
System Description

INFOID:0000000000978149

SUNSHADE SYSTEM
INPUT/OUTPUT SIGNAL CHART

Item	Input signal to sunshade motor assembly	Sunshade motor function	Actuator
Sunshade switch	Sunshade switch signal (slide open)	Sunshade control	Sunshade motor
	Sunshade switch signal (slide close)		

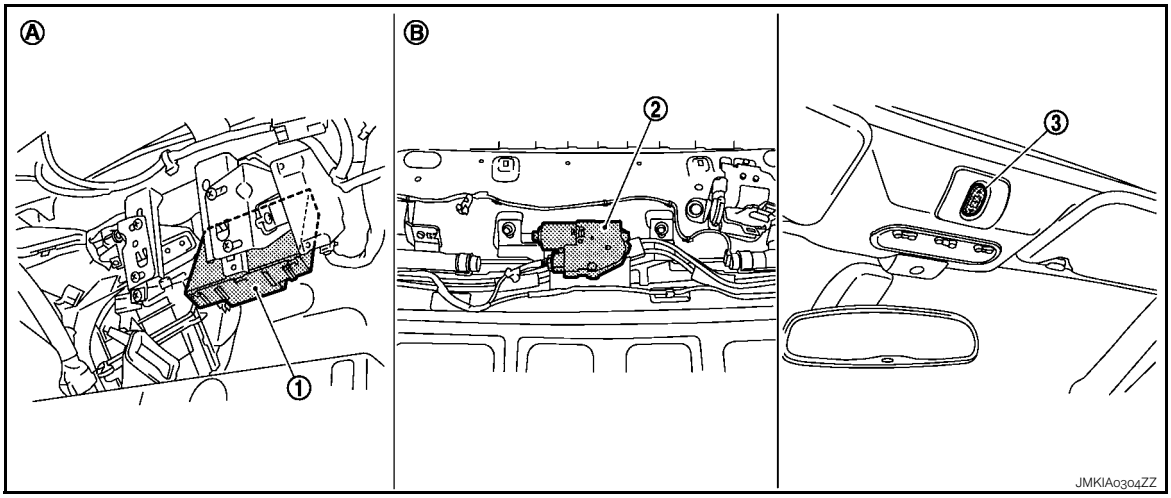
SUNSHADE OPERATION
- Sunshade motor assembly operates with the power supply from BCM while ignition switch is ON.
- Slide open and slide close signals from sunshade switch enables to operate sunshade motor.

AUTO OPERATION
Sunshade AUTO feature makes it possible to slide open and slide close the sunshade without holding the sunshade switch at the slide open or slide close position.
Auto operation is activated by a short press.(Less than 0.7 second)

ANTI-PINCH FUNCTION
The CPU of sunshade motor assembly monitors the sunshade motor operation and the shade position (fully-closed or other) by the signals from sunshade motor assembly.
When sunshade motor detects an interruption during the slide close operation, sunshade will auto open to the full-open position.
- Close operation when ignition switch is in the “ON” position

Component Parts Location

INFOID:0000000000978150



1. BCM M65, M66, M67
2. Sunshade motor assembly R5
3. Sunshade switch R2

A. View with dash side finisher RH removed
B. View with headlining removed

Component Description

INFOID:0000000000978151

Component	Function
BCM	Supplies the power to sunshade motor assembly.
Sunshade switch	Transmits slides open/close operation signal to sunshade motor assembly.
Sunshade motor assembly	It is sunshade motor and CPU integrated type that enables to slide open/close by sunshade switch operation

DIAGNOSIS SYSTEM (BCM)

Diagnosis Description

INFOID:0000000000978152

BCM CONSULT-III FUNCTION

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.

COMPONENT DIAGNOSIS

POWER SUPPLY AND GROUND CIRCUIT

SUNSHADE MOTOR ASSEMBLY

SUNSHADE MOTOR ASSEMBLY : Description

INFOID:0000000000978153

- BCM supplies power.
- It is sunshade motor and CPU integrated type.
- Slides open/close by sunshade switch operation.

SUNSHADE MOTOR ASSEMBLY : Component Function Check

INFOID:0000000000978154

1.CHECK SUNSHADE MOTOR FUNCTION

Do slide open/close operations operate normally with sunshade switch?

Is the inspection result normal?

YES >> Sunshade motor assembly is OK.
NO >> Refer to RF-8, "SUNSHADE MOTOR ASSEMBLY : Diagnosis Procedure".

SUNSHADE MOTOR ASSEMBLY : Diagnosis Procedure

INFOID:0000000000978155

SUNSHADE MOTOR ASSEMBLY

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect sunshade motor assembly connector.
3. Turn ignition switch ON.
4. Check voltage between sunshade motor assembly connector and ground.

Terminal			Voltage (V) (Approx.)
(+)		(–)	
Sunshade motor assembly connector	Terminal		
R5	3	Ground	Battery voltage
	6		

Is the inspection result normal?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between sunshade motor assembly connector and ground.

Sunshade motor assembly connector	Terminal	Ground	Continuity
R5	1		Existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

3.CHECK SUNSHADE MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector and sunshade motor assembly connector.

cardiagn.com

BCM connector	Terminal	Sunshade motor assembly connector	Terminal	Continuity
M67	53	R5	3	Existed
	58		6	

4. Check continuity between BCM connector and ground.

BCM connector	Terminal	Ground	Continuity
M67	53		Not existed
	58		

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M67	53	Ground	Battery voltage
	58		

Is the inspection result normal?

YES >> Check condition of harness and connector.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

5.CHECK SUNROOF SWITCH INPUT SIGNAL

1. Connect sunshade motor assembly connector.
2. Turn ignition switch ON.
3. Check voltage between sunshade motor assembly connector and ground.

Sunshade motor assembly connector	Terminals		Condition	Voltage (V) (Approx.)
	(+)	(–)		
R5	5	Ground	Sunroof switch is operated SLIDE OPEN	0
			Other than above	Battery voltage
	10		Sunroof switch is operated SLIDE CLOSE	0
			Other than above	Battery voltage

Is the inspection result normal?

YES >> Replace sunshade motor assembly. Refer to RF-50, "SUNSHADE MOTOR ASSEMBLY : Exploded View" and RF-50, "SUNSHADE MOTOR ASSEMBLY : Removal and Installation". After that, Refer to RF-10, "SUNSHADE MOTOR ASSEMBLY : Special Repair Requirement"
NO >> GO TO 6.

6.CHECK SUNROOF SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect sunshade motor assembly connector and sunshade switch connector.
3. Check continuity between sunshade motor assembly connector and sunshade switch connector.

Sunshade motor assembly connector	Terminal	Sunshade switch connector	Terminal	Continuity
R5	5	R2	1	Existed
	10		3	

4. Check continuity between sunshade motor assembly connector and ground.

Sunshade motor assembly connector	Terminal	Ground	Continuity
R5	5		Not existed
	10		

Is the inspection result normal?

YES >> GO TO 7.
NO >> Repair or replace harness.

7.CHECK SUNSHADE SWITCH GROUND CIRCUIT

Check continuity between sunshade switch connector and sunshade motor assembly connector.

Sunshade switch connector	Terminal	Sunshade motor assembly connector	Terminal	Continuity
R2	2	R5	2	Existed

Is the inspection result normal?

YES >> Refer to RF-10, "SUNSHADE MOTOR ASSEMBLY : Component Inspection".
NO >> Repair or replace harness.

SUNSHADE MOTOR ASSEMBLY : Component Inspection

INFOID:0000000000978156

SUNSHADE SWITCH

1.CHECK SUNSHADE SWITCH

1. Turn ignition switch OFF.
2. Disconnect sunshade switch connector.
3. Check continuity between sunshade switch terminals.

Terminals		Condition	Continuity
1	2	Sunshade switch is operated SLIDE OPEN	Existed
		Other than above	Not existed
3		Sunshade switch is operated SLIDE CLOSE	Existed
		Other than above	Not existed

Is the inspection result normal?

YES >> Sunshade switch is OK.
NO >> Replace sunshade switch. Refer to RF-56, "SUNSHADE SWITCH : Exploded View".

SUNSHADE MOTOR ASSEMBLY : Special Repair Requirement

INFOID:0000000000978157

1.PERFORM INITIALIZATION PROCEDURE

Perform initialization procedure.
Refer to RF-4, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

2.CHECK ANTI-PINCH OPERATION

Check anti-pinch operation.
Refer to RF-4, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

cardiagn.com

Is the inspection result normal?

YES >> Inspection end.

NO >> Replace sunshade motor assembly. Refer to RF-50, "SUNSHADE MOTOR ASSEMBLY : Exploded View" and RF-50, "SUNSHADE MOTOR ASSEMBLY : Removal and Installation".

ECU DIAGNOSIS

BCM (BODY CONTROL MODULE)

Reference Value

INFOID:0000000001116532

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

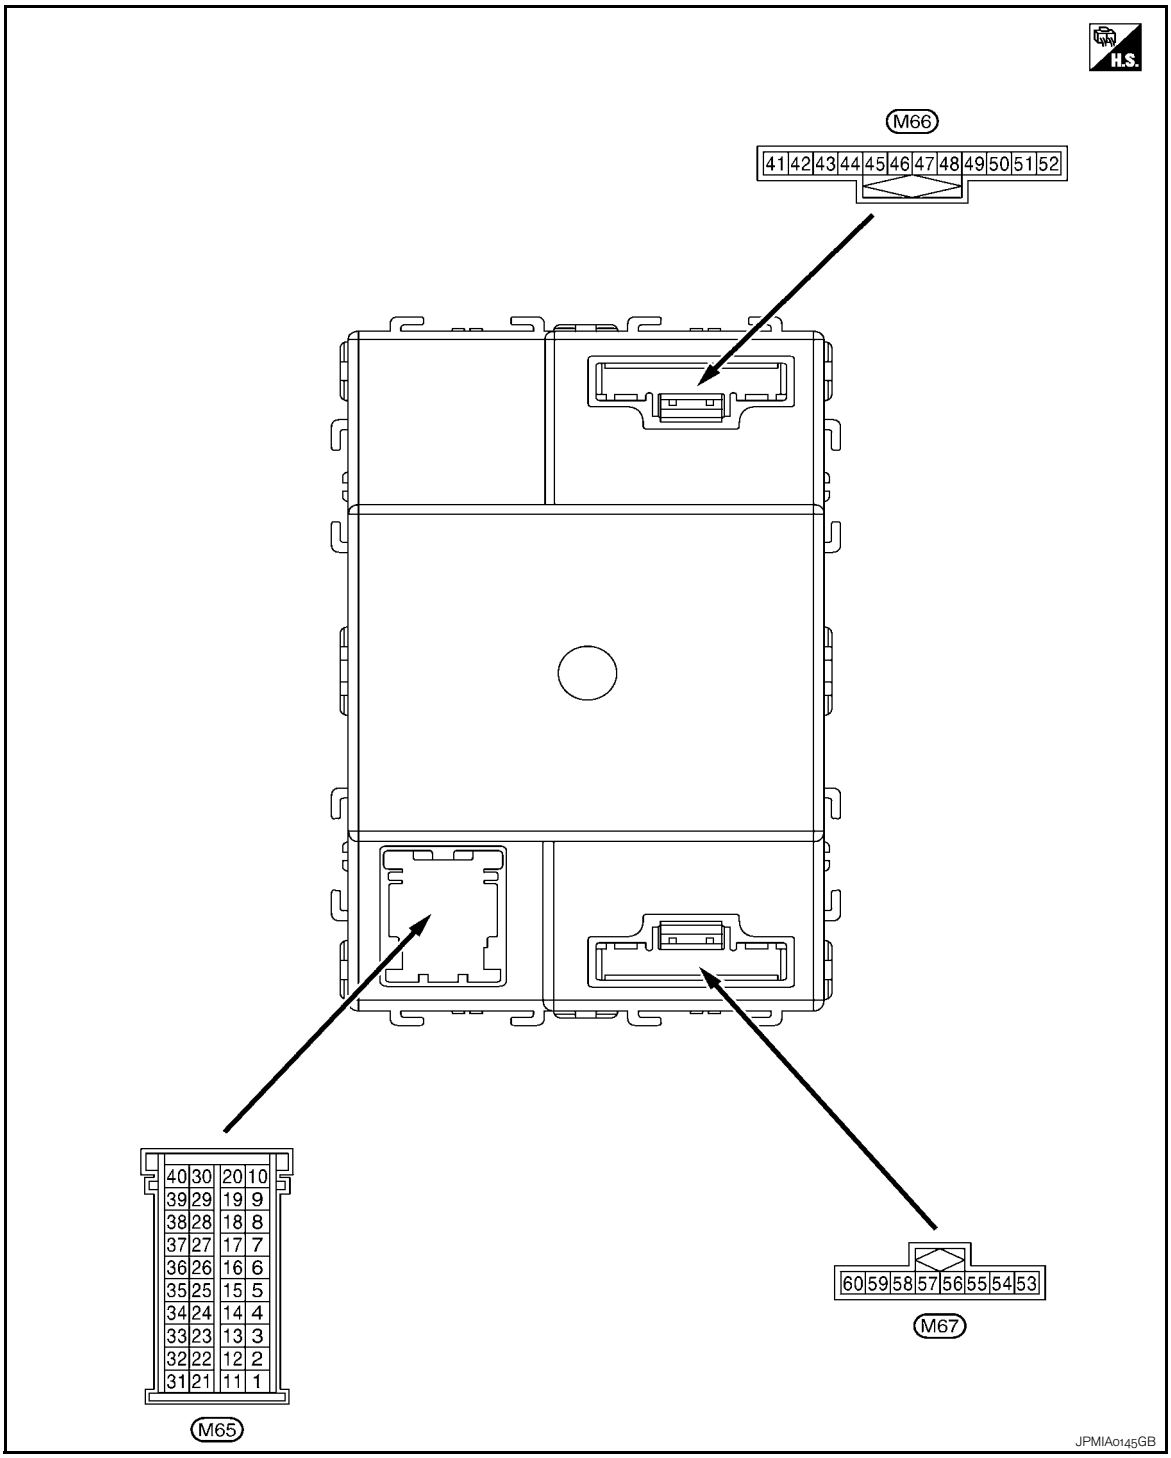
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000001116533

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control

Headlamp is turned ON.

Front Wiper Control

The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001116534

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN)
2	• B2190: NATS ANTENNA AMP • B2191: DIFFERNCE OF KEY • B2192: ID DISCORD BCM-ECM • B2193: CHAIN OF BCM-ECM • B2194: DISCORD BCM-I-KEY • B2195: ANTI SCANNING • B2196: DONGLE NG

DTC Index

INFOID:0000000001116535

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

SYMPTOM DIAGNOSIS

SUNSHADE SYSTEM DOES NOT OPERATE PROPERLY

Diagnosis Procedure

INFOID:0000000000978165

1. CHECK BCM POWER SUPPLY AND GROUND CIRCUIT

Check BCM power supply and ground circuit.
Refer to BCS-34, "Diagnosis Procedure"

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2. CHECK SUNSHADE MOTOR ASSEMBLY POWER SUPPLY AND GROUND CIRCUIT

Check sunshade motor assembly power supply and ground circuit.
Refer to RF-8, "SUNSHADE MOTOR ASSEMBLY : Component Function Check"

Is the inspection result normal?

YES >> Inspection end.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident"

carsdiagn.com

AUTO OPERATION DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000000978166

1.PERFORM INITIALIZATION PROCEDURE

Perform initialization procedure.
Refer to RF-4, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

Is the inspection result normal?

YES >> Inspection end.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

DOES NOT STOP FULLY-OPEN OR FULLY-CLOSED POSITION

Diagnosis Procedure

INFOID:0000000000978167

1.PERFORM INITIALIZATION PROCEDURE

Perform initialization procedure.
Refer to RF-4, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

Is the inspection result normal?

YES >> Inspection end.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

A B C D E F G H I J RF L M N O P
carsdiagn.com

SUNSHADE DOES NOT OPERATE ANTI-PINCH FUNCTION

Diagnosis Procedure

INFOID:0000000000978168

1. PERFORM INITIALIZATION PROCEDURE

Perform initialization procedure.
Refer to RF-4, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement".

Is the inspection result normal?

YES >> Inspection end.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

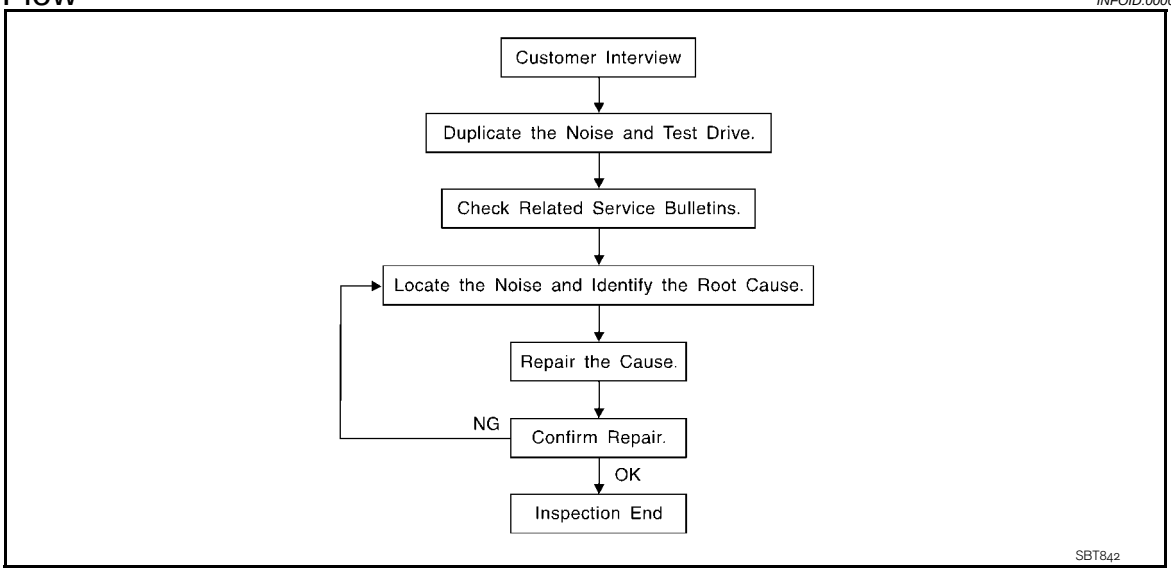
SQUEAK AND RATTLE TROUBLE DIAGNOSIS

Work Flow

INFOID:0000000001115894



CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any of the customer's comments; refer to RF-45, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by a test drive with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak – (Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak – (Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle – (Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock – (Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick – (Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump – (Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz – (Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSB) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Engine Ear or mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to RF-43, "Inspection Procedure".

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:

- separate components by repositioning or loosening and retightening the component, if possible.
- insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape are available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.
NOTE:

- URETHANE PADS
  Insulates connectors, harness, etc.
- INSULATOR (Foam blocks)
  Insulates components from contact. Can be used to fill space behind a panel.
- INSULATOR (Light foam block)
- FELT CLOTHTAPE
  Used to insulate where movement does not occur. Ideal for instrument panel applications.
  The following materials, not available through NISSAN Parts Department, can also be used to repair squeaks and rattles.
- UHMW(TEFLON) TAPE
  Insulates where slight movement is present. Ideal for instrument panel applications.
- SILICONE GREASE
  Used in place of UHMW tape that will be visible or not fit.
  Note: Will only last a few months.
- SILICONE SPRAY
  Use when grease cannot be applied.
- DUCT TAPE
  Use to eliminate movement.

CONFIRM THE REPAIR

cardiagn.com

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Inspection Procedure

INFOID:0000000001115895

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. Cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. Trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

g-diagn.com

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. Rear seatback lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

cardiagn.com

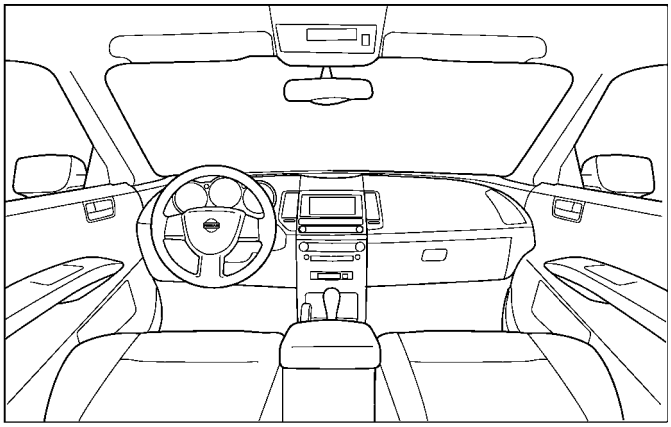
Diagnostic Worksheet

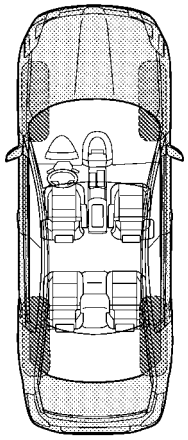
INFOID:0000000001115896

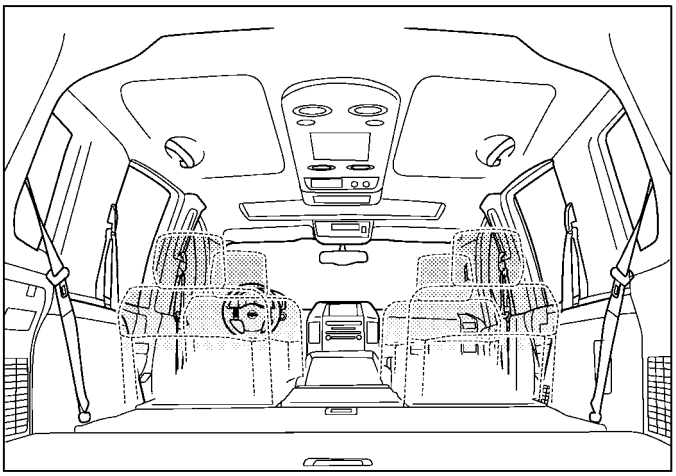
SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

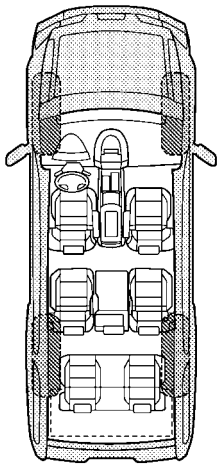
Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.









Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000000978172

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Service Notice

INFOID:0000000000978173

- When removing or installing various parts, place a cloth or padding onto the vehicle body to prevent scratches.
- Handle trim, molding, instruments, grille, etc. carefully during removing or installing. Be careful not to oil or damage them.
- Apply sealing compound where necessary when installing parts.
- When applying sealing compound, be careful that the sealing compound does not protrude from parts.
- When replacing any metal parts (for example body outer panel, members, etc.), be sure to take rust prevention measures.

Precaution for Work

INFOID:0000000000978174

- When removing or disassembling each component, be careful not to damage or deform it. If a component may be subject to interference, be sure to protect it with a shop cloth.
- When removing (disengaging) components with a screwdriver or similar tool, be sure to wrap the component with a shop cloth or vinyl tape to protect it.
- Protect the removed parts with a shop cloth and keep them.
- Replace a deformed or damaged clip.
- If a part is specified as a non-reusable part, always replace it with new one.
- Be sure to tighten bolts and nuts securely to the specified torque.
- After re-installation is completed, be sure to check that each part works normally.
- Follow the steps below to clean components.

- Water soluble foul: Dip a soft cloth into lukewarm water, and wring the water out of the cloth to wipe the fouled area.
  Then rub with a soft and dry cloth.
- Oily foul: Dip a soft cloth into lukewarm water with mild detergent (concentration: within 2 to 3%), and wipe the fouled area.
  Then dip a cloth into fresh water, and wring the water out of the cloth to wipe the detergent off. Then rub with a soft and dry cloth.

- Do not use organic solvent such as thinner, benzene, alcohol, and gasoline.
- For genuine leather seats, use a genuine leather seat cleaner.

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000000978177

BASIC INSPECTION

1. INSPECTION START

1. Check the service history.
2. Check the following parts.

- Fuse/circuit breaker blown.
- Poor connection, open or short circuit of harness connector.
- Battery voltage.

Is the inspection result normal?

YES >> Inspection end.
NO >> Repair or replace the malfunctioning parts.

REMOVAL

CAUTION:

- **Always work with a helper.**
- **Fully open the sunshade before removal.**
- **Never operate sunshade motor assembly after removal.**
- **When taking sunshade unit assembly out, use cloths to protect the seats and trim from damage.**

1. Fully open the sunshade.
2. Remove the headlining. Refer to INT-21, "Removal and Installation".
3. Remove the sunshade motor assembly. Refer to RF-50, "SUNSHADE MOTOR ASSEMBLY : Removal and Installation".
4. Remove the harness clamp.
5. Remove the TORX bolt (T30)
6. Remove the rear sunshade bracket.
7. Remove the mounting bolt from the side rail.
8. Remove the unit side bolts of the sunshade front bracket and loosen the body side bolts.
9. Remove the bolt from the rear end, and then remove sunshade unit assembly.
10. Remove the sunshade from vehicle.

INSTALLATION

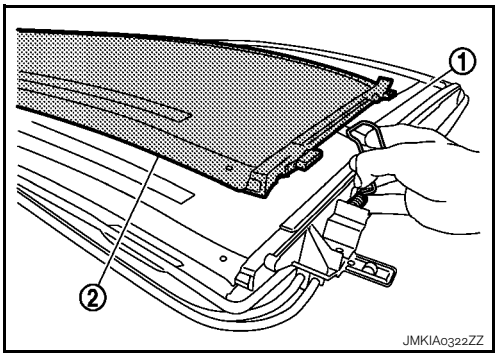
1. Temporarily tighten the mounting bolts to the sunshade front bracket.
2. Place the front end of the rail onto the sunshade front bracket.
3. Temporarily tighten the mounting bolts to the rear end of sunshade unit assembly.
4. Temporarily tighten the mounting bolts to the sunshade rear bracket.
5. Tighten the installation points diagonally excluding the installation point of the sunshade bracket around the roof.
6. Tighten the sunshade front and rear bracket bolts, of the vehicle side, and then tighten the bolt of the rail side.
7. Tighten the mounting bolt to the rear end.
8. Install the sunshade motor assembly. Refer to RF-50, "SUNSHADE MOTOR ASSEMBLY : Removal and Installation".
9. Install the headlining. Refer to INT-21, "Removal and Installation".

SUNSHADE UNIT ASSEMBLY : Disassembly and Assembly

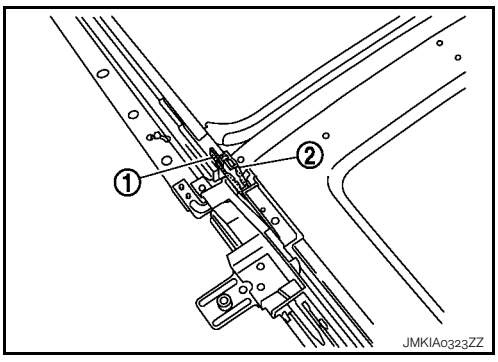
INFOID:0000000001026655

DISASSEMBLY

1. Remove the sunshade A and B.
   Slide sunshades (2) A and B while lifting up the spring (1), and then remove them from the rails



2. Remove the sunshade C.
   - Remove the tabs of the wire joint (1) and sunshade C joint (2).
   - Slide sunshades C while lifting up the spring, and then remove them from the rails



ASSEMBLY

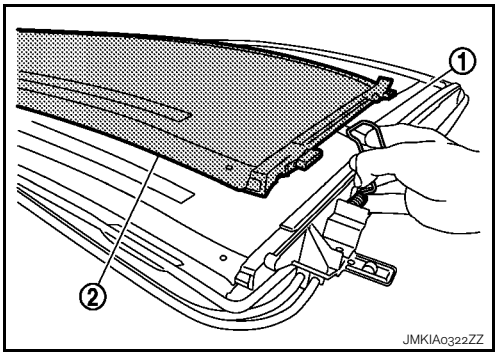
SUNSHADE : Removal and Installation

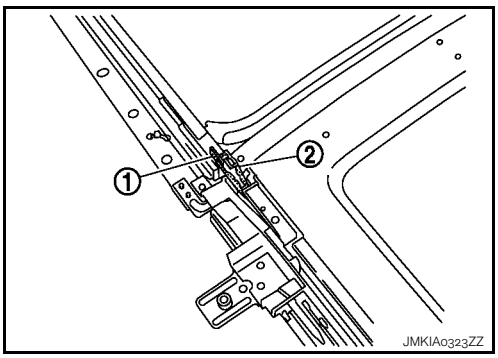
INFOID:0000000001026742

REMOVAL

1. Remove the sunshade unit assembly. Refer to RF-53, "SUNSHADE UNIT ASSEMBLY : Removal and Installation".
2. Remove the sunshade A and B.
   Slide sunshades (2) A and B while lifting up the spring (1), and then remove them from the rails



3. Remove the sunshade C.
   - Remove the tabs of the wire joint (1) and sunshade C joint (2).
   - Slide sunshades C while lifting up the spring, and then remove them from the rails

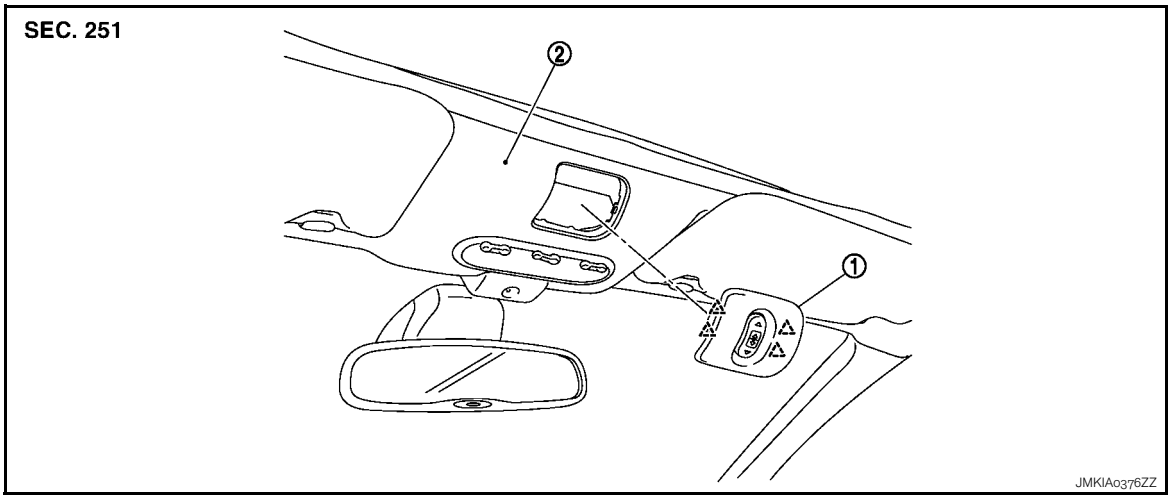


INSTALLATION
Install in the reverse order of removal.

SUNSHADE SWITCH

SUNSHADE SWITCH : Exploded View

INFOID:0000000001055267



1. Sunshade switch
2. Headlining
△ : Pawl

Refer to RF-56, "SUNSHADE SWITCH : Removal and Installation".

SUNSHADE SWITCH : Removal and Installation

INFOID:0000000001055266

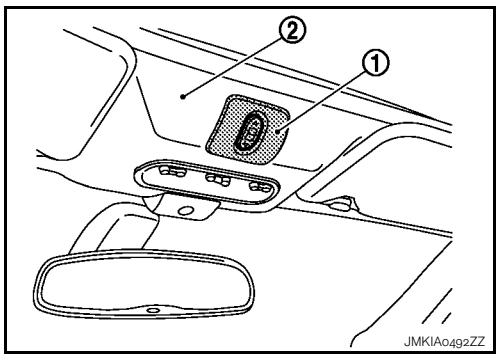
Removal

cardiagn.com

Remove the sunshade switch (1) from headlining (2).

CAUTION:

Do not bend headlining when sunshade switch removed.



Installation

Install in the reverse order of removal.

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000001059495

DETAILED FLOW

1.OBTAIN INFORMATION ABOUT SYMPTOM

Interview the customer to obtain the malfunction information (conditions and environment when the malfunction occurred) as much as possible when the customer brings the vehicle in.

>> GO TO 2.

2.REPRODUCE THE MALFUNCTION INFORMATION

Check the malfunction on the vehicle that the customer describes.
Inspect the relation of the symptoms and the condition when the symptoms occur.

>> GO TO 3.

3.PERFORM “BASIC INSPECTION”

Perform the basic inspection.Refer to SBC-35, "Basic Inspection".

>> GO TO 4.

4.IDENTIFY THE MALFUNCTIONING SYSTEM WITH “SYMPTOM DIAGNOSIS”

Use “Symptom diagnosis” from the symptom inspection result in step 2. Then identify where to start performing the diagnosis based on possible causes and symptoms.

>> GO TO 5.

5.IDENTIFY MALFUNCTIONING PARTS WITH “COMPONENT DIAGNOSIS”

Perform the diagnosis with “Component diagnosis” of the applicable system.

>> GO TO 6.

6.REPAIR OR REPLACE THE MALFUNCTIONING PARTS

Repair or replace the specified malfunctioning parts.

>> GO TO 7.

7.FINAL CHECK

Check that malfunctions are not reproduced when obtaining the malfunction information from the customer, referring to the symptom inspection result in step 2.

Is the malfunctioning part repaired or replaced?

YES >> Trouble diagnosis is completed.
NO >> GO TO 3.

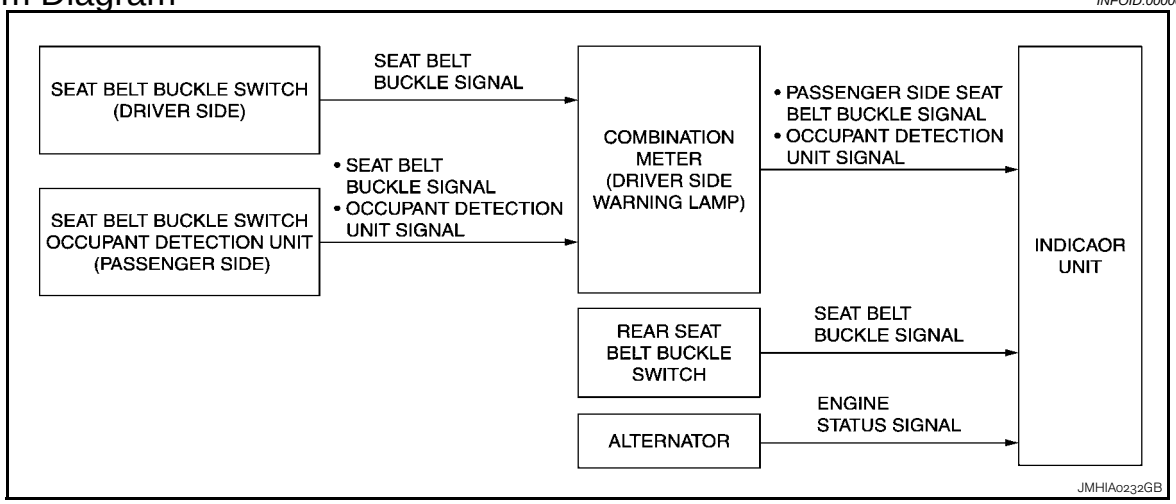
cardiagn.com

FUNCTION DIAGNOSIS

SEAT BELT WARNING LAMP

System Diagram

INFOID:0000000001092885



System Description

INFOID:0000000001059500

Seat belt warning lamp will light up if the driver has started the engine or turned ignition switch to ON position.

DRIVER SIDE SEAT BELT WARNING LAMP OPEARATION

- Driver side seat belt warning lamp is built in combination meter.
- Warning lamp lights up if seat belt buckle switch is in OFF position (unbuckled).
- Warning lamp turns off if seat belt buckle switch is in ON position (buckled).

PASSENGER SIDE SEAT BELT WARNING LAMP OPERATION

- Passenger side seat belt warning lamp is located on center consol indicator unit.
- There is an occupant detection unit situated inside passenger seat. Note that passenger seat belt warning lamp will not light up if the seat is unoccupied.
- If passenger seat is occupied and seat belt buckle is in OFF position warning lamp will light up.
- If passenger seat is occupied and seat belt buckle is in ON position warning lamp will turn off.

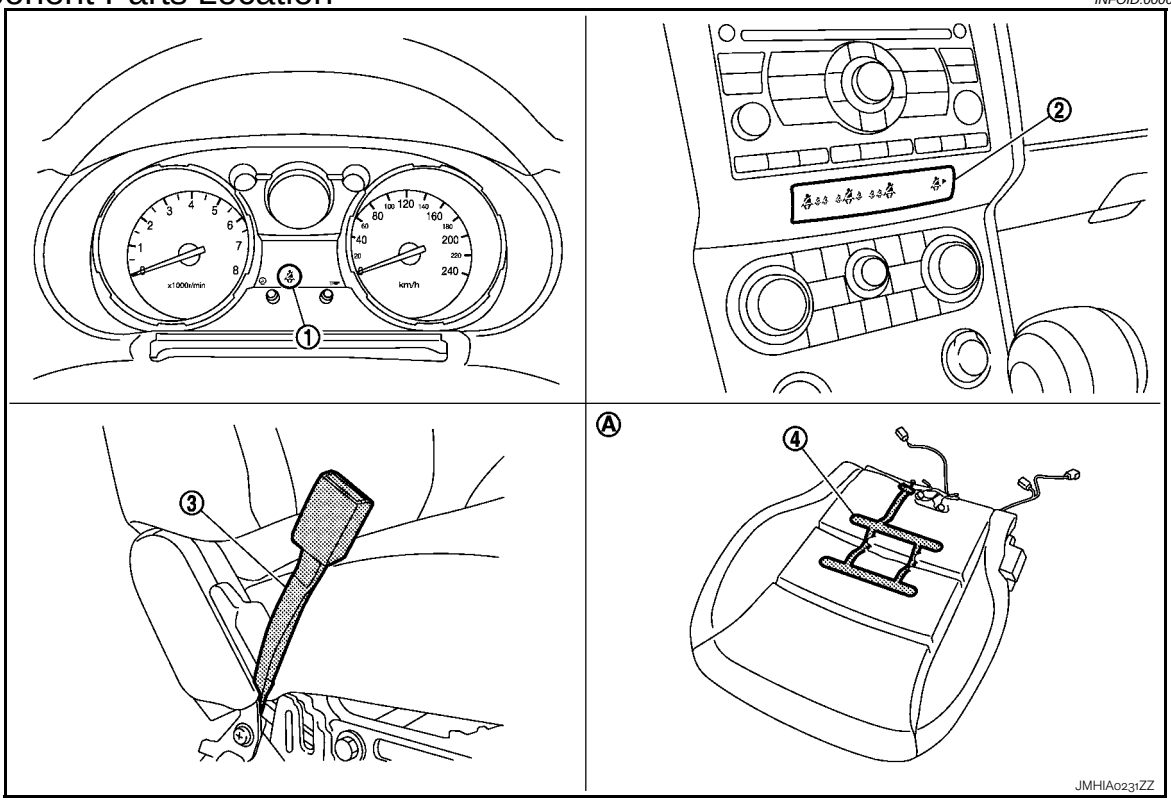
REAR SEAT BELT WARNING LAMP OPEATION

- Rear seat belt warning lamps are located on center consol indicator unit.
- Warning lamp lights up if seat belt buckle switch is in OFF position (unbuckled)
- Warning lamp turns off if seat belt buckle switch is in ON position (buckled).
- Regardless of rear seat belt status, warning lamp turns off approximately 35 seconds (the specified time) after the engine has started.

cardiagn.com

Component Parts Location

INFOID:0000000001059501



1. Seat belt warning lamp (built in combination meter M34)
2. Indicator unit M91
3. Seat belt buckle switch (Driver side) B22
4. Occupant detection unit B48
A. Behind seat cushion trim

Component Description

INFOID:0000000001059502

Item	Function
Combination meter	• Driver seat belt warning lamp is built in combination meter. • Detects the status of driver side passenger side seat belt buckle switch and controls warning lamp operation.
Indicator unit	• Passenger side and rear seat belt warning lamps are built in indicator unit. • Detects the status of rear seat belt buckle switch and controls the warning lamp illumination. • Judges the status of engine by detection of the signal transmitted by alternator and performs the control of seat belt warning lamp ON/OFF function.
Seat belt buckle switch (driver/passenger/rear)	Detects seat belt feature status transmits signal to combination meter or to indicator unit.

COMPONENT DIAGNOSIS

INDICATOR UNIT POWER SUPPLY CIRCUIT

Component Function Check

INFOID:0000000001080161

1.CHECK INDICATOR UNIT FUNCTION

1. All seat belt buckle are unbuckle.
2. Turn ignition switch ON.
3. Check indicator unit operation.

Is the inspection results normal?

YES >> Indicator unit power supply circuit is OK.
NO >> Refer to SBC-6, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001080162

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect indicator unit connector.
3. Check voltage between indicator unit connector and ground.

Terminals			Voltage(V) (Approx.)
(+)		(-)	
Indicator unit connector	Terminal		
M91	7	Ground	Battery voltage

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace power supply circuit.

cardiagn.com

FRONT SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Description

INFOID:0000000001083098

- Detects if the seat belt is fastened or unfastened.
- Warning lamp turns OFF if the seat belt is fastened.

Component Function Check

INFOID:0000000001083099

1.CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) FUNCTION

Check “SEAT BELT W/L” in DATA MONITOR mode with CONSULT-III

Driver seat belt is unfastened **SEAT BELT W/L : ON**

Driver seat belt is fastened **SEAT BELT W/L : OFF**

Is the inspection results normal?

YES >> Seat belt buckle switch (driver side) function is OK.
NO >> Refer to SBC-7, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001083100

1.CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) FUNCTION

1. Turn ignition switch ON.
2. Check voltage between combination meter connector and ground.

Combination meter connector	Terminal		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M34	35	Ground	Driver seat belt is unfastened	0
			Driver seat belt is fastened	5

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident"
NO >> GO TO 2.

2.CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) HARNESS

1. Turn ignition switch OFF.
2. Disconnect combination meter and seat belt buckle switch (driver side) connector.
3. Check continuity between combination meter and seat belt buckle switch (driver side) harness connector.

Combination meter connector	Terminal	Seat belt buckle switch (driver side) connector	terminal	Continuity
M34	35	B22	1	Existed

4. Check continuity between combination meter harness connector and ground.

Combination meter connector	Terminal	Ground	Continuity
M34	35		Not existed

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK GROUND CIRCUIT

Check continuity between seat belt buckle switch (driver side) harness connector and ground.

Seat belt buckle switch (driver side) connector	Terminal	Ground	Continuity
B22	2		Existed

Is the inspection result normal?

YES >> GO TO 4.

cardiagn.com

NO >> Repair or replace harness.

4. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check seat belt buckle switch (driver side).
Refer to SBC-8, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace seat belt buckle switch (driver side). Refer to SB-8, "SEAT BELT BUCKLE : Removal and Installation".

5. CHECK COMBINATION METER OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Connect combination meter connector.
3. Check voltage between combination meter connector and ground.

Combination meter connector	Terminal		Voltage (V) (Approx.)
M34	(+)	(-)	
	35	Ground	5

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Replace combination meter. Refer to MWI-72, "Removal and Installation".

Component Inspection

INFOID:0000000001083101

1. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check continuity between seat belt buckle switch (driver side) while performing the insertion operation to the seat belt buckle.

Seat belt buckle switch connector (driver side)	Terminal		Condition	Continuity
B22	1	2	When seat belt is unfastened	Existed
			When seat belt is fastened	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace seat belt buckle switch (driver side). Refer to SB-8, "SEAT BELT BUCKLE : Removal and Installation".

cardiagn.com

FRONT SEAT BELT BUCKLE SWITCH (PASSENGER SIDE)

Description

INFOID:0000000001084939

- Detects if the seat belt is fastened or unfastened.
- Warning lamp turns OFF if the seat belt is fastened.

Component Function Check

INFOID:0000000001083103

1.CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE) FUNCTION

Check if the warning lamp turns OFF as soon as the seat belt is fastened.

Is the inspection results normal?

YES >> Seat belt buckle switch (passenger side) is OK.
NO >> Refer to SBC-9, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001085564

1.CHECK INDICATOR UNIT HARNESS

1. Turn ignition switch OFF.
2. Disconnect indicator unit and combination meter connector.
3. Check continuity between indicator unit and combination meter harness connector.

Indicator unit connector	Terminal	Combination meter connector	terminal	Continuity
M91	1	M34	14	Existed

4. Check continuity between indicator unit harness connector and ground.

Indicator unit connector	Terminal	Ground	Continuity
M91	1		Not existed

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace harness.

2.CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE) FUNCTION

1. Connect combination meter connector.
2. Turn ignition switch ON.
3. Sits in the passenger seat.
4. Check voltage between combination meter connector and ground.

Combination meter connector	Terminal		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M34	36	Ground	Passenger seat belt is unfastened	0
			Passenger seat belt is fastened	Battery voltage

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE) HARNESS

1. Turn ignition switch OFF.
2. Disconnect seat belt buckle switch (passenger side) and combination meter connector.
3. Check continuity between combination meter and seat belt buckle switch (passenger side) harness connector.

Combination meter connector	Terminal	Seat belt buckle switch (passenger side) connector	terminal	Continuity
M34	36	B23	1	Existed

4. Check continuity between combination meter harness connector and ground.

Combination meter connector	Terminal	Ground	Continuity
M34	36		Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK OCCUPANT DETECTION UNIT HARNESS

1. Disconnect occupant detection unit connector.
2. Check continuity between seat belt buckle switch (passenger side) and occupant detection unit harness connector.

Seat belt buckle switch (passenger side) connector	Terminal	Occupant detection unit connector	terminal	Continuity
B23	2	B48	1	Existed

3. Check continuity between seat belt buckle switch (passenger side) harness connector and ground.

Seat belt buckle switch (passenger side) connector	Terminal	Ground	Continuity
B23	2		Not existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5. CHECK GROUND CIRCUIT

Check continuity between occupant detection unit harness connector and ground.

Occupant detection unit connector	Terminal	Ground	Continuity
B48	2		Existed

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace harness.

6. CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE)

Check seat belt buckle switch (passenger side).
Refer to SBC-11, "Component Inspection (seat belt buckle switch passenger side)".

Is the inspection result normal?

YES >> GO TO 7.
NO >> Replace seat belt buckle switch (passenger side). Refer to SB-8, "SEAT BELT BUCKLE : Removal and Installation".

7. CHECK OCCUPANT DETECTION UNIT

Check occupant detection unit.
Refer to SBC-11, "Component Inspection (occupant detection unit)".

Is the inspection result normal?

YES >> GO TO 8.
NO >> Replace occupant detection unit. Refer to SE-25, "Disassembly and Assembly".

8. CHECK COMBINATION METER OUTPUT SIGNAL

1. Connect combination meter connector.
2. Turn ignition switch ON.
3. Check voltage between combination meter and ground.

Combination meter connector	Terminal		Voltage (V) (Approx.)
M34	(+)	(-)	
	36	Ground	Battery voltage

cardiagn.com

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Replace combination meter. Refer to MWI-72, "Removal and Installation".

Component Inspection (seat belt buckle switch passenger side)

INFOID:0000000001085839

1. CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE)

Check continuity between seat belt buckle switch (passenger side) while performing the insertion operation to the seat belt buckle.

Seat belt buckle switch connector (passenger side)	Terminal		Condition	Continuity
B23	1	2	When seat belt is unfastened	Existed
			When seat belt is fastened	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace seat belt buckle switch (passenger side). Refer to SB-8, "SEAT BELT BUCKLE : Removal and Installation".

Component Inspection (occupant detection unit)

INFOID:0000000001098099

1. CHECK OCCUPANT DETECTION UNIT

Check occupant detection unit.

Occupant detection unit connector	Terminal		Condition	Continuity
B48	1	2	When getting in the passenger seat	Existed
			Other than above	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace occupant detection unit. Refer to SE-25, "Disassembly and Assembly".

REAR SEAT BELT BUCKLE SWITCH

Description

INFOID:0000000001094017

- Detects if the seat belt is fastened or unfastened.
- Warning lamp turns OFF if the seat belt is fastened.

Component Function Check

INFOID:0000000001094018

1.CHECK REAR SEAT BELT BUCKLE SWITCH FUNCTION

Check if the warning lamp turns OFF as soon as the seat belt is fastened.

Is the inspection results normal?

YES >> Rear seat belt buckle switch is OK.
NO >> Refer to SBC-12, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001085566

1.CHECK REAR SEAT BELT BUCKLE CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between rear seat belt buckle switch and ground.

Rear seat belt buckle switch connector	Terminal		Condition	Voltage (V) (Approx.)
	(+)	(-)		
B63 (LH and center)	1	Ground	Rear seat belt (LH) is fastened	Battery voltage
			Rear seat belt (LH) is unfastened	0
	3		Rear seat belt (center) is fastened	Battery voltage
			Rear seat belt (center) is unfastened	0
B64 (RH and center)	1		Rear seat belt (RH) is fastened	Battery voltage
			Rear seat belt (RH) is unfastened	0
	3		Rear seat belt (center) is fastened	Battery voltage
			Rear seat belt (center) is unfastened	0

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK INDICATOR UNIT OUTPUT SIGANL

Check voltage between indicator unit connector and ground.

Indicator unit connector	Terminal		Voltage (V) (Approx.)
M91	3	Ground	Battery voltage
	4		
	5		

Is the inspection result normal?

YES >> GO TO 3.
NO >> Replace indicator unit. Refer to SBC-36, "Removal and Installation".

3.CHECK REAR SEAT BELT BUCKLE SWITCH HARNESS

1. Turn ignition switch OFF.
2. Disconnect indictor unit and rear seat belt buckle switch connector.
3. Check continuity between indictor unit and rear seat belt buckle switch harness connector.

cardiagn.com

Indicator unit connector	Terminal	Rear seat belt buckle switch connector	terminal	Continuity
M91	3	B63 (LH and center)	1	Existed
	4		3	
		B64 (RH and center)	3	
	5		1	

4. Check continuity between indicator unit connector and ground.

Indicator unit connector	Terminal		Continuity
M91	3	Ground	Not existed
	4		
	5		

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK GROUND CIRCUIT

Check continuity between rear sear belt buckle switch connector and ground.

Rear seat belt buckle switch connector	Terminal		Continuity
B63 (LH and center)	2	Ground	Existed
	4		
B64 (RH and center)	2		
	4		

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5.CHECK REAR SEAT BELT BUKLE SWITCH

Check rear seat belt buckle switch.
Refer to SBC-13, "Component Inspection".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Replace rear seat belt buckle switch. Refer to SB-17, "SEAT BELT BUCKLE : Removal and Installation".

Component Inspection

INFOID:0000000001088995

1.CHECK SEAT BELT BUCKLE SWITCH

Check continuity between rear seat belt buckle switch while performing the insertion operation to the rear seat belt buckle.

Rear seat belt buckle switch connector	Terminal		Condition	Continuity
B63 (LH and center)	1	2	Rear seat belt (LH) is unfastened	Existed
			Rear seat belt (LH) is fastened	Not existed
	3	4	Rear seat belt (center) is unfastened	Existed
			Rear seat belt (center) is fastened	Not existed
B64 (RH and center)	1	2	Rear seat belt (RH) is unfastened	Existed
			Rear seat belt (RH) is fastened	Not existed
	3	4	Rear seat belt (center) is unfastened	Existed
			Rear seat belt (center) is fastened	Not existed

cardiagn.com

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace seat belt buckle switch. Refer to SB-17, "SEAT BELT BUCKLE : Removal and Installation".

cardiagn.com

ALTERNATOR SIGNAL CIRCUIT

Description

INFOID:0000000001080171

Transmits the “engine started” signal to indicator unit.

Component Function Check

INFOID:0000000001080172

1.CHECK ALTERNATOR SIGNAL CIRCUIT

Check if the warning lamp turns OFF, approximately 35 seconds after the engine has started.

Is the inspection results normal?

YES >> Alternator signal circuit is OK.
NO >> Refer to SBC-15, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001080173

1.CHECK INDICATOR UNIT INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect indicator unit connector.
3. Turn ignition switch ON.
4. Check voltage between indicator unit harness connector and ground.

Indictor unit connector	Terminal		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M91	6	Ground	Engine running	Battery voltage
			Other than above	0

Is the inspection result normal?

YES >> Replace indictor unit. Refer to SBC-36, "Removal and Installation".
NO >> GO TO 2.

2.CHECK ALTERNATOR HARNESS

1. Turn ignition switch OFF.
2. Disconnect alternator connector.
3. Check continuity between indictor unit and alternator harness connector.

Indicator unit connector	Terminal	Alternator connector	terminal	Continuity
M91	6	R5*1	3*1	Existed
		F60*2	4*2	

*1 With gasoline engine

*2 With diesel engine

4. Check continuity between indicator unit harness connector and ground.

Indicator unit connector	Terminal	Ground	Continuity
M91	6		Not existed

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace harness.

ECU DIAGNOSIS

COMBINATION METER

Reference Value

INFOID:0000000001102416

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
SPEED METER [km/h]	Ignition switch ON	While driving	Equivalent to speedometer reading **NOTE:** 655.35 is displayed when the malfunction signal is received
SPEED OUTPUT [km/h]	Ignition switch ON	While driving	Equivalent to speedometer reading **NOTE:** 655.35 is displayed when the malfunction signal is received
TACHO METER [rpm]	Ignition switch ON	While driving	Equivalent to tachometer reading **NOTE:** 8191.875 is displayed when the malfunction signal is received

SYMPTOM DIAGNOSIS

DRIVER SIDE SEAT BELT WARNING LAMP DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000001080184

1. CHECK FRONT SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check font seat belt buckle switch (driver side).
Refer to SBC-7, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2. CHECK COMBINATION METER

Check combination meter.
Refer to MWI-3, "Work Flow".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

PASSENGER SIDE SEAT BELT WARNING LAMP DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000001091054

1.CHECK FRONT SEAT BELT BUCKLE SWITCH (PASSENGER SIDE)

Check front seat belt buckle switch (passenger side).
Refer to SBC-9, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident"
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

REAR SEAT BELT WARNING LAMP DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000001091055

1.CHECK REAR SEAT BELT BUCKLE SWITCH

Check rear seat belt buckle switch.
Refer to SBC-12, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

WARNING LAMP DOES NOT OPERATE EXCEPT FOR DRIVER SIDE

Diagnosis Procedure

INFOID:0000000001091242

1.CHECK INDICATOR UNIT POWER SUPPLY CIRCUIT

Check indicator unit power supply circuit.
Refer to SBC-6, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

DRIVER SIDE SEAT BELT WARNING LAMP DOES NOT TURN OFF

Diagnosis Procedure

INFOID:0000000001091152

1.CHECK FRONT SEAT BELT BUCKLE SWITCH (DRIVER SIDE)

Check font seat belt buckle switch (driver side).
Refer to SBC-7, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2.CHECK COMBINATION METER

Check combination meter.
Refer to MWI-3, "Work Flow".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

PASSENGER SIDE SEAT BELT WARNING LAMP DOES NOT TURN OFF

Diagnosis Procedure

INFOID:0000000001091236

1.CHECK FRONT SEAT BELT BUCKLE SWITCH (PASSENGER SIDE)

Check front seat belt buckle switch (passenger side).
Refer to SBC-9, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident"
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

REAR SEAT BELT WARNING LAMP DOES NOT TURN OFF

Diagnosis Procedure

INFOID:0000000001091237

1.CHECK REAR SEAT BELT BUCKLE SWITCH

Check rear seat belt buckle switch.
Refer to SBC-12, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

REAR SEAT BELT WARNING LAMP DOSE NOT TURN OFF AFTER A LAPSE OF SPECIFIED TIME

Diagnosis Procedure

INFOID:0000000001091060

1. CHECK ALTERNATOR SIGNAL CIRCUIT

Check alternator signal circuit.
Refer to SBC-15, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

PASSENGER SEAT IS OCCUPIED BUT SEAT BELT WARNING LAMP DOES NOT LIGHT UP

Diagnosis Procedure

INFOID:0000000001091238

1. CHECK FRONT SEAT BELT BUCKLE SWITCH (PASSENGER SIDE)

Check front seat belt buckle switch (passenger side).
Refer to SBC-9, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident"
NO >> Repair or replace the malfunctioning parts.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001098109

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

cardiagn.com

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001059487

BASIC INSPECTION

1. INSPECTION START

1. Check the service history.
2. Check the following parts.

- Fuse/circuit breaker blown.
- Poor connection, open or short circuit of harness connector.
- Battery voltage.

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Repair or replace the malfunctioning parts.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001115377

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution for Seat Belt Service

INFOID:0000000001093940

CAUTION:

- **Before removing the front seat belt pre-tensioner assembly, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.**
- **Do not use electrical test equipment for front seat belt pre-tensioner connector.**
- **After replacing or reinstalling front seat belt pre-tensioner assembly, or reconnecting front seat belt pre-tensioner connector, check the system function. Refer to SRC-10, "Diagnosis Description".**
- **Do not use disassembled buckle or seat belt assembly.**
- **Replace anchor bolts if they are deformed or worn out.**
- **Never oil tongue and buckle.**
- **If any component of seat belt assembly is questionable, do not repair. Replace the entire seat belt assembly.**
- **If webbing is cut, frayed or damaged, replace seat belt assembly.**
- **When replacing seat belt assembly, use a genuine NISSAN seat belt assembly.**

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attached hardware after any collision. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioners should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident (i.e. torn webbing, bent retractor or guide).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The front seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

INFOID:0000000001093941

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attached hardware after any collision. NISSAN/INFINITI recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pretensioners should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident (i.e. torn webbing, bent retractor or guide, etc.).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioners should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

PRELIMINARY CHECKS

1. Check the seat belt warning lamp/chime for proper operation as follows:

a. Turn ignition switch ON. The seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about six seconds.

b. Fasten driver seat belt. The seat belt warning lamp should turn off and the chime (if sounding) should stop.

2. If the air bag warning lamp is blinking, conduct self-diagnosis with CONSULT-III and air bag warning lamp. Refer to SRC-10, "Diagnosis Description".

3. Check that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.

4. Check the shoulder seat belt guide and shoulder belt height adjuster for front seats. Ensure guide swivels freely and that webbing lays flat and does not bind in guide. Ensure height adjuster operates properly and holds securely.

5. Check retractor operation:

a. Fully extend the seat belt webbing and check for twists, tears or other damage.

b. Allow the seat belt to retract. Ensure that webbing returns smoothly and completely into the retractor. If the seat belt does not return smoothly, wipe the inside of the loops with a clean paper cloth. Because dirt build-up in the loops of the upper anchors can cause the seat belts to retract slowly.

c. Fasten the seat belt. Check that seat belt returns smoothly and completely to the retractor. If the webbing does not return smoothly, the cause may be an accumulation of dust or dirt. Use the “SEAT BELT TAPE SET” and perform the following steps.

Inspect the front seat belt through-anchor

1. Pull the seat belt out to a length of 500 mm (19.69 in) or more.
2. Fix the seat belt at the center pillar webbing opening with a clip or other device.
3. Pass a thin wire through the through-anchor webbing opening. Hold both ends of the wire and pull it tauntly while moving it up and down several times along the webbing opening surface to remove dirt stuck there.
4. Any dirt that cannot be removed with the wire can be removed by cleaning the opening with a clean cloth.
5. Apply tape at the point where the webbing contacts the through-anchor webbing opening.
   NOTE:
   Apply the tape so that there is no looseness or wrinkling.

cardiagn.com

6. Remove the clip fixing the seat belt and check that the webbing returns smoothly.

6. Repeat steps above as necessary to check the other seat belts.

SEAT BELT RETRACTOR ON-VEHICLE CHECK

Emergency Locking Retractors (ELR) and Automatic Locking Retractors (ALR)

NOTE:

All seat belt retractors are Emergency Locking Retractors (ELR) type. In an emergency (sudden stop) the retractor will lock and prevent the webbing from extending any further. All 3-point type seat belt retractors except the driver seat belt also have an Automatic Locking Retractors (ALR) mode. The ALR mode (also called child restraint mode) is used when installing child seats. The ALR mode is activated when the seat belt is fully extended. When the webbing is then retracted partially, the ALR mode automatically locks the seat belt in a specific position so the webbing cannot be extended any further. To cancel the ALR mode, allow the seat belt to fully wind back into the retractor.

Check the seat belt retractors with the following test(s) to determine if a retractor assembly is operating properly.

ELR Function Stationary Check

Grasp the shoulder webbing and pull forward quickly. The retractor should lock and prevent the belt from extending further.

ALR Function Stationary Check

1. Pull out the entire length of seat belt from retractor until a click is heard.
2. Retract the webbing partially. A clicking noise should be heard as the webbing retracts indicating that the retractor is in the Automatic Locking Retractors (ALR) mode.
3. Grasp the seat belt and try to pull out the retractor. The webbing must lock and not extend any further. If NG, replace the retractor assembly.
4. Allow the entire length of the webbing to retract to cancel the automatic locking mode.

ELR Function Moving Check

WARNING:

Perform the following test in a safe, open area clear of other vehicles and obstructions (for example, a large, empty parking lot). Road surface must be paved and dry. DO NOT perform the following test on wet or gravel roads or on public streets and highways. This could result in an accident and serious personal injury. The driver and passenger must be prepared to brace themselves in the event that the retractor does not lock.

1. Fasten driver seat belt. Buckle a passenger into the seat for the belt that is to be tested.
2. Proceed to the designated safe area.
3. Drive the vehicle at approximately 16 km/h (10 MPH). Notify any passengers of a pending sudden stop and the driver and passenger must be prepared to brace themselves in the event that the retractor does not lock, apply brakes firmly and make a very hard stop.

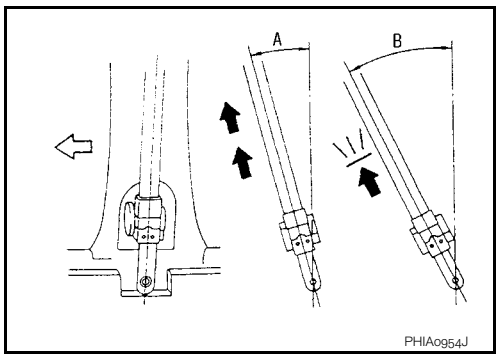
During stop, seat belts should lock and not be extended. If the seat belt retractor assembly does not lock, perform the retractor off-vehicle check.

SEAT BELT RETRACTOR OFF-VEHICLE CHECK

1. Remove the seat belt retractor.
   Remove the front seat belt assembly, refer to SB-5, "SEAT BELT RETRACTOR : Exploded View".
2. Slowly pull out webbing while tilting the retractor assembly forward from the mounted position without twisting the retractor assembly as shown in the illustration.

cardiagn.com

A : The webbing can be pulled out in case the retractor is tilted 15° degrees or less.
B : The webbing cannot be pulled out in case the retractor is tilted 27° degrees or more.
- A and B show tilting angles.
- ⇦ : Vehicle front.



Replace the seat belt assembly if it does not operate normally.

REMOVAL

CAUTION:

cardiagn.com

Before servicing SRS, turn the ignition switch off, disconnect both battery cables and wait at least 3 minutes.

REMOVAL OF DRIVER SEAT BELT RETRACTOR

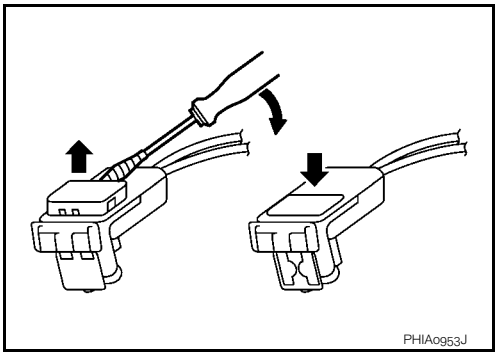
1. Remove rear kicking plate. Refer to INT-14, "Removal and Installation".
2. Remove upper and lower center pillar garnish. Refer to INT-14, "Removal and Installation".
3. Remove lower anchor.
   - Pull floor carpet.
   - Disconnect front seat belt pre-tensionner connector.
   - Remove pre-tensionner fixing bolt.
   - Push lower anchor through center pillar garnish.
4. Remove shoulder anchor.
   - Remove anchor fixing bolt.
5. Remove seat belt shoulder adjuster.
   - Remove upper fixing bolt.
   - Pull upward to release seat belt shoulder adjuster from center pillar.
6. Remove seat belt retractor.
   - Remove retractor fixing bolts.
   - Disconnect retractor connector.
   - Remove seat belt retractor.

REMOVAL OF PASSENGER SEAT BELT RETRACTOR

1. Remove rear kicking plate. Refer to INT-14, "Removal and Installation".
2. Remove upper and lower center pillar garnish. Refer to INT-14, "Removal and Installation".
3. Remove lower anchor.
   - Pull floor carpet.
   - Remove anchor plate finisher.
   - Remove anchor plate fixing bolt.
4. Remove shoulder anchor.
   - Remove anchor fixing bolt.
5. Remove seat belt shoulder adjuster.
   - Remove upper fixing bolt.
   - Pull upward to release seat belt shoulder adjuster from center pillar.
6. Remove seat belt retractor.
   - Remove retractor fixing bolts.
   - Disconnect retractor connector.
   - Remove seat belt retractor.

CAUTION:

- **For installing/removing seat belt pre-tensioner connector, insert thin screwdriver wrapped in tape into notch, lift lock and remove connector.**
- **Install connector with lock raised, and push lock into connector.**



INSTALLATION

Install in the reverse order of removal.

SEAT BELT BUCKLE

SEAT BELT BUCKLE : Inspection

INFOID:0000000001093944

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attached hardware after any collision. NISSAN/INFINITI recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pretensioners should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident (i.e. torn webbing, bent retractor or guide, etc.).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

PRELIMINARY CHECKS

1. Check the seat belt warning lamp/chime for proper operation as follows:

a. Turn ignition switch ON. The seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about six seconds.

b. Fasten driver seat belt. The seat belt warning lamp should turn off and the chime (if sounding) should stop.

2. If the air bag warning lamp is blinking, conduct self-diagnosis using CONSULT-III and air bag warning lamp. Refer to SRC-10, "Diagnosis Description".

3. Check that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.

4. Repeat steps above as necessary to check the other seat belts.

REMOVAL

Remove the seat belt buckle.

- Remove the front seat from vehicle. Refer to SE-24, "Removal and Installation".
- Remove front seat inner finisher. Refer to SE-25, "Disassembly and Assembly".
- Disconnect the seat belt buckle harness connector and harness clamp.
- Remove the seat belt buckle anchor fixing bolt.

INSTALLATION

Installation is basically the reverse order of removal.

REAR SEAT BELT
OUTER SEAT BELT RETRACTOR
OUTER SEAT BELT RETRACTOR : Inspection

INFOID:0000000001093947

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attached hardware after any collision. NISSAN/INFINITI recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pretensioners should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident (i.e. torn webbing, bent retractor or guide, etc.).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioners should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

PRELIMINARY CHECKS

1. Check the seat belt warning lamp/chime for proper operation as follows:

a. Turn ignition switch ON. The seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about six seconds.

b. Fasten driver seat belt. The seat belt warning lamp should turn off and the chime (if sounding) should stop.

2. If the air bag warning lamp is blinking, conduct self-diagnosis with CONSULT-III and air bag warning lamp. Refer to SRC-10, "Diagnosis Description".

3. Check that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.

4. Check retractor operation:

a. Fully extend the seat belt webbing and check for twists, tears or other damage.

b. Allow the seat belt to retract. Ensure that webbing returns smoothly and completely into the retractor. If the seat belt does not return smoothly, wipe the inside of the loops with a clean paper cloth. Because dirt build-up in the loops of that upper anchors can cause the seat belts to retract slowly.

c. Fasten the seat belt. Check the seat belt returns smoothly and completely to the retractor. If the webbing does not return smoothly, the cause may be an accumulation of dust or dirt. Use the “SEAT BELT TAPE SET” and perform the following steps.

5. Repeat steps above as necessary to check the other seat belts.

SEAT BELT RETRACTOR ON-VEHICLE CHECK

Emergency Locking Retractors (ELR) and Automatic Locking Retractors (ALR)

NOTE:

All seat belt retractors are Emergency Locking Retractors (ELR) type. In an emergency (sudden stop) the retractor will lock and prevent the webbing from extending any further. All 3-point type seat belt retractors except the driver's seat belt also have an Automatic Locking Retractors (ALR) mode. The ALR mode (also called child restraint mode) is used when installing child seats. The ALR mode is activated when the seat belt is fully extended. When the webbing is then retracted partially, the ALR mode automatically locks the seat belt in a specific position so the webbing cannot be extended any further. To cancel the ALR mode, allow the seat belt to fully wind back into the retractor.

Check the seat belt retractors with the following test(s) to determine if a retractor assembly is operating properly.

ELR Function Stationary Check

cardiagn.com

Grasp the shoulder webbing and pull forward quickly. The retractor should lock and prevent the belt from extending further.

ALR Function Stationary Check

1. Pull out the entire length of seat belt from retractor until a click is heard.
2. Retract the webbing partially. A clicking noise should be heard as the webbing retracts indicating that the retractor is in the Automatic Locking Retractors (ALR) mode.
3. Grasp the seat belt and try to pull out the retractor. The webbing must lock and not extend any further. If NG, replace the retractor assembly.
4. Allow the entire length of the webbing to retract to cancel the automatic locking mode.

ELR Function Moving Check

WARNING:

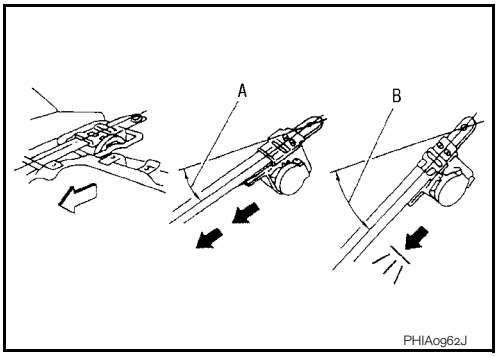
Perform the following test in a safe, open area clear of other vehicles and obstructions (for example, a large, empty parking lot). Road surface must be paved and dry. DO NOT perform the following test on wet or gravel roads or on public streets and highways. This could result in an accident and serious personal injury. The driver and passenger must be prepared to brace themselves in the event that the retractor does not lock.

1. Fasten driver seat belt. Buckle a passenger into the seat for the belt that is to be tested.
2. Proceed to the designated safe area.
3. Drive the vehicle at approximately 16 km/h (10 MPH). Notify any passengers of a pending sudden stop and the driver and passenger must be prepared to brace themselves in the event that the retractor does not lock, apply brakes firmly and make a very hard stop.

During stop, seat belts should lock and not be extended. If the seat belt retractor assembly does not lock, perform the retractor off-vehicle check.

SEAT BELT RETRACTOR OFF-VEHICLE CHECK

1. Remove the seat belt retractor.
   Remove the rear seat belt assembly, refer to SB-12, "OUTER SEAT BELT RETRACTOR : Removal and Installation".
2. Slowly pull out webbing while tilting the retractor assembly forward from the mounted position without twisting the retractor assembly as shown in the illustration.
   A : The webbing can be pulled out in case the retractor is tilted 15° degrees or less.
   B : The webbing cannot be pulled out in case the retractor is tilted 27° degrees or more.
   - A and B show tilting angles.
   - ⇦ : Vehicle front.



Replace the seat belt assembly if it does not operate normally.

INFOID:0000000001109218

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attached hardware after any collision. NISSAN/INFINITI recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pretensioners should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident (i.e. torn webbing, bent retractor or guide, etc.).
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioners should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

PRELIMINARY CHECKS

1. Check the seat belt warning lamp/chime for proper operation as follows:

a. Turn ignition switch ON. The seat belt warning lamp should illuminate. Also, the seat belt warning chime should sound for about six seconds.

b. Fasten driver seat belt. The seat belt warning lamp should turn off and the chime (if sounding) should stop.

2. If the air bag warning lamp is blinking, conduct self-diagnosis with CONSULT-III and air bag warning lamp. Refer to SRC-10, "Diagnosis Description".
3. Check that the seat belt retractor, seat belt anchor and buckle bolts are securely attached.
4. Check retractor operation:

a. Fully extend the seat belt webbing and check for twists, tears or other damage.

b. Allow the seat belt to retract. Ensure that webbing returns smoothly and completely into the retractor. If the seat belt does not return smoothly, wipe the inside of the loops with a clean paper cloth. Because dirt build-up in the loops of that upper anchors can cause the seat belts to retract slowly.

c. Fasten the seat belt. Check the seat belt returns smoothly and completely to the retractor. If the webbing does not return smoothly, the cause may be an accumulation of dust or dirt. Use the “SEAT BELT TAPE SET” and perform the following steps.

5. Repeat steps above as necessary to check the other seat belts.

SEAT BELT RETRACTOR ON-VEHICLE CHECK

Emergency Locking Retractors (ELR) and Automatic Locking Retractors (ALR)

NOTE:

All seat belt retractors are Emergency Locking Retractors (ELR) type. In an emergency (sudden stop) the retractor will lock and prevent the webbing from extending any further. All 3-point type seat belt retractors except the driver's seat belt also have an Automatic Locking Retractors (ALR) mode. The ALR mode (also called child restraint mode) is used when installing child seats. The ALR mode is activated when the seat belt is fully extended. When the webbing is then retracted partially, the ALR mode automatically locks the seat belt in a specific position so the webbing cannot be extended any further. To cancel the ALR mode, allow the seat belt to fully wind back into the retractor.

Check the seat belt retractors with the following test(s) to determine if a retractor assembly is operating properly.

ELR Function Stationary Check

Grasp the shoulder webbing and pull forward quickly. The retractor should lock and prevent the belt from extending further.

ALR Function Stationary Check

1. Pull out the entire length of seat belt from retractor until a click is heard.
2. Retract the webbing partially. A clicking noise should be heard as the webbing retracts indicating that the retractor is in the Automatic Locking Retractors (ALR) mode.
3. Grasp the seat belt and try to pull out the retractor. The webbing must lock and not extend any further. If NG, replace the retractor assembly.
4. Allow the entire length of the webbing to retract to cancel the automatic locking mode.

ELR Function Moving Check

WARNING:

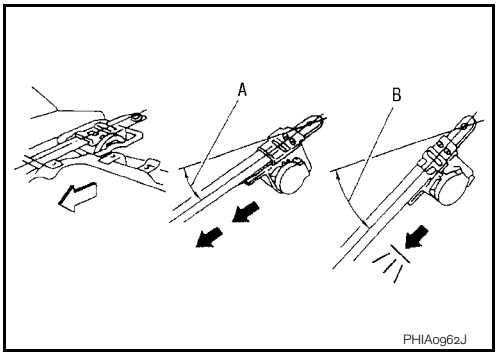
Perform the following test in a safe, open area clear of other vehicles and obstructions (for example, a large, empty parking lot). Road surface must be paved and dry. DO NOT perform the following test on wet or gravel roads or on public streets and highways. This could result in an accident and serious personal injury. The driver and passenger must be prepared to brace themselves in the event that the retractor does not lock.

1. Fasten driver seat belt. Buckle a passenger into the seat for the belt that is to be tested.
2. Proceed to the designated safe area.
3. Drive the vehicle at approximately 16 km/h (10 MPH). Notify any passengers of a pending sudden stop and the driver and passenger must be prepared to brace themselves in the event that the retractor does not lock, apply brakes firmly and make a very hard stop.

During stop, seat belts should lock and not be extended. If the seat belt retractor assembly does not lock, perform the retractor off-vehicle check.

SEAT BELT RETRACTOR OFF-VEHICLE CHECK

1. Remove the seat belt retractor.
   Remove the rear seat belt assembly, refer to SB-15, "CENTER SEAT BELT RETRACTOR : Removal and Installation".
2. Slowly pull out webbing while tilting the retractor assembly forward from the mounted position without twisting the retractor assembly as shown in the illustration.
   A : The webbing can be pulled out in case the retractor is tilted 15° degrees or less.
   B : The webbing cannot be pulled out in case the retractor is tilted 27° degrees or more.
   - A and B show tilting angles.
   - ⇦ : Vehicle front.



Replace the seat belt assembly if it does not operate normally.

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000001059405

DETAILED FLOW

1.OBTAIN INFORMATION ABOUT SYMPTOM

Interview the customer to obtain the malfunction information (conditions and environment when the malfunction occurred) as much as possible when the customer brings the vehicle in.

>> GO TO 2.

2.REPRODUCE THE MALFUNCTION INFORMATION

Check the malfunction on the vehicle that the customer describes.
Inspect the relation of the symptoms and the condition when the symptoms occur.

>> GO TO 3.

3.PERFORM “BASIC INSPECTION”

Perform the basic inspection.Refer to SE-22, "Basic Inspection".

>> GO TO 4.

4.IDENTIFY THE MALFUNCTIONING SYSTEM WITH “SYMPTOM DIAGNOSIS”

Use “Symptom diagnosis” from the symptom inspection result in step 2. Then identify where to start performing the diagnosis based on possible causes and symptoms.

>> GO TO 5.

5.IDENTIFY MALFUNCTIONING PARTS WITH “COMPONENT DIAGNOSIS”

Perform the diagnosis with “Component diagnosis” of the applicable system.

>> GO TO 6.

6.REPAIR OR REPLACE THE MALFUNCTIONING PARTS

Repair or replace the specified malfunctioning parts.

>> GO TO 7.

7.FINAL CHECK

Check that malfunctions are not reproduced when obtaining the malfunction information from the customer, referring to the symptom inspection result in step 2.

Is the malfunctioning part repaired or replaced?

YES >> Trouble diagnosis is completed.
NO >> GO TO 3.

carmanualsgn.com

FUNCTION DIAGNOSIS

HEATED SEAT

System Description

INFOID:0000000001059412

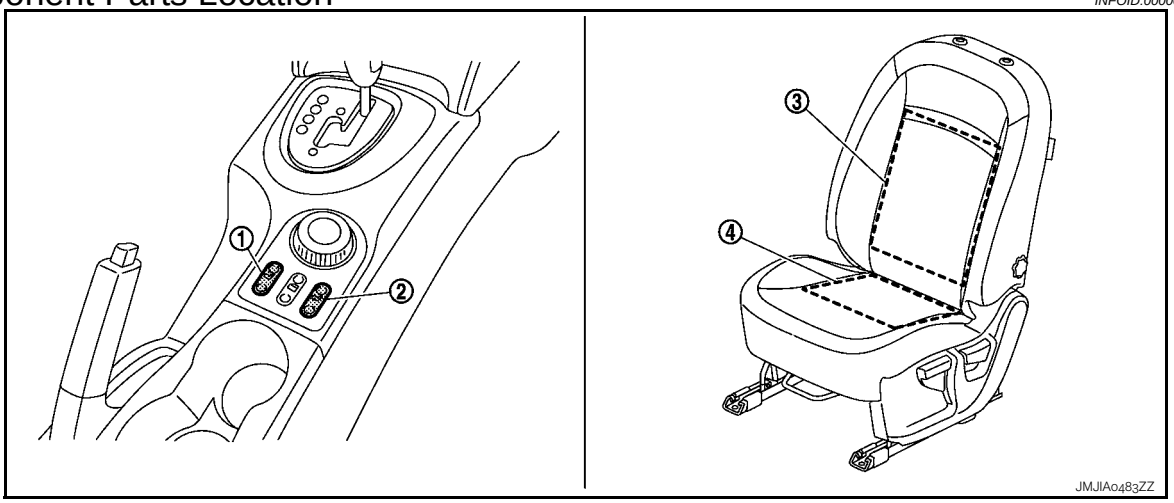
Heated seat is a system that operates when ignition switch is in ON or START position.

HEATER OPERATION

- While operating the heated seat switch, seat cushion heater and seat back heater operate.
- Temperature of seat can be adjusted by operating on heated seat switch.

Component Parts Location

INFOID:0000000001059413



1. Heated seat switch (LH) M56
2. Heated seat switch (RH) M55
3. Seat back heater unit
4. Seat cushion heater unit

Component Description

INFOID:0000000001059414

Item	Function
Heated seat switch	• Power is supplied to each heater. • Depending on LOW/HIGH position of switch, operating heater number is changeable.
Seat cushion heater	Built-in seat cushion, the heater operates with the power supplied by heater seat switch.
Seat back heater	Built-in seatback, the heater operates with the power supplied by heater seat switch.

cardiagn.com

COMPONENT DIAGNOSIS

HEATED SEAT POWER SUPPLY AND GROUND CIRCUIT

Component Function Check

INFOID:0000000001059420

1.CHECK HEATED SEAT FUNCTION

1. Turn ignition switch ON.
2. Check operation of heated seat with heated seat switch.

Is the inspection result normal?

YES >> Heated seat power supply and ground circuit are OK.
NO >> Refer to SE-5, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001059421

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect heated seat switch connector.
3. Check voltage between heated seat switch (LH) and ground.

Terminals			Voltage (V) (Approx.)
(+)		(-)	
Heated seat switch connector	Terminal		
M55	3	Ground	Battery voltage

4. Check voltage between heated seat switch (RH) and ground.

Terminals			Voltage (V) (Approx.)
(+)		(-)	
Heated seat switch connector	Terminal		
M56	3	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace power supply circuit.

2.CHECK GROUND CIRCUIT

1. Check continuity between heated seat switch (LH) and ground.

Heated seat switch connector	Terminal		Continuity
M55	5	Ground	Existed
	6		

2. Check continuity between heated seat switch (RH) and ground.

Heated seat switch connector	Terminal		Continuity
M56	5	Ground	Existed
	6		

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace ground circuit.

HEATED SEAT SWITCH

Description

INFOID:0000000001059434

- Power is supplied to each heater.
- Temperature of seat can be adjusted by operating on heated seat switch.

Component Function Check

INFOID:0000000001059435

1.CHECK HEATED SEAT SWITCH FUNCTION

1. Turn ignition switch ON.
2. Check heated seat operation with heated seat switch.

Is the inspection results normal?

YES >> Power seat switch is OK.
NO >> Refer to SE-6, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001059436

1.CHECK HEATED SEAT SWITCH SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect heated seat switch and heated seat connector.
3. Check continuity between heated seat switch and heated seat connector.

Heated seat switch connector	Terminal	Heated seat connector	Terminal	Continuity
M55 (LH) M56 (RH)	2	B20 (LH) B21 (RH)	3	Existed
	4		1	

4. Check continuity between heated seat switch and ground.

Heated seat switch connector	Terminal		Continuity
M55 (LH) M56 (RH)	2	Ground	Not existed
	4		

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace circuit.

2.CHECK HEATED SEAT SWITCH

Check heated seat switch.
Refer to SE-6, "Component Inspection".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Heated seat switch. Refer to SE-35, "Removal and Installation".

Component Inspection

INFOID:0000000001059437

NOTE:
Same component inspection procedure for driver seat and passenger seat.

1.CHECK HEATED SEAT SWITCH

1. Turn ignition switch OFF.
2. Disconnect heated seat switch connector.
3. Check continuity between heated seat switch terminals.

cardiagn.com

Terminal		Switch condition	Continuity
3	2	High	Existed
		OFF	Not existed
		Low	Not existed

		OFF	Not existed
		Low	Existed
3 (+)	6 (-)	High	Existed
		OFF	Not existed
		Low	Existed
3 (-)	6 (+)	High	Not existed
		OFF	Not existed
		Low	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace heated seat switch. Refer to SE-35, "Removal and Installation".

carmanualsonline.com

SEAT HEATER

Description

INFOID:0000000001093529

- With a built-in seat cushion, the heater operates with the power supplied by heater seat switch.
- With a built-in seat back, the heater operates with the power supplied by heater seat switch.

Component Function Check

INFOID:0000000001093530

1.CHECK SEAT HEATER FUNCTION

Check heated operation with heated seat switch.

Is the inspection results normal?

YES >> Power seat switch is OK.
NO >> Refer to SE-8, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001093531

1.CHECK SEAT HEATER GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect heated seat connector.
3. Check continuity between heated seat connector and ground.

Heated seat connector	Terminal	Ground	Continuity
B20 (LH) B21 (RH)	2		Existed

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace circuit.

2.CHECK SEAT HEATER UNIT

Check seat heater unit.
Refer to SE-8, "Component Inspection"

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Replace seat heater unit. Refer to SE-25, "Disassembly and Assembly".

Component Inspection

INFOID:0000000001093548

1.CHECK SEAT HEATER

1. Turn ignition switch OFF.
2. Disconnect heated seat connector.
3. Check continuity between heated seat terminals.

Heated seat connector	Terminal		Continuity
B20 (LH) B21 (RH)	1	2	Existed
	3		

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace seat heater unit.Refer to SE-25, "Disassembly and Assembly".

SYMPTOM DIAGNOSIS

BOTH DRIVER SEAT HEATER AND PASSENGER SEAT HEATER DO NOT OPERATE

Diagnosis Procedure

INFOID:0000000001059478

1. CHECK HEATED SEAT POWER SUPPLY AND GROUND CIRCUIT

Check heated seat power supply and ground circuit.
Refer to SE-5, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

carmanualsonline.com

BOTH DRIVER SEAT HEATER AND PASSENGER SEAT HEATER DO NOT OPERATE

Diagnosis Procedure

INFOID:0000000001059479

1.CHECK HEATED SEAT POWER SUPPLY AND GROUND CIRCUIT

Check heated seat power supply and ground circuit.
Refer to SE-5, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2.CHECK HEATED SEAT SWITCH

Check heated seat switch.
Refer to SE-6, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace the malfunctioning parts.

3.CHECK SEAT HEATER

Check seat heater.
Refer to SE-8, "Component Function Check".

Is the inspection result normal?

YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

PASSENGER SIDE HEATER DOES NOT OPERATE

Diagnosis Procedure

INFOID:0000000001059480

1.CHECK HEATED SEAT POWER SUPPLY AND GROUND CIRCUIT

Check heated seat power supply and ground circuit.
Refer to SE-5, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2.CHECK HEATED SEAT SWITCH

Check heated seat switch.
Refer to SE-6, "Component Function Check".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace the malfunctioning parts.

3.CHECK SEAT HEATER

Check seat heater.
Refer to SE-8, "Component Function Check".

Is the inspection result normal?

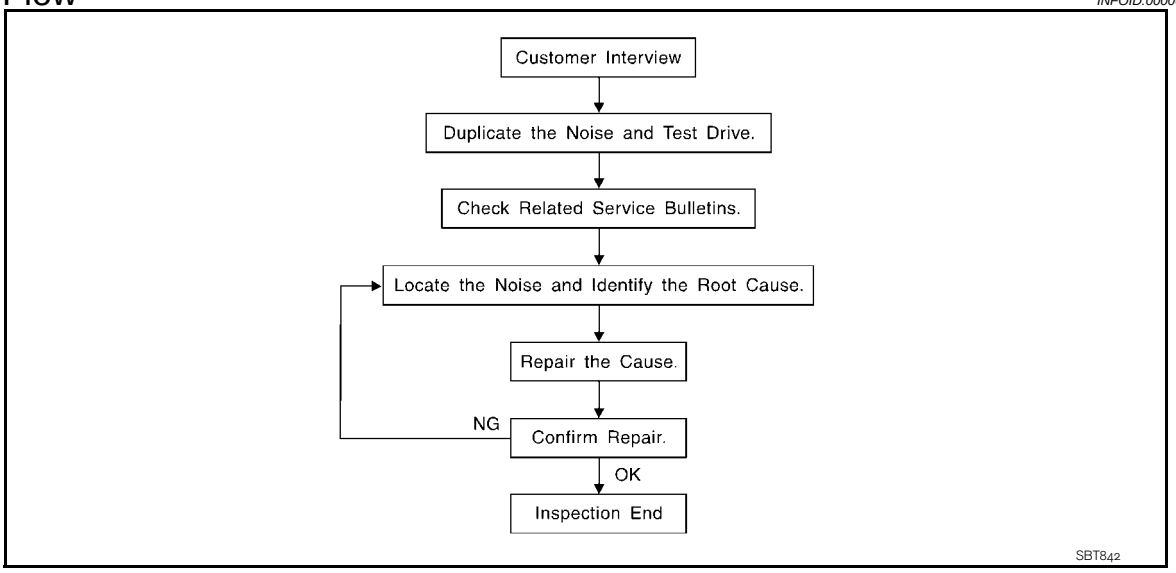
YES >> Refer to GI-39, "Intermittent Incident".
NO >> Repair or replace the malfunctioning parts.

carmanualsonline.com

SQUEAK AND RATTLE TROUBLE DIAGNOSIS

Work Flow

INFOID:0000000001115891



CUSTOMER INTERVIEW

Interview the customer if possible, to determine the conditions that exist when the noise occurs. Use the Diagnostic Worksheet during the interview to document the facts and conditions when the noise occurs and any of the customer's comments; refer to SE-18, "Diagnostic Worksheet". This information is necessary to duplicate the conditions that exist when the noise occurs.

- The customer may not be able to provide a detailed description or the location of the noise. Attempt to obtain all the facts and conditions that exist when the noise occurs (or does not occur).
- If there is more than one noise in the vehicle, be sure to diagnose and repair the noise that the customer is concerned about. This can be accomplished by a test drive with the customer.
- After identifying the type of noise, isolate the noise in terms of its characteristics. The noise characteristics are provided so the customer, service adviser and technician are all speaking the same language when defining the noise.
- Squeak – (Like tennis shoes on a clean floor)
  Squeak characteristics include the light contact/fast movement/brought on by road conditions/hard surfaces = higher pitch noise/softer surfaces = lower pitch noises/edge to surface = chirping
- Creak – (Like walking on an old wooden floor)
  Creak characteristics include firm contact/slow movement/twisting with a rotational movement/pitch dependent on materials/often brought on by activity.
- Rattle – (Like shaking a baby rattle)
  Rattle characteristics include the fast repeated contact/vibration or similar movement/loose parts/missing clip or fastener/incorrect clearance.
- Knock – (Like a knock on a door)
  Knock characteristics include hollow sounding/sometimes repeating/often brought on by driver action.
- Tick – (Like a clock second hand)
  Tick characteristics include gentle contacting of light materials/loose components/can be caused by driver action or road conditions.
- Thump – (Heavy, muffled knock noise)
  Thump characteristics include softer knock/dead sound often brought on by activity.
- Buzz – (Like a bumble bee)
  Buzz characteristics include high frequency rattle/firm contact.
- Often the degree of acceptable noise level will vary depending upon the person. A noise that you may judge as acceptable may be very irritating to the customer.
- Weather conditions, especially humidity and temperature, may have a great effect on noise level.

DUPLICATE THE NOISE AND TEST DRIVE

If possible, drive the vehicle with the customer until the noise is duplicated. Note any additional information on the Diagnostic Worksheet regarding the conditions or location of the noise. This information can be used to duplicate the same conditions when you confirm the repair.

cardiagn.com

If the noise can be duplicated easily during the test drive, to help identify the source of the noise, try to duplicate the noise with the vehicle stopped by doing one or all of the following:

1) Close a door.
2) Tap or push/pull around the area where the noise appears to be coming from.
3) Rev the engine.
4) Use a floor jack to recreate vehicle “twist”.
5) At idle, apply engine load (electrical load, half-clutch on M/T model, drive position on A/T model).
6) Raise the vehicle on a hoist and hit a tire with a rubber hammer.

- Drive the vehicle and attempt to duplicate the conditions the customer states exist when the noise occurs.
- If it is difficult to duplicate the noise, drive the vehicle slowly on an undulating or rough road to stress the vehicle body.

CHECK RELATED SERVICE BULLETINS

After verifying the customer concern or symptom, check ASIST for Technical Service Bulletins (TSB) related to that concern or symptom.
If a TSB relates to the symptom, follow the procedure to repair the noise.

LOCATE THE NOISE AND IDENTIFY THE ROOT CAUSE

1. Narrow down the noise to a general area. To help pinpoint the source of the noise, use a listening tool (Engine Ear or mechanics stethoscope).
2. Narrow down the noise to a more specific area and identify the cause of the noise by:

- removing the components in the area that you suspect the noise is coming from.
  Do not use too much force when removing clips and fasteners, otherwise clips and fastener can be broken or lost during the repair, resulting in the creation of new noise.
- tapping or pushing/pulling the component that you suspect is causing the noise.
  Do not tap or push/pull the component with excessive force, otherwise the noise will be eliminated only temporarily.
- feeling for a vibration with your hand by touching the component(s) that you suspect is (are) causing the noise.
- placing a piece of paper between components that you suspect are causing the noise.
- looking for loose components and contact marks.
  Refer to SE-16, "Inspection Procedure".

REPAIR THE CAUSE

- If the cause is a loose component, tighten the component securely.
- If the cause is insufficient clearance between components:
- separate components by repositioning or loosening and retightening the component, if possible.
- insulate components with a suitable insulator such as urethane pads, foam blocks, felt cloth tape or urethane tape are available through your authorized Nissan Parts Department.

CAUTION:
Do not use excessive force as many components are constructed of plastic and may be damaged.
NOTE:

- URETHANE PADS
  Insulates connectors, harness, etc.
- INSULATOR (Foam blocks)
  Insulates components from contact. Can be used to fill space behind a panel.
- INSULATOR (Light foam block)
- FELT CLOTHTAPE
  Used to insulate where movement does not occur. Ideal for instrument panel applications.
  The following materials, not available through NISSAN Parts Department, can also be used to repair squeaks and rattles.
- UHMW(TEFLON) TAPE
  Insulates where slight movement is present. Ideal for instrument panel applications.
- SILICONE GREASE
  Used in place of UHMW tape that will be visible or not fit.
  Note: Will only last a few months.
- SILICONE SPRAY
  Use when grease cannot be applied.
- DUCT TAPE
  Use to eliminate movement.

CONFIRM THE REPAIR

carsign.com

Confirm that the cause of a noise is repaired by test driving the vehicle. Operate the vehicle under the same conditions as when the noise originally occurred. Refer to the notes on the Diagnostic Worksheet.

Inspection Procedure

INFOID:0000000001115892

Refer to Table of Contents for specific component removal and installation information.

INSTRUMENT PANEL

Most incidents are caused by contact and movement between:

1. Cluster lid A and instrument panel
2. Acrylic lens and combination meter housing
3. Instrument panel to front pillar garnish
4. Instrument panel to windshield
5. Instrument panel mounting pins
6. Wiring harnesses behind the combination meter
7. A/C defroster duct and duct joint

These incidents can usually be located by tapping or moving the components to duplicate the noise or by pressing on the components while driving to stop the noise. Most of these incidents can be repaired by applying felt cloth tape or silicon spray (in hard to reach areas). Urethane pads can be used to insulate wiring harness.

CAUTION:

Do not use silicone spray to isolate a squeak or rattle. If you saturate the area with silicone, you will not be able to recheck the repair.

CENTER CONSOLE

Components to pay attention to include:

1. Shifter assembly cover to finisher
2. A/C control unit and cluster lid C
3. Wiring harnesses behind audio and A/C control unit

The instrument panel repair and isolation procedures also apply to the center console.

DOORS

Pay attention to the:

1. Finisher and inner panel making a slapping noise
2. Inside handle escutcheon to door finisher
3. Wiring harnesses tapping
4. Door striker out of alignment causing a popping noise on starts and stops

Tapping or moving the components or pressing on them while driving to duplicate the conditions can isolate many of these incidents. You can usually insulate the areas with felt cloth tape or insulator foam blocks to repair the noise.

TRUNK

Trunk noises are often caused by a loose jack or loose items put into the trunk by the owner.
In addition look for:

1. Trunk lid dumpers out of adjustment
2. Trunk lid striker out of adjustment
3. Trunk lid torsion bars knocking together
4. A loose license plate or bracket

Most of these incidents can be repaired by adjusting, securing or insulating the item(s) or component(s) causing the noise.

SUNROOF/HEADLINING

Noises in the sunroof/headlining area can often be traced to one of the following:

1. Sunroof lid, rail, linkage or seals making a rattle or light knocking noise
2. Sunvisor shaft shaking in the holder
3. Front or rear windshield touching headlining and squeaking

cardiagn.com

Again, pressing on the components to stop the noise while duplicating the conditions can isolate most of these incidents. Repairs usually consist of insulating with felt cloth tape.

SEATS

When isolating seat noise it is important to note the position the seat is in and the load placed on the seat when the noise is present. These conditions should be duplicated when verifying and isolating the cause of the noise.

Cause of seat noise include:

1. Headrest rods and holder
2. A squeak between the seat pad cushion and frame
3. Rear seatback lock and bracket

These noises can be isolated by moving or pressing on the suspected components while duplicating the conditions under which the noise occurs. Most of these incidents can be repaired by repositioning the component or applying urethane tape to the contact area.

UNDERHOOD

Some interior noise may be caused by components under the hood or on the engine wall. The noise is then transmitted into the passenger compartment.

Causes of transmitted underhood noise include:

1. Any component mounted to the engine wall
2. Components that pass through the engine wall
3. Engine wall mounts and connectors
4. Loose radiator mounting pins
5. Hood bumpers out of adjustment
6. Hood striker out of adjustment

These noises can be difficult to isolate since they cannot be reached from the interior of the vehicle. The best method is to secure, move or insulate one component at a time and test drive the vehicle. Also, engine RPM or load can be changed to isolate the noise. Repairs can usually be made by moving, adjusting, securing, or insulating the component causing the noise.

carsign.com

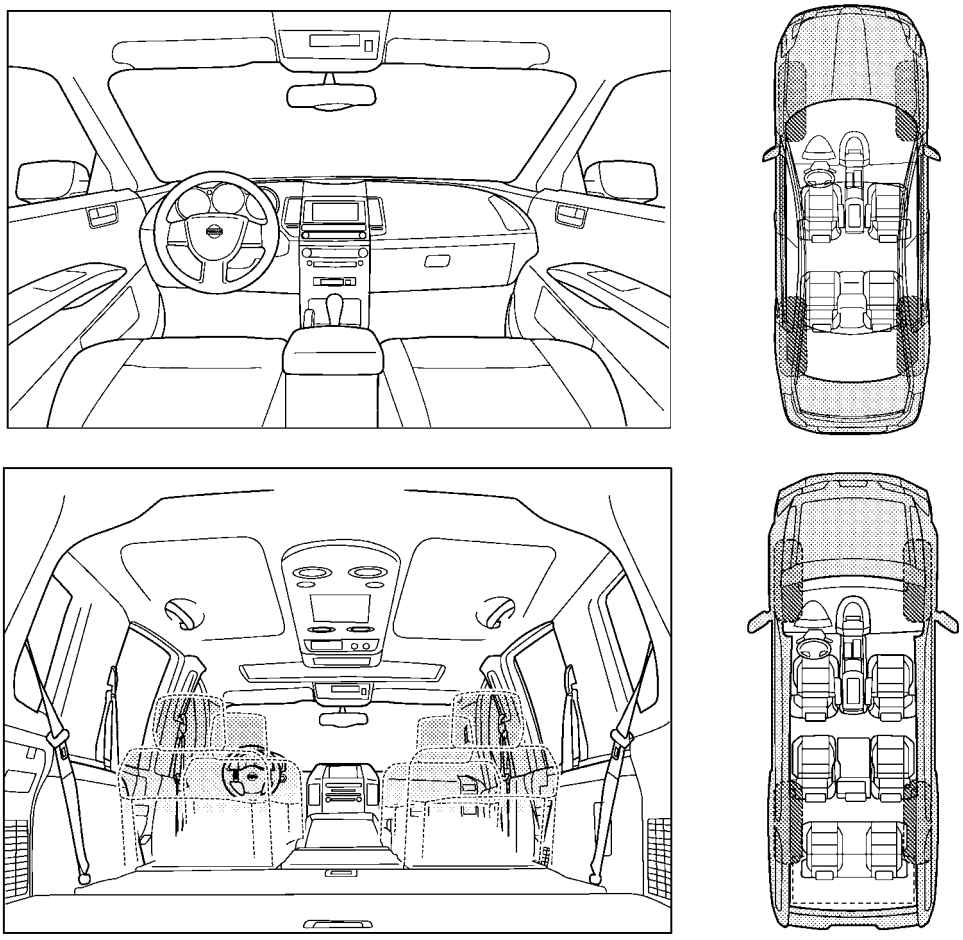
Diagnostic Worksheet

INFOID:0000000001115893

SQUEAK & RATTLE
DIAGNOSTIC WORKSHEET

Dear Nissan Customer:
We are concerned about your satisfaction with your Nissan vehicle. Repairing a squeak or rattle sometimes can be very difficult. To help us fix your Nissan right the first time, please take a moment to note the area of the vehicle where the squeak or rattle occurs and under what conditions. You may be asked to take a test drive with a service advisor or technician to ensure we confirm the noise you are hearing.

I. WHERE DOES THE NOISE COME FROM? (circle the area of the vehicle)
The illustrations are for reference only, and may not reflect the actual configuration of your vehicle.



Continue to page 2 of the worksheet and briefly describe the location of the noise or rattle. In addition, please indicate the conditions which are present when the noise occurs.

PIIB8740E

cardiagn.com

SQUEAK & RATTLE DIAGNOSTIC WORKSHEET - page 2

Briefly describe the location where the noise occurs:

_____

_____

II. WHEN DOES IT OCCUR? (please check the boxes that apply)

- ☐ anytime
- ☐ 1st time in the morning
- ☐ only when it is cold outside
- ☐ only when it is hot outside
- ☐ after sitting out in the rain
- ☐ when it is raining or wet
- ☐ dry or dusty conditions
- ☐ other:

III. WHEN DRIVING:

- ☐ through driveways
- ☐ over rough roads
- ☐ over speed bumps
- ☐ only about ____ mph
- ☐ on acceleration
- ☐ coming to a stop
- ☐ on turns: left, right or either (circle)
- ☐ with passengers or cargo
- ☐ other: _____
- ☐ after driving _____ miles or _____ minutes

IV. WHAT TYPE OF NOISE

- ☐ squeak (like tennis shoes on a clean floor)
- ☐ creak (like walking on an old wooden floor)
- ☐ rattle (like shaking a baby rattle)
- ☐ knock (like a knock at the door)
- ☐ tick (like a clock second hand)
- ☐ thump (heavy, muffled knock noise)
- ☐ buzz (like a bumble bee)

TO BE COMPLETED BY DEALERSHIP PERSONNEL

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001025085

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Service Notice

INFOID:0000000001025086

- When removing or installing various parts, place a cloth or padding onto the vehicle body to prevent scratches.
- Handle trim, molding, instruments, grille, etc. carefully during removing or installing. Be careful not to oil or damage them.
- Apply sealing compound where necessary when installing parts.
- When applying sealing compound, be careful that the sealing compound does not protrude from parts.
- When replacing any metal parts (for example body outer panel, members, etc.), be sure to take rust prevention measures.

Precaution for Work

INFOID:0000000001025087

- When removing or disassembling each component, be careful not to damage or deform it. If a component may be subject to interference, be sure to protect it with a shop cloth.
- When removing (disengaging) components with a screwdriver or similar tool, be sure to wrap the component with a shop cloth or vinyl tape to protect it.
- Protect the removed parts with a shop cloth and keep them.
- Replace a deformed or damaged clip.
- If a part is specified as a non-reusable part, always replace it with new one.
- Be sure to tighten bolts and nuts securely to the specified torque.
- After re-installation is completed, be sure to check that each part works normally.
- Follow the steps below to clean components.

- Water soluble foul: Dip a soft cloth into lukewarm water, and wring the water out of the cloth to wipe the fouled area.
  Then rub with a soft and dry cloth.
- Oily foul: Dip a soft cloth into lukewarm water with mild detergent (concentration: within 2 to 3%), and wipe the fouled area.
  Then dip a cloth into fresh water, and wring the water out of the cloth to wipe the detergent off. Then rub with a soft and dry cloth.

- Do not use organic solvent such as thinner, benzene, alcohol, and gasoline.
- For genuine leather seats, use a genuine leather seat cleaner.

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001059483

BASIC INSPECTION

1. INSPECTION START

1. Check the service history.
2. Check the following parts.

- Fuse/circuit breaker blown.
- Poor connection, open or short circuit of harness connector.
- Battery voltage.

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Repair or replace the malfunctioning parts.

Removal and Installation

INFOID:0000000001025092

cardiagn.com

REMOVAL

CAUTION:

- **When removing and installing, use shop cloths to protect parts from damage.**
- **Before removal, turn ignition switch OFF, disconnect both battery cables, and then wait for at least 3 minutes.**

1. Remove the headrest.
2. Remove the mounting TORX bolts (T50) on the front side of the front seat.
3. Remove the mounting TORX bolts (T50) on the rear side of the front seat.
4. Set seatback in a standing position.
5. Disconnect harness connector under the seat and remove harness securing clips.
6. Remove seat from the vehicle.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Before installation, turn ignition switch OFF, disconnect both battery cables, and then wait for at least 3 minutes.**
- **Clamp the harness in position.**

Disassembly and Assembly

INFOID:0000000001025093

SEATBACK

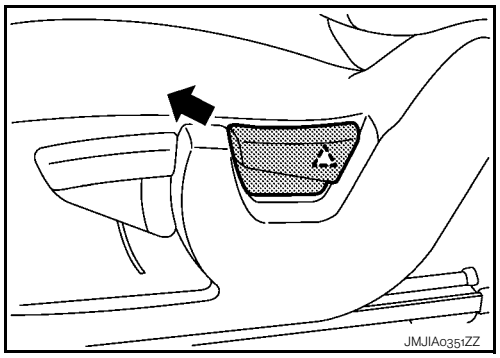
Disassembly

1. Remove the seat cushion outer finisher.
   - Pull out the lifter lever knob while holding and raising the pawls.

     : Pawl

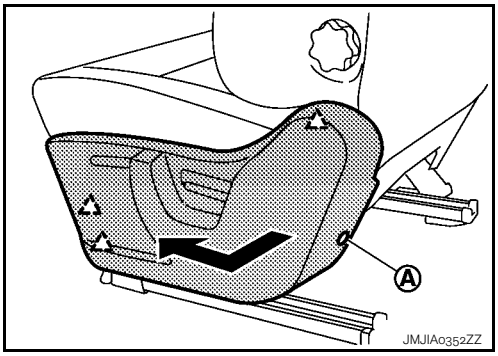
   - Pull out the reclining lever knob while holding and raising the pawls.

     : Pawl



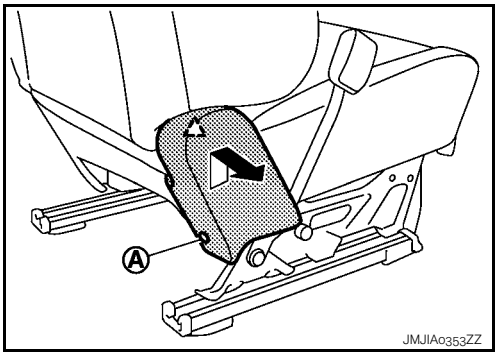
- Remove the TORX bolt (T25) (A).
- Pull the rear side of the seat cushion outer finisher frontward, and then slide it forward to remove the pawls.Remove the seat cushion outer finisher.

: Pawl

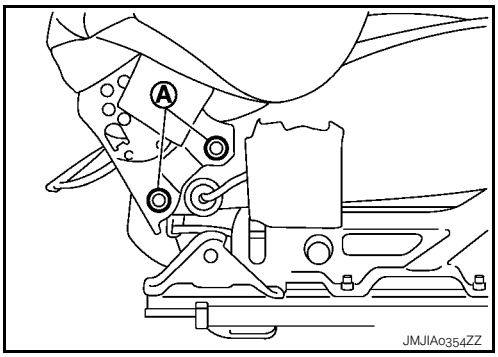


2. Remove the seat cushion inner finisher.
   - Remove the TORX bolt (T25) (A).
   - Pull the rear side of the seat cushion inner finisher frontward, and then slide it upward to remove the pawls.Remove the seat cushion inner finisher.

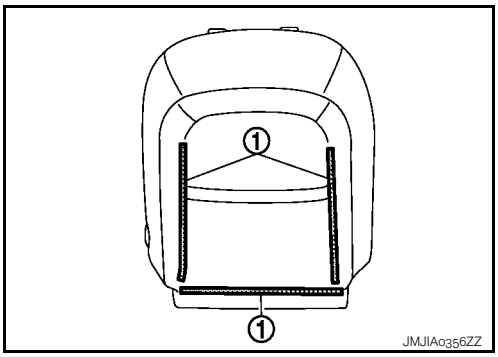
: Pawl



3. Remove the seatback assembly.
   - Disconnect the seat cushion heater harness connect, and remove the harness clamp.
   - Pull out the side air bag harness and seat heater harness from seat cushion trim.
   - Remove the TORX bolt (T50) (A).



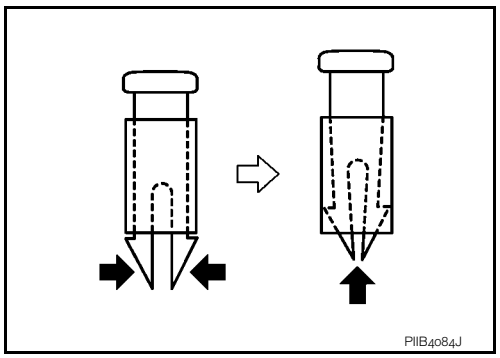
4. Remove the seatback trim and seatback pad.
   - Remove the lumbar support knob.
   - Remove the seatback retainer (1) on the back side of the seatback.



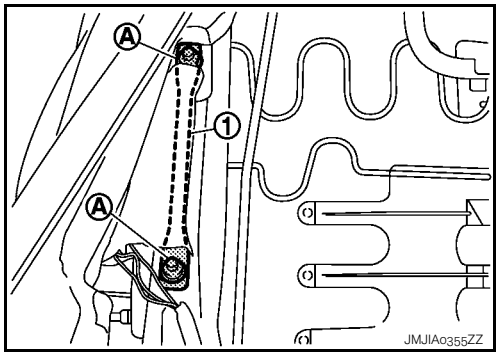
cardiagn.com

- Remove the headrest holder.

CAUTION:
Before installing headrest holder check its orientation. (front/rear and right/left)



- Remove the mounting nut (A), and then remove side air bag rod (1).



- Remove the seatback trim and seatback pad from the seatback frame.
- Remove the hog lings to separate the seatback trim and seatback pad.

5. Remove the air bag module. Refer to SR-12, "Removal and Installation".
6. Remove the lumbar support unit.(Lumbar support model only.)
   - Remove the TORX bolts (T20), and then remove lumbar support knob.
   - Remove the spring, and then remove lumbar support unit.

Assembly

Assemble in the reverse order of disassembly.

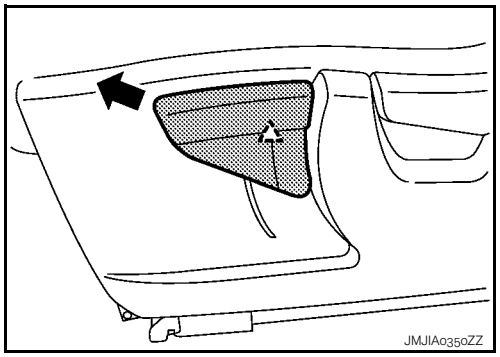
CAUTION:
Install the hog rings of seatback trim in position, and then securely connect the trim or trim cord with the pad side wire.

SEAT CUSHION

Disassembly

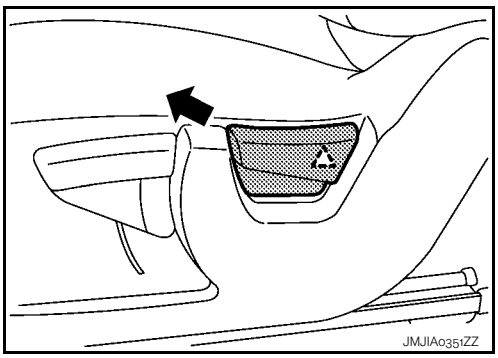
1. Remove the seat cushion outer finisher.
   - Pull out the lifter lever knob while holding and raising the pawls.

: Pawl



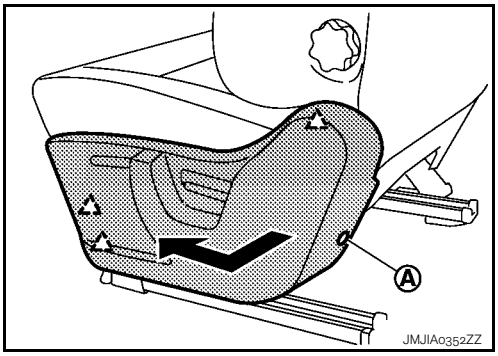
- Pull out the reclining lever knob while holding and raising the pawls.

△ : Pawl



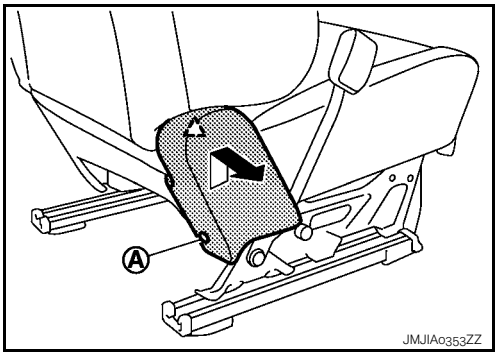
- Remove the TORX bolt (T25) (A).
- Pull the rear side of the seat cushion outer finisher frontward, and then slide it forward to remove the pawls.Remove the seat cushion outer finisher.

△ : Pawl

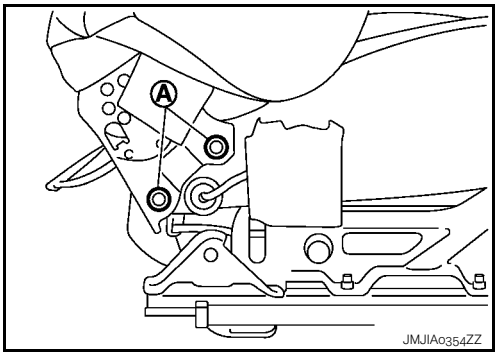


2. Remove the seat cushion inner finisher.
   - Remove the TORX bolt (T25) (A).
   - Pull the rear side of the seat cushion inner finisher frontward, and then slide it upward to remove the pawls.Remove the seat cushion inner finisher.

△ : Pawl



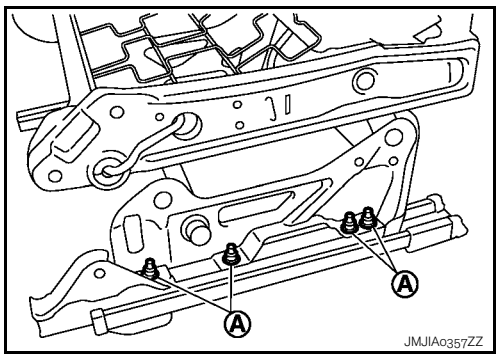
3. Remove the seatback assembly.
   - Disconnect the seat cushion heater harness connect, and remove the harness clamp.
   - Pull out the side air bag harness and seat heater harness from seat cushion trim.
   - Remove the TORX bolt (T50) (A).



4. Remove the seat belt buckle. Refer to SB-8, "SEAT BELT BUCKLE : Removal and Installation".
5. Remove the seat cushion trim and seat cushion pad.
   - Remove the seat cushion retainer.
   - Remove the seat cushion heater harness, and occupant detection unit harness connector.
   - Remove the hog rings, and separate the seat cushion trim and seat cushion pad, seat cushion heater unit and occupant detection unit.

cardiagn.com

6. Remove the seat slide assembly.
   Remove the mounting nuts (A), and them remove seat slide assembly.



7. Remove the front slide cover.
8. Remove the rear slide cover.

Assembly

Assemble in the reverse order of disassembly.

CAUTION:

Install the hog rings of seat cushion trim in position, and then securely connect the trim or trim cord with the pad side wire.

Removal and Installation

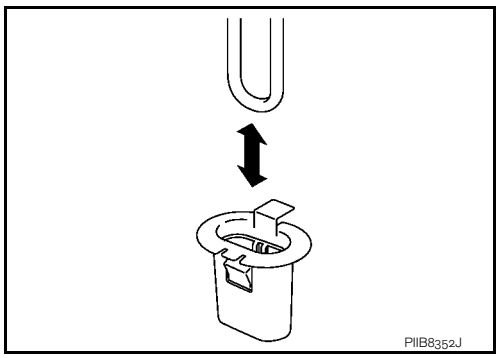
INFOID:0000000001025095

REMOVAL

CAUTION:

When removing and installing, use shop cloths to protect parts from damage.

1. Remove the seat cushion.
   Pull seat cushion up, and then remove the seat cushion from the seat cushion hook.



2. Remove the seatback.
   - Remove the luggage side lower finisher (front). Refer to INT-14, "Removal and Installation".
   - Remove the seatback side bracket (RH) mounting nuts.
   - Remove the seatback assembly (RH) from the vehicle.
   - Remove the seatback side bracket (LH) mounting nuts.
   - Remove the center seatback bracket mounting bolt and nut.
   - Remove the seatback assembly (LH) from the vehicle.
3. Remove the seat striker.
   - Remove the seat striker mounting bolt.
   - Remove the seat striker from the vehicle.
4. Remove the seatback lower support.
   - Remove the seatback lower support mounting bolt.
   - Remove the seatback lower support from the vehicle.
5. Remove the seatback mounting outer bracket.
   - Remove the seatback mounting outer bracket mounting bolt.
   - Remove the seatback mounting outer bracket from the vehicle.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

When removing and installing, use shop cloths to protect parts from damage.

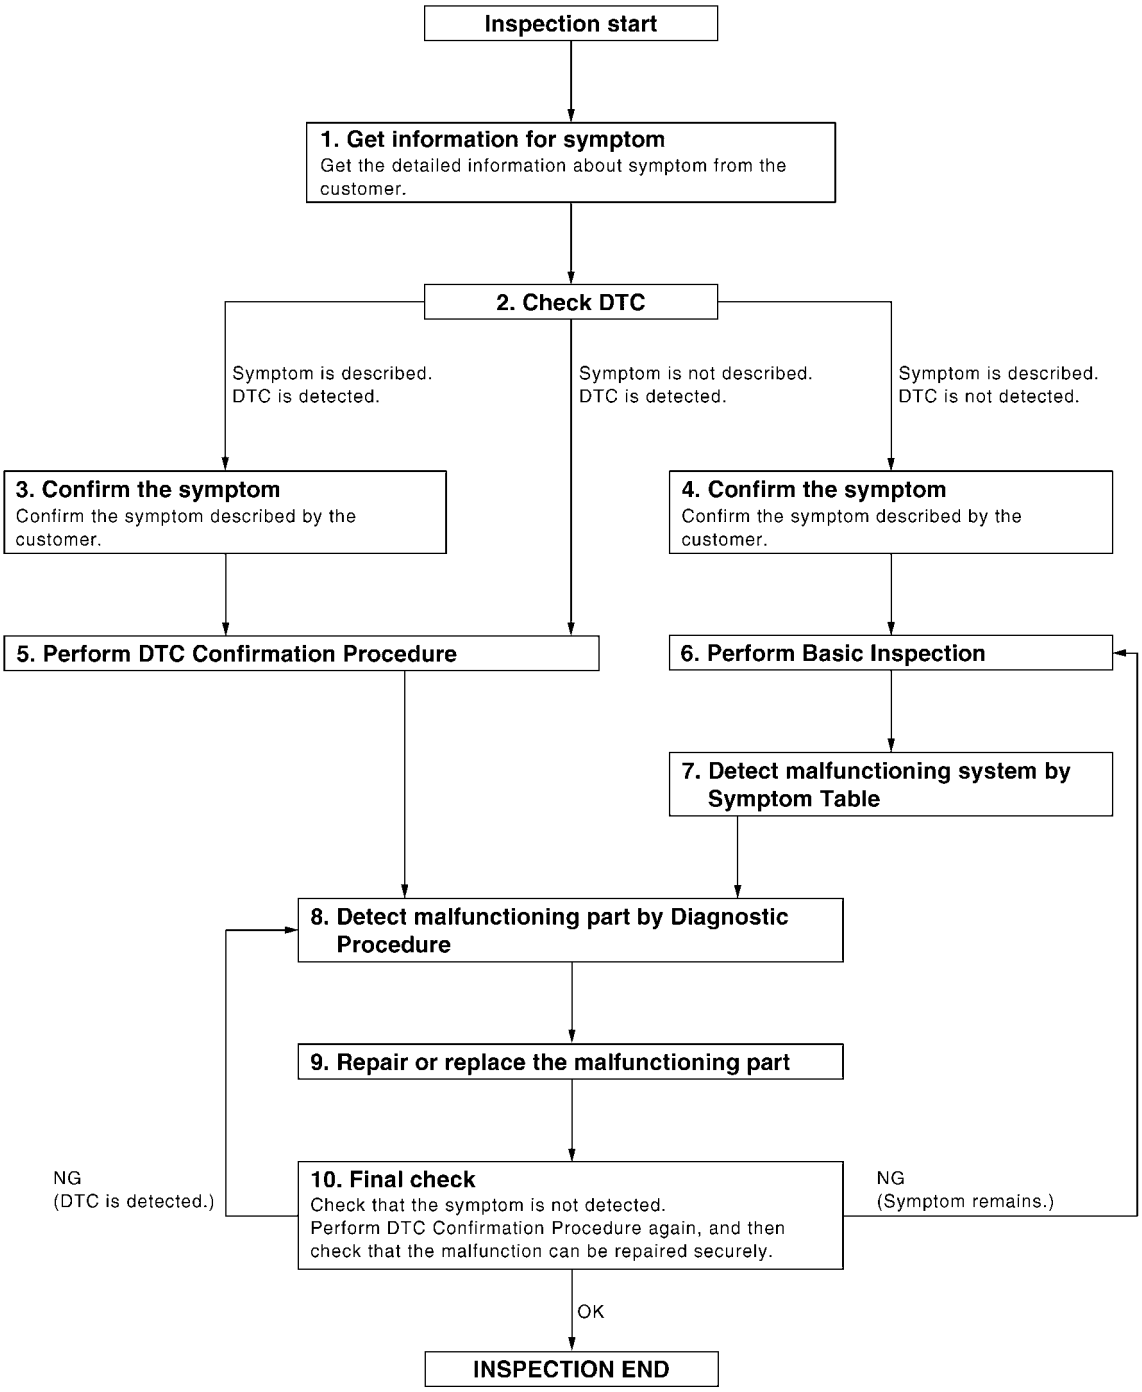
BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000001116419

OVERALL SEQUENCE



JMKIA0101GB

DETAILED FLOW

1.GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred).

>> GO TO 2.

2.CHECK DTC

1. Check DTC for Intelligent Key unit and BCM.
2. Perform the following procedure if DTC is displayed.

- Erase DTC.
- Study the relationship between the cause detected by DTC and the symptom described by the customer.

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC is displayed>>GO TO 3.
Symptom is described, DTC is not displayed>>GO TO 4.
Symptom is not described, DTC is displayed>>GO TO 5.

3.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR” mode and check real-time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR ” mode and check real-time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5.PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC, and then check that DTC is detected again.
If two or more DTCs are detected, refer to SEC-121, "DTC Inspection Priority Chart" (Intelligent Key unit), SEC-95, "DTC Inspection Priority Chart" (BCM) and determine trouble diagnosis order.

Is DTC detected?

YES >> GO TO 8.
NO >> Refer to GI-39, "Intermittent Incident".

6.PERFORM BASIC INSPECTION

Perform Basic Inspection. Refer to SEC-150, "Basic Inspection".

>> GO TO 7.

7.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to Symptom Table based on the confirmed symptom in step 4.

>> GO TO 8.

8.DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.
NOTE:
The Diagnostic Procedure is described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure.

>> GO TO 9.

cardiagn.com

9.REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it.

>> GO TO 10.

10.FINAL CHECK

When DTC was detected in step 9, perform DTC Confirmation Procedure or Component Function Check again, and then check that the malfunctions have been fully repaired.
When symptom was described by the customer, refer to the confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Does the symptom reappear?

YES (DTC is detected)>>GO TO 8.
YES (Symptom remains)>>GO TO 6.
NO >> **INSPECTION END**

autodiagn.com

INSPECTION AND ADJUSTMENT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description

INFOID:0000000001116423

Perform the system initialization when replacing siren.

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement

INFOID:0000000001116424

Refer to the CONSULT-III Operation Manual-NATS.

ECM RE-COMMUNICATING FUNCTION

ECM RE-COMMUNICATING FUNCTION : Description

INFOID:0000000000944523

Performing following procedure can automatically perform re-communication of ECM and BCM, but only when the ECM has been replaced with a new one (*1).
*1: New one means a virgin ECM which has never been energized on-board.
(In this step, initialization procedure by CONSULT-III is not necessary)
NOTE:
- **When registering new Key IDs or replacing the ECM that is not brand new, refer to CONSULT-III Operation Manual NATS.**
- **If multiple keys are attached to the key holder, separate them before work.**
- **Distinguish keys with unregistered key ID from those with registered ID.**

ECM RE-COMMUNICATING FUNCTION : Special Repair Requirement

INFOID:0000000000944524

1.PERFORM ECM RE-COMMUNICATING FUNCTION

1. Install ECM.
2. Using a registered key (*2), turn ignition switch to “ON”.
   *2: To perform this step, use the key that has been used before performing ECM replacement.
3. Maintain ignition switch in “ON” position for at least 5 seconds.
4. Turn ignition switch to “OFF”.
5. Start engine.

Can engine be started?

YES >> Procedure is completed.
NO >> Initialize control unit. Refer to CONSULT-III Operation Manual NATS.

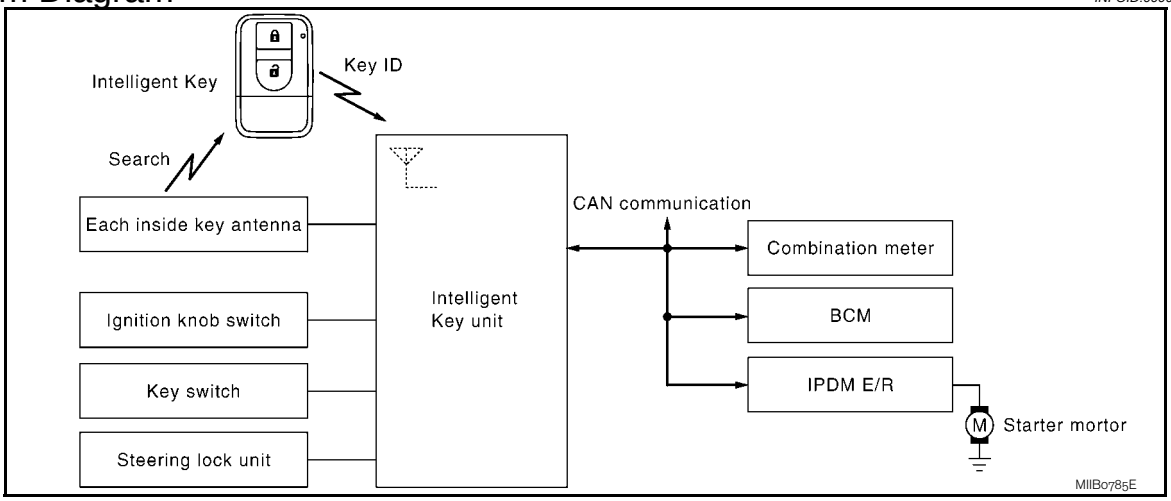
cardiagn.com

FUNCTION DIAGNOSIS

INTELLIGENT KEY SYSTEM/ENGINE START FUNCTION

System Diagram

INFOID:0000000000944525



System Description

INFOID:0000000000944526

Park/neutral position switch (only for CVT models)	P,N range	Engine start function	• Starter relay • Starter motor

BCM

Switch/Input signal	Input signal to BCM	BCM function	Actuator/Output signal
Stop lamp switch	Brake (press/release)	Engine start function	• Inside key antenna (Instrument center, console, rear seat)
Key switch	Mechanical key (insert/remove)		

SYSTEM DESCRIPTION

- The engine start function of Intelligent Key system is a system that makes it possible to start and stop the engine without using the key. It verifies the electronic ID using two-way communications when pressing the ignition knob switch while carrying the Intelligent Key, which operates based on the results of electronic ID verification for Intelligent Key using two-way communications between the Intelligent Key and the vehicle.

NOTE:

The driver should carry the Intelligent Key at all times.

A B C D E F G H I J SEC L M N O P
carsdiagn.com

- Intelligent Key has 2 IDs (for Intelligent Key and for NATS). It can perform the door lock/unlock operation and the engine start operation when the registered Intelligent Key is carried.
- When the Intelligent Key battery is discharged, it can be used as emergency back-up by inserting the mechanical key set in the Intelligent Key to the ignition key cylinder. At that time, perform the NATS ID verification. If it is used when the Intelligent Key is carried, perform the Intelligent Key ID verification.
- If the ID is successfully verified, and when the ignition knob switch is pressed, steering lock will be released and initiating the engine will be possible.
- The door lock/unlock operation can be performed when the Intelligent Key battery is discharged, by operating the driver door key cylinder using the mechanical key set in the Intelligent Key.
- Up to 4 Intelligent Keys can be registered (Including the standard Intelligent Key) on request from the owner.

NOTE:

- Refer to DLK-28, "INTELLIGENT KEY : System Description" for any functions other than engine start function of Intelligent Key system.

PRECAUTIONS FOR INTELLIGENT KEY SYSTEM

- **In the Intelligent Key system of model J10, the transponder [the chip for NATS ID verification] is integrated into the Intelligent Key. (For the conventional models, it is integrated into the mechanical key.) Therefore, the mechanical key cannot perform the ID verification, and thus it cannot start the engine. Instead, the NATS ID verification can be performed by inserting the mechanical key into the key cylinder, and then it can start the engine.**

OPERATION WHEN INTELLIGENT KEY IS CARRIED

1. When the ignition knob switch and brake switch are ON, and Intelligent Key unit is transmit the request signal to the Intelligent Key.
2. The Intelligent Key receives the request signal and transmits the Intelligent Key ID signal to the Intelligent Key unit.
3. The Intelligent Key unit receives the Intelligent Key ID signal and verifies it with the registered ID.
4. Intelligent Key unit transmits the steering lock unlock signal to steering lock unit and turn on the key warning lamp (green) if the verification results are OK. (The detail of key warning lamp operation, refer to DLK-52, "System Description")
5. Release of the steering lock.
6. BCM transmits the starter request signal via CAN communication to IPDM E/R and turns the starter relay in IPDM E/R ON if BCM judges that the engine start condition is satisfied.
7. IPDM E/R turns the starter control relay ON when receiving the starter request signal.
8. When shift position is in P or N position, battery power is supplied through the starter relay and operate the starter motor and to start the cranking.

   CAUTION:

   If a malfunction is detected in the Intelligent Key system, the “KEY” warning lamp in the combination meter illuminates. At that time, the engine cannot be started.

OPERATION RANGE

Engine can be started when Intelligent Key is inside the vehicle. However, sometimes engine might not start when Intelligent Key is on instrument panel or in glove box.

OPERATION WHEN MECHANICAL KEY IS USED

When the Intelligent Key battery is discharged, performs the NATS ID verification between the integrated transponder and BCM by inserting the mechanical key into the key cylinder, and then the engine can be started. For details relating to starting the engine using mechanical key, refer to SEC-14, "System Description".

STEERING LOCK OPERATION

Steering is locked by steering lock unit when ignition switch is in the OFF position (the ignition knob is released) and key switch is OFF (key is removed from ignition key cylinder).

KEY INTERLOCK OPERATION (ONLY FOR MT MODELS)

In case of a MT vehicle is in motion and ignition is turned into LOCK position, steering lock unit causes a risk by activating the steering lock actuator. The key interlock operation is designed to override the steering lock system and prevent the situation mentioned above from occuring.

LOCK condition

When the following conditions are fulfilled, key interlock solenoid will be locked. (Steering lock inactive)

- 1 second passes after ignition switch is in ON position and engine revolution speed goes above 500 rpm.

cardiagn.com

UNLOCK condition

When any of the following condition are fulfilled key interlock solenoid will be unlocked. (Steering lock active)

- When vehicle speed is below 4km/h and the ignition switch is turned from ON to OFF.
- When vehicle speed is over 4km/h but less than 10km/h in LOCK condition, and 3 second passes after the ignition switch is turned from ON to OFF.

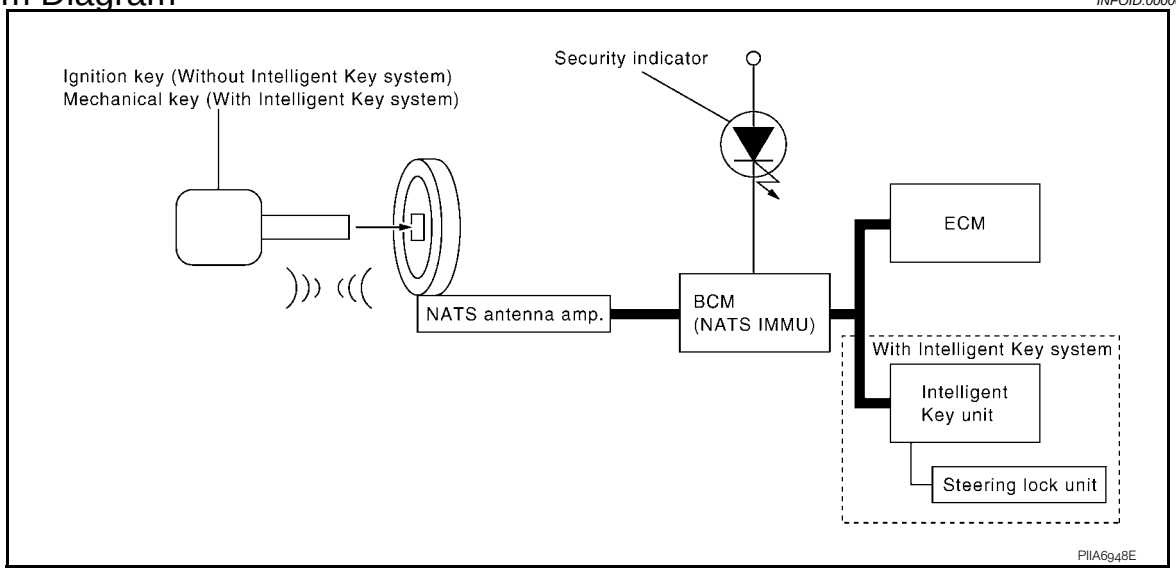
NATS (NISSAN ANTI-THEFT SYSTEM)

System Diagram

INFOID:0000000000944529



System Description

INFOID:0000000000944530

INPUT/OUTPUT SIGNAL CHART

Intelligent Key Unit

Switch/Input signal	Input signal to BCM	BCM function	Actuator/Output signal
Ignition knob switch	Ignition knob (push/release)	NATS	• Steering lock unit
Key switch	Mechanical key (Insert/remove)		
Steering lock unit	Steering (lock/unlock)		
ECM	Engine status signal		

BCM

Switch/Input signal	Input signal to BCM	BCM function	Actuator/Output signal
NATS antenna amp.	Key ID	NATS	• Security indicator lamp • Starter request
Audio unit	Audio unit ID		
ECM	Engine status signal		

SYSTEM DESCRIPTION

NATS (Nissan Anti-Theft System) has the following immobilizer functions:

- Engine immobilizer shows high anti-theft performance to prevent engine from starting by other than the owner.
- Only a key with key ID registered in BCM and ECM can start engine, and shows high anti-theft performance to prevent key from being copied or stolen.
- Security indicator always flashes with mechanical key removed condition (key switch: OFF) and ignition knob released condition on LOCK position (ignition knob switch: OFF).
- Therefore, NATS warns outsiders that the vehicle is equipped with the anti-theft system. Refer to SEC-19, "System Description".
- If system detects malfunction, security indicator illuminates when ignition switch is turned to ON position.
- If the owner requires, ignition key ID or mechanical key ID can be registered for up to 5 keys.
- During trouble diagnosis or when the following parts have been replaced, and if mechanical key is added, registration* is required.

cardiagn.com

*1: All keys kept by the owner of the vehicle should be registered with mechanical key.

- ECM
- BCM
- Mechanical key
- ABS actuator control unit
- EPS control unit
- IPDM E/R
- Combination meter

- NATS trouble diagnosis, system initialization and additional registration of other mechanical key IDs must be carried out using CONSULT-III hardware and SECURITY CARD.
  When NATS initialization has been completed, the ID of the inserted mechanical key or mechanical key IDs can be carried out.
- Possible symptom of NATS malfunction is “Engine cannot start”. In J10, the engine can be started with the Intelligent Key system and NATS. Identify the possible causes according to “Work Flow”, Refer to SEC-5, "Work Flow".
- If ECM other than Genuine NISSAN is installed, the engine cannot be started. For ECM replacement procedure, refer to SEC-8, "ECM RE-COMMUNICATING FUNCTION : Description".

PRECAUTIONS FOR KEY REGISTRATION

- The key registration is a procedure that erases the current NATS ID once, and then re-registers a new ID. Therefore the registered Intelligent Key is necessary for this procedure. Before starting the registration operation collect all registered Intelligent Keys from the customer.
- The NATS ID registration is the procedure that registers the ID stored into the transponder (integrated in mechanical key) to BCM.
  The Intelligent Key ID registration is the procedure that registers the ID to Intelligent Key unit.
- When performing the Intelligent Key system registration only, the engine cannot be started by inserting the key into the key cylinder. When performing the NATS registration only, the engine cannot be started by using the mechanical key.

SECURITY INDICATOR

- Always flashes with ignition knob released (ignition knob switch: OFF) condition on ignition knob LOCK position.
- Always flashes with ignition knob released (ignition knob switch: OFF) condition on mechanical key removed position.

MAINTENANCE INFORMATION

CAUTION:

It is necessary to perform NATS ID registration when replacing any of the following part.
If it's not (or fail to do so), the electrical system may not operate properly.
***: New one means a virgin control unit that has never been energized on-board.**

- **ABS actuator control unit**
- **EPS control unit**
- **IPDM E/R**

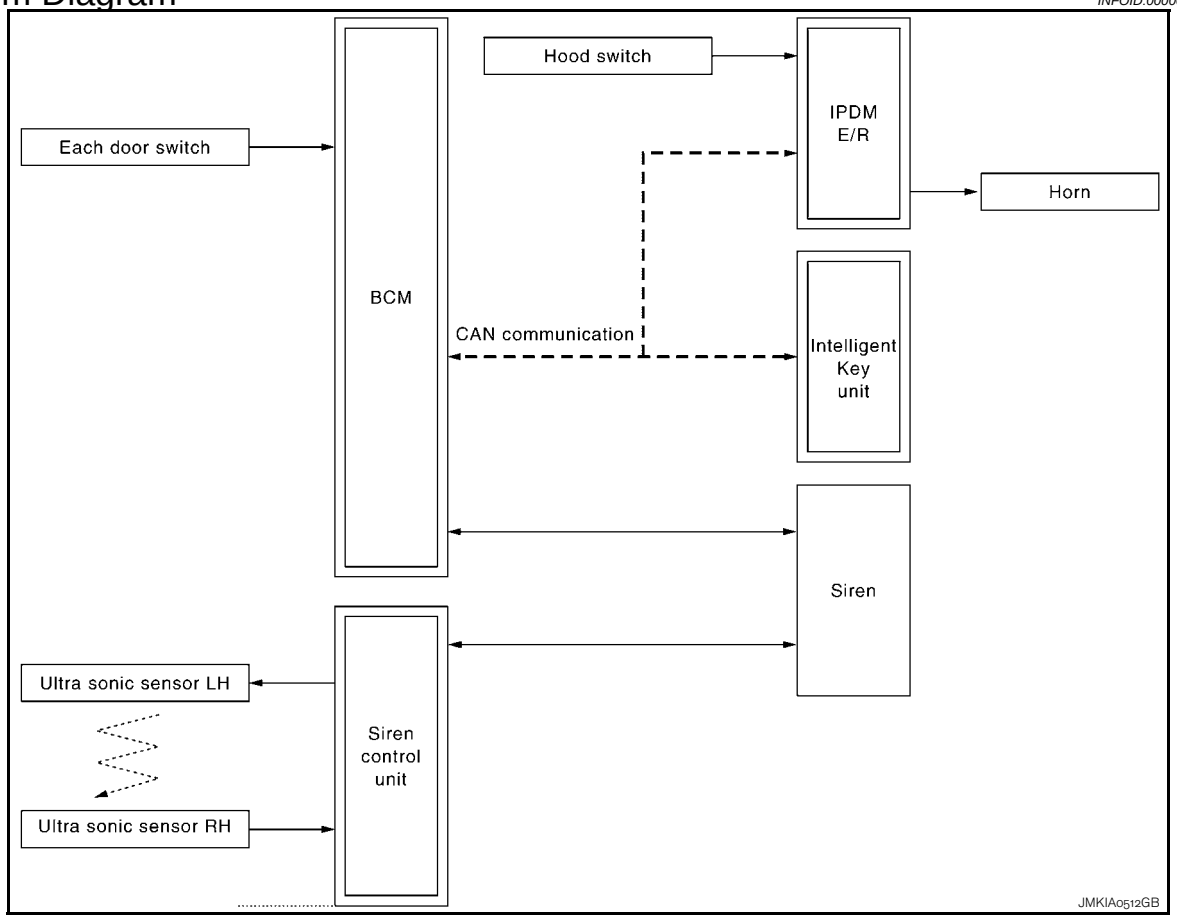
VEHICLE SECURITY SYSTEM

System Diagram

INFOID:0000000000944533



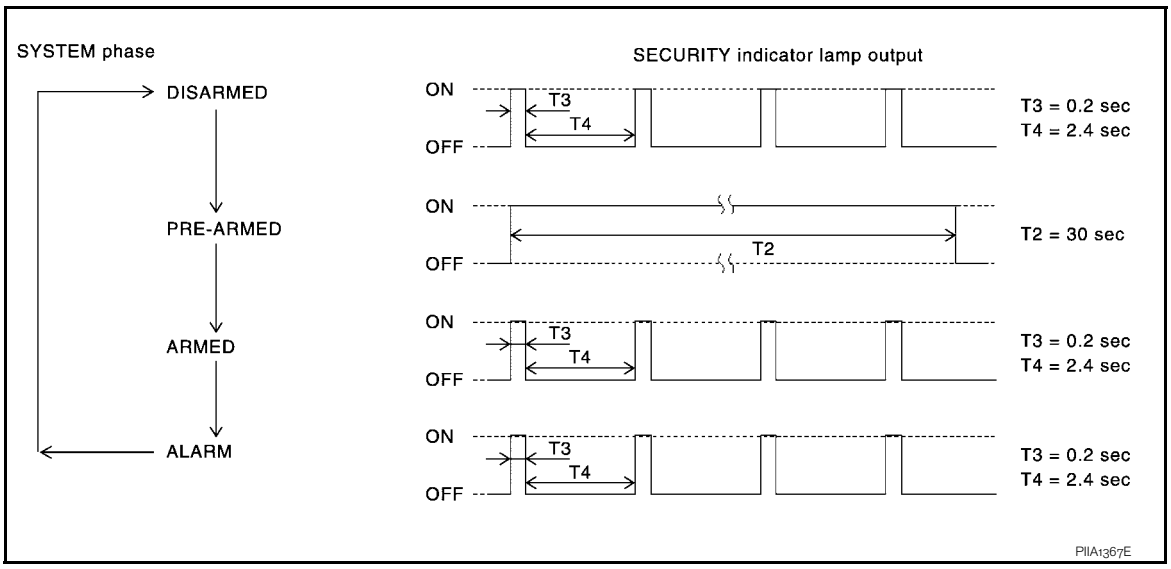
System Description

INFOID:0000000000944534

DESCRIPTION

The security system provides an audible and visual alarm when an unauthorized access to the vehicle is detected while the system is in armed phase.
The security system consist of two control units. BCM manages audible alarm (horn), siren control unit manage audible alarm (siren).

OPERATION FLOW



BCM shifts the phase as follows and the phase information is sent to siren control unit via communication line.

Disarmed Phase
When the vehicle is being driven or when doors are open, the theft warning system is set in the disarmed phase on the assumption that the owner is inside or near the vehicle.

Pre-Armed Phase And Armed Phase
The vehicle security system turns into the pre-armed phase when ignition switch is in OFF position, all doors are closed and locked (using Intelligent Key, door request switch or auto relock function). 10 seconds after the lock operation, the system automatically shifts into the armed phase.

Condition of Activating The System
When the following condition is performed in armed phase, the system sounds the horns/siren and flashes the head lamps for about 30 seconds.
- Hood or any door is opened.
- Ultra sonic sensor is triggered.
- Ignition switch goes ON with invalid transponder ID.

Condition of Deactivating The System
When one of the following operations is performed, the armed phase is canceled.
- Unlock the doors with Intelligent Key or door request switch.
- Ignition switch goes ON with transponder ID verified.

SIREN CONTROL UNIT

Siren control unit manages siren. The siren control unit does not shift to armed phase in the same way as BCM. The siren control unit goes to armed phase after about 10 seconds from lock command. If door is opened or closed within about 20 seconds, only the siren will be activated.
Siren control unit has battery inside. If disconnect or connect battery terminal before canceling armed phase, siren will be activated.

CAUTION:
When replace siren control unit (new one and used one), Perform "C/U INITALIZATION" with CONSULT-III.

Ultra Sonic Sensor Function
The ultra sonic sensor consist of two separate units, a transmitter on the left and receiver on the right mounted on room mirror. The LH transmitter sensor sends an ultra sonic pulse of sound, and RH receiver sensor receives the returning echo pulse.
It is possible to exclude the ultrasonic sensors.
To exclude the ultra sonic sensors:
1. Turn the ignition switch from the OFF to the ON position.
2. Turn the ignition switch from OFF to ON 3 times within 7 seconds.
3. Close the doors, bonnet and press the lock button on the Intelligent Key to lock all doors.

The ultra sonic sensors are now excluded from the alarm system. All other functions of the system remain activated until the alarm system is disarmed again.

DIAGNOSIS SYSTEM (BCM)

COMMON ITEM

COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001096688

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION

BCM can perform the following functions for each system.

NOTE:

It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

IMMU

IMMU : CONSULT-III Function (BCM - IMMU)

INFOID:0000000001096689

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

carsdiagn.com

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.

DATA MONITOR

Monitor item	Content
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.

*1: For the vehicle Intelligent key is equipped.

ACTIVE TEST

Test item	Description
THEFT IND	This test is able to check security indicator operation [ON/OFF].

THEFT ALM

THEFT ALM : CONSULT-III Function (BCM - THEFT ALM)

INFOID:0000000001096690

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
KEYKESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.

*1: For vehicle equipped with Intelligent Key.

cardiagn.com

*2: For the vehicle equipped with remote key less entry system.

ACTIVE TEST

Test item	Description
THEFT IND	This test is able to check security indicator operation [ON/OFF].
VEHICLE SECURITY HORN	This test is able to check horn operation [ON].
FLASHER	This test is able to check flasher operation [LH/RH/OFF].

WORK SUPPORT

Test item	Description
SECURITY ALARM SET	Vehicle security function mode can be changed in this mode. • ON: Vehicle security function is ON. • OFF: Vehicle security function is OFF.
THEFT ALM TRG	The switch which triggered vehicle security system is recorded. This mode can be able to confirm and erase the record of vehicle security system.

c-diagn.com

DIAGNOSIS SYSTEM (INTELLIGENT KEY UNIT)

CONSULT-III Function (INTELLIGENT KEY)

INFOID:0000000001096691

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with Intelligent Key unit.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by Intelligent Key unit.
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from Intelligent Key unit.
DATA MONITOR	The Intelligent Key unit input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.
ECU IDENTIFICATION	The Intelligent Key unit part number is displayed.

WORK SUPPORT

Support item	Description	Selection item	Condition
CONFIRM KEY FOB ID	It can check whether Intelligent Key ID code is registered or not.	—	—
TAKE OUT FROM WINDOW WARN	Take away warning chime (from window) mode can be changed.	ON	Active
		OFF	Inactive
LOW BATT OF KEY FOB WARN	Intelligent Key low battery warning mode can be changed.	ON	Active
		OFF	Inactive
KEYLESS FUNCTION	Door lock function with Intelligent Key can be changed.	ON	Active
		OFF	Inactive
ANSWER BACK FUNCTION	Buzzer reminder operation can be changed.	ON	Active
		OFF	Inactive
SELECTIVE UNLOCK FUNCTION	Anti-hijack mode can be changed.	ON	Active
		OFF	Inactive
HAZARD ANSWER BACK	Hazard reminder operation mode can be changed.	Refer to DLK-58.	
ANSWER BACK WITH I-KEY LOCK	Buzzer reminder operation (lock operation) mode by each door request switch can be changed.	BUZZER	Active
		OFF	Inactive
ANSWER BACK WITH I-KEY UNLOCK	Buzzer reminder operation (unlock operation) mode by each door request switch can be changed.	BUZZER	Active
		OFF	Inactive
AUTO RELOCK TIMER	Auto door lock operation mode can be changed.	OFF	Inactive
		2 min	Active
ENGINE START BY I-KEY	Engine start function (by Intelligent Key) mode can be changed.	ON	Active
		OFF	Inactive
LOCK/UNLOCK BY I-KEY	Door lock function by door request switch can be changed.	ON	Active
		OFF	Inactive

SELF-DIAG RESULT

Refer to SEC-121, "DTC Index".

DATA MONITOR

cardiagn.com

Monitor Item	Condition
PUSH SW	Indicates [ON (pressed)/OFF (released)] condition of ignition knob switch.
KEY SW	Indicates [ON (inserted)/OFF (removed)] condition of key switch.
DR REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (driver side).
AS REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (passenger side).
BD/TR REQ SW	Indicates [ON (pressed)/OFF (released)] condition of door request switch (back door).
IGN SW	Indicates [ON (ON or START position)/OFF (other than ON and START position)] condition of ignition switch ON position.
ACC SW	Indicates [ON/OFF] condition of ignition switch ACC position.
STOP LAMP SW	Indicates [ON/OFF] condition of stop lamp switch.
DOOR LOCK SIG	Indicates [ON/OFF] condition of LOCK signal from Intelligent Key.
DOOR UNLOCK SIG	Indicates [ON/OFF] condition of UNLOCK signal from Intelligent Key.
DOOR SW DR	Indicates [OPEN/CLOSE] condition of front door switch (driver side) from BCM via CAN communication.
DOOR SW AS	Indicates [OPEN/CLOSE] condition of front door switch (passenger side) from BCM via CAN communication.
DOOR SW RR	Indicates [OPEN/CLOSE] condition of rear door switch (RH) from BCM via CAN communication.
DOOR SW RL	Indicates [OPEN/CLOSE] condition of rear door switch (LH) from BCM via CAN communication.
DOOR BK SW	Indicates [OPEN/CLOSE] condition of back door switch from BCM via CAN communication.
VEHICLE SPEED	Displays the vehicle speed signal received from combination meter by numerical value [km/h].

ACTIVE TEST

Test item	Description
DOOR LOCK/UNLOCK	This test is able to check door lock/unlock operation. • ALL UNLK: All door lock actuators are unlocked. • DR UNLK: Door lock actuator (driver side) is unlocked. • AS UNLK: Door lock actuator (passenger side) is unlocked. • BK UNLK: This item is indicated, but inactive. • LOCK: All door lock actuator is locked.
ANTENNA	This test is able to check Intelligent Key antenna operation. When the following condition are met, hazard warning lamps flash. • ROOM ANT1: Inside key antenna (console) detects Intelligent Key, when “ROOM ANT1” is selected. • ROOM ANT2: Inside key antenna (instrument center/rear seat) detects Intelligent Key, when “ROOM ANT2”is selected. • DRIVER ANT: Outside key antenna (driver side) detects Intelligent Key, when “DRIVER ANT” is selected. • ASSIST ANT: Outside key antenna (passenger side) detects Intelligent Key, when “ASSIST ANT” is selected. • BK DOOR ANT: Outside key antenna (rear bumper) detects Intelligent Key, when “BK DOOR ANT” is selected.
OUTSIDE BUZZER	This test is able to check Intelligent Key warning buzzer operation. • ON • OFF
INSIDE BUZZER	This test is able to check warning chime in combination meter operation. • TAKE OUT: Take away warning chime sounds. • KNOB: Ignition knob switch warning chime sounds. • KEY: Key warning chime sounds. • OFF

Test item	Description
INDICATOR	This test is able to check warning lamp operation. • BLUE ON: Key warning lamp (green) illuminates. • RED ON: Key warning lamp (red) illuminates. • KNOB ON: Lock warning lamp illuminates. • BLUE IND: Key warning lamp (green) flashes. • RED IND: Key warning lamp (red) flashes. • KNOB IND: Lock warning lamp flashes. • OFF
KEY LOCK SOLENOID*1	This test is able to check key interlock operation. • LOCK: Key interlock is active. • UNLOCK: Key interlock is inactive.

*1: The item is only for MT model.

cardiagn.com

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000001098010

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart, refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000001098011

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1000	CAN COMM CIRCUIT	When Intelligent Key unit cannot communicate CAN communication signal continuously for 2 seconds or more.	In CAN communication system, any item (or items) of the following listed below is malfunctioning. • Transmission • Receiving (BCM) • Receiving (IPDM E/R) • Receiving (ECM) • Receiving (METER/M&A) • Receiving (MULTI AV)

Diagnosis Procedure

INFOID:0000000001098012

1.PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 seconds or more.
2. Check “Self Diagnostic Result”.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI-39, "Intermittent Incident".

U1010 CONTROL UNIT (CAN)

Description

INFOID:0000000001098013

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart, refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000001098014

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller of Intelligent Key unit.	Intelligent Key unit

Diagnosis Procedure

INFOID:0000000001098015

1.REPLACE INTELLIGENT KEY UNIT

When DTC [U1010] is detected, replace Intelligent Key unit.

>> Replace Intelligent Key unit.

Special Repair Requirement

INFOID:0000000001098016

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS-IVIS/NVIS.

>> Work end.

cardiagn.com

B2013 ID DISCORD I-KEY-STRG

Description

INFOID:0000000000944553

Intelligent Key unit performs the ID verification with the steering lock unit and releases the steering lock if both Intelligent Key unit and steering lock unit ID are same. Intelligent Key unit starts the communication with the steering lock unit when Intelligent Key is carried into the vehicle and the ignition knob switch is pressed.

DTC Logic

INFOID:0000000000944554

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2013	STRG COMM 1	The ID verification results between Intelligent Key unit and steering control unit are NG. The registration is necessary.	• Steering lock unit

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Press the ignition knob switch
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-31, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000000944555

1.PERFORM INITIALIZATION

Perform initialization with CONSULT-III. Re-register all mechanical keys.
For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can steering lock be released with re-registered mechanical key?

YES >> Steering lock unit was unregistered.
NO >> GO TO 2.

2.CHECK STEERING LOCK UNIT POWER SUPPLY-1

1. Turn ignition switch OFF.
2. Disconnect steering lock unit connector.
3. Check voltage between steering lock unit harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Steering lock unit connector	Terminal		
M28	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK STEERING LOCK UNIT POWER SUPPLY-2

Check voltage between steering lock unit harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Steering lock unit connector	Terminal		
M28	2	Ground	5

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK STEERING LOCK UNIT GROUND CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit harness connector and steering lock unit harness connector.

Intelligent Key unit connector	Terminal	Steering lock unit connector	Terminal	Continuity
M40	31	M28	4	Existed

3. Check continuity between Intelligent Key unit connector and ground.

Intelligent Key unit connector	Terminal	Ground	Continuity
M40	31	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace harness.

5. CHECK STEERING LOCK UNIT COMMUNICATION CIRCUIT

1. Connect Intelligent Key unit and steering lock unit connectors.
2. Check voltage between steering lock unit connector and ground.

Terminals (+) Steering lock unit connector	Terminals (+) Terminal	Terminals (–)	Condition		Voltage (V) (Approx.)
M28	3	Ground	Steering lock	LOCK status	Battery voltage
				LOCK ⇔ UNLOCK					For 15 seconds after UNLOCK	Battery voltage
				15 seconds later UN-LOCK	0

JMKIA0433ZZ

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace harness.

6. CHECK INTERMITTENT INCIDENT

Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Replace steering lock unit.
NO >> Repair or replace malfunctioning parts.

cardiagn.com

B2190, P1614 NATS ANTENNA AMP.

Description

INFOID:0000000001109193

Performs ID verification through BCM and NATS antenna amplifier when ignition knob switch is pressed.
Prohibits the release of steering lock or start of engine when an unregistered ID of mechanical key is used.

DTC Logic

INFOID:0000000001109194

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2190 P1614	NATS ANTENNA AMP	• Inactive communication between NATS antenna amp. and BCM. • Mechanical key is malfunctioning.	• Harness or connectors (The NATS antenna amp. circuit is open or shorted) • Mechanical key • NATS antenna amp. • BCM

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Insert mechanical key into the key cylinder.
2. Press the ignition knob switch.
3. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-33, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001109195

1.CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to SEC-152, "Removal and Installation".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Reinstall NATS antenna amp. correctly.

2.CHECK MECHANICAL KEY

Start engine with another registered mechanical key.

Does the engine start?

YES >> Replace mechanical key. Perform initialization and registration of mechanical key. Refer to “”
NO >> GO TO 3.

3.CHECK NATS ANTENNA AMP. POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect NATS antenna amp. harness connector.
3. Check voltage between NATS antenna amp. harness connector and ground.

NATS antenna amp.		Ground	Voltage [V] (approx.)
Connector	Terminal		
M26	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK NATS ANTENNA AMP. GROUND CIRCUIT

Check continuity between NATS antenna amp. connector and ground.

Key slot		Ground	Continuity
Connector	Terminal		
M26	3	Ground	Existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace circuit.

5.CHECK NATS ANTENNA AMP. SIGNAL CIRCUIT

Check voltage between NATS antenna amp. harness connector and ground.

NATS antenna amp.		Ground	Condition	Voltage [V] (approx.)
Connector	Terminal			
M26	2	Ground	Just after inserting mechanical key in key cylinder.	Pointer of tester should move.
	4		Other than above.	0

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace circuit.

6.CHECK INTERMITTENT INCIDENT

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace NATS antenna amp.
NO >> Repair or replace malfunctioning parts.

cardiagn.com

B2191, P1615 DIFFERENCE OF KEY

Description

INFOID:0000000000944544

Performs ID verification through BCM when ignition knob switch is pressed.
Prohibits the release of steering lock or start of engine when an unregistered ID of mechanical key is used.

DTC Logic

INFOID:0000000000944545

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2191 P1615	DIFFERENCE OF KEY	The ID verification results between BCM and mechanical key are NG. The registration is necessary.	• Mechanical key

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Insert mechanical key into the key cylinder.
2. Press the ignition knob switch.
3. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer toSEC-35, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000000944546

1.PERFORM INITIALIZATION

Perform initialization with CONSULT-III. Re-register all mechanical keys.
For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered mechanical key?

YES >> Mechanical key was unregistered.
NO >> BCM is malfunctioning.
- Replace BCM. Refer to BCS-64, "Removal and Installation".
- Perform initialization again

B2192, P1611 ID DISCORD, IMMU-ECM

Description

INFOID:0000000001034107

BCM performs the ID verification with ECM that allows the engine to start. BCM starts the communication with ECM if ignition switch is turned ON and starts the engine if the ID is OK. ECM prevents the engine from starting if the ID is not registered.

DTC Logic

INFOID:0000000001034108

DTC DETECTION LOGIC

NOTE:

- If DTC B2192 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-29, "DTC Logic".
- If DTC B2192 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-30, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2192 P1611	ID DISCORD BCM-ECM	The ID verification results between BCM and ECM are NG. The registration is necessary.	• BCM • ECM

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-36, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001034109

1.PERFORM INITIALIZATION

Perform initialization with CONSULT-III. Re-register all mechanical keys.
For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered mechanical key?

YES >> ID was unregistered.
NO >> GO TO 2.

2.PEPLACE BCM

1. Replace BCM. Refer to BCS-64, "Removal and Installation".
2. Perform initialization with CONSULT-III. Re-register all mechanical keys.
   For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered mechanical key?

YES >> BCM is malfunctioning.
NO >> GO TO 3.

3.PEPLACE ECM

1. Replace ECM. Refer to the following page.

- HR16 (WITH EURO-OBD): EC-29, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement"
- HR16 (WITHOUT EURO-OBD): EC-368, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement"
- MR20 (WITH EUR-OBD): EC-645, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement"
- MR20 (WITHOUT EUR-OBD): EC-989, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement"

cardiagn.com

- K9K: EC-1273, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement"

2. Perform initialization with CONSULT-III. Re-register all mechanical keys.
   For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered mechanical key?

YES >> ECM is malfunctioning.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

carsdiagn.com

B2193, P1612 CHAIN OF ECM-IMMU

Description

INFOID:0000000001116341

BCM performs the ID verification with ECM that allows the engine to start. BCM starts the communication with ECM if ignition switch is turned ON and starts the engine if the ID is OK. ECM prevents the engine from starting if the ID is not registered.

DTC Logic

INFOID:0000000001116342

DTC DETECTION LOGIC

NOTE:

- If DTC B2193 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-29, "DTC Logic".
- If DTC B2193 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-30, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2193 P1612	CHAIN OF BCM-ECM	Inactive communication between ECM and BCM	• Harness or connectors (The CAN communication line is open or short) • BCM • ECM

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-38, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001116343

1.REPLACE BCM

1. Replace BCM. Refer to BCS-64, "Removal and Installation".
2. Perform initialization with CONSULT-III.
   For initialization, refer to “CONSULT-III Operation Manual NATS”.

Does the engine start?

YES >> BCM was malfunctioning.
NO >> ECM is malfunctioning.
- Replace ECM.
- Perform ECM re-communicating function.

cardiagn.com

B2194 ID DISCORD IMMU-I-KEY

Description

INFOID:0000000001109365

BCM performs the ID verification with Intelligent Key unit that allows the engine to start. BCM starts the communication with Intelligent Key unit if ignition switch is turned ON and starts the engine if the ID is OK. BCM prevents the engine from starting if the ID is not registered.

YES >> GO TO 2.
NO >> ID was unregistered.

2.REPLACE BCM

1. Turn ignition switch OFF.
2. Replace BCM. Refer to BCS-64, "Removal and Installation".
3. Perform initialization with CONSULT-III. Re-register all mechanical keys.
   For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started?

YES >> BCM is malfunctioning.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

B2195 ANTI-SCANNING

Description

INFOID:0000000000944547

When the ID of the remote control engine starter installed cannot be registered, anti-scanning operates and it may be possible that the engine can not start. In the case, obtain the customer approval to remove the remote control engine starter.

DTC Logic

INFOID:0000000000944548

DTC DETECTION LOGIC

NOTE:

- If DTC B2195 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-29, "DTC Logic".
- If DTC B2195 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-30, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2195	ANTI-SCANNING	The ID of the remote control engine starter installed cannot be registered.	Remote control engine starter

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-40, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000000944549

1.REMOVAL OF REMOTE CONTROL ENGINE STARTER

Remove remote control engine starter with the customer approval.

>> GO TO 2.

2.CHECK SELF DIAGNOSTIC RESULT

1. Turn ignition switch ON.
2. Perform “Self diagnostic result” with CONSULT-III.
3. Erase DTC.
4. Start the engine.

Does the engine start?

YES >> INSPECTION END
NO >> BCM is malfunctioning.
- Replace BCM
- Perform initialization

cardiagn.com

B2196 DONGLE NG

Description

INFOID:0000000001034035

BCM performs the ID verification with the slave control units (ECM, ABS actuator, EPS column assy, IPDM E/R, combination meter).
If either slave control unit is replaced by used part, perform initialization with CONSULT-III. But if the control unit is replaced by new part, the system does not need initialization.

DTC Logic

INFOID:0000000001034036

DTC DETECTION LOGIC

NOTE:

- If DTC B2196 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-29, "DTC Logic".
- If DTC B2196 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-30, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2196	DONGLE NG	The ID verification results between BCM and each slave control unit are NG.	• ECM • ABS actuator assy • EPS column assy • Combination meter • IPDM E/R

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self Diagnostic Result” with CONSULT-III.

Is the DTC detected?

YES >> Refer to SEC-41, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001034037

1.PERFORM INITIALIZATION

1. Perform initialization with CONSULT-III. Re-register all mechanical keys. Refer to “CONSULT-III Operation Manual NATS”.
2. Start the engine.

Dose the engine start?

YES >> INSPECTION END
NO >> Perform “Self Diagnosis Result” for each control unit.

B2552 INTELLIGENT KEY

Description

INFOID:0000000001098017

Intelligent key unit performs engine start operation and steering lock control by crosschecking ID with the Intelligent key.

DTC Logic

INFOID:0000000001098018

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2552	INTELLIGENT KEY UNIT	Malfunction is detected inside Intelligent key unit.	• Intelligent Key unit

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-42, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001098019

1.REPLACE INTELLIGENT KEY UNIT

1. Replace Intelligent Key unit.
2. Perform initialization with CONSULT-III. Re-register all mechanical keys. Refer to “CONSULT-III Operation Manual NATS”.
3. Start the engine.

Does the engine start?

YES >> INSPECTION END
NO >> Perform “DTC confirmation procedure”. Refer to SEC-42, "DTC Logic".

Special Repair Requirement

INFOID:0000000001115369

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS-IVIS/NVIS.

>> Work end.

cardiagn.com

B2590 ID DISCORD BCM-I-KEY

Description

INFOID:0000000001109118

Intelligent Key unit performs the ID verification with BCM that allows the engine to start. BCM starts the engine if the ID is OK and prevents the engine from starting if the ID is not registered.

DTC Logic

INFOID:0000000001109119

DTC DETECTION LOGIC

NOTE:

- If DTC B2590 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-29, "DTC Logic".
- If DTC B2590 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-30, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2590	ID DISCORD BCM-I-KEY	The ID verification results between BCM and Intelligent Key unit are NG. The registration is necessary.	• BCM • Intelligent Key unit

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-43, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001109120

1.PERFORM INITIALIZATION

Perform initialization with CONSULT-III. Re-register all mechanical keys.
For initialization and registration of mechanical key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered mechanical key?

YES >> ID was unregistered.
NO >> BCM is malfunctioning.
- Replace BCM
- Perform initialization again

P1610 LOCK MODE

Description

INFOID:0000000000944556

When the starting operation is carried more than five times consecutively under the following conditions, NATS will shift to the mode which prevents the engine from being started.
- Unregistered mechanical key is used.
- BCM or ECM's malfunctioning.

DTC Logic

INFOID:0000000000944557

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1610	LOCK MODE	When the starting operation is carried out five or more times consecutively under the following conditions. • Unregistered mechanical key • BCM or ECM's malfunctioning.	—

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-44, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000944558

1.CHECK ENGINE START FUNCTION

1. Perform the check for DTC except DTC P1610.
2. Use CONSULT-III to erase DTC after fixing.
3. Check that engine can start with registered mechanical key.

Does the engine start?

YES >> INSPECTION END
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

POWER SUPPLY AND GROUND CIRCUIT
INTELLIGENT KEY UNIT

INTELLIGENT KEY UNIT : Diagnosis Procedure

INFOID:0000000001116020

1.CHECK FUSE AND FUSIBLE LINK

Check that the following fuse is not blown.

Terminal No.	Signal name	Fuse No.
11	Battery power supply	9 (10A)
6	Ignition power supply	4 (10A)

Is the fuse blown?

YES >> Replace the blown fuse after repairing the affected circuit if a fuse is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Turn ignition switch ON.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminal			Voltage (V) (Approx.)
(+)		(−)	
Intelligent Key unit		Ground	
Connector	Terminal		
M40	11		Battery voltage
	6		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between Intelligent Key unit harness connector and ground.

Intelligent Key unit		Ground	Continuity
Connector	Terminal		
M40	12		Exists

Does continuity exist?

YES >> Intelligent Key unit power supply and ground circuit are OK.
NO >> Repair harness or connector.

INTELLIGENT KEY UNIT : Special Repair Requirement

INFOID:0000000001098008

1.REQUIRED WORK WHEN REPLACING INTELLIGENT KEY UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS.

>> Work end.

SIREN CONTROL UNIT

SIREN CONTROL UNIT : Diagnosis Procedure

INFOID:0000000001098009

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.

carDiagn.com

2. Disconnect siren control unit connector.
3. Check voltage between siren control unit harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Siren control unit			
Connector	Terminal	Ground	
M94	4	Ground	Battery voltage

Is the measurement value normal?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK GROUND CIRCUIT

Check continuity between siren control unit harness connectors and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
M94	6	Ground	Existed

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

SIREN CONTROL UNIT : Special Repair Requirement

INFOID:0000000001116002

1.REQUIRED WORK WHEN REPLACING SIREN CONTROL UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS.

>> Work end.

SIREN

SIREN : Diagnosis Procedure

INFOID:0000000001116021

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect siren control unit connector.
3. Check voltage between siren harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Siren			
Connector	Terminal	Ground	
B68	2		Battery voltage

Is the measurement value normal?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK GROUND CIRCUIT

Check continuity between siren control unit harness connectors and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
B68	5		Existed

cardiagn.com

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

BCM

BCM : Diagnosis Procedure

INFOID:0000000001116003

1.CHECK FUSES AND FUSIBLE LINK

Check that the following fuses and fusible link are not fusing.

Terminal No.	Signal name	Fuses and fusible link No.
41	Battery power supply	9
57		J
37	ACC power supply	5
38	Ignition power supply	4

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(–)			
BCM			OFF	ACC	ON
Connector	Terminal				
M65	37	Ground	Approx. 0 V	Battery voltage	Battery voltage
	38		Approx. 0 V	Approx. 0 V	Battery voltage
M66	41		Battery voltage	Battery voltage	Battery voltage
M67	57				

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

KEY SWITCH

Description

INFOID:0000000001094466

Key switch detects that mechanical key is inserted into the key cylinder, and then transmits the signal to BCM and Intelligent Key unit.

Component Function Check

INFOID:0000000001094467

1.CHECK KEY SWITCH INPUT SIGNAL

Check key switch (“KEY SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
KEY SW	Insert mechanical key into key cylinder	: ON
	Remove mechanical key from key cylinder	: OFF

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Refer to SEC-48, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001094468

1.CHECK KEY SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key unit and BCM connector.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	7	Ground	Insert mechanical key into key cylinder	Battery voltage
			Remove mechanical key from key cylinder	0

4. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	36	Ground	Insert mechanical key into key cylinder	Battery voltage
			Remove mechanical key from key cylinder	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Remove mechanical key from key cylinder.
2. Disconnect key switch connector.
3. Check voltage between key switch harness connector and ground.

cardiagn.com

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Key switch connector	Terminal		
M25	2	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK KEY SWITCH SIGNAL CIRCUIT

1. Check continuity between Intelligent Key unit harness connector and key switch connector.

Intelligent Key unit connector	Terminal	Key switch connector	Terminal	Continuity
M40	7	M25	1	Exists

2. Check continuity between BCM harness connector and key switch connector.

BCM connector	Terminal	Key switch connector	Terminal	Continuity
M65	36	M25	1	Exists

3. Check continuity between key switch connector and ground.

Key switch connector	Terminal	Ground	Continuity
M25	1	Ground	Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK KEY SWITCH

Check key switch function.
Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace key switch.

Component Inspection

INFOID:0000000001094469

COMPONENT INSPECTION

1.CHECK KEY SWITCH

Check continuity between key switch terminals.

Terminal		Condition	Continuity
key switch connector			
1	2	Insert mechanical key into key cylinder	Exists
		Remove mechanical key from key cylinder	Does not exist

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Replace key switch.

IGNITION KNOB SWITCH

Description

INFOID:0000000001094769

Ignition knob switch detects that ignition knob is pressed, and then transmits the signal to Intelligent Key unit.

Component Function Check

INFOID:0000000001094773

1.CHECK IGNITION KNOB SWITCH INPUT SIGNAL

Check ignition knob switch (“PUSH SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
PUSH SW	Ignition knob switch is pressed	: ON
	Ignition knob switch is released	: OFF

Is the inspection result normal?

YES >> Ignition knob switch is OK.
NO >> Refer to SEC-48, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001096673

1.CHECK IGNITION KNOB SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect Intelligent Key unit and BCM connector.
3. Check voltage between Intelligent Key unit harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
Intelligent Key unit connector	Terminal			
M40	27	Ground	Ignition knob switch is pressed	Battery voltage
			Ignition knob switch is released	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK IGNITION KNOB SWITCH POWER SUPPLY CIRCUIT

1. Disconnect ignition knob switch connector.
2. Check voltage between ignition knob switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Ignition knob switch connector	Terminal		
M25	4	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK IGNITION KNOB SWITCH SIGNAL CIRCUIT

1. Check continuity between Intelligent Key unit harness connector and ignition knob switch connector.

Intelligent Key unit connector	Terminal	Ignition knob switch connector	Terminal	Continuity
M40	27	M25	3	Exists

cardiagn.com

2. Check continuity between ignition knob switch connector and ground.

Ignition knob switch connector	Terminal	Ground	Continuity
M25	3		Does not exist

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK IGNITION KNOB SWITCH

Check ignition knob switch function.
Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace ignition knob switch.

Component Inspection

INFOID:0000000001094772

1. CHECK IGNITION KNOB SWITCH

1. Turn ignition switch OFF.
2. Disconnect ignition knob switch harness connector.
3. Check continuity between ignition knob switch terminals under the following conditions.

Ignition knob switch			Condition	Continuity
Connector	Terminal			
M25	3	4	Ignition knob switch is pressed	Exists
			Ignition knob switch is released	Does not exist

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace ignition knob switch.

cardiagn.com

STOP LAMP

Description

INFOID:0000000001096712

Stop lamp switch detects that brake pedal is depressed, and then transmits the signal to BCM.

Component Function Check

INFOID:0000000001096713

1.CHECK STOP LAMP SWITCH INPUT SIGNAL

Check stop lamp function by depressing brake pedal.

Is the inspection result normal?

YES >> Stop lamp switch is OK.
NO >> Refer to SEC-48, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001096714

1.CHECK STOP LAMP SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M66	51	Ground	Brake pedal is depressed	Battery voltage
			Brake pedal is not depressed	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch connector.
2. Check voltage between stop lamp switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Stop lamp switch connector	Terminal		
E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK STOP LAMP SWITCH SIGNAL CIRCUIT

1. Check continuity between BCM harness connector and stop lamp switch connector.

BCM connector	Terminal	Stop lamp switch connector	Terminal	Continuity
M66	51	E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	2	Existed

2. Check continuity between stop lamp switch connector and ground.

cardiagn.com

Stop lamp switch connector	Terminal	Ground	Continuity
E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	2	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK STOP LAMP SWITCH

Check stop lamp switch function.
Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace stop lamp switch.

Component Inspection

INFOID:0000000001096715

1. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check continuity between stop lamp switch terminals under the following conditions.

Stop lamp switch			Condition	Continuity
Connector	Terminal			
E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	1	2	Brake pedal is depressed	Existed
			Brake pedal is released	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace stop lamp switch.

HOOD SWITCH

Description

INFOID:0000000000944671

Hood switch detects that hood is open/close condition, and then transmits the signal to IPDM E/R.

Component Function Check

INFOID:0000000000944672

1.CHECK FUNCTION

1. Select “HOOD SW” in “Data Monitor” mode with CONSULT-III.
2. Check the hood switch signal under the following condition.

Test item	Condition		Status
HOOD SW	Hood	Open	ON
		Close	OFF

Is the indication normal?

YES >> INSPECTION END.
NO >> Refer to SEC-54, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000944673

1.CHECK HOOD SWITCH SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Condition		Voltage (V) (Approx.)
Connector	Terminal				
E12	21	Ground	Hood	Open	0
				Close	Battery voltage

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK HOOD SWITCH SIGNAL CIRCUIT

1. Disconnect IPDM E/R and hood switch connector.
2. Check continuity between IPDM E/R harness connector and hood switch harness connector.

IPDM E/R		Hood switch		Continuity
Connector	Terminal	Connector	Terminal	
E12	21	E113	2	Existed

3. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E12	21	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK HOOD SWITCH GROUND CIRCUIT

Check continuity between hood switch harness connector and ground.

cardiagn.com

Hood switch		Ground	Continuity
Connector	Terminal		
E113	1	Ground	Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK IPDM E/R OUTPUT

1. Connect the IPDM E/R connector.
2. Check voltage between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Voltage (V) (Approx.)
Connector	Terminal		
E12	21	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".

5. CHECK HOOD SWITCH

Refer to SEC-55, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Replace hood switch.

6. CHECK INTERMITTENT INCIDENT

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".
NO >> Repair or replace malfunctioning parts.

Component Inspection

INFOID:0000000000944674

1. CHECK HOOD SWITCH

1. Turn ignition switch OFF.
2. Disconnect hood switch connector.
3. Check continuity between hood switch terminals.

Hood switch		Condition		Continuity
Terminal				
1	2	Hood switch	Push	Not existed
			Release	Existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace hood switch.

HORN

Description

INFOID:0000000000944675

Horn is located inside of front bumper and operates when theft warning system is in alarm phase.

Component Function Check

INFOID:0000000000944676

1.CHECK FUNCTION

1. Select “HORN” in “ACTIVE TEST” mode with CONSULT-III.
2. Check the horn operation.

Is the operation normal?

YES >> INSPECTION END.
NO >> Refer to SEC-56, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000944677

1.CHECK HORN FUNCTION

Check horn function with horn switch.

Does the horn sound?

YES >> GO TO 2.
NO >> Refer to HRN-2, "Wiring Diagram - HORN -".

2.CHECK HORN RELAY POWER SUPPLY

1. Turn ignition switch ON.
2. Perform “ACTIVE TEST” (“HORN”) with CONSULT-III.
3. Check voltage between horn relay harness connector and ground.

Horn relay		Ground	Test item		Voltage (V) (Applox.)
Connector	Terminal				
E5	2	Ground	HORN	ON	→Battery voltage →0 →Battery voltage
				Other than above	0

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 3.

3.CHECK HORN RELAY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and horn relay 1and 2 connector.
3. Check continuity between IPDM E/R harness connector and horn relay 1and 2 harness connector.

IPDM E/R		Horn relay 1 and 2		Continuity
Connector	Terminal	Connector	Terminal	
E12	30	E5	1	Existed

4. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E12	30	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK INTERMITTENT INCIDENT

cardiagn.com

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace IPDM E/R.Refer to PCS-32, "Removal and Installation".
NO >> Repair or replace the malfunctioning parts.

VEHICLE SECURITY INDICATOR

Description

INFOID:0000000000944681

- Vehicle security indicator is built in combination meter.
- NATS (Nissan Anti-Theft System) and vehicle security system conditions are indicated by blink or illumination of vehicle security indicator.

Component Function Check

INFOID:0000000000944682

1.CHECK FUNCTION

1. Perform “THEFT IND” in the “ACTIVE TEST” mode with CONSULT-III.
2. Check vehicle security indicator operation.

Test item		Description	
THEFT IND	ON	Vehicle security indicator	ON
	OFF		OFF

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Refer to SEC-58, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001098043

1.CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector.
3. Check voltage between combination meter harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Combination meter connector	Terminal		
M34	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace harness.

2.CHECK SECURITY INDICATOR LAMP SIGNAL CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector and combination meter connector.

BCM connector	Terminal	Combination meter connector	Terminal	Continuity
M65	18	M34	28	Existed

3. Check continuity between combination meter connector and ground.

Combination meter connector	Terminal	Ground	Continuity
M34	28	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK BCM FUNCTION

1. Connect combination meter connector.
2. Check voltage between BCM harness connector and ground.

cardiagn.com

Terminals			Voltage (V) (Approx.)
(+)		(–)	
BCM connector	Terminal		
M65	18	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Replace combination meter. Refer to MWI-72, "Removal and Installation".

4. CHECK INTERMITTENT INCIDENT

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace BCM. Refer to BCS-64, "Removal and Installation".
NO >> Repair or replace malfunctioning parts.

autodiagn.com

ULTRA SONIC SENSOR

Description

INFOID:0000000001115998

Siren control unit sounds the siren when it received a trigger signal from ultra sonic sensor.

Component Function Check

INFOID:0000000001115999

1.CHECK SIREN CONTROL UNIT FUNCTION

1. Turn ignition switch OFF.
2. Get in the vehicle and close all doors.
3. Lock doors with Intelligent Key.
4. Check that security indicator blinks when theft warning system is armed.
5. With hand, intercept the signal between left and right sensors.

Does the siren sound?

YES >> Siren control unit function is OK.
NO >> Refer to SEC-60, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116000

1.CHECK SIREN FUNCTION

1. Turn ignition switch ON.
2. Perform “ACTIVE TEST” (“VEHICLE SECURITY HORN”) with CONSULT-Ill.

Does the siren sound?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK SIREN SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and siren connectors.
3. Check continuity between BCM harness connector and siren connector.

BCM connector	Terminal	Siren connector	Terminal	Continuity
M65	8	B68	1	Existed
	16		3	Existed

4. Check continuity between siren connector and ground.

Siren connector	Terminal	Ground	Continuity
B68	1	Ground	Not existed
	3		Not existed

Is the inspection result normal?

YES >> Replace siren. Refer to SEC-153, "Removal and Installation".
NO >> Repair or replace harness.

3.CHECK SIREN CONTROL UNIT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect siren control unit and siren connector.
3. Check continuity between siren control unit harness connector and siren connector.

Siren control unit connector	Terminal	Siren connector	Terminal	Continuity
M94	3	B68	4	Existed

4. Check continuity between siren control unit harness connector and ground.

cardiagn.com

Siren control unit connector	Terminal	Ground	Continuity
M94	3	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK ULTRA SONIC SENSOR SIGNAL CIRCUIT

1. Disconnect ultra sonic sensor connectors.
2. Check continuity between siren control unit harness connector and ultra sonic sensor connector.

Siren control unit connector	Terminal	Ultra sonic sensor connector	Terminal	Continuity
M94	1	R11	1	Existed
	8	R12	1	Existed

3. Check continuity between siren control unit connector and ground.

Siren control unit connector	Terminal	Ground	Continuity
M94	1	Ground	Not existed
	8		Not existed

Is the inspection result normal?

YES >> Replace ultra sonic sensor.
NO >> Repair or replace harness.

ECU DIAGNOSIS

BCM (BODY CONTROL MODULE)

Reference Value

INFOID:0000000001102176

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

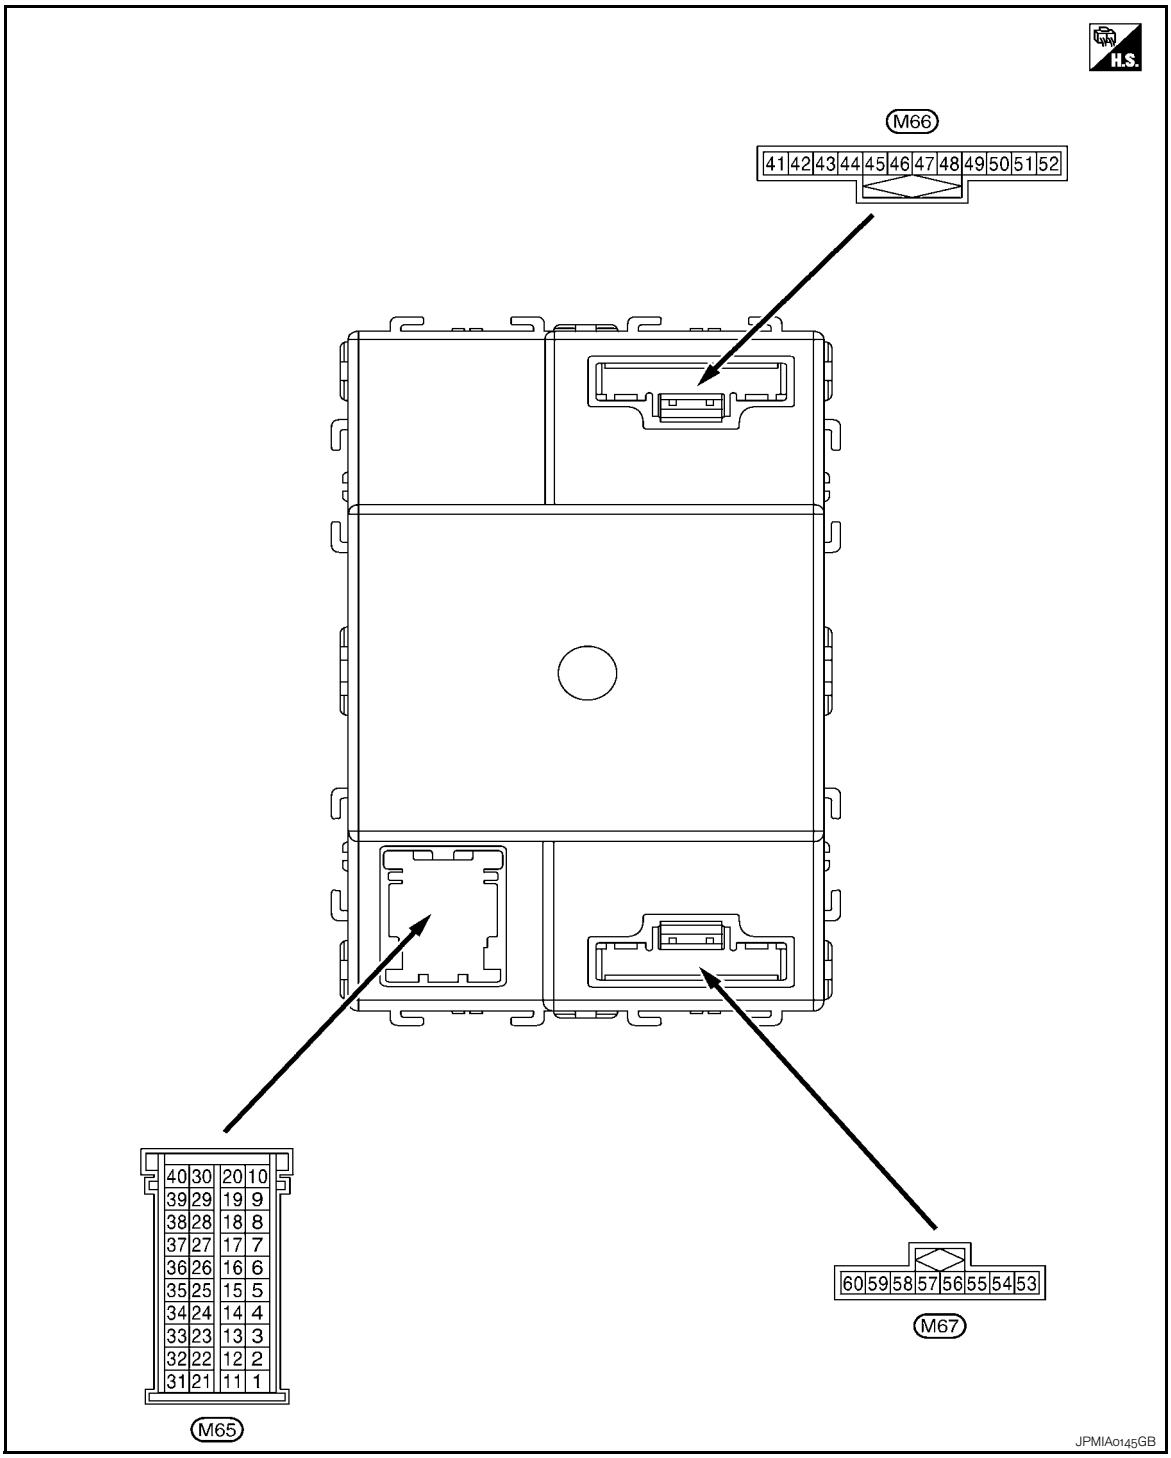
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000001102185

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001102186

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN)
2	• B2190: NATS ANTENNA AMP • B2191: DIFFERNCE OF KEY • B2192: ID DISCORD BCM-ECM • B2193: CHAIN OF BCM-ECM • B2194: DISCORD BCM-I-KEY • B2195: ANTI SCANNING • B2196: DONGLE NG

DTC Index

INFOID:0000000001102187

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

cardiagn.com

Display contents of CONSULT-III	Fail-safe	Cancellation
B2013: STRG COMM 1	• Inhibits steering look unlocking	Erase DTC
B2552: INTELLIGENT KEY	• Inhibits steering look unlocking • Inhibits engine cranking (BCM) • Fuel cut (ECM)	Erase DTC
B2590: NATS MALFUNCTION	• Inhibits steering look unlocking • Inhibits engine cranking (BCM) • Fuel cut (ECM)	Erase DTC

DTC Inspection Priority Chart

INFOID:0000000001102197

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN) • B2552: INTELIGENT KEY
2	• B2013: STRG COMM 1 • B2590: NATS MALFUNCTION

DTC Index

INFOID:0000000001102198

NOTE:
Details of time display
- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

CONSULT display	Detection condition	Fail-safe	Diagnosis
No DTC is detected. further testing may be required.	—	—	—
U1000: CAN COMM CIRCUIT	Intelligent Key unit cannot receive CAN communication signal continuously for 2 seconds or more.	—	Check CAN communication system. Refer to SEC-29
U1010: CONTROL UNIT (CAN)	Intelligent Key unit detects internal CAN communication circuit malfunction.	—	Replace Intelligent Key unit.
B2013: STRG COMM 1	The ID verification result between Intelligent key unit and steering lock unit are NG. Or Intelligent Key unit cannot communicate with steering lock unit.	×	Perform steering lock unit ID registration with CONSULT-III
B2552: INTELLIGENT KEY	Intelligent Key unit internal malfunction.	×	Replace Intelligent Key unit.
B2590: NATS MALFUNCTION	The ID verification result between Intelligent key unit and BCM are NG. Or Intelligent Key unit cannot communicate with BCM.	×	Check NATS Refer to SEC-43

				Ignition switch ON		0 - 1.0 V
26 (O)	Ground	Front wiper auto stop	Input	Ignition switch ON	Front wiper stop position	0 V
					Any position other than front wiper stop position	Battery voltage
27 (W)	Ground	Oil pressure switch	Input	Engine stopped		0 V
				Engine running		Battery voltage
28 (L)	—	CAN-H	Input/ Output	—		—
29 (P)	—	CAN-L	Input/ Output	—		—
30*4 (L)	Ground	Horn relay control	Output	The horn is not activated		Battery voltage
				The horn is activated		0 V
31 (R)	Ground	Headlamp LO (sensor)	Output	Ignition switch ON	Lighting switch OFF	0 V
					Lighting switch 2ND	Battery voltage
32*1 (R/Y)	Ground	ETC relay power supply	Output	Ignition switch ON		Battery voltage
33*1 (B/O)	Ground	Fuel pump relay control	Input	• Engine running • Ignition switch ON (For 1 second after turning ignition switch ON)		0 - 1.0 V
				Ignition switch ON (More than 1 second after turning ignition switch ON)		Battery voltage
34 (R/B)	Ground	Starter relay power supply	Input	Ignition switch ON (Except M/T models)	Selector lever “P” or “N”	0 V
					Selector lever in any position other than “P” or “N”	Battery voltage
				Ignition switch ON (M/T models)		
35 (W/L)	Ground	Ignition switch ON	Input	Ignition switch OFF or ACC		0 V
				Ignition switch ON		Battery voltage
36 (W)	Ground	Front fog lamp (RH)	Output	Lighting switch 1ST	Front fog lamp switch ON	Battery voltage
					Front fog lamp switch OFF	0 V
37 (R/W)	Ground	Parking lamp (RH)	Output	Lighting switch 1ST		Battery voltage
				Lighting switch OFF		0 V
38 (R/L)	Ground	Tail, license plate lamps and illuminations	Output	Lighting switch 1ST		Battery voltage
				Lighting switch OFF		0 V
39 (GR)	Ground	Headlamp washer relay control	Output	Ignition switch ON	When headlamp washer is operating	0 V
					When headlamp washer is not operating	Battery voltage
40*1 (BR/Y)*5 (SB)*6	Ground	Ignition relay power supply	Output	Ignition switch OFF or ACC		0 V
				Ignition switch ON		Battery voltage
41 (P)	Ground	Ignition relay power supply	Output	Ignition switch OFF or ACC		0 V
				Ignition switch ON		Battery voltage

cardiagn.com

Terminal No. (Wire color)		Description		Condition		Value (Approx.)
+	–	Signal name	Input/ Output			
42*1 (B/Y)	Ground	Fuel pump relay power supply	Output	• Ignition switch OFF or ACC • Approximately 1 second or more after turning the ignition switch ON		0 V
				• Approximately 1 second after turning the ignition switch ON • Engine running		Battery voltage
43 (W/B)	Ground	Front fog lamp (LH)	Output	Lighting switch 1ST	Front fog lamp switch ON	Battery voltage
					Front fog lamp switch OFF	0 V
44 (L)	Ground	Headlamp LO (LH)	Output	Lighting switch OFF		0 V
				Lighting switch 2ND		Battery voltage
45 (L/W)	Ground	Headlamp HI (RH)	Output	• Lighting switch 2ND and HI • lighting switch PASS		Battery voltage
				Lighting switch OFF		0 V
46 (G)	Ground	Headlamp HI (LH)	Output	• Lighting switch 2ND and HI • Lighting switch PASS		Battery voltage
				Lighting switch OFF		0 V
47 (R/L)	Ground	Parking lamp (LH)	Output	Lighting switch 1ST		Battery voltage
				Lighting switch OFF		0 V
48*7 (Y)	Ground	Cooling fan relay-3 control	Output	When cooling fan does HI operation		0 V
				When cooling fan does OFF or LO operation		Battery voltage
49 (B)	Ground	Rear window defogger relay power supply	Output	Ignition switch ON	Rear window defogger switch ON	Battery voltage
					Rear window defogger switch OFF	0 V
50 (B/R)	Ground	Starter relay power supply	Output	When engine is clanking		Battery voltage
				When engine is not clanking		0 V
51 (P)	Ground	Ignition switch START	Input	Ignition switch START		Battery voltage
				Ignition switch OFF, ACC or ON		0 V
52 (W)	Ground	Cooling fan relay-1 power supply	Output	When cooling fan does LO or HI operation		Battery voltage
				When cooling fan does OFF operation		0 V
53 (W/B)	Ground	Battery power supply (Cooling fan relay)	Input	Ignition switch OFF		Battery voltage
54*5 (R)	Ground	Cooling fan relay-2 power supply	Input	When cooling fan does HI operation		Battery voltage
				When cooling fan does OFF or LO operation		0 V

Fail Safe

INFOID:0000000001102193

CAN communication control

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

If no CAN communication is available with ECM

cardiagn.com

Control part	Fail-safe in operation
Cooling fan	• The cooling fan relay-2*1 or the cooling fan relay-3*2 turns ON when the ignition switch is turned ON • Turns off the fan motor low relay when the ignition switch is turned OFF
A/C compressor	A/C relay OFF

*1: HR engine models

*2: MR engine and K9K engine models

If no CAN communication is available with BCM

Control part	Fail-safe in operation
Headlamp	• The headlamp low relay turns ON when the ignition switch is turned ON • The headlamp low relay turns OFF when the ignition switch is turned OFF • Headlamp high relay OFF
• Parking lamps • License plate lamps • Tail lamps • Illuminations	• The tail lamp relay turns ON when the ignition switch is turned ON • The tail lamp relay turns OFF when the ignition switch is turned OFF
Front wiper	• The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed. • The front wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the INT mode and the front wiper motor is operating.
Front fog lamps	Front fog lamp relay OFF
Starter motor	Inhibit relay OFF
Rear window defogger	Rear window defogger relay OFF
Headlamp washer	Headlamp washer relay OFF
PTC heater	PTC heater relay OFF

Ignition relay malfunction detection function

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

DTC	Ignition switch	Ignition relay	Tail lamp relay
—	ON	ON	—
—	OFF	OFF	—
B2098: IGN RLY ON	OFF	ON	ON (10 minutes)
B2099: IGN RLY OFF	ON	OFF	—

NOTE:

The tail lamp relay is turned OFF when the ignition switch is turned ON.

Front wiper control

IPDM E/R detects the front wiper stop position with the front wiper auto stop signal.
When the front wiper auto stop signal is in the conditions listed below, IPDM E/R repeats a front wiper 10 seconds operation and 20 seconds stop five times.

Ignition switch	Front wiper switch	Front wiper auto stop signal
ON	OFF	The front wiper auto stop signal (stop position) cannot be input for 10 seconds.
	ON	The front wiper auto stop signal does not change for 10 seconds.

NOTE:

carDiagn.com

This operation status can be confirmed on the IPDM E/R “Data Monitor” that displays “BLOCK” for the item “WIP PROT” while the wiper is stopped.

SYMPTOM DIAGNOSIS

INTELLIGENT KEY SYSTEM/ENGINE START FUNCTION SYMPTOMS

Symptom Table

INFOID:0000000000944697

NOTE:
- Before performing the diagnosis in the following table, check “DLK-20, "Work Flow"”.
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

CONDITIONS OF VEHICLE (OPERATING CONDITIONS)
- Engine start function is ON when setting on CONSULT-III.
- Mechanical key is not inserted in key cylinder.
- One or more of Intelligent Keys with registered Intelligent Key ID is in the vehicle.

Symptom	Diagnosis/service procedure	Reference page
Ignition switch does not turn on with Intelligent Key. [KEY warning lamp (green) illuminates.]	1. Check steering lock unit.	SEC-31
	2. Replace Intelligent Key unit.	DLK-282
Ignition switch does not turn on with Intelligent Key. [KEY warning lamp does not illuminate.]	1. Check Intelligent Key unit power supply and ground circuit.	DLK-71
	2. Check ignition knob switch.	SEC-50
	3. Check key switch.	SEC-48
	4. Replace Intelligent Key unit.	DLK-282
Ignition switch does not turn on with Intelligent Key. [KEY warning lamp (red) illuminates.]	1. Check inside key antenna.	DLK-116
	2. Replace Intelligent Key unit.	DLK-282
Ignition switch does not turn on with mechanical key	Check key switch.	SEC-48
Engine can not start	1. CHeck key switch.	SEC-48
	2. CHeck stop lamp switch.	SEC-52

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001097890

The engine start function, door lock function, and NATS in the Intelligent Key system are closely related to each other regarding control. Narrow down the functional area in question by performing basic inspection to identify which function is malfunctioning. The vehicle security function can operate only when the door lock is operating normally. Therefore, it is easy to identify any factor unique to the vehicle security system by performing the vehicle security operation check after basic inspection.

1.CHECK DOOR LOCK OPERATION

Check the door lock for normal operation with the Intelligent Key and door request switch.
Successful door lock operation with the Intelligent Key and request switch indicates that the remote keyless entry receiver and inside key antenna required for engine start are functioning normally.
Identify the malfunctioning point by referring to the DLK section if the door cannot be unlocked.

Can the door be locked with the Intelligent Key and door request switch?

YES >> GO TO 2.
NO >> Refer to DLK-203, "INTELLIGENT KEY : Symptom Table".

2.CHECK IGNITION KNOB SWITCH OPERATION-1

With all registered Intelligent Keys, check if ignition knob can rotate when carrying Intelligent Key inside the vehicle.

Does ignition knob rotate?

YES >> GO TO 3.
NO >> Refer to SEC-149, "Symptom Table".

3.CHECK IGNITION KNOB SWITCH OPERATION-2

Insert registered mechanical key into key cylinder, and check if ignition knob can rotate. Check for all registered mechanical keys.

Does ignition knob rotate?

YES >> GO TO 4.
NO (Does not rotate with some of mechanical keys)>>Perform mechanical key registration.
NO (Does not rotate with all mechanical keys)>>Refer to SEC-149, "Symptom Table".

4.CHECK VEHICLE SECURITY SYSTEM

Check the vehicle security system for normal operation.
The vehicle security function can operate only when the door lock function is operating normally.
Therefore, it is easy to identify any factor unique to the vehicle security by performing the vehicle security operation check after this basic inspection.

>> Go to SEC-150, "Vehicle Security Operation Check".

Vehicle Security Operation Check

INFOID:0000000001097891

1.INSPECTION START

Turn ignition switch “OFF” and pull out mechanical key from key cylinder.
NOTE:
Before starting operation check, open front windows.

>> GO TO 2.

2.CHECK SECURITY INDICATOR LAMP

1. Lock doors using Intelligent Key.
2. Check that security indicator lamp illuminates for 30 seconds.

Security indicator lamp should illuminate.

OK >> GO TO 3.

cardiagn.com

NG >> Perform diagnosis and repair. Refer to SEC-148, "Symptom Table".

3. CHECK ALARM FUNCTION

1. After 30 seconds, security indicator lamp will start to blink.
2. Open any door or hood before unlocking with Intelligent Key or open back door without Intelligent Key.

Does alarm function properly.

OK >> GO TO 4.
NG >> Check the following.
- The vehicle security system does not phase in alarm mode. Refer to SEC-148, "Symptom Table".
- Alarm does not operate. Refer to SEC-148, "Symptom Table".

4. CHECK ALARM CANCEL OPERATION

Unlock any door or open back door using Intelligent Key.

Alarm (horn and headlamp) should stop.

OK >> INSPECTION END.
NG >> Check door lock function. Refer to DLK-20, "Work Flow".

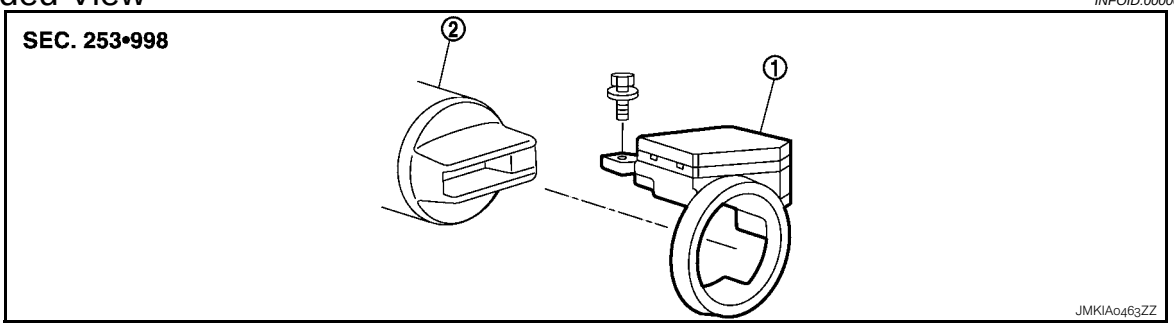
carldiagn.com

ON-VEHICLE REPAIR

NATS (NISSAN ANTI-THEFT SYSTEM)

Exploded View

INFOID:0000000000944700



1. NATS antenna amp.
2. Steering lock assembly

Refer to SEC-152, "Removal and Installation".

Removal and Installation

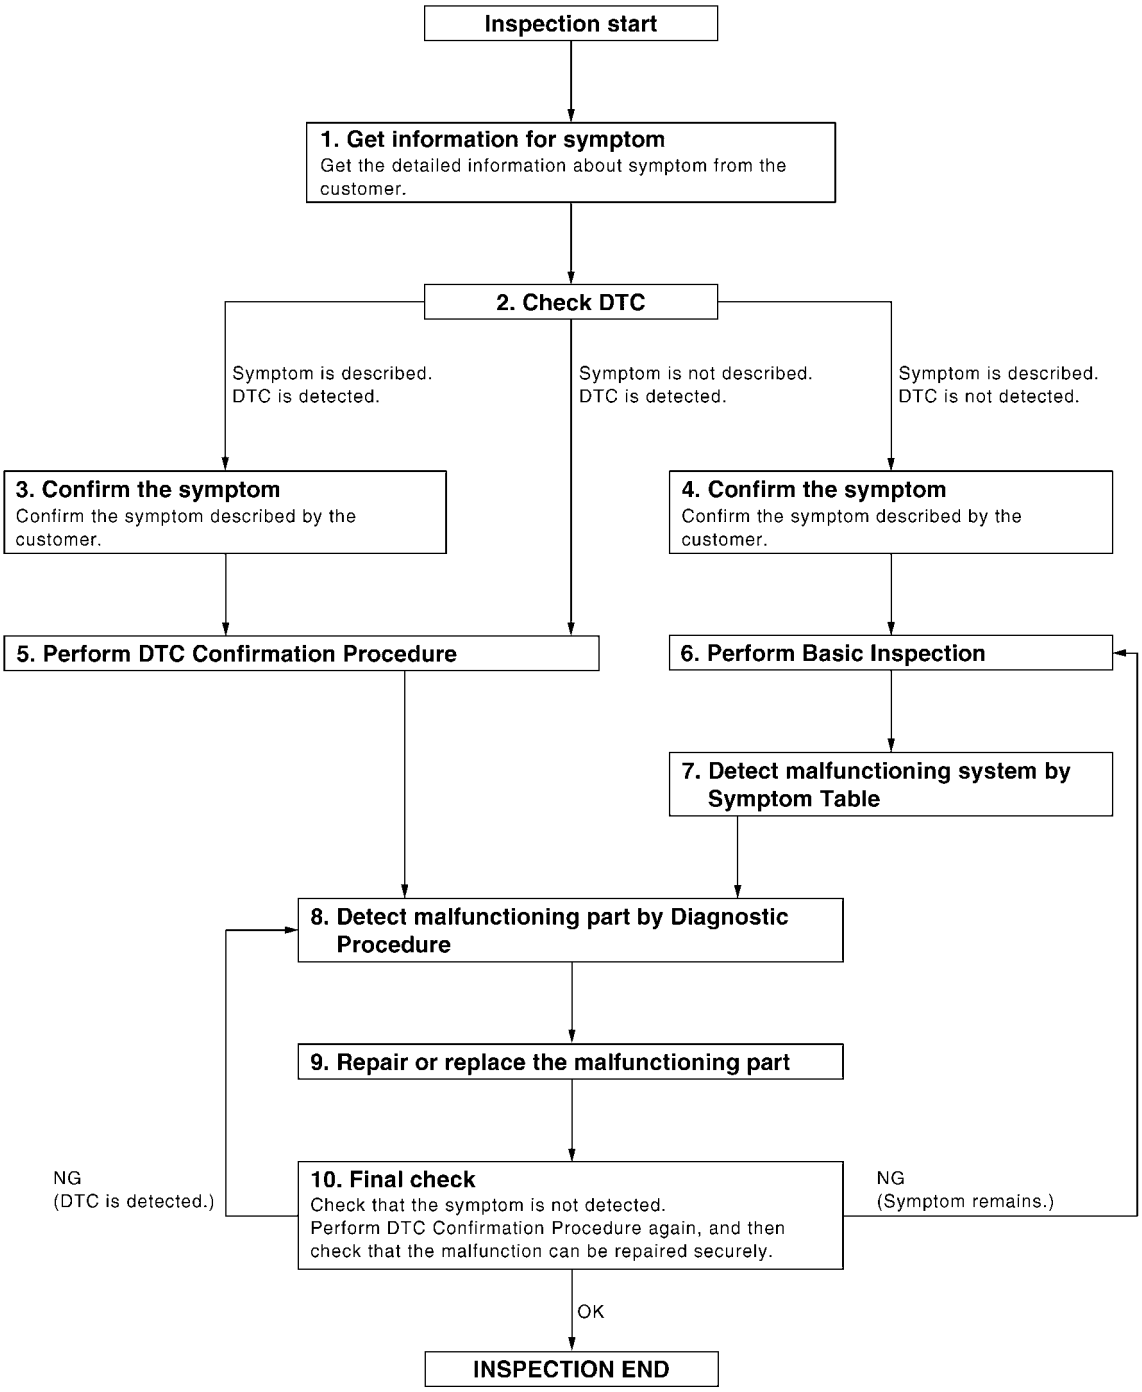
BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000001116420

OVERALL SEQUENCE



JMKIA0101GB

DETAILED FLOW

1.GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred).

>> GO TO 2.

2.CHECK DTC

1. Check DTC for BCM.
2. Perform the following procedure if DTC is displayed.

- Erase DTC.
- Study the relationship between the cause detected by DTC and the symptom described by the customer.

3. Check related service bulletins for information.

Is any symptom described and any DTC detected?

Symptom is described, DTC is displayed>>GO TO 3.
Symptom is described, DTC is not displayed>>GO TO 4.
Symptom is not described, DTC is displayed>>GO TO 5.

3.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR” mode and check real time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 5.

4.CONFIRM THE SYMPTOM

Confirm the symptom described by the customer.
Connect CONSULT-III to the vehicle in “DATA MONITOR ” mode and check real time diagnosis results.
Verify relation between the symptom and the condition when the symptom is detected.

>> GO TO 6.

5.PERFORM DTC CONFIRMATION PROCEDURE

Perform DTC Confirmation Procedure for the displayed DTC, and then check that DTC is detected again.
If two or more DTCs are detected, refer to SEC-224, "DTC Inspection Priority Chart" and determine trouble diagnosis order.

Is DTC detected?

YES >> GO TO 8.
NO >> Refer to GI-39, "Intermittent Incident".

6.PERFORM BASIC INSPECTION

Perform Basic Inspection, refer to SEC-248, "Basic Inspection".

Inspection End>>GO TO 7.

7.DETECT MALFUNCTIONING SYSTEM BY SYMPTOM TABLE

Detect malfunctioning system according to Symptom Table based on the confirmed symptom in step 4.

>> GO TO 8.

8.DETECT MALFUNCTIONING PART BY DIAGNOSTIC PROCEDURE

Inspect according to Diagnostic Procedure of the system.
NOTE:
The Diagnostic Procedure described based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure.

>> GO TO 9.

cardiagn.com

9.REPAIR OR REPLACE THE MALFUNCTIONING PART

1. Repair or replace the malfunctioning part.
2. Reconnect parts or connectors disconnected during Diagnostic Procedure again after repair and replacement.
3. Check DTC. If DTC is displayed, erase it.

>> GO TO 10.

10.FINAL CHECK

When DTC was detected in step 2, perform DTC Confirmation Procedure or Component Function Check again, and then check that the malfunction have been repaired securely.
When symptom was described from the customer, refer to confirmed symptom in step 3 or 4, and check that the symptom is not detected.

Does the symptom reappear?

YES (DTC is detected)>>GO TO 8.
YES (Symptom remains)>>GO TO 6.
NO >> **INSPECTION END**

autodiagn.com

INSPECTION AND ADJUSTMENT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description

INFOID:0000000001116433

Perform the system initialization when replacing siren.

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Special Repair Requirement

INFOID:0000000001116434

Refer to the CONSULT-III Operation Manual-NATS.

ECM RE-COMMUNICATING FUNCTION

ECM RE-COMMUNICATING FUNCTION : Description

INFOID:0000000001116435

Performing following procedure can automatically perform re-communication of ECM and BCM, but only when the ECM has been replaced with a new one (*1).
*1: New one means a virgin ECM which has never been energized on-board.
(In this step, initialization procedure by CONSULT-III is not necessary)
NOTE:
- **When registering new Key IDs or replacing the ECM that is not brand new, refer to CONSULT-III Operation Manual NATS.**
- **If multiple keys are attached to the key holder, separate them before work.**
- **Distinguish keys with unregistered key ID from those with registered ID.**

ECM RE-COMMUNICATING FUNCTION : Special Repair Requirement

INFOID:0000000001116436

1.PERFORM ECM RE-COMMUNICATING FUNCTION

1. Install ECM.
2. Using a registered key (*2), turn ignition switch to “ON”.
   *2: To perform this step, use the key that has been used before performing ECM replacement.
3. Maintain ignition switch in “ON” position for at least 5 seconds.
4. Turn ignition switch to “OFF”.
5. Start engine.

Can engine be started?

YES >> Procedure is completed.
NO >> Initialize control unit. Refer to CONSULT-III Operation Manual NATS.

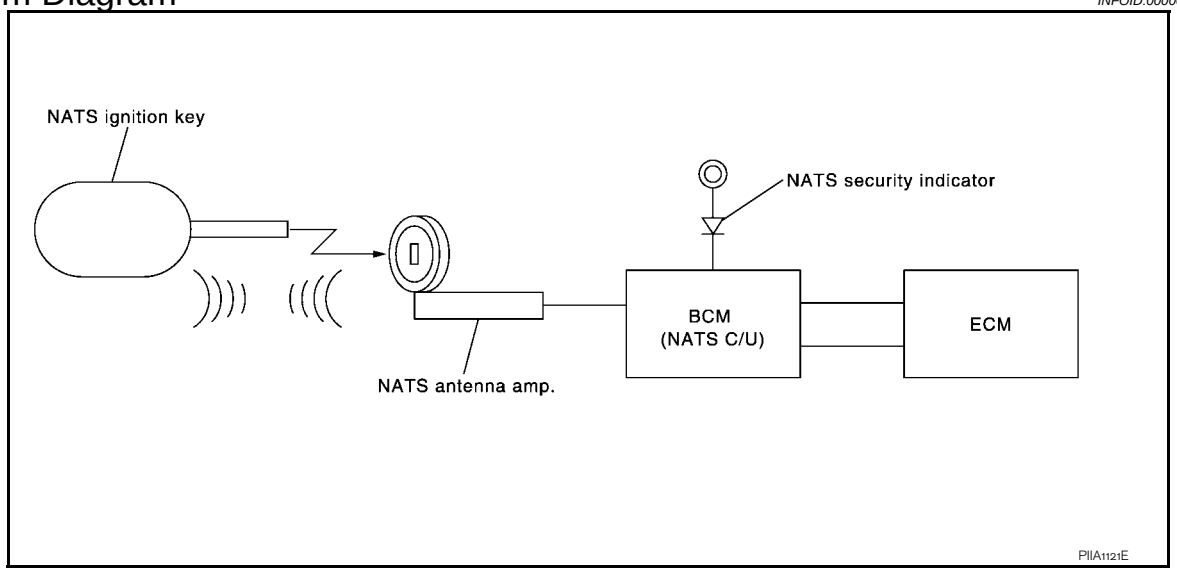
cardiagn.com

FUNCTION DIAGNOSIS

NATS (NISSAN ANTI-THEFT SYSTEM)

System Diagram

INFOID:0000000001097658



System Description

INFOID:0000000001097659

INPUT/OUTPUT SIGNAL CHART

BCM

Switch/Input signal	Input signal to BCM	BCM function	Actuator/Output signal
NATS antenna amp.	Key ID	NATS	• Security indicator lamp • Starter request
Audio unit	Audio unit ID		
ECM	Engine status signal		

SYSTEM DESCRIPTION

NATS (Nissan Anti-Theft System) has the following immobilizer functions:

- Engine immobilizer shows high anti-theft performance to prevent engine start by other than the owner.
- Only a key with key ID registered in BCM and ECM can start engine, and shows high anti-theft performance to prevent key from being copied or stolen.
- Security indicator always flashes with mechanical key removed condition (key switch: OFF).
- Therefore, NATS warns outsiders that the vehicle is equipped with the anti-theft system. Refer to SEC-165, "System Description".
- If system detects malfunction, security indicator illuminate when ignition switch is turned to ON position.
- If the owner requires, ignition key ID can be registered for up to 5 keys.
- During trouble diagnosis or when the following parts have been replaced, and if ignition key is added, registration* is required.

*1: All keys kept by the owner of the vehicle should be registered with ignition key.

- ECM
- BCM
- Ignition key
- ABS actuator control unit
- EPS sontrol unit
- IPDM E/R
- Combination meter

- NATS trouble diagnosis, system initialization and additional registration of other Ignition key IDs must be carried out using CONSULT-III hardware and SECURITY CARD.
  When NATS initialization has been completed, the ID of the inserted ignition key or ignition key IDs can be carried out.

- Possible symptom of NATS malfunction is “Engine cannot start” In J10, the engine can be started with the NATS. Identify the possible causes according to “Work Flow”. Refer to SEC-157, "Work Flow".
- If ECM other than Genuine NISSAN is installed, the engine cannot be started. For ECM replacement procedure, refer to SEC-160, "ECM RE-COMMUNICATING FUNCTION : Description".

PRECAUTIONS FOR KEY REGISTRATION

- The key registration is a procedure that erases the current NATS ID once, and then re-registers a new ID. Therefore the registered ignition key is necessary for this procedure. Before starting the registration operation collect all registered ignition keys from the customer
- The NATS ID registration is the procedure that registers the ID stored into the transponder (integrated in ignition key) to BCM.

SECURITY INDICATOR

- Security indicator blinks when the ignition switch is in “OFF” or “ACC” position.
- When NATS detects trouble, the security indicator lamp lights up while ignition key is in the “ON” position.

MAINTENANCE INFORMATION

CAUTION:

If necessary to perform NATS ID registration when replacing any of the following part.
If it's not (or fail to do so), the electrical system may not operate properly.
***: New one means a virgin control unit that has never been energized on-board.**

- **ABS actuator control unit**
- **EPS control unit**
- **IPDM E/R**
- **ECM**
- **Combination meter**

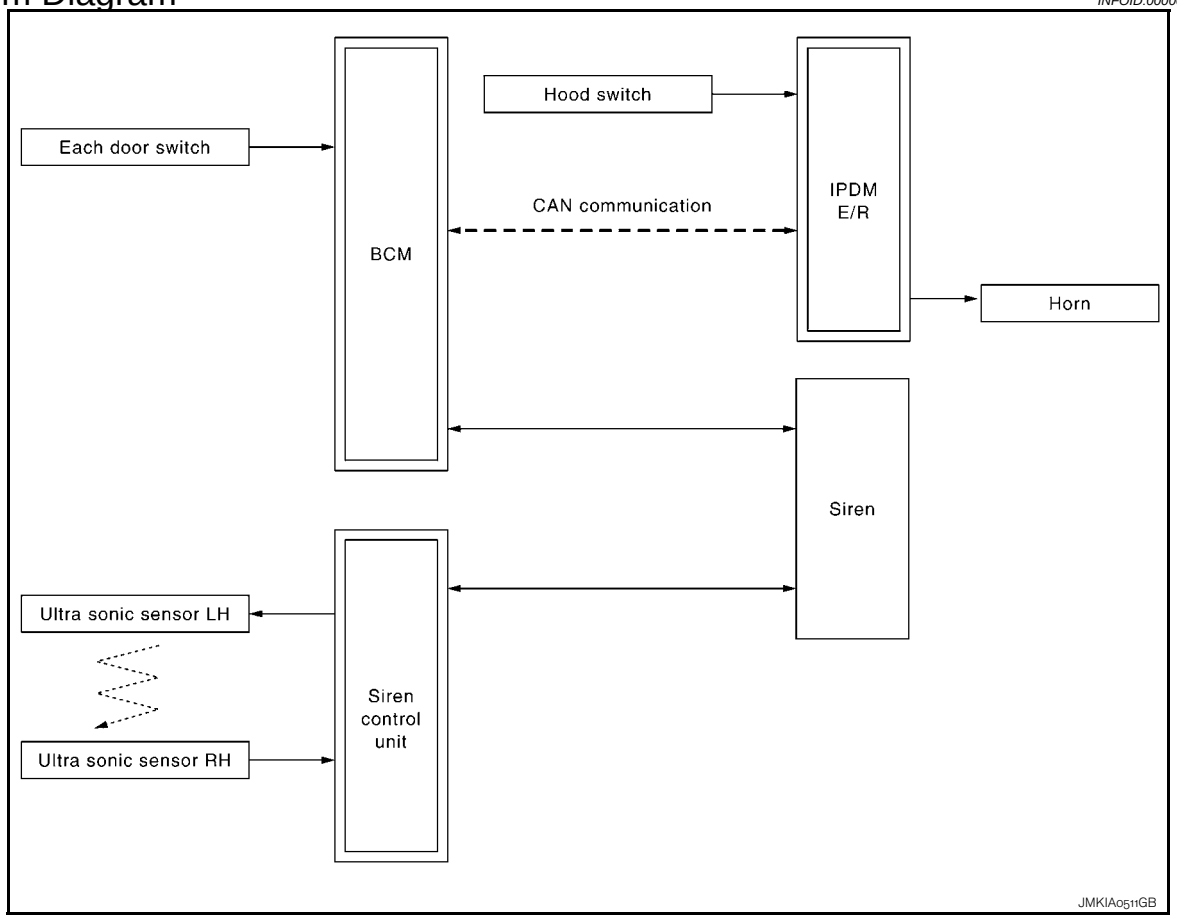
VEHICLE SECURITY SYSTEM

System Diagram

INFOID:0000000001097664



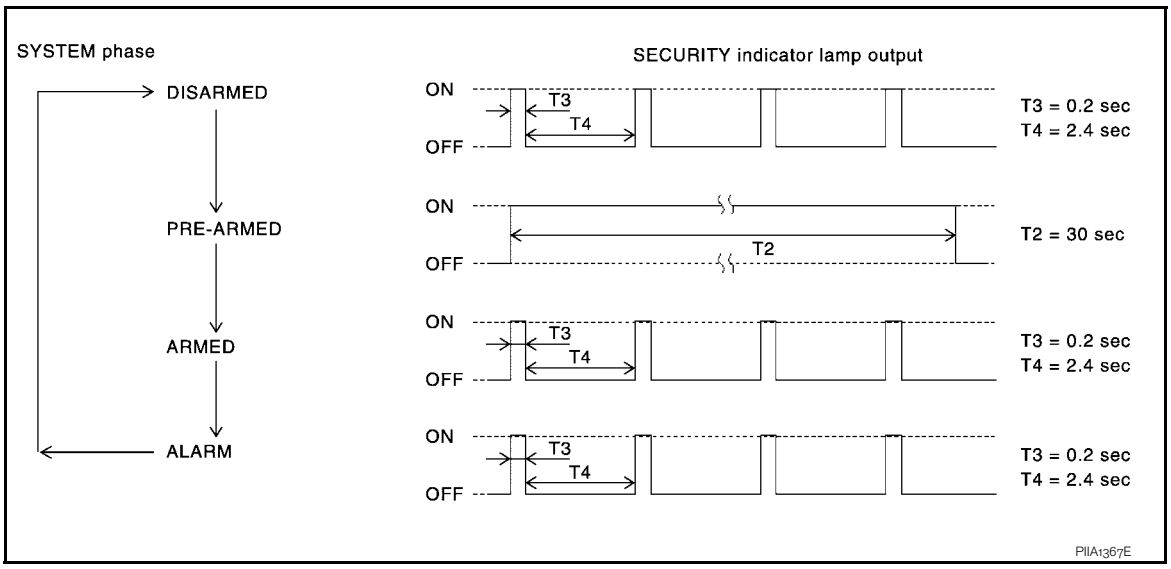
System Description

INFOID:0000000001116439

DESCRIPTION

The security system provides an audible and visual alarm when an unauthorized access to the vehicle is detected while the system is in armed phase.
The security system consist of two control units. BCM manages audible alarm (horn), siren control unit manage audible alarm (siren).

OPERATION FLOW



BCM shifts the phase as follows and the phase information is sent to siren control unit via communication line.

Disarmed Phase
When the vehicle is being driven or when doors are open, the theft warning system is set in the disarmed phase on the assumption that the owner is inside or near the vehicle.

Pre-Armed Phase And Armed Phase
The vehicle security system turns into the pre-armed phase when ignition switch is in OFF position, all doors are closed and locked (using Intelligent Key, door request switch or auto relock function). After 10 seconds from the lock operation, the system automatically shifts into the armed phase.

Condition of Activating The System
When the following condition are performed in armed phase, the system sounds the horns/siren and flashes the head lamps for about 30 seconds.
- Hood or any door is opened.
- Ultra sonic sensor is triggered.
- Ignition switch goes ON with invalid transponder ID.

Condition of Deactivating The System
When one of the following operations is performed, the armed phase is canceled.
- Unlock the doors with Intelligent Key or door request switch.
- Ignition switch goes ON with transponder ID verified.

SIREN CONTROL UNIT

Siren control unit manages siren. the siren control unit does not shift to armed phase in the same way as BCM. the siren control unit goes to armed phase after about 10 seconds from lock command. If door is opened or closed within about 20 seconds, only the siren will be activated.
Siren control unit has battery inside. If disconnect or connect battery terminal before canceling armed phase, siren will be activated.

CAUTION:
When replace siren control unit (new one and used one), Perform "C/U INITALIZATION" with CONSULT-III.

Ultra Sonic Sensor Function
The ultra sonic sensor consist of two separate units, a transmitter on the left and receiver on the right mounted on room mirror. The LH transmitter sensor sends an ultra sonic pulse of sound, and RH receiver sensor receives the returning echo pulse.
It is possible to exclude the ultrasonic sensors.
To exclude the ultra sonic sensors:
1. Turn the ignition switch from the OFF to the ON position.
2. Turn the ignition switch from OFF to ON 3 times within 7 seconds.
3. Close the doors, bonnet and press the lock button on the keyfob to lock all doors.

The ultra sonic sensors are now excluded from the alarm system. All other functions of the system remain activated until the alarm system is disarmed again.

DIAGNOSIS SYSTEM (BCM)

COMMON ITEM

COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001097675

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION

BCM can perform the following functions for each system.

NOTE:

It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

IMMU

IMMU : CONSULT-III Function (BCM - IMMU)

INFOID:0000000001097676

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

carsdiagn.com

Diagnosis mode	Function Description
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from Intelligent Key unit.

DATA MONITOR

Monitor item	Content
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.

*1: For the vehicle Intelligent key is equipped.

ACTIVE TEST

Test item	Description
THEFT IND	This test is able to check security indicator operation [ON/OFF].

THEFT ALM

THEFT ALM : CONSULT-III Function (BCM - THEFT ALM)

INFOID:0000000001097677

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.

DATA MONITOR

Monitor Item	Condition
IGN ON SW	Indicates [ON/OFF] condition of ignition switch in ON position.
ACC ON SW	Indicates [ON/OFF] condition of ignition switch in ACC position.
PUSH SW*1	Indicates [ON/OFF] condition of ignition knob switch.
KEY ON SW	Indicates [ON/OFF] condition of key switch.
KEYKESS LOCK*2	Indicates [ON/OFF] condition of lock signal from key fob.
KEYLESS UNLOCK*2	Indicates [ON/OFF] condition of unlock signal from key fob.
I-KEY LOCK*1	Indicates [ON/OFF] condition of lock signal from Intelligent Key.
I-KEY UNLOCK*1	Indicates [ON/OFF] condition of unlock signal from Intelligent Key.
HOOD SW	Indicates [ON/OFF] condition of hood switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock and unlock switch.

*1: For vehicle equipped with Intelligent Key.

cardiagn.com

*2: For the vehicle equipped with remote key less entry system.

ACTIVE TEST

Test item	Description
THEFT IND	This test is able to check security indicator operation [ON/OFF].
VEHICLE SECURITY HORN	This test is able to check horn operation [ON].
FLASHER	This test is able to check flasher operation [LH/RH/OFF].

WORK SUPPORT

Test item	Description
SECURITY ALARM SET	Vehicle security function mode can be changed in this mode. • ON: Vehicle security function is ON. • OFF: Vehicle security function is OFF.
THEFT ALM TRG	The switch which triggered vehicle security system is recorded. This mode can be able to confirm and erase the record of vehicle security system.

c-diagn.com

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000001116800

CAN (Controller Area Network) is a serial communication line for real time applications. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicle is equipped with many electronic control unit, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
CAN Communication Signal Chart. Refer to LAN-59, "CAN Communication Signal Chart".

DTC Logic

INFOID:0000000001116801

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1000	CAN COMM CIRCUIT	When BCM cannot communicate CAN communication signal continuously for 2 seconds or more.	Any item (or items) of the following listed below is malfunctioning in CAN communication system. • Transmission • Receiving (ECM) • Receiving (METER/M&A) • Receiving (TCM) • Receiving (MULTI AV) • Receiving (IPDM E/R) • Receiving (I-KEY)

Diagnosis Procedure

INFOID:0000000001116802

1.PERFORM SELF DIAGNOSTIC

1. Turn ignition switch ON and wait for 2 seconds or more.
2. Check “Self Diagnostic Result” of BCM.

Is “CAN COMM CIRCUIT” displayed?

YES >> Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Refer to GI-39, "Intermittent Incident".

DTC Logic

INFOID:0000000001116803

DTC DETECTION LOGIC

DTC	CONSULT-III display description	DTC Detection Condition	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller of BCM.	BCM

Diagnosis Procedure

INFOID:0000000001116804

1.REPLACE BCM

When “DTC:U1010” is detected, replace BCM.

>> Replace BCM. Refer to BCS-64, "Exploded View".

Special Repair Requirement

INFOID:0000000001116805

1.ADDITIONAL SERVICE WHEN REPLACING BCM

>> Refer to BCS-3, "ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Description".

carsdiagn.com

B2190, P1614 NATS ANTENNA AMP.

Description

INFOID:0000000001115688

Performs ID verification through BCM and NATS antenna amplifier when ignition switch is ON position.
Prohibits the release of steering lock or start of engine when an unregistered ID of ignition key is used.

DTC Logic

INFOID:0000000001115689

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2190 P1614	NATS ANTENNA AMP	• Inactive communication between NATS antenna amp. and BCM. • Ignition key is malfunctioning.	• Harness or connectors (The NATS antenna amp. circuit is open or short) • Ignition key • NATS antenna amp. • BCM

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Insert ignition key into the key cylinder.
2. Turn ignition switch ON.
3. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-174, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001115690

1.CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to SEC-249, "Removal and Installation".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Reinstall NATS antenna amp. correctly.

2.CHECK IGNITION KEY

Start engine with another registered ignition key.

Does the engine start?

YES >> Replace ignition key. Perform initialization and registration of ignition key. Refer to “CONSULT-III Operation Manual NATS”
NO >> GO TO 3.

3.CHECK NATS ANTENNA AMP. POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect NATS antenna amp. harness connector.
3. Check voltage between NATS antenna amp. harness connector and ground.

NATS antenna amp.		Ground	Voltage [V] (approx.)
Connector	Terminal		
M26	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK NATS ANTENNA AMP. GROUND CIRCUIT

cardiagn.com

Check continuity between NATS antenna amp. harness connector and ground.

Key slot		Ground	Continuity
Connector	Terminal		
M26	3	Ground	Existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace circuit.

5. CHECK NATS ANTENNA AMP. SIGNAL CIRCUIT

Check voltage between NATS antenna amp. harness connector and ground.

NATS antenna amp.		Ground	Condition	Voltage [V] (approx.)
Connector	Terminal			
M26	2	Ground	Just after inserting ignition key in key cylinder.	Pointer of tester should move.
	4		Other than above.	0

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace circuit.

6. CHECK INTERMITTENT INCIDENT

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace NATS antenna amp.
NO >> Repair or replace malfunctioning parts.

B2191, P1615 DIFFERENCE OF KEY

Description

INFOID:0000000001115691

Performs ID verification through BCM when ignition switch is ON position.
Prohibits the release of steering lock or start of engine when an unregistered key is used.

DTC Logic

INFOID:0000000001115692

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2191 P1615	DIFFERENCE OF KEY	The ID verification results between BCM and ignition key are NG. The registration is necessary.	• Ignition key

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Insert ignition key into the key cylinder.
2. Press the ignition knob switch.
3. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-176, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001115693

1.PERFORM INITIALIZATION

Perform initialization with CONSULT-III. Re-register all ignition keys.
For initialization and registration of ignition key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered ignition key?

YES >> Ignition key was unregistered.
NO >> BCM is malfunctioning.
- Replace BCM. Refer to BCS-64, "Removal and Installation".
- Perform initialization again

cardiagn.com

B2192, P1611 ID DISCORD, IMMU-ECM

Description

INFOID:0000000001115694

BCM performs the ID verification with ECM that allows the engine to start. BCM starts the communication with ECM if ignition switch is turned ON starts the engine if the ID is OK. ECM prevents the engine from starting if the ID is not registered.

DTC Logic

INFOID:0000000001115695

DTC DETECTION LOGIC

NOTE:

- If DTC B2192 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-172, "DTC Logic".
- If DTC B2192 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-173, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2192 P1611	ID DISCORD BCM-ECM	The ID verification results between BCM and ECM are NG. The registration is necessary.	• BCM • ECM

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-177, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001115696

1.PERFORM INITIALIZATION

Perform initialization with CONSULT-III. Re-register all ignition keys.
For initialization and registration of ignition key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered ignition key?

YES >> ID was unregistered.
NO >> GO TO 2.

2.PEPLACE BCM

1. Replace BCM. Refer to BCS-64, "Removal and Installation".
2. Perform initialization with CONSULT-III. Re-register all ignition keys.
   For initialization and registration of ignition key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered ignition key?

YES >> BCM is malfunctioning.
NO >> GO TO 3.

3.PEPLACE ECM

1. Replace ECM.
2. Perform initialization with CONSULT-III. Re-register all ignition keys.
   For initialization and registration of ignition key. Refer to “CONSULT-III Operation Manual NATS”.

Can the system be initialized and can the engine be started with re-registered ignition key?

YES >> ECM is malfunctioning.
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

B2193, P1612 CHAIN OF ECM-IMMU

Description

INFOID:0000000001116346

BCM performs the ID verification with ECM that allows the engine to start. BCM starts the communication with ECM if ignition switch is turned ON and starts the engine if the ID is OK. ECM prevents the engine from starting if the ID is not registered.

DTC Logic

INFOID:0000000001116347

DTC DETECTION LOGIC

NOTE:

- If DTC B2193 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-29, "DTC Logic".
- If DTC B2193 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-30, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2193 P1612	CHAIN OF BCM-ECM	Inactive communication between ECM and BCM	• Harness or connectors (The CAN communication line is open or short) • BCM • ECM

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-178, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001116348

1.REPLACE BCM

1. Replace BCM. Refer to BCS-64, "Removal and Installation".
2. Perform initialization with CONSULT-III.
   For initialization, refer to “CONSULT-III Operation Manual NATS”.

Does the engine start?

YES >> BCM was malfunctioning.
NO >> ECM is malfunctioning.
- Replace ECM.
- Perform ECM re-communicating function.

cardiagn.com

B2195 ANTI-SCANNING

Description

INFOID:0000000001115700

When the ID of the remote control engine starter installed cannot be registered, anti-scanning operates and it may be possible that the engine can not start. In the case, obtain the customer approval to remove the remote control engine starter.

DTC Logic

INFOID:0000000001115701

DTC DETECTION LOGIC

NOTE:

- If DTC B2195 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-172, "DTC Logic".
- If DTC B2195 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-173, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2195	ANTI-SCANNING	The ID of the remote control engine starter installed cannot be registered.	Remote control engine starter

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-179, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001115702

1.REMOVAL OF REMOTE CONTROL ENGINE STARTER

Remove remote control engine starter with the customer approval.

>> GO TO 2.

2.CHECK SELF DIAGNOSTIC RESULT

1. Turn ignition switch ON.
2. Perform “Self diagnostic result” with CONSULT-III.
3. Erase DTC.
4. Start the engine.

Does the engine start?

YES >> INSPECTION END
NO >> BCM is malfunctioning.
- Replace BCM
- Perform initialization

B2196 DONGLE NG

Description

INFOID:0000000001115703

BCM performs the ID verification with the slave control units (ECM, ABS actuator, EPS column assy, IPDM E/R, combination meter).
If either slave control unit is replaced by used part, perform initialization with CONSULT-III. But if the control unit is replaced by new part, the system does not need initialization.

DTC Logic

INFOID:0000000001115704

DTC DETECTION LOGIC

NOTE:

- If DTC B2196 is displayed with DTC U1000, first perform the trouble diagnosis for DTC U1000. Refer to SEC-172, "DTC Logic".
- If DTC B2196 is displayed with DTC U1010, first perform the trouble diagnosis for DTC U1010. Refer to SEC-173, "DTC Logic".

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
B2196	DONGLE NG	The ID verification results between BCM and each slave control unit are NG.	• ECM • ABS actuator assy • EPS column assy • Combination meter • IPDM E/R

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self Diagnostic Result” with CONSULT-III.

Is the DTC detected?

YES >> Refer to SEC-180, "Diagnosis Procedure".
NO >> INSPECTION END.

Diagnosis Procedure

INFOID:0000000001115705

1.PERFORM INITIALIZATION

1. Perform initialization with CONSULT-III. Re-register all ignition keys. Refer to “”.
2. Start the engine.

Dose the engine start?

YES >> INSPECTION END
NO >> Perform “Self Diagnosis Result” for each control unit.

cardiagn.com

P1610 LOCK MODE

Description

INFOID:0000000001115713

When the starting operation is carried more than five times consecutively under the following conditions, NATS will shift to the mode which prevents the engine from being started.
- Unregistered mechanical key is used.
- BCM or ECM's malfunctioning.

DTC Logic

INFOID:0000000001115714

DTC DETECTION LOGIC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1610	LOCK MODE	When the starting operation is carried out five or more times consecutively under the following conditions. • Unregistered mechanical key • BCM or ECM's malfunctioning.	—

DTC CONFIRMATION PROCEDURE

1.PERFORM DTC CONFIRMATION PROCEDURE

1. Turn ignition switch ON.
2. Check “Self diagnostic result” with CONSULT-III.

Is DTC detected?

YES >> Refer to SEC-181, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000001115715

1.CHECK ENGINE START FUNCTION

1. Perform the check for DTC except DTC P1610.
2. Use CONSULT-III to erase DTC after fixing.
3. Check that engine can start with registered mechanical key.

Does the engine start?

YES >> INSPECTION END
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

POWER SUPPLY AND GROUND CIRCUIT
SIREN CONTROL UNIT

SIREN CONTROL UNIT : Diagnosis Procedure

INFOID:0000000001102470

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect siren control unit connector.
3. Check voltage between siren control unit harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Siren control unit			
Connector	Terminal	Ground	
M94	4	Ground	Battery voltage

Is the measurement value normal?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK GROUND CIRCUIT

Check continuity between siren control unit harness connectors and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
M94	6	Ground	Existed

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

SIREN CONTROL UNIT : Special Repair Requirement

INFOID:0000000001116005

1.REQUIRED WORK WHEN REPLACING SIREN CONTROL UNIT

Initialize control unit. Refer to CONSULT-III operation manual NATS.

>> Work end.

SIREN

SIREN : Diagnosis Procedure

INFOID:0000000001116024

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect siren control unit connector.
3. Check voltage between siren harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Siren			
Connector	Terminal	Ground	
B68	2		Battery voltage

Is the measurement value normal?

YES >> GO TO 2.
NO >> Repair harness or connector.

cardiagn.com

2.CHECK GROUND CIRCUIT

Check continuity between siren control unit harness connectors and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
B68	5		Existed

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

BCM

BCM : Diagnosis Procedure

INFOID:0000000001116004

1.CHECK FUSES AND FUSIBLE LINK

Check that the following fuses and fusible link are not fusing.

Terminal No.	Signal name	Fuses and fusible link No.
41	Battery power supply	9
57		J
37	ACC power supply	5
38	Ignition power supply	4

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.
3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(–)			
BCM					
Connector	Terminal		OFF	ACC	ON
M65	37	Ground	Approx. 0 V	Battery voltage	Battery voltage
	38		Approx. 0 V	Approx. 0 V	Battery voltage
M66	41		Battery voltage	Battery voltage	Battery voltage
M67	57				

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

carsdiagn.com

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

cardiagn.com

KEY SWITCH

Description

INFOID:0000000001097819

Key switch detects that ignition key is inserted into the key cylinder, and then transmits the signal to BCM.

Component Function Check

INFOID:0000000001097820

1.CHECK KEY SWITCH INPUT SIGNAL

Check key switch (“KEY SW”) in “DATA MONITOR” mode with CONSULT-III. Refer to DLK-62, "DOOR LOCK : CONSULT-III Function (BCM - DOOR LOCK)".

Monitor item	Condition	
KEY SW	Insert mechanical key into key cylinder	: ON
	Remove mechanical key from key cylinder	: OFF

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Refer to SEC-185, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001097821

1.CHECK KEY SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M65	36	Ground	Insert ignition key into key cylinder	Battery voltage
			Remove ignition key from key cylinder	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Remove ignition key from key cylinder.
2. Disconnect key switch connector.
3. Check voltage between key switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Key switch connector	Terminal		
M25	2	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK KEY SWITCH SIGNAL CIRCUIT

1. Check continuity between BCM harness connector and key switch connector.

BCM connector	Terminal	Key switch connector	Terminal	Continuity
M65	36	M25	1	Existed

2. Check continuity between key switch connector and ground.

Key switch connector	Terminal	Ground	Continuity
M25	1	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK KEY SWITCH

Check key switch function.
Refer to SEC-186, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace key switch.

Component Inspection

INFOID:0000000001097822

COMPONENT INSPECTION

1.CHECK KEY SWITCH

Check continuity between key switch terminals.

Terminal		Condition	Continuity
key switch connector			
1	2	Insert ignition key into key cylinder	Existed
		Remove ignition key from key cylinder	Not existed

Is the inspection result normal?

YES >> Key switch is OK.
NO >> Replace key switch.

cardiagn.com

STOP LAMP

Description

INFOID:0000000001157664

Stop lamp switch detects that brake pedal is depressed, and then transmits the signal to BCM.

Component Function Check

INFOID:0000000001157665

1.CHECK STOP LAMP SWITCH INPUT SIGNAL

Check stop lamp function by depressing brake pedal.

Is the inspection result normal?

YES >> Stop lamp switch is OK.
NO >> Refer to SEC-48, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001157666

1.CHECK STOP LAMP SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Condition	Voltage (V) (Approx.)
(+)		(–)		
BCM connector	Terminal			
M66	51	Ground	Brake pedal is depressed	Battery voltage
			Brake pedal is not depressed	0

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 2.

2.CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch connector.
2. Check voltage between stop lamp switch harness connector and ground.

Terminals			Voltage (V) (Approx.)
(+)		(–)	
Stop lamp switch connector	Terminal		
E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	1	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK STOP LAMP SWITCH SIGNAL CIRCUIT

1. Check continuity between BCM harness connector and stop lamp switch connector.

BCM connector	Terminal	Stop lamp switch connector	Terminal	Continuity
M66	51	E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	2	Existed

2. Check continuity between stop lamp switch connector and ground.

Stop lamp switch connector	Terminal	Ground	Continuity
E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	2	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK STOP LAMP SWITCH

Check stop lamp switch function.
Refer to SEC-49, "Component Inspection".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace stop lamp switch.

Component Inspection

INFOID:0000000001157667

1. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect stop lamp switch harness connector.
3. Check continuity between stop lamp switch terminals under the following conditions.

Stop lamp switch			Condition	Continuity
Connector	Terminal			
E114 (with gasoline engine and M/T models) E115 (except gasoline engine and M/T models)	1	2	Brake pedal is depressed	Existed
			Brake pedal is released	Not existed

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace stop lamp switch.

cardiagn.com

HOOD SWITCH

Description

INFOID:0000000001097846

Hood switch detects that hood is in open/close condition, and then transmits the signal to IPDM E/R.

Component Function Check

INFOID:0000000001097847

1.CHECK FUNCTION

1. Select “HOOD SW” in “Data Monitor” mode with CONSULT-III.
2. Check the hood switch signal under the following condition.

Test item	Condition		Status
HOOD SW	Hood	Open	ON
		Close	OFF

Is the indication normal?

YES >> INSPECTION END.
NO >> Refer to SEC-189, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001097848

1.CHECK HOOD SWITCH SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Condition		Voltage (V) (Approx.)
Connector	Terminal				
E12	21	Ground	Hood	Open	0
				Close	Battery voltage

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2.CHECK HOOD SWITCH SIGNAL CIRCUIT

1. Disconnect IPDM E/R and hood switch connector.
2. Check continuity between IPDM E/R harness connector and hood switch harness connector.

IPDM E/R		Hood switch		Continuity
Connector	Terminal	Connector	Terminal	
E12	21	E113	2	Existed

3. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E12	21	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace harness.

3.CHECK HOOD SWITCH GROUND CIRCUIT

Check continuity between hood switch harness connector and ground.

Hood switch		Ground	Continuity
Connector	Terminal		
E113	1	Ground	Existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK IPDM E/R OUTPUT

1. Connect the IPDM E/R connector.
2. Check voltage between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Voltage (V) (Approx.)
Connector	Terminal		
E12	21	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 5.
NO >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".

5.CHECK HOOD SWITCH

Refer to SEC-190, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Replace hood switch.

6.CHECK INTERMITTENT INCIDENT

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace IPDM E/R. Refer to PCS-32, "Removal and Installation".
NO >> Repair or replace malfunctioning parts.

Component Inspection

INFOID:0000000001097849

1.CHECK HOOD SWITCH

1. Turn ignition switch OFF.
2. Disconnect hood switch connector.
3. Check continuity between hood switch terminals.

Hood switch		Condition		Continuity
Terminal				
1	2	Hood switch	Push	Not existed
			Release	Existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace hood switch.

cardiagn.com

HORN

Description

INFOID:0000000001097850

Horn is located inside of front bumper and operates when theft warning system is in alarm phase.

Component Function Check

INFOID:0000000001097851

1.CHECK FUNCTION

1. Select “HORN” in “ACTIVE TEST” mode with CONSULT-III.
2. Check the horn operation.

Is the operation normal?

YES >> INSPECTION END.
NO >> Refer to SEC-191, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001097852

1.CHECK HORN FUNCTION

Check horn function with horn switch.

Does the horn sound?

YES >> GO TO 2.
NO >> Refer to HRN-2, "Wiring Diagram - HORN -".

2.CHECK HORN RELAY POWER SUPPLY

1. Turn ignition switch ON.
2. Perform “ACTIVE TEST” (“HORN”) with CONSULT-Ill.
3. Check voltage between horn relay harness connector and ground.

Horn relay		Ground	Test item		Voltage (V) (Applox.)
Connector	Terminal				
E5	2	Ground	HORN	ON	→Battery voltage →0 →Battery voltage
				Other than above	0

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 3.

3.CHECK HORN RELAY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R and horn relay 1and 2 connector.
3. Check continuity between IPDM E/R harness connector and horn relay 1and 2 harness connector.

IPDM E/R		Horn relay 1 and 2		Continuity
Connector	Terminal	Connector	Terminal	
E12	30	E5	1	Existed

4. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E12	30	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4.CHECK INTERMITTENT INCIDENT

A B C D E F G H I J SEC L M N O P
carsdiagn.com

Refer to GI-39, "Intermittent Incident".

Is the inspection result normal?

YES >> Replace IPDM E/R.Refer to PCS-32, "Removal and Installation".
NO >> Repair or replace the malfunctioning parts.

cardiagn.com

VEHICLE SECURITY INDICATOR

Description

INFOID:0000000001097856

- Vehicle security indicator is built in combination meter.
- NATS (Nissan Anti-Theft System) and vehicle security system conditions are indicated by blink or illumination of vehicle security indicator.

Component Function Check

INFOID:0000000001097857

1.CHECK FUNCTION

1. Perform “THEFT IND” in the “ACTIVE TEST” mode with CONSULT-III.
2. Check vehicle security indicator operation.

Test item		Description	
THEFT IND	ON	Vehicle security indicator	ON
	OFF		OFF

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Refer to SEC-193, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001097858

1.CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

Perform “Self Diagnostic Result” for unified meter and A/C amp. Refer to MWI-23, "CONSULT-III Function (METER/M&A)".

Is the inspection result is normal?

YES >> GO TO 2.
NO >> Repair or replace the malfunctioning parts.

2.CHECK INTERMITTENT INCIDENT

Refer to GI-39, "Intermittent Incident".

>> INSPECTION END.

ULTRA SONIC SENSOR

Description

INFOID:0000000001116034

Siren control unit sounds the siren when it received a trigger signal from ultra sonic sensor.

Component Function Check

INFOID:0000000001116035

1.CHECK SIREN CONTROL UNIT FUNCTION

1. Turn ignition switch OFF.
2. Get in the vehicle and close all doors.
3. Lock doors with keyfob.
4. Check that security indicator blinks when theft warning system is armed.
5. With hand, intercept the signal between left and right sensors.

Does the siren sound?

YES >> Siren control unit function is OK.
NO >> Refer to SEC-194, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000001116036

1.CHECK SIREN FUNCTION

1. Turn ignition switch ON.
2. Perform “ACTIVE TEST” (“VEHICLE SECURITY HORN”) with CONSULT-Ill.

Does the siren sound?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK SIREN SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and siren connectors.
3. Check continuity between BCM harness connector and siren connector.

BCM connector	Terminal	Siren connector	Terminal	Continuity
M65	8	B68	1	Existed
	16		3	Existed

4. Check continuity between siren connector and ground.

Siren connector	Terminal	Ground	Continuity
B68	1	Ground	Not existed
	3		Not existed

Is the inspection result normal?

YES >> Replace siren. Refer to SEC-250, "Removal and Installation".
NO >> Repair or replace harness.

3.CHECK SIREN CONTROL UNIT SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect siren control unit and siren connector.
3. Check continuity between siren control unit harness connector and siren connector.

Siren control unit connector	Terminal	Siren connector	Terminal	Continuity
M94	3	B68	4	Existed

4. Check continuity between siren control unit harness connector and ground.

cardiagn.com

Siren control unit connector	Terminal	Ground	Continuity
M94	3	Ground	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace harness.

4. CHECK ULTRA SONIC SENSOR SIGNAL CIRCUIT

1. Disconnect ultra sonic sensor connectors.
2. Check continuity between siren control unit harness connector and ultra sonic sensor connector.

Siren control unit connector	Terminal	Ultra sonic sensor connector	Terminal	Continuity
M94	1	R11	1	Existed
	8	R12	1	Existed

3. Check continuity between siren control unit connector and ground.

Siren control unit connector	Terminal	Ground	Continuity
M94	1	Ground	Not existed
	8		Not existed

Is the inspection result normal?

YES >> Replace ultra sonic sensor.
NO >> Repair or replace harness.

ECU DIAGNOSIS

BCM (BODY CONTROL MODULE)

Reference Value

INFOID:0000000001102201

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

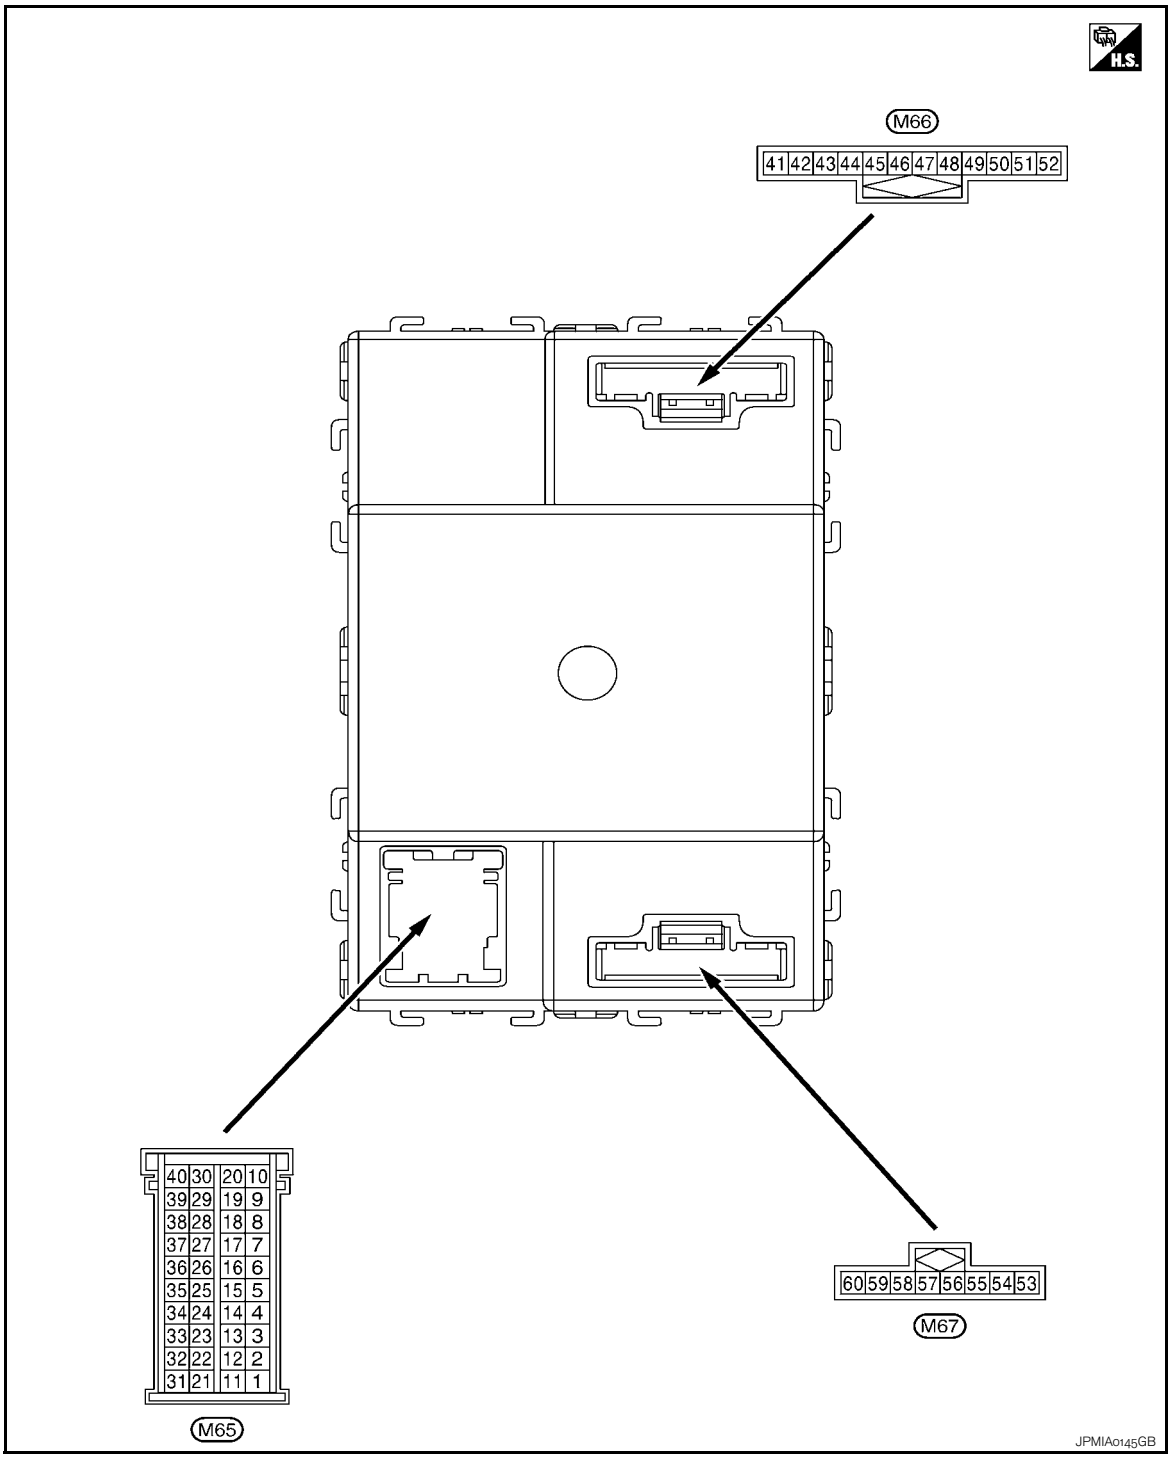
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000001102208

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

INFOID:0000000001102209

cardiagn.com

Priority	DTC
1	• U1000: CAN COMM CIRCUIT • U1010: CONTROL UNIT (CAN)
2	• B2190: NATS ANTENNA AMP • B2191: DIFFERNCE OF KEY • B2192: ID DISCORD BCM-ECM • B2193: CHAIN OF BCM-ECM • B2194: DISCORD BCM-I-KEY • B2195: ANTI SCANNING • B2196: DONGLE NG

DTC Index

INFOID:0000000001102210

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

Fail Safe

INFOID:0000000001102212

CAN communication control

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

If no CAN communication is available with ECM

Control part	Fail-safe in operation
Cooling fan	• The cooling fan relay-2*1 or the cooling fan relay-3*2 turns ON when the ignition switch is turned ON • Turns off the fan motor low relay when the ignition switch is turned OFF
A/C compressor	A/C relay OFF

*1: HR engine models

*2: MR engine and K9K engine models

If no CAN communication is available with BCM

Control part	Fail-safe in operation
Headlamp	• The headlamp low relay turns ON when the ignition switch is turned ON • The headlamp low relay turns OFF when the ignition switch is turned OFF • Headlamp high relay OFF
• Parking lamps • License plate lamps • Tail lamps • Illuminations	• The tail lamp relay turns ON when the ignition switch is turned ON • The tail lamp relay turns OFF when the ignition switch is turned OFF
Front wiper	• The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed. • The front wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the INT mode and the front wiper motor is operating.
Front fog lamps	Front fog lamp relay OFF
Starter motor	Inhibit relay OFF
Rear window defogger	Rear window defogger relay OFF
Headlamp washer	Headlamp washer relay OFF
PTC heater	PTC heater relay OFF

Ignition relay malfunction detection function

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

DTC	Ignition switch	Ignition relay	Tail lamp relay
—	ON	ON	—
—	OFF	OFF	—
B2098: IGN RLY ON	OFF	ON	ON (10 minutes)
B2099: IGN RLY OFF	ON	OFF	—

NOTE:

The tail lamp relay is turned OFF when the ignition switch is turned ON.

Front wiper control

IPDM E/R detects the front wiper stop position with the front wiper auto stop signal.
When the front wiper auto stop signal is in the conditions listed below, IPDM E/R repeats a front wiper 10 seconds operation and 20 seconds stop five times.

Ignition switch	Front wiper switch	Front wiper auto stop signal
ON	OFF	The front wiper auto stop signal (stop position) cannot be input for 10 seconds.
	ON	The front wiper auto stop signal does not change for 10 seconds.

NOTE:

cardiagn.com

This operation status can be confirmed on the IPDM E/R “Data Monitor” that displays “BLOCK” for the item “WIP PROT” while the wiper is stopped.

DTC Index

INFOID:0000000001102213

CONSULT display	Fail-safe	Timing[NOTE]		Reference page
No DTC is detected. further testing may be required.	—	—	—	—
U1000: CAN COMM CIRCUIT	×	CRNT	PAST	PCS-14
B2098: IGN RELAY ON	×	CRNT	PAST	PCS-15
B2099: IGN RELAY OFF	—	CRNT	PAST	PCS-16
B2100: EEPROM	—	CRNT	PAST	PCS-17

NOTE:

The details of time display are as follows.

- CRNT: The malfunctions that are detected now.
- PAST: The number is indicated when it is normal at present and a malfunction was detected in the past.

NATS (NISSAN ANTI-THEFT SYSTEM) SYMPTOMS

Symptom Table

INFOID:0000000001097889

NOTE:
- Before performing the diagnosis in the following table, check “SEC-157, "Work Flow"”.
- Check that vehicle is under the condition shown in “Conditions of vehicle” before starting diagnosis, and check each symptom.
- If the following symptoms are detected, check systems shown in the “Diagnosis/service procedure” column in this order.

CONDITIONS OF VEHICLE (OPERATING CONDITIONS)

- Ignition key is not inserted into key cylinder.

Symptom	Diagnosis/service procedure	Reference page
Engine can not start	1. Check stop lamp switch	SEC-187
	2. Check Intermittent Incident	GI-39
Security indicator does not turn ON or flash	1. Check vehicle security indicator	SEC-193
	2. Check Intermittent Incident	GI-39

ON-VEHICLE MAINTENANCE

PRE-INSPECTION FOR DIAGNOSTIC

Basic Inspection

INFOID:0000000001116849

1.INSPECTION START

Turn ignition switch “OFF” and pull out ignition key from key cylinder.
NOTE:
Before starting operation check, open front windows.

>> GO TO 2.

2.CHECK SECURITY INDICATOR LAMP

1. Lock doors using keyfob.
2. Check that security indicator lamp illuminates for 30 seconds.

Security indicator lamp should illuminate.

OK >> GO TO 3.
NG >> Perform diagnosis and repair. Refer to SEC-246, "Symptom Table".

3.CHECK ALARM FUNCTION

1. After 30 seconds, security indicator lamp will start to blink.
2. Open any door or hood before unlocking with keyfob or open back door without keyfob.

Do alarm function properly.

OK >> GO TO 4.
NG >> Check the following.
- The vehicle security system does not phase in alarm mode. Refer to SEC-246, "Symptom Table".
- Alarm do not operate. Refer to SEC-246, "Symptom Table".

4.CHECK ALARM CANCEL OPERATION

Unlock any door or open back door using keyfob.

Alarm (horn and siren) should stop.

OK >> INSPECTION END.
NG >> Check door lock function. Refer to DLK-645, "KEYFOB : Symptom Table".

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000000935704

DETAILED FLOW

1.INTERVIEW FOR MALFUNCTION

Interview the conditions and environment when occurring any malfunction to the customer.

>> GO TO 2.

2.SYMPTOM CHECK

- Check the symptom from the customer's information.
- Check if any malfunction occurs other than the malfunction interviewed from the customer.

>> GO TO 3.

3.INSPECTION BEFORE DIAGNOSIS

Check the following conditions of the sensor.
- Check if the sonar sensor is not frozen.
- Check if snow, mud, or other foreign objects are not adhering to the sonar sensor.
- Check if there is no deformation, scratches, or other damage to the sonar sensor.
- Check if water has not accumulated in the sonar sensor.

Is the sensor condition normal?

YES >> GO TO 4.
NO >> Repair the sensor condition. GO TO 5.

4.MALFUNCTIONING PART EXTRACTION BY SYMPTOM DIAGNOSIS

Repair the malfunctioning part by the symptom diagnosis.

>> GO TO 5.

5.FINAL INSPECTION

Check that the sonar system activates normally.

Does the sonar system activate normally?

YES >> INSPECTION END
NO >> GO TO 1.

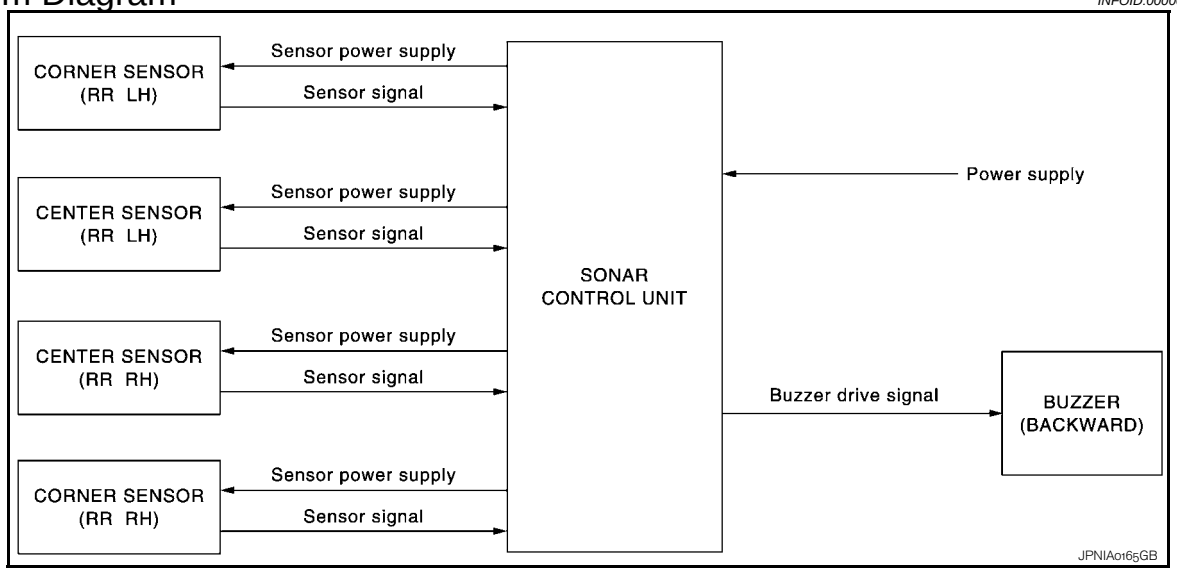
cardiagn.com

FUNCTION DIAGNOSIS

SONAR SYSTEM

System Diagram

INFOID:0000000000935705



System Description

INFOID:0000000000935706

- The sonar sensor installed to the rear bumper detects obstacles around the bumper.
- The distance between a bumper and obstacles is informed to the driver with different frequency of buzzer.

Activation condition

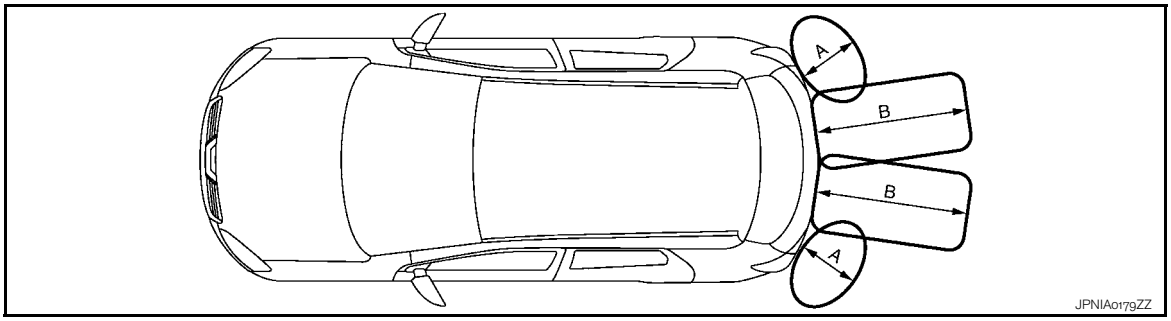
The rear sensor activates and outputs the warning buzzer in the following conditions.

- Reverse signal ON (Power supply)
- Obstacle detection

Obstacle detection distance

- The sonar control unit controls the obstacle detection distance. The detection distance differs between the corner sensor and the center sensor.
- Obstacle detection distance is indicated by a variable beep frequency.

Obstacle detection range image



A. Approx. 60 cm (23.6 in) B. Approx. 180 cm (70.9 in)

NOTE:

- When an obstacle and distance of a bumper approach to less than 30 cm (11.8 in), a buzzer sound becomes consecutive sounds.
- The nearest sensor from the detected obstacle applies the buzzer output frequency if plural sensors detect any obstacle simultaneously.

4. Corner sensor rear RH
5. Sonar control unit
6. Buzzer

A Inside luggage side lower finisher LH

Component Description

INFOID:0000000000935708

Component	Description
SONAR CONTROL UNIT	• The warning buzzer outputs by inputting the sensor signal from corner/center sensor. The warning buzzer outputs the separated buzzer. • When reverse signal is input, a power supply is input into sonar control unit.
CORNER/CENTER SENSOR	The obstacle distance is detected. The signal is transmitted to the sonar control unit.
BUZZER	The warning buzzer outputs with the signal from the sonar control unit.

cardiagn.com

DIAGNOSIS SYSTEM (SONAR CONTROL UNIT)

Diagnosis Description

INFOID:0000000000935709

DESCRIPTION

Buzzer sounds to indicate a malfunctioning sensor system when a malfunction/error occurs in the body, power supply, ground, or sensor signals of the center/corner sensor. Also, a buzzer sounds if a sonar control unit includes a malfunction/error.

NOTE:

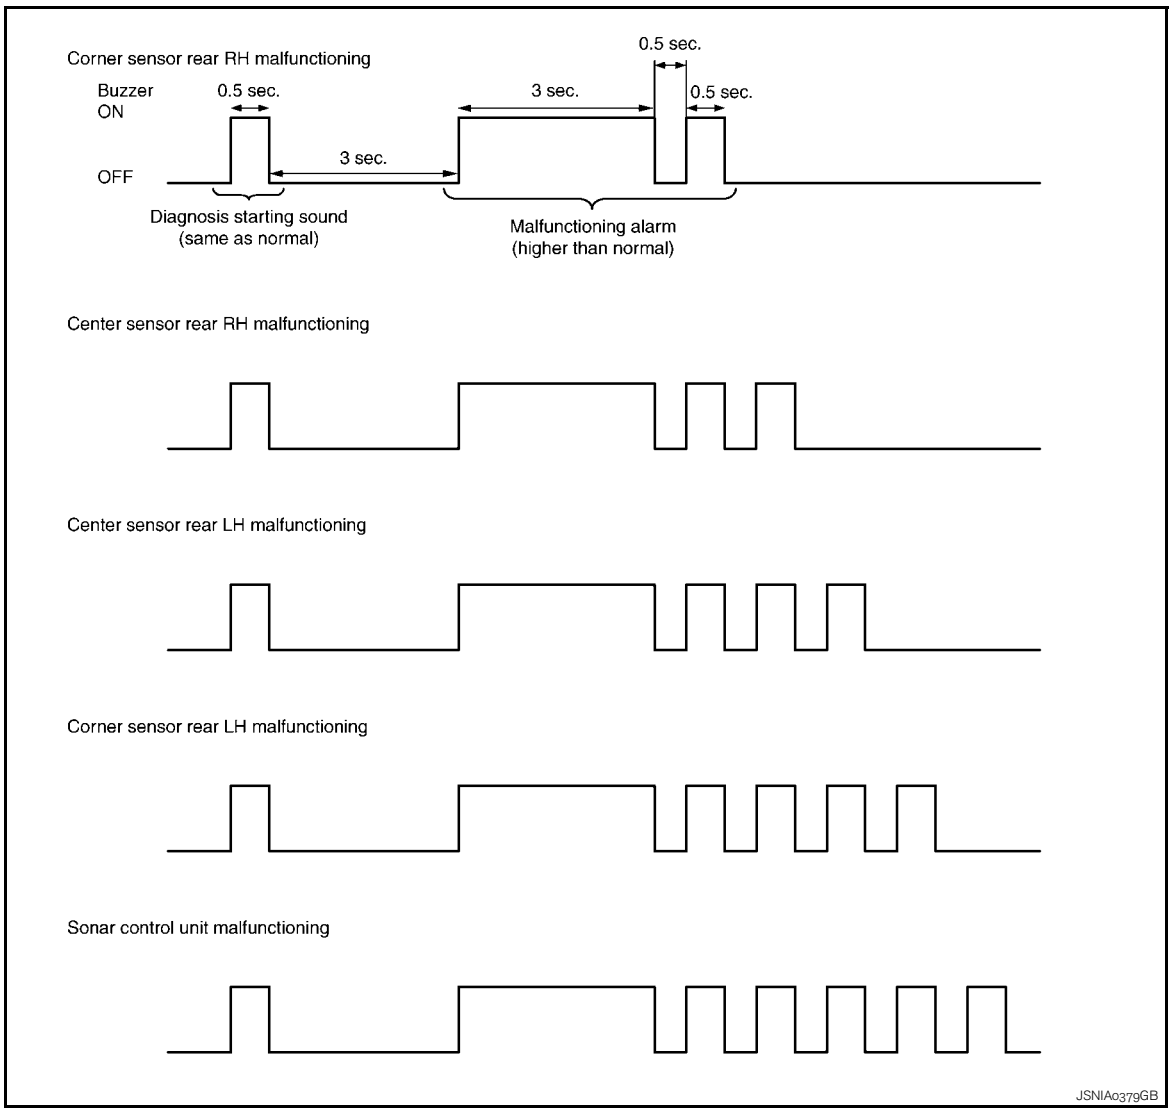
- Malfunctions are indicated by a sound of the buzzer. Therefore, errors/malfunctions cannot be identified when the buzzer system has a malfunction.
- Buzzer sounds to indicate a malfunctioning sensor system only once when turning ON the ignition switch and shifting the lever to the “REVERSE” position. For reconfirmation, shifting the lever to a position other than the reverse position and returning it to the “REVERSE” position enables to reconfirm the malfunction.
- Functions of the sonar system stop after indicating malfunctions/errors by the buzzer. (Buzzer does not sound if an obstacle is approaching to the sensor.)

Identifying malfunctioning sensor system

1. Turn the ignition switch ON. Shift lever to the “REVERSE” position.
2. Buzzer sounds once with the same sound range as heard at normal operations.
3. Then buzzer sounds with a higher sound range than normal operation. Malfunctioning sensor systems can be identified by the cycle (the number of buzzer sounds) of the buzzer sound.
   NOTE:

cardiagn.com

The sensors are indicated by a sound of the buzzer one by one when more than one sensor has a malfunction/error.



cardiagn.com

COMPONENT DIAGNOSIS

POWER SUPPLY AND GROUND CIRCUIT

SONAR CONTROL UNIT

SONAR CONTROL UNIT : Diagnosis Procedure

INFOID:0000000000935750

1.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Shift the shift position to “R” position.
3. Check voltage between sonar control unit harness connector terminal 1 and ground.

1 – Ground : Approx. 12 V

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check back-up lamp switch circuit or park/neutral position switch circuit.

2.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect sonar control unit connector.
3. Check continuity between sonar control unit harness connector terminal 3 and ground.

3 – Ground : Continuity should exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair or replace sonar control unit ground harness.

cardiagn.com

SENSOR POWER SUPPLY AND GROUND CIRCUIT

Description

INFOID:0000000001098824

The sonar control unit outputs sensor power supply to each sensor when the shift position to “R” position.

Diagnosis Procedure

INFOID:0000000000936327

1.CHECK CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect sonar control unit connector, center sensor and corner sensor connector.
3. Check continuity between sonar control unit harness connector terminal 9 and each sensor harness connector terminal 1.

9 – 1 : Continuity should exist.

4. Check continuity between sonar control unit harness connector terminal 9 and ground.

9 – Ground : Continuity should not exist.

5. Check continuity between sonar control unit harness connector terminal 10 and each sensor harness connector terminal 3.

10 – 3 : Continuity should exist.

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK POWER SUPPLY CIRCUIT

1. Connect sonar control unit connector, center sensor and corner sensor connector.
2. Turn ignition switch ON.
3. Shift the shift position to “R” position.
4. Check voltage between each sensor harness connector terminal 1 and ground.

1 – Ground : Approx. 12 V

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace sonar control unit.

cardiagn.com

BUZZER DRIVE SIGNAL CIRCUIT

Description

INFOID:0000000000935757

The sonar control unit outputs the buzzer drive signal when the rear sonar detects the obstacle.

Diagnosis Procedure

INFOID:0000000000935759

1.CHECK HARNESS BUZZER CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect sonar control unit connector and buzzer connector.
3. Check continuity between sonar control unit harness connector terminals 2, 6 and buzzer harness connector terminals 2, 1.

2 – 2	**: Continuity should exist.**
6 – 1	**: Continuity should exist.**

4. Check continuity between sonar control unit harness connector terminal 2 and ground.

2 – Ground	**: Continuity should not exist.**

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair harness or connector.

2.CHECK BUZZER DRIVE SIGNAL

1. Connect sonar control unit connector and buzzer connector.
2. Bring an obstacle near to sound the buzzer.
3. Check signal between sonar control unit harness connector terminals 2 and 6.

2 – 6	**Waveform period changes due to the distance to an obstacle.**  JPNIA0232ZZ

Is the inspection result normal?

YES >> Replace buzzer.
NO >> Replace sonar control unit.

cardiagn.com

SENSOR SIGNAL CIRCUIT

Description

INFOID:0000000000936324

The sensor detects the distance to obstacles and outputs the signal to the sonar control unit.

Diagnosis Procedure

INFOID:0000000000936326

1.CHECK SENSOR POWER SUPPLY AND GROUND CIRCUIT

Check sensor power supply and ground circuit. Refer to SN-8, "Diagnosis Procedure".

Is inspection result normal?

YES >> GO TO 2.
NO >> Repair malfunctioning parts.

2.CHECK HARNESS SENSOR SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect sonar control unit connector and each sensor connector.
3. Check continuity between sonar control unit harness connector terminals 13, 14, 15, 16 and each sensor harness connector terminal 2.

13 – 2	**: Continuity should exist.**
14 – 2	**: Continuity should exist.**
15 – 2	**: Continuity should exist.**
16 – 2	**: Continuity should exist.**

4. Check continuity between sonar control unit harness connector terminals 13, 14, 15, 16 and ground.

13 – Ground	**: Continuity should not exist.**
14 – Ground	**: Continuity should not exist.**
15 – Ground	**: Continuity should not exist.**
16 – Ground	**: Continuity should not exist.**

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK SENSOR SIGNAL

1. Connect sonar control unit connector and each sensor connector.
2. Turn ignition switch ON.
3. Shift the shift position to “R” position.
4. Check signal between sonar control unit harness connector terminals 13, 14, 15, 16 and Ground.

13 – Ground **14 – Ground** **15 – Ground** **16 – Ground**	 JPNIA0233ZZ

Is the inspection result normal?

YES >> Replace sonar control unit.
NO >> Replace malfunctioning sensor.

DETAILED FLOW

1.GET INFORMATION FOR SYMPTOM

Get the detailed information from the customer about the symptom.

>> GO TO 2.

2.PERFORM PRELIMINARY CHECK

At the begining of inspection, confirm the condition of power supply circuit, check that the battery is charged and fuses and fusible links are not blown.

Is power supply circuit normal?

YES >> GO TO 3.
NO >> Repair or replace the battery and fuse/fusible links.

3.PERFORM SELF-DIAGNOSIS USING “CONSULT-III” (WITH CONSULT-III)

Is malfunctioning part displayed on CONSULT-III?

YES >> GO TO 4.
NO >> Repeat DTC confirmation with diagnostic procedure.

4.PERFORM SELF-DIAGNOSIS “AIR BAG” WARNING LAMP (WITHOUT CONSULT-III)

Is malfunctioning part detected?

YES >> GO TO 5.
NO >> Repeat DTC confirmation with diagnostic procedure.

5.REPAIR OR REPLACE

Repair or replace the malfunctioning part.

After the malfunctioning is repaired, erase the self-diagnostic result. Refer to SRC-10, "Diagnosis Description".

>> GO TO 6.

6.FINAL CHECK-DIAGNOSIS MODE AND USER MODE

Does any symptom reappear again?

YES >> GO TO 3 or GO TO 4.

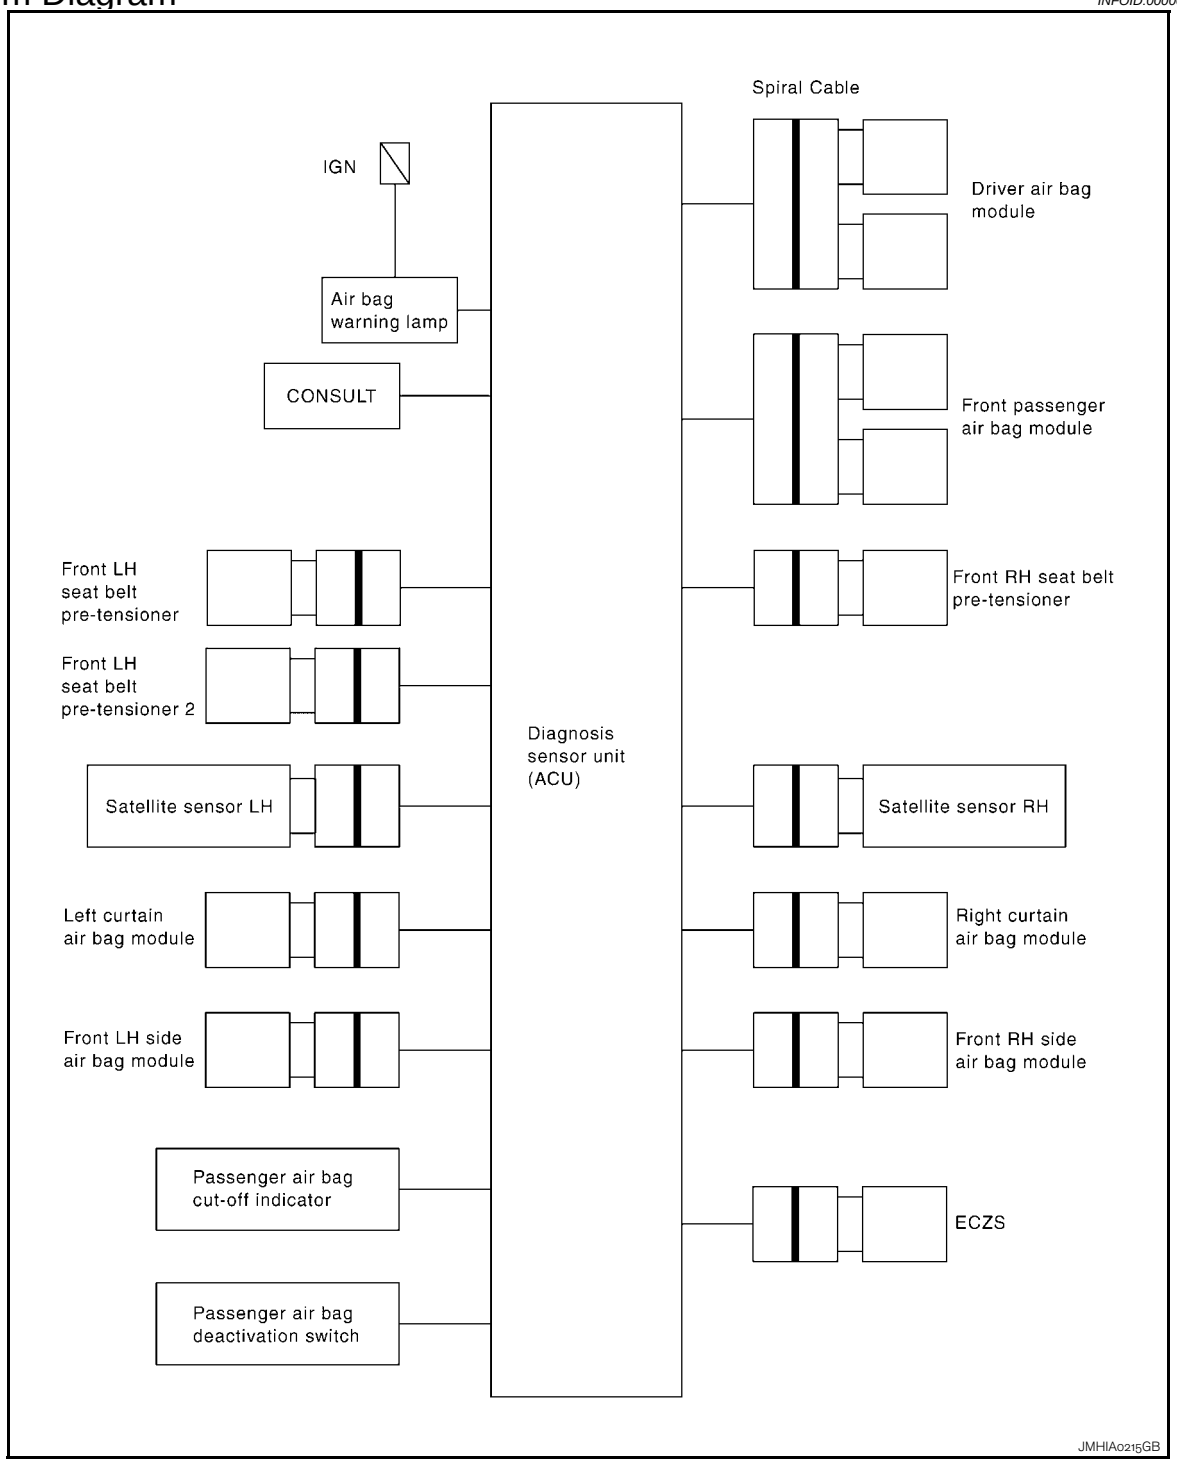
FUNCTION DIAGNOSIS

SRS AIR BAG SYSTEM

System Diagram

INFOID:0000000001069738



System Description

INFOID:0000000001069739

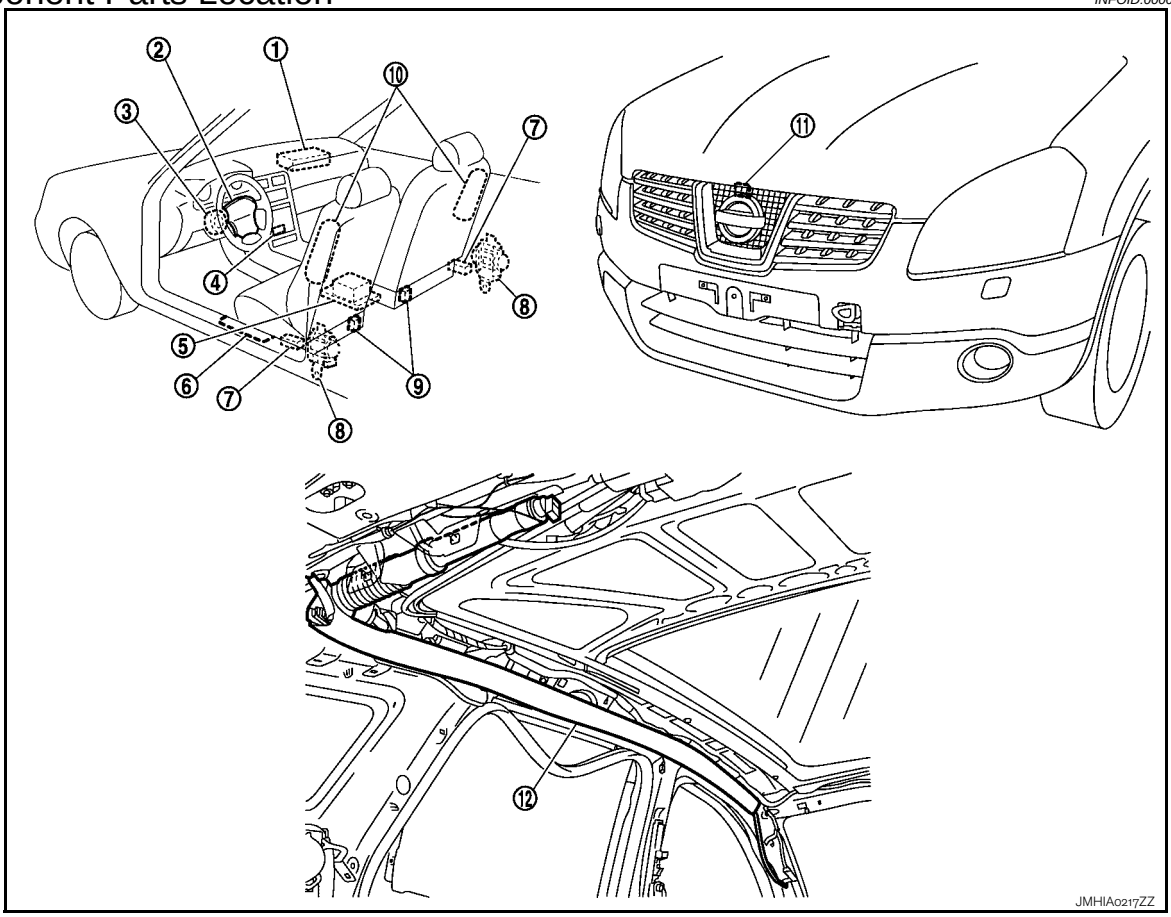
This SRS Air Bag System has the following function.

1. Detect crash and supply the energy for deploying air bag and seat belt pre-tensioner.
2. Detect electrical trouble in air bag system and seat belt pre-tensioner system, record trouble code, and blinking air bag warning lamp.

3. Detect and record the deployment of air bag and seat belt pre-tensioner, and turn on air bag warning lamp.
4. Indicate malfunctioning portion with blinking times of air bag warning lamp in diagnosis mode.
5. Indicate the malfunctioning record by CONSULT-III.

Component Parts Location

INFOID:0000000001069740



1. Front passenger air bag module

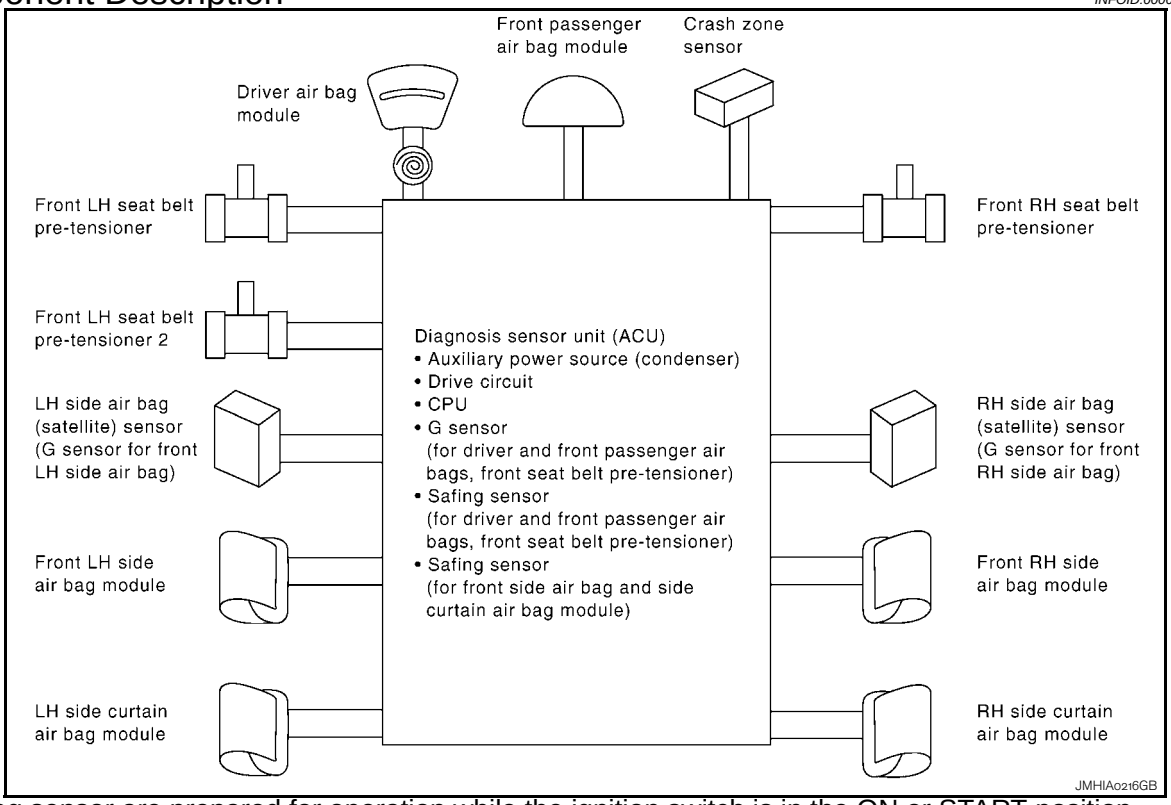
10. Front side air bag module (LH/RH)
11. Crash zone sensor
12. Side curtain air bag module (LH/RH)

cardiagn.com

Component Description

INFOID:0000000001069741



- Air bag sensor are prepared for operation while the ignition switch is in the ON or START position.
- The operation of supplemental restraint system is different from collision modes applicastion. For example the driver air bag module and front passenger air bag module are activated in a frontal collision but not in a side collision.
- SRS configurations which are activated for some collision modes are as follows;

SRS configuration	Frontal collision	Left side collision	Right side collision
Driver air bag module. Refer to SRC-194	×	—	—
Front passenger air bag module. Refer to SRC-194	×	—	—
Front LH seat belt pre-tensioner. Refer to SRC-194	×	—	—
Front RH seat belt pre-tensioner. Refer to SRC-194	×	—	—
Front LH seat belt pre-tensioner2. Refer to SRC-194	×	—	—
Front LH side air bag module. Refer to SRC-196	—	×	—
Front RH side air bag module. Refer to SRC-196	—	—	×
LH side curtain air bag module. Refer to SRC-196	—	×	—
RH side curtain air bag module. Refer to SRC-196	—	—	×

×: Application, —: Not application

DIAGNOSIS SYSTEM (AIRBAG)

Diagnosis Description

INFOID:0000000001069750

CAUTION:

- **Do not use electrical test equipment on any circuit related to the SRS unless instructed in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**
- **Do not repair, splice or modify the SRS wiring harness. If the harness is damaged, replace it with a new one.**
- **Keep ground portion clean.**

DIAGNOSIS FUNCTION

- The SRS self-diagnosis results can be read by using “AIR BAG” warning lamp and/or CONSULT-III.
- The user mode is exclusively prepared for the customer (driver). This mode warns the driver of a system malfunction through the operation of the “AIR BAG” warning lamp.
- The diagnosis mode allows the technician to locate and inspect the malfunctioning part.
- The mode applications for the “AIR BAG” warning lamp and CONSULT-III are as follows:

	User mode	Diagnosis mode	Display type
“AIR BAG” warning lamp	X	X	ON-OFF operation
CONSULT-III	–	X	Monitoring

HOW TO PERFORM TROUBLE DIAGNOSIS FOR QUICK AND ACCURATE REPAIR

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.

Information from Customer

- WHAT..... Vehicle model
- WHEN..... Date, Frequencies
- WHERE..... Road conditions
- HOW..... Operating conditions, Symptoms

Preliminary Check

Check that the following parts are in good order.

- Battery (Refer to PG-3, "How to Handle Battery".)
- Fuse (Refer to PG-71, "Fuse".)
- System component-to-harness connections

HOW TO ERASE SELF-DIAGNOSTIC RESULTS (With CONSULT-III)

- “SELF-DIAG [CURRENT]”
  A current self-diagnosis result is displayed on CONSULT-III screen in real time.
  After the malfunction is repaired completely, no malfunction is detected on “SELF-DIAG [CURRENT]”.
- “SELF-DIAG [PAST]”
  Return to “SELF-DIAG [CURRENT]”CONSULT-lll screen by touching “BACK” key of CONSULT-III and select “SELF-DIAG [CURRENT]” in SELECT DIAG MODE. Touch “ERASE” in “SELF-DIAG [CURRENT]” mode.
  NOTE:
  If the memory of the malfunction in “SELF-DIAG [PAST]” is not erased, the user mode shows the system malfunction by the operation of the warning lamp even if the malfunction is repaired completely.
- “TROUBLE DIAG RECORD”
  The memory of “TROUBLE DIAG RECORD” cannot be erased.

HOW TO ERASE SELF-DIAGNOSTIC RESULTS (Without CONSULT-III)

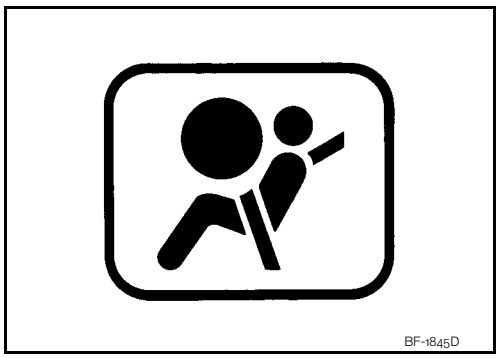
After a malfunction is repaired, turn the ignition switch OFF for at least one second, then turn ignition switch ON diagnosis mode returns to the user mode. At that time the self-diagnosis result is cleared.

cardiagn.com

DIAGNOSTIC PROCEDURE (User mode)

Checking Air bag operation according to “AIR BAG” Warning Lamp-User Mode

1. Turn the ignition switch from OFF to ON, and check that the air bag warning lamp blinks.
2. Compare the SRS air bag warning lamp blinking pattern with the examples.



Warning lamp examples (User mode)

“AIR BAG” warning lamp operation -User mode	SRS condition	Reference item
	• No malfunction is detected. • No further action is necessary.	—
	• The system is malfunctioning and needs to be repaired as indicated.	Go to SRC-10, "Diagnosis Description".

“AIR BAG” warning lamp operation -User mode	SRS condition	Reference item
	• Air bag is deployed. • Seat belt pre-tensioner is deployed.	Go toSRC-194, "Diagnosis Procedure (Component diagnosis)" or SRC-196, "Diagnosis Procedure (Component diagnosis)"
	• Diagnosis sensor unit is malfunctioning. • Air bag power supply circuit is malfunctioning. • SRS air bag warning lamp circuit is malfunctioning.	Go to SRC-220, "Symptom Table".
	• Diagnosis sensor unit is malfunctioning. • Air bag warning lamp circuit is malfunctioning.	Go to SRC-220, "Symptom Table".

DIAGNOSTIC PROCEDURE (With CONSULT-III)

Diagnostic Mode	Description
SELF-DIAG RESULT	The self-diagnosis result is displayed. (SELF-DIAG [CURRENT], [PAST], [RECORD])
ECU DISCRIMINATED No.	The part number of diagnosis sensor unit is displayed.

CONSULT-III Function

INFOID:0000000001069751

DIAGNOSIS MODE FOR CONSULT-III

- “SELF-DIAG [CURRENT]”
  A current self-diagnosis results (also indicated with the number of warning lamp fblinking in diagnosis mode) are displayed on CONSULT-III screen in real time. This refers to a malfunctioning part requiring repairs.
- “SELF-DIAG [PAST]”
  Diagnosis results previously stored in the memory are displayed on CONSULT-III screen. The stored results are not erased until memory erasing is executed.
- “TROUBLE DIAG RECORD”
  With TROUBLE DIAG [RECORD], diagnosis results previously erased by a reset operation can be displayed on CONSULT-Ill screen.
- “ECU DISCRIMINATED NO.”
  The diagnosis sensor unit for each vehicle model is assigned with its own individual classification number. This number will be displayed on CONSULT-III screen, as shown. When replacing the diagnosis sensor unit, refer to the part number for the compatibility. After installation, replacement with a correct unit can be checked by confirming this classification number on CONSULT-III screen.
  After repair, check that the discriminated number of diagnosis sensor unit installed to vehicle are same. Refer to SR-16, "Removal and Installation".

HOW TO CHANGE SELF-DIAGNOSIS MODE WITH CONSULT-III

From User Mode to Diagnosis Mode

After selecting “AIR BAG” on the “SELECT SYSTEM” screen, User mode automatically changes to Diagnosis mode.

cardiagn.com

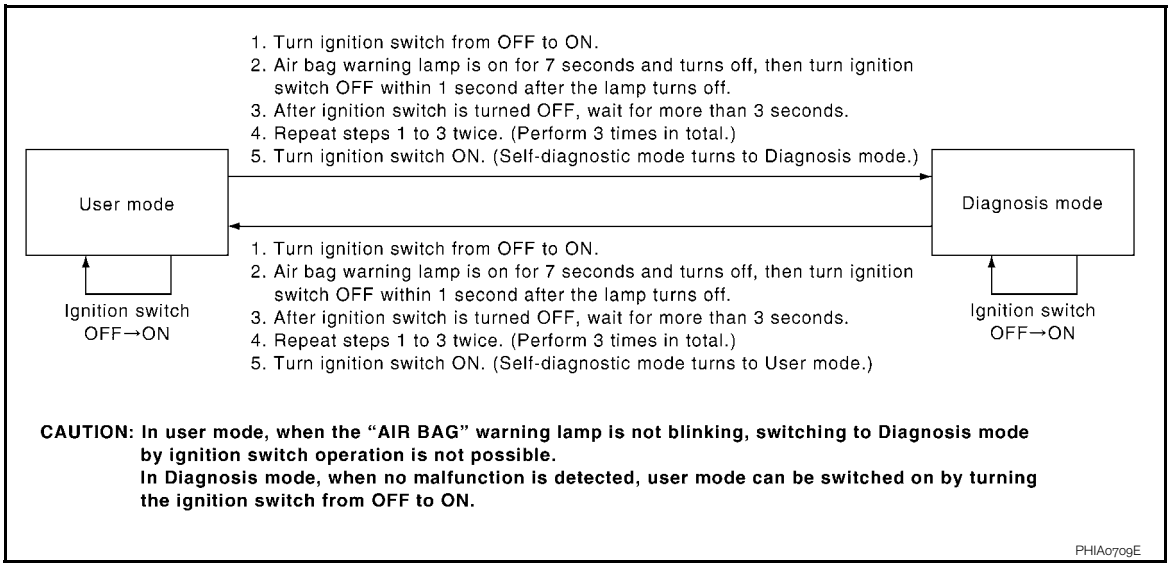
From Diagnosis Mode to User Mode

To return to User mode from Diagnosis mode, touch “BACK” key of CONSULT-III until “SELECT SYSTEM” appears, then diagnosis mode automatically changes to User mode.

SELF-DIAGNOSIS FUNCTION (Without CONSULT-III)

- The reading of these results is accomplished by “User mode” and “Diagnosis mode”.
- After a malfunction is repaired, turn ignition switch ON. Diagnosis mode returns to the user mode. At that time, the self-diagnosis result is cleared.

HOW TO CHANGE SELF-DIAGNOSIS MODE WITHOUT CONSULT-III



COMPONENT DIAGNOSIS

B1001, B1002, B1003, B1004, B1005 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069753

DTC B1001, B1002, B1003, B1004, B1005 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1023 PASS A/B INDCTR CKT

Description

INFOID:0000000001069771

DTC B1023 PASS A/B INDCTR CKT

It is possible to suppress the deployment of passenger air bag by turning to OFF position the deactivation switch. Passenger air bag cut–off indicator illuminates when the deactivation switch is turned to the OFF position. In case of malfunction the blinking of the SRS air bag warning lamp tells the trouble to driver and by the on board self-diagnosis system or electro diagnosis tester CONSULT-III can detects the cause.

OPERATION

Passenger air bag cut–off indicator illuminates when the deactivation switch is turned to the OFF position.-

STRUCTURE

Passenger air bag cut–off indicator with LED illumination.

INSTALLATION

Passenger air bag cut–off indicator is installed at the instrument panel center.

B1033, B1034 CRASH ZONE SEN

Description

INFOID:0000000001069777

DTC B1033, B1034 [UNIT FAIL] CRASH ZONE SENSOR

Main “G” sensor generates signal voltage when it detects deceleration beyond the specified level caused by vehicle frontal collision.

OPERATION

When ACU define the both signal voltage of the “G” sensor and the safing sensor to be that of collision which exceeds specified level, the driving circuit switches on and feed the electric ignitor of both driver and passenger air bags and pre-tensioner seat belt.

STRUCTURE

Integrated type of the “G” sensor element for frontal collision with output terminals for signal voltage.

INSTALLATION

Crash zone sensor is installed on the radiator core support assembly with fixed nuts.

cardiagn.com

With CONSULT-III

CAUTION:

- **Before servicing, turn ignition switch OFF, disconnect both battery terminals and wait at least 3 minutes. (To discharge backup capacitor.)**
- **Do not use unspecified tester or other measuring device.**

DIAGNOSTIC PROCEDURE

1.CHECK HARNESS CONNECTOR

Are connections of harness connectors and terminals correct?

YES >> GO TO 2.
NO >> Repair or replace harness connectors.

2.CHECK WIRING HARNESS

Is the outside of wiring harness normal, without any damage?

YES >> GO TO 3.
NO >> Replace wiring harness.

3.CHECK CRASH ZONE SENSOR

Is crash zone sensor displayed on CONSULT-III?

YES >> Replace crash zone sensor.
NO >> Replace diagnosis sensor unit (ACU).

cardiagn.com

B1035 CRASH ZONE SEN

Description

INFOID:0000000001069780

DTC B1035 [COMM FAIL] CRASH ZONE SENSOR

Main “G” sensor that generates signal voltage, when it detects deceleration beyond the specified level caused by vehicle frontal collision.

OPERATION

When ACU defines both signal voltage of the “G” sensor and the safing sensor to be that of collision which exceeds specified level, the driving circuit switches on and feed the electric ignitor of both driver and passenger air bags and pre-tensioner seat belt.

STRUCTURE

Integrated type of the “G” sensor element for frontal collision with output terminals for signal voltage.

INSTALLATION

Crash zone sensor is installed on the radiator core support assembly with fixed nuts.

B1042, B1043, B1044, B1045, B1046, B1047 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069783

DTC B1042, B1043, B1044, B1045, B1046, B1047 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1071 ASSIST A/B MODULE

Description

INFOID:0000000001069804

DTC B1071 [VB-SHORT] ASSIST A/B MODULE

For front passenger “AIR BAG”, crash is judged by main “G” sensor output signal and sub “G” sensor in front direction.

OPERATION

In case of frontal collision whose acceleration exceeds the specified level, the ignition materials are ignited by electric ignition system. The system burns and introduces the chemical reaction of gas generating materials to generate hot gases that flow into the air bag through a filter and expand the bag.

STRUCTURE

Air bag module mainly consists of air bag and inflator which inflates air bag.

INSTALLATION

Front passenger air bag module is installed on the instrument panel with fixed bolts.

DTC Logic

B1074, B1075, B1076, B1077, B1078, B1079 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069813

DTC B1074, B1075, B1076, B1077, B1078, B1079 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1086 PRE-TEN FRONT LH

Description

INFOID:0000000001069828

DTC B1086 [OPEN] PRE-TEN FRONT LH

For seat belt pre-tensioner, crash is judged by main “G” sensor output signal and sub “G” sensor in front direction.

OPERATION

In case of frontal collision that exceeds specified impact level, the diagnosis sensor unit detects the deceleration caused by collision. If restrains the passenger with seat belt easing the stress on passengers chest with load limitter.

STRUCTURE

The restraint system for front seat occupant consists of the pre-tensioner mechanism and load limitter mechanism.

INSTALLATION

Seat belt pre-tensioner is installed on the under side of center pillar with fixed nuts.

B1106, B1107, B1108, B1109, B1110, B1111 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069840

DTC B1106, B1107, B1108, B1109, B1110, B1111 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

With CONSULT-III

CAUTION:

- **Before servicing, turn ignition switch OFF, disconnect both battery terminals and wait at least 3 minutes. (To discharge backup capacitor.)**
- **Do not use unspecified tester or other measuring device.**

DIAGNOSTIC PROCEDURE

1.CHECK HARNESS CONNECTOR

Are connections of harness connectors and terminals correct?

YES >> GO TO 2.
NO >> Repair or replace harness connectors.

2.CHECK WIRING HARNESS

Is the outside of wiring harness normal, without any damage?

YES >> GO TO 3.
NO >> Replace wiring harness.

3.CHECK SATELLITE SENSOR

Is “SATELLITE SENSOR” displayed on CONSULT-III?

YES >> Replace satellite sensor.
NO >> Replace diagnosis sensor unit (ACU).

cardiagn.com

B1120 SATELLITE SENS LH

Description

INFOID:0000000001069852

DTC B1120 [COMM FAIL] SATELLITE SENS LH

Main “G” sensor generates signal voltage when it detects deceleration beyond the specified level by vehicle side collision.

OPERATION

When ACU defines both signal voltage of the “G” sensor and the Safing sensor to be that of collision which exceeds specified level, the driving circuit switches on and feed the electric ignitor of both the side air bag and curtain air bag.

STRUCTURE

Integrated type of the “G” sensor element for side collision with output terminals for signal voltage.

INSTALLATION

Satellite sensor is installed at the underside of center pillar with fixed nuts.

B1122, B1123, B1124, B1125, B1126, B1127 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069855

DTC B1122, B1123, B1124, B1125, B1126, B1127 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1129 SIDE MODULE RH

Description

INFOID:0000000001069858

DTC B1129 [OPEN] SIDE MODULE RH

For side air bag, crash is judged by main “G” sensor output signal (left side: left satellite sensor, right side: right satellite sensor) and sub “G” sensor (right and left GP in center unit).

OPERATION

In case of collision whose acceleration exceeds the specified level, the ignition materials are ignited by electric ignition system. The system burns and introduces the chemical reaction of gas generating materials to generate hot gases that flow into the air bag through a filter and expand the bag.

STRUCTURE

Front side air bag module mainly consists of air bag and inflator which inflates air bag.

INSTALLATION

Front side air bag module is installed on the side of front seatback with fixed nuts.

B1136 SIDE MODULE LH

Description

INFOID:0000000001069876

DTC B1136 [GND-SHORT] SIDE MODULE LH

For side air bag, crash is judged by main “G” sensor output signal (left side: left satellite sensor, right side: right satellite sensor) and sub “G” sensor (right and left GP in center unit).

OPERATION

In case of collision whose acceleration exceeds the specified level, the ignition materials are ignited by electric ignition system. The system burns and introduces the chemical reaction of gas generating materials to generate hot gases that flow into the air bag through a filter and expand the bag.

STRUCTURE

Front side air bag module mainly consists of air bag and inflator which inflates air bag.

INSTALLATION

Front side air bag module is installed on the side of front seatback with fixed nuts.

B1138, B1139, B1140, B1141, B1142, B1143 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069882

DTC B1138, B1139, B1140, B1141, B1142, B1143 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1151 CURTAIN MODULE LH

Description

INFOID:0000000001069900

DTC B1151 [VB-SHORT] CURTAIN MODULE LH

For curtain air bag, crash is judged by main “G” sensor output signal (left side: left satellite sensor, right side: right satellite sensor) and sub “G” sensor (right and left GP in center unit).

OPERATION

In case of collision whose acceleration exceeds the specified level, the ignition materials are ignited by electric ignition system. The system burns and introduces the chemical reaction of gas generating materials to generate hot gases that flow into the air bag through a filter and expand the bag.

STRUCTURE

Curtain air bag module mainly consists of air bag and inflator which inflates air bag.

INSTALLATION

Curtain air bag module is installed on the roof side with fixed bolts.

B1170, B1171, B1172, B1173, B1174, B1175 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001070023

DTC B1170, B1171, B1172, B1173, B1174, B1175 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1182 PRE-TEN2 FRONT LH

Description

INFOID:0000000001070038

DTC B1182 [OPEN] PRE-TEN2 FRONT LH

For seat belt pre-tensioner2, crash is judged by main “G” sensor output signal and sub “G” sensor in front direction.

OPERATION

In case of frontal collision that exceeds specified impact level, the diagnosis sensor unit detects the deceleration caused by collision. If restrains the passenger with seat belt easing the stress on passengers chest with load limitter.

STRUCTURE

The restraint system for front seat occupant consists of the pre-tensioner mechanism and load limitter mechanism.

INSTALLATION

Seat belt pre-tensioner2 is installed on the under side of center pillar with fixed bolt.

B1202, B1203, B1204, B1205, B1206, B1207 DIAGNOSIS SENSOR UNIT

Description

INFOID:0000000001069909

DTC B1202, B1203, B1204, B1205, B1206, B1207 DIAGNOSIS SENSOR UNIT

Detects the whole SRS electrical system and displays the malfunction either by illuminating or blinking the air bag warning lamp in the combination meter Malfunctioning part can be detected by on board self-diagnosis system and electro-diagnosis tester “CONSULT-III”.

OPERATION

It detects a shock that exceeds specified level and watches such systems as the driver and passenger air bag, side air bag, curtain air bag, pre-tensioner seat belts operate properly.

STRUCTURE

It contains the “G” sensors of both for frontal collision and for side collision and spare battery function in case of main battery damage in collision.

INSTALLATION

SRS diagnosis sensor unit is installed under the center console with fixed bolts.

B1209 FRONTAL COLLISION DETECTION

Description

INFOID:0000000001069912

DTC B1209 FRONTAL COLLISION DETECTION

If the components that are not activated in frontal collision are reused, they should be checked for damage by CONSULT-lll or air bag warning lamp. Repair or replace malfunctioning components.

OPERATION

The air bag and seat belt pre-tensioners for driver and front seat passenger are operated by the decision of the diagnosis sensor unit out signaltransmitted because of the frontal collision.

STRUCTURE

It consists of crash zone sensor, diagnosis sensor unit (ACU), air bags and seat belt pre-tensioners for drivers and front passenger.

INSTALLATION

Refer to SR-14, "Removal and Installation", SR-16, "Removal and Installation", SR-4, "Removal and Installation", SR-8, "Removal and Installation", SR-18, "Removal and Installation".

INFOID:0000000001069918

DTC No. Index (With CONSULT-III)
(“SELF-DIAG [CURRENT]”), (“SELF-DIAG [PAST]” or “TROUBLE DIAG RECORD”)
NOTE:
Follow the procedures in numerical order when repairing malfunctioning parts. Confirm whether malfunction is eliminated using air bag warning lamp or CONSULT-III each time repair is completed. If malfunction is still observed, proceed to the next step. When malfunction is eliminated, further repair work is not required.

Diagnostic item	Explanation		Repair order “Recheck SRS at each replacement”
NO DTC IS DETECTED.	When malfunction is indicated by the “AIR BAG” warning lamp in User mode.	• Low battery voltage (Less than 9 V)	
		• Self-diagnosis result “SELF-DIAG [PAST]” (previously stored in the memory) might not be erased after repair. • Intermittent malfunction has been detected in the past.	• Go to SRC-10, "Diagnosis Description".
	• No malfunction is detected.		—
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1001-B1015]	• Diagnosis sensor is out of order.		• Replace diagnosis sensor unit (ACU).
PASS A/B INDCTR CKT [B1023]	• Front passenger air bag cut-off indicator circuit is open, or shorted each other or to ground.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace cut-off indicator unit. 4. Replace diagnosis sensor unit (ACU).
PASS A/B DEACT SW [B1024]	• Front passenger air bag deactivation switch unit is malfunctioning.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace deactivation switch unit. 4. Replace diagnosis sensor unit (ACU).
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1026-B1031]	• Diagnosis sensor is out of order.		• Replace diagnosis sensor unit (ACU).
CRASH ZONE SEN [UNIT FAIL] [B1033] [B1034] CRASH ZONE SEN [COMM FAIL] [B1035]	• Crash zone sensor is out of order.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace crash zone sensor. 4. Replace diagnosis sensor unit (ACU).
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1042-B1047]	• Diagnosis sensor is out of order.		• Replace diagnosis sensor unit (ACU).

cardiagn.com

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
DRIVER AIRBAG MODULE [OPEN] [B1054]	• Driver air bag module circuit is open. (including the spiral cable.)	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace driver air bag module. 4. Replace spiral cable. 5. Replace diagnosis sensor unit (ACU).
DRIVER AIRBAG MODULE [VB-SHORT] [B1055]	• Driver air bag module circuit is shorted to some power supply circuit. (including the spiral cable.)	
DRIVER AIRBAG MODULE [GND-SHORT] [B1056]	• Driver air bag module circuit is shorted to ground. (including the spiral cable.)	
DRIVER AIRBAG MODULE [SHORT] [B1057]	• Driver air bag module circuit is shorted to each other. (including spiral cable.)	
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1058-B1063]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
ASSIST A/B MODULE [OPEN] [B1070]	• Front passenger air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag module. 4. Replace diagnosis sensor unit (ACU).
ASSIST A/B MODULE [VB-SHORT] [B1071]	• Front passenger air bag module circuit is shorted to some power supply circuit.	
ASSIST A/B MODULE [GND-SHORT] [B1072]	• Front passenger air bag module circuit is shorted to ground.	
ASSIST A/B MODULE [SHORT] [B1073]	• Front passenger air bag module circuit is shorted to each other.	
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1074-B1079]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
PRE-TEN FRONT RH [OPEN] [B1081]	• Front RH pre-tensioner circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front RH seat belt. 4. Replace diagnosis sensor unit (ACU).
PRE-TEN FRONT RH [VB-SHORT] [B1082]	• Front RH pre-tensioner circuit is shorted to some power supply circuit.	
PRE-TEN FRONT RH [GND-SHORT] [B1083]	• Front RH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT RH [SHORT] [B1084]	• Front RH pre-tensioner circuit is shorted to each other.	

cardiagn.com

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
PRE-TEN FRONT LH [OPEN] [B1086]	• Front LH pre-tensioner circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front LH seat belt. 4. Replace diagnosis sensor unit (ACU).
PRE-TEN FRONT LH [VB-SHORT] [B1087]	• Front LH pre-tensioner circuit is shorted to some power supply circuit.	
PRE-TEN FRONT LH [GND-SHORT] [B1088]	• Front LH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT LH [SHORT] [B1089]	• Front LH pre-tensioner circuit is shorted to each other.	
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1106-B1111]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
SATELLITE SENS RH [UNIT FAIL] [B1113] [B1114] SATELLITE SENS RH [COMM FAIL] [B1115]	• RH side air bag (satellite) sensor is out of order.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace RH side air bag (Satellite) sensor. 4. Replace diagnosis sensor unit (ACU).
SATELLITE SENS LH [UNIT FAIL] [B1118] [B1119] SATELLITE SENS LH [COMM FAIL] [B1120]	• LH side air bag (satellite) sensor is out of order.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace LH side air bag (Satellite) sensor. 4. Replace diagnosis sensor unit (ACU).
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1122-B1127]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
SIDE MODULE RH [OPEN] [B1129]	• Front RH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front RH side air bag module. 4. Replace diagnosis sensor unit (ACU).
SIDE MODULE RH [VB-SHORT] [B1130]	• Front RH side air bag module circuit is shorted to some power supply circuit.	
SIDE MODULE RH [GND-SHORT] [B1131]	• Front RH side air bag module circuit is shorted to ground.	
SIDE MODULE RH [SHORT] [B1132]	• Front RH side air bag module circuit is shorted to each other.	

cardiagn.com

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
SIDE MODULE LH [OPEN] [B1134]	• Front LH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front LH side air bag module. 4. Replace diagnosis sensor unit (ACU).
SIDE MODULE LH [VB-SHORT] [B1135]	• Front LH side air bag module circuit is shorted to some power supply circuit.	
SIDE MODULE LH [GND-SHORT] [B1136]	• Front LH side air bag module circuit is shorted to ground.	
SIDE MODULE LH [SHORT] [B1137]	• Front LH side air bag module circuit is shorted to each other.	
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1138-B1143]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
CURTAIN MODULE RH [OPEN] [B1145]	• RH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace RH side curtain air bag module. 4. Replace diagnosis sensor unit (ACU).
CURTAIN MODULE RH [VB-SHORT] [B1146]	• RH side curtain air bag module circuit is shorted to some power supply circuit.	
CURTAIN MODULE RH [GND-SHORT] [B1147]	• RH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE RH [SHORT] [B1148]	• RH side curtain air bag module circuit is shorted to each other.	
CURTAIN MODULE LH [OPEN] [B1150]	• LH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace LH side curtain air bag module. 4. Replace diagnosis sensor unit (ACU).
CURTAIN MODULE LH [VB-SHORT] [B1151]	• LH side curtain air bag module circuit is shorted to some power supply circuits.	
CURTAIN MODULE LH [GND-SHORT] [B1152]	• LH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE LH [SHORT] [B1153]	• LH side curtain air bag module circuit is shorted to each other.	
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1170-B1175]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
PRE-TEN2 FRONT RH* [OPEN] [B1177]	• Front RH pre-tensioner2 circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front RH seat belt pre-tensioner2. 4. Replace diagnosis sensor unit (ACU).
PRE-TEN2 FRONT RH* [VB-SHORT] [B1178]	• Front RH pre-tensioner2 circuit is shorted to some power supply circuit.	
PRE-TEN2 FRONT RH* [GND-SHORT] [B1179]	• Front RH pre-tensioner2 circuit is shorted to ground.	
PRE-TEN2 FRONT RH* [SHORT] [B1180]	• Front RH pre-tensioner2 circuit is shorted to each other.	

Diagnostic item	Explanation	Repair order “Recheck SRS at each replacement”
PRE-TEN2 FRONT LH [OPEN] [B1182]	• Front LH pre-tensioner2 circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front LH seat belt pre-tensioner2. 4. Replace diagnosis sensor unit (ACU).
PRE-TEN2 FRONT LH [VB-SHORT] [B1183]	• Front LH pre-tensioner2 circuit is shorted to some power supply circuit.	
PRE-TEN2 FRONT LH [GND-SHORT] [B1184]	• Front LH pre-tensioner2 circuit is shorted to ground.	
PRE-TEN2 FRONT LH [SHORT] [B1185]	• Front LH pre-tensioner2 circuit is shorted to each other.	
DIAGNOSIS SENSOR UNIT (CONTROL UNIT) [B1202-B1207]	• Diagnosis sensor is out of order.	• Replace diagnosis sensor unit (ACU).
FRONTAL COLLISION DETECTION [B1209]	• Seat belt pre-tensioner and front air bag is deployed.	• Go to SRC-194, "Diagnosis Procedure (Component diagnosis)".
SIDE COLLISION DETECTION [B1210]	• Side and curtain air bag is deployed.	• Go to SRC-196, "Diagnosis Procedure (Component diagnosis)".

*: with RHD models.

WARNING LAMP FLASH CODE CHART (Without CONSULT-III)

NOTE:

Follow the procedures in numerical order when repairing malfunctioning parts. Confirm whether malfunction is eliminated using air bag warning lamp or CONSULT-III each time repair is completed. If malfunction is still observed, proceed to the next step. When malfunction is eliminated, further repair work is not required.

<Diagnosis results (previously stored in the memory) might not be erased after repair or intermittent malfunctions have been detected in the past.>

Flash pattern	Repair order
a through b are repeated. 	1. Erase memory. (Once key switch is turned from OFF to ON, TROUBLE DIAG RECORD will be erased.)

PHIA0532E

<Diagnosis sensor unit>

Flash pattern	Repair order
a through d are repeated. d: Seven flashes indicate malfunctioning diagnosis sensor unit circuit. 	1. Replace the diagnosis sensor unit (ACU).

JMHIA0034GB

cardiagn.com

<Front passenger air bag indicator CKT>

Flash pattern	Repair order
a through d are repeated. d: Eleven flashes indicate malfunctioning front passenger air bag off indicator. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag off indicator unit. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0233GB

<Front passenger air bag deactivation switch>

Flash pattern	Repair order
a through d are repeated. d: Ten flashes indicate malfunctioning front passenger air bag deactivation switch. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag deactivation switch. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0228GB

<Crash zone sensor>

Flash pattern	Repair order
a through d are repeated. d: Six flashes indicate malfunctioning crash zone sensor circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the crash zone sensor. 4. Replace the diagnosis sensor unit.

JMHIA0036GB

<Driver air bag module>

Flash pattern	Repair order
a through d are repeated. d: Two flashes indicate malfunctioning driver air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the driver air bag module. 4. Replace the spiral cable. 5. Replace the diagnosis sensor unit (ACU).

JMHIA0033GB

<Front passenger air bag module>

Flash pattern	Repair order
a through d are repeated. d: Eight flashes indicate malfunctioning front passenger air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the front passenger air bag module. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0035GB

<Front RH seat belt pre-tensioner>

Flash pattern	Repair order
a through d are repeated. d: One flash indicates malfunctioning front RH seat belt pre-tensioner circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the front RH seat belt. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0037GB

<Front LH seat belt pre-tensioner>

Flash pattern	Repair order
a through d are repeated. d: Three flashes indicate malfunctioning front LH seat belt pre-tensioner circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the front LH seat belt. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0038GB

<RH side air bag (Satellite) sensor>

Flash pattern	Repair order
a through f are repeated. f: Three flashes indicate malfunctioning RH side air bag (Satellite) sensor circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the RH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit.

JMHIA0039GB

<LH side air bag (Satellite) sensor>

Flash pattern	Repair order
a through f are repeated. f: Four flashes indicate malfunctioning LH side air bag (Satellite) sensor. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the LH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit.

JMHIA0040GB

<Front RH side air bag module>

Flash pattern	Repair order
a through f are repeated. f: One flash indicates malfunctioning front RH side air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the front RH side air bag module. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0041GB

cardiagn.com

<Front LH side air bag module>

Flash pattern	Repair order
a through f are repeated. f: Two flashes indicate malfunctioning front LH side air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the front LH side air bag module. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0042GB

<RH side curtain air bag module>

Flash pattern	Repair order
a through f are repeated. f: Five flashes indicate malfunctioning RH side curtain air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the RH side curtain air bag module. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0043GB

<LH side curtain air bag module>

Flash pattern	Repair order
a through f are repeated. f: Six flashes indicate malfunctioning LH side curtain air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the LH side curtain air bag module. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0044GB

<Front RH seat belt pre-tensioner 2>

Flash pattern	Repair order
a through d are repeated. d: Twelve flashes indicates malfunctioning front RH seat belt pre-tensioner 2 circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the front RH seat belt pre-tensioner 2. 4. Replace the diagnosis sensor unit (ACU).

JMHIA0223GB

<Front LH seat belt pre-tensioner 2>

Flash pattern	Repair order
a through d are repeated. d: Thirteen flashes indicate malfunctioning front LH seat belt pre-tensioner 2 circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the front LH seat belt pre-tensioner 2. 4. Replace the diagnosis sensor unit (ACU).

SYMPTOM DIAGNOSIS

SRS AIR BAG SYSTEM

Symptom Table

INFOID:0000000001069920

“SRS AIR BAG” Warning Lamp Does Not Turn OFF

1.CHECK THE DEPLOYMENT OF AIR BAG MODULE

Is “AIR BAG” module deployed?

YES >> Refer to SRC-194, "Diagnosis Procedure (Component diagnosis)".
NO >> GO TO 2.

2.CHECK THE AIR BAG FUSE

Refer to PG-71, "Fuse".

Check 10A fuse [No.2, located in fuse block (J/B)].

OK >> GO TO 4.
NG >> GO TO 3.

3.CHECK AIR BAG FUSE AGAIN

Replace “AIR BAG” fuse and turn ignition switch ON.

Does the “AIR BAG” fuse blow again?

YES >> Repair or replace main harness.
NO >> **INSPECTION END**

4.CHECK DIAGNOSIS SENSOR UNIT

Is “AIR BAG” displayed on CONSULT-III?

YES >> GO TO 5.
NO >> Visually check the wiring harness connection of diagnosis sensor unit. If the harness connection check result is OK, replace diagnosis sensor unit.

5.CHECK HARNESS CONNECTION

Is harness connections between warning lamp and diagnosis sensor unit?

OK >> Replace diagnosis sensor unit.
NG >> Connect “AIR BAG” warning lamp and diagnosis sensor unit connector properly. If “AIR BAG” warning lamp still does not go off, replace harness.

“SRS AIR BAG” Warning Lamp Does Not Turn ON

1.CHECK METER FUSE

Refer to PG-71, "Fuse".

Check 10A fuse [No.4, located in fuse block (J/B)].

OK >> GO TO 3.
NG >> GO TO 2.

2.CHECK METER FUSE AGAIN

Replace meter fuse and turn ignition switch ON.

Does the meter fuse blow again?

YES >> Repair or replace the related harness.
NO >> **INSPECTION END**

cardiagn.com

3.CHECK HARNESS CONNECTION BETWEEN DIAGNOSIS SENSOR UNIT AND COMBINATION METER

Disconnect diagnosis sensor unit connector and turn ignition switch ON.

Does AIR BAG warning lamp turn ON?

YES >> Replace diagnosis sensor unit.
NO >> Replace combination meter assembly.

cardiagn.com

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001069922

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Service

INFOID:0000000001069923

- Do not use electrical test equipment to check SRS circuits unless instructed to in this Service Manual.
- Before servicing the SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.
  For approximately 3 minutes after the cables are removed, it is still possible for the air bag and seat belt pretensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have elapsed.
- Diagnosis sensor unit must always be installed with their arrow marks “⇐” pointing towards the front of the vehicle for proper operation. Also check diagnosis sensor unit for cracks, deformities or rust before installation and replace as required.
- The spiral cable must be aligned in the neutral position since its rotations are limited. Do not turn steering wheel and column after removal of steering gear.
- Handle air bag module carefully. Always place driver and front passenger air bag modules with the pad side facing upward and seat mounted front side air bag module standing with the stud bolt side facing down.
- Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.
- Always replace instrument panel pad following front passenger air bag deployment.

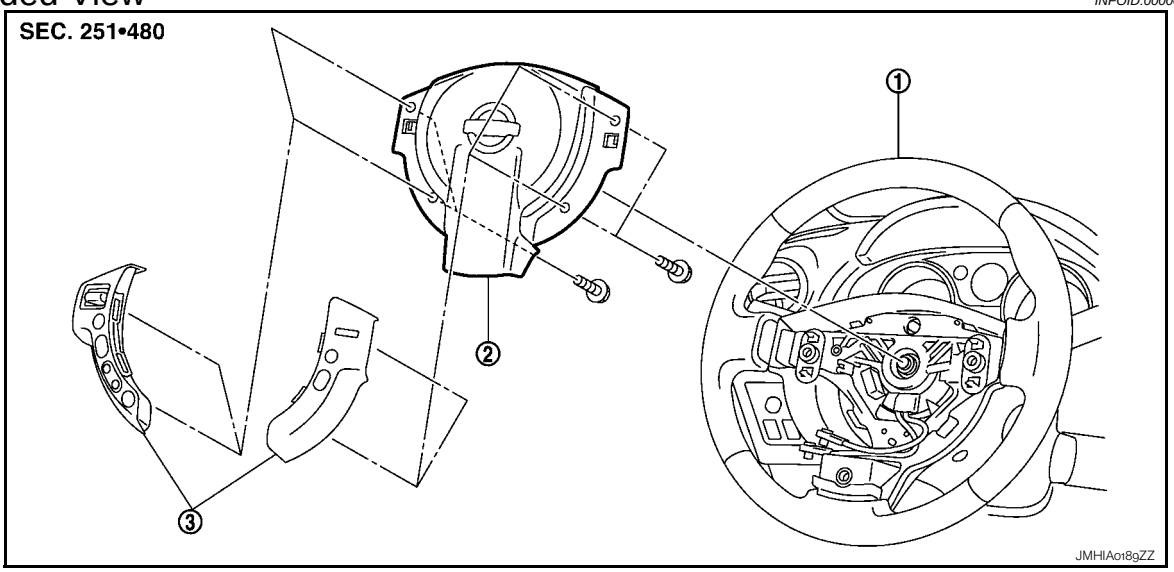
ON-VEHICLE REPAIR

DRIVER AIR BAG MODULE

Exploded View

INFOID:0000000001069721



1. Steering wheel
2. Driver air bag module
3. Steering switch

Removal and Installation

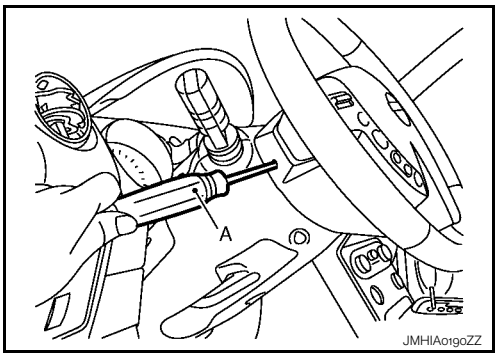
INFOID:0000000001069722

REMOVAL

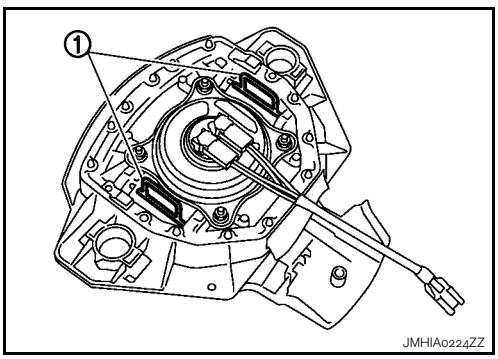
CAUTION:

- **Before servicing, turn ignition switch OFF, disconnect both battery terminals and wait at least 3 minutes.**
- **Always work from the side of air bag module. Do not work in front of it.**
- **Do not use air tools or electric tools for servicing.**

1. Locate retaining clip access hole (left/right) and insert screwdriver (A).



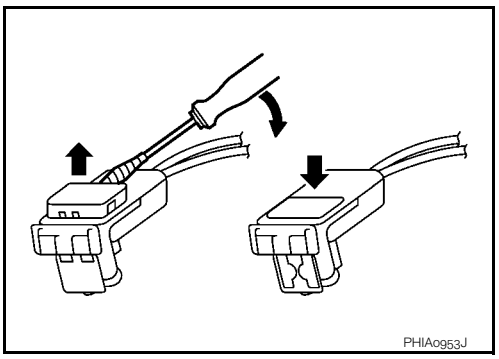
2. Press upward on retaining clip (1) until driver air bag module is released from steering wheel.



3. Lift the driver air bag module from the steering wheel.

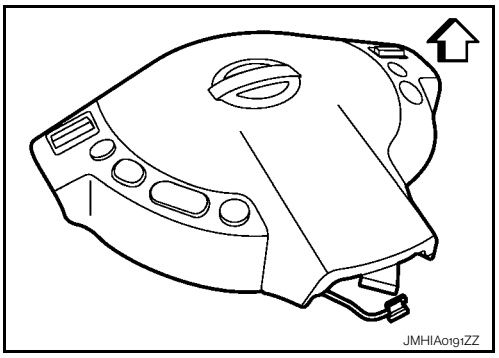
cardiagn.com

4. Disconnect the driver air bag module and horn connectors, then remove the driver air bag module.
NOTE:
- For installing/removing driver air bag module connector, insert thin screwdriver wrapped in tape into notch, lift lock and remove connector.
- Install connector with lohe k raised, and push lock into connector.
- After installing the connector, check that the lock is pushed securely into it.



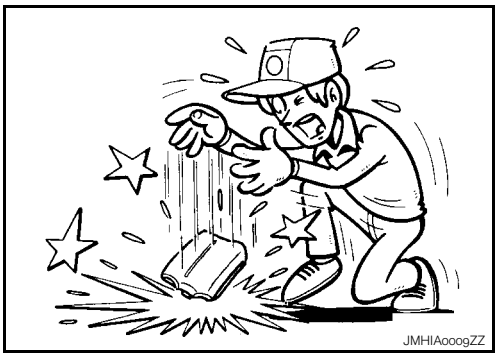
CAUTION:
- **Always place air bag module with pad side facing upward.**

⇦ : Upward



- **Do not insert any foreign objects (screwdriver, etc.) into air bag module.**
- **Do not disassemble air bag module.**
- **Do not expose the air bag module to temperatures exceeding 90°C (194°F).**
- **Do not allow oil, grease or water to come in contact with the air bag module.**

- **Replace the air bag module if it has been dropped or sustained an impact.**



INSTALLATION

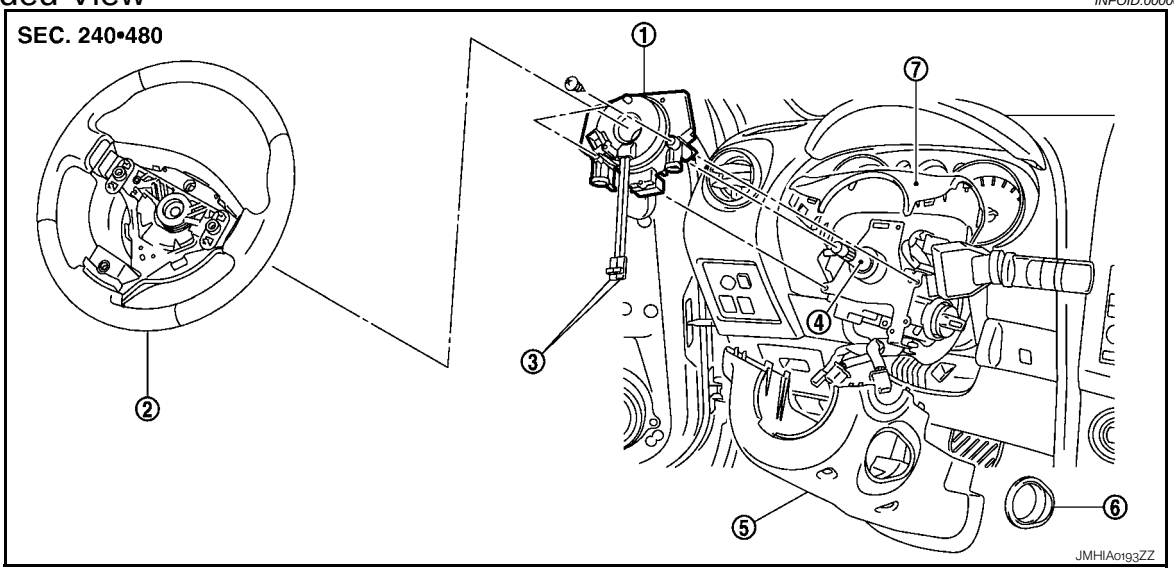
Install in the reverse order of removal.

CAUTION:
- **Do not damage the harness while installing.**
- **In case that malfunction is detected by the air bag warning lamp, reset by the self-diagnosis function and delete the memory by CONSULT-III.**
- **In case that malfunction is still detected after the above operations, perform self-diagnosis to repair malfunctions.**
- **After the work is completed, check that no malfunctioning system is detected by air bag warning lamp. Refer to SRC-10, "Diagnosis Description".**

SPIRAL CABLE

Exploded View

INFOID:0000000001069723



1. Spiral cable
2. Steering wheel
3. Driver air bag module harness connectors
4. Steering column assembly
5. Steering column cover (lower)
6. Steering lock escation
7. Steering column cover (upper)

Removal and Installation

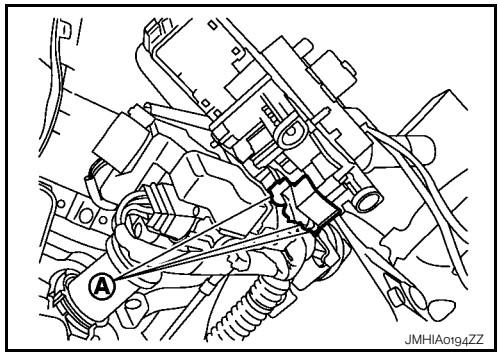
INFOID:0000000001069724

REMOVAL

CAUTION:

- **Before servicing, turn ignition switch OFF, disconnect both battery terminals and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**

1. Remove the driver air bag module. Refer to SR-4, "Removal and Installation".
2. Remove the steering wheel. Refer to ST-9, "Removal and Installation".
3. Remove the column cover (upper/lower). Refer to IP-11, "Exploded View".
4. Disconnect spiral cable body side connectors (A).
   NOTE:
   Disconnect spiral cable body side connectors after remove the spiral cable.



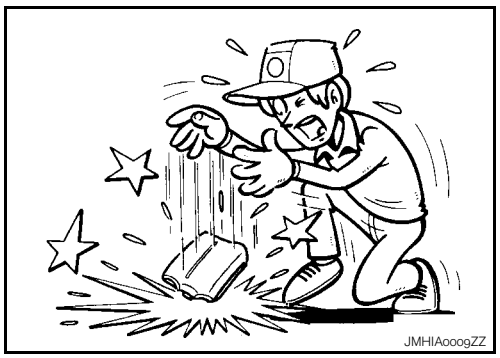
5. Remove spiral cable fixing screws, and pawls (left/right).
6. Pull out forward the spiral cable.

CAUTION:

- **Do not disassemble the spiral cable.**
- **Do not apply lubricant to the spiral cable.**
- **Do not allow oil, grease, detergent or water to come in contact with the spiral cable.**

cardiagn.com

- **Do not make an impact the spiral cable by dropping etc. Replace the spiral cable if it has been dropped or sustained an impact.**

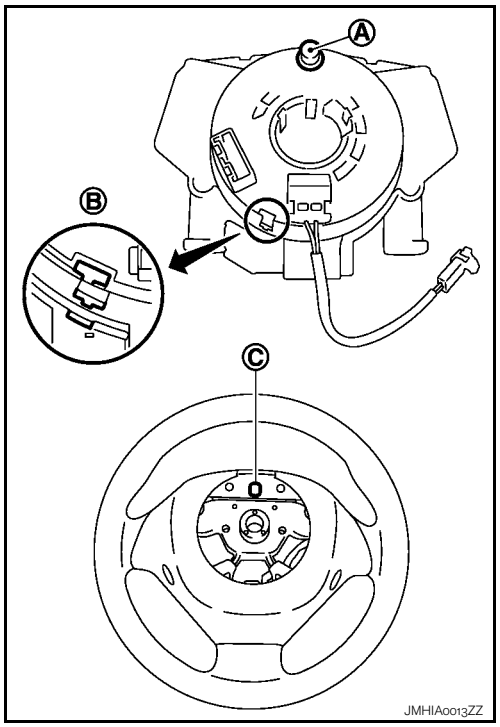


INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **The spiral cable may snap by steering operation if the cable is installed in an improper position.**
- **The neutral position is set as follows.**
- **Turn carefully the spiral cable clockwise to the end position. Then turn it counterclockwise (about 2 and half turns) and stop turning at the point (B) on which the stopper insertion holes are in the same position.**
- **The service part is installed in the neutral position by the stopper and can be set without adjusting after the stopper is removed.**
- **Do not over turn spiral cable or beyond number of turns required. (These will cause cable snap.)**
- **Adjust the spiral cable locating pin (A) to the steering wheel locating pin hole (C).**
- **Secure the air bag harness with the harness fixing hook.**



- **In case that malfunction is detected by the air bag warning lamp, reset by the self-diagnosis function and delete the memory by CONSULT-III.**
- **In case that malfunction is still detected after the above operations, perform self-diagnosis to repair malfunctions.**
- **After the work is completed, check that no malfunctioning system is detected by air bag warning lamp. Refer to SRC-10, "Diagnosis Description".**

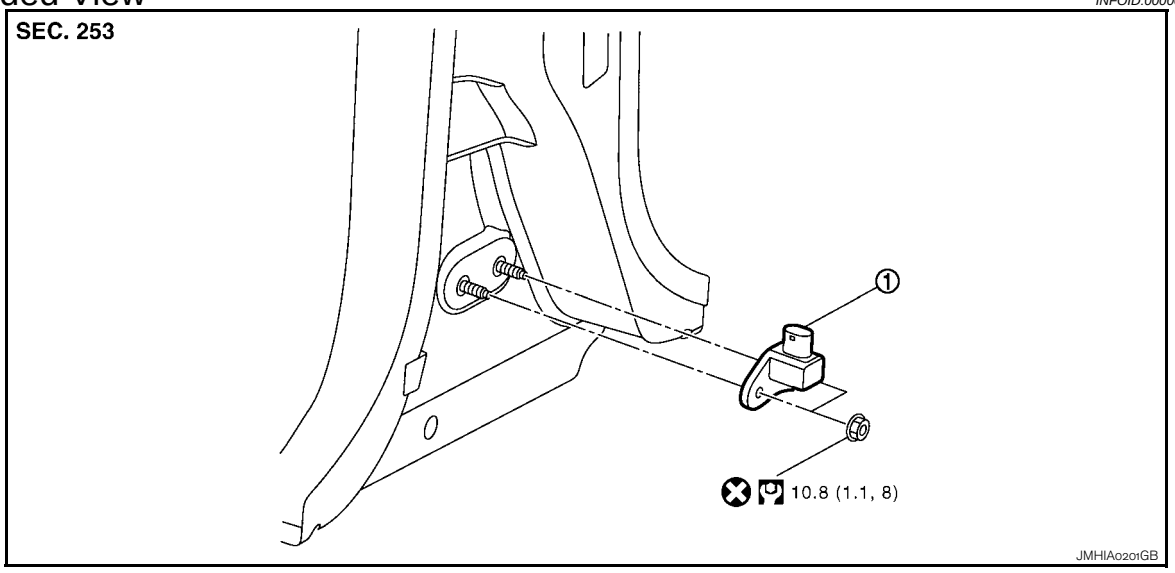
SIDE AIR BAG (SATELLITE) SENSOR

Exploded View

INFOID:0000000001069731



1. Satellite sensor

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000001069732

REMOVAL

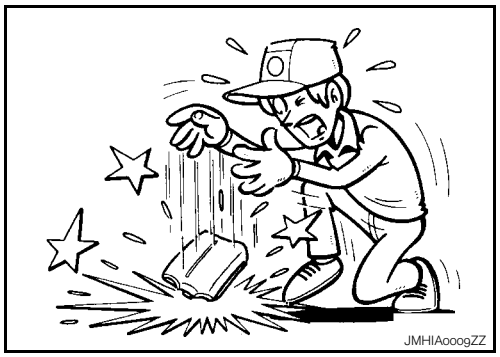
CAUTION:

- **Before servicing, turn ignition switch OFF, disconnect both battery terminals and wait at least 3 minutes.**
- **Do not use air tools or electric tools for servicing.**

1. Remove the front seat belt. Refer to SB-5, "SEAT BELT RETRACTOR : Exploded View".
2. Remove the side air bag (satellite) sensor fixing nuts.
3. Disconnect harness connector and then remove side air bag (satellite) sensor.

CAUTION:

- **Replace the side air bag (satellite) sensor if it has been dropped or sustained an impact.**
- **Do not use old fixing nuts after removal; replace with new nuts.**
- **Replace the satellite sensor of deployed SRS front side air bag and deployed SRS side curtain air bag.**



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Do not damage the satellite sensor harness.**
- **In case that malfunction is detected by the air bag warning lamp, reset by the self-diagnosis function and delete the memory by CONSULT-III.**
- **In case that malfunction is still detected after the above operations, perform self-diagnosis to repair malfunctions.**
- **After the work is completed, check that no malfunctioning system is detected by air bag warning lamp. Refer to SRC-10, "Diagnosis Description".**

DIAGNOSIS SENSOR UNIT

Exploded View

RHD	Models with driver and passenger air bags, seat belt pre-tensioners, seat belt pre-tensioner2, side air bags and curtain air bags	F900

FRONT SEAT BELT PRE-TENSIONER

Removal and Installation

INFOID:0000000001069735

For removal and installation procedures, refer to SB-5, "SEAT BELT RETRACTOR : Exploded View".

cardiagn.com

DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

Caution for Air Bag Module and Seat Belt Pre-tensioner

INFOID:0000000001082527

- Before disposing of air bag module and seat belt pre-tensioner, or vehicles equipped with such systems, deploy the systems. If such systems have already been deployed due to an accident, dispose of them as indicated in Disposing of Air Bag Module and Seat Belt Pre-tensioner.
- When deploying the air bag module and seat belt pre-tensioner,always use the Special Service Tool; Deployment tool (SST: KV99106400).
- When deploying the air bag module and seat belt pre-tensioner,stand at least 5 m (16 ft) away from the deployment component.
- When deploying air bag module and seat belt pre-tensioner, a fairlyloud noise is made, followed by smoke being released. The smoke is not poisonous,however, be careful not to inhale smoke since it irritates the throat and can cause choking.
- Always activate one air bag module at a time.
- Due to heat, leave air bag module unattended for more than 30 minutes after deployment. Also leave seat belt pre-tensioner unattended for more than 10 minutes after deployment.
- Wear gloves when handling a deployed air bag module and seat belt pre-tensioner.
- Never apply water to the deployed air bag module and seat belt pre-tensioner.
- Wash your hands after finishing work.
- Place the vehicle outdoors with an open space of at least 6 m (20 ft) on all sides when deploying air bag module and seat belt pre-tensioner while mounted in vehicle.
- Use a volt meter to make sure the vehicle battery is fully charged.
- Do not dispose of the air bag module and seat belt pre-tensioner undeployed.

CHECKING DEPLOYMENT TOOL

Connecting to Battery

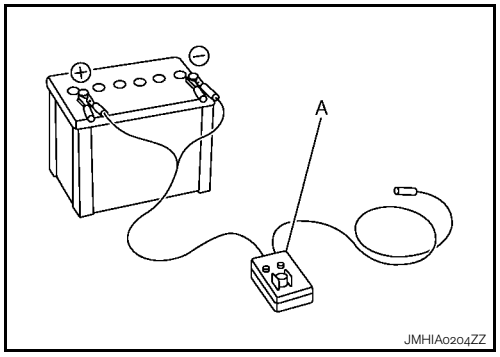
CAUTION:

The battery must show voltage of 9.6 V or more.

Remove the battery from the vehicle and place it on dry wood blocks approximately 5 m (16 ft) away from the vehicle.

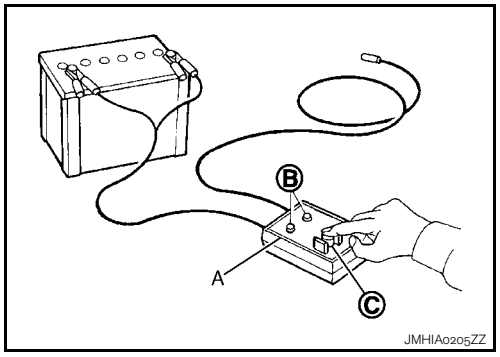
- Wait 3 minutes after the vehicle battery is disconnected before proceeding.
- Connect red clip of deployment tool (A) to battery positive terminal and black clip to negative terminal.

Check that the polarity is correct. The right side lamp in the tool, marked “deployment tool power”, should glow with a green light. If the right side lamp glows red, reverse the connections to the battery.



Deployment Tool Check

Press the deployment tool switch (C) to the ON position. The left side lamp in the tool, marked “air bag connector voltage” should illuminate (B). If it does not illuminate, replace the deployment tool (A).



Air Bag Deployment Tool Lamp Illumination Chart (Battery Connected)

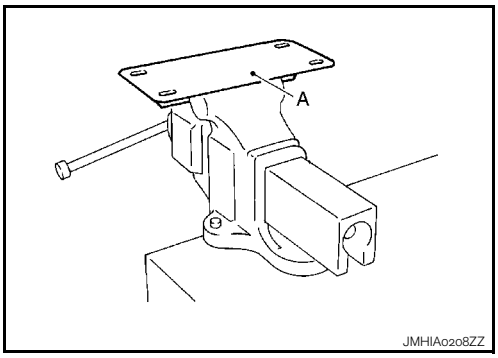
Switch operation	Left side lamp, green* “AIR BAG CONNECTOR VOLTAGE”	Right side lamp, green* “DEPLOYMENT TOOL POWER”
OFF	OFF	ON
ON	ON	ON

*: If this lamp glows red, the tool is connected to the battery incorrectly.Reverse the connections and check the lamp glows green.

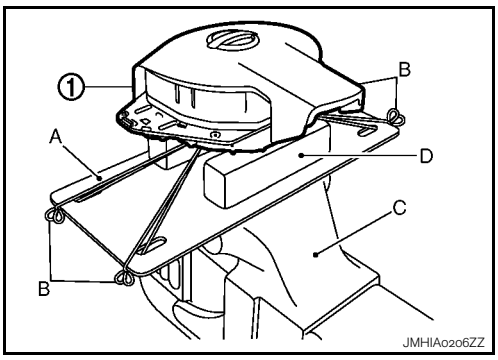
DEPLOYMENT OF AIR BAG MODULE (OUTSIDE OF VEHICLE)

Deployment of Driver Air Bag Module (Outside of Vehicle)

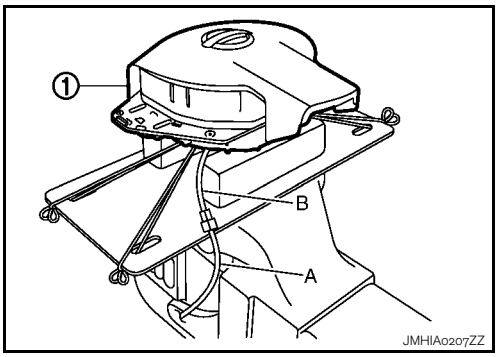
1. Unless the vehicle is being scrapped, deploying the air bag in the vehicle is not recommended. This may cause damage to the vehicle interior.
   Anchor air bag module bracket (SST: KV99105300) (A) in a vice secured to a firm foundation deployment.



2. Using wire (B), secure air bag module (1) to air bag module bracket (SST: KV99105300) (A) at four places.
   CAUTION:
   - **Use wire of at at least 1 mm (0.04 in) diameter.**
   - **If a gap exists between air bag module and air bag module bracket, use a piece of wood (D) inserted in the gap to stabilize the air bag module.**
3. Firmly secure air bag module bracket (SST: KV99105300) (A) with air bag module attached, in a vise (C).

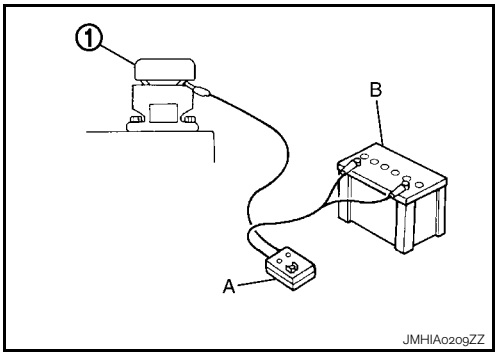


4. Connect deployment tool adapter (SST: KV99110500) (B) to air bag module (1) and deployment tool connector (SST: KV99106400) (A).



5. Connect red clip of deployment tool (A) to battery positive terminal and black clip to negative terminal (B).
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
7. Press the button on the deployment tool (A). The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module (1) will deploy.

CAUTION:
When deploying the driver air bag module, stand at least 5 m (16 ft)away from the air bag module.

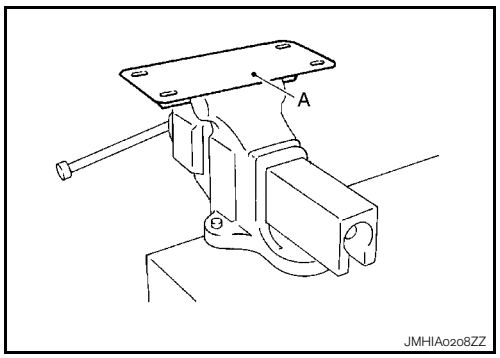


DEPLOYMENT OF AIR BAG MODULE (OUTSIDE OF VEHICLE)

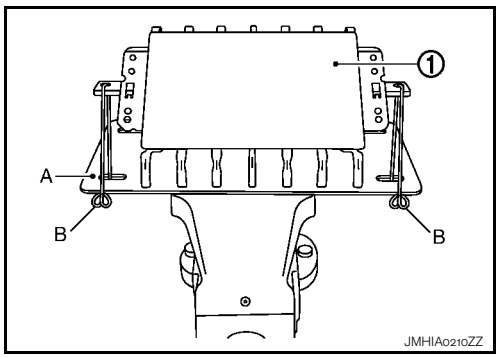
Deployment of Front Passenger Air Bag Module (Outside of Vehicle)

cardiagn.com

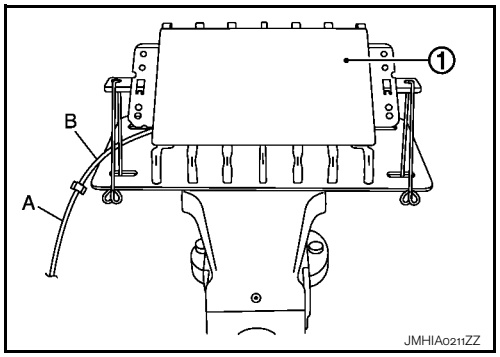
1. Firmly secure air bag module bracket (SST: KV99105300) (A) in a vise.



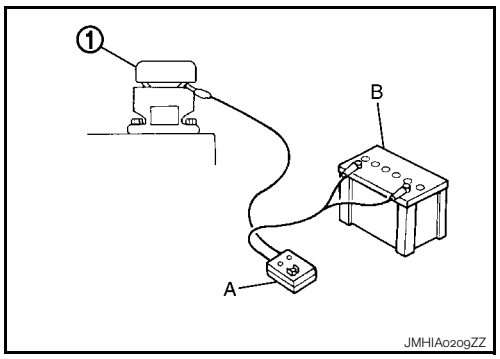
2. Using wire, secure air bag module to air bag module bracket (SST: KV99105300) (A) at two places.
CAUTION:
Use wire of at least 1 mm (0.04 in) diameter.



3. Connect deployment tool (SST: KV99106400) (A) and deployment tool adapter (SST: KV99110500) (B) to front passenger air bag module connector (1).



4. Connect red clip of deployment tool (A) to battery positive terminal and black clip to negative terminal (B).
5. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
6. Press the button on the deployment tool (A). The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module (1) will deploy.

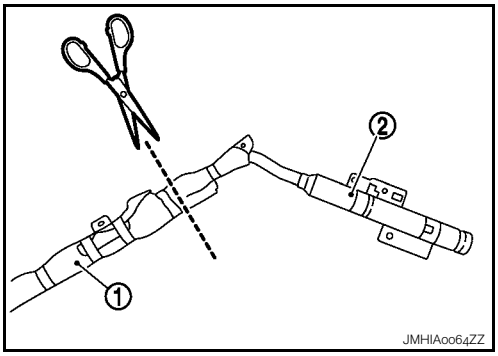


CAUTION:
- **When deploying the front passenger air bag module, do not stand on the deploying side.**
- **Stand at least 5 m (16 ft) away from the air bag module.**

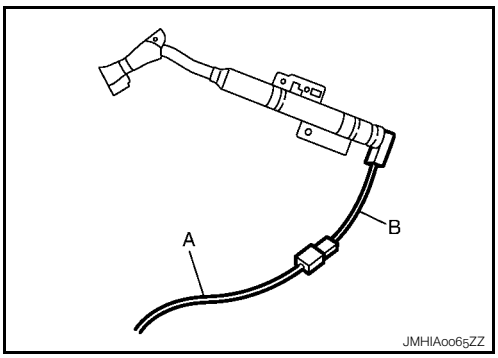
DEPLOYMENT OF AIR BAG MODULE (OUTSIDE VEHICLE)

Deployment of Side Curtain Air Bag Module (Outside of Vehicle)

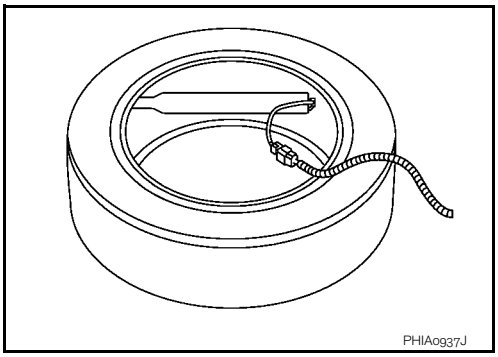
1. Cut the inflator (2) from side curtain air bag module (1).



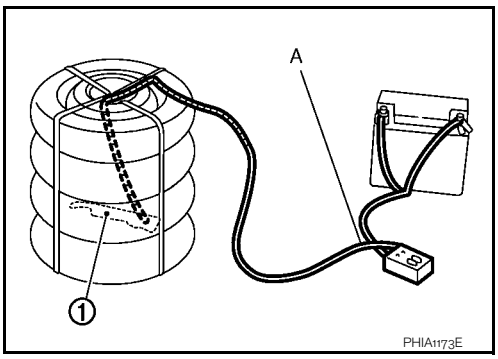
2. Connect deployment tool (SST: KV99106400) (A) and deployment tool adapter (SST: KV99109800) (B) to the inflator.



3. Put the inflator connected with the deployment tool (SST: KV99106400) and deployment tool adapter (SST: KV99109800) into a tire without a wheel.



4. Put the tire with the inflator (1) onto another tire without wheel.Add an additional tire without a wheel and then a tire mounted on a wheel on top.
   CAUTION:
   Tie all tires together with a strap in order keep them standing.
5. Connect red clip of deployment tool (A) to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
7. Press the button on the deployment tool (A). The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module inflator (1) will deploy.
   CAUTION:
   When deploying the side curtain air bag module, stand at least 5 m (16ft) away from the side curtain air bag module.

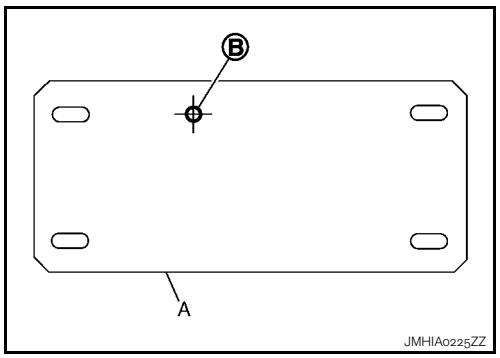


DEPLOYMENT OF AIR BAG MODULE (OUTSIDE VEHICLE)

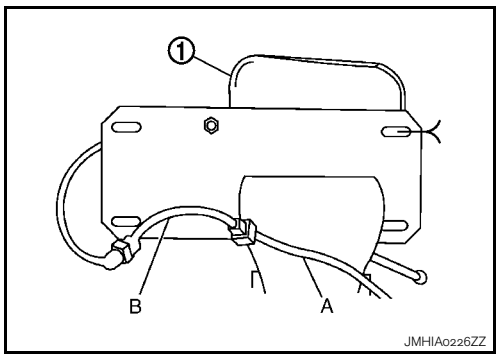
Deployment of Front Side Air Bag Module (Outside of Vehicle)

cardiagn.com

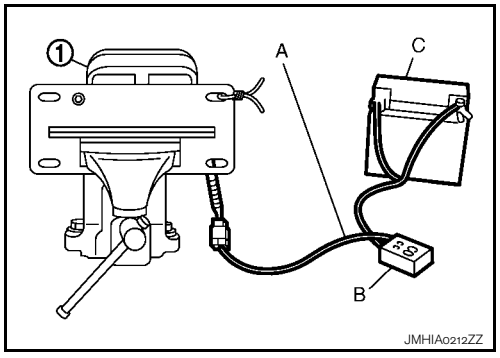
1. Make 6.5 mm (0.256 in) diameter hole (B) in air bag module bracket (SST: KV99105300) (A) at the position shown in figure.



2. Firmly secure air bag module bracket in a vise.
3. Insert one bolt through air bag module bracket and air bag module upper side holes, and fix them with one M6 bolt/nut.
   Insert wire through air bag module bracket and air bag module lower side holes, and fix them.
   CAUTION:
   Using wire, of at least 1 mm (0.04 in) diameter.
4. Connect deployment tool (SST: KV99106400) (A) and deployment tool adapter (SST: KV99109800) (B) to air bag module (1) connector.



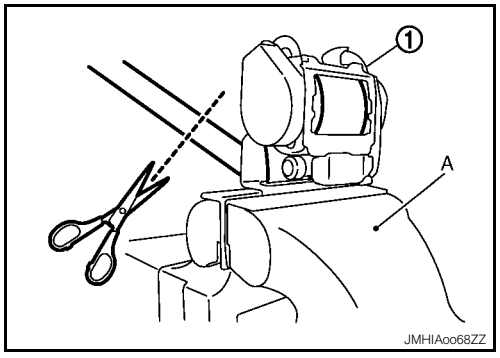
5. Connect red clip of deployment tool (SST: KV99106400) (A),(B) to battery positive terminal and black clip to negative terminal (C).
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
7. Press the button on the deployment tool. The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module (1) will deploy.
   CAUTION:
   When deploying the front side air bag module, stand at least 5 m (16ft) away from the air bag module.



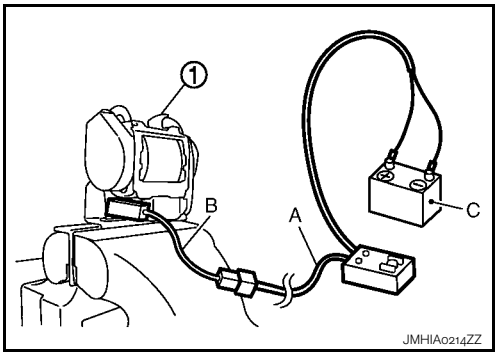
DEPLOYMENT OF SEAT BELT PRE-TENSIONER (OUTSIDE OF VEHICLE)

Deployment of Front Seat Belt Pre-Tensioner (Outside of Vehicle)

1. Firmly grip pre-tensioner (1) in a vise (A) and cut off the webbing.



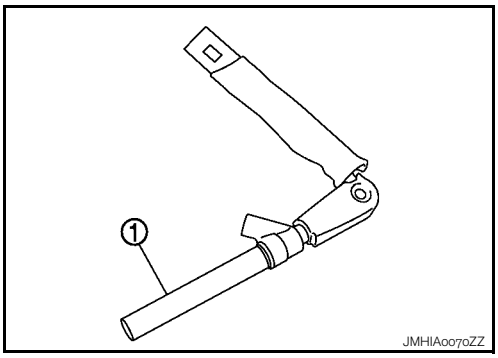
2. Connect deployment tool (SST: KV99106400) (A) and deployment tool adapter (SST: KV99110500) (B) yellow connector to front seat belt pre-tensioner (1).
3. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal (C).
4. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
5. Press the button on the deployment tool. The left side lamp on the tool, marked “seat belt pre-tensioner connector voltage”, will illuminate and the seat belt pre-tensioner (1) will deploy.
   CAUTION:
   When deploying the front seat belt pre-tensioner, stand at least 5 m(16 ft) away from the seat belt pre-tensioner.



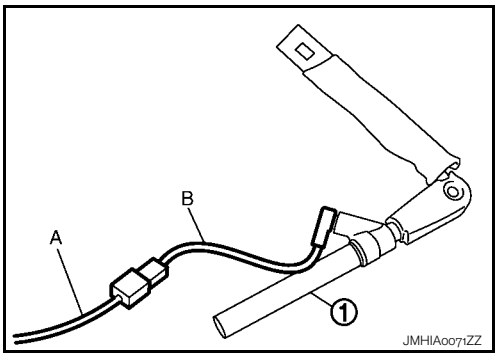
DEPLOYMENT OF SEAT BELT PRE-TENSIONER (OUTSIDE OF VEHICLE)

Deployment of Front Seat Belt Pre-Tensioner2 (Outside of Vehicle)

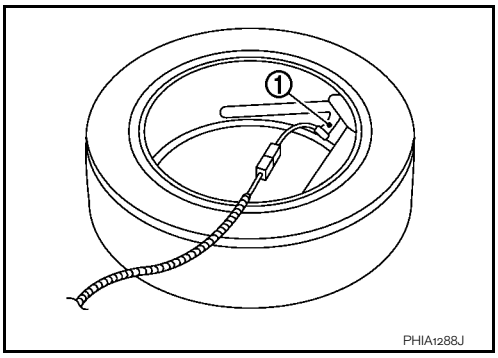
1. Disconnect the webbing of seat belt pre-tensioner2 (1).



2. Connect deployment tool (SST: KV99106400) (A) and deployment tool adapter (SST: KV99110500) (B) orange connector to seat belt pre-tensioner2 (1).

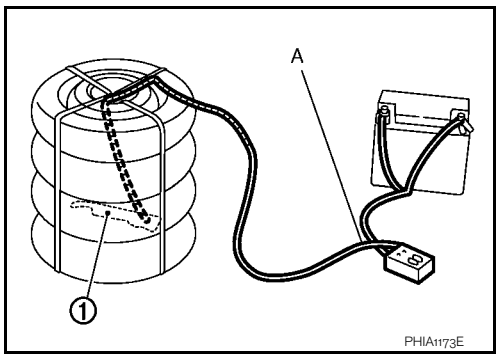


3. Put the seat belt pre-tensioner2 (1) connected with the deployment tool into a tire without a wheel.



cardiagn.com

4. Connect red clip of deployment tool (A) to battery positive terminal and black clip to negative terminal.
5. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
6. Press the button on the deployment tool (A). The left side lamp on the tool, marked “seat belt pre-tensioner2 connector voltage”, will illuminate and the seat belt pre-tensioner2 (1) will deploy.
   CAUTION:
   When deploying the front seat belt pre-tensioner2, stand at least 5 m(16 ft) away from the seat belt pre-tensioner2.



DISPOSING OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

Deployed air bag module and seat belt pre-tensioner are very hot. Before disposing of air bag module and seat belt pre-tensioner, wait at least 30 minutes, and 10 minutes, respectively. Seal them in a plastic bag before disposal.

CAUTION:

- **Never apply water to a deployed air bag module or seat belt pre-tensioner.**
- **Wear gloves when handling a deployed air bag moduleor seat belt pre-tensioner.**
- **No poisonous gas is produced upon air bag module deployment. However,be careful not to inhale gas since it irritates the throat and can cause choking.**
- **Do not disassemble air bag module and seat belt pre-tensioner.**
- **Air bag module and seat belt pre-tensioner cannot be reused.**
- **Wash your hands clean after finishing work.**

DETAILED FLOW

NOTE:
If any malfunction is found, immediately disconnect the battery cable from the negative terminal.

1.CHECK ENGINE START

Crank the engine and check that the engine starts.

Does the engine start?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK THAT THE STARTER MOTOR STOPS

Check that the starter motor stops after starting the engine.

Does the starter motor stop?

YES >> INSPECTION END
NO >> Replace starter motor.

3.CHECK THE ENGINE SPEED WITH CRANKING

Check that the engine runs at cranking.

Does engine turn by cranking?

YES >> GO TO 4.
NO >> GO TO 5.

4.CHECK THE ENGINE SPEED WITH CRANKING

Check that the engine speed is not low at cranking.

Does engine turn normally?

YES >> Check ignition/fuel system.
NO >> Check charge condition, corrosion and connection condition of the battery. Refer to PG-4, "Work Flow".

5.CHECK STARTER MOTOR ACTIVATION

Check that the starter motor runs at cranking.

Does starter motor turn?

YES >> GO TO 6.
NO >> GO TO 7.

6.ENGINE ROTATION STATUS

Check that the engine can be rotated by hand.

Does engine turn freely by hand?

YES >> Replace starter motor.
NO >> Perform further diagnosis of engine mechanical or powertrain mechanism. Refer to EM, TM or CL sections.

7.CHECK POWER SUPPLY CIRCUIT

Check the following conditions.
- Fuse and fusible link
- Charge condition, corrosion and connection condition of the battery. Refer to PG-4, "Work Flow".

Are these inspection results normal?

YES >> GO TO 8.
NO >> Repair as needed.

8.CHECK STARTING SYSTEM WIRING

Check the following.
- “B” terminal circuit. Refer to STR-10, "Diagnosis Procedure"
- “S” terminal circuit. Refer to STR-11, "Diagnosis Procedure"

Are these inspection results normal?

YES >> GO TO 9.
NO >> Repair as needed.

cardiagn.com

9.CHECK MAGNETIC SWITCH OPERATION SOUND

Check that a magnetic switch operation sound can be heard when the ignition switch is set at the starting position.

Does magnetic switch operation sound occur?

YES >> GO TO 10.
NO >> Replace starter motor.

10.PINION AND RING GEAR ENGAGEMENT CHECK

Check condition of pinion and ring gear mesh.

Is the inspection result normal?

YES >> Replace starter motor.
NO >> GO TO 11.

11.CHECK STARTER MOTOR UNIT

Check the following.
- Check pinion moving mechanism.
- Check ring gear.

Are these inspection results normal?

YES >> INSPECTION END
NO >> Repair or replace, if necessary.

DETAILED FLOW

NOTE:

If any malfunction is found, immediately disconnect the battery cable from the negative terminal.

1.CHECK ENGINE START

Crank the engine and check that the engine starts.

Does the engine start?

cardiagn.com

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK THAT THE STARTER MOTOR STOPS

Check that the starter motor stops after starting the engine.

Does the starter motor stop?

YES >> INSPECTION END
NO >> Replace magnetic switch.

3.CHECK THE ENGINE SPEED WITH CRANKING

Check that the engine runs at cranking.

Does engine turn by cranking?

YES >> GO TO 4.
NO >> GO TO 5.

4.CHECK THE ENGINE SPEED WITH CRANKING

Check that the engine speed is not low at cranking.

Does engine turn normally?

YES >> Check ignition/fuel system.
NO >> Check charge condition, corrosion and connection condition of the battery. Refer to PG-4, "Work Flow".

5.CHECK STARTER MOTOR ACTIVATION

Check that the starter motor runs at cranking.

Does starter motor turn?

YES >> GO TO 6.
NO >> GO TO 7.

6.CHECK STARTER MOTOR UNIT

1. Remove starter motor.
2. Check that the gear shaft of starter motor rotates.

Does gear shaft turn?

YES >> • Check pinion clutch. Refer to the following.
- HR16DE models: STR-22, "HR16DE MODELS : Inspection".
- MR20DE models: STR-27, "MR20DE MODELS : Inspection".

NO >> Check reduction gear, armature and gear shaft.

7.CHECK POWER SUPPLY CIRCUIT

Check the following conditions.
• Fuse and fusible link
• Charge condition, corrosion and connection condition of the battery. Refer to PG-4, "Work Flow".

Are these inspection results normal?

YES >> GO TO 8.
NO >> Repair as needed.

8.CHECK STARTING SYSTEM WIRING

Check the following.
• “B” terminal circuit. Refer to STR-10, "Diagnosis Procedure"
• “S” terminal circuit. Refer to STR-11, "Diagnosis Procedure"

Are these inspection results normal?

YES >> GO TO 9.
NO >> Repair as needed.

9.CHECK MAGNETIC SWITCH OPERATION SOUND

Check that a magnetic switch operation sound can be heard when the ignition switch is set at the starting position.

Does magnetic switch operation sound occur?

cardiagn.com

YES >> GO TO 10.
NO >> Replace magnetic switch.

10.PINION AND RING GEAR ENGAGEMENT CHECK

Check condition of pinion and ring gear mesh.

Is the inspection result normal?

YES >> GO TO 12.
NO >> GO TO 11.

11.CHECK STARTER MOTOR UNIT

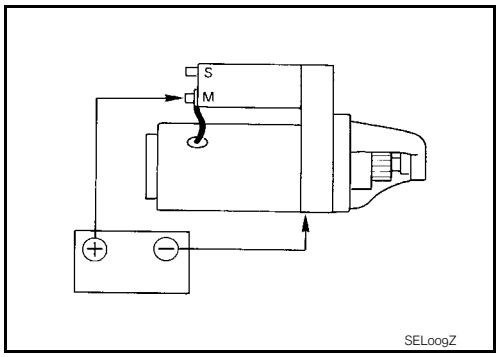
Check the following.
- Adjust pinion movement. Refer to the following.
- HR16DE models: STR-22, "HR16DE MODELS : Inspection"
- MR20DE engine models: STR-27, "MR20DE MODELS : Inspection"
- Check pinion moving mechanism.
- Check ring gear.

Are these inspection results normal?

YES >> INSPECTION END
NO >> Repair or replace, if necessary.

12.CHECK STARTER MOTOR UNIT

Check that the starter motor runs when connecting the positive terminal (12 V) to starter motor terminal M and the negative terminal (ground) to starter motor body.



Does the starter motor run?

YES >> Replace magnetic switch.
NO >> Repair starter motor.

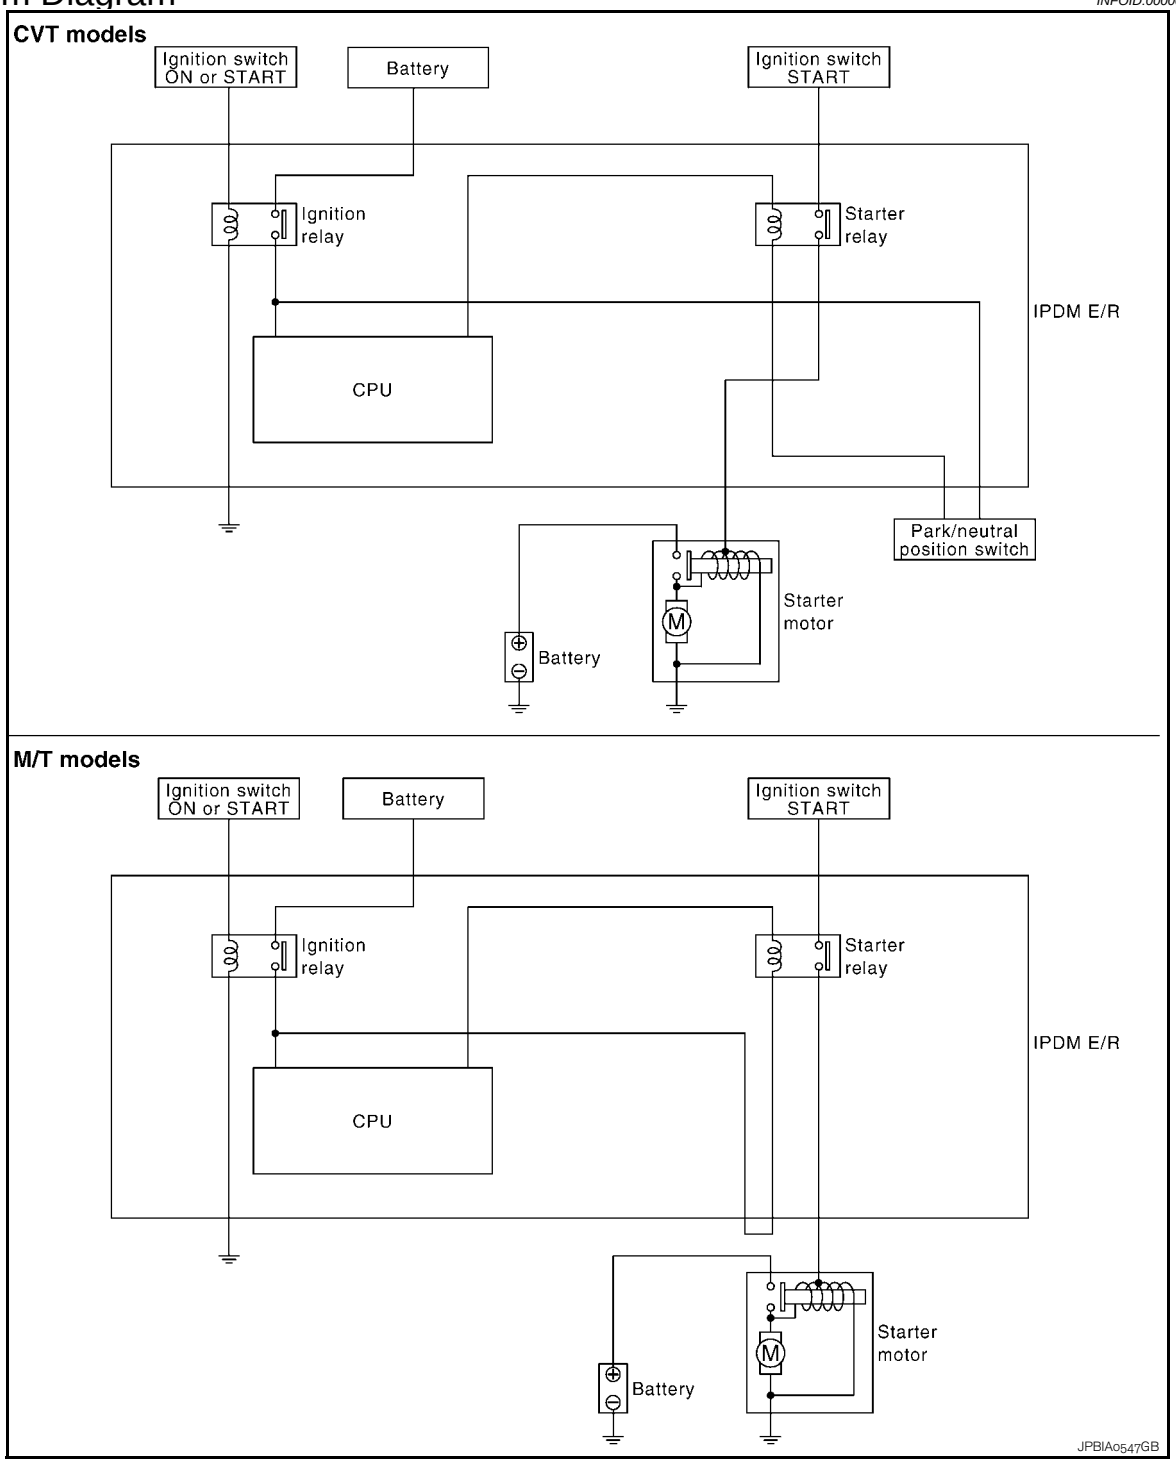
cardiagn.com

FUNCTION DIAGNOSIS

STARTING SYSTEM

System Diagram

INFOID:0000000000955264



System Description

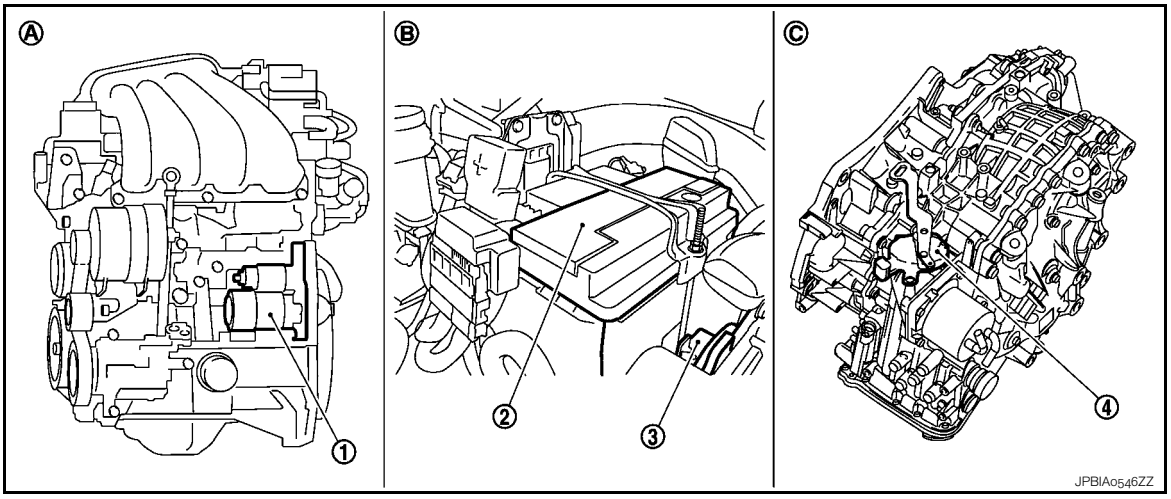
INFOID:0000000000955265

The starter motor plunger closes and provides a closed circuit between the battery and starter motor. The starter motor is grounded to the engine block. With power and ground supplied, cranking occurs and the engine starts.

Component Parts Location

INFOID:0000000000955266

cardiagn.com



1. Starter motor
2. Battery
3. IPDM E/R
4. Park/neutral position switch (CVT models only)

A. Engine
B. Engine room (left side)
C. CVT assembly

Component Description

INFOID:0000000000955267

Component part	Description
Park/neutral position switch (CVT models only)	Park/neutral position switch supplies power to the starter relay inside IPDM E/R when the selector lever is shifted to the P or N position.
IPDM E/R	CPU inside IPDM E/R controls the starter relay. Ignition relay inside IPDM E/R supplies power to the Park/neutral position switch when ignition switch is ON or START.
Starter motor	The starter motor plunger closes and the motor is supplied with battery power, which in turn cranks the engine, when the “S” terminal is supplied with electric power.

cardiagn.com

COMPONENT DIAGNOSIS

B TERMINAL CIRCUIT

Description

INFOID:0000000000955268

The “B” terminal is constantly supplied with battery power.

Diagnosis Procedure

INFOID:0000000000955269

CAUTION:

Perform diagnosis under the condition that engine cannot start by the following procedure.

1. **Remove fuel pump fuse.**
2. **Crank or start the engine (where possible) until the fuel pressure is released.**

1.CHECK “B” TERMINAL CIRCUIT

1. Turn ignition switch OFF.
2. Check that starter motor “B” terminal connection is clean and tight.
3. Check voltage between starter motor “B” terminal and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Starter motor “B” terminal	Terminal		
F49 (K9K) F52 (HR16DE) F10 (MR20DE)	2	Ground	Battery voltage

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check harness between battery and starter motor for open circuit.

2.CHECK BATTERY CABLE CONNECTION STATUS (VOLTAGE DROP TEST)

1. Shift CVT selector lever to “P” or “N” position. (CVT models)
2. Check voltage between battery positive terminal and starter motor “B” terminal.

Terminals			Condition	Voltage (Approx.)
(+)	(–)			
	Starter motor “B” terminal	Terminal		
Battery positive terminal	F49 (K9K) F52 (HR16DE) F10 (MR20DE)	2	When the ignition switch is in START position	Less than 0.5 V

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check harness between the battery and the starter motor for poor continuity.

3.CHECK GROUND CIRCUIT STATUS (VOLTAGE DROP TEST)

1. Shift CVT selector lever to “P” or “N” position. (CVT models)
2. Check voltage between starter motor case and battery negative terminal.

Terminals		Condition	Voltage (Approx.)
(+)	(–)		
Starter motor case	Battery negative terminal	When the ignition switch is in START position	Less than 0.2 V

Is the inspection result normal?

YES >> “B” terminal circuit is OK. Further inspection is necessary. Refer to STR-4, "HR16DE/MR20DE MODELS : Work Flow".
NO >> Check the starter motor case and ground for poor continuity.

cardiagn.com

S TERMINAL CIRCUIT

Description

INFOID:0000000000955270

The starter motor magnetic switch is supplied with power when the ignition switch is turned to START with the selector lever P or N for CVT models.

Diagnosis Procedure

INFOID:0000000000955271

CAUTION:
Perform diagnosis under the condition that engine cannot start by the following procedure.
1. **Remove fuel pump fuse.**
2. **Crank or start the engine (where possible) until the fuel pressure is released.**

1.CHECK “S” CONNECTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect “S” terminal.
3. Shift CVT selector lever to “P” or “N” position. (CVT models)
4. Check voltage between starter motor harness connector and ground.

Terminals			Condition	Voltage (Approx.)
(+)		(–)		
Starter motor harness connector	Terminal			
F50 (K9K) F53 (HR16DE) F11 (MR20DE)	1	Ground	When the ignition switch is in START position	Battery voltage

Is the inspection result normal?

YES >> “S” terminal circuit is OK. Further inspection is necessary. Refer to STR-2, "K9K MODELS : Work Flow" (K9K models) or STR-4, "HR16DE/MR20DE MODELS : Work Flow" (HR16DE/MR20DE models).
NO >> GO TO 2.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Check the following terminals and connectors for damage, bend and loose connection.

- Harness connector E8 (M/T models)
- Harness connector F122 (M/T models)
- Harness connector E6 (CVT models)
- Harness connector F123 (CVT models)

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair the terminal and connector.

3.CHECK HARNESS CONTINUITY (OPEN CIRCUIT)

1. Disconnect IPDM E/R connector.
2. Check continuity between starter motor “S” terminal and IPDM E/R harness connector.

Starter motor “S” terminal		IPDM E/R harness connector		Continuity
Connector No.	Terminal No.	Connector No.	Terminal No.	
F50 (K9K) F53 (HR16DE) F11 (MR20DE)	1	E14	50	Existed

Is the inspection result normal?

YES >> Inspect IPDM E/R and power supply circuit. Refer to SEC-5, "Work Flow".
NO >> Repair the harness.

SYMPTOM DIAGNOSIS

STARTING SYSTEM

Symptom Table

INFOID:0000000000955272

Symptom	Reference
No normal cranking	Refer to STR-2, "K9K MODELS : Work Flow" (K9K models) or STR-4, "HR16DE/MR20DE MODELS : Work Flow" (HR16DE/MR20DE models).
Starter motor does not rotate	

cardiagn.com

PRECAUTION

PRECAUTIONS

Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000000955273

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision that would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

ON-VEHICLE REPAIR

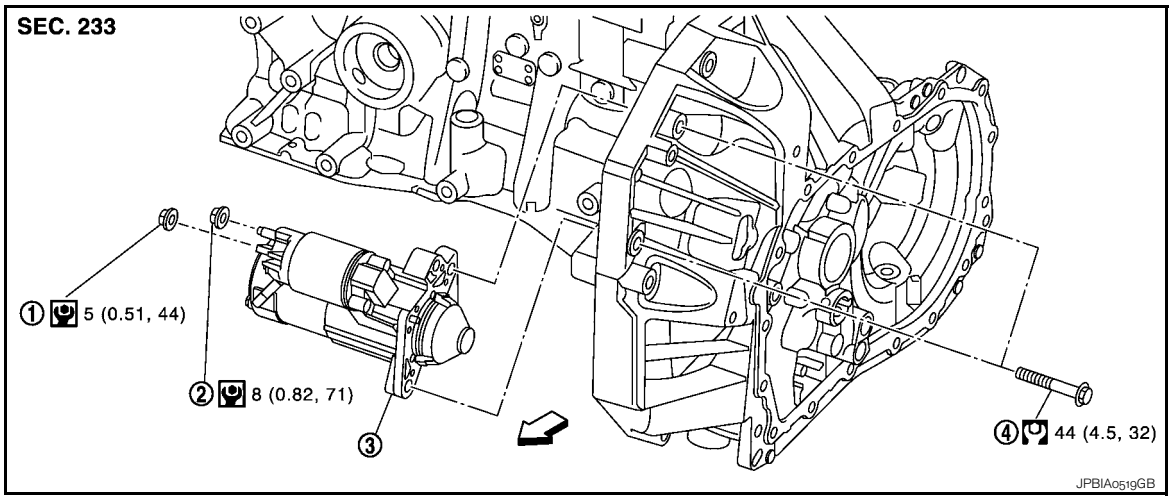
STARTER MOTOR

K9K MODELS

K9K MODELS : Exploded View

INFOID:0000000000955275

REMOVAL



1. “S” terminal nut
2. “B” terminal nut
3. Starter motor
4. Starter motor mounting bolt

⇦: Engine front

Refer to GI-4, "Components" for symbols in the figure.

K9K MODELS : Removal and Installation

INFOID:0000000000955276

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove “S” terminal nut and “S” terminal harness.
3. Remove “B” terminal nut and “B” terminal harness.
4. Remove starter motor mounting bolts.
5. Remove starter motor upward from the vehicle.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to tighten “B” terminal nut carefully.

HR16DE MODELS : Removal and Installation

INFOID:0000000000955719

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove “B” terminal nut and “B” terminal harness.
3. Remove “S” terminal nut and “S” terminal harness.
4. Remove starter motor mounting bolts.
5. Remove starter motor upward from the vehicle.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

Be sure to tighten “B” terminal nut carefully.

HR16DE MODELS : Disassembly and Assembly

INFOID:0000000000967656

ASSEMBLY

Apply high-temperature grease to lubricate the bearing, gears and frictional surface when assembling the starter.

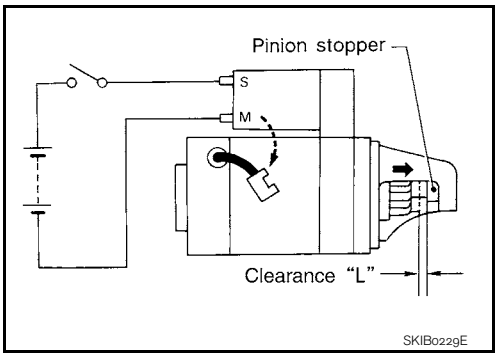
Carefully observe the following instructions.

Pinion Protrusion Length Adjustment

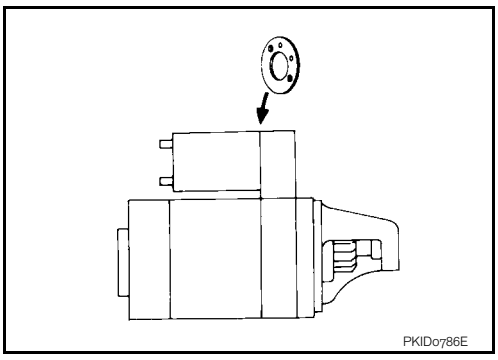
CLEARANCE

- With pinion driven out by magnetic switch, push pinion back to remove slack and measure clearance “L” between the front edge of the pinion and the pinion stopper.

Clearance “L” **: Refer to SDS STR-31, "Starter Motor".**



- Adjust with the adjusting plate if the measurement value is not in the specified area.



HR16DE MODELS : Inspection

INFOID:0000000000967657

INSPECTION

Magnetic Switch Check

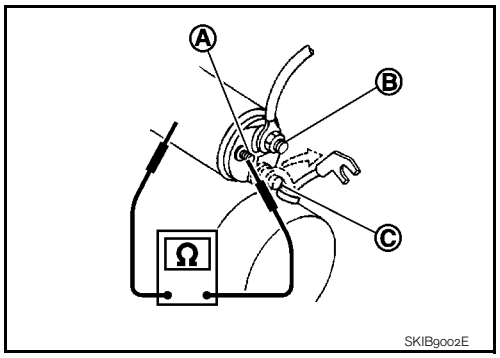
cardiagn.com

- Before starting to check, disconnect the battery cable from the negative terminal.
- Disconnect “M” terminal of starter motor.

1. Continuity test [between “S” terminal (A) and switch body]

B : “B” terminal
C : “M” terminal

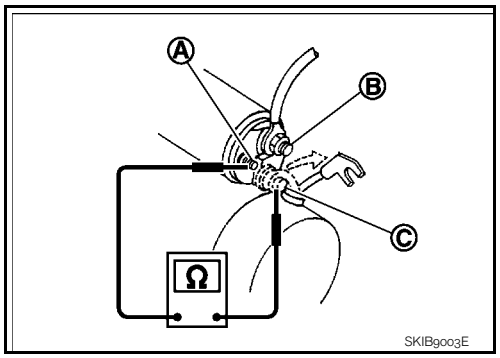
- Replace magnetic switch if continuity does not exist.



2. Continuity test [between “S” terminal (A) and “M” terminal (C)]

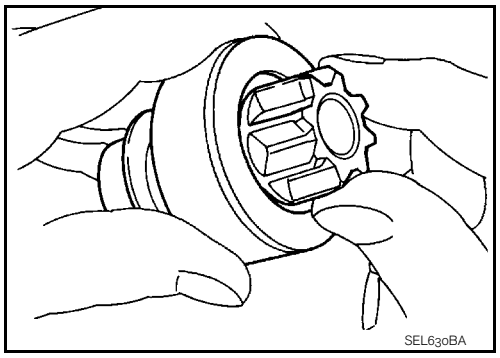
B : “B” terminal

- Replace magnetic switch if continuity does not exist.



Pinion/Clutch Check

1. Inspect pinion teeth.
   - Replace pinion if teeth are worn or damaged. (Also check condition of ring gear teeth.)
2. Inspect reduction gear teeth (If equipped).
   - Replace reduction gear if teeth are worn or damaged. (Also check condition of armature shaft gear teeth.)
3. Check to see if pinion locks in one direction and rotates smoothly in the opposite direction.
   - Replace pinion assembly if it is locked or rotated in both directions or unusual resistance is evident.

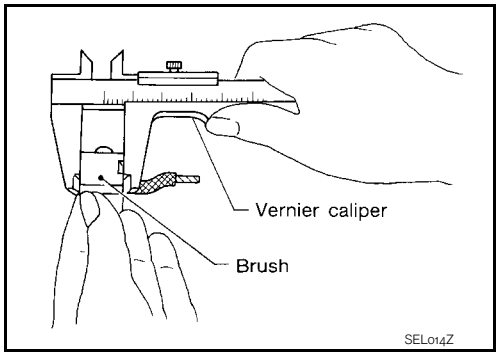


Brush Check

- Check wear of brush.

Minimum length of brush **: Refer to SDS STR-31, "Starter Motor".**

- Replace brush if the measurement value is less than the specified value.



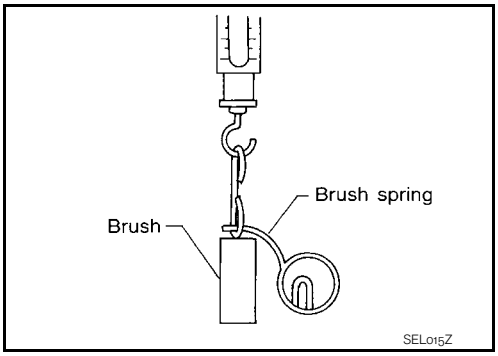
Brush Spring Check

cardiagn.com

- Check brush spring tension with brush spring detached from brush.

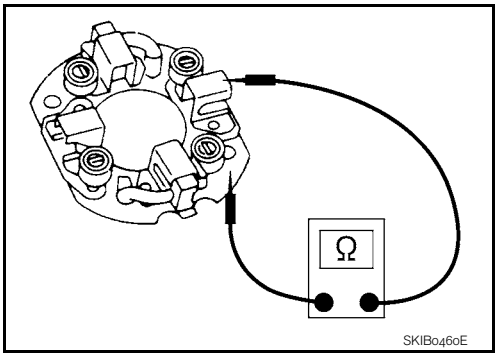
Spring tension (with new brush) : **Refer to SDS STR-31, "Starter Motor".**

- Replace brush spring if the measurement value is less than the specified value.



Brush Holder Check

1. Perform insulation test between brush holder (positive side) and its base (negative side).
   - Replace brush holder assembly if continuity does not exist.
2. Check brush to see if it moves smoothly.
   - If brush holder is bent, replace it; if sliding surface is dirty, clean.

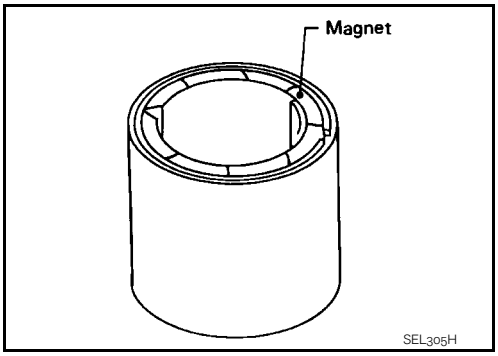


Yoke Check

Magnet is secured to yoke by bonding agent. Check magnet to see that it is secured to yoke and for any cracks. Replace malfunctioning parts as an assembly.

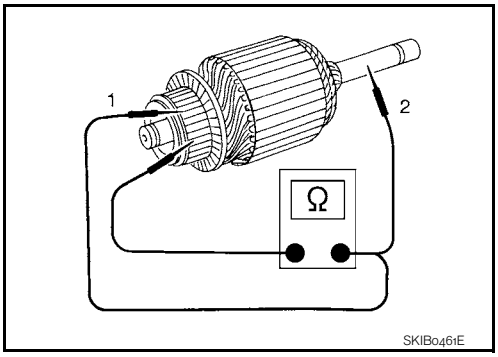
CAUTION:

Never clamp yoke in a vise or strike it with a hammer.



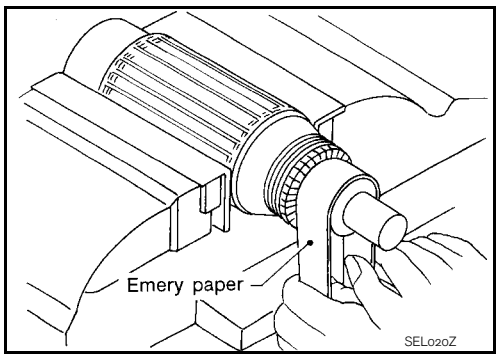
Armature Check

1. Continuity test (between two segments side by side)
   - Replace armature assembly if continuity does not exist.
2. Insulation test (between each commutator bar and shaft)
   - Replace armature assembly if continuity exists.



cardiagn.com

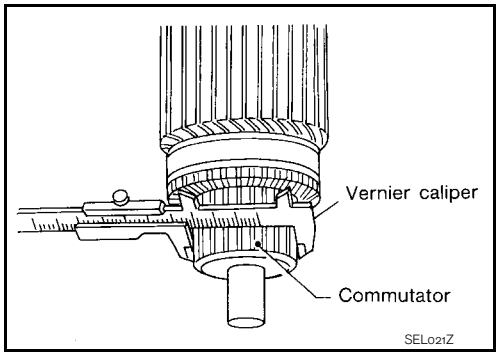
3. Check commutator surface.
   - Grind with No. 500 - 600 emery paper if it has a rough surface.



4. Check diameter of commutator.

Commutator minimum diameter	**: Refer to SDS STR-31, "Starter Motor".**

   - Replace armature assembly if the measurement value is less than the specified value.



5. Check depth of insulating mold from commutator surface.
   - Undercut to 0.5 to 0.8 mm (0.020 to 0.031 in) if the depth is 0.2 mm (0.008 in) or less.

15. Center bracket (P)
16. E-ring
17. Pinion assembly
18. Pinion stopper
19. Pinion stopper clip
20. Gear case assembly

: High-temperature grease point

Refer to GI-4, "Components" for symbols not described on the above.

MR20DE MODELS : Removal and Installation

INFOID:0000000000955723

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Disconnect the oil pressure switch connector.
3. Remove “B” terminal nut and “B” terminal harness.
4. Remove “S” terminal nut and “S” terminal harness.
5. Remove starter motor mounting bolts.
6. Remove starter motor upward from the vehicle.

CAUTION:
Never damage oil pressure switch when removing starter motor.

INSTALLATION

Install in the reverse order of removal.

CAUTION:
Be sure to tighten “B” terminal nut carefully.

MR20DE MODELS : Disassembly and Assembly

INFOID:0000000000955724

ASSEMBLY

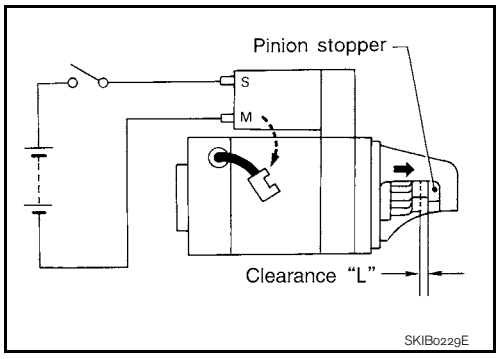
Apply high-temperature grease to lubricate the bearing, gears and frictional surface when assembling the starter.
Carefully observe the following instructions.

Pinion Protrusion Length Adjustment

CLEARANCE

- With pinion driven out by magnetic switch, push pinion back to remove slack and measure clearance “L” between the front edge of the pinion and the pinion stopper.

Clearance “L” **: Refer to SDS STR-31, "Starter Motor".**



- Adjust with the adjusting plate if the measurement value is not in the specified area.

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000000943735

DETAIED FLOW

1. COLLECT THE INFORMATION FROM THE CUSTOMER

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using the diagnosis worksheet.

>> GO TO 2.

2. PERFORM THE SELF-DIAGNOSIS

Check the DTC display with the self-diagnosis function. Refer to STC-7, "CONSULT-III Function (EPS)".

Is there any DTC displayed?

YES >> GO TO 3.
NO >> GO TO 4.

3. PERFORM THE SYSTEM DIAGNOSIS

Perform the diagnosis applicable to the displayed DTC. Refer to STC-22, "DTC No. Index".

>> GO TO 6.

4. CHECK THE WARNING LAMP FOR ILLUMINATION

Check that the warning lamp illuminate.

Is ON/OFF timing normal?

YES >> GO TO 5.
NO >> GO TO 2.

5. PERFORM THE DIAGNOSIS BY SYMPTOM

Perform the diagnosis applicable to the symptom.

>> GO TO 6.

6. REPAIR OR REPLACE THE MALFUNCTIONING PARTS

Repair or replace the specified malfunctioning parts.

>> GO TO 7.

7. FINAL CHECK

Perform the self-diagnosis again, and check that the malfunction is repaired completely. After checking, erase the self-diagnosis memory. Refer to STC-7, "CONSULT-III Function (EPS)".

Is no other DTC present and the repair completed?

YES >> INSPECTION END
NO >> GO TO 3.

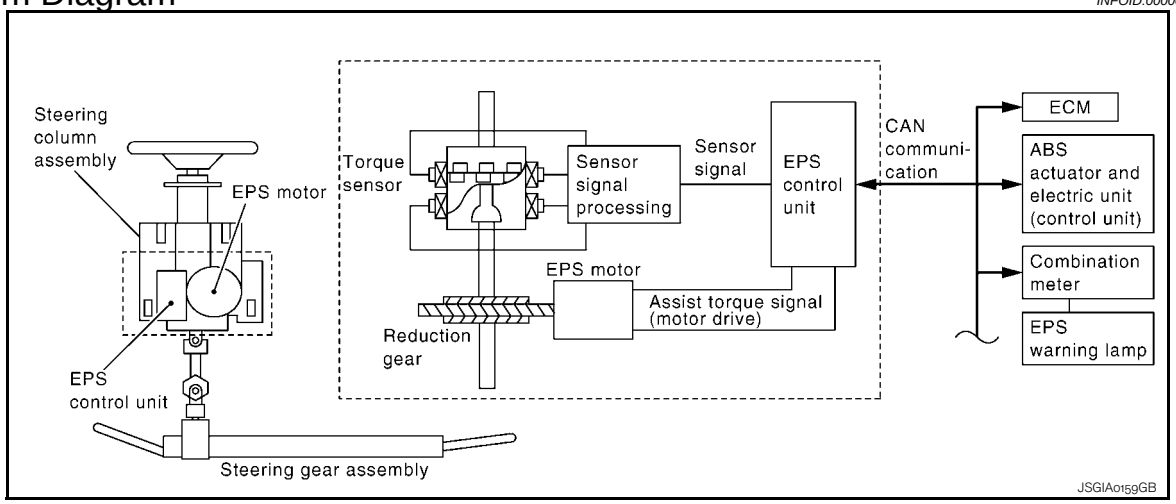
cardiagn.co

FUNCTION DIAGNOSIS

EPS SYSTEM

System Diagram

INFOID:0000000000940470



System Description

INFOID:0000000000940471

- EPS control unit performs an arithmetical operation on data, such as steering wheel turning force (sensor signal) from the torque sensor, vehicle speed signal, etc. Then it generates an optimum assist torque to the EPS motor according to the driving condition.
- EPS control unit decreases the output to EPS motor while extremely using the power steering function (e.g., full steering) for protecting EPS motor and EPS control unit (Protect overload status). While activating protect overload status, the assist torque gradually decreases, and the steering wheel turning force becomes heavy. The normal assist torque reactivates by not steering.
- In case of an error in the electrical system, the fail-safe function stops output signals to the EPS motor. Then the previous state is changed to the manual steering state.
- Self-diagnosis can be done with CONSULT-III.
- EPS control unit will decrease assistance under 2 conditions.

- Extensive steering at low speed will cause the ECU and MOTOR to heat up, once temperature reaches critical point ECU will reduce current to reduce heat up. System will recover as temperature lowers (reduced or no assistance).
- Holding steering on rack-end (full lock) for 1 second will cause the system to engage rack-end protection. This reduces assistance down to 40% in order to prevent heat up. Assistance is immediately returned to 100% when steering released or turned away from rack-end.

Component Description

INFOID:0000000000940473

Components parts	Reference
EPS control unit	STC-13, "Description"
EPS motor	STC-11, "Description"
Torque sensor	STC-10, "Description"
Reduction gear	Reduction gear increases the assist torque provided from EPS motor with worm gears, and outputs to the column shaft.
EPS warning lamp	Turn on when a malfunction occurs in the EPS system, and tells the driver the malfunction.

cardiagn.com

DIAGNOSIS SYSTEM (EPS CONTROL UNIT)

CONSULT-III Function (EPS)

INFOID:0000000000949820

FUNCTION

CONSULT-III can display each diagnostic item using the diagnostic test modes shown following.

Diagnostic test mode	Function
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the EPS control unit can be read.
ECU part number	EPS control unit part number can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.

SELF-DIAG RESULTS MODE

Display Item List

Refer to STC-22, "DTC No. Index".

DATA MONITOR MODE

Display Item List

Monitor item (Unit)	Remarks
BATTERY VOLT (V)	Displays the power supply voltage for EPS control unit.
TORQUE SENSOR (Nm)	Displays steering wheel turning force detected by torque sensor.
MOTOR SIG (A)	Displays the current commanded value to EPS motor.
MOTOR CURRENT (A)	Displays the current value consumed by EPS motor.
ASSIST TORQUE (Nm)	Displays assist torque being output by the electric power steering.
C/U TEMP (°C)	Displays the temperature of the EPS control unit.
ASSIST LEVEL (%)	Normally displays 100%. In case of an excessive stationary steering, the assist curvature gradually falls. However, it return to 100% when left standing.
VEHICLE SPEED (km/h) or (MPH)	Vehicle speed is displayed from vehicle speed signal with CAN communication.
WARNING LAMP (On/Off)	EPS warning lamp control status is displayed.
ENGINE STATUS (STOP/RUN)	Engine speed is displayed from engine status signal with CAN communication.
MOTOR TEMP (°C)	Displays the temperature of EPS motor.
VHCL SPD CALC (km/h) or (MPH)	Displays vehicle speeds used for controlling EPS.

COMPONENT DIAGNOSIS

C1601 BATTERY POWER SUPPLY

Description

INFOID:0000000000940491

Power is supplied from the battery to EPS control unit.

DTC Logic

INFOID:0000000000940492

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1601	BATTERY VOLT	When the power supply malfunction supplied to EPS control unit is detected.	• Harness or connector • EPS control unit

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
BATTERY VOLT

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to STC-8, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000940494

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connector and then perform self-diagnosis. Refer to STC-7, "CONSULT-III Function (EPS)".

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Repair or replace connector.

2.CHECK EPS CONTROL UNIT POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Turn ignition switch ON. (Do not start engine.)
4. Check voltage between EPS control unit harness connector terminals and ground.

EPS control unit		—	Voltage
Connector	Terminal		
M38	1	Ground	Battery voltage
M37	10		

5. Turn ignition switch OFF.
6. Check voltage between EPS control unit harness connector terminals and ground.

cardiagn.com

EPS control unit		—	Voltage
Connector	Terminal		
M38	1	Ground	Battery voltage
M37	10		Approx. 0 V

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK EPS CONTROL UNIT GROUND CIRCUIT

1. Check continuity between EPS control unit harness connector terminal and ground.

EPS control unit		—	Continuity
Connector	Terminal		
M38	2	Ground	Existed

2. Connect EPS control unit harness connector.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4.CHECK DTC

Start engine.

Does EPS warning lamp turn OFF?

YES >> EPS control unit is malfunction. Replace steering column assembly.
NO >> Perform self-diagnosis, repair or replace damaged parts.

Special Repair Requirement

INFOID:0000000000956134

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the EPS control unit. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description". (With ESP models)

>> END

cardiagn.com

C1604 TORQUE SENSOR

Description

INFOID:0000000000940497

Torque sensor detects the steering torque, and transmit the signal to EPS control unit.

DTC Logic

INFOID:0000000000940498

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1604	TORQUE SENSOR	Malfunction of the torque sensor in steering column assembly is detected.	• Harness or connector • Torque sensor • EPS control unit

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
TORQUE SENSOR

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to STC-10, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000940499

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connectors and then perform the self-diagnosis. Refer to STC-7, "CONSULT-III Function (EPS)".

Is the “TORQUE SENSOR” [C1604] displayed?

YES >> Torque sensor is malfunction. Replace steering column assembly.
NO >> Poor connection of connector terminal. Repair or replace connector.

Special Repair Requirement

INFOID:0000000000956143

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the EPS control unit. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description". (With ESP models)

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connectors and then perform the self-diagnosis.

Is the “EPS MOTOR” [C1606] displayed?

YES >> EPS motor malfunctions. Replace steering column assembly.
NO >> Poor connection of connector terminal. Repair or replace connector.

Special Repair Requirement

INFOID:0000000000956144

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the EPS control unit. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description". (With ESP models)

>> END

C1607 EEPROM

Description

INFOID:0000000000940507

EPS control unit incorporates a memory function.

DTC Logic

INFOID:0000000000940508

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1607	EEPROM	When the memory (EEPROM) system malfunction is detected in EPS control unit.	• Harness or connector • EPS control unit

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
EEPROM

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to STC-12, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000940509

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connectors and then perform the self-diagnosis.

Is the “EEPROM” [C1607] displayed?

YES >> EEPROM malfunctions. Replace steering column assembly. Refer to ST-10, "Exploded View".
NO >> Poor connection of connector terminal. Repair or replace connector.

Special Repair Requirement

INFOID:0000000000956145

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the EPS control unit. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description". (With ESP models)

>> END

C1608 CONTROL UNIT

Description

INFOID:0000000000940512

EPS control unit performs an arithmetical operation on data, such as steering wheel turning force (sensor signal) from the torque sensor, vehicle speed signal, etc. Then it generates an optimum assist torque to the EPS motor according to the driving condition.

DTC Logic

INFOID:0000000000940513

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
C1608	CONTROL UNIT	When the internal malfunction is detected in EPS control unit.	• Harness or connector • EPS control unit

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
CONTROL UNIT

Is above displayed on the self-diagnosis dislay?

YES >> Proceed to diagnosis procedure. Refer to STC-13, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000940514

1.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connectors and then perform self-diagnosis.

Is any item indicated on the self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal. Repair or replace connector.

2.EPS CONTROL UNIT POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Turn ignition switch ON. (Do not start engine.)
4. Check voltage between EPS control unit harness connector terminals and ground.

EPS control unit		—	Voltage
Connector	Terminal		
E38	1	Ground	Battery voltage
E37	10		

5. Turn ignition switch OFF.
6. Check voltage between EPS control unit harness connector terminals and ground.

EPS control unit		—	Voltage
Connector	Terminal		
E38	1	Ground	Battery voltage
E37	10		Approx. 0 V

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK EPS CONTROL UNIT GROUND CIRCUIT

1. Check continuity between EPS control unit harness connector terminal and ground.

EPS control unit		—	Continuity
Connector	Terminal		
E38	2	Ground	Existed

2. Connect EPS control unit harness connector.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4.CHECK DTC

Start engine.

Does EPS warning lamp turn OFF?

YES >> EPS control unit is malfunction. Replace steering column assembly.
NO >> Perform self-diagnosis, repair or replace damaged parts.

Special Repair Requirement

INFOID:0000000000956146

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the EPS control unit. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description". (With ESP models)

>> END

U1200 VEHICLE SPEED SIGNAL (ABS)

Description

INFOID:0000000000940517

EPS control unit receives the vehicle speed signal from ABS actuator and electric unit (control unit) with CAN communication line.

DTC Logic

INFOID:0000000000940518

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
U1200	CAN VHCL SPEED (ABS)	Abnormal vehicle speed signals received with CAN communication are detected.	• Harness or connector • CAN communication line • EPS control unit

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results
CAN VHCL SPEED (ABS)

Is above displayed on the self-diagnosis display?

YES >> Proceed to diagnosis procedure. Refer to STC-15, "Diagnosis Procedure".
NO >> INSPECTION END

Diagnosis Procedure

INFOID:0000000000940519

1.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) SYSTEM

Perform ABS actuator and electric unit (control unit) self-diagnosis. Repair or replace items indicated, then perform ABS actuator and electric unit (control unit) self-diagnosis again. Refer to BRC-17, "CONSULT-III Function (ABS)" (With ABS models), BRC-96, "CONSULT-III Function (ABS)" (With ESP models).

Is any item indicated on the self-diagnosis display?

YES >> Repair or replace malfunctioning components.
NO >> GO TO 2.

2.CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
4. Reconnect connectors and then perform the self-diagnosis.

Is any item indicated on the self-diagnosis display?

YES >> EPS control unit malfunctions. Replace steering column assembly. Refer to ST-10, "Exploded View".
NO >> Poor connection of connector terminal. Repair or replace connector.

Special Repair Requirement

INFOID:0000000000956147

1.ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION

Always perform the neutral position adjustment for the steering angle sensor, when replacing the EPS control unit. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Description". (With ESP models)

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000000940527

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H line, CAN-L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

DTC Logic

INFOID:0000000000940528

DTC DETECTION LOGIC

DTC	Display item	Malfunction detected condition	Possible cause
U1000	CAN COMM CIRCUIT	When EPS control unit is not transmitting or receiving CAN communication signal for 2 seconds or more.	• Harness or connector • CAN communication line • EPS control unit

DTC CONFIRMATION PROCEDURE

1.CHECK SELF-DIAGNOSIS RESULTS

Check the self-diagnosis results.

Self-diagnosis results

ECU DIAGNOSIS

EPS CONTROL UNIT

Reference Value

INFOID:0000000000940480

VALUES ON THE DIAGNOSIS TOOL

CAUTION:

The output signal indicates the EPS control unit calculation data. The normal values will be displayed even in the event that the output circuit (harness) is open.

Monitor item (Unit)	Content	Condition		Display value
BATTERY VOLT (V)	Power supply voltage for EPS control unit	Ignition switch: ON		Battery voltage
TORQUE SENSOR (Nm)	Steering wheel turning force	Engine running	Steering wheel: Not steering (There is no steering force)	0.0 Nm
			Steering wheel: Right turn	Positive value (Nm)
			Steering wheel: Left turn	Negative value (Nm)
MOTOR SIG (A)	Command current to EPS motor	Engine running	Steering wheel: Not steering (There is no steering force)	0.0 A
			Steering wheel: Right turn	Negative value (A)
			Steering wheel: Left turn	Positive value (A)
MOTOR CURRENT (A)	Consumption current of EPS motor	Engine running	Steering wheel: Not steering (There is no steering force)	0.0 A
			Steering wheel: Steering	0 – 105.0 A*1 (The value is changed according to steering left or right)
ASSIST TORQUE (Nm)	Displays assist torque being output by the EPS.	Engine running	Steering wheel: Not steering (There is no steering force)	0.0 Nm
			Steering wheel: Right turn	Negative value (Nm)
			Steering wheel: Left turn	Positive value (Nm)
ASSIST LEVEL (%)	Assist available level	Engine running		100 % *2
VEHICLE SPEED (km/h) or (mph)	Vehicle speed	Vehicle stopped		0 km/h (0 mph)
		While driving		Approximately equal to the indication on speed-ometer (inside of ±10%)*3
WARNING LAMP (On/Off)	EPS warning lamp condition	EPS warning lamp: ON		On
		EPS warning lamp: OFF		Off
ENGINE STATUS (RUN/STOP)	Engine status	Engine stopped (Engine speed: Less than 400 rpm)		STOP
		Engine running (Engine speed: 400 rpm or more)		RUN

*1: Almost in accordance with the value of MOTOR SIG. It is not a malfunction though these values are not accorded when steering quickly.

*2: Normally displays 100%. In case of an excessive stationary steering, the assist curvature gradually falls. However, it returns to 100% when left standing.

*3: It is not a malfunction, though it might not be corresponding just after ignition switch in turned ON.

SYMPTOM DIAGNOSIS

EPS WARNING LAMP DOES NOT TURN ON

Diagnosis Procedure

INFOID:0000000000940534

1. CHECK SYSTEM FOR CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to STC-7, "CONSULT-III Function (EPS)".

Is the “CAN COMM CIRCUIT [U1000]” displayed?

YES >> Perform trouble diagnosis for CAN communication line.
NO >> GO TO 2.

2. CHECK EPS CONTROL UNIT

Check EPS control unit input/output signal. Refer to STC-18, "Reference Value".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check EPS control unit pin terminals for damage or loose connection with harness connector. If any items are damaged, repair or replace damaged parts.

3. CHECK COMBINATION METER SELF-DIAGNOSIS RESULTS

Perform combination meter self-diagnosis. Refer to MWI-23, "CONSULT-III Function (METER/M&A)".

is self-diagnosis results indicated?

YES >> Repair or replace malfunctioning components.
NO >> GO TO 4.

4. SYMPTOM CHECK

Check again.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace combination meter.

cardiagn.com

EPS WARNING LAMP DOES NOT TURN OFF

Diagnosis Procedure

INFOID:0000000000940536

1.CHECK SELF-DIAGNOSIS RESULTS

Perform self-diagnosis. Refer to STC-7, "CONSULT-III Function (EPS)".

Is any malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 2.

2.CHECK EPS CONTROL UNIT POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EPS control unit harness connector.
3. Turn ignition switch ON. (Do not start engine.)
4. Check voltage between EPS control unit harness connector terminals and ground.

EPS control unit		—	Voltage
Connector	Terminal		
M38	1	Ground	Battery voltage
M37	10		

5. Turn ignition switch OFF.
6. Check voltage between EPS control unit harness connector terminals and ground.

EPS control unit		—	Voltage
Connector	Terminal		
M38	1	Ground	Battery voltage
M37	10		Approx. 0 V

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace malfunctioning components.

3.CHECK EPS CONTROL UNIT GROUND CIRCUIT

1. Check continuity between EPS control unit harness connector terminal and ground.

EPS control unit		—	Continuity
Connector	Terminal		
M38	2	Ground	Existed

2. Connect EPS control unit harness connector.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4.CHECK EPS CONTROL UNIT PIN TERMINAL

Check EPS control unit pin terminals for damage or loose connection with harness connector.

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace damaged parts.

5.CHECK COMBINATION METER SELF-DIAGNOSIS RESULTS

Perform combination meter self-diagnosis. Refer to MWI-23, "CONSULT-III Function (METER/M&A)".

is self-diagnosis results indicated?

YES >> Repair or replace malfunctioning components.

cardiagn.co

NO >> GO TO 6.

6. CHECK VEHICLE SPEED SIGNAL FROM ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform self-diagnosis with ABS actuator and electric unit (control unit).
- Without ESP models: BRC-17, "CONSULT-III Function (ABS)"
- With ESP models: BRC-96, "CONSULT-III Function (ABS)"

Is any malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 7.

7. CHECK ENGINE STATUS SIGNAL

Perform self-diagnosis with ECM.
- HR16DE (with EURO-OBD): EC-100, "CONSULT-III Function".
- HR16DE (Without EURO-OBD): EC-430, "CONSULT-III Function".
- MR20DE (with EURO-OBD): EC-719, "CONSULT-III Function".
- MR20DE (without EURO-OBD): EC-1054, "CONSULT-III Function".
- K9K: EC-1315, "Diagnosis Description"

Is the malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 8.

8. SYMPTOM CHECK

Check again.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace combination meter. Refer to MWI-72, "Exploded View".

cardiagn.com

STEERING WHEEL TURNING FORCE IS HEAVY OR LIGHT

Diagnosis Procedure

INFOID:0000000000940537

1.CHECK SYSTEM FOR CAN COMMUNICATION LINE

Perform self-diagnosis. Refer to STC-7, "CONSULT-III Function (EPS)".

Is the “CAN COMM CIRCUIT [U1000]” displayed.

YES >> Perform trouble diagnosis for CAN communication line. Refer to STC-17, "Description".
NO >> GO TO 2.

2.CHECK VEHICLE SPEED SIGNAL FROM ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform self-diagnosis with ABS actuator and electric unit (control unit).
- Without ESP models: BRC-17, "CONSULT-III Function (ABS)"
- With ESP models: BRC-96, "CONSULT-III Function (ABS)"

Is any malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 3.

3.CHECK COMBINATION METER SIGNAL

Perform self-diagnosis with combination meter. Refer to MWI-23, "CONSULT-III Function (METER/M&A)".

Is the malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 4.

4.CHECK ENGINE STATUS SIGNAL

Perform self-diagnosis with ECM.
- HR16DE (with EURO-OBD): EC-100, "CONSULT-III Function".
- HR16DE (Without EURO-OBD): EC-430, "CONSULT-III Function".
- MR20DE (with EURO-OBD): EC-719, "CONSULT-III Function".
- MR20DE (without EURO-OBD): EC-1054, "CONSULT-III Function".
- K9K: EC-1315, "Diagnosis Description"

Is the malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 5.

5.CHECK EPS CONTROL UNIT

Check EPS control unit input/output signal. Refer to STC-18, "Reference Value".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Check EPS control unit pin terminals for damage or loose connection with harness connector. If any items are damaged, repair or replace damaged parts.

6.CHECK STEERING WHEEL TURNING FORCE

Check steering wheel turning force. Refer to ST-7, "Inspection".

Is the inspection result normal?

YES >> GO TO 7.
NO >> Repair or replace malfunctioning components.

7.SYMPTOM CHECK

Check again.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check the steering wheel turning force for mechanical malfunction. Refer to ST-7, "Inspection".

UNBALANCE STEERING WHEEL TURNING FORCE AND RETURN BETWEEN RIGHT AND LEFT

Diagnosis Procedure

INFOID:0000000000940538

1.CHECK EPS WARNING LAMP

Confirm EPS warning lamp during engine running.

Does EPS warning lamp turn OFF?

YES >> GO TO 2.
NO >> Go to STC-25, "Diagnosis Procedure".

2.CHECK WHEEL ALIGNMENT

Check wheel alignment. Refer to FSU-7, "Wheel Alignment Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Adjust wheel alignment. Refer to FSU-7, "Wheel Alignment Inspection".

3.CHECK EPS CONTROL UNIT

Check EPS control unit input/output signal. Refer to STC-18, "Reference Value".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check EPS control unit pin terminals for damage or loose connection with harness connector. If any items are damaged, repair or replace damaged parts.

4.CHECK STEERING WHEEL TURNING FORCE

Check steering wheel turning force. Refer to ST-7, "Inspection".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace malfunctioning components.

5.SYMPTOM CHECK

Check again.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check the steering wheel turning force for mechanical malfunction. Refer to ST-7, "Inspection".

cardiagn.com

UNBALANCE STEERING WHEEL TURNING FORCE (TORQUE VARIATION)

Diagnosis Procedure

INFOID:0000000000940540

1.CHECK EPS WARNING LAMP

Confirm EPS warning lamp during engine running.

Does EPS warning lamp turn OFF?

YES >> GO TO 2.
NO >> Go to STC-25, "Diagnosis Procedure".

2.CHECK STEERING COLUMN INTERMEDIATE SHAFT

Check the connection between intermediate shaft and the mounting part of steering column assembly and steering gear assembly. Refer to ST-10, "Exploded View".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK EPS CONTROL UNIT

Check EPS control unit input/output signal. Refer to STC-18, "Reference Value".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Check EPS control unit pin terminals for damage or loose connection with harness connector. If any items are damaged, repair or replace damaged parts.

4.SYMPTOM CHECK

Check again.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Check the steering wheel turning force for mechanical malfunction. Refer to ST-7, "Inspection".

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001115248

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001115249

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

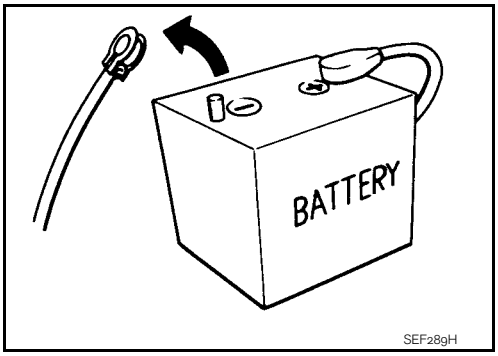
Service Notice or Precautions for EPS System

INFOID:0000000000940487

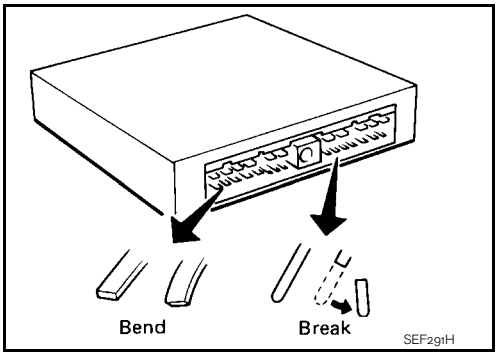
CAUTION:
Check the following item when performing the trouble diagnosis.

cardiagn.com

- **Check any possible causes by interviewing the symptom and it's condition from the customer if any malfunction, such as EPS warning lamp is turned ON, occurs.**
- **Check if air pressure and size of tires are proper, the specified part is used for the steering wheel, and control unit is genuine part.**
- **Check if the connection of steering column assembly and steering gear assembly is proper (there is not looseness of mounting bolts, damage of rods, boots or sealants, and leakage of grease, etc).**
- **Check if the wheel alignment is adjusted properly.**
- **Check if there is any damage or modification to suspension or body resulting in increased weight or altered ground clearance.**
- **Check if installation conditions of each link and suspension are proper.**
- **Check if the battery voltage is proper.**
- **Check connection conditions of each connector are proper.**
- **Before connecting or disconnecting the EPS control unit harness connector, turn ignition switch "OFF" and disconnect battery ground cable. Because battery voltage is applied to EPS control unit even if ignition switch is turned "OFF".**



- **When connecting or disconnecting pin connectors into or from EPS control unit, take care not to damage pin terminals (bend or break).**
  When connecting pin connectors, make sure that there are no bends or breaks on EPS control unit pin terminal.



- **Before replacing EPS control unit, perform EPS control unit input/output signal inspection and make sure whether EPS control unit functions properly or not. Refer to STC-18, "Reference Value".**

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000000955811

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000000955810

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.

For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.

If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Service Notice or Precautions for Steering System

INFOID:0000000000953490

CAUTION:

- **In case of removing steering gear assembly, make the final tightening with grounded and unloaded vehicle condition, and then check wheel alignment.**
- **Observe the following precautions when disassembling.**

- Before disassembly, thoroughly clean the outside of the unit.

cardiagn.com

- **Disassembly should be done in a clean work area. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.**
- **For easier and proper assembly, place disassembled parts in order on a parts rack.**
- **Use nylon cloth or paper towels to clean the parts; common shop rags can leave lint that might interfere with their operation.**
- **Never reuse non-reusable parts.**
- **Before assembling, apply the specified grease to the directed parts.**

ON-VEHICLE MAINTENANCE

STEERING WHEEL

Inspection

INFOID:0000000000953494

STEERING WHEEL AXIAL END PLAY

1. Check installation conditions of steering gear assembly, front suspension assembly, axle and steering column assembly.
2. Check if movement exists when steering wheel is moved up and down, to the left and right and to the axial direction.

Standard	
Steering wheel axial end play	**: Refer to ST-18, "Steering Wheel Axial End Play and Play".**

3. Check the following items when steering wheel axial end play is out of the standard.
   - Check the steering column assembly mounting condition. Refer to ST-10, "Exploded View".
   - Check steering gear assembly mounting condition for looseness. Refer to ST-13, "Exploded View".

STEERING WHEEL PLAY

1. Turn steering wheel so that front wheels come to the straight-ahead position.
2. Start engine and lightly turn steering wheel to the left and right until front wheels start to move.
3. Measure steering wheel movement on the outer circumference.

Standard	
Steering wheel play on the outer circumference	**: Refer to ST-18, "Steering Wheel Axial End Play and Play".**

4. Check the following items when steering wheel play is out of the standard.
   - Check backlash for each joint of steering column assembly.
   - Check installation condition of steering gear assembly.

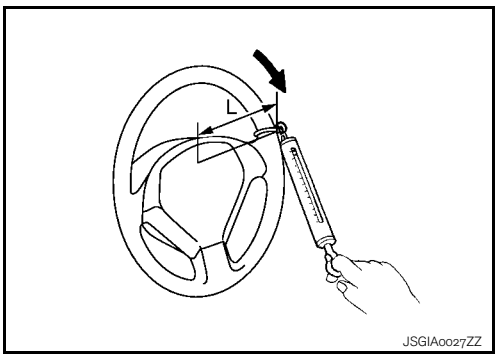
NEUTRAL POSITION STEERING WHEEL

1. Make sure that steering gear assembly, steering column assembly and steering wheel are installed in the correct position.
2. Perform neutral position inspection after wheel alignment. Refer to FSU-7, "Wheel Alignment Inspection".
3. Set vehicle to the straight-ahead position and confirm steering wheel is in the neutral position.
4. Loosen outer socket lock nut and turn inner socket to left and right equally to make fine adjustments if steering wheel is not in the neutral position.

STEERING WHEEL TURNING FORCE

1. Park vehicle on a level and dry surface, set parking brake.
2. Tires need to be inflated normal pressure. Refer to WT-4, "Tire".
3. Start engine.

4. Check steering wheel turning force when steering wheel has been turned 540° from neutral position.



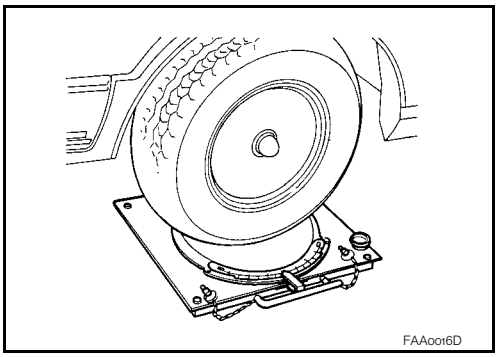
Standard

Steering wheel turning force	**: Refer to ST-18, "Steering Wheel Turning Force".**

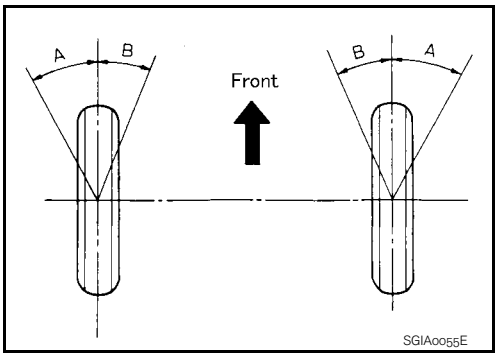
NOTE:
Multiply the distance (L) from the hook of spring balance to the center of steering wheel by the measurement value with a spring balance.

FRONT WHEEL TURNING ANGLE

1. Check front wheel turning angle after toe-in inspection. Refer to FSU-7, "Wheel Alignment Inspection".
2. Place front wheels on turning radius gauges and rear wheels on stands, so that vehicle can be level.
3. Check the maximum inner and outer wheel turning angles for LH and RH road wheels.



4. With the engine at idle, turn steering wheel from full left stop to full right stop and measure the turning angles.

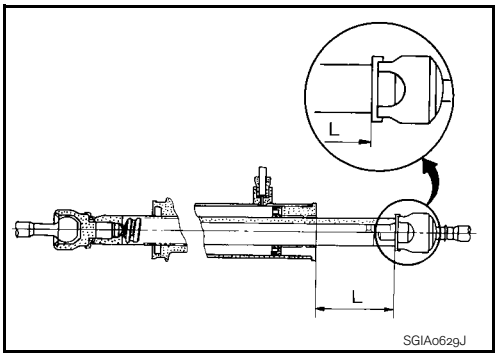


Standard

Inner wheel (Angle: A)	**: Refer to ST-18, "Steering Angle".**
Outer wheel (Angle: B)	**: Refer to ST-18, "Steering Angle".**

5. Check the following items when turning angle is out of the standard.

a. Check rack stroke.



Standard

Rack stroke “L”	**: Refer to ST-19, "Rack Stroke".**

b. Disassemble steering gear assembly to check the cause that rack stroke is outside of the standard.
- Steering angles are not adjustable. Check steering gear assembly, steering column assembly and front suspension components for wear or damage if any of the turning angles are different from the specified value. Replace any of them, if any non-standard condition exists.

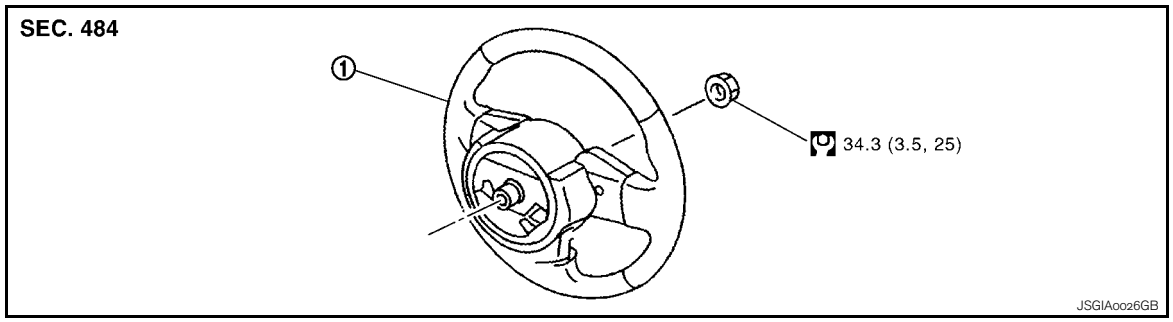
cardiagn.com

ON-VEHICLE REPAIR

STEERING WHEEL

Exploded View

INFOID:0000000000953495



1. Steering wheel

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

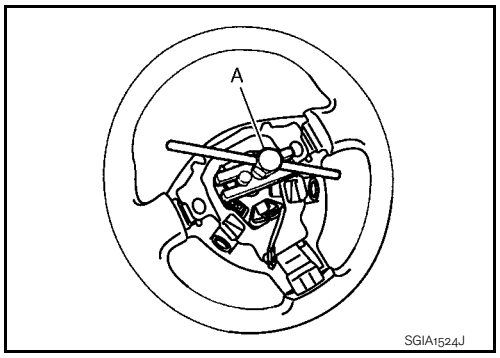
INFOID:0000000000953496

REMOVAL

NOTE:

When reconnecting spiral cable, fix cable with a tape so that fixing case and rotating part keep aligned. This will omit neutral position alignment procedure during spiral cable installation.

1. Set vehicle to the straight-ahead position.
2. Remove driver air bag module. Refer to SR-4, "Exploded View".
3. Remove steering wheel lock nut after steering is locked.
4. Remove steering wheel with the steering wheel puller (A) (SST: ST27180001).



INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

Never twist spiral cable excessively after it becomes tight. (twisting may cause the cable to be torn off.)

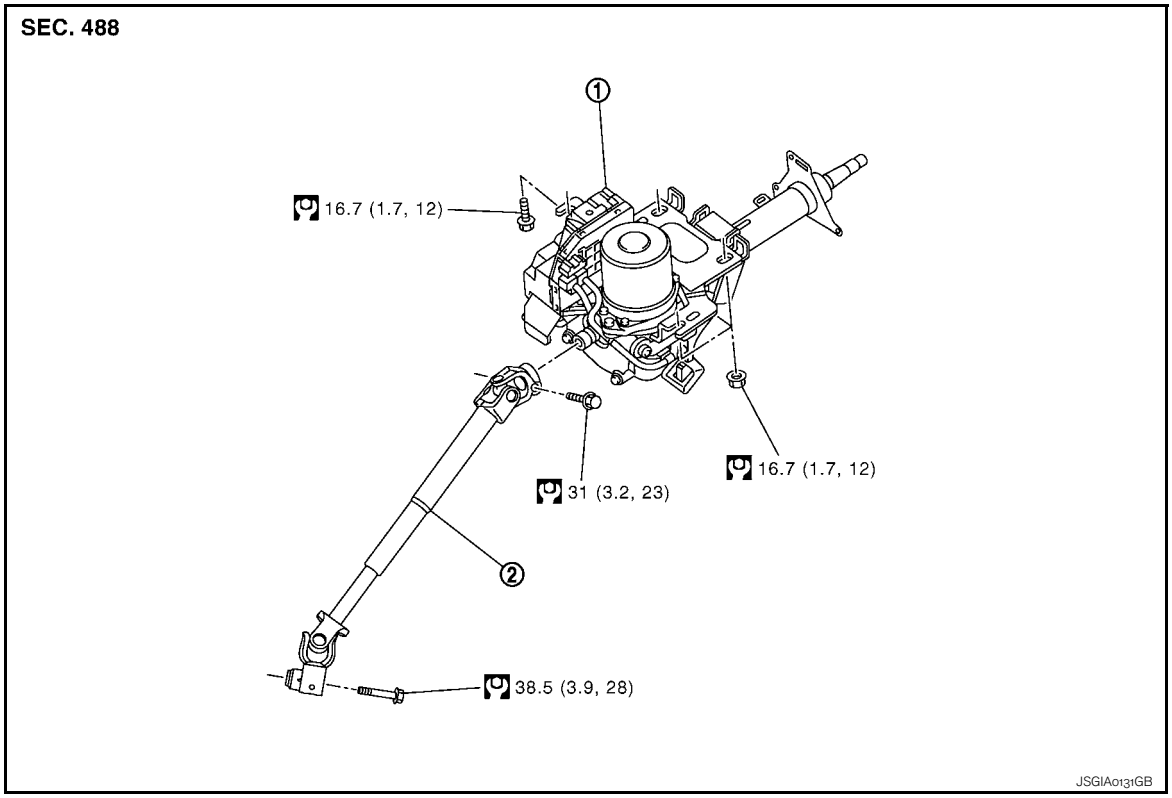
NOTE:

Check the spiral cable neutral position after replacing or rotating spiral cable. Refer to SR-6, "Removal and Installation".

STEERING COLUMN

Exploded View

INFOID:0000000000953497



1. Steering column assembly
2. Intermediate shaft

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000000953498

REMOVAL

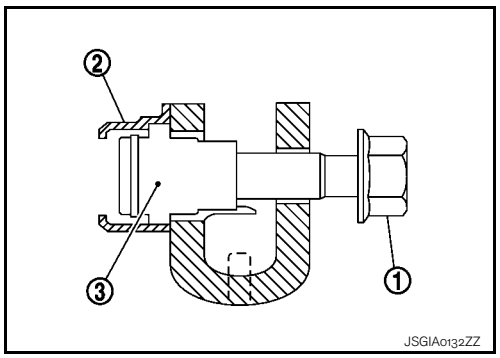
CAUTION:

- **Never impact on the axis when removing steering column assembly.**
- **Place a matching mark on both intermediate shaft and steering column assembly before removing intermediate shaft.**
- **Never repeat static steering. (Motor and EPS control unit is heated.)**
- **Be careful when removing steering column assembly from the vehicle because it is heavy.**
- **Keep steering column assembly away from magnetic sources.**
- **Never disassemble steering column assembly. It is not separable.**

1. Set vehicle to the straight-ahead position.
2. Place the tilt to the highest level.
3. Remove steering wheel. Refer to ST-9, "Exploded View".
4. Remove steering column cover. Refer to IP-11, "Exploded View".
5. Remove spiral cable. Refer to SR-6, "Exploded View".
6. Remove combination switch. Refer to BCS-65, "Exploded View".
7. Remove instrument driver lower panel. Refer to IP-11, "Exploded View".
8. Remove combination meter. Refer to MWI-72, "Exploded View".
9. Disconnect each switch harness connectors installed to steering column assembly.
10. Remove intermediate shaft to steering column assembly with the following procedure.

cardiagn.com

a. Remove fixing bolt (1).
b. Remove pressed cam nut holder (2) from intermediate shaft yoke.
c. Remove cam nut (3).
11. Remove steering column assembly.



INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

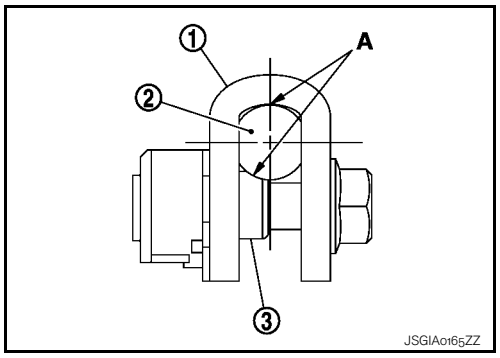
- **Never impact on the axis when removing steering column assembly.**
- **Place a matching mark on both intermediate shaft and steering column assembly before removing intermediate shaft.**
- **Never repeat static steering. (Motor and EPS control unit is heated.)**
- **Be careful when removing steering column assembly from the vehicle because it is heavy.**
- **Keep steering column assembly away from magnetic sources.**
- **Never disassemble steering column assembly. It is not separable.**

Be careful of the following points when installing the steering column assembly.

CAUTION:

Never reuse cam nut and fixing bolt.

1. Check that all parts of the cam nut holder are removed.
2. Fit yoke to pinion shaft, ensuring no clearance between yoke and pinion shaft.
3. Insert cam nut fully.
4. Whilst holding cam nut in position by hand, insert bolt and tighten to specified torque. Take care to hold cam nut in correct axial position during this process.
5. After intermediate shaft fitted, make sure there is no gap (A) between the yoke (1), pinion shaft (2) and cam nut (3).



CAUTION:

Adjust neutral position of steering angle sensor. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement".

Inspection

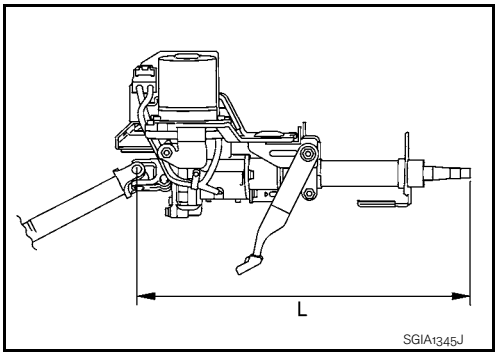
INFOID:0000000000953499

INSPECTION AFTER REMOVAL

- Check each part of steering column assembly for damage or other malfunctions. Replace if there are.
- Measure steering column assembly rotating torque using a preload gauge (SST: ST3127S000). Replace steering column assembly if outside the standard.

Standard	
Rotating torque	**: Refer to ST-18, "Steering Column Operating Range".**

- Measure the length “L” as shown, if vehicle has been involved in a minor collision. Replace steering column assembly (with motor, reduction gear, sensor) if outside the standard.

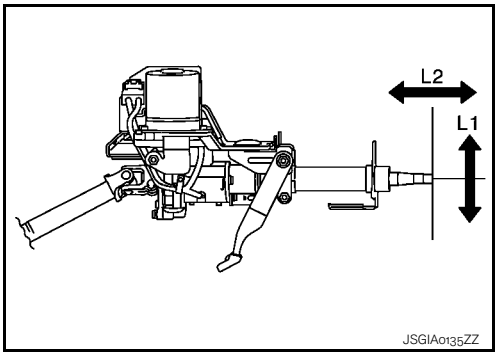


Standard

Steering column length “L”	**: Refer to ST-18, "Steering Column Operating Range".**

INSPECTION AFTER INSTALLATION

- Check each part of steering column assembly for damage or other malfunctions. Replace if there are.
- Check the steering wheel play, neutral position steering wheel, steering wheel turning force, and front wheel turning angle. Refer to ST-7, "Inspection".
- Check tilt and telescopic mechanism operating range “L^1”, “L^2” as shown in the figure.



Standard

Tilt operating range “L^1”	**: Refer to ST-18, "Steering Column Operating Range".**
Telescopic operating range “L^2”	**: Refer to ST-18, "Steering Column Operating Range".**

2. Outer socket lock nut
3. Inner socket
4. Boot clamp (small diamater)
5. Boot
6. Boot clamp (large diameter)
7. Gear housing assembly

: Apply Molywhite LSG or equivalent.

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000953511

REMOVAL

1. Set vehicle to the straight-ahead position.
2. Remove bolt of intermediate shaft (lower side), and then remove intermediate shaft from steering gear pinion shaft.
3. Remove tires with a power tool.
4. Remove steering outer socket from steering knuckle so as not to damage ball joint boot using suitable ball joint remover.
   CAUTION:
   Temporarily tighten the nut to prevent damage to threads and to prevent the ball joint remover from suddenly coming off.
5. Remove front suspension member.
6. Remove steering gear assembly.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

Spiral cable may be cut if steering wheel turns while separating steering column assembly and steering gear assembly. Be sure to secure steering wheel using string to avoid turning.

- Perform final tightening of nuts and bolts on each part under unladen conditions with tires on level ground when removing steering gear assembly. Check wheel alignment. Refer to FSU-7, "Wheel Alignment Inspection".
- Adjust neutral position of steering angle sensor after checking wheel alignment. Refer to BRC-78, "ADJUSTMENT OF STEERING ANGLE SENSOR NEUTRAL POSITION : Special Repair Requirement". (ESP models)

Disassembly and Assembly

INFOID:0000000000953512

DISASSEMBLY

1. Loosen outer socket lock nut, and remove outer socket.
2. Remove boot clamps, and then remove boot from inner socket.
   CAUTION:
   Never damage inner socket and gear housing assembly when removing boot. Inner socket and gear housing assembly must be replaced if inner socket and gear housing assembly are damaged because it may cause foreign material interfusion.
3. Remove inner socket from gear housing assembly.

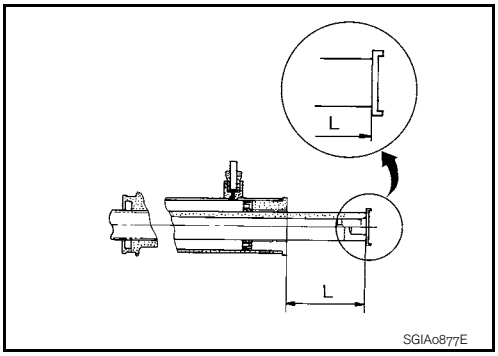
ASSEMBLY

1. Install inner socket to gear housing assembly.
2. Apply recommended grease to inner socket.

3. Decide on the neutral position for the rack.

Standard

Rack stroke “L” **: Refer to ST-19, "Rack Stroke".**

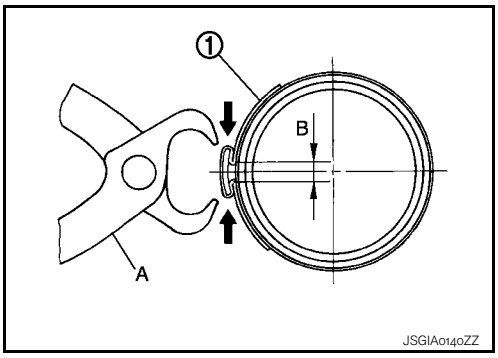


4. Install boot to gear housing assembly and inner socket.

5. Install boot clamp (large diameter) (1) to boot using boot band crimping tool (A) (SST: KV40107300).

CAUTION:

Install large diameter side boot clamp (1) securely to boot groove, and crimp it so as to have clearance (B) of 3 mm (0.12 in) or less as shown.



6. Install boot clamp (small diameter) to boot.

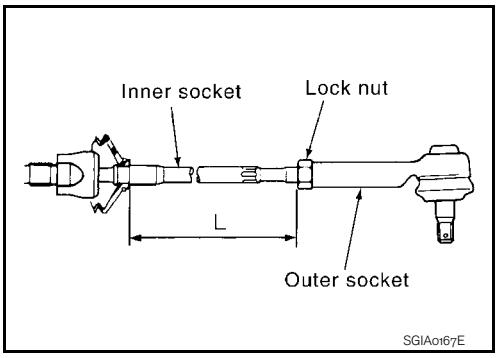
7. Adjust inner socket to standard length “L”, and then tighten lock nut to the specified torque. Check length “L” again after tightening lock nut.

Standard

Inner socket length “L” **: Refer to ST-20, "Inner Socket Length".**

CAUTION:

Adjust toe-in after this procedure. Length achieved after toe-in adjustment is not necessaly the value above.



Inspection

INFOID:0000000000953513

INSPECTION AFTER INSTALLATION

- Check if steering wheel turns smoothly when it is turned several times fully to the end of the left and right.
- Check the steering wheel play, neutral position steering wheel, steering wheel turning force, and front wheel turning angle. Refer to ST-7, "Inspection".

INSPECTION AFTER DISASSEMBLY

Boot

- Check boot for cracks, and replace it if a malfunction is detected.

Gear Housing Assembly

- Check gear housing assembly for damage and scratches (inner wall). Replace if there are.

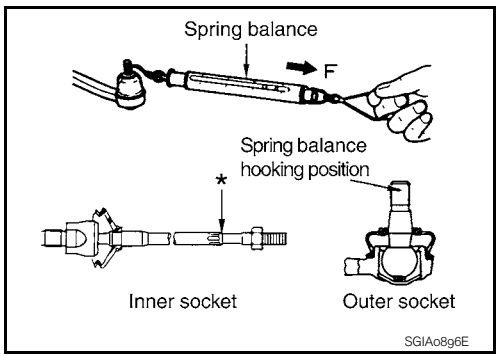
Outer Socket and Inner Socket

- Check the following items and replace the component if it does not meet the standard.

BALL JOINT SWINGING TORQUE

cardiagn.com

- Hook a spring balance at the point shown in the figure and pull the spring balance. Make sure that the spring balance reads the specified value when ball stud and inner socket start to move. Replace outer socket and inner socket if they are outside the standard.



Standard for outer socket

(Measuring point: Ball stud upper side)

Swinging torque	**: Refer to ST-19, "Socket Swing Force and Rotating Torque".**
Spring balance measurement	**: Refer to ST-19, "Socket Swing Force and Rotating Torque".**

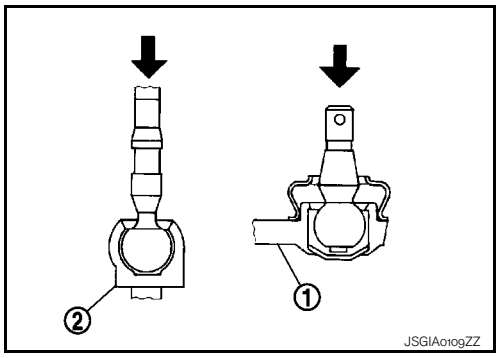
Standard for inner socket

(Measuring point: "*" mark shown in the figure)

Swinging torque	**: Refer to ST-19, "Socket Swing Force and Rotating Torque".**
Spring balance measurement	**: Refer to ST-19, "Socket Swing Force and Rotating Torque".**

BALL JOINT AXIAL END PLAY

- Apply an axial load of 490 N (50 kg, 110 lb) to ball stud. Using a dial gauge, measure amount of stud movement, and then make sure that the value is within the following specified range. Replace outer socket (1) and inner socket (2) if the measured value is outside the standard.



Standard

Outer socket	**: Refer to ST-19, "Socket Axial End Play".**
Inner socket	**: Refer to ST-19, "Socket Axial End Play".**

System Description

INFOID:0000000001098398

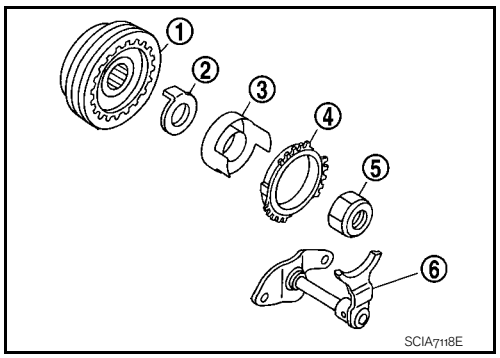
DOUBLE-CONE SYNCHRONIZER

Double-cone synchronizer are adopted for 1st and 2nd gears to reduce operating force of the control lever.

REVERSE GEAR NOISE PREVENTION FUNCTION (SYNCHRONIZING METHOD)

cardiagn.com

5th-reverse synchronizer hub assembly consists of reverse baulk ring, reverse synchronizer cone and reverse gear gate assembly. When the lever is shifted to the reverse position, the construction allows smooth shift operation by stopping the input shaft rotation by frictional force of synchronizer.



1 : 5th-reverse synchronizer hub assembly
2 : Lock washer
3 : Reverse synchronizer cone
4 : Reverse baulk ring
5 : Input shaft nut
6 : Reverse gear gate assembly

COMPONENT DIAGNOSIS

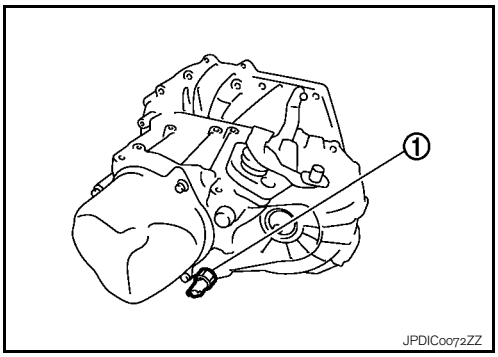
POSITION SWITCH

BACK-UP LAMP SWITCH

BACK-UP LAMP SWITCH : Component Parts Location

INFOID:0000000001070426

1 : Position switch



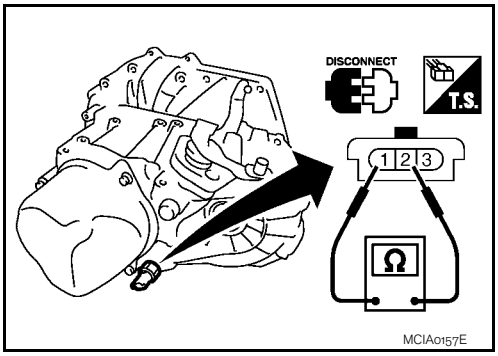
BACK-UP LAMP SWITCH : Component Inspection

INFOID:0000000001070427

1.CHECK BACK-UP LAMP SWITCH

Check continuity between position switch terminals with control lever turned to 1st to 6th and reverse position.

Terminals	Gear position	Continuity
1 – 2	Reverse	Existed
	Except reverse	Not existed



Is the inspection result normal?

YES >> INSPECTION END

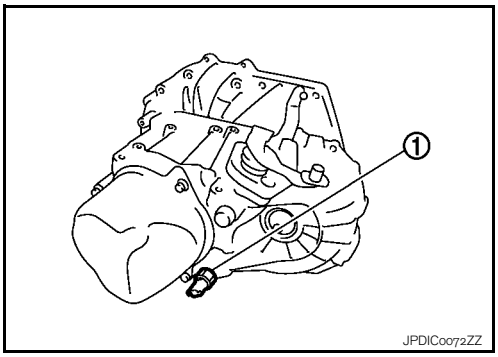
NO >> Replace position switch. Refer to TM-25, "Exploded View".

PARK/NEUTRAL POSITION (PNP) SWITCH

PARK/NEUTRAL POSITION (PNP) SWITCH : Component Parts Location

INFOID:0000000001070428

1 : Position switch



PARK/NEUTRAL POSITION (PNP) SWITCH : Component Inspection

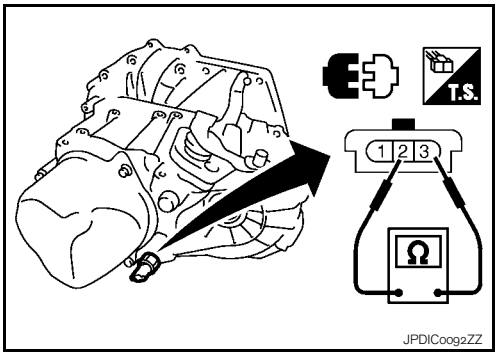
INFOID:0000000001070429

1.CHECK PARK/NEUTRAL POSITION (PNP) SWITCH

cardiagn.com

Check continuity between position switch terminals with control lever turned to 1st to 6th and reverse position.

Terminals	Gear position	Continuity
2 – 3	Neutral	Existed
	Except neutral	Not existed



Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace position switch. Refer to TM-25, "Exploded View".

PRECAUTION

PRECAUTIONS

Service Notice or Precautions for Manual Transaxle

INFOID:0000000001070431

CAUTION:

- **If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.**
- **Never reuse transaxle gear oil, once it has been drained.**
- **Check oil level or replace gear oil with vehicle on level surface.**
- **During removal or installation, keep inside of transaxle clear of dust or dirt.**
- **Check for the correct installation status prior to removal or disassembly. If matching marks are required, be certain they do not interfere with the function of the parts they are applied.**
- **In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, use it.**
- **Never damage sliding surfaces and mating surfaces.**
- **Removing and handling the parts must be carried out on a workbench with a knockproof cover. (rubber or thick plastic)**
- **Cover all turning and synchronizer points in gear oil.**
- **Observe the tightening torques.**
- **Carefully carry out the specific settings and adjustments.**
- **Be sure to properly refit parts in the same order and position after removal.**

ON-VEHICLE MAINTENANCE

GEAR OIL

Exploded View

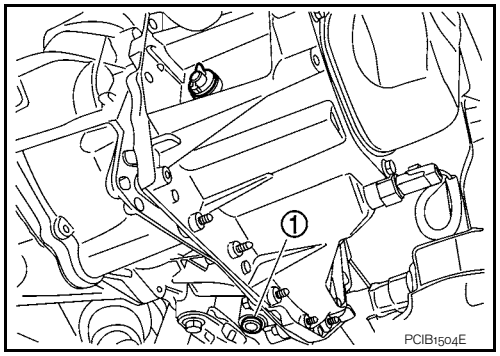
INFOID:0000000001070434

Refer to TM-25, "Exploded View".

Draining

INFOID:0000000001070435

1. Start engine and let it run to warm up transaxle.
2. Stop engine. Remove drain plug (1) and then drain gear oil.
3. Set a new gasket on drain plug and install it to clutch housing. Tighten drain plug to the specified torque.
   CAUTION:
   Never reuse gasket.



Refilling

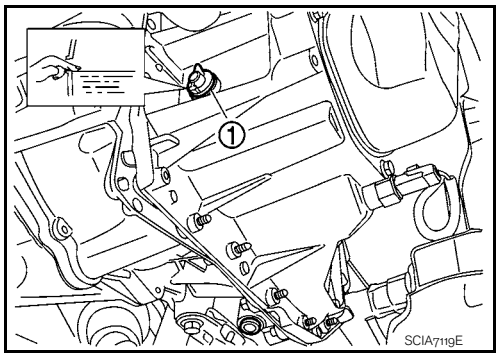
INFOID:0000000001070436

1. Remove filler plug (1). Fill with new gear oil until oil level reaches the specified limit at filler plug hole as shown.

   Oil grade and viscosity : **Refer to MA-21, "Fluids and Lubricants".**

   Oil capacity : **Refer to TM-50, "General Specification".**

2. After refilling gear oil, check oil level. Refer to TM-17, "Inspection".
3. Set a new gasket on filler plug and then install it to transaxle case.
   CAUTION:
   Never reuse gasket.
4. Tighten filler plug to the specified torque.



Inspection

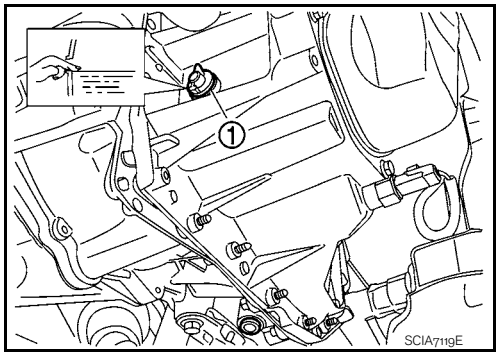
INFOID:0000000001070437

LEAKAGE

Make sure that gear oil is not leaking from transaxle or around it.

LEVEL

1. Remove filler plug (1) and check oil level at filler plug hole as shown.
   CAUTION:
   Never start engine while checking oil level.
2. Set a new gasket on filler plug and then install it to transaxle case.
   CAUTION:
   Never reuse gasket.
3. Tighten filler plug to the specified torque.



cardiagn.com

ON-VEHICLE REPAIR

SIDE OIL SEAL

Exploded View

INFOID:0000000001070438

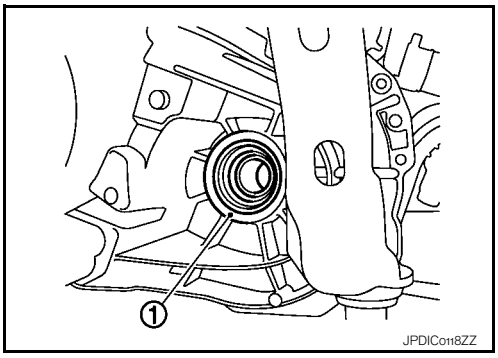
Refer to TM-25, "Exploded View".

Removal and Installation

INFOID:0000000001070439

REMOVAL

1. Remove front drive shafts. Refer to FAX-17, "HR16DE MODELS : Removal and Installation".
2. Remove differential side oil seals (1) using a suitable tool.
   CAUTION:
   Never damage transaxle case and clutch housing.



INSTALLATION

Note the following, and install in the reverse order of removal.

- Install differential side oil seals (1) to clutch housing and transaxle case using the drift (A) [SST: — (B. Vi. 1666)].

  B : Transaxle case side
  C : Clutch housing side

  Dimension "L_1" : 5.7 - 6.3 mm (0.224 - 0.248 in)
  Dimension "L_2" : 2.4 - 3.0 mm (0.094 - 0.118 in)

  CAUTION:
  - **Never reuse differential side oil seal.**
  - **When installing, never incline differential side oil seal.**
  - **Never damage clutch housing and transaxle case.**
- Check oil level and oil leakage after installation. Refer to TM-17, "Inspection".

Removal and Installation

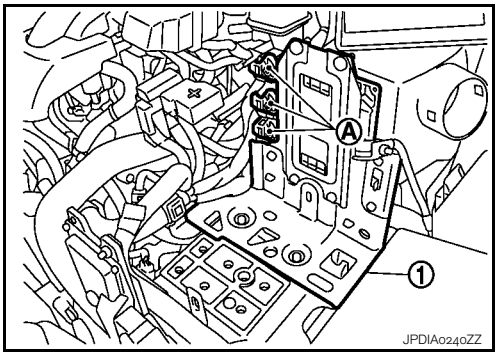
INFOID:0000000001070441

REMOVAL

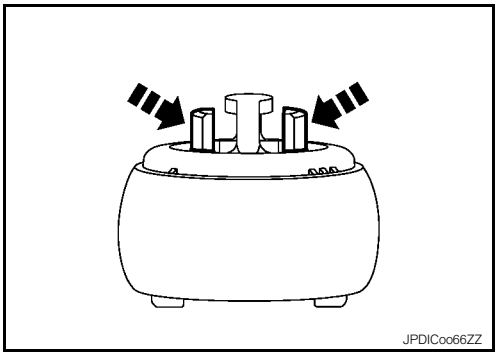
1. Remove the air cleaner case and air duct (inlet). Refer to EM-27, "Removal and Installation".
2. Remove the battery. Refer to PG-118, "Removal and Installation".

cardiagn.com

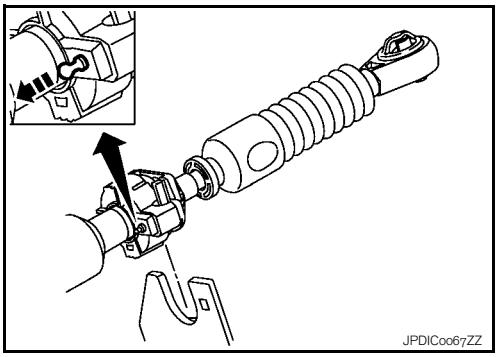
3. Disconnect the connectors (A) and then remove the bracket (1).



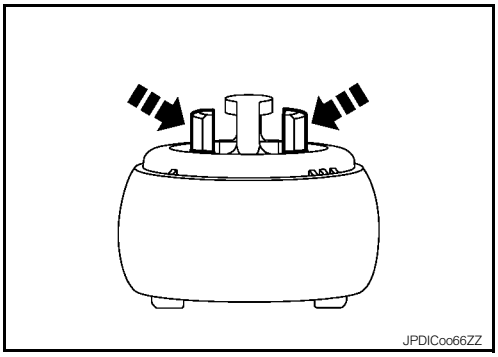
4. While pressing the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control shaft assembly.
5. While pressing the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control shaft assembly.



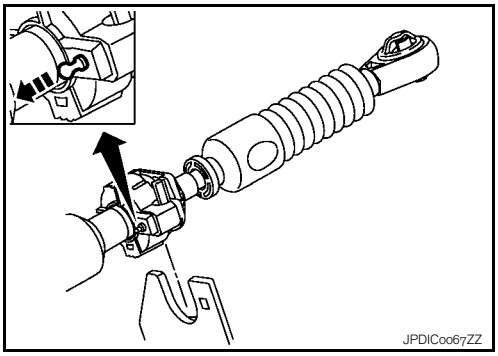
6. While pulling the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the cable mounting bracket.
7. While pulling the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the cable mounting bracket.
8. Remove the control lever knob.
9. Remove console finisher assembly and the center console assembly. Refer to IP-18, "Removal and Installation".
10. Shift the control lever to the neutral position.



11. While pressing the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control device assembly.
12. While pressing the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control device assembly.



13. While pulling the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control device assembly.
14. While pulling the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control device assembly.
15. Remove the control device assembly.
16. Remove the heat plate.
17. Remove the bracket.



cardiagn.com

18. Remove the grommet and then remove the shift cable and select cable from the vehicle.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Shift the control lever to the neutral position.
- Securely assemble each cable and the lever of the control shaft assembly.
- Securely assemble each cable and the cable mounting bracket.
- Securely assemble each cable and the control device assembly.
- Make sure that the claws of grommet are in contact with the floor.
- Be careful about the installation direction and push the control lever knob into the control lever.
  CAUTION:
  Never reuse control lever knob.
- Tapping work for tapping bolt is not applied to new clutch housing. Do not perform tapping by other than screwing tapping bolt because tapping is formed by screwing tapping bolt into clutch housing.
  CAUTION:
  Never reuse tapping bolt.

Inspection

INFOID:0000000001070442

After installing, confirm the following items:

- When the control lever is shifted to 1st-2nd side and 5th-Reverse side, confirm the control lever returns to neutral position smoothly.
- When the control lever is shifted to each position, make sure there is no binding or disconnection in each boot.

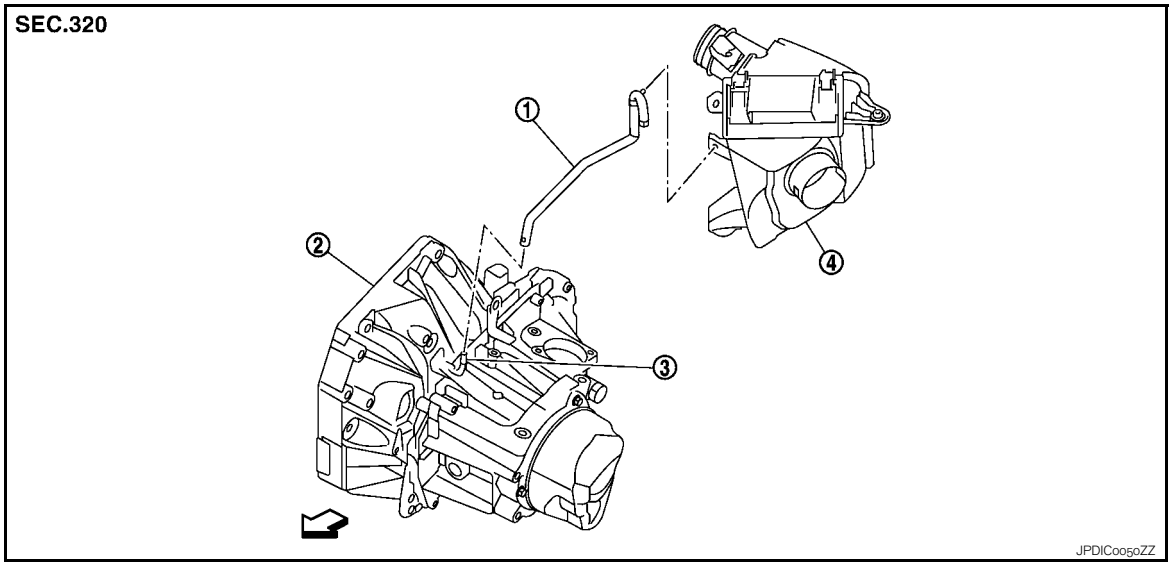
AIR BREATHER HOSE

Exploded View

INFOID:0000000001070443



1. Air breather hose
2. Transaxle assembly
3. Breather pipe
4. Air cleaner case

⇦: Vehicle front

Removal and Installation

INFOID:0000000001070444

REMOVAL

Refer to the figure for removal procedure.

CAUTION:

When removing air breather hose, be sure to hold breather pipe securely.

INSTALLATION

Refer to the figure for installation procedure.

- When installing air breather hose on breather pipe, aim paint mark face toward the vehicle front.
- When installing air breather hose on breather pipe, push it until it hits transaxle case.
- When installing air breather hose to air cleaner case, make sure that clip are fully inserted.

CAUTION:

Make sure air breather hose is not collapsed or blocked due to folding or bending when installed.

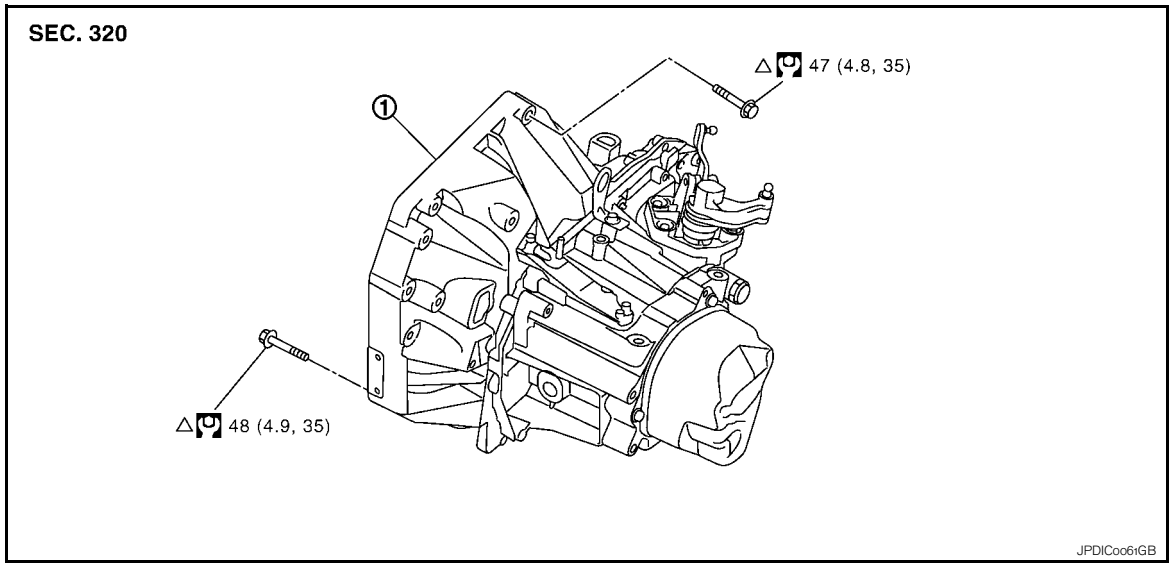
REMOVAL AND INSTALLATION

TRANSAXLE ASSEMBLY

Exploded View

INFOID:0000000001070445



1. Transaxle assembly

△: For the bolt mounting positions, refer to “INSTALLATION”.

Refer to GI-4, "Components" for symbols not described on the above.

CAUTION:

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

Removal and Installation

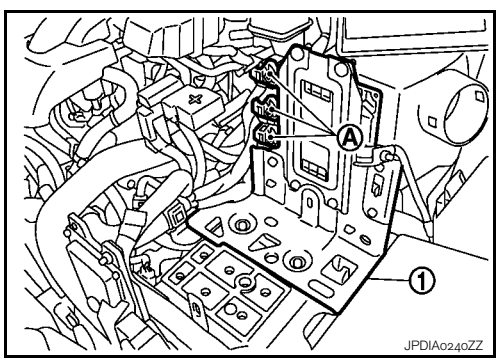
INFOID:0000000001070446

CAUTION:

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove air breather hose. Refer to TM-22, "Removal and Installation".
3. Remove air cleaner case and air duct (inlet). Refer to EM-27, "Removal and Installation".
4. Remove battery. Refer to PG-118, "Removal and Installation".
5. Disconnect connectors (A) and then remove bracket (1).
6. Drain clutch fluid and then remove clutch tube from CSC (Concentric Slave Cylinder). Refer to CL-14, "Removal and Installation".
   CAUTION:
   Never depress clutch pedal during removal procedure.
7. Disconnect position switch harness connector.
8. Disconnect ground cable.
9. Remove wire harnesses from transaxle assembly.
10. Disconnect select cable and shift cable from transaxle assembly. Refer to TM-19, "Removal and Installation".



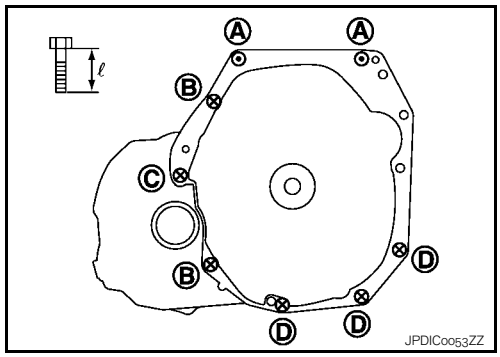
cardiagn.com

11. Remove starter motor. Refer to STR-22, "HR16DE MODELS : Removal and Installation".
12. Remove engine under cover.
13. Drain gear oil. Refer to TM-17, "Draining".
14. Remove exhaust front tube. Refer to EX-5, "Removal and Installation".
15. Remove front drive shafts. Refer to FAX-17, "HR16DE MODELS : Removal and Installation".
    NOTE:
    Insert a suitable plug into differential side oil seal after removing front drive shaft.
16. Remove rear engine mounting brackets and rear torque rod. Refer to EM-83, "Removal and Installation".
17. Remove suspension member and suspension member stay. Refer to FSU-17, "Removal and Installation".
18. Set a suitable jack to transaxle assembly and then set a suitable jack to engine assembly.
    CAUTION:
    When setting a suitable jack, be careful so that it does not contact with the switch.
19. Remove transaxle assembly mounting bolts.
20. Remove engine mounting through bolt-securing nut. Refer to EM-83, "Removal and Installation".
21. Remove transaxle assembly from the vehicle.
    CAUTION:
    - **Secure transaxle assembly to a suitable jack while removing it.**
    - **The transaxle assembly must not interfere with the wire harnesses and clutch tube.**
22. Remove CSC (Concentric Slave Cylinder). Refer to CL-15, "Removal and Installation".
    CAUTION:
    If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Tighten transaxle assembly mounting bolts to the specified torque. The figure is the view from the engine.



: Transaxle to engine

: Engine to transaxle

Bolt symbol	A	B	C	D
Quantity	2	2	1	3
" ℓ " mm (in)	55 (2.17)	49 (1.93)	69 (2.72)	80 (3.15)

CAUTION:
- **The transaxle assembly must not interfere with the wire harnesses and clutch tube.**
- **When installing transaxle assembly, never bring input shaft into contact with clutch cover.**

- Refer to CL-15, "Removal and Installation" for CSC (Concentric Slave Cylinder) installation procedure.
- Refer to TM-19, "Removal and Installation" for select cable and shift cable installation procedure.
- Bleed the air from the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".
- After installation, check for oil leakage and oil level. Refer to TM-17, "Inspection".

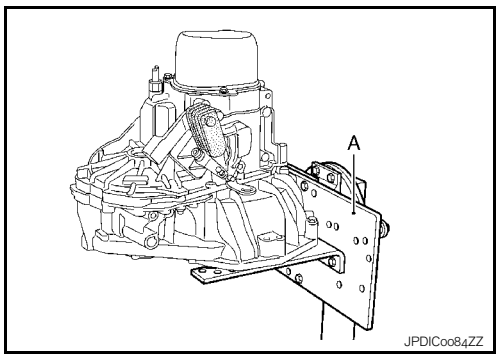
Disassembly

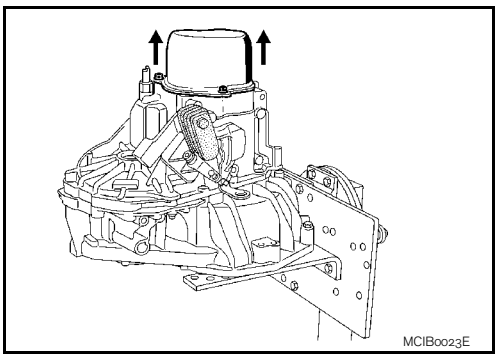
INFOID:0000000001070447

1. Remove drain plug and gasket from clutch housing and then drain oil.
2. Remove filler plug and gasket from transaxle case.
3. Install transaxle assembly on a suitable stand (A).
4. Remove mounting bolts from located inside the clutch housing.

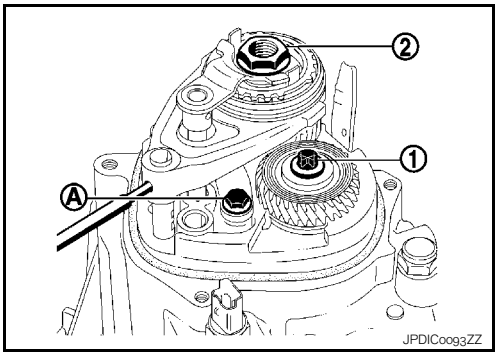


cardiagn.com

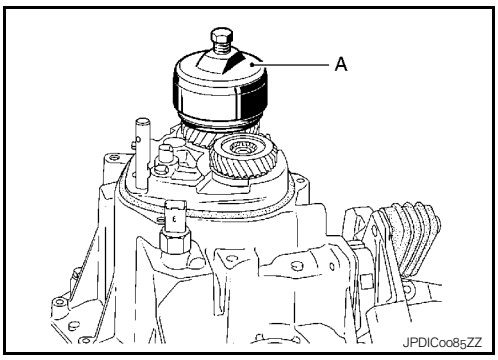
5. Remove rear housing and O-ring from transaxle case. This must be removed along the horizontal axis of the transaxle assembly because it has a lubrication spline which is located in the input shaft bore.



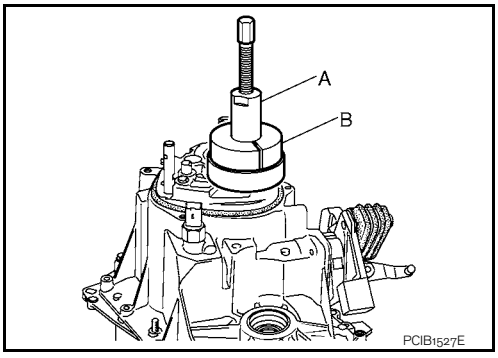
6. Remove reverse gear gate assembly mounting bolts (A).
7. Remove retaining pin from 5th-reverse shift fork using the pin punch [SST: — (B. Vi. 31-01)].
8. Shift the 3rd gear on the shift lever of control shaft assembly and the 5th gear by the 5th-reverse shift fork on its the 5th-reverse fork rod.
9. Remove the mainshaft bolt (1).
10. Remove the input shaft nut (2).
11. Remove the reverse synchronizer cone and reverse baulk ring.
12. Remove 5th-reverse shift fork, reverse gear gate assembly and 5th-reverse coupling sleeve from 5th-reverse synchronizer hub.



13. Remove the 5th-reverse synchronizer hub from input shaft using the puller (A) [SST: — (B. Vi. 1170)]. To do this, fit the puller and rotate it so that the splines are opposite those of the input shaft hub.

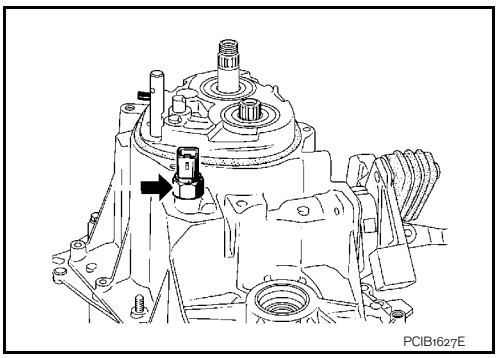


14. Remove 5th main gear using the puller (A) [SST: KV32300QAC (B. Vi. 22-01)] and (B) [SST: KV32300QAD (B. Vi. 1000-01)].



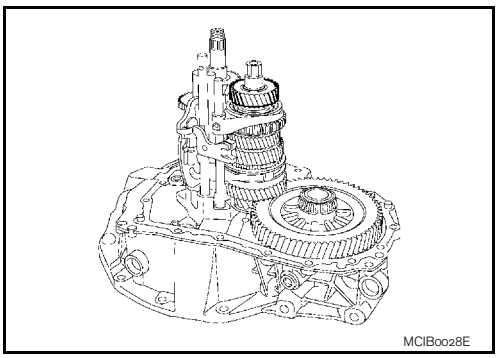
cardiagn.com

15. Remove position switch from transaxle case.
16. Engage 3rd gear.
17. Remove the transaxle case mounting bolts.
18. Remove the transaxle case from clutch housing.
19. Remove oil gutter from transaxle case.
20. Remove mainshaft rear bearing inner race from mainshaft using a suitable puller.



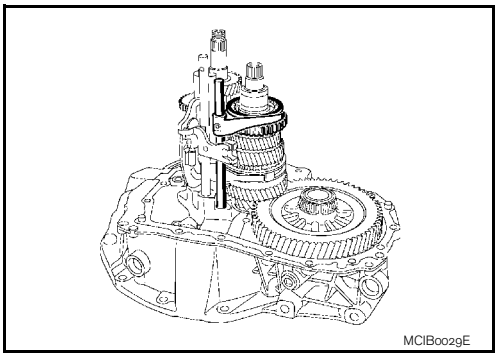
PCIB1627E

21. Remove bearing preloading shim, 4th main gear, needle bearing, and 4th baulk ring from mainshaft.



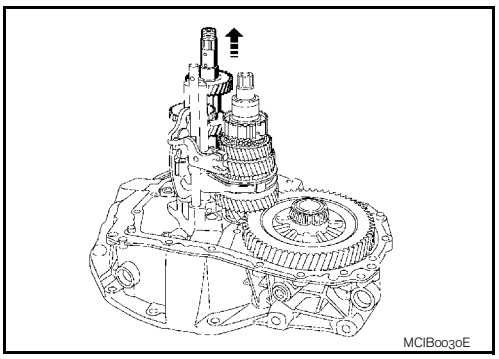
MCIB0028E

22. Remove 3rd-4th fork rod assembly and 3rd-4th coupling sleeve while gently lifting the mainshaft assembly.



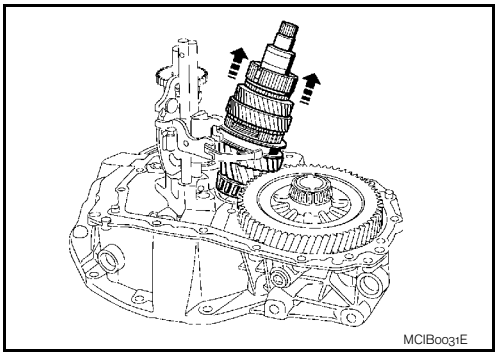
MCIB0029E

23. Remove input shaft assembly.



MCIB0030E

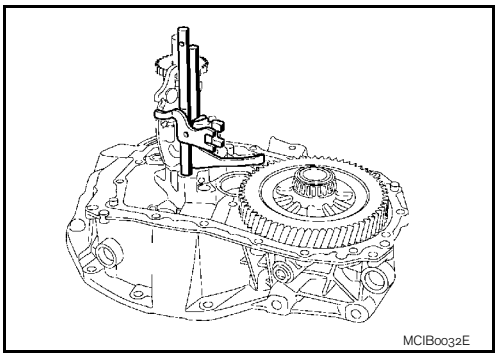
24. Remove mainshaft assembly.



MCIB0031E

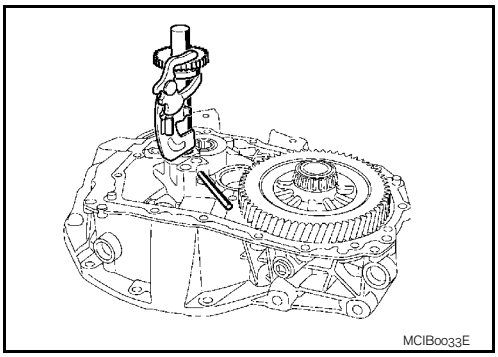
cardiagn.com

25. Remove 1st-2nd fork rod assembly and the 5th-reverse fork rod assembly.



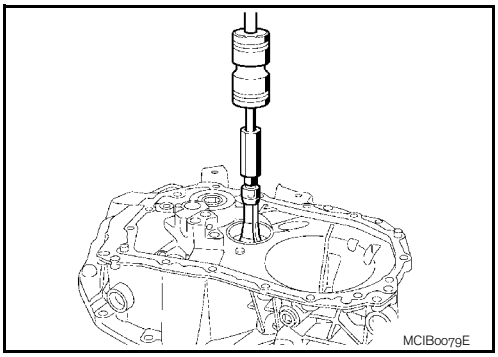
MCIB0032E

26. Remove retaining pin from reverse gear assembly using a pin punch.
27. Remove reverse gear assembly from clutch housing.
28. Remove final drive assembly from clutch housing.
29. Remove magnet and dowel pins from clutch housing.



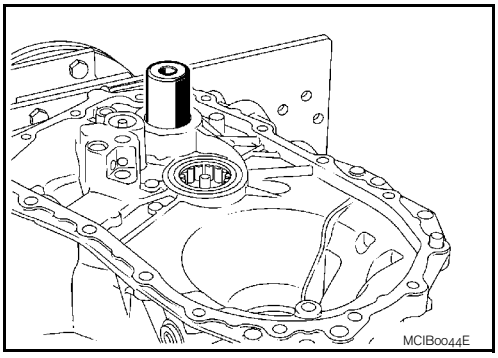
MCIB0033E

30. Cut the base of the oil channel plastic hollow needle located at the centre of the mainshaft front bearing.
31. Drive out mainshaft front bearing outer race using a suitable puller.



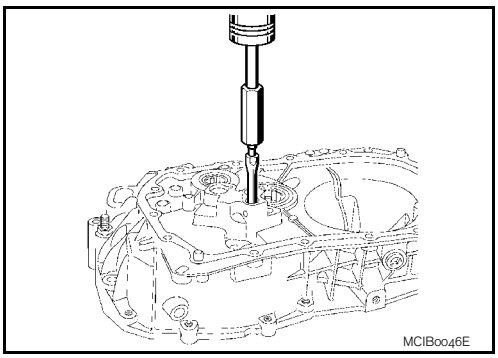
MCIB0079E

32. Remove input shaft front bearing using the press and the drift [Commercial service tool].



MCIB0044E

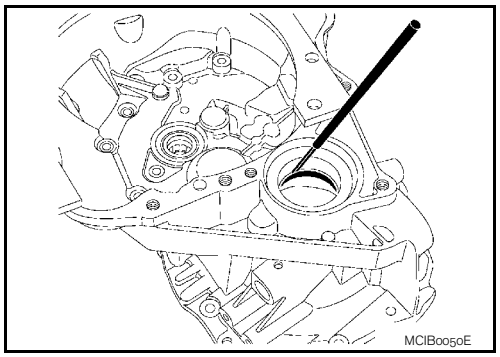
33. Remove bushings from clutch housing using a suitable puller.



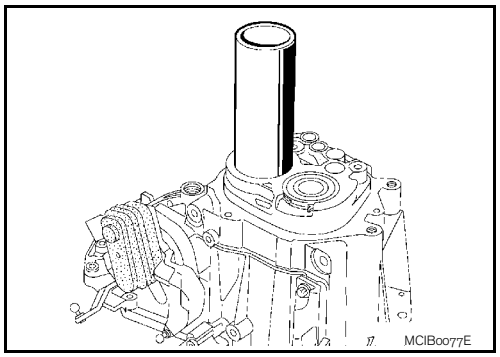
MCIB0046E

cardiagn.com

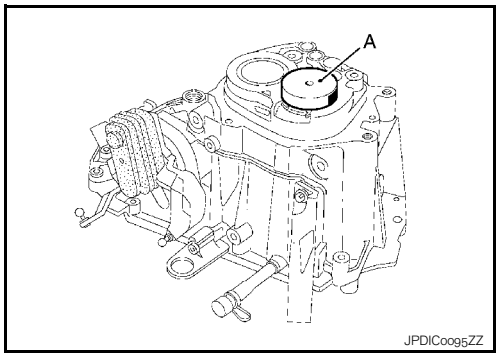
34. Remove differential side bearing outer races from clutch housing and transaxle case using a roll pin punch.
CAUTION:
Never damage clutch housing and transaxle case.



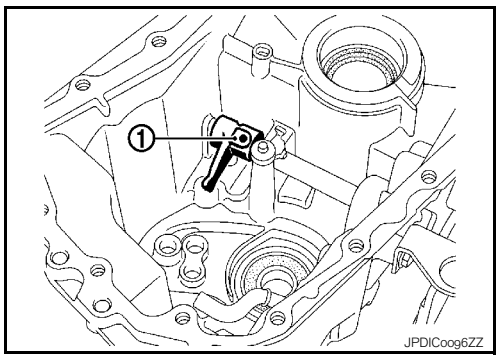
35. Remove snap ring and mainshaft rear bearing outer race using the drift [Commercial service tool].



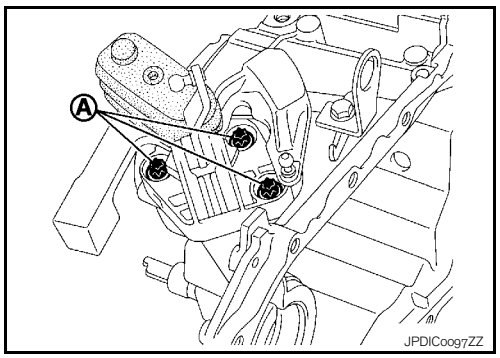
36. Remove snap ring and drive the input shaft rear bearing inside the transaxle case using the mandrel (A) [SST: — (B. Vi. 1576)].



37. Remove retaining pin from selector (1) using a pin punch.
38. Remove interlock bolt, bushing, spring, and striking interlock from transaxle case.



39. Remove mounting bolts (A) and then remove the control shaft assembly from transaxle case.
40. Pull out 2 way connector straight from air breather inner tube.
41. Remove air breather inner tube from transaxle case.



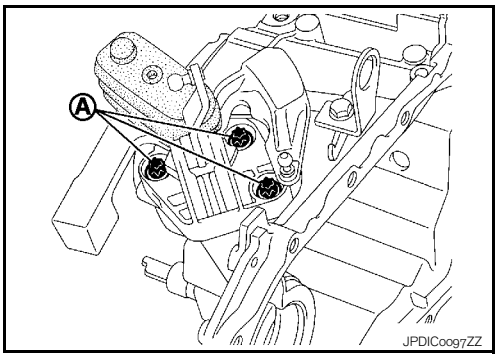
cardiagn.com

Assembly

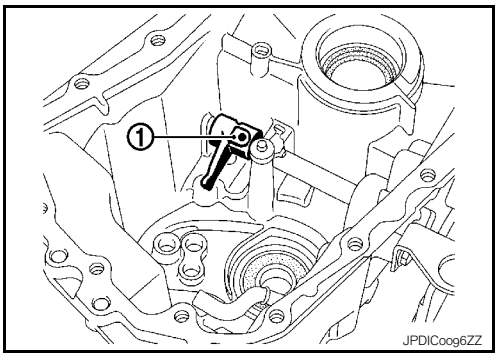
INFOID:0000000001070448

CAUTION:
When replacing the parts below, adjust mainshaft rear bearing preload. Refer to TM-39, "Adjustment".
- **Mainshaft front bearing outer race**
- **Mainshaft front bearing inner race**
- **Mainshaft rear bearing inner race**
- **Mainshaft rear bearing outer race**
- **Clutch housing**
- **Transaxle case**
- **Mainshaft**

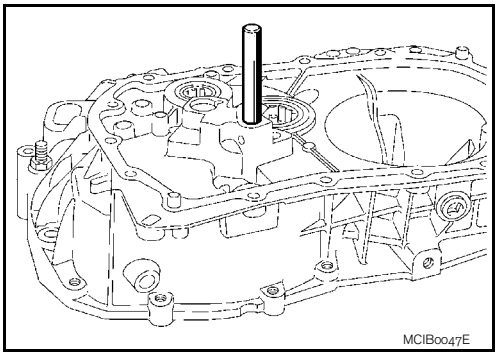
1. Install air breather inner tube to transaxle case.
   CAUTION:
   Never damage air breather inner tube.
   NOTE:
   It is easy to install the air breather inner tube when its end is closed with tape. Remove the tape after the installation.
2. Insert 2 way connector straight to air breather inner tube.
   CAUTION:
   Check air breather inner tube for twists after installing.
3. Install control shaft to transaxle case and then install selector to control shaft. Tighten mounting bolts (A) to the specified torque.



4. Install selector (1) onto control shaft, and then install retaining pin to selector.
5. Install striking interlock, spring, bushing, and interlock bolt to transaxle case, and then tighten interlock bolt to the specified torque.
6. Install bushings to transaxle case using a suitable drift.

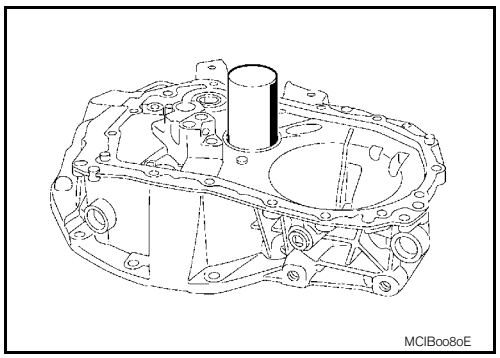


7. Install bushings using the drift [Commercial service tool] down to the thrust bearing.
   CAUTION:
   Never reuse bushing.



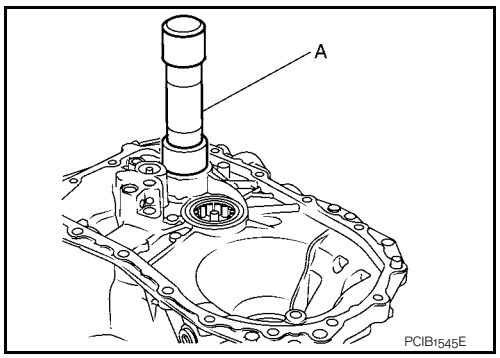
cardiagn.com

8. Install the oil channel and then the mainshaft front bearing outer race using the drift [Commercial service tool].
CAUTION:
- **Never reuse oil channel.**
- **Replace mainshaft front bearing outer race and mainshaft front bearing inner race as a set.**



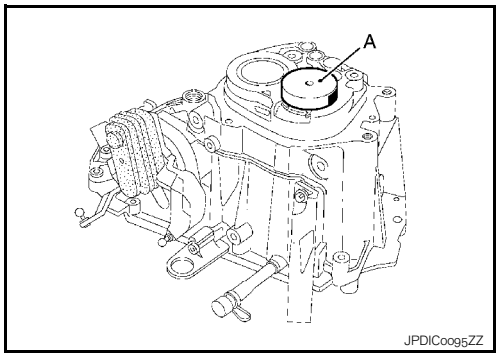
MCIB0080E

9. Install the input shaft front bearing using the press and the mandrel (A) [SST: — (B. Vi. 1601)].
10. Install input shaft oil seal to clutch housing using a suitable drift.



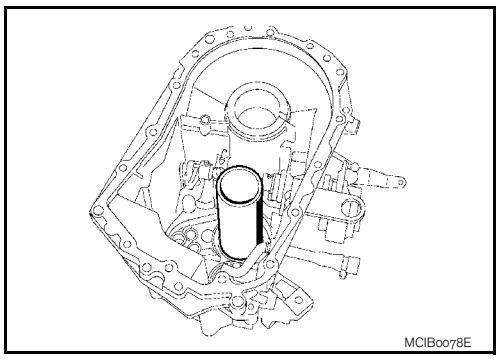
PCIB1545E

11. Install the snap rings.
CAUTION:
Never reuse snap ring.
12. Install the input shaft rear bearing using the mandrel (A) [SST: — (B. Vi. 1576)].



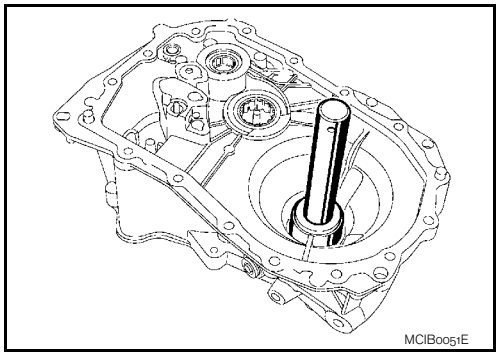
JPDIC0095ZZ

13. Install the mainshaft rear bearing outer race using the drift [Commercial service tool].
CAUTION:
Replace mainshaft rear bearing outer race and mainshaft rear bearing inner race as a set.



MCIB0078E

14. Install the differential side bearing outer races using the drift kit [SST: — (B. Vi. 1554)].
CAUTION:
Replace differential side bearing outer race and differential side bearing inner race as a set.



MCIB0051E

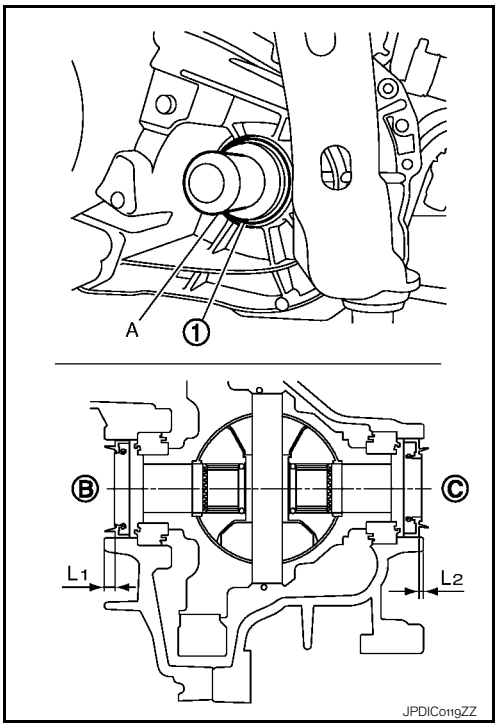
cardiagn.com

15. Install differential side oil seals (1) using the drift (A) [SST: — (B. Vi. 1666)].

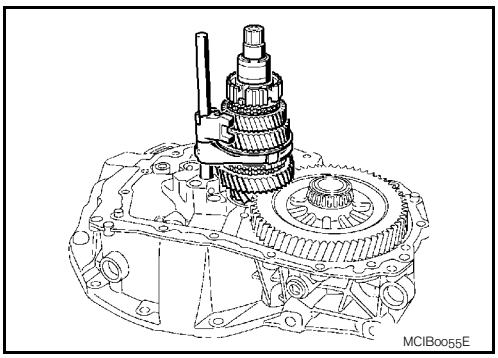
    B : Transaxle case side
    C : Clutch housing side

    Dimension "L_1" : 5.7 - 6.3 mm (0.224 - 0.248 in)
    Dimension "L_2" : 2.4 - 3.0 mm (0.094 - 0.118 in)

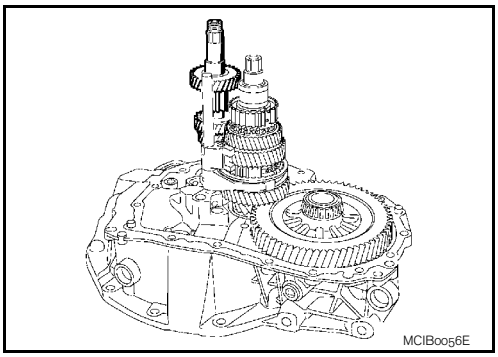
16. Install final drive assembly to clutch housing.
17. Install dowel pins and magnet to clutch housing.



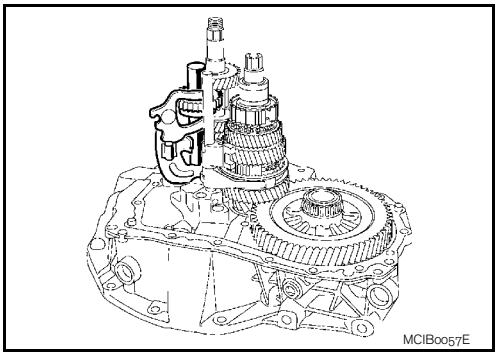
18. Install the mainshaft assembly and 1st-2nd fork rod assembly.



19. Install the input shaft assembly and washer.

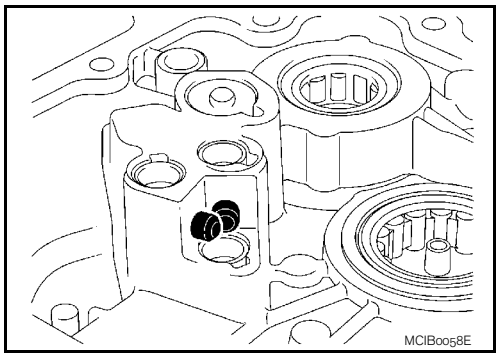


20. Install reverse gear assembly.

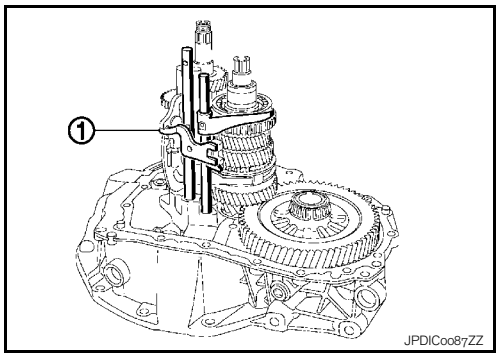


cardiagn.com

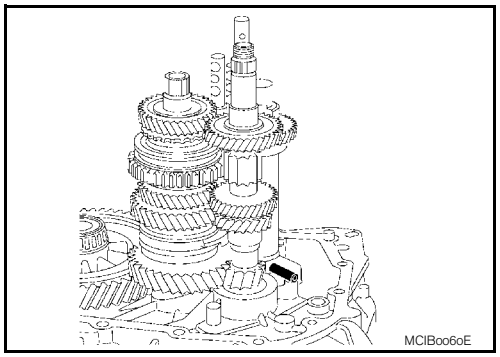
21. Install the lock pins.



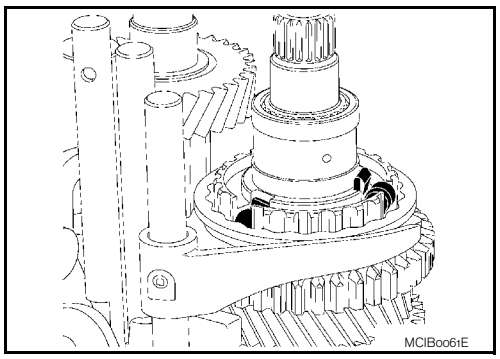
22. Install the 5th-reverse fork rod and the 3rd-4th fork rod assembly and the 3rd-4th coupling sleeve while gently lifting the input shaft assembly. Rotate the reverse gear assembly to position the 5th-reverse fork rod (1).
CAUTION:
Replace 3rd-4th coupling sleeve and 3rd-4th synchronizer hub as a set.



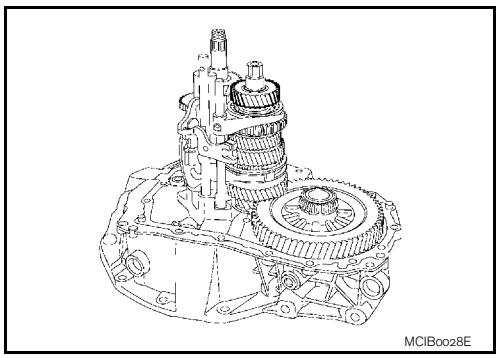
23. Install the retaining pin to the reverse gear assembly.
CAUTION:
Never reuse retaining pin.



24. Shift to 3rd gear and insert the springs and Insert keys.
25. Install needle bearing to mainshaft.

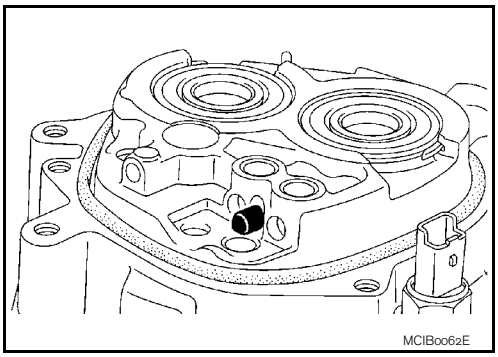


26. Apply gear oil to 4th baulk ring.
27. Install the 4th main gear fitted its 4th baulk ring.
28. Install selected bearing preloading shim to mainshaft.
    - For selection of bearing preloading shim, refer to TM-39, "Adjustment".
29. Install mainshaft rear bearing inner race to mainshaft using a suitable drift.
CAUTION:
Replace mainshaft rear bearing inner race and mainshaft rear bearing outer race as a set.



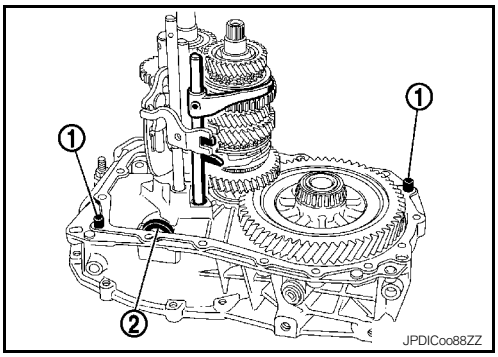
cardiagn.com

30. Install the check balls into the transaxle case.
31. Install oil gutter to transaxle case.
32. Engage 3rd gear.

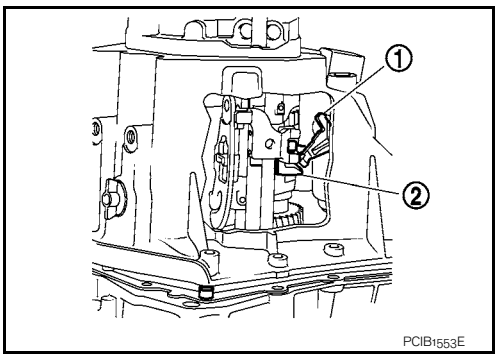


33. Check the positioning of the dowel pins (1).
    CAUTION:
    Never reuse dowel pin.
34. Check the positioning of magnet (2).
35. Apply recommended sealant to mating surface of clutch housing.
    - **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

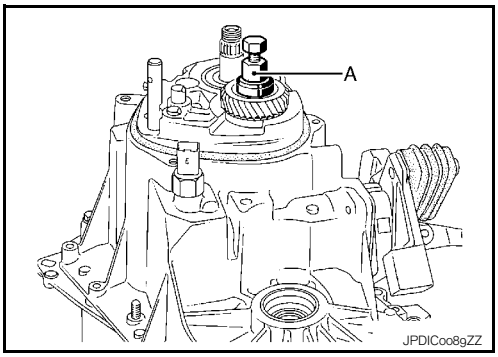
    CAUTION:
    - **Remove old sealant adhering to the mounting surfaces. Also remove any moisture, oil, or foreign material adhering to both mounting surfaces.**
    - **Apply sealant so as not to break the bead.**



36. Offer up the transaxle case while guiding the selector (1) into shift fork (2) of the 3rd gear.
37. Pretighten the transaxle case mounting bolts and rotate the input shaft to check that they make contact with the bearings.
38. Tighten the transaxle case mounting bolts to the specified torque.

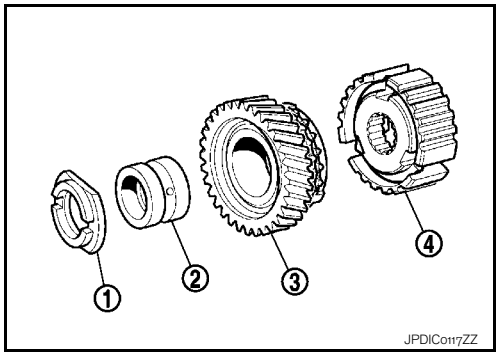


39. Put three drops of LOCTITE Frenbloc or an equivalent on the splines of the fixed 5th main gear and fit it using the installer (A) [SST: — (B. Vi. 1175)].

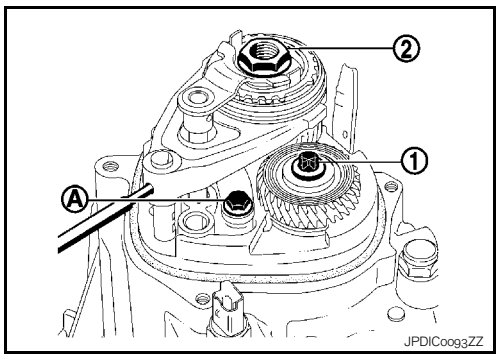


cardiagn.com

40. On the input shaft, fit the adapter plate (1) (top side gear side).
41. On the input shaft, fit the bushing (2).
42. Apply gear oil to 5th baulk ring.
43. On the input shaft, fit the 5th input gear (3) fitted with its 5th baulk ring.
44. On the input shaft, fit the 5th-reverse synchronizer hub (4) fitted with its spread springs.
    CAUTION:
    Replace 5th-reverse coupling sleeve and 5th-reverse synchronizer hub as a set.

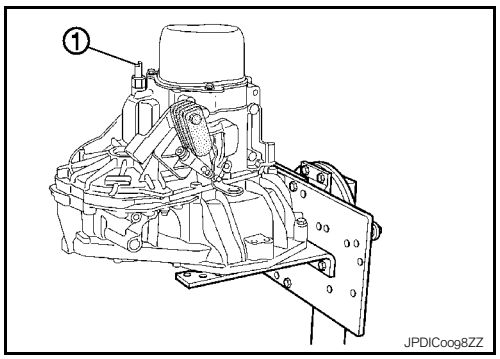


45. Install the 5th-reverse shift fork, 5th-reverse coupling sleeve, and reverse gear assembly.
    CAUTION:
    Replace 5th-reverse coupling sleeve and 5th-reverse synchronizer hub as a set.
46. Apply gear oil to the reverse synchronizer cone and the reverse baulk ring.
47. Install the reverse synchronizer cone and the reverse baulk ring.
48. Tighten mounting bolts (A) to the specified torque.
49. Slide the 5th-reverse shift fork on its 5th-reverse fork rod to engage 5th gear.



50. Tighten mainshaft bolt (1) to the specified torque.
51. Tighten input shaft nut (2) to the specified torque.
    CAUTION:
    Never reuse input shaft nut.
52. Reset to neutral and install retaining pin to the 5th-reverse shift fork.
53. Install O-ring to rear housing and then install them to transaxle case. Tighten mounting bolts to the specified torque.
    CAUTION:
    - **Rear housing oil channel is inserted to input shaft. Therefore, when installing rear housing, install it to axial direction of input shaft.**
    - **Be careful to pinch O-ring when installing rear housing.**
54. Apply recommended sealant to threads of the position switch (1) and then tighten it to the specified torque.
    - **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

    CAUTION:
    Remove old sealant and oil adhering to threads.
55. Install gaskets onto drain plug and filler plug, and then install them to clutch housing and transaxle case.
    CAUTION:
    - **Never reuse gasket.**
    - **After oil is filled, tighten filler plug to specified torque.**



Adjustment

INFOID:0000000001098127

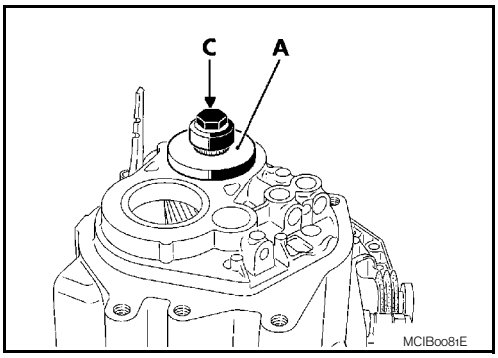
MAINSHAFT REAR BEARING PRELOAD

NOTE:
This operation is performed when replacing the mainshaft front bearing outer race, mainshaft front bearing inner race, mainshaft rear bearing inner race, mainshaft rear bearing outer race, clutch housing, transaxle case, or mainshaft.

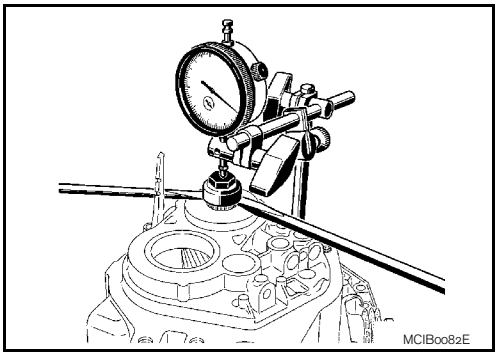
1. Remove final drive assembly and input shaft assembly from clutch housing.
2. Install the mainshaft assembly in the clutch housing with the mainshaft front bearing outer race, mainshaft front bearing inner race, mainshaft rear bearing inner race, mainshaft rear bearing outer race, and the presetting washer or an equivalent, of 1.60 mm (0.06 in) (large outer ϕ).

cardiagn.com

3. Install the transaxle case assembly and then tighten mounting bolts to the specified torque.
4. Fit the dial gauge support plate [SST: — (B. Vi. 1161)], or equivalent, on the tripod basin mountings.
5. Install the special spacer (A) [SST: — (B. Vi. 1527)].
6. Install a suitable bolt (C).



7. Fit the dial indicator with its magnetic holder.
8. Rotate the mainshaft assembly several times to fit the mainshaft front bearing outer race, mainshaft front bearing inner race, mainshaft rear bearing inner race, mainshaft rear bearing outer race.
9. Set the dial indicator to zero.
10. Pull the mainshaft assembly upwards by making a lever out of two screwdrivers.
11. Take a reading from the dial indicator.
12. Repeat the operations several times (7 to 10).
13. Calculate the average of the readings.
14. Calculation of the value of the bearing preloading shim.



Prescribed value + average of the readings on the dial indicator + value of the pre-setting washer = value of the bearing preloading shim.

Example:

Unit: mm (in)

0.26	**+**	**0.49**	**+**	**1.60**	**=**	**2.35**
↓		↓		↓		↓
Prescribed value		Average reading		Pre-setting washer value		Bearing preloading shim value

NOTE:
A set of pre-load washers of 2.15 mm (0.08 in) to 2.43 mm (0.10 in) from 0.04 mm (0.002 in) to 0.04 mm (0.002 in) thickness is supplied as replacement parts.

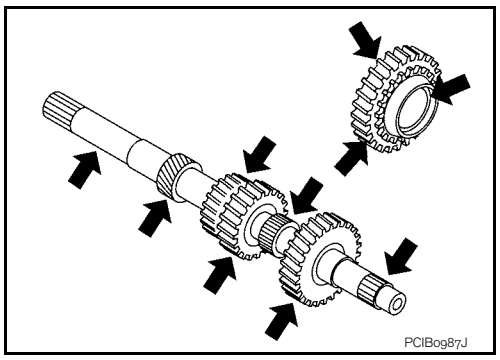
Inspection

INFOID:0000000001070452

INPUT SHAFT AND GEAR

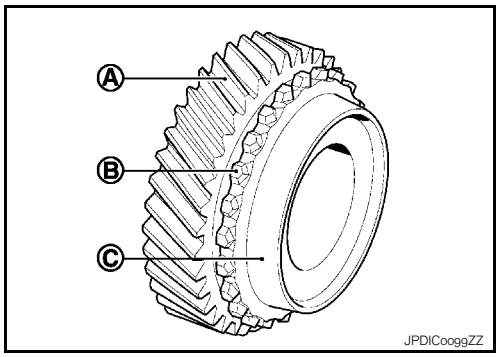
Check items below. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.



NOTE:
The inspection focuses mainly on the appearance of the teeth, especially in terms of claw chamfers.

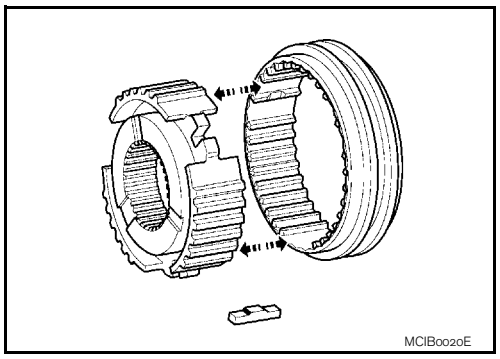
- Check that the teeth (A) are not broken or chipped.
- Check that the claws (B) are not broken, chipped or worn.
- Check that the cone (C) shows no scratches or blueness.



SYNCHRONIZER

Synchronizer Hub and Coupling Sleeve

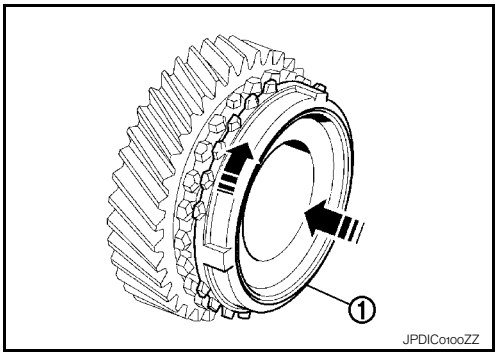
- Make sure the coupling sleeve turns smoothly in the synchronizer hub.
- Check that the springs or insert keys are in good condition.



Baulk Ring

cardiagn.com

Check that the grooves and ridges on the ring are not worn or damaged. Otherwise, replace the baulk ring.
- Check that put the baulk ring onto the gear cone.
- Check that rotate the baulk ring while applying force in the direction of the cone (1).
- Check that the baulk ring should lock against the cone.



BEARING

If the bearings does not rotate smoothly of the contact surface on ball or race is damaged or peeled, replace with new ones.

MAINSHAFT AND GEAR

Exploded View

INFOID:0000000001070453

Refer to TM-25, "Exploded View".

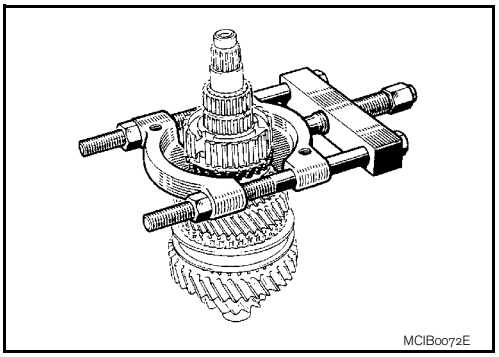
Disassembly

INFOID:0000000001070454

CAUTION:
- **Set mainshaft on the vise with back plate and remove gears.**
- **Disassemble gear components putting matching marks on the parts that do not affect any functions.**

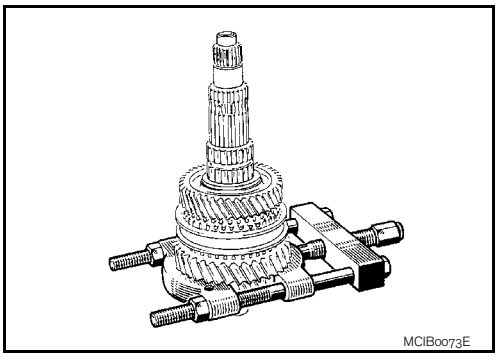
NOTE:
The the parts below underneath the 2nd, 3rd, and 4th main gears are fitted tightened. They will be systematically replaced during assemble.
- 1st inner baulk ring
- 1st synchronizer cone
- 1st outer baulk ring
- 2nd inner baulk ring
- 2nd synchronizer cone
- 2nd outer baulk ring

1. Remove the 3rd main gear and 3rd-4th synchronizer hub with the press, resting underneath the 3rd main gear claw teeth.
2. Remove needle bearing and thrust washer.



MCIB0072E

3. Remove the 1st and 2nd main gears and 1st-2nd synchronizer assembly with the press, resting underneath the 1st main gear.
4. Remove mainshaft front bearing inner race from mainshaft using a suitable puller.



MCIB0073E

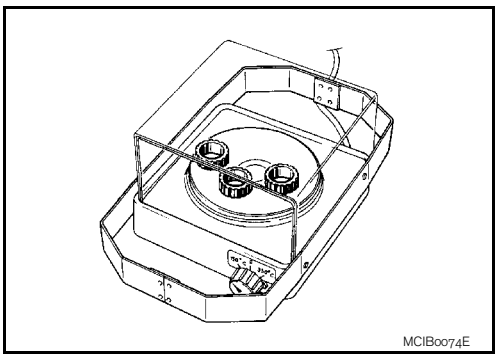
Assembly

INFOID:0000000001070455

CAUTION:
- **When replacing the parts below, adjust mainshaft rear bearing preload. Refer to TM-39, "Adjustment".**
- **Mainshaft front bearing outer race**
- **Mainshaft front bearing inner race**
- **Mainshaft rear bearing inner race**
- **Mainshaft rear bearing outer race**
- **Clutch housing**
- **Transaxle case**
- **Mainshaft**

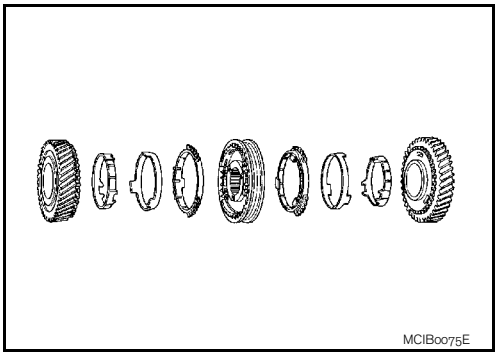
cardiagn.com

- **Place the new parts below on the hot plate. Heat them for 15 minutes with a thermostat setting of 150°C (302°F). The hot plate with a setting of 150°C (302°F) should be used for assemble.**
- **1st inner baulk ring**
- **1st synchronizer cone**
- **1st outer baulk ring**
- **2nd inner baulk ring**
- **2nd synchronizer cone**
- **2nd outer baulk ring**



MCIB0074E

- **Remove the parts below from the hot plate, using pliers. And use a suitable tube with an internal diameter of 33 mm (1.30 in) to fit it on the mainshaft until it is resting on the synchronizer hub.**
- **1st inner baulk ring**
- **1st synchronizer cone**
- **1st outer baulk ring**
- **2nd inner baulk ring**
- **2nd synchronizer cone**
- **2nd outer baulk ring**



MCIB0075E

1. Install mainshaft front bearing inner race to mainshaft using a suitable drift.
   CAUTION:
   Replace mainshaft front bearing inner race and mainshaft front bearing outer race as a set.
2. Install 1st main gear to mainshaft using a suitable drift.
3. Apply gear oil to 1st inner baulk ring, 1st synchronizer cone, 1st outer baulk ring, 2nd inner baulk ring, 2nd synchronizer cone, and 2nd outer baulk ring.
   CAUTION:
   - **Replace 1st inner baulk ring, 1st synchronizer cone, and 1st outer baulk ring as a set.**
   - **Replace 2nd inner baulk ring, 2nd synchronizer cone, and 2nd outer baulk ring as a set.**
4. Install 1st-2nd synchronizer hub assembly to mainshaft using a suitable drift.
   CAUTION:
   Replace 1st-2nd synchronizer hub and 1st-2nd coupling sleeve as a set.
5. Install needle bearing, 2nd main gear, and thrust washer to mainshaft.
6. Install needle bearing and 3rd main gear to mainshaft.
7. Apply gear oil to 3rd baulk ring and then install it to mainshaft.
8. Install 3rd-4th synchronizer hub to mainshaft using a suitable drift.

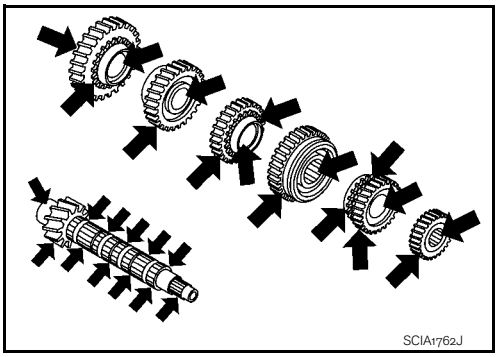
Inspection

INFOID:0000000001070456

MAINSHAFT AND GEAR

Check items below. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.

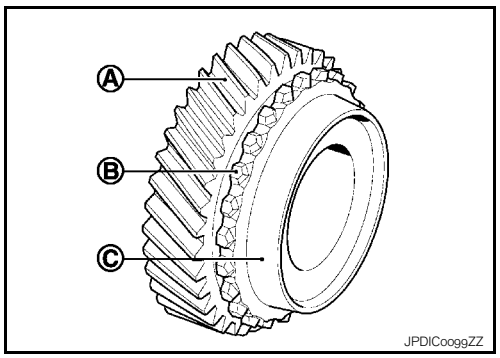


SCIA1762J

NOTE:

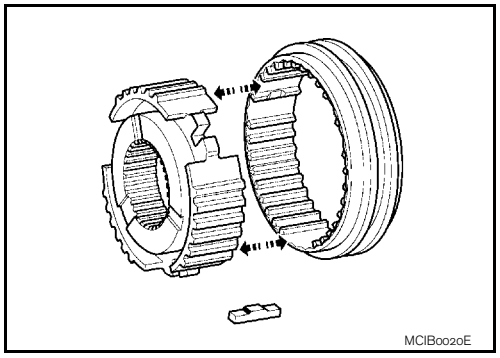
cardiagn.com

The inspection focuses mainly on the appearance of the teeth, especially in terms of claw chamfers.
- Check that the teeth (A) are not broken or chipped.
- Check that the claws (B) are not broken, chipped or worn.
- Check that the cone (C) shows no scratches or blueness.



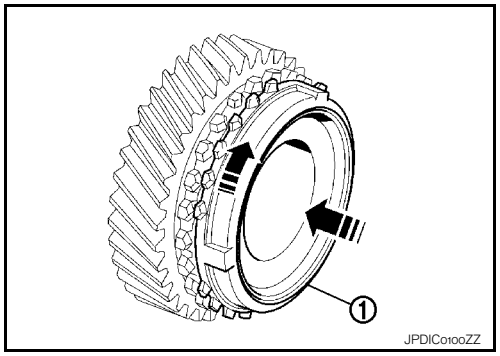
SYNCHRONIZER

Synchronizer Hub and Coupling Sleeve
- Make sure the coupling sleeve turns smoothly in the synchronizer hub.
- Check that the springs or insert keys are in good condition.
- The synchronizer hub teeth and the claws should not be chipped or excessively worn.
- Also ensure that there are no signs of grating or abnormal wear on the surfaces of the coupling sleeves or the inner walls of the synchronizer hubs.
- It is advisable to mark the position of the coupling sleeves in relation to the hub.



Baulk Ring

Check that the grooves and ridges on the ring are not worn or damaged. Otherwise, replace the baulk ring.
- Check that put the baulk ring onto the gear cone.
- Check that rotate the baulk ring while applying force in the direction of the cone (1).
- Check that the baulk ring should lock against the cone.



BEARING

If the bearings does not rotate smoothly of the contact surface on ball or race is damaged or peeled, replace with new ones.

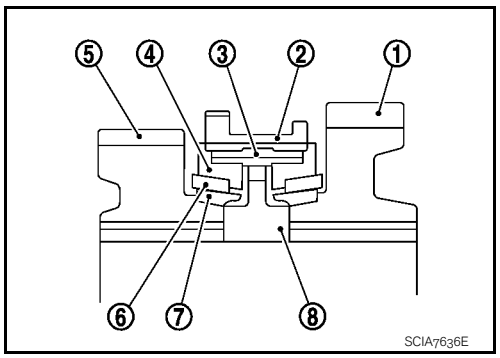
System Description

INFOID:0000000001070315

cardiagn.com

TRIPLE-CONE SYNCHRONIZER

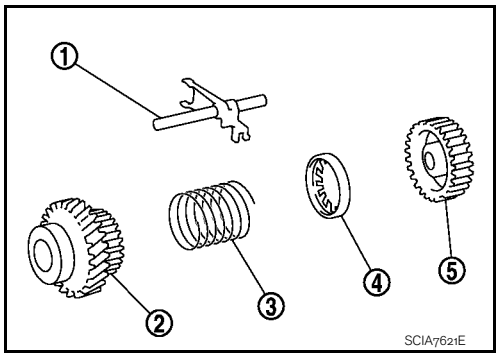
Triple-cone synchronizer is used for the 1st and the 2nd gears to reduce operating force of the control lever.



1 : 1st main gear
2 : 1st-2nd coupling sleeve
3 : Insert key
4 : Outer baulk ring
5 : 2nd main gear
6 : Synchronizer cone
7 : Inner baulk ring
8 : 1st-2nd synchronizer hub

REVERSE GEAR NOISE PREVENTION FUNCTION (SYNCHRONIZING METHOD)

Reverse gear assembly consists of reverse input gear, return spring, reverse baulk ring and reverse output gear. When the control lever is shifted to the reverse position, the construction allows smooth shift operation by stopping the reverse idler shaft rotation by frictional force of synchronizer.



1 : Reverse fork rod
2 : Reverse output gear
3 : Return spring
4 : Reverse baulk ring
5 : Reverse input gear

PRECAUTION

PRECAUTIONS

Service Notice or Precautions for Manual Transaxle

INFOID:0000000001070321

CAUTION:

- **If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.**
- **Never reuse transaxle gear oil, once it has been drained.**
- **Check oil level or replace gear oil with vehicle on level surface.**
- **During removal or installation, keep inside of transaxle clear of dust or dirt.**
- **Check for the correct installation status prior to removal or disassembly. If matching marks are required, be certain they do not interfere with the function of the parts they are applied.**
- **In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, use it.**
- **Never damage sliding surfaces and mating surfaces.**

ON-VEHICLE MAINTENANCE

GEAR OIL

Exploded View

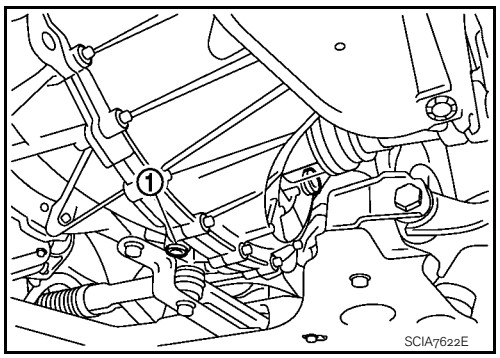
INFOID:0000000001070324

Refer to TM-71, "Exploded View".

Draining

INFOID:0000000001070325

1. Start engine and let it run to warm up transaxle.
2. Stop engine. Remove drain plug (1) and then drain gear oil.
3. Set a new gasket on drain plug (1) and install it to clutch housing. Tighten drain plug to the specified torque.
   CAUTION:
   Never reuse gasket.



Refilling

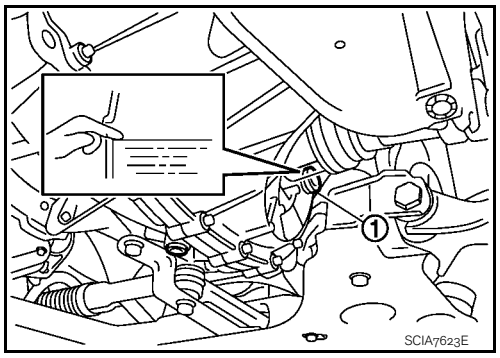
INFOID:0000000001070326

1. Remove filler plug (1). Fill with new gear oil until oil level reaches the specified limit at filler plug hole as shown.

   Oil grade and viscosity : **Refer to MA-21, "Fluids and Lubricants".**

   Oil capacity : **Refer to TM-103, "General Specification".**

2. After refilling gear oil, check oil level. Refer to TM-61, "Inspection".
3. Set a new gasket on filler plug (1) and then install it to transaxle case.
   CAUTION:
   Never reuse gasket.
4. Tighten filler plug to the specified torque.



Inspection

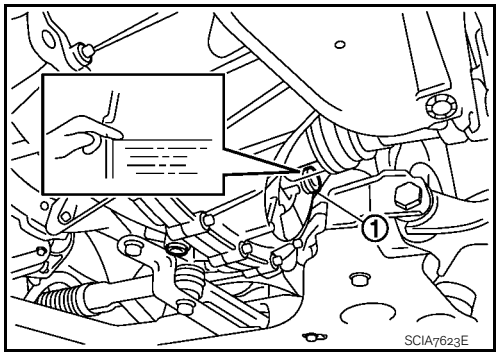
INFOID:0000000001070327

LEAKAGE

Make sure that gear oil is not leaking from transaxle or around it.

LEVEL

1. Remove filler plug (1) and check oil level at filler plug hole as shown.
   CAUTION:
   Never start engine while checking oil level.
2. Set a new gasket on filler plug (1) and then install it to transaxle case.
   CAUTION:
   Never reuse gasket.
3. Tighten filler plug to the specified torque.



cardiagn.com

ON-VEHICLE REPAIR

SIDE OIL SEAL

Exploded View

INFOID:0000000001070328

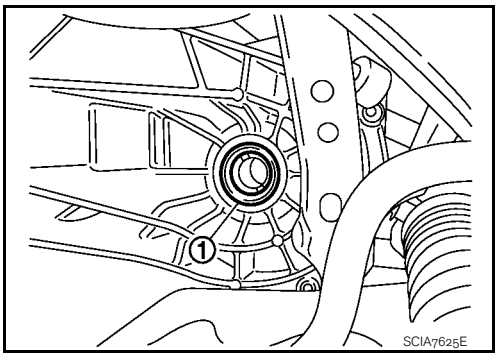
Refer to TM-71, "Exploded View".

Removal and Installation

INFOID:0000000001070329

REMOVAL

1. Remove front drive shafts. Refer to FAX-25, "MR20DE MODELS : Removal and Installation" (MR20DE) or FAX-33, "K9K MODELS : Removal and Installation" (K9K).
2. Remove differential side oil seals (1) using a suitable tool.
   CAUTION:
   Never damage transaxle case and clutch housing.



INSTALLATION

Note the following, and install in the reverse order of removal.

- Install differential side oil seals (1) to clutch housing and transaxle case using the drift (A) [SST: KV38100300].

  B : Transaxle case side
  C : Clutch housing side

  Dimension “L_1” : 1.2 - 1.8 mm (0.047 - 0.071 in)
  Dimension “L_2” : 2.7 - 3.3 mm (0.106 - 0.130 in)

  CAUTION:
  - **Never reuse differential side oil seal.**
  - **When installing, never incline differential side oil seal.**
  - **Never damage clutch housing and transaxle case.**
- Check oil level and oil leakage after installation. Refer to TM-61, "Inspection".

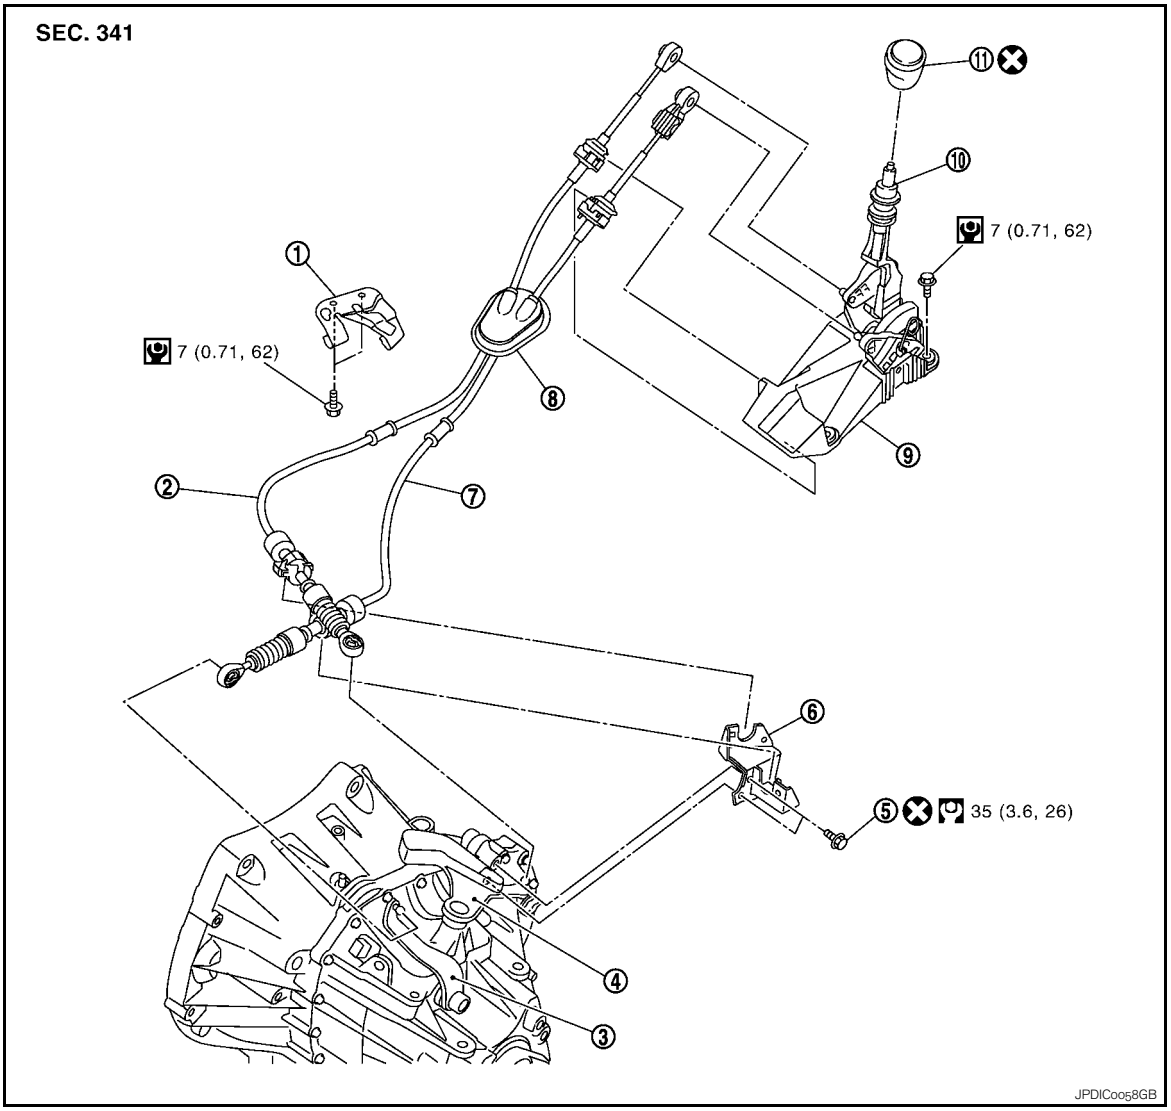
CONTROL LINKAGE

Exploded View

INFOID:0000000001070330



1. Bracket
2. Shift cable
3. Selector lever
4. Shifter lever
5. Tapping bolt
6. Cable mounting bracket
7. Select cable
8. Grommet
9. Control device assembly
10. Control lever
11. Control lever knob

Refer to GI-4, "Components" for the symbols in the figure.

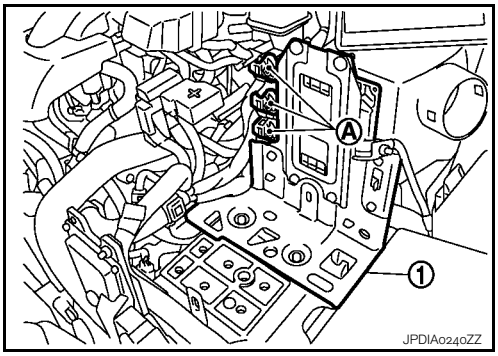
Removal and Installation

INFOID:0000000001070368

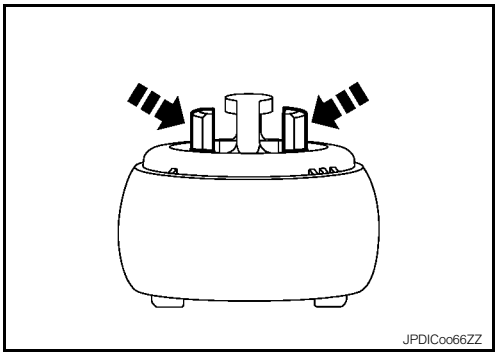
REMOVAL

1. Remove the air cleaner case and air duct (inlet) or air ducts. Refer to EM-144, "Removal and Installation" (MR20DE), EM-265, "Removal and Installation" (K9K).
2. Remove the battery. Refer to PG-118, "Removal and Installation".

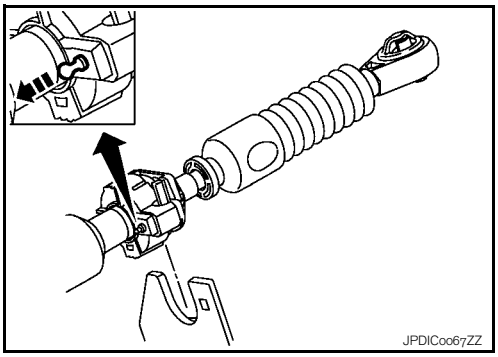
3. Disconnect connectors (A) and then remove bracket (1).



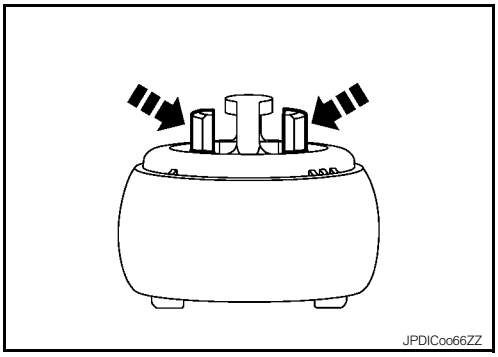
4. While pressing the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the selector lever.
5. While pressing the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the shifter lever.



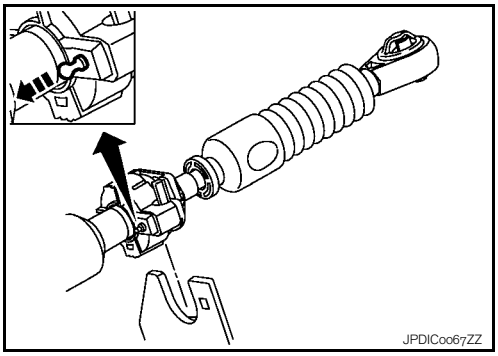
6. While pulling the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the cable mounting bracket.
7. While pulling the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the cable mounting bracket.
8. Remove the control lever knob.
9. Remove console finisher assembly and the center console assembly. Refer to IP-18, "Removal and Installation".
10. Shift the control lever to the neutral position.



11. While pressing the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control device assembly.
12. While pressing the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control device assembly.



13. While pulling the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control device assembly.
14. While pulling the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control device assembly.
15. Remove the control device assembly.
16. Remove the heat plate.
17. Remove the bracket.



cardiagn.com

18. Remove the grommet and then remove the shift cable and select cable from the vehicle.

INSTALLATION

Note the following, and install in the reverse order of removal.

- Shift the control lever to the neutral position.
- Securely assemble each cable and the selector lever and shifter lever.
- Securely assemble each cable and the cable mounting bracket.
- Securely assemble each cable and the control device assembly.
- Make sure that the claws of grommet are in contact with the floor.
- Be careful about the installation direction and push the control lever knob into the control lever.

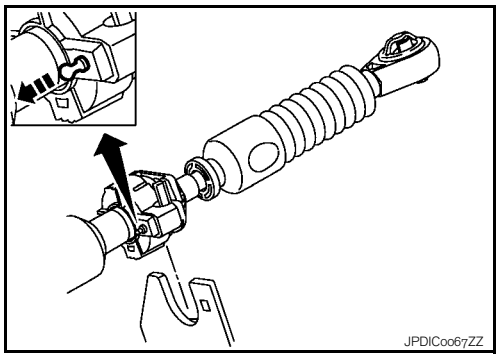
CAUTION:
Never reuse control lever knob.

- Tapping work for tapping bolt is not applied to new clutch housing. Do not perform tapping by other than screwing tapping bolt because tapping is formed by screwing tapping bolt into clutch housing.

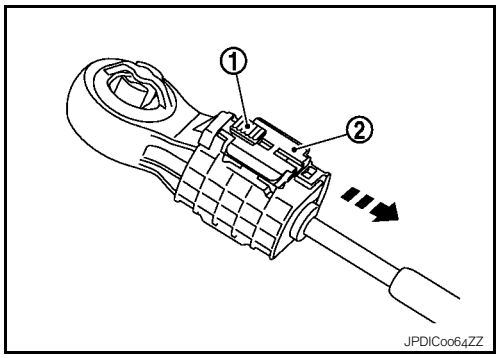
CAUTION:
Never reuse tapping bolt.

Install the select cable (the control device assembly side) with the following procedure.

1. While pulling the lock of the select cable in the direction of the arrow shown in the figure, install the select cable to the control device assembly.



2. Slide the lock (1) of the select cable in the direction of the arrow as shown in the figure to pull up the stopper (2) of the select cable.
3. Install the end of the select cable to the pin of the control device assembly.

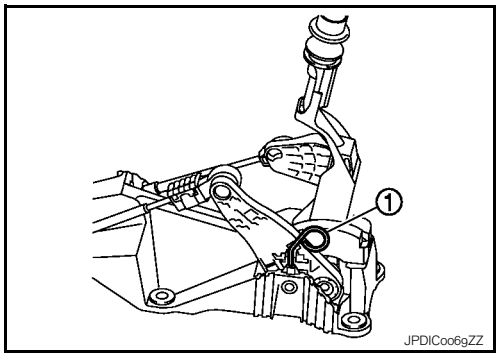


4. Install the lever stopper pin (1) or a pin [3 mm (0.12 in) dia.] to the control device assembly.

CAUTION:
Select cable cannot be adjusted accurately without a use of a lever stopper pin or a pin [3 mm (0.12 in) dia.].

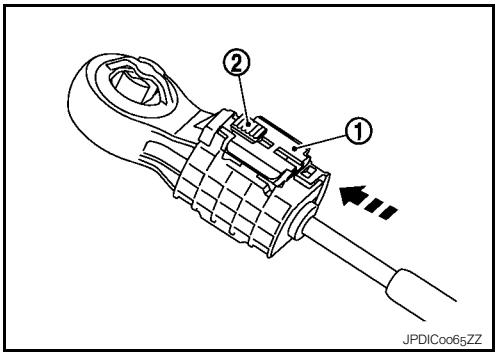
NOTE:
A lever stopper pin is not included in control device assembly. Therefore, if the control device assembly is not replaced, prepare a pin [3 mm (0.12 in) dia.].

5. Check that the control lever does not move in the direction of the select. If it moves, repeat step 3.
6. Shift the control lever to 4th gear position.



cardiagn.com

7. With the stopper (1) of the select cable pressed into all the way, slide lock (2) of the select cable all the way in the direction of the arrow.
8. Remove the lever stopper pin or a pin [3 mm (0.12 in) dia.] from the control device assembly.
9. Shift the control lever to each gear position to check that there is no bindings. If any, repeat step 3.



Inspection

INFOID:0000000001070332

After installing, confirm the following items:
- When the control lever is shifted to 1st-2nd side and 5th-6th side, confirm the control lever returns to neutral position smoothly.
- When the control lever is shifted to each position, make sure there is no binding or disconnection in each boot.

Removal and Installation

INFOID:0000000001070334

REMOVAL

Refer to the figure for removal procedure.

CAUTION:

When removing air breather hose, be sure to hold two way connector securely.

INSTALLATION

Refer to the figure for installation procedure.

- When installing air breather hose on two way connector, aim paint mark face toward the vehicle front.
- When installing air breather hose on two way connector, push it until it hits transaxle case.
- When installing air breather hose to air cleaner case, make sure that clip are fully inserted.

CAUTION:

Make sure air breather hose is not collapsed or blocked due to folding or bending when installed.

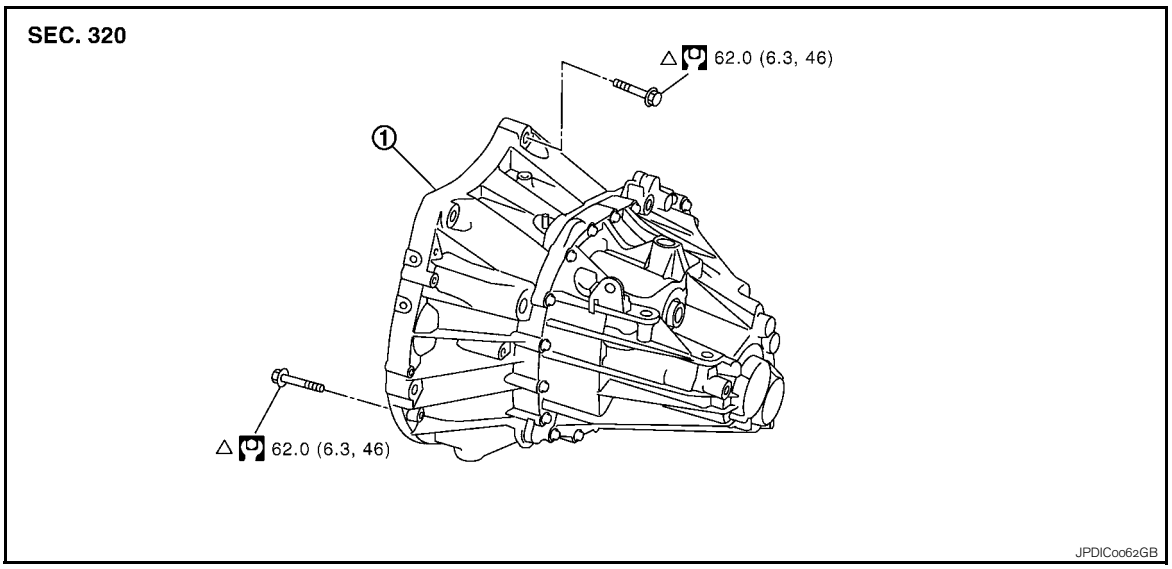
TRANSAXLE ASSEMBLY

Exploded View

INFOID:0000000001070335

MR20DE



1. Transaxle assembly

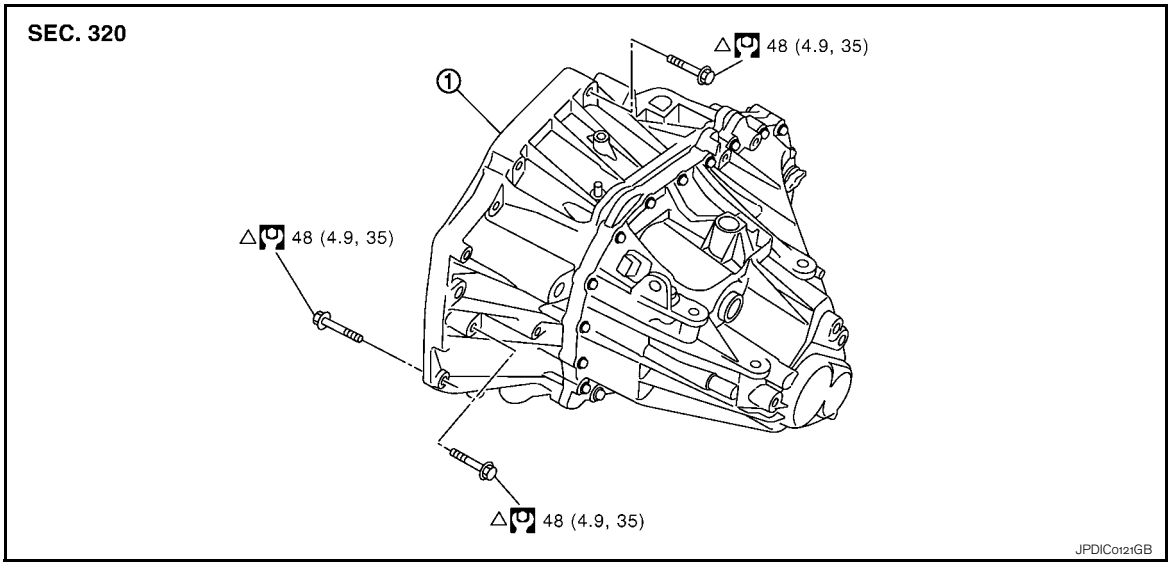
△: For the bolt mounting positions, refer to “INSTALLATION”.

Refer to GI-4, "Components" for symbols not described on the above.

CAUTION:

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

K9K



1. Transaxle assembly

△: For the bolt mounting positions, refer to “INSTALLATION”.

Refer to GI-4, "Components" for symbols not described on the above.

CAUTION:

cardiagn.com

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

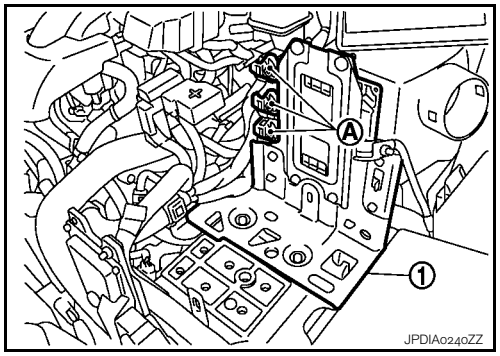
Removal and Installation

INFOID:0000000001070336

CAUTION:
If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove air breather hose. Refer to TM-67, "Removal and Installation".
3. Remove air cleaner case and air duct (inlet). Refer to EM-144, "Removal and Installation" (MR20DE) or EM-265, "Removal and Installation" (K9K).
4. Remove battery. Refer to PG-118, "Removal and Installation".
5. Disconnect connectors (A) and then remove bracket (1).
6. Drain clutch fluid and then remove clutch tube from CSC (Concentric Slave Cylinder). Refer to CL-14, "Removal and Installation".
   CAUTION:
   Never depress clutch pedal during removal procedure.
7. Disconnect position switch harness connector.
8. Remove crankshaft position sensor (POS). (For K9K) Refer to EM-280, "Removal and Installation".
   CAUTION:
   - **Handle carefully to avoid dropping and shocks.**
   - **Never disassemble.**
   - **Never allow metal powder to adhere to magnetic part at sensor tip.**
   - **Never place sensors in a location where they are exposed to magnetism.**



9. Disconnect ground cable.
10. Remove wire harnesses from transaxle assembly.
11. Disconnect select cable and shift cable from transaxle assembly. Refer to TM-63, "Removal and Installation".
12. Remove starter motor. Refer to STR-27, "MR20DE MODELS : Removal and Installation" (MR20DE) or STR-20, "K9K MODELS : Removal and Installation" (K9K).
13. Remove engine under cover.
14. Drain gear oil. Refer to TM-61, "Draining".
15. Remove exhaust front tube. Refer to EX-10, "Removal and Installation" (MR20DE) or EX-15, "Removal and Installation" (K9K).
16. Remove front drive shafts. Refer to FAX-25, "MR20DE MODELS : Removal and Installation" (MR20DE) or FAX-33, "K9K MODELS : Removal and Installation" (K9K).
    NOTE:
    Insert a suitable plug into differential side oil seal after removing front drive shaft.
17. Remove rear engine mounting brackets and rear torque rod. (For MR20DE) Refer to EM-195, "M/T : Removal and Installation".
18. Remove transaxle mounting lower brackets and transaxle torque rod. (For K9K) Refer to EM-298, "Removal and Installation".
19. Remove suspension member and suspension member stay. Refer to FSU-17, "Removal and Installation".
20. Set a suitable jack to transaxle assembly and then set a suitable jack to engine assembly.
    CAUTION:
    When setting a suitable jack, be careful so that it does not contact with the switch.
21. Remove transaxle assembly mounting bolts.
22. Remove engine mounting through bolt-securing nut. Refer to EM-195, "M/T : Removal and Installation" (MR20DE) or EM-298, "Removal and Installation" (K9K).

cardiagn.com

23. Remove transaxle assembly from the vehicle.
CAUTION:
- **Secure transaxle assembly to a suitable jack while removing it.**
- **The transaxle assembly must not interfere with the wire harnesses and clutch tube.**

24. Remove CSC (Concentric Slave Cylinder). Refer to CL-15, "Removal and Installation".
CAUTION:
If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

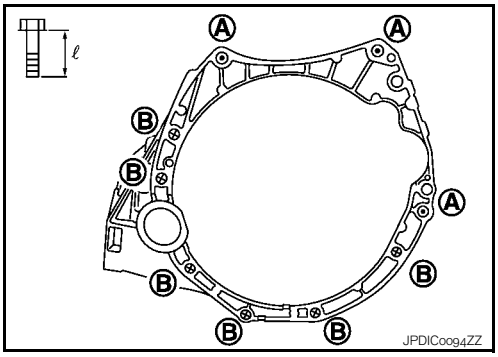
INSTALLATION

Note the following, and install in the reverse order of removal.
- Tighten transaxle assembly mounting bolts to the specified torque. The figure is the view from the engine.

- **MR20DE**

: Transaxle to engine

: Engine to transaxle

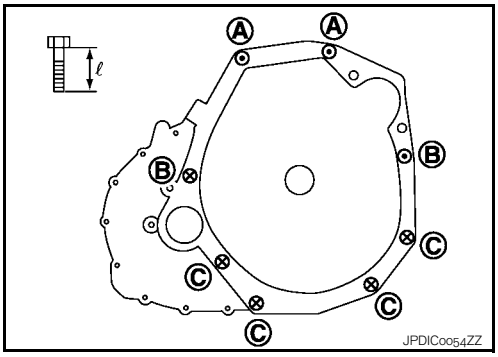


Bolt symbol	A	B
Quantity	3	6
"ℓ" mm (in)	60 (2.36)	50 (1.97)

- **K9K**

: Transaxle to engine

: Engine to transaxle



Bolt symbol	A	B	C
Quantity	2	2	4
"ℓ" mm (in)	50 (1.97)	80 (3.15)	65 (2.56)

CAUTION:
- **The transaxle assembly must not interfere with the wire harnesses and clutch tube.**
- **When installing transaxle assembly, never bring input shaft into contact with clutch cover.**
- Refer to CL-15, "Removal and Installation" for CSC (Concentric Slave Cylinder) installation procedure.
- Refer to TM-63, "Removal and Installation" for select cable and shift cable installation procedure.
- Bleed the air from the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".
- After installation, check for oil leakage and oil level. Refer to TM-61, "Inspection".

12. Differential side bearing inner race (clutch housing side)
13. Differential side bearing outer race (clutch housing side)

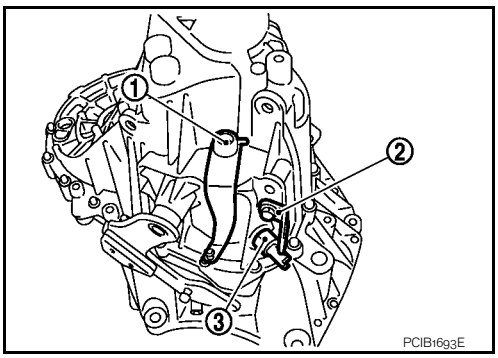
■: Replace the parts as a set.

Refer to GI-4, "Components" for symbols not described on the above.

Disassembly

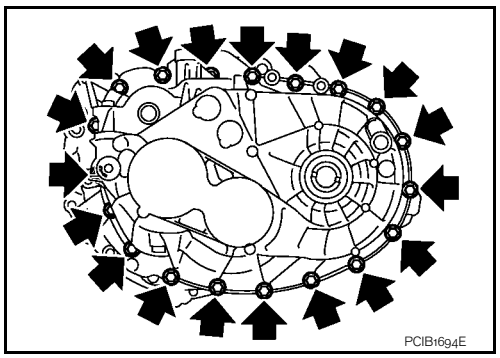
INFOID:0000000001070338

1. Remove drain plug and gasket from clutch housing using the socket [Commercial service tool] and then drain gear oil.
2. Remove filler plug and gasket from transaxle case.
3. Remove retaining pin from shifter lever (1) using a pin punch. And then remove shifter lever.
4. Remove bracket (2) and position switch (3) from transaxle case.

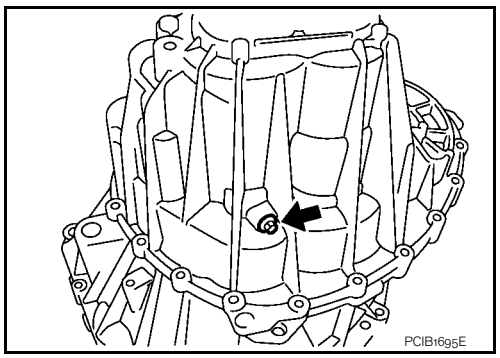


cardiagn.com

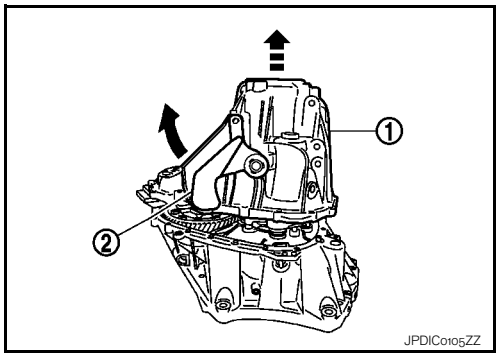
5. Remove mounting bolts.



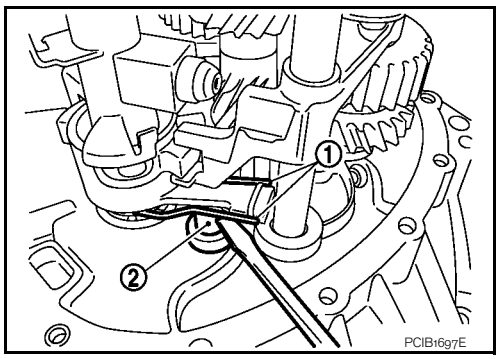
6. Remove reverse idler shaft mounting bolt and seal washer.



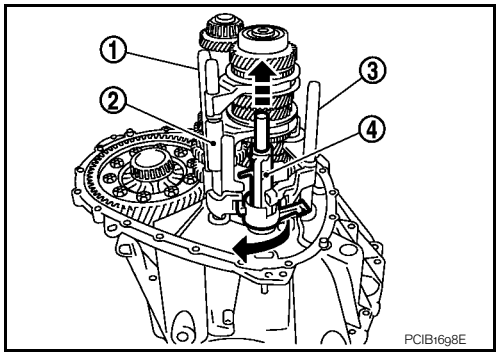
7. Remove transaxle case (1) upward while rotating selector lever (2).



8. Remove spring (1) of selector from return bushing (2).

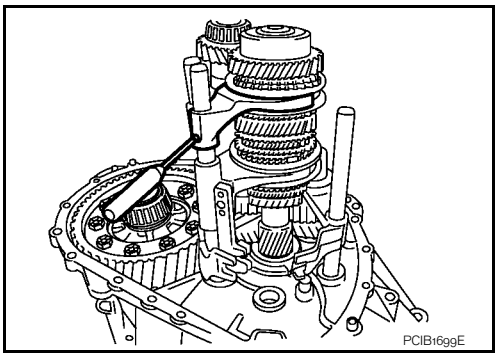


9. Move 1st-2nd fork rod (1), 3rd-4th and 5th-6th fork rod (2), and reverse fork rod (3) to neutral position.
10. Remove selector (4) from clutch housing.

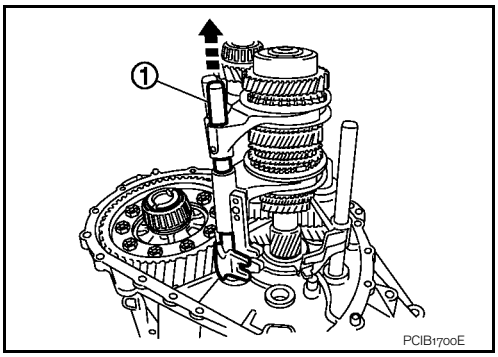


cardiagn.com

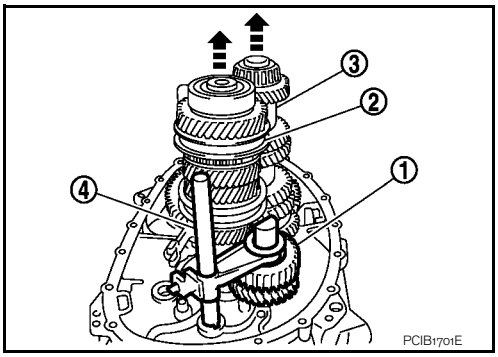
11. Remove retaining pin from 5th-6th shift fork using a pin punch.



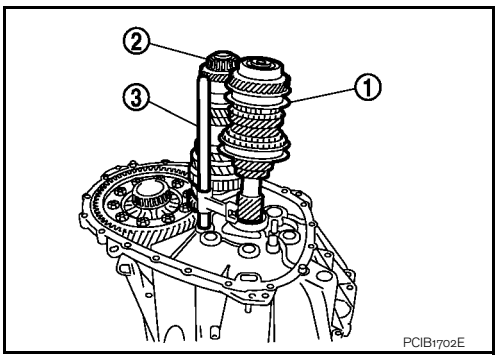
12. Remove 3rd-4th and 5th-6th fork rod (1) assembly according to the following.
a. Lift the fork rod up.
b. Remove 3rd-4th and 5th-6th fork rod (1) assembly from clutch housing.
c. Remove 3rd-4th shift fork and 5th-6th shift fork from 3rd-4th and 5th-6th fork rod.



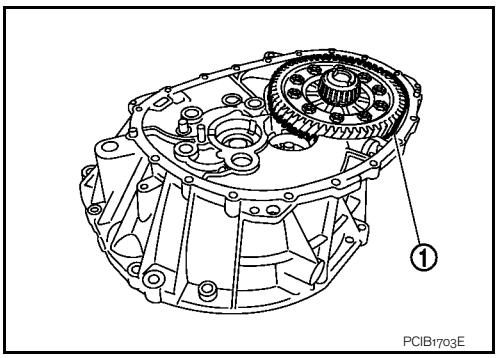
13. Remove reverse gear assembly (1) according to the following.
a. Lift up the input shaft assembly (2) and mainshaft assembly (3).
b. Remove reverse gear assembly (1) and reverse fork rod (4) from clutch housing.
14. Remove spring washer located under the reverse idler shaft.



15. Remove input shaft assembly (1), mainshaft assembly (2), and 1st-2nd fork rod (3) from clutch housing.

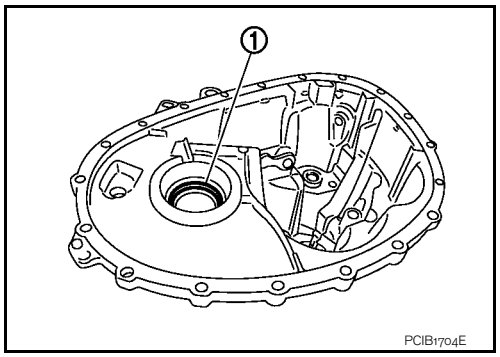


16. Remove final drive assembly (1) from clutch housing.
17. Remove magnet from clutch housing.

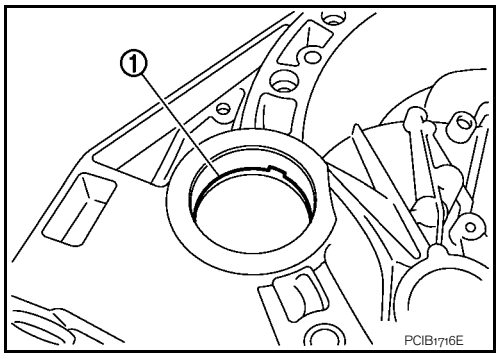


cardiagn.com

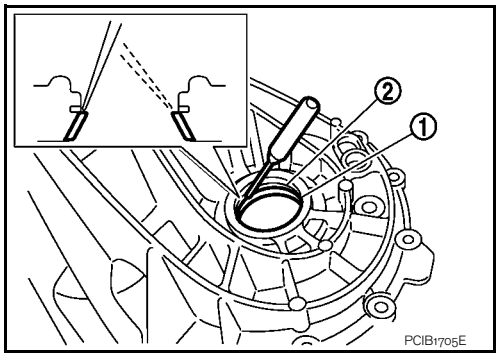
18. Remove differential side oil seals (1) from clutch housing and transaxle case using a flat-bladed screwdriver.
CAUTION:
Never damage clutch housing and transaxle case.



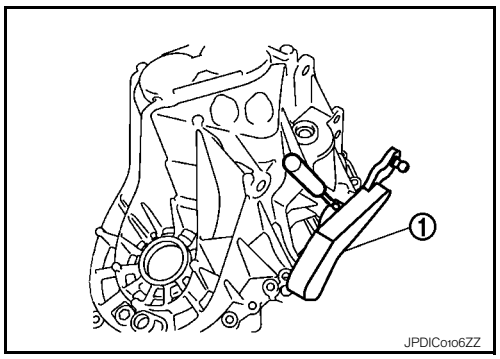
19. Remove differential side bearing outer race (1) from clutch housing using a brass bar.
CAUTION:
Never damage clutch housing.



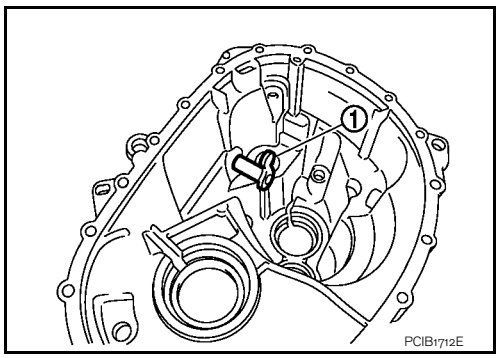
20. Remove differential side bearing outer race (1) and shim (2) from transaxle case using a brass bar as shown.
CAUTION:
Never damage transaxle case.



21. Remove retaining pin from selector lever (1) using a pin punch.
22. Remove selector lever.

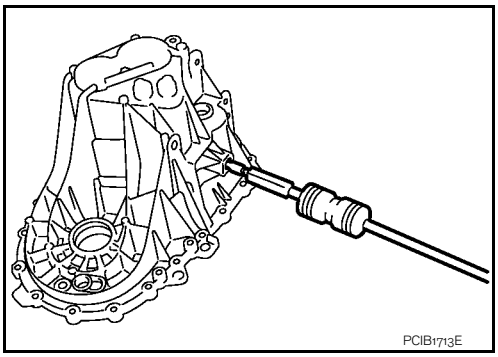


23. Remove shift finger (1) from transaxle case.

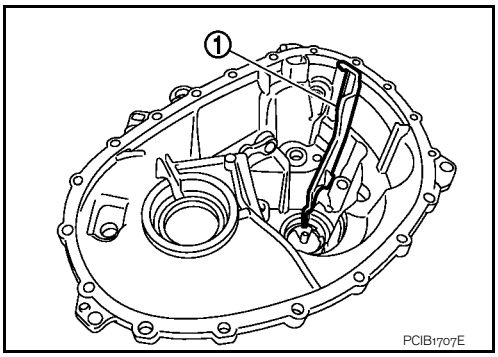


cardiagn.com

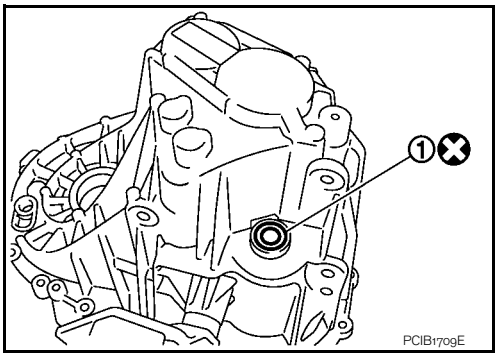
24. Remove selector lever oil seal and bushings from transaxle case using a suitable remover.



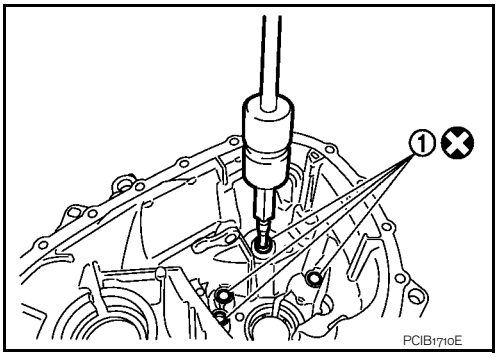
25. Remove oil gutter (1) from transaxle case.



26. Remove shifter lever oil seal (1) from transaxle case.



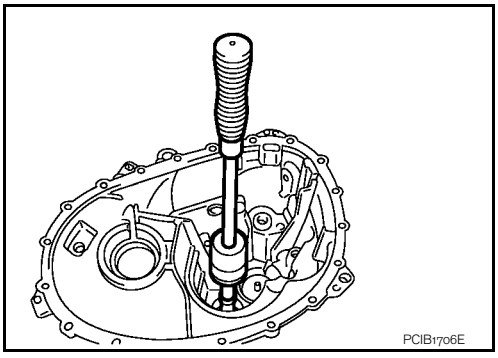
27. Remove bushings (1) from transaxle case using a suitable remover.



28. Remove mainshaft rear bearing outer race from transaxle case using a suitable remover and then remove bearing preloading shim.

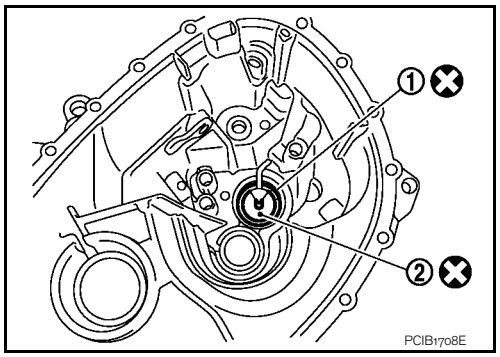
CAUTION:

Never damage transaxle case.

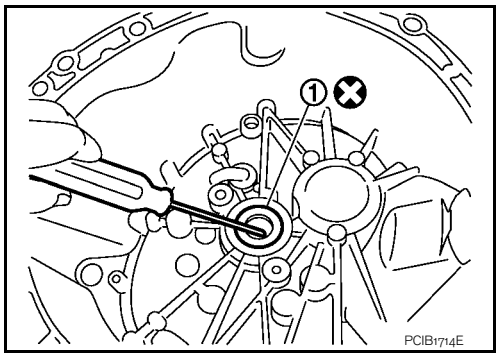


cardiagn.com

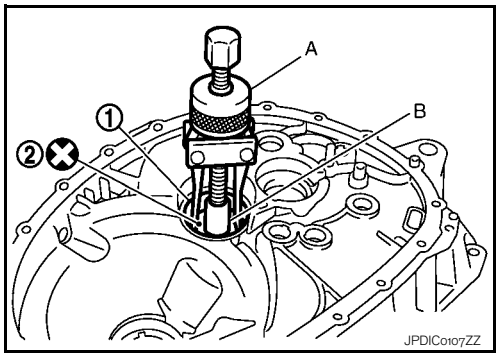
29. Remove snap ring (1) and oil channel (2) from transaxle case.



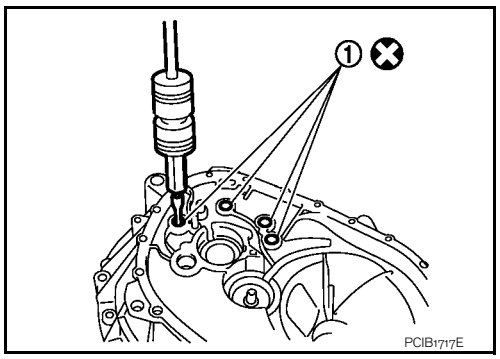
30. Remove input shaft oil seal (1) from clutch housing using a flat-bladed screwdriver.



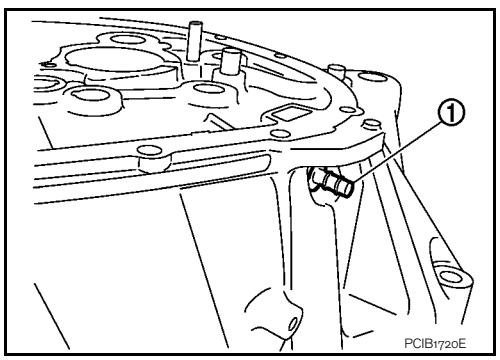
31. Remove mainshaft front bearing outer race (1) and oil channel (2) from clutch housing using the puller (A) [SST: KV381054S0] and the spacer (B) [Commercial service tool].



32. Remove bushings (1) from clutch housing using a suitable remover.

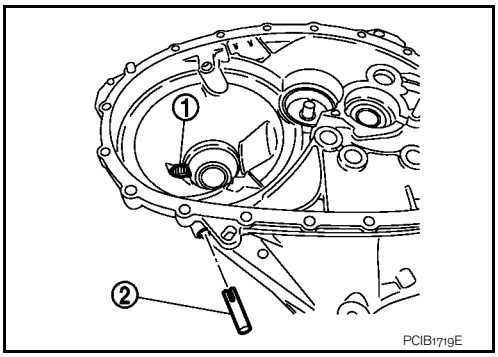


33. Remove two way connector (1) from clutch housing.



cardiagn.com

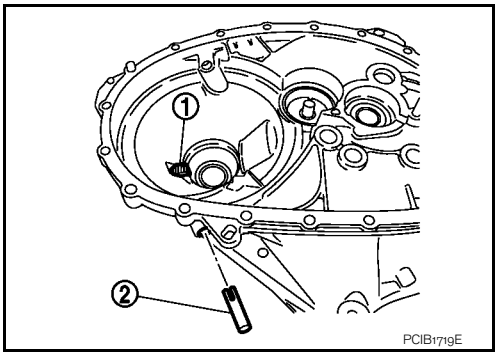
34. Remove pinion gear (1) and pinion shaft (2) from clutch housing.



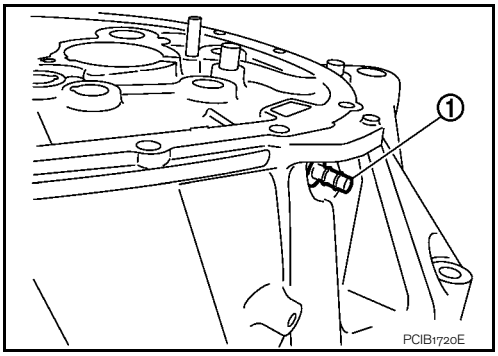
Assembly

INFOID:0000000001070339

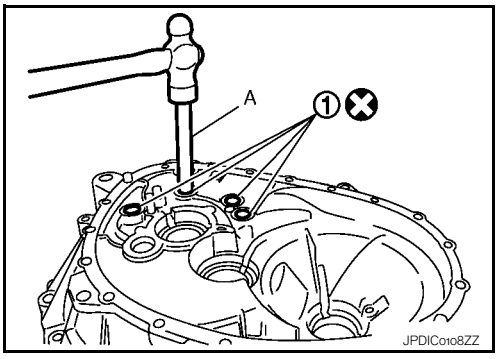
1. Install pinion gear (1) and pinion shaft (2) into clutch housing.



2. Install two way connector (1) into clutch housing.

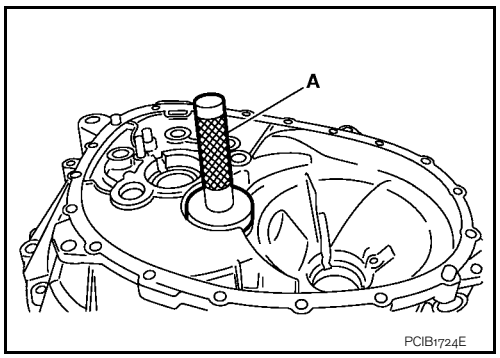


3. Install bushings (1) until they are flush with end face of clutch housing using the drift (A) [Commercial service tool].

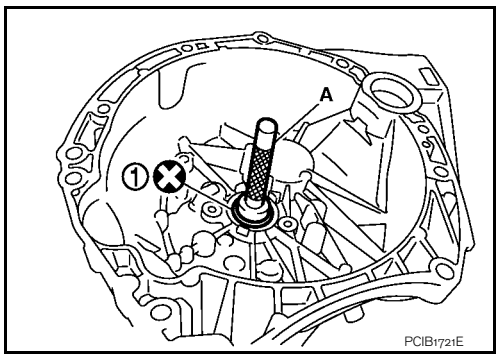


cardiagn.com

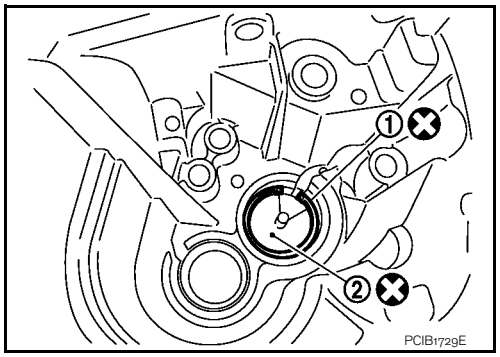
4. Install oil channel and mainshaft front bearing outer race into clutch housing using the drift (A) [SST: KV38100200].
CAUTION:
- **Never reuse oil channel.**
- **Replace mainshaft front bearing outer race and mainshaft front bearing inner race as a set.**



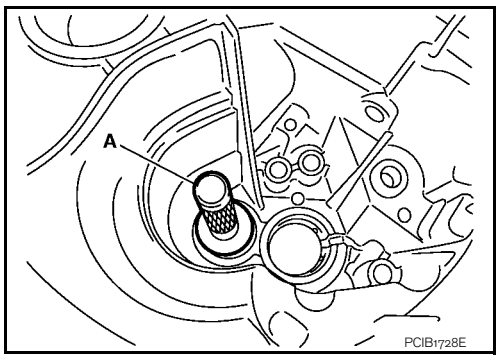
5. Install input shaft oil seal (1) into clutch housing using the drift (A) [SST: ST33220000].



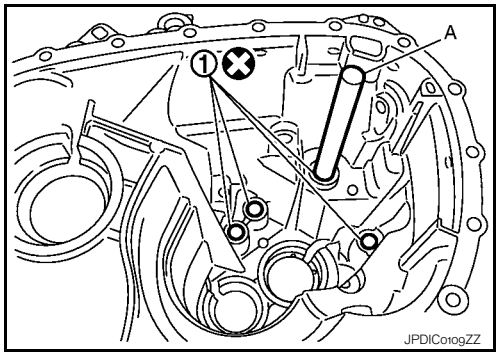
6. Install snap ring (1) and oil channel (2) onto transaxle case.



7. Install bearing preloading shim and mainshaft rear bearing outer race into transaxle case using the drift (A) [SST: KV38100200].
CAUTION:
Replace mainshaft rear bearing outer race and mainshaft rear bearing inner race as a set.

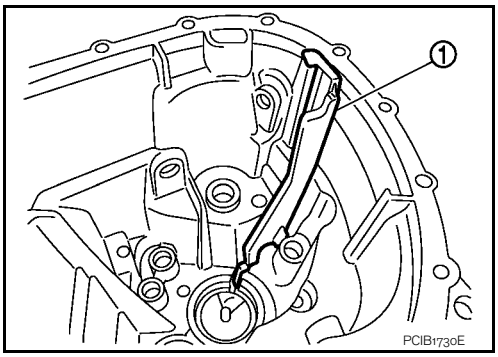


8. Install bushings (1) into transaxle case using the drift (A) [Commercial service tool].

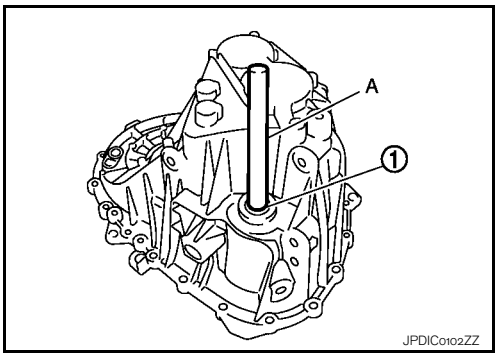


cardiagn.com

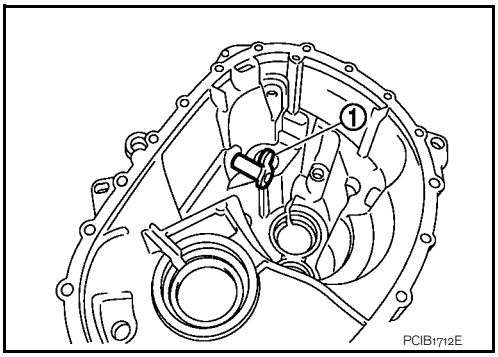
9. Install oil gutter (1) onto transaxle case.



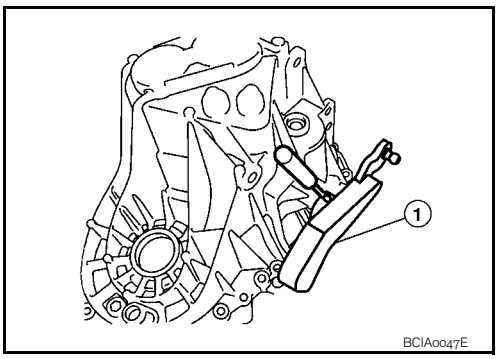
10. Install shifter lever oil seal (1) into transaxle case using the drift (A) [Commercial service tool].
11. Install selector lever oil seal and bushings into transaxle case using the drift [Commercial service tool].



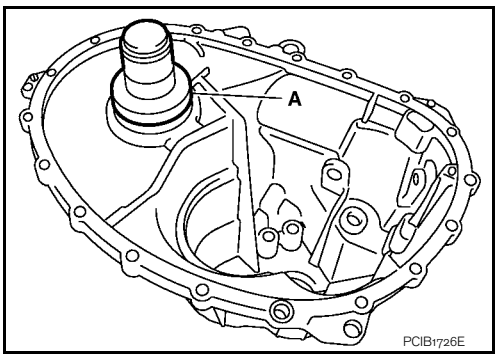
12. Install shift finger (1) into transaxle case.



13. Install selector lever (1) and then install retaining pin.
CAUTION:
Never reuse retaining pin.

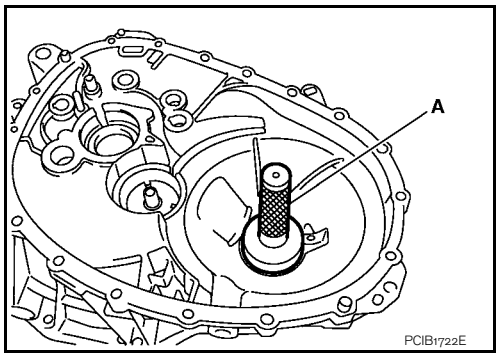


14. Install shim and differential side bearing outer race (transaxle case side) into transaxle case using the drift (A) [SST: ST33400001].
CAUTION:
Replace differential side bearing inner race and differential side bearing outer race as a set.



cardiagn.com

15. Install differential side bearing outer race (clutch housing side) into clutch housing using the drift (A) [SST: KV38100200].
CAUTION:
Replace differential side bearing inner race and differential side bearing outer race as a set.

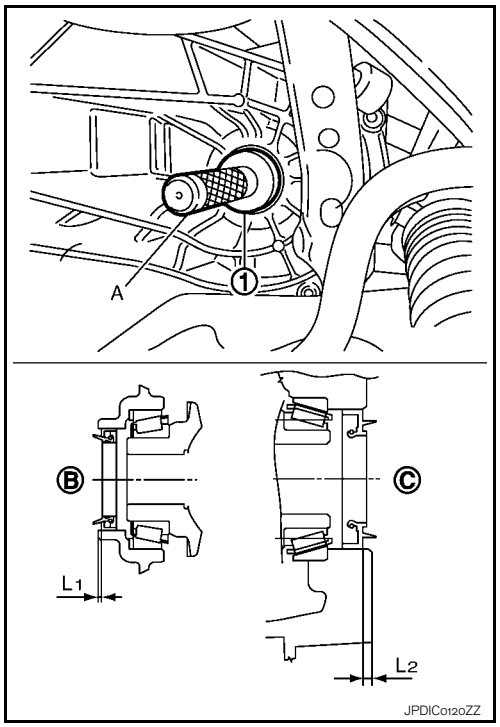


16. Install differential side oil seals (1) into clutch housing and transaxle case using the drift (A) [SST: KV38100300].

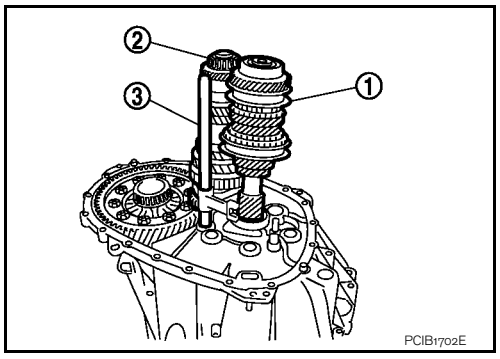
B : Transaxle case side
C : Clutch housing side

Dimension "L_1" : 1.2 - 1.8 mm (0.047 - 0.071 in)
Dimension "L_2" : 2.7 - 3.3 mm (0.106 - 0.130 in)

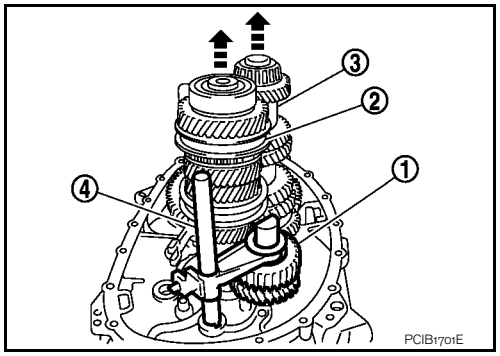
17. Install magnet onto clutch housing.
18. Install final drive assembly into clutch housing.



19. Install input shaft assembly (1), mainshaft assembly (2) and 1st-2nd fork rod (3) into clutch housing.
20. Install spring washer located under the reverse idler shaft.

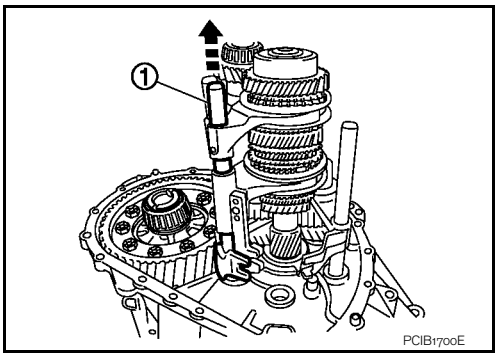


21. Install reverse gear assembly (1) according to the following.
a. Lift up the input shaft assembly (2) and mainshaft assembly (3).
b. Install reverse gear assembly and reverse fork rod (4) to clutch housing.
22. Install 3rd-4th shift fork and 5th-6th shift fork to 3rd-4th and 5th-6th fork rod.

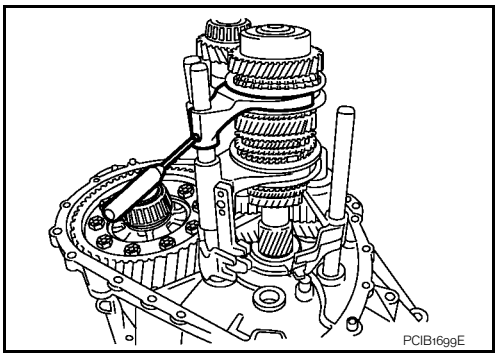


cardiagn.com

23. While lifting up fork rod (1), install 3rd-4th and 5th-6th fork rod assembly to clutch housing.
CAUTION:
Replace the 5th-6th shift fork, the 3rd-4th shift fork, and the 3rd-4th and 5th-6th fork rod as a set.

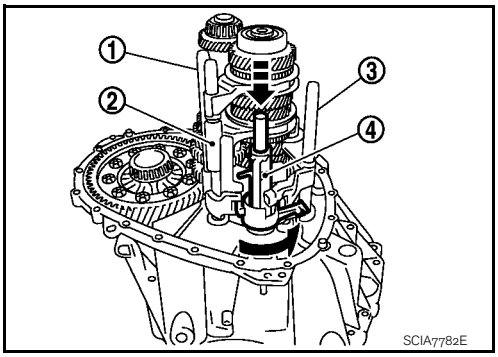


24. Install retaining pin into 5th-6th shift fork using a pin punch.
CAUTION:
Never reuse retaining pin.

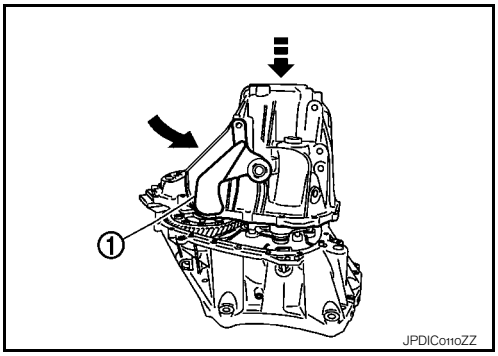


25. Move 1st-2nd fork rod (1), 3rd-4th and 5th-6th fork rod assembly (2), and reverse fork rod (3) to neutral position.
26. Install selector (4) into clutch housing.
27. Install spring of selector into return bushing.
28. Apply recommended sealant onto the mating surface of transaxle case.
    - **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

    CAUTION:
    - **Remove old sealant adhering to the mating surfaces. Also remove any moisture, oil, or foreign material adhering to both mating surfaces.**
    - **Check for damage on the mating surface.**
    - **Apply a continuous bead of liquid gasket to the mating surface.**

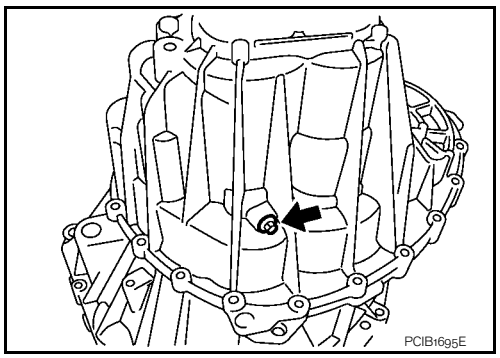


29. Engage shift finger and selector by moving selector lever (1). Install transaxle case to clutch housing.

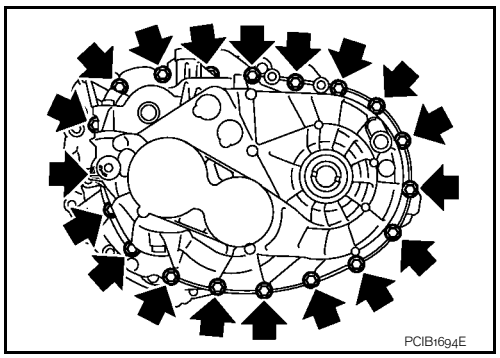


cardiagn.com

30. Install seal washer and reverse idler shaft mounting bolt, and then tighten mounting bolt to the specified torque.
CAUTION:
Never reuse seal washer.

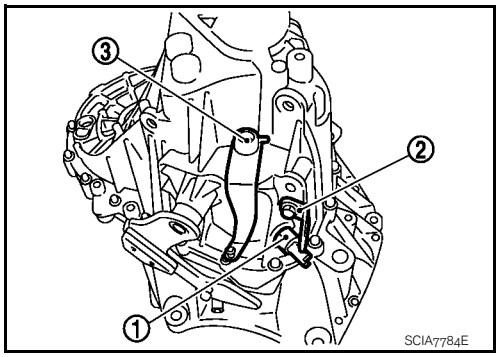


31. Tighten mounting bolts to the specified torque.



32. Apply recommended sealant to threads of position switch (1). Then install it to transaxle case and tighten to the specified torque.
- **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

33. Install bracket (2), and then mounting bolt to the specified torque.
34. Install shifter lever (3), and then install retaining pin using a pin punch.
CAUTION:
Never reuse retaining pin.



35. Install gasket onto drain plug, and then install it into clutch housing using the socket [Commercial service tool]. Tighten drain plug to the specified torque.
CAUTION:
Never reuse gasket.
36. Install gasket onto filler plug, and then install it into transaxle case. Tighten filler plug to the specified torque.
CAUTION:
- **Never reuse gasket.**
- **After gear oil is filled, tighten filler plug to specified torque.**

INPUT SHAFT AND GEAR

Exploded View

INFOID:0000000001070341

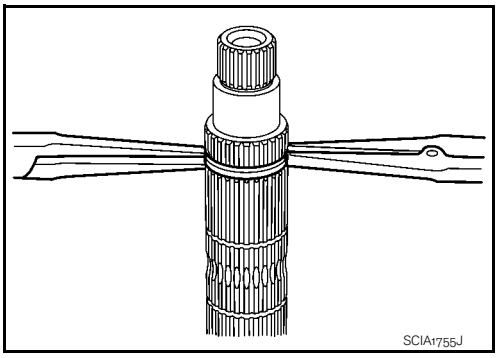
Refer to TM-71, "Exploded View".

Disassembly

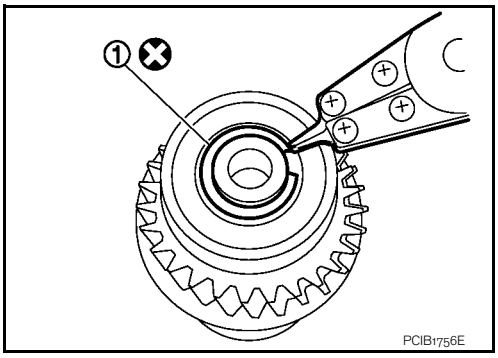
INFOID:0000000001070342

CAUTION:

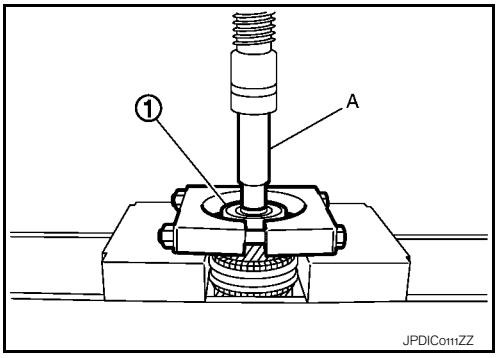
- **Set input shaft on the vise with back plate and remove gears and snap rings.**
- **For installation and removal of snap ring, set snap ring pliers and flat pliers at both sides of snap ring. Stretch snap ring, and move it with flat pliers.**
- **Disassemble gear components putting matching marks on the parts that do not affect any functions.**



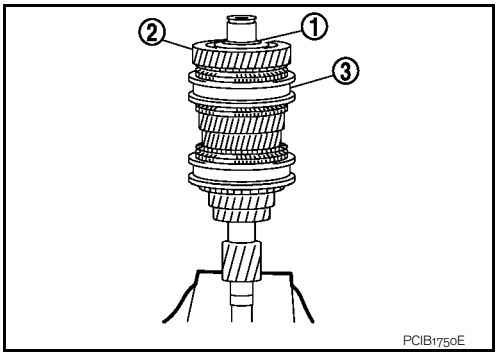
1. Remove snap ring (1).



2. Set the drift (A) [Commercial service tool] and puller to input shaft rear bearing (1), and remove input shaft rear bearing from input shaft using a press.

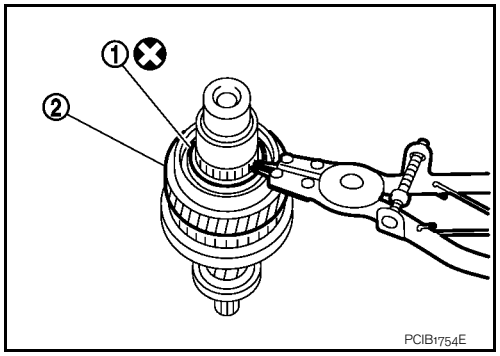


3. Remove washer (1), 6th input gear (2) and 5th-6th synchronizer assembly (3).
4. Remove needle bearing.

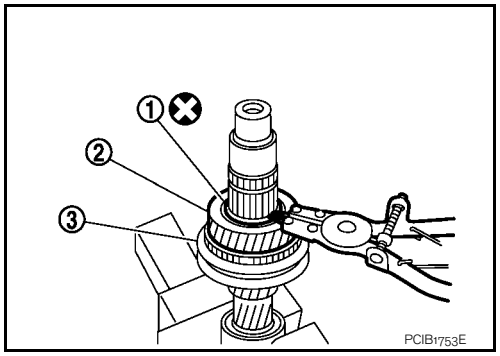


cardiagn.com

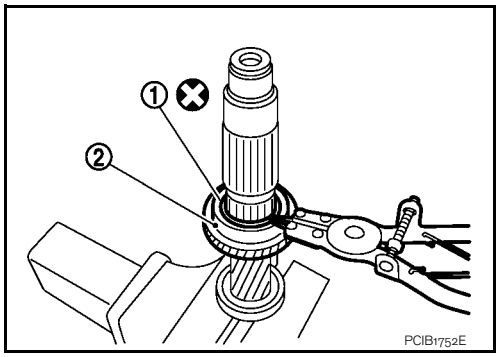
5. Remove snap ring (1), washer and 5th input gear (2).
6. Remove washer.



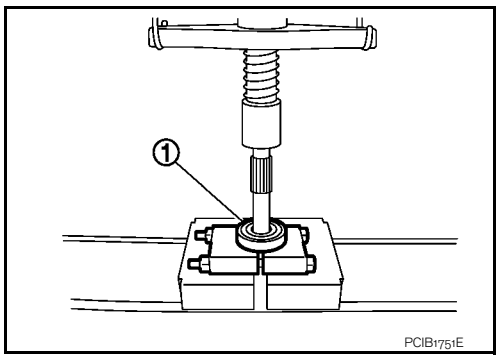
7. Remove snap ring (1), washer, 4th input gear (2) and 3rd-4th synchronizer assembly (3).



8. Remove snap ring (1), washer and 3rd input gear (2).



9. Remove input shaft front bearing (1) from input shaft using a press.



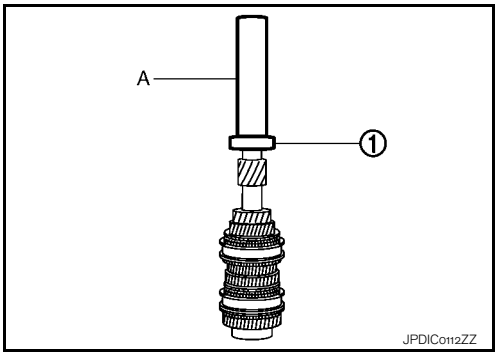
Assembly

INFOID:0000000001070343

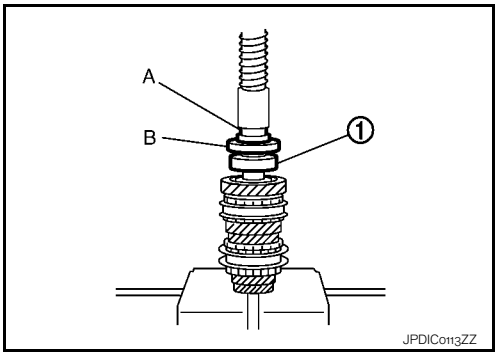
Note the following, and assembly is in the reverse order of disassembly.

cardiagn.com

- Press-fit the input shaft front bearing (1) onto the input shaft using the drift (A) [Commercial service tool] and press.

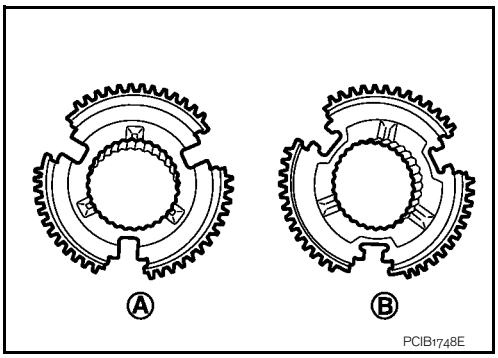


- Press-fit the input shaft rear bearing (1) onto the input shaft using the drift (A) [Commercial service tool], the drift (B) [SST: ST36720030] and press.



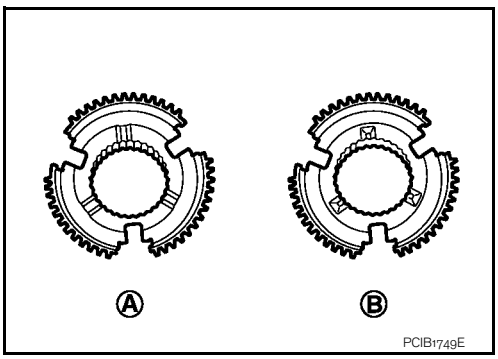
CAUTION:
- **Never reuse snap ring.**
- **Make sure that snap ring is securely installed in the groove.**
- **Apply gear oil to baulk ring.**
- **Replace coupling sleeve and synchronizer hub as a set.**
- **Be careful with the orientation of 3rd-4th synchronizer hub.**

A	: 3rd input gear side
B	: 4th input gear side



- **Be careful with the orientation of 5th-6th synchronizer hub.**

A	: 5th input gear side
B	: 6th input gear side



Inspection

MAINSHAFT AND GEAR

Exploded View

INFOID:0000000001070345

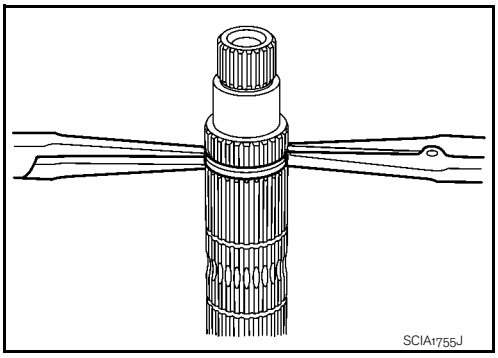
Refer to TM-71, "Exploded View".

Disassembly

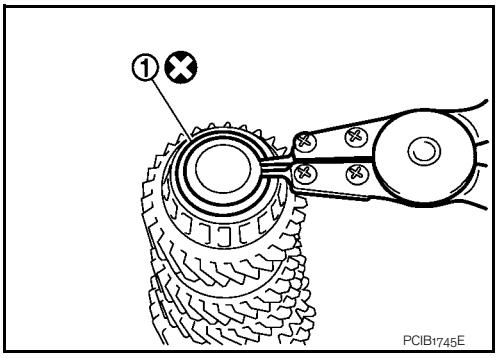
INFOID:0000000001070346

CAUTION:

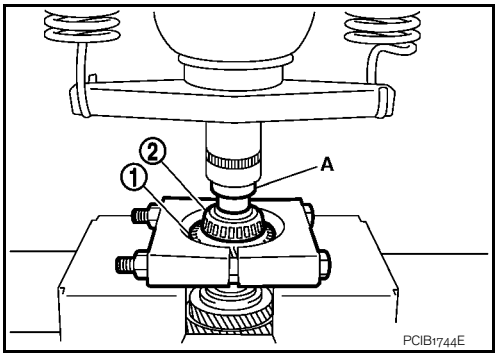
- **Set mainshaft on the vise with back plate and remove gears and snap rings.**
- **For installation and removal of snap ring, set snap ring pliers and flat pliers at both sides of snap ring. Stretch snap ring, and move it with flat pliers.**
- **Disassemble gear components putting matching marks on the parts that do not affect any functions.**



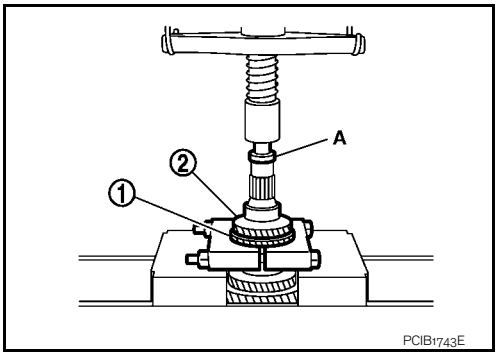
1. Remove snap ring (1).



2. Set the drift (A) [SST: ST33052000] and puller on 6th main gear (1), and remove mainshaft rear bearing inner race (2) and 6th main gear from mainshaft using a press.

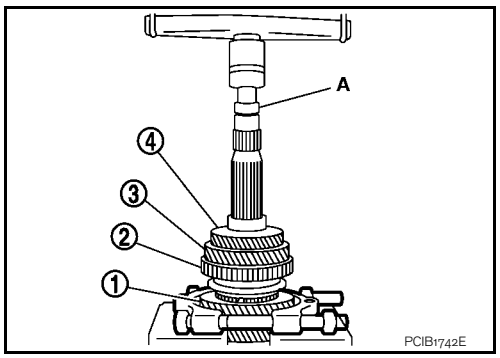


3. Set the drift (A) [SST: ST33052000] and puller on 4th main gear (1), and remove 5th main gear (2), and 4th main gear from mainshaft using a press.
4. Remove intermediate adjusting shim.

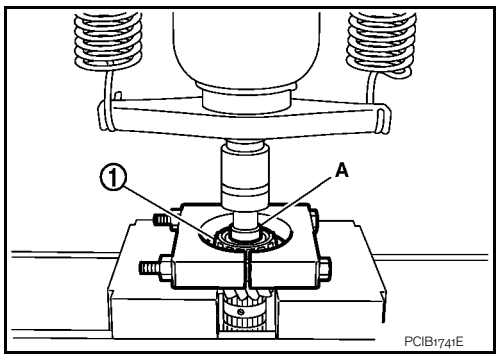


cardiagn.com

5. Set the drift (A) [SST: ST33052000] and puller on 1st main gear (1), and remove 1st main gear, 1st-2nd synchronizer assembly (2), 2nd main gear (3), bushing, and 3rd main gear (4) from mainshaft using a press.



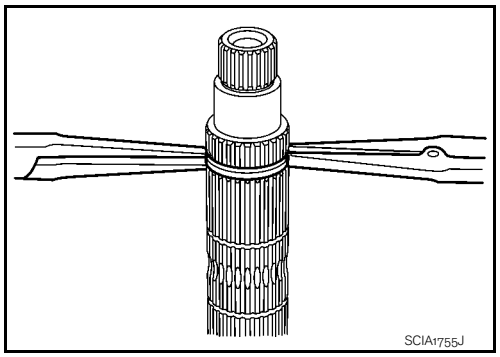
6. Set the drift (A) [SST: ST33052000] and puller on mainshaft front bearing inner race (1), and remove mainshaft front bearing inner race from mainshaft using a press.



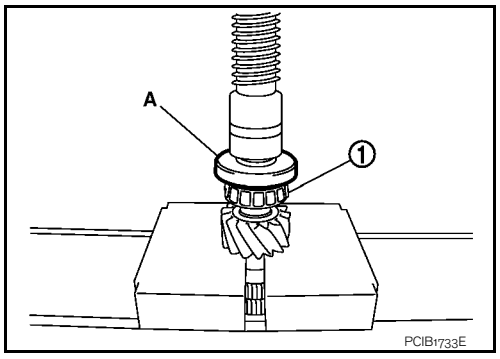
Assembly

INFOID:0000000001070347

CAUTION:
For installation and removal of snap ring, set snap ring pliers and flat pliers at both sides of snap ring. Stretch snap ring, and move it with flat pliers.

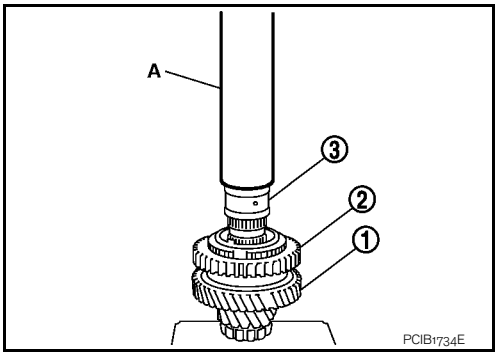


1. Press-fit the mainshaft front bearing inner race (1) onto the mainshaft using the drift (A) [SST: ST36720030] and press.
CAUTION:
Replace mainshaft front bearing outer race and mainshaft front bearing inner race as a set.
2. Apply gear oil to 1st inner baulk ring, 1st synchronizer cone, 1st outer baulk ring, 2nd inner baulk ring, 2nd synchronizer cone, and 2nd outer baulk ring.

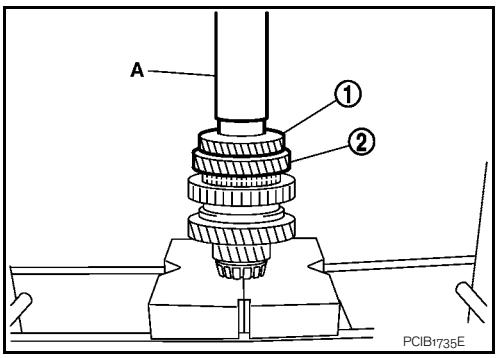


cardiagn.com

3. Install 1st main gear (1), and 1st-2nd synchronizer assembly (2) onto the mainshaft.
   CAUTION:
   - **Replace 1st inner baulk ring, 1st synchronizer cone and 1st outer baulk ring as a set.**
   - **Replace 2nd inner baulk ring, 2nd synchronizer cone and 2nd outer baulk ring as a set.**
   - **Replace 1st-2nd coupling sleeve and 1st-2nd synchronizer hub as a set.**
4. Press-fit the bushing (3) onto the mainshaft using the drift (A) [SST: KV32102700] and press.



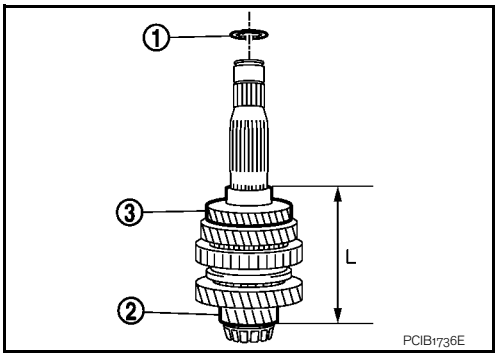
5. Press-fit 3rd main gear (1) to the mainshaft using the drift (A) [SST: KV32102700] and press after installing the 2nd main gear (2) and the 3rd main gear to the mainshaft.



6. Select the thickness of the intermediate adjusting shim (1) needed by measuring the distance “L” between the base of the mainshaft (2) and the top of the 3rd main gear (3).

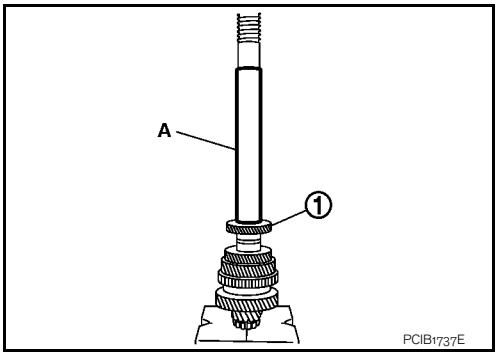
Unit: mm (in)

Distance “L”	Adjusting shim thickness
147.690 – 147.666 (5.8146 – 5.8136)	1.500 (0.0591)
147.665 – 147.641 (5.8136 – 5.8126)	1.525 (0.0600)
147.640 – 147.616 (5.8126 – 5.8116)	1.550 (0.0610)
147.615 – 147.591 (5.8116 – 5.8107)	1.575 (0.0620)
147.590 – 147.566 (5.8106 – 5.8097)	1.600 (0.0630)
147.565 – 147.541 (5.8096 – 5.8087)	1.625 (0.0640)
147.540 – 147.516 (5.8086 – 5.8077)	1.650 (0.0650)
147.515 – 147.491 (5.8077 – 5.8067)	1.675 (0.0659)
147.490 – 147.466 (5.8067 – 5.8057)	1.700 (0.0669)
147.465 – 147.441 (5.8057 – 5.8048)	1.725 (0.0679)
147.440 – 147.416 (5.8047 – 5.8038)	1.750 (0.0689)
147.415 – 147.391 (5.8037 – 5.8028)	1.775 (0.0699)



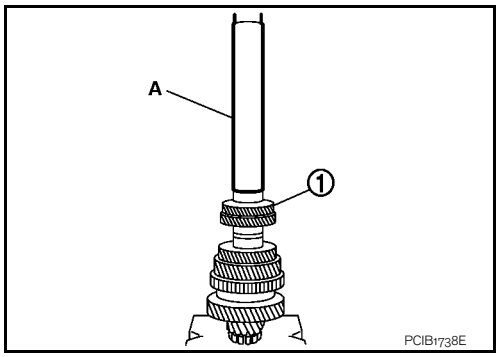
7. Install selected intermediate adjusting shim.

8. Press-fit the 4th main gear (1) onto the mainshaft using the drift (A) [SST: KV32102700].

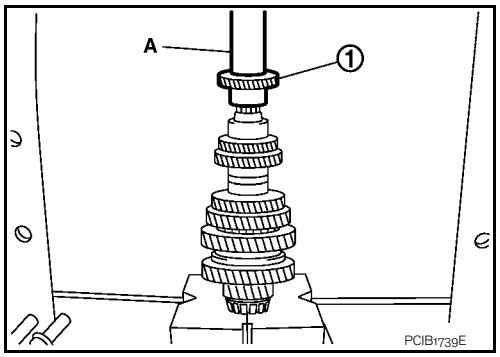


cardiagn.com

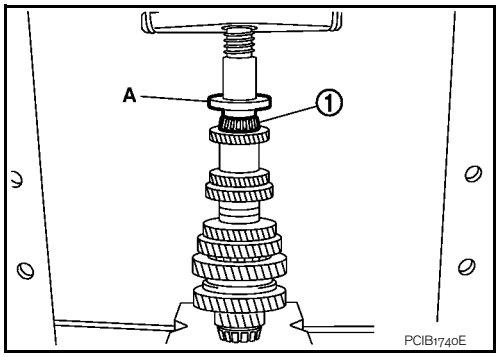
9. Press-fit the 5th main gear (1) onto the mainshaft using the drift (A) [SST: KV32102700].



10. Press-fit the 6th main gear (1) onto the mainshaft using the drift (A) [SST: KV32102700].



11. Press-fit the mainshaft rear bearing inner race (1) onto the mainshaft using the drift (A) [SST: ST30901000].
CAUTION:
Replace mainshaft rear bearing outer race and mainshaft rear bearing inner race as a set.
12. Install snap ring onto mainshaft.
CAUTION:
Never reuse snap ring.

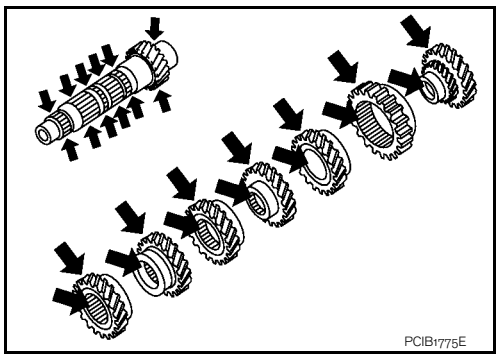


Inspection

INFOID:0000000001070348

MAINSHAFT AND GEAR

Check items below. If necessary, replace them with new ones.
- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.

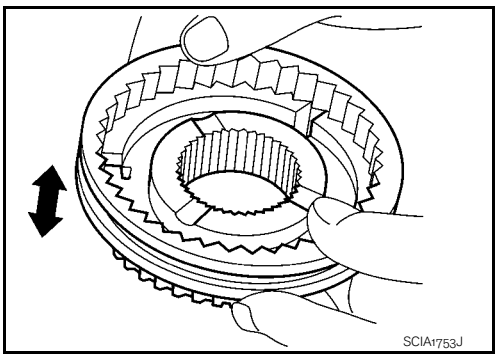


SYNCHRONIZER

Synchronizer Hub and Coupling Sleeve

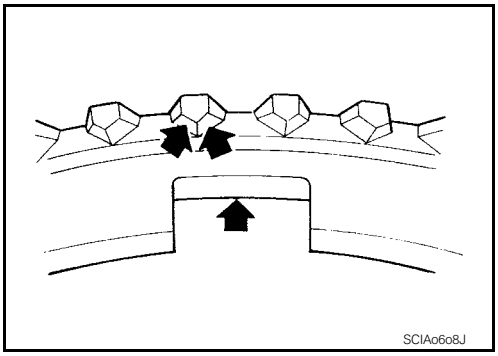
cardiagn.com

Check items below. If necessary, replace them with new ones.
- Damage and excessive wear of contact surfaces of coupling sleeve, synchronizer hub, insert key.
- Coupling sleeve and synchronizer hub must move smoothly.



Baulk Ring

Check items below. If necessary, replace them with new ones.
- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

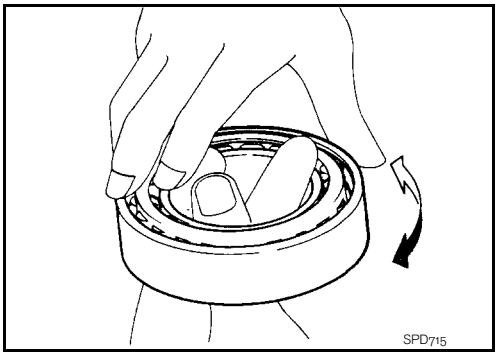


BEARING

Check for bearing damage and rough rotation. If necessary, replace with a new one.

CAUTION:

When replacing tapered roller bearing, replace outer and inner races as a set.



CAUTION:

Bearing preloading shim: after the intermediate adjusting shim and/or the 6th main gear, 5th main gear, and 4th main gear have been replaced, it is necessary to modify the bearing preloading setting by changing the bearing preloading shim.
- **Replacing the intermediate adjusting shim.**
- **Increase the size of the bearing preloading shim, if the replaced intermediate adjusting shim is thinner than the shim used before.**
- **Decrease the size of the bearing preloading shim, if the replaced intermediate adjusting shim is thicker than the shim used before.**
- **Replacing the 6th main gear, 5th main gear, and 4th main gear.**
- **Measure the thickness of the main gear used before and the new main gear.**
- **Increase the thickness of the bearing preloading shim, if the difference is smaller than 0.025 mm (0.0010 in).**
- **Decrease the thickness of the bearing preloading shim, if the difference is greater than 0.025 mm (0.0010 in).**

FINAL DRIVE

Exploded View

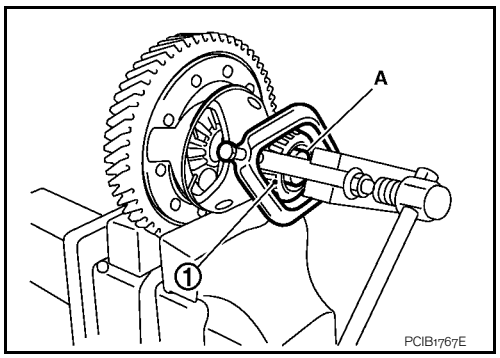
INFOID:0000000001070353

Refer to TM-71, "Exploded View".

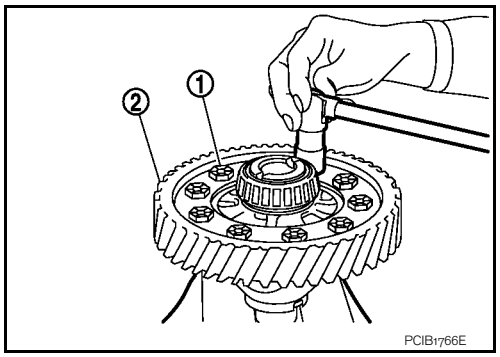
Disassembly

INFOID:0000000001070354

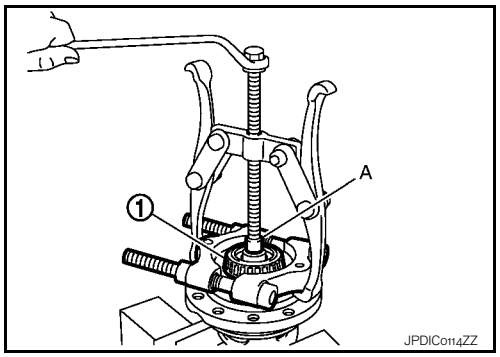
1. Remove differential side bearing inner race (clutch housing side) (1) using the drift (A) [SST: ST33061000] and a puller.
2. Remove speedometer drive gear.



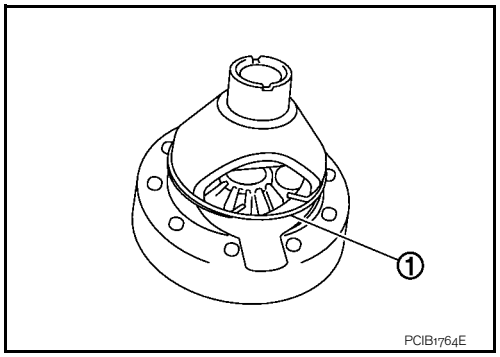
3. Remove final gear mounting bolts (1), and then separate the final gear (2) from differential case.



4. Remove differential side bearing inner race (transaxle case side) (1) using the drift (A) [Commercial service tool] and a suitable puller.



5. Remove lock ring (1) from differential case.
6. Remove pinion mate shaft, pinion mate gears, side gears and thrust washer from differential case.



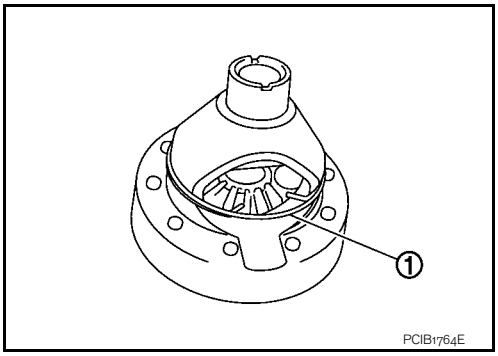
Assembly

INFOID:0000000001070355

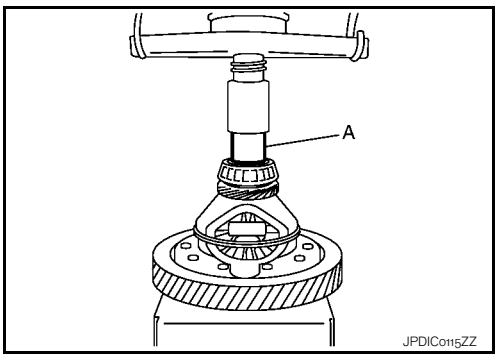
1. Install pinion mate shaft, pinion mate gears, side gears and thrust washer into differential case.

cardiagn.com

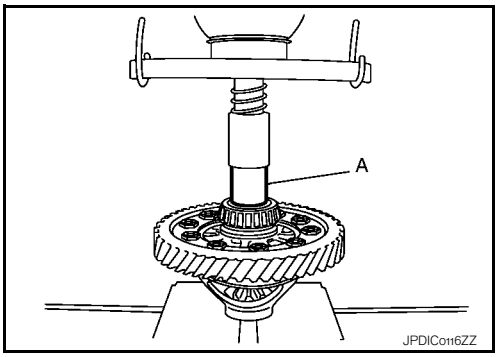
2. Install lock ring (1) onto differential case.
CAUTION:
Make sure that lock ring is securely installed in the groove.
3. Install final gear into differential case, and tighten final gear mounting bolts to the specified torque.
4. Install speedometer drive gear onto differential case.



5. Press-fit the differential side bearing inner race (clutch housing side) onto the differential case using the drift (A) [Commercial service tool] and press.
CAUTION:
Replace differential side bearing inner race and differential side bearing outer race as a set.



6. Press-fit the differential side bearing inner race (transaxle case side) onto the differential case using the drift (A) [Commercial service tool] and press.
CAUTION:
Replace differential side bearing inner race and differential side bearing outer race as a set.

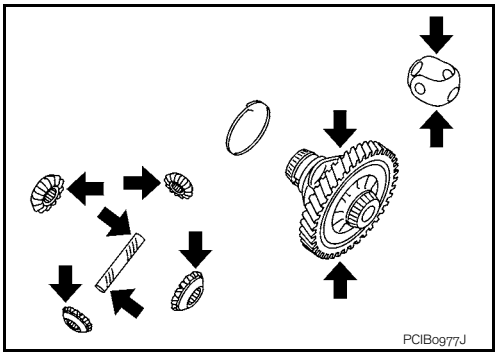


Inspection

INFOID:0000000001070356

GEAR, WASHER, SHAFT AND CASE

Check side gears, thrust washer, pinion mate shaft, pinion mate gears, lock ring and differential case. If necessary, replace with a new one.



BEARING

cardiagn.com

Check for bearing damage and rough rotation. If necessary, replace with a new one.

CAUTION:

When replacing tapered roller bearing, replace outer and inner races as a set.

System Description

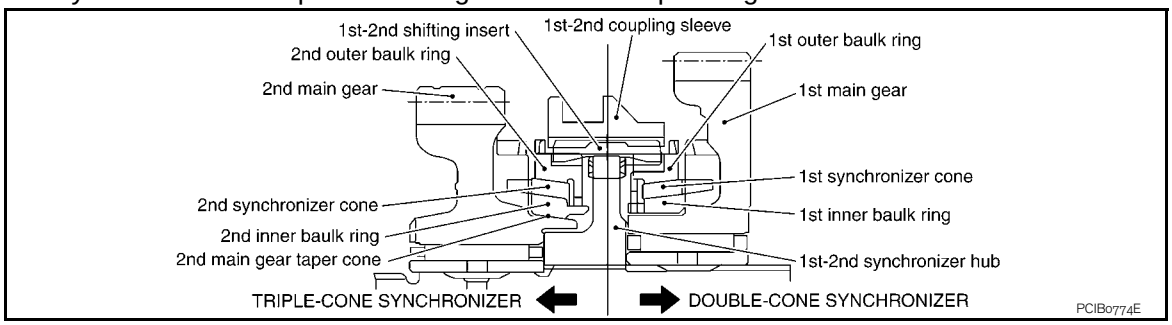
INFOID:0000000001034931

DOUBLE-CONE SYNCHRONIZER

Double-cone synchronizer are adopted for 1st and 3rd gears to reduce operating force of the control lever.

TRIPLE-CONE SYNCHRONIZER

Triple-cone synchronizer is adopted for 2nd gear to reduce operating force of the control lever.



REVERSE GEAR NOISE PREVENTION FUNCTION (SYNCHRONIZING METHOD)

Reverse gear can be matched smoothly in a structure by setting synchronizer hub (1) of reverse idler gear (rear), reverse coupling sleeve (2), reverse baulk ring (3), and reverse insert spring (4) to reverse idler gears, and letting reverse gear be synchronized.

5 : Reverse idler gear (rear)
6 : Reverse idler gear (front)

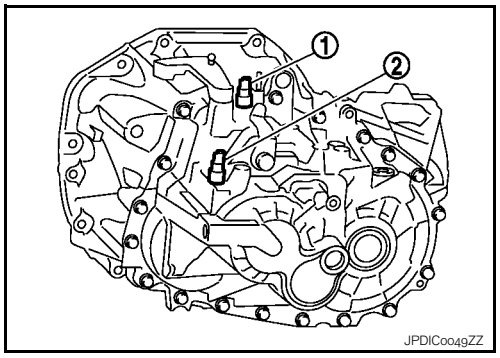
COMPONENT DIAGNOSIS

BACK-UP LAMP SWITCH

Component Parts Location

INFOID:0000000001065855

1 : Park/Neutral position (PNP) switch
2 : Back-up lamp switch



Component Inspection

INFOID:0000000001065856

1. CHECK BACK-UP LAMP SWITCH

Check continuity between back-up lamp switch terminals with control lever turned to 1st to 6th and reverse position.

Terminals	Gear position	Continuity
1 – 2	Reverse	Existed
	Except reverse	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace back up lamp switch. Refer to TM-125, "Exploded View".

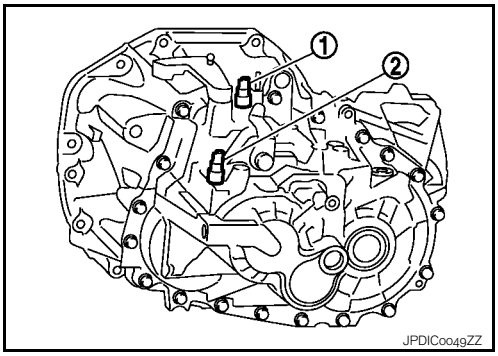
cardiagn.com

PARK/NEUTRAL POSITION (PNP) SWITCH

Component Parts Location

INFOID:0000000001065857

1 : Park/Neutral position (PNP) switch
2 : Back-up lamp switch



Component Inspection

INFOID:0000000001065858

1. CHECK PARK/NEUTRAL POSITION (PNP) SWITCH

Check continuity between park/neutral position (PNP) switch terminals with control lever turned to 1st to 6th and reverse position.

Terminals	Gear position	Continuity
1 – 2	Neutral	Existed
	Except neutral	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace park/neutral position (PNP) switch. Refer to TM-125, "Exploded View".

PRECAUTION

PRECAUTIONS

Service Notice or Precautions for Manual Transaxle

INFOID:0000000001066146

CAUTION:

- **If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.**
- **Never reuse transaxle gear oil, once it has been drained.**
- **Check oil level or replace gear oil with vehicle on level surface.**
- **During removal or installation, keep inside of transaxle clear of dust or dirt.**
- **Check for the correct installation status prior to removal or disassembly. If matching marks are required, be certain they do not interfere with the function of the parts they are applied.**
- **In principle, tighten bolts or nuts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, use it.**
- **Never damage sliding surfaces and mating surfaces.**

ON-VEHICLE MAINTENANCE

GEAR OIL

Exploded View

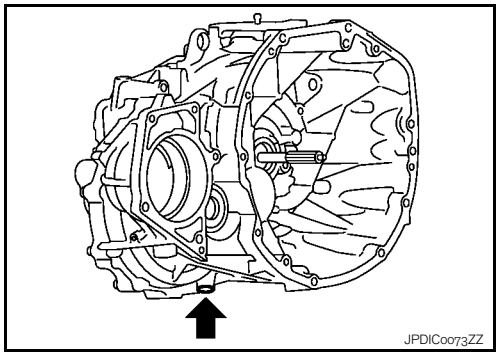
INFOID:0000000001066147

Refer to TM-125, "Exploded View".

Draining

INFOID:0000000001034936

1. Start engine and let it run to warm up transaxle.
2. Stop engine. Remove drain plug and then drain gear oil.
3. Set a new gasket on drain plug and install it to clutch housing. Tighten drain plug to the specified torque.
   CAUTION:
   Never reuse gasket.



Refilling

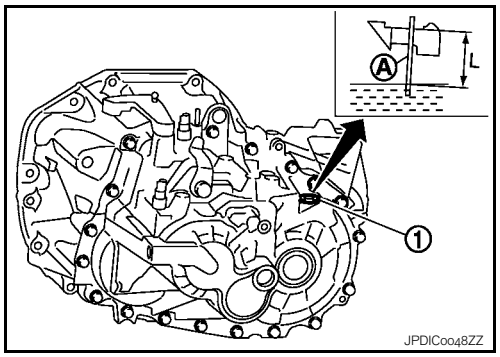
INFOID:0000000001034937

1. Remove filler plug (1). Fill with new gear oil to transaxle.

   A : Suitable gauge

   Oil grade and viscosity **: Refer to MA-21, "Fluids and Lubricants".**

   Oil capacity (reference) **: Refer to TM-183, "General Specifications".**



2. After refilling gear oil, check oil level. Refer to TM-115, "Inspection".
3. Set a new gasket on filler plug and then install it to transaxle case.
   CAUTION:
   Never reuse gasket.
4. Tighten filler plug to the specified torque.

Inspection

INFOID:0000000001034938

LEAKAGE

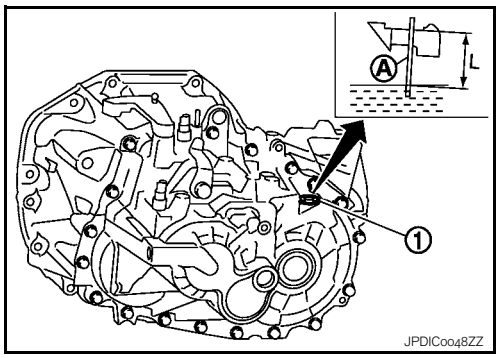
Make sure that gear oil is not leaking from transaxle or around it.

LEVEL

1. Remove filler plug (1).
2. Measure oil level using a suitable gauge (A) as shown in the figure and then check if it is within the specifications.

   Oil level "L" **: Refer to TM-183, "General Specifications".**

   CAUTION:
   Never start engine while checking oil level.
3. Set a new gasket on filler plug (1) and then install it to transaxle case.
   CAUTION:



cardiagn.com

Never reuse gasket.

4. Tighten filler plug to the specified torque.

cardiagn.com

ON-VEHICLE REPAIR

SIDE OIL SEAL

Exploded View

INFOID:0000000001066148

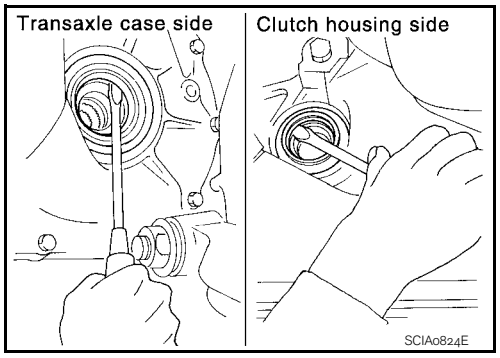
Refer to TM-125, "Exploded View".

Removal and Installation

INFOID:0000000001034939

REMOVAL

1. Remove front drive shafts. Refer to FAX-56, "Removal and Installation".
2. Remove differential side oil seals using a suitable tool.
   CAUTION:
   Never damage transaxle case and clutch housing.



INSTALLATION

Note the following, and install in the reverse order of removal.

- Install differential side oil seal to clutch housing using the drift [SST: ST33400001].

  Dimension “A” : -0.5 - 0.5 mm (-0.020 - 0.020 in)

  CAUTION:
  - **Never reuse differential side oil seal.**
  - **When installing, never incline differential side oil seal.**
  - **Never damage clutch housing.**
- Install differential side oil seal to transaxle case using the drift [SST: ST30720000].

  Dimension “A” : -0.5 - 0.5 mm (-0.020 - 0.020 in)

  CAUTION:
  - **Never reuse differential side oil seal.**
  - **When installing, never incline differential side oil seal.**
  - **Never damage transaxle case.**
- Check oil level and oil leakage after installation. Refer to TM-115, "Inspection".

1. Bracket
2. Shift cable
3. Shifter lever A
4. Selector lever
5. Cable mounting bracket
6. Select cable
7. Grommet
8. Control device assembly
9. Control lever
10. Control lever knob

Refer to GI-4, "Components" for the symbols in the figure.

Removal and Installation

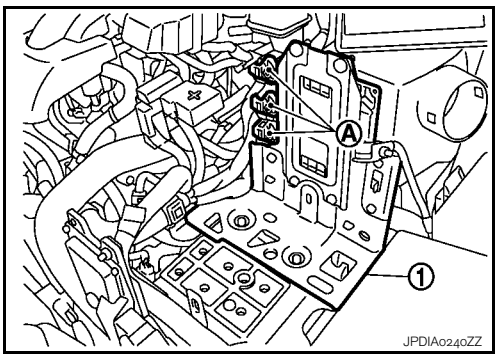
INFOID:0000000001034945

REMOVAL

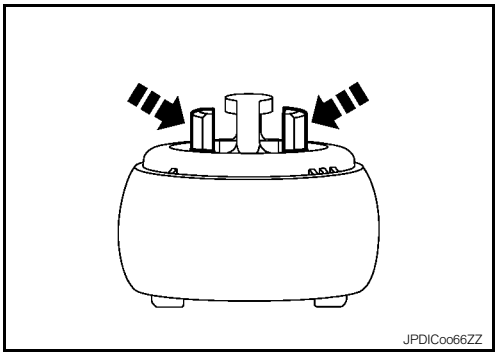
1. Remove the air cleaner case and air duct (inlet). Refer to EM-144, "Removal and Installation".
2. Remove the battery. Refer to PG-118, "Removal and Installation".

cardiagn.com

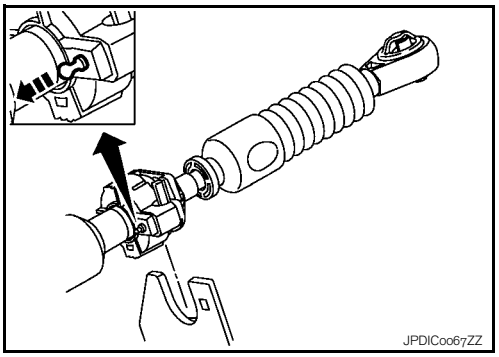
3. Disconnect connectors (A) and then remove bracket (1).



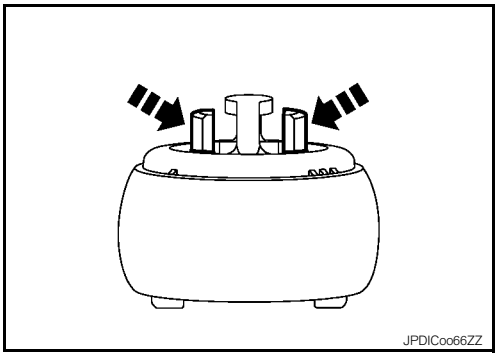
4. While pressing the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the selector lever.
5. While pressing the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the shifter lever A.



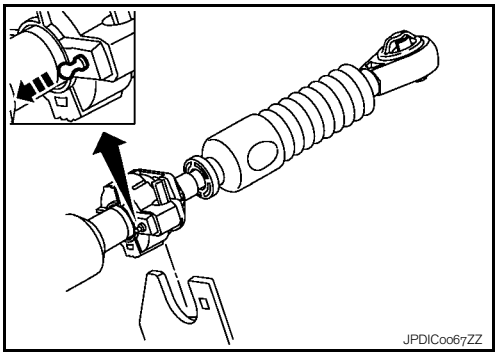
6. While pulling the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the cable mounting bracket.
7. While pulling the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the cable mounting bracket.
8. Remove the control lever knob.
9. Remove console finisher assembly and the center console assembly. Refer to IP-18, "Removal and Installation".
10. Shift the control lever to the neutral position.



11. While pressing the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control device assembly.
12. While pressing the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control device assembly.



13. While pulling the lock of the select cable in the direction of the arrow shown in the figure, remove the select cable from the control device assembly.
14. While pulling the lock of the shift cable in the direction of the arrow shown in the figure, remove the shift cable from the control device assembly.
15. Remove the control device assembly.
16. Remove the heat plate.
17. Remove the bracket.



cardiagn.com

18. Remove the grommet and then remove the shift cable and select cable from the vehicle.

INSTALLATION

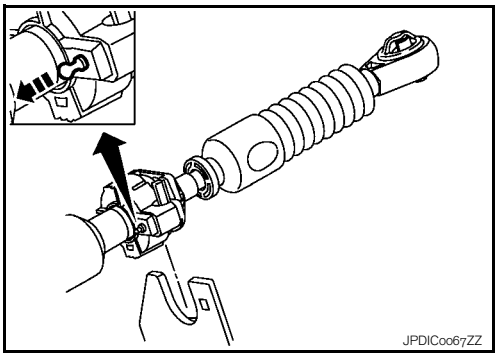
Note the following, and install in the reverse order of removal.

- Shift the control lever to the neutral position.
- Securely assemble each cable and the selector lever and shifter lever A.
- Securely assemble each cable and the cable mounting bracket.
- Securely assemble each cable and the control device assembly.
- Make sure that the claws of grommet are in contact with the floor.
- Be careful about the installation direction and push the control lever knob into the control lever.

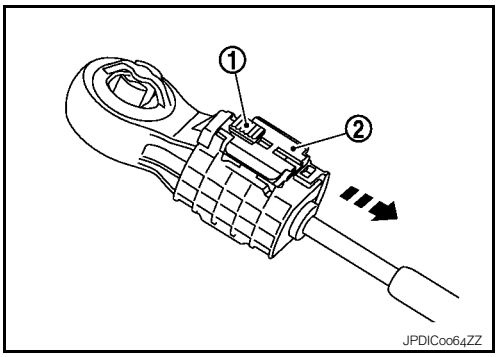
CAUTION:
Never reuse control lever knob.

Install the select cable (the control device assembly side) with the following procedure.

1. While pulling the lock of the select cable in the direction of the arrow shown in the figure, install the select cable to the control device assembly.



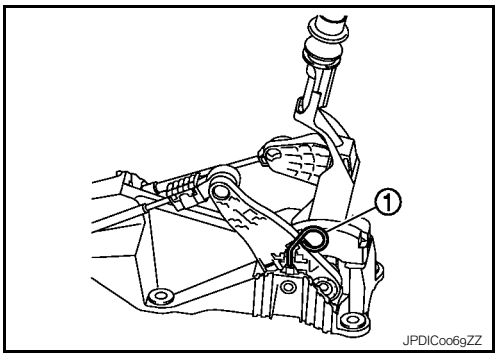
2. Slide the lock (1) of the select cable in the direction of the arrow as shown in the figure to pull up the stopper (2) of the select cable.
3. Install the end of the select cable to the pin of the control device assembly.



4. Install the lever stopper pin (1) or a pin [3 mm (0.12 in) dia.] to the control device assembly.

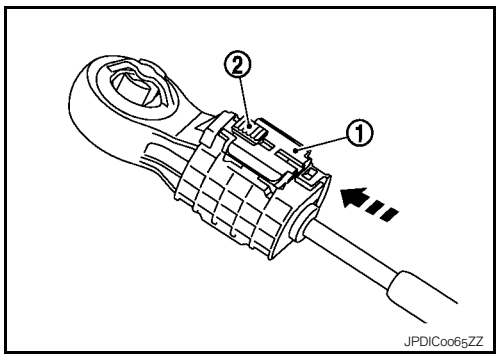
CAUTION:
Select cable cannot be adjusted accurately without a use of a lever stopper pin or a pin [3 mm (0.12 in) dia.].
NOTE:
A lever stopper pin is not included in control device assembly. Therefore, if the control device assembly is not replaced, prepare a pin [3 mm (0.12 in) dia.].

5. Check that the control lever does not move in the direction of the select. If it moves, repeat step 3.
6. Shift the control lever to 4th gear position.



cardiagn.com

7. With the stopper (1) of the select cable pressed into all the way, slide lock (2) of the select cable all the way in the direction of the arrow.
8. Remove the lever stopper pin or a pin [3 mm (0.12 in) dia.] from the control device assembly.
9. Shift the control lever to each gear position to check that there is no bindings. If any, repeat step 3.



Inspection

INFOID:0000000001034946

After installing, confirm the following items:
- When the control lever is shifted to 1st-2nd side and 5th-6th side, confirm the control lever returns to neutral position smoothly.
- When the control lever is shifted to each position, make sure there is no binding or disconnection in each boot.

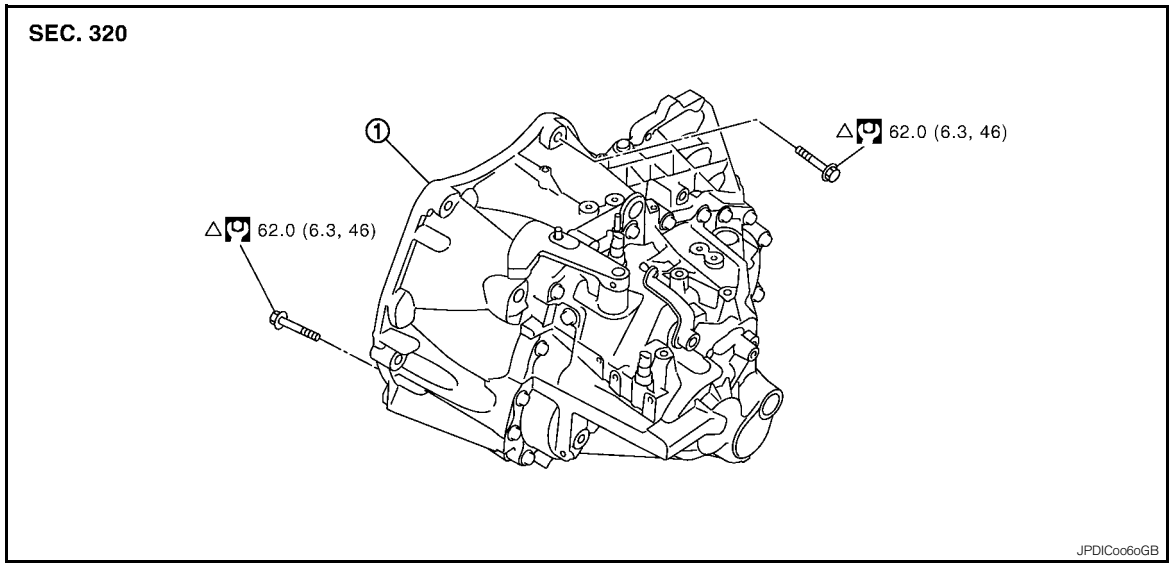
REMOVAL AND INSTALLATION

TRANSAXLE ASSEMBLY

Exploded View

INFOID:0000000001034949



1. Transaxle assembly

△: For the bolt mounting positions, refer to “INSTALLATION”.

Refer to GI-4, "Components" for symbols not described on the above.

CAUTION:

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

Removal and Installation

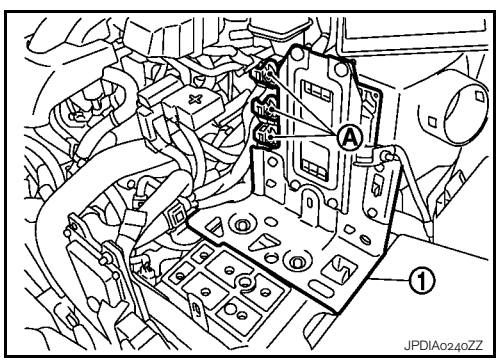
INFOID:0000000001034950

CAUTION:

If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

REMOVAL

1. Disconnect the battery cable from the negative terminal.
2. Remove air breather hose. Refer to TM-122, "Removal and Installation".
3. Remove air cleaner case and air duct (inlet). Refer to EM-144, "Removal and Installation".
4. Remove battery. Refer to PG-118, "Removal and Installation".
5. Disconnect connectors (A) and then remove bracket (1).
6. Drain clutch fluid and then remove clutch tube from CSC (Concentric Slave Cylinder). Refer to CL-14, "Removal and Installation".
   CAUTION:
   Never depress clutch pedal during removal procedure.
7. Disconnect park/neutral position (PNP) switch harness connector.
8. Disconnect back-up lamp switch harness connector.
9. Disconnect ground cable.
10. Remove wire harnesses from transaxle assembly.



cardiagn.com

11. Disconnect select cable and shift cable from transaxle assembly. Refer to TM-118, "Removal and Installation".
12. Remove starter motor. Refer to STR-27, "MR20DE MODELS : Removal and Installation".
13. Remove engine under cover.
14. Drain gear oil. Refer to TM-115, "Draining".
15. Remove exhaust front tube. Refer to EX-10, "Removal and Installation".
16. Remove propeller shaft assembly. Refer to DLN-110, "Removal and Installation".
17. Remove front drive shafts. Refer to FAX-56, "Removal and Installation".
    NOTE:
    Insert a suitable plug into differential side oil seal after removing front drive shaft.
18. Remove transfer assembly. Refer to DLN-58, "M/T : Removal and Installation".
19. Remove rear engine mounting brackets and rear torque rod. Refer to EM-195, "M/T : Removal and Installation".
20. Remove suspension member and suspension member stay. Refer to FSU-17, "Removal and Installation".
21. Set a suitable jack to transaxle assembly and then set a suitable jack to engine assembly.
    CAUTION:
    When setting a suitable jack, be careful so that it does not contact with the switch.
22. Remove transaxle assembly mounting bolts.
23. Remove engine mounting through bolt-securing nut. Refer to EM-195, "M/T : Removal and Installation".
24. Remove transaxle assembly from the vehicle.
    CAUTION:
    - **Secure transaxle assembly to a suitable jack while removing it.**
    - **The transaxle assembly must not interfere with the wire harnesses and clutch tube.**
25. Remove CSC (Concentric Slave Cylinder). Refer to CL-15, "Removal and Installation".
    CAUTION:
    If transaxle assembly is removed from the vehicle, always replace CSC (Concentric Slave Cylinder). Return CSC insert to original position to remove transaxle assembly. Dust on clutch disc sliding parts may damage seal of CSC and may cause clutch fluid leakage.

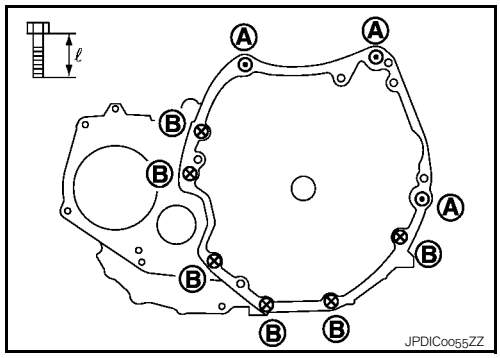
INSTALLATION

Note the following, and install in the reverse order of removal.

- Tighten transaxle assembly mounting bolts to the specified torque. The figure is the view from the engine.

: Transaxle to engine

: Engine to transaxle



Bolt symbol	A	B
Quantity	3	6
Bolt length " ℓ " mm (in)	60 (2.36)	50 (1.97)

CAUTION:
- **The transaxle assembly must not interfere with the wire harnesses and clutch tube.**
- **When installing transaxle assembly, never bring input shaft into contact with clutch cover.**

- Refer to CL-15, "Removal and Installation" for CSC (Concentric Slave Cylinder) installation procedure.
- Refer to TM-118, "Removal and Installation" for select cable and shift cable installation procedure.
- Bleed the air from the clutch hydraulic system. Refer to CL-6, "Air Bleeding Procedure".
- After installation, check for oil leakage and oil level. Refer to TM-115, "Inspection".

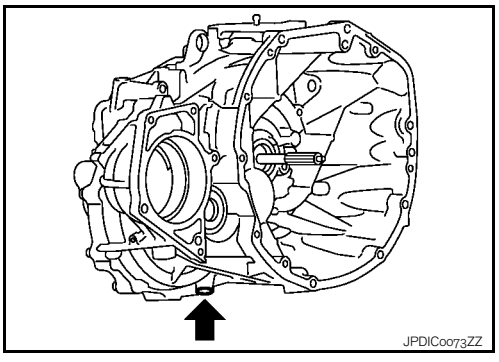
Disassembly

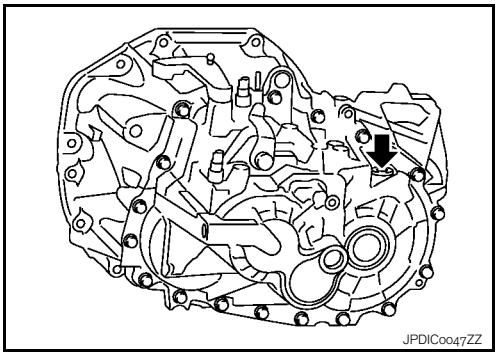
INFOID:0000000001034952

1. Remove drain plug and gasket from clutch housing.

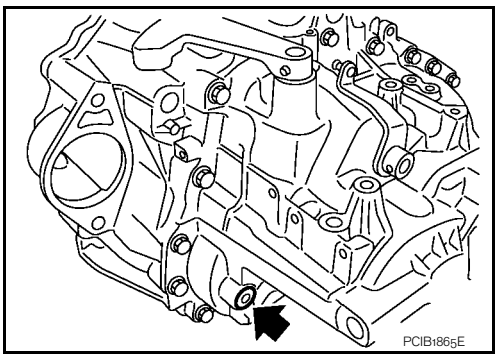


cardiagn.com

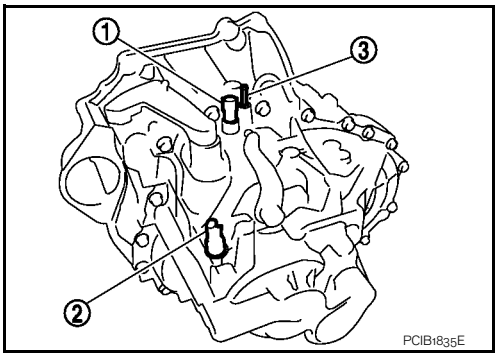
2. Remove filler plug and gasket from transaxle case.



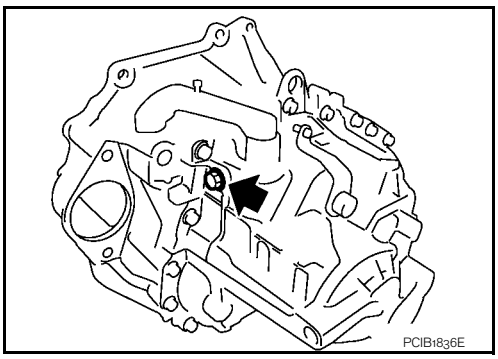
3. Remove plug and gasket from transaxle case.



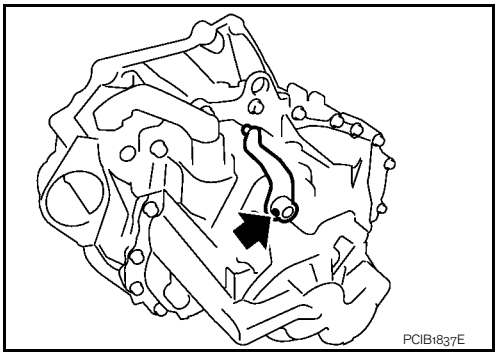
4. Remove park/neutral position (PNP) switch (1) from transaxle case.
5. Remove back-up lamp switch (2) and plunger from transaxle case.
   CAUTION:
   Never lose plunger.
6. Remove air breather tube (3) from transaxle case.



7. Remove guide bolt from transaxle case.

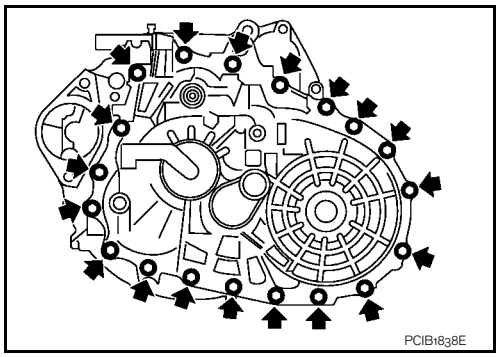


8. Remove retaining pin using a pin punch and then remove selector lever from transaxle case.

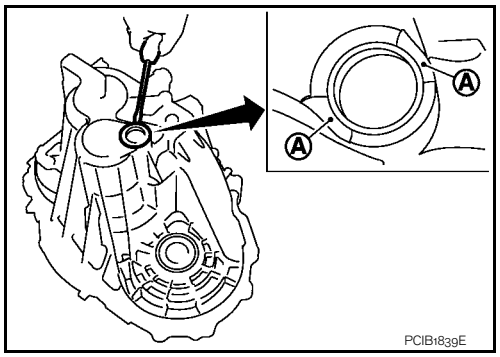


cardiagn.com

9. Remove transaxle case mounting bolts.

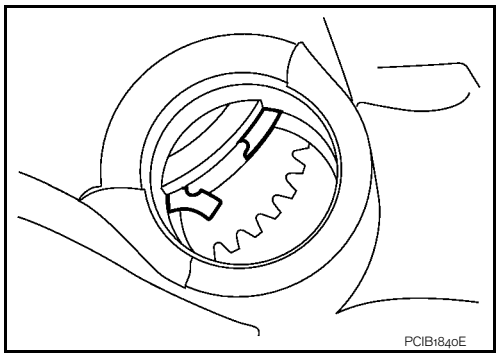


10. Remove bore plug from transaxle case.
CAUTION:
- **Never damage transaxle case.**
- **Access bore plug from cutout (A) of transaxle case when removing.**

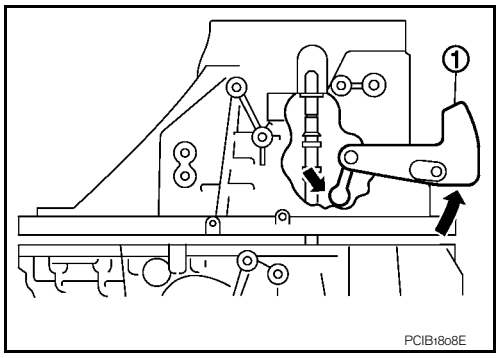


11. Remove transaxle case following the procedures below.

a. Expand snap ring at mainshaft rear bearing accessing from the bore plug hole. Then pull up transaxle case from clutch housing until snap ring comes off.



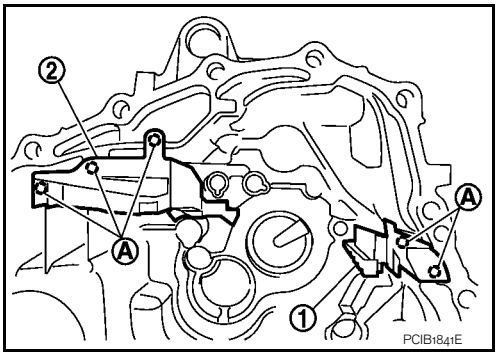
b. With shifter lever A (1) held in the position shown in the figure, remove transaxle case from clutch housing.
CAUTION:
Never drop each adjusting shim.
NOTE:
Make sure to hold shifter lever A in the position shown in the figure. Otherwise transaxle case cannot be removed from clutch housing.



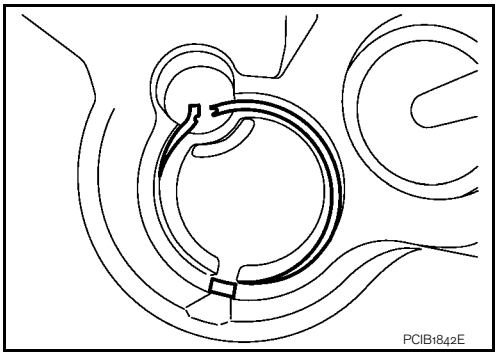
cardiagn.com

12. Remove oil gutter A (1) and oil gutter B (2) from transaxle case.

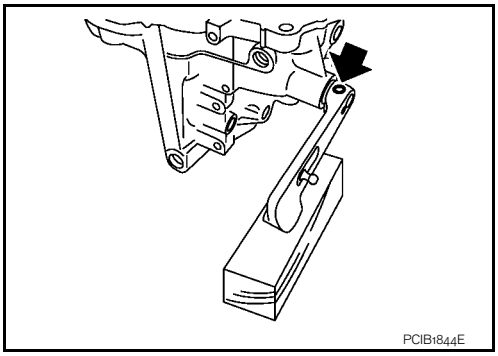
A : Tab of oil gutter



13. Remove snap ring from transaxle case.



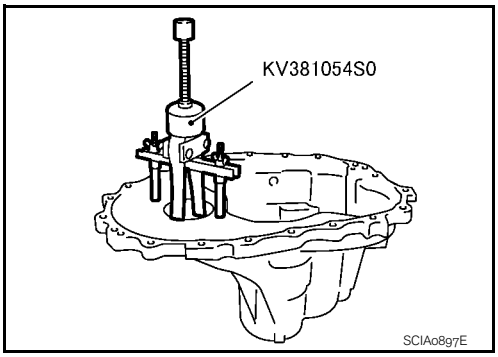
14. Remove retaining pin using a pin punch and then remove shifter lever A and shifter lever B from transaxle case.



15. Remove differential side bearing outer race (transaxle case side) from transaxle case using the puller and then remove differential side bearing adjusting shim from transaxle case.

CAUTION:

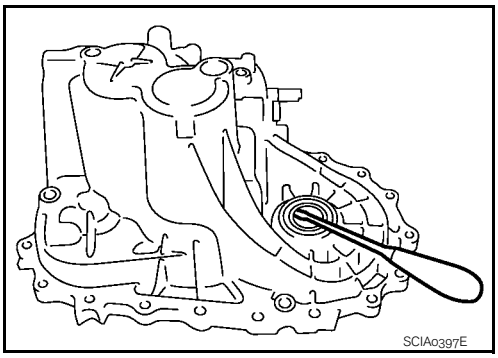
Never damage transaxle case and differential side bearing outer race.



16. Remove differential side oil seal from transaxle case.

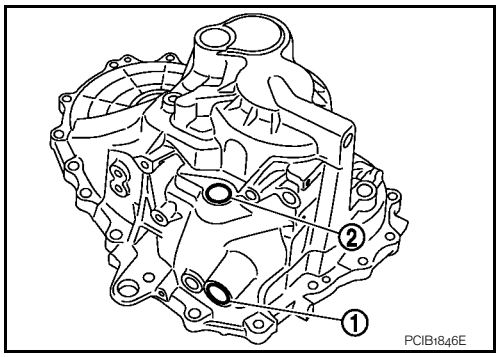
CAUTION:

Never damage transaxle case.

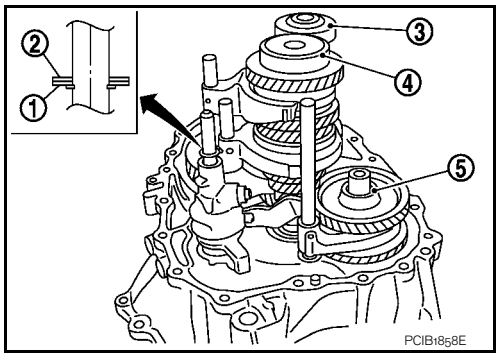


cardiagn.com

17. Remove shifter lever oil seal (1) and striking rod oil seal (2) from transaxle case.
CAUTION:
Never damage transaxle case.

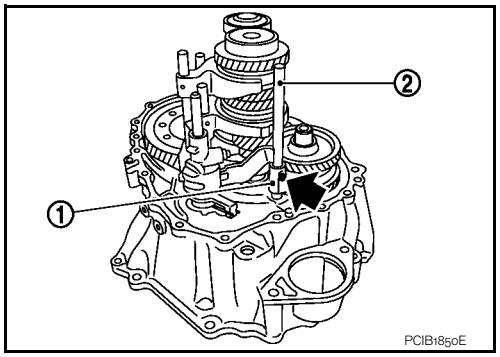


18. Remove striking rod shim (1), striking rod adjusting shim (2), mainshaft rear bearing adjusting shim (3), input shaft rear bearing adjusting shim (4), and reverse idler gear adjusting shim (5).

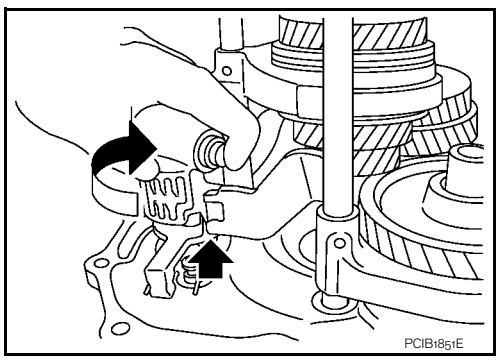


19. Remove retaining pin of reverse shift fork (1) using a pin punch.

2 : Reverse fork rod

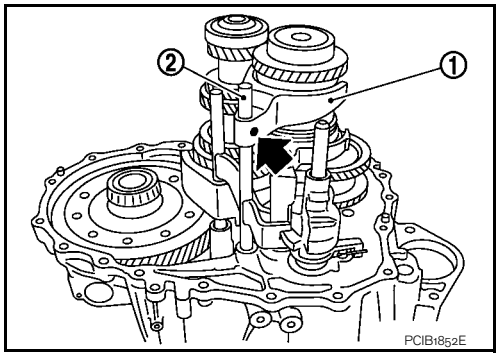


20. Rotate striking lever of striking rod assembly as shown in the figure. Then rotate reverse fork rod to a position where bracket of reverse fork rod does not interfere with striking lever of striking rod assembly.
21. Pull out reverse shift fork and reverse fork rod.



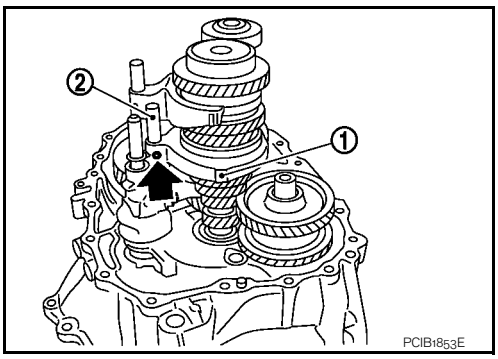
22. Remove retaining pin of 5th-6th shift fork (1) using a pin punch.

2 : 5th-6th fork rod

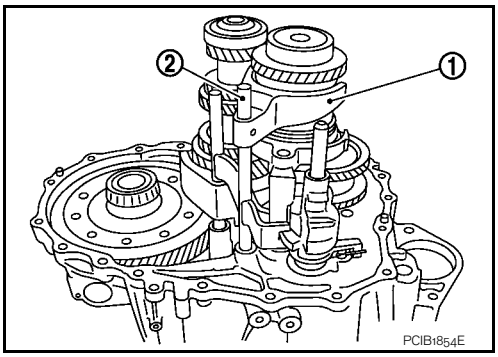


cardiagn.com

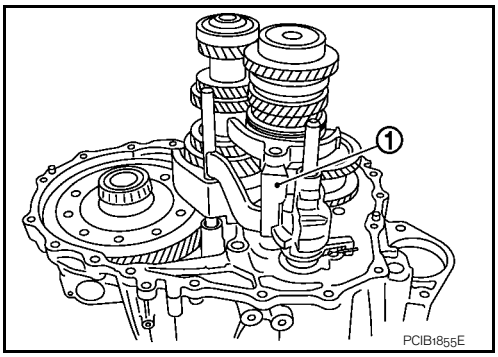
23. Remove retaining pin of 3rd-4th shift fork (1) using a pin punch.
24. Pull out 3rd-4th fork rod (2).



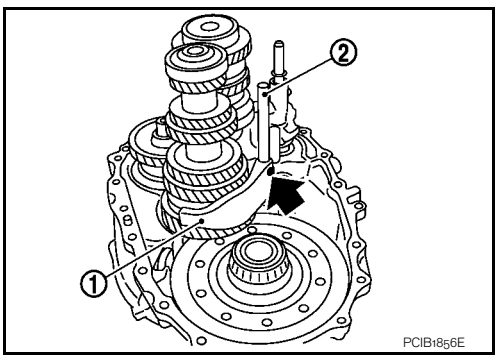
25. Pull out 5th-6th shift fork (1) and 5th-6th fork rod (2).



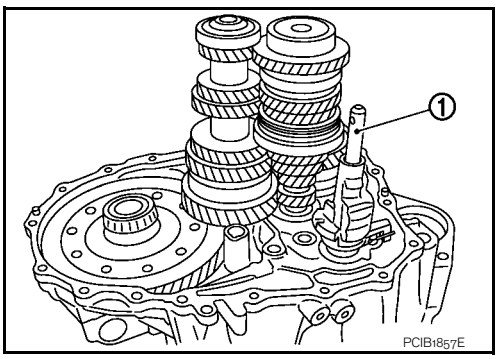
26. Pull out 3rd-4th shift fork (1).



27. Remove retaining pin of 1st-2nd shift fork (1) using a pin punch.
28. Pull out 1st-2nd shift fork and 1st-2nd fork rod (2).



29. Remove striking rod assembly (1).

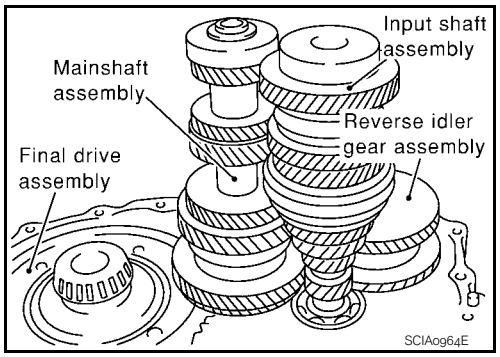


cardiagn.com

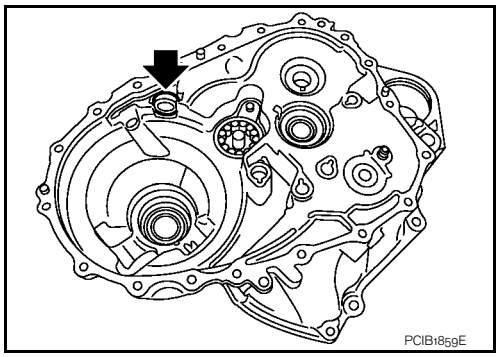
30. Remove gear components from clutch housing in the following procedure.

a. Remove a set of input shaft assembly, mainshaft assembly, and reverse idler gear assembly by tapping the tip of input shaft from the back of the clutch housing with a plastic hammer.
CAUTION:
Always withdraw mainshaft straight out. Failure to do so can damage resin oil channel on clutch housing side.

b. Remove final drive assembly.

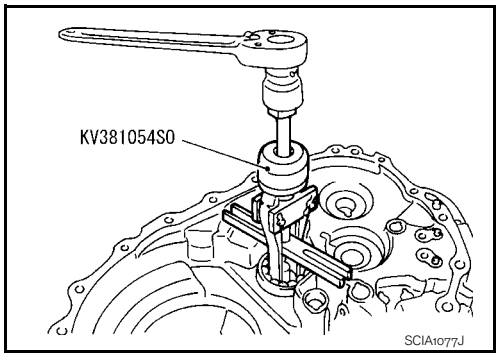


31. Remove magnet from clutch housing.

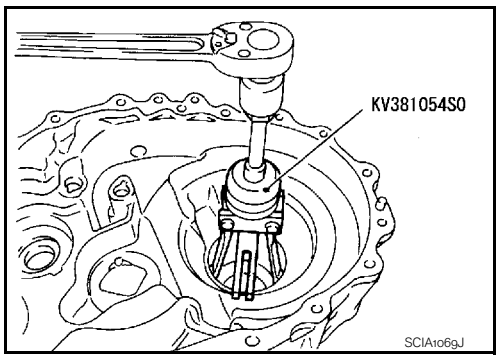


32. Remove mainshaft bearing retainer and then mainshaft front bearing from clutch housing using the puller.
CAUTION:
Never damage clutch housing, mainshaft front bearing, and oil channel.

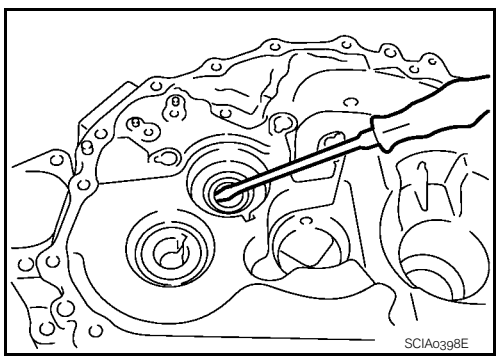
33. Remove oil channel from clutch housing.



34. Remove differential side bearing outer race (clutch housing side) from clutch housing using the puller.
CAUTION:
Never damage clutch housing and differential side bearing outer race.

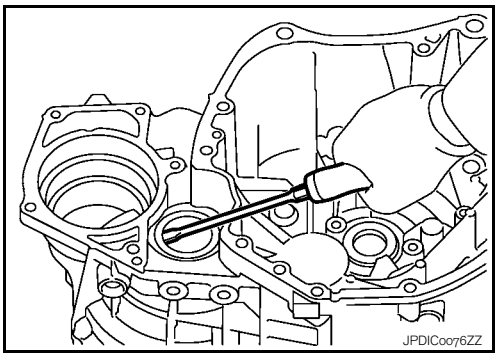


35. Remove input shaft oil seal from clutch housing.
CAUTION:
Never damage clutch housing.

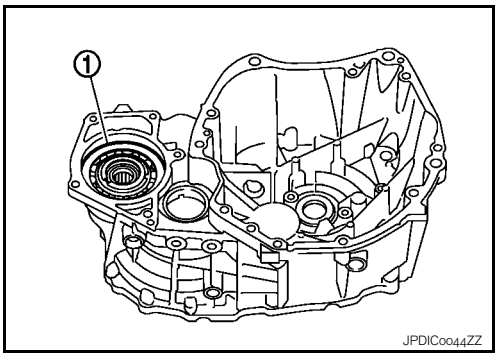


cardiagn.com

36. Remove differential side oil seal from clutch housing.
CAUTION:
Never damage clutch housing.

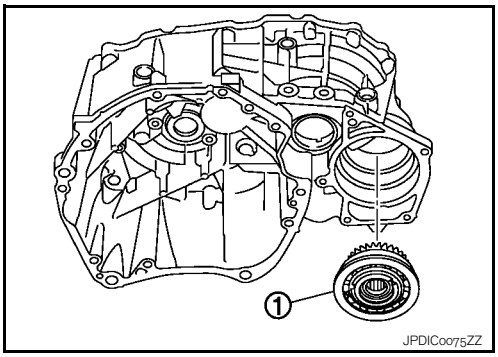


37. Remove snap ring (1) from clutch housing.
CAUTION:
Never damage clutch housing.



38. With output gear assembly (1) held by hand, turn clutch housing upside down as shown in the figure.
CAUTION:
- **When turning clutch housing upside down, hold output gear assembly by hand so that it will not become detached.**
- **Never damage clutch housing.**

NOTE:
Output gear assembly spontaneously falls when changing the clutch housing direction as shown in the figure.

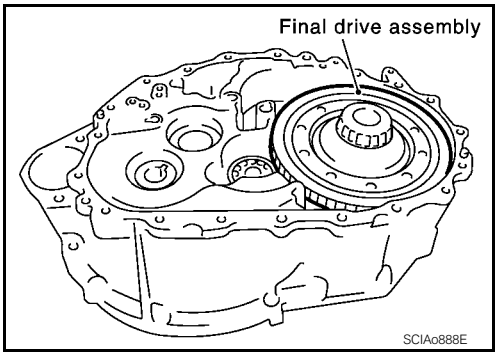


39. With output gear assembly held by hand, slowly remove output gear assembly from clutch housing. If output gear assembly can not be removed, tap it with a plastic hammer from the transaxle case contact surface side of clutch housing for removal.

Assembly

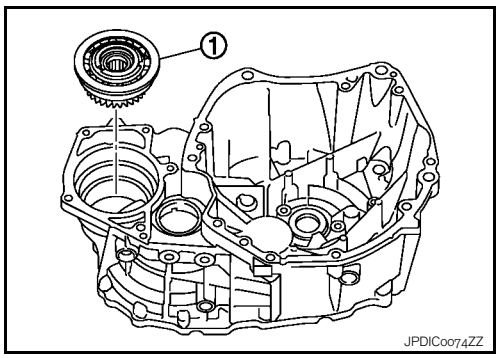
INFOID:0000000001034953

1. Install final drive assembly into clutch housing.
2. Select differential side bearing adjusting shim. Refer to TM-147, "Adjustment".
CAUTION:
Never select differential side bearing adjusting shim with output gear assembly installed on clutch housing.
3. Remove final drive assembly.



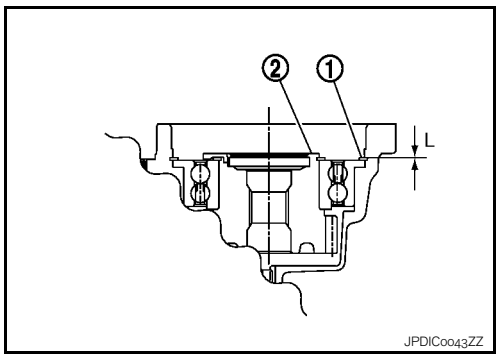
cardiagn.com

4. Turn clutch housing upside down as shown in the figure. And then install output gear assembly (1) into clutch housing.



CAUTION:
- **Gently install it, aligning the clutch housing hole with the center of output gear assembly.**
- **Install output gear assembly, straightening it with a magnet.**
- **Never damage clutch housing and output gear assembly.**

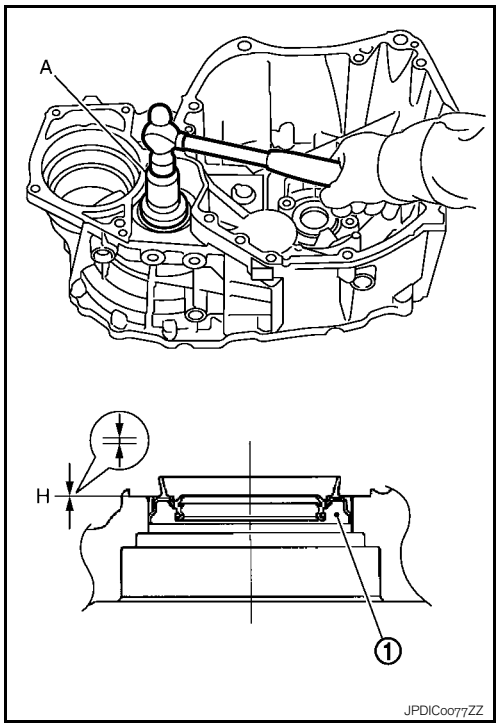
5. Install snap ring (1) onto clutch housing and make sure that end play (gap between snap ring and groove) of output gear assembly (2) satisfies the standard value.



End play standard value "L" : Refer to TM-184, "End Play".

CAUTION:
- **Only one snap ring can be selected.**
- **Never reuse snap ring.**
- **Never damage clutch housing.**

6. Install differential side oil seal (1) to clutch housing using the drift (A) [SST: ST33400001].



Dimension "H" : **-0.5 - 0.5 mm (-0.020 - 0.020 in)**

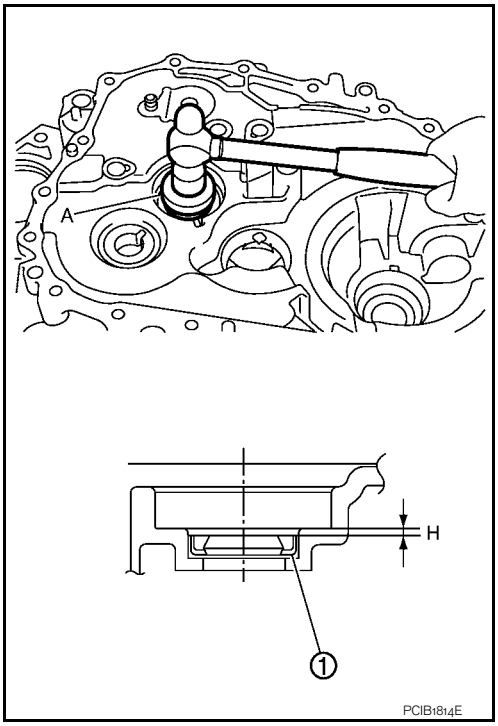
CAUTION:
- **Never reuse differential side oil seal.**
- **When installing, never incline differential side oil seal.**
- **Never damage clutch housing.**

cardiagn.com

7. Install input shaft oil seal (1) to clutch housing using the drift (A) [SST: ST35321000].

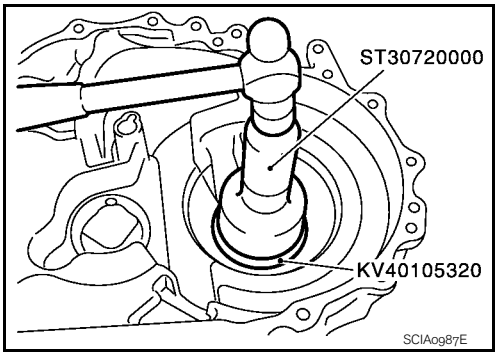
Dimension "H" : 1.1 - 2.1 mm (0.043 - 0.083 in)

CAUTION:
- **Never reuse input shaft oil seal.**
- **When installing, never incline input shaft oil seal.**
- **Never damage clutch housing.**



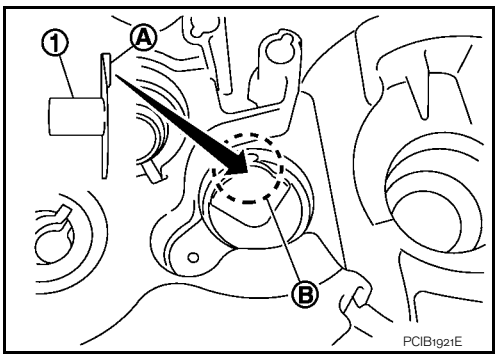
8. Install differential side bearing outer race (clutch housing side) to clutch housing using the drifts.

CAUTION:
Replace differential side bearing and differential side bearing outer race as a set.



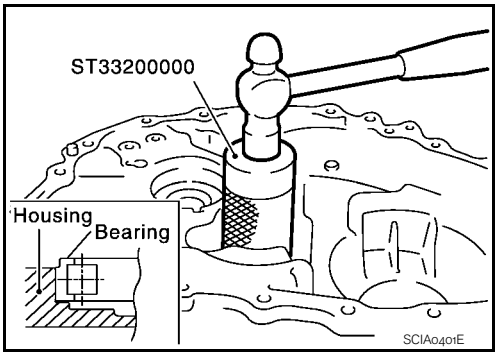
9. Install oil channel (1) on mainshaft side.

CAUTION:
When installing oil channel, fit the rib (A) of oil channel into the processed area of the spot facing (B).



10. Install mainshaft front bearing to clutch housing using the drift.

CAUTION:
Be careful with the orientation of mainshaft front bearing.

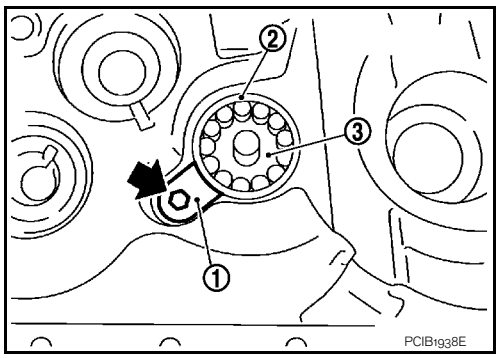


cardiagn.com

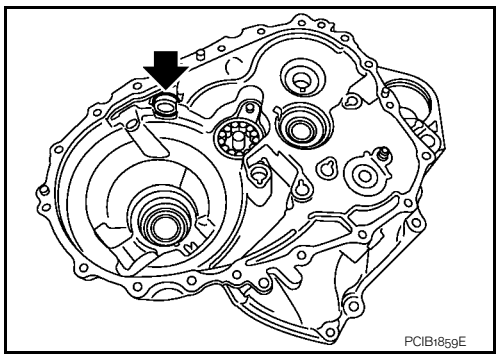
11. Install mainshaft bearing retainer (1) to clutch housing and tighten mounting bolt to the specified torque.

    2 : Mainshaft front bearing
    3 : Oil channel

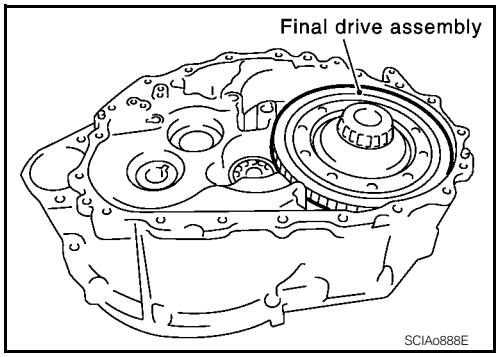
    CAUTION:
    Install with punched surface facing up.



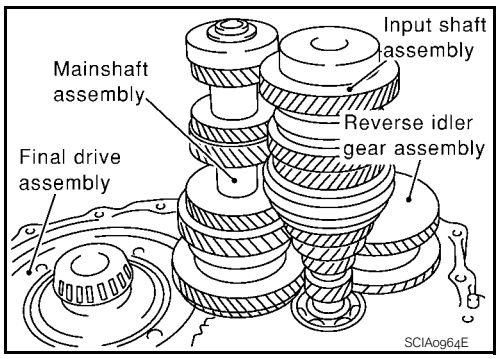
12. Install magnet to clutch housing.



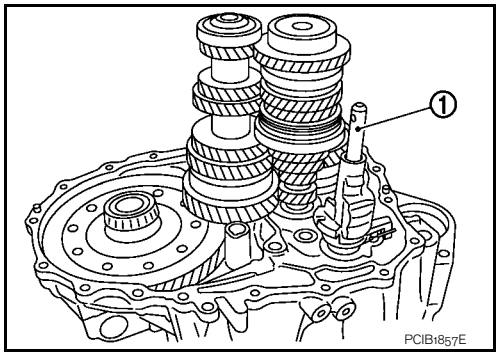
13. Install final drive assembly into clutch housing.
    CAUTION:
    Engage reduction gear teeth in output gear teeth.



14. Install input shaft assembly, mainshaft assembly, and reverse idler gear assembly into clutch housing.
    CAUTION:
    - **Wrap a tape, etc. to the spline of input shaft so as not to damage the input shaft oil seal.**
    - **Be careful with the orientation of reverse idler shaft.**

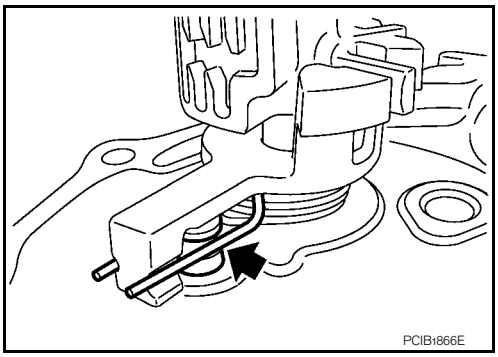


15. Install striking rod assembly (1) into clutch housing.

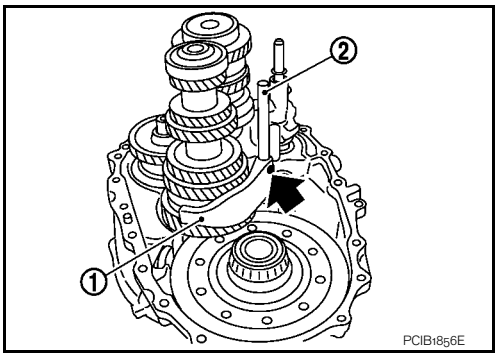


cardiagn.com

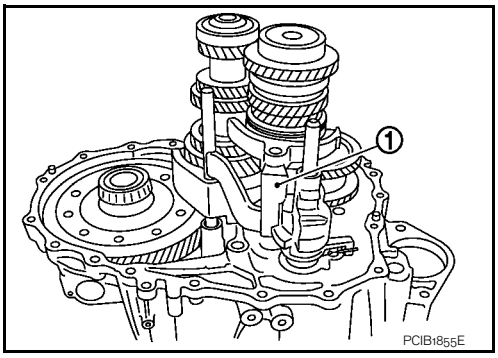
CAUTION:
Check that return spring is securely seated in the groove on return pin.



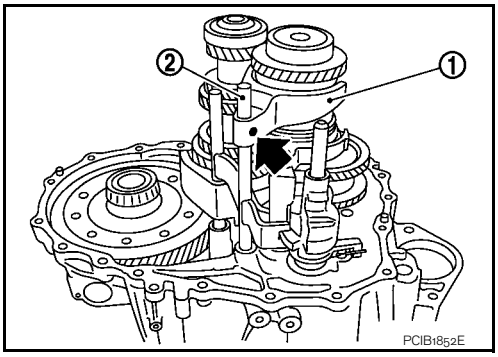
16. Install 1st-2nd shift fork (1) and 1st-2nd fork rod (2) and then install retaining pin to 1st-2nd shift fork.
CAUTION:
- **Never reuse retaining pin.**
- **Be careful with the orientation of 1st-2nd shift fork and 1st-2nd fork rod.**
- **Assemble retaining pin from the direction shown by the arrow in the figure until it becomes flush with the end surface of 1st-2nd shift fork.**



17. Install 3rd-4th shift fork (1) to 3rd-4th coupling sleeve.
CAUTION:
Be careful with the orientation of 3rd-4th shift fork.



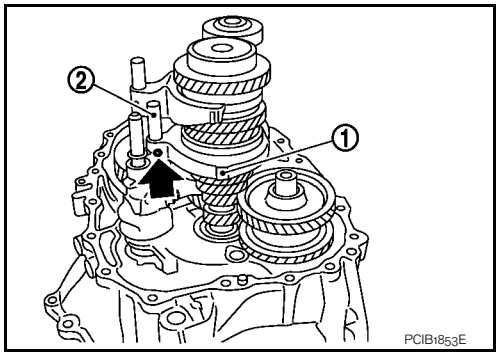
18. Install 5th-6th shift fork (1) and 5th-6th fork rod (2) and then install retaining pin to 5th-6th shift fork.
CAUTION:
- **Never reuse retaining pin.**
- **Be careful with the orientation of 5th-6th shift fork and 5th-6th fork rod.**
- **Assemble retaining pin from the direction shown by the arrow in the figure until it becomes flush with the end surface of 5th-6th shift fork.**



cardiagn.com

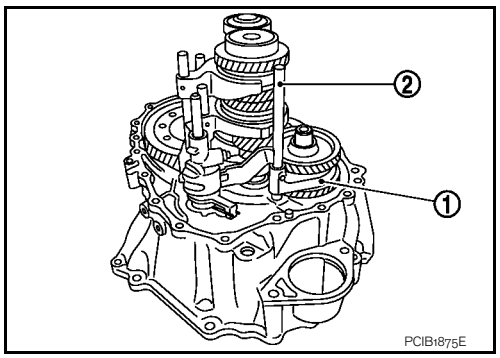
19. Install 3rd-4th fork rod (2) and then install retaining pin to 3rd-4th shift fork (1).

CAUTION:
- **Never reuse retaining pin.**
- **Be careful with the orientation of 3rd-4th fork rod.**
- **Assemble retaining pin from the direction shown by the arrow in the figure until it becomes flush with the end surface of 3rd-4th shift fork.**

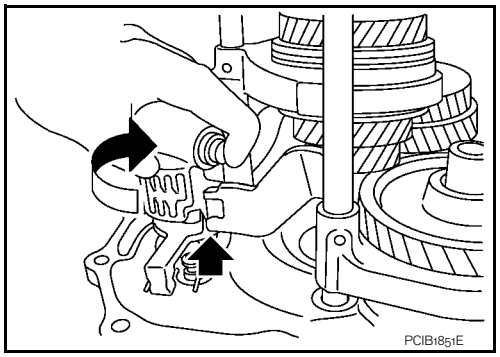


20. Install reverse shift fork (1) and reverse fork rod (2).

CAUTION:
Be careful with the orientation of reverse shift fork and reverse fork rod.



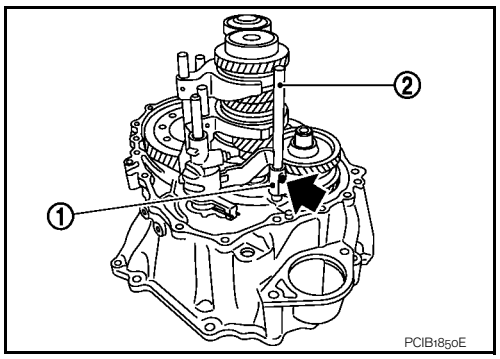
21. Rotate striking lever of striking rod assembly as shown in the figure. Then rotate reverse fork rod to a position where bracket of reverse fork rod does not interfere with striking lever of striking rod assembly.



22. Install retaining pin to reverse shift fork (1).

2 : Reverse fork rod

CAUTION:
- **Never reuse retaining pin.**
- **Assemble retaining pin from the direction shown by the arrow in the figure until it becomes flush with the end surface of reverse shift fork.**



23. Install selected differential side bearing adjusting shim and differential side bearing outer race (transaxle case side).
- For selection of adjusting shim, refer to TM-147, "Adjustment".

24. Install selected reverse idler gear adjusting shim onto reverse idler gear assembly.
- For selection of adjusting shim, refer to TM-147, "Adjustment".

25. Install selected input shaft rear bearing adjusting shim onto input shaft.
- For selection of adjusting shim, refer to TM-147, "Adjustment".

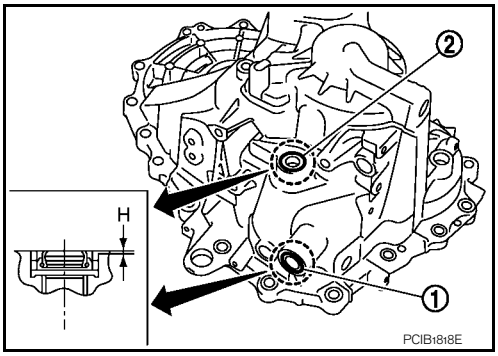
26. Install selected striking rod adjusting shim and striking rod shim onto striking rod assembly.
- For selection of adjusting shim, refer to TM-147, "Adjustment".

cardiagn.com

27. Install shifter lever oil seal (1) and striking rod oil seal (2) to transaxle case using the drift [Commercial service tool].

Dimension "H" : 0 - 1.0 mm (0 - 0.039 in)

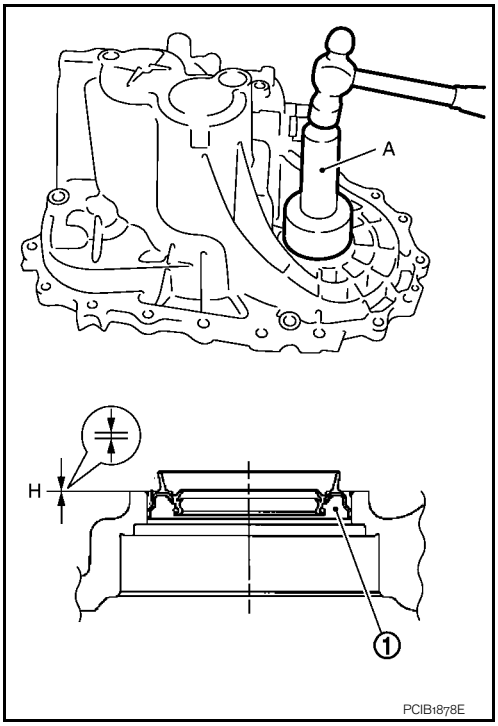
CAUTION:
- **Never reuse shifter lever oil seal and striking rod oil seal.**
- **When installing, never incline shifter lever oil seal and striking rod oil seal.**
- **Never damage transaxle case.**



28. Install differential side oil seal (1) to transaxle case using the drift (A) [SST: ST30720000].

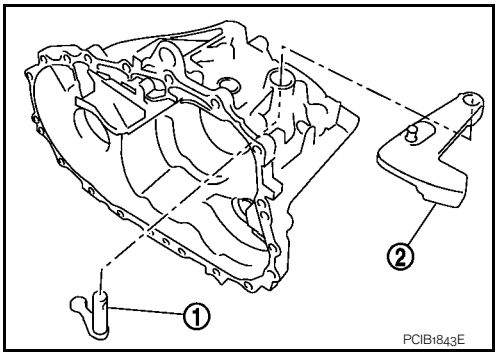
Dimension "H" : -0.5 - 0.5 mm (-0.020 - 0.020 in)

CAUTION:
- **Never reuse differential side oil seal.**
- **When installing, never incline differential side oil seal.**
- **Never damage transaxle case.**



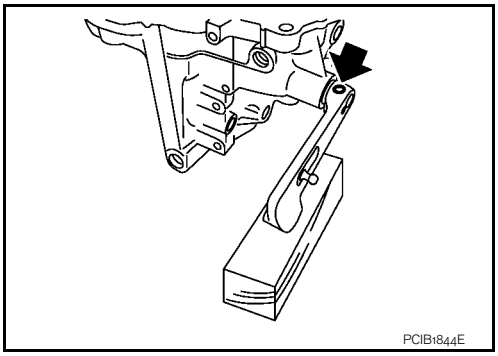
29. Install shifter lever B (1) and shifter lever A (2) to transaxle case.

CAUTION:
Be careful with the orientation of shifter lever B and shifter lever A.



30. Install retaining pin to shifter lever A.

CAUTION:
- **Never reuse retaining pin.**
- **Assemble retaining pin from the direction shown by the arrow in the figure until it becomes flush with the end surface of shifter lever A.**

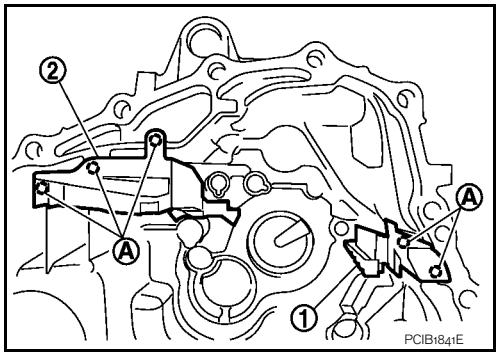


cardiagn.com

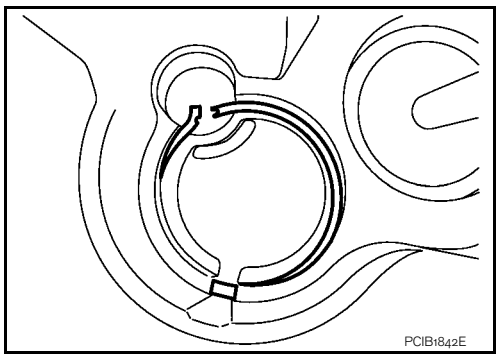
31. Install transaxle case following the procedures below.

a. Install selected mainshaft rear bearing adjusting shim into transaxle case.
   - For selection of adjusting shim, refer to TM-147, "Adjustment".

b. Install oil gutter A (1) and oil gutter B (2) to transaxle case.
   CAUTION:
   Insert the tab (A) of oil gutter A and oil gutter B into transaxle case.

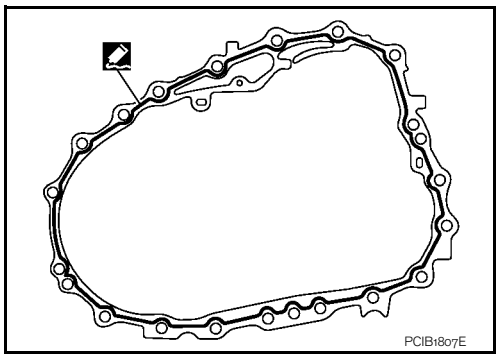


c. Temporarily install snap ring of mainshaft rear bearing into transaxle case.
   CAUTION:
   Never reuse snap ring.

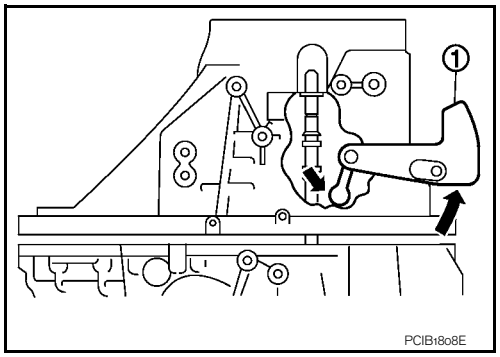


d. Apply recommended sealant to mating surface of clutch housing as shown in the figure.
   - **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

   CAUTION:
   - **Remove old sealant adhering to the mounting surfaces. Also remove any moisture, oil, or foreign material adhering to both mounting surfaces.**
   - **Apply sealant so as not to break the bead.**
   - **The width of sealant bead is 1 - 2 mm (0.04 - 0.08 in).**
   - **The height of sealant bead is 0.4 - 1 mm (0.016 - 0.04 in).**
   - **The overlap length of both ends of sealant bead is 3 - 5 mm (0.12 - 0.20 in).**



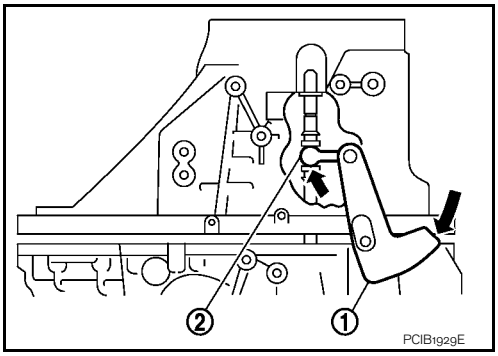
e. With shifter lever A (1) held in the position shown in the figure, temporarily assemble transaxle case to clutch housing.
   CAUTION:
   Never damage striking rod oil seal.
   NOTE:
   Make sure to hold shifter lever A in the position shown in the figure. Otherwise transaxle case cannot be installed to clutch housing.



cardiagn.com

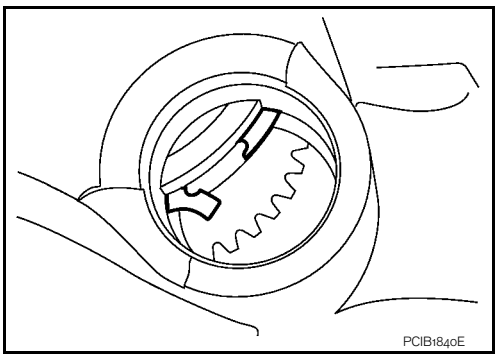
f. While rotating shifter lever A (1) in the direction of the arrow in the figure, assemble transaxle case to clutch housing.

2 : Shifter lever B

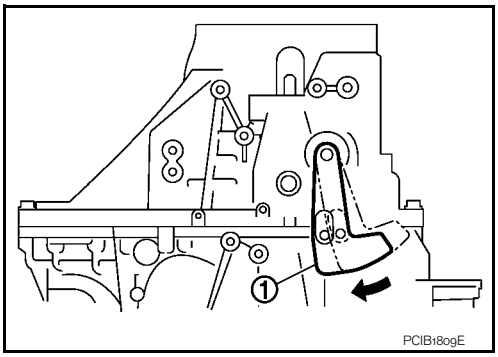


g. Accessing from the bore plug hole, expand snap ring at mainshaft rear bearing so that the ring catches the periphery of mainshaft rear bearing.

h. Temporarily tighten transaxle case mounting bolts.

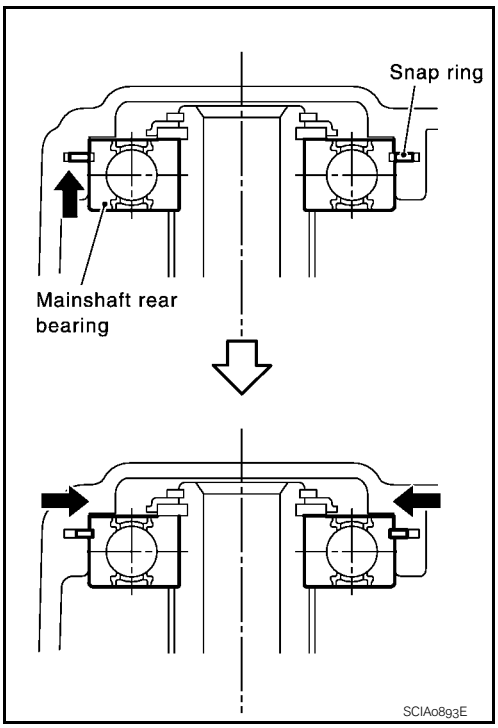


i. Shift the shifter lever A (1) to 2nd gear position.
NOTE:
- The 2nd gear position is attained when shifter lever A is in the position shown in the figure.



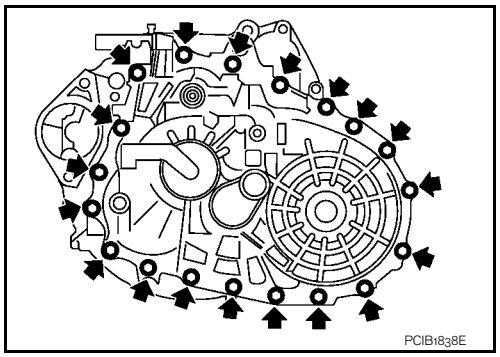
- When transaxle is shifted to the 2nd gear position, mainshaft assembly is lifted.

j. Seat snap ring in the groove on mainshaft rear bearing. If snap ring is not seated in the groove on mainshaft rear bearing, remove transaxle case and repeat the procedure from step d.

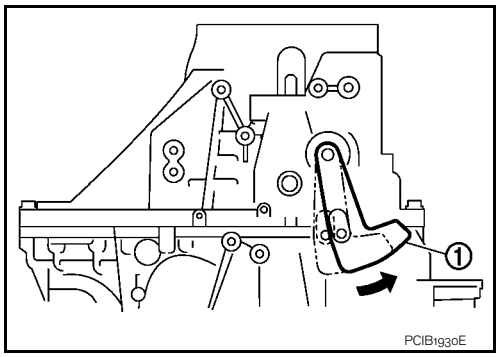


cardiagn.com

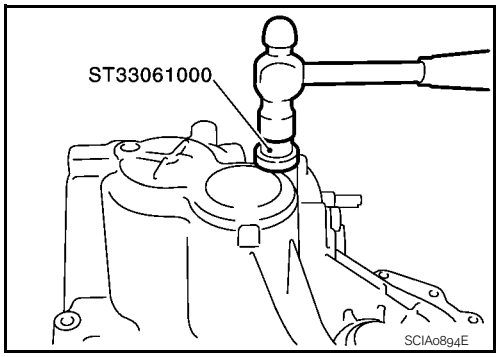
k. Tighten transaxle case mounting bolts to the specified torque.



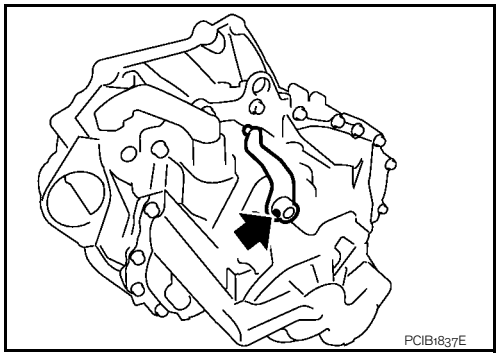
l. Shift the shifter lever A (1) to neutral position.
NOTE:
The neutral position is attained when shifter lever A is in the position shown in the figure.



32. Install bore plug to transaxle case using the drift.
CAUTION:
Never reuse bore plug.



33. Install selector lever to transaxle case and then install retaining pin to selector lever.
CAUTION:
- **Never reuse retaining pin.**
- **Assemble retaining pin from the direction shown by the arrow in the figure until it becomes flush with the end surface of selector lever.**



34. Install guide bolt following the procedures below.
a. Shift the shifter lever A and selector lever to neutral position.

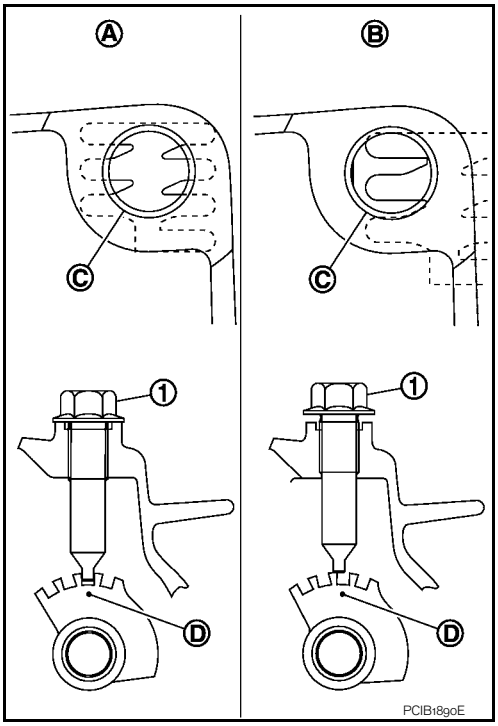
cardiagn.com

b. Visually confirm from the guide bolt mounting hole (C) that the lever is securely set to neutral position (A). If it is not in the neutral position, repeat the procedure from step a.

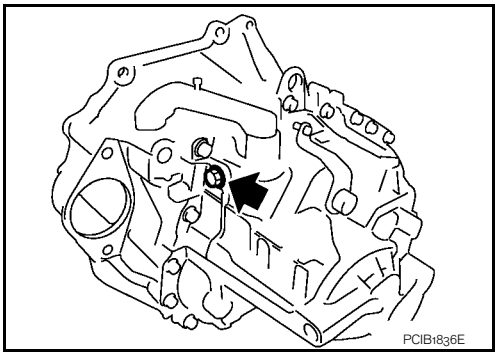
1 : Guide bolt

CAUTION:
The guide groove (D) of striking rod assembly will be damaged when assembling guide bolt with the lever is in except neutral position (B).

c. Check continuity between terminals of park/neutral position (PNP) switch to confirm it in the neutral position. If it is not in the neutral position, remove park/neutral position (PNP) switch and repeat the procedure from step a. Refer to TM-108, "Component Inspection".



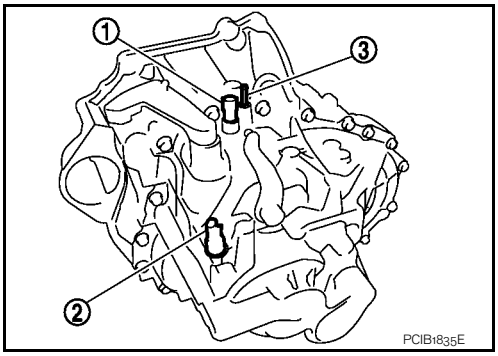
d. Install guide bolt to transaxle case and then tighten guide bolt to the specified torque.
CAUTION:
Never reuse guide bolt.



35. Apply recommended sealant to threads of park/neutral position (PNP) switch (1). Then install it to transaxle case and tighten to the specified torque.
    - **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

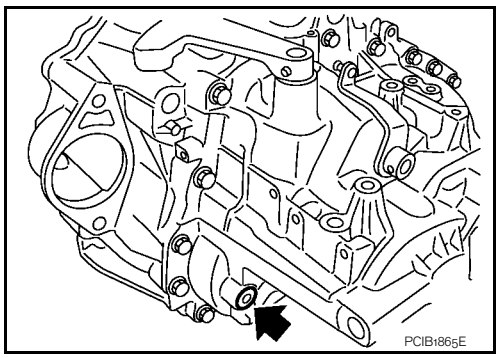
    CAUTION:
    Remove old sealant and oil adhering to threads.
36. Install plunger to transaxle case.
37. Apply recommended sealant to threads of back-up lamp switch (2). Then install it to transaxle case and tighten to the specified torque.
    - **Use Genuine Liquid Gasket, Three Bond 1215 or an equivalent.**

    CAUTION:
    Remove old sealant and oil adhering to threads.
38. Install air breather tube (3) to transaxle case.
    CAUTION:
    - **Never reuse air breather tube.**
    - **Assemble air breather tube until its collar element contacts with transaxle case.**

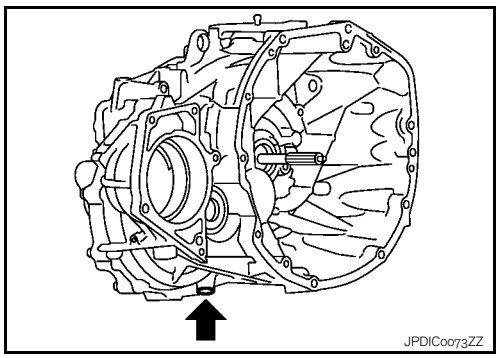


cardiagn.com

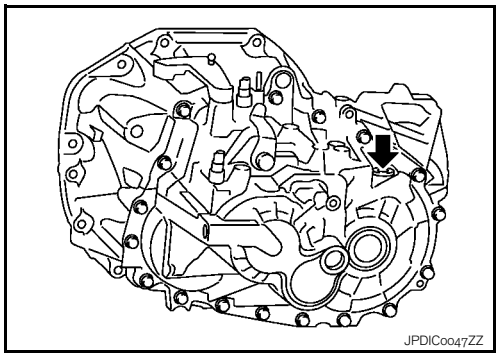
39. Install gasket onto plug and then install them into transaxle case. Tighten plug to the specified torque.
CAUTION:
Never reuse gasket.



40. Install gasket onto drain plug and then install them into clutch housing. Tighten drain plug to the specified torque.
CAUTION:
Never reuse gasket.



41. Install gasket onto filler plug and then install them into transaxle case. Tighten filler plug to the specified torque.
CAUTION:
- **Never reuse gasket.**
- **After gear oil is filled, tighten filler plug to specified torque.**

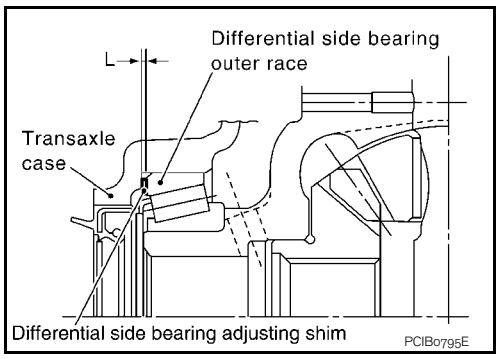


Adjustment

INFOID:0000000001034954

DIFFERENTIAL SIDE BEARING PRELOAD

- When adjusting differential side bearing preload, select adjusting shim for differential side bearing. To select adjusting shim, measure clearance “L” between transaxle case and differential side bearing outer race.
CAUTION:
Up to 2 adjusting shims can be selected.
- Calculate dimension “L” (thickness of adjusting shim) using the following procedure to satisfy specification of preload for differential side bearing.



Preload : Refer to TM-185, "Differential Side Bearing Preload".

Dimension “L” = (L_1 - L_2) + Preload

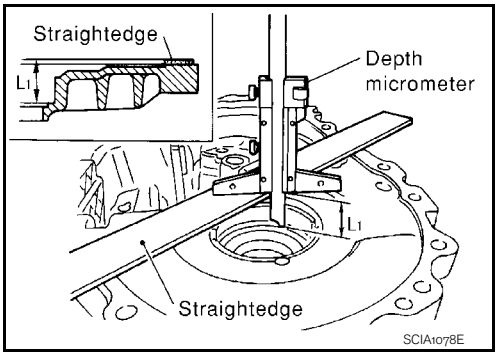
L : Thickness of adjusting shim

L_1 : Distance between transaxle case end face and mounting face of adjusting shim

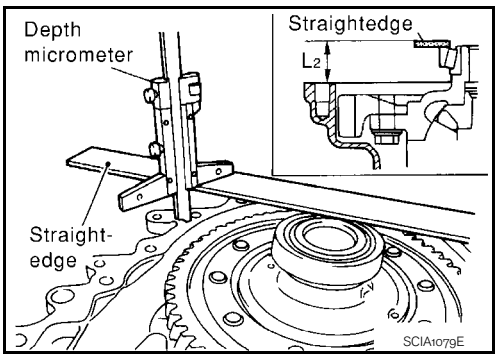
L_2 : Distance between differential side bearing outer race and clutch housing end face

cardiagn.com

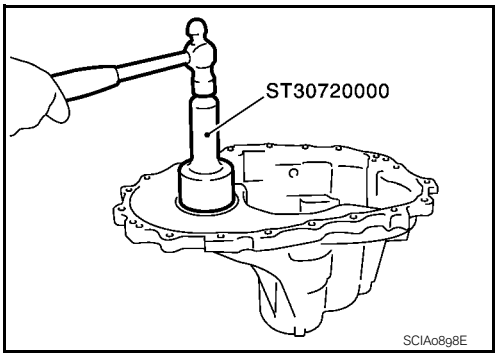
1. Using a depth micrometer and straightedge, measure dimension "L_1" between transaxle case end face and mounting face of adjusting shim.
2. Install differential side bearing outer race onto differential side bearing on final gear side. Holding lightly differential side bearing outer race horizontally by hand, rotate final gear five times or more (for smooth movement of bearing roller).



3. Using a depth micrometer and straightedge as shown in the figure, measure dimension "L_2" between differential side bearing outer race and clutch housing end face.
   CAUTION:
   "L_2": Measure at 4 point by approximately 90 degrees and use the average value.

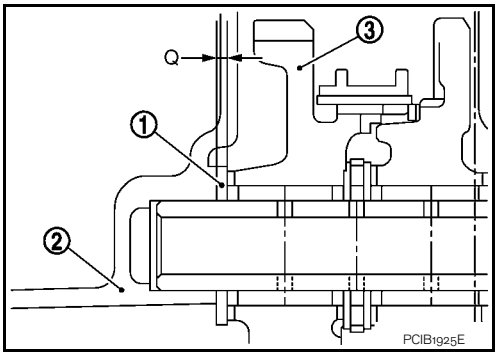


4. Install selected differential side bearing adjusting shim and then install differential side bearing outer race (transaxle case side) using the drift.
   CAUTION:
   Replace differential side bearing and differential side bearing outer race as a set.



REVERSE IDLER GEAR END PLAY

- When adjusting reverse idler gear end play, select adjusting shim for reverse idler gear. To select adjusting shim (1), measure clearance between transaxle case (2) and reverse idler gear (rear) (3).
  CAUTION:
  Only 1 adjusting shim can be selected.
- Calculate dimension "Q" (thickness of adjusting shim) using the following procedure to satisfy specification of end play for reverse idler gear.



End play : Refer to TM-184, "End Play".

Dimension "Q" = (Q_1 - Q_2) - End play

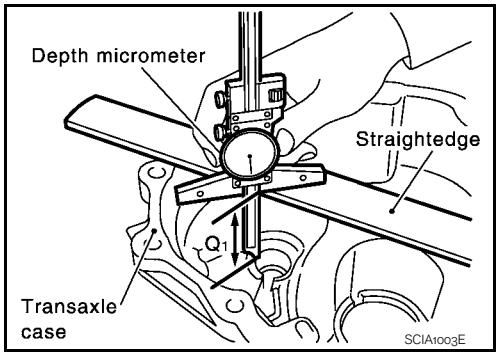
Q : Thickness of adjusting shim

Q_1 : Distance between transaxle case end face and mounting face of adjusting shim

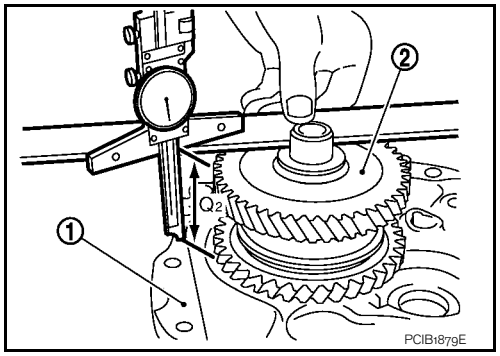
Q_2 : Distance between clutch housing end face and end face of reverse idler gear (rear)

cardiagn.com

1. Using a depth micrometer and straightedge, measure dimension "Q_1" between transaxle case end face and mounting face of adjusting shim.

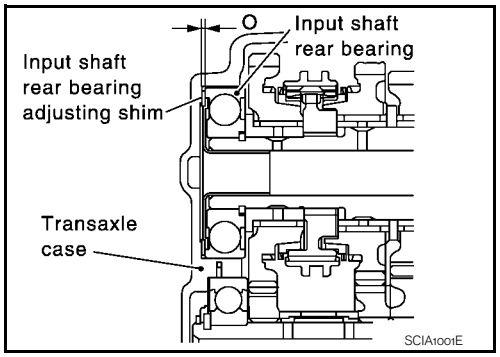


2. Using a depth micrometer and straightedge as shown in the figure, measure dimension "Q_2" between clutch housing (1) end face and end face of reverse idler gear (rear) (2).
CAUTION:
"Q_2": Measure at 4 point by approximately 90 degrees and use the average value.
3. Install selected reverse idler gear adjusting shim onto reverse idler gear (rear).



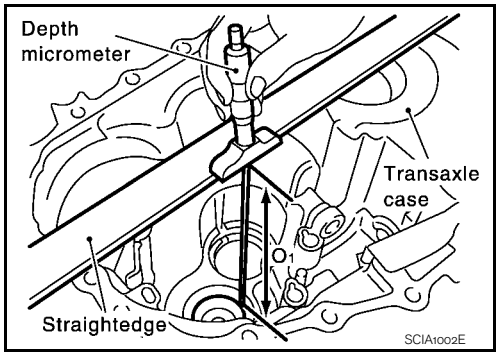
INPUT SHAFT END PLAY

- When adjusting input shaft end play, select adjusting shim for input shaft rear bearing. To select adjusting shim, measure clearance between transaxle case and input shaft rear bearing.
CAUTION:
Only 1 adjusting shim can be selected.
- Calculate dimension "O" (thickness of adjusting shim) using the following procedure to satisfy specification of end play for input shaft rear bearing.



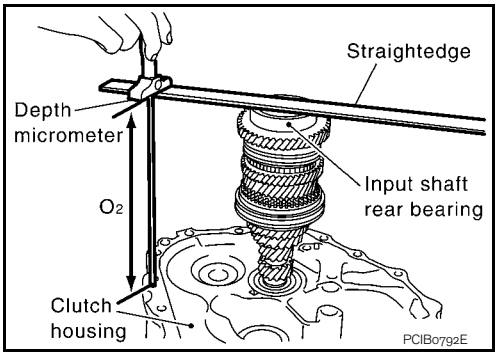
End play : Refer to TM-184, "End Play".
Dimension "O" = (O_1 - O_2) - End play
O : Thickness of adjusting shim
O_1 : Distance between transaxle case end face and mounting face of adjusting shim
O_2 : Distance between clutch housing end face and end face of input shaft rear bearing

1. Using a depth micrometer and straightedge, measure dimension "O_1" between transaxle case end face and mounting face of adjusting shim.
CAUTION:
"O_1": Measure at 4 point by approximately 90 degrees and use the average value.



cardiagn.com

2. Using a depth micrometer and straightedge as shown in the figure, measure dimension "O_2" between clutch housing end face and end face of input shaft rear bearing.
CAUTION:
"O_2": Measure at 4 point by approximately 90 degrees and use the average value.
3. Install selected input shaft rear bearing adjusting shim onto input shaft.



STRIKING ROD END PLAY

- When adjusting striking rod end play, select adjusting shim (1) for striking rod (2). To select adjusting shim, measure clearance between transaxle case (3) and striking rod shim (4).
CAUTION:
Only 1 adjusting shim can be selected.
- Calculate dimension "R" (thickness of adjusting shim) using the following procedure to satisfy specification of end play for striking rod.

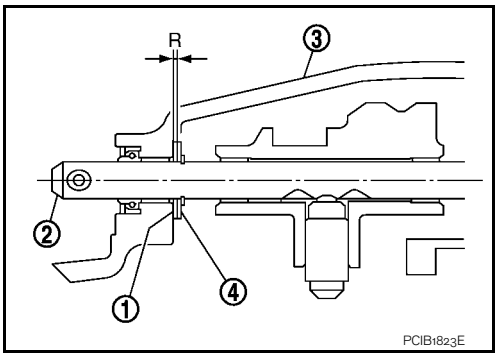
End play : Refer to TM-184, "End Play".

Dimension "R" = (R_1 - R_2) - End play

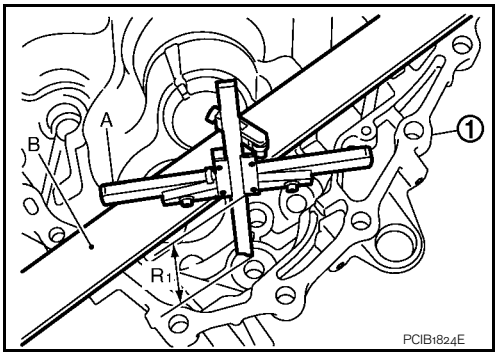
R : Thickness of adjusting shim

R_1 : Distance between transaxle case end face and mounting face of adjusting shim

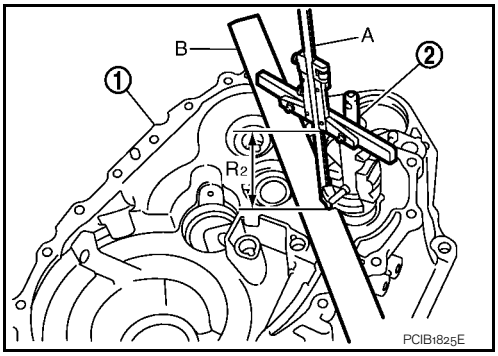
R_2 : Distance between clutch housing end face and end face of striking rod shim



1. Using a depth micrometer (A) and straightedge (B), measure dimension "R_1" between transaxle case (1) end face and mounting face of adjusting shim.
CAUTION:
"R_1": Measure at 4 point by approximately 90 degrees and use the average value.



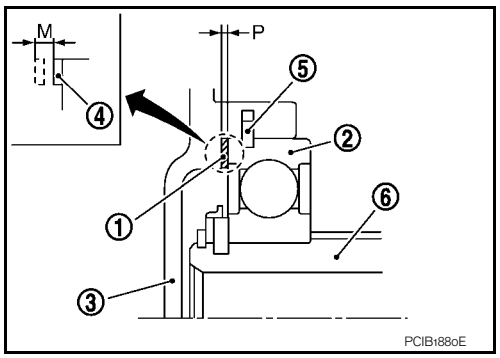
2. Using a depth micrometer (A) and straightedge (B) as shown in the figure, measure dimension "R_2" between clutch housing (1) end face and end face of striking rod shim (2).
CAUTION:
- **"R_2": Measure at 4 point by approximately 90 degrees and use the average value.**
- **When measuring, be careful for the inclination of striking rod assembly and striking rod shim.**
3. Install selected striking rod adjusting shim onto striking rod assembly.



MAINSHAFT END PLAY

cardiagn.com

- When adjusting mainshaft end play, select adjusting shim (1) for mainshaft rear bearing (2). To select adjusting shim, measure clearance “M” between transaxle case (3) and dummy adjusting shim (4) on mainshaft rear bearing.



5 : Snap ring
6 : Mainshaft

CAUTION:
Only 1 adjusting shim can be selected.

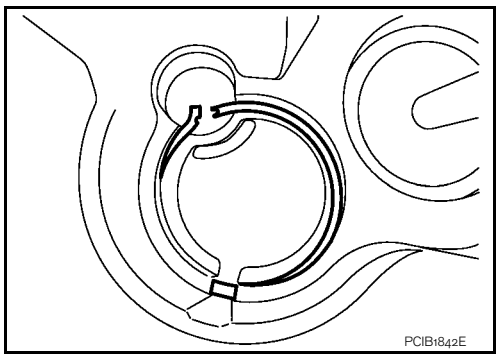
- Calculate dimension “P” (thickness of adjusting shim) using the following procedure to satisfy specification of end play for mainshaft rear bearing.

End play : Refer to TM-184, "End Play".
Dimension “P” = (M + N) - End play
P : Thickness of adjusting shim
M : Distance between dummy adjusting shim on mainshaft rear bearing end face and transaxle case end face
N* : Thickness of dummy adjusting shim

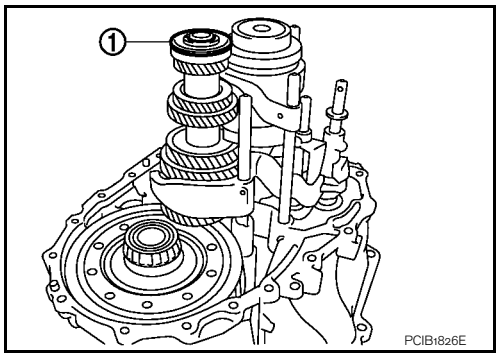
*: Refer to the latest parts information to use a dummy adjusting shim of which part number is the thinnest in thickness.

1. Install transaxle case following the procedures below.

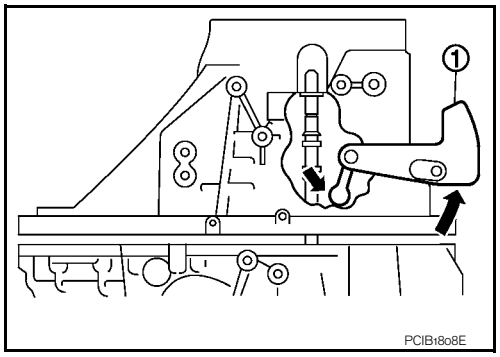
a. Temporarily install snap ring of mainshaft rear bearing into transaxle case.
CAUTION:
Do not reuse snap ring.



b. Install dummy adjusting shim (1) to mainshaft assembly.



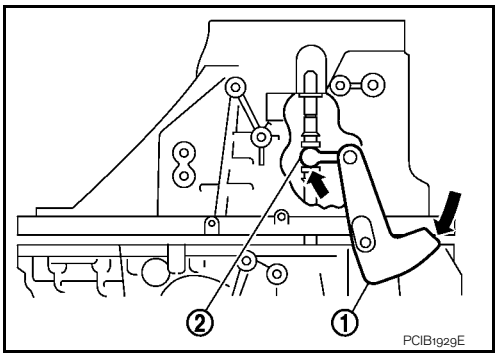
c. With shifter lever A (1) held in the position shown in the figure, temporarily assemble transaxle case to clutch housing.
CAUTION:
Be careful not to damage striking rod oil seal.
NOTE:
Make sure to hold shifter lever A in the position shown in the figure. Otherwise transaxle case cannot be installed to clutch housing.



cardiagn.com

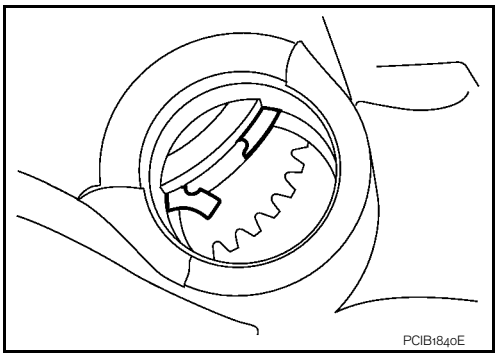
d. While rotating shifter lever A (1) in the direction of the arrow shown in the figure, assemble transaxle case to clutch housing.

2 : Shifter lever B

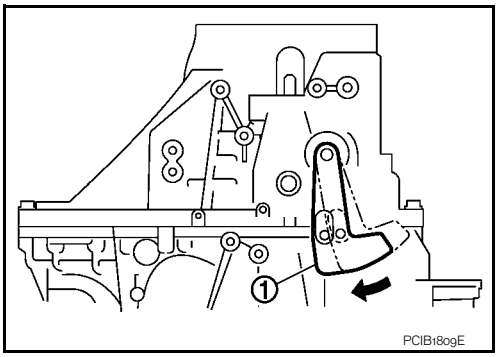


e. Accessing from the bore plug hole, expand snap ring at mainshaft rear bearing so that the ring catches the periphery of mainshaft rear bearing.

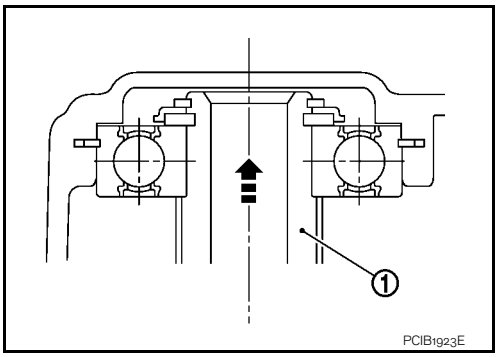
f. Temporarily tighten transaxle case mounting bolts.



2. Shift the shifter lever A (1) to 2nd gear position.
NOTE:
- The 2nd gear position is attained when shifter lever A is in the position shown in the figure.



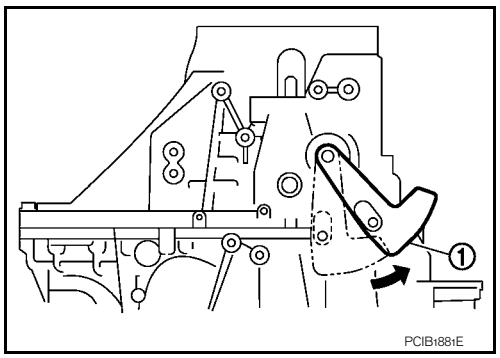
- When transaxle is shifted to the 2nd gear position, mainshaft assembly (1) is lifted.



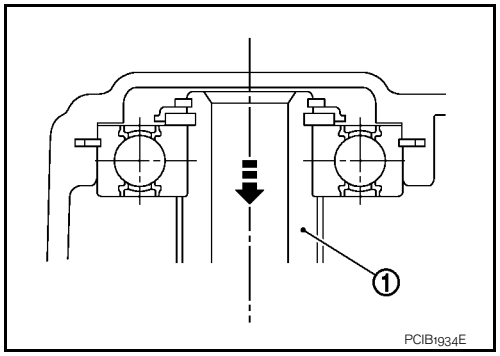
3. Seat snap ring in the groove on mainshaft rear bearing. If snap ring is not seated in the groove on mainshaft rear bearing, remove transaxle case and repeat the procedure 1 from step c.
4. Shift the shifter lever A to 1st gear position, and then shift it to 2nd gear position. Repeat 3 times.
NOTE:
- The mainshaft rear bearing position will be stabilized by shifting between 1st gear position and 2nd gear position alternately.

cardiagn.com

- The 1st gear position is attained when shifter lever A (1) is in the position shown in the figure.

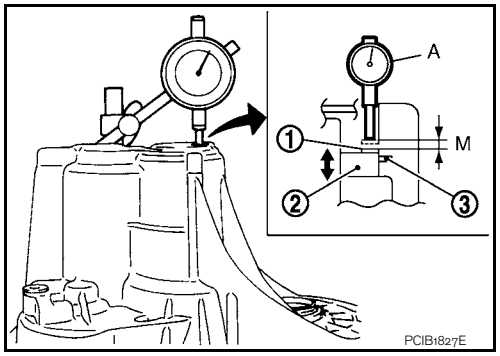


- When transaxle is shifted to the 1st gear position, mainshaft assembly (1) is declined.



5. Set the dial indicator (A) to dummy adjusting shim (1) through the bore plug mounting hole.

   2 : Mainshaft rear bearing
   3 : Snap ring



cardiagn.com

6. Shift the shifter lever A (1) to 2nd gear position (A), and then rotate it in the direction of the arrow (C) in the figure until it stops. Using this position as the reference point, measure the amount of movement when shifting shifter lever A to 1st gear position (B) and rotating it in the direction of the arrow (D) in the figure until it stops. This measurement is the "M" dimension.
7. When measurement "M" is 0 - 0.06 mm (0 - 0.0024 in), adjustment terminates, and the dummy adjusting shim becomes regular adjusting shim. Select adjusting shim from the computed expressions when measurement "M" is over 0.06 mm (0.0024 in).

INPUT SHAFT AND GEAR

Exploded View

INFOID:0000000001034955

Refer to TM-125, "Exploded View".

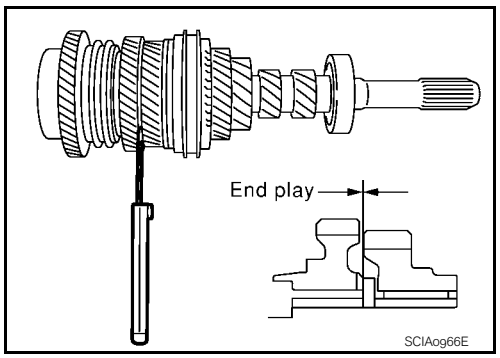
Disassembly

INFOID:0000000001034956

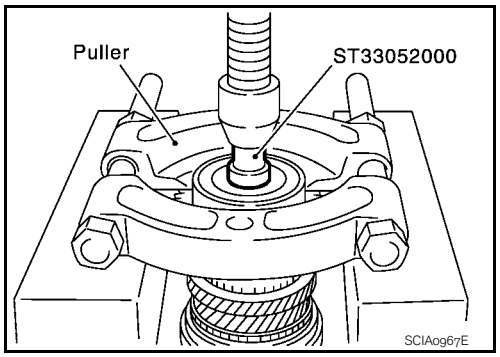
1. Before disassembling, measure end play for 3rd, 4th, 5th, and 6th input gears.

End play standard value : Refer to TM-184, "End Play".

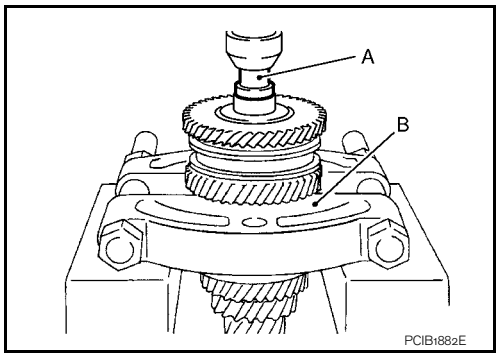
2. Remove oil channel.



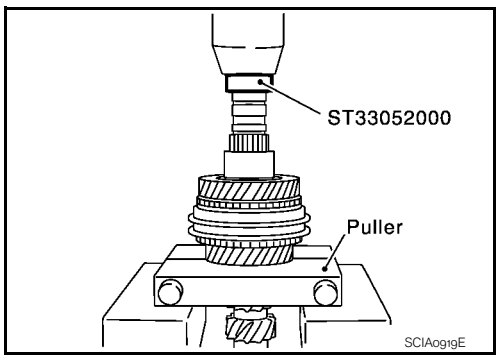
3. Press out input shaft rear bearing using the drift and a puller.
4. Remove snap ring.



5. Press out 6th input gear, 6th needle bearing, 6th input gear bushing, 5th-6th synchronizer hub assembly, and 5th input gear using the drift (A) [SST: ST33052000] and a puller (B).
6. Remove 5th needle bearing.

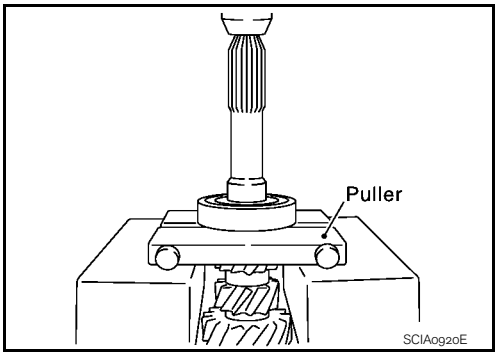


7. Press out 5th input gear bushing, thrust washer, 4th input gear, 4th needle bearing, 4th input gear bushing, 3rd-4th synchronizer hub assembly, and 3rd input gear using the drift and a puller.
8. Remove 3rd needle bearing.



cardiagn.com

9. Press out input shaft front bearing using a puller.



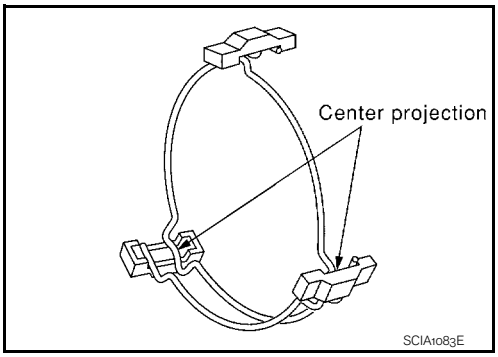
Assembly

INFOID:0000000001034957

1. Install 3rd needle bearing to input shaft.
2. Install 3rd input gear, 3rd inner baulk ring, 3rd synchronizer cone, and 3rd outer baulk ring to input shaft.
   CAUTION:
   Replace 3rd inner baulk ring, 3rd synchronizer cone, and 3rd outer baulk ring as a set.
3. Install 3rd-4th spread springs, 3rd-4th shifting inserts, and 3rd-4th synchronizer hub onto 3rd-4th coupling sleeve.
   CAUTION:
   - **Be careful with orientation of 3rd-4th synchronizer hub.**
   - **Never reuse 3rd-4th synchronizer hub and 3rd-4th coupling sleeve.**
   - **Replace 3rd-4th synchronizer hub and 3rd-4th coupling sleeve as a set.**

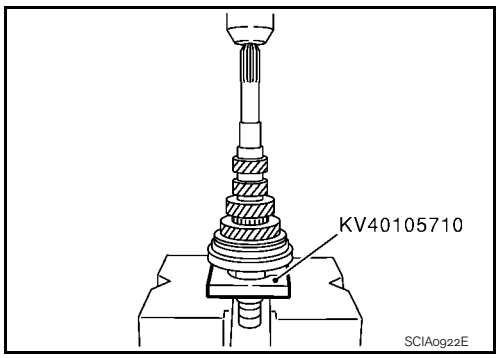
   - **Be careful with orientation of 3rd-4th coupling sleeve.**

   - **Be sure not to hook center projection of 2 spread springs on same shifting insert.**

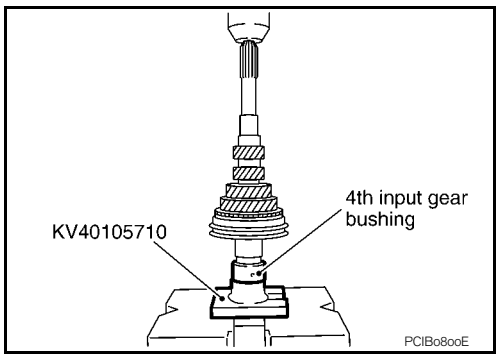


cardiagn.com

4. Press in 3rd-4th synchronizer hub assembly using the press stand.
   CAUTION:
   Align grooves of 3rd-4th shifting insert and 3rd outer baulk ring.



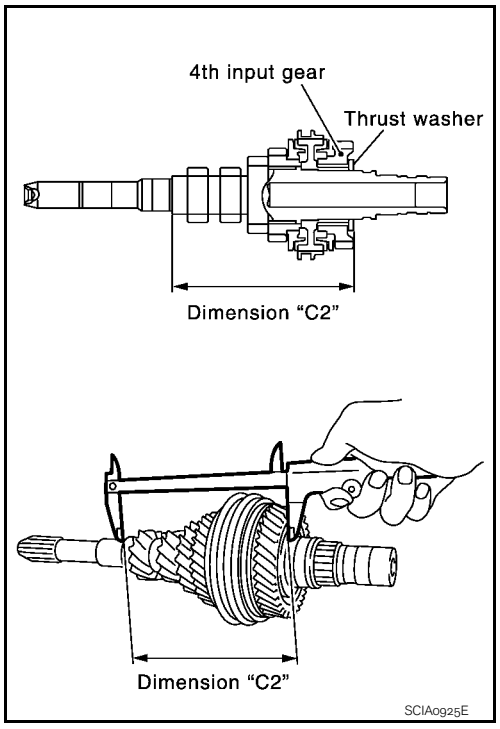
5. Press in 4th input gear bushing using the press stand.
6. Install 4th baulk ring.
7. Install 4th needle bearing and 4th input gear to input shaft.



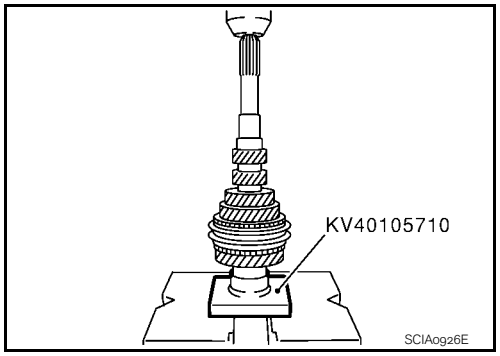
8. Select thrust washer so that dimension “C2” satisfies the standard value below. Then install thrust washer onto input shaft.

   Standard value for dimension “C2” : **Refer to TM-185, "Dimension".**

   CAUTION:
   Only one thrust washer can be selected.



9. Press in 5th input gear bushing using the press stand.
   CAUTION:
   Never reuse 5th input gear bushing.
10. Install 5th needle bearing and 5th input gear to input shaft.
11. Install 5th baulk ring.



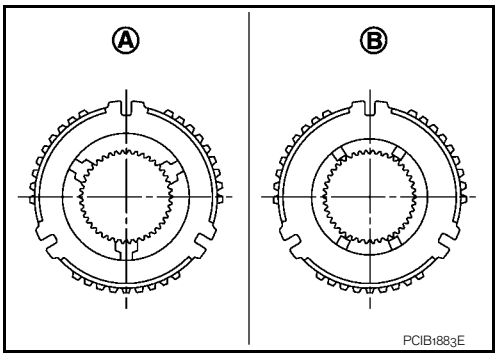
cardiagn.com

12. Install 5th-6th synchronizer hub, 5th-6th spread springs, and 5th-6th shifting inserts onto 5th-6th coupling sleeve.

CAUTION:

- **Be careful with orientation of 5th-6th synchronizer hub.**

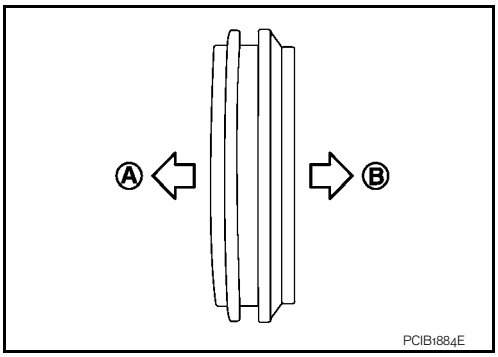
A	: Front side
B	: Rear side



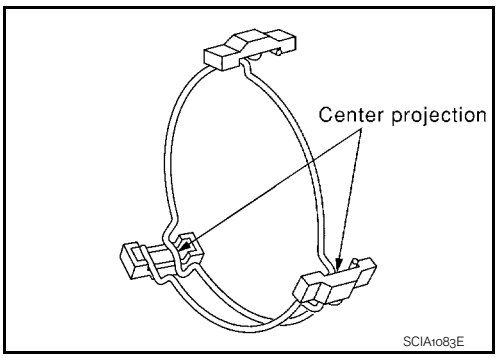
- **Never reuse 5th-6th synchronizer hub and 5th-6th coupling sleeve.**
- **Replace 5th-6th synchronizer hub and 5th-6th coupling sleeve as a set.**

- **Be careful with orientation of 5th-6th coupling sleeve.**

A	: 5th input gear side
B	: 6th input gear side



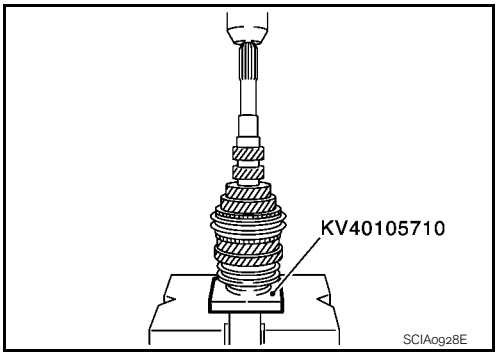
- **Be sure not to hook center projection of 2 spread springs on same shifting insert.**



13. Press in 5th-6th synchronizer hub assembly using the press stand.

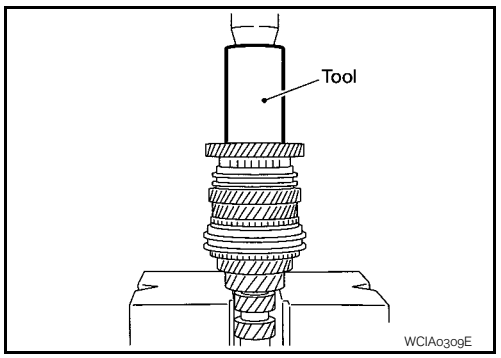
CAUTION:

Align grooves of 5th-6th shifting insert and 5th baulk ring.



cardiagn.com

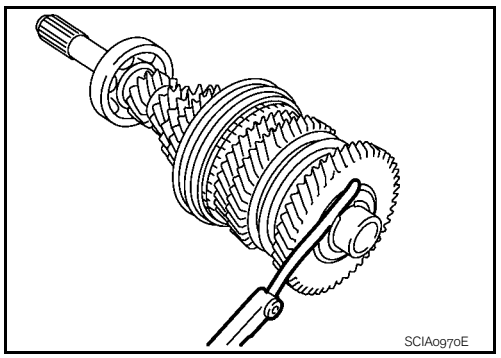
14. Install 6th needle bearing, 6th input gear, 6th baulk ring onto 6th input gear bushing and then press in 6th input gear bushing onto input shaft using the drift [SST: ST33200000].



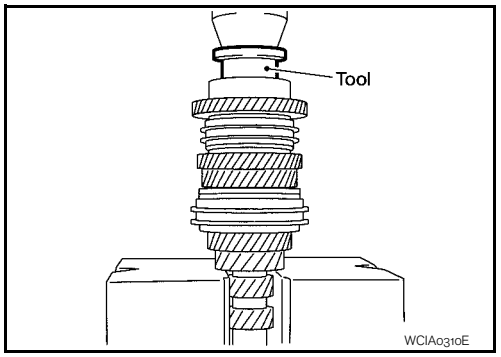
15. Install snap ring onto input shaft and make sure that end play (gap between snap ring and groove) of 6th input gear bushing satisfies the standard value.

End play standard value :Refer to TM-184, "End Play".

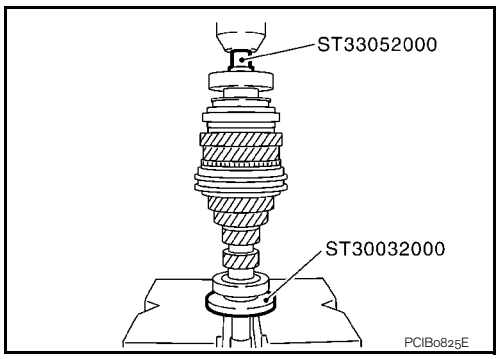
- If measurement is outside the standard range, select snap ring.
  CAUTION:
  Never reuse snap ring.



16. Press in input shaft rear bearing using the drift [SST: ST30901000].
    CAUTION:
    Install input shaft rear bearing with its brown surface facing the 6th input gear side.



17. Press in input shaft front bearing using the drifts.
18. Install oil channel onto input shaft.



19. Check end play of 3rd, 4th, 5th, and 6th input gears.

End play standard value : Refer to TM-184, "End Play".

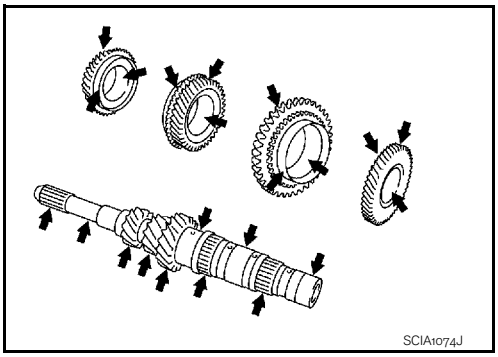
Inspection

INFOID:0000000001034958

INPUT SHAFT AND GEAR

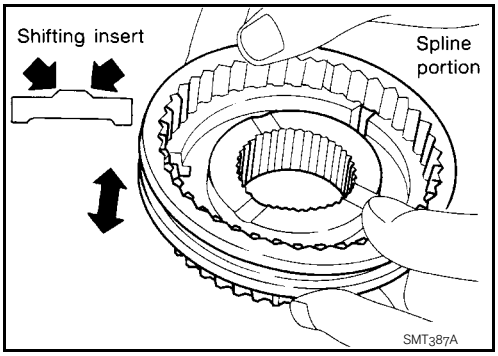
Check items below. If necessary, replace them with new ones.
- Damage, peeling, dent, uneven wear, bending, etc. of shaft
- Excessive wear, damage, peeling, etc. of gears



SYNCHRONIZER

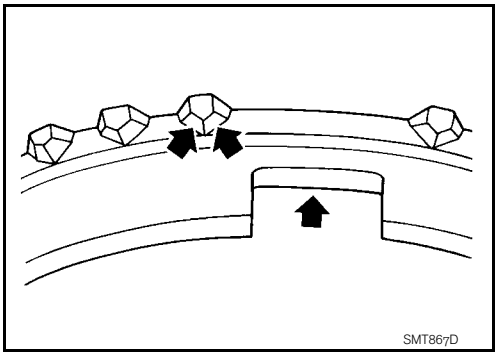
Synchronizer Hub and Coupling Sleeve

Check items below. If necessary, replace them with new ones.
- Damage and excessive wear of contact surfaces of coupling sleeve, synchronizer hub and shifting insert
- Coupling sleeve and synchronizer hub must move smoothly.



Baulk Ring and Spread Spring

Check items below. If necessary, replace them with new ones.
- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

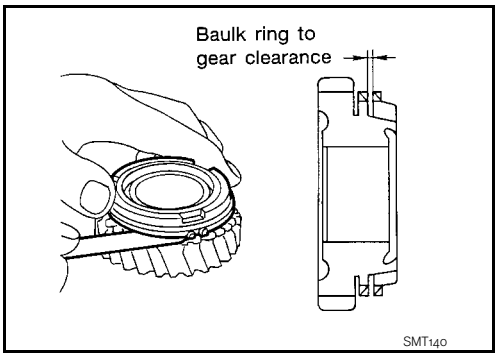


Baulk Ring Clearance for Single Cone Synchronizer (4th, 5th, and 6th)

Push baulk ring on the cone and measure the clearance between baulk ring and cone. If measurement is below limit, replace it with a new one.

Clearance

Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



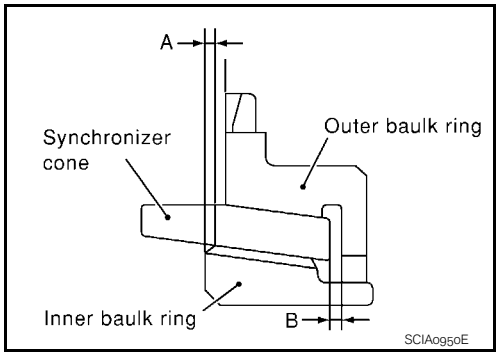
Baulk Ring Clearance for Double Cone Synchronizer (3rd)

cardiagn.com

Check the clearance between outer baulk ring, synchronizer cone, and inner baulk ring as follows.

CAUTION:

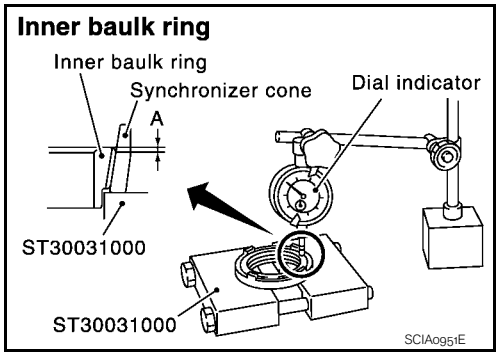
The clearances “A” and “B” are controlled with outer baulk ring, synchronizer cone, and inner baulk ring as a set. Replace them as a set if the clearances are outside the limit value.



1. Measure the clearance “A” at 2 points or more diagonally opposite using a dial indicator. And then calculate mean value.

Clearance “A”

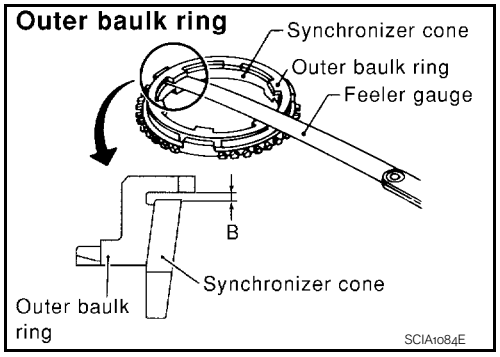
Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



2. Measure the clearance “B” at 2 points or more diagonally opposite using a feeler gauge. And then calculate mean value.

Clearance “B”

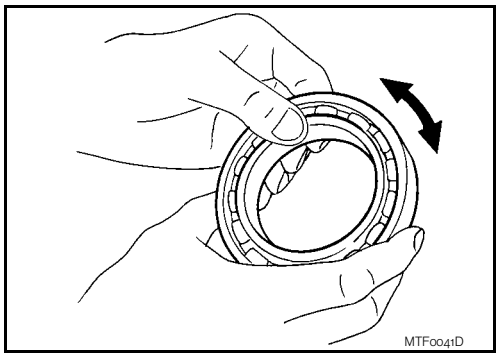
Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



BEARING

Check items below. If necessary, replace them with new ones.

- Damage and rough rotation of bearing



MAINSHAFT AND GEAR

Exploded View

INFOID:0000000001034959

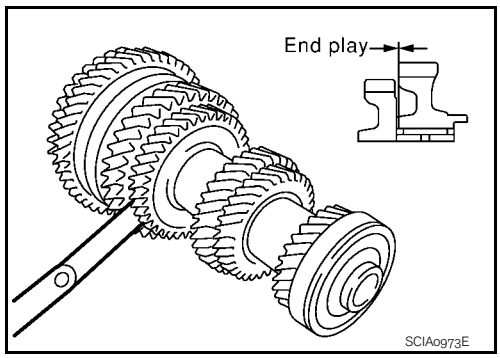
Refer to TM-125, "Exploded View".

Disassembly

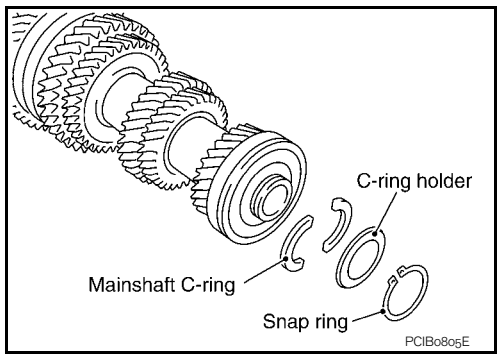
INFOID:0000000001034960

1. Before disassembling, measure the end play of 1st and 2nd main gears.

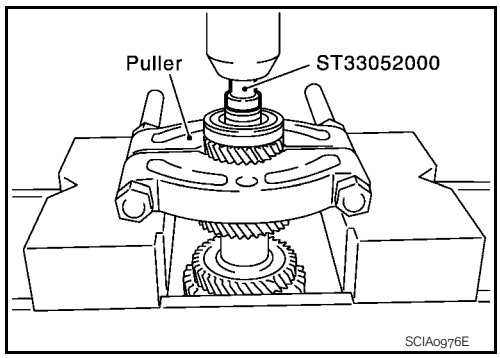
End play standard value : Refer to TM-184, "End Play".



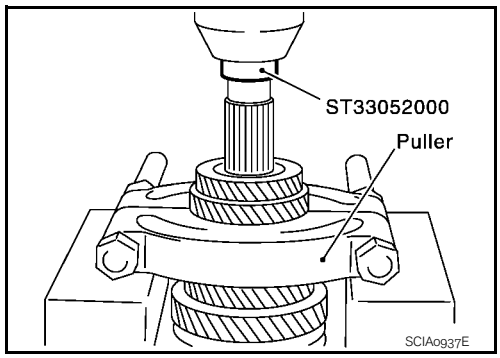
2. Remove snap ring.
3. Remove C-ring holder and then remove mainshaft C-rings.



4. Press out mainshaft rear bearing, 6th main gear adjusting shim, and 6th main gear using the drift and a puller.
5. Remove 5th-6th mainshaft spacer.

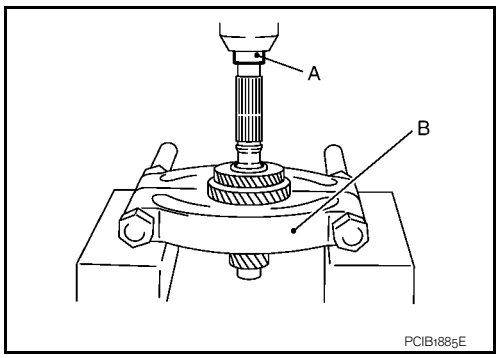


6. Press out 4th main gear and 5th main gear using the drift and a puller.
7. Remove 4th main gear adjusting shim.
8. Remove 3rd-4th mainshaft spacer.

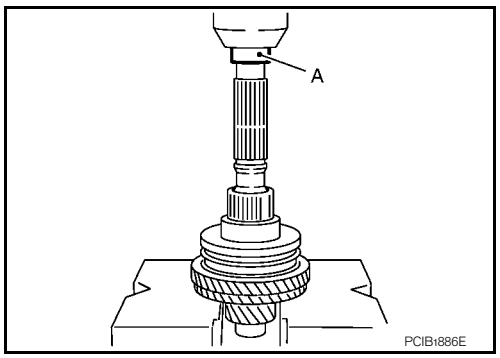


cardiagn.com

9. Press out 3rd main gear and 2nd main gear using the drift (A) [SST: KV40105020] and a puller (B).
10. Remove 2nd needle bearing.



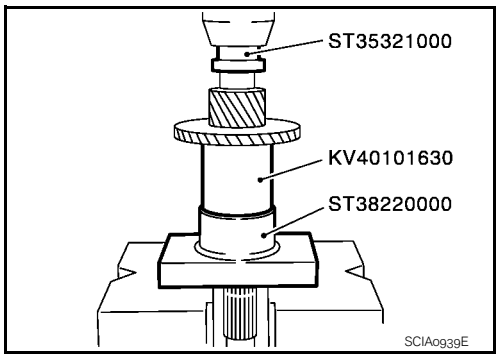
11. Press out 2nd main gear bushing, 1st-2nd synchronizer hub assembly, 1st main gear, 1st needle bearing, 1st main gear bushing, and reverse main gear using the drift (A) [SST: KV40105020].



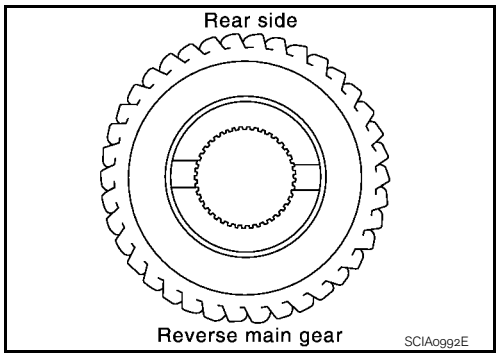
Assembly

INFOID:0000000001034961

1. Press in reverse main gear using the drifts and the press stand.

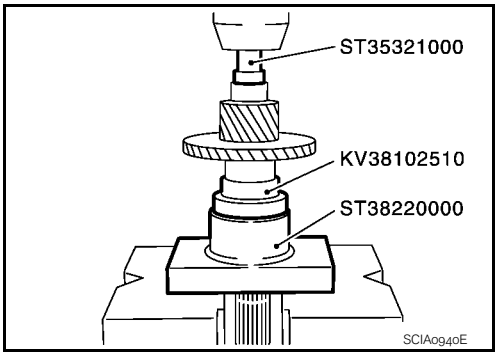


CAUTION:
- **Be careful with orientation of reverse main gear.**
- **Never reuse reverse main gear.**



cardiagn.com

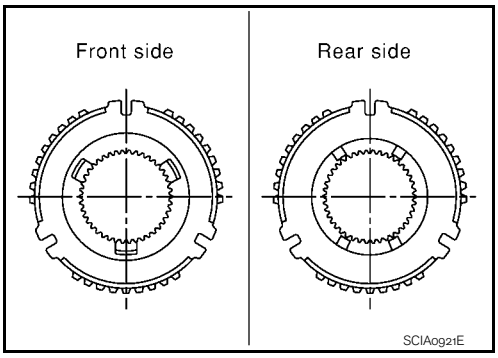
2. Press in 1st main gear bushing using the drifts and the press stand.
3. Install 1st needle bearing and then 1st main gear.



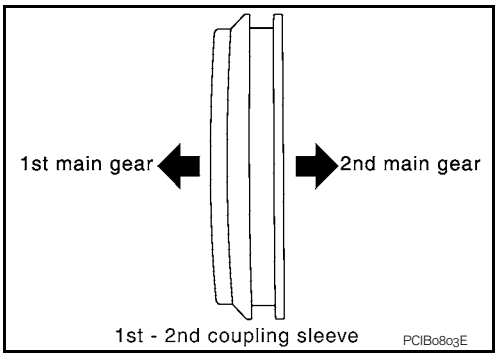
4. Install 1st-2nd spread springs, 1st-2nd shifting inserts, and 1st-2nd synchronizer hub onto 1st-2nd coupling sleeve.

CAUTION:

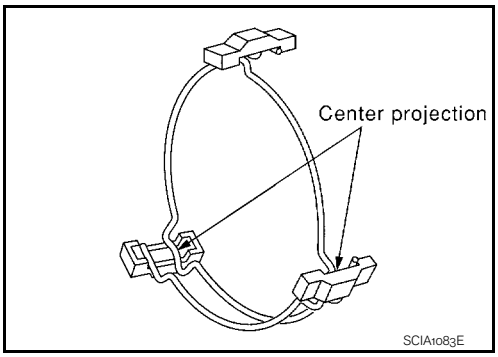
- **Be careful with orientation of 1st-2nd synchronizer hub.**
- **Never reuse 1st-2nd synchronizer hub and 1st-2nd coupling sleeve.**
- **Replace 1st-2nd synchronizer hub and 1st-2nd coupling sleeve as a set.**



- **Be careful with orientation of 1st-2nd coupling sleeve.**



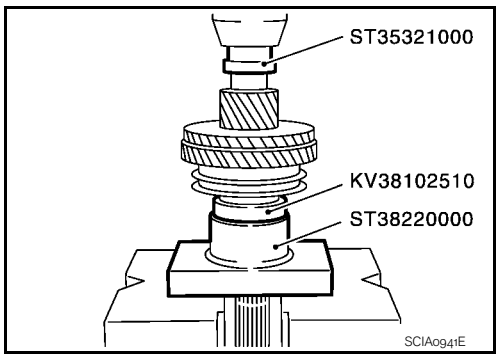
- **Be sure not to hook center projection of 2 spread springs on same 1st-2nd shifting insert.**



cardiagn.com

5. Install 1st inner baulk ring, 1st synchronizer cone, and 1st outer baulk ring onto mainshaft and then press in 1st-2nd synchronizer hub assembly onto mainshaft using the drifts and the press stand.

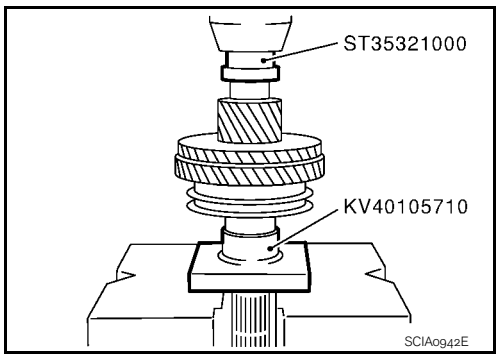
CAUTION:
- **Outer baulk ring, synchronizer cone, and inner baulk ring on 2nd gear-side must have been removed.**
- **Be careful with orientation of coupling sleeve.**
- **Replace 1st inner baulk ring, 1st synchronizer cone, and 1st outer baulk ring as a set.**



6. Press in 2nd main gear bushing using the drift and the press stand.
7. Install 2nd outer baulk ring, 2nd synchronizer cone, and 2nd inner baulk ring.

CAUTION:
Replace 2nd outer baulk ring, 2nd synchronizer cone, and 2nd inner baulk ring as a set.

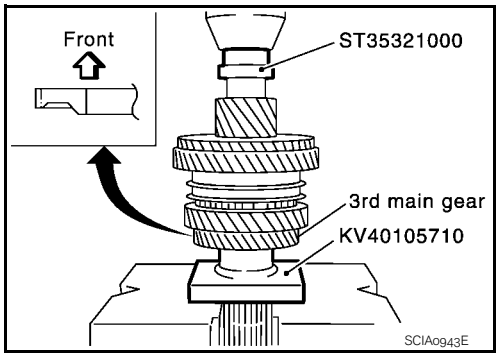
8. Install 2nd needle bearing and 2nd main gear.



9. Press in 3rd main gear using the drift and the press stand.

CAUTION:
- **Be careful with orientation of 3rd main gear.**
- **Never reuse 3rd main gear.**

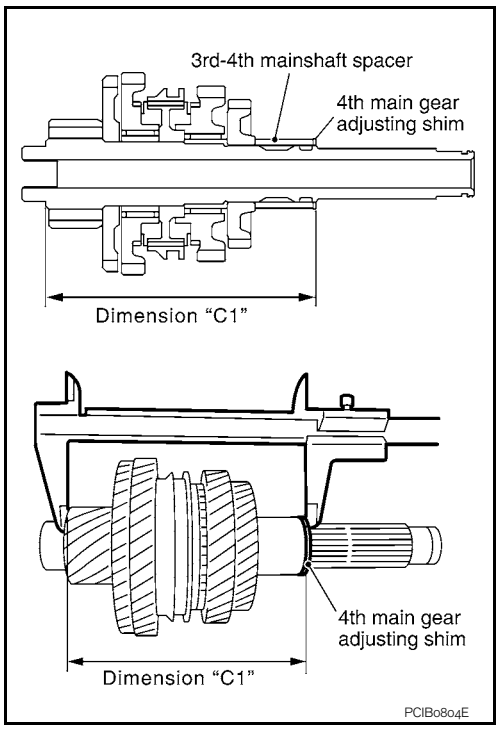
10. Install 3rd-4th mainshaft spacer.



11. Select 4th main gear adjusting shim so that dimension “C1” satisfies the standard value below and install 4th main gear adjusting shim onto mainshaft.

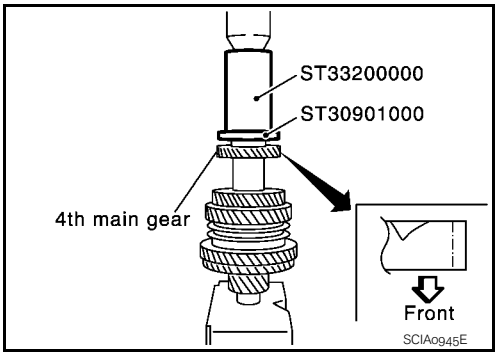
Standard value for dimension “C1” : Refer to TM-185, "Dimension".

CAUTION:
Only one adjusting shim can be selected.



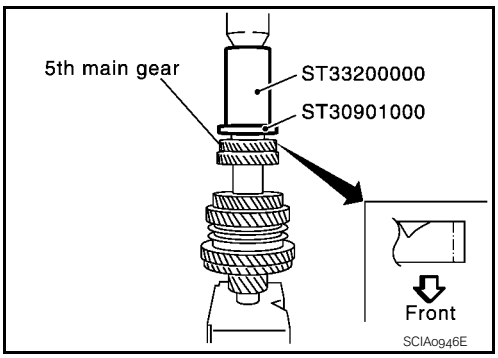
cardiagn.com

12. Press in 4th main gear using the drifts.
CAUTION:
- **Be careful with orientation of 4th main gear.**
- **Never reuse 4th main gear.**

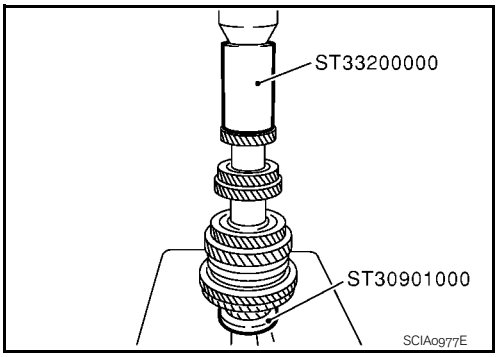


13. Press in 5th main gear using the drifts.
CAUTION:
- **Be careful with orientation of 5th main gear.**
- **Never reuse 5th main gear.**

14. Install 5th-6th mainshaft spacer.



15. Press in 6th main gear using the drifts.
CAUTION:
Never reuse 6th main gear.



16. Select 6th main gear adjusting shim and then install it onto mainshaft.
- Calculate thickness “S” of 6th main gear adjusting shim following the procedure below so that end play dimension between 6th main gear and mainshaft rear bearing becomes the dimension shown below.

End play :Refer to TM-184, "End Play".

Dimension “S” = (S_1 - S_2) - End play

S : Thickness of adjusting shim

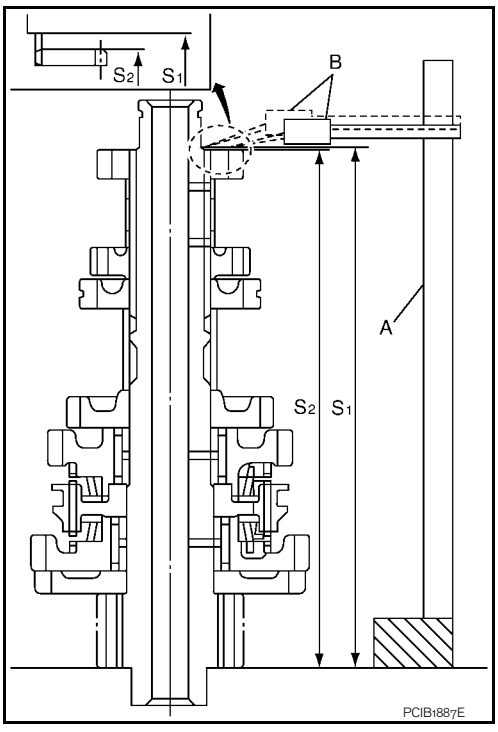
S_1 : Dimension from mainshaft standard face to mainshaft rear bearing press-fit end face

S_2 : Dimension from mainshaft standard face to 6th main gear end face

CAUTION:
Only one adjusting shim can be selected.

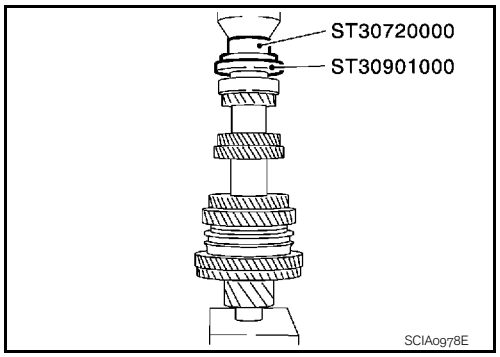
a. Measure dimension “S_1” and “S_2” using a height gauge (A) and pick tester (B).

b. Install selected 6th main gear adjusting shim to mainshaft.



cardiagn.com

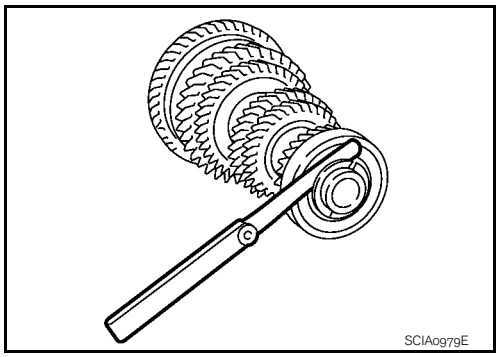
17. Press in mainshaft rear bearing using the drifts.



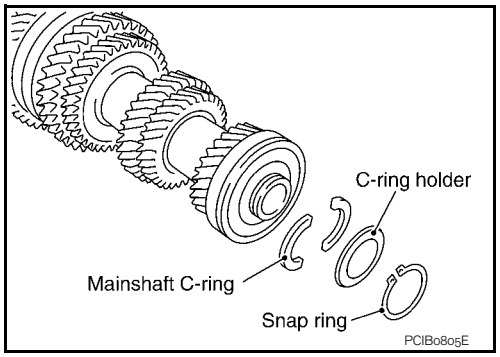
18. Install mainshaft C-rings onto mainshaft and check that end play of mainshaft rear bearing satisfies the standard value.

End play standard value : Refer to TM-184, "End Play".

- If measurement is outside the standard range, reselect mainshaft C-rings.

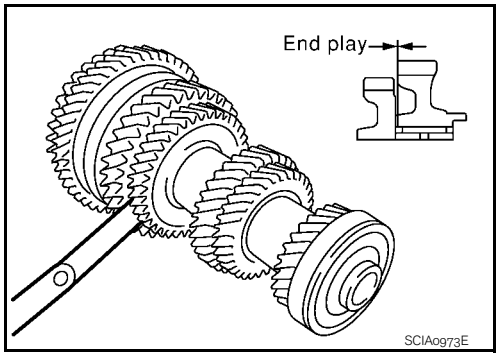


19. Install C-ring holder and then install snap ring.
CAUTION:
Never reuse snap ring.



20. Check end play of 1st and 2nd main gears.

End play standard value : Refer to TM-184, "End Play".



Inspection

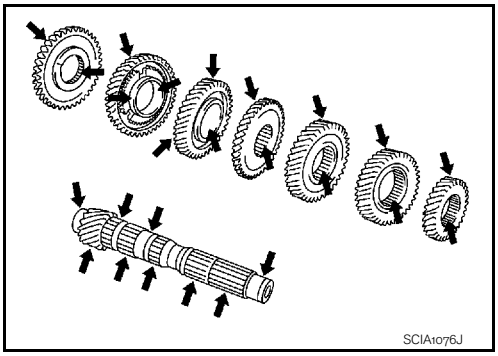
MAINSHAFT AND GEAR

cardiagn.com

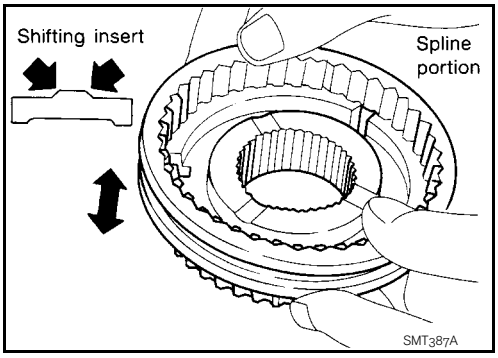
Check items below. If necessary, replace them with new ones.
- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.



SYNCHRONIZER

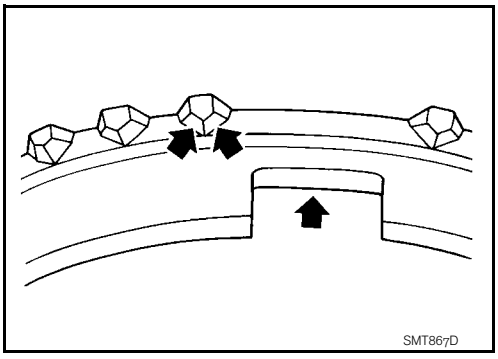
Synchronizer Hub and Coupling Sleeve

Check items below. If necessary, replace them with new ones.
- Damage and unusual wear on contact surfaces of coupling sleeve, synchronizer hub and shifting insert.
- Coupling sleeve and synchronizer hub must move smoothly.



Baulk Ring and Spread Spring

Check items below. If necessary, replace them with new ones.
- If any crack, damage, or excessive wear is found on cam face of baulk ring or working face of insert, replace it.

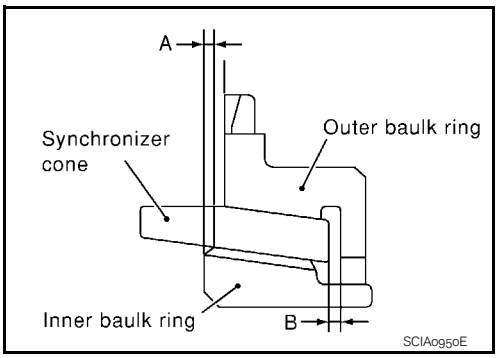


Baulk Ring Clearance for Double Cone Synchronizer (1st)

Check the clearance between outer baulk ring, synchronizer cone, and inner baulk ring as follows.

CAUTION:

The clearances “A” and “B” are controlled with outer baulk ring, synchronizer cone, and inner baulk ring as a set. Replace them as a set if the clearances are outside the limit value.

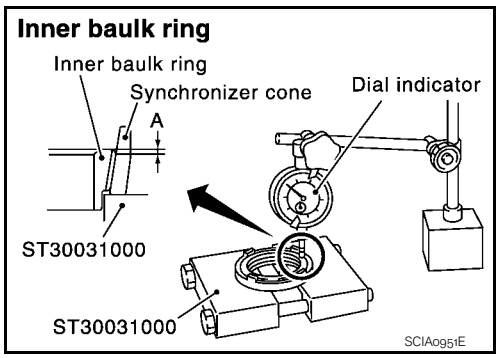


cardiagn.com

1. Measure the clearance “A” at 2 points or more diagonally opposite using a dial indicator. And then calculate mean value.

Clearance “A”

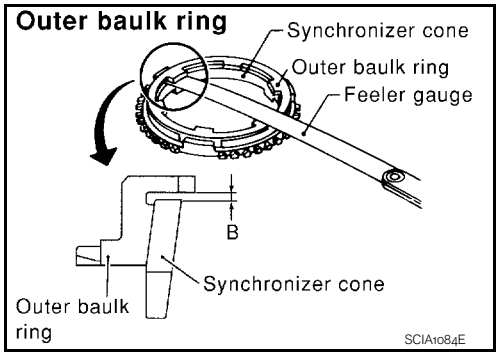
Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



2. Measure the clearance “B” at 2 points or more diagonally opposite using a feeler gauge. And then calculate mean value.

Clearance “B”

Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**

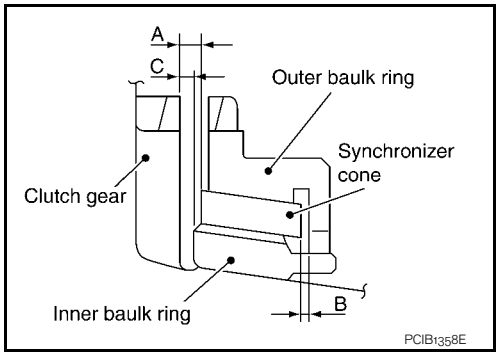


Baulk Ring Clearance for Triple Cone Synchronizer (2nd)

Check the clearance between outer baulk ring, synchronizer cone, and inner baulk ring as follows.

CAUTION:

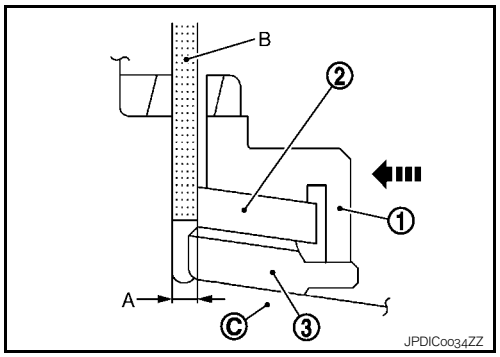
The clearances “A”, “B”, and “C” are controlled with outer baulk ring, synchronizer cone, and inner baulk ring as a set. Replace them as a set if the clearances are outside the limit value.



1. Measure the clearance “A” at 2 points or more diagonally opposite using a feeler gauge (B) when pressing outer baulk ring (1), synchronizer cone (2), and inner baulk ring (3) toward gear taper cone (C). And then calculate mean value.

Clearance “A”

Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**

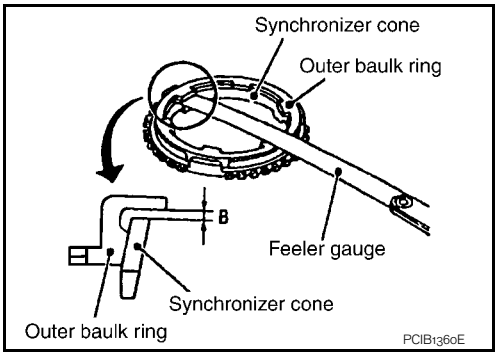


cardiagn.com

2. Measure the clearance “B” at 2 points or more diagonally opposite using a feeler gauge. And then calculate mean value.

Clearance “B”

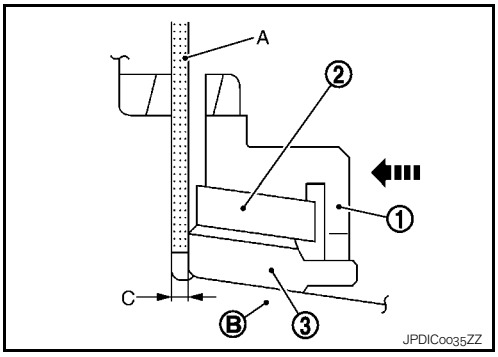
Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



3. Measure the clearance “C” at 2 points or more diagonally opposite using a feeler gauge (A) when pressing outer baulk ring (1), synchronizer cone (2), and inner baulk ring (3) toward gear taper cone (B). And then calculate mean value.

Clearance “C”

Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



BEARING

Check items below. If necessary, replace them with new ones.

REVERSE IDLER SHAFT AND GEAR

Exploded View

INFOID:0000000001034963

Refer to TM-125, "Exploded View".

Disassembly

INFOID:0000000001034964

1. Remove reverse idler gear (rear), reverse coupling sleeve, and reverse insert springs simultaneously.
2. Remove reverse idler gear needle bearing.
3. Remove thrust needle bearing.
4. Remove reverse baulk ring.
5. Remove reverse idler gear (front).
6. Remove reverse idler gear needle bearing.
7. Remove thrust needle bearing.
8. Remove retaining pin from reverse idler shaft.

Assembly

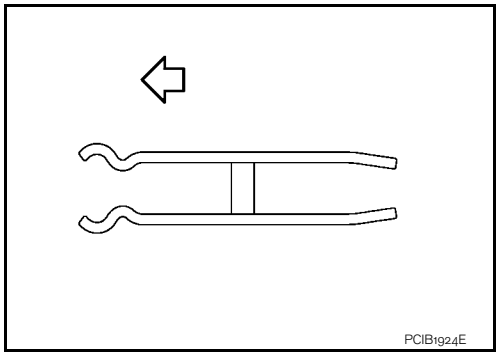
INFOID:0000000001034965

Note the following, and assemble in the reverse order of disassembly.

CAUTION:

- **Be careful with orientation of reverse insert spring.**

⇦ : Front



- **Never reuse retaining pin.**

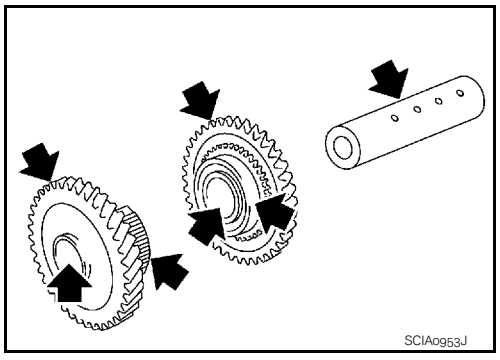
Inspection

INFOID:0000000001034966

REVERSE IDLER SHAFT AND GEAR

Check items below. If necessary, replace them with new ones.

- Damage, peeling, dent, uneven wear, bending, and other non-standard conditions of the shaft.
- Excessive wear, damage, peeling, and other non-standard conditions of the gears.

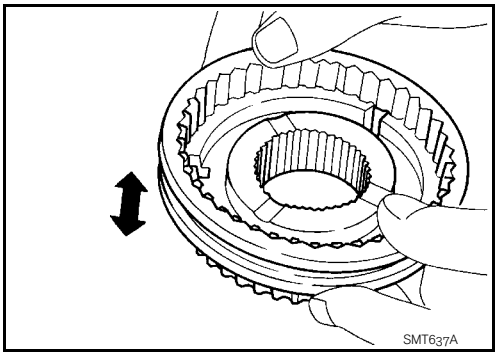


SYNCHRONIZER

Synchronizer Hub and Coupling Sleeve

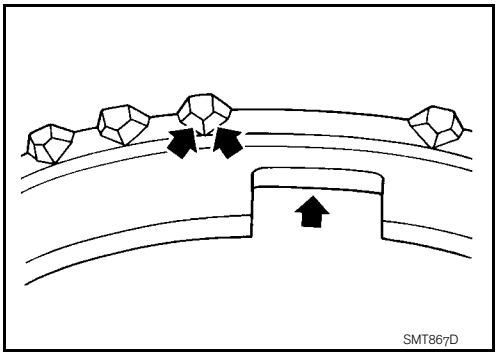
cardiagn.com

Check items below. If necessary, replace them with new ones.
- Damage and unusual wear on contact surfaces of coupling sleeve, synchronizer hub of reverse idler gear (rear), and insert spring.
- Coupling sleeve and synchronizer hub of reverse idler gear (rear) must move smoothly.



Baulk Ring

Check damage, or excessive wear on cam face of baulk ring or working face of insert. If necessary, replace it with new ones.

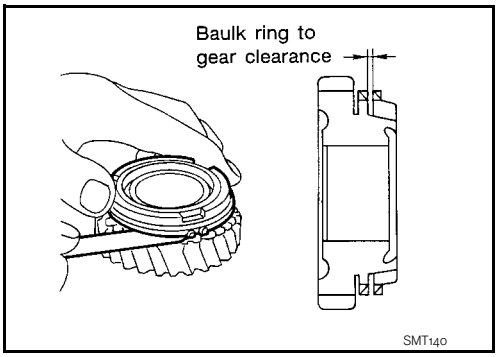


Baulk Ring Clearance for Single Cone Synchronizer (Reverse)

Push baulk ring on the cone and measure the clearance between baulk ring and cone. If the measurement is below limit, replace it with a new one.

Clearance

Standard value	**: Refer to TM-184, "Baulk Ring Clearance".**
Limit value	**: Refer to TM-184, "Baulk Ring Clearance".**



BEARING

Check items below. If necessary, replace them with new ones.
- Damage and rough rotation of bearing

FINAL DRIVE

Exploded View

INFOID:0000000001034967

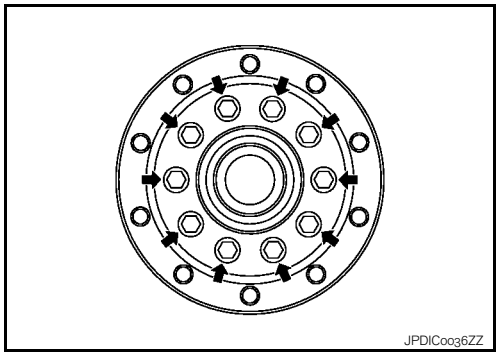
Refer to TM-125, "Exploded View".

Disassembly

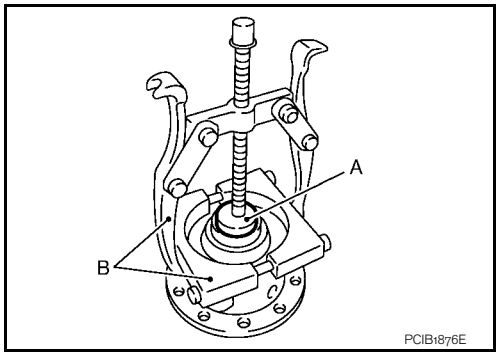
INFOID:0000000001034968

DIFFERENTIAL CASE

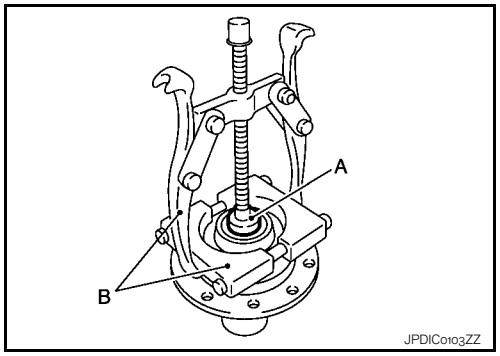
1. Remove final gear mounting bolts and then separate the final gear from differential case.
2. Remove reduction gear mounting bolts.



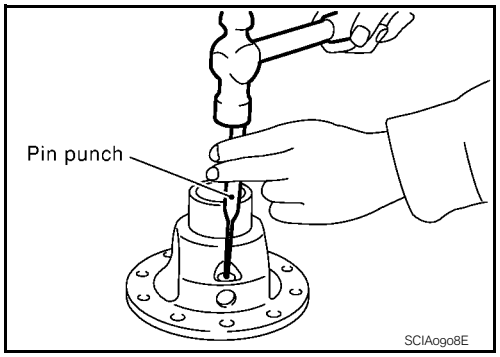
3. Remove differential side bearing (clutch housing side) using the drift (A) [SST: ST33061000] and pullers (B).
   CAUTION:
   Hook a puller on the inner race of differential side bearing.
4. Remove reduction gear.



5. Remove differential side bearing (transaxle case side) using the drift (A) [SST: ST33061000] and pullers (B).
   CAUTION:
   Hook a puller on the inner race of differential side bearing.



6. Remove retaining pin from differential case using a pin punch and then remove pinion mate shaft.
7. Rotate pinion mate gears and remove pinion mate gears, pinion mate thrust washers, side gears, and side gear thrust washers from differential case.

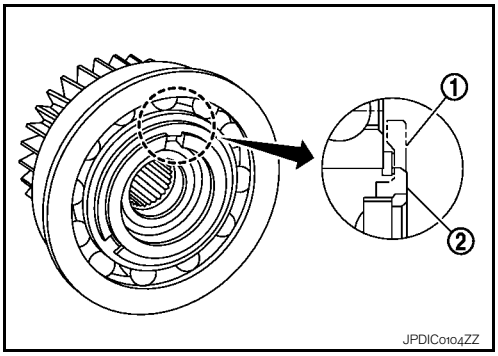


OUTPUT GEAR

cardiagn.com

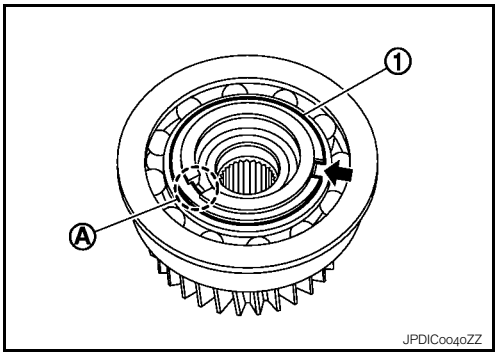
1. Remove snap ring (1).

2 : Output gear

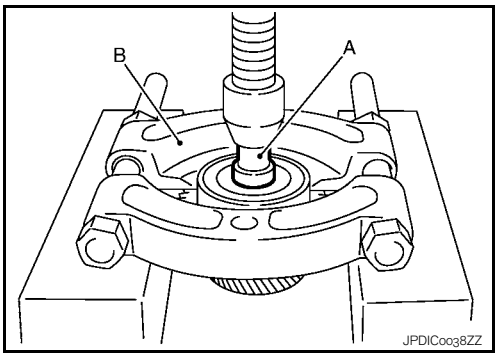


2. Remove snap ring (1).

A : Output gear groove
⬅ : Snap ring notch



3. Remove output gear bearing using the drift (A) [SST: ST30612000] and a puller (B).

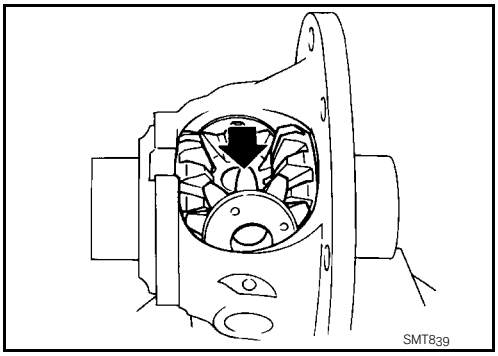


Assembly

INFOID:0000000001034969

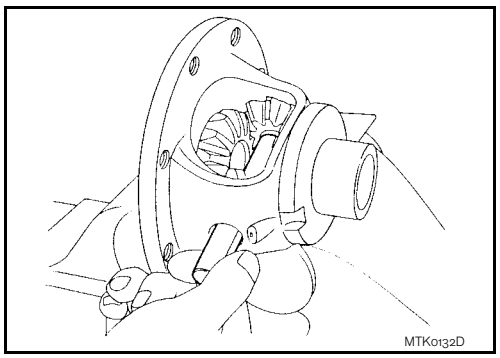
DIFFERENTIAL CASE

1. Apply gear oil to sliding area of differential case, each gear, and thrust washer.
2. Install side gear thrust washers and side gears into differential case.
3. While rotating pinion mate thrust washers and pinion mate gears, aligning them diagonally, install them into differential case.



cardiagn.com

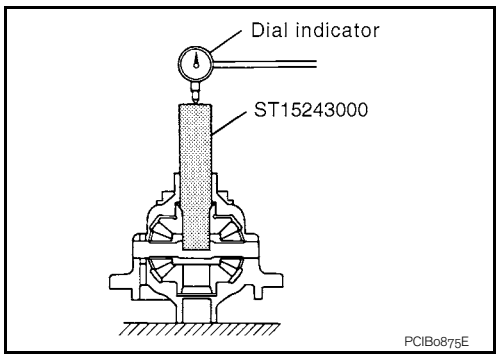
4. Insert pinion mate shaft into differential case.
CAUTION:
Be sure not to damage pinion mate thrust washers.



5. Measure end play of side gears following the procedure below. Then select side gear thrust washer.

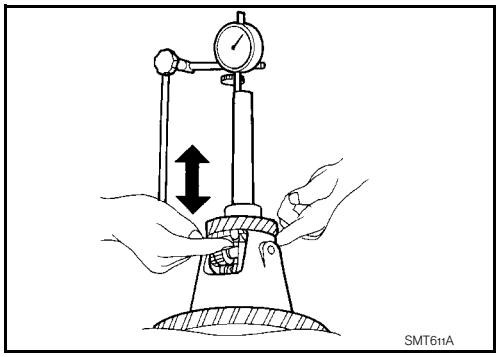
a. Put differential case vertically so that its side gear to be measured faces upward.

b. Place the drift and a dial indicator onto side gears.



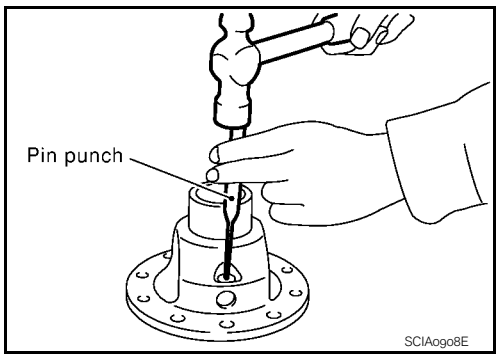
c. Move side gears up and down to measure the clearance and select thrust washer so that it satisfies the standard value.

Allowable Clearance between side gear and differential case with thrust washer	**: Refer to TM-185, "Differential Side Gear Clearance".**



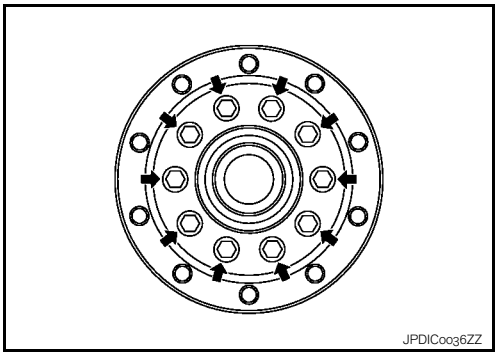
CAUTION:
- **There should be no resistance and gears should rotate freely.**
- **Place differential case upside down. Measure the end play for opposite side-gears likewise securely.**
- **Only one thrust washer can be selected.**

6. Install retaining pin into pinion mate shaft using a pin punch.
CAUTION:
Never reuse retaining pin.



cardiagn.com

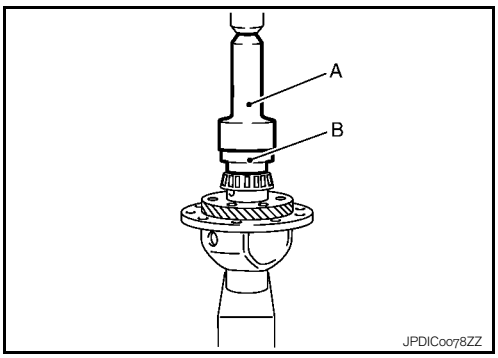
7. Install reduction gear into differential case and tighten reduction gear mounting bolts to the specified torque.



8. Press in differential side bearing (clutch housing side) to differential case using the drifts.

   A: Drift [SST: ST30720000]
   B: Drift [SST: KV38102510]

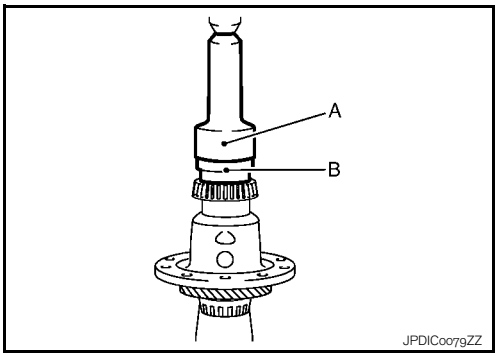
   CAUTION:
   Replace differential side bearing and differential side bearing outer race as a set.



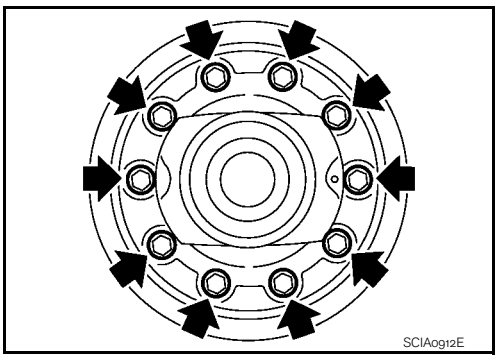
9. Press in differential side bearing (transaxle case side) to differential case using the drifts.

   A: Drift [SST: ST30720000]
   B: Drift [SST: KV38102510]

   CAUTION:
   Replace differential side bearing and differential side bearing outer race as a set.



10. Install final gear into differential case and tighten final gear mounting bolts to the specified torque.

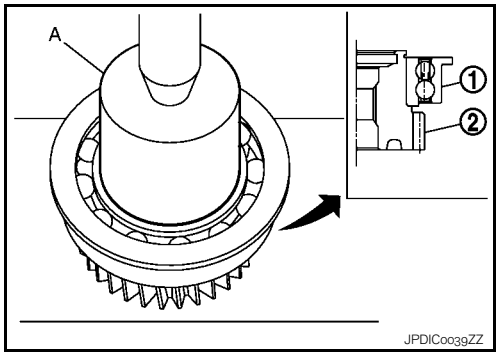


OUTPUT GEAR

cardiagn.com

1. Install output gear bearing (1) to output gear (2) using the drift (A) [Commercial service tool].

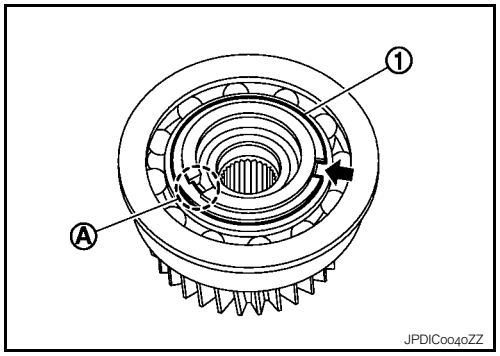
CAUTION:
Be careful with the orientation of output gear bearing.



2. Install snap ring (1) onto output gear and make sure that end play (gap between snap ring and groove) of output gear bearing satisfies the standard value.

End play standard value : Refer to TM-184, "End Play".

CAUTION:
- **Only one snap ring can be selected.**
- **Never reuse snap ring.**
- **Never align snap ring notch with output gear groove (A) when assembling.**



3. Install snap ring following the procedures below.

CAUTION:
If the following steps b and c are not performed when installing snap ring, it may become detached from output gear.

a. Press (A) of the snap ring (1) against (B) of the output gear (2).

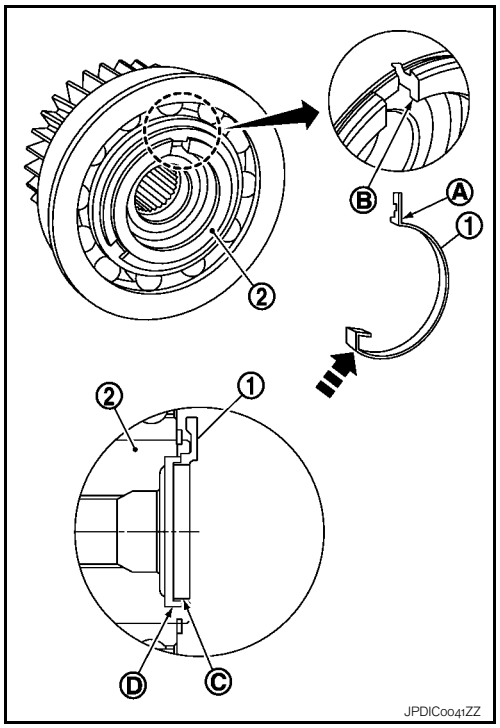
CAUTION:
Never reuse snap ring.

b. Press snap ring from the direction shown in the figure. Temporarily install it so that the rim of snap ring contacts with (C) of output gear.

CAUTION:
- **When compressing snap ring, outside diameter of snap ring must not become 46 mm (1.81 in) or less.**
- **Never press snap ring excessively.**
- **Never insert snap ring in (D) of output gear.**

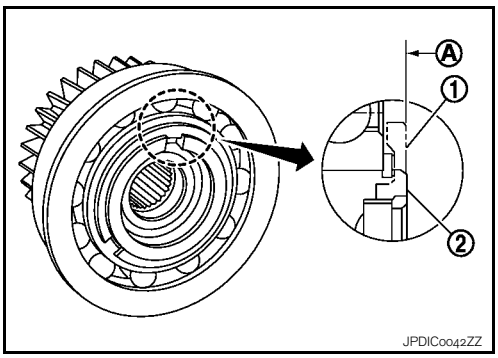
c. Evenly press snap ring in the axial direction to install it on (D) of output gear.

CAUTION:
- **Securely install snap ring on (D) of output gear.**



cardiagn.com

- **Snap ring (1) must not lie off (A) of output gear (2).**



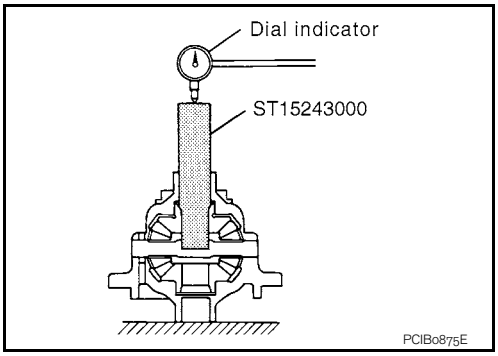
Inspection

INFOID:0000000001034970

INSPECTION BEFORE DISASSEMBLY

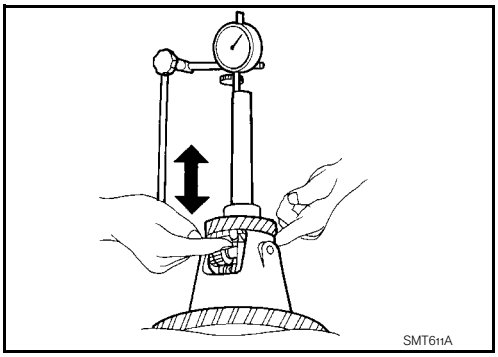
Check the clearance between side gear and differential case as follows.

1. Clean final drive assembly sufficiently to prevent side gear thrust washer, differential case, side gear, and other parts from sticking by gear oil.



2. Put differential case vertically so that side gear to be measured faces upward.
3. Place the drift and a dial indicator onto side gear. Move side gear up and down, and measure the clearance.

Allowable Clearance between side gear and differential case with thrust washer : **Refer to TM-185, "Differential Side Gear Clearance".**



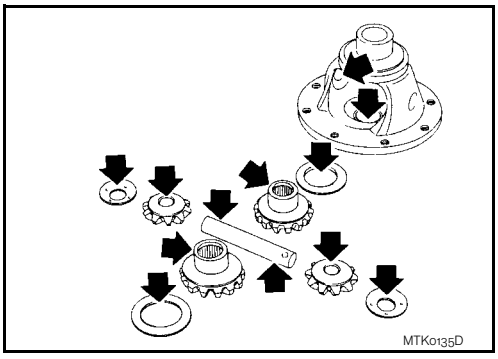
CAUTION:
There should be no resistance and gears should rotate freely.

4. If not within specification, adjust the clearance by changing side gear thrust washer thickness.
5. Turn differential case upside down and measure the clearance between side gear and differential case on the other side in the same way.

INSPECTION AFTER DISASSEMBLY

Gear, Washer, Shaft, and Case

- Check side gears, side gear thrust washers, pinion mate shaft, pinion mate gears, pinion mate thrust washers and differential case. If necessary, replace with a new one.



Gear

cardiagn.com

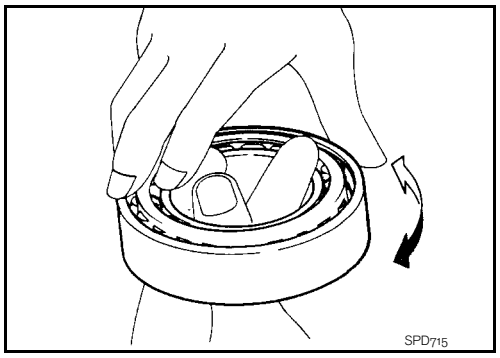
- Check output gear and reduction gear. If necessary, replace with a new one.

Bearing

Check for bearings damage and rough rotation. If necessary, replace with a new one.

CAUTION:

When replacing tapered roller bearing, replace outer and inner races as a set.



cardiagn.com

SHIFT FORK AND FORK ROD

Exploded View

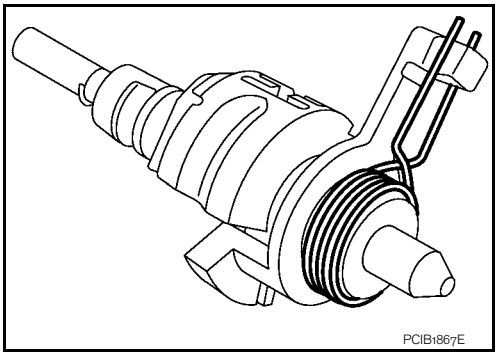
INFOID:0000000001034971

Refer to TM-125, "Exploded View".

Disassembly

INFOID:0000000001034972

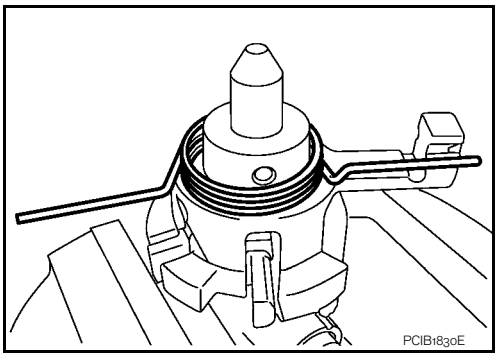
Remove return spring to striking rod assembly.



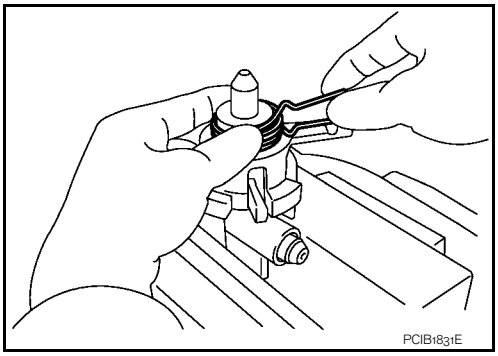
Assembly

INFOID:0000000001034973

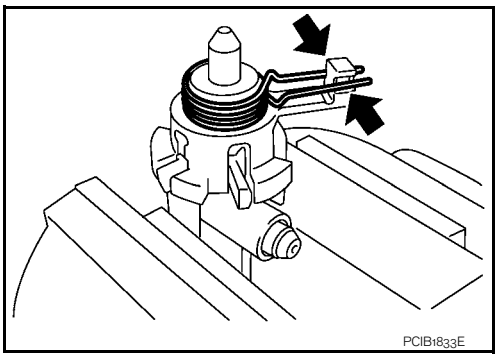
1. Temporarily install return spring to striking rod assembly.
   CAUTION:
   Be careful with the orientation of return spring.



2. Attach one end of the return spring to striking interlock of striking rod assembly while holding return spring.



CAUTION:
When installing, check that return spring is securely seated in the groove of striking interlock of striking rod assembly.



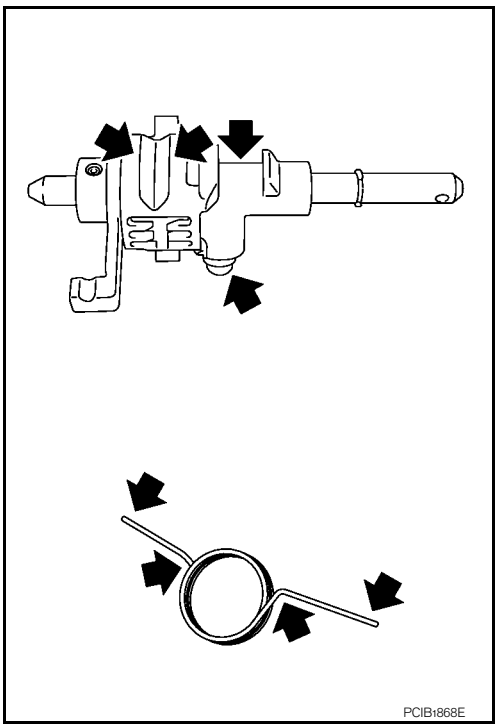
Inspection

INFOID:0000000001034974

cardiagn.com

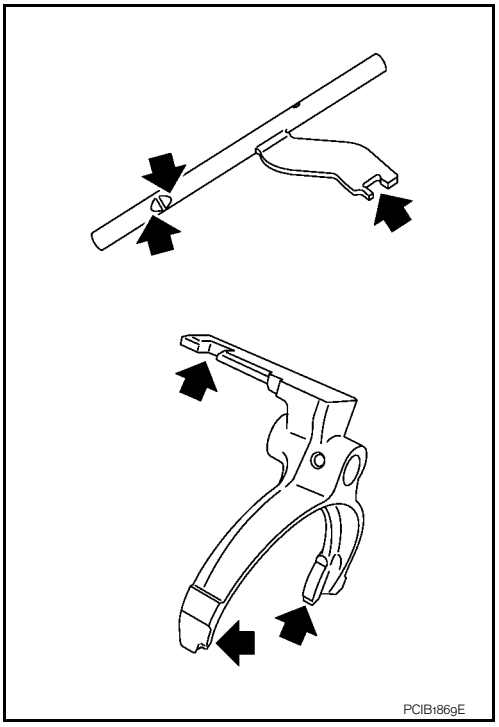
STRIKING ROD ASSEMBLY AND RETURN SPRING

Check contact surfaces and sliding area for wear, damage, bending, etc. If necessary, replace parts.



FORK ROD AND SHIFT FORK

- Check contact surfaces and sliding area for wear, damage, bending, etc. If necessary, replace parts.



cardiagn.com

• Check if the width of shift fork hook (sliding area with coupling sleeve) is within allowable specification below.

Item	One-side wear specification	Sliding width of new part
1st-2nd	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
3rd-4th	0.2 mm (0.008 in)	7.80 - 7.93 mm (0.3071 - 0.3122 in)
5th-6th	0.2 mm (0.008 in)	6.10 - 6.23 mm (0.2402 - 0.2453 in)
Reverse	0.2 mm (0.008 in)	12.80 - 12.93 mm (0.5039 - 0.5091 in)

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

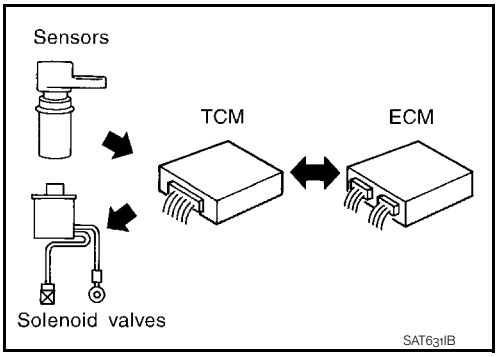
INFOID:0000000000987941

INTRODUCTION

The TCM receives a signal from the vehicle speed sensor, PNP switch and provides shift control or lock-up control via CVT solenoid valves.

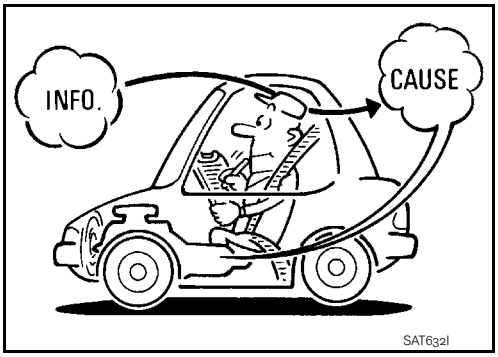
The TCM also communicates with the ECM by means of a signal sent from sensing elements used with the OBD-related parts of the CVT system for malfunction-diagnostic purposes. The TCM is capable of diagnosing malfunctioning parts while the ECM can store malfunctions in its memory.

Input and output signals must always be correct and stable in the operation of the CVT system. The CVT system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.



It is much more difficult to diagnose an error that occurs intermittently rather than continuously. Most intermittent errors are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.

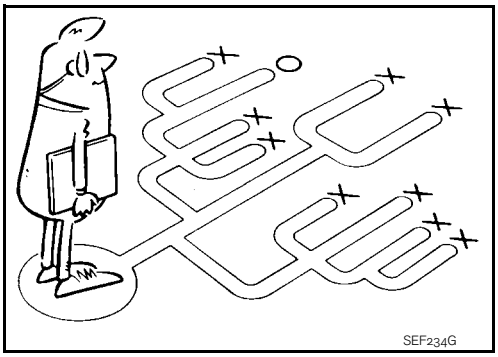
A visual check only may not find the cause of the errors. A road test with CONSULT-III (or GST) or a circuit tester connected should be performed. Follow the “DETAILED FLOW”.



Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such errors, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A “Diagnostic Work Sheet” as shown on the example (Refer to TM-187) should be used.

Start your diagnosis by looking for “conventional” errors first. This will help troubleshoot driveability errors on an electronically controlled engine vehicle.

Also check related Service bulletins.



DETAILED FLOW

1. COLLECT THE INFORMATION FROM THE CUSTOMER

Get the detailed information from the customer about the symptom (the condition and the environment when the incident/malfunction occurred) using diagnosis worksheet. Refer to TM-187, "Diagnostic Work Sheet".

>> GO TO 2.

2. CHECK SYMPTOM 1

Check the following items based on the information obtained from the customer.

- Fail-safe. Refer to TM-292, "Fail-safe".
- CVT fluid inspection. Refer to TM-314, "Inspection".
- Line pressure test. Refer to TM-318, "Inspection and Judgment".

cardiagn.com

• Stall test. Refer to TM-316, "Inspection and Judgment".

>> GO TO 3.

3.CHECK DTC

1. Check DTC.
2. Perform the following procedure if DTC is detected.

• Record DTC.
• Erase DTC. Refer to TM-214, "Diagnosis Description".

Is any DTC detected?

YES >> GO TO 4.
NO >> GO TO 5.

4.PERFORM DIAGNOSTIC PROCEDURE

Perform “Diagnostic Procedure” for the displayed DTC.

>> GO TO 5.

5.PERFORM DTC CONFIRMATION PROCEDURE

Perform “DTC CONFIRMATIOM PROCEDURE” for the displayed DTC.

Is DTC detected?

YES >> GO TO 4.
NO >> GO TO 6.

6.CHECK SYMPTOM 2

Confirm the symptom described by the customer.

Is any malfunction present?

YES >> GO TO 7.
NO >> **INSPECTION END**

7.RODE TEST

Perform “RODE TEST”. Refer to TM-320, "Description".

>> GO TO 8.

8.CHECK SYMPTOM 3

Confirm the symptom described by the customer.

Is any malfunction present?

YES >> GO TO 2.
NO >> **INSPECTION END**

Diagnostic Work Sheet

INFOID:0000000000987942

INSPECTION AND ADJUSTMENT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT

ADDITIONAL SERVICE WHEN REPLACING CONTROL UNIT : Service After Replacing TCM and Transaxle Assembly

INFOID:0000000000987943

SERVICE AFTER REPLACING TCM AND TRANSAXLE ASSEMBLY

Perform the applicable service in the following sheet when replacing TCM or transaxle assembly.

CAUTION:

- **Never start the engine until the service is completed.**
- **"TCM- POWER SUPPLY [P1701]" may be indicated soon after replacing TCM or transaxle assembly (after erasing the memory at the pattern B). Restart the self-diagnosis after erasing the self-diagnosis result. Check that no error is detected.**

TCM	CVT assembly	Service pattern
Replace the new unit.	Do not replace the unit.	"PATTERN A"
Do not replace the unit.	Replace the old unit with new one.	"PATTERN B"
Replace the old unit.	Do not replace the unit.	
	Replace the old unit with new one.	
Replace the new unit.	Replace the old unit with new one.	"PATTERN C"

NOTE:

Old unit means that the unit has been already used for another vehicle.

PATTERN A

1. Shift the selector lever to "P" position after replacing TCM. Turn the ignition switch ON.
2. Check that the shift position indicator in the combination meter turns ON (It indicates approximately 1 or 2 seconds after turning the ignition switch ON.)
   - Check the following items if the shift position indicator does not turn ON. Repair or replace the shift position indicator if necessary.
   - The harness between TCM and ROM ASSY in the transaxle assembly is open or short.
   - Cable disconnected, loosen, or bent from the connector housing.

PATTERN B

1. Turn the ignition switch ON after replacing each part.
2. Start engine.
   CAUTION:
   Never start the driving.
3. Select "DATA MONITOR".
4. Warm up the transaxle assembly until "ATFTEMP COUNT" indicates 47 [approximately 20°C (68°)] or more. Turn the ignition switch OFF.
5. Turn the ignition switch ON.
   CAUTION:
   Never start engine.
6. Select "SELF-DIAG RESULTS".
7. Shift the selector lever to "R" position.
8. Depress slightly the accelerator pedal (Pedal angle: 2/8) while depressing the brake pedal.
9. Perform "ERASE".
10. Shift the selector lever to "R" position after replacing TCM. Turn the ignition switch OFF.
11. Wait approximately 10 minutes after turning the ignition switch OFF.
12. Turn the ignition switch ON while shifting the selector lever to "R" position.
    CAUTION:
    Never start engine.
13. Select "Special function".
14. Check that the value on "CALIBRATION DATA" is same as the data after erasing "Calibration Data".

cardiagn.com

- Restart the procedure from step 3 if the values are not same.

15. Shift the selector lever to “P” position.
16. Check that the shift position indicator in the combination meter turns ON (It indicates approximately 1 or 2 seconds after shifting the selector lever to “P” position.)
    - Check the following items if the shift position indicator does not turn ON. Repair or replace the shift position indicator if necessary.
    - The harness between TCM and ROM ASSY in the transaxle assembly is open or short.
    - Cable disconnected, loosen, or bent from the connector housing.
    - Power supply and ground of TCM. Refer to TM-265, "Description".

Calibration Data

Data after deletion

Item	Function
Torque converter	The torque converter is the device that increases the engine torque as well as the conventional CVT and transmits it to the transaxle.
Oil pump	The efficiency of pump discharge rate at low-rpm and the optimization at high-rpm have been increased through the oil pump drive chain by adopting a vane-type oil pump controlled by the engine. Discharged oil from oil pump is transmitted to the control valve. It is used as the oil of primary and secondary pulley operation and the oil of clutch operation and the lubricant for each part.
Planetary gear	Perform the transmission of drive power and the switching of forward/backward movement.
Forward clutch	
Reverse brake	
Primary pulley	It is composed of a pair of pulleys (the groove width is changed freely in the axial direction) and the steel belt (the steel star wheels are placed continuously and the belt is guided with the multilayer steel rings on both sides). The groove width changes according to wrapping radius of steel belt and pulley from low status to overdrive status continuously with non-step. It is controlled with the oil pressures of primary pulley and secondary pulley.
Secondary pulley	
Steel belt	
Output gear	The drive power from the secondary pulley returns the deceleration gears [primary deceleration (output gear/idler gear pair) and secondary deceleration (reduction gear/final gear pair)]. It is transmitted from differential to drive wheel.
Idler gear	
Reduction gear	
Final gear	
Differential	
Manual shaft	The parking rod rotates the parking pole and the parking pole engages with the parking gear when the manual shaft is in P position. As a result the parking gear and the output axis are fixed.
Parking rod	
Parking pawl	
Parking gear

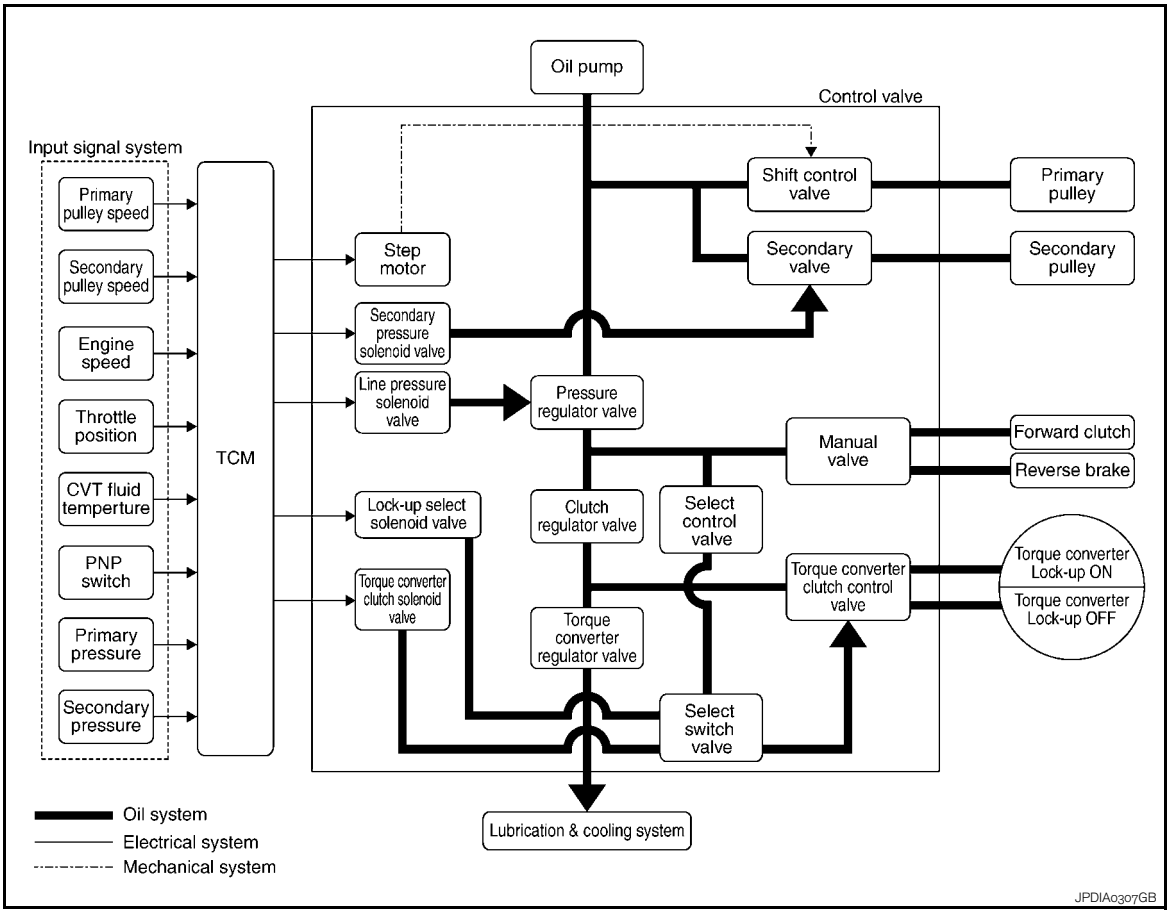
HYDRAULIC CONTROL SYSTEM

System Diagram

INFOID:0000000000988610



System Description

INFOID:0000000000988611

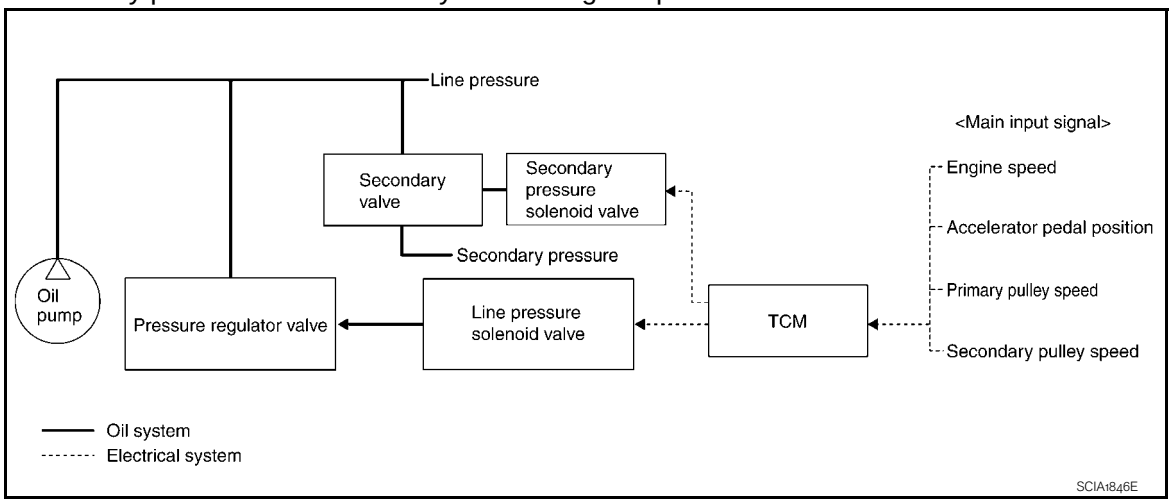
The hydraulic control mechanism consists of the oil pump directly driven by the engine, the hydraulic control valve that controls line pressure and transmission, and the input signal line.

LINE PRESSURE AND SECONDARY PRESSURE CONTROL

- When an input torque signal equivalent to the engine drive force is sent from the ECM to the TCM, the TCM controls the line pressure solenoid valve and secondary pressure solenoid valve.

cardiagn.com

- This line pressure solenoid controls the pressure regulator valve as the signal pressure and adjusts the pressure of the operating oil discharged from the oil pump to the line pressure most appropriate to the driving state. Secondary pressure is controlled by decreasing line pressure.



Normal Control

Optimize the line pressure and secondary pressure, depending on driving conditions, on the basis of the throttle position, the engine speed, the primary pulley (input) revolution speed, the secondary pulley (output) revolution speed, the brake signal, the PNP switch signal, the lock-up signal, the voltage, the target gear ratio, the fluid temperature, and the fluid pressure.

Feedback Control

When controlling the normal fluid pressure or the selected fluid pressure, the secondary pressure can be set more accurately by using the fluid pressure sensor to detect the secondary pressure and controlling the feedback.

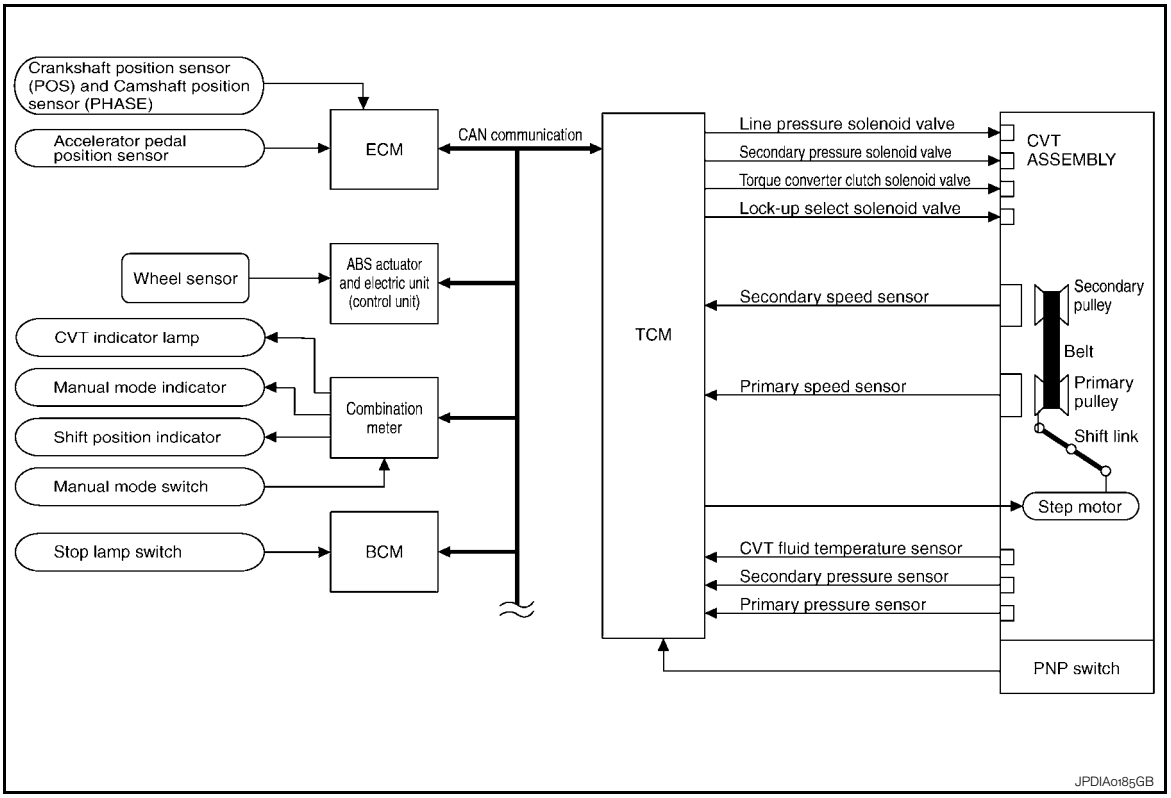
CONTROL SYSTEM

System Diagram

INFOID:0000000000988614



System Description

INFOID:0000000000988615

The function of the TCM is to:
- Receive input signals sent from various switches and sensors.
- Determine required line pressure, shifting point, and lock-up operation.
- Send required output signals to the step motor and the respective solenoids.

CONTROL SYSTEM OUTLINE

The CVT senses vehicle operating conditions through various sensors. It always controls the optimum shift position and reduces shifting and lock-up shocks.

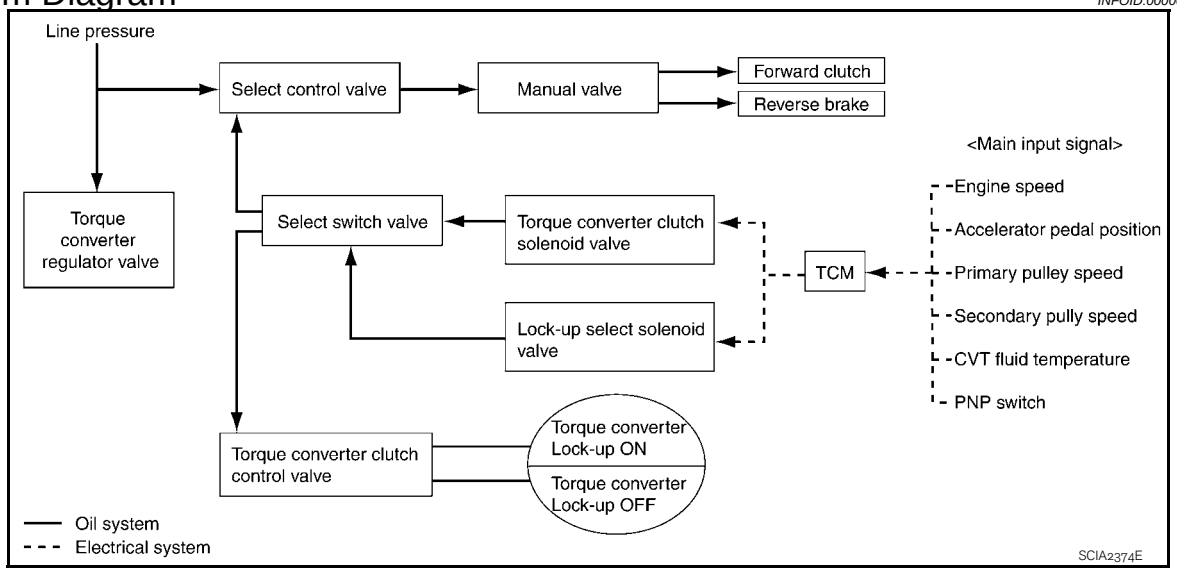
LOCK-UP AND SELECT CONTROL SYSTEM

System Diagram

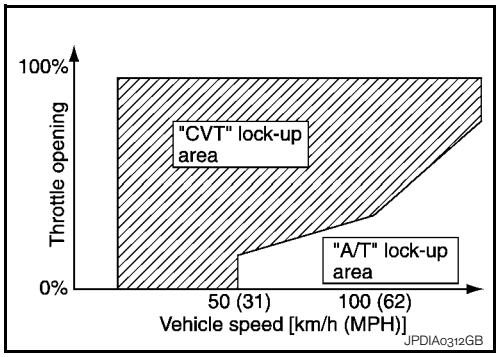
INFOID:0000000000988618



System Description

INFOID:0000000000988619

- The torque converter clutch piston in the torque converter is engaged to eliminate torque converter slip to increase power transmission efficiency.
- The torque converter clutch control valve operation is controlled by the torque converter clutch solenoid valve, which is controlled by a signal from TCM. The torque converter clutch control valve engages or releases the torque converter clutch piston.
- When shifting between “N” (“P”) ⇔“D” (“R”), torque converter clutch solenoid controls engagement power of forward clutch and reverse brake.
- The lock-up applied gear range was expanded by locking up the torque converter at a lower vehicle speed than conventional CVT models.



TORQUE CONVERTER CLUTCH AND SELECT CONTROL VALVE CONTROL

Lock-up Released

In the lock-up released state, the torque converter clutch control valve is set into the unlocked state by the torque converter clutch solenoid and the lock-up apply pressure is drained.
In this way, the torque converter clutch piston is not coupled.

Lock-up Applied

In the lock-up applied state, the torque converter clutch control valve is set into the locked state by the torque converter clutch solenoid and lock-up apply pressure is generated.
In this way, the torque converter clutch piston is pressed and coupled.

Select Control

When shifting between “N” (“P”) ⇔“D” (“R”), optimize the operating pressure on the basis of the throttle position, the engine speed, and the secondary pulley (output) revolution speed to lessen the shift shock.

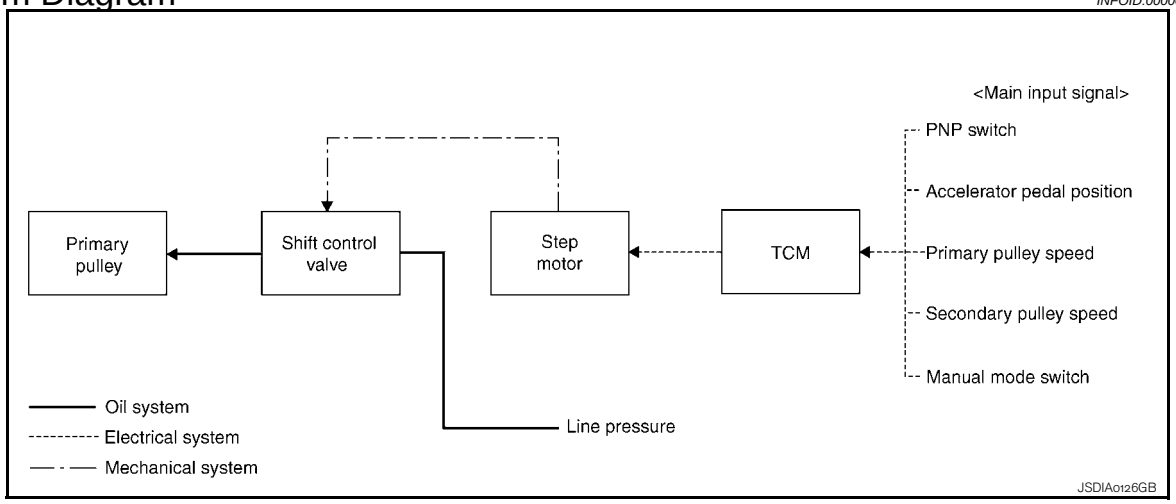
SHIFT CONTROL SYSTEM

System Diagram

INFOID:0000000000988622



NOTE:
The gear ratio is set for every position separately.

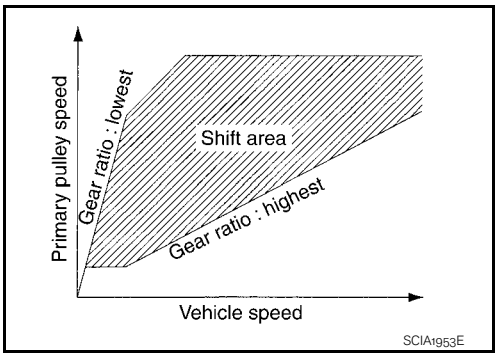
System Description

INFOID:0000000000988623

In order to select the gear ratio which can obtain the driving force in accordance with driver's intention and the vehicle condition, TCM monitors the driving conditions, such as the vehicle speed and the throttle position and selects the optimum gear ratio, and determines the gear change steps to the gear ratio. Then send the command to the step motor, and control the flow-in/flow-out of line pressure from the primary pulley to determine the position of the moving-pulley and control the gear ratio.

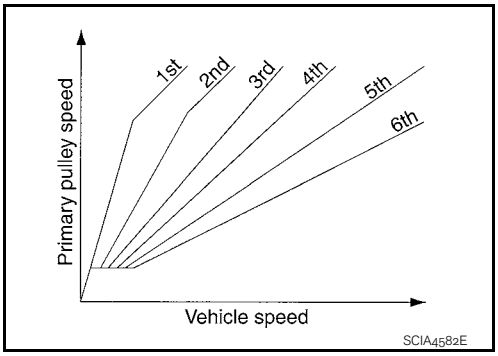
"D" POSITION

Shifting over all the ranges of gear ratios from the lowest to the highest.



"M" POSITION

When the selector lever is put in the manual shift gate side, the fixed changing gear line is set. By moving the selector lever to + side or - side, the manual mode switch is changed over, and shift change like M/T becomes possible following the changing gear set line step by step.



DOWNHILL ENGINE BRAKE CONTROL (AUTO ENGINE BRAKE CONTROL)

When downhill is detected with the accelerator pedal released, the engine brake will be strengthened up by downshifting so as not to accelerate the vehicle more than necessary.

ACCELERATION CONTROL

cardiagn.com

According to vehicle speed and a change of accelerator pedal angle, driver's request for acceleration and driving scene are judged. This function assists improvement in acceleration feeling by making the engine speed proportionate to the vehicle speed. And a shift map which can gain a larger driving force is available for compatibility of mileage with driveability.

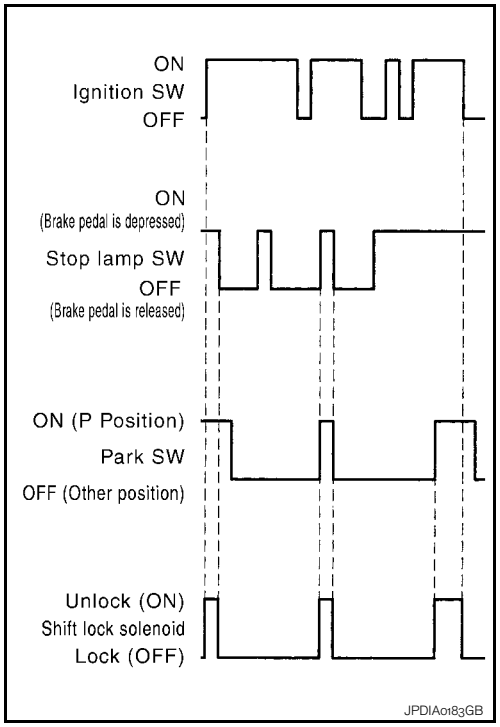
SHIFT LOCK SYSTEM

System Description

INFOID:0000000000914573

It is designed so that it cannot be shifted from the P position unless the brake pedal is depressed while the ignition switch is set to ON. The shift lock is unlocked by turning the shift lock solenoid ON when the ignition switch is set to ON, the park switch is turned ON (selector lever is in P position), and the stop lamp switch is turned ON (brake pedal is depressed) as shown in the operation chart in the figure. Therefore, the shift lock solenoid receives no ON signal and the shift lock remains locked if all of the above conditions are not fulfilled. (However, selector operation is allowed if the shift lock release button is pressed.)

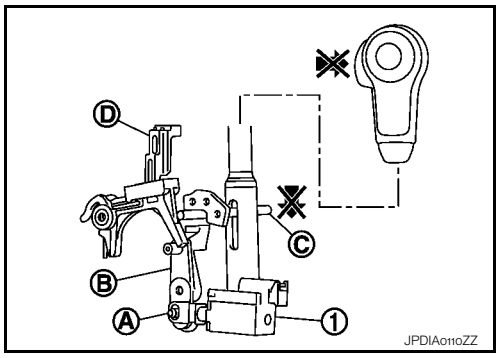


SHIFT LOCK OPERATION at P POSITION

When Brake Pedal Is Not Depressed (No Selector Operation Allowed)

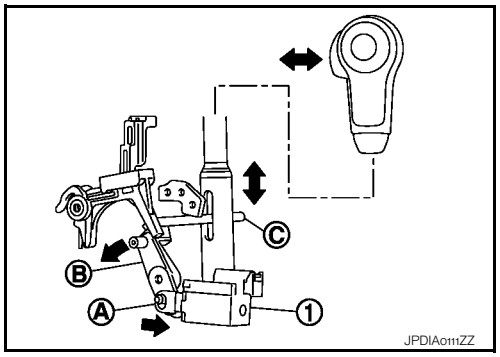
The shift lock solenoid (1) is turned OFF (not energized) and the solenoid rod (A) is extended with the spring when the brake pedal is not depressed (no selector operation allowed) with the ignition switch ON.

The connecting lock lever (B) is located at the position shown in the figure when the solenoid rod is extended. It prevents the movement of the detent rod (C). The selector lever cannot be shifted from the P position for this reason. However, the lock lever is forcibly moved to the direction opposite to that of the arrow when the shift lock release button (D) is pressed. Selector operation can be performed.



When Brake Pedal Is Depressed (Shift Operation Allowed)

The shift lock solenoid (1) is turned ON (energized) when the brake pedal is depressed with the ignition switch ON. The solenoid rod (A) is compressed with the electromagnetic force. The connecting lock lever (B) rotates when the solenoid is compressed. Therefore, the detent rod (C) can be moved. The selector lever can be shifted to other positions for this reason.



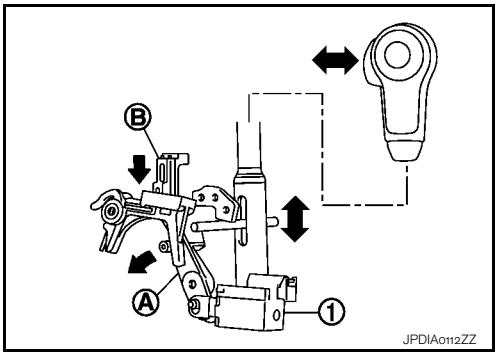
P POSITION HOLD MECHANISM (IGNITION SWITCH LOCK)

cardiagn.com

The shift lock solenoid (1) is not energized when the ignition switch is in any position other than ON. The shift mechanism is locked and P position is held. The operation cannot be performed from P position if the brake pedal is depressed with the ignition switch ON when the operation system of shift lock solenoid is malfunctioning. However, the lock lever (A) is forcibly rotated and the shift lock is released when the shift lock release button (B) is pressed from above. The selector operation from P position can be performed.

CAUTION:

Use the shift lock release button only when the selector lever cannot be operated even if the brake pedal is depressed with the ignition switch ON.

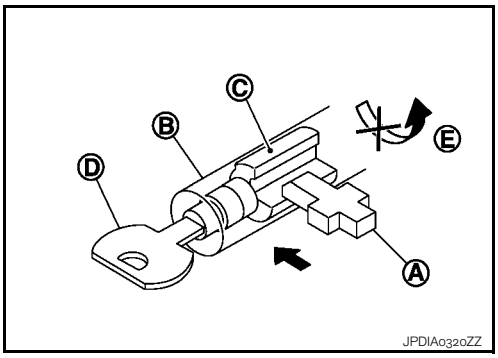


KEY LOCK MECHANISM

The key is not set to LOCK when the selector lever is not selected to P position. This prevents the key from being removed from the key cylinder.

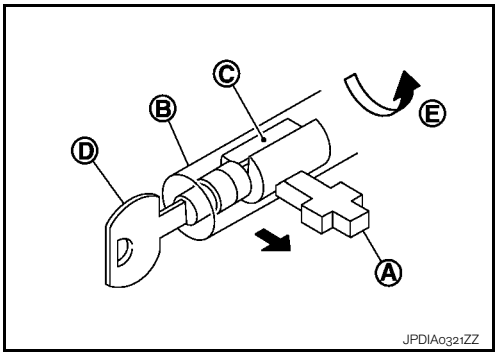
Key Lock Status

The slider (A) in the key cylinder (B) is moved to the left side of the figure when the selector lever is in any position other than P position. The rotator (C) that rotates together with the key (D) cannot be rotated for this reason. The key cannot be removed from the key cylinder because it cannot be turned to LOCK (E).



Key Unlock Status

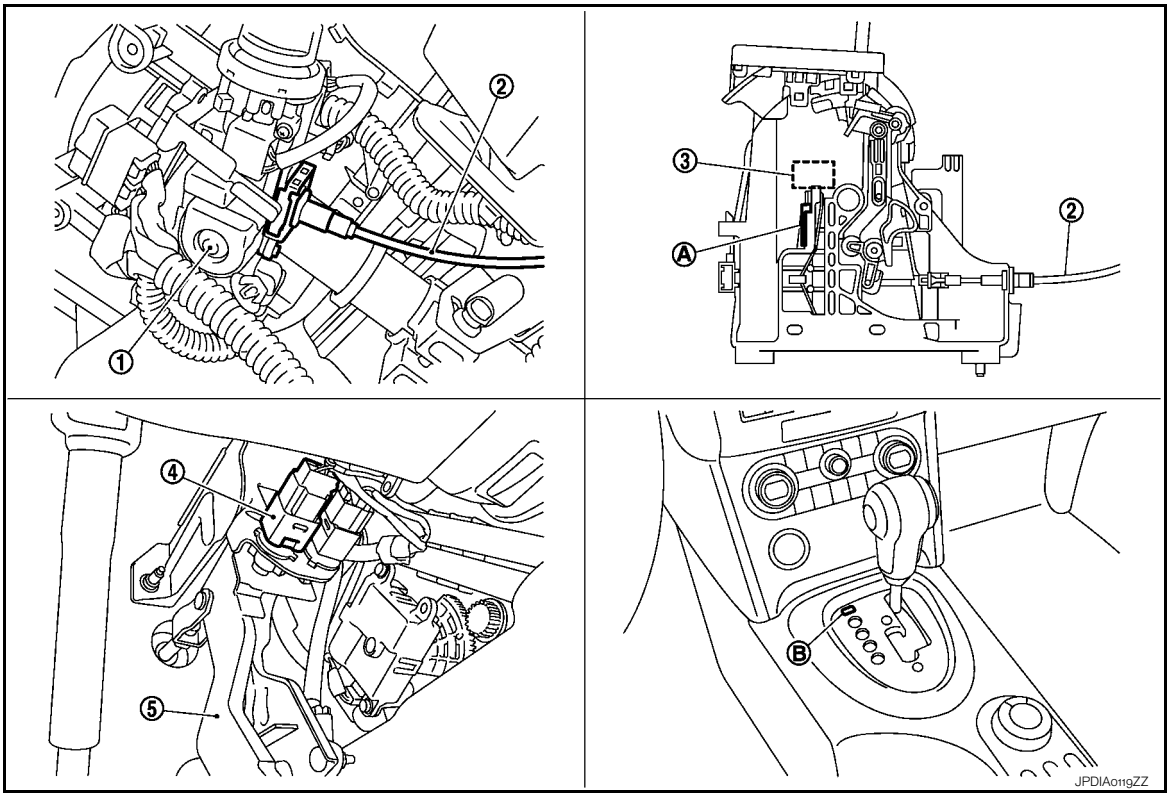
The slider (A) in the key cylinder (B) is moved to the right side of the figure when the selector lever is in P position and the finger is removed from the selector button. The rotator (C) can be rotated for this reason. The key (D) can be removed from the key cylinder because it can be turned to LOCK (E).



Component Parts Location

INFOID:0000000000914574

cardiagn.com



1. Key cylinder
2. Key interlock cable
3. Shift lock solenoid
4. Stop lamp switch
5. Brake pedal
A. Park position switch
B. Shift lock release button*

*: Shift lock release button becomes operative by removing shift lock cover. (LHD only)

Component Description

INFOID:0000000000927611

SHIFT LOCK

Component	Function
Shift lock solenoid	Refer to TM-280, "Description"
Lock lever	
Detent rod	
Park position switch	
Key interlock cable and rod	
Shift lock release button	

KEY LOCK

Component		Function
Key cylinder	Rotator	It rotates together with the key and restricts the slider movement when the ignition switch is in LOCK position.
	Slider	It moves according to the rotation of the lock lever.
Key interlock cable and key interlock rod		Actuation of lock lever is conveyed to slider in the key cylinder.

cardiagn.com

ON BOARD DIAGNOSTIC (OBD) SYSTEM

Diagnosis Description

INFOID:0000000000988626

DESCRIPTION

The CVT system has two self-diagnostic systems.
The first is the emission-related on board diagnostic system (OBD) performed by the TCM in combination with the ECM. The malfunction is indicated by the MI (malfunction indicator) and is stored as a DTC in the ECM memory, and the TCM memory.
The second is the TCM original self-diagnosis performed by the TCM. The malfunction is stored in the TCM memory. The detected items are overlapped with OBD self-diagnostic items. For detail, refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

OBD FUNCTION

The ECM provides emission-related on board diagnostic (OBD) functions for the CVT system. One function is to receive a signal from the TCM used with OBD-related parts of the CVT system. The signal is sent to the ECM when a malfunction occurs in the corresponding OBD-related part. The other function is to indicate a diagnostic result by means of the MI (malfunction indicator) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements.
The MI automatically illuminates in “One or Two Trip Detection Logic” when a malfunction is sensed in relation to CVT system parts.

ONE OR TWO TRIP DETECTION LOGIC OF OBD

One Trip Detection Logic

If a malfunction is sensed during the first test drive, the MI will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

Two Trip Detection Logic

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MI will not illuminate. — 1st trip
If the same malfunction as that experienced during the first test drive is sensed during the second test drive, the MI will illuminate. — 2nd trip
The “trip” in the “One or Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation.

OBD DIAGNOSTIC TROUBLE CODE (DTC)

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.
(with CONSULT-III or GST) CONSULT-III or GST (Generic Scan Tool) Examples: P0705, P0720 etc.
These DTC are prescribed by ISO 15031-5.
(CONSULT-III also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST, they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal.**
  CONSULT-III can identify them as shown below, therefore, CONSULT-III (if available) is recommended.

- DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode for “ENGINE” with CONSULT-III. Time data indicates how many times the vehicle was driven after the last detection of a DTC.
- If the DTC is being detected currently, the time data will be “0”.
- If a 1st trip DTC is stored in the ECM, the time data will be “1t”.

Freeze Frame Data and 1st Trip Freeze Frame Data

- The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.
  Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-III or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-III screen, not on the GST. For details, refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

cardiagn.com

Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data, and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MI on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0304 Fuel Injection System Function — DTC: P0171, P0172
2		Except the above items (Includes CVT related items)
3	1st trip freeze frame data	

Both 1st trip freeze frame data and freeze frame data (along with the DTC) are cleared when the ECM memory is erased.

How to Erase DTC

- The diagnostic trouble code can be erased by CONSULT-III, GST or ECM DIAGNOSTIC TEST MODE as described following.
- **If the battery cable is disconnected, the diagnostic trouble code will be lost within 24 hours.**
- **When you erase the DTC, using CONSULT-III or GST is easier and quicker than switching the mode selector on the ECM.**
- The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to OBD. For details, refer to EC-962, "DTC Index".
- **Diagnostic trouble codes (DTC)**
- **1st trip diagnostic trouble codes (1st trip DTC)**
- **Freeze frame data**
- **1st trip freeze frame data**
- **System readiness test (SRT) codes**
- **Test values**

How to Erase DTC (With CONSULT-III)

The emission related diagnostic information in the TCM and ECM can be erased by selecting “ALL Erase” in the “Description” of “FINAL CHECK” mode with CONSULT-III.

How to Erase DTC (With GST)

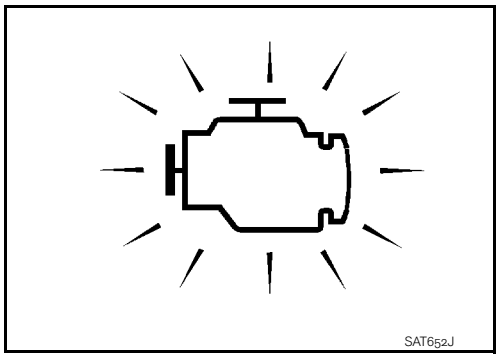
1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Select Mode 4 with GST (Generic Scan Tool). For details, refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

MALFUNCTION INDICATOR (MI)

Description

The MI is located on the instrument panel.

1. The MI will light up when the ignition switch is turned ON without the engine running. This is a bulb check.
   - If the MI does not light up, refer to EC-934, "Component Function Check" (WITH EURO-OBD), EC-1213, "Component Function Check" (WITHOUT EURO-OBD).
2. When the engine is started, the MI should go off.
   If the MI remains on, the on board diagnostic system has detected an engine system malfunction.



cardiagn.com

DIAGNOSIS SYSTEM (TCM)

CONSULT-III Function (TRANSMISSION)

INFOID:0000000000988627

CONSULT-III can display each diagnostic item using the diagnostic test modes shown below.

FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-III.
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the TCM can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
CALIB data	Characteristic information for TCM and CVT assembly can be read. Do not use, but displayed.
Function test	Performed by CONSULT-III instead of a technician to determine whether each system is “OK” or “NG”.
ECU part number	TCM part number can be read.

WORK SUPPORT MODE

Display Item List

Item name	Description
ENGINE BRAKE ADJ.	The engine brake level setting can be canceled.
CONFORM CVTF DETERIORTN	The CVT fluid deterioration level can be checked.

Engine Brake Adjustment

“ENGINE BRAKE LEVEL”

0: Initial set value (Engine brake level control is activated)

OFF: Engine brake level control is deactivated.

CAUTION:

Mode of “+1”“0”“–1”“–2”“OFF” can be selected by pressing the “UP”“DOWN” on CONSULT-III screen. However, do not select mode other than “0” and “OFF”. If the “+1” or “–1” or “–2” is selected, that might cause the irregular driveability.

Check CVT Fluid Deterioration Date

“CVTF DETERIORATION DATE”

More than 210000:

It is necessary to change CVT fluid.

Less than 210000:

It is not necessary to change CVT fluid.

CAUTION:

Touch “CLEAR” after changing CVT fluid, and then erase “CVTF DETERIORATION DATE”.

SELF-DIAGNOSTIC RESULT MODE

After performing self-diagnosis, place check marks for results on the TM-187, "Diagnostic Work Sheet". Reference pages are provided following the items.

Display Items List

X: Applicable —: Not applicable

Items (CONSULT-III screen terms)	Malfunction is detected when...	TCM self-diagnosis	OBD (DTC)	Reference page
		"TRANSMISSION" with CONSULT-III	MI*, "ENGINE" with CONSULT-III or GST	
CAN COMM CIRCUIT	When TCM is not transmitting or receiving CAN communication signal for 2 seconds or more.	U1000	U1000	TM-222
CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller to TCM.	U1010	U1010	TM-223
BRAKE SW/CIRC	When the brake switch does not switch to ON or OFF.	P0703	—	TM-224
PNP SW/CIRC	TCM does not receive the correct voltage signal (based on the gear position) from the switch.	P0705	P0705	TM-226
ATF TEMP SEN/CIRC	During running, the CVT fluid temperature sensor signal voltage is excessively high or low.	P0710	P0710	TM-229
INPUT SPD SEN/CIRC	• Input speed sensor (primary speed sensor) signal is not input due to an open circuit. • An unexpected signal is input when vehicle is being driven.	P0715	P0715	TM-231
VEH SPD SEN/CIR AT	• Signal from vehicle speed sensor CVT [Output speed sensor (Secondary speed sensor)] not input due to open or short circuit. • Unexpected signal input during running.	P0720	P0720	TM-234
ENGINE SPEED SIG	• TCM does not receive the CAN communication signal from the ECM. • Engine speed is too low while driving.	P0725	—	TM-237
BELT DAMG	Unexpected gear ratio detected.	P0730	—	TM-239
TCC SOLENOID/CIRC	Normal voltage not applied to solenoid due to open or short circuit.	P0740	P0740	TM-240
A/T TCC S/V FNCTN	• CVT cannot perform lock-up even if electrical circuit is good. • TCM detects as irregular by comparing difference value with slip rotation. • There is big difference engine speed and primary speed when TCM lock-up signal is on.	P0744	P0744	TM-242
L/PRESS SOL/CIRC	• Normal voltage not applied to solenoid due to open or short circuit. • TCM detects as irregular by comparing target value with monitor value.	P0745	P0745	TM-244
PRS CNT SOL/A FCTN	Unexpected gear ratio was detected in the LOW side due to excessively low line pressure.	P0746	P0746	TM-246
PRS CNT SOL/B FCTN	Secondary pressure is too high or too low compared with the commanded value while driving.	P0776	P0776	TM-248
PRS CNT SOL/B CIRC	• Normal voltage not applied to solenoid due to cut line, short, or the like. • TCM detects as irregular by comparing target value with monitor value.	P0778	P0778	TM-250
MANUAL MODE SWITCH	When an impossible pattern of switch signals is detected, a malfunction is detected.	P0826	—	TM-252
TR PRS SENS/A CIRC	Signal voltage of the transmission fluid pressure sensor A (secondary pressure sensor) is too high or too low while driving.	P0840	P0840	TM-255
PRESS SEN/FNCTN	Correlation between the values of the transmission fluid pressure sensor A (secondary pressure sensor) and the transmission fluid pressure sensor B (primary pressure sensor) is out of specification.	P0841	—	TM-258

cardiagn.com

Items (CONSULT-III screen terms)	Malfunction is detected when...	TCM self-diagnosis	OBD (DTC)	Reference page
		"TRANSMISSION" with CONSULT-III	MI*, "ENGINE" with CONSULT-III or GST	
TR PRS SENS/B CIRC	Signal voltage of the transmission fluid pressure sensor B (primary pressure sensor) is too high or too low while driving.	P0845	P0845	TM-260
SEC/PRESS DOWN	Secondary fluid pressure is too low compared with the commanded value while driving.	P0868	—	TM-263
TCM-POWER SUPPLY	• When the power supply to the TCM is cut OFF, for example because the battery is removed, and the self-diagnosis memory function stops. • This is not a malfunction message (Whenever shutting OFF a power supply to the TCM, this message appears on the screen).	P1701	—	TM-265
TP SEN/CIRC A/T	TCM does not receive the proper accelerator pedal position signals (input by CAN communication) from ECM.	P1705	—	TM-267
ESTM VEH SPD SIG	• CAN communication with the ABS actuator and the electric unit (control unit) is malfunctioning. • There is a great difference between the vehicle speed signal from the ABS actuator and the electric unit (control unit), and the vehicle speed sensor signal.	P1722	—	TM-268
CVT SPD SEN/ FNCTN	A rotation sensor error is detected because the gear does not change in accordance with the position of the stepping motor. **CAUTION:** **One of the "P0720 VEH SPD SEN/CIR AT", the "P0715 INPUT SPD SEN/CIRC" or the "P0725 ENGINE SPEED SIG" is displayed with the DTC at the same time.**	P1723	—	TM-270
ELEC TH CONTROL	The electronically controlled throttle for ECM is malfunctioning.	P1726	—	TM-272
LU-SLCT SOL/ CIRC	• Normal voltage not applied to solenoid due to cut line, short, or the like. • TCM detects as irregular by comparing target value with monitor value.	P1740	P1740	TM-273
L/PRESS CONTROL	TCM detects the unexpected line pressure.	P1745	—	TM-275
STEP MOTR CIRC	Each coil of the step motor is not energized properly due to an open or a short.	P1777	P1777	TM-276
STEP MOTR/FNC	There is a great difference between the number of steps for the stepping motor and for the actual gear ratio.	P1778	P1778	TM-278
NO DTC IS DETECTED: FURTHER TESTING MAY BE REQUIRED	No NG item has been detected.	X	X	—

*: Refer to TM-214, "Diagnosis Description".

COMPONENT DIAGNOSIS

U1000 CAN COMM CIRCUIT

Description

INFOID:0000000000988643

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent malfunction detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H and CAN-L) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

DTC Logic

INFOID:0000000000988644

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
U1000	CAN COMM CIRCUIT	When TCM is not transmitting or receiving CAN communication signal for 2 seconds or more.	Harness or connectors (CAN communication line is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:
If “DTC CONFIRMATION PROCEDURE” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Start engine and wait for at least 6 seconds.
3. Perform “SELF-DIAG RESULTS”. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

With GST
Follow the procedure “With CONSULT-III”.

Is “U1000 CAN COMM CIRCUIT” detected?

YES >> Go to TM-222, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988645

1.CHECK CAN COMMUNICATION CIRCUIT

With CONSULT-III
1. Turn ignition switch ON and start engine.
2. Select “SELF-DIAG RESULTS”.

Is any malfunction of the “U1000 CAN COMM CIRCUIT” indicated?

YES >> Go to LAN section. Refer to LAN-55, "CAN System Specification Chart".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

U1010 CONTROL UNIT (CAN)

Description

INFOID:0000000000988646

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent malfunction detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN-H and CAN-L) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

DTC Logic

INFOID:0000000000988647

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
U1010	CONTROL UNIT (CAN)	When detecting error during the initial diagnosis of CAN controller to TCM.	Harness or connectors (CAN communication line is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Start engine and wait for at least 6 seconds.
3. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

With GST
Follow the procedure "With CONSULT-III".

Is "U1010 CONTROL UNIT (CAN)" detected?

YES >> Go to TM-223, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988648

1. CHECK CAN COMMUNICATION CIRCUIT

With CONSULT-III
1. Turn ignition switch ON and start engine.
2. Select "SELF-DIAG RESULTS".

Is any malfunction of the "U1010 CONTROL UNIT (CAN)" indicated?

YES >> Print out CONSULT-III screen, go to LAN section. Refer to LAN-46, "Trouble Diagnosis Flow Chart".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

P0703 STOP LAMP SWITCH

Description

INFOID:0000000000988649

ON, OFF status of the stop lamp switch is sent via the CAN communication from the BCM to TCM using the signal.

DTC Logic

INFOID:0000000000988650

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0703	BRAKE SW/CIRC	When the brake switch does not switch to ON or OFF.	• Harness or connectors - (Stop lamp switch, and BCM circuit are open or shorted.) - (CAN communication line is open or shorted.) • Stop lamp switch

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC Confirmation Procedure" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Start engine.
3. Start vehicle for at least 3 consecutive seconds.
4. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is "P0703 BRAKE SW/CIRC" detected?

YES >> Go to TM-224, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988651

1. CHECK STOP LAMP SWITCH

Check stop lamp switch.

Is the inspection result normal?

YES >> Check the following. If NG, repair or replace damaged parts.
- Harness for short or open between battery and stop lamp switch.
- Harness for short or open between stop lamp switch and BCM.
- 10A fuse (No. 11, located in fuse block).

NO >> Repair or replace the stop lamp switch.

Component Inspection

INFOID:0000000000988652

1. CHECK STOP LAMP SWITCH

Check continuity between stop lamp switch connector terminals.

Stop lamp switch			Condition	Continuity
Connector	Terminal			
E115	1	2	Depressed brake pedal	Existed
			Released brake pedal	Not existed

cardiagn.com

Check stop lamp switch after adjusting brake pedal — refer to BR-8, "Exploded View" (LHD), BR-52, "Exploded View"(RHD).

Is the inspection result normal?

YES >> Check the following. If NG, repair or replace damaged parts.
- Harness for short or open between battery and stop lamp switch.
- Harness for short or open between stop lamp switch and BCM.
- 10A fuse (No. 11, located in fuse block).

NO >> Repair or replace the stop lamp switch.

cardiagn.com

P0705 PARK/NEUTRAL POSITION SWITCH

Description

INFOID:0000000000988653

- The PNP switch assembly includes a transaxle range switch.
- The transaxle range switch detects the selector lever position and sends a signal to the TCM.

Item name	Condition	Display value
P POSITION SW	Selector lever in “P” position	ON
	Other than the above position.	OFF
R POSITION SW	Selector lever in “R” position	ON
	Other than the above position.	OFF
N POSITION SW	Selector lever in “N” position	ON
	Other than the above position.	OFF
D POSITION SW	Selector lever in “D” position	ON
	Other than the above position.	OFF
RANGE	Selector lever in “N” or “P” position	N/P
	Selector lever in “R” position	R
	Selector lever in “D” position	D

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0705	PNP SW/CIRC	TCM does not receive the correct voltage signal (based on the gear position) from the switch.	• Harness or connectors (PNP switches circuit is open or shorted.) • PNP switch

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If “DTC CONFIRMATION PROCEDURE” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Start engine.
4. Drive vehicle and maintain the following conditions for at least 2 consecutive seconds.

VEHICLE SPEED	**: More than 10 km/h (6 MPH)**
ENG SPEED	**: More than 450 rpm**
ACC PEDAL OPEN	**: More than 1.0/8**

With GST

Follow the procedure “With CONSULT-III”.

Is “P0705 PNP SW/CIRC” detected?

YES >> Go to TM-227, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

Diagnosis Procedure

INFOID:0000000000988655

1. CHECK HARNESS BETWEEN TCM AND PNP SWITCH

1. Turn ignition switch OFF.
2. Disconnect TCM connector and PNP switch connector.
3. Check continuity between TCM connector terminals and PNP switch connector terminals.

TCM connector		PNP switch connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	1	F21	8	Existed
	2		3	
	3		4	
	4		1	
	11		2	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

OK >> GO TO 2.
NG >> Repair or replace damaged parts.

2. DETECT MALFUNCTIONING ITEM

Check the following items.
- Harness for short or open between ignition switch and PNP switch.
- 10A fuse (No. 55, located in the IPDM E/R).
- Ignition switch.

Is the inspection result normal?

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. CHECK PNP SWITCH

Check PNP switch. Refer to TM-227, "Component Inspection".

Is the inspection result normal?

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

OK >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NG >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988656

1. CHECK PNP SWITCH

Change selector lever to various positions to check the continuity between terminals on the PNP switch and ground.

Selector lever position	PNP switch connector		Continuity
	Connector	Terminal	

cardiagn.com

P	F21	2	5	Existed
		6	7	
R		5	8	
N		3	5	
		6	7	
D		4	5	

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> GO TO 2.

2.CHECK CVT POSITION

1. Disconnect control cable.
2. Check PNP switch. (Refer to step 1 above.)

Is the inspection result normal?

YES >> Adjust CVT position. Refer to TM-324, "Inspection and Adjustment".
NO >> GO TO 3.

3.CHECK PNP SWITCH

1. Remove PNP switch from transaxle assembly. Refer to TM-337, "Exploded View".
2. Check PNP switch. (Refer to step 1 above.)

Is the inspection result normal?

YES >> Adjust PNP switch. Refer to TM-337, "Inspection and Adjustment".
NO >> Replace PNP switch. Refer to TM-337, "Exploded View".

cardiagn.com

P0710 CVT FLUID TEMPERATURE SENSOR

Description

INFOID:0000000000988657

The CVT fluid temperature sensor detects the CVT fluid temperature and sends a signal to the TCM.

DTC Logic

INFOID:0000000000988658

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0710	ATF TEMP SEN/CIRC	During running, the CVT fluid temperature sensor signal voltage is excessively high or low.	• Harness or connectors (Sensor circuit is open or shorted.) • CVT fluid temperature sensor

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 10 minutes (Total).

VEHICLE SPEED	**: 10 km/h (6 MPH) or more**
ENG SPEED	**: 450 rpm more than**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**

With GST

Follow the procedure "With CONSULT-III".

Is "P0710 ATF TEMP SEN/CIRC" detected?

YES >> Go to TM-229, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988659

1. CHECK CVT FLUID TEMPERATURE SENSOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect the TCM connector.
3. Check resistance between TCM connector terminals.

TCM connector			Temperature °C (°F)	Resistance (Approx.)
Connector	Terminal			
F25	13	25	20 (68)	6.5 kΩ
			80 (176)	0.9 kΩ

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2. CHECK CVT FLUID TEMPERATURE SENSOR

cardiagn.com

Check CVT fluid temperature sensor. Refer to TM-230, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Replace the transaxle assembly. Refer toTM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

3. CHECK HARNESS BETWEEN TCM AND CVT FLUID TEMPERATURE SENSOR

1. Disconnect the CVT unit harness connector.
2. Check continuity between TCM connector terminals and CVT unit harness connector terminals.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	13	F24	17	Existed
	25		19	

3. If OK, check harness for short to ground and short to power.
4. Reinstall any part removed.

Is the inspection result normal?

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988660

CVT FLUID TEMPERATURE SENSOR

1. CHECK CVT FLUID TEMPERATURE SENSOR

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector.
3. Check resistance between CVT unit harness connector terminals.

CVT unit harness connector			Temperature °C (°F)	Resistance (Approx.)
Connector	Terminal			
F24	17	19	20 (68)	6.5 kΩ
			80 (176)	0.9 kΩ

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

cardiagn.com

P0715 INPUT SPEED SENSOR (PRI SPEED SENSOR)

Description

INFOID:0000000000988661

The input speed sensor (primary speed sensor) detects the primary pulley revolution speed and sends a signal to the TCM.

DTC Logic

INFOID:0000000000988662

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0715	INPUT SPD SEN/CIRC	• Input speed sensor (primary speed sensor) signal is not input due to an open circuit. • An unexpected signal is input when vehicle is being driven.	• Harness or connectors (Sensor circuit is open or shorted.) • Input speed sensor (Primary speed sensor)

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If “DTC CONFIRMATION PROCEDURE” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Start engine and maintain the following conditions for at least 5 consecutive seconds.

VEHICLE SPEED	**: 10 km/h (6 MPH) or more**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: “D” position**
ENG SPEED	**: 450 rpm or more**
Driving location	**: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

With GST

Follow the procedure “With CONSULT-III”.

Is “P0715 INPUT SPD SEN/CIRC” detected?

YES >> Go to TM-231, "Diagnosis Procedure".

NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988663

1. CHECK PRIMARY SPEED SENSOR

With CONSULT-III

1. Start engine.
2. Check power supply to input speed sensor (primary speed sensor) by voltage between TCM connector terminals.

TCM connector		Voltage (Approx.)
Connector	Terminal	

cardiagn.com

F25	25	46	Battery voltage
		48	

3. If OK, check the pulse when vehicle cruises.

TCM connector		Condition	Data (Approx.)
Connector	Terminal		
F25	33	When running at 20 km/h (12 MPH) in "M1" position, use the CONSULT-III pulse frequency measuring function. **CAUTION:** **Connect the data link connector to the vehicle-side diagnosis connector.**	800 Hz

Is the inspection result normal?

YES >> GO TO 7.
NO >> GO TO 2.

2. CHECK POWER AND SENSOR GROUND

1. Turn ignition switch OFF.
2. Disconnect the input speed sensor (primary speed sensor) harness connector.
3. Turn ignition switch ON.
4. Check voltage between input speed sensor (primary speed sensor) harness connector terminals.

Input speed sensor (primary speed sensor) harness connector			Voltage (Approx.)
Connector	Terminal		
F55	1	3	Battery voltage

5. Check voltage between input speed sensor (primary speed sensor) harness connector terminal and ground.

Input speed sensor (primary speed sensor) harness connector		Ground	Voltage (Approx.)
Connector	Terminal		
F55	3		Battery voltage

6. If OK, check harness for short to ground and short to power.
7. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 3.
NO - 1 >> Battery voltage is not supplied between terminals 1 and 3, terminal 3 and ground: GO TO 4.
NO - 2 >> Battery voltage is not supplied between terminals 1 and 3 only: GO TO 5.

3. CHECK HARNESS BETWEEN TCM AND INPUT SPEED SENSOR (PRIMARY SPEED SENSOR)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminal and input speed sensor (primary speed sensor) harness connector terminal.

TCM connector		Input speed sensor (primary speed sensor) harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	33	F55	2	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HARNESS BETWEEN TCM AND INPUT SPEED SENSOR (PRIMARY SPEED SENSOR) (POW-

cardiagn.com

ER)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminals and input speed sensor (primary speed sensor) harness connector terminal.

IPDM E/R		Input speed sensor (primary speed sensor) harness connector		Continuity
Connector	Terminal	Connector	Terminal	
E11	16	F55	3	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> 10 A fuse (No. 55, located in the IPDM E/R) or ignition switch are malfunctioning.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HARNESS BETWEEN TCM AND INPUT SPEED SENSOR (PRIMARY SPEED SENSOR) (SENSOR GROUND)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminal and input speed sensor (primary speed sensor) harness connector terminal.

TCM connector		Input speed sensor (primary speed sensor) harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	25	F55	1	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK THE TCM SHORT

Replace same type TCM, perform self-diagnosis check. Erase self-diagnostic results and then drive the vehicle [more than 10 km/h (6 MPH)], perform self-diagnosis check. Refer to TM-231, "DTC Logic".

Is “P0715 INPUT SPD SEN/CIRC” detected again?

YES >> Replace the primary speed sensor. Refer toTM-339, "Exploded View".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

7. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0720 VEHICLE SPEED SENSOR CVT (SECONDARY SPEED SENSOR)

Description

INFOID:0000000000988664

The vehicle speed sensor CVT [output speed sensor (secondary speed sensor)] detects the revolution of the CVT output shaft and emits a pulse signal. The pulse signal is sent to the TCM, which converts it into vehicle speed.

DTC Logic

INFOID:0000000000988665

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0720	VEH SPD SEN/CIR AT	• Signal from vehicle speed sensor CVT [Output speed sensor (Secondary speed sensor)] not input due to open or short circuit. • Unexpected signal input during running.	• Harness or connectors (Sensor circuit is open or shorted.) • Output speed sensor (Secondary speed sensor)

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 12 consecutive seconds.

ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**
Driving location	**: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

4. If DTC is detected,

With GST

Follow the procedure "With CONSULT-III".

Is "P0720 VEH SPD SEN/CIR AT" detected?

YES >> Go to TM-234, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988666

1. CHECK SECONDARY SPEED SENSOR

With CONSULT-III

1. Start engine.
2. Check power supply to output speed sensor (secondary speed sensor) by voltage between TCM connector terminals.

cardiagn.com

TCM connector			Voltage (Approx.)
Connector	Terminal		
F25	7	46	Battery voltage
		48	

3. If OK, check the pulse when vehicle cruises.

TCM connector		Condition	Data (Approx.)
Connector	Terminal		
F25	34	When running at 20 km/h (12 MPH) in “D” position, use the CONSULT-III pulse frequency measuring function. **CAUTION:** **Connect the data link connector to the vehicle-side diagnosis connector.**	500 Hz

Is the inspection result normal?

YES >> GO TO 7.
NO >> GO TO 2.

2. CHECK POWER AND SENSOR GROUND

1. Turn ignition switch OFF.
2. Disconnect the output speed sensor (secondary speed sensor) harness connector.
3. Turn ignition switch ON.
4. Check voltage between output speed sensor (secondary speed sensor) harness connector terminals.

Output speed sensor (Secondary speed sensor) harness connector			Voltage (Approx.)
Connector	Terminal		
F19	1	3	Battery voltage

5. Check voltage between output speed sensor (secondary speed sensor) harness connector terminal and ground.

Output speed sensor (Secondary speed sensor) harness connector		Ground	Voltage (Approx.)
Connector	Terminal		
F19	3		Battery voltage

6. If OK, check harness for short to ground and short to power.
7. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 3.
NO - 1 >> Battery voltage is not supplied between terminals 1 and 3, neither terminal 3 and ground: GO TO 4.
NO - 2 >> Battery voltage is not supplied between terminals 1 and 3 only: GO TO 5.

3. CHECK HARNESS BETWEEN TCM AND OUTPUT SPEED SENSOR (SECONDARY SPEED SENSOR)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminal and output speed sensor (secondary speed sensor) harness connector terminal.

TCM connector		Output speed sensor (Secondary speed sensor) harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	34	F19	2	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

cardiagn.com

YES >> GO TO 6.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HARNESS BETWEEN TCM AND OUTPUT SPEED SENSOR (SECONDARY SPEED SENSOR) (POWER)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminals and output speed sensor (secondary speed sensor) harness connector terminal.

IPDM E/R		Output speed sensor (Secondary speed sensor) harness connector		Continuity
Connector	Terminal	Connector	Terminal	
E11	16	F19	3	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> 10 A fuse (No. 55, located in the IPDM E/R) or ignition switch are malfunctioning.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HARNESS BETWEEN TCM AND OUTPUT SPEED SENSOR (SECONDARY SPEED SENSOR) (SENSOR GROUND)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminal and output speed sensor (secondary speed sensor) harness connector terminal.

TCM connector		Output speed sensor (Secondary speed sensor) harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	7	F19	1	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 7.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK THE TCM SHORT

Replace same type TCM, perform self-diagnosis check. Erase self-diagnostic results and then drive the vehicle [more than 40 km/h (25 MPH)], perform self-diagnosis check. Refer to TM-234, "DTC Logic".

Is “P0720 VEH SPD SEN/CIR AT” detected again?

YES >> Replace the secondary speed sensor. Refer to TM-340, "Exploded View".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

7. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0725 ENGINE SPEED SIGNAL

Description

INFOID:0000000000988667

The engine speed signal is transmitted from ECM to TCM by CAN communication line.

DTC Logic

INFOID:0000000000988668

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0725	ENGINE SPEED SIG	• TCM does not receive the CAN communication signal from the ECM. • Engine speed is too low while driving.	• Harness or connectors (The ECM to the TCM circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

CAUTION:
Always drive vehicle at a safe speed.
NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 10 consecutive seconds.

PRI SPEED SEN : More than 1000 rpm

Is "P0725 ENGINE SPEED SIG" detected?

YES >> Go to TM-237, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988669

1. CHECK DTC WITH ECM

With CONSULT-III
1. Turn ignition switch ON.
2. Select "SELF-DIAG RESULTS" mode for "ENGINE" with CONSULT-III. Refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

Is the inspection result normal?

OK >> GO TO 2.
NG >> Check the DTC detected item. Refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

2. CHECK DTC WITH TCM

With CONSULT-III
Select "SELF-DIAG RESULTS" mode for "TRANSMISSION" with CONSULT-III. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is the inspection result normal?

OK >> GO TO 3.
NG >> Check the DTC detected item. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

3. CHECK INPUT SIGNALS

cardiagn.com

With CONSULT-III

1. Start engine.
2. Select “DATA MONITOR”.
3. While monitoring “ENG SPEED SIG”, check for engine speed change corresponding to “ACC PEDAL OPEN”.

Item name	Condition	Display value
ENG SPEED SIG	Engine running	Closely matches the tachometer reading.
ACC PEDAL OPEN	Released accelerator pedal – Fully depressed accelerator pedal	0.0/8 – 8.0/8

Is the inspection result normal?

OK >> GO TO 4.
NG >> Check ignition signal circuit. Refer to EC-929, "Description" (WITH EURO-OBD), EC-1208, "Description" (WITHOUT EURO-OBD).

4. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

OK >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NG >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0730 BELT DAMAGE

Description

INFOID:0000000000988670

TCM selects the gear ratio using the engine load (throttle position), the primary pulley revolution speed, and the secondary pulley revolution speed as input signal. Then it changes the operating pressure of the primary pulley and the secondary pulley and changes the groove width of the pulley.

DTC Logic

INFOID:0000000000988671

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0730	BELT DAMG	Unexpected gear ratio detected.	Transaxle assembly

DTC CONFIRMATION PROCEDURE

CAUTION:
Always drive vehicle at a safe speed.
NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Make sure that output voltage of CVT fluid temperature sensor is within the range below.

ATF TEMP SEN	**: 1.0 – 2.0 V**

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

4. Start engine and maintain the following conditions for at least 30 consecutive seconds.

TEST START FROM 0 km/h (0 MPH)	
CONSTANT ACCELERATION	**: Keep 30 sec or more**
VEHICLE SPEED	**: 10 km/h (6 MPH) or more**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**
ENG SPEED	**: 450 rpm or more**

Is "P0730 BELT DAMG" detected?

YES >> Go to TM-239, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988672

1. CHECK DTC

1. Turn ignition switch ON.
2. Select "SELF-DIAG RESULTS".

Are any DTC displayed?

YES - 1>> DTC except for "P0730 BELT DAMG" is displayed: Go to Check the DTC detected item. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".
YES - 2>> DTC for "P0730 BELT DAMG" is displayed: Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

Description

INFOID:0000000000988673

- The torque converter clutch solenoid valve is activated by the TCM in response to signals sent from the vehicle speed and accelerator pedal position sensors. Lock-up piston operation will then be controlled.
- Lock-up operation, however, is prohibited when CVT fluid temperature is too low.
- When the accelerator pedal is depressed (less than 2.0/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.

DTC Logic

INFOID:0000000000988674

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0740	TCC SOLENOID/CIRC	Normal voltage not applied to solenoid due to open or short circuit.	• Torque converter clutch solenoid valve • Harness or connectors (Solenoid circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Wait at least 10 consecutive seconds.
3. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

With GST

Follow the procedure "With CONSULT-III".

Is "P0740 TCC SOLENOID/CIRC" detected?

YES >> Go to TM-240, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988675

1. CHECK TORQUE CONVERTER CLUTCH SOLENOID VALVE CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check resistance between TCM connector terminal and ground.

TCM connector		Ground	Resistance (Approx.)
Connector	Terminal		
F25	38		3.0 – 9.0 Ω

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2. CHECK HARNESS BETWEEN TCM AND TORQUE CONVERTER CLUTCH SOLENOID VALVE

1. Disconnect CVT unit harness connector.
2. Check continuity between TCM connector terminal and CVT unit harness connector terminal.

cardiagn.com

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	38	F24	12	Existed

3. If OK, check harness for short to ground and short to power.
4. If OK, check continuity between ground and CVT assembly.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK TORQUE CONVERTER CLUTCH SOLENOID VALVE

Check torque converter clutch solenoid valve. Refer to TM-241, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988676

TORQUE CONVERTER CLUTCH SOLENOID VALVE

1.TORQUE CONVERTER CLUTCH SOLENOID VALVE

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector.
3. Check resistance between CVT unit harness connector terminal and ground.

CVT unit harness connector		Ground	Resistance (Approx.)
Connector	Terminal		
F24	12		3.0 – 9.0 Ω

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

cardiagn.com

P0744 A/T TCC S/V FUNCTION (LOCK -UP)

Description

INFOID:0000000000988677

This malfunction is detected when the torque converter clutch does not lock-up as instructed by the TCM. This is not only caused by electrical malfunction (circuits open or shorted), but also by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

DTC Logic

INFOID:0000000000988678

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0744	A/T TCC S/V FNCTN	• CVT cannot perform lock-up even if electrical circuit is good. • TCM detects as irregular by comparing difference value with slip rotation. • There is big difference engine speed and primary speed when TCM lock-up signal is on.	• Torque converter clutch solenoid valve • Hydraulic control circuit

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following condition for at least 30 seconds.

ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**
VEHICLE SPEED	**: Constant speed of more than 40 km/h (25 MPH)**

4. If DTC is detected

With GST

Follow the procedure "With CONSULT-III".

Is "P0744 A/T TCC S/V FNCTN" detected?

YES >> Go to TM-242, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988679

1.CHECK LINE PRESSURE

Perform line pressure test. Refer toTM-318, "Inspection and Judgment".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace damaged parts. Refer to TM-318, "Inspection and Judgment".

2.CHECK TORQUE CONVERTER CLUTCH SOLENOID VALVE

cardiagn.com

Check torque converter clutch solenoid valve. Refer to TM-241, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3. CHECK LOCK-UP SELECT SOLENOID VALVE

Check lock-up select solenoid valve. Refer to TM-274, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4. CHECK OUTPUT SPEED SENSOR (SECONDARY SPEED SENSOR) SYSTEM

Check output speed sensor (secondary speed sensor) system. Refer to TM-234, "DTC Logic".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace damaged parts.

5. CHECK INPUT SPEED SENSOR (PRIMARY SPEED SENSOR) SYSTEM

Check input speed sensor (primary speed sensor) system. Refer to TM-231, "DTC Logic".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace damaged parts.

6. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0745 LINE PRESSURE SOLENOID VALVE

Description

INFOID:0000000000988680

The pressure control solenoid valve A (line pressure solenoid valve) regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

DTC Logic

INFOID:0000000000988681

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0745	L/PRESS SOL/CIRC	• Normal voltage not applied to solenoid due to open or short circuit. • TCM detects as irregular by comparing target value with monitor value.	• Harness or connectors (Solenoid circuit is open or shorted.) • Pressure control solenoid valve A (Line pressure solenoid valve)

DTC CONFIRMATION PROCEDURE

NOTE:

If “DTC CONFIRMATION PROCEDURE” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Start engine and wait at least 5 seconds.
3. Perform “SELF-DIAG RESULTS” TM-216, "CONSULT-III Function (TRANSMISSION)".

With GST

Follow the procedure “With CONSULT-III”.

Is “P0745 L/PRESS SOL/CIRC” detected?

YES >> Go to TM-244, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988682

1.CHECK PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check resistance between TCM connector terminal and ground.

TCM connector		Ground	Resistance (Approx.)
Connector	Terminal		
F25	40		3.0 – 9.0 Ω

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

Check pressure control solenoid valve A (Line pressure solenoid valve). Refer to TM-245, "Component Inspection"

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

cardiagn.com

3. CHECK HARNESS BETWEEN TCM AND PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector and TCM connector.
3. Check continuity between TCM connector terminal and CVT unit harness connector terminal.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	40	F24	2	Existed

4. If OK, check harness for short to ground and short to power.
5. If OK, check continuity between ground and CVT assembly.
6. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988683

PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

1. PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector.
3. Check resistance between CVT unit harness connector terminal and ground.

CVT unit harness connector		Ground	Resistance (Approx.)
Connector	Terminal		
F24	2		3.0 – 9.0 Ω

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

cardiagn.com

P0746 PRESSURE CONTROL SOLENOID A PERFORMANCE (LINE PRESSURE SOLENOID VALVE)

Description

INFOID:0000000000988684

The pressure control solenoid valve A (line pressure solenoid valve) regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

DTC Logic

INFOID:0000000000988685

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0746	PRS CNT SOL/A FCTN	Unexpected gear ratio was detected in the LOW side due to excessively low line pressure.	• Line pressure control system • Output speed sensor (Secondary speed sensor) • Input speed sensor (Primary speed sensor)

DTC CONFIRMATION PROCEDURE

CAUTION:
Always drive vehicle at a safe speed.
NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 10 consecutive seconds. Test start from 0 km/h (0 MPH).

ATF TEMP SEN	**: 1.0 – 2.0 V**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**
VEHICLE SPEED	**: 10 km/h (6 MPH) More than**
Driving location	**: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

With GST
Follow the procedure "With CONSULT-III".

Is "P0746 PRS CNT SOL/A FCTN" detected?

YES >> Go to TM-246, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988686

1.CHECK LINE PRESSURE

Perform line pressure test. Refer to TM-318, "Inspection and Judgment".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace damaged parts. Refer to TM-318, "Inspection and Judgment".

2.CHECK PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

cardiagn.com

Check pressure control solenoid valve A (line pressure solenoid valve). Refer to TM-245, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3. CHECK OUTPUT SPEED SENSOR (SECONDARY SPEED SENSOR) SYSTEM

Check output speed sensor (secondary speed sensor) system. Refer to TM-234, "DTC Logic".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4. CHECK INPUT SPEED SENSOR (PRIMARY SPEED SENSOR) SYSTEM

Check input speed sensor (primary speed sensor) system. Refer to TM-231, "DTC Logic".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace damaged parts.

5. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0776 PRESSURE CONTROL SOLENOID B PERFORMANCE (SEC PRESSURE SOLENOID VALVE)

Description

INFOID:0000000000988687

The pressure control solenoid valve B (secondary pressure solenoid valve) regulates the secondary pressure to suit the driving condition in response to a signal sent from the TCM.

DTC Logic

INFOID:0000000000988688

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0776	PRS CNT SOL/B FCTN	Secondary pressure is too high or too low compared with the commanded value while driving.	• Harness or connectors (Solenoid circuit is open or shorted.) • Pressure control solenoid valve B (Secondary pressure solenoid valve system) • Transmission fluid pressure sensor A (Secondary pressure sensor) • Line pressure control system

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 30 consecutive seconds.

ATF TEMP SEN	**: 1.0 – 2.0 V**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**
VEHICLE SPEED	**: 10 km/h (6 MPH) More than**
Driving location	**: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

With GST

Follow the procedure "With CONSULT-III".

Is "P0776 PRS CNT SOL/B FCTN" detected?

YES >> Go to TM-248, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988689

1. CHECK LINE PRESSURE

Perform line pressure test. Refer to TM-318, "Inspection and Judgment".

Is the inspection result normal?

cardiagn.com

YES >> GO TO 2.
NO >> Repair or replace damaged parts. Refer to TM-318, "Inspection and Judgment".

2.CHECK PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE)

Check pressure control solenoid valve B (Secondary pressure solenoid valve). Refer to TM-251, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

Check pressure control solenoid valve A (Line pressure solenoid valve). Refer to TM-245, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4.CHECK TRANSMISSION FLUID PRESSURE SENSOR A (SECONDARY PRESSURE SENSOR) SYSTEM

Check transmission fluid pressure sensor A (secondary pressure sensor) system. Refer to TM-255, "DTC Logic".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace damaged parts.

5.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0778 PRESSURE CONTROL SOLENOID B ELECTRICAL (SEC PRESSURE SOLENOID VALVE)

Description

INFOID:0000000000988690

The pressure control solenoid valve B (secondary pressure solenoid valve) regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

DTC Logic

INFOID:0000000000988691

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0778	PRS CNT SOL/B CIRC	• Normal voltage not applied to solenoid due to cut line, short, or the like. • TCM detects as irregular by comparing target value with monitor value.	• Harness or connectors (Sensor circuit is open or shorted.) • Pressure control solenoid valve B (Secondary pressure solenoid valve)

DTC CONFIRMATION PROCEDURE

NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Start engine.
3. Drive vehicle and maintain the following conditions for at least 5 consecutive seconds.
4. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

With GST
Follow the procedure "With CONSULT-III".

Is "P0778 PRS CNT SOL/B CIRC" detected?

YES >> Go to TM-250, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988692

1.CHECK PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE) CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check resistance between TCM connector terminal and ground.

TCM connector		Ground	Resistance (Approx.)
Connector	Terminal		
F25	39		3.0 – 9.0 Ω

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE)

Check pressure control solenoid valve B (secondary pressure solenoid valve). Refer to TM-251, "Component Inspection".

cardiagn.com

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3. CHECK HARNESS BETWEEN TCM AND PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE)

1. Turn ignition switch OFF.
2. Disconnect TCM connector and CVT unit harness connector.
3. Check continuity between TCM connector terminal and CVT unit harness connector terminal.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	39	F24	3	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988693

PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE)

1. PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE)

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector.
3. Check resistance between CVT unit harness connector terminal and ground.

CVT unit harness connector		Ground	Resistance (Approx.)
Connector	Terminal		
F24	3		3.0 – 9.0 Ω

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

cardiagn.com

P0826 MANUAL MODE SWITCH

Description

INFOID:0000000000988694

Manual mode switch is installed in shift control device. The manual mode switch sends shift up and shift down switch signals to TCM.
TCM sends the switch signals to combination meter via CAN communication line. Then manual mode switch position is indicated on the shift position indicator.

DTC Logic

INFOID:0000000000988695

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0826	MANUAL MODE SWITCH	When an impossible pattern of switch signals is detected, a malfunction is detected.	• Harness or connectors - (These switches circuit is open or shorted.) - (TCM, and combination meter circuit are open or shorted.) - (CAN communication line is open or shorted.) • Manual mode select switch (Built into control device) • Manual mode position select switch (Built into control device)

DTC CONFIRMATION PROCEDURE

CAUTION:
Always drive vehicle at a safe speed.
NOTE:
If “DTC CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Start engine.
4. Drive vehicle for at least 2 consecutive seconds.

MMODE : ON

Is “P0826 MANUAL MODE SWITCH” detected?

YES >> Go to TM-252, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988696

1. CHECK MANUAL MODE SWITCH SIGNALS

With CONSULT-III
1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Read out ON/OFF switching action of the “MMODE”, “NON M-MODE”, “UPLVR”, “DOWNLVR”.

cardiagn.com

Item name	Condition	Display value
MMODE	Manual shift gate position (neutral)	ON
	Other than the above	OFF
NONMMODE	Manual shift gate position (neutral, +side, -side)	OFF
	Other than the above	ON
UPLVR	Selector lever: + side	ON
	Other than the above	OFF
DOWNLVR	Selector lever: - side	ON
	Other than the above	OFF

Without CONSULT-III

Drive vehicle in the manual mode, and confirm that the actual gear position and the meter's indication of the position mutually coincide when the selector lever is shifted to the “+ (up)” or “- (down)” side (1st ⇔ 6th gear).

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK MANUAL MODE SWITCH

Check manual mode switch. Refer to TM-254, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK SELF-DIAGNOSTIC RESULTS (COMBINATION METER)

Perform self-diagnosis check. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is any malfunction detected by self-diagnosis?

YES >> Check the malfunctioning system.
NO >> GO TO 4.

4.CHECK MANUAL MODE SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect control device connector and combination meter connector.
3. Check continuity between control device harness connector terminals and combination meter harness connector terminals.

Control device harness connector		Combination meter harness connector		Continuity
Connector	Terminal	Connector	Terminal	
M57	7	M34	40	Existed
	8		38	
	9		39	
	11		37	

4. Check continuity between control device harness connector terminal and ground.

Control device harness connector		Ground	Continuity
Connector	Terminal		
M57	10		Existed

5. If OK, check harness for short to ground and short to power.
6. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 5.

cardiagn.com

NO >> Repair open circuit or short to ground or short to power in harness or connectors.

5.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988697

MANUAL MODE SWITCH

1.MANUAL MODE SWITCH

Check continuity between control device harness connector terminals.

Item	Position	Control device harness connector			Continuity
		Connector	Terminal		
Manual mode select switch	Not manual	M57	10	11	Existed
	Manual		7	10	
Manual mode position select switch	Up		9	10	
	Down		8	10	

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Repair or replace damaged parts.

cardiagn.com

P0840 TRANSMISSION FLUID PRESSURE SENSOR A (SEC PRESSURE SENSOR)

Description

INFOID:0000000000988698

The transmission fluid pressure sensor A (secondary pressure sensor) detects secondary pressure of CVT and sends TCM the signal.

DTC Logic

INFOID:0000000000988699

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0840	TR PRS SENS/A CIRC	Signal voltage of the transmission fluid pressure sensor A (secondary pressure sensor) is too high or too low while driving.	• Transmission fluid pressure sensor A (Secondary pressure sensor) • Harness or connectors (Switch circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Make sure that output voltage of line temperature sensor is within the range below.

ATF TEMP SEN : 1.0 – 2.0 V

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

4. Start engine and wait for at least 5 consecutive seconds.

With GST
Follow the procedure "With CONSULT-III".

Is "P0840 TR PRS SENS/A CIRC" detected?

YES >> Go to TM-255, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988700

1. CHECK INPUT SIGNAL

1. Start engine.
2. Check voltage between TCM connector terminal and ground.

TCM connector		Ground	Condition	Voltage (Approx.)
Connector	Terminal			
F25	15		"N" position idle	1.0 V

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2. CHECK HARNESS BETWEEN TCM AND TRANSMISSION FLUID PRESSURE SENSOR A (SECOND-

cardiagn.com

ARY PRESSURE SENSOR)

1. Turn ignition switch OFF.
2. Disconnect TCM connector and CVT unit harness connector.
3. Check continuity between TCM connector terminal and CVT unit harness connector terminal.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	15	F24	23	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK SENSOR POWER AND SENSOR GROUND

1. Connect TCM connector.
2. Turn ignition switch ON.
3. Check voltage between CVT unit harness connector terminals.

CVT unit harness connector			Voltage (Approx.)
Connector	Terminal		
F24	19	20	5.0 V

4. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 4.

4. CHECK HARNESS BETWEEN TCM AND CVT UNIT HARNESS CONNECTOR (SENSOR POWER AND SENSOR GROUND)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminals and CVT unit harness connector terminals.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	25	F24	19	Existed
	26		20	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THE TCM SHORT

Replace same type TCM, perform self-diagnosis check. Erase self-diagnostic results and then start engine perform self-diagnosis check. Refer to TM-255, "DTC Logic".

Is “P0840 TR PRS SENS/A CIRC” detected again?

YES >> Replace the transaxle assembly. Refer to TM-340, "Exploded View".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

6. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0841 PRESSURE SENSOR FUNCTION

Description

INFOID:0000000000988701

Using the engine load (throttle position), the primary pulley revolution speed, and the secondary pulley revolution speed as input signal, TCM changes the operating pressure of the primary pulley and the secondary pulley and changes the groove width of the pulley to control the gear ratio.

DTC Logic

INFOID:0000000000988702

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0841	PRESS SEN/FNCTN	Correlation between the values of the transmission fluid pressure sensor A (secondary pressure sensor) and the transmission fluid pressure sensor B (primary pressure sensor) is out of specification.	• Transmission fluid pressure sensor A (Secondary pressure sensor) • Transmission fluid pressure sensor B (Primary pressure sensor) • Harness or connectors (Sensor circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 12 consecutive seconds.

VEHICLE SPEED	**: 40 km/h (25 MPH) More than**
RANGE	**: "D" position**

Is "P0841 PRESS SEN/FNCTN" detected?

YES >> Go to TM-258, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988703

1.CHECK LINE PRESSURE

Perform line pressure test. Refer to TM-318, "Inspection and Judgment".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace damaged parts. Refer to TM-318, "Inspection and Judgment".

2.CHECK TRANSMISSION FLUID PRESSURE SENSOR A (SECONDARY PRESSURE SENSOR) SYSTEM

Check transmission fluid pressure sensor A (secondary pressure sensor) system. Refer to TM-255, "Description".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

cardiagn.com

3. CHECK TRANSMISSION FLUID PRESSURE SENSOR B (PRIMARY PRESSURE SENSOR) SYSTEM

Check transmission fluid pressure sensor B (primary pressure sensor) system. Refer to TM-260, "Description".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4. CHECK LINE PRESSURE SOLENOID VALVE

Check line pressure solenoid valve. Refer to TM-245, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace damaged parts.

5. CHECK SECONDARY PRESSURE SOLENOID VALVE

Check secondary pressure solenoid valve. Refer to TM-251, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair or replace damaged parts.

6. CHECK STEP MOTOR

Check step motor. Refer to TM-277, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 7.
NO >> Repair or replace damaged parts.

7. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0845 TRANSMISSION FLUID PRESSURE SENSOR B (PRI PRESSURE SENSOR)

Description

INFOID:0000000000988704

The transmission fluid pressure sensor B (primary pressure sensor) detects primary pressure of CVT and sends TCM the signal.

DTC Logic

INFOID:0000000000988705

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0845	TR PRS SENS/B CIRC	Signal voltage of the transmission fluid pressure sensor B (primary pressure sensor) is too high or too low while driving.	• Transmission fluid pressure sensor B (Primary pressure sensor) • Harness or connectors (Sensor circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Make sure that output voltage of line temperature sensor is within the range below.

ATF TEMP SEN : 1.0 – 2.0 V

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

4. Start engine and wait for at least 5 consecutive seconds.

With GST

Follow the procedure "With CONSULT-III".

Is "P0845 TR PRS SENS/B CIRC" detected?

YES >> Go to TM-260, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988706

1. CHECK INPUT SIGNAL

1. Start engine.
2. Check voltage between TCM connector terminal and ground.

TCM connector		Ground	Condition	Voltage (Approx.)
Connector	Terminal			
F25	14		"N" position idle	0.7 – 3.5 V

Is the inspection result normal?

YES >> GO TO 6.
NO >> GO TO 2.

2. CHECK HARNESS BETWEEN TCM AND TRANSMISSION FLUID PRESSURE SENSOR B (PRIMARY

cardiagn.com

PRESSURE SENSOR)

1. Turn ignition switch OFF.
2. Disconnect TCM connector and CVT unit harness connector.
3. Check continuity between TCM connector terminal and CVT unit harness connector terminal.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	14	F24	25	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK SENSOR POWER AND SENSOR GROUND

1. Connect TCM connector.
2. Turn ignition switch ON.
3. Check voltage between CVT unit harness connector terminals.

CVT unit harness connector			Voltage (Approx.)
Connector	Terminal		
F24	19	20	5.0 V

4. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 5.
NO >> GO TO 4.

4. CHECK HARNESS BETWEEN TCM AND CVT UNIT HARNESS CONNECTOR (SENSOR POWER AND SENSOR GROUND)

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminals and CVT unit harness connector terminals.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	25	F24	19	Existed
	26		20	

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THE TCM SHORT

Replace same type TCM, perform self-diagnosis check. Erase self-diagnostic results and then start engine perform self-diagnosis check. Refer to TM-260, "DTC Logic".

Is “P0845 TR PRS SENS/B CIRC” detected again?

YES >> Replace the transaxle assembly. Refer to TM-340, "Exploded View".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

6. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P0868 SECONDARY PRESSURE DOWN

Description

INFOID:0000000000988707

The pressure control solenoid valve B (secondary pressure solenoid valve) regulates the secondary pressure to suit the driving condition in response to a signal sent from the TCM.

DTC Logic

INFOID:0000000000988708

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P0868	SEC/PRESS DOWN	Secondary fluid pressure is too low compared with the commanded value while driving.	• Harness or connectors (Solenoid circuit is open or shorted.) • Pressure control solenoid valve B (Secondary pressure solenoid valve) system • Transmission fluid pressure sensor A (Secondary pressure sensor) • Line pressure control system

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If “DTC CONFIRMATION PROCEDURE” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Make sure that output voltage of CVT fluid temperature sensor is within the range below.

ATF TEMP SEN	**: 1.0 – 2.0 V**
If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)	

4. Start engine and maintain the following conditions for at least 10 consecutive seconds.

VEHICLE SPEED (accelerate slowly)	**: 0 → 50 km/h (31 MPH)**
ACC PEDAL OPEN	**: 0.5/8 – 1.0/8**
RANGE	**: “D” position**

Is “P0868 SEC/PRESS DOWN” detected?

YES >> Go to TM-263, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988709

1. CHECK LINE PRESSURE

Perform line pressure test. Refer to TM-318, "Inspection and Judgment".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace damaged parts. Refer to TM-318, "Inspection and Judgment".

cardiagn.com

2.CHECK PRESSURE CONTROL SOLENOID VALVE B (SECONDARY PRESSURE SOLENOID VALVE)

Check pressure control solenoid valve B (secondary pressure solenoid valve). Refer to TM-251, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK PRESSURE CONTROL SOLENOID VALVE A (LINE PRESSURE SOLENOID VALVE)

Check pressure control solenoid valve A (line pressure solenoid valve). Refer to TM-245, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4.CHECK TRANSMISSION FLUID PRESSURE SENSOR A (SECONDARY PRESSURE SENSOR) SYSTEM

Check transmission fluid pressure sensor A (secondary pressure sensor) system. Refer to TM-255, "DTC Logic".

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair or replace damaged parts.

5.CHECK TCM

Check input/output signal. Refer to TM-285, "Reference Value"

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P1701 TRANSMISSION CONTROL MODULE (POWER SUPPLY)

Description

INFOID:0000000000988710

When the power supply to the TCM is cut OFF, for example because the battery is removed, and the self-diagnosis memory function stops, malfunction is detected.

NOTE:

Since “P1701 TCM-POWER SUPPLY” will be indicated when replacing TCM, perform diagnosis after erasing “SELF-DIAG RESULTS”

DTC Logic

INFOID:0000000000988711

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1701	TCM-POWER SUPPLY	• When the power supply to the TCM is cut OFF, for example because the battery is removed, and the self-diagnosis memory function stops. • This is not a malfunction message (Whenever shutting OFF a power supply to the TCM, this message appears on the screen).	• Harness or connectors (Battery or ignition switch and TCM circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:

If “DTC CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Wait for at least 2 consecutive seconds.
3. Perform “SELF-DIAG RESULTS”. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is “P1701 TCM-POWER SUPPLY” detected?

YES >> Go to TM-265, "Diagnosis Procedure".

NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988712

1. CHECK TCM POWER SOURCE

Check voltage between TCM connector terminals and ground.

Name	TCM connector		Ground	Condition	Voltage (Approx.)
	Connector	Terminal			
Power supply	F25	46	Ground	Ignition switch ON	Battery voltage
				Ignition switch OFF	0 V
		48		Ignition switch ON	Battery voltage
				Ignition switch OFF	0 V
Power supply (memory back-up)		45		Always	Battery voltage
		47			

Is the inspection result normal?

YES >> GO TO 4.

cardiagn.com

NO >> GO TO 2.

2.DETECT MALFUNCTIONING ITEM

Check the following.
- Harness for short or open between battery and TCM connector terminal 45, 47
- Harness for short or open between ignition switch and TCM connector terminal 46, 48
- 10 A fuse (No. 55, located in the IPDM E/R)
- 15 A fuse (No. 13, located in the J/B)
- Ignition switch. Refer to TM-332, "Exploded View".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK TCM GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check continuity between TCM connector terminals and ground.

TCM connector		Ground	Continuity
Connector	Terminal		
F25	5		Existed
	42		

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P1705 THROTTLE POSITION SENSOR

Description

INFOID:0000000000988713

Electric throttle control actuator consists of throttle control motor, accelerator pedal position sensor, throttle position sensor etc. The actuator sends a signal to the ECM, and ECM sends the signal to TCM with CAN communication.

DTC Logic

INFOID:0000000000988714

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1705	TP SEN/CIRC A/T	TCM does not receive the proper accelerator pedal position signals (input by CAN communication) from ECM.	• ECM • Harness or connectors (CAN communication line is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Depress accelerator pedal fully and release it, then wait for 5 seconds.
3. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is "P1705 TP SEN/CIRC A/T" detected?

YES >> Go to TM-267, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988715

1. CHECK INPUT SIGNAL

With CONSULT-III
1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Read out the value of "ACC PEDAL OPEN".

Item name	Condition	Display value (Approx.)
ACC PEDAL OPEN	Released accelerator pedal - Fully depressed accelerator pedal	0.0/8 - 8.0/8

Is the inspection result normal?

OK >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NG >> GO TO 2.

2. CHECK DTC WITH ECM

With CONSULT-III
1. Turn ignition switch ON.
2. Select "SELF-DIAG RESULTS" mode for "ENGINE" with CONSULT-III. Refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

Is the inspection result normal?

OK >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NG >> Check the DTC Detected Item. Go to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

cardiagn.com

P1722 ESTM VEHICLE SPEED SIGNAL

Description

INFOID:0000000000988716

The vehicle speed signal is transmitted from ABS actuator and electric unit (control unit) to TCM by CAN communication line.

DTC Logic

INFOID:0000000000988717

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1722	ESTM VEH SPD SIG	• CAN communication with the ABS actuator and the electric unit (control unit) is malfunctioning. • There is a great difference between the vehicle speed signal from the ABS actuator and the electric unit (control unit), and the vehicle speed sensor signal.	• Harness or connectors (Sensor circuit is open or shorted.) • ABS actuator and electric unit (control unit)

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 5 consecutive seconds.

ACC PEDAL OPEN	**: 1.0/8 or less**
VEHICLE SPEED	**: 30 km/h (19 MPH) or more**

Is "P1722 ESTM VEH SPD SIG" detected?

YES >> Go to TM-268, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988718

1.CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT)

Perform "SELF-DIAG RESULTS". Refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair or replace damaged parts.

2.CHECK INPUT SIGNALS

With CONSULT-III

1. Start engine.
2. Select "DATA MONITOR".
3. Drive vehicle and read out the value of "VEHICLE SPEED" and "ESTM VSP SIG".

cardiagn.com

Item name	Condition	Display value
ESTM VSP SIG	During driving	Approximately matches the speedometer reading.
VEHICLE SPEED		

4. Check if there is a great difference between the two values.

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> GO TO 3.

3.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P1723 CVT SPEED SENSOR FUNCTION

Description

INFOID:0000000000988719

The vehicle speed sensor CVT [output speed sensor (secondary speed sensor)] detects the revolution of parking gear and generates a pulse signal. The pulse signal is sent to the TCM, which converts it into vehicle speed.
The input speed sensor (primary speed sensor) detects the primary pulley revolution speed and sends a signal to the TCM.

DTC Logic

INFOID:0000000000988720

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1723	CVT SPD SEN/FNCTN	A rotation sensor error is detected because the gear does not change in accordance with the position of the stepping motor. **CAUTION:** **One of the "P0720 VEH SPD SEN/CIR AT", the "P0715 INPUT SPD SEN/CIRC" or the "P0725 ENGINE SPEED SIG" is displayed with the DTC at the same time.**	• Harness or connectors (Sensor circuit is open or shorted.) • Output speed sensor (Secondary speed sensor) • Input speed sensor (Primary speed sensor) • Engine speed signal system

DTC CONFIRMATION PROCEDURE

CAUTION:
Always drive vehicle at a safe speed.
NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON.
2. Select "DATA MONITOR".
3. Start engine and maintain the following conditions for at least 5 consecutive seconds.

VEHICLE SPEED	**: 10 km/h (6 MPH) or more**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: "D" position**
ENG SPEED	**: 450 rpm or more**
Driving location	**: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.**

Is "P1723 CVT SPD SEN/FNCTN" detected?

YES >> Go to TM-270, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988721

1.CHECK STEP MOTOR FUNCTION

Perform the self-diagnosis check. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is a malfunction in the step motor function indicated in the results?

cardiagn.com

YES >> Repair or replace damaged parts. (Check the step motor function. Refer to TM-278, "DTC Logic".)
NO >> GO TO 2.

2. CHECK OUTPUT SPEED SENSOR (SECONDARY SPEED SENSOR) SYSTEM

Check output speed sensor (secondary speed sensor) system. Refer to TM-234, "DTC Logic".

Is the inspection result normal?

OK >> GO TO 3.
NG >> Repair or replace damaged parts.

3. CHECK INPUT SPEED SENSOR (PRIMARY SPEED SENSOR) SYSTEM

Check input speed sensor (primary speed sensor) system. Refer to TM-231, "DTC Logic".

Is the inspection result normal?

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK ENGINE SPEED SIGNAL SYSTEM

Check engine speed signal system. Refer to TM-237, "DTC Logic".

Is the inspection result normal?

OK >> GO TO 5.
NG >> Repair or replace damaged parts. Refer to EC-929, "Description" (WITH EURO-OBD), EC-1208, "Description" (WITHOUT EURO-OBD).

5. CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

OK >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NG >> Replace the TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P1726 ELECTRIC THROTTLE CONTROL SYSTEM

Description

INFOID:0000000000988722

Electric throttle control actuator consists of throttle control motor, accelerator pedal position sensor, throttle position sensor etc. The actuator sends a signal to the ECM, and ECM sends the signal to TCM with CAN communication.

DTC Logic

INFOID:0000000000988723

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1726	ELEC TH CONTROL	The electronically controlled throttle for ECM is malfunctioning.	Harness or connectors (Sensor circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Start engine and let it idle for 5 seconds.
3. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is "P1726 ELEC TH CONTROL" detected?

YES >> Go to TM-272, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988724

1.CHECK DTC WITH ECM

With CONSULT-III

1. Turn ignition switch ON.
2. Select "SELF-DIAG RESULTS" mode for "ENGINE" with CONSULT-III. Refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

Is the inspection result normal?

YES >> GO TO 2.
NO >> Check the DTC Detected Item. Refer to EC-719, "CONSULT-III Function" (WITH EURO-OBD), EC-1054, "CONSULT-III Function" (WITHOUT EURO-OBD).

2.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace TCM. Refer to TM-325, "Exploded View".

cardiagn.com

P1740 LOCK-UP SELECT SOLENOID VALVE

Description

INFOID:0000000000988725

- Lock-up select solenoid valve controls lock-up clutch pressure or forward clutch pressure (reverse brake pressure).
- When controlling lock-up clutch, the valve is turned OFF. When controlling forward clutch, it is turned ON.

DTC Logic

INFOID:0000000000988726

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1740	LU-SLCT SOL/CIRC	• Normal voltage not applied to solenoid due to cut line, short, or the like. • TCM detects as irregular by comparing target value with monitor value.	• Lock-up select solenoid valve • Harness or connectors (Solenoid circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If “DTC CONFIRMATION PROCEDURE” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Start engine and maintain the following conditions for at least 5 consecutive seconds.

RANGE : “D” position and “N” positions

(At each time, wait for 5 seconds.)

With GST

Follow the procedure “With CONSULT-III”.

Is “P1740 LU-SLCT SOL/CIRC” detected?

YES >> Go to TM-273, "Diagnosis Procedure".

NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988727

1. CHECK LOCK-UP SELECT SOLENOID VALVE CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect TCM connector.
3. Check resistance between TCM connector terminal and ground.

TCM connector		Ground	Resistance (Approx.)
Connector	Terminal		
F25	37		17.0 – 38.0 Ω

Is the inspection result normal?

YES >> GO TO 4.

NO >> GO TO 2.

cardiagn.com

2.CHECK LOCK-UP SELECT SOLENOID VALVE

Check lock-up select solenoid valve.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair or replace damaged parts.

3.CHECK HARNESS BETWEEN TCM AND LOCK-UP SELECT SOLENOID VALVE

1. Turn ignition switch OFF.
2. Disconnect TCM connector and CVT unit harness connector.
3. Check continuity between TCM connector terminal and CVT unit harness connector terminal.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	37	F24	13	Existed

4. If OK, check harness for short to ground and short to power.
5. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

4.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988728

LOCK-UP SELECT SOLENOID VALVE

1.LOCK-UP SELECT SOLENOID VALVE

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector.
3. Check resistance between CVT unit harness connector terminal and ground.

CVT unit harness connector		Ground	Resistance (Approx.)
Connector	Terminal		
F24	13		17.0 – 38.0 Ω

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

cardiagn.com

P1745 LINE PRESSURE CONTROL

Description

INFOID:0000000000988729

The pressure control solenoid valve A (line pressure solenoid valve) regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

DTC Logic

INFOID:0000000000988730

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1745	L/PRESS CONTROL	TCM detects the unexpected line pressure.	TCM

DTC CONFIRMATION PROCEDURE

NOTE:
If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III
1. Turn ignition switch ON
2. Select "DATA MONITOR".
3. Make sure that output voltage of CVT fluid temperature sensor is within the range below.

ATF TEMP SEN : 1.0 – 2.0 V

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

Is "P1745 L/PRESS CONTROL" detected?

YES >> Go to TM-275, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988731

1. CHECK DTC

With CONSULT-III
1. Turn ignition switch ON.
2. Select "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".
3. Erase self-diagnostic results.
4. Turn ignition switch OFF, and wait for 10 seconds or more.
5. Start engine.
6. Confirm self-diagnostic results again. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is the "P1745 L/PRESS CONTROL" displayed?

YES >> Replace TCM. Refer to TM-325, "Exploded View".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

cardiagn.com

P1777 STEP MOTOR

Description

INFOID:0000000000988732

The step motor changes the step with turning 4 coils ON/OFF according to the signal from TCM. As a result, the flow of line pressure to primary pulley is changed and pulley ratio is controlled.

DTC Logic

INFOID:0000000000988733

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1777	STEP MOTR CIRC	Each coil of the step motor is not energized properly due to an open or a short.	• Step motor • Harness or connectors (Step motor circuit is open or shorted.)

DTC CONFIRMATION PROCEDURE

CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DTC CONFIRMATION PROCEDURE" has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1.CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Drive vehicle for at least 5 consecutive seconds.
3. Perform "SELF-DIAG RESULTS". Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

With GST

Follow the procedure "With CONSULT-III".

Is "P1777 STEP MOTR CIRC" detected?

YES >> Go to TM-276, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988734

1.CHECK INPUT SIGNALS

With CONSULT-III

1. Start engine.
2. Select "DATA MONITOR".
3. Start vehicle and read out the value of "STM STEP", "SMCOIL A", "SMCOIL B", "SMCOIL C", and "SMCOIL D".

Item name	Condition	Display value (Approx.)
STM STEP	During driving	0 step – 177 step
SMCOIL A		Changes ON⇔OFF.
SMCOIL B		
SMCOIL C		
SMCOIL D		

Is the inspection result normal?

YES >> GO TO 4.
NO >> GO TO 2.

2.CHECK HARNESS BETWEEN TCM AND STEP MOTOR

cardiagn.com

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector and TCM connector.
3. Check continuity between TCM connector terminals and CVT unit harness connector terminals.

TCM connector		CVT unit harness connector		Continuity
Connector	Terminal	Connector	Terminal	
F25	27	F24	9	Existed
	28		8	
	29		7	
	30		6	

4. If OK, check harness for short to ground and short to power.
5. If OK, check continuity between body ground and transaxle assembly.
6. Reinstall any part removed.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

3.CHECK STEP MOTOR

Check step motor. Refer to TM-277, "Component Inspection".

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4.CHECK TCM

Check TCM input/output signals. Refer to TM-285, "Reference Value".

Is the inspection result normal?

YES >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NO >> Replace the TCM. Refer to TM-325, "Exploded View".

Component Inspection

INFOID:0000000000988735

STEP MOTOR

1.STEP MOTOR

1. Turn ignition switch OFF.
2. Disconnect CVT unit harness connector.
3. Check resistance between CVT unit harness connector terminals and ground.

CVT unit harness connector			Resistance (Approx.)
Connector	Terminal		
F24	6	7	30.0 Ω
	8	9	

CVT unit harness connector		Ground	Resistance (Approx.)
Connector	Terminal		
F24	6		15.0 Ω
	7		
	8		
	9		

Is the inspection result normal?

YES >> **INSPECTION END**
NO >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).

cardiagn.com

P1778 STEP MOTOR - FUNCTION

Description

INFOID:0000000000988736

- The step motor's 4 aspects of ON/OFF change according to the signal from TCM. As a result, the flow of line pressure to primary pulley is changed and pulley ratio is controlled.
- This diagnosis item is detected when electrical system is OK, but mechanical system is NG.
- This diagnosis item is detected when the state of the changing the speed mechanism in unit does not operate normally.

DTC Logic

INFOID:0000000000988737

DTC DETECTION LOGIC

DTC	Item (CONSULT-III screen term)	Malfunction is detected when...	Possible cause
P1778	STEP MOTR/FNC	There is a great difference between the number of steps for the stepping motor and for the actual gear ratio.	Step motor

DTC CONFIRMATION PROCEDURE

CAUTION:

- **Always drive vehicle at a safe speed.**
- **Before starting “DTC CONFIRMATION PROCEDURE”, confirm “Hi” or “Mid” or “Low” fixation by “PRI SPEED” and “VEHICLE SPEED” on “DATA MONITOR MODE”.**
- **If hi-geared fixation occurred, go to TM-278, "Diagnosis Procedure".**

NOTE:

If “DTC Confirmation Procedure” has been previously performed, always turn ignition switch OFF and wait at least 10 seconds before performing the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.

1. CHECK DTC DETECTION

With CONSULT-III

1. Turn ignition switch ON.
2. Select “DATA MONITOR”.
3. Make sure that output voltage of CVT fluid temperature sensor is within the range below.

ATF TEMP SEN	**: 1.0 – 2.0 V**

If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid)

4. Start engine and maintain the following conditions for at least 30 consecutive seconds.

TEST START FROM 0 km/h (0 MPH)	
CONSTANT ACCELERATION	**: Keep 30 sec or more**
VEHICLE SPEED	**: 10 km/h (6 MPH) or more**
ACC PEDAL OPEN	**: More than 1.0/8**
RANGE	**: “D” position**
ENG SPEED	**: 450 rpm or more**

With GST.

Follow the procedure “With CONSULT-III”.

Is “P1778 STEP MOTR/FNC” detected?

YES >> Go to TM-278, "Diagnosis Procedure".
NO >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".

Diagnosis Procedure

INFOID:0000000000988738

1. CHECK STEP MOTOR

cardiagn.com

With CONSULT-III

It is monitoring whether “GEAR RATIO: 2.34 – 0.39” changes similarly to “STM STEP: 0 – 177” by “DATA MONITOR” mode. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Without CONSULT-III

Inspect the engine speed (rise and descend), vehicle speed, throttle position, and check shift change. Refer to TM-361, "Vehicle Speed When Shifting Gears".

OK or NG

OK >> Check intermittent incident. Refer to GI-39, "Intermittent Incident".
NG >> Replace the transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View"(4WD).

cardiagn.com

CVT SHIFT LOCK SYSTEM

Description

INFOID:0000000000914676

Component	Function
Shift lock solenoid	It operates according to the signal from the stop lamp switch and moves the lock lever.
Lock lever	It moves according to the operation of the shift lock solenoid and performs the release of the shift lock.
Detent rod	It links with the selector button and restricts the selector lever movement.
Park position switch	It detects that the selector lever is in P position.
Key interlock cable and key interlock rod	It transmits the lock lever operation to the slider in the key cylinder.
Shift lock release button	It moves the lock lever forcibly.

cardiagn.com

Diagnosis Procedure

INFOID:0000000000914678

1. CHECK POWER SOURSE

1. Turn ignition switch ON.
2. Check voltage between control device harness connector and ground.

cardiagn.com

Control device harness connector		Ground	Voltage (Approx.)
Connector	Terminal		
M57	3		Battery Voltage

Is the inspection result normal?

YES >> GO TO 2.
NO >> • Harness for short or open between ignition switch and control device harness connector terminal 3
• 10 A fuse [No. 55, located in the IPDM E/R]
• Ignition switch

2.CHECK HARNESS BETWEEN CONTROL DEVICE AND STOP LAMP SWITCH

1. Turn ignition switch OFF.
2. Disconnect control device harness connector and stop lamp switch connector.
3. Check continuity between control device harness connector terminal and stop lamp switch connector terminal.

Control device harness connector		Stop lamp switch harness connector		Continuity
Connector	Terminal	Connector	Terminal	
M57	4	E115	3	Existed

4. If OK, check harness for short to ground and short to power.

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

3.CHECK STOP LAMP SWITCH

Check continuity between stop lamp switch harness connector terminal 3 and 4.

Stop lamp switch harness connector			Condition	Continuity
Connector	Terminal			
E115	3	4	Depressed brake pedal	Existed
			Released brake pedal	Not existed

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair or replace damaged parts.

4.CHECK GROUND CIRCUIT

Check continuity between stop lamp switch harness connector and ground.

Stop lamp switch harness connector		Ground	Continuity
Connector	Terminal		
E115	4		Existed

Is the inspection result normal?

YES >> GO TO 5.
NO >> Repair open circuit or short to ground or short to power in harness or connectors.

5.CHECK CONTROL DEVICE

1. Move selector lever to “P” position.
2. Check continuity between control device harness connector.

Control device harness connector			Continuity
Connector	Terminal		
M57	3	4	Existed

Is the inspection result normal?

cardiagn.com

YES >> GO TO 6.
NO >> Replace control device. Refer to TM-326, "Exploded View".

6.CHECK SHIFT LOCK SOLENOID

1. Move selector lever to “P” position.
2. Apply voltage to terminals 3 and 4 of control device harness connector, and then shift lock solenoid is activated.

CAUTION:
Connect the fuse between the terminals when applying the voltage.

(+) (fuse)		(–)	Condition	Status
Control device harness connector				
Connector	Terminal			
M57	3	4	Apply 12 V direct current between terminals 3 and 4.	Shift lock solenoid operates

Is the inspection result normal?

YES >> INSPECTION END.
NO >> Replace control device. Refer to TM-326, "Exploded View".

Component Inspection (Stop lamp switch)

INFOID:0000000001115989

1.CHECK STOP LAMP SWITCH

1. Disconnect stop lamp switch harness connector.
2. Check continuity between stop lamp switch connector terminal 3 and 4.

Stop lamp switch connector			Condition	Continuity
Connector	Terminal			
E115	3	4	Depressed brake pedal	Existed
			Released brake pedal	Not existed

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace stop lamp switch. Refer to BR-17, "Exploded View" (LHD), BR-61, "Exploded View" (RHD).

cardiagn.com

JCDWA0071GB

Fail-safe

INFOID:0000000000988742

The TCM has an electrical fail-safe mode. In this mode TCM is operator even if there is an error in a main electronic control input/output signal circuit.

FAIL-SAFE FUNCTION

If any malfunction occurs in a sensor or solenoid, this function controls the CVT to make driving possible.

Output Speed Sensor (Secondary Speed Sensor)

cardiagn.com

The shift pattern is changed in accordance with throttle position when an unexpected signal is sent from the output speed sensor (secondary speed sensor) to the TCM. The manual mode position is inhibited, and the transaxle is put in “D”.

Input Speed Sensor (Primary Speed Sensor)
The shift pattern is changed in accordance with throttle position and secondary speed (vehicle speed) when an unexpected signal is sent from the input speed sensor (primary speed sensor) to the TCM. The manual mode position is inhibited, and the transaxle is put in “D”.

PNP Switch
If an unexpected signal is sent from the PNP switch to the TCM, the transaxle is put in “D”.

Manual Mode Switch
If an unexpected signal is sent from the manual mode switch to the TCM, the transaxle is put in “D”.

CVT Fluid Temperature Sensor
If an unexpected signal is sent from the CVT fluid temperature sensor to the TCM, the gear ratio in use before receiving the unexpected signal is maintained or the gear ratio is controlled to keep engine speed under 5000 rpm.

Transmission Fluid Pressure Sensor A (Secondary Pressure Sensor)
- If an unexpected signal is sent from the transmission fluid pressure sensor A (secondary pressure sensor) to the TCM, the secondary pressure feedback control is stopped and the offset value obtained before the non-standard condition occurs is used to control line pressure.
- If transmission fluid pressure sensor A (secondary pressure sensor) error signal is input to TCM, secondary pressure feedback control stops, but line pressure is controlled normally.

Pressure Control Solenoid A (Line Pressure Solenoid)
If an unexpected signal is sent from the solenoid to the TCM, the pressure control solenoid A (line pressure solenoid) is turned OFF to achieve the maximum fluid pressure.

Pressure Control Solenoid B (Secondary Pressure Solenoid)
If an unexpected signal is sent from the solenoid to the TCM, the pressure control solenoid B (secondary pressure solenoid) is turned OFF to achieve the maximum fluid pressure.

Torque Converter Clutch Solenoid
If an unexpected signal is sent from the solenoid to the TCM, the torque converter clutch solenoid is turned OFF to cancel the lock-up.

Step Motor
If an unexpected signal is sent from the step motor to the TCM, the step motor coil phases “A” through “D” are all turned OFF to hold the gear ratio used right before the non-standard condition occurred.

CVT Lock-up Select Solenoid
If an unexpected signal is sent from the solenoid to the TCM, the CVT lock-up select solenoid is turned OFF to cancel the lock-up.

TCM Power Supply (Memory Back-up)
Transaxle assembly is protected by limiting the engine torque when the memory back-up power supply (for controlling) from the battery is not supplied to TCM. Normal statues is restored when turning the ignition switch OFF to ON after the normal power supply.

DTC Inspection Priority Chart

INFOID:0000000000988743

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:
If DTC “U1000 CAN COMM CIRCUIT” is displayed with other DTCs, first perform the trouble diagnosis for “DTC U1000 CAN COMMUNICATION LINE”. Refer to TM-222.

Priority	Detected items (DTC)
1	U1000 CAN communication line
2	Except above

DTC Index

INFOID:0000000000988744

cardiagn.com

NOTE:
If DTC "U1000 CAN COMM CIRCUIT" is displayed with other DTCs, first perform the trouble diagnosis for "DTC U1000 CAN COMMUNICATION LINE". Refer to TM-222.

DTC		Items (CONSULT-III screen terms)	Reference page

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000000914688

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001102435

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

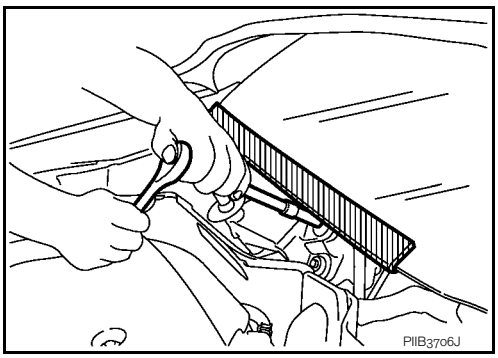
1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Precaution for Procedure without Cowl Top Cover

INFOID:0000000000914689

cardiagn.com

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



Precaution for On Board Diagnosis (OBD) System of CVT and Engine

INFOID:0000000000914691

The ECM has an on board diagnostic system. It will light up the malfunction indicator (MI) to warn the driver of a malfunction causing emission deterioration.

CAUTION:

- **Be sure to turn the ignition switch OFF and disconnect the battery cable from the negative terminal before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MI to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MI to light up due to an open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Be sure to route and secure the harnesses properly after work. Interference of the harness with a bracket, etc. may cause the MI to light up due to a short circuit.**
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MI to light up due to a malfunction of the EVAP system or fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM and ECM before returning the vehicle to the customer.**

Precaution for TCM and CVT Assembly Replacement

INFOID:0000000000914692

CAUTION:

- **Check if new data (Unit ID) are entered correctly after replacing CVT assembly and erasing data in TCM. (Connect CONSULT-III, and then turn ignition switch OFF.)**
- **When replacing CVT assembly or TCM, refer to the pattern table below and erase the EEPROM in the TCM if necessary.**

EEPROM ERASING PATTERNS

CVT assembly	TCM	Erasing EEPROM in TCM	Remarks
Replaced	Replaced	Not required	Not required because the EEPROM in the TCM is in the default state. (CVT assembly must be replaced first.)
Not replaced	Replaced	Not required	Not required because the EEPROM in the TCM is in the default state.
Replaced	Not replaced	Required	Required because data has been written in the EEPROM in the TCM and because the TCM cannot write data from the ROM assembly in the transmission.

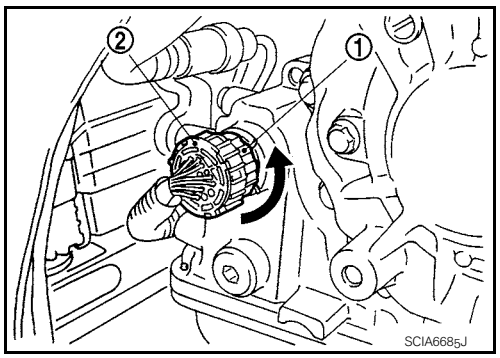
Removal and Installation Procedure for CVT Unit Connector

INFOID:0000000000914693

REMOVAL

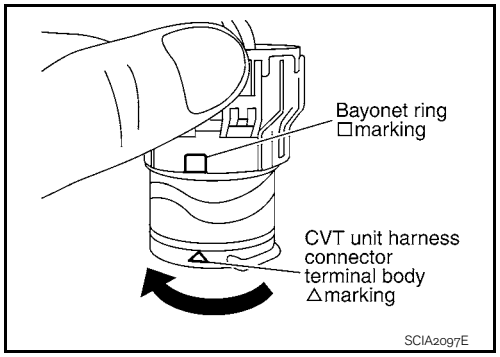
cardiagn.com

Rotate bayonet ring (1) counterclockwise, pull out CVT unit harness connector (2) upward and remove it.

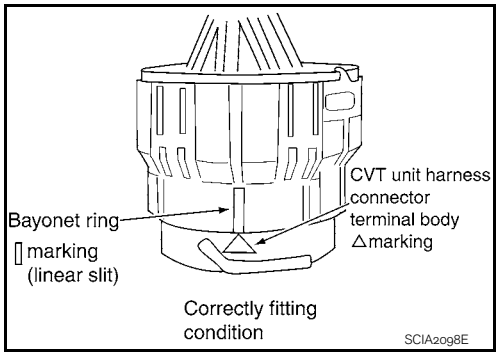


INSTALLATION

1. Align Δ marking on CVT unit harness connector terminal body with o marking on bayonet ring, insert CVT unit harness connector, and then rotate bayonet ring clockwise.

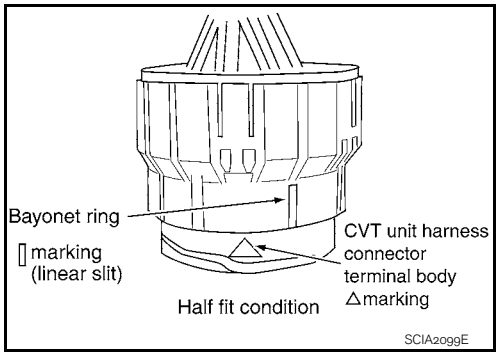


2. Rotate bayonet ring clockwise until Δ marking on CVT unit harness connector terminal body is aligned with the slit on bayonet ring as shown in the figure (correctly fitting condition), install CVT unit harness connector to CVT unit harness connector terminal body.



CAUTION:

- **Securely align Δ marking on CVT unit harness connector terminal body with bayonet ring slit. Then, be careful not to make a half fit condition as shown in the figure.**
- **Never mistake the slit of bayonet ring for other dent portion.**



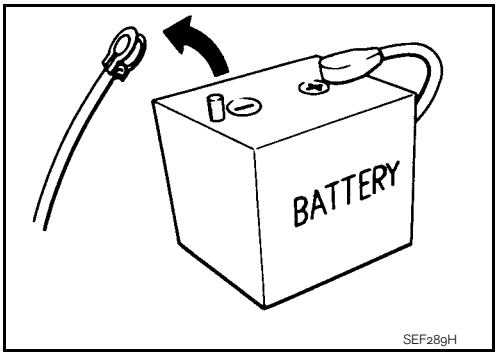
Precaution

INFOID:0000000000914694

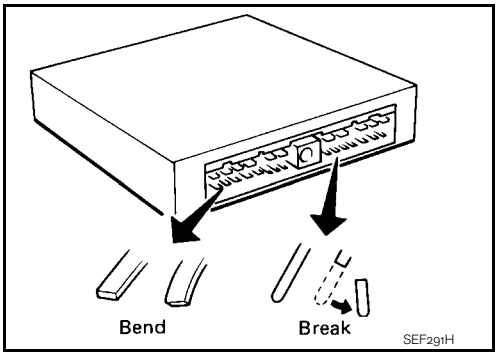
NOTE:
If any malfunction occurs in the RE0F10A model transaxle, replace the entire transaxle assembly.

cardiagn.com

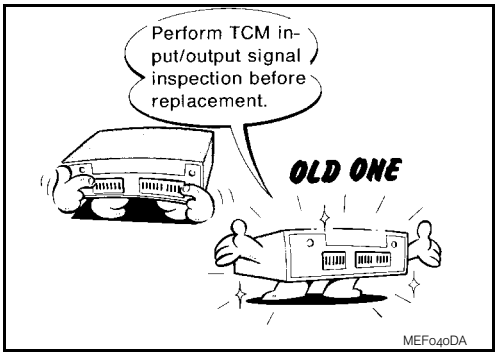
- **Before connecting or disconnecting the TCM harness connector, turn ignition switch OFF and disconnect negative battery cable. Because battery voltage is applied to TCM even if ignition switch is turned OFF.**



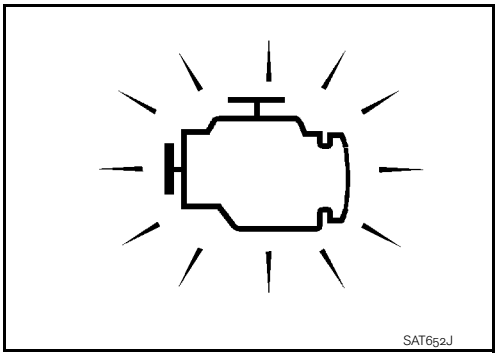
- **When connecting or disconnecting pin connectors into or from TCM, take care not to damage pin terminals (bend or break).**
  When connecting pin connectors make sure that there are not any bends or breaks on TCM pin terminal.



- **Before replacing TCM, perform TCM input/output signal inspection and make sure whether TCM functions properly or not. TM-285, "Reference Value"**.



- **After performing each TROUBLE DIAGNOSIS, perform “DTC Confirmation Procedure”.**
  If the repair is completed the DTC should not be displayed in the “DTC Confirmation Procedure”.
- Always use the specified brand of CVT fluid. Refer to PG-47, "Wiring Diagram - IGNITION POWER SUPPLY -".
- Use lint-free paper, not cloth rags, during work.
- After replacing the CVT fluid, dispose of the waste oil using the methods prescribed by law, ordinance, etc.



Service Notice or Precaution

INFOID:0000000000914695

OBD SELF-DIAGNOSIS

- CVT self-diagnosis is performed by the TCM in combination with the ECM. The results can be read through the blinking pattern of the malfunction indicator (MI). Refer to the table on TM-216, "CONSULT-III Function (TRANSMISSION)" for the indicator used to display each self-diagnostic result.
- The self-diagnostic results indicated by the MI are automatically stored in both the ECM and TCM memories. **Always perform the procedure on TM-214, "Diagnosis Description" to complete the repair and avoid unnecessary blinking of the MI.**

cardiagn.com

For details of OBD, refer to EC-706, "Diagnosis Description" (WITH EURO-OBD), EC-1050, "Diagnosis Description" (WITHOUT EURO-OBD).

- **Certain systems and components, especially those related to OBD, may use the new style slide-locking type harness connector. For description and how to disconnect, refer to PG-105.**

ON-VEHICLE MAINTENANCE

CVT FLUID

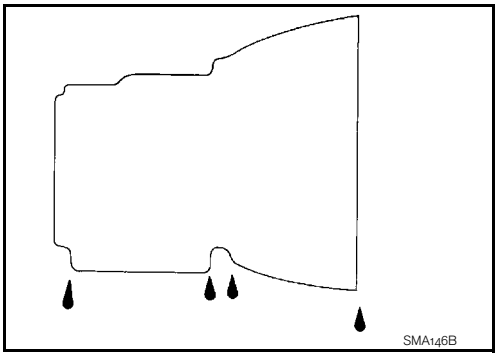
Inspection

INFOID:0000000000988983

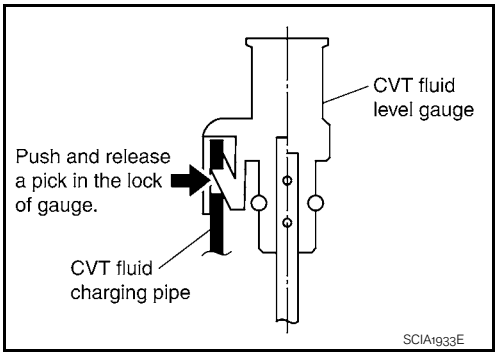
CHECKING CVT FLUID

Fluid level should be checked with the fluid warmed up to 50 to 80°C (122 to 176°F). The fluid level check procedure is as follows:

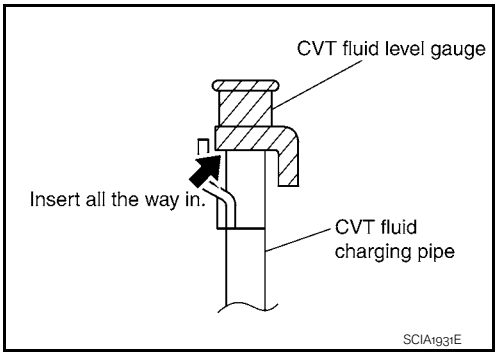
1. Check for fluid leakage.
2. With the engine warmed up, drive the vehicle in an urban area. When ambient temperature is 20°C (68°F), it takes about 10 minutes for the CVT fluid to warm up to 50 to 80°C (122 to 176°F).
3. Park the vehicle on a level surface.
4. Apply parking brake firmly.
5. With engine at idle, while depressing brake pedal, move shift selector throughout the entire shift range.



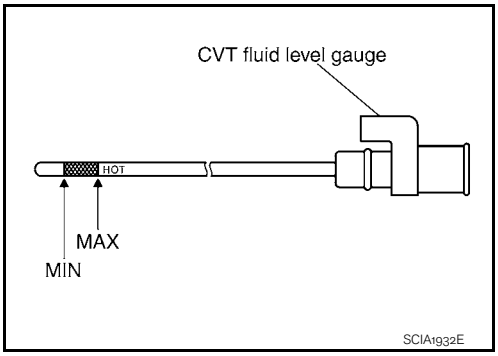
6. Pull out the CVT fluid level gauge from the CVT fluid charging pipe after pressing the tab on the CVT fluid level gauge to release the lock.



7. Wipe fluid off the CVT fluid level gauge. Insert the CVT fluid level gauge rotating 180° from the originally installed position, then securely push the CVT fluid level gauge until it meets the top end of the CVT fluid charging pipe.
   CAUTION:
   When wiping away the CVT fluid level gauge, always use lint-free paper, not a cloth rag.



8. Place the selector lever in “P” or “N” and make sure the fluid level is within the specified range.
   CAUTION:
   When reinstalling CVT fluid level gauge, insert it into the CVT fluid charging pipe and rotate it to the original installation position until securely locked.

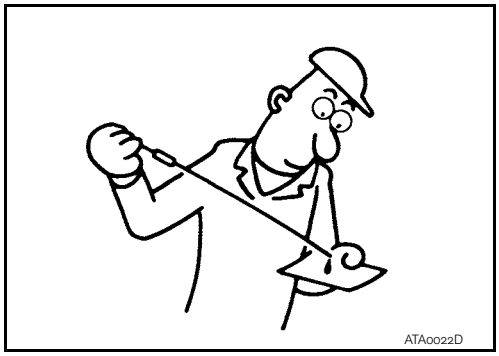


CVT FLUID CONDITION

cardiagn.com

Check CVT fluid condition.

- If CVT fluid is very dark or smells burned, check operation of CVT. Flush cooling system after repair of CVT.
- If CVT fluid contains frictional material (clutches, brakes, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of CVT. Refer to CO-34, "Exploded View".



Fluid status	Conceivable cause	Required operation
Varnished (viscous varnish state)	CVT fluid become degraded due to high temperatures.	Replace the CVT fluid and check the CVT main unit and the vehicle for malfunctions (wire harnesses, cooler pipes, etc.)
Milky white or cloudy	Water in the fluid	Replace the CVT fluid and check for places where water is getting in.
Large amount of metal powder mixed in	Unusual wear of sliding parts within CVT	Replace the CVT fluid and check for improper operation of the CVT.

Changing

INFOID:0000000000988984

1. Remove drain plug, and then drain CVT fluid from oil pan.
2. Install drain plug to oil pan.
   CAUTION:
   Never reuse drain plug gasket.

   Drain plug – tightening torque : Refer to TM-335, "Exploded View".
3. Fill CVT fluid from CVT fluid charging pipe to the specified level.
4. With the engine warmed up, drive the vehicle in an urban area. When ambient temperature is 20°C (68°F), it takes about 10 minutes for the CVT fluid to warm up to 50 to 80°C (122 to 176°F).
5. Check CVT fluid level and condition.
6. Repeat steps 1 to 5 if CVT fluid has been contaminated.

CVT fluid : Refer to TM-361, "General Specification".

Fluid capacity : Refer to TM-361, "General Specification".

CAUTION:

- **Use only Genuine NISSAN CVT Fluid NS-2. Never mix with other fluid.**
- **Using CVT fluid other than Genuine NISSAN CVT Fluid NS-2 will deteriorate in driveability and CVT durability, and may damage the CVT, which is not covered by the warranty.**
- **When filling CVT fluid, take care not to scatter heat generating parts such as exhaust.**
- **Sufficiently shake the container of CVT fluid before using.**
- **Delete CVT fluid deterioration date with CONSULT-III after changing CVT fluid.**

cardiagn.com

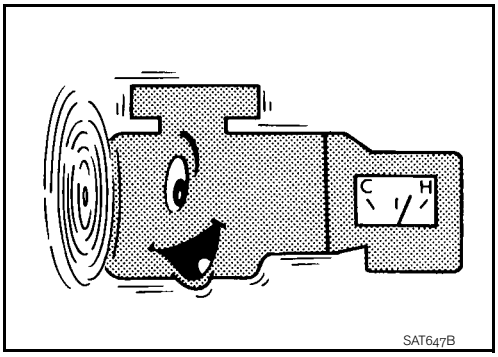
STALL TEST

Inspection and Judgment

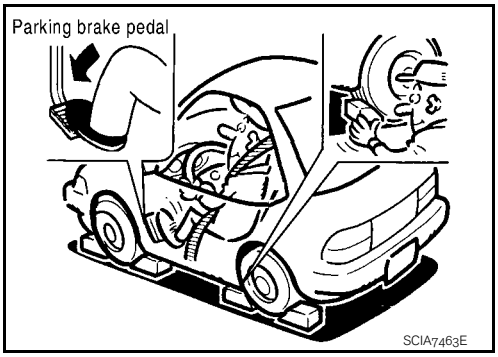
INFOID:0000000000914702

INSPECTION

1. Inspect the amount of engine oil. Replenish the engine oil if necessary.
2. Drive for about 10 minutes to warm up the vehicle so that the CVT fluid temperature is 50 to 80°C (122 to 176°F). Inspect the amount of CVT fluid. Replenish if necessary.

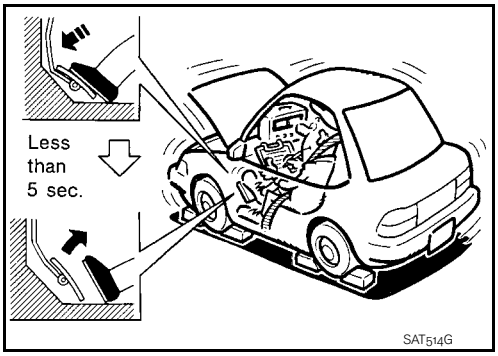


3. Securely engage the parking brake so that the tires do not turn.
4. Install a tachometer where it can be seen by driver during test.
   NOTE:
   It is good practice to mark the point of specified engine rpm on indicator.
5. Start engine, apply foot brake, and place selector lever in “D” position.



6. While holding down the foot brake, gradually press down the accelerator pedal.
7. Quickly read off the stall speed, and then quickly remove your foot from the accelerator pedal.
   CAUTION:
   Never hold down the accelerator pedal for more than 5 seconds during this test.

   Stall speed: **Refer to TM-361, "Stall Speed".**



8. Move the selector lever to the “N” position.
9. Cool down the CVT fluid.
   CAUTION:
   Run the engine at idle for at least 1 minute.
10. Repeat steps 6 through 9 with selector lever in “R” position.

JUDGMENT

cardiagn.com

	Selector lever position		Expected problem location
	“D”	“R”	
Stall rotation	H	O	• Forward clutch
	O	H	• Reverse brake
	L	L	• Engine and torque converter one-way clutch
	H	H	• Line pressure low • Primary pulley • Secondary pulley • Steel belt

O: Stall speed within standard value position.

H: Stall speed is higher than standard value.

L: Stall speed is lower than standard value.

cardiagn.com

LINE PRESSURE TEST

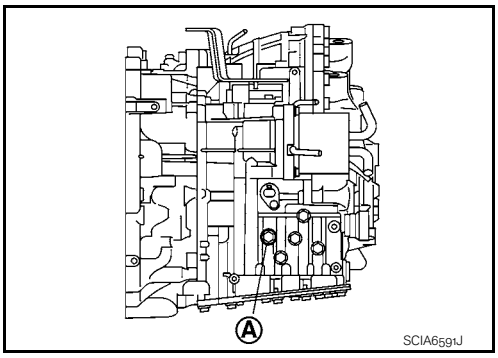
Inspection and Judgment

INFOID:0000000000914703

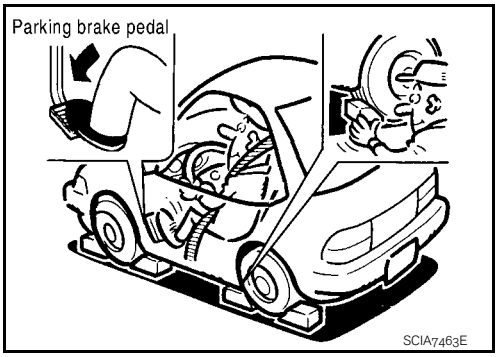
INSPECTION

Line Pressure Test Procedure

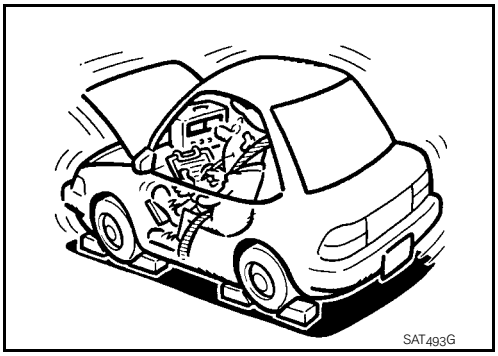
1. Inspect the amount of engine oil and replenish if necessary.
2. Drive the car for about 10 minutes to warm it up so that the CVT fluid reaches in the range of 50 to 80°C (122 to 176°F), then inspect the amount of CVT fluid and replenish if necessary.
   NOTE:
   The CVT fluid temperature rises in the range of 50 to 80°C (122 to 176°F) during 10 minutes of driving.
3. After warming up CVT, remove the oil pressure detection plug (A) and install the oil pressure gauge (commercial service tool).
   CAUTION:
   When using the oil pressure gauge, be sure to use the O-ring attached to the oil pressure detection plug.



4. Securely engage the parking brake so that the tires do not turn.



5. Start the engine, and then measure the line pressure at both idle and the stall speed.
   CAUTION:
   - **Keep the brake pedal pressed all the way down during measurement.**
   - **When measuring the line pressure at the stall speed, refer to TM-316, "Inspection and Judgment".**
6. After the measurements are complete, install the oil pressure detection plug and tighten to the specified torque below.



: 7.5 N·m (0.77 kg-m, 66 in-lb)

CAUTION:
- **Never reuse O-ring.**
- **Apply CVT fluid to O-ring.**

Line Pressure

cardiagn.com

kPa (bar, kg/cm^2, psi)

Engine speed	Line pressure
	"R" or "D" positions
At idle	750 (7.50, 7.65, 108.8)
At stall	5,700 (57.00, 58.14, 826.5)*

*: Reference values

JUDGMENT

Judgment		Possible cause
Idle speed	Low for all positions ("P", "R", "N", "D")	Possible causes include malfunctions in the pressure supply system and low oil pump output. For example • Oil pump wear • Pressure regulator valve or plug sticking or spring fatigue • Oil strainer ⇒ oil pump ⇒ pressure regulator valve passage oil leak • Engine idle speed too low
	Only low for a specific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.
	High	Possible causes include a sensor malfunction or malfunction in the line pressure adjustment function. For example • Accelerator pedal position signal malfunction • CVT fluid temperature sensor malfunction • Pressure control solenoid A (line pressure solenoid) malfunction (sticking in OFF state, filter clog, cut line) • Pressure regulator valve or plug sticking
Stall speed	Line pressure does not rise higher than the line pressure for idle.	Possible causes include a sensor malfunction or malfunction in the pressure adjustment function. For example • Accelerator pedal position signal malfunction • TCM malfunction • Pressure control solenoid A (line pressure solenoid) malfunction (shorting, sticking in ON state) • Pressure regulator valve or plug sticking
	The pressure rises, but does not enter the standard position.	Possible causes include malfunctions in the pressure supply system and malfunction in the pressure adjustment function. For example • Accelerator pedal position signal malfunction • Pressure control solenoid A (line pressure solenoid) malfunction (sticking, filter clog) • Pressure regulator valve or plug sticking
	Only low for a specific position	Possible causes include an oil pressure leak in a passage or device related to the position after the pressure is distributed by the manual valve.

cardiagn.com

ROAD TEST

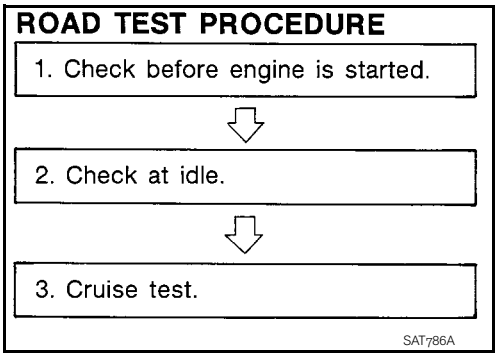
Description

INFOID:0000000000988985

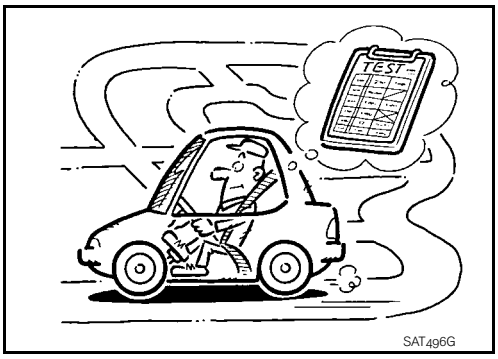
DESCRIPTION

- The purpose of the test is to determine overall performance of CVT and analyze causes of problems.
- The road test consists of the following three parts:

1. "Check Before Engine Is Started" TM-320.
2. "Check at Idle" TM-321.
3. "Cruise Test" TM-322.



- Before road test, familiarize yourself with all test procedures and items to check.
- Perform tests on all items until specified symptom is found. Troubleshoot items the malfunctioning items after road test.



CONSULT-III SETTING PROCEDURE

- Using CONSULT-III, perform a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule.

1. Touch "DATA MONITOR" on "SELECT DIAG MODE" screen.
2. Touch "MAIN SIGNALS" to set recording condition.
3. See "Numerical Display", "Barchart Display" or "Line Graph Display".
4. Touch "START".
5. When performing cruise test. Refer to TM-322, "Cruise Test".
6. After finishing cruise test part, touch "RECORD".
7. Touch "STORE".
8. Touch "BACK".
9. Touch "DISPLAY".
10. Touch "PRINT".
11. Check the monitor data printed out.

Check before Engine Is Started

INFOID:0000000000988986

1.CHECK CVT INDICATOR LAMP

1. Park vehicle on flat surface.
2. Move selector lever to "P" position.
3. Turn ignition switch OFF. Wait at least 5 seconds.
4. Turn ignition switch ON. (Do not start engine.)

Is shift position indicator activated for about 2 seconds?

YES >> 1. Turn ignition switch OFF.
2. Perform self-diagnosis and note NG items.
Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".
3. Go to TM-321, "Check at Idle".

cardiagn.com

NO >> Stop “Road Test”. Refer to TM-295, "Symptom Table".

Check at Idle

INFOID:0000000000988987

1. CHECK STARTING THE ENGINE

1. Park vehicle on flat surface.
2. Move selector lever to “P” or “N” position.
3. Turn ignition switch OFF.
4. Turn ignition switch to “START” position.

Is engine started?

YES >> GO TO 2.
NO >> Stop “Road Test”. Refer to TM-295, "Symptom Table".

2. CHECK STARTING THE ENGINE

1. Turn ignition switch ON.
2. Move selector lever to “D”, “M” or “R” position.
3. Turn ignition switch to “START” position.

Is engine started?

YES >> Stop “Road Test”. Refer to TM-295, "Symptom Table".
NO >> GO TO 3.

3. CHECK “P” POSITION FUNCTION

1. Move selector lever to “P” position.
2. Turn ignition switch OFF.
3. Release parking brake.
4. Push vehicle forward or backward.
5. Apply parking brake.

Does vehicle move forward or backward?

YES >> Refer to TM-295, "Symptom Table". Continue “Road Test”.
NO >> GO TO 4.

4. CHECK “N” POSITION FUNCTION

1. Start engine.
2. Move selector lever to “N” position.
3. Release parking brake.

Does vehicle move forward or backward?

YES >> Refer to TM-295, "Symptom Table". Continue “Road Test”.
NO >> GO TO 5.

5. CHECK SHIFT SHOCK

1. Apply foot brake.
2. Move selector lever to “R” position.

Is there large shock when changing from “N” to “R” position?

YES >> Refer to TM-295, "Symptom Table". Continue “Road Test”.
NO >> GO TO 6.

6. CHECK “R” POSITION FUNCTION

Release foot brake for several seconds.

Does vehicle creep backward when foot brake is released?

YES >> GO TO 7.
NO >> Refer toTM-295, "Symptom Table". Continue “Road Test”.

7. CHECK “D” POSITION FUNCTION

Move selector lever to “D” position and check if vehicle creeps forward.

Does vehicle creep forward in all positions?

YES >> Go to TM-322, "Cruise Test".
NO >> Stop “Road Test”. Refer to TM-295, "Symptom Table".

cardiagn.com

Cruise Test

INFOID:0000000000988988

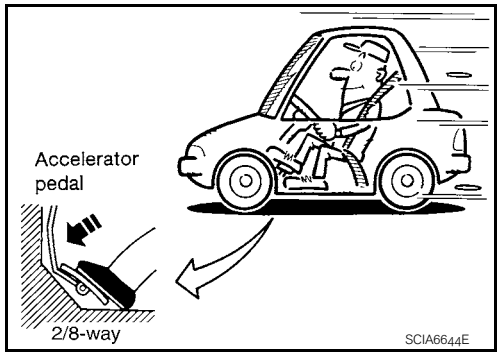
1.CHECK VEHICLE SPEED WHEN SHIFTING GEARS — PART 1

1. Drive vehicle for approximately 10 minutes to warm engine oil and CVT fluid up to operating temperature.

CVT fluid operating temperature: 50 – 80°C (122 – 176°F)

2. Park vehicle on flat surface.
3. Move selector lever to “P” position.
4. Start engine.
5. Move selector lever to “D” position.
6. Accelerate vehicle to 2/8-way throttle depressing accelerator pedal constantly.

Read vehicle speed and engine speed. Refer to TM-361, "Vehicle Speed When Shifting Gears".



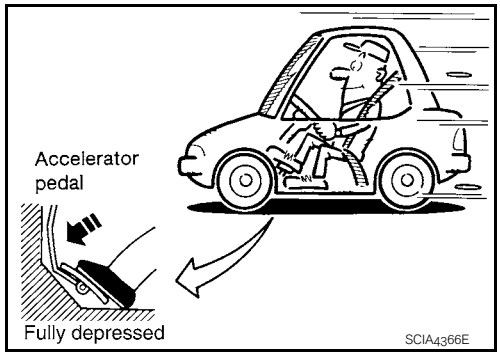
OK or NG

OK >> GO TO 2.
NG >> Refer to TM-295, "Symptom Table". Continue “Road Test”.

2.CHECK VEHICLE SPEED WHEN SHIFTING GEARS — PART 2

1. Park vehicle on flat surface.
2. Move selector lever to “D” position.
3. Accelerate vehicle to full depression depressing accelerator pedal constantly.

Read vehicle speed and engine speed.Refer to TM-361, "Vehicle Speed When Shifting Gears".



OK or NG

OK >> GO TO 3.
NG >> Refer to TM-295, "Symptom Table". Continue “Road Test”.

3.CHECK MANUAL MODE FUNCTION

Move to manual mode from “D” position.

Does it switch to manual mode?

YES >> GO TO 4.
NO >> Refer to TM-295, "Symptom Table". Continue “Road Test”.

4.CHECK SHIFT-UP FUNCTION

During manual mode driving, is upshift from M1 → M2 → M3 → M4 → M5 → M6 performed?

Read the gear position. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is upshifting correctly performed?

YES >> GO TO 5.
NO >> Refer to TM-295, "Symptom Table". Continue “Road Test”.

5.CHECK SHIFT-DOWN FUNCTION

During manual mode driving, is downshift from M6 → M5 → M4 → M3 → M2 → M1 performed?

Read the gear position. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

Is downshifting correctly performed?

YES >> GO TO 6.
NO >> Refer to TM-295, "Symptom Table". Continue “Road Test”.

cardiagn.com

6.CHECK ENGINE BRAKE FUNCTION

Check engine brake.

Does engine braking effectively reduce speed in M1 position?

YES >> 1. Stop the vehicle.
2. Perform self-diagnosis. Refer to TM-216, "CONSULT-III Function (TRANSMISSION)".

NO >> Refer to TM-295, "Symptom Table". Then continue trouble diagnosis.

cardiagn.com

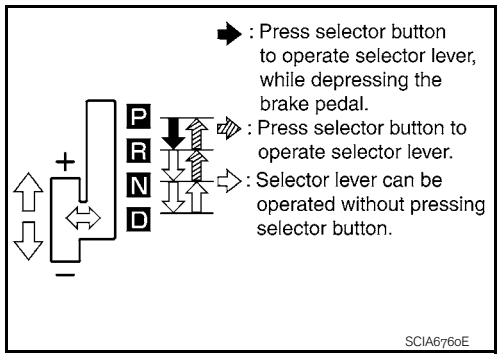
CVT POSITION

Inspection and Adjustment

INFOID:0000000000914708

INSPECTION

1. Place selector lever in “P” position, and turn ignition switch ON (engine stop).
2. Make sure that selector lever can be shifted to other than “P” position when brake pedal is depressed. Also make sure that selector lever can be shifted from “P” position only when brake pedal is depressed.
3. Move the selector lever and check for excessive effort, sticking, noise or rattle.
4. Confirm the selector lever stops at each position with the feel of engagement when it is moved through all the positions. Check that the actual position of the selector lever matches the position shown by the shift position indicator and the manual lever on the transaxle.
5. The method of operating the selector lever to individual positions correctly should be as shown.
6. When selector button is pressed in “P”, “R”, or “N” position without applying forward/backward force to selector lever, check button operation for sticking.
7. Confirm the back-up lamps illuminate only when selector lever is placed in the “R” position. Confirm the back-up lamps do not illuminate when the selector lever is pushed toward the “R” position when in the “P” or “N” position.
8. Confirm the engine can only be started with the selector lever in the “P” and “N” positions.



9. Make sure transaxle is locked completely in “P” position.
10. When selector lever is set to manual shift gate, make sure that manual mode is displayed on combination meter.
    Shift selector lever to “+” and “–” sides, and check that set shift position changes.

ADJUSTMENT

1. Place selector lever in “ P” position.
   CAUTION:
   Turn wheels more than 1/4 rotations and apply the park lock.
2. Loosen nut (A) and place manual lever (B) in “P” position.
   CAUTION:
   Never apply any force to the manual lever.
3. Tighten nut. Refer to TM-330, "Exploded View".
   CAUTION:
   Fix the manual lever when tightening.

REMOVAL

CAUTION:

Make sure that parking brake is applied before removal/installation.

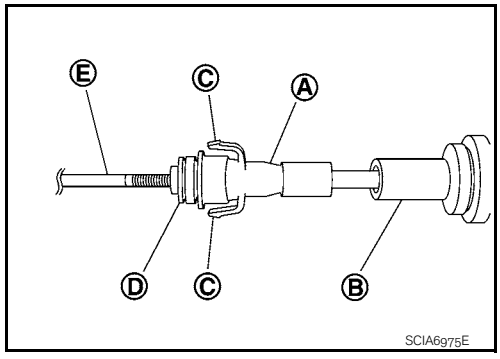
1. Move selector lever to “P” position.
2. Removal selector lever knob. Refer to TM-326, "Exploded View".
3. Removal center console. Refer to IP-18, "Exploded View".
4. Slide slider (A) toward casing cap (B) while pressing tabs (C) on slider to separate slider from adjust holder (D).

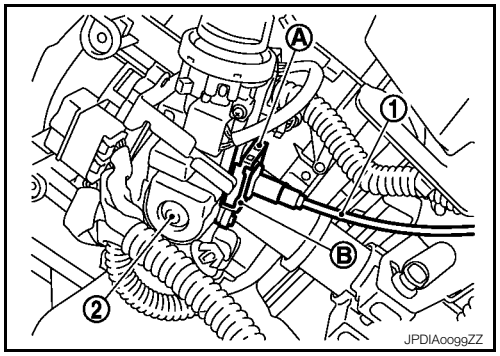
   E : Key interlock rod



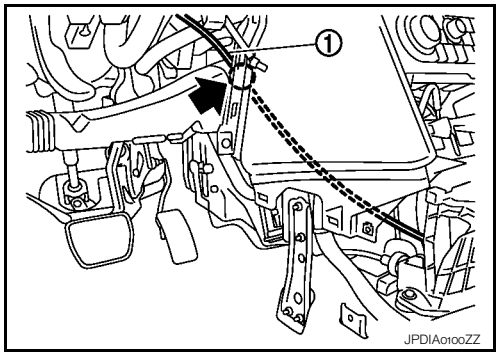
5. Remove steering column lower cover and lower instrument panel, driver side. Refer to IP-11, "Exploded View".

cardiagn.com

6. Remove clip (A) from holder (B) and remove key inter lock cable (1) from key cylinder (2).



7. Remove clip (⬅) and remove key inter lock cable (1).



INSTALLATION

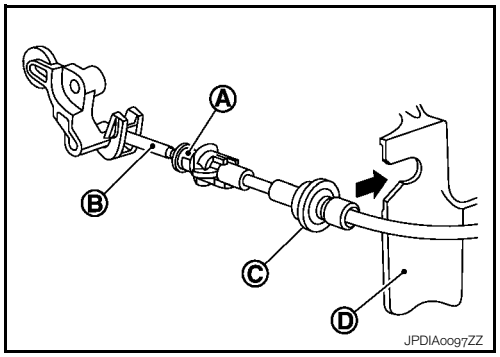
Note the following, and install in the reverse order of removal.

CAUTION:

- **Install key interlock cable in such a way that it will not be damaged by sharp bends, twists or interference with adjacent parts.**
- **After installing key interlock cable to control device assembly, make sure that casing cap and bracket are firmly secured in their positions.**
- Temporarily install adjust holder (A) to key interlock rod (B). Install casing cap (C) to cable bracket (D) on control device assembly.

  CAUTION:

  - **Never bend or twist key interlock cable excessively when installing.**
  - **After installing key interlock cable to cable bracket on control device assembly, make sure casing caps is firmly secured in cable bracket on control device assembly.**
  - **If casing cap is loose [less than 39.2 N (4.0 kg, 8.8 lb) removing force], replace key interlock cable.**



cardiagn.com

- With the detent rod (A) pressed fully to the end, slider the key interlock cable slider (B) to the key interlock rod side (C), and install adjust holder (D) and key interlock rod.

CAUTION:

- **Never press tabs when holding slider.**
- **Never apply any force at the right angle to key interlock rod when slider.**

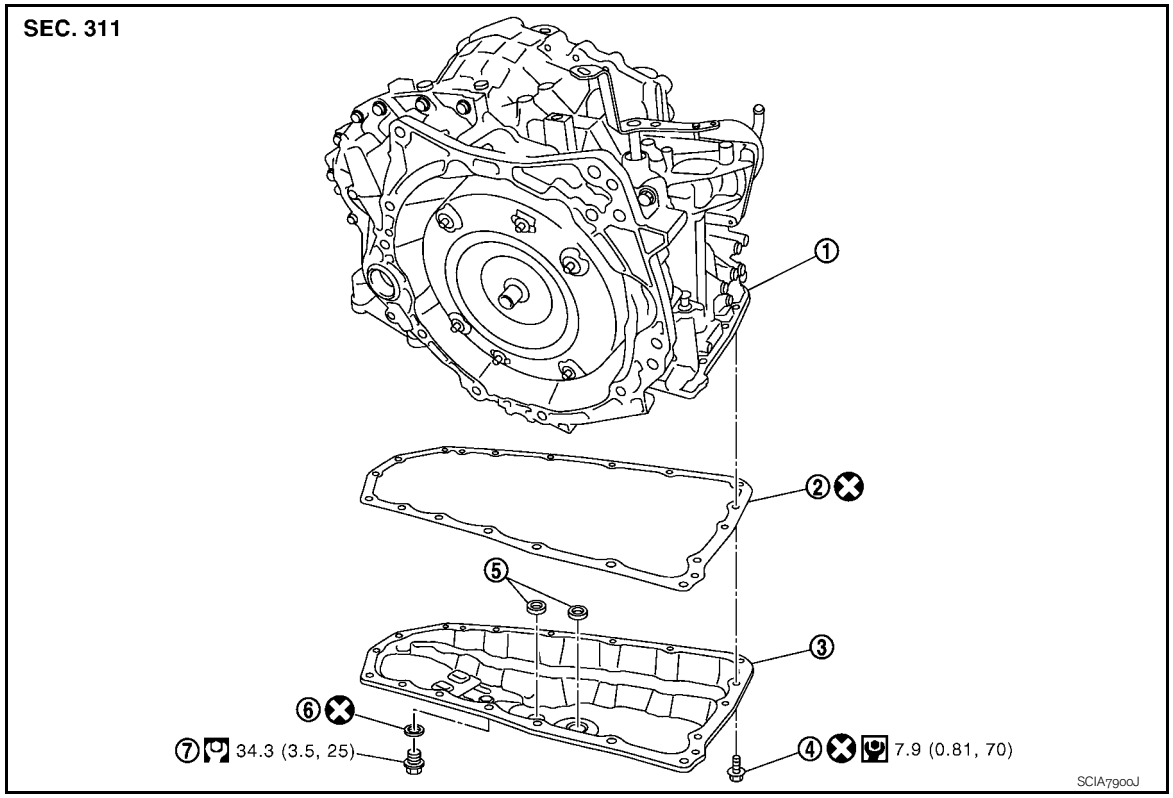
OIL PAN

Exploded View

INFOID:0000000000950755



1. Transaxle assembly
2. Oil pan gasket
3. Oil pan
4. Oil pan fitting bolt
5. Magnet
6. Drain plug gasket
7. Drain plug

Refer to GI-4, "Components" for symbols in the figure.

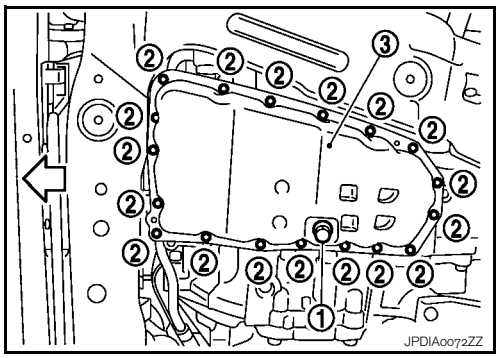
Removal and Installation

INFOID:0000000000950757

REMOVAL

1. Remove engine under cover with power tool.
2. Remove drain plug (1), and then drain CVT fluid from oil pan.

⇦ : Vehicle front



3. Remove oil pan fitting bolts (2).
4. Remove oil pan (3).
5. Remove oil pan gasket from oil pan.
6. Remove magnet from oil pan.

INSTALLTION

Note the following, and install in the reverse order of removal.

CAUTION:

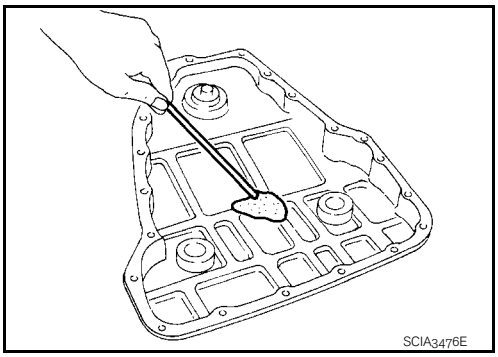
- **Completely remove all moisture, oil and old gasket, etc. from the oil pan gasket mounting surface of transaxle case and oil pan.**
- **Never reuse oil pan gasket and oil pan fitting bolts.**

cardiagn.com

Inspection

INFOID:0000000000954882

- Check foreign materials in oil pan to help determine causes of malfunction. If the CVT fluid is very dark, smells burned, or contains foreign particles, frictional material (clutches) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves and clutches to stick and can inhibit pump pressure.



INSPECTION AFTER INSTALLATION

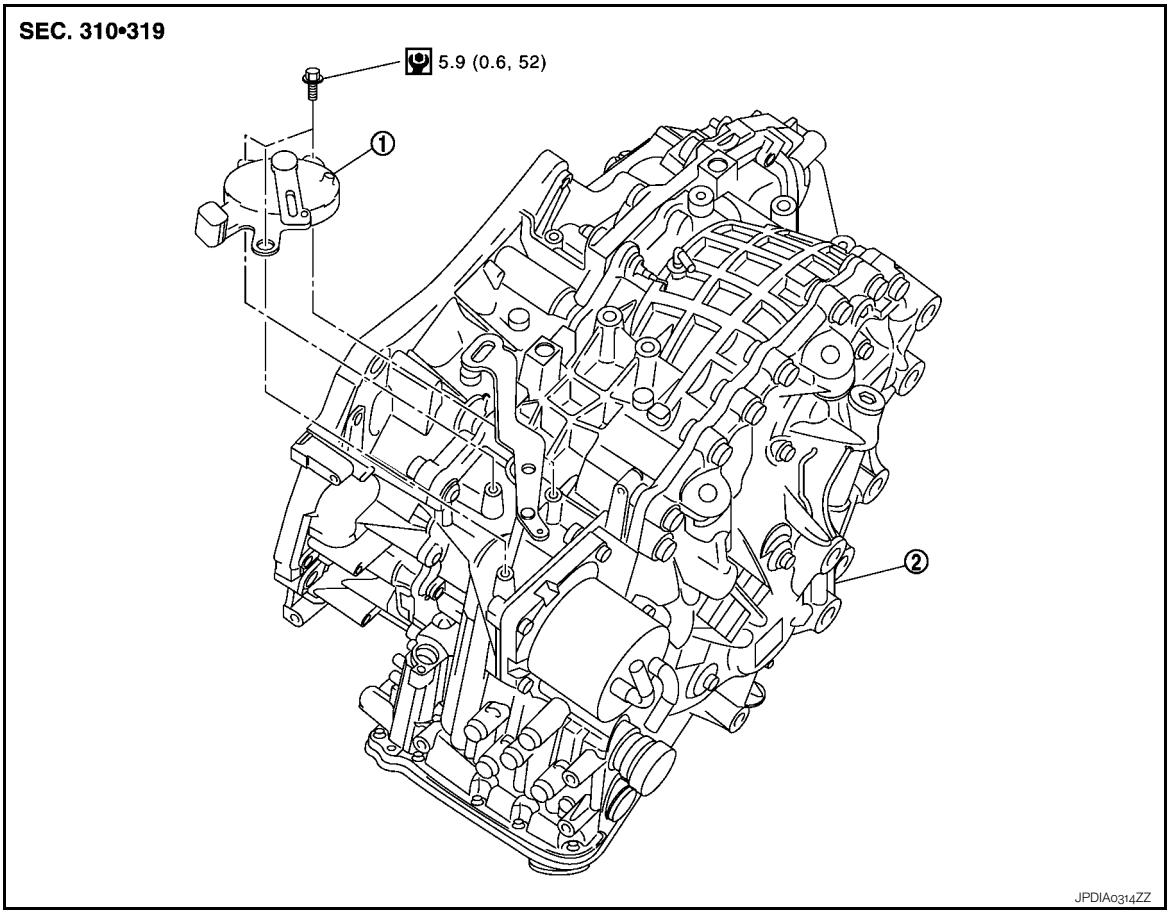
After completing installation, check for CVT fluid leakage and CVT fluid level. Refer to TM-314, "Inspection".

cardiagn.com

PARK/NEUTRAL POSITION (PNP) SWITCH

Exploded View

INFOID:0000000000950776



1. PNP switch
2. Transaxle assembly

Refer to GI-4, "Components" for symbols in the figure.

Removal and Installation

INFOID:0000000000950777

REMOVAL

1. Remove battery. Refer to PG-118, "Exploded View".
2. Remove ECM bracket.
3. Remove PNP switch connector.
4. Remove control cable. Refer to TM-330, "Exploded View".
5. Remove PNP switch from transaxle assembly.

INSTALLATION

Install in the reverse order of removal.

Inspection and Adjustment

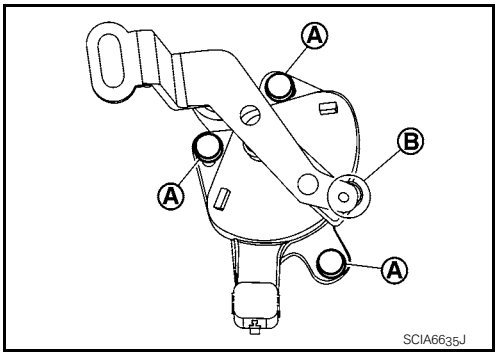
INFOID:0000000000950778

ADJUSTMENT OF PNP SWITCH

1. Move selector lever to “N” position.
2. Remove control cable from manual lever.

cardiagn.com

3. Loosen mounting bolts (A) of PNP switch. Insert a pin (ϕ4 mm) into the adjusting holes (B) on both PNP switch and manual lever for adjusting the position.
4. Tighten mounting bolts of PNP switch.
5. Connect control cable on manual lever. Refer to TM-324, "Inspection and Adjustment".



ADJUSTMENT AFTER INSTALLATION

Adjust the CVT positions after installing the control device. Refer to TM-324, "Inspection and Adjustment".

INSPECTION AFTER INSTALLAION

Check the CVT positions after adjusting the CVT positions. Refer to TM-324, "Inspection and Adjustment".

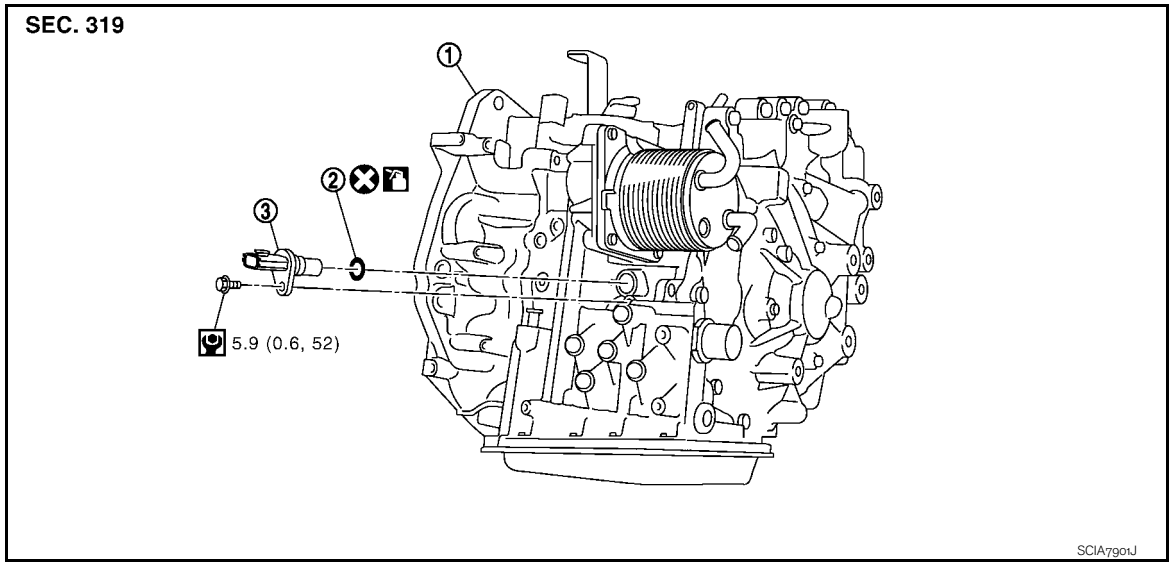
PRIMARY SPEED SENSOR

Exploded View

INFOID:0000000000950779



1. Transaxle assembly
2. O-ring
3. Primary speed sensor

: Apply CVT Fluid NS-2.

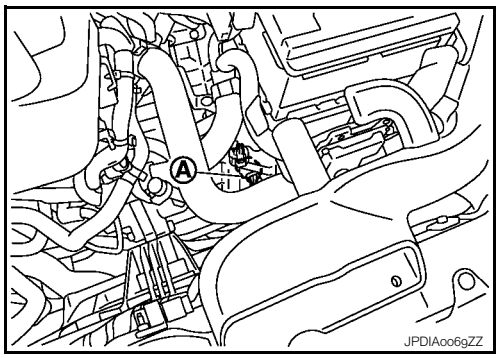
Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000950780

REMOVAL

1. Remove primary speed sensor connector (A).
2. Remove primary speed sensor.
3. Remove O-ring from primary speed sensor.



INSTALLATION

Note the following, and install in the reverse order of removal.

- After completing installation, check for CVT fluid leakage and CVT fluid level. Refer to TM-314, "Inspection".

CAUTION:

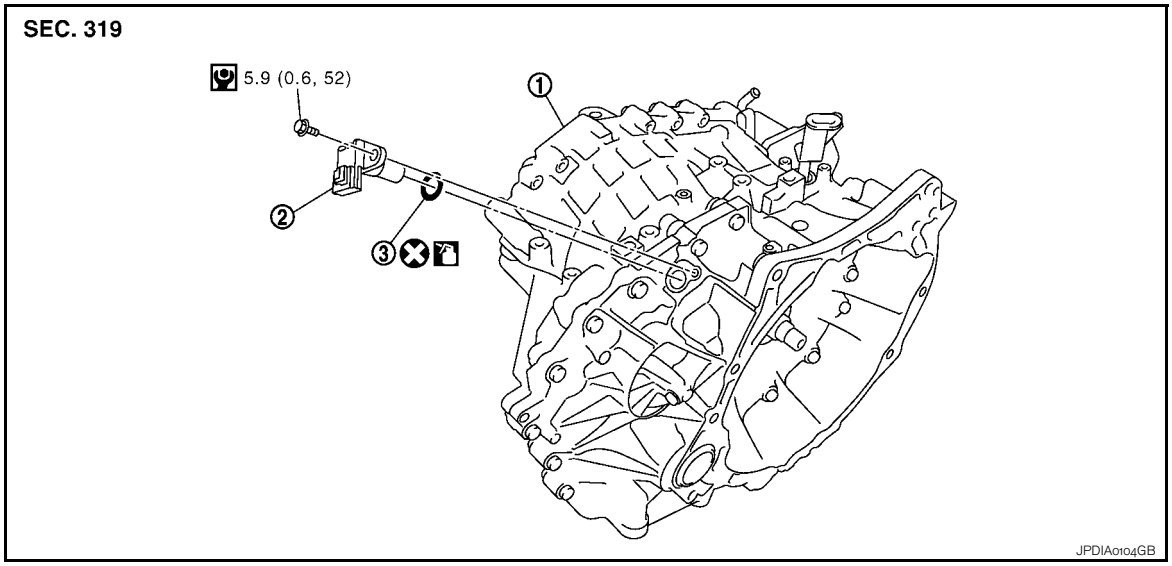
- **Never reuse O-ring.**
- **Apply CVT fluid to O-ring.**

cardiagn.com

SECONDARY SPEED SENSOR

Exploded View

INFOID:0000000000950781



1. Transaxle assembly
2. Secondary speed sensor
3. O-ring

: Apply CVT Fluid NS-2.

Refer to GI-4, "Components" for symbols not described on the above.

Removal and Installation

INFOID:0000000000950782

REMOVAL

1. Remove secondary speed sensor connector.
2. Remove secondary speed sensor.
3. Remove O-ring from secondary speed sensor.

INSTALLATION

Note the following, and install in the reverse order of removal.

- After completing installation, check for CVT fluid leakage and CVT fluid level. Refer to TM-314, "Inspection".

CAUTION:

- **Never reuse O-ring.**
- **Apply CVT fluid to O-ring.**

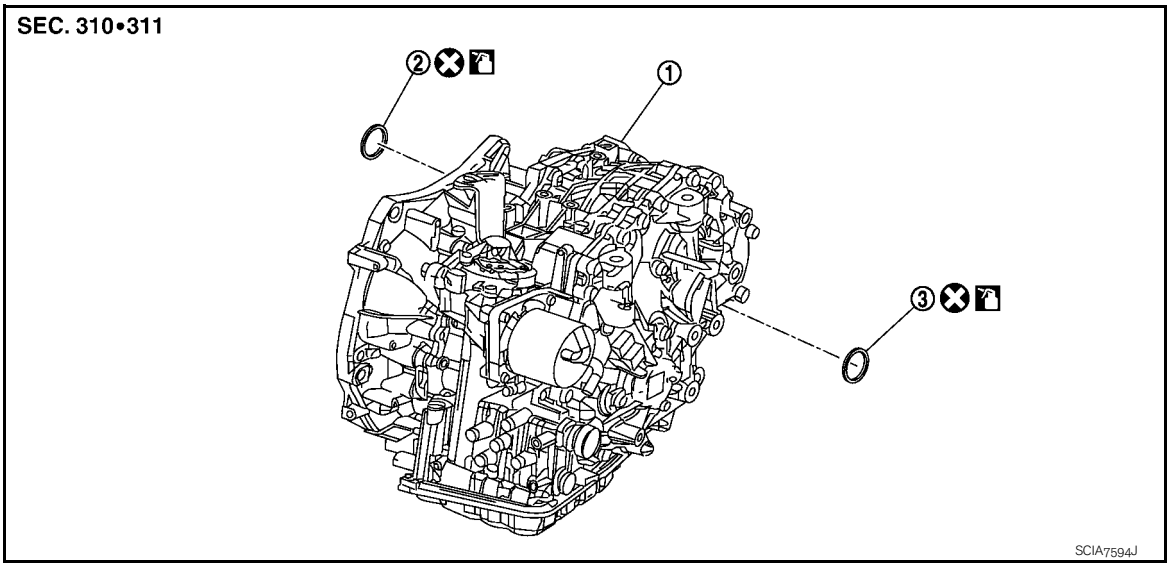
DIFFERENTIAL SIDE OIL SEAL

2WD

2WD : Exploded View

INFOID:0000000000950783



1. Transaxle assembly
2. RH differential side oil seal
3. LH differential side oil seal

: Apply CVT Fluid NS-2.

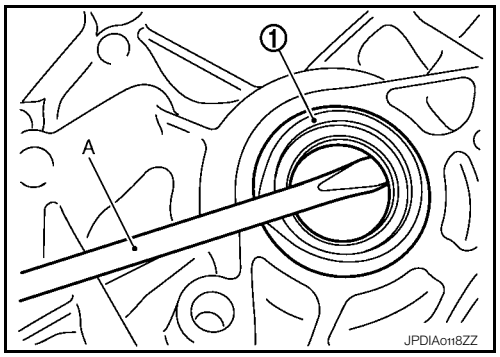
Refer to GI-4, "Components" for symbols not described on the above.

2WD : Removal and Installation

INFOID:0000000000950784

REMOVAL

1. Remove drive shaft assembly. Refer to FAX-22, "MR20DE MODELS : Exploded View".
2. Remove differential side oil seals (1) using a flat-bladed screwdriver (A).
   CAUTION:
   Be careful not to scratch transaxle case and converter housing.



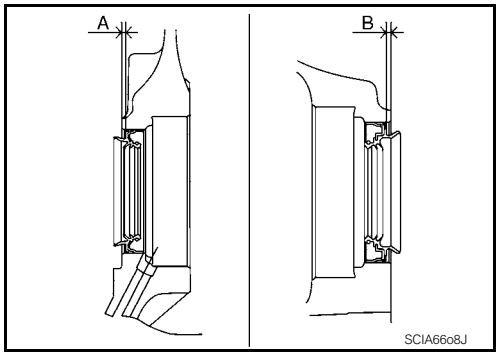
INSTALLTION

Note the following, and install in the reverse order of removal.

- Drive each differential side oil seal evenly using a commercial service tool so that differential side oil seal protrudes by the dimension (A) or (B) respectively.

Unit: mm (in)

Dimension A	1.8 ± 0.5 (0.071 ± 0.020)
Dimension B	2.2 ± 0.5 (0.087 ± 0.020)



NOTE:
Differential side oil seal pulling direction is used as the reference.
CAUTION:
- **Never reuse differential side oil seals.**

cardiagn.com

- **Apply CVT fluid to differential side oil seals.**

Drift to be used:

Location	Tool number
Transaxle case side	Commercial service tool [Outer diameter: 54 mm (2.13 in), inner diameter: 47 mm (1.85 in)]
Converter housing side	

2WD : Inspection

INFOID:0000000001091256

After completing installation, check for CVT fluid leakage and CVT fluid level. Refer to TM-314, "Inspection".

Refer to GI-4, "Components" for symbols not descrived on the above.

2WD : Removal and Installation

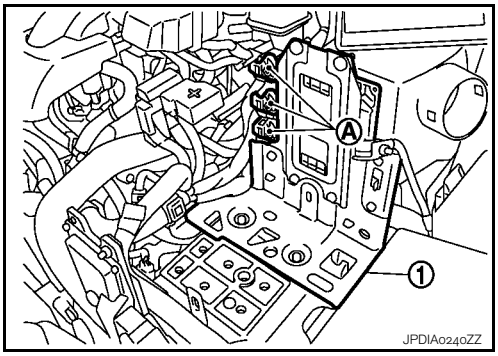
INFOID:0000000000914727

REMOVAL

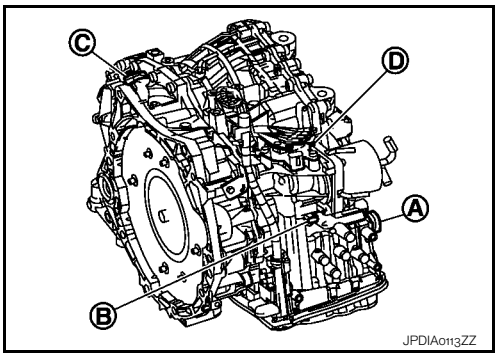
1. Disconnect the battery cable from the negative terminal.
2. Remove air breather hose. Refer to TM-345, "Exploded View".
3. Remove air duct (inlet). Refer to EM-144, "Exploded View".
4. Remove battery. Refer to PG-118, "Exploded View".

cardiagn.com

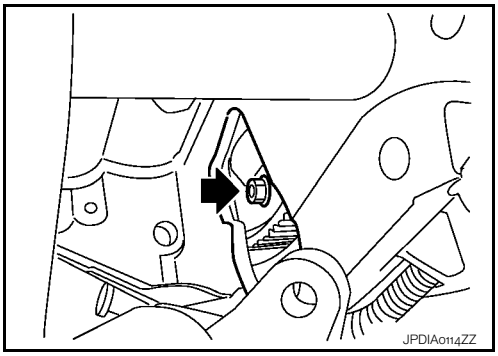
5. Disconnect connectors (A) and then remove bracket (1).
6. Remove air cleaner case. Refer to EM-144, "Exploded View".
7. Drain engine coolant.
8. Remove CVT fluid level gauge.
9. Remove CVT fluid charging pipe from transaxle assembly.
10. Remove O-ring from CVT fluid charging pipe.



11. Disconnect fluid cooler hose from transaxle assembly. Refer to TM-348, "FLUID COOLER : Exploded view".
12. Disconnect following harness connector and wire harness.
    - CVT unit harness connector (A).
    - Primary speed sensor harness connector (B).
    - Secondary speed sensor harness connector (C).
    - PNP switch connector (D).
13. Remove harness and clip from the transaxle assembly.
14. Remove CVT water hose. Refer to TM-346, "WATER HOSE : Exploded View".
15. Remove control cable from transaxle assembly. Refer to TM-330, "Exploded View".
16. Remove starter motor. Refer to STR-25, "MR20DE MODELS : Exploded View".
17. Remove engine under cover with power tool.



18. Turn crankshaft, and remove the four tightening nuts (⬅) for drive plate and torque converter.
    CAUTION:
    When turning crankshaft, turn it clockwise as viewed from the front of the engine.
19. Remove exhaust front tube. Refer to EX-10, "Exploded View".
20. Remove front drive shafts. Refer to FAX-22, "MR20DE MODELS : Exploded View".
21. Remove suspension member from vehicle. Refer to FSU-15, "Exploded View".
22. Support transaxle assembly with a transmission jack.
    CAUTION:
    When setting the transmission jack, be careful not to collide against the drain plug.
23. Support engine assembly with a transmission jack.
    CAUTION:
    When setting the transmission jack, be careful not to collide against the drain plug.
24. Remove engine mounting insulator (LH). Refer to EM-198, "CVT : Exploded View".
25. Remove bolts fixing transaxle assembly to engine assembly.
26. Remove transaxle assembly from vehicle.
    CAUTION:
    - **Secure torque converter to prevent it from dropping.**
    - **Secure transaxle assembly to a transmission jack.**
27. Remove heater thermostat. Refer to CO-41, "Exploded View".



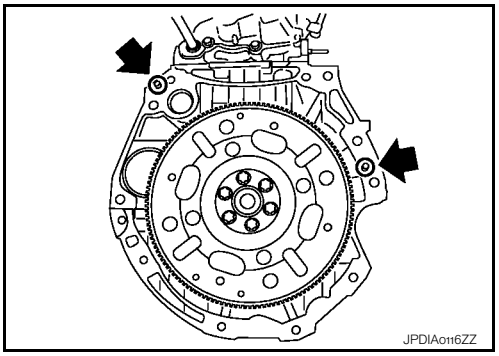
INSTALLATION

Note following, and install the removed parts in the reverse order of the removal.

CAUTION:

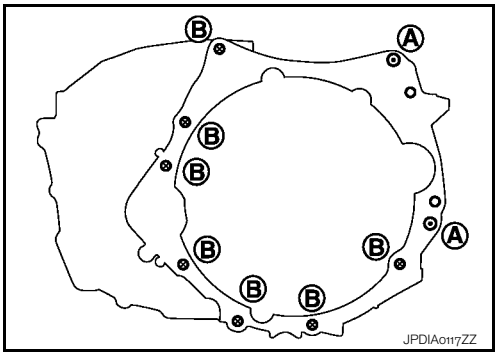
cardiagn.com

- **Check fitting of dowel pin (⬅) when installing transaxle assembly to engine assembly.**



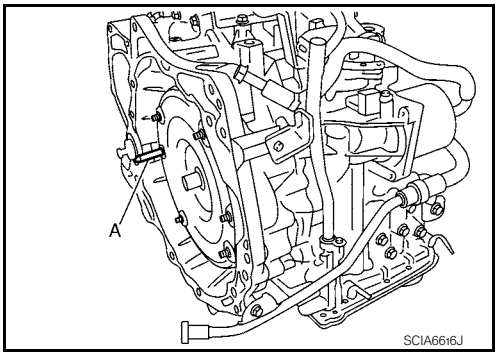
- **When installing Transaxle assembly to the engine assembly, attach the fixing bolts in accordance with the following.**

A : Transaxle to engine
B : Engine to transaxle

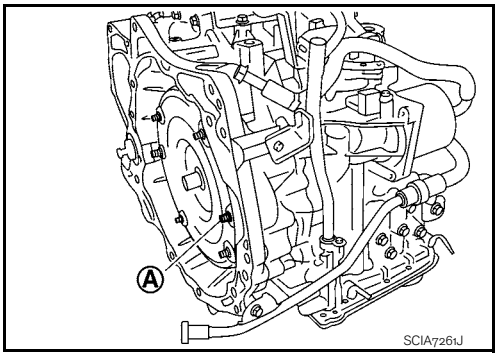


Bolt No.	A	B
Number of bolts	2	7
Bolt length " ℓ " mm (in)	55 (2.17)	50 (1.97)
Tightening torque N·m (kg-m, ft-lb)	62 (6.3, 46)	

- Set and screw in the drive plate location guide (commercial service tool: 31197CA000) (A) onto the stud bolts for the torque converter locate.



- When not using drive plate location guide, rotate torque converter so that the stud bolt (A) for mounting the drive plate location guide of torque converter aligns with the mounting position of starter motor.

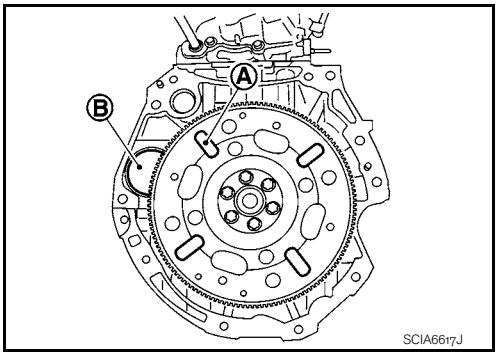


cardiagn.com

- Rotate crankshaft so that the hole (A) for inserting drive plate location guide of drive plate aligns with the mounting position (B) of starter motor.

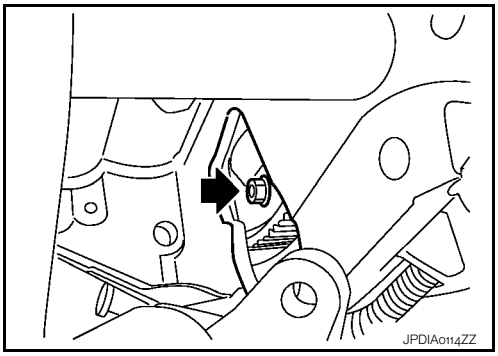
NOTE:
When not using drive plate location guide, insert stud bolt of torque converter into the hole of drive plate, aligning the drive plate hole position and torque converter.

CAUTION:
Note that the stud bolt strikes the drive plate hole position is not aligned the torque converter stud bolt.



- Align the position of tightening nuts (⬅) for drive plate with those of the torque converter, and temporarily tighten the nuts. Then, tighten the bolts with the specified torque.

:51 N·m (5.2 kg-m,38 ft-lb)



CAUTION:
- **When turning crankshaft, turn it clockwise as viewed from the front of the engine.**
- **When tightening the tightening nuts for the torque converter after fixing the crankshaft pulley bolts, confirm the tightening torque of the crankshaft pulley mounting bolts. Refer to EM-163, "Removal and Installation".**
- **After converter is installed to drive plate, rotate crankshaft several turns and check that transaxle rotates freely without binding.**

2WD : Inspection

INFOID:0000000000914728

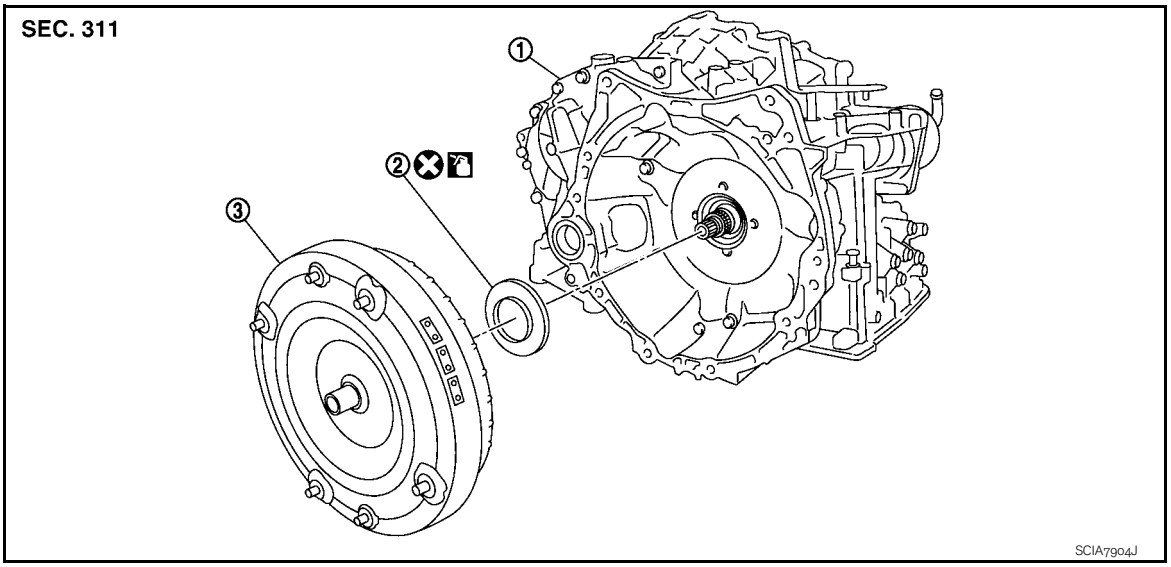
DISASSEMBLY AND ASSEMBLY

TORQUE CONVERTER AND CONVERTER HOUSING OIL SEAL

Exploded View

INFOID:0000000000987937



1. Transaxle assembly
2. Converter housing oil seal
3. Torque converter

: Apply CVT Fluid NS-2.

Refer to GI-4, "Components" for symbols not described on the above.

Disassembly

INFOID:0000000000987938

1. Remove transaxle assembly. Refer to TM-351, "2WD : Exploded View" (2WD), TM-354, "4WD : Exploded View" (4WD).
2. Remove torque converter from transaxle assembly.
   CAUTION:
   Never damage bush on the inside of torque converter sleeve when removing torque converter.
3. Remove converter housing oil seal using a flat-bladed screwdriver.
   CAUTION:
   Be careful not to scratch converter housing.

Assembly

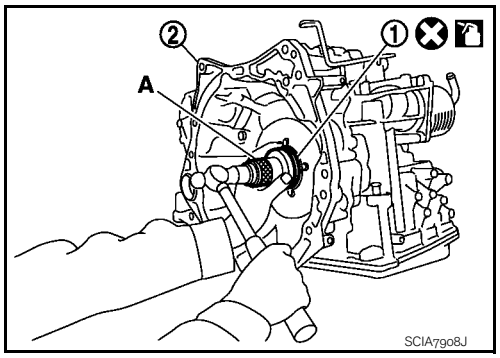
INFOID:0000000000987939

Note the following, and install in the reverse order of removal.

- Drive converter housing oil seal (1) evenly using a drift (A) (commercial service tool) so that converter housing oil seal protrudes by the dimension (B" respectively.

Unit: mm (in)

Commercial service tool: A	Outer diameter: 65 (2.56)
	Inner diameter: 60 (2.36)

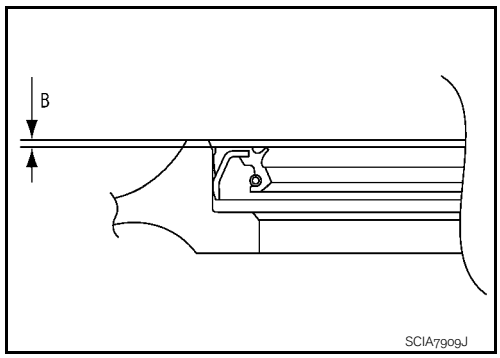


2 : Transaxle assembly

cardiagn.com

Unit: mm (in)

Dimension B	1.0 ± 0.5 (0.039 ± 0.020)

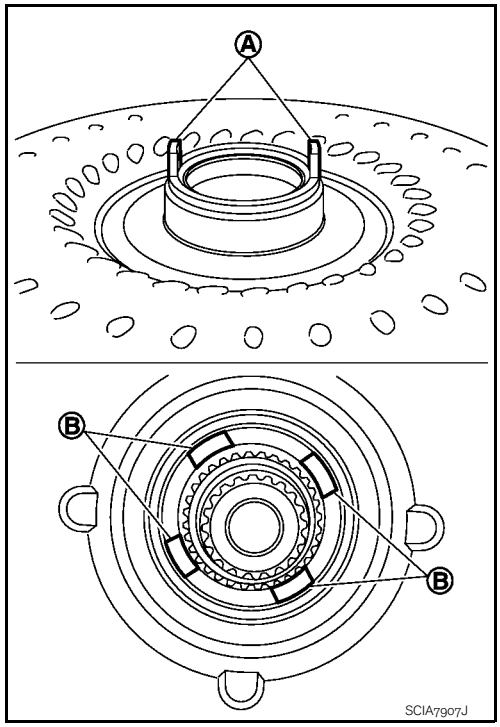


NOTE:
Converter housing oil seal pulling direction is used as the reference.

- After completing installation, check for CVT fluid leakage and CVT fluid level. Refer to TM-314, "Inspection".

- Attach the pawl (A) of the torque converter to the drive sprocket hole (B) on the transaxle assembly side.

CAUTION:
- **Rotate the torque converter for installing torque converter.**
- **Never damage the bushing inside the torque converter sleeve when installing the converter housing oil seal.**



Inspection

INFOID:0000000001116442

INSPECTION AFTER INSTALLATION

- After inserting a torque converter to the CVT, check distance (A) with in the reference value limit.

B : Scale
C : Straightedge

Distance (A) : Refer to TM-362, "Removal and Installation".

SERVICE DATA AND SPECIFICATIONS (SDS)

SERVICE DATA AND SPECIFICATIONS (SDS)

General Specification

INFOID:0000000000914729

Applied model		MR20DE	
		2WD	4WD
CVT model		RE0F10A	
CVT assembly	Model code number	1XF0D	1XF0E
Transmission gear ratio	D range	2.349 – 0.394	
	Reverse	1.750	
	Final drive	6.466	
Recommended fluid		NISSAN CVT Fluid NS-2*1	
Fluid capacity		8.3 liter (7-1/4 Imp qt)	

CAUTION:

- **Use only Genuine NISSAN CVT Fluid NS-2. Do not mix with other fluid.**
- **Using CVT fluid other than Genuine NISSAN CVT Fluid NS-2 will deteriorate in driveability and CVT durability, and may damage the CVT, which is not covered by the warranty.**

*1: Refer to MA-21, "Fluids and Lubricants".

Vehicle Speed When Shifting Gears

INFOID:0000000000914730

Numerical value data are reference values.

(rpm)

Engine type	Throttle position	Shift pattern	Engine speed	
			At 40 km/h (25 MPH)	At 60 km/h (37 MPH)
MR20DE	8/8	“D” position	3,600 – 4,500	4,500 – 5,400
	2/8	“D” position	1,200 – 3,100	1,300 – 3,500

CAUTION:

Lock-up clutch is engaged when vehicle speed is approximately 18 km/h (11 MPH) to 90 km/h (56 MPH).

Stall Speed

INFOID:0000000000914731

Stall speed	2,500 – 3,000 rpm

Line Pressure

INFOID:0000000000914732

kPa (bar, kg/cm^2, psi)

Engine speed	Line pressure
	“R” or “D” positions
At idle	750 (7.50, 7.65, 108.8)
At stall	5,700 (57.00, 58.14, 826.5)*

*: Reference values

Solenoid Valves

INFOID:0000000000914733

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001115378

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001115380

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

OPERATION PROCEDURE

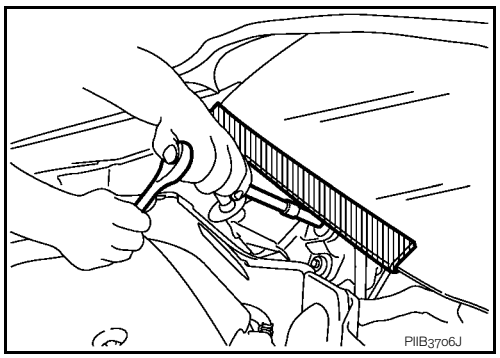
1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Precaution for Procedure without Cowl Top Cover

INFOID:0000000001115382

cardiagn.com

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



Precautions For Xenon Headlamp Service

INFOID:0000000001115385

WARNING:

Comply with the following warnings to prevent any serious accident.

- **Disconnect the battery cable (negative terminal) or the power supply fuse before installing, removing, or touching the xenon headlamp (bulb included). The xenon headlamp contains high-voltage generated parts.**
- **Never work with wet hands.**
- **Check the xenon headlamp ON-OFF status after assembling it to the vehicle. Never turn the xenon headlamp ON in other conditions. Connect the power supply to the vehicle-side connector. (Turning it ON outside the lamp case may cause fire or visual impairments.)**
- **Never touch the bulb glass immediately after turning it OFF. It is extremely hot.**

CAUTION:

Comply with the following cautions to prevent any error and malfunction.

- **Install the xenon bulb securely. (Insufficient bulb socket installation may melt the bulb, the connector, the housing, etc. by high-voltage leakage or corona discharge.)**
- **Never perform HID circuit inspection with a tester.**
- **Never touch the xenon bulb glass with hands. Never put oil and grease on it.**
- **Dispose of the used xenon bulb after packing it in thick vinyl without breaking it.**
- **Never wipe out dirt and contamination with organic solvent (thinner, gasoline, etc.).**

Working with HFC-134a (R-134a)

INFOID:0000000001093690

CAUTION:

- **CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. These refrigerants must never be mixed, even in the smallest amounts. If the refrigerants are mixed and compressor malfunction is likely occur.**
- **Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor malfunction is likely to occur.**
- **The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:**

- **When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.**
- **When installing refrigerant components to a vehicle, never remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.**
- **Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.**
- **Never allow lubricant (Nissan A/C System Oil Type S) to come in contact with styrene foam parts. Damage may result.**

General Refrigerant Precaution

INFOID:0000000001093691

WARNING:

- **Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Use only approved recovery/recycling equipment to discharge HFC-134a (R-134a) refrigerant. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.**

cardiagn.com

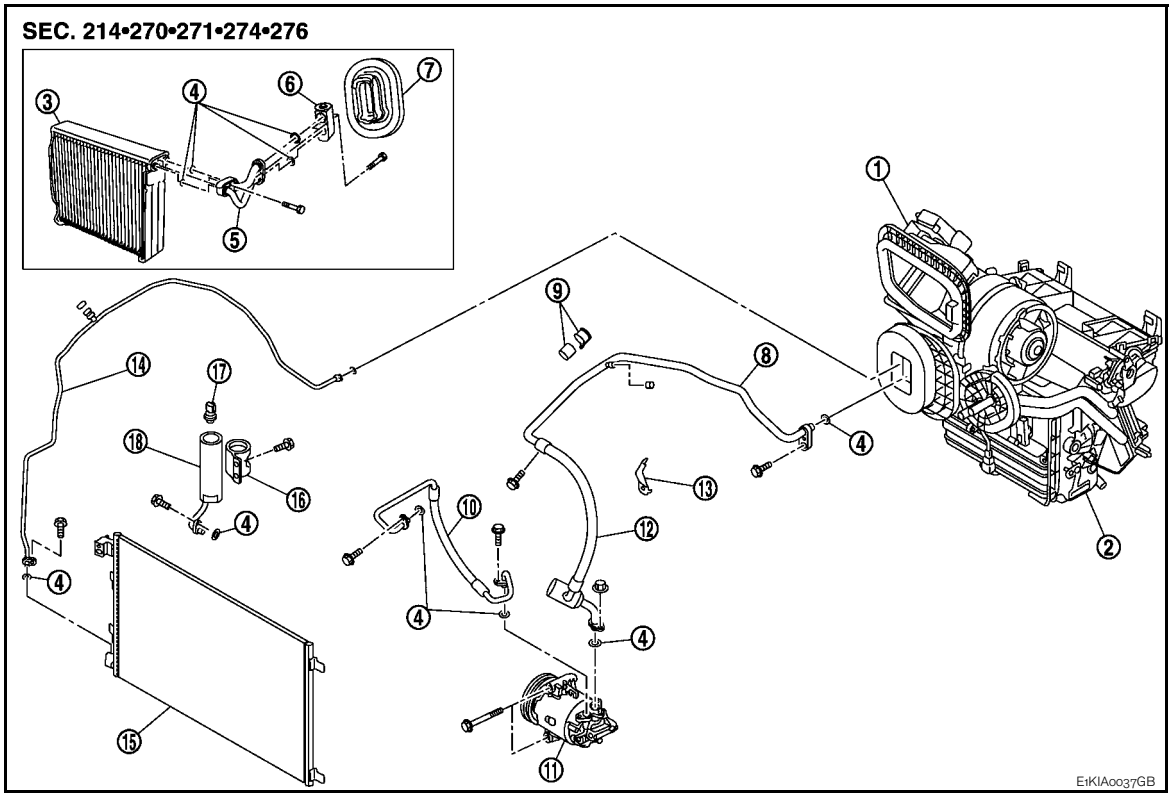
- **Never release refrigerant into the air. Use approved recovery/recycling equipment to capture the refrigerant every time an air conditioning system is discharged.**
- **Always wear eye and hand protection (goggles and gloves) when working with any refrigerant or air conditioning system.**
- **Never store or heat refrigerant containers above 52°C (126°F).**
- **Never heat a refrigerant container with an open flame; if container warming is required, place the bottom of the container in a warm pail of water.**
- **Never intentionally drop, puncture, or incinerate refrigerant containers.**
- **Keep refrigerant away from open flames: poisonous gas will be produced if refrigerant burns.**
- **Refrigerant will displace oxygen, therefore be certain to work in well ventilated areas to prevent suffocation.**
- **Never pressure test or leak test HFC-134a (R-134a) service equipment and/or vehicle air conditioning systems with compressed air during repair. Some mixtures of air and HFC-134a (R-134a) have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**

Refrigerant Connection

INFOID:0000000001093692

A new type refrigerant connection has been introduced to all refrigerant lines except the following location.
- Expansion valve to evaporator
- Refrigerant pressure sensor to liquid tank

O-RING AND REFRIGERANT CONNECTION (HR/MR)



1. Heater sealing
2. Expansion valve
3. O-ring
4. Evaporator
5. Evaporator connector pipes
6. Connector pipe fixing bolt
7. High pressure pipe
8. Condenser assembly
9. Fixing bolt
10. Compressor
11. Heater & cooling unit assembly
12. Heater & Blower unit assembly
13. Refrigerant pressure sensor
14. Liquid tank
15. Pipe fixing bolt
16. Low pressure flexible hose assembly
17. Low & high pipe bracket support
18. Low pressure flexible hose
19. Pipes fixing clip
20. Low pipe fixing clamp assembly
21. Liquid tank fixing screw
22. Liquid tank fixing bracket
23. High pressure flexible hose

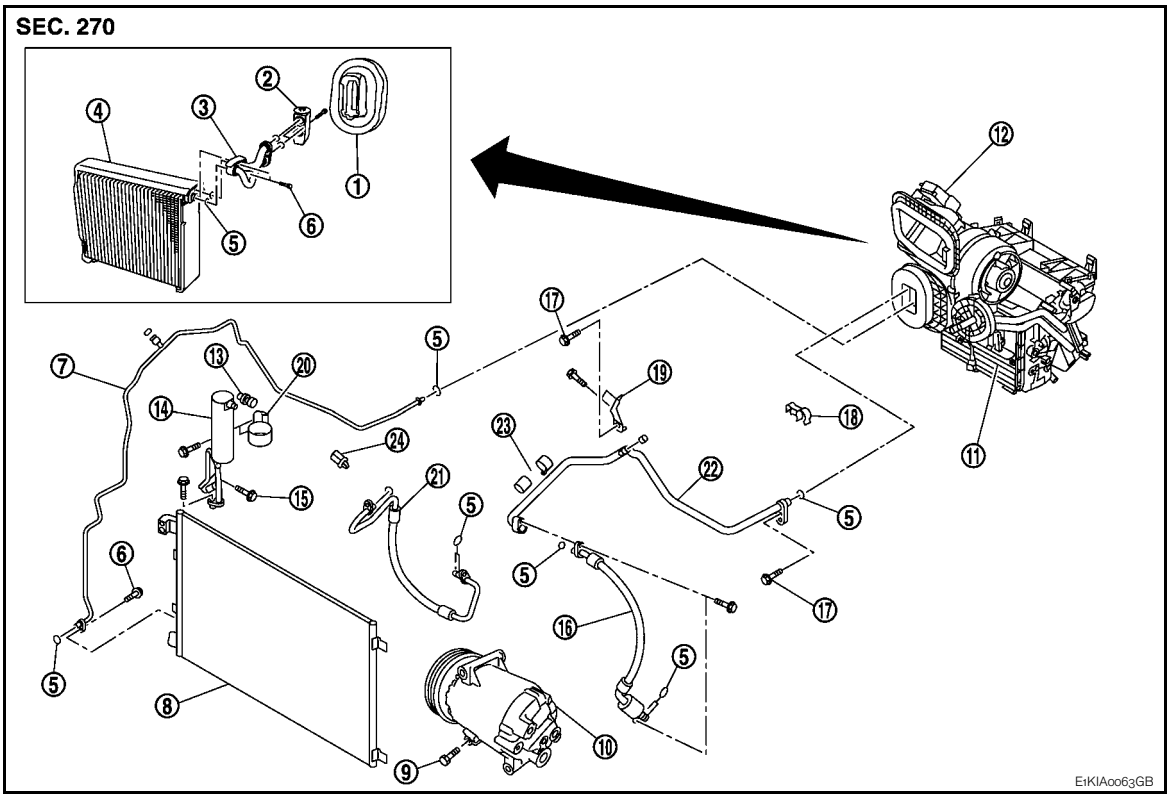
cardiagn.com

CAUTION:
The new and former refrigerant connections use different O-ring configurations. Never confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant may leak at the connection.

O-Ring Part Numbers and Specifications

Connection type	Piping connection point		Part number	QTY	O-ring size
New	Low pressure pipe 2 to expansion valve		92473 N8210	1	16
	High pressure flexible pipe 1 to condenser		92472 N8210	1	12
	High pressure pipe 1 to expansion valve		92471 N8210	1	8
	Low pressure pipe 1 and high pressure pipe 2 assembly to expansion valve	Inlet	92475 71L00	1	12
		Outlet	92475 72L00	1	16
	Low pressure pipe 1 and high pressure pipe 2 assembly to evaporator	Inlet	92475 71L00	1	12
		Outlet	92475 72L00	1	16
	High pressure pipe 1 to liquid tank		92471 N8210	1	8
	Compressor to low pressure flexible hose		92474 N8210	2	19
	Compressor to high pressure flexible hose		92474 N8210	2	12
	Liquid tank to condenser		92473 N8210	1	16

O-RING AND REFRIGERANT CONNECTION (K9K)



1. Heater sealing
2. Expansion valve
3. Evaporator connector pipes
4. Evaporator
5. O-ring
6. Connector pipe fixing bolt
7. High pressure pipe
8. Condenser assembly
9. Fixing bolt
10. Compressor
11. Heater & cooling unit assembly
12. Heater & Blower unit assembly
13. Refrigerant pressure sensor
14. Liquid tank
15. Liquid tank fixing screw
16. Low pressure flexible hose
17. Fixing bolt
18. Pipes fixing clip

19. Low & high pressure pipe bracket
20. Liquid tank fixing bracket
21. High pressure flexible hose
22. Low pressure pipe
23. Low pressure pipe fixing clamp assembly
24. Pipe mantening clip

CAUTION:
The new and former refrigerant connections use different O-ring configurations. Never confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant may leak at the connection.

O-Ring Part Numbers and Specifications

Connection type	Piping connection point		Part number	QTY	O-ring size
New	Low pressure flexible hose to Low pressure pipe 2		92473 N8210	1	16
	Low pressure pipe 2 to expansion valve		92473 N8210	1	16
	High pressure flexible pipe 1 to condenser		92472 N8210	1	12
	High pressure pipe 1 to expansion valve		92471 N8210	1	8
	Low pressure pipe 1 and high pressure	Inlet	92475 71L00	1	12
	Pipe 2 assembly to expansion valve	Outlet	92475 72L00	1	16
	Low pressure pipe 1 and high pressure	Inlet	92475 71L00	1	12
	Pipe 2 assembly to evaporator	Outlet	92475 72L00	1	16
	High pressure pipe 1 to liquid tank		92471 N8210	1	8
	Compressor to low pressure flexible hose		01-57-112	2	19
	Compressor to high pressure flexible hose		01-57-112	2	12
	Liquid tank to condenser		92473 N8210	2	16

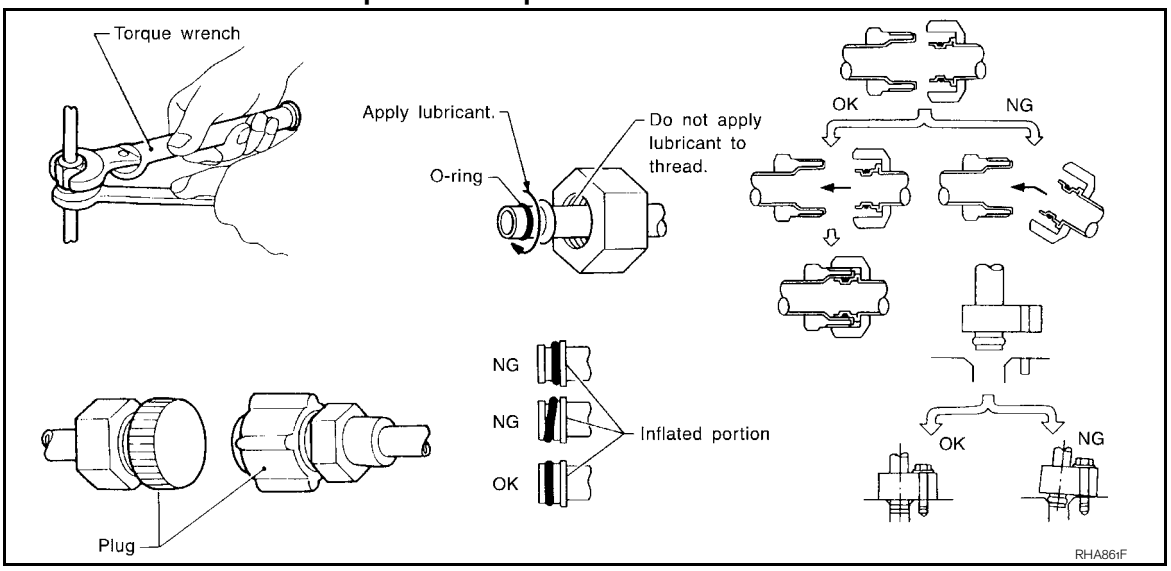
WARNING:
Make sure all refrigerant is discharged into the recycling equipment and the pressure in the system is less than atmospheric pressure. Then gradually loosen the discharge side hose fitting and remove it.
CAUTION:
When replacing or cleaning refrigerant cycle components, observe the following.
- **When the compressor is removed, store it in the same way at it is when mounted on the car. Failure to do so will cause lubricant to enter the low-pressure chamber.**
- **When connecting tubes, always use a torque wrench and a back-up wrench.**
- **After disconnecting tubes, immediately plug all openings to prevent entry of dust and moisture.**
- **When installing an air conditioner in the vehicle, connect the pipes at the final stage of the operation. Never remove the seal caps of pipes and other components until just before required for connection.**
- **Allow components stored in cool areas to warm to working area temperature before removing seal caps. This prevents condensation from forming inside A/C components.**
- **Thoroughly remove moisture from the refrigeration system before charging the refrigerant.**
- **Always replace used O-rings.**
- **When connecting tube, apply lubricant to circle of the O-rings shown in illustration. Be careful not to apply lubricant to threaded portion.**

Name : Nissan A/C System Oil Type S

- **O-ring must be closely attached to the groove portion of tube.**
- **When replacing the O-ring, be careful not to damage O-ring and tube.**
- **Connect tube until a click can be heard, then tighten the nut or bolt by hand. Make sure that the O-ring is installed to tube correctly.**

cardiagn.com

- **After connecting line, perform leak test and make sure that there is no leakage from connections. When the refrigerant leaking point is found, disconnect that line and replace the O-ring. Then tighten connections of seal seat to the specified torque.**



Service Equipment

INFOID:0000000001093693

RECOVERY/RECYCLING EQUIPMENT

Be certain to follow the manufacturer's instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

ELECTRICAL LEAK DETECTOR

Be certain to follow the manufacturer's instructions for tester operation and tester maintenance.

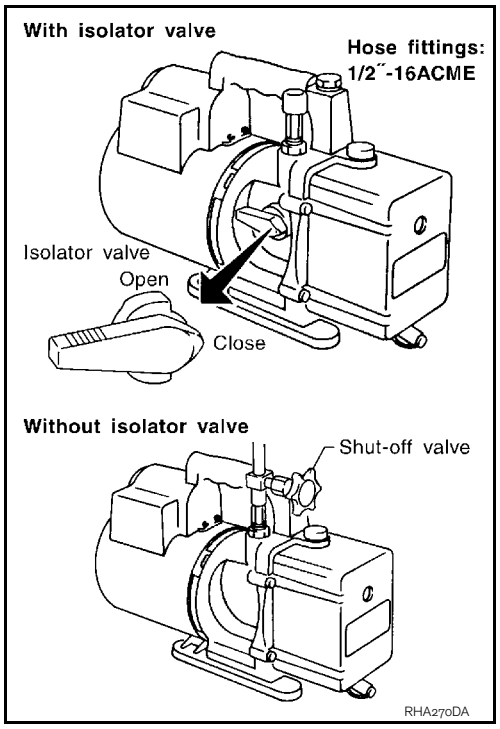
VACUUM PUMP

The lubricant contained inside the vacuum pump is not compatible with the specified lubricant for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure. So the vacuum pump lubricant may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it.

To prevent this migration, use a manual valve placed near the hose-to-pump connection, as follows.

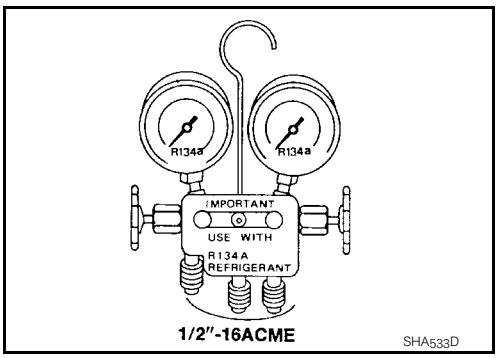
- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut-off valve, disconnect the hose from the pump. As long as the hose is connected, the valve is open and lubricating oil may migrate.

Some one-way valves open when vacuum is applied and close under no vacuum condition. Such valves may restrict the pump's ability to pull a deep vacuum and are not recommended.



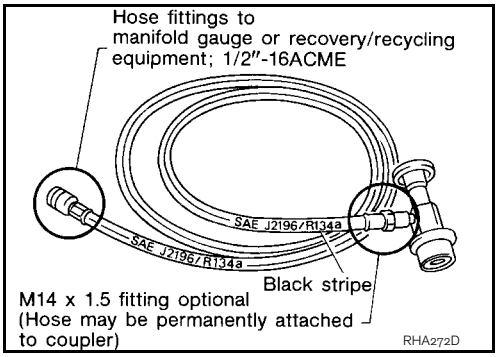
MANIFOLD GAUGE SET

Be certain that the gauge face indicates HFC-134a or R-134a. Be sure the gauge set has 1/2″-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) and specified lubricants.



SERVICE HOSES

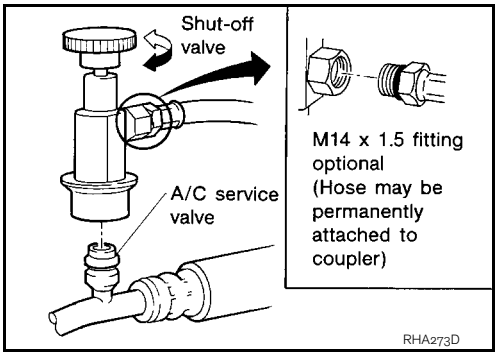
Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shut-off devices (either manual or automatic) near the end of the hoses opposite to the manifold gauge.



SERVICE COUPLERS

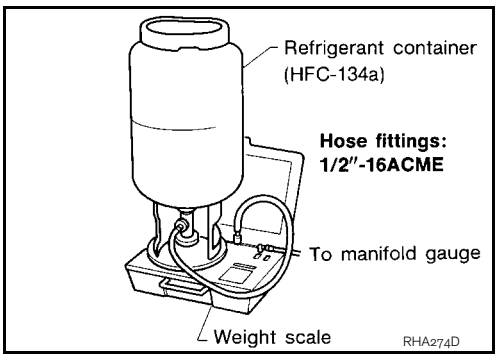
Never attempt to connect HFC-134a (R-134a) service couplers to a CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve
Clockwise	Open
Counterclockwise	Close



REFRIGERANT WEIGHT SCALE

Verify that no refrigerant other than HFC-134a (R-134a) and specified lubricants have been used with the scale. If the scale controls refrigerant flow electronically, the hose fitting must be 1/2″-16 ACME.



CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electronic scale or of quality recycle/recharge equipment.

cardiagn.com

COMPRESSOR

General Precautions

INFOID:0000000001093694

CAUTION:

- **Plug all openings to prevent moisture and foreign matter from entering.**
- **When the compressor is removed, store it in the same way at it is when mounted on the car.**
- **When replacing or repairing compressor, follow “Maintenance of Lubricant Quantity in Compressor” exactly. Refer to HA-27, "Adjustment".**
- **Keep friction surfaces between clutch and pulley clean. If the surface is contaminated with lubricant, wipe it off by using a clean waste cloth moistened with thinner.**
- **After compressor service operation, turn the compressor shaft by hand more than five turns in both directions. This will equally distribute lubricant inside the compressor. After the compressor is installed, let the engine idle and operate the compressor for one hour.**
- **After replacing the compressor magnet clutch, apply voltage to the new one and check for normal operation.**

cardiagn.com

FLUORESCENT LEAK DETECTOR

General Precautions

INFOID:0000000001093695

CAUTION:

- **The A/C system contains a fluorescent leak detection dye used for locating refrigerant leaks. An ultraviolet (UV) lamp is required to illuminate the dye when inspecting for leaks.**
- **Always wear fluorescence enhancing UV safety goggles to protect your eyes and enhance the visibility of the fluorescent dye.**
- **The fluorescent dye leak detector is not a replacement for an electrical leak detector (SST: J-41995). The fluorescent dye leak detector should be used in conjunction with an electrical leak detector (SST: J-41995) to pin-point refrigerant leaks.**
- **For the purpose of safety and customer's satisfaction, read and follow all manufacture's operating instructions and precautions prior to performing the work.**
- **A compressor shaft seal should not necessarily be repaired because of dye seepage. The compressor shaft seal should only be repaired after confirming the leak with an electrical leak detector (SST: J-41995).**
- **Always remove any remaining dye from the leak area after repairs are completed to avoid a misdiagnosis during a future service.**
- **Never allow dye to come into contact with painted body panels or interior components. If dye is spilled, clean immediately with the approved dye cleaner. Fluorescent dye left on a surface for an extended period of time cannot be removed.**
- **Never spray the fluorescent dye cleaning agent on hot surfaces (engine exhaust manifold, etc.).**
- **Never use more than one refrigerant dye bottle (1/4 ounce /7.4 cc) per A/C system.**
- **Leak detection dyes for HFC-134a (R-134a) and CFC-12 (R-12) A/C systems are different. Never use HFC-134a (R-134a) leak detection dye in CFC-12 (R-12) A/C system, or CFC-12 (R-12) leak detection dye in HFC-134a (R-134a) A/C system, or A/C system damage may result.**
- **The fluorescent properties of the dye will remain for three years or a little over unless a compressor malfunction occurs.**

IDENTIFICATION

NOTE:

Vehicles with factory installed fluorescent dye have a green label.
Vehicles without factory installed fluorescent dye have a blue label.

IDENTIFICATION LABEL FOR VEHICLE

Vehicles with factory installed fluorescent dye have the identification label on the front side of hood.

PREPARATION

PREPARATION

HFC-134a (R-134a) Service Tools and Equipment

INFOID:0000000001116483

Never mix HFC-134a (R-134a) refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.
Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.
Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.
Adapters that convert one size fitting to another must never be used: refrigerant/lubricant contamination will occur and compressor malfunction will result.

Tool number Tool name		Description
HFC-134a (R-134a) refrigerant	 S-NT196	Container color: Light blue Container marking: HFC-134a (R-134a) Fitting size: Thread size • Large container 1/2″-16 ACME
KLH00-PAGS0 Nissan A/C System Oil Type S (DH-PS)	S-NT197	Type: Polyalkylene glycol oil (PAG), type S (DH-PS) Application: HFC-134a (R-134a) wobble (swash) plate compressors (Nissan only) Lubricity: 40 m ℓ (1.4 Imp fl oz.)
Recovery/Recycling/ Recharging equipment (ACR4)	 RJIA0195E	Function: Refrigerant recovery and recycling and recharging
Electrical leak detector	 A/C leak detector SHA705EB	Power supply: DC 12V (Cigarette lighter)

Tool number Tool name		Description
(J-43926) Refrigerant dye leak detection kit Kit includes: (J-42220) UV lamp and UV safety goggles (J-41459) HFC-134a (R-134a) dye injector Use with J-41447, 1/4 ounce bottle (J-41447) HFC-134a (R-134a) fluorescent leak detection dye (Box of 24, 1/4 ounce bottles) (J-43872) Refrigerant dye cleaner	 ZHA200H	Power supply: DC 12V (Battery terminal)
(J-42220) UV lamp and UV safety goggles	 SHA438F	Power supply: DC 12V (Battery terminal) For checking refrigerant leak when fluorescent dye is installed in A/C system Includes: UV lamp and UV safety goggles
(J-41447) HFC-134a (R-134a) fluorescent leak detection dye (Box of 24, 1/4 ounce bottles)	 SHA439F	Application: For HFC-134a (R-134a) PAG oil Container: 1/4 ounce (7.4 cc) bottle (Includes self-adhesive dye identification labels for affixing to vehicle after charging system with dye.)
(J-41459) HFC-134a (R-134a) dye injector Use with J-41447, 1/4 ounce bottle	 SHA440F	For injecting 1/4 ounce of fluorescent leak detection dye into A/C system.
(J-43872) Refrigerant dye cleaner	 SHA441F	For cleaning dye spills.
Manifold gauge set (with hoses and couplers)	 RJIA0196E	Identification: • The gauge face indicates HFC-134a (R-134a). Fitting size: Thread size • 1/2″ -16 ACME

Removal and Installation

INFOID:0000000001093715

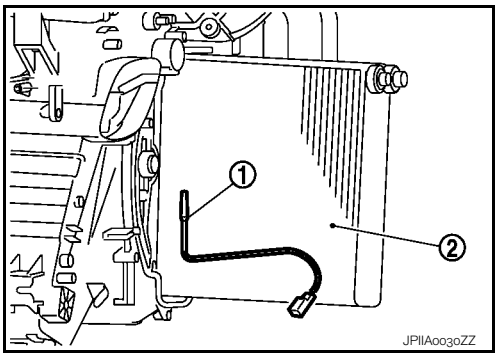
REMOVAL

1. Remove passenger front Air Bag. Refer to SR-8, "Removal and Installation".
2. Remove Instrument Panel. Refer to IP-12, "Removal and Installation".

3. Remove heater and cooling unit case.
4. Remove low-pressure pipe 1 and high-pressure pipe 2. Refer to HA-47, "Removal and Installation" (MR/HR), HA-98, "Removal and Installation" (K9K).

CAUTION:
Cap or wrap the joint of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with suitable material such as vinyl tape to avoid the entry of air.

5. Slide evaporator (2) to passenger side, and then remove intake sensor (1).



INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:
- **Replace O-rings of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to it when installing it.**
- **Mark the mounting position of intake sensor bracket prior to removal so that the reinstalled sensor can be located in the same position.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a click is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

REMOVAL

cardiagn.com

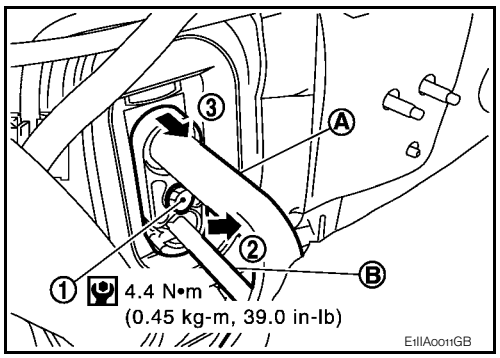
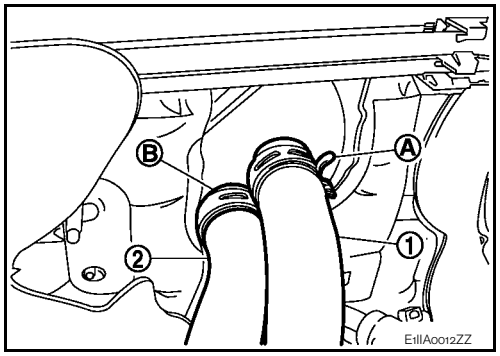
1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Drain engine coolant from cooling system. Refer to CO-9, "Draining" (HR), CO-30, "Draining" (MR), CO-52, "Draining" (K9K).
3. Remove pipe bracket fixing bolt (1), then, disconnect high-pressure pipe (B) and low-pressure pipe (A) from expansion valve as shown.

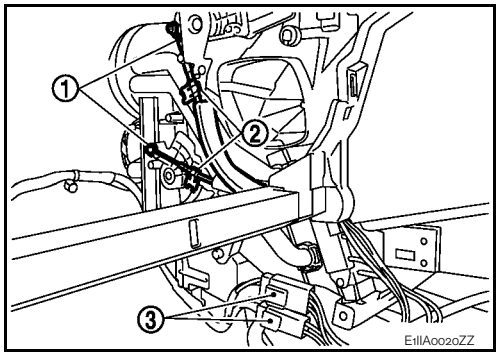
CAUTION:
Cap or wrap the joint of low-pressure pipe 1 and low-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.

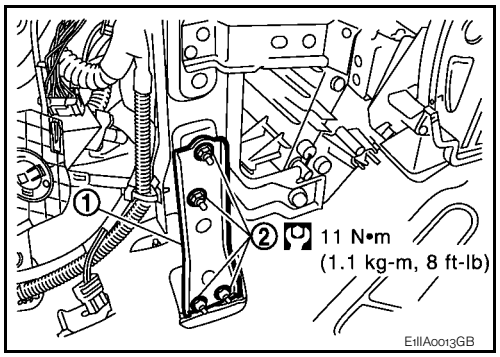


4. Remove clamp (A), then disconnect heater hoses (1) and then remove clamp (B), to remove heater hose (2).

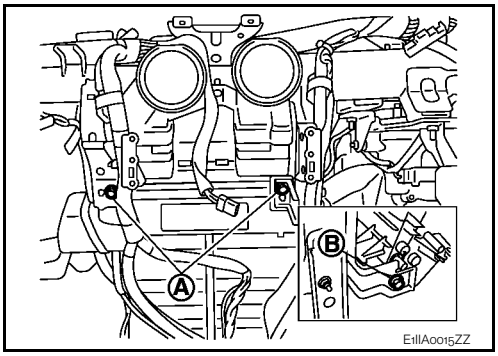


5. Remove Instrument Panel. Refer to IP-12, "Removal and Installation".
6. Remove BCM.Refer to BCS-64, "Removal and Installation".
   - Remove fixing screws.
   - Remove harness connectors.
7. Disconnect heater connectors (3), then remove heater connector and bracket.
8. Disconnect blower motor connector.
9. Remove heater control cable retainers (2) and cables (1) from heater and cooling unit.
10. Remove foot duct, RH.
11. Remove power steering C/U. Refer to STC-32, "Removal and Installation".
12. Disconnect intake door motor connector and blower motor connector.
13. Remove center air duct.
14. Remove blower intake motor connector and remove harness fixing clip.
15. Remove instrument stay (1).
16. Remove fixing nuts (2).
17. Remove heater draining hose.





18. Remove heater and cooling assembly lower fixing bolts, RH side.
19. Remove heater and cooling assembly upper fixing bolts.
20. Remove high and low pressure pipes. Refer to HA-47, "Removal and Installation" (HR/MR), HA-98, "Removal and Installation" (K9K).



21. Remove clips of main harness from steering member.
22. Remove steering member mounting bolts.
    • Disconnect harness fixing clips from steering member
    NOTE:
    Two workers are necessary to remove this part.
23. Remove heater and cooling unit assembly.

INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a clicks is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

NOTE:

- When filling radiator with engine coolant, refer to CO-9, "Refilling" (HR), CO-30, "Refilling" (MR), CO-52, "Refilling" (K9K).
- Recharge the refrigerant.

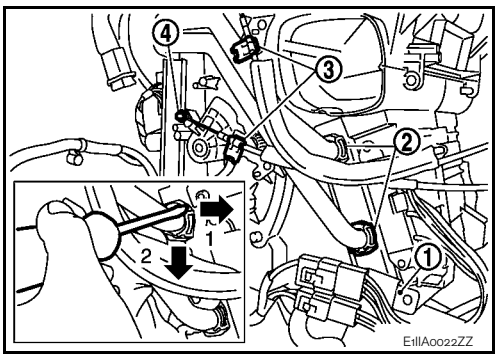
3. Remove LH foot duct.
4. Disconnect harness connectors, remove harness bracket (1).
5. Remove air mix door motor fixing screw.
6. Remove air mix door motor (4), from heater.
7. Remove heater core pipes metal clip retainers (2).
   CAUTION:
   Use shop cloth and all other protection necessaries to avoid damaging floor carpet.
8. Remove heater pipes as shown.
9. Pull to remove heater core.



INSTALLATION

Installation is basically the reverse order of removal.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001115379

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution Necessary for Steering Wheel Rotation After Battery Disconnect

INFOID:0000000001115381

NOTE:

- This Procedure is applied only to models with Intelligent Key system and NATS (NISSAN ANTI-THEFT SYSTEM).
- Remove and install all control units after disconnecting both battery cables with the ignition knob in the ″LOCK″ position.
- Always use CONSULT-III to perform self-diagnosis as a part of each function inspection after finishing work. If DTC is detected, perform trouble diagnosis according to self-diagnostic results.

For models equipped with the Intelligent Key system and NATS, an electrically controlled steering lock mechanism is adopted on the key cylinder.
For this reason, if the battery is disconnected or if the battery is discharged, the steering wheel will lock and steering wheel rotation will become impossible.
If steering wheel rotation is required when battery power is interrupted, follow the procedure below before starting the repair operation.

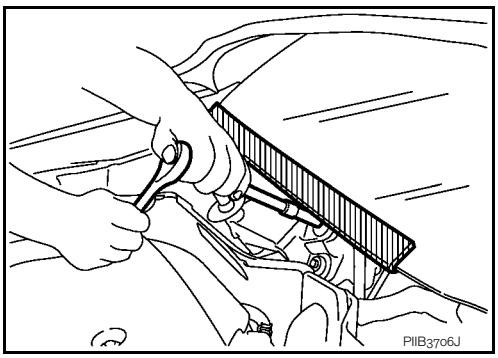
OPERATION PROCEDURE

1. Connect both battery cables.
   NOTE:
   Supply power using jumper cables if battery is discharged.
2. Use the Intelligent Key or mechanical key to turn the ignition switch to the ″ACC″ position. At this time, the steering lock will be released.
3. Disconnect both battery cables. The steering lock will remain released and the steering wheel can be rotated.
4. Perform the necessary repair operation.
5. When the repair work is completed, return the ignition switch to the ″LOCK″ position before connecting the battery cables. (At this time, the steering lock mechanism will engage.)
6. Perform a self-diagnosis check of all control units using CONSULT-III.

Precaution for Procedure without Cowl Top Cover

INFOID:0000000001115383

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.



Precautions For Xenon Headlamp Service

INFOID:0000000001115384

WARNING:

Comply with the following warnings to prevent any serious accident.

- **Disconnect the battery cable (negative terminal) or the power supply fuse before installing, removing, or touching the xenon headlamp (bulb included). The xenon headlamp contains high-voltage generated parts.**
- **Never work with wet hands.**
- **Check the xenon headlamp ON-OFF status after assembling it to the vehicle. Never turn the xenon headlamp ON in other conditions. Connect the power supply to the vehicle-side connector. (Turning it ON outside the lamp case may cause fire or visual impairments.)**
- **Never touch the bulb glass immediately after turning it OFF. It is extremely hot.**

CAUTION:

Comply with the following cautions to prevent any error and malfunction.

- **Install the xenon bulb securely. (Insufficient bulb socket installation may melt the bulb, the connector, the housing, etc. by high-voltage leakage or corona discharge.)**
- **Never perform HID circuit inspection with a tester.**
- **Never touch the xenon bulb glass with hands. Never put oil and grease on it.**
- **Dispose of the used xenon bulb after packing it in thick vinyl without breaking it.**
- **Never wipe out dirt and contamination with organic solvent (thinner, gasoline, etc.).**

Working with HFC-134a (R-134a)

INFOID:0000000001093818

CAUTION:

- **CFC-12 (R-12) refrigerant and HFC-134a (R-134a) refrigerant are not compatible. These refrigerants must never be mixed, even in the smallest amounts. If the refrigerants are mixed and compressor malfunction is likely occur.**
- **Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor malfunction is likely to occur.**
- **The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:**

- **When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.**
- **When installing refrigerant components to a vehicle, never remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.**
- **Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.**
- **Never allow lubricant (Nissan A/C System Oil Type S) to come in contact with styrene foam parts. Damage may result.**

General Refrigerant Precaution

INFOID:0000000001093819

WARNING:

- **Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Use only approved recovery/recycling equipment to discharge HFC-134a (R-134a) refrigerant. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.**

cardiagn.com

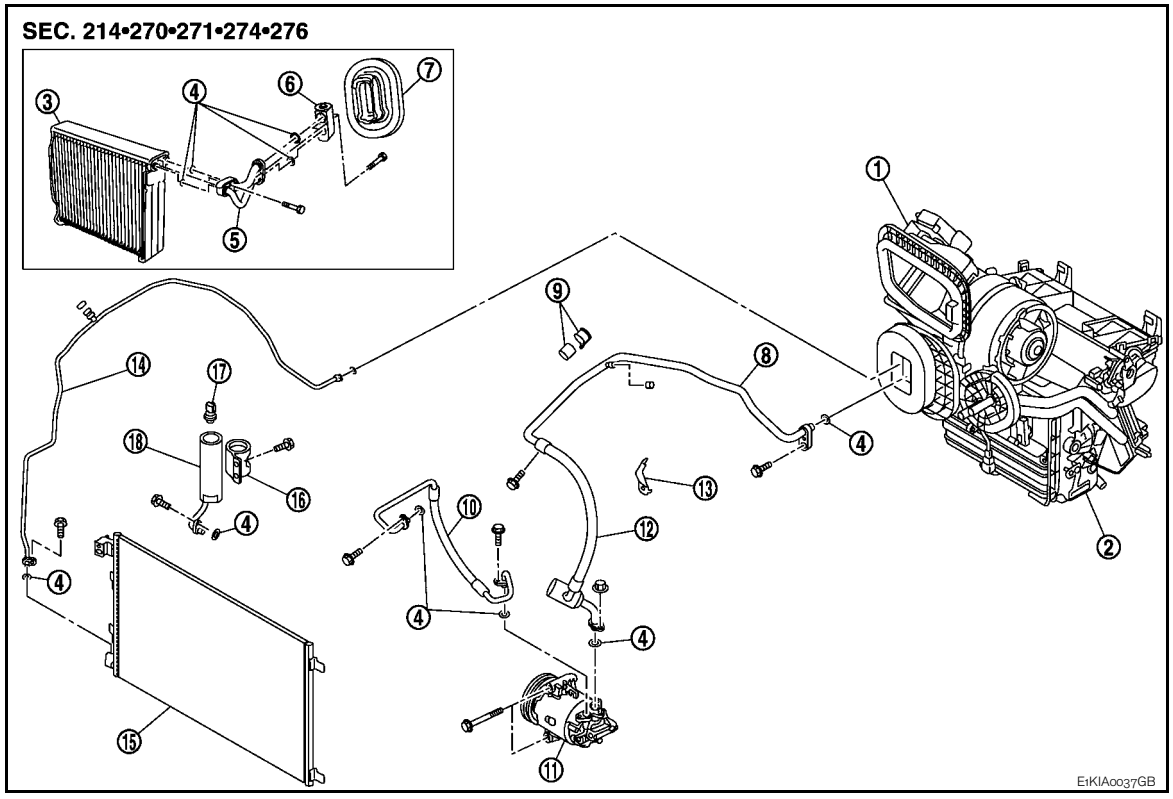
- **Never release refrigerant into the air. Use approved recovery/recycling equipment to capture the refrigerant every time an air conditioning system is discharged.**
- **Always wear eye and hand protection (goggles and gloves) when working with any refrigerant or air conditioning system.**
- **Never store or heat refrigerant containers above 52°C (126°F).**
- **Never heat a refrigerant container with an open flame; if container warming is required, place the bottom of the container in a warm pail of water.**
- **Never intentionally drop, puncture, or incinerate refrigerant containers.**
- **Keep refrigerant away from open flames: poisonous gas will be produced if refrigerant burns.**
- **Refrigerant will displace oxygen, therefore be certain to work in well ventilated areas to prevent suffocation.**
- **Never pressure test or leak test HFC-134a (R-134a) service equipment and/or vehicle air conditioning systems with compressed air during repair. Some mixtures of air and HFC-134a (R-134a) have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**

Refrigerant Connection

INFOID:0000000001093820

A new type refrigerant connection has been introduced to all refrigerant lines except the following location.
- Expansion valve to evaporator
- Refrigerant pressure sensor to liquid tank

O-RING AND REFRIGERANT CONNECTION (HR/MR)



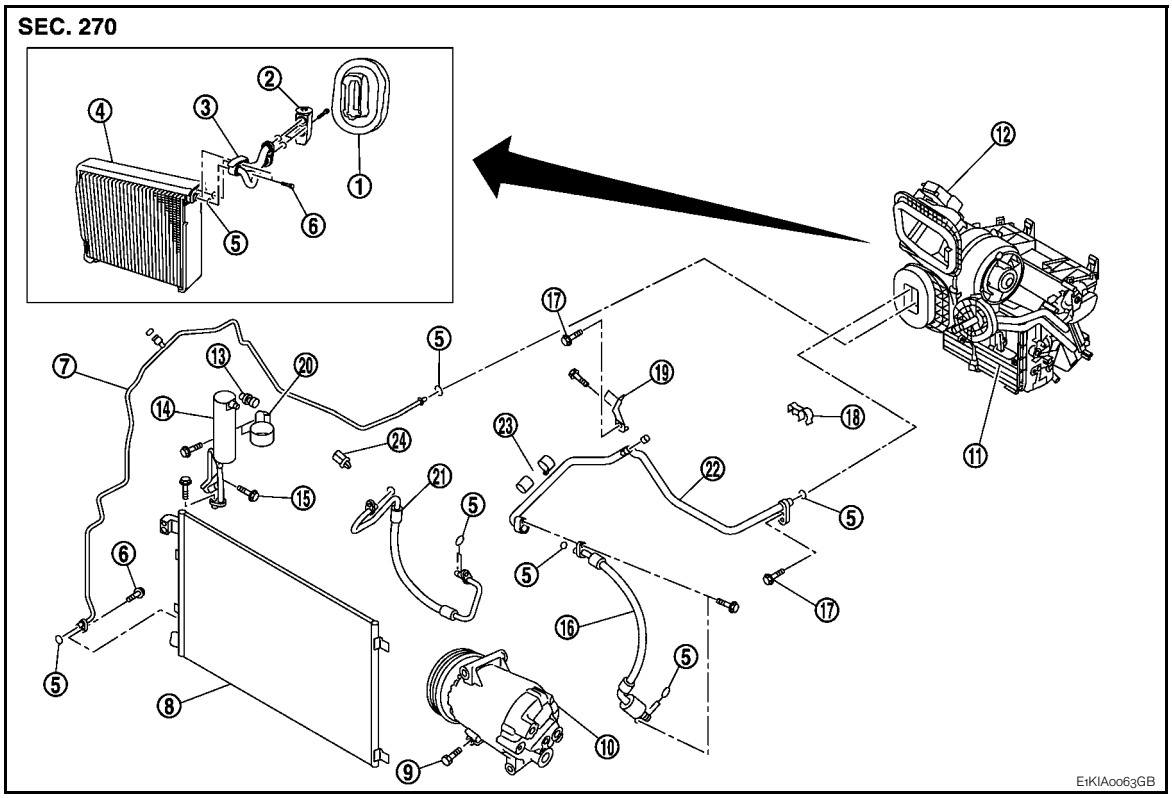
1. Heater sealing	2. Expansion valve	3. O-ring
4. Evaporator	5. Evaporator connector pipes	6. Connector pipe fixing bolt
7. High pressure pipe	8. Condenser assembly	9. Fixing bolt
10. Compressor	11. Heater & cooling unit assembly	12. Heater & Blower unit assembly
13. Refrigerant pressure sensor	14. Liquid tank	15. Pipe fixing bolt
16. Low pressure flexible hose	17. Low & high pipe bracket support	18. Low pressure flexible hose assembly
19. Pipes fixing clip	20. Low pipe fixing clamp assembly	21. Liquid tank fixing screw
22. Liquid tank fixing bracket	23. High pressure flexible hose	

CAUTION:
The new and former refrigerant connections use different O-ring configurations. Never confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant may leak at the connection.

O-Ring Part Numbers and Specifications

Connection type	Piping connection point		Part number	QTY	O-ring size
New	Low pressure pipe 2 to expansion valve		92473 N8210	1	16
	High pressure flexible pipe 1 to condenser		92472 N8210	1	12
	High pressure pipe 1 to expansion valve		92471 N8210	1	8
	Low pressure pipe 1 and high pressure pipe 2 assembly to expansion valve	Inlet	92475 71L00	1	12
		Outlet	92475 72L00	1	16
	Low pressure pipe 1 and high pressure pipe 2 assembly to evaporator	Inlet	92475 71L00	1	12
		Outlet	92475 72L00	1	16
	High pressure pipe 1 to liquid tank		92471 N8210	1	8
	Compressor to low pressure flexible hose		92474 N8210	2	19
	Compressor to high pressure flexible hose		92474 N8210	2	12
	Liquid tank to condenser		92473 N8210	1	16

O-RING AND REFRIGERANT CONNECTION (K9K)



1. Heater sealing
2. Expansion valve
3. Evaporator connector pipes
4. Evaporator
5. O-ring
6. Connector pipe fixing bolt
7. High pressure pipe
8. Condenser assembly
9. Fixing bolt
10. Compressor
11. Heater & cooling unit assembly
12. Heater & Blower unit assembly
13. Refrigerant pressure sensor
14. Liquid tank
15. Liquid tank fixing screw
16. Low pressure flexible hose
17. Fixing bolt
18. Pipes fixing clip

cardiagn.com

19. Low & high pressure pipe bracket
20. Liquid tank fixing bracket
21. High pressure flexible hose
22. Low pressure pipe
23. Low pressure pipe fixing clamp assembly
24. Pipe mantening clip

CAUTION:
The new and former refrigerant connections use different O-ring configurations. Never confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant may leak at the connection.

O-Ring Part Numbers and SpecificationsA

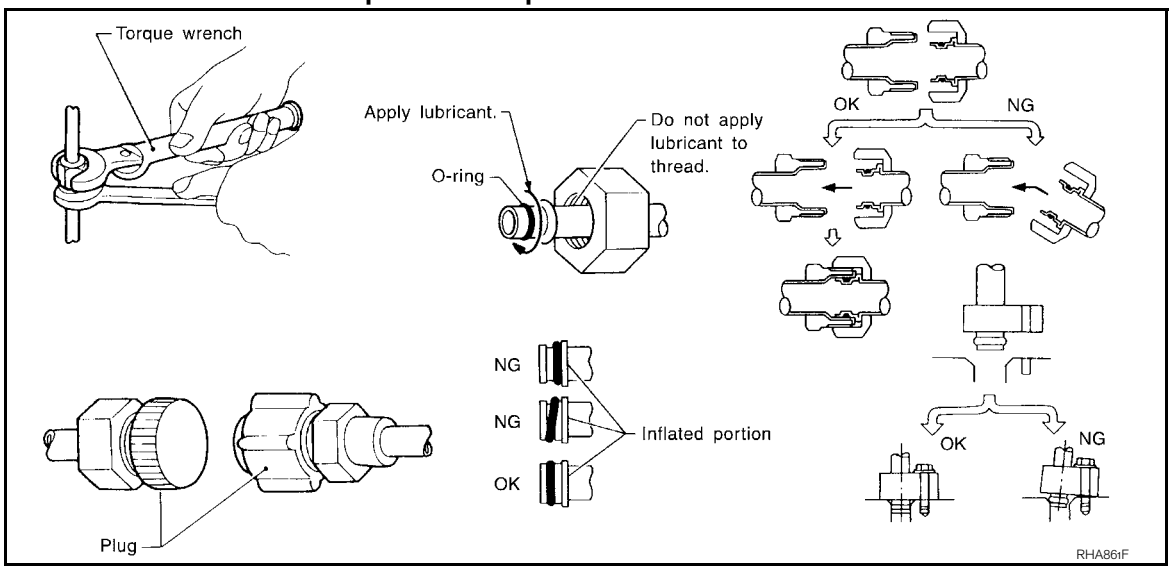
Connection type	Piping connection point		Part number	QTY	O-ring size
New	Low pressure flexible hose to Low pressure pipe 2		92473 N8210	1	16
	Low pressure pipe 2 to expansion valve		92473 N8210	1	16
	High pressure flexible pipe 1 to condenser		92472 N8210	1	12
	High pressure pipe 1 to expansion valve		92471 N8210	1	8
	Low pressure pipe 1 and high pressure	Inlet	92475 71L00	1	12
	Pipe 2 assembly to expansion valve	Outlet	92475 72L00	1	16
	Low pressure pipe 1 and high pressure	Inlet	92475 71L00	1	12
	Pipe 2 assembly to evaporator	Outlet	92475 72L00	1	16
	High pressure pipe 1 to liquid tank		92471 N8210	1	8
	Compressor to low pressure flexible hose		01-57-112	2	19
	Compressor to high pressure flexible hose		01-57-112	2	12
	Liquid tank to condenser		92473 N8210	2	16

WARNING:
Make sure all refrigerant is discharged into the recycling equipment and the pressure in the system is less than atmospheric pressure. Then gradually loosen the discharge side hose fitting and remove it.
CAUTION:
When replacing or cleaning refrigerant cycle components, observe the following.
- **When the compressor is removed, store it in the same way at it is when mounted on the car. Failure to do so will cause lubricant to enter the low-pressure chamber.**
- **When connecting tubes, always use a torque wrench and a back-up wrench.**
- **After disconnecting tubes, immediately plug all openings to prevent entry of dust and moisture.**
- **When installing an air conditioner in the vehicle, connect the pipes at the final stage of the operation. Never remove the seal caps of pipes and other components until just before required for connection.**
- **Allow components stored in cool areas to warm to working area temperature before removing seal caps. This prevents condensation from forming inside A/C components.**
- **Thoroughly remove moisture from the refrigeration system before charging the refrigerant.**
- **Always replace used O-rings.**
- **When connecting tube, apply lubricant to circle of the O-rings shown in illustration. Be careful not to apply lubricant to threaded portion.**

Name : Nissan A/C System Oil Type S

- **O-ring must be closely attached to the groove portion of tube.**
- **When replacing the O-ring, be careful not to damage O-ring and tube.**
- **Connect tube until a click can be heard, then tighten the nut or bolt by hand. Make sure that the O-ring is installed to tube correctly.**

- **After connecting line, perform leak test and make sure that there is no leakage from connections. When the refrigerant leaking point is found, disconnect that line and replace the O-ring. Then tighten connections of seal seat to the specified torque.**



Service Equipment

INFOID:0000000001093821

RECOVERY/RECYCLING EQUIPMENT

Be certain to follow the manufacturer's instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

ELECTRICAL LEAK DETECTOR

Be certain to follow the manufacturer's instructions for tester operation and tester maintenance.

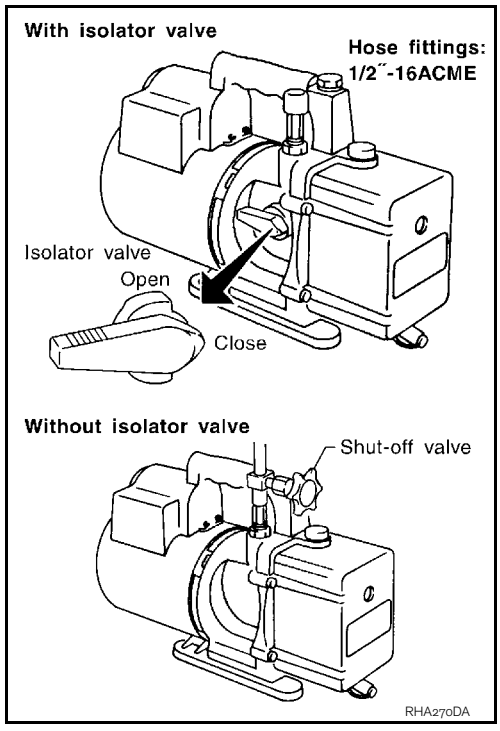
VACUUM PUMP

The lubricant contained inside the vacuum pump is not compatible with the specified lubricant for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure. So the vacuum pump lubricant may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it.

To prevent this migration, use a manual valve placed near the hose-to-pump connection, as follows.

- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut-off valve, disconnect the hose from the pump. As long as the hose is connected, the valve is open and lubricating oil may migrate.

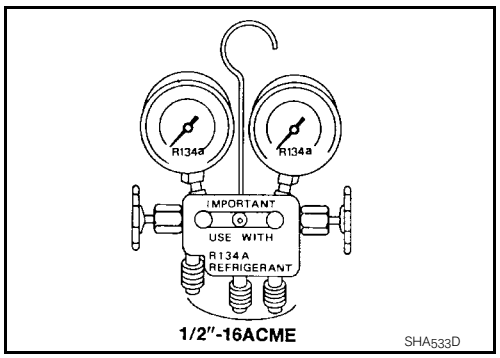
Some one-way valves open when vacuum is applied and close under no vacuum condition. Such valves may restrict the pump's ability to pull a deep vacuum and are not recommended.



MANIFOLD GAUGE SET

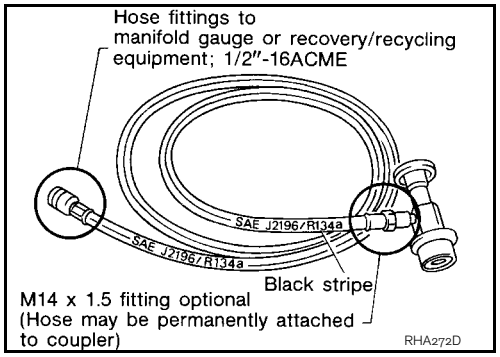
cardiagn.com

Be certain that the gauge face indicates HFC-134a or R-134a. Be sure the gauge set has 1/2″-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) and specified lubricants.



SERVICE HOSES

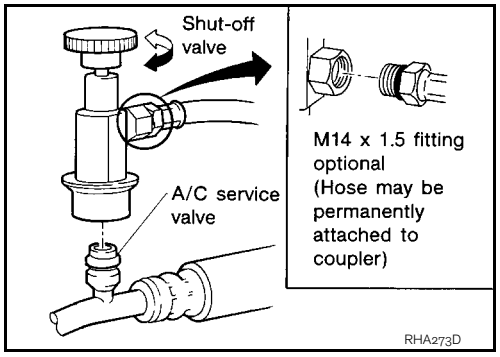
Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shut-off devices (either manual or automatic) near the end of the hoses opposite to the manifold gauge.



SERVICE COUPLERS

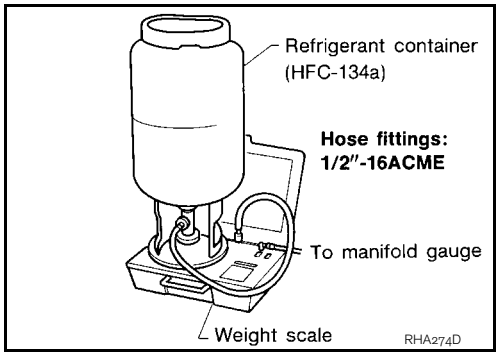
Never attempt to connect HFC-134a (R-134a) service couplers to a CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve
Clockwise	Open
Counterclockwise	Close



REFRIGERANT WEIGHT SCALE

Verify that no refrigerant other than HFC-134a (R-134a) and specified lubricants have been used with the scale. If the scale controls refrigerant flow electronically, the hose fitting must be 1/2″-16 ACME.



CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electronic scale or of quality recycle/recharge equipment.

COMPRESSOR

General Precautions

INFOID:0000000001093822

CAUTION:

- **Plug all openings to prevent moisture and foreign matter from entering.**
- **When the compressor is removed, store it in the same way at it is when mounted on the car.**
- **When replacing or repairing compressor, follow “Maintenance of Lubricant Quantity in Compressor” exactly. Refer to HA-129, "Adjustment".**
- **Keep friction surfaces between clutch and pulley clean. If the surface is contaminated with lubricant, wipe it off by using a clean waste cloth moistened with thinner.**
- **After compressor service operation, turn the compressor shaft by hand more than five turns in both directions. This will equally distribute lubricant inside the compressor. After the compressor is installed, let the engine idle and operate the compressor for one hour.**
- **After replacing the compressor magnet clutch, apply voltage to the new one and check for normal operation.**

cardiagn.com

FLUORESCENT LEAK DETECTOR

General Precautions

INFOID:0000000001093823

CAUTION:

- **The A/C system contains a fluorescent leak detection dye used for locating refrigerant leaks. An ultraviolet (UV) lamp is required to illuminate the dye when inspecting for leaks.**
- **Always wear fluorescence enhancing UV safety goggles to protect your eyes and enhance the visibility of the fluorescent dye.**
- **The fluorescent dye leak detector is not a replacement for an electrical leak detector (SST: J-41995). The fluorescent dye leak detector should be used in conjunction with an electrical leak detector (SST: J-41995) to pin-point refrigerant leaks.**
- **For the purpose of safety and customer's satisfaction, read and follow all manufacture's operating instructions and precautions prior to performing the work.**
- **A compressor shaft seal should not necessarily be repaired because of dye seepage. The compressor shaft seal should only be repaired after confirming the leak with an electrical leak detector (SST: J-41995).**
- **Always remove any remaining dye from the leak area after repairs are completed to avoid a misdiagnosis during a future service.**
- **Never allow dye to come into contact with painted body panels or interior components. If dye is spilled, clean immediately with the approved dye cleaner. Fluorescent dye left on a surface for an extended period of time cannot be removed.**
- **Never spray the fluorescent dye cleaning agent on hot surfaces (engine exhaust manifold, etc.).**
- **Never use more than one refrigerant dye bottle (1/4 ounce /7.4 cc) per A/C system.**
- **Leak detection dyes for HFC-134a (R-134a) and CFC-12 (R-12) A/C systems are different. Never use HFC-134a (R-134a) leak detection dye in CFC-12 (R-12) A/C system, or CFC-12 (R-12) leak detection dye in HFC-134a (R-134a) A/C system, or A/C system damage may result.**
- **The fluorescent properties of the dye will remain for three years or a little over unless a compressor malfunction occurs.**

IDENTIFICATION

NOTE:

Vehicles with factory installed fluorescent dye have a green label.
Vehicles without factory installed fluorescent dye have a blue label.

IDENTIFICATION LABEL FOR VEHICLE

Vehicles with factory installed fluorescent dye have the identification label on the front side of hood.

cardiagn.com

PREPARATION

PREPARATION

HFC-134a (R-134a) Service Tools and Equipment

INFOID:0000000001116519

Never mix HFC-134a (R-134a) refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.
Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.
Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.
Adapters that convert one size fitting to another must never be used: refrigerant/lubricant contamination will occur and compressor malfunction will result.

Tool number Tool name		Description
HFC-134a (R-134a) refrigerant	 S-NT196	Container color: Light blue Container marking: HFC-134a (R-134a) Fitting size: Thread size • Large container 1/2″-16 ACME
KLH00-PAGS0 Nissan A/C System Oil Type S (DH-PS)	S-NT197	Type: Polyalkylene glycol oil (PAG), type S (DH-PS) Application: HFC-134a (R-134a) wobble (swash) plate compressors (Nissan only) Lubricity: 40 m ℓ (1.4 Imp fl oz.)
Recovery/Recycling/ Recharging equipment (ACR4)	 RJIA0195E	Function: Refrigerant recovery and recycling and recharging
Electrical leak detector	 A/C leak detector SHA705EB	Power supply: DC 12V (Cigarette lighter)

cardiagn.com

Tool number Tool name		Description
(J-43926) Refrigerant dye leak detection kit Kit includes: (J-42220) UV lamp and UV safety goggles (J-41459) HFC-134a (R-134a) dye injector Use with J-41447, 1/4 ounce bottle (J-41447) HFC-134a (R-134a) fluorescent leak detection dye (Box of 24, 1/4 ounce bottles) (J-43872) Refrigerant dye cleaner	 ZHA200H	Power supply: DC 12V (Battery terminal)
(J-42220) UV lamp and UV safety goggles	 SHA438F	Power supply: DC 12V (Battery terminal) For checking refrigerant leak when fluorescent dye is installed in A/C system Includes: UV lamp and UV safety goggles
(J-41447) HFC-134a (R-134a) fluorescent leak detection dye (Box of 24, 1/4 ounce bottles)	 SHA439F	Application: For HFC-134a (R-134a) PAG oil Container: 1/4 ounce (7.4 cc) bottle (Includes self-adhesive dye identification labels for affixing to vehicle after charging system with dye.)
(J-41459) HFC-134a (R-134a) dye injector Use with J-41447, 1/4 ounce bottle	 SHA440F	For injecting 1/4 ounce of fluorescent leak detection dye into A/C system.
(J-43872) Refrigerant dye cleaner	 SHA441F	For cleaning dye spills.
Manifold gauge set (with hoses and couplers)	 RJIA0196E	Identification: • The gauge face indicates HFC-134a (R-134a). Fitting size: Thread size • 1/2″ -16 ACME

Sealant or/and Lubricant

INFOID:0000000001093826

HFC-134a (R-134a) Service Tool and Equipment

- Never mix HFC-134a (R-134a) refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.
- Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.
- Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.
- Never use adapters that convert one size fitting to another: refrigerant/lubricant contamination occurs and compressor malfunction may result.

Removal and Installation

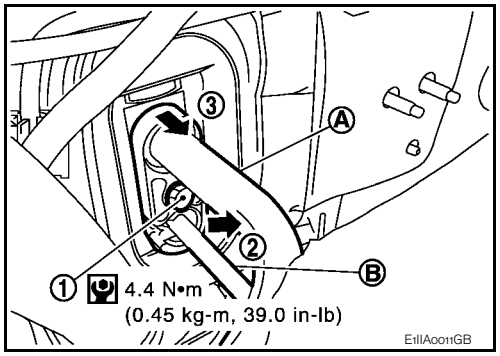
INFOID:0000000001093849

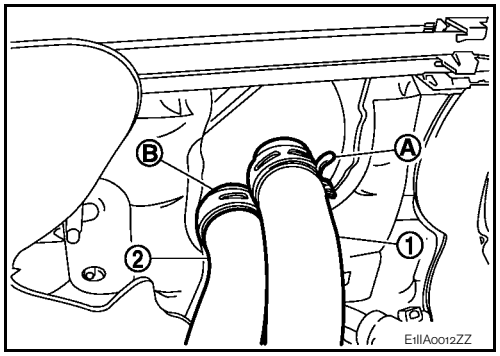
REMOVAL

cardiagn.com

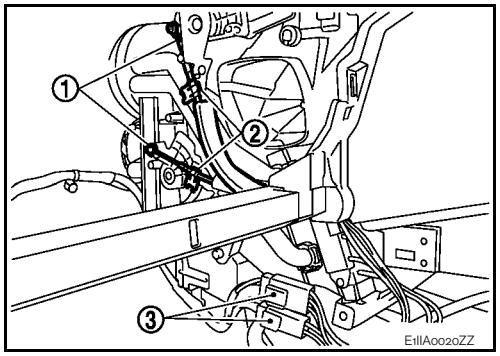
1. Use a refrigerant collecting equipment (for HFC-134a) to discharge the refrigerant.
2. Drain engine coolant from cooling system. Refer to CO-9, "Draining" (HR), CO-30, "Draining" (MR), CO-52, "Draining" (K9K).
3. Remove pipe bracket fixing bolt (1), then, disconnect high-pressure pipe 1 (B) and low-pressure pipe 2 (A) from expansion valve.
   CAUTION:
   Cap or wrap the joint of high-pressure pipe 1 and low-pressure pipe 2 with suitable material such as vinyl tape to avoid the entry of air.



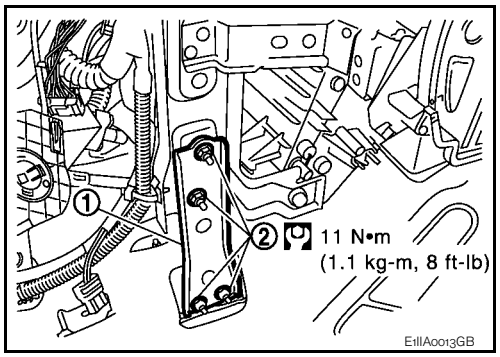
4. Remove clamp (A), then disconnect heater hoses (1), and then remove clamp (B), to remove heater hose (2).



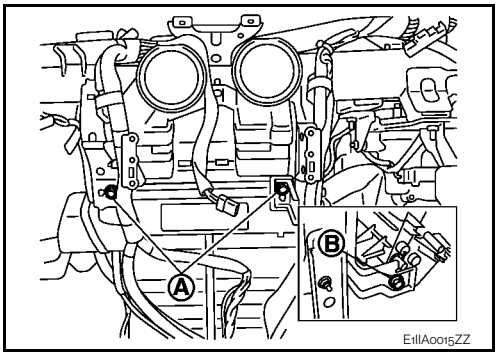
5. Remove Instrument Panel. Refer to IP-12, "Removal and Installation".
6. Remove BCM.Refer to BCS-64, "Removal and Installation".
   - Remove fixing screws.
   - Remove harness connectors.
7. Disconnect heater connectors (3), then remove heater connector and bracket.
8. Disconnect blower motor connector.
9. Remove heater control cables from heater and cooling unit (1).
10. Remove foot duct, RH.
11. Remove power steering C/U. Refer to STC-32, "Removal and Installation".
12. Disconnect intake door motor connector and blower motor connector.
13. Remove center air duct.
14. Remove blower intake motor connector and remove harness fixing clip.



15. Remove instrument stay (1).
16. Remove fixing nuts (2).
17. Remove heater draining hose.



18. Remove heater and cooling assembly lower fixing bolts (B), RH side.
19. Remove heater and cooling assembly upper fixing bolts (A).
20. Remove high and low pressure pipes. Refer to HA-149, "Removal and Installation" (HR/MR), HA-200, "Removal and Installation" (K9K).



21. Remove clips of main harness from steering member.
22. Remove steering member mounting bolts.
    • Disconnect harness fixing clips from steering member
    NOTE:
    Two workers are necessary to remove this part.
23. Remove heater and cooling unit assembly.

INSTALLATION

Installation is basically the reverse order of removal.

CAUTION:

- **Replace O-rings of low-pressure pipe 1, 2 and high-pressure pipe 1, 2 with new ones, and then apply compressor oil to it when installing it.**
- **Female-side piping connection is thin and easy to deform. Slowly insert the male-side piping straight in axial direction.**
- **Insert piping securely until a clicks is heard.**
- **After piping connection is completed, pull male-side piping by hand to make sure that connection does not come loose.**
- **When recharging refrigerant, check for leaks.**

NOTE:

- When filling radiator with engine coolant. Refer to CO-9, "Refilling" (HR), CO-30, "Refilling" (MR), CO-52, "Refilling" (K9K).
- Recharge the refrigerant.

Heater & cooling unit (1) assembly mounting bolt (A)

SIDE DEFROSTER DUCTS : Removal and Installation

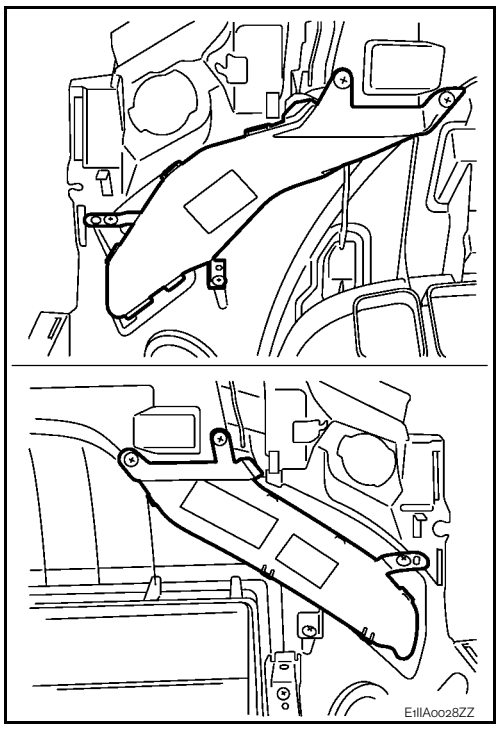
INFOID:0000000001093863

REMOVAL

1. Remove instrument panel. Refer to IP-12, "Removal and Installation".
2. Remove side ventilator ducts (RH/LH). Refer to VTL-90, "SIDE VENTILATOR GRILLES : Removal and Installation".
3. Remover side defroster ducts (RH/LH) fixing screws.
4. Pull to release from center defroster duct.

cardiagn.com

5. Remove side defroster ducts.



INSTALLATION

Installation is basically the reverse order of removal.

FOOT DUCTS

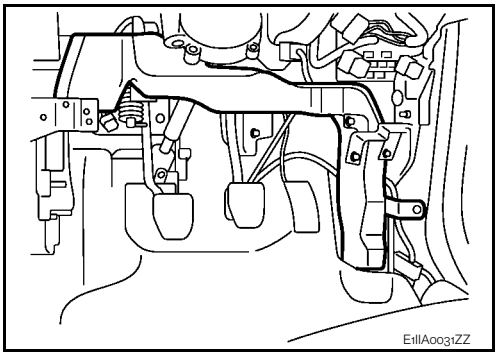
FOOT DUCTS : Removal and Installation

INFOID:0000000001116019

REMOVAL

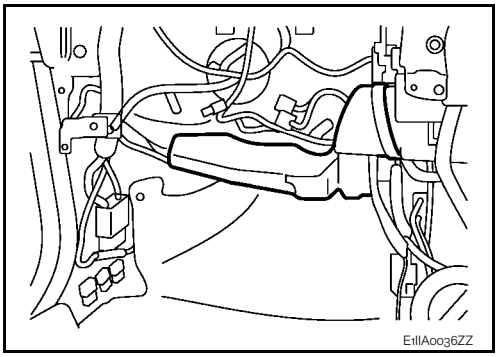
Driver Side

1. Remove driver side lower panel. Refer to IP-12, "Removal and Installation".
2. Remove side finisher. Refer to IP-12, "Removal and Installation".
3. Remove duct fixing bolt from lid and hood opener bracket.
4. Remove lower fixing clip from driver side foot duct.
5. Pull duct center side to release it from heater and cooling assembly.
6. Release foot duct from floor duct (if equipped).
7. Handle to remove foot duct.



Passenger Side

1. Remove glove box assembly. Refer to IP-12, "Removal and Installation".
2. Remove lower instrument panel finisher.
3. Remove outer fixing screw from bracket.
4. Release foot duct center side from heater and cooling assembly.
   CAUTION:
   Be careful not to damage upper fixing clip.
5. Release foot duct from floor duct.
6. Handle to remove foot duct.



INSTALLATION

Installation is basically the reverse of removal.

BASIC INSPECTION

DIAGNOSIS AND REPAIR WORKFLOW

Work Flow

INFOID:0000000000953318

DETAILED FLOW

1.OBTAIN INFORMATION ABOUT SYMPTOM

Interview the customer to obtain as much information as possible about the conditions and environment under which the malfunction occurred.

>> GO TO 2.

2.CHECK SYMPTOM

- Check the symptom based on the information obtained from the customer.
- Check if any other malfunctions are present.

>> GO TO 3.

3.CHECK CONSULT-III SELF-DIAGNOSIS RESULTS

Connect CONSULT-III and perform self-diagnosis. Refer to MWI-23, "CONSULT-III Function (METER/M&A)".

Are self-diagnosis results normal?

YES >> GO TO 4.
NO >> Repair or replace the malfunctioning parts and go to 5.

4.NARROW DOWN MALFUNCTIONING PARTS THROUGH SYMPTOM DIAGNOSIS

Perform symptom diagnosis and repair or replace the identified malfunctioning parts.

>> GO TO 5.

5.FINAL CHECK

Check that the warning buzzer in the combination meter operates normally.

Does it operate normally?

YES >> INSPECTION END
NO >> GO TO 1.

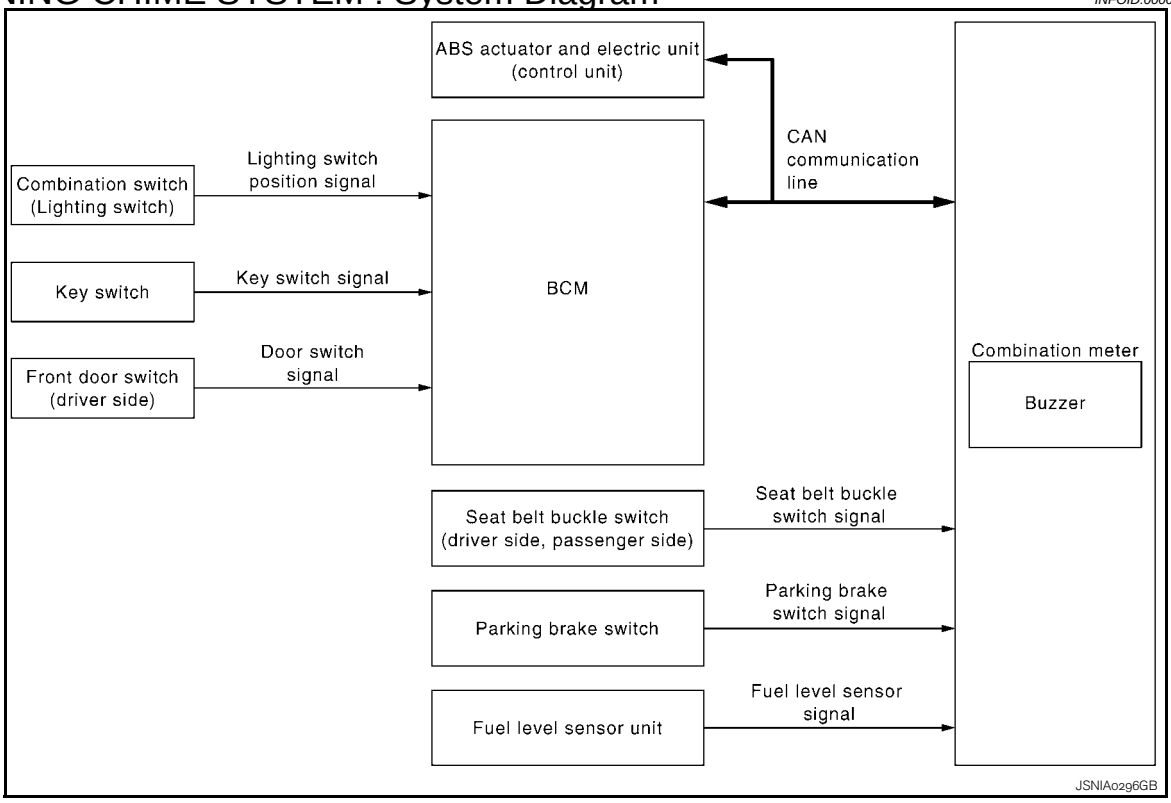
FUNCTION DIAGNOSIS

WARNING CHIME SYSTEM

WARNING CHIME SYSTEM

WARNING CHIME SYSTEM : System Diagram

INFOID:0000000000892392

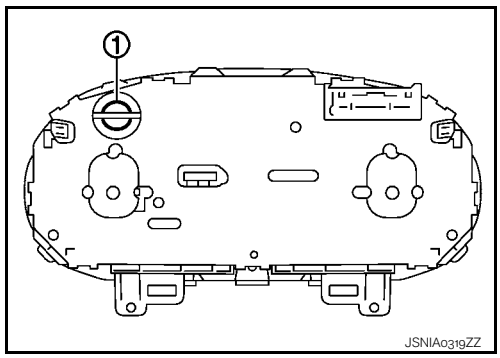


WARNING CHIME SYSTEM : System Description

INFOID:0000000000892393

COMBINATION METER

- The buzzer (1) for the warning chime system is integrated in the combination meter.
- The combination meter sounds the alarm buzzer installed in the combination meter when receiving the buzzer output signal transmitted from each unit.



BCM

BCM receives signals from various units and transmits a buzzer output signal to the combination meter via CAN communication if it judges that the warning buzzer should be activated.

BCM warning function list

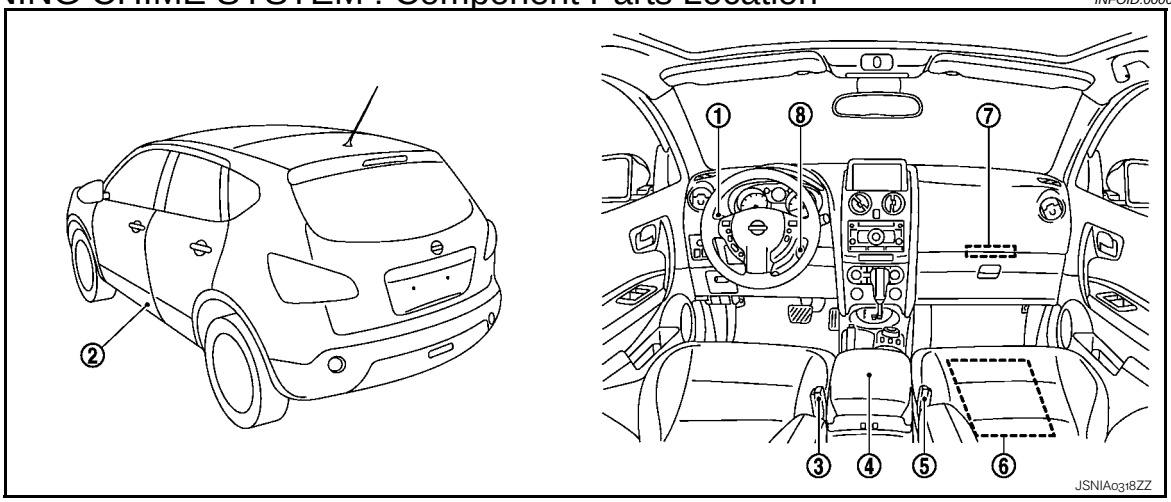
Warning functions	Signal name
Light reminder warning chime	• Ignition signal • Lighting switch position signal • Front door switch signal (driver side)
Key warning chime	• Ignition signal • Key switch signal • Front door switch signal (driver side)

cardiagn.com

NOTE:
- Seat belt reminder warning, parking brake release warning and low fuel warning are judged by combination meter.
- Intelligent key warning is judged by intelligent key unit.

WARNING CHIME SYSTEM : Component Parts Location

INFOID:0000000000892394



1. Combination switch (Lighting switch)
2. Front door switch (driver side)
3. Front seat belt buckle switch (driver side)
4. Parking brake switch
5. Front seat belt buckle switch (passenger side)
6. Occupant detection unit
7. BCM
8. Key switch

WARNING CHIME SYSTEM : Component Description

INFOID:0000000000892395

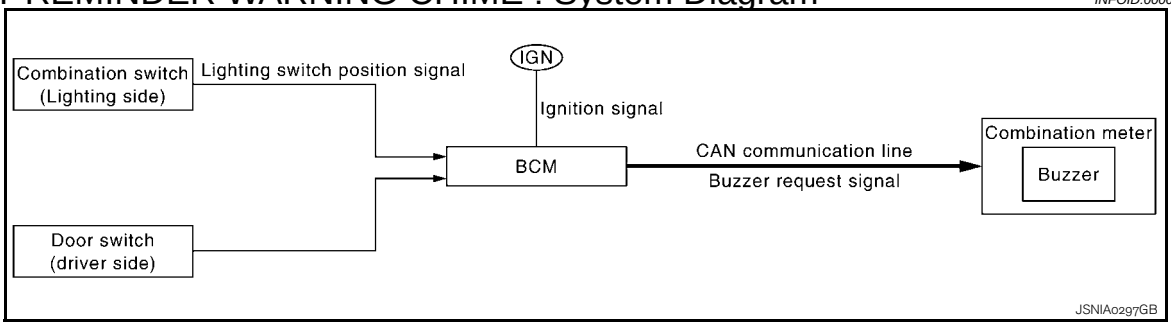
Unit	Description
Combination meter	• Receives the buzzer output signal from BCM with the CAN communication line and sounds the buzzer. • Judges the remaining parking brake according to the vehicle speed signal received from the ABS actuator and electric unit (control unit) via CAN communication and the parking brake switch signal from parking brake switch to sound the warning buzzer.
BCM	Transmits signals received from each unit to the combination meter with the CAN communication line.
ABS actuator and electric unit (control unit)	Transmits the vehicle speed signal to combination meter with the CAN communication line.
Front seat belt buckle switch (Driver side, passenger side)	Transmits the seat belt buckle switch signal to the combination meter.
Combination switch (Lighting switch)	Transmits the lighting switch signal to BCM.
Front door switch	Transmits the door switch signal to BCM.
Key switch	Transmits the ignition switch signal to BCM.
Fuel level sensor unit	Refer to MWI-30, "2WD : Description" (2WD) or MWI-31, "4WD : Description" (4WD).
Parking brake switch	Refer to WCS-23, "Description".

LIGHT REMINDER WARNING CHIME

cardiagn.com

LIGHT REMINDER WARNING CHIME : System Diagram

INFOID:0000000000892396



LIGHT REMINDER WARNING CHIME : System Description

INFOID:0000000000892397

DESCRIPTION

With ignition switch in OFF or ACC position, driver door open, and lighting switch in 1ST or 2ND position, the light warning chime will sound.

- BCM detects ignition switch in OFF or ACC position, front door switch (driver side) ON, and lighting switch in 1ST or 2ND position. And then transmits buzzer output signal (light reminder warning chime) to combination meter with CAN communication line.
- When combination meter receives buzzer output signal (light reminder warning chime), it sounds the buzzer.

WARNING OPERATION CONDITIONS

If all of the following conditions are fulfilled.

- Lighting switch is at 1st or 2nd position
- Ignition switch is at OFF or ACC
- Front door switch (driver side) is ON

WARNING CANCEL CONDITIONS

Warning is canceled if any of the following conditions is fulfilled.

- Lighting switch OFF
- Ignition switch ON
- Front door switch (driver side) is OFF

7. BCM
8. Key switch

LIGHT REMINDER WARNING CHIME : Component Description

INFOID:0000000000892399

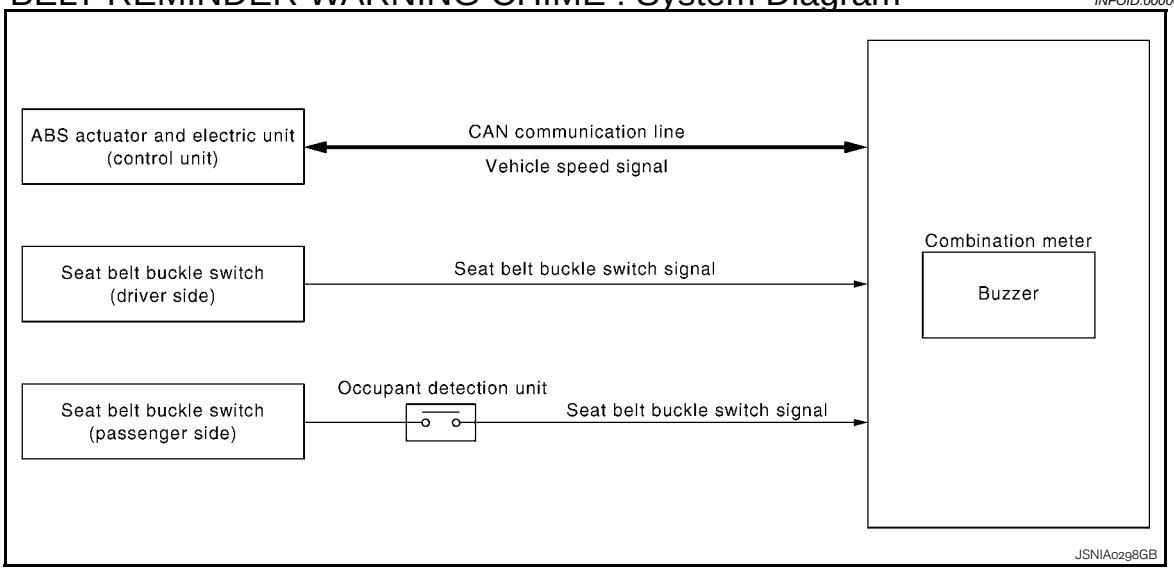
cardiagn.com

Unit	Description
Combination meter	Receives a buzzer output signal from the BCM and sounds the buzzer.
BCM	Judges the light warning conditions from the signals provided by various switches and transmits a buzzer output signal to the combination meter via CAN communication line if necessary.
Combination switch (Lighting switch)	Transmits the lighting switch position signal to BCM.
Front door switch (driver side)	Transmits the door switch signal to BCM.

SEAT BELT REMINDER WARNING CHIME

SEAT BELT REMINDER WARNING CHIME : System Diagram

INFOID:0000000000892400



SEAT BELT REMINDER WARNING CHIME : System Description

INFOID:0000000000892401

DESCRIPTION

- Combination meter receives the vehicle speed signals from ECM with CAN communication line.
- Combination meter receives the seat belt buckle switch signals from seat belt buckle switches (driver side and passenger side).
- Combination meter judges seat belt reminder based on the received signals to sound the warning buzzer.

WARNING OPERATION CONDITIONS

Driver Side Warning Operation Conditions

If all of the following conditions are fulfilled.
- When driver seat belt is not fastened (driver seat belt buckle switch ON)
- Vehicle speed approximately 15 km/h (9.3 MPH) or more

Passenger Side Operation Conditions

If all of the following conditions are fulfilled.
- When getting in the passenger seat
- When passenger seat belt is not fastened (passenger seat belt buckle switch ON)
- Vehicle speed approximately 15 km/h (9.3 MPH) or more

WARNING CANCEL CONDITIONS

Driver Side Warning Cancel Conditions

Warning is canceled if any of the following conditions is fulfilled.
- When driver seat belt is fastened (driver seat belt buckle switch OFF)
- Vehicle speed approximately 15 km/h (9.3 MPH) or less

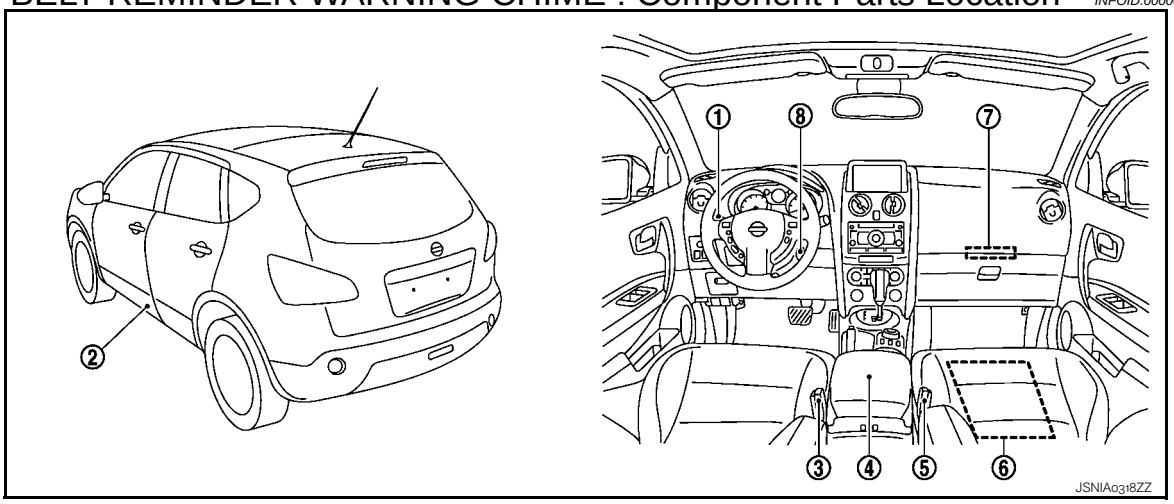
Passenger Side Warning Cancel Conditions

cardiagn.com

Warning is canceled if any of the following conditions is fulfilled.
- When getting out the passenger seat
- When passenger seat belt is fastened (passenger seat belt buckle switch OFF)
- Vehicle speed approximately 15 km/h (9.3 MPH) or less

SEAT BELT REMINDER WARNING CHIME : Component Parts Location

INFOID:0000000000936033



1. Combination switch (Lighting switch)

6. Occupant detection unit
7. BCM
8. Key switch

SEAT BELT REMINDER WARNING CHIME : Component Description

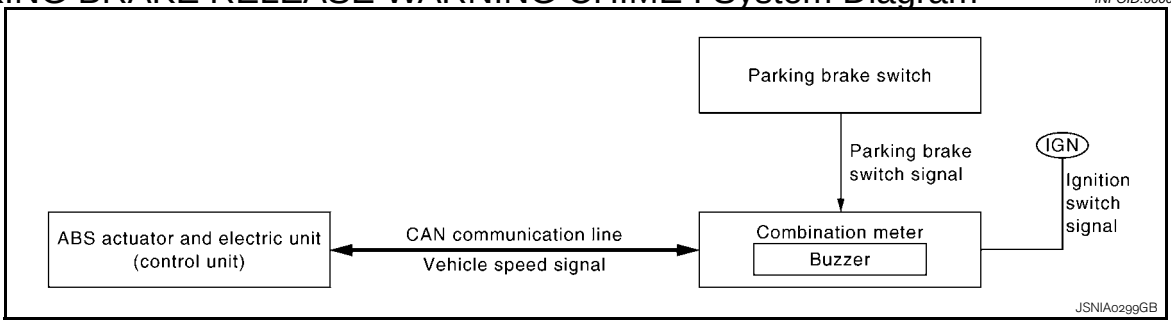
INFOID:0000000000892403

Unit	Description
Combination meter	Judges the seat belt reminder warning according to the vehicle speed signal received from the ABS actuator and electric unit (control unit) via CAN communication and the seat belt buckle switch signal from seat belt buckle switch and sounds the warning buzzer.
Front seat belt buckle switch (driver side)	Transmits the seat belt buckle switch signal to the combination meter.
Front seat belt buckle switch (passenger side)	Transmits the seat belt buckle switch signal to the combination meter via the occupant detection unit.
Occupant detection unit	Detects getting in/out conditions of passenger seat.

PARKING BRAKE RELEASE WARNING CHIME

PARKING BRAKE RELEASE WARNING CHIME : System Diagram

INFOID:0000000000892404



PARKING BRAKE RELEASE WARNING CHIME : System Description

INFOID:0000000000892405

DESCRIPTION

cardiagn.com

Parking brake release warning chime judges the remaining parking brake according to the vehicle speed signal received from the ABS actuator and electric unit (control unit) via CAN communication and the parking brake switch signal from parking brake switch to sound the warning buzzer.

WARNING OPERATION CONDITIONS

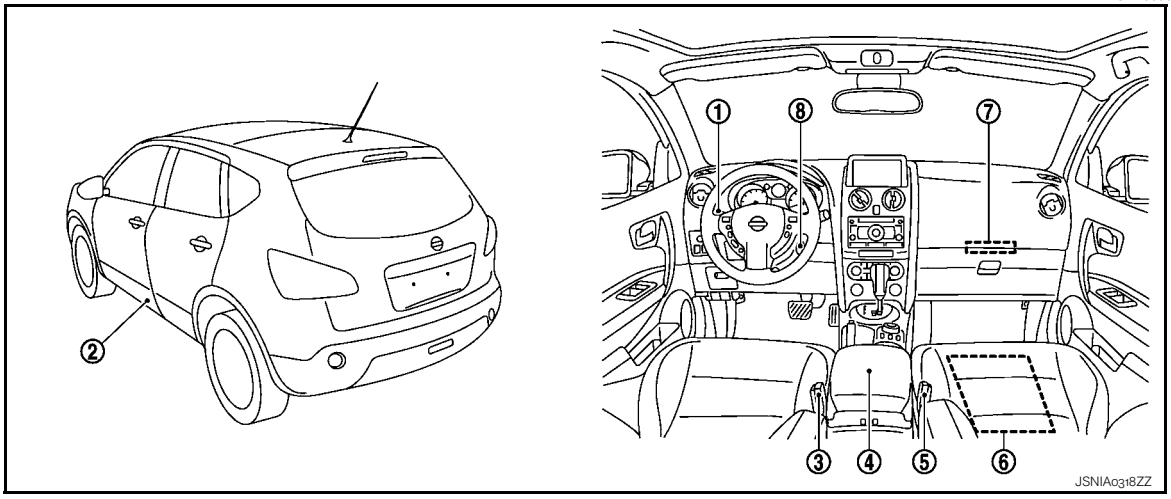
If all of the following conditions are fulfilled.
- Vehicle speed is 7 km/h (4.3 MPH) or higher
- Parking brake switch ON

WARNING CANCEL CONDITIONS

Warning is canceled if any of the following conditions is fulfilled.
- Vehicle speed is approximately 3 km/h (1.9 MPH) or less
- Parking brake switch OFF

PARKING BRAKE RELEASE WARNING CHIME : Component Parts Location

INFOID:0000000000936034



1. Combination switch (Lighting switch)

PARKING BRAKE RELEASE WARNING CHIME : Component Description

INFOID:0000000000892407

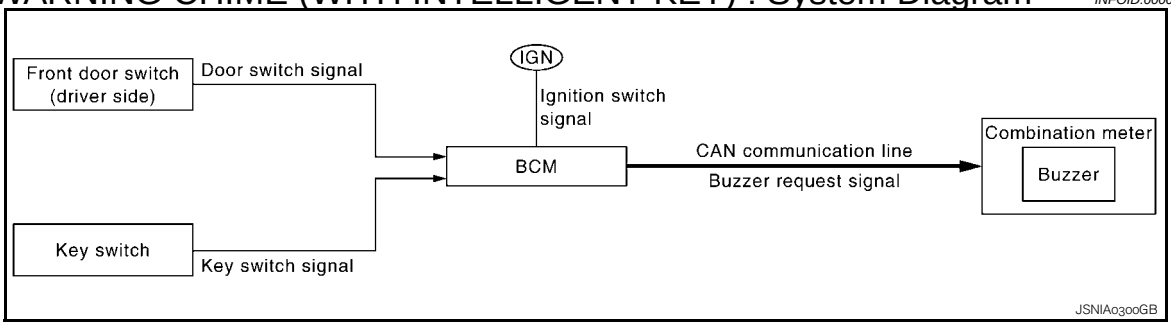
Unit	Description
Combination meter	Judges the remaining parking brake according to the vehicle speed signal received from the ABS actuator and electric unit (control unit) via CAN communication and the parking brake switch signal from parking brake switch and sounds the warning buzzer.
ABS actuator and electric unit (control unit)	Transmits the vehicle speed signal to the combination meter via CAN communication.
Parking brake switch	Transmits the parking brake switch signal to the combination meter.

KEY WARNING CHIME (WITH INTELLIGENT KEY)

cardiagn.com

KEY WARNING CHIME (WITH INTELLIGENT KEY) : System Diagram

INFOID:0000000000892408



KEY WARNING CHIME (WITH INTELLIGENT KEY) : System Description

INFOID:0000000000892409

DESCRIPTION

- BCM judges “key warning” according to the input of ignition switch, key switch and door switch (driver side) signals and transmits the buzzer output signal via CAN communication.
- The combination meter receives the buzzer output signal from BCM and sounds the warning buzzer.

WARNING OPERATION CONDITIONS

If all of the following conditions are fulfilled.

- Other than ignition switch ON
- Key switch ON
- Door switch (driver side) ON

WARNING CANCEL CONDITIONS

Warning is canceled if any of the following conditions is fulfilled.

- Ignition switch ON
- Key switch OFF
- Door switch (driver side) OFF

KEY WARNING CHIME (WITH INTELLIGENT KEY) : Component Parts Location

INFOID:0000000000936035

7.	BCM	8.	Key switch		

KEY WARNING CHIME (WITH INTELLIGENT KEY) : Component Description

INFOID:0000000000892411

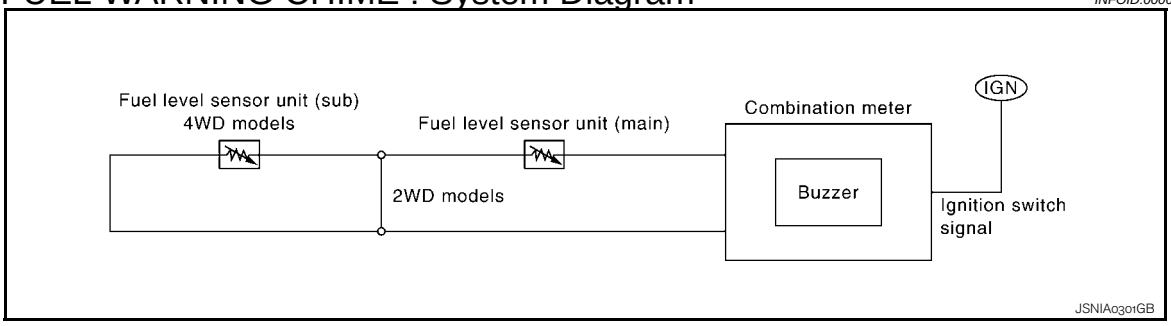
cardiagn.com

Unit	Description
Combination meter	Sounds the warning buzzer according to the buzzer output signal received from BCM via CAN communication.
BCM	Judges according to the door switch signal from the front door switch (driver side) and the key switch signal from the key switch and transmits the buzzer output signal to the combination meter via CAN communication.
Front door switch (driver side)	Transmits the door switch signal to BCM.
Key switch	Transmits the key switch signal to BCM.

LOW FUEL WARNING CHIME

LOW FUEL WARNING CHIME : System Diagram

INFOID:0000000000909713



LOW FUEL WARNING CHIME : System Description

INFOID:0000000000909714

DESCRIPTION

The combination meter judges the low fuel warning according to the fuel level sensor signal from the fuel level sensor and sounds the warning buzzer.

WARNING OPERATION CONDITIONS

If all of the following conditions are fulfilled.

- Ignition switch ON
- Fuel level: Approximately 12.5 ℓ (3 - 3/10 US gal, 2 - 4/5 Imp gal) or less

NOTE:

The low fuel warning does not operate until refueling the fuel and fulfilling the above operation conditions again if it operates once.

LOW FUEL WARNING CHIME : Component Parts Location

DIAGNOSIS SYSTEM (METER)

CONSULT-III Function (METER/M&A)

INFOID:0000000000911519

CONSULT-III FUNCTION (METER/M&A)

System	Diagnosis mode	Description
METER/M&A	Self Diagnostic Result	Combination meter checks the conditions and displays memorized error.
	Data Monitor	Displays combination meter input/output data in real time.

SELF DIAG RESULT

Refer to MWI-51, "DTC Index".

DATA MONITOR

Display Item List

X: Applicable

Display item [Unit]	MAIN SIGNALS	Description
SPEED METER [km/h]	X	Value of vehicle speed signal received from ABS actuator and electric unit (control unit) with CAN communication line. **NOTE:** 655.35 is displayed when the malfunction signal is received.
SPEED OUTPUT [km/h]	X	Vehicle speed signal value transmitted to other units with CAN communication line. **NOTE:** 655.35 is displayed when the malfunction signal is received.
TACHO METER [rpm]	X	Value of the engine speed signal received from ECM with CAN communication line. **NOTE:** 8191.875 is displayed when the malfunction signal is received.
W TEMP METER [°C]	X	Value of engine coolant temperature signal received from ECM with CAN communication line. **NOTE:** 215 is displayed when the malfunction signal is input.
FUEL METER [lit.]	X	Fuel level indicated on combination meter.
DISTANCE [km]	X	Value of possible driving distance calculated by combination meter.
FUEL W/L [On/Off]	X	Low-fuel warning status judged by the identified fuel level.
MIL [On/Off]		Status of malfunction indicator lamp judged from malfunctioning indicator lamp signal received from ECM with CAN communication line.
SEAT BELT W/L [On/Off]		Status of front seat belt buckle switch (driver side).
BUZZER [On/Off]	X	Buzzer status (in the combination meter) judged with the buzzer output signal received from BCM via CAN communication and the warning output condition of the combination meter.
C -ENG2 W/L [On/Off]		Status of malfunction indicator lamp 2 judged from malfunctioning indicator lamp signal received from ECM with CAN communication line.
GLOW IND [On/Off]		Glow indicator lamp status judged from glow indicator lamp signal received from ECM with the CAN communication line.
DOOR W/L [On/Off]		Status of door warning judged from door switch signal received from BCM with CAN communication line.
HI -BEAM IND [On/Off]		Status of high beam indicator lamp judged from high beam request signal received from BCM with CAN communication line.

cardiagn.com

Display item [Unit]	MAIN SIGNALS	Description
TURN IND [On/Off]		Status of turn indicator lamp judged from turn indicator signal received from BCM with CAN communication line.
FR FOG IND [On/Off]		Status of front fog light indicator lamp judged from front fog light request signal received from BCM with CAN communication line.
RR FOG IND [On/Off]		Status of rear fog light indicator lamp judged from rear fog light request signal received from BCM with CAN communication line.
OIL W/L [On/Off]		Status of oil pressure warning lamp judged from oil pressure switch signal received from IPDM E/R with CAN communication line.
LIGHT IND [On/Off]		Status of light indicator lamp judged from position light request signal received from BCM with CAN communication line.
DPF W/L [On/Off]		DPF warning lamp status judged by the DPF warning lamp signal received from ECM with the CAN communication line.
VDC/TCS IND [On/Off]		Status of VDC indicator lamp judged from VDC OFF indicator lamp signal received from ABS actuator and electric unit (control unit) with CAN communication line.
ABS W/L [On/Off]		Status of ABS warning lamp judged from ABS warning lamp signal received from ABS actuator and electric unit (control unit) with CAN communication line.
SLIP IND [On/Off]		Status of slip indicator lamp judged from slip indicator lamp signal received from ABS actuator and electric unit (control unit) with CAN communication line.
BRAKE W/L [On/Off]		Status of brake warning lamp judged from brake warning lamp signal received from ABS actuator and electric unit (control unit) with CAN communication line. **NOTE:** Displays “Off” if the brake warning lamp is illuminated when the valve check starts, the parking brake switch is turned ON or the brake fluid level switch is turned ON.
OIL LEVEL IND [LEVEL1, 2, 3, 4, 5/CR NG/On]		Oil level status judged by the oil level sensor signal from the oil level sensor.
KEY G W/L [On/Off]		Status of key warning lamp (G) judged from key warning signal received from BCM with CAN communication line.
KEY R W/L [On/Off]		Status of key warning lamp (R) judged from key warning signal received from BCM with CAN communication line.
KEY KNOB W/L [On/Off]		Key knob switch status received from Intelligent Key unit with the CAN communication line.
M RANGE SW [On/Off]	X	Status of mode select switch (manual).
NM RANGE SW [On/Off]	X	Status of mode select switch (auto).
AT SFT UP SW [On/Off]	X	Status of position select switch (up).
AT SFT DWN SW [On/Off]	X	Status of position select switch (down).

cardiagn.com

Display item [Unit]	MAIN SIGNALS	Description
P RANGE IND [On/Off]	X	Status of shift position indicator judged from shift position signal and manual mode indicator signal received from TCM with CAN communication line.
R RANGE IND [On/Off]	X	
N RANGE IND [On/Off]	X	
D RANGE IND [On/Off]	X	
4 RANGE IND [On/Off]	X	
3 RANGE IND [On/Off]	X	
2 RANGE IND [On/Off]	X	
AT CHECK W/L [On/Off]		A/T check warning lamp status judged by the A/T CHECK indicator lamp signal received from TCM with the CAN communication line.
CVT IND [On/Off]		CVT indicator lamp status judged from CVT CHECK indicator lamp signal received from TMC with the CAN communication line.
CRUISE IND [On/Off]		Status of CRUISE indicator judged from ASCD CRUISE lamp signal received from ECM with CAN communication line.
SET IND [On/Off]		Status of set indicator judged from ASCD SET indicator signal received from ECM with CAN communication line.
4WD LOCK SW [On/Off]		4WD lock switch status judged by the 4WD signal received from 4WD control unit with the CAN communication line.
4WD LOCK IND [On/Off]		4WD lock indicator status judged by the 4WD signal received from 4WD control unit with the CAN communication line.
4WD W/L [On/Off]		Status of 4WD warning lamp judged from 4WD warning lamp signal received from 4WD control unit with CAN communication line.

NOTE:

Some items are not available according to vehicle specification.

cardiagn.com

DIAGNOSIS SYSTEM (BCM)

COMMON ITEM

COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001102445

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION

BCM can perform the following functions for each system.

NOTE:

It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

BUZZER

BUZZER : CONSULT-III Function (BCM - BUZZER)

INFOID:0000000000892413

CONSULT-III FUNCTION (BCM – BUZZER)

cardiagn.com

Test item	Diagnosis mode	Description
Buzzer	Data Monitor	Displays BCM input data in real time.
	Active Test	Operation of electrical loads can be checked by sending driving signal to them.

DATA MONITOR

Display item [Unit]	Description
IGN ON SW [On/Off]	Ignition switch (ON) status judged by ignition power supply input.
KEY ON SW [On/Off]	Key switch status.
DOOR SW -DR [On/Off]	Front door switch (driver side) status judged by BCM.
TAIL LAMP SW [On/Off]	Lighting switch status judged by the lighting switch signal read with combination switch reading function.
BUCKLE SW [On/Off]	Seat belt buckle switch status judged by the seat belt buckle switch signal received from combination meter via CAN communication.
DOOR SW -AS	Front door switch (passenger side) status judged by BCM.
DOOR SW -RR	Rear door switch RH status judged by BCM.
DOOR SW -RL	Rear door switch LH status judged by BCM.
BACK DOOR SW	Back door switch status judged by BCM.
VEHICLE SPEED [km/h]	Vehicle speed signal value received from combination meter via CAN communication.

ACTIVE TEST

Display item	Description
LIGHT WARN ALM	The light reminder warning operation can be checked by operating the relevant function (On/Off).
IGN KEY WARN ALM	The key warning operation can be checked by operating the relevant function (On/Off).
KEY REMINDER WARN	The key reminder warning operation can be checked by operating the relevant function (On/Off).

COMPONENT DIAGNOSIS

POWER SUPPLY AND GROUND CIRCUIT

COMBINATION METER

COMBINATION METER : Diagnosis Procedure

INFOID:0000000000936047

1.CHECK FUSE

Check for blown fuses.

Battery power supply	: 8
Ignition signal	: 4

Is the inspection result normal?

YES >> GO TO 2.
NO >> Be sure to eliminate cause of malfunction before installing new fuse.

2.CHECK POWER SUPPLY CIRCUIT

Check voltage between combination meter harness connector terminals 1, 2 and ground.

Terminal No.	Signal name	Ignition switch position	Value (Approx.)
1	Battery power supply	OFF	Battery voltage
2	Ignition signal	ON	Battery voltage

Is the inspection result normal?

YES >> GO TO 3.
NO >> Check harness between combination meter and fuse.

3.CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector.
3. Check continuity between combination meter harness connector terminals 3, 23 and ground.

3, 23 – Ground	: Continuity should exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair harness or connector.

BCM (BODY CONTROL MODULE)

BCM (BODY CONTROL MODULE) : Diagnosis Procedure

INFOID:0000000001102067

1.CHECK FUSES AND FUSIBLE LINK

Check that the following fuses and fusible link are not fusing.

Terminal No.	Signal name	Fuses and fusible link No.
41	Battery power supply	9
57		J
38	Ignition power supply	4

Is the fuse fusing?

YES >> Replace the blown fuse or fusible link after repairing the affected circuit if a fuse or fusible link is blown.
NO >> GO TO 2.

2.CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connectors.

cardiagn.com

3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(–)			
BCM			OFF	ACC	ON
Connector	Terminal				
M65	38	Ground	Approx. 0 V	Approx. 0 V	Battery voltage
M66	41		Battery voltage	Battery voltage	Battery voltage
M67	57				

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M67	55		Existed

Does continuity exist?

YES >> INSPECTION END
NO >> Repair harness or connector.

cardiagn.com

METER BUZZER CIRCUIT

Description

INFOID:0000000000892420

- The buzzer for warning chime system is installed in the combination meter.
- The combination meter sounds the alarm buzzer based on the signals transmitted from various units.

Component Function Check

INFOID:0000000000892421

1.CHECK OPERATION OF METER BUZZER

1. Select “BUZZER” of “BCM” on CONSULT-III.
2. Perform “LIGHT WARN ALM” of “ACTIVE TEST”.

Does meter buzzer beep?

YES >> INSPECTION END
NO >> GO TO 2.

2.CHECK COMBINATION METER INPUT SIGNAL

Select the “Data Monitor” for the “METER/M&A” and check the “BUZZER” monitor value.

BUZZER	
Under the condition of buzzer input	: On
Except above	: Off

Is the inspection result normal?

YES >> Replace combination meter. Refer to MWI-72, "Removal and Installation".
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

Diagnosis Procedure

INFOID:0000000000892422

1.CHECK POWER SUPPLY AND GROUND CIRCUIT OF COMBINATION METER

Check power supply and ground circuit of combination meter. Refer to WCS-18, "COMBINATION METER : Diagnosis Procedure".

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair or replace malfunctioning parts.

cardiagn.com

SEAT BELT BUCKLE SWITCH SIGNAL CIRCUIT

Description

INFOID:0000000000892423

Transmits a seat belt buckle switch signal to the combination meter.

Component Function Check

INFOID:0000000000892424

1.CHECK COMBINATION METER INPUT SIGNAL

Select the “Data Monitor” for the “METER/M&A” and check the “BUCKLE SW” monitor value.

BUCKLE SW	
When seat belt is fastened (driver side)	: Off
When seat belt is unfastened (driver side)	: On

>> INSPECTION END

Diagnosis Procedure

INFOID:0000000000892425

1.CHECK COMBINATION METER INPUT SIGNAL 1

1. Turn ignition switch ON.
2. Check voltage between combination meter harness connector terminal 35 and ground.

35 – Ground	
When driver seat belt is fastened	: Approx. 5 V
When driver seat belt is unfastened	: Approx. 0 V

Is the inspection result normal?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK COMBINATION METER INPUT SIGNAL 2

Check voltage between combination meter harness connector terminal 36 and ground.

36 – Ground	
• Passenger seat getting in conditions • When passenger seat belt is fastened	: Approx. 12 V
When passenger seat belt is unfastened	: Approx. 0 V

Is the inspection result normal?

YES >> INSPECTION END
NO >> GO TO 5.

3.CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and front seat belt buckle switch (driver side) connector.
3. Check continuity between combination meter harness connector terminal 35 and front seat belt buckle switch (driver side) harness connector terminal 1.

35 – 1	: Continuity should exist.

4. Check harness continuity between combination meter harness connector terminal 35 and ground.

35 – Ground	: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 4.
NO >> Repair harness or connector.

cardiagn.com

4. CHECK SEAT BELT BUCKLE SWITCH (DRIVER SIDE) GROUND CIRCUIT

Check harness continuity between front seat belt buckle switch (driver side) harness connector terminal 2 and ground.

2 – Ground	: Continuity should exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair harness or connector.

5. CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE) CIRCUIT 1

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and front seat belt buckle switch (passenger side) connector.
3. Check continuity between combination meter harness connector terminal 36 and front seat belt buckle switch (passenger side) harness connector terminal 1.

36 – 1	: Continuity should exist.

4. Check harness continuity between combination meter harness connector terminal 36 and ground.

36 – Ground	: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 6.
NO >> Repair harness or connector.

6. CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE) CIRCUIT 2

1. Disconnect occupant detection unit connector.
2. Check continuity between front seat belt buckle switch (passenger side) harness connector terminal 2 and occupant detection unit harness connector terminal 1.

2 – 1	: Continuity should exist.

3. Check harness continuity between front seat belt buckle switch (passenger side) harness connector terminal 2 and ground.

2 – Ground	: Continuity should not exist.

Is the inspection result normal?

YES >> GO TO 7.
NO >> Repair harness or connector.

7. CHECK SEAT BELT BUCKLE SWITCH (PASSENGER SIDE) GROUND CIRCUIT

Check harness continuity between occupant detection unit harness connector terminal 2 and ground.

2 – Ground	: Continuity should exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair harness or connector.

cardiagn.com

PARKING BRAKE SWITCH SIGNAL CIRCUIT

Description

INFOID:0000000000905323

Transmits the parking brake switch signal to the combination meter.

Diagnosis Procedure

INFOID:0000000000905324

1.CHECK COMBINATION METER INPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between combination meter harness connector terminal 26 and ground.

26 – Ground	
Parking brake ON	: Approx. 0 V
Parking brake OFF	: Approx. 5 V

Is the inspection result normal?

YES >> INSPECTION END
NO >> GO TO 2.

2.CHECK PARKING BRAKE SWITCH SIGNAL CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect combination meter connector and parking brake switch connector.
3. Check continuity between combination meter harness connector terminal 26 and parking brake switch harness connector terminal 1.

26 – 1	: Continuity should exist.

4. Check continuity between combination meter harness connector terminal 26 and ground.

26 – Ground	: Continuity should not exist.

Is the inspection result normal?

YES >> INSPECTION END
NO >> Repair harness or connector.

Component Inspection

INFOID:0000000000905325

Refer to BRC-47, "Component Inspection".

Fail Safe

INFOID:0000000000936441

The combination meter activates the fail-safe control if the CAN communication lines between each unit are malfunctioning.

cardiagn.com

Function		Specifications
Speedometer		Reset to zero by suspending communication.
Tachometer		
Meter illumination control		Changed to nighttime mode.
Buzzer		Turned off by suspending communication.
Warning lamp/indicator lamp	ABS warning lamp	Turned on by suspending communication.
	Brake warning lamp	
	EPS OFF indicator lamp	
	VDC OFF indicator lamp	
	SLIP indicator lamp	
	CVT warning lamp	Turned off by suspending communication.
	Oil pressure warning lamp	
	Door warning lamp	
	Malfunction indicator lamp	
	CRUISE indicator lamp	
	Tail lamp indicator	
	Front fog indicator lamp	
	Rear fog indicator lamp	
	Glow indicator lamp	
	Malfunction indicator lamp 2	
	Trailer indicator lamp	
	Key R/G warning lamp	
	KEY LOCK warning lamp	
	High beam indicator lamp	
	Turn signal indicator lamp	

DTC Index

INFOID:0000000000936442

Display contents of CONSULT-III	Time	Diagnostic item is detected when ...	Refer to
CAN COMM CIRCUIT [U1000]	CRNT, 1 - 39	Combination meter is not transmitting or receiving CAN communication signal for 2 seconds or more.	MWI-26
VEHICLE SPEED [B2205]	CRNT, 1 - 39	The abnormal vehicle speed signal is input from ABS actuator and electric unit (control unit) for 2 seconds or more.	MWI-27

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

cardiagn.com

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

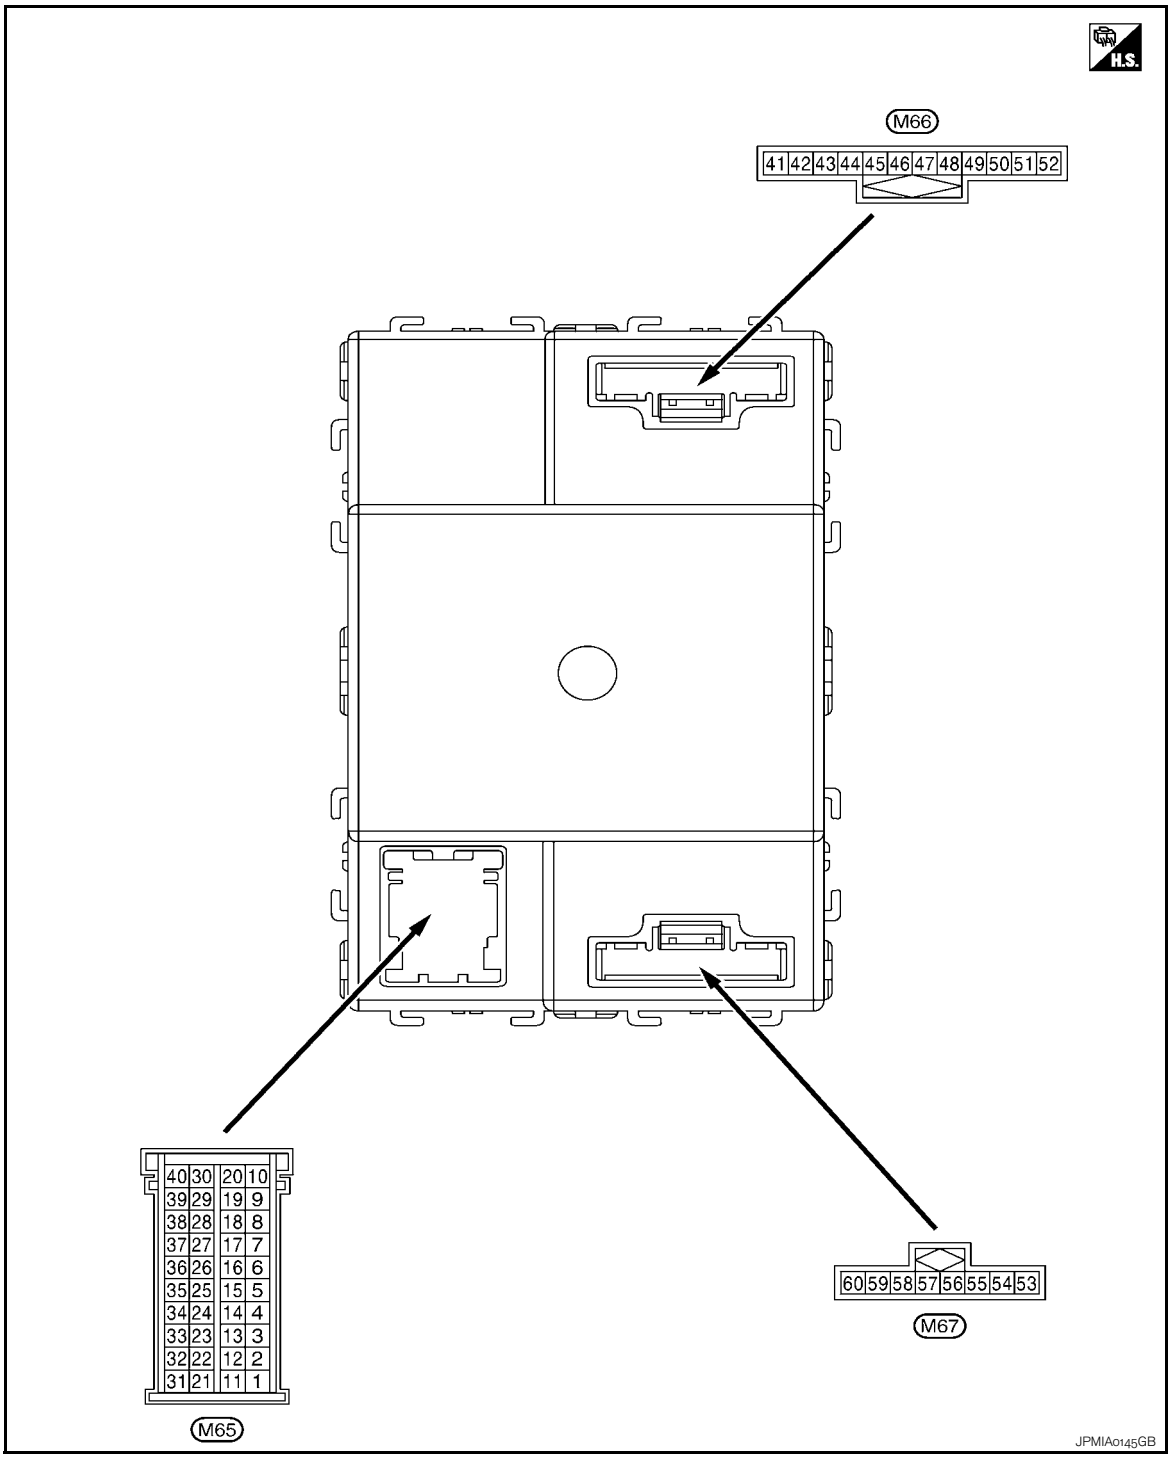
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Inspection Priority Chart

DTC Index

INFOID:0000000001102072

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

SYMPTOM DIAGNOSIS

THE LIGHT REMINDER WARNING DOES NOT SOUND

Description

INFOID:0000000000892444

The light reminder warning does not sound under the following conditions.
- Lighting switch 1st or 2nd position
- Driver door open
- Ignition switch OFF or ACC

Diagnosis Procedure

INFOID:0000000000892445

1. CHECK COMBINATION SWITCH (LIGHTING SWITCH) OPERATION

Check that the headlamps operate normally by operating the combination switch (lighting switch).

Do they operate normally?

YES >> GO TO 2.
NO >> Refer to EXL-156, "Symptom Table".

2. CHECK FRONT DOOR SWITCH (DRIVER SIDE) SIGNAL CIRCUIT

Perform the inspection for the front door switch (driver side) signal circuit. Refer to DLK-83, "DRIVER SIDE : Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3. CHECK FRONT DOOR SWITCH (DRIVER SIDE) UNIT

Perform a unit inspection for the front door switch (driver side). Refer to DLK-84, "DRIVER SIDE : Component Inspection".

Is the inspection result normal?

YES >> Replace the BCM. Refer to BCS-64, "Exploded View".
NO >> Replace the front door switch (driver side). Refer to DLK-272, "Removal and Installation".

cardiagn.com

THE SEAT BELT REMINDER WARNING CONTINUES SOUNDING, OR DOES NOT SOUND

Description

INFOID:0000000000892446

- Seat belt reminder warning does not sound.
- Seat belt reminder warning sounds continuously.

Trouble diagnosis procedure

INFOID:0000000000892447

1.CHECK FRONT SEAT BELT BUCKLE SWITCH CIRCUIT

Perform the front seat belt buckle switch circuit inspection. Refer to WCS-21, "Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 2.
NO >> Repair the harnesses or connectors.

2.CHECK FRONT SEAT BELT BUCKLE SWITCH UNIT

Perform the front seat belt buckle switch unit inspection. Refer to SBC-8, "Component Inspection" (driver side) or SBC-11, "Component Inspection (seat belt buckle switch passenger side)" (passenger side).

Is the inspection result normal?

YES >> GO TO 3.
NO >> Replace the seat belt buckle. Refer to SB-8, "SEAT BELT BUCKLE : Removal and Installation".

3.CHECK OCCUPANT DETECTION UNIT

Perform a unit inspection for the occupant detection unit. Refer to SBC-11, "Component Inspection (occupant detection unit)".

Is the inspection result normal?

YES >> INSPECTION END
NO >> Replace the occupant detection unit. Refer to SE-25, "Disassembly and Assembly".

cardiagn.com

THE PARKING BRAKE RELEASE WARNING CONTINUES SOUNDING, OR DOES NOT SOUND

Description

INFOID:0000000000892442

- The parking brake warning buzzer sounds continuously during vehicle travel even though the parking brake is released.
- The parking brake warning buzzer does not sound at all even though driving the vehicle with the parking brake applied.

Diagnosis Procedure

INFOID:0000000000892443

1.CHECK PARKING BRAKE WARNING LAMP OPERATION

1. Start engine.
2. Check the operation of the parking brake warning lamp when operating the parking brake.

Condition	Warning lamp status
Parking brake ON	ON
Parking brake OFF	OFF

Is the inspection result normal?

YES >> Replace combination meter.
NO >> GO TO 2.

2.CHECK PARKING BRAKE SWITCH SIGNAL CIRCUIT

Perform an inspection for the parking brake switch signal circuit. Refer to WCS-23, "Diagnosis Procedure".

Is the inspection result normal?

YES >> GO TO 3.
NO >> Repair harness or connector.

3.CHECK PARKING BRAKE SWITCH UNIT

Perform a unit inspection for the parking brake switch. Refer to WCS-23, "Component Inspection".

Is the inspection result normal?

YES >> Replace combination meter. Refer to MWI-72, "Removal and Installation".
NO >> Replace parking brake switch.

cardiagn.com

THE KEY WARNING DOES NOT SOUND

Description

INFOID:0000000000911528

The key warning does not sound with the ignition switch OFF, the driver door open, and the mechanical key inserting conditions.

Diagnosis Procedure

INFOID:0000000000911529

1.CHECK BCM INPUT SIGNAL

Connect CONSULT-III and inspect the BCM input signal. Refer to DLK-597, "Component Function Check".

Is the inspection result normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> GO TO 2.

2.CHECK KEY SWITCH SIGNAL CIRCUIT

Perform an inspection for the key switch signal circuit. Refer to DLK-597, "Diagnosis Procedure".

Is the inspection result normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Check applicable parts, and repair or replace corresponding parts.

cardiagn.com

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001078352

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

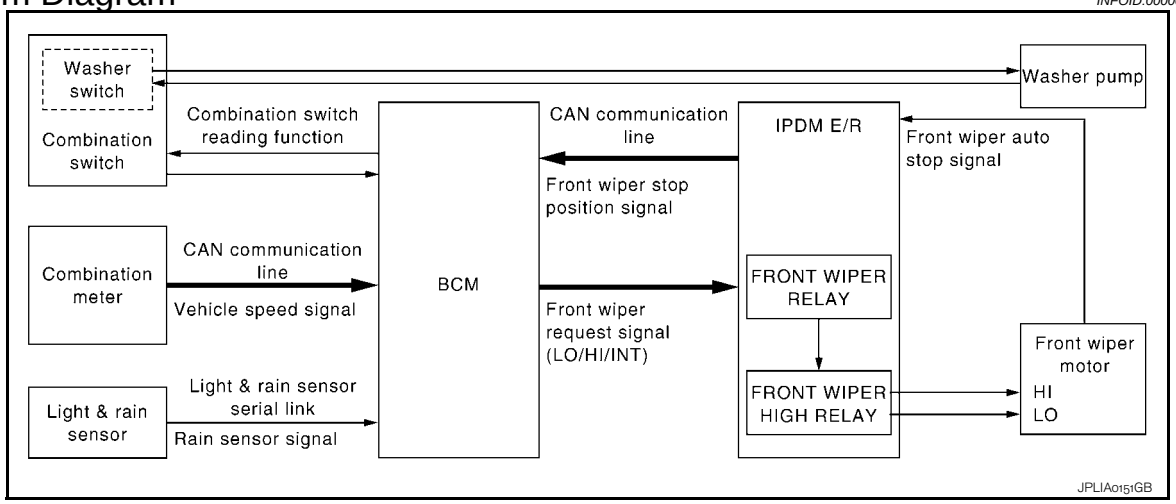
FUNCTION DIAGNOSIS

FRONT WIPER AND WASHER SYSTEM

System Diagram

INFOID:0000000000896754



System Description

INFOID:0000000000896755

OUTLINE

The front wiper is controlled by each function of BCM and IPDM E/R.

Control by BCM
- Combination switch reading function
- Front wiper control function

Control by IPDM E/R
- Front wiper control function
- Relay control function

FRONT WIPER BASIC OPERATION

- BCM detects the combination switch condition by the combination switch reading function.
- BCM transmits the front wiper request signal to IPDM E/R with CAN communication depending on each operating condition of the front wiper.
- IPDM E/R turns ON/OFF the integrated front wiper relay and the front wiper high relay according to the front wiper request signal. IPDM E/R provides the power supply to operate the front wiper HI/LO operation.

FRONT WIPER LO OPERATION

- BCM transmits the front wiper request signal (LO) to IPDM E/R with CAN communication according to the front wiper LO operating condition.

Front wiper LO operating condition
- Ignition switch ON
- Front wiper switch LO or front wiper switch MIST (while pressing)
- IPDM E/R turns ON the integrated front wiper relay according to the front wiper request signal (LO).

FRONT WIPER HI OPERATION

- BCM transmits the front wiper request signal (HI) to IPDM E/R with CAN communication according to the front wiper HI operating condition.

Front wiper HI operating condition
- Ignition switch ON
- Front wiper switch HI
- IPDM E/R turns ON the integrated front wiper relay and the front wiper high relay according to the front wiper request signal (HI).

FRONT WIPER INT OPERATION (LINKED WITH VEHICLE SPEED)

cardiagn.com

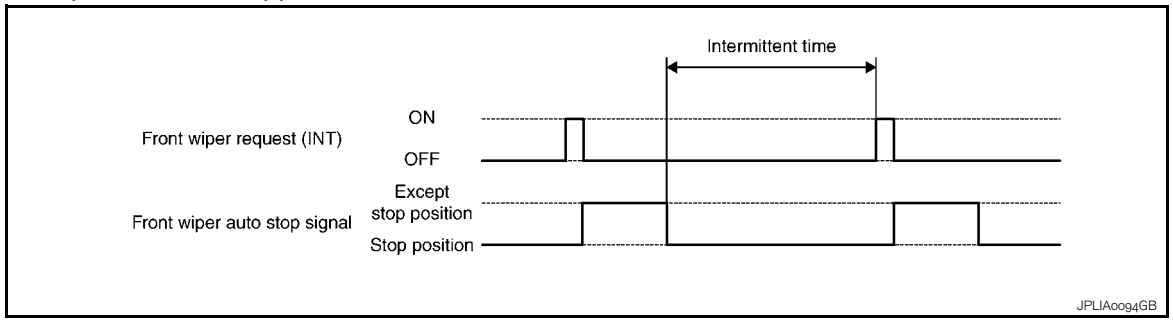
- BCM transmits the front wiper request signal (INT) to IPDM E/R with CAN communication according to the front wiper INT operation condition and the intermittent operation delay interval judged value.

Front wiper INT operating condition
- Ignition switch ON
- Front wiper switch INT

Intermittent operation delay interval judgment
- BCM calculates the intermittent operation delay interval from the vehicle speed signal received from the wiper dial position and the combination meter with CAN communication.

Wiper intermittent dial position	Intermittent operation interval	Intermittent operation delay Interval (s)			
		Vehicle speed			
		Vehicle stopped or less than 5 km/h (3.1 MPH)	5 km/h (3.1 MPH) or more or less than 35 km/h (21.7 MPH)	35 km/h (21.7 MPH) or more or less than 65 km/h (40.4 MPH)	65 km/h (40.4 MPH) or more
1	Short ↑	0.8	0.6	0.4	0.24
2		4	3	2	1.2
3		10	7.5	5	3
4		16	12	8	4.8
5		24	18	12	7.2
6		32	24	16	9.6
7	↓ Long	42	31.5	21	12.6

- IPDM E/R turns the integrated front wiper relay ON so that the front wiper is operated only once according to the front wiper request signal (INT).
- BCM detects stop position/except stop position of the front wiper motor according to the front wiper stop position signal received from IPDM E/R with CAN communication.
- BCM transmits the front wiper request signal (INT) again after the intermittent operation delay interval after the front wiper motor is stopped.



FRONT WIPER AUTO OPERATION

- BCM receives the wiping speed request signal from the rain sensor with the light and rain sensor serial link.
- BCM judges the auto wiping condition depending on the wiping speed request signal and the rain sensor sensitivity setting under front wiper AUTO operating condition.
- BCM transmits the front wiper request signals (LO or HI) to the IPDM E/R through CAN communication line according to the auto wiping condition.

  NOTE:

  When the wiper volume is turned down at 1 level with front wiper AUTO operating condition, BCM transmits front wiper request signal (LO) to IPDM E/R with CAN communication.

Front wiper AUTO operating condition
- Ignition switch ON
- Front wiper switch AUTO

Rain sensor sensitivity setting
- BCM determines rain sensor sensitivity according to a wiper volume.

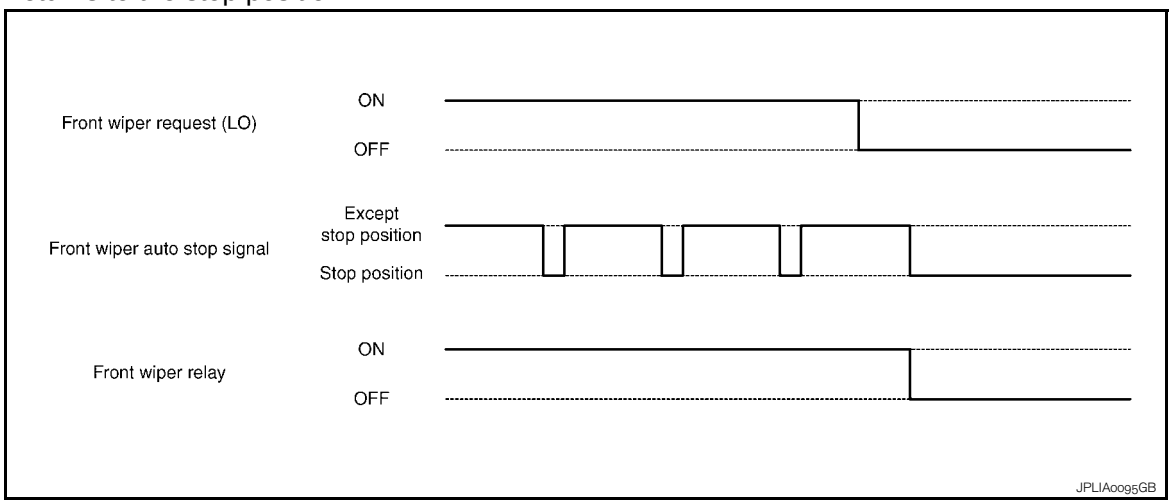
carDiagn.com

Wiper intermittent dial position	Sensitivity
1	High sensitivity
2	
3	Medium–high sensitivity
4	
5	Low–medium sensitivity
6	
7	Low sensitivity

- IPDM E/R turns ON the integrated front wiper relay and front wiper HI relay according to the front wiper request signal (LO or HI).
- Light and rain sensor transmits rain sensor signal to BCM for HI operation immediately after sensing the raindrops increase under the wiper motor LO operating with the front wiper switch AUTO.

FRONT WIPER AUTO STOP OPERATION

- BCM stops transmitting the front wiper request signal when the front wiper switch is turned OFF.
- IPDM E/R detects the front wiper auto stop signal from the front wiper motor and detects the front wiper motor position (stop position/except stop position).
- When the front wiper request signal is stopped, IPDM E/R turns ON the front wiper relay until the front wiper motor returns to the stop position.



NOTE:

- BCM stops the transmitting of the front wiper request signal when the ignition switch is OFF.
- IPDM E/R turns the front wiper relay OFF when the ignition switch is OFF.

FRONT WIPER OPERATION LINKED WITH WASHER

- BCM transmits the front wiper request signal (LO) to IPDM E/R with CAN communication according to the washer linked operating condition of the front wiper.
- BCM transmits the front wiper request signal (LO) so that the front wiper operates approximately 3 times when the front washer switch OFF is detected.

Washer linked operating condition of front wiper

- Ignition switch ON
- Front washer switch ON (0.4 second or more)

- IPDM E/R turns ON the integrated front wiper relay according to the front wiper request signal (LO).
- The washer pump is grounded through the combination switch with the front washer switch ON.

FRONT WIPER DROP WIPE OPERATION

- BCM controls the front wiper to operate once according to the conditions of front wiper drop wipe operation.

Front wiper drop wipe operating condition

- Ignition switch ON
- Front wiper switch OFF
- Front washer switch OFF

cardiagn.com

- BCM transmits the front wiper request signal (LO) to IPDM E/R with CAN communication so that the front wiper operate once three seconds after front wiper operation linked with washer.
- IPDM E/R turns ON the integrated front wiper relay according to the front wiper request signal (LO).

FRONT WIPER FAIL–SAFE OPERATION

- IPDM E/R performs the fail-safe function when the front wiper auto stop circuit is malfunctioning. Refer to PCS-28, "Fail Safe".
- BCM performs fail-safe operation when light and rain sensor or light and rain sensor-related systems are malfunctioning. Refer to BCS-59, "Fail Safe".

- F. Cowl top, right side of engine room

Component Description

INFOID:0000000000896818

carDiagn.com

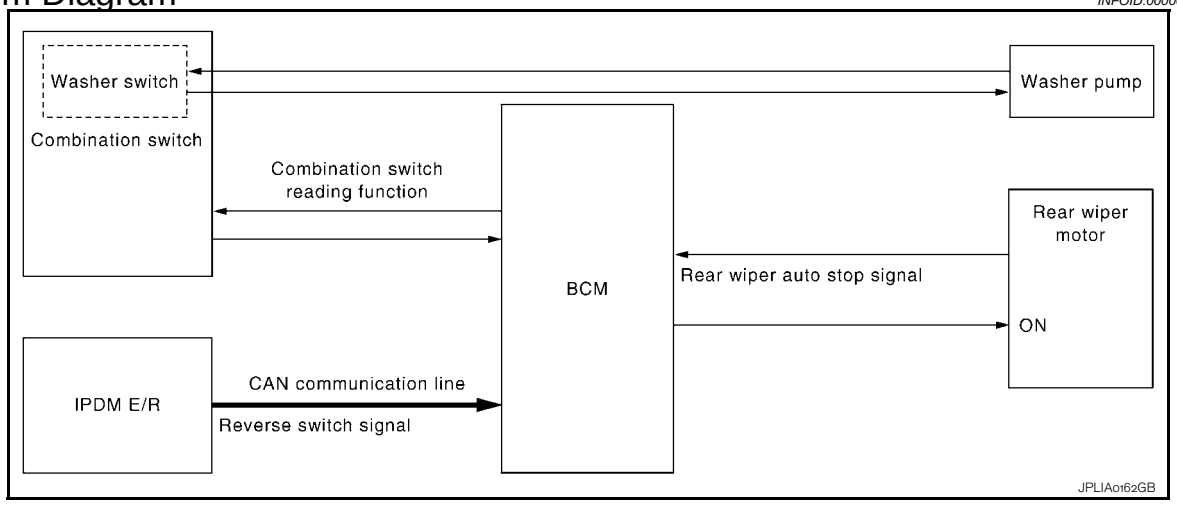
Part	Description
BCM	• Judges each switch status by the combination switch reading function. • Requests (with CAN communication) the front wiper relay and the front wiper high relay ON to IPDM E/R.
IPDM E/R	• Controls the integrated relay according to the request (with CAN communication) from BCM. • Performs the auto stop control of the front wiper.
Combination switch (Wiper & washer switch)	Refer to BCS-9, "System Diagram".
Combination meter	Transmits the vehicle speed signal to BCM with CAN communication.
Light and rain sensor	Detects water droplets on the windshield with infrared rays, and transmits the rain sensor signal to BCM through the light and rain sensor serial link.

cardiagn.com

REAR WIPER AND WASHER SYSTEM

System Diagram

INFOID:0000000000896810



System Description

INFOID:0000000000896811

OUTLINE

The rear wiper is controlled by each function of BCM and IPDM E/R.

Control by BCM
- Combination switch reading function
- Rear wiper control function

Control by IPDM E/R
- Reverse-linked rear wiper function

REAR WIPER BASIC OPERATION

- BCM detects the combination switch condition by the combination switch reading function.
- BCM controls the rear wiper to start or stop.

REAR WIPER ON OPERATION

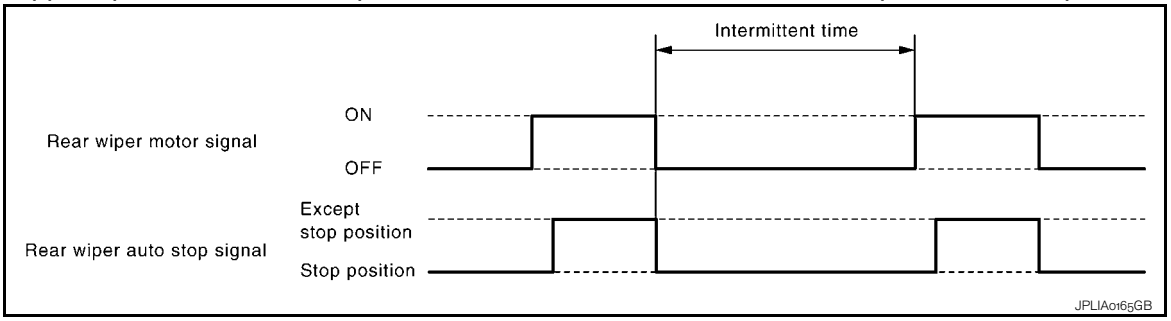
- BCM supplies power to the rear wiper motor according to the rear wiper ON operating condition.

Rear wiper ON operating condition
- Ignition switch ON
- Rear wiper switch ON

REAR WIPER INT OPERATION LINKED WITH VEHICLE SPEED

- BCM supplies power to the rear wiper motor according to the INT operating condition.

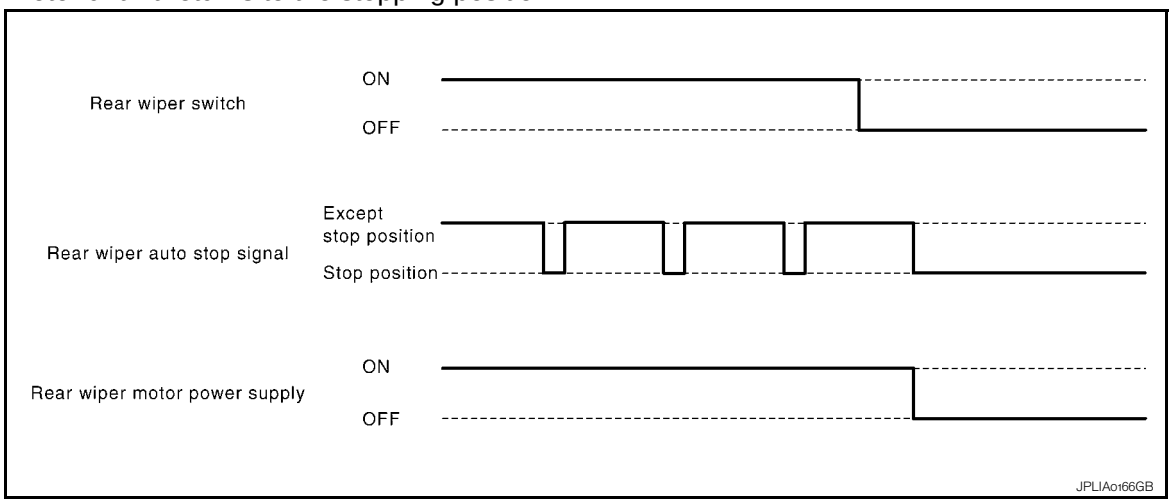
Rear wiper INT operating condition
- Ignition switch ON
- Rear wiper switch INT
- BCM controls the rear wiper to operate once.
- BCM detects the rear wiper motor stopping position.
- BCM supplies power to the rear wiper motor after an intermittent from the stop of the rear wiper motor.



carDiag.com

REAR WIPER AUTO STOP OPERATION

- BCM stops supplying power to the rear wiper motor when the rear wiper switch is turned OFF.
- BCM reads an auto stop signal from the rear wiper motor to detect a rear wiper motor position.
- When the rear wiper motor is at other than the stopping position, BCM continues to supply power to the rear wiper motor until it returns to the stopping position.



NOTE:
BCM stops supplying power to the rear wiper motor when the ignition switch is turned OFF.

REAR WIPER OPERATION LINKED WITH WASHER

- BCM supplies power to the rear wiper motor according to the washer linked operating condition of rear wiper. When the rear washer switch is turned OFF, BCM controls rear wiper to operate approximately three times.

Washer linked operating condition of rear wiper
- Ignition switch ON
- Rear washer switch ON (0.4 second or more)
- Washer pump becomes grounded through the combination switch when the rear washer switch is turned ON.

REAR WIPER OPERATION LINKED WITH REVERSE

- BCM controls rear wiper to operate once according to the conditions of rear wiper operation linked with reverse.

Condition of rear wiper operation linked with reverse
- Ignition switch ON
- Front wiper switch: LO, HI, AUTO*1, or INT*2
  NOTE:
  *1: With light and rain sensor
  *2: Without light and rain sensor
- Rear wiper switch OFF
- Selector lever “R”.
- IPDM E/R transmits a reverse switch signal to BCM through the CAN communication line when the selector lever is shifted to the “R”.
- BCM supplies power to the rear wiper motor when receiving the reverse switch signal.

REAR WIPER DROP WIPE OPERATION

- BCM controls the rear wiper to operate once according to the rear wiper drop wipe operating condition.

Rear wiper drop wipe operating condition
- Ignition switch ON
- Rear wiper switch OFF
- Rear washer switch OFF
- BCM controls the rear wiper so that it operates once time approximately three seconds later after the washer interlocking operation of the rear wiper.

REAR WIPER FAIL–SAFE OPERATION

cardiagn.com

BCM performs the fail-safe function when the rear wiper auto stop circuit is malfunctioning. Refer to BCS-59, "Fail Safe".

Component Parts Location

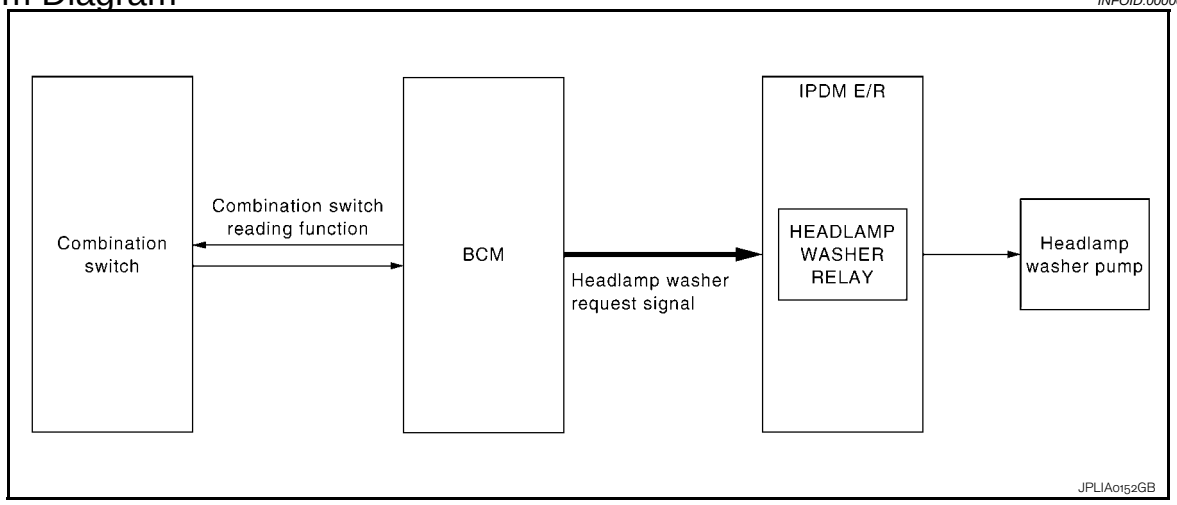
HEADLAMP WASHER SYSTEM

System Diagram

INFOID:0000000000896814



System Description

INFOID:0000000000896815

OUTLINE

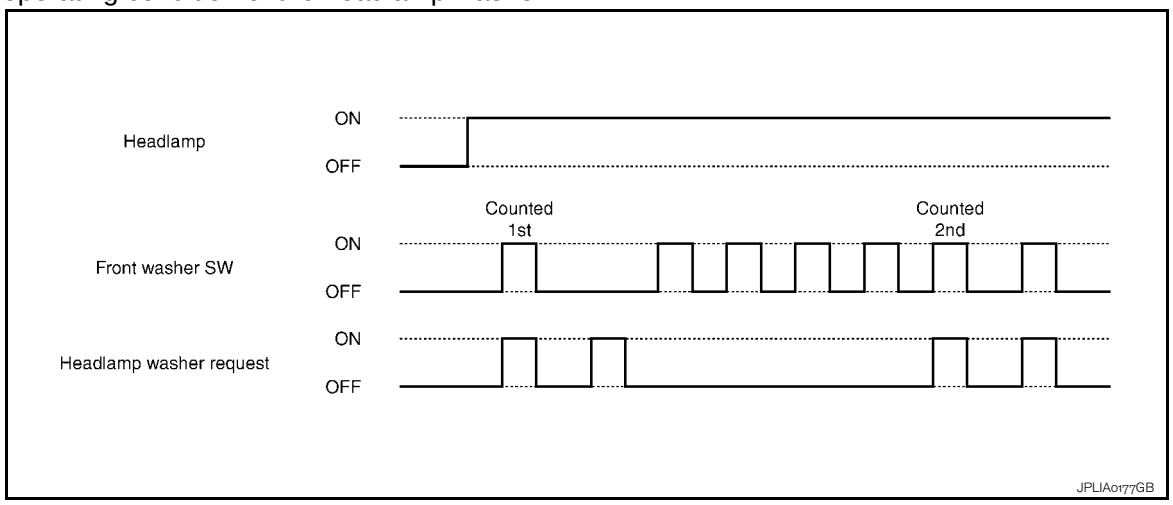
The headlamp washer is controlled by each function of BCM and IPDM E/R.

Control by BCM
- Combination switch reading function
- Headlamp washer control function

Control by IPDM E/R
- Relay control function

HEADLAMP WASHER BASIC OPERATION

- BCM detects the combination switch condition by the combination switch reading function.
- BCM transmits the headlamp washer request signal to IPDM E/R with CAN communication depending on each operating condition of the headlamp washer.



Operating conditions (The first time)
- Ignition switch ON
- Headlamps ON (PASS excluded)
- Front washer switch ON at first time.

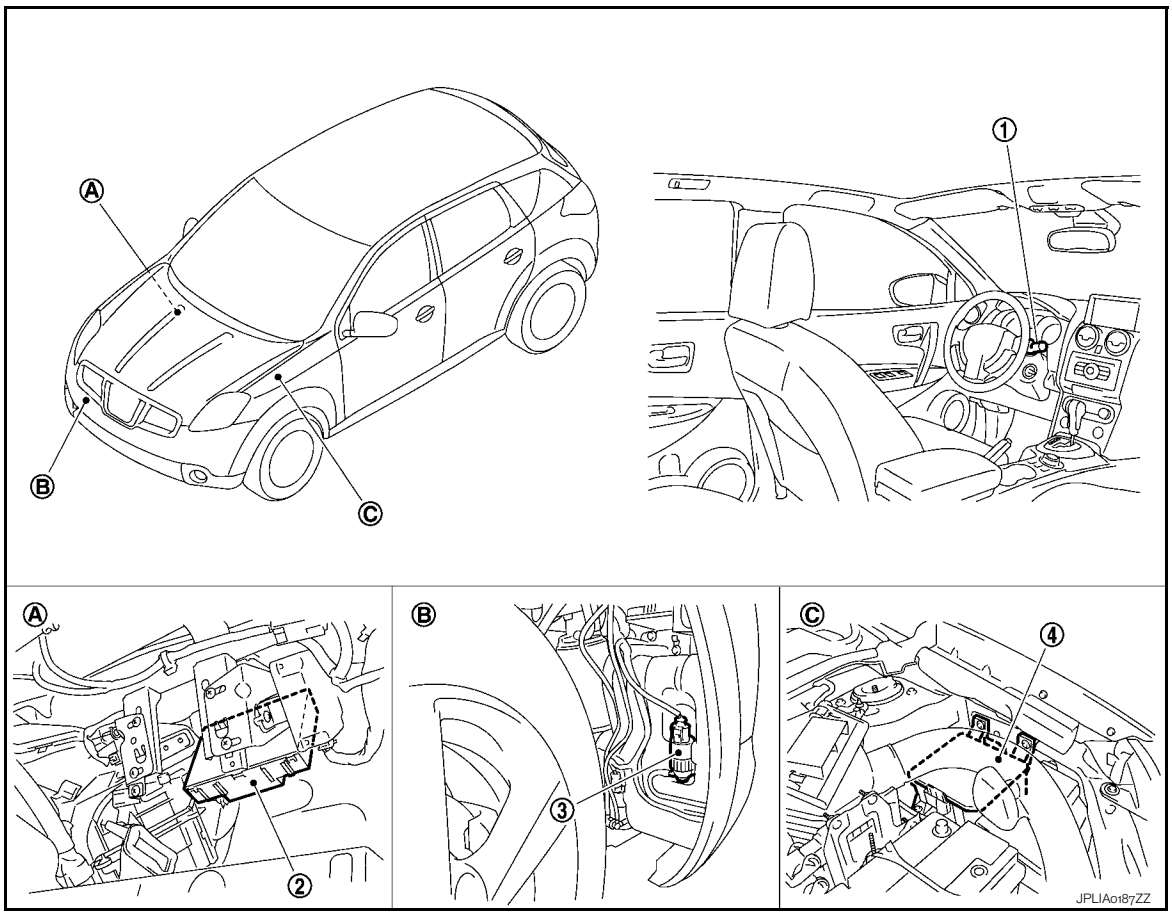
Operating conditions (From the second time)
- Ignition switch ON
- Headlamps ON (PASS excluded)
- Front washer switch ON at fifth time after the first time.

carDiagn.com

- IPDM E/R turns ON/OFF the headlamp washer relay by receiving the headlamp washer request signal, and controls the headlamp washer twice.

Component Parts Location

INFOID:0000000000896816



1. Combination switch
2. BCM
3. Headlamp washer pump
4. IPDM E/R
A. Over the glove box
B. Radiator core support (RH)
C. Engine room (left side)

Component Description

INFOID:0000000000896820

Part	Description
BCM	• Judges each switch status by the combination switch reading function. • Requests (with CAN communication) the headlamp washer relay ON to IPDM E/R.
IPDM E/R	Controls the integrated relay according to the request (with CAN communication) from BCM.
Combination switch (Wiper & washer switch)	Refer to BCS-9, "System Diagram".

cardiagn.com

DIAGNOSIS SYSTEM (BCM)

COMMON ITEM

COMMON ITEM : CONSULT-III Function (BCM - COMMON ITEM)

INFOID:0000000001054857

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with BCM.

Diagnosis mode	Function Description
WORK SUPPORT	Changes the setting for each system function.
SELF-DIAG RESULTS	Displays the diagnosis results judged by BCM. Refer to BCS-61, "DTC Index".
CAN DIAG SUPPORT MNTR	Monitors the reception status of CAN communication viewed from BCM.
DATA MONITOR	The BCM input/output signals are displayed.
ACTIVE TEST	The signals used to activate each device are forcibly supplied from BCM.
ECU IDENTIFICATION	The BCM part number is displayed.
CONFIGURATION	• Enables to read and save the vehicle specification. • Enables to write the vehicle specification when replacing BCM.

SYSTEM APPLICATION

BCM can perform the following functions for each system.

NOTE:

It can perform the diagnosis modes except the following for all sub system selection items.

System	Sub system selection item	Diagnosis mode		
		WORK SUPPORT	DATA MONITOR	ACTIVE TEST
—	BCM	×		
Door lock	DOOR LOCK	×	×	×
Rear window defogger	REAR DEFOGGER		×	×
Warning chime	BUZZER		×	×
Interior room lamp timer	INT LAMP	×	×	×
Remote keyless entry system	MULTI REMOTE ENT	×	×	×
Exterior lamp	HEAD LAMP	×	×	×
Wiper and washer	WIPER	×	×	×
Turn signal and hazard warning lamps	FLASHER		×	×
Air conditioner	AIR CONDITONER		×	
Intelligent Key system	INTELLIGENT KEY		×	
Combination switch	COMB SW		×	
Immobilizer	IMMU		×	×
Interior room lamp battery saver	BATTERY SAVER	×	×	×
Trunk open	TRUNK		×	
Vehicle security system	THEFT ALM	×	×	×
Signal buffer system	SIGNAL BUFFER		×	×
PTC heater system	PTC HEATER		×	×

WIPER

WIPER : CONSULT-III Function (BCM - WIPER)

INFOID:0000000000896761

WORK SUPPORT

carDiag.com

Service item	Setting item	Description
WIPER SPEED SETTING	ON*	With vehicle speed (Front wiper intermittent time linked with the vehicle speed and wiper intermittent dial position)
	OFF	Without vehicle speed (Front wiper intermittent time linked with the wiper intermittent dial position)

*:Factory setting

DATA MONITOR

Monitor Item [Unit]	Description
IGN ON SW	Ignition switch ON status judged from ignition power supply.
IGN SW CAN	Ignition switch ON status received from IPDM E/R with CAN communication.
FR WIPER HI [OFF/ON]	Each switch status that BCM judges from the combination switch reading function.
FR WIPER LOW [OFF/ON]	
FR WIPER INT [OFF/ON]	
FR WASHER SW [OFF/ON]	
H/L WASH SW [OFF/ON]	**NOTE:** The item is indicated, but not monitored.
INT VOLUME [1 – 7]	Each switch status that BCM judges from the combination switch reading function.
FR WIPER STOP [OFF/ON]	Front wiper motor (stop position) status received from IPDM E/R with CAN communication.
VEHICLE SPEED [km/h]	The value of the vehicle speed signal received from combination meter with CAN communication.
RR WIPER ON [OFF/ON]	Each switch status that BCM judges from the combination switch reading function.
RR WIPER INT [OFF/ON]	
RR WASHER SW [OFF/ON]	
RR WIPER STOP [OFF/ON]	Rear wiper motor (stop position) status input from the rear wiper motor.

ACTIVE TEST

Test item	Operation	Description
FR WIPER	HI	Transmits the front wiper request signal (HI) to IPDM E/R with CAN communication to operate the front wiper HI operation.
	LO	Transmits the front wiper request signal (LO) to IPDM E/R with CAN communication to operate the front wiper LO operation.
	INT	Transmits the front wiper request signal (INT) to IPDM E/R with CAN communication to operate the front wiper INT operation.
	OFF	Stops transmitting the front wiper request signal to stop the front wiper operation.
RR WIPER	ON	Outputs the voltage to operate the rear wiper motor.
	OFF	Stops the voltage to stop.
HEADLAMP WASHER	ON	Transmits the headlamp washer request signal to IPDM E/R with CAN communication to operate the headlamp washer operation.

cardiagn.com

DIAGNOSIS SYSTEM (IPDM E/R)

Diagnosis Description

INFOID:0000000001054858

Auto active test

Description

In auto active test mode, the IPDM E/R sends a drive signal to the following systems to check their operation.

- Oil pressure warning lamp
- Rear window defogger
- Front wiper (LO, HI)
- Parking lamps
- License plate lamps
- Tail lamps
- Front fog lamps
- Headlamps (LO, HI)
- A/C compressor (magnet clutch)
- Cooling fan (LO, HI)

Operation procedure

1. Close the hood and lift the wiper arms from the windshield. (Prevent windshield damage due to wiper operation)
   NOTE:
   When auto active test is performed with hood opened, sprinkle water on windshield beforehand.
2. Turn ignition switch OFF.
3. Turn the ignition switch ON, and within 20 seconds, press the driver door switch 10 times. Then turn the ignition switch OFF.
   CAUTION:
   Close passenger door.
4. Turn the ignition switch ON within 10 seconds. Then the horn sounds once and the auto active test starts.
5. The oil pressure warning lamp starts blinking when the auto active test starts.
6. After a series of the following operations is repeated 3 times, auto active test is completed.

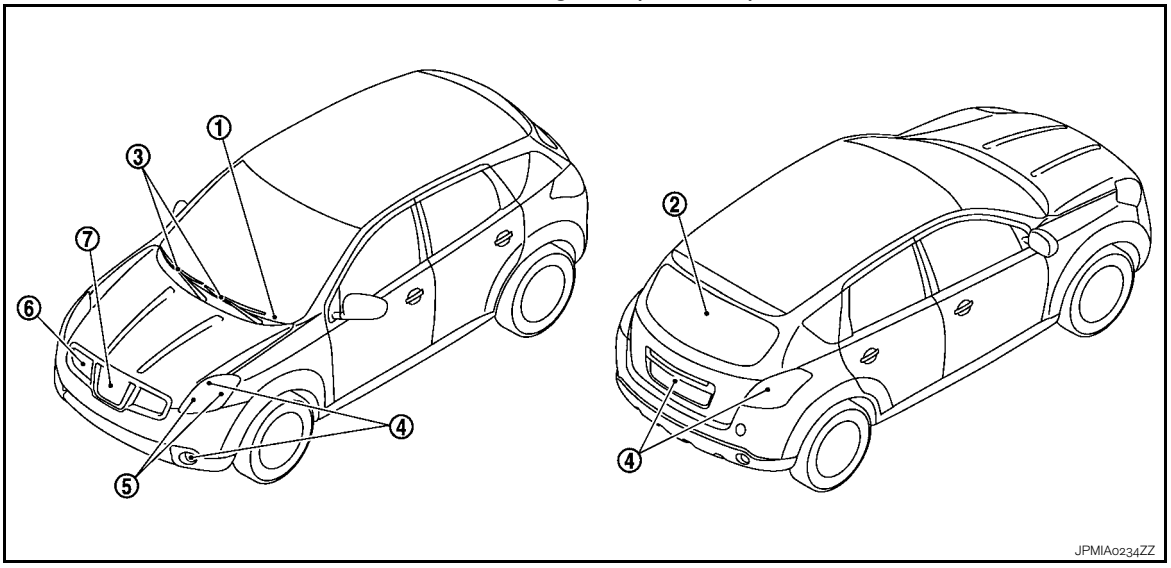
NOTE:
When auto active test mode has to be cancelled halfway through test, turn ignition switch OFF.

CAUTION:

- **If auto active test mode cannot be actuated, check door switch system.**
- **Never start the engine.**

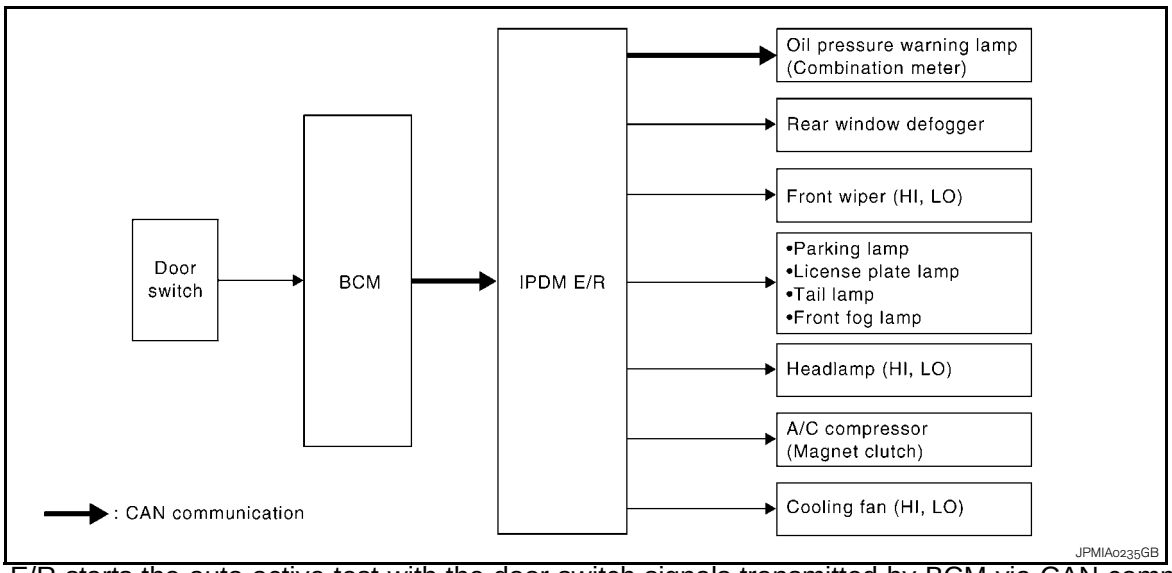
Inspection in auto active test mode

When auto active test mode is actuated, the following 6 steps are repeated 3 times.



Operation sequence	Inspection location	Operation
1	Oil pressure warning lamp	Blinks continuously during operation of auto active test.
2	Rear window defogger	10 seconds
3	Front wiper	LO for 5 seconds → HI for 5 seconds
4	• Parking lamps • License plate lamps • Tail lamps • Front fog lamps	10 seconds
5	Headlamps	LO ⇔ HI 5 times
6	A/C compressor (magnet clutch)	ON ⇔ OFF 5 times
7	Cooling fan	LO for 5 seconds → HI for 5 seconds

Concept of auto active test



- IPDM E/R starts the auto active test with the door switch signals transmitted by BCM via CAN communication. Therefore, the CAN communication line between IPDM E/R and BCM is considered normal if the auto active test starts successfully.
- The auto active test facilitates troubleshooting if any systems controlled by IPDM E/R cannot be operated.

Diagnosis chart in auto active test mode

Symptom	Inspection contents		Possible cause
Rear window defogger does not operate	Perform auto active test. Does the rear window defogger operate?	YES	BCM signal input circuit
		NO	• Rear window defogger • Rear window defogger ground circuit • Harness or connector between IPDM E/R and rear window defogger • IPDM E/R
Any of the following components do not operate • Parking lamps • License plate lamps • Tail lamps • Front fog lamps • Headlamp (HI, LO) • Front wiper (HI, LO)	Perform auto active test. Does the applicable system operate?	YES	BCM signal input circuit
		NO	• Lamp or motor • Lamp or motor ground circuit • Harness or connector between IPDM E/R and applicable system • IPDM E/R

cardiagn.com

Symptom	Inspection contents		Possible cause
A/C compressor does not operate	Perform auto active test. Does the magnet clutch operate?	YES	• Communication signal between BCM and auto amp. (with auto A/C) • Communication signal between BCM and heater control panel (without auto A/C, with manual A/C) • BCM • CAN communication signal between BCM and ECM • CAN communication signal between ECM and IPDM E/R
		NO	• Magnet clutch • Harness or connector between IPDM E/R and magnet clutch • IPDM E/R
Oil pressure warning lamp does not operate	Perform auto active test. Does the oil pressure warning lamp blink?	YES	• Harness or connector between IPDM E/R and oil pressure switch • Oil pressure switch • IPDM E/R
		NO	• CAN communication signal between IPDM E/R and BCM • CAN communication signal between BCM and combination meter • Combination meter
Cooling fan does not operate	Perform auto active test. Does the cooling fan operate?	YES	• ECM signal input circuit • CAN communication signal between ECM and IPDM E/R
		NO	• Cooling fan • Cooling fan ground circuit • Harness or connector between IPDM E/R and cooling fan • IPDM E/R • Cooling fan relay-3* • Harness or connector between IPDM E/R and cooling fan relay-3* • Harness or connector between cooling fan and cooling fan relay-3*

NOTE:

*: MR engine and K9K engine models

CONSULT - III Function (IPDM E/R)

INFOID:0000000001054859

APPLICATION ITEM

CONSULT-III performs the following functions via CAN communication with IPDM E/R.

Diagnosis mode	Description
Ecu Identification	Allows confirmation of IPDM E/R part number.
Self Diagnostic Result	Displays the diagnosis results judged by IPDM E/R.
Data Monitor	Displays the real-time input/output data from IPDM E/R input/output data.
Active Test	IPDM E/R can provide a drive signal to electronic components to check their operations.
CAN Diag Support Monitor	The results of transmit/receive diagnosis of CAN communication can be read.

SELF DIAGNOSTIC

Refer to PCS-30, "DTC Index".

DATA MONITOR

Monitor item

carDiagn.com

Monitor Item [Unit]	MAIN SIGNALS	Description
MOTOR FAN REQ [1 - 4]	×	Displays the value of the cooling fan speed signal received from ECM via CAN communication.
AC COMP REQ [Off/On]	×	Displays the status of the A/C compressor request signal received from ECM via CAN communication.
TAIL&CLR REQ [Off/On]	×	Displays the status of the position light request signal received from BCM via CAN communication.
HL LO REQ [Off/On]	×	Displays the status of the low beam request signal received from BCM via CAN communication.
HL HI REQ [Off/On]	×	Displays the status of the high beam request signal received from BCM via CAN communication.
FR FOG REQ [Off/On]	×	Displays the status of the front fog light request signal received from BCM via CAN communication.
HL WASHER REQ [Off/On]		Displays the status of the headlamp washer request signal received from BCM via CAN communication.
FR WIP REQ [Stop/1LOW/Low/Hi]	×	Displays the status of the front wiper request signal received from BCM via CAN communication.
WIP AUTO STOP [STOP P/ACT P]	×	Displays the status of the front wiper auto stop signal judged by IPDM E/R.
WIP PROT [Off/BLOCK]	×	Displays the status of the front wiper fail-safe operation judged by IPDM E/R.
ST RLY REQ [Off/On]		Displays the status of the ignition and starter request signal received from BCM via CAN communication.
IGN RLY [Off/On]	×	Displays the status of the ignition relay judged by IPDM E/R.
RR DEF REQ [Off/On]	×	Displays the status of the rear defogger request signal received from BCM via CAN communication.
OIL P SW [Open/Close]		Displays the status of the oil pressure switch judged by IPDM E/R.
REV SW [Off/On]		Displays the status of the reverse switch judged by IPDM E/R.
HOOD SW [Off/On]		Displays the status of the hood switch judged by IPDM E/R. **NOTE:** This item is monitored only the vehicle with the Vehicle Security (Theft Warning) system.
THFT HRN REQ [Off/On]		Displays the status of the theft warning horn request signal received from BCM via CAN communication. **NOTE:** This item is monitored only the vehicle with the Vehicle Security (Theft Warning) system.
HORN CHIRP [Off/On]		**NOTE:** This item is indicated, but not monitored.
IGN ON SW [Off/On]		Displays the status of the ignition switch judged by IPDM E/R.

ACTIVE TEST

Test item

Test item	Operation	Description
REAR DEFOGGER	Off	OFF
	On	Operates the rear window defogger relay.
FRONT WIPER	Off	OFF
	Lo	Operates the front wiper relay.
	Hi	Operates the front wiper relay and front wiper high relay.

cardiagn.com

Test item	Operation	Description
MOTOR FAN	1	OFF
	2	Operates the cooling fan relay (low operation).
	3	Operates the cooling fan relay (high operation).
	4	
HEAD LAMP WASHER	On	Operates the headlamp washer relay for 1 second.
EXTERNAL LAMPS	Off	OFF
	TAIL	Operates the tail lamp relay.
	Lo	Operates the headlamp low relay.
	Hi	Operates the headlamp low relay and ON/OFF the headlamp high relay at 1 second intervals.
	Fog	Operates the front fog lamp relay.
HORN	On	Operates horn relay for 20 ms.

carDiagn.com

COMPONENT DIAGNOSIS

WIPER AND WASHER FUSE, FUSIBLE LINK

Description

INFOID:0000000000896764

Fuse, fusible link list

Unit	Location	No.	Capacity
Front wiper motor	IPDM E/R	#44	30 A
Washer pump	Fuse block	#3	20 A
Headlamp washer pump	Fuse and fusible link block	#G	30 A

Diagnosis Procedure

INFOID:0000000000896765

1.CHECK FUSES AND FUSIBLE LINK

Check that the following fuses and fusible link are not fusing.

Unit	Location	No.	Capacity
Front wiper motor	IPDM E/R	#44	30 A
Washer pump	Fuse block	#3	20 A
Headlamp washer pump	Fuse and fusible link block	#G	30 A

Is the fuse or fusible link fusing?

YES >> Replace the fuse block or fusible link with a new one after repairing the applicable circuit.
NO >> The fuse or fusible link is normal.

cardiagn.com

FRONT WIPER MOTOR LO CIRCUIT

Component Function Check

INFOID:0000000000924447

1.CHECK FRONT WIPER LO OPERATION

IPDM E/R AUTO ACTIVE TEST
1. Start IPDM E/R auto active test. Refer to PCS-9, "Diagnosis Description".
2. Check that the front wiper operates at the LO operation.

CONSULT-III ACTIVE TEST
1. Select "FRONT WIPER" of IPDM E/R active test item.
2. With operating the test item, check front wiper operation.

LO : Front wiper (LO) operation
OFF : Stop the front wiper.

Is front wiper (LO) operation normally?

YES >> Front wiper motor LO circuit is normal.
NO >> Refer to WW-25, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924448

1.CHECK FRONT WIPER MOTOR FUSE

1. Turn the ignition switch OFF.
2. Check that the following fuses are not fusing.

Unit	Location	Fuse No.	Capacity
Front wiper motor	IPDM E/R	#44	30 A

Is the fuse fusing?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK FRONT WIPER MOTOR (LO) SHORT CIRCUIT

1. Disconnect front wiper motor connector.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E10	7		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors. And then replace the fuse.
NO >> Replace the fuse. (Replace IPDM E/R if the fuse is fusing again.)

3.CHECK FRONT WIPER MOTOR (LO) OUTPUT VOLTAGE

CONSULT-III ACTIVE TEST
1. Connect IPDM E/R connector.
2. Turn the ignition switch ON.
3. Select "FRONT WIPER" of IPDM E/R active test item.
4. With operating the test item, check voltage between IPDM E/R harness connector and ground.

cardiagn.com

Terminals			Test item	Voltage (Approx.)
(+)		(-)		
IPDM E/R		Ground	FRONT WIPER	
Connector	Terminal			
E10	7		LO	Battery voltage
			OFF	0 V

Is the measurement value normal?

YES >> GO TO 4.
NO >> Replace IPDM E/R.

4. CHECK FRONT WIPER MOTOR (LO) OPEN CIRCUIT

1. Turn the ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front wiper motor harness connector.

IPDM E/R		Front wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
E10	7	E20	2	Existed

Does continuity exist?

YES >> Replace front wiper motor.
NO >> Repair the harnesses or connectors.

cardiagn.com

FRONT WIPER MOTOR HI CIRCUIT

Component Function Check

INFOID:0000000000924449

1.CHECK FRONT WIPER HI OPERATION

IPDM E/R AUTO ACTIVE TEST
1. Start IPDM E/R auto active test. Refer to PCS-9, "Diagnosis Description".
2. Check that the front wiper operates at the HI operation.

CONSULT-III ACTIVE TEST
1. Select "FRONT WIPER" of IPDM E/R active test item.
2. With operating the test item, check front wiper operation.

HI : Front wiper (HI) operation
OFF : Stop the front wiper.

Is front wiper (HI) operation normally?

YES >> Front wiper motor HI circuit is normal.
NO >> Refer to WW-27, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924450

1.CHECK FRONT WIPER MOTOR FUSE

1. Turn the ignition switch OFF.
2. Check that the following fuses are not fusing.

Unit	Location	Fuse No.	Capacity
Front wiper motor	IPDM E/R	#44	30 A

Is the fuse fusing?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK FRONT WIPER MOTOR (HI) SHORT CIRCUIT

1. Disconnect front wiper motor connector.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E10	8		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors. And then replace the fuse.
NO >> Replace the fuse. (Replace IPDM E/R if the fuse is fusing again.)

3.CHECK FRONT WIPER MOTOR (HI) OUTPUT VOLTAGE

CONSULT-III ACTIVE TEST
1. Connect IPDM E/R connector.
2. Turn the ignition switch ON.
3. Select "FRONT WIPER" of IPDM E/R active test item.
4. With operating the test item, check voltage between IPDM E/R harness connector and ground.

carDiagn.com

Terminals			Test item	Voltage (Approx.)
(+)		(-)		
IPDM E/R		Ground	FRONT WIPER	
Connector	Terminal			
E10	8		HI	Battery voltage
			OFF	0 V

Is the measurement value normal?

YES >> GO TO 4.
NO >> Replace IPDM E/R.

4. CHECK FRONT WIPER MOTOR (HI) OPEN CIRCUIT

1. Turn the ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and front wiper motor harness connector.

IPDM E/R		Front wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
E10	8	E20	1	Existed

Does continuity exist?

YES >> Replace front wiper motor.
NO >> Repair the harnesses or connectors.

cardiagn.com

FRONT WIPER AUTO STOP SIGNAL CIRCUIT

Component Function Check

INFOID:0000000000924451

1.CHECK FRONT WIPER (AUTO STOP) SIGNAL CHECK

CONSULT-III DATA MONITOR
1. Select "FRONT WIPER STOP" of IPDM E/R data monitor item.
2. Operate the front wiper.
3. Check that "FR WIPER STOP" changes to "STOP P" and "ACT P" linked with the wiper operation.

Monitor item	Condition		Monitor status
FR WIPER STOP	Front wiper motor	Stop position	STOP P
		Except stop position	ACT P

Is the status of item normal?

YES >> Front wiper auto stop signal circuit is normal.
NO >> Refer to WW-29, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000924452

1.CHECK FRONT WIPER MOTOR (AUTO STOP) OUTPUT VOLTAGE

1. Turn the ignition switch OFF.
2. Disconnect front wiper motor connector.
3. Turn the ignition switch ON.
4. Check voltage between IPDM E/R harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(-)	
IPDM E/R		Ground	
Connector	Terminal		
E12	26		Battery voltage

Is the measurement value normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK FRONT WIPER MOTOR (AUTO STOP) SHORT CIRCUIT

1. Turn the ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E12	26		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors.
NO >> Replace IPDM E/R.

3.CHECK FRONT WIPER MOTOR (AUTO STOP) CIRCUIT CONTINUITY

1. Check continuity between IPDM E/R harness connector and front wiper motor harness connector.

carDiagn.com

IPDM E/R		Front wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
E12	26	E20	4	Existed

Does continuity exist?

YES >> Replace front wiper motor.
NO >> Repair the harnesses or connectors.

cardiagn.com

FRONT WIPER MOTOR GROUND CIRCUIT

Diagnosis Procedure

INFOID:0000000000924453

1.CHECK FRONT WIPER MOTOR (GROUND) OPEN CIRCUIT

1. Turn the ignition switch OFF.
2. Disconnect front wiper motor connector.
3. Check continuity between front wiper motor harness connector and ground.

Front wiper motor		Ground	Continuity
Connector	Terminal		
E20	5		Existed

Does continuity exist?

YES >> Front wiper motor ground circuit is normal.
NO >> Repair the harnesses or connectors.

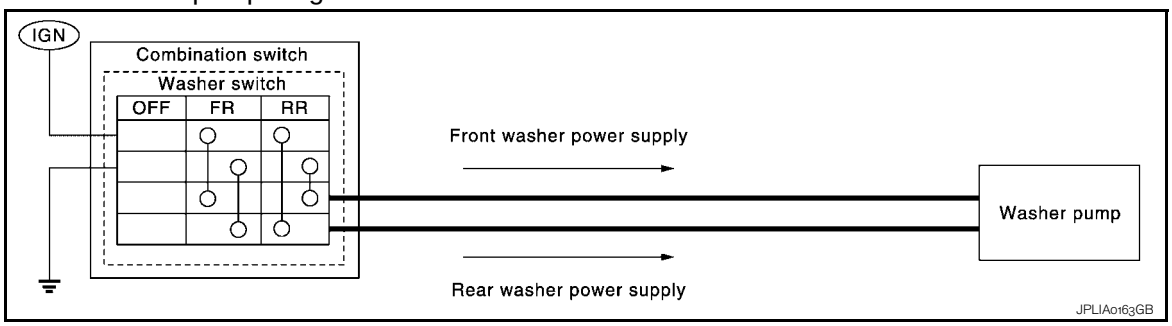
carDiagn.com

WASHER SWITCH

Description

INFOID:0000000000896851

- Washer switch is integrated with combination switch.
- Combination switch switches polarity between front washer operating and rear washer operating to supply power to the washer pump on ground.



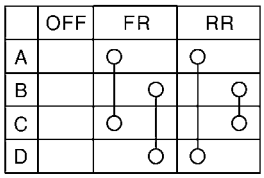
Component Inspection

INFOID:0000000000896852

1.CHECK WIPER SWITCH

1. Turn the ignition switch OFF.
2. Disconnect combination switch connector.
3. Check continuity between the combination switch terminals.

A : Terminal 14
B : Terminal 12
C : Terminal 13
D : Terminal 11



Combination switch		Condition	Continuity
Terminal			
11	12	Front washer switch ON	Existed
13	14		
11	14	Rear washer switch ON	
12	13		

Does continuity exist?

YES >> Wiper and washer switch is normal.
NO >> Replace wiper and washer switch.

cardiagn.com

RAIN SENSOR

Description

INFOID:0000000000984465

Detects water droplets on the windshield with infrared rays, and transmits the rain sensor signal to BCM through the light and rain sensor serial link.

Diagnosis Procedure

INFOID:0000000000907640

Refer to EXL-69, "Component Function Check".

carDiag.com

REAR WIPER MOTOR CIRCUIT

Component Function Check

INFOID:0000000000903198

1.CHECK REAR WIPER ON OPERATION

CONSULT-III ACTIVE TEST
1. Select "RR WIPER" of BCM active test item.
2. With operating the test item, check rear wiper operation.

ON : Rear wiper ON operation
OFF : Stop the rear wiper.

Is rear wiper operation normally?

YES >> Rear wiper motor circuit is normal.
NO >> Refer to WW-34, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000903199

1.CHECK REAR WIPER MOTOR OUTPUT VOLTAGE

CONSULT-III ACTIVE TEST
1. Turn the ignition switch OFF.
2. Disconnect rear wiper motor connector.
3. Turn the ignition switch ON.
4. Select "RR WIPER" of BCM active test item.
5. With operating the test item, check voltage between BCM harness connector and ground.

Terminals			Test item	Voltage (Approx.)
(+)		(–)		
BCM		Ground	REAR WIPER	
Connector	Terminal			
M66	43		ON	Battery voltage
			OFF	0 V

Is the measurement value normal?

YES >> GO TO 2.
NO >> GO TO 3.

2.CHECK REAR WIPER MOTOR GROUND OPEN CIRCUIT

1. Turn the ignition switch OFF.
2. Check continuity between rear wiper motor harness connector and ground.

Rear wiper motor		Ground	Continuity
Connector	Terminal		
D156	1		Existed

Does continuity exist?

YES >> Replace rear wiper motor.
NO >> Repair the harnesses or connectors.

3.CHECK REAR WIPER MOTOR OPEN CIRCUIT

1. Turn the ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM harness connector and rear wiper motor harness connector.

cardiagn.com

BCM		Rear wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
M66	43	D156	3	Existed

Does continuity exist?

YES >> GO TO 4.
NO >> Repair the harnesses or connectors.

4. CHECK REAR WIPER MOTOR SHORT CIRCUIT

Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M66	43		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors.
NO >> Replace BCM. Rrefer to BCS-64, "Exploded View".

carDiag.com

REAR WIPER AUTO STOP SIGNAL CIRCUIT

Component Function Check

INFOID:0000000000903201

1.CHECK REAR WIPER (AUTO STOP) OPERATION

CONSULT-III DATA MONITOR
1. Select "WIPER" of BCM data monitor item.
2. Operate the rear wiper.
3. Check that "RR WIPER STOP" changes to "ON" and "OFF" linked with the wiper operation.

Monitor item	Condition		Monitor status
RR WIPER STOP	Rear wiper motor	Stop position	ON
		Except stop position	OFF

Is the status of item normal?

YES >> Rear wiper auto stop signal circuit is normal.
NO >> Refer to WW-36, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000903200

1.CHECK REAR WIPER MOTOR (AUTO STOP) OUTPUT VOLTAGE

1. Turn the ignition switch OFF.
2. Disconnect rear wiper motor connector.
3. Turn the ignition switch ON.
4. Check voltage between BCM harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
BCM		Ground	
Connector	Terminal		
M66	44		Battery voltage

Is the measurement value normal?

YES >> GO TO 3.
NO >> GO TO 2.

2.CHECK REAR WIPER MOTOR (AUTO STOP) SHORT CIRCUIT

1. Turn the ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM harness connector and ground.

BCM		Ground	Continuity
Connector	Terminal		
M66	44		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors.
NO >> Replace BCM. Refer to BCS-64, "Exploded View".

3.CHECK REAR WIPER MOTOR (AUTO STOP) CIRCUIT CONTINUITY

1. Check continuity between BCM harness connector and rear wiper motor harness connector.

cardiagn.com

BCM		Rear wiper motor		Continuity
Connector	Terminal	Connector	Terminal	
M66	44	D156	2	Existed

Does continuity exist?

YES >> Replace rear wiper motor.
NO >> Repair the harnesses or connectors.

carDiagn.com

HEADLAMP WASHER RELAY

Component Inspection

INFOID:0000000000903229

1.CHECK HEADLAMP WASHER RELAY

1. Turn the ignition switch OFF.
2. Disconnect headlamp washer relay.
3. Apply battery voltage to headlamp washer relay between terminals 3 and 4.
4. Check continuity of headlamp washer relay.

Headlamp washer relay		Condition	Continuity
Terminal		Voltage	
1	2	Apply	Existed
		Not Apply	Not existed

Does continuity exist?

YES >> Headlamp washer relay is normal.
NO >> Replace headlamp washer relay.

cardiagn.com

HEADLAMP WASHER CIRCUIT

Component Function Check

INFOID:0000000000904047

1.CHECK HEADLAMP WASHER OPERATION

CONSULT-III ACTIVE TEST
1. Select "HEADLAMP WASHER" of IPDM E/R active test item.
2. With operating the test item, check headlamp washer operation.

ON	**: Headlamp washer ON operation**
OFF	**: Stop the headlamp washer.**

Is the headlamp washer operation normally?

YES >> Headlamp washer circuit is normal.
NO >> Refer to WW-39, "Diagnosis Procedure".

Diagnosis Procedure

INFOID:0000000000903230

1.CHECK HEADLAMP WASHER FUSIBLE LINK

1. Turn the ignition switch OFF.
2. Check that the headlamp washer 30A fusible link (#G) is not fusing.

Is the fusible link fusing?

YES >> Replace the fusible link after repairing the applicable circuit.
NO >> GO TO 2.

2.CHECK HEADLAMP WASHER RELAY POWER SUPPLY

1. Remove headlamp washer relay.
2. Turn the ignition switch ON.
3. Check voltage between headlamp washer harness connector and ground.

Terminals			Voltage (Approx.)
(+)		(–)	
Headlamp washer relay		Ground	
Connector	Terminal		
E32	2		Battery voltage
	3		

Is the measurement value normal?

YES >> GO TO 3.
NO >> Repair the harnesses or connectors.

3.CHECK HEADLAMP WASHER RELAY

1. Check headlamp washer relay. Refer to WW-38, "Component Inspection".

Is the headlamp washer relay normal?

YES >> GO TO 4.
NO >> Replace the headlamp washer relay.

4.CHECK HEADLAMP WASHER RELAY SIGNAL OUTPUT

CONSULT-III ACTIVE TEST
1. Turn the ignition switch OFF.
2. Install headlamp washer relay.
3. Turn the ignition switch ON.
4. Select "HEADLAMP WASHER" of IPDM E/R active test item.
5. With operating the test item, check voltage between IPDM E/R harness connector and ground.

cardiagn.com

Terminals			Test item	Voltage (Approx.)
(+)		(–)		
IPDM E/R		Ground	HEADLAMP WASHER	
Connector	Terminal			
E13	39		ON	0 V
			OFF	Battery voltage

Is the measurement value normal?

YES >> GO TO 7.
Fixed at 0 V >> GO TO 5.
Fixed at Battery voltage >> Replace IPDM E/R.

5.CHECK HEADLAMP WASHER RELAY CONTROL SIGNAL OPEN CIRCUIT

1. Remove headlamp washer relay.
2. Disconnect IPDM E/R harness connector.
3. Check continuity between IPDM E/R harness connector and headlamp washer relay harness connector.

IPDM E/R		Headlamp washer relay		Continuity
Connector	Terminal	Connector	Terminal	
E13	39	E32	4	Existed

Does continuity exist?

YES >> GO TO 6.
NO >> Repair the harnesses or connectors.

6.CHECK HEADLAMP WASHER RELAY CONTROL SIGNAL SHORT CIRCUIT

Check continuity between IPDM E/R harness connector and ground.

IPDM E/R		Ground	Continuity
Connector	Terminal		
E13	39		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors.
NO >> Replace IPDM E/R.

7.CHECK HEADLAMP WASHER PUMP OPEN CIRCUIT

1. Disconnect headlamp washer pump connector.
2. Remove headlamp washer relay.
3. Check continuity between headlamp washer relay harness connector and headlamp washer pump harness connector.

Headlamp washer relay		Headlamp washer pump		Continuity
Connector	Terminal	Connector	Terminal	
E32	1	E42	1	Existed

Does continuity exist?

YES >> GO TO 8.
NO >> Repair the harnesses or connectors.

8.CHECK HEADLAMP WASHER PUMP SHORT CIRCUIT

Check continuity between headlamp washer pump harness connector and ground.

cardiagn.com

Headlamp washer pump		Ground	Continuity
Connector	Terminal		
E42	1		Not existed

Does continuity exist?

YES >> Repair the harnesses or connectors.
NO >> GO TO 9.

9. CHECK HEADLAMP WASHER PUMP (GROUND) OPEN CIRCUIT

1. Check continuity between headlamp washer pump harness connector and ground.

Headlamp washer pump		Ground	Continuity
Connector	Terminal		
E42	2		Existed

Does continuity exist?

YES >> Replace the headlamp washer pump.
NO >> Repair the harnesses or connectors.

ECU DIAGNOSIS

BCM (BODY CONTROL MODULE)

Reference Value

INFOID:0000000001116753

VALUES ON THE DIAGNOSIS TOOL

Monitor Item	Condition		Value/Status
ACC ON SW	Ignition switch OFF		OFF
	Ignition switch ACC or ON		ON
AIR COND SW	A/C switch OFF		OFF
	A/C switch ON		ON
AUT LIGHT SYS	Outside of the room is dark		OFF
	Outside of the room is bright		ON
AUTO LIGHT SW	Lighting switch OFF		OFF
	Lighting switch AUTO		ON
BACK DOOR SW	Back door closed		OFF
	Back door opened		ON
BATTERY VOLT **NOTE:** Diesel engine models only	Ignition switch ON		Approximately the same as power supply voltage
BUCKLE SW	Driver's seat belt unfastened		OFF
	Driver's seat belt fastened		ON
CDL LOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the LOCK side		ON
CDL UNLOCK SW	Door lock/unlock switch does not operate		OFF
	Press door lock/unlock switch to the UNLOCK side		ON
DOOR SW-AS	Passenger door closed		OFF
	Passenger door opened		ON
DOOR SW-DR	Driver door closed		OFF
	Driver door opened		ON
DOOR SW-RL	Rear LH door closed		OFF
	Rear LH door opened		ON
DOOR SW-RR	Rear RH door closed		OFF
	Rear RH door opened		ON
ELEC PWR CUT **NOTE:** Diesel engine models only	Engine running	Fan switch ON (when engine coolant is cool) **NOTE:** Depending on the ambient temperature, battery voltage, etc.	OFF
		The current status maintained with the signal from ECM received.	FREEZ
		• Fan switch OFF • Fan switch ON after engine warming UP **NOTE:** Depending on the engine coolant temperature, ambient temperature, battery voltage, etc.	INHBT

cardiagn.com

Monitor Item	Condition	Value/Status
ENG COOLNT T **NOTE:** Diesel engine models only	Engine running	Approximately the same as water temperature gauge reading
ENGINE RPM **NOTE:** Diesel engine models only	Engine running	Approximately the same as tachometer reading
ENGINE RUN	Engine stopped	OFF
	Engine running	ON
ENGINE STATUS **NOTE:** Diesel engine models only	Engine stopped	STOP
	While the engine stalls	STALL
	Engine running	RUN
	At engine cranking	CRA
FAN ON SIG	Fan switch OFF	OFF
	Fan switch ON	ON
FR FOG SW	Front fog lamp switch OFF	OFF
	Front fog lamp switch ON	ON
FR WASHER SW	Front washer switch OFF	OFF
	Front washer switch ON	ON
FR WIPER LOW	Front wiper switch OFF	OFF
	Front wiper switch LO	ON
FR WIPER HI	Front wiper switch OFF	OFF
	Front wiper switch HI	ON
FR WIPER INT	Front wiper switch OFF	OFF
	Front wiper switch INT	ON
FR WIPER STOP	Any position other than front wiper stop position	OFF
	Front wiper stop position	ON
HAZARD SW	When hazard switch is not pressed	OFF
	When hazard switch is pressed	ON
HEAD LAMP SW 1	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HEAD LAMP SW 2	Lighting switch OFF	OFF
	Lighting switch 2ND	ON
HI BEAM SW	Lighting switch OFF	OFF
	Lighting switch HI	ON
HOOD SW	Close the hood **NOTE:** Vehicles without theft warning system are OFF-fixed	OFF
	Open the hood	ON
H/L WASH SW	**NOTE:** The item is indicated, but not monitored	OFF
IGN ON SW	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
IGN SW CAN	Ignition switch OFF or ACC	OFF
	Ignition switch ON	ON
INT VOLUME	Wiper intermittent dial is in a dial position 1 - 7	1 - 7

Monitor Item	Condition	Value/Status
I-KEY LOCK	LOCK button of Intelligent Key is not pressed	OFF
	LOCK button of Intelligent Key is pressed	ON
I-KEY UNLOCK	UNLOCK button of Intelligent Key is not pressed	OFF
	UNLOCK button of Intelligent Key is pressed	ON
KEY ON SW	Mechanical key is removed from key cylinder	OFF
	Mechanical key is inserted to key cylinder	ON
KEYLESS LOCK	LOCK button of key fob is not pressed	OFF
	LOCK button of key fob is pressed	ON
KEYLESS UNLOCK	UNLOCK button of key fob is not pressed	OFF
	UNLOCK button of key fob is pressed	ON
LIT-SEN FAIL	Light & rain sensor is in normal condition	OK
	Light & rain sensor is with internal error	NOTOK
OIL PRESS SW	• Ignition switch OFF or ACC • Engine running	OFF
	Ignition switch ON	ON
OUT SIDE TEMP **NOTE:** Diesel engine models	Ignition switch ON	Approximately the same as outside air temperature
PASSING SW	Other than lighting switch PASS	OFF
	Lighting switch PASS	ON
PUSH SW	Return to ignition switch to LOCK position	OFF
	Press ignition switch	ON
REAR DEF SW	Rear window defogger switch OFF	OFF
	Rear window defogger switch ON	ON
RKE LOCK AND UN-LOCK	**NOTE:** The item is indicated, but not monitored	OFF
		ON
RR FOG SW	Rear fog lamp switch OFF	OFF
	Rear fog lamp switch ON	ON
RR WASHER SW	Rear washer switch OFF	OFF
	Rear washer switch ON	ON
RR WIPER INT	Rear wiper switch OFF	OFF
	Rear wiper switch INT	ON
RR WIPER ON	Rear wiper switch OFF	OFF
	Rear wiper switch ON	ON
RR WIPER STOP	Rear wiper stop position	OFF
	Other than rear wiper stop position	ON
SHOCK SENSOR	Ignition switch ON	NOMAL
	After the reception of air bag deployment signal from air bag diagnosis sensor unit	OFF
	During the reception of air bag deployment signal from air bag diagnosis sensor unit	ON
TAIL LAMP SW	Lighting switch OFF	OFF
	Lighting switch 1ST	ON
TRNK OPNR SW	When back door opener switch is not pressed	OFF
	When back door opener switch is pressed	ON

cardiagn.com

Monitor Item	Condition	Value/Status
TURN SIGNAL L	Turn signal switch OFF	OFF
	Turn signal switch LH	ON
TURN SIGNAL R	Turn signal switch OFF	OFF
	Turn signal switch RH	ON
UNLOCK WITH DR	**NOTE:** The item is indicated, but not monitored	OFF
		ON
UNLOCK SHOCK	Other than the following	OFF
	During the unlock operation interlocked with air bag	ON
VEHICLE SPEED	While driving	Equivalent to speedometer reading

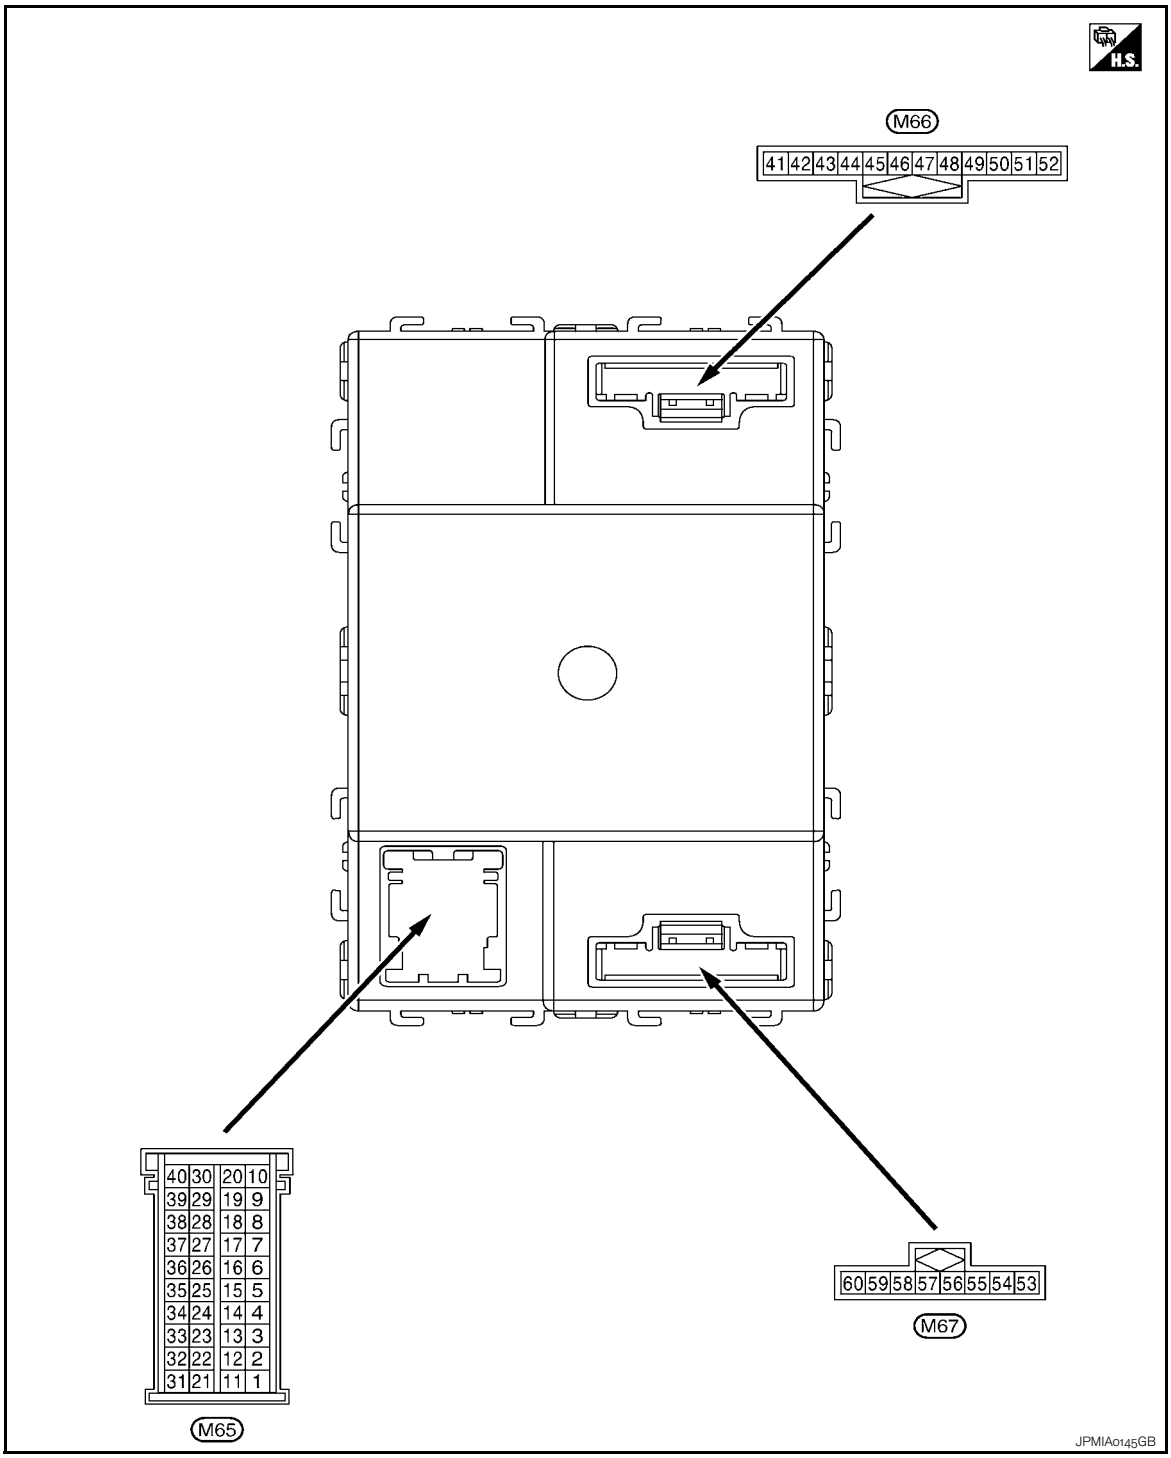
TERMINAL LAYOUT



PHYSICAL VALUES

CAUTION:

- **Check combination switch system terminal waveform under the loaded condition with lighting switch, turn signal switch and wiper switch OFF is not to be fluctuated by being overloaded.**
- **Turn wiper intermittent dial position to 4 except when checking waveform or voltage of wiper intermittent dial position. Wiper intermittent dial position can be confirmed on CONSULT -III. Refer to BCS-26, "COMB SW : CONSULT-III Function (BCM - COMB SW)".**
- **BCM reads the status of the combination switch at 10 ms internal normally. Refer to BCS-7, "System Description".**

Fail Safe

INFOID:0000000001116755

Fail-safe index

BCM performs fail-safe control when any DTC listed below is detected.

cardiagn.com

Display contents of CONSULT	Fail-safe	Cancellation
B2190: NATS ANTENNA AMP	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2191: DIFFERENCE OF KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2192: ID DISCORD BCM-ECM	Fuel cut (ECM)	Erase DTC
B2193: CHAIN OF BCM-ECM	Fuel cut (ECM)	Erase DTC
B2194: DISCORD BCM-I-KEY	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2195: ANTI SCANNING	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC
B2196: DONGLE NG	• Inhibits engine cranking • Inhibits steering lock unlocking (Intelligent Key unit) • Fuel cut (ECM)	Erase DTC

REAR WIPER CONTROL

BCM detects a rear wiper stopping position according to a rear wiper auto stop signal.
When a rear wiper auto stop signal is in the condition listed below, BCM stops power supply to rear wiper after rear wiper is activated for five seconds.

Ignition switch	Rear wiper switch	Auto stop signal
ON	OFF	Rear wiper stop position signal cannot be input 5 seconds.
	ON	The signal does not change for 5 seconds.

NOTE:
The above operation is repeated when operating the rear wiper switch one minute after the stop of the rear wiper caused by Fail-safe.

TURN SIGNAL LAMP CONTROL

BCM detects the turn signal lamp circuit status from the terminal voltage.
BCM increases the turn signal lamp blinking speed if the bulb or harness open is detected with the turn signal lamp operating.

NOTE:
The blinking speed is normal while activating the hazard warning lamp.

LIGHT & RAIN SENSOR MALFUNCTION DETECTION FUNCTION

BCM controls the following items when LIGHT & RAIN sensor has a malfunction.

Auto Light Control
Headlamp is turned ON.

Front Wiper Control
The condition just before the activation of Fail-safe is maintained until the front wiper switch is turned OFF.

DTC Index

INFOID:0000000001116757

NOTE:

Details of time display

- CRNT: Displays when there is a malfunction now or after returning to the normal condition until turning ignition switch OFF → ON again.
- PAST: Displays when there is a malfunction that is detected in the past and stored.
- 1 - 39: Displayed if any previous malfunction is present when current condition is normal. It increases like 1 → 2 → 3...38 → 39 after returning to the normal condition whenever ignition switch OFF → ON. The counter remains at 39 even if the number of cycles exceeds it. It is counted from 1 again when turning ignition switch OFF → ON after returning to the normal condition if the malfunction is detected again.

Fail Safe

INFOID:0000000001116760

CAN communication control

When CAN communication with ECM and BCM is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.

If no CAN communication is available with ECM

cardiagn.com

Control part	Fail-safe in operation
Cooling fan	• The cooling fan relay-2*1 or the cooling fan relay-3*2 turns ON when the ignition switch is turned ON • Turns off the fan motor low relay when the ignition switch is turned OFF
A/C compressor	A/C relay OFF

*1: HR engine models

*2: MR engine and K9K engine models

If no CAN communication is available with BCM

Control part	Fail-safe in operation
Headlamp	• The headlamp low relay turns ON when the ignition switch is turned ON • The headlamp low relay turns OFF when the ignition switch is turned OFF • Headlamp high relay OFF
• Parking lamps • License plate lamps • Tail lamps • Illuminations	• The tail lamp relay turns ON when the ignition switch is turned ON • The tail lamp relay turns OFF when the ignition switch is turned OFF
Front wiper	• The status just before activation of fail-safe control is maintained until the ignition switch is turned OFF while the front wiper is operating at LO or HI speed. • The front wiper is operated at LO speed until the ignition switch is turned OFF if the fail-safe control is activated while the front wiper is set in the INT mode and the front wiper motor is operating.
Front fog lamps	Front fog lamp relay OFF
Starter motor	Inhibit relay OFF
Rear window defogger	Rear window defogger relay OFF
Headlamp washer	Headlamp washer relay OFF
PTC heater	PTC heater relay OFF

Ignition relay malfunction detection function

- IPDM E/R monitors the voltage at the contact circuit and excitation coil circuit of the ignition relay inside it.
- IPDM E/R judges the ignition relay error if the voltage differs between the contact circuit and the excitation coil circuit.
- If the ignition relay cannot turn OFF due to contact seizure, it activates the tail lamp relay for 10 minutes to alert the user to the ignition relay malfunction when the ignition switch is turned OFF.

DTC	Ignition switch	Ignition relay	Tail lamp relay
—	ON	ON	—
—	OFF	OFF	—
B2098: IGN RLY ON	OFF	ON	ON (10 minutes)
B2099: IGN RLY OFF	ON	OFF	—

NOTE:

The tail lamp relay is turned OFF when the ignition switch is turned ON.

Front wiper control

IPDM E/R detects the front wiper stop position with the front wiper auto stop signal.
When the front wiper auto stop signal is in the conditions listed below, IPDM E/R repeats a front wiper 10 seconds operation and 20 seconds stop five times.

Ignition switch	Front wiper switch	Front wiper auto stop signal
ON	OFF	The front wiper auto stop signal (stop position) cannot be input for 10 seconds.
	ON	The front wiper auto stop signal does not change for 10 seconds.

NOTE:

carDiagn.com

This operation status can be confirmed on the IPDM E/R “Data Monitor” that displays “BLOCK” for the item “WIP PROT” while the wiper is stopped.

DTC Index

SYMPTOM DIAGNOSIS

WIPER AND WASHER SYSTEM SYMPTOMS

Symptom Table

INFOID:0000000000924455

CAUTION:

Perform the self-diagnosis with CONSULT-III before performing the diagnosis by symptom. Perform the diagnosis by DTC if DTC is detected.

Symptom		Probable malfunction location	Inspection item
Front wiper does not operate.	HI only	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		• IPDM E/R • Harness between IPDM E/R and front wiper motor • Front wiper motor	Front wiper motor (HI) circuit Refer to WW-27, "Component Function Check".
		Front wiper request signal • BCM • IPDM E/R	IPDM E/R DATA MONITOR "FR WIP REQ"
	LO and INT	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		• IPDM E/R • Harness between IPDM E/R and front wiper motor • Front wiper motor	Front wiper motor (LO) circuit Refer to WW-25, "Component Function Check".
		Front wiper request signal • BCM • IPDM E/R	IPDM E/R DATA MONITOR "FR WIP REQ"
	INT only	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		Front wiper request signal • BCM • IPDM E/R	IPDM E/R DATA MONITOR "FR WIP REQ"
	HI, LO, and INT	SYMPTOM DIAGNOSIS “FRONT WIPER DOES NOT OPERATE” Refer to WW-93, "Diagnosis Procedure".	

cardiagn.com

Symptom		Probable malfunction location	Inspection item
Front wiper does not stop.	HI only	• Combination switch • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		Front wiper request signal • BCM • IPDM E/R	IPDM E/R DATA MONITOR "FR WIP REQ"
		IPDM E/R	—
	LO only	• Combination switch • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		Front wiper request signal • BCM • IPDM E/R	IPDM E/R DATA MONITOR "FR WIP REQ"
		IPDM E/R	—
	INT only	• Combination switch • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		Front wiper request signal • BCM • IPDM E/R	IPDM E/R DATA MONITOR "FR WIP REQ"
Front wiper does not operate normally.	Intermittent adjustment cannot be performed.	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		BCM	—
	Intermittent control linked with vehicle speed cannot be performed.	Check the vehicle speed detection wiper setting. Refer to WW-17, "WIPER : CONSULT-III Function (BCM - WIPER)".	
	Wiper is not linked to the washer operation.	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		BCM	—
	Does not return to stop position (Repeatedly operates for 10 seconds and then stops for 20 seconds. After that, it stops the operation).	• IPDM E/R • Harness between IPDM E/R and front wiper motor • Front wiper motor	Front wiper auto stop signal circuit Refer to WW-29, "Component Function Check".
Rear wiper does not operate.	ON only	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
	INT only	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
	ON and INT	• Combination switch • Harness between combination switch and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		• BCM • Harness between rear wiper motor and BCM • Harness between rear wiper motor and ground • Rear wiper motor	Combination switch Refer to WW-34, "Component Function Check".

cardiagn.com

Symptom		Probable malfunction location	Inspection item
Rear wiper does not stop.	ON only	• Combination switch • BCM	Rear wiper motor circuit Refer to WW-34, "Component Function Check".
	INT only	• Combination switch • BCM	Combination switch Refer to BCS-63, "Symptom Table".
Rear wiper does not operate normally.	Wiper is not linked to the washer operation.	• Combination switch • Harness between rear wiper motor and BCM • BCM	Combination switch Refer to BCS-63, "Symptom Table".
		BCM	—
	Rear wiper does not return to the Stop position (Stops after a five-second operation).	• BCM • Harness between rear wiper motor and BCM • Rear wiper motor	Rear wiper auto stop signal circuit Refer to WW-36, "Component Function Check".
	Rear wiper stops after operating for five seconds when ignition switch is turned ON.		
	Rear wiper does not operate even when selector lever is shifted to the “R”.	Reverse switch signal (CAN communication) • BCM • IPDM E/R	IPDM E/R DATA MONITOR “REV SW”
Headlamp washer does not operate.	Headlamp washer does not operate with the front washer when headlamps are turned ON.	• Combination switch • Harness between combination switch and BCM • BCM • Headlamp washer pump	Combination switch Refer to BCS-63, "Symptom Table".
		• Fusible link • Harness between fusible link and headlamp washer relay • Headlamp washer relay • Harness between headlamp washer relay and IPDM E/R • IPDM E/R • Harness between headlamp washer relay and headlamp washer pump • Harness between headlamp washer pump and ground • Headlamp washer pump	Headlamp washer circuit Refer to WW-39, "Component Function Check".
		BCM	—

NORMAL OPERATING CONDITION

Description

INFOID:0000000000924458

FRONT WIPER MOTOR PROTECTION FUNCTION

- IPDM E/R may stop the front wiper to protect the front wiper motor if any obstruction (operation resistance) such as a large amount of snow is detected during the front wiper operation.
- At that time turn OFF the front wiper and remove the foreign object. Then wait for approximately 20 seconds or more and reactivate the front wiper. The wiper will operate normally.

REAR WIPER MOTOR PROTECTION FUNCTION

- BCM may stop rear wiper to protect the rear wiper motor when the rear wiper is stopped for 5 seconds or more due to a snowfall.
- Rear wiper operates normally one minute after the obstacles are removed with rear wiper OFF.

cardiagn.com

FRONT WIPER DOES NOT OPERATE

Description

INFOID:0000000000924456

The front wiper does not operate under any operation conditions.

Diagnosis Procedure

INFOID:0000000000924457

1.CHECK WIPER RELAY OPERATION

IPDM E/R AUTO ACTIVE TEST
1. Start IPDM E/R auto active test. Refer to PCS-9, "Diagnosis Description".
2. Check that the front wiper operates at the LO/HI operation.

CONSULT-III ACTIVE TEST
1. Select "FRONT WIPER" of IPDM E/R active test item.
2. With operating the test item, check front wiper operation.

LO : Front wiper LO operation
HI : Front wiper HI operation
OFF : Stop the front wiper.

Is front wiper operation normally?

YES >> GO TO 5.
NO >> GO TO 2.

2.CHECK FRONT WIPER MOTOR FUSE

1. Turn the ignition switch OFF.
2. Check that the front wiper motor 30A fuse (#44) is not fusing.

Is the fuse fusing?

YES >> Replace the fuse after repairing the applicable circuit.
NO >> GO TO 3.

3.CHECK FRONT WIPER MOTOR GROUND OPEN CIRCUIT

1. Disconnect front wiper motor connector.
2. Check continuity between front wiper motor harness connector and ground.

Front wiper motor		Ground	Continuity
Connector	Terminal		
E20	5		Existed

Does continuity exist?

YES >> GO TO 4.
NO >> Repair the harnesses or connectors.

4.CHECK FRONT WIPER MOTOR OUTPUT VOLTAGE

CONSULT-III ACTIVE TEST
1. Disconnect front wiper motor connector.
2. Turn the ignition switch ON.
3. Select "FRONT WIPER" of IPDM E/R active test item.
4. With operating the test item, check voltage between IPDM E/R harness connector and ground.

carDiagn.com

Terminals			Test item	Voltage (Approx.)
(+)		(–)		
IPDM E/R		Ground	FRONT WIPER	
Connector	Terminal			
E10	7		LO	Battery voltage
			OFF	0 V
	8		HI	Battery voltage
			OFF	0 V

Is the measurement value normal?

YES >> Replace front wiper motor.
NO >> Replace IPDM E/R.

5.CHECK FRONT WIPER REQUEST SIGNAL INPUT

CONSULT-III DATA MONITOR
1. Select "FR WIP REQ" of IPDM E/R data monitor item.
2. Switch the front wiper switch to HI and LO.
3. With operating the front wiper switch, check the status of "FR WIP REQ".

Monitor item	Condition		Monitor status
FR WIP REQ	Front wiper switch HI	ON	HI
		OFF	STOP
	Front wiper switch LO	ON	LOW
		OFF	STOP

Is the status of item normal?

YES >> Replace IPDM E/R.
NO >> GO TO 6.

6.CHECK COMBINATION SWITCH

1. Perform the inspection of the combination switch. Refer to BCS-63, "Symptom Table".

Is combination switch normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Repair or replace the applicable parts.

cardiagn.com

HEADLAMP WASHER DOES NOT OPERATE

Description

INFOID:0000000001115040

Headlamp washer does not operate linked to front washer operation.

Diagnosis Procedure

INFOID:0000000000904271

1.CHECK IPDM E/R

CONSULT-III DATA MONITOR
1. Turn the lighting switch 2ND.
2. Select "HL WASHER REQ" of IPDM E/R data monitor item.
3. Operate the headlamp washer.
4. Check the status of "HL WASHER REQ".

Monitor item	Condition		Monitor status
HL WASHER REQ	Headlamp washer	Operating	ON
		Stopped	OFF

Is the status of item normal?

YES >> Refer to WW-39, "Component Function Check".
NO >> GO TO 2.

2.CHECK COMBINATION SWITCH

1. Perform the inspection of the combination switch. Refer to BCS-63, "Symptom Table".

Is combination switch normal?

YES >> Replace BCM. Refer to BCS-64, "Exploded View".
NO >> Repair or replace the applicable parts.

PRECAUTION

PRECAUTIONS

Precaution for Supplemental Restraint System (SRS) "AIR BAG" and "SEAT BELT PRE-TENSIONER"

INFOID:0000000001102412

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted. Information necessary to service the system safely is included in the SRC and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRC section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution for Procedure without Cowl Top Cover

INFOID:0000000001102413

When performing the procedure after removing cowl top cover, cover the lower end of windshield with urethane, etc.
