PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001094798

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

1. Accelerator pedal assembly (LHD models) 2. Accelerator pedal assembly (RHD models)
A. Locating pin
⇦ : Vehicle front

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000000905755

REMOVAL

1. Loosen mounting bolts, and remove accelerator pedal assembly.
   CAUTION:
   - **Never disassemble accelerator lever. Never remove accelerator pedal position sensor from accelerator lever.**
   - **Avoid impact from dropping etc. during handling.**
   - **Be careful to keep accelerator lever away from water.**
2. Disconnect accelerator pedal position sensor harness connector.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Insert locating pin into vehicle side to position accelerator pedal assembly. Install mounting bolt to accelerator pedal assembly.

Inspection

INFOID:0000000000905756

INSPECTION AFTER INSTALLATION

- Make sure accelerator pedal moves smoothly within the whole operation range when it is fully depressed and released. (CVT models)

cardiagn.com

- Make sure accelerator pedal securely returns to the fully released position.
- For the electrical inspection of accelerator pedal position sensor. Refer to EC-280, "Description" (HR16DE), EC-1158, "Description" (MR20DE) or EC-1358, "Description" (K9K).

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000000996219

DETAILED FLOW

1.CHECK SYMPTOM

Check the malfunction symptoms by performing the following items.
- Interview the customer to obtain the malfunction information (conditions and environment when the malfunction occurred).
- Check the symptom.

>> GO TO 2.

2.PERFORM DIAGNOSIS BY SYMPTOM

Perform the relevant diagnosis referring to the diagnosis chart by symptom. Refer to AV-30, "Symptom Table".

>> GO TO 3.

3.REPAIR OR REPLACE MALFUNCTIONING PARTS

Repair or replace the malfunctioning parts.

>> GO TO 4.

4.FINAL CHECK

Perform the operation to check that the malfunction symptom is solved or any other symptoms are present.

Is there any symptom?

YES >> GO TO 2.
NO >> INSPECTION END

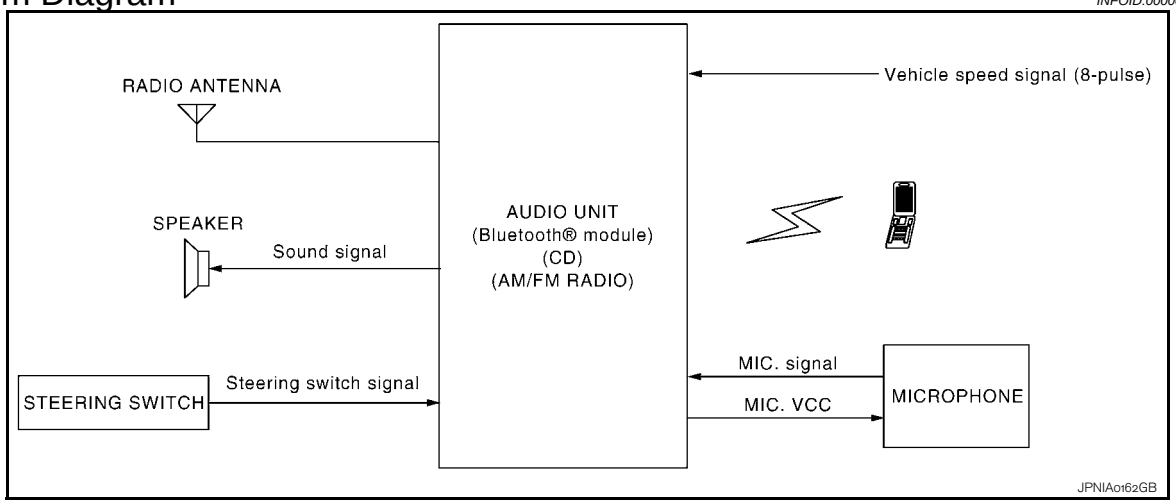
cardiagn.com

FUNCTION DIAGNOSIS

AUDIO SYSTEM

System Diagram

INFOID:0000000000996244



System Description

INFOID:0000000000996245

The audio system is equipped with following function. Each function is operated with audio switch or steering switch.

Function
AM/FM radio
CD
HANDS-FREE PHONE

FUNCTION DESCRIPTION

Operating signal

Audio system operation can be performed with audio switch or steering switch.

AM/FM Radio Mode

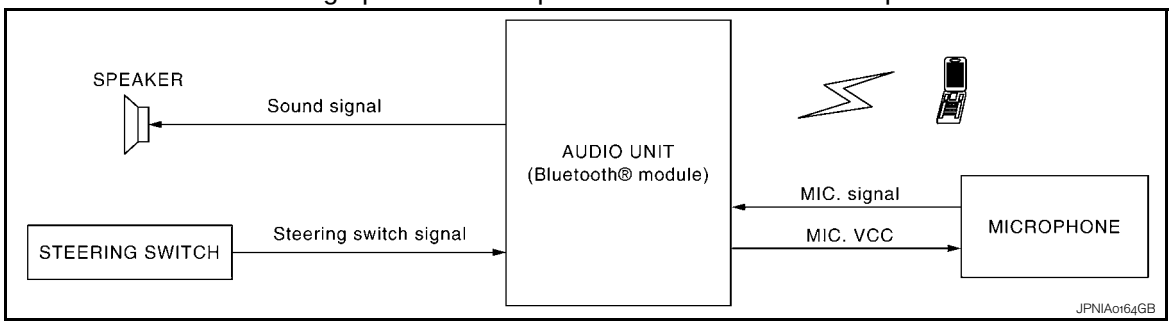
- AM/FM radio tuner is built into audio unit.
- Audio signal is received by antenna, next it is input to audio unit. Audio unit outputs the audio signal to each speaker.

CD Mode

- CD function is built into audio unit.
- Audio unit outputs audio signal to each speaker when CD is inserted to audio unit.

Hands-free phone system

- Hands-free communication can be operated by connecting using Bluetooth® with cellular phone.
- Operation is performed by steering switch.
- Guide sound that is heard during operation is output from audio unit to front speaker.



cardiagn.com

When a call is originated
- Spoken voice sound output from the microphone (Mic. Signal) is input to audio unit. Audio unit outputs to cellular phone with Bluetooth® communication as a TEL voice signal. Voice sound is then heard at the other party.

When receiving a call
- Voice sound is input to own cellular phone from the other party. TEL voice signal is output to front speaker, and the signal is input to audio unit by establishing Bluetooth® communication from cellular phone.

NATS AUDIO LINK

Description

The link with the NATS IMMU implies that the audio unit can basically only be operated if connected to the matching NATS IMMU to which the audio unit was initially fitted on the production line.
Since radio operation is impossible after the link with the NATS is disrupted, theft of the audio unit is basically useless since special equipment is required to reset the audio unit.

Initialization Process for Audio Units That Are Linked to the NATS IMMU

New audio units will be delivered to the factories in the “NEW” state, i.e. ready to be linked with the vehicle's NATS. When the audio unit in “NEW” state is first switched on at the factory, it will start up communication with the vehicle's immobilizer control unit (IMMU) and send a code (the “Audio Unit Code”) to the IMMU. The IMMU will then store this code, which is unique to each audio unit, in its (permanent) memory.
Upon receipt of the code by the IMMU, the NATS will confirm correct receipt of the audio unit code to the audio unit. Hereafter, the audio unit will operate as normal.
During the initialization process, “NEW” is displayed on the audio unit display. Normally though, communication between audio unit and IMMU takes such a short time (300 ms) that the audio unit seems to switch on directly without showing “NEW” on its display.

Normal Operation

Each time the audio unit is switched on afterwards, the audio unit code will be verified between the audio unit and the NATS before the audio unit becomes operational. During the code verification process, “WAIT” is shown on the audio unit display. Again, the communication takes such a short time (300 ms) that the audio unit seems to switch on directly without showing “WAIT” on its display.

When The Radio Is Locked

In case of the audio unit being linked with the vehicle's NATS (immobilizer system), disconnection of the link between the audio unit and the IMMU will cause the audio unit to switch into the lock (“SECURE”) mode in which the audio unit is fully inoperative. Hence, repair of the audio unit is basically impossible, unless the audio unit is reset to the “NEW” state for which special decoding equipment is required.
Clarion has provided their authorized service representatives with so called “decoder boxes” which can bring the audio unit back to the “NEW” state, enabling the audio unit to be switched on after which repair can be performed. Subsequently, when the repaired audio unit is delivered to the final user again, it will be in the “NEW” state to enable re-linking the audio unit to the vehicle's immobilizer system. As a result of the above, repair of the audio unit can only be done by an authorized Clarion representative (when the owner of the vehicle requests repair and can show personal identification).

Service Procedure

Item	Service procedure	Description
Battery disconnection	No additional action required.	–
Radio needs repair	Repair needs to be done by authorized representative of radio manufacturer since radio cannot be operated unless it is reset to NEW state, using special decoding equipment.	–
Replacement of radio by new part	No additional action required.	Radio is delivered in “NEW” state.
Transferring radio to another vehicle/replacement of radio by an old part	Radio needs to be reset to NEW state by authorized representative of radio manufacturer.	–
Replacement of IMMU	Radio needs to be reset to NEW state by authorized representative of Clarion.	After switching on the radio, it will display “SECURE” after 1 minute.

cardiagn.com

Item	Service procedure	Description
No communication from IMMU to radio	1. Check NATS system if NATS is malfunctioning. 2. Reset radio to “NEW” state by authorized representative of Clarion after NATS is repaired.	The radio will display “SECURE” after 1 minute after switching on the radio. Further use of radio is impossible until communication is established again, or after radio is reset by authorized representative of Clarion.
When initialized between ECM and IMMU.	Radio needs to be reset to “NEW” status by authorized representative of Clarion.	It will display “SECURE” after 1 minute after switching on the radio.

Component Description

INFOID:0000000000996249

Part name	Description
AUDIO UNIT	• Operational switch of audio system is integrated. • Receiving function of AM/FM radio, replaying function of CD and hands-free phone function are integrated. • Audio signals are output to each speaker.
FRONT DOOR SPEAKER	• Outputs sound signal from audio unit. • Outputs high, mid and low range sounds.
REAR DOOR SPEAKER	• Outputs sound signal from audio unit. • Outputs high, mid and low range sounds.
TWEETER	• Outputs sound signal from audio unit. • Outputs high range sound.
STEERING SWITCH	• Operations for audio and hands-free phone are possible. • Steering switch signal (operation signal) is output to audio unit.
MICROPHONE	• Used for hands-free phone operation. • Mic. signal is sent to audio unit. • Power (Mic. VCC) is supplied from audio unit.
RADIO ANTENNA	Radio signal received by antenna is sent to audio unit.

COMPONENT DIAGNOSIS

POWER SUPPLY AND GROUND CIRCUIT

AUDIO UNIT

AUDIO UNIT : Diagnosis Procedure

INFOID:0000000000996400

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	38
Ignition switch ACC or ON	5

Is inspection result OK?

YES >> GO TO 2.
NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2.CHECK POWER SUPPLY CIRCUIT

Check voltage between audio unit harness connector and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Value (Approx.)
Battery power supply	M46	19	OFF	12 V
ACC power supply	M46	7	ACC	12 V

Is inspection result OK?

YES >> GO TO 3.
NO >> Check harness between audio unit and fuse.

3.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect audio unit connector.
3. Check continuity between audio unit harness connector and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Continuity
Ground	M48	31	OFF	Continuity should exist.

Is inspection result OK?

YES >> INSPECTION END
NO >> Repair harness or connector.

cardiagn.com

MICROPHONE SIGNAL CIRCUIT

Description

INFOID:0000000000996424

Supply power from audio unit to microphone. The microphone transmits the sound voice to the audio unit.

Diagnosis Procedure

INFOID:0000000000996425

1.CHECK CONTINUITY BETWEEN AUDIO UNIT AND MICROPHONE CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect audio unit connector and microphone connector.
3. Check continuity between audio unit harness connector terminals 35, 36, 37 and microphone harness connector terminals 1, 2, 4.

35 - 1	**: Continuity should exist.**
36 - 2	**: Continuity should exist.**
37 - 4	**: Continuity should exist.**

4. Check continuity between audio unit harness connector terminals 35, 37 and ground.

35, 37 - Ground	**: Continuity should not exist.**

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK VOLTAGE MICROPHONE VCC

1. Connect audio unit connector.
2. Turn ignition switch ON.
3. Check voltage between audio unit harness connector terminal 37 and ground.

37 - ground	**: Approx. 5 V**

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace audio unit.

3.CHECK MICROPHONE SIGNAL

1. Connect microphone connector.
2. Check signal between audio unit harness connector terminals 35 and 36.

35 - 36	 PKIB5037J

Is inspection result OK?

YES >> Replace audio unit.
NO >> Replace microphone.

cardiagn.com

STEERING SWITCH SIGNAL A CIRCUIT

Description

INFOID:0000000000996436

Transmits the steering switch signal to audio unit.

Diagnosis Procedure

INFOID:0000000000996437

1.CHECK STEERING SWITCH SIGNAL A CIRCUIT

1. Disconnect audio unit connector and spiral cable connector.
2. Check continuity between audio unit harness connector terminal 6 and spiral cable harness connector terminal 24.

6 - 24 : Continuity should exist.

3. Check continuity between audio unit harness connector terminal 6 and ground.

6 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK SPIRAL CABLE

Check spiral cable.

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace spiral cable.

3.CHECK AUDIO UNIT VOLTAGE

1. Connect audio unit connector and spiral cable connector.
2. Turn ignition switch ON.
3. Check voltage between audio unit harness connector terminals 6 and 15.

6 - 15 : Approx. 5 V

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace audio unit.

4.CHECK STEERING SWITCH

1. Turn ignition switch OFF.
2. Check steering switch. Refer to AV-11, "Component Inspection".

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace steering switch.

Component Inspection

INFOID:0000000000996438

Measure the resistance between the steering switch connector terminals 20 to 17 and 16 to 17.

cardiagn.com

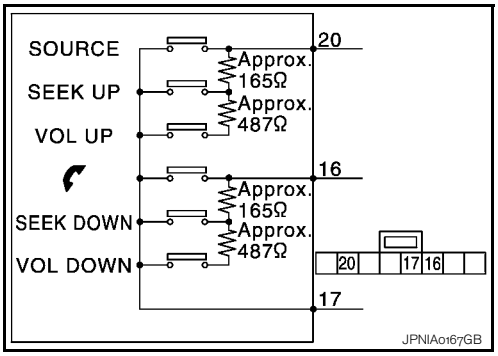
Standard

Between terminals 20 and 17

VOL UP switch ON	**: 634 – 665 Ω**
SEEK UP switch ON	**: 162 – 168 Ω**
SOURCE switch ON	**: 0 Ω**

Between terminals 16 and 17

VOL DOWN switch ON	**: 634 – 665 Ω**
SEEK DOWN switch ON	**: 162 – 168 Ω**
switch ON	**: 0 Ω**



cardiagn.com

STEERING SWITCH SIGNAL B CIRCUIT

Description

INFOID:0000000000999575

Transmits the steering switch signal to audio unit.

Diagnosis Procedure

INFOID:0000000000996441

1.CHECK STEERING SWITCH SIGNAL B CIRCUIT

1. Disconnect audio unit connector and spiral cable connector.
2. Check continuity between audio unit harness connector terminal 16 and spiral cable harness connector terminals 32.

16 - 32 : Continuity should exist.

3. Check continuity between audio unit harness connector terminal 16 and ground.

16 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK SPIRAL CABLE

Check spiral cable.

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace spiral cable.

3.CHECK AUDIO UNIT VOLTAGE

1. Connect audio unit connector and spiral cable connector.
2. Turn ignition switch ON.
3. Check voltage between audio unit harness connector terminals 16 and 15.

16 - 15 : Approx. 5 V

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace audio unit.

4.CHECK STEERING SWITCH

1. Turn ignition switch OFF.
2. Check steering switch. Refer to AV-13, "Component Inspection".

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace steering switch.

Component Inspection

INFOID:0000000000999577

Measure the resistance between the steering switch connector terminals 20 to 17 and 16 to 17.

cardiagn.com

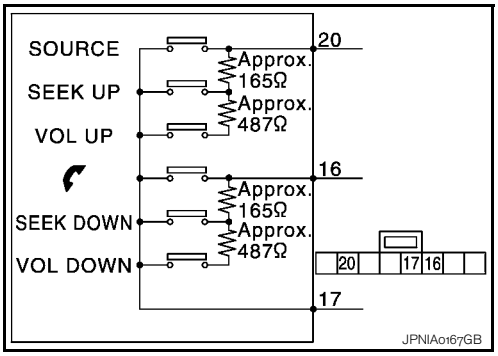
Standard

Between terminals 20 and 17

VOL UP switch ON	**: 634 – 665 Ω**
SEEK UP switch ON	**: 162 – 168 Ω**
SOURCE switch ON	**: 0 Ω**

Between terminals 16 and 17

VOL DOWN switch ON	**: 634 – 665 Ω**
SEEK DOWN switch ON	**: 162 – 168 Ω**
switch ON	**: 0 Ω**



cardiagn.com

STEERING SWITCH SIGNAL GND CIRCUIT

Description

INFOID:0000000000999576

Transmits the steering switch signal to audio unit.

Diagnosis Procedure

INFOID:0000000000996446

1.CHECK STEERING SWITCH SIGNAL GND CIRCUIT

1. Disconnect audio unit connector and spiral cable connector.
2. Check continuity between audio unit harness connector terminal 15 and spiral cable harness connector terminal 31.

15 - 31 : Continuity should exist.

3. Connect audio unit connector.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK SPIRAL CABLE

Check spiral cable.

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace spiral cable.

3.CHECK GROUND CIRCUIT

1. Connect audio unit connector.
2. Check continuity between audio unit harness connector terminal 15 and ground.

15 - Ground : Continuity should exist.

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace audio unit.

4.CHECK STEERING SWITCH

1. Turn ignition switch OFF.
2. Check steering switch. Refer to AV-15, "Component Inspection".

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace steering switch.

Component Inspection

INFOID:0000000000999578

Measure the resistance between the steering switch connector terminals 20 to 17 and 16 to 17.

Standard

Between terminals 20 and 17

VOL UP switch ON	**: 634 – 665 Ω**
SEEK UP switch ON	**: 162 – 168 Ω**
SOURCE switch ON	**: 0 Ω**

Between terminals 16 and 17

VOL DOWN switch ON	**: 634 – 665 Ω**
SEEK DOWN switch ON	**: 162 – 168 Ω**
switch ON	**: 0 Ω**

SYMPTOM DIAGNOSIS

MULTI AV SYSTEM SYMPTOMS

Symptom Table

INFOID:0000000000996467

RELATED TO AUDIO

Symptom	Check items	Possible malfunction location / Action to take
Audio sound is not heard.	No sound from all speakers	Audio unit (AV-33, "Exploded View")
	Sound is not heard only from the specific places (Front RH, rear RH, front LH and rear LH).	Sound signal circuit of suspect system

RELATED TO HANDS FREE PHONE

- Check that the cellular phone is corresponding type (Bluetooth® enabled) when the hands free related malfunction vehicle is in service before performing a diagnosis.
- There is a case that malfunction occurs due to the version change of the phone type, etc. even though it is a corresponding type. Therefore, confirm it by changing the cellular phone to another corresponding type phone, and check that it operates normally. It is necessary to distinguish whether the cause is the vehicle or cellular phone. Check to ensure the customers phone is supported by checking the phone compatibility for the hands free system.

Trouble diagnosis chart by symptom

Symptoms	Check items	Possible malfunction location / Action to take
Does not recognize cellular phone connection.	Repeat the registration of cellular phone.	Audio unit (AV-33, "Exploded View")
Hands free phone cannot be established.	• Hands free phone operation can be made, but the communication cannot be established. • Hands free phone operation can be performed, however, voice between each other cannot be heard during the conversation.	Audio unit (AV-33, "Exploded View")
The other party's voice cannot be heard by hands free phone.	No sound from all speakers	Audio unit (AV-33, "Exploded View")
	Sound is not heard only from the specific places (Front RH or front LH).	Sound signal circuit (TEL voice)
Originating sound is not heard by the other party with hands free phone communication.	Sound operation function is normal.	Audio unit (AV-33, "Exploded View")
	Sound operation function does not work.	Microphone signal circuit (AV-10, "Diagnosis Procedure")

RELATED TO STEERING SWITCH

Symptoms	Possible malfunction location / Action to take
All steering switches are not operated.	Steering switch signal ground circuit (AV-15, "Diagnosis Procedure")
Only specified switch cannot be operated.	Steering switch (AV-37, "Exploded View")
“MENU UP”, “VOL UP” and “SOURCE” switches are not operated.	Steering switch signal A circuit (AV-11, "Diagnosis Procedure")
“ ”, “MENU DOWN” and “VOL DOWN” switches are not operated.	Steering switch signal B circuit (AV-13, "Diagnosis Procedure")

cardiagn.com

NORMAL OPERATING CONDITION

Description

INFOID:0000000001000509

RELATED TO AUDIO

- The majority of the audio malfunctions are the result of outside causes (bad CD, electromagnetic interference, etc.). Check the symptoms below to diagnose the malfunction.
- The vehicle itself can be a source of noise if noise prevention parts or electrical equipment is malfunctioning. Check that noise is caused and/or changed by engine speed, ignition switch turned to each position, and operation of each piece of electrical equipment. Then determine the cause.

NOTE:

- CD-R is not guaranteed to play because they can contain compressed audio (MP3, WMA) or could be incorrectly mastered by the customer on a computer.
- Check that the CDs carry the Compact Disc Logo. If not, the disc is not mastered to the red book Compact Disc Standard and may not play.

Symptoms	Cause and Counter measure
Cannot play	Check that the CD was inserted correctly.
	Check that the CD is scratched or dirty.
	Check that there is condensation inside the player, and if there is, wait until the condensation is gone (about 1 hour) before using the player.
	The player will play correctly after it returns to the normal temperature if there is a temperature increase error.
	Only the music CD files (CD-DA data) will be played if there is a mixture of music CD files (CD-DA data) and MP3/WMA files on a CD.
	Files with extensions other than ".MP3", ".WMA", ".mp3", or ".wma" cannot be played.
	Check that the finalization process, such as session close and disc close, is done for the disc.
	Check that the CD is protected by copyright.
Poor sound quality	Check that the CD is scratched or dirty.
It takes a relatively long time before the music starts playing.	If there are many folder or file levels on the MP3/WMA CD, or if it is a multisession disc, some time may be required before the music starts playing.
The songs do not play back in the desired order.	The playback order is the order in which the files were written by the software, so the files might not play in the desired order.

Noise resulting from variations in field strength, such as fading noise and multi-path noise, or external noise from trains and other sources, is not a malfunction.

NOTE:

- Fading noise: This noise occurs because of variations in the field strength in a narrow range due to mountains or buildings blocking the signal.
- Multi-path noise: This noise results from a time difference between the broadcast waves directly from the station arriving at the antenna and the waves reflected by mountains or buildings.

RELATED TO TELEPHONE

Symptom	Possible cause	Possible solution
The system does not recognize the command. The system recognizes the command incorrectly.	The interior of the vehicle is too noisy.	Close the windows or have other occupants be quiet.
	The volume of the voice is too low.	Speak louder.
	Pronunciation is unclear.	Speak clearly.
	Voice recognition mode is not yet ready to speak.	Push the release "✆" on the steering switch, and speak a command after the tone sounds.
	5 seconds or more have passed after pushed and released "✆" on the steering switch.	Make sure to speak a command within 5seconds after push and release "✆" on the steering switch.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001091326

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

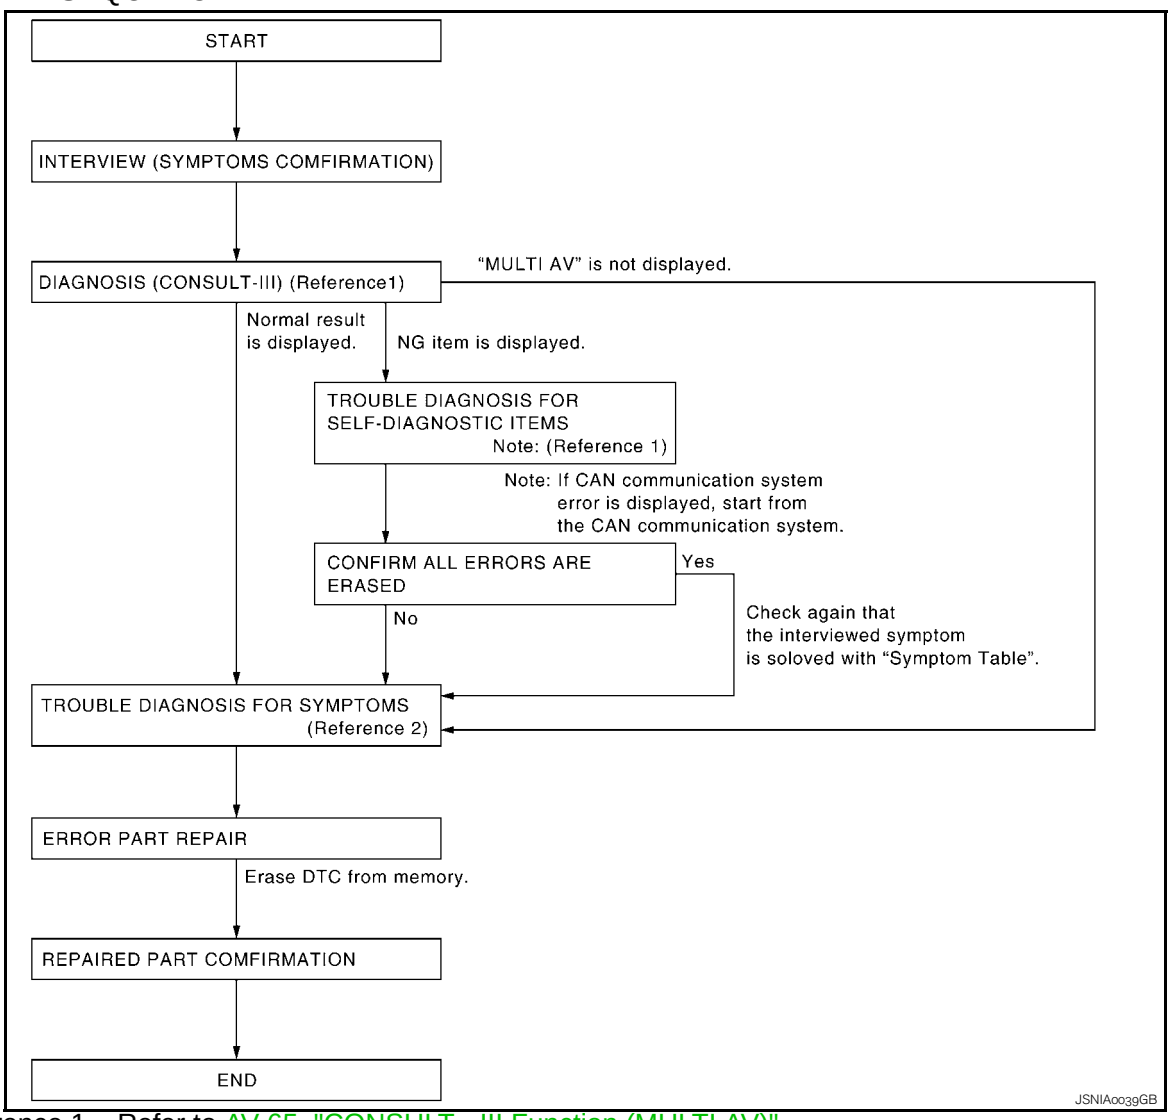
DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000000946996

OVERALL SEQUENCE



- Reference 1··· Refer to AV-65, "CONSULT - III Function (MULTI AV)".
- Reference 2··· Refer to AV-189, "Symptom Table".

DETAILED FLOW

1.CHECK SYMPTOM

Check the malfunction symptoms by performing the following items.
- Interview the customer to obtain the malfunction information (conditions and environment when the malfunction occurred).
- Check the symptom.

>> GO TO 2.

2.SELF-DIAGNOSIS (CONSULT-III)

1. Connect CONSULT-III and perform a self-diagnosis for "MULTI AV".
   NOTE:
   Skip to step 4 of the diagnosis procedure if "MULTI AV" is not displayed.
2. Check that any DTC No. is displayed in the self-diagnosis results.

cardiagn.com

Is any DTC No. displayed?

YES >> GO TO 3.
NO >> GO TO 4.

3. CHECK SELF-DIAGNOSIS RESULTS (CONSULT-III)

1. Check the DTC No. indicated in the self-diagnosis results.
2. Perform the relevant diagnosis referring to the DTC Index. Refer to AV-137, "DTC Index".

NOTE:
Start with the diagnosis for the CAN communication system if “CAN COMM CIRCUIT [U1000] and CONTROL UNIT CAN [U1010]” is displayed.

>> GO TO 5.

4. PERFORM DIAGNOSIS BY SYMPTOM

Perform the relevant diagnosis referring to the diagnosis chart by symptom. Refer to AV-189, "Symptom Table".

>> GO TO 5.

5. REPAIR OR REPLACE MALFUNCTIONING PARTS

Repair or replace the identified malfunctioning parts.

NOTE:
Erase the stored self-diagnosis results after repairing or replacing the relevant components if any DTC No. has been indicated in the self-diagnosis results.

>> GO TO 6.

6. CHECK AFTER REPAIR

1. Perform a self-diagnosis for “MULTI AV” with CONSULT-III after repairing or replacing the malfunctioning parts.
2. Check that any DTC No. is displayed in the self-diagnosis results.

Is any DTC No. displayed?

YES >> GO TO 3.
NO >> GO TO 7.

7. FINAL CHECK

Perform the operation to check that the malfunction symptom is solved or any other symptoms are present.

Is there any symptom?

YES >> GO TO 4.
NO >> INSPECTION END

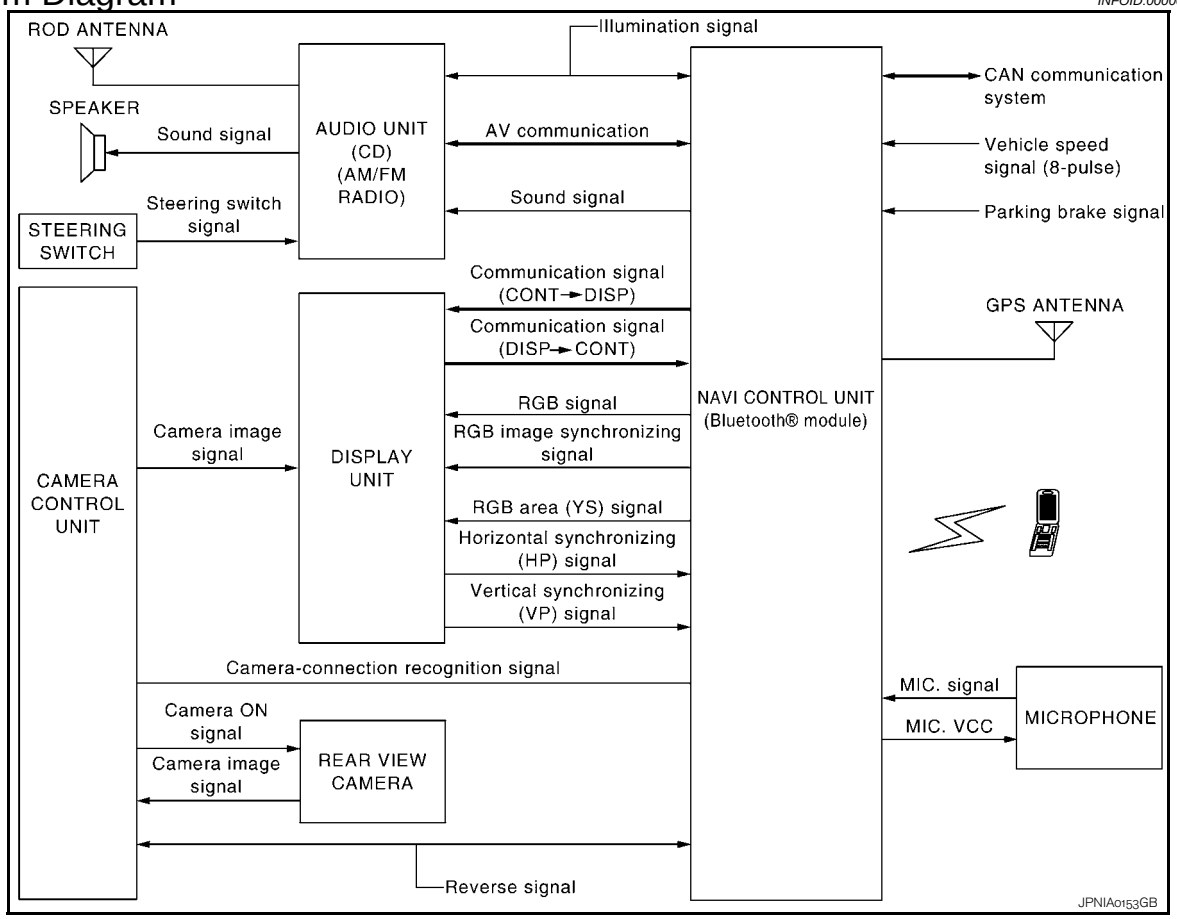
FUNCTION DIAGNOSIS

MULTI AV SYSTEM

System Diagram

INFOID:0000000000947003



System Description

INFOID:0000000000947004

Multi AV system means that the following systems are integrated.

System name	System explanation
NAVIGATION SYSTEM	AV-47, "System Description"
AUDIO SYSTEM	AV-53, "System Description"
REAR VIEW MONITOR SYSTEM	AV-51, "System Description"
VEHICLE INFORMATION SYSTEM	• Status of audio, fuel economy, maintenance and navigation is displayed. • NAVI control unit displays the fuel consumption status and trip computer status while receiving data signal through CAN communication from ECM, combination meter and BCM.
HANDS-FREE PHONE SYSTEM	Refer to the following “HANDS-FREE PHONE SYSTEM”.

- Two AV communication lines (H, L) connect between units that configure MULTI AV system. NAVI control unit controls by sending/receiving data one by one with each unit (slave unit) that configures them completely as a master unit.
- Two AV communication lines (H, L) adopt a twisted pair line that is resistant to noise.
- NAVI control unit is connected by CAN communication, and it receives data signal from ECM, combination meter. It computes and displays fuel economy information value with the obtained information. Sending/receiving of data signal is performed by BCM. Also, it sends the required signal of vehicle setting and receives the response signal.

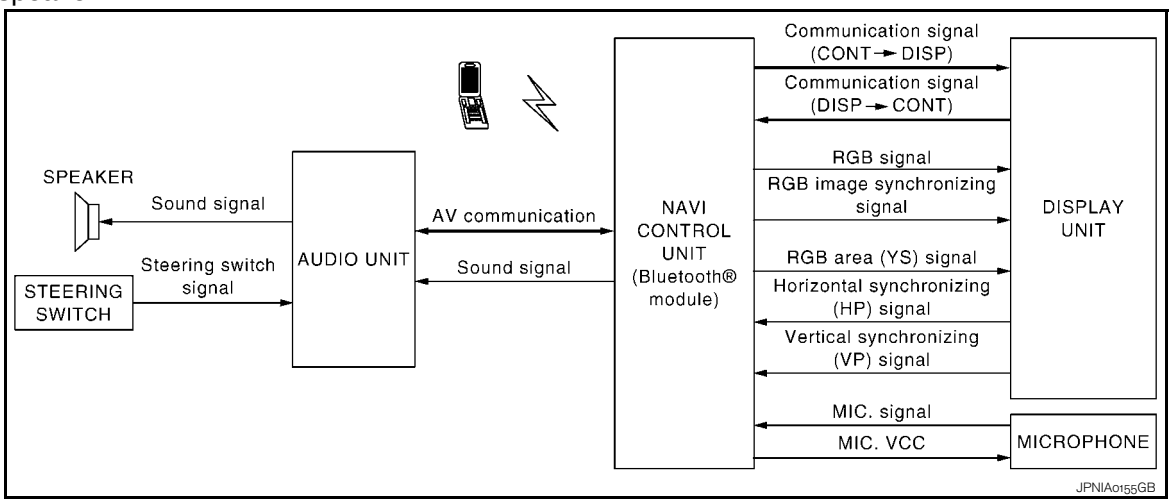
cardiagn.com

- NAVI control unit is connected with display and serial communication, and it sends the required signal of display and display control and receives the response signal from front display. Also, it is connected with satellite radio by serial communication, and it sends the operating signal and receives the display signal.

NOTE:
NAVI control unit can perform CONSULT-III self-operating function and on board self-diagnosis.
- CONSULT-III self diagnosis: Refer to AV-65, "CONSULT - III Function (MULTI AV)".
- On board self diagnosis: Refer to AV-55, "Diagnosis Description".

HANDS-FREE PHONE SYSTEM

- Hands-free communication can be operated by connecting using Bluetooth® with cellular phone.
- Operation is performed by steering switch, and operating condition is indicated on display.
- Guide sound that is heard during operation is input from NAVI control unit to audio unit and is output from front speaker.



When a call is originated
Spoken voice sound output from the microphone (Mic. Signal) is input to NAVI control unit. NAVI control unit outputs to cellular phone with Bluetooth® communication as a TEL voice signal. Voice sound is then heard at the other party.

When receiving a call
Voice sound is input to own cellular phone from the other party. TEL voice signal is output to front speaker, and the signal is input to audio unit via NAVI control unit by establishing Bluetooth® communication from cellular phone.

Component Parts Location

INFOID:0000000000947005

NOTE:
As for right-hand drive vehicles, install GPS antenna feeder between the center console and the instrument panel in the reverse of left-handle drive vehicles.

Component Description

INFOID:0000000000947006

Part name	Description
NAVI CONTORL UNIT	• Map data can be read from the Map DVD-ROM by installing Map DVD-ROM. • It is the master unit of the MULTI AV system, and it is connected to each control unit by means of communication. It operates each system according to communication signals from the NAVI control unit. • The NAVI control unit includes the audio, hands-free phone, navigation, and vehicle information functions. • It is connected to ECM and combination meter via CAN communication to obtain necessary information for the vehicle information function. • It inputs the illumination signals that are required for the display dimming control. • It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake).
MAP DVD-ROM	A collection of Map data.
DISPLAY UNIT	• Display image is controlled by the serial communication from NAVI control unit. • RGB image signal is input from NAVI control unit (RGB, RGB area and RGB synchronizing). Camera image signal is input from camera control unit. • Synchronize signal (HP, VP) is output to NAVI control unit.

cardiagn.com

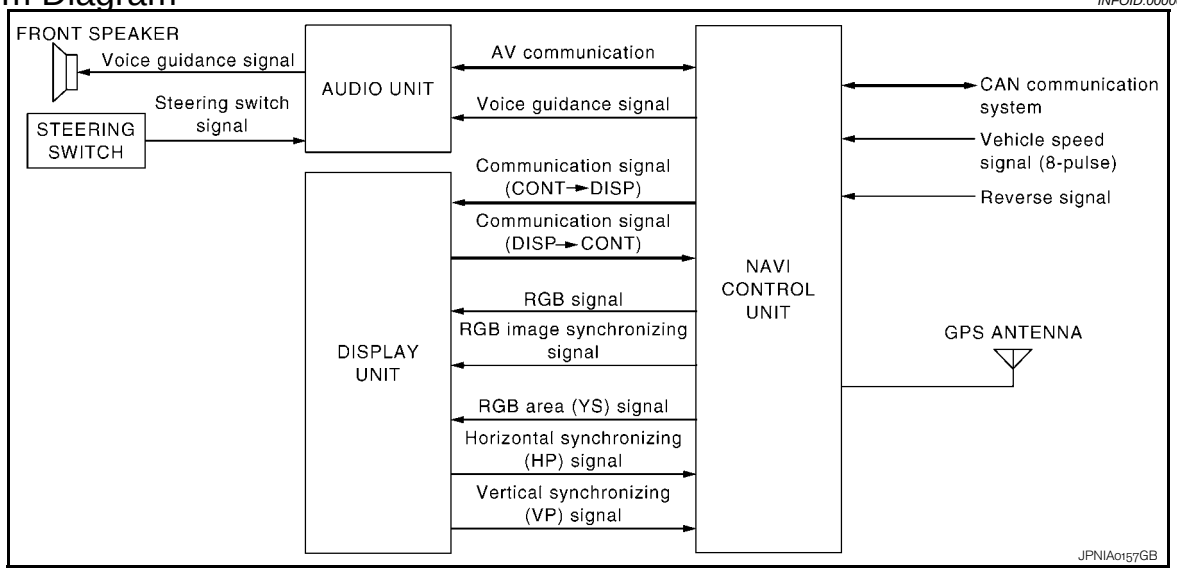
Part name	Description
AUDIO UNIT	• Operational switch of MULTI AV system is integrated. • NAVI control unit and AV communication are connected with Audio unit. Operating signals of the switch are sent to the NAVI control unit.
FRONT DOOR SPEAKER	• Outputs sound signal from audio unit. • Outputs high, mid and low range sounds.
REAR DOOR SPEAKER	• Outputs sound signal from audio unit. • Outputs high, mid and low range sounds.
TWEETER	• Outputs sound signal from audio unit. • Outputs high range sound.
CAMERA CONTROL UNIT	• Camera image signal is input from rear view camera, and camera image is indicated on the display. • Power (camera ON signal) is sent to rear view camera. • Controlled by AV communication sent from NAVI control unit. • NAVI control unit recognizes the presence of camera system with camera connection recognition signal.
REAR VIEW CAMERA	The image of vehicle rear view is sent to camera control unit.
STEERING SWITCH	• Operations for audio, hands-free phone, voice recognition and navigation, etc. are possible. • Steering switch signal (operation signal) is output to audio unit.
MICROPHONE	• Used for hands-free phone operation and voice recognition. • Mic. signal is sent to NAVI control unit. • Power (Mic. VCC) is supplied from NAVI control unit.
GPS ANTENNA	GPS signal is received and sent to NAVI control unit.
RADIO ANTENNA	Radio signal received by antenna is sent to audio unit.

cardiagn.com

NAVIGATION SYSTEM

System Diagram

INFOID:0000000000947007



System Description

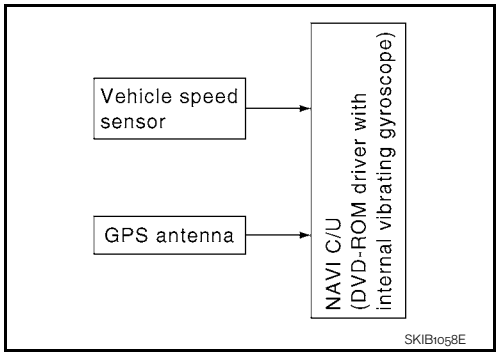
INFOID:0000000000947008

NAVIGATION SYSTEM

Location Detection Principle

The navigation system periodically calculates the vehicle's current position according to the following three signals:

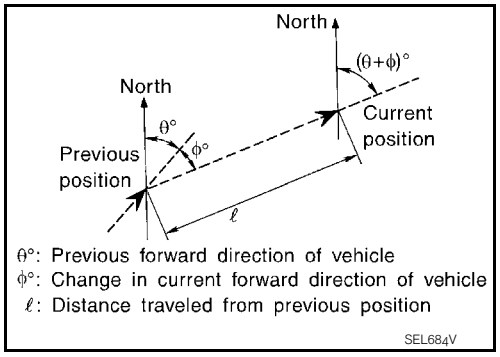
- Travel distance of the vehicle as determined by the vehicle speed sensor
- Turning angle of the vehicle as determined by the gyroscope (angular velocity sensor)
- Direction of vehicle travel as determined by the GPS antenna (GPS information)



The current position of the vehicle is then identified by comparing the calculated vehicle position with map data read from the map DVD-ROM, which is stored in the DVD-ROM drive (map-matching), and indicated on the screen as a vehicle mark. More accurate data is judged and used by comparing vehicle position detection results found by the GPS with the result by map-matching.

The current vehicle position will be calculated by detecting the distance the vehicle moved from the previous calculation point and its direction.

- Travel distance
  Travel distance calculations are based on the vehicle speed sensor input signal. Therefore, the calculation may become incorrect as the tires wear down. To prevent this, an automatic distance correction function has been adopted.
- Travel direction
  Change in the travel direction of the vehicle is calculated by a gyroscope (angular velocity sensor) and a GPS antenna (GPS information). They have both advantages and disadvantages.



Type	Advantage	Disadvantage
Gyroscope (angular velocity sensor)	Can detect the vehicle's turning angle quite accurately.	Direction errors may accumulate when vehicle is driven for long distances without stopping.
GPS antenna (GPS information)	Can detect the vehicle's travel direction (North/South/East/West).	Correct direction cannot be detected when vehicle speed is low.

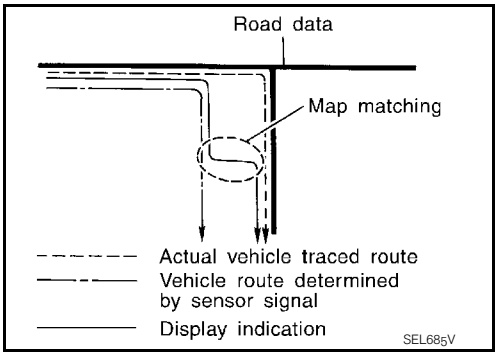
More accurate traveling direction is detected because priorities are set for the signals from these two devices according to the situation.

Map-Matching

Map-matching compares a current location detected by the method in the “Location Detection Principle” with a road map data from Map DVD-ROM stored in DVD-ROM drive.

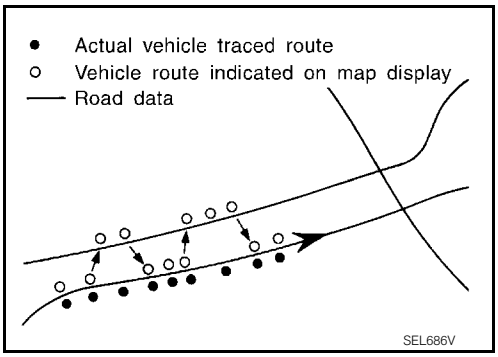
NOTE:

The road map data is based on data stored in the map DVD-ROM.

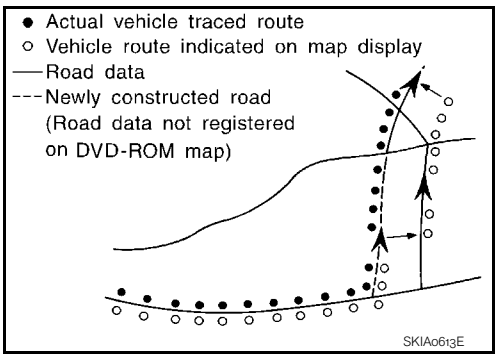


The vehicle position may not be corrected under the following circumstances and after driving for a certain time when GPS information is difficult to receive. In this case, the vehicle mark on the display must be corrected manually.

- In map-matching, alternative routes to reach the destination will be shown and prioritized, after the road on which the vehicle is currently driven has been judged and the vehicle mark has been repositioned.
  Alternative routes will be shown in different order of priority, and the incorrect road can be avoided if there is an error in distance and/or direction.
  They are of the same priority if two roads are running in parallel. Therefore, the vehicle mark may appear on either of them alternately, depending on maneuvering of the steering wheel and configuration of the road.

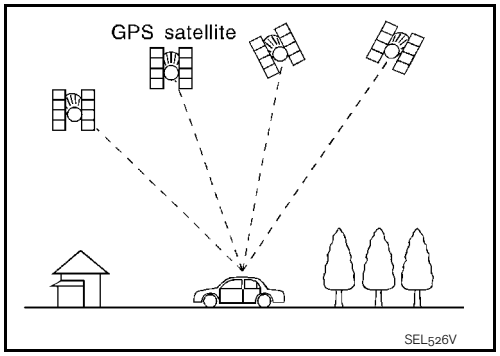


- Map-matching does not function correctly when a road on which the vehicle is driving is new and not recorded in the map DVD-ROM, or when road pattern stored in the map data and the actual road pattern are different due to repair.
  The map-matching function may find another road and position the vehicle mark on it when driving on a road not present in the map. Then, the vehicle mark may change to it when the correct road is detected.
- Effective range for comparing the vehicle position and travel direction calculated by the distance and direction with the road data read from the map DVD-ROM is limited. Therefore, correction by map-matching is not possible when there is an excessive gap between current vehicle position and the position on the map.



GPS (Global Positioning System)

cardiagn.com



GPS (Global Positioning System) was developed for and is controlled by the US Department of Defense. The system utilizes GPS satellites (NAVSTAR), sending out radio waves while flying on an orbit around the earth at an altitude of approximately 21,000 km (13,100miles).
The GPS receiver calculates the vehicle's position in three dimensions (latitude/longitude/altitude) according to the time lag of the radio waves received from four or more GPS satellites (three-dimensional positioning). The GPS receiver calculates the vehicle's position in two dimensions (latitude/longitude), utilizing the altitude data calculated previously with radio waves from four or more GPS satellites (two-dimensional positioning) if radio waves were received only from three GPS satellites.
Position correction by GPS is not available while the vehicle is stopped.
Accuracy of GPS will deteriorate under the following conditions:

- In two-dimensional positioning, GPS accuracy will deteriorate when altitude of the vehicle position changes.
- The accuracy can be even lower depending on the arrangement of the GPS satellites utilized for the positioning.
- Position detection is not possible when vehicle is in an area where radio waves from the GPS satellite do not reach, such as in a tunnel, parking lot in a building, and under an elevated highway. Radio waves from the GPS satellites may not be received when some object is located over the GPS antenna.

NOTE:

- Even a high-precision three dimensional positioning, the detection result has an error about 10 m (30ft).
- Because the signals of GPS satellite is controlled by the Tracking and Control Center in the United States, the accuracy may be degraded lower intentionally or the radio waves may stop.

Traffic Information (RDS-TMC)
NOTE: This system is built-in NAVI control unit.
The traffic information broadcast allows to you to avoid delays due to traffic incidents.
Traffic jams, roadwork, closed roads around your current location, etc. are represented graphically on the map by icons depicting the nature of the event.
Incidents on the route are automatically brought to your attention when they are approached.
The Traffic Information feature gives you the opportunity to forecast traffic incidents, determine how serious they are, via the guidance mode, and allows you to detour around traffic incidents.
The navigation system receives traffic information from best available sources and enables the RDS-TMC (Radio Data System-Traffic Information Channel) to inform and guide you.
The RDS-TMC broadcast is fed by a dedicated FM tuner so that you can still tune your radio station while Traffic Information is being broadcasted.

Component Parts Location

INFOID:0000000000984502

NOTE:
As for right-hand drive vehicles, install GPS antenna feeder between the center console and the instrument panel in the reverse of left-handle drive vehicles.

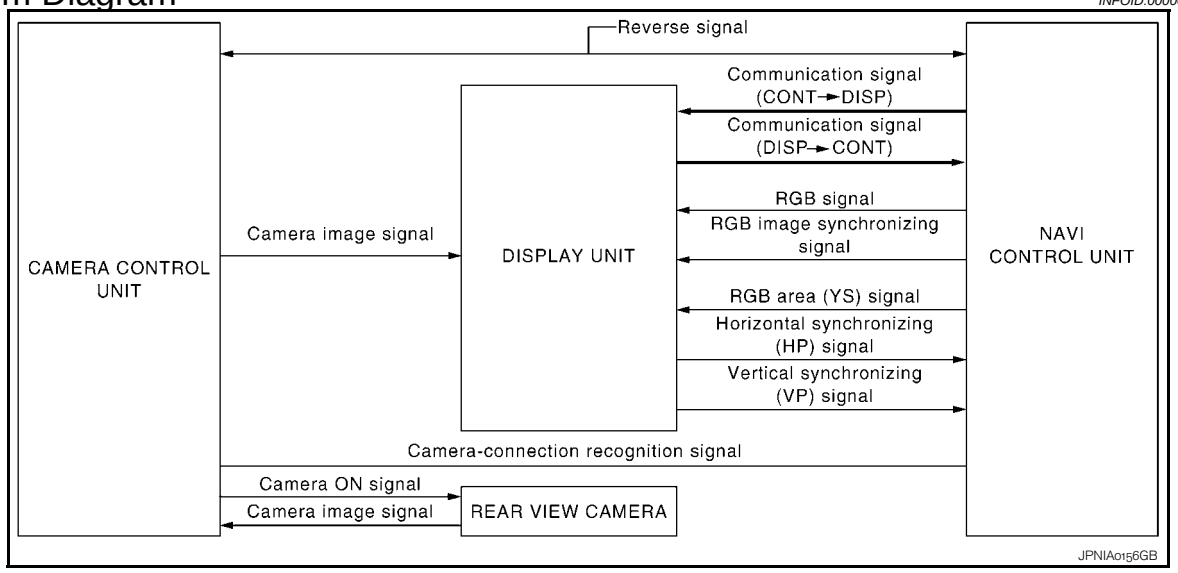
FRONT DOOR SPEAKER	Voice guidance signal from audio unit is output.
TWEETER	
STEERING SWITCH	• Each operation of navigation, etc. can be performed. • Switch operating signal is output to NAVI control unit via audio unit with AV communication.
GPS ANTENNA	GPS signal is received and is output to NAVI control unit.

cardiagn.com

REAR VIEW MONITOR SYSTEM

System Diagram

INFOID:0000000000947011



System Description

INFOID:0000000000947012

Camera image operation principle

- Power is supplied to rear view camera from camera control unit and outputs camera image signal to camera control unit when selector lever is set to R position and the reverse signal on camera control unit is input.
- Camera control unit synthesizes guide lines with camera image signal from rear view camera, and transmits camera image signal to the display. In this case, since the reverse signal is also input to NAVI control unit, the NAVI control unit recognizes the selector lever as in R position, and it switches communication signal between NAVI control unit and display unit, and image that is displayed on the display unit by RGB signal with rear view monitor image.
- The NAVI control unit determines whether rear view camera is equipped or not, based on the presence of camera connection recognition signal. It switches to rear view monitor image at the time of reverse signal input when it is not equipped.
- Warning message under the rear view monitor display is described by NAVI control unit.
- NAVI control unit is connected in communication with display unit, and it controls operation of rear view monitor system.

Component Parts Location

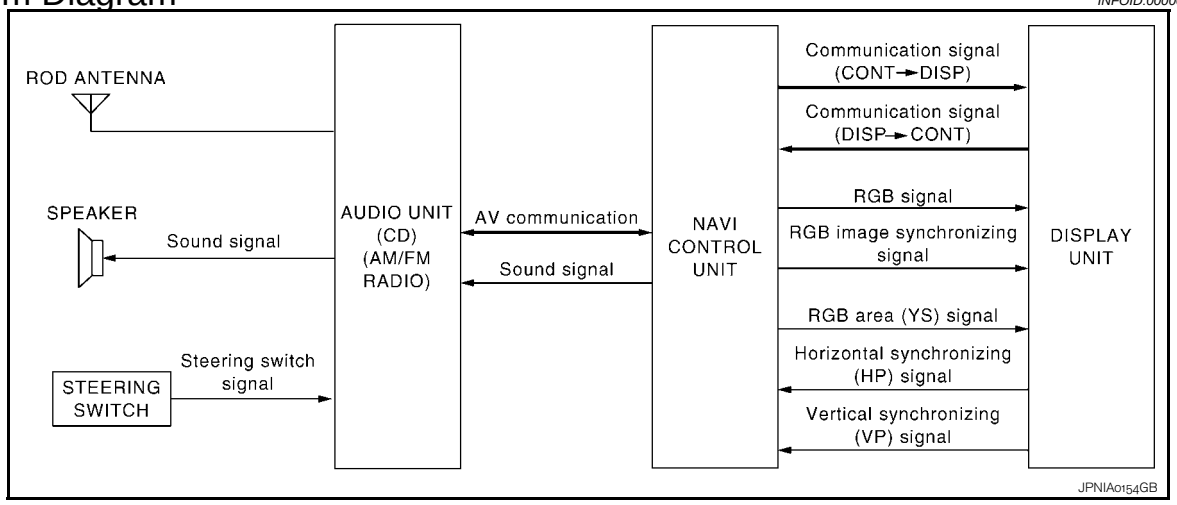
AUDIO SYSTEM

System Diagram

INFOID:0000000000947015



System Description

INFOID:0000000000947016

The audio system is equipped with following function. Each function is operated with audio switch or steering switch. Operation status of AUDIO is indicated at display.

Function
AM/FM radio
CD

Function description

Operating signal

Audio system operation can be performed with audio switch or steering switch.

Screen display

- Switching of display is performed with serial communication between display unit and NAVI control unit.
- The image signal to display operating condition is performed with RGB signal, RGB area signal and RGB image synchronizing signal.

AM/FM Radio Mode

- AM/FM radio tuner is built into audio unit.
- Audio signal is received by antenna, next it is amplified by antenna amp., and finally it is input to audio unit. Audio unit outputs the audio signal to each speaker.

CD Mode

- CD function is built into audio unit.
- Audio unit outputs audio signal to each speaker when CD is inserted to audio unit.

Component Parts Location

cardiagn.com

DIAGNOSIS SYSTEM (NAVI CONTROL UNIT)

Diagnosis Description

INFOID:0000000000947019

MULTI AV SYSTEM on board diagnosis function

- The NAVI control unit diagnosis function starts up with audio switch operation and the NAVI control unit performs a diagnosis for each unit in the system during the on board diagnosis.
- Perform a CONSULT-III diagnosis if the on board diagnosis does not start, e.g., the screen does not display anything, the multifunction switch does not function. etc.

On board diagnosis

Description

- The trouble diagnosis function has a self-diagnosis mode for conducting trouble diagnosis automatically and a confirmation/adjustment mode for operating manually.
- The self-diagnosis mode performs diagnoses on the NAVI control unit, connections between system components as well as connections between NAVI control unit and GPS antenna. Then it displays the diagnosis results on the display.
- The confirmation/adjustment mode allows the technician to check, modify or adjust the vehicle signals and set values, as well as to monitor the system error records and system communication status. The check, modify or adjust actions generally require human intervention and judgment (the system cannot make judgment automatically).

On board diagnosis item

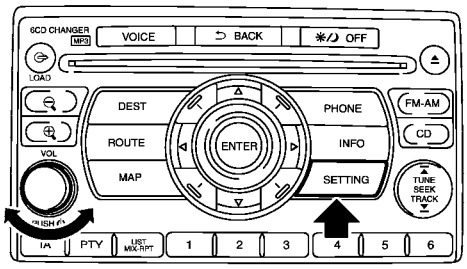
Mode			Description
Self Diagnosis			• NAVI control unit diagnosis • Diagnoses the connections across system components, between NAVI control unit and GPS antenna.
Confirmation/ Adjustment	Display Diagnosis		The following check functions are available: color tone check by color bar display, light and shade check by gray scale display.
	Vehicle Signals		Diagnosis of signals can be performed for vehicle speed, parking brake, lights, ignition switch, and reverse.
	Speaker Test		The connection of a speaker can be confirmed by test tone.
	Navigation	Steering Angle Adjustment	A difference can be adjusted between the actual turning angle and the vehicle mark turning angle.
		Speed Calibration	A difference can be adjusted between the current location mark and the actual location.
	Error History		The system malfunction and the frequency when occurred in the past are displayed. The time and place that the selected malfunction last occurred are displayed when the malfunctioning item is selected.
	Vehicle CAN Diagnosis		The transmitting/receiving of CAN communication can be monitored.
	AV COMM Diagnosis		The communication condition of each unit of Multi AV system can be monitored.
	Handsfree Phone		The received volume adjustment of hands-free phone, microphone speaker check, and erase memory can be performed.
	Bluetooth		The passkey and the device name can be checked and changed.
	Delete Unit Connection Log		Erase the connection history of unit and error history.
	Feature Restriction Setting		Operations of navigation system while driving can be restricted by using this function.

STARTING PROCEDURE

1. Start the engine.
2. Turn the audio system OFF.

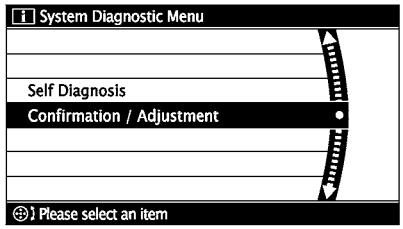
cardiagn.com

3. Turn the volume control dial clockwise or counterclockwise for 40 clicks or more while pushing the “SETTING” button. (A short beep will be heard when the self-diagnosis mode is started.)
   • Shifting from current screen to previous screen is performed by pushing “BACK” button.



JPNIA0173GB

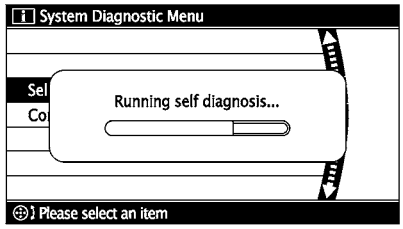
4. The trouble diagnosis initial screen is displayed, and then the items of “Self Diagnosis” and “Confirmation / Adjustment” can be selected.



SKIB3961E

Self-diagnosis mode

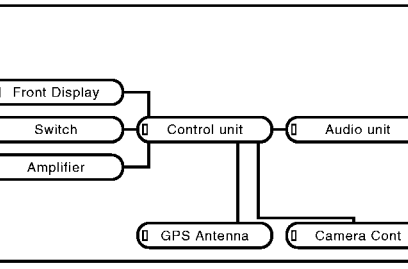
1. Start the self-diagnosis function. Then select “Self Diagnosis”.
- Self-diagnosis subdivision screen is displayed, and the self-diagnosis mode starts.
- The bar graph visible on the center of the self-diagnosis subdivision screen indicates progress of the trouble diagnosis.



SKIB3657E

2. Diagnosis results are displayed after the self-diagnosis is completed. The unit names and the connection lines are color-coded according to the diagnostic results.

Diagnosis results	Unit	Connection line
Normal	Green	Green
Connection malfunction	Gray	Yellow
DVD drive undiagnosed	Gray	Green
DVD-ROM and DVD-ROM drive malfunction	Yellow	Green
Unit malfunction Note	Red	Green



SKIB9021E

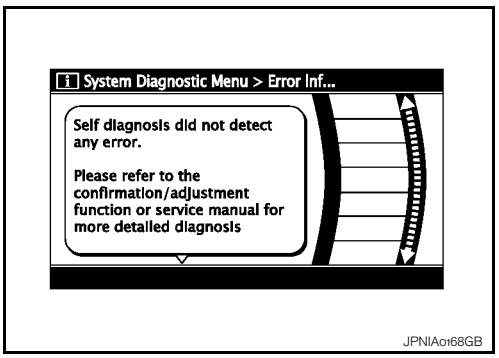
NOTE:

• Only the control unit (NAVI control unit) is displayed in red.

- The screen switch colors are determined according to the following order of priority: red > yellow > gray if multiple errors occur at the same time for a single unit.

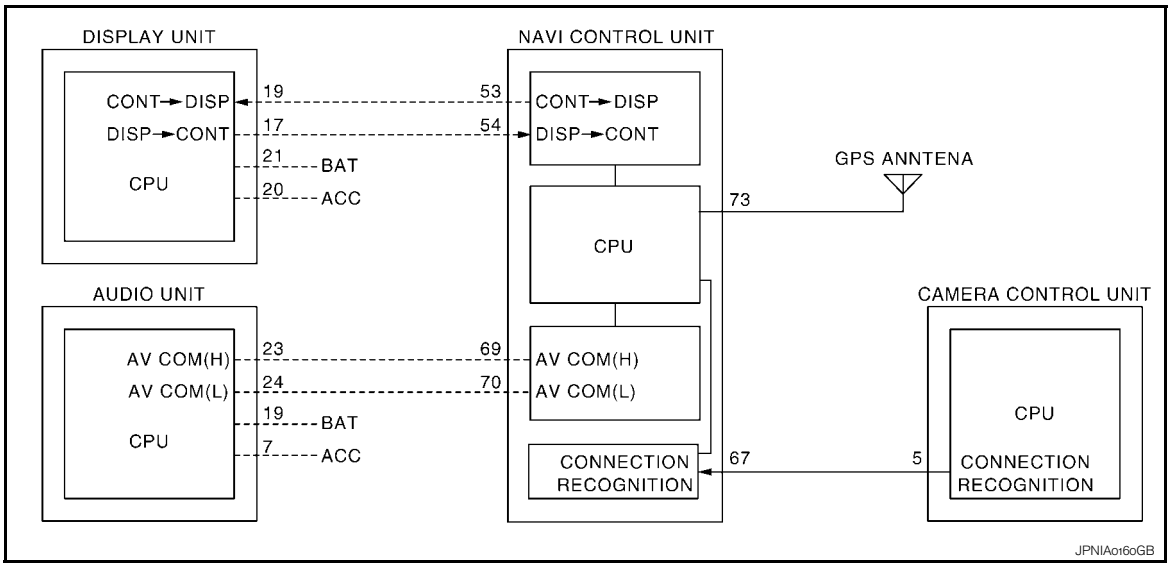
cardiagn.com

- The comments of the self-diagnosis results can be viewed with a component in the diagnosis result screen.



Detection range of self-diagnosis mode

- The self-diagnosis mode allows the technician to diagnose the connection in the communication line between NAVI control unit and each unit and the internal operation of the NAVI control unit.
- Because the start condition of diagnosis function is a switch operation, the on board diagnosis function cannot be started up if any malfunction is detected in a switch.



Self-diagnosis results

Check the applicable display at the following table, and then repair the malfunctioning parts.

Self-diagnosis result chart

cardiagn.com

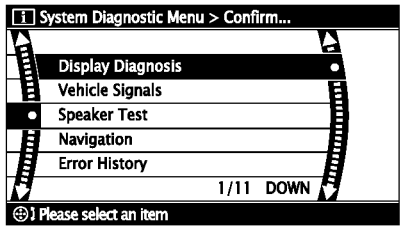
Area with yellow connection lines	Description	Possible malfunction location / Action to take
 : Red SKIB9022E	NAVI control unit malfunction is detected.	NAVI control unit
 : Yellow JSNIA0391GB	• Malfunction is detected on DVD-ROM drive pickup lens in NAVI control unit. • There is dirt and damage on the map disc.	• Clean the DVD-ROM drive pickup lens in NAVI control unit using the specified cleaning disc. • Map disc • NAVI control unit
 : Gray SKIB9024E	DVD-ROM not inserted is detected.	Insert map disc
 : Gray ····· : Yellow SKIB9025E	Malfunction is detected on communication signal between NAVI control unit and audio unit.	• NAVI control unit • Audio unit

cardiagn.com

Area with yellow connection lines	Description	Possible malfunction location / Action to take
 JSNIA0392GB	A malfunction is detected in Camera-connection recognition signal circuit.	Camera connection recognition signal circuit
 SKIB9028E	GPS antenna connection malfunction is detected.	• GPS antenna • GPS antenna feeder
 JSNIA0393GB	Malfunction is detected on communication signal between NAVI control unit and display unit.	• NAVI control unit • Display unit

COMFIRMATON/ADJUSTMENT MODE

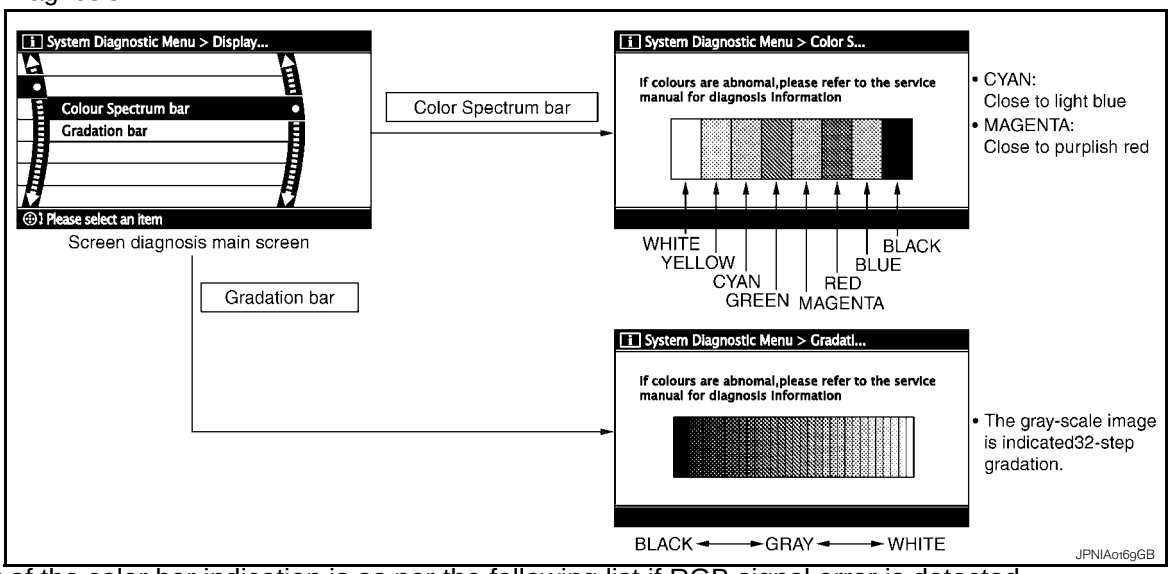
1. Start the diagnosis function and select “Confirmation / Adjustment”. The confirmation/adjustment mode indicates where each item can be checked or adjusted.
2. Select each switch on the “Confirmation / Adjustment Mode” screen to display the relevant trouble diagnosis screen. Press the “BACK” switch to return to the initial “Confirmation / Adjustment Mode” screen.



SKIB4658E

cardiagn.com

Display Diagnosis

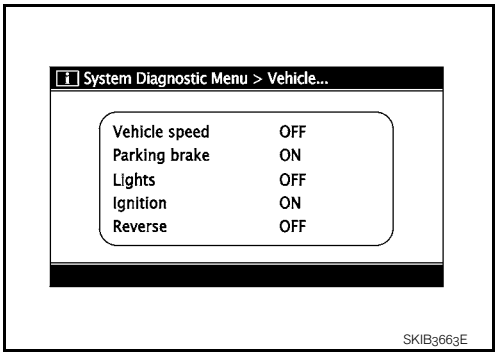


The tint of the color bar indication is as per the following list if RGB signal error is detected.

R (red) signal error : Light blue (Cyan) tint
G (green) signal error : Purple (Magenta) tint
B (blue) signal error : Yellow tint

Vehicle Signals

A comparison check can be made of each actual vehicle signal and the signals recognized by the system.



Diagnosis item	Display	Vehicle status	Remarks
Vehicle speed	ON	Vehicle speed > 0 km/h (0 MPH)	Changes in indication may be delayed by approximately 1.5 seconds. This is normal.
	OFF	Vehicle speed = 0 km/h (0 MPH)	
	—	Ignition switch ACC	
Parking brake	ON	Parking brake is applied.	
	OFF	Parking brake is released.	
Lights	ON	Light switch ON	—
	OFF	Light switch OFF	
Ignition	ON	Ignition switch ON	—
	OFF	Ignition switch in ACC position	
Reverse	ON	Selector lever in R position	Changes in indication may be delayed by approximately 1.5 seconds. This is normal.
	OFF	Selector lever in any position other than R	
	—	Ignition switch ACC	

Speaker Test

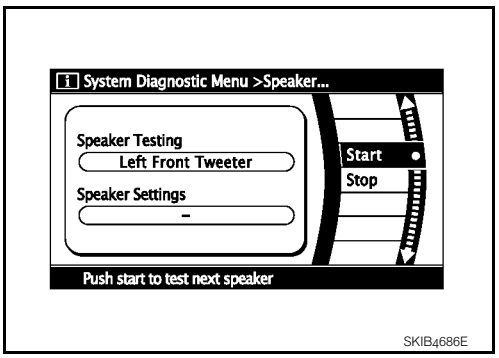
cardiagn.com

Select “SPEAKER TEST” to display the Speaker Diagnosis screen. Press “START and NEXT” to generate a test tone in a speaker. Press “Start” to generate a test tone in the next speaker. Press “Stop” to stop the test tones.

NOTE:

The frequency of test tone emitted from each speaker is as follows.

Tweeter	**: 3 kHz**
Front door speaker	**: 300 Hz**
Rear door speaker	**: 1 kHz**

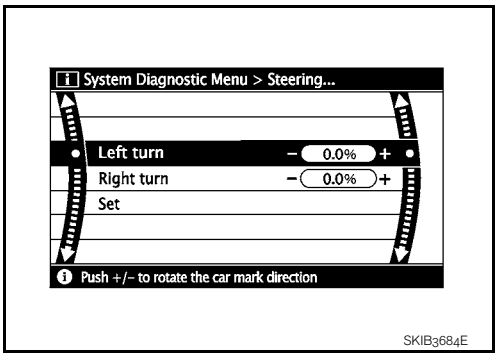


SKIB4686E

Navigation

STEERING ANGLE ADJUSTMENT

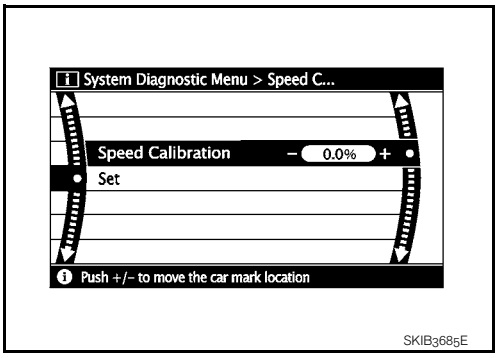
The steering angle output value detected with the gyroscope is adjusted.



SKIB3684E

SPEED CALIBRATION

During normal driving, distance error caused by tire wear and tire pressure change is automatically adjusted for by the automatic distance correction function. This function, on the other hand, is for immediate adjustment, in cases such as driving with tire chain fitted on tires.



SKIB3685E

ERROR HISTORY

The diagnostic results of “Self-diagnosis” determine if any malfunction occurred between selecting “Self-diagnosis” and displaying “Self-diagnostic Results”.

The trouble diagnosis result will be judged normal if an error occurred before the ignition switch was turned ON and does not occur again until “Self-diagnosis” is completed. Therefore, errors in the past which cannot be found by “Self-diagnosis”, must be found by checking the “Error record”.

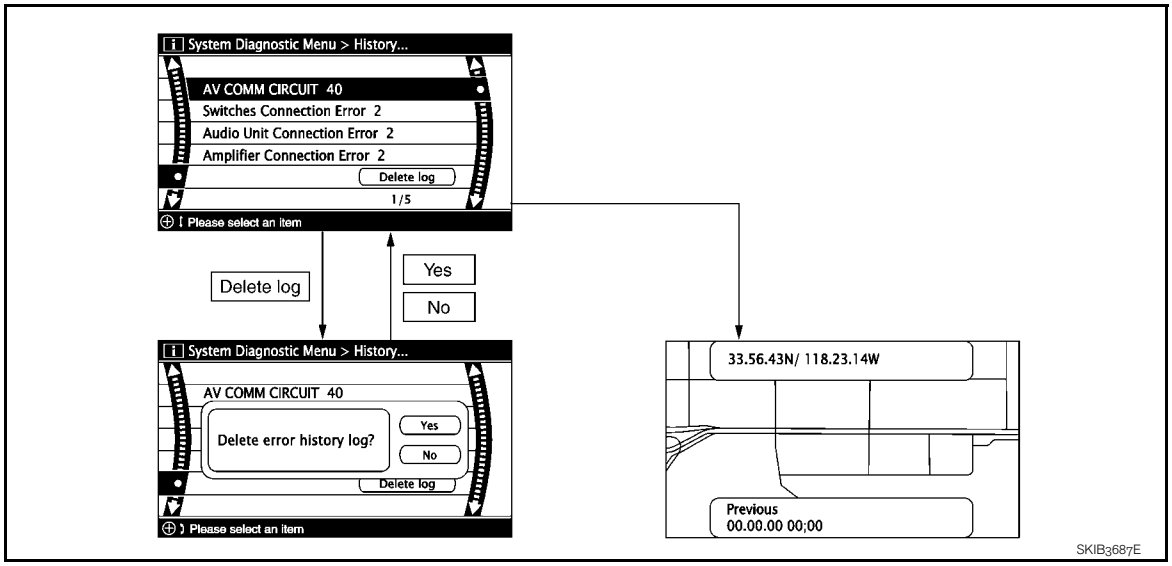
The error history shows the error occurrence frequency in past. The frequency of occurrence is displayed by 2 types: the count down type and the count up type. Select either type according to the error item.

In “Error History” of models with NAVI, time and place that the selected error last occurred are displayed. Be careful about the following.

- The correct date of occurrence may not be able to be displayed if there is a malfunction with the GPS antenna circuit board in the NAVI control unit.
- Place of the error occurrence is represented by the position of the current location mark at the time an error occurred. If current location mark has deviated from the correct position, then the place of the error occurrence cannot be located correctly.

cardiagn.com

Transition Screen



Count Down Type
- Set the counter to 40 when the error is detected. The counter decreases by 1 if the system is normal when turning the ignition switch ON.
- The lower limit of the counter is 1. It can be reset to 0 by “Delete log” switch or CONSULT-III.

Count Up Type
- The counter increases 1 when the ignition switch is turned ON and the error is detected. The counter does not decrease even if it is normal when the ignition switch is turned ON the next time.
- The upper limit of the counter is 50. 51 or more is displayed as 50. It can be reset to 0 by “Delete log” switch or CONSULT-III.

Display type of occurrence frequency	Error history display item
Count down type	CAN_COMM_CIRCUIT, CONTROL UNIT (CAN), AV COMM CIRCUIT, CONTROL UNIT (AV)
Count up type	Other than the above

Error Item
- Some error items may be displayed simultaneously according to the cause. The detection of the cause can be performed by the combination of display items if some error items are displayed simultaneously.

Error item	Description	Possible cause/Action to take
CAN_COMM_CIRCUIT	CAN communication malfunction is detected.	Perform the diagnosis using CONSULT-III, and then repair the malfunctioning parts based on diagnostic results. Refer to AV-65, "CONSULT - III Function (MULTI AV)".
CONTROL UNIT (CAN)	CAN initial diagnosis malfunction is detected.	NAVI control unit
CONTROL UNIT (AV)	AV communication circuit initial diagnosis malfunction is detected.	NAVI control unit
• AV COMM CIRCUIT • Switches Connection Error • Audio Unit Connection Error • Amplifier Connection Error • RDS-TMC Error	• Audio unit power supply and ground circuit malfunction is detected. • Malfunction is detected on communication circuit between Audio unit and NAVI control unit. • Malfunction is detected on communication signal between audio unit and NAVI control unit.	• Audio unit power supply and ground circuit • Communication circuit between audio unit and NAVI control unit

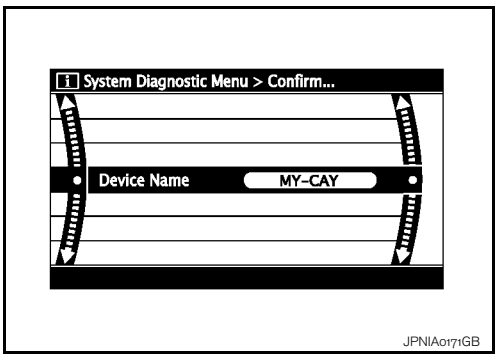
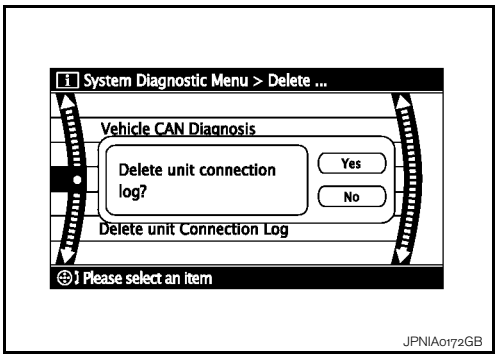
- The device name of Bluetooth can be confirmed and changed.
- The device name can be changed by sixteen digits within A to Z (small character can be used) and - (hyphen).



JPNIA0171GB

Delete Unit Connection Log

Deletes any unit connection records and error records from the NAVI control unit memory. (Clear the records of the unit that has been removed.)



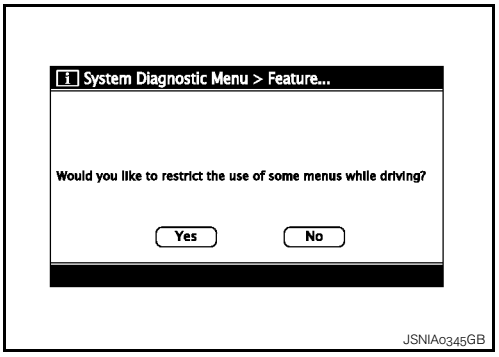
JPNIA0172GB

Feature Restriction Setting

Operations of navigation system that are performed while driving can be restricted by using this function.

CAUTION:

Once operational restrictions are imposed, they can not be cancelled even when the software is updated or the language-switching program is loaded.



JSNIA0345GB

CONSULT - III Function (MULTI AV)

INFOID:0000000000947020

CONSULT-III functions

CONSULT-III performs the following functions via the communication with the NAVI control unit.

Diagnosis mode	Description
SELF-DIAG RESULTS	Performs a diagnosis on the NAVI control unit and a connection diagnosis for the communication circuit of the Multi AV system, and displays the current and past malfunctions collectively.
DATA MONITOR	The diagnosis of vehicle signal that is input to the NAVI control unit can be performed.
AV COMM MONITOR	Allows the technician to monitor the status of the Multi AV system communication signals.
ECU PART NUMBER	The part number of NAVI control unit can be checked.

Self-diagnosis results

- In CONSULT-III self-diagnosis, self-diagnosis results and error history are displayed collectively.
- The current malfunction indicates “CRNT”. The past malfunction indicates “PAST”.
- The timing is displayed as “0” if any of the error codes [U1000], [U1010], [U1300] and [U1310] is detected. The counter increases by 1 if the condition is normal at the next ignition switch ON cycle.

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000000947021

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart. Refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000000947022

DTC DETECTION LOGIC

DTC	Display contents of CONSULT-III	Diagnostic item is detected when...	Probable malfunction location
U1000	CAN COMM CIRCUIT [U1000]	NAVI control unit does not transmit or receive CAN communication signal for 2 seconds or more.	CAN communication system

Diagnosis Procedure

INFOID:0000000000947023

1. PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 second or more.
2. Check “Self Diagnostic Result” of “MULTI AV”.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to “LAN system”. Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI section. Refer to GI-39, "Intermittent Incident".

U1208 NAVI CONTROL UNIT

Description

INFOID:0000000000954914

Part name	Description
NAVI CONTORL UNIT	• Map data can be read from the map DVD-ROM by installing map DVD-ROM. • It is the master unit of the MULTI AV system, and it is connected to each control unit by means of communication. It operates each system according to communication signals from the NAVI control unit. • The NAVI control unit includes the audio, hands-free phone, navigation, and vehicle information functions. • It is connected to ECM and combination meter via CAN communication to obtain necessary information for the vehicle information function. • It inputs the illumination signals that are required for the display dimming control. • It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake).
MAP DVD-ROM	A collection of map data

DTC Logic

INFOID:0000000000954915

DTC	Display contents of CONSULT-III	DTC Detection Condition	Probable malfunction location
U1208	DVD-ROM COMM [U1208]	• Malfunction is detected on DVD-ROM drive pickup lens in NAVI control unit. • There is dirt and damage on the map disc.	• Map disc • NAVI control unit

Diagnosis Procedure

INFOID:0000000000954916

1.PERFORM THE SELF-DIAGNOSIS

1. Delete the self-diagnosis results. Turn ignition switch OFF.
2. Turn ignition switch ON. Replace map DVD-ROM with a normal one.
3. Perform the self-diagnosis again.
4. Check that the DTC is detected again.

Is any DTC detected?

YES >> Replace NAVI control unit.
NO >> Replace Map disc.

cardiagn.com

U1209 NAVI CONTROL UNIT

Description

INFOID:0000000000954923

Part name	Description
NAVI CONTORL UNIT	• Map data can be read from the map DVD-ROM by installing map DVD-ROM. • It is the master unit of the MULTI AV system, and it is connected to each control unit by means of communication. It operates each system according to communication signals from the NAVI control unit. • The NAVI control unit includes the audio, hands-free phone, navigation, and vehicle information functions. • It is connected to ECM and combination meter via CAN communication to obtain necessary information for the vehicle information function. • It inputs the illumination signals that are required for the display dimming control. • It inputs the signals for driving status recognition (vehicle speed, reverse and parking brake).
MAP DVD-ROM	A collection of map data

DTC Logic

INFOID:0000000000954924

DTC	Display contents of CONSULT-III	DTC Detection Condition	Probable malfunction location
U1209	DVD-ROM READ [U1209]	• Malfunction is detected on DVD-ROM drive pickup lens in NAVI control unit. • There is dirt and damage on the map disc.	• Map disc • NAVI control unit

Diagnosis Procedure

INFOID:0000000000954925

1.PERFORM THE SELF-DIAGNOSIS

1. Delete the self-diagnosis results. Turn ignition switch OFF.
2. Turn ignition switch ON. Replace map DVD-ROM with a normal one.
3. Perform the self-diagnosis again.
4. Check that the DTC is detected again.

Is any DTC detected?

YES >> Replace NAVI control unit.
NO >> Replace Map disc.

U1243 DISPLAY UNIT

Description

INFOID:0000000000947068

Part name	Description
DISPLAY UNIT	• Display image is controlled by the serial communication from NAVI control unit. • RGB image signal is input from NAVI control unit (RGB, RGB area and RGB synchronizing). Camera image signal is input from camera control unit. • Synchronize signal (HP, VP) is output to NAVI control unit.

DTC Logic

INFOID:0000000000947069

DTC	Display contents of CONSULT-III	DTC Detection Condition	Possible causes
U1243	FRONT DISP CONN [U1243]	• Display unit power supply and ground circuit malfunction is detected. • Malfunction is detected on communication circuit between display unit and NAVI control unit. • Malfunction is detected on communication signal between display unit and NAVI control unit.	• Display unit power supply and ground circuit • Communication circuit between display unit and NAVI control unit

Diagnosis Procedure

INFOID:0000000000947070

1.CHECK DISPLAY UNIT POWER SUPPLY AND GROUND CIRCUIT

Check display unit power supply and ground circuit. Refer to AV-101, "DISPLAY UNIT : Diagnosis Procedure".

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair malfunctioning parts.

2.CHECK CONTINUITY COMMUNICATION CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminals 17, 19 and NAVI control unit harness connector terminals 54, 53.

17 - 54 : Continuity should exist.
19 - 53 : Continuity should exist.

4. Check continuity between display unit harness connector terminals 17, 19 and ground.

17, 19 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK COMMUNICATION SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Check signal between display unit harness connector terminal 17 and ground.

cardiagn.com

17 - Ground	 PKIB5039J

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace NAVI control unit.

4.CHECK COMMUNICATION SIGNAL

Check signal between display unit harness connector terminal 19 and ground.

19 - Ground	 PKIB5039J

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace display unit.

cardiagn.com

U1244 GPS ANTENNA

Description

INFOID:0000000000947071

Part name	Description
GPS ANTENNA	GPS signal is received and sent to NAVI control unit.

DTC Logic

INFOID:0000000000947072

DTC	Display contents of CONSULT-III	DTC Detection Condition	Possible causes
U1244	GPS ANTENNA CONN [U1244]	GPS antenna connection malfunction is detected.	GPS antenna disconnection

Diagnosis Procedure

INFOID:0000000000947073

1.CHECK GPS ANTENNA

Visually check GPS antenna and antenna feeder.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair malfunctioning parts.

2.CHECK NAVI CONTROL UNIT VOLTAGE

1. Disconnect GPS antenna connector.
2. Turn ignition switch ON.
3. Check voltage between NAVI control unit terminal 73 and ground.

73 - Ground : Approx. 5 V

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace NAVI control unit.

cardiagn.com

U1250 CAMERA CONTROL UNIT

Description

INFOID:0000000000947077

Part name	Description
CAMERA CONTROL UNIT	• Camera image signal is input from rear view camera, and camera image is indicated on the display. • Power (camera ON signal) is sent to rear view camera. • It is controlled by AV communication sent from NAVI control unit. • NAVI control unit recognizes the presence of camera system with camera connection recognition signal.

DTC Logic

INFOID:0000000000947078

DTC	Display contents of CONSULT-III	DTC Detection Condition	Possible causes
U1250	CAMERA CONT. CONN [U1250]	A malfunction is detected in camera-connection recognition signal circuit.	Camera-connection recognition signal circuit

Diagnosis Procedure

INFOID:0000000000947079

1.CHECK CAMERA-CONNECTION RECOGNITION SIGNAL CIRCUIT

1. Disconnect NAVI control unit connector and camera control unit connector.
2. Check continuity between NAVI control unit harness connector terminal 67 and camera control unit harness connector terminal 5.

67 - 5 : Continuity should exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK NAVI CONTROL UNIT VOLTAGE

1. Connect NAVI control unit connector.
2. Turn ignition switch ON.
3. Check voltage between NAVI control unit harness connector terminal 67 and ground.

67 - Ground : Approx. 5 V

Is inspection result OK?

YES >> Replace camera control unit.
NO >> Replace NAVI control unit.

cardiagn.com

U1300 AV COMM CIRCUIT

Description

INFOID:0000000000955002

U1300 is indicated when malfunction occurs in communication signal of multi AV system. It is indicated simultaneously, without fail, with the malfunction of control units connected to NAVI control unit with communication line. It determines the possible malfunction cause from the table below.

SELF-DIAGNOSIS RESULTS DISPLAY ITEM

DTC	Display contents of CONSULT-III	Description	Possible malfunction factor/Action to take
U1300 U1240 U1249 U124E U124F	• AV COMM CIRCUIT [U1300] • SWITCH CONN [U1240] • AUDIO H/U CONN [U1249] • AMP CONN [U124E] • RDS CONN [U124F]	• Audio unit power supply and ground circuit malfunction is detected. • Malfunction occurs in AV communication circuit between NAVI control unit and audio unit. • Malfunction is detected in AV communication signal between NAVI control unit and audio unit.	• Audio unit power supply and ground circuits Refer to AV-100, "AUDIO UNIT : Diagnosis Procedure". • AV communication circuit between NAVI control unit and audio unit

cardiagn.com

POWER SUPPLY AND GROUND CIRCUIT
NAVI CONTROL UNIT

NAVI CONTROL UNIT : Diagnosis Procedure

INFOID:0000000000947084

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	38
Ignition switch ACC or ON	5
Ignition switch ON or START	4

Is inspection result OK?

YES >> GO TO 2.
NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2.CHECK POWER SUPPLY CIRCUIT

Check voltage between NAVI control unit harness connectors and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Value (Approx.)
Battery power supply	B95	2	OFF	12 V
ACC power supply	B95	5	ACC	12 V
Ignition signal	B96	63	ON	12 V

Is inspection result OK?

YES >> GO TO 3.
NO >> Check harness between NAVI control unit and fuse.

3.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit connectors.
3. Check continuity between NAVI control unit harness connector and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Continuity
Ground	B95	1	OFF	Continuity should exist.

Is inspection result OK?

YES >> INSPECTION END
NO >> Repair harness or connector.

AUDIO UNIT

AUDIO UNIT : Diagnosis Procedure

INFOID:0000000000954530

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	38
Ignition switch ACC or ON	5

Is inspection result OK?

YES >> GO TO 2.
NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2.CHECK POWER SUPPLY CIRCUIT

Check voltage between audio unit harness connectors and ground.

cardiagn.com

Signal name	Connector No.	Terminal No.	Ignition switch position	Value (Approx.)
Battery power supply	M46	19	OFF	12 V
ACC power supply	M46	7	ACC	12 V

Is inspection result OK?

YES >> GO TO 3.
NO >> Check harness between audio unit and fuse.

3.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect audio unit connectors.
3. Check continuity between audio unit harness connector and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Continuity
Ground	M46	8, 20	OFF	Continuity should exist.

Is inspection result OK?

YES >> INSPECTION END
NO >> Repair harness or connector.

DISPLAY UNIT

DISPLAY UNIT : Diagnosis Procedure

INFOID:0000000000947085

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	38
Ignition switch ACC or ON	5

Is inspection result OK?

YES >> GO TO 2.
NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2.CHECK POWER SUPPLY CIRCUIT

Check voltage between display unit harness connectors and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Value (Approx.)
Battery power supply	M49	21	OFF	12 V
ACC power supply	M49	20	ACC	12 V

Is inspection result OK?

YES >> GO TO 3.
NO >> Check harness between display unit and fuse.

3.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector.
3. Check continuity between display unit harness connector and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Continuity
Ground	M49	23	OFF	Continuity should exist.

Is inspection result OK?

YES >> INSPECTION END
NO >> Repair harness or connector.

CAMERA CONTROL UNIT

cardiagn.com

CAMERA CONTROL UNIT : Diagnosis Procedure

INFOID:0000000000947087

1.CHECK FUSE

Check for blown fuses.

Power source	Fuse No.
Battery	38
Ignition switch ACC or ON	5

Is inspection result OK?

YES >> GO TO 2.
NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2.CHECK POWER SUPPLY CIRCUIT

Check voltage between camera control unit harness connectors and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Value (Approx.)
Battery power supply	B60	1	OFF	12 V
ACC power supply	B60	2	ACC	12 V

Is inspection result OK?

YES >> GO TO 3.
NO >> Check harness between camera control unit and fuse.

3.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect camera control unit connector.
3. Check continuity between camera control unit harness connector and ground.

Signal name	Connector No.	Terminal No.	Ignition switch position	Continuity
Ground	B60	3	OFF	Continuity should exist.

Is inspection result OK?

YES >> INSPECTION END
NO >> Repair harness or connector.

cardiagn.com

RGB (R: RED) SIGNAL CIRCUIT

Description

INFOID:0000000000947090

Transmits the image displayed with NAVI control unit with RGB signal to the display unit.

Diagnosis Procedure

INFOID:0000000000947091

1.CHECK CONTINUITY RGB (R: RED) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 1 and NAVI control unit harness connector terminal 44.

1 - 44 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 1 and ground.

1 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK RGB (R: RED) SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Start “Confirmation / Adjustment Mode”, and then display color bar by selecting“Color Spectrum Bar” on DISPLAY DIAGNOSIS screen.
4. Check signal between display unit harness connector terminal 1 and 8.

1 - 8	 JPNIA0221ZZ

Is inspection result OK?

YES >> Replace display unit.
NO >> Replace NAVI control unit.

cardiagn.com

RGB (G: GREEN) SIGNAL CIRCUIT

Description

INFOID:0000000000947092

Transmits the image displayed with NAVI control unit with RGB signal to the display unit.

Diagnosis Procedure

INFOID:0000000000947093

1.CHECK CONTINUITY RGB (G: GREEN) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 3 and NAVI control unit harness connector terminal 45.

3 - 45 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 3 and ground.

3 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK RGB (G: GREEN) SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Start “Confirmation / Adjustment Mode”, and then display color bar by selecting“Color Spectrum Bar” on DISPLAY DIAGNOSIS screen.
4. Check signal between display unit harness connector terminal 3 and 8.

3 - 8	 JPNIA0222ZZ

Is inspection result OK?

YES >> Replace display unit.
NO >> Replace NAVI control unit.

cardiagn.com

RGB (B: BLUE) SIGNAL CIRCUIT

Description

INFOID:0000000000947094

Transmits the image displayed with NAVI control unit with RGB signal to the display unit.

Diagnosis Procedure

INFOID:0000000000947095

1.CHECK CONTINUITY RGB (B: BLUE) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 5 and NAVI control unit harness connector terminal 46.

5 - 46 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 5 and ground.

5 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK RGB (B: BLUE) SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Start “Confirmation / Adjustment Mode”, and then display color bar by selecting“Color Spectrum Bar” on DISPLAY DIAGNOSIS screen.
4. Check signal between display unit harness connector terminal 5 and 8.

5 - 8	 JPNIA0223ZZ

Is inspection result OK?

YES >> Replace display unit.
NO >> Replace NAVI control unit.

cardiagn.com

RGB SYNCHRONIZING SIGNAL CIRCUIT

Description

INFOID:0000000000947096

Transmits the RGB synchronizing signal to the display unit so as to synchronize the RGB image displayed with NAVI control unit.

Diagnosis Procedure

INFOID:0000000000947097

1.CHECK CONTINUITY RGB SYNCHRONIZING SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 7 and NAVI control unit harness connector terminal 48.

7 - 48 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 7 and ground.

7 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK RGB SYNCHRONIZING SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Check signal between display unit harness connector terminal 7 and ground.

7 - Ground	 SKIB0825E

Is inspection result OK?

YES >> Replace display unit.
NO >> Replace NAVI control unit.

cardiagn.com

RGB AREA (YS) SIGNAL CIRCUIT

Description

INFOID:0000000000947098

Transmits the display area of RGB image displayed by NAVI control unit with RGB area (YS) signal to display unit.

Diagnosis Procedure

INFOID:0000000000947099

1.CHECK CONTINUITY RGB AREA (YS) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 2 and NAVI control unit harness connector terminal 50.

2 - 50 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 2 and ground.

2 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK RGB SYNCHRONIZING SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Check signal between display unit harness connector terminal 2 and ground.

2 - Ground	At RGB image displayed	: Approx. 5 V
	At rear view camera image displayed	 PKIB4948J

Is inspection result OK?

YES >> Replace display unit.
NO >> Replace NAVI control unit.

cardiagn.com

HORIZONTAL SYNCHRONIZING (HP) SIGNAL CIRCUIT

Description

INFOID:0000000000947100

In composite image (camera image), it transmits the vertical synchronizing (VP) signal and horizontal synchronizing (HP) signal from display unit to NAVI control unit so as to synchronize the RGB images displayed with NAVI control unit such as the image quality adjusting menu, etc.

Diagnosis Procedure

INFOID:0000000000947101

1.CHECK CONTINUITY HORIZONTAL SYNCHRONIZING (HP) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 4 and NAVI control unit harness connector terminal 51.

4 - 51 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 4 and ground.

4 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK HORIZONTAL SYNCHRONIZING (HP) SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Check signal between display unit harness connector terminal 4 and ground.

4 - Ground	 SKIB0825E

Is inspection result OK?

YES >> Replace NAVI control unit.
NO >> Replace display unit.

cardiagn.com

VERTICAL SYNCHRONIZING (VP) SIGNAL CIRCUIT

Description

INFOID:0000000000947102

In composite image (camera image), it is transmits the vertical synchronizing (VP) signal and horizontal synchronizing (HP) signal from display unit to NAVI control unit so as to synchronize the RGB images displayed with NAVI control unit such as the image quality adjusting menu, etc.

Diagnosis Procedure

INFOID:0000000000947103

1. CHECK CONTINUITY VERTICAL SYNCHRONIZING (VP) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect display unit connector and NAVI control unit connector.
3. Check continuity between display unit harness connector terminal 6 and NAVI control unit harness connector terminal 52.

6 - 52 : Continuity should exist.

4. Check continuity between display unit harness connector terminal 6 and ground.

6 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2. CHECK VERTICAL SYNCHRONIZING (VP) SIGNAL

1. Connect display unit connector and NAVI control unit connector.
2. Turn ignition switch ON.
3. Check signal between display unit harness connector terminal 6 and ground.

6 - Ground	 SKIB0823E

Is inspection result OK?

YES >> Replace NAVI control unit.
NO >> Replace display unit.

cardiagn.com

MICROPHONE SIGNAL CIRCUIT

Description

INFOID:0000000000947108

Supplies power from NAVI control unit to microphone. The microphone transmits the sound voice to the NAVI control unit.

Diagnosis Procedure

INFOID:0000000000947109

1.CHECK CONTINUITY BETWEEN NAVI CONTROL UNIT AND MICROPHONE CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect NAVI control unit connector and microphone connector.
3. Check continuity between NAVI control unit harness connector terminals 6, 7, 8 and microphone harness connector terminals 4, 2, 1.

6 - 4	**: Continuity should exist.**
7 - 2	**: Continuity should exist.**
8 - 1	**: Continuity should exist.**

4. Check continuity between NAVI control unit harness connector terminals 6, 8 and ground.

6, 8 - Ground	**: Continuity should not exist.**

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK VOLTAGE MICROPHONE VCC

1. Connect NAVI control unit connector.
2. Turn ignition switch ON.
3. Check voltage between NAVI control unit harness connector terminals 6 and 7.

6 - 7	**: Approx. 5 V**

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace NAVI control unit.

3.CHECK MICROPHONE SIGNAL

1. Connect microphone connector.
2. Check signal between NAVI control unit harness connector terminals 8 and 7.

8 - 7	 PKIB5037J

Is inspection result OK?

YES >> Replace NAVI control unit.
NO >> Replace microphone.

cardiagn.com

CAMERA IMAGE SIGNAL CIRCUIT (REAR VIEW CAMERA TO CAMERA CONTROL UNIT)

Description

INFOID:0000000000947110

- Camera control unit outputs camera ON signal to rear view camera and inputs rear view camera image signal from rear view camera when the reverse signal is input.
- The camera control unit that inputs the camera image signal transmits the camera image signal to the display unit.

Diagnosis Procedure

INFOID:0000000000947111

1.CHECK CONTINUITY CAMERA IMAGE SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect camera control unit connector and rear view camera connector.
3. Check continuity between camera control unit harness connector terminal 10 and rear view camera harness connector terminal 3.

10 - 3 : Continuity should exist.

4. Check continuity between camera control unit harness connector terminal 10 and ground.

10 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK CAMERA IMAGE SIGNAL

1. Connect camera control unit connector and rear view camera connector.
2. Turn ignition switch ON.
3. Check signal between camera control unit harness connector terminal 10 and ground.

10 - Ground	At rear view camera image displayed	 SKIB0827E

Is inspection result OK?

YES >> Replace camera control unit.
NO >> Replace rear view camera.

cardiagn.com

CAMERA IMAGE SIGNAL CIRCUIT (CAMERA CONTROL UNIT TO DISPLAY UNIT)

Description

INFOID:0000000000947114

- Camera control unit outputs camera ON signal to rear view camera and inputs rear view camera image signal from rear view camera when the reverse signal is input.
- The camera control unit that inputs the camera image signal transmits the camera image signal to the display unit.

Diagnosis Procedure

INFOID:0000000000947115

1.CHECK CONTINUITY CAMERA IMAGE SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect camera control unit connector and display unit connector.
3. Check continuity between camera control unit harness connector terminal 12, 11 and display unit harness connector terminal 11, 12.

12 - 11	**: Continuity should exist.**
11 - 12	**: Continuity should exist.**

4. Check continuity between camera control unit harness connector terminal 12 and ground.

12 - Ground	**: Continuity should not exist.**

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK CAMERA IMAGE SIGNAL

1. Connect camera control unit connector and display unit connector.
2. Turn ignition switch ON.
3. Check signal between camera control unit harness connector terminal 12 and ground.

12 - Ground	At rear view camera image displayed	 SKIB0827E

Is inspection result OK?

YES >> Replace display unit.
NO >> Replace camera control unit.

cardiagn.com

CAMERA ON SIGNAL CIRCUIT

Description

INFOID:0000000000947112

- Camera control unit outputs camera ON signal to rear view camera and inputs rear view camera image signal from rear view camera when the reverse signal is input.
- The camera control unit that inputs the camera image signal transmits the camera image signal to the display unit.

Diagnosis Procedure

INFOID:0000000000947113

1. CHECK CONTINUITY CAMERA ON SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect camera control unit connector and rear view camera connector.
3. Check continuity between camera control unit harness connector terminal 8 and rear view camera harness connector terminal 1.

8 - 1 : Continuity should exist.

4. Check continuity between camera control unit harness connector terminal 8 and ground.

8 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2. CHECK VOLTAGE CAMERA ON SIGNAL

1. Connect camera control unit connector and rear view camera connector.
2. Turn ignition switch ON.
3. Shift the selector lever to “R” position.
4. Check signal between camera control unit harness connector terminal 8 and ground.

8 - Ground : Approx. 6 V

Is inspection result OK?

YES >> Replace rear view camera.
NO >> Replace camera control unit.

cardiagn.com

STEERING SWITCH SIGNAL A CIRCUIT

Description

INFOID:0000000000947120

Transmits the steering switch signal to audio unit.

Diagnosis Procedure

INFOID:0000000000947121

1.CHECK STEERING SWITCH SIGNAL A CIRCUIT

1. Disconnect audio unit connector and spiral cable connector.
2. Check continuity between audio unit harness connector terminal 6 and spiral cable harness connector terminal 24.

6 - 24 : Continuity should exist.

3. Check continuity between audio unit harness connector terminals 6 and ground.

6 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK SPIRAL CABLE

Check spiral cable.

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace spiral cable.

3.CHECK AUDIO UNIT VOLTAGE

1. Connect audio unit connector and spiral cable connector.
2. Turn ignition switch ON.
3. Check voltage between audio unit harness connector terminals 6 and 15.

6 - 15 : Approx. 5 V

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace audio unit.

4.CHECK STEERING SWITCH

1. Turn ignition switch OFF.
2. Check steering switch. Refer to AV-114, "Component Inspection".

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace steering switch.

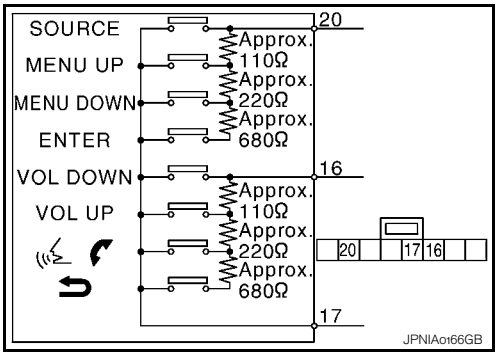
Component Inspection

INFOID:0000000000947122

Measure the resistance between the steering switch connector terminals 20 to 17 and 16 to 17.

cardiagn.com

Standard



Between terminals 20 and 17

ENTER switch ON	**: 990 – 1030 Ω**
MENU DOWN switch ON	**: 324 – 336 Ω**
MENU UP switch ON	**: 108 – 112 Ω**
SOURCE switch ON	**: 0 Ω**

Between terminals 16 and 17

↩ switch ON	**: 990 – 1030 Ω**
switch ON	**: 324 – 336 Ω**
VOL UP switch ON	**: 108 – 112 Ω**
VOL DOWN switch ON	**: 0 Ω**

cardiagn.com

STEERING SWITCH SIGNAL B CIRCUIT

Description

INFOID:0000000000955225

Transmits the steering switch signal to audio unit.

Diagnosis Procedure

INFOID:0000000000947124

1.CHECK STEERING SWITCH SIGNAL B CIRCUIT

1. Disconnect audio unit connector and spiral cable connector.
2. Check continuity between audio unit harness connector terminal 16 and spiral cable harness connector terminal 32.

16 - 32 : Continuity should exist.

3. Check continuity between audio unit harness connector terminal 16 and ground.

16 - Ground : Continuity should not exist.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK SPIRAL CABLE

Check spiral cable.

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace spiral cable.

3.CHECK AUDIO UNIT VOLTAGE

1. Connect audio unit connector and spiral cable connector.
2. Turn ignition switch ON.
3. Check voltage between audio unit harness connector terminals 16 and 15.

16 - 15 : Approx. 5 V

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace audio unit.

4.CHECK STEERING SWITCH

1. Turn ignition switch OFF.
2. Check steering switch. Refer to AV-116, "Component Inspection".

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace steering switch.

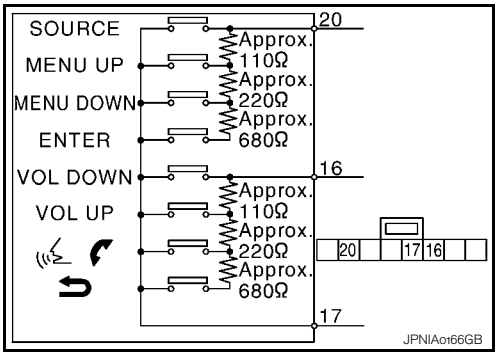
Component Inspection

INFOID:0000000000955226

Measure the resistance between the steering switch connector terminals 20 to 17 and 16 to 17.

cardiagn.com

Standard



Between terminals 20 and 17

ENTER switch ON	**: 990 – 1030 Ω**
MENU DOWN switch ON	**: 324 – 336 Ω**
MENU UP switch ON	**: 108 – 112 Ω**
SOURCE switch ON	**: 0 Ω**

Between terminals 16 and 17

↩ switch ON	**: 990 – 1030 Ω**
switch ON	**: 324 – 336 Ω**
VOL UP switch ON	**: 108 – 112 Ω**
VOL DOWN switch ON	**: 0 Ω**

STEERING SWITCH SIGNAL GND CIRCUIT

Description

INFOID:0000000000955227

Transmits the steering switch signal to audio unit.

Diagnosis Procedure

INFOID:0000000000947127

1.CHECK STEERING SWITCH SIGNAL GND CIRCUIT

1. Disconnect audio unit connector and spiral cable connector.
2. Check continuity between audio unit harness connector terminal 15 and spiral cable harness connector terminal 31.

15 - 31 : Continuity should exist.

3. Connect audio unit connector.

Is inspection result OK?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK SPIRAL CABLE

Check spiral cable.

Is inspection result OK?

YES >> GO TO 3.
NO >> Replace spiral cable.

3.CHECK GROUND CIRCUIT

1. Connect audio unit connector.
2. Check continuity between audio unit harness connector terminal 15 and ground.

15 - Ground : Continuity should exist.

Is inspection result OK?

YES >> GO TO 4.
NO >> Replace audio unit.

4.CHECK STEERING SWITCH

1. Turn ignition switch OFF.
2. Check steering switch. Refer to AV-118, "Component Inspection".

Is inspection result OK?

YES >> INSPECTION END
NO >> Replace steering switch.

Component Inspection

INFOID:0000000000955228

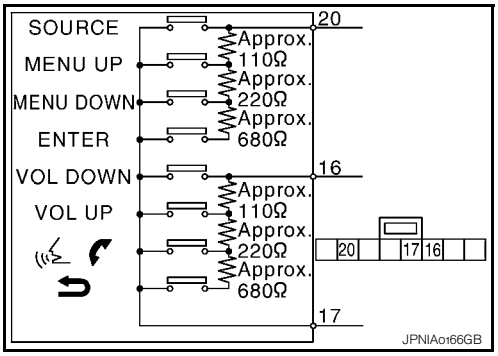
Measure the resistance between the steering switch connector terminals 20 to 17 and 16 to 17.

Standard

Between terminals 20 and 17

ENTER switch ON : 990 – 1030 Ω
MENU DOWN switch ON : 324 – 336 Ω
MENU UP switch ON : 108 – 112 Ω
SOURCE switch ON : 0 Ω

Between terminals 16 and 17



cardiagn.com

switch ON	: 990 – 1030 Ω
switch ON	: 324 – 336 Ω

SYMPTOM DIAGNOSIS

MULTI AV SYSTEM SYMPTOMS

Symptom Table

INFOID:0000000000947140

RELATED TO NAVIGATION

NOTE:
Combined part of AV switch and audio unit.

Symptoms	Check items	Possible malfunction location/Action to take
AV switch cannot be operated. (All switches cannot be operated.)	"MULTI AV" is displayed on "SELECT SYSTEM" screen of CONSULT-III.	Perform the self-diagnosis using CONSULT-III. (AV-65, "CONSULT - III Function (MULTI AV)")
	"MULTI AV" is not displayed on "SELECT SYSTEM" screen of CONSULT-III.	• NAVI control unit power supply and ground circuit (AV-100, "NAVI CONTROL UNIT : Diagnosis Procedure") • Perform CAN diagnosis when "Please wait" is indicated on the screen for approximately 120 seconds after ignition switch ON.
AV switch cannot be operated. (Only specified switch cannot be operated.)	CONSULT-III self-diagnosis detects a malfunction.	Perform the self-diagnosis using CONSULT-III. (AV-65, "CONSULT - III Function (MULTI AV)")
	CONSULT-III self-diagnosis does not detect a malfunction.	Audio unit (AV-202, "Exploded View")
Map screen is not displayed. (RGB image other than map is normal.)	–	Perform the self-diagnosis using CONSULT-III. (AV-65, "CONSULT - III Function (MULTI AV)")
Fuel economy information display is malfunctioning.	–	NAVI control unit power supply and ground circuit (Ignition signal) (AV-100, "NAVI CONTROL UNIT : Diagnosis Procedure")
Voice guidance is not heard.	–	Voice guidance signal circuit
Traffic information (RDS-TMC) is not received.	Radio broadcasts are received.	Audio unit (AV-202, "Exploded View")
	Radio broadcasts are not received.	• Radio antenna (AV-209, "Exploded View") • Antenna feeder (AV-216, "Harness Layout")

RELATED TO REAR VIEW MONITOR

Symptoms	Check items	Possible malfunction location/Action to take
Warning message under the display is not displayed at rear view monitor image.	–	• Horizontal synchronizing (HP) signal circuit (AV-108, "Diagnosis Procedure") • Vertical synchronizing (VP) signal circuit (AV-109, "Diagnosis Procedure") • RGB area (YS) signal circuit (AV-107, "Diagnosis Procedure")
Camera image is not shown. (Only warning message under the display is displayed.)	"REAR VIEW CAMERA" is displayed on "SELECT SYSTEM" screen of CONSULT-III.	• Camera image signal circuit (positive circuit) (Between camera control unit and display unit) (AV-112, "Diagnosis Procedure") • Camera ON signal circuit (AV-113, "Diagnosis Procedure") • Camera image signal circuit (Between rear view camera and camera control unit) (AV-111, "Diagnosis Procedure")
	"REAR VIEW CAMERA" is not displayed on "SELECT SYSTEM" screen of CONSULT-III.	Camera control unit power supply and ground circuit (AV-102, "CAMERA CONTROL UNIT : Diagnosis Procedure")
Camera image is rolling.	–	Camera image signal circuit (negative circuit) (Between camera control unit and display unit) (AV-112, "Diagnosis Procedure")

cardiagn.com

Symptoms	Check items	Possible malfunction location/Action to take
It cannot be switched to rear view monitor.	CONSULT-III self-diagnosis detects a malfunction.	Perform the self-diagnosis using CONSULT-III (MULTI AV) (AV-65, "CONSULT - III Function (MULTI AV)").
	CONSULT-III self-diagnosis does not detect a malfunction.	NAVI control unit reverse signal circuit

RELATED TO AUDIO

Symptom	Check items	Possible malfunction location / Action to take
Audio sound is not heard.	No sound from all speakers	Audio unit (AV-202, "Exploded View")
	Sound is not heard only from the specific places (Front RH, rear RH, front LH and rear LH).	Sound signal circuit of suspect system

RELATED TO RGB IMAGE

Symptoms	Check items	Possible malfunction location/Action to take
Color of RGB image is not proper.	Light blue (Cyan) tint	RGB signal (R: red) circuit (AV-103, "Diagnosis Procedure")
	Purple (Magenta) tint and image is rolling.	RGB signal (G: green) circuit (AV-104, "Diagnosis Procedure")
	Screen looks yellowish.	RGB signal (B: blue) circuit (AV-105, "Diagnosis Procedure")
• RGB image is too dark. • RGB image is too fuzzy.	–	RGB ground circuit
RGB image is not displayed. (Nothing is displayed on the screen.)	"MULTI AV" is displayed on "SELECT SYSTEM" screen of CONSULT-III.	Perform the self-diagnosis using CONSULT-III (AV-65, "CONSULT - III Function (MULTI AV)").
	"MULTI AV" is not displayed on "SELECT SYSTEM" screen of CONSULT-III.	NAVI control unit power supply and ground circuit (AV-100, "NAVI CONTROL UNIT : Diagnosis Procedure")

RELATED TO VOICE ACTIVATED CONTROL

Symptoms	Check items	Possible malfunction location/Action to take
The voice cannot be controlled even if the voice control screen is displayed.	Voice sounds at "Speaker Test" and "Voice Microphone Test" of "Confirmation / Adjustment Mode".	NAVI control unit (AV-201, "Exploded View")
	Voice does not sound at "Speaker Test" and "Voice Microphone Test" of "Confirmation / Adjustment Mode".	• MIC. power supply circuit (AV-110, "Diagnosis Procedure") • Shield (MIC.) circuit (AV-110, "Diagnosis Procedure") • MIC. signal circuit (AV-110, "Diagnosis Procedure")
The voice cannot be controlled. (Voice control screen is not displayed.)	TEL operation screen is displayed by pressing and holding "" switch of steering wheel switch.	NAVI control unit (AV-201, "Exploded View")
	• TEL operation screen is not displayed by pressing and holding "" switch of steering wheel switch. • Other steering wheel switches are normal.	Steering switch (AV-207, "Exploded View")
	"BACK", "VOL UP", "VOL DOWN" and "" switches of steering wheel switch are not operated.	Steering switch signal B circuit AV-116, "Diagnosis Procedure"(AV-201, "Exploded View")
	All steering switches are not operated.	Steering switch signal ground circuit (AV-118, "Diagnosis Procedure")

RELATED TO HANDS FREE PHONE

cardiagn.com

- Check that the cellular phone is corresponding type (Bluetooth® enabled) when the hands free related malfunction vehicle is in service before performing a diagnosis.
- There is a case that malfunction occurs due to the version change of the phone type, etc. even though it is a corresponding type. Therefore, confirm it by changing the cellular phone to another corresponding type phone, and check that it operates normally. It is necessary to distinguish whether the cause is the vehicle or cellular phone. Check to ensure the customers phone is supported by checking the phone compatibility for the hands free system.

Trouble diagnosis chart by symptom

Symptoms	Check items	Possible malfunction location/Action to take
Does not recognize cellular phone connection.	Repeat the registration of cellular phone.	NAVI control unit (AV-201, "Exploded View")
Hands free phone cannot be established.	• Hands free phone operation can be made, but the communication cannot be established. • Hands free phone operation can be performed, however, voice between each other cannot be heard during the conversation.	NAVI control unit (AV-201, "Exploded View")
The other party's voice cannot be heard by hands free phone.	Check the “microphone speaker ”in Inspection & Adjustment Mode if sound is heard.	NAVI control unit (AV-65, "CONSULT - III Function (MULTI AV)")
	Check the “microphone speaker ”in Inspection & Adjustment Mode if sound is not heard.	TEL voice signal circuit
Originating sound is not heard by the other party with hands free phone communication.	Sound operation function is normal.	NAVI control unit (AV-201, "Exploded View")
	Sound operation function does not work.	Microphone signal circuit (AV-110, "Diagnosis Procedure")

RELATED TO STEERING WHEEL SWITCH

Symptoms	Possible malfunction location/Action to take
All steering switches are not operated.	Steering switch signal ground circuit (AV-118, "Diagnosis Procedure")
Only specified switch cannot be operated.	Steering switch (AV-207, "Exploded View")
“ENTER”, “MENU UP”, “MENU DOWN” and “SOURCE” switches are not operated.	Steering switch signal A circuit (AV-114, "Diagnosis Procedure")
“BACK”, “ ”, “VOL UP” and “VOL DOWN” switches are not operated.	Steering switch signal B circuit (AV-116, "Diagnosis Procedure")

cardiagn.com

NORMAL OPERATING CONDITION

Description

INFOID:0000000000972595

BASIC OPERATION

Symptoms	Possible cause	Possible solution
No image is displayed.	The brightness is at the lowest setting.	Adjust the brightness of the display.
	The display is turned off.	Push and hold ☀/☽ to turn on the display.
No voice guidance is available. The volume is too high or too low.	The volume is not set correctly, or it is turned off.	Adjust the volume of voice guidance.
	Volume guidance is not provided for narrow streets (roads displayed in gray).	This is not a malfunction.
No map is displayed on the screen.	The map DVD-ROM is not inserted, or it is inserted upside down.	Insert the map DVD-ROM correctly.
	A screen other than map screen is displayed.	Push “MAP”.
The screen is too dim. The movement is slow.	The temperature in the interior of the vehicle is low.	Wait until the interior of the vehicle has warmed up.
Some pixels in the display are darker or brighter than others.	This condition is an inherent characteristic of liquid crystal displays.	This is not a malfunction.
Some menu items cannot be selected.	Some menu items become unavailable while the vehicle is driven.	Park the vehicle in a safe location, and then operate the navigation system.

NOTE:

Locations stored in the Address Book and other memory functions may be lost if the vehicle's battery is disconnected or becomes discharged. Service the vehicle's battery as necessary and re-enter the information in the Address Book If this occurs.

VEHICLE ICON

Symptoms	Possible cause	Possible solution
Names of roads and locations differ between Plan view and Birdview™.	This is because the quantity of the displayed information is reduced so that the screen does not become too crowded. There is also a chance that names of the roads or locations may be displayed multiple times, and the names appearing on the screen may be different because of a processing procedure.	This is not a malfunction.
The vehicle icon is not displayed in the correct position.	The vehicle was transported after the ignition switch was turned off, for example, by a ferry or car transporter.	Drive the vehicle for a while on a road where GPS can be received.
	The position and direction of the vehicle may be incorrect depending on the driving environments and the levels of positioning accuracy of the navigation system.	This is not a malfunction. Drive the vehicle for a while to automatically correct the position and direction of the vehicle icon.
When the vehicle is traveling on a new road, the vehicle icon is located on another road nearby.	Because the new road is not stored in the map data, the system automatically places the vehicle ion on the nearest road available.	Updated road information will be included in the next version of the map DVD-ROM.
The screen does not switch to the night screen even after turning on the headlights.	The daytime screen was set the last time the headlights were turned on.	Set the screen to the night screen mode using when turning on the headlights.
The map does not scroll even when the vehicle is moving.	The current location map screen is not displayed.	Push “MAP”.
The vehicle icon is not displayed.	The current location map screen is not displayed.	Push “MAP”.

cardiagn.com

Symptoms	Possible cause	Possible solution
The GPS indicator on the screen remains gray.	GPS signals cannot be received depending on the vehicle location, such as in a parking garage, on a road that has numerous tall buildings, etc.	Drive on an open, straight road for a while.
	GPS signals cannot be received because objects are placed on top of the display.	Remove the objects from top of the display.
	A sufficient amount of GPS satellites are not available.	Wait for the satellites to move locations available for navigation system.
The location of vehicle icon is misaligned from the actual position.	Speed calculations based on the speed sensor may be incorrect when using tire chains or replacing the tires.	Drive the vehicle for a while (at approximately 30 km/h (19 MPH) for about 30 minutes) to automatically correct the vehicle icon position. Contact an NISSAN / INFINITI dealer if this does not correct the vehicle icon position.
	The map data has mistake or is incomplete (the vehicle icon position is always misaligned in the same area).	Updated road information will be included in the next version of the map DVD-ROM.

MAP DVD-ROM

Symptom	Possible cause	Possible solution
The message “Error” appears.	Map DVD-ROM is dirty or partially damaged.	Check the DVD-ROM and wipe it clean with a soft cloth.
		Replace the DVD-ROM if there is any damage.

ROUTE CALCULATION AND VISUAL GUIDANCE

Symptoms	Possible cause	Possible solution
In the auto reroute calculation, waypoints are not included.	Waypoints already passed are not included in the auto reroute calculation.	In case of going to that waypoints again, edit the route.
Route information is not displayed.	Route calculation has not yet been performed.	Set the destination and perform route calculation.
	The vehicle is not driven on the suggested route.	Drive on the suggested route.
	Route guidance is set to off.	Turn on route guidance.
	Route information is not provided for narrow streets (roads displayed in gray).	This is not a malfunction.
The auto reroute calculation (or detour calculation) suggests the same route as the one previously suggested.	Route calculation took priority conditions into consideration, but the same route was calculated.	This is not a malfunction.
A waypoint cannot be added.	Five waypoints are already set on the route, including ones that already passed.	A maximum of 5 waypoints can be set on the route. In case of going to 6 or more waypoints, perform route calculations multiple times as necessary.
The suggested route is not displayed.	Roads near the destination cannot be calculated.	Reset the destination to a main or ordinary road, and recalculate the route.
	The starting point and destination are too close.	Set a more distant destination.
	The starting point and destination are too far away.	Divide the way by selecting one or two intermediate destinations, and perform route calculations multiple times.
	There are time restricted roads (by day of week, by time) near the current vehicle location or destination.	Set Use Time Restricted Roads to off.
A part of the route is not displayed.	The suggested route includes narrow streets (roads displayed in gray).	This is not a malfunction.

cardiagn.com

Symptoms	Possible cause	Possible solution
The part of the route already passed is deleted.	A route is managed by sections between waypoints. The section between the starting point and the waypoint is deleted if you passed the first waypoint. (It may not be deleted depending on the area.)	This is not a malfunction.
An indirect route is suggested.	The system may suggest an indirect route if there are restrictions (such as one way streets) on roads close to the starting point or destination.	Adjust the location of the starting point or destination.
	The system may suggest an indirect route because route calculation does not take into consideration some areas such as narrow streets (gray roads).	Reset the destination to a main or ordinary road, and recalculate the route.
The landmark information does not correspond to the actual information.	This may be caused by insufficient or incorrect data on the DVD-ROM.	This is not a malfunction.
The suggested route does not exactly connect to the starting point, waypoints, or destination.	There is no data for route calculation closer to these locations.	Set the starting point, waypoints and destination on main road, and perform route calculation.

VOICE GUIDANCE

Symptoms	Possible cause	Possible solution
The voice guidance is not available.	Voice guidance is only available at certain intersections. In some cases, voice guidance is not available even when the vehicle should make a turn.	This is not a malfunction.
	The vehicle has deviated from the suggested route.	Go back to the suggested route or request route calculation again.
	Voice guidance is set to off.	Turn on the voice guidance.
	Route guidance is set to off.	Turn on the voice guidance.
The guidance content does not correspond to the actual condition.	The content of the voice guidance may vary, depending on the types of intersections at which turns are made.	Follow all traffic rules and regulations.

VOICE RECOGNITION

Symptom	Possible cause	Possible solution
The system does not recognize the command. The system recognizes the command incorrectly.	The interior of the vehicle is too noisy.	Close the windows or have other occupants be quiet.
	The volume of the voice is too low.	Speak louder.
	Pronunciation is unclear.	Speak clearly.
	Voice recognition mode is not yet ready to speak.	Push the release " " on the steering switch, and speak a command after the tone sounds.
	5 seconds or more have passed after pushed and released " " on the steering switch.	Make sure to speak a command within 5 seconds after push and release " " on the steering switch.
	Only a limited range of voice commands is usable for each screen.	Use a correct voice command appropriate for the current screen.

REAR VIEW MONITOR

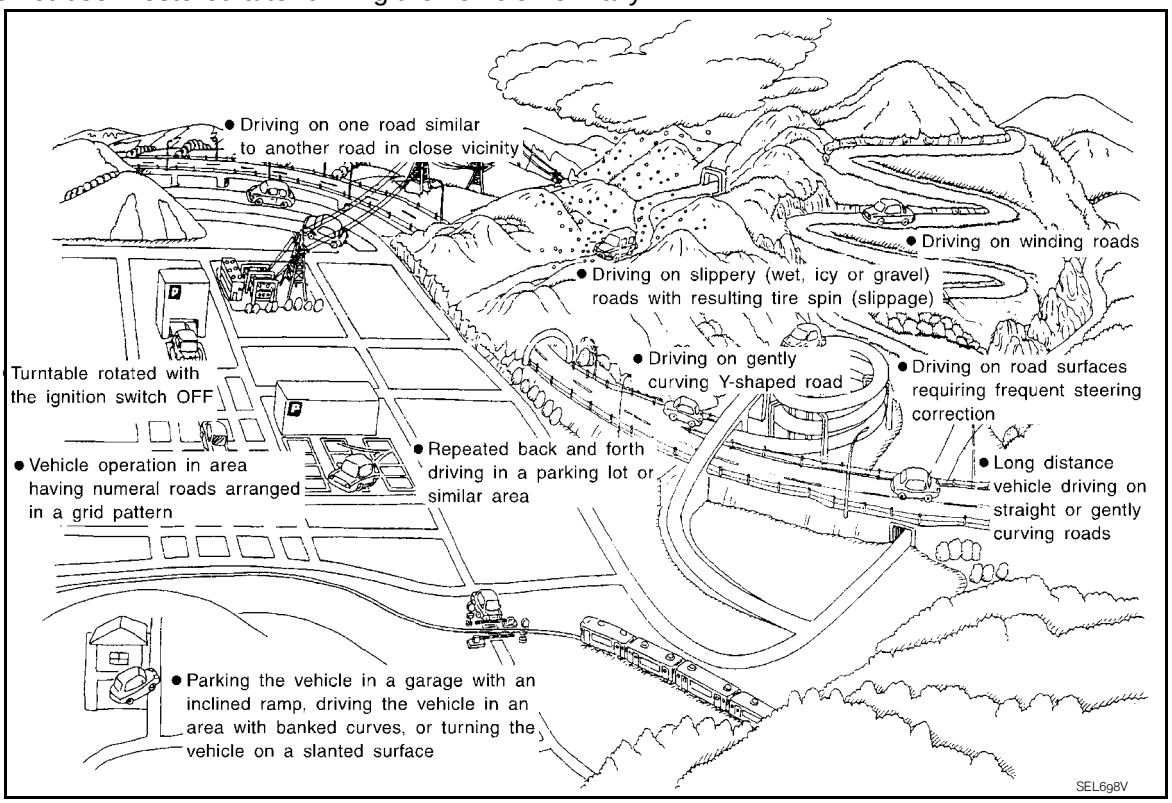
Symptoms	Possible cause	Possible solution
Rear view monitor image is not displayed	Shift lever (M/T models) or selector lever (CVT models) is not in R position.	Shift lever (M/T models) or selector lever (CVT models) is in R position.

cardiagn.com

Symptoms	Possible cause	Possible solution
Rear view monitor image is not clear	Front glass of camera lens is dirty.	Dip a soft cloth into water and wipe the glass softly.
	There are raindrops, snow, etc.	Wipe it with a soft cloth softly.
	The sunlight or the headlight of following vehicle is shining directly to the camera lens.	It returns to the original condition if the light applied to the lens disappears.

EXAMPLES OF CURRENT LOCATION MARK DISPLACEMENT

It calculates vehicle travel by reading travel distance and turn angle. Therefore, a mistake will occur in the current location display if the vehicle is driven in the following manner. Perform location correction if correct location has not been restored after driving the vehicle normally.



cardiagn.com

Cause (condition)		Driving condition	Remarks (correction, etc.)
Road pattern	Y-intersections  ELKo192D	At a Y intersection or similar gradual division of roads, errors in the direction of travel deduced by the sensor may result in the current location mark appearing on the wrong road.	Perform location correction and, if necessary, direction correction if the correct location has not been restored after traveling about 10 km/h (6 MPH).
	Spiral roads  ELKo193D	Turning angle errors accumulate and vehicle mark may deviate from the correct location when driving on a large, continuous spiral road (such as loop bridge).	
	Straight roads  ELKo194D	Map-matching does not work effectively enough and distance errors may accumulate when driving on a long, straight, slowly curving road without stopping. As a result, the vehicle mark may deviate from the correct location when the vehicle turns at a corner.	
	Switchback turns  ELKo195D	The map may be matched to other roads in a similar direction nearby at every turn, and the vehicle mark may deviate from the correct location when driving on a zigzag road.	
	Grid pattern roads  ELKo196D	The map may be matched to them by mistake and the vehicle mark may deviate from the correct location when driving in a location where roads are laid out in a grid pattern, where many roads are running in the similar direction nearby.	
	Parallel roads  ELKo197D	The map may be matched to the other road by mistake and the vehicle mark may deviate from the correct location when two roads are running in parallel (such as highway and sideway).	

cardiagn.com

Cause (condition)		Driving condition	Remarks (correction, etc.)
Place	In a parking lot  SEL709V	Matching may place the vehicle mark on a nearby road when driving in a parking lot, or other locations where there are no roads on the map. The vehicle mark may have deviated from the correct location when the vehicle returns to the road. Direction errors accumulate, and the vehicle mark may deviate from the correct location when driving in circle or turning the steering wheel repeatedly.	Perform location correction and, if necessary, direction correction if the correct location has not been restored after traveling about 10 km/h (6 MPH).
	Turntable  SEL710V	The navigation system cannot receive the signal from the gyroscope (angular speed sensor) when the ignition switch is OFF. Therefore, the displayed direction may be incorrect and the correct road may not be easily returned to after rotating the vehicle on a turntable with the ignition OFF.	
	Slippery roads	On snow, wet roads, gravel, or other roads where tires may slip easily, accumulated mileage errors may cause the vehicle mark to deviate from the correct road.	
	Slopes	An error in the turning angle will occur, and the vehicle mark may deviate from the road when parking in sloped garages, when traveling on banked roads, or in other cases where the vehicle turns when tilted.	
Map data	Roads not displayed on the map screen  SEL699V	Map matching does not function correctly and matches the location to a nearby road when driving on new roads or other roads not displayed on the map screen. The vehicle mark may deviate from the correct road when the vehicle returns to a road which is on the map.	
	Different road pattern (Changed due to repair)  ELK0201D	Map matching does not function correctly and matches the location to a nearby road if the road pattern stored in the map data and the actual road pattern are different. The vehicle mark may deviate from the correct road.	

cardiagn.com

Cause (condition)		Driving condition	Remarks (correction, etc.)
Vehicle	Use of tire chains	The vehicle mark may deviate from the correct road.	Drive the vehicle for a while. Adjust it with the distance adjustment function if distance still deviates. (Recover the original value if tire chains are removed.)
	Use of tires other than the specified size		Replace all tires with the specified size tire.
	Malfunctioning air pressure of tire		Adjust all tires to the specified air pressure.
	Replace tire		Drive the vehicle for a while. It adjusts with the distance adjustment function if the distance is still not in the correct location.
Driving manner	Just after the engine is started	The vehicle can be shown in the incorrect direction and may deviate from the correct location if vehicle is driven off just after the engine is started when gyroscope (angular speed sensor) correction is not completed.	Wait for a short while before driving after starting the engine.
	Continuous driving without stopping	Direction errors may accumulate, and the current location mark may deviate from the correct road when driving long distances without stopping.	Stop and adjust orientation.
	Abusive driving	Spinning the wheels or engaging in other kinds of abusive driving may result in the system being unable perform correct detection, and may cause the vehicle mark to deviate from the correct road.	Perform location correction and, if necessary, direction correction if after traveling about 10 km/h (6 MPH) the correct location has not been restored.
Position correction method	Position correction accuracy  SEL701V	Accuracy may be reduced when correct road cannot be found, particularly in places where there are many roads if accuracy of location settings is poor.	From the roads displayed on the screen, input a position within an accuracy of 1mm (0.04 in). **CAUTION:** **When correcting, use the most detailed map possible.**
	Direction when location is corrected  SEL702V	Accuracy may be reduced afterwards if accuracy of location settings during correction is poor.	Perform direction correction.

THE CURRENT POSITION MARK SHOWS A POSITION THAT IS COMPLETELY INCORRECT.

In the following cases, the current location mark may be displayed in a completely incorrect location. If so, perform position/direction correction.

- When location correction has not been done
- It may shift to a completely unexpected location and not return unless location correction is performed if GPS satellite reception is poor and the current location mark slips out of place. The position will be corrected if a GPS signal can be received.
- When vehicle is traveled by ferry, or when vehicle is towed.
- Because calculation of the current location cannot be done when traveling with the ignition OFF, for example when traveling by ferry or when being towed, the location before travel is displayed. The location will be corrected if the precise location can be detected with GPS.

cardiagn.com

THE CURRENT POSITION MARK JUMPS.

In the following cases, the current location mark may appear to jump as a result of automatic correction of the current location.

- When map matching has been done
- The current location mark may seem to jump if current location and the current location mark are different when map matching is done. At this time, the location may be “corrected” to the incorrect road or to a location which is not on a road.
- When GPS location correction has been done
- The current location mark may seem to jump if current location and the current location mark are different when location is corrected using GPS measurements. At this time, the location may be “corrected” to a location which is not on a road.

THE CURRENT LOCATION MARK IS IN A RIVER OR THE SEA.

The navigation system moves the current location mark with no distinction between land and rivers or sea. It may appear that the vehicle is driving in a river or the sea if the location mark is somehow out of place.

CURRENT LOCATION MARK ROTATES WITHOUT OPERATION

The rotating condition is recorded as the stop condition if the ignition switch is turned ON with the turntable rotating. Therefore, the current location mark might rotate when actually stopping.

WHEN DRIVING ON THE SAME ROAD, SOMETIMES THE CURRENT LOCATION MARK IS IN THE CORRECT PLACE AND SOMETIMES IT IS IN THE INCORRECT PLACE.

The conditions of the GPS antenna (GPS data) and gyroscope (angular speed sensor) change gradually. Depending on the road traveled and operation of the steering wheel, the location detection results will be different. Therefore, even on a road on which the location has never been incorrect, conditions may cause the vehicle mark to deviate.

LOCATION CORRECTION BY MAP MATCHING IS SLOW.

- The map matching function needs to refer to the data of the surrounding area. It is necessary to drive some distance for the function to work.
- Because of the way map matching operates, when there are many roads running in similar directions in the surrounding area a matching determination may be impossible. The location will remain uncorrected until some special feature is found.

ALTHOUGH THE GPS RECEIVING DISPLAY IS GREEN, THE VEHICLE MARK DOES NOT RETURN TO THE CORRECT LOCATION.

- GPS accuracy has a malfunction range of about 10 m (30 ft). In some cases the current location mark may not be on the correct street, even when GPS location correction is done.
- The navigation system compares the results of GPS location detection with the results from map-matching location detection. The one that is determined to have higher accuracy is used.
- Position correction by GPS is not available while the vehicle is stopped.

THE NAME OF THE CURRENT PLACE IS NOT DISPLAYED.

The current place name might not be displayed when there is no name of place information in the map screen.

THE DISPLAY IS DIFFERENT BETWEEN BIRDVIEW® AND (FLAT) MAP DISPLAY.

The following is different at Birdview®.

- The current place name displays names that are primarily in the direction of vehicle travel.
- The amount of time before the vehicle travel or turn angle is updated on the screen is longer than for the (flat) map display.
- The conditions for display of place names, roads, and other data are different for nearby areas and for more distant areas.
- Some trimming of the character data is done to prevent the display from becoming too complex. In some cases and in some locations, the display contents may differ.
- The same place name, street name, etc. may be displayed multiple times.

cardiagn.com

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001091324

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution for Trouble Diagnosis

INFOID:0000000000947143

AV COMMUNICATION SYSTEM

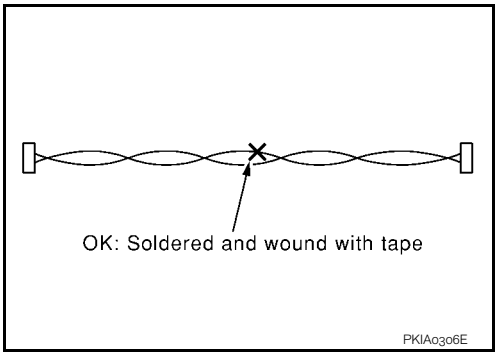
- Do not apply voltage of 7.0 V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0 V or less.
- Be sure to turn ignition switch OFF and disconnect the battery cable from the negative terminal before checking the circuit.

Precaution for Harness Repair

INFOID:0000000000947144

AV COMMUNICATION SYSTEM

- Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in).]



- Do not perform bypass wire connections for the repair parts. (The spliced wire will become separated and the characteristics of twisted line will be lost.)

Adjustment

INFOID:0000000000970728

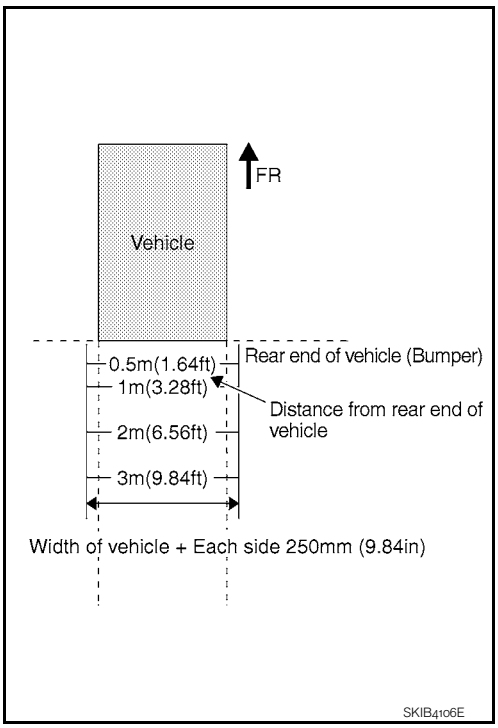
DESCRIPTION

CONSULT-III is used to modify the guideline position that shows the width of vehicle and the distance from rear end of vehicle on the rear view monitor. These can be caused by condition variations of body assembly and camera installation.

VEHICLE WIDTH AND DISTANCE GUIDING LINE CORRECTION PROCEDURE

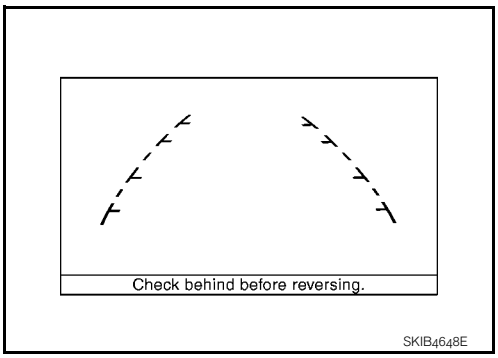
cardiagn.com

1. Create a correction line to modify the guiding lines inside monitors. Draw lines on the rearward area of the vehicle passing through the following points: 250 mm (9.84 in) from both sides of the vehicle, and 0.5 m (1.64 ft), 1 m (3.28 ft), 2 m (6.56 ft), and 3 m (9.84 ft) from the rear end of the bumper.



2. Connect CONSULT-III. Then touch “REAR VIEW CAMERA” on “SELECT SYSTEM” screen.
   CAUTION:
   Correct the guiding line with the engine stopped for safety.

3. Shift selector lever to R position.



4. Touch “ADJ GUIDELINE POSITION” on “SELECT WORK ITEM” screen.
   CAUTION:
   Vehicle width guiding lines may move horizontally when starting “ADJ GUIDELINE POSITION” mode. It is normal.

5. Touch “X UP”, “X DOWN”, “Y UP”, and “Y DOWN” so as to align with a correction line created, and then adjust the guiding lines.

Adjustment direction	ADJUST MONITOR	
LEFT/RIGHT	X VALUE ADJ	– 8 - 8
UP/DOWN	Y VALUE ADJ	– 8 - 8

6. Touch “SAVE” so as to fix the lines if the guiding lines align with the correction lines. Then end the correction by touching “END”. GO TO 7 if the guiding lines do not align with the correction lines.

7. Touch “SELECT GUIDELINE PATTERN” on “SELECT WORK ITEM” screen.

8. Change the pattern of the guiding lines by touching “UP” or “DOWN”. [Select from among 2 patterns (“PATTERN NO. 0” or “1”) of the guiding lines.]
9. Fix the pattern of the guiding lines by touching “SAVE”.

cardiagn.com

10. End the correction by touching “END”.

CAUTION:

The change is not reflected at the next starting if “SAVE” is not touched if the setting value is changed on “SELECT GUIDELINE PATTERN” and “ADJ GUIDELINE POSITION”.

INSPECTION AND ADJUSTMENT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description

INFOID:0000000000892455

When replacing BCM, save or print current vehicle specification with CONSULT-III configuration before replacement.
Configuration has three functions as follows

- READ CONFIGURATION is the function to read (extract) vehicle configuration of current BCM.
- WRITE CONFIGURATION - Manual selection is the function to select and write vehicle configuration on BCM manually.
- WRITE CONFIGURATION - Config file is the function to write vehicle configuration with the data extracted from current BCM.

CAUTION:

- **When replacing BCM, you must perform WRITE CONFIGURATION with CONSULT-III.**
- **Complete the procedure of WRITE CONFIGURATION in order.**
- **If you set incorrect WRITE CONFIGURATION, incidents will occur.**
- **Configuration is different for each vehicle model. Confirm configuration of each vehicle model.**

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement

INFOID:0000000000892456

1.SAVING VEHICLE SPECIFICATION

Perform “READ CONFIGURATION” with CONSULT-III to save or print current vehicle specification.

>> GO TO 2.

2.REPLACE BCM

Replace BCM. Refer to BCS-64, "Exploded View".

>> GO TO 3.

3.WRITING VEHICLE SPECIFICATION

Perform “WRITE CONFIGURATION - Config file” or “WRITE CONFIGURATION - Manual selection” with CONSULT-III to write vehicle specification. Refer to BCS-4, "CONFIGURATION : Special Repair Requirement".

>> GO TO 4.

4.INITIALIZE BCM (NATS)

Perform BCM initialization. (NATS)

>> WORK END

CONFIGURATION

CONFIGURATION : Description

INFOID:0000000000892457

Vehicle specification needs to be written with CONSULT-III because it is not written after replacing BCM.
Configuration has three functions as follows

- READ CONFIGURATION is the function to read (extract) vehicle configuration of current BCM.
- WRITE CONFIGURATION - Manual selection is the function to select and write vehicle configuration on BCM manually.
- WRITE CONFIGURATION - Config file is the function to write vehicle configuration with the data extracted from current BCM.

CAUTION:

cardiagn.com

- **When replacing BCM, you must perform WRITE CONFIGURATION with CONSULT-III.**
- **Complete the procedure of WRITE CONFIGURATION in order.**
- **If you set incorrect WRITE CONFIGURATION, incidents will occur.**
- **Configuration is different for each vehicle model. Confirm configuration of each vehicle model.**

CONFIGURATION : Special Repair Requirement

INFOID:0000000000892458

1.WRITING VEHICLE SPECIFICATION

Perform “WRITE CONFIGURATION” with CONSULT-III.

When writing saved data>>GO TO 2.
When writing manually>>GO TO 3.

2.PERFORM “WRITE CONFIGURATION - CONFIG FILE”

Perform “WRITE CONFIGURATION - Config file” with CONSULT-III.

>> WORK END

3.PERFORM “WRITE CONFIGURATION - MANUAL SELECTION”

For “WRITE CONFIGURATION - Manual selection”, using the following flow chart, identify the correct model and configuration list.
Confirm and/or change setting value for each item according to the configuration list.
Depending on CONSULT-III software version being used, some or all of the write configuration items shown in the following configuration lists may be displayed. If an item does not display on the CONSULT-III “WRITE CONFIGURATION - Manual selection” screen, then it is an auto setting item and it cannot be manually set or changed.

FUNCTION DIAGNOSIS

BODY CONTROL SYSTEM

System Description

INFOID:0000000000924591

OUTLINE

- BCM (Body Control Module) controls the various electrical components. It inputs the information required to the control from CAN communication and the signal received from each switch and sensor.
- BCM has combination switch reading function for reading the operation status of combination switches (light, turn signal, wiper and washer) in addition to a function for controlling the operation of various electrical components. It also has the signal transmission function as the passed point of signal and the power consumption control function that reduces the power consumption with the ignition switch OFF.
- BCM is equipped with the diagnosis function that performs the diagnosis with CONSULT-III and various settings.

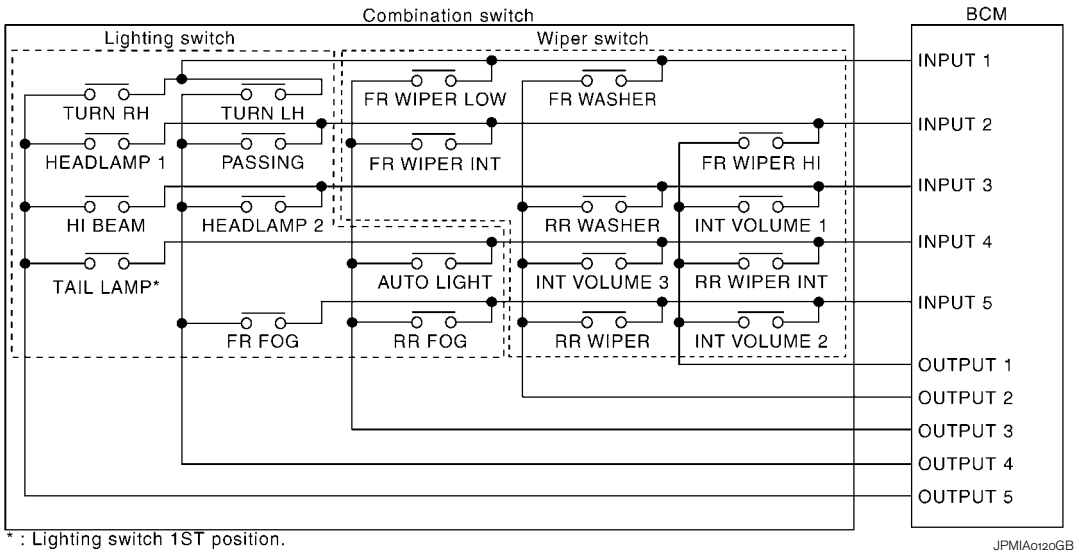
COMBINATION SWITCH READING SYSTEM

System Diagram

INFOID:0000000000924593



* : Lighting switch 1ST position.

JPMIA0120GB

System Description

INFOID:0000000000924594

OUTLINE

- BCM reads the status of the combination switch (light, turn signal, wiper and washer) and recognizes the status of each switch.
- BCM is a combination of 5 output terminals (OUTPUT 1 - 5) and 5 input terminals (INPUT 1 - 5). It reads a maximum of 20 switch status.

COMBINATION SWITCH MATRIX

INPUT 4	RR WIPER INT	INT VOLUME 3	AUTO LIGHT	—	TAIL LAMP
INPUT 5	INT VOLUME 2	RR WIPER	RR FOG	FR FOG	—

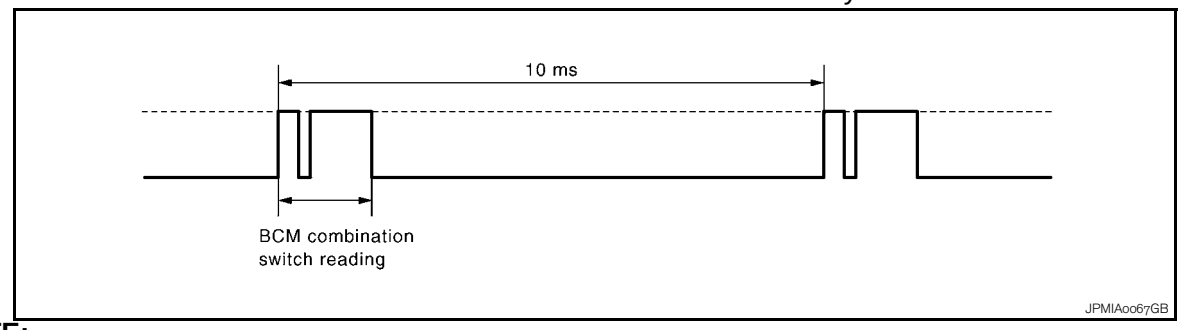
NOTE:

Headlamp has a dual system switch.

COMBINATION SWITCH READING FUNCTION

Description

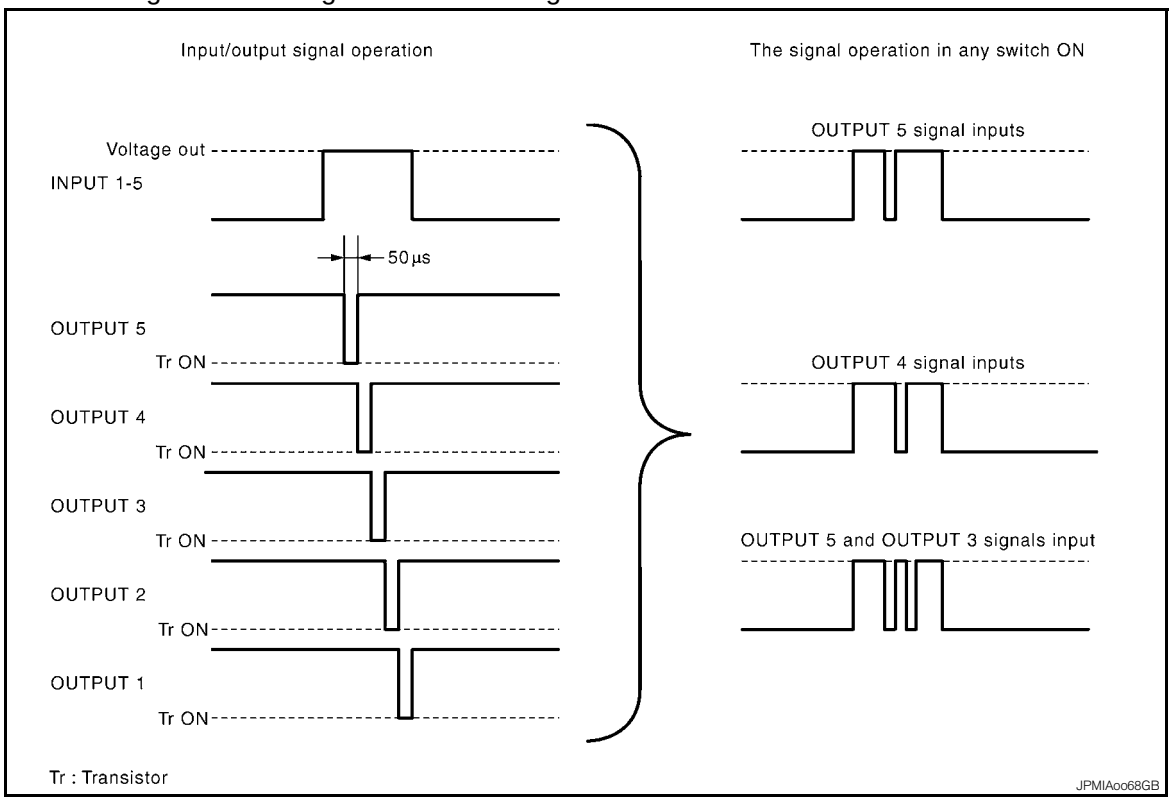
- BCM reads the status of the combination switch at 10 ms interval normally.



NOTE:

BCM reads the status of the combination switch at 20 ms interval when BCM is controlled at low power consumption control mode.

- BCM operates as follows and judges the status of the combination switch.
- INPUT 1 - 5 outputs the voltage waveforms of 5 systems simultaneously.
- It operates the transistor on OUTPUT side in the following order: OUTPUT 5 → 4 → 3 → 2 → 1.
- The voltage waveform of INPUT corresponding to the formed circuit changes according to the operation of the transistor on OUTPUT side if any (1 or more) switches are ON.
- It reads this change of the voltage as the status signal of the combination switch.



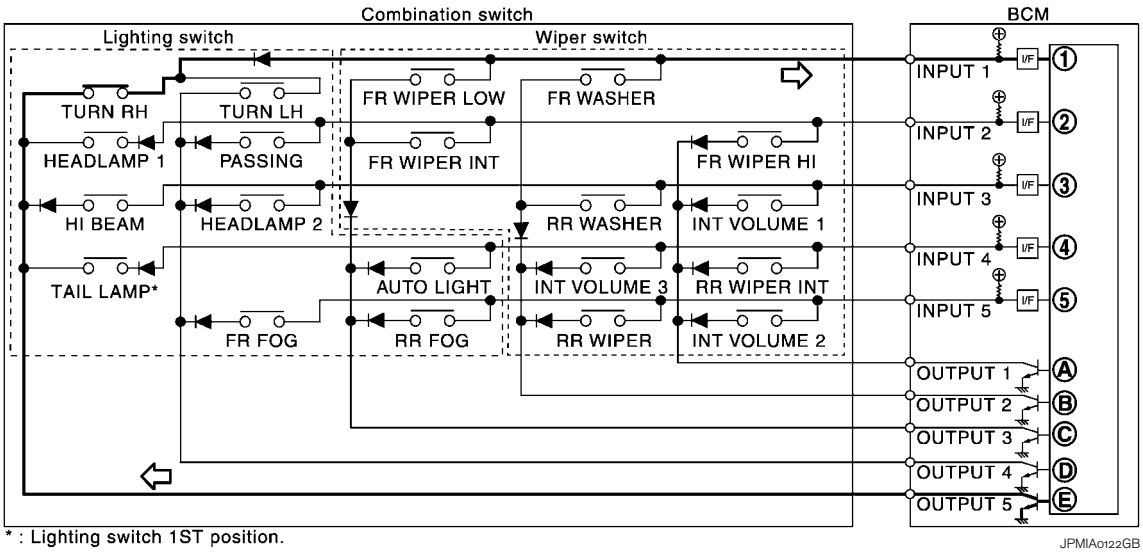
Operation Example

In the following operation example, the combination of the status signals of the combination switch is replaced as follows: INPUT 1 - 5 to “1 - 5” and OUTPUT 1 - 5 to “A - E”.

Example 1: When a switch (TURN RH switch) is turned ON

cardiagn.com

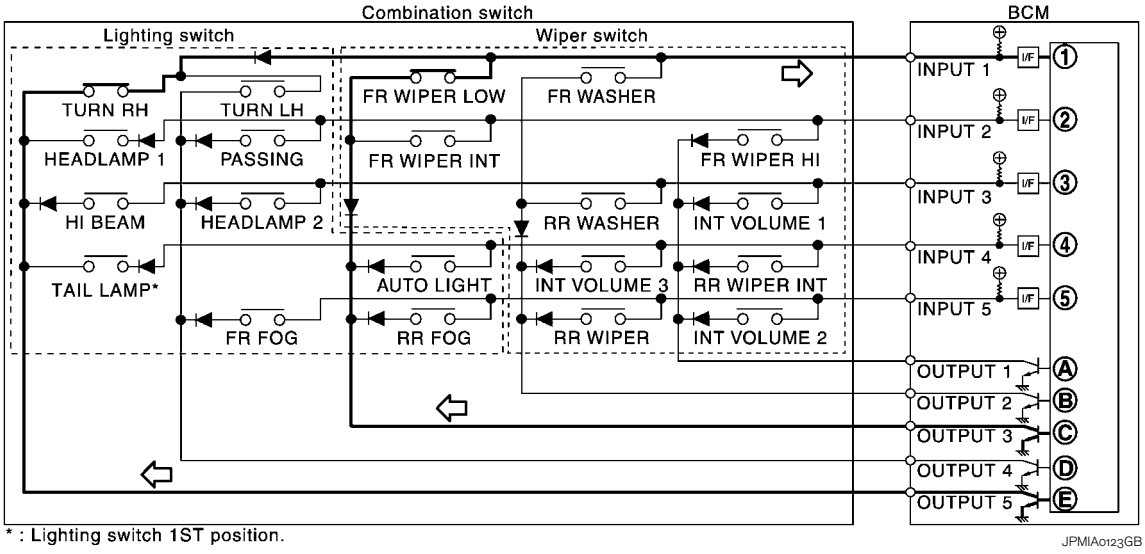
- The circuit between INPUT 1 and OUTPUT 5 is formed when the TURN RH switch is turned ON.



- BCM detects the combination switch status signal “1E” when the signal of OUTPUT 5 is input to INPUT 1.
- BCM judges that the TURN RH switch is ON when the signal “1E” is detected.

Example 2: When some switches (turn RH switch, front wiper LO switch) are turned ON

- The circuits between INPUT 1 and OUTPUT 5 and between INPUT 1 and OUTPUT 3 are formed when the TURN RH switch and FR WIPER LOW switch are turned ON.



- BCM detects the combination switch status signal “1CE” when the signals of OUTPUT 3 and OUTPUT 5 are input to INPUT 1.
- BCM judges that the TURN RH switch and FR WIPER LOW switch are ON when the signal “1CE” is detected.

WIPER INTERMITTENT DIAL POSITION SETTING (FRONT WIPER INTERMITTENT OPERATION)

BCM judges the wiper intermittent dial 1 - 7 by the status of INT VOLUME 1, 2 and 3 switches.

cardiagn.com

Wiper intermittent dial position	Intermittent operation delay interval	INT VOLUME switch ON/OFF status		
		INT VOLUME 1 switch	INT VOLUME 2 switch	INT VOLUME 3 switch

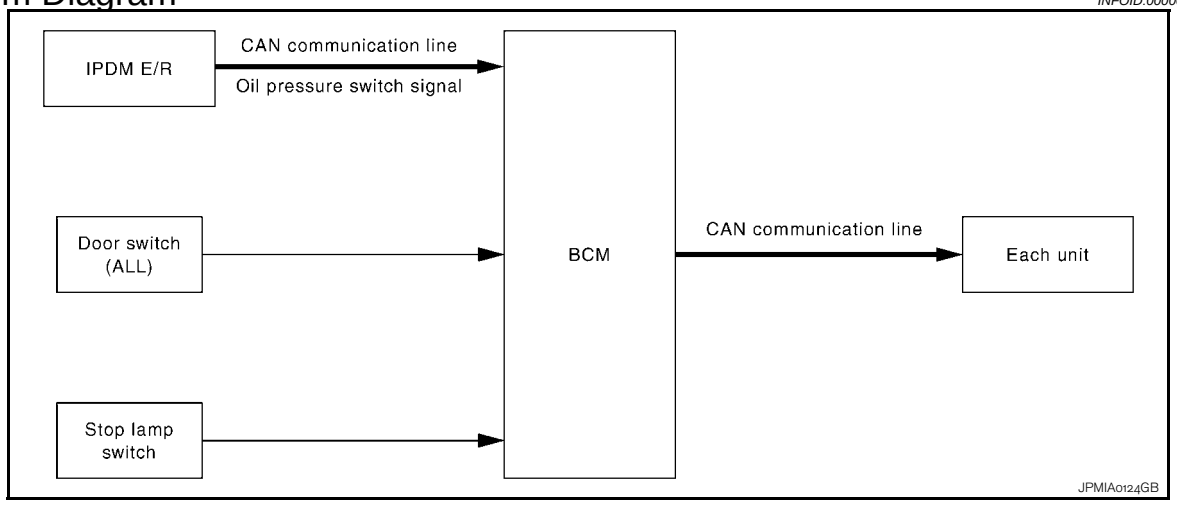
SIGNAL BUFFER SYSTEM

System Diagram

INFOID:0000000000924596



System Description

INFOID:0000000000924597

OUTLINE

BCM has the signal transmission function that outputs/transmits each input/received signal to each unit.

Signal transmission function list

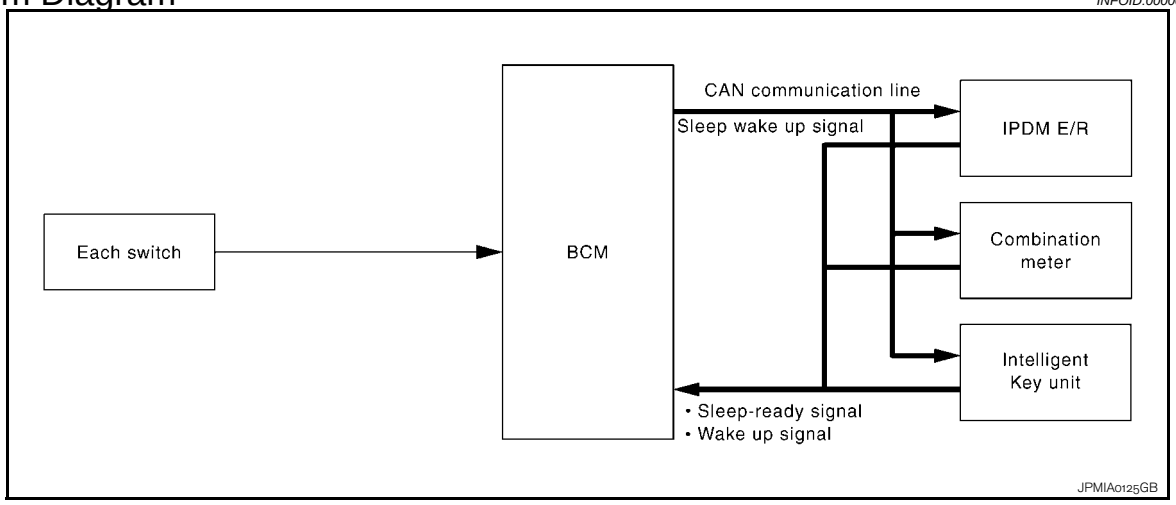
Signal name	Input	Output	Description
Door switch signal	Any door switch	• Combination meter (CAN) • IPDM E/R (CAN) • Intelligent Key unit (CAN) • NAVI control unit (CAN)	Inputs the door switch signal and transmits it via CAN communication.
Stop lamp switch signal	Stop lamp switch	TCM (CAN)	Inputs the stop lamp switch signal and transmits the stop lamp switch signal via CAN communication.
Oil pressure switch signal	IPDM E/R (CAN)	Combination meter (CAN)	Transmits the received oil pressure switch signal via CAN communication.

cardiagn.com

POWER CONSUMPTION CONTROL SYSTEM

System Diagram

INFOID:0000000000924598



System Description

INFOID:0000000000924599

OUTLINE

- BCM incorporates a power consumption control function that reduces the power consumption according to the vehicle status.
- BCM switches the status (control mode) by itself with the power saving control function. It performs the sleep request to each unit (IPDM E/R, combination meter and Intelligent Key unit) that operates with the ignition switch OFF.

Normal mode (wake-up)
- CAN communication is normally performed with other units
- Each control with BCM is operating properly

CAN communication sleep mode (CAN sleep)
- CAN transmission is stopped
- Control with BCM only is operating

Low power consumption mode (BCM sleep)
- Low power consumption control is active
- CAN transmission is stopped

LOW POWER CONSUMPTION CONTROL WITH BCM

BCM reduces the power consumption with the following operation in the low power consumption mode.
- The reading interval of the each switches changes from 10 ms interval to 20 ms interval.

Sleep mode activation

- BCM receives the sleep-ready signal (ready) from IPDM E/R, combination meter and Intelligent Key unit via CAN communication.
- BCM transmits the sleep wake up signal (sleep) to each unit when all of the CAN sleep conditions are fulfilled.
- Each unit stops the transmission of CAN communication with the sleep wake up signal. BCM is in CAN communication sleep mode.
- BCM is in the low power consumption mode and perform the low power consumption control when all of the BCM sleep conditions are fulfilled with CAN sleep condition.

cardiagn.com

Sleep condition

CAN sleep condition	BCM sleep condition
• Receiving the sleep-ready signal (ready) from all units • Ignition switch: OFF • Vehicle security system alarm: Not operation • Warning lamp: Not operation • Warning chime: Not operation • Stop lamp switch: OFF • Key switch status: No change for 2seconds • Hazard warning lamp: Not operation • Exterior lamp: OFF • Door lock status: No change for 2seconds • CONSULT-III communication status: Not communication • Door switch status: No change for 2seconds	The controls only BCM are completed. (Interior room lamp battery saver: Time out etc.)

Wake-up operation

- BCM transmits sleep wake up signal (wake up) to each unit when any condition listed below is established, and then goes into normal mode from low power consumption mode.
- Each unit starts transmissions with CAN communication by receiving sleep wake up signals. Each unit transmits wake up signals to BCM with CAN communication to convey the start of CAN communication.

Wake-up condition

BCM wake-up condition
• Ignition switch: OFF → ACC or ON • Stop lamp switch: ON (Depress brake pedal) • Any door switch: OFF → ON • Lighting switch: OFF → 1ST or PASS • Hazard switch: OFF → ON • Back door opener switch OFF → ON • Remote keyless entry receiver: Receiving

DIAGNOSIS SYSTEM (BCM)

COMMON ITEM

COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000000924601

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION

BCM can perform the following functions for each system.

NOTE:

It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

BCM

BCM : CONSULT-III Function (BCM - BCM)

INFOID:0000000000924608

WORK SUPPORT

cardiagn.com

Item	Description
RESET SETTING VALUE	Return a value set with WORK SUPPORT of each system to a default value in factory shipment.

DOOR LOCK

DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)

INFOID:0000000001097013

BCM CONSULT-III FUNCTION

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
KEYLESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
UNLOCK WITH DR	This item is indicated, but not monitored.
UNLOCK SHOCK	Indicates [ON/OFF] condition of signal from air bag diagnosis unit. • ON: During the unlock operation interlock with air bag. • OFF: Other than above.
SHOCK SENSOR	Indicates [NOMAL/ON/OFF] condition of circuit between BCM and air bag diagnosis sensor unit. • NORMAL: Ignition switch ON. (BCM is receiving normal condition signal from air bag diagnosis sensor unit.) • ON: During the receiving of air bag deployment signal from air bag diagnosis sensor unit. • OFF: After the receiving of air bag deployment signal from air bag diagnosis sensor unit.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the multi remote control system equipped vehicle.

ACTIVE TEST

cardiagn.com

Test item	Description
SUPER LOCK*1	This test is able to check super lock operation [LOCK (SET)/UNLOCK (RELEASE)].
DOOR LOCK IND	This test is able to check door lock indicator (built in door lock and unlock switch on center console) operation [ON/OFF].
DOOR LOCK	This test is able to check door lock operation [ALL LOCK/ALL UNLOCK/DR UNLOCK/ OTHER UNLOCK].

:*1 For the super lock equipped vehicle.

WORK SUPPORT

Test item	Description
SECURITY DOOR LOCK SET	Anti hijack function mode can be changed in this mode. • ON: Anti hijack mode is active. • OFF: Anti hijack mode is inactive.

REAR WINDOW DEFOGGER

REAR WINDOW DEFOGGER : CONSULT-III Function (BCM - REAR DEFOGGER)

INFOID:0000000001097014

Data monitor

Monitor Item	Description
REAR DEF SW	Displays “Press (ON)/other (OFF)” status determined with the rear window defogger switch.
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.

ACTIVE TEST

Test Item	Description
REAR DEFOGGER	Give a drive signal to the rear window defogger relay to activate it.

BUZZER

BUZZER : CONSULT-III Function (BCM - BUZZER)

INFOID:0000000001097015

CONSULT-III FUNCTION (BCM – BUZZER)

Test item	Diagnosis mode	Description
Buzzer	Data Monitor	Displays BCM input data in real time.
	Active Test	Operation of electrical loads can be checked by sending driving signal to them.

DATA MONITOR

Display item [Unit]	Description
IGN ON SW [On/Off]	Ignition switch (ON) status judged by ignition power supply input.
KEY ON SW [On/Off]	Key switch status.
DOOR SW -DR [On/Off]	Front door switch (driver side) status judged by BCM.
TAIL LAMP SW [On/Off]	Lighting switch status judged by the lighting switch signal read with combination switch reading function.

cardiagn.com

Display item [Unit]	Description
BUCKLE SW [On/Off]	Seat belt buckle switch status judged by the seat belt buckle switch signal received from combination meter via CAN communication.
DOOR SW -AS	Front door switch (passenger side) status judged by BCM.
DOOR SW -RR	Rear door switch RH status judged by BCM.
DOOR SW -RL	Rear door switch LH status judged by BCM.
BACK DOOR SW	Back door switch status judged by BCM.
VEHICLE SPEED [km/h]	Vehicle speed signal value received from combination meter via CAN communication.

ACTIVE TEST

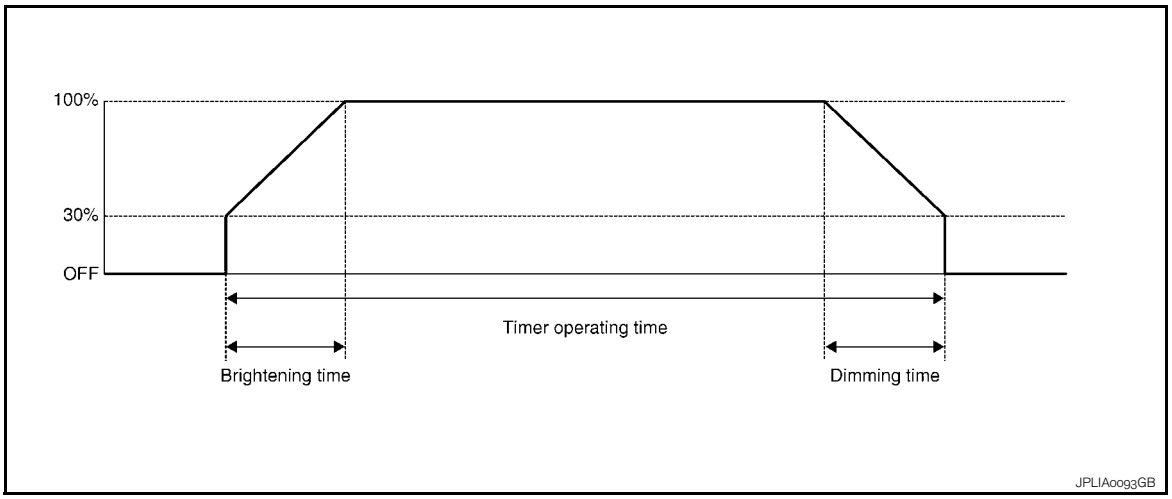
Display item	Description
LIGHT WARN ALM	The light reminder warning operation can be checked by operating the relevant function (On/Off).
IGN KEY WARN ALM	The key warning operation can be checked by operating the relevant function (On/Off).
KEY REMINDER WARN	The key reminder warning operation can be checked by operating the relevant function (On/Off).

INT LAMP

INT LAMP : CONSULT-III Function (BCM - INT LAMP)

INFOID:0000000001097016

WORK SUPPORT



Service item	Setting item	Setting	
ROOM LAMP TIMER SET	MODE 1	0 sec.	Sets the interior room lamp ON time. (Timer operating time)
	MODE 2	7.5 sec.	
	MODE 3*	15 sec.	
	MODE 4	30 sec.	
SET I/L D-UNLCK INTCON	ON*	With the interior room lamp timer function	
	OFF	Without the interior room lamp timer function	
ROOM LAMP ON TIME SET	MODE 1	0.5 sec.	Sets the interior room lamp gradual brightening time.
	MODE 2*	1 sec.	
	MODE 3	2 sec.	
	MODE 4	3 sec.	
	MODE 5	4 sec.	
	MODE 6	5 sec.	
	MODE 7	0 sec.	

cardiagn.com

Service item	Setting item	Setting	
ROOM LAMP OFF TIME SET	MODE 1	0.5 sec.	Sets the interior room lamp gradual dimming time.
	MODE 2*	1 sec.	
	MODE 3	2 sec.	
	MODE 4	3 sec.	
	MODE 5	4 sec.	
	MODE 6	5 sec.	
	MODE 7	0 sec.	
R LAMP TIMER LOGIC SET	MODE 1*	Interior room lamp timer activates with synchronizing all doors.	
	MODE 2	Interior room lamp timer activates with synchronizing the driver door only.	

*: Initial setting

DATA MONITOR

Monitor item [Unit]	Description
IGN ON SW [ON/OFF]	Ignition switch (ON) status judges from IGN signal (ignition power supply)
ACC SW [ON/OFF]	Ignition switch (ACC) status judges from ACC signal (ACC power supply)
KEY ON SW [ON/OFF]	The switch status input from key switch
PUSH SW [ON/OFF]	Push switch status received from Intelligent Key unit by CAN communication
DOOR SW-DR [ON/OFF]	The switch status input from front door switch (driver side)
DOOR SW-AS [ON/OFF]	The switch status input from front door switch (passenger side)
DOOR SW-RR [ON/OFF]	The switch status input from rear door switch RH
DOOR SW- RL [ON/OFF]	The switch status input from rear door switch LH
BACK DOOR SW [ON/OFF]	The switch status input from back door switch
CDL LOCK SW [ON/OFF]	Lock switch status input from door lock and unlock switch
CDL UNLOCK SW [ON/OFF]	Unlock switch status input from door lock and unlock switch
I-KEY LOCK [ON/OFF]	Lock signal status received from Intelligent Key unit by CAN communication
I-KEY UNLOCK [ON/OFF]	Unlock signal status received from Intelligent Key unit by CAN communication
KEYLESS LOCK [ON/OFF]	Lock signal status received from remote keyless entry receiver (integrated in the BCM)
KEYLESS UNLOCK [ON/OFF]	Unlock signal status received from remote keyless entry receiver (integrated in the BCM)

ACTIVE TEST

cardiagn.com

Test item	Operation	Description
INT LAMP	ON	Outputs the interior room lamp control signal to turn the interior room lamps ON. [Map lamp, personal lamp, room lamp, luggage room lamp (when applicable lamps switch is in DOOR position.)]
	OFF	Stops the interior room lamp control signal to turn the interior room lamps.

MULTIREMOTE ENT

MULTIREMOTE ENT : CONSULT-III Function (BCM - MULTIREMOTE ENT)

INFOID:0000000001097017

BCM CONSULT-III FUNCTION

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
KEYKESS LOCK	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK	Indicates [ON/OFF] condition of unlock signal from key fob.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
RKE LOCK AND UNLOCK	This item is indicated, but not monitored.

ACTIVE TEST

Test item	Description
DOOR LOCK	This test is able to check warning chime in combination meter operation. [ALL LOCK/ALL UNLOCK/DR UNLOCK/OTHER UNLOCK]
INT LAMP	This test is able to check interior lamp operation [ON/OFF].
FLASHER	This test is able to check flasher operation [LH/RH/OFF].

WORK SUPPORT

cardiagn.com

Test item	Description
HAZARD LAMP SET	Answer back function (hazard) mode can be changed in this mode. For the detail of the setting, refer to DLK-575, "System Description".
AUTO LOCK SET	Auto door lock time can be changed in this mode. • MODE 1: 1 minute • MODE 2: 2 minutes • MODE 3: 3 minutes • MODE 4: 4 minutes • MODE 5: 5 minutes

HEADLAMP

HEADLAMP : CONSULT-III Function (BCM - HEAD LAMP)

INFOID:0000000001097018

WORK SUPPORT

Service item	Setting item	Setting	
HEAD LIGHT TIMER	MODE 1	10 sec.	Sets follow me home function activating time.
	MODE 2*	30 sec.	

*: Initial setting

DATA MONITOR

Monitor item [Unit]	Description
IGN ON SW [ON/OFF]	Ignition switch (ON) status judged from IGN signal (ignition power supply)
ACC SW [ON/OFF]	Ignition switch (ACC) status judged from ACC signal (ACC power supply)
HI BEAM SW [ON/OFF]	Each switch status that BCM judges from the combination switch reading function
HEAD LAMP SW1 [ON/OFF]	
HEAD LAMP SW2 [ON/OFF]	
TAIL LAMP SW [ON/OFF]	
AUTO LIGHT SW [ON/OFF]	
PASSING SW [ON/OFF]	
FR FOG SW [ON/OFF]	
RR FOG SW [ON/OFF]	
DOOR SW-DR [ON/OFF]	The switch status input from front door switch (driver side)
DOOR SW-AS [ON/OFF]	The switch status input from front door switch (passenger side)
DOOR SW-RR [ON/OFF]	The switch status input from rear door switch RH
DOOR SW- RL [ON/OFF]	The switch status input from rear door switch LH
BACK DOOR SW [ON/OFF]	The switch status input from back door switch

cardiagn.com

Monitor item [Unit]	Description
TURN SIGNAL R [ON/OFF]	Each switch status that BCM judges from the combination switch reading function
TURN SIGNAL L [ON/OFF]	
ENGINE RUNNING [ON/OFF]	The engine status received from ECM with CAN communication
PUSH SW [ON/OFF]	Push switch status received from Intelligent Key unit by CAN communication
LIT-SEN FAIL [OK/NOTOK]	• The sensor status received from light & rain sensor with serial link • The serial link condition that BCM judges
AUT LIGHT SYS [ON/OFF]	Auto light system status that BCM judges from the vehicle condition

ACTIVE TEST

Test item	Operation	Description
TAIL LAMP	ON	Transmits the position light request signal to IPDM E/R with CAN communication to turn the tail lamp ON.
	OFF	Stops the tail lamp request signal transmission.
HEAD LAMP	HI	Transmits the high beam request signal with CAN communication to turn the headlamp (HI).
	LO	Transmits the low beam request signal with CAN communication to turn the headlamp (LO).
	OFF	Stops the high & low beam request signal transmission.
FR FOG LAMP	ON	Transmits the front fog lights request signal to IPDM E/R with CAN communication to turn the front fog lamp ON.
	OFF	Stops the front fog lights request signal transmission.
RR FOG LAMP	ON	• Outputs the voltage to turn the rear fog lamp ON. • Transmits the rear fog lamp status signal to the combination meter with CAN communication to turn the rear fog lamp indicator lamp ON.
	OFF	• Stops the voltage to turn the rear fog lamp OFF. • Stops the rear fog lamp status signal transmission.
DAYTIME RUNNING LIGHT	ON	Transmits the day time running light request signal to IPDM E/R with CAN communication to turn the each lamps ON.
	OFF	Stops the day time running light request signal transmission.

WIPER

WIPER : CONSULT-III Function (BCM - WIPER)

INFOID:0000000001097019

WORK SUPPORT

Service item	Setting item	Description
WIPER SPEED SETTING	ON*	With vehicle speed (Front wiper intermittent time linked with the vehicle speed and wiper intermittent dial position)
	OFF	Without vehicle speed (Front wiper intermittent time linked with the wiper intermittent dial position)

*:Factory setting

DATA MONITOR

cardiagn.com

Monitor Item [Unit]	Description
IGN ON SW	Ignition switch ON status judged from ignition power supply.
IGN SW CAN	Ignition switch ON status received from IPDM E/R with CAN communication.
FR WIPER HI [OFF/ON]	Each switch status that BCM judges from the combination switch reading function.
FR WIPER LOW [OFF/ON]	
FR WIPER INT [OFF/ON]	
FR WASHER SW [OFF/ON]	
H/L WASH SW [OFF/ON]	**NOTE:** The item is indicated, but not monitored.
INT VOLUME [1 – 7]	Each switch status that BCM judges from the combination switch reading function.
FR WIPER STOP [OFF/ON]	Front wiper motor (stop position) status received from IPDM E/R with CAN communication.
VEHICLE SPEED [km/h]	The value of the vehicle speed signal received from combination meter with CAN communication.
RR WIPER ON [OFF/ON]	Each switch status that BCM judges from the combination switch reading function.
RR WIPER INT [OFF/ON]	
RR WASHER SW [OFF/ON]	
RR WIPER STOP [OFF/ON]	Rear wiper motor (stop position) status input from the rear wiper motor.

ACTIVE TEST

Test item	Operation	Description
FR WIPER	HI	Transmits the front wiper request signal (HI) to IPDM E/R with CAN communication to operate the front wiper HI operation.
	LO	Transmits the front wiper request signal (LO) to IPDM E/R with CAN communication to operate the front wiper LO operation.
	INT	Transmits the front wiper request signal (INT) to IPDM E/R with CAN communication to operate the front wiper INT operation.
	OFF	Stops transmitting the front wiper request signal to stop the front wiper operation.
RR WIPER	ON	Outputs the voltage to operate the rear wiper motor.
	OFF	Stops the voltage to stop.
HEADLAMP WASHER	ON	Transmits the headlamp washer request signal to IPDM E/R with CAN communication to operate the headlamp washer operation.

FLASHER

FLASHER : CONSULT-III Function (BCM - FLASHER)

INFOID:0000000001097020

DATA MONITOR

cardiagn.com

Monitor item [Unit]	Description
IGN ON SW [ON/OFF]	Ignition switch (ON) status judged from IGN signal (ignition power supply)
HAZARD SW [ON/OFF]	The switch status input from the hazard switch
TURN SIGNAL R [ON/OFF]	Each switch condition that BCM judges from the combination switch reading function
TURN SIGNAL L [ON/OFF]	

ACTIVE TEST

Test item	Operation	Description
FLASHER	RH	Outputs the voltage to turn the right side turn signal lamps ON.
	LH	Outputs the voltage to turn the left side turn signal lamps ON.
	OFF	Stops the voltage to turn the turn signal lamps OFF.

AIR CONDITIONER

AIR CONDITIONER : CONSULT-III Function (BCM - AUTO AIR CONDITIONER)

INFOID:0000000001098003

DATA MONITOR

Display Item List

Monitor Item [Unit]		Contents
IGN SW	[On/Off]	Display [ignition switch position (On)/(Off), ACC position (Off)] status as judged form ignition switch signal.
FAN ON SIG	[On/Off]	Display [FAN (On)/FAN (Off)] status as judged form blower fan motor switch signal.
AIR COND SW	[On/Off]	Display [COMP (On)/COMP (Off)] status as judged form air conditioner switch signal.

INTELLIGENT KEY

INTELLIGENT KEY : CONSULT-III Function (BCM - INTELLIGENT KEY)

INFOID:0000000001097021

BCM CONSULT-III FUNCTION

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW	Indicates [ON/OFF] condition of ignition knob switch.
I-KEY LOCK	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.

COMB SW

COMB SW : CONSULT-III Function (BCM - COMB SW)

INFOID:0000000000924607

cardiagn.com

DATA MONITOR

Monitor item [UNIT]	Description
TURN SIGNAL R [OFF/ON]	Displays the status of the TURN RH switch in combination switch judged by BCM with the combination switch reading function.
TURN SIGNAL L [OFF/ON]	Displays the status of the TURN LH switch in combination switch judged by BCM with the combination switch reading function.
HI BEAM SW [OFF/ON]	Displays the status of the HI BEAM switch in combination switch judged by BCM with the combination switch reading function.
HEAD LAMP SW 1 [OFF/ON]	Displays the status of the HEADLAMP 1 switch in combination switch judged by BCM with the combination switch reading function.
HEAD LAMP SW 2 [OFF/ON]	Displays the status of the HEADLAMP 2 switch in combination switch judged by BCM with the combination switch reading function.
TAIL LAMP SW [OFF/ON]	Displays the status of the TAIL LAMP switch in combination switch judged by BCM with the combination switch reading function.
PASSING SW [OFF/ON]	Displays the status of the PASSING switch in combination switch judged by BCM with the combination switch reading function.
AUTO LIGHT SW [OFF/ON]	Displays the status of the AUTO LIGHT switch in combination switch judged by BCM with the combination switch reading function.
FR FOG SW [OFF/ON]	Displays the status of the FR FOG switch in combination switch judged by BCM with the combination switch reading function.
RR FOG SW [OFF/ON]	Displays the status of the RR FOG switch in combination switch judged by BCM with the combination switch reading function.
FR WIPER HI [OFF/ON]	Displays the status of the FR WIPER HI switch in combination switch judged by BCM with the combination switch reading function.
FR WIPER LOW [OFF/ON]	Displays the status of the FR WIPER LOW switch in combination switch judged by BCM with the combination switch reading function.
FR WIPER INT [OFF/ON]	Displays the status of the FR WIPER INT switch in combination switch judged by BCM with the combination switch reading function.
FR WASHER SW [OFF/ON]	Displays the status of the FR WASHER switch in combination switch judged by BCM with the combination switch reading function.
INT VOLUME [1 - 7]	Displays the status of wiper intermittent dial position judged by BCM with the combination switch reading function.
RR WIPER ON [OFF/ON]	Displays the status of the RR WIPER switch in combination switch judged by BCM with the combination switch reading function.
RR WIPER INT [OFF/ON]	Displays the status of the RR WIPER INT switch in combination switch judged by BCM with the combination switch reading function.
RR WASHER SW [OFF/ON]	Displays the status of the RR WASHER switch in combination switch judged by BCM with the combination switch reading function.

IMMU

IMMU : CONSULT-III Function (BCM - IMMU)

INFOID:0000000001097022

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.

DATA MONITOR

cardiagn.com

Monitor item	Content
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.

*1: For the vehicle Intelligent key is equipped.

ACTIVE TEST

Test item	Description
THEFT IND	This test is able to check security indicator operation [ON/OFF].

BATTERY SAVER

BATTERY SAVER : CONSULT-III Function (BCM - BATTERY SAVER)

INFOID:0000000001097023

WORK SUPPORT

Service item	Setting item	Setting	
ROOM LAMP TIMER SET	MODE 1*	30 min.	Sets the interior room lamp battery saver timer operating time.
	MODE 2	60 min.	

*: Initial setting

DATA MONITOR

Monitor item [Unit]	Description
IGN ON SW [ON/OFF]	Ignition switch (ON) status judges from IGN signal (ignition power supply)
ACC SW [ON/OFF]	Ignition switch (ACC) status judges from ACC signal (ACC power supply)
KEY ON SW [ON/OFF]	The switch status input from key switch
PUSH SW [ON/OFF]	Push switch status received from Intelligent Key unit by CAN communication
DOOR SW-DR [ON/OFF]	The switch status input from front door switch (driver side)
DOOR SW-AS [ON/OFF]	The switch status input from front door switch (passenger side)
DOOR SW-RR [ON/OFF]	The switch status input from rear door switch RH
DOOR SW- RL [ON/OFF]	The switch status input from rear door switch LH
BACK DOOR SW [ON/OFF]	The switch status input from back door switch
CDL LOCK SW [ON/OFF]	Lock switch status input from door lock and unlock switch
CDL UNLOCK SW [ON/OFF]	Unlock switch status input from door lock and unlock switch
I-KEY LOCK [ON/OFF]	Lock signal status received from Intelligent Key unit by CAN communication
I-KEY UNLOCK [ON/OFF]	Unlock signal status received from Intelligent Key unit by CAN communication

cardiagn.com

Monitor item [Unit]	Description
KEYLESS LOCK [ON/OFF]	Lock signal status received from remote keyless entry receiver (integrated in the BCM)
KEYLESS UNLOCK [ON/OFF]	Unlock signal status received from remote keyless entry receiver (integrated in the BCM)

ACTIVE TEST

Test item	Operation	Description
BATTERY SAVER	OFF	Cuts the interior room lamp power supply to turn interior room lamps OFF.
	ON	Outputs the interior room lamp power supply to turn interior room lamps ON.*

*: Each lamp switch is in ON position.

TRUNK

TRUNK : CONSULT-III Function (BCM - TRUNK)

INFOID:0000000001097025

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
TRNK OPNR SW	Indicates [ON/OFF] condition of back door opener switch.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the remote keyless entry system equipped vehicle.

ACTIVE TEST

Test item	Description
TRUNK/GLASS HATCH	This test is able to check back door opener operation [ON/OFF].

THEFT ALM

THEFT ALM : CONSULT-III Function (BCM - THEFT ALM)

INFOID:0000000001097026

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

cardiagn.com

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
KEYKESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.

*1: For vehicle equipped with Intelligent Key.

*2: For the vehicle equipped with remote key less entry system.

ACTIVE TEST

Test item	Description
THEFT IND	This test is able to check security indicator operation [ON/OFF].
VEHICLE SECURITY HORN	This test is able to check horn operation [ON].
FLASHER	This test is able to check flasher operation [LH/RH/OFF].

WORK SUPPORT

Test item	Description
SECURITY ALARM SET	Vehicle security function mode can be changed in this mode. • ON: Vehicle security function is ON. • OFF: Vehicle security function is OFF.
THEFT ALM TRG	The switch which triggered vehicle security system is recorded. This mode can be able to confirm and erase the record of vehicle security system.

SIGNAL BUFFER

SIGNAL BUFFER : CONSULT-III Function (BCM - SIGNAL BUFFER)

INFOID:0000000000924610

DATA MONITOR

Monitor item [UNIT]	Description
OIL PRESS SW [OFF/ON]	Displays the status of oil pressure switch received from IPDM E/R via CAN communication.

ACTIVE TEST

cardiagn.com

Test item	Operation	Description
OIL PRESSURE SW	OFF	OFF
	ON	BCM transmits the oil pressure switch signal to the combination meter via CAN communication, which illuminates the oil pressure warning lamp in the combination meter.

PTC HEATER

PTC HEATER : CONSULT-III Function (BCM - PTC HEATER)

INFOID:0000000001098004

DATA MONITOR

Display Item List

Monitor Item [Unit]	Description
ELEC PWR CUT [OFF/FREEZ/INHBT]	Indicate [OFF/FREEZ/INHBT] condition of the PTC heater states.
FAN ON SIG [On/Off]	Displays [FAN (ON)/FAN (OFF)] status as judged from blower fan motor signal.
ENGINE STATUS [STOP/STAL/RUN/CRA]	Indicate [STOP/STALL/RUN/CRA] condition of the engine states.
ENG COOLNT T [°C]	The engine coolant temperature (determined by the signal voltage of the engine coolant temperature sensor) is displayed.
BATTERY VOLT [V]	The power supply voltage of BCM is displayed.
ENGINE RPM [rpm]	Indicates the engine speed computed from the signal of the crankshaft position sensor.
OUTSIDE TEMP [°C]	The outside air temperature (determined by the signal voltage of the OAT sensor) is displayed.

ACTIVE TEST

Test item

Test Item	Operation	Description
PTC HEATER	OFF PTC 1 PTC 2 PTC 3	This test is able to check PTC heater operation.

cardiagn.com

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000000924613

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart. Refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000000924614

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1000	CAN COMM CIRCUIT	When BCM cannot communicate CAN communication signal continuously for 2 seconds or more.	Any item (or items) of the following listed below is malfunctioning in CAN communication system. • Transmission • Receiving (ECM) • Receiving (METER/M&A) • Receiving (TCM) • Receiving (MULTI AV) • Receiving (IPDM E/R) • Receiving (I-KEY)

Diagnosis Procedure

INFOID:0000000000943712

1.PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 seconds or more.
2. Check “Self Diagnostic Result” of BCM.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI-39, "Intermittent Incident".

cardiagn.com

U1010 CONTROL UNIT (CAN)

DTC Logic

INFOID:0000000000924616

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller of BCM.	BCM

Diagnosis Procedure

INFOID:0000000000924617

1.REPLACE BCM

When “DTC:U1010” is detected, replace BCM.

>> Replace BCM. Refer to BCS-64, "Exploded View".

Special Repair Requirement

INFOID:0000000000927249

1.ADDITIONAL SERVICE WHEN REPLACING BCM

>> Refer to BCS-3, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".

cardiagn.com

POWER SUPPLY AND GROUND CIRCUIT

Diagnosis Procedure

INFOID:0000000000924627

1.CHECK FUSES AND FUSIBLE LINK

Check that the following fuses and fusible link are not fusing.

Terminal No.	Signal name	Fuses and fusible link No.
41	Battery power supply	9
57		J
37	ACC power supply	5
38	Ignition power supply	4

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(–)			
BCM			OFF	ACC	ON
Connector	Terminal				
M65	37	Ground	Approx. 0 V	Battery voltage	Battery voltage
	38		Approx. 0 V	Approx. 0 V	Battery voltage
M66	41		Battery voltage	Battery voltage	Battery voltage
M67	57				

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

cardiagn.com

COMBINATION SWITCH INPUT CIRCUIT

Diagnosis Procedure

INFOID:0000000000924629

1.CHECK INPUT 1 - 5 SYSTEM CIRCUIT FOR OPEN

1. Turn ignition switch OFF.
2. Disconnect BCM and combination switch connectors.
3. Check continuity between BCM harness connector and combination switch harness connector.

System	BCM		Combination switch		Continuity
	Connector	Terminal	Connector	Terminal	
INPUT 1	M65	33	M27	1	Existed
INPUT 2		32		2	
INPUT 3		35		3	
INPUT 4		34		4	
INPUT 5		31		5	

Does continuity exist?

YES >> GO TO 2.
NO >> Repair harnesses or connectors.

2.CHECK INPUT 1 - 5 SYSTEM CIRCUIT FOR SHORT

Check for continuity between BCM harness connector and ground.

System	BCM		Ground	Continuity
	Connector	Terminal		
INPUT 1	M65	33	Ground	Not existed
INPUT 2		32		
INPUT 3		35		
INPUT 4		34		
INPUT 5		31		

Does continuity exist?

YES >> Repair harnesses or connectors.
NO >> GO TO 3.

3.CHECK BCM OUTPUT VOLTAGE

1. Connect BCM connector.
2. Check voltage between BCM harness connector and ground.

System	Terminals			Voltage (Approx.)
	(+)		(–)	
	BCM			
	Connector	Terminal		
INPUT 1	M65	33	Ground	Refer to BCS-39, "Reference Value".
INPUT 2		32		
INPUT 3		35		
INPUT 4		34		
INPUT 5		31		

Is the measurement value normal?

YES >> GO TO 4.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

cardiagn.com

4.CHECK COMBINATION SWITCH

Check combination switch. Refer to BCS-38, "Description".

Is the check result normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Replace the combination switch (applicable parts).

Special Repair Requirement

INFOID:0000000000927429

1.ADDITIONAL SERVICE WHEN REPLACING BCM

>> Refer to BCS-3, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".

cardiagn.com

COMBINATION SWITCH OUTPUT CIRCUIT

Diagnosis Procedure

INFOID:0000000000924631

1.CHECK OUTPUT 1 - 5 SYSTEM CIRCUIT FOR OPEN

1. Turn ignition switch OFF.
2. Disconnect BCM and combination switch connectors.
3. Check continuity between BCM harness connector and combination switch harness connector.

System	BCM		Combination switch		Continuity
	Connector	Terminal	Connector	Terminal	
OUTPUT 1	M65	1	M27	6	Existed
OUTPUT 2		4		7	
OUTPUT 3		3		10	
OUTPUT 4		2		9	
OUTPUT 5		5		8	

Does continuity exist?

YES >> GO TO 2.
NO >> Repair harnesses or connectors.

2.CHECK OUTPUT 1 - 5 SYSTEM CIRCUIT FOR SHORT

Check for continuity between BCM harness connector and ground.

System	BCM			Continuity
	Connector	Terminal		
OUTPUT 1	M65	1	Ground	Not existed
OUTPUT 2		4		
OUTPUT 3		3		
OUTPUT 4		2		
OUTPUT 5		5		

Does continuity exist?

YES >> Repair harnesses or connectors.
NO >> GO TO 3.

3.CHECK COMBINATION SWITCH

Check combination switch. Refer to BCS-38, "Description".

Is the check result normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Replace combination switch (applicable parts).

Special Repair Requirement

INFOID:0000000000927430

1.ADDITIONAL SERVICE WHEN REPLACING BCM

>> Refer to BCS-3, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".

cardiagn.com

COMBINATION SWITCH

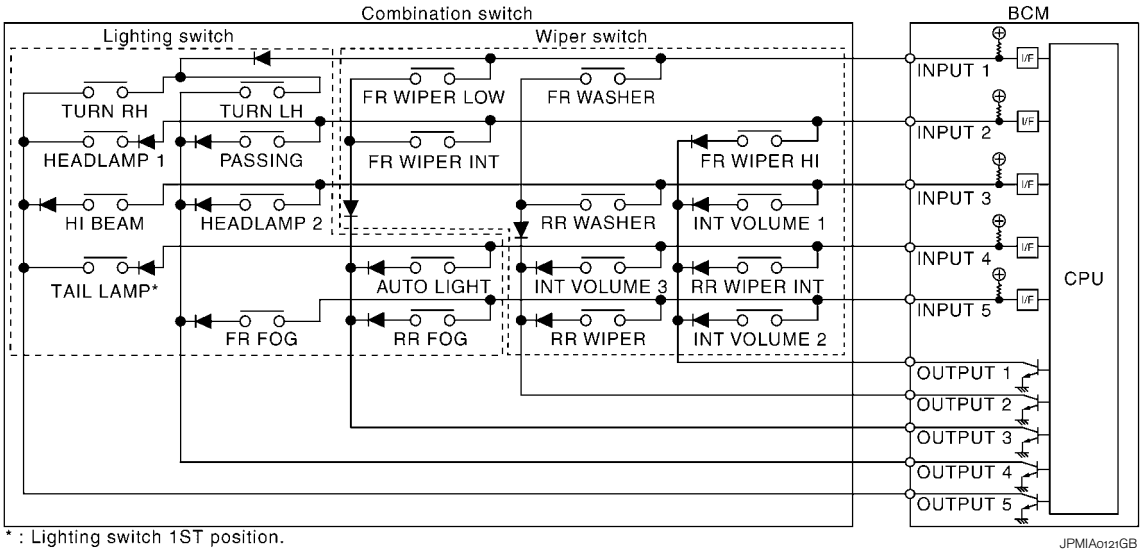
Description

INFOID:0000000001026782

COMBINATION SWITCH MATRIX

Combination switch consists of INPUT circuit and OUTPUT circuit.

Combination switch circuit



Combination switch INPUT-OUTPUT system list

System	OUTPUT 1	OUTPUT 2	OUTPUT 3	OUTPUT 4	OUTPUT 5
INPUT 1	—	FR WASHER	FR WIPER LOW	TURN LH	TURN RH
INPUT 2	FR WIPER HI	—	FR WIPER INT	PASSING	HEADLAMP 1
INPUT 3	INT VOLUME 1	RR WASHER	—	HEADLAMP 2	HI BEAM
INPUT 4	RR WIPER INT	INT VOLUME 3	AUTO LIGHT	—	TAIL LAMP
INPUT 5	INT VOLUME 2	RR WIPER	RR FOG	FR FOG	—

NOTE:

Headlamp has a dual system switch.

Diagnosis Procedure

INFOID:0000000001026783

1.CHECK LIGHT & TURN SIGNAL SWITCH

Check operation with normal light & turn signal switch installed.

Does it operate normally?

YES >> Replace light & turn signal switch.
NO >> GO TO 2.

2.CHECK WIPER & WASHER SWITCH

Check operation with normal wiper & washer switch installed.

Does it operate normally?

YES >> Replace wiper & washer switch.
NO >> GO TO 3.

3.CHECK SWITCH BASE (SPIRAL CABLE)

Check operation with normal switch base (spiral cable) installed.

Does it operate normally?

YES >> Replace switch base (spiral cable).
NO >> Combination switch is normal.

ECU DIAGNOSIS

BCM (BODY CONTROL MODULE)

Reference Value

INFOID:0000000000924644

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

cardiagn.com

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

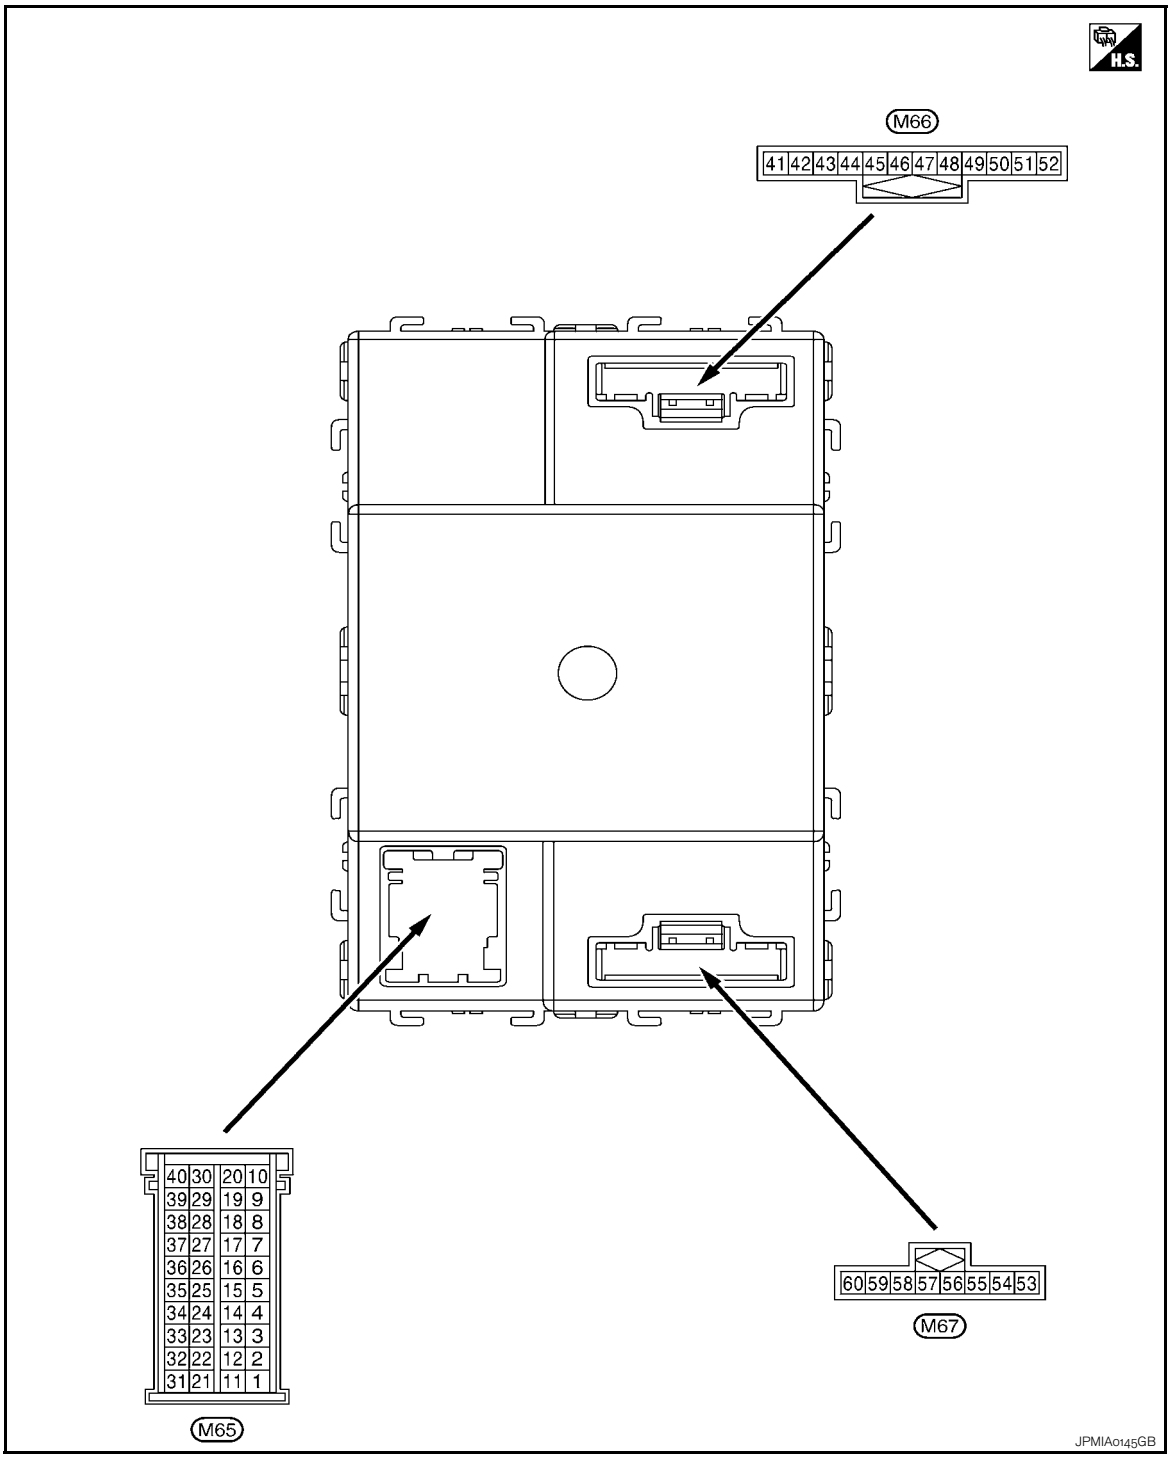
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000000924646

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Index

INFOID:0000000000925732

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001097632

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

SYMPTOM DIAGNOSIS

COMBINATION SWITCH SYSTEM SYMPTOMS

Symptom Table

INFOID:0000000000936046

1. Perform “Data Monitor” of CONSULT-III to check for any malfunctioning item.
2. Check the malfunction combinations.

Malfunction item: ×

Data monitor item																	Malfunction combination
TURN SIGNAL R	TURN SIGNAL L	HI BEAM SW	HEAD LAMP SW 1	HEAD LAMP SW 2	TAIL LAMP SW	PASSING SW	AUTO LIGHT SW	FR FOG SW	RR FOG SW	FR WIPER HI	FR WIPER LOW	FR WIPER INT	FR WASHER SW	INT VOLUME	RR WIPER ON	RR WIPER INT	RR WASHER SW	
×	×										×		×					A
			×			×				×		×						B
		×		×										×			×	C
					×		×							×		×		D
								×	×					×	×			E
										×				×		×	×	F
													×	×	×			G
							×		×		×	×						H
	×			×		×		×										I
×		×	×		×													J
Combinations other than those above																		K
All Items																		L
If only one item is detected or the item is not applicable to the combinations A to L																		M

3. Identify the malfunctioning part from the agreed combination and repair or replace the part.

Malfunction combination	Malfunctioning part	Repair or replace
A	Combination switch INPUT 1 circuit	Inspect the combination switch input circuit applicable to the malfunctioning part. Refer to BCS-35, "Diagnosis Procedure".
B	Combination switch INPUT 2 circuit	
C	Combination switch INPUT 3 circuit	
D	Combination switch INPUT 4 circuit	
E	Combination switch INPUT 5 circuit	
F	Combination switch OUTPUT 1 circuit	Inspect the combination switch output circuit applicable to the malfunctioning part. Refer to BCS-37, "Diagnosis Procedure".
G	Combination switch OUTPUT 2 circuit	
H	Combination switch OUTPUT 3 circuit	
I	Combination switch OUTPUT 4 circuit	
J	Combination switch OUTPUT 5 circuit	
K	Light and turn signal switch or front wiper and washer switch	Refer to BCS-38, "Description".
L	BCM	Replace BCM.
M	Light and turn signal switch or front wiper and washer switch	Replace the switch that cannot be operated.

Removal and Installation

INFOID:0000000000924641

CAUTION:
Before replacing BCM, perform configuration. Refer to BCS-3, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".

REMOVAL

1. Remove glove box assembly. Refer to IP-11, "Exploded View".
2. Disconnect 4WD control unit connector.
3. Remove intake heater duct.
4. Remove mounting screws.
5. Remove BCM and disconnect the connector.

INSTALLATION

Install in the reverse order of removal.

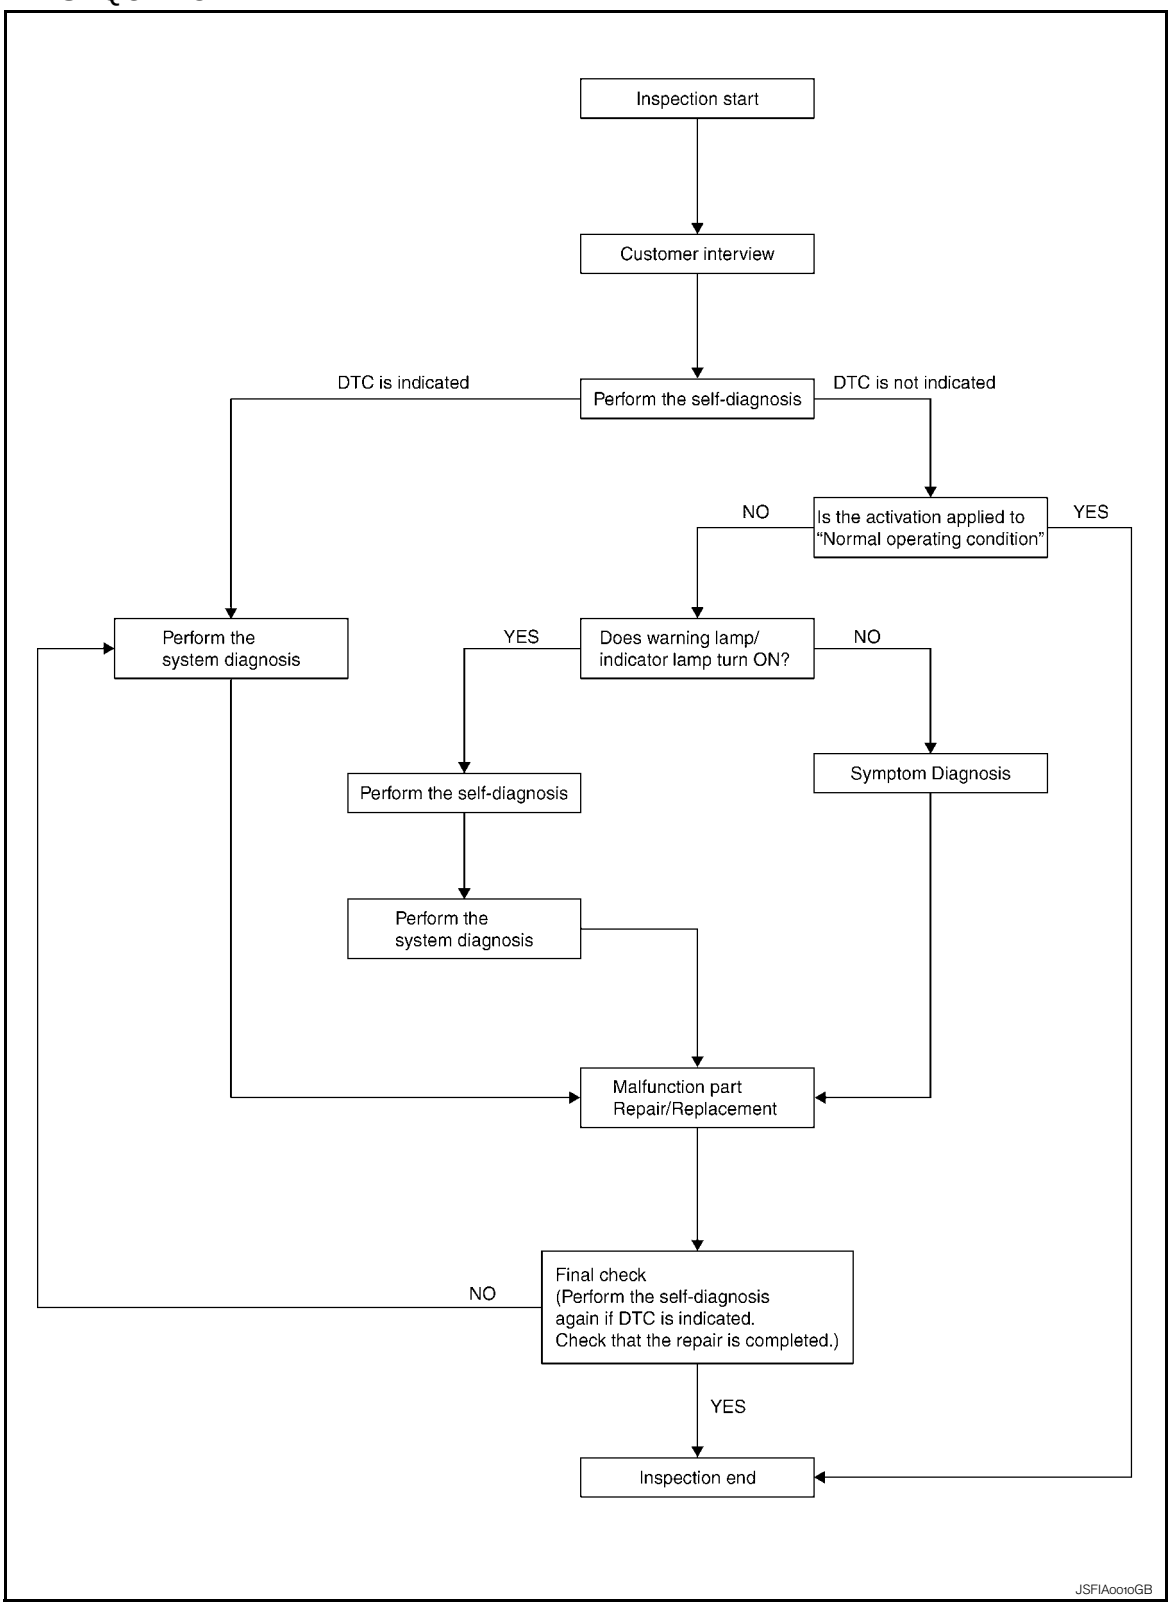
OVERALL SEQUENCE



DETAIED FLOW

cardiagn.com

1.COLLECT THE INFORMATION FROM THE CUSTOMER

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the diagnosis worksheet. Refer to BRC-8, "Diagnostic Work Sheet".

>> GO TO 2.

2.PERFORM THE SELF-DIAGNOSIS

Check the DTC display with the self-diagnosis function. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is there any DTC displayed?

YES >> GO TO 3.
NO >> GO TO 4.

3.PERFORM THE SYSTEM DIAGNOSIS

Perform the diagnosis applicable to the displayed DTC. Refer to BRC-57, "DTC No. Index".

>> GO TO 7.

4.CHECK THE SYMPTOM THAT IS NOT CONSIDERED A SYSTEM MALFUNCTION

Check that the symptom is a normal operation that is not considered a system malfunction. Refer to BRC-63, "Description".

Is the symptom is a normal operation?

YES >> INSPECTION END
NO >> GO TO 5.

5.CHECK THE WARNING LAMP FOR ILLUMINATION

Check that the warning lamp illuminate.
- ABS warning lamp: Refer to BRC-49, "Description".
- Brake warning lamp: Refer to BRC-50, "Description".

Is ON/OFF timing normal?

YES >> GO TO 6.
NO >> GO TO 2.

6.PERFORM THE DIAGNOSIS BY SYMPTOM

Perform the diagnosis applicable to the symptom.

>> GO TO 7.

7.REPAIR OR REPLACE THE MALFUNCTIONING PARTS

Repair or replace the specified malfunctioning parts.

>> GO TO 8.

8.FINAL CHECK

Perform the self-diagnosis again, and check that the malfunction is repaired completely. After checking, erase the self-diagnosis memory. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any DTC indicated?

YES >> GO TO 3.
NO >> INSPECTION END

System Description

INFOID:0000000000924960

- Anti-Lock Braking System is a function that detects wheel revolution while braking, electronically controls braking force, and prevents wheel locking during sudden braking. It improves handling stability and maneuverability for avoiding obstacles.
- Electrical system diagnosis by CONSULT-III is available.

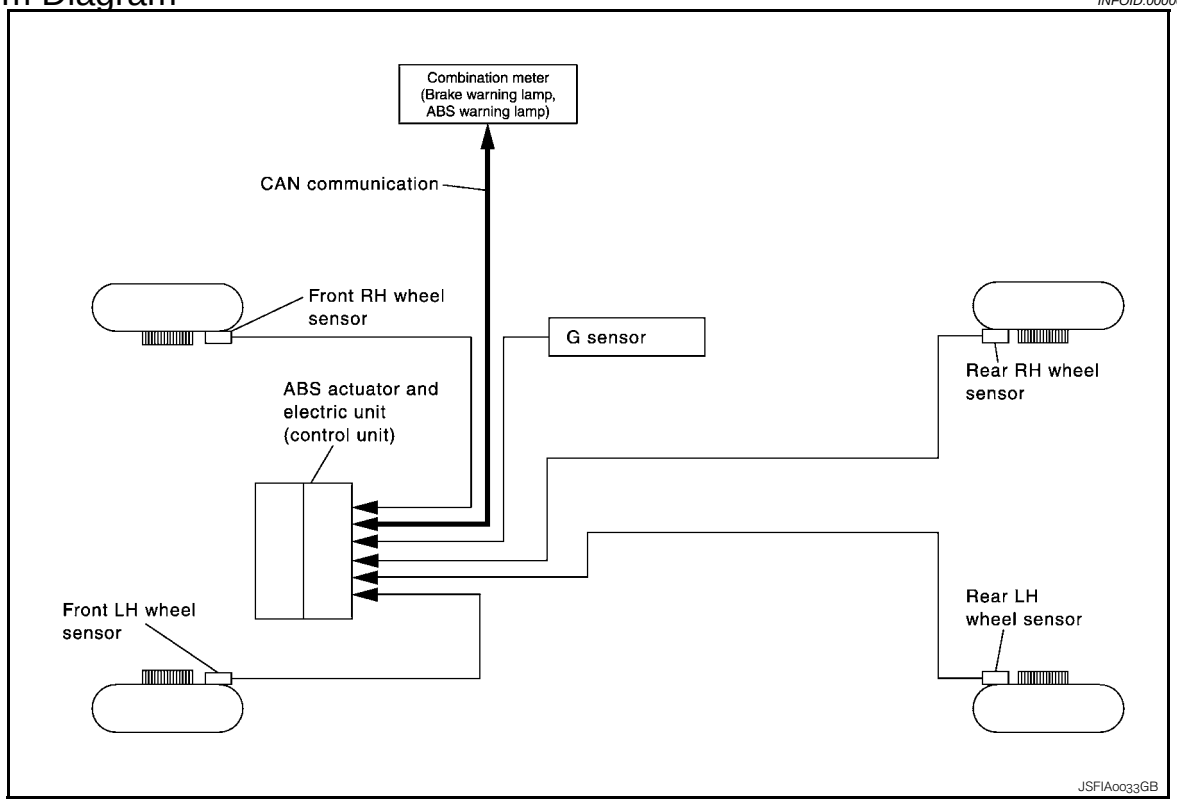
System Diagram

INFOID:0000000000977414



System Description

INFOID:0000000000924964

- Electric Brake force Distribution is a following function. ABS actuator and electric unit (control unit) detects subtle slippages between the front and rear wheels during braking. Then is electronically controls the rear braking force (brake fluid pressure) to reducing and reduces rear wheel slippage. Accordingly it improves vehicle stability.
- Electrical system diagnosis by CONSULT-III is available.

DIAGNOSIS SYSTEM [ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)]

CONSULT-III Function (ABS)

INFOID:0000000000924967

FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the ABS actuator and electric unit (control unit) can be read.
Active test	Diagnostic test mode is which CONSULT-III drives some actuators apart from the ABS actuator and electric unit (control unit) and also shifts some parameters in a specified range.
ECU part number	ABS actuator and electric unit (control unit) part number can be read.
Function test	Performed by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.

SELF-DIAG RESULTS MODE

Operation Procedure

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

How to Erase Self-diagnosis Results

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp and brake warning lamp turn OFF.
   CAUTION:
   If memory cannot be erased, perform applicably diagnosis.
   NOTE:
   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).

Display Item List

Refer to BRC-57, "DTC No. Index".

DATA MONITOR MODE

Display Item List

×: Applicable o: Optional item

RR RH SENSOR [km/h (MPH)]	×	×	
STOP LAMP SW (On/Off)	×	×	Stop lamp switch signal status

cardiagn.com

Monitor item (Unit)	SELECT MONITOR ITEM		Remarks
	ECU INPUT SIGNALS	MAIN SIGNLAS	
BATTERY VOLT (V)	×	×	Battery voltage supplied to the ABS actuator and electric unit (control unit)
DECEL G SENSOR (G) NOTE 1	×	×	Vehicle on level surface or on slope
FR RH IN SOL (On/Off)	o	×	Operation status of each solenoid valve
FR RH OUT SOL (On/Off)	o	×	
FR LH IN SOL (On/Off)	o	×	
FR LH OUT SOL (On/Off)	o	×	
RR RH IN SOL (On/Off)	o	×	
RR RH OUT SOL (On/Off)	o	×	
RR LH IN SOL (On/Off)	o	×	
RR LH OUT SOL (On/Off)	o	×	
MOTOR RELAY (On/Off)	o	×	Motor and motor relay operation
ACTUATOR RLY (On/Off) NOTE 2	o	×	Actuator relay operation
ABS WARN LAMP (On/Off)	o	×	ABS warning lamp
G SENSOR (On/Off)	o	o	G sensor signal status
EBD SIGNAL (On/Off)	o	o	EBD operation
ABS SIGNAL (On/Off)	o	o	ABS operation
EBD FAIL SIG (On/Off)	o	o	EBD fail-safe signal
ABS FAIL SIG (On/Off)	o	o	ABS fail-safe signal

NOTE:

1: Only 4WD models

2: Every 20 seconds momentary switch to OFF.

ACTIVE TEST MODE

CAUTION:

- **Do not perform active test while driving vehicle.**
- **Make sure to completely bleed air from brake system.**
- **The active test cannot be performed with the ABS warning lamp and brake warning lamp are ON.**
- **ABS warning lamp and brake warning lamp are ON during active test.**

NOTE:

- When active test is performed while depressing the pedal, the pedal depression amount will change. This is normal. (Only solenoid valve and ABS motor.)
- “TEST IS STOPPED” is displayed 10 seconds after operation start.
- After “TEST IS STOPPED” is displayed, to perform test again.

Test Item

cardiagn.com

ABS SOLENOID VALVE

- For ABS solenoid valve, touch “UP”, “KEEP”, and “DOWN”. Then use screen monitor to check that solenoid valve operates as shown in solenoid valve operation chart.

Solenoid valve operation chart

Test item	Display item	Display		
		UP	KEEP	DOWN
FR RH SOL	FR RH IN SOL	OFF	ON	ON
	FR RH OUT SOL	OFF	OFF	ON*
FR LH SOL	FR LH IN SOL	OFF	ON	ON
	FR LH OUT SOL	OFF	OFF	ON*
RR RH SOL	RR RH IN SOL	OFF	ON	ON
	RR RH OUT SOL	OFF	OFF	ON*
RR LH SOL	RR LH IN SOL	OFF	ON	ON
	RR LH OUT SOL	OFF	OFF	ON*

*: ON for 1 to 2 seconds after the touch, and then OFF.

ABS MOTOR

- Touch “ON” and “OFF” on screen. Make sure motor relay and actuator relay operates as shown in table below.

Test item	Display item	Display	
		ON	OFF
ABS MOTOR	MOTOR RELAY	ON	OFF
	ACTUATOR RLY NOTE	ON	ON

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is not malfunction because it is an operation for checking.

cardiagn.com

COMPONENT DIAGNOSIS

C1101, C1102, C1103, C1104 WHEEL SENSOR-1

Description

INFOID:0000000000924968

When the sensor rotor rotates, the magnetic field changes. The sensor converts the magnetic field changes to current signals (rectangular wave) and transmits them to the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924969

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1101	RR RH SENSOR-1	Circuit of rear RH wheel circuit is open or short circuit. Current signal from sensor is outside limits.	• Harness or connector • Wheel sensor • ABS actuator and electric unit (control unit)
C1102	RR LH SENSOR-1	Circuit of rear LH wheel circuit is open or short circuit. Current signal from sensor is outside limits.	
C1103	FR RH SENSOR-1	Circuit of front RH wheel circuit is open or short circuit. Current signal from sensor is outside limits.	
C1104	FR LH SENSOR-1	Circuit of front LH wheel circuit is open or short circuit. Current signal from sensor is outside limits.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
RR RH SENSOR-1
RR LH SENSOR-1
FR RH SENSOR-1
FR LH SENSOR-1

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-20, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924970

CAUTION:
Do not check between wheel sensor terminals.

INSPECTION PROCEDURE

1.CHECK SENSOR AND SENSOR ROTOR

- Check sensor rotor for damage.
- Check wheel sensor for damage, disconnection or looseness.

Are the sensor and sensor rotor normal?

YES >> GO TO 2.
NO >> Repair wheel sensor mount or replace sensor rotor. Then perform the self-diagnosis.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.

cardiagn.com

5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Repair or replace connector.

3. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check continuity between terminals. (Also check continuity when steering wheel is turned right and left and when sensor harness inside the wheel house is moved.)

Measurement terminal for power supply circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal	
E34	9	E39 (Front RH)	2	Existed
	16	E22 (Front LH)		
	8	B41 (Rear RH)		
	6	B44 (Rear LH)		

Measurement terminal for signal circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal	
E34	10	E39 (Front RH)	1	Existed
	5	E22 (Front LH)		
	19	B41 (Rear RH)		
	17	B44 (Rear LH)		

Measurement terminal for ground circuit

ABS actuator and electric unit (control unit)				Continuity
Connector	Terminal	Connector	Terminal	
E34	9, 10	E34	1, 4	Not existed
	16, 5			
	8, 19			
	6, 17			

5. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace malfunctioning components.

4. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel sensor		—	Voltage
Connector	Terminal		
E39 (Front RH)	2	Ground	8 V or more
E22 (Front LH)			
B41 (Rear RH)			
B44 (Rear LH)			

Is the inspection result normal?

cardiagn.com

YES >> Replace applicable wheel sensor.
NO >> Replace ABS actuator and electric unit (control unit).

Component Inspection

INFOID:0000000000924971

1. CHECK DATA MONITOR

On “DATA MONITOR”, select “FR LH SENSOR”, “FR RH SENSOR”, “RR LH SENSOR”, and “RR RH SENSOR”, and check the vehicle speed.

Wheel sensor	Vehicle speed (DATA MONITOR)
FR LH SENSOR	Nearly matches the speedometer display (±10% or less)
FR RH SENSOR	
RR LH SENSOR	
RR RH SENSOR	

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-20, "Diagnosis Procedure".

cardiagn.com

C1105, C1106, C1107, C1108 WHEEL SENSOR-2

Description

INFOID:0000000000977429

ABS unit continually monitors wheel speed sensors to detect abnormal signals.

DTC Logic

INFOID:0000000000924974

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1105	RR RH SENSOR-2	Signal from rear RH wheel sensor does not match other 3 wheel speed signals.	• Sensor not installed correctly • Sensor rotor or encoder damaged • Sensor rotor loose on axle • Electrical interference • Wheel not turning - e.g. vehicle driven on 2WD dyno • Sensor damaged • ABS unit damaged
C1106	RR LH SENSOR-2	Signal from rear LH wheel sensor does not match other 3 wheel speed signals.	
C1107	FR RH SENSOR-2	Signal from front RH wheel sensor does not match other 3 wheel speed signals.	
C1108	FR LH SENSOR-2	Signal from front LH wheel sensor does not match other 3 wheel speed signals.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
RR RH SENSOR-2
RR LH SENSOR-2
FR RH SENSOR-2
FR LH SENSOR-2

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-23, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001090894

CAUTION:
Do not check between wheel sensor terminals.

INSPECTION PROCEDURE

1.CHECK SENSOR AND SENSOR ROTOR

- Check sensor rotor for damage.
- Check wheel sensor for damage, disconnection or looseness.

Are the sensor and sensor rotor normal?

YES >> GO TO 2.
NO >> Repair wheel sensor mount or replace sensor rotor. Then perform the self-diagnosis.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

cardiagn.com

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Repair or replace connector.

3.CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check continuity between terminals. (Also check continuity when steering wheel is turned right and left and when sensor harness inside the wheel house is moved.)

NO >> Go to diagnosis procedure. Refer to BRC-35, "Diagnosis Procedure".

cardiagn.com

C1109 POWER AND GROUND SYSTEM

Description

INFOID:0000000000924978

Power is supply from the battery to ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924979

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1109	BATTERY VOLTAGE [ABNORMAL]	When the ABS actuator and electric unit (control unit) power supply is lower than normal and vehicle speed is greater than 6 km/h (4 MPH). Power supply is greater than normal limits.	• Harness or connector • ABS actuator and electric unit (control unit) • Fuse • Vehicle electrical power system

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-26, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924980

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Repair or replace connector.

2.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Turn ignition switch ON or OFF and check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

ABS actuator and electric unit (control unit)		—	Condition	Voltage
Connector	Terminal			
E34	18	Ground	Ignition switch: ON	Battery voltage
			Ignition switch: OFF	Approx. 0 V

4. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 3.

cardiagn.com

NO >> Repair or replace malfunctioning components.

3. ABS POWER SUPPLY CHECK (UNDER LOAD CONDITIONS)

1. Use 12V lamp (normal rating 10 to 20W) connected between E34 terminals 18 and 4. With ignition switch ON check bulb illuminates correctly.
2. Check ABS motor supply under loaded condition (connector E34 terminals 1 and 2).

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check both power supply and ground circuit.

4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E34	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Check battery for terminal looseness, low voltage, etc. if any malfunction is found, repair malfunctioning parts.
NO >> Repair or replace malfunctioning components (check ABS earth bolt for tightness and corrosion).

cardiagn.com

C1110, C1153 ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Description

INFOID:0000000001091113

ABS unit is continuously monitoring ECU hardware and software for correct operation.

DTC Logic

INFOID:0000000000924982

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1110	CONTROLLER FAILURE	Possible internal failure of control unit components.	• Internal failure of control unit components • ABS solenoid valve or motor power supply/ground abnormality
C1153	EMERGENCY BRAKE	Continuous ABS/EBD control for more than 60 seconds.	• ABS control unit software failure • Wheel speed sensor input abnormality

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

1. Check both ABS solenoid valve and motor supply and ground circuits using a suitable electrical load.
2. Check wheel speed sensor inputs.
3. Check the self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE
EMERGENCY BRAKE

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-28, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924983

INSPECTION PROCEDURE

1.REPLACE ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

CAUTION:
Replace ABS actuator and electric unit (control unit) when self-diagnostic result shows items other than those applicable.

>> Replace ABS actuator and electric unit (control unit).

cardiagn.com

C1111 ABS MOTOR, MOTOR RELAY SYSTEM

Description

INFOID:0000000000924985

PUMP

The pump returns the brake fluid stored in the reservoir to the master cylinder by reducing the pressure.

MOTOR

The motor drives the pump according to the signals transmitted by the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924986

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1111	PUMP MOTOR	During the actuator motor operating with ON, when the actuator motor turns OFF, or when the control line for actuator motor relay is open.	• Harness or connector • ABS actuator and electric unit (control unit)
		During the actuator motor operating with OFF, when the actuator motor turns ON, or when the control line for relay is shorted to ground.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
PUMP MOTOR

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-29, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924987

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnect, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Replace or repair connector.

2.CHECK ABS MOTOR AND MOTOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check voltage between the ABS actuator and electric unit (control unit) harness connector terminal and ground.

cardiagn.com

ABS actuator and electric unit (control unit)		—	Voltage
Connector	Terminal		
E34	2	Ground	Battery voltage

4. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.ABS POWER SUPPLY CHECK (UNDER LOAD CONDITIONS)

Use 12V lamp (normal rating 10 to 20W) connected between E34 terminals 1 and 2. With ignition switch ON check bulb illuminates correctly.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check both power supply and ground circuit.

4.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E34	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components. (Check ABS each bolt for tightness and corrosion).

Component Inspection

INFOID:0000000000924988

1.CHECK ACTIVE TEST

1. On “ACTIVE TEST”, select “ABS MOTOR”.
2. Touch “ON” and “OFF” on screen. Make sure motor relay and actuator relay operates as shown in table below.

Test item	Display item	Display	
		ON	OFF
ABS MOTOR	MOTOR RELAY	ON	OFF
	ACTUATOR RLY NOTE	ON	ON

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is not malfunction because it is an operation for checking.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-29, "Diagnosis Procedure".

cardiagn.com

C1113 G SENSOR

Description

INFOID:0000000000936456

G sensor detects G affecting the vehicle, and transmits the data to the ABS actuator and electric unit (control unit) as an analog voltage signal.

DTC Logic

INFOID:0000000000936457

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1113	G SENSOR	G sensor is malfunctioning, or signal line of G sensor is open or shorted.	• Harness or connector • ABS actuator and electric unit (control unit) • G sensor • Electrical interference • Vehicle driven on 4WD rolling road

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
G SENSOR

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-31, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000936458

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect G sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Replace or repair connector.

2.CHECK G SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect G sensor connector.
3. Turn ignition switch ON or OFF and check voltage between G sensor harness connector terminal and ground.

G sensor		—	Condition	Voltage
Connector	Terminal			
M71	3	Ground	Ignition switch: ON	Battery voltage
		Ground	Ignition switch: OFF	Approx. 0 V

cardiagn.com

C1114 ACTUATOR RELAY SYSTEM

Description

INFOID:0000000000924990

Activates or deactivates each solenoid valve according to the signals transmitted by the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924991

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1114	MAIN RELAY	During the actuator relay operating with OFF, when the actuator relay turns ON, or when the control line for the relay is shorted to the ground.	• Harness or connector • ABS actuator and electric unit (control unit)
		During the actuator relay operating with ON, when the actuator relay turns ON, or when the control line for the relay is open.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
MAIN RELAY

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-33, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924992

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Replace or repair connector.

2.CHECK ACTUATOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

ABS actuator and electric unit (control unit)		—	Voltage
Connector	Terminal		
E34	3	Ground	Battery voltage

4. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

cardiagn.com

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.ABS POWER SUPPLY CHECK (UNDER LOAD CONDITIONS)

Use 12V lamp (normal rating 10 to 20W) connected between E34 terminals 1 and 3. With ignition switch ON check bulb illuminates correctly.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check both power supply and ground circuit.

4.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E34	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components. (Check ABS each bolt for tightness and corrosion).

Component Inspection

INFOID:0000000000924993

1.CHECK ACTIVE TEST

1. On “ACTIVE TEST”, select “ABS MOTOR”.
2. Touch “ON” and “OFF” on screen. Make sure motor relay and actuator relay operates as shown in table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RLY NOTE	ON	ON

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is not malfunction because it is an operation for checking.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-33, "Diagnosis Procedure".

cardiagn.com

C1115 WHEEL SENSOR

Description

INFOID:0000000000977433

When the sensor rotor rotates, the magnetic field changes. The sensor converts the magnetic field changes to current signals (rectangular wave) and transmits them to the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924996

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1115	ABS SENSOR [ABNORMAL SIGNAL]	Miss-match between the 4 wheel speed sensor signals.	• Harness or connector not a possible cause. • Other possible causes - Tire radius (due to wrong size or pressure) interference.

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
ABS SENSOR [ABNORMAL SIGNAL]

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-35, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001090896

CAUTION:
Do not check between wheel sensor terminals.

INSPECTION PROCEDURE

1.CHECK SENSOR AND SENSOR ROTOR

- Check sensor rotor for damage.
- Check wheel sensor for damage, disconnection or looseness.

Are the sensor and sensor rotor normal?

YES >> GO TO 2.
NO >> Repair wheel sensor mount or replace sensor rotor. Then perform the self-diagnosis.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Repair or replace connector.

3.CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.

cardiagn.com

4. Check continuity between terminals. (Also check continuity when steering wheel is turned right and left and when sensor harness inside the wheel house is moved.)

Measurement terminal for power supply circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal	
E34	9	E39 (Front RH)	2	Existed
	16	E22 (Front LH)		
	8	B41 (Rear RH)		
	6	B44 (Rear LH)		

Measurement terminal for signal circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal	
E34	10	E39 (Front RH)	1	Existed
	5	E22 (Front LH)		
	19	B41 (Rear RH)		
	17	B44 (Rear LH)		

Measurement terminal for ground circuit

ABS actuator and electric unit (control unit)				Continuity
Connector	Terminal	Connector	Terminal	
E34	9, 10	E34	1, 4	Not existed
	16, 5			
	8, 19			
	6, 17			

5. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace malfunctioning components.

4. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel sensor		—	Voltage
Connector	Terminal		
E39 (Front RH)	2	Ground	8 V or more
E22 (Front LH)			
B41 (Rear RH)			
B44 (Rear LH)			

Is the inspection result normal?

YES >> Replace applicable wheel sensor.
NO >> Replace ABS actuator and electric unit (control unit).

Component Inspection

INFOID:0000000001090897

1. CHECK DATA MONITOR

On “DATA MONITOR”, select “FR LH SENSOR”, “FR RH SENSOR”, “RR LH SENSOR”, and “RR RH SENSOR”, and check the vehicle speed.

cardiagn.com

Wheel sensor	Vehicle speed (DATA MONITOR)
FR LH SENSOR	Nearly matches the speedometer display (±10% or less)
FR RH SENSOR	
RR LH SENSOR	
RR RH SENSOR	

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-35, "Diagnosis Procedure".

cardiagn.com

C1116 STOP LAMP SWITCH

Description

INFOID:0000000000925000

The stop lamp switch transmits the stop lamp switch signal (ON/OFF) to the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000925001

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1116	STOP LAMP SW	When stop lamp switch circuit is open.	• Harness or connector • Stop lamp switch • ABS actuator and electric unit (control unit)

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
STOP LAMP SW

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-38, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000925002

INSPECTION PROCEDURE

1.CHECK STOP LAMP ILLUMINATE

Press brake pedal and check stop lamp illuminate.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace malfunctioning components.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect stop lamp switch connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors securely.
6. Start engine.
7. Repeat pumping brake pedal carefully several times, and perform self-diagnosis.

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Replace or repair connector.

3.CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch connector.
3. Check continuity between stop lamp switch connector terminals.

cardiagn.com

Stop lamp switch Terminal	Condition	Continuity
1 – 2	Release stop lamp switch (When brake pedal is depressed.)	Existed
	Push stop lamp switch (When brake pedal is released.)	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Replace stop lamp switch.

4.CHECK STOP LAMP SWITCH CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Connect stop lamp switch connector.
3. Check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

ABS actuator and electric unit (control unit)		Condition	Voltage
Connector	Terminal		
E34	20	Brake pedal is depressed	Battery voltage
		Brake pedal is released	Approx. 0 V

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components.

Component Inspection

INFOID:0000000000925003

1.CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch connector.
3. Check continuity between stop lamp switch connector terminals.

Stop lamp switch Terminal	Condition	Continuity
1 – 2	Release stop lamp switch (When brake pedal is depressed.)	Existed
	Push stop lamp switch (When brake pedal is released.)	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace stop lamp switch.

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000000925048

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

DTC Logic

INFOID:0000000000925049

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
U1000	CAN COMM CIRCUIT	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or more.	• CAN communication line • ABS actuator and electric unit (control unit)

Diagnosis Procedure

INFOID:0000000000925050

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and perform self-diagnosis.

BRAKE FLUID LEVEL SWITCH

Description

INFOID:0000000000925043

The brake fluid level switch converts the brake fluid level to an electric signal and transmits it to the ABS actuator and electric unit (control unit).

Component Function Check

INFOID:0000000000925730

1.CHECK BRAKE FLUID LEVEL SWITCH OPERATION

Operate the brake fluid level switch. Then check that the brake warning lamp in the combination meter turns ON/OFF correctly.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-45, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000925045

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect brake fluid level switch connector and combination meter connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connectors and then perform component function check. Refer to BRC-45, "Component Function Check".

Is the inspection result normal?

YES >> Poor connection of connector terminal. Replace or repair connector.
NO >> GO TO 2.

2.CHECK BRAKE FLUID LEVEL SWITCH

1. Turn ignition switch OFF.
2. Disconnect brake fluid level switch connector.
3. Check continuity between brake fluid level switch connector terminals.

Brake fluid level switch		Condition	Continuity
Connector	Terminal		
E37	1 – 2	When brake fluid is full in the reservoir tank.	Not existed
		When brake fluid is empty in the reservoir tank.	Existed

Is the inspection result normal?

YES >> GO TO 3.
NO >> Brake fluid level switch is malfunction. Replace reservoir tank.

3.CHECK BRAKE FLUID LEVEL SWITCH CIRCUIT

1. Disconnect combination meter connector.
2. Check continuity between brake fluid level switch harness connector terminals and combination meter harness connector terminal and/or ground.

Combination meter		Brake fluid level switch		Continuity
Connector	Terminal	Connector	Terminal	
M34	27	E37	1	Existed

cardiagn.com

Combination meter		—	Continuity
Connector	Terminal		
M34	27	Ground	Not existed

Brake fluid level switch		—	Continuity
Connector	Terminal

PARKING BRAKE SWITCH

Description

INFOID:0000000000925052

The parking brake switch converts the status of the parking brake pedal to an electric signal and transmits it to the ABS actuator and electric unit (control unit).

Diagnosis Procedure

INFOID:0000000001125317

1.CHECK COMBINATION METER INPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between combination meter harness connector terminal 26 and ground.

26 – Ground	
Parking brake ON	: Approx. 0 V
Parking brake OFF	: Approx. 5 V

Is the inspection result normal?

YES >> INSPECTION END
NO >> GO TO 2.

2.CHECK PARKING BRAKE SWITCH SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and parking brake switch connector.
3. Check continuity between combination meter harness connector terminal 26 and parking brake switch harness connector terminal 1.

26 – 1	: Continuity should exist.

4. Check continuity between combination meter harness connector terminal 26 and ground.

26 – Ground	: Continuity should not exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair harness or connector.

Component Function Check

INFOID:0000000000925053

1.CHECK PARKING BRAKE SWITCH OPERATION

Operate the parking brake pedal. Then check that the brake warning lamp in the combination meter turns on/off correctly.

Condition	Brake warning lamp illumination status
When the parking brake switch is operation	ON
When the parking brake switch is not operation.	OFF

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-47, "Diagnosis Procedure".

Component Inspection

INFOID:0000000000925055

INSPECTION PROCEDURE

1.CHECK PARKING BRAKE SWITCH

1. Turn ignition switch OFF.
2. Disconnect parking brake switch connector.

cardiagn.com

3. Check continuity between parking brake switch terminal and ground.

Parking brake switch		—	Condition	Continuity
Connector	Terminal			
M103	1	Ground	When the parking brake switch is operated.	Existed
			When the parking brake switch is not operated.	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace parking brake switch.

cardiagn.com

ABS WARNING LAMP

Description

INFOID:0000000000925060

×: ON –: OFF

Condition	ABS warning lamp
Ignition switch OFF	–
For 1 second after turning ON ignition switch	×
1 second later after turning ON ignition switch	–
ABS function is malfunctioning.	×
EBD function is malfunctioning.	×

Component Function Check

INFOID:0000000000925061

1.CHECK ABS WARNING LAMP OPERATION

Check that the lamp illuminates for approximately 1 second after the ignition switch is turned ON.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-49, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000925062

1.CHECK SELF-DIAGNOSIS

Perform ABS actuator and electric unit (control unit) self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check items displayed by self-diagnosis.

2.CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

cardiagn.com

BRAKE WARNING LAMP

Description

INFOID:0000000000925063

×: ON –: OFF

Condition	Brake warning lamp NOTE 1
Ignition switch OFF	–
For 1 second after turning ON ignition switch	× NOTE 2
1 second later after turning ON ignition switch	× NOTE 2
EBD function is malfunctioning.	×

NOTE:

- 1: Brake warning lamp will turn on in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).
- 2: After starting engine, brake warning lamp is turned off.

Component Function Check

INFOID:0000000000925064

1. BRAKE WARNING LAMP OPERATION CHECK 1

Check that the lamp illuminates for approximately 1 second after the ignition switch is turned ON.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Go to diagnosis procedure. Refer to BRC-50, "Diagnosis Procedure".

2. BRAKE WARNING LAMP OPERATION CHECK 2

Check that the brake warning lamp in the combination meter turns ON/OFF correctly when operating the parking brake pedal.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check parking brake switch. Refer to BRC-47, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000925065

1. CHECK PARKING BRAKE SWITCH

Check that the brake warning lamp in the combination meter turns ON/OFF correctly when operating the parking brake pedal.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check parking brake switch. Refer to BRC-47, "Diagnosis Procedure".

2. CHECK SELF-DIAGNOSIS

Perform ABS actuator and electric unit (control unit) self-diagnosis.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check items displayed by self-diagnosis.

3. CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

cardiagn.com

Fail-Safe

INFOID:0000000000925074

ABS, EBD SYSTEM

In case of electrical malfunctions with the ABS, ABS warning lamp will turn ON. In case of electrical malfunctions with the EBD, brake warning lamp, ABS warning lamp will turn ON. Simultaneously, the ABS become one of the following conditions of the fail-safe function.

cardiagn.com

- For malfunction of ABS, only the EBD is activated and the condition of vehicle is the same condition of vehicles without ABS system.
  NOTE:
  ABS self-diagnosis sound may be heard. That is a normal condition because a self-diagnosis for “Ignition switch ON” and “The first starting” are being performed.
- For malfunction of EBD, EBD and ABS become inoperative, and the condition of vehicle is the same as the condition of vehicles without ABS, EBD system.

SYMPTOM DIAGNOSIS

EXCESSIVE ABS FUNCTION OPERATION FREQUENCY

Diagnosis Procedure

INFOID:0000000000925077

1.CHECK START

Check front and rear brake force distribution using a brake tester. Refer to BR-46, "General Specifications" (LHD models), BR-90, "General Specifications" (RHD models).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check brake system.

2.CHECK FRONT AND REAR AXLE

Make sure that there is no excessive play in the front and rear axles.
- Front: FAX-7, "Inspection" (2WD models), FAX-47, "Inspection" (4WD models)
- Rear: RAX-3, "Inspection" (2WD models), RAX-9, "Inspection" (4WD models)

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK WHEEL SENSOR AND SENSOR ROTOR

Check the following.
- Wheel sensor installation for damage.
- Sensor rotor installation for damage.
- Wheel sensor connector connection.
- Wheel sensor harness inspection.

Is the inspection result normal?

YES >> GO TO 4.
NO >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4.CHECK ABS WARNING LAMP DISPLAY

Make sure that the ABS warning lamp is turned off after the ignition switch is turned ON or when driving.

Is the ABS warning lamp illuminated?

YES >> Perform self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".
NO >> INSPECTION END

cardiagn.com

UNEXPECTED PEDAL REACTION

Diagnosis Procedure

INFOID:0000000000925078

1.CHECK BRAKE PEDAL STROKE

Check brake pedal stroke. Refer to BR-8, "Inspection and Adjustment" (LHD models), BR-52, "Inspection and Adjustment" (RHD models).

Is the stroke too large?

YES >> • Bleed air from brake tube and hose. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).
• Check brake pedal, brake booster, and master cylinder for mount play, looseness, brake system fluid leakage, etc.
- Brake pedal: BR-8, "Exploded View" (LHD models), BR-52, "Exploded View" (RHD models).
- Brake booster: BR-14, "Exploded View" (LHD models), BR-58, "Exploded View" (RHD models).
- Brake master cylinder: BR-13, "Exploded View" (LHD models), BR-57, "Exploded View" (RHD models).
- Brake fluid: BR-11, "Inspection" (LHD models), BR-55, "Inspection" (RHD models).

NO >> GO TO 2.

2.CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. Check if braking force is normal in this condition. Connect connector after inspection.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check brake system.

cardiagn.com

THE BRAKING DISTANCE IS LONG

Diagnosis Procedure

INFOID:0000000000925079

CAUTION:

The stopping distance on slippery road surfaces might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check brake system.

cardiagn.com

ABS FUNCTION DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000000925080

CAUTION:
ABS does not operate when speed is 10 km/h (6 MPH) or lower.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure that the ABS warning lamp turns OFF after ignition switch is turned ON or when driving.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Perform self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

cardiagn.com

PEDAL VIBRATION OR ABS OPERATION SOUND OCCURS

Diagnosis Procedure

INFOID:0000000000925081

CAUTION:

Under the following conditions, ABS is activated and vibration is felt when brake pedal is lightly depressed (just place a foot on it). However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [at approximately 50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1. SYMPTOM CHECK 1

Check that there are pedal vibrations when the engine is started.

Do vibrations occur?

YES >> GO TO 2.
NO >> Inspect the brake pedal.

2. SYMPTOM CHECK 2

Check that there are ABS operation noises when the engine is started.

Do the operation noises occur?

YES >> GO TO 3.
NO >> Perform self-diagnosis. Refer to BRC-17, "CONSULT-III Function (ABS)".

3. SYMPTOM CHECK 3

Check symptoms when electrical component (headlamps, etc.) switches are operated.

Do symptoms occur?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit. If there is, move it farther away.
NO >> INSPECTION END

cardiagn.com

NORMAL OPERATING CONDITION

Description

INFOID:0000000000925083

Symptom	Result
Slight vibrations are felt on the brake pedal and the operation noises occur, when ABS is activated.	This is a normal condition due to the ABS activation.
Stopping distance is longer than that of vehicles without ABS when the vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.	
The brake pedal vibrates and motor operation noises occur from the engine room, after the engine starts and just after the vehicle starts.	This is a normal, and it is caused by the ABS operation check.

cardiagn.com

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER" Service

INFOID:0000000000925084

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

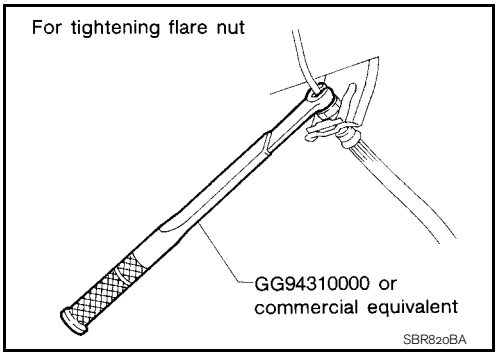
Precaution for Brake System

INFOID:0000000000925085

WARNING:

Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

- Only use DOT 4 brake fluid. Refer to MA-21, "Fluids and Lubricants".
- Never to reuse drained brake fluid.
- Never to spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.
- Never to use mineral oils such as gasoline or light oil. They may damage rubber parts and cause improper operation.
- Always loosen the brake tube flare nut with a flare nut wrench.
- Tighten the brake tube flare nut to the specified torque with a flare nut torque wrench.
- Always conform the specified tightening torque when installing the brake pipes.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before performing the work.



Precaution for Brake Control

INFOID:0000000000925086

- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is normal condition.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides electrical system inspection, check brake booster operation, brake fluid level, and oil leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- ABS might be out of order or malfunctions by putting a radio (wiring inclusive), an antenna and a lead-in wire near the control unit.

cardiagn.com

- If aftermarket parts (car stereo, CD player, etc.) have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.

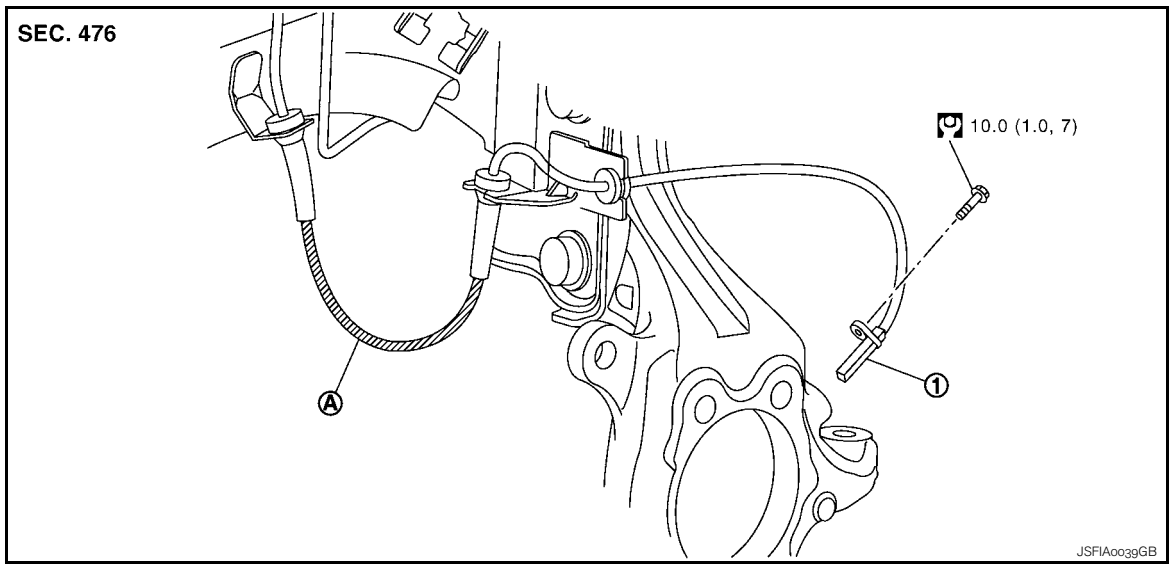
ON-VEHICLE REPAIR

WHEEL SENSOR

FRONT WHEEL SENSOR

FRONT WHEEL SENSOR : Exploded View

INFOID:0000000001115319



1. Front LH wheel sensor

A. White line (slant line)

Refer to GI section GI-4, "Components" for symbols in the figure.

NOTE:
The above figure (front side) shows left side. Right side is the mirror image.

FRONT WHEEL SENSOR : Removal and Installation

INFOID:0000000001115320

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **Do not twist sensor harness as much as possible, when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**
- **When you see the harness of the wheel sensor from the front side of the vehicle ensure that the white lines (A) are not twisted.**

INSTALLATION

Pay attention to the following when installing wheel sensor. Tighten installation bolts to the specified torques. Refer to BRC-67, "FRONT WHEEL SENSOR : Exploded View".

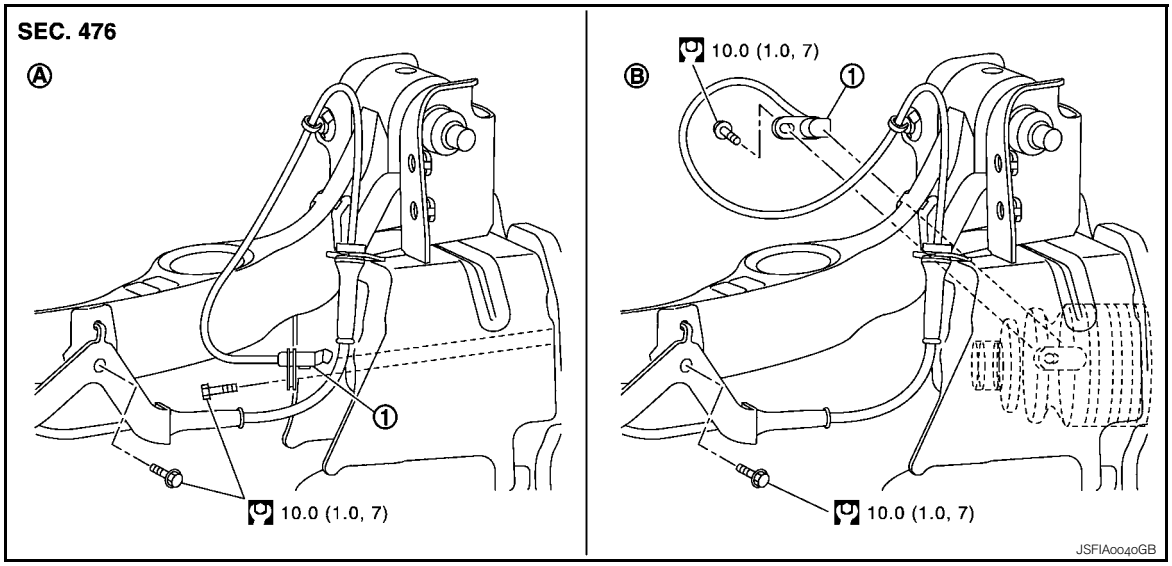
- When installing, make sure there is no foreign material such as iron chips on and in the mounting hole of the wheel sensor. Make sure no foreign material has been caught in the sensor rotor. Remove any foreign material and clean the mount.
- When installing wheel sensor, be sure to press rubber grommets in until they lock at locations shown above in the figure. When installed, harness must not be twisted.

REAR WHEEL SENSOR

REAR WHEEL SENSOR : Exploded View

INFOID:0000000001115321

cardiagn.com



1. Rear LH wheel sensor

A. 2WD models B. 4WD models

Refer to GI section GI-4, "Components" for symbols in the figure.

NOTE:
The above figure (front side) shows left side. Right side is the mirror image.

REAR WHEEL SENSOR : Removal and Installation

INFOID:0000000001115322

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:
- **Do not twist sensor harness as much as possible, when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing wheel sensor. Tighten installation bolts to the specified torques. Refer to BRC-67, "REAR WHEEL SENSOR : Exploded View".
- When installing, make sure there is no foreign material such as iron chips on and in the mounting hole of the wheel sensor. Make sure no foreign material has been caught in the sensor rotor. Remove any foreign material and clean the mount.
- When installing wheel sensor, be sure to press rubber grommets in until they lock at locations shown above in the figure. When installed, harness must not be twisted.

SENSOR ROTOR

FRONT SENSOR ROTOR

FRONT SENSOR ROTOR : Exploded View

INFOID:0000000001115323

Refer to FAX-9, "Exploded View" (2WD models), FAX-49, "Exploded View" (4WD models).

FRONT SENSOR ROTOR : Removal and Installation

INFOID:0000000001115324

REMOVAL

Sensor rotor cannot be disassembled. Remove the sensor rotor together with wheel hub and bearing assembly. Refer to FAX-9, "Removal and Installation" (2WD models), FAX-49, "Removal and Installation" (4WD models).

INSTALLATION

Sensor rotor cannot be disassembled. Installation the sensor rotor together with wheel hub and bearing assembly. Refer to FAX-9, "Removal and Installation" (2WD models), FAX-49, "Removal and Installation" (4WD models).

REAR SENSOR ROTOR

REAR SENSOR ROTOR : Exploded View

INFOID:0000000001115325

Refer to RAX-4, "Exploded View" (2WD models), RAX-13, "Exploded View" (4WD models).

REAR SENSOR ROTOR : Removal and Installation

INFOID:0000000001115326

2WD MODELS

Removal

Sensor rotor cannot be disassembled. Remove the sensor rotor together with wheel hub and bearing assembly. Refer to RAX-4, "Removal and Installation".

Installation

Sensor rotor cannot be disassembled. Installation the sensor rotor together with wheel hub and bearing assembly. Refer to RAX-4, "Removal and Installation".

4WD MODELS

For removal and installation of sensor rotor, refer to RAX-14, "Disassembly and Assembly".

Removal and Installation

INFOID:0000000000925096

LHD MODELS

Removal

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**

1. Remove cowl top cover. Refer to EXT-19, "Exploded View".
2. Remove exhaust manifold.
   - HR16DE: EX-5, "Exploded View"
   - MR20DE: EX-10, "Exploded View"
   - K9K: EX-15, "Exploded View"
3. Disconnect ABS actuator and electric unit (control unit) connector.
4. Loosen brake tube flare nuts, then remove brake tubes from ABS actuator and electric unit (control unit).
5. Remove ABS actuator and electric unit (control unit) bracket mounting nut.
6. Remove ABS actuator and electric unit (control unit) from vehicle.

cardiagn.com

Installation

Note the following, and install in the reverse order of removal.

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**
- **After installing harness connector in the ABS actuator and electric unit (control unit), make sure connector is securely locked.**

RHD MODELS

Removal

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**

1. Remove cowl top cover. Refer to EXT-19, "Exploded View".
2. Remove air cleaner and air duct.
   - HR16DE: EM-27, "Exploded View"
   - MR20DE: EM-144, "Exploded View"
   - K9K: EM-265, "Exploded View"
3. Disconnect ABS actuator and electric unit (control unit) connector.
4. Loosen brake tube flare nuts, then remove brake tubes from ABS actuator and electric unit (control unit).
5. Remove ABS actuator and electric unit (control unit) bracket mounting nut.
6. Remove ABS actuator and electric unit (control unit) from vehicle.

Installation

Note the following, and install in the reverse order of removal.

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**
- **After installing harness connector in the ABS actuator and electric unit (control unit), make sure connector is securely locked.**

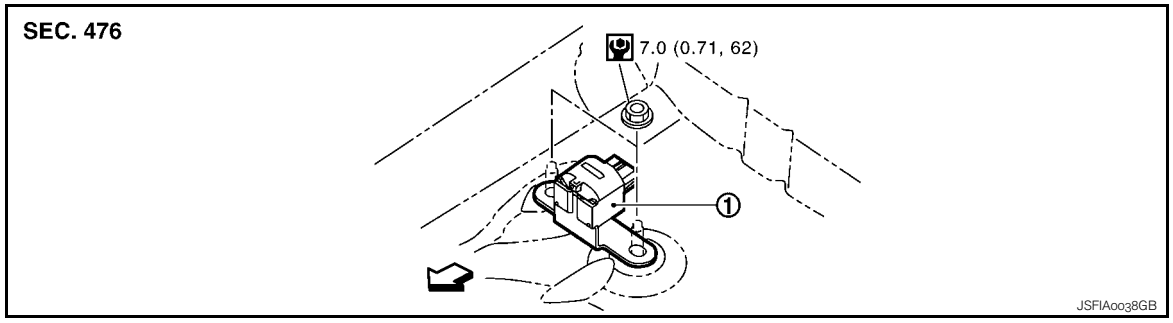
G SENSOR

Exploded View

INFOID:0000000000925097



1. G sensor

⇦: Vehicle front

Refer to GI section GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000000925098

REMOVAL

CAUTION:

- **Do not drop or strike G sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because G sensor is sensitive for the impact.**

1. Remove lower instrument cover RH. Refer to IP-11, "Exploded View".
2. Disconnect G sensor harness connector.
3. Remove mounting nuts. Remove G sensor.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

- **Do not drop or strike G sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because G sensor is sensitive for the impact.**

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

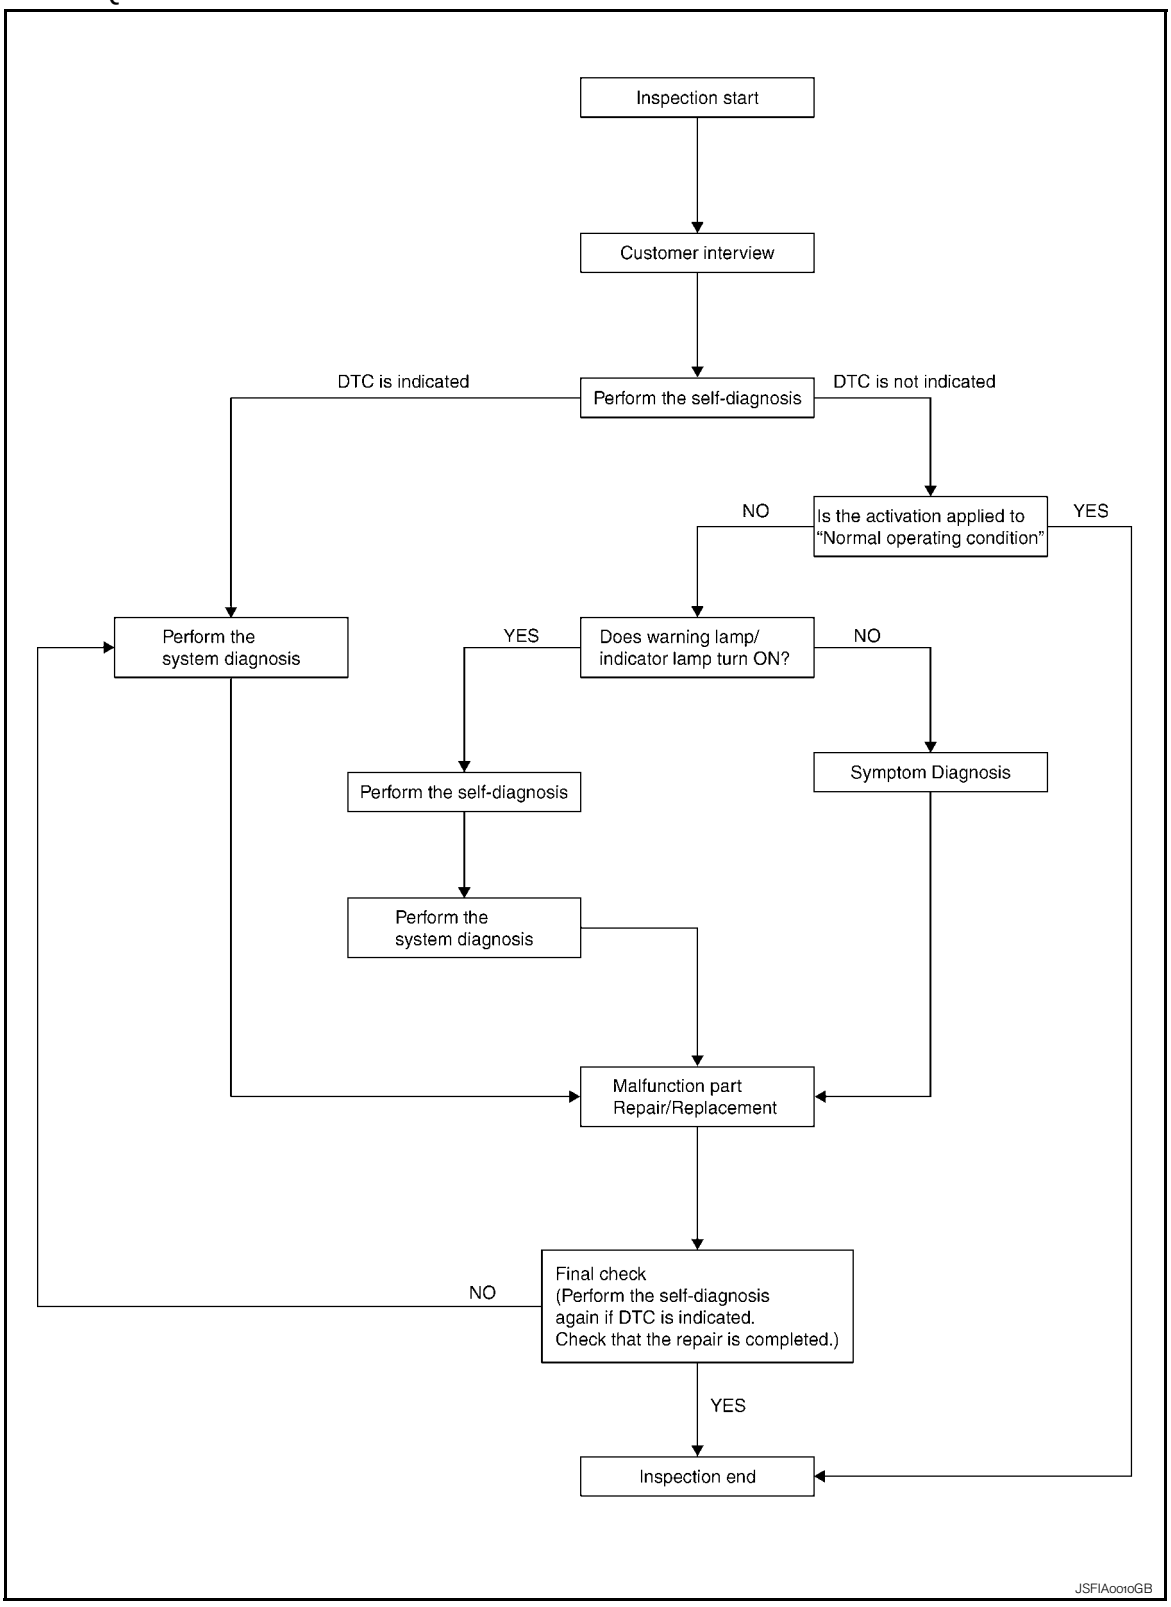
INFOID:0000000000924789

PRECAUTIONS FOR DIAGNOSIS

If steering angle sensor, steering system parts, suspension system parts, ABS actuator and electric unit (control unit) or tires have been replaced, or if wheel alignment has been adjusted, be sure to adjust neutral position of steering angle sensor before driving. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

cardiagn.com

OVERALL SEQUENCE



DETAIED FLOW

1. COLLECT THE INFORMATION FROM THE CUSTOMER

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the diagnosis worksheet. Refer to BRC-77, "Diagnostic Work Sheet".

>> GO TO 2.

cardiagn.com

2.PERFORM THE SELF-DIAGNOSIS

Check the DTC display with the self-diagnosis function. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is there any DTC displayed?

YES >> GO TO 3.
NO >> GO TO 4.

3.PERFORM THE SYSTEM DIAGNOSIS

Perform the diagnosis applicable to the displayed DTC. Refer to BRC-160, "DTC No. Index".

>> GO TO 7.

4.CHECK THE SYMPTOM THAT IS NOT CONSIDERED A SYSTEM MALFUNCTION

Check that the symptom is a normal operation that is not considered a system malfunction. Refer to BRC-168, "Description".

Is the symptom is a normal operation?

YES >> INSPECTION END
NO >> GO TO 5.

5.CHECK THE WARNING LAMP AND INDICATOR LAMP FOR ILLUMINATION

Check that the warning lamp and indicator lamp illuminate.
- ABS warning lamp: Refer to BRC-149, "Description".
- Brake warning lamp: Refer to BRC-150, "Description".
- ESP OFF indicator lamp: Refer to BRC-151, "Description".
- SLIP indicator lamp: Refer to BRC-152, "Description".

Is ON/OFF timing normal?

YES >> GO TO 6.
NO >> GO TO 2.

6.PERFORM THE DIAGNOSIS BY SYMPTOM

Perform the diagnosis applicable to the symptom.

>> GO TO 7.

7.REPAIR OR REPLACE THE MALFUNCTIONING PARTS

Repair or replace the specified malfunctioning parts.

>> GO TO 8.

8.FINAL CHECK

Perform the self-diagnosis again, and check that the malfunction is repaired completely. After checking, erase the self-diagnosis memory. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any DTC indicated?

YES >> GO TO 3.
NO >> INSPECTION END

cardiagn.com

Diagnostic Work Sheet

INFOID:0000000000924790

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work (Wheels lock when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually

INSPECTION AND ADJUSTMENT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description

INFOID:0000000000924791

After replacing the ABS actuator and electric unit (control unit), perform the neutral position adjustment for the steering angle sensor.

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement

INFOID:0000000000924792

1.PERFORM THE NEUTRAL POSITION ADJUSTMENT FOR THE STEERING ANGLE SENSOR

Perform the neutral position adjustment for the steering angle sensor.

>> Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement".

ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description

INFOID:0000000000924793

In case of doing work that applies to the list below, make sure to adjust neutral position of steering angle sensor before running vehicle.

×: Required –: Not required

Situation	Adjustment of steering angle sensor neutral position
Removing/Installing ABS actuator and electric unit (control unit)	—
Replacing ABS actuator and electric unit (control unit)	×
Removing/Installing steering angle sensor	×
Replacing steering angle sensor	×
Removing/Installing steering components	×
Replacing steering components	×
Removing/Installing suspension components	×
Replacing suspension components	×
Change tires to new ones	—
Tire rotation	—
Adjusting wheel alignment	×

ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement

INFOID:0000000000924794

ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

CAUTION:

To adjust neutral position of steering angle sensor, make sure to use CONSULT-III.
(Adjustment cannot be done without CONSULT-III).

1.ALIGN THE VEHICLE STATUS

Stop vehicle with front wheels in straight-ahead position.

>> GO TO 2.

2.PERFORM THE NEUTRAL POSITION ADJUSTMENT FOR THE STEERING ANGLE SENSOR

1. On the CONSULT-III screen, touch "WORK SUPPORT" and "ST ANG SEN ADJUSTMENT" in order.
2. Touch “START”.

cardiagn.com

CAUTION:
Do not touch steering wheel while adjusting steering angle sensor.

3. After approximately 10 seconds, touch “END”.
NOTE:
After approximately 60 seconds, it ends automatically.
4. Turn ignition switch OFF, then turn it ON again.
CAUTION:
Be sure to perform above operation.

>> GO TO 3.

3. CHECK DATA MONITOR

1. Run vehicle with front wheels in straight-ahead position, then stop.
2. Select “DATA MONITOR”. Then make sure “STR ANGLE SIG” is within 0±2.5°.

Is the steering angle within the specified range?

YES >> GO TO 4.
NO >> Perform the neutral position adjustment for the steering angle sensor again, GO TO 1.

4. ERASE THE SELF-DIAGNOSIS MEMORY

Erase the self-diagnosis memories of the ABS actuator and electric unit (control unit) and ECM.
- ABS actuator and electric unit (control unit): Refer to BRC-96, "CONSULT-III Function (ABS)".
- ECM
- HR16DE (With EURO-OBD): EC-100, "CONSULT-III Function".
- HR16DE (Without EURO-OBD): EC-430, "CONSULT-III Function".
- MR20DE (With EURO-OBD): EC-719, "CONSULT-III Function".
- MR20DE (Without EURO-OBD): EC-1054, "CONSULT-III Function".
- K9K: EC-1315, "Diagnosis Description".

Are the memories erased?

YES >> INSPECTION END
NO >> Check the items indicated by the self-diagnosis.

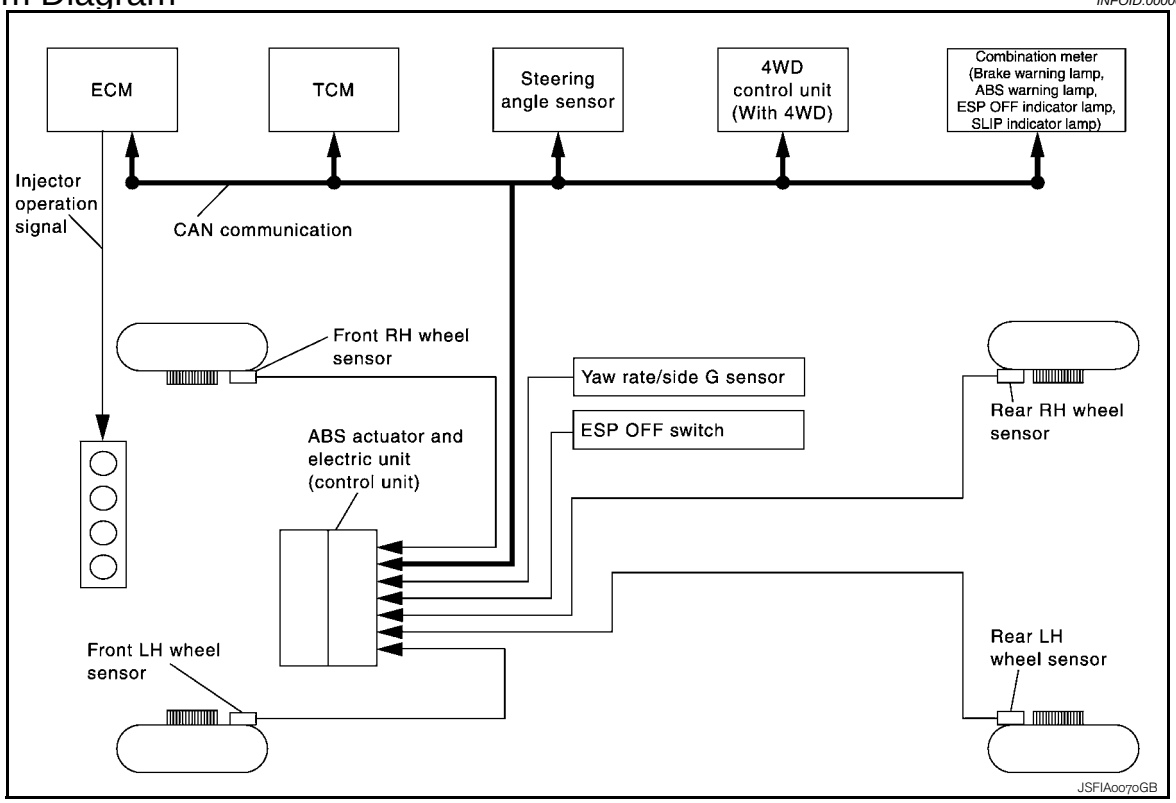
FUNCTION DIAGNOSIS

ESP

System Diagram

INFOID:0000000000924795



System Description

INFOID:0000000000924796

- Electronic Stability Program system detects driver's steering operation amount and brake pedal travel from steering angle sensor and pressure sensor. Using information from yaw rate sensor, G sensor and wheel sensor, ESP judges driving condition (conditions of under steer and over steer) to improve vehicle driving stability by controlling brake application to 4 wheels and engine output.
- During ESP operation, it informs driver of system operation by flashing SLIP indicator lamp.
- Electrical system diagnosis by CONSULT-III is available.

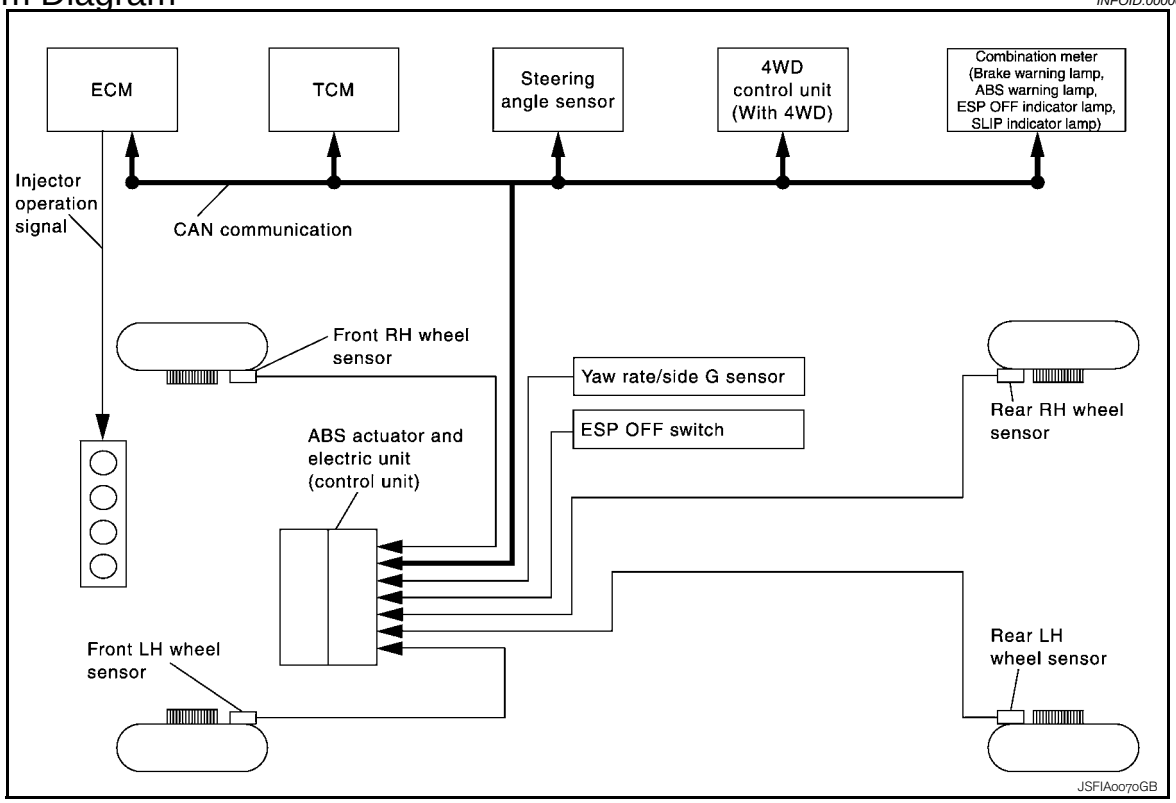
TCS

System Diagram

INFOID:0000000000977394



System Description

INFOID:0000000000924800

- Traction Control System is a function that electronically controls engine torque, brake fluid pressure and gear ratio (except M/T) to ensure the optimum slippage ratio at drive wheels by computing wheel speed signals from 4 wheel sensors. When ABS actuator and electric unit (control unit) detects a spin at drive wheels (rear wheels), it compares wheel speed signals from all 4 wheels. At this time, LH and RH rear brake fluid pressure are controlled, while fuel being cut to engine and throttle valve being closed to reduce engine torque by the control unit. Further more, throttle position is continuously controlled to ensure the optimum engine torque at all times.
- During TCS operation, it informs driver of system operation by flashing SLIP indicator lamp.
- Electrical system diagnosis by CONSULT-III is available.

DIAGNOSIS SYSTEM [ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)]

CONSULT-III Function (ABS)

INFOID:0000000000924811

FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-III.
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the ABS actuator and electric unit (control unit) can be read.
Active test	Diagnostic test mode is which CONSULT-III drives some actuators apart from the ABS actuator and electric unit (control unit) and also shifts some parameters in a specified range.
ECU part number	ABS actuator and electric unit (control unit) part number can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.

SELF-DIAG RESULTS MODE

Operation Procedure

1. Before performing the self-diagnosis, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute.

How to Erase Self-diagnosis Results

1. After erasing DTC memory, start engine and drive vehicle at 30 km/h (19 MPH) or more for approximately 1 minute as the final inspection, and make sure that the ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp and brake warning lamp turn OFF.
   CAUTION:
   If memory cannot be erased, perform applicably diagnosis.
   NOTE:
   - When the wheel sensor malfunctions, after inspecting the wheel sensor system, the ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp and brake warning lamp will not turn OFF even when the system is normal unless the vehicle is driving at approximately 30 km/h (19 MPH) or more for approximately 1 minute.
   - Brake warning lamp will turn ON in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).
   - ESP OFF switch should not stay “ON” position.

Display Item List

Refer to BRC-160, "DTC No. Index".

DATA MONITOR MODE

Display Item List

×: Applicable o: Optional item

Monitor item (Unit)	SELECT MONITOR ITEM		Remarks

SLIP LAMP (On/Off)	o	×	SLIP indicator lamp

cardiagn.com

NOTE:

Every 20 seconds momentary switch to OFF.

ACTIVE TEST MODE

CAUTION:

- **Do not perform active test while driving vehicle.**
- **Make sure to completely bleed air from brake system.**
- **The active test cannot be performed with the ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp and brake warning lamp are on.**
- **ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp and brake warning lamp are on during active test.**
- **Erase memory of ICC system after implementing active test.**

NOTE:

- When active test is performed while depressing the pedal, the pedal depression amount will change. This is normal. (Only solenoid valve and ABS motor.)
- “TEST IS STOPPED” is displayed 10 seconds after operation start.
- After “TEST IS STOPPED” is displayed, to perform test again.

Test Item

ABS SOLENOID VALVE

- For ABS solenoid valve, touch “UP”, “KEEP” and “DOWN”. Then use screen monitor to check that solenoid valve operates as shown in the table below.

Test item	Display item	Display		
		UP	KEEP	DOWN
FR RH SOL	FR RH IN SOL	OFF	ON	ON
	FR RH OUT SOL	OFF	OFF	ON*
	USV [FR-RL]	OFF	OFF	OFF
	HSV [FR-RL]	OFF	OFF	OFF
FR LH SOL	FR LH IN SOL	OFF	ON	ON
	FR LH OUT SOL	OFF	OFF	ON*
	USV [FL-RR]	OFF	OFF	OFF
	HSV [FL-RR]	OFF	OFF	OFF
RR RH SOL	RR RH IN SOL	OFF	ON	ON
	RR RH OUT SOL	OFF	OFF	ON*
	USV [FL-RR]	OFF	OFF	OFF
	HSV [FL-RR]	OFF	OFF	OFF
RR LH SOL	RR LH IN SOL	OFF	ON	ON
	RR LH OUT SOL	OFF	OFF	ON*
	USV [FR-RL]	OFF	OFF	OFF
	HSV [FR-RL]	OFF	OFF	OFF

*: ON for 1 to 2 seconds after the touch, and then OFF.

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is malfunction because it is an operation for checking.

ABS SOLENOID VALVE (ACT)

- For ABS solenoid valve (ACT), touch “UP”, “ACT UP” and “ACT KEEP”. Then use screen monitor to check that solenoid valve operates as shown in the table below.

cardiagn.com

Test item	Display item	Display		
		UP	KEEP	DOWN
FR RH SOL	FR RH IN SOL	OFF	OFF	OFF
	FR RH OUT SOL	OFF	OFF	OFF
	USV [FR-RL]	OFF	ON	ON
	HSV [FR-RL]	OFF	ON*	OFF
FR LH SOL	FR LH IN SOL	OFF	OFF	OFF
	FR LH OUT SOL	OFF	OFF	OFF
	USV [FL-RR]	OFF	ON	ON
	HSV [FL-RR]	OFF	ON*	OFF
RR RH SOL	RR RH IN SOL	OFF	OFF	OFF
	RR RH OUT SOL	OFF	OFF	OFF
	USV [FL-RR]	OFF	ON	ON
	HSV [FL-RR]	OFF	ON*	OFF
RR LH SOL	RR LH IN SOL	OFF	OFF	OFF
	RR LH OUT SOL	OFF	OFF	OFF
	USV [FR-RL]	OFF	ON	ON
	HSV [FR-RL]	OFF	ON*	OFF

*: ON for 1 to 2 seconds after the touch, and then OFF.

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is malfunction because it is an operation for checking.

ABS MOTOR

- Touch “ON” and “OFF” on screen. Make sure motor relay and actuator relay operates as shown in table below.

Test item	Display item	Display	
		ON	OFF
ABS MOTOR	MOTOR RELAY	ON	OFF
	ACTUATOR RLY NOTE	ON	ON

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is not malfunction because it is an operation for checking.

COMPONENT DIAGNOSIS

C1101, C1102, C1103, C1104 WHEEL SENSOR-1

Description

INFOID:0000000000924812

When the sensor rotor rotates, the magnetic field changes. The sensor converts the magnetic field changes to current signals (rectangular wave) and transmits them to the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924813

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1101	RR RH SENSOR-1	Circuit of rear RH wheel sensor is open or short circuit. Current signal from sensor is outside limits.	• Harness or connector • Wheel sensor • ABS actuator and electric unit (control unit)
C1102	RR LH SENSOR-1	Circuit of rear LH wheel sensor is open or short circuit. Current signal from sensor is outside limits.	
C1103	FR RH SENSOR-1	Circuit of front RH wheel sensor is open or short circuit. Current signal from sensor is outside limits.	
C1104	FR LH SENSOR-1	Circuit of front LH wheel sensor is open or short circuit. Current signal from sensor is outside limits.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
RR RH SENSOR-1
RR LH SENSOR-1
FR RH SENSOR-1
FR LH SENSOR-1

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-100, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924814

CAUTION:
Do not check between wheel sensor terminals.

INSPECTION PROCEDURE

1.CHECK SENSOR AND SENSOR ROTOR

- Check sensor rotor for damage.
- Check wheel sensor for damage, disconnection or looseness.

Are the sensor and sensor rotor normal?

YES >> GO TO 2.
NO >> Repair wheel sensor mount or replace sensor rotor. Then perform the self-diagnosis.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.

cardiagn.com

5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Repair or replace connector.

3. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check continuity between terminals. (Also check continuity when steering wheel is turned right and left and when sensor harness inside the wheel house is moved.)

Measurement terminal for power supply circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal	
E36	9	E39 (Front RH)	2	Existed
	16	E22 (Front LH)		
	8	B41 (Rear RH)		
	6	B44 (Rear LH)		

Measurement terminal for signal circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal	
E36	10	E39 (Front RH)	1	Existed
	5	E22 (Front LH)		
	19	B41 (Rear RH)		
	17	B44 (Rear LH)		

Measurement terminal for ground circuit

ABS actuator and electric unit (control unit)				Continuity
Connector	Terminal	Connector	Terminal	
E36	10, 9	E36	1, 4	Not existed
	5, 16			
	19, 8			
	17, 6			

5. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace malfunctioning components.

4. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between wheel sensor harness connector power supply terminal and ground.

Wheel sensor		—	Voltage
Connector	Terminal		
E39 (Front RH)	2	Ground	8 V or more
E22 (Front LH)			
B41 (Rear RH)			
B44 (Rear LH)			

Is the inspection result normal?

cardiagn.com

YES >> Replace applicable wheel sensor.
NO >> Replace ABS actuator and electric unit (control unit).

Component Inspection

INFOID:0000000000924815

1.CHECK DATA MONITOR

On “DATA MONITOR”, select “FR LH SENSOR”, “FR RH SENSOR”, “RR LH SENSOR”, and “RR RH SENSOR”, and check the vehicle speed.

Wheel sensor	Vehicle speed (DATA MONITOR)
FR LH SENSOR	Nearly matches the speedometer display (±10% or less)
FR RH SENSOR	
RR LH SENSOR	
RR RH SENSOR	

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-100, "Diagnosis Procedure".

Special Repair Requirement

INFOID:0000000000924816

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the ABS actuator and electric unit (control unit). Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

>> END

C1105, C1106, C1107, C1108 WHEEL SENSOR-2

Description

INFOID:0000000000977401

ABS unit continually monitors wheel speed sensors to detect abnormal signals.

DTC Logic

INFOID:0000000000924818

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1105	RR RH SENSOR-2	Signal from rear RH wheel sensor does not match other 3 wheel speed signal.	• Sensor not installed corretly • Sensor rotor or encoder damaged • Sensor rotor loose on axle • Electrical interference • Wheel not turning - e.g. vehicle driven on 2WD dyno • Sensor damaged • ABS unit damaged
C1106	RR LH SENSOR-2	Signal from rear LH wheel sensor does not match other 3 wheel speed signal.	
C1107	FR RH SENSOR-2	Signal from front RH wheel sensor does not match other 3 wheel speed signal.	
C1108	FR LH SENSOR-2	Signal from front LH wheel sensor does not match other 3 wheel speed signal.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
RR RH SENSOR-2

FR RH SENSOR-2
FR LH SENSOR-2

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-103, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000977403

CAUTION:
Do not check between wheel sensor terminals.

INSPECTION PROCEDURE

1.CHECK SENSOR AND SENSOR ROTOR

- Check sensor rotor for damage.
- Check wheel sensor for damage, disconnection or looseness.

Are the sensor and sensor rotor normal?

YES >> GO TO 2.
NO >> Repair wheel sensor mount or replace sensor rotor. Then perform the self-diagnosis.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

cardiagn.com

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Repair or replace connector.

3.CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check continuity between terminals. (Also check continuity when steering wheel is turned right and left and when sensor harness inside the wheel house is moved.)

Measurement terminal for power supply circuit

C1109 POWER AND GROUND SYSTEM

Description

INFOID:0000000000924822

Power is supplied from the battery to ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924823

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1109	BATTERY VOLTAGE [ABNORMAL]	When the ABS actuator and electric unit (control unit) power supply is lower than normal and vehicle speed is greater than 6 km/h (4 MPH). Power supply is greater than normal limits.	• Harness or connector • ABS unit • Fuse • Vehicle electrical power system

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
BATTERY VOLTAGE [ABNORMAL]

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-106, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924824

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Repair or replace connector.

2.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY CIRCUIT AND GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Turn ignition switch ON or OFF and check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

ABS actuator and electric unit (control unit)		—	Condition	Voltage
Connector	Terminal			
E36	18	Ground	Ignition switch: ON	Battery voltage
			Ignition switch: OFF	Approx. 0 V

4. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 3.

cardiagn.com

NO >> Repair or replace malfunctioning components.

3. ABS POWER SUPPLY CHECK (UNDER LOAD CONDITIONS)

1. Use 12V lamp (normal rating 10 to 20W) connected between E36 terminals 18 and 4. With ignition switch ON check bulb illuminates correctly.
2. Check ABS motor supply under loaded condition (connector E36 terminals 1 and 2).

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check both power supply and ground circuit.

4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E36	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Check battery for terminal looseness, low voltage, etc. if any malfunction is found, repair malfunctioning parts.
NO >> Repair or replace malfunctioning components. (Check ABS earth bolt for tightness and corrosion.)

Special Repair Requirement

INFOID:0000000000924825

1. ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the ABS actuator and electric unit (control unit). Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

>> END

cardiagn.com

C1110, C1153, C1170 ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Description

INFOID:0000000001091114

ABS unit is continuously monitoring ECU hardware and software for correct operation.

DTC Logic

INFOID:0000000000924826

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1110	CONTROLLER FAILURE	Possible internal failure of control unit components.	• Internal failure of control unit components. • ABS solenoid valve or motor power supply / ground abnormal.
C1153	EMERGENCY BRAKE	Continuous ABS/EBD control for more than 60 seconds.	• ABS control unit software failure • Wheel speed sensor input abnormality.
C1170	VARIANT CODING	In a case where VARIANT CODING is different.	ABS actuator and electric unit (control unit)

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

1. Check both ABS solenoid valve and motor supply and ground circuits using a suitable electrical load.
2. Check wheel speed sensor inputs.
3. Check the self-diagnosis results.

Self-diagnosis results
CONTROLLER FAILURE
EMERGENCY BRAKE
VARIANT CODING

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-108, "Diagnosis Procedure".

C1111 ABS MOTOR, MOTOR RELAY SYSTEM

Description

INFOID:0000000000924829

PUMP

The pump returns the brake fluid stored in the reservoir to the master cylinder by reducing the pressure.

MOTOR

The motor drives the pump according to the signals transmitted by the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924830

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1111	PUMP MOTOR	During the actuator motor operating with ON, when the actuator motor turns OFF, or when the control line for actuator motor relay is open.	• Harness or connector • ABS actuator and electric unit (control unit)
		During the actuator motor operating with OFF, when the actuator motor turns ON, or when the control line for relay is shorted to ground.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
PUMP MOTOR

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-110, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924831

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnect, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Replace or repair connector.

2.CHECK ABS MOTOR AND MOTOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check voltage between the ABS actuator and electric unit (control unit) harness connector terminal and ground.

cardiagn.com

ABS actuator and electric unit (control unit)		—	Voltage
Connector	Terminal		
E36	2	Ground	Battery voltage

4. Reconnect ABS actuator and electric unit (control unit) connector.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.ABS POWER SUPPLY CHECK (UNDER LOAD CONDITION)

Use 12V lamp (normal rating 10 to 20W) connected between E36 terminals 1 and 2. With ignition switch ON check bulb illuminates correctly.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check both power supply and ground circuit.

4.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E36	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components. (Check ABS each bolt for tightness and corrosion.)

Component Inspection

INFOID:0000000000924832

1.CHECK ACTIVE TEST

1. On “ACTIVE TEST”, select “ABS MOTOR”.
2. Touch ON and OFF on screen. Make sure motor relay and actuator relay operates as shown in table below.

Test item	Display item	Display	
		ON	OFF
ABS MOTOR	MOTOR RELAY	ON	OFF
	ACTUATOR RLY NOTE	ON	ON

NOTE:
A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is not malfunction because it is an operation for checking.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-110, "Diagnosis Procedure".

Special Repair Requirement

C1115 WHEEL SENSOR

Description

INFOID:0000000000977406

When the sensor rotor rotates, the magnetic field changes. The sensor converts the magnetic field changes to current signals (rectangular wave) and transmits them to the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924840

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1115	ABS SENSOR [ABNORMAL SIGNAL]	Miss-match between the 4 wheel speed sensor signals.	• Harness or connector is not a possible cause • Other possible causes - Tire radius (due to wrong size or pressure) interference.

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
ABS SENSOR [ABNORMAL SIGNAL]

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-115, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000977407

CAUTION:
Do not check between wheel sensor terminals.

INSPECTION PROCEDURE

1.CHECK SENSOR AND SENSOR ROTOR

- Check sensor rotor for damage.
- Check wheel sensor for damage, disconnection or looseness.

Are the sensor and sensor rotor normal?

YES >> GO TO 2.
NO >> Repair wheel sensor mount or replace sensor rotor. Then perform the self-diagnosis.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Repair or replace connector.

3.CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect malfunctioning wheel sensor connector.

cardiagn.com

4. Check continuity between terminals. (Also check continuity when steering wheel is turned right and left and when sensor harness inside the wheel house is moved.)

Measurement terminal for power supply circuit

ABS actuator and electric unit (control unit)		Wheel sensor		Continuity
Connector	Terminal	Connector	Terminal

C1116 STOP LAMP SWITCH

Description

INFOID:0000000000924844

The stop lamp switch transmits the stop lamp switch signal (ON/OFF) to the ABS actuator and electric unit (control unit).

DTC Logic

INFOID:0000000000924845

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1116	STOP LAMP SW	When stop lamp switch circuit is open.	• Harness or connector • Stop lamp switch • ABS actuator and electric unit (control unit)

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
STOP LAMP SW

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-118, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924846

INSPECTION PROCEDURE

1.CHECK STOP LAMPS ILLUMINATE

Check stop lamps illuminate when brake pedal is pressed.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check stop lamp circuit.

2.CHECK DATA MONITOR

Using data monitor check both pressure sensor signal and brake lamp switch signal.

Pressure sensor

Condition	PRESS SEN (DATA MONITOR)
Brake pedal released	Approx. 3 bar
Brake pedal pressed	0 to 200 bar

Stop lamp switch

Condition	STOP LAMP SW (DATA MONITOR)
Brake pedal released	OFF
Brake pedal pressed	ON

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning parts.

3.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.

cardiagn.com

3. Disconnect stop lamp switch connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors securely.
6. Start engine.
7. Repeat pumping brake pedal carefully several times, and perform self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)"

Is any item indicated in the self-diagnosis display?

YES >> GO TO 4.
NO >> Poor connection of connector terminal. Replace or repair connector.

4. CHECK STOP LAMP SWITCH

1. Disconnect stop lamp switch connector.
2. Check continuity between stop lamp switch connector terminals.

Stop lamp switch Terminal	Condition	Continuity
1 – 2	Release stop lamp switch (When brake pedal is depressed.)	Existed
	Push stop lamp switch (When brake pedal is released.)	Not existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace stop lamp switch.

5. CHECK STOP LAMP SWITCH CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Connect stop lamp switch connector.
3. Check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

ABS actuator and electric unit (control unit)		Condition	Voltage
Connector	Terminal		
E36	20	Brake pedal is depressed	Battery voltage
		Brake pedal is released	Approx. 0 V

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components.

Component Inspection

INFOID:0000000000924847

1. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch connector.
3. Check continuity between stop lamp switch connector terminals.

Stop lamp switch Terminal	Condition	Continuity
1 – 2	Release stop lamp switch (When brake pedal is depressed.)	Existed
	Push stop lamp switch (When brake pedal is released.)	Not existed

Is the inspection result normal?

YES >> INSPECTION END

cardiagn.com

NO >> Replace stop lamp switch.

Special Repair Requirement

INFOID:0000000000924848

1. ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the ABS actuator and electric unit (control unit). Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

>> END

Diagnosis Procedure

INFOID:0000000000924851

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Replace or repair connector.

2.CHECK SOLENOID, ESP SWITCH-OVER VALVE AND ACTUATOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

cardiagn.com

ABS actuator and electric unit (control unit)		—	Voltage
Connector	Terminal		
E36	3	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK SOLENOID, ESP SWITCH-OVER VALVE AND ACUATOR RELAY GROUND CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E36	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components.

Component Inspection

INSPECTION PROCEDURE

1.CHECK VEHICLE STATE

Check vehicle for any suspension/steering misalignment or damage.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Correct any damage found.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect steering angle sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)"

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Replace or repair connector.

3.CHECK STEERING ANGLE SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect steering angle sensor connector.
3. Check continuity between steering angle sensor harness connector terminal and ground.

cardiagn.com

Steering angle sensor		—	Continuity
Connector	Terminal		
M30	3	Ground	Existed

4. Turn ignition switch ON.
5. Check voltage between steering angle sensor harness connector terminal and ground.

Steering angle sensor		—	Voltage
Connector	Terminal		
M30	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace malfunctioning components.

4.CHECK DATA MONITOR

1. Connect the steering angle sensor connector and ABS actuator and electric unit (control unit) connector.
2. Check steering angle sensor signal.

Steering condition	STR ANGLE SIG (DATA MONITOR)
Driving straight	±2.5 °
Turn 90 ° to right	Approx. +90 °
Turn 90 ° to left	Approx. –90 °

Is the inspection result normal?

YES >> GO TO 5.
NO >> Adjust neutral position of steering angle sensor.

5.CHECK FOR BACKLASH

1. Check for backlash [turn wheel to left then straight then right then straight (approx. 90)].
2. Check straight position is always similar value.

Is there noticeable backlash?

YES >> Check sensor is correctly fitted to combination witch.
NO >> Check sensor output is correct from lock to lock.

Component Inspection

INFOID:0000000000924875

1.CHECK DATA MONITOR

Select “STR ANGLE SIG” in “DATA MONITOR” and check steering angle sensor signal.

Steering condition	STR ANGLE SIG (DATA MONITOR)
Driving straight	±2.5 °
Turn 90 ° to right	Approx. +90 °
Turn 90 ° to left	Approx. –90 °

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-130, "Diagnosis Procedure".

Special Repair Requirement

C1145 YAW RATE SENSOR

Description

INFOID:0000000000924877

The yaw rate sensor detects the yaw rate affecting the vehicle, and transmits the data to the ABS actuator and electric unit (control unit) as an analog voltage signal.

DTC Logic

INFOID:0000000000924878

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1145	YAW RATE SENSOR	Yaw rate sensor is malfunctioning, or the yaw rate sensor signal line is open or shorted.	• Harness or connector • ABS actuator and electric unit (control unit) • Yaw rate sensor

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
YAW RATE SENSOR

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-133, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924879

CAUTION:

- **Driving on high speed banked corners can also indicate yaw rate sensor malfunction.**
- **If vehicle is on turn-table at entrance to parking garage, or on other moving surface, VDC OFF indicator lamp may illuminate and CONSULT-III self-diagnosis may indicate yaw rate sensor system malfunction. However, in this case there is no malfunction in yaw rate sensor system. Take vehicle off of turn-table or other moving surface, and start engine. Results will return to normal. And after doing spin turns or acceleration turns with VDC function is being off (VDC OFF switch “ON”), too, the results will return to a normal condition by re-starting vehicle.**

INSPECTION PROCEDURE

1.CHECK INSTALLATION STATE OF YAW RATE SENSOR

Check yaw rate sensor is correctly attached to vehicle. Refer to BRC-178, "Exploded View".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace malfunctioning parts.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect yaw rate sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Replace or repair connector.

cardiagn.com

3.CHECK YAW RATE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect yaw rate sensor connector.
3. Turn ignition switch ON or OFF and check voltage between yaw rate sensor harness connector terminal and ground.

Yaw rate sensor		—	Condition	Voltage
Connector	Terminal			
M72	4	Ground	Ignition switch: ON	Battery voltage
			Ignition switch: OFF	Approx. 0 V

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace malfunctioning components.

4.CHECK YAW RATE SENSOR GROUND CIRCUIT

Check continuity between yaw rate sensor harness connector terminal and ground.

Yaw rate sensor		—	Continuity
Connector	Terminal		
M72	1	Ground	Existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace malfunctioning components.

5.CHECK YAW RATE SENSOR HARNESS

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check continuity between yaw rate sensor harness connector terminals and ABS actuator and electric unit (control unit) harness connector terminals.

ABS actuator and electric unit (control unit)		Yaw rate sensor		Continuity
Connector	Terminal	Connector	Terminal	
E36	14	M72	2	Existed
	25		3	

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace malfunctioning components.

6.CHECK DATA MONITOR

1. Connect the yaw rate sensor connector and ABS actuator and electric unit (control unit) connector.
2. Select “YAW RATE SEN”, “SIDE G-SENSOR” in “DATA MONITOR” and check yaw rate sensor signal.

Vehicle condition	YAW RATE SEN (DATA MONITOR)
Stopped	Approx. 0 d/s
Turning right	Negative value
Turning left	Positive value

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Replace yaw rate sensor.

Component Inspection

INFOID:0000000000924880

cardiagn.com

1.CHECK DATA MONITOR

Select “YAW RATE SEN” in “DATA MONITOR” and check yaw rate sensor signal.

Vehicle condition	YAW RATE SEN (DATA MONITOR)
Stopped	Approx. 0 d/s
Turning right	Negative value

C1146 G SENSOR

Description

INFOID:0000000000972968

G sensor detects G affecting the vehicle, and transmits the data to the ABS actuator and electric unit (control unit) as an analog voltage signal.

DTC Logic

INFOID:0000000000972969

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1146	SIDE G-SEN CIRCUIT	Side G sensor is malfunctioning, or circuit of side G sensor is open or shorted.	• Harness or connector • ABS actuator and electric unit (control unit) • G sensor

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
SIDE G-SEN CIRCUIT

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-136, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000972970

CAUTION:
Sudden turns (such as spin turns, acceleration turns), drifting, etc., when VDC function is off (VDC OFF switch “ON”) may cause G sensor system to indicate a malfunction. However, this is not a malfunction, if normal operation can be resumed after restarting engine. Then erase memory of self-diagnosis.

INSPECTION PROCEDURE

1.CHECK INSTALLATION STATE OF G SENSOR

Check G sensor is correctly attached to vehicle. Refer to BRC-178, "Exploded View".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace malfunctioning parts.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Disconnect G sensor connector.
4. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
5. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-136, "Diagnosis Procedure".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 3.
NO >> Poor connection of connector terminal. Replace or repair connector.

3.CHECK G SENSOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect G sensor connector and ABS actuator and electric unit (control unit) connector.

cardiagn.com

3. Check continuity between G sensor harness connector terminals and ABS actuator and electric unit (control unit) harness connector terminals.

ABS actuator and electric unit (control unit)		G sensor		Continuity
Connector	Terminal	Connector	Terminal	
E36	14	M71	1	Existed
	21		2	
	24		3	

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace malfunctioning components.

4.CHECK DATA MONITOR

1. Connect the G sensor connector and ABS actuator and electric unit (control unit) connector.
2. Select “SIDE G-SENSOR” in “DATA MONITOR” and check G sensor signal.

Vehicle condition	SIDE G-SENOR (DATA MONITOR)
Stopped	Approx. 0 m/s^2
Turning right	Negative value
Turning left	Positive value

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Replace G sensor.

Component Inspection

INFOID:0000000000972971

1.CHECK DATA MONITOR

Select “SIDE G-SENSOR” in “DATA MONITOR” and check G sensor signal.

Vehicle condition	SIDE G-SENSOR (DATA MONITOR)
Stopped	Approx. 0 m/s^2
Turning right	Negative value
Turning left	Positive value

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-136, "Diagnosis Procedure".

Special Repair Requirement

C1147, C1148, C1149, C1150 USV/HSV LINE

Description

INFOID:0000000000924882

USV1, USV2 (CUT VALVE)

The cut valve shuts off the normal brake fluid path from the master cylinder, when ESP/TCS is activated.

HSV1, HSV2 (SUCTION VALVE)

The suction valve supplies the brake fluid from the master cylinder to the pump, when ESP/TCS is activated.

DTC Logic

INFOID:0000000000924883

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1147	USV LINE [FL-RR]	ESP switch-over solenoid valve (USV1) on the primary side is open circuit or shorted, or the control line is open or shorted to the power supply or the ground.	• Harness or connector • ABS actuator and electric unit (control unit)
C1148	USV LINE [FR-RL]	ESP switch-over solenoid valve (USV2) on the primary side is open circuit or shorted, or the control line is open or shorted to the power supply or the ground.	
C1149	HSV LINE [FL-RR]	ESP switch-over solenoid valve (HSV1) on the primary side is open circuit or shorted, or the control line is open or shorted to the power supply or the ground.	
C1150	HSV LINE [FR-RL]	ESP switch-over solenoid valve (HSV2) on the primary side is open circuit or shorted, or the control line is open or shorted to the power supply or the ground.	

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
USV LINE [FL-RR]
USV LINE [FR-RL]
HSV LINE [FL-RR]
HSV LINE [FR-RL]

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-138, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924884

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Replace or repair connector.

cardiagn.com

2.CHECK SOLENOID, ESP SWITCH-OVER VALVE AND ACTUATOR RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check voltage between ABS actuator and electric unit (control unit) harness connector terminal and ground.

ABS actuator and electric unit (control unit)		—	Voltage
Connector	Terminal		
E36	3	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK SOLENOID, ESP SWITCH-OVER VALVE AND ACUATOR RELAY GROUND CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) harness connector terminals and ground.

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E36	1, 4	Ground	Existed

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components.

Component Inspection

INFOID:0000000000924885

1.CHECK ACTIVE TEST

1. Select each test menu item on ”ACTIVE TEST“.
2. On the display, touch “UP”, “ACT UP”, and “ACT KEEP”, and check that the system operates as shown in the table below.

Test item	Display item (Note)	Display		
		UP	ACT UP	ACT KEEP
FR RH SOL	FR RH IN SOL	OFF	OFF	OFF
	FR RH OUT SOL	OFF	OFF	OFF
	USV [FR-RL]	OFF	ON	ON
	HSV [FR-RL]	OFF	ON*	OFF
FR LH SOL	FR LH IN SOL	OFF	OFF	OFF
	FR LH OUT SOL	OFF	OFF	OFF
	USV [FL-RR]	OFF	ON	ON
	HSV [FL-RR]	OFF	ON*	OFF
RR RH SOL	RR RH IN SOL	OFF	OFF	OFF
	RR RH OUT SOL	OFF	OFF	OFF
	USV [FL-RR]	OFF	ON	ON
	HSV [FL-RR]	OFF	ON*	OFF
RR LH SOL	RR LH IN SOL	OFF	OFF	OFF
	RR LH OUT SOL	OFF	OFF	OFF
	USV [FR-RL]	OFF	ON	ON
	HSV [FR-RL]	OFF	ON*	OFF

*: ON for 1 to 2 seconds after the touch, and then OFF.

cardiagn.com

NOTE:

A brief moment of ON/OFF condition occurs every 20 seconds after ignition switch turned ON. This is not malfunction because it is an operation for checking.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-138, "Diagnosis Procedure".

Special Repair Requirement

INFOID:0000000000924886

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the ABS actuator and electric unit (control unit). Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

>> END

cardiagn.com

C1155 BRAKE FLUID LEVEL SWITCH

Description

INFOID:0000000000924887

Brake fluid level switch contacts close when brake fluid level is low. This is detected by the combination meter which sends the status of fluid level to the ABS actuator and electric unit (control unit) via the CAN communication.

DTC Logic

INFOID:0000000000924888

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1155	BR FLUID LEVEL LOW	Ignition switch ON and brake fluid signal low or not available for 10 seconds.	• Brake fluid level is low • Brake fluid level switch • Harness or connector • CAN communication line • Combination meter

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
BR FLUID LEVEL LOW

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to BRC-141, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000924889

INSPECTION PROCEDURE

1.CHECK BRAKE FLUID LEVEL

Check the brake fluid level.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Investigate and fix.

2.CHECK BRAKE WARNING LAMP 1

Check that the brake warning lamp illuminates after the ignition switch is turned ON.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check wiring to brake fluid level switch and combination meter.

3.CHECK BRAKE WARNING LAMP 2

Check that the brake warning lamp in the combination meter turns ON/OFF correctly when operating the parking brake.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check parking brake switch. Refer to BRC-145, "Diagnosis Procedure".

4.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect brake fluid level switch connector and combination meter connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.

cardiagn.com

4. Reconnect connectors and then perform the self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 5.
NO >> Poor connection of connector terminal. Replace or repair connector.

5.CHECK BRAKE FLUID LEVEL SWITCH

1. Turn ignition switch OFF.
2. Disconnect brake fluid level switch connector.
3. Check continuity between brake fluid level switch connector terminals.

Brake fluid level switch		Condition	Continuity
Connector	Terminal		
E37	1 – 2	When brake fluid is full in the reservoir tank.	Not existed
		When brake fluid is empty in the reservoir tank.	Existed

Is the inspection result normal?

YES >> GO TO 6.
NO >> Brake fluid level switch is malfunction. Replace reservoir tank.

6.CHECK BRAKE FLUID LEVEL SWITCH CIRCUIT

1. Disconnect combination meter connector.
2. Check continuity between brake fluid level switch harness connector terminals and combination meter harness connector terminal and/or ground.

Combination meter		Brake fluid level switch		Continuity
Connector	Terminal	Connector	Terminal	
M34	27	E37	1	Existed

Combination meter		—	Continuity
Connector	Terminal		
M34	27	Ground	Not existed

Brake fluid level switch		—	Continuity
Connector	Terminal		
E37	2	Ground	Existed

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace malfunctioning components.

Component Inspection

INFOID:0000000000924890

1.CHECK BRAKE FLUID LEVEL SWITCH

1. Turn ignition switch OFF.
2. Disconnect brake fluid level switch connector.
3. Check continuity between brake fluid level switch connector terminals.

Brake fluid level switch		—	Condition	Continuity
Connector	Terminal			
E37	1	Ground	When brake fluid is full in the reservoir tank.	Not existed
			When brake fluid is empty in the reservoir tank.	Existed

Is the inspection result normal?

YES >> INSPECTION END

cardiagn.com

NO >> Replace reservoir tank.

Special Repair Requirement

INFOID:0000000000924891

1. ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the ABS actuator and electric unit (control unit). Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

>> END

cardiagn.com

U1000, U1002 CAN COMM CIRCUIT

Description

INFOID:0000000001125390

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

DTC Logic

INFOID:0000000000924893

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
U1000	CAN COMM CIRCUIT	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or more.	• CAN communication line • ABS actuator and electric unit (control unit)
U1002	SYSTEM COMM	When ABS actuator and electric unit (control unit) is not transmitting or receiving CAN communication signal for 2 seconds or less.	

Diagnosis Procedure

INFOID:0000000000924894

INSPECTION PROCEDURE

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect ABS actuator and electric unit (control unit) connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and perform self-diagnosis.

Self-diagnosis results
CAN COMM CIRCUIT
SYSTEM COMM

Is above displayed on the self-diagnosis display?

YES >> Go to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> INSPECTION END

Special Repair Requirement

INFOID:0000000000924895

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the ABS actuator and electric unit (control unit). Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

>> END

cardiagn.com

PARKING BRAKE SWITCH

Description

INFOID:0000000000924896

The parking brake switch converts the status of the parking brake pedal to an electric signal and transmits it to the ABS actuator and electric unit (control unit).

Diagnosis Procedure

INFOID:0000000001125318

1.CHECK COMBINATION METER INPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between combination meter harness connector terminal 26 and ground.

26 – Ground	
Parking brake ON	: Approx. 0 V
Parking brake OFF	: Approx. 5 V

Is the inspection result normal?

YES >> INSPECTION END
NO >> GO TO 2.

2.CHECK PARKING BRAKE SWITCH SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and parking brake switch connector.
3. Check continuity between combination meter harness connector terminal 26 and parking brake switch harness connector terminal 1.

26 – 1	: Continuity should exist.

4. Check continuity between combination meter harness connector terminal 26 and ground.

26 – Ground	: Continuity should not exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair harness or connector.

Component Function Check

INFOID:0000000000924897

1.CHECK PARKING BRAKE SWITCH OPERATION

Operate the parking brake pedal. Then check that the brake warning lamp in the combination meter turns on/off correctly.

Condition	Brake warning lamp illumination status
When the parking brake switch is operation	ON
When the parking brake switch is not operation.	OFF

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-145, "Diagnosis Procedure".

Component Inspection

INFOID:0000000001125391

INSPECTION PROCEDURE

1.CHECK PARKING BRAKE SWITCH

1. Turn ignition switch OFF.
2. Disconnect parking brake switch connector.

cardiagn.com

3. Check continuity between parking brake switch terminal and ground.

Parking brake switch		—	Condition	Continuity
Connector	Terminal			
M103	1	Ground	When the parking brake switch is operated.	Existed
			When the parking brake switch is not operated.	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace parking brake switch.

cardiagn.com

ESP OFF SWITCH

Description

INFOID:0000000000924900

ESP OFF switch can deactivate (turn OFF) the ESP/TCS function by pressing the ESP OFF switch.

Component Function Check

INFOID:0000000000924901

1.CHECK ESP OFF SWITCH OPERATION

Turn ON/OFF the ESP OFF switch and check that the ESP OFF indicator lamp in the combination meter turns ON/OFF correctly.

Condition	ESP OFF indicator lamp illumination status
ESP OFF switch: ON	ON
ESP OFF switch: OFF	OFF

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-147, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924902

1.CHECK ESP OFF SWITCH

1. Turn ignition switch OFF.
2. Disconnect ESP OFF switch connector.
3. Check continuity between ESP OFF switch connector terminals.

ESP OFF switch		Condition	Continuity
Connector	Terminal		
M5	1 – 2	When ESP OFF switch is hold pressed.	Existed
		When releasing ESP OFF switch.	Not existed

Is the inspection result normal?

YES >> GO TO 2.
NO >> ESP OFF switch is malfunctioning. Replace ESP OFF switch.

2.CHECK ESP OFF SWITCH HARNESS

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check continuity between ESP OFF switch connector terminals and ABS actuator and electric unit (control unit) connector terminal and/or ground.

ABS actuator and electric unit (control unit)		ESP OFF switch		Continuity
Connector	Terminal	Connector	Terminal	
E36	21	M5	1	Existed

ABS actuator and electric unit (control unit)		—	Continuity
Connector	Terminal		
E36	21	Ground	Not existed

ESP OFF switch		—	Continuity
Connector	Terminal		
M5	2	Ground	Existed

Is the inspection result normal?

cardiagn.com

YES >> GO TO 3.
NO >> If the open or short in harness, repair or replace harness.

3.CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

Component Inspection

INFOID:0000000000924903

INSPECTION PROCEDURE

1.CHECK ESP OFF SWITCH

1. Turn ignition switch OFF.
2. Disconnect ESP OFF switch connector.
3. Check continuity between ESP OFF switch connector terminals.

ESP OFF switch		Condition	Continuity
Connector	Terminal		
M5	1 – 2	When ESP OFF switch is hold pressed.	Existed
		When releasing ESP OFF switch.	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace ESP OFF switch.

cardiagn.com

ABS WARNING LAMP

Description

INFOID:0000000000924904

×: ON –: OFF

Condition	ABS warning lamp
Ignition switch OFF	–
For 1 second after turning ON ignition switch	×
1 second later after turning ON ignition switch	–
ABS function is malfunctioning.	×
EBD function is malfunctioning.	×

Component Function Check

INFOID:0000000000924905

1.CHECK ABS WARNING LAMP OPERATION

Check that the lamp illuminates for approximately 1 second after the ignition switch is turned ON.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-149, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924906

1.CHECK SELF-DIAGNOSIS

Perform ABS actuator and electric unit (control unit) self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check items displayed by self-diagnosis.

2.CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

cardiagn.com

BRAKE WARNING LAMP

Description

INFOID:0000000000924907

×: ON –: OFF

Condition	Brake warning lamp NOTE 1
Ignition switch OFF	–
For 1 second after turning ON ignition switch	× NOTE 2
1 second later after turning ON ignition switch	× NOTE 2
EBD function is malfunctioning.	×

NOTE:

- 1: Brake warning lamp will turn on in case of parking brake operation (when switch is ON) or of brake fluid level switch operation (when brake fluid is insufficient).
- 2: After starting engine, brake warning lamp is turned off.

Component Function Check

INFOID:0000000000924908

1. BRAKE WARNING LAMP OPERATION CHECK 1

Check that the lamp illuminates for approximately 1 second after the ignition switch is turned ON.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Go to diagnosis procedure. Refer to BRC-150, "Diagnosis Procedure".

2. BRAKE WARNING LAMP OPERATION CHECK 2

Check that the brake warning lamp in the combination meter turns ON/OFF correctly when operating the parking brake pedal.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check parking brake switch. Refer to BRC-145, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924909

1. CHECK PARKING BRAKE SWITCH

Check that the brake warning lamp in the combination meter turns ON/OFF correctly when operating the parking brake pedal.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check parking brake switch. Refer to BRC-145, "Diagnosis Procedure".

2. CHECK SELF-DIAGNOSIS

Perform ABS actuator and electric unit (control unit) self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check items displayed by self-diagnosis.

3. CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

cardiagn.com

ESP OFF INDICATOR LAMP

Description

INFOID:0000000000924910

×: ON –: OFF

Condition	ESP OFF indicator lamp
Ignition switch OFF	–
For 1 second after turning ON ignition switch	×
1 second later after turning ON ignition switch	–
ESP OFF switch turned ON. (ESP function is OFF.)	×
ESP/TCS function is malfunctioning.	×
ABS function is malfunctioning.	×
EBD function is malfunctioning.	×

Component Function Check

INFOID:0000000000924911

1.ESP OFF INDICATOR LAMP OPERATION CHECK 1

Check that the lamp illuminates for approximately 1 second after the ignition switch is turned ON.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Go to diagnosis procedure. Refer to BRC-151, "Diagnosis Procedure".

2.ESP OFF INDICATOR LAMP OPERATION CHECK 2

Check that the ESP OFF indicator lamp in the combination meter turns ON/OFF correctly when operating the ESP OFF switch.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check ESP OFF switch. Refer to BRC-147, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924912

1.CHECK SELF-DIAGNOSIS

Perform ABS actuator and electric unit (control unit) self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check items displayed by self-diagnosis.

2.CHECK ESP OFF SWITCH

Check that the ESP OFF indicator lamp in the combination meter turns ON/OFF correctly when operating the ESP OFF switch.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check ESP OFF switch. Refer to BRC-147, "Diagnosis Procedure".

3.CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

SLIP INDICATOR LAMP

Description

INFOID:0000000000924913

×: ON –: OFF

Condition	SLIP indicator lamp
Ignition switch OFF	–
For 1 second after turning ON ignition switch	×
1 second later after turning ON ignition switch	–
VDC/TCS function is malfunctioning.	×
ABS function is malfunctioning.	×
EBD function is malfunctioning.	×

Component Function Check

INFOID:0000000000924914

1.CHECK SLIP INDICATOR LAMP OPERATION

Check that the lamp illuminates for approximately 1 second after the ignition switch is turned ON.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Go to diagnosis procedure. Refer to BRC-152, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924915

1.CHECK SELF-DIAGNOSIS

Perform ABS actuator and electric unit (control unit) self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check items displayed by self-diagnosis.

2.CHECK COMBINATION METER

Check if the indication and operation of combination meter are normal. Refer to MWI-21, "Diagnosis Description".

Is the inspection result normal?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> Repair or replace combination meter.

Fail-Safe

INFOID:0000000000924918

ABS, EBD SYSTEM

In case of electrical malfunctions with the ABS, ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp will turn on. In case of electrical malfunctions with the EBD, brake warning lamp, ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp will turn on. Simultaneously, the ESP/TCS/ABS become one of the following conditions of the fail-safe function.

cardiagn.com

- For malfunction of ABS, only the EBD is activated and the condition of vehicle is the same condition of vehicles without TCS/ABS system.
  NOTE:
  ABS self-diagnosis sound may be heard. That is a normal condition because a self-diagnosis for “Ignition switch ON” and “The first starting” are being performed.
- For malfunction of EBD, EBD and ABS become inoperative, and the condition of vehicle is the same as the condition of vehicles without TCS/ABS, EBD system.

ESP/TCS SYSTEM

In case of malfunction in the ESP/TCS/ABS system, ESP OFF indicator lamp, SLIP indicator lamp are turned on, and the condition of vehicle is the same as the condition of vehicles without ESP/TCS control.

CAUTION:

If the Fail-Safe function is activated, then perform self-diagnosis for ESP/TCS/ABS control system.

SYMPTOM DIAGNOSIS

EXCESSIVE ABS FUNCTION OPERATION FREQUENCY

Diagnosis Procedure

INFOID:0000000000924921

1.CHECK START

Check front and rear brake force distribution using a brake tester. Refer to BR-46, "General Specifications" (LHD models), BR-90, "General Specifications" (RHD models).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check brake system.

2.CHECK FRONT AND REAR AXLE

Make sure that there is no excessive play in the front and rear axles.
- Front: FAX-7, "Inspection" (2WD models), FAX-47, "Inspection" (4WD models)
- Rear: RAX-3, "Inspection" (2WD models), RAX-9, "Inspection" (4WD models)

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK WHEEL SENSOR AND SENSOR ROTOR

Check the following.
- Wheel sensor installation for damage.
- Sensor rotor installation for damage.
- Wheel sensor connector connection.
- Wheel sensor harness inspection.

Is the inspection result normal?

YES >> GO TO 4.
NO >>
- Replace wheel sensor or sensor rotor.
- Repair harness.

4.CHECK ABS WARNING LAMP DISPLAY

Make sure that the ABS warning lamp is turned off after the ignition switch is turned ON or when driving.

Is the ABS warning lamp illuminated?

YES >> Perform self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".
NO >> INSPECTION END

cardiagn.com

UNEXPECTED PEDAL REACTION

Diagnosis Procedure

INFOID:0000000000924922

1.CHECK BRAKE PEDAL STROKE

Check brake pedal stroke. Refer to BR-8, "Inspection and Adjustment" (LHD models), BR-52, "Inspection and Adjustment" (RHD models).

Is the stroke too large?

YES >> • Bleed air from brake tube and hose. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).
• Check brake pedal, brake booster, and master cylinder for mount play, looseness, brake system fluid leakage, etc.
- Brake pedal: BR-8, "Exploded View" (LHD models), BR-52, "Exploded View" (RHD models).
- Brake booster: BR-14, "Exploded View" (LHD models), BR-58, "Exploded View" (RHD models).
- Brake master cylinder: BR-13, "Exploded View" (LHD models), BR-57, "Exploded View" (RHD models).
- Brake fluid: BR-11, "Inspection" (LHD models), BR-55, "Inspection" (RHD models).

NO >> GO TO 2.

2.CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. Check if braking force is normal in this condition. Connect connector after inspection.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check brake system.

cardiagn.com

THE BRAKING DISTANCE IS LONG

Diagnosis Procedure

INFOID:0000000000924923

CAUTION:

The stopping distance on slippery road surfaces might be longer with the ABS operating than when the ABS is not operating.

1.CHECK FUNCTION

Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check brake system.

cardiagn.com

ABS FUNCTION DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000000924924

CAUTION:
ABS does not operate when speed is 10 km/h (6 MPH) or lower.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure that the ABS warning lamp turns OFF after ignition switch is turned ON or when driving.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Perform self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

cardiagn.com

PEDAL VIBRATION OR ABS OPERATION SOUND OCCURS

Diagnosis Procedure

INFOID:0000000000924925

CAUTION:

Under the following conditions, ABS is activated and vibration is felt when brake pedal is lightly depressed (just place a foot on it). However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [at approximately 50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1.SYMPTOM CHECK 1

Check that there are pedal vibrations when the engine is started.

Do vibrations occur?

YES >> GO TO 2.
NO >> Inspect the brake pedal.

2.SYMPTOM CHECK 2

Check that there are ABS operation noises when the engine is started.

Do the operation noises occur?

YES >> GO TO 3.
NO >> Perform self-diagnosis. Refer to BRC-96, "CONSULT-III Function (ABS)".

3.SYMPTOM CHECK 3

Check symptoms when electrical component (headlamps, etc.) switches are operated.

Do symptoms occur?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to the control unit. If there is, move it farther away.
NO >> INSPECTION END

cardiagn.com

VEHICLE JERKS DURING ESP/TCS/ABS CONTROL

Diagnosis Procedure

INFOID:0000000000924926

1.SYMPTOM CHECK

Check if the vehicle jerks during ESP/TCS/ABS control.

Is the inspection result normal?

YES >> INSPECTION END
NO >> GO TO 2.

2.CHECK SELF-DIAGNOSIS RESULTS

Perform self-diagnostic of ABS actuator and electric unit (control unit). Refer to BRC-96, "CONSULT-III Function (ABS)".

Are self-diagnosis results indicated?

YES >> Check corresponding items, make repairs, and perform ABS actuator and electric unit (control unit) self-diagnosis.
NO >> GO TO 3.

3.CHECK CONNECTOR

- Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector and check terminal for deformation, disconnection, looseness, etc.
- Securely connect connectors and perform ABS actuator and electric unit (control unit) self-diagnosis.

Are self-diagnosis results indicated?

YES >> If poor contact, damage, open or short circuit of connector terminal is found, repair or replace.
NO >> GO TO 4.

4.CHECK ECM AND TCM SELF-DIAGNOSIS RESULTS

Perform ECM and TCM self-diagnosis.

Are self-diagnosis results indicated?

YES >> Check the corresponding items.
- ECM:
  - HR16DE (with EURO-OBD): EC-100, "CONSULT-III Function".
  - HR16DE (without EURO-OBD): EC-430, "CONSULT-III Function".
  - MR20DE (with EURO-OBD): EC-719, "CONSULT-III Function".
  - MR20DE (without EURO-OBD): EC-1054, "CONSULT-III Function".
  - K9K: EC-1315, "Diagnosis Description".
- TCM: Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

NO >> Replace ABS actuator and electric unit (control unit).

cardiagn.com

NORMAL OPERATING CONDITION

Description

INFOID:0000000000924927

Symptom	Result
Slight vibrations are felt on the brake pedal and the operation noises occur, when ESP, TCS or ABS is activated.	This is a normal condition due to the ESP, TCS or ABS activation.
Stopping distance is longer than that of vehicles without ABS when the vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.	
The brake pedal moves and generates noises, when TCS or ESP is activated due to rapid acceleration or sharp turn.	
The brake pedal vibrates and motor operation noises occur from the engine room, after the engine starts and just after the vehicle starts.	This is a normal, and it is caused by the ABS operation check.
Depending on the road conditions, the driver may experience a sluggish feel.	This is normal, because TCS places the highest priority on the optimum traction (stability).
TCS may activate momentarily if wheel speed changes when driving over location where friction coefficient varies, when downshifting, or when fully depressing accelerator pedal.	
The ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp may turn ON when the vehicle is subject to strong shaking or large vibration, such as when the vehicle is rotating on a turntable or located on a ship while the engine is running.	In this case, restart the engine on a normal road. If the normal condition is restored, there is no malfunction. At that time, erase the self-diagnosis memory.
ESP may not operate normally or the ABS warning lamp, ESP OFF indicator lamp, and SLIP indicator lamp may illuminate, when running on a special road that is extremely slanted (e.g. bank in a circuit course).	
A malfunction may occur in the yaw rate/side G sensor system, when the vehicle turns sharply, such as during a spin turn, axle turn, or drift driving, while the ESP function is off (ESP OFF indicator lamp illuminated).	
The vehicle speed will not increase even though the accelerator pedal is depressed, when inspecting the speedometer on a 2-wheel chassis dynamometer.	Normal (Deactivate the ESP/TCS function before performing an inspection on a chassis dynamometer.)

cardiagn.com

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER" Service

INFOID:0000000000924928

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

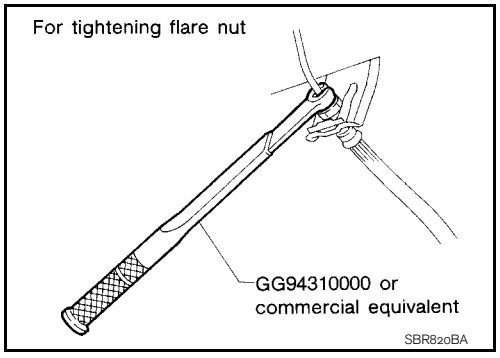
Precaution for Brake System

INFOID:0000000000924929

WARNING:

Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.

- Only use DOT 4 brake fluid. Refer to MA-21, "Fluids and Lubricants".
- Never to reuse drained brake fluid.
- Never to spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.
- Never to use mineral oils such as gasoline or light oil. They may damage rubber parts and cause improper operation.
- Always loosen the brake tube flare nut with a flare nut wrench.
- Tighten the brake tube flare nut to the specified torque with a flare nut torque wrench.
- Always conform the specified tightening torque when installing the brake pipes.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before performing the work.



Precaution for Brake Control

INFOID:0000000000924930

- Just after starting vehicle after ignition switch ON, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is normal condition.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides electrical system inspection, check brake booster operation, brake fluid level, and oil leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- ABS might be out of order or malfunctions by putting a radio (wiring inclusive), an antenna and a lead-in wire near the control unit.

cardiagn.com

- If aftermarket parts (car stereo, CD player, etc.) have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.
- ESP system may not operate normally or a ESP OFF indicator lamp or SLIP indicator lamp may light.

- When replacing the following parts with parts other than genuine parts or making modifications: Suspension-related parts (shock absorber, spring, bushing, etc.), tires, wheels (other than specified sizes), brake-related parts (pad, rotor, caliper, etc.), engine-related parts (muffler, ECM, etc.) and body reinforcement-related parts (roll bar, tower bar, etc.).
- When driving with worn or deteriorated suspension, tires and brake-related parts.

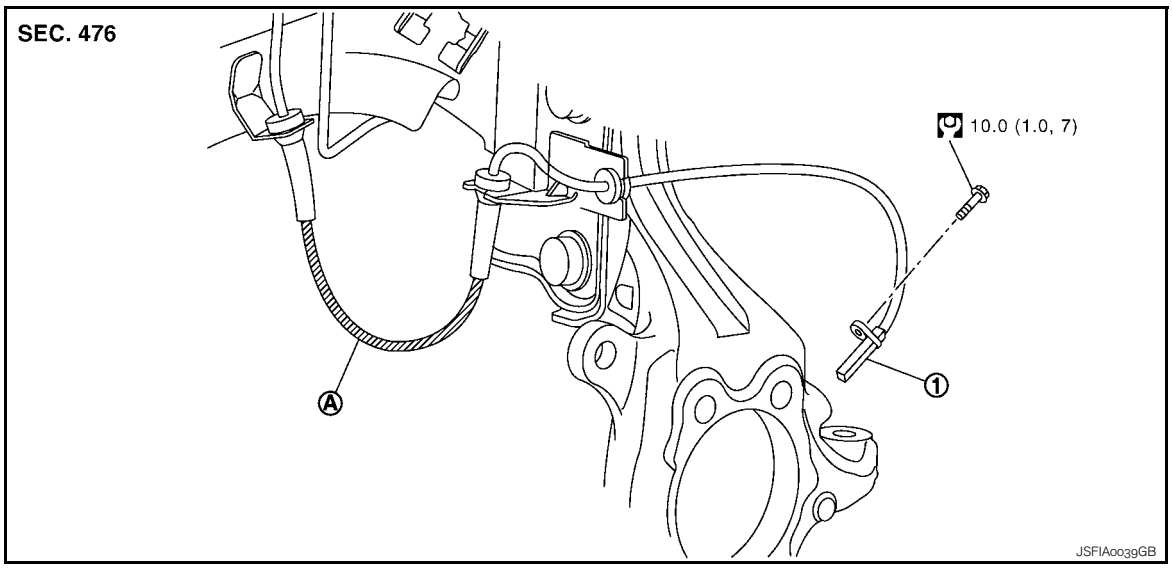
ON-VEHICLE REPAIR

WHEEL SENSOR

FRONT WHEEL SENSOR

FRONT WHEEL SENSOR : Exploded View

INFOID:0000000001115340



1. Front LH wheel sensor

A. White line (slant line)

Refer to GI section GI-4, "Components" for symbols in the figure.

NOTE:
The above figure (front side) shows left side. Right side is the mirror image.

FRONT WHEEL SENSOR : Removal and Installation

INFOID:0000000001115341

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **Do not twist sensor harness as much as possible, when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**
- **When you see the harness of the wheel sensor from the front side of the vehicle ensure that the white lines (A) are not twisted.**

INSTALLATION

Pay attention to the following when installing wheel sensor. Tighten installation bolts to the specified torques. Refer to BRC-67, "FRONT WHEEL SENSOR : Exploded View".

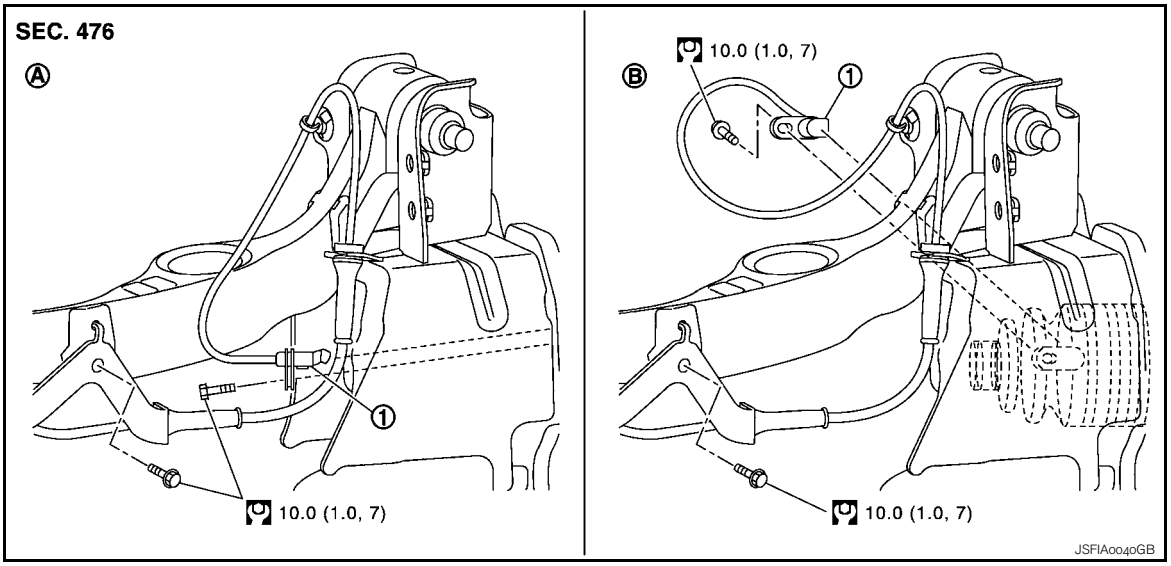
- When installing, make sure there is no foreign material such as iron chips on and in the mounting hole of the wheel sensor. Make sure no foreign material has been caught in the sensor rotor. Remove any foreign material and clean the mount.
- When installing wheel sensor, be sure to press rubber grommets in until they lock at locations shown above in the figure. When installed, harness must not be twisted.

REAR WHEEL SENSOR

REAR WHEEL SENSOR : Exploded View

INFOID:0000000001115342

cardiagn.com



1. Rear LH wheel sensor

A. 2WD models B. 4WD models

Refer to GI section GI-4, "Components" for symbols in the figure.

NOTE:
The above figure (front side) shows left side. Right side is the mirror image.

REAR WHEEL SENSOR : Removal and Installation

INFOID:0000000001115343

REMOVAL

Pay attention to the following when removing sensor.

CAUTION:

- **Do not twist sensor harness as much as possible, when removing it. Pull sensors out without pulling on sensor harness.**
- **Take care to avoid damaging sensor edges or rotor teeth. Remove wheel sensor first before removing front or rear wheel hub. This is to avoid damage to sensor wiring and loss of sensor function.**

INSTALLATION

Pay attention to the following when installing wheel sensor. Tighten installation bolts to the specified torques. Refer to BRC-67, "REAR WHEEL SENSOR : Exploded View".

- When installing, make sure there is no foreign material such as iron chips on and in the mounting hole of the wheel sensor. Make sure no foreign material has been caught in the sensor rotor. Remove any foreign material and clean the mount.
- When installing wheel sensor, be sure to press rubber grommets in until they lock at locations shown above in the figure. When installed, harness must not be twisted.

SENSOR ROTOR

FRONT SENSOR ROTOR

FRONT SENSOR ROTOR : Exploded View

INFOID:0000000001115344

Refer to FAX-9, "Exploded View" (2WD models), FAX-49, "Exploded View" (4WD models).

FRONT SENSOR ROTOR : Removal and Installation

INFOID:0000000001115345

REMOVAL

Sensor rotor cannot be disassembled. Remove the sensor rotor together with wheel hub and bearing assembly. Refer to FAX-9, "Removal and Installation" (2WD models), FAX-49, "Removal and Installation" (4WD models).

INSTALLATION

Sensor rotor cannot be disassembled. Installation the sensor rotor together with wheel hub and bearing assembly. Refer to FAX-9, "Removal and Installation" (2WD models), FAX-49, "Removal and Installation" (4WD models).

REAR SENSOR ROTOR

REAR SENSOR ROTOR : Exploded View

INFOID:0000000001115346

Refer to RAX-4, "Exploded View" (2WD models), RAX-13, "Exploded View" (4WD models).

REAR SENSOR ROTOR : Removal and Installation

INFOID:0000000001115347

2WD MODELS

Removal

Sensor rotor cannot be disassembled. Remove the sensor rotor together with wheel hub and bearing assembly. Refer to RAX-4, "Removal and Installation".

Installation

Sensor rotor cannot be disassembled. Installation the sensor rotor together with wheel hub and bearing assembly. Refer to RAX-4, "Removal and Installation".

4WD MODELS

For removal and installation of sensor rotor, refer to RAX-14, "Disassembly and Assembly".

Refer to GI section GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000001116482

LHD MODELS

Removal

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**

1. Remove cowl top cover. Refer to EXT-19, "Exploded View".
2. Remove exhaust manifold.
   - HR16DE: EX-5, "Exploded View"
   - MR20DE: EX-10, "Exploded View"
   - K9K: EX-15, "Exploded View"
3. Disconnect ABS actuator and electric unit (control unit) connector.
4. Loosen brake tube flare nuts, then remove brake tubes from ABS actuator and electric unit (control unit).
5. Remove ABS actuator and electric unit (control unit) bracket mounting nut.
6. Remove ABS actuator and electric unit (control unit) from vehicle.

cardiagn.com

Installation

Note the following, and install in the reverse order of removal.

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**
- **After installing harness connector in the ABS actuator and electric unit (control unit), make sure connector is securely locked.**
- **When replacing ABS actuator and electric unit (control unit), make sure to adjust neutral position of steering angle sensor. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement".**

RHD MODELS

Removal

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**

1. Remove cowl top cover. Refer to EXT-19, "Exploded View".
2. Remove air cleaner and air duct.
   - HR16DE: EM-27, "Exploded View"
   - MR20DE: EM-144, "Exploded View"
   - K9K: EM-265, "Exploded View"
3. Disconnect ABS actuator and electric unit (control unit) connector.
4. Loosen brake tube flare nuts, then remove brake tubes from ABS actuator and electric unit (control unit).
5. Remove ABS actuator and electric unit (control unit) bracket mounting nut.
6. Remove ABS actuator and electric unit (control unit) from vehicle.

Installation

Note the following, and install in the reverse order of removal.

CAUTION:

- **Before servicing, disconnect the battery cable from negative terminal.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use flare nut crowfoot and torque wrench.**
- **Do not apply excessive impact to ABS actuator and electric unit (control unit), such as dropping it.**
- **Do not remove and install actuator by holding harness.**
- **After work is completed, bleed air from brake tube. Refer to BR-12, "Bleeding Brake System" (LHD models), BR-56, "Bleeding Brake System" (RHD models).**
- **After installing harness connector in the ABS actuator and electric unit (control unit), make sure connector is securely locked.**
- **When replacing ABS actuator and electric unit (control unit), make sure to adjust neutral position of steering angle sensor. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement".**

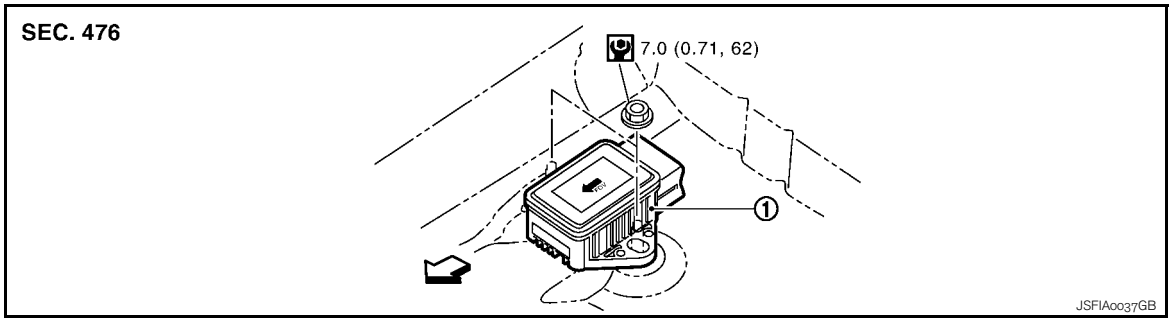
YAW RATE/SIDE G SENSOR

Exploded View

INFOID:0000000000924941



1. Yaw rate/side G sensor

⇦: Vehicle front

Refer to GI section GI-4, "Components" for symbol makes in the figure.

Removal and Installation

INFOID:0000000000924942

REMOVAL

CAUTION:

- **Do not drop or strike yaw rate/side G sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because yaw rate/side G sensor is sensitive for the impact.**

1. Remove lower instrument cover RH. Refer to IP-11, "Exploded View".
2. Disconnect yaw rate/side G sensor harness connector.
3. Remove mounting nuts. Remove yaw rate/side G sensor.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

- **Do not drop or strike yaw rate/side G sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because yaw rate/side G sensor is sensitive for the impact.**

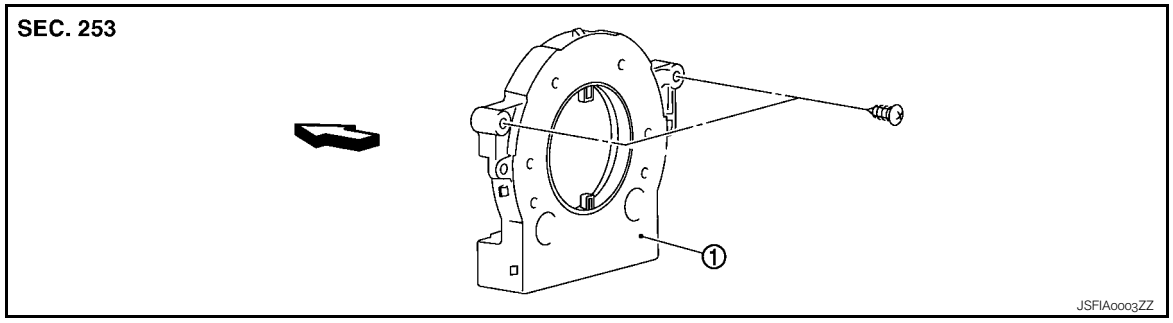
STEERING ANGLE SENSOR

Exploded View

INFOID:0000000000924943



1. Steering angle sensor

⇦: Vehicle front

Removal and Installation

INFOID:0000000000924944

REMOVAL

1. Remove spiral cable assembly. Refer to SR-6, "Exploded View".
2. Remove steering angle sensor from spiral cable assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

After work, make sure to adjust neutral position of steering angle sensor. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description".

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001116836

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001095720

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Precaution for Brake System

INFOID:0000000000925765

WARNING:

Clean any dust from the front brake and rear brake with a vacuum dust collector. Never blow with compressed air.

cardiagn.com

CAUTION:

- **Only use “DOT 4” brake fluid. Refer to MA-21, "Fluids and Lubricants".**
- **Never reuse drained brake fluid.**
- **Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.**
- **Always clean with new brake fluid when cleaning the master cylinder, brake caliper and other components.**
- **Never use mineral oils such as gasoline or light oil to clean. They may damage rubber parts and cause improper operation.**
- **Always loosen the brake tube flare nut with a flare nut wrench.**
- **Tighten the brake tube flare nut to the specified torque with flare nut torque wrench (A).**
- **Always confirm the specified tightening torque when installing the brake pipes.**
- **Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before performing the work.**
- **Check that no brake fluid leakage is present after replacing the parts.**
- **Burnish the brake contact surfaces after refinishing or replacing rotors, after replacing pads, or if a soft pedal occurs at very low mileage. Refer to BR-36, "BRAKE PAD : Inspection and Adjustment" (front brake pad), BR-40, "BRAKE CALIPER ASSEMBLY : Inspection and Adjustment" (front disc rotor), BR-41, "BRAKE PAD : Inspection and Adjustment" (rear brake pad), BR-45, "BRAKE CALIPER ASSEMBLY : Inspection and Adjustment" (rear disc rotor).**

ON-VEHICLE MAINTENANCE

BRAKE PEDAL

Exploded View

INFOID:0000000000925771

Refer to BR-17, "Exploded View".

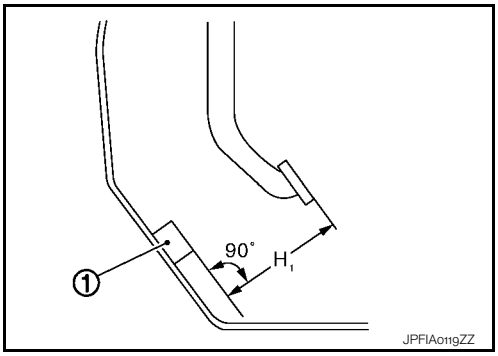
Inspection and Adjustment

INFOID:0000000000925772

INSPECTION

Brake Pedal Height

Check the height (H_1) between the accelerator pedal stopper (1) and the brake pedal upper surface.



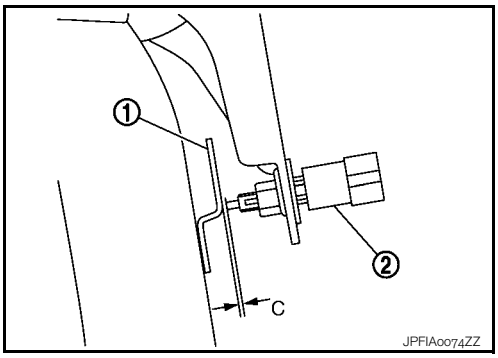
Standard

Brake pedal height (H_1)	**: Refer to BR-46, "Brake Pedal".**

CAUTION:
Remove the floor trim.

ASCD Cancel Switch and Stop Lamp Switch

Check the clearance (C) among bracket (1) and ASCD cancel switch/stop lamp switch (2) threaded end.



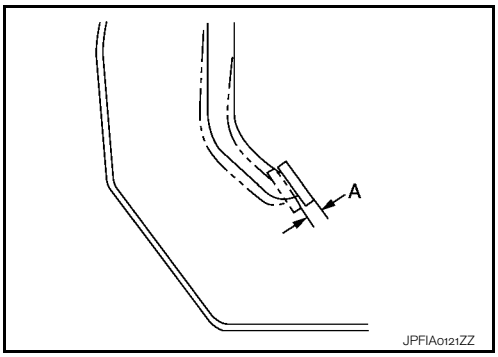
Standard

Clearance (C) between bracket and ASCD cancel switch/stop lamp switch threaded end	**: Refer to BR-46, "Brake Pedal".**

CAUTION:
The stop lamp must be turned off when the brake pedal is released.
NOTE:
Pull the brake pedal pad to make the clearance between bracket and ASCD cancel switch/stop lamp switch threaded end.

Brake Pedal Play

Press the brake pedal. Check the brake pedal play (A).



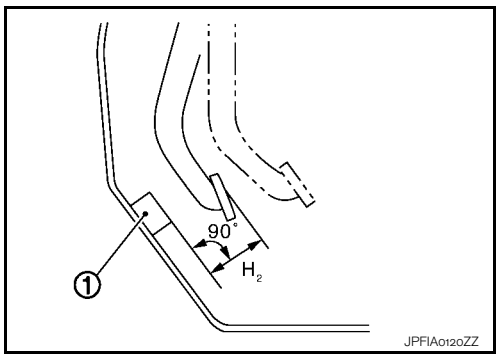
Standard

Pedal play (A)	**: Refer to BR-46, "Brake Pedal".**

Depressed Brake Pedal Height

cardiagn.com

Check the height between the accelerator pedal stopper (1) and the brake pedal upper surface (H_2) when depressing the brake pedal at 490 N (50 kg, 110 lb) while turning engine ON.



Standard

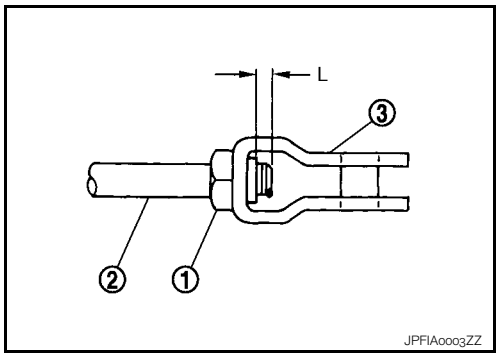
Depressed brake pedal height (H_2) **: Refer to BR-46, "Brake Pedal".**

CAUTION:
Remove the floor trim.

ADJUSTMENT

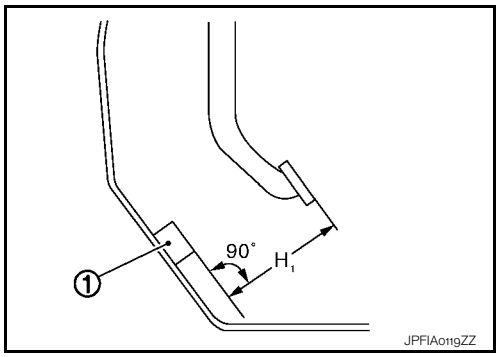
Brake Pedal Height

1. Disconnect the harness connector from ASCD cancel switch and stop lamp switch.
2. Turn the ASCD cancel switch and stop lamp switch 45° counterclockwise.
3. Loosen the input rod lock nut (1). Adjust the brake pedal to the specification. Tighten the input rod lock nut to the specification. Refer to BR-30, "Exploded View".
   CAUTION:
   The threaded end of the input rod (2) must project to the inner side (L) of the clevis (3).



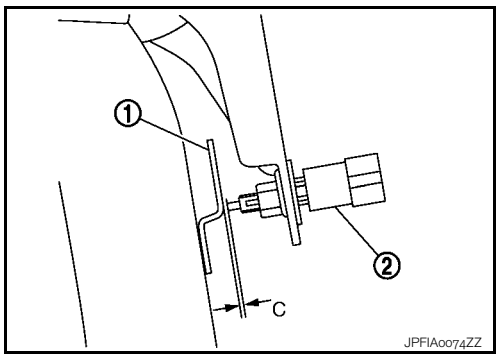
Standard

Brake pedal height (H_1) **: Refer to BR-46, "Brake Pedal".**



ASCD Cancel Switch and Stop Lamp Switch

1. Disconnect the harness connector from ASCD cancel switch and stop lamp switch.
2. Turn the ASCD cancel switch and stop lamp switch 45° counterclockwise.
3. Press-fit ASCD cancel switch/stop lamp switch (2) until ASCD cancel switch/stop lamp switch hits the bracket (1) 45° clockwise.
   CAUTION:
   - **The clearance (C) between the bracket and ASCD cancel switch/stop lamp switch threaded end must be the specified value. Refer to BR-46, "Brake Pedal".**
   - **The stop lamp must be turned off when the brake pedal is released.**



Brake Pedal Play

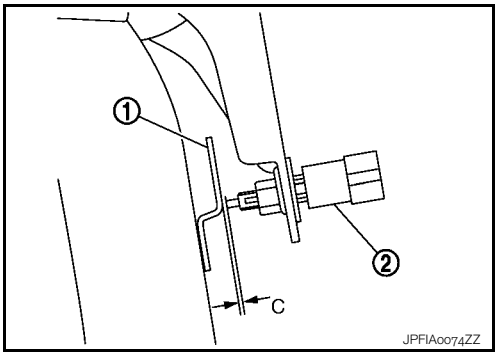
1. Disconnect the harness connector from ASCD cancel switch and stop lamp switch.
2. Turn the ASCD cancel switch and stop lamp switch 45° counterclockwise.

cardiagn.com

3. Press-fit ASCD cancel switch/stop lamp switch (2) until ASCD cancel switch/stop lamp switch hits the bracket (1) 45° clockwise.

CAUTION:

- **The clearance (C) between the bracket and ASCD cancel switch/stop lamp switch threaded end must be the specified value. Refer to BR-46, "Brake Pedal".**
- **The stop lamp must be turned off when the brake pedal is released.**



cardiagn.com

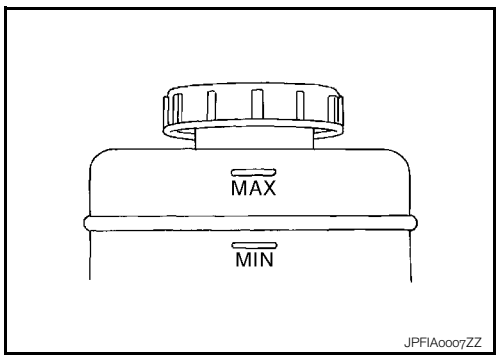
BRAKE FLUID

Inspection

INFOID:0000000000925773

BRAKE FLUID LEVEL

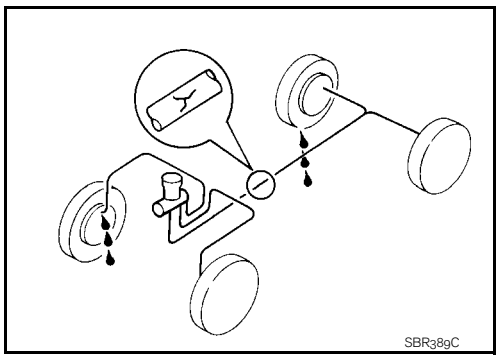
- Check that the fluid level in the reservoir tank is within the specified range (MAX – MIN lines).
- Visually check for any brake fluid leakage around the reservoir tank.
- Check the brake system for any leakage if the fluid level is extremely low (lower than MIN).
- Check the brake system for fluid leakage if the warning lamp remains illuminated even after the parking brake is released.



JPFIA0007ZZ

BRAKE LINE

1. Check brake line (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.
2. Check for fluid leakage by fully depressing brake pedal while engine is running.
   CAUTION:
   If leakage occurs around joints, retighten or, if necessary, replace damaged parts.



SBR389C

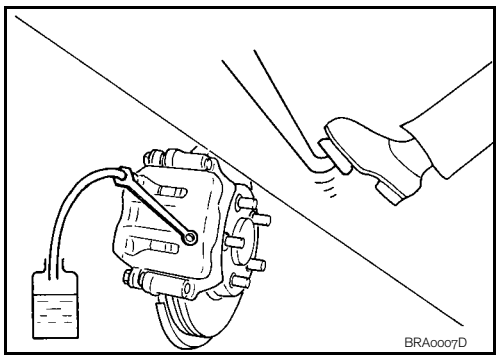
Draining

INFOID:0000000000925774

CAUTION:

- **Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.**
- **Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before draining.**

1. Connect a vinyl tube to the bleed valve.
2. Depress the brake pedal and loosen the bleeder valve to gradually discharge brake fluid.



BRA0007D

Refilling

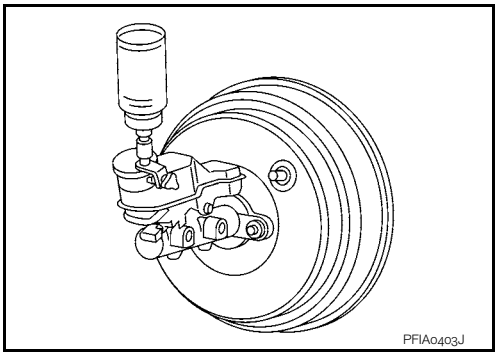
INFOID:0000000000925775

CAUTION:

Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before refilling.

cardiagn.com

1. Check that there is no foreign material in the reservoir tank, and refill with new brake fluid.
   CAUTION:
   Never reuse drained brake fluid.
2. Loosen the bleeder valve, slowly depress the brake pedal to the full stroke, and then release the pedal. Repeat this operation at intervals of 2 or 3 seconds until all brake fluid is discharged. Then close the bleeder valve with the brake pedal depressed. Repeat the same work on each wheel.
3. Perform the air bleeding. Refer to BR-12, "Bleeding Brake System".



Bleeding Brake System

INFOID:0000000000925776

CAUTION:
- **Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before performing the work.**
- **Monitor the fluid level in the reservoir tank during the air bleeding.**
- **Always use new brake fluid for refilling. Never reuse the drained brake fluid.**

1. Connect a vinyl tube to the bleeder valve of the rear right brake.
2. Fully depress the brake pedal 4 to 5 times.
3. Loosen the bleeder valve and bleed air with the brake pedal depressed, and then quickly tighten the bleeder valve.
4. Repeat steps 2 and 3 until all of the air is out of the brake line.
5. Tighten the bleeder valve to the specified torque. Refer to BR-37, "BRAKE CALIPER ASSEMBLY : Exploded View" (front disc brake), BR-42, "BRAKE CALIPER ASSEMBLY : Exploded View" (rear disc brake).
6. Perform steps 1 to 5 for the rear right brake → front left brake → rear left brake → and front right brake in order.
7. Check that the fluid level in the reservoir tank is within the specified range after air bleeding. Refer to BR-11, "Inspection".

cardiagn.com

BRAKE MASTER CYLINDER

Exploded View

INFOID:0000000000925777

Refer to BR-27, "Exploded View".

Inspection

INFOID:0000000000925778

FLUID LEAK

Check for brake fluid leakage from the master cylinder mounting face, reservoir tank mounting face and brake tube connections.

cardiagn.com

BRAKE BOOSTER

Exploded View

INFOID:0000000000925779

Refer to BR-30, "Exploded View".

Inspection

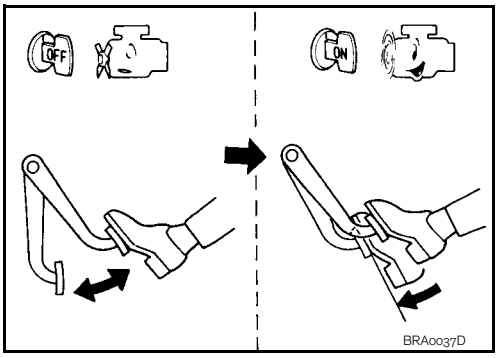
INFOID:0000000000925780

OPERATION

Depress the brake pedal several times at 5-second intervals with the engine stopped. Start the engine with the brake pedal fully depressed. Check that the clearance between brake pedal and dash lower panel decreases.

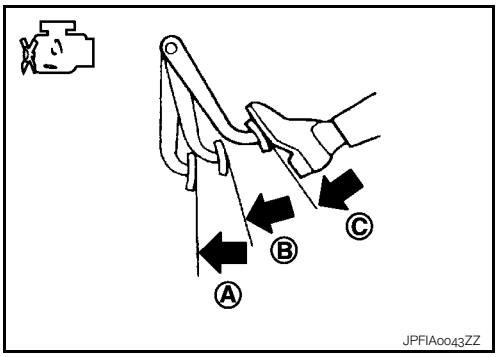
NOTE:

A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



AIR TIGHT

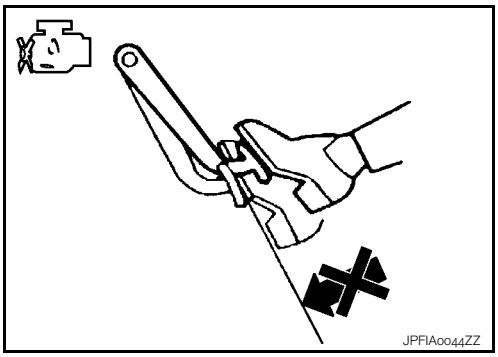
- Idle the engine for 1 minute to apply vacuum to the brake booster, and stop the engine. Then depress the brake pedal several times at 5-second intervals until the accumulated vacuum is released to atmospheric pressure. Check that the clearance between brake pedal and dash lower panel gradually increases (A → B → C) each time the brake pedal is depressed during this operation.



- Depress the brake pedal with the engine running. Then stop the engine while holding down the brake pedal. Check that the brake pedal stroke does not change after holding down the brake pedal for 30 seconds or more.

  NOTE:

  A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



cardiagn.com

FRONT DISC BRAKE

BRAKE PAD

BRAKE PAD : Exploded View

INFOID:0000000000925781

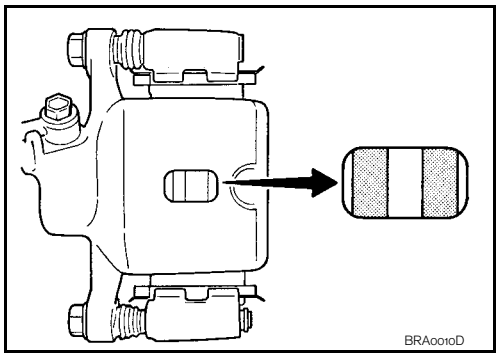
Refer to BR-37, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Inspection

INFOID:0000000000925782

PAD WEAR

Check pad thickness from an inspection hole on cylinder body. Check using a scale if necessary.



Standard thickness : Refer to **BR-46, "Front Disc Brake"**.

Wear limit thickness : Refer to **BR-46, "Front Disc Brake"**.

DISC ROTOR

DISC ROTOR : Inspection

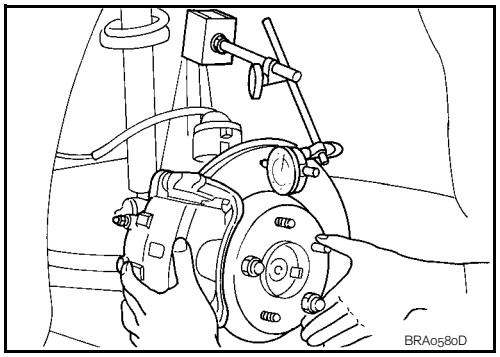
INFOID:0000000000925783

APPEARANCE

Check surface of disc rotor for uneven wear, cracks, and serious damage. Replace if there are.

RUNOUT

1. Fix the disc rotor to the wheel hub and bearing assembly with wheel nuts (2 points at least).
2. Inspect the runout with a dial gauge. [Measured at 10 mm (0.39 in) inside the disc edge.]



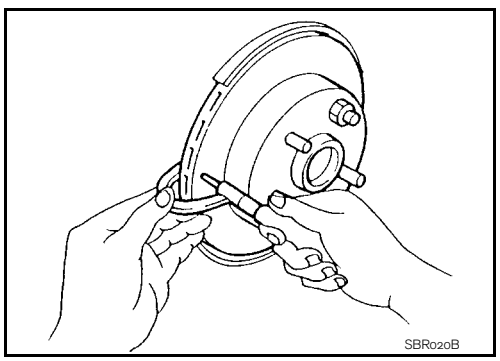
Runout limit : Refer to **BR-46, "Front Disc Brake"**.

NOTE:
Check the wheel bearing axial end play before the inspection. Refer to FAX-7, "Inspection" (2WD), FAX-47, "Inspection" (4WD).

3. Find the installation position with a minimum runout by shifting the disc rotor-to-wheel hub and bearing assembly installation position by one hole at a time if the runout exceeds the limit value.
4. Replace or lathe the disc rotor if the runout exceeds the limit even after the above operation.

THICKNESS

Check the thickness of the disc rotor using a micrometer. Replace the disc rotor if the thickness is below the wear limit.



Wear limit thickness : Refer to **BR-46, "Front Disc Brake"**.

cardiagn.com

REAR DISC BRAKE

BRAKE PAD

BRAKE PAD : Exploded View

INFOID:0000000000925784

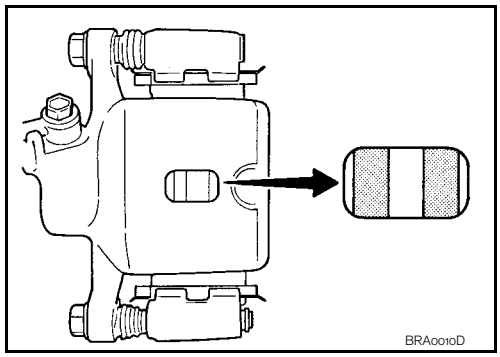
Refer to BR-42, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Inspection

INFOID:0000000000925785

PAD WEAR

Check pad thickness from an inspection hole on cylinder body. Check using a scale if necessary.



Standard thickness : Refer to BR-46, "Rear Disc Brake".

Wear limit thickness : Refer to BR-46, "Rear Disc Brake".

DISC ROTOR

DISC ROTOR : Inspection

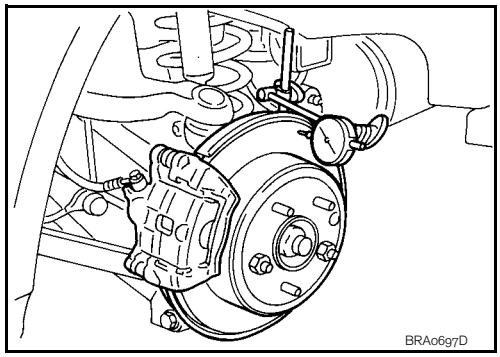
INFOID:0000000000925786

APPEARANCE

Check surface of disc rotor for uneven wear, cracks, and serious damage. Replace if there are.

RUNOUT

1. Fix the disc rotor to the wheel hub and bearing assembly with wheel nuts (2 points at least).
2. Inspect the runout with a dial gauge. [Measured at 10 mm (0.39 in) inside disc edge.]



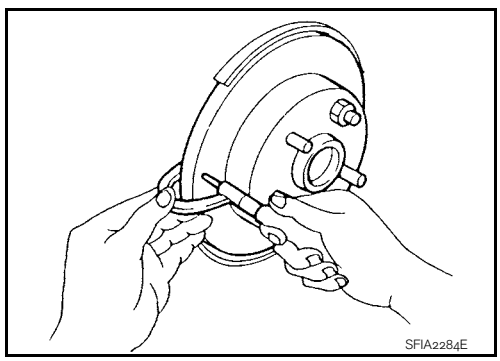
Runout limit : Refer to BR-46, "Rear Disc Brake".

NOTE:
Check the wheel bearing axial end play before the inspection. Refer to RAX-3, "Inspection" (2WD), RAX-9, "Inspection" (4WD).

3. Find the installation position with a minimum runout by shifting the disc rotor-to-wheel hub and bearing assembly installation position by one hole at a time if the runout exceeds the limit value.
4. Replace or lathe the disc rotor if the runout exceeds the limit even after the above operation.

THICKNESS

Check the thickness of the disc rotor using a micrometer. Replace the disc rotor if the thickness is below the wear limit.



Wear limit thickness : Refer to BR-46, "Rear Disc Brake".

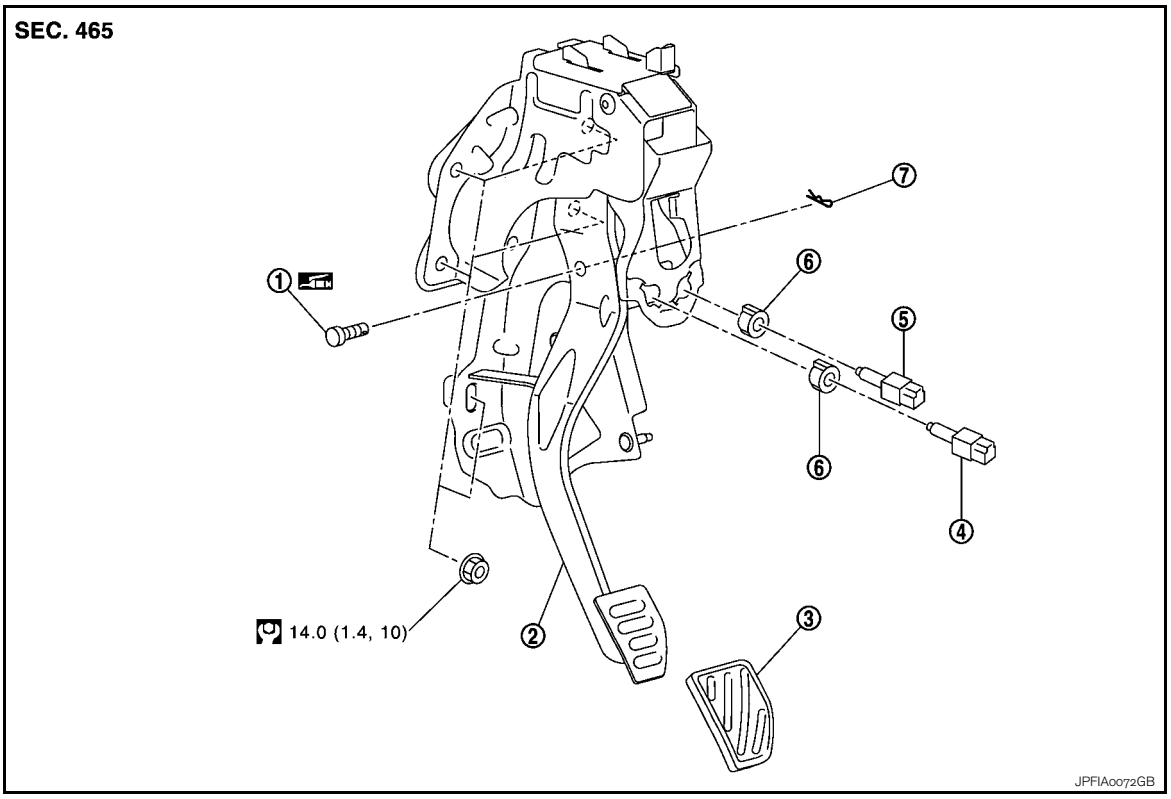
cardiagn.com

ON-VEHICLE REPAIR

BRAKE PEDAL

Exploded View

INFOID:0000000000925787



1. Clevis pin
2. Brake pedal assembly
3. Brake pedal pad
4. ASCD cancel switch
5. Stop lamp switch
6. Clip
7. Snap pin

: Apply multi-purpose grease.

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000925788

REMOVAL

1. Remove front kicking plate inner. Refer to INT-14, "Exploded View".
2. Remove dash side finisher. Refer to INT-14, "Exploded View".
3. Remove instrument driver lower panel. Refer to IP-11, "Exploded View".
4. Remove foot duct. Refer to VTL-47, "FOOT DUCTS : Exploded View" (automatic air conditioner), VTL-93, "FOOT DUCTS : Exploded View" (manual air conditioner)
5. Remove mode door motor. Refer to VTL-35, "Exploded View" (automatic air conditioner).
6. Disconnect ASCD cancel switch and the stop lamp switch harness connectors.
7. Disconnect accelerator pedal position sensor harness connector.
8. Remove steering member stay.
9. Remove snap pin and clevis pin from clevis of brake booster.
10. Remove the brake pedal assembly and the accelerator pedal.
11. Remove the accelerator pedal from brake pedal assembly. Refer to ACC-3, "Exploded View".

INSTALLATION

Note the following, and installation is the reverse order of removal.

cardiagn.com

- Apply the multi-purpose grease to the clevis pin and the mating faces. (Not necessary if grease has been already applied.)

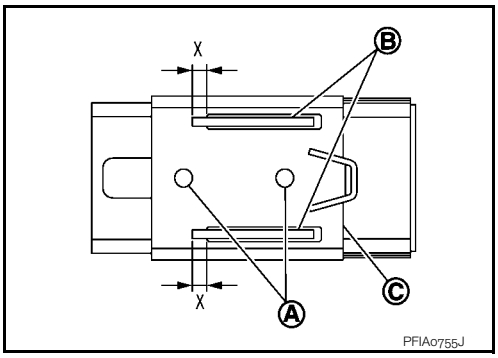
NOTE:
The clevis pin may be inserted in either direction.

Inspection and Adjustment

INFOID:0000000000925789

INSPECTION AFTER REMOVAL

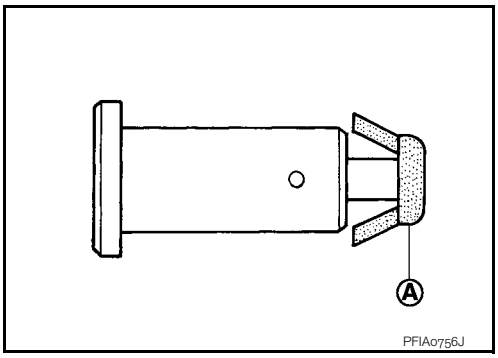
- Check the following items and replace the brake pedal assembly if necessary.
- Check the brake pedal upper rivet (A) for deformation.
- Check the brake pedal for bend, damage, and cracks on the welded parts.
- Check the lapping length (X) of sub-bracket (B) and slide plate (C).



Limit

Lapping length	**: 5.0 mm (0.197 in)**

- Check clevis pin and plastic stopper (A) for damage and deformation. If any is found, replace clevis pin.



ADJUSTMENT AFTER INSTALLATION

- Perform the brake pedal adjustment after installing the brake pedal assembly. Refer to BR-8, "Inspection and Adjustment".
- Perform the accelerator pedal check after installing the accelerator pedal. Refer to ACC-3, "Inspection".

FRONT BRAKE (WITH ABS) : Removal and Installation

INFOID:0000000000925792

REMOVAL

CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

1. Remove tires.
2. Drain brake fluid. Refer to BR-11, "Draining".
3. Loosen the flare nut with a flare nut wrench and separate the brake tube from the hose.
   CAUTION:
   - **Never scratch the flare nut and the brake tube.**
   - **Never bend sharply, twist or strongly pull out the brake hoses and tubes.**
   - **Cover open end of brake tubes and hoses when disconnecting to prevent entrance of dirt.**
4. Remove the union bolt and remove the brake hose from the brake caliper assembly.
5. Remove the lock plate and remove the brake hose.

INSTALLATION

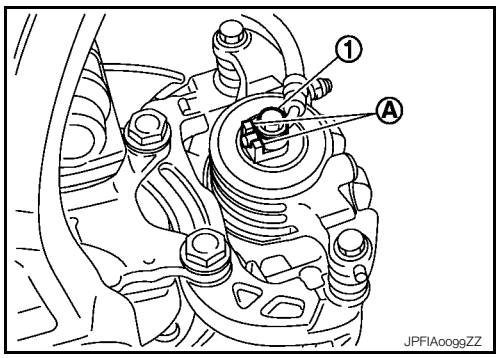
CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

1. Assemble the union bolt and the copper washer to the brake hose.
   CAUTION:
   Never reuse the copper washer.

cardiagn.com

2. Align the brake hose pin to the projection (A) of the brake caliper assembly and tighten the union bolt (1) to the specified torque.
3. Install the brake tube to the brake hose, temporarily tighten the flare nut by hand until it does not rotate further, and fix the brake hose to the bracket with the lock plate.
   CAUTION:
   Check that all brake hoses and tubes are not twisted and bent.
4. Tighten the flare nut to the specified torque with a flare nut torque wrench.
   CAUTION:
   Never scratch the flare nut and the brake tube.



5. Refill with new brake fluid and perform the air bleeding. Refer to BR-12, "Bleeding Brake System".
   CAUTION:
   Never reuse drained brake fluid.
6. Install tires.

FRONT BRAKE (WITH ABS) : Inspection

INFOID:0000000000925793

INSPECTION AFTER INSTALLATOIN

1. Check the brake hoses and tubes for the following: no scratches; no twist and deformation; no interference with other components when steering the steering wheel; no looseness at connections.
2. Depress the brake pedal with a force of 785 N (80 kg, 176 lb) and hold down the pedal for approximately 5 seconds with the engine running. Check for any fluid leakage.
   CAUTION:
   Retighten the applicable connection to the specified torque and repair any abnormal (damaged, worn or deformed) part if any brake fluid leakage is present.

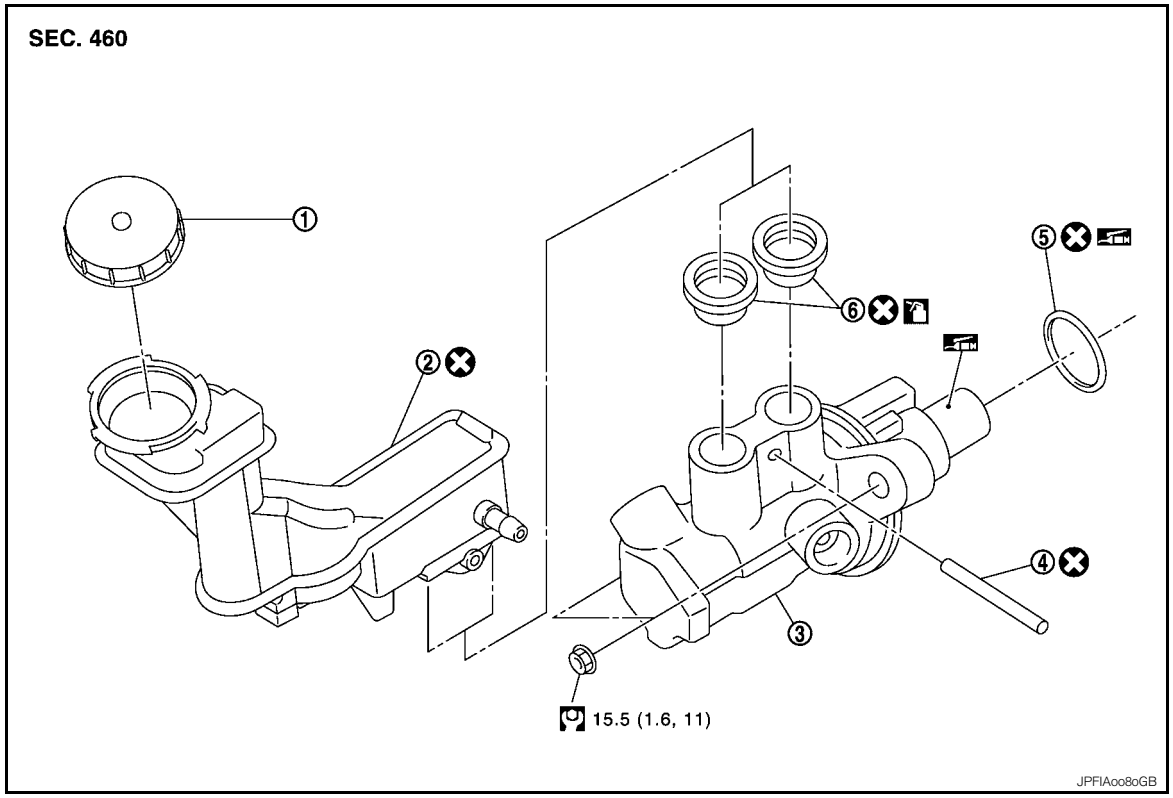
BRAKE MASTER CYLINDER

Exploded View

INFOID:0000000000925798



1. Reservoir cap
2. Reservoir tank
3. Cylinder body
4. Pin
5. O-ring
6. Grommet

: Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease.

: Apply brake fluid.

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000925799

REMOVAL

CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

1. Remove battery and bracket.
2. Remove air duct and air cleaner case. Refer to EM-27, "Exploded View" (HR16DE engine models), EM-144, "Exploded View" (HR20DE engine models), EM-265, "Exploded View" (K9K engine models).
3. Drain brake fluid. Refer to BR-11, "Draining".
4. Separate the brake fluid level switch harness connector.
5. Separate the brake tubes from the master cylinder assembly with a flare nut wrench.
   CAUTION:
   Never scratch the flare nut and the brake tube.
6. Remove the master cylinder assembly.
   CAUTION:
   - **Depress the brake pedal several times to release the vacuum pressure from the brake booster. Then remove the master cylinder assembly.**
   - **Never depress the brake pedal after the master cylinder assembly is removed.**

cardiagn.com

- **The piston of the master cylinder assembly is exposed. Never damage it when removing the master cylinder.**
- **The piston may drop off when pulled out strongly. Never hold the piston. Hold the cylinder body when handling the master cylinder assembly.**

INSTALLATION

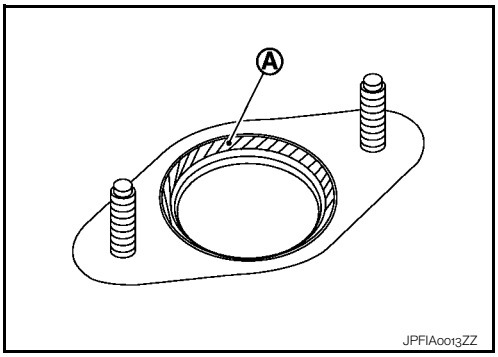
CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

- Note the following, and installation is the reverse order of removal.

CAUTION:

- **Never depress the brake pedal after the master cylinder assembly is removed.**
- **Apply PBC (Poly Butyl Cuprysil) silicone-based grease to the brake booster [see (A) in the figure] when installing the master cylinder assembly to the brake booster.**
- **The piston of the master cylinder assembly is exposed. Never damage it when handling the master cylinder and check that no dirt and dust are present on the piston before installation. Clean it with new brake fluid if necessary.**
- **The piston may drop off when pulled strongly. Never hold the piston. Hold the cylinder body when handling the master cylinder assembly.**



- Temporarily tighten the brake tube flare nut to the master cylinder assembly by hand. Then tighten it to the specified torque with a flare nut torque wrench. Refer to BR-19, "FRONT BRAKE (WITH ABS) : Exploded View" (with ABS), BR-21, "FRONT BRAKE (WITH ESP) : Exploded View" (with ESP).

CAUTION:

Never scratch the flare nut and the brake tube.

- After installation, perform the air bleeding. Refer to BR-12, "Bleeding Brake System".

CAUTION:

Never reuse drained brake fluid.

Disassembly and Assembly

INFOID:0000000000925800

DISASSEMBLY

CAUTION:

- **Never disassemble the cylinder body.**
- **Remove the reservoir tank if necessary.**

1. Fix the master cylinder assembly to a vise.

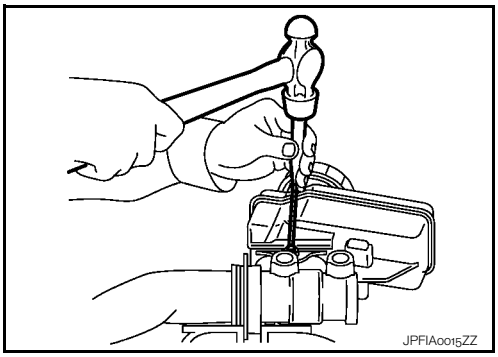
   CAUTION:

   Always set copper plates or cloth between vise when fixing the cylinder body to a vise. Never overtighten the vise.

2. Remove the reservoir tank mounting pin with a pin punch.
3. Remove the reservoir tank and grommet from the cylinder body.

   CAUTION:

   Never drop the removed parts. The parts must not be reused if they are dropped.



ASSEMBLY

1. Apply new brake fluid to the grommet and install it to the cylinder body.

   CAUTION:

   - **Never use mineral oil such as gasoline or light oil.**
   - **Never reuse the grommets.**

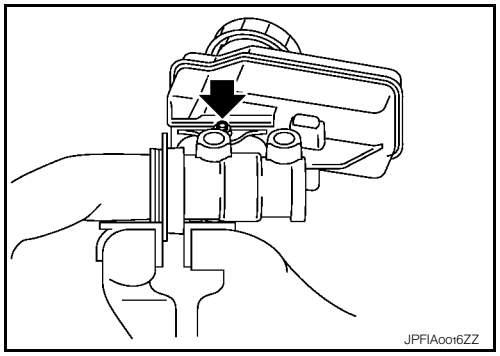
2. Install the reservoir tank to the cylinder body.

cardiagn.com

CAUTION:
- **Never drop the parts when installing. The parts must not be reused if they are dropped.**
- **Never reuse reservoir tank.**

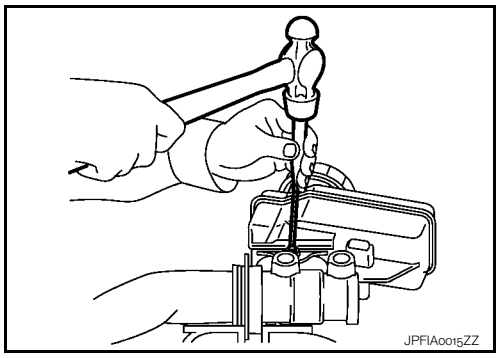
3. Fix the cylinder body to a vise.

CAUTION:
- **Place the reservoir tank with the chamfered pin hole (⬅) facing up.**
- **Always set copper plates or cloth between vise when fixing the cylinder body to a vise. Never overtighten the vise.**



4. Tilt the reservoir tank so that a mounting pin can be inserted. Insert a mounting pin. Return the reservoir tank to the horizontal position. Insert another mounting pin into the pin hole on the opposite side in the same manner after the mounting pin passes through the cylinder body pin hole.

CAUTION:
Never reuse the mounting pin.



Inspection

INFOID:0000000000925801

INSPECTION AFTER INSTALLATION

Fluid Leak

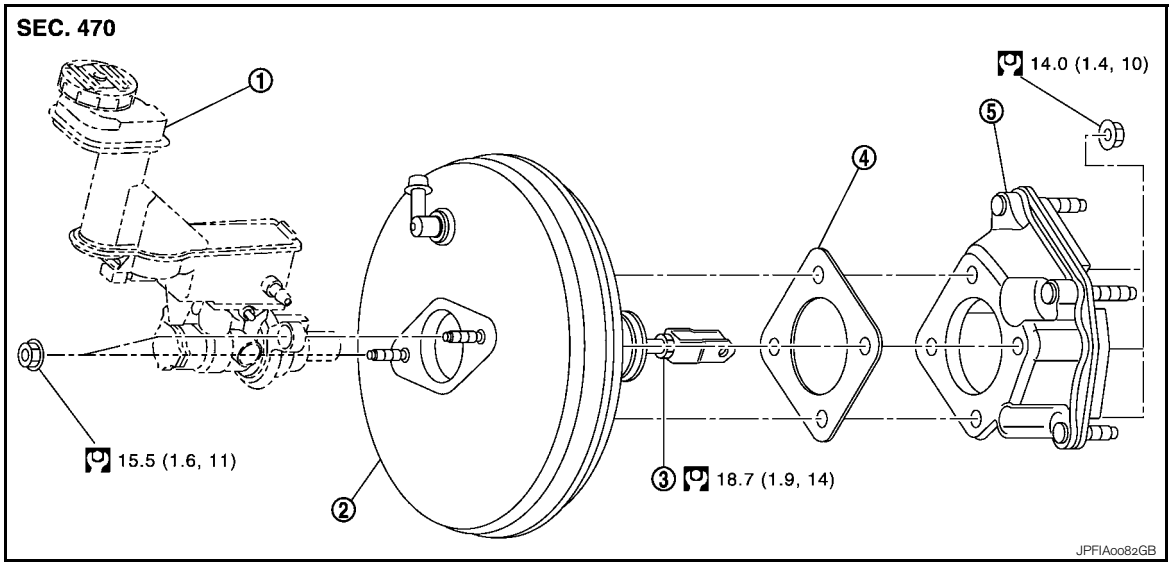
Check for brake fluid leakage from the cylinder body-to-brake booster mounting face, reservoir tank mounting face and brake tube connections.

cardiagn.com

BRAKE BOOSTER

Exploded View

INFOID:0000000000925806



1. Master cylinder assembly
2. Brake booster
3. Lock nut
4. Gasket
5. Spacer

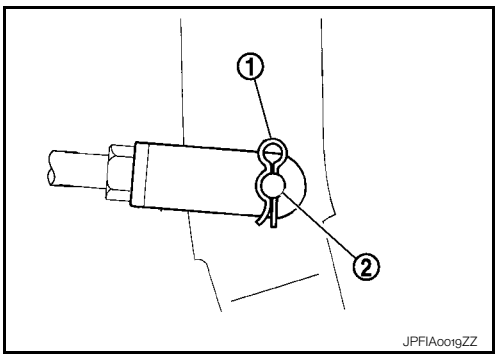
Refer to GI-4, "Components" for symbols in the figure.

Removal and installation

INFOID:0000000000925807

REMOVAL

1. Remove battery and bracket.
2. Remove air duct and air cleaner case. Refer to EM-27, "Exploded View" (HR16DE engine models), EM-144, "Exploded View" (MR20DE engine models), EM-265, "Exploded View" (K9K engine models).
3. Remove brake master cylinder assembly. Refer to BR-27, "Removal and Installation".
   CAUTION:
   - **Depress the brake pedal several times to release the vacuum pressure from the brake booster. Then remove the master cylinder assembly.**
   - **Never depress the brake pedal after the master cylinder assembly is removed.**
   - **The piston of the master cylinder assembly is exposed. Never damage it when removing the master cylinder.**
   - **The piston may drop off when pulled out strongly. Never hold the piston. Hold the cylinder body when handling the master cylinder assembly.**
4. Remove vacuum hose from brake booster. Refer to BR-33, "HR16DE/MR20DE MODELS : Removal and Installation" (HR16DE, MR20DE engine models), BR-34, "K9K MODELS : Removal and Installation" (K9K engine models).
5. Remove snap pin (1) and clevis pin (2) from inside vehicle.
6. Remove nuts on brake booster and brake pedal assembly. Refer to BR-17, "Exploded View".
7. Remove brake booster from dash panel in engine room side.
   CAUTION:
   Never deform or bend the brake tubes.
8. Remove the spacer from brake booster.



INSTALLATION

cardiagn.com

Note the following, and installation is the reverse order of removal.

CAUTION:

- **Be careful not to damage brake booster stud bolt threads. If brake booster is tilted during installation, the dash panel may damage the threads.**
- **Never deform or bend the brake tubes when installing the brake booster.**
- **Always use a new gasket between the brake booster and the spacer.**
- **Replace the clevis pin if it is damaged. Refer to BR-18, "Inspection and Adjustment".**
- After installation, perform the air bleeding. Refer to BR-12, "Bleeding Brake System".

CAUTION:

Never reuse drained brake fluid.

Inspection and Adjustment

INFOID:0000000000925808

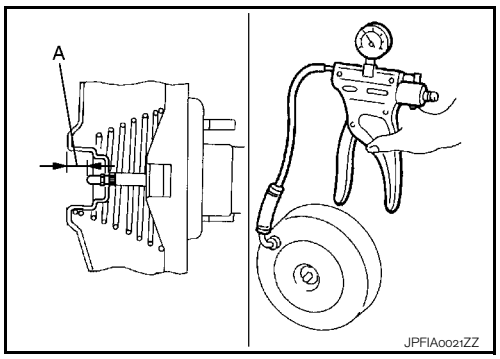
INSPECTION AFTER REMOVAL

Output Rod Length Inspection

1. With a handy vacuum pomp, apply vacuum pressure of –66.7 kPa (–500 mmHg, –19.70 inHg, –0.667 bar) to the brake booster.
2. Check the output rod length (A).

Standard

Output rod length (A) **: Refer to BR-46, "Brake Booster".**



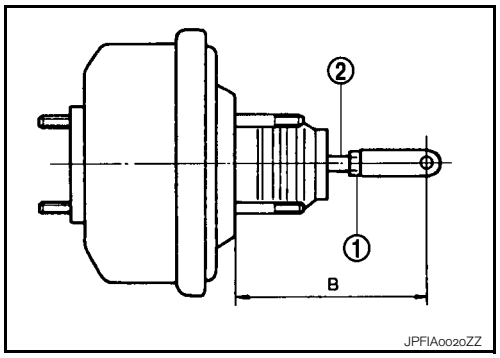
Input Rod Length Inspection

1. Loosen the lock nut (1) and adjust the input rod (2) to the specified length (B).

Standard

Input rod length (B) **: Refer to BR-46, "Brake Booster".**

2. Tighten the lock nut to the specified torque.



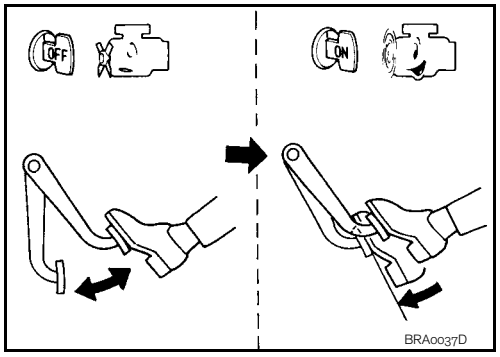
INSPECTION AFTER INSTALLATION

Operation

Depress the brake pedal several times at 5-second intervals with the engine stopped. Start the engine with the brake pedal fully depressed. Check that the clearance between brake pedal and dash lower pane decreases.

NOTE:

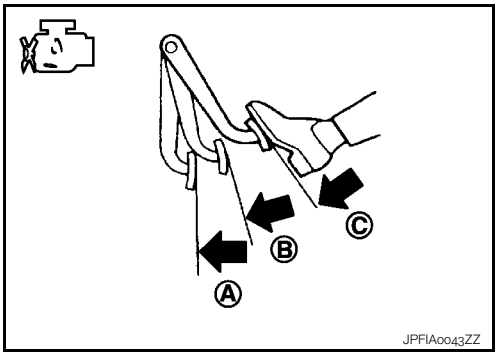
A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



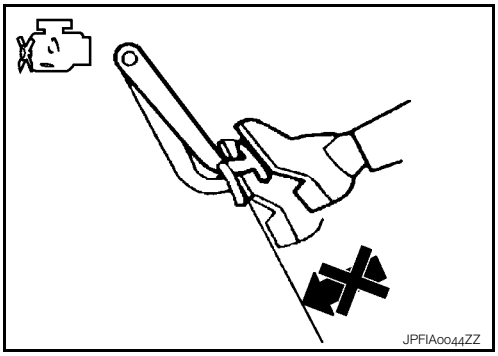
Air Tight

cardiagn.com

- Idle the engine for 1 minute to apply vacuum to the brake booster, and stop the engine. Then depress the brake pedal several times at 5-second intervals until the accumulated vacuum is released to atmospheric pressure. Check that the clearance between brake pedal and dash lower panel gradually increases (A → B → C) each time the brake pedal is depressed during this operation.



- Depress the brake pedal with the engine running. Then stop the engine while holding down the brake pedal. Check that the brake pedal stroke does not change after holding down the brake pedal for 30 seconds or more.
  NOTE:
  A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



ADJUSTMENT AFTER INSTALLTION

Perform the brake pedal adjustment after installing the brake pedal assembly. Refer to BR-8, "Inspection and Adjustment".

cardiagn.com

HR16DE/MR20DE MODELS : Removal and Installation

INFOID:0000000000925813

REMOVAL

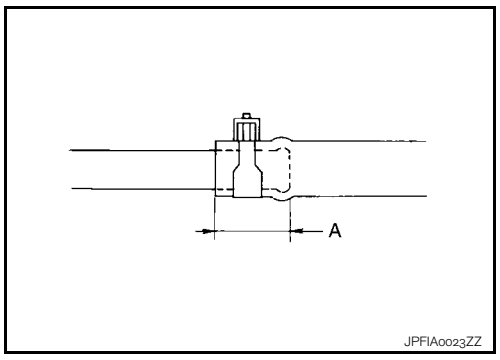
Remove the vacuum hose and tube.

INSTALLATION

Install the vacuum hose and tube.

CAUTION:

- **Because vacuum hose contains a check valve, it must be installed in the correct position. Refer to the stamp to confirm correct installation. Brake booster will not operate normally if the hose is installed in the wrong direction.**
- **Insert vacuum hose at least 24 mm (0.94 in) (A).**
- **Never use lubricating oil during assembly.**
- **Face the marking side up when assembling of vacuum hose.**
- **Face the marking side vehicle front when assembling of vacuum hose (built in check valve).**



HR16DE/MR20DE MODELS : Inspection

INFOID:0000000000925814

INSPECTION AFTER REMOVAL

Appearance

Check for correct assembly, damage and deterioration.

Check Valve Airtightness

cardiagn.com

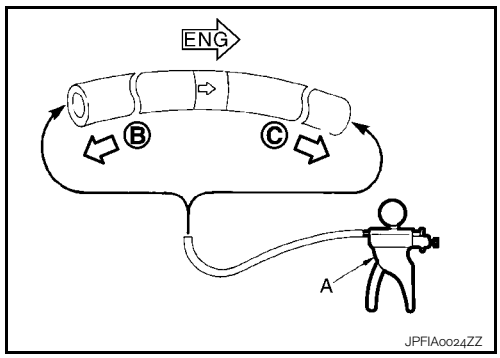
- Use a handy vacuum pump (A) to check.

When connected to the brake booster side (B):

Vacuum should decrease within 1.3 kPa (10 mmHg, 0.39 inHg, 0.013 bar) for 15 seconds under a vacuum of −66.7 kPa (−500 mmHg, −19.70 inHg, −0.667 bar).

When connected to the engine side (C):

Vacuum should not exist.



- Replace vacuum hose assembly if vacuum hose and check valve are malfunctioning.

K9K MODELS

K9K MODELS : Exploded View

cardiagn.com

FRONT DISC BRAKE

BRAKE PAD

BRAKE PAD : Exploded View

INFOID:0000000000925818

Refer to BR-37, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Removal and Installation

INFOID:0000000000925819

REMOVAL

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Remove tires.
2. Remove lower sliding pin bolt.
3. Suspend the cylinder body with suitable wire so that the brake hose will not stretch. Then remove the brake pad from the torque member.
   CAUTION:
   - **Never deform the pad retainer when removing the pad retainer from the torque member.**
   - **Never damage the piston boot.**
   - **Never drop the brake pads, shims, and the shim covers.**

INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads or the cylinder body because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Install the pad retainer to the torque member if the pad retainers has been removed.
   CAUTION:
   - **Securely assemble the pad retainers so that it will not be lifted up from the torque member.**
   - **Never deform the pad retainers.**
2. Apply copper based brake grease to the mating faces between the pads, shims and shim covers, and install them to the brake pad.
   CAUTION:
   Always replace the shims together with the shim covers when replacing the brake pad.
3. Install the cylinder body and brake pads to the torque member.
   CAUTION:
   - **Never damage the piston boot.**
   - **When replacing a pad with new one, check a brake fluid level in the reservoir tank because brake fluid returns to master cylinder reservoir tank when pressing piston in.**

   NOTE:
   Use a disc brake piston tool to easily press piston.
4. Install the lower sliding pin bolt and tighten it to the specified torque.
5. Depress the brake pedal several times to check that no drag feel is present for the front disc brake.
6. Install tires.

BRAKE PAD : Inspection and Adjustment

INFOID:0000000000925820

INSPECTION AFTER REMOVAL

Replace the shims and the shim covers if rust is excessively attached.

ADJUSTMENT AFTER INSTALLATION

cardiagn.com

Brake Burnishing Procedure

Burnish contact surfaces between pads according to following procedure after refinishing or replacing pads, or if a soft pedal occurs at very low mileage.

CAUTION:

- **Be careful of vehicle speed because the brake does not operate easily until pads and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool the brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

16. Inner pad	17. Pad retainer	18. Outer pad
19. Outer shim	20. Outer shim cover	

: 1: Apply rubber grease.

: 2: Apply copper based brake grease.

: Apply brake fluid.

Refer to GI-4, "Components" for symbols not described on the above.

BRAKE CALIPER ASSEMBLY : Removal and Installation

INFOID:0000000000925826

REMOVAL

WARNING:

Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.

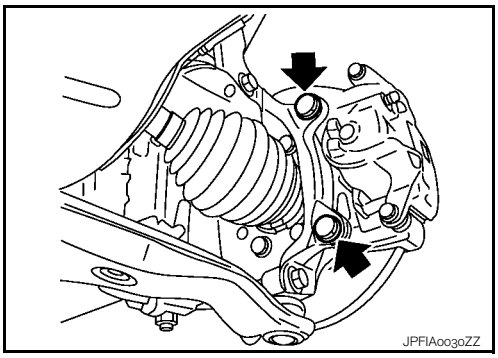
CAUTION:

Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Remove tires.

cardiagn.com

2. Fix the disc rotor using wheel nuts.
3. Drain brake fluid. Refer to BR-11, "Draining".
   CAUTION:
   Never spill or splash brake fluid on the disc rotor.
4. Remove union bolt, and then disconnect brake hose from caliper assembly.
5. Remove torque member mounting bolts, and remove brake caliper assembly.
   CAUTION:
   Never drop brake pads and caliper assembly.
6. Remove disc rotor.
   CAUTION:
   - **Put matching marks on the wheel hub and bearing assembly and the disc rotor before removing the disc rotor.**
   - **Never drop disc rotor.**



INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Install disc rotor.
   CAUTION:
   Align the matching marks made during removal when reusing the disc rotor.
2. Install the brake caliper assembly to the vehicle and tighten the torque member mounting bolts to the specified torque.
   CAUTION:
   Never spill or splash any grease and moisture on the brake caliper assembly mounting face, threads, mounting bolts and washers. Wipe out any grease and moisture.
3. Install brake hose to brake caliper assembly, and tighten union bolts to the specified torque.
4. Refill with new brake fluid and perform the air bleeding. Refer to BR-12, "Bleeding Brake System".
   CAUTION:
   - **Never reuse drained brake fluid.**
   - **Never spill or splash brake fluid on the disc rotor.**
5. Check that no drag feel is present for the front disc brake.
6. Install tires.

BRAKE CALIPER ASSEMBLY : Disassembly and Assembly

INFOID:0000000000925827

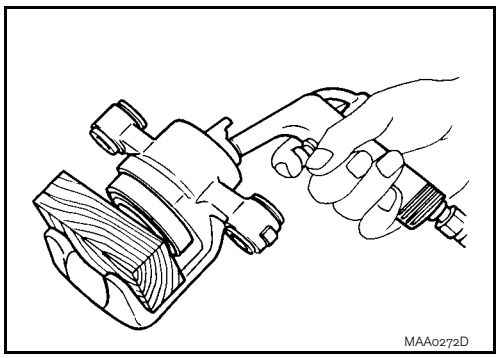
DISASSEMBLY

NOTE:
Never remove the torque member, brake pads, shims, shim covers and pad retainers when disassembling and assembling the cylinder body.

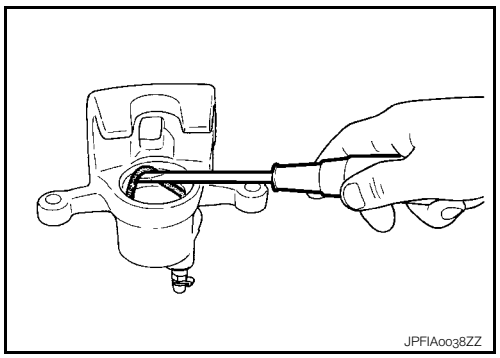
1. Remove the sliding pin bolts, and remove the cylinder body from the torque member.
   CAUTION:
   Never drop pads, shims, shim covers and pad retainers from torque member.
2. Remove sliding pins and sliding pin boots from torque member.
3. Remove bushing from sliding pin.

cardiagn.com

4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove piston and piston boot.
CAUTION:
Never get fingers caught in the piston.

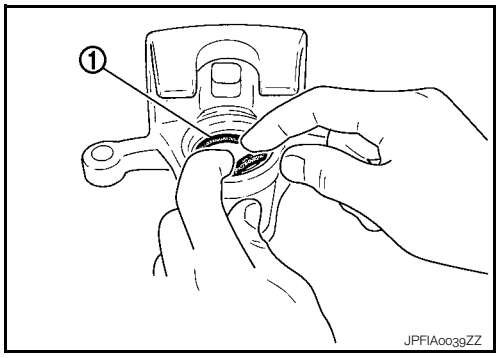


5. Remove piston seal from cylinder body using suitable tool.
CAUTION:
Be careful not to damage a cylinder inner wall.

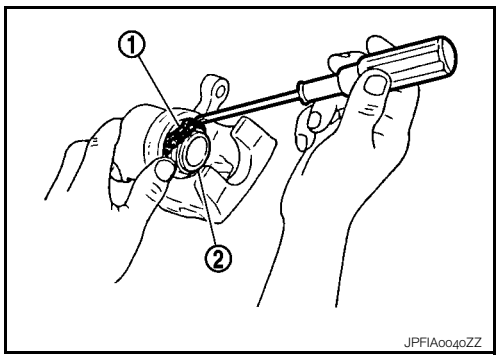


ASSEMBLY

1. Apply rubber grease to piston seal (1), and install to cylinder body.
CAUTION:
Never reuse piston seal.

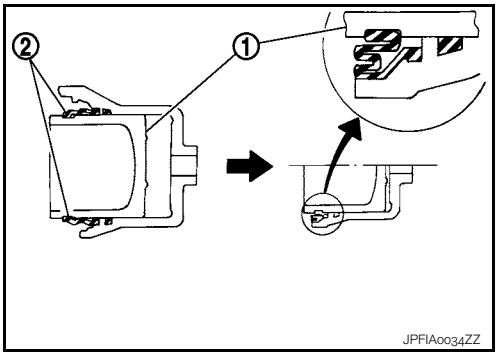


2. Apply rubber grease to piston boot (1). Cover the piston (2) end with piston boot, and then install cylinder side lip on piston boot securely into a groove on cylinder body.
CAUTION:
Never reuse piston boot.



cardiagn.com

3. Apply brake fluid to piston (1). Push piston into cylinder body by hand and push piston boot (2) piston-side lip into the piston groove.
   CAUTION:
   Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.
4. Apply rubber grease to bushing, install bushing to sliding pin.
5. Apply rubber grease to sliding pins and sliding pin boots, install sliding pins and sliding pin boots to torque member.
6. Install the cylinder body to the torque member and tighten the sliding pin bolts to the specified torque.



BRAKE CALIPER ASSEMBLY : Inspection and Adjustment

INFOID:0000000000925828

INSPECTION AFTER DISASSEMBLY

Cylinder Body

Check the inner wall of the cylinder for rust, wear, cracks or damage. Replace the cylinder if any abnormal condition is detected.

CAUTION:
Always clean with new brake fluid. Never clean with mineral oil such as gasoline and light oil.

Torque Member

Check the torque member for rust, wear, cracks or damage. Replace the member if any abnormal condition is detected.

Piston

Check the surface of the piston for rust, wear, cracks or damage. Replace the piston if any abnormal condition is detected.

CAUTION:
A piston sliding surface is plated. Never polish with sandpaper.

Sliding Pin and Sliding Pin Boot

Check the sliding pins and sliding boots for rust, wear, cracks or damage. Replace the parts if any abnormal condition is detected.

ADJUSTMENT AFTER INSTALLATION

Brake Burnishing Procedure

Burnish contact surfaces between disc rotors and pads according to following procedure after refinishing or replacing disc rotor, or if a soft pedal occurs at very low mileage.

CAUTION:
- **Be careful of vehicle speed because the brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool the brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

REAR DISC BRAKE

BRAKE PAD

BRAKE PAD : Exploded View

INFOID:0000000000925832

Refer to BR-42, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Removal and Installation

INFOID:0000000000925833

REMOVAL

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads or the cylinder body because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Remove tires.
2. Remove the lower sliding pin bolt.
3. Suspend the cylinder body with suitable wire so that the brake hose will not stretch. Remove the brake pads from the torque member.
   CAUTION:
   - **Never deform the pad retainers if removing the pad retainers.**
   - **Never damage the piston boot.**
   - **Never drop the brake pad, shims, and the shim cover.**

INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads or the cylinder body because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Install the pad retainers to the torque member if the pad retainers has been removed.
   CAUTION:
   - **Securely assemble the pad retainers not to be lifted up from the torque member.**
   - **Never deform the pad retainers.**
2. Apply copper based brake grease to the mating faces between the brake pads and the shims and install them to the brake pad.
   CAUTION:
   Always replace the shims together with the shim cover when replacing the brake pad.
3. Install cylinder body and brake pads to torque member.
   CAUTION:
   - **Never damage the piston boot.**
   - **When replacing a pads with new one, check a brake fluid level in the reservoir tank because brake fluid returns to master cylinder reservoir tank when pressing piston in.**

   NOTE:
   Use a disc brake piston tool to easily press piston.
4. Install the lower sliding pin bolt and tighten it to the specified torque.
5. Depress the brake pedal several times to check that no drag feel is present for the rear disc brake.
6. Install tires.

BRAKE PAD : Inspection and Adjustment

INFOID:0000000000925834

INSPECTION AFTER REMOVAL

Replace the shims and the shim cover if rust is excessively attached.

17. Pad wear sensor (RH inner side only)
18. Pad retainer
19. Outer pad
20. Outer shim

1: Apply rubber grease.

2: Apply copper based brake grease.

3: Apply polyglycol ether based lubricant.

cardiagn.com

: Apply brake fluid.

Refer to GI-4, "Components" for symbols not described on the above.

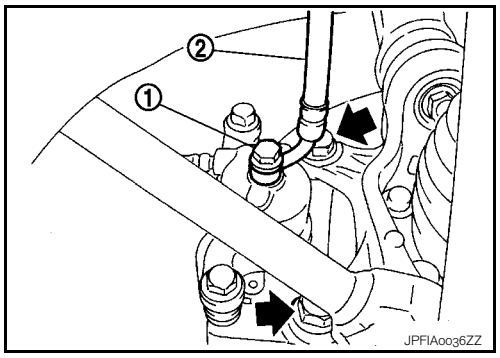
BRAKE CALIPER ASSEMBLY : Removal and Installation

INFOID:0000000000925840

REMOVAL

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Remove tires.
2. Fix the disc rotor using wheel nuts.
3. Drain brake fluid. Refer to BR-11, "Draining".
   CAUTION:
   Never spill or splash brake fluid on the disc rotor.
4. Remove union bolt (1) and then disconnect brake hose (2) from caliper assembly.
5. Remove torque member mounting bolts, and remove brake caliper assembly.
   CAUTION:
   Never drop brake pads and caliper assembly.
6. Remove disc rotor.
   CAUTION:
   - **Put matching marks on the wheel hub and bearing assembly and the disc rotor before removing the disc rotor.**
   - **Never drop disc rotor.**



INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Install disc rotor.
   CAUTION:
   Align the matching marks made during removal when reusing the disc rotor.
2. Install the brake caliper assembly to the vehicle and tighten the torque member mounting bolts to the specified torque.
   CAUTION:
   Never spill or splash any grease and moisture on the brake caliper assembly mounting face, threads, mounting bolts, and washers. Wipe out any grease and moisture.
3. Install brake hose to brake caliper assembly, and tighten union bolts to the specified torque.
4. Refill with new brake fluid and perform the air bleeding. Refer to BR-12, "Bleeding Brake System".
   CAUTION:
   - **Never reuse drained brake fluid.**
   - **Never spill or splash brake fluid on the disc rotor.**
5. Check that no drag feel is present for the rear disc brake.
6. Install tires.

BRAKE CALIPER ASSEMBLY : Disassembly and Assembly

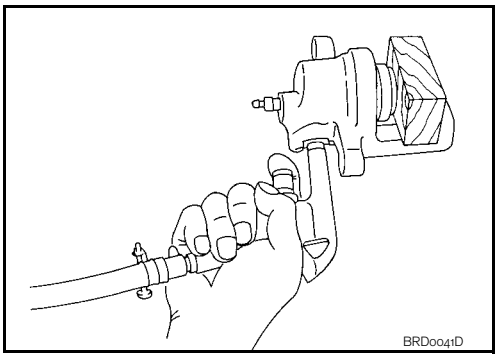
INFOID:0000000000925841

DISASSEMBLY

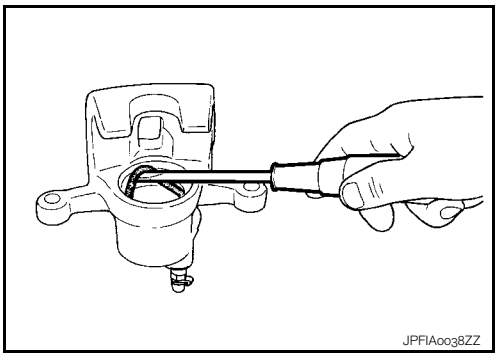
NOTE:
Never remove the torque member, brake pads, shims, shim cover and pad retainers disassembling and assembling the cylinder body.

cardiagn.com

1. Remove the sliding pin bolts and remove the cylinder body from the torque member.
   CAUTION:
   Never drop pads, shims, shim cover and pad retainers from torque member.
2. Remove sliding pin boots from torque member.
3. Remove bushing from sliding pin bolt.
4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove piston and piston boot.
   CAUTION:
   Never get fingers caught in the piston.

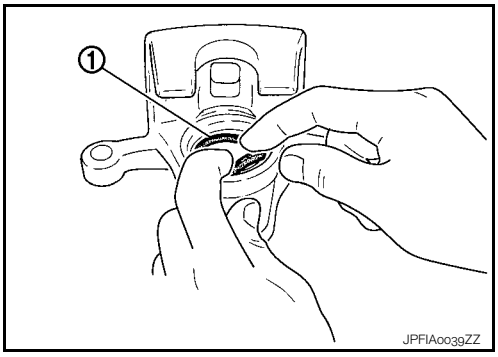


5. Remove piston seal from cylinder body using suitable tool.
   CAUTION:
   Be careful not to damage a cylinder inner wall.

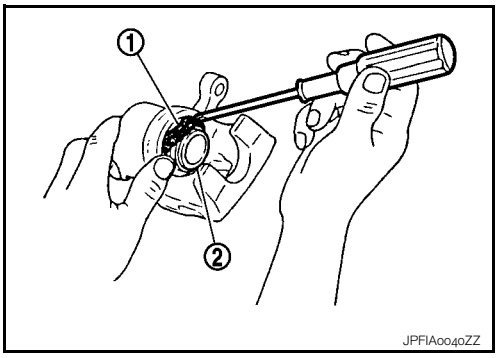


ASSEMBLY

1. Apply polyglycol ether based lubricant to piston seal (1), and install to cylinder body.
   CAUTION:
   Never reuse piston seal.

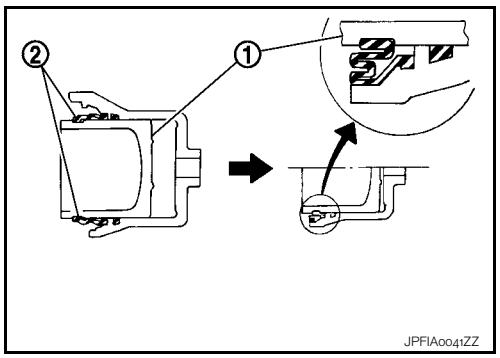


2. Apply rubber grease to piston boot (1). Cover the piston (2) end with the piston boot, and then install cylinder side lip on the piston boot securely into the groove on cylinder body.
   CAUTION:
   Never reuse piston boot.



cardiagn.com

3. Apply brake fluid to piston (1). Push piston into cylinder body by hand and push piston boot (2) piston side lip into the piston groove.
CAUTION:
Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.
4. Apply polyglycol ether based lubricant to bushing, install bushing to sliding pin bolt.
5. Apply rubber grease to the sliding pin bolts and the sliding pin boots, install sliding pin boot to torque member.
6. Install the cylinder body to the torque member and tighten the sliding pin bolts to the specified torque.



BRAKE CALIPER ASSEMBLY : Inspection and Adjustment

INFOID:0000000000925842

INSPECTION AFTER DISASSEMBLY

Cylinder Body

Check the inner wall of the cylinder for rust, wear, cracks or damage. Replace the cylinder if any abnormal condition is detected.

CAUTION:
Always clean with new brake fluid. Never clean with mineral oil such as gasoline and light oil.

Torque Member

Check the torque member for rust, wear, cracks or damage. Replace the member if any abnormal condition is detected.

Piston

Check the piston for rust, wear, cracks or damage. Replace the piston if any abnormal condition is detected.

CAUTION:
A piston sliding surface is plated. Never polish with sandpaper.

Sliding Pin Bolt and Sliding Pin Boot

Check the sliding pin bolts and sliding pin boots for rust, wear, cracks or damage. Replace the parts if any abnormal condition is detected.

ADJUSTMENT AFTER INSTALLATION

Brake Burnishing Procedure

Burnish contact surfaces between disc rotors and pads according to the following procedure after refinishing or replacing disc rotor, or if a soft pedal occurs at very low mileage.

CAUTION:
- **Be careful of vehicle speed because the brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool the brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001116848

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001102254

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Precaution for Brake System

INFOID:0000000000938038

WARNING:

Clean any dust from the front brake and rear brake with a vacuum dust collector. Never blow with compressed air.

cardiagn.com

CAUTION:

- **Only use “DOT 4” brake fluid. Refer to MA-21, "Fluids and Lubricants".**
- **Never reuse drained brake fluid.**
- **Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.**
- **Always clean with new brake fluid when cleaning the master cylinder, brake caliper and other components.**
- **Never use mineral oils such as gasoline or light oil to clean. They may damage rubber parts and cause improper operation.**
- **Always loosen the brake tube flare nut with a flare nut wrench.**
- **Tighten the brake tube flare nut to the specified torque with flare nut torque wrench (A).**
- **Always confirm the specified tightening torque when installing the brake pipes.**
- **Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before performing the work.**
- **Check that no brake fluid leakage is present after replacing the parts.**
- **Burnish the brake contact surfaces after refinishing or replacing rotors, after replacing pads, or if a soft pedal occurs at very low mileage. Refer to BR-80, "BRAKE PAD : Inspection and Adjustment" (front brake pad), BR-84, "BRAKE CALIPER ASSEMBLY : Inspection and Adjustment" (front disc rotor), BR-85, "BRAKE PAD : Inspection and Adjustment" (rear brake pad), BR-89, "BRAKE CALIPER ASSEMBLY : Inspection and Adjustment" (rear disc rotor).**

ON-VEHICLE MAINTENANCE

BRAKE PEDAL

Exploded View

INFOID:0000000000938039

Refer to BR-61, "Exploded View".

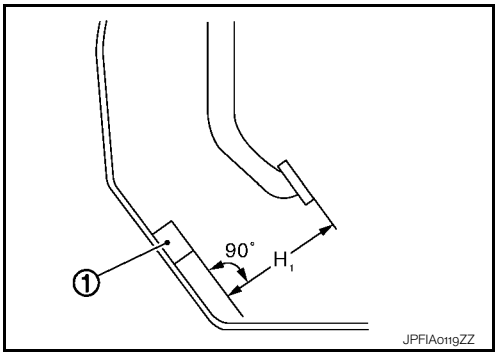
Inspection and Adjustment

INFOID:0000000000938040

INSPECTION

Brake Pedal Height

Check the height (H_1) between the accelerator pedal stopper (1) and the brake pedal upper surface.



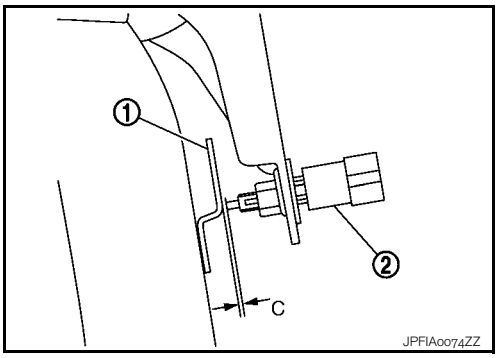
Standard

Brake pedal height (H_1)	**: Refer to BR-90, "Brake Pedal".**

CAUTION:
Remove the floor trim.

ASCD Cancel Switch and Stop Lamp Switch

Check the clearance (C) among bracket (1) and ASCD cancel switch/stop lamp switch (2) threaded end.



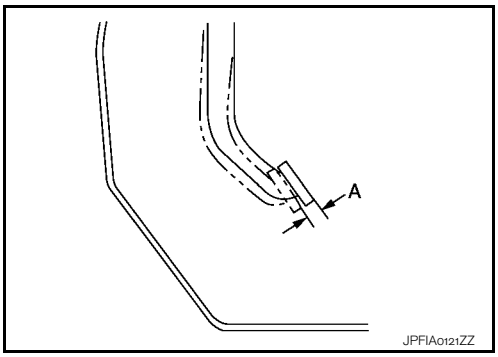
Standard

Clearance (C) between bracket and ASCD cancel switch/stop lamp switch threaded end	**: Refer to BR-90, "Brake Pedal".**

CAUTION:
The stop lamp must be turned off when the brake pedal is released.
NOTE:
Pull the brake pedal pad to make the clearance between bracket and ASCD cancel switch/stop lamp switch threaded end.

Brake Pedal Play

Press the brake pedal. Check the brake pedal play (A).



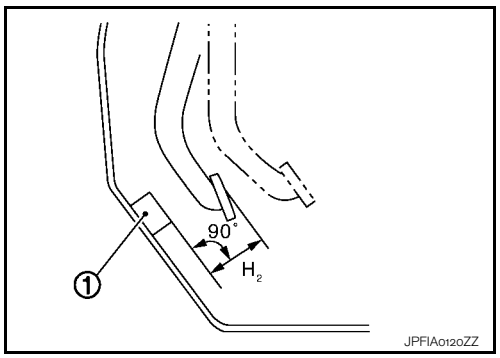
Standard

Pedal play (A)	**: Refer to BR-90, "Brake Pedal".**

Depressed Brake Pedal Height

cardiagn.com

Check the height between the accelerator pedal stopper (1) and the brake pedal upper surface (H_2) when depressing the brake pedal at 490 N (50 kg, 110 lb) while turning engine ON.



Standard

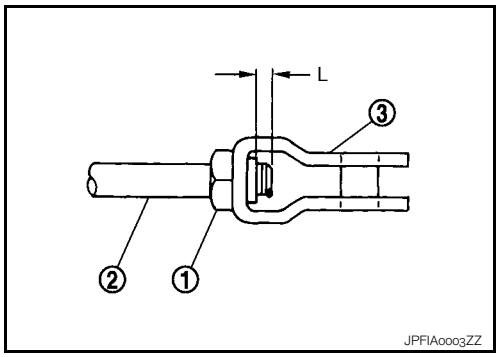
Depressed brake pedal height (H_2)	**: Refer to BR-90, "Brake Pedal".**

CAUTION:
Remove the floor trim.

ADJUSTMENT

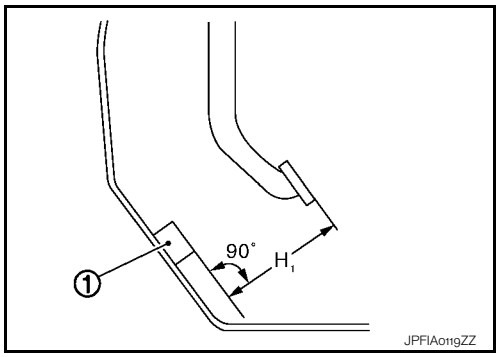
Brake Pedal Height

1. Disconnect the harness connector from ASCD cancel switch and stop lamp switch.
2. Turn the ASCD cancel switch and stop lamp switch 45° counterclockwise.
3. Loosen the input rod lock nut (1). Adjust the brake pedal to the specification. Tighten the input rod lock nut to the specification. Refer to BR-74, "Exploded View".
   CAUTION:
   The threaded end of the input rod (2) must project to the inner side (L) of the clevis (3).



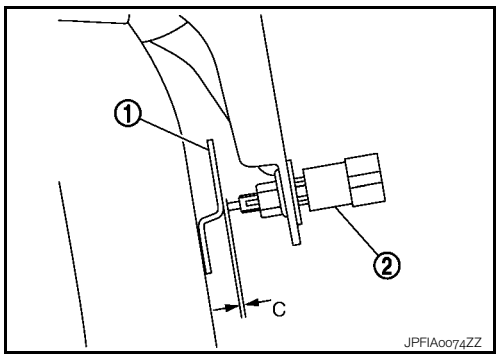
Standard

Brake pedal height (H_1)	**: Refer to BR-90, "Brake Pedal".**



ASCD Cancel Switch and Stop Lamp Switch

1. Disconnect the harness connector from ASCD cancel switch and stop lamp switch.
2. Turn the ASCD cancel switch and stop lamp switch 45° counterclockwise.
3. Press-fit ASCD cancel switch/stop lamp switch (2) until ASCD cancel switch/stop lamp switch hits the bracket (1) 45° clockwise.
   CAUTION:
   - **The clearance (C) between the bracket and ASCD cancel switch/stop lamp switch threaded end must be the specified value. Refer to BR-90, "Brake Pedal".**
   - **The stop lamp must be turned off when the brake pedal is released.**



Brake Pedal Play

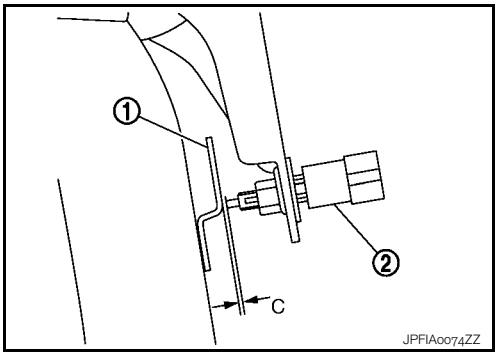
1. Disconnect the harness connector from ASCD cancel switch and stop lamp switch.
2. Turn the ASCD cancel switch and stop lamp switch 45° counterclockwise.

cardiagn.com

3. Press-fit ASCD cancel switch/stop lamp switch (2) until ASCD cancel switch/stop lamp switch hits the bracket (1) 45° clockwise.

CAUTION:

- **The clearance (C) between the bracket and ASCD cancel switch/stop lamp switch threaded end must be the specified value. Refer to BR-90, "Brake Pedal".**
- **The stop lamp must be turned off when the brake pedal is released.**



cardiagn.com

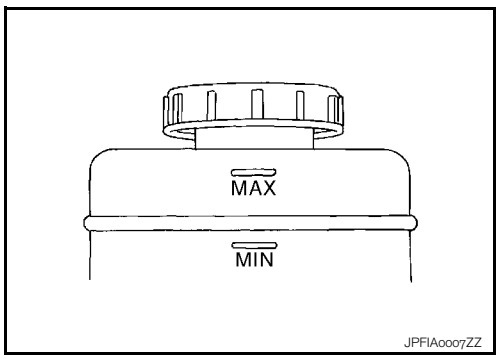
BRAKE FLUID

Inspection

INFOID:0000000000938041

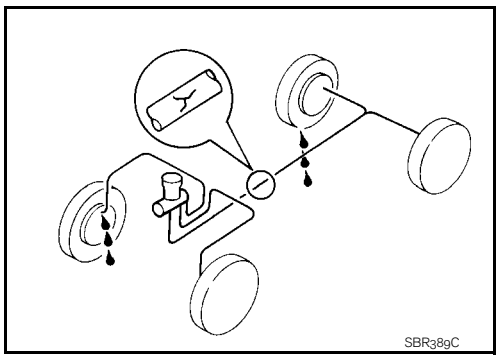
BRAKE FLUID LEVEL

- Check that the fluid level in the reservoir tank is within the specified range (MAX – MIN lines).
- Visually check for any brake fluid leakage around the reservoir tank.
- Check the brake system for any leakage if the fluid level is extremely low (lower than MIN).
- Check the brake system for fluid leakage if the warning lamp remains illuminated even after the parking brake is released.



BRAKE LINE

1. Check brake line (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.
2. Check for fluid leakage by fully depressing brake pedal while engine is running.
   CAUTION:
   If leakage occurs around joints, retighten or, if necessary, replace damaged parts.



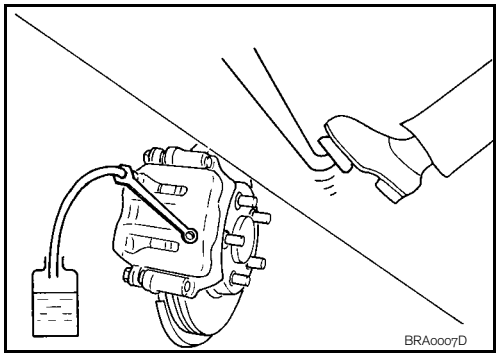
Draining

INFOID:0000000000938042

CAUTION:

- **Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.**
- **Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before draining.**

1. Connect a vinyl tube to the bleed valve.
2. Depress the brake pedal and loosen the bleeder valve to gradually discharge brake fluid.



Refilling

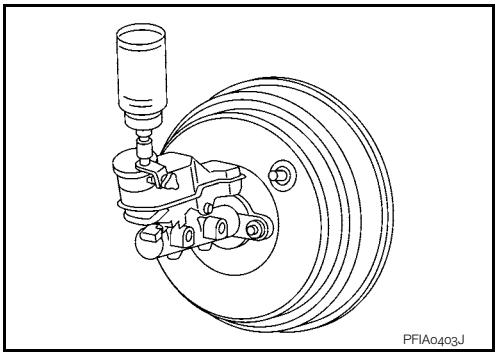
INFOID:0000000000938043

CAUTION:

Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before refilling.

cardiagn.com

1. Check that there is no foreign material in the reservoir tank, and refill with new brake fluid.
   CAUTION:
   Never reuse drained brake fluid.
2. Loosen the bleeder valve, slowly depress the brake pedal to the full stroke, and then release the pedal. Repeat this operation at intervals of 2 or 3 seconds until all brake fluid is discharged. Then close the bleeder valve with the brake pedal depressed. Repeat the same work on each wheel.
3. Perform the air bleeding. Refer to BR-56, "Bleeding Brake System".



Bleeding Brake System

INFOID:0000000000938044

CAUTION:
- **Turn the ignition switch OFF and disconnect the ABS actuator and electric unit (control unit) connector or the battery negative terminal before performing the work.**
- **Monitor the fluid level in the reservoir tank during the air bleeding.**
- **Always use new brake fluid for refilling. Never reuse the drained brake fluid.**

1. Connect a vinyl tube to the bleeder valve of the rear left brake.
2. Fully depress the brake pedal 4 to 5 times.
3. Loosen the bleeder valve and bleed air with the brake pedal depressed, and then quickly tighten the bleeder valve.
4. Repeat steps 2 and 3 until all of the air is out of the brake line.
5. Tighten the bleeder valve to the specified torque. Refer to BR-81, "BRAKE CALIPER ASSEMBLY : Exploded View" (front disc brake), BR-86, "BRAKE CALIPER ASSEMBLY : Exploded View" (rear disc brake).
6. Perform steps 1 to 5 for the rear left brake →front right brake → rear right brake → and front left brake in order.
7. Check that the fluid level in the reservoir tank is within the specified range after air bleeding. Refer to BR-55, "Inspection".

cardiagn.com

BRAKE MASTER CYLINDER

Exploded View

INFOID:0000000000938045

Refer to BR-71, "Exploded View".

Inspection

INFOID:0000000000938046

FLUID LEAK

Check for brake fluid leakage from the master cylinder mounting face, reservoir tank mounting face and brake tube connections.

cardiagn.com

BRAKE BOOSTER

Exploded View

INFOID:0000000000938047

Refer to BR-74, "Exploded View".

Inspection

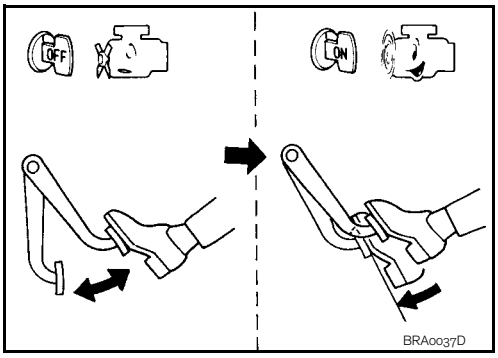
INFOID:0000000000938048

OPERATION

Depress the brake pedal several times at 5-second intervals with the engine stopped. Start the engine with the brake pedal fully depressed. Check that the clearance between brake pedal and dash lower panel decreases.

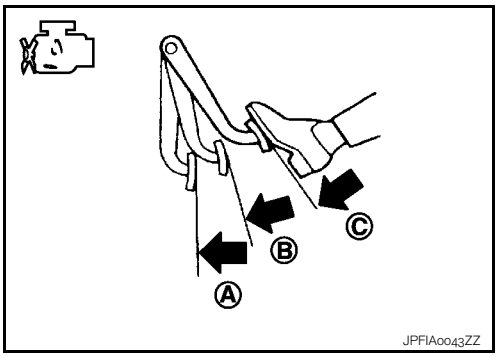
NOTE:

A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



AIR TIGHT

- Idle the engine for 1 minute to apply vacuum to the brake booster, and stop the engine. Then depress the brake pedal several times at 5-second intervals until the accumulated vacuum is released to atmospheric pressure. Check that the clearance between brake pedal and dash lower panel gradually increases (A → B → C) each time the brake pedal is depressed during this operation.



- Depress the brake pedal with the engine running. Then stop the engine while holding down the brake pedal. Check that the brake pedal stroke does not change after holding down the brake pedal for 30 seconds or more.

  NOTE:

  A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.

FRONT DISC BRAKE

BRAKE PAD

BRAKE PAD : Exploded View

INFOID:0000000000938049

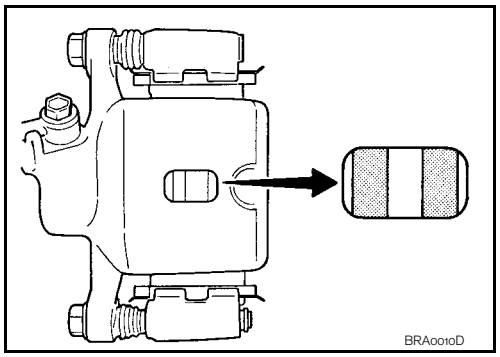
Refer to BR-81, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Inspection

INFOID:0000000000938050

PAD WEAR

Check pad thickness from an inspection hole on cylinder body. Check using a scale if necessary.



Standard thickness : Refer to **BR-90, "Front Disc Brake"**.

Wear limit thickness : Refer to **BR-90, "Front Disc Brake"**.

DISC ROTOR

DISC ROTOR : Inspection

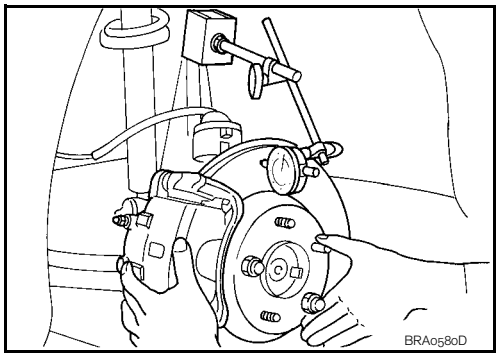
INFOID:0000000000938051

APPEARANCE

Check surface of disc rotor for uneven wear, cracks, and serious damage. Replace if there are.

RUNOUT

1. Fix the disc rotor to the wheel hub and bearing assembly with wheel nuts (2 points at least).
2. Inspect the runout with a dial gauge. [Measured at 10 mm (0.39 in) inside the disc edge.]



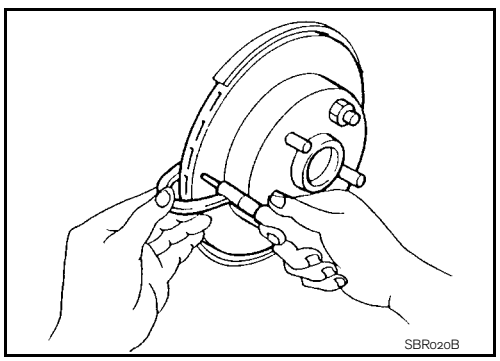
Runout limit : Refer to **BR-90, "Front Disc Brake"**.

NOTE:
Check the wheel bearing axial end play before the inspection. Refer to FAX-7, "Inspection" (2WD), FAX-47, "Inspection" (4WD).

3. Find the installation position with a minimum runout by shifting the disc rotor-to-wheel hub and bearing assembly installation position by one hole at a time if the runout exceeds the limit value.
4. Replace or lathe the disc rotor if the runout exceeds the limit even after the above operation.

THICKNESS

Check the thickness of the disc rotor using a micrometer. Replace the disc rotor if the thickness is below the wear limit.



Wear limit thickness : Refer to **BR-90, "Front Disc Brake"**.

cardiagn.com

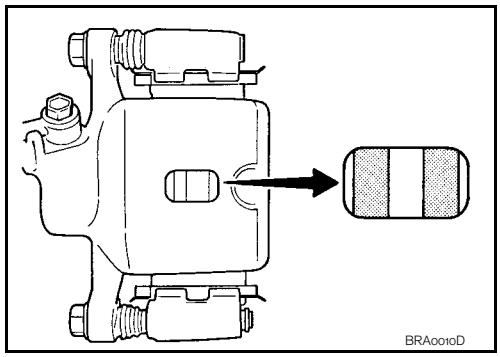
PAD WEAR

Check pad thickness from an inspection hole on cylinder body. Check using a scale if necessary.



Standard thickness **: Refer to BR-90, "Rear Disc Brake".**

Wear limit thickness **: Refer to BR-90, "Rear Disc Brake".**

DISC ROTOR

DISC ROTOR : Inspection

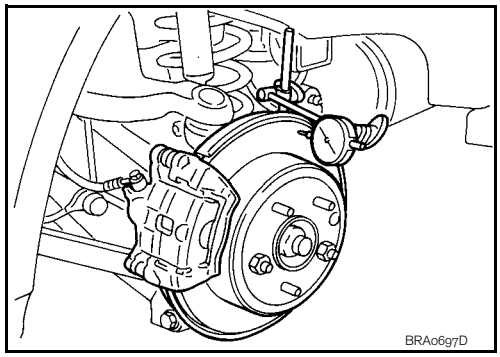
INFOID:0000000000938054

APPEARANCE

Check surface of disc rotor for uneven wear, cracks, and serious damage. Replace if there are.

RUNOUT

1. Fix the disc rotor to the wheel hub and bearing assembly with wheel nuts (2 points at least).
2. Inspect the runout with a dial gauge. [Measured at 10 mm (0.39 in) inside disc edge.]



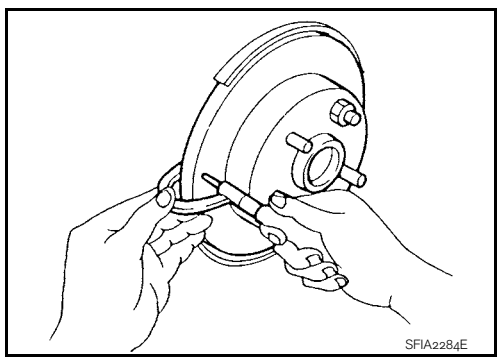
Runout limit **: Refer to BR-90, "Rear Disc Brake".**

NOTE:
Check the wheel bearing axial end play before the inspection. Refer to RAX-3, "Inspection" (2WD), RAX-9, "Inspection" (4WD).

3. Find the installation position with a minimum runout by shifting the disc rotor-to-wheel hub and bearing assembly installation position by one hole at a time if the runout exceeds the limit value.
4. Replace or lathe the disc rotor if the runout exceeds the limit even after the above operation.

THICKNESS

Check the thickness of the disc rotor using a micrometer. Replace the disc rotor if the thickness is below the wear limit.



Wear limit thickness **: Refer to BR-90, "Rear Disc Brake".**

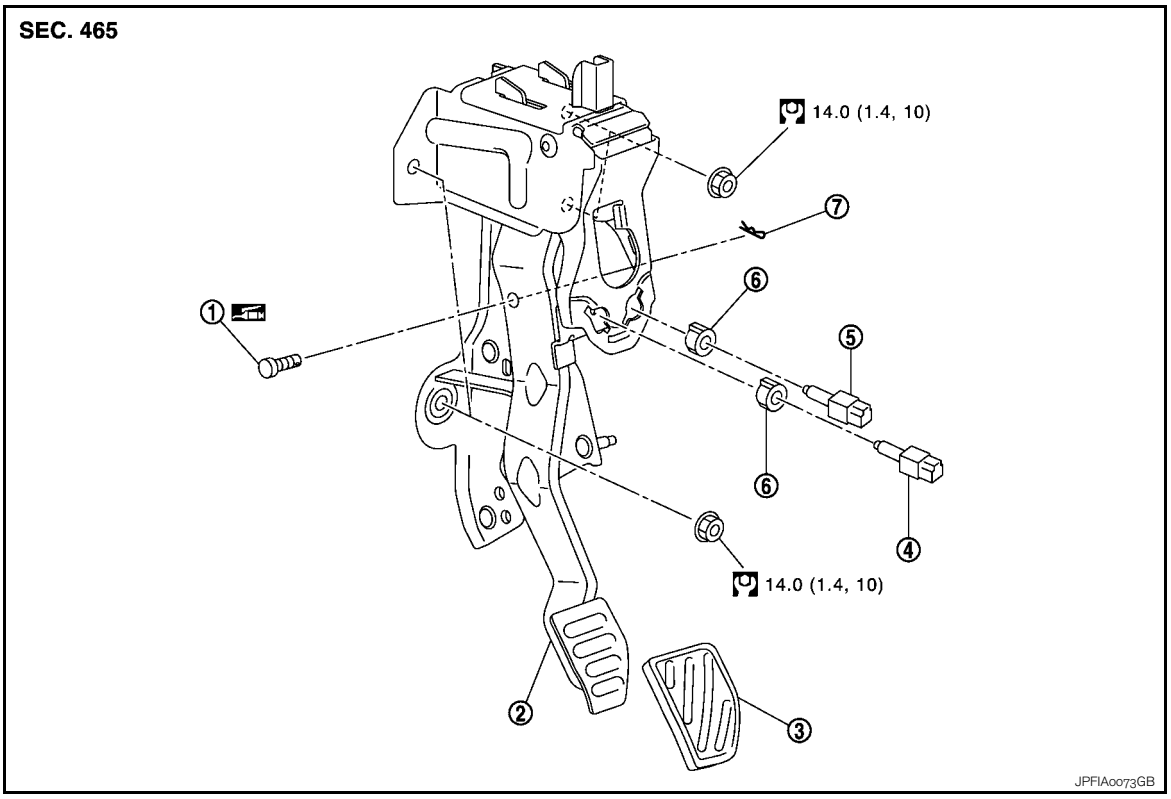
ON-VEHICLE REPAIR

BRAKE PEDAL

Exploded View

INFOID:0000000000938055



1. Clevis pin
2. Brake pedal assembly
3. Brake pedal pad
4. ASCD cancel switch
5. Stop lamp switch
6. Clip
7. Snap pin

: Apply multi-purpose grease.

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000938056

REMOVAL

1. Remove front kicking plate inner. Refer to INT-14, "Exploded View".
2. Remove dash side finisher. Refer to INT-14, "Exploded View".
3. Remove instrument driver lower panel. Refer to IP-11, "Exploded View".
4. Remove foot duct. Refer to IP-11, "Exploded View" (automatic air conditioner), VTL-93, "FOOT DUCTS : Exploded View" (manual air conditioner).
5. Disconnect ASCD cancel switch and the stop lamp switch harness connectors.
6. Disconnect accelerator pedal position sensor harness connector.
7. Remove steering member stay.
8. Remove snap pin and clevis pin from clevis of brake booster.
9. Remove the brake pedal assembly and the accelerator pedal.
10. Remove the accelerator pedal from brake pedal assembly. Refer to ACC-3, "Exploded View".

INSTALLATION

Note the following, and installation is the reverse order of removal.

cardiagn.com

- Apply the multi-purpose grease to the clevis pin and the mating faces. (Not necessary if grease has been already applied.)

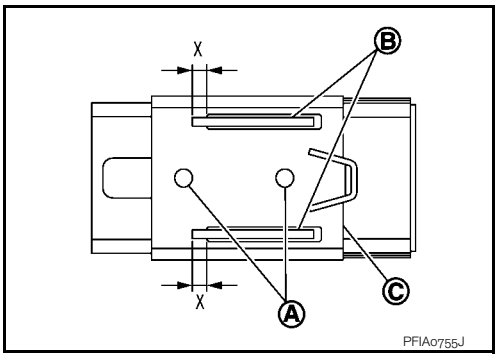
NOTE:
The clevis pin may be inserted in either direction.

Inspection and Adjustment

INFOID:0000000000938057

INSPECTION AFTER REMOVAL

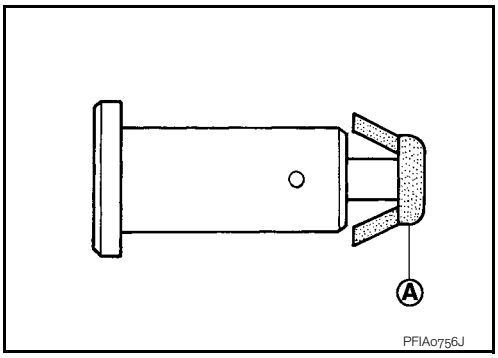
- Check the following items and replace the brake pedal assembly if necessary.
- Check the brake pedal upper rivet (A) for deformation.
- Check the brake pedal for bend, damage, and cracks on the welded parts.
- Check the lapping length (X) of sub-bracket (B) and slide plate (C).



Limit

Lapping length	**: 5.0 mm (0.197 in)**

- Check clevis pin and plastic stopper (A) for damage and deformation. If any is found, replace clevis pin.



ADJUSTMENT AFTER INSTALLATION

- Perform the brake pedal adjustment after installing the brake pedal assembly. Refer to BR-52, "Inspection and Adjustment".
- Perform the accelerator pedal check after installing the accelerator pedal. Refer to ACC-3, "Inspection".

FRONT BRAKE (WITH ABS) : Removal and Installation

INFOID:0000000000938060

REMOVAL

CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

1. Remove tires.
2. Drain brake fluid. Refer to BR-55, "Draining".
3. Loosen the flare nut with a flare nut wrench and separate the brake tube from the hose.
   CAUTION:
   - **Never scratch the flare nut and the brake tube.**
   - **Never bend sharply, twist or strongly pull out the brake hoses and tubes.**
   - **Cover open end of brake tubes and hoses when disconnecting to prevent entrance of dirt.**
4. Remove the union bolt and remove the brake hose from the brake caliper assembly.
5. Remove the lock plate and remove the brake hose.

INSTALLATION

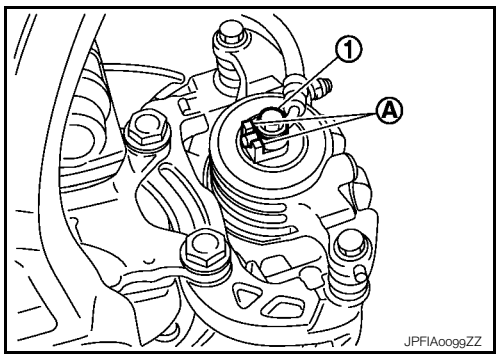
CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

1. Assemble the union bolt and the copper washer to the brake hose.
   CAUTION:
   Never reuse the copper washer.

cardiagn.com

2. Align the brake hose pin to the projection (A) of the brake caliper assembly and tighten the union bolt (1) to the specified torque.
3. Install the brake tube to the brake hose, temporarily tighten the flare nut by hand until it does not rotate further, and fix the brake hose to the bracket with the lock plate.
   CAUTION:
   Check that all brake hoses and tubes are not twisted and bent.
4. Tighten the flare nut to the specified torque with a flare nut torque wrench.
   CAUTION:
   Never scratch the flare nut and the brake tube.



5. Refill with new brake fluid and perform the air bleeding. Refer to BR-56, "Bleeding Brake System".
   CAUTION:
   Never reuse drained brake fluid.
6. Install tires.

FRONT BRAKE (WITH ABS) : Inspection

INFOID:0000000000938061

INSPECTION AFTER INSTALLATOIN

1. Check the brake hoses and tubes for the following: no scratches; no twist and deformation; no interference with other components when steering the steering wheel; no looseness at connections.
2. Depress the brake pedal with a force of 785 N (80 kg, 176 lb) and hold down the pedal for approximately 5 seconds with the engine running. Check for any fluid leakage.
   CAUTION:
   Retighten the applicable connection to the specified torque and repair any abnormal (damaged, worn or deformed) part if any brake fluid leakage is present.

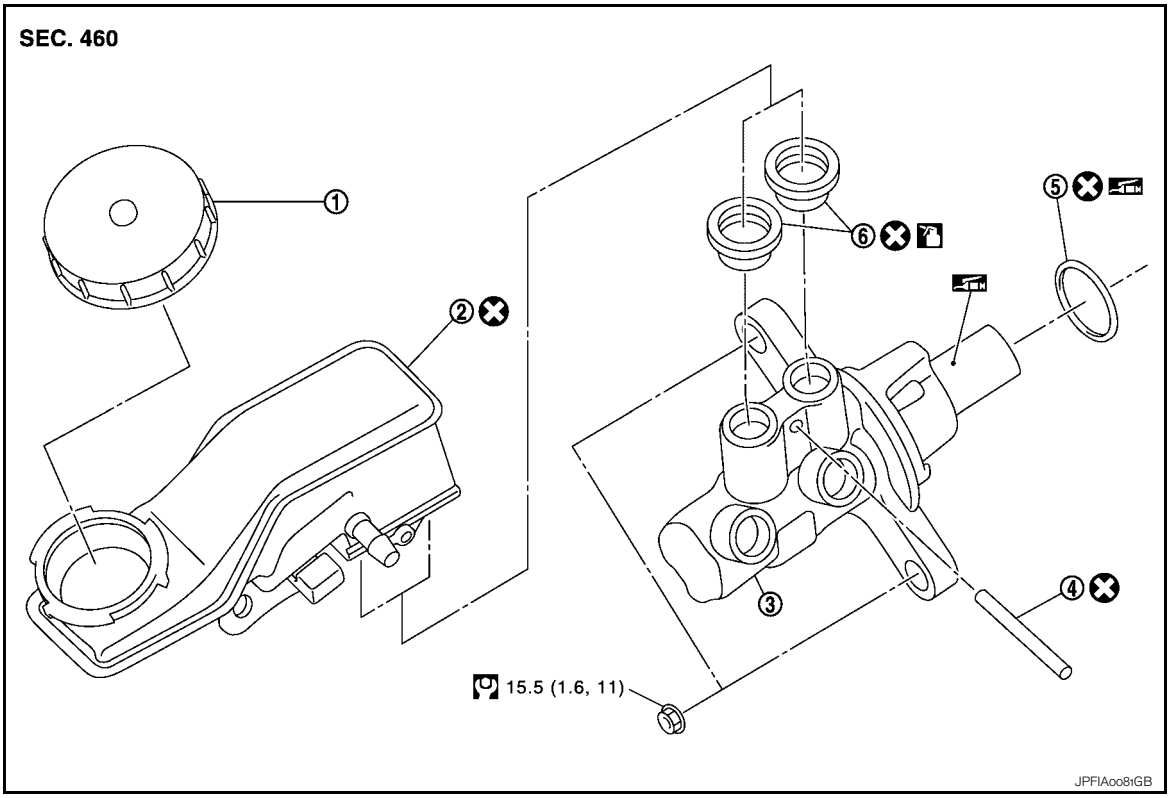
BRAKE MASTER CYLINDER

Exploded View

INFOID:0000000000938070



1. Reservoir cap
2. Reservoir tank
3. Cylinder body
4. Pin
5. O-ring
6. Grommet

: Apply PBC (Poly Butyl Cuprysil) grease or silicone-based grease.

: Apply brake fluid.

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000938071

REMOVAL

CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

1. Drain brake fluid. Refer to BR-55, "Draining".
2. Separate the brake fluid level switch harness connector.
3. Separate the brake tubes from the master cylinder assembly with a flare nut wrench.
   CAUTION:
   Never scratch the flare nut and the brake tube.
4. Remove the master cylinder assembly.
   CAUTION:
   - **Depress the brake pedal several times to release the vacuum pressure from the brake booster. Then remove the master cylinder assembly.**
   - **Never depress the brake pedal after the master cylinder assembly is removed.**
   - **The piston of the master cylinder assembly is exposed. Never damage it when removing the master cylinder.**
   - **The piston may drop off when pulled out strongly. Never hold the piston. Hold the cylinder body when handling the master cylinder assembly.**

cardiagn.com

INSTALLATION

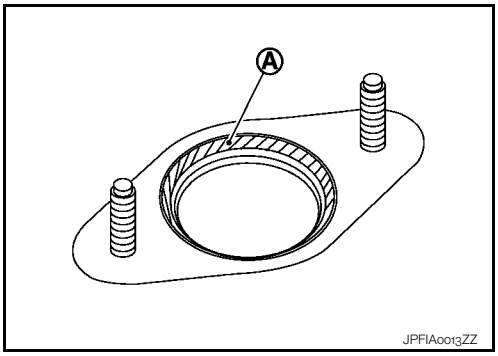
CAUTION:

Never spill or splash brake fluid on painted surfaces. Brake fluid may seriously damage paint. Wipe it off immediately and wash with water if it gets on a painted surface.

- Note the following, and installation is the reverse order of removal.

CAUTION:

- **Never depress the brake pedal after the master cylinder assembly is removed.**
- **Apply PBC (Poly Butyl Cuprysil) silicone-based grease to the brake booster [see (A) in the figure] when installing the master cylinder assembly to the brake booster.**
- **The piston of the master cylinder assembly is exposed. Never damage it when handling the master cylinder and check that no dirt and dust are present on the piston before installation. Clean it with new brake fluid if necessary.**
- **The piston may drop off when pulled strongly. Never hold the piston. Hold the cylinder body when handling the master cylinder assembly.**



- Temporarily tighten the brake tube flare nut to the master cylinder assembly by hand. Then tighten it to the specified torque with a flare nut torque wrench. Refer to BR-63, "FRONT BRAKE (WITH ABS) : Exploded View" (with ABS), BR-65, "FRONT BRAKE (WITH ESP) : Exploded View" (with ESP).

CAUTION:

Never scratch the flare nut and the brake tube.

- After installation, perform the air bleeding. Refer to BR-56, "Bleeding Brake System".

CAUTION:

Never reuse drained brake fluid.

Disassembly and Assembly

INFOID:0000000000938072

DISASSEMBLY

CAUTION:

- **Never disassemble the cylinder body.**
- **Remove the reservoir tank if necessary.**

1. Fix the master cylinder assembly to a vise.

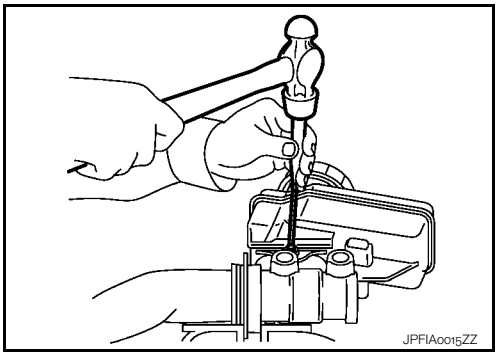
   CAUTION:

   Always set copper plates or cloth between vise when fixing the cylinder body to a vise. Never overtighten the vise.

2. Remove the reservoir tank mounting pin with a pin punch.
3. Remove the reservoir tank and grommet from the cylinder body.

   CAUTION:

   Never drop the removed parts. The parts must not be reused if they are dropped.



ASSEMBLY

1. Apply new brake fluid to the grommet and install it to the cylinder body.

   CAUTION:

   - **Never use mineral oil such as gasoline or light oil.**
   - **Never reuse the grommets.**

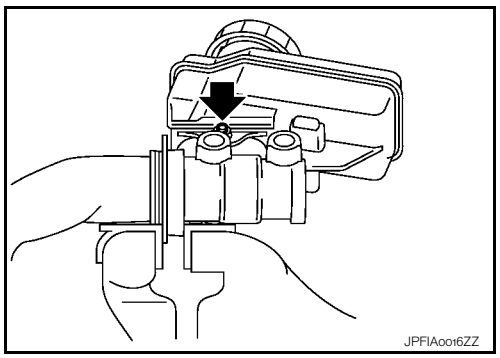
2. Install the reservoir tank to the cylinder body.

   CAUTION:

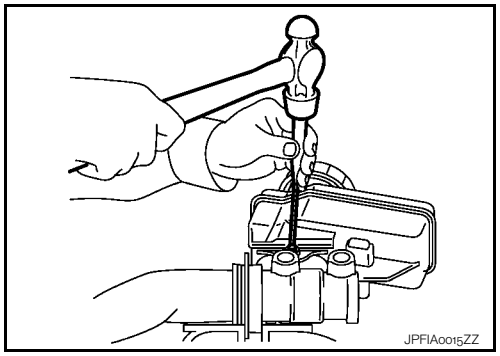
   - **Never drop the parts when installing. The parts must not be reused if they are dropped.**
   - **Never reuse reservoir tank.**

cardiagn.com

3. Fix the cylinder body to a vise.
CAUTION:
- **Place the reservoir tank with the chamfered pin hole (⬅) facing up.**
- **Always set copper plates or cloth between vise when fixing the cylinder body to a vise. Never overtighten the vise.**



4. Tilt the reservoir tank so that a mounting pin can be inserted. Insert a mounting pin. Return the reservoir tank to the horizontal position. Insert another mounting pin into the pin hole on the opposite side in the same manner after the mounting pin passes through the cylinder body pin hole.
CAUTION:
Never reuse the mounting pin.



Inspection

INFOID:0000000000938073

INSPECTION AFTER INSTALLATION

Fluid Leak

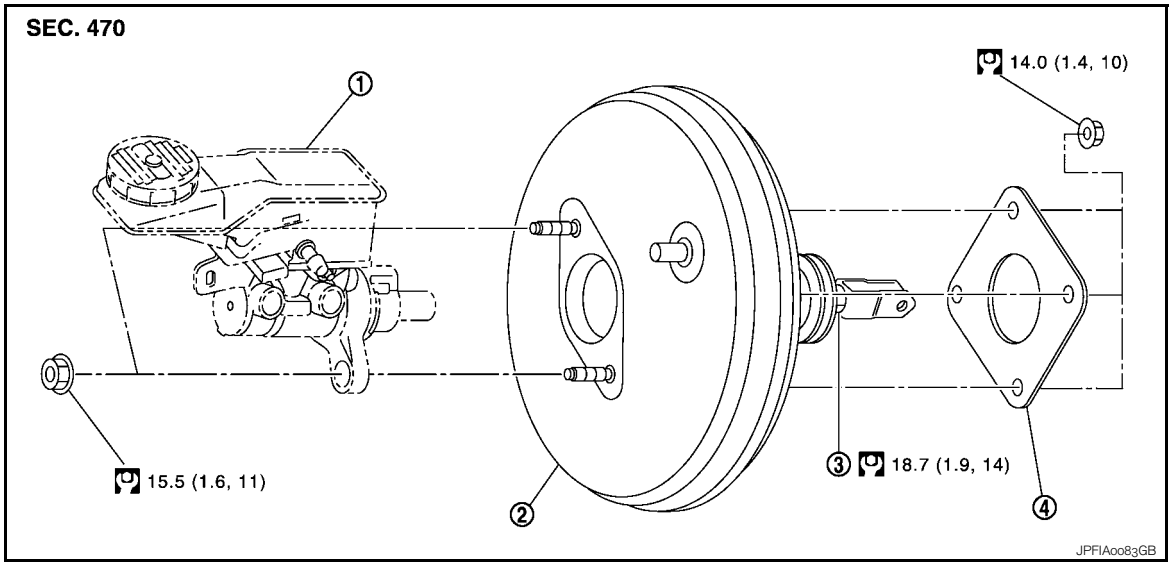
Check for brake fluid leakage from the cylinder body-to-brake booster mounting face, reservoir tank mounting face and brake tube connections.

cardiagn.com

BRAKE BOOSTER

Exploded View

INFOID:0000000000938074



1. Master cylinder assembly
2. Brake booster
3. Lock nut
4. Gasket

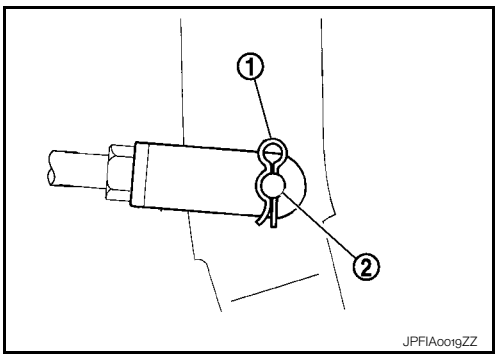
Refer to GI-4, "Components" for symbols in the figure.

Removal and installation

INFOID:0000000000938075

REMOVAL

1. Remove brake master cylinder assembly. Refer to BR-71, "Removal and Installation".
   CAUTION:
   - **Depress the brake pedal several times to release the vacuum pressure from the brake booster. Then remove the master cylinder assembly.**
   - **Never depress the brake pedal after the master cylinder assembly is removed.**
   - **The piston of the master cylinder assembly is exposed. Never damage it when removing the master cylinder.**
   - **The piston may drop off when pulled out strongly. Never hold the piston. Hold the cylinder body when handling the master cylinder assembly.**
2. Remove vacuum hose from brake booster. Refer to BR-77, "HR16DE/MR20DE MODELS : Removal and Installation" (HR16DE, MR20DE engine models), BR-78, "K9K MODELS : Removal and Installation" (K9K engine models).
3. Remove snap pin (1) and clevis pin (2) from inside vehicle.
4. Remove nuts on brake booster and brake pedal assembly. Refer to BR-61, "Exploded View".
5. Remove brake booster from dash panel in engine room side.
   CAUTION:
   Never deform or bend the brake tubes.
6. Remove the spacer from brake booster.



INSTALLATION

Note the following, and installation is the reverse order of removal.

CAUTION:

cardiagn.com

- **Be careful not to damage brake booster stud bolt threads. If brake booster is tilted during installation, the dash panel may damage the threads.**
- **Never deform or bend the brake tubes when installing the brake booster.**
- **Always use a new gasket between the brake booster and the spacer.**
- **Replace the clevis pin if it is damaged. Refer to BR-62, "Inspection and Adjustment".**
- After installation, perform the air bleeding. Refer to BR-56, "Bleeding Brake System".

CAUTION:
Never reuse drained brake fluid.

Inspection and Adjustment

INFOID:0000000000938076

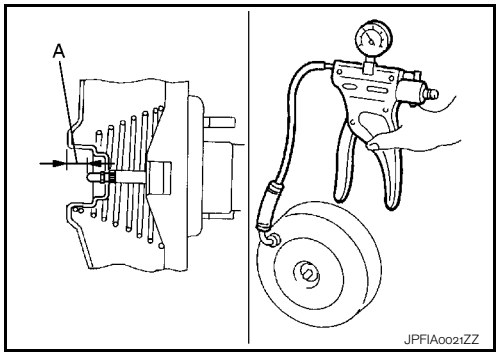
INSPECTION AFTER REMOVAL

Output Rod Length Inspection

1. With a handy vacuum pomp, apply vacuum pressure of –66.7 kPa (–500 mmHg, –19.70 inHg, –0.667 bar) to the brake booster.
2. Check the output rod length (A).

Standard

Output rod length (A) **: Refer to BR-90, "Brake Booster".**



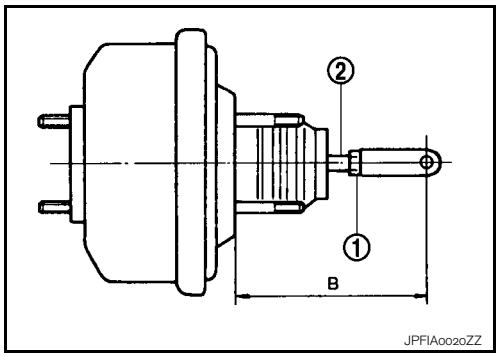
Input Rod Length Inspection

1. Loosen the lock nut (1) and adjust the input rod (2) to the specified length (B).

Standard

Input rod length (B) **: Refer to BR-90, "Brake Booster".**

2. Tighten the lock nut to the specified torque.

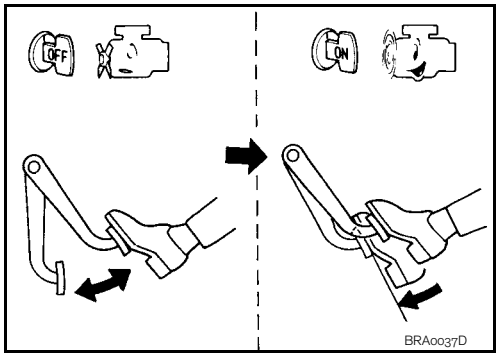


INSPECTION AFTER INSTALLATION

Operation

Depress the brake pedal several times at 5-second intervals with the engine stopped. Start the engine with the brake pedal fully depressed. Check that the clearance between brake pedal and dash lower pane decreases.

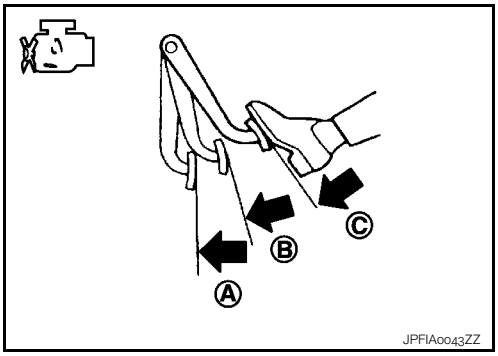
NOTE:
A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



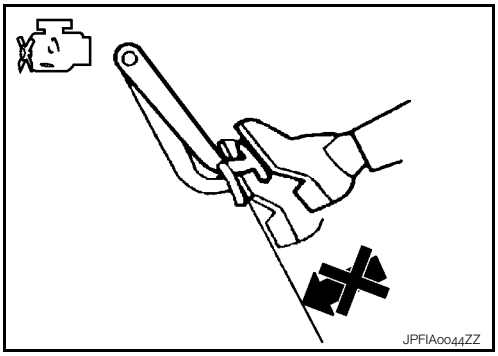
Air Tight

cardiagn.com

- Idle the engine for 1 minute to apply vacuum to the brake booster, and stop the engine. Then depress the brake pedal several times at 5-second intervals until the accumulated vacuum is released to atmospheric pressure. Check that the clearance between brake pedal and dash lower panel gradually increases (A → B → C) each time the brake pedal is depressed during this operation.



- Depress the brake pedal with the engine running. Then stop the engine while holding down the brake pedal. Check that the brake pedal stroke does not change after holding down the brake pedal for 30 seconds or more.
  NOTE:
  A slight impact with a small click may be felt on the pedal when the brake pedal is fully depressed. This is a normal phenomenon due to the brake system operation.



ADJUSTMENT AFTER INSTALLTION

Perform the brake pedal adjustment after installing the brake pedal assembly. Refer to BR-52, "Inspection and Adjustment".

cardiagn.com

FRONT DISC BRAKE

BRAKE PAD

BRAKE PAD : Exploded View

INFOID:0000000000938083

Refer to BR-81, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Removal and Installation

INFOID:0000000000938084

REMOVAL

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Remove tires.
2. Remove lower sliding pin bolt.
3. Suspend the cylinder body with suitable wire so that the brake hose will not stretch. Then remove the brake pad from the torque member.
   CAUTION:
   - **Never deform the pad retainer when removing the pad retainer from the torque member.**
   - **Never damage the piston boot.**
   - **Never drop the brake pads, shims, and the shim covers.**

INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads or the cylinder body because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Install the pad retainer to the torque member if the pad retainers has been removed.
   CAUTION:
   - **Securely assemble the pad retainers so that it will not be lifted up from the torque member.**
   - **Never deform the pad retainers.**
2. Apply copper based brake grease to the mating faces between the pads, shims and shim covers, and install them to the brake pad.
   CAUTION:
   Always replace the shims together with the shim covers when replacing the brake pad.
3. Install the cylinder body and brake pads to the torque member.
   CAUTION:
   - **Never damage the piston boot.**
   - **When replacing a pad with new one, check a brake fluid level in the reservoir tank because brake fluid returns to master cylinder reservoir tank when pressing piston in.**

   NOTE:
   Use a disc brake piston tool to easily press piston.
4. Install the lower sliding pin bolt and tighten it to the specified torque.
5. Depress the brake pedal several times to check that no drag feel is present for the front disc brake.
6. Install tires.

BRAKE PAD : Inspection and Adjustment

INFOID:0000000000938085

INSPECTION AFTER REMOVAL

Replace the shims and the shim covers if rust is excessively attached.

ADJUSTMENT AFTER INSTALLATION

cardiagn.com

Brake Burnishing Procedure

Burnish contact surfaces between pads according to following procedure after refinishing or replacing pads, or if a soft pedal occurs at very low mileage.

CAUTION:

- **Be careful of vehicle speed because the brake does not operate easily until pads and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool the brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

BRAKE CALIPER ASSEMBLY : Removal and Installation

INFOID:0000000000938087

REMOVAL

WARNING:

Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.

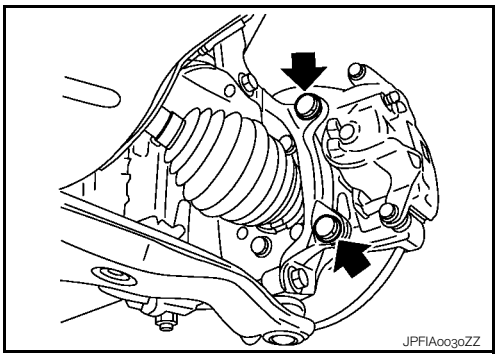
CAUTION:

Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Remove tires.

cardiagn.com

2. Fix the disc rotor using wheel nuts.
3. Drain brake fluid. Refer to BR-11, "Draining".
   CAUTION:
   Never spill or splash brake fluid on the disc rotor.
4. Remove union bolt, and then disconnect brake hose from caliper assembly.
5. Remove torque member mounting bolts, and remove brake caliper assembly.
   CAUTION:
   Never drop brake pads and caliper assembly.
6. Remove disc rotor.
   CAUTION:
   - **Put matching marks on the wheel hub and bearing assembly and the disc rotor before removing the disc rotor.**
   - **Never drop disc rotor.**



INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Install disc rotor.
   CAUTION:
   Align the matching marks made during removal when reusing the disc rotor.
2. Install the brake caliper assembly to the vehicle and tighten the torque member mounting bolts to the specified torque.
   CAUTION:
   Never spill or splash any grease and moisture on the brake caliper assembly mounting face, threads, mounting bolts and washers. Wipe out any grease and moisture.
3. Install brake hose to brake caliper assembly, and tighten union bolts to the specified torque.
4. Refill with new brake fluid and perform the air bleeding. Refer to BR-12, "Bleeding Brake System".
   CAUTION:
   - **Never reuse drained brake fluid.**
   - **Never spill or splash brake fluid on the disc rotor.**
5. Check that no drag feel is present for the front disc brake.
6. Install tires.

BRAKE CALIPER ASSEMBLY : Disassembly and Assembly

INFOID:0000000000938088

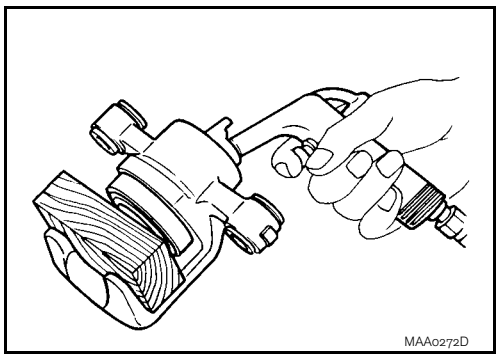
DISASSEMBLY

NOTE:
Never remove the torque member, brake pads, shims, shim covers and pad retainers when disassembling and assembling the cylinder body.

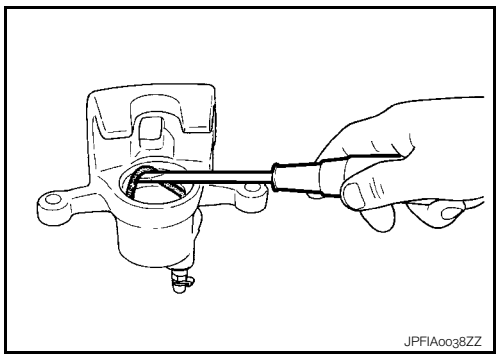
1. Remove the sliding pin bolts, and remove the cylinder body from the torque member.
   CAUTION:
   Never drop pads, shims, shim covers and pad retainers from torque member.
2. Remove sliding pins and sliding pin boots from torque member.
3. Remove bushing from sliding pin.

cardiagn.com

4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove piston and piston boot.
CAUTION:
Never get fingers caught in the piston.

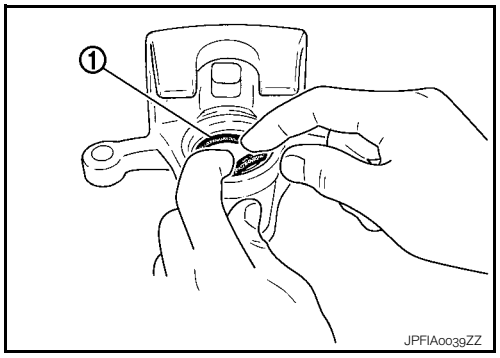


5. Remove piston seal from cylinder body using suitable tool.
CAUTION:
Be careful not to damage a cylinder inner wall.

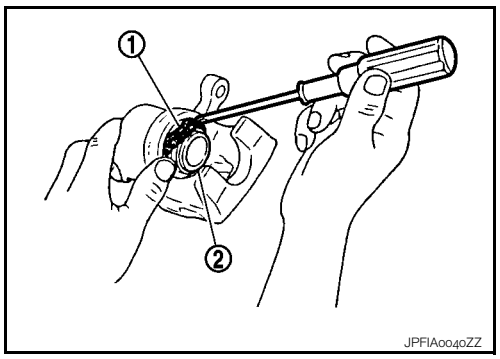


ASSEMBLY

1. Apply rubber grease to piston seal (1), and install to cylinder body.
CAUTION:
Never reuse piston seal.

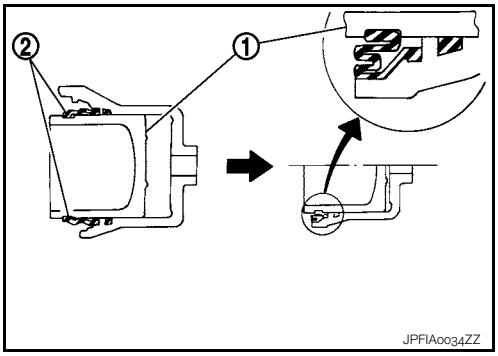


2. Apply rubber grease to piston boot (1). Cover the piston (2) end with piston boot, and then install cylinder side lip on piston boot securely into a groove on cylinder body.
CAUTION:
Never reuse piston boot.



cardiagn.com

3. Apply brake fluid to piston (1). Push piston into cylinder body by hand and push piston boot (2) piston-side lip into the piston groove.
   CAUTION:
   Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.
4. Apply rubber grease to bushing, install bushing to sliding pin.
5. Apply rubber grease to sliding pins and sliding pin boots, install sliding pins and sliding pin boots to torque member.
6. Install the cylinder body to the torque member and tighten the sliding pin bolts to the specified torque.



BRAKE CALIPER ASSEMBLY : Inspection and Adjustment

INFOID:0000000000938089

INSPECTION AFTER DISASSEMBLY

Cylinder Body

Check the inner wall of the cylinder for rust, wear, cracks or damage. Replace the cylinder if any abnormal condition is detected.

CAUTION:
Always clean with new brake fluid. Never clean with mineral oil such as gasoline and light oil.

Torque Member

Check the torque member for rust, wear, cracks or damage. Replace the member if any abnormal condition is detected.

Piston

Check the surface of the piston for rust, wear, cracks or damage. Replace the piston if any abnormal condition is detected.

CAUTION:
A piston sliding surface is plated. Never polish with sandpaper.

Sliding Pin and Sliding Pin Boot

Check the sliding pins and sliding boots for rust, wear, cracks or damage. Replace the parts if any abnormal condition is detected.

ADJUSTMENT AFTER INSTALLATION

Brake Burnishing Procedure

Burnish contact surfaces between disc rotors and pads according to following procedure after refinishing or replacing disc rotor, or if a soft pedal occurs at very low mileage.

CAUTION:
- **Be careful of vehicle speed because the brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool the brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

INFOID:0000000000938090

Refer to BR-42, "BRAKE CALIPER ASSEMBLY : Exploded View".

BRAKE PAD : Removal and Installation

INFOID:0000000000938091

REMOVAL

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads or the cylinder body because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Remove tires.
2. Remove the lower sliding pin bolt.
3. Suspend the cylinder body with suitable wire so that the brake hose will not stretch. Remove the brake pads from the torque member.
   CAUTION:
   - **Never deform the pad retainers if removing the pad retainers.**
   - **Never damage the piston boot.**
   - **Never drop the brake pad, shims, and the shim cover.**

INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
- **Never depress the brake pedal while removing the brake pads or the cylinder body because the piston may pop out.**
- **Never spill or splash brake fluid on the disc rotor.**

1. Install the pad retainers to the torque member if the pad retainers has been removed.
   CAUTION:
   - **Securely assemble the pad retainers not to be lifted up from the torque member.**
   - **Never deform the pad retainers.**
2. Apply copper based brake grease to the mating faces between the brake pads and the shims and install them to the brake pad.
   CAUTION:
   Always replace the shims together with the shim cover when replacing the brake pad.
3. Install cylinder body and brake pads to torque member.
   CAUTION:
   - **Never damage the piston boot.**
   - **When replacing a pads with new one, check a brake fluid level in the reservoir tank because brake fluid returns to master cylinder reservoir tank when pressing piston in.**

   NOTE:
   Use a disc brake piston tool to easily press piston.
4. Install the lower sliding pin bolt and tighten it to the specified torque.
5. Depress the brake pedal several times to check that no drag feel is present for the rear disc brake.
6. Install tires.

BRAKE PAD : Inspection and Adjustment

INFOID:0000000000938092

INSPECTION AFTER REMOVAL

Replace the shims and the shim cover if rust is excessively attached.

cardiagn.com

ADJUSTMENT AFTER INSTALLATION

Brake Burnishing Procedure

Burnish contact surfaces between pads according to following procedure after refinishing or replacing pads, or if a soft pedal occurs at very low mileage.

CAUTION:

- **Be careful of vehicle speed because the brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.

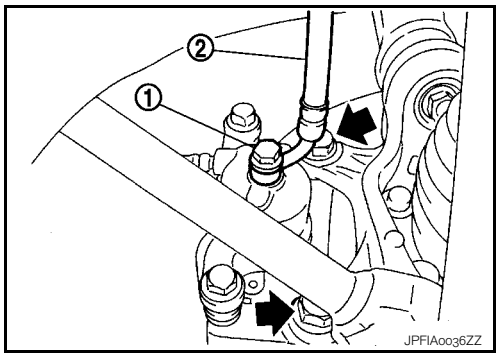
BRAKE CALIPER ASSEMBLY : Removal and Installation

INFOID:0000000000938094

REMOVAL

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Remove tires.
2. Fix the disc rotor using wheel nuts.
3. Drain brake fluid. Refer to BR-11, "Draining".
   CAUTION:
   Never spill or splash brake fluid on the disc rotor.
4. Remove union bolt (1) and then disconnect brake hose (2) from caliper assembly.
5. Remove torque member mounting bolts, and remove brake caliper assembly.
   CAUTION:
   Never drop brake pads and caliper assembly.
6. Remove disc rotor.
   CAUTION:
   - **Put matching marks on the wheel hub and bearing assembly and the disc rotor before removing the disc rotor.**
   - **Never drop disc rotor.**



INSTALLATION

WARNING:
Clean any dust from the brake caliper and brake pads with a vacuum dust collector. Never blow with compressed air.
CAUTION:
Never depress the brake pedal. Brake fluid may splash while removing the brake hose.

1. Install disc rotor.
   CAUTION:
   Align the matching marks made during removal when reusing the disc rotor.
2. Install the brake caliper assembly to the vehicle and tighten the torque member mounting bolts to the specified torque.
   CAUTION:
   Never spill or splash any grease and moisture on the brake caliper assembly mounting face, threads, mounting bolts, and washers. Wipe out any grease and moisture.
3. Install brake hose to brake caliper assembly, and tighten union bolts to the specified torque.
4. Refill with new brake fluid and perform the air bleeding. Refer to BR-12, "Bleeding Brake System".
   CAUTION:
   - **Never reuse drained brake fluid.**
   - **Never spill or splash brake fluid on the disc rotor.**
5. Check that no drag feel is present for the rear disc brake.
6. Install tires.

BRAKE CALIPER ASSEMBLY : Disassembly and Assembly

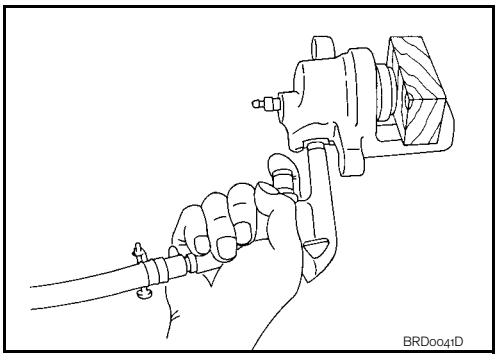
INFOID:0000000000938095

DISASSEMBLY

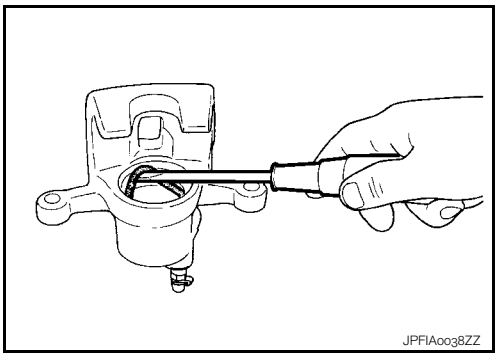
NOTE:
Never remove the torque member, brake pads, shims, shim cover and pad retainers disassembling and assembling the cylinder body.

cardiagn.com

1. Remove the sliding pin bolts and remove the cylinder body from the torque member.
   CAUTION:
   Never drop pads, shims, shim cover and pad retainers from torque member.
2. Remove sliding pin boots from torque member.
3. Remove bushing from sliding pin bolt.
4. Place a wooden block as shown in the figure, and blow air from union bolt mounting hole to remove piston and piston boot.
   CAUTION:
   Never get fingers caught in the piston.

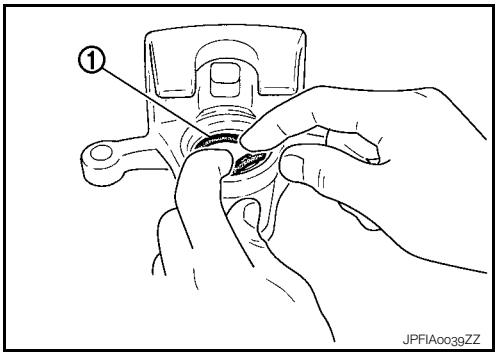


5. Remove piston seal from cylinder body using suitable tool.
   CAUTION:
   Be careful not to damage a cylinder inner wall.

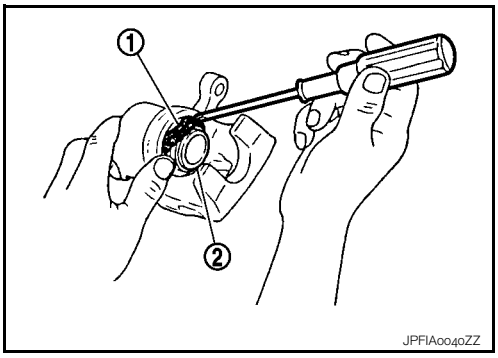


ASSEMBLY

1. Apply polyglycol ether based lubricant to piston seal (1), and install to cylinder body.
   CAUTION:
   Never reuse piston seal.

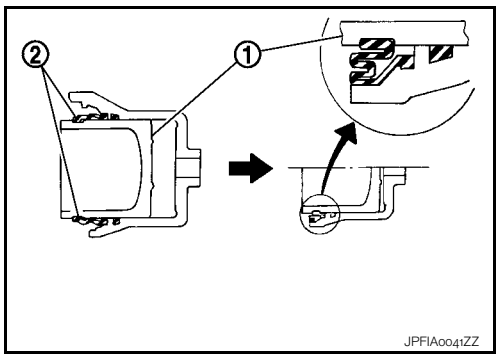


2. Apply rubber grease to piston boot (1). Cover the piston (2) end with the piston boot, and then install cylinder side lip on the piston boot securely into the groove on cylinder body.
   CAUTION:
   Never reuse piston boot.



cardiagn.com

3. Apply brake fluid to piston (1). Push piston into cylinder body by hand and push piston boot (2) piston side lip into the piston groove.
CAUTION:
Press the piston evenly and vary the pressing point to prevent cylinder inner wall from being rubbed.
4. Apply polyglycol ether based lubricant to bushing, install bushing to sliding pin bolt.
5. Apply rubber grease to the sliding pin bolts and the sliding pin boots, install sliding pin boot to torque member.
6. Install the cylinder body to the torque member and tighten the sliding pin bolts to the specified torque.



BRAKE CALIPER ASSEMBLY : Inspection and Adjustment

INFOID:0000000000938096

INSPECTION AFTER DISASSEMBLY

Cylinder Body

Check the inner wall of the cylinder for rust, wear, cracks or damage. Replace the cylinder if any abnormal condition is detected.

CAUTION:
Always clean with new brake fluid. Never clean with mineral oil such as gasoline and light oil.

Torque Member

Check the torque member for rust, wear, cracks or damage. Replace the member if any abnormal condition is detected.

Piston

Check the piston for rust, wear, cracks or damage. Replace the piston if any abnormal condition is detected.

CAUTION:
A piston sliding surface is plated. Never polish with sandpaper.

Sliding Pin Bolt and Sliding Pin Boot

Check the sliding pin bolts and sliding pin boots for rust, wear, cracks or damage. Replace the parts if any abnormal condition is detected.

ADJUSTMENT AFTER INSTALLATION

Brake Burnishing Procedure

Burnish contact surfaces between disc rotors and pads according to the following procedure after refinishing or replacing disc rotor, or if a soft pedal occurs at very low mileage.

CAUTION:
- **Be careful of vehicle speed because the brake does not operate easily until pad and disc rotor are securely fitted.**
- **Only perform this procedure under safe road and traffic conditions. Use extreme caution.**

1. Drive vehicle on straight, flat road.
2. Depress brake pedal with the power to stop vehicle within 3 to 5 seconds until the vehicle stops.
3. Drive without depressing brake for a few minutes to cool the brake.
4. Repeat steps 1 to 3 until pad and disc rotor are securely fitted.

BASIC INSPECTION

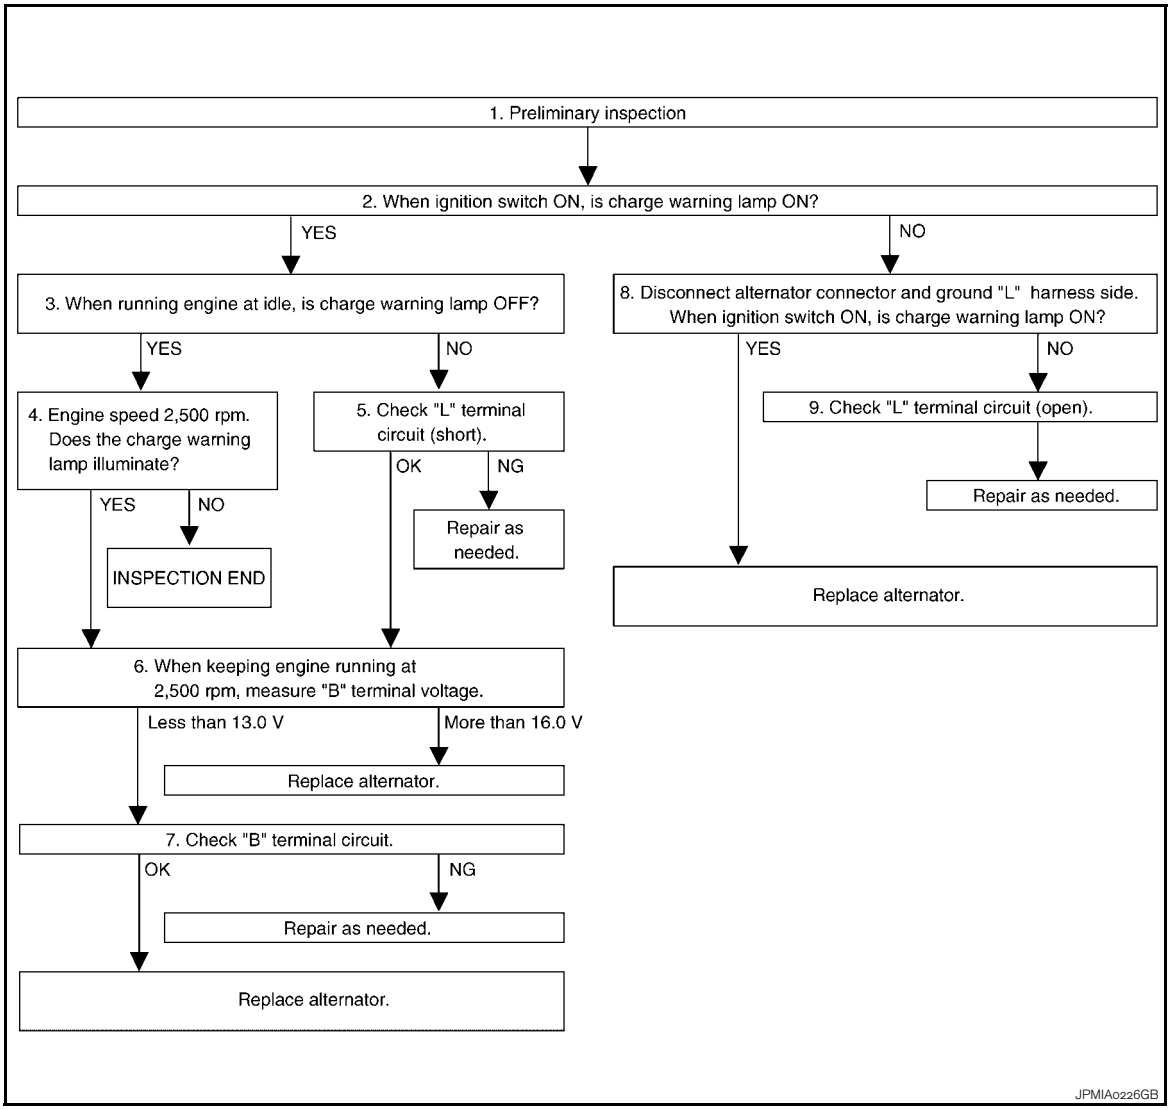
DIAGNOSIS AND REPAIR WORKFLOW

K9K MODELS

K9K MODELS : Work Flow

INFOID:0000000000955234

OVERALL SEQUENCE



DETAILED FLOW

1.PRELIMINARY INSPECTION

Perform the preliminary inspection. Refer to CHG-24, "Inspection Procedure" .

>> GO TO 2.

2.INSPECTION WITH CHARGE WARNING LAMP (IGNITION SWITCH IS ON)

Turn the ignition switch ON.

Does the charge warning lamp illuminate?

YES >> GO TO 3.
NO >> GO TO 8.

3.INSPECTION WITH CHARGE WARNING LAMP (IDLING)

cardiagn.com

Start the engine and run it at idle.

Does the charge warning lamp turn OFF?

YES >> GO TO 4.
NO >> GO TO 5.

4. INSPECTION WITH CHARGE WARNING LAMP (ENGINE AT 2,500 RPM)

Increase and maintain the engine speed at 2,500 rpm.

Does the charge warning lamp illuminate?

YES >> GO TO 6.
NO >> INSPECTION END

5. "L" TERMINAL CIRCUIT (SHORT) INSPECTION

Check "L" terminal circuit (short). Refer to CHG-13, "Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair as needed.

6. MEASURE "B" TERMINAL VOLTAGE

Engine start. When keeping engine running at 2,500 rpm, measure "B" terminal voltage.

What voltage does the measurement result show?

Less than 13.0 V>>GO TO 7.
More than 16.0 V>>Replace alternator.

7. "B" TERMINAL CIRCUIT INSPECTION

Check "B" terminal circuit. Refer to CHG-10, "Diagnosis Procedure" .

Is the inspection result normal?

YES >> Replace alternator.
NO >> Repair as needed.

8. INSPECTION WITH CHARGE WARNING LAMP (IGNITION SWITCH IS ON)

1. Disconnect alternator connector and ground "L" harness side.
2. Turn the ignition switch ON.

Does the charge warning lamp illuminate?

YES >> Replace alternator.
NO >> GO TO 9.

9. CHECK "L" TERMINAL CIRCUIT (OPEN)

Check "L" terminal circuit (open). Refer to CHG-11, "Diagnosis Procedure".

>> Repair as needed.

NO >> INSPECTION END

5. "L" TERMINAL CIRCUIT (SHORT) INSPECTION

Check "L" terminal circuit (short). Refer to CHG-13, "Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair as needed.

6. "S" TERMINAL CIRCUIT INSPECTION

Check "S" terminal circuit. Refer to CHG-14, "Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 7.
NO >> Repair as needed.

7. MEASURE "B" TERMINAL VOLTAGE

Start engine. When keeping engine running at 2,500 rpm, measure "B" terminal voltage.

What voltage does the measurement result show?

Less than 13.0 V>>GO TO 8.
More than 16.0 V>>Replace IC regulator.

8. "B" TERMINAL CIRCUIT INSPECTION

Check "B" terminal circuit. Refer to CHG-10, "Diagnosis Procedure" .

Is the inspection result normal?

YES >> GO TO 9.
NO >> Repair as needed.

9. DISASSEMBLE AND CHECK ALTERNATOR

Check the following conditions. Refer to CHG-28, "HR16DE MODELS : Inspection" (HR engine models) or CHG-32, "MR20DE MODELS : Inspection" (MR engine models)

- Rotor coil
- Rotor slip ring
- Brush
- Stator coil

Are these normal?

YES >> Replace IC regulator and/or diode assembly.
NO >> Repair as needed.

10. INSPECTION WITH CHARGE WARNING LAMP (IGNITION SWITCH IS ON)

1. Disconnect alternator connector and ground "L" harness side.
2. Turn the ignition switch ON.

Does the charge warning lamp illuminate?

YES >> GO TO 11.
NO >> GO TO 12.

11. DISASSEMBLE AND CHECK ALTERNATOR

cardiagn.com

Check the following conditions. Refer to CHG-28, "HR16DE MODELS : Inspection" (HR engine models) or CHG-32, "MR20DE MODELS : Inspection" (MR engine models)

- Rotor coil
- Rotor slip ring
- Brush

Are these normal?

YES >> Replace IC regulator.
NO >> Repair as needed.

12. CHECK “L” TERMINAL CIRCUIT (OPEN)

Check “L” terminal circuit (open). Refer to CHG-11, "Diagnosis Procedure".

>> Repair as needed.

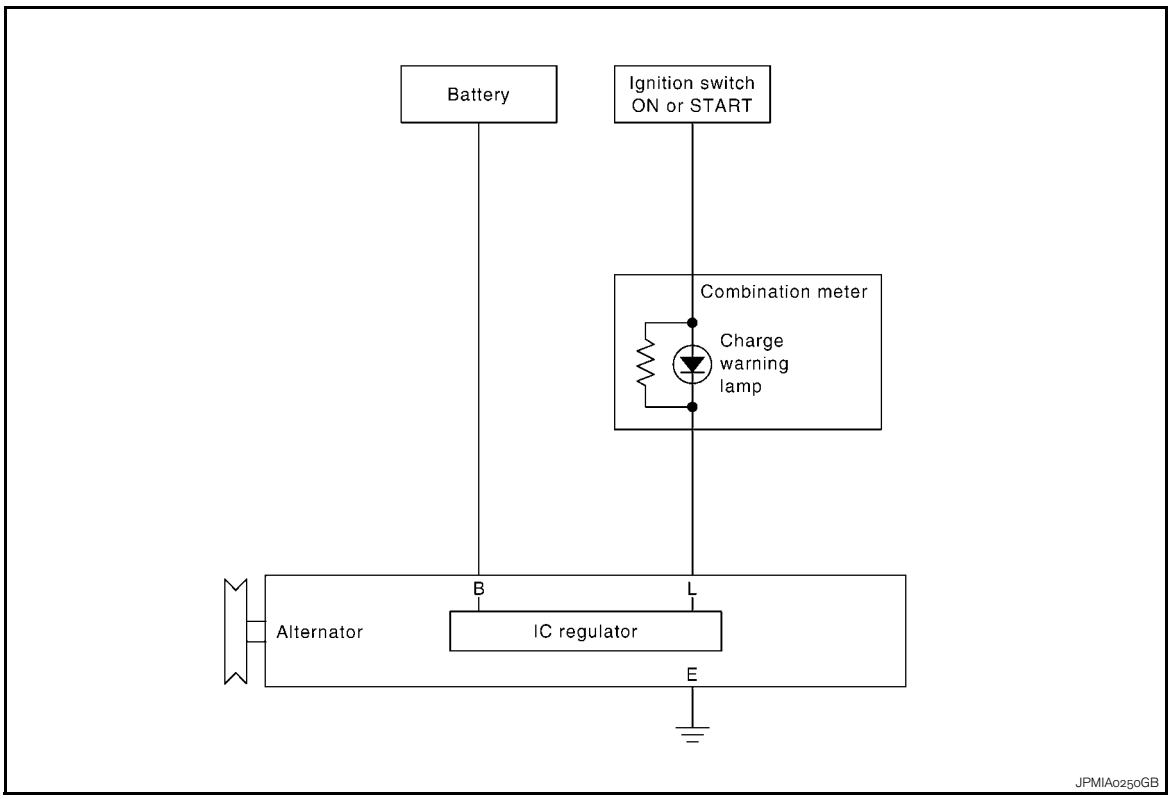
FUNCTION DIAGNOSIS

CHARGING SYSTEM

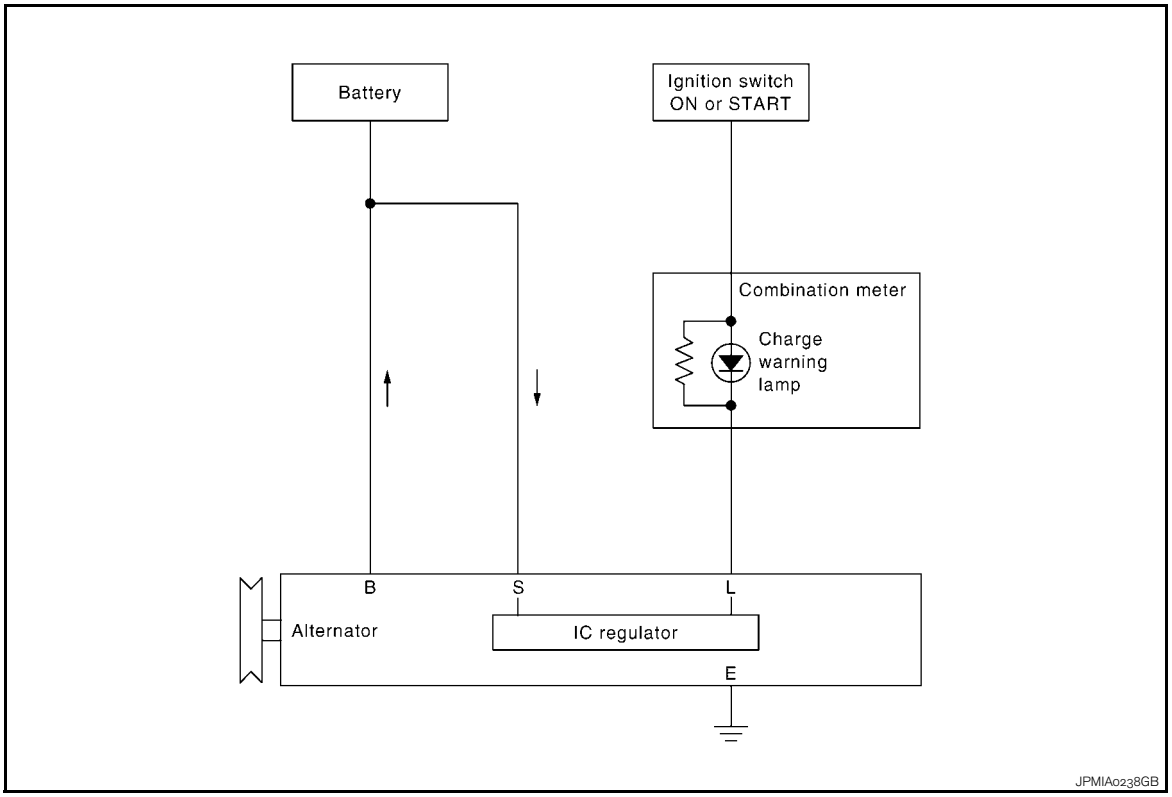
System Diagram

INFOID:0000000000955235

K9K models



HR16DE/MR20DE models



cardiagn.com

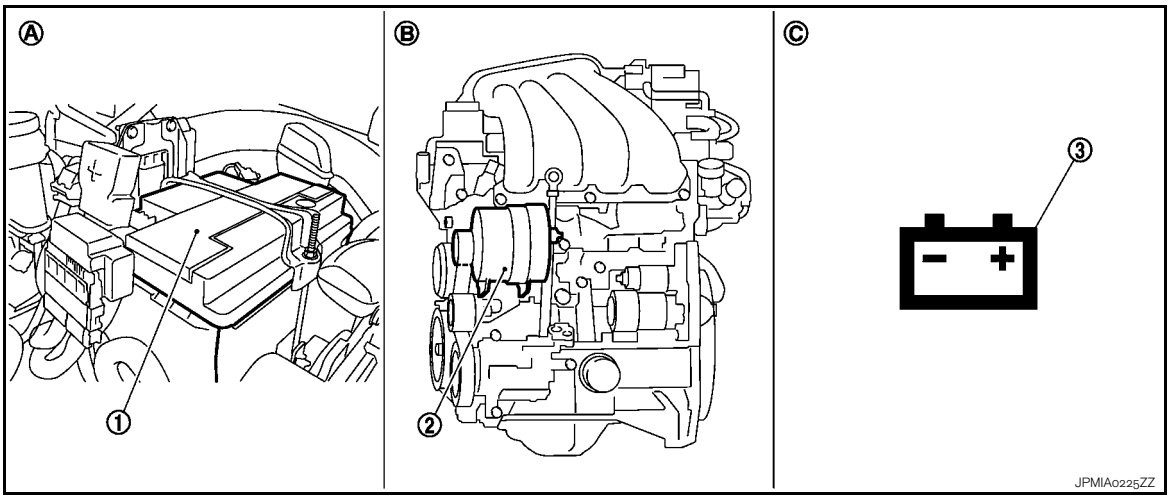
System Description

INFOID:0000000000955236

The alternator provides DC voltage to operate the vehicle's electrical system and to keep the battery charged. The voltage output is controlled by the IC regulator.

Component Parts Location

INFOID:0000000000955237



1. Battery
2. Alternator
3. Charge warning lamp
A. Engine room (left side)
B. Engine
C. Combination meter

Component Description

INFOID:0000000000955238

Component part		Description
Alternator	“B” terminal	Refer to CHG-10, "Description".
	“S” terminal (HR16DE/MR20DE models only)	Refer to CHG-14, "Description".
	“L” terminal	Refer to CHG-11, "Description".
Combination meter (Charge warning lamp)		The IC regulator warning function activates to illuminate the charge warning lamp, if any of the following symptoms occur while alternator is operating: • Excessive voltage is produced. • No voltage is produced.

cardiagn.com

COMPONENT DIAGNOSIS

B TERMINAL CIRCUIT

Description

INFOID:0000000000955243

"B" terminal circuit supplies power to charge the battery and to operate the vehicle's electrical system.

Diagnosis Procedure

INFOID:0000000000955244

1.CHECK "B" TERMINAL CONNECTION

1. Turn ignition switch OFF.
2. Check if "B" terminal is clean and tight.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair "B" terminal connection.

2.CHECK "B" TERMINAL CIRCUIT

Check voltage between alternator "B" terminal and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Alternator "B" terminal	Terminal		
F59 (K9K) F14 (HR16DE/MR20DE)	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check harness for open between alternator and fusible link.

3.CHECK "B" TERMINAL CONNECTION (VOLTAGE DROP TEST)

1. Start engine, then engine running at idle and warm.
2. Check voltage between battery positive terminal and alternator "B" terminal.

Terminals			Voltage (Approx.)
(+)	(–)		
	Alternator "B" terminal	Terminal	
Battery positive terminal	F59 (K9K) F14 (HR16DE/MR20DE)	1	Less than 0.2 V

Is the inspection result normal?

YES >> "B" terminal circuit is normal. Refer to CHG-3, "K9K MODELS : Work Flow" (K9K models) or CHG-4, "HR16DE/MR20DE MODELS : Work Flow" (HR16DE/MR20DE models).
NO >> Check harness between battery and alternator for poor continuity.

cardiagn.com

L TERMINAL CIRCUIT (OPEN)

Description

INFOID:0000000000955245

The “L” terminal circuit controls the charge warning lamp. The charge warning lamp illuminates when the ignition switch is set to ON or START. When the alternator is providing sufficient voltage with the engine running, the charge warning lamp will go off. If the charge warning lamp illuminates with the engine running, a malfunction is indicated.

Diagnosis Procedure

INFOID:0000000000955246

1.CHECK “L” TERMINAL CONNECTION

1. Turn ignition switch OFF.
2. Check if “L” terminal is clean and tight.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair “L” terminal connection.

2.CHECK “L” TERMINAL CIRCUIT (OPEN)

1. Disconnect alternator connector.
2. Apply ground to alternator connector harness connector terminal.
3. Check condition of the charge warning lamp with the ignition switch in the ON position.

- K9K models

Alternator harness connector	Terminal	Ground	Condition	
			Ignition switch position	Charge warning lamp
F60	4		ON	Illuminate

- HR16DE/MR20DE models

Alternator harness connector	Terminal	Ground	Condition	
			Ignition switch position	Charge warning lamp
F15	3		ON	Illuminate

Does it illuminate?

YES >> “L” terminal circuit is normal. Refer to CHG-3, "K9K MODELS : Work Flow" (K9K models) or CHG-4, "HR16DE/MR20DE MODELS : Work Flow" (HR16DE/MR20DE models).
NO >> GO TO 3.

3.CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect the battery cable from the negative terminal.
2. Disconnect the combination meter connector.
3. Check continuity between alternator harness connector and combination meter harness connector.

- K9K engine models

Alternator harness connector		Combination meter harness connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
F60	4	M34	25	Existed

- HR engine/MR engine models

Alternator harness connector		Combination meter harness connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
F15	3	M34	25	Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair the harness or connector.

cardiagn.com

4. CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

Check continuity between combination meter harness connector M34 terminal 2 and 10A fuse [No.4, located in the fuse block(J/B)].

Does continuity exist?

YES >> GO TO 5.
NO >> Repair the harness.

5. CHECK POWER SUPPLY CIRCUIT

1. Connect the battery cable to the negative terminal.
2. Check voltage between combination meter harness connector and ground.

Terminals			Condition	Voltage (Approx.)
(+)		(–)		
Combination meter harness connector	Terminal			
M34	2	Ground	When the ignition switch is in ON position	Battery voltage

Is the inspection result normal?

YES >> Replace combination meter.
NO >> Inspect the power supply circuit. Refer to PG-47, "Wiring Diagram - IGNITION POWER SUPPLY - ".

cardiagn.com

L TERMINAL CIRCUIT (SHORT)

Description

INFOID:0000000000955247

The “L” terminal circuit controls the charge warning lamp. The charge warning lamp illuminates when the ignition switch is set to ON or START. When the alternator is providing sufficient voltage with the engine running, the charge warning lamp will go off. If the charge warning lamp illuminates with the engine running, a malfunction is indicated.

Diagnosis Procedure

INFOID:0000000000955248

1.CHECK “L” TERMINAL CIRCUIT (SHORT)

1. Turn ignition switch OFF.
2. Disconnect alternator harness connector.
3. Turn ignition switch ON.

Does charge warning lamp illuminate?

YES >> GO TO 2.
NO >> Refer to CHG-3, "K9K MODELS : Work Flow" (K9K models) or CHG-4, "HR16DE/MR20DE MODELS : Work Flow" (HR16DE/MR20DE models).

2.CHECK HARNESS CONTINUITY (SHORT CIRCUIT)

1. Turn the ignition switch OFF.
2. Disconnect the battery cable from the negative terminal.
3. Disconnect combination meter connector.
4. Check continuity between combination meter harness connector and ground.

Combination meter harness connector		Ground	Continuity
Connector No.	Terminal No.		
M34	25		Not existed

Is the inspection result normal?

YES >> Replace combination meter.
NO >> Repair the harness.

cardiagn.com

S TERMINAL CIRCUIT

Description

INFOID:0000000000955249

The output voltage of the alternator is controlled by the IC regulator at the “S” terminal detecting the input voltage.
The “S” terminal circuit detects the battery voltage to adjust the alternator output voltage with the IC regulator.

Diagnosis Procedure

INFOID:0000000000955250

1.CHECK “S” TERMINAL CONNECTION

1. Turn ignition switch OFF.
2. Check if “S” terminal is clean and tight.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair “S” terminal connection.

2.CHECK “S” TERMINAL CIRCUIT

Check voltage between alternator harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Alternator harness connector	Terminal		
F15	4	Ground	Battery voltage

Is the inspection result normal?

YES >> Refer to CHG-4, "HR16DE/MR20DE MODELS : Work Flow" .
NO >> Check harness for open between alternator and fuse.

SYMPTOM DIAGNOSIS

CHARGING SYSTEM

Symptom Table

INFOID:0000000000955252

Symptom	Reference
Discharged battery	Refer to CHG-3, "K9K MODELS : Work Flow" (K9K models) or CHG-4, "HR16DE/MR20DE MODELS : Work Flow" (HR16DE/MR20DE models).
The charge warning lamp does not illuminate when the ignition switch is set to ON.	
The charge warning lamp does not turn OFF after the engine starts.	
The charge warning lamp turns ON when increasing the engine speed.	

cardiagn.com

PRECAUTION

PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000000955253

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

ON-VEHICLE MAINTENANCE

CHARGING SYSTEM PRELIMINARY INSPECTION

Inspection Procedure

INFOID:0000000000955256

1.CHECK BATTERY TERMINALS CONNECTION

Check if battery terminals are clean and tight.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair battery terminals connection.

2.CHECK FUSE

Check for blown fuse and fusible link.

- K9K engine models

Unit	Power source (Power supply terminals)	Fuse No.
Combination meter	Ignition switch ON (“L” terminal)	4

- HR engine/MR engine models

Unit	Power source (Power supply terminals)	Fuse No.
Alternator	Battery (“S” terminal)	33
Combination meter	Ignition switch ON (“L” terminal)	4

Is the inspection result normal?

YES >> GO TO 3.
NO >> Be sure to eliminate the cause of malfunction before installing new fuse.

3.CHECK “E” TERMINAL CONNECTION

Check if “E” terminal (alternator ground harness) is clean and tight.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair “E” terminal connection.

4.CHECK DRIVE BELT TENSION

Check drive belt tension. Refer to EM-259, "Inspection and Adjustment"(K9K), EM-15, "Checking"(HR16DE) or EM-134, "Checking"(MR20DE).

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair as needed.

3. Alternator
4. “B” terminal harness
5. “B” terminal nut

Refer to GI-4, "Components" for symbols in the figure.

K9K MODELS : Removal and Installation

INFOID:0000000000955259

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove RH fender protector partially.
3. Remove fuel injection pipe protector.
4. Remove drive belt. Refer to EM-259, "Removal and Installation".
5. Disconnect alternator connector.
6. Remove “B” terminal nut and “B” terminal harness.
7. Remove upper alternator mounting bolt.
8. Release lower alternator mounting bolt, then push it aside.
9. Remove alternator with lower mounting bolt.
   NOTE:
   Pull alternator to the front side from upside. Turn, then pull lower side of alternator with lower mounting bolt.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to tighten “B” terminal nut carefully.

- Install alternator, and check tension of belt. Refer to EM-259, "Inspection and Adjustment".

11. Rear bracket assembly
12. Terminal set

cardiagn.com

13. “B” terminal nut

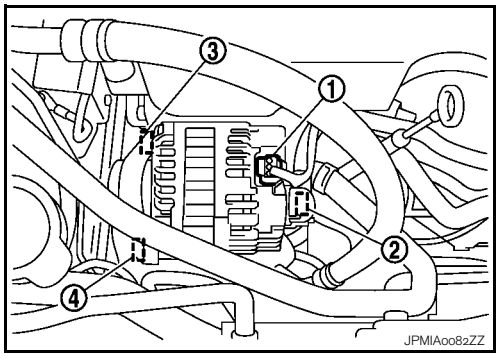
Refer to GI-4, "Components" for symbols in the figure.

HR16DE MODELS : Removal and Installation

INFOID:0000000000955727

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove drive belt. Refer to EM-16, "Removal and Installation".
3. Disconnect alternator connector (1).
4. Remove “B” terminal nut (2) and “B” terminal harness.
5. Remove upper alternator mounting bolt (3) and alternator lower mounting bolt (4).
6. Remove alternator upward from the vehicle.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to tighten “B” terminal nut carefully.

- Temporarily tighten the alternator bolts in order from the lower to the upper, and then tighten them in order from the upper to the lower.

  CAUTION:

  For the alternator, the front side (pulley side) surface is the reference surface. Fit the reference surface to the alternator mounting part, and then tighten the bolts.
- Install alternator, and check tension of belt. Refer to EM-15, "Checking".

HR16DE MODELS : Disassembly and Assembly

INFOID:0000000000967571

DISASSEMBLY

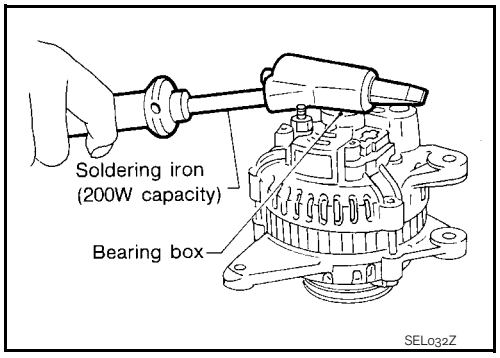
Rear Cover

NOTE:

Rear cover may be hard to remove because a ring is used to lock outer race of rear bearing. To facilitate removal of rear cover, heat only the bearing box section until the temperature increases to approximately 30°C (86°F) with a soldering iron (200W capacity).

CAUTION:

Never use a heat gun, as if can damage diode assembly.



ASSEMBLY

Rear Bearing

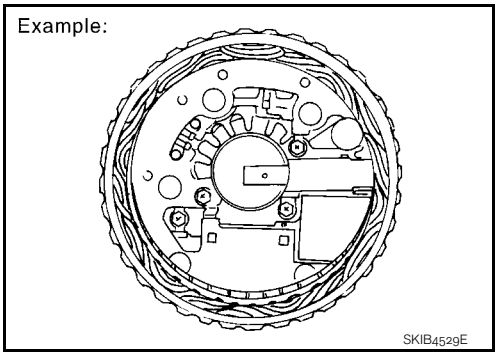
CAUTION:

- **Never reuse rear bearing. Replace with a new one.**
- **Never lubricate rear bearing outer race.**

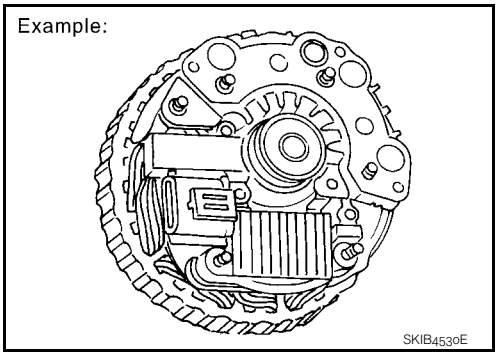
Rear Cover Installation

cardiagn.com

1. Fit brush assembly, diode assembly, regulator assembly and stator.



2. Push brushed up with fingers and install them to rotor.
NOTE:
Take care not damage slip ring sliding surface.



HR16DE MODELS : Inspection

INFOID:0000000000955729

INSPECTION AFTER DISASSEMBLY

Rotor Check

1. Resistance test

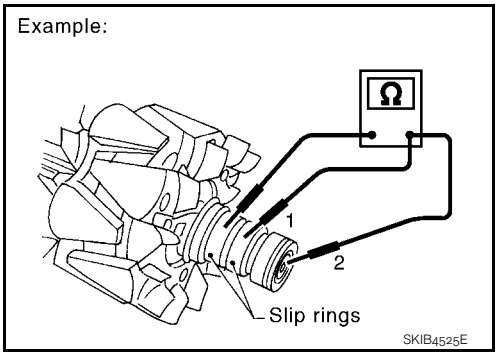
Resistance	**Refer to SDS CHG-34, "Alternator".**

- Replace the rotor if the measurement value is outside of the specified range.

2. Insulator test
   - Replace the rotor if continuity exists.
3. Check slip ring for wear.

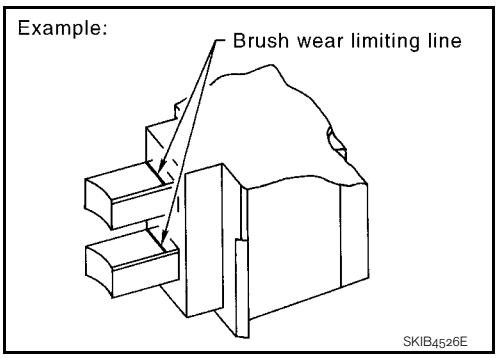
Slip ring minimum outer diameter	**: Refer to SDS CHG-34, "Alternator".**

- Replace the rotor if the measurement value is outside of the specified range.



Brush Check

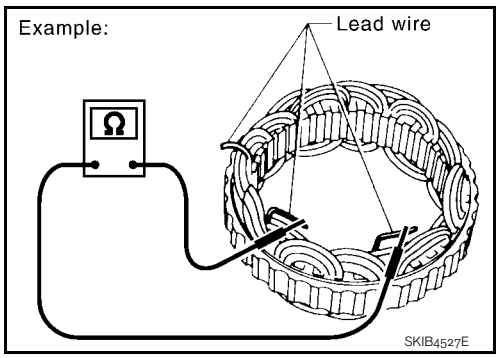
1. Check smooth movement of brush.
   - Check brush holder and clean if it is not smooth.
2. Check brush for wear.
   - Replace brush if it is worn down to the limit line.



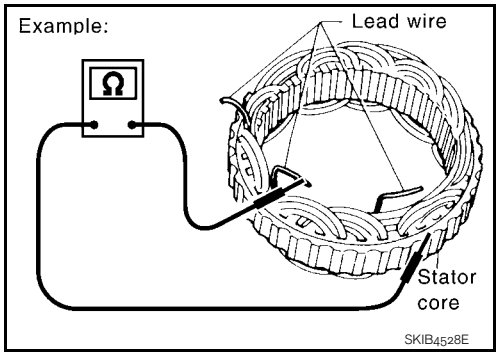
Stator Check

cardiagn.com

1. Continuity test
   - Replace the stator if continuity does not exist.



2. Ground test
   - Replace the stator if continuity exists.

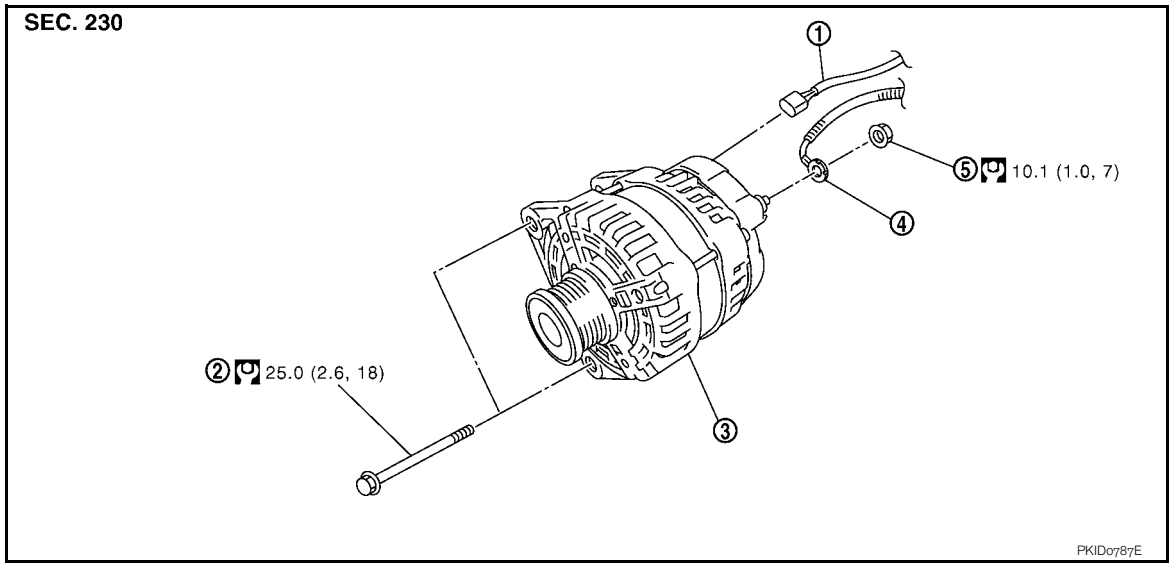


MR20DE MODELS

MR20DE MODELS : Exploded View

INFOID:0000000000955730

REMOVAL



1. Alternator connector
2. Alternator mounting bolt
3. Alternator
4. “B” terminal harness
5. “B” terminal nut

Refer to GI-4, "Components" for symbols in the figure.

DISASSEMBLY

Type: A2TJ0281ZE

6. Pulley
7. Pulley cap
8. Stator assembly
9. IC voltage regulator assembly
10. Diode assembly
11. Rear bracket assembly
12. Terminal set
13. “B” terminal nut

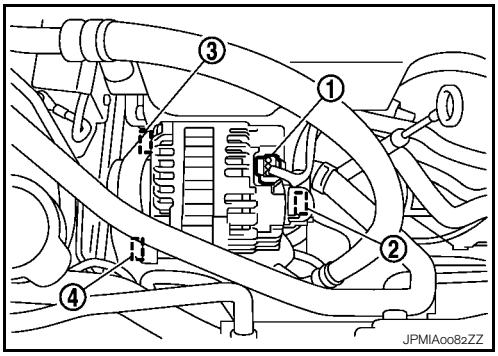
Refer to GI-4, "Components" for symbols in the figure.

MR20DE MODELS : Removal and Installation

INFOID:0000000000955731

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove drive belt. Refer to EM-134, "Removal and Installation".
3. Disconnect alternator connector (1).
4. Remove “B” terminal nut (2) and “B” terminal harness.
5. Remove upper alternator mounting bolt (3).
6. Completely loosen lower alternator mounting bolt (4), and pull it out until the bolt head is in contact with the side member. And then, remove the alternator by pulling it forward.
   NOTE:
   The alternator can be removed together with the bolts by pulling it forward and using the alternator bracket bolt hole cutout.
7. Remove alternator upward from the vehicle.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to tighten “B” terminal nut carefully.

- Temporarily tighten the alternator bolts in order from the lower to the upper, and then tighten them in order from the upper to the lower.

  CAUTION:

cardiagn.com

For the alternator, the front side (pulley side) surface is the reference surface. Fit the reference surface to the alternator mounting part, and then tighten the bolts.

- Install alternator, and check tension of belt. Refer to EM-134, "Checking".

MR20DE MODELS : Disassembly and Assembly

INFOID:0000000000955732

DISASSEMBLY

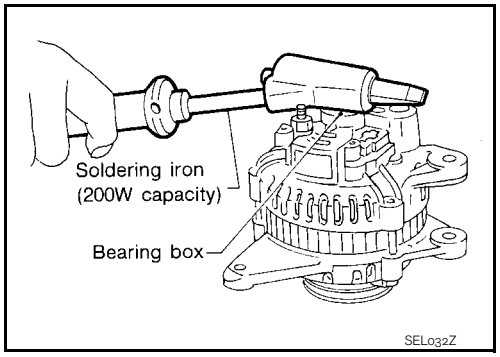
Rear Cover

NOTE:

Rear cover may be hard to remove because a ring is used to lock outer race of rear bearing. To facilitate removal of rear cover, heat only the bearing box section until the temperature increases to approximately 30°C (86°F) with a soldering iron (200W capacity).

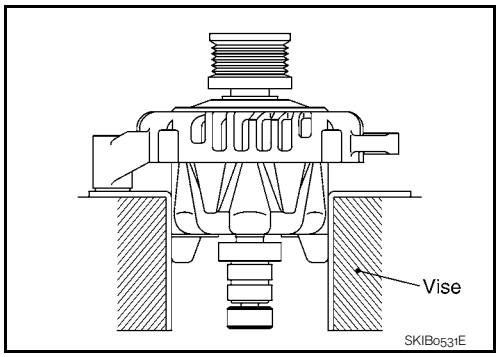
CAUTION:

Never use a heat gun, as if can damage diode assembly.

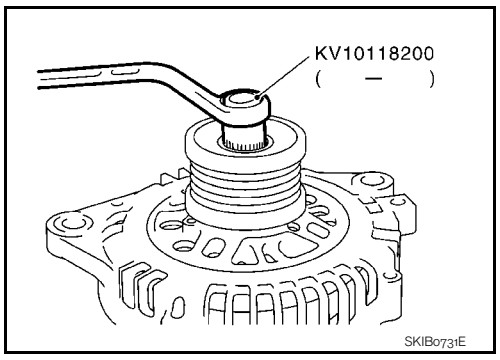


Front Cover

1. Set rotor to the vise.
   CAUTION:
   - **Be careful not to damage the rotor.**
   - **Use copper plate or thick cloth for rotor in the vise.**
2. Remove pulley cap, using suitable tool.



3. Remove alternator pulley, using alternator pulley adaptor [SST].



ASSEMBLY

Rear Bearing

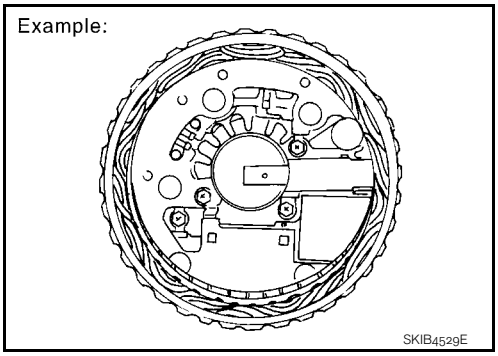
CAUTION:

- **Never reuse rear bearing. Replace with a new one.**
- **Never lubricate rear bearing outer race.**

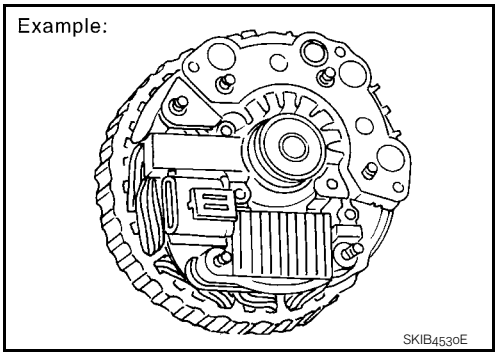
Rear Cover Installation

cardiagn.com

1. Fit brush assembly, diode assembly, regulator assembly and stator.



2. Push brushed up with fingers and install them to rotor.
NOTE:
Take care not damage slip ring sliding surface.



MR20DE MODELS : Inspection

INFOID:0000000000955733

INSPECTION AFTER DISASSEMBLY

Rotor Check

1. Resistance test

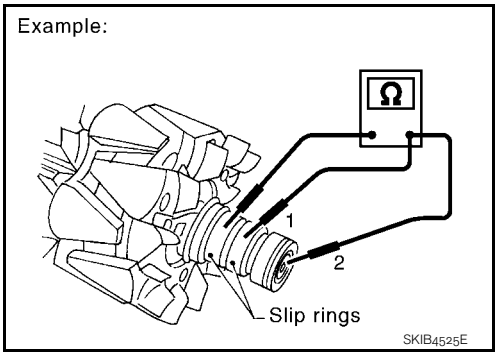
Resistance	**Refer to SDS CHG-34, "Alternator".**

- Replace the rotor if the measurement value is outside of the specified range.

2. Insulator test
   - Replace the rotor if continuity exists.
3. Check slip ring for wear.

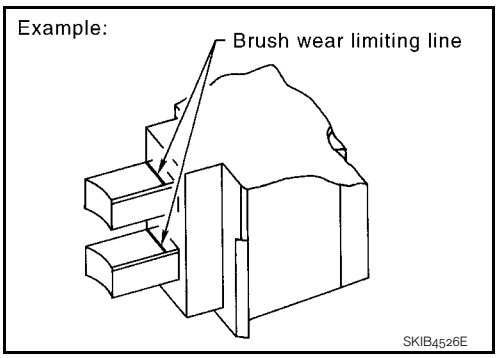
Slip ring minimum outer diameter	**: Refer to SDS CHG-34, "Alternator".**

- Replace the rotor if the measurement value is outside of the specified range.



Brush Check

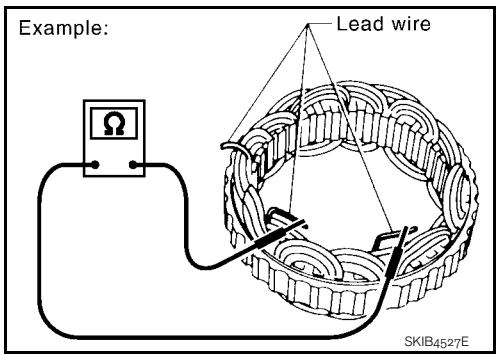
1. Check smooth movement of brush.
   - Check brush holder and clean if it is not smooth.
2. Check brush for wear.
   - Replace brush if it is worn down to the limit line.



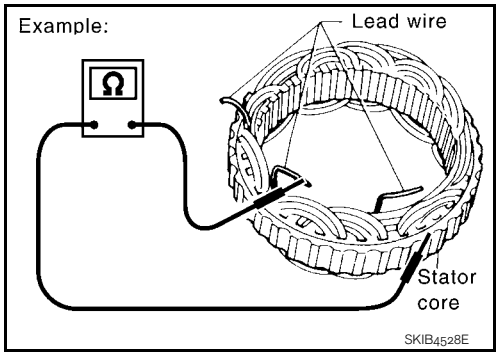
Stator Check

cardiagn.com

1. Continuity test
   - Replace the stator if continuity does not exist.



2. Ground test
   - Replace the stator if continuity exists.



cardiagn.com

PRECAUTION

PRECAUTIONS

Service Notice or Precautions for Clutch

INFOID:0000000001043506

CAUTION:

- **Recommended clutch fluid is brake fluid “DOT 4”. Refer to MA-21, "Fluids and Lubricants".**
- **Never reuse drained clutch fluid.**
- **Never splash clutch fluid on painted areas.**
- **Never use mineral oils such as gasoline or kerosene. It will ruin the rubber parts of the hydraulic system.**
- **If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.**
- **Never disassemble master cylinder and CSC.**

WARNING:

After cleaning clutch disc, wipe it with a dust collector. Never use compressed air.

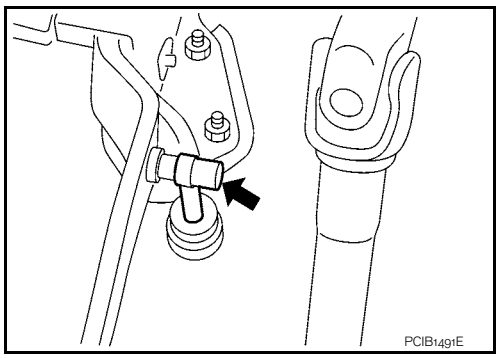
ON-VEHICLE MAINTENANCE

CLUTCH PEDAL

Inspection and Adjustment

INFOID:0000000001043509

INSPECTION



1. Check to see if the master cylinder rod end moves freely. It should not be bound by the clutch pedal.
   - If the rod end does not move freely, remove the rod end and check for deformation or damage on the rod end. Leave the rod end removed for step 2.
2. Check the clutch pedal stroke for free range of movement.

a. With the master cylinder rod end removed, manually move the clutch pedal up and down to determine if it moves freely.

b. If any sticking is noted, replace the clutch pedal assembly. Reverify that the master cylinder rod end moves freely.

3. Inspect the ASCD clutch switch position.

a. If the rod end does not move freely, check that the ASCD clutch switch is not applying pressure to the clutch pedal causing the rod end to bind. To adjust, disconnect the ASCD clutch switch electrical connector and turn the ASCD clutch switch.

b. Connect the ASCD clutch switch electrical connector.

4. Check the clutch hydraulic system components (master cylinder assembly, CSC) for sticking or binding.

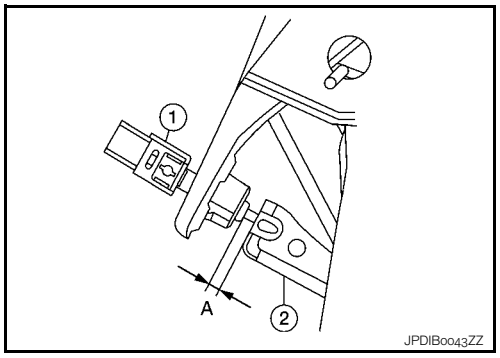
a. If any sticking or binding is noted, repair or replace the related parts as necessary.

b. If any hydraulic system repair was necessary, bleed the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".

NOTE:
Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all of the air from the system.

ADJUSTMENT

Adjust ASCD clutch switch (1) position so that clearance between clutch pedal (2) and thread end of ASCD clutch switch, with clutch pedal fully released, is within specification “A”.



Clearance “A” : Refer to CL-20, "Clutch Pedal".

cardiagn.com

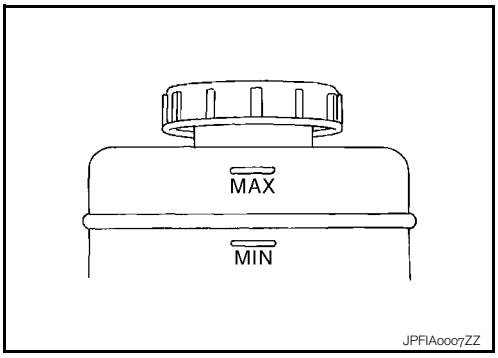
CLUTCH FLUID

Inspection

INFOID:0000000001092869

CLUTCH FLUID LEVEL

- Check that the fluid level in the reservoir tank is within the specified range (MAX – MIN lines).
- Visually check for any clutch fluid leakage around the reservoir tank.
- Check the clutch system for any leakage if the fluid level is extremely low (lower than MIN).



Air Bleeding Procedure

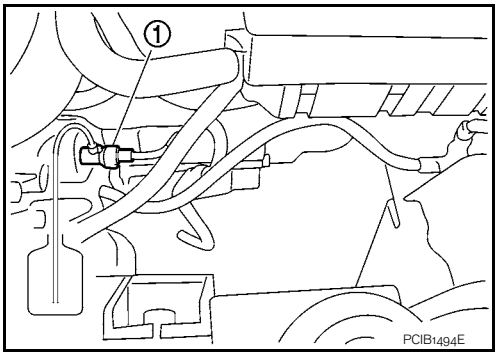
INFOID:0000000001043510

NOTE:
Do not use a vacuum assist or any other type of power bleeder on this system. Use of a vacuum assist or power bleeder will not purge all the air from the system.

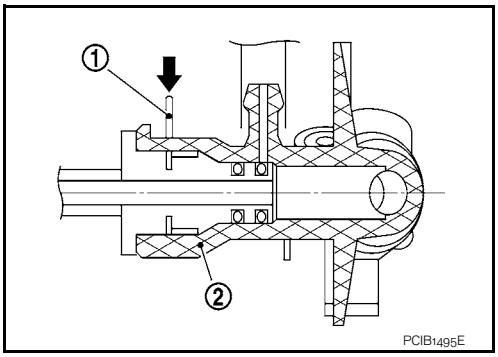
CAUTION:

- **Monitor clutch fluid level in reservoir tank to make sure it does not empty.**
- **Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.**
- Bleed the air of bleeding connector (1).

1. Fill reservoir tank with new clutch fluid.
2. Connect a transparent vinyl hose to air bleeder of bleeding connector.
3. “Depress” and “release” the clutch pedal slowly and fully 15 times at an interval of 2 to 3 seconds and release the clutch pedal.



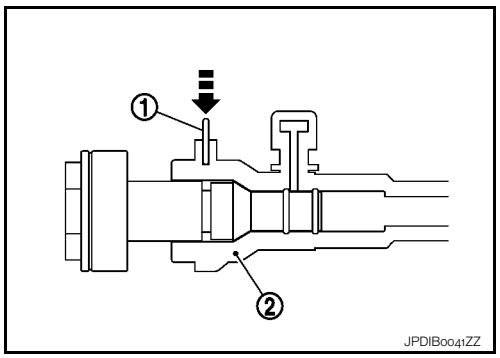
4. Push the lock pin (1) of the bleeding connector (2), and maintain the position.
   - RS5F92R



cardiagn.com

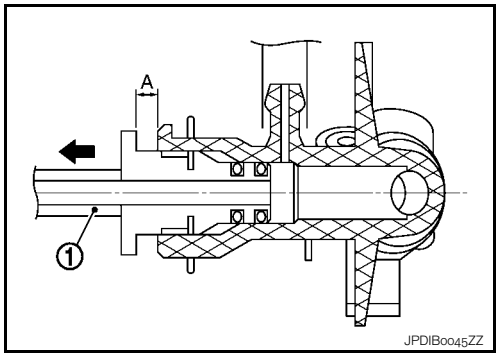
- RS6F94R and RS6F52A

CAUTION:
Hold it to prevent releasing clutch tube from bleeding connector when fluid pressure is applied in the tube.



5. Slide clutch tube (1) in the direction of the arrow as shown in the figure.
   - RS5F92R

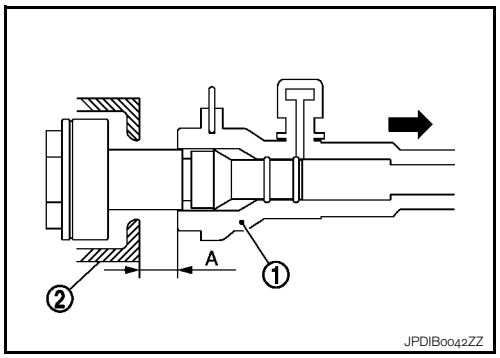
Dimension “A” : 5 mm (0.20 in)



- RS6F94R and RS6F52A

2 : Clutch housing

Dimension “A” : 10 mm (0.39 in)



6. Depress the clutch pedal soon and hold it, and then bleed the air from the piping.
   CAUTION:
   Hold it to prevent releasing clutch tube from bleeding connector when fluid pressure is applied in the tube.
7. Return clutch tube (1) and lock pin to their original positions.
8. Release clutch pedal and wait for 5 seconds.
9. Repeat steps 3 to 8 until no bubbles are observed in the clutch fluid.

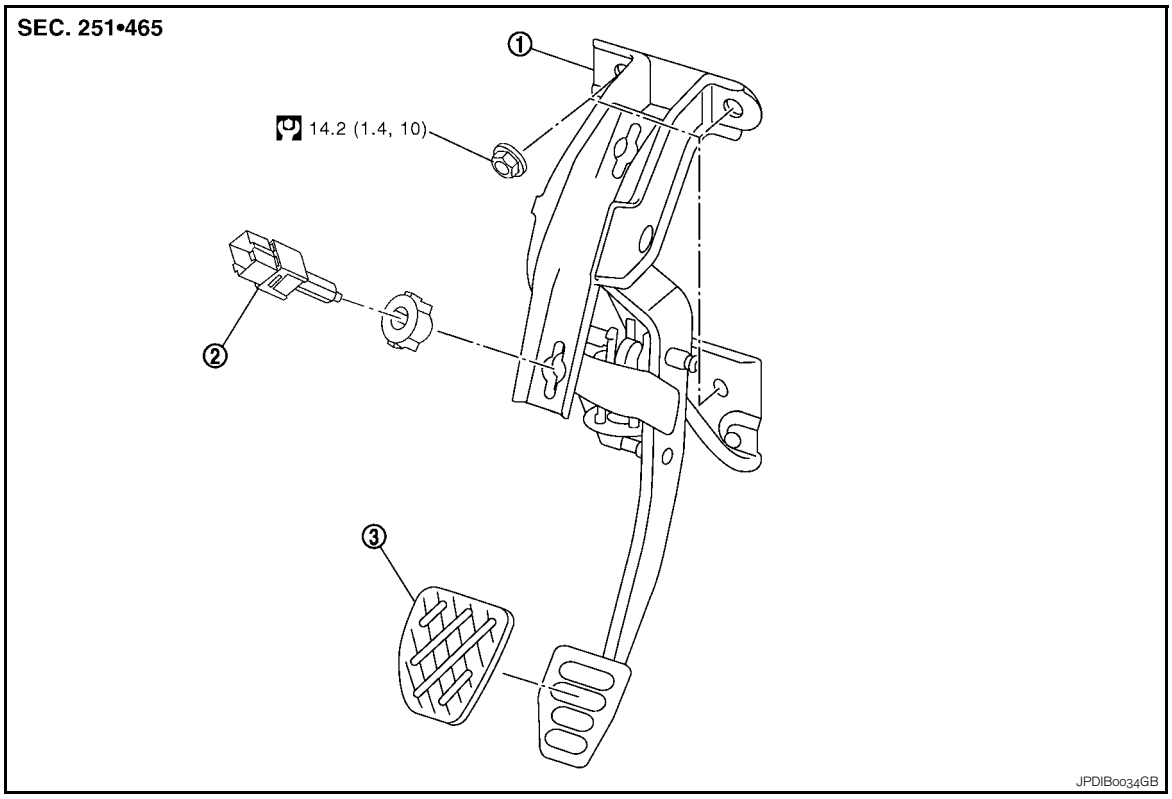
CLUTCH PEDAL

Exploded View

INFOID:0000000001043511



1. Clutch pedal assembly
2. ASCD clutch switch
3. Pedal pad

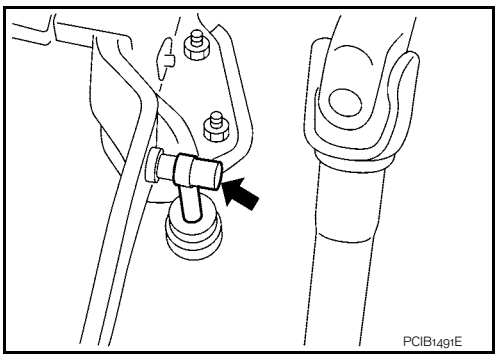
Refer to GI-4, "Components" for the symbols in the figure.

Removal and Installation

INFOID:0000000001043512

REMOVAL

1. Remove front kicking plate inner and dash side finisher. Refer to INT-14, "Removal and Installation".
2. Remove lower instrument panel, driver side. Refer to IP-12, "Removal and Installation".
3. Disconnect ASCD clutch switch harness connector and then disconnect clip of harness from clutch pedal assembly.
4. Remove master cylinder rod end from clutch pedal assembly.
5. Remove clutch pedal assembly.



INSTALLATION

Install in the reverse order of removal.

Inspection

INFOID:0000000001043513

cardiagn.com

INSPECTION AFTER REMOVAL

Check clutch pedal for bend, damage, or a cracked weld. If bend, damage, or a cracked weld is found, replace clutch pedal assembly.

Removal and Installation

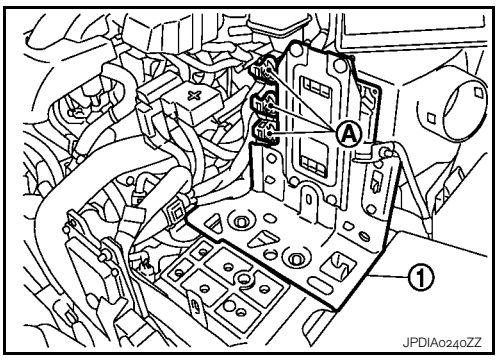
INFOID:0000000001043515

REMOVAL

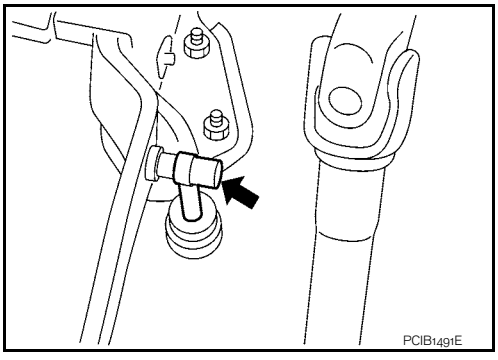
CAUTION:

- **Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.**
- **Never disassemble master cylinder.**

1. Remove the air cleaner case and air duct (inlet) or air ducts. Refer to EM-27, "Removal and Installation" (HR16DE), EM-144, "Removal and Installation" (MR20DE), or EM-265, "Removal and Installation" (K9K).
2. Remove the battery. Refer to PG-118, "Removal and Installation".
3. Disconnect the connectors (A) and then remove the bracket (1).
4. Drain clutch fluid in reservoir tank assembly and then remove hose.

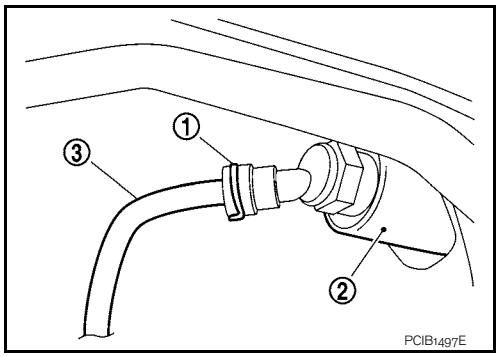


5. Remove master cylinder rod end from clutch pedal assembly.



cardiagn.com

6. Remove lock pin (1) from connector of master cylinder (2) and separate clutch tube (3).
7. Rotate master cylinder assembly clockwise by 45° and then remove master cylinder assembly from the vehicle.



INSTALLATION

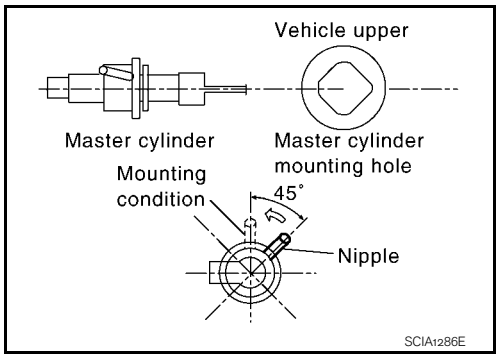
CAUTION:

Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.

1. Tilt master cylinder assembly clockwise by 45° and insert it to the mounting hole. Rotate counterclockwise and secure it. At this time, nipple is upward of the vehicle.
2. Install master cylinder rod end to clutch pedal assembly.
3. Install hose to reservoir tank assembly and master cylinder assembly.

   CAUTION:

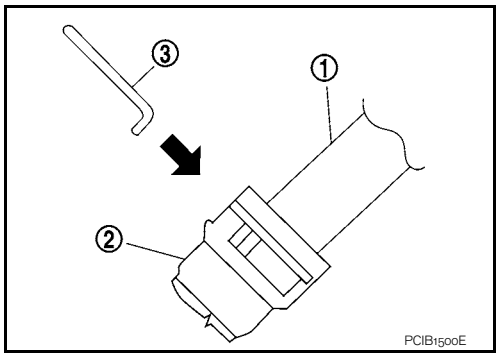
   Set hose with painted mark facing upward.



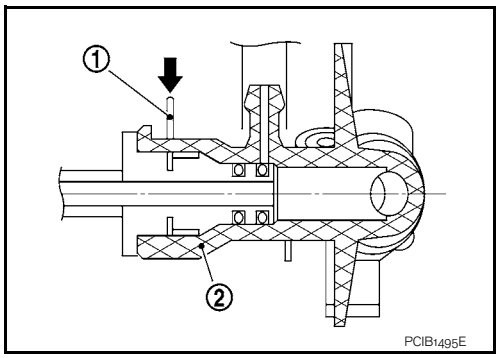
4. Install clutch tube (1) into connector of master cylinder assembly (2) until it stops.
5. Install lock pin (3) into connector of master cylinder assembly until it stops.
6. Fill new clutch fluid according to the following.

a. Fill reservoir tank assembly with new clutch fluid.

b. Connect a transparent vinyl hose to air bleeder of bleeding connector.

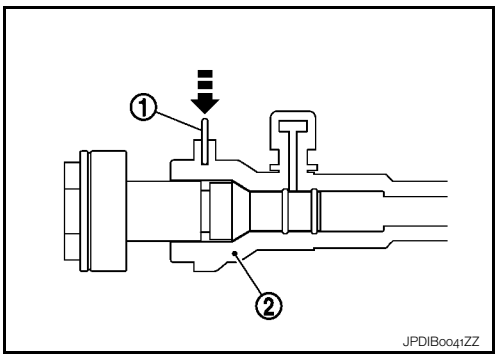


c. Push the lock pin (1) of the bleeding connector (2).
   - RS5F92R



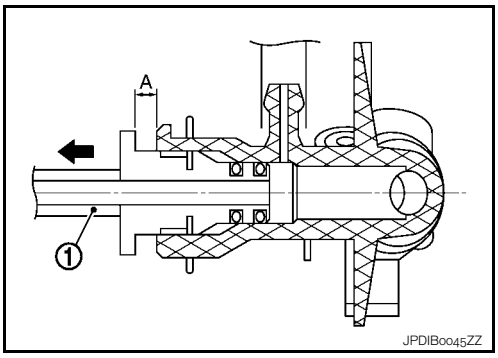
cardiagn.com

- RS6F94R and RS6F52A



d. Slide clutch tube (1) in the direction of the arrow as shown in the figure.
- RS5F92R

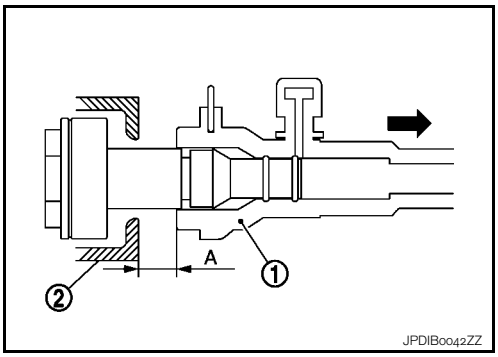
Dimension "A" : 5 mm (0.20 in)



- RS6F94R and RS6F52A

2 : Clutch housing

Dimension "A" : 10 mm (0.39 in)



e. Depress clutch pedal slowly to full stroke and then release it. Repeat this until new clutch fluid comes out.

CAUTION:
- **Hold it to prevent releasing clutch tube from bleeding connector when fluid pressure is applied in the tube.**
- **Monitor clutch fluid level in reservoir tank to make sure it does not empty.**

f. Place clutch tube (1) and lock pin back into position with clutch pedal depressed.

g. Bleed the air from the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".

7. After completing this procedure, inspect for clutch pedal. Refer to CL-5, "Inspection and Adjustment".

8. Install the bracket (1) and then connect the connectors (A).

9. Install the battery. Refer to PG-118, "Removal and Installation".

10. Install the air cleaner case and air duct (inlet) or air ducts. Refer to EM-27, "Removal and Installation" (HR16DE), EM-144, "Removal and Installation" (MR20DE), or EM-265, "Removal and Installation" (K9K).

Removal and Installation

INFOID:0000000001043520

CAUTION:
Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.

REMOVAL

Refer to the figure for removal procedure.

INSTALLATION

Refer to the figure for installation procedure.

- When installing clutch tube to connector of CSC, connector of clutch damper and connector of master cylinder, push it as far as it goes.
- When installing lock pin to connector of CSC, connector of clutch damper and connector of master cylinder, push it as far as it goes.
- After installation, bleed the air from the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".

CAUTION:
Never scratch or damage clutch hose.

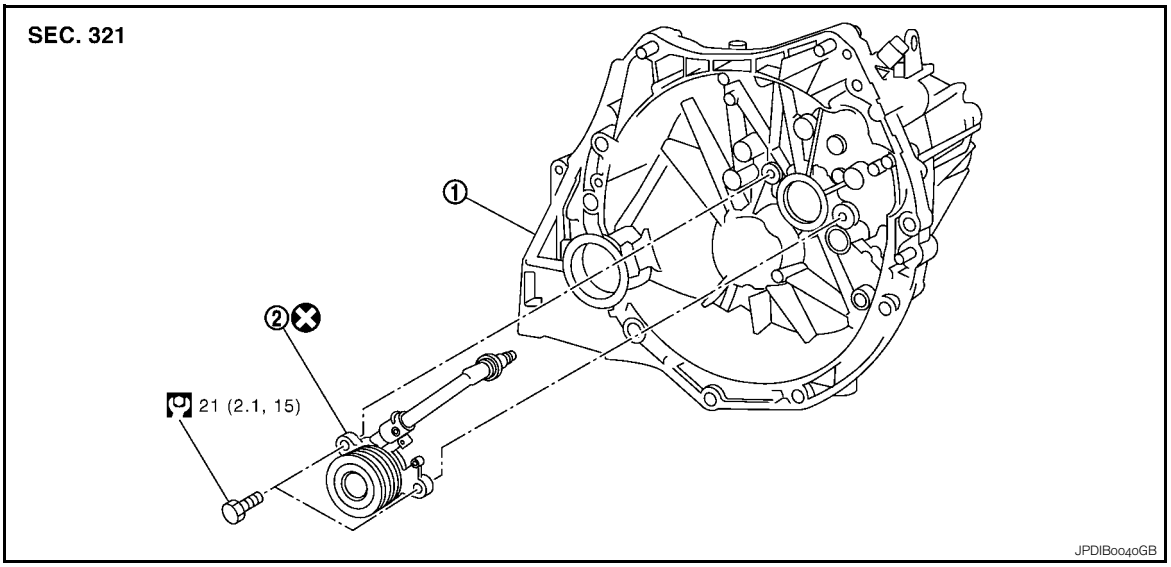
REMOVAL AND INSTALLATION

CSC (CONCENTRIC SLAVE CYLINDER)

Exploded View

INFOID:0000000001043521



1. Transaxle assembly
2. CSC (Concentric Slave Cylinder)

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000001043522

CAUTION:

- **If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.**
- **Never disassemble CSC.**
- **Keep painted surface on the body or other parts free of clutch fluid. If it spills, wipe up immediately and wash the affected area with water.**

REMOVAL

1. Remove transaxle assembly from the vehicle. Refer to TM-23, "Removal and Installation" (RS5F92R), TM-69, "Removal and Installation" (RS6F94R), or TM-123, "Removal and Installation" (RS6F52A).
2. Remove mounting bolts and then remove CSC from clutch housing.

INSTALLATION

1. Install CSC to clutch housing and then tighten bolts to the specified torque.
   CAUTION:
   - **Never reuse CSC.**
   - **Never insert and operate CSC because piston and stopper of CSC components may fall off.**
2. Install transaxle assembly. Refer to TM-23, "Removal and Installation" (RS5F92R), TM-69, "Removal and Installation" (RS6F94R), or TM-123, "Removal and Installation" (RS6F52A).
3. Bleed the air from the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".

3. Clutch cover
4. Input shaft

A. First step (MR20DE)
B. First step (HR16DE)
C. Final step

: Apply lithium-based grease including molybdenum disulphide.

Refer to GI-4, "Components" for symbols not described on the above.

CAUTION:

- **If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.**
- **Never bring any grease to the clutch disc facing, pressure plate surface and flywheel surface.**
- **When installing, be careful that grease applied to input shaft does not adhere to clutch disc.**
- **Never clean in solvent on clutch disc.**

HR16DE, MR20DE : Removal and Installation

INFOID:0000000001043524

CAUTION:

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

REMOVAL

1. Remove transaxle assembly from the vehicle. Refer to TM-23, "Removal and Installation" (RS5F92R), TM-69, "Removal and Installation" (RS6F94R), or TM-123, "Removal and Installation" (RS6F52A).
2. Loosen clutch cover mounting bolts.
3. Remove clutch cover and clutch disc.
   CAUTION:
   Never drop clutch disc.

INSTALLATION

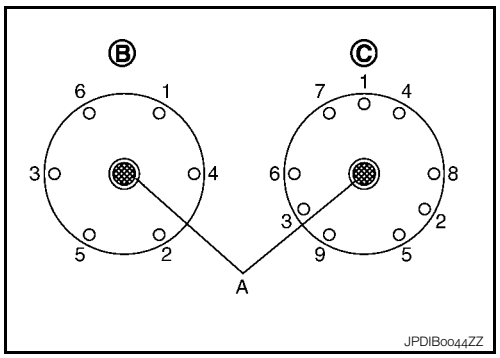
1. Clean clutch disc and input shaft splines to remove grease and powder arisen from abrasion.
2. Apply recommended grease to clutch disc and input shaft splines.
   CAUTION:

cardiagn.com

Be sure to apply grease to the points specified. Otherwise, noise, poor disengagement, or damage to the clutch may result. Excessive grease may cause slip or judder. And if it adheres to seal of CSC, it cause clutch fluid leakage. Wipe off excess grease. Wipe off any grease oozing from the parts.

3. Install clutch disc using a suitable clutch aligner (A).

   B : HR16DE
   C : MR20DE



4. Install clutch cover. Pre-tighten clutch cover mounting bolts.
5. Tighten clutch cover mounting bolts evenly to the specified torque in two steps in the order shown in the figure.
6. Install transaxle assembly to the vehicle. Refer to TM-23, "Removal and Installation" (RS5F92R), TM-69, "Removal and Installation" (RS6F94R), or TM-123, "Removal and Installation" (RS6F52A).

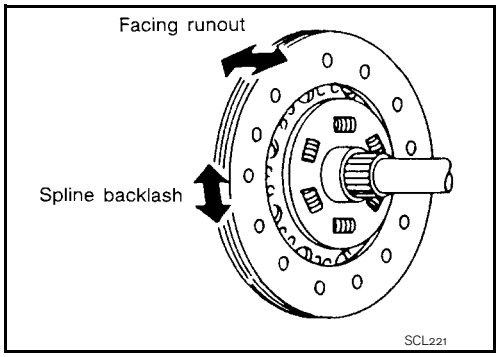
HR16DE, MR20DE : Inspection

INFOID:0000000001043525

INSPECTION AFTER REMOVAL

CLUTCH DISC

- Measure circumferential runout relative to clutch disc center spline. If it is outside the specification, replace clutch disc.

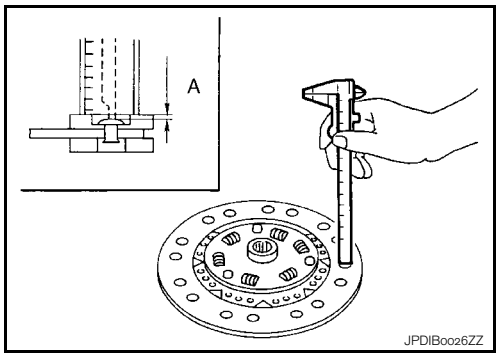


Runout limit/diameter of the area to be measured	**: Refer to CL-20, "Clutch Disc".**

- Measure backlash to clutch disc spline and main drive gear spline at the circumference of clutch disc. If outside the specification, replace clutch disc.

Maximum allowable spline backlash (at outer edge of disc)	**: Refer to CL-20, "Clutch Disc".**

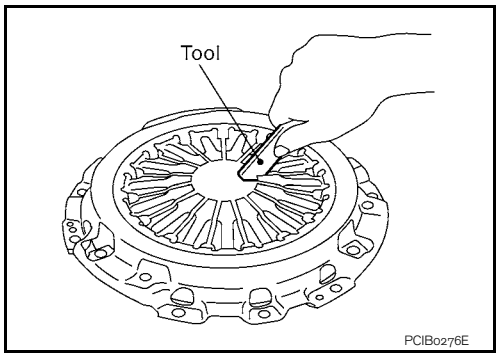
- Measure the depth “A” to clutch disc facing rivet heads using calipers. If it exceeds the allowable facing wear limit, replace clutch disc.



Facing wear limit (depth to the rivet head)	**: Refer to CL-20, "Clutch Disc".**

CLUTCH COVER

Check diaphragm spring lever claws for unevenness with the lever still on the vehicle. If they exceed the tolerance, adjust lever height using the diaphragm adjusting wrench [SST: ST20050240].



Tolerance for diaphragm spring lever unevenness	**: Refer to CL-20, "Clutch Cover".**

- Check clutch cover thrust ring for wear or breakage. If wear or breakage is found, replace clutch cover.
  NOTE:
  - Worn thrust ring will generate a beating noise when tapped at the rivet with a hammer.
  - Broken thrust ring will make a clinking sound when cover is shaken up and down.

cardiagn.com

- If a trace of burn or discoloration is found on the clutch cover pressure plate to clutch disc contact surface, repair the surface with sandpaper. If surface is damaged or distorted, replace clutch cover.

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000000951256

DETAILED FLOW

1.OBTAIN INFORMATION ABOUT SYMPTOM

Interview the customer to obtain the malfunction information (conditions and environment when the malfunction occurred) as much as possible when the customer brings the vehicle in.

>> GO TO 2.

2.CHECK DTC

Perform self diagnosis with CONSULT-III

Is any DTC detected?

YES >> Refer to BCS-61, "DTC Index".
NO >> GO TO 3.

3.REPRODUCE THE MALFUNCTION INFORMATION

Check the malfunction on the vehicle that the customer describes.
Inspect the relation of the symptoms and the condition when the symptoms occur.

>> GO TO 4.

4.PERFORM “BASIC INSPECTION”

Perform the basic inspection.Refer to DEF-74, "Basic Inspection".

>> GO TO 5.

5.IDENTIFY THE MALFUNCTIONING SYSTEM WITH “SYMPTOM DIAGNOSIS”

Use “Symptom diagnosis” from the symptom inspection result in step 3. Then identify where to start performing the diagnosis based on possible causes and symptoms.

>> GO TO 6.

6.IDENTIFY MALFUNCTIONING PARTS WITH “COMPONENT DIAGNOSIS”

Perform the diagnosis with “Component diagnosis” of the applicable system.

>> GO TO 7.

7.REPAIR OR REPLACE THE MALFUNCTIONING PARTS

Repair or replace the specified malfunctioning parts.

>> GO TO 8.

8.FINAL CHECK

Check that malfunctions are not reproduced when obtaining the malfunction information from the customer, referring to the symptom inspection result in step 3.

Is the malfunctioning part repaired or replaced?

YES >> Trouble diagnosis is completed.
NO >> GO TO 4.

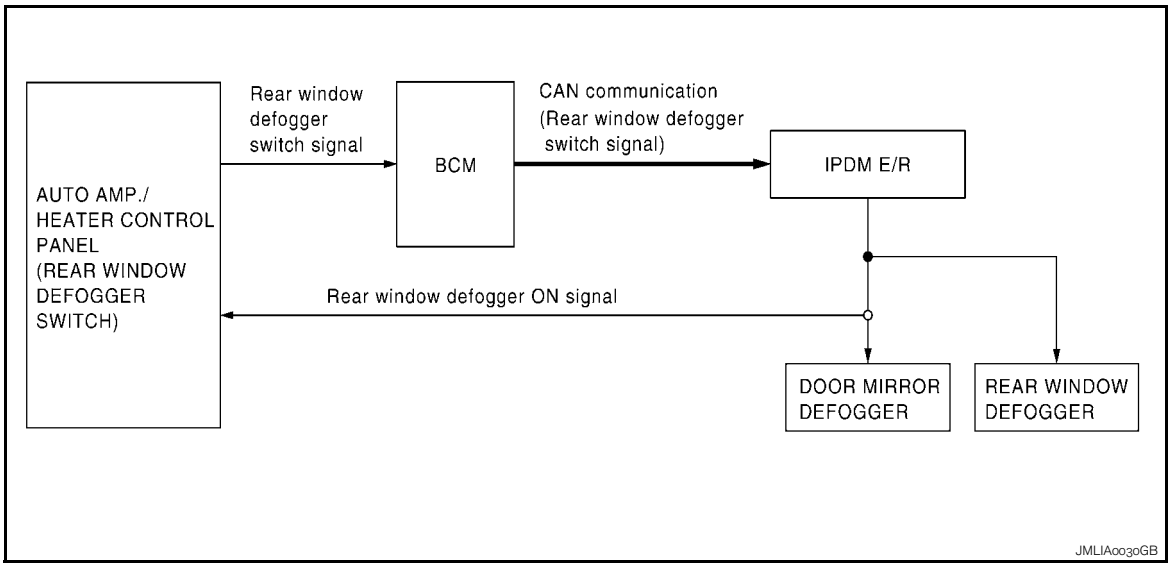
cardiagn.com

FUNCTION DIAGNOSIS

REAR WINDOW DEFOGGER SYSTEM

System Diagram

INFOID:0000000000951258



System Description

INFOID:0000000000951259

OPERATION DESCRIPTION

- BCM detects that the rear window defogger switch is turned ON when the ignition switch is ON, and then transmits the rear window defogger switch signal to IPDM E/R via CAN communication for approximately 15 minutes.
- IPDM E/R turns rear window defogger relay ON when it receives the rear window defogger switch signal. Then, it transmits the rear window defogger ON signal to ECM via CAN communication.
- The power is supplied to the rear window defogger and door mirror defogger (with mirror defogger) when the rear window defogger relay is turned ON.

TIMER FUNCTION

- BCM transmits the rear window defogger switch signal to IPDM E/R for approximately 15 minutes when the rear window defogger switch is turned ON with the ignition switch ON. Then, IPDM E/R operates the rear window defogger and door mirror defogger (with mirror defogger).
- The timer is cancelled if the rear window defogger switch is pressed again during timer operation. BCM stops the output of rear window defogger switch signal. The same reaction also occurs during timer operation if the ignition switch is turned OFF.

INPUT/OUTPUT SIGNAL CHART

Switch	Input signal to BCM	BCM function	Acutuator

DIAGNOSIS SYSTEM (BCM)
COMMON ITEM
COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001114950

APPLICATION ITEM
CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION
BCM can perform the following functions for each system.
NOTE:
It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

REAR WINDOW DEFOGGER
REAR WINDOW DEFOGGER : CONSULT-III Function (BCM - REAR DEFOGGER)

INFOID:0000000000951263

Data monitor

cardiagn.com

Monitor Item	Description
REAR DEF SW	Displays “Press (ON)/other (OFF)” status determined with the rear window defogger switch.
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.

ACTIVE TEST

Test Item	Description
REAR DEFOGGER	Give a drive signal to the rear window defogger relay to activate it.

carDiagn.com

DIAGNOSIS SYSTEM (IPDM E/R)

Diagnosis Description

INFOID:0000000001114954

Auto active test

Description

In auto active test mode, the IPDM E/R sends a drive signal to the following systems to check their operation.

- Oil pressure warning lamp
- Rear window defogger
- Front wiper (LO, HI)
- Parking lamps
- License plate lamps
- Tail lamps
- Front fog lamps
- Headlamps (LO, HI)
- A/C compressor (magnet clutch)
- Cooling fan (LO, HI)

Operation procedure

1. Close the hood and lift the wiper arms from the windshield. (Prevent windshield damage due to wiper operation)
   NOTE:
   When auto active test is performed with hood opened, sprinkle water on windshield beforehand.
2. Turn ignition switch OFF.
3. Turn the ignition switch ON, and within 20 seconds, press the driver door switch 10 times. Then turn the ignition switch OFF.
   CAUTION:
   Close passenger door.
4. Turn the ignition switch ON within 10 seconds. Then the horn sounds once and the auto active test starts.
5. The oil pressure warning lamp starts blinking when the auto active test starts.
6. After a series of the following operations is repeated 3 times, auto active test is completed.

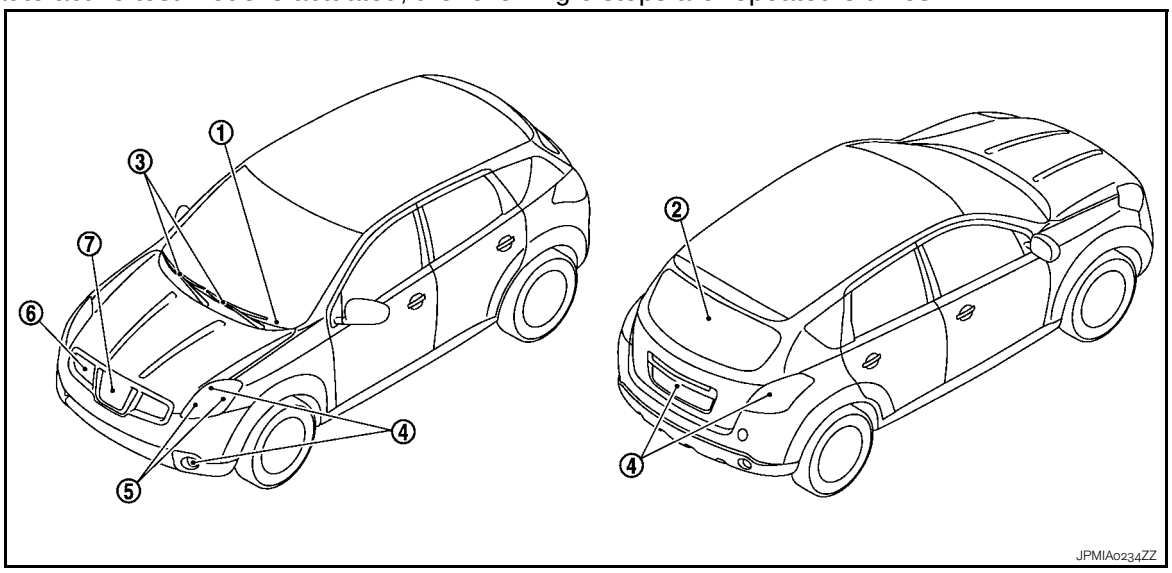
NOTE:
When auto active test mode has to be cancelled halfway through test, turn ignition switch OFF.

CAUTION:

- **If auto active test mode cannot be actuated, check door switch system.**
- **Never start the engine.**

Inspection in auto active test mode

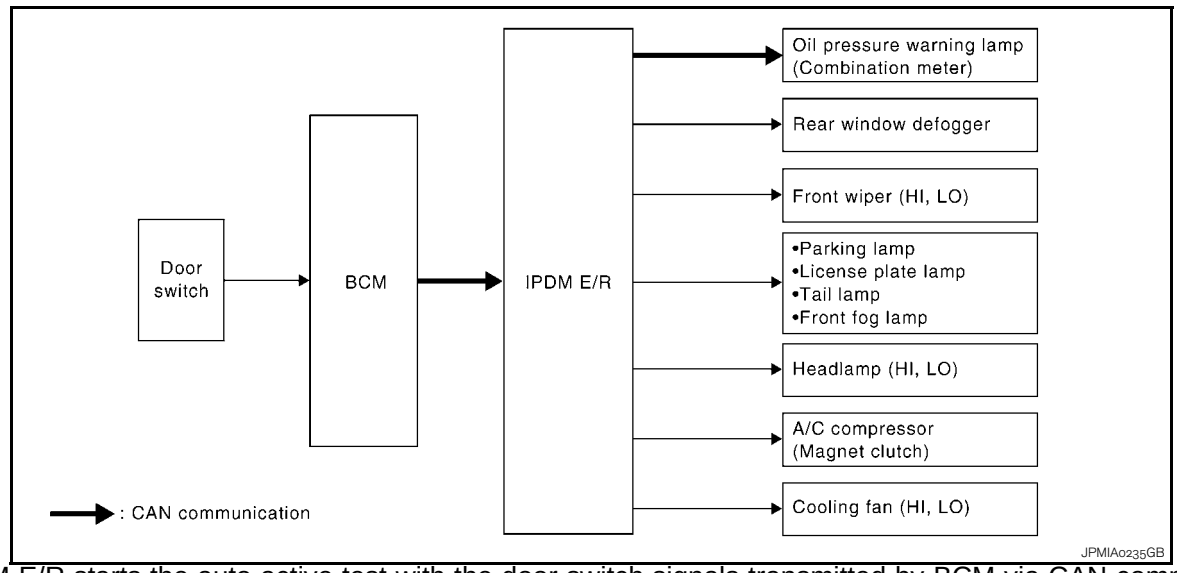
When auto active test mode is actuated, the following 6 steps are repeated 3 times.



cardiagn.com

Operation sequence	Inspection location	Operation
1	Oil pressure warning lamp	Blinks continuously during operation of auto active test.
2	Rear window defogger	10 seconds
3	Front wiper	LO for 5 seconds → HI for 5 seconds
4	• Parking lamps • License plate lamps • Tail lamps • Front fog lamps	10 seconds
5	Headlamps	LO ⇔ HI 5 times
6	A/C compressor (magnet clutch)	ON ⇔ OFF 5 times
7	Cooling fan	LO for 5 seconds → HI for 5 seconds

Concept of auto active test



- IPDM E/R starts the auto active test with the door switch signals transmitted by BCM via CAN communication. Therefore, the CAN communication line between IPDM E/R and BCM is considered normal if the auto active test starts successfully.
- The auto active test facilitates troubleshooting if any systems controlled by IPDM E/R cannot be operated.

Diagnosis chart in auto active test mode

Symptom	Inspection contents		Possible cause
Rear window defogger does not operate	Perform auto active test. Does the rear window defogger operate?	YES	BCM signal input circuit
		NO	• Rear window defogger • Rear window defogger ground circuit • Harness or connector between IPDM E/R and rear window defogger • IPDM E/R
Any of the following components do not operate • Parking lamps • License plate lamps • Tail lamps • Front fog lamps • Headlamp (HI, LO) • Front wiper (HI, LO)	Perform auto active test. Does the applicable system operate?	YES	BCM signal input circuit
		NO	• Lamp or motor • Lamp or motor ground circuit • Harness or connector between IPDM E/R and applicable system • IPDM E/R

Symptom	Inspection contents		Possible cause
A/C compressor does not operate	Perform auto active test. Does the magnet clutch operate?	YES	• Communication signal between BCM and auto amp. (with auto A/C) • Communication signal between BCM and heater control panel (without auto A/C, with manual A/C) • BCM • CAN communication signal between BCM and ECM • CAN communication signal between ECM and IPDM E/R
		NO	• Magnet clutch • Harness or connector between IPDM E/R and magnet clutch • IPDM E/R
Oil pressure warning lamp does not operate	Perform auto active test. Does the oil pressure warning lamp blink?	YES	• Harness or connector between IPDM E/R and oil pressure switch • Oil pressure switch • IPDM E/R
		NO	• CAN communication signal between IPDM E/R and BCM • CAN communication signal between BCM and combination meter • Combination meter
Cooling fan does not operate	Perform auto active test. Does the cooling fan operate?	YES	• ECM signal input circuit • CAN communication signal between ECM and IPDM E/R
		NO	• Cooling fan • Cooling fan ground circuit • Harness or connector between IPDM E/R and cooling fan • IPDM E/R • Cooling fan relay-3* • Harness or connector between IPDM E/R and cooling fan relay-3* • Harness or connector between cooling fan and cooling fan relay-3*

NOTE:

*: MR engine and K9K engine models

CONSULT - III Function (IPDM E/R)

INFOID:0000000001114955

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with IPDM E/R.

Diagnosis mode	Description
Ecu Identification	Allows confirmation of IPDM E/R part number.
Self Diagnostic Result	Displays the diagnosis results judged by IPDM E/R.
Data Monitor	Displays the real-time input/output data from IPDM E/R input/output data.
Active Test	IPDM E/R can provide a drive signal to electronic components to check their operations.
CAN Diag Support Monitor	The results of transmit/receive diagnosis of CAN communication can be read.

SELF DIAGNOSTIC

Refer to PCS-30, "DTC Index".

DATA MONITOR

Monitor item

cardiagn.com

Monitor Item [Unit]	MAIN SIGNALS	Description
MOTOR FAN REQ [1 - 4]	×	Displays the value of the cooling fan speed signal received from ECM via CAN communication.
AC COMP REQ [Off/On]	×	Displays the status of the A/C compressor request signal received from ECM via CAN communication.
TAIL&CLR REQ [Off/On]	×	Displays the status of the position light request signal received from BCM via CAN communication.
HL LO REQ [Off/On]	×	Displays the status of the low beam request signal received from BCM via CAN communication.
HL HI REQ [Off/On]	×	Displays the status of the high beam request signal received from BCM via CAN communication.
FR FOG REQ [Off/On]	×	Displays the status of the front fog light request signal received from BCM via CAN communication.
HL WASHER REQ [Off/On]		Displays the status of the headlamp washer request signal received from BCM via CAN communication.
FR WIP REQ [Stop/1LOW/Low/Hi]	×	Displays the status of the front wiper request signal received from BCM via CAN communication.
WIP AUTO STOP [STOP P/ACT P]	×	Displays the status of the front wiper auto stop signal judged by IPDM E/R.
WIP PROT [Off/BLOCK]	×	Displays the status of the front wiper fail-safe operation judged by IPDM E/R.
ST RLY REQ [Off/On]		Displays the status of the ignition and starter request signal received from BCM via CAN communication.
IGN RLY [Off/On]	×	Displays the status of the ignition relay judged by IPDM E/R.
RR DEF REQ [Off/On]	×	Displays the status of the rear defogger request signal received from BCM via CAN communication.
OIL P SW [Open/Close]		Displays the status of the oil pressure switch judged by IPDM E/R.
REV SW [Off/On]		Displays the status of the reverse switch judged by IPDM E/R.
HOOD SW [Off/On]		Displays the status of the hood switch judged by IPDM E/R. **NOTE:** This item is monitored only the vehicle with the Vehicle Security (Theft Warning) system.
THFT HRN REQ [Off/On]		Displays the status of the theft warning horn request signal received from BCM via CAN communication. **NOTE:** This item is monitored only the vehicle with the Vehicle Security (Theft Warning) system.
HORN CHIRP [Off/On]		**NOTE:** This item is indicated, but not monitored.
IGN ON SW [Off/On]		Displays the status of the ignition switch judged by IPDM E/R.

ACTIVE TEST

Test item

Test item	Operation	Description
REAR DEFOGGER	Off	OFF
	On	Operates the rear window defogger relay.
FRONT WIPER	Off	OFF
	Lo	Operates the front wiper relay.
	Hi	Operates the front wiper relay and front wiper high relay.

carDiag.com

Test item	Operation	Description
MOTOR FAN	1	OFF
	2	Operates the cooling fan relay (low operation).
	3	Operates the cooling fan relay (high operation).
	4	
HEAD LAMP WASHER	On	Operates the headlamp washer relay for 1 second.
EXTERNAL LAMPS	Off	OFF
	TAIL	Operates the tail lamp relay.
	Lo	Operates the headlamp low relay.
	Hi	Operates the headlamp low relay and ON/OFF the headlamp high relay at 1 second intervals.
	Fog	Operates the front fog lamp relay.
HORN	On	Operates horn relay for 20 ms.

cardiagn.com

COMPONENT DIAGNOSIS

REAR WINDOW DEFOGGER SWITCH WITH AUTO A/C

WITH AUTO A/C : Description

INFOID:0000000000951265

The rear window defogger is operated by turning the rear window defogger switch ON.

WITH AUTO A/C : Component Function Check

INFOID:0000000000951266

1.CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

Check (“REAR DEF SW”, “IGN ON SW”) in DATA MONITOR mode with CONSULT-III. Refer to DEF-6, "REAR WINDOW DEFOGGER : CONSULT-III Function (BCM - REAR DEFOGGER)".

When rear defogger switch is turned to ON

REAR DEF SW :ON

OK or NG

OK >> Rear window defogger switch is OK.
NG >> Refer to DEF-13, "WITH AUTO A/C : Diagnosis Procedure".

WITH AUTO A/C : Diagnosis Procedure

INFOID:0000000000951267

1.CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

1. Turn ignition switch ON.
2. Check voltage between BCM connector ground.

Connector	Terminal (+)	Terminal (–)	Condition	Voltage (V) (Approx.)
M65	21	Ground	Rear window defogger switch is pressed.	0
			Rear window defogger switch is OFF.	
JPMIA0154GB

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK REAR WINDOW DEFOGGER SWITCH CIRCUIT HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and auto amp. connector.
3. Check continuity between BCM connector and auto amp. connector.

BCM connector	Terminal	Auto amp. connector	Terminal	Continuity
M65	21	M53	23	Yes

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	21		No

Is the inspection result normal?

YES >> GO TO 3.

carDiagn.com

NO >> Repair or replace harness between BCM and auto amp.

3.CHECK REAR WINDOW DEFOGGER SWITCH GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect auto amp,connector.
3. Check continuity between auto amp. connector and ground.

Auto amp. connector	Terminal	Ground	Continuity
M53	17		Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness between auto amp.and ground.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector and ground.

Connector	Terminal		Voltage (V) (Approx.)
	(+)	(–)	
M65	21	Ground	
JPMIA0154GB

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 6.

5.CHECK IINTERMITTENT INCDENT

Check intermittent incident.
Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace auto amp. Refer to VTL-21, "Removal and Installation".
NO >> Repair or replace the malfunctioning parts.

6.CHECK IINTERMITTENT INCDENT

Check intermittent incident.
Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Repair or replace the malfunctioning parts.

WITHOUT AUTO A/C

WITHOUT AUTO A/C : Description

INFOID:0000000000978700

The rear window defogger is operated by turning the rear window defogger switch ON.

WITHOUT AUTO A/C : Component Function Check

INFOID:0000000000978756

1.CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

Check (“REAR DEF SW”, “IGN ON SW”) in DATA MONITOR mode with CONSULT-III. Refer to DEF-6, "REAR WINDOW DEFOGGER : CONSULT-III Function (BCM - REAR DEFOGGER)".

cardiagn.com

When rear defogger switch is turned to ON

REAR DEF SW :ON

OK or NG

OK >> Rear window defogger switch is OK.
NG >> Refer to DEF-13, "WITH AUTO A/C : Diagnosis Procedure".

WITHOUT AUTO A/C : Diagnosis Procedure

INFOID:0000000000978757

1.CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

1. Turn ignition switch ON.
2. Check voltage between BCM connector ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M65	21	Ground	Rear window defogger switch is pressed.	0
			Rear window defogger switch is OFF.	
JPMIA0154GB

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK REAR WINDOW DEFOGGER SWITCH CIRCUIT HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and heater control panel connector.
3. Check continuity between BCM connector and heater control panel connector.

BCM connector	Terminal	Heater control panel connector	Terminal	Continuity
M65	21	M54	18	Yes

4. Check continuity between BCM connector and ground

BCM connector	Terminal	Ground	Continuity
M65	21		No

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and heater control panel.

3.CHECK REAR WINDOW DEFOGGER SWITCH

Check rear window defogger switch.
Refer to DEF-16, "WITHOUT AUTO A/C : Component Inspection".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Replace heater control panel (rear window defogger switch). Refer to VTL-72, "Removal and Installation".

4.CHECK REAR WINDOW DEFOGGER SWITCH GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect heater control panel connector.
3. Check continuity between heater control panel connector and ground.

carDiagn.com

Heater control panel connector	Terminal	Ground	Continuity
M54	20		Existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness between heater control panel and ground.

5.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector and ground.

Connector	Terminal (+)	Terminal (–)	Voltage (V) (Approx.)
M65	21	Ground	
JPMIA0154GB

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> GO TO 6.

6.CHECK INTERMITTENT INCDENT

Check intermittent incident.
Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Repair or replace the malfunctioning parts.

WITHOUT AUTO A/C : Component Inspection

INFOID:0000000000997885

1.CHECK HEATER CONTROL PANEL (REAR WINDOW DEFOGGER SWITCH)

Check heter control panel (rear window defogger switch).

Terminal (Heater control panel)		Condition	Continuity
18	20	Rear window defogger switch is pressed	Existed
		Rear window defogger switch: OFF	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace heter control panel (rear window defogger switch). Refer to VTL-72, "Removal and Installation".

cardiagn.com

REAR WINDOW DEFOGGER POWER SUPPLY AND GROUND CIRCUIT

Description

INFOID:0000000000951272

Heats the heating wire with the power supply from the rear window defogger relay to prevent the rear window from fogging up.

Component Function Check

INFOID:0000000000951273

1.CHECK REAR WINDOW DEFOGGER

Check that the heating wire of rear window defogger is heated when turning the rear window defogger switch ON.

Is the inspection result normal?

YES >> Rear window defogger is OK.
NO >> Refer to DEF-17, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000951274

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between rear window defogger connector and ground.

Terminals			Condition of rear window defogger switch	Voltage (V) (Approx.)
(+)		(–)		
Rear window defogger connector	Terminal			
B58	1	Ground	ON	Battery voltage
			OFF	0

Is the inspection result normal?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect rear window defogger connector.
3. Check continuity between rear window defogger connector and ground.

Rear window defogger connector	Terminal	Ground	Continuity
D155	2		Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness between rear window defogger and ground.

3.CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and rear window defogger connectors.
3. Check continuity between IPDM E/R and rear window defogger connector.

IPDM E/R connector	Terminal	Rear window defogger connector	Terminal	Continuity
E14	49	B58	1	Existed

4. Check continuity between IPDM E/R connector and ground.

IPDM E/R connector	Terminal	Ground	Continuity
E14	49		Not existed

cardiagn.com

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness between IPDM E/R and rear window defogger .

4.CHECK FILAMENT

Check filament.
Refer to DEF-18, "Component Inspection".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair filament.

5.CHECK IPDM E/R OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between IPDM E/R connector and ground.

Terminal		Condition	Voltage (V) (Approx.)
(+)	(–)		
49	Ground	Rear window defogger switch : ON	Battery voltage
		Rear window defogger switch : OFF	0

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".

Component Inspection

INFOID:0000000000951275

1.CHECK FILAMENT

Check the filament for damage or blown.
Refer to DEF-75, "Inspection and Repair".

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Repair filament.

cardiagn.com

DRIVER SIDE DOOR MIRROR DEFOGGER

Description

INFOID:0000000000951276

Heats the heating wire with the power supply from the rear window defogger relay to prevent the door mirror from fogging up.

Component Function Check

INFOID:0000000000951277

1.CHECK DRIVER SIDE DOOR MIRROR DEFOGGER

Check that heating wire of driver side door mirror defogger is heated when turning the rear window defogger switch ON.

Is the inspection result normal?

YES >> Driver side door mirror defogger is OK.
NO >> Refer to DEF-19, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000951278

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door mirror (driver side) connector.
3. Turn ignition switch ON.
4. Check voltage between door mirror (driver side) connector and ground.

Terminals			Condition of rear window defogger switch	Voltage (V) (Approx.)
(+)		(–)		
Door mirror (driver side) connector	Terminal			
D3(LHD) D23(RHD)	7	Ground	ON	Battery voltage
			OFF	0

Is the inspection result normal?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between door mirror (driver side) connector and ground.

Door mirror (driver side) connector	Terminal	Ground	Continuity
D3(LHD) D23(RHD)	8		Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness between door mirror (driver side) and ground.

3.CHECK DOOR MIRROR HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between door mirror (driver side) connector and IPDM E/R.

Door mirror (driver side) connector	Terminal	IPDM E/R connector	Terminal	Continuity
D3(LHD) D23(RHD)	7	E14	49	Existed

4. Check continuity between door mirror (driver side) connector and ground.

PASSENGER SIDE DOOR MIRROR DEFOGGER

Description

INFOID:0000000000951280

Heats the heating wire with the power supply from the rear window defogger relay to prevent the door mirror from fogging up.

Component Function Check

INFOID:0000000000951281

1.CHECK PASSENGER SIDE DOOR MIRROR DEFOGGER

Check that the heating wire of passenger side door mirror defogger is heated when turning the rear window defogger switch ON.

Is the inspection result normal?

YES >> Passenger side door mirror defogger is OK.
NO >> Refer to DEF-21, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000998568

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door mirror (passenger side) connector.
3. Turn ignition switch ON.
4. Check voltage between door mirror (passenger side) connector and ground.

Terminals			Condition of rear window defogger switch	Voltage (V) (Approx.)
(+)		(–)		
Door mirror (passenger side) connector	Terminal			
D43(LHD) D63(RHD)	7	Ground	ON	Battery voltage
			OFF	0

Is the inspection result normal?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between door mirror (passenger side) connector and ground.

Door mirror (passenger side) connector	Terminal	Ground	Continuity
D43(LHD) D63(RHD)	8		Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness between door mirror (passenger side) and ground.

3.CHECK DOOR MIRROR HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between door mirror (passenger side) connector and IPDM E/R.

Door mirror (passenger side) connector	Terminal	IPDM E/R connector	Terminal	Continuity
D43(LHD) D63(RHD)	7	E14	49	Existed

REAR WINDOW DEFOGGER ON SIGNAL WITH AUTO A/C

WITH AUTO A/C : Description

INFOID:0000000001025363

Turns the indicator lamp in the rear window defogger switch ON when operating the rear window defogger.

WITH AUTO A/C : Component Function Check

INFOID:0000000001025364

1.CHECK REAR WINDOW DEFOGGER ON SIGNAL

Check that the indicator lamps of rear window defogger switch are illuminated when turning the rear window defogger switch ON.

Is the inspection result normal?

OK >> Rear window defogger ON signal is OK.
NG >> Refer to DEF-23, "WITH AUTO A/C : Diagnosis Procedure".

WITH AUTO A/C : Diagnosis Procedure

INFOID:0000000001025365

1.CHECK REAR WINDOW DEFOGGER ON SIGNAL

1. Turn ignition switch ON.
2. Check voltage between auto amp. connector ground.

Auto amp. connector	Terminal		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M53	22	Ground	Rear window defogger switch is pressed.	Battery voltage
			Rear window defogger switch is OFF.	0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and auto amp. connector.
3. Check continuity between IPDM E/R connector and auto amp. connector.

IPDM E/R connector	Terminal	Auto amp. connector	Terminal	Continuity
E14	49	M53	22	Existed

4. Check continuity between BCM connector and ground.

IPDM E/R connector	Terminal	Ground	Continuity
E14	49		Not existed

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness between IPDM E/R and auto amp.

3.CHECK IINTERMITTENT INCDENT

Check intermittent incident.
Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace auto amp. Refer to VTL-21, "Removal and Installation".
NO >> Repair or replace the malfunctioning parts.

WITHOUT AUTO A/C

WITHOUT AUTO A/C : Description

INFOID:0000000001025367

cardiagn.com

Turns the indicator lamp in the rear window defogger switch ON when operating the rear window defogger.

WITHOUT AUTO A/C : Component Function Check

INFOID:0000000001025368

1.CHECK REAR WINDOW DEFOGGER ON SIGNAL

Check that the indicator lamps of rear window defogger switch are illuminated when turning the rear window defogger switch ON.

Is the inspection result normal?

OK >> Rear window defogger ON signal is OK.
NG >> Refer to DEF-23, "WITH AUTO A/C : Diagnosis Procedure".

WITHOUT AUTO A/C : Diagnosis Procedure

INFOID:0000000001025369

1.CHECK REAR WINDOW DEFOGGER ON SIGNAL

1. Turn ignition switch ON.
2. Check voltage between heater control panel connector ground.

Heater control panel connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M54	19	Ground	Rear window defogger switch is ON.	Battery voltage
			Rear window defogger switch is OFF.	0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and heater control panel connector.
3. Check continuity between IPDM E/R connector and heater control panel connector.

IPDM E/R connector	Terminal	Heater control panel connector	Terminal	Continuity
E14	49	M54	19	Existed

4. Check continuity between BCM connector and ground

IPDM E/R connector	Terminal	Ground	Continuity
E14	49		Not existed

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness between IPDM E/R and heater control panel.

3.CHECK IINTERMITTENT INCDENT

Check intermittent incident.
Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace heater control panel. Refer to VTL-72, "Removal and Installation".
NO >> Repair or replace the malfunctioning parts.

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

cardiagn.com

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

carDiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

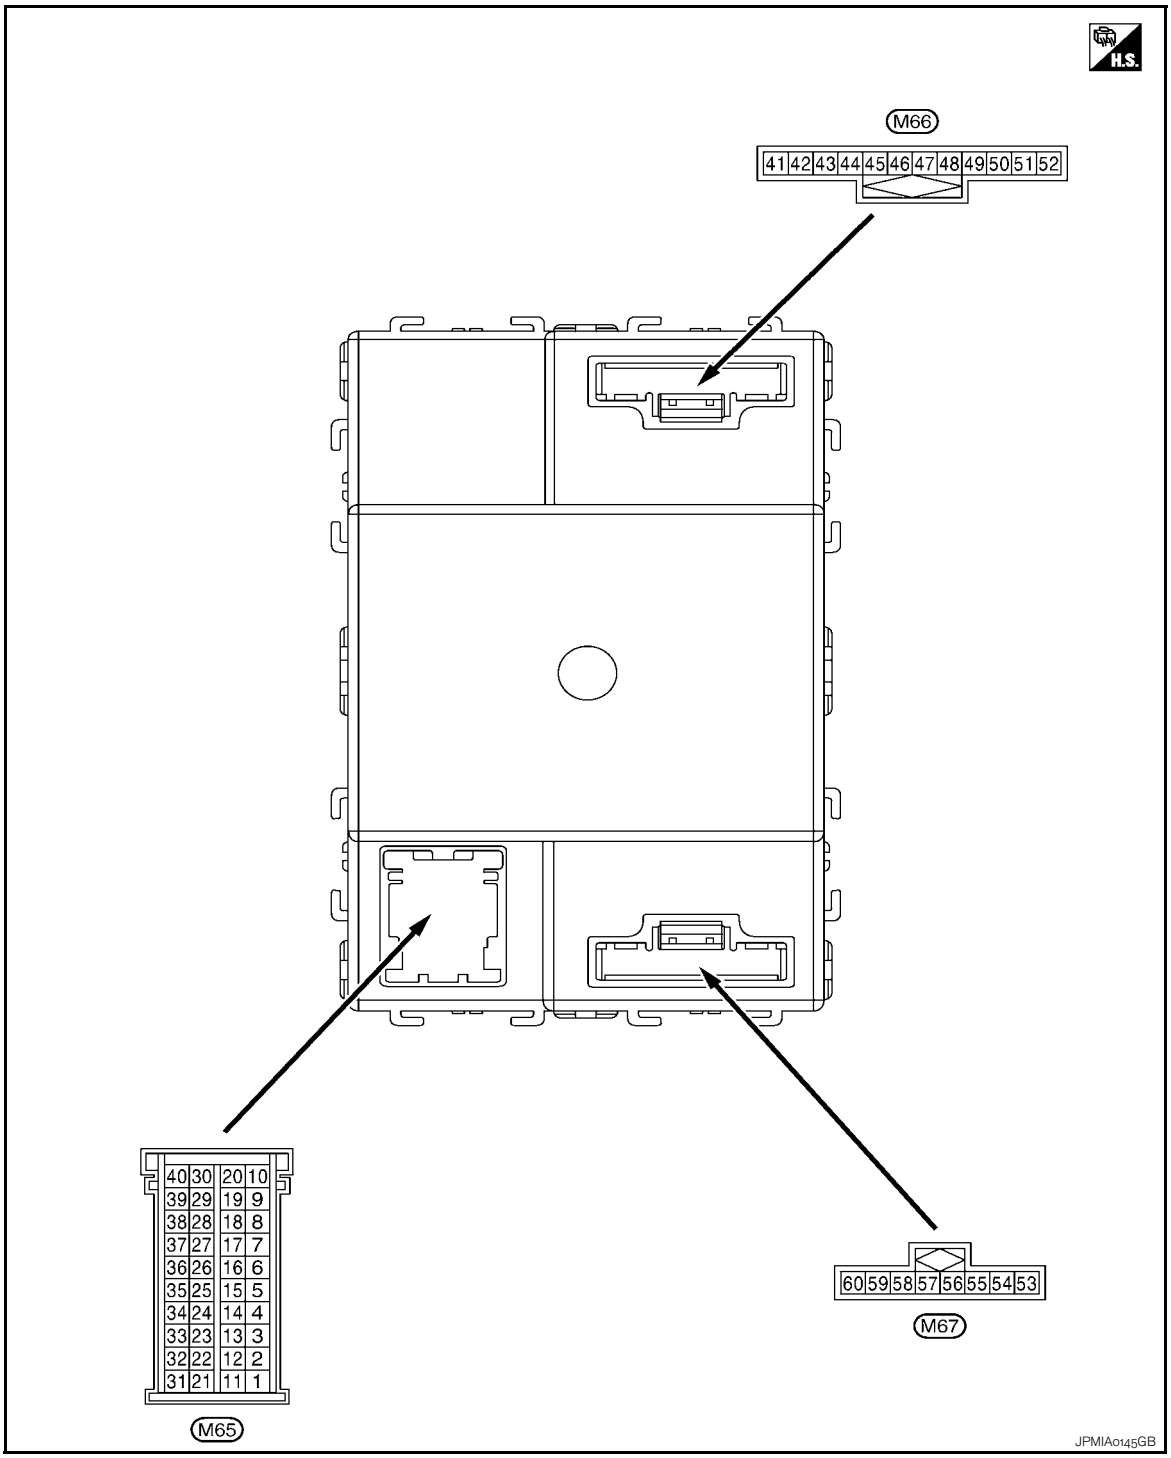
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Terminal No. (Wire color)		Description		Condition		Value (Approx.)
		Signal name	Input/ Output

Fail Safe

INFOID:0000000001114996

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001114997

carDiagn.com

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN)

DTC Index

INFOID:0000000001114998

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
MOTOR FAN REQ	Engine idle speed	Changes depending on engine coolant temperature, air conditioner operation status, vehicle speed, etc.	1 - 3
AC COMP REQ	Engine running	A/C switch OFF	Off
		A/C switch ON (Compressor is operating)	On
TAIL&CLR REQ	Lighting switch OFF		Off
	Lighting switch 1ST, 2ND or AUTO (Light is illuminated)		On
HL LO REQ	Lighting switch OFF		Off
	Lighting switch 2ND or AUTO (Light is illuminated)		On
HL HI REQ	Lighting switch OFF		Off
	Lighting switch HI (Light is illuminated)		On
FR FOG REQ	Lighting switch 2ND or AUTO (Light is illuminated)	Front fog lamp switch OFF	Off
		Front fog lamp switch ON	On
HL WASHER REQ	Ignition switch ON, and low beam headlamp is ON	Front washer switch OFF	Off
		Front washer switch ON (When headlamp washer is operating)	On
FR WIP REQ	Ignition switch ON	Front wiper switch OFF	STOP
		Front wiper switch INT	1LOW
		Front wiper switch LO	Low
		Front wiper switch HI	Hi
WIP AUTO STOP	Ignition switch ON	Front wiper stop position	STOP P
		Any position other than front wiper stop position	ACT P
WIP PROT	Ignition switch ON	Front wiper operates normally	Off
		Front wiper stops at fail-safe operation	BLOCK
ST RLY REQ **NOTE:** Vehicle without Intelligent Key system indicates only “ON”, and it does not change.	When Intelligent Key is outside the vehicle, and the push switch is pushed		Off
	When Intelligent Key is inside the vehicle, and the push switch is pushed		On
IGN RLY	Ignition switch OFF or ACC		Off
	Ignition switch ON		On
RR DEF REQ	Ignition switch ON	Rear window defogger switch OFF	Off
		Rear window defogger switch ON (Rear window defogger is operating)	On
OIL P SW	Ignition switch OFF, ACC or engine running		Open
	Ignition switch ON		Close

carDiagn.com

Monitor Item	Condition	Value/Status
REV SW	Except selector lever R position	Off
	Selector lever R position	On
HOOD SW **NOTE:** This item is monitored only on the vehicle with the Vehicle Security (Theft Warning) system.	Close the hood	Off
	Open the hood	On
THFT HRN REQ **NOTE:** This item is monitored only on the vehicle with the Vehicle Security (Theft Warning) system.	Not operation	Off
	Horn is activated with Vehicle Security (Theft Warning) system.	On
HORN CHIRP	**NOTE:** This item is indicated, but not monitored.	Off
IGN ON SW	Ignition switch OFF or ACC	Off
	Ignition switch ON	On

Fail Safe

INFOID:0000000001035895

CAN communication control

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

If no CAN communication is available with ECM

cardiagn.com

Control part	Fail-safe in operation
Cooling fan	• The cooling fan relay-2*1 or the cooling fan relay-3*2 turns ON when the ignition switch is turned ON • Turns off the fan motor low relay when the ignition switch is turned OFF
A/C compressor	A/C relay OFF

*1: HR engine models

*2: MR engine and K9K engine models

If no CAN communication is available with BCM

Control part	Fail-safe in operation
Headlamp	• The headlamp low relay turns ON when the ignition switch is turned ON • The headlamp low relay turns OFF when the ignition switch is turned OFF • Headlamp high relay OFF
• Parking lamps • License plate lamps • Tail lamps • Illuminations	• The tail lamp relay turns ON when the ignition switch is turned ON • The tail lamp relay turns OFF when the ignition switch is turned OFF
Front wiper	• The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed. • The front wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the INT mode and the front wiper motor is operating.
Front fog lamps	Front fog lamp relay OFF
Starter motor	Inhibit relay OFF
Rear window defogger	Rear window defogger relay OFF
Headlamp washer	Headlamp washer relay OFF
PTC heater	PTC heater relay OFF

Ignition relay malfunction detection function

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

DTC	Ignition switch	Ignition relay	Tail lamp relay
—	ON	ON	—
—	OFF	OFF	—
B2098: IGN RLY ON	OFF	ON	ON (10 minutes)
B2099: IGN RLY OFF	ON	OFF	—

NOTE:

The tail lamp relay is turned OFF when the ignition switch is turned ON.

Front wiper control

IPDM E/R detects the front wiper stop position with the front wiper auto stop signal.
When the front wiper auto stop signal is in the conditions listed below, IPDM E/R repeats a front wiper 10 seconds operation and 20 seconds stop five times.

Ignition switch	Front wiper switch	Front wiper auto stop signal
ON	OFF	The front wiper auto stop signal (stop position) cannot be input for 10 seconds.
	ON	The front wiper auto stop signal does not change for 10 seconds.

NOTE:

carDiagn.com

This operation status can be confirmed on the IPDM E/R “Data Monitor” that displays “BLOCK” for the item “WIP PROT” while the wiper is stopped.

DTC Index

INFOID:0000000001035896

CONSULT display	Fail-safe	Timing[NOTE]		Reference page

SYMPTOM DIAGNOSIS

REAR WINDOW DEFOGGER DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000000998574

1. IPDM E/R AUTO ACTIVE TEST

Check IPDM E/R active test.
Refer to PCS-9, "Diagnosis Description".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2. CHECK REAR WINDOW DEFOGGER SWITCH

Check rear window defogger switch.
With auto A/C. Refer to DEF-13, "WITH AUTO A/C : Component Function Check".
Without auto A/C. Refer to DEF-14, "WITHOUT AUTO A/C : Component Function Check"

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace the malfunctioning parts.

3. CHECK REAR WINDOW DEFOGGER POWER SUPPLY AND GROUND CIRCUIT

Check rear window defogger power supply and ground circuit.
Refer to DEF-17, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

REAR WINDOW DEFOGGER AND DOOR MIRROR DEFOGGER DO NOT OPERATE.

Diagnosis Procedure

INFOID:0000000000951289

1. IPDM E/R AUTO ACTIVE TEST

Check IPDM E/R active test.
Refer to PCS-9, "Diagnosis Description".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2. CHECK REAR WINDOW DEFOGGER SWITCH

Check rear window defogger switch.
With auto A/C. Refer to DEF-13, "WITH AUTO A/C : Component Function Check".
Without auto A/C. Refer to DEF-14, "WITHOUT AUTO A/C : Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

REAR WINDOW DEFOGGER DOES NOT OPERATE BUT BOTH OF DOOR MIRROR DEFOGGER OPERATE.

Diagnosis Procedure

INFOID:0000000000951290

1. CHECK REAR WINDOW DEFOGGER POWER SUPPLY AND GROUND CIRCUIT

Check rear window defogger power supply and ground circuit.
Refer to DEF-17, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

DRIVER SIDE DOOR MIRROR DEFOGGER DOES NOT OPERATE.

Diagnosis Procedure

INFOID:0000000000951292

1.CHECK DRIVER SIDE DOOR MIRROR DEFOGGER

Check driver side door mirror defogger.
Refer to DEF-19, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

PASSENGER SIDE DOOR MIRROR DEFOGGER DOES NOT OPERATE.

Diagnosis Procedure

INFOID:0000000000951293

1.CHECK PASSENGER SIDE DOOR MIRROR DEFOGGER

Check passenger side door mirror defogger.
Refer to DEF-21, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

REAR WINDOW DEFOGGER SWITCH DOES NOT LIGHT, BUT REAR WINDOW DEFOGGER OPERATES

Diagnosis Procedure

INFOID:0000000000951295

1. CHECK REAR WINDOW DEFOGGER ON SIGNAL

Check rear window defogger ON signal.
With auto A/C. Refer to DEF-23, "WITH AUTO A/C : Component Function Check".
Without auto A/C. Refer to DEF-24, "WITHOUT AUTO A/C : Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000000951296

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000000977986

BASIC INSPECTION

1. INSPECTION START

1. Check the service history.
2. Check the following parts.

- Fuse/circuit breaker blown.
- Poor connection, open or short circuit of harness connector.
- Battery voltage.

Is the inspection result normal?

YES >> Inspection end.
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

ON-VEHICLE REPAIR

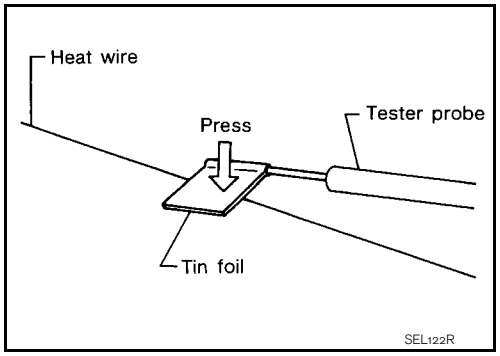
FILAMENT

Inspection and Repair

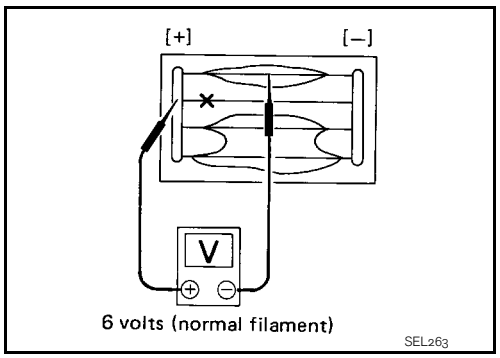
INFOID:0000000000951297

INSPECTION

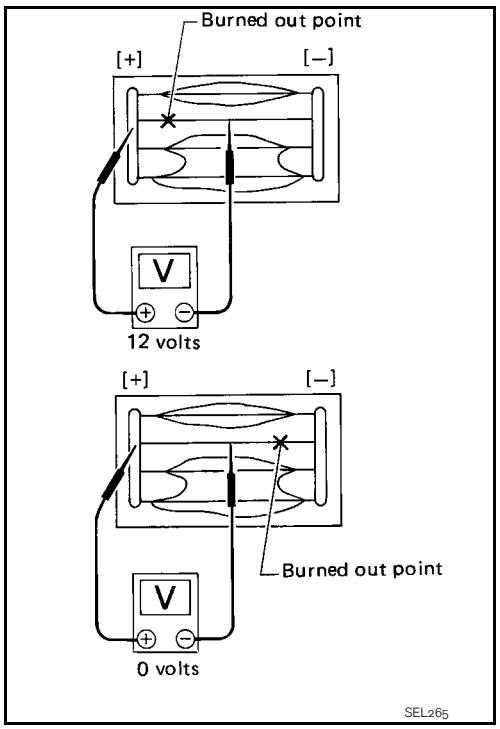
1. When measuring voltage, wrap tin foil around the top of the negative probe. Then press the foil against the wire with your finger.



2. Attach probe circuit tester (in Volt range) to middle portion of each filament.



3. If a filament is burned out, circuit tester registers 0 or battery voltage.
4. To locate burned out point, move probe to left and right along filament. Test needle will swing abruptly when probe passes the point.



REPAIR

REPAIR EQUIPMENT

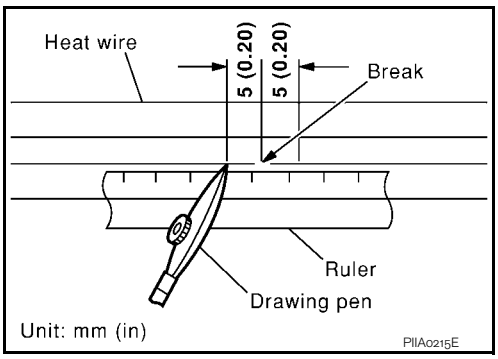
- Conductive silver composition (Dupont No. 4817 or equivalent)

cardiagn.com

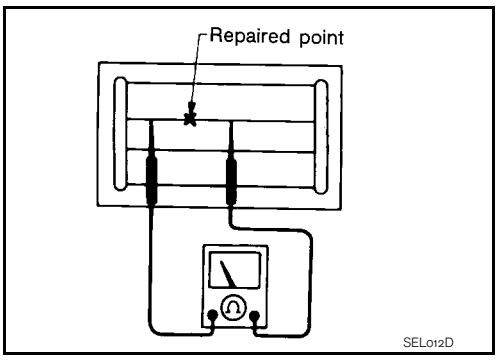
- Ruler 30 cm (11.8 in) long
- Drawing pen
- Heat gun
- Alcohol
- Cloth

REPAIRING PROCEDURE

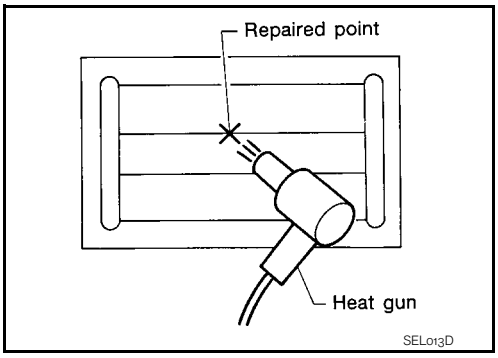
1. Wipe broken heat wire and its surrounding area clean with a cloth dampened in alcohol.
2. Apply a small amount of conductive silver composition to tip of drawing pen.
   Shake silver composition container before use.
3. Place ruler on glass along broken line. Deposit conductive silver composition on break with drawing pen. Slightly overlap existing heat wire on both sides [preferably 5 mm (0.20 in)] of the break.



4. After repair has been completed, check repaired wire for continuity. This check should be conducted 10 minutes after silver composition is deposited.
   Do not touch repaired area while test is being conducted.



5. Apply a constant stream of hot air directly to the repaired area for approximately 20 minutes with a heat gun. A minimum distance of 3 cm (1.2 in) should be kept between repaired area and hot air outlet.
   If a heat gun is not available, let the repaired area dry for 24 hours.



cardiagn.com

1.GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred).

>> GO TO 2.

2.CHECK DTC

1. Check DTC for Intelligent Key unit and BCM.
2. Perform the following procedure if DTC is displayed.

- Erase DTC.
- Study the relationship between the cause detected by DTC and the symptom described by the customer.

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC is displayed>>GO TO 3.
Symptom is described, DTC is not displayed>>GO TO 4.
Symptom is not described, DTC is displayed>>GO TO 5.

3.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR” mode and check real-time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR ” mode and check real-time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5.PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC, and then check that DTC is detected again.
If two or more DTCs are detected, refer to DLK-163, "DTC Inspection Priority Chart" (Intelligent Key unit), DLK-201, "DTC Inspection Priority Chart" (BCM) and determine trouble diagnosis order.

Is DTC detected?

YES >> GO TO 8.
NO >> Refer to GI-39, "Intermittent Incident".

6.PERFORM BASIC INSPECTION

Perform Basic Inspection. Refer to DLK-221, "Basic Inspection".

>> GO TO 7.

7.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to Symptom Table based on the confirmed symptom in step 4.

>> GO TO 8.

8.DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.
NOTE:
The Diagnostic Procedure is described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure.

>> GO TO 9.

9.REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it.

>> GO TO 10.

10.FINAL CHECK

When DTC was detected in step 9, perform DTC Confirmation Procedure or Component Function Check again, and then check that the malfunctions have been fully repaired.
When symptom was described by the customer, refer to the confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Does the symptom reappear?

YES (DTC is detected)>>GO TO 8.
YES (Symptom remains)>>GO TO 6.
NO >> **INSPECTION END**

FUNCTION DIAGNOSIS

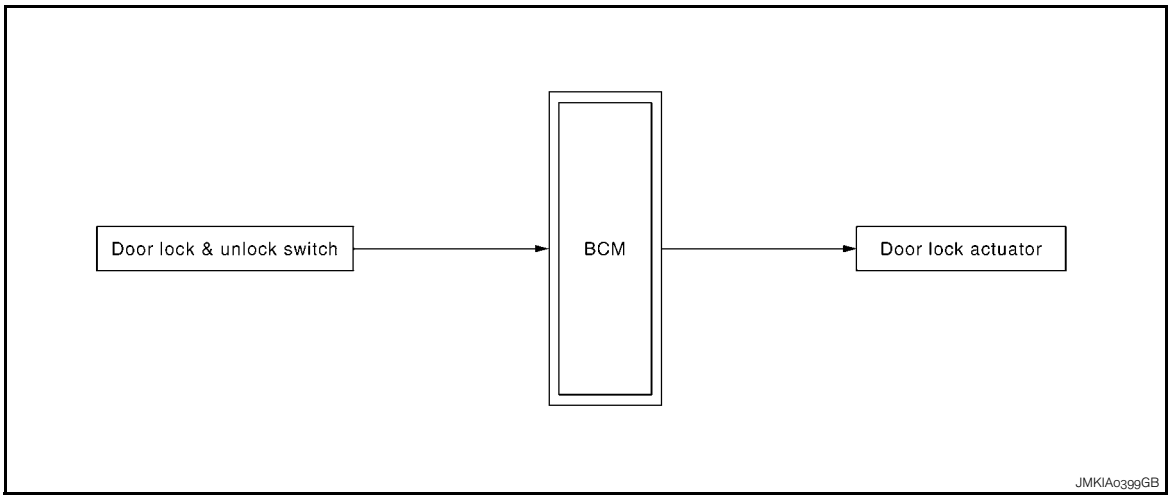
DOOR LOCK FUNCTION

DOOR LOCK AND UNLOCK SWITCH

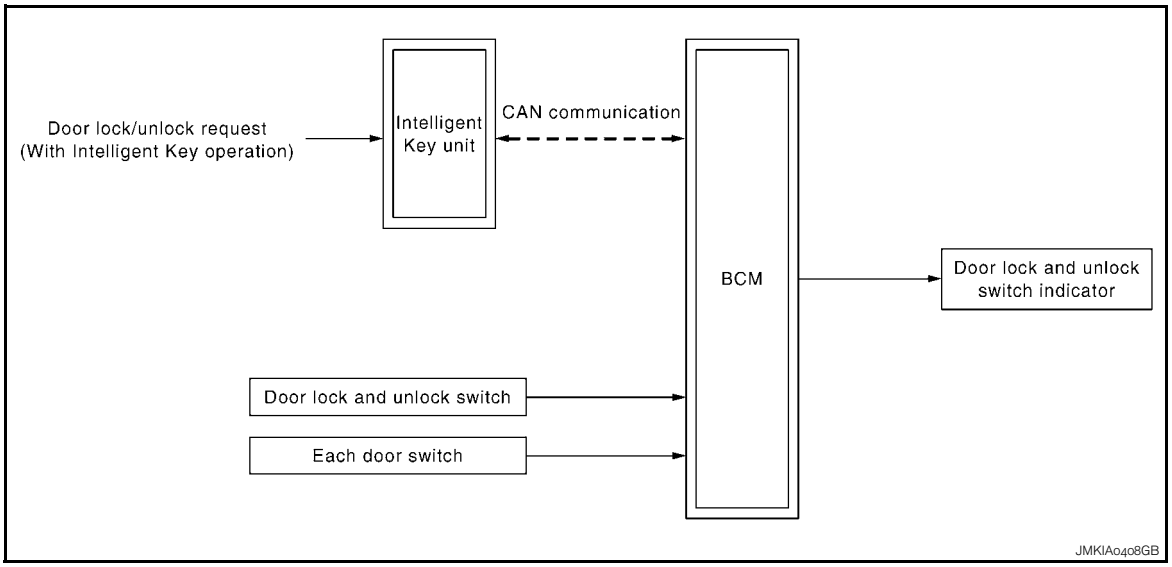
DOOR LOCK AND UNLOCK SWITCH : System Diagram

INFOID:0000000000939036

DOOR LOCK AND UNLOCK SWITCH OPERATION



DOOR LOCK AND UNLOCK SWITCH INDICATOR OPERATION



DOOR LOCK AND UNLOCK SWITCH : System Description

INFOID:0000000000939037

DOOR LOCK AND UNLOCK SWITCH OPERATION

Functions are available by operating the door lock and unlock switch on center console. Interlocked with the lock/unlock operation of door lock and unlock switch, door lock actuators of all doors are locked/unlocked.

Operation Condition

If the following conditions are not satisfied, door lock/unlock operation is not performed even if the door lock and unlock switch is operated.

cardiagn.com

Door lock and unlock switch	Operation condition
Lock operation	All of the following conditions are satisfied. • Except driver side doors are closed. • Doors are not locked with Intelligent Key or door request switch.
Unlock operation	All of the following conditions are satisfied. • Doors are not locked with Intelligent Key or door request switch.

NOTE:
When the door lock is locked with Intelligent Key or door request switch, door lock and unlock switch operation will be invalid until either of the following conditions is satisfied.
- Turn ignition switch ON.
- Unlock with Intelligent Key or door request switch.

DOOR LOCK AND UNLOCK SWITCH INDICATOR OPERATION

Door lock and unlock switch indicator indicates door lock status. The indicator turns ON while ignition switch is ON and each door lock is locked. If any door is opened, the indicator will turn OFF.

1 Minute Timer

A timer must be running to turn OFF the indicator. The timer will run for 1 minute after locking with Intelligent Key, door request switch or auto door lock.

30 Minutes Timer

A timer must be running to turn OFF the indicator. The timer will run for 30 minutes after locking with door lock and unlock switch.

NOTE:
1minute timer condition is satisfied while the 30 minutes timer is active, however the 30 minutes timer does not change to 1 minute timer condition.

DOOR LOCK AND UNLOCK SWITCH : Component Description

INFOID:0000000000939039

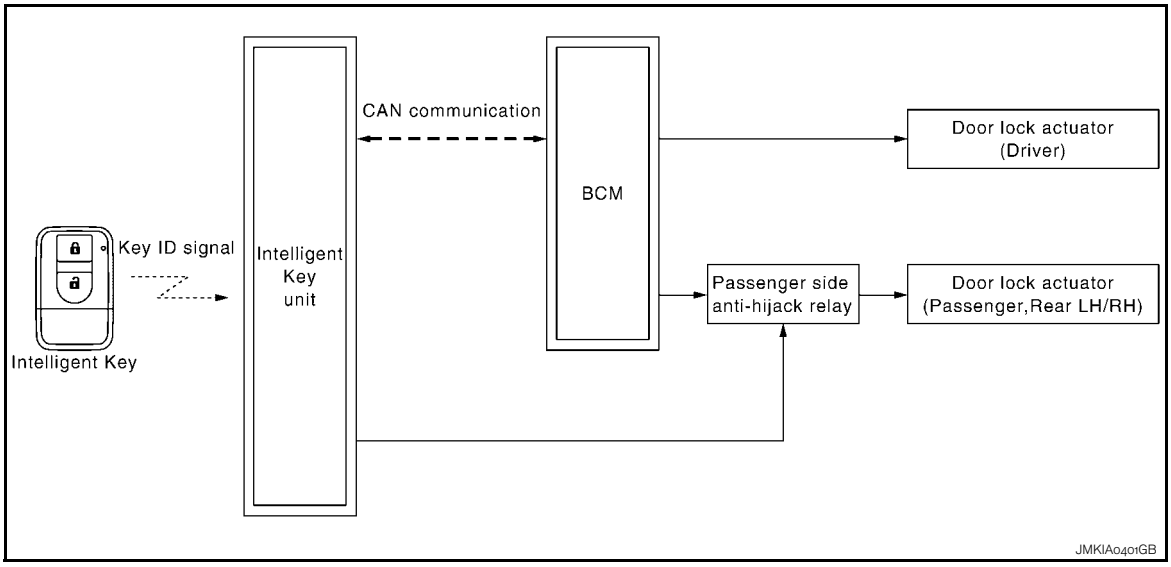
Item	Function
BCM	Controls the door lock function.
Door switch	Detects door state (open or close).
Door lock and unlock switch	Transmits door lock/unlock signal to BCM. Door lock/unlock switch indicator is built-in door lock and unlock switch.
Door lock actuator	Receives door lock/unlock signal from BCM and locks/unlocks each door.

INTELLIGENT KEY

INTELLIGENT KEY : System Diagram

INFOID:0000000000939040

INTELLIGENT KEY OPERATION



INTELLIGENT KEY : System Description

INFOID:0000000000939041

INTELLIGENT KEY OPERATION

The Intelligent Key has the same functions as the multi remote control system. Therefore, it can be used in the same manner as the keyfob by operating the door lock/unlock button.
This function can be set to OFF with CONSULT-III. For the setting information, refer to DLK-65, "CONSULT-III Function (INTELLIGENT KEY)".

OPERATION CONDITION

Remote controller operation	Operation condition
Lock	• All doors are closed • Key switch is OFF (key is removed from ignition key cylinder) • Ignition knob switch is OFF (Ignition switch is not pressed)
Unlock	• Key switch is OFF (key is removed from ignition key cylinder) • Ignition knob switch is OFF (Ignition switch is not pressed)

OPERATION AREA

To ensure that the Intelligent Key works effectively, use within a 100 cm range of each door, however the operable range may differ according to surroundings.

DOOR LOCK AND UNLOCK CONTROL

When door lock and unlock button of the Intelligent Key are pressed, lock signal or unlock signal is transmitted from Intelligent Key to Intelligent Key unit.
When Intelligent Key unit receives the door lock and unlock signal, it operates door lock actuator.

ANTI-HIJACK MODE

cardiagn.com

When door lock is unlocked, pressing LOCK button on Intelligent Key once will lock all doors. When door lock is locked, pressing UNLOCK button on Intelligent Key door will unlock driver side door. Pressing UNLOCK button on Intelligent Key a second time within 5 seconds from the first time will unlock all doors and back door can be opened with back door opener switch.

NOTE:

Anti-hijack mode can be set to ON or OFF with CONSULT-III. For the setting information, refer to DLK-65, "CONSULT-III Function (INTELLIGENT KEY)".

cardiagn.com

INTELLIGENT KEY : Component Description

INFOID:0000000000939043

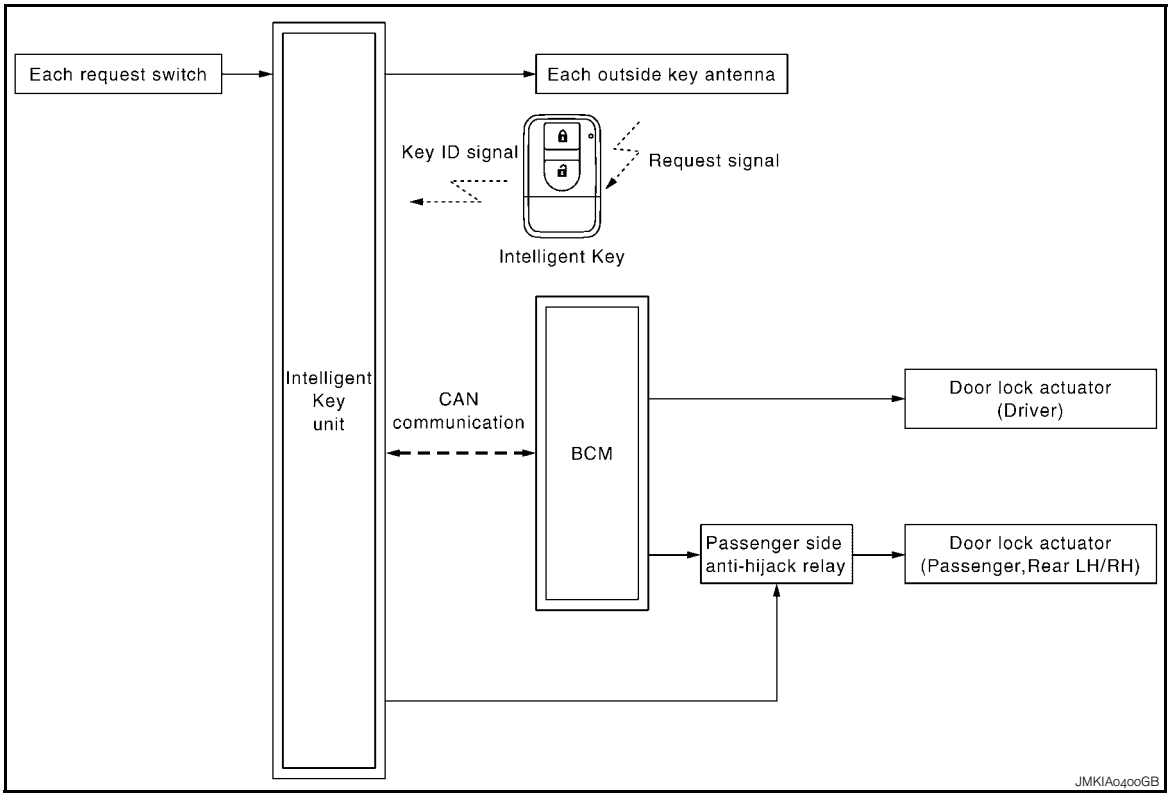
Item	Function
Intelligent Key unit	Controls the door lock/unlock operation with BCM.
BCM	Controls the door lock/unlock operation with Intelligent Key unit.
Door switch	Detects door state (open or closed).
Key switch	Detects that mechanical key is inserted into ignition key cylinder.
Ignition knob switch	Detects ignition knob state (push or release).
Outside key antenna	Detects that Intelligent Key is in detection area of outside key antenna.
Intelligent Key	Transmits key ID to Intelligent Key unit when lock/unlock button is pressed.
Passenger side anti-hijack relay	Controls the circuit of door lock actuator (passenger side, rear LH/RH).
Door lock actuator	Receives lock/unlock signal from BCM and locks and unlocks each door.

DOOR REQUEST SWITCH

DOOR REQUEST SWITCH : System Diagram

INFOID:0000000001078856

DOOR REQUEST SWITCH OPERATION



DOOR REQUEST SWITCH : System Description

INFOID:0000000001078857

DOOR REQUEST SWITCH OPERATION

Only when pressing the request switch, it is possible to lock and unlock the door by carrying the Intelligent Key. The Intelligent Key system is a system that makes it possible to lock and unlock the door by carrying the Intelligent Key, which operates based on the results of electronic ID verification using two-way communications between the Intelligent Key and the vehicle (Intelligent Key unit).

This function can be set to OFF with CONSULT-III. For the setting information, refer to DLK-65, "CONSULT-III Function (INTELLIGENT KEY)".

CAUTION:

The driver should always carry the Intelligent Key

OPERATION CONDITION

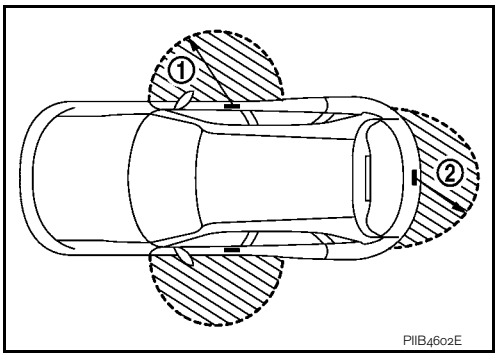
If the following conditions are not satisfied, door lock and unlock operation is not performed even if the request switch is operated.

Each request switch operation	Operation condition
Lock operation	• All doors are closed. • Key switch is OFF. (Key is removed from ignition key cylinder.) • Ignition knob switch is OFF. (Ignition switch is not pushed.) • Any Intelligent Key is not inside the vehicle • Intelligent Key is within outside key antenna detection area
Unlock Operation	• Key switch is OFF. (Key is removed from ignition key cylinder.) • Ignition knob switch is OFF. (Ignition switch is not pushed.) • Intelligent Key is not inside the vehicle.* • Intelligent Key is within outside key antenna detection area.

*: Even with a registered Intelligent Key remaining inside the vehicle, door locks can be unlocked from outside of the vehicle with a spare Intelligent Key as long as key IDs are different.

OUTSIDE KEY ANTENNA DETECTION AREA

The outside key antenna detection area of door lock and unlock function is in the range of approximately 80 cm (31.50 in) surrounding the driver and passenger door handles (1) and the back door request switch (2). However, this operating range depends on the ambient conditions.



DOOR LOCK AND UNLOCK CONTROL

When the Intelligent Key detects that door request switch is pressed, it starts corresponding with outside key antenna (door of request switch pressed side). Then, the Intelligent Key is checked to be near the door.
If the Intelligent Key is within the outside key antenna detection area, it receives the request signal and transmits the key ID signal to the Intelligent Key unit. Intelligent Key unit receives the key ID signal and compares it with the registered key ID. Intelligent Key unit sends the door lock and unlock signal to BCM via CAN communication.

ANTI-HIJACK MODE

- When door is unlocked, pressing door request switch (driver or passenger) once will lock all doors. When door is locked, pressing door request switch (driver or passenger) once will unlock operated door. Pressing the door request switch door a second time within 5 seconds from the first time will unlock all doors and back door can be opened with back door opener switch.
- When door is unlocked, pressing door request switch (back door) will lock all doors. When door lock is locked, pressing door request switch (back door) will unlock all doors and back door can be opened with back door opener switch.

NOTE:
Anti-hijack mode can be set to OFF with CONSULT-III and Intelligent Key. For the setting information, refer to DLK-65, "CONSULT-III Function (INTELLIGENT KEY)".

DOOR REQUEST SWITCH : Component Description

INFOID:0000000001078859

cardiagn.com

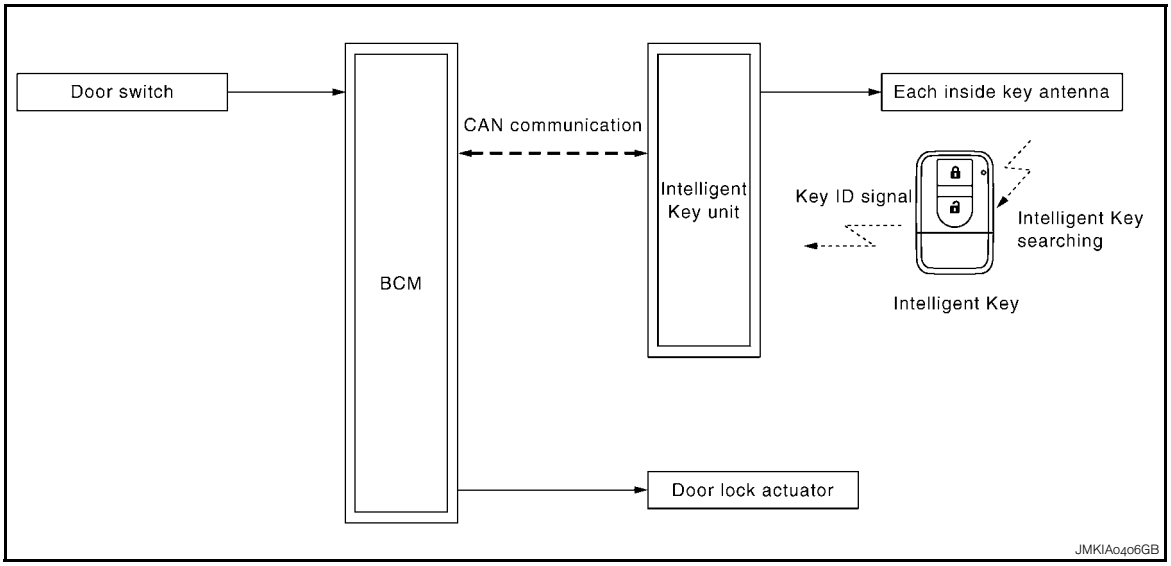
Item	Function
Intelligent Key unit	Controls the door lock function with BCM.
BCM	Controls the door lock/unlock function with Intelligent Key unit.
Door request switch	Transmits opertion signal (lock and unlock) to Intelligent Key unit.
Door switch	Detects door state (open or closed).
Key switch	Detects that mechanical key is inserted into ignition key cylinder.
Ignition knob switch	Detects ignition knob state (push or release).
Outside key antenna	Detects that Intelligent Key is in detection area of outside key antenna.
Inside key antenna	Detects that Intelligent Key is in detection area of inside key antenna.
Intelligent Key	Transmits key ID to Intelligent Key unit when request signal is received from outside key antenna.
Passenger side anti-hijack relay	Controls the circuit of door lock actuator (passenger side, rear LH/RH).
Door lock actuator	Receives lock/unlock signal from BCM and locks/unlocks each door.

KEY REMINDER

KEY REMINDER : System Diagram

INFOID:0000000001080230

KEY REMINDER OPERATION



KEY REMINDER : System Description

INFOID:0000000001080231

KEY REMINDER OPERATION

Key reminder have the following 2 functions.

Operation	Operation condition	Operation
Driver door close	Right after driver side door is closed under the following conditions. • Door lock operation. • Driver side door is opened. • Driver side door is in unlock state.	All doors unlock
Any door open to all doors close	Right after all doors are closed under the following conditions. • Intelligent Key is inside the vehicle. • Any door is opened. • All doors are locked by door lock and unlock switch.	• All doors unlock • Active Intelligent Key warning buzzer

CAUTION:

The above function operates when the Intelligent Key is inside the vehicle. However, there may be times when the Intelligent Key cannot be detected, and this function will not operate when the Intelligent Key is on the instrument panel, rear parcel shelf or in the glove box. Also, this system sometimes does not operate if the Intelligent Key is in the door pocket of an open door.

KEY REMINDER : Component Description

INFOID:0000000001080233

Item	Function
Intelligent Key unit	Controls the door lock function with BCM.
BCM	Controls the door lock and unlock operation with Intelligent Key unit.
Door switch	Detects door state (open or closed).
Inside key antenna	Detects that Intelligent Key is in detection area of inside key antenna.
Intelligent Key	Transmits key ID to Intelligent Key unit when Intelligent Key is searching.
Door lock actuator	Receives lock and unlock signal from BCM and locks/unlocks each door.

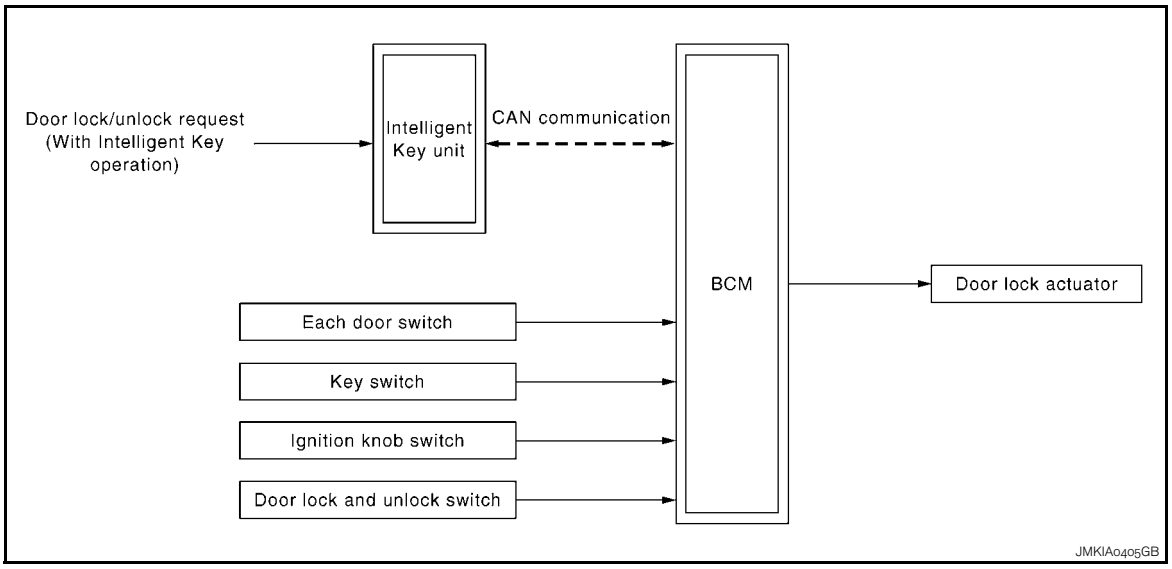
AUTO DOOR LOCK OPERATION



AUTO DOOR LOCK : System Description

INFOID:0000000001080186

AUTO DOOR LOCK OPERATION

When all doors are locked and then doors are unlocked with Intelligent Key or door request switch, BCM does not receive the following signals within 2 minutes*1, and all doors are automatically locked.

- Any door is opened.
- Ignition knob is pressed.
- Ignition key is inserted into ignition key cylinder.
- Door is locked with Intelligent Key.
- Door is locked/unlocked with door lock and unlock switch.

*1: Auto door lock operation mode can be changed with CONSULT-III. Refer to DLK-65, "CONSULT-III Function (INTELLIGENT KEY)".

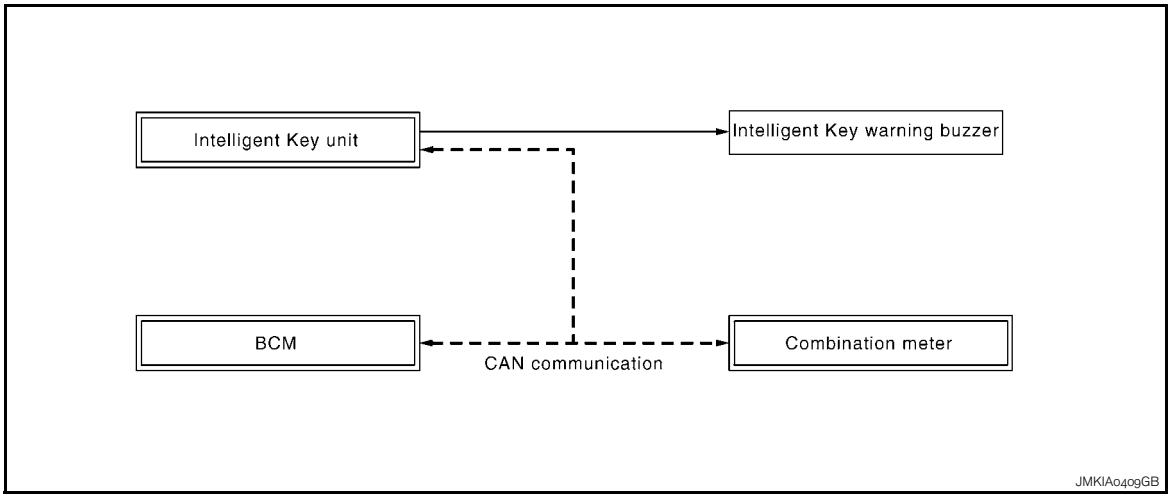
WARNING FUNCTION

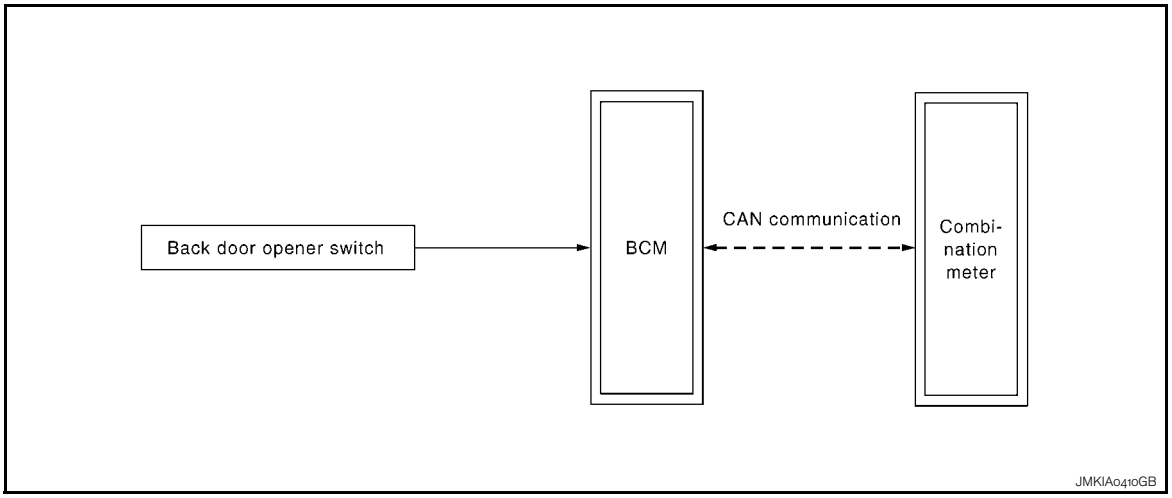
System Diagram

INFOID:0000000001078629

INTELLIGENT KEY WARNING OPERATION



BACK DOOR OPEN WARNING OPERATION



System Description

INFOID:0000000001078630

DESCRIPTION

The warning functions are as follows and are given to the user as warning information and warnings using combinations of Intelligent Key warning buzzer, key warning lamps and buzzer (built in combination meter).

INTELLIGENT KEY WARNING OPERATION

Once one of the following conditions below is established, alert or warning will be executed.

cardiagn.com

Warning/Information functions		Operation conditions	Warning lamp	Warning chime	
				Combination meter buzzer	Intelligent Key warning buzzer
Ignition knob return forgotten warning		When all the conditions below are met. • Ignition knob: OFF or LOCK (knob is pressed). • Door switch (driver side): ON (Door is open).	—	Active for 5 seconds (pipipipi, pipipipi···)	—
Ignition key warning (when mechanical key is used)		When all the conditions below are met. • Ignition switch: OFF position. • Key switch: ON (inserted) • Door switch (driver side): ON (Door is open).	—	Active for 5 seconds (pipipipi, pipipipi···)	—
OFF position warning		When all the conditions below are met. • Ignition switch is between ACC and OFF position or ignition knob is pressed in while ignition switch is in LOCK position. • 3 seconds in the above state have pressed.	"LOCK" (RED blinking)	Active for 1 second (pipi, pipi···)	—
Take away warning	Any door open to all doors closed	When all the conditions below are met. • Ignition switch: Except LOCK position. • Door switch: ON to OFF (Door is open to closed). • Intelligent Key cannot be detected inside the vehicle.	"LOCK" (RED blinking)	—	Active (pi, pi, pi)
	Door is open	When all the conditions below are met. • Door switch: ON (Door is open) • Key ID verification every 5 seconds when registered Intelligent Key can not be detected inside the vehicle.	"LOCK" (RED blinking)	—	—
	Take away through window	When all the conditions below are met. • Key ID verification: OK • Every 30 seconds when registered Intelligent Key cannot be detected inside the vehicle or result of vehicle speed verification is NG. (The registered Intelligent Key cannot be detected inside the vehicle when ignition switch is ON.) • Key switch: OFF (Key is removed from ignition key cylinder.)	"LOCK" (RED blinking)	Active for 3 seconds (pipipi···	—

carsdiagn.com

Warning/Information functions		Operation conditions	Warning lamp	Warning chime	
				Combination meter buzzer	Intelligent Key warning buzzer
Door lock operation warning	Request switch operation	When request switch is pushed (lock operation) under the following conditions. • Door switch: ON (Any door is open). • Ignition switch is in ACC or OFF position or ignition knob is pressed in LOCK position or mechanical key is inserted into ignition key cylinder. • Intelligent Key is inside vehicle.	—	—	Active for 2 seconds (pipipi···)
	Intelligent Key button operation	When Intelligent Key button is pushed (lock operation) under the following conditions. • Door switch: ON (Any door is open). • Ignition switch is in ACC or OFF position or ignition knob is pressed in LOCK position or mechanical key is inserted into ignition key cylinder.	—	—	Active for 2 seconds (pipipi···)
Intelligent Key low battery warning		When Intelligent Key battery voltage is low, Intelligent Key unit is detected after ignition switch is turned ON.	"KEY" (GREEN blinking for 30 seconds)	—	—

KEY WARNING LAMP & LOCK WARNING LAMP

The key indicator and lock indicator indicates Intelligent Key system status.

Operation Condition

Behavior of lamps			Operation condition
KEY	GREEN	Lighting	All the following conditions are satisfied. • Ignition knob is pushed in LOCK position. (Ignition knob switch is ON) • Ignition key is removed from ignition key cylinder. (Key switch is OFF) • Intelligent Key is detected inside of the vehicle. • KEY RED lighting/blinking conditions are not satisfied.
		Blinking	while Intelligent Key low battery warning is operating.
	RED	Lighting	All the following conditions are satisfied. • Ignition knob is pushed. (Ignition knob switch is ON) • Ignition key is removed from ignition key cylinder. (Key switch is OFF) • Intelligent Key is not detected inside of the vehicle.
		Blinking	All the following conditions are satisfied. • Take away warning is operating. • KEY RED lighting condition is not satisfied.
LOCK		Blinking	while OFF position warning is operating.
KEY(RED) and LOCK lighting			All the following conditions are satisfied. • Ignition switch is ON. • Steering lock ID is NG.

BACK DOOR OPEN WARNING OPERATION

When back door opener switch is operated, when door lock is locked with door lock and unlock switch, speed sensing lock or only driver side is unlocked with anti-hijack function, the buzzer (built in combination meter) will sound.

KEY REMINDER OPERATION

- The buzzer (combination meter) will sound and the doors will not lock if the door lock and unlock switch is pressed while the driver door is open and mechanical key is inserted ignition key cylinder.
- The buzzer (combination meter) will sound and the doors will not lock if the door lock and unlock switch is pressed while any door other than the driver door is open.

DIAGNOSIS SYSTEM (BCM)
COMMON ITEM
COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001096696

APPLICATION ITEM
CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION
BCM can perform the following functions for each system.
NOTE:
It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

DOOR LOCK
DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)

INFOID:0000000001034253

BCM CONSULT-III FUNCTION
CONSULT-III performs the following functions via CAN communication with BCM.

cardiagn.com

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
KEYLESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
UNLOCK WITH DR	This item is indicated, but not monitored.
UNLOCK SHOCK	Indicates [ON/OFF] condition of signal from air bag diagnosis unit. • ON: During the unlock operation interlock with air bag. • OFF: Other than above.
SHOCK SENSOR	Indicates [NOMAL/ON/OFF] condition of circuit between BCM and air bag diagnosis sensor unit. • NORMAL: Ignition switch ON. (BCM is receiving normal condition signal from air bag diagnosis sensor unit.) • ON: During the receiving of air bag deployment signal from air bag diagnosis sensor unit. • OFF: After the receiving of air bag deployment signal from air bag diagnosis sensor unit.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the multi remote control system equipped vehicle.

ACTIVE TEST

Test item	Description
SUPER LOCK*1	This test is able to check super lock operation [LOCK (SET)/UNLOCK (RELEASE)].
DOOR LOCK IND	This test is able to check door lock indicator (built in door lock and unlock switch on center console) operation [ON/OFF].
DOOR LOCK	This test is able to check door lock operation [ALL LOCK/ALL UNLOCK/DR UNLOCK/ OTHER UNLOCK].

:*1 For the super lock equipped vehicle.

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW	Indicates [ON/OFF] condition of ignition knob switch.
I-KEY LOCK	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.

TRUNK

TRUNK : CONSULT-III Function (BCM - TRUNK)

INFOID:0000000001034257

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
TRNK OPNR SW	Indicates [ON/OFF] condition of back door opener switch.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the remote keyless entry system equipped vehicle.

ACTIVE TEST

Test item	Description
TRUNK/GLASS HATCH	This test is able to check back door opener operation [ON/OFF].

cardiagn.com

DIAGNOSIS SYSTEM (INTELLIGENT KEY UNIT)

CONSULT-III Function (INTELLIGENT KEY)

INFOID:0000000001034251

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with Intelligent Key unit.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by Intelligent Key unit.
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from Intelligent Key unit.
DATA MONITOR	The Intelligent Key unit input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.
ECU IDENTIFICATION	The Intelligent Key unit part number is displayed.

WORK SUPPORT

Support item	Description	Selection item	Condition
CONFIRM KEY FOB ID	It can check whether Intelligent Key ID code is registered or not.	—	—
TAKE OUT FROM WINDOW WARN	Take away warning chime (from window) mode can be changed.	ON	Active
		OFF	Inactive
LOW BATT OF KEY FOB WARN	Intelligent Key low battery warning mode can be changed.	ON	Active
		OFF	Inactive
KEYLESS FUNCTION	Door lock function with Intelligent Key can be changed.	ON	Active
		OFF	Inactive
ANSWER BACK FUNCTION	Buzzer reminder operation can be changed.	ON	Active
		OFF	Inactive
SELECTIVE UNLOCK FUNCTION	Anti-hijack mode can be changed.	ON	Active
		OFF	Inactive
HAZARD ANSWER BACK	Hazard reminder operation mode can be changed.	Refer to DLK-58.	
ANSWER BACK WITH I-KEY LOCK	Buzzer reminder operation (lock operation) mode by each door request switch can be changed.	BUZZER	Active
		OFF	Inactive
ANSWER BACK WITH I-KEY UNLOCK	Buzzer reminder operation (unlock operation) mode by each door request switch can be changed.	BUZZER	Active
		OFF	Inactive
AUTO RELOCK TIMER	Auto door lock operation mode can be changed.	OFF	Inactive
		2 min	Active
ENGINE START BY I-KEY	Engine start function (by Intelligent Key) mode can be changed.	ON	Active
		OFF	Inactive
LOCK/UNLOCK BY I-KEY	Door lock function by door request switch can be changed.	ON	Active
		OFF	Inactive

SELF-DIAG RESULT

Refer to DLK-163, "DTC Index".

DATA MONITOR

Monitor Item	Condition
PUSH SW	Indicates [ON (pressed)/OFF (released)] condition of ignition knob switch.
KEY SW	Indicates [ON (inserted)/OFF (removed)] condition of key switch.
DR REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (driver side).
AS REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (passenger side).
BD/TR REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (back door).
IGN SW	Indicates [ON (ON or START position)/OFF (other than ON and START position)] condition of ignition switch ON position.
ACC SW	Indicates [ON/OFF] condition of ignition switch ACC position.
STOP LAMP SW	Indicates [ON/OFF] condition of stop lamp switch.
DOOR LOCK SIG	Indicates [ON/OFF] condition of LOCK signal from Intelligent Key.
DOOR UNLOCK SIG	Indicates [ON/OFF] condition of UNLOCK signal from Intelligent Key.
DOOR SW DR	Indicates [OPEN/CLOSE] condition of front door switch (driver side) from BCM via CAN communication.
DOOR SW AS	Indicates [OPEN/CLOSE] condition of front door switch (passenger side) from BCM via CAN communication.
DOOR SW RR	Indicates [OPEN/CLOSE] condition of rear door switch (RH) from BCM via CAN communication.
DOOR SW RL	Indicates [OPEN/CLOSE] condition of rear door switch (LH) from BCM via CAN communication.
DOOR BK SW	Indicates [OPEN/CLOSE] condition of back door switch from BCM via CAN communication.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

ACTIVE TEST

Test item	Description
DOOR LOCK/UNLOCK	This test is able to check door lock/unlock operation. • ALL UNLK: All door lock actuators are unlocked. • DR UNLK: Door lock actuator (driver side) is unlocked. • AS UNLK: Door lock actuator (passenger side) is unlocked. • BK UNLK: This item is indicated, but inactive. • LOCK: All door lock actuator is locked.
ANTENNA	This test is able to check Intelligent Key antenna operation. When the following condition are met, hazard warning lamps flash. • ROOM ANT1: Inside key antenna (console) detects Intelligent Key, when “ROOM ANT1” is selected. • ROOM ANT2: Inside key antenna (instrument center/rear seat) detects Intelligent Key, when “ROOM ANT2”is selected. • DRIVER ANT: Outside key antenna (driver side) detects Intelligent Key, when “DRIVER ANT” is selected. • ASSIST ANT: Outside key antenna (passenger side) detects Intelligent Key, when “ASSIST ANT” is selected. • BK DOOR ANT: Outside key antenna (rear bumper) detects Intelligent Key, when “BK DOOR ANT” is selected.
OUTSIDE BUZZER	This test is able to check Intelligent Key warning buzzer operation. • ON • OFF
INSIDE BUZZER	This test is able to check warning chime in combination meter operation. • TAKE OUT: Take away warning chime sounds. • KNOB: Ignition knob switch warning chime sounds. • KEY: Key warning chime sounds. • OFF

cardiagn.com

Test item	Description
INDICATOR	This test is able to check warning lamp operation. • BLUE ON: Key warning lamp (green) illuminates. • RED ON: Key warning lamp (red) illuminates. • KNOB ON: Lock warning lamp illuminates. • BLUE IND: Key warning lamp (green) flashes. • RED IND: Key warning lamp (red) flashes. • KNOB IND: Lock warning lamp flashes. • OFF
KEY LOCK SOLENOID*1	This test is able to check key interlock operation. • LOCK: Key interlock is active. • UNLOCK: Key interlock is inactive.

*1: The item is only for MT model.

carsdiagn.com

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000001078091

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart, refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000000939071

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1000	CAN COMM CIRCUIT	When Intelligent Key unit cannot communicate CAN communication signal continuously for 2 seconds or more.	In CAN communication system, any item (or items) of the following listed below is malfunctioning. • Transmission • Receiving (BCM) • Receiving (IPDM E/R) • Receiving (ECM) • Receiving (METER/M&A) • Receiving (MULTI AV)

Diagnosis Procedure

INFOID:0000000000939072

1.PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 seconds or more.
2. Check “Self Diagnostic Result”.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI-39, "Intermittent Incident".

cardiagn.com

U1010 CONTROL UNIT (CAN)

Description

INFOID:0000000001078092

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart, refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000000939073

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller of Intelligent Key unit.	Intelligent Key unit

Diagnosis Procedure

INFOID:0000000000939074

1.REPLACE INTELLIGENT KEY UNIT

When DTC [U1010] is detected, replace Intelligent Key unit.

>> Replace Intelligent Key unit.

Special Repair Requirement

INFOID:0000000000939075

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS-IVIS/NVIS.

>> Work end.

B2552 INTELLIGENT KEY

Description

INFOID:0000000001115364

Intelligent key unit performs engine start operation and steering lock control by crosschecking ID with the Intelligent key.

DTC Logic

INFOID:0000000001115365

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2552	INTELLIGENT KEY UNIT	Malfunction is detected inside Intelligent key unit.	• Intelligent Key unit

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to DLK-70, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001115366

1.REPLACE INTELLIGENT KEY UNIT

1. Replace Intelligent Key unit.
2. Perform initialization with CONSULT-III. Re-register all mechanical keys. Refer to “CONSULT-III Operation Manual NATS”.
3. Start the engine.

Does the engine start?

YES >> INSPECTION END
NO >> Perform “DTC confirmation procedure”. Refer to DLK-70, "DTC Logic".

Special Repair Requirement

INFOID:0000000001115367

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS-IVIS/NVIS.

>> Work end.

cardiagn.com

POWER SUPPLY AND GROUND CIRCUIT
INTELLIGENT KEY UNIT

INTELLIGENT KEY UNIT : Diagnosis Procedure

INFOID:0000000000939085

1.CHECK FUSE AND FUSIBLE LINK

Check that the following fuse is not blown.

Terminal No.	Signal name	Fuse No.
11	Battery power supply	9 (10A)
6	Ignition power supply	4 (10A)

Is the fuse blown?

YES >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Turn ignition switch ON.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Voltage (V) (Approx.)
(+)		(–)	
Intelligent Key unit		Ground	
Connector	Terminal		
M40	11		Battery voltage
	6		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between Intelligent Key unit harness connector and ground.

Intelligent Key unit		Ground	Continuity
Connector	Terminal		
M40	12		Exists

Does continuity exist?

YES >> Intelligent Key unit power supply and ground circuit are OK.
NO >> Repair harness or connector.

BCM

BCM : Diagnosis Procedure

INFOID:0000000001034129

1.CHECK FUSE AND FUSIBLE LINK

Check that the following fuse and fusible link are not blown.

Terminal No.	Signal name	Fuse and fusible link No.
41	Battery power supply	9 (10A)
57		J (40A)

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.

carsdiagn.com

NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
BCM		Ground	
Connector	Terminal		
M66	41		Battery voltage
M67	57		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

Does continuity exist?

YES >> BCM power supply and ground circuit are OK.
NO >> Repair harness or connector.

cardiagn.com

DOOR LOCK AND UNLOCK SWITCH

Description

INFOID:0000000000939090

Transmits door lock/unlock operation to BCM.

Component Function Check

INFOID:0000000000939091

1.CHECK FUNCTION

With CONSULT-III

Check “CDL LOCK SW ”and “CDL UNLOCK SW” in Data monitor mode with CONSULT-III.

Monitor item	Condition	
CDL LOCK SW	LOCK	: ON
	UNLOCK	: OFF
CDL UNLOCK SW	LOCK	: OFF
	UNLOCK	: ON

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Refer to DLK-73, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000939092

1.CHECK DOOR LOCK AND UNLOCK INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect door lock and unlock switch connector.
3. Check voltage between door lock and unlock switch and ground.

Terminal			Signal (Reference value)
(+)		(–)	
Door lock and unlock switch connector	Terminal		
M89	1	Ground		6		

JPMIA0154GB

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK AND UNLOCK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector and door lock and unlock switch connector.

BCM connector	Terminal	Door lock and unlock switch connector	Terminal	Continuity
M65	7	M89	6	Exists
	9		1	

4. Check continuity between BCM connector and ground.

carsdiagn.com

BCM connector	Terminal		Continuity
M65	7	Ground	Does not exist
	9		

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

3.CHECK DOOR LOCK AND UNLOCK SWITCH GROUND

Check continuity between door lock and unlock switch connector and ground.

Door lock and unlock switch connector	Terminal	Ground	Continuity
M89	5		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminal			Signal (Reference value)
(+)		(–)	
BCM connector	Terminal		
M65	7	Ground		9		

JPMIA0154GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK DOOR LOCK AND UNLOCK SWITCH

Check door lock and unlock switch
Refer to DLK-74, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

Component Inspection

INFOID:0000000001098047

1.CHECK DOOR LOCK AND UNLOCK SWITCH

Check door lock and unlock switch.

Door lock and unlock switch	Terminal		Condition	Continuity
M89	6	5	LOCK	Exists
	1		UNLOCK	

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

cardiagn.com

DOOR LOCK AND UNLOCK SWITCH INDICATOR

Description

INFOID:0000000001102255

The door lock and unlock switch indicates door lock status. The indicator will illuminate when a lock operation is accomplished, and during this status, if any door is opened, the indicator will turn OFF.

Component Function Check

INFOID:0000000001102256

1.CHECK FUNCTION

With CONSULT-III

Check “DOOR LOCK IND” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK IND	:ON	Illuminated
	:OFF	Not illuminated

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Refer to DLK-75, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001102257

1.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between door lock and unlock switch and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(–)		
Door lock and unlock switch connector	Terminal			
M89	4	Ground	Door lock operation is accomplished	Battery voltage
			Any door is OPEN	0

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR LOCK AND UNLOCK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and door lock and unlock switch connector.
3. Check continuity between BCM connector and door lock and unlock switch connector.

BCM connector	Terminal	Door lock and unlock switch connector	Terminal	Continuity
M65	24	M89	4	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	24		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK DOOR LOCK AND UNLOCK SWITCH GROUND

Check continuity between door lock and unlock switch connector and ground.

Door lock and unlock switch connector	Terminal	Ground	Continuity
M89	5		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	24	Ground	Door lock operation is accomplished	Battery voltage
			Any door is OPEN	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5. CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR

Check door lock and unlock switch
Refer to DLK-76, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

Component Inspection

INFOID:0000000001102258

1. CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR

Check continuity door lock and unlock switch.

Door lock and unlock switch	Terminal		Continuity
	(+)	(-)	
M89	5	4	Exists
	4	5	Does not exist

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

cardiagn.com

DOOR REQUEST SWITCH
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001109368

Transmits lock/unlock operation to Intelligent Key unit.

DRIVER SIDE : Component Function Check

INFOID:0000000001109369

1.CHECK FUNCTION

With CONSULT-III

Check door request switch “DR REQ SW” in Data monitor mode.

Monitor item	Condition	
DR REQ SW	Door request switch is pressed	:ON
	Door request switch is released	:OFF

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Refer to DLK-77, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001109370

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Door request switch condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	5	Ground	Pressed	0
			Released	5

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK FRONT DOOR REQUEST SWITCH CIRCUIT

1. Disconnect Intelligent Key unit.
2. Check continuity between Intelligent Key unit connector and door request switch connector.

Intelligent Key unit connector	Terminal	Door request switch connector	Terminal	Continuity
M40	5	D10	1	Exists

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	5		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and front outside handle.

3.CHECK DOOR REQUEST SWITCH GROUND CIRCUIT

Check continuity between door request switch connector and ground.

Door request switch connector	Terminal	Ground	Continuity
D10	2		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace front outside handle ground circuit.

4.CHECK INTELLIGENT KEY UNIT OUTPUT SIGNAL

1. Connect Intelligent Key unit connector.
2. Check voltage between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Voltage (V) (Approx.)
M40	5		5

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 6.

5.CHECK DOOR REQUEST SWITCH

Check door request switch.
Refer to DLK-78, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

6.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-282, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

DRIVER SIDE : Component Inspection

INFOID:0000000001109371

1.CHECK DOOR REQUEST SWITCH

Check door request switch.

Terminal		Door request switch condition	Continuity
Door request switch			
1	2	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001109372

Transmits lock/unlock operation to Intelligent Key unit.

cardiagn.com

PASSENGER SIDE : Component Function Check

INFOID:0000000001109373

1.CHECK FUNCTION

With CONSULT-III

Check door request switch “AS REQ SW” in Data monitor mode.

Monitor item	Condition	
AS REQ SW	Door request switch is pressed	:ON
	Door request switch is released	:OFF

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Refer to DLK-81, "BACK DOOR : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001109374

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Door request switch condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	25	Ground	Pressed	0
			Released	5

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR REQUEST SWITCH CIRCUIT

1. Disconnect Intelligent Key unit.
2. Check continuity between Intelligent Key unit connector and door request switch connector.

Intelligent Key unit connector	Terminal	Door request switch connector	Terminal	Continuity
M40	25	D49	1	Exists

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	25		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and front outside handle.

3.CHECK DOOR REQUEST SWITCH GROUND CIRCUIT

Check continuity between front door request switch connector and ground.

Door request switch connector	Terminal	Ground	Continuity
D49	2		Exists

Is the inspection result normal?

YES >> GO TO 4.

NO >> Repair or replace front outside handle ground circuit.

4.CHECK INTELLIGENT KEY UNIT OUTPUT SIGNAL

1. Connect Intelligent Key unit connector.
2. Check voltage between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Voltage (V) (Approx.)
M40	25		5

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 6.

5.CHECK DOOR REQUEST SWITCH

Check door request switch.
Refer to DLK-82, "BACK DOOR : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

6.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-282, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

PASSENGER SIDE : Component Inspection

INFOID:0000000001109375

1.CHECK DOOR REQUEST SWITCH

Check door request switch.

Terminal		Door request switch condition	Continuity
Door request switch			
1	2	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

BACK DOOR

BACK DOOR : Description

INFOID:0000000001109376

Transmits lock/unlock operation to Intelligent Key unit.

BACK DOOR : Component Function Check

INFOID:0000000001109377

1.CHECK FUNCTION

With CONSULT-III
Check door request switch “BD/TR REQ SW” in Data monitor mode.

cardiagn.com

Monitor item	Condition	
BD/TR REQ SW	Door request switch is pressed	:ON
	Door request switch is released	:OFF

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Refer to DLK-81, "BACK DOOR : Diagnosis Procedure".

BACK DOOR : Diagnosis Procedure

INFOID:0000000001109378

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Door request switch condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	29	Ground	Pressed	0
			Released	5

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR REQUEST SWITCH CIRCUIT

1. Disconnect Intelligent Key unit.
2. Check continuity between Intelligent Key unit connector and door request switch connector.

Intelligent Key unit connector	Terminal	Door request switch connector	Terminal	Continuity
M40	29	D187	1	Exists

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	29		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and back door request switch.

3.CHECK DOOR REQUEST SWITCH GROUND CIRCUIT

Check continuity between front door request switch connector and ground.

Door request switch connector	Terminal	Ground	Continuity
D187	2		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace back door request switch ground circuit.

4.CHECK INTELLIGENT KEY UNIT OUTPUT SIGNAL

1. Connect Intelligent Key unit connector.
2. Check voltage between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Voltage (V) (Approx.)
M40	29		5

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 6.

5.CHECK DOOR REQUEST SWITCH

Check door request switch.
Refer to DLK-82, "BACK DOOR : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door request switch. Refer to DLK-278, "Exploded View".

6.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-282, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

BACK DOOR : Component Inspection

INFOID:0000000001109379

1.CHECK DOOR REQUEST SWITCH

Check door request switch.

Terminal		Door request switch condition	Continuity
Door request switch			
1	2	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Replace back door request switch. Refer to DLK-278, "Exploded View".

cardiagn.com

DOOR SWITCH
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000000939086

Detects door open/closed condition.

DRIVER SIDE : Component Function Check

INFOID:0000000000939087

1.CHECK FUNCTION

With CONSULT-III

Check door switches “DOOR SW-DR” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-83, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000000939088

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals (+) BCM connector	Terminals (+) Terminal	Terminals (–)	Door condition	Voltage (V) (Approx.)
M65	26	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	26	B34	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	26		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-84, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

DRIVER SIDE : Component Inspection

INFOID:0000000000939089

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001035849

Detects door open/closed condition.

PASSENGER SIDE : Component Function Check

INFOID:0000000001035850

1.CHECK FUNCTION

With CONSULT-III

Check door switches “DOOR SW-AS” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-84, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001098048

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

cardiagn.com

Terminals			Door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	27	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	27	B27	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	27		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-85, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

PASSENGER SIDE : Component Inspection

INFOID:0000000001098049

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR LH

REAR LH : Description

INFOID:0000000001035853

Detects door open/closed condition.

REAR LH : Component Function Check

INFOID:0000000001035854

1.CHECK FUNCTION

With CONSULT-III

Check door switches “DOOR SW-RL” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-RL	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-86, "REAR LH : Diagnosis Procedure".

REAR LH : Diagnosis Procedure

INFOID:0000000001098050

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals			Door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	25	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	25	B71	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	25		Does not exist

Is the inspection result normal?

cardiagn.com

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3. CHECK DOOR SWITCH

Check door switch.
Refer to DLK-87, "REAR LH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR LH : Component Inspection

INFOID:0000000001098051

1. CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR RH

REAR RH : Description

INFOID:0000000001035857

Detects door open/close condition.

REAR RH : Component Function Check

INFOID:0000000001035858

1. CHECK FUNCTION

With CONSULT-III
Check door switches “DOOR SW-RR” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-RR	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-87, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001098052

1. CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals			Door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	29	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	29	B53	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	29		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-88, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR RH : Component Inspection

INFOID:0000000001098053

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

cardiagn.com

BACK DOOR

BACK DOOR : Description

INFOID:0000000000939119

Detects back door open condition.

BACK DOOR : Component Function Check

INFOID:0000000000939120

1.CHECK FUNCTION

With CONSULT-III

Check “BACK DOOR SW” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

Is the inspection result normal?

YES >> Back door lock assembly (door switch) is OK.
NO >> Refer to DLK-89, "BACK DOOR : Diagnosis Procedure".

BACK DOOR : Diagnosis Procedure

INFOID:0000000000939121

1.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH) INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Back door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	28	Ground	OPEN	0
			CLOSE	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH) CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and back door lock assembly (door switch) connector.

BCM connector	Terminal	Back door lock assembly (door switch) connector	Terminal	Continuity
M65	28	D152	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	28		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and trunk room lamp switch.

3.CHECK BACK DOOR LOCK ASSEMBLY GROUND CIRCUIT

Check continuity between back door lock assembly connector and ground.

Back door lock assembly (door switch) connector	Terminal	Ground	Continuity
D152	3		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace back door lock assembly ground circuit.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	28	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH)

Check back door lock assembly (door switch).
Refer to DLK-90, "BACK DOOR : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door lock assembly (door switch). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

BACK DOOR : Component Inspection

INFOID:0000000000939122

1.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH)

1. Turn ignition switch OFF.
2. Disconnect back door lock assembly (door switch) connector.
3. Check back door lock assembly (door switch).

Terminal		Trunk condition	Continuity
Back door lock assembly (door switch)			
4	3	OPEN	Exists
		CLOSE	Does not exist

Is the inspection result normal?

YES >> Back door lock assembly (door switch) is OK.
NO >> Replace back door lock assembly (door switch). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

cardiagn.com

KEY SWITCH

Description

INFOID:0000000001116292

Key switch detects that mechanical key is inserted into the key cylinder, and then transmits the signal to BCM and Intelligent Key unit.

Component Function Check

INFOID:0000000001116293

1.CHECK KEY SWITCH INPUT SIGNAL

Check key switch (“KEY SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
KEY SW	Insert mechanical key into key cylinder	: ON
	Remove mechanical key from key cylinder	: OFF

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Refer to DLK-91, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116294

1.CHECK KEY SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key unit and BCM connector.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	7	Ground	Insert mechanical key into key cylinder	Battery voltage
			Remove mechanical key from key cylinder	0

4. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	36	Ground	Insert mechanical key into key cylinder	Battery voltage
			Remove mechanical key from key cylinder	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Remove mechanical key from key cylinder.
2. Disconnect key switch connector.
3. Check voltage between key switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Key switch connector	Terminal		
M25	2	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK KEY SWITCH SIGNAL CIRCUIT

1. Check continuity between Intelligent Key unit harness connector and key switch connector.

Intelligent Key unit connector	Terminal	Key switch connector	Terminal	Continuity
M40	7	M25	1	Exists

2. Check continuity between BCM harness connector and key switch connector.

BCM connector	Terminal	Key switch connector	Terminal	Continuity
M65	36	M25	1	Exists

3. Check continuity between key switch connector and ground.

Key switch connector	Terminal	Ground	Continuity
M25	1	Ground	Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK KEY SWITCH

Check key switch function.
Refer to DLK-92, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace key switch.

Component Inspection

INFOID:0000000001116295

COMPONENT INSPECTION

1.CHECK KEY SWITCH

Check continuity between key switch terminals.

Terminal		Condition	Continuity
key switch connector			
1	2	Insert mechanical key into key cylinder	Exists
		Remove mechanical key from key cylinder	Does not exist

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Replace key switch.

cardiagn.com

IGNITION KNOB SWITCH

Description

INFOID:0000000001116319

Ignition knob switch detects that ignition knob is pressed, and then transmits the signal to Intelligent Key unit.

Component Function Check

INFOID:0000000001116320

1.CHECK IGNITION KNOB SWITCH INPUT SIGNAL

Check ignition knob switch (“PUSH SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
PUSH SW	Ignition knob switch is pressed	: ON
	Ignition knob switch is released	: OFF

Is the inspection result normal?

YES >> Ignition knob switch is OK.
NO >> Refer to SEC-48, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116321

1.CHECK IGNITION KNOB SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key unit and BCM connector.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	27	Ground	Ignition knob switch is pressed	Battery voltage
			Ignition knob switch is released	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK IGNITION KNOB SWITCH POWER SUPPLY CIRCUIT

1. Disconnect ignition knob switch connector.
2. Check voltage between ignition knob switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Ignition knob switch connector	Terminal		
M25	4	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK IGNITION KNOB SWITCH SIGNAL CIRCUIT

1. Check continuity between Intelligent Key unit harness connector and ignition knob switch connector.

Intelligent Key unit connector	Terminal	Ignition knob switch connector	Terminal	Continuity
M40	27	M25	3	Exists

A B C D E F G H I J DLK L M N O P
carsdiagn.com

2. Check continuity between ignition knob switch connector and ground.

Ignition knob switch connector	Terminal	Ground	Continuity
M25	3		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK IGNITION KNOB SWITCH

Check ignition knob switch function.
Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace ignition knob switch.

Component Inspection

INFOID:0000000001116322

1. CHECK IGNITION KNOB SWITCH

1. Turn ignition switch OFF.
2. Disconnect ignition knob switch harness connector.
3. Check continuity between ignition knob switch terminals under the following conditions.

Ignition knob switch			Condition	Continuity
Connector	Terminal			
M25	3	4	Ignition knob switch is pressed	Exists
			Ignition knob switch is released	Does not exist

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace ignition knob switch.

cardiagn.com

DOOR LOCK ACTUATOR
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000000939131

Locks/unlocks the door with the signal from BCM.

DRIVER SIDE : Component Function Check

INFOID:0000000000939132

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:DR UNLK	The door lock actuator (driver side) is unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-95, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000000939133

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	60		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM and front door lock actuator (driver side) connector.
2. Check continuity between BCM connector and front door lock actuator (driver side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D9	3	Exists
	60		2	

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	60		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK DOOR LOCK ACTUATOR CIRCUIT 1

1. Disconnect anti-hijack relay connector.
2. Check continuity between BCM connector and anti-hijack relay connector.

BCM connector	Terminal	Anti-hijack relay connector	Terminal	Continuity
M67	56	M90	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK DOOR LOCK ACTUATOR CIRCUIT 2

Check continuity of anti-hijack relay.

Anti-hijack relay connector	Terminal		Continuity
M90	4	3	Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK DOOR LOCK ACTUATOR CIRCUIT 3

1. Check continuity between anti-hijack relay connector and front door lock actuator (driver side) connector.

Anti-hijack relay connector	Terminal	Door lock actuator connector	Terminal	Continuity
M90	3	D9	3	Exists

2. Check continuity between anti-hijack relay connector and ground.

Anti-hijack relay connector	Terminal	Ground	Continuity
M90	3		Does not exist

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

6.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-96, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation". After that, DLK-97, "DRIVER SIDE : Special Repair Requirement"

DRIVER SIDE : Component Inspection

INFOID:0000000001098100

1.CHECK FRONT DOOR LOCK ACTUATOR (DRIVER SIDE)

Check the actuator operation by connecting the battery voltage to front door lock actuator (driver side).

cardiagn.com

Front door lock actuator (driver side)	Terminal		Door lock actuator condition
	(+)	(-)	
D9	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Front door lock actuator (driver side) is OK.
NO >> Replace front door lock actuator (driver side). Refer to DLK-255, "DOOR LOCK : Removal and Installation". After that, PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement".

DRIVER SIDE : Special Repair Requirement

INFOID:0000000001098101

Refer to PWC-4, "ADDITIONAL SERVICE WHEN REMOVING BATTERY NEGATIVE TERMINAL : Description".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001097240

Locks/unlocks the door with the signal from BCM.

PASSENGER SIDE : Component Function Check

INFOID:0000000001102056

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:AS UNLK	The door lock actuator (passenger side) is locked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-97, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001097242

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM and front door lock actuator (passenger side) connector.
2. Check continuity between BCM connector and front door lock actuator (passenger side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D48	3	Exists
	54		2	

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

3.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-98, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

PASSENGER SIDE : Component Inspection

INFOID:0000000001098102

1.CHECK FRONT DOOR LOCK ACTUATOR (PASSENGER SIDE)

Check the actuator operation by connecting the battery voltage directly to front door lock actuator (passenger side).

Front door lock actuator (passenger side) connector	Terminal		Door lock actuator condition
	(+)	(-)	
D48	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Front door lock actuator (passenger side) is OK.
NO >> Replace front door lock actuator (passenger side). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR LH

REAR LH : Description

INFOID:0000000001097243

Locks/unlocks the door with the signal from BCM.

REAR LH : Component Function Check

INFOID:0000000001102057

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-99, "REAR LH : Diagnosis Procedure".

cardiagn.com

REAR LH : Diagnosis Procedure

INFOID:0000000001097245

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM and rear door lock actuator (LH) connector.
2. Check continuity between BCM connector and rear door lock actuator (LH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D85	3	Exists
	54		2	

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK DOOR LOCK ACTUATOR CIRCUIT 1

1. Disconnect anti-hijack relay connector.
2. Check continuity between BCM connector and anti-hijack relay connector.

BCM connector	Terminal	Anti-hijack relay connector	Terminal	Continuity
M67	56	M90	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK DOOR LOCK ACTUATOR CIRCUIT 2

Check continuity anti-hijack relay.

Anti-hijack relay connector	Terminal		Continuity
M90	4	3	Exists

Is the inspection result normal?

A B C D E F G H I J DLK L M N O P
carsdiagn.com

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK DOOR LOCK ACTUATOR CIRCUIT 3

1. Check continuity between anti-hijack relay connector and rear door lock actuator (LH) connector.

Anti-hijack relay connector	Terminal	Door lock actuator connector	Terminal	Continuity
M90	3	D85	3	Exists

2. Check continuity between anti-hijack relay connector and ground.

Anti-hijack relay connector	Terminal	Ground	Continuity
M90	3		Does not exist

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

6.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-100, "REAR LH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR LH : Component Inspection

INFOID:0000000001098103

1.CHECK REAR DOOR LOCK ACTUATOR (LH)

Check the actuator operation by connecting the battery voltage directly to rear door lock actuator (LH).

Rear door lock actuator (LH)	Terminal		Door lock actuator condition
	(+)	(-)	
D85	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Rear door lock actuator (LH) is OK.
NO >> Replace rear door lock actuator (LH). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH

REAR RH : Description

INFOID:0000000001097246

Locks/unlocks the door with the signal from BCM.

REAR RH : Component Function Check

INFOID:0000000001102058

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

cardiagn.com

YES >> Door lock actuator is OK.
NO >> Refer to DLK-101, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001097248

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door lock actuator (RH) connector.
3. Check continuity between BCM connector and rear door lock actuator (RH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D105	3	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect anti-hijack relay.
2. Check continuity between BCM connector and anti-hijack relay connector.

BCM connector	Terminal	Anti-hijack relay connector	Terminal	Continuity
M67	56	M90	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK DOOR LOCK ACTUATOR CIRCUIT

Check continuity anti-hijack relay.

Anti-hijack relay connector	Terminal		Continuity
M90	4	3	Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Check continuity between anti-hijack relay connector and rear door lock actuator (RH) connector.

Anti-hijack relay connector	Terminal	Door lock actuator connector	Terminal	Continuity
M90	3	D105	3	Exists

2. Check continuity between anti-hijack relay connector and ground.

Anti-hijack relay connector	Terminal	Ground	Continuity
M90	3		Does not exist

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

6.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-102, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH : Component Inspection

INFOID:0000000001098104

1.CHECK REAR DOOR LOCK ACTUATOR (RH)

Check the actuator operation by connecting the battery voltage directly to rear door lock actuator (RH).

Rear door lock actuator (RH)	Terminal		Door lock actuator condition
	(+)	(-)	
D105	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Rear door lock actuator (RH) is OK.
NO >> Replace rear door lock actuator (RH). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

cardiagn.com

BACK DOOR OPENER ACTUATOR

Description

INFOID:0000000001097224

Opens the back door with the signal from BCM.

Component Function Check

INFOID:0000000001097225

1.CHECK FUNCTION

With CONSULT-III

Check “TRUNK/GLASS HATCH” in Active test mode with CONSULT-III.

Test item		Condition
TRUNK/GLASS HATCH	:OPEN	Back door lock opener actuator operation

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-103, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001097226

1.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of back door opener switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M66	45	Ground	Pressed	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK BACK DOOR LOCK ASSEMBLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door lock assembly connector.
3. Check continuity between BCM connector and back door lock assembly connector.

BCM connector	Terminal	Back door lock assembly connector	Terminal	Continuity
M66	45	D152	2	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M66	45		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BACK DOOR LOCK ASSEMBLY GROUND CIRCUIT

Check continuity between back door lock assembly connector and ground.

Back door lock assembly connector	Terminal	Ground	Continuity
D152	1		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK BACK DOOR LOCK ASSEMBLY

Check back door lock assembly connector and ground.
Refer to DLK-104, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door lock assembly. Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

Component Inspection

INFOID:0000000001098113

1.CHECK BACK DOOR LOCK ASSEMBLY

Check the actuator operation by connecting battery voltage to back door lock assembly.

Back door lock assembly connector	Terminal		Back door actuator condition
D152	(+)	(-)	OPEN
	2	1	

Is the inspection result normal?

YES >> Back door lock assembly (back door lock actuator) is OK.
NO >> Replace back door lock assembly (back door lock actuator). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

cardiagn.com

BACK DOOR OPENER SWITCH

Description

INFOID:0000000001078347

Sends the back door opening signal to BCM.

Component Function Check

INFOID:0000000001078348

1.CHECK FUNCTION

With CONSULT-III

Check “TRNK OPNR SW” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
TRNK OPNR SW	Back door opener switch is pressed	:ON
	Back door opener switch is released	:OFF

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-105, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001078349

1.CHECK BCM INPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of back door opener switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	12	Ground	Pressed	0
			Released	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK BACK DOOR OPENER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and back door opener switch connector.
3. Check continuity between BCM connector and back door opener switch connector.

BCM connector	Terminal	Back door opener switch connector	Terminal	Continuity
M65	12	D186	1	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	12		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	12	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

4.CHECK BACK DOOR OPENER SWITCH GROUND CIRCUIT

Check continuity between back door opener switch connector and ground.

Back door opener switch connector	Terminal	Ground	Continuity
D186	2		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK BACK DOOR OPENER SWITCH

Check back door opener switch.
Refer to DLK-106, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door opener switch. Refer to DLK-279, "Exploded View".

Component Inspection

INFOID:0000000001098114

1.CHECK BACK DOOR OPENER SWITCH

Check back door opener switch.

Back door opener switch connector	Terminal		Back door opener switch condition	Continuity
D186	1	2	Pressed	Exists
			Released	Does not exist

Is the inspection result normal?

YES >> Back door opener switch is OK.
NO >> Replace back door opener switch. Refer to DLK-279, "Exploded View".

cardiagn.com

OUTSIDE KEY ANTENNA
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001109329

Detects whether Intelligent Key is outside the vehicle.
Integrated in front outside handle (driver side).

DRIVER SIDE : Component Function Check

INFOID:0000000001109330

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III
1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “DRIVER ANT”.
3. When Intelligent Key is in outside key antenna (driver side) detection area, hazard lamp flashes.

Test Item		Outside Antenna
ANTENNA	:DRIVER ANT	Outside key antenna (driver side)

Is the inspection result normal?

YES >> Outside key antenna is OK.
NO >> Refer to DLK-113, "REAR BUMPER : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001109331

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

carsdiagn.com

Terminals				Condition		Signal (Reference value)
(+)			(–)			
Intelligent Key unit connector		Terminal				
M40	Driver side (+)	19	Ground	Request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Driver side (-)	20			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK OUTSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and front outside handle connector.
2. Check continuity between Intelligent Key unit connector and outside key antenna connector.

Intelligent Key unit connector	Terminal	Outside key antenna connector	Terminal	Continuity
M40	19	D11	1	Exists
	20		2	

3. Check continuity between Intelligent Key unit connector and ground.

cardiagn.com

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	19		Does not exist
	20		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and outside key antenna.

3. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace outside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and outside key antenna connector.
3. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminals (+) Intelligent Key unit connector	Terminals (+) Terminal	Terminals (–)	Condition		Signal (Reference value)
M40	Driver side (+) 19	Ground	Door request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Driver side (-) 20		Door request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Replace outside key antenna (driver side). Refer to DLK-275, "DRIVER SIDE : Exploded View".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001109332

Detects whether Intelligent Key is outside the vehicle.
Integrated in front outside handle (passenger side).

PASSENGER SIDE : Component Function Check

INFOID:0000000001109333

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “ASSIST ANT”.
3. When Intelligent Key is in outside key antenna (passenger side) detection area, hazard lamp is flashes.

Test Item		Outside Antenna
ANTENNA	:ASSIST ANT	Outside key antenna (passenger side)

Is the inspection result normal?

YES >> Outside key antenna is OK.
NO >> Refer to DLK-110, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001109334

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

cardiagn.com

Terminals				Condition		Signal (Reference value)
(+)			(–)			
Intelligent Key unit connector		Terminal				
M40	Passenger side (+)	37	Ground	Request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Passenger side (-)	38			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK OUTSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and front outside handle connector.
2. Check continuity between Intelligent Key unit connector and outside key antenna connector.

Intelligent Key unit connector	Terminal	Outside key antenna connector	Terminal	Continuity
M40	37	D50	1	Exists
	38		2	

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	37		Does not exist
	38		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and outside key antenna.

3.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace outside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and outside key antenna connector.
3. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminal (+)			Terminal (–)	Condition		Signal (Reference value)
Intelligent Key unit connector		Terminal				
M40	Passenger side (+)	37	Ground	Door request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0514ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Passenger side (-)	38			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Replace outside key antenna. Refer to DLK-275, "PASSENGER SIDE : Exploded View" (passenger side).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

REAR BUMPER

REAR BUMPER : Description

INFOID:0000000001109335

Detects whether Intelligent Key is outside the vehicle.
Installed in rear bumper.

REAR BUMPER : Component Function Check

INFOID:0000000001109336

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “BK DOOR ANT”.
3. When Intelligent Key is in outside key antenna (rear bumper) detection area, hazard lamp is flashes.

Test Item		Outside Antenna
ANTENNA	:BK DOOR ANT	Outside key antenna (rear bumper)

Is the inspection result normal?

YES >> Outside key antenna is OK.
NO >> Refer to DLK-113, "REAR BUMPER : Diagnosis Procedure".

REAR BUMPER : Diagnosis Procedure

INFOID:0000000001109337

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminal				Condition		Signal (Reference value)
(+)			(–)			
Intelligent Key unit connector		Terminal				
M40	Rear bumper (+)	17	Ground	Request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Rear bumper (-)	18			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK OUTSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and front outside handle connector.
2. Check continuity between Intelligent Key unit connector and outside key antenna connector.

Intelligent Key unit connector	Terminal	Outside key antenna connector	Terminal	Continuity
M40	17	B81 (rear bumper)	1	Exists
	18		2	

3. Check continuity between Intelligent Key unit connector and ground.

cardiagn.com

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	17		Does not exist
	18		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and outside key antenna.

3. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace outside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and outside key antenna connector.
3. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminal (+) Intelligent Key unit connector		Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Rear bumper (+)	17	Ground	Door request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0514ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Rear bumper (-)	18			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Replace outside key antenna. Refer to DLK-276, "REAR BUMPER : Exploded View" (Rear bumper).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

INSIDE KEY ANTENNA
INSTRUMENT CENTER

INSTRUMENT CENTER : Description

INFOID:0000000001109338

Detects whether Intelligent Key is inside the vehicle.

INSTRUMENT CENTER : Component Function Check

INFOID:0000000001109339

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in Active test mode with CONSULT-III.
2. Touch “ROOM ANT 2”.
3. When Intelligent Key is in inside key antenna (instrument center) detection area, hazard lamp flashes.

Test Item		Inside Antenna
ANTENNA	:ROOM ANT 2	Inside key antenna (instrument center)

Is the inspection result normal?

YES >> Inside key antenna is OK.
NO >> Refer to DLK-116, "INSTRUMENT CENTER : Diagnosis Procedure".

INSTRUMENT CENTER : Diagnosis Procedure

INFOID:0000000001109340

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

cardiagn.com

Terminals				Condition		Signal (Reference value)
(+)			(–)			
Intelligent Key unit connector		Terminal				
M40	Instrument center (+)	33	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Instrument center (-)	34			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK INSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and inside key antenna connector.
2. Check continuity between Intelligent Key unit connector and inside key antenna connector.

Intelligent Key unit connector	Terminal	Inside key antenna connector	Terminal	Continuity
M40	33	M70 (instrument center)	1	Exists
	34		2	

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	33		Does not exist
	34		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and inside key antenna.

3.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace inside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and inside key antenna connector.
3. Check signal between Intelligent Key connector and ground with oscilloscope.

Terminals (+) Intelligent Key unit connector		Terminals (+) Terminal	Terminals (–)	Condition		Signal (Reference value)
M40	Instrument center (+)	33	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Instrument center (-)	34			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Replace inside key antenna. Refer to DLK-273, "INSTRUMENT CENTER : Exploded View" (instrument center).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

CONSOLE

CONSOLE : Description

	Console (-)	16			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Replace inside key antenna. Refer to DLK-273, "CONSOLE : Exploded View" (console).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

REAR SEAT

carsdiagn.com

REAR SEAT : Description

INFOID:0000000001109344

Detects whether Intelligent Key is inside the vehicle.

REAR SEAT : Component Function Check

INFOID:0000000001109345

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “ROOM ANT 2”.
3. When Intelligent Key is in inside key antenna (rear seat) detection area, hazard lamp flases.

Test Item		Inside Antenna
ANTENNA	:ROOM ANT 2	Inside key antenna (rear seat)

Is the inspection result normal?

YES >> Inside key antenna is OK.
NO >> Refer to DLK-122, "REAR SEAT : Diagnosis Procedure".

REAR SEAT : Diagnosis Procedure

INFOID:0000000001109346

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

cardiagn.com

Terminal (+)		Terminal (+)	Terminal (–)	Condition		Signal (Reference value)
Intelligent Key unit connector		Terminal				
M40	Rear seat (+)	13	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Rear seat (-)	14			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK INSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and inside key antenna connector.
2. Check continuity between Intelligent Key unit connector and inside key antenna connector.

Intelligent Key unit connector	Terminal	Inside key antenna connector	Terminal	Continuity
M40	13	B45 (rear seat)	1	Exists
	14		2	

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	13		Does not exist
	14		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and inside key antenna.

3.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace inside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and inside key antenna connector.
3. Check signal between Intelligent Key connector and ground with oscilloscope.

Terminal (+) Intelligent Key unit connector	Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Rear seat (+) 13	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Rear seat (-) 14			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Replace inside key antenna. Refer to DLK-274, "REAR : Exploded View" (rear seat).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

ANTI-HIJACK RELAY
PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001034191

Receives anti-hijack signal from Intelligent Key unit.

PASSENGER SIDE : Component Function Check

INFOID:0000000001034192

1.CHECK FUNCTION

1. All doors are locked using Intelligent Key or door request switch. (Super lock system condition: Set)
2. Press door request switch (passenger side), only passenger side door is UNLOCK.

Is the inspection result normal?

YES >> Anti-hijack relay is OK.
NO >> Refer to DLK-125, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001034193

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL 1

1. Check voltage between Intelligent Key unit connector and ground.

Terminal			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	11	Ground	Ignition switch OFF	Battery voltage

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check condition of harness and connector. If OK, repair or replace harness.

2.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL 2

1. Check voltage between Intelligent Key unit connector and ground.

Terminal			Condition		Voltage (V) (Approx.)
(+)		(–)			
Intelligent Key unit connector	Terminal				
M40	40	Ground	Press front door request switch (passenger side)	Anti-hijack operation	Battery voltage → 0 → Battery voltage
				Other than above	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 4.

3.CHECK INTELLIGENT KEY UNIT GROUND CIRCUIT

Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	12		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair harness or connector.

4. CHECK PASSENGER SIDE ANTI-HIJACK RELAY GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect passenger side anti-hijack relay connector and Intelligent Key unit connector.
3. Check voltage between passenger side anti-hijack relay connector and ground.

Terminal			Condition	Voltage (V) (Approx.)
(+)		(–)		
Passenger side anti-hijack relay connector	Terminal			
M90	2	Ground	Ignition switch OFF	Battery voltage

4. Check continuity between passenger side anti-hijack relay connector and Intelligent Key unit connector.

Passenger side anti-hijack relay connector	Terminal	Intelligent Key unit connector	Terminal	Continuity
M90	1	M40	40	Exists

5. Check continuity between passenger side anti-hijack relay connector and ground.

Passenger side anti-hijack relay connector	Terminal	Ground	Continuity
M90	1		Does not exist

Is the inspection result normal?

YES >> GO TO 5.
NO >> Check condition of harness and connector. If OK, repair or replace harness.

5. CHECK ANTI-HIJACK RELAY

Check anti-hijack relay.
Refer to DLK-126, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace anti-hijack relay. Refer to DLK-25, "DOOR LOCK AND UNLOCK SWITCH : Component Parts Location".

PASSENGER SIDE : Component Inspection

INFOID:0000000001034194

1. CHECK ANTI-HIJACK RELAY

1. Turn ignition switch OFF.
2. Disconnect passenger side anti-hijack relay harness connector.
3. Check continuity passenger side anti-hijack relay terminals 3 and 4.

Passenger side anti-hijack relay connector	Terminal		Condition	Continuity
M90	3	4	Battery voltage direct current supply between terminals 1 and 2	Does not exist
			Other than above	Exists

Is the inspection result normal?

YES >> Passenger side anti-hijack relay is OK.
NO >> Replace passenger side anti-hijack relay. Refer to DLK-25, "DOOR LOCK AND UNLOCK SWITCH : Component Parts Location".

cardiagn.com

INTELLIGENT KEY WARNING BUZZER

Description

INFOID:0000000000939149

Answers back and warns about an inappropriate operation.

Component Function Check

INFOID:0000000000939150

1.CHECK FUNCTION

With CONSULT-III

Check Intelligent Key warning buzzer “OUTSIDE BUZZER” in “Active Test” mode.

Is the inspection result normal?

YES >> Intelligent Key warning buzzer is OK.
NO >> Refer to DLK-127, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000939151

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL 1

Check voltage between Intelligent Key unit connector and ground.

Terminal			Warning buzzer operation condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	4	Ground	Sounding	0
			Not sounding	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK INTELLIGENT KEY WARNING BUZZER POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key warning buzzer connector.
3. Check voltage between Intelligent Key warning buzzer connector and ground.

Terminal			Voltage (V) (Approx.)
(+)		(–)	
Intelligent Key warning buzzer connector	Terminal		
E25	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace Intelligent Key warning buzzer power supply circuit.

3.CHECK HARNESS CONTINUITY

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key warning buzzer connector and Intelligent Key unit connector.

Intelligent Key warning buzzer connector	Terminal	Intelligent Key unit connector	Terminal	Continuity
E25	3	M40	4	Exists

3. Check continuity between Intelligent Key warning buzzer connector and ground.

Intelligent Key warning buzzer connector	Terminal	Ground	Continuity
E25	3		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness between Intelligent Key warning buzzer and Intelligent Key unit.

4.CHECK INTELLIGENT KEY WARNING BUZZER

Check Intelligent Key warning buzzer.
Refer to DLK-128, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace Intelligent Key warning buzzer. Refer to DLK-277, "Exploded View".

5.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-282, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

Component Inspection

INFOID:0000000000939152

1.CHECK INTELLIGENT KEY WARNING BUZZER

Connect battery power supply to Intelligent Key warning buzzer terminals 1 and 3, and check the operation.

Intelligent Key warning buzzer connector	Terminal		Operation
	(+)	(-)	Buzzer sounds
E25	1	3	

Is the inspection result normal?

YES >> Intelligent Key warning buzzer is OK. GO TO 2.
NO >> Replace Intelligent Key warning buzzer. Refer to DLK-277, "Exploded View".

2.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-282, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

cardiagn.com

BUZZER (COMBINATION METER)

Description

INFOID:0000000000939172

Performs operation method guide and warning with buzzer.

Component Function Check

INFOID:0000000000939173

1.CHECK FUNCTION

With CONSULT-III

Check the operation with “INSIDE BUZZER” in the Active test.

Test item	Condition	
INSIDE BUZZER	:TAKE OUT	Take away warning chime sounds
	:KNOB	Ignition knob switch warning chime sounds
	:KEY	Key warning chime sounds

Is the inspection result normal?

Yes >> Warning buzzer in combination meter is OK.
No >> Refer to DLK-129, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000939174

1.CHECK BUZZER (COMBINATION METER) CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace buzzer (combination meter) circuit.

KEY WARNING LAMP

Description

INFOID:0000000001034140

Performs operation method guide and warning together with buzzer.

Component Function Check

INFOID:0000000001034141

1.CHECK FUNCTION

With CONSULT-III

Check the operation with “INDICATOR” in “Active Test”.

Test item	Condition	
INDICATOR	:BLUE ON	Key warning lamp (green) illuminates
	:RED ON	Key warning lamp (red) illuminates
	:BLUE IND	Key warning lamp (green) flashes
	:RED IND	Key warning lamp (red) flashes

Is the inspection result normal?

Yes >> Key warning lamp in combination meter is OK.
No >> Refer to DLK-130, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001034142

1.CHECK KEY WARNING LAMP CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace key warning lamp circuit.

cardiagn.com

LOCK WARNING LAMP

Description

INFOID:0000000001097590

Performs operation method guide and warning together with buzzer.

Component Function Check

INFOID:0000000001097591

1.CHECK FUNCTION

With CONSULT-III

Check the operation with “INDICATOR” in “Active Test”.

Test item	Condition	
INDICATOR	:KNOB ON	Lock warning lamp illuminates
	:KNOB IND	Lock warning lamp flashes

Is the inspection result normal?

Yes >> Lock warning lamp in combination meter is OK.
No >> Refer to DLK-131, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001097592

1.CHECK LOCK WARNING LAMP CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace lock warning lamp circuit.

HAZARD WARNING LAMPS

Description

INFOID:0000000000939175

Performs answer-back for each operation with the number of blinks.

Component Function Check

INFOID:0000000000939176

1.CHECK FUNCTION

With CONSULT-III

Check hazard warning lamp “FLASHER” in “Active test”.

Is the inspection result normal?

YES >> Hazard warning lamp circuit is OK.
NO >> Refer to DLK-132, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000939177

1.CHECK HAZARD SWITCH CIRCUIT

Check hazard switch circuit.
Refer to EXL-72, "Component Function Check".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace hazard warning switch circuit.

cardiagn.com

VEHICLE SPEED SIGNAL CIRCUIT

Description

INFOID:0000000001078356

Displays the vehicle speed signal received from combination meter as a numerical value (km/h).

Component Function Check

INFOID:0000000001078357

1.CHECK FUNCTION

Check that all doors are automatically locked at the vehicle speed of more than 12 km/h (7 MPH).

Is the inspection result normal?

YES >> Vehicle speed signal circuit is OK.
NO >> Refer to DLK-133, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001078358

1.CHECK VEHICLE SPEED SIGNAL CIRCUIT

Check vehicle speed signal “VEHICLE SPEED” in “Data Monitor”.

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace vehicle speed signal circuit.

carsdiagn.com

INTELLIGENT KEY BATTERY

Description

INFOID:0000000000939159

The following functions are available when having and carrying electronic ID.
- Door lock and unlock
- Engine start

Remote control entry function and panic alarm function are available when operating the button.

Component Function Check

INFOID:0000000000939160

1.CHECK INTELLIGENT KEY FUNCTION

Does door lock and unlock operate when operating Intelligent Key switch?

Is the inspection result normal?

YES >> Intelligent Key is OK.
NO >> Refer to DLK-134, "Diagnosis Procedure".

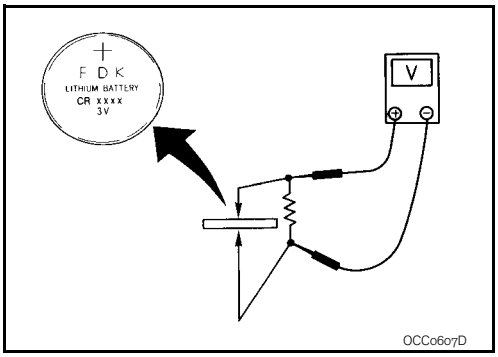
Diagnosis Procedure

INFOID:0000000000939161

1.CHECK INTELLIGENT KEY BATTERY

Check by connecting a resistance (approximately 300Ω) so that the current value becomes about 10 mA.

Standard : Approx. 2.5 - 3.0V



Is the measurement value within the specification?

YES >> Replace Intelligent Key.
NO >> Replace Intelligent Key battery. Refer to DLK-281, "Exploded View".

cardiagn.com

B2590: NATS MALFUNCTION	• Inhibits steering look unlocking • Inhibits engine cranking (BCM) • Fuel cut (ECM)	Erase DTC

DTC Inspection Priority Chart

INFOID:0000000001070419

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN) • B2552: INTELIGENT KEY
2	• B2013: STRG COMM 1 • B2590: NATS MALFUNCTION

DTC Index

INFOID:0000000001070420

NOTE:
Details of time display
- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

CONSULT display	Detection condition	Fail-safe	Diagnosis
No DTC is detected. further testing may be required.	—	—	—
U1000: CAN COMM CIRCUIT	Intelligent Key unit cannot receive CAN communication signal continuously for 2 seconds or more.	—	Check CAN communication system. Refer to DLK-68
U1010: CONTROL UNIT (CAN)	Intelligent Key unit detects internal CAN communication circuit malfunction.	—	Replace Intelligent Key unit.
B2013: STRG COMM 1	The ID verification result between Intelligent key unit and steering lock unit are NG. Or Intelligent Key unit cannot communicate with steering lock unit.	×	Perform steering lock unit ID registration with CONSULT-III
B2552: INTELLIGENT KEY	Intelligent Key unit internal malfunction.	×	Replace Intelligent Key unit.
B2590: NATS MALFUNCTION	The ID verification result between Intelligent key unit and BCM are NG. Or Intelligent Key unit cannot communicate with BCM.	×	Check NATS Refer to SEC-43

BCM (BODY CONTROL MODULE)

Reference Value

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

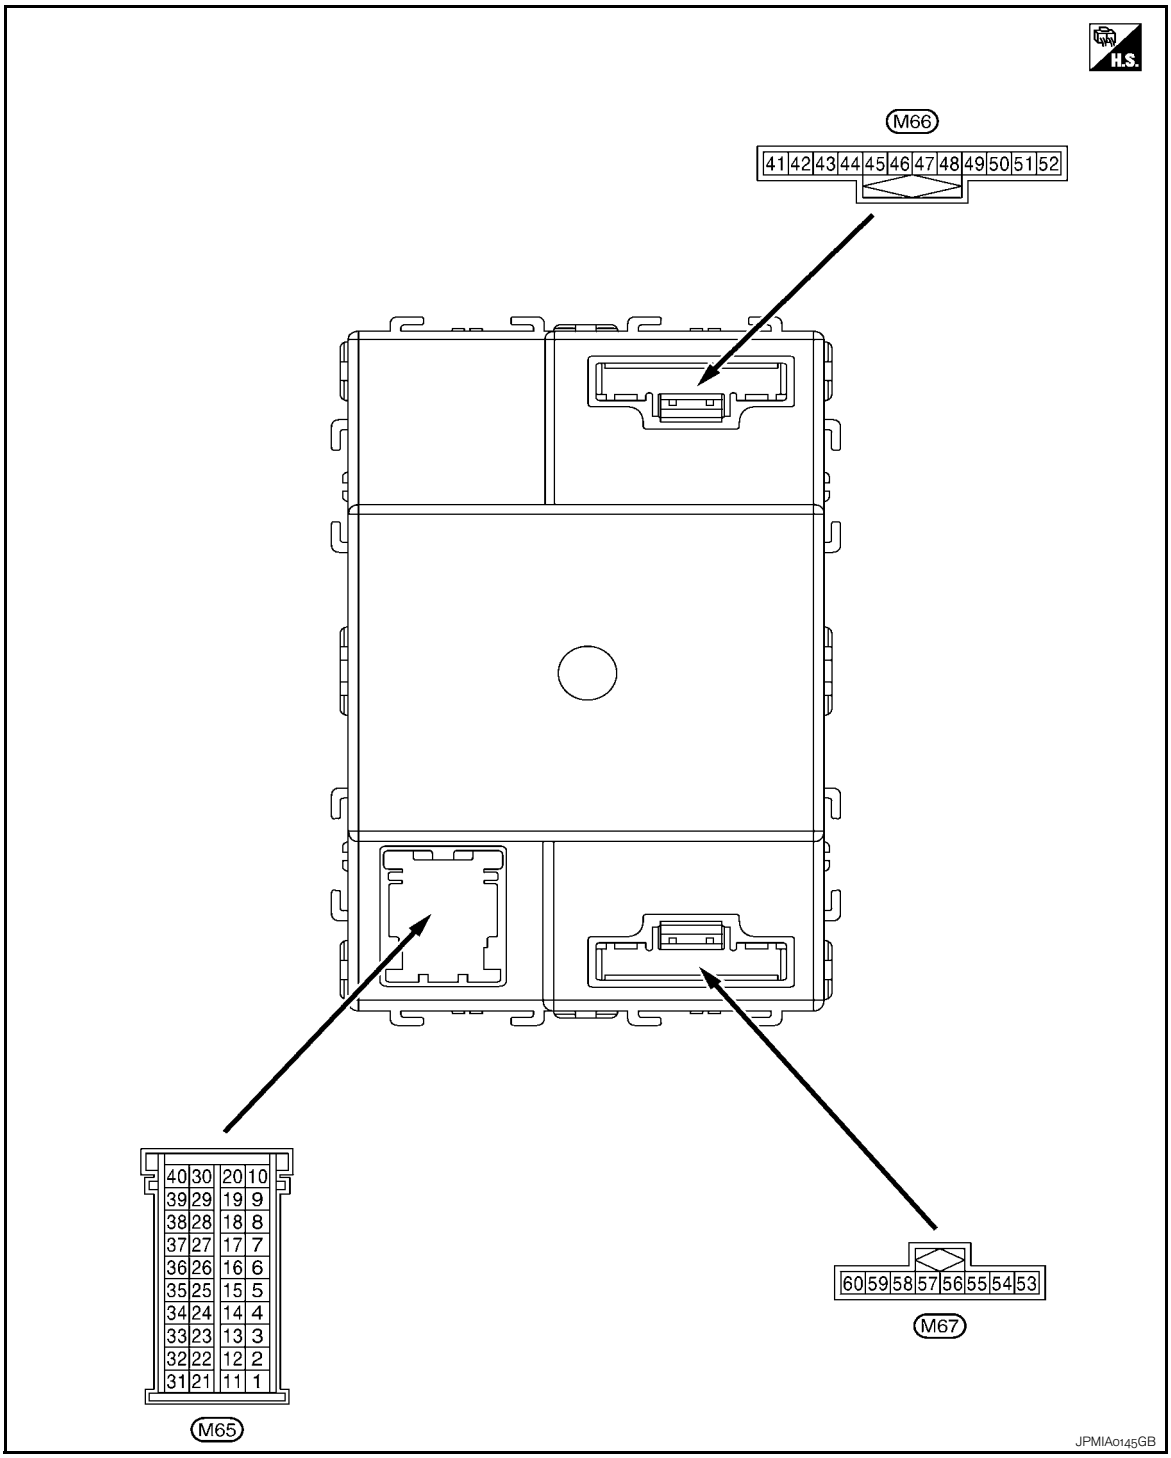
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000001097039

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001097040

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN)
2	• B2190: NATS ANTENNA AMP • B2191: DIFFERNCE OF KEY • B2192: ID DISCORD BCM-ECM • B2193: CHAIN OF BCM-ECM • B2194: DISCORD BCM-I-KEY • B2195: ANTI SCANNING • B2196: DONGLE NG

DTC Index

INFOID:0000000001097041

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

SYMPTOM DIAGNOSIS

DOOR LOCK FUNCTION SYMPTOMS

DOOR LOCK AND UNLOCK SWITCH

DOOR LOCK AND UNLOCK SWITCH : Symptom Table

INFOID:0000000000939191

DOOR LOCK AND UNLOCK SWITCH OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-20, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Except driver side, doors are closed.
- Passenger side door is not in anti-hijack state.
- Doors are not locked by Intelligent Key or door request switch.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Door lock and unlock function does not operate with door lock and unlock switch.	1. Check BCM power supply and ground circuit.		DLK-71
	2. Check door lock and unlock switch.		DLK-73
	3. Check door switch.	Passenger side	DLK-84
		Rear LH	DLK-86
		Rear RH	DLK-87
		Back door	DLK-89
	4. Check intermittent incident.		GI-39
Specific door lock actuator does not operate.	1. Check door lock actuator.	Driver side	DLK-95
		Passenger side	DLK-97
		Rear LH	DLK-98
		Rear RH	DLK-100
	2. Check intermittent incident.		GI-39
Rear LH and RH door lock actuator does not operate.	1. Check anti-hijack relay.		DLK-125
	2. Check intermittent incident.		GI-39

INTELLIGENT KEY

INTELLIGENT KEY : Symptom Table

INFOID:0000000000939193

INTELLIGENT KEY OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-20, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Door lock and unlock operation are normal.
- Emergency key is removed from ignition key cylinder.
- All doors are closed.
- Ignition knob is not pressed.

- No Intelligent Keys are inside the vehicle.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
All of the Intelligent Key functions do not operate.	1. Check Intelligent Key power supply and ground circuit.	DLK-71
	2. Check driver side door switch.	DLK-83
	3. Check key switch.	DLK-91
	4. Check ignition knob switch.	DLK-93
	5. Check Intelligent Key battery.	DLK-134
	6. Check intermittent incident.	GI-39
Anti-hijack function does not operate by Intelligent Key.	1. Check “SELECTIVE UNLOCK FUNCTION” setting in “WORK SUPPORT”.	DLK-65
	2. Check intermittent incident.	GI-39

DOOR REQUEST SWITCH

DOOR REQUEST SWITCH : Symptom Table

INFOID:0000000000939192

DOOR REQUEST SWITCH OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-20, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Intelligent Key operation is normal.
- “LOCK/UNLOCK BY I-KEY” is ON when setting on CONSULT-III.
- Emergency key is removed from ignition key cylinder.
- Ignition switch is in OFF position.
- No Intelligent Keys are not inside the vehicle.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Door lock and unlock do not operate by door request switch.	1. Check “LOCK/UNLOCK BY I-KEY” setting in “WORK SUPPORT”.	DLK-65
	2. Check intermittent incident.	GI-39
Door lock/unlock does not operate by request switch (driver side).	1. Check door request switch (driver side).	DLK-77
	2. Check outside key antenna (driver side).	DLK-107
	3. Check intermittent incident.	GI-39
Door lock/unlock does not operate by request switch (passenger side).	1. Check door request switch (passenger side).	DLK-79
	2. Check outside key antenna (passenger side).	DLK-110
	3. Check intermittent incident.	GI-39
Door lock/unlock does not operate by request switch (back door).	1. Check door request switch (back door).	DLK-80
	2. Check outside key antenna (rear bumper).	DLK-113
	3. Check intermittent incident.	GI-39
Anti-hijack function does not operate by driver side door request switch (other door lock functions operate).	1. Check “SELECTIVE UNLOCK FUNCTION” setting in “WORK SUPPORT”.	DLK-65
	2. Check intermittent incident.	GI-39

KEY REMINDER

KEY REMINDER : Symptom Table

INFOID:0000000001091244

KEY REMINDER OPERATION MALFUNCTION

NOTE:
- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-20, "Work Flow".
- To understand the operation when it does work, refer to DLK-35, "KEY REMINDER : System Description".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)
- Request switch operation and door lock and unlock switch operation are normal.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Key reminder operation does not operate.	1. Check door switch (driver side).		DLK-83
	2. Check inside key antenna.	Instrument center	DLK-116
		Console	DLK-119
		Rear seat	DLK-122
	3. Check intermittent incident.		GI-38

AUTO DOOR LOCK

AUTO DOOR LOCK : Symptom Table

INFOID:0000000001091243

AUTO DOOR LOCK OPERATION MALFUNCTION

NOTE:
- “AUTO RELOCK TIMER” is not OFF when setting on CONSULT-III.
- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-20, "Work Flow".
- To understand the operation when it does work, refer to DLK-38, "AUTO DOOR LOCK : System Description"“
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)
- Request switch operation and door lock and unlock switch operation are normal.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Auto door lock operation does not operate.	1. Check “AUTO RELOCK TIMER” setting in “WORK SUPPORT”.		DLK-65
	2. Check door switch.	Driver side	DLK-83
		Passenger side	DLK-84

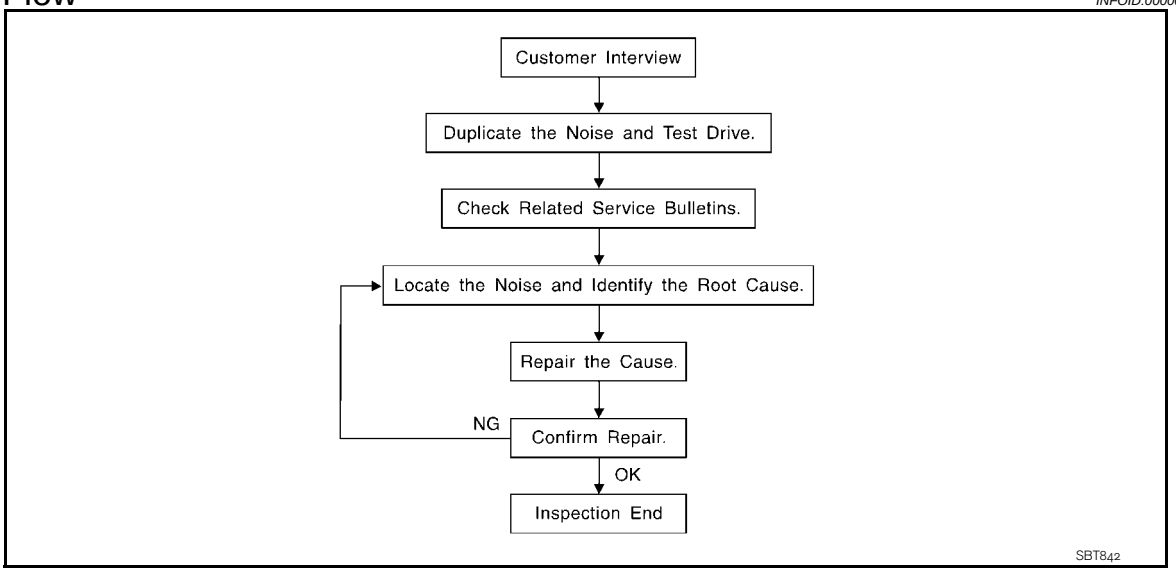
Hazard reminder operation does not operate properly.	1. Check setting of hazard reminder with CONSULT-III.	DLK-65
	2. Check intermittent incident.	GI-39

SQUEAK AND RATTLE TROUBLE DIAGNOSES

Work Flow

INFOID:0000000001098110



CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any of the customer's comments; refer to DLK-216, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by a test drive with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak – (Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak – (Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle – (Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock – (Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick – (Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump – (Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz – (Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

cardiagn.com

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSB) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Engine Ear or mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to DLK-214, "Inspection Procedure".

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
- separate components by repositioning or loosening and retightening the component, if possible.
- insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape are available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.
NOTE:

- URETHANE PADS
  Insulates connectors, harness, etc.
- INSULATOR (Foam blocks)
  Insulates components from contact. Can be used to fill space behind a panel.
- INSULATOR (Light foam block)
- FELT CLOTHTAPE
  Used to insulate where movement does not occur. Ideal for instrument panel applications.
  The following materials, not available through NISSAN Parts Department, can also be used to repair squeaks and rattles.
- UHMW(TEFLON) TAPE
  Insulates where slight movement is present. Ideal for instrument panel applications.
- SILICONE GREASE
  Used in place of UHMW tape that will be visible or not fit.
  Note: Will only last a few months.
- SILICONE SPRAY
  Use when grease cannot be applied.
- DUCT TAPE
  Use to eliminate movement.

CONFIRM THE REPAIR

carsdiagn.com

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Inspection Procedure

INFOID:0000000001098111

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. Cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. Trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

cardiagn.com

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. Rear seatback lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

c-diagn.com

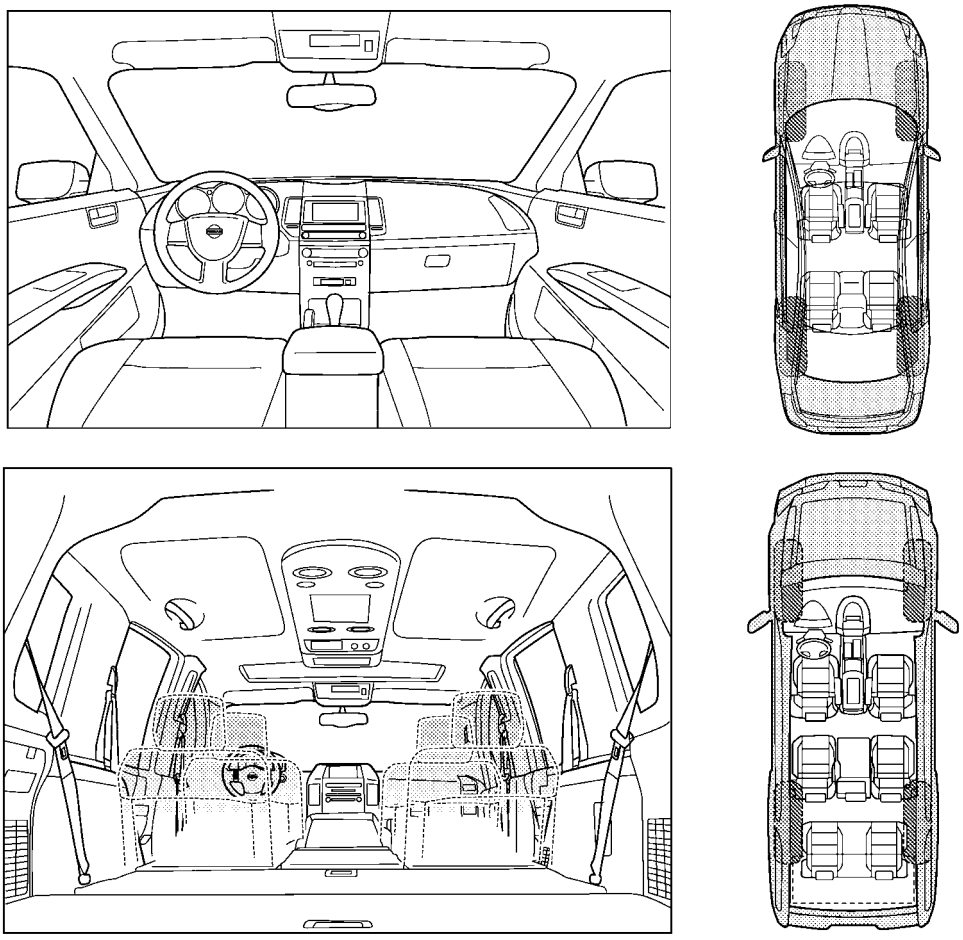
Diagnostic Worksheet

INFOID:0000000001098112

SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.



Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

cardiagn.com

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001096525

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001096526

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

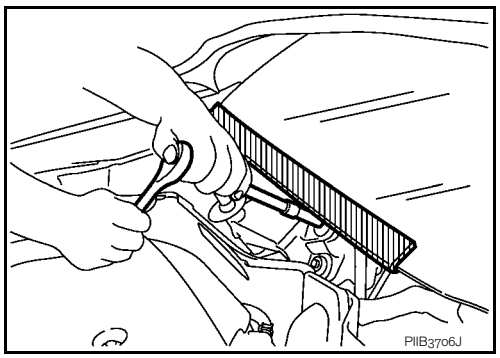
1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Precaution for Procedure without Cowl Top Cover

INFOID:0000000001096527

cardiagn.com

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



Work

INFOID:0000000000939205

- After removing and installing the opening/closing parts, be sure to carry out fitting adjustments to check their operational.
- Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001035832

BASIC INSPECTION

1. CHECK POWER DOOR LOCK AND UNLOCK SWITCH OPERATION

Check door lock and unlock operation by operating door lock and unlock switch.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Refer to DLK-203, "DOOR LOCK AND UNLOCK SWITCH : Symptom Table".

2. CHECK INTELLIGENT KEY OPERATION

Check door lock and unlock operation by operating the Intelligent Key remote control button.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Refer to DLK-203, "INTELLIGENT KEY : Symptom Table".

3. CHECK DOOR REQUEST SWITCH OPERATION

Check door lock and unlock operation by operating door request switch.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Refer to DLK-204, "DOOR REQUEST SWITCH : Symptom Table".

4. CHECK KEY REMINDER OPERATION

Check key reminder operation. Refer to DLK-35, "KEY REMINDER : System Description".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Refer to DLK-205, "KEY REMINDER : Symptom Table".

5. CHECK AUTO DOOR LOCK OPERATION

Check auto door lock operation. Refer to DLK-38, "AUTO DOOR LOCK : System Description".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Refer to DLK-205, "AUTO DOOR LOCK : Symptom Table".

6. CHECK VEHICLE SPEED SENSING AUTO DOOR LOCK OPERATION

Check vehicle speed sensing auto door lock operation. Refer to DLK-41, "VEHICLE SPEED SENSING AUTO DOOR LOCK : System Description".

Is the inspection result normal?

YES >> GO TO 7.
NO >> Refer to DLK-206, "VEHICLE SPEED SENSING AUTO DOOR LOCK : Symptom Table".

7. CHECK BACK DOOR OPENER OPERATION

Check back door opener operation by operating the back door opener switch.

Is the inspection result normal?

YES >> GO TO 8.
NO >> Refer to DLK-207, "BACK DOOR OPENER SWITCH : Symptom Table".

8. CHECK WARNING FUNCTION

Check warning function. Refer to DLK-52, "System Description".

Is the inspection result normal?

YES >> GO TO 9.

NO [Buzzer (combination meter)]>> Refer to DLK-208, "BUZZER (COMBINATION METER) : Symptom Table".
NO (Intelligent Key warning buzzer)>> Refer to DLK-208, "INTELLIGENT KEY WARNING BUZZER : Symptom Table".
NO (Warning lamp)>> Refer to DLK-209, "WARNING LAMP : Symptom Table".
NO (Back door open warning)>> Refer to DLK-209, "BACK DOOR : Symptom Table".

9. CHECK HAZARD AND BUZZER REMINDER FUNCTION

Check hazard and buzzer reminder function by Intelligent Key or request switch. Refer to DLK-322, "System Description".

Is the inspection result normal?

YES >> GO TO 10.
NO (Hazard warning lamp)>> Refer to DLK-211, "HAZARD WARNING LAMP : Symptom Table".
NO (Intelligent Key warning buzzer)>> Refer to DLK-211, "INTELLIGENT KEY WARNING BUZZER : Symptom Table".

10. CHECK OUT

CHECK OUT.

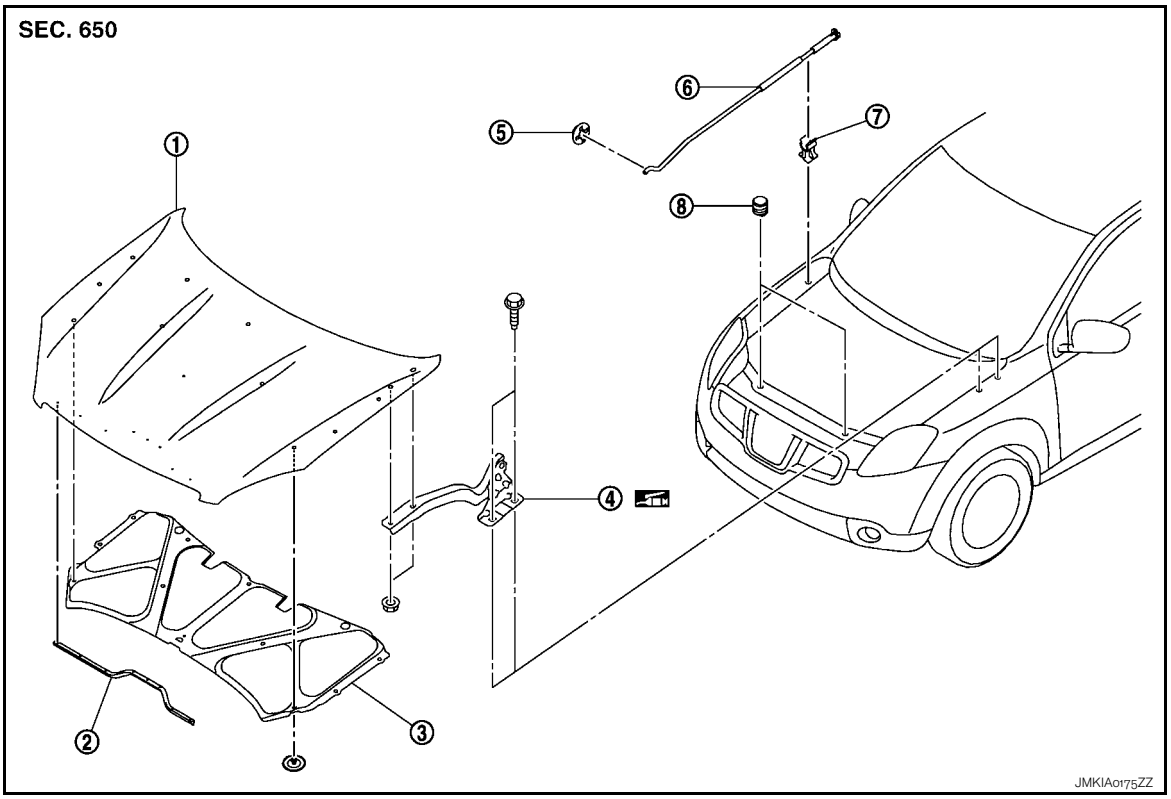
HOOD

HOOD ASSEMBLY

HOOD ASSEMBLY : Exploded View

INFOID:0000000000939208

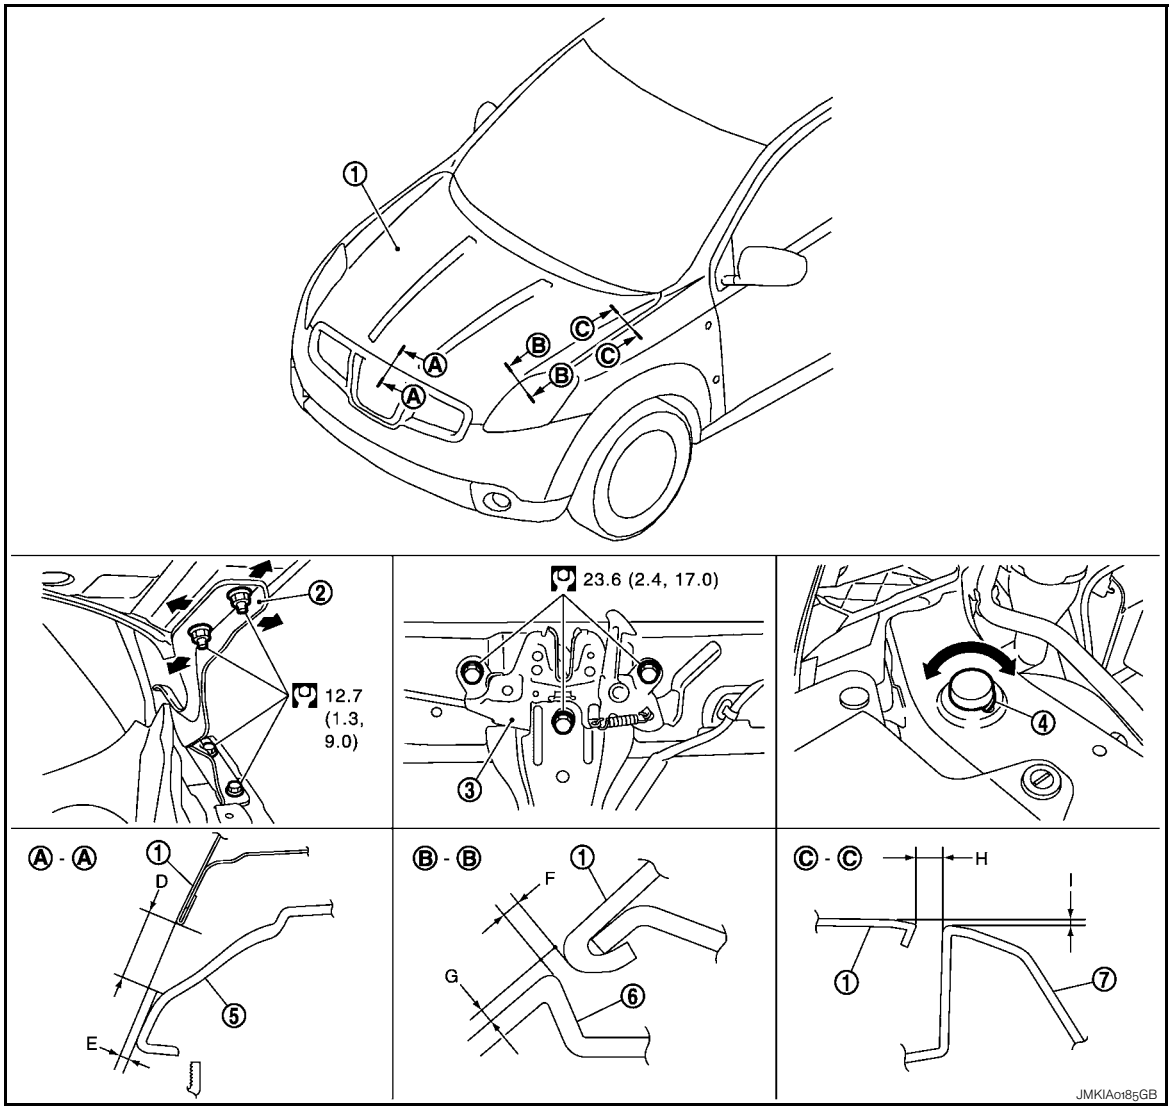
REMOVAL



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

ADJUSTMENT



1. Hood assembly
2. Hood hinge
3. Hood lock assembly
4. Hood bumper rubber
5. Front grille
6. Front combination lamp
7. Front fender

Refer to GI-4, "Components" for symbols in the figure.

HOOD ASSEMBLY : Removal and Installation

INFOID:0000000000939209

REMOVAL

1. Support the hood lock assembly with the proper material to prevent it from falling.
   WARNING:
   Bodily injury may occur if no supporting rod is holding the hood open when removing the hood stay.
2. Remove the hood hinge mounting nuts on the hood to remove the hood assembly.
   CAUTION:
   Perform work with 2 workers, because of its heavy weight.
3. Remove the following parts after removing the hood assembly.
   - Hood insulator
   - Hood sealing rubber

INSTALLATION

Install in the reverse order of removal.

CAUTION:

cardiagn.com

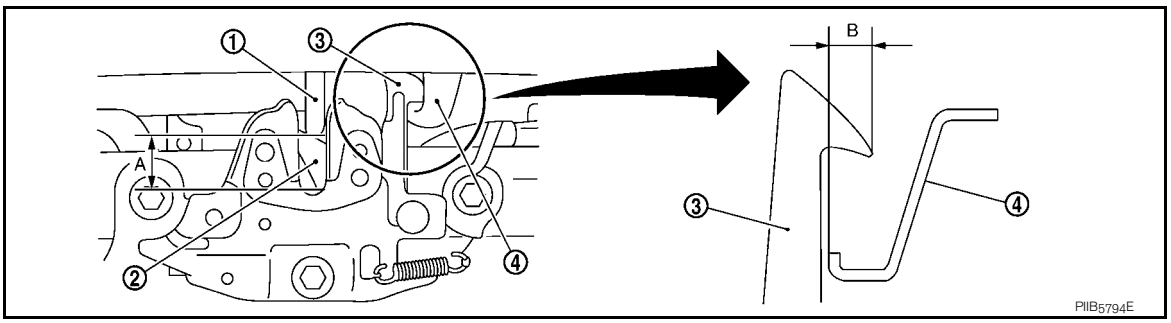
- **Perform work with 2 workers, because of its heavy weight.**
- **Before installing the hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installing, perform hood fitting adjustment. Refer to DLK-225, "HOOD ASSEMBLY : Adjustment".**

HOOD ASSEMBLY : Adjustment

INFOID:0000000000939210

Portion				Standard	Right/left Clearance (MAX)
Hood – Front bumper	A – A	D	Clearance	5.2 – 9.2 mm (0.205 – 0.362 in)	2.0 mm (0.079 in)
		E	Surface height	- 0.2 – 3.8 mm (- 0.008 – 0.150 in)	2.0 mm (0.079 in)
Hood – Front combination lamp	B – B	F	Clearance	3.7 – 7.7 mm (0.140 – 0.303 in)	2.0 mm (0.079 in)
		G	Surface height	- 2.3 – 2.3 mm (- 0.091 – 0.091 in)	2.3 mm (0.091 in)
Hood – Front fender	C – C	H	Clearance	3.9 – 5.9 mm (0.154 – 0.232 in)	1.5 mm (0.059 in)
		I	Surface height	- 1.0 – 1.0 mm (- 0.039 – 0.039 in)	1.5 mm (0.059 in)

1. Check the clearance and the surface height between the hood and each part by visualy and touching. (Fitting standard dimension in the table below should be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Remove the hood lock and adjust the height by rotating the bumper rubber until the hood becomes 1 to1.5 mm (0.04 to 0.059 in) lower than the fender.
4. Temporarily tighten the hood lock, and position by engaging it with the hood striker. Check the lock and striker for looseness and adjust the clearance and evenness with the striker to satisfy the specification.
5. Adjust A and B shown in the figure to the following value with hood's own weight by dropping it from approximately. 200 mm (7.87 in) height or by pressing the hood lightly [approximately. 29 N (3 kg)].



1. Hood striker
2. Primary latch
3. Secondary striker
4. Secondary latch

A : 20.0 mm (0.787 in)
B : 6.8 mm (0.268 in)

6. After adjustment tighten lock bolts to the specified torque.

HOOD HINGE

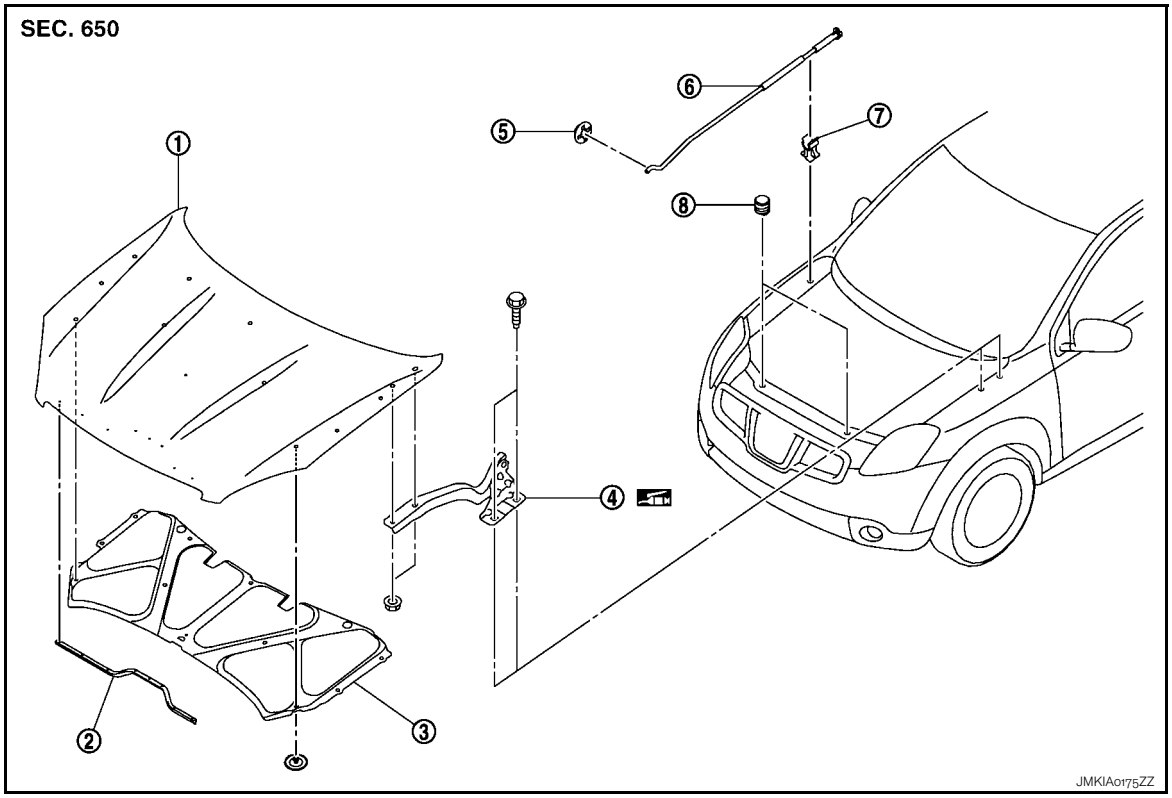
INFOID:0000000001091261



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

HOOD HINGE : Removal and Installation

INFOID:0000000001091262

REMOVAL

1. Remove the hood assembly. Refer to DLK-224, "HOOD ASSEMBLY : Removal and Installation".
2. Remove the front fender. Refer to DLK-233, "Removal and Installation".
3. Remove the hood hinge mounting bolts, and then remove the hood hinge.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

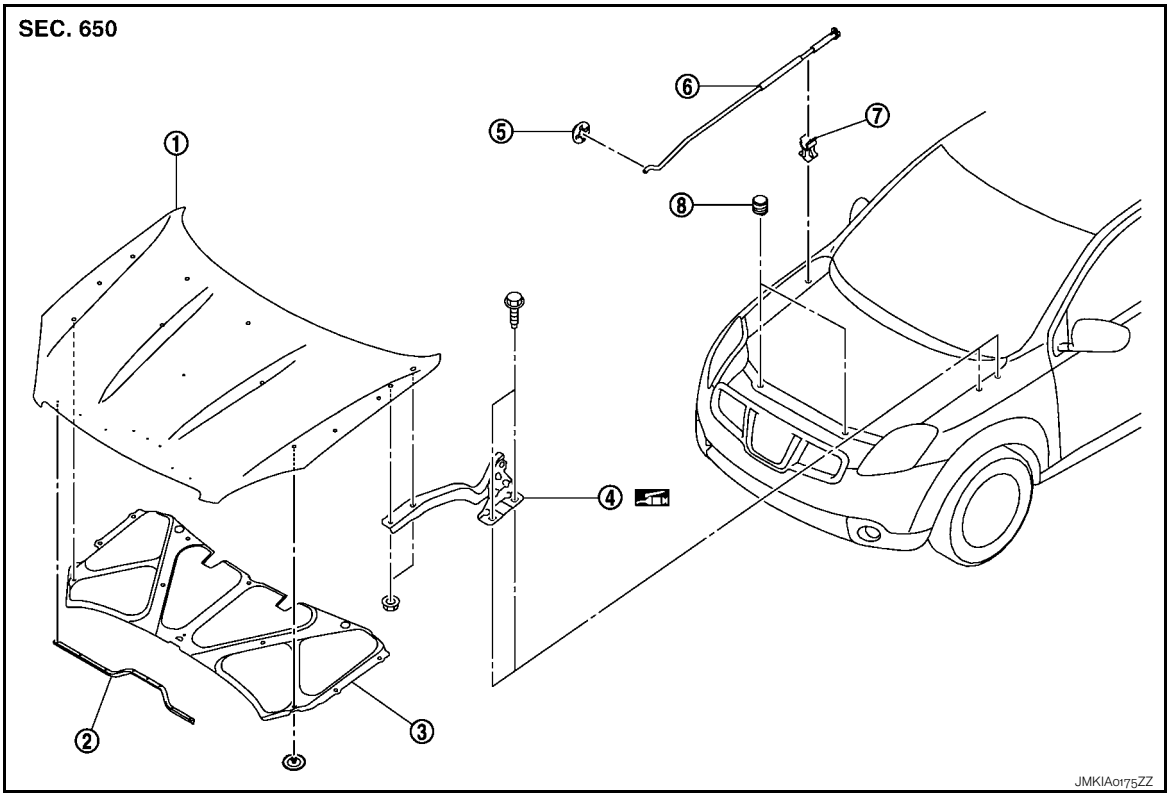
- **After installation, apply touch-up paint (the body color) onto the head of the hinge mounting bolts and nuts.**
- **Before installation of hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installation, perform hood fitting adjustment. Refer to DLK-225, "HOOD ASSEMBLY : Adjustment".**

HOOD SUPPORT ROD

HOOD SUPPORT ROD : Exploded View

INFOID:0000000001095093

cardiagn.com



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

HOOD SUPPORT ROD : Removal and Installation

INFOID:0000000001091264

REMOVAL

1. Support the hood lock assembly with the proper material to prevent it from falling.

   WARNING:
   Bodily injury may occur if no supporting rod is holding the hood open when removing the hood stay.
2. Remove the hood support rod from the grommet.

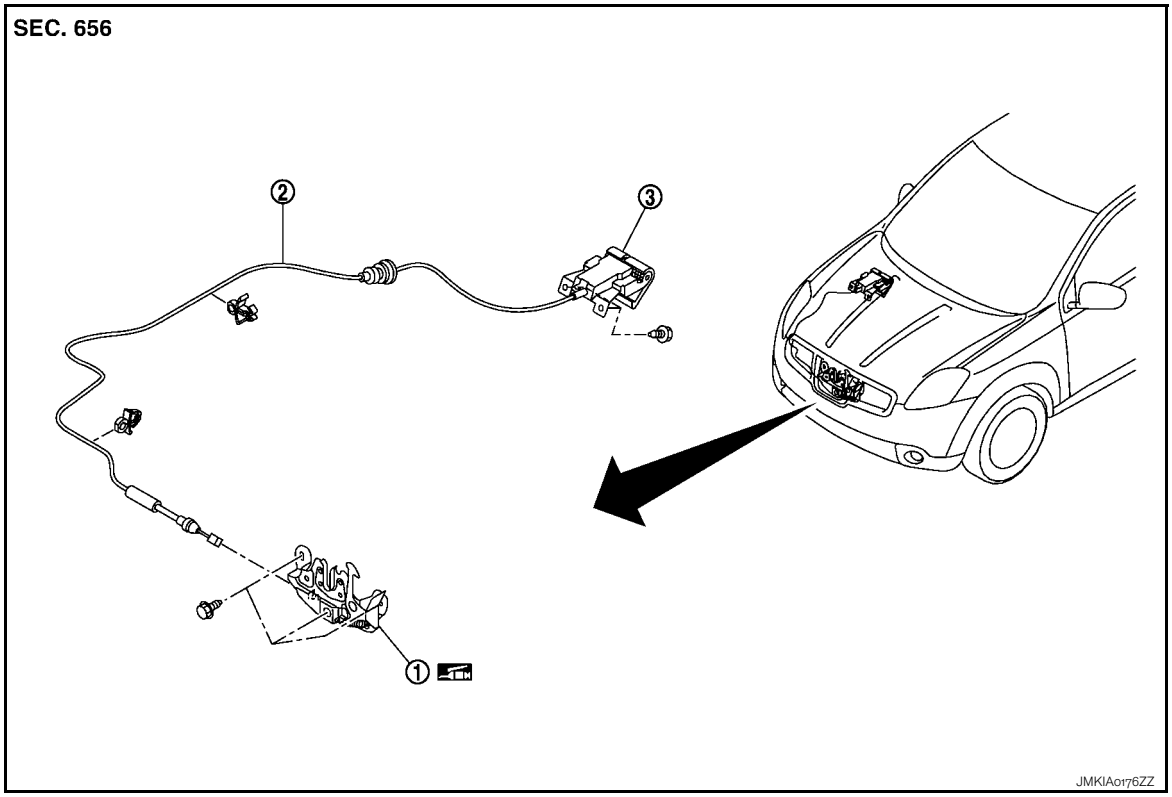
INSTALLATION

Install in the reverse order of removal.

HOOD LOCK CONTROL

HOOD LOCK CONTROL : Exploded View

INFOID:0000000000939211



1. Hood lock assembly
2. Hood lock control cable
3. Hood lock opener

Refer to GI-4, "Components" for symbols in the figure.

HOOD LOCK CONTROL : Removal and Installation

INFOID:0000000000939212

REMOVAL

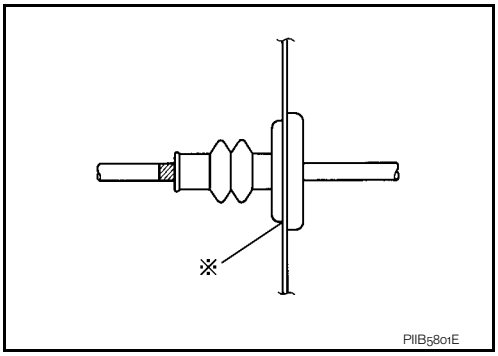
1. Remove the hood lock opener mounting bolts, and then remove the hood lock opener.
2. Remove the front bumper fascia. Refer to EXT-11, "Removal and Installation".
3. Remove the hood lock mounting bolts, and then remove the hood lock.
4. Remove the fender protector. Refer to EXT-22, "Removal and Installation".
5. Disconnect the hood lock cable from hood lock, and clip it from the hoodledge.
6. Remove the grommet on the dash lower panel, and pull the hood lock control cable toward the passenger compartment.
   CAUTION:
   While pulling, do not to damage (peeling) the outside of the hood lock control cable.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Do not to bend the cable too much, keeping the radius 100 mm (3.94 in) or more.**
- **Check that the cable is not offset from the positioning grommet, and apply the sealant to the grommet (at *mark) properly.**



cardiagn.com

- **Check that the hood lock control cable is properly engaged with the hood lock.**
- **After installation, perform hood fitting adjustment. Refer to DLK-225, "HOOD ASSEMBLY : Adjustment".**
- **After installation, perform the hood lock control inspection. Refer to DLK-229, "HOOD LOCK CONTROL : Inspection".**

HOOD LOCK CONTROL : Inspection

INFOID:0000000000939213

NOTE:
If the hood lock cable is bent or deformed, replace it.

1. Check that the secondary latch is properly engaged with the secondary striker [6.8 mm (0.268 in) shown in the figure] by hood weight.
2. While operating the hood opener, carefully check that the front end of the hood is raised by approximately 20.0 mm (0.787 in). Also check that the hood opener returns to the original position.
3. Check that the hood opener operating is condition 49 N (5.0 kg) or below.
4. Install so that static closing face of hood is 94 – 490 N·m (9.6 – 50.0 kg-m).
   NOTE:
   - Exert vertical force on right side and left side of hood lock.
   - Do not press simultaneously both sides.
5. Check the hood lock lubrication condition. If necessary, apply body grease to the hood lock.

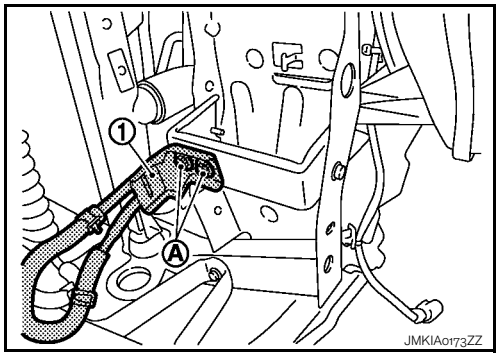
Removal and Installation

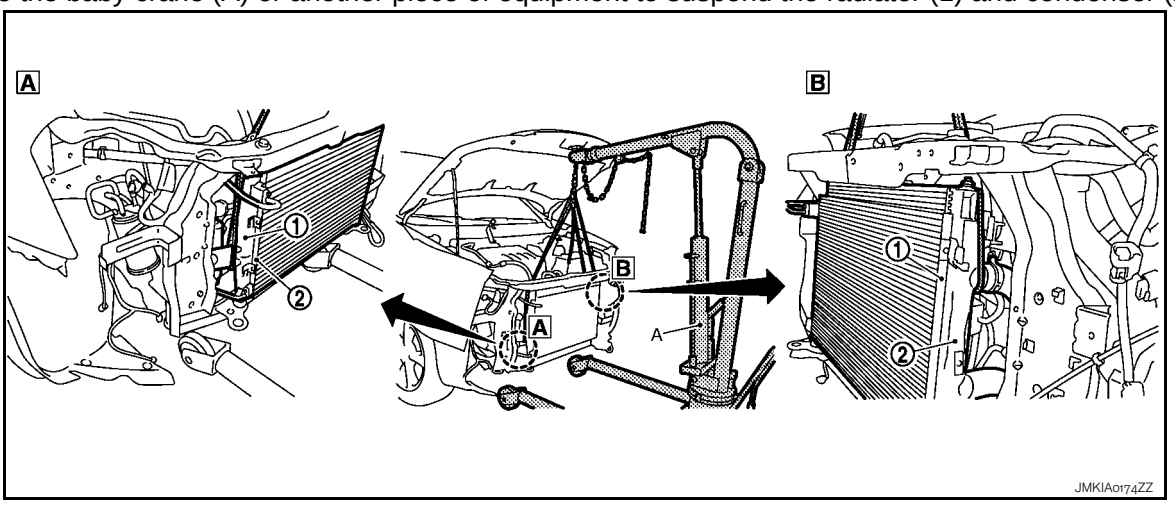
INFOID:0000000000939215

REMOVAL

1. Remove the front fillet molding. Refer to EXT-23, "Removal and Installation".
2. Remove the front bumper fascia and the energy absorber. Refer to EXT-11, "Removal and Installation".
3. Remove the energy absorber (upper and lower). Refer to EXT-11, "Removal and Installation".
4. Remove the air cleaner duct. Refer to EM-27, "Removal and Installation".
5. Remove the front combination lamp (LH/RH). Refer to EXL-171, "Removal and Installation".
6. Remove the bumper reinforcement. Refer to EXT-11, "Removal and Installation".
7. Disconnect the hood lock control cable clamp, and then remove the hood lock assembly. Refer to DLK-228, "HOOD LOCK CONTROL : Removal and Installation".
8. Remove the air guide mounting clips, and then remove the air guide (LH/RH).
9. Remove the hood lock stay mounting bolts, and then remove the hood lock stay.
10. Remove the hood switch (with theft warning systems). Refer to SEC-SEC-156, "Removal and Installation".
11. Remove the crush zone sensor. Refer to SR-14, "Removal and Installation".
12. Remove the horn. Refer to HRN-5, "Removal and Installation".
13. Remove the ambient sensor. Refer to VTL-22, "Removal and Installation".
14. Remove the radiator mounting bracket (LH/RH). Refer to CO-13, "Removal and Installation".
15. Remove the Intelligent Key warning buzzer (with Intelligent Key systems). Refer to DLK-277, "Removal and Installation".
16. Remove the charge air cooler assembly (with K9K engine models). Refer to EM-266, "Removal and Installation".
17. Remove the A/T fluid cooler assembly and the A/T fluid cooler bracket (with A/T models only). Refer to TM-348, "FLUID COOLER : Removal and Installation".
18. Remove the A/T fluid cooler pipe bracket (1) mounting bolts (A) (with A/T models only).



19. Remove the washer tank. Refer to WW-99, "Removal and Installation".
20. Use the baby crane (A) or another piece of equipment to suspend the radiator (1) and condenser (2).



21. Remove the radiator core support assembly mounting bolts, and draw out the radiator core support assembly to the front of the vehicle.
22. Remove the radiator core support assembly.
23. Remove the following parts after removing the radiator core support assembly.
    - Inlet tube bracket (with K9K engine models)
    - Intercooler bracket (with K9K engine models)
    - Apron reinforcement bracket

INSTALLATION

Install in the reverse order of removal.

CAUTION:

After installation, refill the following parts.

- **A/T fluid. Refer to TM-315, "Changing".**
- **Engine coolant. Refer to CO-9, "Refilling".**

4. Front fender

: Metal clip

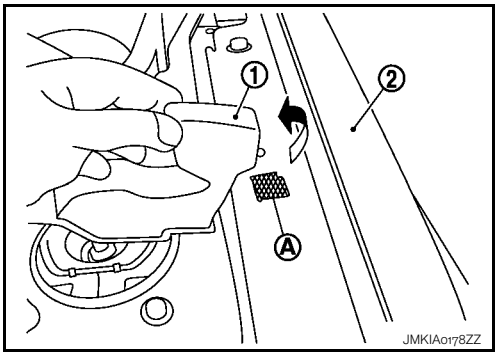
Removal and Installation

INFOID:0000000000939217

REMOVAL

1. Remove the outer fender protector. Refer to EXT-22, "Removal and Installation".
2. Remove the inner fender protector. Refer to EXT-22, "Removal and Installation".
3. Remove the side turn signal lamp. Refer to EXL-178, "Removal and Installation".
4. Remove the front bumper fascia. Refer to EXT-11, "Removal and Installation".
5. Remove the front combination lamp.
   - XENON TYPE: EXL-171, "Removal and Installation".
   - HALOGEN TYPE: EXL-327, "Removal and Installation".
6. Remove the mounting clips and remove hoodledge cover.
7. Remove the center mudguard. Refer to EXT-28, "Removal and Installation".

8. Peel away the double-faced adhesive tape (A) of the front fender seal (1) from the front fender (2).



9. Remove the mounting bolts and remove the front fender.
   CAUTION:
   Use a shop cloth to protect the body from being damaged during removal.
10. Remove the following parts after removing the front fender.
    - Front fender seal.
    - Bumper side bracket. Refer to EXT-11, "Exploded View".

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace the double-faced adhesive tape on the back of the cowl top cover seal with new tape.**
- **Do not wash the vehicle within 24 hours after installation so as to keep adhesive.**
- **After installation, apply the touch-up paint (the body color) onto the head of the front fender mounting bolts.**
- **After installation, check the front fender adjustment. Refer to DLK-225, "HOOD ASSEMBLY : Adjustment" and DLK-237, "DOOR ASSEMBLY : Adjustment".**

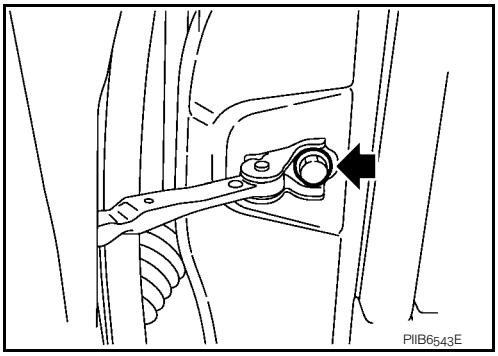
DOOR ASSEMBLY : Removal and Installation

INFOID:0000000000939219

REMOVAL

1. Remove the mounting bolts of the door check link on the vehicle.



2. Remove the front door harness grommet, and then pull out the harness from the vehicle.

cardiagn.com

3. Disconnect the front door harness connector.
4. Remove the door hinge mounting nuts (door side), and then remove the door assembly.
   CAUTION:
   - **When removing and installing the front door assembly, support the door with a jack and cloth to protect the door and body.**
   - **Perform work with 2 workers, because of its heavy weight.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **When removing and installing the front door assembly, perform the fitting adjustment. Refer to DLK-237, "DOOR ASSEMBLY : Adjustment".**
- **After installation, apply touch-up paint (the body color) onto the head of the door hinge mounting nuts.**
- **Check the door hinge rotating part for poor lubrication. If necessary, apply body grease.**
- **Check the front door open/close operation after installation.**

DOOR ASSEMBLY : Adjustment

INFOID:0000000000939220

CLEARANCE, SURFACE HEIGHT AND SURFACE MISMATCH ADJUSTMENT

Portion		Clearance	Surface height
Front fender – Front door	A – A	3.5 – 5.0 mm (0.138 – 0.197 in)	- 1.5 – 0.5 mm (- 0.059 – 0.020 in)
Front door – Rear door	B – B	3.5 – 5.0 mm (0.138 – 0.197 in)	- 1.5 – 0.5 mm (- 0.059 – 0.020 in)

1. Check the clearance and surface height and surface mismatch between the front door and each part visually and by touching. (Fitting standard dimension in the table below shall be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Remove the front fender. Refer to refer to DLK-233, "Removal and Installation".
4. Loosen the door hinge mounting nuts on door side.
5. Adjust the surface height and surface mismatch of the front door according to the fitting standard dimension.
6. Temporarily tighten the hinge mounting nuts on door side.
7. Loosen the door hinge mounting bolts on body side.
8. Raise the front door at rear end to adjust clearance of the front door according to the fitting standard dimension.
9. After adjustment tighten bolts and nuts to the specified torque.
10. Install the front fender. Refer to refer to DLK-233, "Removal and Installation".
    CAUTION:
    After installation, check the front fender adjustment. Refer to DLK-225, "HOOD ASSEMBLY : Adjustment".

DOOR STRIKER ADJUSTMENT

Adjust the door striker so that it becomes parallel with the lock insertion direction.

INFOID:0000000001054826

REMOVAL

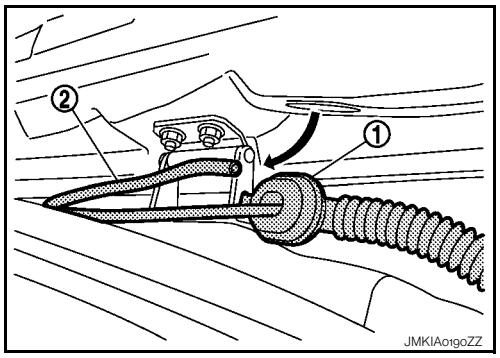
1. Remove the back door finisher inner. Refer to INT-26, "Removal and Installation".
2. Remove the back door window glass. Refer to GW-17, "Removal and Installation".

NOTE:

cardiagn.com

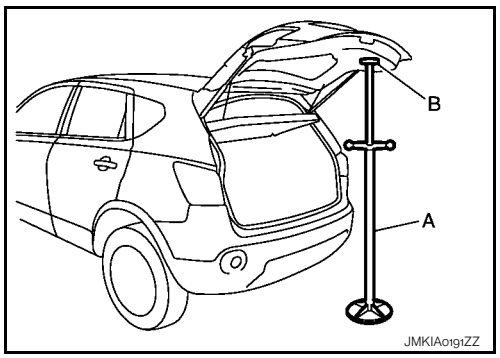
It is necessary to remove back door window glass in order to remove harness, because harness connector interferes with back door window glass pin.

3. Disconnect the connectors in the back door, and then remove the grommet, and pull out hte harness.
4. Remove the parcel shelf. Refer to INT-24, "Removal and Installation".
5. Remove the high-mounted stop lamp. Refer to EXL-183, "Removal and Installation".
6. Remove the grommet (1), and then pull out the washer tube (2) .

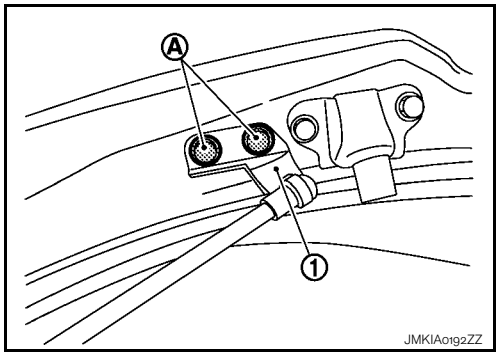


7. Pull the harness out of the back door.
8. Support the back door lock with the proper material to prevent it from falling.

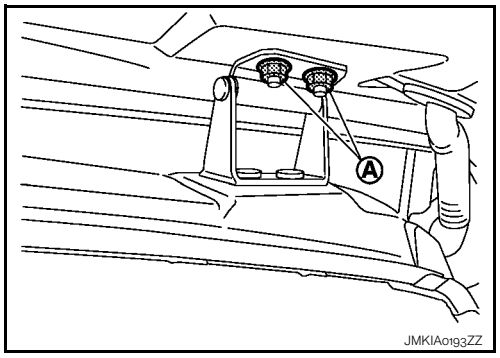
A : Jack
B : Shop cloth



9. Remove the back door stay bracket mounting bolts (A) on the back door.



10. Remove the back door hinge mounting nuts (A) on the back door and remove the back door assembly.
CAUTION:
Perform work with 2 workers, because of its heavy weight.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Perform work with 2 workers, because of its heavy weight.**

carsdiagn.com

- **After installation, perform fitting adjustment. Refer to DLK-250, "BACK DOOR ASSEMBLY : Adjustment".**
- **Check the back door open/close operation after installation.**
- **Check the back door lock/unlock operation after installation.**

BACK DOOR ASSEMBLY : Adjustment

INFOID:0000000001054856

Portion				Standard	Difference(RH/LH)
Back door panel – Roof panel	A – A	F	Clearance	5.0 – 7.0 mm (0.197 – 0.276 in)	—
		G	Surface height	0.0 – 2.0 mm (0.000 – 0.079 in)	—
Back door glass – Body side outer	B – B	H	Clearance	3.9 – 8.1 mm (0.154 – 0.319 in)	2.1 mm (0.083 in)
		I	Surface height	- 1.0 – 3.1 mm (- 0.039 – 0.122 in)	2.0 mm (0.079 in)
Back door panel – Body side outer	C – C	J	Clearance	3.5 – 6.5 mm (0.138 – 0.256 in)	2.0 mm (0.079 in)
		K	Surface height	- 1.0 – 1.0 mm (- 0.039 – 0.039 in)	—
Back door panel – Rear bumper fascia	D – D	L	Clearance	4.0 – 8.0 mm (0.157 – 0.315 in)	2.0 mm (0.079 in)
		M	Surface height	0.1 – 4.1 mm (0.004 – 0.161 in)	2.1 mm (0.083 in)
Back door panel – Rear bumper fascia	E – E	N	Clearance	5.8 – 10.2 mm (0.228 – 0.402 in)	—

FITTING ADJUSTMENT

1. Check the clearance and the evenness between the back door and each part visually and by touching. (Fitting standard dimension in the table below shall be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Loosen the bumper rubber.
4. Loosen the back door striker mounting bolts.
5. Lift up the back door approximately 100 – 150 mm (3.937 – 5.906 in) height then close it lightly and check that it is engaged firmly with the back door closed.
6. Check the clearance and evenness.
7. Finally tighten the back door striker.

BACK DOOR STRIKER

INTELLIGENT KEY BATTERY

Exploded View

INFOID:0000000001109238

Refer to DLK-281, "Removal and Installation".

Removal and Installation

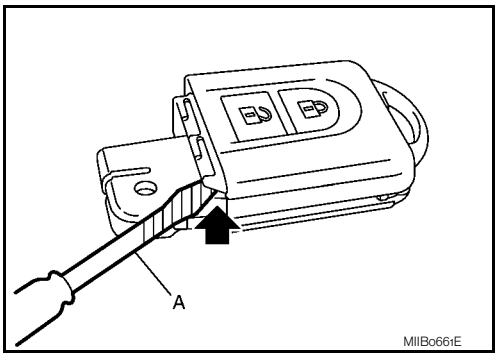
INFOID:0000000001109237

REMOVAL

1. Remove Intelligent Key cover.
2. Insert a flat-bladed screwdriver (A) wrapped with tape as shown in the illustration and then separate lower and upper cases by twisting screwdriver.

CAUTION:

- **Do not touch the circuit board or battery terminal.**
- **The Intelligent Key is water-resistant. However, if it does get wet, immediately wipe it dry.**



3. Remove the circuit board assembly from the upper case (1). [Substrate assembly: circuit board (3) + rubber (2)]
4. Gently press the rubber (2) and remove the circuit board (3).

CAUTION:

Do not touch the printed circuits directly.

5. Remove the battery (4) from the lower case (5) and replace it.

Battery replacement : Coin-type lithium battery (CR2032)

CAUTION:

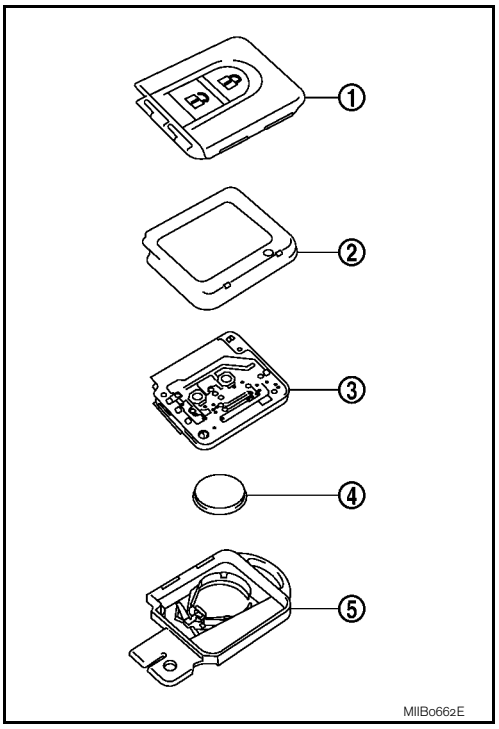
When replacing battery, keep dirt, grease, and other foreign materials off the electrode contact area.

6. After replacement, assemble the upper and lower cases by engaging the hooks on their circumference while being careful not to pinch the rubber, etc.

CAUTION:

After replacing the battery, check that all Intelligent Key functions work normally.

Refer to DLK-134, "Component Function Check".



INSTALLATION

Install in the reverse order of removal.

INTELLIGENT KEY UNIT

Exploded View

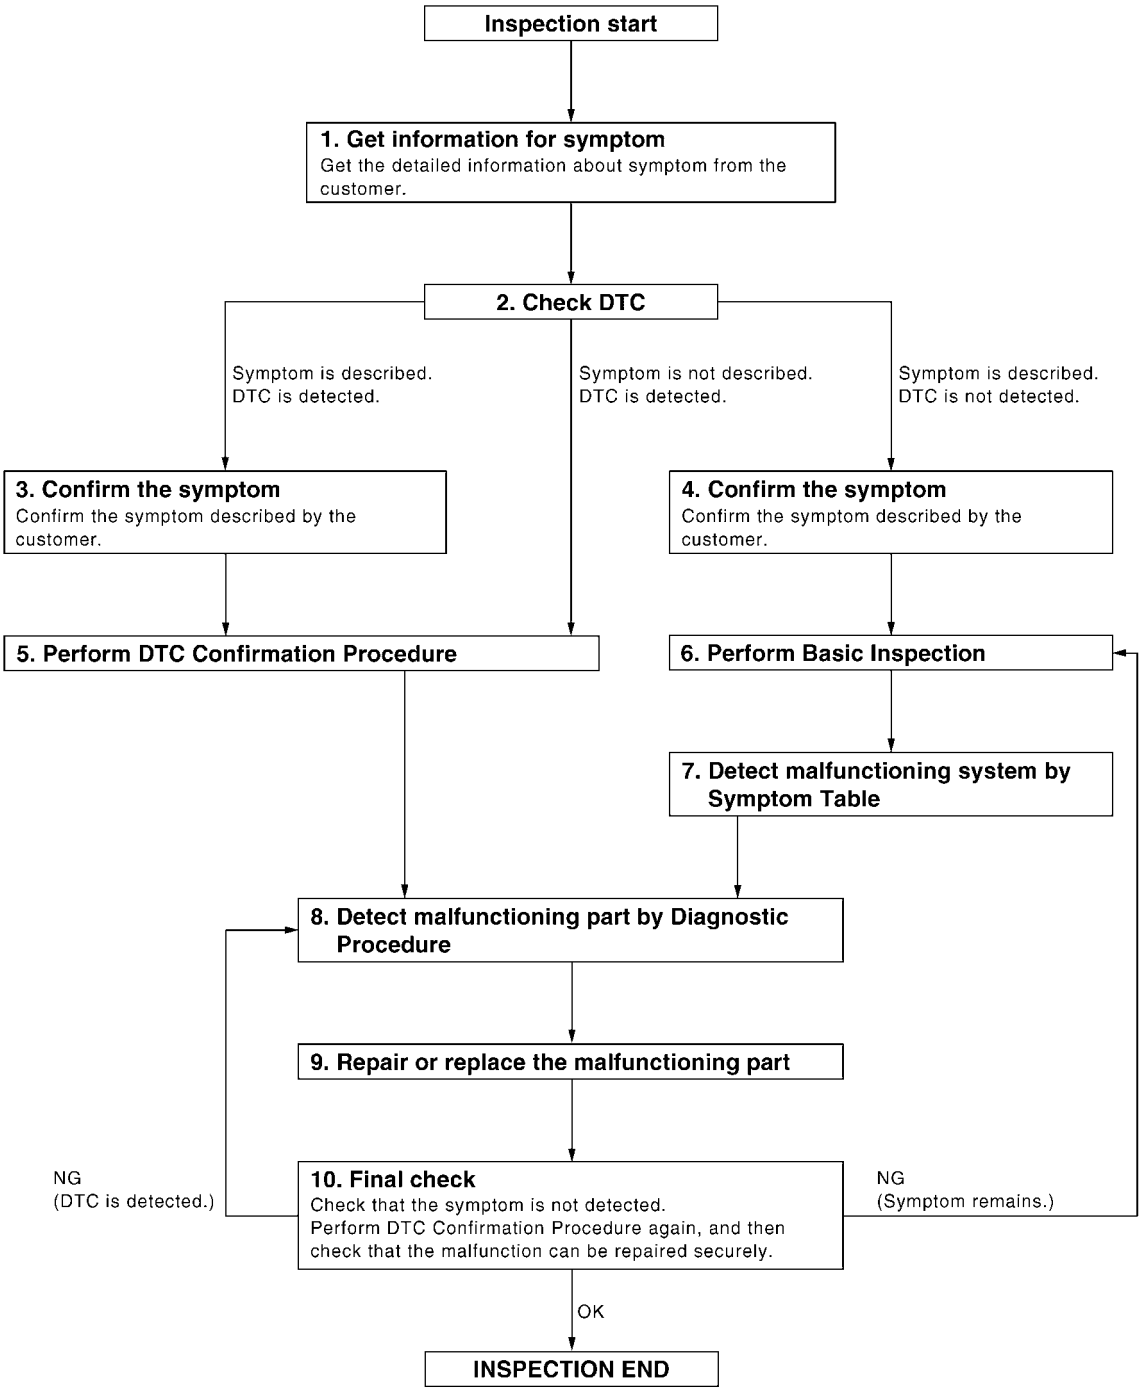
DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000001102238

OVERALL SEQUENCE



JMKIA0101GB

DETAILED FLOW

1.GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred).

>> GO TO 2.

2.CHECK DTC

1. Check DTC for Intelligent Key unit and BCM.
2. Perform the following procedure if DTC is displayed.

- Erase DTC.
- Study the relationship between the cause detected by DTC and the symptom described by the customer.

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC is displayed>>GO TO 3.
Symptom is described, DTC is not displayed>>GO TO 4.
Symptom is not described, DTC is displayed>>GO TO 5.

3.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR” mode and check real time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR ” mode and check real time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5.PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC, and then check that DTC is detected again.
If two or more DTCs are detected, refer to DLK-433, "DTC Inspection Priority Chart" (Intelligent Key unit), DLK-471, "DTC Inspection Priority Chart" (BCM) and determine trouble diagnosis order.

Is DTC detected?

YES >> GO TO 8.
NO >> Refer to GI-39, "Intermittent Incident".

6.PERFORM BASIC INSPECTION

Perform Basic Inspection. Refer to DLK-491, "Basic Inspection".

>> GO TO 7.

7.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to Symptom Table based on the confirmed symptom in step 4.

>> GO TO 8.

8.DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.
NOTE:
The Diagnostic Procedure described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure.

>> GO TO 9.

cardiagn.com

9.REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it.

>> GO TO 10.

10.FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Component Function Check again, and then check that the malfunction have been repaired securely.
When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Does the symptom reappear?

YES (DTC is detected)>>GO TO 8.
YES (Symptom remains)>>GO TO 6.
NO >> **INSPECTION END**

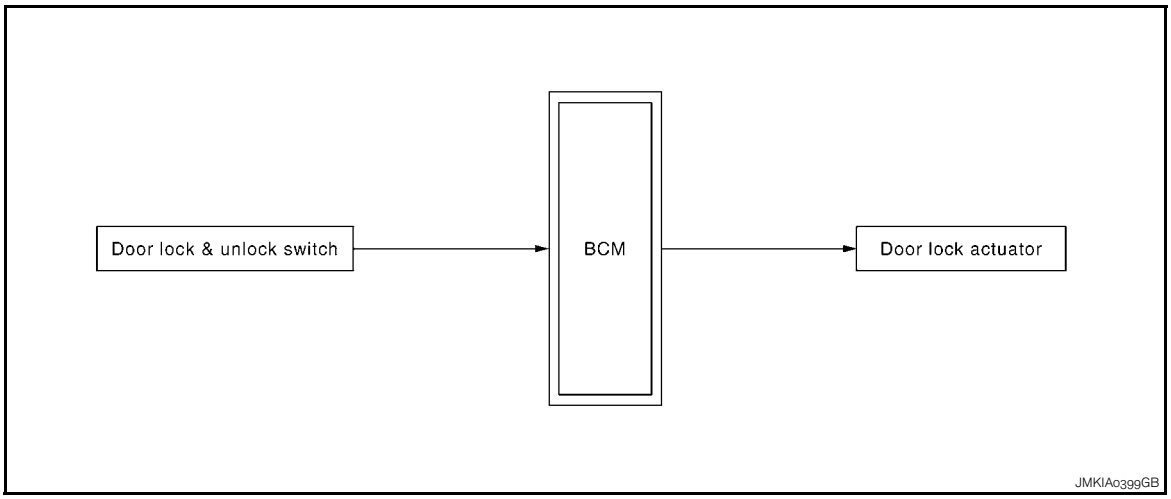
DOOR LOCK FUNCTION

DOOR LOCK AND UNLOCK SWITCH

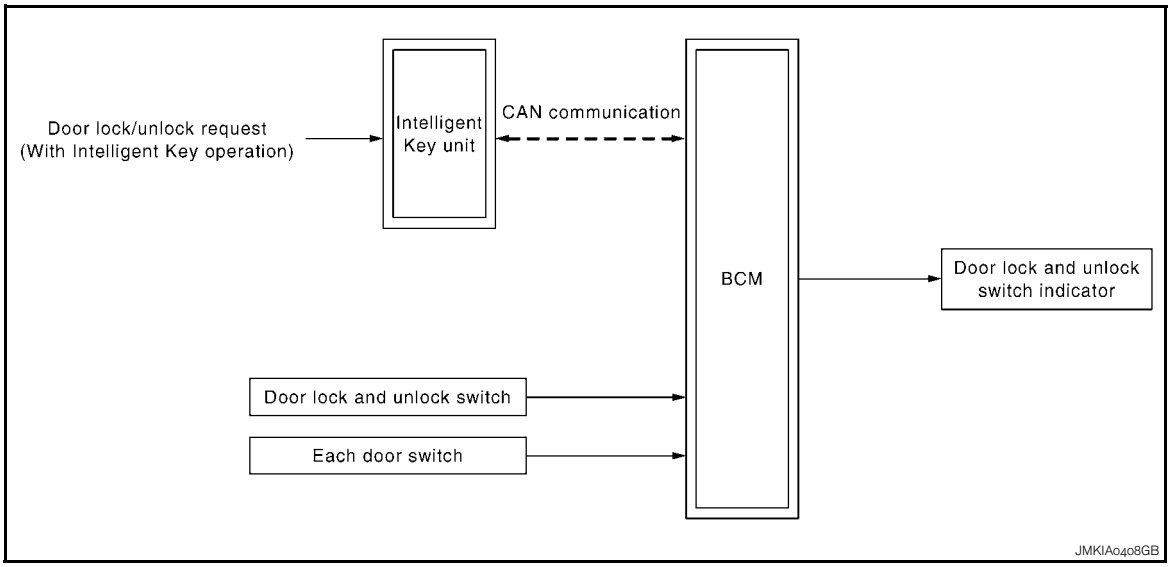
DOOR LOCK AND UNLOCK SWITCH : System Diagram

INFOID:0000000001081194

DOOR LOCK AND UNLOCK SWITCH OPERATION



DOOR LOCK AND UNLOCK SWITCH INDICATOR OPERATION



DOOR LOCK AND UNLOCK SWITCH : System Description

INFOID:0000000001081195

DOOR LOCK AND UNLOCK SWITCH OPERATION

Functions available by operating the door lock and unlock switch on center console. Interlocked with the lock/unlock operation of door lock and unlock switch, door lock actuators of all doors are locked/unlocked.

Operation Condition

If the following conditions are not satisfied, door lock/unlock operation is not performed even if the door lock and unlock switch is operated.

Door lock and unlock switch	Operation condition
Lock operation	Following all conditions are satisfied. • Except driver side doors are closed. • Doors are not locked with Intelligent Key or door request switch.
Unlock operation	Following all conditions are satisfied. • Doors are not locked with Intelligent Key or door request switch.

NOTE:
When the door lock is locked with Intelligent Key or door request switch (in super lock set state), door lock and unlock switch operation will be invalid until either following condition is satisfied.
- Turn ignition switch ON.
- Unlock with Intelligent key or door request switch.

DOOR LOCK AND UNLOCK SWITCH INDICATOR OPERATION

Door lock and unlock switch indicator indicates door lock status. The indicator turn ON while ignition switch is ON and door lock is locked or super lock is set. If any door is opened, the indicator will be turn OFF.

1 Minute Timer

A timer must be running to turn OFF the indicator. The timer will running for 1 minute after super lock set or lock with Intelligent Key, door request switch or auto door lock.

30 Minutes Timer

A timer must be running to turn OFF the indicator. The timer will running for 30 minutes after locking with door lock and unlock switch.

NOTE:
1minuite timer condition is satisfied during 30 minutes timer is active, 30 minutes timer is not change to 1 minutes.

DOOR LOCK AND UNLOCK SWITCH : Component Description

INFOID:0000000001081197

cardiagn.com

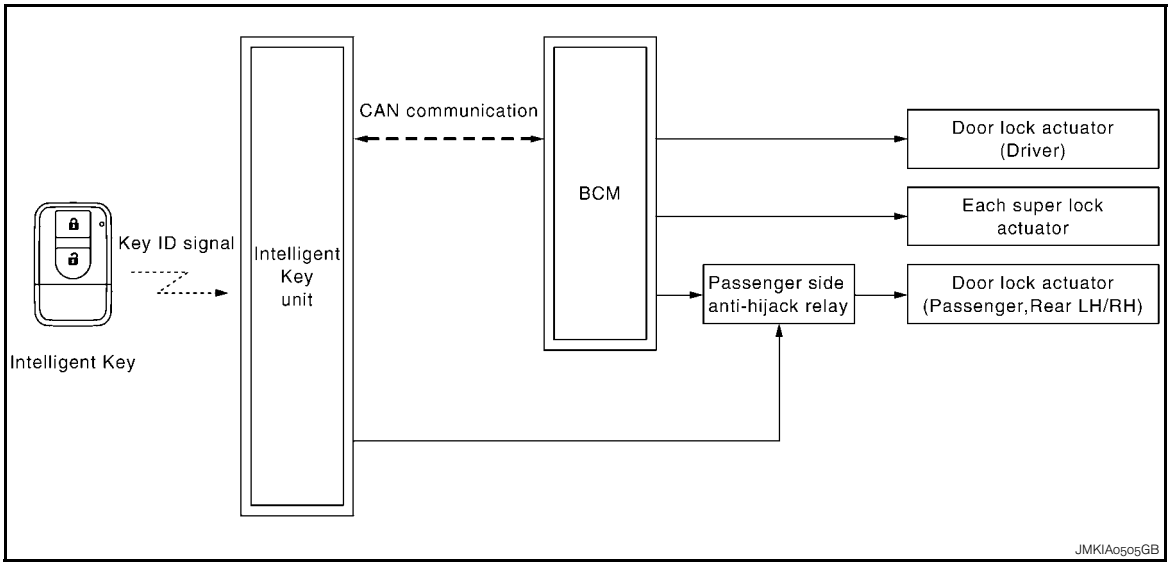
Item	Function
BCM	Controls the door lock function.
Door switch	Detects door state (open or close).
Door lock and unlock switch	Transmits door lock and unlock signal to BCM. Door lock/unlock switch indicator is built-in door lock/unlock switch.
Door lock actuator	Receives door lock/unlock signal from BCM and locks/unlock each door.

INTELLIGENT KEY

INTELLIGENT KEY : System Diagram

INFOID:0000000001081202

INTELLIGENT KEY OPERATION



INTELLIGENT KEY : System Description

INFOID:0000000001081203

INTELLIGENT KEY OPERATION

The Intelligent Key has the same functions as the multi remote control system. Therefore, it can be used in the same manner as the keyfob by operating the door lock/unlock button.
This function can be set to OFF with CONSULT-III. For the setting information, refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

OPERATION CONDITION

Remote controller operation	Operation condition
Lock	• All doors are closed • Key switch is OFF (key is removed from ignition key cylinder) • Ignition knob switch is OFF (Ignition switch is not pressed) • No Intelligent Keys are inside the vehicle.
Unlock	• Key switch is OFF (key is removed from ignition key cylinder) • Ignition knob switch is OFF (Ignition switch is not pressed)

OPERATION AREA

To ensure that the Intelligent Key works effectively, use within 100 cm range of each door, however the operable range may differ according to surroundings.

LOCK AND UNLOCK CONTROL

When door lock and unlock button of the Intelligent Key is pressed, lock signal or unlock signal is transmitted from Intelligent Key to Intelligent Key unit.
When Intelligent Key unit receives the door lock and unlock signal, it operates door lock actuator.

SUPER LOCK CONTROL WITH ANTI-HIJACK MODE

- Super lock provides a higher anti-theft performance than a conventional power door lock system. The super lock system is controlled by BCM.
- When door lock is unlocked, pressing LOCK button on Intelligent Key once will lock and super lock set all doors. When all doors are set super lock, pressing UNLOCK button on Intelligent Key driver side door will unlock (and super lock release) driver side door and super lock release all other doors. Pressing UNLOCK button on Intelligent Key for a second time within 5 seconds from the first time will unlock all doors and back door can be opened with back door opener switch.

NOTE:
Anti-hijack mode can be set to ON or OFF with CONSULT-III. For the setting information, refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

SUPER LOCK CONTROL WITHOUT ANTI-HIJACK MODE

When door lock is unlocked, pressing LOCK button on Intelligent Key once will lock and super lock set all doors. When all doors are set to super lock, pressing UNLOCK button on Intelligent Key will unlock all doors and super lock release all doors and back door can be opened with back door opener switch.

NOTE:
Anti-hijack mode can be set to ON or OFF with CONSULT-III. For the setting information, refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

INTELLIGENT KEY : Component Description

INFOID:0000000001081205

cardiagn.com

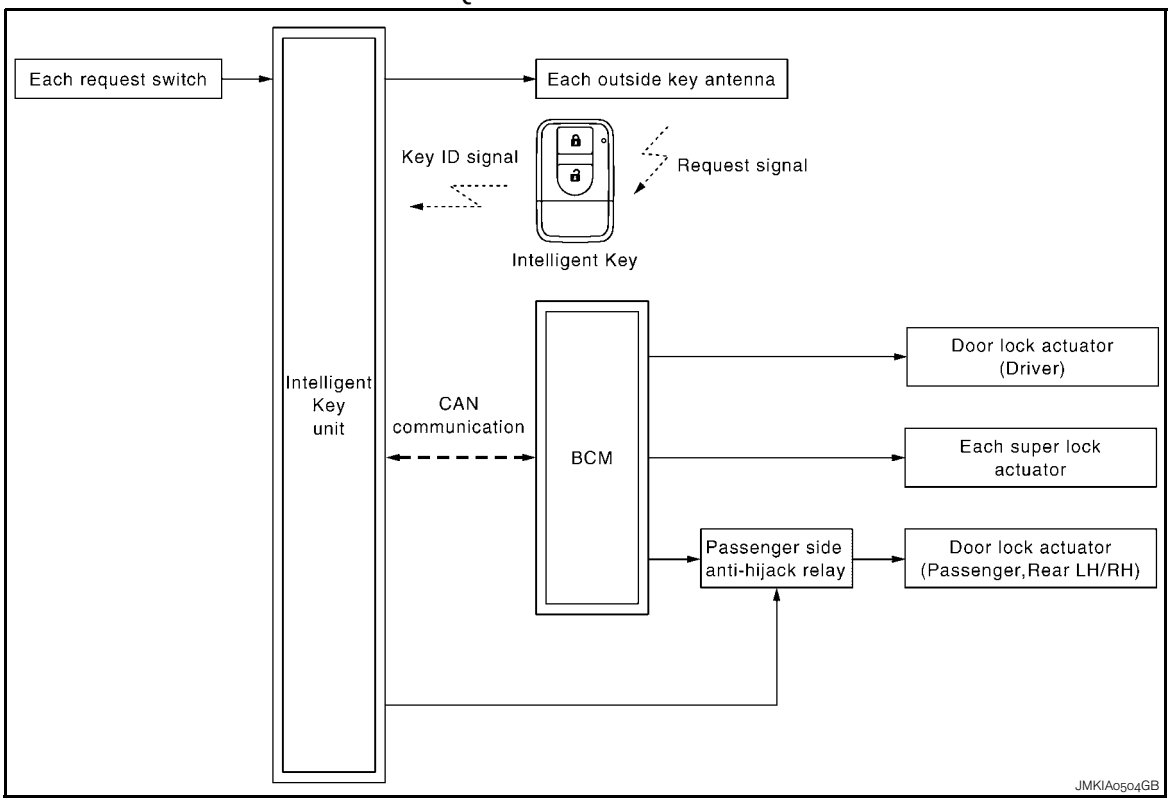
Item	Function
Intelligent Key unit	Controls the door lock/unlock operation with BCM.
BCM	Controls the door lock/unlock operation with Intelligent Key unit.
Door switch	Detects door state (open or close).
Key switch	Detects mechanical key is inserted into ignition key cylinder.
Outside key antenna	Detects Intelligent Key is in detection area of outside key antenna.
Inside key antenna	Detects Intelligent Key is in detection area of inside key antenna.
Intelligent Key	Transmits key ID to Intelligent Key unit when lock/unlock button is pressed.
Passenger side anti-hijack relay	Controls the circuit of door lock actuator (passenger side, rear LH/RH).
Door lock actuator	Receives lock/unlock signal from BCM and lock and unlock each door.
Super lock actuator	Receives super lock set/release signal from BCM and set/release super lock system.

DOOR REQUEST SWITCH

DOOR REQUEST SWITCH : System Diagram

INFOID:0000000001081198

DOOR REQUEST SWITCH OPERATION



DOOR REQUEST SWITCH : System Description

INFOID:0000000001081199

DOOR REQUEST SWITCH OPERATION

Only when pressing the request switch, it is possible to lock and unlock the door by carrying the Intelligent Key. The Intelligent Key system is a system that makes it possible to lock and unlock the door by carrying the Intelligent Key, which operates based on the results of electronic ID verification using two-way communications between the Intelligent Key and the vehicle (Intelligent Key unit).

This function can be set to OFF with CONSULT-III. For the setting information, refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

CAUTION:

The driver should always carry the Intelligent Key

OPERATION CONDITION

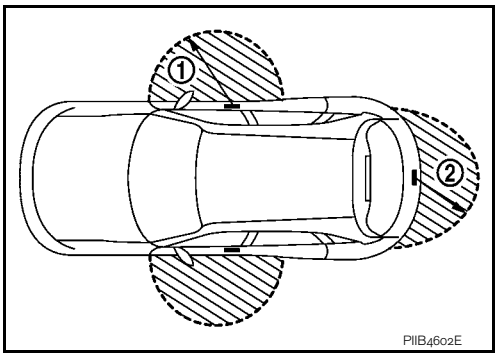
If the following conditions are not satisfied, door lock and unlock operation is not performed even if the request switch is operated.

Each request switch operation	Operation condition
Lock operation	• All doors are closed. • Key switch is OFF. (Key is removed from ignition key cylinder) • Ignition knob switch is OFF. (Ignition switch is not pressed) • No Intelligent Keys are inside the vehicle. • Intelligent Key is within outside key antenna detection area.
Unlock Operation	• Key switch is OFF. (Key is removed from ignition key cylinder) • Ignition knob switch is OFF. (Ignition switch is not pressed) • Intelligent Key is not inside the vehicle.* • Intelligent Key is within outside key antenna detection area.

*: Even with a registered Intelligent Key remaining inside the vehicle, door locks can be unlocked from outside of the vehicle with a spare Intelligent Key as long as key IDs are different.

OUTSIDE KEY ANTENNA DETECTION AREA

The outside key antenna detection area of door lock/unlock function is in the range of approximately 80 cm (31.50 in) surrounding the driver and passenger door handles (1) and the back door request switch (2). However, this operating range depends on the ambient conditions.



DOOR LOCK AND UNLOCK CONTROL

When the Intelligent Key detects that door request switch is pressed, it starts corresponding with outside key antenna (request switch pressed door). Then, the Intelligent Key is checked to be near the door.
If the Intelligent Key is within the outside key antenna detection area, it receives the request signal and transmits the key ID signal to the Intelligent Key unit. Intelligent Key unit receives the key ID signal and compares it with the registered key ID. Intelligent Key unit sends door lock and unlock signal to BCM via CAN communication.

SUPER LOCK CONTROL WITH ANTI-HIJACK MODE

- Super lock provides a higher anti-theft performance than a conventional power door lock system. The super lock system is controlled by BCM and Intelligent Key unit.
- When door is unlocked, pressing door request switch (driver side or passenger side) once will lock all doors and set super lock simultaneously. When super lock is set, all doors cannot be opened from inside.
  When super lock is set, pressing the door request switch once will unlock operated door and super lock is released except operated door. Pressing the door request switch a second time within 5 seconds from the first time will unlock all doors and back door can be opened with back door opener switch.
- When door is unlocked, pressing door request switch (back door) will lock all doors and set super lock simultaneously. When super lock is set, all doors cannot be opened from inside.
  When super lock is set, pressing door request switch (back door) will unlock all doors and release super lock simultaneously and back door can be opened with back door opener switch.

NOTE:
Anti-hijack mode can be set to ON or OFF with CONSULT-III. For the setting information, refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

SUPER LOCK CONTROL WITHOUT ANTI-HIJACK MODE

When door is unlocked, pressing door request switch (driver, passenger or back door) will lock all doors and set super lock simultaneously. When super lock is set, all doors can not be opened from inside.
When super lock is set, pressing door request switch (driver side, passenger side or back door) will unlock all doors and release super lock simultaneously and back door is can be opened with back door opener switch.

NOTE:
Anti-hijack mode can be set to ON or OFF with CONSULT-III. For the setting information, refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

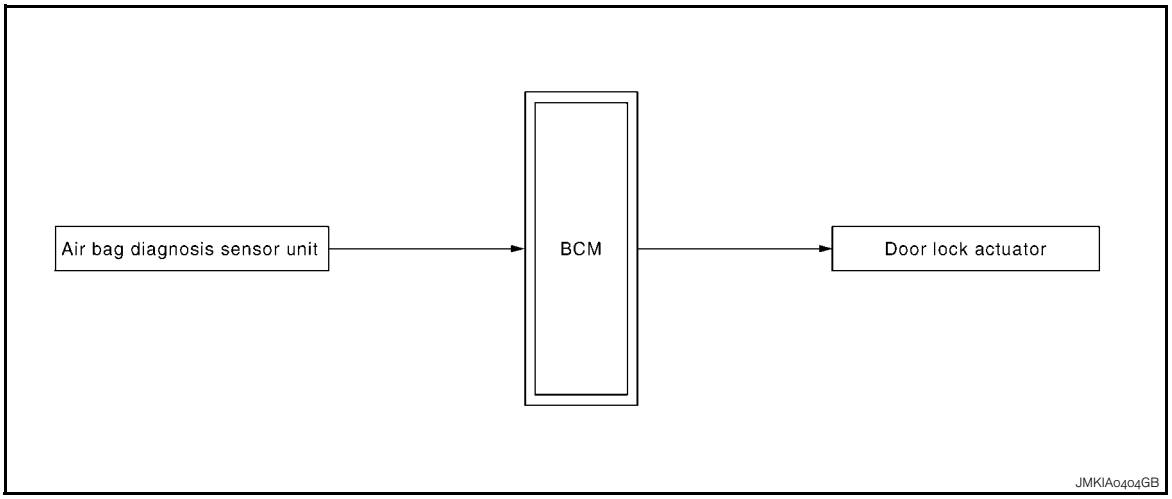
AIR BAG INTERLOCK UNLOCK OPERATION



AIR BAG INTERLOCK UNLOCK : System Description

INFOID:0000000001081235

AIR BAG INTERLOCK UNLOCK OPERATION

When ignition switch is ON and BCM receive air bag deployment signal, it operates automatically to unlock all doors. Air bag diagnosis sensor unit sends the air bag deployment signal to BCM.

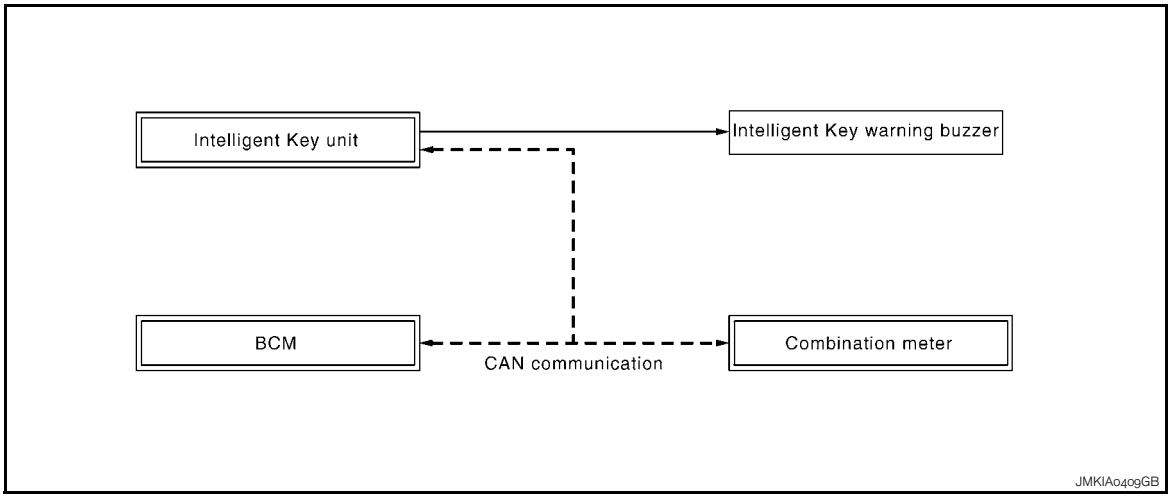
WARNING FUNCTION

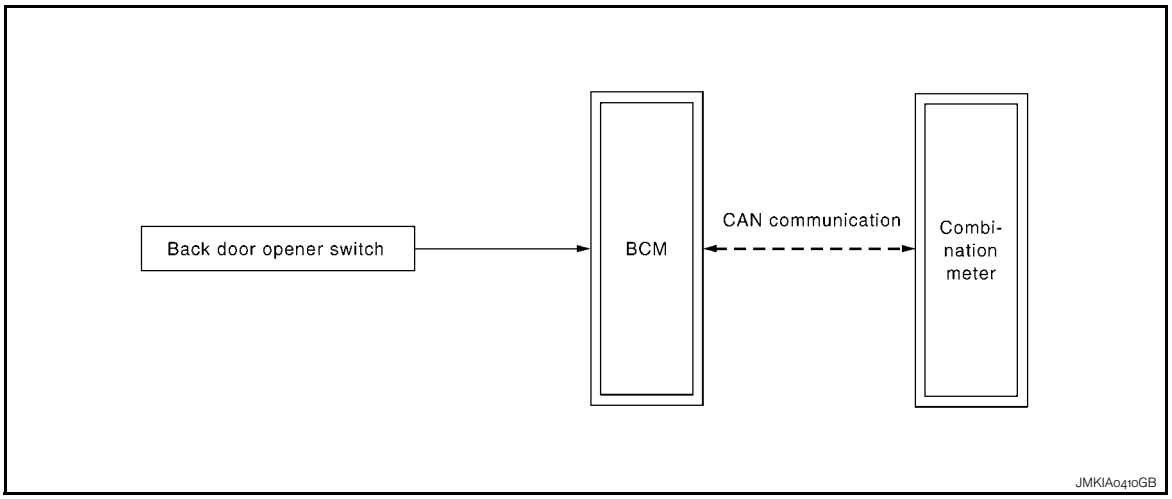
System Diagram

INFOID:0000000001081255

INTELLIGENT KEY WARNING OPERATION



BACK DOOR OPEN WARNING OPERATION



System Description

INFOID:0000000001081256

DESCRIPTION

The warning functions are as follows and are given to the user as warning information and warnings using combinations of Intelligent Key warning buzzer, key warning lamps and buzzer (built in combination meter).

INTELLIGENT KEY WARNING OPERATION

Once one of the following conditions below is established, alert or warning will be executed.

cardiagn.com

Warning/Information functions		Operation conditions	Warning lamp	Warning chime	
				Combination meter buzzer	Intelligent Key warning buzzer
Ignition knob return forgotten warning		When all the conditions below are met. • Ignition knob: OFF or LOCK (knob is pressed). • Door switch (driver side): ON (Door is open).	—	Active for 5 seconds (pipipipi, pipipipi···)	—
Ignition key warning (when mechanical key is used)		When all the conditions below are met. • Ignition switch: OFF position. • Key switch: ON (inserted) • Door switch (driver side): ON (Door is open).	—	Active for 5 seconds (pipipipi, pipipipi···)	—
OFF position warning		When all the conditions below are met. • Ignition switch is between ACC and OFF position or ignition knob is pressed in while ignition switch is in LOCK position. • 3 seconds in the above state have pressed.	"LOCK" (RED blinking)	Active for 1 second (pipi, pipi···)	—
Take away warning	Any door open to all doors closed	When all the conditions below are met. • Ignition switch: Except LOCK position. • Door switch: ON to OFF (Door is open to closed). • Intelligent Key cannot be detected inside the vehicle.	"LOCK" (RED blinking)	—	Active (pi, pi, pi)
	Door is open	When all the conditions below are met. • Door switch: ON (Door is open) • Key ID verification every 5 seconds when registered Intelligent Key can not be detected inside the vehicle.	"LOCK" (RED blinking)	—	—
	Take away through window	When all the conditions below are met. • Key ID verification: OK • Every 30 seconds when registered Intelligent Key cannot be detected inside the vehicle or result of vehicle speed verification is NG. (The registered Intelligent Key cannot be detected inside the vehicle when ignition switch is ON.) • Key switch: OFF (Key is removed from ignition key cylinder.)	"LOCK" (RED blinking)	Active for 3 seconds (pipipi···	—

carsdiagn.com

Warning/Information functions		Operation conditions	Warning lamp	Warning chime	
				Combination meter buzzer	Intelligent Key warning buzzer
Door lock operation warning	Request switch operation	When request switch is pushed (lock operation) under the following conditions. • Door switch: ON (Any door is open). • Ignition switch is in ACC or OFF position or ignition knob is pressed in LOCK position or mechanical key is inserted into ignition key cylinder. • Intelligent Key is inside vehicle.	—	—	Active for 2 seconds (pipipi···)
	Intelligent Key button operation	When Intelligent Key button is pushed (lock operation) under the following conditions. • Door switch: ON (Any door is open). • Ignition switch is in ACC or OFF position or ignition knob is pressed in LOCK position or mechanical key is inserted into ignition key cylinder.	—	—	Active for 2 seconds (pipipi···)
Intelligent Key low battery warning		When Intelligent Key battery voltage is low, Intelligent Key unit is detected after ignition switch is turned ON.	"KEY" (GREEN blinking for 30 seconds)	—	—

KEY WARNING LAMP & LOCK WARNING LAMP

The key indicator and lock indicator indicates Intelligent Key system status.

Operation Condition

Behavior of lamps			Operation condition
KEY	GREEN	Lighting	All the following conditions are satisfied. • Ignition knob is pushed in LOCK position. (Ignition knob switch is ON) • Ignition key is removed from ignition key cylinder. (Key switch is OFF) • Intelligent Key is detected inside of the vehicle. • KEY RED lighting/blinking conditions are not satisfied.
		Blinking	while Intelligent Key low battery warning is operating.
	RED	Lighting	All the following conditions are satisfied. • Ignition knob is pushed. (Ignition knob switch is ON) • Ignition key is removed from ignition key cylinder. (Key switch is OFF) • Intelligent Key is not detected inside of the vehicle.
		Blinking	All the following conditions are satisfied. • Take away warning is operating. • KEY RED lighting condition is not satisfied.
LOCK		Blinking	while OFF position warning is operating.
KEY(RED) and LOCK lighting			All the following conditions are satisfied. • Ignition switch is ON. • Steering lock ID is NG.

BACK DOOR OPEN WARNING OPERATION

When back door opener switch is operated, when door lock is locked with door lock and unlock switch, speed sensing lock or only driver side is unlocked with anti-hijack function, the buzzer (built in combination meter) will sound.

KEY REMINDER OPERATION

- The buzzer (combination meter) will sound and the doors will not lock if the door lock and unlock switch is pressed while the driver door is open and mechanical key is inserted ignition key cylinder.
- The buzzer (combination meter) will sound and the doors will not lock if the door lock and unlock switch is pressed while any door other than the driver door is open.

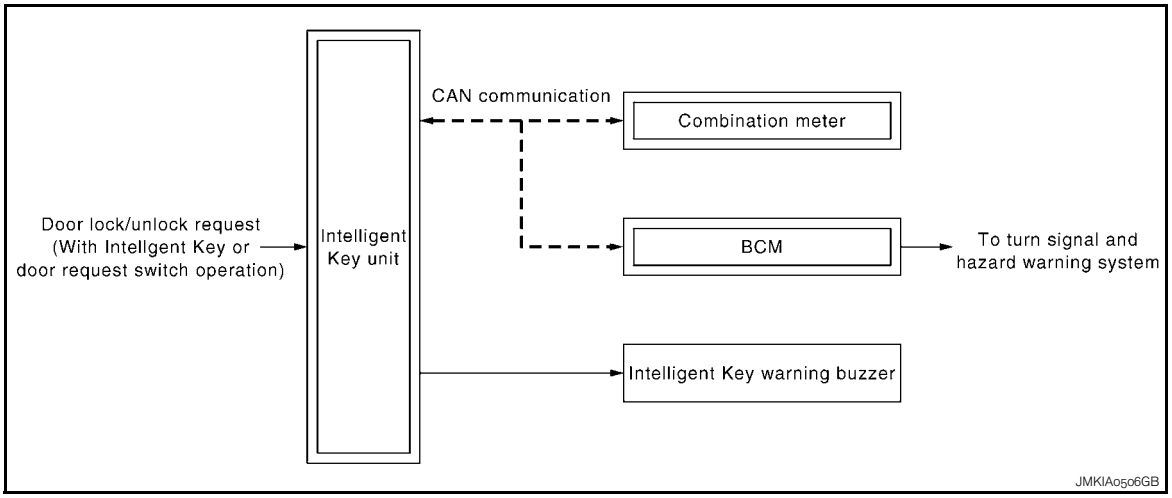
HAZARD & BUZZER REMINDER FUNCTION



System Description

INFOID:0000000001081323

HAZARD AND BUZZER REMINDER FUNCTION

When door is locked or unlocked by Intelligent Key or door request switch, Intelligent Key unit sounds buzzer and sends hazard request signal to BCM via CAN communication. Then BCM flashes hazard warning lamps as a reminder.

NOTE:

Hazard and buzzer reminder function mode can be changed with CONSULT-III. Refer to DLK-329, "CONSULT-III Function (INTELLIGENT KEY)".

DIAGNOSIS SYSTEM (BCM)
COMMON ITEM
COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001097285

APPLICATION ITEM
CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION
BCM can perform the following functions for each system.
NOTE:
It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

DOOR LOCK
DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)

INFOID:0000000001097286

BCM CONSULT-III FUNCTION
CONSULT-III performs the following functions via CAN communication with BCM.

cardiagn.com

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
KEYLESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
UNLOCK WITH DR	This item is indicated, but not monitored.
UNLOCK SHOCK	Indicates [ON/OFF] condition of signal from air bag diagnosis unit. • ON: During the unlock operation interlock with air bag. • OFF: Other than above.
SHOCK SENSOR	Indicates [NOMAL/ON/OFF] condition of circuit between BCM and air bag diagnosis sensor unit. • NORMAL: Ignition switch ON. (BCM is receiving normal condition signal from air bag diagnosis sensor unit.) • ON: During the receiving of air bag deployment signal from air bag diagnosis sensor unit. • OFF: After the receiving of air bag deployment signal from air bag diagnosis sensor unit.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the multi remote control system equipped vehicle.

ACTIVE TEST

Test item	Description
SUPER LOCK*1	This test is able to check super lock operation [LOCK (SET)/UNLOCK (RELEASE)].
DOOR LOCK IND	This test is able to check door lock indicator (built in door lock and unlock switch on center console) operation [ON/OFF].
DOOR LOCK	This test is able to check door lock operation [ALL LOCK/ALL UNLOCK/DR UNLOCK/ OTHER UNLOCK].

:*1 For the super lock equipped vehicle.

		OFF	Inactive

SELF-DIAG RESULT

Refer to DLK-472, "DTC Index".

DATA MONITOR

Monitor Item	Condition
PUSH SW	Indicates [ON (pressed)/OFF (released)] condition of ignition knob switch.
KEY SW	Indicates [ON (inserted)/OFF (removed)] condition of key switch.
DR REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (driver side).
AS REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (passenger side).
BD/TR REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (back door).
IGN SW	Indicates [ON (ON or START position)/OFF (other than ON and START position)] condition of ignition switch ON position.
ACC SW	Indicates [ON/OFF] condition of ignition switch ACC position.
STOP LAMP SW	Indicates [ON/OFF] condition of stop lamp switch.
DOOR LOCK SIG	Indicates [ON/OFF] condition of LOCK signal from Intelligent Key.
DOOR UNLOCK SIG	Indicates [ON/OFF] condition of UNLOCK signal from Intelligent Key.
DOOR SW DR	Indicates [OPEN/CLOSE] condition of front door switch (driver side) from BCM via CAN communication.
DOOR SW AS	Indicates [OPEN/CLOSE] condition of front door switch (passenger side) from BCM via CAN communication.
DOOR SW RR	Indicates [OPEN/CLOSE] condition of rear door switch (RH) from BCM via CAN communication.
DOOR SW RL	Indicates [OPEN/CLOSE] condition of rear door switch (LH) from BCM via CAN communication.
DOOR BK SW	Indicates [OPEN/CLOSE] condition of back door switch from BCM via CAN communication.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

ACTIVE TEST

Test item	Description
DOOR LOCK/UNLOCK	This test is able to check door lock/unlock operation. • ALL UNLK: All door lock actuators are unlocked. • DR UNLK: Door lock actuator (driver side) is unlocked. • AS UNLK: Door lock actuator (passenger side) is unlocked. • BK UNLK: This item is indicated, but inactive. • LOCK: All door lock actuator is locked.
ANTENNA	This test is able to check Intelligent Key antenna operation. When the following condition are met, hazard warning lamps flash. • ROOM ANT1: Inside key antenna (console) detects Intelligent Key, when “ROOM ANT1” is selected. • ROOM ANT2: Inside key antenna (instrument center/rear seat) detects Intelligent Key, when “ROOM ANT2”is selected. • DRIVER ANT: Outside key antenna (driver side) detects Intelligent Key, when “DRIVER ANT” is selected. • ASSIST ANT: Outside key antenna (passenger side) detects Intelligent Key, when “ASSIST ANT” is selected. • BK DOOR ANT: Outside key antenna (rear bumper) detects Intelligent Key, when “BK DOOR ANT” is selected.
OUTSIDE BUZZER	This test is able to check Intelligent Key warning buzzer operation. • ON • OFF
INSIDE BUZZER	This test is able to check warning chime in combination meter operation. • TAKE OUT: Take away warning chime sounds. • KNOB: Ignition knob switch warning chime sounds. • KEY: Key warning chime sounds. • OFF

cardiagn.com

Test item	Description
INDICATOR	This test is able to check warning lamp operation. • BLUE ON: Key warning lamp (green) illuminates. • RED ON: Key warning lamp (red) illuminates. • KNOB ON: Lock warning lamp illuminates. • BLUE IND: Key warning lamp (green) flashes. • RED IND: Key warning lamp (red) flashes. • KNOB IND: Lock warning lamp flashes. • OFF
KEY LOCK SOLENOID*1	This test is able to check key interlock operation. • LOCK: Key interlock is active. • UNLOCK: Key interlock is inactive.

*1: The item is only for MT model.

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000001097045

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart, refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000001097046

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1000	CAN COMM CIRCUIT	When Intelligent Key unit cannot communicate CAN communication signal continuously for 2 seconds or more.	In CAN communication system, any item (or items) of the following listed below is malfunctioning. • Transmission • Receiving (BCM) • Receiving (IPDM E/R) • Receiving (ECM) • Receiving (METER/M&A) • Receiving (MULTI AV)

Diagnosis Procedure

INFOID:0000000001097047

1.PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 seconds or more.
2. Check “Self Diagnostic Result”.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI-39, "Intermittent Incident".

cardiagn.com

U1010 CONTROL UNIT (CAN)

Description

INFOID:0000000001097048

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart, refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000001097049

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller of Intelligent Key unit.	Intelligent Key unit

Diagnosis Procedure

INFOID:0000000001097050

1.REPLACE INTELLIGENT KEY UNIT

When DTC [U1010] is detected, replace Intelligent Key unit.

>> Replace Intelligent Key unit.

Special Repair Requirement

INFOID:0000000001097051

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS-IVIS/NVIS.

>> Work end.

B2552 INTELLIGENT KEY

Description

INFOID:0000000001115370

Intelligent key unit performs engine start operation and steering lock control by crosschecking ID with the Intelligent key.

DTC Logic

INFOID:0000000001115371

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2552	INTELLIGENT KEY UNIT	Malfunction is detected inside Intelligent key unit.	• Intelligent Key unit

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to DLK-334, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001115372

1.REPLACE INTELLIGENT KEY UNIT

1. Replace Intelligent Key unit.
2. Perform initialization with CONSULT-III. Re-register all mechanical keys. Refer to “CONSULT-III Operation Manual NATS”.
3. Start the engine.

Does the engine start?

YES >> INSPECTION END
NO >> Perform “DTC confirmation procedure”. Refer to DLK-334, "DTC Logic".

Special Repair Requirement

INFOID:0000000001115373

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS-IVIS/NVIS.

>> Work end.

cardiagn.com

POWER SUPPLY AND GROUND CIRCUIT
INTELLIGENT KEY UNIT

INTELLIGENT KEY UNIT : Diagnosis Procedure

INFOID:0000000001099157

1.CHECK FUSE AND FUSIBLE LINK

Check that the following fuse is not blown.

Terminal No.	Signal name	Fuse No.
11	Battery power supply	9 (10A)
6	Ignition power supply	4 (10A)

Is the fuse blown?

YES >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Turn ignition switch ON.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Voltage (V) (Approx.)
(+)		(–)	
Intelligent Key unit		Ground	
Connector	Terminal		
M40	11		Battery voltage
	6		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between Intelligent Key unit harness connector and ground.

Intelligent Key unit		Ground	Continuity
Connector	Terminal		
M40	12		Exists

Does continuity exist?

YES >> Intelligent Key unit power supply and ground circuit are OK.
NO >> Repair harness or connector.

BCM

BCM : Diagnosis Procedure

INFOID:0000000001115313

1.CHECK FUSE AND FUSIBLE LINK

Check that the following fuse and fusible link are not blown.

Terminal No.	Signal name	Fuse and fusible link No.
41	Battery power supply	9 (10A)
57		J (40A)

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.

carsdiagn.com

NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
BCM		Ground	
Connector	Terminal		
M66	41		Battery voltage
M67	57		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

Does continuity exist?

YES >> BCM power supply and ground circuit are OK.
NO >> Repair harness or connector.

cardiagn.com

DOOR LOCK AND UNLOCK SWITCH

Description

INFOID:0000000001099158

Transmits door lock/unlock operation to BCM.

Component Function Check

INFOID:0000000001099159

1.CHECK FUNCTION

With CONSULT-III

Check “CDL LOCK SW ”and “CDL UNLOCK SW” in Data monitor mode with CONSULT-III.

Monitor item	Condition	
CDL LOCK SW	LOCK	: ON
	UNLOCK	: OFF
CDL UNLOCK SW	LOCK	: OFF
	UNLOCK	: ON

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Refer to DLK-337, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001099160

1.CHECK DOOR LOCK AND UNLOCK INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect door lock and unlock switch connector.
3. Check voltage between door lock and unlock switch and ground.

Terminal			Signal (Reference value)
(+)		(–)	
Door lock and unlock switch connector	Terminal		
M89	1	Ground		6		

JPMIA0154GB

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK AND UNLOCK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector and door lock and unlock switch connector.

BCM connector	Terminal	Door lock and unlock switch connector	Terminal	Continuity
M65	7	M89	6	Exists
	9		1	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal		Continuity
M65	7	Ground	Does not exist
	9		

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

3.CHECK DOOR LOCK AND UNLOCK SWITCH GROUND

Check continuity between door lock and unlock switch connector and ground.

Door lock and unlock switch connector	Terminal	Ground	Continuity
M89	5		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminal			Signal (Reference value)
(+)		(–)	
BCM connector	Terminal		
M65	7	Ground		9		

JPMIA0154GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK DOOR LOCK AND UNLOCK SWITCH

Check door lock and unlock switch
Refer to DLK-74, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

Component Inspection

INFOID:0000000001099161

1.CHECK DOOR LOCK AND UNLOCK SWITCH

Check door lock and unlock switch.

Door lock and unlock switch	Terminal		Condition	Continuity
M89	6	5	LOCK	Exists
	1		UNLOCK	

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

cardiagn.com

DOOR LOCK AND UNLOCK SWITCH INDICATOR

Description

INFOID:0000000001102268

The door lock and unlock switch indicates door lock status. The indicator will illuminate when a lock operation is accomplished, and during this status, if any door is opened, the indicator will turn OFF.

Component Function Check

INFOID:0000000001102269

1.CHECK FUNCTION

With CONSULT-III

Check “DOOR LOCK IND” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK IND	:ON	Illuminated
	:OFF	Not illuminated

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Refer to DLK-339, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001102270

1.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between door lock and unlock switch and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(–)		
Door lock and unlock switch connector	Terminal			
M89	4	Ground	Door lock operation is accomplished	Battery voltage
			Any door is OPEN	0

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR LOCK AND UNLOCK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and door lock and unlock switch connector.
3. Check continuity between BCM connector and door lock and unlock switch connector.

BCM connector	Terminal	Door lock and unlock switch connector	Terminal	Continuity
M65	24	M89	4	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	24		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK DOOR LOCK AND UNLOCK SWITCH GROUND

Check continuity between door lock and unlock switch connector and ground.

Door lock and unlock switch connector	Terminal	Ground	Continuity
M89	5		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	24	Ground	Door lock operation is accomplished	Battery voltage
			Any door is OPEN	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR

Check door lock and unlock switch
Refer to DLK-340, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

Component Inspection

INFOID:0000000001102271

1.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR

Check continuity door lock and unlock switch.

Door lock and unlock switch	Terminal		Continuity
	(+)	(-)	
M89	5	4	Exists
	4	5	Does not exist

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

cardiagn.com

DOOR REQUEST SWITCH
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001109380

Transmits lock/unlock operation to Intelligent Key unit.

DRIVER SIDE : Component Function Check

INFOID:0000000001109381

1.CHECK FUNCTION

With CONSULT-III
Check door request switch “DR REQ SW” in Data monitor mode.

Monitor item	Condition	
DR REQ SW	Door request switch is pressed	:ON
	Door request switch is released	:OFF

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Refer to DLK-345, "BACK DOOR : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001109382

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Door request switch condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	5	Ground	Pressed	0
			Released	5

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK FRONT DOOR REQUEST SWITCH CIRCUIT

1. Disconnect intelligent key unit.
2. Check continuity between Intelligent Key unit connector and door request switch connector.

Intelligent Key unit connector	Terminal	Door request switch connector	Terminal	Continuity
M40	5	D30	1	Exists

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	5		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and front outside handle.

3.CHECK DOOR REQUEST SWITCH GROUND CIRCUIT

Check continuity between door request switch connector and ground.

Door request switch connector	Terminal	Ground	Continuity
D30	2		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace front outside handle ground circuit.

4.CHECK INTELLIGENT KEY UNIT OUTPUT SIGNAL

1. Connect Intelligent Key unit connector.
2. Check voltage between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Voltage (V) (Approx.)
M40	5		5

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 6.

5.CHECK DOOR REQUEST SWITCH

Check door request switch.
Refer to DLK-346, "BACK DOOR : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

6.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-552, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

DRIVER SIDE : Component Inspection

INFOID:0000000001109383

1.CHECK DOOR REQUEST SWITCH

Check door request switch.

Terminal		Door request switch condition	Continuity
Door request switch			
1	2	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001109384

Transmits lock/unlock operation to Intelligent Key unit.

cardiagn.com

PASSENGER SIDE : Component Function Check

INFOID:0000000001109385

1.CHECK FUNCTION

With CONSULT-III

Check door request switch “AS REQ SW” in Data monitor mode.

Monitor item	Condition	
AS REQ SW	Door request switch is pressed	:ON
	Door request switch is released	:OFF

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Refer to DLK-345, "BACK DOOR : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001109386

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Door request switch Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	25	Ground	Pressed	0
			Released	5

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR REQUEST SWITCH CIRCUIT

1. Disconnect intelligent key unit.
2. Check continuity between Intelligent Key unit connector and door request switch connector.

Intelligent Key unit connector	Terminal	Door request switch connector	Terminal	Continuity
M40	25	D69	1	Exists

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	25		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and front outside handle.

3.CHECK DOOR REQUEST SWITCH GROUND CIRCUIT

Check continuity between front door request switch connector and ground.

1.CHECK DOOR REQUEST SWITCH

Check door request switch.

Terminal		Door request switch condition	Continuity
Door request switch			
1	2	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Replace malfunctioning front outside handle. Refer to DLK-258, "OUTSIDE HANDLE : Exploded View" and DLK-259, "OUTSIDE HANDLE : Removal and Installation".

BACK DOOR

BACK DOOR : Description

INFOID:0000000001109388

Transmits lock/unlock operation to Intelligent Key unit.

BACK DOOR : Component Function Check

INFOID:0000000001109389

1.CHECK FUNCTION

With CONSULT-III
Check door request switch “BD/TR REQ SW” in Data monitor mode.

cardiagn.com

Monitor item	Condition	
BD/TR REQ SW	Door request switch is pressed	:ON
	Door request switch is released	:OFF

Is the inspection result normal?

YES >> Door request switch is OK.
NO >> Refer to DLK-345, "BACK DOOR : Diagnosis Procedure".

BACK DOOR : Diagnosis Procedure

INFOID:0000000001109390

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Door request switch condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	29	Ground	Pressed	0
			Released	5

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR REQUEST SWITCH CIRCUIT

1. Disconnect Intelligent Key unit.
2. Check continuity between Intelligent Key unit connector and door request switch connector.

Intelligent Key unit connector	Terminal	Door request switch connector	Terminal	Continuity
M40	29	D187	1	Exists

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	29		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and back door request switch.

3.CHECK DOOR REQUEST SWITCH GROUND CIRCUIT

Check continuity between front door request switch connector and ground.

Door request switch connector	Terminal	Ground	Continuity
D187	2		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace back door request switch ground circuit.

4.CHECK INTELLIGENT KEY UNIT OUTPUT SIGNAL

1. Connect Intelligent Key unit connector.
2. Check voltage between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Voltage (V) (Approx.)
M40	29		5

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-351, "REAR LH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR LH : Component Inspection

INFOID:0000000001099177

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR RH

REAR RH : Description

INFOID:0000000001099178

Detects door open/close condition.

REAR RH : Component Function Check

INFOID:0000000001099179

1.CHECK FUNCTION

With CONSULT-III
Check door switches “DOOR SW-RR” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-RR	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-351, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001099180

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals			Door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	29	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	29	B53	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	29		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-352, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR RH : Component Inspection

INFOID:0000000001099181

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

cardiagn.com

BACK DOOR

BACK DOOR : Description

INFOID:0000000001099182

Detects back door open condition.

BACK DOOR : Component Function Check

INFOID:0000000001099183

1.CHECK FUNCTION

With CONSULT-III

Check “BACK DOOR SW” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

Is the inspection result normal?

YES >> Back door lock assembly (door switch) is OK.
NO >> Refer to DLK-353, "BACK DOOR : Diagnosis Procedure".

BACK DOOR : Diagnosis Procedure

INFOID:0000000001099184

1.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH) INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Back door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	28	Ground	OPEN	0
			CLOSE	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH) CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and back door lock assembly (door switch) connector.

BCM connector	Terminal	Back door lock assembly (door switch) connector	Terminal	Continuity
M65	28	D152	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	28		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and trunk room lamp switch.

3.CHECK BACK DOOR LOCK ASSEMBLY GROUND CIRCUIT

Check continuity between back door lock assembly connector and ground.

Back door lock assembly (door switch) connector	Terminal	Ground	Continuity
D152	3		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace back door lock assembly ground circuit.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	28	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH)

Check back door lock assembly (door switch).
Refer to DLK-354, "BACK DOOR : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door lock assembly (door switch). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

BACK DOOR : Component Inspection

INFOID:0000000001099185

1.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH)

1. Turn ignition switch OFF.
2. Disconnect back door lock assembly (door switch) connector.
3. Check back door lock assembly (door switch).

Terminal		Trunk condition	Continuity
Back door lock assembly (door switch)			
4	3	OPEN	Exists
		CLOSE	Does not exist

Is the inspection result normal?

YES >> Back door lock assembly (door switch) is OK.
NO >> Replace back door lock assembly (door switch). Refer to DLK-518, "BACK DOOR ASSEMBLY : Exploded View" and DLK-519, "BACK DOOR ASSEMBLY : Removal and Installation".

cardiagn.com

KEY SWITCH

Description

INFOID:0000000001116374

Key switch detects that mechanical key is inserted into the key cylinder, and then transmits the signal to BCM and Intelligent Key unit.

Component Function Check

INFOID:0000000001116375

1.CHECK KEY SWITCH INPUT SIGNAL

Check key switch (“KEY SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
KEY SW	Insert mechanical key into key cylinder	: ON
	Remove mechanical key from key cylinder	: OFF

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Refer to DLK-355, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116376

1.CHECK KEY SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key unit and BCM connector.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	7	Ground	Insert mechanical key into key cylinder	Battery voltage
			Remove mechanical key from key cylinder	0

4. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	36	Ground	Insert mechanical key into key cylinder	Battery voltage
			Remove mechanical key from key cylinder	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Remove mechanical key from key cylinder.
2. Disconnect key switch connector.
3. Check voltage between key switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Key switch connector	Terminal		
M25	2	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK KEY SWITCH SIGNAL CIRCUIT

1. Check continuity between Intelligent Key unit harness connector and key switch connector.

Intelligent Key unit connector	Terminal	Key switch connector	Terminal	Continuity
M40	7	M25	1	Exists

2. Check continuity between BCM harness connector and key switch connector.

BCM connector	Terminal	Key switch connector	Terminal	Continuity
M65	36	M25	1	Exists

3. Check continuity between key switch connector and ground.

Key switch connector	Terminal	Ground	Continuity
M25	1	Ground	Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK KEY SWITCH

Check key switch function.
Refer to DLK-356, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace key switch.

Component Inspection

INFOID:0000000001116377

COMPONENT INSPECTION

1.CHECK KEY SWITCH

Check continuity between key switch terminals.

Terminal		Condition	Continuity
key switch connector			
1	2	Insert mechanical key into key cylinder	Exists
		Remove mechanical key from key cylinder	Does not exist

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Replace key switch.

cardiagn.com

IGNITION KNOB SWITCH

Description

INFOID:0000000001116378

Ignition knob switch detects that ignition knob is pressed, and then transmits the signal to Intelligent Key unit.

Component Function Check

INFOID:0000000001116379

1.CHECK IGNITION KNOB SWITCH INPUT SIGNAL

Check ignition knob switch (“PUSH SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
PUSH SW	Ignition knob switch is pressed	: ON
	Ignition knob switch is released	: OFF

Is the inspection result normal?

YES >> Ignition knob switch is OK.
NO >> Refer to SEC-48, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116380

1.CHECK IGNITION KNOB SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key unit and BCM connector.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	27	Ground	Ignition knob switch is pressed	Battery voltage
			Ignition knob switch is released	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK IGNITION KNOB SWITCH POWER SUPPLY CIRCUIT

1. Disconnect ignition knob switch connector.
2. Check voltage between ignition knob switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Ignition knob switch connector	Terminal		
M25	4	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK IGNITION KNOB SWITCH SIGNAL CIRCUIT

1. Check continuity between Intelligent Key unit harness connector and ignition knob switch connector.

Intelligent Key unit connector	Terminal	Ignition knob switch connector	Terminal	Continuity
M40	27	M25	3	Exists

A B C D E F G H I J DLK L M N O P
carsdiagn.com

2. Check continuity between ignition knob switch connector and ground.

Ignition knob switch connector	Terminal	Ground	Continuity
M25	3		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK IGNITION KNOB SWITCH

Check ignition knob switch function.
Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace ignition knob switch.

Component Inspection

INFOID:0000000001116381

1. CHECK IGNITION KNOB SWITCH

1. Turn ignition switch OFF.
2. Disconnect ignition knob switch harness connector.
3. Check continuity between ignition knob switch terminals under the following conditions.

Ignition knob switch			Condition	Continuity
Connector	Terminal			
M25	3	4	Ignition knob switch is pressed	Exists
			Ignition knob switch is released	Does not exist

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace ignition knob switch.

cardiagn.com

DOOR LOCK ACTUATOR
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001099187

Locks/unlocks the door with the signal from BCM.

DRIVER SIDE : Component Function Check

INFOID:0000000001099188

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:DR UNLK	The door lock actuator (driver side) is unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-359, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001099189

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	60		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM and front door lock actuator (driver side) connector.
2. Check continuity between BCM connector and front door lock actuator (driver side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D9	3	Exists
	60		2	

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	60		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK DOOR LOCK ACTUATOR CIRCUIT 1

1. Disconnect anti-hijack relay connector.
2. Check continuity between BCM connector and anti-hijack relay connector.

BCM connector	Terminal	Anti-hijack relay connector	Terminal	Continuity
M67	56	M90	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK DOOR LOCK ACTUATOR CIRCUIT 2

Check continuity of anti-hijack relay.

Anti-hijack relay connector	Terminal		Continuity
M90	4	3	Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK DOOR LOCK ACTUATOR CIRCUIT 3

1. Check continuity between anti-hijack relay connector and front door lock actuator (driver side) connector.

Anti-hijack relay connector	Terminal	Door lock actuator connector	Terminal	Continuity
M90	3	D9	3	Exists

2. Check continuity between anti-hijack relay connector and ground.

Anti-hijack relay connector	Terminal	Ground	Continuity
M90	3		Does not exist

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

6.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-96, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation". After that, PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement"

DRIVER SIDE : Component Inspection

INFOID:0000000001099190

1.CHECK FRONT DOOR LOCK ACTUATOR (DRIVER SIDE)

Check the actuator operation by connecting the battery voltage to front door lock actuator (driver side).

cardiagn.com

Front door lock actuator (driver side)	Terminal		Door lock actuator condition
	(+)	(-)	
D9	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Front door lock actuator (driver side) is OK.
NO >> Replace front door lock actuator (driver side). Refer to DLK-255, "DOOR LOCK : Removal and Installation". After that, PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement".

DRIVER SIDE : Special Repair Requirement

INFOID:0000000001099191

Refer to PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001099192

Locks/unlocks the door with the signal from BCM.

PASSENGER SIDE : Component Function Check

INFOID:0000000001099193

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:DR UNLK	The door lock actuator (driver side) is unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-368, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001099194

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and front door lock actuator (passenger side) connector.
3. Check continuity between BCM connector and front door lock actuator (passenger side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D48	3	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

3.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-98, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

PASSENGER SIDE : Component Inspection

INFOID:0000000001099195

1.CHECK FRONT DOOR LOCK ACTUATOR (PASSENGER SIDE)

Check the actuator operation by connecting the battery voltage directly to front door lock actuator (passenger side).

Front door lock actuator (passenger side) connector	Terminal		Door lock actuator condition
	(+)	(-)	
D48	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Front door lock actuator (passenger side) is OK.
NO >> Replace front door lock actuator (passenger side). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR LH

REAR LH : Description

INFOID:0000000001099196

Locks/unlocks the door with the signal from BCM.

REAR LH : Component Function Check

INFOID:0000000001099197

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:DR UNLK	The door lock actuator (driver side) is unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.

cardiagn.com

NO >> Refer to DLK-363, "REAR LH : Diagnosis Procedure".

REAR LH : Diagnosis Procedure

INFOID:0000000001099198

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect BCM and rear door lock actuator (LH) connector.
2. Check continuity between BCM connector and rear door lock actuator (LH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D85	3	Exists
	54		2	

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK DOOR LOCK ACTUATOR CIRCUIT 1

1. Disconnect anti-hijack relay connector.
2. Check continuity between BCM connector and anti-hijack relay connector.

BCM connector	Terminal	Anti-hijack relay connector	Terminal	Continuity
M67	56	M90	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK DOOR LOCK ACTUATOR CIRCUIT 2

Check continuity anti-hijack relay.

Anti-hijack relay connector	Terminal		Continuity
M90	4	3	Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK DOOR LOCK ACTUATOR CIRCUIT 3

1. Check continuity between anti-hijack relay connector and rear door lock actuator (LH) connector.

Anti-hijack relay connector	Terminal	Door lock actuator connector	Terminal	Continuity
M90	3	D85	3	Exists

2. Check continuity between anti-hijack relay connector and ground.

Anti-hijack relay connector	Terminal	Ground	Continuity
M90	3		Does not exist

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

6.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-100, "REAR LH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR LH : Component Inspection

INFOID:0000000001099199

1.CHECK REAR DOOR LOCK ACTUATOR (LH)

Check the actuator operation by connecting the battery voltage directly to rear door lock actuator (LH).

Rear door lock actuator (LH)	Terminal		Door lock actuator condition
	(+)	(-)	
D85	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Rear door lock actuator (LH) is OK.
NO >> Replace rear door lock actuator (LH). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH

REAR RH : Description

INFOID:0000000001099200

Locks/unlocks the door with the signal from BCM.

REAR RH : Component Function Check

INFOID:0000000001099201

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK/UNLOCK” in “Active Test” mode with CONSULT-III.

cardiagn.com

Test item		Condition
DOOR LOCK/UNLOCK	:ALL UNLK	The all door lock actuators are unlocked
	:DR UNLK	The door lock actuator (driver side) is unlocked
	:LOCK	The all door lock actuators are locked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-365, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001099202

1.CHECK OUTPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door lock actuator (RH) connector.
3. Check continuity between BCM connector and rear door lock actuator (RH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D105	3	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Disconnect anti-hijack relay.
2. Check continuity between BCM connector and anti-hijack relay connector.

BCM connector	Terminal	Anti-hijack relay connector	Terminal	Continuity
M67	56	M90	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist

A B C D E F G H I J DLK L M N O P
c-diagn.com

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK DOOR LOCK ACTUATOR CIRCUIT

Check continuity anti-hijack relay.

Anti-hijack relay connector	Terminal		Continuity
M90	4	3	Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5. CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Check continuity between anti-hijack relay connector and rear door lock actuator (RH) connector.

Anti-hijack relay connector	Terminal	Door lock actuator connector	Terminal	Continuity
M90	3	D105	3	Exists

2. Check continuity between anti-hijack relay connector and ground.

Anti-hijack relay connector	Terminal	Ground	Continuity
M90	3		Does not exist

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

6. CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-102, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH : Component Inspection

INFOID:0000000001099203

1. CHECK REAR DOOR LOCK ACTUATOR (RH)

Check the actuator operation by connecting the battery voltage directly to rear door lock actuator (RH).

Rear door lock actuator (RH)	Terminal		Door lock actuator condition
	(+)	(-)	
D105	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Rear door lock actuator (RH) is OK.
NO >> Replace rear door lock actuator (RH). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

cardiagn.com

SUPER LOCK ACTUATOR
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001097264

The super lock system is controlled by BCM.

DRIVER SIDE : Component Function Check

INFOID:0000000001097265

1.CHECK FUNCTION

With CONSULT-III
Check “SUPER LOCK” in Active test mode with CONSULT-III.

Test item		Condition
SUPER LOCK	:LOCK (SET)	The super lock actuator is locked (SET)
	:UNLOCK (RELEASE)	The super lock actuator is unlocked (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Refer to DLK-367, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001097266

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	60	Ground	UNLOCK (RELEASE)	0 → Battery voltage → 0
	59		LOCK (SET)	

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK SUPER LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and front door lock actuator (driver side) connector.
3. Check continuity between BCM connector and front door lock actuator (driver side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	59	D29	1	Exists
	60		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	59		Does not exist
	60		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

3.CHECK SUPER LOCK ACTUATOR

Check super lock actuator.
Refer to DLK-368, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation". After that, DLK-368, "DRIVER SIDE : Special Repair Requirement".

DRIVER SIDE : Component Inspection

INFOID:0000000001099306

1.CHECK SUPER LOCK ACTUATOR

Check the actuator operation by connecting the battery voltage to super lock actuator.

Door lock actuator (super lock actuator) connector	Terminal		Actuator condition
	(+)	(-)	
D29	1	2	LOCK (SET)
	2	1	UNLOCK (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Replace door lock actuator (super lock actuator). Refer to DLK-255, "DOOR LOCK : Exploded View" and DLK-255, "DOOR LOCK : Removal and Installation". After that, Refer to DLK-368, "DRIVER SIDE : Special Repair Requirement".

DRIVER SIDE : Special Repair Requirement

INFOID:0000000001099307

Perform initialization procedure. Refer to PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001099308

The super lock system is controlled by BCM.

PASSENGER SIDE : Component Function Check

INFOID:0000000001099309

1.CHECK FUNCTION

With CONSULT-III
Check “SUPER LOCK” in Active test mode with CONSULT-III.

Test item		Condition
SUPER LOCK	:LOCK (SET)	The super lock actuator is locked (SET)
	:UNLOCK (RELEASE)	The super lock actuator is unlocked (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Refer to DLK-368, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001099317

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

cardiagn.com

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	54	Ground	UNLOCK (RELEASE)	0 → Battery voltage → 0
	59		LOCK (SET)	

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK SUPER LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and front door lock actuator (passenger side) connector.
3. Check continuity between BCM connector and front door lock actuator (passenger side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	59	D68	1	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	59		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK SUPER LOCK ACTUATOR

Check super lock actuator.
Refer to DLK-369, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

PASSENGER SIDE : Component Inspection

INFOID:0000000001099314

1.CHECK SUPER LOCK ACTUATOR

Check the actuator operation by connecting the battery voltage to super lock actuator.

Door lock actuator (super lock actuator) connector	Terminal		Actuator condition
	(+)	(-)	
D68	1	2	LOCK (SET)
	2	1	UNLOCK (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Replace door lock actuator (super lock actuator). Refer to DLK-255, "DOOR LOCK : Exploded View" and DLK-255, "DOOR LOCK : Removal and Installation".

REAR LH

REAR LH : Description

INFOID:0000000001099310

The super lock system is controlled by BCM.

REAR LH : Component Function Check

INFOID:0000000001099311

1.CHECK FUNCTION

With CONSULT-III

Check “SUPER LOCK” in Active test mode with CONSULT-III.

Test item		Condition
SUPER LOCK	:LOCK (SET)	The super lock actuator is locked (SET)
	:UNLOCK (RELEASE)	The super lock actuator is unlocked (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Refer to DLK-370, "REAR LH : Diagnosis Procedure".

REAR LH : Diagnosis Procedure

INFOID:0000000001099318

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	54	Ground	UNLOCK (RELEASE)	0 → Battery voltage → 0
	59		LOCK (SET)	

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK SUPER LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door lock actuator (LH) connector.
3. Check continuity between BCM connector and rear door lock actuator (LH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	59	D115	1	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	59		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK SUPER LOCK ACTUATOR

Check super lock actuator.
Refer to DLK-370, "REAR LH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR LH : Component Inspection

INFOID:0000000001099315

cardiagn.com

1.CHECK SUPER LOCK ACTUATOR

Check the actuator operation by connecting the battery voltage to super lock actuator.

Door lock actuator (super lock actuator) connector	Terminal		Actuator condition
	(+)	(-)	
D115	1	2	LOCK (SET)
	2	1	UNLOCK (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Replace door lock actuator (super lock actuator). Refer to DLK-255, "DOOR LOCK : Exploded View" and DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH

REAR RH : Description

INFOID:0000000001099312

The super lock system is controlled by BCM.

REAR RH : Component Function Check

INFOID:0000000001099313

1.CHECK FUNCTION

With CONSULT-III
Check “SUPER LOCK” in Active test mode with CONSULT-III.

Test item		Condition
SUPER LOCK	:LOCK (SET)	The super lock actuator is locked (SET)
	:UNLOCK (RELEASE)	The super lock actuator is unlocked (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Refer to DLK-371, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001099319

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	54	Ground	UNLOCK (RELEASE)	0 → Battery voltage → 0
	59		LOCK (SET)	

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK SUPER LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door lock actuator (RH) connector.
3. Check continuity between BCM connector and rear door lock actuator (RH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	59	D95	1	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	59		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK SUPER LOCK ACTUATOR

Check super lock actuator.
Refer to DLK-372, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH : Component Inspection

INFOID:0000000001099316

1.CHECK SUPER LOCK ACTUATOR

Check the actuator operate by connecting the battery voltage to super lock actuator.

Door lock actuator (super lock actuator) connector	Terminal		Actuator condition
	(+)	(-)	
D95	1	2	LOCK (SET)
	2	1	UNLOCK (RELEASE)

Is the inspection result normal?

YES >> Door lock actuator (super lock actuator) is OK.
NO >> Replace door lock actuator (super lock actuator). Refer to DLK-255, "DOOR LOCK : Exploded View" and DLK-255, "DOOR LOCK : Removal and Installation".

cardiagn.com

BACK DOOR OPENER ACTUATOR

Description

INFOID:0000000001099204

Opens the back door with the signal from BCM.

Component Function Check

INFOID:0000000001099205

1.CHECK FUNCTION

With CONSULT-III

Check “TRUNK/GLASS HATCH” in Active test mode with CONSULT-III.

Test item		Condition
TRUNK/GLASS HATCH	:OPEN	Back door lock opener actuator operation

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-373, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001099206

1.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of back door opener switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M66	45	Ground	Pressed	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK BACK DOOR LOCK ASSEMBLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door lock assembly connector.
3. Check continuity between BCM connector and back door lock assembly connector.

BCM connector	Terminal	Back door lock assembly connector	Terminal	Continuity
M66	45	D152	2	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M66	45		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BACK DOOR LOCK ASSEMBLY GROUND CIRCUIT

Check continuity between back door lock assembly connector and ground.

Back door lock assembly connector	Terminal	Ground	Continuity
D152	1		Exists

Is the inspection result normal?

carsdiagn.com

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK BACK DOOR LOCK ASSEMBLY

Check back door lock assembly connector and ground.
Refer to DLK-374, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door lock assembly. Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

Component Inspection

INFOID:0000000001099207

1. CHECK BACK DOOR LOCK ASSEMBLY

Check the actuator operation by connecting battery voltage to back door lock assembly.

Back door lock assembly connector	Terminal		Back door actuator condition
D152	(+)	(-)	OPEN
	2	1	

Is the inspection result normal?

YES >> Back door lock assembly (back door lock actuator) is OK.
NO >> Replace back door lock assembly (back door lock actuator). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

cardiagn.com

BACK DOOR OPENER SWITCH

Description

INFOID:0000000001115816

Sends the back door opening signal to BCM.

Component Function Check

INFOID:0000000001115817

1.CHECK FUNCTION

With CONSULT-III

Check “TRNK OPNR SW” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
TRNK OPNR SW	Back door opener switch is pressed	:ON
	Back door opener switch is released	:OFF

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-375, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115818

1.CHECK BCM INPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of back door opener switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	12	Ground	Pressed	0
			Released	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK BACK DOOR OPENER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and back door opener switch connector.
3. Check continuity between BCM connector and back door opener switch connector.

BCM connector	Terminal	Back door opener switch connector	Terminal	Continuity
M65	12	D186	1	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	12		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	12	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

4. CHECK BACK DOOR OPENER SWITCH GROUND CIRCUIT

Check continuity between back door opener switch connector and ground.

Back door opener switch connector	Terminal	Ground	Continuity
D186	2		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5. CHECK BACK DOOR OPENER SWITCH

Check back door opener switch.
Refer to DLK-376, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door opener switch. Refer to DLK-279, "Exploded View".

Component Inspection

INFOID:0000000001115819

1. CHECK BACK DOOR OPENER SWITCH

Check back door opener switch.

Back door opener switch connector	Terminal		Back door opener switch condition	Continuity
D186	1	2	Pressed	Exists
			Released	Does not exist

Is the inspection result normal?

YES >> Back door opener switch is OK.
NO >> Replace back door opener switch. Refer to DLK-279, "Exploded View".

cardiagn.com

OUTSIDE KEY ANTENNA
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001109347

Detects whether Intelligent Key is outside the vehicle.
Integrated in front outside handle (driver side).

DRIVER SIDE : Component Function Check

INFOID:0000000001109348

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III
1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “DRIVER ANT”.
3. When Intelligent Key is in outside key antenna (driver side) detection area, hazard lamp flashes.

Test Item		Outside Antenna
ANTENNA	:DRIVER ANT	Outside key antenna (driver side)

Is the inspection result normal?

YES >> Outside key antenna is OK.
NO >> Refer to DLK-383, "REAR BUMPER : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001109349

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

carsdiagn.com

Terminals				Condition		Signal (Reference value)
(+)			(–)			
Intelligent Key unit connector		Terminal				
M40	Driver side (+)	19	Ground	Request switch is pushed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Driver side (-)	20			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK OUTSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and front outside handle connector.
2. Check continuity between Intelligent Key unit connector and outside key antenna connector.

Intelligent Key unit connector	Terminal	Outside key antenna connector	Terminal	Continuity
M40	19	D31	1	Existed
	20		2	

3. Check continuity between Intelligent Key unit connector and ground.

cardiagn.com

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	19		Not existed
	20		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and outside key antenna.

3. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace outside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and outside key antenna connector.
3. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminals (+) Intelligent Key unit connector	(+) Terminal	(–)	Condition		Signal (Reference value)
M40	Driver side (+) 19	Ground	Door request switch is pushed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Driver side (-) 20		Door request switch is pushed	When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Replace outside key antenna (driver side). Refer to DLK-275, "DRIVER SIDE : Exploded View".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001109350

Detects whether Intelligent Key is outside the vehicle.
Integrated in front outside handle (passenger side).

PASSENGER SIDE : Component Function Check

INFOID:0000000001109351

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “ASSIST ANT”.
3. When Intelligent Key is in outside key antenna (passenger side) detection area, hazard lamp is flashes.

Test Item		Outside Antenna
ANTENNA	:ASSIST ANT	Outside key antenna (passenger side)

Is the inspection result normal?

YES >> Outside key antenna is OK.
NO >> Refer to DLK-383, "REAR BUMPER : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001109352

1.CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

cardiagn.com

Terminal (+) Intelligent Key unit connector	Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Passenger side (+)	37	Ground	Request switch is pushed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Passenger side (-)	38			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK OUTSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and front outside handle connector.
2. Check continuity between Intelligent Key unit connector and outside key antenna connector.

Intelligent Key unit connector	Terminal	Outside key antenna connector	Terminal	Continuity
M40	37	D70	1	Existed
	38		2	

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal		Continuity
M40	37	Ground	Not existed
	38		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and outside key antenna.

3. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace outside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and outside key antenna connector.
3. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminal (+)			Terminal (–)	Condition		Signal (Reference value)
Intelligent Key unit connector		Terminal				
M40	Passenger side (+)	37	Ground	Door request switch is pushed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Passenger side (-)	38			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Replace outside key antenna. Refer to DLK-275, "PASSENGER SIDE : Exploded View" (passenger side).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

REAR BUMPER

cardiagn.com

REAR BUMPER : Description

INFOID:0000000001109353

Detects whether Intelligent Key is outside the vehicle.
Installed in rear bumper.

REAR BUMPER : Component Function Check

INFOID:0000000001109354

1. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “BK DOOR ANT”.
3. When Intelligent Key is in outside key antenna (rear bumper) detection area, hazard lamp is flashes.

Test Item		Outside Antenna
ANTENNA	:BK DOOR ANT	Outside key antenna (rear bumper)

Is the inspection result normal?

YES >> Outside key antenna is OK.
NO >> Refer to DLK-383, "REAR BUMPER : Diagnosis Procedure".

REAR BUMPER : Diagnosis Procedure

INFOID:0000000001109355

1. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminal (+) Intelligent Key unit connector	Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Rear bumper (+)	17	Ground	Request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0397ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Rear bumper (-)	18			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK OUTSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and front outside handle connector.
2. Check continuity between Intelligent Key unit connector and outside key antenna connector.

Intelligent Key unit connector	Terminal	Outside key antenna connector	Terminal	Continuity
M40	17	B81 (rear bumper)	1	Exists
	18		2	

3. Check continuity between Intelligent Key unit connector and ground.

cardiagn.com

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	17		Does not exist
	18		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and outside key antenna.

3. CHECK OUTSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace outside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and outside key antenna connector.
3. Check signal between Intelligent Key unit connector and ground with oscilloscope.

Terminal (+)		Terminal (+)	Terminal (–)	Condition		Signal (Reference value)
Intelligent Key unit connector		Terminal				
M40	Rear bumper (+)	17	Ground	Door request switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0514ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0514ZZ
	Rear bumper (-)	18			When Intelligent Key is in the antenna detection area.	 JMKIA0395ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0515ZZ

Is the inspection result normal?

YES >> Replace outside key antenna. Refer to DLK-276, "REAR BUMPER : Exploded View" (Rear bumper).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

INSIDE KEY ANTENNA
INSTRUMENT CENTER

INSTRUMENT CENTER : Description

INFOID:0000000001109356

Detects whether Intelligent Key is inside the vehicle.

INSTRUMENT CENTER : Component Function Check

INFOID:0000000001109357

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in Active test mode with CONSULT-III.
2. Touch “ROOM ANT 2”.
3. When Intelligent Key is in inside key antenna (instrument center) detection area, hazard lamp flashes.

Test Item		Inside Antenna
ANTENNA	:ROOM ANT 2	Inside key antenna (instrument center)

Is the inspection result normal?

YES >> Inside key antenna is OK.
NO >> Refer to DLK-386, "INSTRUMENT CENTER : Diagnosis Procedure".

INSTRUMENT CENTER : Diagnosis Procedure

INFOID:0000000001109358

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

cardiagn.com

Terminals (+) Intelligent Key unit connector		Terminals (+) Terminal	Terminals (–)	Condition		Signal (Reference value)
M40	Instrument center (+)	33	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Instrument center (-)	34			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK INSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and inside key antenna connector.
2. Check continuity between Intelligent Key unit connector and inside key antenna connector.

Intelligent Key unit connector	Terminal	Inside key antenna connector	Terminal	Continuity
M40	33	M70 (instrument center)	1	Exists
	34		2	

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	33		Does not exist
	34		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and inside key antenna.

3.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace inside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and inside key antenna connector.
3. Check signal between Intelligent Key connector and ground with oscilloscope.

Terminals (+) Intelligent Key unit connector		Terminal	(–)	Condition		Signal (Reference value)
M40	Instrument center (+)	33	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Instrument center (-)	34			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Replace inside key antenna. Refer to DLK-273, "INSTRUMENT CENTER : Exploded View" (instrument center).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

CONSOLE

CONSOLE : Description

INFOID:0000000001109359

Detects whether Intelligent Key is inside the vehicle.

CONSOLE : Component Function Check

INFOID:0000000001109360

1. CHECK INSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in Active test mode with CONSULT-III.
2. Touch “ROOM ANT 1”.
3. When Intelligent Key is in inside key antenna (console) detection area, hazard lamp flashes.

Test Item		Inside Antenna
ANTENNA	:ROOM ANT 1	Inside key antenna (console)

Is the inspection result normal?

YES >> Inside key antenna is OK.
NO >> Refer to DLK-389, "CONSOLE : Diagnosis Procedure".

CONSOLE : Diagnosis Procedure

INFOID:0000000001109361

1. CHECK INSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

carsdiagn.com

Terminal (+) Intelligent Key unit connector	Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Console (+) 15	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Console (-) 16			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK INSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and inside key antenna connector.
2. Check continuity between Intelligent Key unit connector and inside key antenna connector.

Intelligent Key unit connector	Terminal	Inside key antenna connector	Terminal	Continuity
M40	15	M61 (console)	1	Exists
	16		2	

3. Check continuity between Intelligent Key unit connector and ground.

cardiagn.com

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	15		Does not exist
	16		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and inside key antenna.

3. CHECK INSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace inside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and inside key antenna connector.
3. Check signal between Intelligent Key connector and ground with oscilloscope.

Terminal (+)		Terminal (+)	Terminal (–)	Condition		Signal (Reference value)
Intelligent Key unit connector						
M40	Console (+)	15	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ

	Console (-)	16			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Replace inside key antenna. Refer to DLK-273, "CONSOLE : Exploded View" (console).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

REAR SEAT

carsdiagn.com

REAR SEAT : Description

INFOID:0000000001109362

Detects whether Intelligent Key is inside the vehicle.

REAR SEAT : Component Function Check

INFOID:0000000001109363

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL

With CONSULT-III

1. Check “ANTENNA” in “Active Test” mode with CONSULT-III.
2. Touch “ROOM ANT 2”.
3. When Intelligent Key is in inside key antenna (rear seat) detection area, hazard lamp flases.

Test Item		Inside Antenna
ANTENNA	:ROOM ANT 2	Inside key antenna (rear seat)

Is the inspection result normal?

YES >> Inside key antenna is OK.
NO >> Refer to DLK-392, "REAR SEAT : Diagnosis Procedure".

REAR SEAT : Diagnosis Procedure

INFOID:0000000001109364

1.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 1

1. Turn ignition switch OFF.
2. Check signal between Intelligent Key unit connector and ground with oscilloscope.

cardiagn.com

Terminal (+) Intelligent Key unit connector	Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Rear seat (+)	13	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ

					When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2. CHECK INSIDE KEY ANTENNA CIRCUIT

1. Disconnect Intelligent Key unit connector and inside key antenna connector.
2. Check continuity between Intelligent Key unit connector and inside key antenna connector.

Intelligent Key unit connector	Terminal	Inside key antenna connector	Terminal	Continuity
M40	13	B45 (rear seat)	1	Exists
	14		2	

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	13		Does not exist
	14		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between Intelligent Key unit and inside key antenna.

3.CHECK INSIDE KEY ANTENNA INPUT SIGNAL 2

1. Replace inside key antenna. (New antenna or other antenna)
2. Connect Intelligent Key unit connector and inside key antenna connector.
3. Check signal between Intelligent Key connector and ground with oscilloscope.

Terminal (+) Intelligent Key unit connector	Terminal (+) Terminal	Terminal (–)	Condition		Signal (Reference value)
M40	Rear seat (+) 13	Ground	• All doors are closed • Ignition knob switch is pressed	When Intelligent Key is in the antenna detection area.	 JMKIA0393ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0391ZZ
	Rear seat (-) 14			When Intelligent Key is in the antenna detection area.	 JMKIA0392ZZ
				When Intelligent Key is not in the antenna detection area.	 JMKIA0390ZZ

Is the inspection result normal?

YES >> Replace inside key antenna. Refer to DLK-274, "REAR : Exploded View" (rear seat).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

ANTI-HIJACK RELAY
PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001115302

Receives anti-hijack signal from Intelligent Key unit.

PASSENGER SIDE : Component Function Check

INFOID:0000000001115303

1.CHECK FUNCTION

1. All doors are locked using Intelligent Key or door request switch. (Super lock system condition: Set)
2. Press door request switch (passenger side), only passenger side door is UNLOCK.

Is the inspection result normal?

YES >> Anti-hijack relay is OK.
NO >> Refer to DLK-395, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001115304

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL 1

1. Check voltage between Intelligent Key unit connector and ground.

Terminal			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	11	Ground	Ignition switch OFF	Battery voltage

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check condition of harness and connector. If OK, repair or replace harness.

2.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL 2

1. Check voltage between Intelligent Key unit connector and ground.

Terminal			Condition		Voltage (V) (Approx.)
(+)		(–)			
Intelligent Key unit connector	Terminal				
M40	40	Ground	Press front door request switch (passenger side)	Anti-hijack operation	Battery voltage → 0 → Battery voltage
				Other than above	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 4.

3.CHECK INTELLIGENT KEY UNIT GROUND CIRCUIT

Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	12		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair harness or connector.

4. CHECK PASSENGER SIDE ANTI-HIJACK RELAY GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect passenger side anti-hijack relay connector and Intelligent Key unit connector.
3. Check voltage between passenger side anti-hijack relay connector and ground.

Terminal			Condition	Voltage (V) (Approx.)
(+)		(–)		
Passenger side anti-hijack relay connector	Terminal			
M90	2	Ground	Ignition switch OFF	Battery voltage

4. Check continuity between passenger side anti-hijack relay connector and Intelligent Key unit connector.

Passenger side anti-hijack relay connector	Terminal	Intelligent Key unit connector	Terminal	Continuity
M90	1	M40	40	Exists

5. Check continuity between passenger side anti-hijack relay connector and ground.

Passenger side anti-hijack relay connector	Terminal	Ground	Continuity
M90	1		Does not exist

Is the inspection result normal?

YES >> GO TO 5.
NO >> Check condition of harness and connector. If OK, repair or replace harness.

5. CHECK ANTI-HIJACK RELAY

Check anti-hijack relay.
Refer to DLK-396, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace anti-hijack relay. Refer to DLK-288, "DOOR LOCK AND UNLOCK SWITCH : Component Parts Location".

PASSENGER SIDE : Component Inspection

INFOID:0000000001115305

1. CHECK ANTI-HIJACK RELAY

1. Turn ignition switch OFF.
2. Disconnect passenger side anti-hijack relay harness connector.
3. Check continuity passenger side anti-hijack relay terminals 3 and 4.

Passenger side anti-hijack relay connector	Terminal		Condition	Continuity
M90	3	4	Battery voltage direct current supply between terminals 1 and 2	Does not exist
			Other than above	Exists

Is the inspection result normal?

YES >> Passenger side anti-hijack relay is OK.
NO >> Replace passenger side anti-hijack relay. Refer to DLK-288, "DOOR LOCK AND UNLOCK SWITCH : Component Parts Location".

cardiagn.com

INTELLIGENT KEY WARNING BUZZER

Description

INFOID:0000000001116071

Answers back and warns about an inappropriate operation.

Component Function Check

INFOID:0000000001116072

1.CHECK FUNCTION

With CONSULT-III

Check Intelligent Key warning buzzer “OUTSIDE BUZZER” in “Active Test” mode.

Is the inspection result normal?

YES >> Intelligent Key warning buzzer is OK.
NO >> Refer to DLK-397, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116073

1.CHECK INTELLIGENT KEY UNIT INPUT SIGNAL 1

Check voltage between Intelligent Key unit connector and ground.

Terminal			Warning buzzer operation condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	4	Ground	Sounding	0
			Not sounding	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK INTELLIGENT KEY WARNING BUZZER POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key warning buzzer connector.
3. Check voltage between Intelligent Key warning buzzer connector and ground.

Terminal			Voltage (V) (Approx.)
(+)		(–)	
Intelligent Key warning buzzer connector	Terminal		
E25	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace Intelligent Key warning buzzer power supply circuit.

3.CHECK HARNESS CONTINUITY

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key warning buzzer connector and Intelligent Key unit connector.

Intelligent Key warning buzzer connector	Terminal	Intelligent Key unit connector	Terminal	Continuity
E25	3	M40	4	Exists

3. Check continuity between Intelligent Key warning buzzer connector and ground.

Intelligent Key warning buzzer connector	Terminal	Ground	Continuity
E25	3		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness between Intelligent Key warning buzzer and Intelligent Key unit.

4.CHECK INTELLIGENT KEY WARNING BUZZER

Check Intelligent Key warning buzzer.
Refer to DLK-398, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace Intelligent Key warning buzzer. Refer to DLK-277, "Exploded View".

5.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-552, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

Component Inspection

INFOID:0000000001116074

1.CHECK INTELLIGENT KEY WARNING BUZZER

Connect battery power supply to Intelligent Key warning buzzer terminals 1 and 3, and check the operation.

Intelligent Key warning buzzer connector	Terminal		Operation
	(+)	(-)	Buzzer sounds
E25	1	3	

Is the inspection result normal?

YES >> Intelligent Key warning buzzer is OK. GO TO 2.
NO >> Replace Intelligent Key warning buzzer. Refer to DLK-277, "Exploded View".

2.REPLACE INTELLIGENT KEY UNIT

Replace Intelligent Key unit.
Refer to DLK-552, "Exploded View".
NOTE:
Perform the system initialization when replacing Intelligent Key unit.
Refer to DLK-23, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

>> INSPECTION END

cardiagn.com

BUZZER (COMBINATION METER)

Description

INFOID:0000000001115727

Performs operation method guide and warning with buzzer.

Component Function Check

INFOID:0000000001115728

1.CHECK FUNCTION

With CONSULT-III

Check the operation with “INSIDE BUZZER” in the Active test.

Test item	Condition	
INSIDE BUZZER	:TAKE OUT	Take away warning chime sounds
	:KNOB	Ignition knob switch warning chime sounds
	:KEY	Key warning chime sounds

Is the inspection result normal?

Yes >> Warning buzzer in combination meter is OK.
No >> Refer to DLK-399, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115729

1.CHECK BUZZER (COMBINATION METER) CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace buzzer (combination meter) circuit.

KEY WARNING LAMP

Description

INFOID:0000000001115730

Performs operation method guide and warning together with buzzer.

Component Function Check

INFOID:0000000001115731

1.CHECK FUNCTION

With CONSULT-III

Check the operation with “INDICATOR” in “Active Test”.

Test item	Condition	
INDICATOR	:BLUE ON	Key warning lamp (green) illuminates
	:RED ON	Key warning lamp (red) illuminates
	:BLUE IND	Key warning lamp (green) flashes
	:RED IND	Key warning lamp (red) flashes

Is the inspection result normal?

Yes >> Key warning lamp in combination meter is OK.
No >> Refer to DLK-400, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115732

1.CHECK KEY WARNING LAMP CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace key warning lamp circuit.

cardiagn.com

LOCK WARNING LAMP

Description

INFOID:0000000001115733

Performs operation method guide and warning together with buzzer.

Component Function Check

INFOID:0000000001115734

1.CHECK FUNCTION

With CONSULT-III

Check the operation with “INDICATOR” in “Active Test”.

Test item	Condition	
INDICATOR	:KNOB ON	Lock warning lamp illuminates
	:KNOB IND	Lock warning lamp flashes

Is the inspection result normal?

Yes >> Lock warning lamp in combination meter is OK.
No >> Refer to DLK-401, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115735

1.CHECK LOCK WARNING LAMP CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace lock warning lamp circuit.

HAZARD WARNING LAMPS

Description

INFOID:0000000001115736

Performs answer-back for each operation with the number of blinks.

Component Function Check

INFOID:0000000001115737

1.CHECK FUNCTION

With CONSULT-III

Check hazard warning lamp “FLASHER” in “Active test”.

Is the inspection result normal?

YES >> Hazard warning lamp circuit is OK.
NO >> Refer to DLK-402, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115738

1.CHECK HAZARD SWITCH CIRCUIT

Check hazard switch circuit.
Refer to EXL-72, "Component Function Check".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace hazard warning switch circuit.

cardiagn.com

VEHICLE SPEED SIGNAL CIRCUIT

Description

INFOID:0000000001115718

Displays the vehicle speed signal received from combination meter as a numerical value (km/h).

Component Function Check

INFOID:0000000001115719

1.CHECK FUNCTION

Check that all doors are automatically locked at the vehicle speed of more than 12 km/h (7 MPH).

Is the inspection result normal?

YES >> Vehicle speed signal circuit is OK.
NO >> Refer to DLK-403, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115720

1.CHECK VEHICLE SPEED SIGNAL CIRCUIT

Check vehicle speed signal “VEHICLE SPEED” in “Data Monitor”.

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace vehicle speed signal circuit.

carsdiagn.com

INTELLIGENT KEY BATTERY

Description

INFOID:0000000001099239

The following functions are available when having and carrying electronic ID.
- Door lock and unlock
- Engine start

Remote control entry function and panic alarm function are available when operating the button.

Component Function Check

INFOID:0000000001099240

1.CHECK INTELLIGENT KEY FUNCTION

Does door lock and unlock operate when operating Intelligent Key switch?

Is the inspection result normal?

YES >> Intelligent Key is OK.
NO >> Refer to DLK-404, "Diagnosis Procedure".

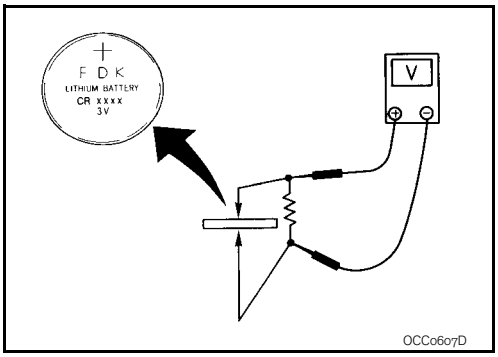
Diagnosis Procedure

INFOID:0000000001099241

1.CHECK INTELLIGENT KEY BATTERY

Check by connecting a resistance (approximately 300Ω) so that the current value becomes about 10 mA.

Standard : Approx. 2.5 - 3.0V



Is the measurement value within the specification?

YES >> Replace Intelligent Key.
NO >> Replace Intelligent Key battery. Refer to DLK-551, "Exploded View".

cardiagn.com

DTC Inspection Priority Chart

INFOID:0000000001081546

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN) • B2552: INTELIGENT KEY
2	• B2013: STRG COMM 1 • B2590: NATS MALFUNCTION

DTC Index

INFOID:0000000001081547

NOTE:
Details of time display
- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

CONSULT display	Detection condition	Fail-safe	Diagnosis
No DTC is detected. further testing may be required.	—	—	—
U1000: CAN COMM CIRCUIT	Intelligent Key unit cannot receive CAN communication signal continuously for 2 seconds or more.	—	Check CAN communication system. Refer to DLK-68
U1010: CONTROL UNIT (CAN)	Intelligent Key unit detects internal CAN communication circuit malfunction.	—	Replace Intelligent Key unit.
B2013: STRG COMM 1	The ID verification result between Intelligent key unit and steering lock unit are NG. Or Intelligent Key unit cannot communicate with steering lock unit.	×	Perform steering lock unit ID registration with CONSULT-III
B2552: INTELLIGENT KEY	Intelligent Key unit internal malfunction.	×	Replace Intelligent Key unit.
B2590: NATS MALFUNCTION	The ID verification result between Intelligent key unit and BCM are NG. Or Intelligent Key unit cannot communicate with BCM.	×	Check NATS Refer to SEC-43

BCM (BODY CONTROL MODULE)

Reference Value

INFOID:0000000001097293

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

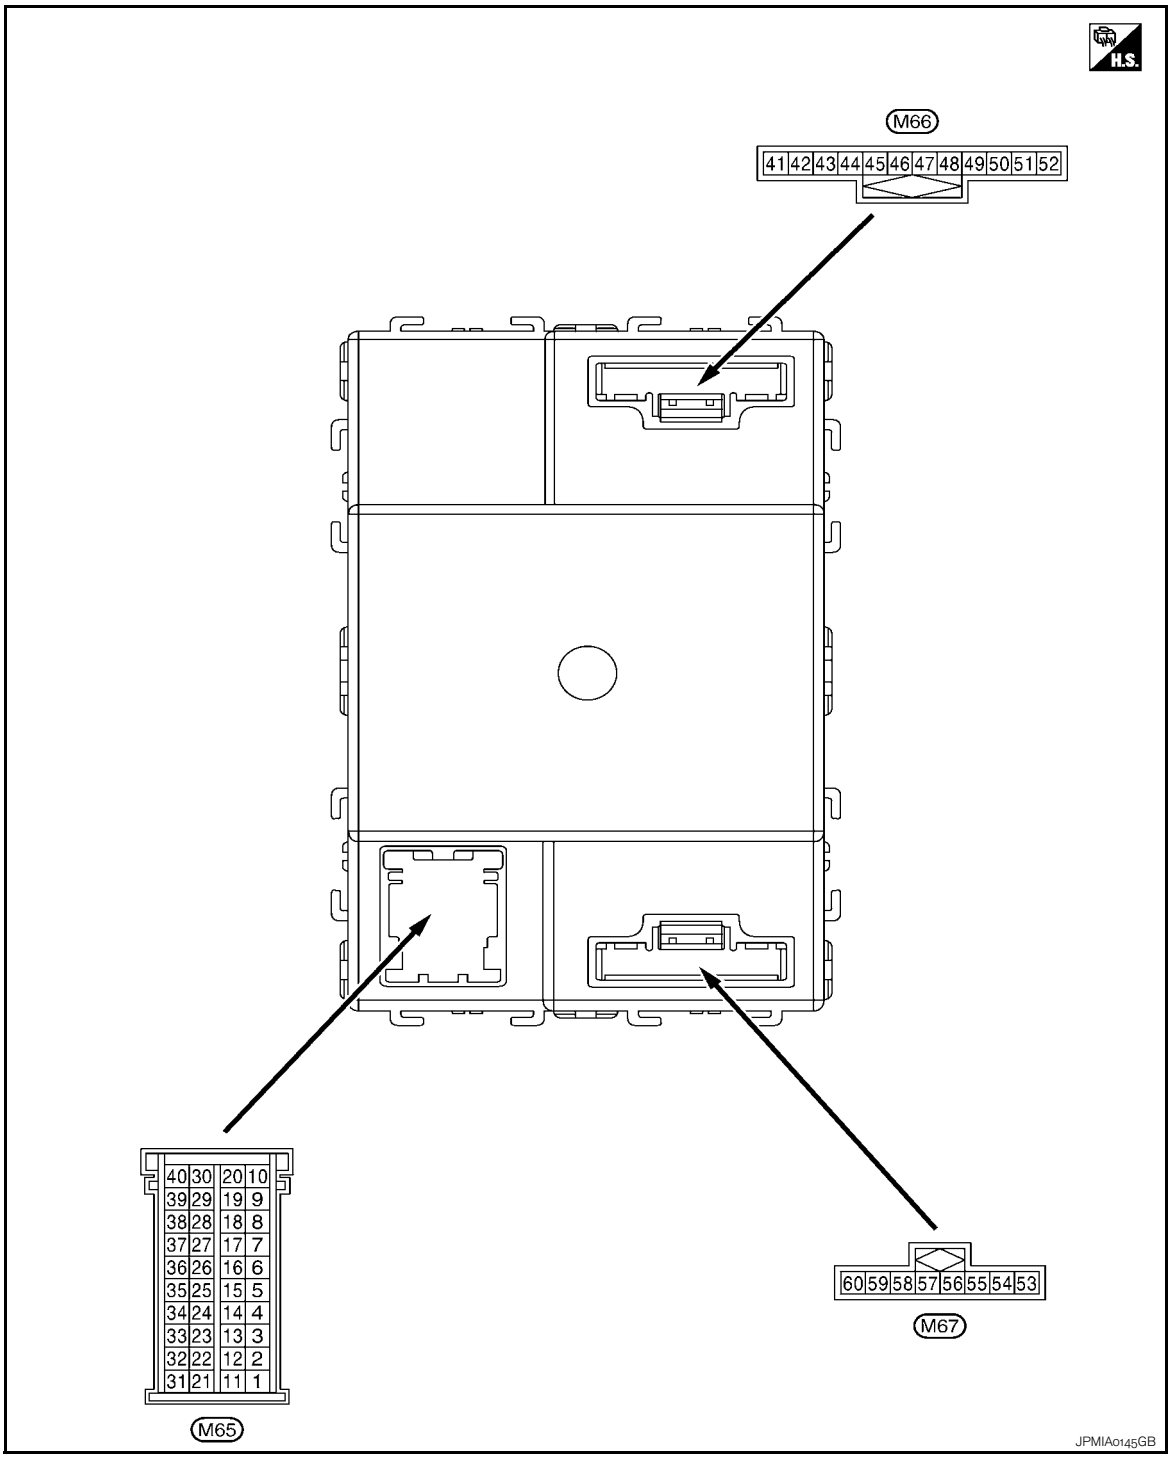
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000001097295

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001097296

DTC Index

INFOID:0000000001097297

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

SYMPTOM DIAGNOSIS

DOOR LOCK FUNCTION SYMPTOMS

DOOR LOCK AND UNLOCK SWITCH

DOOR LOCK AND UNLOCK SWITCH : Symptom Table

INFOID:0000000001109309

DOOR LOCK AND UNLOCK SWITCH OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-283, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Except driver side, doors are closed.
- Super lock is not in set state.
- Passenger side door is not in anti-hijack state.
- Doors are not locked by Intelligent Key or door request switch.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Door lock and unlock function does not operate with door lock and unlock switch.	1. Check BCM power supply and ground circuit.		DLK-335
	2. Check door lock and unlock switch.		DLK-337
	3. Check door switch.	Passenger side	DLK-348
		Rear LH	DLK-350
		Rear RH	DLK-351
		Back door	DLK-353
	4. Check intermittent incident.		GI-39
Specific door lock does not operate properly.	1. Check door lock actuator.	Driver side	DLK-359
		Passenger side	DLK-361
		Rear LH	DLK-362
		Rear RH	DLK-364
	2. Check intermittent incident.		GI-39
Specific door does not open from inside the vehicle.	1. Check super lock actuator.	Driver side	DLK-367
		Passenger side	DLK-368
		Rear LH	DLK-370
		Rear RH	DLK-371
	2. Check intermittent incident.		GI-39
Rear LH and RH door lock actuator does not operate.	1. Check passenger side anti-hijack relay.		DLK-395
	2. Check intermittent incident.		GI-39

INTELLIGENT KEY

INTELLIGENT KEY : Symptom Table

INFOID:0000000001109310

INTELLIGENT KEY OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “WORK FLOW”. Refer to DLK-283, "Work Flow".

- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)
- Door lock and unlock switch operations are normal.
- Emergency key is removed from ignition key cylinder.
- All doors are closed.
- Ignition knob is not pressed.
- No Intelligent keys are inside the vehicle.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
All of the Intelligent Key functions do not operate.	1. Check Intelligent Key unit power supply and ground circuit.		DLK-335
	2. Check driver side door switch.		DLK-353
	3. Check key switch.		DLK-355
	4. Check ignition knob switch.		DLK-357
	5. Check Intelligent Key battery.		DLK-404
	6. Check intermittent incident.		GI-39
Specific door does not operate properly.	1. Check door lock actuator.	Driver side	DLK-359
		Passenger side	DLK-361
		Rear LH	DLK-362
		Rear RH	DLK-364
	2. Check intermittent incident.		GI-39
Anti-hijack function does not operate by Intelligent Key.	1. Check “SELECTIVE UNLOCK FUNCTION” setting in “WORK SUPPORT”.		DLK-329
	2. Check intermittent incident.		GI-39

DOOR REQUEST SWITCH

DOOR REQUEST SWITCH : Symptom Table

INFOID:0000000001109311

DOOR REQUEST SWITCH OPERATION MALFUNCTION

NOTE:
- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-283, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)
- Intelligent Key operation is normal.
- “LOCK/UNLOCK BY I-KEY” is ON when setting on CONSULT-III.
- Emergency key is removed from ignition key cylinder.
- Ignition switch is in OFF position.
- No Intelligent Keys are inside the vehicle.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Door lock and unlock do not operate by door request switch.	1. Check “LOCK/UNLOCK BY I-KEY” setting in “WORK SUPPORT”.	DLK-329
	2. Check intermittent incident.	GI-39

Symptom	Diagnosis/service procedure	Reference page
Door lock/unlock does not operate by request switch (driver side).	1. Check door request switch (driver side).	DLK-341
	2. Check outside key antenna (driver side).	DLK-377
	3. Check intermittent incident.	GI-39
Door lock/unlock does not operate by request switch (passenger side).	1. Check door request switch (passenger side).	DLK-343
	2. Check outside key antenna (passenger side).	DLK-380
	3. Check intermittent incident.	GI-39
Door lock/unlock does not operate by request switch (back door).	1. Check door request switch (back door).	DLK-344
	2. Check outside key antenna (rear bumper).	DLK-383
	3. Check intermittent incident.	GI-39
Anti-hijack function does not operate by driver side door request switch (other door lock functions operate).	1. Check “SELECTIVE UNLOCK FUNCTION” setting in “WORK SUPPORT”.	DLK-329
	2. Check intermittent incident.	GI-39
Passenger side anti-hijack function does not operate by passenger side door request switch (other door lock functions operate).	1. Check passenger side anti-hijack relay.	DLK-395
	2. Check intermittent incident.	GI-39

KEY REMINDER

KEY REMINDER : Symptom Table

INFOID:0000000001109312

KEY REMINDER OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “WORK FLOW”. Refer toDLK-283, "Work Flow".
- Understand the operation when does it work, refer to DLK-299, "KEY REMINDER : System Description".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Request switch operation and door lock and unlock switch operation are normal.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Key reminder operation does not operate properly.	1. Check door switch.	Driver side	DLK-347
		Passenger side	DLK-348
		Rear LH	DLK-350
		Rear RH	DLK-351
		Back door	DLK-353
	2. Check inside key antenna.	Instrument center	DLK-386
		Console	DLK-389
		Rear seat	DLK-392
	3. Check Intermittent Incident.		GI-39

AUTO DOOR LOCK

AUTO DOOR LOCK : Symptom Table

INFOID:0000000001109313

AUTO DOOR LOCK OPERATION MALFUNCTION

NOTE:

- “AUTO RELOCK TIMER” is not OFF when setting on CONSULT-III.
- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-283, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- Understand the operation when does it work, refer to DLK-302, "AUTO DOOR LOCK : System Description".
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Request switch operation and door lock and unlock switch operation are normal.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Auto door lock operation does not operate properly.	1. Check “AUTO RELOCK TIMER” setting in “WORK SUPPORT”.	DLK-329
	2. Check ignition knob switch.	DLK-357
	3. Check key switch.	DLK-355
	4. Check Intermittent Incident.	GI-39

VEHICLE SPEED SENSING AUTO DOOR LOCK

VEHICLE SPEED SENSING AUTO DOOR LOCK : Symptom Table

INFOID:0000000001109314

VEHICLE SPEED SENSING AUTO DOOR LOCK OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “WORK FLOW”. Refer to DLK-283, "Work Flow".
- Understand the operation when does it work, refer to DLK-305, "VEHICLE SPEED SENSING AUTO DOOR LOCK : System Description".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Request switch operation and door lock and unlock switch operation are normal.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Vehicle speed sensing auto door lock operation does not operate.	1. Check vehicle speed signal.	DLK-403
	2. Check Intermittent Incident.	GI-39

BACK DOOR OPEN FUNCTION SYMPTOMS
BACK DOOR OPENER SWITCH
BACK DOOR OPENER SWITCH : Symptom Table

INFOID:0000000001109315

BACK DOOR OPENER FUNCTION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “WORK FLOW”. Refer to DLK-283, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Door lock function is normal.
- Vehicle speed is less than 5 km/h (3MPH).
- All doors are unlocked.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Back door opener function does not operate by back door opener switch.	1. Check back door opener switch.	DLK-375
	2. Check vehicle speed signal.	DLK-403
	3. Check back door opener actuator.	DLK-373
	4. Check Intermittent Incident.	GI-39

WARNING FUNCTION SYMPTOMS

BUZZER (COMBINATION METER)

BUZZER (COMBINATION METER) : Symptom Table

INFOID:0000000001109316

BUZZER (COMBINATION METER) OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “WORK FLOW”. Refer to DLK-283, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following “symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Warning chime functions operating condition is extremely complicated, during operating confirmations, reconfirm the list above twice in order to ensure proper operation. Refer to DLK-316, "System Description".
- Door lock function is normal.

Symptom Table

Symptom		Diagnosis/service procedure	Reference page
Ignition knob return forgotten warning.does not operate properly.		1. Check buzzer (combination meter).	DLK-399
		2. Check Intermittent Incident.	GI-39
Ignition key warning does not operate properly.		1. Check buzzer (combination meter).	DLK-399
		2. Check Intermittent Incident.	GI-39
OFF position warning does not operate properly.		1. Check buzzer (combination meter).	DLK-399
		2. Check Intermittent Incident.	GI-39

	2. Check intermittent incident.	GI-39

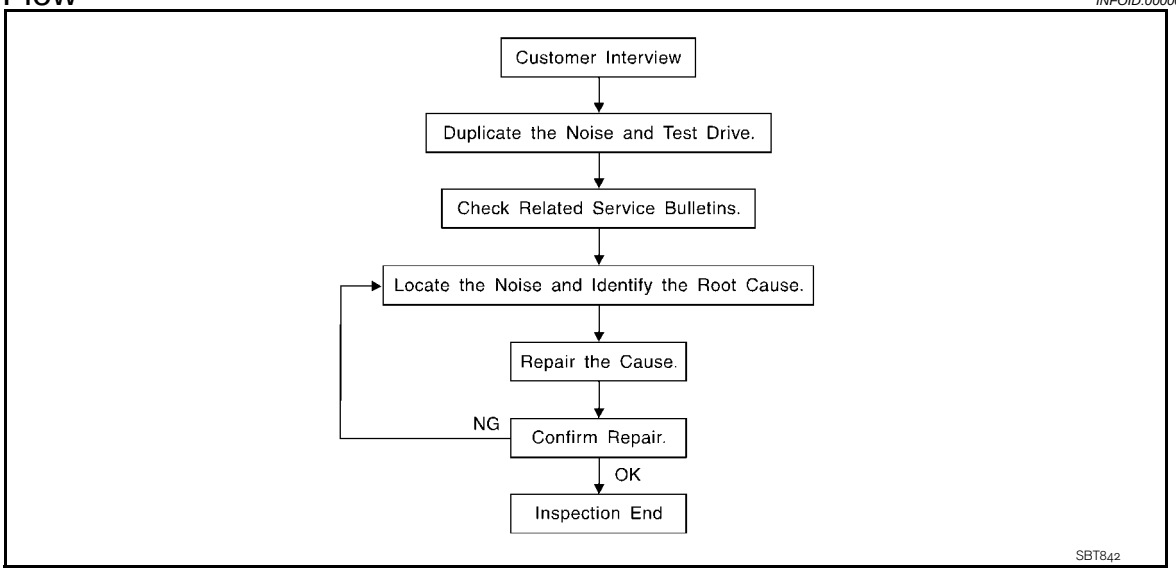
SQUEAK AND RATTLE TROUBLE DIAGNOSES

Work Flow

INFOID:0000000001098118



CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any of the customer's comments; refer to DLK-216, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by a test drive with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak – (Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak – (Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle – (Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock – (Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick – (Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump – (Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz – (Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

cardiagn.com

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSB) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Engine Ear or mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to DLK-214, "Inspection Procedure".

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
- separate components by repositioning or loosening and retightening the component, if possible.
- insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape are available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.
NOTE:

- URETHANE PADS
  Insulates connectors, harness, etc.
- INSULATOR (Foam blocks)
  Insulates components from contact. Can be used to fill space behind a panel.
- INSULATOR (Light foam block)
- FELT CLOTHTAPE
  Used to insulate where movement does not occur. Ideal for instrument panel applications.
  The following materials, not available through NISSAN Parts Department, can also be used to repair squeaks and rattles.
- UHMW(TEFLON) TAPE
  Insulates where slight movement is present. Ideal for instrument panel applications.
- SILICONE GREASE
  Used in place of UHMW tape that will be visible or not fit.
  Note: Will only last a few months.
- SILICONE SPRAY
  Use when grease cannot be applied.
- DUCT TAPE
  Use to eliminate movement.

CONFIRM THE REPAIR

carsdiagn.com

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Inspection Procedure

INFOID:0000000001098119

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. Cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. Trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

cardiagn.com

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. Rear seatback lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

carsdiagn.com

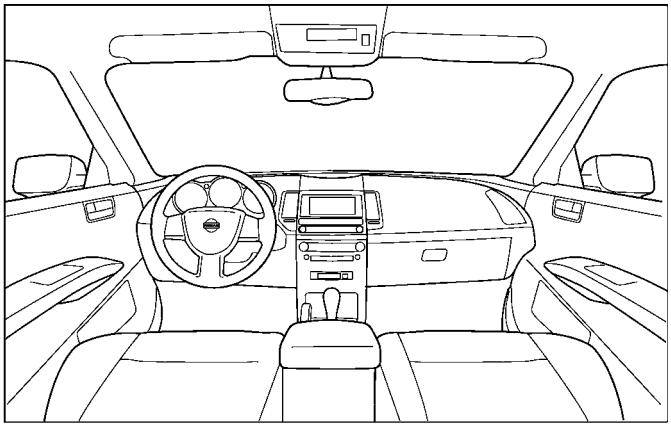
Diagnostic Worksheet

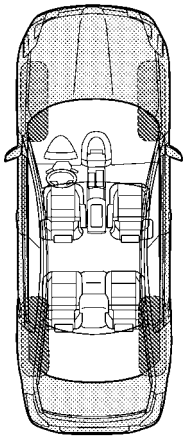
INFOID:0000000001098120

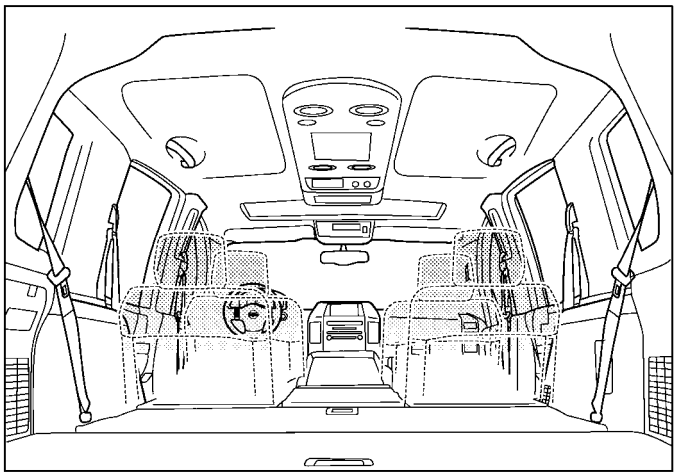
SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

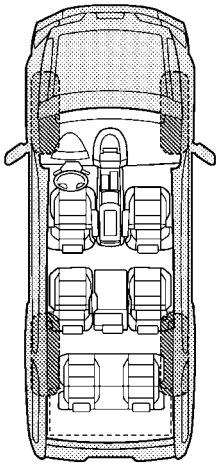
Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.









Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

Test Drive Notes:

_____

_____

_____

	YES	NO	Initials of person performing
Vehicle test driven with customer	☐	☐	_____
- Noise verified on test drive	☐	☐	_____
- Noise source located and repaired	☐	☐	_____
- Follow up test drive performed to confirm repair	☐	☐	_____

PRECAUTION

PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001081560

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

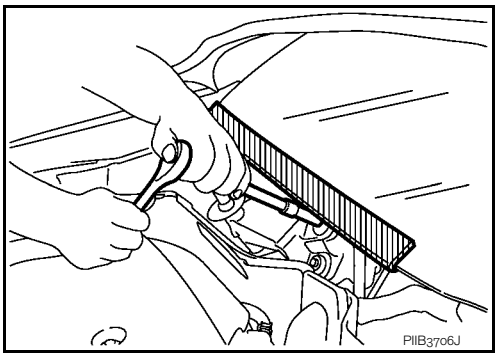
WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Procedure without Cowl Top Cover

INFOID:0000000001081561

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



Steering Wheel Rotation after Battery Disconnect

INFOID:0000000001081562

NOTE:

- Before removing and installing any control units, first turn the push-button ignition switch to the LOCK position, then disconnect both battery cables.
- After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If a DTC is detected, perform trouble diagnosis according to self-diagnosis results.

This vehicle is equipped with a push-button ignition switch and a steering lock unit.
If the battery is disconnected or discharged, the steering wheel will lock and cannot be turned.
If turning the steering wheel is required with the battery disconnected or discharged, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Carry the Intelligent Key or insert it to the key slot and turn the push-button ignition switch to ACC position. (At this time, the steering lock will be released.)

cardiagn.com

3. Disconnect both battery cables. The steering lock will remain released with both battery cables disconnected and the steering wheel can be turned.
4. Perform the necessary repair operation.
5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the push-button ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the push-button ignition switch is turned to LOCK position.)
6. Perform self-diagnosis check of all control units using CONSULT-III.

Work

INFOID:0000000001081563

- After removing and installing the opening/closing parts, be sure to carry out fitting adjustments to check their operational.
- Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001090922

BASIC INSPECTION

1. CHECK POWER DOOR LOCK AND UNLOCK SWITCH OPERATION

Check door lock and unlock operation by operating door lock and unlock switch.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Refer to DLK-473, "DOOR LOCK AND UNLOCK SWITCH : Symptom Table".

2. CHECK INTELLIGENT KEY OPERATION

Check door lock and unlock operation by operating the Intelligent Key remote control button.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Refer to DLK-473, "INTELLIGENT KEY : Symptom Table".

3. CHECK DOOR REQUEST SWITCH OPERATION

Check door lock and unlock operation by operating door request switch.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Refer to DLK-474, "DOOR REQUEST SWITCH : Symptom Table".

4. CHECK KEY REMINDER OPERATION

Check key reminder operation. Refer to DLK-299, "KEY REMINDER : System Description".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Refer to DLK-475, "KEY REMINDER : Symptom Table".

5. CHECK AUTO DOOR LOCK OPERATION

Check auto door lock operation. Refer to DLK-302, "AUTO DOOR LOCK : System Description".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Refer to DLK-475, "AUTO DOOR LOCK : Symptom Table".

6. CHECK VEHICLE SPEED SENSING AUTO DOOR LOCK OPERATION

Check vehicle speed sensing auto door lock operation. Refer to DLK-305, "VEHICLE SPEED SENSING AUTO DOOR LOCK : System Description".

Is the inspection result normal?

YES >> GO TO 7.
NO >> Refer to DLK-476, "VEHICLE SPEED SENSING AUTO DOOR LOCK : Symptom Table".

7. CHECK BACK DOOR OPENER OPERATION

Check back door opener operation by operating the back door opener switch.

Is the inspection result normal?

YES >> GO TO 8.
NO >> Refer to DLK-477, "BACK DOOR OPENER SWITCH : Symptom Table".

8. CHECK WARNING FUNCTION

Check warning function. Refer to DLK-316, "System Description".

Is the inspection result normal?

YES >> GO TO 9.

NO [Buzzer (combination meter)]>> Refer to DLK-478, "BUZZER (COMBINATION METER) : Symptom Table".
NO (Intelligent Key warning buzzer)>> Refer to DLK-478, "INTELLIGENT KEY WARNING BUZZER : Symptom Table".
NO (Warning lamp)>> Refer to DLK-479, "WARNING LAMP : Symptom Table".
NO (Back door open warning)>> Refer to DLK-479, "BACK DOOR : Symptom Table".

9. CHECK HAZARD AND BUZZER REMINDER FUNCTION

Check hazard and buzzer reminder function by Intelligent Key or request switch. Refer to DLK-322, "System Description".

Is the inspection result normal?

YES >> GO TO 10.
NO (Hazard warning lamp)>> Refer to DLK-481, "HAZARD WARNING LAMP : Symptom Table".
NO (Intelligent Key warning buzzer)>> Refer to DLK-481, "INTELLIGENT KEY WARNING BUZZER : Symptom Table".

10. CHECK OUT

CHECK OUT.

>> INSPECTION END

ON-VEHICLE REPAIR

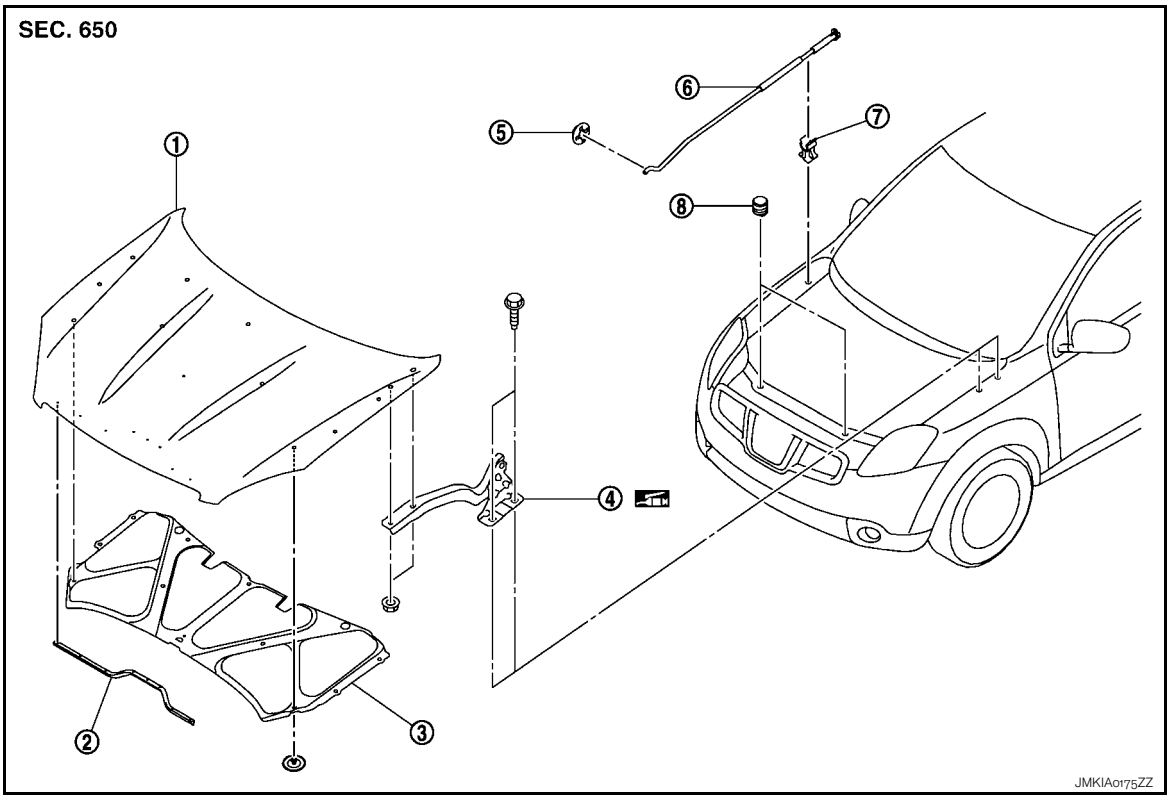
HOOD

HOOD ASSEMBLY

HOOD ASSEMBLY : Exploded View

INFOID:0000000001098453

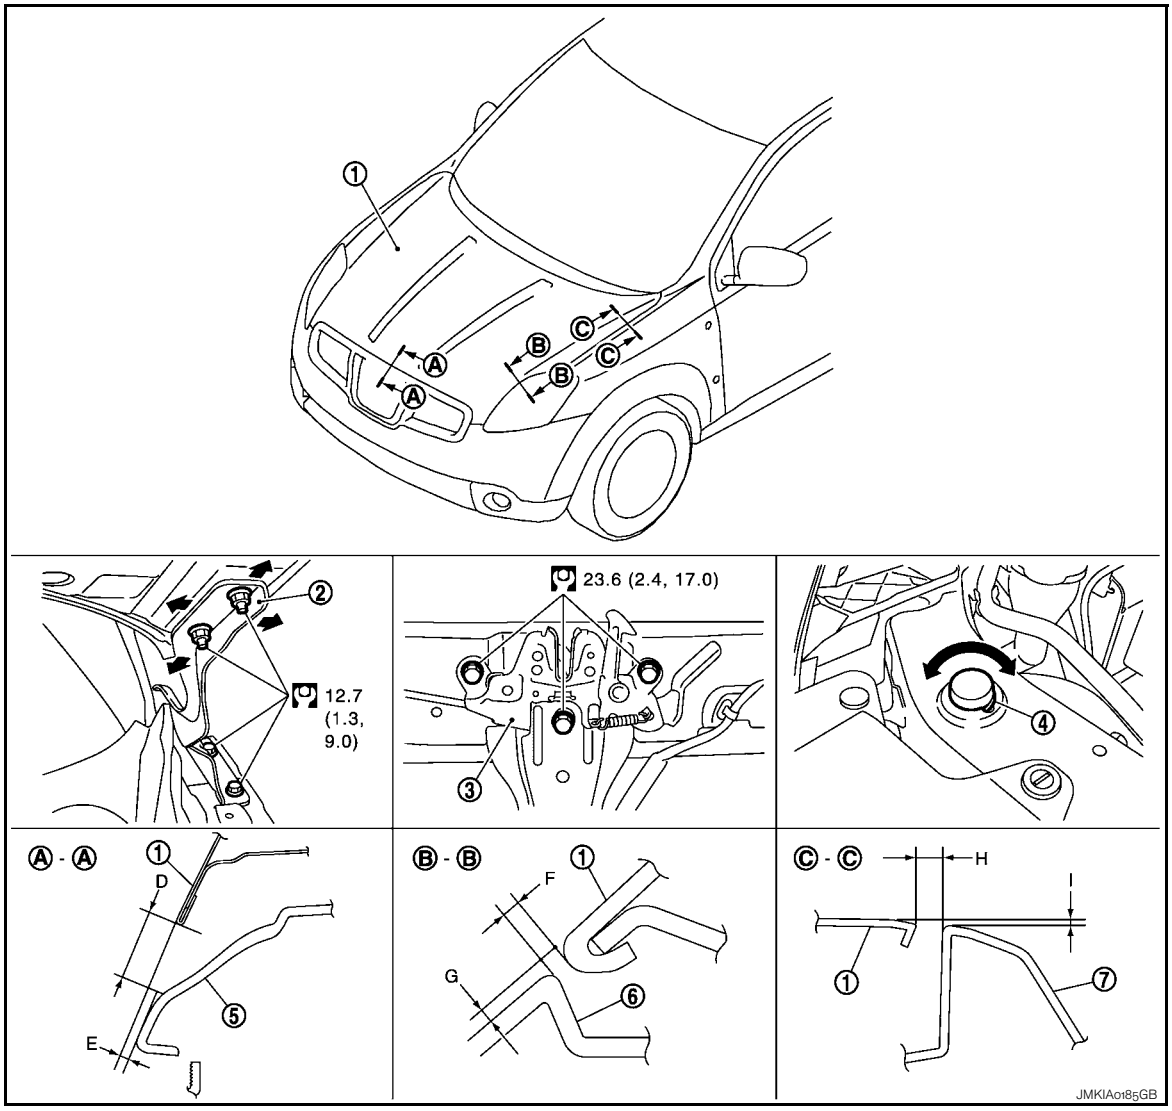
REMOVAL



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

ADJUSTMENT



1. Hood assembly
2. Hood hinge
3. Hood lock assembly
4. Hood bumper rubber
5. Front grille
6. Front combination lamp
7. Front fender

Refer to GI-4, "Components" for symbols in the figure.

HOOD ASSEMBLY : Removal and Installation

INFOID:0000000001098454

REMOVAL

1. Support the hood lock assembly with the proper material to prevent it from falling.
   WARNING:
   Bodily injury may occur if no supporting rod is holding the hood open when removing the hood stay.
2. Remove the hood hinge mounting nuts on the hood to remove the hood assembly.
   CAUTION:
   Perform work with 2 workers, because of its heavy weight.
3. Remove the following parts after removing the hood assembly.
   - Hood insulator
   - Hood sealing rubber

INSTALLATION

Install in the reverse order of removal.

CAUTION:

cardiagn.com

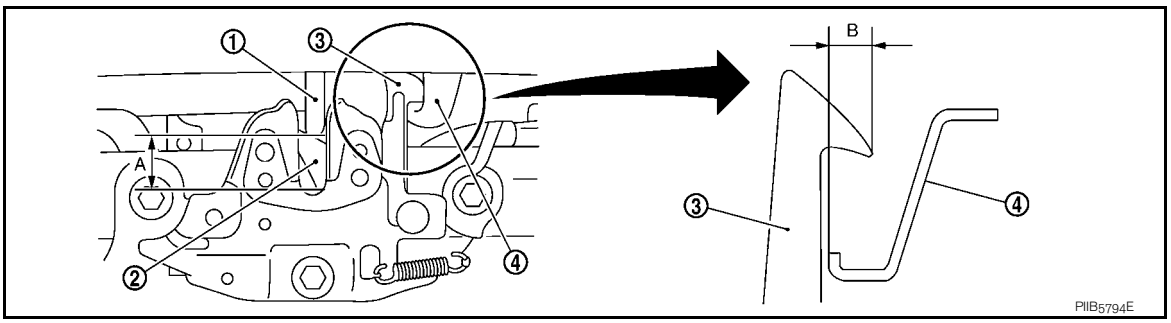
- **Perform work with 2 workers, because of its heavy weight.**
- **Before installing the hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installing, perform hood fitting adjustment. Refer to DLK-830, "HOOD ASSEMBLY : Adjustment".**

HOOD ASSEMBLY : Adjustment

INFOID:0000000001098455

Portion				Standard	Right/left Clearance (MAX)
Hood – Front bumper	A – A	D	Clearance	5.2 – 9.2 mm (0.205 – 0.362 in)	2.0 mm (0.079 in)
		E	Surface height	- 0.2 – 3.8 mm (- 0.008 – 0.150 in)	2.0 mm (0.079 in)
Hood – Front combination lamp	B – B	F	Clearance	3.7 – 7.7 mm (0.140 – 0.303 in)	2.0 mm (0.079 in)
		G	Surface height	- 2.3 – 2.3 mm (- 0.091 – 0.091 in)	2.3 mm (0.091 in)
Hood – Front fender	C – C	H	Clearance	3.9 – 5.9 mm (0.154 – 0.232 in)	1.5 mm (0.059 in)
		I	Surface height	- 1.0 – 1.0 mm (- 0.039 – 0.039 in)	1.5 mm (0.059 in)

1. Check the clearance and the surface height between the hood and each part by visualy and touching. (Fitting standard dimension in the table below should be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Remove the hood lock and adjust the height by rotating the bumper rubber until the hood becomes 1 to1.5 mm (0.04 to 0.059 in) lower than the fender.
4. Temporarily tighten the hood lock, and position by engaging it with the hood striker. Check the lock and striker for looseness and adjust the clearance and evenness with the striker to satisfy the specification.
5. Adjust A and B shown in the figure to the following value with hood's own weight by dropping it from approximately. 200 mm (7.87 in) height or by pressing the hood lightly [approximately. 29 N (3 kg)].



1. Hood striker
2. Primary latch
3. Secondary striker
4. Secondary latch

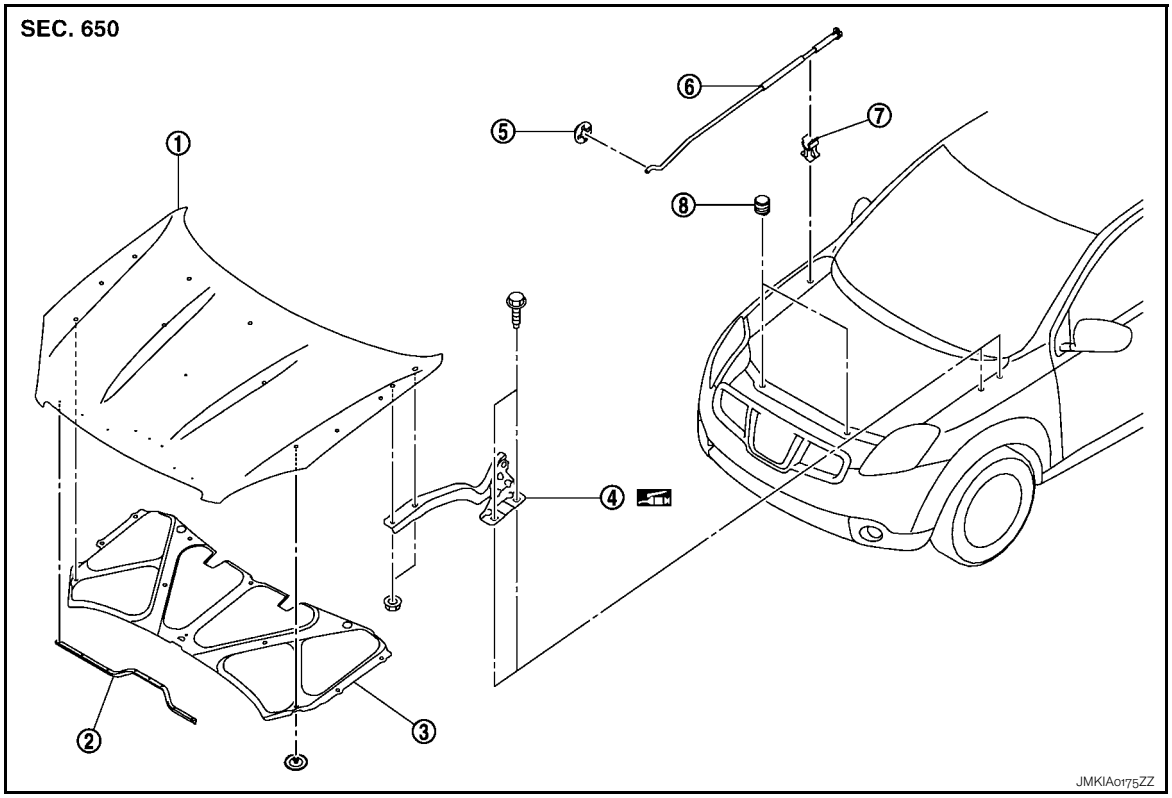
A : 20.0 mm (0.787 in)
B : 6.8 mm (0.268 in)

6. After adjustment tighten lock bolts to the specified torque.

HOOD HINGE

HOOD HINGE : Exploded View

INFOID:0000000001098461



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

HOOD HINGE : Removal and Installation

INFOID:0000000001098462

REMOVAL

1. Remove the hood assembly. Refer to DLK-829, "HOOD ASSEMBLY : Removal and Installation".
2. Remove the front fender. Refer to DLK-838, "Removal and Installation".
3. Remove the hood hinge mounting bolts, and then remove the hood hinge.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

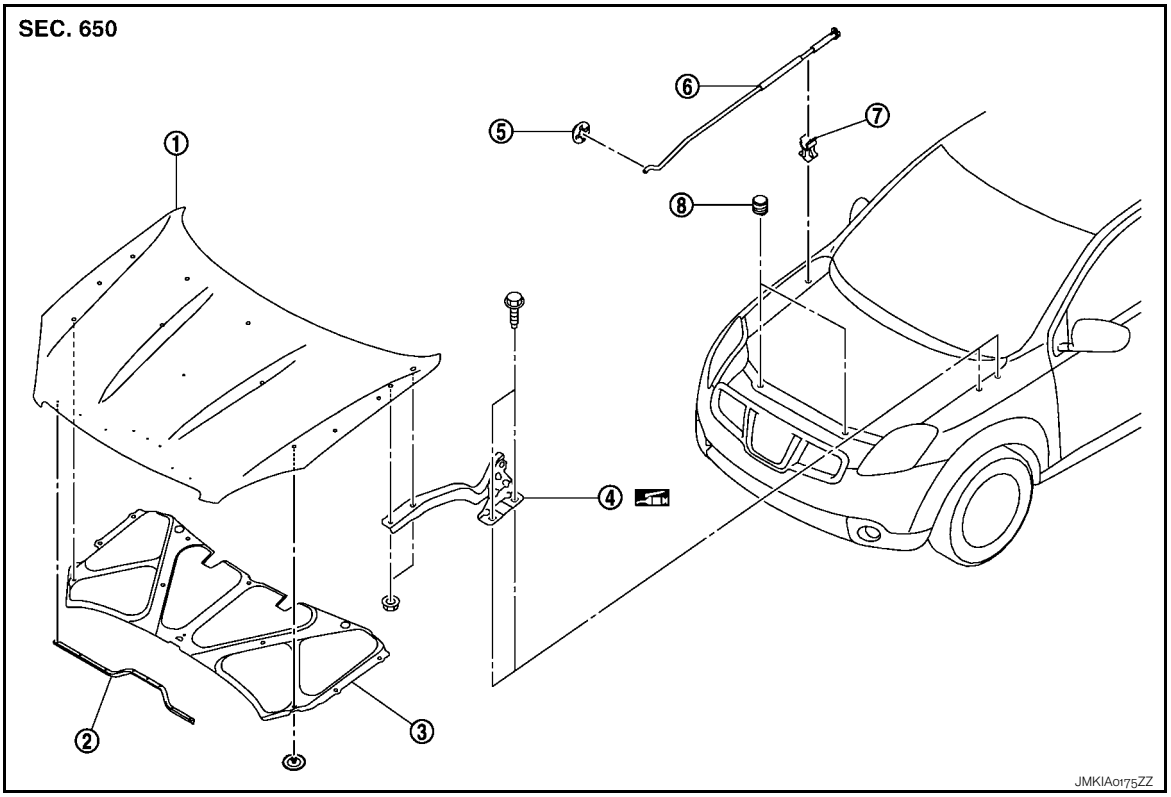
- **After installation, apply touch-up paint (the body color) onto the head of the hinge mounting bolts and nuts.**
- **Before installation of hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installation, perform hood fitting adjustment. Refer to DLK-830, "HOOD ASSEMBLY : Adjustment".**

HOOD SUPPORT ROD

HOOD SUPPORT ROD : Exploded View

INFOID:0000000001098464

cardiagn.com



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

HOOD SUPPORT ROD : Removal and Installation

INFOID:0000000001098466

REMOVAL

1. Support the hood lock assembly with the proper material to prevent it from falling.

   WARNING:
   Bodily injury may occur if no supporting rod is holding the hood open when removing the hood stay.
2. Remove the hood support rod from the grommet.

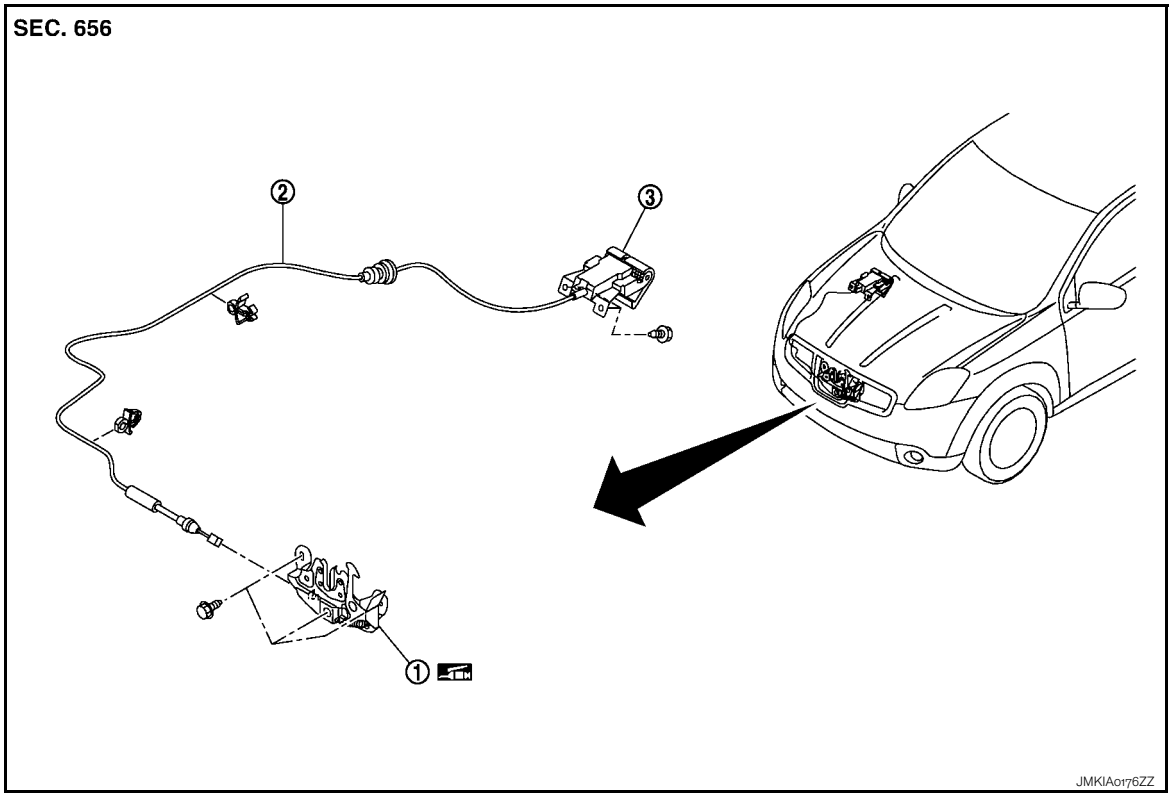
INSTALLATION

Install in the reverse order of removal.

HOOD LOCK CONTROL

HOOD LOCK CONTROL : Exploded View

INFOID:0000000001098468



1. Hood lock assembly
2. Hood lock control cable
3. Hood lock opener

Refer to GI-4, "Components" for symbols in the figure.

HOOD LOCK CONTROL : Removal and Installation

INFOID:0000000001098469

REMOVAL

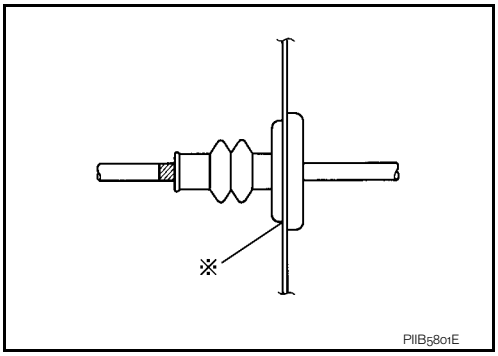
1. Remove the hood lock opener mounting bolts, and then remove the hood lock opener.
2. Remove the front bumper fascia. Refer to EXT-11, "Removal and Installation".
3. Remove the hood lock mounting bolts, and then remove the hood lock.
4. Remove the fender protector. Refer to EXT-22, "Removal and Installation".
5. Disconnect the hood lock cable from hood lock, and clip it from the hoodledge.
6. Remove the grommet on the dash lower panel, and pull the hood lock control cable toward the passenger compartment.
   CAUTION:
   While pulling, do not to damage (peeling) the outside of the hood lock control cable.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Do not to bend the cable too much, keeping the radius 100 mm (3.94 in) or more.**
- **Check that the cable is not offset from the positioning grommet, and apply the sealant to the grommet (at *mark) properly.**



cardiagn.com

- **Check that the hood lock control cable is properly engaged with the hood lock.**
- **After installation, perform hood fitting adjustment. Refer to DLK-830, "HOOD ASSEMBLY : Adjustment".**
- **After installation, perform the hood lock control inspection. Refer to DLK-834, "HOOD LOCK CONTROL : Inspection".**

HOOD LOCK CONTROL : Inspection

INFOID:0000000001098470

NOTE:
If the hood lock cable is bent or deformed, replace it.

1. Check that the secondary latch is properly engaged with the secondary striker [6.8 mm (0.268 in) shown in the figure] by hood weight.
2. While operating the hood opener, carefully check that the front end of the hood is raised by approximately 20.0 mm (0.787 in). Also check that the hood opener returns to the original position.
3. Check that the hood opener operating is condition 49 N (5.0 kg) or below.
4. Install so that static closing face of hood is 94 – 490 N·m (9.6 – 50.0 kg-m).
   NOTE:
   - Exert vertical force on right side and left side of hood lock.
   - Do not press simultaneously both sides.
5. Check the hood lock lubrication condition. If necessary, apply body grease to the hood lock.

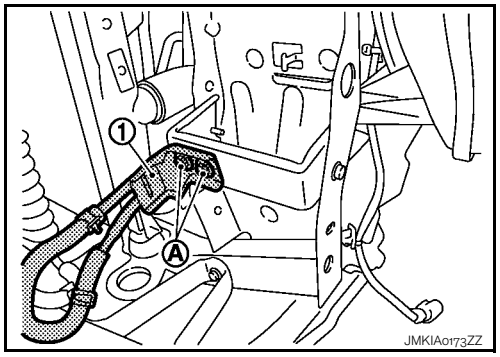
Removal and Installation

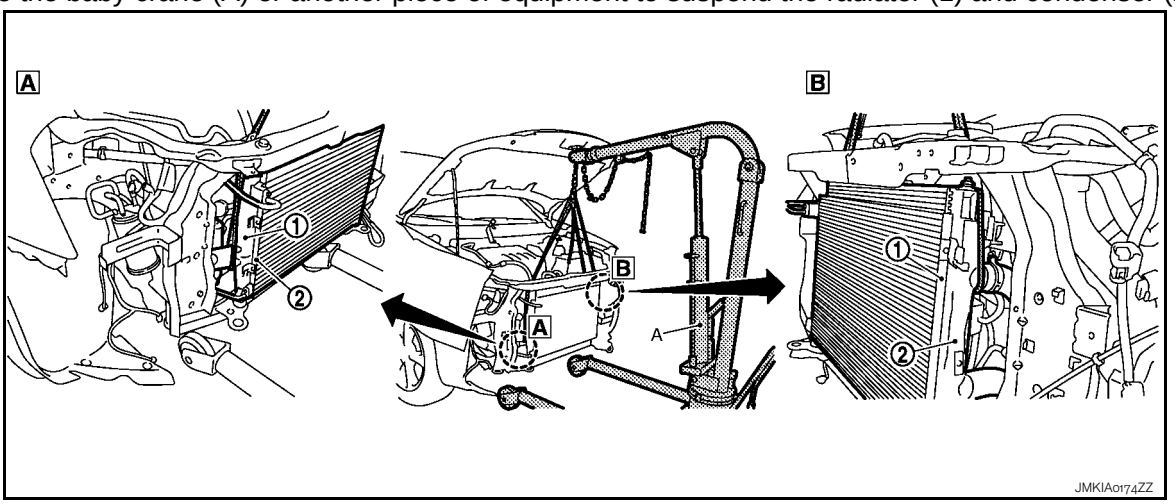
INFOID:0000000001098476

REMOVAL

1. Remove the front fillet molding. Refer to EXT-23, "Removal and Installation".
2. Remove the front bumper fascia and the energy absorber. Refer to EXT-11, "Removal and Installation".
3. Remove the energy absorber (upper and lower). Refer to EXT-11, "Removal and Installation".
4. Remove the air cleaner duct. Refer to EM-27, "Removal and Installation".
5. Remove the front combination lamp (LH/RH). Refer to EXL-171, "Removal and Installation".
6. Remove the bumper reinforcement. Refer to EXT-11, "Removal and Installation".
7. Disconnect the hood lock control cable clamp, and then remove the hood lock assembly. Refer to DLK-833, "HOOD LOCK CONTROL : Removal and Installation".
8. Remove the air guide mounting clips, and then remove the air guide (LH/RH).
9. Remove the hood lock stay mounting bolts, and then remove the hood lock stay.
10. Remove the hood switch (with theft warning systems). Refer to SEC-SEC-156, "Removal and Installation".
11. Remove the crush zone sensor. Refer to SR-14, "Removal and Installation".
12. Remove the horn. Refer to HRN-5, "Removal and Installation".
13. Remove the ambient sensor. Refer to VTL-22, "Removal and Installation".
14. Remove the radiator mounting bracket (LH/RH). Refer to CO-13, "Removal and Installation".
15. Remove the Intelligent Key warning buzzer (with Intelligent Key systems). Refer to DLK-277, "Removal and Installation".
16. Remove the charge air cooler assembly (with K9K engine models). Refer to EM-266, "Removal and Installation".
17. Remove the A/T fluid cooler assembly and the A/T fluid cooler bracket (with A/T models only). Refer to TM-348, "FLUID COOLER : Removal and Installation".
18. Remove the A/T fluid cooler pipe bracket (1) mounting bolts (A) (with A/T models only).



19. Remove the washer tank. Refer to WW-99, "Removal and Installation".
20. Use the baby crane (A) or another piece of equipment to suspend the radiator (1) and condenser (2).



21. Remove the radiator core support assembly mounting bolts, and draw out the radiator core support assembly to the front of the vehicle.
22. Remove the radiator core support assembly.
23. Remove the following parts after removing the radiator core support assembly.
    - Inlet tube bracket (with K9K engine models)
    - Intercooler bracket (with K9K engine models)
    - Apron reinforcement bracket

INSTALLATION

Install in the reverse order of removal.

CAUTION:

After installation, refill the following parts.

- **A/T fluid. Refer to TM-315, "Changing".**
- **Engine coolant. Refer to CO-9, "Refilling".**

cardiagn.com

2. Front fender finisher
3. Front fender seal
4. Front fender

: Metal clip

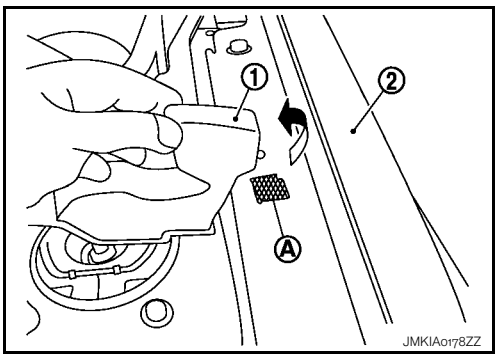
Removal and Installation

INFOID:0000000001098478

REMOVAL

1. Remove the outer fender protector. Refer to EXT-22, "Removal and Installation".
2. Remove the inner fender protector. Refer to EXT-22, "Removal and Installation".
3. Remove the side turn signal lamp. Refer to EXL-178, "Removal and Installation".
4. Remove the front bumper fascia. Refer to EXT-11, "Removal and Installation".
5. Remove the front combination lamp.
   - XENON TYPE: EXL-171, "Removal and Installation".
   - HALOGEN TYPE: EXL-327, "Removal and Installation".
6. Remove the mounting clips and remove hoodledge cover.
7. Remove the center mudguard. Refer to EXT-28, "Removal and Installation".

8. Peel away the double-faced adhesive tape (A) of the front fender seal (1) from the front fender (2).



9. Remove the mounting bolts and remove the front fender.
   CAUTION:
   Use a shop cloth to protect the body from being damaged during removal.
10. Remove the following parts after removing the front fender.
    - Front fender seal.
    - Bumper side bracket. Refer to EXT-11, "Exploded View".

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace the double-faced adhesive tape on the back of the cowl top cover seal with new tape.**
- **Do not wash the vehicle within 24 hours after installation so as to keep adhesive.**
- **After installation, apply the touch-up paint (the body color) onto the head of the front fender mounting bolts.**
- **After installation, check the front fender adjustment. Refer to DLK-830, "HOOD ASSEMBLY : Adjustment" and DLK-842, "DOOR ASSEMBLY : Adjustment".**

9. Door striker

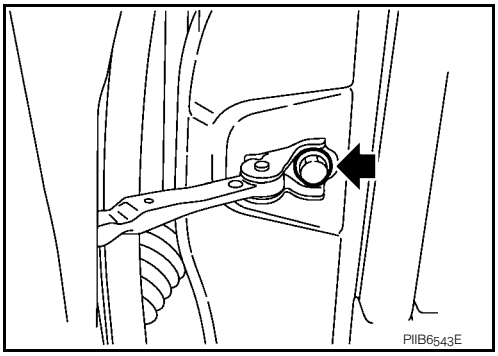
Refer to GI-4, "Components" for symbols in the figure.

DOOR ASSEMBLY : Removal and Installation

INFOID:0000000001098480

REMOVAL

1. Remove the mounting bolts of the door check link on the vehicle.



2. Remove the front door harness grommet, and then pull out the harness from the vehicle.

cardiagn.com

3. Disconnect the front door harness connector.
4. Remove the door hinge mounting nuts (door side), and then remove the door assembly.
   CAUTION:
   - **When removing and installing the front door assembly, support the door with a jack and cloth to protect the door and body.**
   - **Perform work with 2 workers, because of its heavy weight.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **When removing and installing the front door assembly, perform the fitting adjustment. Refer to DLK-842, "DOOR ASSEMBLY : Adjustment".**
- **After installation, apply touch-up paint (the body color) onto the head of the door hinge mounting nuts.**
- **Check the door hinge rotating part for poor lubrication. If necessary, apply body grease.**
- **Check the front door open/close operation after installation.**

DOOR ASSEMBLY : Adjustment

INFOID:0000000001098481

CLEARANCE, SURFACE HEIGHT AND SURFACE MISMATCH ADJUSTMENT

Portion		Clearance	Surface height
Front fender – Front door	A – A	3.5 – 5.0 mm (0.138 – 0.197 in)	- 1.5 – 0.5 mm (- 0.059 – 0.020 in)
Front door – Rear door	B – B	3.5 – 5.0 mm (0.138 – 0.197 in)	- 1.5 – 0.5 mm (- 0.059 – 0.020 in)

1. Check the clearance and surface height and surface mismatch between the front door and each part visually and by touching. (Fitting standard dimension in the table below shall be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Remove the front fender. Refer to refer to DLK-838, "Removal and Installation".
4. Loosen the door hinge mounting nuts on door side.
5. Adjust the surface height and surface mismatch of the front door according to the fitting standard dimension.
6. Temporarily tighten the hinge mounting nuts on door side.
7. Loosen the door hinge mounting bolts on body side.
8. Raise the front door at rear end to adjust clearance of the front door according to the fitting standard dimension.
9. After adjustment tighten bolts and nuts to the specified torque.
10. Install the front fender. Refer to refer to DLK-838, "Removal and Installation".
    CAUTION:
    After installation, check the front fender adjustment. Refer to DLK-225, "HOOD ASSEMBLY : Adjustment".

DOOR STRIKER ADJUSTMENT

Adjust the door striker so that it becomes parallel with the lock insertion direction.

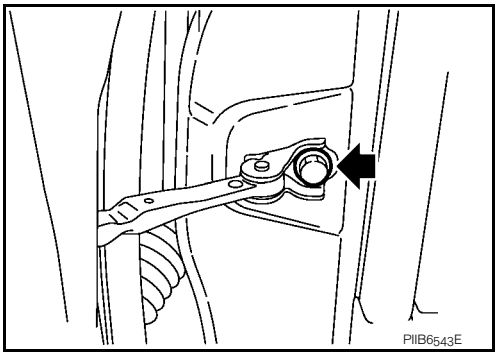
DOOR ASSEMBLY : Removal and Installation

INFOID:0000000001098498

REMOVAL

1. Remove the mounting bolts of the door check link on the vehicle.



2. Remove the rear door harness grommet, and then pull out the door harness from the vehicle.

cardiagn.com

3. Disconnect the rear door harness connector.
4. Remove the door hinge mounting nuts (door side), and then remove the rear door assembly.
   CAUTION:
   - **When removing and installing the front door assembly, support the door with a jack and cloth to protect the door and body.**
   - **Perform work with 2 workers, because of it's heavy weight.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **When removing and installing the rear door assembly, perform the fitting adjustment. Refer to DLK-848, "DOOR ASSEMBLY : Adjustment".**
- **After installation, apply touch-up paint (the body color) onto the head of the door hinge mounting nuts.**
- **Check the door hinge rotating part for poor lubrication. If necessary, apply body grease.**
- **Check the rear door open/close operation after installation.**
- **Check the rear door lock/unlock operation after installation.**

DOOR ASSEMBLY : Adjustment

INFOID:0000000001098500

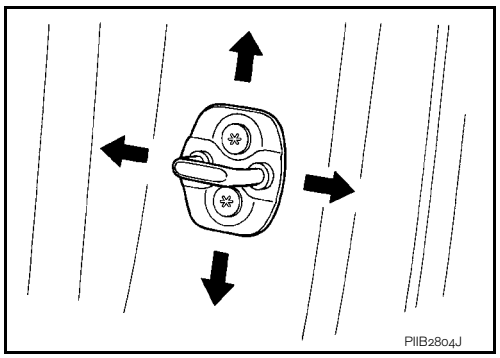
CLEARANCE, SURFACE HEIGHT AND SURFACE MISMATCH ADJUSTMENT

Portion		Clearance	Surface height
Front door – Rear door	B – B	3.5 – 5.0 mm (0.138 – 0.197 in)	- 1.5 – 0.5 mm (- 0.059 – 0.020 in)
Rear door – Rear fender	C – C	3.5 – 5.0 mm (0.138 – 0.197 in)	- 1.5 – 0.5 mm (- 0.059 – 0.020 in)

1. Check the clearance and surface height and surface mismatch between the rear door and each part visually and by touching. (Fitting standard dimension in the table below shall be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Remove the center pillar upper garnish and center pillar lower garnish. Refer to INT-14, "Removal and Installation".
4. Loosen the door hinge mounting nuts on door side.
5. Adjust the surface height and surface mismatch of the rear door according to the fitting standard dimension.
6. Temporarily tighten the hinge mounting nuts on door side.
7. Loosen the door hinge mounting nuts and bolts on body side.
8. Raise the rear door at rear end to adjust clearance of the rear door according to the fitting standard dimension.
9. After adjustment tighten bolts and nuts to the specified torque.
10. Install the center pillar upper garnish and center pillar lower garnish. Refer to INT-14, "Removal and Installation".

DOOR STRIKER ADJUSTMENT

Adjust the door striker so that it becomes parallel with the lock insertion direction.



DOOR STRIKER

2. Back door striker
3. Roof panel
4. Back door outer
5. Back door glass
6. Body side outer
7. Rear bumper fascia

Refer to GI-4, "Components" for symbols in the figure.

BACK DOOR ASSEMBLY : Removal and Installation

INFOID:0000000001098526

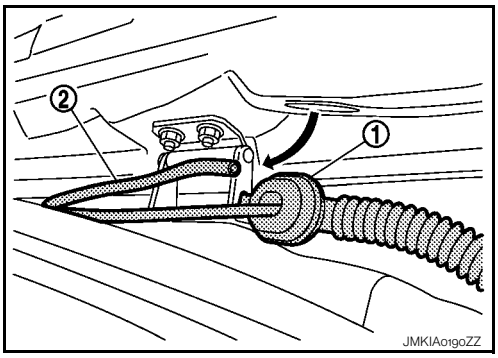
REMOVAL

1. Remove the back door finisher inner. Refer to INT-26, "Removal and Installation".
2. Remove the back door window glass. Refer to GW-17, "Removal and Installation".

NOTE:

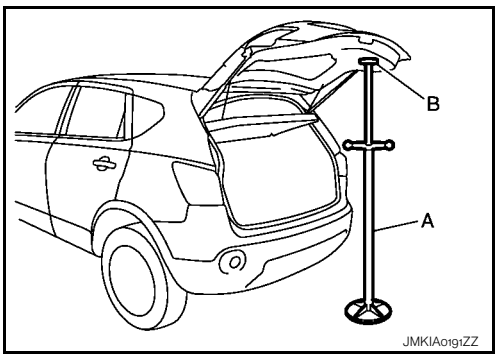
It is necessary to remove back door window glass in order to remove harness, because harness connector interferes with back door window glass pin.

3. Disconnect the connectors in the back door, and then remove the grommet, and pull out hte harness.
4. Remove the parcel shelf. Refer to INT-24, "Removal and Installation".
5. Remove the high-mounted stop lamp. Refer to EXL-183, "Removal and Installation".
6. Remove the grommet (1), and then pull out the washer tube (2) .

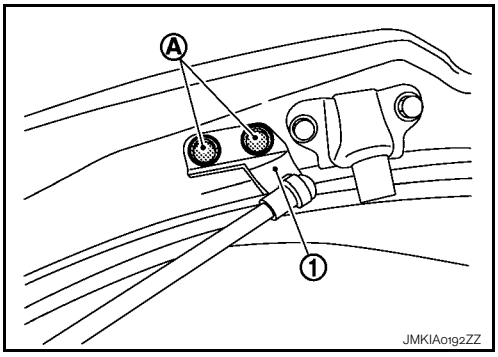


7. Pull the harness out of the back door.
8. Support the back door lock with the proper material to prevent it from falling.

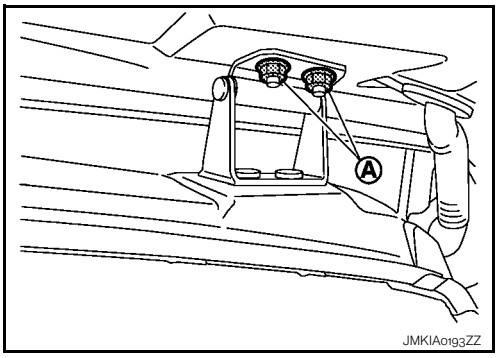
A : Jack
B : Shop cloth



9. Remove the back door stay bracket mounting bolts (A) on the back door.



10. Remove the back door hinge mounting nuts (A) on the back door and remove the back door assembly.
CAUTION:
Perform work with 2 workers, because of its heavy weight.



INSTALLATION
Install in the reverse order of removal.
CAUTION:
- **Perform work with 2 workers, because of its heavy weight.**

cardiagn.com

- **After installation, perform fitting adjustment. Refer to DLK-855, "BACK DOOR ASSEMBLY : Adjustment".**
- **Check the back door open/close operation after installation.**
- **Check the back door lock/unlock operation after installation.**

BACK DOOR ASSEMBLY : Adjustment

INFOID:0000000001098527

Portion				Standard	Difference(RH/LH)
Back door panel – Roof panel	A – A	F	Clearance	5.0 – 7.0 mm (0.197 – 0.276 in)	—
		G	Surface height	0.0 – 2.0 mm (0.000 – 0.079 in)	—
Back door glass – Body side outer	B – B	H	Clearance	3.9 – 8.1 mm (0.154 – 0.319 in)	2.1 mm (0.083 in)
		I	Surface height	- 1.0 – 3.1 mm (- 0.039 – 0.122 in)	2.0 mm (0.079 in)
Back door panel – Body side outer	C – C	J	Clearance	3.5 – 6.5 mm (0.138 – 0.256 in)	2.0 mm (0.079 in)
		K	Surface height	- 1.0 – 1.0 mm (- 0.039 – 0.039 in)	—
Back door panel – Rear bumper fascia	D – D	L	Clearance	4.0 – 8.0 mm (0.157 – 0.315 in)	2.0 mm (0.079 in)
		M	Surface height	0.1 – 4.1 mm (0.004 – 0.161 in)	2.1 mm (0.083 in)
Back door panel – Rear bumper fascia	E – E	N	Clearance	5.8 – 10.2 mm (0.228 – 0.402 in)	—

FITTING ADJUSTMENT

1. Check the clearance and the evenness between the back door and each part visually and by touching. (Fitting standard dimension in the table below shall be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Loosen the bumper rubber.
4. Loosen the back door striker mounting bolts.
5. Lift up the back door approximately 100 – 150 mm (3.937 – 5.906 in) height then close it lightly and check that it is engaged firmly with the back door closed.
6. Check the clearance and evenness.
7. Finally tighten the back door striker.

BACK DOOR STRIKER

INTELLIGENT KEY BATTERY

Exploded View

INFOID:0000000001109246

Refer to DLK-281, "Removal and Installation".

Removal and Installation

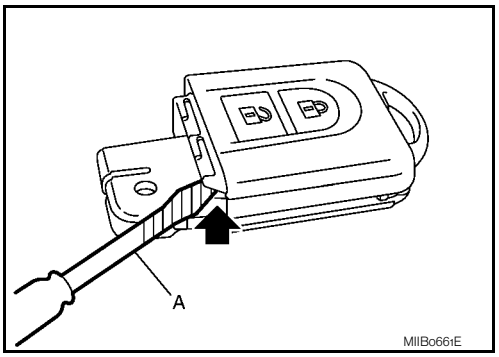
INFOID:0000000001109247

REMOVAL

1. Remove Intelligent Key cover.
2. Insert a flat-bladed screwdriver (A) wrapped with tape as shown in the illustration and then separate lower and upper cases by twisting screwdriver.

CAUTION:

- **Do not touch the circuit board or battery terminal.**
- **The Intelligent Key is water-resistant. However, if it does get wet, immediately wipe it dry.**



3. Remove the circuit board assembly from the upper case (1). [Substrate assembly: circuit board (3) + rubber (2)]
4. Gently press the rubber (2) and remove the circuit board (3).

CAUTION:

Do not touch the printed circuits directly.

5. Remove the battery (4) from the lower case (5) and replace it.

Battery replacement : Coin-type lithium battery (CR2032)

CAUTION:

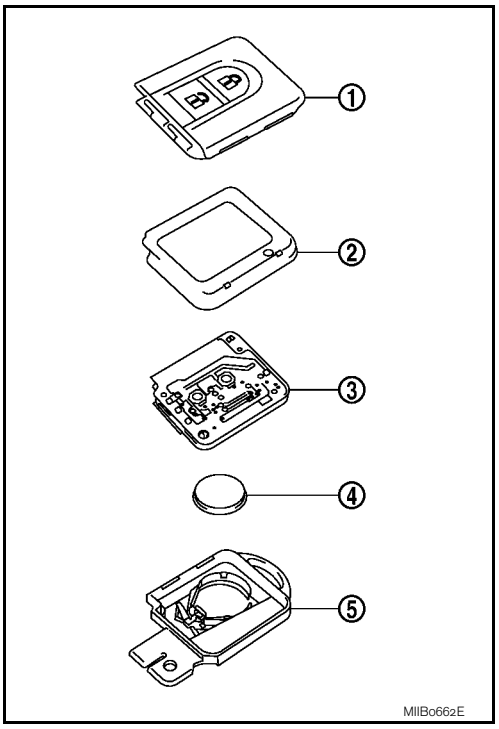
When replacing battery, keep dirt, grease, and other foreign materials off the electrode contact area.

6. After replacement, assemble the upper and lower cases by engaging the hooks on their circumference while being careful not to pinch the rubber, etc.

CAUTION:

After replacing the battery, check that all Intelligent Key functions work normally.

Refer to DLK-134, "Component Function Check".



INSTALLATION

Install in the reverse order of removal.

INTELLIGENT KEY UNIT

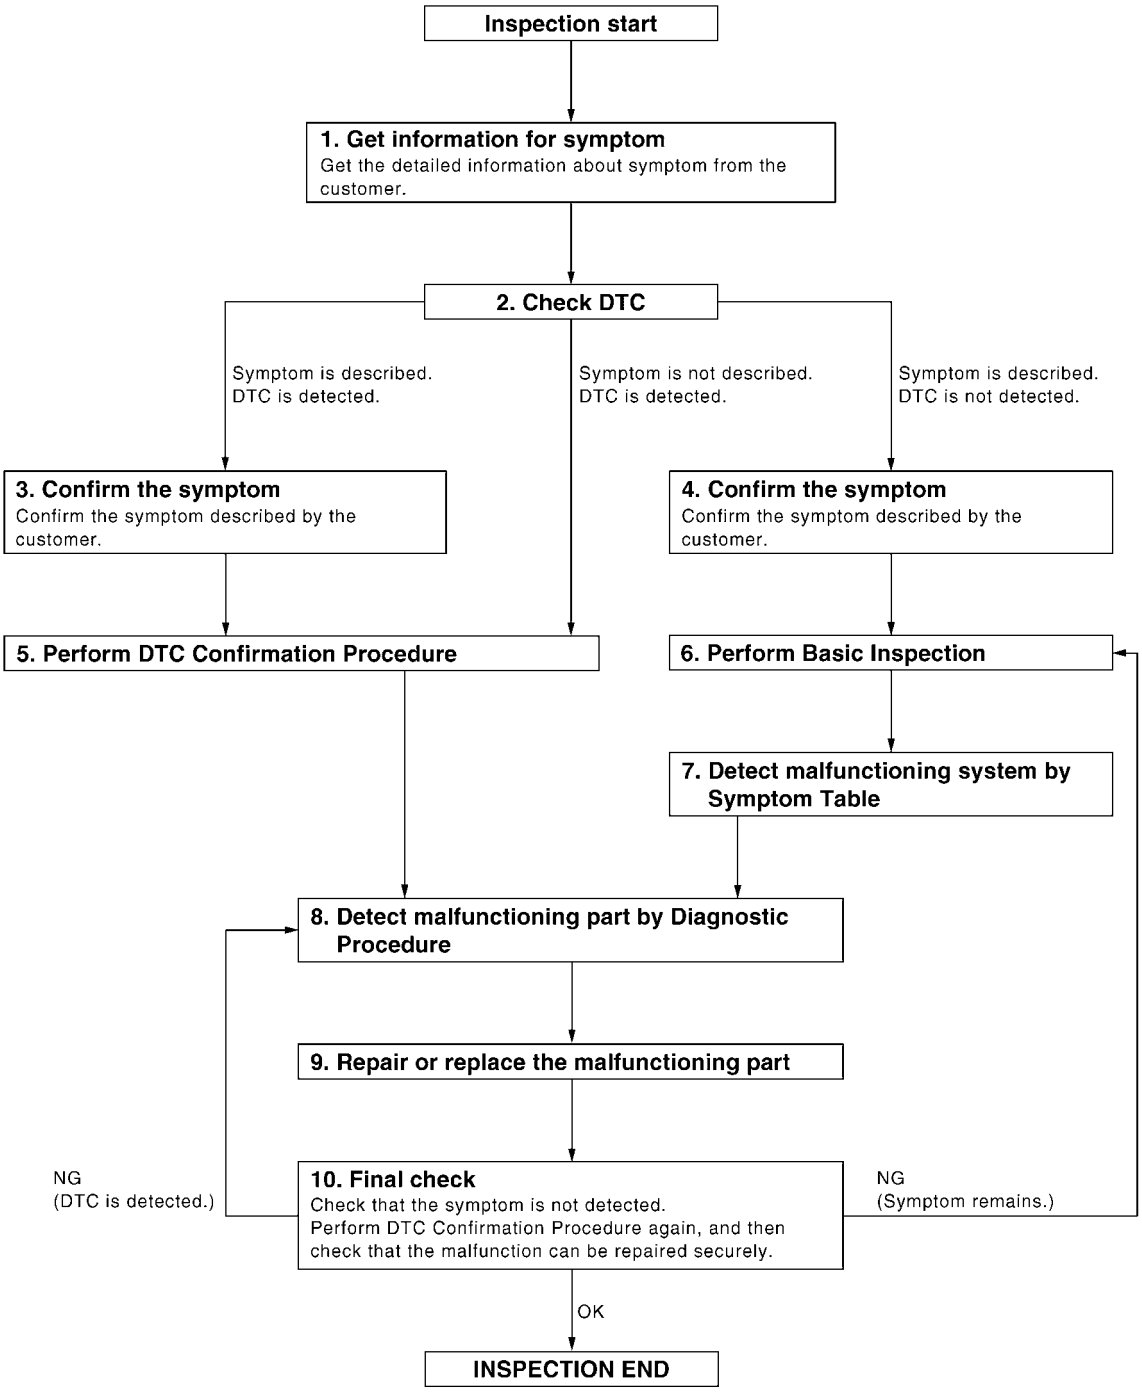
DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000001102242

OVERALL SEQUENCE



JMKIA0101GB

DETAILED FLOW

1.GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred).

>> GO TO 2.

2.CHECK DTC

1. Check DTC for BCM.
2. Perform the following procedure if DTC is displayed.

- Erase DTC.
- Study the relationship between the cause detected by DTC and the symptom described by the customer.

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC is displayed>>GO TO 3.
Symptom is described, DTC is not displayed>>GO TO 4.
Symptom is not described, DTC is displayed>>GO TO 5.

3.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR” mode and check real time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR ” mode and check real time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5.PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC, and then check that DTC is detected again.
If two or more DTCs are detected, refer to DLK-643, "DTC Inspection Priority Chart" and determine trouble diagnosis order.

Is DTC detected?

YES >> GO TO 8.
NO >> Refer to GI-39, "Intermittent Incident".

6.PERFORM BASIC INSPECTION

Perform Basic Inspection, refer to DLK-660, "Basic Inspection".

Inspection End>>GO TO 7.

7.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to Symptom Table based on the confirmed symptom in step 4.

>> GO TO 8.

8.DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.
NOTE:
The Diagnostic Procedure described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure.

>> GO TO 9.

cardiagn.com

9.REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it.

>> GO TO 10.

10.FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Component Function Check again, and then check that the malfunction have been repaired securely.
When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Does the symptom reappear?

YES (DTC is detected)>>GO TO 8.
YES (Symptom remains)>>GO TO 6.
NO >> **INSPECTION END**

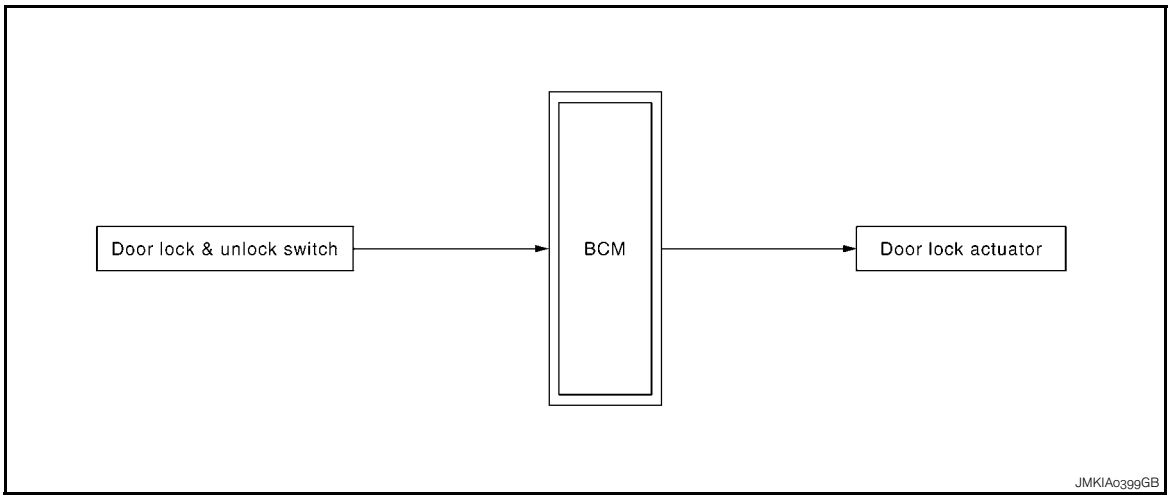
DOOR LOCK FUNCTION

DOOR LOCK AND UNLOCK SWITCH

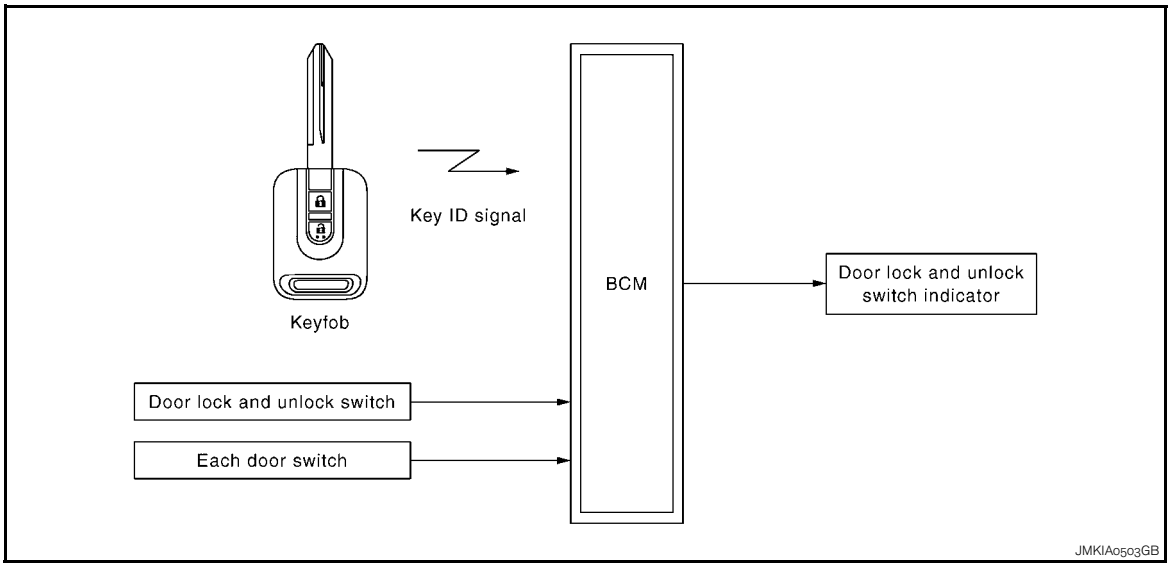
DOOR LOCK AND UNLOCK SWITCH : System Diagram

INFOID:0000000001081575

DOOR LOCK AND UNLOCK SWITCH OPERATION



DOOR LOCK AND UNLOCK SWITCH INDICATOR OPERATION



DOOR LOCK AND UNLOCK SWITCH : System Description

INFOID:0000000001081576

DOOR LOCK AND UNLOCK SWITCH OPERATION

Functions are available by operating the door lock and unlock switch on center console. Interlocked with the lock/unlock operation of door lock and unlock switch, door lock actuators of all doors are locked/unlocked.

Operation Condition

If the following conditions are not satisfied, door lock/unlock operation is not performed even if the door lock and unlock switch is operated.

Door lock and unlock switch	Operation condition
Lock operation	All the following conditions are satisfied. • Except driver side, doors are closed. • Doors are not locked with keyfob.
Unlock operation	All the following all conditions are satisfied. • Doors are not locked with keyfob.

NOTE:
When the door lock is locked with keyfob, door lock and unlock switch operation will be invalid until either of the following conditions is satisfied.
- Turn ignition switch ON.
- Unlock operation by keyfob.

DOOR LOCK AND UNLOCK SWITCH INDICATOR OPERATION

Door lock and unlock switch indicator indicates door lock status. The indicator turn ON while ignition switch is ON and door lock is locked. If any door is opened, the indicator will turn OFF.

1 Minute Timer

A timer must be running to turn OFF the indicator. The timer will run for 1 minute after locking with keyfob or auto door lock.

30 Minutes Timer

A timer must be running to turn OFF the indicator. The timer will run for 30 minutes after locking with door lock and unlock switch.

NOTE:
1minute timer condition is satisfied while 30 minutes timer is active, however 30 minutes timer does not change when 1 minutes timer is active.

DOOR LOCK AND UNLOCK SWITCH : Component Description

INFOID:0000000001081578

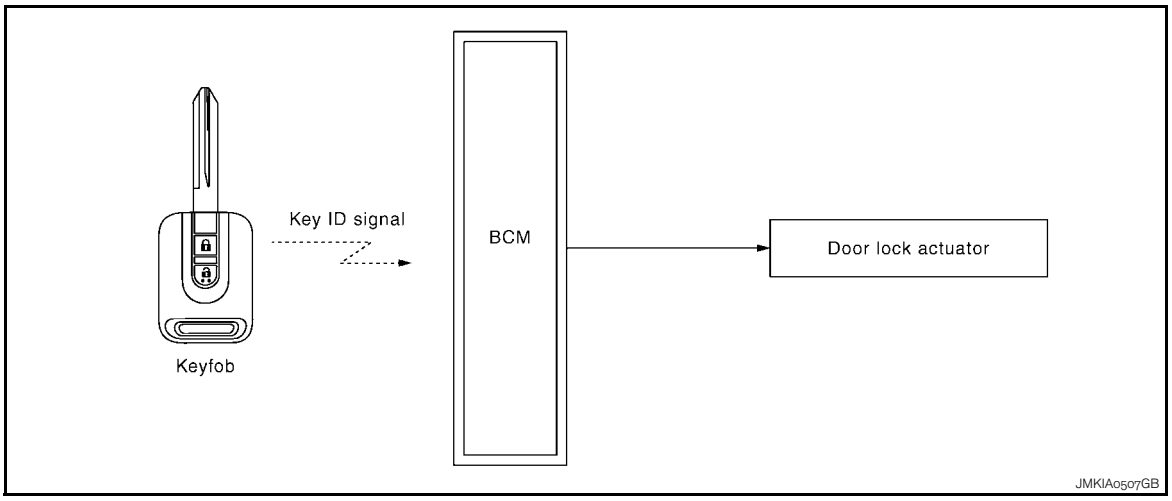
Item	Function
BCM	Controls the door lock and unlock function.
Door switch	Detects door state (open or closed).
Door lock and unlock switch	Transmits door lock and unlock signal to BCM. Door lock and unlock switch indicator is built in door lock and unlock switch.
Door lock actuator	Receives door lock and unlock signal from BCM and locks and unlocks each door.

KEYFOB

KEYFOB : System Diagram

INFOID:0000000001081583

KEYFOB OPERATION



KEYFOB : System Description

INFOID:0000000001081584

KEYFOB OPERATION

The multi remote control system can be locked and unlocked by pressing door lock and unlock button of key-fob.

DOOR LOCK AND UNLOCK OPERATION

When door lock and unlock button of keyfob is pressed, door lock and unlock signal transmits from keyfob to BCM. When BCM receives the door lock and unlock signal, it operates door lock actuator.

OPERATION CONDITION

Remote controller operation	Operation condition
Lock/unlock	Key switch is OFF (key is removed from ignition key cylinder).

OPERATION AREA

To ensure that the keyfob works effectively, use within 100 cm range of each door, however the operable range may differ according to surroundings.

ANTI-HIJACK MODE

When door lock is unlocked, pressing LOCK button on keyfob once will lock all doors. When door lock is locked, pressing UNLOCK button on keyfob will unlock driver side door. Pressing UNLOCK button on keyfob second time within 5 seconds from the first time will unlock all doors and back door can be opened with back door opener switch.

NOTE:

Anti-hijack mode can be set to ON or OFF with CONSULT-III. For the setting information, refer to DLK-580, "MULTIREMOTE ENT : CONSULT-III Function (BCM - MULTIREMOTE ENT)".

Keyfob	Transmits key ID to BCM when lock and unlock button is pressed.

DIAGNOSIS SYSTEM (BCM)
COMMON ITEM
COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001096702

APPLICATION ITEM
CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION
BCM can perform the following functions for each system.
NOTE:
It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode

DOOR LOCK
DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)

INFOID:0000000001097316

BCM CONSULT-III FUNCTION
CONSULT-III performs the following functions via CAN communication with BCM.

cardiagn.com

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
KEYLESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
UNLOCK WITH DR	This item is indicated, but not monitored.
UNLOCK SHOCK	Indicates [ON/OFF] condition of signal from air bag diagnosis unit. • ON: During the unlock operation interlock with air bag. • OFF: Other than above.
SHOCK SENSOR	Indicates [NOMAL/ON/OFF] condition of circuit between BCM and air bag diagnosis sensor unit. • NORMAL: Ignition switch ON. (BCM is receiving normal condition signal from air bag diagnosis sensor unit.) • ON: During the receiving of air bag deployment signal from air bag diagnosis sensor unit. • OFF: After the receiving of air bag deployment signal from air bag diagnosis sensor unit.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the multi remote control system equipped vehicle.

ACTIVE TEST

Test item	Description
SUPER LOCK*1	This test is able to check super lock operation [LOCK (SET)/UNLOCK (RELEASE)].
DOOR LOCK IND	This test is able to check door lock indicator (built in door lock and unlock switch on center console) operation [ON/OFF].
DOOR LOCK	This test is able to check door lock operation [ALL LOCK/ALL UNLOCK/DR UNLOCK/ OTHER UNLOCK].

:*1 For the super lock equipped vehicle.

WORK SUPPORT

A B C D E F G H I J DLK L M N O P
carDiagn.com

Test item	Description
SECURITY DOOR LOCK SET	Anti hijack function mode can be changed in this mode. • ON: Anti hijack mode is active. • OFF: Anti hijack mode is inactive.

MULTIREMOTE ENT

MULTIREMOTE ENT : CONSULT-III Function (BCM - MULTIREMOTE ENT)

INFOID:0000000001096699

BCM CONSULT-III FUNCTION

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
KEYKESS LOCK	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK	Indicates [ON/OFF] condition of unlock signal from key fob.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
RKE LOCK AND UNLOCK	This item is indicated, but not monitored.

ACTIVE TEST

Test item	Description
DOOR LOCK	This test is able to check warning chime in combination meter operation. [ALL LOCK/ALL UNLOCK/DR UNLOCK/OTHER UNLOCK]
INT LAMP	This test is able to check interior lamp operation [ON/OFF].
FLASHER	This test is able to check flasher operation [LH/RH/OFF].

WORK SUPPORT

cardiagn.com

Test item	Description
HAZARD LAMP SET	Answer back function (hazard) mode can be changed in this mode. For the detail of the setting, refer to DLK-575, "System Description".
AUTO LOCK SET	Auto door lock time can be changed in this mode. • MODE 1: 1 minute • MODE 2: 2 minutes • MODE 3: 3 minutes • MODE 4: 4 minutes • MODE 5: 5 minutes

TRUNK

TRUNK : CONSULT-III Function (BCM - TRUNK)

INFOID:0000000001097315

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
TRNK OPNR SW	Indicates [ON/OFF] condition of back door opener switch.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

*1: For the Intelligent key equipped vehicle.

*2: For the remote keyless entry system equipped vehicle.

ACTIVE TEST

Test item	Description
TRUNK/GLASS HATCH	This test is able to check back door opener operation [ON/OFF].

carsdiagn.com

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000001097215

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart. Refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000001097216

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1000	CAN COMM CIRCUIT	When BCM cannot communicate CAN communication signal continuously for 2 seconds or more.	Any item (or items) of the following listed below is malfunctioning in CAN communication system. • Transmission • Receiving (ECM) • Receiving (METER/M&A) • Receiving (TCM) • Receiving (MULTI AV) • Receiving (IPDM E/R) • Receiving (I-KEY)

Diagnosis Procedure

INFOID:0000000001097217

1.PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 seconds or more.
2. Check “Self Diagnostic Result” of BCM.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI-39, "Intermittent Incident".

cardiagn.com

U1010 CONTROL UNIT (CAN)

DTC Logic

INFOID:0000000001097218

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller of BCM.	BCM

Diagnosis Procedure

INFOID:0000000001097219

1.REPLACE BCM

When “DTC:U1010” is detected, replace BCM.

>> Replace BCM. Refer to BCS-64, "Exploded View".

Special Repair Requirement

INFOID:0000000001097220

1.ADDITIONAL SERVICE WHEN REPLACING BCM

>> Refer to BCS-3, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".

A B C D E F G H I J DLK L M N O P
ecudiagn.com

POWER SUPPLY AND GROUND CIRCUIT
BCM

BCM : Diagnosis Procedure

INFOID:0000000001115315

1.CHECK FUSE AND FUSIBLE LINK

Check that the following fuse and fusible link are not blown.

Terminal No.	Signal name	Fuse and fusible link No.
41	Battery power supply	9 (10A)
57		J (40A)

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
BCM		Ground	
Connector	Terminal		
M66	41		Battery voltage
M67	57		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

Does continuity exist?

YES >> BCM power supply and ground circuit are OK.
NO >> Repair harness or connector.

cardiagn.com

DOOR LOCK AND UNLOCK SWITCH

Description

INFOID:0000000001099004

Transmits door lock/unlock operation to BCM.

Component Function Check

INFOID:0000000001099005

1.CHECK FUNCTION

With CONSULT-III

Check “CDL LOCK SW ”and “CDL UNLOCK SW” in Data monitor mode with CONSULT-III.

Monitor item	Condition	
CDL LOCK SW	LOCK	: ON
	UNLOCK	: OFF
CDL UNLOCK SW	LOCK	: OFF
	UNLOCK	: ON

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Refer to DLK-585, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001099006

1.CHECK DOOR LOCK AND UNLOCK INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect door lock and unlock switch connector.
3. Check voltage between door lock and unlock switch and ground.

Terminal			Signal (Reference value)
(+)		(–)	
Door lock and unlock switch connector	Terminal		
M89	1	Ground		6		

JPMIA0154GB

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK AND UNLOCK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector and door lock and unlock switch connector.

BCM connector	Terminal	Door lock and unlock switch connector	Terminal	Continuity
M65	7	M89	6	Exists
	9		1	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal		Continuity
M65	7	Ground	Does not exist
	9		

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

3.CHECK DOOR LOCK AND UNLOCK SWITCH GROUND

Check continuity between door lock and unlock switch connector and ground.

Door lock and unlock switch connector	Terminal	Ground	Continuity
M89	5		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminal			Signal (Reference value)
(+)		(–)	
BCM connector	Terminal		
M65	7	Ground		9		

JPMIA0154GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK DOOR LOCK AND UNLOCK SWITCH

Check door lock and unlock switch
Refer to DLK-74, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

Component Inspection

INFOID:0000000001099007

1.CHECK DOOR LOCK AND UNLOCK SWITCH

Check door lock and unlock switch.

Door lock and unlock switch	Terminal		Condition	Continuity
M89	6	5	LOCK	Exists
	1		UNLOCK	

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

cardiagn.com

DOOR LOCK AND UNLOCK SWITCH INDICATOR

Description

INFOID:0000000001102272

The door lock and unlock switch indicates door lock status. The indicator will illuminate when a lock operation is accomplished, and during this status, if any door is opened, the indicator will turn OFF.

Component Function Check

INFOID:0000000001102273

1.CHECK FUNCTION

With CONSULT-III

Check “DOOR LOCK IND” in “Active Test” mode with CONSULT-III.

Test item		Condition
DOOR LOCK IND	:ON	Illuminated
	:OFF	Not illuminated

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Refer to DLK-587, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001102274

1.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between door lock and unlock switch and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(–)		
Door lock and unlock switch connector	Terminal			
M89	4	Ground	Door lock operation is accomplished	Battery voltage
			Any door is OPEN	0

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK DOOR LOCK AND UNLOCK SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and door lock and unlock switch connector.
3. Check continuity between BCM connector and door lock and unlock switch connector.

BCM connector	Terminal	Door lock and unlock switch connector	Terminal	Continuity
M65	24	M89	4	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	24		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK DOOR LOCK AND UNLOCK SWITCH GROUND

Check continuity between door lock and unlock switch connector and ground.

Door lock and unlock switch connector	Terminal	Ground	Continuity
M89	5		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminal			Condition	Voltage (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	24	Ground	Door lock operation is accomplished	Battery voltage
			Any door is OPEN	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR

Check door lock and unlock switch
Refer to DLK-588, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

Component Inspection

INFOID:0000000001102275

1.CHECK DOOR LOCK AND UNLOCK SWITCH INDICATOR

Check continuity door lock and unlock switch.

Door lock and unlock switch	Terminal		Continuity
	(+)	(-)	
M89	5	4	Exists
	4	5	Does not exist

Is the inspection result normal?

YES >> Door lock and unlock switch is OK.
NO >> Replace door lock and unlock switch. Refer to DLK-280, "Exploded View".

cardiagn.com

DOOR SWITCH
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001099008

Detects door open/closed condition.

DRIVER SIDE : Component Function Check

INFOID:0000000001099009

1.CHECK FUNCTION

With CONSULT-III

Check door switches “DOOR SW-DR” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-DR	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-589, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001099010

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals (+) BCM connector	Terminals (+) Terminal	Terminals (–)	Door condition	Voltage (V) (Approx.)
M65	26	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	26	B34	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	26		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-590, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

DRIVER SIDE : Component Inspection

INFOID:0000000001099011

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001099012

Detects door open/closed condition.

PASSENGER SIDE : Component Function Check

INFOID:0000000001099013

1.CHECK FUNCTION

With CONSULT-III
Check door switches “DOOR SW-AS” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-AS	OPEN	: ON
	CLOSE	: OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-590, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001099014

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

cardiagn.com

Terminals			Door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	27	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	27	B27	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	27		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-591, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

PASSENGER SIDE : Component Inspection

INFOID:0000000001099015

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR LH

REAR LH : Description

INFOID:0000000001099016

Detects door open/closed condition.

REAR LH : Component Function Check

INFOID:0000000001099017

1.CHECK FUNCTION

With CONSULT-III

Check door switches “DOOR SW-RL” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-RL	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-592, "REAR LH : Diagnosis Procedure".

REAR LH : Diagnosis Procedure

INFOID:0000000001099018

1.CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals (+) BCM connector	Terminals (+) Terminal	Terminals (–)	Door condition	Voltage (V) (Approx.)
M65	25	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	25	B71	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	25		Does not exist

Is the inspection result normal?

cardiagn.com

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3. CHECK DOOR SWITCH

Check door switch.
Refer to DLK-593, "REAR LH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR LH : Component Inspection

INFOID:0000000001099019

1. CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR RH

REAR RH : Description

INFOID:0000000001099020

Detects door open/close condition.

REAR RH : Component Function Check

INFOID:0000000001099021

1. CHECK FUNCTION

With CONSULT-III
Check door switches “DOOR SW-RR” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
DOOR SW-RR	OPEN	:ON
	CLOSE	:OFF

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Refer to DLK-593, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001099022

1. CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check signal between BCM connector and ground with oscilloscope.

Terminals			Door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	29	Ground	OPEN	0
			CLOSE	
JPMIA0011GB

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK DOOR SWITCH CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and door switch connector.

BCM connector	Terminal	Door switch connector	Terminal	Continuity
M65	29	B53	1	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	29		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and door switch.

3.CHECK DOOR SWITCH

Check door switch.
Refer to DLK-594, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

REAR RH : Component Inspection

INFOID:0000000001099023

1.CHECK DOOR SWITCH

1. Turn ignition switch OFF.
2. Disconnect door switch connector.
3. Check door switch.

Terminal		Door switch condition	Continuity
Door switch			
1	Ground part of door switch	Pressed	Exists
		Released	Does not exist

Is the inspection result normal?

YES >> Door switch is OK.
NO >> Replace malfunctioning door switch. Refer to DLK-272, "Exploded View".

cardiagn.com

BACK DOOR

BACK DOOR : Description

INFOID:0000000001099024

Detects back door open condition.

BACK DOOR : Component Function Check

INFOID:0000000001099025

1.CHECK FUNCTION

With CONSULT-III

Check “BACK DOOR SW” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
BACK DOOR SW	OPEN	: ON
	CLOSE	: OFF

Is the inspection result normal?

YES >> Back door lock assembly (door switch) is OK.
NO >> Refer to DLK-595, "BACK DOOR : Diagnosis Procedure".

BACK DOOR : Diagnosis Procedure

INFOID:0000000001099026

1.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH) INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector and ground.

Terminals			Back door condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	28	Ground	OPEN	0
			CLOSE	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH) CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM connector and back door lock assembly (door switch) connector.

BCM connector	Terminal	Back door lock assembly (door switch) connector	Terminal	Continuity
M65	28	D152	4	Exists

3. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	28		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness between BCM and trunk room lamp switch.

3.CHECK BACK DOOR LOCK ASSEMBLY GROUND CIRCUIT

Check continuity between back door lock assembly connector and ground.

Back door lock assembly (door switch) connector	Terminal	Ground	Continuity
D152	3		Exists

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace back door lock assembly ground circuit.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	28	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH)

Check back door lock assembly (door switch).
Refer to DLK-596, "BACK DOOR : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door lock assembly (door switch). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

BACK DOOR : Component Inspection

INFOID:0000000001099027

1.CHECK BACK DOOR LOCK ASSEMBLY (DOOR SWITCH)

1. Turn ignition switch OFF.
2. Disconnect back door lock assembly (door switch) connector.
3. Check back door lock assembly (door switch).

Terminal		Trunk condition	Continuity
Back door lock assembly (door switch)			
4	3	OPEN	Exists
		CLOSE	Does not exist

Is the inspection result normal?

YES >> Back door lock assembly (door switch) is OK.
NO >> Replace back door lock assembly (door switch). Refer to DLK-706, "DOOR LOCK : Exploded View" and DLK-706, "DOOR LOCK : Removal and Installation".

cardiagn.com

KEY SWITCH

Description

INFOID:0000000001116382

Key switch detects that ignition key is inserted into the key cylinder, and then transmits the signal to BCM.

Component Function Check

INFOID:0000000001116383

1.CHECK KEY SWITCH INPUT SIGNAL

Check key switch (“KEY SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
KEY SW	Insert mechanical key into key cylinder	: ON
	Remove mechanical key from key cylinder	: OFF

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Refer to DLK-597, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116384

1.CHECK KEY SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	36	Ground	Insert ignition key into key cylinder	Battery voltage
			Remove ignition key from key cylinder	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Remove ignition key from key cylinder.
2. Disconnect key switch connector.
3. Check voltage between key switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Key switch connector	Terminal		
M25	2	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK KEY SWITCH SIGNAL CIRCUIT

1. Check continuity between BCM harness connector and key switch connector.

BCM connector	Terminal	Key switch connector	Terminal	Continuity
M65	36	M25	1	Existed

2. Check continuity between key switch connector and ground.

Key switch connector	Terminal	Ground	Continuity
M25	1	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK KEY SWITCH

Check key switch function.
Refer to DLK-598, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace key switch.

Component Inspection

INFOID:0000000001116385

COMPONENT INSPECTION

1.CHECK KEY SWITCH

Check continuity between key switch terminals.

Terminal		Condition	Continuity
key switch connector			
1	2	Insert ignition key into key cylinder	Existed
		Remove ignition key from key cylinder	Not existed

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Replace key switch.

cardiagn.com

DOOR LOCK ACTUATOR
DRIVER SIDE

DRIVER SIDE : Description

INFOID:0000000001099028

Locks/unlocks the door with the signal from BCM.

DRIVER SIDE : Component Function Check

INFOID:0000000001099029

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK” in Active test mode with CONSULT-III.

Test item		Condition
DOOR LOCK	ALL LOCK	The all door lock actuator are locked
	ALL UNLOCK	The all door lock actuator are unlocked
	DR UNLOCK	The door lock actuator (driver side) is unlocked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-599, "DRIVER SIDE : Diagnosis Procedure".

DRIVER SIDE : Diagnosis Procedure

INFOID:0000000001099030

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	60		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and front door lock actuator (driver side) connector.
3. Check continuity between BCM connector and front door lock actuator (driver side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D9	3	Exists
	60		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	60		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

carsdiagn.com

3.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-600, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Exploded View" and DLK-255, "DOOR LOCK : Removal and Installation". After that, PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement"

DRIVER SIDE : Component Inspection

INFOID:0000000001099031

1.CHECK FRONT DOOR LOCK ACTUATOR (DRIVER SIDE)

Check the actuator operation by connecting the battery voltage to front door lock actuator (driver side).

Front door lock actuator (driver side)	Terminal		Door lock actuator condition
	(+)	(-)	
D9	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Front door lock actuator (driver side) is OK.
NO >> Replace front door lock actuator (driver side). Refer to DLK-255, "DOOR LOCK : Removal and Installation". After that, PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement".

DRIVER SIDE : Special Repair Requirement

INFOID:0000000001099032

Refer to PWC-15, "POWER WINDOW MAIN SWITCH : Special Repair Requirement".

PASSENGER SIDE

PASSENGER SIDE : Description

INFOID:0000000001099033

Locks/unlocks the door with the signal from BCM.

PASSENGER SIDE : Component Function Check

INFOID:0000000001099034

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK” in Active test mode with CONSULT-III.

Test item		Condition
DOOR LOCK	:ALL LOCK	The all door lock actuator are locked
	:ALL UNLOCK	The all door lock actuator are unlocked
	:OTHER UNLOCK	The door lock actuator (front passenger side, rear LH and rear RH) are unlocked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-600, "PASSENGER SIDE : Diagnosis Procedure".

PASSENGER SIDE : Diagnosis Procedure

INFOID:0000000001099035

1.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

cardiagn.com

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and front door lock actuator (passenger side) connector.
3. Check continuity between BCM connector and front door lock actuator (passenger side) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D48	3	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

3.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-601, "PASSENGER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Exploded View" and DLK-255, "DOOR LOCK : Removal and Installation".

PASSENGER SIDE : Component Inspection

INFOID:0000000001099036

1.CHECK FRONT DOOR LOCK ACTUATOR (PASSENGER SIDE)

Check the actuator operation by connecting the battery voltage directly to front door lock actuator (passenger side).

Front door lock actuator (passenger side) connector	Terminal		Door lock actuator condition
	(+)	(-)	
D48	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Front door lock actuator (passenger side) is OK.
NO >> Replace front door lock actuator (passenger side). Refer to DLK-601, "PASSENGER SIDE : Component Inspection".

REAR LH

REAR LH : Description

INFOID:0000000001099037

Locks/unlocks the door with the signal from BCM.

REAR LH : Component Function Check

INFOID:0000000001099038

1.CHECK FUNCTION

With CONSULT-III

Check “DOOR LOCK” in Active test mode with CONSULT-III.

Test item		Condition
DOOR LOCK	:ALL LOCK	The all door lock actuator are locked
	:ALL UNLOCK	The all door lock actuator are unlocked
	:OTHER UNLOCK	The door lock actuator (front passenger side, rear LH and rear RH) are unlocked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-602, "REAR LH : Diagnosis Procedure".

REAR LH : Diagnosis Procedure

INFOID:0000000001099039

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door lock actuator (LH) connector.
3. Check continuity between BCM connector and rear door lock actuator (LH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D85	3	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

3.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-603, "REAR LH : Component Inspection".

Is the inspection result normal?

cardiagn.com

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-700, "DOOR LOCK : Exploded View" and DLK-700, "DOOR LOCK : Removal and Installation".

REAR LH : Component Inspection

INFOID:0000000001099040

1.CHECK REAR DOOR LOCK ACTUATOR (LH)

Check the actuator operation by connecting the battery voltage directly to rear door lock actuator (LH).

Rear door lock actuator (LH)	Terminal		Door lock actuator condition
	(+)	(-)	
D85	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Rear door lock actuator (LH) is OK.
NO >> Replace rear door lock actuator (LH). Refer to DLK-262, "DOOR LOCK : Removal and Installation".

REAR RH

REAR RH : Description

INFOID:0000000001099041

Locks/unlocks the door with the signal from BCM.

REAR RH : Component Function Check

INFOID:0000000001099042

1.CHECK FUNCTION

With CONSULT-III
Check “DOOR LOCK” in Active test mode with CONSULT-III.

Test item		Condition
DOOR LOCK	:ALL LOCK	The all door lock actuator are locked
	:ALL UNLOCK	The all door lock actuator are unlocked
	:OTHER UNLOCK	The door lock actuator (front passenger side, rear LH and rear RH) are unlocked

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-603, "REAR RH : Diagnosis Procedure".

REAR RH : Diagnosis Procedure

INFOID:0000000001099043

1.CHECK OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of door lock and unlock switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M67	56	Ground	Lock	0 → Battery voltage → 0
	54		Unlock	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK DOOR LOCK ACTUATOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door lock actuator (RH) connector.

3. Check continuity between BCM connector and rear door lock actuator (RH) connector.

BCM connector	Terminal	Door lock actuator connector	Terminal	Continuity
M67	56	D105	3	Exists
	54		2	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	56		Does not exist
	54		

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

3.CHECK DOOR LOCK ACTUATOR

Check door lock actuator.
Refer to DLK-604, "REAR RH : Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace door lock actuator. Refer to DLK-255, "DOOR LOCK : Removal and Installation".

REAR RH : Component Inspection

INFOID:0000000001099044

1.CHECK REAR DOOR LOCK ACTUATOR (RH)

Check the actuator operation by connecting the battery voltage directly to rear door lock actuator (RH).

Rear door lock actuator (RH)	Terminal		Door lock actuator condition
	(+)	(-)	
D105	3	2	LOCK
	2	3	UNLOCK

Is the inspection result normal?

YES >> Rear door lock actuator (RH) is OK.
NO >> Replace rear door lock actuator (RH). Refer to DLK-255, "DOOR LOCK : Removal and Installation".

cardiagn.com

BACK DOOR OPENER ACTUATOR

Description

INFOID:0000000001116447

Opens the back door with the signal from BCM.

Component Function Check

INFOID:0000000001116448

1.CHECK FUNCTION

With CONSULT-III

Check “TRUNK/GLASS HATCH” in Active test mode with CONSULT-III.

Test item		Condition
TRUNK/GLASS HATCH	:OPEN	Back door lock opener actuator operation

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-605, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116449

1.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of back door opener switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M66	45	Ground	Pressed	0 → Battery voltage → 0

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK BACK DOOR LOCK ASSEMBLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and back door lock assembly connector.
3. Check continuity between BCM connector and back door lock assembly connector.

BCM connector	Terminal	Back door lock assembly connector	Terminal	Continuity
M66	45	D152	2	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M66	45		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BACK DOOR LOCK ASSEMBLY GROUND CIRCUIT

Check continuity between back door lock assembly connector and ground.

Back door lock assembly connector	Terminal	Ground	Continuity
D152	1		Exists

Is the inspection result normal?

A B C D E F G H I J DLK L M N O P
carDiagn.com

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK BACK DOOR LOCK ASSEMBLY

Check back door lock assembly connector and ground.
Refer to DLK-606, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door lock assembly. Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

Component Inspection

INFOID:0000000001116450

1. CHECK BACK DOOR LOCK ASSEMBLY

Check the actuator operation by connecting battery voltage to back door lock assembly.

Back door lock assembly connector	Terminal		Back door actuator condition
D152	(+)	(-)	OPEN
	2	1	

Is the inspection result normal?

YES >> Back door lock assembly (back door lock actuator) is OK.
NO >> Replace back door lock assembly (back door lock actuator). Refer to DLK-268, "DOOR LOCK : Exploded View" and DLK-268, "DOOR LOCK : Removal and Installation".

cardiagn.com

BACK DOOR OPENER SWITCH

Description

INFOID:0000000001115824

Sends the back door opening signal to BCM.

Component Function Check

INFOID:0000000001115825

1.CHECK FUNCTION

With CONSULT-III

Check “TRNK OPNR SW” in “Data Monitor” mode with CONSULT-III.

Monitor item	Condition	
TRNK OPNR SW	Back door opener switch is pressed	:ON
	Back door opener switch is released	:OFF

Is the inspection result normal?

YES >> Door lock actuator is OK.
NO >> Refer to DLK-607, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115826

1.CHECK BCM INPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Condition of back door opener switch	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	12	Ground	Pressed	0
			Released	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK BACK DOOR OPENER SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector and back door opener switch connector.
3. Check continuity between BCM connector and back door opener switch connector.

BCM connector	Terminal	Back door opener switch connector	Terminal	Continuity
M65	12	D186	1	Exists

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M65	12		Does not exist

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BCM OUTPUT SIGNAL

Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	12	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

4. CHECK BACK DOOR OPENER SWITCH GROUND CIRCUIT

Check continuity between back door opener switch connector and ground.

Back door opener switch connector	Terminal	Ground	Continuity
D186	2		Exists

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5. CHECK BACK DOOR OPENER SWITCH

Check back door opener switch.
Refer to DLK-608, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace back door opener switch. Refer to DLK-279, "Exploded View".

Component Inspection

INFOID:0000000001115827

1. CHECK BACK DOOR OPENER SWITCH

Check back door opener switch.

Back door opener switch connector	Terminal		Back door opener switch condition	Continuity
D186	1	2	Pressed	Exists
			Released	Does not exist

Is the inspection result normal?

YES >> Back door opener switch is OK.
NO >> Replace back door opener switch. Refer to DLK-279, "Exploded View".

cardiagn.com

BUZZER (COMBINATION METER)

Description

INFOID:0000000001099053

Performs operation method guide and warning with buzzer.

Component Function Check

INFOID:0000000001099054

1.CHECK FUNCTION

With CONSULT-III

1. Check the operation with “WARNING BUZZER” in the Active Test.
2. Touch “KEY REMINDER WARN” on screen.

Is the inspection result normal?

Yes >> Warning buzzer into combination meter is OK.
No >> Refer to DLK-609, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001099055

1.CHECK METER BUZZER CIRCUIT

Refer to WCS-20, "Component Function Check".

Is the inspection result normal?

Yes >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
No >> Repair or replace meter buzzer circuit.

HAZARD WARNING LAMPS

Description

INFOID:0000000001099056

Perform answer-back for each operation with number of blinks.

Component Function Check

INFOID:0000000001099057

1.CHECK FUNCTION

With CONSULT-III

Check hazard warning lamp “FLASHER” in Active test.

Is the inspection result normal?

YES >> Hazard warning lamp circuit is OK.
NO >> Refer to DLK-610, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001099058

1.CHECK HAZARD SWITCH CIRCUIT

Check hazard switch circuit.
Refer to EXL-72, "Component Function Check".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace hazard warning switch circuit.

cardiagn.com

VEHICLE SPEED SIGNAL CIRCUIT

Description

INFOID:0000000001115721

Display the vehicle speed signal received from combination meter by numerical value (km/h).

Component Function Check

INFOID:0000000001115722

1.CHECK FUNCTION

Check the vehicle speed more than 12km/h (7MPH), all doors are automatically locked.

Is the inspection result normal?

YES >> Vehicle speed signal circuit is OK.
NO >> Refer to DLK-611, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001115723

1.CHECK VEHICLE SPEED SIGNAL CIRCUIT

Check vehicle speed signal “VEHICLE SPEED” in Data monitor.

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace hazard warning switch circuit.

KEYFOB BATTERY

Description

INFOID:0000000001099062

Remote door lock and unlock control entry function available when operating on button.
- Door lock and unlock

Component Function Check

INFOID:0000000001099063

1.CHECK KEYFOB FUNCTION

Does door lock and unlock operate with operating keyfob switch?

Is the inspection result normal?

YES >> Keyfob is OK.
NO >> Refer to DLK-612, "Diagnosis Procedure".

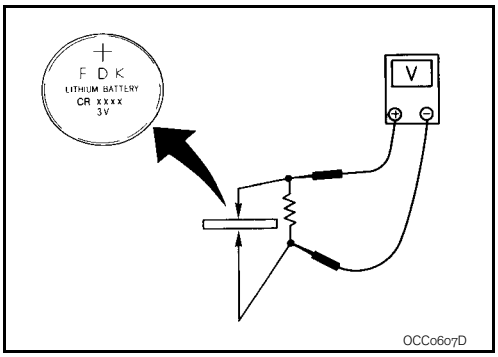
Diagnosis Procedure

INFOID:0000000001099064

1.CHECK KEYFOB BATTERY

Check by connecting a resistance (approximately 300Ω) so that the current value becomes about 10 mA.

Standard : Approx. 2.5 - 3.0V



Is the measurement value within the specification?

YES >> Replace keyfob.
NO >> Replace keyfob battery. Refer to DLK-712, "Exploded View".

cardiagn.com

ECU DIAGNOSIS

RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

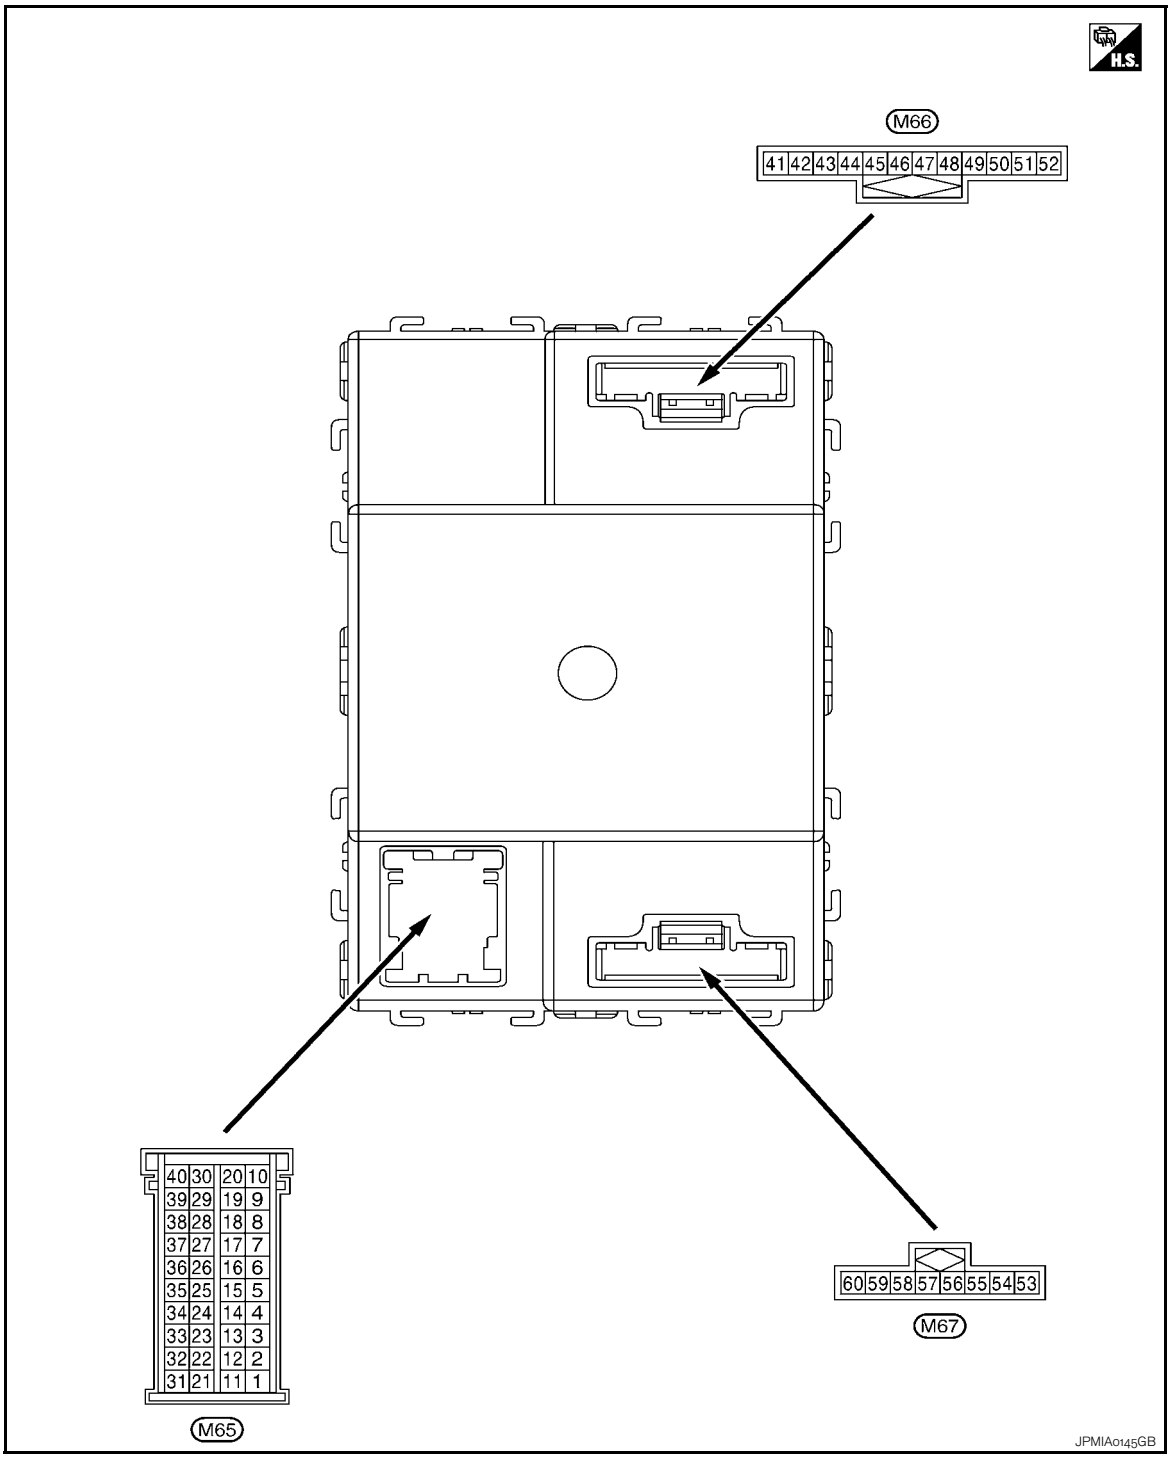
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Terminal No. (Wire color)		Description		Condition		Value (Approx.)
		Signal name	Input/ Output

Fail Safe

INFOID:0000000001116444

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001116445

Priority	DTC

SYMPTOM DIAGNOSIS

DOOR LOCK FUNCTION SYMPTOMS

DOOR LOCK AND UNLOCK SWITCH

DOOR LOCK AND UNLOCK SWITCH : Symptom Table

INFOID:0000000001093366

DOOR LOCK AND UNLOCK SWITCH OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-553, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Except driver side, doors are closed.
- Doors are not locked by keyfob.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Door lock and unlock function does not operate with door lock and unlock switch.	1. Check BCM power supply and ground circuit.		DLK-584
	2. Check door lock and unlock switch.		DLK-585
	3. Check door switch.	Passenger side	DLK-590
		Rear LH	DLK-592
		Rear RH	DLK-593
		Back door	DLK-595
	4. Check intermittent incident.		GI-39
Specific door lock actuator does not operate.	1. Check door lock actuator.	Driver side	DLK-599
		Passenger side	DLK-600
		Rear LH	DLK-602
		Rear RH	DLK-603
	2. Check intermittent incident.		GI-39

KEYFOB

KEYFOB : Symptom Table

INFOID:0000000001093368

KEYFOB OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “WORK FLOW”. Refer to DLK-553, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of Vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Mechanical key is removed from ignition key cylinder.
- Door lock and unlock operation is normal.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
All of the keyfob operations do not operate.	1. Check keyfob battery inspection.	DLK-612
	2. Check key switch	DLK-597
	3. Check intermittent incident.	GI-39
Anti-hijack operation does not operate.	1. Check “SECURITY DOOR LOCK SET” setting in “WORK SUPPORT”.	DLK-578
	2. Check intermittent incident.	GI-39

AUTO DOOR LOCK

AUTO DOOR LOCK : Symptom Table

INFOID:0000000001093370

AUTO DOOR LOCK OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-553, "Work Flow".
- To understand the operation when it does work, refer to DLK-563, "AUTO DOOR LOCK : System Description".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- “AUTO LOCK SET” is ON when setting on CONSULT-III.
- Door lock and unlock function is normal.

Symptom Table

Symptom	Diagnosis/service procedure		Reference page
Auto door lock operation does not operate.	1. Check “AUTO LOCK SET” setting in “WORK SUPPORT”.		DLK-580
	2. Check door switch.	Driver side	DLK-589
		Passenger side	DLK-590
		Rear LH	DLK-592
		Rear RH	DLK-593
		Back door	DLK-595
	3. Check key switch.		DLK-597
	4. Check intermittent incident.		GI-39

VEHICLE SPEED SENSING AUTO DOOR LOCK

VEHICLE SPEED SENSING AUTO DOOR LOCK : Symptom Table

INFOID:0000000001093372

VEHICLE SPEED SENSING AUTO DOOR LOCK OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-553, "Work Flow".
- To understand the operation when it does work, refer to DLK-565, "VEHICLE SPEED SENSING AUTO DOOR LOCK : System Description".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Door lock and unlock switch operation is normal.

cardiagn.com

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Vehicle speed sensing auto door lock operation does not operate.	1. Check vehicle speed signal.	DLK-611
	2. Check intermittent incident.	GI-39

BACK DOOR OPEN FUNCTION SYMPTOMS
BACK DOOR OPENER SWITCH
BACK DOOR OPENER SWITCH : Symptom Table

INFOID:0000000001093374

BACK DOOR OPENER FUNCTION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-553, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Door lock function is normal.
- Vehicle speed is less than 5 km/h (3 MPH).
- All doors are unlocked.

Symptom Table

Symptom	Diagnosis/service procedure	Reference page
Back door opener function does not operate by back door opener switch.	1. Check back door opener switch.	DLK-607
	2. Check vehicle speed signal.	DLK-611
	3. Check back door opener actuator.	DLK-605
	4. Check intermittent incident.	GI-39

WARNING FUNCTION SYMPTOMS
BACK DOOR

BACK DOOR : Symptom Table

INFOID:0000000001093380

BACK DOOR OPEN WARNING OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-553, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Door lock function and back door opener function are normal.

Symptom	Diagnosis/service procedure	Reference page
Back door open warning does not operate properly.	1. Check back door opener switch.	DLK-607
	2. Check intermittent incident.	GI-39

carsdiagn.com

HAZARD REMINDER FUNCTION
HAZARD WARNING LAMP
HAZARD WARNING LAMP : Symptom Table

INFOID:0000000001093381

HAZARD REMINDER OPERATION MALFUNCTION

NOTE:

- Before performing the diagnosis in the following table, check “Work Flow”. Refer to DLK-553, "Work Flow".
- Check that vehicle is under the condition shown in “Conditions of Vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

Conditions of Vehicle (Operating Conditions)

- Door lock function is normal.
- “HAZARD LAMP SET” is active when setting on CONSULT-III.

Symptom Table

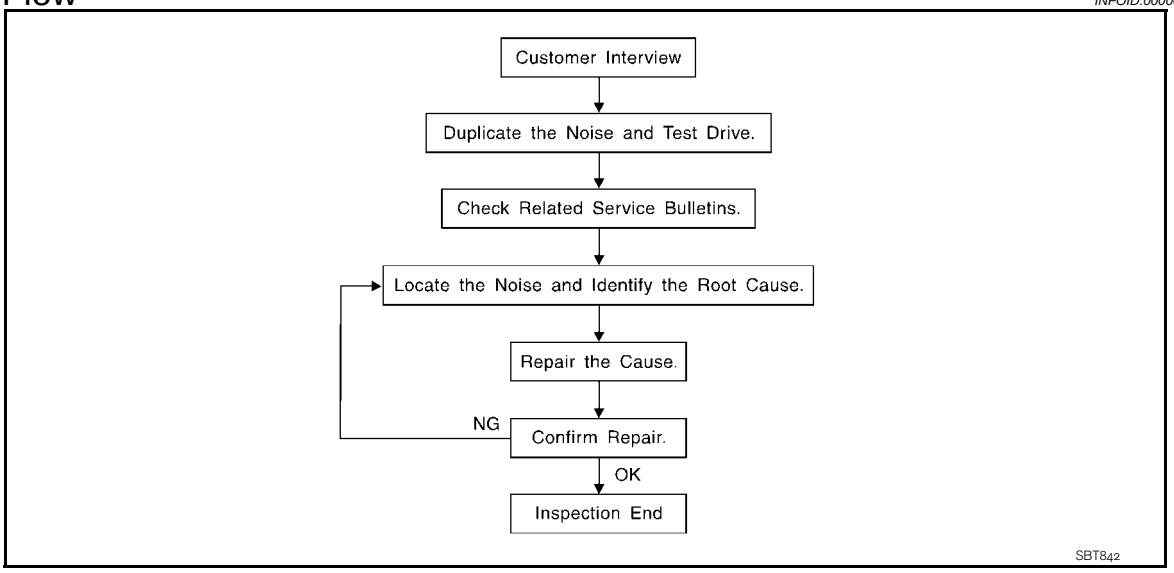
Symptom	Diagnosis/service procedure	Reference page
Hazard reminder operation does not operate properly.	1. Check setting of “HAZARD LAMP SET” with CONSULT-III.	DLK-580
	2. Check intermittent incident.	GI-39

cardiagn.com

SQUEAK AND RATTLE TROUBLE DIAGNOSES

Work Flow

INFOID:0000000001098121



CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any of the customer's comments; refer to DLK-216, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by a test drive with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak – (Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak – (Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle – (Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock – (Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick – (Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump – (Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz – (Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSB) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Engine Ear or mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to DLK-214, "Inspection Procedure".

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:

- separate components by repositioning or loosening and retightening the component, if possible.
- insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape are available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.
NOTE:

- URETHANE PADS
  Insulates connectors, harness, etc.
- INSULATOR (Foam blocks)
  Insulates components from contact. Can be used to fill space behind a panel.
- INSULATOR (Light foam block)
- FELT CLOTHTAPE
  Used to insulate where movement does not occur. Ideal for instrument panel applications.
  The following materials, not available through NISSAN Parts Department, can also be used to repair squeaks and rattles.
- UHMW(TEFLON) TAPE
  Insulates where slight movement is present. Ideal for instrument panel applications.
- SILICONE GREASE
  Used in place of UHMW tape that will be visible or not fit.
  Note: Will only last a few months.
- SILICONE SPRAY
  Use when grease cannot be applied.
- DUCT TAPE
  Use to eliminate movement.

CONFIRM THE REPAIR

cardiagn.com

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Inspection Procedure

INFOID:0000000001098122

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. Cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. Trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

c-diagn.com

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. Rear seatback lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

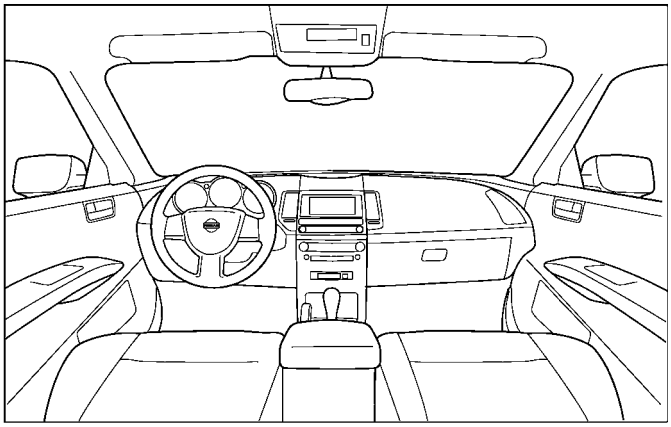
Diagnostic Worksheet

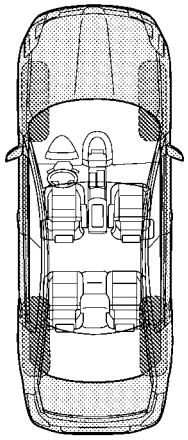
INFOID:0000000001098123

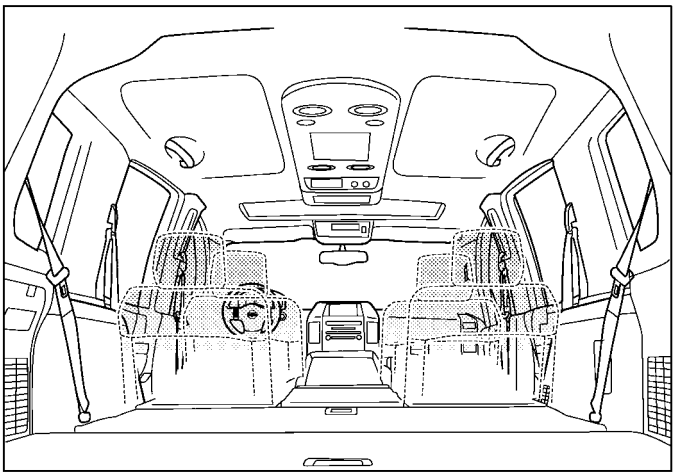
SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

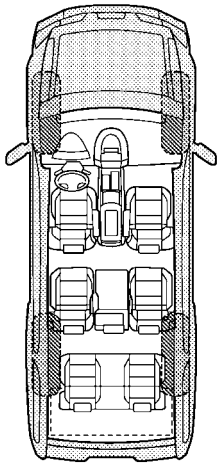
Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.









Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

Test Drive Notes:

PRECAUTION

PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001081941

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

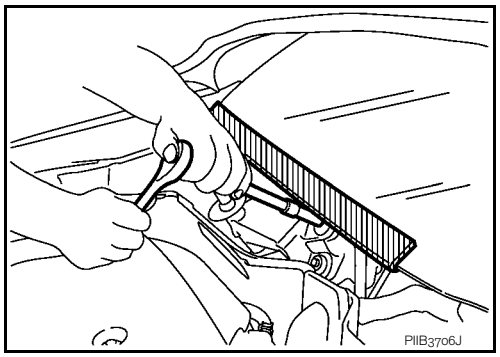
WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Procedure without Cowl Top Cover

INFOID:0000000001081942

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



Steering Wheel Rotation after Battery Disconnect

INFOID:0000000001081943

NOTE:

- Before removing and installing any control units, first turn the push-button ignition switch to the LOCK position, then disconnect both battery cables.
- After finishing work, confirm that all control unit connectors are connected properly, then re-connect both battery cables.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If a DTC is detected, perform trouble diagnosis according to self-diagnosis results.

This vehicle is equipped with a push-button ignition switch and a steering lock unit.
If the battery is disconnected or discharged, the steering wheel will lock and cannot be turned.
If turning the steering wheel is required with the battery disconnected or discharged, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Carry the Intelligent Key or insert it to the key slot and turn the push-button ignition switch to ACC position. (At this time, the steering lock will be released.)

3. Disconnect both battery cables. The steering lock will remain released with both battery cables disconnected and the steering wheel can be turned.
4. Perform the necessary repair operation.
5. When the repair work is completed, re-connect both battery cables. With the brake pedal released, turn the push-button ignition switch from ACC position to ON position, then to LOCK position. (The steering wheel will lock when the push-button ignition switch is turned to LOCK position.)
6. Perform self-diagnosis check of all control units using CONSULT-III.

Work

INFOID:0000000001081944

- After removing and installing the opening/closing parts, be sure to carry out fitting adjustments to check their operational.
- Check the lubrication level, damage, and wear of each part. If necessary, grease or replace it.

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001090923

BASIC INSPECTION

1.CHECK DOOR LOCK AND UNLOCK SWITCH OPERATION

Check door lock and unlock operation by operating door lock and unlock switch.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Refer to DLK-645, "DOOR LOCK AND UNLOCK SWITCH : Symptom Table".

2.CHECK KEYFOB OPERATION

Check door lock and unlock operation by operationg lock and unlock button of keyfob.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Refer to DLK-645, "KEYFOB : Symptom Table".

3.CHECK AUTO DOOR LOCK OPERATION

Check auto door lock operation. Refer to DLK-563, "AUTO DOOR LOCK : System Description".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Refer to DLK-646, "AUTO DOOR LOCK : Symptom Table".

4.CHECK VEHICLE SPEED SENSING AUTO DOOR LOCK OPERATION

Check vehicle speed sensing auto door lock. Refer to DLK-565, "VEHICLE SPEED SENSING AUTO DOOR LOCK : System Description"

Is the inspection result normal?

YES >> GO TO 5.
NO >> Refer to DLK-646, "VEHICLE SPEED SENSING AUTO DOOR LOCK : Symptom Table".

5.CHECK BACK DOOR OPENER SWITCH OPERATION

Check back door opener operation by operating back door opener switch.

Is the inspection result normal?

YES >> GO TO 6.
NO >> Refer to DLK-648, "BACK DOOR OPENER SWITCH : Symptom Table".

6.CHECK HAZARD REMINDER FUNCTION

Check hazard reminder function by operating the following switches.
- Lock and unlock button of keyfob.

Is the inspection result normal?

YES >> GO TO 7.
NO >> Refer to DLK-650, "HAZARD WARNING LAMP : Symptom Table".

7.CHECK WARNING FUNCTION

Check that warning function operate properly. Refer to DLK-572, "System Description".

Is the inspection result normal?

YES >> GO TO 8.
NO >> Refer to DLK-649, "BACK DOOR : Symptom Table".

8.CHECK OUT

CHECK OUT.

>> INSPECTION END

ON-VEHICLE REPAIR

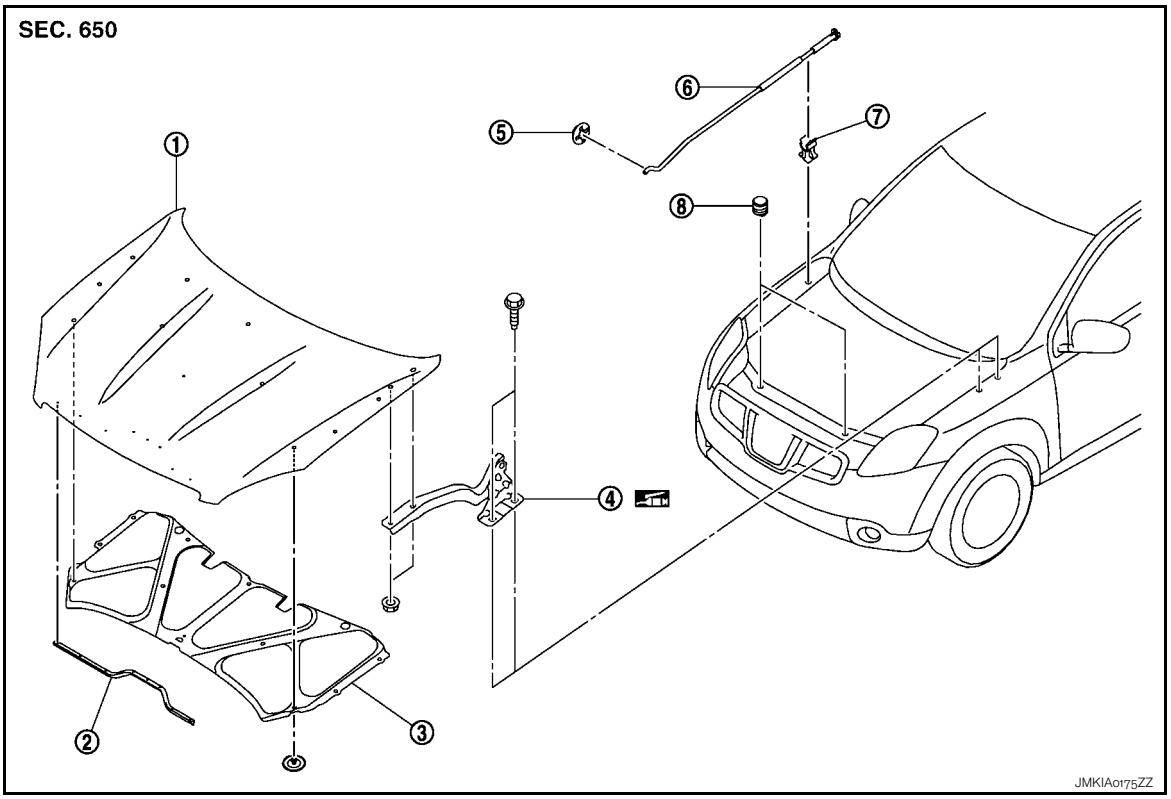
HOOD

HOOD ASSEMBLY

HOOD ASSEMBLY : Exploded View

INFOID:0000000001098574

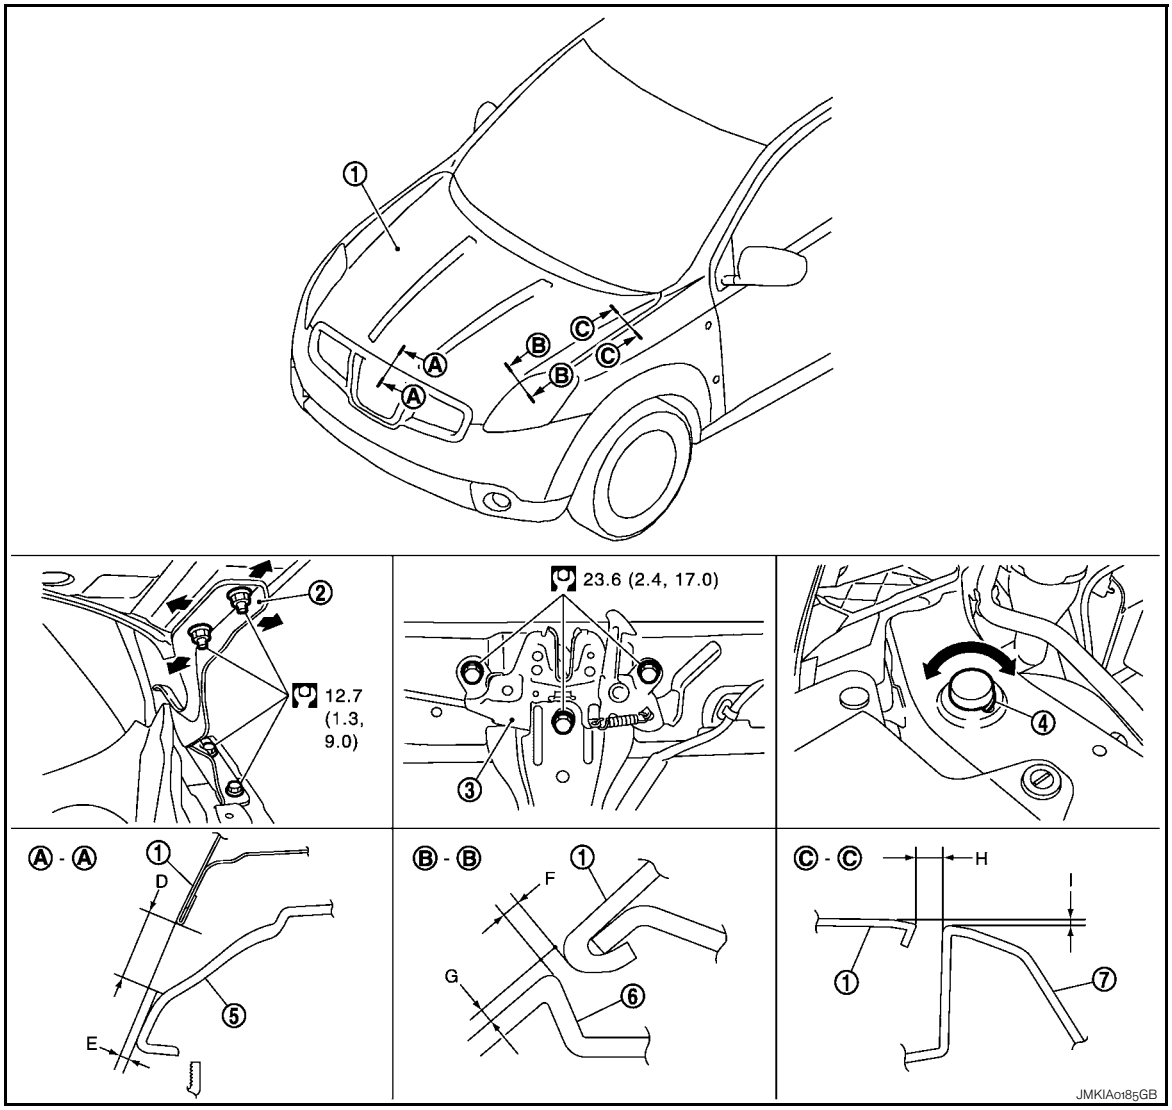
REMOVAL



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

ADJUSTMENT



1. Hood assembly
2. Hood hinge
3. Hood lock assembly
4. Hood bumper rubber
5. Front grille
6. Front combination lamp
7. Front fender

Refer to GI-4, "Components" for symbols in the figure.

HOOD ASSEMBLY : Removal and Installation

INFOID:0000000001098575

REMOVAL

1. Support the hood lock assembly with the proper material to prevent it from falling.
   WARNING:
   Bodily injury may occur if no supporting rod is holding the hood open when removing the hood stay.
2. Remove the hood hinge mounting nuts on the hood to remove the hood assembly.
   CAUTION:
   Perform work with 2 workers, because of its heavy weight.
3. Remove the following parts after removing the hood assembly.
   - Hood insulator
   - Hood sealing rubber

INSTALLATION

Install in the reverse order of removal.

CAUTION:

cardiagn.com

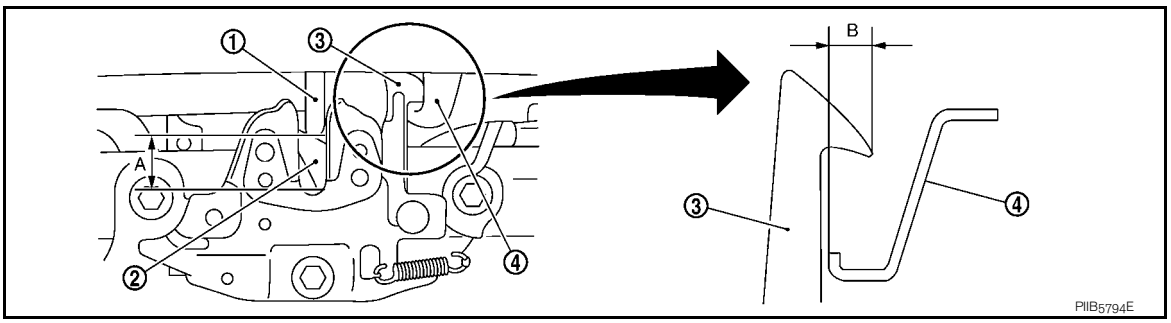
- **Perform work with 2 workers, because of its heavy weight.**
- **Before installing the hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installing, perform hood fitting adjustment. Refer to DLK-830, "HOOD ASSEMBLY : Adjustment".**

HOOD ASSEMBLY : Adjustment

INFOID:0000000001098576

Portion				Standard	Right/left Clearance (MAX)
Hood – Front bumper	A – A	D	Clearance	5.2 – 9.2 mm (0.205 – 0.362 in)	2.0 mm (0.079 in)
		E	Surface height	- 0.2 – 3.8 mm (- 0.008 – 0.150 in)	2.0 mm (0.079 in)
Hood – Front combination lamp	B – B	F	Clearance	3.7 – 7.7 mm (0.140 – 0.303 in)	2.0 mm (0.079 in)
		G	Surface height	- 2.3 – 2.3 mm (- 0.091 – 0.091 in)	2.3 mm (0.091 in)
Hood – Front fender	C – C	H	Clearance	3.9 – 5.9 mm (0.154 – 0.232 in)	1.5 mm (0.059 in)
		I	Surface height	- 1.0 – 1.0 mm (- 0.039 – 0.039 in)	1.5 mm (0.059 in)

1. Check the clearance and the surface height between the hood and each part by visualy and touching. (Fitting standard dimension in the table below should be satisfied.)
2. In case any parts are out of specification, adjust them according to the procedures shown below.
3. Remove the hood lock and adjust the height by rotating the bumper rubber until the hood becomes 1 to1.5 mm (0.04 to 0.059 in) lower than the fender.
4. Temporarily tighten the hood lock, and position by engaging it with the hood striker. Check the lock and striker for looseness and adjust the clearance and evenness with the striker to satisfy the specification.
5. Adjust A and B shown in the figure to the following value with hood's own weight by dropping it from approximately. 200 mm (7.87 in) height or by pressing the hood lightly [approximately. 29 N (3 kg)].



1. Hood striker
2. Primary latch
3. Secondary striker
4. Secondary latch

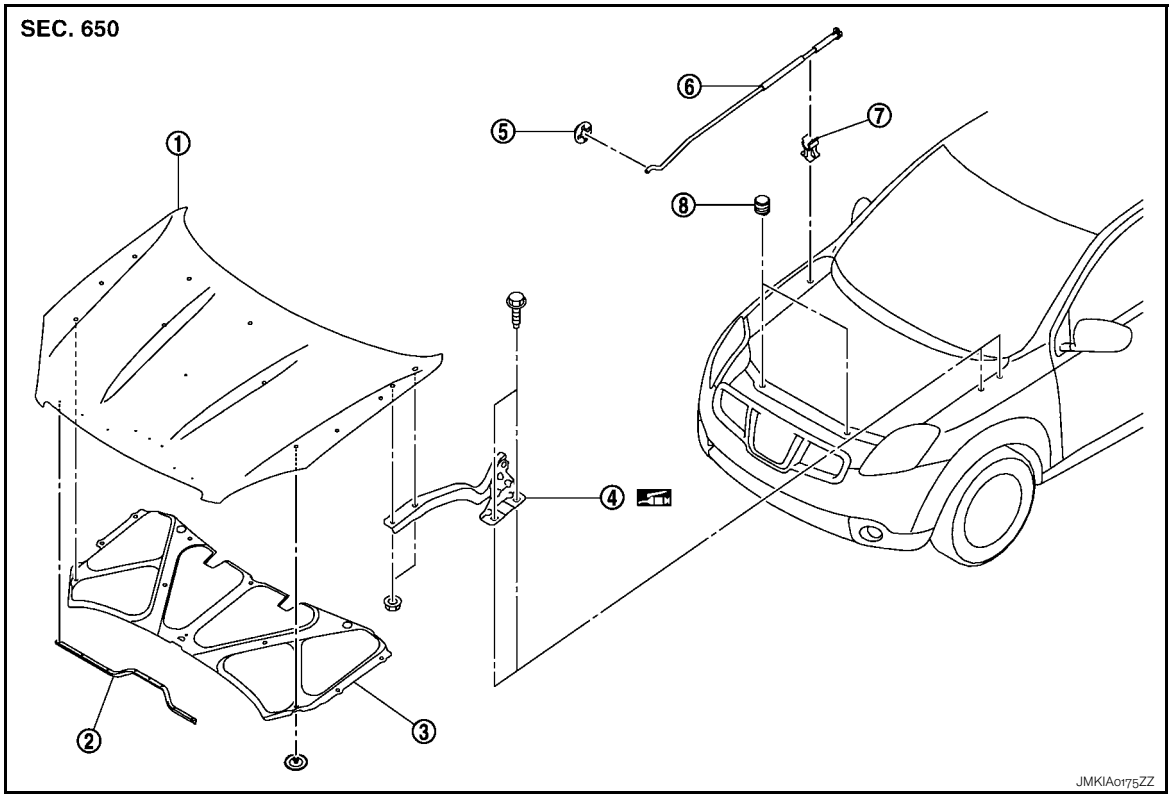
A : 20.0 mm (0.787 in)
B : 6.8 mm (0.268 in)

6. After adjustment tighten lock bolts to the specified torque.

HOOD HINGE

HOOD HINGE : Exploded View

INFOID:0000000001098582



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

HOOD HINGE : Removal and Installation

INFOID:0000000001098583

REMOVAL

1. Remove the hood assembly. Refer to DLK-829, "HOOD ASSEMBLY : Removal and Installation".
2. Remove the front fender. Refer to DLK-838, "Removal and Installation".
3. Remove the hood hinge mounting bolts, and then remove the hood hinge.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

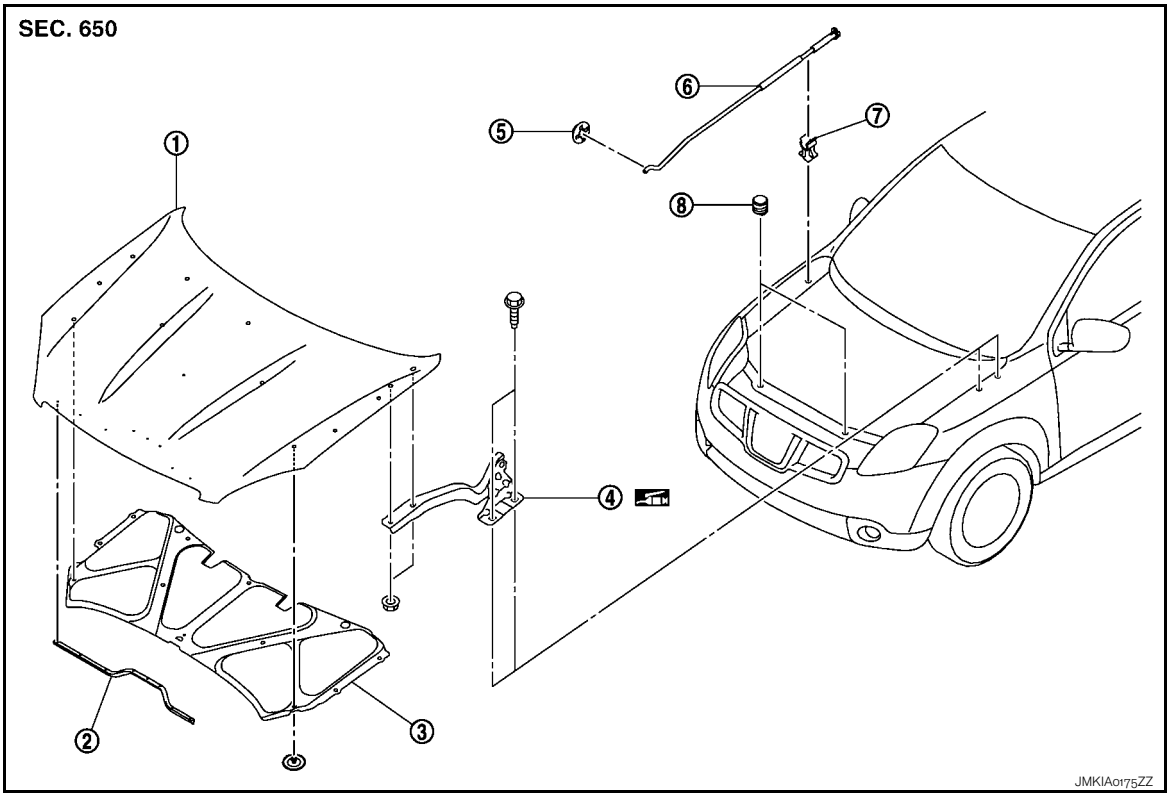
- **After installation, apply touch-up paint (the body color) onto the head of the hinge mounting bolts and nuts.**
- **Before installation of hood hinge, apply anticorrosive agent onto the mounting surface of the vehicle body.**
- **After installation, perform hood fitting adjustment. Refer to DLK-830, "HOOD ASSEMBLY : Adjustment".**

HOOD SUPPORT ROD

HOOD SUPPORT ROD : Exploded View

INFOID:0000000001098585

cardiagn.com



1. Hood assembly
2. Hood sealing rubber
3. Hood insulator
4. Hood hinge
5. Grommet
6. Hood support rod
7. Clamp
8. Hood bumper rubber

Refer to GI-4, "Components" for symbols in the figure.

HOOD SUPPORT ROD : Removal and Installation

INFOID:0000000001098587

REMOVAL

1. Support the hood lock assembly with the proper material to prevent it from falling.

   WARNING:
   Bodily injury may occur if no supporting rod is holding the hood open when removing the hood stay.
2. Remove the hood support rod from the grommet.

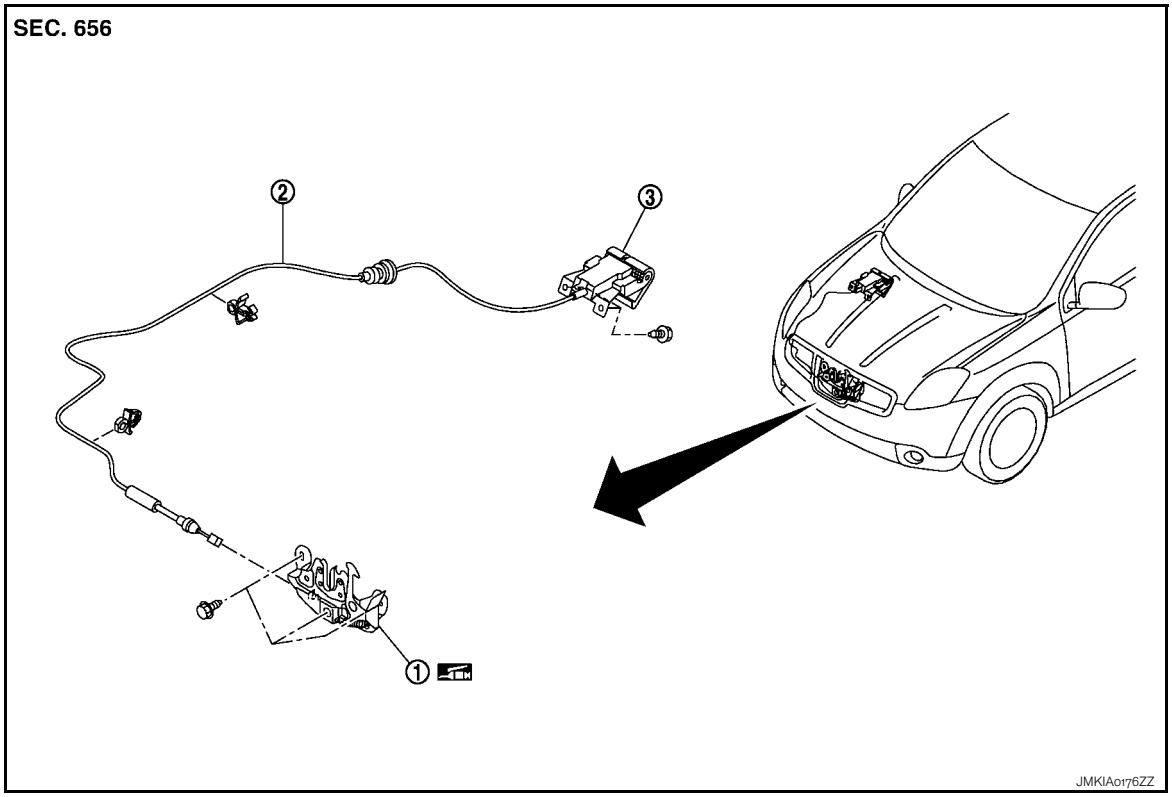
INSTALLATION

Install in the reverse order of removal.

HOOD LOCK CONTROL

HOOD LOCK CONTROL : Exploded View

INFOID:0000000001098589



1. Hood lock assembly
2. Hood lock control cable
3. Hood lock opener

Refer to GI-4, "Components" for symbols in the figure.

HOOD LOCK CONTROL : Removal and Installation

INFOID:0000000001098590

REMOVAL

1. Remove the hood lock opener mounting bolts, and then remove the hood lock opener.
2. Remove the front bumper fascia. Refer to EXT-11, "Removal and Installation".
3. Remove the hood lock mounting bolts, and then remove the hood lock.
4. Remove the fender protector. Refer to EXT-22, "Removal and Installation".
5. Disconnect the hood lock cable from hood lock, and clip it from the hoodledge.
6. Remove the grommet on the dash lower panel, and pull the hood lock control cable toward the passenger compartment.
   CAUTION:
   While pulling, do not to damage (peeling) the outside of the hood lock control cable.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Do not to bend the cable too much, keeping the radius 100 mm (3.94 in) or more.**
- **Check that the cable is not offset from the positioning grommet, and apply the sealant to the grommet (at *mark) properly.**
