FOREWORD

This manual contains maintenance and repair procedures for the NISSAN MICRA, model K12 series.

In order to assure your safety and the efficient functioning of the vehicle, this manual should be read thoroughly. It is especially important that the PRECAUTIONS in the GI section be completely understood before starting any repair task.

All information in this manual is based on the latest product information at the time of publication. The right is reserved to make changes in specifications and methods at any time without notice.

IMPORTANT SAFETY NOTICE

The proper performance of service is essential for both the safety of the technician and the efficient functioning of the vehicle.
The service methods in this Service Manual are described in such a manner that the service may be performed safely and accurately.
Service varies with the procedures used, the skills of the technician and the tools and parts available. Accordingly, anyone using service procedures, tools or parts which are not specifically recommended by NISSAN must first be completely satisfied that neither personal safety nor the vehicle's safety will be jeopardized by the service method selected.

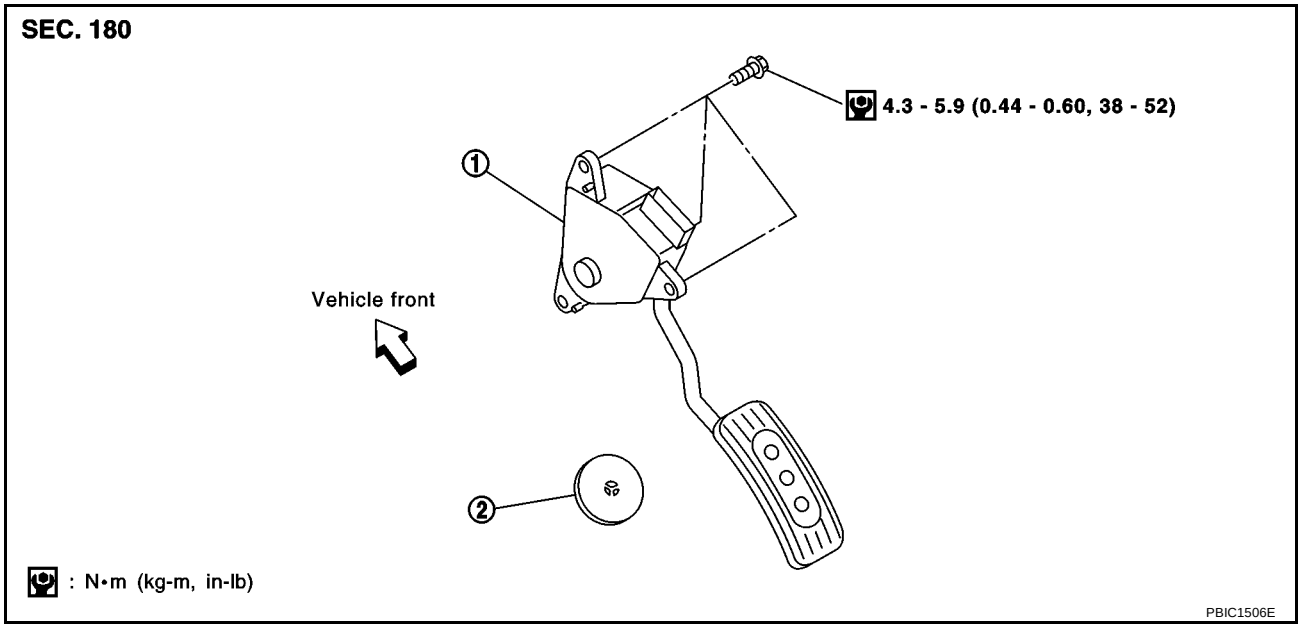
Removal and Installation

EBS00OJF



1. Accelerator pedal assembly
2. Accelerator pedal stopper (Underfloor carpet)

REMOVAL

1. Remove harness connector.
2. Remove mounting bolts, and remove accelerator assembly.

CAUTION:

- **Do not disassemble accelerator pedal assembly and remove sensors.**
- **Handle them carefully without subjecting them to impacts such as dropping.**
- **Be careful not to get it wet.**

3. Fold the floor carpet and remove accelerator pedal stopper.
   - Remove pedal stopper by turning it counterclockwise with fingers.

INSTALLATION

Install in the reverse order of removal. be careful of the following:

- Insert locating pin into vehicle side to position accelerator pedal assembly. Install mounting bolt to accelerator pedal assembly.
- Align the stud bolt on the floor with the thread hole to insert accelerator pedal stopper until it contacts the face.

INSPECTION AFTER INSTALLATION

- Check that the accelerator pedal moves smoothly within the whole operation range.
- Check that the accelerator pedal securely returns to the original position.
- For the electrical inspection of the accelerator pedal assembly, refer to EC-233, "DTC P0226 APP SENSOR" (CR WITH EURO-OBD), EC-621, "DTC P0226 APP SENSOR" (CR WITHOUT EURO-OBD) or “Interpretation”, “DIESEL INJECTION” in EC section(K9K).
- When accelerator electrical connector is disconnected, perform EC-42, "Accelerator Pedal Released Position Learning" (WITH EURO-OBD), EC-503, "Accelerator Pedal Released Position Learning" (WITHOUT EURO-OBD).

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

ECS008MZ

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for On Board Diagnostic (EURO-OBD) System of A/T and Engine — Euro-OBD —

ECS008N0

The ECM has an on board diagnostic system. It will light up the malfunction indicator lamp (MIL) to warn the driver of a malfunction causing emission deterioration.

CAUTION:

- **Be sure to turn the ignition switch “OFF” and disconnect the negative battery terminal before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. Will cause the MIL to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MIL to light up due to an open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Be sure to route and secure the harnesses properly after work. Interference of the harness with a bracket, etc. May cause the MIL to light up due to a short circuit.**
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MIL to light up due to a malfunction of the EGR system or fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the TCM and ECM before returning the vehicle to the customer.**

Precautions for Trouble Diagnosis

ECS008N1

CAN SYSTEM

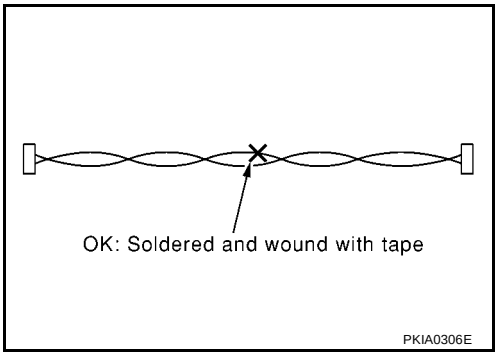
- Do not apply voltage of 7.0V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0V or less.

Precautions for Harness Repair

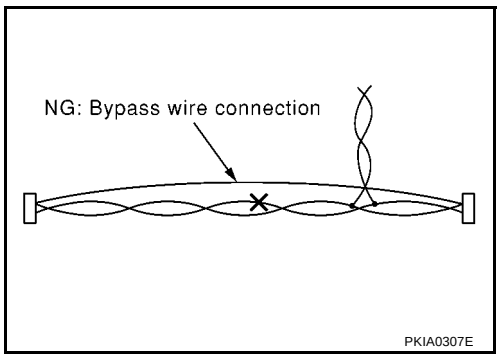
ECS008N2

CAN SYSTEM

- Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in)]



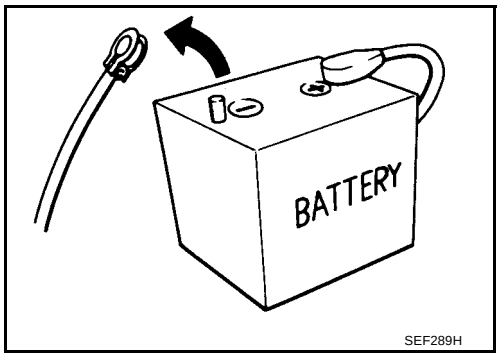
- Do not perform bypass wire connections for the repair parts.(The spliced wire will become separated and the characteristics of twisted line will be lost.)



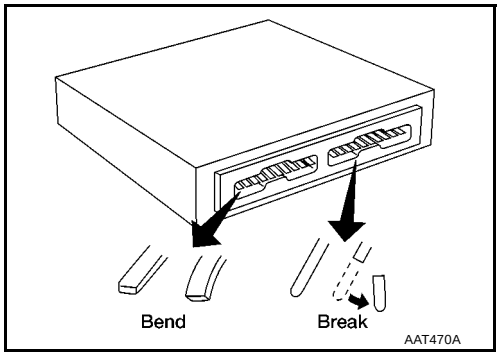
Precautions

ECS008N3

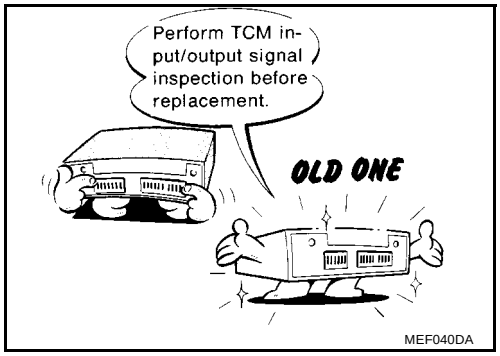
- **Before connecting or disconnecting the TCM harness connector, turn ignition switch OFF and disconnect negative battery terminal. Failure to do so may damage the TCM. Because battery voltage is applied to TCM even if ignition switch is turned off.**



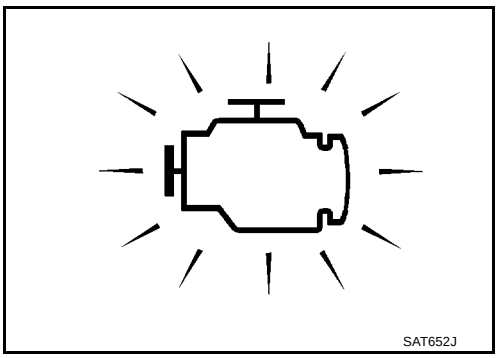
- **When connecting or disconnecting pin connectors into or from TCM, take care not to damage pin terminals (bend or break).**
  Make sure that there are not any bends or breaks on TCM pin terminal, when connecting pin connectors.



- **Before replacing TCM, perform TCM input/output signal inspection and make sure whether TCM functions properly or not. (See page AT-104, "TCM Terminals and Reference Value".)**



- **After performing each TROUBLE DIAGNOSIS, perform "DTC (Diagnostic Trouble Code) CONFIRMATION PROCEDURE".**
  The DTC should not be displayed in the "DTC CONFIRMATION PROCEDURE" if the repair is completed.
- Before proceeding with disassembly, thoroughly clean the outside of the transaxle. It is important to prevent the internal parts from becoming contaminated by dirt or other foreign matter.
- Disassembly should be done in a clean work area.
- Use lint-free cloth or towels for wiping parts clean. Common shop rags can leave fibers that could interfere with the operation of the transaxle.



SAT652J

- Place disassembled parts in order for easier and proper assembly.
- All parts should be carefully cleaned with a general purpose, non-flammable solvent before inspection or reassembly.
- Gaskets, seals and O-rings should be replaced any time the transaxle is disassembled.
- It is very important to perform functional tests whenever they are indicated.
- The valve body contains precision parts and requires extreme care when parts are removed and serviced. Place disassembled valve body parts in order for easier and proper assembly. Care will also prevent springs and small parts from becoming scattered or lost.
- Properly installed valves, sleeves, plugs, etc. Will slide along bores in valve body under their own weight.
- Before assembly, apply a coat of recommended ATF to all parts. Apply petroleum jelly to protect O-rings and seals, or hold bearings and washers in place during assembly. Do not use grease.
- Extreme care should be taken to avoid damage to O-rings, seals and gaskets when assembling.
- After overhaul, refill the transaxle with new ATF.
- When the A/T drain plug is removed, only some of the fluid is drained. Old A/T fluid will remain in torque converter and ATF cooling system.
  Always follow the procedures under "Changing A/T Fluid" in the AT section when changing A/T fluid. Refer to "Changing A/T Fluid", AT-12, "A/T FLUID" .

Service Notice or Precautions

ECS008N4

FAIL-SAFE

The TCM has an electronic Fail-Safe (limp home mode). This allows the vehicle to be driven even if a major electrical input/output device circuit is damaged.
Under Fail-Safe, the vehicle always runs in third gear, even with a shift lever position of "1", "2" or "D". The customer may complain of sluggish or poor acceleration.
When the ignition key is turned "ON" following Fail-Safe operation, O/D OFF indicator lamp blinks for about 8 seconds. Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" (EXCEPT FOR EURO-OBD) or AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" (EURO-OBD).
The blinking of the O/D OFF indicator lamp for about 8 seconds will appear only once and be cleared. The customer may resume normal driving conditions.
Always follow the "WORK FLOW", refer to AT-266, "Work Flow" (EXCEPT FOR Euro-OBD) or AT-58, "Work Flow" (Euro-OBD).
The SELF-DIAGNOSIS results will be as follows:

- The first SELF-DIAGNOSIS will indicate damage to the vehicle speed sensor or the revolution sensor.
- During the next SELF-DIAGNOSIS, performed after checking the sensor, no damages will be indicated.

TORQUE CONVERTER SERVICE

The torque converter should be replaced under any of the following conditions:

- External leaks in the hub weld area.
- Converter hub is scored or damaged.
- Converter pilot is broken, damaged or fits poorly into crankshaft.
- Steel particles are found after flushing the cooler and cooler lines.
- Pump is damaged or steel particles are found in the converter.
- Vehicle has TCC shudder and/or no TCC apply. Replace only after all hydraulic and electrical diagnoses have been made. (Converter clutch material may be glazed.)

- Converter is contaminated with engine coolant containing antifreeze.
- Internal failure of stator roller clutch.
- Heavy clutch debris due to overheating (blue converter).
- Steel particles or clutch lining material found in fluid filter or on magnet when no internal parts in unit are worn or damaged — indicates that lining material came from converter.

The torque converter should not be replaced if:

- The fluid has an odor, is discolored, and there is no evidence of metal or clutch facing particles.
- The threads in one or more of the converter bolt holes are damaged.
- Transaxle failure did not display evidence of damaged or worn internal parts, steel particles or clutch plate lining material in unit and inside the fluid filter.
- Vehicle has been exposed to high mileage (only). The exception may be where the torque converter clutch dampener plate lining has seen excess wear by vehicles operated in heavy and/or constant traffic, such as taxi, delivery or police use.

EURO-OBD SELF-DIAGNOSIS — EURO-OBD —

- A/T self-diagnosis is performed by the TCM in combination with the ECM. The results can be read through the blinking pattern of the O/D OFF indicator lamp or the malfunction indicator lamp (MIL). Refer to the table on AT-40, "SELF-DIAGNOSTIC RESULT TEST MODE" for the indicator used to display each self-diagnostic result.
- The self-diagnostic results indicated by the MIL are automatically stored in both the ECM and TCM memories.
  Always perform the procedure “HOW TO ERASE DTC” on AT-37, "HOW TO ERASE DTC" to complete the repair and avoid unnecessary blinking of the MIL.
- The following self-diagnostic items can be detected using ECM self-diagnostic results mode* only when the O/D OFF indicator lamp does not indicate any malfunctions.

– PNP switch
– A/T 1st, 2nd, 3rd, or 4th gear function

*: For details of EURO-OBD, refer to EC-47, "ON BOARD DIAGNOSTIC (OBD) SYSTEM" .

- **Certain systems and components, especially those related to EURO-OBD, may use a new style slide-locking type harness connector.**
  For description and how to disconnect, refer to PG-99, "HARNESS CONNECTOR" .

Wiring Diagrams and Trouble Diagnosis

ECS008N5

When you read wiring diagrams, refer to the following:

- GI-14, "How to Read Wiring Diagrams"
- PG-4, "POWER SUPPLY ROUTING"

When you perform trouble diagnosis, refer to the following:

- GI-10, "How to Follow Trouble Diagnoses"
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident"

A/T FLUID

PFP:KLE40

Checking A/T Fluid

ECS008N8

1. Warm up engine.
2. Check for fluid leakage.
3. Before driving, fluid level can be checked at fluid temperatures of 30 to 50°C (86 to 122°F) using “COLD” range on dipstick.

a. Park vehicle on level surface and set parking brake.

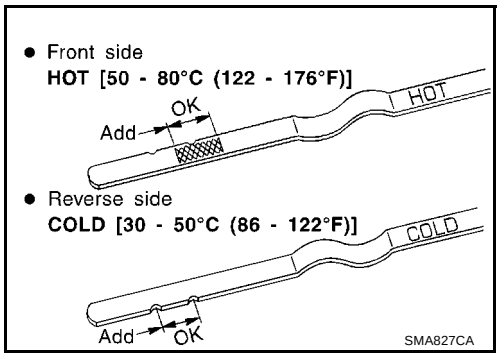
b. Start engine and move selector lever through each gear position. Leave selector lever in “P” position.

c. Check fluid level with engine idling.

d. Remove dipstick and note reading. If level is at low side of either range, and fluid to the charging pipe.

e. Re-insert dipstick into charging pipe as far as it will go.

f. Remove dipstick and note reading. If reading is at low side of range, add fluid to the charging pipe.



Do not overfill.

4. Drive vehicle for approximately 5 minutes in urban areas.
5. Re-check fluid level at fluid temperatures of 50 to 80°C (122 to 176°F) using “HOT” range on dipstick.
6. Check fluid condition.
   - If fluid is very dark or smells burned, refer to AT section for checking operation of A/T. Flush cooling system after repair of A/T.
   - If A/T fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to CO-11, "RADIATOR" , CO-17, "RADIATOR (ALUMINUM TYPE)" .

Changing A/T Fluid

ECS008N9

1. Warm up A/T fluid.
2. Stop engine.
3. Drain A/T fluid from drain plug and refill with new A/T fluid. Always refill same volume with drained fluid.

Fluid grade:

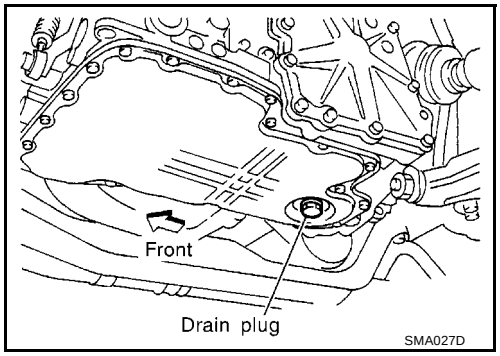
Genuine Nissan ATF or equivalent. Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS" .

Fluid capacity (With torque converter):

Approx. 7.7 ℓ (6-3/4 Imp qt)

Drain plug:

: 29 - 39 N·m (3.0 - 3.9 kg-m, 22 - 28 ft-lb)



4. Run engine at idle speed for five minutes.
5. Check fluid level and condition. Refer to “Checking A/T Fluid”. If fluid is still dirty, repeat steps 2 through 5.

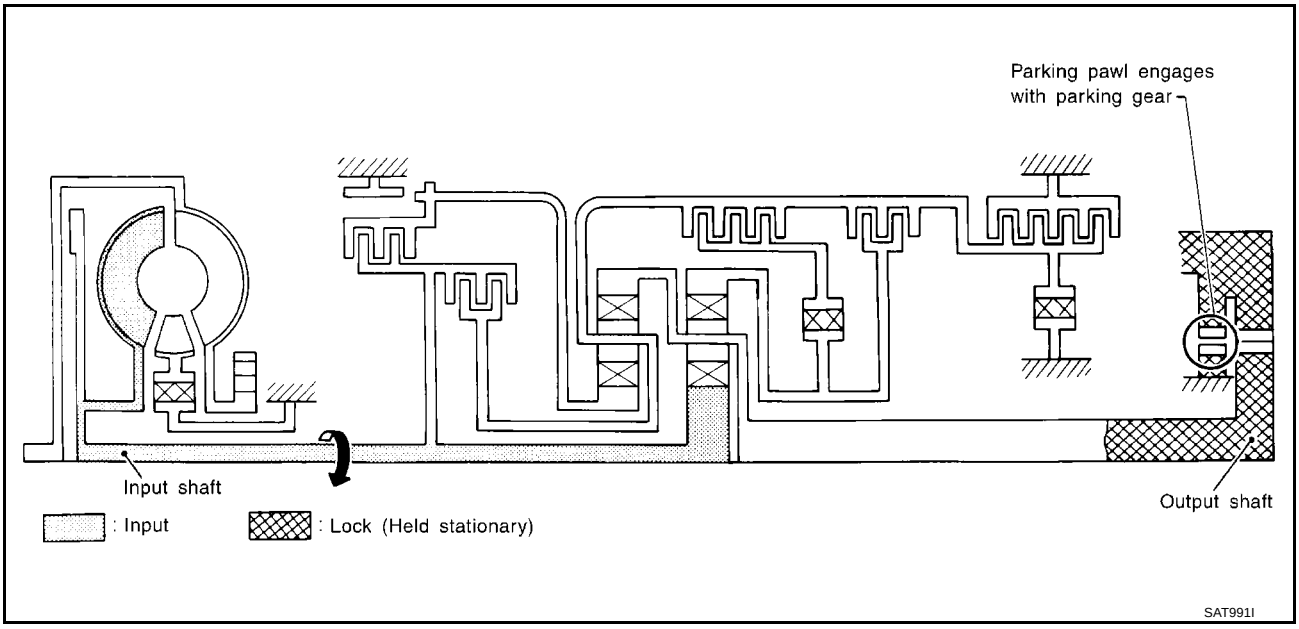
- *1: Operates when overdrive control switch is set in “OFF” position.
- *2: Oil pressure is applied to both 2nd “apply” side and 3rd “release” side of band servo piston. However, brake band does not contract because oil pressure area on the “release” side is greater than that on the “apply” side.
- *3: Oil pressure is applied to 4th “apply” side in condition *2 above, and brake band contracts.
- *4: A/T will not shift to 4th when overdrive control switch is set in “OFF” position.
- ○: Operates.
- A: Operates when throttle opening is less than 3/16, activating engine brake.
- B: Operates during “progressive” acceleration.
- C: Operates but does not affect power transmission.
- D: Operates when throttle opening is less than 3/16, but does not affect engine brake.

POWER TRANSMISSION

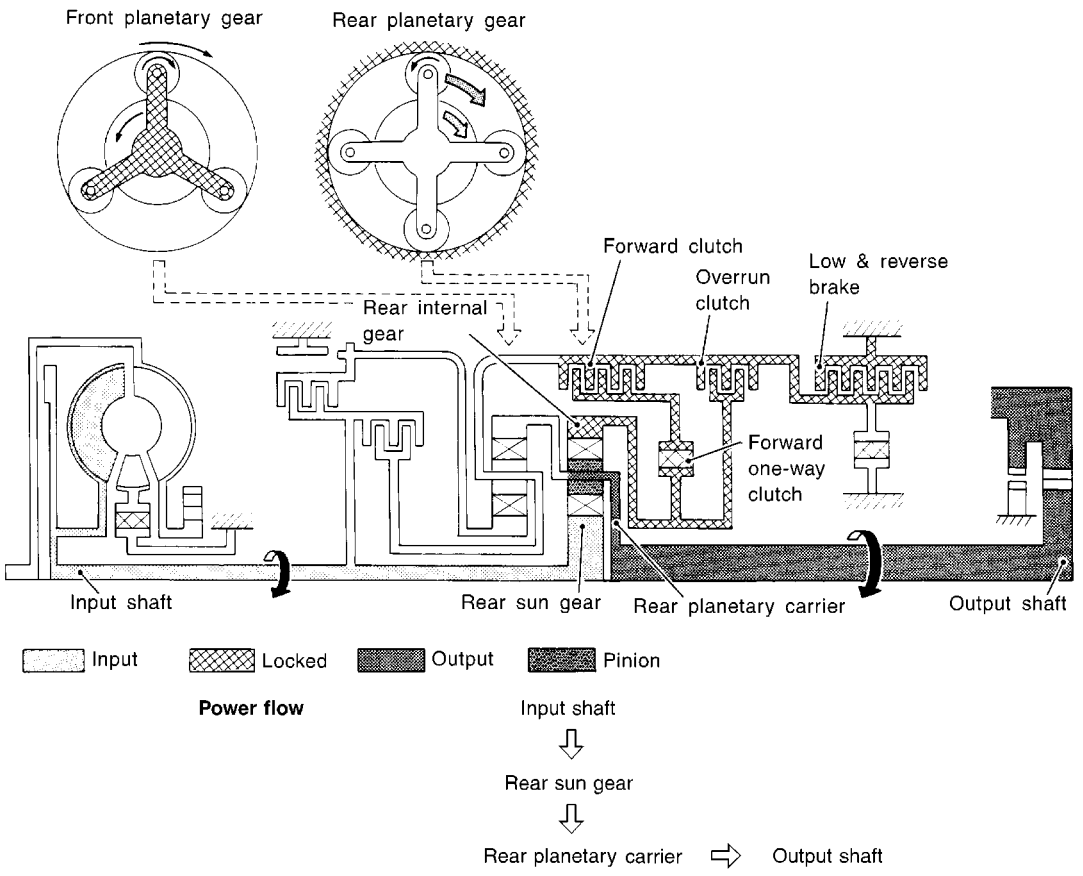
“N” and “P” Positions

- “N” position
  Power from the input shaft is not transmitted to the output shaft because the clutches do not operate.
- “P” position
  Similar to the “N” position, the clutches do not operate. The parking pawl engages with the parking gear to mechanically hold the output shaft so that the power train is locked.



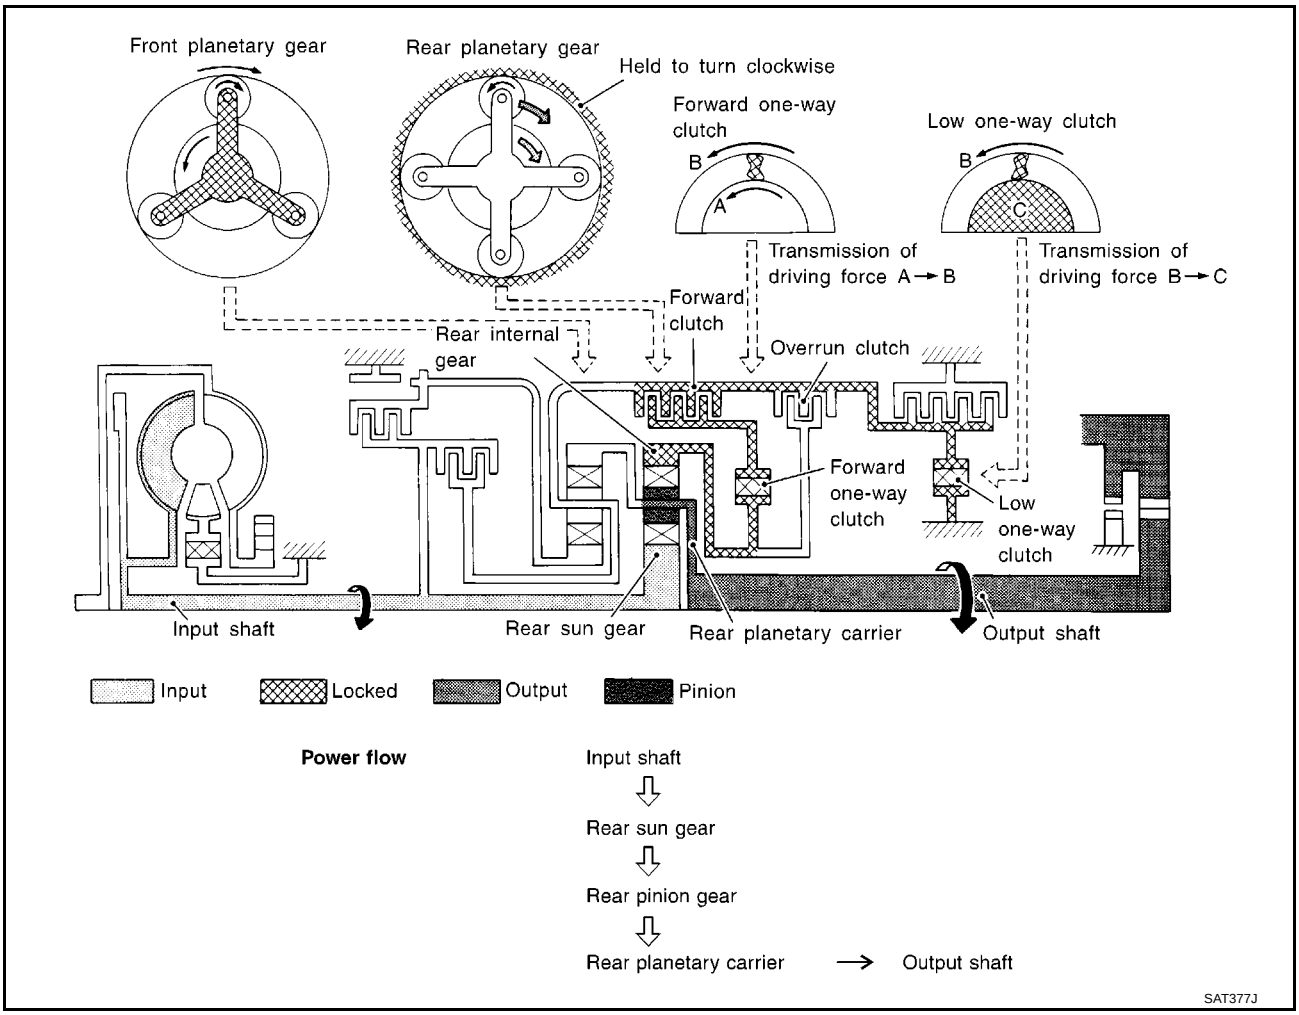
“1₁ ” Position

● **Forward clutch** ● **Forward one-way clutch** ● **Overrun clutch** ● **Low and reverse brake**	As overrun clutch engages, rear internal gear is locked by the operation of low and reverse brake. This is different from that of D1 and 21 .
Engine brake	Overrun clutch always engages, therefore engine brake can be obtained when decelerating.



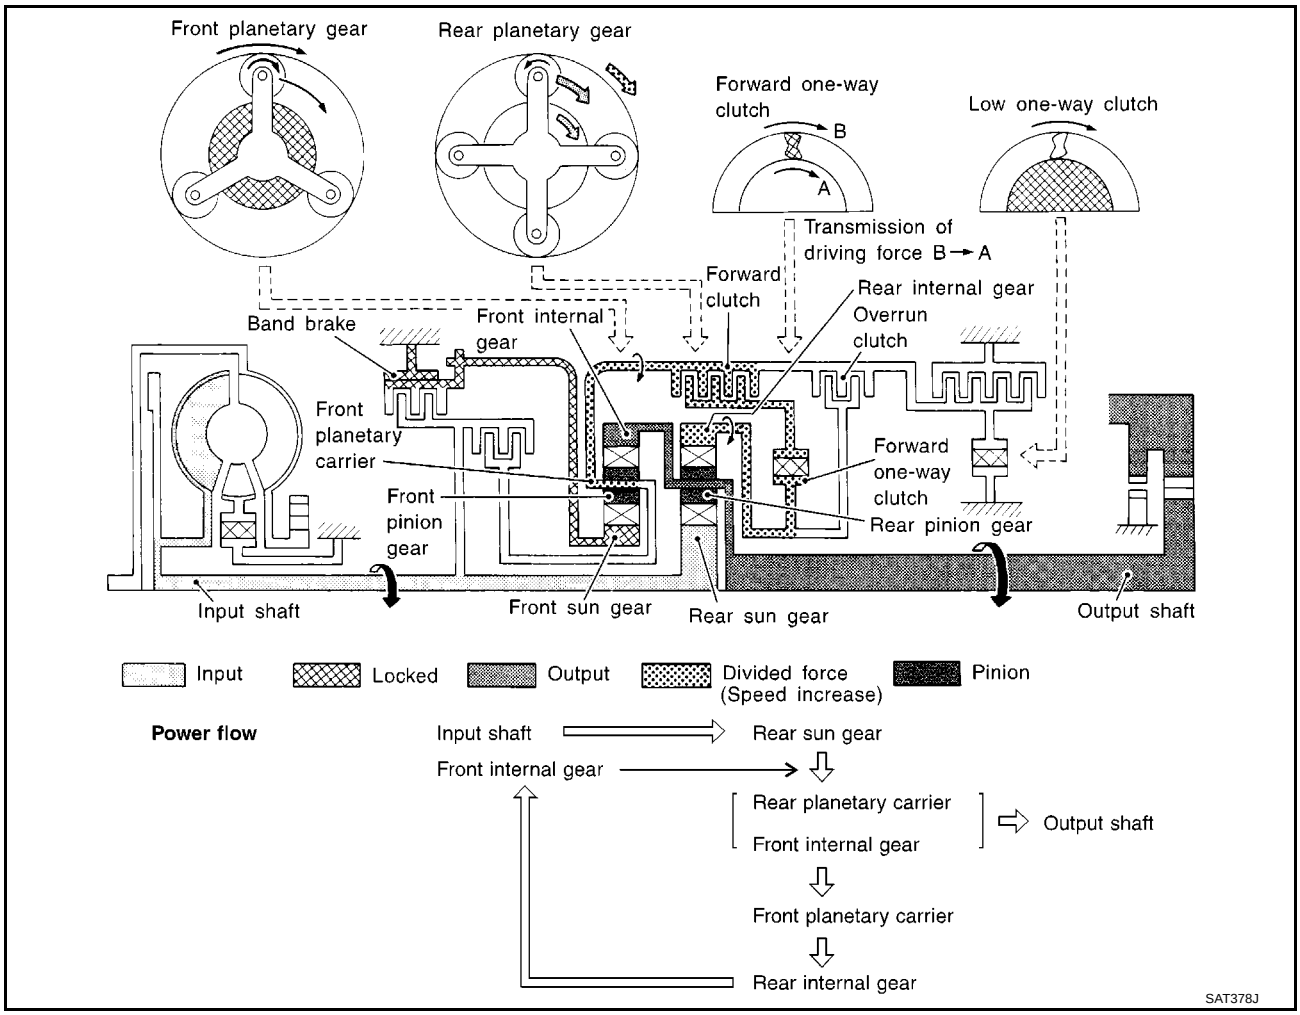
“D1 ” and “21 ” Positions

● **Forward one-way clutch** ● **Forward clutch** ● **Low one-way clutch**	Rear internal gear is locked to rotate counterclockwise because of the functioning of these three clutches.
Overrun clutch engagement conditions (Engine brake)	D1 : Overdrive control switch “OFF” and throttle opening is less than 3/16 21 : Always engaged At D1 and 21 positions, engine brake is not activated due to free turning of low one-way clutch.



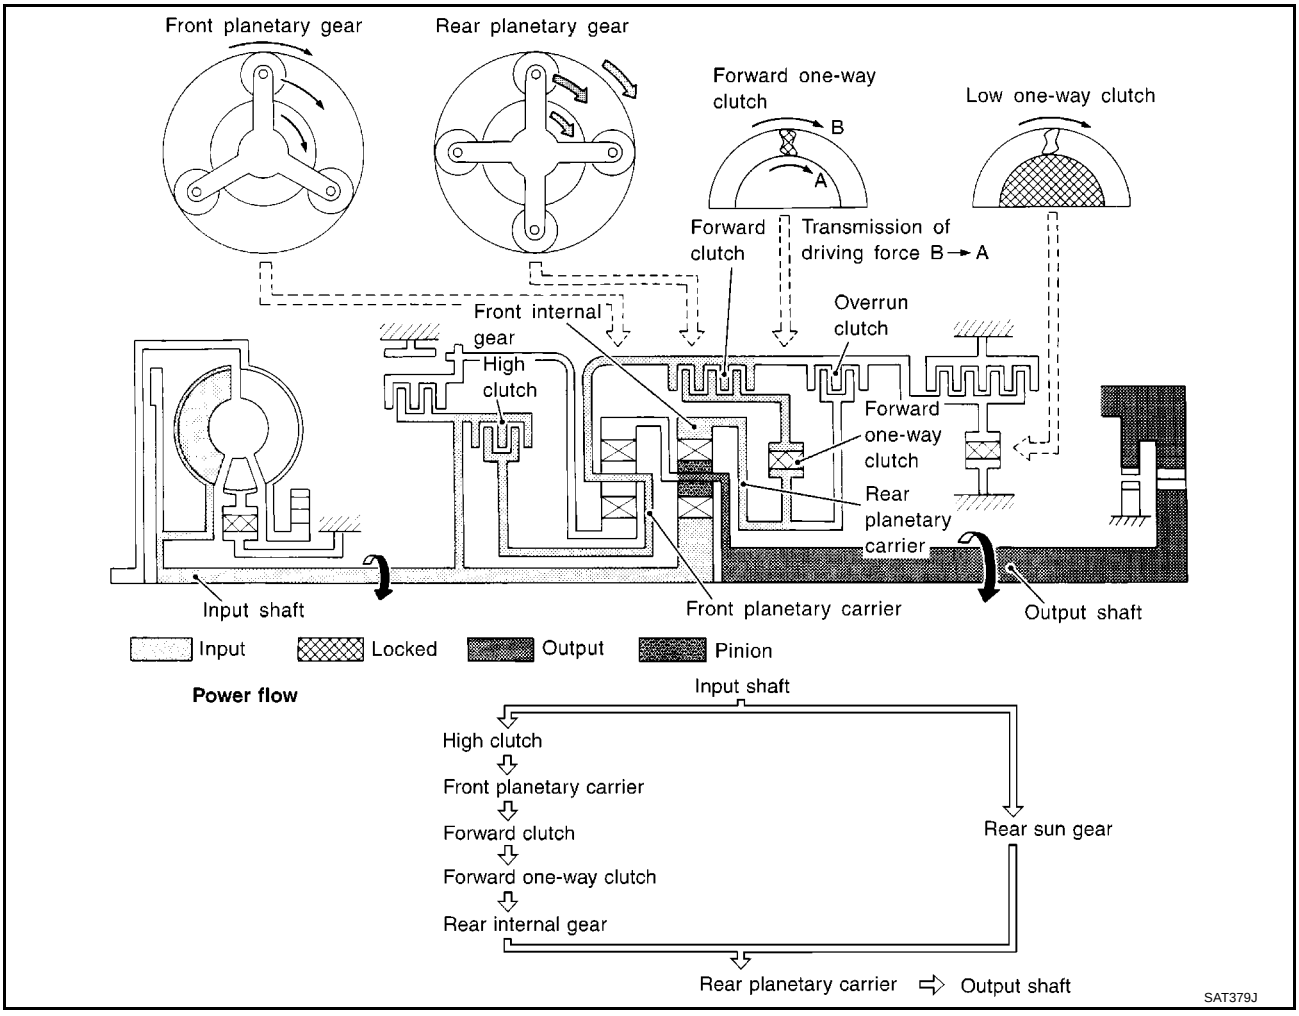
“D2 ”, “22 ” and “12 ” Positions

● **Forward clutch** ● **Forward one-way clutch** ● **Brake band**	Rear sun gear drives rear planetary carrier and combined front internal gear. Front internal gear now rotates around front sun gear accompanying front planetary carrier. As front planetary carrier transfers the power to rear internal gear through forward clutch and forward one-way clutch, this rotation of rear internal gear increases the speed of rear planetary carrier compared with that of the 1st speed.
Overrun clutch engagement conditions	D2 : Overdrive control switch “OFF” and throttle opening is less than 3/16 22 and 12 : Always engaged



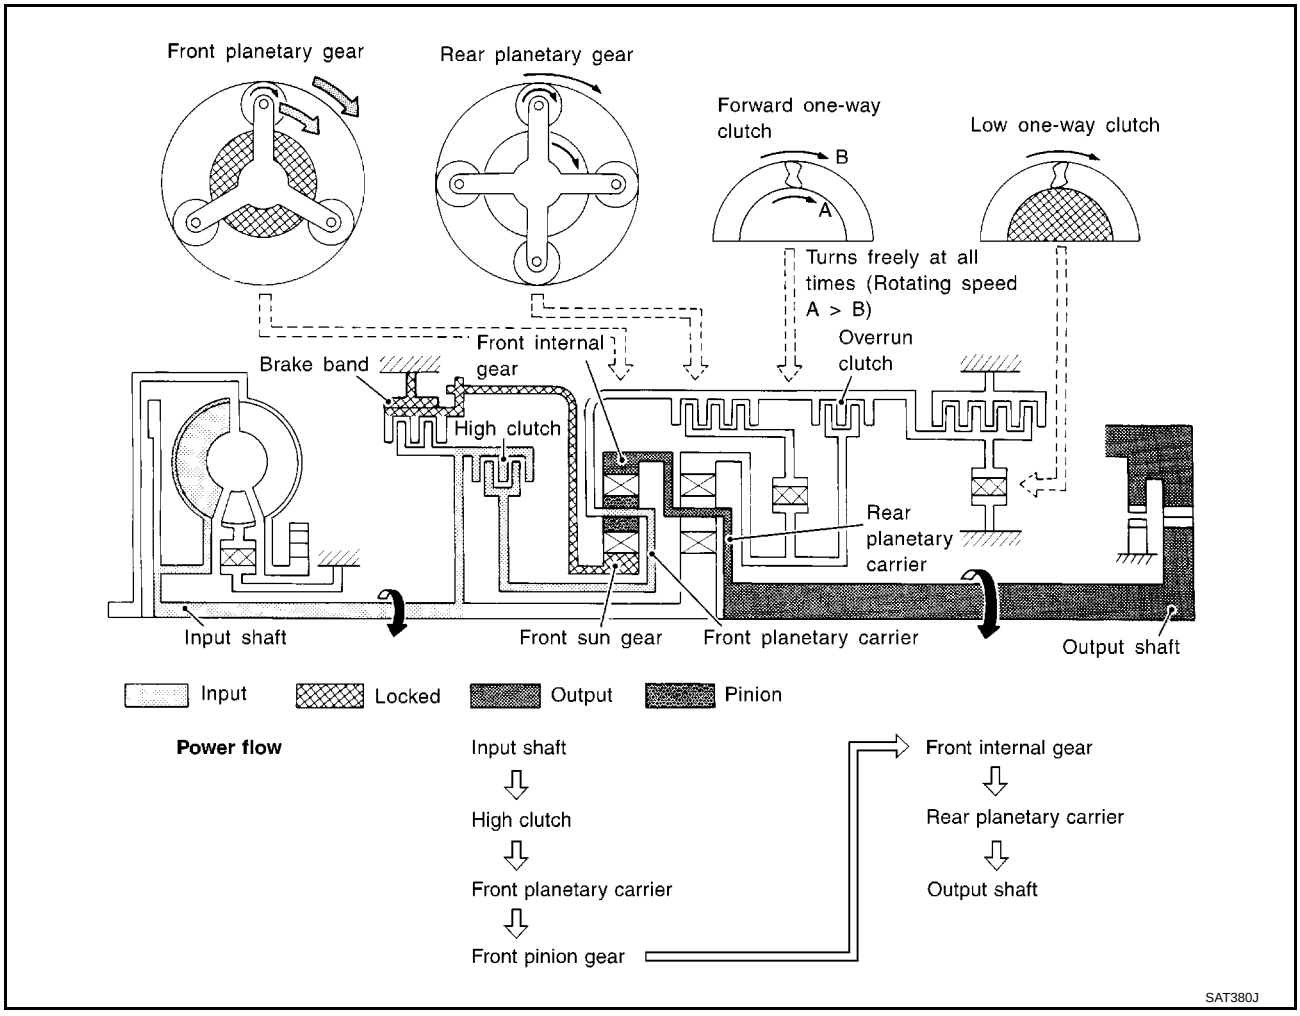
“D3 ” Position

● **High clutch** ● **Forward clutch** ● **Forward one-way clutch**	Input power is transmitted to front planetary carrier through high clutch. And front planetary carrier is connected to rear internal gear by operation of forward clutch and forward one-way clutch. This rear internal gear rotation and another input (the rear sun gear) accompany rear planetary carrier to turn at the same speed.
Overrun clutch engagement conditions	D3 : Overdrive control switch “OFF” and throttle opening is less than 3/16



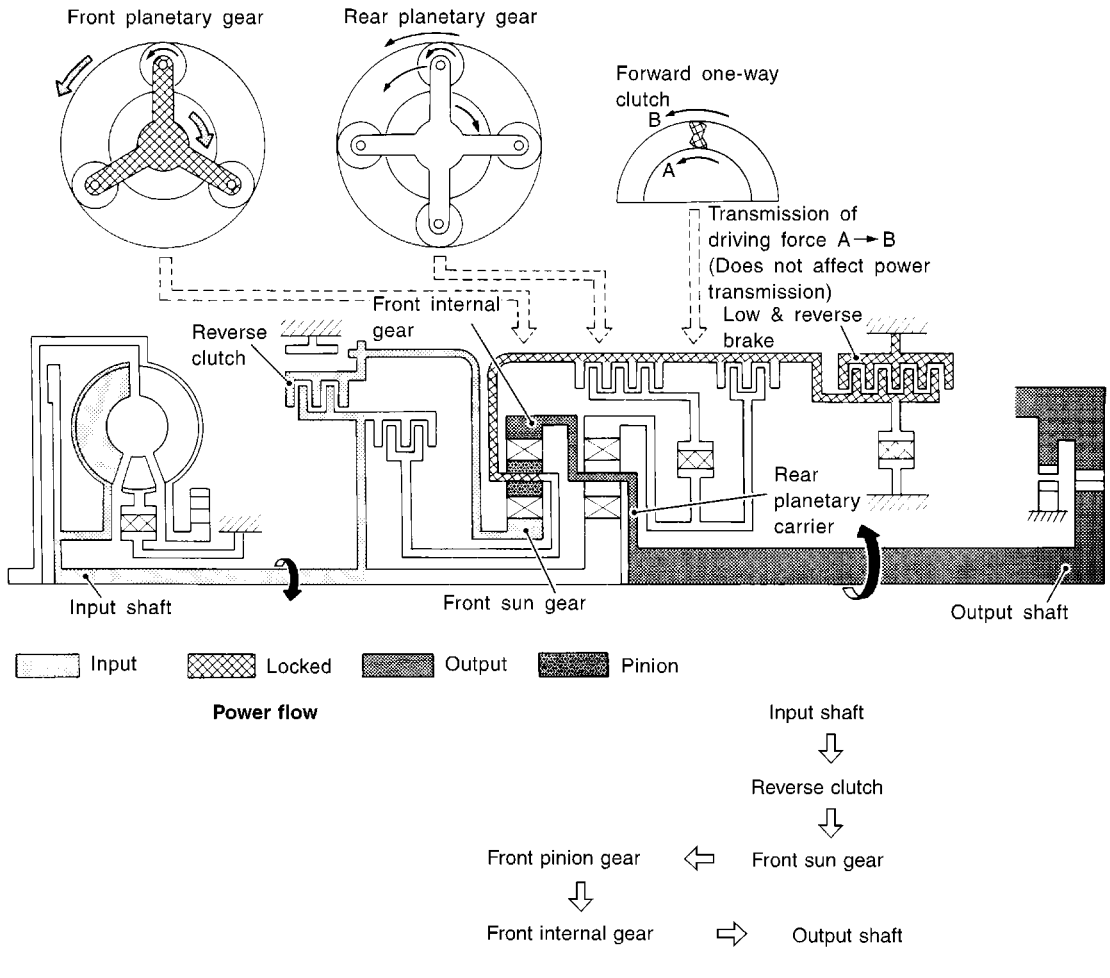
"D4 " (OD) Position

● **High clutch** ● **Brake band** ● **Forward clutch** (Does not affect power transmission)	Input power is transmitted to front carrier through high clutch. This front carrier turns around the sun gear which is fixed by brake band and makes front internal gear (output) turn faster.
Engine brake	At D4 position, there is no one-way clutch in the power transmission line and engine brake can be obtained when decelerating.



“R” Position

● **Reverse clutch** ● **Low and reverse brake**	Front planetary carrier is stationary because of the operation of low and reverse brake. Input power is transmitted to front sun gear through reverse clutch, which drives front internal gear in the opposite direction.
Engine brake	As there is no one-way clutch in the power transmission line, engine brake can be obtained when decelerating.



Control System

ECS008NF

OUTLINE

The automatic transaxle senses vehicle operating conditions through various switches and sensors. It always controls the optimum shift position and reduces shifting and lock-up shocks.

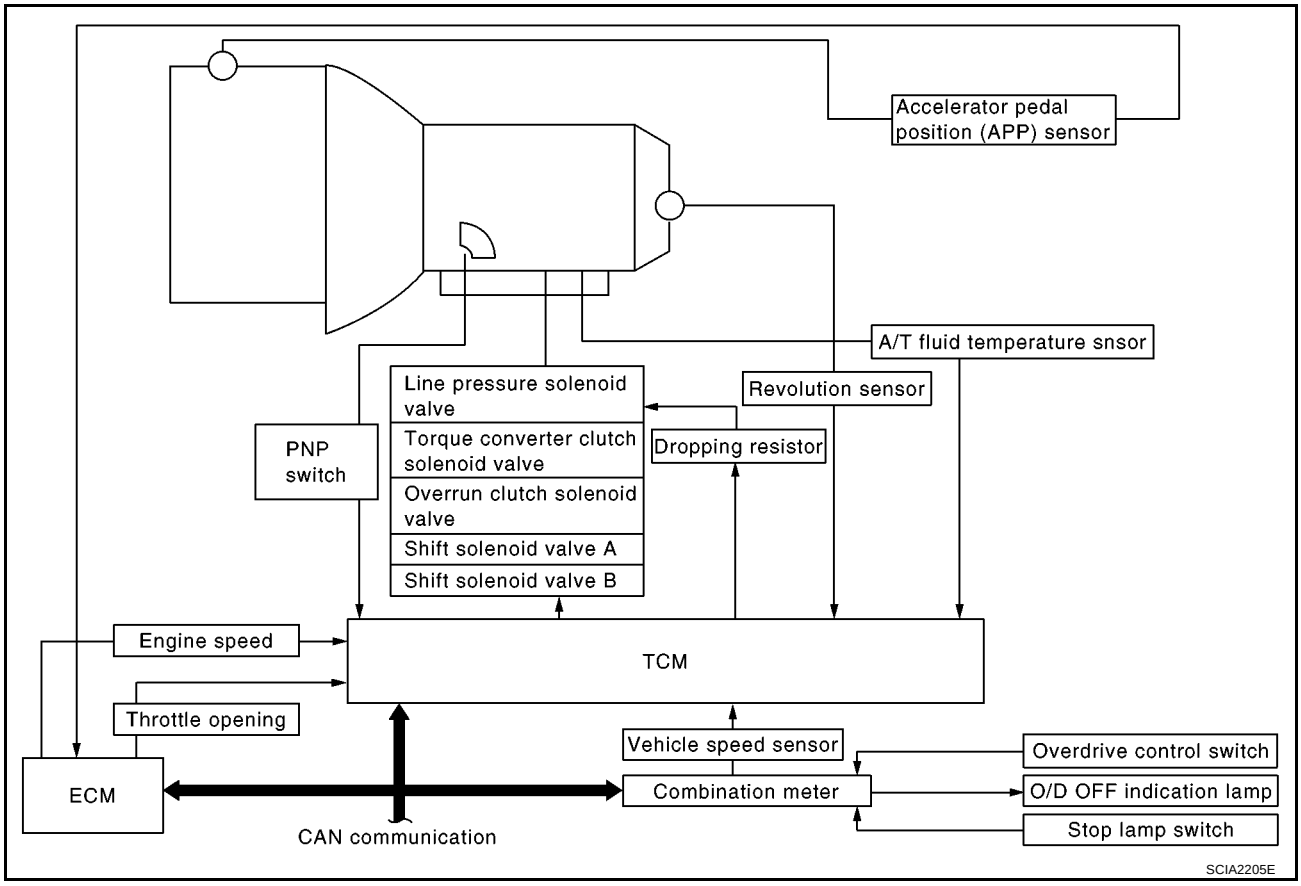
CONTROL SYSTEM



TCM FUNCTION

The function of the TCM is to:

- Receive input signals sent from various switches and sensors.
- Determine required line pressure, shifting point, lock-up operation, and engine brake operation.
- Send required output signals to the respective solenoids.

INPUT/OUTPUT SIGNAL OF TCM

	Sensors, switches and solenoid valves	Function
Input	PNP switch	Detects select lever position and sends a signal to TCM.
	Accelerator pedal position (APP) sensor	Detects accelerator pedal position sensor as throttle position signal and sends a signal from ECM to TCM.
	Closed throttle position signal	Detects throttle valve's fully-closed position and sends a signal from ECM to TCM.
	Wide open throttle position signal	Detects a throttle valve position of greater than 1/2 of full throttle and sends a signal from ECM to TCM.
	Engine speed signal	From ECM.
	A/T fluid temperature sensor	Detects transmission fluid temperature and sends a signal to TCM.
	Revolution sensor	Detects output shaft rpm and sends a signal to TCM.
	Vehicle speed sensor	Used as an auxiliary vehicle speed sensor. Sends a signal when revolution sensor (installed on transmission) malfunctions.
	Overdrive control switch	Sends a signal, which prohibits a shift to "D4 " (overdrive) position, to the TCM.
	Stop lamp switch	Releases lock-up system when depressing pedal in lock-up condition.
Output	Shift solenoid valve A/B	Selects shifting point suited to driving conditions in relation to a signal sent from TCM.
	Line pressure solenoid valve	Regulates (or decreases) line pressure suited to driving conditions in relation to a signal sent from TCM.
	Torque converter clutch solenoid valve	Regulates (or decreases) lock-up pressure suited to driving conditions in relation to a signal sent from TCM.
	Overrun clutch solenoid valve	Controls an "engine brake" effect suited to driving conditions in relation to a signal sent from TCM.
	O/D OFF indicator lamp	Shows TCM faults when A/T control components malfunction.

Control Mechanism

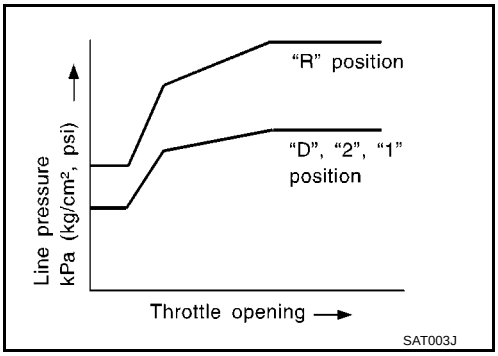
ECS008NG

LINE PRESSURE CONTROL

TCM has various line pressure control characteristics to match the driving conditions.
An ON-OFF duty signal is sent to the line pressure solenoid valve based on TCM characteristics.
Hydraulic pressure on the clutch and brake is electronically controlled through the line pressure solenoid valve to accommodate engine torque. This results in smooth shift operation.

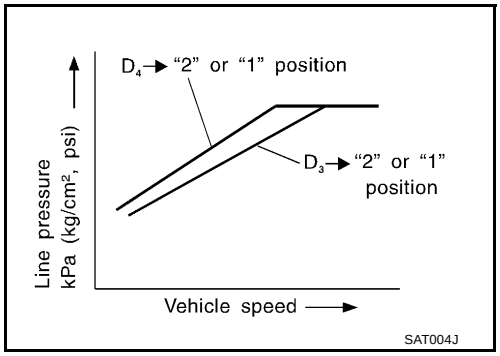
Normal Control

The line pressure to throttle opening characteristics is set for suitable clutch operation.



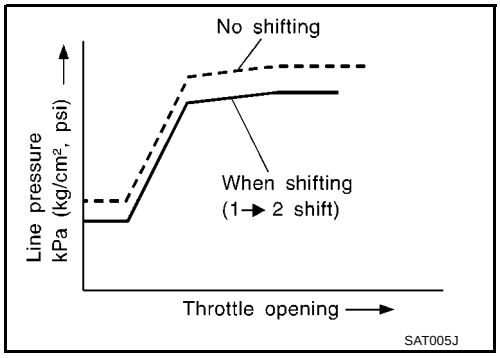
Back-up Control (Engine Brake)

If the selector lever is shifted to “2” position while driving in D_4 (OD) or D_3 , great driving force is applied to the clutch inside the transmission. Clutch operating pressure (line pressure) must be increased to deal with this driving force.



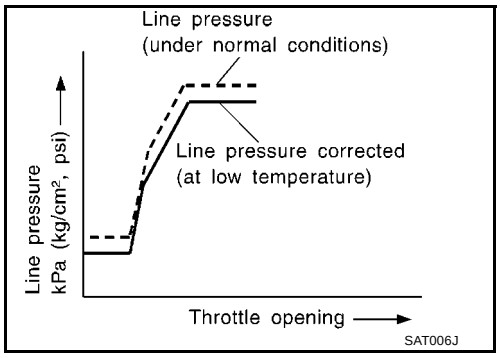
During Shift Change

The line pressure is temporarily reduced corresponding to a change in engine torque when shifting gears (that is, when the shift solenoid valve is switched for clutch operation) to reduce shifting shock.

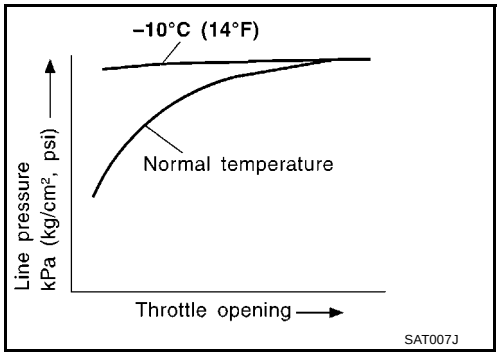


At Low Fluid Temperature

- Fluid viscosity and frictional characteristics of the clutch facing change with fluid temperature. Clutch engaging or band-contacting pressure is compensated for, according to fluid temperature, to stabilize shifting quality.
- The line pressure is reduced below 60°C (140°F) to prevent shifting shock due to low viscosity of automatic transmission fluid when temperature is low.



- Line pressure is increased to a maximum irrespective of the throttle opening when fluid temperature drops to −10°C (14°F). This pressure rise is adopted to prevent a delay in clutch and brake operation due to extreme drop of fluid viscosity at low temperature.

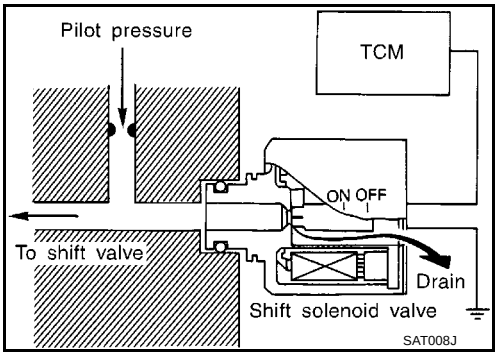


SHIFT CONTROL

The shift is regulated entirely by electronic control to accommodate vehicle speed and varying engine operations. This is accomplished by electrical signals transmitted by the revolution sensor and throttle position sensor. This results in improved acceleration performance and fuel economy.

Control of Shift Solenoid Valves A and B

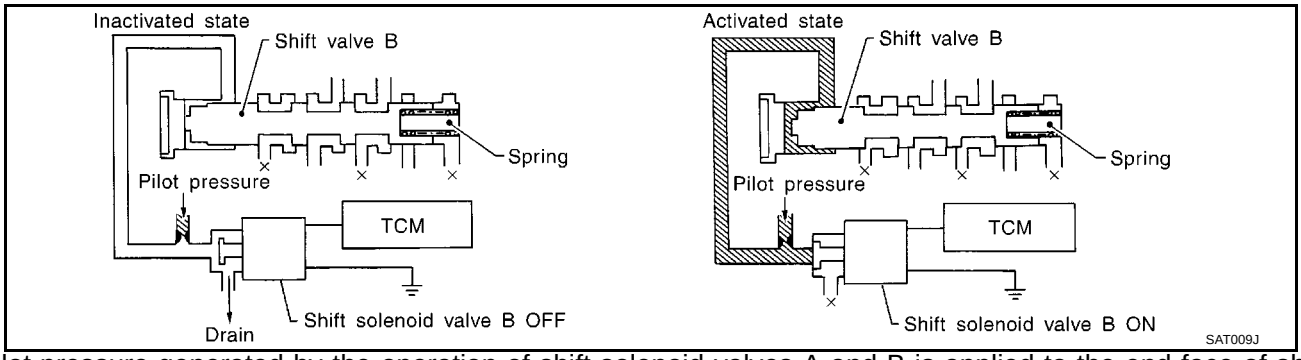
The TCM activates shift solenoid valves A and B according to signals from the throttle position sensor and revolution sensor to select the optimum gear position on the basis of the shift schedule memorized in the TCM.
The shift solenoid valve performs simple ON-OFF operation. When set to “ON”, the drain circuit closes and pilot pressure is applied to the shift valve.



Relation Between Shift Solenoid Valves A and B and Gear Positions

Shift solenoid valve	Gear position				
	D_1 , 2_1 , 1_1	D_2 , 2_2 , 1_2	D_3	D_4 (OD)	N-P
A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)	ON (Closed)
B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)

Control of Shift Valves A and B



Pilot pressure generated by the operation of shift solenoid valves A and B is applied to the end face of shift valves A and B.
The drawing above shows the operation of shift valve B. When the shift solenoid valve is “ON”, pilot pressure applied to the end face of the shift valve overcomes spring force, moving the valve upward.

LOCK-UP CONTROL

The torque converter clutch piston in the torque converter is locked to eliminate torque converter slip to increase power transmission efficiency. The solenoid valve is controlled by an ON-OFF duty signal sent from the TCM. The signal is converted to an oil pressure signal which controls the torque converter clutch piston.

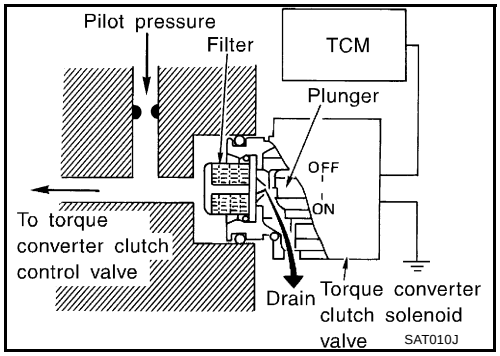
Conditions for Lock-Up Operation

When vehicle is driven in 3rd and 4th gear position, vehicle speed and throttle opening are detected. If the detected values fall within the lock-up zone memorized in the TCM, lock-up is performed.

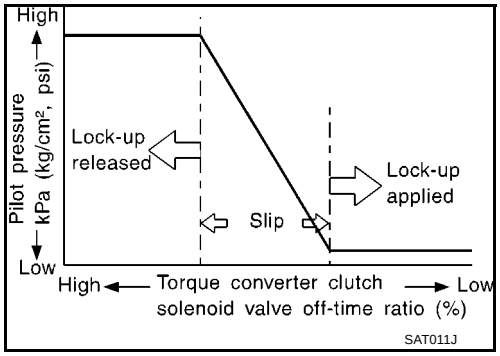
Overdrive control switch	ON	OFF
Selector lever	“D” position	
Gear position	D_4	D_3
Vehicle speed sensor	More than set value	
Throttle position sensor	Less than set opening	
Closed throttle position switch	OFF	
A/T fluid temperature sensor	More than 40°C (104°F)	

Torque Converter Clutch Solenoid Valve Control

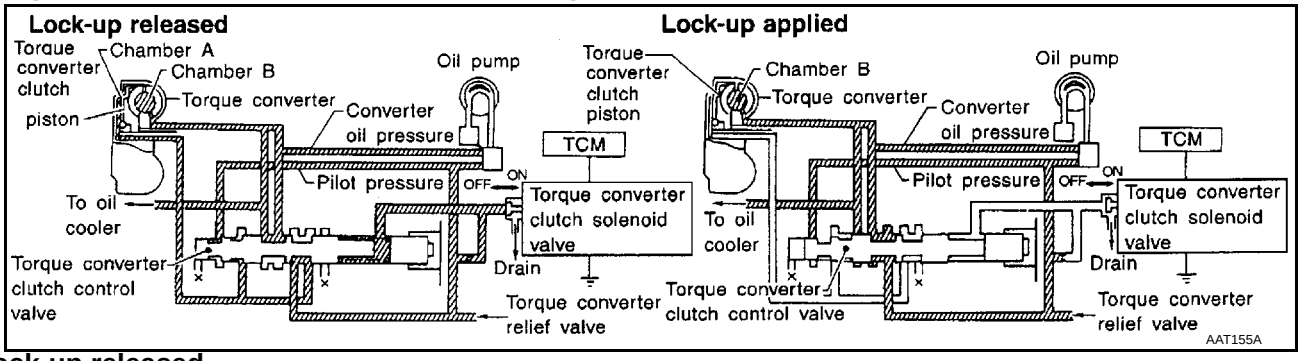
The torque converter clutch solenoid valve is controlled by the TCM. The plunger closes the drain circuit during the “OFF” period, and opens the circuit during the “ON” period. If the percentage of OFF-time increases in one cycle, the pilot pressure drain time is reduced and pilot pressure remains high.
The torque converter clutch position is designed to slip to adjust the ratio of ON–OFF, thereby reducing lock-up shock.



The torque converter clutch piston is designed to slip to adjust the ratio of ON-OFF, thereby reducing lock-up shock.
OFF-time INCREASING
↓
Amount of drain DECREASING
↓
Pilot pressure HIGH
↓
Lock-up RELEASING



Torque Converter Clutch Control Valve Operation



Lock-up released
The OFF-duration of the torque converter clutch solenoid valve is long, and pilot pressure is high. The pilot pressure pushes the end face of the torque converter clutch control valve in combination with spring force to move the valve to the left. As a result, converter pressure is applied to chamber A (torque converter clutch piston release side). Accordingly, the torque converter clutch piston remains unlocked.

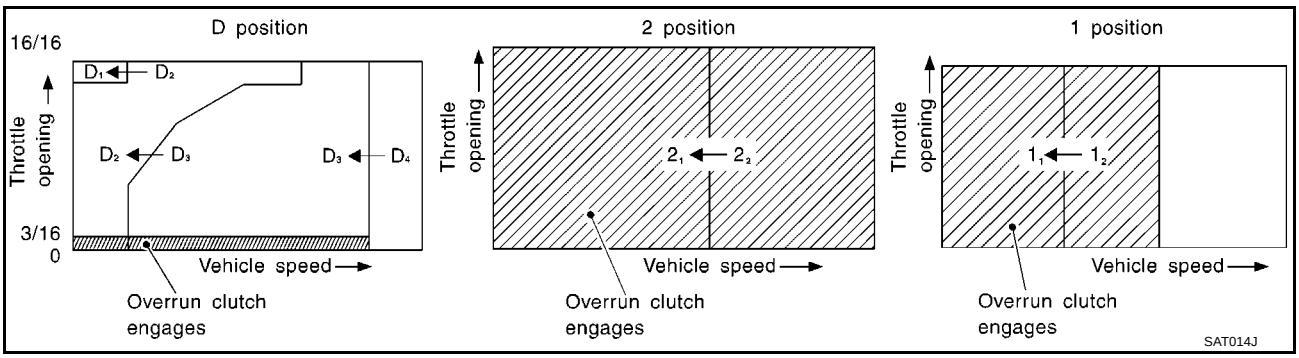
Lock-up applied
When the OFF-duration of the torque converter clutch solenoid valve is short, pilot pressure drains and becomes low. Accordingly, the control valve moves to the right by the pilot pressure of the other circuit and converter pressure. As a result, converter pressure is applied to chamber B, keeping the torque converter clutch piston applied.
Also smooth lock-up is provided by transient application and release of the lock-up.

OVERRUN CLUTCH CONTROL (ENGINE BRAKE CONTROL)

Forward one-way clutch is used to reduce shifting shocks in downshifting operations. This clutch transmits engine torque to the wheels. However, drive force from the wheels is not transmitted to the engine because the one-way clutch rotates idle. This means the engine brake is not effective.
The overrun clutch operates when the engine brake is needed.

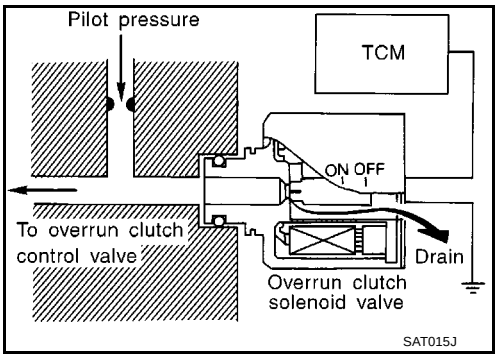
Overrun Clutch Operating Conditions

Selector lever position	Gear position	Throttle opening
“D” position	D1 , D2 , D3 gear position	Less than 3/16
“2” position	21 , 22 gear position	At any position
“1” position	11 , 12 gear position	



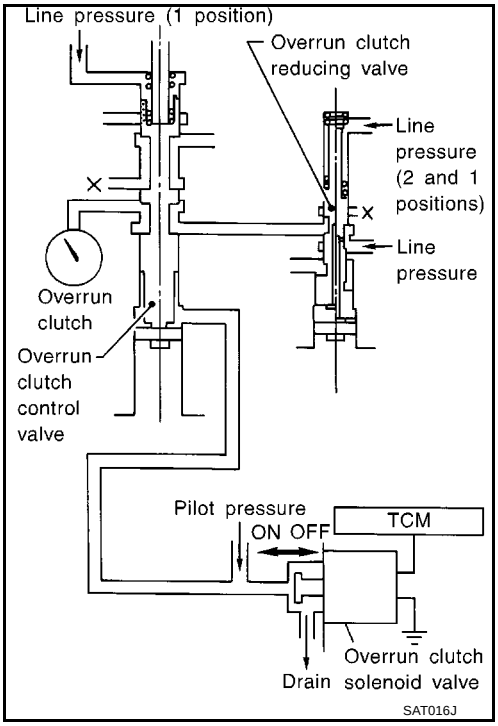
Overrun Clutch Solenoid Valve Control

The overrun clutch solenoid valve is operated by an ON-OFF signal transmitted by the TCM to provide overrun clutch control (engine brake control).
When this solenoid valve is “ON”, the pilot pressure drain port closes. When it is “OFF”, the drain port opens.
During the solenoid valve “ON” pilot pressure is applied to the end face of the overrun clutch control valve.



Overrun Clutch Control Valve Operation

When the solenoid valve is “ON”, pilot pressure is applied to the overrun clutch control valve. This pushes up the overrun clutch control valve. The line pressure is then shut off so that the clutch does not engage.
When the solenoid valve is “OFF”, pilot pressure is not generated. At this point, the overrun clutch control valve moves downward by spring force. As a result, overrun clutch operation pressure is provided by the overrun clutch reducing valve. This causes the overrun clutch to engage.
In the 1 position, the overrun clutch control valve remains pushed down so that the overrun clutch is engaged at all times.



Control Valve

ECS008NH

FUNCTION OF CONTROL VALVES

Valve name	Function
Pressure regulator valve, plug and sleeve	Regulates oil discharged from the oil pump to provide optimum line pressure for all driving conditions.
Pressure modifier valve and sleeve	Used as a signal supplementary valve to the pressure regulator valve. Regulates pressure-modifier pressure (signal pressure) which controls optimum line pressure for all driving conditions.
Pilot valve	Regulates line pressure to maintain a constant pilot pressure level which controls lock-up mechanism, overrun clutch, shift timing.
Accumulator control valve	Regulates accumulator back-pressure to pressure suited to driving conditions.
Manual valve	Directs line pressure to oil circuits corresponding to select positions. Hydraulic pressure drains when the shift lever is in Neutral.
Shift valve A	Simultaneously switches four oil circuits using output pressure of shift solenoid valve A to meet driving conditions (vehicle speed, throttle opening, etc.). Provides automatic downshifting and up-shifting (1st → 2nd → 3rd → 4th gears/4th → 3rd → 2nd → 1st gears) in combination with shift valve B.
Shift valve B	Simultaneously switches three oil circuits using output pressure of shift solenoid valve B in relation to driving conditions (vehicle speed, throttle opening, etc.). Provides automatic downshifting and up-shifting (1st → 2nd → 3rd → 4th gears/4th → 3rd → 2nd → 1st gears) in combination with shift valve A.
Overrun clutch control valve	Switches hydraulic circuits to prevent engagement of the overrun clutch simultaneously with application of the brake band in D_4 . (Interlocking occurs if the overrun clutch engages during D_4 .)
1st reducing valve	Reduces low & reverse brake pressure to dampen engine-brake shock when down-shifting from the “1” position 1_2 to 1_1 .
Overrun clutch reducing valve	Reduces oil pressure directed to the overrun clutch and prevents engine-brake shock. In “1” and “2” positions, line pressure acts on the overrun clutch reducing valve to increase the pressure-regulating point, with resultant engine brake capability.
Torque converter relief valve	Prevents an excessive rise in torque converter pressure.
Torque converter clutch control valve, plug and sleeve	Activates or inactivates the lock-up function. Also provides smooth lock-up through transient application and release of the lock-up system.
1-2 accumulator valve and piston	Dampens the shock encountered when 2nd gear band servo contracts, and provides smooth shifting.
3-2 timing valve	Switches oil pressure with 3-2 timing valve according to throttle opening.
Shuttle control valve	Reduces shock when down-shifting from 3rd to 2nd and regulates overrun clutch.
Cooler check valve	Regulates oil pressure which causes lock-up when driving at low speeds.

ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

PFP:00000

Introduction

ECS008NJ

The A/T system has two self-diagnostic systems.
The first is the emission-related on board diagnostic system (EURO-OBD) performed by the TCM in combination with the ECM. The malfunction is indicated by the MIL (malfunction indicator lamp) and is stored as a DTC in the ECM memory but not the TCM memory.
The second is the TCM original self-diagnosis indicated by the O/D OFF indicator lamp. The malfunction is stored in the TCM memory. The detected items are overlapped with EURO-OBD self-diagnostic items. For detail, refer to AT-40, "SELF-DIAGNOSTIC RESULT TEST MODE" .

EURO-OBD Function for A/T System

ECS008NK

The ECM provides emission-related on board diagnostic (EURO-OBD) functions for the A/T system. One function is to receive a signal from the TCM used with EURO-OBD-related parts of the A/T system. The signal is sent to the ECM when a malfunction occurs in the corresponding EURO-OBD-related part. The other function is to indicate a diagnostic result by means of the MIL (malfunction indicator lamp) on the instrument panel. Sensors, switches and solenoid valves are used as sensing elements.
The MIL automatically illuminates in One or Two Trip Detection Logic when a malfunction is sensed in relation to A/T system parts.

One or Two Trip Detection Logic of EURO-OBD

ECS008NL

ONE TRIP DETECTION LOGIC

If a malfunction is sensed during the first test drive, the MIL will illuminate and the malfunction will be stored in the ECM memory as a DTC. The TCM is not provided with such a memory function.

TWO TRIP DETECTION LOGIC

When a malfunction is sensed during the first test drive, it is stored in the ECM memory as a 1st trip DTC (diagnostic trouble code) or 1st trip freeze frame data. At this point, the MIL will not illuminate. — First Trip
If the same malfunction as that experienced during the first test drive is sensed during the second test drive, the MIL will illuminate. — Second Trip
A/T-related parts for which the MIL illuminates during the first or second test drive are listed below.

Items	MIL	
	One trip detection	Two trip detection
Shift solenoid valve A — DTC: P0750	X	
Shift solenoid valve B — DTC: P0755	X	
Throttle position sensor — DTC: P1705	X	
Except above		X

The “trip” in the “One or Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation.

EURO-OBD Diagnostic Trouble Code (DTC)

ECS008NM

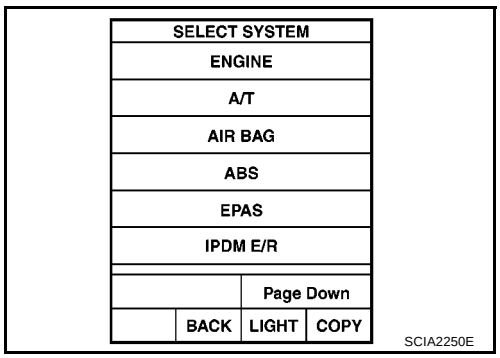
HOW TO READ DTC AND 1ST TRIP DTC

DTC and 1st trip DTC can be read by the following methods.

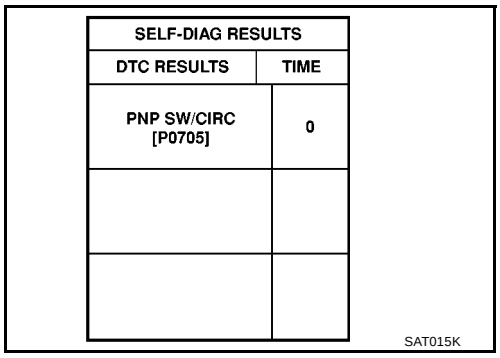
(With CONSULT-II or GST) GST) CONSULT-II or GST (Generic Scan Tool) Examples: P0705, P0710, P0720, P0725, etc.
These DTCs are prescribed by SAE J2012.
(CONSULT-II also displays the malfunctioning component or system.)

- **1st trip DTC No. is the same as DTC No.**
- **Output of the diagnostic trouble code indicates that the indicated circuit has a malfunction. However, in case of the Mode II and GST they do not indicate whether the malfunction is still occurring or occurred in the past and returned to normal.**
  CONSULT-II can identify them as shown below. Therefore, using CONSULT-II (if available) is recommended.

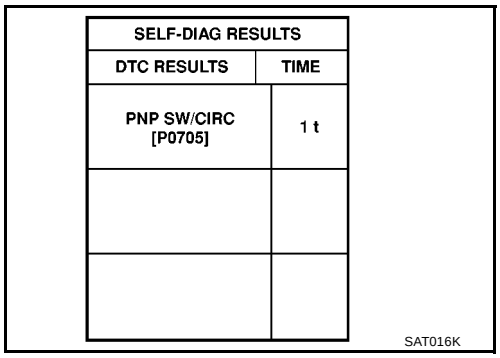
A sample of CONSULT-II display for DTC is shown in the following page. DTC or 1st trip DTC of a malfunction is displayed in SELF DIAGNOSIS mode for “ENGINE” with CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.



If the DTC is being detected currently, the time data will be “0”.



If a 1st trip DTC is stored in the ECM, the time data will be “1t”.



Freeze Frame Data and 1st Trip Freeze Frame Data

The ECM has a memory function, which stores the driving condition such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed and vehicle speed at the moment the ECM detects a malfunction.
Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data, and the data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For detail, refer to EC-101, "CONSULT-II Function (ENGINE)" .
Only one set of freeze frame data (either 1st trip freeze frame data of freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MIL on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM.
The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0306 Fuel Injection System Function — DTC: P0171, P0172, P0174, P0175
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased.

HOW TO ERASE DTC

The diagnostic trouble code can be erased by CONSULT-II, GST or ECM DIAGNOSTIC TEST MODE as described following.

- **If the battery terminal is disconnected, the diagnostic trouble code will be lost within 24 hours.**
- **When you erase the DTC, using CONSULT-II or GST is easier and quicker than switching the mode selector on the ECM.**

The following emission-related diagnostic information is cleared from the ECM memory when erasing DTC related to EURO-OBD. For details, refer to EC-48, "Emission-related Diagnostic Information" .

- **Diagnostic trouble codes (DTC)**
- **1st trip diagnostic trouble codes (1st trip DTC)**
- **Freeze frame data**
- **1st trip freeze frame data**
- **System readiness test (SRT) codes**
- **Test values**

HOW TO ERASE DTC (WITH CONSULT-II)

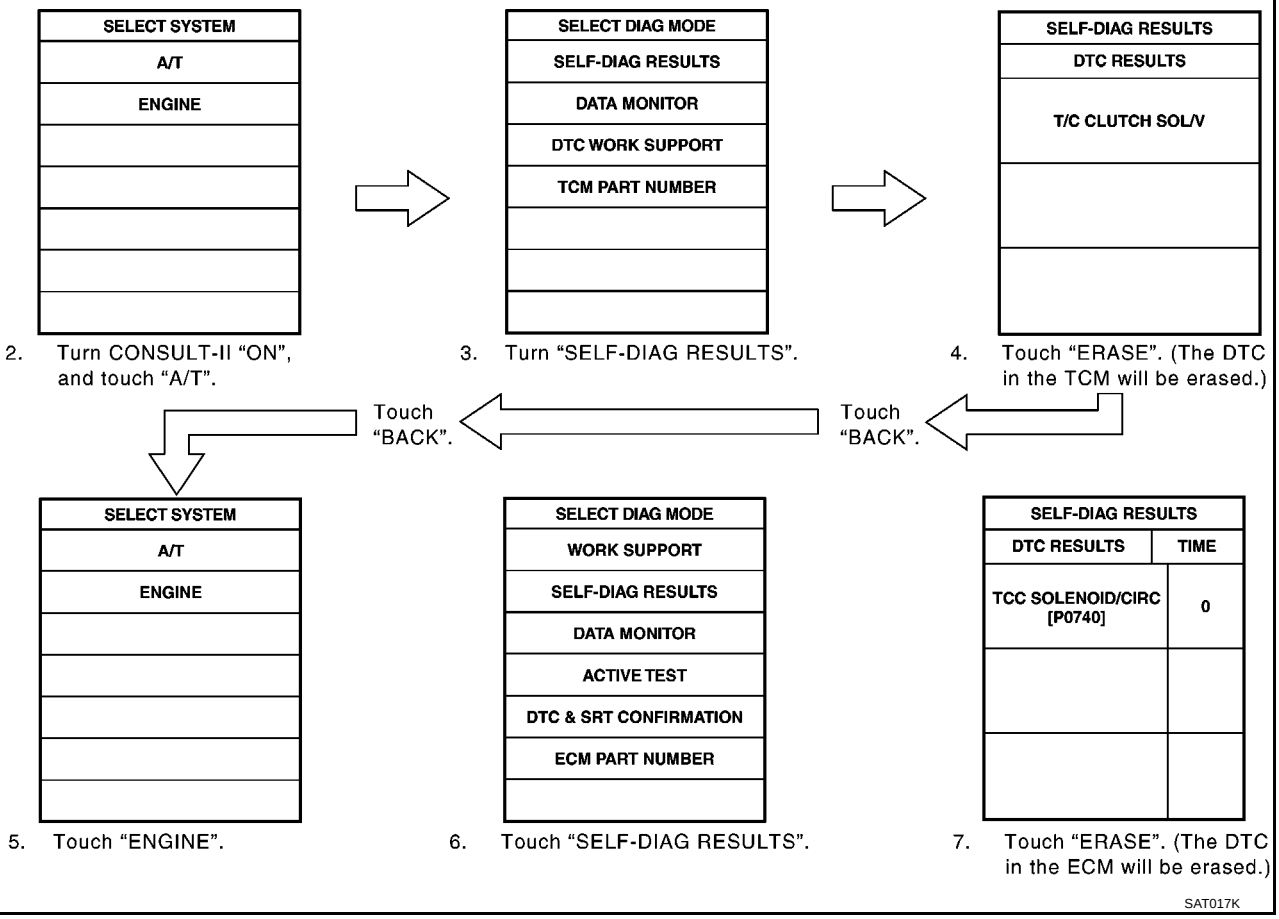
- **If a DTC is displayed for both ECM and TCM, it needs to be erased for both ECM and TCM.**

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 5 seconds and then turn it “ON” (engine stopped) again.
2. Turn CONSULT-II “ON” and touch “A/T”.
3. Touch “SELF DIAGNOSIS”.
4. Touch “ERASE”. (The DTC in the TCM will be erased.) Then touch “BACK” twice.
5. Touch “ENGINE”.
6. Touch “SELF DIAGNOSIS”.

7. Touch “ERASE”. (The DTC in the ECM will be erased.)

How to erase DTC (With CONSULT-II)

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 5 seconds and then turn it “ON” (engine stopped) again.



HOW TO ERASE DTC (WITH GST)

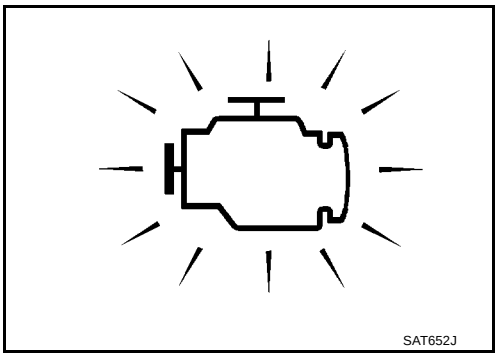
1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 5 seconds and then turn it “ON” (engine stopped) again.
2. Perform “TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)”. Refer to AT-49 . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Select Mode 4 with Generic Scan Tool (GST). For details, refer to EC-112, "Generic Scan Tool (GST) Function" .

HOW TO ERASE DTC (NO TOOLS)

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 5 seconds and then turn it “ON” (engine stopped) again.
2. Perform “TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)”. Refer to AT-49 . (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Perform “EURO-OBD SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)”. Refer to AT-48 .

Malfunction Indicator lamp (MIL)

ECS008NN



1. The malfunction indicator lamp will light up when the ignition switch is turned ON without the engine running. This is for checking the lamp.
   - If the malfunction indicator does not light up, refer to DI-65, "Schematic" .
     (Or see MIL & CONSULT-II in EC section. Refer to EC-60, "Malfunction Indicator (MI)" , EC-101, "CONSULT-II Function (ENGINE)" .
2. When the engine is started, the malfunction indicator should go off.
   If the lamp remains on, the on board diagnostic system has detected an emission-related (EURO-OBD) malfunction. For detail, refer to EC-47, "ON BOARD DIAGNOSTIC (OBD) SYSTEM" .

CONSULT-II Function (A/T)

ECS008NO

CONSULT-II can display each diagnostic item using the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

Diagnostic test mode	Function
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the TCM can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Function test	Performed by CONSULT-II instead of a technician to determine whether each system is “OK” or “NG”.
DTC work support	Select the operating condition to confirm Diagnostic Trouble Codes.
ECU part number	ECU part number can be read.

After performing “SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)” AT-40 , place check marks for results on the “DIAGNOSTIC WORKSHEET”, AT-55 . Reference pages are provided following the items.

NOTICE:

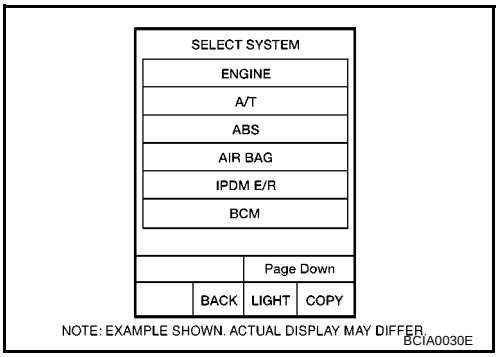
1. The CONSULT-II electrically displays shift timing and lock-up timing (that is, operation timing of each solenoid).
   Check for time difference between actual shift timing and the CONSULT-II display. If the difference is noticeable, mechanical parts (except solenoids, sensors, etc.) may be malfunctioning. Check mechanical parts using applicable diagnostic procedures.
2. Shift schedule (which implies gear position) displayed on CONSULT-II and that indicated in Service Manual may differ slightly. This occurs because of the following reasons:

- Actual shift schedule has more or less tolerance or allowance,
- Shift schedule indicated in Service Manual refers to the point where shifts start, and
- Gear position displayed on CONSULT-II indicates the point where shifts are completed.

3. Shift solenoid valve “A” or “B” is displayed on CONSULT-II at the start of shifting. Gear position is displayed upon completion of shifting (which is computed by TCM).
4. Additional CONSULT-II information can be found in the Operation Manual supplied with the CONSULT-II unit.

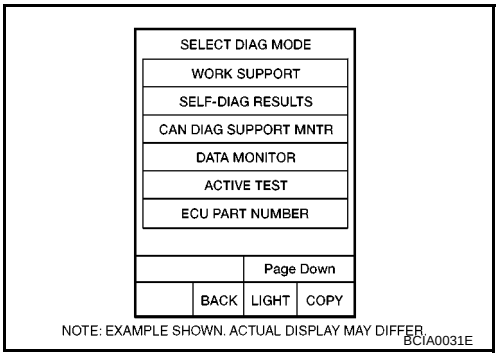
SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)

1. Turn on CONSULT-II and touch “ENGINE” for EURO-OBD detected items or touch “A/T” for TCM self-diagnosis.
   If A/T is not displayed, check TCM power supply and ground circuit. Refer to AT-104, "TCM Terminals and Reference Value" . If result is NG, refer to PG-4, "POWER SUPPLY ROUTING" .



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER.
BCIA0030E

2. Touch “SELF DIAGNOSIS”.
   Display shows malfunction experienced since the last erasing operation.
   CONSULT-II performs “real time diagnosis”.
   Also, any malfunction detected while in this mode will be displayed at real time.



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER.
BCIA0031E

SELF-DIAGNOSTIC RESULT TEST MODE

Detected items (Screen terms for CONSULT-II, “SELF DIAGNOSIS” test mode)		Malfunction is detected when...	TCM self-diagnosis	EURO-OBD (DTC)
“A/T”	“ENGINE”		Available by O/D OFF indicator lamp	Available by malfunction indicator*2 , “ENGINE” on CONSULT-II or GST
No failure (NO SELF DIAGNOSTIC FAILURE INDICATED FURTHER TESTING MAY BE REQUIRED**)		● No failure has been detected.	X	X
Initial start		● This is not a malfunction message (Whenever shutting off a power supply to the TCM, this message appears on the screen.)	X	—
INITIAL START	—			
Park/neutral position (PNP) switch circuit		● TCM does not receive the correct voltage signal (based on the gear position) from the switch.	—	P0705
—	PNP SW/CIRC			
Revolution sensor		● TCM does not receive the proper voltage signal from the sensor.	X	P0720

DATA MONITOR MODE (A/T)

Item	Display	Mover to center Monitor items			Description	Remarks
		TCM Input signals	Main signals	Selection from menu		
Vehicle speed sensor 1 (A/T) (Revolution sensor)	VHCL/S SE·A/T [km/h] or [mph]	X	—	▼	● Vehicle speed computed from signal of revolution sensor is displayed.	● When racing engine in N or P with vehicle stationary, CONSULT-II data may not indicate 0 km/h (0 mph).
Vehicle speed sensor 2 (Meter)	VHCL/S SE·MTR [km/h] or [mph]	X	—	▼	● Vehicle speed computed from signal of vehicle speed sensor is displayed.	● Vehicle speed display may not be accurate under approx. 10 km/h (6 mph). It may not indicate 0 km/h (0 mph) when vehicle is stationary.
Throttle position sensor	THRTL POS SEN [V]	X	—	▼	● Throttle position sensor signal voltage is displayed.	● Accelerator pedal position sensor signal
A/T fluid temperature sensor	FLUID TEMP SE [V]	X	—	▼	● A/T fluid temperature sensor signal voltage is displayed. ● Signal voltage lowers as fluid temperature rises.	
Battery voltage	BATTERY VOLT [V]	X	—	▼	● Source voltage of TCM is displayed.	
Engine speed	ENGINE SPEED [rpm]	X	X	▼	● Engine speed, computed from engine speed signal, is displayed.	● Engine speed display may not be accurate under approx. 800 rpm. It may not indicate 0 rpm even when engine is not running.
Power train revolution sensor	TURBINE REV [rpm]	X	—	▼		● Not mounted but displayed.
Overdrive control switch	OVERDRIVE SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of overdrive control SW is displayed.	
PN position (PNP) switch	PN POSI SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of PN position SW is displayed.	
R position switch	R POSITION SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of R position SW is displayed.	
D position switch	D POSITION SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of D position SW is displayed.	
2 position switch	2 POSITION SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of 2 position SW, is displayed.	
1 position switch	1 POSITION SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of 1 position SW, is displayed.	

Item	Display	Mover to center Monitor items			Description	Remarks
		TCM Input signals	Main signals	Selection from menu		
ASCD cruise signal	ASCD·CRUISE [ON/OFF]	X	—	▼	● Status of ASCD cruise signal is displayed. ON... Cruising state OFF... Normal running state	● This is displayed even when no ASCD is mounted.
ASCD OD cut signal	ASCD·OD CUT [ON/OFF]	X	—	▼	● Status of ASCD OD release signal is displayed. ON... OD released OFF... OD not released	● This is displayed even when no ASCD is mounted.
Kickdown switch	KICKDOWN SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of kick down SW, is displayed.	● This is displayed even when no kick down switch is equipped.
Closed throttle position signal	CLOSED THL/SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of closed throttle position signal, is displayed.	● This means closed throttle position signal input via CAN communication line.
Wide open throttle position signal	W/O THRL/P-SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of wide open throttle position signal, is displayed.	● This means wide open throttle position signal input via CAN communication line.
A/T mode switch	HOLD SW [ON/OFF]	X	—	▼		● Not mounted but displayed.
Gear position	GEAR	—	X	▼	● Gear position data used for computation by TCM, is displayed.	
Selector lever position	SLCT LVR POSI	—	X	▼	● Selector lever position data, used for computation by TCM, is displayed.	● A specific value used for control is displayed if fail-safe is activated due to error.
Vehicle speed	VEHICLE SPEED [km/h] or [mph]	—	X	▼	● Vehicle speed data, used for computation by TCM, is displayed.	
A/T mode switch	POWER SHIFT SW [ON/OFF]	—	—	▼		● Not mounted but displayed.
Torque converter slip ratio	TC SLIP RATIO [0.000]	—	—	▼	● Ratio of engine revolution to input shaft revolution of torque converter	
Torque converter slip speed	TC SLIP SPEED [rpm]	—	—	▼	● Difference in revolution between input shaft revolution and input shaft revolution of torque converter	● Display doesn't indicate o rpm even if engine is stopped. But this isn't malfunction.
Throttle position	THROTTLE POSI [/8]	—	X	▼	● Throttle position data, used for computation by TCM, is displayed.	● A specific value used for control is displayed if fail-safe is activated due to error.
Stop lamp switch	BRAKE SW [ON/OFF]	X	—	▼	● ON/OFF status is displayed. ON... Brake pedal is depressed. OFF... Brake pedal is released.	

Item	Display	Mover to center Monitor items			Description	Remarks
		TCM Input signals	Main signals	Selection from menu		
Line pressure duty	LINE PRES DTY [%]	—	X	▼	● Control value of line pressure solenoid valve, computed by TCM from each input signal, is displayed.	
Torque converter clutch solenoid valve duty	TCC S/V DUTY [%]	—	X	▼	● Control value of torque converter clutch solenoid valve, computed by TCM from each input signal, is displayed.	
Shift solenoid valve A	SHIFT S/V A [ON/OFF]	—	X	▼	● Control value of shift solenoid valve A, computed by TCM from each input signal, is displayed.	● Control value of solenoid is displayed even if solenoid circuit is disconnected. The OFF signal is displayed if solenoid circuit is shorted.
Shift solenoid valve B	SHIFT S/V B [ON/OFF]	—	X	▼	● Control value of shift solenoid valve B, computed by TCM from each input signal, is displayed.	
Overrun clutch solenoid valve	OVERRUN/C S/V [ON/OFF]	—	X	▼	● Control value of overrun clutch solenoid valve computed by TCM from each input signal is displayed.	
Self-diagnosis display lamp (O/D OFF indicator lamp)	SELF-D DP LMP [ON/OFF]	—	X	▼	● Control status of O/D OFF indicator lamp is displayed.	
Voltage [V]		—	—	▼	● Value measured by voltage probe is displayed.	
Frequency [Hz]		—	—	▼	● Value measured by pulse probe is displayed. If measurement is impossible, “#” sign is displayed. “#” sign is also displayed at the final data value until the measurement result is obtained.	
DUTY-HI		—	—	▼	● Duty cycle value for measurement probe is displayed.	
DUTY-LOW		—	—	▼		
PLS WIDTH-HI		—	—	▼	● Measured pulse width of measurement probe is displayed.	
PLS WIDTH-LOW		—	—	▼

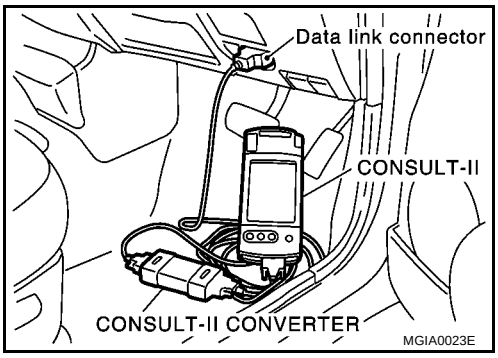
DTC WORK SUPPORT MODE WITH CONSULT-II

CONSULT-II Setting Procedure

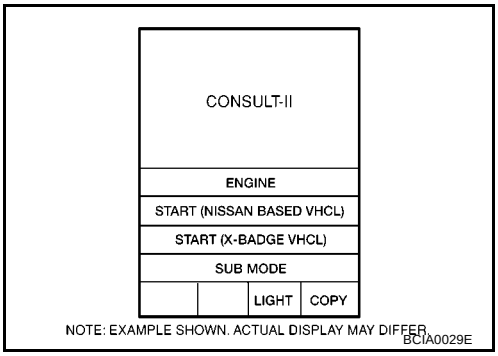
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

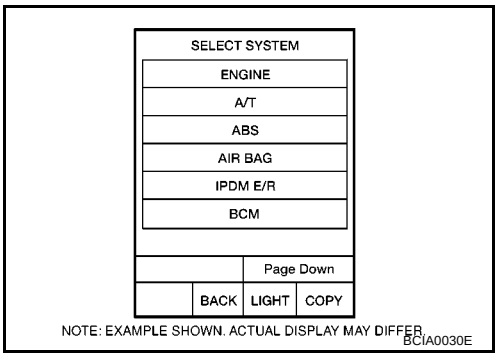
1. Turn ignition switch to “OFF” position.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector, which is located in instrument lower panel on driver side.



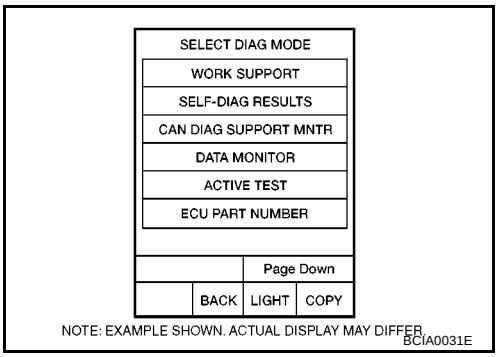
3. Turn ignition switch to “ON” position. (Do not start engine.)
4. Touch “START”.



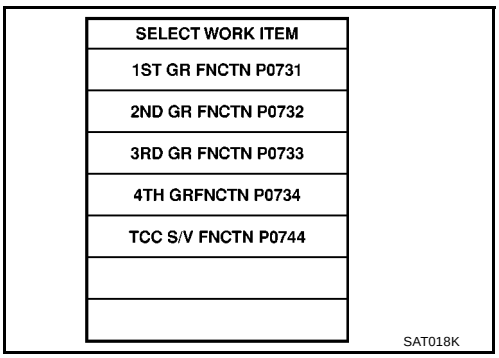
5. Touch “A/T”.
   If “A/T” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



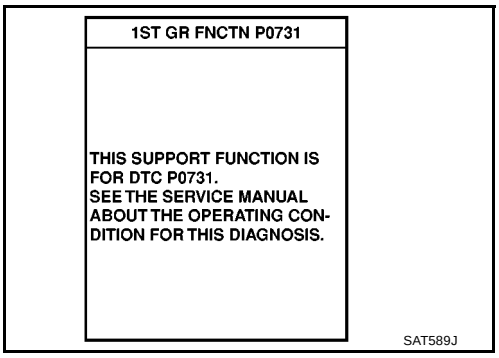
6. Touch “DTC WORK SUPPORT”.



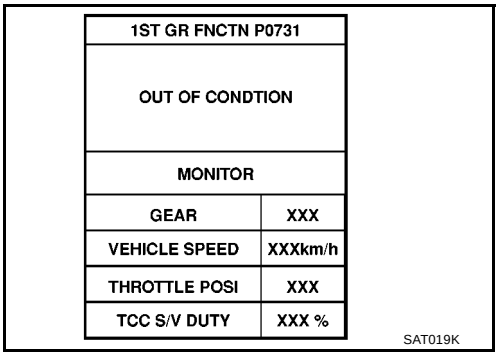
7. Touch select item menu (1ST, 2ND, etc.).



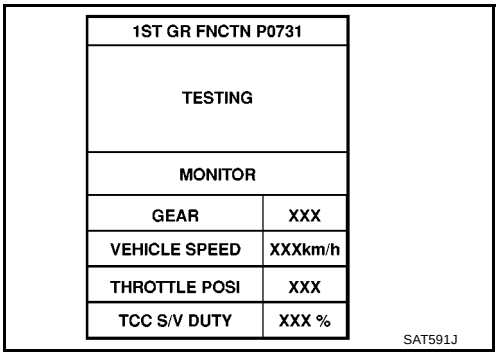
8. Touch “START”.



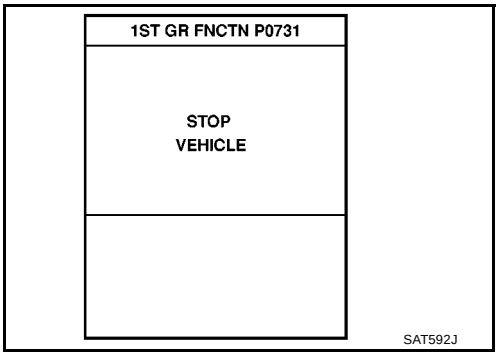
9. Perform driving test according to “DTC CONFIRMATION PROCEDURE” in “TROUBLE DIAGNOSIS FOR DTC”.

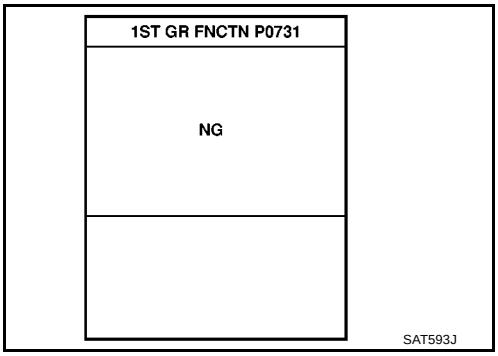


- **When testing conditions are satisfied, CONSULT-II screen changes from “OUT OF CONDITION” to “TESTING”.**

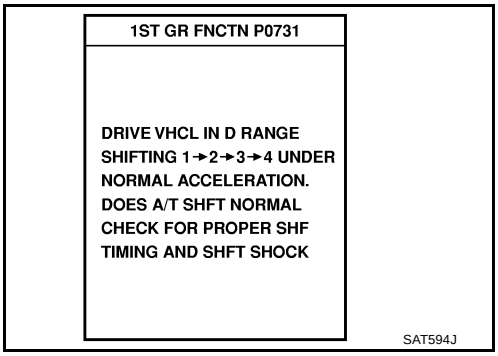


10. Stop vehicle. If “NG” appears on the screen, malfunction may exist. Go to “DIAGNOSTIC PROCEDURE”.

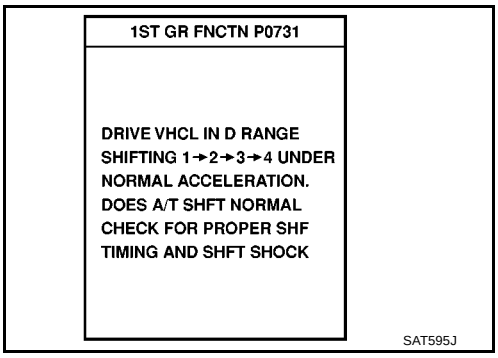




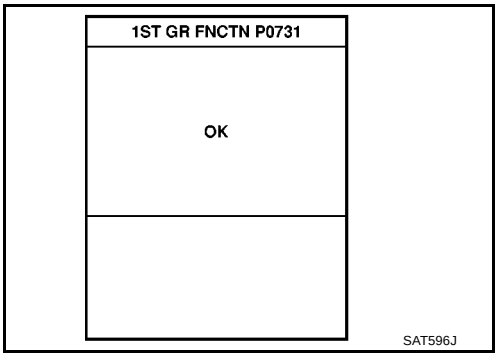
11. Perform test drive to check gear shift feeling in accordance with instructions displayed.

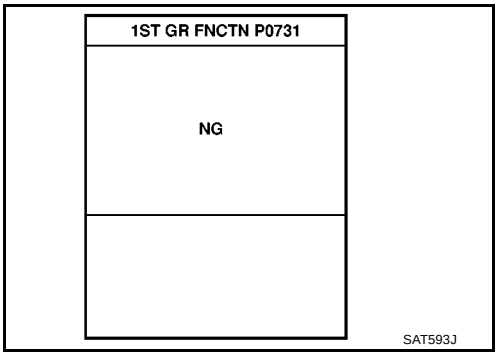


12. Touch “YES” or “NO”.



13. CONSULT-II procedure ended.





If “NG” appears on the screen, a malfunction may exist. Go to “DIAGNOSTIC PROCEDURE”.

DTC WORK SUPPORT MODE

DTC work support item	Description	Check items (Possible cause)
1ST GR FNCTN P0731	Following items for “A/T 1st gear function (P0731)” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve A ● Shift solenoid valve B ● Each clutch ● Hydraulic control circuit
2ND GR FNCTN P0732	Following items for “A/T 2nd gear function (P0732)” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve B ● Each clutch ● Hydraulic control circuit
3RD GR FNCTN P0733	Following items for “A/T 3rd gear function (P0733)” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve A ● Each clutch ● Hydraulic control circuit
4TH GR FNCTN P0734	Following items for “A/T 4th gear function (P0734)” can be confirmed. ● Self-diagnosis status (whether the diagnosis is being conducted or not) ● Self-diagnosis result (OK or NG)	● Shift solenoid valve A ● Shift solenoid valve B ● Line pressure solenoid valve ● Each clutch ● Hydraulic control circuit

Diagnostic Procedure Without CONSULT-II

ECS008NP

EURO-OBD SELF-DIAGNOSTIC PROCEDURE (WITH GST)

Refer to EC-112, "Generic Scan Tool (GST) Function" .

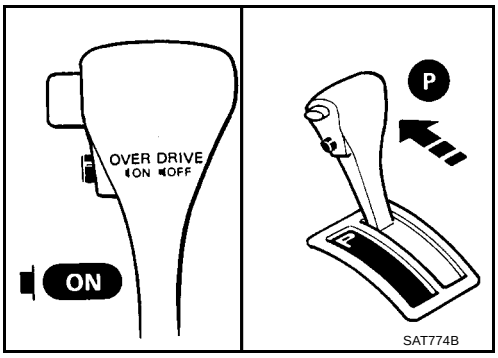
EURO-OBD SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)

Refer to EC-60, "Malfunction Indicator (MI)" .

⊗ TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)

1. CHECK O/D OFF INDICATOR LAMP

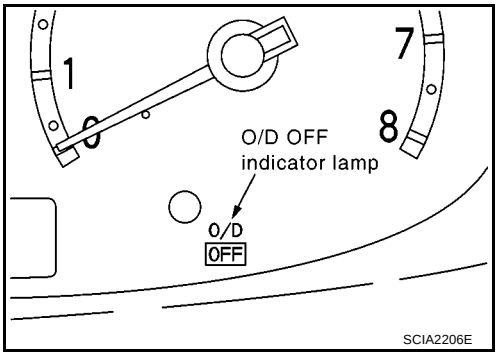
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch to “OFF” position.
   Wait 5 seconds.
3. Turn ignition switch to “ACC” position.
4. Set overdrive control switch to “ON” position.
5. Move selector lever to “P” position.
6. Turn ignition switch to “ON” position. (Do not start engine.)



7. Does O/D OFF indicator lamp come on for about 2 seconds?

Yes or No

Yes >> GO TO 2.
No >> Go to AT-212, "O/D OFF Indicator Lamp Does Not Come On" .

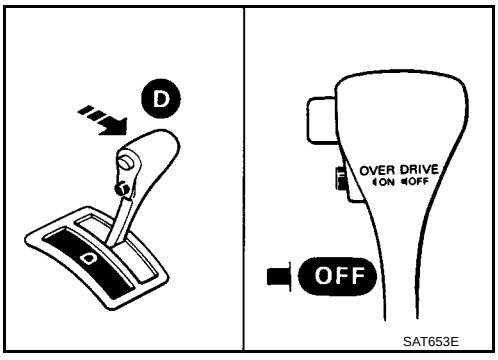


2. JUDGEMENT PROCEDURE STEP 1

1. Turn ignition switch to “OFF” position.
2. Turn ignition switch to “ACC” position.
3. Move selector lever to “D” position.
4. Set overdrive control switch to “OFF” position.
5. Turn ignition switch to “ON” position. (Do not start engine.)

– Wait more than 2 seconds after turning ignition switch “ON”.

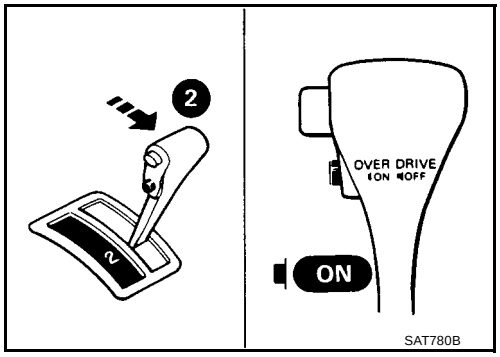
>> GO TO 3.



3. JUDGEMENT PROCEDURE STEP 2

1. Move selector lever to “2” position.
2. Set overdrive control switch to “ON” position.

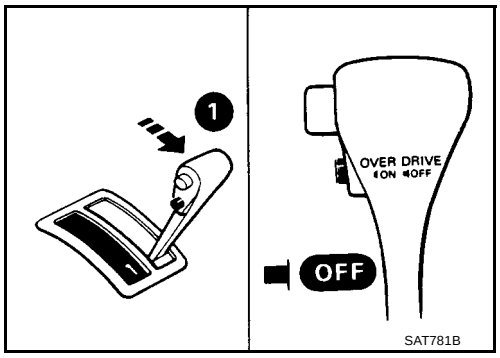
>> GO TO 4.



4. JUDGEMENT PROCEDURE STEP 3

1. Move selector lever to “1” position.
2. Set overdrive control switch to “OFF” position.

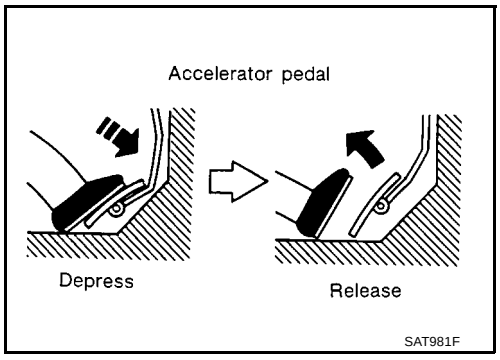
>> GO TO 5.



5. JUDGEMENT PROCEDURE STEP 4

1. Depress accelerator pedal fully and release it.

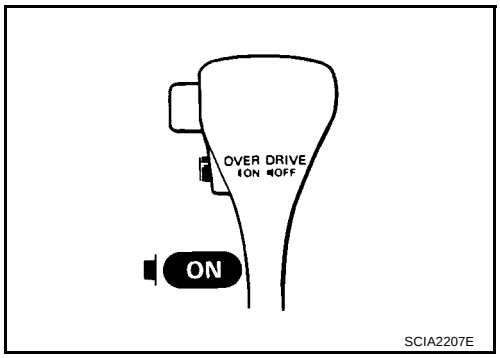
>> GO TO 6.



6. JUDGEMENT PROCEDURE STEP 5

1. Set overdrive control switch to “ON” position.

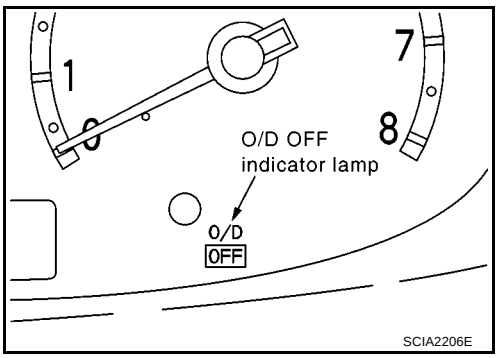
>> GO TO 7.



7. CHECK SELF-DIAGNOSIS CODE

Check O/D OFF indicator lamp. Refer to AT-51, "JUDGEMENT OF SELF-DIAGNOSIS CODE" .

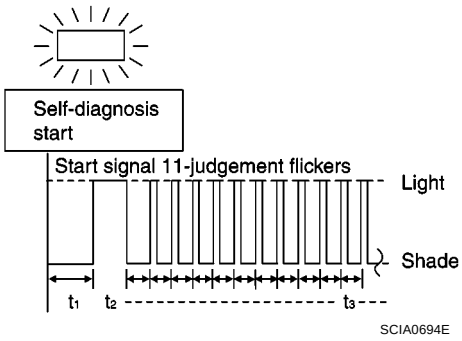
>> **DIAGNOSIS END**



JUDGEMENT OF SELF-DIAGNOSIS CODE

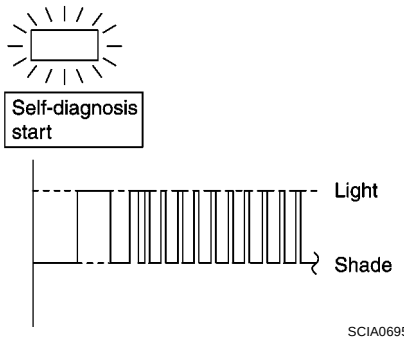
O/D OFF indicator lamp:

All judgement flickers are the same.



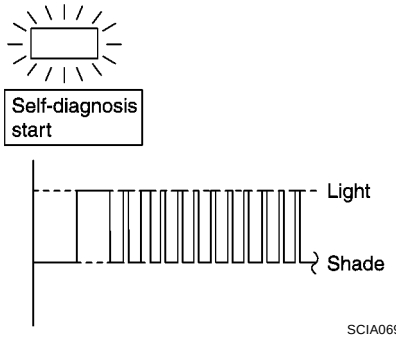
All circuits that can be confirmed by self-diagnosis are OK.

1st judgement flicker is longer than others.



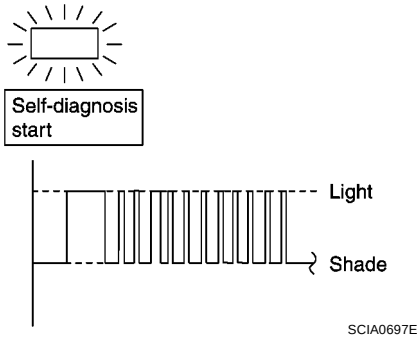
Revolution sensor circuit is short-circuited or disconnected.
⇒ **Go to DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR).**
Refer to AT-126

2nd judgement flicker is longer than others.



Vehicle speed sensor circuit is short-circuited or disconnected.
⇒ **Go to VEHICLE SPEED SENSOR·MTR.**
Refer to AT-202

3rd judgement flicker is longer than others.



Accelerator pedal position (APP) sensor circuit is short-circuited or disconnected.
⇒ **Go to DTC P1705 ACCELEPATOR PEDAL POSITION (APP) SENSOR.**
Refer to AT-183

O/D OFF indicator lamp:

4th judgement flicker is longer than others.  Shift solenoid valve A circuit is short-circuited or disconnected. ⇒ **Go to DTC P0750 SHIFT SOLENOID VALVE A.** Refer to AT-173	5th judgement flicker is longer than others.  Shift solenoid valve B circuit is short-circuited or disconnected. ⇒ **Go to DTC P0755 SHIFT SOLENOID VALVE B.** Refer to AT-178
6th judgement flicker is longer than others.  Overrun clutch solenoid valve circuit is short-circuited or disconnected. ⇒ **Go to DTC P1760 OVERRUN CLUTCH SOLENOID VALVE.** Refer to AT-188	7th judgement flicker is longer than others.  Torque converter clutch solenoid valve circuit is short-circuited or disconnected. ⇒ **Go to DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE.** Refer to AT-161
8th judgement flicker is longer than others.  A/T fluid temperature sensor is disconnected or TCM power source circuit is damaged. ⇒ **Go to DTC BATT/FLUID TEMP SEN A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE.** Refer to AT-196	9th judgement flicker is longer than others.  Engine speed signal circuit is short-circuited or disconnected. ⇒ **Go to DTC P0725 ENGINE SPEED SIGNAL.** Refer to AT-131

O/D OFF indicator lamp:

10th judgement flicker is longer than others.  SCIA0704E Line pressure solenoid valve circuit is short-circuited or disconnected. ⇒ **Go to DTC P0745 LINE PRESSURE SOLENOID VALVE.** Refer to AT-166	11th judgement flicker is longer than others.  SCIA0705E CAN communication line is damaged. ⇒**Go to DTC U1000 CAN COMMNICATION LINE.** Refer to AT-193
Lamp comes off.  SCIA0706E PNP switch, overdrive control switch, closed throttle position signal or wide-open throttle position signal circuit is disconnected or TCM is damaged. (Because closed throttle position signal and wide-open throttle position signal are input via CAN communication line malfunction may continue after self-diagnosis.) ⇒ **Go to TCM Self-diagnosis Does Not Activate** Refer to AT-247	Flickers as shown below.  SAT804H Battery power is low. Battery has been disconnected for a long time. Battery is connected conversely. (When reconnecting TCM connectors.—This is not a problem).

t_1 = 2.5 seconds t_2 = 2.0 seconds t_3 = 1.0 second t_4 = 1.0 second

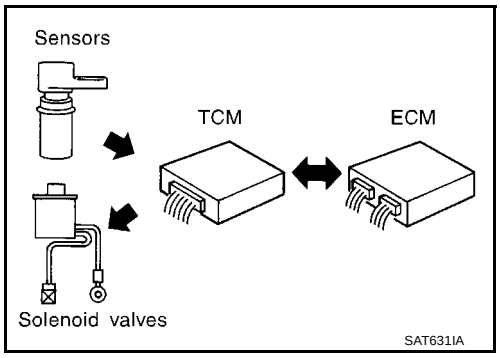
TROUBLE DIAGNOSIS — INTRODUCTION

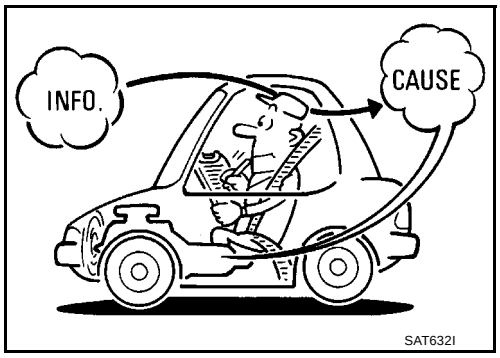
PFP:00000

Introduction

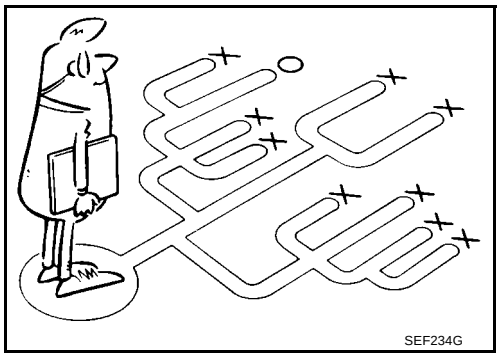
ECS008NQ

The TCM receives a signal from the vehicle speed sensor, throttle position sensor or PNP switch and provides shift control or lock-up control via A/T solenoid valves.
The TCM also communicates with the ECM by means of a signal sent from sensing elements used with the EURO-OBD related parts of the A/T system for malfunction-diagnostic purposes. The TCM is capable of diagnosing malfunctioning parts while the ECM can store malfunctions in its memory.
Input and output signals must always be correct and stable in the operation of the A/T system. The A/T system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.
It is much more difficult to diagnose a problem that occurs intermittently rather than continuously. Most intermittent problems are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.
A visual check only, may not find the cause of the problems. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the “Work Flow”. Refer to AT-58, "Work Flow" .





Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a drive ability complaint. The customer can supply good information about such problems, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A “Diagnostic Worksheet” like the example (AT-55, "DIAGNOSTIC WORKSHEET") should be used.
Start your diagnosis by looking for “conventional” problems first. This will help troubleshoot drive ability problems on an electronically controlled engine vehicle.
Also check related Service bulletins for information.



DIAGNOSTIC WORKSHEET

Information from Customer

KEY POINTS

- **WHAT**..... Vehicle & A/T model
- **WHEN**..... Date, Frequencies
- **WHERE**..... Road conditions
- **HOW**..... Operating conditions, Symptoms

Customer name MR/MS	Model & Year	VIN
Trans. model	Engine	Mileage
Incident Date	Manuf. Date	In Service Date
Frequency	❑ Continuous ❑ Intermittent (times a day)	
Symptoms	❑ Vehicle does not move. (❑ Any position ❑ Particular position)	
	❑ No up-shift (❑ 1st → 2nd ❑ 2nd → 3rd ❑ 3rd → O/D)	
	❑ No down-shift (❑ O/D → 3rd ❑ 3rd → 2nd ❑ 2nd → 1st)	
	❑ Lockup malfunction	
	❑ Shift point too high or too low.	
	❑ Shift shock or slip (❑ N → D ❑ Lockup ❑ Any drive position)	
	❑ Noise or vibration	
	❑ No kick down	
	❑ No pattern select

		❑ Vehicle Does Not Start From D1 , AT-238, "Vehicle Does Not Start From D1" . ❑ A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2 , AT-225, "A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2" . ❑ A/T Does Not Shift: D2 → D3 , AT-227, "A/T Does Not Shift: D2 → D3" . ❑ A/T Does Not Shift: D3 → D4 , AT-229, "A/T Does Not Shift: D3 → D4" .	
		Part-3	AT-80, "Cruise Test — Part 3"
		❑ A/T Does Not Shift: D4 → D3 When Overdrive Control Switch “ON” → “OFF”, AT-241, "A/T Does Not Shift: D4 → D3 , When Overdrive Control Switch “ON” → “OFF”" . ❑ Engine Speed Does Not Return To Idle (Engine Brake In D3), AT-236, "Engine Speed Does Not Return To Idle (Light Braking D4 → D3)" . ❑ A/T Does Not Shift: D3 → 22 , When Selector Lever “D” → “2” Position, AT-242, "A/T Does Not Shift: D3 → 22 , When Selector Lever “D” → “2” Position" . ❑ Engine Speed Does Not Return To Idle (Engine Brake In 22), AT-236, "Engine Speed Does Not Return To Idle (Light Braking D4 → D3)" . ❑ A/T Does Not Shift: 22 → 11 , When Selector Lever “2” → “1” Position, AT-243, "A/T Does Not Shift: 22 → 11 , When Selector Lever “2” → “1” Position" . ❑ Vehicle Does Not Decelerate By Engine Brake, AT-245, "Vehicle Does Not Decelerate By Engine Brake" . ❑ TCM Self-diagnosis Does Not Activate (PNP & Overdrive control switches, and throttle position sensor circuit checks), AT-247, "TCM Self-diagnosis Does Not Activate" . ❑ SELF-DIAGNOSTIC PROCEDURE/DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE — Mark detected items.	
		❑ PNP switch, AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH" . ❑ A/T fluid temperature sensor, AT-120, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT" . ❑ Vehicle speed sensor·A/T (Revolution sensor), AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" . ❑ Engine speed signal, AT-131, "DTC P0725 ENGINE SPEED SIGNAL" . ❑ Torque converter clutch solenoid valve, AT-161, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE" . ❑ Line pressure solenoid valve, AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE" . ❑ Shift solenoid valve A, AT-173, "DTC P0750 SHIFT SOLENOID VALVE A" . ❑ Shift solenoid valve B, AT-178, "DTC P0755 SHIFT SOLENOID VALVE B" . ❑ Accelerator pedal position (App) sensor, AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" . ❑ Overrun clutch solenoid valve, AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE" . ❑ PNP & overdrive control switches, and throttle position sensor, AT-247, "TCM Self-diagnosis Does Not Activate" . ❑ A/T fluid temperature sensor and TCM power source, AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)" . ❑ Vehicle speed sensor·MTR, AT-202, "DTC VEHICLE SPEED SENSOR MTR" . ❑ CAN communication line, AT-193, "DTC U1000 CAN COMMUNICATION LINE" . ❑ Control unit (RAM), control unit (ROM), AT-206, "DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)" . ❑ Control unit (EEP ROM), AT-208, "DTC CONTROL UNIT(EEPROM)" . ❑ Battery ❑ Others	

5.	❑ For self-diagnosis NG items, inspect each component. Repair or replace the damaged parts.	AT-48, "Diagnostic Procedure Without CONSULT-II"
6.	❑ Perform all ROAD TEST and re-mark required procedures.	AT-66, "Road Test"
7.	❑ Perform DTC CONFIRMATION PROCEDURE for following MIL indicating items and check out NG items.	EC-48, "Emission-related Diagnostic Information"
	❑ DTC (P0731) A/T 1st gear function, AT-135, "DTC P0731 A/T 1ST GEAR FUNCTION" . ❑ DTC (P0732) A/T 2nd gear function, AT-141, "DTC P0732 A/T 2ND GEAR FUNCTION" . ❑ DTC (P0733) A/T 3rd gear function, AT-147, "DTC P0733 A/T 3RD GEAR FUNCTION" . ❑ DTC (P0734) A/T 4th gear function, AT-153, "DTC P0734 A/T 4TH GEAR FUNCTION" .	
8.	❑ Perform the Diagnostic Procedures for all remaining items marked NG. Repair or replace the damaged parts. Refer to the Symptom Chart when you perform the procedures. (The chart also shows some other possible symptoms and the component inspection orders.)	AT-83, "Symptom Chart"
9.	❑ Erase DTC from TCM and ECM memories.	AT-37, "HOW TO ERASE DTC"

Work Flow

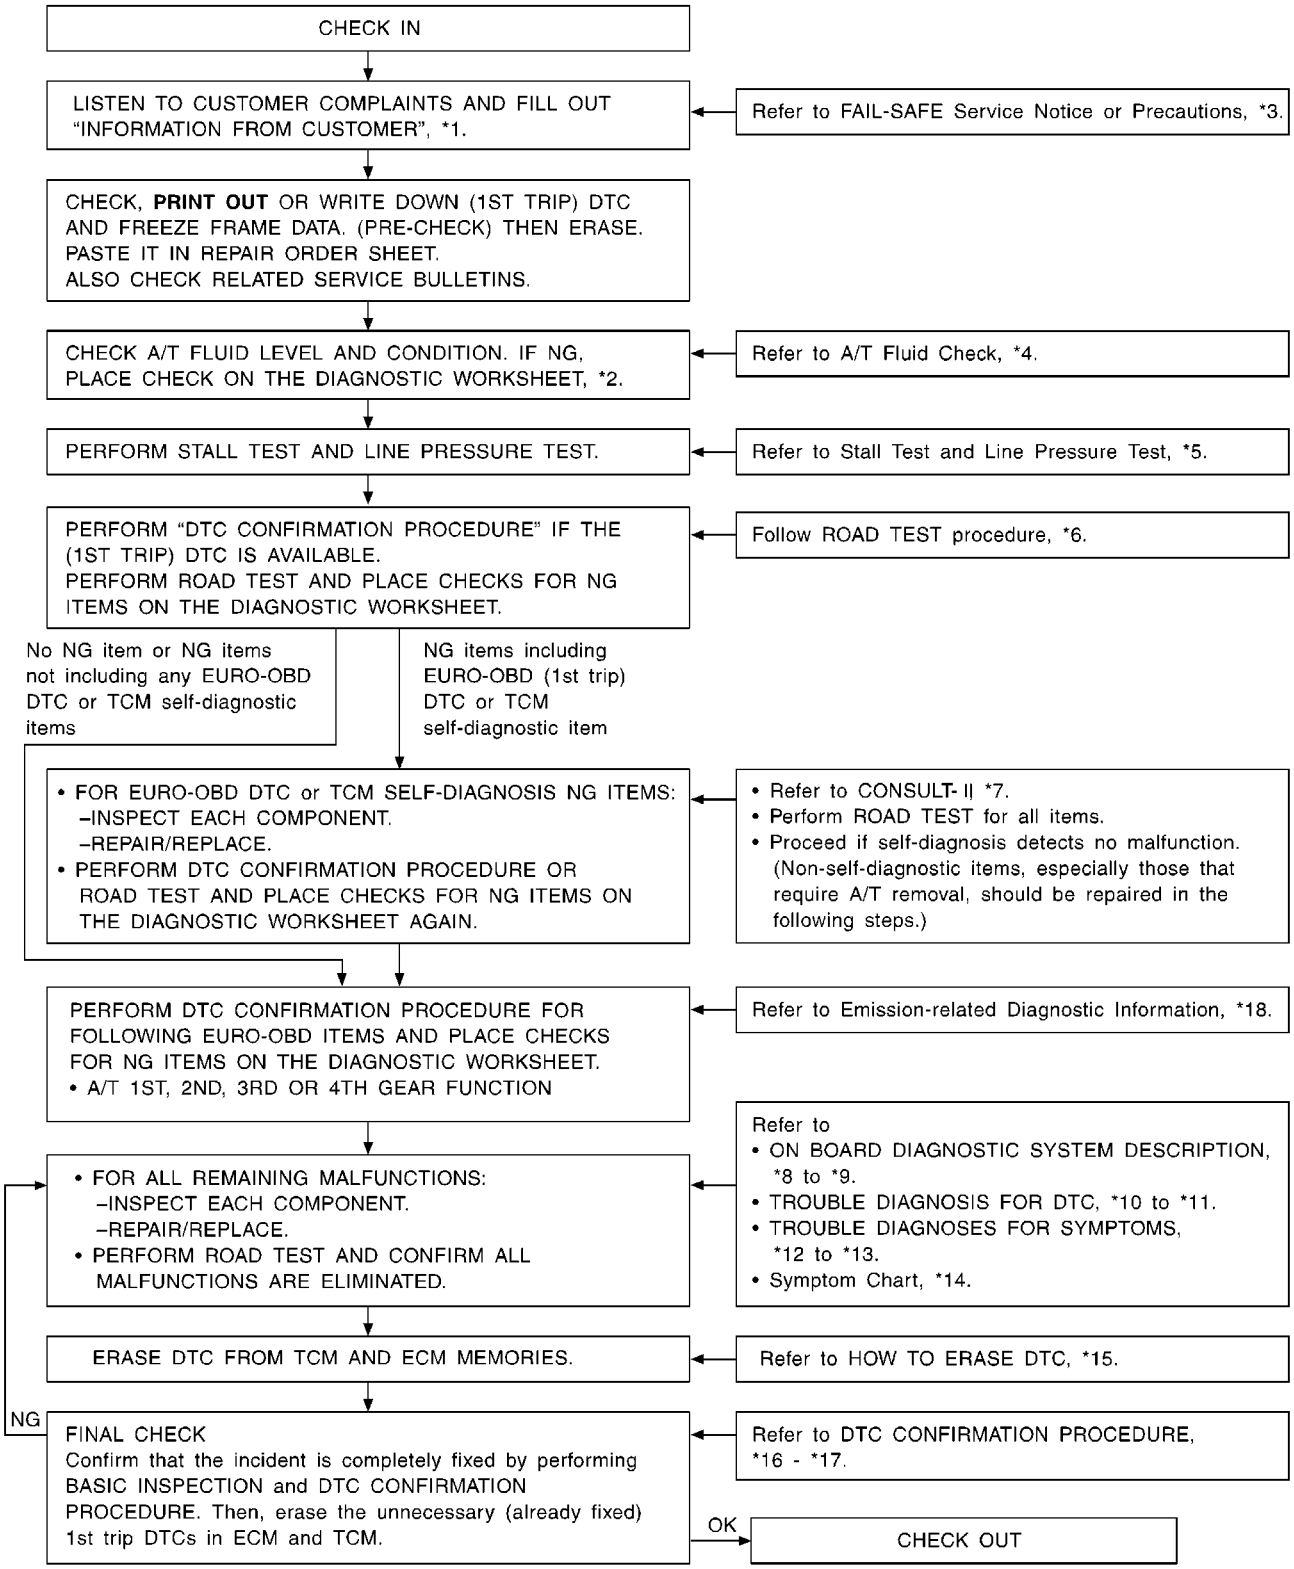
ECS008NR

HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a problem. It is important to fully understand the symptoms or conditions for a customer complaint.

Make good use of the two sheets provided, “INFORMATION FROM CUSTOMER” (AT-55, "Information from Customer") and “DIAGNOSTIC WORKSHEET” (AT-56, "Diagnostic Worksheet"), to perform the best troubleshooting possible.

WORK FLOW CHART



SAT183K

*1:	AT-55, "Information from Customer"	*2:	AT-56, "Diagnostic Worksheet"	*3:	AT-7, "Service Notice or Precautions"
*4:	AT-61, "A/T Fluid Check"	*5:	AT-62, "Stall Test" and AT-65, "Line Pressure Test"	*6:	AT-66, "Road Test"

TROUBLE DIAGNOSIS — BASIC INSPECTION

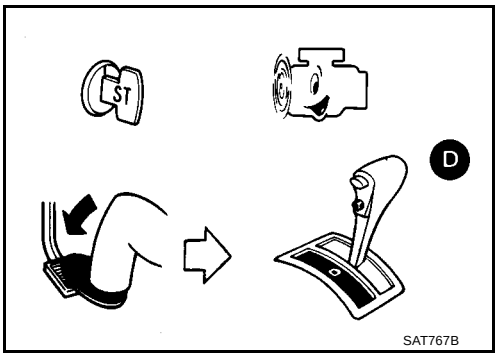
PFP:00000

A/T Fluid Check

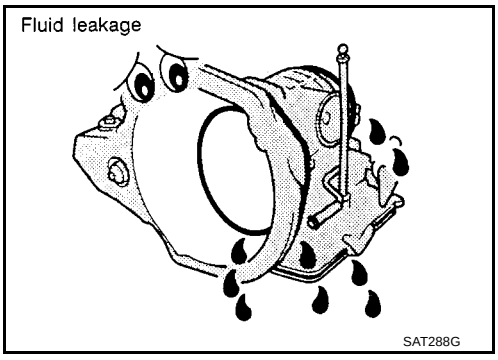
ECS008NS

FLUID LEAKAGE CHECK

1. Clean area suspected of leaking. — for example, mating surface of converter housing and transmission case.
2. Start engine, apply foot brake, place selector lever in “D” position and wait a few minutes.
3. Stop engine.



4. Check for fresh leakage.

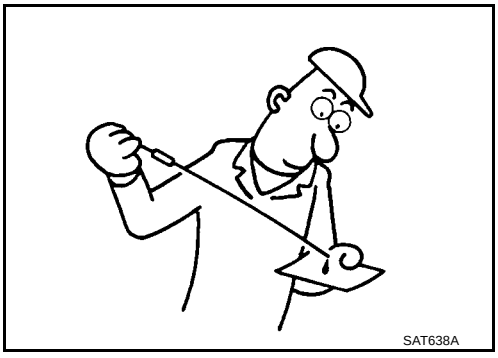


FLUID CONDITION CHECK

Fluid color	Suspected problem
Dark or black with burned odor	Wear of frictional material
Milky pink	Water contamination — Road water entering through filler tube or breather
Varnished fluid, light to dark brown and tacky	Oxidation — Over or under filling, — Overheating

FLUID LEVEL CHECK

Refer to AT-12, "Checking A/T Fluid" .



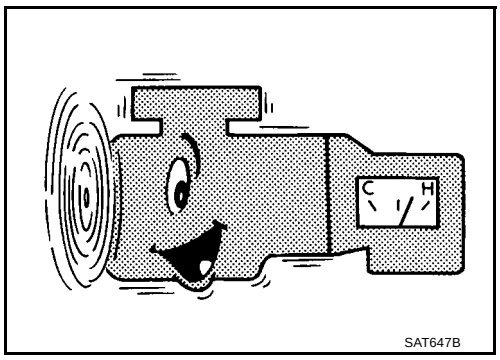
Stall Test

ECS008NT

STALL TEST PROCEDURE

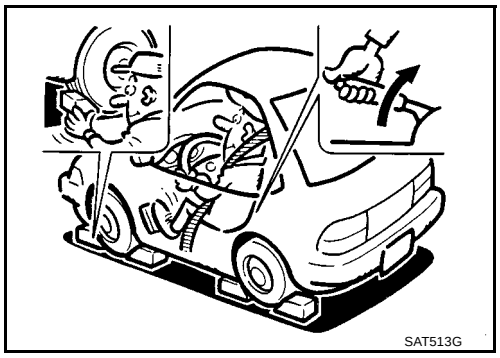
1. Check A/T fluid and engine oil levels. If necessary, add.
2. Drive vehicle for approx. 10 minutes or until fluid and oil reach operating temperature.

ATF operating temperature:
50 - 80°C (122 - 176°F)



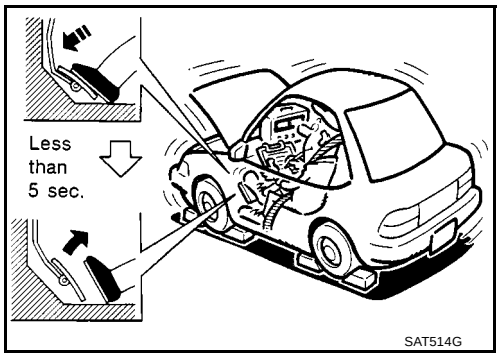
SAT647B

3. Set parking brake and block wheels.
4. Install a tachometer where it can be seen by driver during test.
   - **It is good practice to mark the point of specified engine rpm on indicator.**



SAT513G

5. Start engine, apply foot brake, and place selector lever in D position.
6. Accelerate to wide open throttle gradually while applying foot brake.
7. Quickly note the engine stall revolution and immediately release throttle.
   - **During test, never hold throttle wide open for more than 5 seconds.**

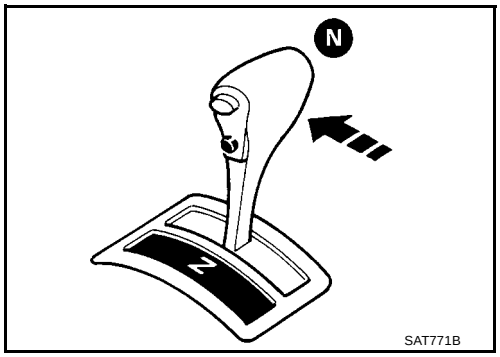


SAT514G

Stall revolution:

CR12DE	2,100 - 2,550 rpm
CR14DE	2,300 - 2,800 rpm

8. Move selector lever to “N” position.
9. Cool off ATF.
   - **Run engine at idle for at least one minute.**
10. Repeat steps 5 through 9 with selector lever in “2”, “1” and “R” positions.



SAT771B

JUDGEMENT OF STALL TEST

The test result and possible damaged components relating to each result are shown in the illustrations on next page.
In order to pinpoint the possible damaged components, follow the WORK FLOW shown in AT-58, "Work Flow".

NOTE:
Stall revolution is too high in “D”, “2” or “1” position:

- Slippage occurs in 1st gear but not in 2nd and 3rd gears..... Low one-way clutch slippage
- Slippage occurs in the following gears:
  1st through 3rd gears in “D” position and engine brake functions with overdrive control switch set to “OFF”.
  1st and 2nd gears in “2” position and engine brake functions with accelerator pedal released (fully closed throttle)..... Forward clutch or forward one-way clutch slippage

Stall revolution is too high in R position:

- Engine brake does not function in “1” position..... Low & reverse brake slippage
- Engine brake functions in “1” position..... Reverse clutch slippage

Stall revolution within specifications:

- Vehicle does not achieve speed of more than 80 km/h (50 MPH)..... One-way clutch seizure in torque converter housing

CAUTION:
Be careful since automatic fluid temperature increases abnormally.

- Slippage occurs in 3rd and 4th gears in “D” position..... High clutch slippage
- Slippage occurs in 2nd and 4th gear in “D” position..... Brake band slippage
- Engine brake does not function in 2nd and 3rd gears in “D” position, 2nd gear in “2” position, and 1st gear in “1” position with overdrive control switch set to “OFF”..... Overrun clutch slippage

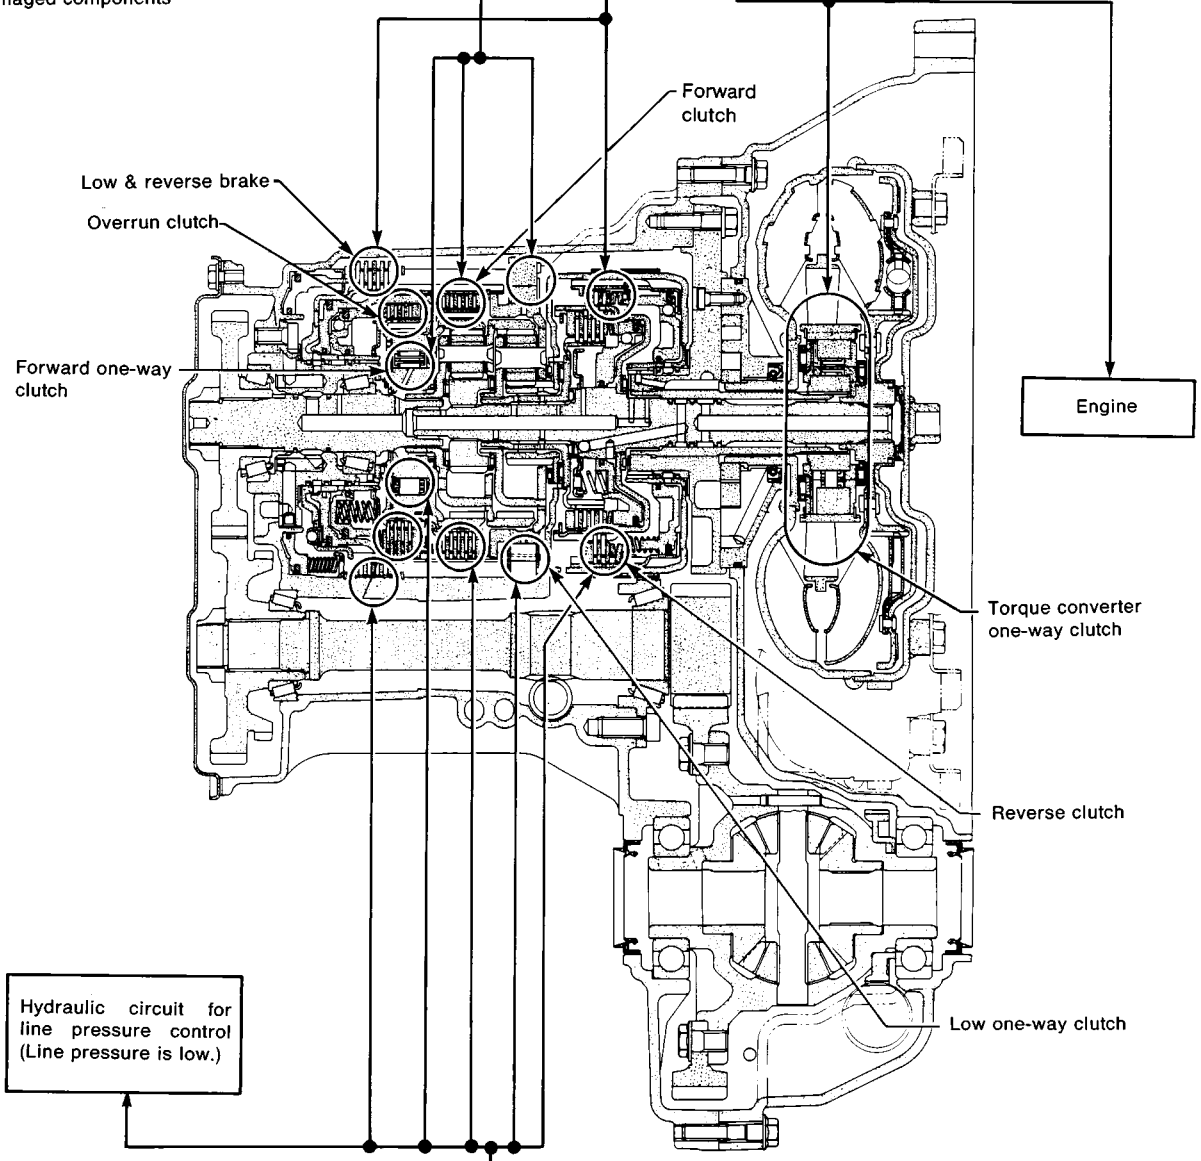
Stall revolution less than specifications:

- Poor acceleration during starts..... One-way clutch slippage in torque converter

Selector lever position	Judgement		
D	H	O	L
2	H	O	L
1	H	O	L
R	O	H	L

O : Stall revolution is normal.
H : Stall revolution is higher than specified.
L : Stall revolution is lower than specified.

Damaged components



Selector lever position	Judgement	
D	H	O
2	H	O
1	H	O
R	H	O

Clutches and brakes except high clutch and brake band are OK. (Condition of high clutch and brake band cannot be confirmed by stall test.)

SAT871HA

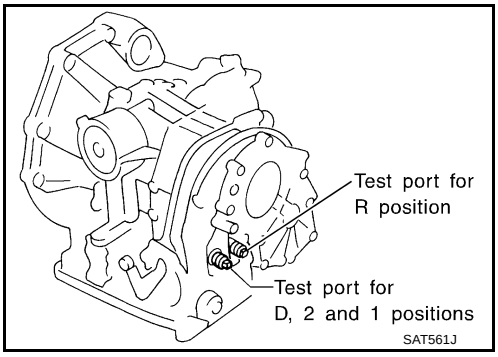
Line Pressure Test

ECS008NU

LINE PRESSURE TEST PORTS

Location of line pressure test ports are shown in the illustration.

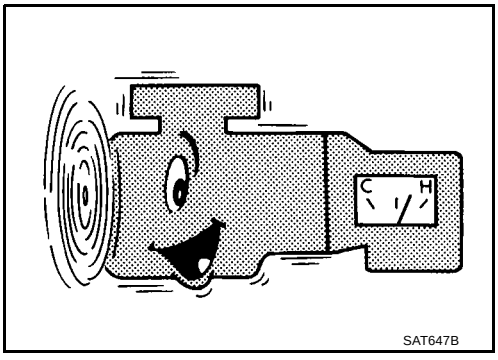
- **Always replace pressure plugs as they are self-sealing bolts.**



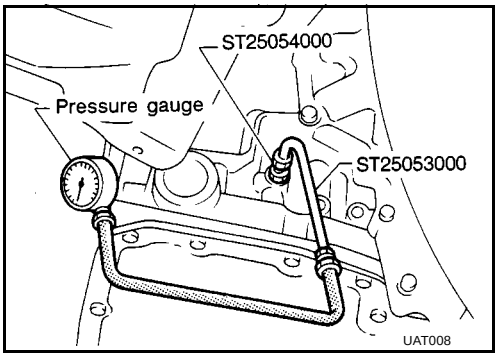
LINE PRESSURE TEST PROCEDURE

1. Check A/T fluid and engine oil levels. If necessary, add fluid or oil.
2. Drive vehicle for approx. 10 minutes or until engine oil and ATF reach operating temperature.

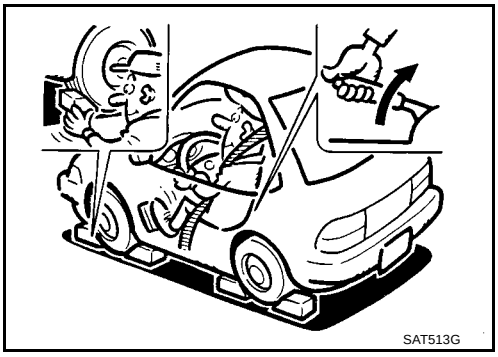
   ATF operating temperature: 50 - 80°C (122 -176°F)



3. Install pressure gauge to corresponding line pressure port.

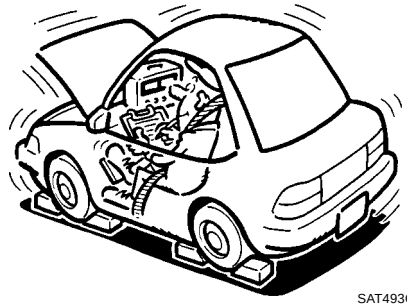


4. Set parking brake and block wheels.
   - **Continue to depress brake pedal fully while line pressure test is being performed at stall speed.**



5. Start engine and measure line pressure at idle and stall speed.
   - **When measuring line pressure at stall speed, follow the stall test procedure.**

Line pressure: Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



SAT493G

JUDGEMENT OF LINE PRESSURE TEST

Judgement		Suspected parts
At idle	Line pressure is low in all positions.	● Oil pump wear ● Control piston damage ● Pressure regulator valve or plug sticking ● Spring for pressure regulator valve damaged ● Fluid pressure leakage between oil strainer and pressure regulator valve ● Clogged strainer
	Line pressure is low in particular position.	● Fluid pressure leakage between manual valve and particular clutch ● For example, line pressure is: – Low in “R” and “1” positions, but – Normal in “D” and “2” positions. Therefore, fluid leakage exists at or around low and reverse brake circuit. Refer to AT-18, "CLUTCH AND BAND CHART" .
	Line pressure is high.	● Maladjustment of throttle position sensor ● A/T fluid temperature sensor damaged ● Line pressure solenoid valve sticking ● Short circuit of line pressure solenoid valve circuit ● Pressure modifier valve sticking ● Pressure regulator valve or plug sticking ● Open in dropping resistor circuit
At stall speed	Line pressure is low.	● Maladjustment of throttle position sensor ● Line pressure solenoid valve sticking ● Short circuit of line pressure solenoid valve circuit ● Pressure regulator valve or plug sticking ● Pressure modifier valve sticking ● Pilot valve sticking

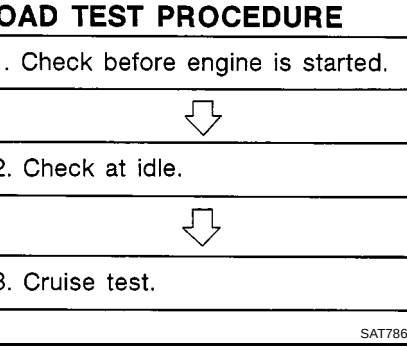
Road Test

ECS008NV

DESCRIPTION

- The purpose of the test is to determine overall performance of A/T and analyze causes of problems.
- The road test consists of the following three parts:

1. Check before engine is started
2. Check at idle



SAT786A

3. Cruise test

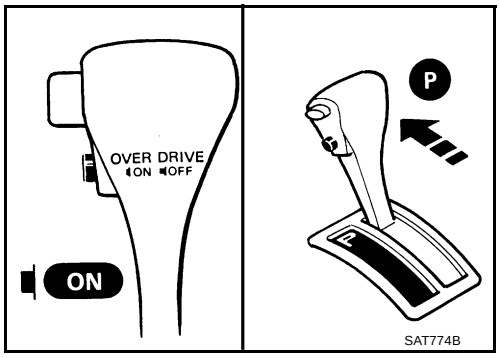
- Before road test, familiarize yourself with all test procedures and items to check.
- Conduct tests on all items until specified symptom is found. Troubleshoot items which check out No Good after road test. Refer to the following items.

	ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION	TROUBLE DIAGNOSES FOR SYMPTOMS
EURO-OBD	AT-35, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION" to AT-48, "Diagnostic Procedure Without CONSULT-II"	AT-212, "O/D OFF Indicator Lamp Does Not Come On" to AT-247, "TCM Self-diagnosis Does Not Activate"

1. CHECK BEFORE ENGINE IS STARTED

1. CHECK O/D OFF INDICATOR LAMP

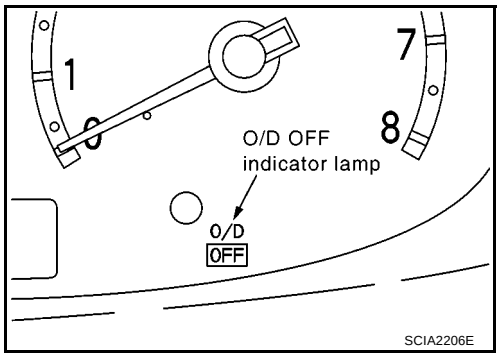
1. Park vehicle on flat surface.
2. Turn ignition switch to “OFF” position.
3. Move selector lever to “P” position.
4. Set overdrive control switch to “ON” position.
5. Turn ignition switch to “ON” position. (Do not start engine.)



6. Does O/D OFF indicator lamp come on for about 2 seconds?

Yes or No

Yes >> GO TO 2
No >> Stop Road Test. Go to “O/D OFF Indicator Lamp Does Not Come On”, AT-212 .



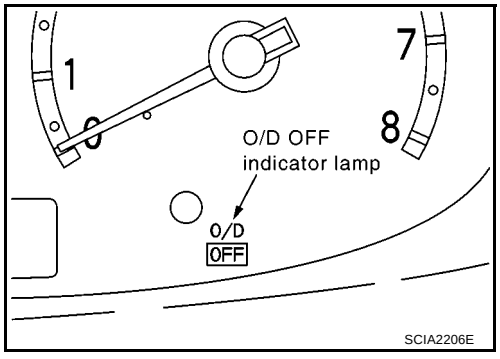
2. CHECK O/D OFF INDICATOR LAMP

Does O/D OFF indicator lamp flicker for about 8 seconds?

Yes or No

Yes >> TCM is under fail-safe mode. Perform self-diagnosis and check NG items on the DIAGNOSTIC WORK-SHEET, AT-55, "DIAGNOSTIC WORKSHEET" . Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

No >> 1. Turn ignition switch to “OFF” position.
2. Perform self-diagnosis and note NG items. Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .
3. Go to “2. CHECK AT IDLE”, AT-69 .



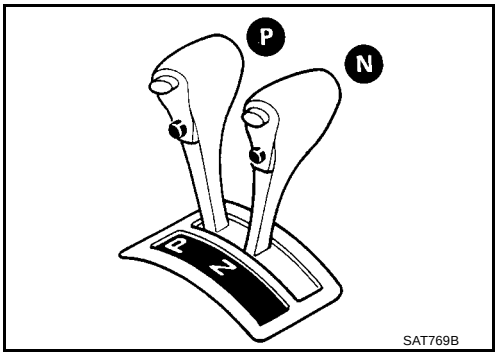
2. CHECK AT IDLE

1. CHECK ENGINE START

1. Park vehicle on flat surface.
2. Turn ignition switch to “OFF” position.
3. Move selector lever to “P” or “N” position.
4. Turn ignition switch to “START” position.
5. Is engine started?

Yes or No

Yes >> GO TO 2
No >> Stop Road Test. Mark the box on the DIAGNOSTIC WORKSHEET.Go to “Engine Cannot Be Started In “P” and “N” Position” AT-214 .

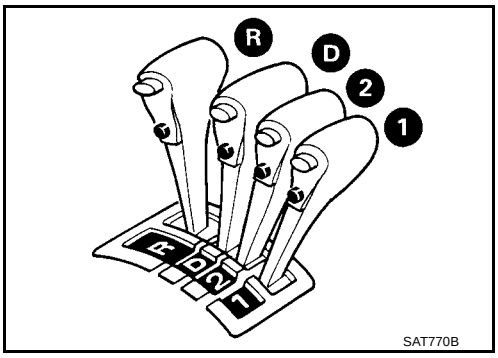


2. CHECK ENGINE START

1. Turn ignition switch to “OFF” position.
2. Move selector lever to “D”, “1”, “2” or “R” position.
3. Turn ignition switch to “START” position.
4. Is engine started?

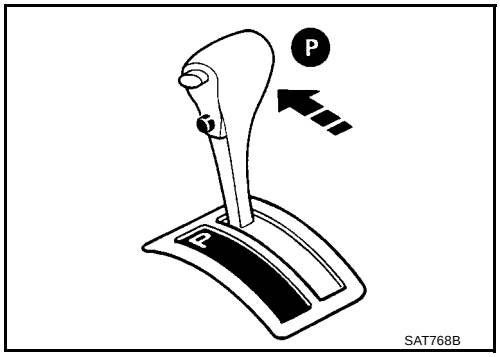
Yes or No

Yes >> Stop Road Test. Mark the box on the DIAGNOSTIC WORKSHEET. Go To “Engine Cannot Be Started In “P” and “N” Position”, AT-214 . Continue Road Test.
No >> GO TO 3



3. CHECK VEHICLE MOVE

1. Turn ignition switch to “OFF” position.
2. Move selector lever to “P” position.
3. Release parking brake.
4. Push vehicle forward or backward.

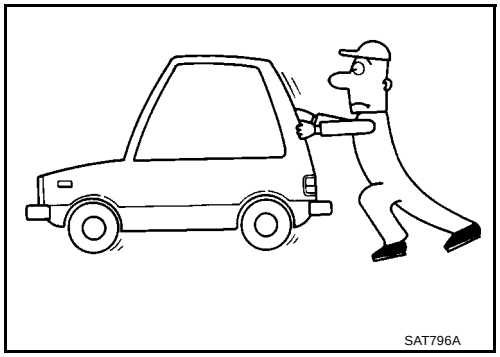


5. Does vehicle move when it is pushed forward or backward?

Yes or No

Yes >> Mark the box of “In “P” Position, Vehicle Moves Forward Or Backward When Pushed” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

No >> GO TO 4



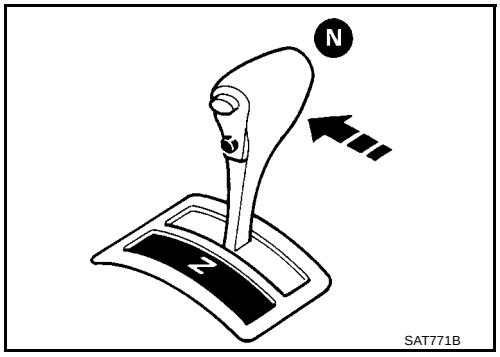
4. CHECK VEHICLE MOVE

1. Apply parking brake.
2. Move selector lever to “N” position.
3. Turn ignition switch to “START” position and start engine.
4. Release parking brake.
5. Does vehicle move forward or backward?

Yes or No

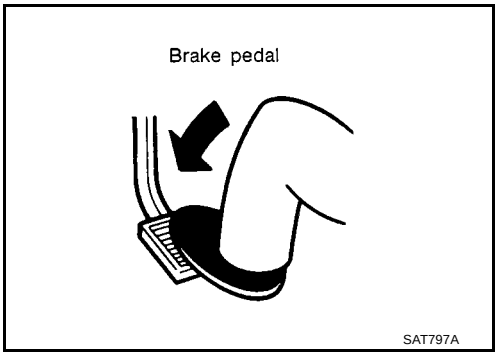
Yes >> Mark the box of “In “N” Position, Vehicle Moves” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

No >> GO TO 5



5. CHECK SHIFT SHOCK

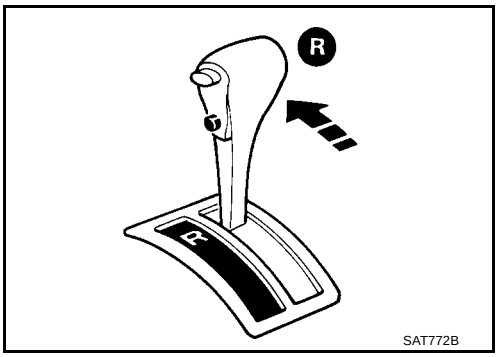
1. Apply foot brake.



2. Move selector lever to “R” position.
3. Is there large shock when changing from “N” to “R” position?

Yes or No

Yes >> Mark the box of “Large Shock “N” → “R” Position” on the DIAGNOSTIC WORKSHEET. Continue Road Test.
No >> GO TO 6

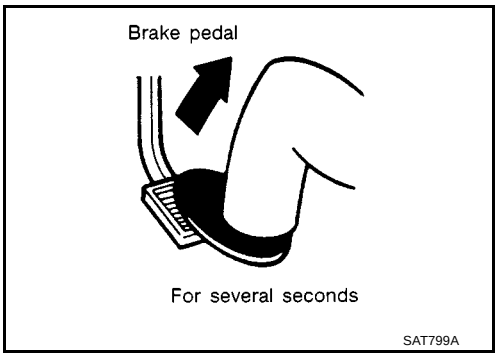


6. CHECK VEHICLE MOVE

1. Release foot brake for several seconds.
2. Does vehicle creep backward when foot brake is released?

Yes or No

Yes >> GO TO 7
No >> Mark the box of “Vehicle Does Not Creep Backward In “R” Position” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

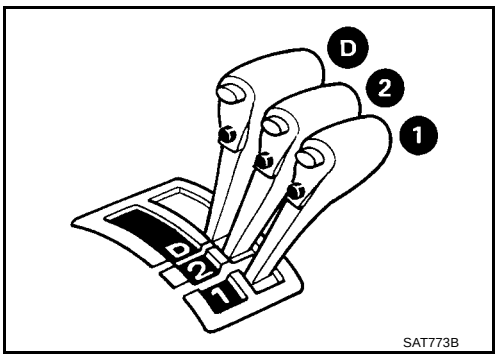


7. CHECK VEHICLE MOVE

1. Move selector lever to “D”, “2” and “1” positions and check if vehicle creeps forward.
2. Does vehicle creep forward in all three positions?

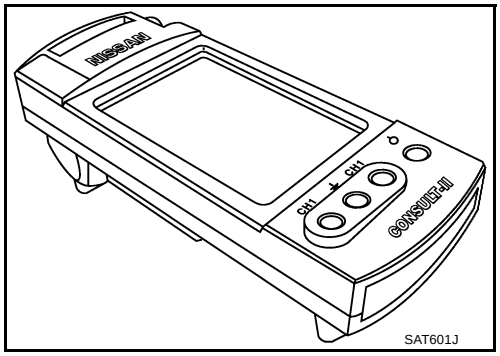
Yes or No

Yes >> Go To “3. CRUISE TEST”, AT-72 .
No >> Mark the box of “Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



3. CRUISE TEST

- Check all items listed in Parts 1 through 3.



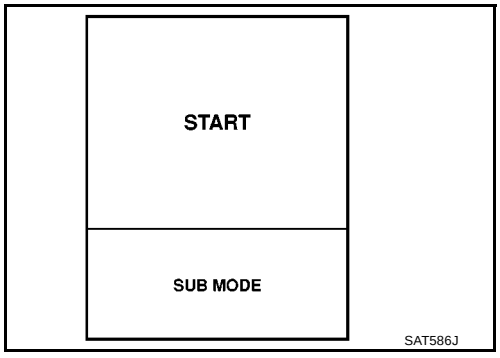
SAT601J

With CONSULT-II

- Using CONSULT-II, conduct a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule.

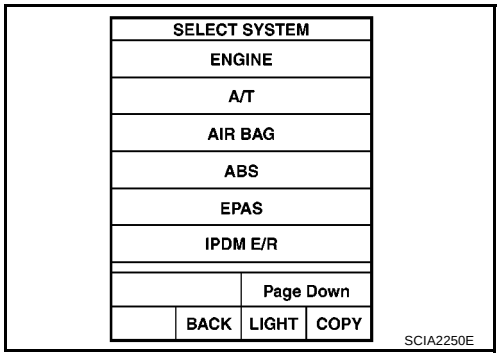
CONSULT-II Setting Procedure

1. Turn ignition switch to “OFF” position.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector, which is located in instrument lower panel on driver side.
3. Turn ignition switch to “ON” position. (Do not start engine.)
4. Touch “START”.



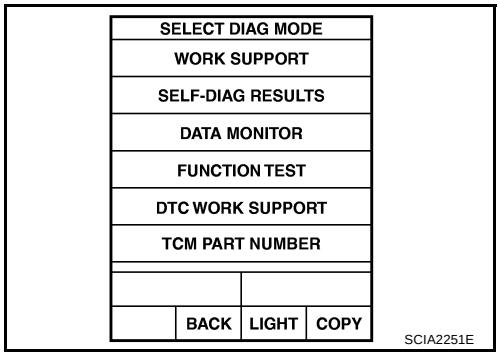
SAT586J

5. Touch “A/T”.
   If “A/T” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



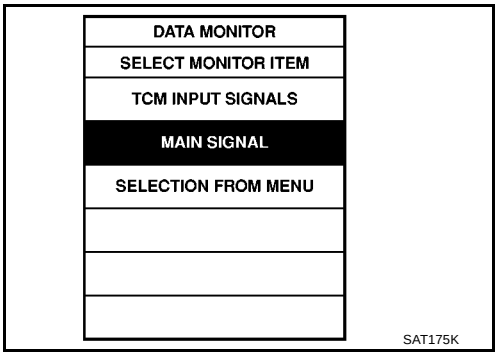
SCIA2250E

6. Touch “DATA MONITOR”.

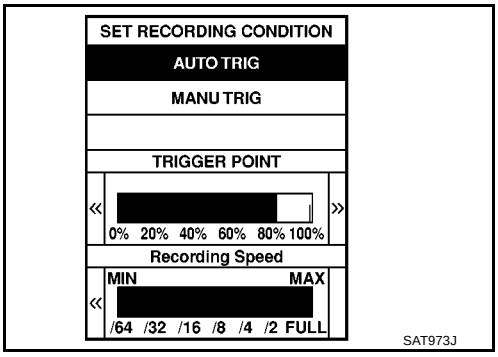


SCIA2251E

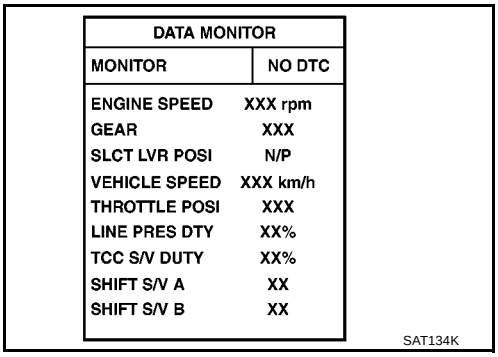
7. Touch “MAIN SIGNALS” or “TCM INPUT SIGNALS”.
8. Select “Numerical Display”, “Barchart Display” or “Line Graph Display”.



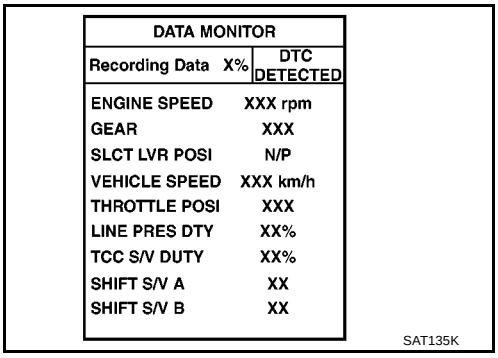
9. Touch “SETTING” to recording condition (“AUTO TRIG” or “MANU TRIG”) and touch “BACK”.
10. Touch “Start”.



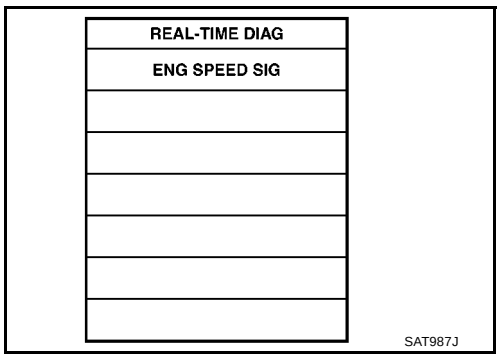
11. When performing cruise test, touch “RECORD”.

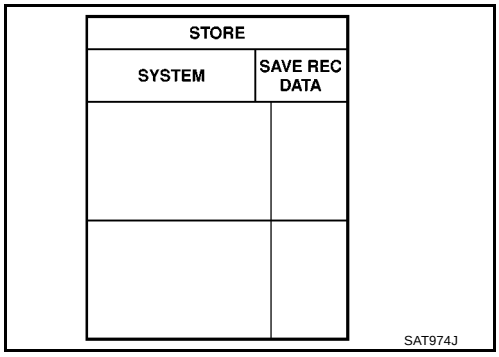


12. After finishing cruise test part 1, touch “STOP”.

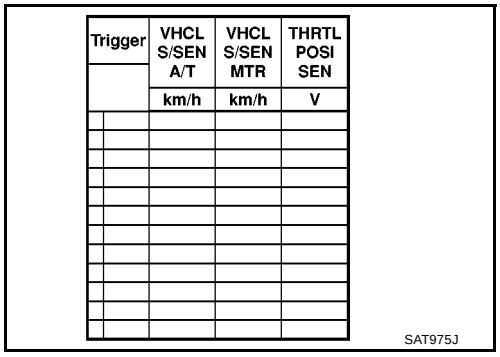


13. Touch “STORE” and touch “BACK”.



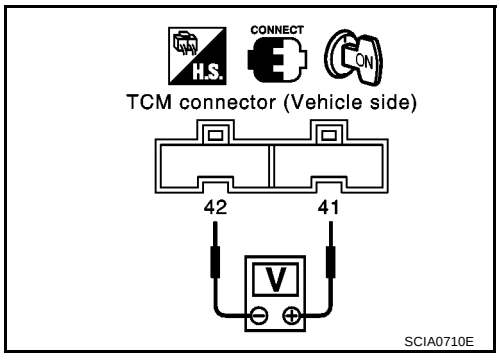


14. Touch “DISPLAY”.
15. Touch “PRINT”.
16. Check the monitor data printed out.
17. Continue cruise test part 2 and 3.



Without CONSULT-II

- Throttle position sensor can be checked by voltage across terminals 41 and 42 of TCM.



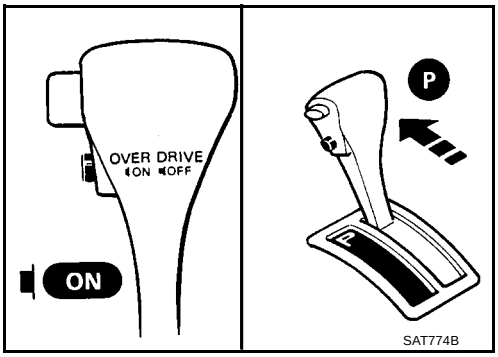
Cruise Test — Part 1

1. CHECK STARTING GEAR (D_1) POSITION

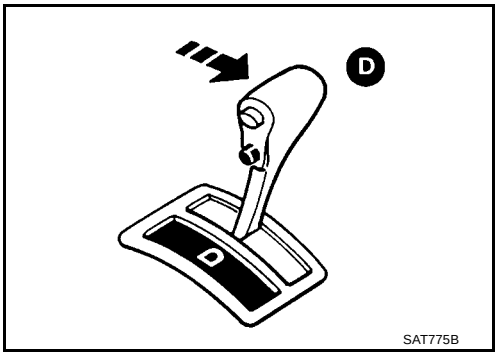
1. Drive vehicle for approx. 10 minutes to warm engine oil and ATF up to operating temperature.

   ATF operating temperature: 50 - 80°C (122 - 176°F)

2. Park vehicle on flat surface.
3. Set overdrive control switch to “ON” position.
4. Move selector lever to “P” position.
5. Start engine.



6. Move selector lever to “D” position.



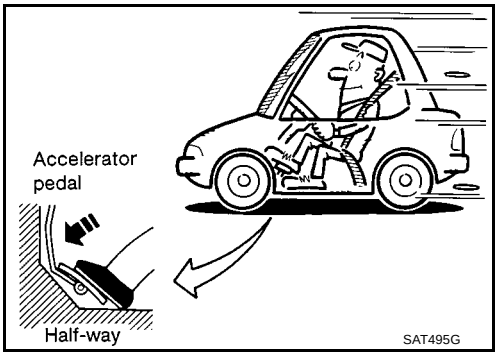
7. Accelerate vehicle by constantly depressing accelerator pedal halfway.
8. Does vehicle start from D_1 ?

   Read gear position.

Yes or No

Yes >> GO TO 2

No >> Mark the box of “Vehicle Cannot Be Started From D_1 ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



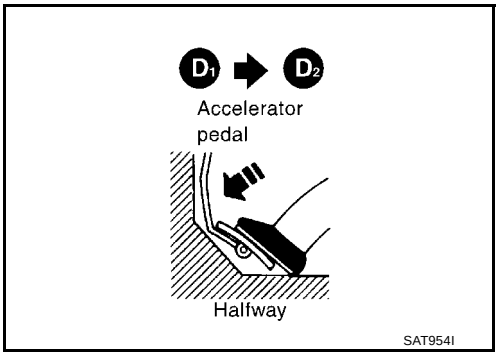
2. CHECK SHIFT UP (D_1 TO D_2)

Does A/T shift from D_1 to D_2 at the specified speed?

Read gear position, throttle opening and vehicle speed.

Specified speed when shifting from D_1 to D_2 :

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 3

No >> Mark the box of “A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kickdown: $D_4 \rightarrow D_2$ ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

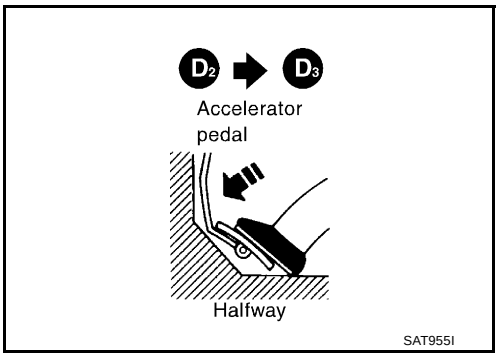
3. CHECK SHIFT UP (D_2 TO D_3)

Does A/T shift from D_2 to D_3 at the specified speed?

Read gear position, throttle position and vehicle speed.

Specified speed when shifting from D_2 to D_3 :

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 4

No >> Mark the box of “A/T Does Not Shift: $D_2 \rightarrow D_3$ ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

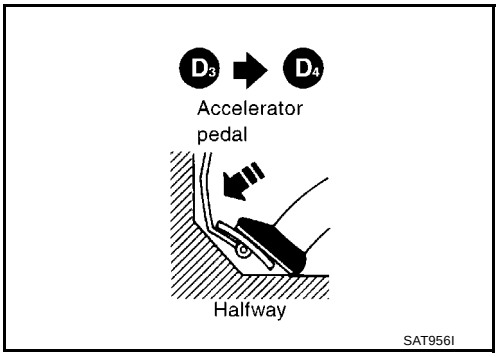
4. CHECK SHIFT UP (D_3 TO D_4)

Does A/T shift from D_3 to D_4 at the specified speed?

Read gear position, throttle position and vehicle speed.

Specified speed when shifting from D_3 to D_4 :

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 5

No >> Mark the box of “A/T Does Not Shift: $D_3 \rightarrow D_4$ ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

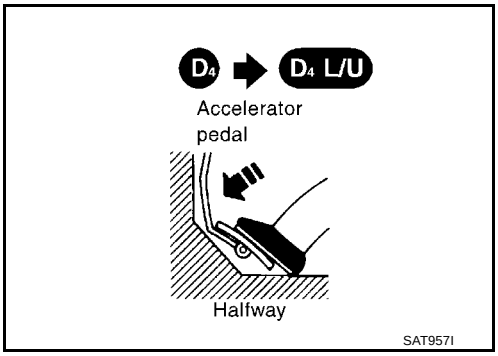
5. CHECK LOCK-UP (D4 TO D4 L/U)

Does A/T perform lock-up at the specified speed?

Read vehicle speed, throttle position when lock-up duty becomes 94%.

Specified speed when lock-up occurs:

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 6

No >> Mark the box of “A/T Does Not Perform Lock-up” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

6. CHECK HOLD LOCK-UP

Does A/T hold lock-up condition for more than 30 seconds?

Yes or No

Yes >> GO TO 7

No >> Mark the box of “A/T Does Not Hold Lock-up Condition” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

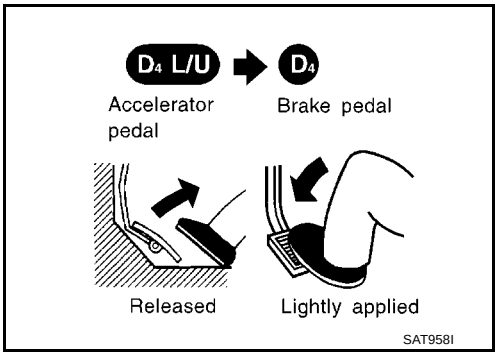
7. CHECK SHIFT DOWN (D4 L/U TO D4)

1. Release accelerator pedal.
2. Is lock-up released when accelerator pedal is released?

Yes or No

Yes >> GO TO 8

No >> Mark the box of “Lock-up Is Not Released” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



8. CHECK SHIFT DOWN (D4 TO D3)

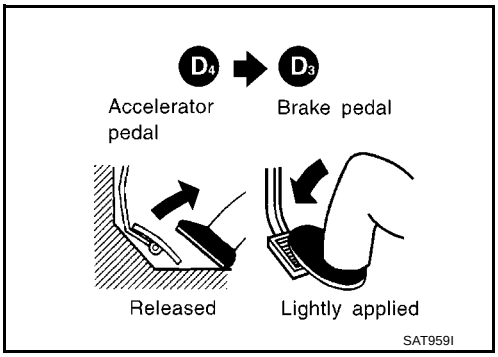
1. Decelerate vehicle by applying foot brake lightly.
2. Does engine speed return to idle smoothly when A/T is shifted from D4 to D3 ?

Read gear position and engine speed.

Yes or No

Yes >> 1. Stop vehicle.
2. Go To “Cruise test — Part 2”, AT-78 .

No >> Mark the box of “Engine Speed Does Not Return To Idle (Light Braking D4 → D3)” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



Cruise Test — Part 2

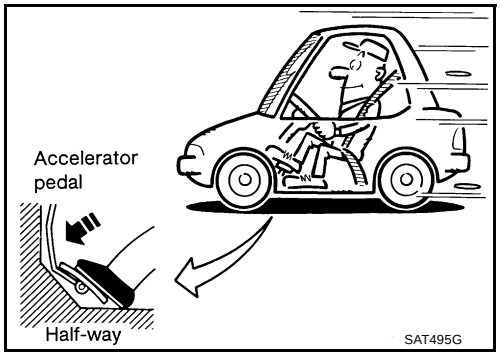
1. CHECK STARTING GEAR (D_1) POSITION

1. Confirm overdrive control switch is in “ON” position.
2. Confirm selector lever is in “D” position.
3. Accelerate vehicle by half throttle again.
4. Does vehicle start from D_1 ?

Read gear position.

Yes or No

Yes >> GO TO 2
No >> Mark the box of “Vehicle Does Not Start From D_1 ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



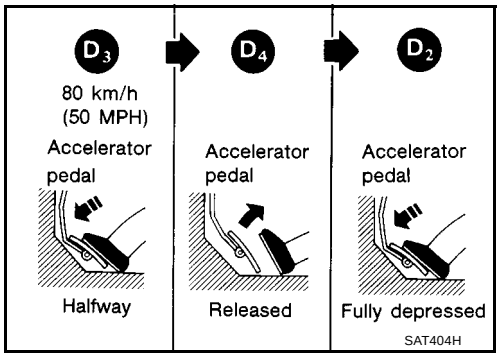
2. CHECK SHIFT UP AND SHIFT DOWN (D_3 TO D_4 TO D_2)

1. Accelerate vehicle to 80 km/h (50 MPH) as shown in illustration.
2. Release accelerator pedal and then quickly depress it fully.
3. Does A/T shift from D_4 to D_2 as soon as accelerator pedal is depressed fully?

Read gear position and throttle position.

Yes or No

Yes >> GO TO 3
No >> Mark the box of “A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kickdown: $D_4 \rightarrow D_2$ ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



3. CHECK SHIFT UP (D_2 TO D_3)

Does A/T shift from D_2 to D_3 at the specified speed?

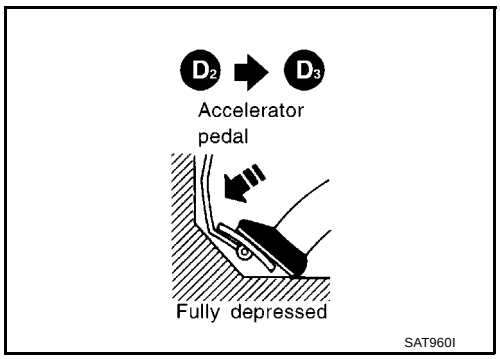
Read gear position, throttle position and vehicle speed.

Specified speed when shifting from D_2 to D_3 :

Refer to AT-534, "Shift Schedule" .

Yes or No

Yes >> GO TO 4
No >> Mark the box of “A/T Does Not Shift: $D_2 \rightarrow D_3$ ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



4. CHECK SHIFT UP (D_3 TO D_4) AND ENGINE BRAKE

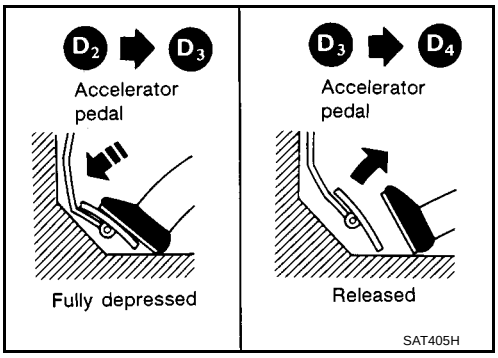
Release accelerator pedal after shifting from D_2 to D_3.
Does A/T shift from D_3 to D_4 and does vehicle decelerate by engine brake?

Read gear position, throttle position and vehicle speed.

Yes or No

Yes >> 1. Stop vehicle.
2. Go To “Cruise test — Part 3”, AT-80.

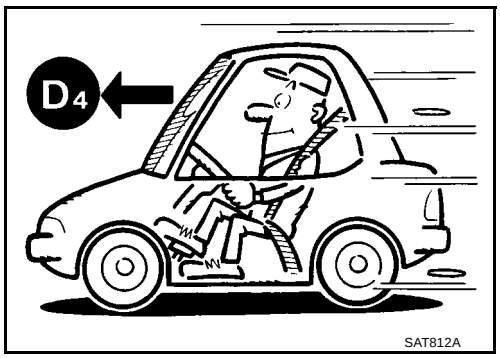
No >> Mark the box of “11. A/T Does Not Shift: $D_3 \rightarrow D_4$ ” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



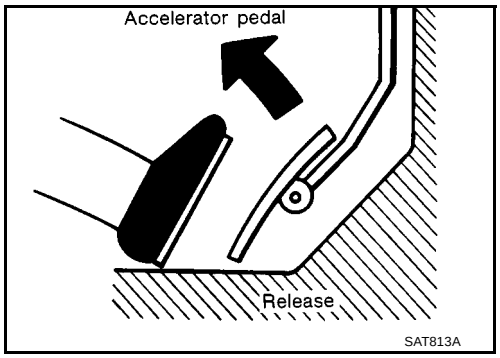
Cruise Test — Part 3

1. CHECK SHIFT DOWN (D_4 TO D_3)

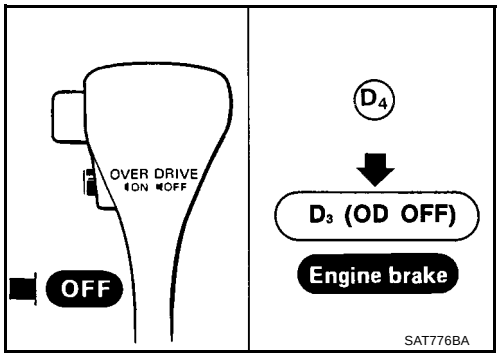
1. Confirm overdrive control switch is in “ON” position.
2. Confirm selector lever is in “D” position.
3. Accelerate vehicle using half-throttle to D_4 .



4. Release accelerator pedal.



5. Set overdrive control switch to “OFF” position while driving in D_4 .



6. Does A/T shift from D_4 to D_3 (O/D OFF)?

Read gear position and vehicle speed.

Yes or No

Yes >> GO TO 2

No >> Mark the box of “A/T Does Not Shift: $D_4 \rightarrow D_3$, When Overdrive Control Switch “ON” → “OFF” on the DIAGNOSTIC WORKSHEET. Continue Road Test.

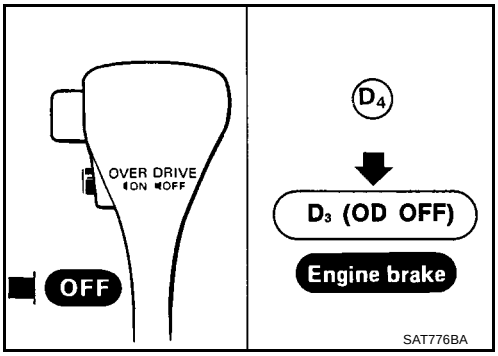
2. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

Yes >> GO TO 3

No >> Mark the box of “Engine Speed Does Not Return To Idle (Light Braking $D_4 \rightarrow D_3$)” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



3. CHECK SHIFT DOWN (D_3 TO 2_2)

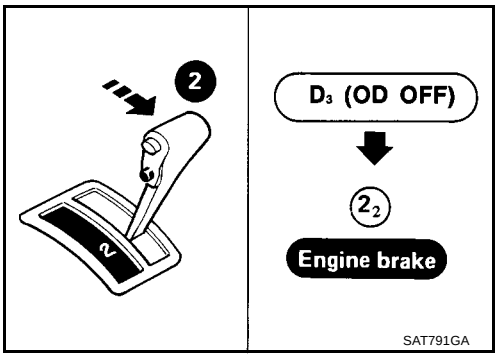
1. Move selector lever from “D” to “2” position while driving in D_3 (O/D OFF).
2. Does A/T shift from D_3 (O/D OFF) to 2_2 ?

Read gear position.

Yes or No

Yes >> GO TO 4

No >> Mark the box of “A/T Does Not Shift: $D_3 \rightarrow 2_2$, When Selector Lever “D” → “2” Position” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



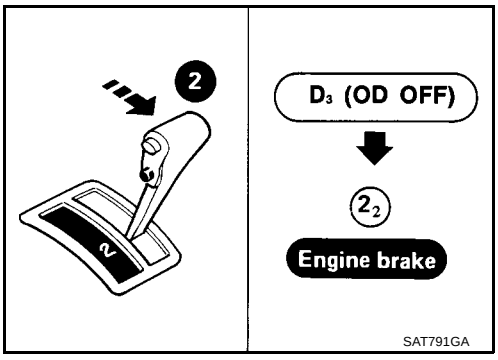
4. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

Yes >> GO TO 5

No >> Mark the box of “Engine Speed Does Not Return To Idle (Light Braking $D_4 \rightarrow D_3$)” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



5. CHECK SHIFT DOWN

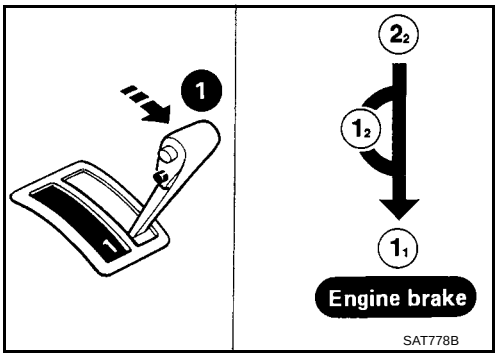
1. Move selector lever from “2” to “1” position while driving in 2_2 .
2. Does A/T shift from 2_2 to 1_1 position?

Read gear position.

Yes or No

Yes >> GO TO 6

No >> Mark the box of “A/T Does Not Shift: $2_2 \rightarrow 1_1$, When Selector lever “2” → “1” Position” on the DIAGNOSTIC WORKSHEET. Continue Road Test.



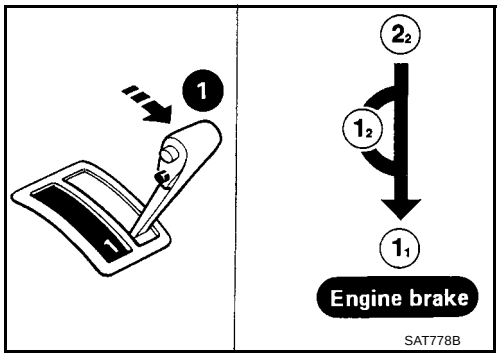
6. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

Yes >> 1. Stop vehicle.
2. Perform self-diagnosis. Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

No >> Mark the box of “Vehicle Does Not Decelerate By Engine Brake” on the DIAGNOSTIC WORKSHEET. Stop Road Test.



TROUBLE DIAGNOSIS — GENERAL DESCRIPTION

PFP:00000

Symptom Chart

ECS008NW

Numbers are arranged in order of inspection.
Perform inspections starting with number one and work up.

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Engine cannot start in “P” and “N” positions. AT-214, "Engine Cannot Be Started In “P” and “N” Position"	ON vehicle	1. Ignition switch and starter	PG-4, "POWER SUPPLY ROUTING", SC-39, "STARTING SYSTEM"
		2. Control cable adjustment	AT-427, "Control Cable Adjustment"
		3. PNP switch	AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH"
Engine starts in position other than “N” and “P” positions. AT-214, "Engine Cannot Be Started In “P” and “N” Position"	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. PNP switch	AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH"
Transaxle noise in “P” and “N” positions.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Line pressure test	AT-65, "Line Pressure Test"
		3. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		4. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
	OFF vehicle	5. Oil pump	AT-453, "Oil Pump"
		6. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Vehicle moves when changing into “P” position, or parking gear does not disengage when shifted out of “P” position. AT-215, "In “P” Position, Vehicle Moves Forward Or Backward When Pushed"	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
	OFF vehicle	2. Parking components	AT-433, "Components", AT-450, "REPAIR FOR COMPONENT PARTS"
Vehicle runs in “N” position. AT-216, "In “N” Position, Vehicle Moves"	ON vehicle	1. PNP switch	AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH"
		2. Control cable adjustment	AT-427, "Control Cable Adjustment"
	OFF vehicle	3. Forward clutch	AT-482, "Forward and Overrun Clutches"
		4. Reverse clutch	AT-472, "Reverse Clutch"
		5. Overrun clutch	AT-482, "Forward and Overrun Clutches"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Vehicle will not run in “R” position (but runs in “D”, “2” and “1” positions). Clutch slips. Very poor acceleration. AT-218, "Vehicle Does Not Creep Backward In “R” Position"	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. Stall test	AT-62, "Stall Test"
		3. Line pressure test	AT-65, "Line Pressure Test"
		4. Line pressure solenoid valve	AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. Reverse clutch	AT-472, "Reverse Clutch"
		7. High clutch	AT-477, "High Clutch"
		8. Forward clutch	AT-482, "Forward and Overrun Clutches"
		9. Overrun clutch	AT-482, "Forward and Overrun Clutches"
		10. Low & reverse brake	AT-489, "Low & Reverse Brake"
Vehicle braked when shifting into “R” position.	ON vehicle	1. Fluid level	AT-61, "A/T Fluid Check"
		2. Line pressure test	AT-65, "Line Pressure Test"
		3. Line pressure solenoid valve	AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	5. High clutch	AT-477, "High Clutch"
		6. Brake band	AT-503, "Band Servo Piston Assembly"
		7. Forward clutch	AT-482, "Forward and Overrun Clutches"
		8. Overrun clutch	AT-482, "Forward and Overrun Clutches"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Sharp shock in shifting from “N” to “D” position.	ON vehicle	1. Engine idling rpm	EC-41, "Idle Speed and Ignition Timing Check"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-65, "Line Pressure Test"
		4. A/T fluid temperature sensor	AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
		5. Engine speed signal	AT-131, "DTC P0725 ENGINE SPEED SIGNAL"
		6. Line pressure solenoid valve	AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
		7. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		8. Accumulator N-D	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	9. Forward clutch	AT-482, "Forward and Overrun Clutches"
Vehicle will not run in “D” and “2” positions (but runs in “1” and “R” positions).	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
	OFF vehicle	2. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Vehicle will not run in “D”, “1”, “2” positions (but runs in “R” position). Clutch slips. Very poor acceleration. AT-220, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position"	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Stall test	AT-62, "Stall Test"
		3. Line pressure test	AT-65, "Line Pressure Test"
		4. Line pressure solenoid valve	AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		6. Accumulator N-D	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	7. Reverse clutch	AT-472, "Reverse Clutch"
		8. High clutch	AT-477, "High Clutch"
		9. Forward clutch	AT-482, "Forward and Overrun Clutches"
		10. Forward one-way clutch	AT-433, "OVERHAUL"
		11. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Clutches or brakes slip somewhat in starting.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Control cable adjustment	AT-427, "Control Cable Adjustment"
		3. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		4. Line pressure test	AT-65, "Line Pressure Test"
		5. Line pressure solenoid valve	AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
		6. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		7. Accumulator N-D	AT-426, "Control Valve Assembly and Accumulators"
		8. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		9. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
		10. Overrun clutch solenoid valve	AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"
		11. Torque converter clutch solenoid valve	AT-161, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"
	OFF vehicle	12. Forward clutch	AT-482, "Forward and Overrun Clutches"
		13. Reverse clutch	AT-472, "Reverse Clutch"
		14. Low & reverse brake	AT-489, "Low & Reverse Brake"
		15. Oil pump	AT-433, "OVERHAUL"
		16. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Excessive creep.	ON vehicle	1. Engine idling rpm	EC-41, "Idle Speed and Ignition Timing Check"]

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
No creep at all. AT-218, "Vehicle Does Not Creep Backward In “R” Position" and AT-220, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position"	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Line pressure test	AT-405, "LINE PRESSURE SOLENOID VALVE"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	4. Forward clutch	AT-482, "Forward and Overrun Clutches"
		5. Oil pump	AT-453, "Oil Pump"
		6. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Failure to change gear from “D_1 ” to “D_2 ”.	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		4. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
		5. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
	OFF vehicle	6. Brake band	AT-503, "Band Servo Piston Assembly"
Failure to change gear from “D_2 ” to “D_3 ”.	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		4. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
		5. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
	OFF vehicle	6. High clutch	AT-477, "High Clutch"
		7. Brake band	AT-503, "Band Servo Piston Assembly"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Failure to change gear from “D_3 ” to “D_4 ”.	ON vehicle	1. PNP switch	AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH"
		2. Overdrive control switch	AT-247, "TCM Self-diagnosis Does Not Activate"
		3. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
		5. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
		6. Accelerator pedal position (APP) sensor	AT-426, "Control Valve Assembly and Accumulators"
		7. A/T fluid temperature sensor	AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	8. Brake band	AT-503, "Band Servo Piston Assembly"
Too high a gear change point from “D_1 ” to “D_2 ”, from “D_2 ” to “D_3 ”, from “D_3 ” to “D_4 ”. AT-225, "A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kickdown: $D_4 \rightarrow D_2$", AT-227, "A/T Does Not Shift: $D_2 \rightarrow D_3$" and AT-229, "A/T Does Not Shift: $D_3 \rightarrow D_4$"	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
		3. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
Gear change directly from “D_1 ” to “D_3 ” occurs.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accumulator servo release	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	3. Brake band	AT-503, "Band Servo Piston Assembly"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Engine stops when shifting lever into “R”, “D”, “2” and “1”.	ON vehicle	1. Engine idling rpm	EC-41, "Idle Speed and Ignition Timing Check"]
		2. Torque converter clutch solenoid valve	AT-161, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	4. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Too sharp a shock in change from “D_1 ” to “D_2 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-65, "Line Pressure Test"
		3. Accumulator servo release	AT-426, "Control Valve Assembly and Accumulators"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		5. A/T fluid temperature sensor	AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	6. Brake band	AT-503, "Band Servo Piston Assembly"
Too sharp a shock in change from “D_2 ” to “D_3 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-65, "Line Pressure Test"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		4. A/T fluid temperature sensor	AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	5. High clutch	AT-477, "High Clutch"
		6. Brake band	AT-503, "Band Servo Piston Assembly"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Too sharp a shock in change from “D_3 ” to “D_4 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-65, "Line Pressure Test"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		4. A/T fluid temperature sensor	AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	5. Brake band	AT-503, "Band Servo Piston Assembly"
		6. Overrun clutch	AT-482, "Forward and Overrun Clutches"
		7. Forward one-way clutch	AT-433, "OVERHAUL"
Almost no shock or clutches slipping in change from “D_1 ” to “D_2 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-65, "Line Pressure Test"
		4. Accumulator servo release	AT-426, "Control Valve Assembly and Accumulators"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. Brake band	AT-503, "Band Servo Piston Assembly"
Almost no shock or slipping in change from “D_2 ” to “D_3 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-65, "Line Pressure Test"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	5. High clutch	AT-477, "High Clutch"
		6. Brake band	AT-503, "Band Servo Piston Assembly"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Almost no shock or slipping in change from “D_3 ” to “D_4 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-65, "Line Pressure Test"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	5. Brake band	AT-503, "Band Servo Piston Assembly"
Vehicle braked by gear change from “D_1 ” to “D_2 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
	OFF vehicle	2. Reverse clutch	AT-472, "Reverse Clutch"
		3. Low & reverse brake	AT-489, "Low & Reverse Brake"
		4. High clutch	AT-477, "High Clutch"
		5. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Vehicle braked by gear change from “D_2 ” to “D_3 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
	OFF vehicle	2. Brake band	AT-503, "Band Servo Piston Assembly"
Vehicle braked by gear change from “D_3 ” to “D_4 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
	OFF vehicle	2. Overrun clutch	AT-386, "OVERRUN CLUTCH SOLENOID VALVE"
		3. Forward one-way clutch	AT-433, "OVERHAUL"
		4. Reverse clutch	AT-472, "Reverse Clutch"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Maximum speed not attained. Acceleration poor.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. PNP switch	AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH"
		3. Overdrive control switch	AT-247, "TCM Self-diagnosis Does Not Activate"
		4. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		5. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		6. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
		7. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	8. Reverse clutch	AT-472, "Reverse Clutch"
		9. High clutch	AT-477, "High Clutch"
		10. Brake band	AT-503, "Band Servo Piston Assembly"
		11. Low & reverse brake	AT-489, "Low & Reverse Brake"
		12. Oil pump	AT-453, "Oil Pump"
		13. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Failure to change gear from “D_4 ” to “D_3 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Overrun clutch solenoid valve	AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"
		4. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		5. Line pressure solenoid valve	AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
		6. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	7. Brake band	AT-503, "Band Servo Piston Assembly"
		8. Overrun clutch	AT-482, "Forward and Overrun Clutches"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Failure to change gear from “D_3 ” to “D_2 ” or from “D_4 ” to “D_2 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. High clutch	AT-477, "High Clutch"
		7. Brake band	AT-503, "Band Servo Piston Assembly"
Failure to change gear from “D_2 ” to “D_1 ” or from “D_3 ” to “D_1 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		3. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
		7. High clutch	AT-477, "High Clutch"
		8. Brake band	AT-503, "Band Servo Piston Assembly"
Gear change shock felt during deceleration by releasing accelerator pedal.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-65, "Line Pressure Test"
		3. Overrun clutch solenoid valve	AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Too high a change point from “D_4 ” to “D_3 ”, from “D_3 ” to “D_2 ”, from “D_2 ” to “D_1 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
Kickdown does not operate when depressing pedal in “D_4 ” within kick down vehicle speed.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"
		2. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"
		3. Shift solenoid valve A	AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
Kickdown operates or engine overruns when depressing pedal in “D_4 ” beyond kick down vehicle speed limit.	ON vehicle	1. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-202, "DTC VEHICLE SPEED SENSOR MTR"

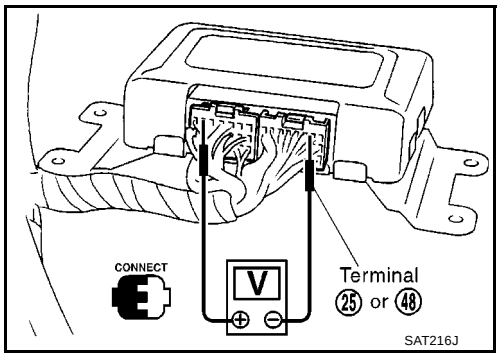
TCM Terminals and Reference Value

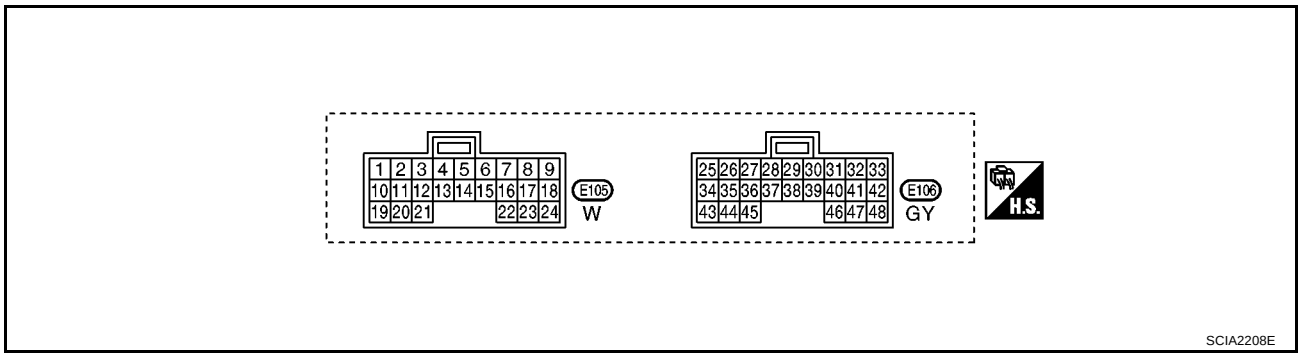
ECS008NX

PREPARATION

- Measure voltage between each terminal and terminal 25 or 48 by following “TCM INSPECTION TABLE”.



TCM HARNESS CONNECTOR TERMINAL LAYOUT



TCM INSPECTION TABLE

(Data are reference values.)

Terminal No.	Wire color	Item	Condition		Judgementstandard(Approx.)
1	PU	Line pressure solenoid valve		When releasing accelerator pedal after warming up engine.	1.5 - 3.0V
				When depressing accelerator pedal fully after warming up engine.	0V
2	BR	Line pressure solenoid valve (with dropping resistor)		When releasing accelerator pedal after warming up engine.	4 - 14V
				When depressing accelerator pedal fully after warming up engine.	0V
3	GY	Torque converter clutch solenoid valve		When A/T performs lock-up.	8 - 15V
				When A/T does not perform lock-up.	0V
5	R	CAN-H (high)	—	—	—
6	W	CAN-L (low)	—	—	—
10	G	Power source		When turning ignition switch to “ON”.	Battery voltage
				When turning ignition switch to “OFF”.	0V

Terminal No.	Wire color	Item	Condition		Judgementstandard(Approx.)
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D1 ” or “D4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D2 ” or “D3 ”.)	0V
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D1 ” or “D2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D3 ” or “D4 ”.)	0V
19	G	Power source		Same as No. 10	
20	Y	Overrun clutch solenoid valve		When overrun clutch solenoid valve operates.	Battery voltage
				When overrun clutch solenoid valve does not operate.	0V
25	B	Ground	Always		0V
26	BR	PNP switch “1” position		When setting selector lever to “1” position.	Battery voltage
				When setting selector lever to other positions.	0V
27	LG	PNP switch “2” position		When setting selector lever to “2” position.	Battery voltage
				When setting selector lever to other positions.	0V
28	GY	Power source (Memory back-up)	Always		Battery voltage
29	OR	Revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 **CAUTION: Connect the diagnosis data link cable to the vehicle diagnosis connector.** *1: A circuit tester cannot be used to test this item.	150 Hz
30 *3	L	CONSULT- II (RX)		—	—
31 *3	BR	CONSULT- II (TX)		—	—
32 *2	OR	Throttle position sensor (Power source)		When turning ignition switch to “ON”.	4.5 - 5.5V
				When turning ignition switch to “OFF”.	0V

Terminal No.	Wire color	Item	Condition		Judgementstandard(Approx.)
34	P	PNP switch “D” position		When setting selector lever to “D” position.	Battery voltage
				When setting selector lever to other positions.	0V
35	R	PNP switch “R” position		When setting selector lever to “R” position.	Battery voltage
				When setting selector lever to other positions.	0V
36	Y	PNP switch “N” or “P” position		When setting selector lever to “N” or “P” position.	Battery voltage
				When setting selector lever to other positions.	0V
39 *2	L	Engine speed signal		—	EC-94, "ECM INSPECTION TABLE"
40	G	Vehicle speed sensor		When moving vehicle at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.	Voltage varies between less than 0V and more than 4.5V
41	Y	Throttle position sensor		When depressing accelerator pedal slowly after warming up engine. (Voltage rises gradually in response to throttle position.)	Fully-closed throttle: 0.5V Fully-open throttle: 4V
42	B	Throttle position sensor (Ground)	Always		0V
47	PU	A/T fluid temperature sensor		When ATF temperature is 20°C (68°F).	1.5V
				When ATF temperature is 80°C (176°F).	0.5V
48	B	Ground	Always		0V

*2: These terminals are connected to the ECM.
*3: These terminals are connected to the data link connector.

CAN COMMUNICATION

PFP:23710

CAN Communication

ECS00CVJ

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

ECS00FF5

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door							
Axle	2WD							
Engine	CR10DE/CR12DE/CR14DE				CR12DE/CR14DE

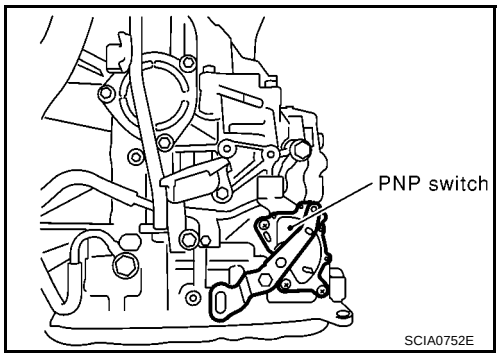
DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH

PFP:32006

Description

ECS008NZ

- The PNP switch assembly includes a transmission range switch.
- The transmission range switch detects the selector lever position and sends a signal to the TCM.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
26	BR	PNP switch “1” position	and 	When setting selector lever to “1” position.	Battery voltage
				When setting selector lever to other positions.	0V
27	LG	PNP switch “2” position		When setting selector lever to “2” position.	Battery voltage
				When setting selector lever to other positions.	0V
34	P	PNP switch “D” position		When setting selector lever to “D” position.	Battery voltage
				When setting selector lever to other positions.	0V
35	R	PNP switch “R” position		When setting selector lever to “R” position.	Battery voltage
				When setting selector lever to other positions.	0V
36	Y	PNP switch “N” or “P” position		When setting selector lever to “N” or “P” position.	Battery voltage
				When setting selector lever to other positions.	0V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: PNP SW/CIRC	TCM does not receive the correct voltage signal from the switch based on the gear position.	● Harness or connectors (The PNP switch circuit is open or shorted.) ● PNP switch
: P0705		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

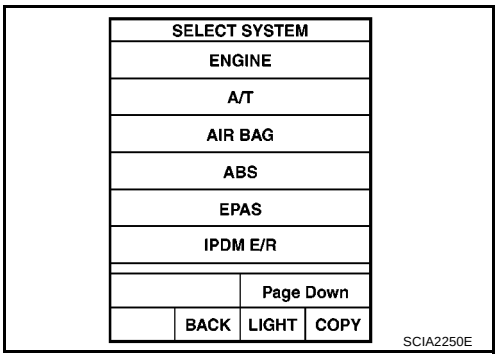
CAUTION:

Always drive vehicle at a safe speed.

NOTE:

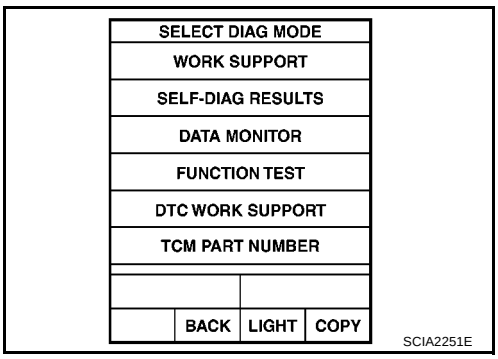
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Turn ignition switch "ON".
2. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
3. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL SPEED SE: 10 km/h (6 MPH) or more
   THRTL POS SEN: More than 1.3V
   Selector lever: D position (OD "ON" or "OFF")

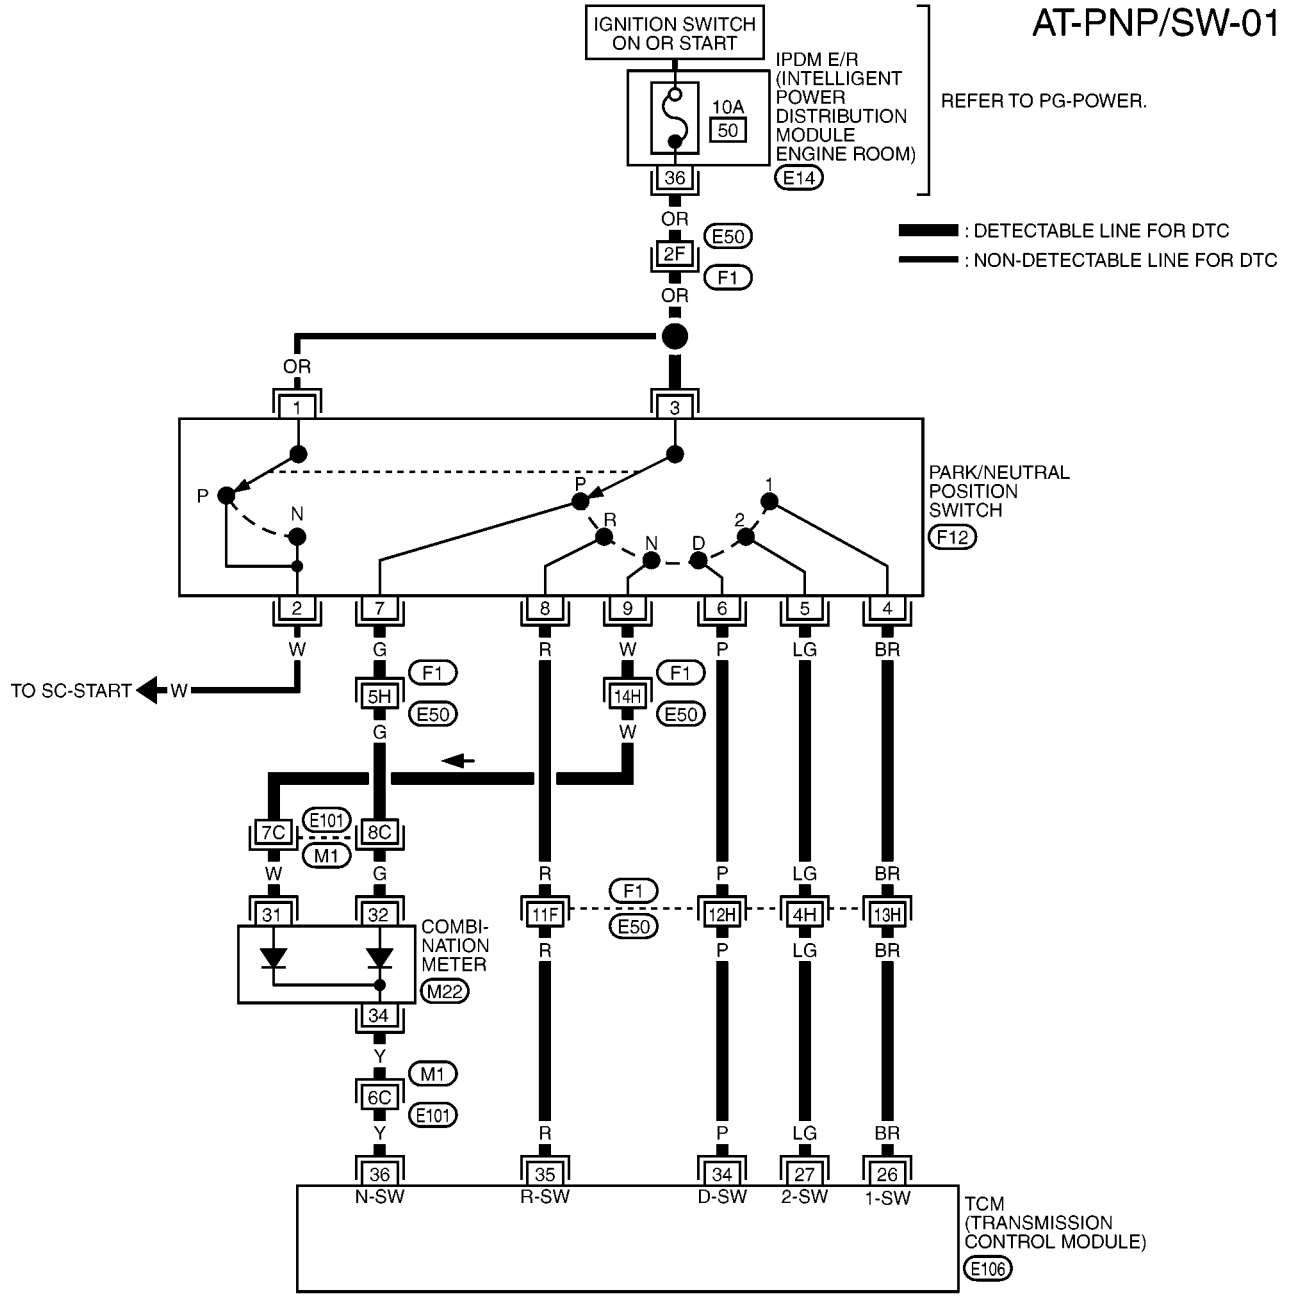


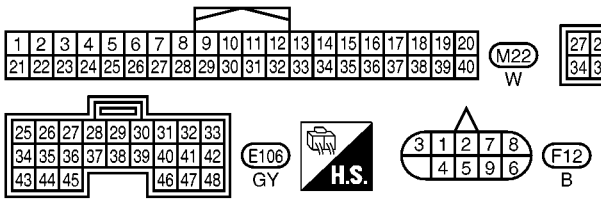
With GST

Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — PNP/SW

ECS008O0





REFER TO THE FOLLOWING.
M1 , F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0071E

Diagnostic Procedure

ECS008O1

1. INSPECTION START

Do you have CONSULT-II?

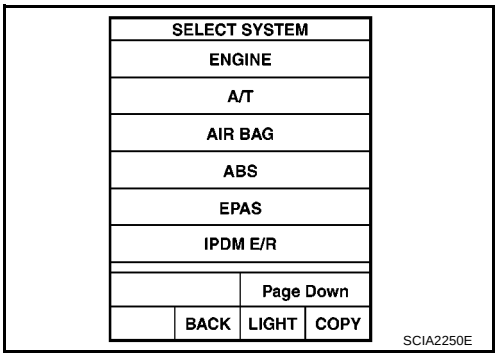
Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

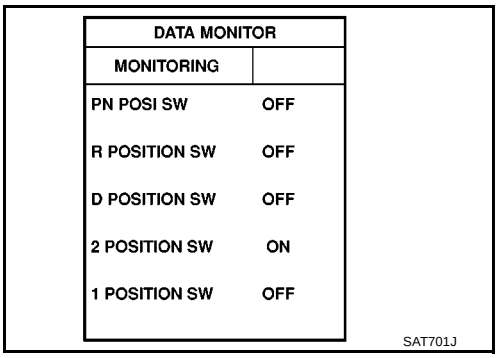
2. CHECK PNP SWITCH CIRCUIT (WITH CONSULT-II)

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out “P/N”, “R”, “D”, “2” and “1” position switches moving selector lever to each position.
   Check the signal of the selector lever position is indicated properly.



OK or NG

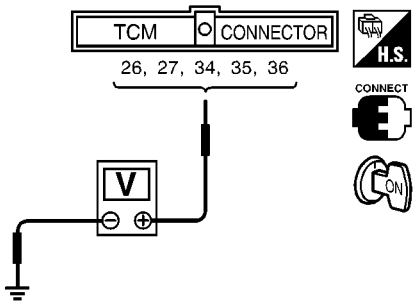
OK >> GO TO 4.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- PNP switch
  Refer to AT-119, "Component Inspection" .
- Harness for short or open between fuse and PNP switch
- Harness for short or open between PNP switch and TCM
- Ignition switch and fuse
  Refer to PG-4, "POWER SUPPLY ROUTING" .

3. CHECK PNP SWITCH CIRCUIT (WITHOUT CONSULT-II)

Without CONSULT-II

1. Turn ignition switch to “ON” position.(Do not start engine.)
2. Check voltage between TCM terminals 26, 27, 34, 35, 36 and ground while moving selector lever through each position.



Voltage:
B: Battery voltage
0: 0V

Lever position	Terminal No.				
	36	35	34	27	26
P, N	**B**	0	0	0	0
R	0	**B**	0	0	0
D	0	0	**B**	0	0
2	0	0	0	**B**	0
1	0	0	0	0	**B**

SAT840J

OK or NG

OK >> GO TO 4.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- PNP switch
  Refer to AT-119, "Component Inspection" .
- Harness for short or open between fuse and PNP switch
- Harness for short or open between PNP switch and TCM
- Ignition switch and fuse
  Refer to PG-4, "POWER SUPPLY ROUTING" .

4. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-115, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

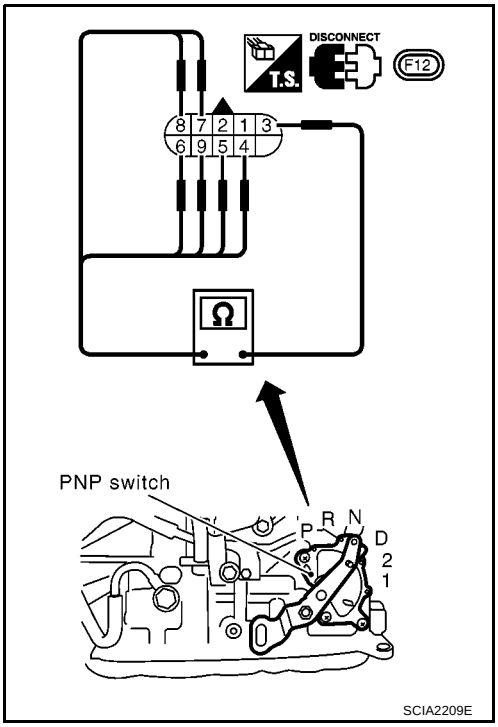
Component Inspection

ECS008O2

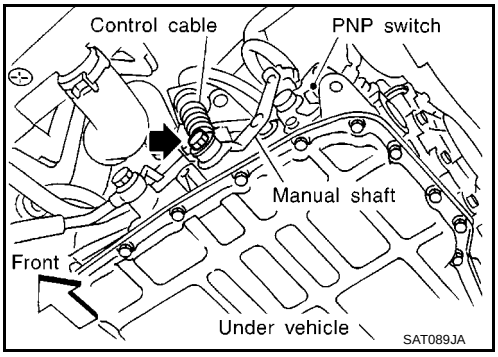
PARK/NEUTRAL POSITION SWITCH

1. Check continuity between terminals 1 and 3 and between terminals 2 and 4, 5, 6, 7, 8, 9 while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 - 7	1 - 2
R	3 - 8	
N	3 - 9	1 - 2
D	3 - 6	
2	3 - 5	
1	3 - 4	



2. If NG, check again with control cable disconnected from manual shaft of A/T assembly. Refer to step 1.
3. If OK on step 2, adjust control cable. Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .
4. If NG on step 2, remove PNP switch from A/T and check continuity of PNP switch terminals. Refer to step 1.
5. If OK on step 4, adjust PNP switch. Refer to AT-426, "Control Valve Assembly and Accumulators" .
6. If NG on step 4, replace PNP switch.



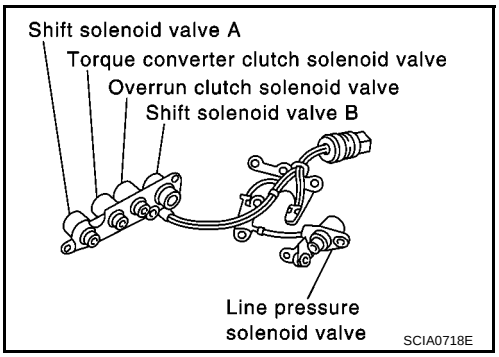
DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT

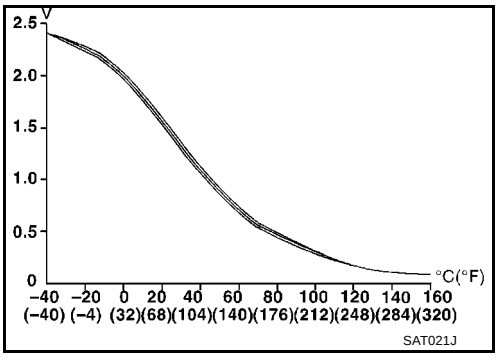
PFP:31940

Description

ECS008O3

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.





CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approximately)	
A/T fluid temperature sensor	Cold [20°C (68°F)] ↓ Hot [80°C (176°F)]	1.5V ↓ 0.5V	2.5 kΩ ↓ 0.3 kΩ

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
42	B	Throttle position sensor (Ground)	Always		0V
47	pu	A/T fluid temperature sensor		When ATF temperature is 20°C (68°F).	1.5V
				When ATF temperature is 80°C (176°F).	0.5V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: ATF TEMP SEN/CIRC	TCM receives an excessively low or high voltage from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● A/T fluid temperature sensor
: P0710		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

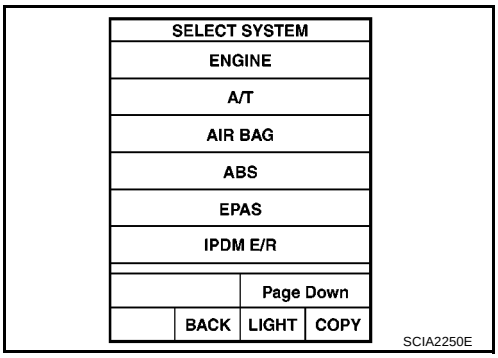
CAUTION:

Always drive vehicle at a safe speed.

NOTE:

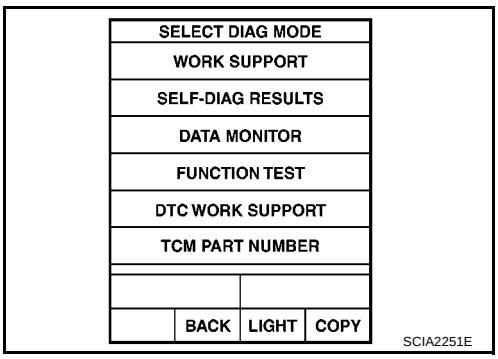
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine and maintain the following conditions for at least 10 minutes (Total). (It is not necessary to maintain continuously.)
   CMPS·RPM (REF): 450 rpm or more
   VHCL SPEED SE: 10 km/h (6 MPH) or more
   THRTL POS SEN: More than 1.2V
   Selector lever: D position (OD "ON")

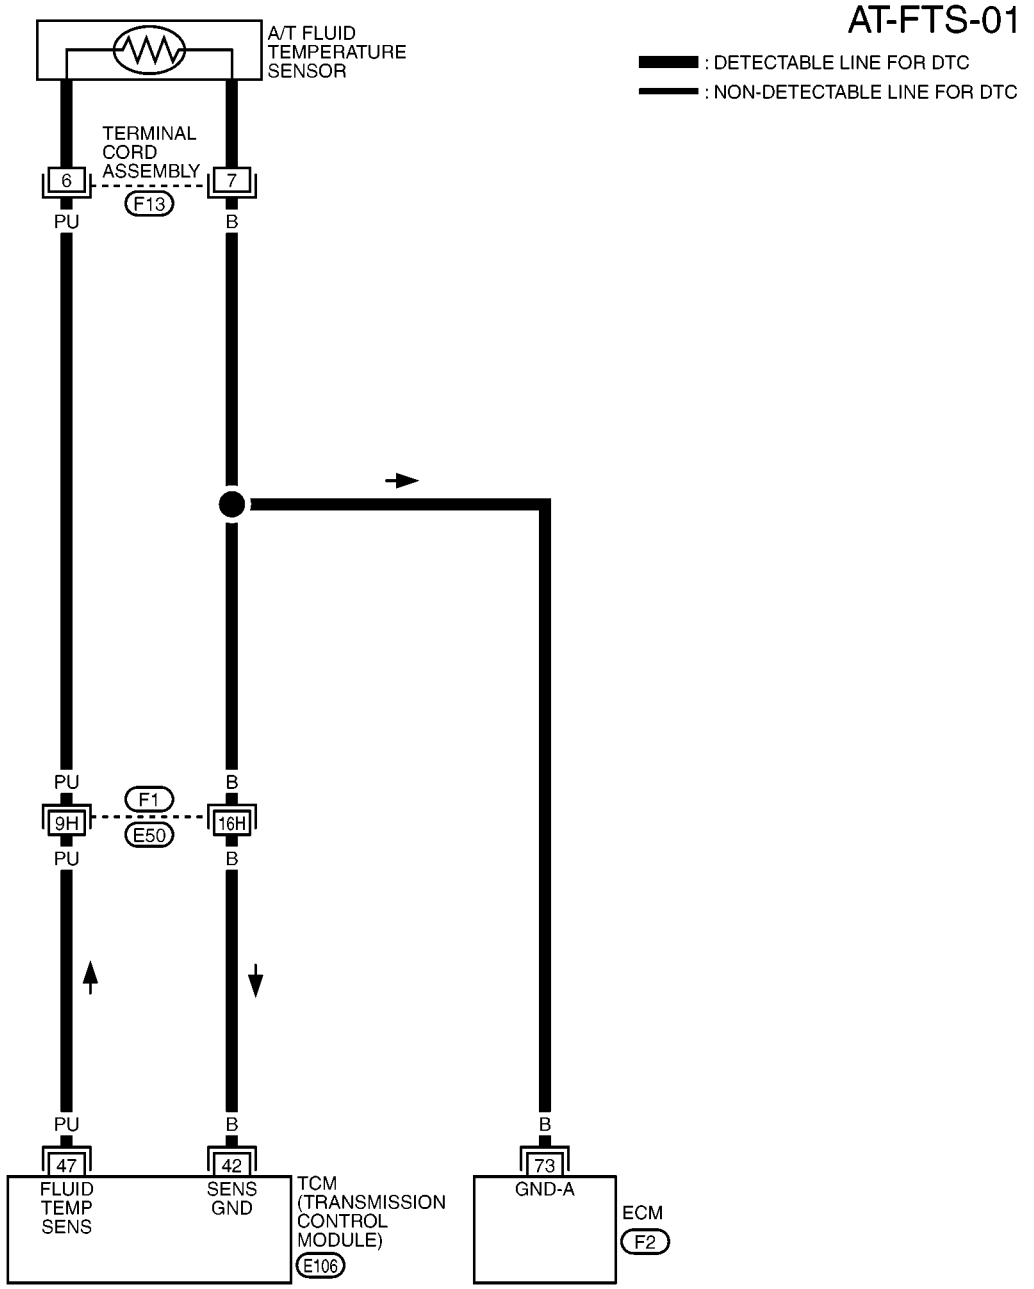


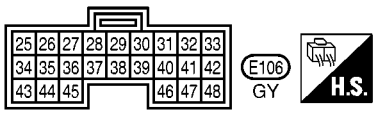
With GST

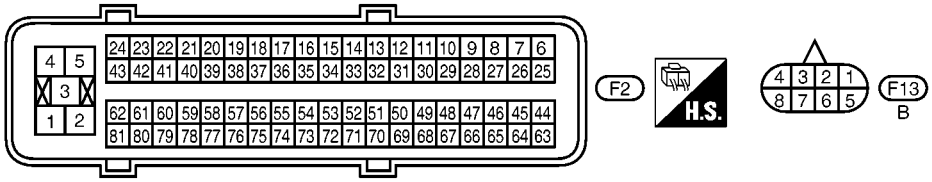
Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — FTS

ECS008O4







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0072E

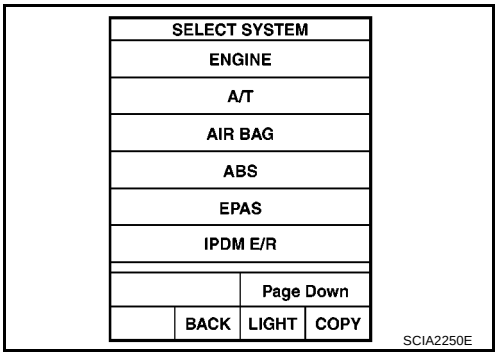
Diagnostic Procedure

ECS008O5

1. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR

With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.

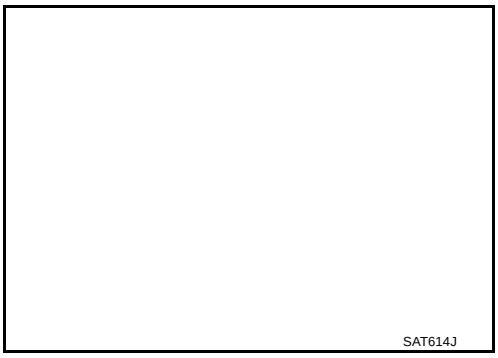


3. Read out the value of “FLUID TEMP SE”.

Voltage:

Cold [20°C (68°F)] → Hot [80°C (176°F)]

Approximately 1.5V → 0.5V



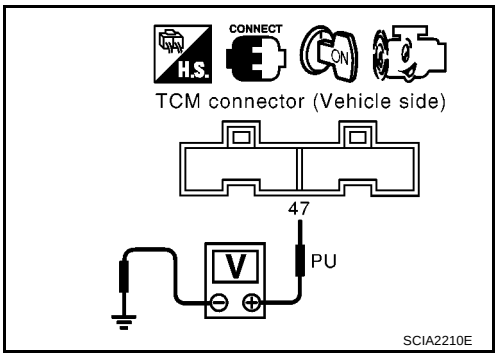
Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 47 and ground while warming up A/T.

Voltage:

Cold [20°C (68°F)] → Hot [80°C (176°F)]

Approximately 1.5V → 0.5V



3. Turn ignition switch to “OFF” position.
4. Disconnect TCM harness connector.

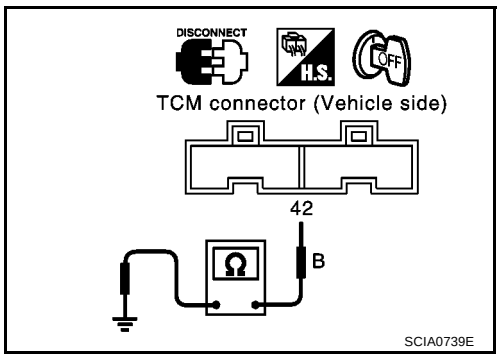
5. Check continuity between terminal 42 and ground.

Continuity should exist.

If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.



2. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-121, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

3. CHECK A/T FLUID TEMPERATURE SENSOR WITH TERMINAL CORD ASSEMBLY

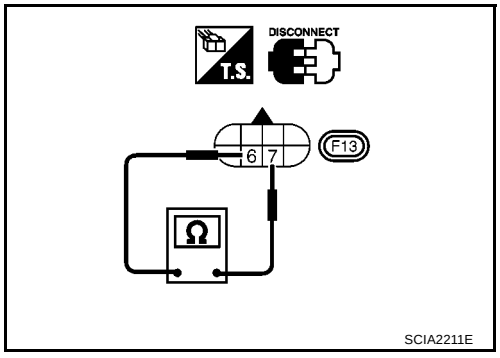
1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminals 6 and 7 when A/T is cold.

Resistance:

Cold [20°C (68°F)]

Approximately 2.5 kΩ

4. Reinstall any part removed.



OK or NG

OK >> GO TO 4.
NG >> 1. Remove oil pan.
2. Check the following items. If any items are damaged, repair or replace damaged parts.
– A/T fluid temperature sensor
Refer to AT-125, "Component Inspection" .
– Harness of terminal cord assembly for short or open

4. DETECT MALFUNCTIONING ITEM

Check the following items:

- harness for short ground or short power or open between TCM, ECM and terminal cord assembly
- Ground circit for ECM
Refer to EC-125, "POWER SUPPLY CIRCUIT FOR ECM" .

OK or NG

OK >> GO TO 2.
NG >> Repair or replace damaged parts.

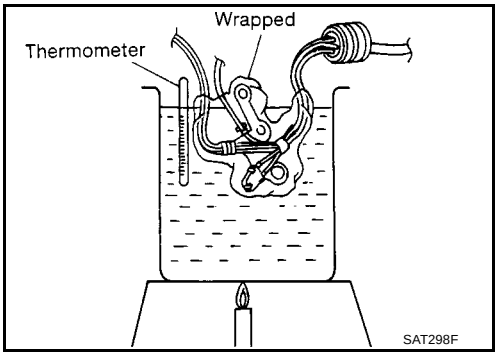
Component Inspection

ECS008O6

A/T FLUID TEMPERATURE SENSOR

- For removal, refer to AT-426, "REMOVAL" .
- Check resistance between two terminals while changing temperature as shown in the figure.

Temperature °C (°F)	Resistance
20 (68)	Approximately 2.5 kΩ
80 (176)	Approximately 0.3 kΩ



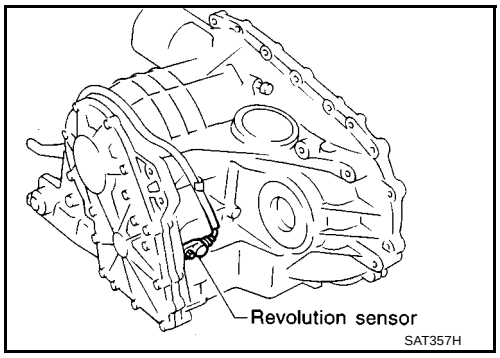
DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)

PFP:32702

Description

ECS008O7

The revolution sensor detects the revolution of the idler gear parking pawl lock gear and emits a pulse signal. The pulse signal is sent to the TCM which converts it into vehicle speed.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
29	OR	Revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 **CAUTION:** **Connect the diagnosis data link cable to the vehicle diagnosis connector.** *1: A circuit tester cannot be used to test this item.	150 Hz
42	B	Throttle position sensor (Ground)	Always		0V

ON BOARD DIAGNOSIS LOGIC

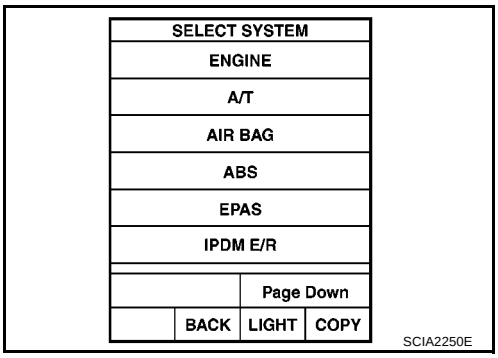
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: VEH SPD SEN/CIR AT	TCM does not receive the proper voltage signal from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● Revolution sensor
: P0720		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

CAUTION:

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

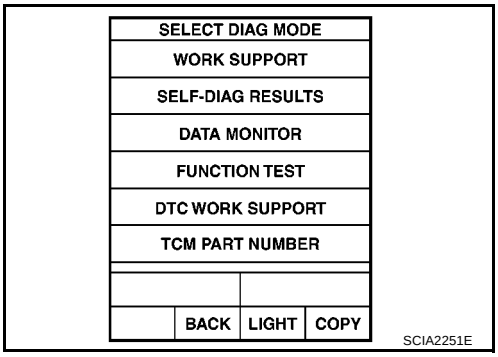
NOTE:
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

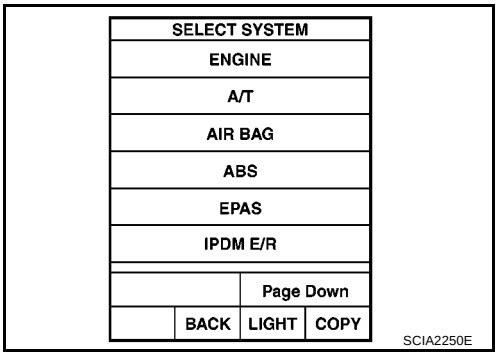


After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Drive vehicle and check for an increase of "VHCL/S SE·MTR" value increase.
   If the check result is NG, go to AT-129, "Diagnostic Procedure" .
   If the check result is OK, go to following step.
3. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
4. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL SPEED SE: 30 km/h (19 MPH) or more
   THRTL POS SEN: More than 1.2V
   Selector lever: D position (OD "ON")
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.
   If the check result is NG, go to AT-129, "Diagnostic Procedure" .
   If the check result is OK, go to following step.

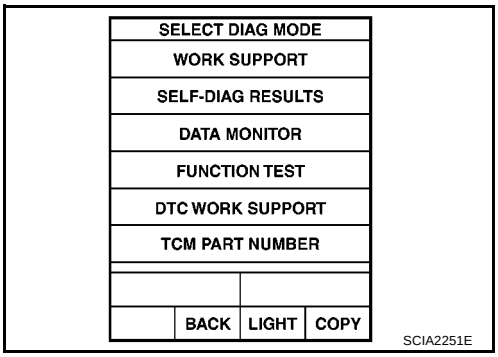




5. Maintain the following conditions for at least 5 consecutive seconds.
   CMPS·RPM (REF): 3,500 rpm or more
   THRTL POS SEN: More than 1.2V
   Selector lever: D position (OD "ON")
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

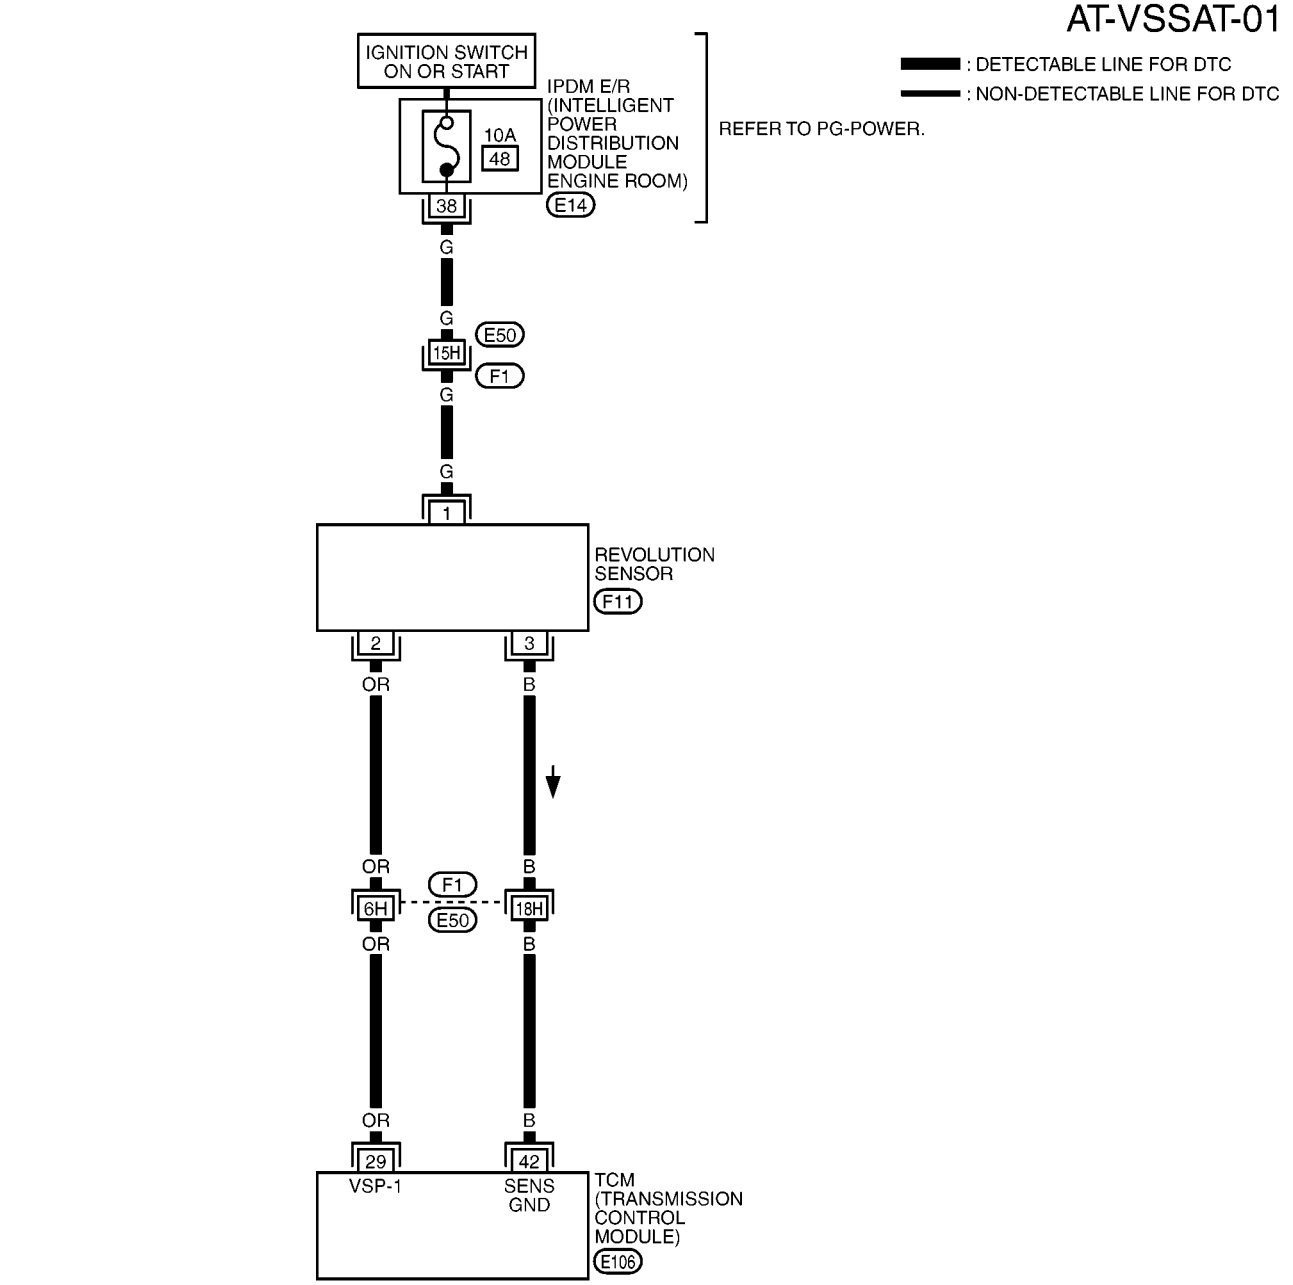
With GST

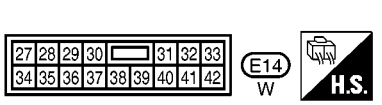
Follow the procedure "With CONSULT-II".

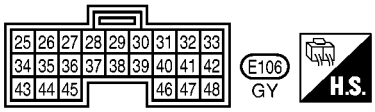


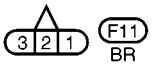
Wiring Diagram — AT — VSSA/T

ECS008O8









REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0073E

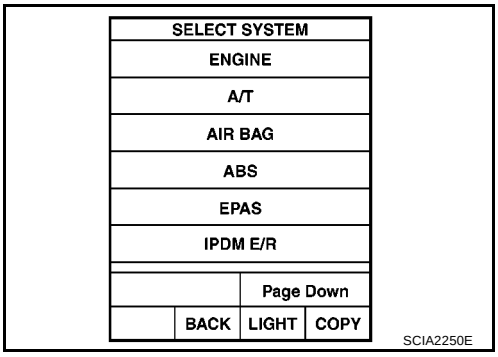
Diagnostic Procedure

ECS008O9

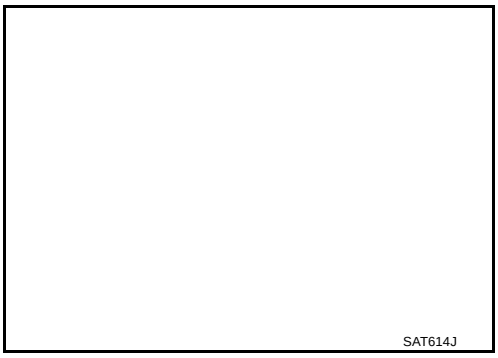
1. CHECK INPUT SIGNAL (WITH CONSULT-II)

With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out the value of “VHCL/S SE·A/T” while driving. Check the value changes according to driving speed.



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK REVOLUTION SENSOR (WITH CONSULT-II)

With CONSULT-II

1. Start engine.
2. Check the pulse when vehicle cruises.

Item	Condition		Judgement standard (Approx.)
Revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 **CAUTION:** **Connect the diagnosis data link cable to the vehicle diagnosis connector.** *1: A circuit tester cannot be used to test this item.	150 Hz

OK or NG

OK >> GO TO 3.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between TCM, ECM and revolution sensor
- Harness for short or open between fuse and revolution sensor

3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-127, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 4.

4. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

DTC P0725 ENGINE SPEED SIGNAL

PFP:24825

Description

ECS008OA

The engine speed signal is sent from the ECM to the TCM.

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
39	L	Engine speed signal	 and	—	Refer to EC-94, "ECM INSPECTION TABLE" .

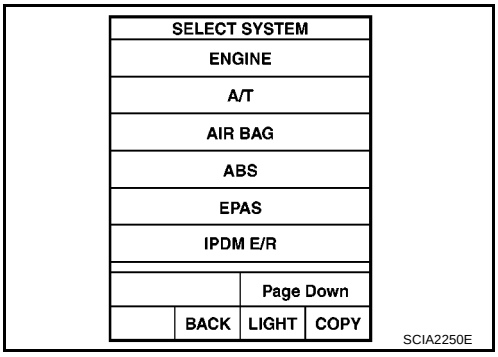
ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check item (Possible cause)
: ENGINE SPEED SIG : P0725	TCM does not receive the proper voltage signal from ECM.	● Harness or connectors (The sensor circuit is open or shorted.)

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

CAUTION:
Always drive vehicle at a safe speed.

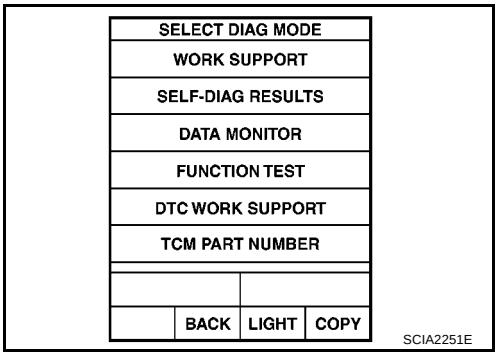
NOTE:
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.



After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine and maintain the following conditions for at least 10 consecutive seconds.
   VHCL SPEED SE: 10 km/h (6 MPH) or more
   THRTL POS SEN: More than 1.2V
   Selector lever: D position (OD "ON")

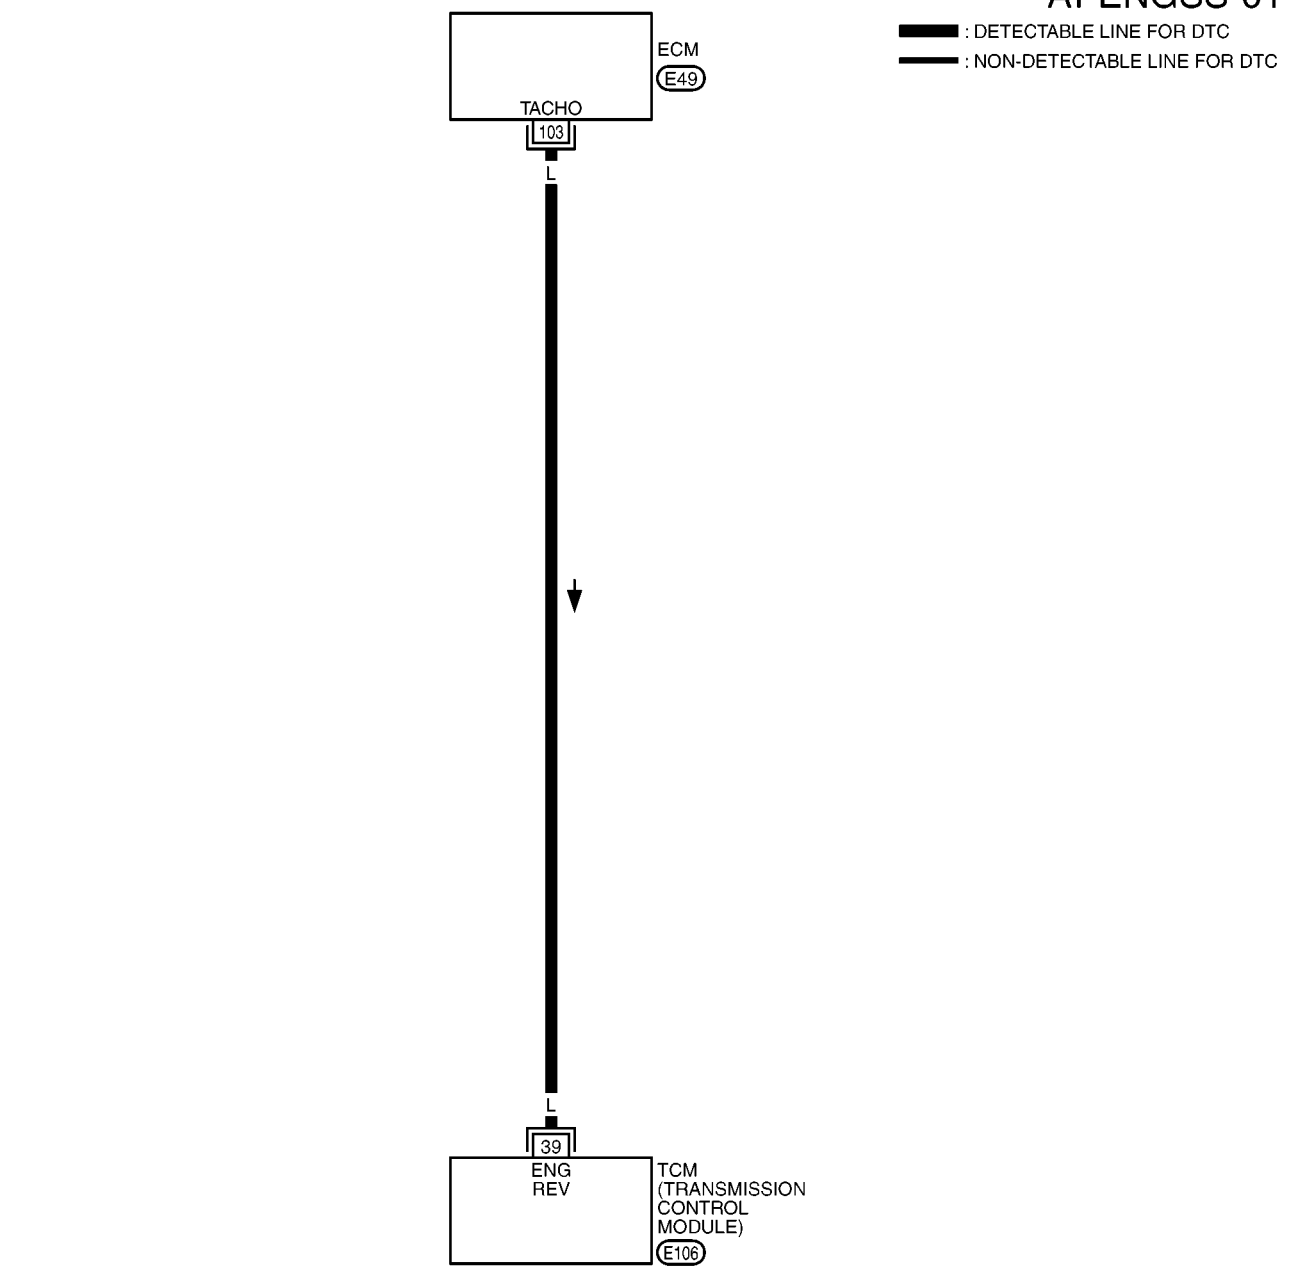


With GST

Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — ENGSS

ECS008OB



MCWA0074E

Diagnostic Procedure

ECS008OC

1. CHECK DTC WITH ECM

Perform diagnostic test mode II (self- diagnostic results) for engine control. Check ignition signal circuit condition.

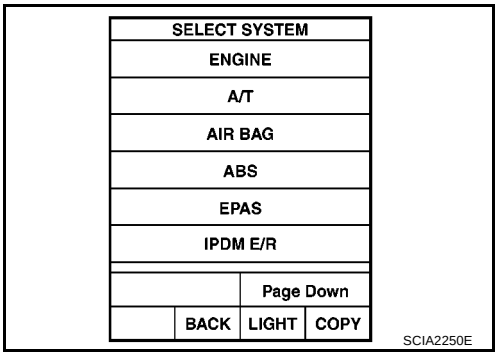
OK or NG

OK >> GO TO 2.
NG >> Check ignition signal circuit for engine control. Refer to EC-435, "IGNITION SIGNAL" .

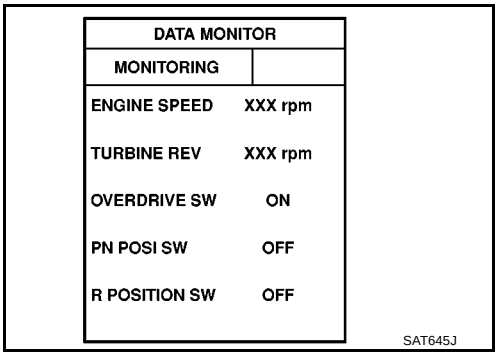
2. CHECK INPUT SIGNAL

With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out the value of “ENGINE SPEED”.
   Check engine speed changes according to throttle position.



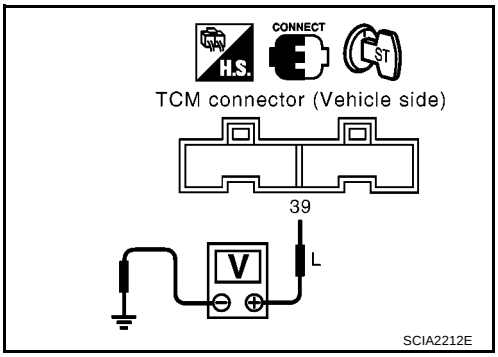
Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 39 and ground.

Voltage (Idle speed): Refer to EC-94, "ECM INSPECTION TABLE" .

OK or NG

OK >> GO TO 3.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.
- Harness for short or open between TCM and ECM
- Resistor and ignition coil. Refer to EC-435, "IGNITION SIGNAL" .



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-131, "DTC P0725 ENGINE SPEED SIGNAL" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

DTC P0731 A/T 1ST GEAR FUNCTION

PFP:31940

Description

ECS008OD

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into first gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D_1 ” or “D_4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D_2 ” or “D_3 ”.)	0V
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D_1 ” or “D_2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D_3 ” or “D_4 ”.)	0V

ON BOARD DIAGNOSTIC LOGIC

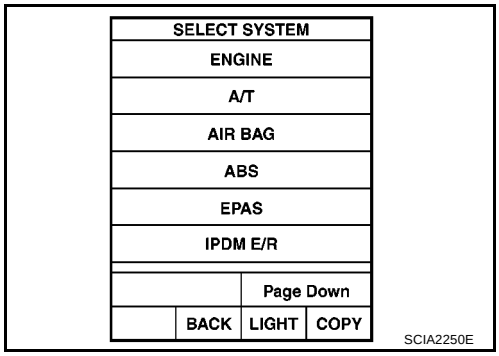
This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:
Torque converter slip ratio = A x C/B
A: Output shaft revolution signal from revolution sensor
B: Engine speed signal from ECM
C: Gear ratio determined as gear position which TCM supposes
If the actual gear position is higher than the position (1st) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.
This malfunction will be caused when either shift solenoid valve A is stuck open or shift solenoid valve B is stuck open.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve A stuck open	2*	2	3	3
In case of gear position with shift solenoid valve B stuck open	4*	3	3	4

*: P0731 is detected.

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: A/T 1ST GR FNCTN	A/T cannot be shifted to the 1st gear position even if electrical circuit is good.	● Shift solenoid valve A ● Shift solenoid valve B ● Each clutch ● Hydraulic control circuit
: P0731		

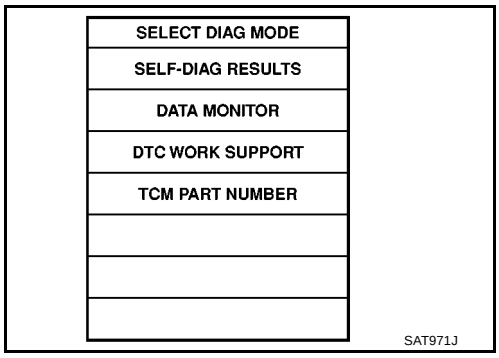
DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE



CAUTION:

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

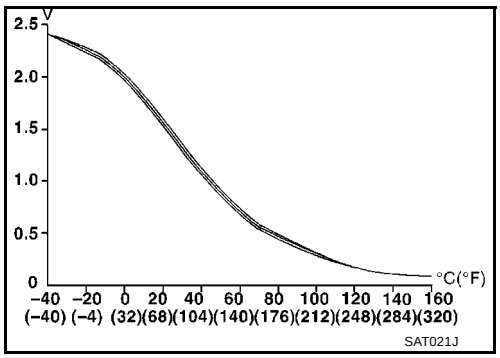
NOTE:
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.



TESTING CONDITION:
Always drive vehicle on a level road to improve the accuracy of test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.
   FLUID TEMP SEN: 0.4 - 1.5V
   If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "1ST GR FNCTN P0731" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".
4. Accelerate vehicle to 20 to 25 km/h (12 to 16 MPH) under the following condition and release the accelerator pedal completely.
   THROTTLE POSI: Less than 1.0/8 (at all times during step 4)
   Selector lever: D position (OD "ON")



- **Check that "GEAR" shows "2" after releasing pedal.**

5. Depress accelerator pedal to WOT (more than 7.0/8 of "THROTTLE POSI") quickly from a speed of 20 to 25 km/h (12 to 16 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)
   If the check result NG appears on CONSULT-II screen, go to AT-139, "Diagnostic Procedure" .
   If "STOP VEHICLE" appears on CONSULT-II screen, go to the following step.

- **Check that "GEAR" shows "1" when depressing accelerator pedal to WOT.**
- **If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAGNOSIS" for "ENGINE". In case a 1st trip DTC other than P0731 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".**

6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0731 exists.	2 → 2 → 3 → 3
	4 → 3 → 3 → 4

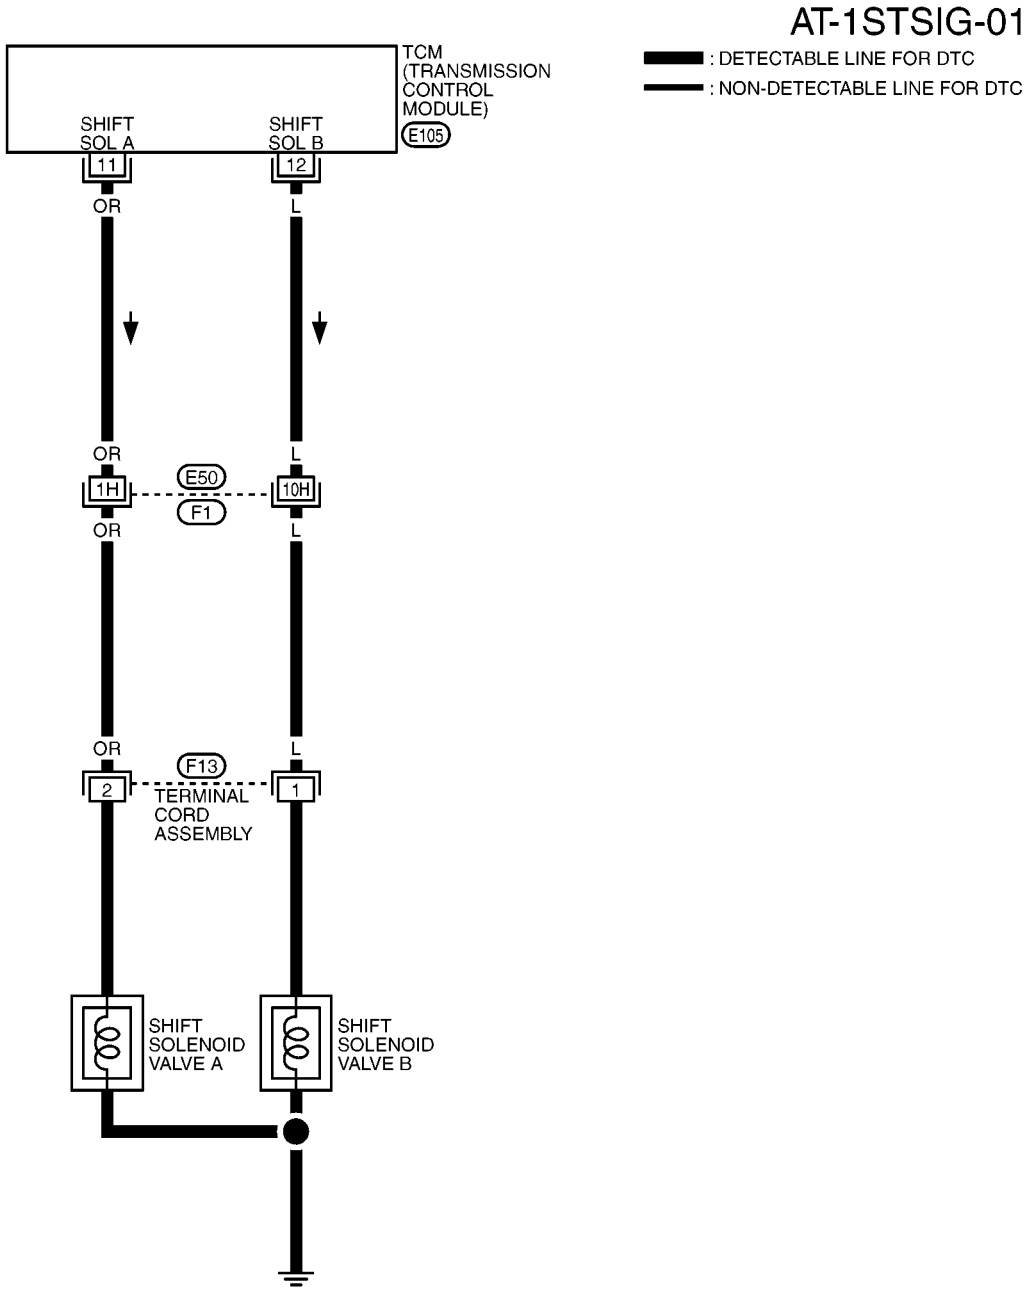
8. Make sure that “OK” is displayed. (If “NG” is displayed, refer to “DIAGNOSTIC PROCEDURE”.)
   Refer to AT-139, "Diagnostic Procedure" .
   Refer to AT-534, "Shift Schedule" .

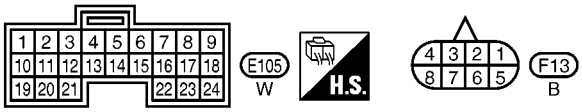
With GST

Follow the procedure “With CONSULT-II”.

Wiring Diagram — AT — 1ST

ECS008OE





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0075E

Diagnostic Procedure

ECS008OF

1. CHECK SHIFT SOLENOID VALVE

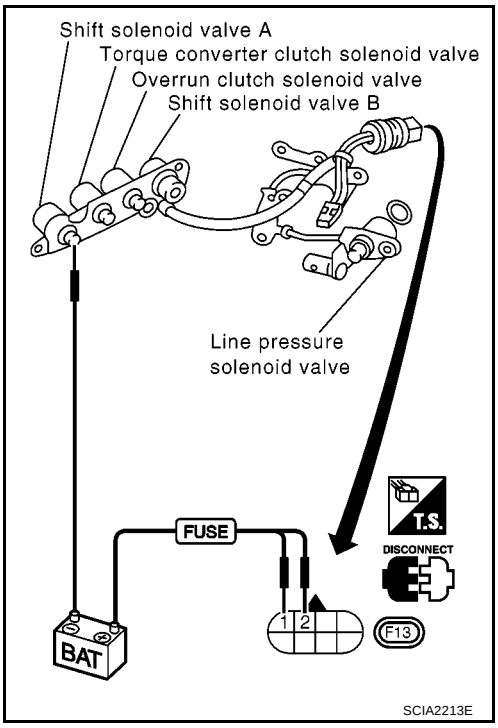
1. Remove control valve assembly. Refer to AT-426, "REMOVAL"
2. Check shift solenoid valve operation.

- Shift solenoid valve A
- Shift solenoid valve B

Refer to AT-140, "Component Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Repair or replace shift solenoid valve assembly.



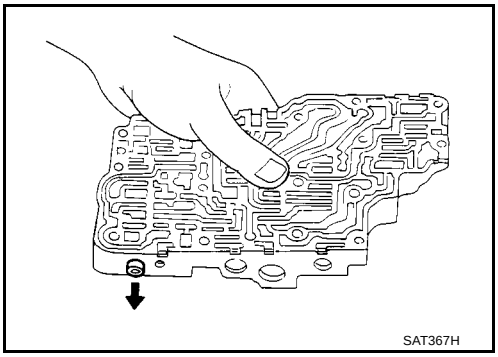
2. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to AT-457, "Control Valve Assembly" .
2. Check to ensure that:

- Valve, sleeve and plug slide along valve bore under their own weight.
- Valve, sleeve and plug are free from burrs, dents and scratches.
- Control valve springs are free from damage, deformation and fatigue.
- Hydraulic line is free from obstacles.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace control valve assembly.



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-136, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> Check transaxle inner parts (clutch, brake, etc.).

Component Inspection

ECS008OG

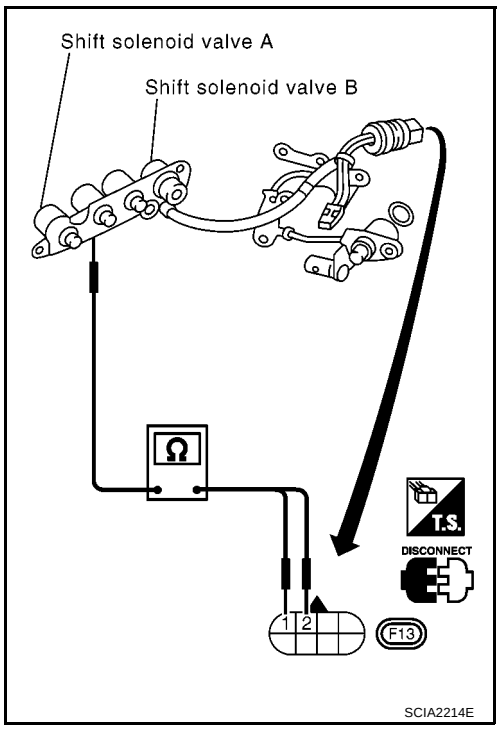
SHIFT SOLENOID VALVE A AND B

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

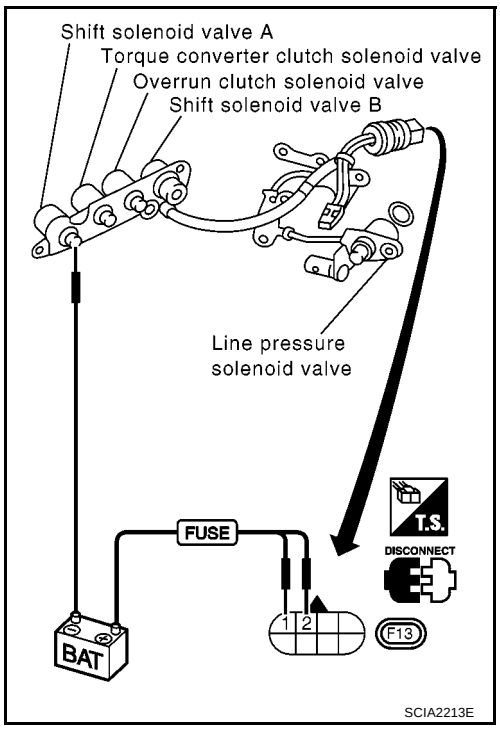
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω
Shift solenoid valve B	1		5 - 20Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



DTC P0732 A/T 2ND GEAR FUNCTION

PFP:31940

Description

ECS008OH

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into second gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D_1 ” or “D_2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D_3 ” or “D_4 ”.)	0V

ON BOARD DIAGNOSTIC LOGIC

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:
Torque converter slip ratio = A x C/B
A: Output shaft revolution signal from revolution sensor
B: Engine speed signal from ECM
C: Gear ratio determined as gear position which TCM supposes
If the actual gear position is higher than the position (2nd) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.
This malfunction will be caused when shift solenoid valve B is stuck open.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve B stuck open	4	3*	3	4

*: P0732 is detected.

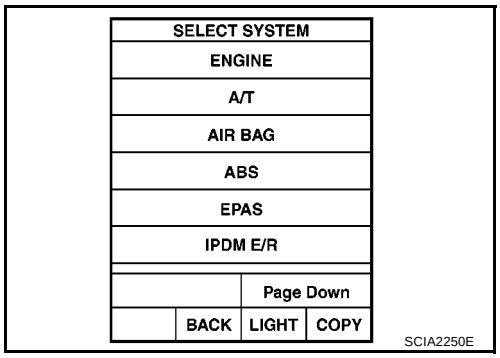
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: A/T 2ND GR FNCTN	A/T cannot be shifted to the 2nd gear position even if electrical circuit is good.	● Shift solenoid valve B ● Each clutch ● Hydraulic control circuit
GST : P0732		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

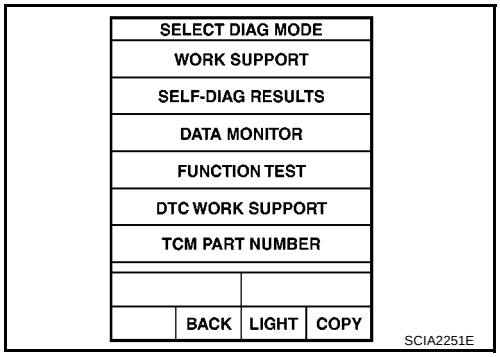
CAUTION:

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

NOTE:
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

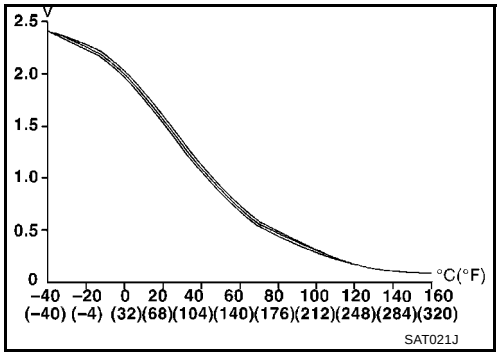


TESTING CONDITION:
Always drive vehicle on a level road to improve the accuracy of test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.
   FLUID TEMP SEN: 0.4 - 1.5V
   If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "2ND GR FNCTN P0732" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".
4. Accelerate vehicle to 50 to 55 km/h (31 to 34 MPH) under the following condition and release the accelerator pedal completely.
   THROTTLE POSI: Less than 1.0/8 (at all times during step 4)
   Selector lever: D position (OD "ON")
   - **Check that "GEAR" shows "3" or "4" after releasing pedal.**
5. Depress accelerator pedal to WOT (more than 7.0/8 of "THROTTLE POSI") quickly from a speed of 50 to 55 km/h (31 to 34 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)
   If the check result NG appears on CONSULT-II screen, go to AT-145, "Diagnostic Procedure" .
   If "STOP VEHICLE" appears on CONSULT-II screen, go to following step.



- **Check that "GEAR" shows "2" when depressing accelerator pedal to WOT.**
- **If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAGNOSIS" for "ENGINE". In case a 1st trip DTC other than P0732 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".**

6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4

No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0732 exists.	4 → 3 → 3 → 4

8. Make sure that “OK” is displayed. (If “NG” is displayed, refer to “DIAGNOSTIC PROCEDURE”.)
   Refer to AT-145, "Diagnostic Procedure" .
   Refer to AT-534, "Shift Schedule" .

With GST

Follow the procedure “With CONSULT-II”.

MCWA0076E

Diagnostic Procedure

ECS008OJ

1. CHECK SHIFT SOLENOID VALVE

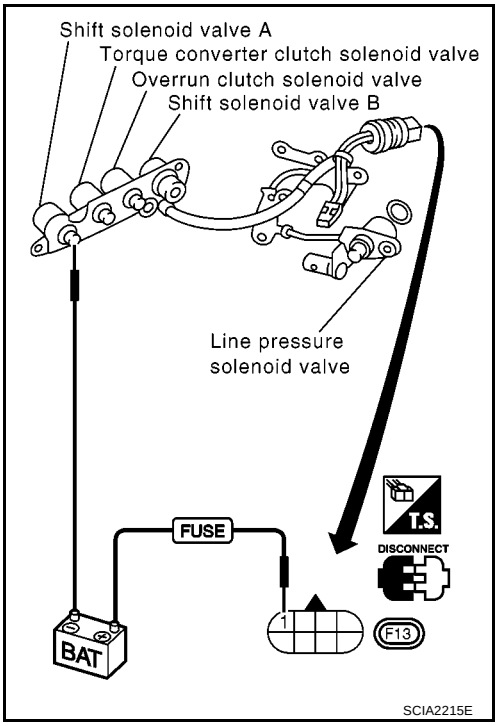
1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check shift solenoid valve operation.

- Shift solenoid valve B

Refer to AT-146, "Component Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Repair or replace shift solenoid valve assembly.



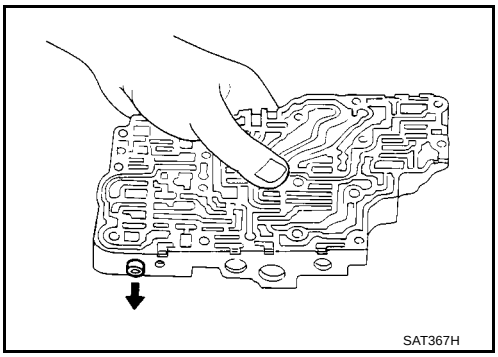
2. CHECK CONTROL VALVE

1. Disassemble control valve assembly. Refer to AT-457, "Control Valve Assembly" .
2. Check to ensure that:

- Valve, sleeve and plug slide along valve bore under their own weight.
- Valve, sleeve and plug are free from burrs, dents and scratches.
- Control valve springs are free from damage, deformation and fatigue.
- Hydraulic line is free from obstacles.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace control valve assembly.



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-142, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> Check transaxle inner parts (clutch, brake, etc.).

Component Inspection

ECS008OK

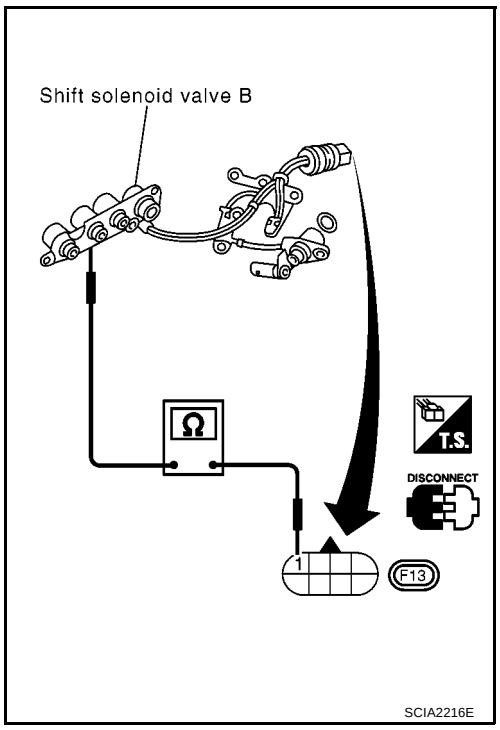
SHIFT SOLENOID VALVE B

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

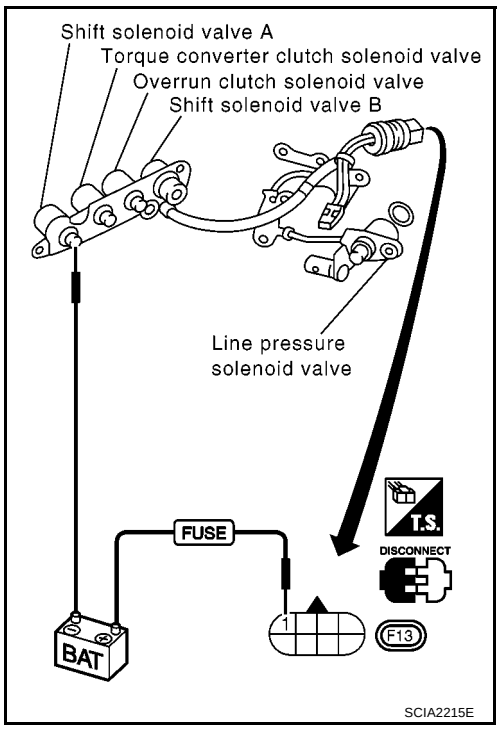
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve B	1	Ground	5 - 20Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



DTC P0733 A/T 3RD GEAR FUNCTION

PFP:31940

Description

ECS008OL

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into third gear position as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning servo piston or brake band, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D1 ” or “D4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D2 ” or “D3 ”.)	0V

ON BOARD DIAGNOSTIC LOGIC

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:
Torque converter slip ratio = A x C/B
A: Output shaft revolution signal from revolution sensor
B: Engine speed signal from ECM
C: Gear ratio determined as gear position which TCM supposes
If the actual gear position is higher than the position (3rd) supposed by TCM, the slip ratio will be more than normal. In case the ratio exceeds the specified value, TCM judges this diagnosis malfunction.
This malfunction will be caused when shift solenoid valve A is stuck closed.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	4
In case of gear position with shift solenoid valve A stuck closed	1	1	4*	4

*: P0733 is detected.

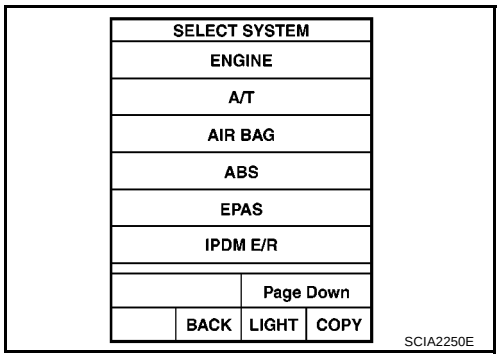
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: A/T 3RD GR FNCTN	A/T cannot be shifted to the 3rd gear position even if electrical circuit is good.	● Shift solenoid valve A ● Each clutch ● Hydraulic control circuit
: P0733		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

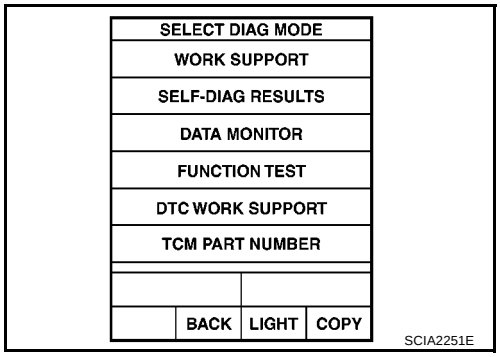
CAUTION:

- **Always drive vehicle at a safe speed.**
- **Be careful not to rev engine into the red zone on the tachometer.**

NOTE:
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

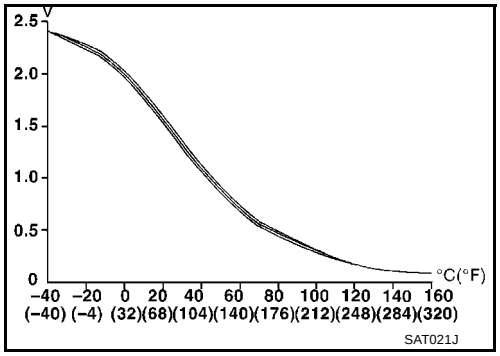


TESTING CONDITION:
Always drive vehicle on a level road to improve the accuracy of test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Start engine and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.
   FLUID TEMP SEN: 0.4 - 1.5V
   If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select "3RD GR FNCTN P0733" of "DTC WORK SUPPORT" mode for "A/T" with CONSULT-II and touch "START".
4. Accelerate vehicle to 70 to 85 km/h (43 to 53 MPH) under the following condition and release the accelerator pedal completely.
   THROTTLE POSI: Less than 1.0/8 (at all times during step 4)
   Selector lever: D position (OD "ON")
   - **Check that "GEAR" shows "4" after releasing pedal.**
5. Depress accelerator pedal steadily with 3.5/8 - 4.5/8 of "THROTTLE POSI" from a speed of 70 to 85 km/h (43 to 53 MPH) until "TESTING" changes to "STOP VEHICLE" or "COMPLETED". (It will take approximately 3 seconds.)
   If the check result NG appears on CONSULT-II screen, go to AT-151, "Diagnostic Procedure" .
   If "STOP VEHICLE" appears on CONSULT-II screen, go to following step.



- **Check that "GEAR" shows "3" when depressing accelerator pedal with 3.5/8 - 4.5/8 of "THROTTLE POSI".**
- **If "TESTING" does not appear on CONSULT-II for a long time, select "SELF-DIAGNOSIS" for "ENGINE". In case a 1st trip DTC other than P0733 is shown, refer to applicable "TROUBLE DIAGNOSIS FOR DTC".**

6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)

Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists.	1 → 2 → 3 → 4
Malfunction for P0733 exists.	1 → 1 → 4 → 4

8. Make sure that “OK” is displayed. (If “NG” is displayed, refer to AT-151, "Diagnostic Procedure" .)
   Refer to AT-151, "Diagnostic Procedure" .
   Refer to AT-534, "Shift Schedule" .

With GST

Follow the procedure “With CONSULT-II”.

Component Inspection

ECS008OO

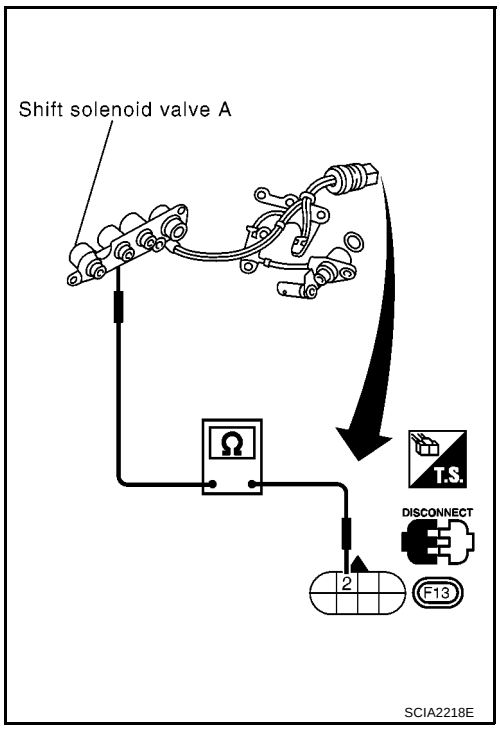
SHIFT SOLENOID VALVE A

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

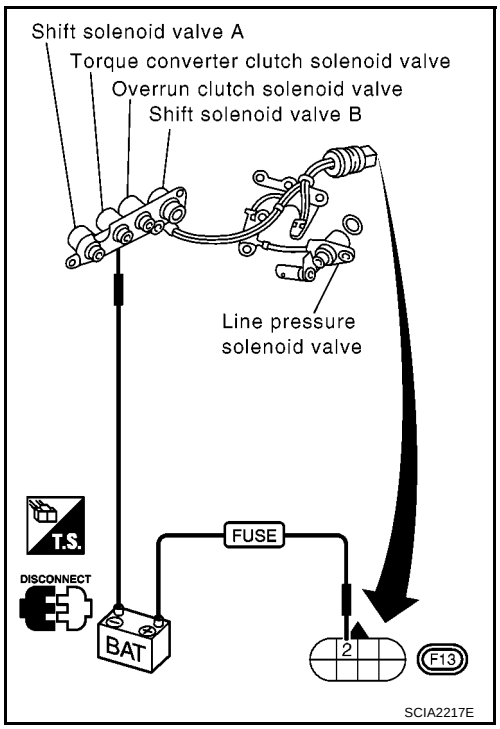
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



DTC P0734 A/T 4TH GEAR FUNCTION

PFP:31940

Description

ECS008OP

- This malfunction will not be detected while the O/D OFF indicator lamp is indicating another self-diagnosis malfunction.
- This malfunction is detected when the A/T does not shift into fourth gear position or line pressure is low as instructed by the TCM. This is not caused by electrical malfunction (circuits open or shorted) but by mechanical malfunction such as control valve sticking, improper solenoid valve operation, malfunctioning oil pump or torque converter clutch, etc.

Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Line pressure solenoid valve duty	Small throttle opening (Low line pressure) ↓ Large throttle opening (High line pressure)	Approximately 24% ↓ Approximately 95%

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
1	PU	Line pressure solenoid valve		When releasing accelerator pedal after warming up engine.	1.5 - 3.0V
				When depressing accelerator pedal fully after warming up engine.	0V
2	BR	Line pressure solenoid valve (with dropping resistor)		When releasing accelerator pedal after warming up engine.	5 - 14V
				When depressing accelerator pedal fully after warming up engine.	0V
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D1 ” or “D4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D2 ” or “D3 ”.)	0V
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D1 ” or “D2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D3 ” or “D4 ”.)	0V

ON BOARD DIAGNOSTIC LOGIC

This diagnosis monitors actual gear position by checking the torque converter slip ratio calculated by TCM as follows:
Torque converter slip ratio = A x C/B
A: Output shaft revolution signal from revolution sensor
B: Engine speed signal from ECM
C: Gear ratio determined as gear position which TCM supposes
If the actual gear position is much lower than the position (4th) supposed by TCM, the slip ratio will be much less than normal. In case the ratio does not reach the specified value, TCM judges this diagnosis malfunction. This malfunction will be caused when shift solenoid valve A is stuck open or shift solenoid valve B is stuck closed.

Gear position supposed by TCM	1	2	3	4
In case of gear position with no malfunctions	1	2	3	**4**
In case of gear position with shift solenoid valve A stuck open	2	2	3	**3***
In case of gear position with shift solenoid valve B stuck closed	1	2	2	**1***

*: P0734 is detected.

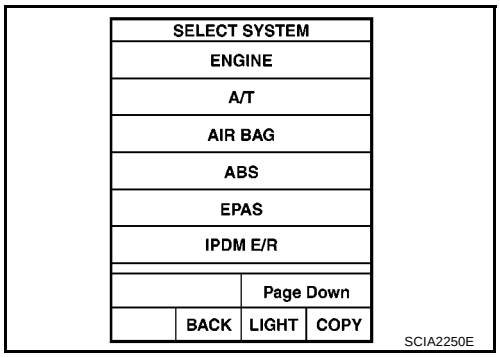
And also, this malfunction will be caused when line pressure is lower than normal same as line pressure solenoid valve stuck open.

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: A/T 4TH GR FNCTN : P0734	A/T cannot be shifted to the 4th gear position even if electrical circuit is good.	● Shift solenoid valve A ● Shift solenoid valve B ● Line pressure solenoid valve ● Each clutch ● Hydraulic control circuit

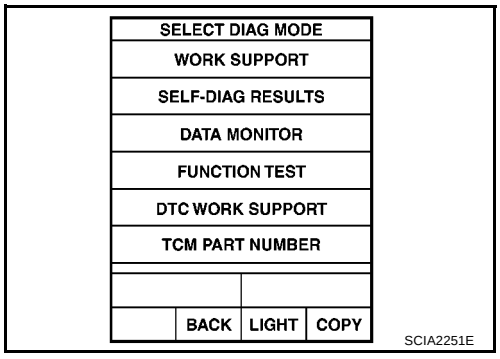
DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

CAUTION:

- **Always drive vehicle at a safe speed.**
- **If conducting this “DTC CONFIRMATION PROCEDURE” again, always turn ignition switch “OFF” and wait at least 5 seconds before continuing.**
- **Be careful not to rev engine into the red zone on the tachometer.**

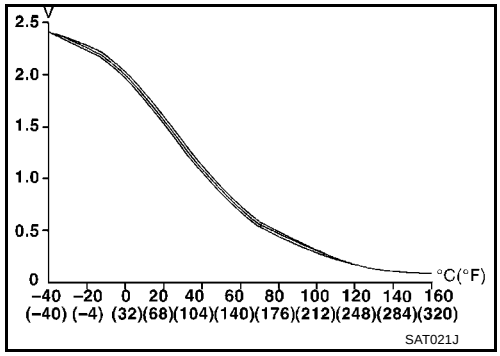


NOTE:
If “DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE” has been previously conducted, always turn ignition switch “OFF” and wait at least 5 seconds before conducting the next test.
TESTING CONDITION:
Always drive vehicle on a level road to improve the accuracy of test.
After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Start engine and select “DATA MONITOR” mode for “A/T” with CONSULT-II.
2. Make sure that output voltage of A/T fluid temperature sensor is within the range below.
   FLUID TEMP SEN: 0.4 - 1.5V
   If out of range, drive the vehicle to decrease the voltage (warm up the fluid) or stop engine to increase the voltage (cool down the fluid).
3. Select “4TH GR FNCTN P0734” of “DTC WORK SUPPORT” mode for “A/T” with CONSULT-II and touch “START”.
4. Accelerate vehicle to 45 to 55 km/h (28 to 34 MPH) under the following condition and release the accelerator pedal completely.
   THROTTLE POSI: Less than 5.5/8 (at all times during step 4)
   Selector lever: D position (OD “ON”)
   - **Check that “GEAR” shows “3” after releasing pedal.**
5. Depress accelerator pedal steadily with 1.0/8 - 2.0/8 of “THROTTLE POSI” from a speed of 45 to 55 km/h (28 to 34 MPH) until “TESTING” has turned to “STOP VEHICLE” or “COMPLETED”. (It will take approximately 3 seconds.)
   If the check result NG appears on CONSULT-II screen, go to AT-157, "Diagnostic Procedure" .
   If “STOP VEHICLE” appears on CONSULT-II screen, go to following step.
   - **Check that “GEAR” shows “4” when depressing accelerator pedal with 1.0/8 - 2.0/8 of “THROTTLE POSI”.**
   - **If “TESTING” does not appear on CONSULT-II for a long time, select “SELF-DIAGNOSIS” for “ENGINE”. In case a 1st trip DTC other than P0734 is shown, refer to applicable “TROUBLE DIAGNOSIS FOR DTC”.**
6. Stop vehicle.
7. Follow the instruction displayed. (Check for normal shifting referring to the table below.)



Vehicle condition	Gear on actual transmission shift pattern when screen is changed to 1 → 2 → 3 → 4
No malfunction exists	1 → 2 → 3 → 4
Malfunction for P0734 exists.	2 → 2 → 3 → 3
	1 → 2 → 2 → 1

8. Make sure that “OK” is displayed. (If “NG” is displayed, refer to AT-157, "Diagnostic Procedure" .)
   Refer to AT-157, "Diagnostic Procedure" .
   Refer to AT-534, "Shift Schedule" .

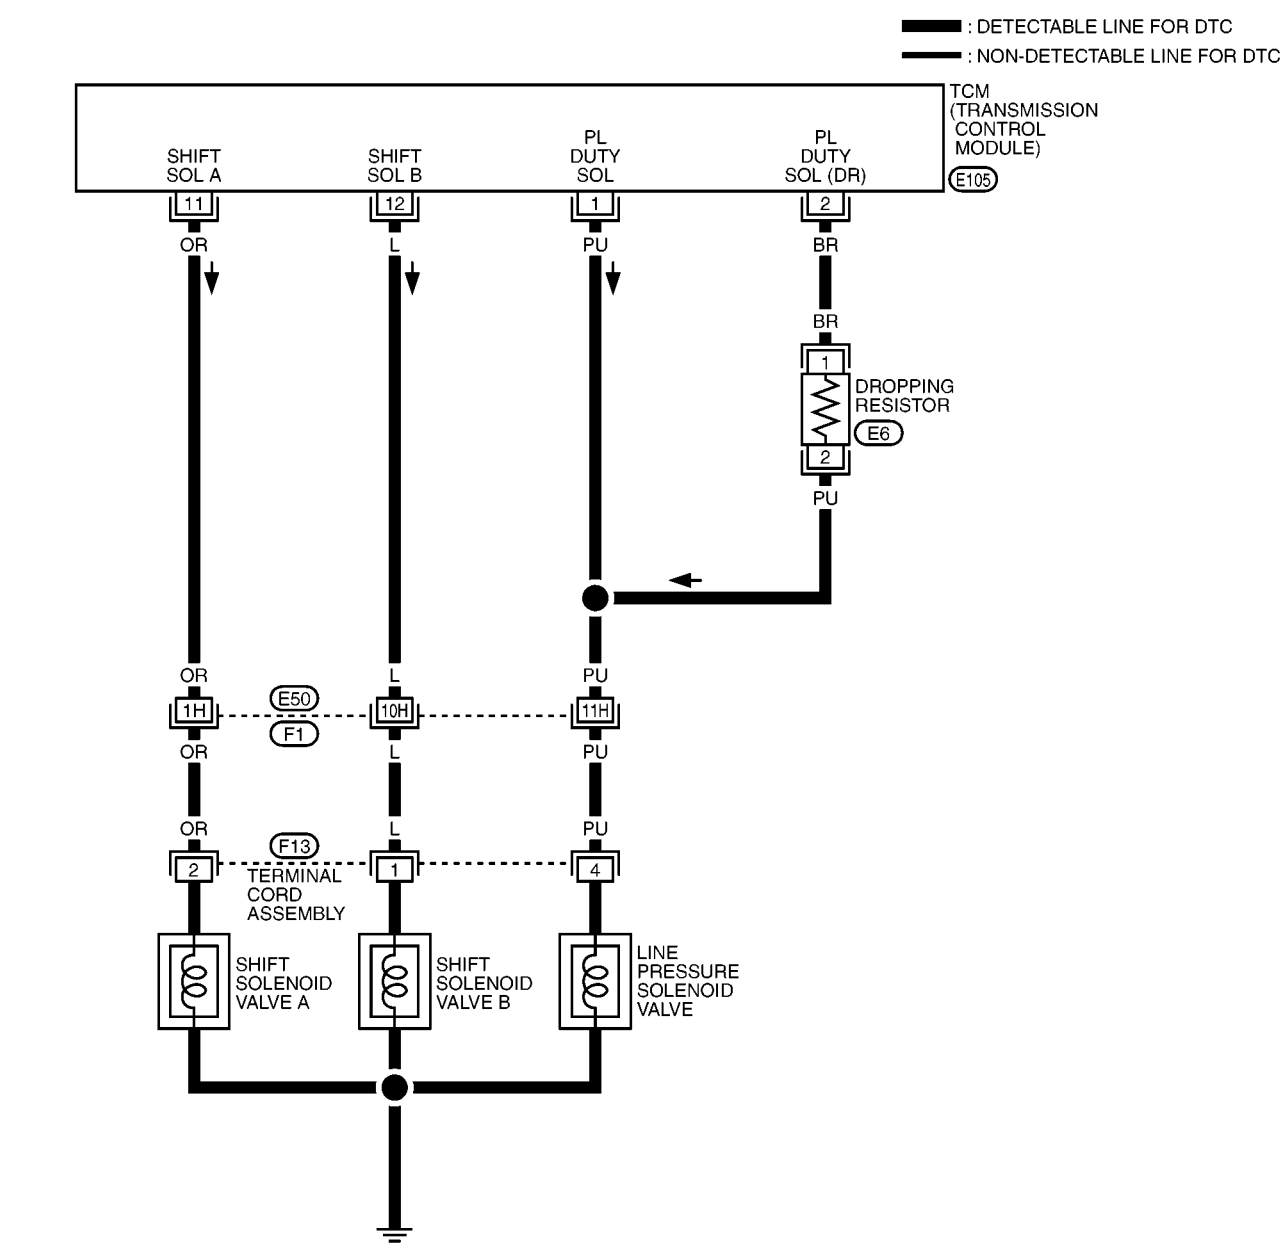
With GST

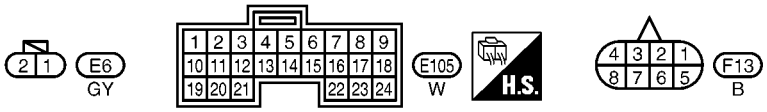
Follow the procedure “With CONSULT-II”.

Wiring Diagram — AT — 4TH

ECS008OQ

AT-4THSIG-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0078E

Diagnostic Procedure

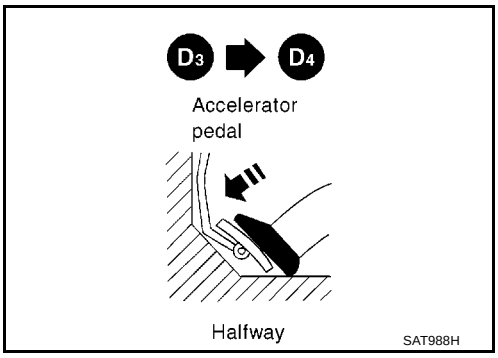
ECS008OR

1. CHECK SHIFT UP (D_3 TO D_4)

During “Cruise test — Part 1” (AT-75, "Cruise Test — Part 1"), does A/T shift from D_3 to D_4 at the specified speed?

Yes or No

Yes >> GO TO 9.
No >> GO TO 2.



2. CHECK LINE PRESSURE

Perform line pressure test.
Refer to AT-65, "Line Pressure Test" .

OK or NG

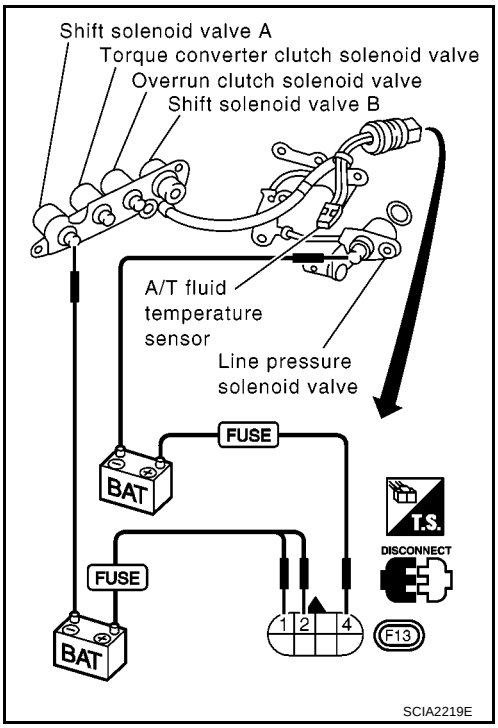
OK >> GO TO 3.
NG >> GO TO 6.

3. CHECK SOLENOID VALVES

1. Remove control valve assembly.
   Refer to AT-426, "REMOVAL" .
2. Refer to AT-160, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> Replace solenoid valve assembly.



4. CHECK CONTROL VALVE

1. Disassemble control valve assembly.
   Refer to AT-457, "Control Valve Assembly" .
2. Check to ensure that:

- Valve, sleeve and plug slide along valve bore under their own weight.
- Valve, sleeve and plug are free from burrs, dents and scratches.
- Control valve springs are free from damage, deformation and fatigue.
- Hydraulic line is free from obstacles.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace control valve.

5. CHECK SHIFT UP (D_3 TO D_4)

Does A/T shift from D_3 to D_4 at the specified speed?

OK or NG

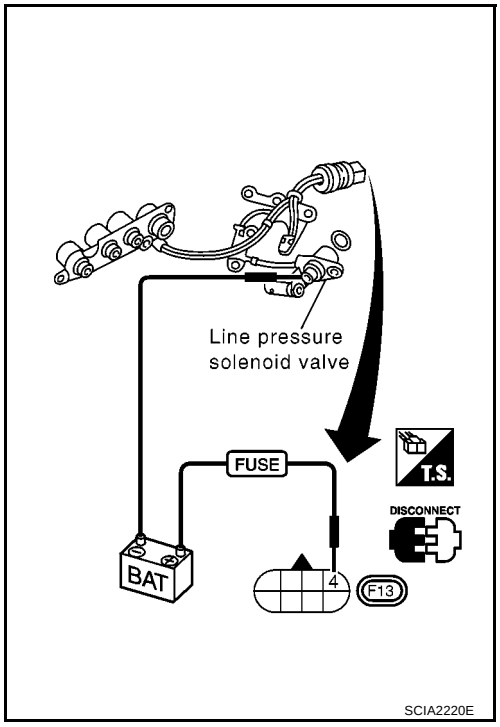
OK >> GO TO 9.
NG >> Check transaxle inner parts (clutch, brake, etc.). If NG, repair or replace the transaxle inner parts.

6. CHECK LINE PRESSURE SOLENOID VALVE

1. Remove control valve assembly.
   Refer to AT-426, "REMOVAL" .
2. Refer to AT-160, "Component Inspection" .

OK or NG

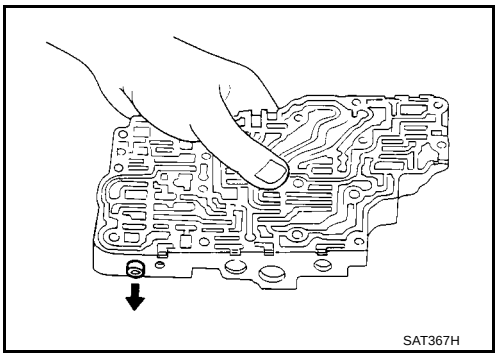
OK >> GO TO 7.
NG >> Replace solenoid valve assembly.



7. CHECK CONTROL VALVE

1. Disassemble control valve assembly.
   Refer to AT-457, "Control Valve Assembly" .
2. Check line pressure circuit valves for sticking.

- Pressure regulator valve
- Pilot valve
- Pressure modifier valve



OK or NG

OK >> GO TO 8.
NG >> Repair or replace control valve.

8. CHECK SHIFT UP (D_3 TO D_4)

Does A/T shift from D_3 to D_4 at the specified speed?

Yes or No

Yes >> GO TO 9.
No >> Check transaxle inner parts (clutch, brake, etc.). If NG, repair or replace the transaxle inner parts.

9. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-154, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> Perform “Cruise test — Part 1” again and return to the start point of this test group.

Component Inspection

ECS008OS

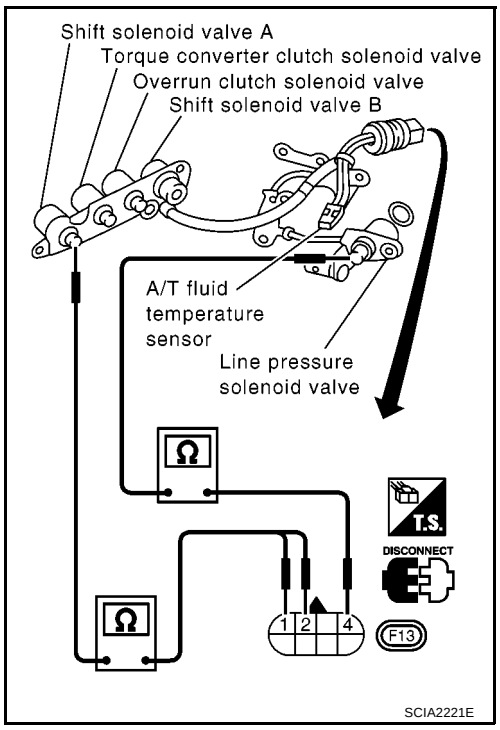
SOLENOID VALVES

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

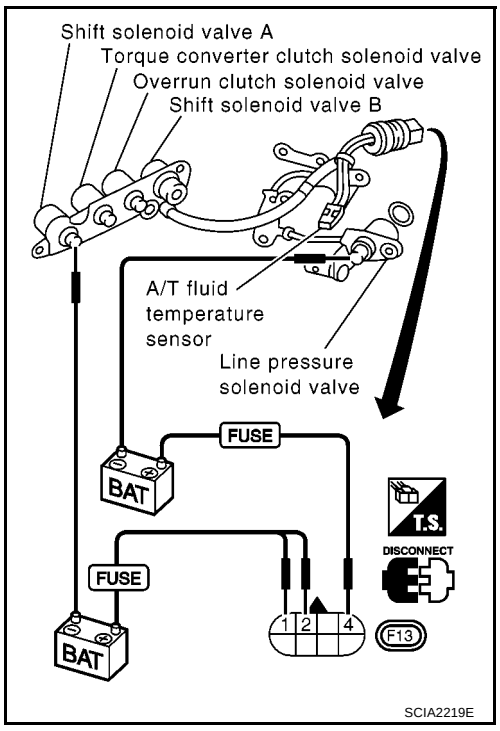
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω
Shift solenoid valve B	1		5 - 20Ω
Line pressure solenoid valve	4		2.5 - 5Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



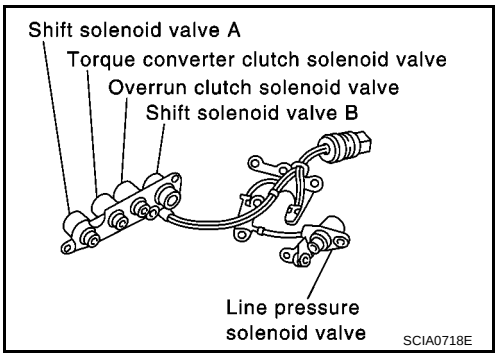
DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE

PFP:31940

Description

ECS008OT

The torque converter clutch solenoid valve is activated, with the gear in "D4 ", by the TCM in response to signals sent from the vehicle speed and throttle position sensors. Lock-up piston operation will then be controlled.
Lock-up operation, however, is prohibited when A/T fluid temperature is too low.
When the accelerator pedal is depressed (less than 2/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.



CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Torque converter clutch solenoid valve duty	Lock-up "OFF" ↓ Lock-up "ON"	Approximately 4% ↓ Approximately 94%

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
3	GY	Torque converter clutch solenoid valve		When A/T performs lock-up.	8 - 15V
				When A/T does not perform lock-up.	0V

ON BOARD DIAGNOSIS LOGIC

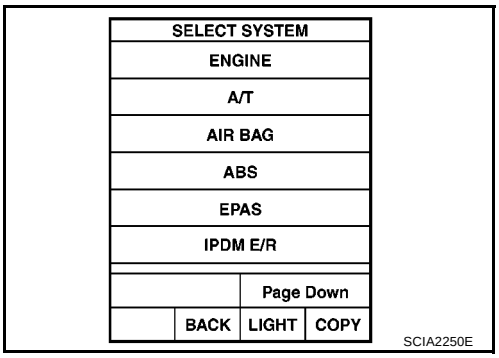
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: TCC SOLENOID/CIRC	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● T/C clutch solenoid valve
: P0740		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

NOTE:

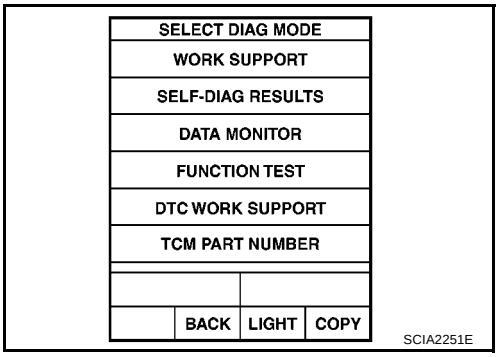
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Turn ignition switch "ON". (Do not start engine.)
2. Select "DATA MONITOR" mode for "ENGINE" with CONSULT-II and wait at least 1 second.
3. Start engine and maintain the following conditions for at least 5 consecutive seconds.
   VHCL SPEED SE: 80 km/h (50 MPH) or more
   THROTTLE POSI : 0.5/8 - 1.0/8
   Selector lever: D position (OD "ON")
   Driving location: Driving the vehicle uphill (increased engine load) will help maintain the driving conditions required for this test.

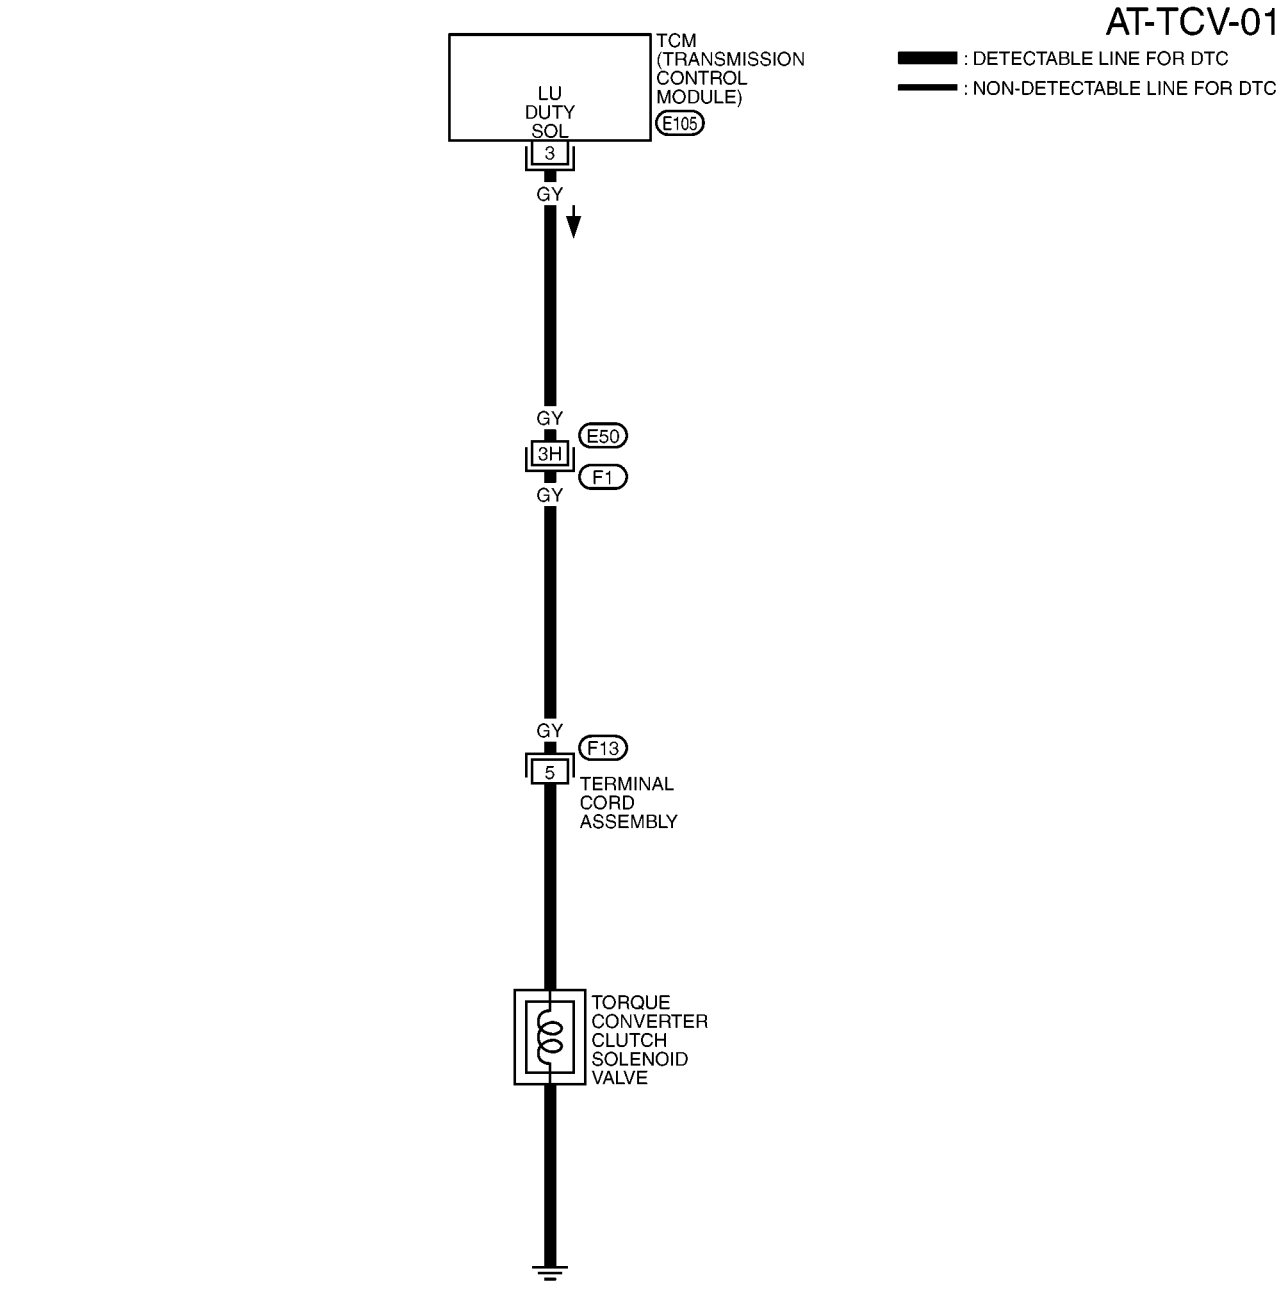


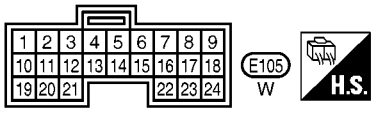
With GST

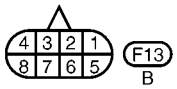
Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — TCV

ECS008OU







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0079E

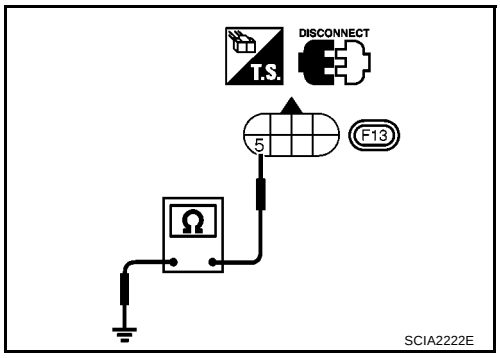
Diagnostic Procedure

ECS008OV

1. CHECK VALVE RESISTANCE

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 5 and ground.

Resistance: 5 - 20Ω



OK or NG

OK >> GO TO 2.
NG >> 1. Remove oil pan. Refer to AT-426, "REMOVAL" .
2. Check the following items. If any items are damaged, repair or replace damaged parts.
- Torque converter clutch solenoid valve
Refer to AT-165, "Component Inspection" .
- Harness of terminal cord assembly for short or open

2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 5 and TCM harness connector terminal 3.

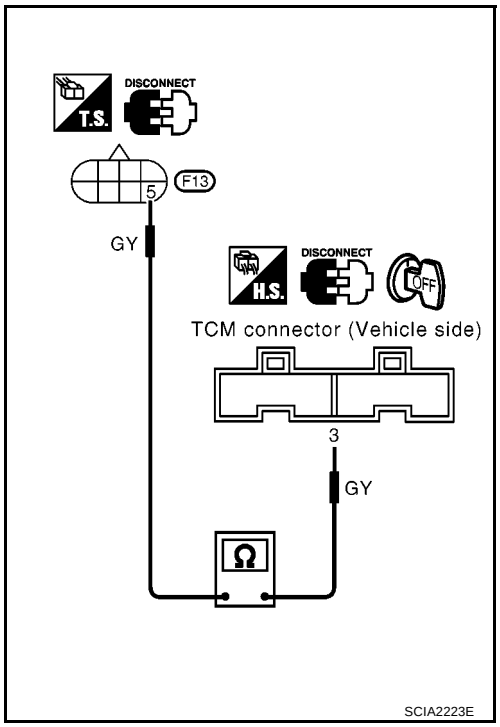
Continuity should exist.

If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-162, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

ECS008OW

TORQUE CONVERTER CLUTCH SOLENOID VALVE

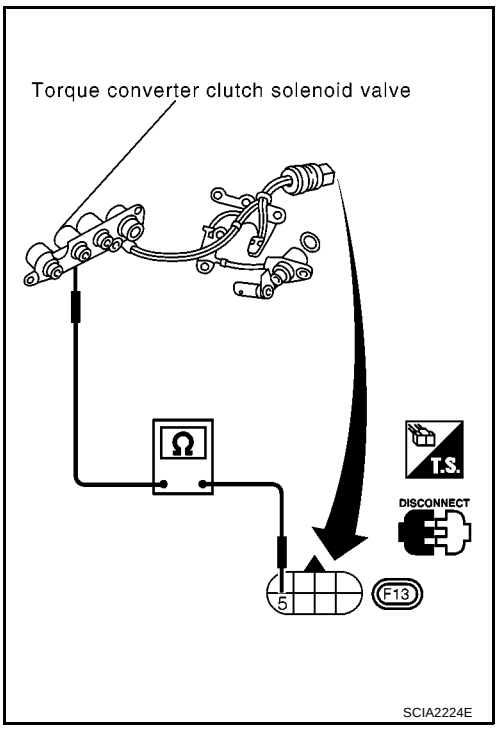
Resistance Check

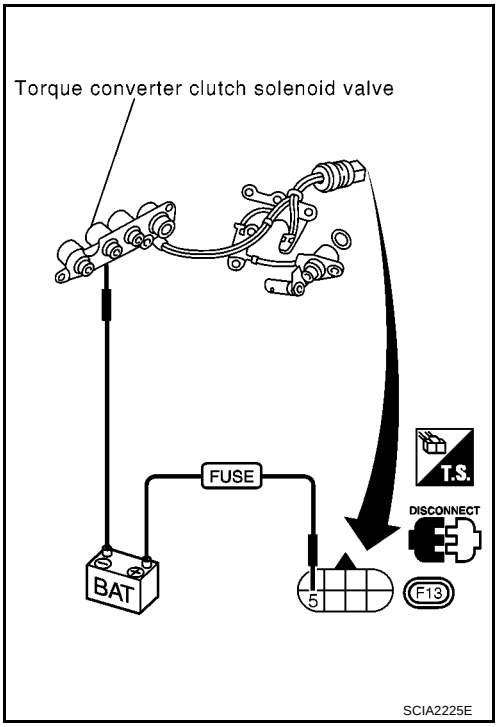
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Torque converter clutch solenoid valve	5	Ground	5 - 20Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



DTC P0745 LINE PRESSURE SOLENOID VALVE

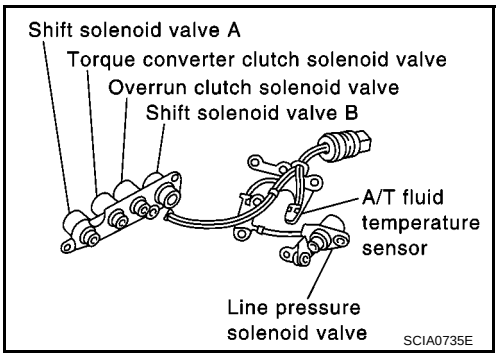
PFP:31940

Description

ECS008OX

The line pressure solenoid valve regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

The line pressure duty cycle value is not consistent when the closed throttle position switch is “ON”. To confirm the line pressure duty cycle at low pressure, the accelerator (throttle) should be open until the closed throttle position switch is “OFF”.



CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Line pressure solenoid valve duty	Small throttle opening (Low line pressure) ↓ Large throttle opening (High line pressure)	Approximately 24% ↓ Approximately 95%

NOTE:

The line pressure duty cycle value is not consistent when the closed throttle position switch is “ON”. To confirm the line pressure duty cycle at low pressure, the accelerator (throttle) should be open until the closed throttle position switch is “OFF”.

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
1	PU	Line pressure solenoid valve		When releasing accelerator pedal after warming up engine.	1.5 - 3.0V
				When depressing accelerator pedal fully after warming up engine.	0V
2	BP	Line pressure solenoid valve (with dropping resistor)		When releasing accelerator pedal after warming up engine.	4 - 14V
				When depressing accelerator pedal fully after warming up engine.	0V

ON BOARD DIAGNOSIS LOGIC

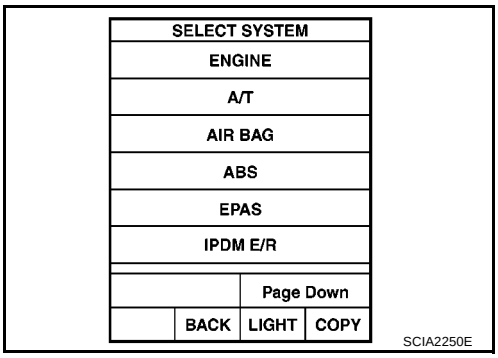
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: L/PRESS SOL/CIRC	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Line pressure solenoid valve
: P0745		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

NOTE:

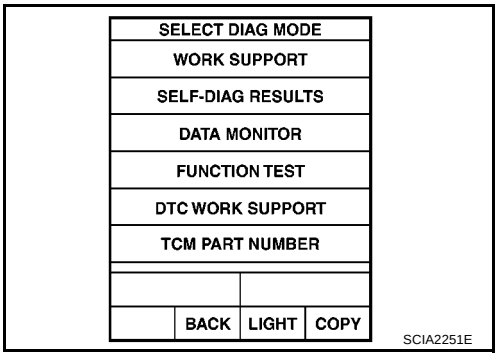
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Depress accelerator pedal completely and wait at least 5 seconds.



With GST

Follow the procedure "With CONSULT-II".

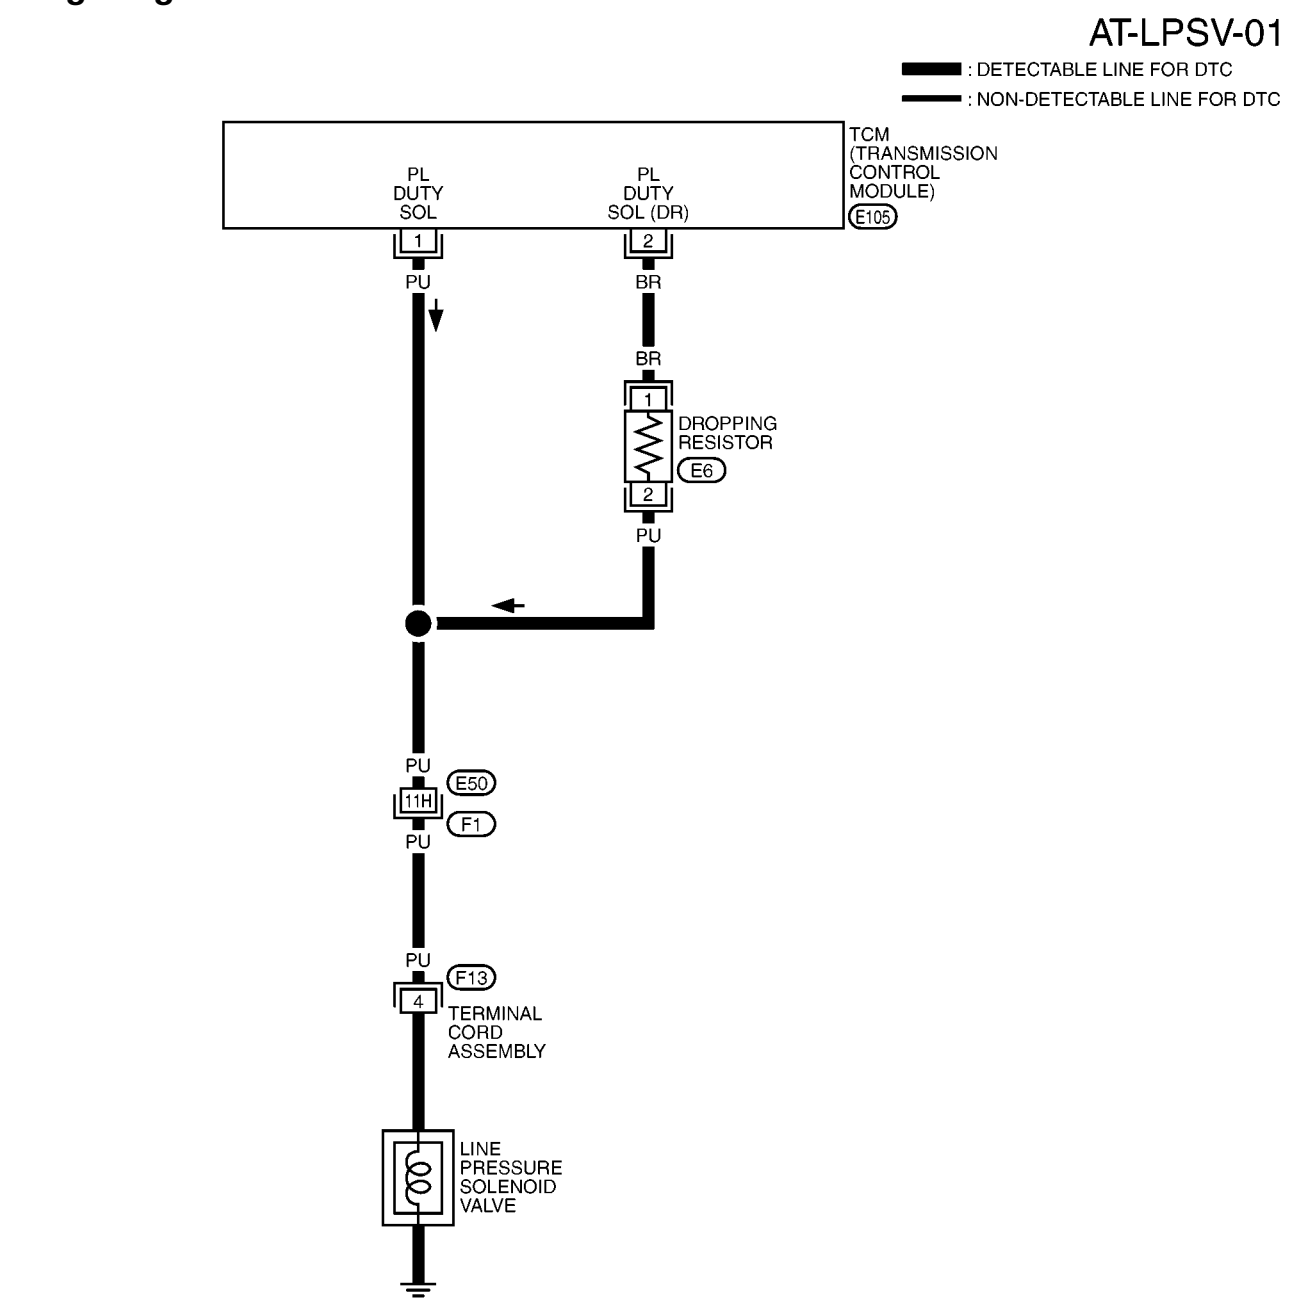
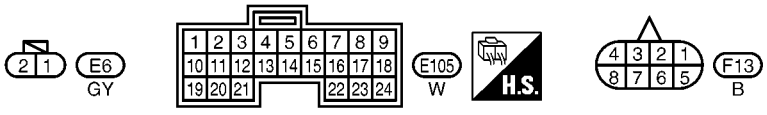
ECS008OY





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0080E

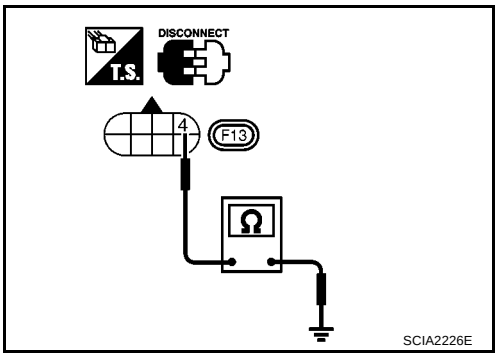
Diagnostic Procedure

ECS008OZ

1. CHECK VALVE RESISTANCE

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 4 and ground.

Resistance: 2.5 - 5Ω



OK or NG

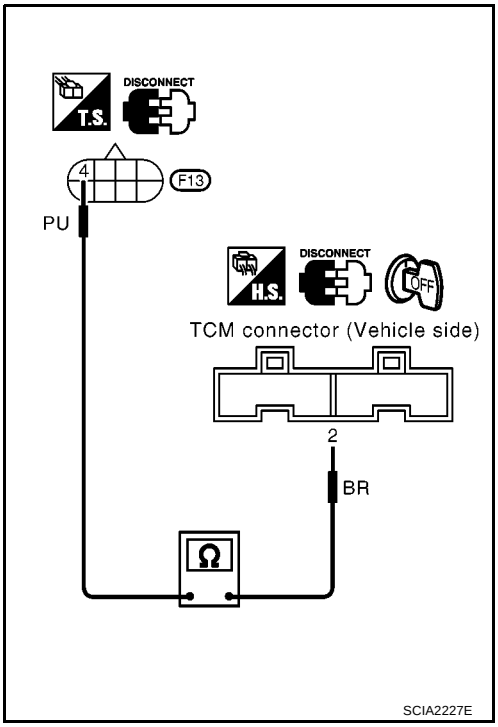
OK >> GO TO 2.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items. If any items are damaged, repair or replace damaged parts.
- Line pressure solenoid valve
  Refer to AT-171, "Component Inspection" .
- Harness of terminal cord assembly for short or open

2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check resistance between terminal 4 and TCM harness connector terminal 2.

Resistance: 10 - 15Ω



OK or NG

OK >> GO TO 3.

NG >> Check the following items. If any items are damaged, repair or replace damaged parts.
- Dropping resistor
  Refer to AT-171, "Component Inspection" .
- Harness for short or open between TCM terminal 2 and terminal cord assembly

3. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Check resistance between terminal 4 and TCM harness connector terminal 1.

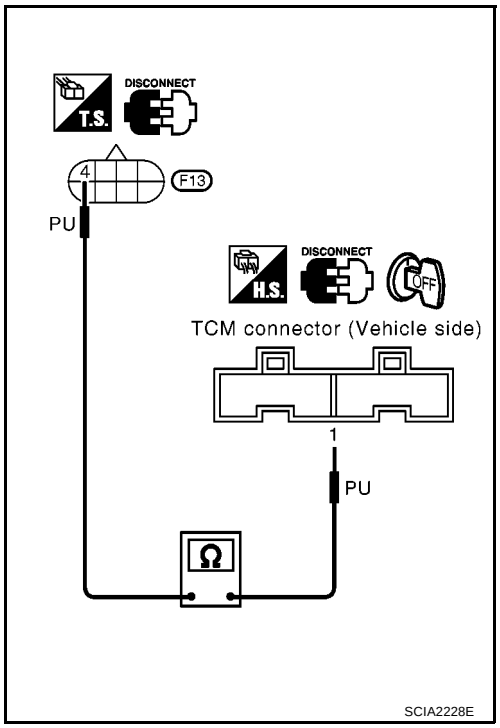
Resistance: Approx. 0Ω

If OK, check harness for short to ground and short to power.

3. Reinstall any part removed.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.



4. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-167, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

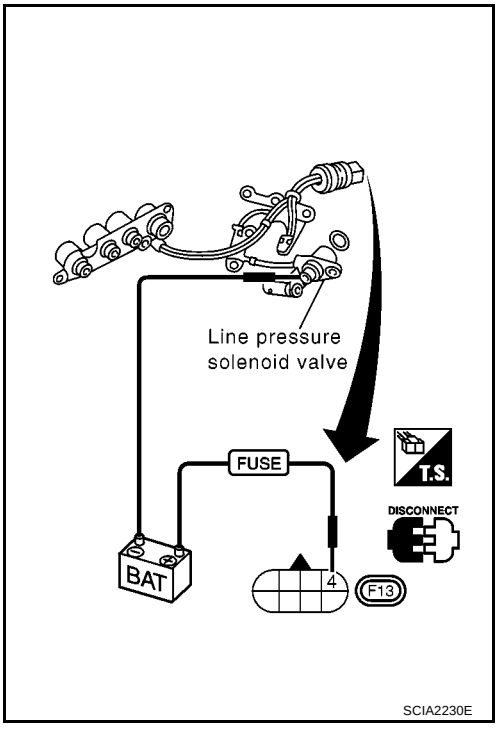
Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.

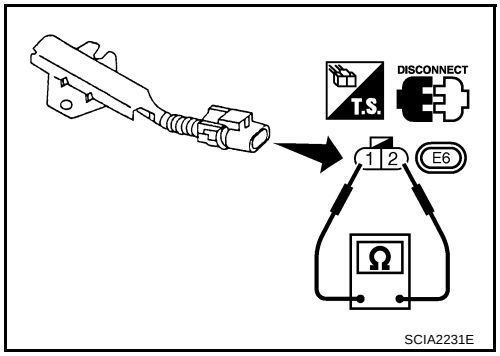


SCIA2230E

DROPPING RESISTOR

- Check resistance between two terminals.

Resistance: 10 - 15Ω



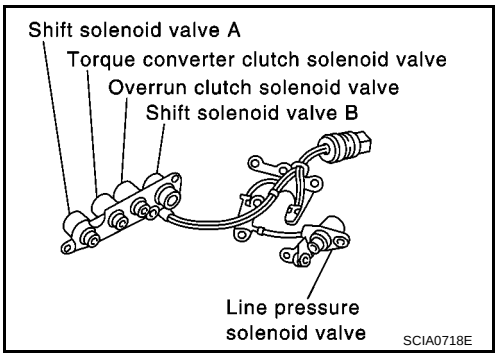
DTC P0750 SHIFT SOLENOID VALVE A

PFP:31940

Description

ECS008P1

Shift solenoid valves A and B are turned “ON” or “OFF” by the TCM in response to signals sent from the PNP switch, vehicle speed and throttle position sensors. Gears will then be shifted to the optimum position.



Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D_1 ” or “D_4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D_2 ” or “D_3 ”.)	0V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: SFT SOL A/CIRC	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Shift solenoid valve A
: P0750		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

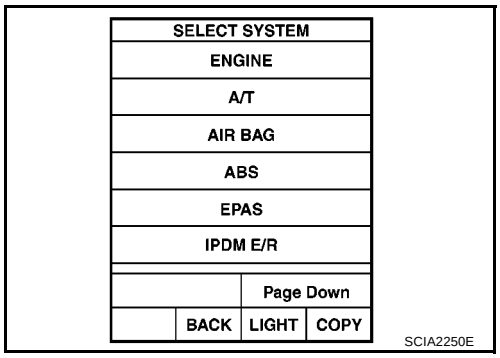
CAUTION:

Always drive vehicle at a safe speed.

NOTE:

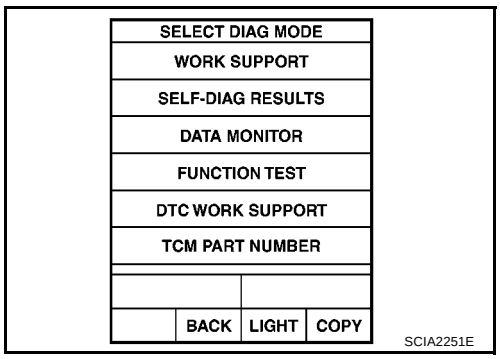
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine.
3. Drive vehicle in D position and allow the transmission to shift "1" → "2" ("GEAR").

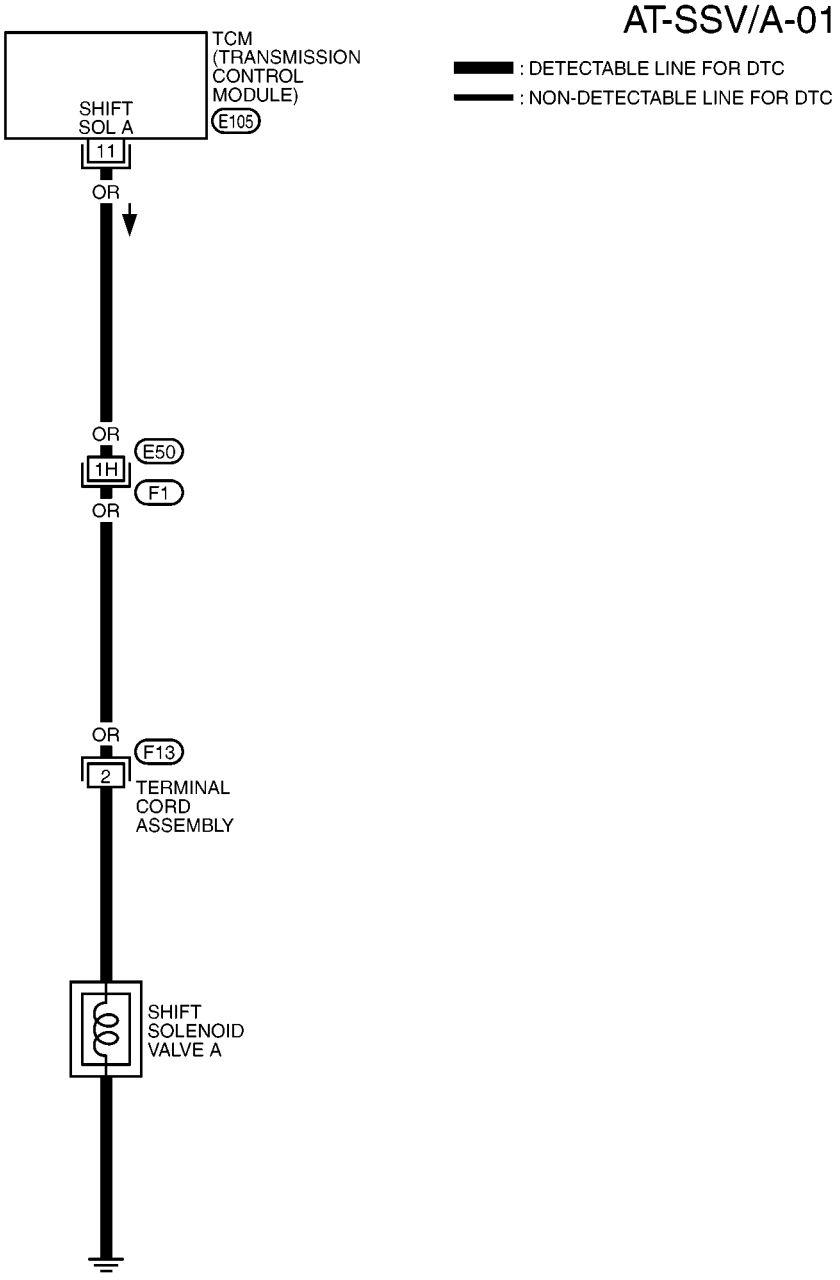


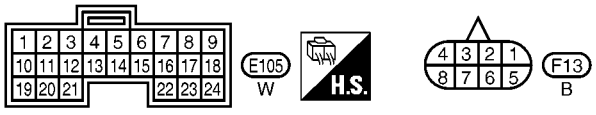
With GST

Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — SSV/A

ECS008P2





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0081E

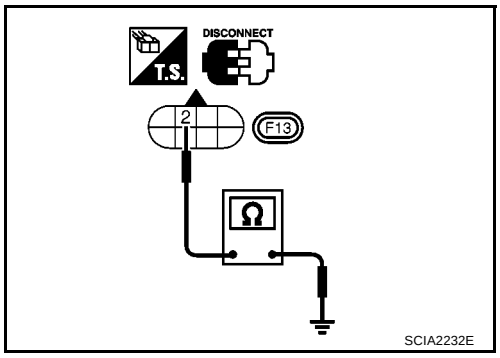
Diagnostic Procedure

ECS008P3

1. CHECK VALVE RESISTANCE

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 2 and ground.

Resistance: 20 - 30Ω



OK or NG

OK >> GO TO 2.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL"

2. Check the following items. If any items are damaged, repair or replace damaged parts.

- Shift solenoid valve A
  Refer to AT-177, "Component Inspection" .
- Harness of terminal cord assembly for short or open

2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 2 and TCM harness connector terminal 11.

Continuity should exist.

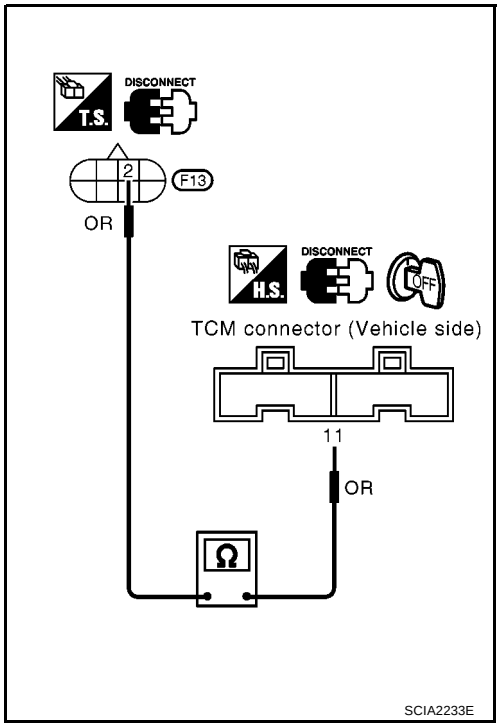
If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

OK or NG

OK >> GO TO 3.

NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-174, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

ECS008P4

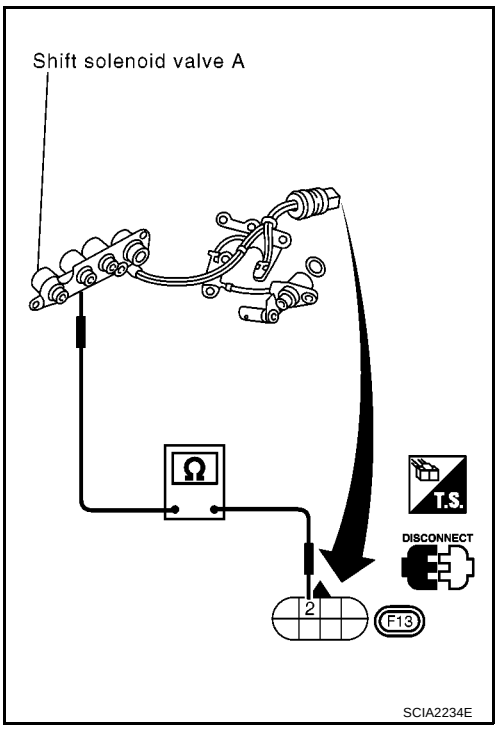
SHIFT SOLENOID VALVE A

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

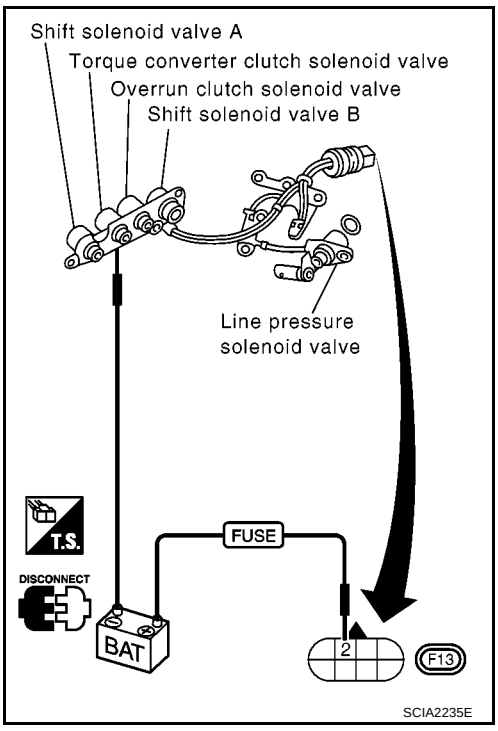
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



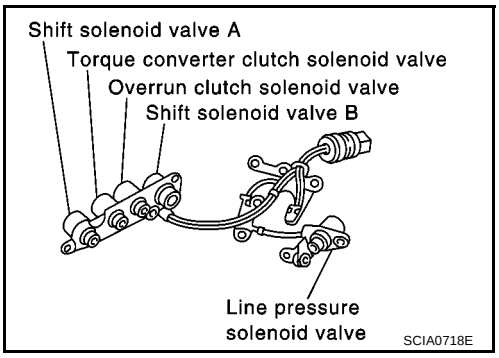
DTC P0755 SHIFT SOLENOID VALVE B

PFP:31940

Description

ECS008P5

Shift solenoid valves A and B are turned “ON” or “OFF” by the TCM in response to signals sent from the PNP switch, vehicle speed and throttle position sensors. Gears will then be shifted to the optimum position.



Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D_1 ” or “D_2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D_3 ” or “D_4 ”.)	0V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: SFT SOL B/CIRC	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Shift solenoid valve B
: P0755		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

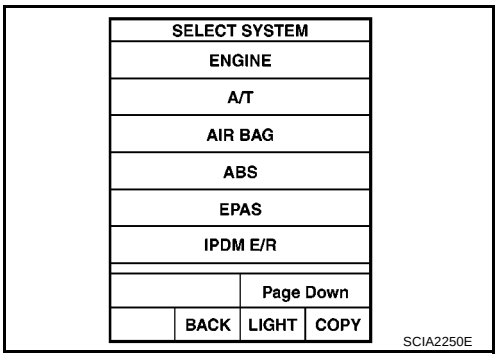
CAUTION:

Always drive vehicle at a safe speed.

NOTE:

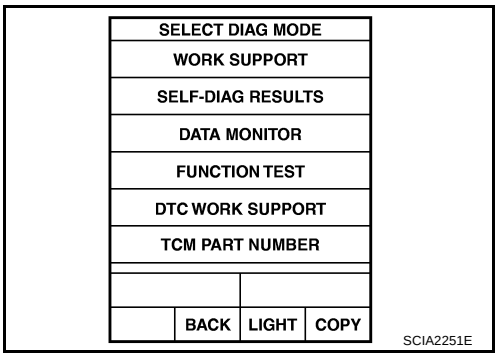
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine.
3. Drive vehicle in D position and allow the transmission to shift 1 → 2 → 3 ("GEAR").

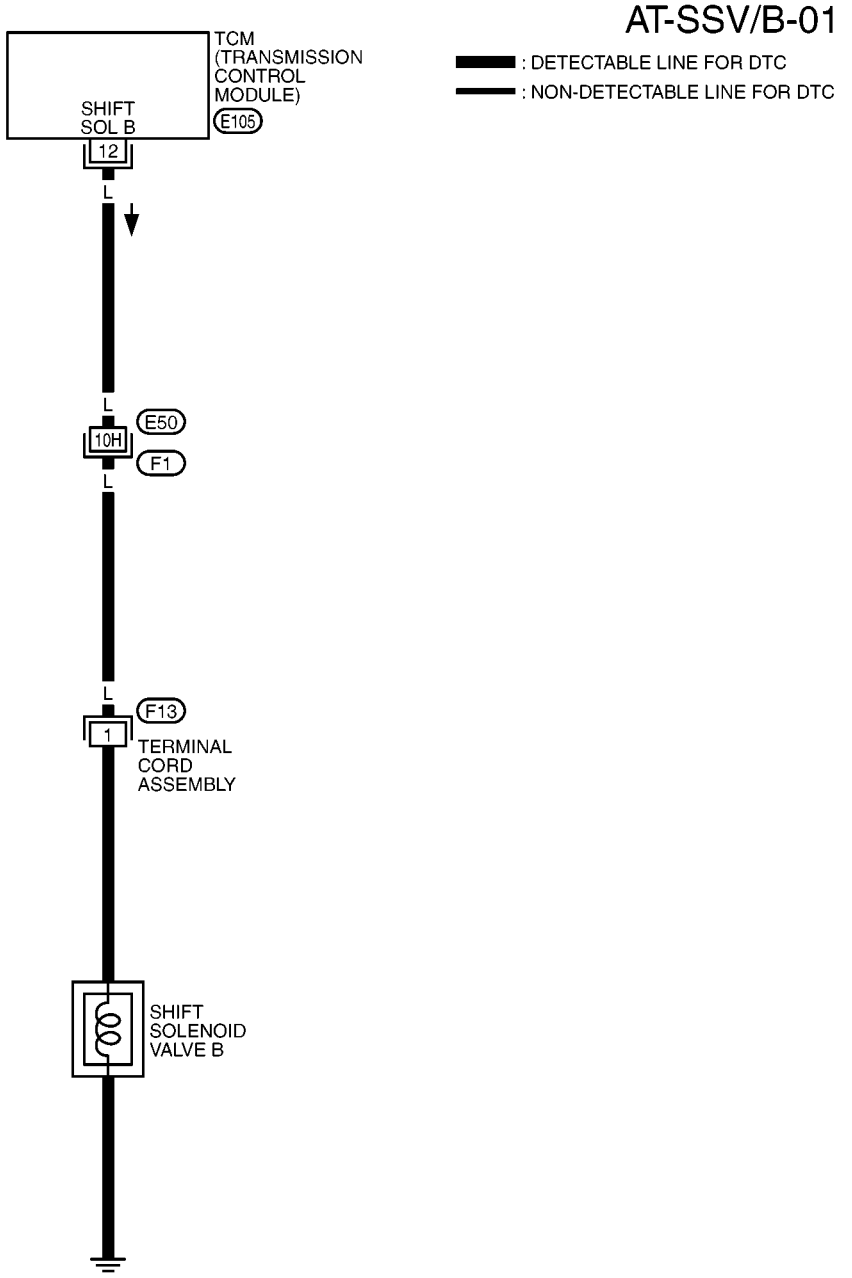


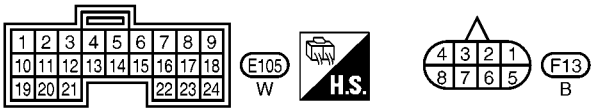
With GST

Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — SSV/B

ECS008P6





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0082E

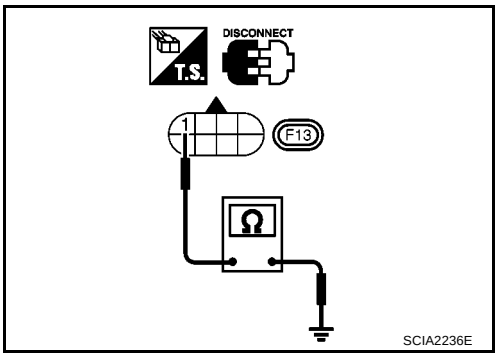
Diagnostic Procedure

ECS008P7

1. CHECK VALVE RESISTANCE

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 1 and ground.

Resistance: 5 - 20Ω



OK or NG

OK >> GO TO 2.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items. If any items are damaged, repair or replace damaged parts.
- Shift solenoid valve B
  Refer to AT-182, "Component Inspection" .
- Harness of terminal cord assembly for short or open

2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 12 and TCM harness connector terminal 1.

Continuity should exist.

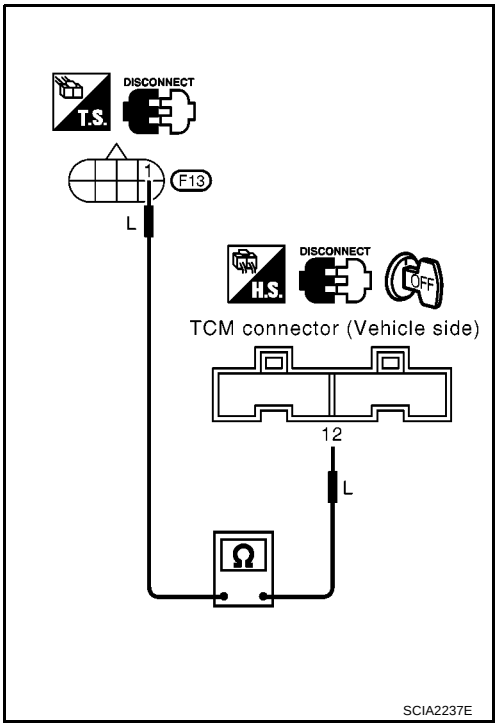
If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

OK or NG

OK >> GO TO 3.

NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-179, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

ECS008P8

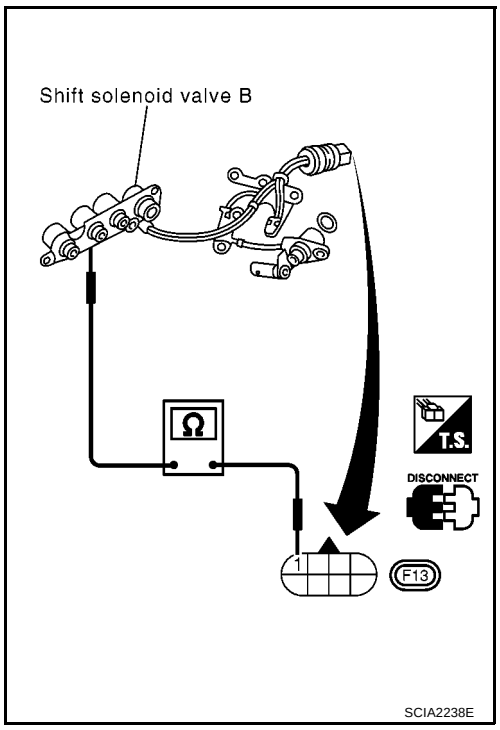
SHIFT SOLENOID VALVE B

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

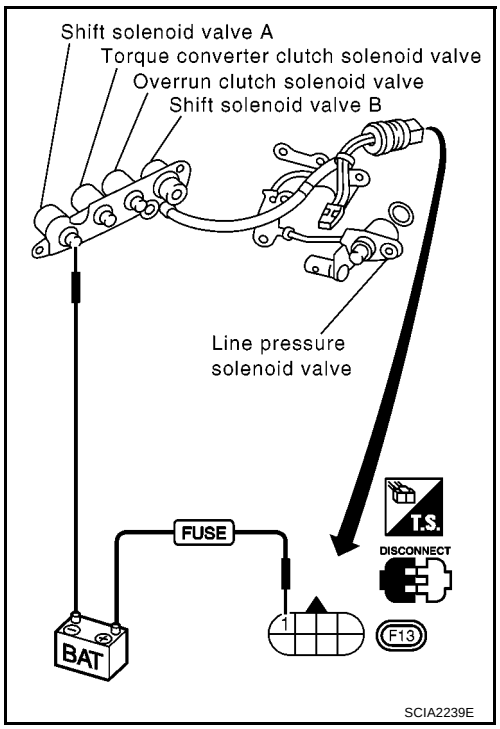
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve B	1	Ground	5 - 20Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



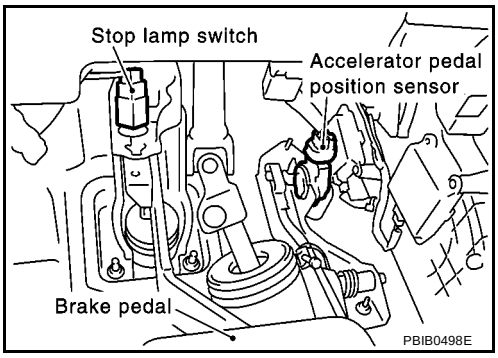
DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR

PFP:22620

Description

ECS008P9

- Accelerator pedal position (APP) sensor
  Electric throttle control actuator consists of throttle control motor, acceleration pedal position sensor, throttle position sensor, etc. The actuator sends a signal to the TCM.



CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Accelerator pedal position (APP) sensor (THRTL POS SEN)	Fully-closed throttle	Approximately 0.5V
	Fully-open throttle	Approximately 4V

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
32	OR	Throttle position sensor (Power source)	or	When turning ignition switch “ON”	4.5 - 5.5V
				When turning ignition switch “OFF”	0V
41	Y	Throttle position sensor		When depressing accelerator pedal slowly after warming up engine. (Voltage rises gradually in response to throttle position.)	Fully-closed throttle: 0.5V Fully-open throttle: 4V
42	B	Ground (Throttle position sensor)	Always		0V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: TP SEN/CIRC A/T*	TCM receives an excessively low or high voltage from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● Accelerator pedal position (APP) sensor
: P1705		

*:This code means Accelerator pedal position (APP) sensor in reality.

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

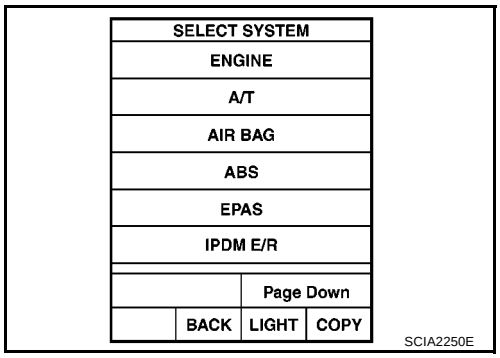
CAUTION:

Always drive vehicle at a safe speed.

NOTE:

If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

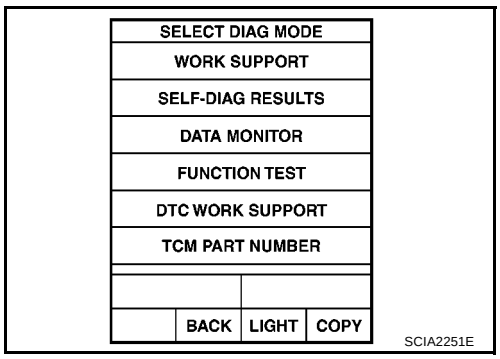
After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

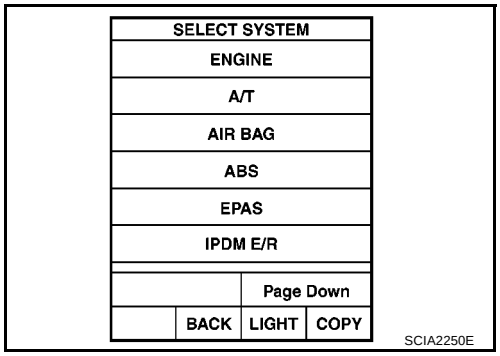
1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Check the following.

Accelerator pedal condition	THRTL POS SEN
Fully released	Less than 4.7V
Partially depressed	0.1 - 4.6V
Fully depressed	1.9 - 4.6V

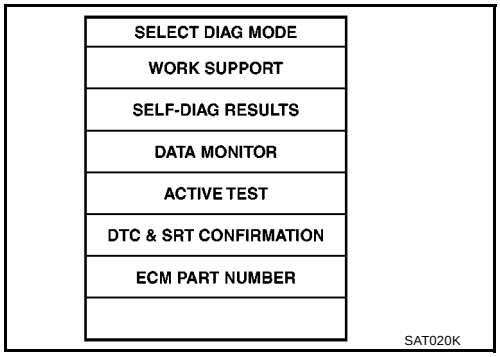


If the check result is NG, go toAT-186, "Diagnostic Procedure" .
If the check result is OK, go to following step.

3. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
4. Start engine and maintain the following conditions for at least 3 consecutive seconds. Then release accelerator pedal completely.
   VHCL SPEED SE: 10 km/h (6 MPH) or more
   THRTL POS SEN: Approximately 3V or less
   Selector lever: D position (OD "ON")
   If the check result is NG, go to AT-186, "Diagnostic Procedure" .
   If the check result is OK, go to following step.



5. Maintain the following conditions for at least 3 consecutive seconds. Then release accelerator pedal completely.
   VHCL SPEED SE: 10 km/h (6 MPH) or more
   Accelerator pedal: Wide open throttle
   Selector lever: D position (OD "ON")

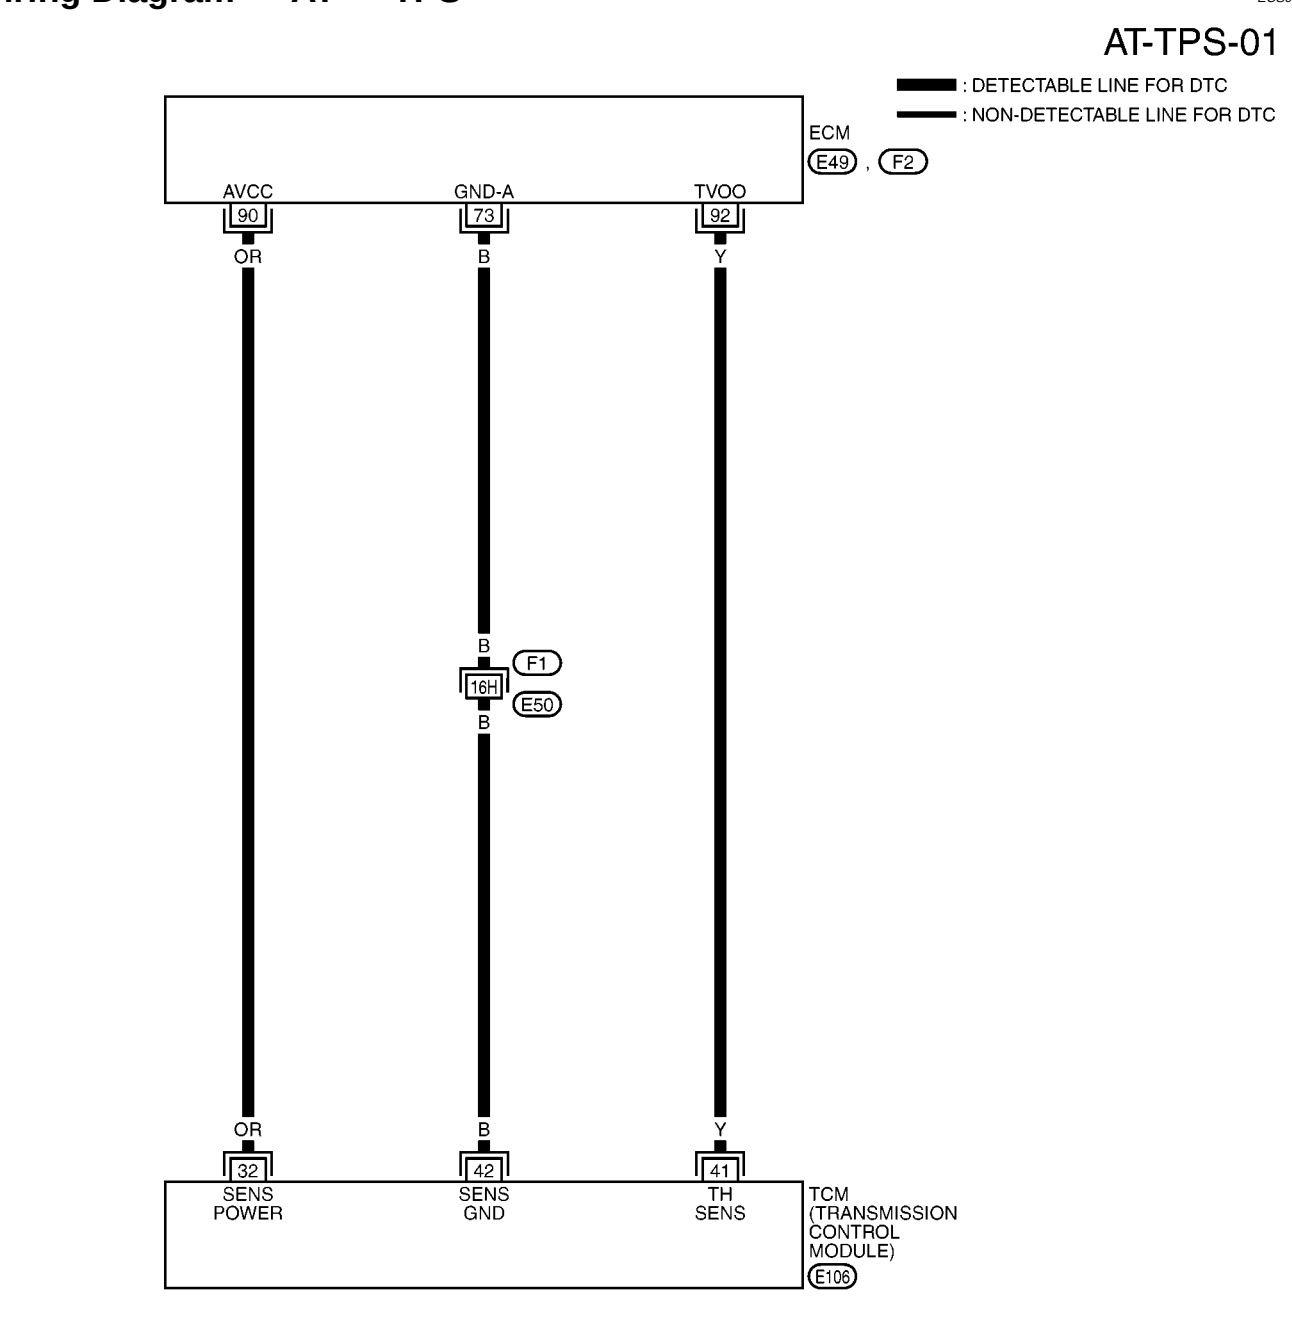


With GST

Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — TPS

ECS008PA



MCWA0083E

Diagnostic Procedure

ECS008PB

1. CHECK DTC WITH ECM

Perform diagnostic test mode II (self-diagnostic results) for engine control.
Refer to EC-60, "Malfunction Indicator (MI)" (With EURO-OBD) or EC-511, "Malfunction Indicator (MI)" (Without EURO-OBD).

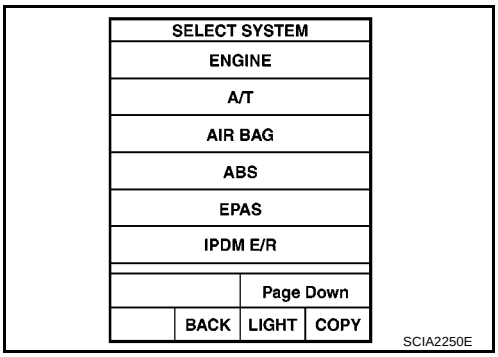
OK or NG

OK >> GO TO 2.
NG >> Check throttle position sensor circuit for engine control.

2. CHECK INPUT SIGNAL (WITH CONSULT-II)

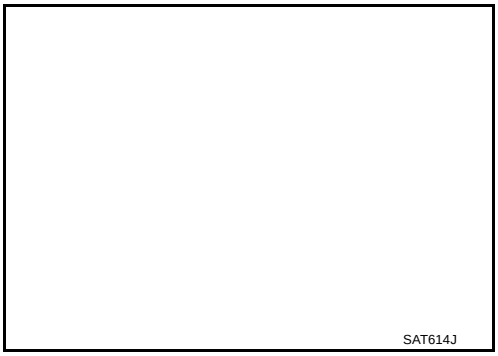
With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out the value of “THRTL POS SEN”.

Voltage:
Fully-closed throttle: Approximately 0.5V
Fully-open throttle: Approximately 4V



Without CONSULT-II

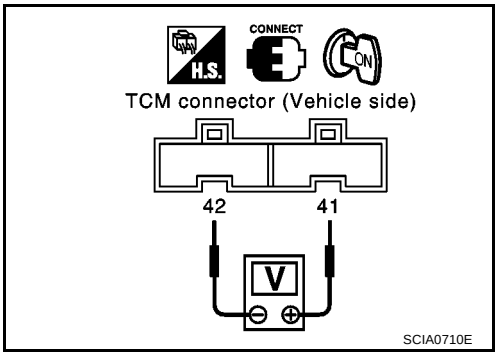
1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 41 and 42 while accelerator pedal is depressed slowly.

Voltage:
Fully-closed throttle valve: Approximately 0.5V
Fully-open throttle valve: Approximately 4V

(Voltage rises gradually in response to throttle position)

OK or NG

OK >> GO TO 3.
NG >> Check harness for short or open between ECM and TCM regarding throttle position sensor circuit.



3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-184, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

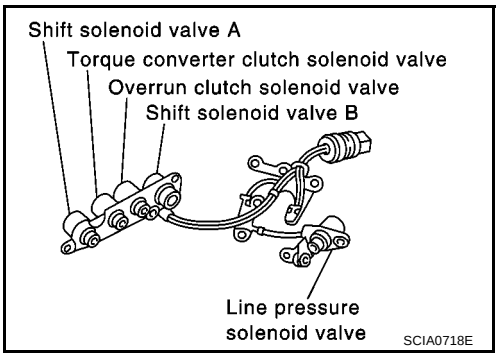
DTC P1760 OVERRUN CLUTCH SOLENOID VALVE

PFP:31940

Description

ECS008PC

The overrun clutch solenoid valve is activated by the TCM in response to signals sent from the inhibitor switch, overdrive control switch, vehicle speed and throttle position sensors. The overrun clutch operation will then be controlled.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
20	Y	Overrun clutch solenoid valve		When overrun clutch solenoid valve operates.	Battery voltage
				When overrun clutch solenoid valve does not operate.	0V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: O/R CLTCH SOL/CIRC	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Overrun clutch solenoid valve
: P1760		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

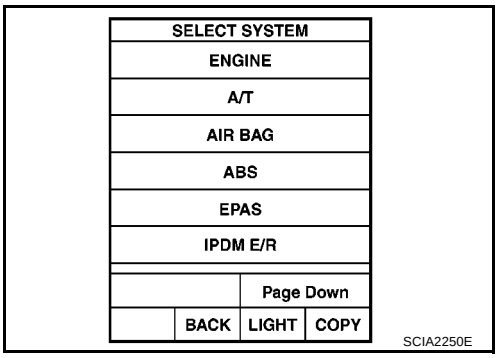
CAUTION:

Always drive vehicle at a safe speed.

NOTE:

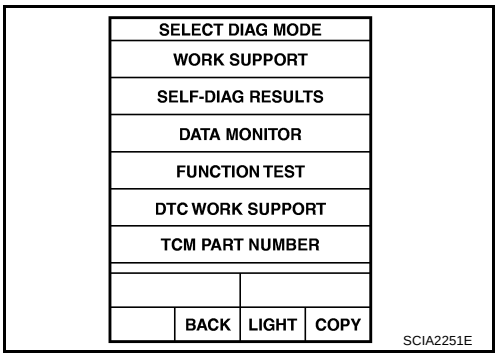
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

TESTING CONDITION:



Always drive vehicle on a level road to improve accuracy of test.

After the repair, perform the following procedure to confirm the malfunction is eliminated.



With CONSULT-II

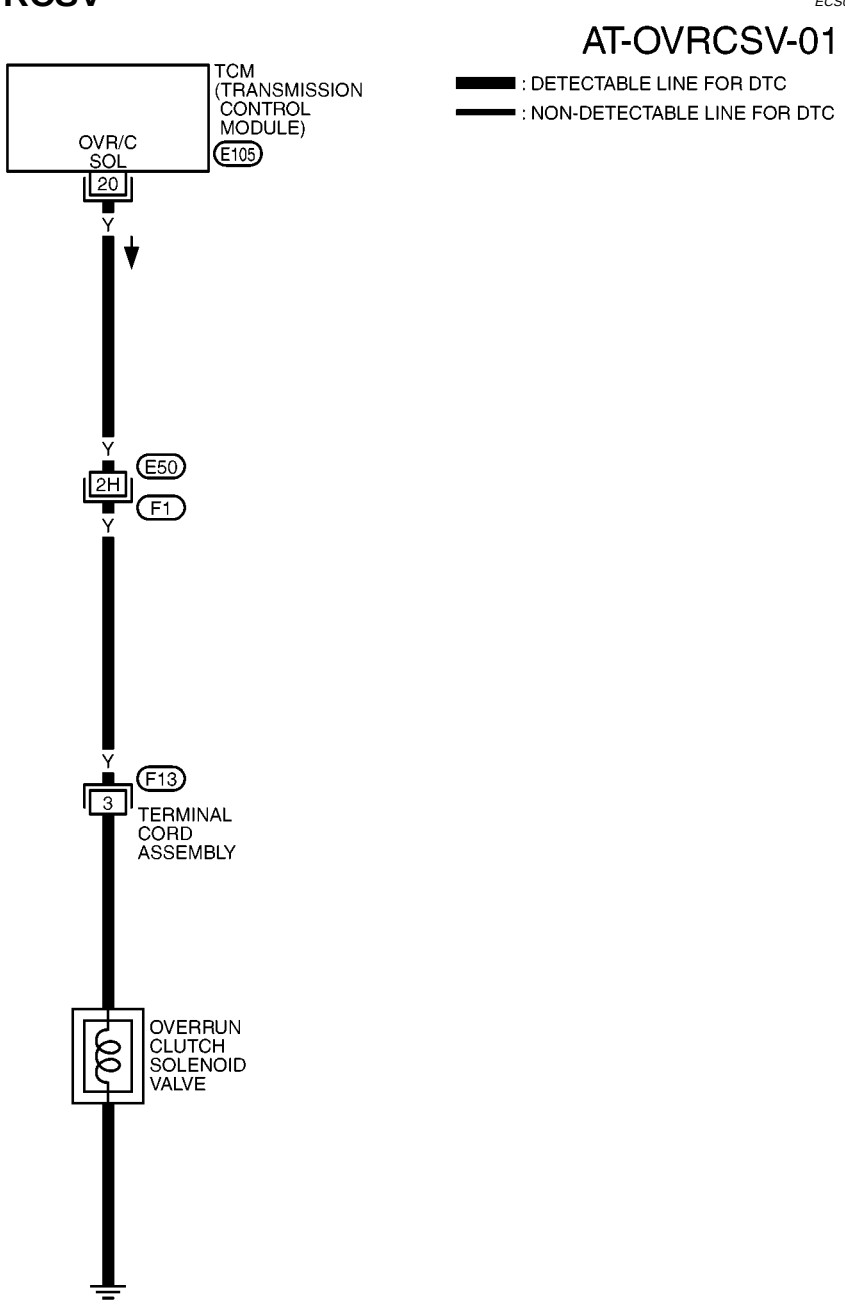
1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "ENGINE" with CONSULT-II.
2. Start engine.
3. Accelerate vehicle to a speed of more than 10 km/h (6 MPH) with "D" position (OD "ON").
4. Release accelerator pedal completely with "D" position (OD "OFF").

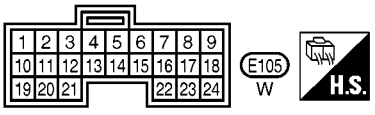
With GST

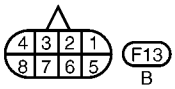
Follow the procedure "With CONSULT-II".

Wiring Diagram — AT — OVRCSV

ECS008PD







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0084E

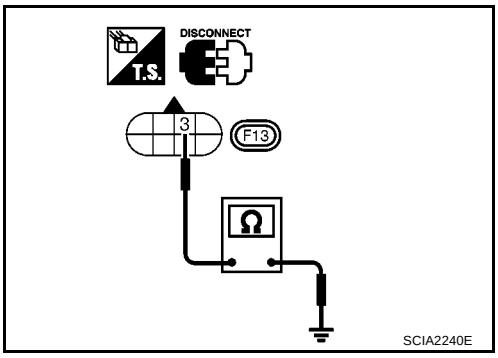
Diagnostic Procedure

ECS008PE

1. CHECK VALVE RESISTANCE

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 3 and ground.

Resistance: 20 - 30Ω



OK or NG

OK >> GO TO 2.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items. If any items are damaged, repair or replace damaged parts.
- Overrun clutch solenoid valve
  Refer to AT-192, "Component Inspection" .
- Harness of terminal cord assembly for short or open

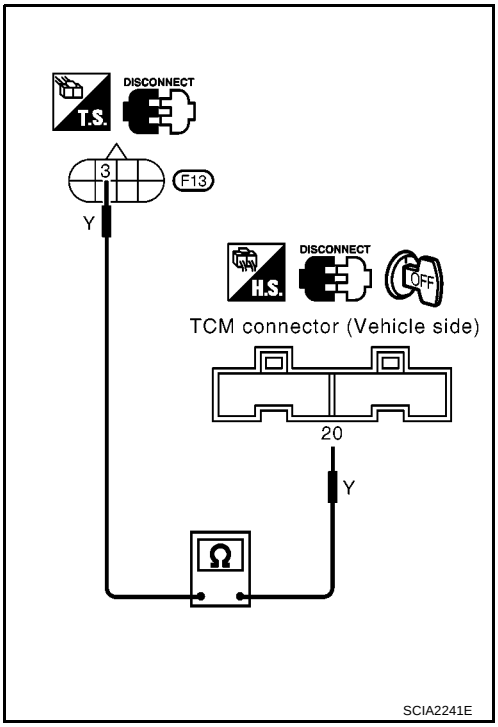
2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 3 and TCM harness connector terminal 20.

Continuity should exist.

If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.



OK or NG

OK >> GO TO 3.

NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.

3. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-189, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

ECS008PF

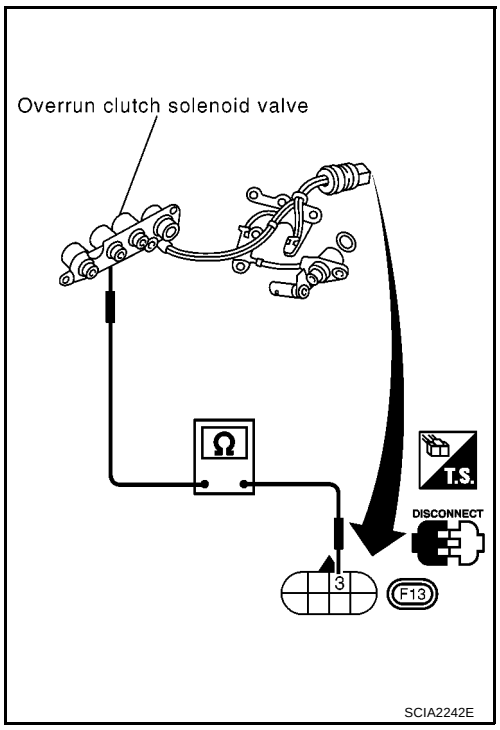
OVERRUN CLUTCH SOLENOID VALVE

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

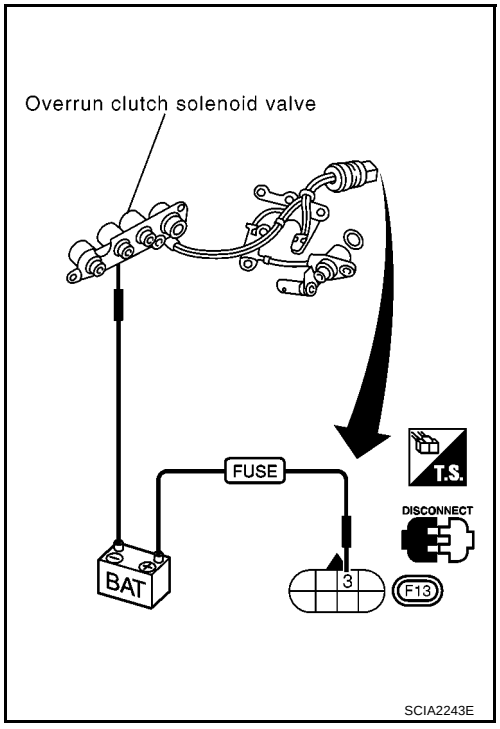
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Overrun clutch solenoid valve	3	Ground	20 - 30Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



DTC U1000 CAN COMMUNICATION LINE

PFP:31940

Description

ECS008PG

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition	Judgement standard (Approx.)
5	R	CAN-H (high)	—	—
6	W	CAN-L (low)	—	—

On Board Diagnosis Logic

ECS008PH

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
:CAN COMM CIRCUIT	When a malfunction is detected in CAN communication line.	● Harness or connectors (CAN communication line is open or shorted.)
:11th judgement flicker		

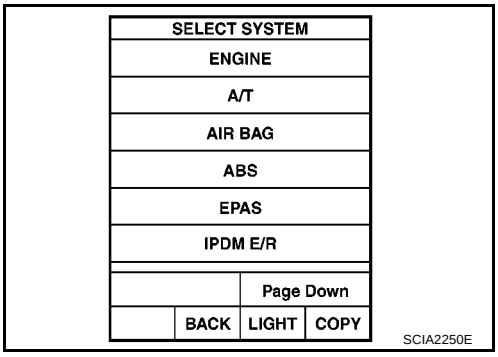
DTC Confirmation Procedure

ECS008PI

After the repair, perform the following procedure to confirm the malfunction is eliminated.

WITH CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “DATA MONITOR” mode for “ENGINE” with CONSULT-II.
3. Wait at least 6 seconds or start engine and wait for at least 6 seconds.



WITHOUT CONSULT-II

1. Turn ignition switch “ON”.
2. Wait at least 6 seconds or start engine and wait at least 6 seconds.
3. Perform self-diagnosis.
   Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

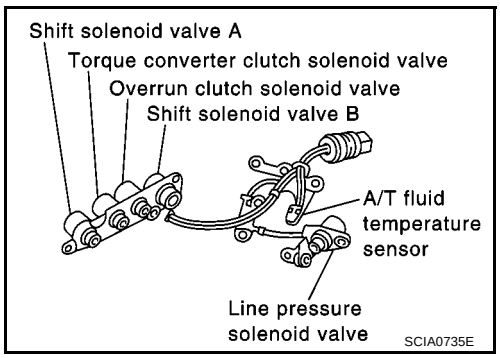
DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)

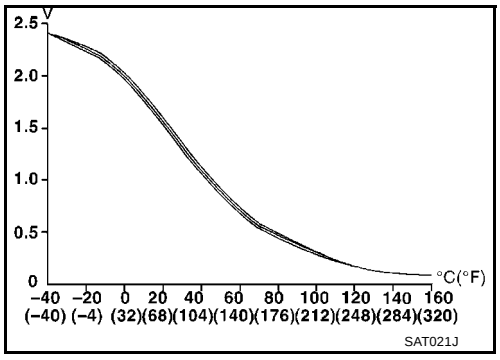
PFP:31940

Description

ECS008PL

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.





CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approximately)	
A/T fluid temperature sensor	Cold [20°C (68°F)] ↓ Hot [80°C (176°F)]	1.5V ↓ 0.5V	2.5 kΩ ↓ 0.3 kΩ

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
10	G	Power source		When turning ignition switch to “ON”.	Battery voltage
				When turning ignition switch to “OFF”.	0V
19	G	Power source	or	Same as No. 10	
28	GY	Power source (Memory back-up)	Always		Battery voltage
42	B	Ground (A/T fluid temperature sensor)	Always		0V
47	PU	A/T fluid temperature sensor		When ATF temperature is 20°C (68°F).	1.5V
				When ATF temperature is 80°C (176°F).	0.5V

ON BOARD DIAGNOSIS LOGIC

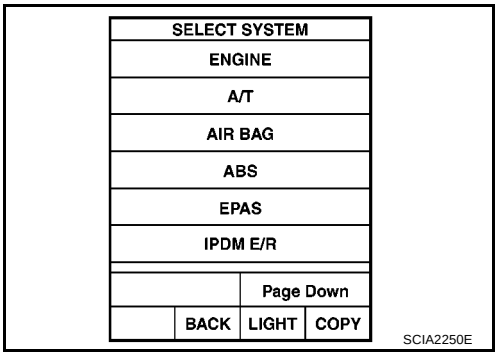
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: BATT/FLUID TEMP SEN	TCM receives an excessively low or high voltage from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● A/T fluid temperature sensor
: 8th judgement flicker		

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

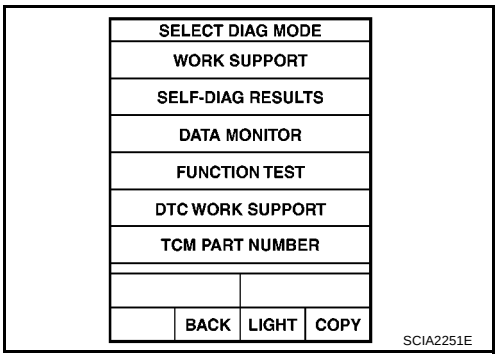
1. Start engine.
2. Select “DATA MONITOR” mode for “A/T” with CONSULT-II.



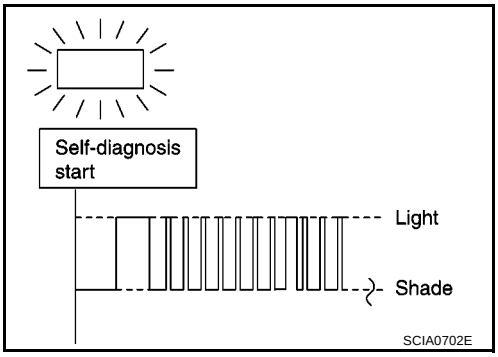
3. Drive vehicle under the following conditions:
   Selector lever in “D”, vehicle speed higher than 20 km/h (12 MPH).

Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D”, vehicle speed higher than 20 km/h (12 MPH).

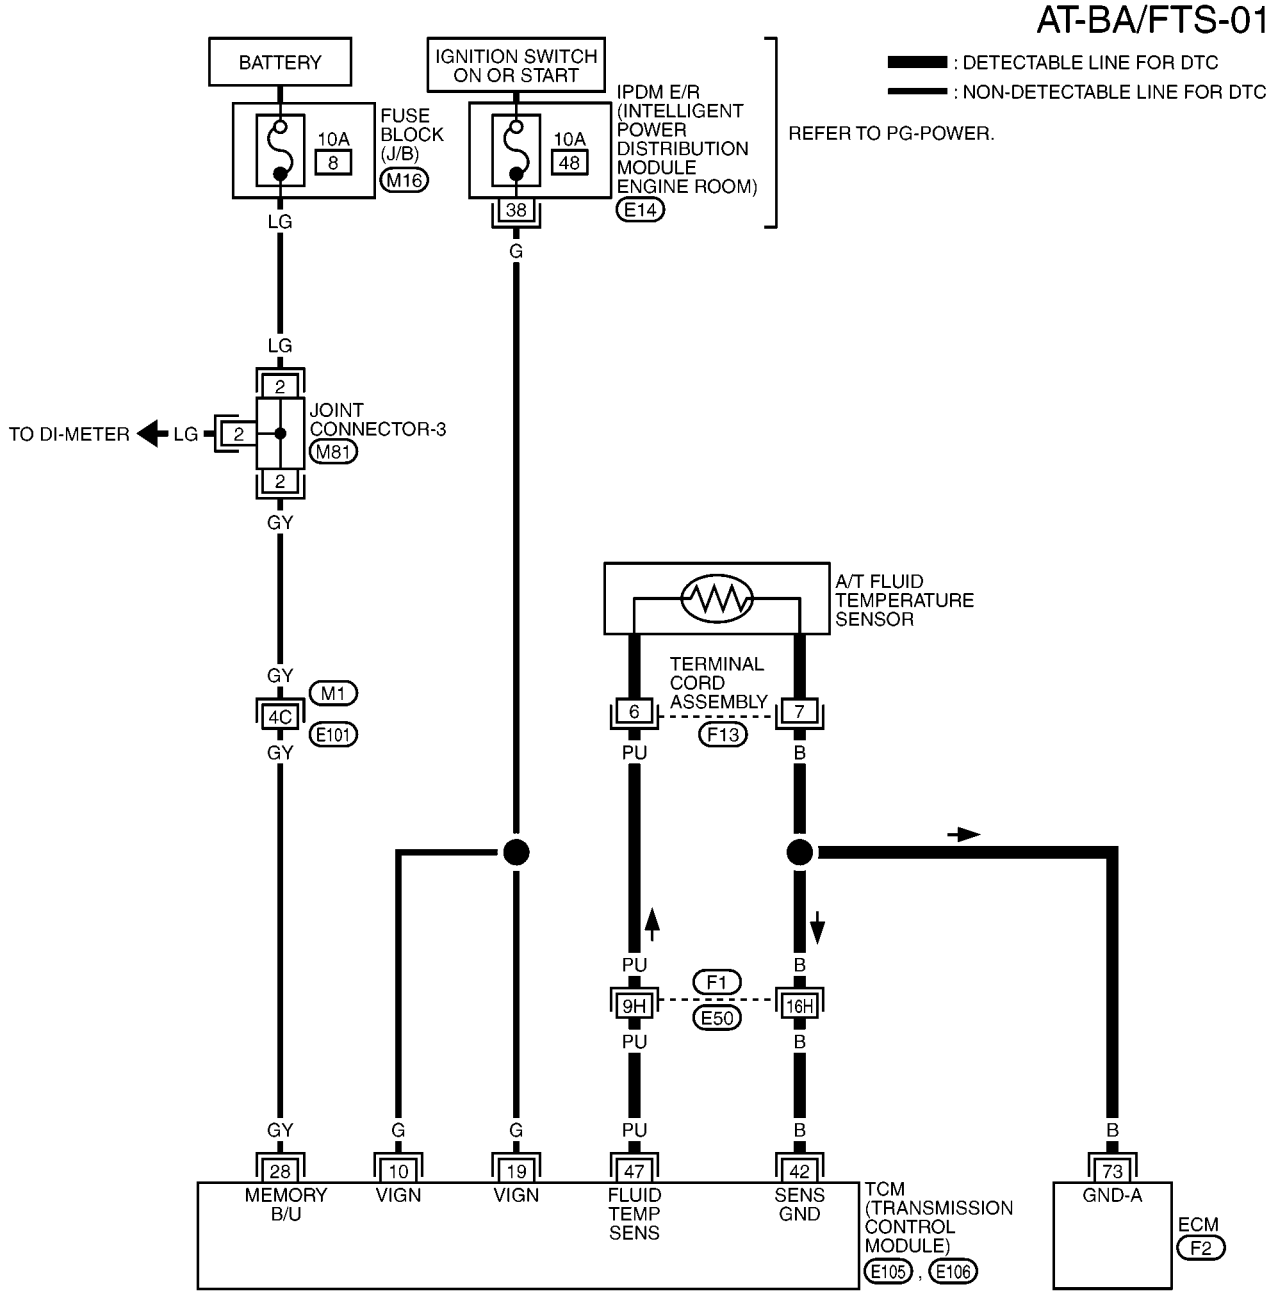


3. Perform self-diagnosis.
   Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .



Wiring Diagram — AT — BA/FTS

ECS008PM



MCWA0121E

Diagnostic Procedure

ECS008PN

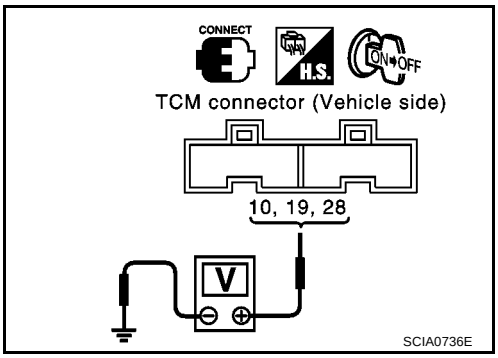
1. CHECK TCM POWER SOURCE

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

Voltage: Battery voltage

3. Turn ignition switch to “OFF” position.
4. Check voltage between TCM terminal 28 and ground.

Voltage: Battery voltage



OK or NG

OK >> GO TO 2.

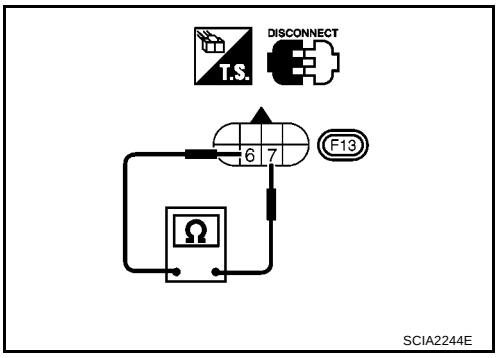
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between battery, ignition switch and TCM
- Ignition switch and fuse
  Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK A/T FLUID TEMPERATURE SENSOR WITH TERMINAL CORD ASSEMBLY

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminals 6 and 7 when A/T is cold.

Resistance: Cold [20°C (68°F)]
Approximately 2.5 kΩ



4. Reinstall any part removed.

OK or NG

OK (With CONSULT-II)>>GO TO 3.
OK (Without CONSULT-II)>>GO TO 4.

NG >> 1. Remove oil pan.
2. Check the following items. If any items are damaged, repair or replace damaged parts.

- A/T fluid temperature sensor
  Refer to AT-201, "Component Inspection" .
- Harness of terminal cord assembly for short or open

3. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR (WITH CONSULT-II)

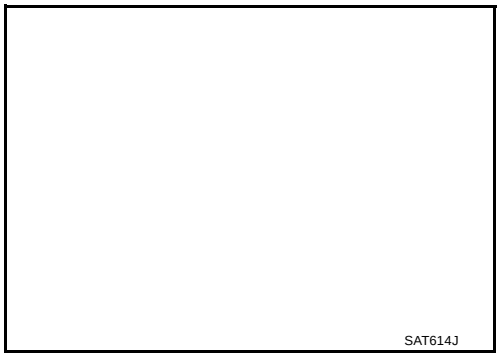
With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out the value of “FLUID TEMP SE”.

Voltage:

Cold [20°C (68°F)] → Hot [80°C (176°F)]

Approximately 1.5V → 0.5V



OK or NG

OK >> GO TO 5.

NG >> Check the following item. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between TCM, ECM and terminal cord assembly
- Ground circuit for ECM
  Refer to EC-289, "DTC P1065 ECM POWER SUPPLY" .

4. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR (WITHOUT CONSULT-II)

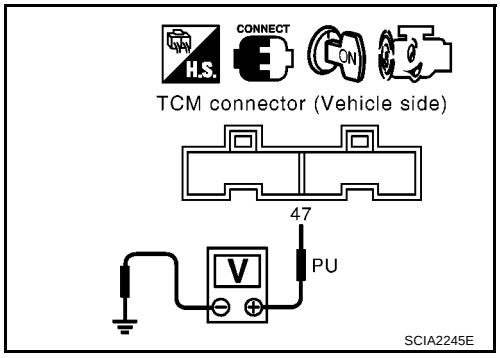
Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 47 and ground while warming up A/T.

Voltage:

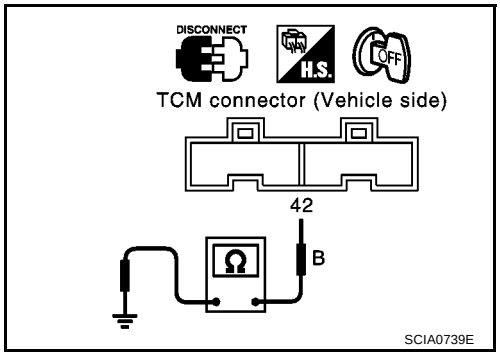
Cold [20°C (68°F)] → Hot [80°C (176°F)]

Approximately 1.5V → 0.5V



3. Turn ignition switch to “OFF” position.
4. Disconnect TCM harness connector.
5. Check resistance between terminal 42 and ground.

Continuity should exist.



OK or NG

OK >> GO TO 5.

NG >> Check the following item. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between TCM, ECM and terminal cord assembly
- Ground circuit for ECM
  Refer to EC-289, "DTC P1065 ECM POWER SUPPLY" .

5. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure, AT-197, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.

2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

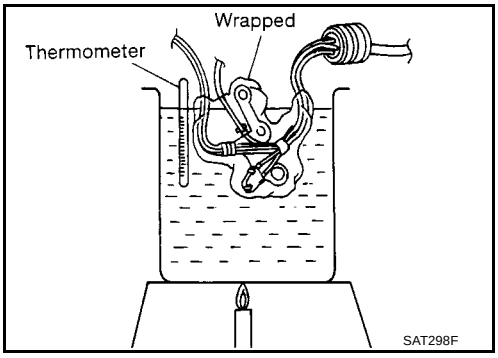
Component Inspection

ECS008PO

A/T FLUID TEMPERATURE SENSOR

- For removal, refer to AT-426, "REMOVAL" .
- Check resistance between two terminals while changing temperature as shown in the figure.

Temperature °C (°F)	Resistance
20 (68)	Approximately 2.5 kΩ
80 (176)	Approximately 0.3 kΩ



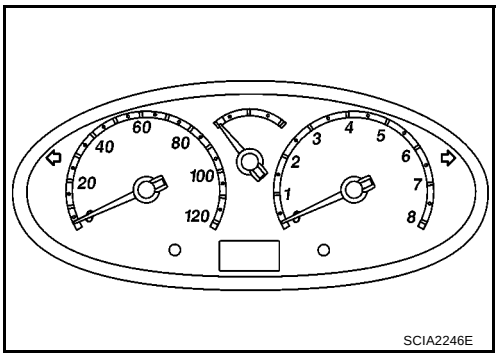
DTC VEHICLE SPEED SENSOR MTR

PFP:24814

Description

ECS008PP

The vehicle speed sensor·MTR is built into the speedometer assembly. The sensor functions as an auxiliary device to the revolution sensor when it is malfunctioning. The TCM will then use a signal sent from the vehicle speed sensor·MTR.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
40	G	Vehicle speed sensor		When moving vehicle at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.	Voltage varies between less than 1V and more than 4.5V

ON BOARD DIAGNOSIS LOGIC

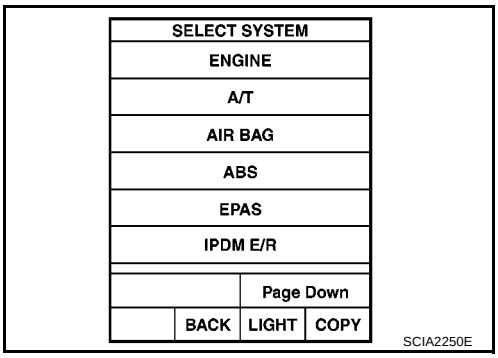
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: VHCL SPEED SEN·MTR : 2nd judgement flicker	TCM does not receive the proper voltage signal from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● Combination meter ● 4WD/ABS control unit

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

CAUTION:

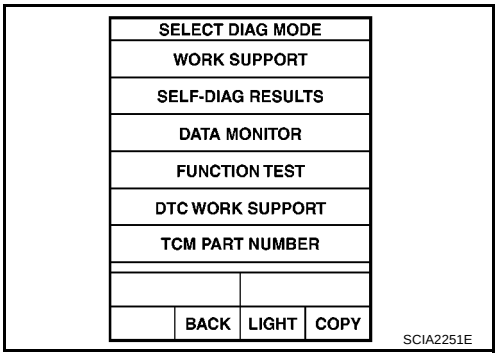
- **Always drive vehicle at a safe speed.**
- **If conducting this "DTC CONFIRMATION PROCEDURE" again, always turn ignition switch "OFF" and wait at least 5 seconds before continuing.**

After the repair, perform the following procedure to confirm the malfunction is eliminated.



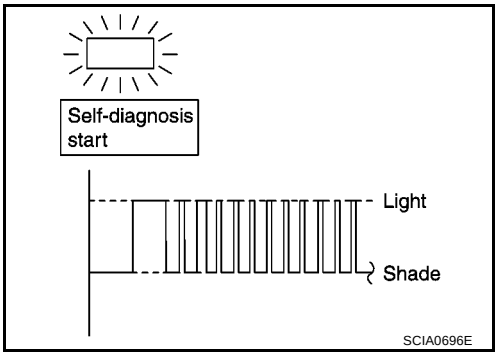
With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for "A/T" with CONSULT-II.
2. Start engine and accelerate vehicle from 0 to 25 km/h (0 to 16 MPH).



Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in "D" and vehicle speed higher than 25 km/h (16 MPH).
3. Perform self-diagnosis.
   Refer to TCM SELF-DIAGNOSTIC PROCEDURE (No Tools), AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)"
   .



Wiring Diagram — AT — VSSMTR

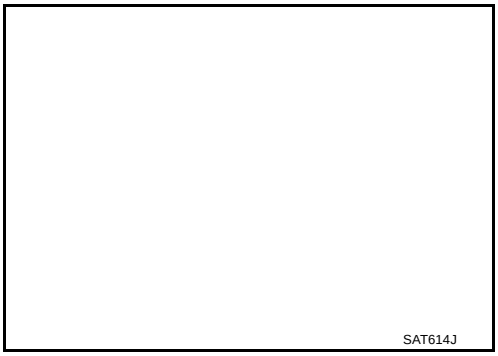
Diagnostic Procedure

ECS008PR

1. CHECK INPUT SIGNAL

With CONSULT-II

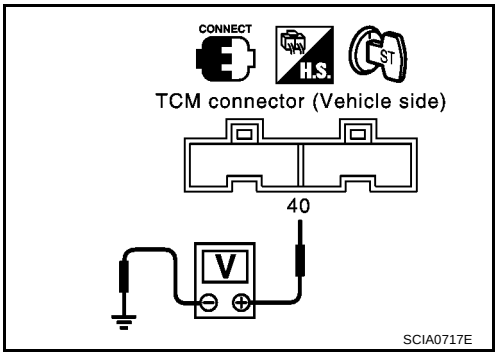
1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out the value of “VHCL/S SE·MTR” while driving. Check the value changes according to driving speed.



Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 40 and ground while driving at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.

Voltage: Voltage varies between less than 1V and more than 4.5V.



OK or NG

OK >> GO TO 2.

NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Combination meter
  Refer to DI-5, "COMBINATION METERS" .
- Harness for short or open between TCM and combination meter
- Harness for short or open between combination meter and vehicle speed sensor

2. CHECK DTC

Perform Diagnostic Trouble Code (DTC) confirmation procedure. Refer to AT-203, "DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

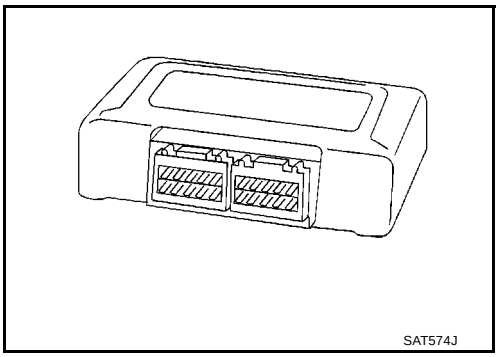
DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)

PFP:31036

Description

ECS008PS

The TCM consists of a microcomputer and connectors for signal input and output and for power supply. The unit controls the A/T.



SAT574J

ON BOARD DIAGNOSIS LOGIC

Diagnostic Trouble Code No.	Malfunction is detected when....	Check Item (Possible Cause)
(P) : CONTROL UNIT (RAM), CONTROL UNIT (ROM)	TCM memory (RAM) or (ROM) is malfunctioning.	● TCM

DIAGNOSTIC TROUBLE CODE (DTC) CONFIRMATION PROCEDURE

NOTE:
If "DIAGNOSTIC TROUBLE CODE CONFIRMATION PROCEDURE" has been previously conducted, always turn ignition switch "OFF" and wait at least 5 seconds before conducting the next test.

(P) With CONSULT-II

1. Turn ignition switch "ON" and select "DATA MONITOR" mode for A/T with CONSULT-II.
2. Start engine.
3. Run engine for at least 2 seconds at idle speed.

O/D OFF Indicator Lamp Does Not Come On

ECS008PX

SYMPTOM:
O/D OFF indicator lamp does not come on for about 2 seconds when turning ignition switch to “ON”.

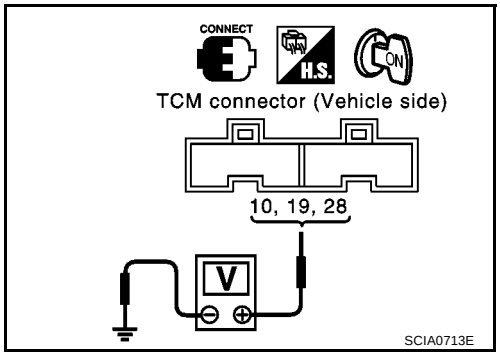
1. CHECK TCM POWER SOURCE

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

Voltage: Battery voltage

3. Turn ignition switch to “OFF” position.
4. Check voltage between TCM terminal 28 and ground.

Voltage: Battery voltage



OK or NG

OK >> GO TO 2.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

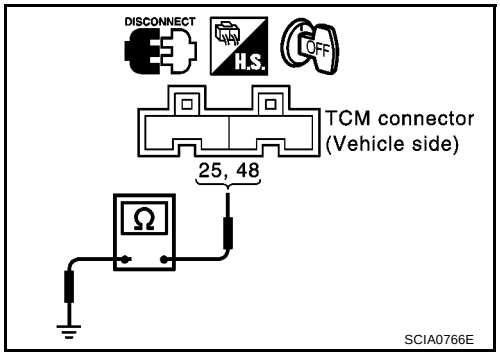
- Harness for short or open between battery, fuse and TCM terminals 10, 19 and 28
- Refer to AT-415, "Wiring Diagram — AT — MAIN" .
- Ignition switch and fuse Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK TCM GROUND CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground.

Continuity should exist.

If OK, check harness for short to ground and short to power.



OK or NG

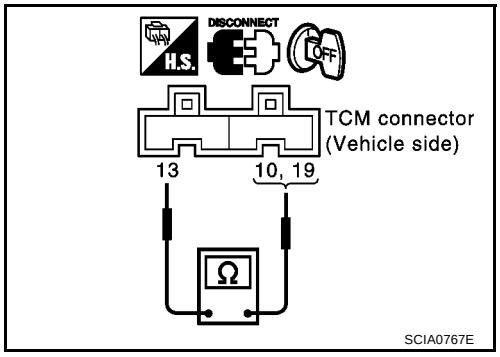
OK >> GO TO 3.
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors. Refer to AT-415, "Wiring Diagram — AT — MAIN" .

3. CHECK LAMP CIRCUIT

1. Check continuity between TCM terminals 13 and 10, 19.

Continuity should exist.

2. Reinstall any part removed.



OK or NG

OK >> GO TO 4.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- O/D OFF indicator lamp.
  Refer to DI-25, "Combination Meter Self-Diagnosis" .
- Harness and fuse for short or open between fuse and O/D OFF indicator lamp
  Refer to PG-4, "POWER SUPPLY ROUTING" .
- Harness for short or open between O/D OFF indicator lamp and TCM.

4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Engine Cannot Be Started In “P” and “N” Position

ECS008PY

SYMPTOM:

- **Engine cannot be started with selector lever in “P” or “N” position.**
- **Engine can be started with selector lever in “D”, “2”, “1” or “R” position.**

1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II

Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

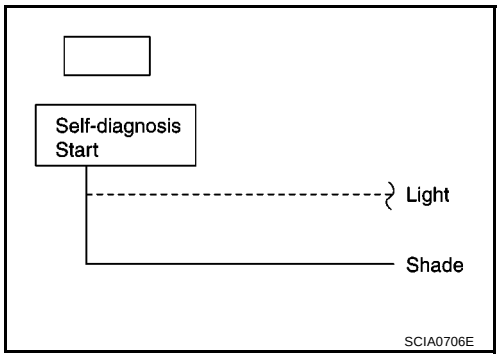
Without CONSULT-II

Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-247, "TCM Self-diagnosis Does Not Activate" .

No >> GO TO 2.



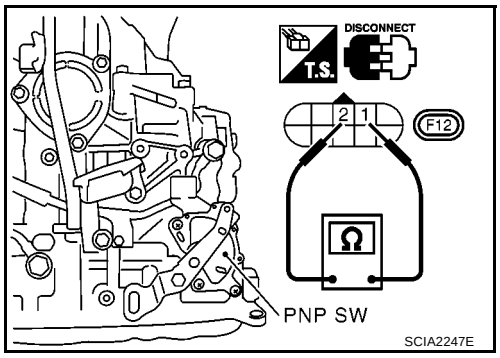
2. CHECK PNP SWITCH INSPECTION

Check for short or open of PNP switch harness connector terminals 1 and 2.
Refer to AT-247, "TCM Self-diagnosis Does Not Activate" .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace PNP switch.



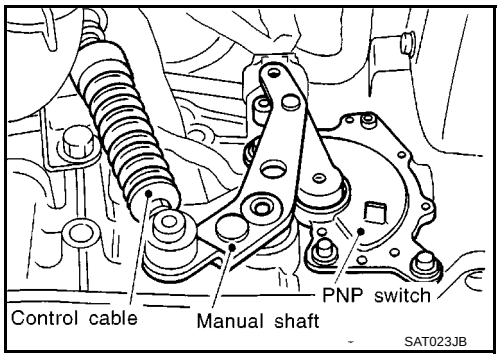
3. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 4.

NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



4. CHECK STARTING SYSTEM

Check starting system. Refer to SC-39, "STARTING SYSTEM" .

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

In “P” Position, Vehicle Moves Forward Or Backward When Pushed

ECS008PZ

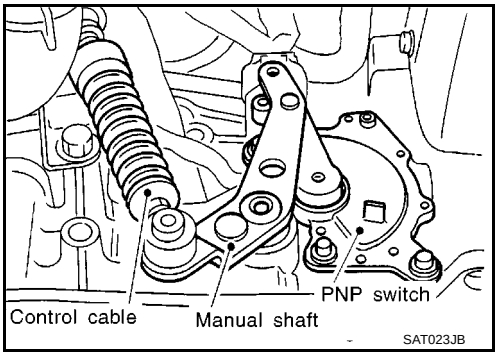
SYMPTOM:
Vehicle moves when it is pushed forward or backward with selector lever in “P” position.

1. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 2.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .

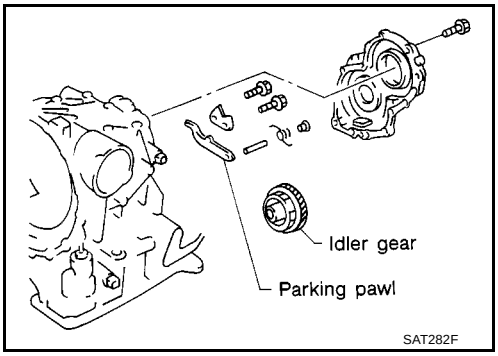


2. CHECK PARKING COMPONENTS

Check parking components. Refer to AT-433, "OVERHAUL" .

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.



In “N” Position, Vehicle Moves

ECS008Q0

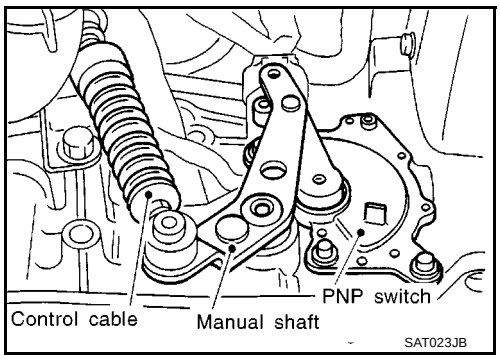
SYMPTOM:
Vehicle moves forward or backward when selecting “N” position.

1. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 2.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .

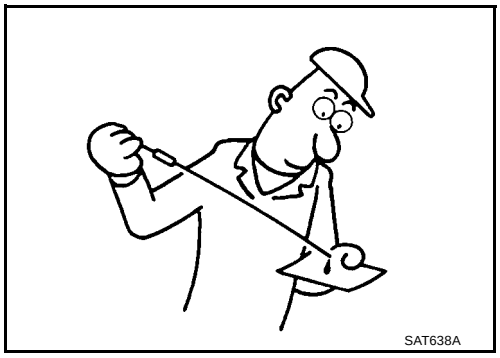


2. CHECK A/T FLUID LEVEL

Check A/T fluid level again.

OK or NG

OK >> GO TO 3.
NG >> Refill ATF.

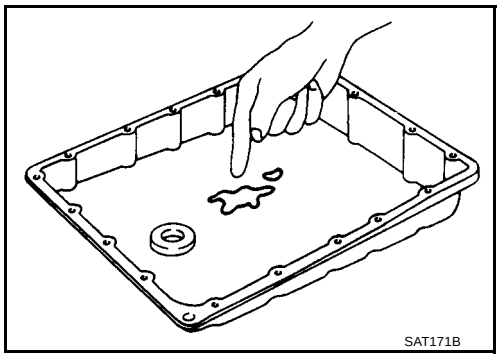


3. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 4.
NG >> 1. Disassemble A/T.
2. Check the following items:
- Forward clutch assembly
- Overrun clutch assembly
- Reverse clutch assembly



4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Large Shock. “N” → “R” Position

ECS008Q1

SYMPTOM:
There is large shock when changing from “N” to “R” position.

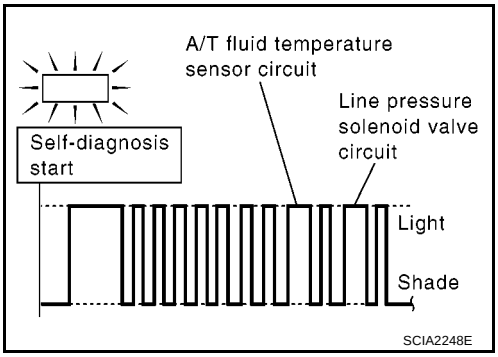
1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to A/T fluid temperature sensor, line pressure solenoid valve circuit?

Yes or No

Yes >> ● Check damaged circuit. Refer to the following items.
- AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE"
- AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"

No >> GO TO 2



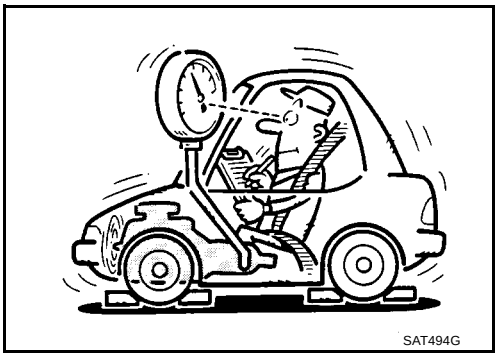
2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “D” position. Refer to AT-65, "Line Pressure Test" .

OK or NG

OK >> GO TO 3.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve
- Oil pump assembly



3. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Vehicle Does Not Creep Backward In “R” Position

ECS008Q2

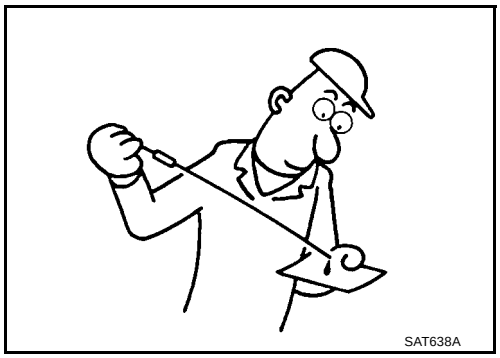
SYMPTOM:
Vehicle does not creep backward when selecting “R” position.

1. CHECK A/T FLUID LEVEL

Check A/T fluid level again.

OK or NG

OK >> GO TO 2.
NG >> Refill ATF.



SAT638A

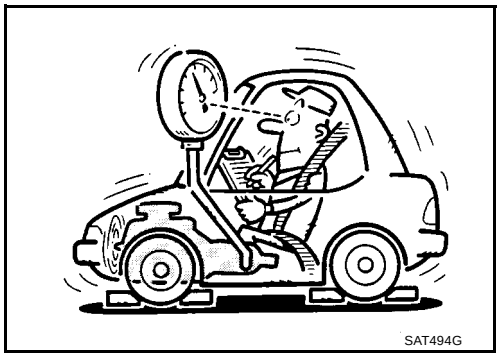
2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “R” position. Refer to AT-65, "Line Pressure Test" .

OK or NG

OK >> GO TO 3.
NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve (AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE")

3. Disassemble A/T.
4. Check the following item:
- Oil pump assembly



SAT494G

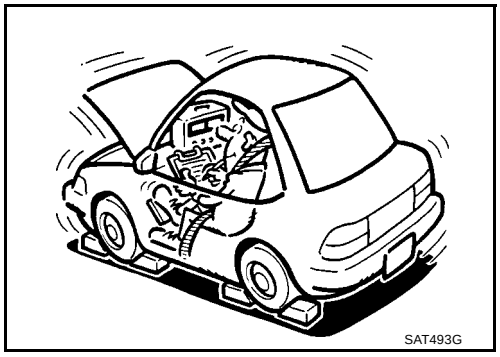
3. CHECK STALL TEST

Check stall revolution with selector lever in “1” and “R” positions.
Refer to AT-62, "Stall Test" .

OK or NG

OK >> GO TO 4.
OK in “1” position, NG in “R” position>>1.Disassemble A/T.
2. Check the following items:
- Reverse clutch assembly
- Low & reverse brake assembly

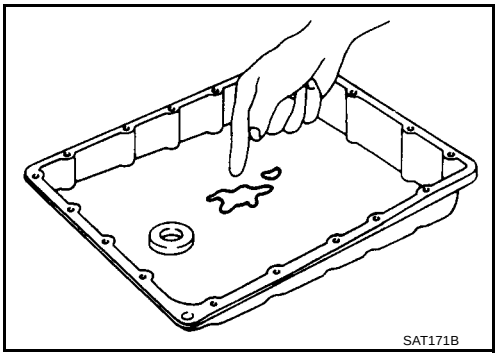
NG in both “1” and “R” positions>>GO TO 6.



SAT493G

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 6.

5. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

6. DETECT MALFUNCTIONING ITEM

1. Disassemble A/T.
2. Check the following items:

- Reverse clutch assembly
- High clutch assembly
- Low & reverse brake assembly
- Forward clutch assembly
- Overrun clutch assembly

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position

ECS008Q3

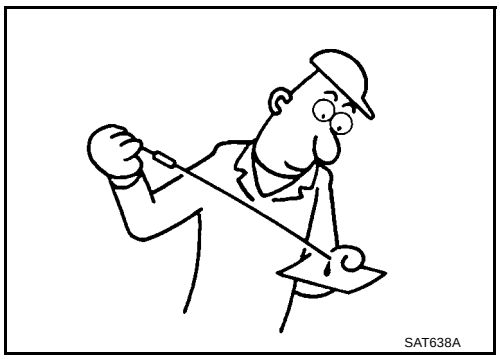
SYMPTOM:
Vehicle does not creep forward when selecting “D”, “2” or “1” position.

1. CHECK A/T FLUID LEVEL

Check A/T fluid level again.

OK or NG

OK >> GO TO 2.
NG >> Refill ATF.



SAT638A

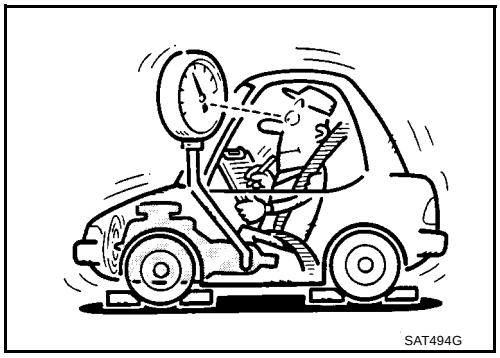
2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “D” position. Refer to AT-65, "Line Pressure Test" .

OK or NG

OK >> GO TO 3.
NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve (AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE")

3. Disassemble A/T.
4. Check the following item:
- Oil pump assembly



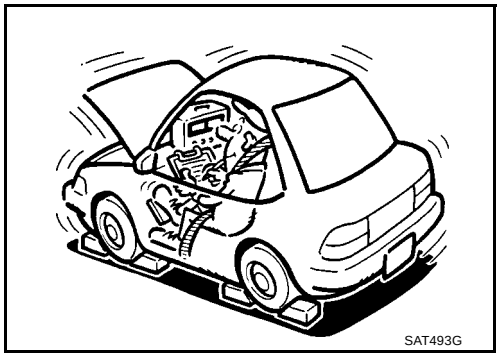
SAT494G

3. CHECK STALL TEST

Check stall revolution with selector lever in “D” position. Refer to AT-62, "Stall Test" .

OK or NG

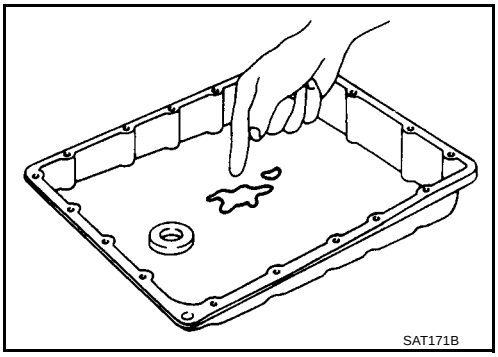
OK >> GO TO 4.
NG >> GO TO 6.



SAT493G

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 6.

5. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

6. DETECT MALFUNCTIONING ITEM

1. Disassemble A/T.
2. Check the following items:

- Forward clutch assembly
- Forward one-way clutch
- Low one-way clutch
- Reverse clutch assembly
- High clutch assembly

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Vehicle Cannot Be Started From D1

ECS008Q4

SYMPTOM:
Vehicle cannot be started from D1 on Cruise test — Part 1.

1. CHECK SYMPTOM

Is Vehicle Does Not Creep Backward In “R” Position OK?

Yes or No

Yes >> GO TO 2.
No >> Go to AT-218, "Vehicle Does Not Creep Backward In “R” Position" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to vehicle speed sensor·A/T (revolution sensor), shift solenoid valve A, B, overrun clutch solenoid valve, vehicle speed sensor·MTR after cruise test?

Yes or No

Yes >> ● Check damaged circuit. Refer to the following items.
- AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)"
- AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
- AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
- AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE"
- AT-367, "DTC VEHICLE SPEED SENSOR MTR"

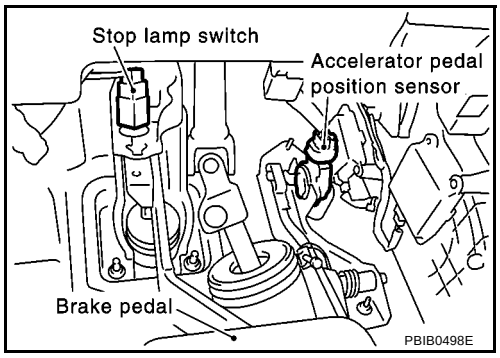
No >> GO TO 3.

3. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR"

OK or NG

OK >> GO TO 4.
NG >> Repair or replace accelerator pedal position (APP) sensor.

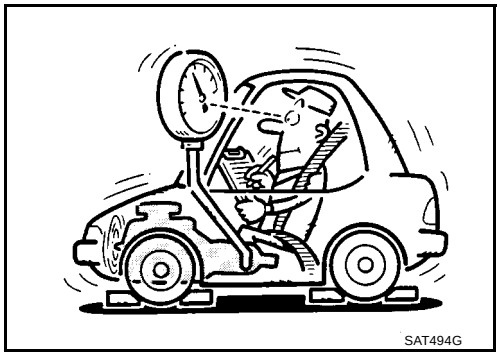


4. CHECK LINE PRESSURE

Check line pressure at stall point with selector lever in “D” position. Refer to AT-65, "Line Pressure Test" .

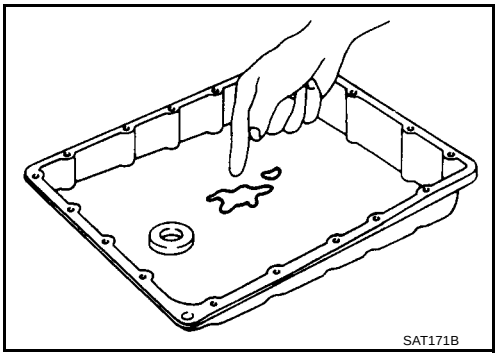
OK or NG

OK >> GO TO 5.
NG >> GO TO 8.



5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 8.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "Control Valve Assembly and Accumulators" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

8. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter
3. Disassemble A/T.
4. Check the following items:
- Forward clutch assembly
- Torque converter
- Oil pump assembly
- Reverse clutch assembly
- Low & reverse clutch assembly

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kickdown: $D_4 \rightarrow D_2$

ECS008Q5

SYMPTOM:
A/T does not shift from D_1 to D_2 at the specified speed.
A/T does not shift from D_4 to D_2 when depressing accelerator pedal fully at the specified speed.

1. CHECK SYMPTOM

Are Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position and Vehicle Cannot Be Started From D_1 OK?

Yes or No

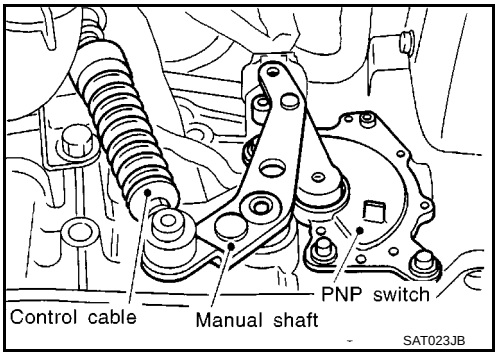
Yes >> GO TO 2.
No >> Go to AT-220, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" , AT-222, "Vehicle Cannot Be Started From D_1" .

2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



3. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" , AT-202, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

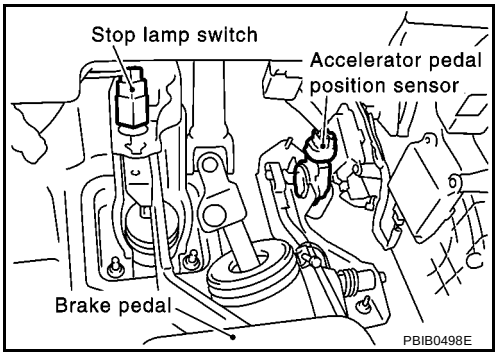
OK >> GO TO 4.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

4. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

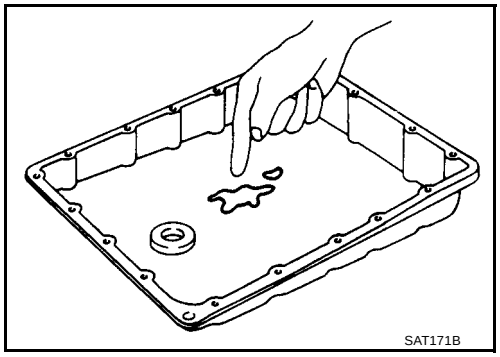
OK or NG

OK >> GO TO 5
NG >> Repair or replace accelerator pedal position (APP) sensor.



5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 8.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

8. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- Brake band

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_2 \rightarrow D_3$

ECS008Q6

SYMPTOM:
A/T does not shift from D_2 to D_3 at the specified speed.

1. CHECK SYMPTOM

Are Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position and Vehicle Cannot Be Started From D_1 OK?

Yes or No

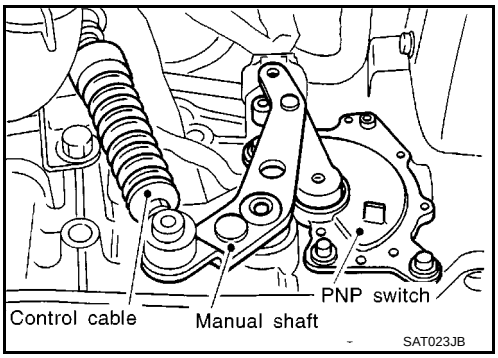
Yes >> GO TO 2.
No >> Go to AT-220, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" , AT-222, "Vehicle Cannot Be Started From D_1" .

2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



3. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" , AT-202, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

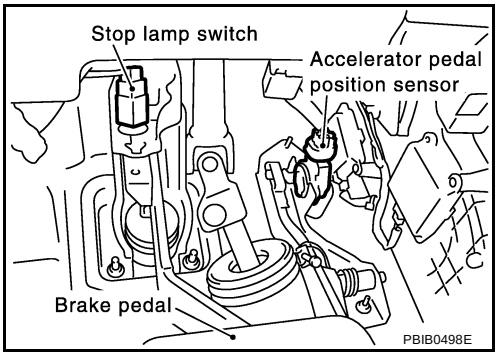
OK >> GO TO 4.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

4. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

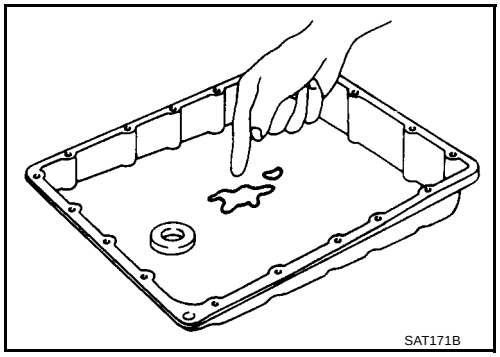
OK or NG

OK >> GO TO 5.
NG >> Repair or replace accelerator pedal position (APP) sensor.



5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 8.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve B
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

8. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve B
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- High clutch assembly
- Brake band

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_3 \rightarrow D_4$

ECS008Q7

SYMPTOM:

- **A/T does not shift from D_3 to D_4 at the specified speed.**
- **A/T must be warm before D_3 to D_4 shift will occur.**

1. CHECK SYMPTOM

Are Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position and Vehicle Cannot Be Started From D_1 OK?

Yes or No

Yes >> GO TO 2.

No >> Go to AT-220, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" , AT-222, "Vehicle Cannot Be Started From D_1" .

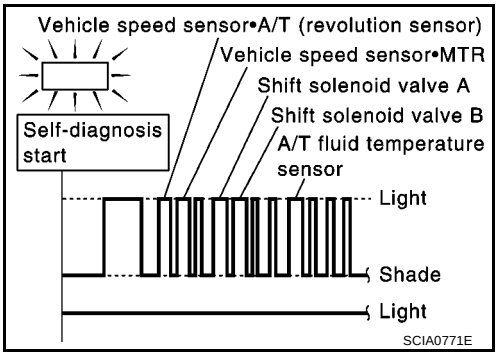
2. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis, after cruise test, show damage to any of the following circuits?

- PNP switch
- Overdrive control switch
- A/T fluid temperature sensor
- Vehicle speed sensor·A/T (revolution sensor)
- Shift solenoid valve A or B
- Vehicle speed sensor·MTR

Yes or No

Yes >>
- Check damaged circuit. Refer to the following items.
  - AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)"
  - AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
  - AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
  - AT-196, "DTC BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
  - AT-202, "DTC VEHICLE SPEED SENSOR MTR"
  - AT-247, "TCM Self-diagnosis Does Not Activate"



No >> GO TO 3.

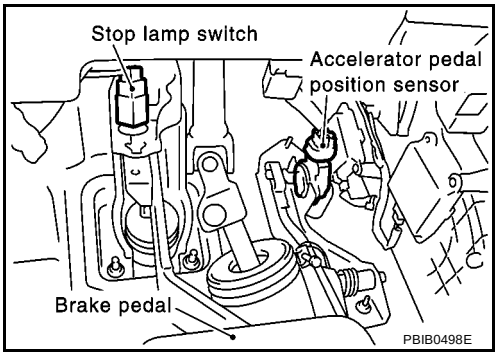
3. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

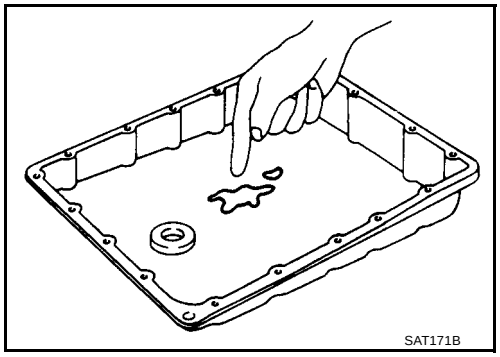
OK >> GO TO 4.

NG >> Repair or replace accelerator pedal position (APP) sensor.



4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 7.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Overrun clutch control valve
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

7. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Overrun clutch control valve
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- Brake band

OK or NG

OK >> GO TO 6
NG >> Repair or replace damaged parts.

A/T Does Not Perform Lock-up

ECS008Q8

SYMPTOM:
A/T does not perform lock-up at the specified speed.

1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to PNP switch, A/T fluid temperature sensor, vehicle speed sensor·A/T (revolution sensor), vehicle speed sensor·MTR, engine speed signal or torque converter clutch solenoid valve circuit after cruise test?

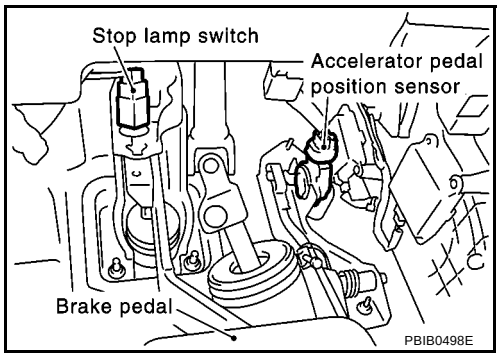
Yes or No

Yes >> Check damaged circuit. Refer to AT-161, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE" , AT-120, "DTC P0710 A/T FLUID TEMPERATURE SENSOR CIRCUIT" , AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" , AT-202, "DTC VEHICLE SPEED SENSOR MTR" , AT-131, "DTC P0725 ENGINE SPEED SIGNAL" .

No >> GO TO 2.

2. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .



OK or NG

OK >> GO TO 3.

NG >> Repair or replace accelerator pedal position (APP) sensor.

3. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Torque converter clutch control valve
- Torque converter relief valve
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check torque converter.

OK or NG

OK >> GO TO 4.

NG >> Repair or replace damaged parts.

4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

A/T Does Not Hold Lock-up Condition

ECS008Q9

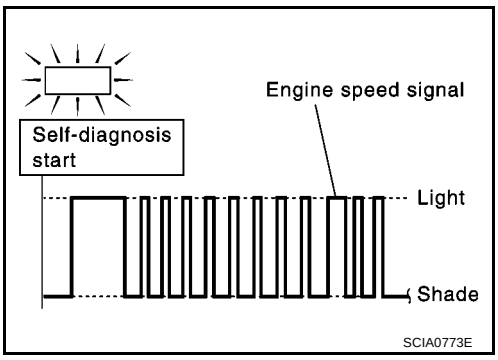
SYMPTOM:
A/T does not hold lock-up condition for more than 30 seconds.

1. CHECK DIAGNOSTIC RESULTS

Does self-diagnosis show damage to engine speed signal circuit after cruise test?

Yes or No

Yes >> Check engine speed signal circuit. Refer to AT-131, "DTC P0725 ENGINE SPEED SIGNAL" .
No >> GO TO 2.

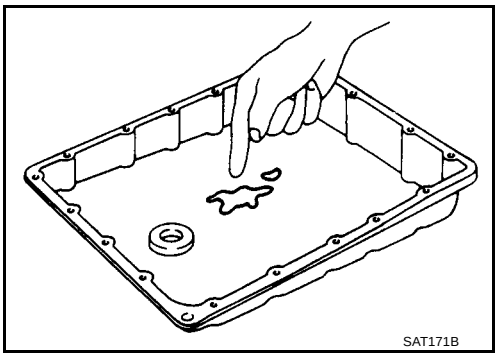


2. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 3.
NG >> GO TO 5.



3. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Torque converter clutch control valve
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Torque converter clutch control valve
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following item:

- Torque converter

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

Lock-up Is Not Released

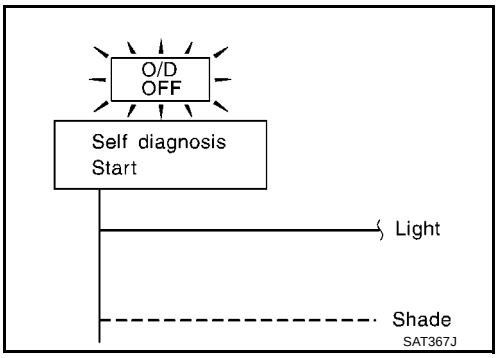
ECS008QA

SYMPTOM:
Lock-up is not released when accelerator pedal is released.

1. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR CIRCUIT

With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage accelerator pedal position (APP) sensor circuit?

Without CONSULT-II
Does self-diagnosis show damage to accelerator pedal position (APP) sensor circuit?



Yes or No

Yes >> Check accelerator pedal position (APP) sensor circuit. Refer to AT-247, "TCM Self-diagnosis Does Not Activate" .

No >> GO TO 2.

2. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Engine Speed Does Not Return To Idle (Light Braking D4 → D3)

ECS008QB

SYMPTOM:

- **Engine speed does not smoothly return to idle when A/T shifts from D4 to D3 .**
- **Vehicle does not decelerate by engine brake when turning overdrive control switch OFF.**
- **Vehicle does not decelerate by engine brake when shifting A/T from “D” to “2” position.**

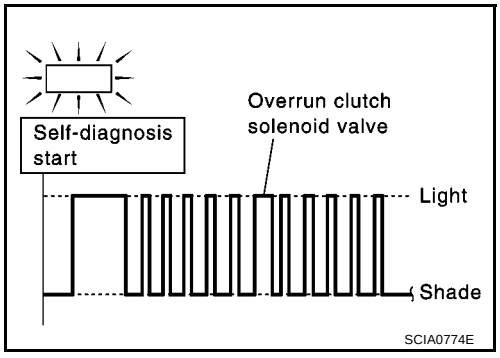
1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to overrun clutch solenoid valve circuit after cruise test?

Yes or NO

Yes >> Check overrun clutch solenoid valve circuit. Refer to AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE" .

No >> GO TO 2.



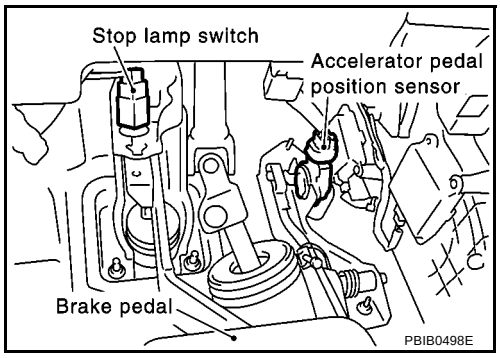
2. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .



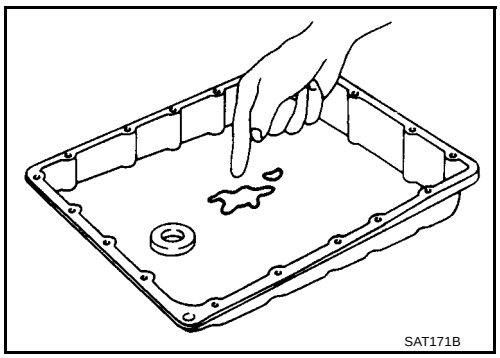
3. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 4.

NG >> GO TO 6.



4. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Overrun clutch control valve
- Overrun clutch reducing valve
- Overrun clutch solenoid valve

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Overrun clutch control valve
- Overrun clutch reducing valve
- Overrun clutch solenoid valve

3. Disassemble A/T.
4. Check the following item:

- Overrun clutch assembly

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

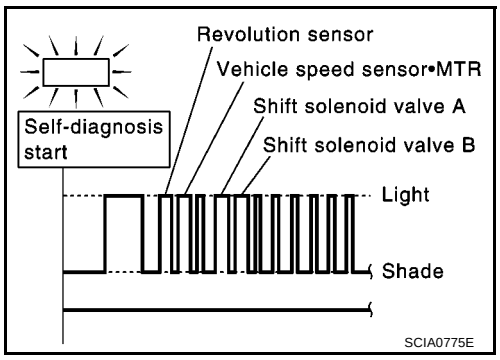
Vehicle Does Not Start From D1

ECS008QC

SYMPTOM:
Vehicle does not start from D1 on Cruise test — Part 2.

1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to vehicle speed sensor·A/T (revolution sensor), shift solenoid valve A, B or vehicle speed sensor·MTR after cruise test?



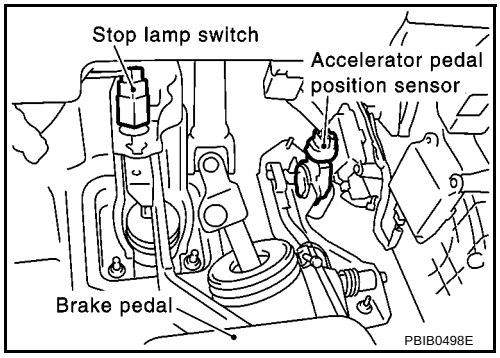
Yes or No

Yes >> ● Check damaged circuit. Refer to the following items.
- AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)"
- AT-173, "DTC P0750 SHIFT SOLENOID VALVE A"
- AT-178, "DTC P0755 SHIFT SOLENOID VALVE B"
- AT-202, "DTC VEHICLE SPEED SENSOR MTR"

No >> GO TO 2.

2. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

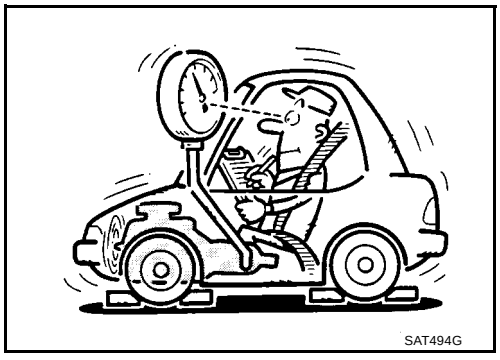


OK or NG

OK >> GO TO 3.
NG >> Repair or replace accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

3. CHECK LINE PRESSURE

Check line pressure at stall point with selector lever in “D” position. Refer to AT-65, "Line Pressure Test" .

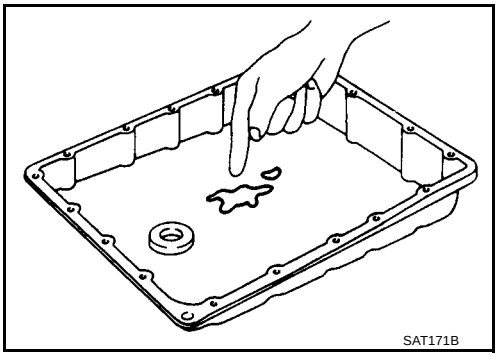


OK or NG

OK >> GO TO 4.
NG >> GO TO 7.

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 7.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again.

OK or NG

OK >> Go to AT-222, "Vehicle Cannot Be Started From D1" .
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

7. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Forward clutch assembly
- Reverse clutch assembly
- Low & reverse brake assembly
- Torque converter
- Oil pump assembly

OK or NG

OK >> GO TO 6
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_4 \rightarrow D_3$, When Overdrive Control Switch “ON” → “OFF”

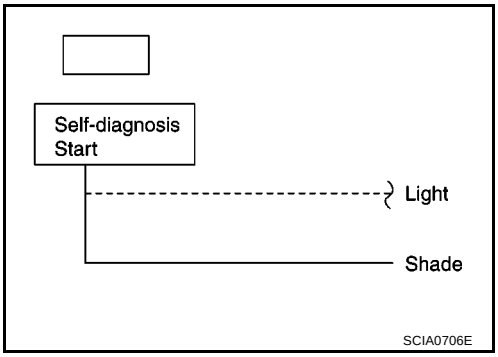
ECS008QD

SYMPTOM:
A/T does not shift from D_4 to D_3 when changing overdrive control switch to “OFF” position.

1. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT

With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to overdrive control switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to overdrive control switch circuit?



Yes or No

Yes >> Check overdrive control switch circuit. Refer to AT-248, "DIAGNOSTIC PROCEDURE" .

No >> Go to AT-227, "A/T Does Not Shift: $D_2 \rightarrow D_3$" .

A/T Does Not Shift: $D_3 \rightarrow 2_2$, When Selector Lever “D” → “2” Position

ECS008QE

SYMPTOM:
A/T does not shift from D_3 to 2_2 when changing selector lever from “D” to “2” position.

1. CHECK PNP SWITCH CIRCUIT

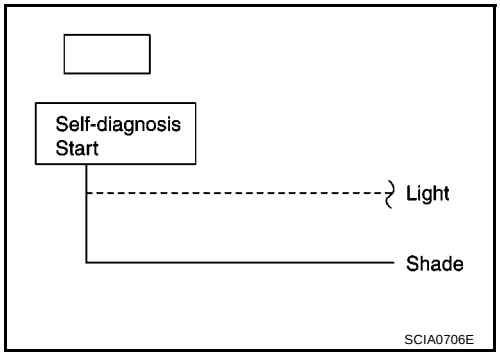
With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-247, "TCM Self-diagnosis Does Not Activate" .

No >> Go to AT-225, "A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kickdown: $D_4 \rightarrow D_2$" .



A/T Does Not Shift: $2_2 \rightarrow 1_1$, When Selector Lever “2” → “1” Position

ECS008QF

SYMPTOM:
A/T does not shift from 2_2 to 1_1 when changing selector lever from “2” to “1” position.

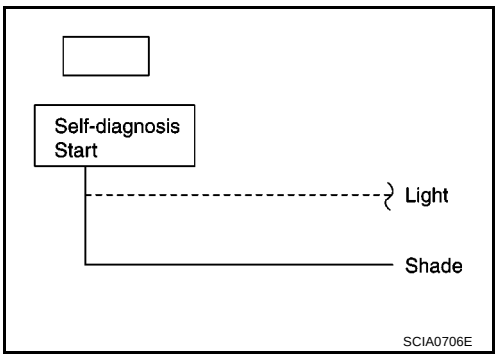
1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-247, "TCM Self-diagnosis Does Not Activate" .
No >> GO TO 2.

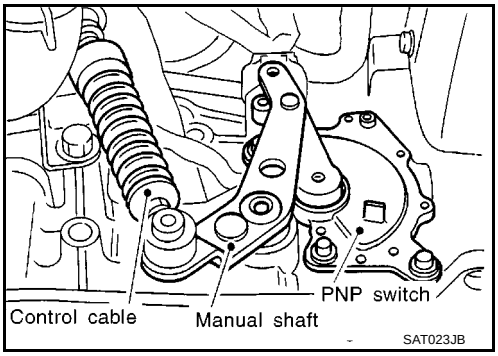


2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



3. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

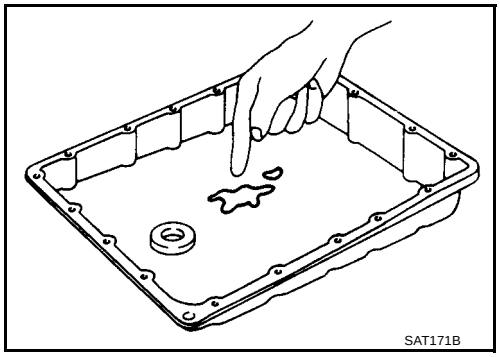
Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" , AT-202, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Overrun clutch control valve
- Shift valve A
- Shift solenoid valve A

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- Brake band

OK or NG

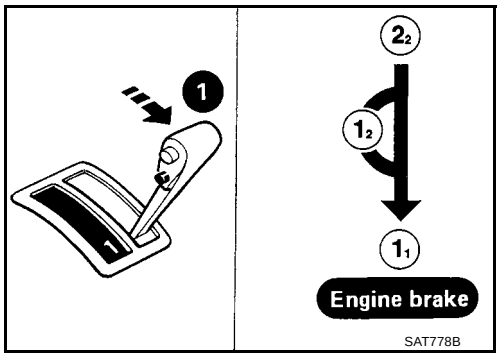
OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.



Vehicle Does Not Decelerate By Engine Brake

ECS008QG

SYMPTOM:
Vehicle does not decelerate by engine brake when shifting from 2$_2$ (1$_2$) to 1$_1$.

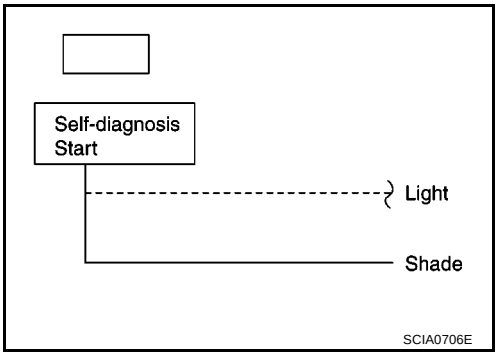
1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-247, "TCM Self-diagnosis Does Not Activate" .
No >> GO TO 2.

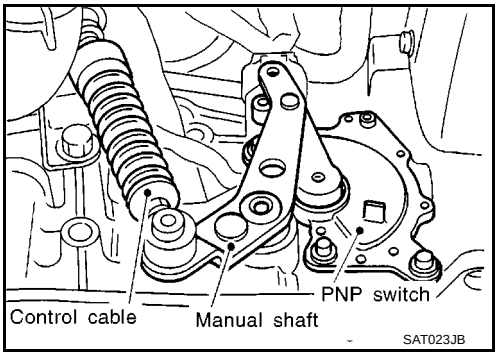


2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .

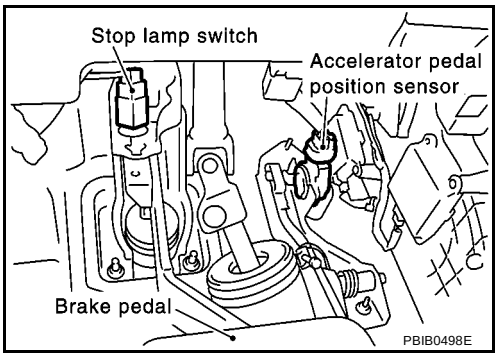


3. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace accelerator pedal position (APP) sensor. Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .



4. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

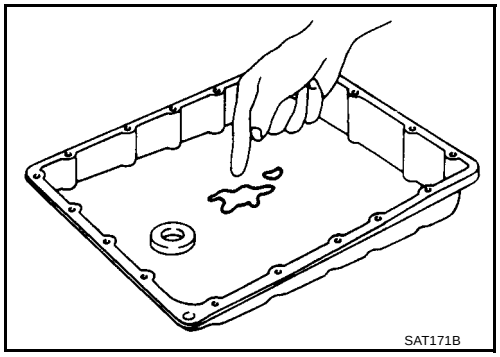
Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-126, "DTC P0720 VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" , AT-202, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Overrun clutch control valve
- Shift valve A
- Shift solenoid valve A
3. Disassemble A/T.
4. Check the following items:
- Overrun clutch assembly
- Low & reverse bake assembly

OK or NG

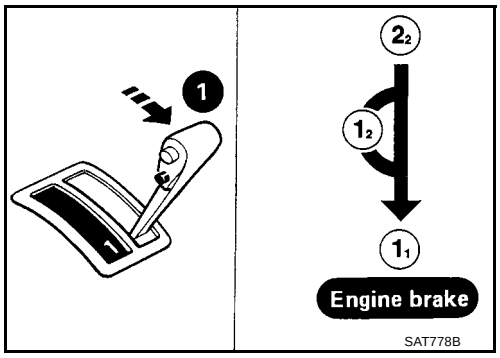
OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.



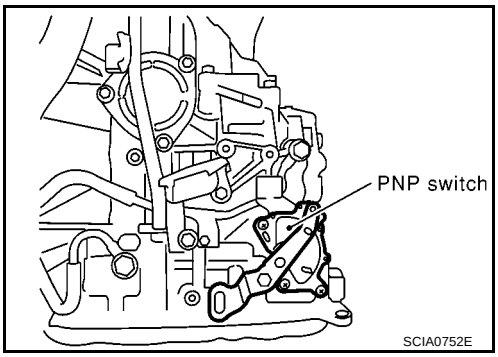
TCM Self-diagnosis Does Not Activate

ECS008QH

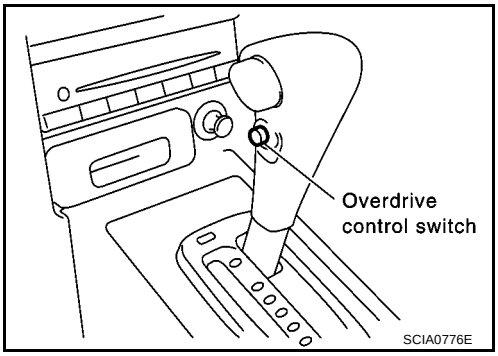
SYMPTOM:
O/D OFF indicator lamp does not come on in TCM self-diagnostic procedure even if the lamp circuit is good.

DESCRIPTION

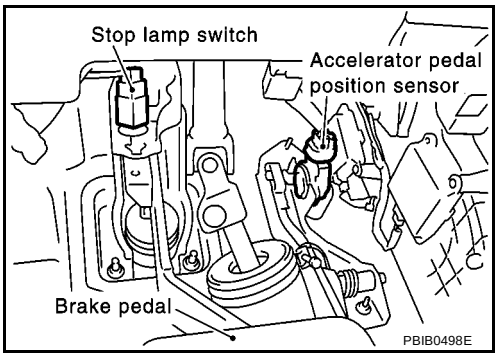
- PNP switch
  The PNP switch assembly includes a transmission position switch. The transmission position switch detects the selector lever position and sends a signal to the TCM.



- Overdrive control switch
  Detects the overdrive control switch position (ON or OFF) and sends a signal to the TCM.



- Closed throttle position signal and wide-open throttle position signal
  ECM judges throttle opening based on a signal from accelerator pedal position sensor, and sends the signal via CAN communication to TCM.



DIAGNOSTIC PROCEDURE

1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out “P/N”, “R”, “D”, “2” and “1” position switches moving selector lever to each position.
   Check that the signal of the selector lever position is indicated properly.

DATA MONITOR	
MONITORING	
PN POSI SW	OFF
R POSITION SW	OFF
D POSITION SW	OFF
2 POSITION SW	ON
1 POSITION SW	OFF

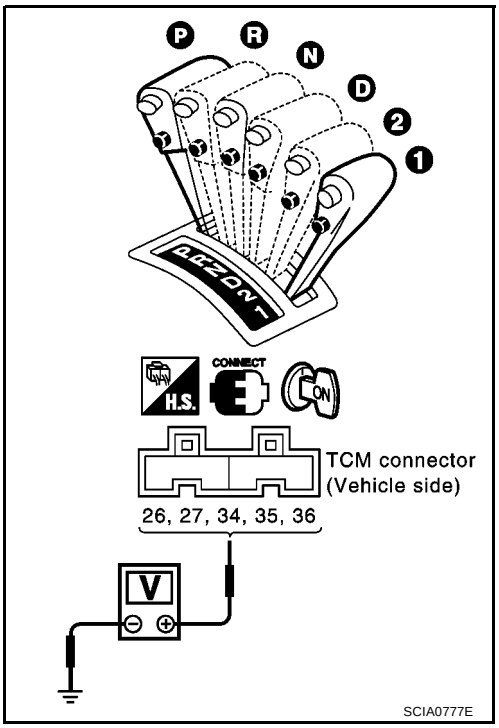
SAT701J

Without CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 26, 27, 34, 35, 36 and ground while moving selector lever through each position.

Voltage:
B: Battery voltage
0: 0V

Lever position	Terminal No.				
	36	35	34	27	26
P, N	B	0	0	0	0
R	0	B	0	0	0
D	0	0	B	0	0
2	0	0	0	B	0
1	0	0	0	0	B



SCIA0777E

OK or NG

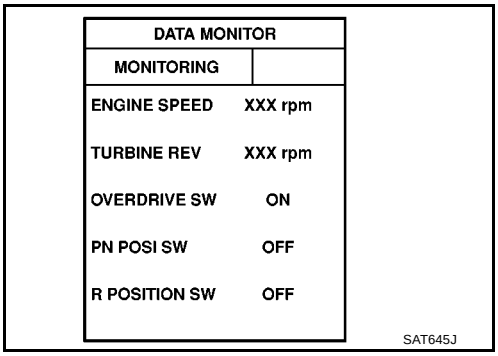
OK >> GO TO 2.
NG >> Check the following items:

- PNP switch (Refer to AT-250, "COMPONENT INSPECTION" .)
- Harness for short or open between ignition switch and PNP switch
- Harness for short or open between PNP switch and TCM
- Harness for short or open between combination meter and TCM
- Harness for short or open between combination meter and PNP switch

2. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT (WITH CONSULT-II)

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out “OVERDRIVE SWITCH”.
   Check the signal of the overdrive control switch is indicated properly.
   (Overdrive control switch “ON” displayed on CONSULT-II means overdrive “OFF”.)



OK or NG

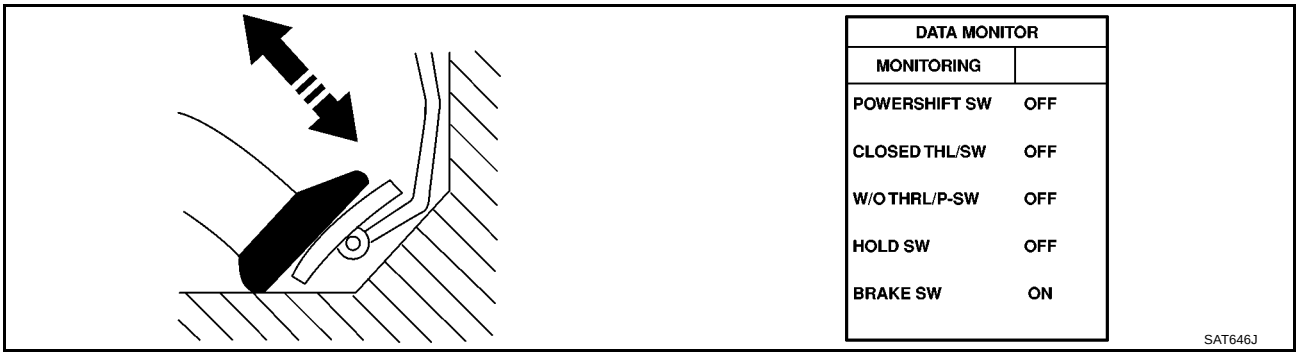
OK >> GO TO 3.
NG >> Check the following items:

- Overdrive control switch (Refer to AT-250, "COMPONENT INSPECTION" .)
- Harness for short or open between TCM and overdrive control switch
- Harness of ground circuit for overdrive control switch for short or open

3. CHECK CLOSED THROTTLE POSITION AND WIDE OPEN THROTTLE POSITION SIGNAL CIRCUIT

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for A/T with CONSULT-II.
3. Read out “CLOSED THL/SW” and “W/O THRL-SW” depressing and releasing accelerator pedal.
   Check the signal of throttle position signal is indicated properly.



Accelerator pedal condition	Data monitor	
	CLOSED THL/SW	W/O THRL-SW
Released	ON	OFF
Fully depressed	OFF	ON

OK or NG

OK >> GO TO 4.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Accelerator pedal position sensor — Refer to AT-183, "DTC P1705 ACCELERATOR PEDAL POSITION (APP) SENSOR" .
- Harness for short or open between accelerator pedal position sensor and ECM

4. CHECK DTC

Perform “TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)”. Refer to AT-49, "TCM SELF-DIAGNOSTIC PROCEDURE (NO TOOLS)" .

OK or NG

OK >> **INSPECTION END**

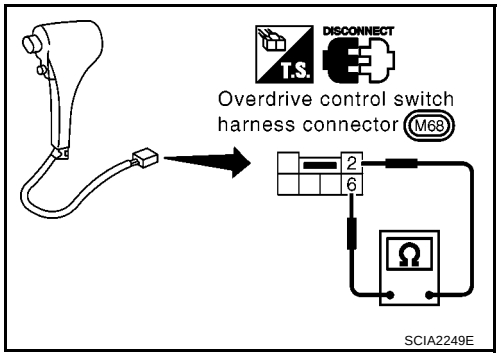
NG >> ● Perform TCM input/output signal inspection.
● If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

COMPONENT INSPECTION

Overdrive Control Switch

● Check continuity between two terminals 2 and 6.

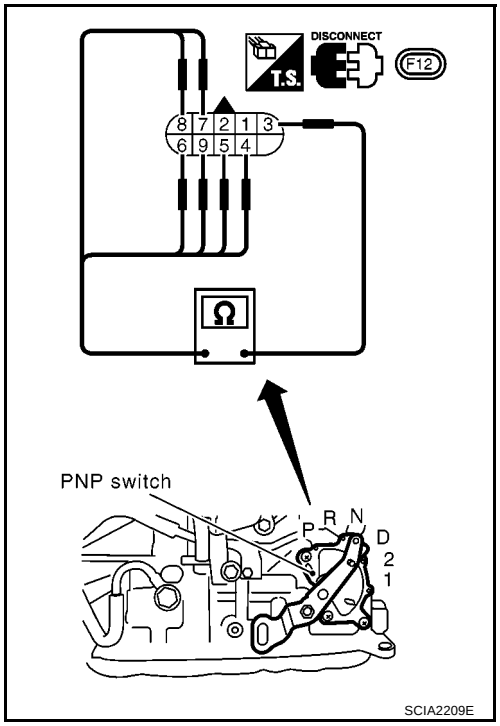
Switch position	Continuity
ON	No
OFF	Yes



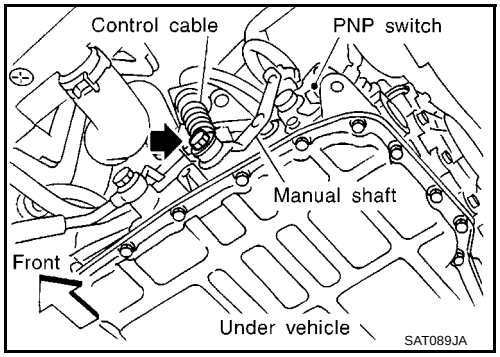
PNP Switch

1. Check continuity between terminals 1 and 2, and between terminals 3 and 4, 5, 6, 7, 8, 9 while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 — 7	1 — 2
R	3 — 8	
N	3 — 9	1 — 2
D	3 — 6	
2	3 — 5	
1	3 — 4	



2. If NG, check again with manual control cable disconnected from manual shaft of A/T assembly. Refer to step 1.
3. If OK on step 2, adjust manual control cable. Refer to AT-427, "Control Cable Adjustment" .
4. If NG on step 2, remove PNP switch from A/T and check continuity of PNP switch terminals. Refer to step 1.
5. If OK on step 4, adjust PNP switch. Refer to AT-427, "Control Cable Adjustment" .
6. If NG on step 4, replace PNP switch.



ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION

PFP:00000

CONSULT-II Function (A/T)

ECS008QI

CONSULT-II can display each diagnostic item using the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

Diagnostic test mode	Function
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.
Data monitor	Input/Output data in the TCM can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Function test	Performed by CONSULT-II instead of a technician to determine whether each system is “OK” or “NG”.
ECU part number	ECU part number can be read.

After performing AT-251, "SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)" , place check marks for results on the AT-263, "DIAGNOSTIC WORKSHEET" . Reference pages are provided following the items.

NOTICE:

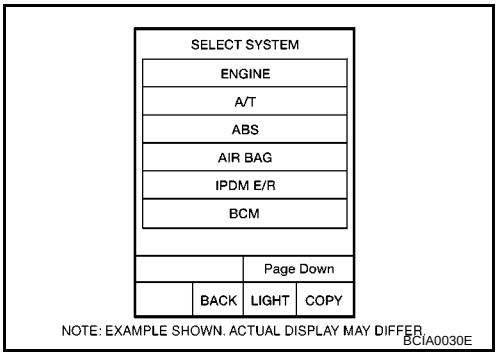
1. The CONSULT-II electrically displays shift timing and lock-up timing (that is, operation timing of each solenoid).
   Check for time difference between actual shift timing and the CONSULT-II display. If the difference is noticeable, mechanical parts (except solenoids, sensors, etc.) may be malfunctioning. Check mechanical parts using applicable diagnostic procedures.
2. Shift schedule (which implies gear position) displayed on CONSULT-II and that indicated in Service Manual may differ slightly. This occurs because of the following reasons:

- Actual shift schedule has more or less tolerance or allowance,
- Shift schedule indicated in Service Manual refers to the point where shifts start, and
- Gear position displayed on CONSULT-II indicates the point where shifts are completed.

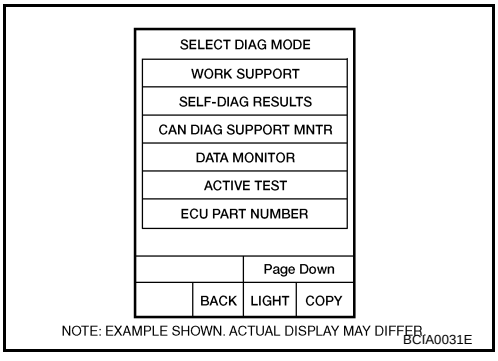
3. Shift solenoid valve “A” or “B” is displayed on CONSULT-II at the start of shifting. Gear position is displayed upon completion of shifting (which is computed by TCM).
4. Additional CONSULT-II information can be found in the Operation Manual supplied with the CONSULT-II unit.

SELF-DIAGNOSTIC PROCEDURE (WITH CONSULT-II)

1. Turn on CONSULT-II and touch “A/T” for TCM self-diagnosis.
   If A/T is not displayed, check TCM power supply and ground circuit. Refer to AT-311, "TCM Terminals and Reference Value" . If result is NG, refer to PG-4, "POWER SUPPLY ROUTING" .



2. Touch “SELF-DIAG RESULTS”.
   Display shows malfunction experienced since the last erasing operation.
   CONSULT-II performs “REAL TIME DIAG”.
   Also, any malfunction detected while in this mode will be displayed at real time.



SELF-DIAGNOSTIC RESULT TEST MODE

Detected items (Screen terms for CONSULT-II, "SELF DIAGNOSIS" test mode)		Malfunction is detected when...	Remarks
Item	Display		
No failure (NO SELF DIAGNOSTIC FAILURE INDICATED FURTHER TESTING MAY BE REQUIRED)		● No failure has been detected.	
Initial start	INITIAL START	● This is not a malfunction message (Whenever shutting off a power supply to the TCM, this message appears on the screen.)	
Revolution sensor	VHCL SPEED SEN·A/T	● TCM does not receive the proper voltage signal from the sensor.	
Vehicle speed sensor (Meter)	VHCL SPEED SEN·MTR	● TCM does not receive the proper voltage signal from the sensor.	
Accelerator pedal position (APP) sensor	THROTTLE POSI SEN	● TCM receives an excessively low or high voltage from the sensor.	
Shift solenoid valve A	SHIFT SOLENOID/V A	● TCM detects an improper voltage drop when it tries to operate the solenoid valve.	
Shift solenoid valve B	SHIFT SOLENOID/V B	● TCM detects an improper voltage drop when it tries to operate the solenoid valve.	
Overrun clutch solenoid valve	OVERRUN CLUTCH S/V	● TCM detects an improper voltage drop when it tries to operate the solenoid valve.	
T/C clutch solenoid valve	T/C CLUTCH SOL/V	● TCM detects an improper voltage drop when it tries to operate the solenoid valve.	
A/T fluid temperature sensor	BATT/FLUID TEMP SEN	● TCM receives an excessively low or high voltage from the sensor.	To be displayed in case of abnormality and when no recording is made.
Engine speed signal	ENGINE SPEED SIG	● TCM does not receive the proper voltage signal from the ECM.	
Line pressure solenoid valve	LINE PRESSURE S/V	● TCM detects an improper voltage drop when it tries to operate the solenoid valve.	
CAN communication	CAN COMM CIRCUIT	● When malfunction is detected in CAN communication line.	
TCM (RAM)	CONTROL UNIT (RAM)	● TCM memory (RAM) is malfunctioning	Refer to AT-311, "TCM Terminals and Reference Value"
TCM (ROM)	CONTROL UNIT (ROM)	● TCM memory (ROM) is malfunctioning	Refer to AT-311, "TCM Terminals and Reference Value"
TCM (EEP ROM)	CONT UNIT (EEP ROM)	● TCM memory (EEP ROM) is malfunctioning.	Refer to AT-311, "TCM Terminals and Reference Value"

CAUTION:

If malfunction is detected in multiple systems including CAN communication line, CAN communication line trouble diagnosis shall be performed first.

DATA MONITOR MODE (A/T)

Item	Display	Mover to center Monitor items			Description	Remarks
		TCM Input signals	Main signals	Selection from menu		
Vehicle speed sensor 1 (A/T) (Revolution sensor)	VHCL/S SE·A/T [km/h] or [mph]	X	—	▼	● Vehicle speed computed from signal of revolution sensor is displayed.	● When racing engine in N or P with vehicle stationary, CONSULT-II data may not indicate 0 km/h (0 mph).
Vehicle speed sensor 2 (Meter)	VHCL/S SE·MTR [km/h] or [mph]	X	—	▼	● Vehicle speed computed from signal of vehicle speed sensor is displayed.	● Vehicle speed display may not be accurate under approx. 10 km/h (6 mph). It may not indicate 0 km/h (0 mph) when vehicle is stationary.
Throttle position sensor	THRTL POS SEN [V]	X	—	▼	● Throttle position sensor signal voltage is displayed.	● Accelerator pedal position sensor signal
A/T fluid temperature sensor	FLUID TEMP SE [V]	X	—	▼	● A/T fluid temperature sensor signal voltage is displayed. ● Signal voltage lowers as fluid temperature rises.	
Battery voltage	BATTERY VOLT [V]	X	—	▼	● Source voltage of TCM is displayed.	
Engine speed	ENGINE SPEED [rpm]	X	X	▼	● Engine speed, computed from engine speed signal, is displayed.	● Engine speed display may not be accurate under approx. 800 rpm. It may not indicate 0 rpm even when engine is not running.
Power train revolution sensor	TURBINE REV [rpm]	X	—	▼		● Not mounted but displayed.
Overdrive control switch	OVERDRIVE SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of overdrive control SW is displayed.	
PN position (PNP) switch	PN POSI SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of PN position SW is displayed.	
R position switch	R POSITION SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of R position SW is displayed.	
D position switch	D POSITION SW [ON/OFF]	X	—	▼	● ON/OFF state computed from signal of D position SW is displayed.	
2 position switch	2 POSITION SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of 2 position SW, is displayed.	
1 position switch	1 POSITION SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of 1 position SW, is displayed.	

Item	Display	Mover to center Monitor items			Description	Remarks
		TCM Input signals	Main signals	Selection from menu		
ASCD cruise signal	ASCD·CRUISE [ON/OFF]	X	—	▼	● Status of ASCD cruise signal is displayed. ON... Cruising state OFF... Normal running state	● This is displayed even when no ASCD is mounted.
ASCD OD cut signal	ASCD·OD CUT [ON/OFF]	X	—	▼	● Status of ASCD OD release signal is displayed. ON... OD released OFF... OD not released	● This is displayed even when no ASCD is mounted.
Kickdown switch	KICKDOWN SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of kick down SW, is displayed.	● This is displayed even when no kick down switch is equipped.
Closed throttle position signal	CLOSED THL/SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of closed throttle position signal, is displayed.	● This means closed throttle position signal input via CAN communication line.
Wide open throttle position signal	W/O THRL/P-SW [ON/OFF]	X	—	▼	● ON/OFF status, computed from signal of wide open throttle position signal, is displayed.	● This means wide open throttle position signal input via CAN communication line.
A/T mode switch	HOLD SW [ON/OFF]	X	—	▼		● Not mounted but displayed.
Gear position	GEAR	—	X	▼	● Gear position data used for computation by TCM, is displayed.	
Selector lever position	SLCT LVR POSI	—	X	▼	● Selector lever position data, used for computation by TCM, is displayed.	● A specific value used for control is displayed if fail-safe is activated due to error.
Vehicle speed	VEHICLE SPEED [km/h] or [mph]	—	X	▼	● Vehicle speed data, used for computation by TCM, is displayed.	
A/T mode switch	POWER SHIFT SW [ON/OFF]	—	—	▼		● Not mounted but displayed.
Torque converter slip ratio	TC SLIP RATIO [0.000]	—	—	▼	● Ratio of engine revolution to input shaft revolution of torque converter	
Torque converter slip speed	TC SLIP SPEED [rpm]	—	—	▼	● Difference in revolution between input shaft revolution and input shaft revolution of torque converter	● Display doesn't indicate o rpm even if engine is stopped. But this isn't malfunction.
CAN communication	CAN COMM [OK/NG]	—	—	—		
CAN circuit 1	CAN CIRC 1 [OK/UNKWN]	—	—	—		
CAN circuit 2	CAN CIRC 2 [OK/UNKWN]	—	—	—

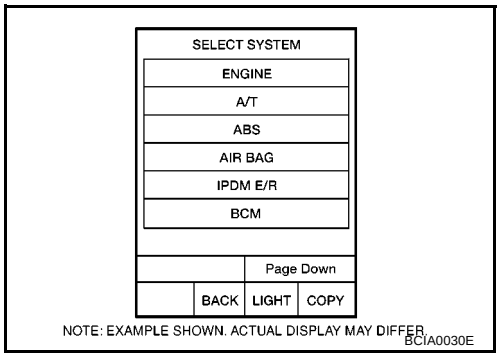
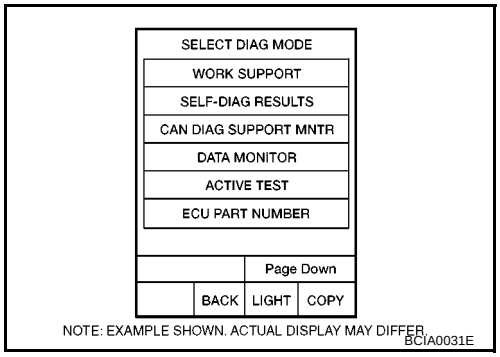
HOW TO ERASE SELF-DIAGNOSTIC RESULTS (WITH CONSULT-II)

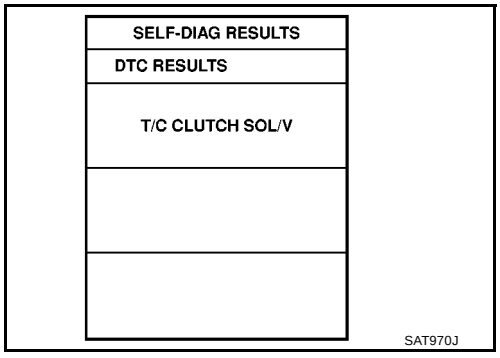
1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait for at least 3 seconds and then turn it “ON” again.
2. Turn CONSULT-II “ON”, and touch “A/T”.



3. Touch “SELF-DIAG RESULTS”.



4. Touch “ERASE”. (The self-diagnostic results will be erased.)



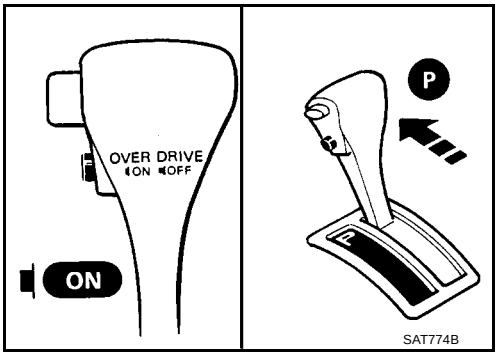
Diagnostic Procedure Without CONSULT-II

ECS008QJ

SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)

1. CHECK O/D OFF INDICATOR LAMP

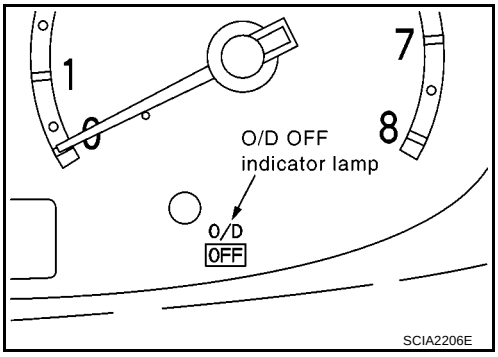
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch to “OFF” position.
   Wait 5 seconds.
3. Turn ignition switch to “ACC” position.
4. Set overdrive control switch to “ON” position.
5. Move selector lever to “P” position.
6. Turn ignition switch to “ON” position. (Do not start engine.)



7. Does O/D OFF indicator lamp come on for about 2 seconds?

Yes or No

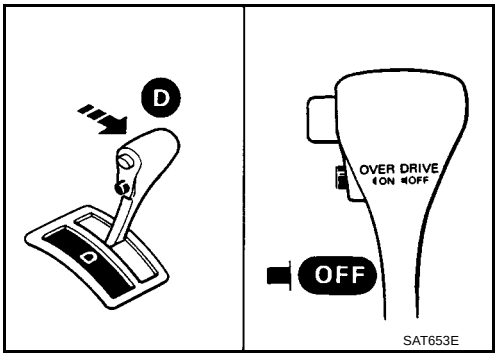
Yes >> GO TO 2.
No >> GO TO AT-323, "O/D OFF Indicator Lamp Does Not Come On" .



2. JUDGEMENT PROCEDURE STEP 1

1. Turn ignition switch to “OFF” position.
2. Turn ignition switch to “ACC” position.
3. Move selector lever to “D” position.
4. Set overdrive control switch to “OFF” position.
5. Turn ignition switch to “ON” position. (Do not start engine.)
   Wait more than 2 seconds after turning ignition switch “ON”.

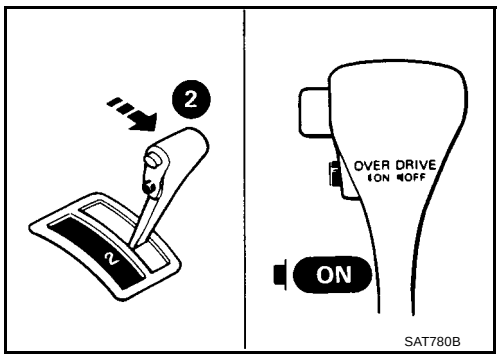
>> GO TO 3.



3. JUDGEMENT PROCEDURE STEP 2

1. Move selector lever to “2” position.
2. Set overdrive control switch to “ON” position.

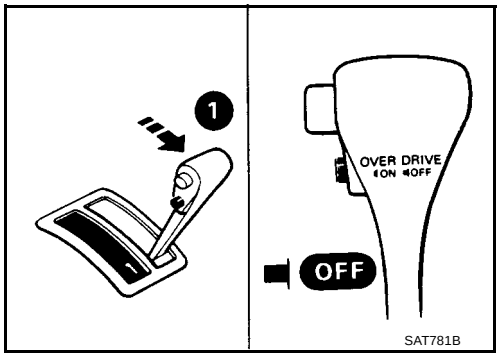
>> GO TO 4.



4. JUDGEMENT PROCEDURE STEP 3

1. Move selector lever to “1” position.
2. Set overdrive control switch to “OFF” position.

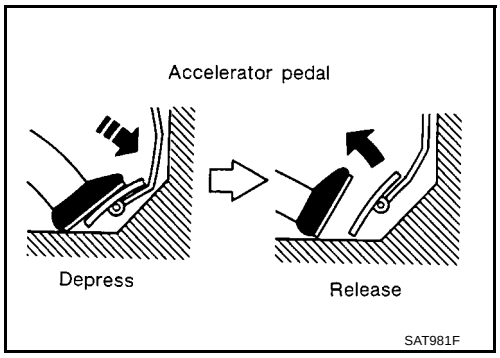
>> GO TO 5.



5. JUDGEMENT PROCEDURE STEP 4

1. Depress accelerator pedal fully and release it.

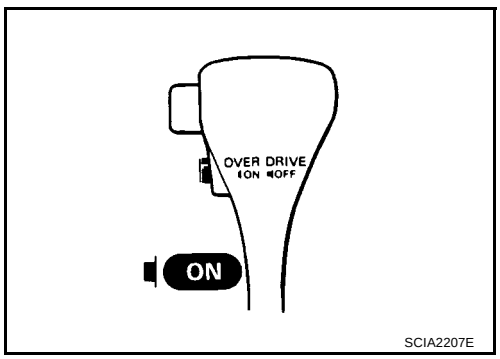
>> GO TO 6.



6. JUDGEMENT PROCEDURE STEP 5

1. Set overdrive control switch to “ON” position.

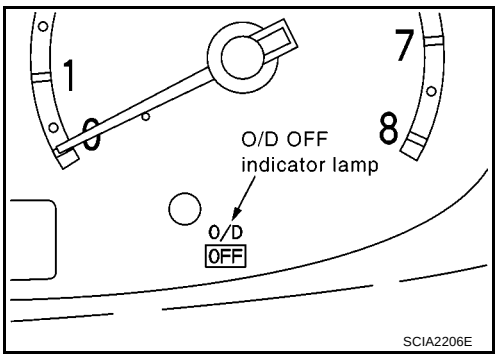
>> GO TO 7.



7. CHECK SELF-DIAGNOSIS CODE

Check O/D OFF indicator lamp. Refer to AT-259, "JUDGEMENT OF SELF-DIAGNOSIS CODE" .

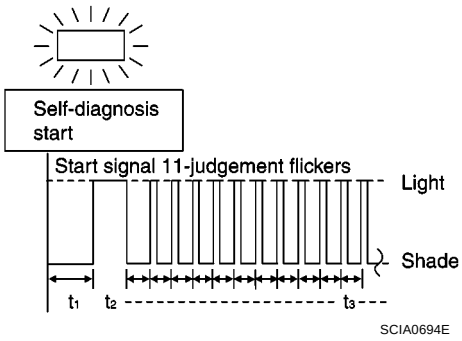
>> **DIAGNOSIS END**



JUDGEMENT OF SELF-DIAGNOSIS CODE

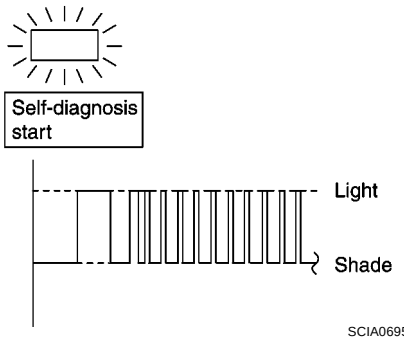
O/D OFF indicator lamp:

All judgement flickers are the same.



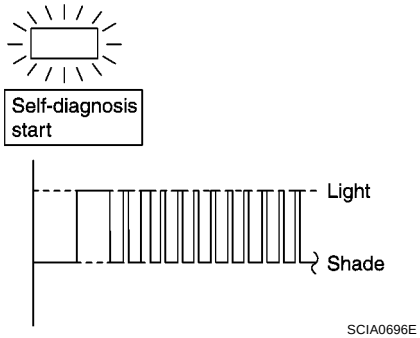
All circuits that can be confirmed by self-diagnosis are OK.

1st judgement flicker is longer than others.



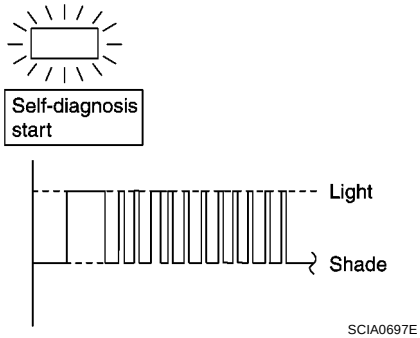
Revolution sensor circuit is short-circuited or disconnected.
⇒ **Go to VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR).**
Refer to AT-362

2nd judgement flicker is longer than others.



Vehicle speed sensor circuit is short-circuited or disconnected.
⇒ **Go to VEHICLE SPEED SENSOR·MTR.**
Refer to AT-367

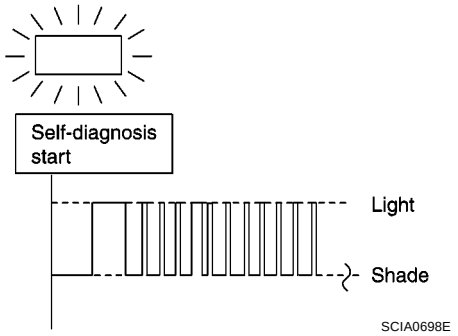
3rd judgement flicker is longer than others.



Accelerator pedal position (APP) sensor circuit is short-circuited or disconnected.
⇒ **Go to ACCELERATOR PEDAL POSITION (APP) SENSOR.**
Refer to AT-371

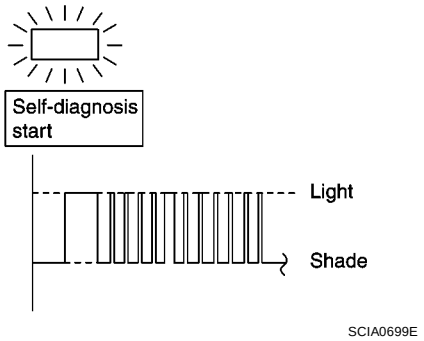
O/D OFF indicator lamp:

4th judgement flicker is longer than others.



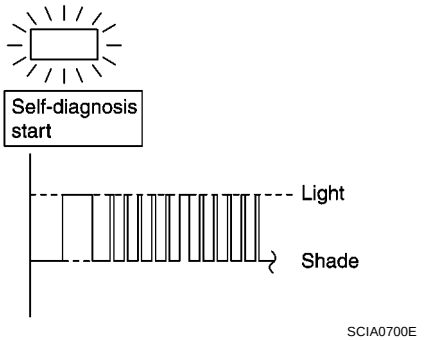
Shift solenoid valve A circuit is short-circuited or disconnected.
⇒ **Go to SHIFT SOLENOID VALVE A.**
Refer to AT-376

5th judgement flicker is longer than others.



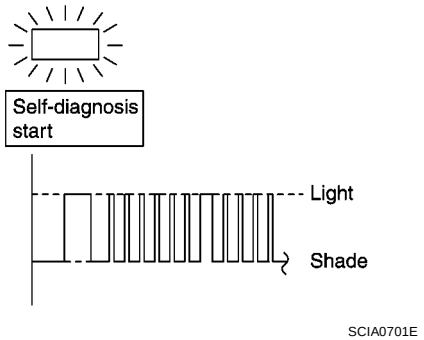
Shift solenoid valve B circuit is short-circuited or disconnected.
⇒ **Go to SHIFT SOLENOID VALVE B.**
Refer to AT-381

6th judgement flicker is longer than others.



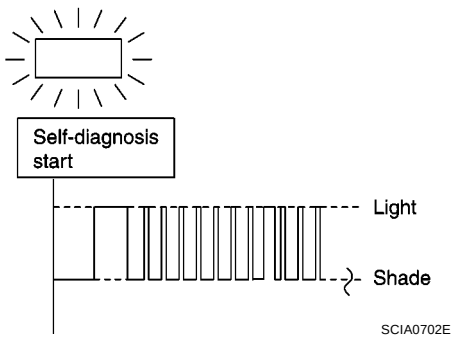
Overrun clutch solenoid valve circuit is short-circuited or disconnected.
⇒ **Go to OVERRUN CLUTCH SOLENOID VALVE.**
Refer to AT-386

7th judgement flicker is longer than others.



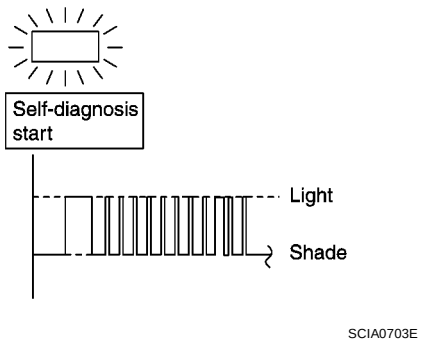
Torque converter clutch solenoid valve circuit is short-circuited or disconnected.
⇒ **Go to TORQUE CONVERTER CLUTCH SOLENOID VALVE.**
Refer to AT-390

8th judgement flicker is longer than others.



A/T fluid temperature sensor is disconnected or TCM power source circuit is damaged.
⇒ **Go to BATT/FLUID TEMP SEN(A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE).**
Refer to AT-395

9th judgement flicker is longer than others.



Engine speed signal circuit is short-circuited or disconnected.
⇒ **Go to ENGINE SPEED SIGNAL.**
Refer to AT-401

O/D OFF indicator lamp:	
10th judgement flicker is longer than others.  SCIA0704E	11th judgement flicker is longer than others.  SCIA0705E
Line pressure solenoid valve circuit is short-circuited or disconnected. ⇒ **Go to LINE PRESSURE SOLENOID VALVE.** Refer to AT-405	CAN communication line is damaged. ⇒**Go to CAN COMMUNICATION LINE.** Refer to AT-412
Lamp comes OFF.  SCIA0706E	Flickers as shown below.  SAT804H
PNP switch, overdrive control switch, closed throttle position signal or wide-open throttle position signal circuit is disconnected or TCM is damaged. (Because closed throttle position signal and wide-open throttle position signal are input via CAN communication line malfunction may continue after self-diagnosis.) ⇒ **Go to TCM Self-diagnosis Does Not Activate.** Refer to AT-358	Battery power is low. Battery has been disconnected for a long time. Battery is connected conversely. (When reconnecting TCM connectors.—This is a problem.)

t_1 = 2.5 seconds t_2 = 2.0 seconds t_3 = 1.0 second t_4 = 1.0 second

HOW TO ERASE SELF-DIAGNOSTIC RESULTS (WITHOUT CONSULT-II)

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait for at least 3 seconds and then turn it “ON” again.
2. Perform “SELF-DIAGNOSTIC PROCEDURE (Without CONSULT-II)”. Refer to AT-257, "Diagnostic Procedure Without CONSULT-II" .
3. Turn ignition switch “OFF”. (The self-diagnostic results will be erased.)

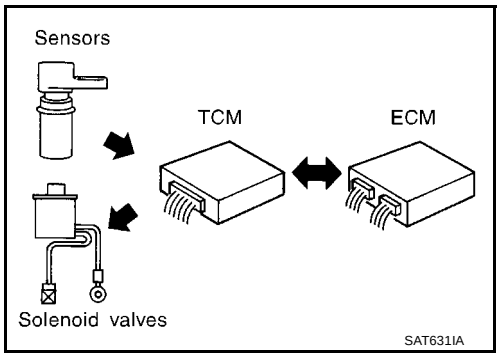
TROUBLE DIAGNOSIS — INTRODUCTION

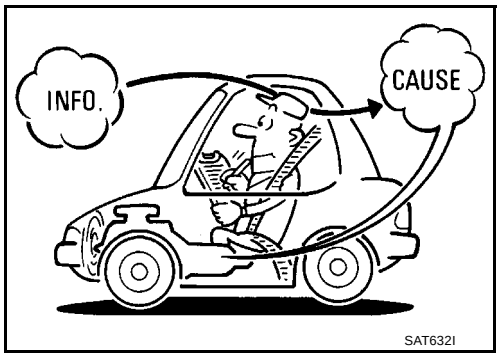
PFP:00000

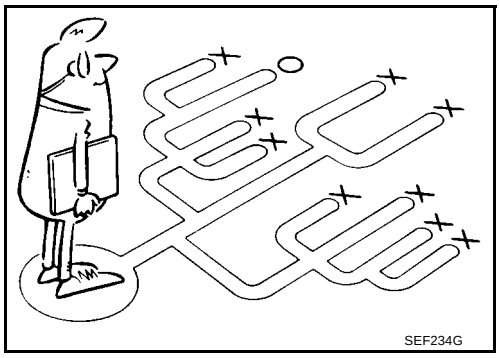
Introduction

ECS008QK

The TCM receives a signal from the vehicle speed sensor, throttle position sensor or PNP switch and provides shift control or lock-up control via A/T solenoid valves.
Input and output signals must always be correct and stable in the operation of the A/T system. The A/T system must be in good operating condition and be free of valve seizure, solenoid valve malfunction, etc.
It is much more difficult to diagnose a problem that occurs intermittently rather than continuously. Most intermittent problems are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.
A visual check only, may not find the cause of the problems. A road test with CONSULT-II or a circuit tester connected should be performed. Follow the “Work Flow”. Refer to AT-58 .
Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a drive ability complaint. The customer can supply good information about such problems, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A “Diagnostic Worksheet” like the example (AT-55) should be used.
Start your diagnosis by looking for “conventional” problems first. This will help troubleshoot drive ability problems on an electronically controlled engine vehicle.
Also check related Service bulletins for information.







DIAGNOSTIC WORKSHEET

Information from Customer

KEY POINTS

- **WHAT**..... Vehicle & A/T model
- **WHEN**..... Date, Frequencies
- **WHERE**..... Road conditions
- **HOW**..... Operating conditions, Symptoms

Customer name MR/MS	Model & Year	VIN
Trans. model	Engine	Mileage
Incident Date	Manuf. Date	In Service Date
Frequency	❑ Continuous ❑ Intermittent (times a day)	
Symptoms	❑ Vehicle does not move. (❑ Any position ❑ Particular position)	
	❑ No up-shift (❑ 1st → 2nd ❑ 2nd → 3rd ❑ 3rd → O/D)	
	❑ No down-shift (❑ O/D → 3rd ❑ 3rd → 2nd ❑ 2nd → 1st)	
	❑ Lockup malfunction	
	❑ Shift point too high or too low.	
	❑ Shift shock or slip (❑ N → D ❑ Lockup ❑ Any drive position)	
	❑ Noise or vibration	
	❑ No kick down	
	❑ No pattern select	
	❑ Others ( )	
O/D OFF indicator lamp	Blinks for about 8 seconds.	
	❑ Continuously lit	❑ Not lit

Diagnostic Worksheet

1.	❑ Read the Fail-safe and listen to customer complaints.		AT-8, "Wiring Diagrams and Trouble Diagnosis", AT-263, "DIAGNOSTIC WORKSHEET"
2.	❑ CHECK A/T FLUID		AT-268, "A/T Fluid Check"
	❑ Leakage (Follow specified procedure) ❑ Fluid condition ❑ Fluid level		
3.	❑ Perform STALL TEST and LINE PRESSURE TEST.		AT-269, "Stall Test", AT-272, "Line Pressure Test"
	❑ Stall test — Mark possible damaged components/others.		
	❑ Torque converter one-way clutch ❑ Reverse clutch ❑ Forward clutch ❑ Overrun clutch ❑ Forward one-way clutch	❑ Low & reverse brake ❑ Low one-way clutch ❑ Engine ❑ Line pressure is low ❑ Clutches and brakes except high clutch and brake band are OK
	❑ Line Pressure test — Suspected parts:		
4.	❑ Perform all ROAD TEST and mark required procedures.		AT-273, "Road Test"
4-1.	Check before engine is started.		AT-275, "1. CHECK BEFORE ENGINE IS STARTED"
	❑ O/D OFF Indicator Lamp Does Not Come On, AT-323 . ❑ SELF-DIAGNOSTIC CONFIRMATION PROCEDURE — Mark detected items.		
	❑ Vehicle speed sensor·A/T (Revolution sensor), AT-362 . ❑ Vehicle speed sensor·MTR, AT-367 . ❑ Accelerator pedal position (APP) sensor, AT-371 . ❑ Shift solenoid valve A, AT-376 . ❑ Shift solenoid valve B, AT-381 . ❑ Overrun clutch solenoid valve, AT-386 . ❑ Torque converter clutch solenoid valve, AT-390 . ❑ A/T fluid temperature sensor and TCM power source, AT-395 . ❑ Engine speed signal, AT-401 . ❑ Line pressure solenoid valve, AT-405 . ❑ CAN communication line, AT-412 . ❑ Control unit (RAM), control unit (ROM), AT-206, "DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)" . ❑ Control unit (EEP ROM), AT-208, "DTC CONTROL UNIT(EEPROM)" . ❑ PNP & overdrive control switches, and throttle position sensor, AT-358 . ❑ Battery ❑ Others		
4-2.	Check at idle		AT-276, "2. CHECK AT IDLE"
	❑ Engine Cannot Be Started In “P” And “N” Position, AT-325 . ❑ In “P” Position, Vehicle Moves Forward Or Backward When Pushed, AT-326 . ❑ In “N” Position, Vehicle Moves, AT-327 . ❑ Large Shock. “N” → “R” Position, AT-328 . ❑ Vehicle Does Not Creep Backward In “R” Position, AT-328 . ❑ Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position, AT-331 .		

4.	4-3.	Cruise test	AT-279, "3. CRUISE TEST", AT-283, "Cruise Test — Part 1"
		Part-1	
		❏ Vehicle Cannot Be Started From D1 , AT-333 . ❏ A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2 , AT-336 . ❏ A/T Does Not Shift: D2 → D3 , AT-338 . ❏ A/T Does Not Shift: D3 → D4 , AT-340 . ❏ A/T Does Not Perform Lock-up,AT-343 . ❏ A/T Does Not Hold Lock-up Condition, AT-344 . ❏ Lock-up Is Not Released, AT-346 . ❏ Engine Speed Does Not Return To Idle (Light Braking D4 → D3), AT-347 .	
		Part-2	AT-286, "Cruise Test — Part 2"
		❏ Vehicle Does Not Start From D1 , AT-349 . ❏ A/T Does Not Shift: D1 → D2 Or Does Not Kickdown: D4 → D2 , AT-336 . ❏ A/T Does Not Shift: D2 → D3 , AT-338 . ❏ A/T Does Not Shift: D3 → D4 , AT-340 .	
		Part-3	AT-288, "Cruise Test — Part 3"
		❏ A/T Does Not Shift: D4 → D3 When Overdrive Control Switch “ON” → “OFF”, AT-352 . ❏ Engine Speed Does Not Return To Idle (Engine Brake In D3), AT-347 . ❏ A/T Does Not Shift: D3 → 22 , When Selector Lever “D” → “2” Position, AT-353 . ❏ Engine Speed Does Not Return To Idle (Engine Brake In 22),AT-347 . ❏ A/T Does Not Shift: 22 → 11 , When Selector Lever “2” → “1” Position, AT-354 . ❏ Vehicle Does Not Decelerate By Engine Brake, AT-356 . ❏ TCM Self-diagnosis Does Not Activate (PNP & Overdrive Control Switches, and throttle position sensor Circuit Checks), AT-358 . ❏ SELF-DIAGNOSTIC PROCEDURE — Mark detected items.	
		❏ Vehicle speed sensor·A/T (Revolution sensor), AT-362 . ❏ Vehicle speed sensor·MTR, AT-367 . ❏ Accelerator pedal position (APP) sensor, AT-371 . ❏ Shift solenoid valve A, AT-376 . ❏ Shift solenoid valve B, AT-381 . ❏ Overrun clutch solenoid valve, AT-386 . ❏ Torque converter clutch solenoid valve, AT-390 . ❏ Batt/fluid temp sen (A/T fluid temperature sensor and TCM power source), AT-395 . ❏ Engine speed signal, AT-401 . ❏ Line pressure solenoid valve, AT-405 . ❏ CAN communication line, AT-412 . ❏ Control unit (RAM), control unit (ROM), AT-206, "DTC CONTROL UNIT (RAM), CONTROL UNIT (ROM)" . ❏ Control unit (EEP ROM), AT-208, "DTC CONTROL UNIT(EEPROM)" . ❏ PNP & overdrive control switches, and throttle position sensor, AT-358 . ❏ Battery ❏ Others	
5.	❏ For self-diagnosis NG items, inspect each component. Repair or replace the damaged parts.		AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)"
6.	❏ Perform all ROAD TEST and re-mark required procedures.		AT-273, "Road Test"

7.	❑ Perform the Diagnostic Procedures for all remaining items marked NG. Repair or replace the damaged parts. Refer to the Symptom Chart when you perform the procedures. (The chart also shows some other possible symptoms and the component inspection orders.)	AT-291, "TROUBLE DIAGNOSIS — GENERAL DESCRIPTION"
8.	❑ Erase self-diagnosis code from TCM memories.	AT-256, "HOW TO ERASE SELF-DIAGNOSTIC RESULTS (WITH CONSULT-II)", AT-261, "HOW TO ERASE SELF-DIAGNOSTIC RESULTS (WITHOUT CONSULT-II)"

Work Flow

ECS008QL

HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate. In general, each customer feels differently about a problem. It is important to fully understand the symptoms or conditions for a customer complaint.
Make good use of the two sheets provided, “INFORMATION FROM CUSTOMER” (AT-263) and “DIAGNOSTIC WORKSHEET” (AT-264), to perform the best troubleshooting possible.

WORK FLOW CHART

TROUBLE DIAGNOSIS — BASIC INSPECTION

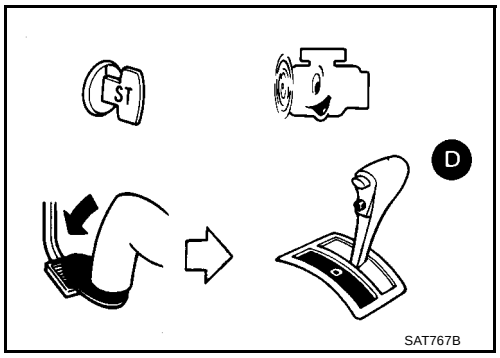
PFP:00000

A/T Fluid Check

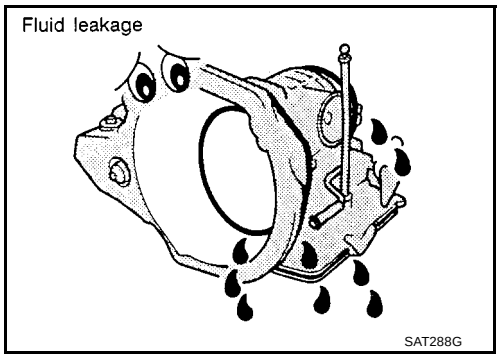
ECS008QM

FLUID LEAKAGE CHECK

1. Clean area suspected of leaking. — for example, mating surface of converter housing and transmission case.
2. Start engine, apply foot brake, place selector lever in “D” position and wait a few minutes.
3. Stop engine.



4. Check for fresh leakage.

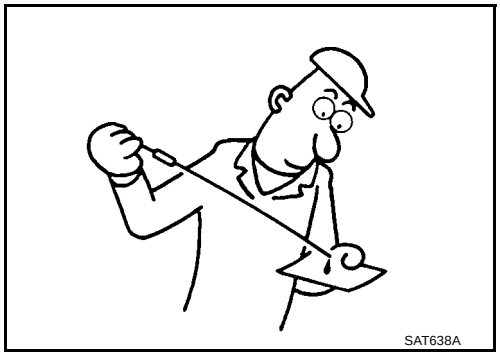


FLUID CONDITION CHECK

Fluid color	Suspected problem
Dark or black with burned odor	Wear of frictional material
Milky pink	Water contamination — Road water entering through filler tube or breather
Varnished fluid, light to dark brown and tacky	Oxidation — Over or under filling, — Overheating

FLUID LEVEL CHECK

Refer to AT-12, "Checking A/T Fluid" .



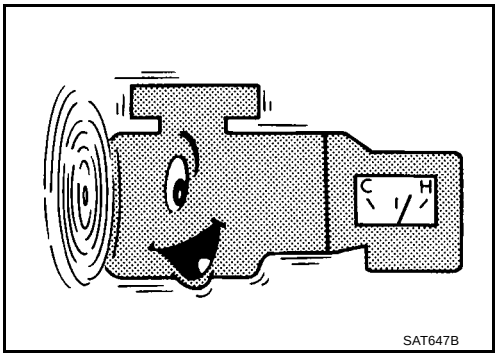
Stall Test

ECS008QN

STALL TEST PROCEDURE

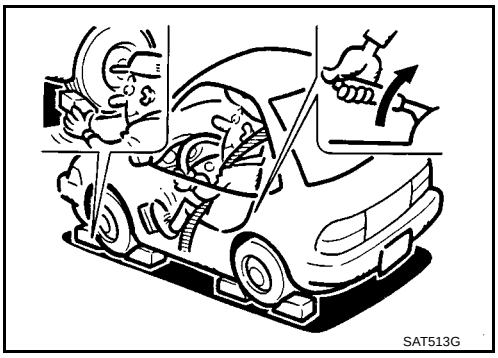
1. Check A/T fluid and engine oil levels. If necessary, add.
2. Drive vehicle for approx. 10 minutes or until fluid and oil reach operating temperature.

   ATF operating temperature:
   50 - 80°C (122 - 176°F)



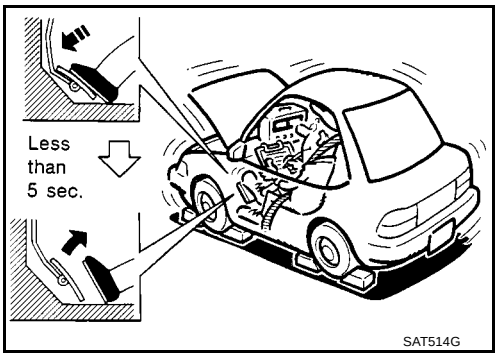
SAT647B

3. Set parking brake and block wheels.
4. Install a tachometer where it can be seen by driver during test.
   - **It is good practice to mark the point of specified engine rpm on indicator.**



SAT513G

5. Start engine, apply foot brake, and place selector lever in D position.
6. Accelerate to wide open throttle gradually while applying foot brake.
7. Quickly note the engine stall revolution and immediately release throttle.
   - **During test, never hold throttle wide open for more than 5 seconds.**

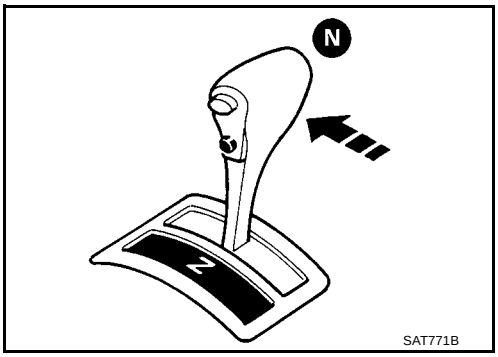


SAT514G

Stall revolution:

CR12DE	2,100 - 2,550 rpm
CR14DE	2,300 - 2,800 rpm

8. Move selector lever to “N” position.
9. Cool off ATF.
   - **Run engine at idle for at least one minute.**
10. Repeat steps 5 through 9 with selector lever in “2”, “1” and “R” positions.



SAT771B

JUDGEMENT OF STALL TEST

The test result and possible damaged components relating to each result are shown in the illustrations on next page.
In order to pinpoint the possible damaged components, follow the WORK FLOW shown in AT-266, "Work Flow" .

NOTE:
Stall revolution is too high in “D”, “2” or “1” position:

- Slippage occurs in 1st gear but not in 2nd and 3rd gears..... Low one-way clutch slippage
- Slippage occurs in the following gears:
  1st through 3rd gears in “D” position and engine brake functions with overdrive control switch set to “OFF”.
  1st and 2nd gears in “2” position and engine brake functions with accelerator pedal released (fully closed throttle)..... Forward clutch or forward one-way clutch slippage

Stall revolution is too high in R position:

- Engine brake does not function in “1” position..... Low & reverse brake slippage
- Engine brake functions in “1” position..... Reverse clutch slippage

Stall revolution within specifications:

- Vehicle does not achieve speed of more than 80 km/h (50 MPH)..... One-way clutch seizure in torque converter housing

CAUTION:
Be careful since automatic fluid temperature increases abnormally.

- Slippage occurs in 3rd and 4th gears in “D” position..... High clutch slippage
- Slippage occurs in 2nd and 4th gear in “D” position..... Brake band slippage
- Engine brake does not function in 2nd and 3rd gears in “D” position, 2nd gear in “2” position, and 1st gear in “1” position with overdrive control switch set to “OFF”..... Overrun clutch slippage

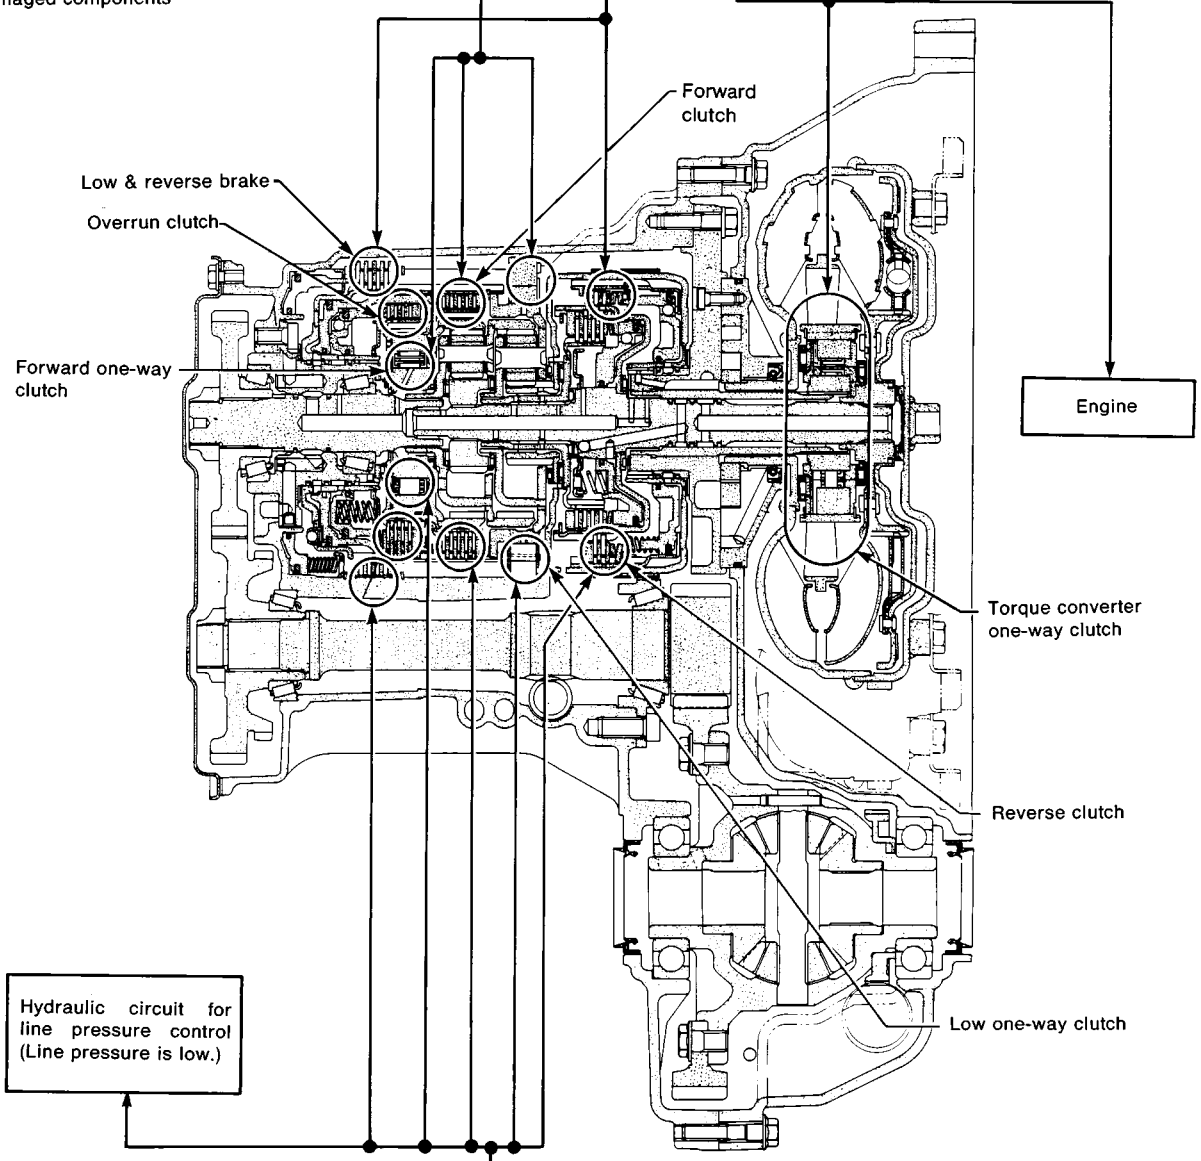
Stall revolution less than specifications:

- Poor acceleration during starts..... One-way clutch slippage in torque converter

Selector lever position	Judgement		
D	H	O	L
2	H	O	L
1	H	O	L
R	O	H	L

O : Stall revolution is normal.
H : Stall revolution is higher than specified.
L : Stall revolution is lower than specified.

Damaged components



D	H	O
2	H	O
1	H	O
R	H	O
Selector lever position	Judgement	

Clutches and brakes except high clutch and brake band are OK. (Condition of high clutch and brake band cannot be confirmed by stall test.)

SAT871HA

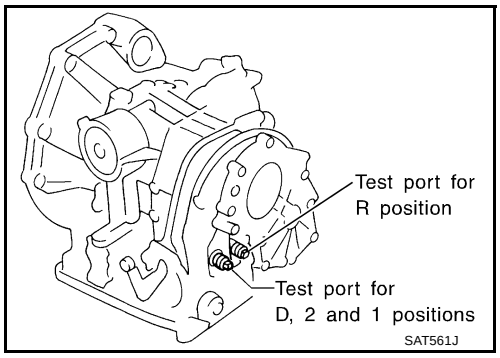
Line Pressure Test

ECS008QO

LINE PRESSURE TEST PORTS

Location of line pressure test ports are shown in the illustration.

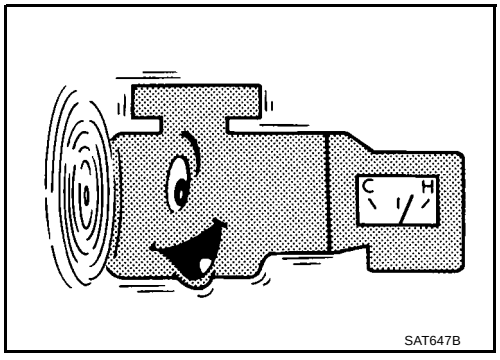
- **Always replace pressure plugs as they are self-sealing bolts.**



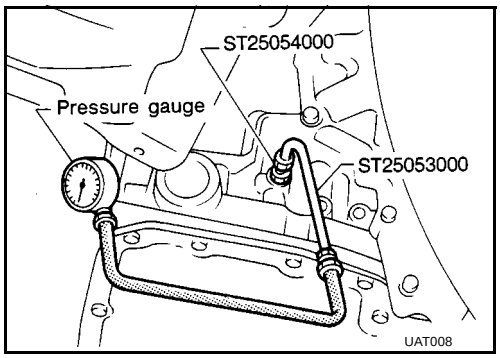
LINE PRESSURE TEST PROCEDURE

1. Check A/T fluid and engine oil levels. If necessary, add fluid or oil.
2. Drive vehicle for approx. 10 minutes or until engine oil and ATF reach operating temperature.

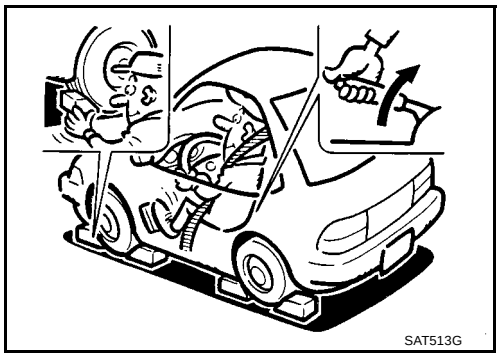
   ATF operating temperature: 50 - 80°C (122 -176°F)



3. Install pressure gauge to corresponding line pressure port.

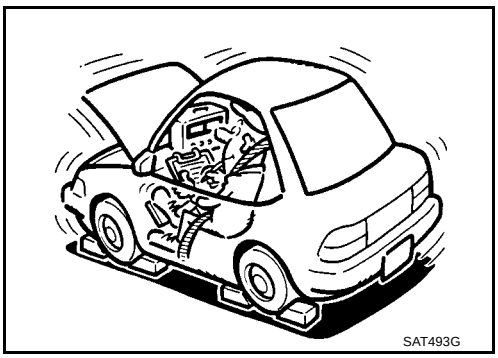


4. Set parking brake and block wheels.
   - **Continue to depress brake pedal fully while line pressure test is being performed at stall speed.**



5. Start engine and measure line pressure at idle and stall speed.
   - **When measuring line pressure at stall speed, follow the stall test procedure.**

Line pressure: Refer to AT-535, "Line Pressure" .



SAT493G

JUDGEMENT OF LINE PRESSURE TEST

Judgement		Suspected parts
At idle	Line pressure is low in all positions.	● Oil pump wear ● Control piston damage ● Pressure regulator valve or plug sticking ● Spring for pressure regulator valve damaged ● Fluid pressure leakage between oil strainer and pressure regulator valve ● Clogged strainer
	Line pressure is low in particular position.	● Fluid pressure leakage between manual valve and particular clutch ● For example, line pressure is: – Low in “R” and “1” positions, but – Normal in “D” and “2” positions. Therefore, fluid leakage exists at or around low and reverse brake circuit. Refer to AT-18, "CLUTCH AND BAND CHART" .
	Line pressure is high.	● Maladjustment of throttle position sensor ● A/T fluid temperature sensor damaged ● Line pressure solenoid valve sticking ● Short circuit of line pressure solenoid valve circuit ● Pressure modifier valve sticking ● Pressure regulator valve or plug sticking ● Open in dropping resistor circuit
At stall speed	Line pressure is low.	● Maladjustment of throttle position sensor ● Line pressure solenoid valve sticking ● Short circuit of line pressure solenoid valve circuit ● Pressure regulator valve or plug sticking ● Pressure modifier valve sticking ● Pilot valve sticking

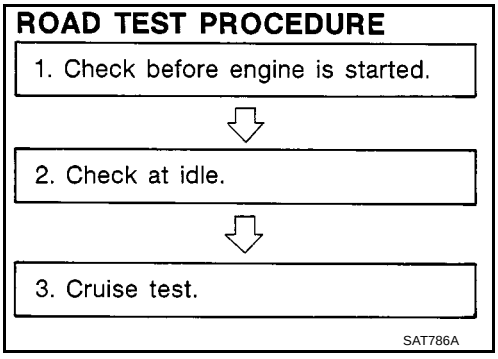
Road Test

ECS008QP

DESCRIPTION

- The purpose of the test is to determine overall performance of A/T and analyze causes of problems.
- The road test consists of the following three parts:

1. Check before engine is started
2. Check at idle



SAT786A

3. Cruise test

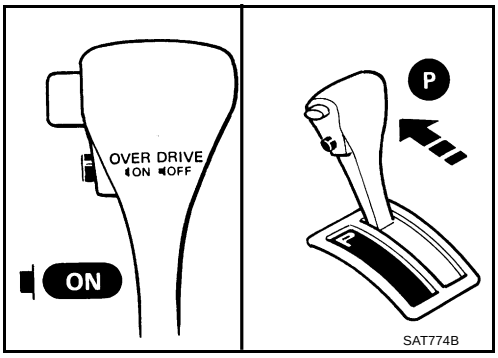
- Before road test, familiarize yourself with all test procedures and items to check.
- Conduct tests on all items until specified symptom is found. Troubleshoot items which check out No Good after road test. Refer to the following items.

	ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION	TROUBLE DIAGNOSES FOR SYMPTOMS
Except for Euro-OBD	AT-251, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION" to AT-257, "Diagnostic Procedure Without CONSULT-II"	AT-323, "O/D OFF Indicator Lamp Does Not Come On" to AT-358, "TCM Self-diagnosis Does Not Activate"

1. CHECK BEFORE ENGINE IS STARTED

1. CHECK O/D OFF INDICATOR LAMP

1. Park vehicle on flat surface.
2. Turn ignition switch to “OFF” position.
3. Move selector lever to “P” position.
4. Set overdrive control switch to “ON” position.
5. Turn ignition switch to “ON” position. (Do not start engine.)

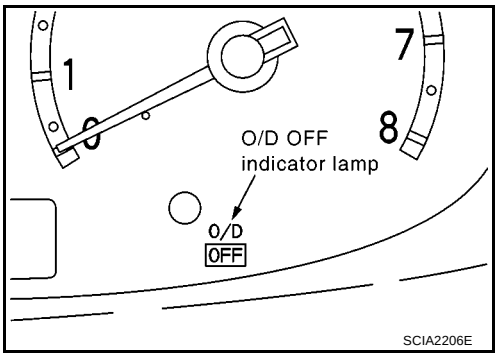


6. Does O/D OFF indicator lamp come on for about 2 seconds?

Yes or No

Yes >> GO TO 2.

No >> Stop ROAD TEST. GO TO AT-323, "O/D OFF Indicator Lamp Does Not Come On" .



2. CHECK O/D OFF INDICATOR LAMP

Does O/D OFF indicator lamp flicker for about 8 seconds?

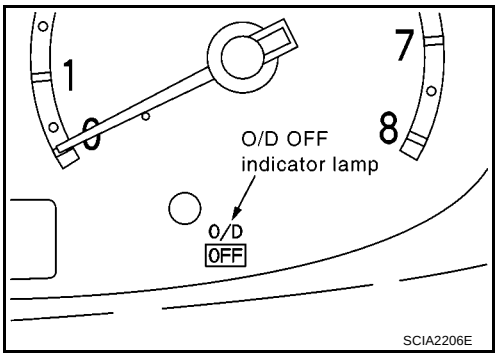
Yes or No

Yes >> TCM is under fail-safe mode. Perform self-diagnosis and check NG items on the DIAGNOSTIC WORK-SHEET. Refer to AT-263, "DIAGNOSTIC WORK-SHEET" and AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

No >> 1. Turn ignition switch to “OFF” position.

2. Perform self-diagnosis and note NG items. Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

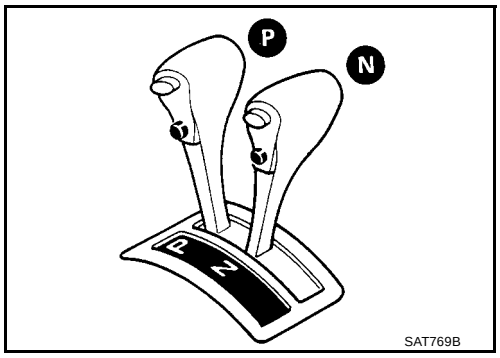
3. GO TO AT-276, "2. CHECK AT IDLE" .



2. CHECK AT IDLE

1. CHECK ENGINE START

1. Park vehicle on flat surface.
2. Turn ignition switch to “OFF” position.
3. Move selector lever to “P” or “N” position.
4. Turn ignition switch to “START” position.
5. Is engine started?



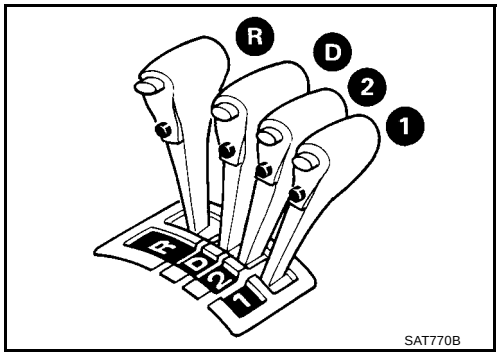
Yes or No

Yes >> GO TO 2.

No >>
- Stop Road Test. Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-325, "Engine Cannot Be Started In “P” and “N” Position" .

2. CHECK ENGINE START

1. Turn ignition switch to “OFF” position.
2. Move selector lever to “D”, “1”, “2” or “R” position.
3. Turn ignition switch to “START” position.
4. Is engine started?



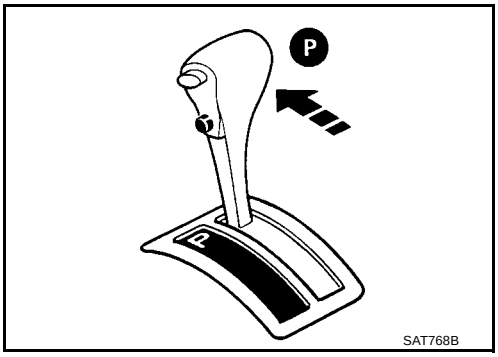
Yes or No

Yes >>
- Stop Road Test. Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-325, "Engine Cannot Be Started In “P” and “N” Position" .
- Continue ROAD TEST. Refer to AT-273, "Road Test" .

No >> GO TO 3.

3. CHECK VEHICLE MOVE

1. Turn ignition switch to “OFF” position.
2. Move selector lever to “P” position.
3. Release parking brake.
4. Push vehicle forward or backward.

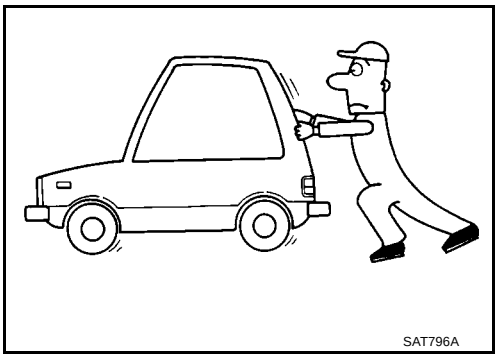


5. Does vehicle move when it is pushed forward or backward?

Yes or No

Yes >>
- Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-326, "In “P” Position, Vehicle Moves Forward Or Backward When Pushed" .
- Continue ROAD TEST.

No >> GO TO 4.



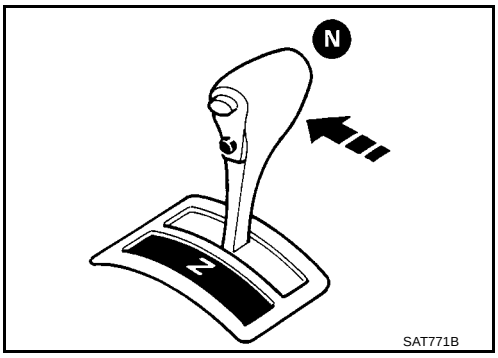
4. CHECK VEHICLE MOVE

1. Apply parking brake.
2. Move selector lever to “N” position.
3. Turn ignition switch to “START” position and start engine.
4. Release parking brake.
5. Does vehicle move forward or backward?

Yes or No

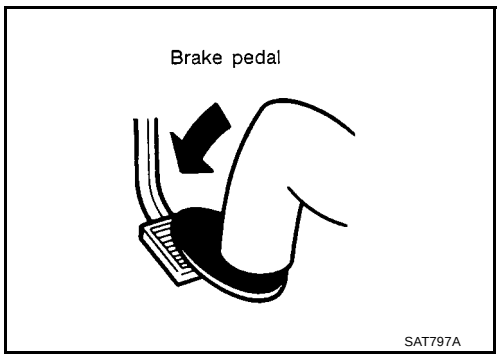
Yes >>
- Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-327, "In “N” Position, Vehicle Moves" .
- Continue ROAD TEST.

No >> GO TO 5.



5. CHECK SHIFT SHOCK

1. Apply foot brake.

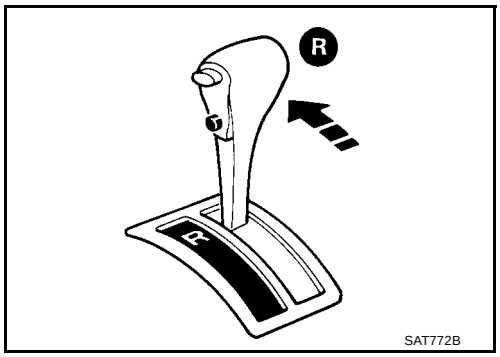


2. Move selector lever to “R” position.
3. Is there large shock when changing from “N” to “R” position?

Yes or No

Yes >>
- Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-328, "Large Shock. “N” → “R” Position" .
- Continue ROAD TEST.

No >> GO TO 6.



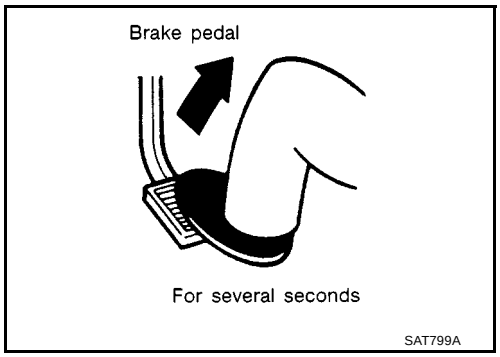
6. CHECK VEHICLE MOVE

1. Release foot brake for several seconds.
2. Does vehicle creep backward when foot brake is released?

Yes or No

Yes >> GO TO 7.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-329, "Vehicle Does Not Creep Backward In “R” Position" .
- Continue ROAD TEST.



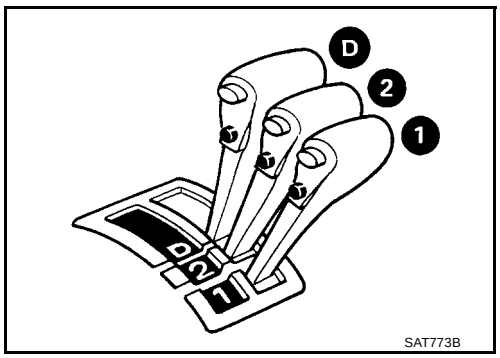
7. CHECK VEHICLE MOVE

1. Move selector lever to “D”, “2” and “1” positions and check if vehicle creeps forward.
2. Does vehicle creep forward in all three positions?

Yes or No

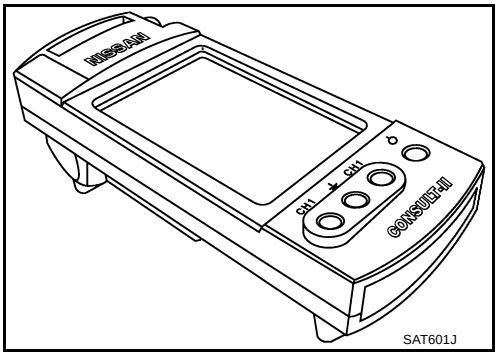
Yes >> GO TO AT-279, "3. CRUISE TEST" .

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET. Refer to AT-263, "DIAGNOSTIC WORKSHEET" .
- GO TO AT-331, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" .
- Continue ROAD TEST.



3. CRUISE TEST

- Check all items listed in Parts 1 through 3.



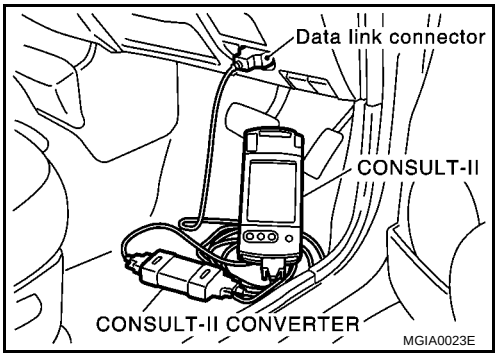
With CONSULT-II

- Using CONSULT-II, conduct a cruise test and record the result.
- Print the result and ensure that shifts and lock-ups take place as per Shift Schedule.

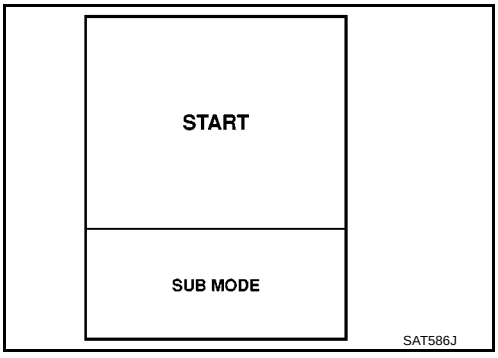
CONSULT-II Setting Procedure

CAUTION:
If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

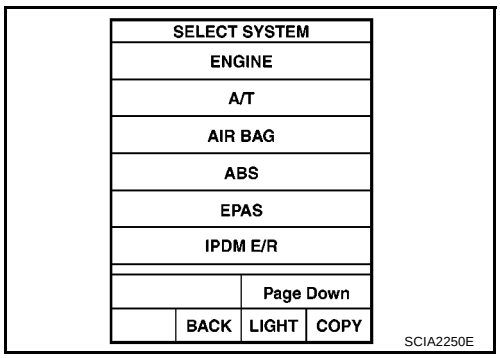
1. Turn ignition switch to “OFF” position.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector, which is located in instrument lower panel on driver side.



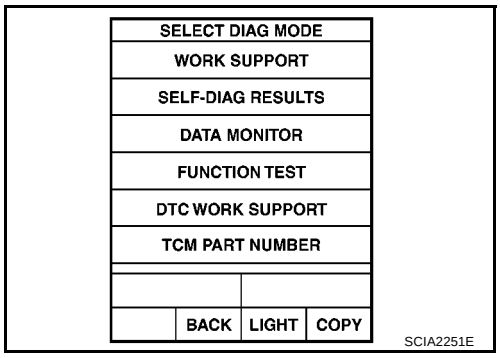
3. Turn ignition switch to “ON” position. (Do not start engine.)
4. Touch “START”.



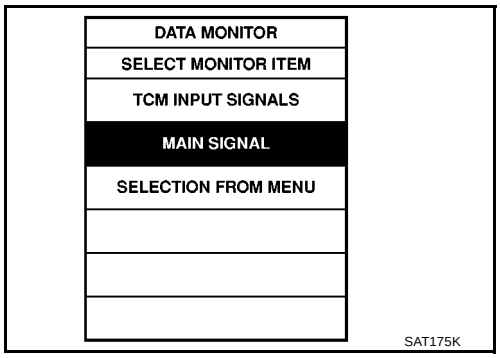
5. Touch “A/T”.
   If “A/T” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



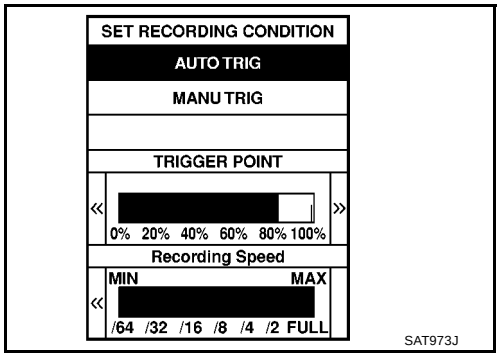
6. Touch “DATA MONITOR”.



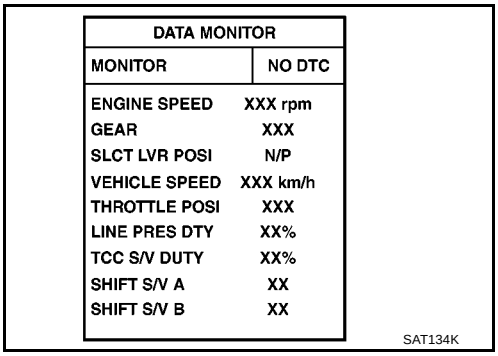
7. Touch “MAIN SIGNALS” or “TCM INPUT SIGNALS”.
8. Select “Numerical Display”, “Barchart Display” or “Line Graph Display”.



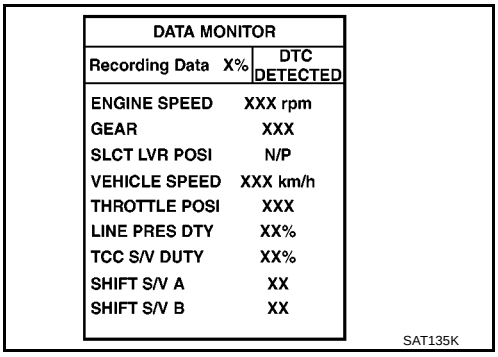
9. Touch “SETTING” to recording condition (“AUTO TRIG” or “MANU TRIG”) and touch “BACK”.
10. Touch “Start”.



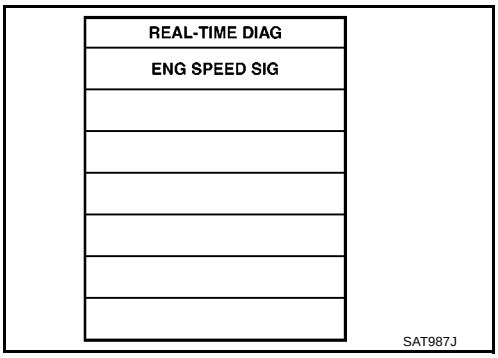
11. When performing cruise test, touch “RECORD”.

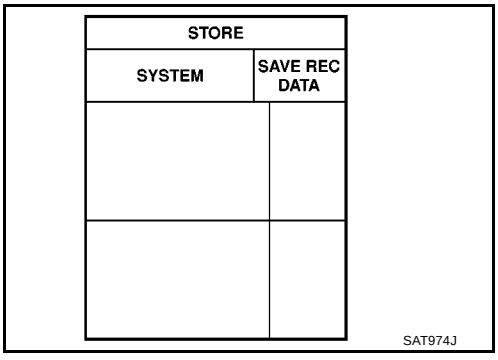


12. After finishing cruise test part 1, touch “STOP”.



13. Touch “STORE” and touch “BACK”.





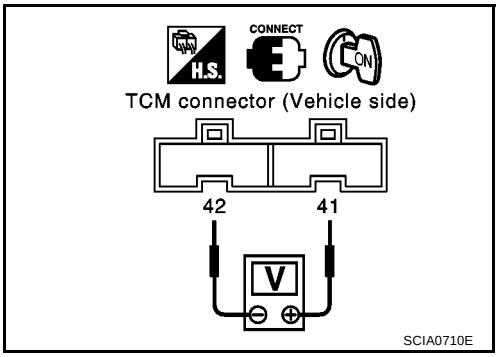
14. Touch “DISPLAY”.
15. Touch “PRINT”.
16. Check the monitor data printed out.
17. Continue cruise test part 2 and 3.

Trigger	VHCL S/SEN A/T	VHCL S/SEN MTR	THRTL POSI SEN
	km/h	km/h	V

SAT975J

Without CONSULT-II

- Throttle position sensor can be checked by voltage across terminals 41 and 42 of TCM.



SCIA0710E

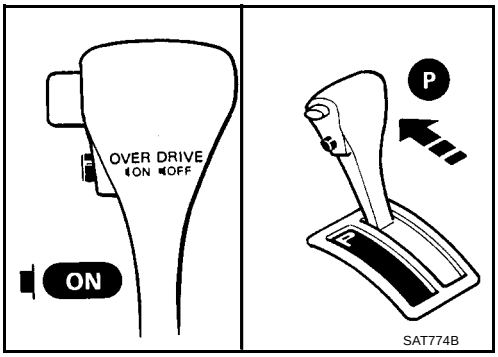
Cruise Test — Part 1

1. CHECK STARTING GEAR (D_1) POSITION

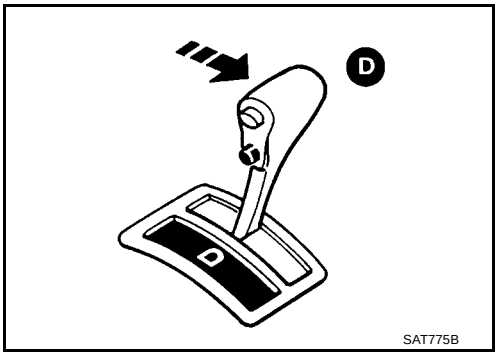
1. Drive vehicle for approx. 10 minutes to warm engine oil and ATF up to operating temperature.

   ATF operating temperature: 50 - 80°C (122 - 176°F)

2. Park vehicle on flat surface.
3. Set overdrive control switch to “ON” position.
4. Move selector lever to “P” position.
5. Start engine.



6. Move selector lever to “D” position.



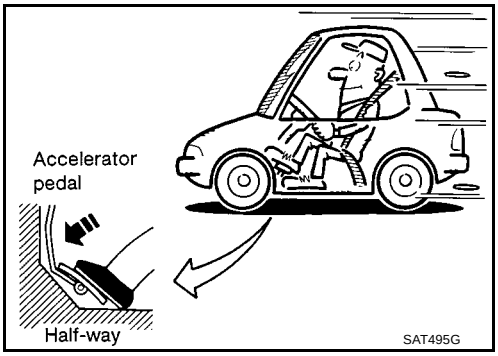
7. Accelerate vehicle by constantly depressing accelerator pedal halfway.
8. Does vehicle start from D_1 ?

   Read gear position.

Yes or No

Yes >> GO TO 2.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-333, "Vehicle Cannot Be Started From D_1" .
- Continue ROAD TEST.



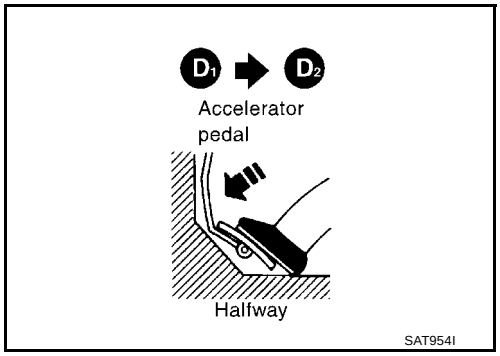
2. CHECK SHIFT UP (D_1 TO D_2)

Does A/T shift from D_1 to D_2 at the specified speed?

Read gear position, throttle opening and vehicle speed.

Specified speed when shifting from D_1 to D_2 :

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 3.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-336, "A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kick down: $D_4 \rightarrow D_2$" .
- Continue ROAD TEST.

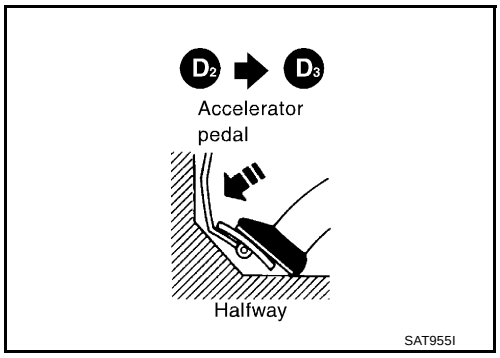
3. CHECK SHIFT UP (D_2 TO D_3)

Does A/T shift from D_2 to D_3 at the specified speed?

Read gear position, throttle position and vehicle speed.

Specified speed when shifting from D_2 to D_3 :

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 4.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-338, "A/T Does Not Shift: $D_2 \rightarrow D_3$" .
- Continue ROAD TEST.

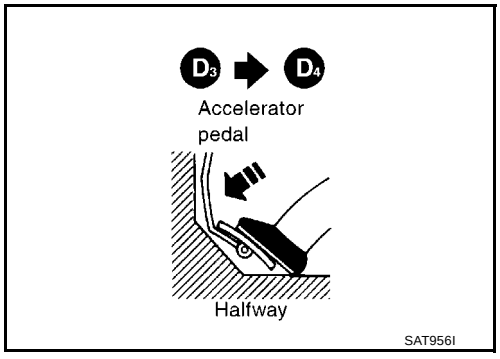
4. CHECK SHIFT UP (D_3 TO D_4)

Does A/T shift from D_3 to D_4 at the specified speed?

Read gear position, throttle position and vehicle speed.

Specified speed when shifting from D_3 to D_4 :

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 5.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-340, "A/T Does Not Shift: $D_3 \rightarrow D_4$" .
- Continue ROAD TEST.

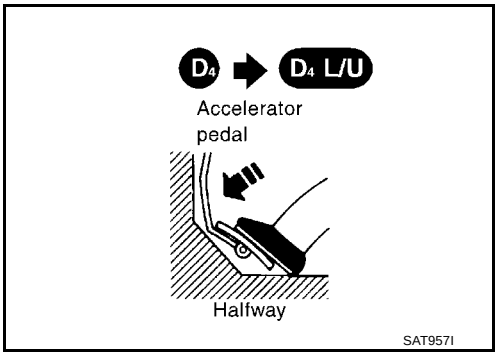
5. CHECK LOCK-UP (D4 TO D4 L/U)

Does A/T perform lock-up at the specified speed?

Read vehicle speed, throttle position when lock-up duty becomes 94%.

Specified speed when lock-up occurs:

Refer to AT-534, "Shift Schedule" .



Yes or No

Yes >> GO TO 6.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-343, "A/T Does Not Perform Lock-up" .
- Continue ROAD TEST.

6. CHECK HOLD LOCK-UP

Does A/T hold lock-up condition for more than 30 seconds?

Yes or No

Yes >> GO TO 7.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-344, "A/T Does Not Hold Lock-up Condition" .
- Continue ROAD TEST.

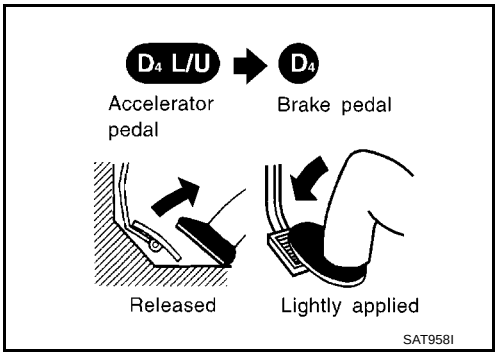
7. CHECK SHIFT DOWN (D4 L/U TO D4)

1. Release accelerator pedal.
2. Is lock-up released when accelerator pedal is released?

Yes or No

Yes >> GO TO 8.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-346, "Lock-up Is Not Released" .
- Continue ROAD TEST.



8. CHECK SHIFT DOWN (D4 TO D3)

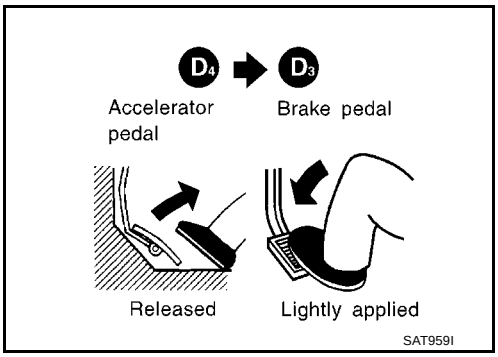
1. Decelerate vehicle by applying foot brake lightly.
2. Does engine speed return to idle smoothly when A/T is shifted from D4 to D3 ?

Read gear position and engine speed.

Yes or No

Yes >>
1. Stop vehicle.
2. GO TO AT-286, "Cruise Test — Part 2" .

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-347, "Engine Speed Does Not Return To Idle (Light Braking D4 → D3)" .
- Continue ROAD TEST.



Cruise Test — Part 2

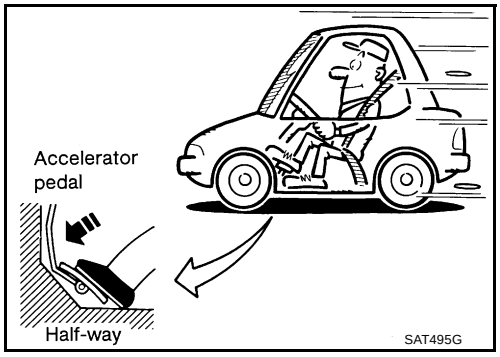
1. CHECK STARTING GEAR (D_1) POSITION

1. Confirm overdrive control switch is in “ON” position.
2. Confirm selector lever is in “D” position.
3. Accelerate vehicle by half throttle again.
4. Does vehicle start from D_1 ?

Read gear position.

Yes or No

Yes >> GO TO 2.
No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-349, "Vehicle Does Not Start From D_1" .
- Continue ROAD TEST.



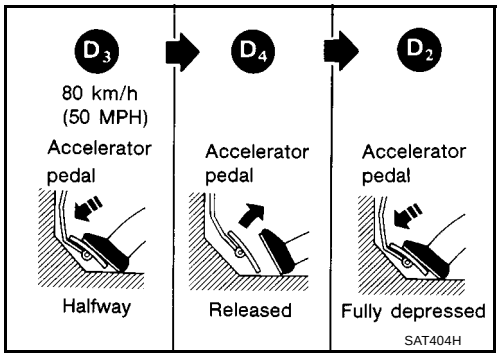
2. CHECK SHIFT UP AND SHIFT DOWN (D_3 TO D_4 TO D_2)

1. Accelerate vehicle to 80 km/h (50 MPH) as shown in illustration.
2. Release accelerator pedal and then quickly depress it fully.
3. Does A/T shift from D_4 to D_2 as soon as accelerator pedal is depressed fully?

Read gear position and throttle position.

Yes or No

Yes >> GO TO 3.
No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-336, "A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kick down: $D_4 \rightarrow D_2$" .
- Continue ROAD TEST.



3. CHECK SHIFT UP (D_2 TO D_3)

Does A/T shift from D_2 to D_3 at the specified speed?

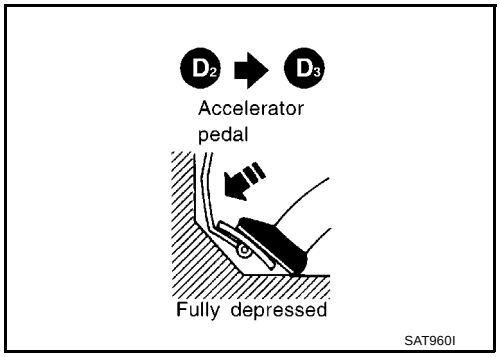
Read gear position, throttle position and vehicle speed.

Specified speed when shifting from D_2 to D_3 :

Refer to AT-534, "Shift Schedule" .

Yes or No

Yes >> GO TO 4.
No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-338, "A/T Does Not Shift: $D_2 \rightarrow D_3$" .
- Continue ROAD TEST.



4. CHECK SHIFT UP (D_3 TO D_4) AND ENGINE BRAKE

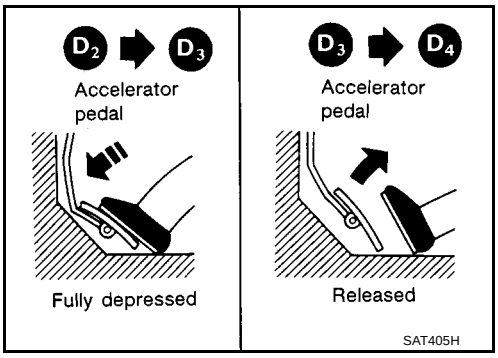
Release accelerator pedal after shifting from D_2 to D_3.
Does A/T shift from D_3 to D_4 and does vehicle decelerate by engine brake?

Read gear position, throttle position and vehicle speed.

Yes or No

Yes >> 1. Stop vehicle.
2. GO TO AT-288, "Cruise Test — Part 3".

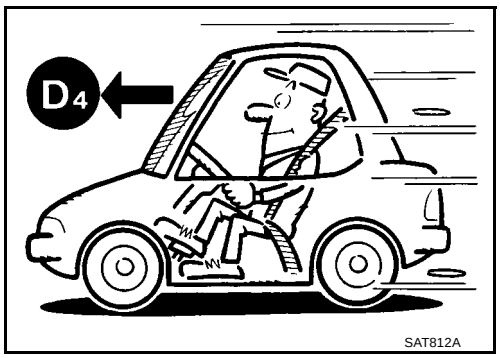
No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-340, "A/T Does Not Shift: $D_3 \rightarrow D_4$".
- Continue ROAD TEST.



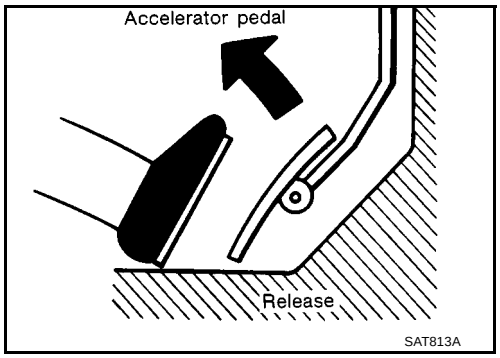
Cruise Test — Part 3

1. CHECK SHIFT DOWN (D_4 TO D_3)

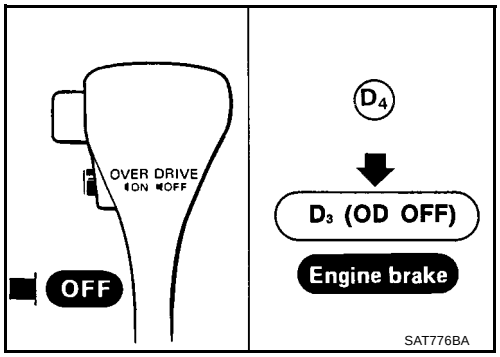
1. Confirm overdrive control switch is in “ON” position.
2. Confirm selector lever is in “D” position.
3. Accelerate vehicle using half-throttle to D_4 .



4. Release accelerator pedal.



5. Set overdrive control switch to “OFF” position while driving in D_4 .



6. Does A/T shift from D_4 to D_3 (O/D OFF)?

Read gear position and vehicle speed.

Yes or No

Yes >> GO TO 2.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-352, "A/T Does Not Shift: $D_4 \rightarrow D_3$, When Overdrive Control Switch “ON” → “OFF”" .
- Continue ROAD TEST.

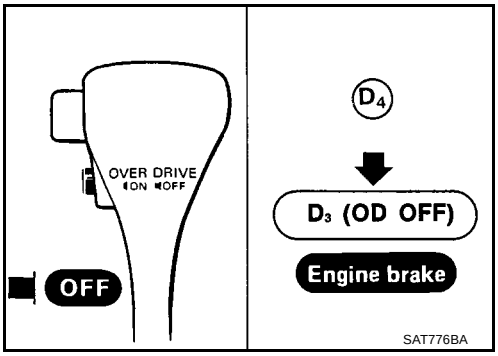
2. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

Yes >> GO TO 3.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-347, "Engine Speed Does Not Return To Idle (Light Braking $D_4 \rightarrow D_3$)".
- Continue ROAD TEST.



3. CHECK SHIFT DOWN (D_3 TO 2_2)

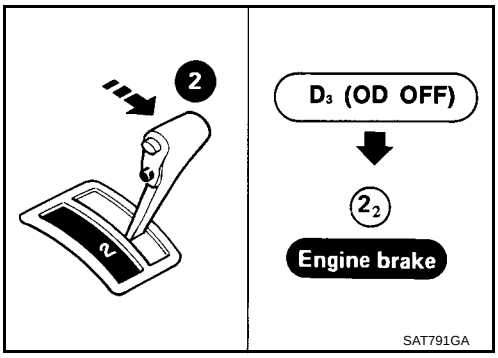
1. Move selector lever from "D" to "2" position while driving in D_3 (O/D OFF).
2. Does A/T shift from D_3 (O/D OFF) to 2_2 ?

Read gear position.

Yes or No

Yes >> GO TO 4.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-353, "A/T Does Not Shift: $D_3 \rightarrow 2_2$, When Selector Lever "D" → "2" Position".
- Continue ROAD TEST.



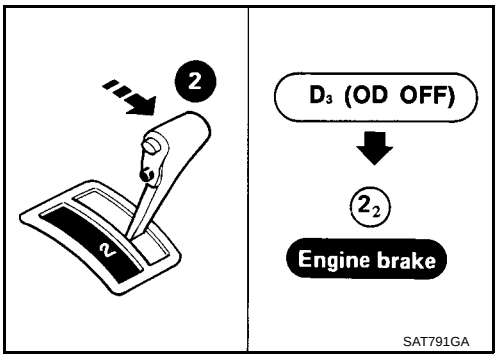
4. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

Yes >> GO TO 5.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-347, "Engine Speed Does Not Return To Idle (Light Braking $D_4 \rightarrow D_3$)".
- Continue ROAD TEST.



5. CHECK SHIFT DOWN

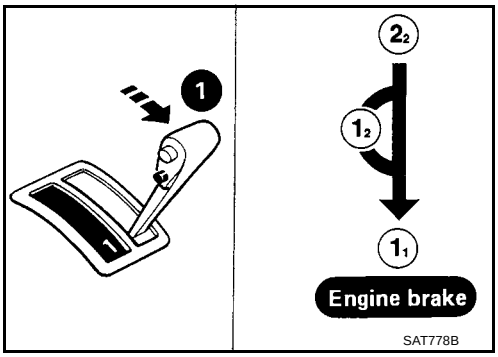
1. Move selector lever from "2" to "1" position while driving in 2_2.
2. Does A/T shift from 2_2 to 1_1 position?

Read gear position.

Yes or No

Yes >> GO TO 6.

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-354, "A/T Does Not Shift: $2_2 \rightarrow 1_1$, When Selector Lever "2" → "1" Position".
- Continue ROAD TEST.



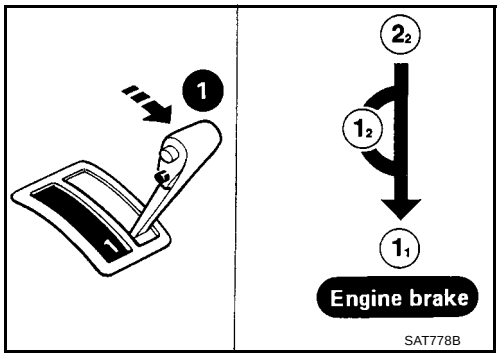
6. CHECK ENGINE BRAKE

Does vehicle decelerate by engine brake?

Yes or No

Yes >> 1. Stop vehicle.
2. Perform self-diagnosis. Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" ,

No >>
- Mark the box on the DIAGNOSTIC WORKSHEET.
- GO TO AT-356, "Vehicle Does Not Decelerate By Engine Brake" .
- Stop ROAD TEST.



TROUBLE DIAGNOSIS — GENERAL DESCRIPTION

PFP:00000

Symptom Chart

ECS008QQ

Numbers are arranged in order of inspection.
Perform inspections starting with number one and work up.

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Engine cannot start in “P” and “N” positions. AT-214, "Engine Cannot Be Started In “P” and “N” Position"	ON vehicle	1. Ignition switch and starter	PG-4, "POWER SUPPLY ROUTING", SC-39, "STARTING SYSTEM"
		2. Control cable adjustment	AT-427, "Control Cable Adjustment"
		3. PNP switch	AT-358, "TCM Self-diagnosis Does Not Activate"
Engine starts in position other than “N” and “P” positions. AT-214, "Engine Cannot Be Started In “P” and “N” Position"	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. PNP switch	AT-358, "TCM Self-diagnosis Does Not Activate"
Transaxle noise in “P” and “N” positions.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		4. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
	OFF vehicle	5. Oil pump	AT-453, "Oil Pump"
		6. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Vehicle moves when changing into “P” position, or parking gear does not disengage when shifted out of “P” position. AT-215, "In “P” Position, Vehicle Moves Forward Or Backward When Pushed"	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
	OFF vehicle	2. Parking components	AT-433, "Components", AT-450, "REPAIR FOR COMPONENT PARTS"
Vehicle runs in “N” position. AT-216, "In “N” Position, Vehicle Moves"	ON vehicle	1. PNP switch	AT-358, "TCM Self-diagnosis Does Not Activate"
		2. Control cable adjustment	AT-427, "Control Cable Adjustment"
	OFF vehicle	3. Forward clutch	AT-482, "Forward and Overrun Clutches"
		4. Reverse clutch	AT-472, "Reverse Clutch"
		5. Overrun clutch	AT-482, "Forward and Overrun Clutches"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Vehicle will not run in “R” position (but runs in “D”, “2” and “1” positions). Clutch slips. Very poor acceleration. AT-218, "Vehicle Does Not Creep Backward In “R” Position"	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. Stall test	AT-269, "Stall Test"
		3. Line pressure test	AT-272, "Line Pressure Test"
		4. Line pressure solenoid valve	AT-405, "LINE PRESSURE SOLENOID VALVE"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. Reverse clutch	AT-472, "Reverse Clutch"
		7. High clutch	AT-477, "High Clutch"
		8. Forward clutch	AT-482, "Forward and Overrun Clutches"
		9. Overrun clutch	AT-482, "Forward and Overrun Clutches"
		10. Low & reverse brake	AT-489, "Low & Reverse Brake"
Vehicle braked when shifting into “R” position.	ON vehicle	1. Fluid level	AT-61, "A/T Fluid Check"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Line pressure solenoid valve	AT-405, "LINE PRESSURE SOLENOID VALVE"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	5. High clutch	AT-477, "High Clutch"
		6. Brake band	AT-503, "Band Servo Piston Assembly"
		7. Forward clutch	AT-482, "Forward and Overrun Clutches"
		8. Overrun clutch	AT-482, "Forward and Overrun Clutches"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Sharp shock in shifting from “N” to “D” position.	ON vehicle	1. Engine idling rpm	EC-41, "Idle Speed and Ignition Timing Check"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-272, "Line Pressure Test"
		4. A/T fluid temperature sensor	AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
		5. Engine speed signal	AT-401, "ENGINE SPEED SIGNAL"
		6. Line pressure solenoid valve	AT-405, "LINE PRESSURE SOLENOID VALVE"
		7. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
		8. Accumulator N-D	AT-426, "Control Valve Assembly and Accumula-tors"
	OFF vehicle	9. Forward clutch	AT-482, "Forward and Overrun Clutches"
Vehicle will not run in “D” and “2” positions (but runs in “1” and “R” positions).	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
	OFF vehicle	2. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjust-ing Shims, Needle Bear-ings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Vehicle will not run in “D”, “1”, “2” positions (but runs in “R” position). Clutch slips. Very poor acceleration. AT-220, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position"	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Stall test	AT-269, "Stall Test"
		3. Line pressure test	AT-272, "Line Pressure Test"
		4. Line pressure solenoid valve	AT-405, "LINE PRESSURE SOLENOID VALVE"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		6. Accumulator N-D	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	7. Reverse clutch	AT-472, "Reverse Clutch"
		8. High clutch	AT-477, "High Clutch"
		9. Forward clutch	AT-482, "Forward and Overrun Clutches"
		10. Forward one-way clutch	AT-433, "OVERHAUL"
		11. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Clutches or brakes slip somewhat in starting.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Control cable adjustment	AT-427, "Control Cable Adjustment"
		3. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		4. Line pressure test	AT-272, "Line Pressure Test"
		5. Line pressure solenoid valve	AT-405, "LINE PRESSURE SOLENOID VALVE"
		6. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
		7. Accumulator N-D	AT-426, "Control Valve Assembly and Accumula-tors"
		8. Shift solenoid valve A	AT-376, "SHIFT SOLE-NOID VALVE A"
		9. Shift solenoid valve B	AT-381, "SHIFT SOLE-NOID VALVE B"
		10. Overrun clutch solenoid valve	AT-386, "OVERRUN CLUTCH SOLENOID VALVE"
		11. Torque converter clutch solenoid valve	AT-390, "TORQUE CON-VERTER CLUTCH SOLE-NOID VALVE"
	OFF vehicle	12. Forward clutch	AT-482, "Forward and Overrun Clutches"
		13. Reverse clutch	AT-472, "Reverse Clutch"
		14. Low & reverse brake	AT-489, "Low & Reverse Brake"
		15. Oil pump	AT-433, "OVERHAUL"
		16. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"
Excessive creep.	ON vehicle	1. Engine idling rpm	EC-41, "Idle Speed and Ignition Timing Check"]
No creep at all. AT-218, "Vehicle Does Not Creep Backward In “R” Position" and AT-220, "Vehicle Does Not Creep For-ward In “D”, “2” Or “1” Position"	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
	OFF vehicle	4. Forward clutch	AT-482, "Forward and Overrun Clutches"
		5. Oil pump	AT-453, "Oil Pump"
		6. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Failure to change gear from “D_1 ” to “D_2 ”.	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. Shift solenoid valve A	AT-376, "SHIFT SOLENOID VALVE A"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		4. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
		5. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
	OFF vehicle	6. Brake band	AT-503, "Band Servo Piston Assembly"
Failure to change gear from “D_2 ” to “D_3 ”.	ON vehicle	1. Control cable adjustment	AT-427, "Control Cable Adjustment"
		2. Shift solenoid valve B	AT-381, "SHIFT SOLENOID VALVE B"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
		4. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
		5. Accelerator pedal position (APP) sensor	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. High clutch	AT-477, "High Clutch"
		7. Brake band	AT-503, "Band Servo Piston Assembly"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Failure to change gear from “D_3 ” to “D_4 ”.	ON vehicle	1. PNP switch	AT-358, "TCM Self-diagnosis Does Not Activate"
		2. Overdrive control switch	AT-247, "TCM Self-diagnosis Does Not Activate"
		3. Shift solenoid valve A	AT-376, "SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-381, "SHIFT SOLENOID VALVE B"
		5. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
		6. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		7. A/T fluid temperature sensor	AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	8. Brake band	AT-503, "Band Servo Piston Assembly"
Too high a gear change point from “D_1 ” to “D_2 ”, from “D_2 ” to “D_3 ”, from “D_3 ” to “D_4 ”. AT-225, "A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kickdown: $D_4 \rightarrow D_2$", AT-227, "A/T Does Not Shift: $D_2 \rightarrow D_3$" and AT-229, "A/T Does Not Shift: $D_3 \rightarrow D_4$"	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
		3. Shift solenoid valve A	AT-376, "SHIFT SOLENOID VALVE A"
		4. Shift solenoid valve B	AT-381, "SHIFT SOLENOID VALVE B"
Gear change directly from “D_1 ” to “D_3 ” occurs.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accumulator servo release	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	3. Brake band	AT-503, "Band Servo Piston Assembly"
Engine stops when shifting lever into “R”, “D”, “2” and “1”.	ON vehicle	1. Engine idling rpm	EC-41, "Idle Speed and Ignition Timing Check"]
		2. Torque converter clutch solenoid valve	AT-390, "TORQUE CONVERTER CLUTCH SOLENOID VALVE"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	4. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Too sharp a shock in change from “D_1 ” to “D_2 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Accumulator servo release	AT-426, "Control Valve Assembly and Accumula-tors"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
		5. A/T fluid temperature sensor	AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	6. Brake band	AT-503, "Band Servo Pis-ton Assembly"
Too sharp a shock in change from “D_2 ” to “D_3 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
		4. A/T fluid temperature sensor	AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	5. High clutch	AT-477, "High Clutch"
		6. Brake band	AT-503, "Band Servo Pis-ton Assembly"
Too sharp a shock in change from “D_3 ” to “D_4 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
		4. A/T fluid temperature sensor	AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
	OFF vehicle	5. Brake band	AT-503, "Band Servo Pis-ton Assembly"
		6. Overrun clutch	AT-482, "Forward and Overrun Clutches"
		7. Forward one-way clutch	AT-433, "OVERHAUL"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Almost no shock or clutches slipping in change from “D_1 ” to “D_2 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-272, "Line Pressure Test"
		4. Accumulator servo release	AT-426, "Control Valve Assembly and Accumulators"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	6. Brake band	AT-503, "Band Servo Piston Assembly"
Almost no shock or slipping in change from “D_2 ” to “D_3 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-272, "Line Pressure Test"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	5. High clutch	AT-477, "High Clutch"
		6. Brake band	AT-503, "Band Servo Piston Assembly"
Almost no shock or slipping in change from “D_3 ” to “D_4 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Line pressure test	AT-272, "Line Pressure Test"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	5. Brake band	AT-503, "Band Servo Piston Assembly"
Vehicle braked by gear change from “D_1 ” to “D_2 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
	OFF vehicle	2. Reverse clutch	AT-472, "Reverse Clutch"
		3. Low & reverse brake	AT-489, "Low & Reverse Brake"
		4. High clutch	AT-477, "High Clutch"
		5. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Vehicle braked by gear change from “D_2 ” to “D_3 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
	OFF vehicle	2. Brake band	AT-503, "Band Servo Piston Assembly"
Vehicle braked by gear change from “D_3 ” to “D_4 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
	OFF vehicle	2. Overrun clutch	AT-386, "OVERRUN CLUTCH SOLENOID VALVE"
		3. Forward one-way clutch	AT-433, "OVERHAUL"
		4. Reverse clutch	AT-472, "Reverse Clutch"
Maximum speed not attained. Acceleration poor.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. PNP switch	AT-358, "TCM Self-diagnosis Does Not Activate"
		3. Overdrive control switch	AT-358, "TCM Self-diagnosis Does Not Activate"
		4. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		5. Shift solenoid valve A	AT-376, "SHIFT SOLENOID VALVE A"
		6. Shift solenoid valve B	AT-381, "SHIFT SOLENOID VALVE B"
		7. Control valve assembly	AT-426, "Control Valve Assembly and Accumulators"
	OFF vehicle	8. Reverse clutch	AT-472, "Reverse Clutch"
		9. High clutch	AT-477, "High Clutch"
		10. Brake band	AT-503, "Band Servo Piston Assembly"
		11. Low & reverse brake	AT-489, "Low & Reverse Brake"
		12. Oil pump	AT-453, "Oil Pump"
		13. Torque converter	AT-437, "Locations of Adjusting Shims, Needle Bearings, Thrust Washers and Snap Rings"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Failure to change gear from “D4 ” to “D3 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Overrun clutch solenoid valve	AT-386, "OVERRUN CLUTCH SOLENOID VALVE"
		4. Shift solenoid valve A	AT-376, "SHIFT SOLE-NOID VALVE A"
		5. Line pressure solenoid valve	AT-405, "LINE PRESSURE SOLENOID VALVE"
		6. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
	OFF vehicle	7. Brake band	AT-503, "Band Servo Pis-ton Assembly"
		8. Overrun clutch	AT-482, "Forward and Overrun Clutches"
Failure to change gear from “D3 ” to “D2 ” or from “D4 ” to “D2 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Shift solenoid valve A	AT-376, "SHIFT SOLE-NOID VALVE A"
		4. Shift solenoid valve B	AT-381, "SHIFT SOLE-NOID VALVE B"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
	OFF vehicle	6. High clutch	AT-477, "High Clutch"
		7. Brake band	AT-503, "Band Servo Pis-ton Assembly"

Symptom	Condition	Diagnostic Item	Reference Page
			EURO-OBD
Failure to change gear from “D2 ” to “D1 ” or from “D3 ” to “D1 ”.	ON vehicle	1. Fluid level	AT-61, "FLUID LEVEL CHECK"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		3. Shift solenoid valve A	AT-376, "SHIFT SOLE-NOID VALVE A"
		4. Shift solenoid valve B	AT-381, "SHIFT SOLE-NOID VALVE B"
		5. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
	OFF vehicle	6. Low one-way clutch	AT-433, "OVERHAUL", AT-437, "Locations of Adjust-ing Shims, Needle Bear-ings, Thrust Washers and Snap Rings"
		7. High clutch	AT-477, "High Clutch"
		8. Brake band	AT-503, "Band Servo Pis-ton Assembly"
Gear change shock felt during deceleration by releasing accelera-tor pedal.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Line pressure test	AT-272, "Line Pressure Test"
		3. Overrun clutch solenoid valve	AT-386, "OVERRUN CLUTCH SOLENOID VALVE"
		4. Control valve assembly	AT-426, "Control Valve Assembly and Accumula-tors"
Too high a change point from “D4 ” to “D3 ”, from “D3 ” to “D2 ”, from “D2 ” to “D1 ”.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLU-TION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
Kickdown does not operate when depressing pedal in “D4 ” within kick down vehicle speed.	ON vehicle	1. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"
		2. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLU-TION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
		3. Shift solenoid valve A	AT-376, "SHIFT SOLE-NOID VALVE A"
		4. Shift solenoid valve B	AT-381, "SHIFT SOLE-NOID VALVE B"

Symptom	Condition	Diagnostic Item	Reference Page EURO-OBD
Kickdown operates or engine over-runs when depressing pedal in “D4 ” beyond kick down vehicle speed limit.	ON vehicle	1. Vehicle speed sensor·A/T (Revolution sensor) and vehicle speed sensor·MTR	AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLU-TION SENSOR)", AT-367, "DTC VEHICLE SPEED SENSOR MTR"
		2. Accelerator pedal position (APP) sensor	AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR"

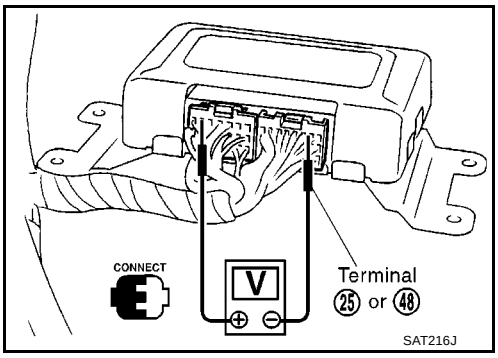
TCM Terminals and Reference Value

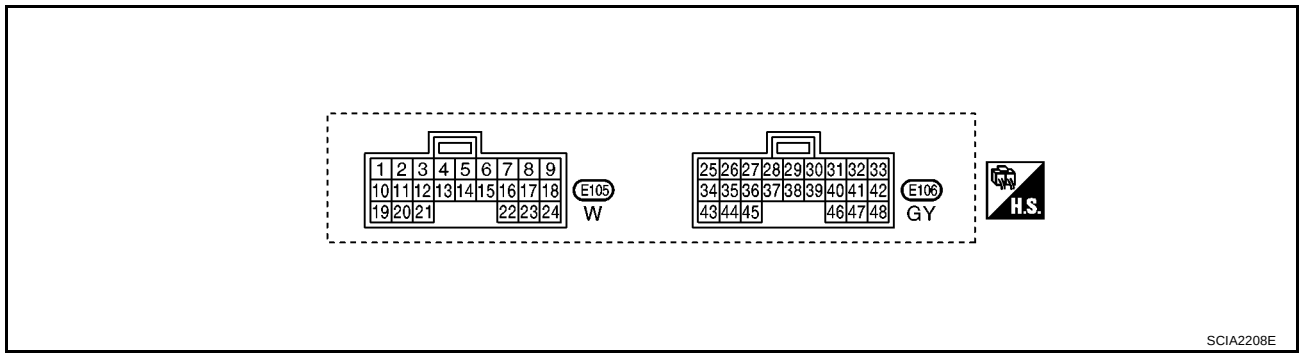
ECS0094W

PREPARATION

- Measure voltage between each terminal and terminal 25 or 48 by following “TCM INSPECTION TABLE”.



TCM HARNESS CONNECTOR TERMINAL LAYOUT



TCM INSPECTION TABLE

(Data are reference values.)

Terminal No.	Wire color	Item	Condition		Judgementstandard(Approx.)
1	PU	Line pressure solenoid valve		When releasing accelerator pedal after warming up engine.	1.5 - 3.0V
				When depressing accelerator pedal fully after warming up engine.	0V
2	BR	Line pressure solenoid valve (with dropping resistor)		When releasing accelerator pedal after warming up engine.	4 - 14V
				When depressing accelerator pedal fully after warming up engine.	0V
3	GY	Torque converter clutch solenoid valve		When A/T performs lock-up.	8 - 15V
				When A/T does not perform lock-up.	0V
5	R	CAN-H (high)	—	—	—
6	W	CAN-L (low)	—	—	—
10	G	Power source		When turning ignition switch to “ON”.	Battery voltage
				When turning ignition switch to “OFF”.	0V

Terminal No.	Wire color	Item	Condition		Judgementstandard(Approx.)
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D1 ” or “D4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D2 ” or “D3 ”.)	0V
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D1 ” or “D2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D3 ” or “D4 ”.)	0V
19	G	Power source		Same as No. 10	
20	Y	Overrun clutch solenoid valve		When overrun clutch solenoid valve operates.	Battery voltage
				When overrun clutch solenoid valve does not operate.	0V
25	B	Ground	Always		0V
26	BR	PNP switch “1” position		When setting selector lever to “1” position.	Battery voltage
				When setting selector lever to other positions.	0V
27	LG	PNP switch “2” position		When setting selector lever to “2” position.	Battery voltage
				When setting selector lever to other positions.	0V
28	GY	Power source (Memory back-up)	Always		Battery voltage
29	OR	Revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 **CAUTION:** **Connect the diagnosis data link cable to the vehicle diagnosis connector.** *1: A circuit tester cannot be used to test this item.	150 Hz
30 *3	L	CONSULT- II (RX)		—	—
31 *3	BR	CONSULT- II (TX)		—	—
32 *2	OR	Throttle position sensor (Power source)		When turning ignition switch to “ON”.	4.5 - 5.5V
				When turning ignition switch to “OFF”.	0V

Terminal No.	Wire color	Item	Condition		Judgementstandard(Approx.)
34	P	PNP switch “D” position		When setting selector lever to “D” position.	Battery voltage
				When setting selector lever to other positions.	0V
35	R	PNP switch “R” position		When setting selector lever to “R” position.	Battery voltage
				When setting selector lever to other positions.	0V
36	Y	PNP switch “N” or “P” position		When setting selector lever to “N” or “P” position.	Battery voltage
				When setting selector lever to other positions.	0V
39 *2	L	Engine speed signal		—	EC-94, "ECM INSPECTION TABLE"
40	G	Vehicle speed sensor		When moving vehicle at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.	Voltage varies between less than 0V and more than 4.5V
41	Y	Throttle position sensor		When depressing accelerator pedal slowly after warming up engine. (Voltage rises gradually in response to throttle position.)	Fully-closed throttle: 0.5V Fully-open throttle: 4V
42	B	Throttle position sensor (Ground)	Always		0V
47	PU	A/T fluid temperature sensor		When ATF temperature is 20°C (68°F).	1.5V
				When ATF temperature is 80°C (176°F).	0.5V
48	B	Ground	Always		0V

*2: These terminals are connected to the ECM.
*3: These terminals are connected to the data link connector.

CAN COMMUNICATION

PFP:23710

CAN Communication

ECS00CVL

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

ECS00CVM

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door							
Axle	2WD							
Engine	CR10DE/CR12DE/CR14DE				CR12DE/CR14DE

ECS008QU

SYMPTOM:
O/D OFF indicator lamp does not come on for about 2 seconds when turning ignition switch to “ON”.

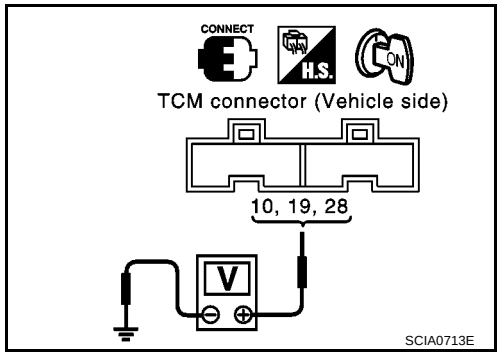
1. CHECK TCM POWER SOURCE

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

Voltage: Battery voltage

3. Turn ignition switch to “OFF” position.
4. Check voltage between TCM terminal 28 and ground.

Voltage: Battery voltage



OK or NG

OK >> GO TO 2.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

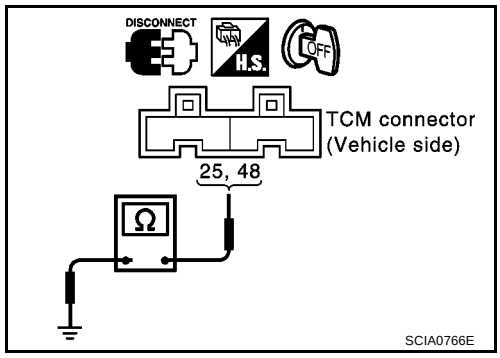
- Harness for short or open between battery, fuse and TCM terminals 10, 19 and 28
- Refer to AT-415, "Wiring Diagram — AT — MAIN" .
- Ignition switch and fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK TCM GROUND CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground.

Continuity should exist.

If OK, check harness for short to ground and short to power.



OK or NG

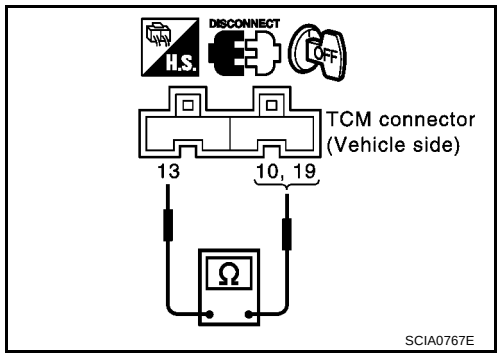
OK >> GO TO 3.
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors. Refer to AT-415, "Wiring Diagram — AT — MAIN" .

3. CHECK LAMP CIRCUIT

1. Check continuity between TCM terminals 13 and 10, 19.

Continuity should exist.

2. Reinstall any part removed.



OK or NG

OK >> GO TO 4.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- O/D OFF indicator lamp.
  Refer to DI-21, "Combination Meter" .
- Harness and fuse for short or open between fuse and O/D OFF indicator lamp
  Refer to PG-4, "POWER SUPPLY ROUTING" .
- Harness for short or open between O/D OFF indicator lamp and TCM.

4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Engine Cannot Be Started In “P” and “N” Position

ECS008QV

SYMPTOM:

- **Engine cannot be started with selector lever in “P” or “N” position.**
- **Engine can be started with selector lever in “D”, “2”, “1” or “R” position.**

1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II

Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

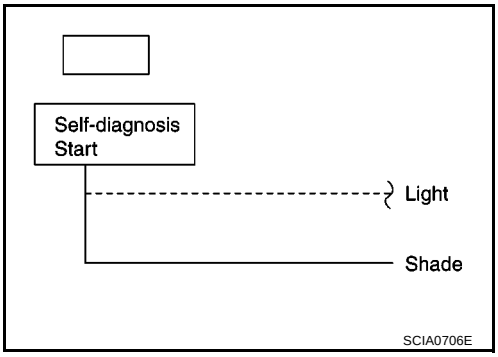
Without CONSULT-II

Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-358, "TCM Self-diagnosis Does Not Activate" .

No >> GO TO 2.



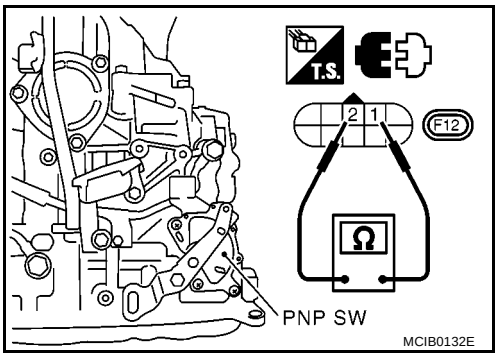
2. CHECK PNP SWITCH INSPECTION

Check for short or open of PNP switch harness connector terminals 1 and 2.
Refer to AT-358, "TCM Self-diagnosis Does Not Activate" .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace PNP switch.



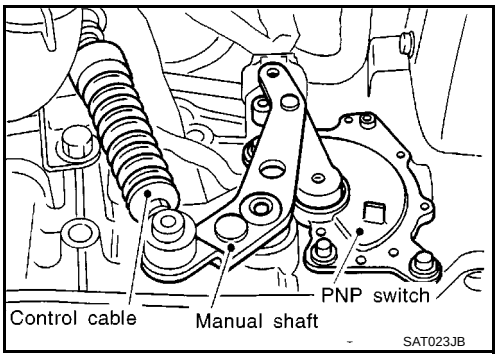
3. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 4.

NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



4. CHECK STARTING SYSTEM

Check starting system. Refer to SC-39, "STARTING SYSTEM" .

OK or NG

OK >> **INSPECTION END**

NG >> Repair or replace damaged parts.

In “P” Position, Vehicle Moves Forward Or Backward When Pushed

ECS008QW

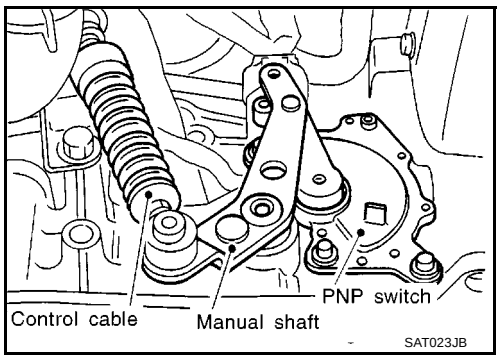
SYMPTOM:
Vehicle moves when it is pushed forward or backward with selector lever in “P” position.

1. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 2.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .

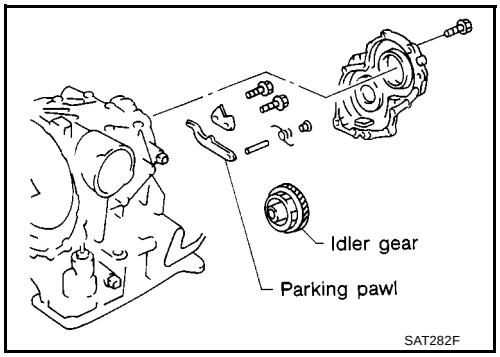


2. CHECK PARKING COMPONENTS

Check parking components. Refer to AT-433, "OVERHAUL" .

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.



In “N” Position, Vehicle Moves

ECS008QX

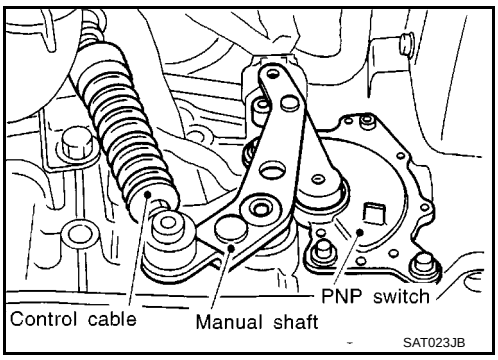
SYMPTOM:
Vehicle moves forward or backward when selecting “N” position.

1. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 2.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .

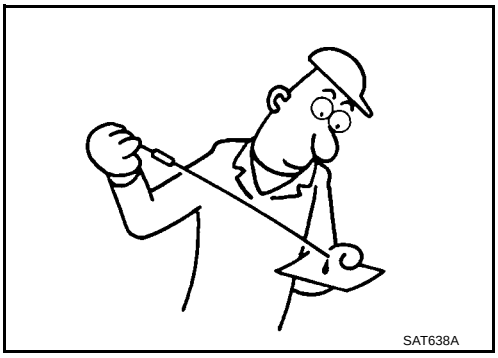


2. CHECK A/T FLUID LEVEL

Check A/T fluid level again.

OK or NG

OK >> GO TO 3.
NG >> Refill ATF.

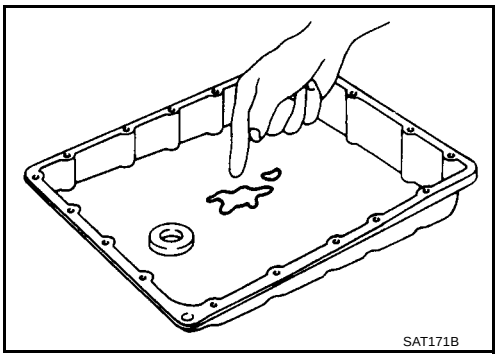


3. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 4.
NG >> 1. Disassemble A/T.
2. Check the following items:
- Forward clutch assembly
- Overrun clutch assembly
- Reverse clutch assembly



4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Large Shock. “N” → “R” Position

ECS008QY

SYMPTOM:
There is large shock when changing from “N” to “R” position.

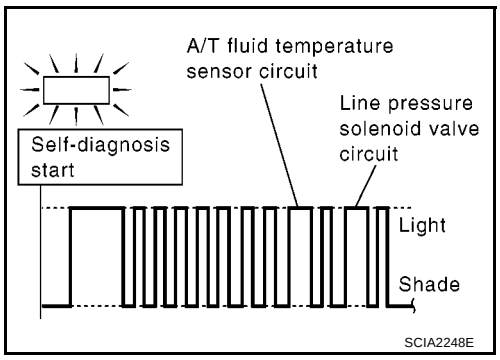
1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to A/T fluid temperature sensor, line pressure solenoid valve circuit?

Yes or No

Yes >> ● Check damaged circuit. Refer to the following items.
- AT-405, "LINE PRESSURE SOLENOID VALVE"
- AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"

No >> GO TO 2.



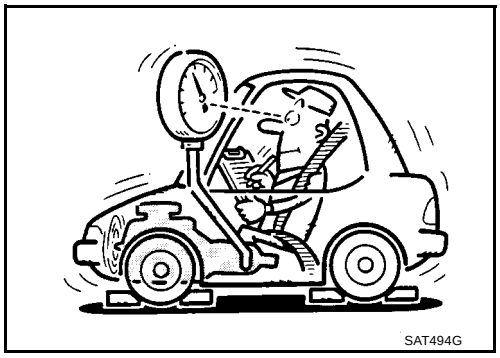
2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “D” position. Refer to AT-272, "Line Pressure Test" .

OK or NG

OK >> GO TO 3.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve
- Oil pump assembly



3. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Vehicle Does Not Creep Backward In “R” Position

ECS008QZ

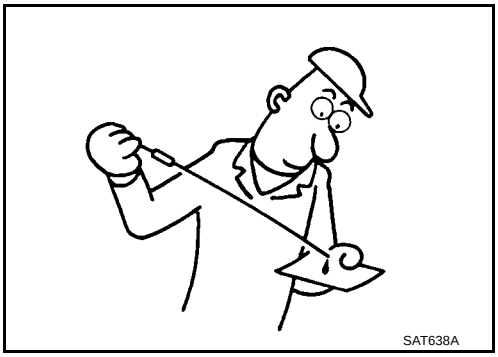
SYMPTOM:
Vehicle does not creep backward when selecting “R” position.

1. CHECK A/T FLUID LEVEL

Check A/T fluid level again.

OK or NG

OK >> GO TO 2.
NG >> Refill ATF.



SAT638A

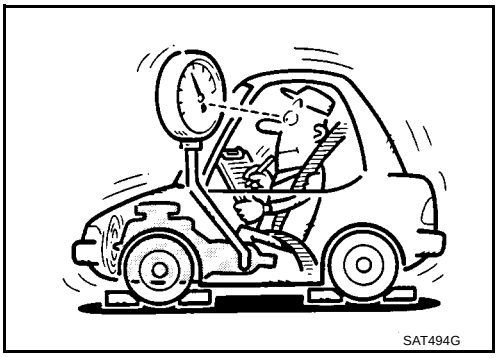
2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “R” position. Refer to AT-272, "Line Pressure Test" .

OK or NG

OK >> GO TO 3.
NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve (AT-405, "LINE PRESSURE SOLENOID VALVE")

3. Disassemble A/T.
4. Check the following item:
- Oil pump assembly



SAT494G

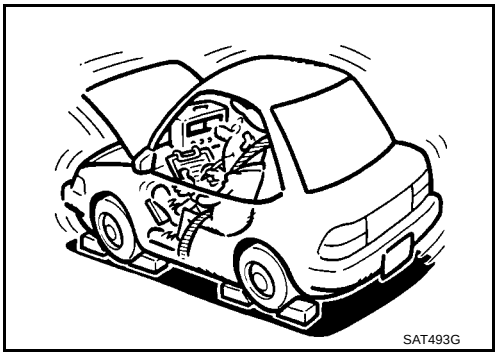
3. CHECK STALL TEST

Check stall revolution with selector lever in “1” and “R” positions.
Refer to AT-269, "Stall Test" .

OK or NG

OK >> GO TO 4.
OK in “1” position, NG in “R” position>>1.Disassemble A/T.
2. Check the following items:
- Reverse clutch assembly
- Low & reverse brake assembly

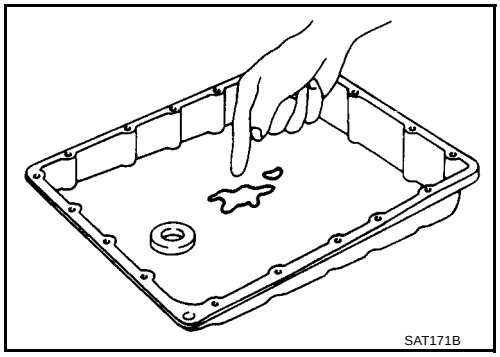
NG in both “1” and “R” positions>>GO TO 6.



SAT493G

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 6.

5. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

6. DETECT MALFUNCTIONING ITEM

1. Disassemble A/T.
2. Check the following items:

- Reverse clutch assembly
- High clutch assembly
- Low & reverse brake assembly
- Forward clutch assembly
- Overrun clutch assembly

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position

ECS008R0

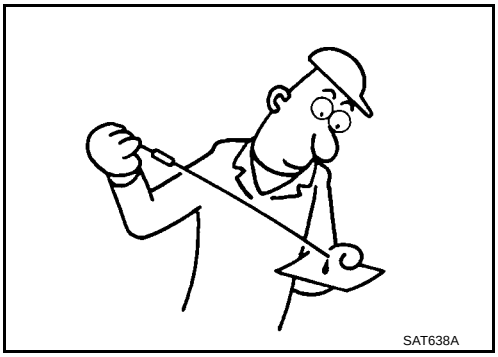
SYMPTOM:
Vehicle does not creep forward when selecting “D”, “2” or “1” position.

1. CHECK A/T FLUID LEVEL

Check A/T fluid level again.

OK or NG

OK >> GO TO 2.
NG >> Refill ATF.



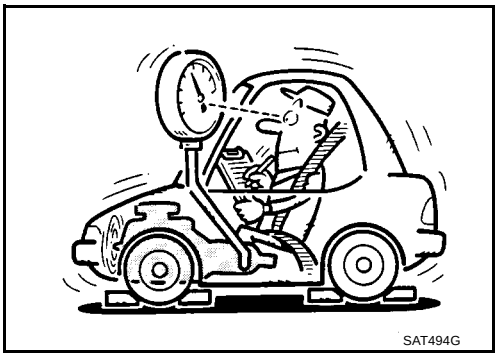
2. CHECK LINE PRESSURE

Check line pressure at idle with selector lever in “D” position. Refer to AT-272, "Line Pressure Test" .

OK or NG

OK >> GO TO 3.
NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Valves to control line pressure (Pressure regulator valve, pressure modifier valve, pilot valve and pilot filter)
- Line pressure solenoid valve (AT-405, "LINE PRESSURE SOLENOID VALVE")

3. Disassemble A/T.
4. Check the following item:
- Oil pump assembly

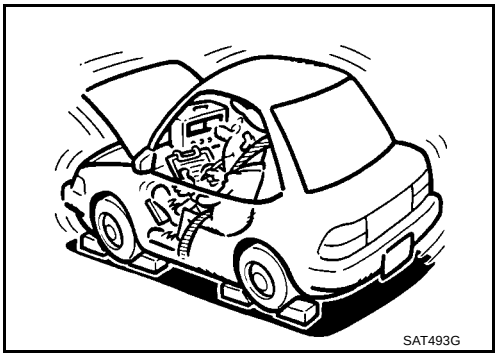


3. CHECK STALL TEST

Check stall revolution with selector lever in “D” position. Refer to AT-269, "Stall Test" .

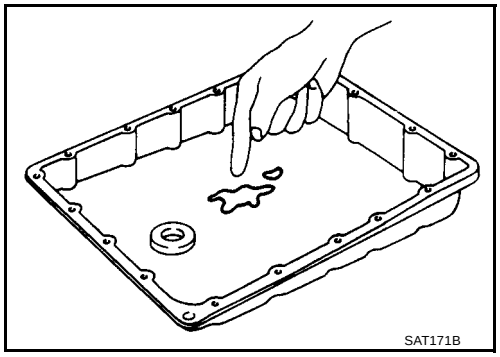
OK or NG

OK >> GO TO 4.
NG >> GO TO 6.



4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 6.

5. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

6. DETECT MALFUNCTIONING ITEM

1. Disassemble A/T.
2. Check the following items:

- Forward clutch assembly
- Forward one-way clutch
- Low one-way clutch
- Reverse clutch assembly
- High clutch assembly

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Vehicle Cannot Be Started From D1

ECS008R1

SYMPTOM:
Vehicle cannot be started from D1 on Cruise test — Part 1.

1. CHECK SYMPTOM

Is Vehicle Does Not Creep Backward In “R” Position OK?

Yes or No

Yes >> GO TO 2
No >> Go to Vehicle Does Not Creep Backward In “R” Position, AT-329, "Vehicle Does Not Creep Backward In “R” Position" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to vehicle speed sensor·A/T (revolution sensor), shift solenoid valve A, B, overrun clutch solenoid valve, vehicle speed sensor·MTR after cruise test?

Yes or No

Yes >> ● Check damaged circuit. Refer to the following items.
- AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)"
- AT-367, "DTC VEHICLE SPEED SENSOR MTR"
- AT-376, "SHIFT SOLENOID VALVE A"
- AT-381, "SHIFT SOLENOID VALVE B"
- AT-386, "OVERRUN CLUTCH SOLENOID VALVE"

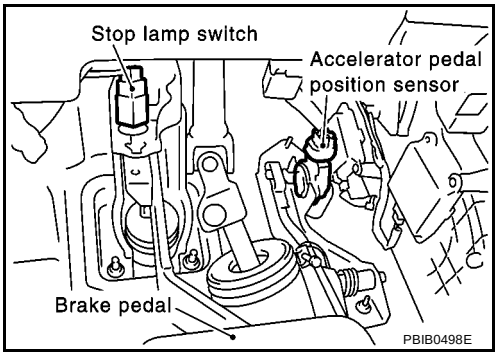
No >> GO TO 3.

3. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace accelerator pedal position (APP) sensor.

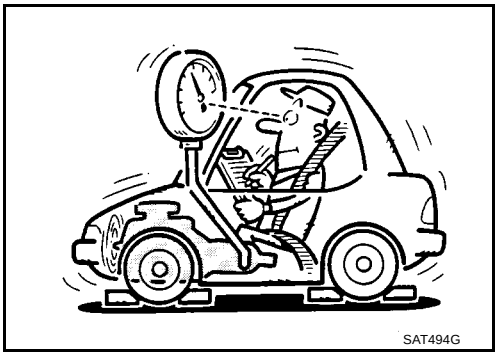


4. CHECK LINE PRESSURE

Check line pressure at stall point with selector lever in “D” position. Refer to AT-272, "Line Pressure Test" .

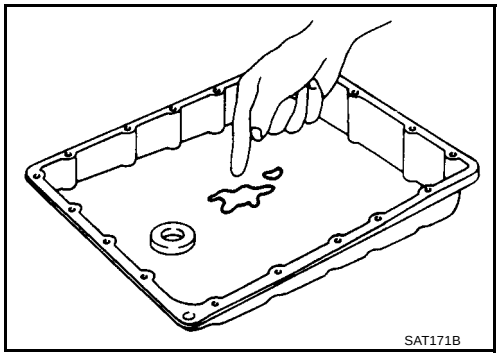
OK or NG

OK >> GO TO 5.
NG >> GO TO 8.



5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 8.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

8. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Forward clutch assembly
- Torque converter
- Oil pump assembly
- Reverse clutch assembly
- Low & reverse clutch assembly

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: D1 → D2 Or Does Not Kick down: D4 → D2

ECS008R2

SYMPTOM:
A/T does not shift from D1 to D2 at the specified speed.
A/T does not shift from D4 to D2 when depressing accelerator pedal fully at the specified speed.

1. CHECK SYMPTOM

Are Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position and Vehicle Cannot Be Started From D1 OK?

Yes or No

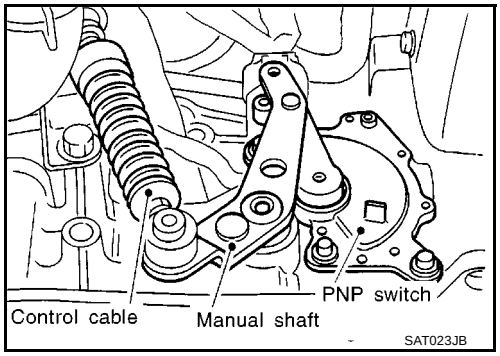
Yes >> GO TO 2
No >> Go to AT-331, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" , AT-333, "Vehicle Cannot Be Started From D1" .

2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



3. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" and AT-367, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

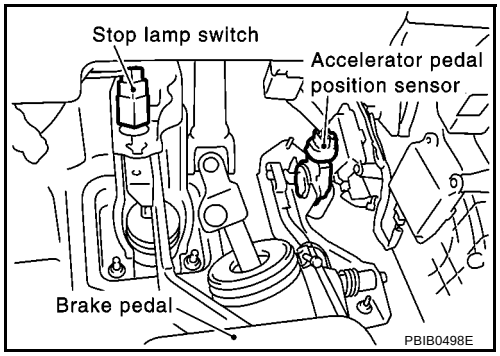
OK >> GO TO 4.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

4. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

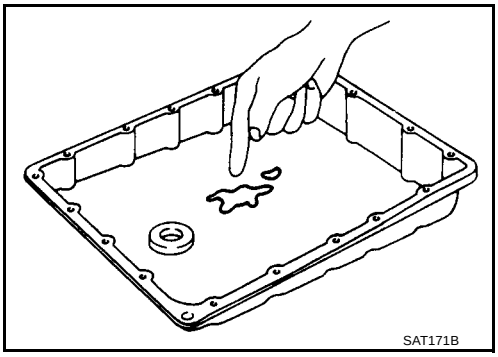
OK or NG

OK >> GO TO 5
NG >> Repair or replace accelerator pedal position (APP) sensor.



5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6
NG >> GO TO 8

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 7
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

8. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- Brake band

OK or NG

OK >> GO TO 7
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_2 \rightarrow D_3$

ECS008R3

SYMPTOM:
A/T does not shift from D_2 to D_3 at the specified speed.

1. CHECK SYMPTOM

Are Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position and Vehicle Cannot Be Started From D_1 OK?

Yes or No

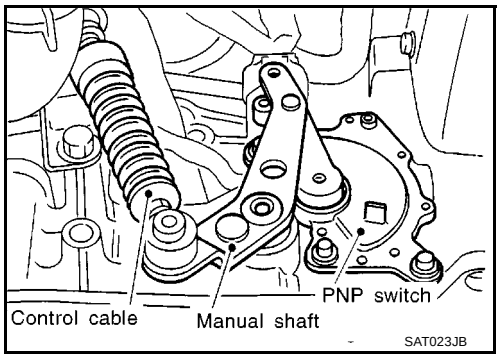
Yes >> GO TO 2.
No >> Go to AT-331, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" , AT-333, "Vehicle Cannot Be Started From D_1" .

2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



3. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" and AT-367, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

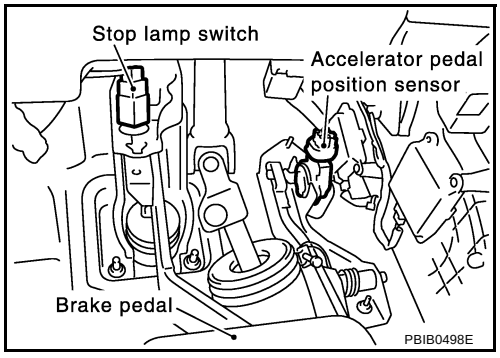
OK >> GO TO 4.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

4. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

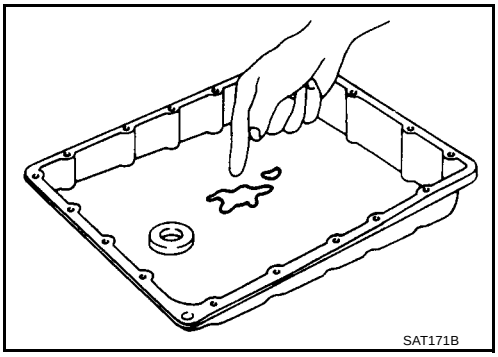
OK or NG

OK >> GO TO 5.
NG >> Repair or replace accelerator pedal position (APP) sensor.



5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 8.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve B
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

8. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve B
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- High clutch assembly
- Brake band

OK or NG

OK >> GO TO 7.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_3 \rightarrow D_4$

ECS008R4

SYMPTOM:

- **A/T does not shift from D_3 to D_4 at the specified speed.**
- **A/T must be warm before D_3 to D_4 shift will occur.**

1. CHECK SYMPTOM

Are Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position and Vehicle Cannot Be Started From D_1 OK?

Yes or No

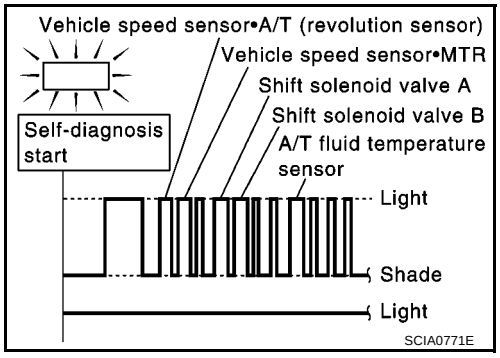
Yes >> GO TO 2.
No >> Go to AT-331, "Vehicle Does Not Creep Forward In “D”, “2” Or “1” Position" .

2. CHECK SELF-DIAGNOSTIC RESULTS

With CONSULT-II

Does self-diagnosis, after cruise test, show damage to any of the following circuits?

- PNP switch
- Overdrive control switch
- A/T fluid temperature sensor
- Vehicle speed sensor·A/T (revolution sensor)
- Shift solenoid valve A or B
- Vehicle speed sensor·MTR



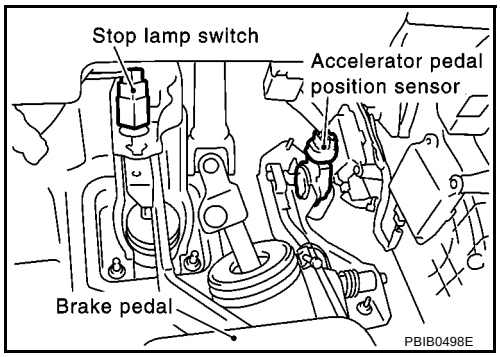
Yes or No

Yes >>
- Check damaged circuit. Refer to the following items.
  - AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)"
  - AT-376, "SHIFT SOLENOID VALVE A"
  - AT-381, "SHIFT SOLENOID VALVE B"
  - AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)"
  - AT-367, "DTC VEHICLE SPEED SENSOR MTR"
  - AT-358, "TCM Self-diagnosis Does Not Activate"

No >> GO TO 3.

3. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

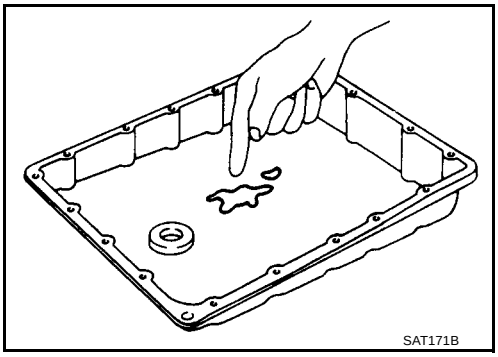


OK or NG

OK >> GO TO 4
NG >> Repair or replace accelerator pedal position (APP) sensor.

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5
NG >> GO TO 7

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Overrun clutch control valve
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

7. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Servo piston assembly
- Brake band

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

A/T Does Not Perform Lock-up

ECS008R5

SYMPTOM:
A/T does not perform lock-up at the specified speed.

1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to PNP switch, A/T fluid temperature sensor, vehicle speed sensor·A/T (revolution sensor), vehicle speed sensor·MTR, engine speed signal or torque converter clutch solenoid valve circuit after cruise test?

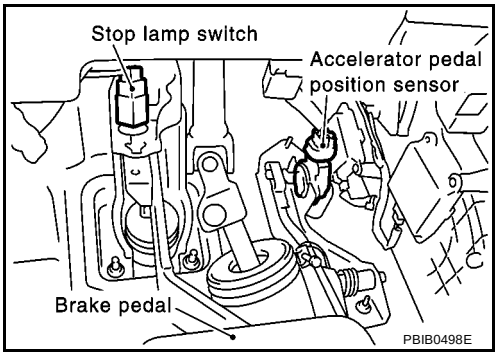
Yes or No

Yes >> Check damaged circuit. Refer to AT-358, "TCM Self-diagnosis Does Not Activate" , AT-390, "TORQUE CONVERTER CLUTCH SOLENOID VALVE" , AT-395, "BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)" , AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" , AT-367, "DTC VEHICLE SPEED SENSOR MTR" , AT-401, "ENGINE SPEED SIGNAL" .

No >> GO TO 2.

2. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .



OK or NG

OK >> GO TO 3.

NG >> Repair or replace accelerator pedal position (APP) sensor.

3. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Torque converter clutch control valve
- Torque converter relief valve
- Pilot valve
- Pilot filter
3. Disassemble A/T.
4. Check torque converter.

OK or NG

OK >> GO TO 4.

NG >> Repair or replace damaged parts.

4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

A/T Does Not Hold Lock-up Condition

ECS008R6

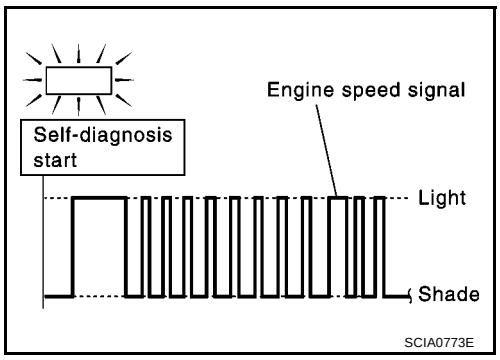
SYMPTOM:
A/T does not hold lock-up condition for more than 30 seconds.

1. CHECK DIAGNOSTIC RESULTS

Does self-diagnosis show damage to engine speed signal circuit after cruise test?

Yes or No

Yes >> Check engine speed signal circuit. Refer to AT-401, "ENGINE SPEED SIGNAL" .
No >> GO TO 2.

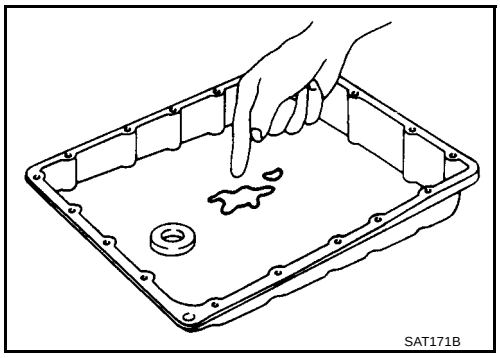


2. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 3.
NG >> GO TO 5.



3. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Torque converter clutch control valve
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

4. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Torque converter clutch control valve
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following item:

- Torque converter

OK or NG

OK >> GO TO 4.
NG >> Repair or replace damaged parts.

Lock-up Is Not Released

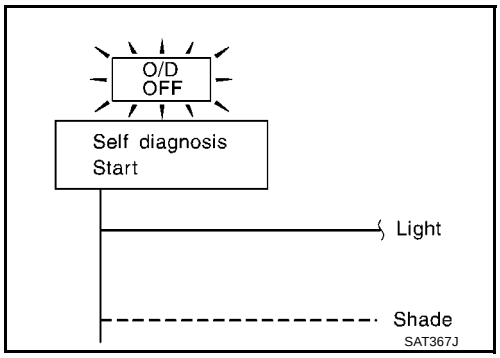
ECS008R7

SYMPTOM:
Lock-up is not released when accelerator pedal is released.

1. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR CIRCUIT

With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage accelerator pedal position (APP) sensor circuit?

Without CONSULT-II
Does self-diagnosis show damage to accelerator pedal position (APP) sensor circuit?



Yes or No

Yes >> Check accelerator pedal position (APP) sensor circuit. Refer to AT-358, "TCM Self-diagnosis Does Not Activate" .
No >> GO TO 2.

2. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Engine Speed Does Not Return To Idle (Light Braking D4 → D3)

ECS008R8

SYMPTOM:

- **Engine speed does not smoothly return to idle when A/T shifts from D4 to D3 .**
- **Vehicle does not decelerate by engine brake when turning overdrive control switch OFF.**
- **Vehicle does not decelerate by engine brake when shifting A/T from "D" to "2" position.**

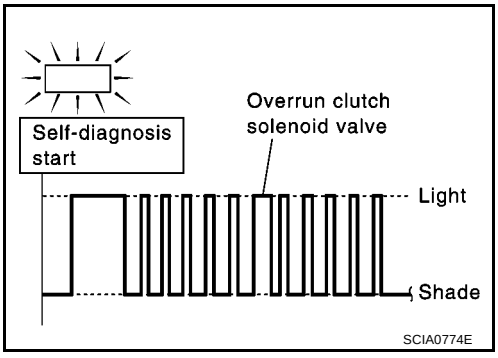
1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to overrun clutch solenoid valve circuit after cruise test?

Yes or NO

Yes >> Check overrun clutch solenoid valve circuit. Refer to AT-386, "OVERRUN CLUTCH SOLENOID VALVE" .

No >> GO TO 2.



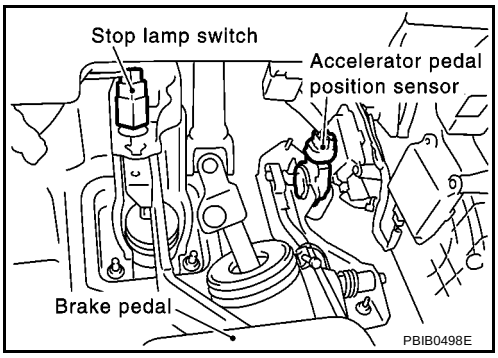
2. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

OK >> GO TO 3.

NG >> Repair or replace accelerator pedal position (APP) sensor.



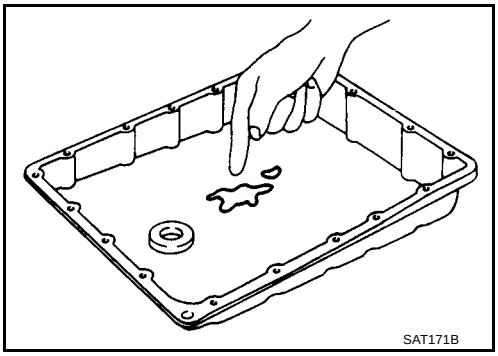
3. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.

OK or NG

OK >> GO TO 4.

NG >> GO TO 6.



4. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Overrun clutch control valve
- Overrun clutch reducing valve
- Overrun clutch solenoid valve

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Overrun clutch control valve
- Overrun clutch reducing valve
- Overrun clutch solenoid valve

3. Disassemble A/T.
4. Check the following item:

- Overrun clutch assembly

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

Vehicle Does Not Start From D1

ECS008R9

SYMPTOM:
Vehicle does not start from D1 on Cruise test — Part 2.

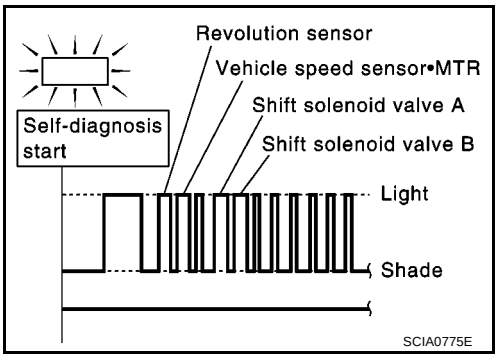
1. CHECK SELF-DIAGNOSTIC RESULTS

Does self-diagnosis show damage to vehicle speed sensor·A/T (revolution sensor), shift solenoid valve A, B or vehicle speed sensor·MTR after cruise test?

Yes or No

Yes >> ● Check damaged circuit. Refer to the following items.
- AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)"
- AT-376, "SHIFT SOLENOID VALVE A"
- AT-381, "SHIFT SOLENOID VALVE B"
- AT-367, "DTC VEHICLE SPEED SENSOR MTR"

No >> GO TO 2.

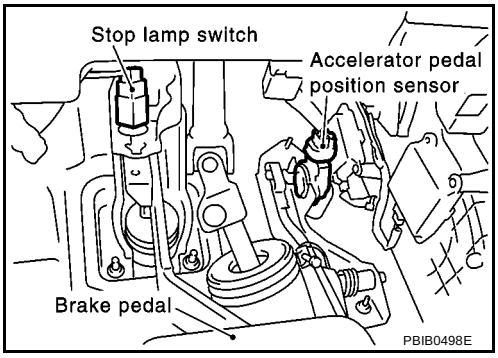


2. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace accelerator pedal position (APP) sensor.

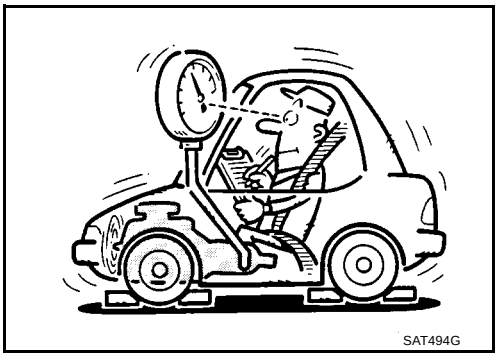


3. CHECK LINE PRESSURE

Check line pressure at stall point with selector lever in “D” position. Refer to AT-272, "Line Pressure Test" .

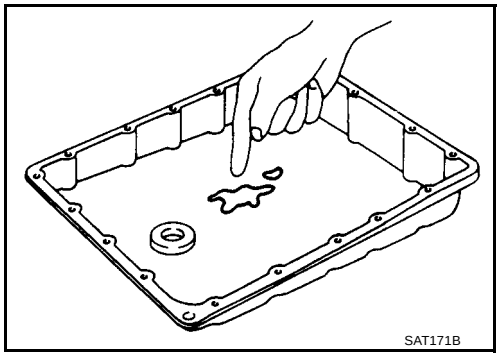
OK or NG

OK >> GO TO 4.
NG >> GO TO 7.



4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 5.
NG >> GO TO 7.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again.

OK or NG

OK >> Go to AT-333, "Vehicle Cannot Be Started From D1" .
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

7. DETECT MALFUNCTIONING ITEM

1. Remove control valve. Refer to AT-426, "REMOVAL" .
2. Check the following items:

- Shift valve A
- Shift valve B
- Shift solenoid valve A
- Shift solenoid valve B
- Pilot valve
- Pilot filter

3. Disassemble A/T.
4. Check the following items:

- Reverse clutch assembly
- Forward clutch assembly
- Low & reverse clutch assembly
- Torque converter
- Oil pump assembly

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

A/T Does Not Shift: $D_4 \rightarrow D_3$, When Overdrive Control Switch “ON” → “OFF”

ECS008RA

SYMPTOM:
A/T does not shift from D_4 to D_3 when changing overdrive control switch to “OFF” position.

1. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT

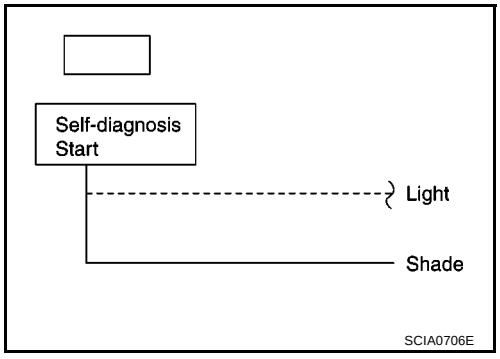
With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to overdrive control switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to overdrive control switch circuit?

Yes or No

Yes >> Check overdrive control switch circuit. Refer to AT-359, "DIAGNOSTIC PROCEDURE" .

No >> Go to AT-338, "A/T Does Not Shift: $D_2 \rightarrow D_3$" .



A/T Does Not Shift: $D_3 \rightarrow 2_2$, When Selector Lever “D” → “2” Position

ECS008RB

SYMPTOM:
A/T does not shift from D_3 to 2_2 when changing selector lever from “D” to “2” position.

1. CHECK PNP SWITCH CIRCUIT

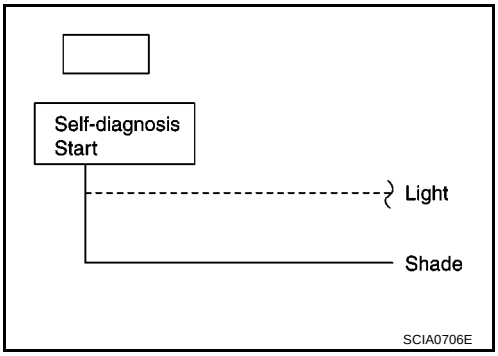
With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-358, "TCM Self-diagnosis Does Not Activate" .

No >> Go to AT-336, "A/T Does Not Shift: $D_1 \rightarrow D_2$ Or Does Not Kick down: $D_4 \rightarrow D_2$" .



A/T Does Not Shift: $2_2 \rightarrow 1_1$, When Selector Lever "2" → "1" Position

ECS008RC

SYMPTOM:
A/T does not shift from 2_2 to 1_1 when changing selector lever from "2" to "1" position.

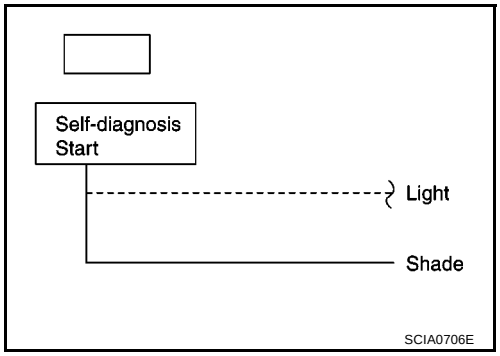
1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II
Does "TCM INPUT SIGNALS" in "DATA MONITOR" show damage to PNP switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-358, "TCM Self-diagnosis Does Not Activate" .
No >> GO TO 2

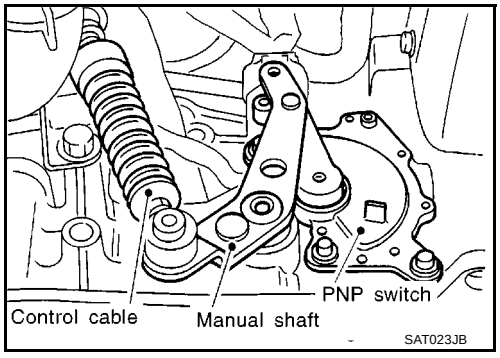


2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .



3. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

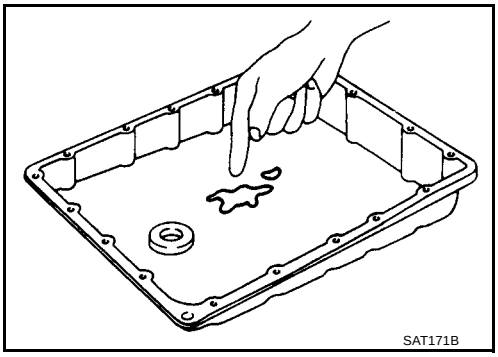
Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" and AT-367, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

4. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Shift valve A
- Overrun clutch control valve
- Shift solenoid valve A
3. Disassemble A/T.
4. Check the following items:
- Servo piston assembly
- Brake band

OK or NG

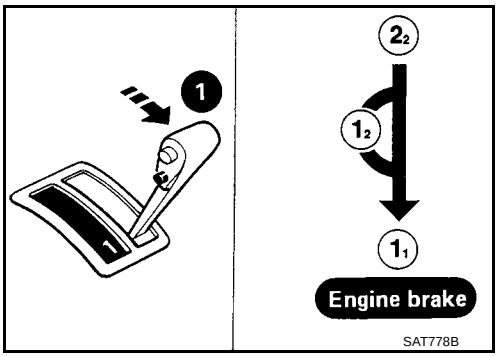
OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.



Vehicle Does Not Decelerate By Engine Brake

ECS008RD

SYMPTOM:
Vehicle does not decelerate by engine brake when shifting from 2_2 (1_2) to 1_1.

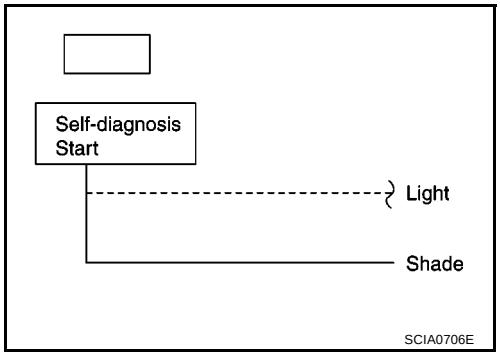
1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II
Does “TCM INPUT SIGNALS” in “DATA MONITOR” show damage to PNP switch circuit?

Without CONSULT-II
Does self-diagnosis show damage to PNP switch circuit?

Yes or No

Yes >> Check PNP switch circuit. Refer to AT-358, "TCM Self-diagnosis Does Not Activate" .
No >> GO TO 2

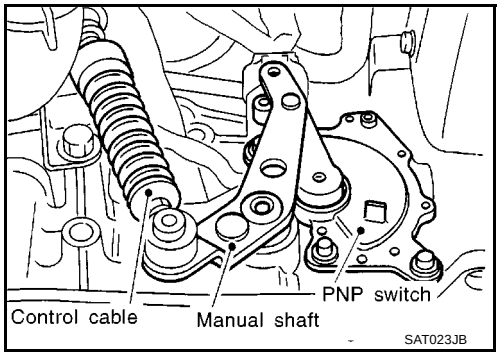


2. CHECK CONTROL CABLE

Check control cable. Refer to AT-427, "Control Cable Adjustment" .

OK or NG

OK >> GO TO 3.
NG >> Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .

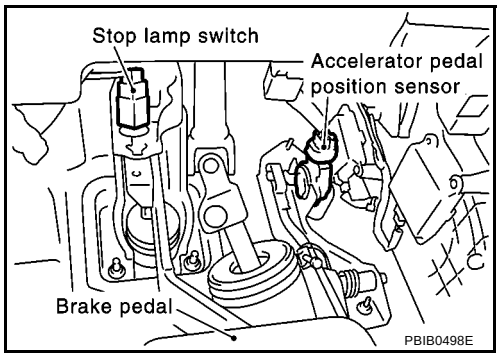


3. CHECK ACCELERATOR PEDAL POSITION (APP) SENSOR

Check accelerator pedal position (APP) sensor. Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace accelerator pedal position (APP) sensor.



4. CHECK VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR) AND CHECK VEHICLE SPEED SENSOR·MTR CIRCUIT

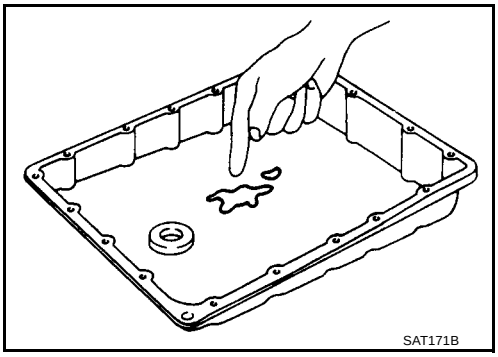
Check vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuit. Refer to AT-362, "VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)" and AT-367, "DTC VEHICLE SPEED SENSOR MTR" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace vehicle speed sensor·A/T (revolution sensor) and vehicle speed sensor·MTR circuits.

5. CHECK A/T FLUID CONDITION

1. Remove oil pan.
2. Check A/T fluid condition.



OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING ITEM

1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
- Shift valve A
- Overrun clutch control valve
- Shift solenoid valve A
3. Disassemble A/T.
4. Check the following items:
- Overrun clutch assembly
- Low & reverse bake assembly

OK or NG

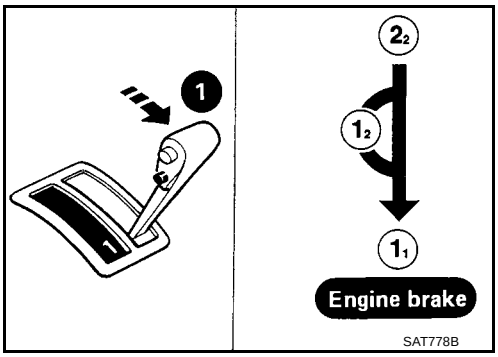
OK >> GO TO 7.
NG >> Repair or replace damaged parts.

7. CHECK SYMPTOM

Check again.

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.



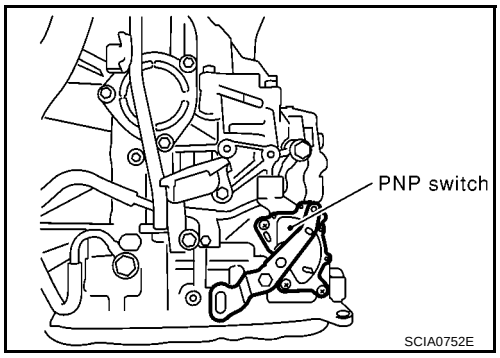
TCM Self-diagnosis Does Not Activate

ECS008RE

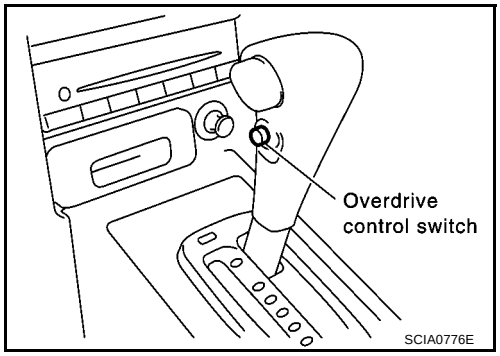
SYMPTOM:
O/D OFF indicator lamp does not come on in TCM self-diagnostic procedure even if the lamp circuit is good.

DESCRIPTION

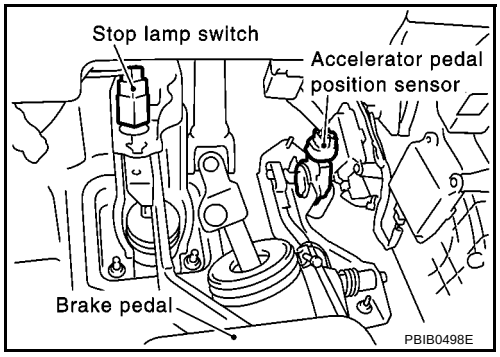
- PNP switch
  The PNP switch assembly includes a transmission position switch. The transmission position switch detects the selector lever position and sends a signal to the TCM.



- Overdrive control switch
  Detects the overdrive control switch position (ON or OFF) and sends a signal to the TCM.



- Closed throttle position signal and wide-open throttle position signal
  ECM judges throttle opening based on a signal from accelerator pedal position sensor, and sends the signal via CAN communication to TCM.



DIAGNOSTIC PROCEDURE

1. CHECK PNP SWITCH CIRCUIT

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out “P/N”, “R”, “D”, “2” and “1” position switches moving selector lever to each position.
   Check that the signal of the selector lever position is indicated properly.

DATA MONITOR	
MONITORING	
PN POSI SW	OFF
R POSITION SW	OFF
D POSITION SW	OFF
2 POSITION SW	ON
1 POSITION SW	OFF

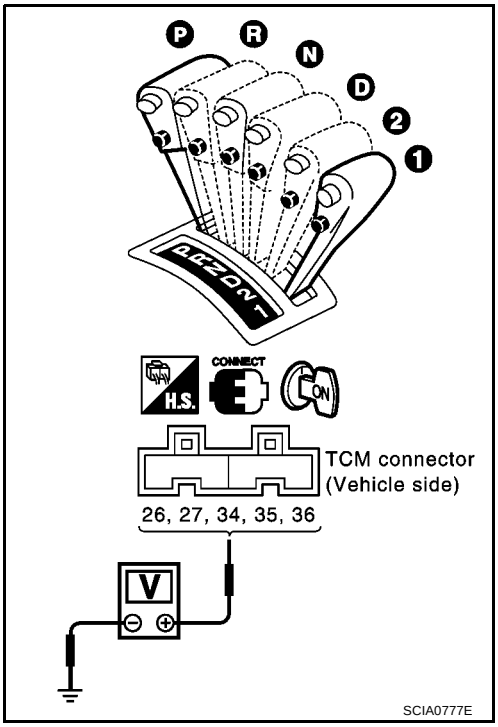
SAT701J

Without CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 26, 27, 34, 35, 36 and ground while moving selector lever through each position.

Voltage:
B: Battery voltage
0: 0V

Lever position	Terminal No.				
	36	35	34	27	26
P, N	B	0	0	0	0
R	0	B	0	0	0
D	0	0	B	0	0
2	0	0	0	B	0
1	0	0	0	0	B



SCIA0777E

OK or NG

OK >> GO TO 2.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- PNP switch (Refer to AT-361, "COMPONENT INSPECTION" .)
- Harness for short or open between ignition switch and PNP switch
- Harness for short or open between PNP switch and TCM
- Harness for short or open between combination meter and TCM
- Harness for short or open between combination meter and PNP switch

2. CHECK OVERDRIVE CONTROL SWITCH CIRCUIT

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out “OVERDRIVE SWITCH”.
   Check the signal of the overdrive control switch is indicated properly.
   (Overdrive control switch “ON” displayed on CONSULT-II means overdrive “OFF”.)

DATA MONITOR	
MONITORING	
ENGINE SPEED	XXX rpm
TURBINE REV	XXX rpm
OVERDRIVE SW	ON
PN POSI SW	OFF
R POSITION SW	OFF

SAT645J

OK or NG

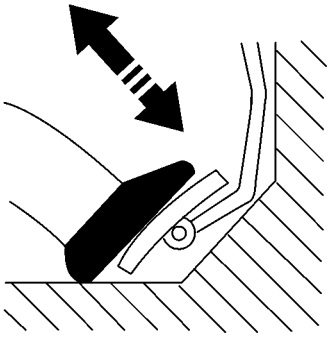
OK >> GO TO 3.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Overdrive control switch (Refer to AT-361, "COMPONENT INSPECTION" .)
- Harness for short or open between TCM and overdrive control switch
- Harness of ground circuit for overdrive control switch for short or open

3. CHECK CLOSED THROTTLE POSITION AND WIDE OPEN THROTTLE POSITION SIGNAL CIRCUIT

With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for A/T with CONSULT-II.
3. Read out “CLOSED THL/SW” and “W/O THRL-SW” depressing and releasing accelerator pedal.
   Check the signal of throttle position signal is indicated properly.



DATA MONITOR	
MONITORING	
POWERSHIFT SW	OFF
CLOSED THL/SW	OFF
W/O THRL/P-SW	OFF
HOLD SW	OFF
BRAKE SW	ON

SAT646J

Accelerator pedal condition	Data monitor	
	CLOSED THL/SW	W/O THRL-SW
Released	ON	OFF
Fully depressed	OFF	ON

OK or NG

OK >> GO TO 4.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Accelerator pedal position sensor — Refer to AT-371, "ACCELE RATOR PEDAL POSITION (APP) SENSOR" .
- Harness for short or open between accelerator pedal position sensor and ECM

4. CHECK DTC

Perform “SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)”. Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

OK or NG

OK >> **INSPECTION END**

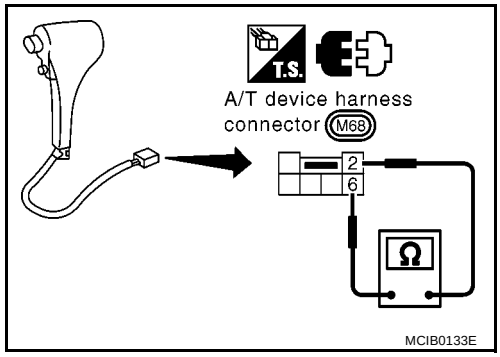
NG >> ● Perform TCM input/output signal inspection.
● If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

COMPONENT INSPECTION

Overdrive Control Switch

● Check continuity between two terminals 2 and 6.

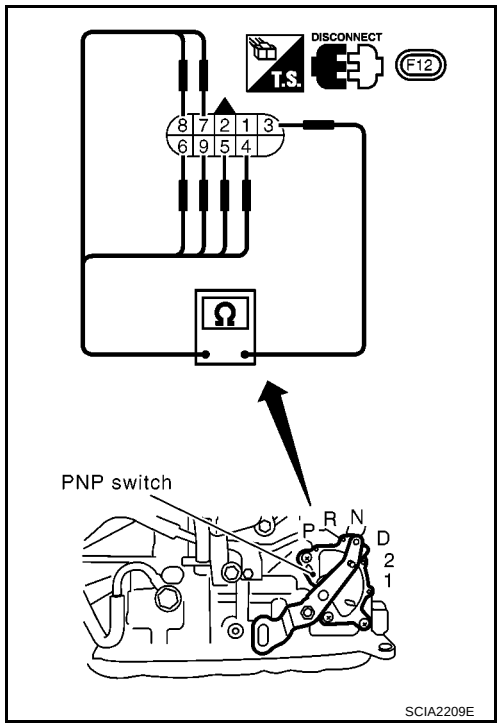
Switch position	Continuity
ON	No
OFF	Yes



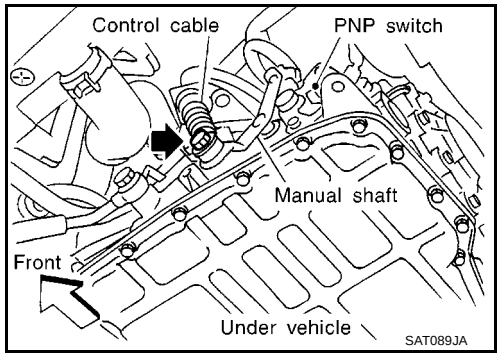
PNP Switch

1. Check continuity between terminals 1 and 2, and between terminals 3 and 4, 5, 6, 7, 8, 9 while moving manual shaft through each position.

Lever position	Terminal No.	
P	3 — 7	1 — 2
R	3 — 8	
N	3 — 9	1 — 2
D	3 — 6	
2	3 — 5	
1	3 — 4	



2. If NG, check again with manual control cable disconnected from manual shaft of A/T assembly. Refer to step 1.
3. If OK on step 2, adjust manual control cable. Refer to AT-427, "Control Cable Adjustment" .
4. If NG on step 2, remove PNP switch from A/T and check continuity of PNP switch terminals. Refer to step 1.
5. If OK on step 4, adjust PNP switch. Refer to AT-427, "Control Cable Adjustment" .
6. If NG on step 4, replace PNP switch.



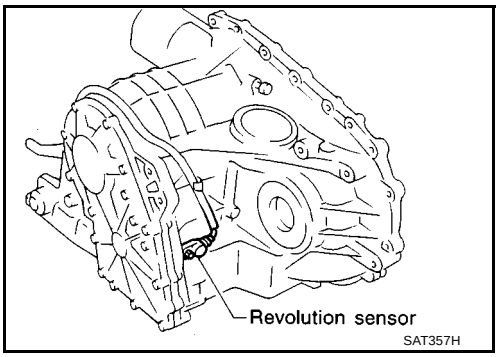
VEHICLE SPEED SENSOR·A/T (REVOLUTION SENSOR)

PFP:32702

Description

ECS008RH

The revolution sensor detects the revolution of the idler gear parking pawl lock gear and emits a pulse signal. The pulse signal is sent to the TCM which converts it into vehicle speed.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
29	OR	Revolution sensor		When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function.*1 **CAUTION:** **Connect the diagnosis data link cable to the vehicle diagnosis connector.** *1: A circuit tester cannot be used to test this item.	150 Hz
				When vehicle parks.	Under 1.3V or over 4.5V
42	B	Throttle position sensor (Ground)	Always		0V

ON BOARD DIAGNOSIS LOGIC

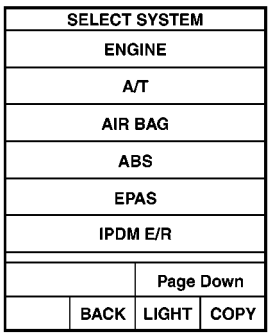
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
(P) : VHCL SPEED SEN·AT	TCM does not receive the proper voltage signal from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● Revolution sensor
(X) : 1st judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

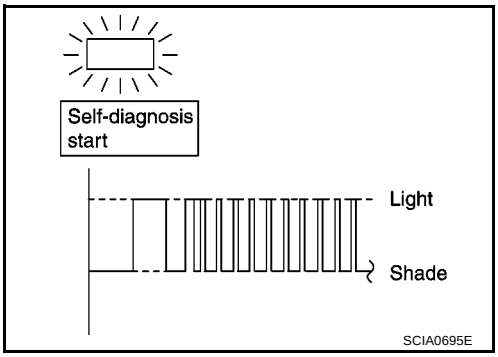
(P) With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 30 km/h (19 MPH), throttle opening greater than 1/8 of the full throttle position and driving for more than 5 seconds.



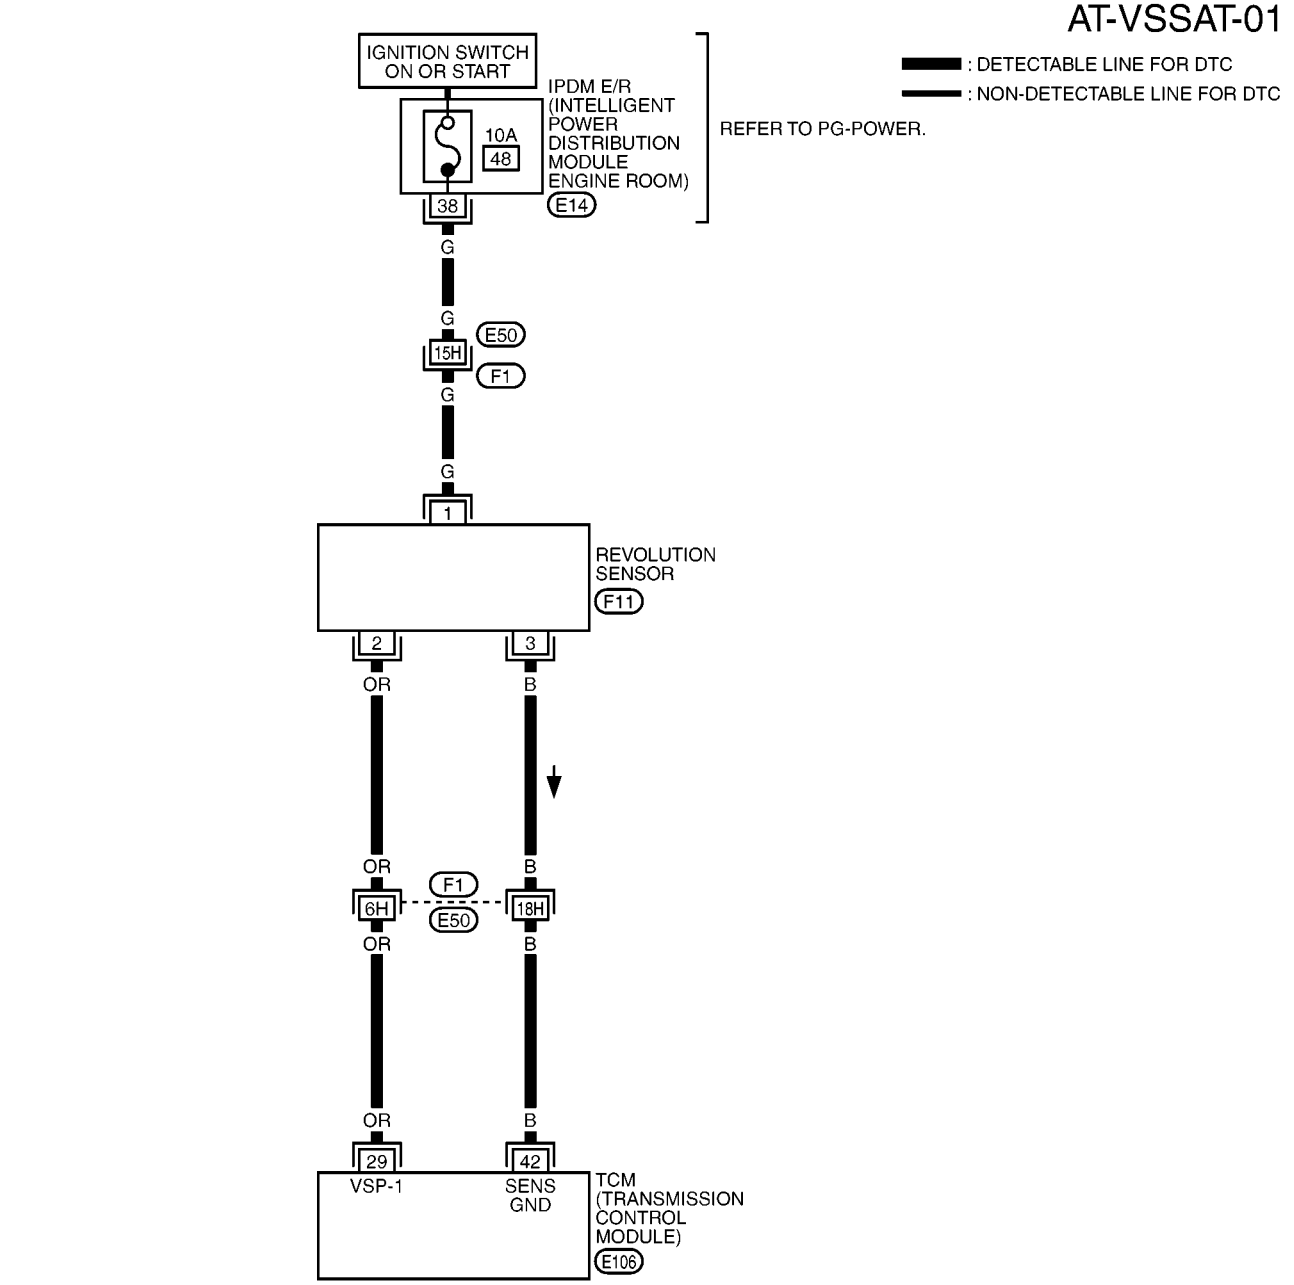
Without CONSULT-II

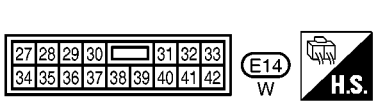
1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 30 km/h (19 MPH), throttle opening greater than 1/8 of the full throttle position and driving for more than 5 seconds.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

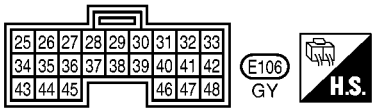


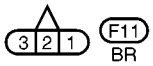
Wiring Diagram — AT — VSSA/T

ECS008RI









REFER TO THE FOLLOWING.

MCWA0073E

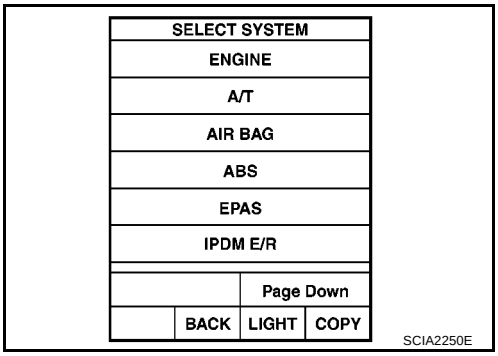
Diagnostic Procedure

ECS008RJ

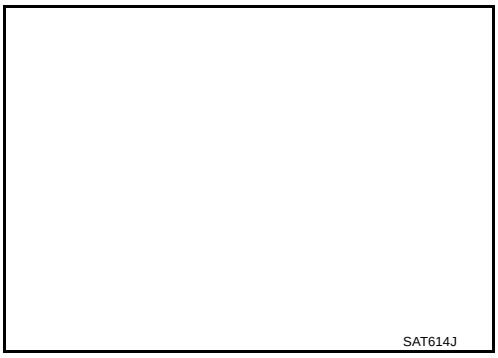
1. CHECK INPUT SIGNAL (WITH CONSULT-II)

With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out the value of “VHCL/S SE·A/T” while driving. Check the value changes according to driving speed.



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK REVOLUTION SENSOR (WITH CONSULT-II)

With CONSULT-II

1. Start engine.

Condition	Judgement standard (Approx.)
When moving at 20 km/h (12 MPH), use the CONSULT-II pulse frequency measuring function. *1 **CAUTION:** **Connect the diagnosis data link cable to the vehicle diagnosis connector.** *1: A circuit tester cannot be used to test this item.	150 Hz
When vehicle parks.	Under 1.3V or over 4.5V

MTBL0575

OK or NG

OK >> GO TO 3.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between TCM, ECM and revolution sensor
- Harness for short or open between fuse and revolution sensor

3. CHECK DTC

Perform Self-diagnosis Code confirmation procedure, AT-362, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 4.

4. CHECK TCM INSPECTION

1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace damaged parts.

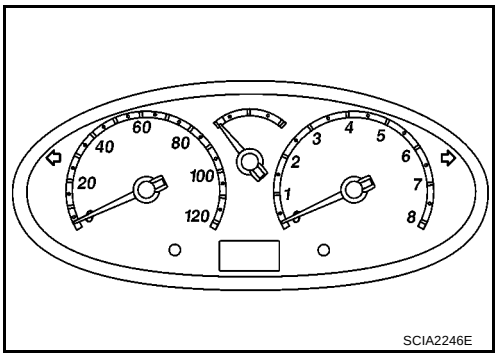
DTC VEHICLE SPEED SENSOR MTR

PFP:24814

Description

ECS008RK

The vehicle speed sensor·MTR is built into the speedometer assembly. The sensor functions as an auxiliary device to the revolution sensor when it is malfunctioning. The TCM will then use a signal sent from the vehicle speed sensor·MTR.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
40	G	Vehicle speed sensor		When moving vehicle at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.	Voltage varies between less than 0V and more than 4.5V

ON BOARD DIAGNOSIS LOGIC

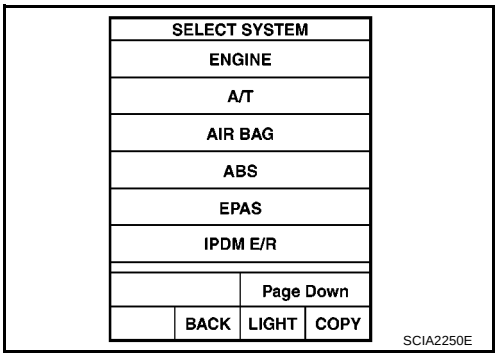
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: VHCL SPEED SEN·MTR : 2nd judgement flicker	TCM does not receive the proper voltage signal from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● Combination meter ● 4WD/ABS control unit

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle under the following conditions:
   Selector lever in “D” position and vehicle speed higher than 20 km/h (12 MPH).



Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D” position and vehicle speed higher than 20 km/h (12 MPH).
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

MCWA0122E

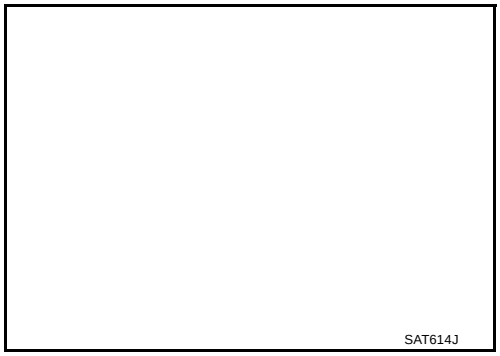
Diagnostic Procedure

ECS008RM

1. CHECK INPUT SIGNAL

With CONSULT-II

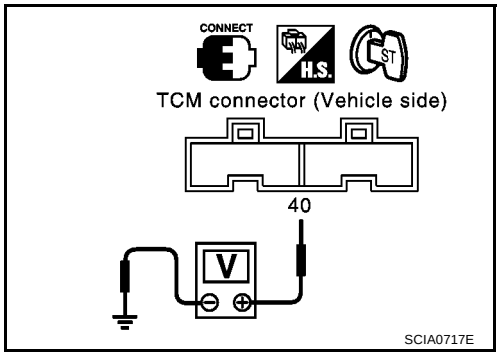
1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out the value of “VHCL/S SE·MTR” while driving.
   Check the value changes according to driving speed.



Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 40 and ground while driving at 2 to 3 km/h (1 to 2 MPH) for 1 m (3 ft) or more.

   Voltage: Voltage varies between less than 1V and more than 4.5V.



OK or NG

OK >> GO TO 2
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Combination meter
  Refer to DI-5, "COMBINATION METERS" .
- Harness for short or open between TCM and combination meter
- Harness for short or open between combination meter and vehicle speed sensor

2. CHECK DTC

Perform Self-diagnosis Code confirmation procedure, AT-367, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

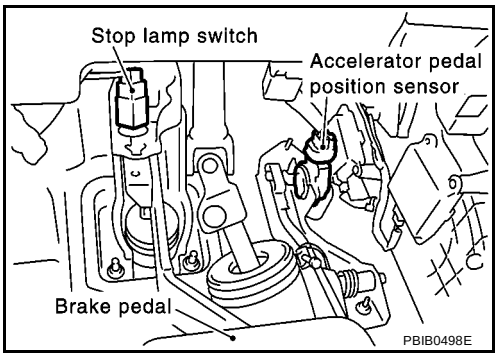
ACCELE RATOR PEDAL POSITION (APP) SENSOR

PFP:22620

Description

ECS008RN

- Accelerator pedal position (APP) sensor
  Electric throttle control actuator consists of throttle control motor, acceleration pedal position sensor, throttle position sensor, etc. The actuator sends a signal to the TCM.



CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Accelerator pedal position (APP) sensor (THRTL POS SEN)	Fully-closed throttle	Approximately 0.5V
	Fully-open throttle	Approximately 4V

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
32	OR	Throttle position sensor (Power source)		When turning ignition switch “ON”.	4.5 - 5.5V
				When turning ignition switch “OFF”.	0V
41	Y	Throttle position sensor		When depressing accelerator pedal slowly after warming up engine. (Voltage rises gradually in response to throttle position.)	Fully-closed throttle: 0.5V Fully-open throttle: 4V
42	B	Ground (Throttle position sensor)	Always		0V

ON BOARD DIAGNOSIS LOGIC

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: THROTTLE POSI SEN*	TCM receives an excessively low or high voltage from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● Accelerator pedal position (APP) sensor
: 3rd judgement flicker		

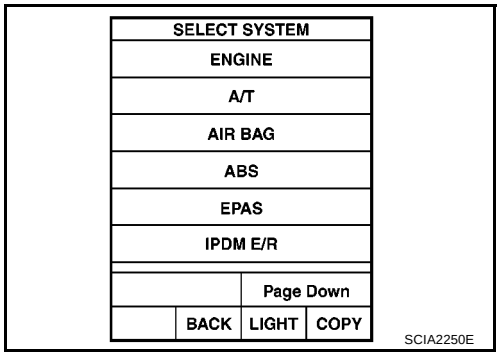
*:This code means Accelerator pedal position (APP) sensor in reality.

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

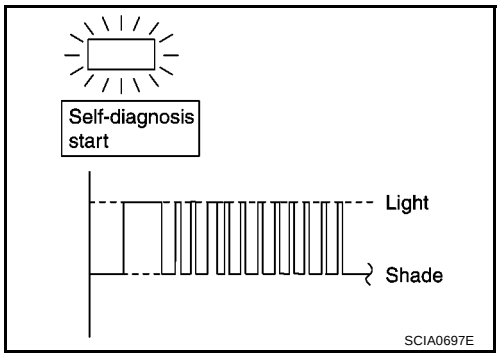
With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 10 km/h (6 MPH), throttle opening greater than 1/2 of the full throttle position and driving for more than 3 seconds.



Without CONSULT-II

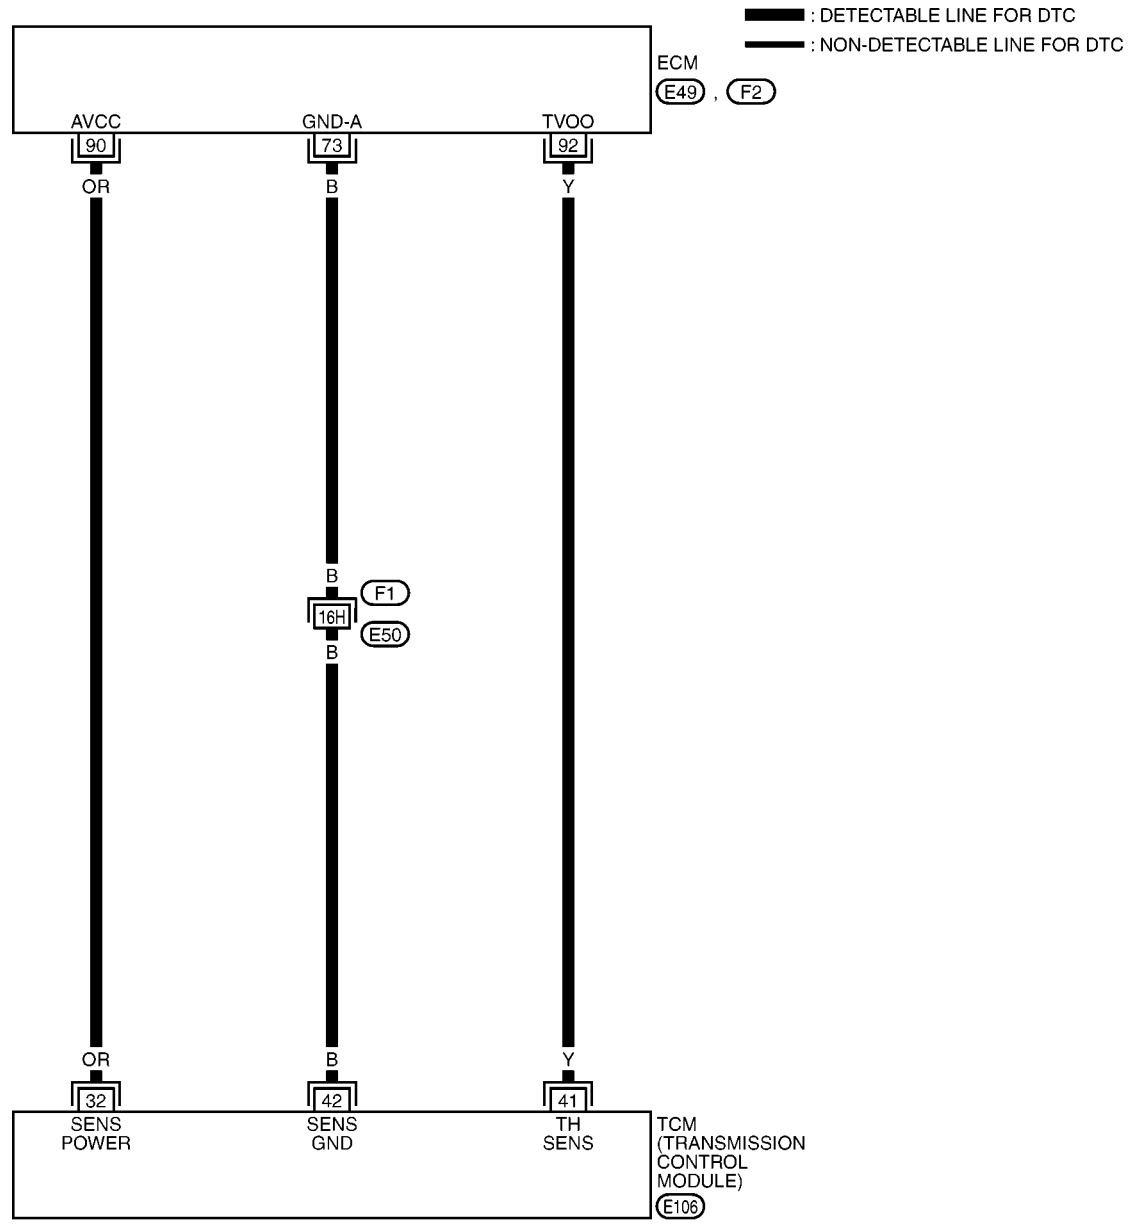
1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 10 km/h (6 MPH), throttle opening greater than 1/2 of the full throttle position and driving for more than 3 seconds.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

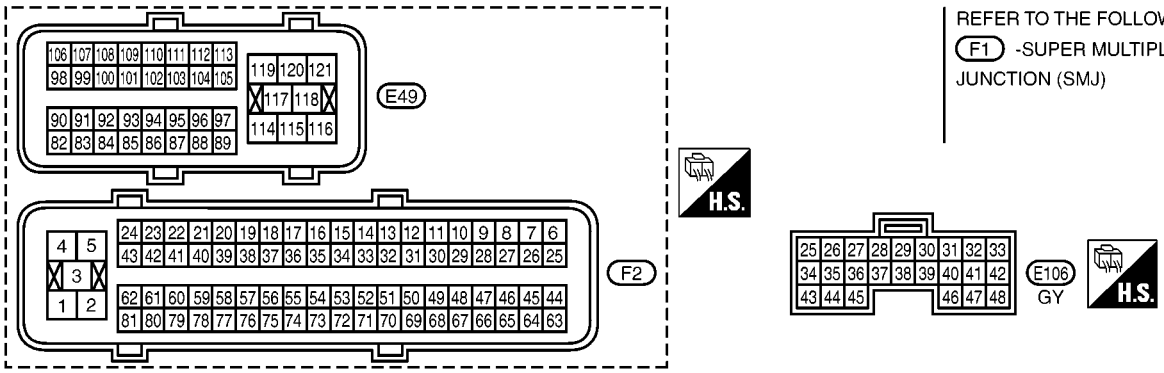


Wiring Diagram — AT — TPS

ECS008RO

AT-TPS-01





MCWA0083E

Diagnostic Procedure

ECS008RP

1. CHECK DTC WITH ECM

- Check P code with CONSULT-II “ENGINE”.

Turn ignition switch ON and select “SELF DIAGNOSTIC RESULTS” mode for “ENGINE” with CONSULT-II. Refer to EC-60, "Malfunction Indicator (MI)" .

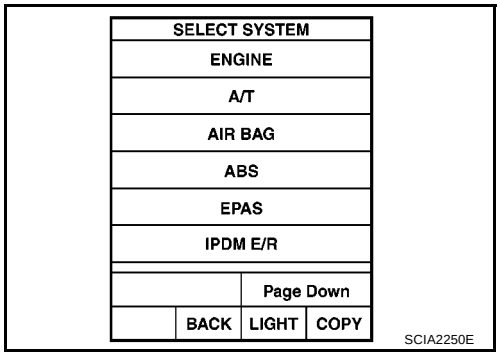
OK or NG

OK >> GO TO 2.
NG >> Check throttle position sensor circuit for engine control.

2. CHECK INPUT SIGNAL (WITH CONSULT-II)

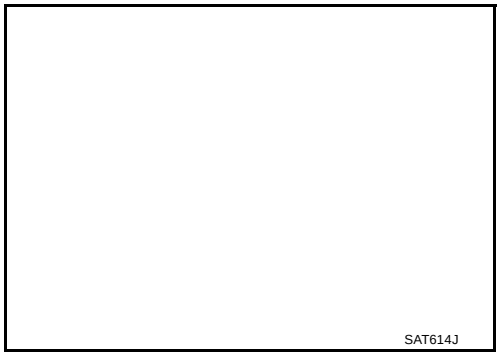
With CONSULT-II

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out the value of “THRTL POS SEN”.

Voltage:
Fully-closed throttle :Approximately 0.5V
Fully-open throttle :Approximately 4V



Without CONSULT-II

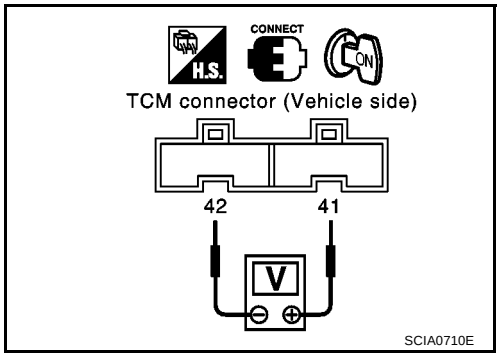
1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 41 and 42 while accelerator pedal is depressed slowly.

Voltage:
Fully-closed throttle valve :Approximately 0.5V
Fully-open throttle valve :Approximately 4V

(Voltage rises gradually in response to throttle position.)

OK or NG

OK >> GO TO 3.
NG >> Check harness for short or open between ECM and TCM regarding throttle position sensor circuit.



3. CHECK DTC

Perform Self-diagnosis Code confirmation procedure. Refer to AT-372, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

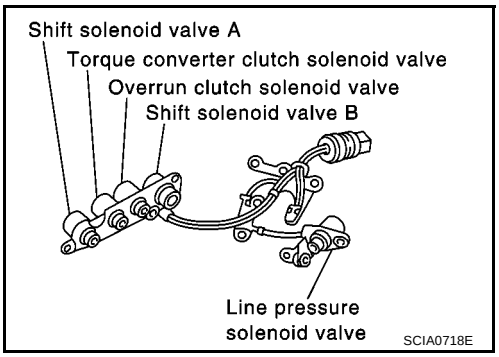
SHIFT SOLENOID VALVE A

PFP:31940

Description

ECS008RQ

Shift solenoid valves A and B are turned “ON” or “OFF” by the TCM in response to signals sent from the PNP switch, vehicle speed and throttle position sensors. Gears will then be shifted to the optimum position.



Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
11	OR	Shift solenoid valve A		When shift solenoid valve A operates. (When driving in “D_1 ” or “D_4 ”.)	Battery voltage
				When shift solenoid valve A does not operate. (When driving in “D_2 ” or “D_3 ”.)	0V

ON BOARD DIAGNOSIS LOGIC

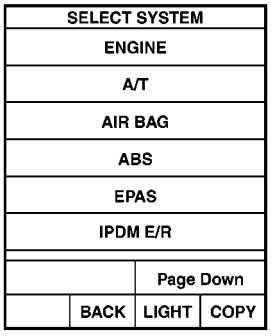
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: SHIFT SOLENOID/VA	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Shift solenoid valve A
: 4th judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

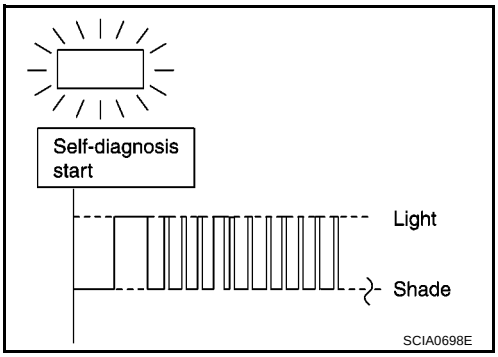
With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle in $D_1 \rightarrow D_2$ position.



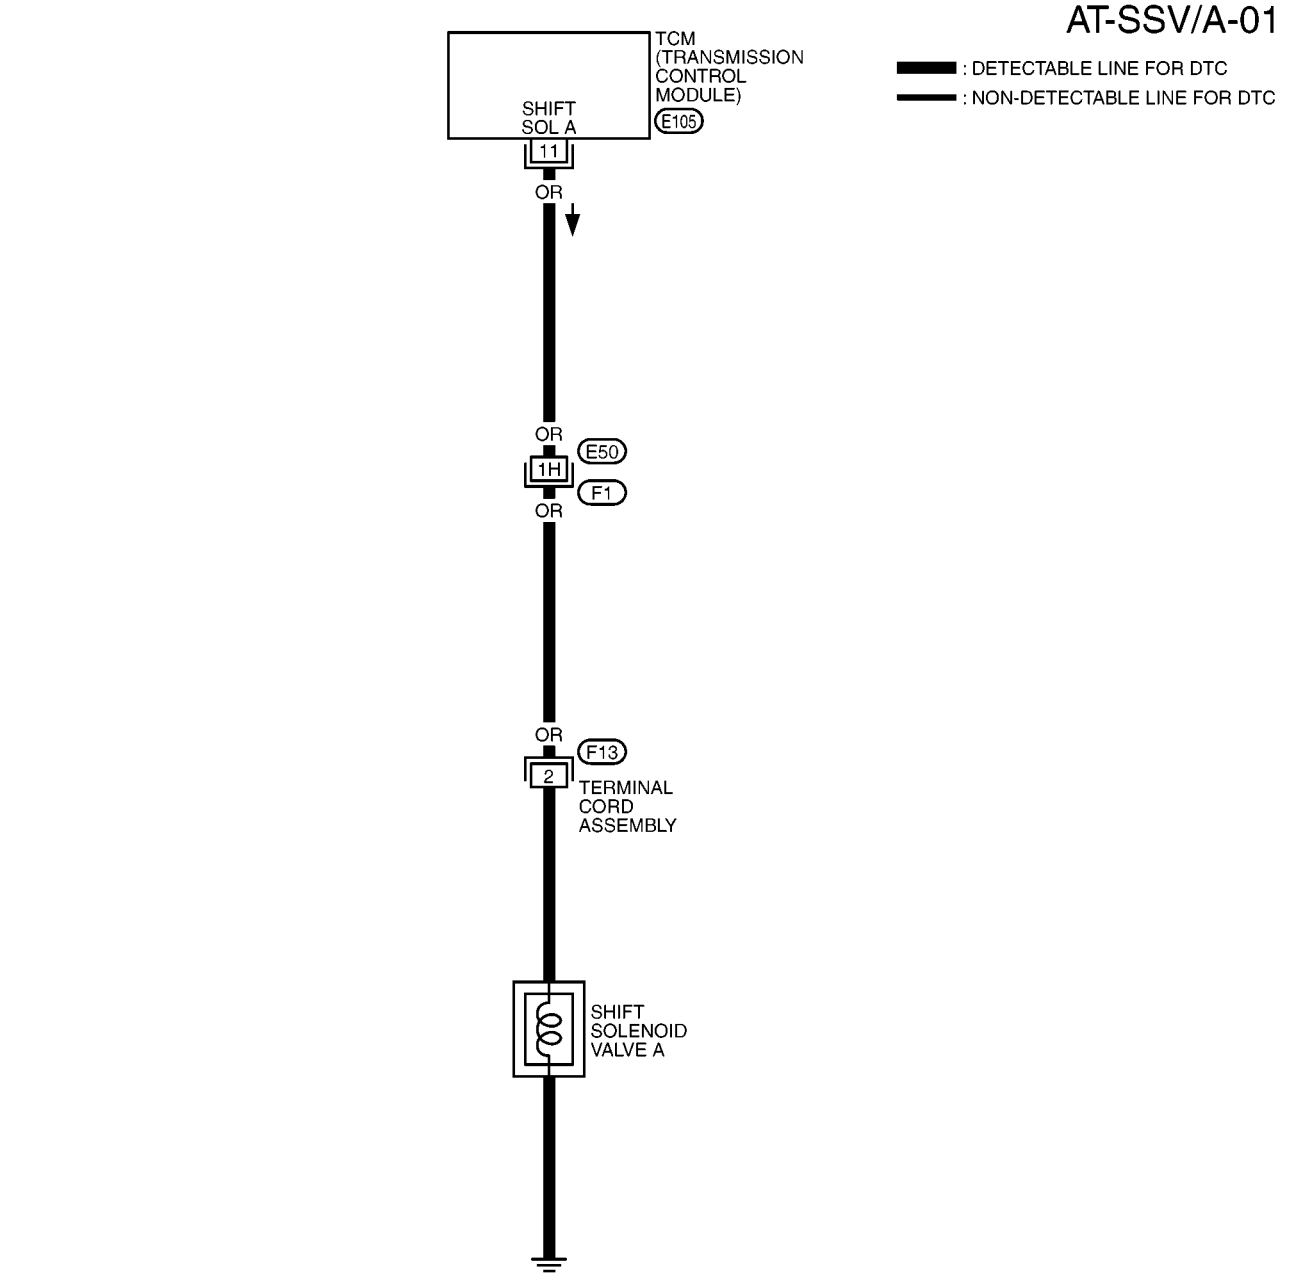
Without CONSULT-II

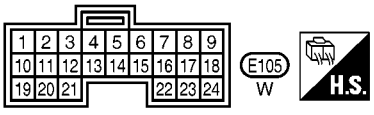
1. Start engine.
2. Drive vehicle in $D_1 \rightarrow D_2$ position.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

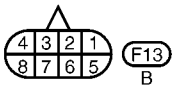


Wiring Diagram — AT — SSV/A

ECS008RR







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MCWA0081E

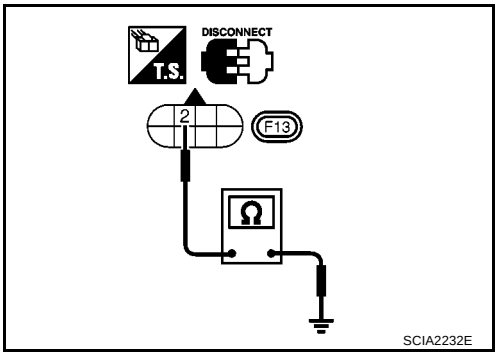
Diagnostic Procedure

ECS008RS

1. CHECK VALVE RESISTANCE

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 2 and ground.

Resistance : 20 - 30Ω



OK or NG

OK >> GO TO 2.

NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
Shift solenoid valve A
Refer to AT-379, "Component Inspection" .
Harness of terminal cord assembly for short or open

2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 2 and TCM harness connector terminal 11.

Continuity should exist.

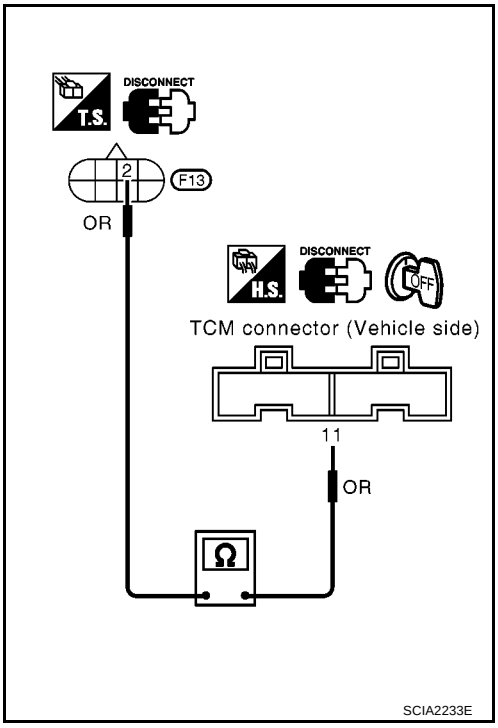
If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.

OK or NG

OK >> GO TO 3.

NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.



3. CHECK DTC

Perform Self-diagnosis Code confirmation procedure. Refer to AT-376, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**

NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

ECS008RT

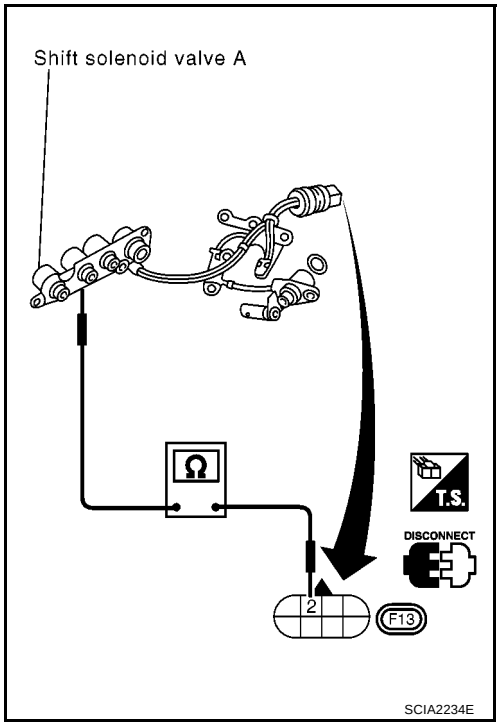
SHIFT SOLENOID VALVE A

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

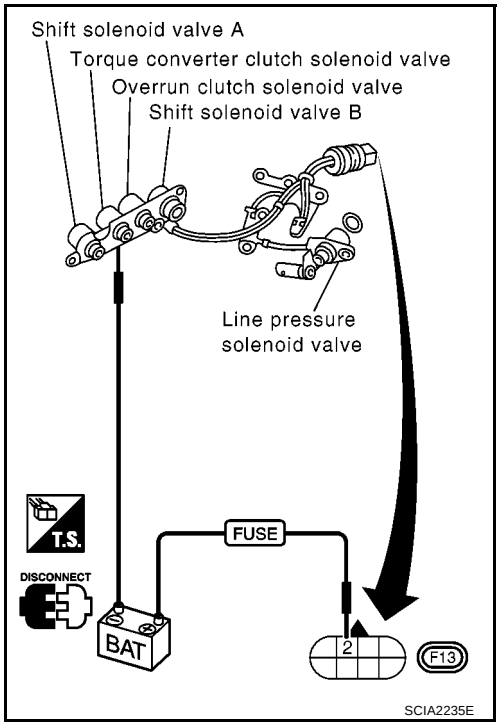
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve A	2	Ground	20 - 30Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



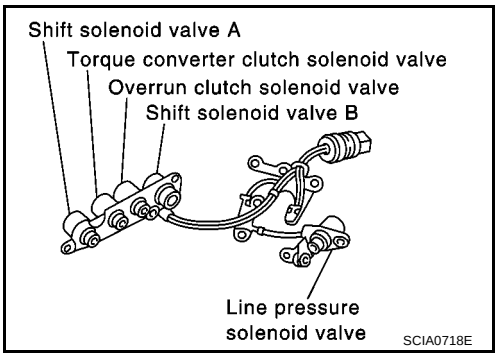
SHIFT SOLENOID VALVE B

PFP:31940

Description

ECS008RU

Shift solenoid valves A and B are turned “ON” or “OFF” by the TCM in response to signals sent from the PNP switch, vehicle speed and throttle position sensors. Gears will then be shifted to the optimum position.



Gear position	1	2	3	4
Shift solenoid valve A	ON (Closed)	OFF (Open)	OFF (Open)	ON (Closed)
Shift solenoid valve B	ON (Closed)	ON (Closed)	OFF (Open)	OFF (Open)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
12	L	Shift solenoid valve B		When shift solenoid valve B operates. (When driving in “D_1 ” or “D_2 ”.)	Battery voltage
				When shift solenoid valve B does not operate. (When driving in “D_3 ” or “D_4 ”.)	0V

ON BOARD DIAGNOSIS LOGIC

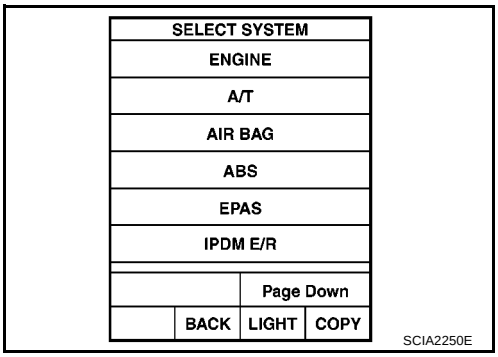
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: SHIFT SOLENOID/VB	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Shift solenoid valve B
: 5th judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle in $D_1 \rightarrow D_2 \rightarrow D_3$ position.



Without CONSULT-II

1. Start engine.
2. Drive vehicle in $D_1 \rightarrow D_2 \rightarrow D_3$ position.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

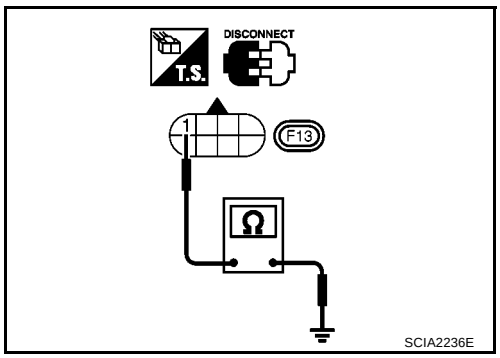
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminal 1 and ground.

Resistance : 5 - 20Ω



OK or NG

OK >> GO TO 2.
NG >> 1. Remove control valve assembly. Refer to AT-426, "REMOVAL" .
2. Check the following items:
Shift solenoid valve B
Refer to AT-384, "Component Inspection" .
Harness of terminal cord assembly for short or open

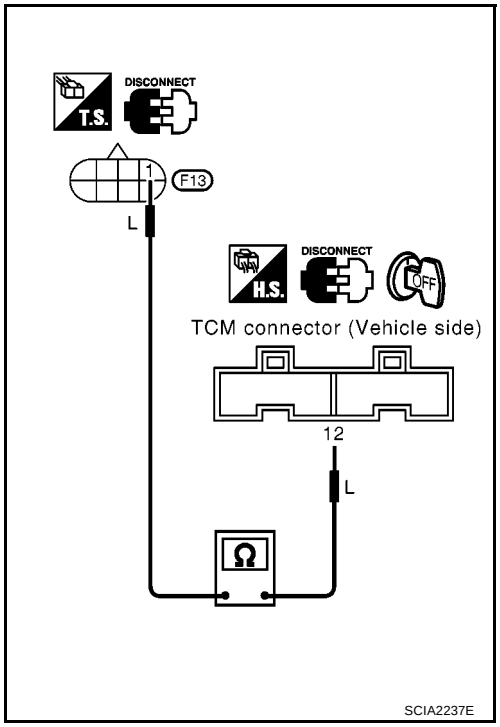
2. CHECK POWER SOURCE CIRCUIT

1. Turn ignition switch to “OFF” position.
2. Disconnect TCM harness connector.
3. Check continuity between terminal 12 and TCM harness connector terminal 1.

Continuity should exist.

If OK, check harness for short to ground and short to power.

4. Reinstall any part removed.



OK or NG

OK >> GO TO 3.
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.

3. CHECK DTC

Perform Self-diagnosis Code confirmation procedure. Refer to AT-381, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

Component Inspection

ECS008RX

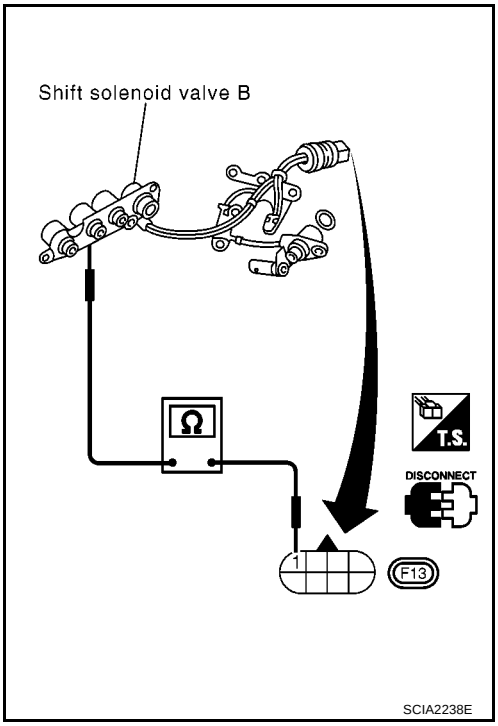
SHIFT SOLENOID VALVE B

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

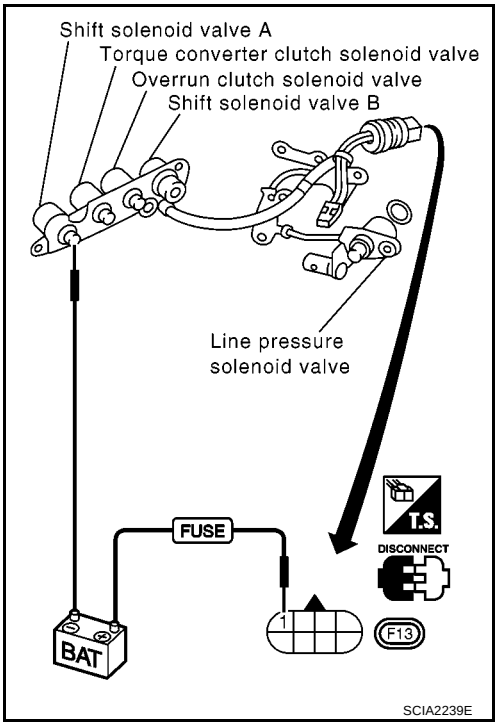
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Shift solenoid valve B	1	Ground	5 - 20Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



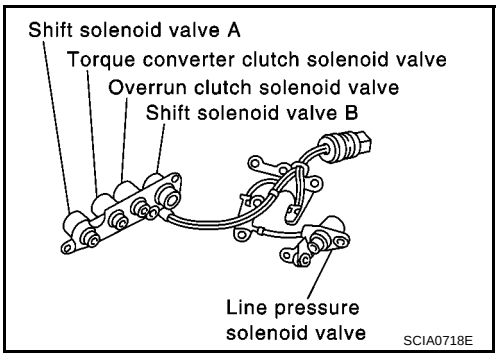
OVERRUN CLUTCH SOLENOID VALVE

PFP:31940

Description

ECS008RY

The overrun clutch solenoid valve is activated by the TCM in response to signals sent from the inhibitor switch, overdrive control switch, vehicle speed and throttle position sensors. The overrun clutch operation will then be controlled.



TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
20	Y	Overrun clutch solenoid valve		When overrun clutch solenoid valve operates.	Battery voltage
				When overrun clutch solenoid valve does not operate.	0V

ON BOARD DIAGNOSIS LOGIC

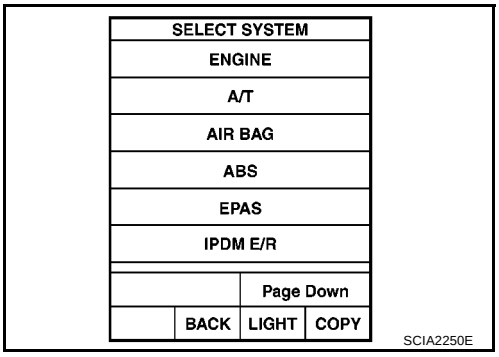
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: OVERRUN CLUTCH S/V	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Overrun clutch solenoid valve
: 6th judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle under the following conditions:
   Selector lever in “D” position, overdrive control switch in “OFF” position and vehicle speed higher than 10 km/h (6 MPH).



Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D” position, overdrive control switch in “OFF” position and vehicle speed higher than 10 km/h (6 MPH).
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

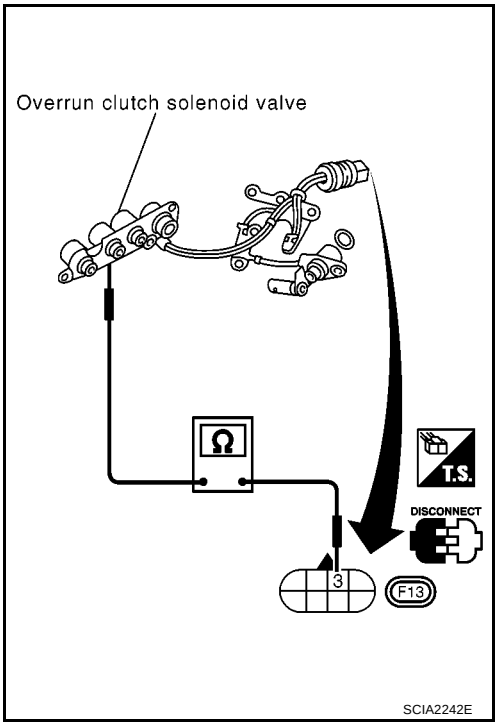
OVERRUN CLUTCH SOLENOID VALVE

- For removal, refer to AT-426, "REMOVAL" .

Resistance Check

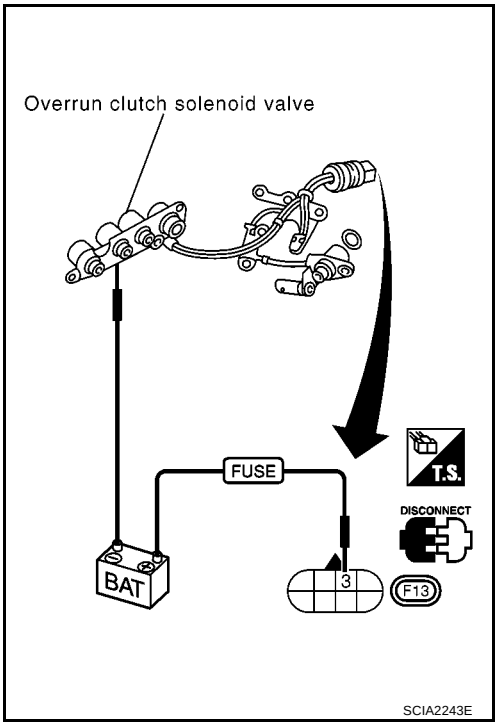
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Overrun clutch solenoid valve	3	Ground	20 - 30Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



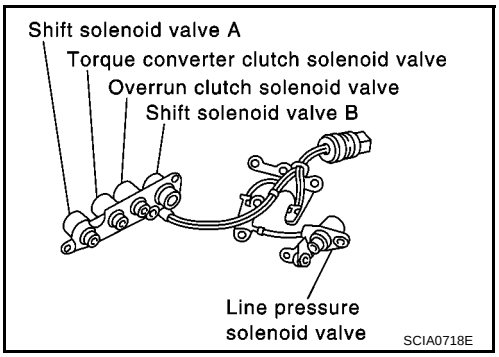
TORQUE CONVERTER CLUTCH SOLENOID VALVE

PFP:31940

Description

ECS008S2

The torque converter clutch solenoid valve is activated, with the gear in "D_4 ", by the TCM in response to signals sent from the vehicle speed and throttle position sensors. Lock-up piston operation will then be controlled.
Lock-up operation, however, is prohibited when A/T fluid temperature is too low.
When the accelerator pedal is depressed (less than 2/8) in lock-up condition, the engine speed should not change abruptly. If there is a big jump in engine speed, there is no lock-up.



CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Torque converter clutch solenoid valve duty	Lock-up "OFF" ↓ Lock-up "ON"	Approximately 4% ↓ Approximately 94%

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
3	GY	Torque converter clutch solenoid valve		When A/T performs lock-up.	8 - 15V
				When A/T does not perform lock-up.	0V

ON BOARD DIAGNOSIS LOGIC

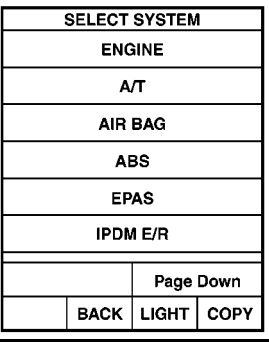
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: T/C CLUTCH SOL/V	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● T/C clutch solenoid valve
: 7th judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Start engine.
2. Select "SELF-DIAG RESULTS" mode for A/T with CONSULT-II.
3. Drive vehicle in $D_1 \rightarrow D_2 \rightarrow D_3 \rightarrow D_4 \rightarrow D_4$ lock-up position.



Without CONSULT-II

1. Start engine.
2. Drive vehicle in $D_1 \rightarrow D_2 \rightarrow D_3 \rightarrow D_4 \rightarrow D_4$ lock-up position.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

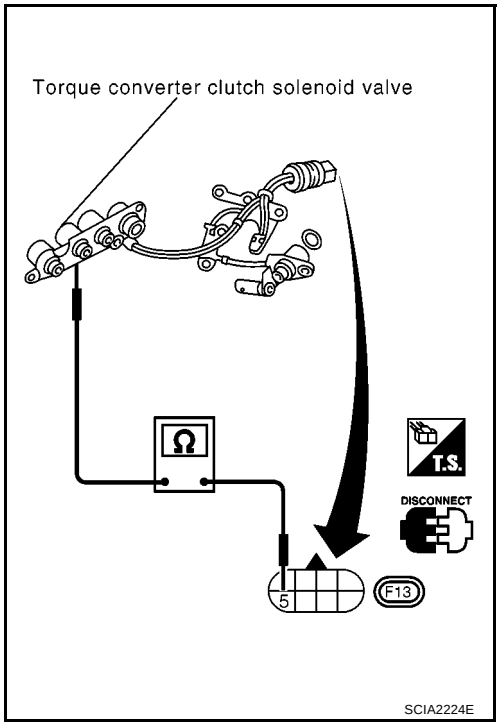
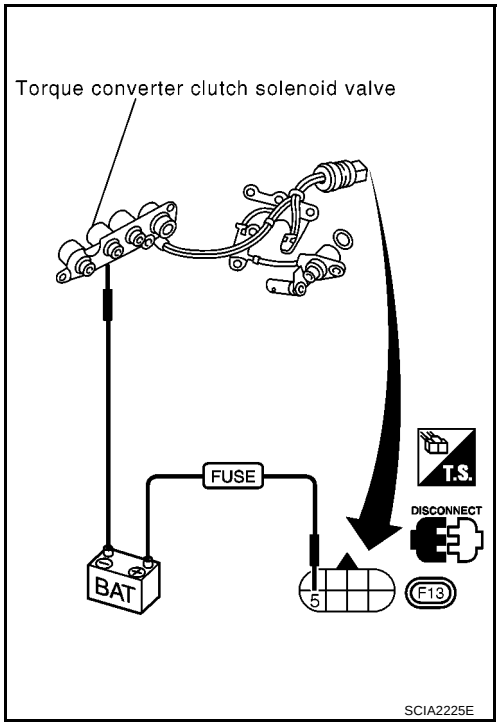
Torque converter clutch solenoid valve	5	Ground	5 - 20Ω



Operation Check

- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



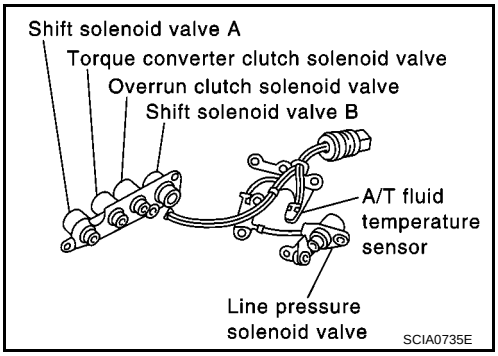
BATT/FLUID TEMP SEN (A/T FLUID TEMP SENSOR CIRCUIT AND TCM POWER SOURCE)

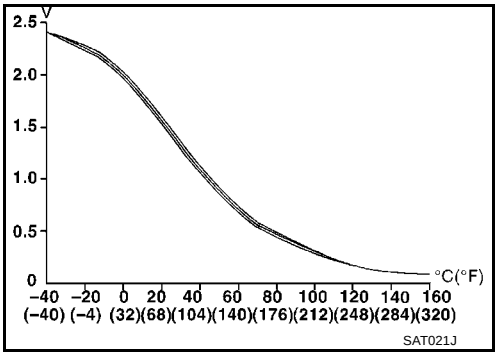
PFP:31940

Description

ECS008S6

The A/T fluid temperature sensor detects the A/T fluid temperature and sends a signal to the TCM.





CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification (Approximately)	
A/T fluid temperature sensor	Cold [20°C (68°F)] ↓ Hot [80°C (176°F)]	1.5V ↓ 0.5V	2.5 kΩ ↓ 0.3 kΩ

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
10	G	Power source		When turning ignition switch to “ON”.	Battery voltage
				When turning ignition switch to “OFF”.	0V
19	G	Power source		Same as No. 10	
28	GY	Power source (Memory back-up)	Always		Battery voltage
42	B	Ground (A/T fluid temperature sensor)	Always		0V
47	PU	A/T fluid temperature sensor		When ATF temperature is 20°C (68°F).	1.5V
				When ATF temperature is 80°C (176°F).	0.5V

ON BOARD DIAGNOSIS LOGIC

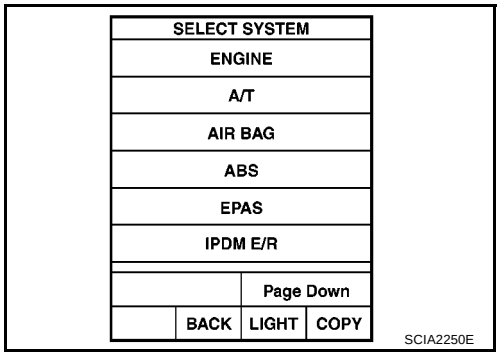
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: BATT/FLUID TEMP SEN	TCM receives an excessively low or high voltage from the sensor.	● Harness or connectors (The sensor circuit is open or shorted.) ● A/T fluid temperature sensor
: 8th judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

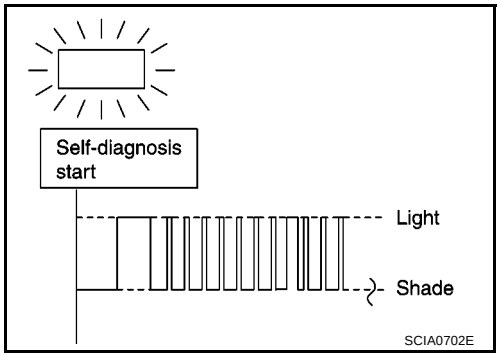
With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 10 km/h (6 MPH), throttle opening greater than 1/8 of the full open position, engine speed higher than 450 rpm and driving for more than 10 minutes.



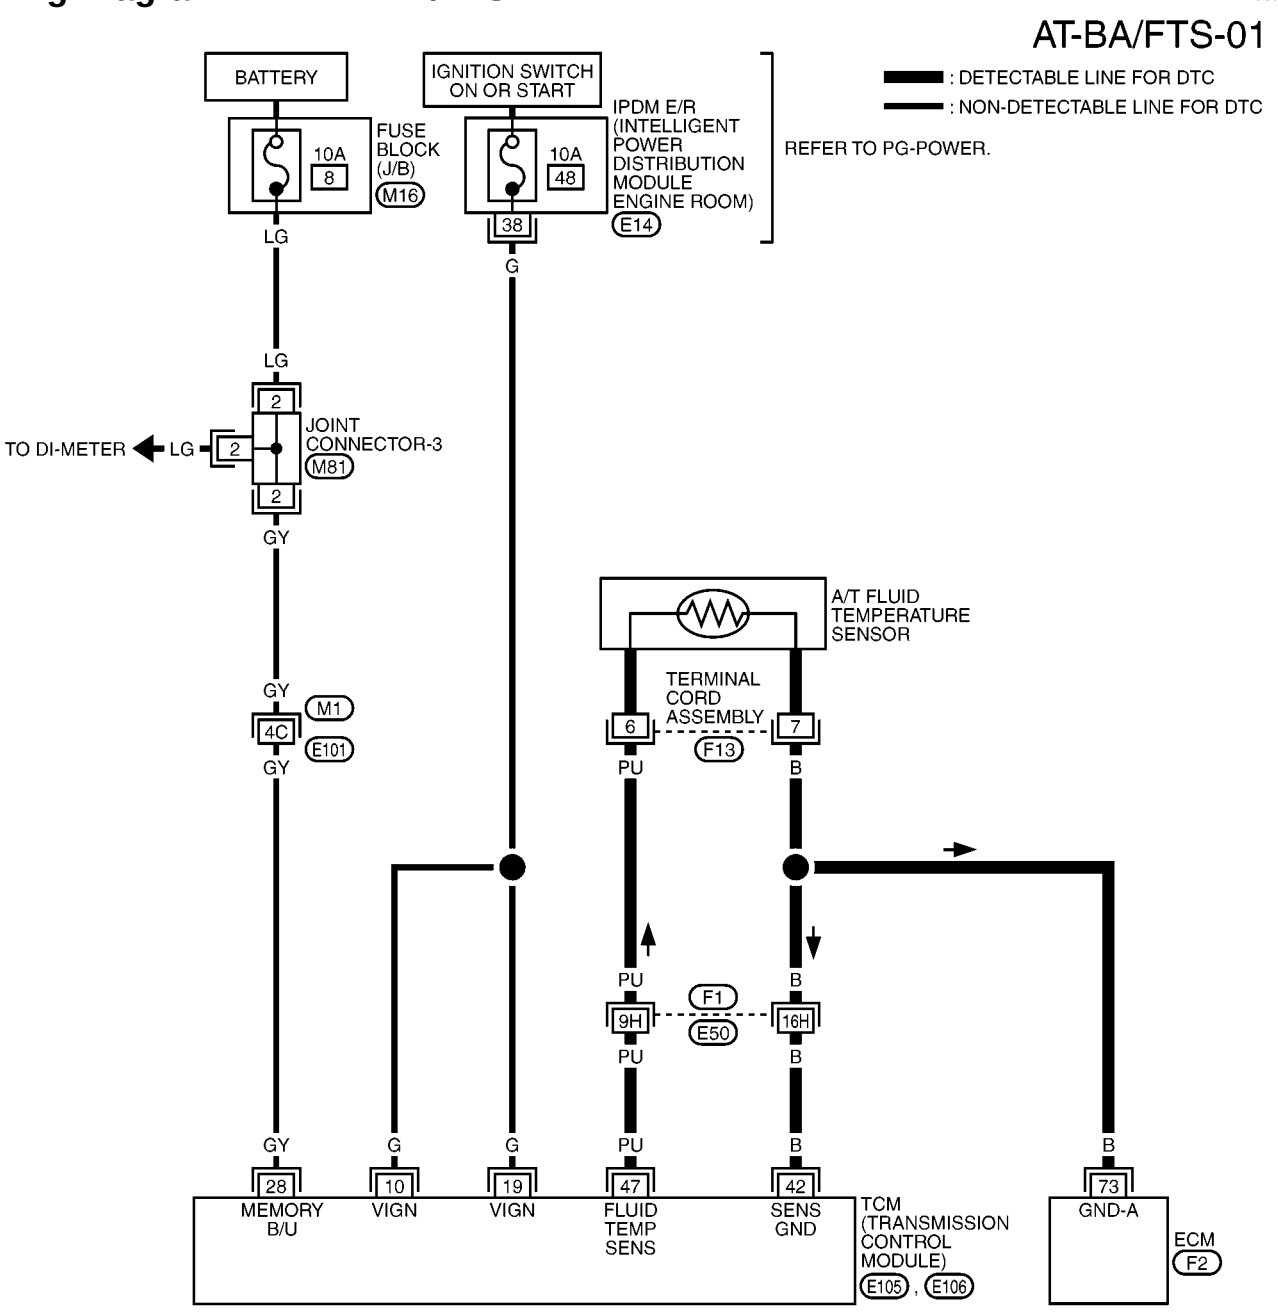
Without CONSULT-II

1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 10 km/h (6 MPH), throttle opening greater than 1/8 of the full open position, engine speed higher than 450 rpm and driving for more than 10 minutes.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .



Wiring Diagram — AT — BA/FTS

ECS008S7



MCWA0121E

Diagnostic Procedure

ECS008S8

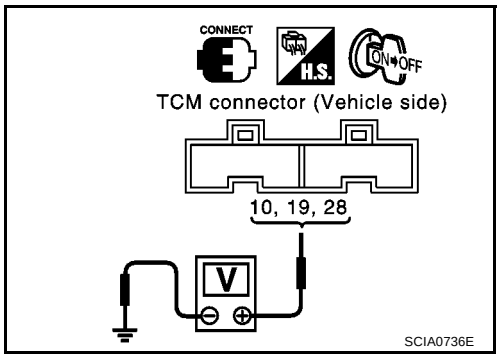
1. CHECK TCM POWER SOURCE

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

Voltage: Battery voltage

3. Turn ignition switch to “OFF” position.
4. Check voltage between TCM terminal 28 and ground.

Voltage: Battery voltage



OK or NG

OK >> GO TO 2.

NG >> Check the following items:

- Harness for short or open between battery, ignition switch and TCM
- Ignition switch and fuse
  Refer to PG-4, "POWER SUPPLY ROUTING" .

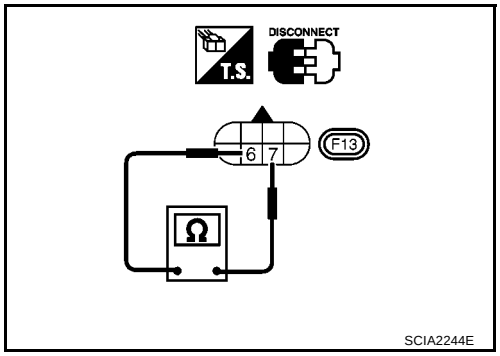
2. CHECK A/T FLUID TEMPERATURE SENSOR WITH TERMINAL CORD ASSEMBLY

1. Turn ignition switch to “OFF” position.
2. Disconnect terminal cord assembly connector in engine compartment.
3. Check resistance between terminals 6 and 7 when A/T is cold.

Resistance Cold[20°C(68°F)]

: Approximately 2.5 kΩ

4. Reinstall any part removed.



OK or NG

OK >> GO TO 3.

NG >> 1. Remove oil pan.

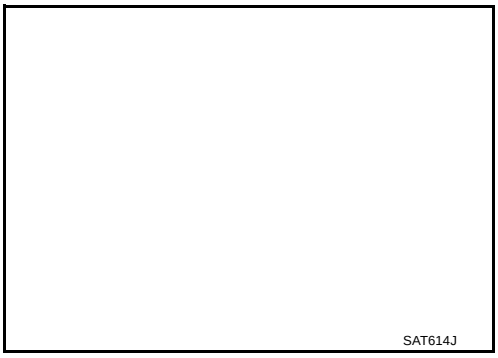
2. Check the following items. If any items are damaged, repair or replace damaged parts.
   A/T fluid temperature sensor
   Refer to AT-400, "Component Inspection" .
   Harness of terminal cord assembly for short or open

3. CHECK INPUT SIGNAL OF A/T FLUID TEMPERATURE SENSOR

With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.
3. Read out the value of “FLUID TEMP SE”.

Voltage
Cold [20°C (68°F)] → Hot [80°C (176°F)]:
Approximately 1.5V→0.5V

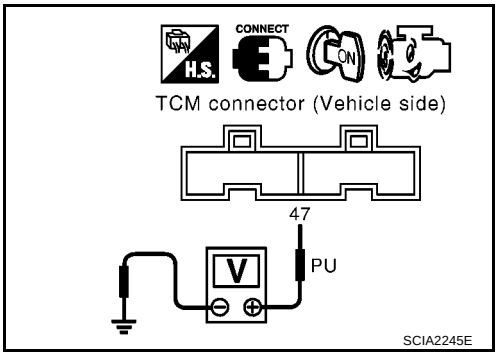


Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 47 and ground while warming up A/T.

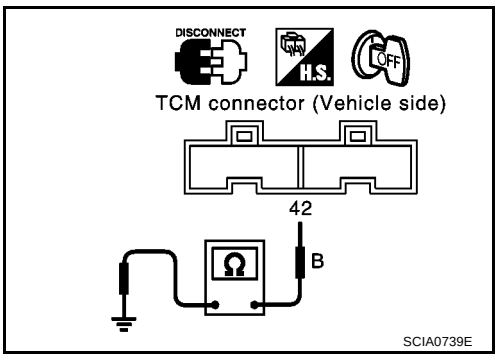
Voltage
Cold [20°C (68°F)] → Hot [80°C (176°F)]:
Approximately 1.5V→0.5V

3. Turn ignition switch to “OFF” position.
4. Disconnect TCM harness connector.



5. Check resistance between terminal 42 and ground.

Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Check the following item. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between TCM, ECM and terminal cord assembly
- Ground circuit for ECM
  Refer to EC-289, "DTC P1065 ECM POWER SUPPLY" .

4. CHECK DTC

Perform Self-diagnosis Code confirmation procedure. Refer to AT-396, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

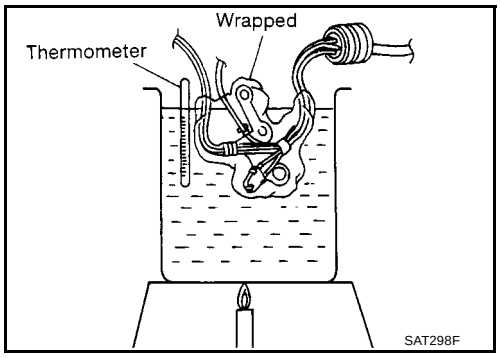
Component Inspection

ECS008S9

A/T FLUID TEMPERATURE SENSOR

- For removal, refer to AT-426, "REMOVAL" .
- Check resistance between two terminals while changing temperature as shown in the figure.

Temperature °C (°F)	Resistance
20 (68)	Approximately 2.5 kΩ
80 (176)	Approximately 0.3 kΩ



ENGINE SPEED SIGNAL

PFP:24825

Description

ECS008SA

The engine speed signal is sent from the ECM to the TCM.

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
39	L	Engine speed signal	 and	—	Refer to EC-94, "ECM INSPECTION TABLE"

ON BOARD DIAGNOSIS LOGIC

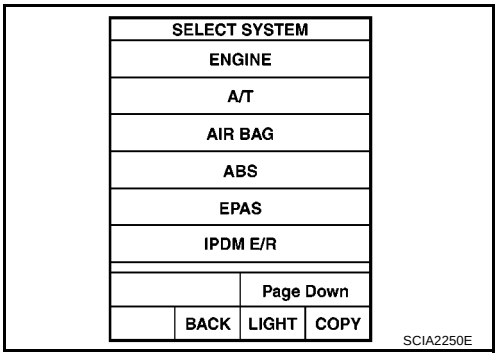
Diagnostic trouble code	Malfunction is detected when...	Check item (Possible cause)
: ENGINE SPEED SIG : 9th judgement flicker	TCM does not receive the proper voltage signal from ECM.	● Harness or connectors (The sensor circuit is open or shorted.)

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

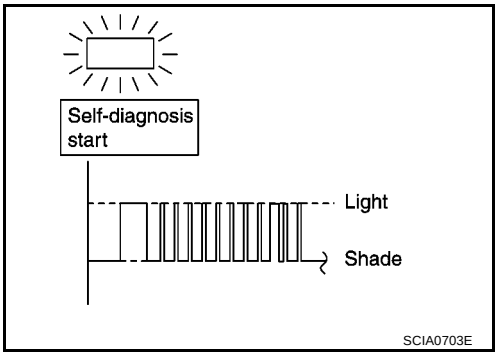
With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 10 km/h (6 MPH), throttle opening greater than 1/8 of the full throttle position and driving for more than 10 seconds.



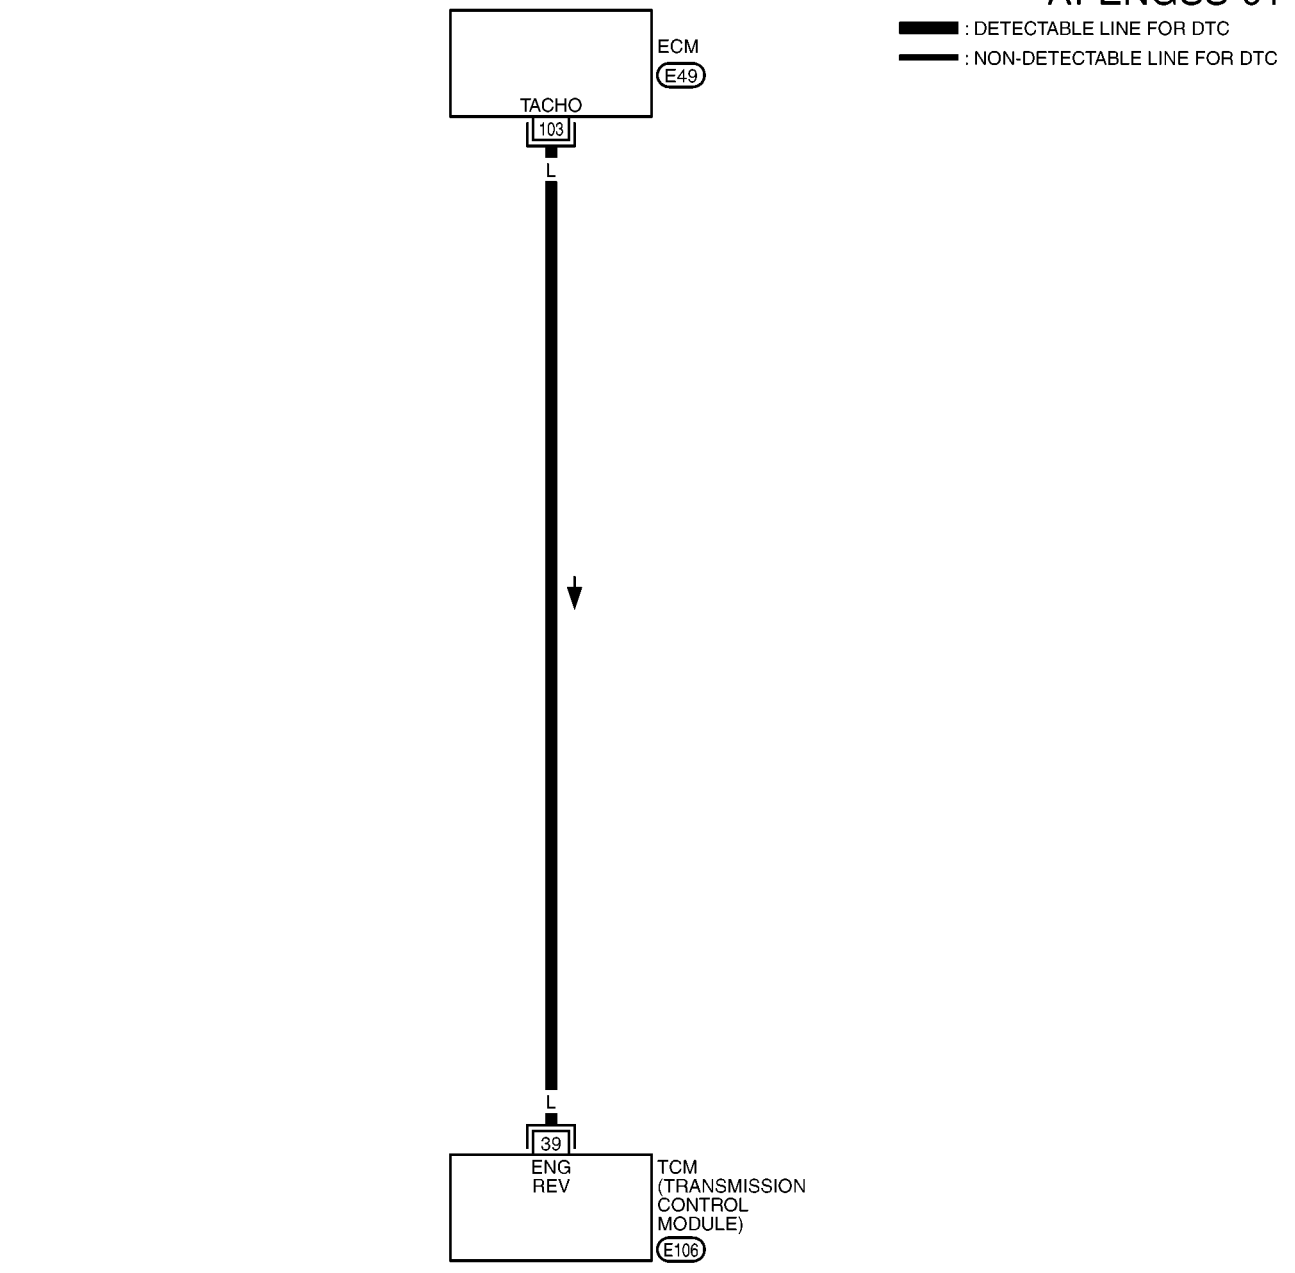
Without CONSULT-II

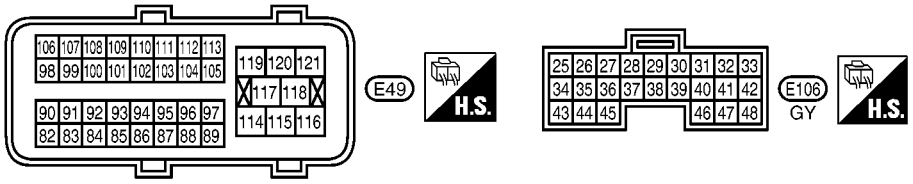
1. Start engine.
2. Drive vehicle under the following conditions:
   Selector lever in “D” position, vehicle speed higher than 10 km/h (6 MPH), throttle opening greater than 1/8 of the full throttle position and driving for more than 10 seconds.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .



Wiring Diagram — AT — ENGSS

ECS008SB





MCWA0074E

Diagnostic Procedure

ECS008SC

1. CHECK DTC WITH ECM

Perform diagnostic test mode II (self-diagnostic results) for engine control. Check ignition signal circuit condition.

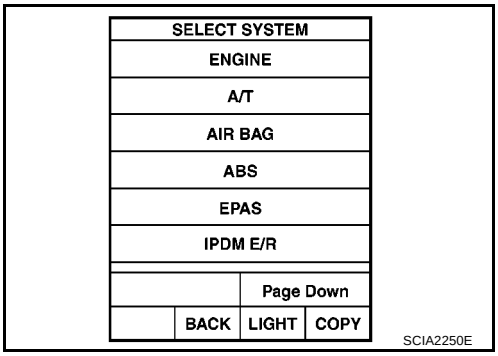
OK or NG

OK >> GO TO 2.
NG >> Check ignition signal circuit for engine control. Refer to EC-435, "IGNITION SIGNAL" .

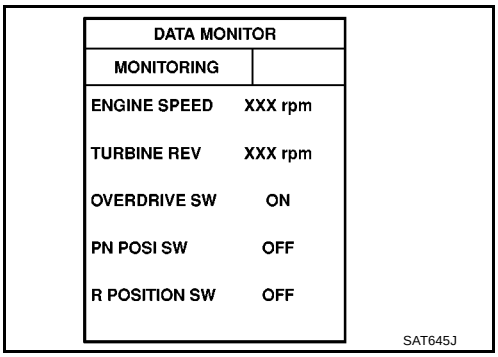
2. CHECK INPUT SIGNAL

With CONSULT-II

1. Start engine.
2. Select “TCM INPUT SIGNALS” in “DATA MONITOR” mode for “A/T” with CONSULT-II.



3. Read out the value of “ENGINE SPEED”.
   Check engine speed changes according to throttle position.



Without CONSULT-II

1. Start engine.
2. Check voltage between TCM terminal 39 and ground.

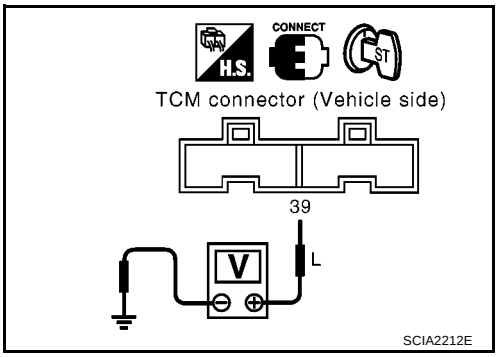
Voltage (Idle speed):

Refer to EC-94, "ECM INSPECTION TABLE" .

OK or NG

OK >> GO TO 3.
NG >> Check the following items. If any items are damaged, repair or replace damaged parts.

- Harness for short or open between TCM and ECM
- Resistor and ignition coil
  Refer to EC-435, "IGNITION SIGNAL" .



3. CHECK DTC

Perform Self-diagnosis Code confirmation procedure. Refer to AT-401, "SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE" .

OK or NG

OK >> **INSPECTION END**
NG >> 1. Perform TCM input/output signal inspection.
2. If NG, recheck TCM pin terminals for damage or loose connection with harness connector.

LINE PRESSURE SOLENOID VALVE

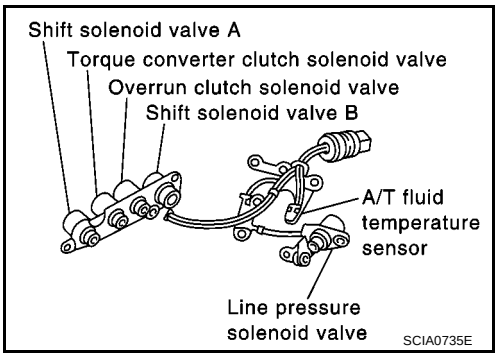
PFP:31940

Description

ECS008SD

The line pressure solenoid valve regulates the oil pump discharge pressure to suit the driving condition in response to a signal sent from the TCM.

The line pressure duty cycle value is not consistent when the closed throttle position switch is “ON”. To confirm the line pressure duty cycle at low pressure, the accelerator (throttle) should be open until the closed throttle position switch is “OFF”.



CONSULT-II REFERENCE VALUE IN DATA MONITOR MODE

Remarks: Specification data are reference values.

Monitor item	Condition	Specification
Line pressure solenoid valve duty	Small throttle opening (Low line pressure) ↓ Large throttle opening (High line pressure)	Approximately 24% ↓ Approximately 95%

NOTE:

The line pressure duty cycle value is not consistent when the closed throttle position switch is “ON”. To confirm the line pressure duty cycle at low pressure, the accelerator (throttle) should be open until the closed throttle position switch is “OFF”.

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
1	PU	Line pressure solenoid valve		When releasing accelerator pedal after warming up engine.	1.5 - 3.0V
				When depressing accelerator pedal fully after warming up engine.	0V
2	BP	Line pressure solenoid valve (with dropping resistor)		When releasing accelerator pedal after warming up engine.	4 - 14V
				When depressing accelerator pedal fully after warming up engine.	0V

ON BOARD DIAGNOSIS LOGIC

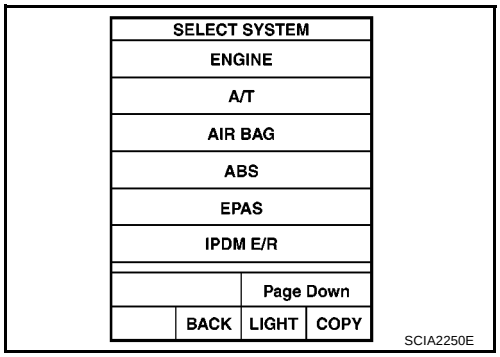
Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)
: LINE PRESSURE S/V	TCM detects an improper voltage drop when it tries to operate the solenoid valve.	● Harness or connectors (The solenoid circuit is open or shorted.) ● Line pressure solenoid valve
: 10th judgement flicker		

SELF-DIAGNOSIS CODE CONFIRMATION PROCEDURE

After the repair, perform the following procedure to confirm the malfunction is eliminated.

With CONSULT-II

1. Start engine.
2. Select “SELF-DIAG RESULTS” mode for A/T with CONSULT-II.
3. With brake pedal depressed, shift the lever from “P” → “N” → “D” → “N” → “P” positions.



Without CONSULT-II

1. Start engine.
2. With brake pedal depressed, shift the lever from “P” → “N” → “D” → “N” → “P” positions.
3. Perform self-diagnosis.
   Refer to AT-257, "SELF-DIAGNOSTIC PROCEDURE (WITHOUT CONSULT-II)" .

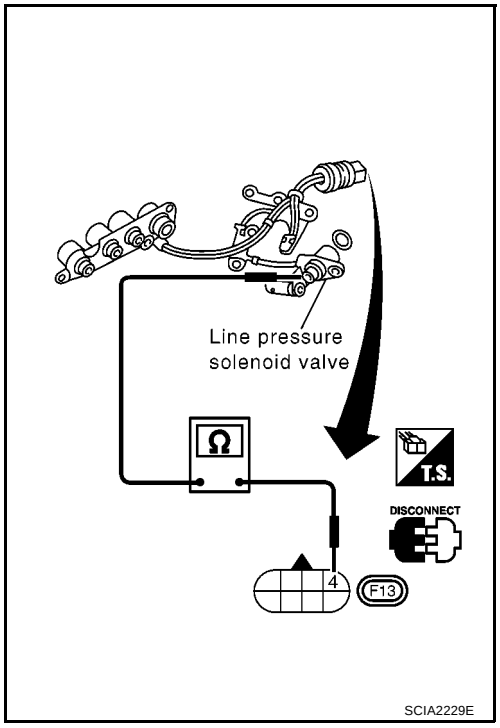
Resistance Check

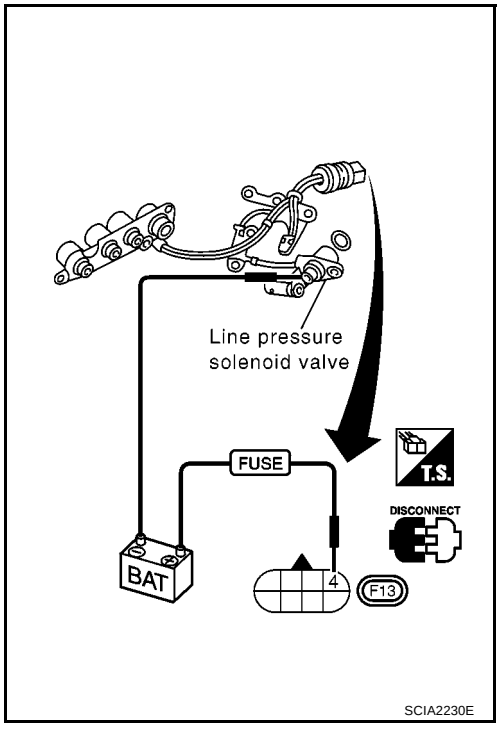
- Check resistance between two terminals.

Solenoid valve	Terminal No.		Resistance (Approx.)
Line pressure solenoid valve	4	Ground	2.5 - 5Ω



Operation Check

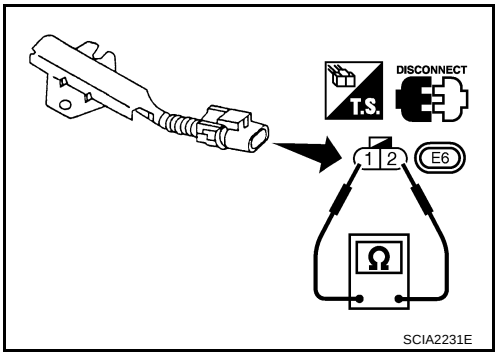
- Check solenoid valve by listening for its operating sound while applying battery voltage to the terminal and ground.



DROPPING RESISTOR

- Check resistance between two terminals.

Resistance: 10 - 15Ω



CAN COMMUNICATION LINE

PFP:31940

Description

ECS008SH

CAN (Control Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition	Judgement standard (Approx.)
5	R	CAN-H (high)	—	—
6	W	CAN-L (low)	—	—

On Board Diagnosis Logic

ECS008SI

Diagnostic trouble code	Malfunction is detected when...	Check items (Possible cause)

TCM TERMINALS AND REFERENCE VALUE

Remarks: Specification data are reference values.

Terminal No.	Wire color	Item	Condition		Judgement standard (Approx.)
10	G	Power source		When turning ignition switch to “ON”.	Battery voltage
				When turning ignition switch to “OFF”.	0V
19	G	Power source		Same as No. 10	
25	B	Ground	Always		0V
28	GY	Power source (Memory back-up)		When turning ignition switch to “OFF”.	Battery voltage
				When turning ignition switch to “ON”.	Battery voltage
48	B	Ground	Always		0V

Diagnostic Procedure

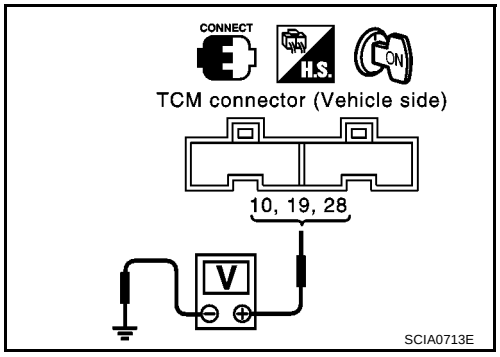
ECS008RG

1. CHECK TCM POWER SOURCE STEP 1

1. Turn ignition switch to ON position. (Do not start engine.)
2. Check voltage between TCM terminals 10, 19, 28 and ground.

OK or NG

OK >> GO TO 2
NG >> GO TO 3

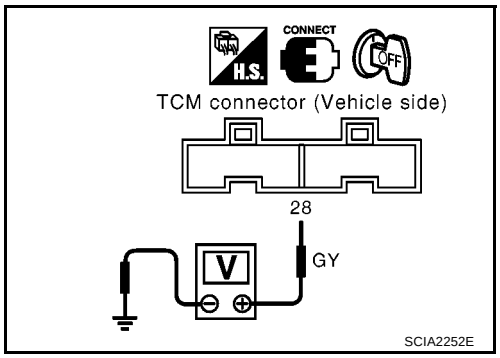


2. CHECK TCM POWER SOURCE STEP 2

1. Turn ignition switch to OFF position.
2. Check voltage between TCM terminal 28 and ground.

OK or NG

OK >> GO TO 4
NG >> GO TO 3



3. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short or open between fuse and TCM terminals 10, 19 and 28
- Fuse
- Ignition switch
  Refer to PG-4, "POWER SUPPLY ROUTING" .

OK or NG

OK >> GO TO 4
NG >> Repair or replace damaged parts.

4. CHECK TCM GROUND CIRCUIT

1. Turn ignition switch to OFF position.
2. Disconnect TCM harness connector.
3. Check continuity between TCM terminals 25, 48 and ground. Refer to wiring diagram — AT — MAIN.

   Continuity should exist.

   If OK, check harness for short to ground and short to power.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.

A/T SHIFT LOCK SYSTEM

PFP:34950

Description

ECS008HO

- The mechanical key interlock mechanism also operates as a shift lock:
  With the key switch turned to ON, the selector lever cannot be shifted from “P” (parking) to any other position unless the brake pedal is depressed.
  With the key removed, the selector lever cannot be shifted from “P” to any other position.
  The key cannot be removed unless the selector lever is placed in “P”.
- The shift lock and key interlock mechanisms are controlled by the ON-OFF operation of the shift lock solenoid and by the operation of the rotator and slider located inside the key cylinder.

Shift Lock System Electrical Parts Location

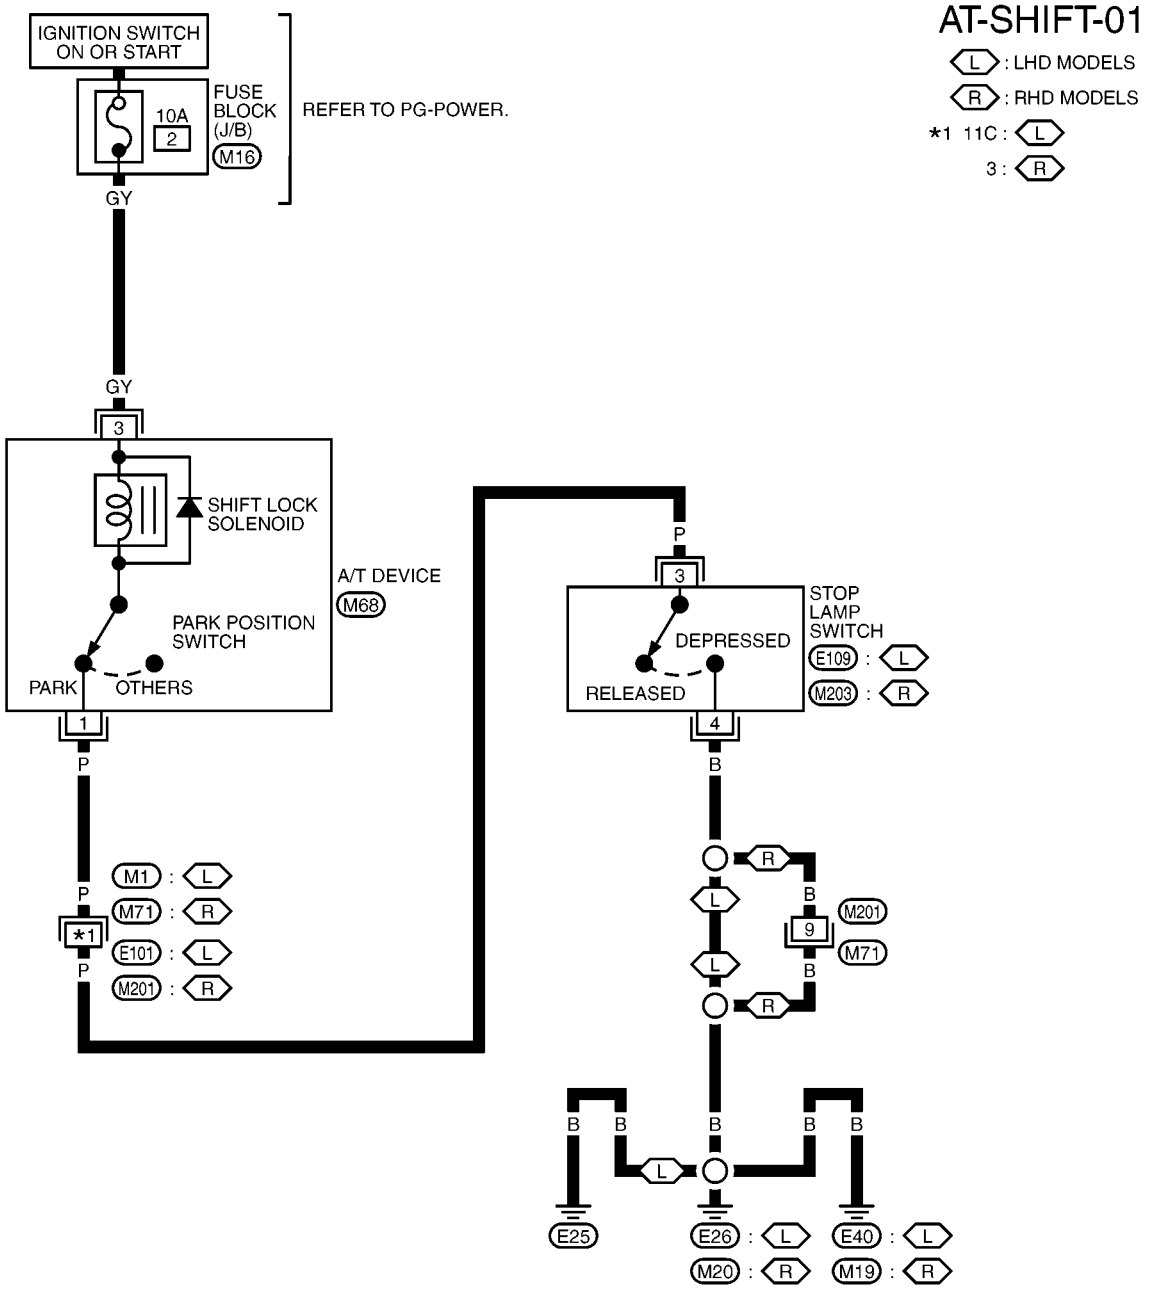
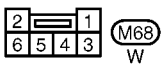
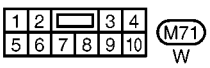
Wiring Diagram — AT — SHIFT

ECS008HQ







REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)

MCWA0091E

Diagnostic Procedure

ECS008HR

SYMPTOM 1:

- **Selector lever cannot be moved from “P” position with key in ON position and brake pedal applied.**
- **Selector lever can be moved from “P” position with key in ON position and brake pedal released.**
- **Selector lever can be moved from “P” position when key is removed from key cylinder.**

SYMPTOM 2:

Ignition key cannot be removed when selector lever is set to “P” position. It can be removed when selector lever is set to any position except “P”.

1. CHECK KEY INTERLOCK CABLE

Check key interlock cable for damage.

OK or NG

OK >> GO TO 2
NG >> Repair key interlock cable. Refer to AT-423, "KEY INTERLOCK CABLE" .

2. CHECK SELECTOR LEVER POSITION

Check selector lever position for damage.

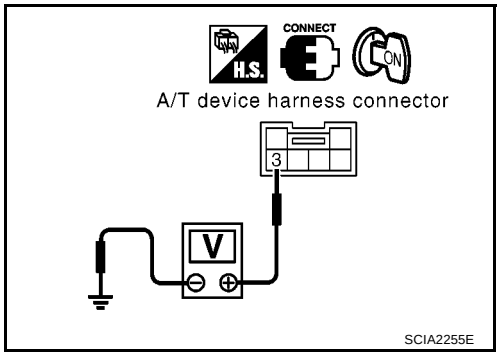
OK or NG

OK >> GO TO 3
NG >> Check selector lever. Refer to AT-428, "Park/Neutral Position (PNP) Switch Adjustment" .

3. CHECK POWER SOURCE

1. Turn ignition switch to “ON” position. (Do not start engine.)
2. Check the voltage between A/T device harness connector M68 terminal 3 (G/Y) and ground.

Voltage: Battery voltage



OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING ITEM

Check the following items:

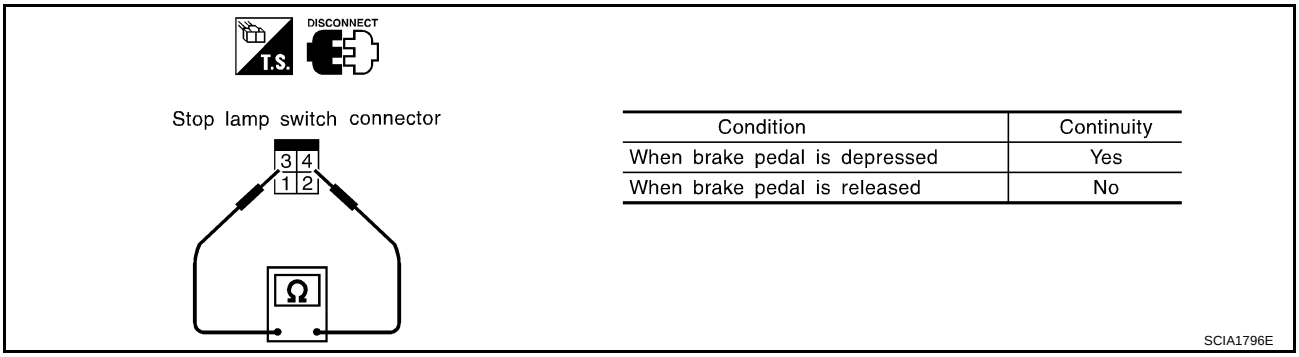
1. Harness for short or open between fuse and A/T device harness terminal 3
2. 10A fuse [No.2, located in the fuse block (J/B)]
3. Ignition switch (Refer to PG-4, "POWER SUPPLY ROUTING" .)

OK or NG

OK >> GO TO 5.
NG >> Repair or replace damaged parts.

5. CHECK STOP LAMP SWITCH

1. Turn ignition switch to “OFF” position.
2. Disconnect stop lamp switch connector.
3. Check continuity between stop lamp switch connector LHD:E109, RHD:M203 terminals 3 (P) and 4 (B).



Condition	Continuity
When brake pedal is depressed	Yes
When brake pedal is released	No

Check stop lamp switch after adjusting brake pedal — refer to **BR-6, "BRAKE PEDAL"** .

OK or NG

OK >> GO TO 6.
NG >> Repair or replace damaged parts.

6. CHECK GROUND CIRCUIT

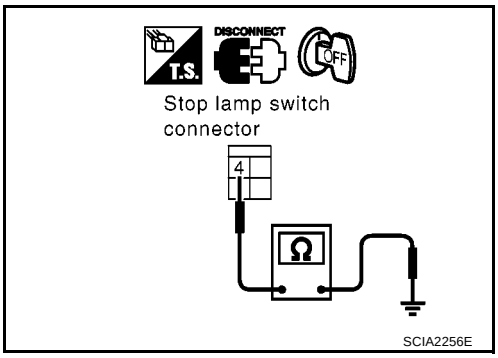
1. Check continuity between stop lamp switch connector LHD:E109, RHD:M203 terminal 4 (B) and ground.

   Continuity should exist.

   If OK, check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair or replace open circuit or short to ground or short to power in harness or connectors.



7. CHECK SHIFT LOCK SOLENOID AND PARK POSITION SWITCH

1. Connect stop lampswitch harness connector.
2. Turn ignition switch to “ON” position. (Do not start engine.)
3. Selector lever is set in “P” position.
4. Check shift lock solenoid and park position switch operation.

Condition	Brake pedal	Operation
When ignition switch is turned to “ON” position and selector lever is set in “P” position.	Depressed	Yes
	Released	No

OK or NG

OK >> INSPECTION END
NG >> GO TO 8.

8. DETECT MALFUNCTIONING ITEM

Check the following items:

- Harness for short or open between stop lamp switch connector LHD:E109, RHD:M203 terminal 3 (P) and A/T device harness connector M68 terminal 1 (P).

OK or NG

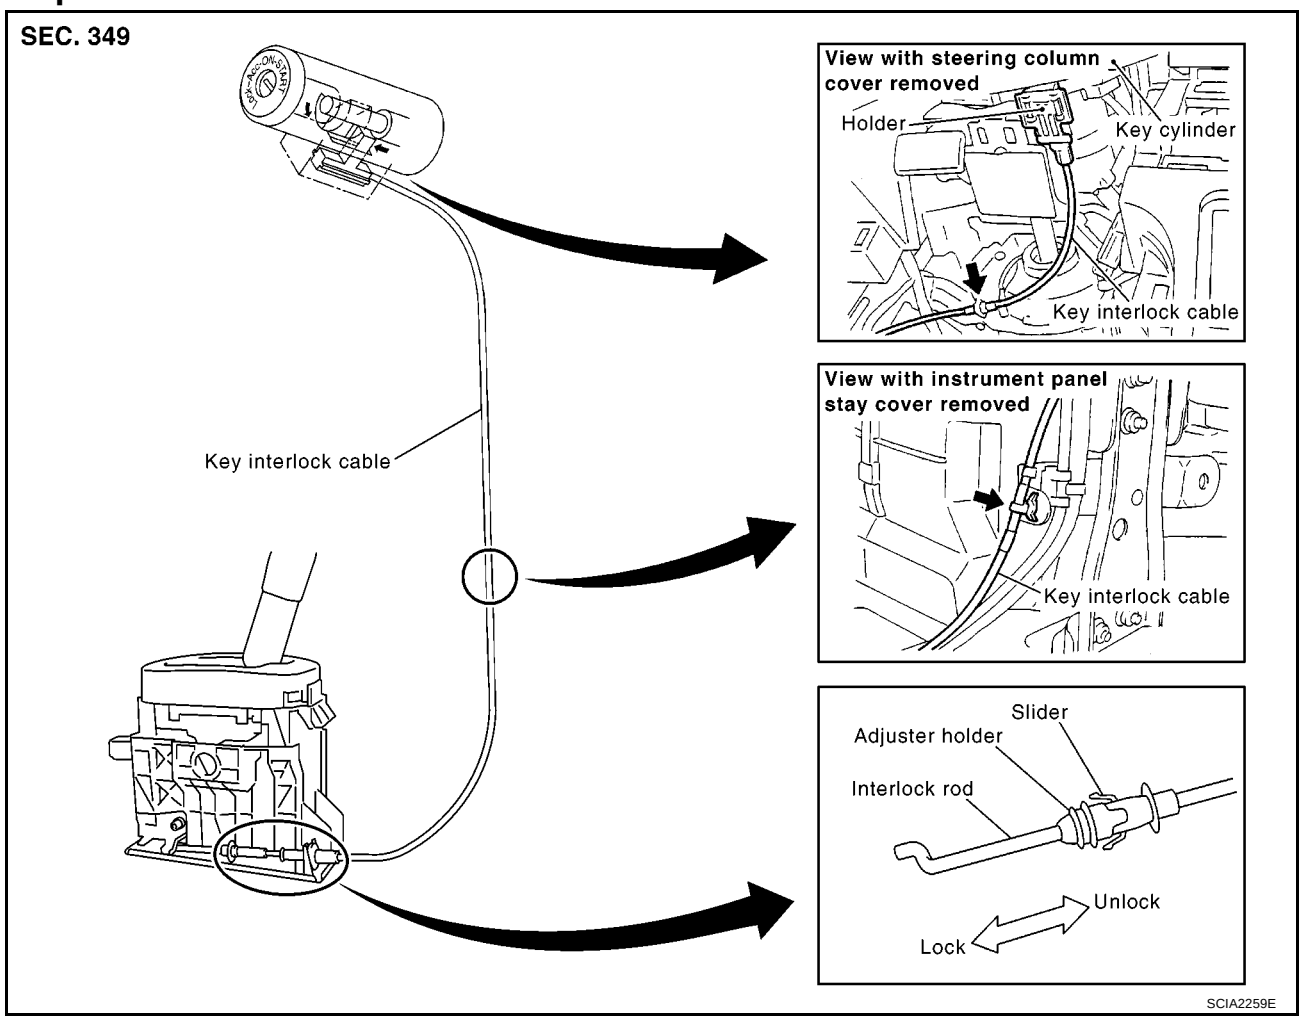
OK >> Replace shift lock solenoid or park position switch.
NG >> Repair or replace damaged parts.

KEY INTERLOCK CABLE

PFP:34908

Components

ECS008HS



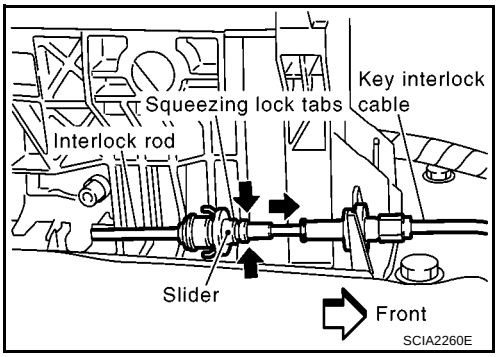
CAUTION:

- **Install key interlock cable in such a way that it will not be damaged by sharp bends, twists or interference with adjacent parts.**
- **After installing key interlock cable to control device, make sure that casing cap and bracket are firmly secured in their positions.**

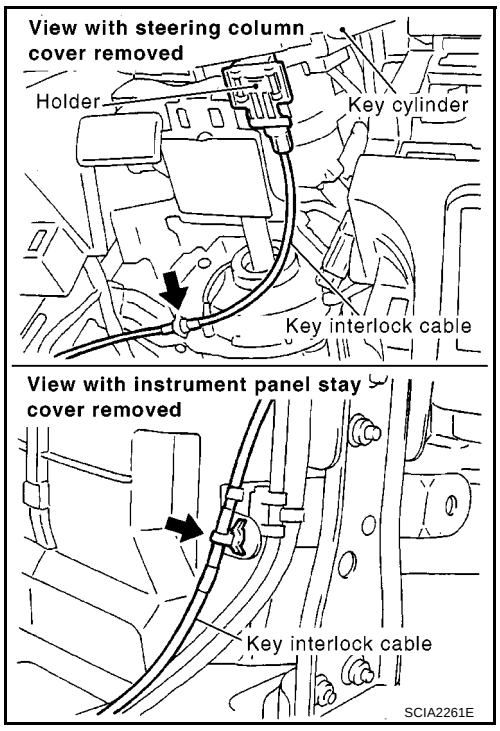
Removal

ECS008SY

1. Unlock slider by squeezing lock tabs on slider from adjuster holder.
2. Remove casing cap from bracket of control device and remove interlock rod from cable.



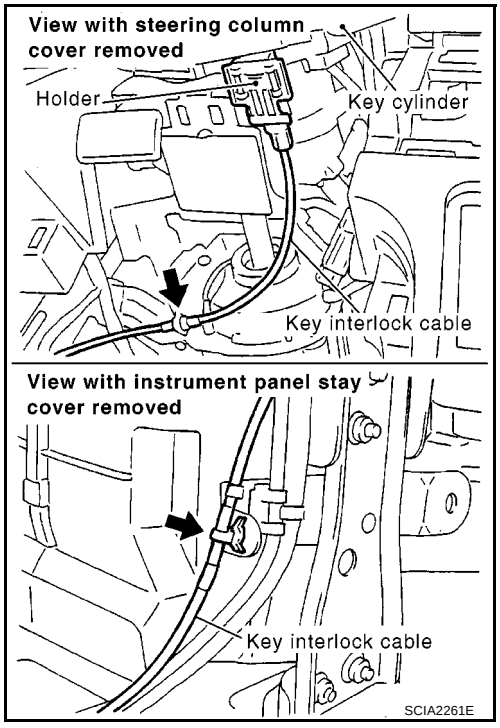
3. Remove holder from key cylinder and remove key interlock cable.



Installation

ECS008SZ

1. Set key interlock cable to key cylinder and install holder.
2. Clamp cable and fix to control cable with band.
3. Turn ignition key to lock position.
4. Set selector lever to P position.

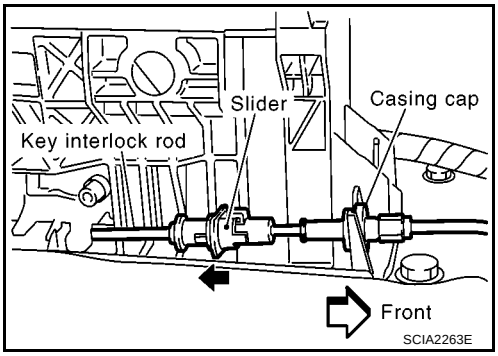


5. Insert interlock rod into adjuster holder.
6. Install casing cap to bracket.
7. Move slider in order to fix adjuster holder to interlock rod.

CAUTION:

Do not touch any adjacent parts of key interlock cable when slider is being held.

Insert slider into key interlock rod straightly.



ON-VEHICLE SERVICE

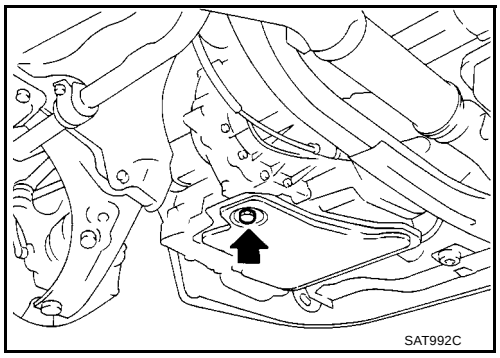
PFP:00000

Control Valve Assembly and Accumulators

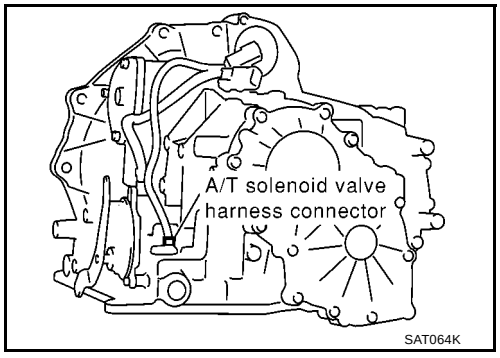
ECS008HV

REMOVAL

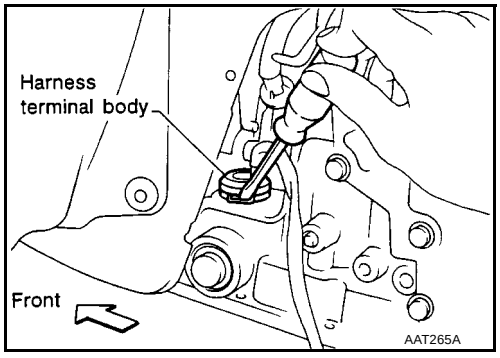
1. Drain ATF from transaxle.
2. Remove oil pan and gasket.



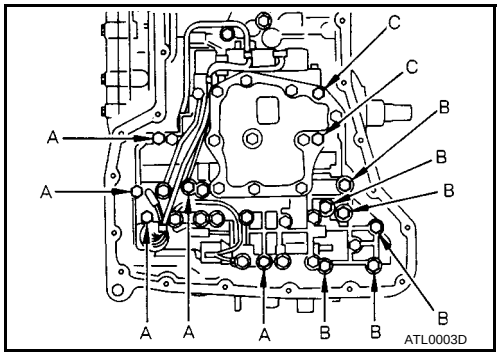
3. Disconnect A/T solenoid valve harness connector.



4. Remove snap ring from A/T solenoid valve harness terminal body.
5. Remove A/T solenoid valve harness by pushing terminal body into transmission case.



6. Remove control valve assembly by removing fixing bolts.

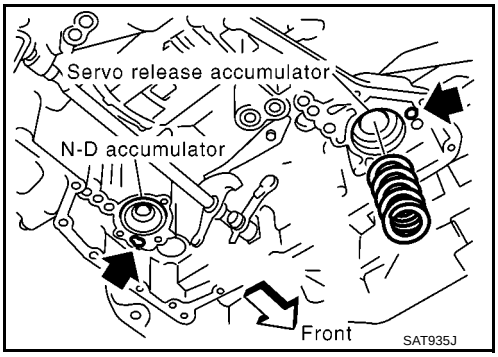


Bolt length, number and location:

Bolt symbol	A	B	C
Bolt length " ℓ " mm (in)	40.0 mm (1.575 in)	33.0 mm (1.299 in)	43.5 mm (1.713 in)
Number of bolts	5	6	2

- **Be careful not to drop manual valve and servo release accumulator return springs.**

7. Disassemble and inspect control valve assembly if necessary. Refer to AT-426, "REMOVAL" .
8. Remove servo release and N-D accumulators by applying compressed air if necessary.
   - **Hold each piston with a rag.**



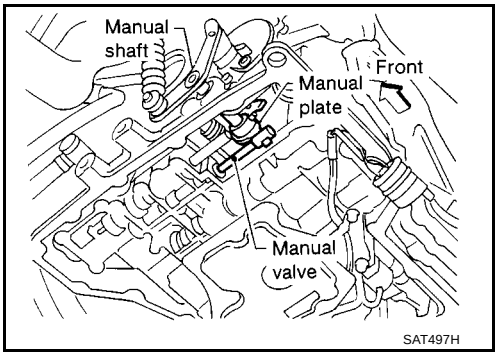
INSTALLATION

Install in the reverse order of removal.

- **Tighten fixing bolts to specification.**

  : 7 - 9 N-m (0.7 - 0.9 kg-m, 61 - 78 in-lb)

- **Set manual shaft in Neutral position, then align manual plate with groove in manual valve.**
- **After installing control valve assembly to transmission case, make sure that selector lever can be moved to all positions.**



Control Cable Adjustment

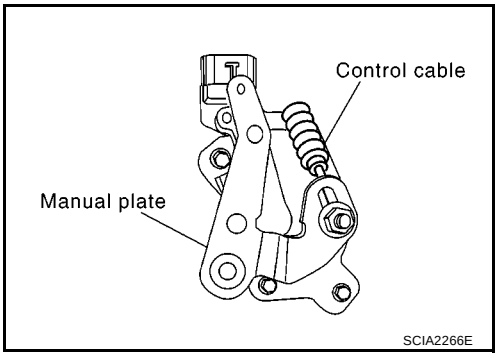
ECS008HW

1. Loosen lock nut connecting manual plate to control cable so control cable can move freely.
2. Place manual plate and selector lever in the P position.

   CAUTION:
   Rotate wheels at least a quarter turn and be certain Park position mechanism is fully engaged.
3. Hold the end of the control cable. Pull and push it two or three times and then apply 9.8 N (1 kg) of pressure to it. Release the cable and temporarily tighten lock nut.
4. Tighten the lock nut for the control cable to the torque specified below:

   Tightening torque **:12.5 - 16.9N·m (1.3 - 1.7kg-m, 10 - 12ft-lb)**

   CAUTION:
   Tighten the lock nut with the manual plate secured.

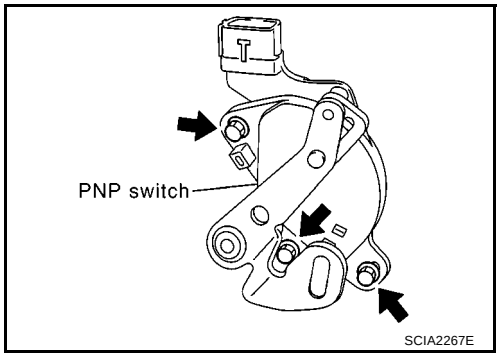


Park/Neutral Position (PNP) Switch Adjustment

ECS008HX

REMOVAL

1. Remove control cable from manual plate.
2. Place manual plate in the N position.
3. Remove bolts to remove PNP switch.



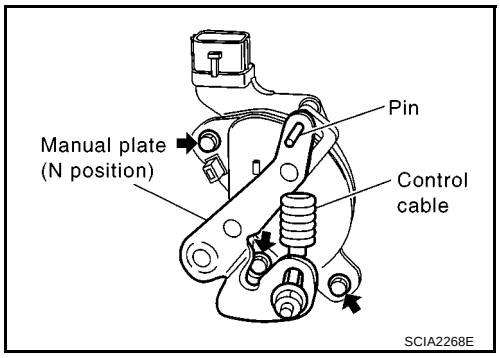
INSTALLATION

Install in the reverse order of removal. Be careful of the following:

- For installation, align the PNP switch hole with the manual plate hole while the transaxle is in N, and insert a pin into the aligned holes.
- When installing PNP switch, tighten to torque specified below:

Tightening torque	**: 2.6 – 3.9N·m (0.27 – 0.39kg–m, 23 – 34in–lb)**

- After installation, perform A/T position adjustment and inspection (refer to AT-427, "Control Cable Adjustment"), and PNP switch continuity (refer to AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH").



Differential Side Oil Seal Replacement

ECS008HY

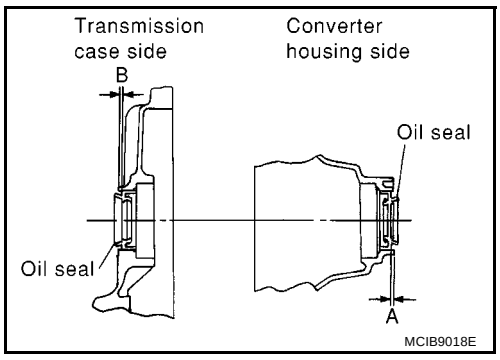
1. Remove drive shaft assemblies. Refer to FAX-10, "FRONT DRIVE SHAFT" .
2. Remove oil seals.
3. Install oil seals.
   - **Apply ATF to oil seal surface before installing.**
   - **Drift for installing**

   - **Install oil seals so that dimensions “A” and “B” are within specifications.**

Unit: mm (in)

A	B
5.5 to 6.5 (0.217 to 0.256)	–0.5 to 0.5 (–0.020 to 0.020)

4. Reinstall any part removed.

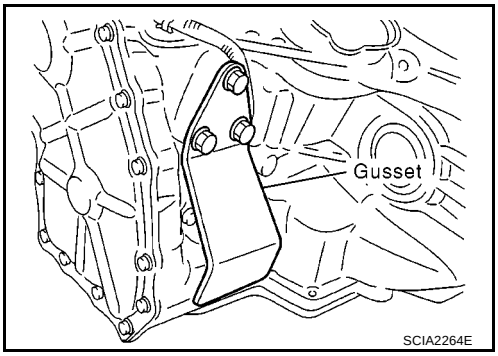


Revolution Sensor Replacement

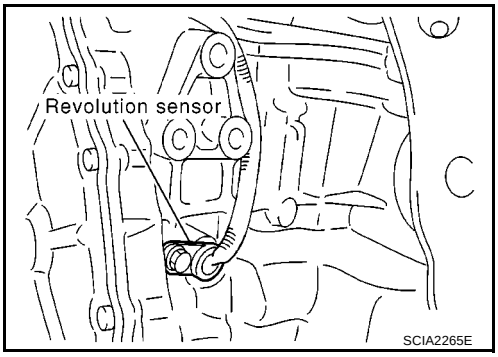
ECS008HZ

REMOVAL

1. Remove drive shaft assemblies. Refer to FAX-10, "FRONT DRIVE SHAFT" .
2. Remove gusset.



3. Remove revolution sensor.



INSTALLATION

- **Install the removed parts in the reverse order of the removal, while paying attention to the following work.**

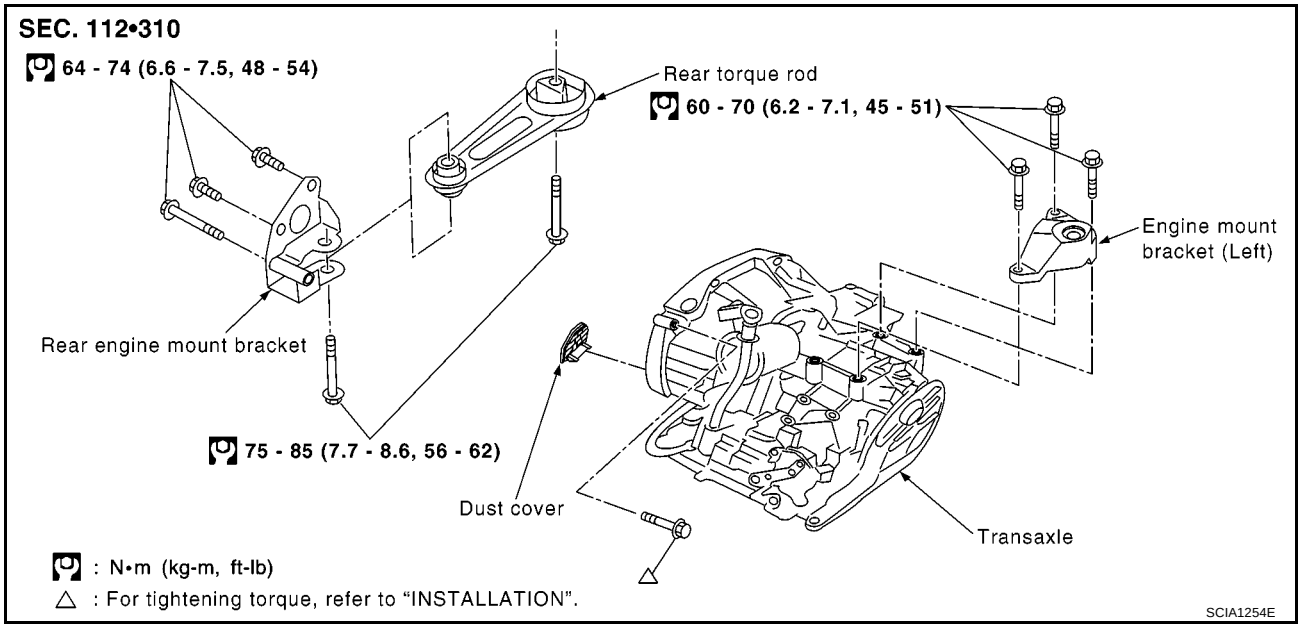
Gusset	**: 45 - 53 N-m (4.6 - 5.4 kg-m, 34 - 39 ft-lb)**
Revolution sensor	**: 5.0 - 6.8 N-m (0.51 - 0.69 kg-m, 45 - 60 in-lb)**

REMOVAL AND INSTALLATION

PFP:00000

Removal

ECS008I0

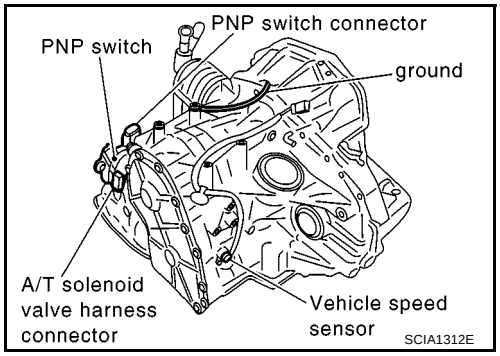


CAUTION:

When removing the A/T assembly from engine, first remove the crankshaft position sensor (POS) from the A/T assembly.

Be careful not to damage sensor edge.

1. Remove battery and air duct.
2. Remove air breather hose.
3. Remove crankshaft position sensor (POS) from A/T assembly.
4. Disconnect PNP switch, A/T solenoid valve harness connector, vehicle speed sensor and ground.



5. Remove control cable from transaxle.
6. Remove front exhaust tube with power tool. Refer to EX-3, "Removal and Installation" .
7. Remove drive shafts. Refer to FAX-13, "Removal and Installation" .
8. Remove oil cooler hose.
9. Remove starter motor. Refer to SC-45, "Removal and Installation (CR Engine Models)" .
10. Remove dust cover from converter housing.
11. Turn crankshaft, and remove the four tightening bolts for drive plate and torque converter.

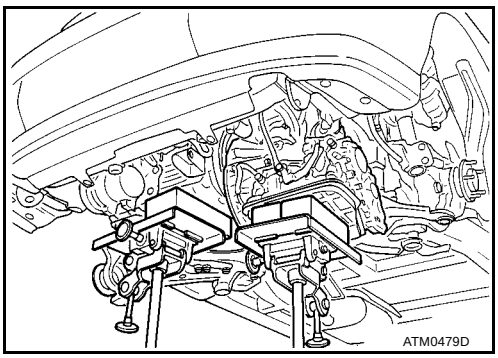
    CAUTION:

    When turning crankshaft, turn it clockwise as viewed from the front of the engine.

12. Support A/T assembly with a jack.

CAUTION:
When setting the transmission jack, be careful not to allow it to collide against the drain plug.

13. Remove rear engine mount brackt and rear torque rod.
14. Remove bolts fixing transaxle to engine mount brackt (Left).
15. Support engine with a jack.
16. Remove bolts fixing transaxle to engine.
17. Remove bolts fixing A/T assembly to engine with power tool.

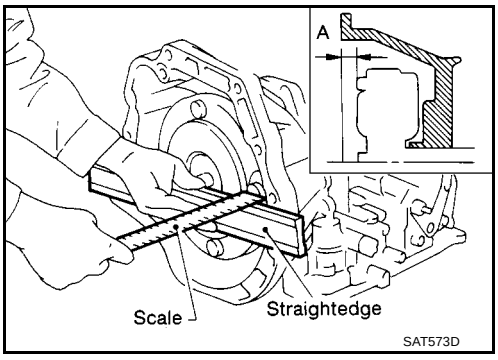


Installation

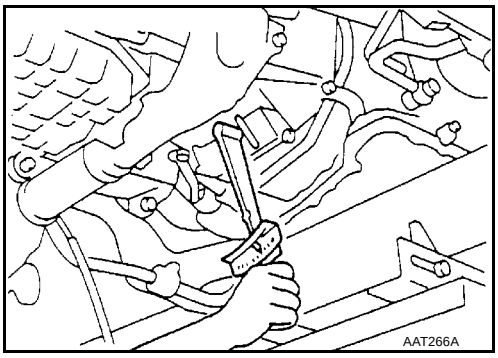
ECS008I1

1. When connecting torque converter to transaxle, measure distance “A” to be certain that they are correctly assembled.

Distance “A”: 21.1 mm (0.831 in) or more

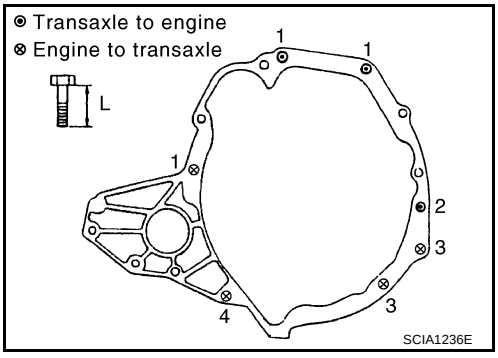


2. Install torque converter to drive plate.
   - **With converter installed, rotate crankshaft several turns to check that transaxle rotates freely without binding.**



3. Tighten bolts fixing transaxle.

Bolt No.	Tightening torque N-m (kg-m, ft-lb)	Bolt length “ L ” mm (in)
1	31 - 40 (3.2 - 4.0, 13 - 29)	50 (1.97)
2		135 (5.31)
3	17 - 23 (1.8 - 2.3, 13 - 16)	20 (0.79)
4		30 (1.18)



4. Reinstall any part removed.
5. Adjust control cable. Refer to AT-427, "Control Cable Adjustment" .
6. Check continuity of PNP switch. Refer to AT-114, "DTC P0705 PARK/NEUTRAL POSITION (PNP) SWITCH" .
7. Refill transaxle with ATF and check fluid level.
8. Move selector lever through all positions to be sure that transaxle operates correctly. With parking brake applied, idle engine. Move selector lever through “N” to “D”, to “2”, to “1” and “R” positions. A slight shock should be felt through the hand gripping the selector each time the transaxle is shifted.
9. Perform road test. Refer to AT-66, "Road Test" .

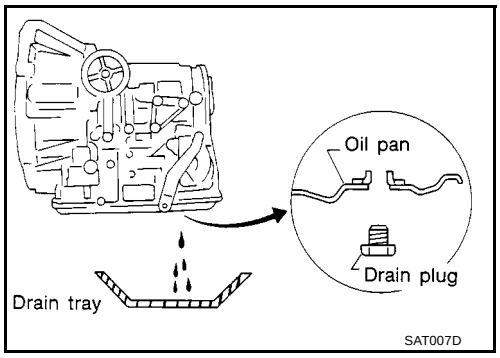
DISASSEMBLY

PFP:31020

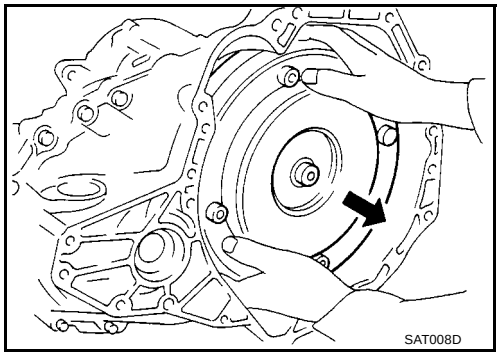
Disassembly

ECS008I5

1. Drain ATF through drain plug.



2. Remove torque converter.

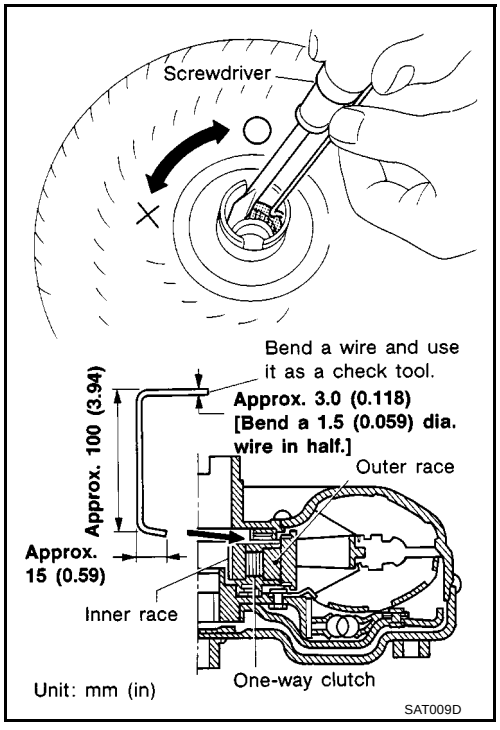


3. Check torque converter one-way clutch using check tool as shown at right.

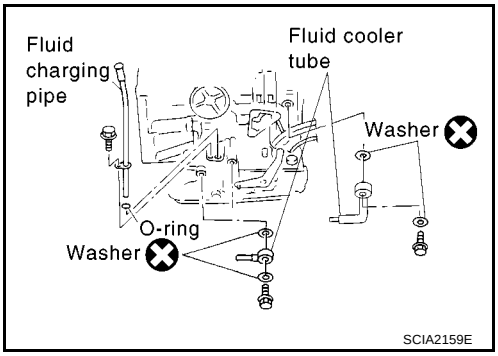
a. Insert check tool into the groove of bearing support built into one-way clutch outer race.

b. When fixing bearing support with check tool, rotate one-way clutch spline using screwdriver.

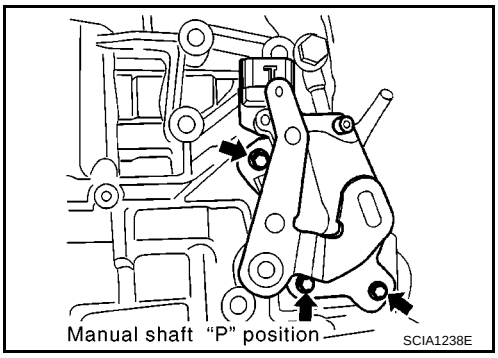
c. Check that inner race rotates clockwise only. If not, replace torque converter assembly.



4. Remove A/T fluid charging pipe and fluid cooler tube.



5. Set manual shaft to position P.
6. Remove park/neutral position (PNP) switch.

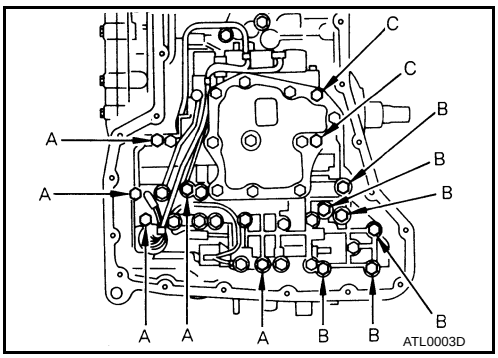


7. Remove oil pan and oil pan gasket.
   - **Do not reuse oil pan bolts.**
8. Check foreign materials in oil pan to help determine causes of malfunction. If the fluid is very dark, smells burned, or contains foreign particles, the frictional material (clutches, band) may need replacement. A tacky film that will not wipe clean indicates varnish build up. Varnish can cause valves, servo, and clutches to stick and can inhibit pump pressure.
   - **If frictional material is detected, replace radiator after repair of A/T. Refer to CO-11, "RADIATOR".**
9. Remove control valve assembly according to the following procedures.

a. Remove snap ring from the terminal body and push the terminal body into the transaxle case by hand.

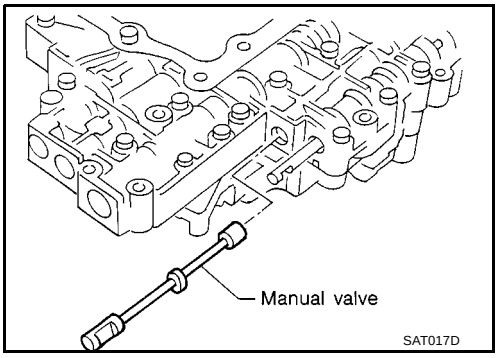
b. Remove bolts securing control valve.

Bolt symbol	A	B	C
Length under head (mm)	40.0	33.0	43.5
Quantity	5	6	2

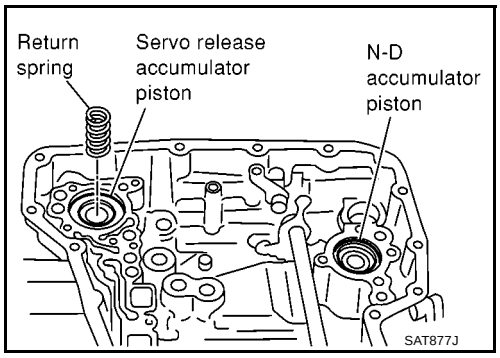


c. Remove control valve assembly from the transaxle assembly.

10. Remove manual valve from control valve assembly as a precaution.



11. Remove return spring from servo release accumulator piston.

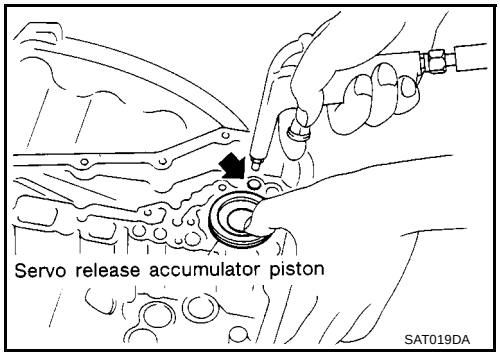


12. Remove servo release accumulator piston with compressed air.

CAUTION:

- **Strong flow of air will push the accumulator piston out along with a splash of oil. To avoid this, cover the area with paper towels and blow air little by little.**
- **Wrap the removed accumulator piston in a paper towel.**

13. Remove O-rings from servo release accumulator piston.

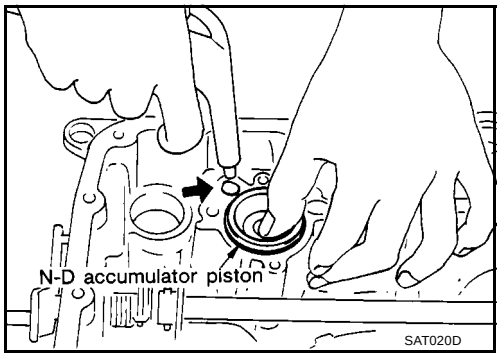


14. Remove N-D accumulator piston and return spring with compressed air.

CAUTION:

- **Strong flow of air will push the accumulator piston out along with a splash of oil. To avoid this, cover the area with paper towels and blow air little by little.**
- **Wrap the removed accumulator piston in a paper towel.**

15. Remove O-rings from N-D accumulator piston.

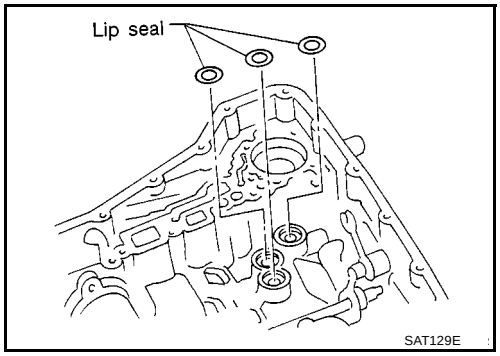


16. Check accumulator pistons and contact surface of transmission case for damage.
17. Check accumulator return springs for damage and free length.

Return spring:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

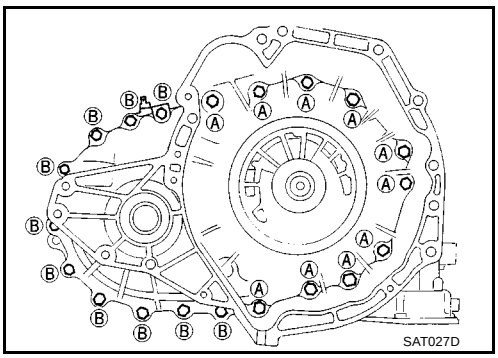
18. Remove lip seals from band servo oil port.



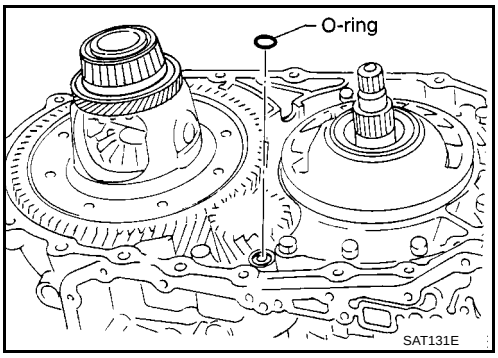
19. Remove converter housing according to the following procedures.

a. Remove converter housing mounting bolts A and B.

b. Remove converter housing by tapping it lightly.

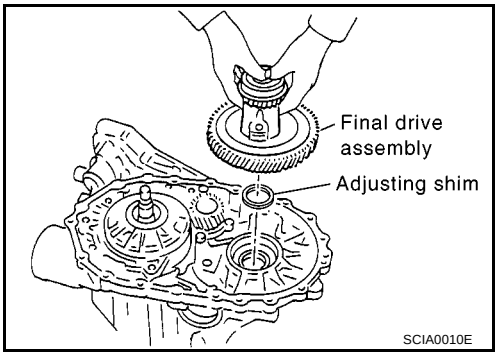


c. Remove O-ring from differential oil port.



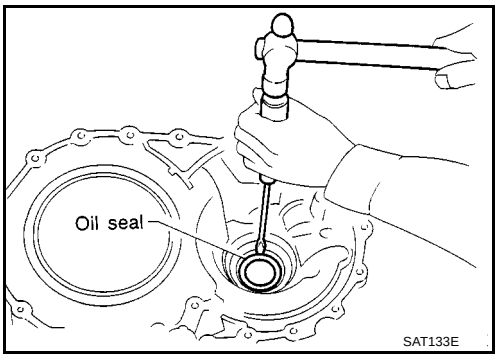
20. Remove final drive assembly from transmission case.

21. Remove adjusting shim from transmission case.

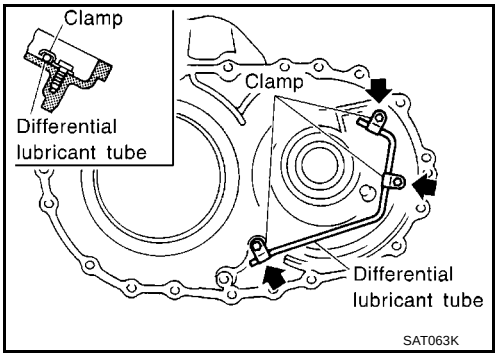


22. Remove oil seal with screwdriver from converter housing.

- **Be careful not to damage case.**

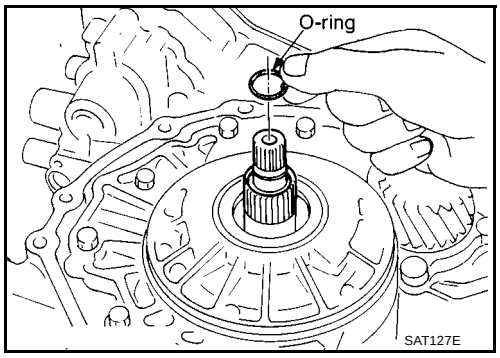


23. Remove differential lubricant tube from converter housing.

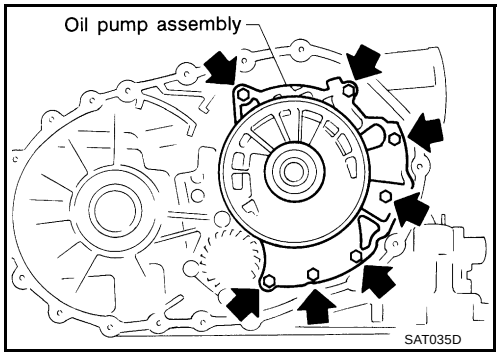


24. Remove oil pump according to the following procedures.

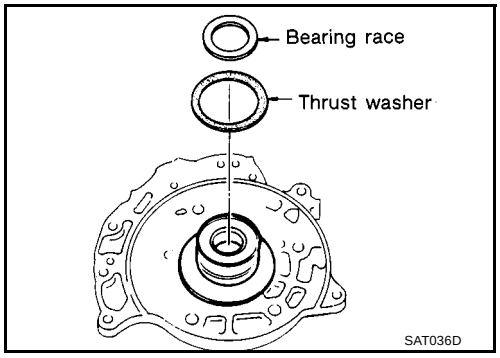
a. Remove O-ring from input shaft.



b. Remove oil pump assembly from transmission case.



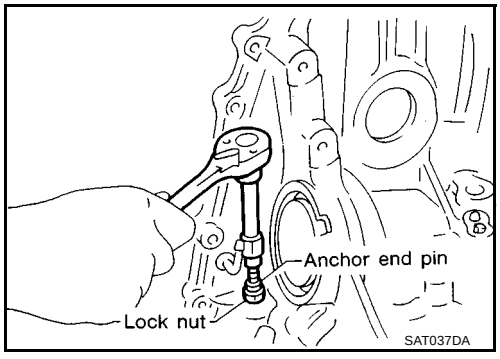
c. Remove thrust washer and bearing race from oil pump assembly.



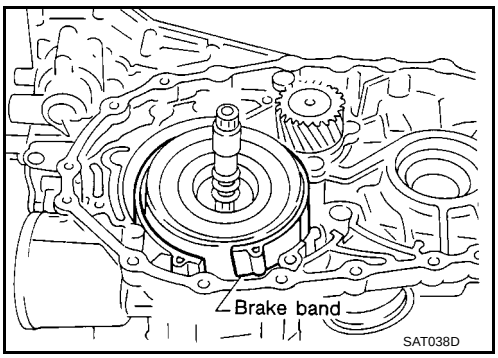
25. Remove brake band according to the following procedures.

a. Loosen lock nut, then back off anchor end pin.

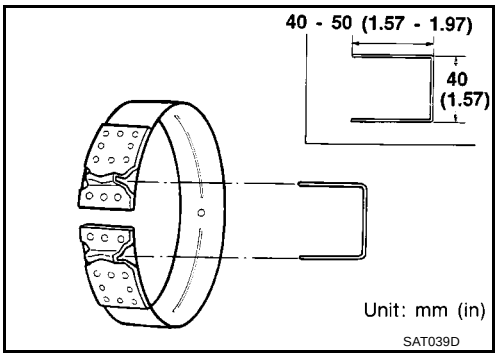
- **Do not reuse anchor end pin.**



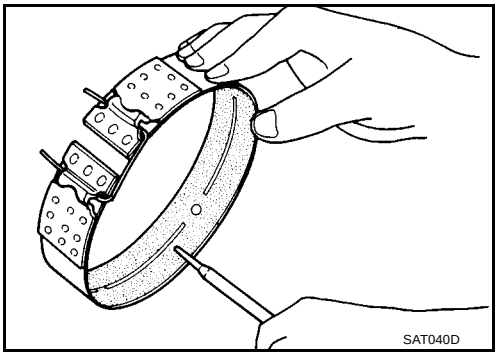
b. Remove brake band and strut from transmission case.



- **To prevent brake linings from cracking or peeling, do not stretch the flexible band unnecessarily. When removing the brake band, always secure it with a clip as shown in the figure at right.**
  Leave the clip in position after removing the brake band.

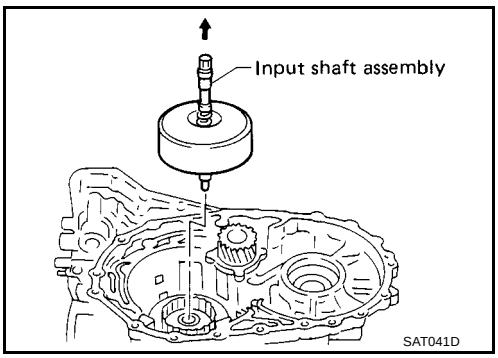


c. Check brake band facing for damage, cracks, wear or burns.

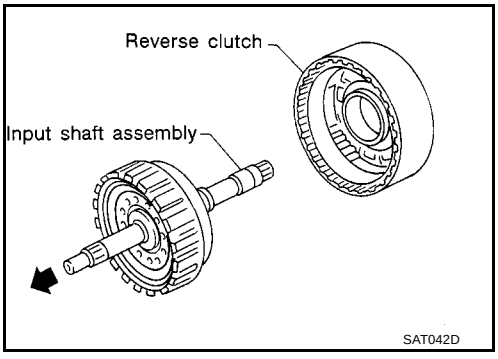


26. Remove input shaft assembly (high clutch) and reverse clutch according to the following procedures.

a. Remove input shaft assembly (high clutch) with reverse clutch.

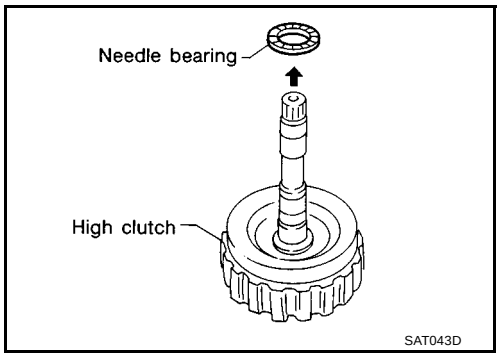


b. Remove input shaft assembly (high clutch) from reverse clutch.

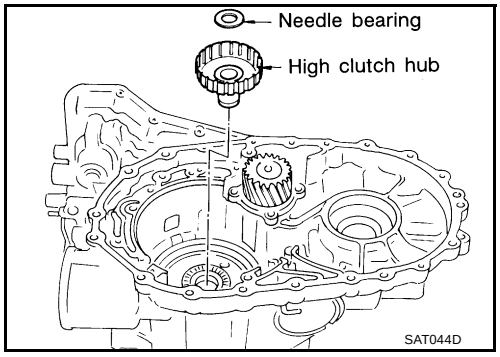


c. Remove needle bearings from high clutch drum.

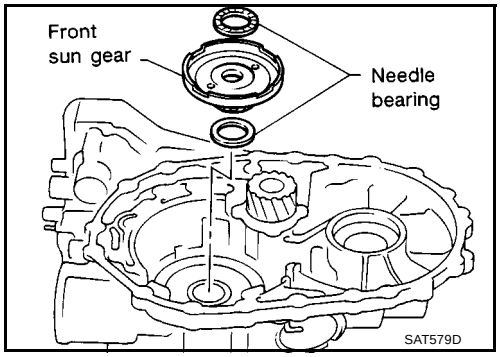
d. Check input shaft assembly and needle bearing for damage or wear.



27. Remove high clutch hub and needle bearing from trans mission case.
    - Check high clutch hub and needle bearing for damage or wear.

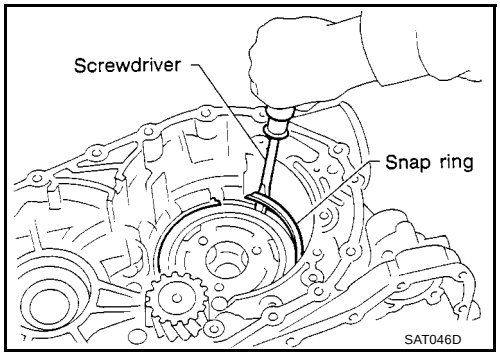


28. Remove high clutch hub and front sun gear from transmission case.
    - Check front sun gear and needle bearings for damage or wear.

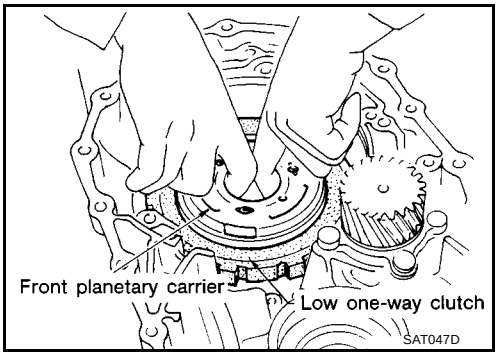


29. Remove low one-way clutch and front planetary carrier assembly according to the following procedures.

a. Remove snap ring with flat-bladed screwdriver.

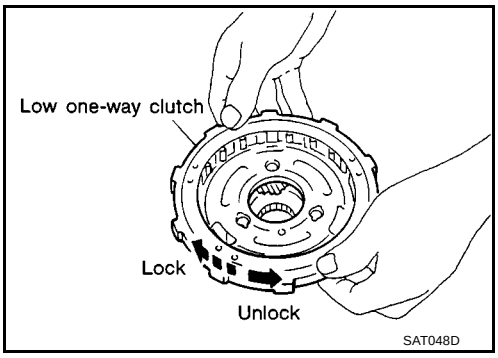


b. Remove front planetary carrier with low one-way clutch.



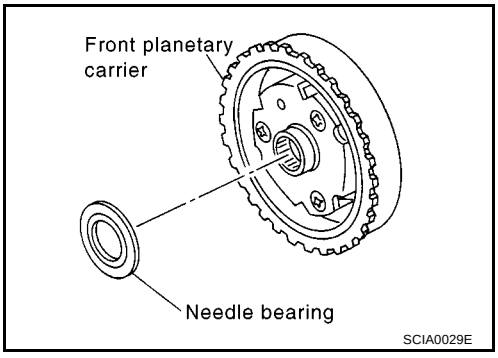
c. Check that low one-way clutch rotates in the direction of the arrow and lochs in the opposite direction.

d. Remove low one-way clutch front planetary carrier by rotating it in the direction of arrow.



e. Remove needle bearing front planetary carrier.

f. Check front planetary carrier, low one-way clutch and needle bearing for damage or wear.

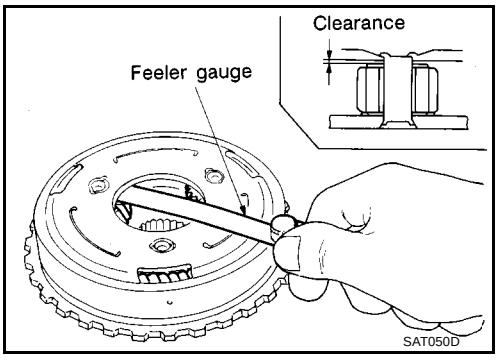


g. Check clearance between pinion washer and planetary carrier using feeler gauge.

Standard clearance: 0.15 - 0.70 mm (0.0059 - 0.0276 in)

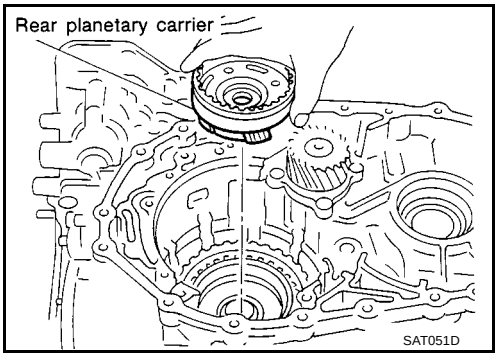
Allowable limit: 0.80 mm (0.0315 in)

Replace front planetary carrier if the clearance exceeds allowable limit.

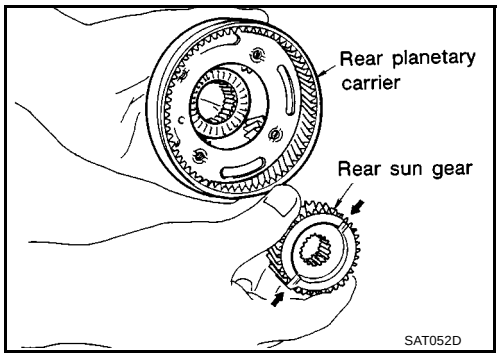


30. Remove rear planetary carrier assembly and rear sun gear according to the following procedures.

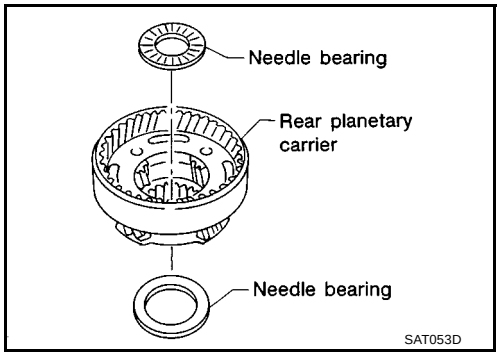
a. Remove rear planetary carrier assembly from transmission case.



b. Remove rear sun gear from rear planetary carrier.



c. Remove needle bearings from rear planetary carrier assembly.
d. Check rear planetary carrier, rear sun gear and needle bearings for damage or wear.

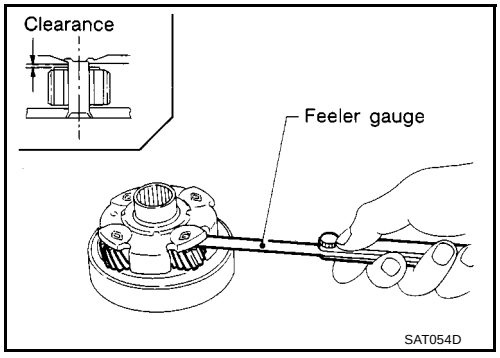


e. Check clearance between pinion washer and rear planetary carrier with feeler gauge.

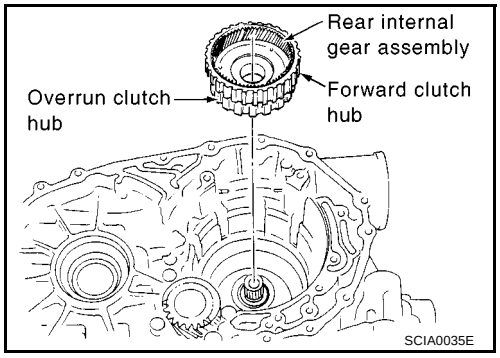
Standard clearance: 0.15 - 0.70 mm (0.0059 - 0.0276 in)

Allowable limit: 0.80 mm (0.0315 in)

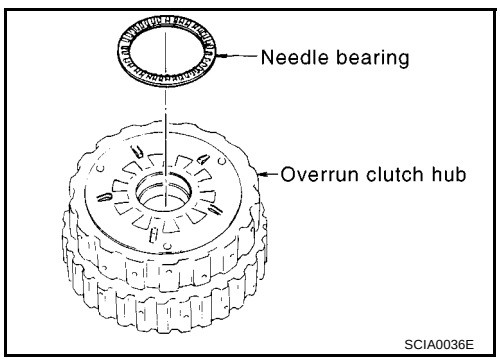
Replace rear planetary carrier if the clearance exceeds allowable limit.



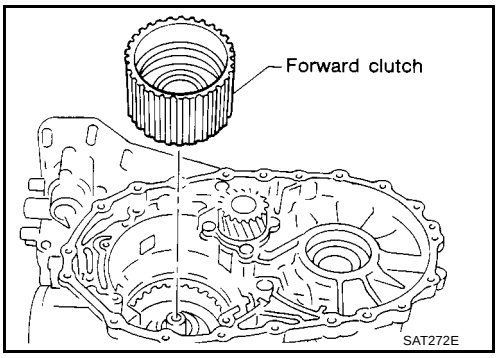
31. Remove rear internal gear assembly, forward clutch hub and overrun clutch hub from transmission case.



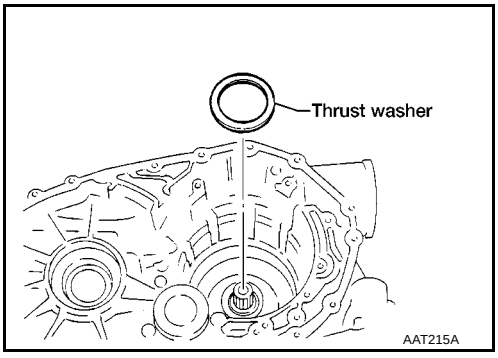
32. Remove needle bearing from overrun clutch hub.
    - Check needle bearing for damage or wear.



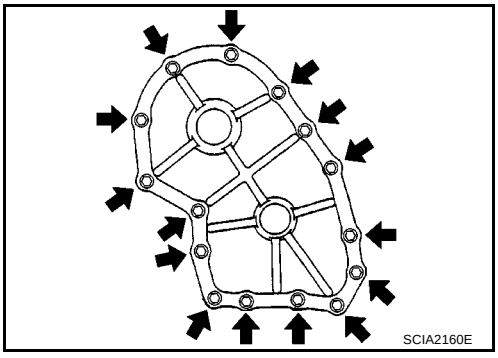
33. Remove forward clutch assembly from transmission case.



34. Remove thrust washer from transmission case.



35. Remove side cover and gasket.



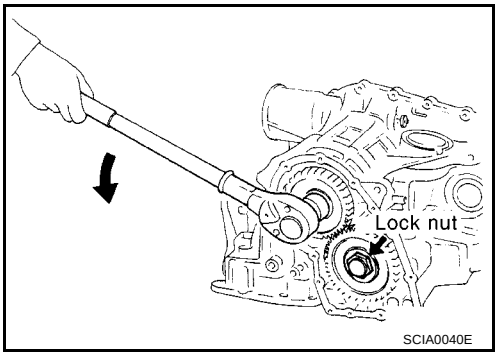
36. Remove output shaft and reduction pinion gear with the following procedure:

a. Put manual shaft in P position, fix idler gear using a parking pole.

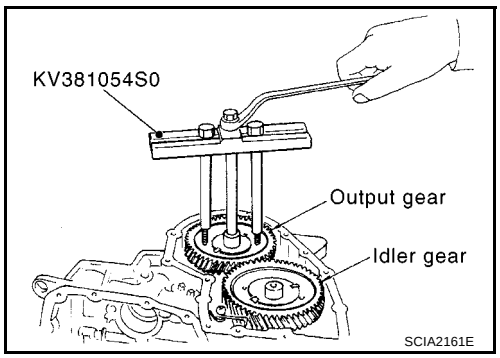
b. Disconnect the caulking parts between output gear and idler gear, remove locknut.

CAUTION:

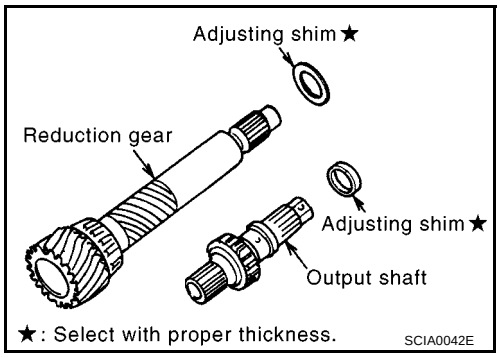
The locknut is not reusable. Never reuse the locknut.



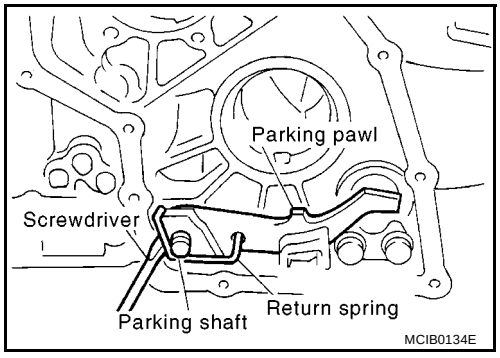
c. Using a puller, remove output gear and idler gear.



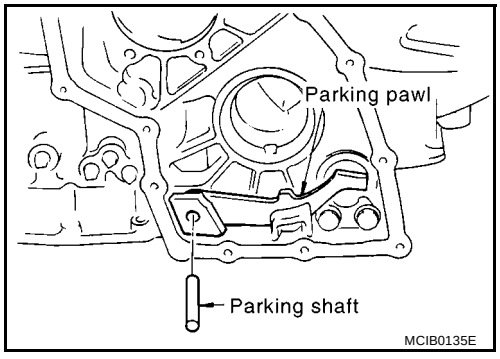
d. Remove adjusting shim from output shaft and reduction pinion gear.



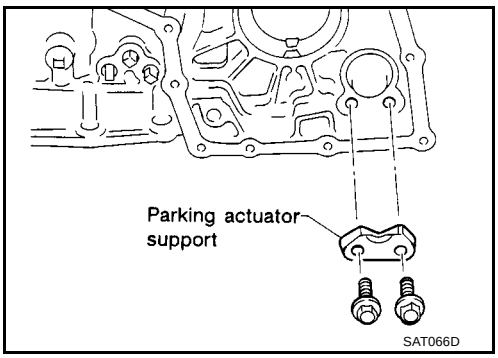
37. Remove return spring from parking shaft with screwdriver.



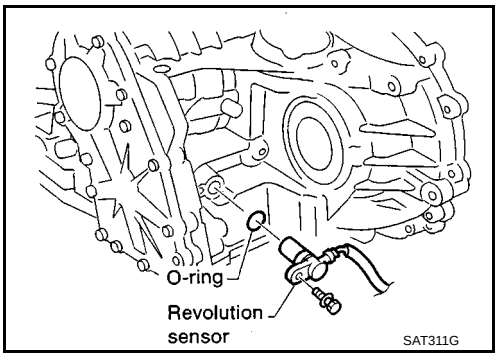
38. Draw out parking shaft and remove parking pawl from transmission case.
    - Check parking pawl and shaft for damage or wear.



39. Remove parking actuator support from transmission case.
    - Check parking actuator support for damage or wear.



40. Remove revolution sensor from transmission case.



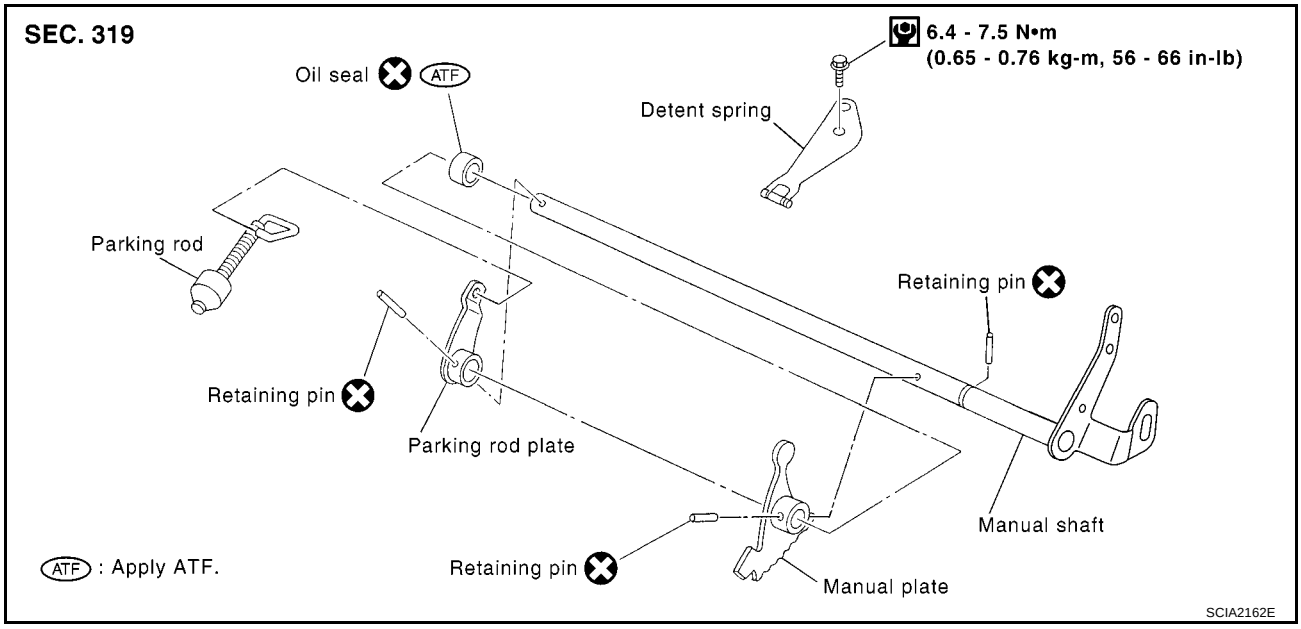
REPAIR FOR COMPONENT PARTS

PFP:00000

Manual Shaft

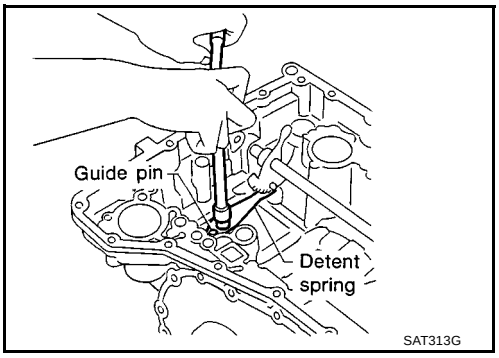
ECS008I6

COMPONENTS

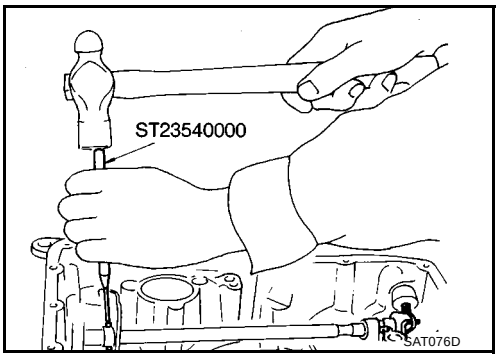


REMOVAL

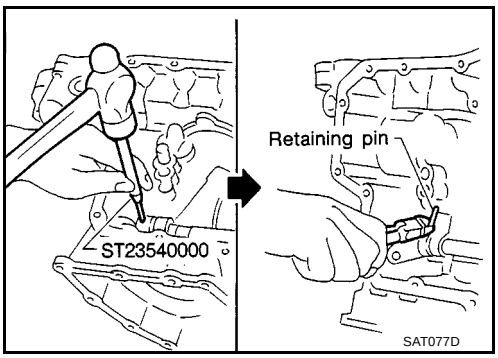
1. Remove detent spring from transmission case.



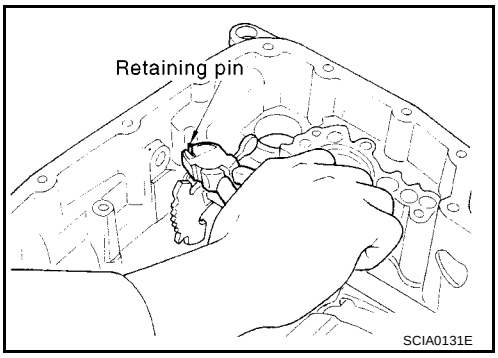
2. Drive out manual plate retaining pin.



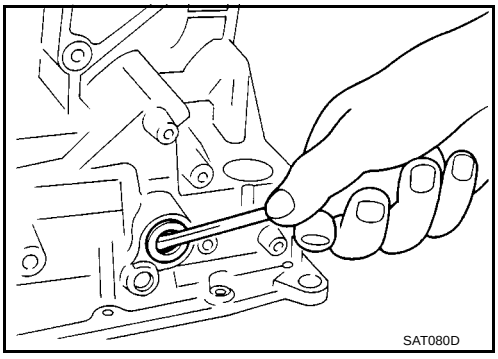
3. Drive and pull out parking rod plate retaining pin.
4. Remove parking rod plate from manual shaft.
5. Draw out parking rod from transmission case.



6. Pull out manual shaft retaining pin.
7. Remove manual shaft and manual plate from transmission case.



8. Remove manual shaft oil seal.

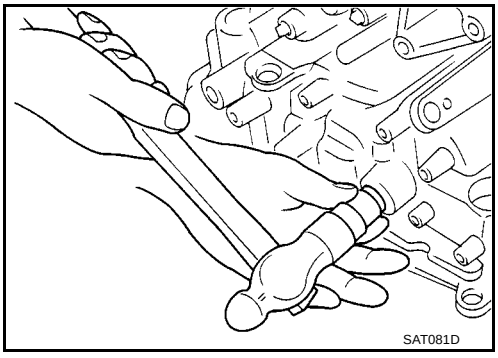


INSPECTION

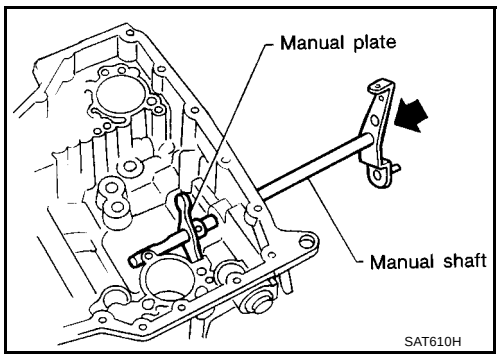
- Check component parts for wear or damage. Replace if necessary.

INSTALLATION

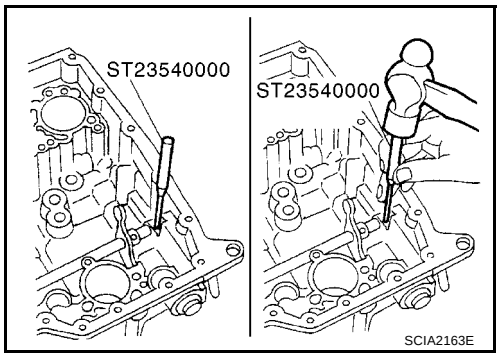
1. Install manual shaft oil seal.
   - **Apply ATF to outer surface of oil seal.**



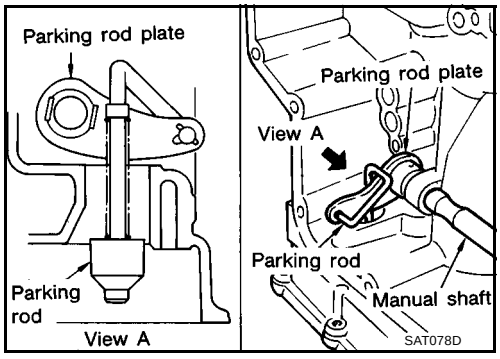
2. Install manual shaft and manual plate.



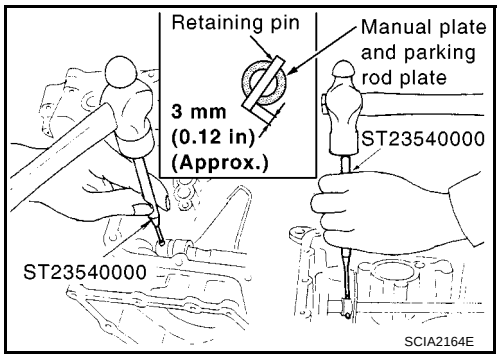
3. Align groove of manual shaft and hole of transmission case.
4. Install manual shaft retaining pin.



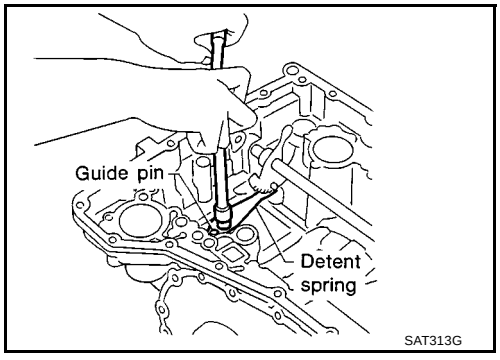
5. Install parking rod to parking rod plate.
6. Set parking rod assembly onto manual shaft.



7. Drive manual plate retaining pin and parking rod plate retaining pin.
   - **Both ends of pin should protrude.**



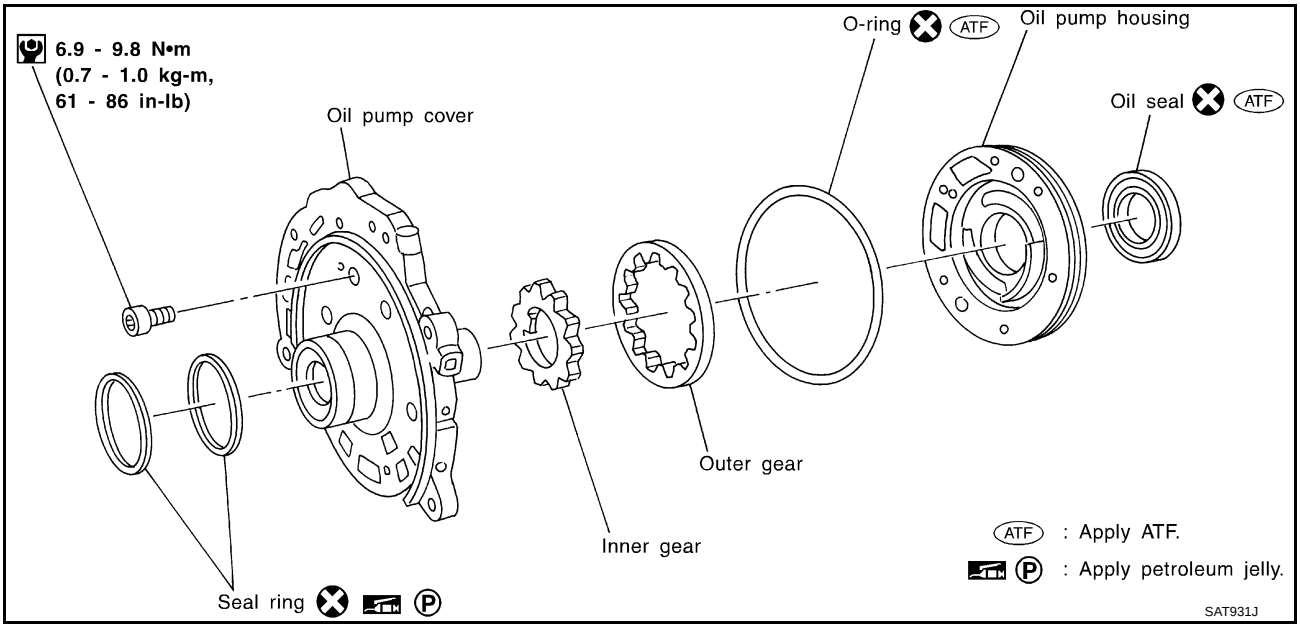
8. Install detent spring.



Oil Pump

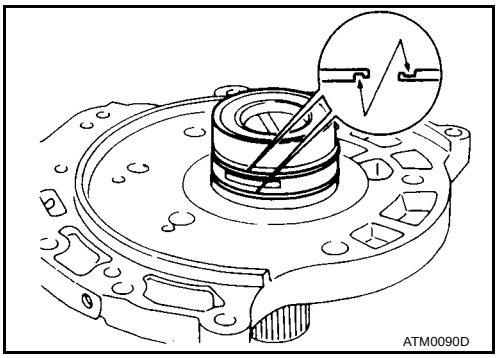
ECS008I7

COMPONENTS

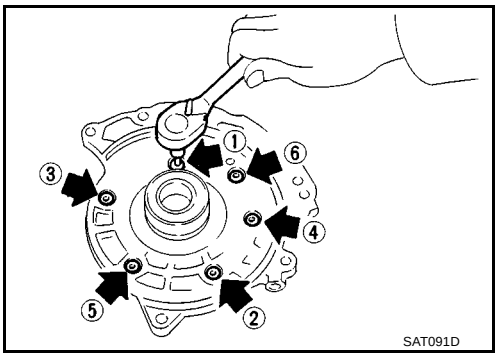


DISASSEMBLY

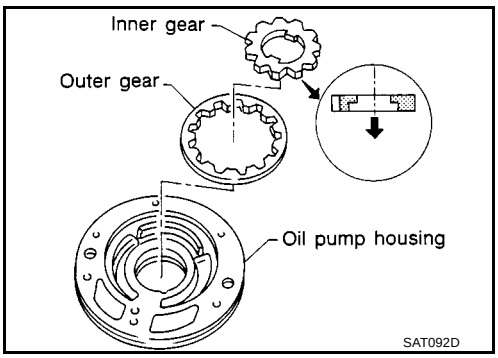
1. Remove seal rings.



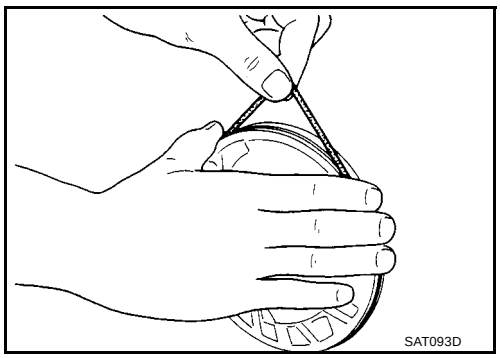
2. Loosen bolts in a crisscross pattern and remove oil pump cover.



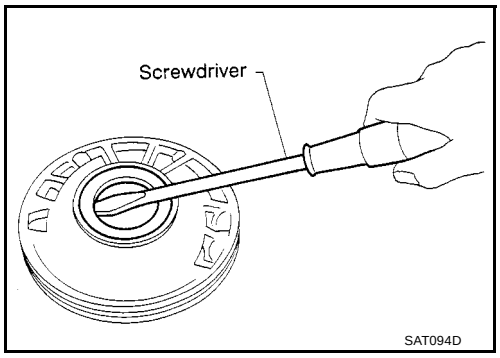
3. Remove inner and outer gear from oil pump housing.



4. Remove O-ring from oil pump housing.



5. Remove oil pump housing oil seal.



INSPECTION

Oil Pump Housing, Oil Pump Cover, Inner Gear and Outer Gear

- Check for wear or damage.

Side Clearances

- Measure side clearance of inner and outer gears in at least four places around each outside edge. Maximum measured values should be within specified positions.

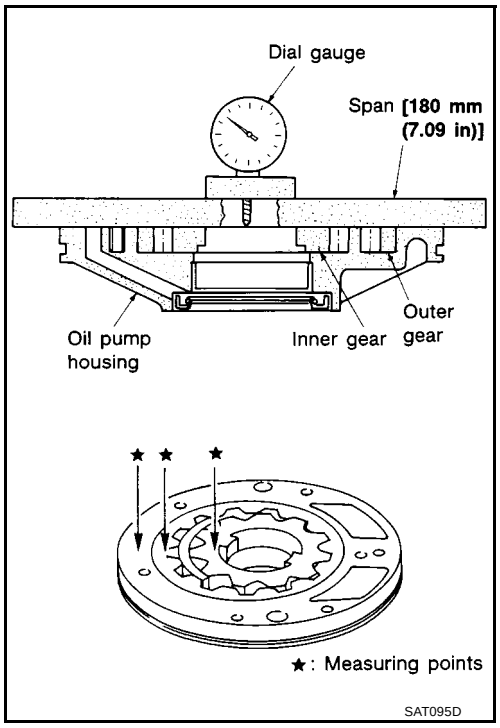
  Standard clearance: 0.02 - 0.04 mm (0.0008 - 0.0016 in)

- If clearance is less than standard, select inner and outer gear as a set so that clearance is within specifications.

  Inner and outer gear:

  Refer to **AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"**

- If clearance is more than standard, replace whole oil pump assembly except oil pump cover.

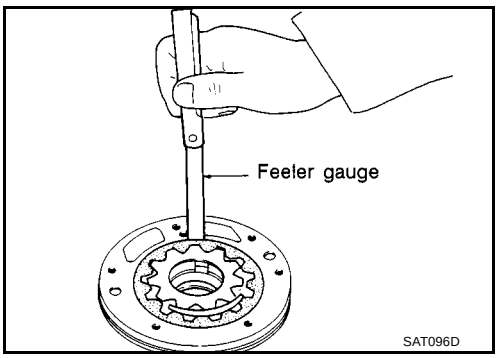


- Measure clearance between outer gear and oil pump housing.

  Standard clearance: 0.08 - 0.15 mm (0.0031 - 0.0059 in)

  Allowable limit: 0.15 mm (0.0059 in)

- If not within allowable limit, replace whole oil pump assembly except oil pump cover.



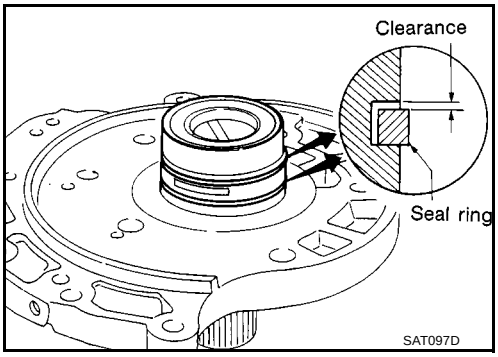
Seal Ring Clearance

- Install new seal rings onto oil pump cover.
- Measure clearance between seal ring and ring groove.

  Standard clearance: 0.1 - 0.25 mm (0.0039 - 0.0098 in)

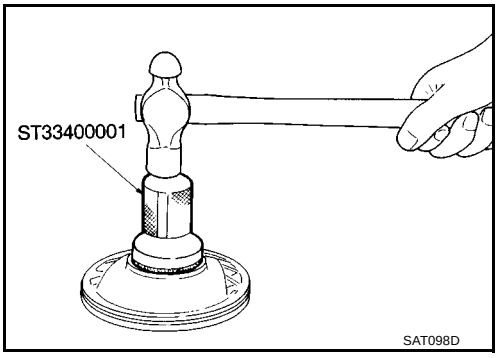
  Allowable limit: 0.25 mm (0.0098 in)

- If not within allowable limit, replace oil pump cover assembly.

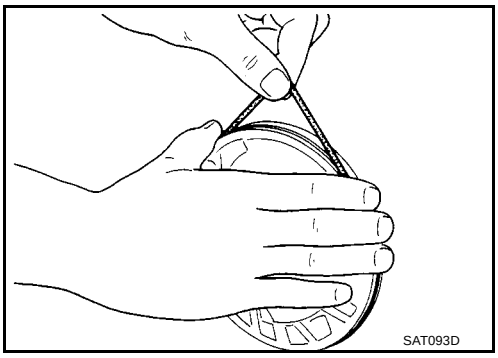


ASSEMBLY

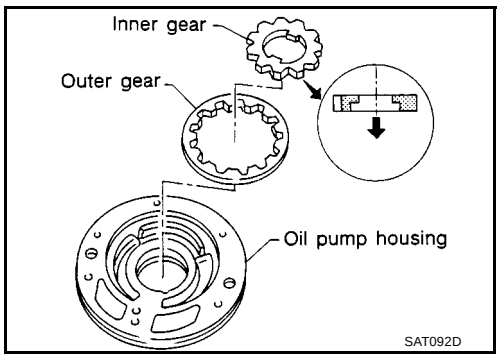
1. Install oil seal on oil pump housing.
   - Apply ATF to oil seal.



2. Install O-ring on oil pump housing.
   - **Apply ATF to O-ring.**



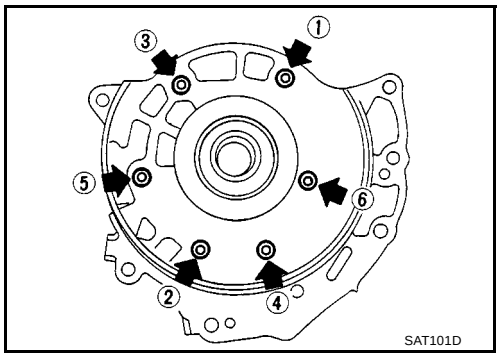
3. Install inner and outer gears on oil pump housing.
   - **Take care with the direction of inner gear.**



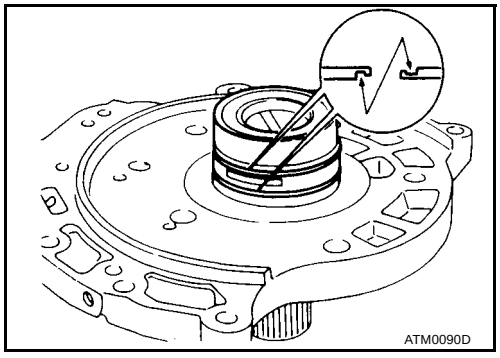
4. Install oil pump cover on oil pump housing.

a. Wrap masking tape around splines of oil pump cover assembly to protect seal. Position oil pump cover assembly on oil pump housing assembly, then remove masking tape.

b. Tighten bolts in a crisscross pattern. Tighten oil pump cover bolts to the specified torque. Refer to AT-453, "COMPONENTS" .



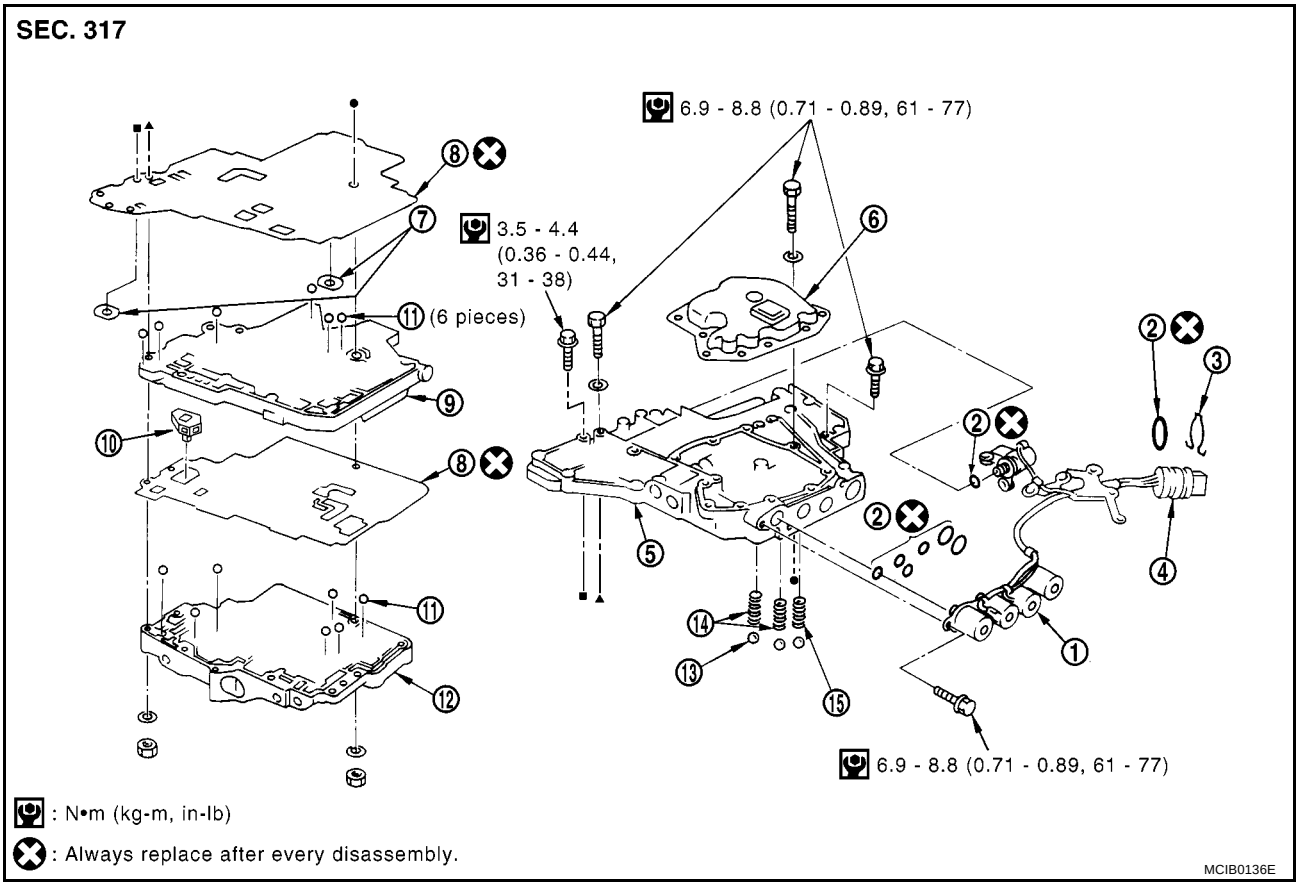
5. Install new seal rings carefully after packing ring groove with petroleum jelly.
   - **Do not spread gap of seal ring excessively while installing. The ring may be deformed.**



Control Valve Assembly

ECS008I8

COMPONENTS



1.	Solenoid valve assembly	2.	O-ring	3.	Clip
4.	Terminal body	5.	Control valve lower body	6.	Oil strainer
7.	Support plate	8.	Separating plate	9.	Control valve inter body
10.	Pilot filter	11.	Steel ball	12.	Control valve upper body
13.	Check ball	20.	Fluid cooler relief valve spring	15.	Valve spring

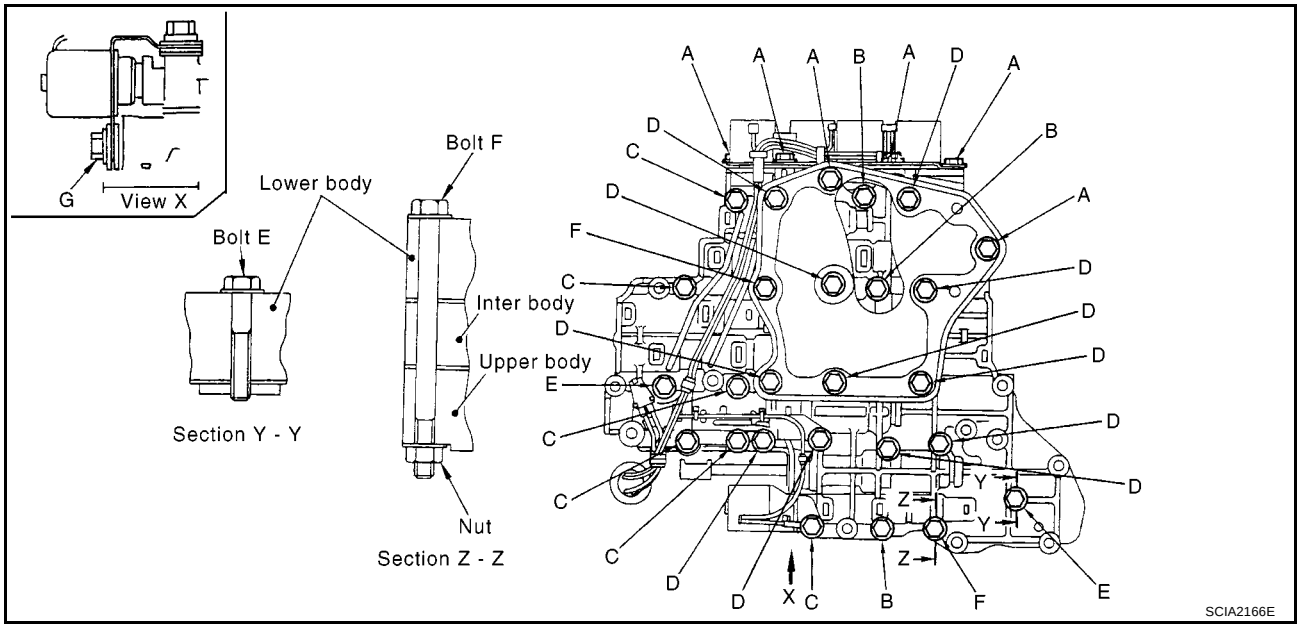
DISASSEMBLY

- Disassemble upper, inter and lower bodies.

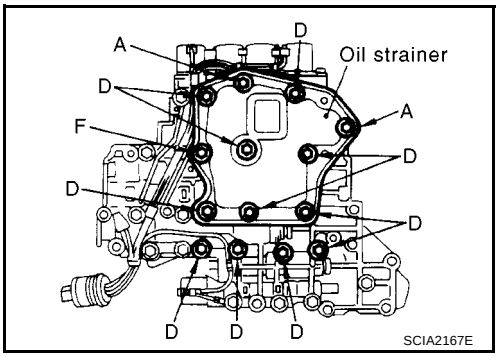
Bolt length, number and location:

Bolt symbol	A	B	C	D	E	F	G
Bolt length "ℓ"	13.5 mm (0.531 in)	58.0 mm (2.283 in)	40.0 mm (1.575 in)	66.0 mm (2.598 in)	33.0 mm (1.299 in)	78.0 mm (3.071 in)	18.0 mm (0.709 in)
Number of bolts	6	3	6	11	2	2	1

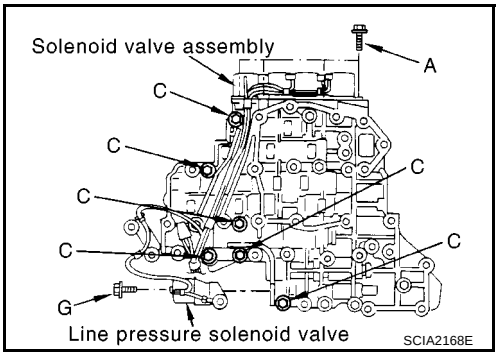
F: Reamer bolt and nut



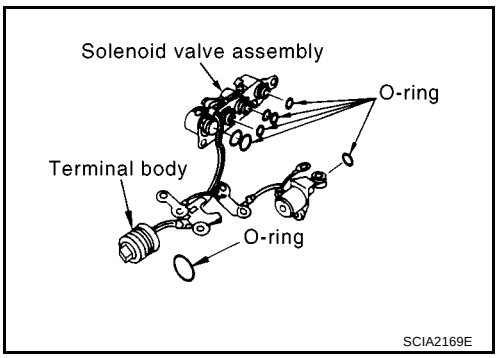
1. Remove bolts A, D and F, and remove oil strainer from control valve assembly.



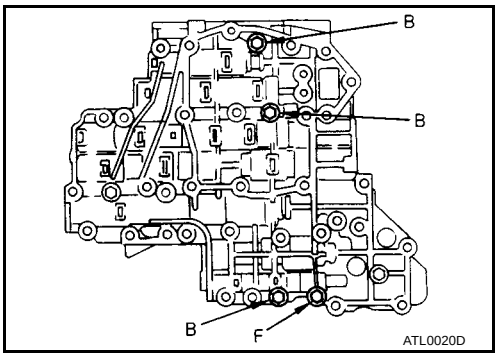
2. Remove solenoid valve assembly and line pressure solenoid valve from control valve assembly.
   - **Be careful not to lose the line pressure solenoid valve spring**.



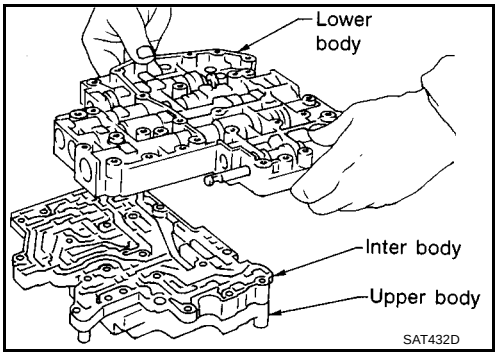
3. Remove O-rings from solenoid valves and terminal body.



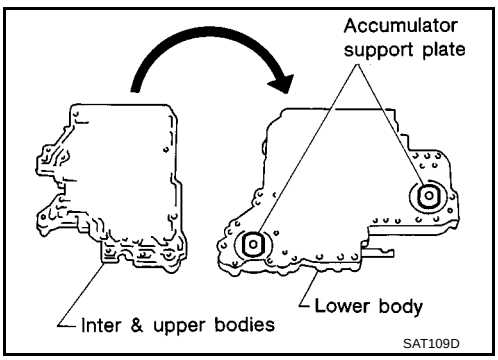
4. Place upper body facedown, and remove bolts B and F.



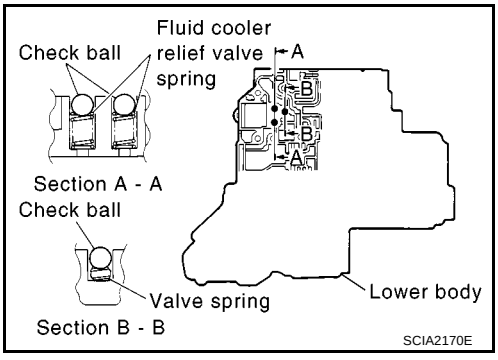
5. Remove lower body from inter body.



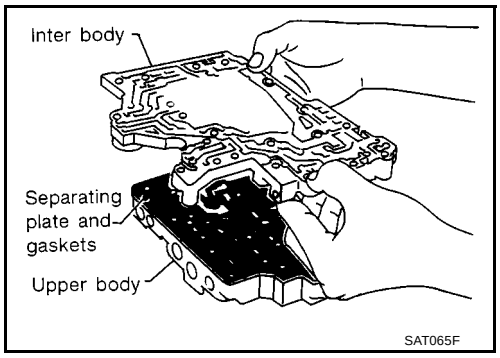
6. Turn over lower body, and accumulator support plates.
7. Remove bolts E, separating plate and separating gaskets from lower body.



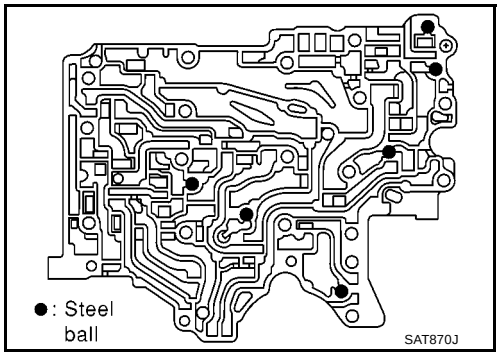
8. Remove check balls, fluid cooler relief valve springs and T/C pressure holding spring from lower body.
   - **Be careful not to lose steel balls and relief valve springs.**



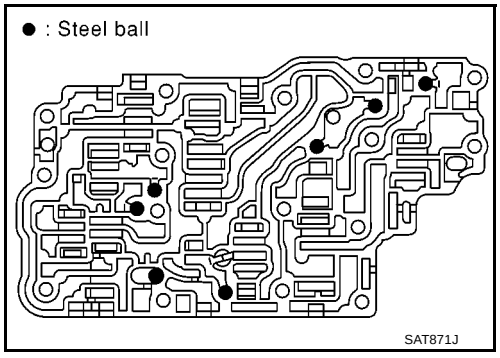
9. Remove inter body from upper body.
10. Remove pilot filter, separating plate and gaskets from upper body.



11. Check to see that steel balls are properly positioned in inter body and then remove them.
    - **Be careful not to lose steel balls.**



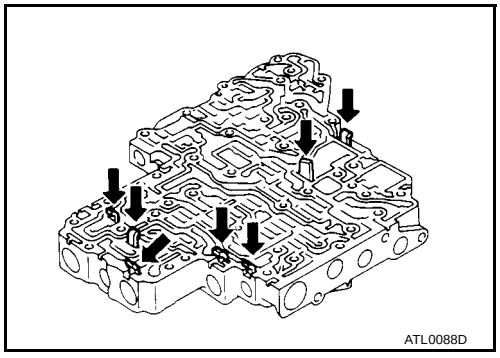
12. Check to see that steel balls are properly positioned in upper body and then remove them.
    - **Be careful not to lose steel balls.**



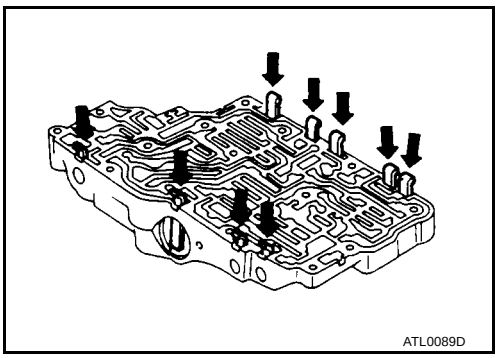
INSPECTION

Lower and Upper Bodies

- Check to see that retainer plates are properly positioned in lower body.

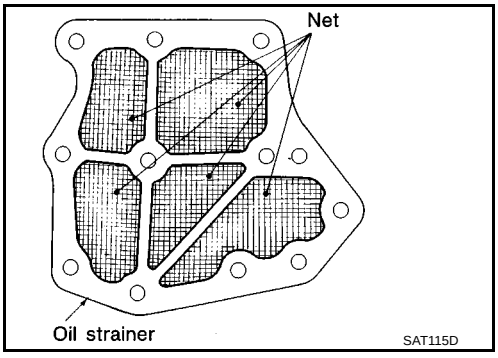


- Check to see that retainer plates are properly positioned in upper body.
- **Be careful not to lose these parts.**



Oil Strainer

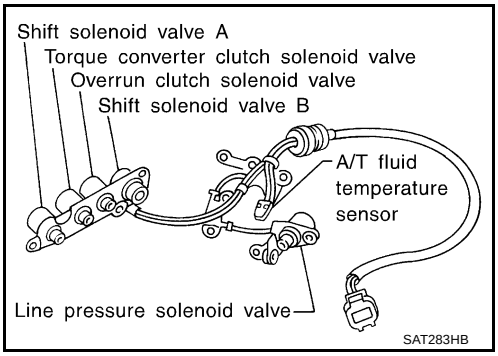
- Check wire netting of oil strainer for damage.



Shift Solenoid Valves “A” and “B”, Line Pressure Solenoid Valve, Torque Converter Clutch Solenoid Valve and Overrun Clutch Solenoid Valve

Measure resistance.
Except for EURO-OBD:

- For shift solenoid valve A, refer to AT-376, "SHIFT SOLENOID VALVE A" .
- For shift solenoid valve B, refer to AT-381, "SHIFT SOLENOID VALVE B" .
- For line pressure solenoid valve, refer to AT-405, "LINE PRESSURE SOLENOID VALVE" .
- For torque converter clutch solenoid valve, refer to AT-390, "TORQUE CONVERTER CLUTCH SOLENOID VALVE" .
- For overrun clutch solenoid valve, refer to AT-386, "OVERRUN CLUTCH SOLENOID VALVE" .



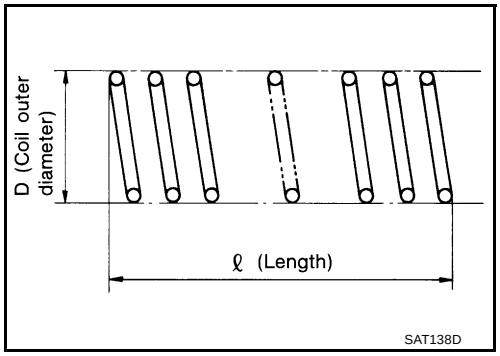
EURO-OBD:

- For shift solenoid valve A, refer to AT-173, "DTC P0750 SHIFT SOLENOID VALVE A" .
- For shift solenoid valve B, refer to AT-178, "DTC P0755 SHIFT SOLENOID VALVE B" .
- For line pressure solenoid valve, refer to AT-166, "DTC P0745 LINE PRESSURE SOLENOID VALVE" .
- For torque converter clutch solenoid valve, refer to AT-161, "DTC P0740 TORQUE CONVERTER CLUTCH SOLENOID VALVE" .
- For overrun clutch solenoid valve, refer to AT-188, "DTC P1760 OVERRUN CLUTCH SOLENOID VALVE" .

Fluid Cooler Relief Valve Spring

- Check springs for damage or deformation.
- Measure free length and outer diameter.

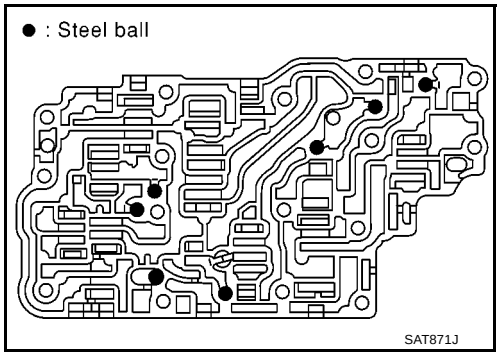
Inspection standard: Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



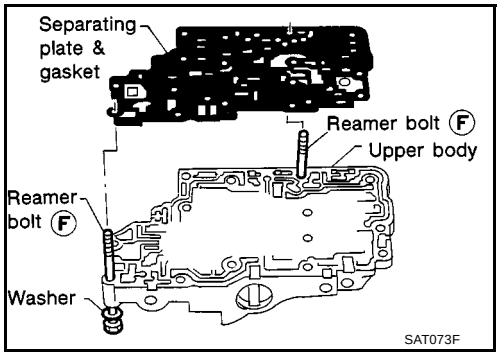
ASSEMBLY

1. Install upper, inter and lower body.

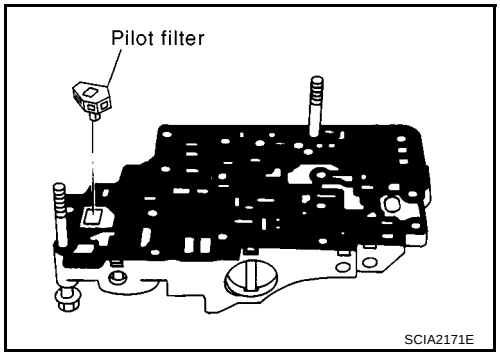
a. Place oil circuit of upper body face up. Install steel balls in their proper positions.



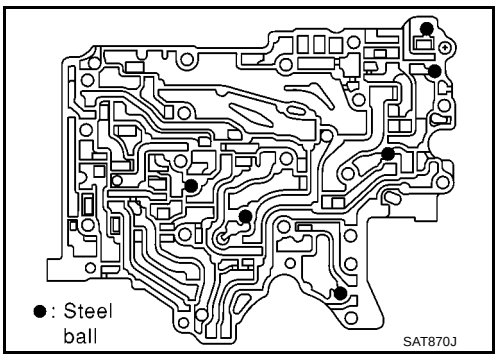
b. Install reamer bolts "**F** " from bottom of upper body. Using reamer bolts as guides, install separating plate and gaskets as a set.



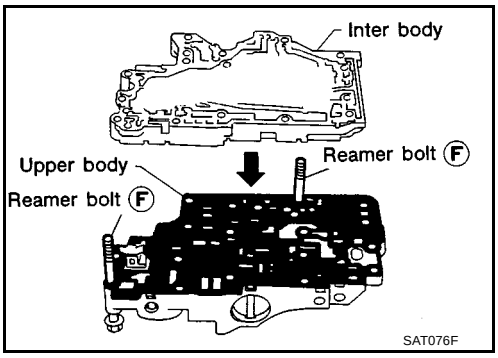
c. Install pilot filter.



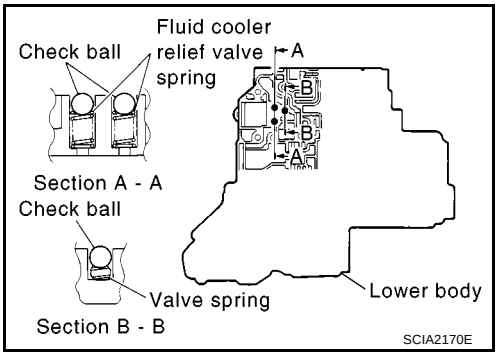
d. Place lower body as shown in illustration (side of inter body face up). Install steel balls in their proper positions.



e. Install inter body on upper body using reamer bolts **"F"** as guides.
   - **Be careful not to dislocate or drop steel balls.**

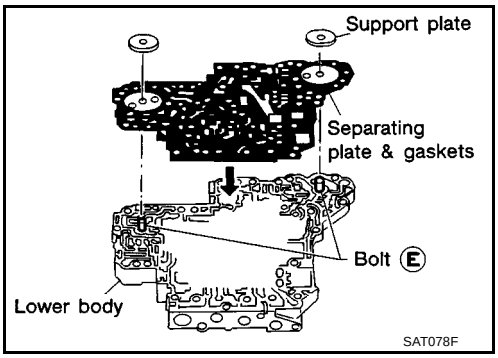


f. Install check balls, fluid cooler relief valve springs and T/C pressure holding spring in their proper positions in lower body.

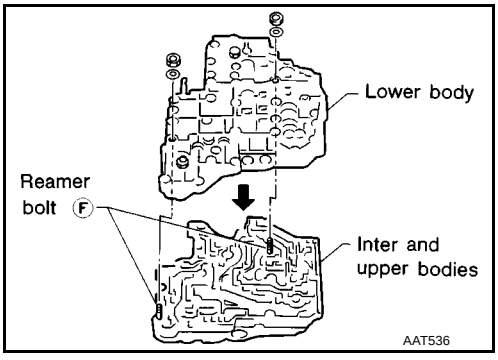


g. Install bolts **"E"** from bottom of lower body. Using bolts **"E"** as guides, install separating plate and gaskets as a set.

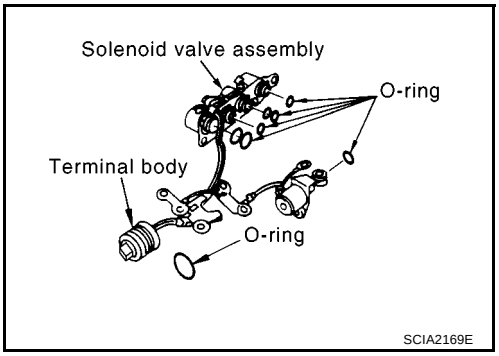
h. Temporarily install support plates on lower body.



i. Install lower body on inter body using reamer bolts "**F**" as guides and tighten reamer bolts **"F"** slightly.



2. Install O-rings to solenoid valves and terminal body.
   - **Apply ATF to O-rings.**

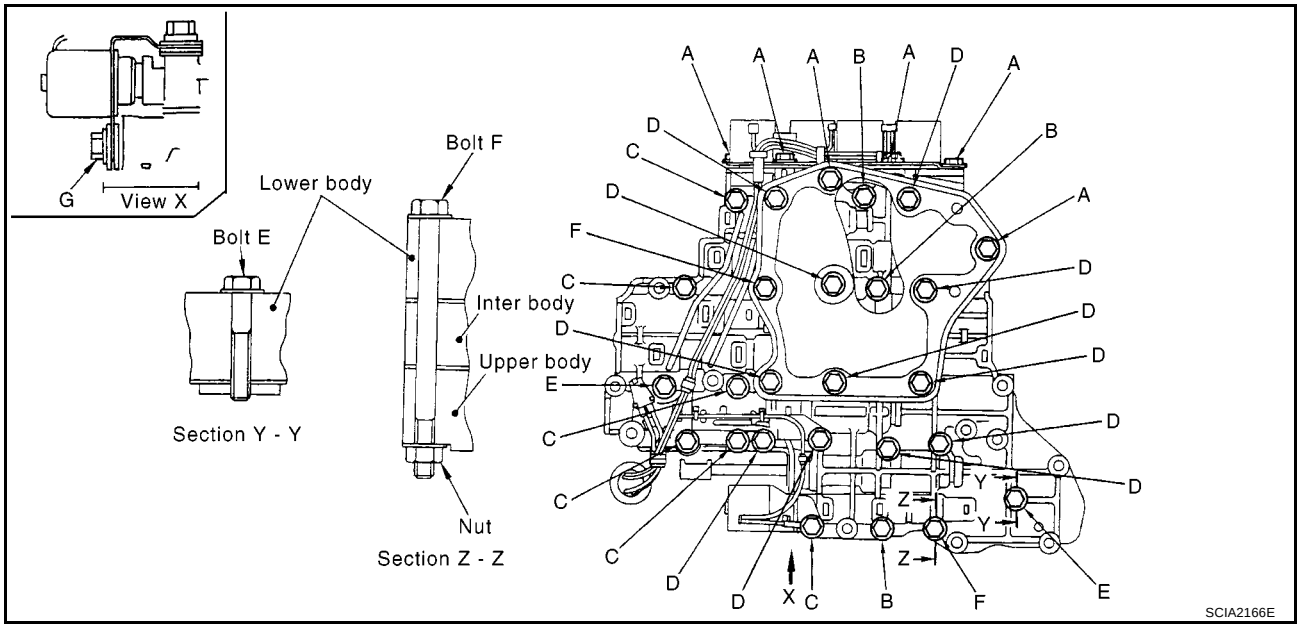


3. Install and tighten bolts.

   Bolt length, number and location:

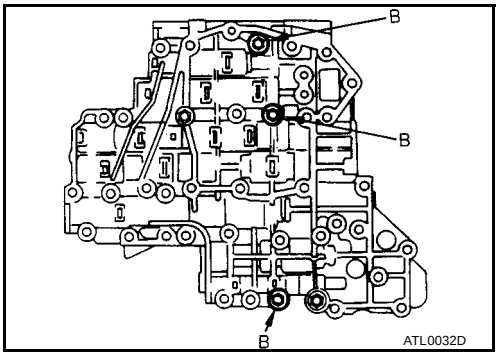
Bolt symbol	A	B	C	D	E	F	G
Bolt length "ℓ"	13.5 mm (0.531 in)	58.0 mm (2.283 in)	40.0 mm (1.575 in)	66.0 mm (2.598 in)	33.0 mm (1.299 in)	78.0 mm (3.071 in)	18.0 mm (0.709 in)
Number of bolts	6	3	6	11	2	2	1

F: Reamer bolt and nut

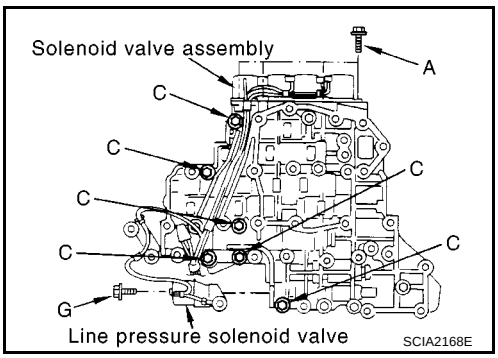


a. Install and tighten bolts **B** to specified torque.

   : 7 - 9 N-m (0.7 - 0.9 kg-m, 61 - 78 in-lb)

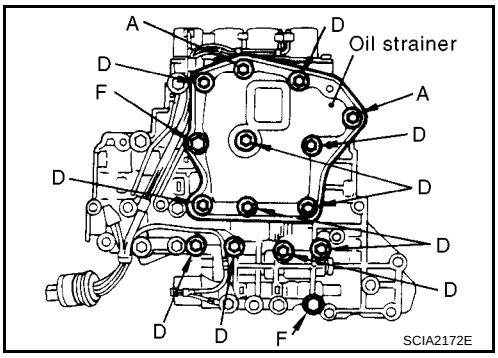


b. Install solenoid valve assembly and line pressure solenoid valve from control valve assembly.



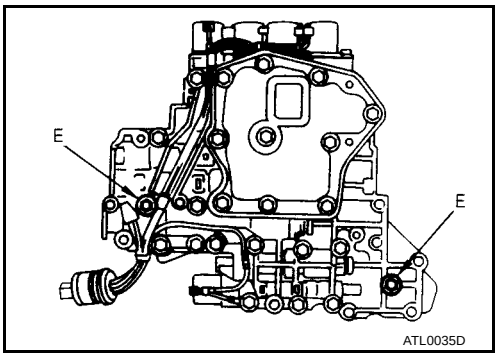
c. Set oil strainer, then tighten bolts **A** , **C** , **D** and nuts **F** to specified torque.

: 7 - 9 N-m (0.7 - 0.9 kg-m, 61 - 78 in-lb)



d. Tighten bolts **E** to specified torque.

: 3.4 - 4.4 N-m (0.35 - 0.45 kg-m, 30 - 39 in-lb)

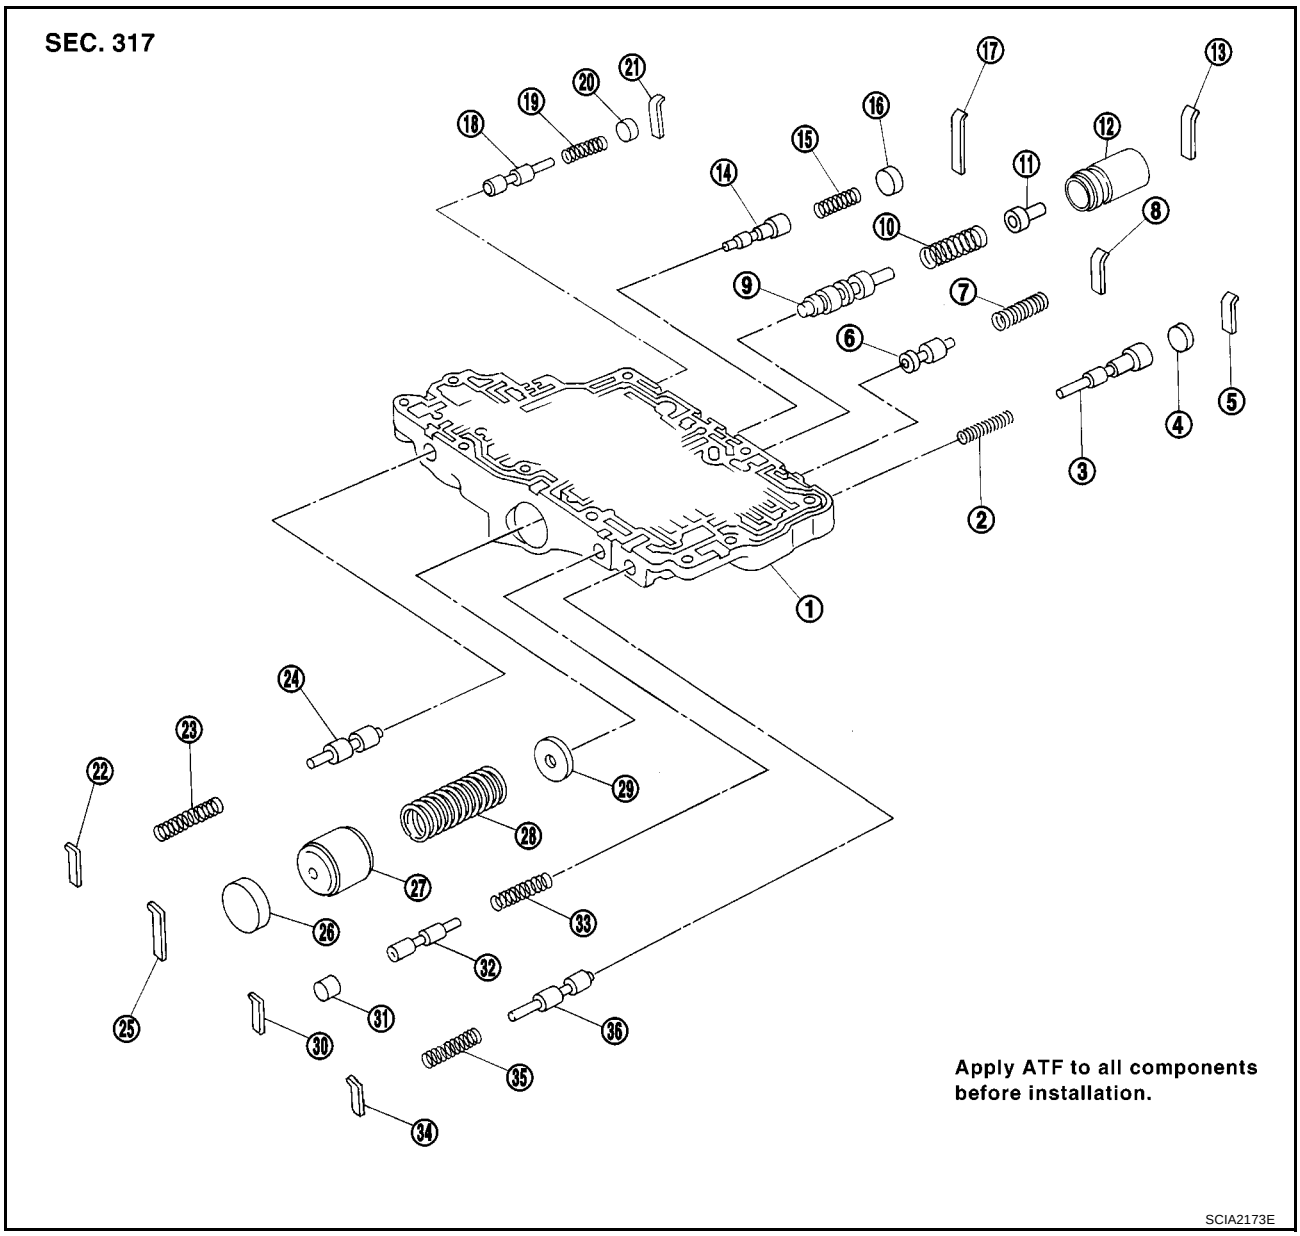


Control Valve Upper Body

ECS008I9

COMPONENTS

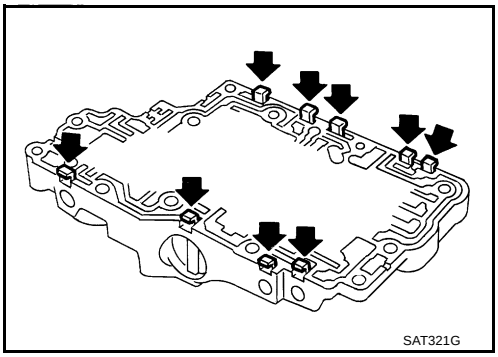
Numbers preceding valve springs correspond with those shown in AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



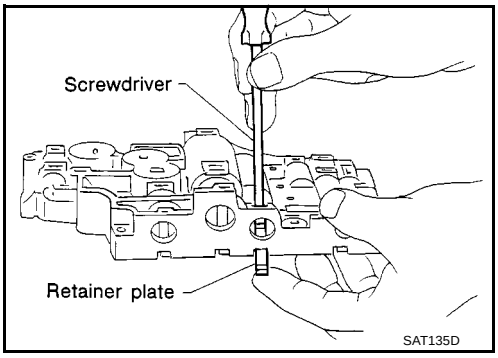
1. Control valve upper body
2. Return spring
3. Overrun clutch reducing valve
4. Plug
5. Retainer plate
6. Torque converter relief valve
7. Return spring
8. Retainer plate
9. Torque converter clutch control valve
10. Return spring
11. Plug
12. Sleeve
13. Retainer plate
14. 1-2 accumulator valve
15. Return spring
16. Plug
17. Retainer plate
18. Cooler check valve
19. Return spring
20. Plug
21. Retainer plate
22. Retainer plate
23. Return spring
24. Pilot valve
25. Retainer plate
26. Plug
27. 1-2 accumulator piston
28. Return spring
29. 1-2 accumulator retainer plate
30. Retainer plate
31. Plug
32. 1st reducing valve
33. Return spring
34. Retainer plate
35. Return spring
36. 3-2 timing valve

DISASSEMBLY

1. Remove valves at retainer plates.
   - **Do not use a magnetic pick-up tool.**

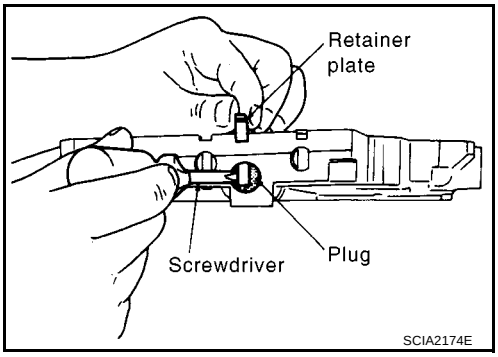


a. Use a screwdriver to remove retainer plates.

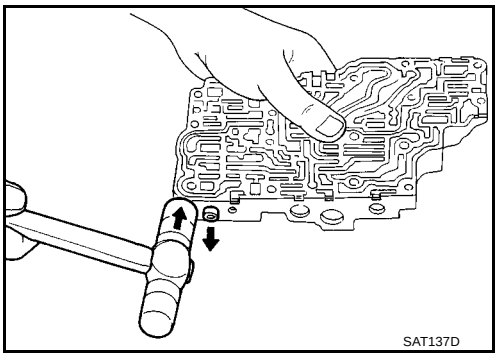


b. Insert plug or return spring using a screwdriver to prevent inside parts from popping out as shown in the figure. And remove retainer plate by hand.

CAUTION:
Be careful not to damage the valve body.



c. Place mating surface of valve body face down, and remove internal parts.
   - **If a valve is hard to remove, place valve body face down and lightly tap it with a soft hammer.**
   - **Be careful not to drop or damage valves and sleeves.**



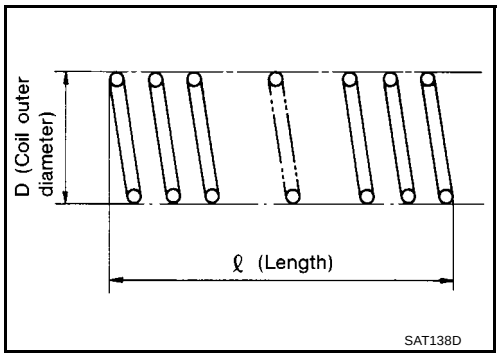
INSPECTION

Valve Spring

- Measure free length and outer diameter of each valve spring. Also check for damage or deformation.

  Inspection standard :Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

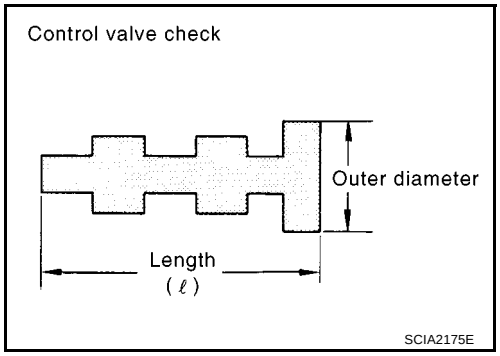
- Replace valve springs if deformed or fatigued.



Control Valves

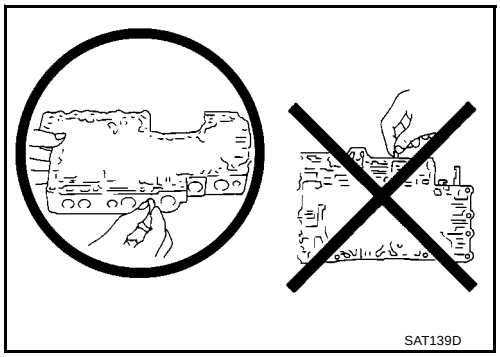
- Check sliding surfaces of control valve, sleeve and plug. If damage is detected, replace them.

  Inspection standard :Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

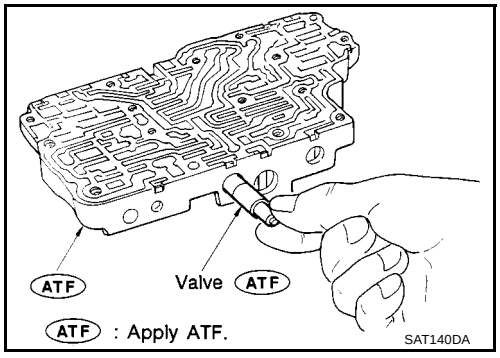


ASSEMBLY

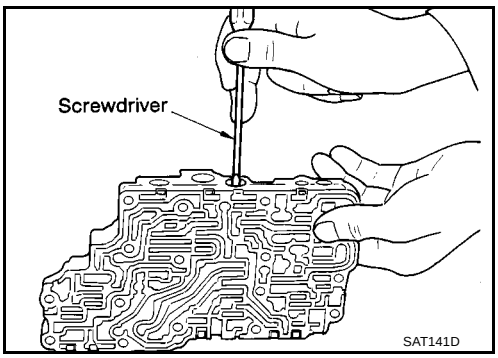
- **Lay control valve body down when installing valves. Do not stand the control valve body upright.**



1. Lubricate the control valve body and all valves with ATF. Install control valves by sliding them carefully into their bores.
   - **Be careful not to scratch or damage valve body.**

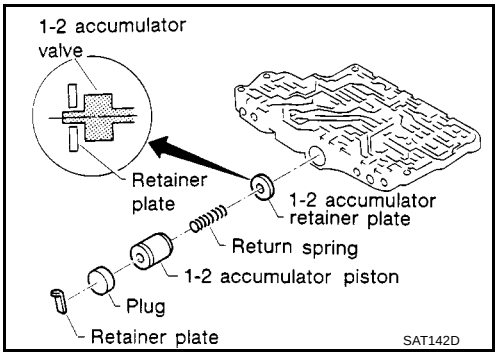


- Wrap a small screwdriver with vinyl tape and use it to insert the valves into their proper positions.

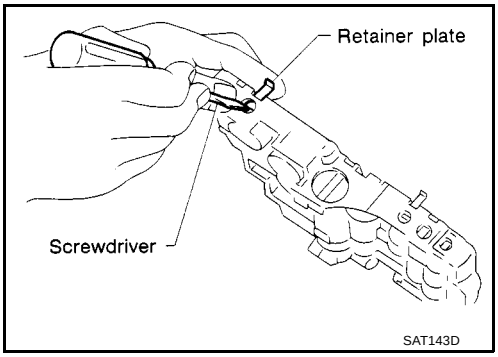


1-2 Accumulator Valve

- Install 1-2 accumulator valve. Align 1-2 accumulator retainer plate from opposite side of control valve body.
- Install return spring, 1-2 accumulator piston and plug.



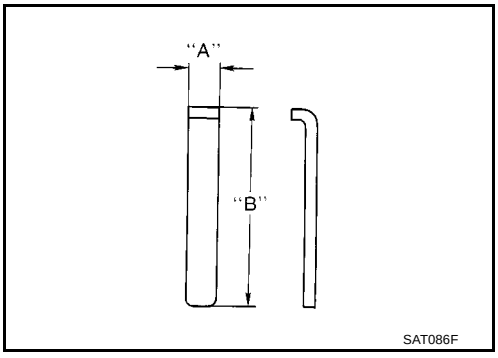
1. Install retainer plates.
   - Install retainer plate while pushing plug or return spring.



Retainer Plate (Upper Body)

Unit: mm (in)

No.	Name of control valve	Width A	Length B
22	Pilot valve	6.0 (0.236)	21.5 (0.846)
30	1st reducing valve		
34	3-2 timing valve		
8	Torque converter relief valve		
17	1-2 accumulator valve		40.5 (1.594)
25	1-2 accumulator piston		
5	Overrun clutch reducing valve		24.0 (0.945)
21	Cooler check valve		
13	Torque converter clutch control valve		28.0 (1.102)



- Install proper retainer plates.
  Refer to AT-466, "Control Valve Upper Body" .

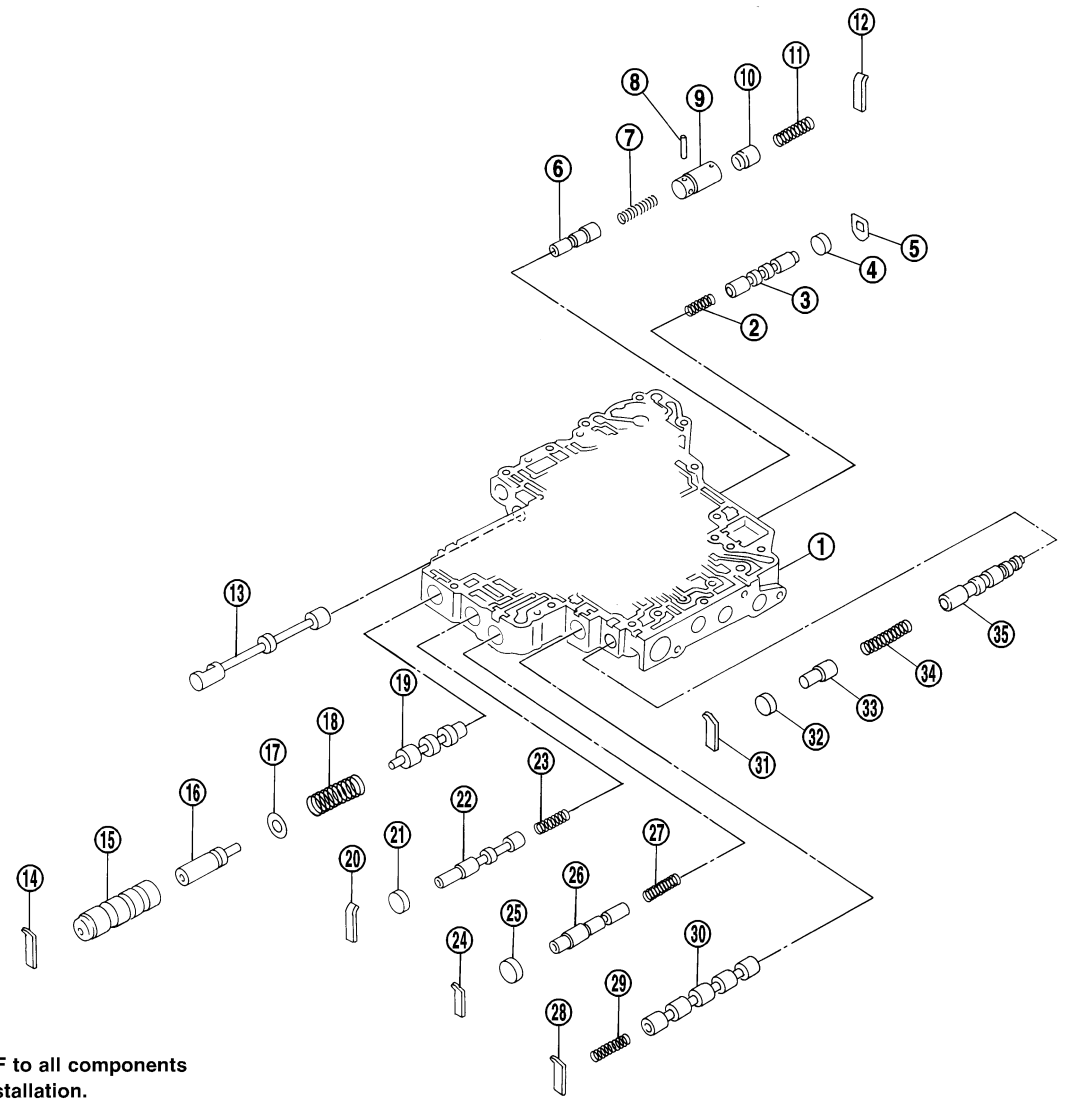
Control Valve Lower Body

ECS008IA

COMPONENTS

Numbers preceding valve springs correspond with those shown in AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

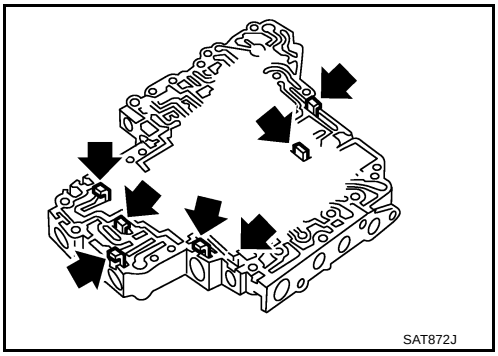
SEC. 317



1. Control valve lower body
2. Return spring
3. Shift valve B
4. Plug
5. Retainer plate
6. Pressure modifier valve
7. Return spring
8. Parallel pin
9. Sleeve
10. Piston
11. Return spring
12. Retainer plate
13. Manual valve
14. Retainer plate
15. Sleeve
16. Plug
17. Spring seat
18. Return spring
19. Pressure regulator valve
20. Retainer plate
21. Plug
22. Overrun clutch control valve
23. Return spring
24. Retainer plate
25. Plug
26. Accumulator control valve
27. Return spring
28. Retainer plate
29. Return spring
30. Shift valve A
31. Retainer plate
32. Plug
33. Plug
34. Return spring
35. Shuttle control valve

DISASSEMBLY

- Remove valves at retainer plate.
  For removal procedures, refer to AT-467, "DISASSEMBLY" .



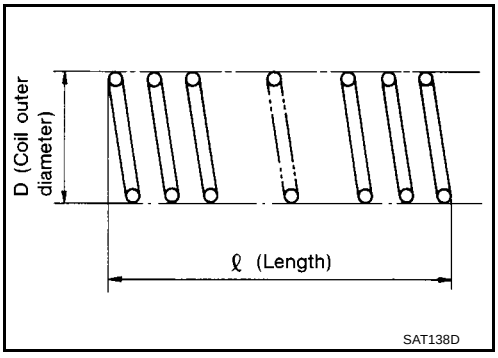
INSPECTION

Valve Springs

- Check each valve spring for damage or deformation. Also measure free length and outer diameter.

  Inspection standard :Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

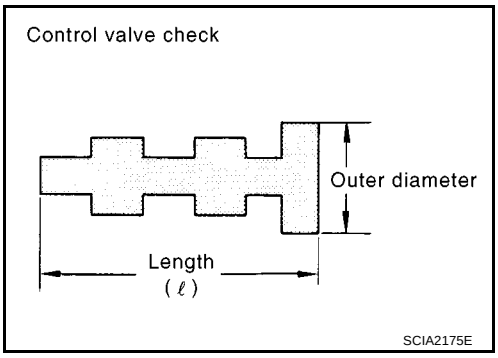
- Replace valve springs if deformed or fatigued.



Control Valves

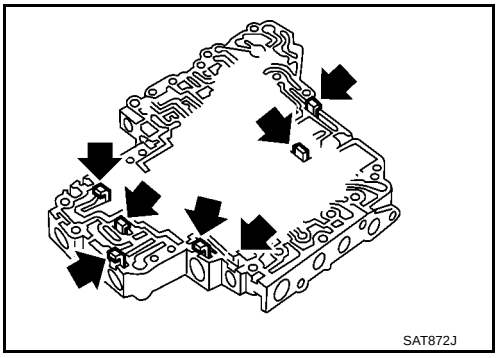
- Check sliding surfaces of control valve, sleeve and plug. If damage is detected, replace them.

  Inspection standard :Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



ASSEMBLY

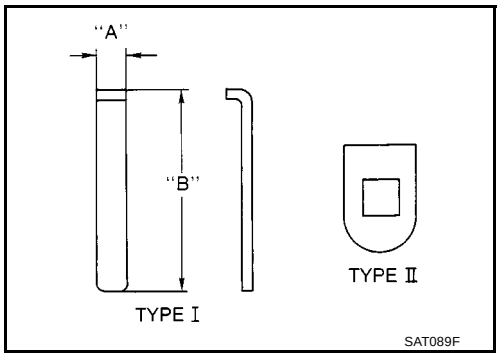
- Install control valves.
  For installation procedures, refer to AT-468, "ASSEMBLY" .



Retainer Plate (for control valve lower body)

Unit: mm (in)

No.	Name of control valve	Length A	Length B	Type
14	Pressure regulator valve	6.0 (0.236)	28.0 (1.102)	I
24	Accumulator control valve			
28	Shift valve A			
20	Overrun clutch control valve			
12	Pressure modifier valve			
31	Shuttle control valve			
5	Shift valve B	17.0 (0.67)	24.0 (0.94)	II

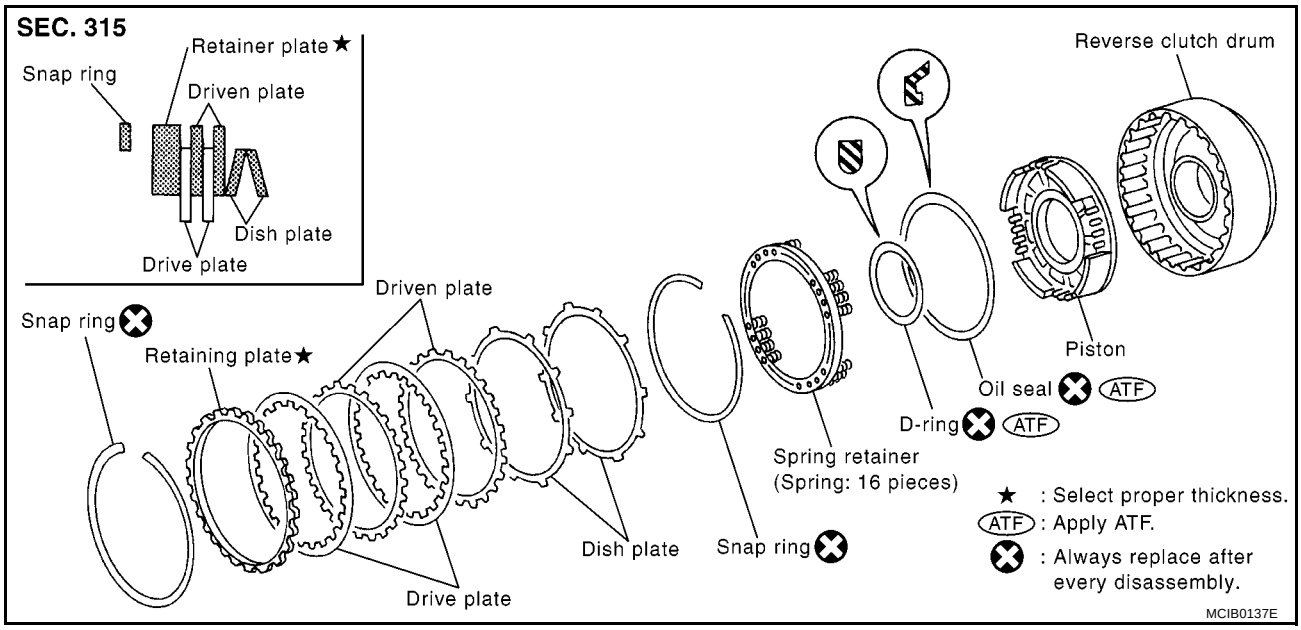


- Install proper retainer plates.
  Refer to AT-470, "Control Valve Lower Body" .

Reverse Clutch

ECS008IB

COMPONENTS



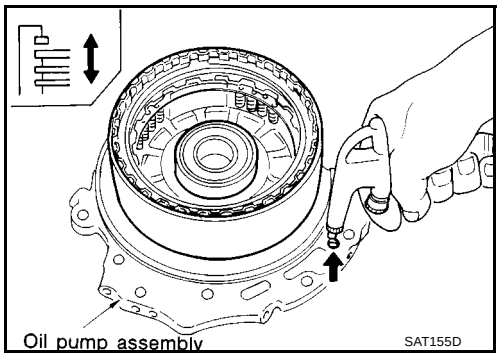
DISASSEMBLY

1. Check operation of reverse clutch

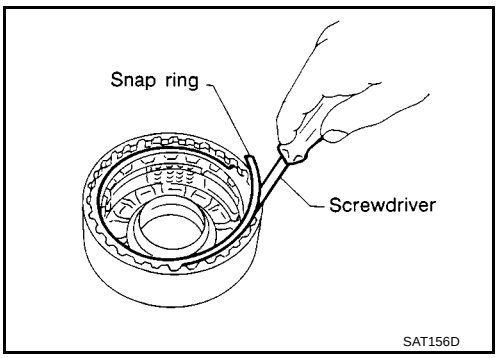
a. Install seal ring onto drum support of oil pump cover and install reverse clutch assembly. Apply compressed air to oil hole.

b. Check to see that retaining plate moves to snap ring.

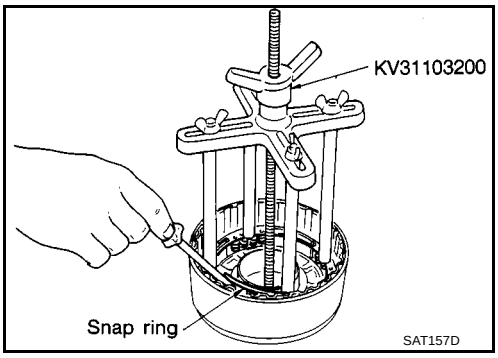
c. If retaining plate does not contact snap ring:
   - D-ring might be damaged.
   - Oil seal might be damaged.
   - Fluid might be leaking past piston check ball.



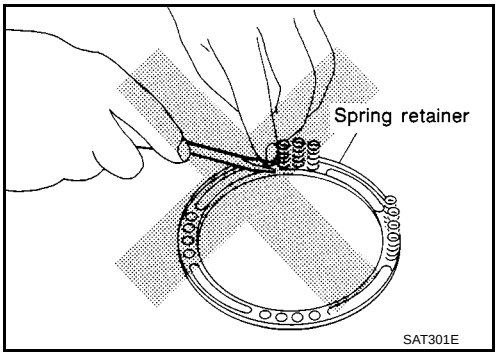
2. Remove snap ring.
3. Remove drive plates, driven plates, retaining plate, and dish plates.



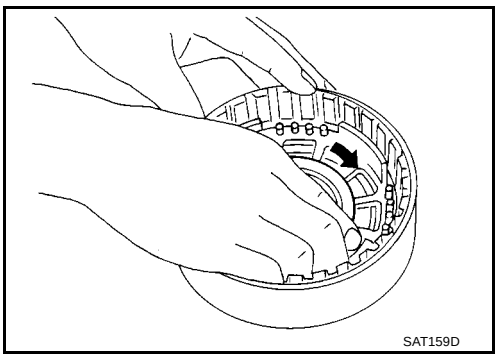
4. Set Tool on spring retainer and remove snap ring from reverse clutch drum while compressing return springs.
   - **Set Tool directly over springs.**
   - **Do not expand snap ring excessively.**
5. Remove spring retainer and return springs.



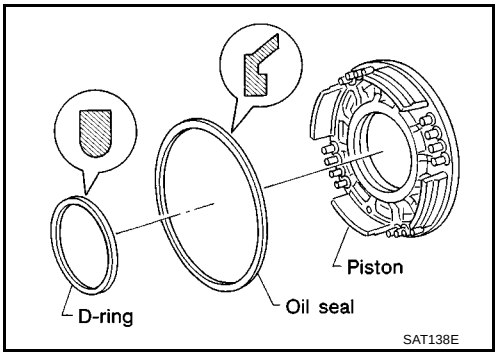
- **Do not remove return spring from spring retainer.**



6. Remove piston from reverse clutch drum by turning it.



7. Remove D-ring and oil seal from piston.



INSPECTION

Reverse Clutch Snap Ring, Spring Retainer and Return Springs

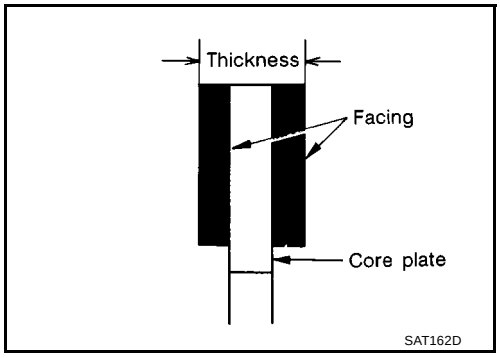
- Check for deformation, fatigue or damage.
- If necessary, replace.
- When replacing spring retainer and return springs, replace them as a set.

Reverse Clutch Drive Plates

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

Thickness of drive plate:
Standard value: 2.0 mm (0.079 in)
Wear limit: 1.8 mm (0.071 in)

- If not within wear limit, replace.

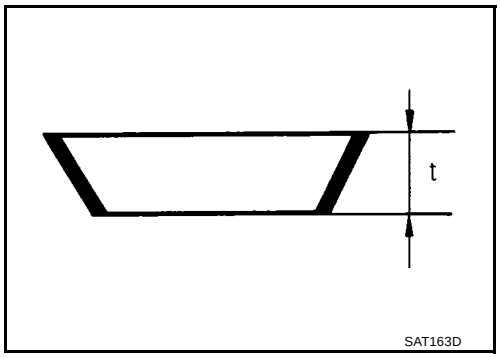


Reverse Clutch Dish Plates

- Check for deformation or damage.
- Measure thickness of dish plate.

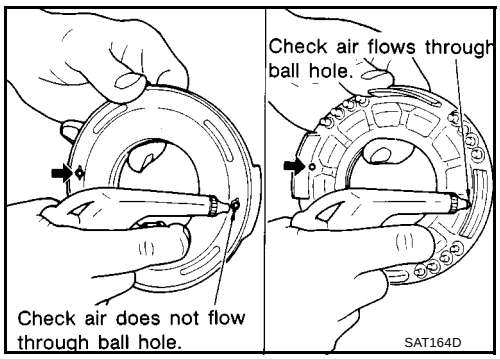
Thickness of dish plate "T": 2.92 mm (0.115 in)

- If deformed or fatigued, replace.



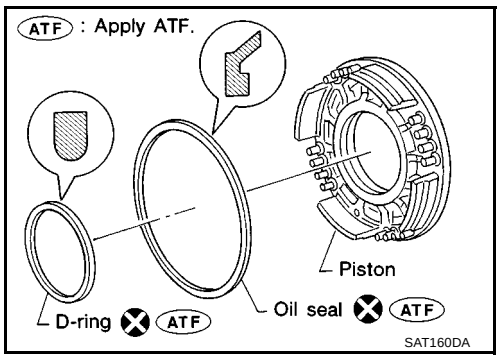
Reverse Clutch Piston

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side to make sure that air leaks past ball.

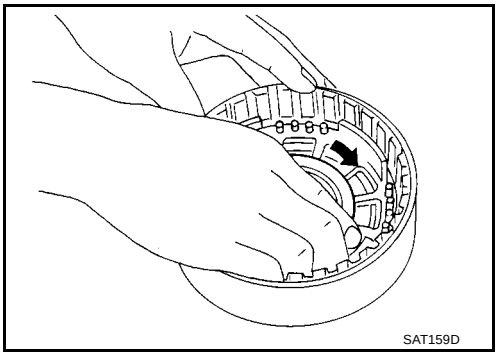


ASSEMBLY

1. Install D-ring and oil seal on piston.
   - **Take care with the direction of oil seal.**
   - **Apply ATF to both parts.**

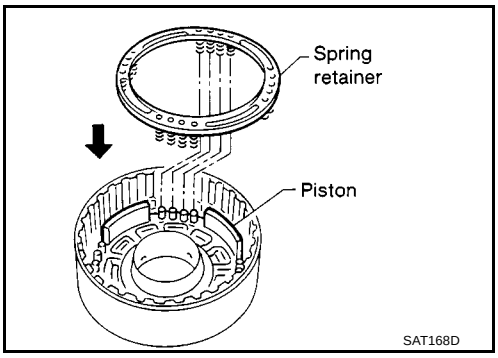


2. Install piston assembly by turning it slowly.
   - **Apply ATF to inner surface of drum.**



SAT159D

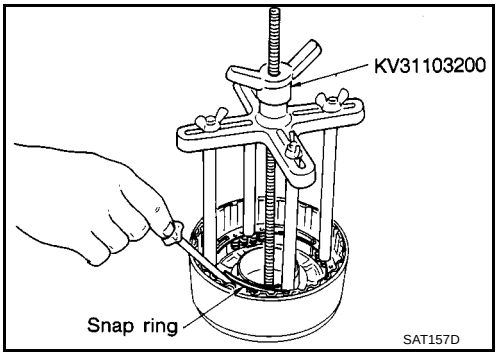
3. Install return springs and spring retainer on piston.



SAT168D

4. Set a clutch spring compressor to return spring of spring retainer and install snap ring using a screwdriver.

   CAUTION:
   - **Do not reuse the snap ring.**
   - **Set a clutch spring compressor right above return spring.**
   - **Install return spring without tilt.**
   - **Make sure snap ring is assembled securely into groove on reverse clutch drum.**

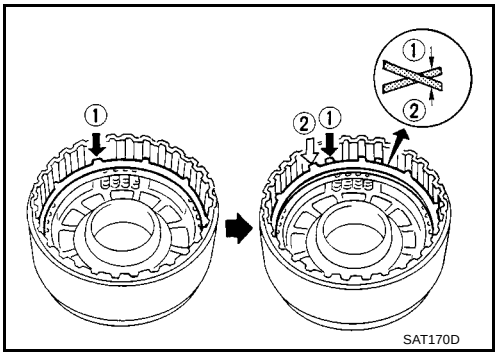


SAT157D

5. Assemble drive plate, driven plate, retaining plate and dish plate.

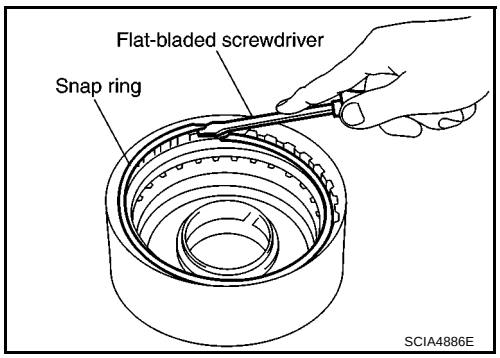
   CAUTION:
   - **Install two dish plates by aligning installation directions as shown in the figure and dislocating clutch drum groove position.**
   - **Be sure to assemble each plate in the correct order.**

6. Install drive plates, driven plates, retaining plate and dish plates.
   - **Do not align the projections of any two dish plates.**
   - **Take care with order and direction of plates.**



SAT170D

7. Install snap ring.



8. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate.

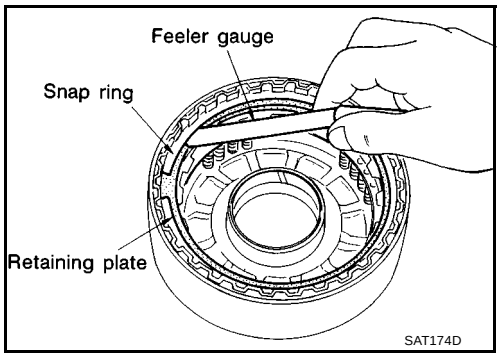
Specified clearance:

Standard: 0.5 - 0.8mm (0.020 - 0.031 in)

Allowable limit: 1.2 mm (0.047 in)

Retaining plate:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



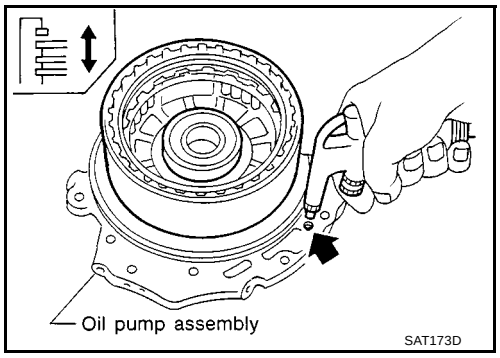
9. Check operation of reverse clutch.

a. Install seal ring onto drum support of oil pump cover and install reverse clutch assembly. Apply compressed air to oil hole.

b. Check to see that retaining plate moves to snap ring.

c. If retaining plate does not contact snap ring:

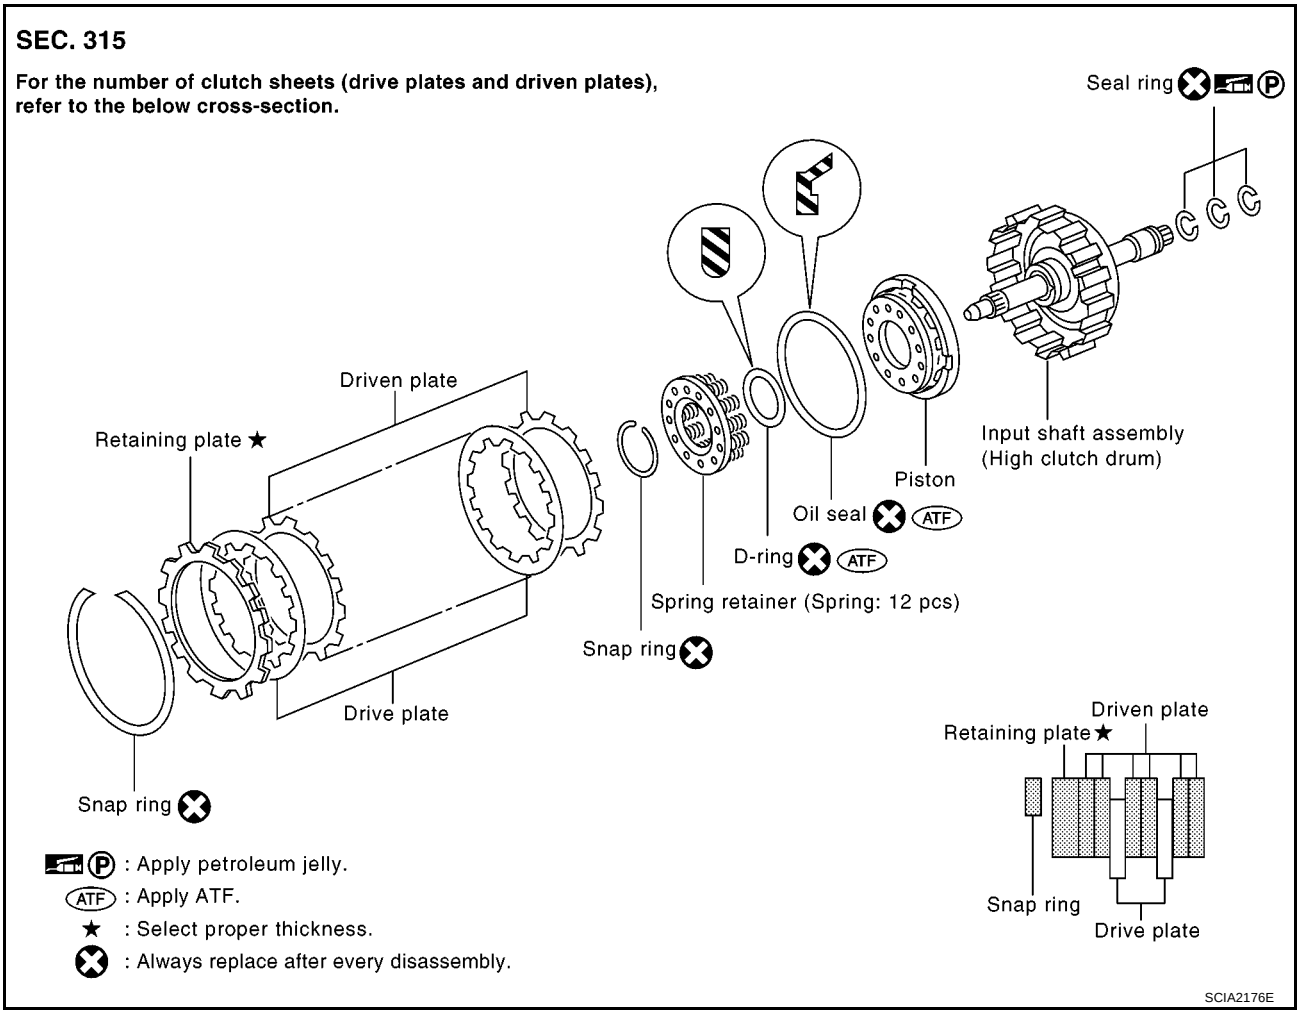
- D-ring might be damaged.
- Oil seal might be damaged.
- Fluid might be leaking past piston check ball.



High Clutch

ECS008IC

COMPONENTS



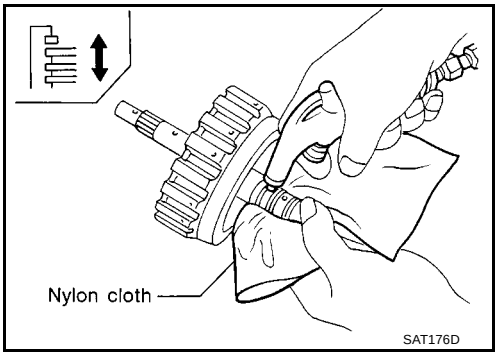
DISASSEMBLY

1. Check operation of high clutch.

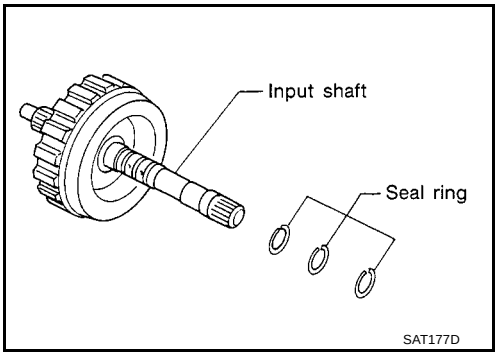
a. Apply compressed air to oil hole of input shaft with nylon cloth.
   - **Stop up hole on opposite side of input shaft with nylon cloth.**

b. Check to see that retaining plate moves to snap ring.

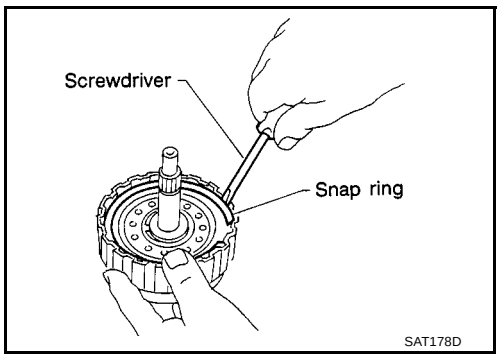
c. If retaining plate does not contact snap ring:
   - D-ring might be damaged.
   - Oil seal might be damaged.
   - Fluid might be leaking past piston check ball.



2. Remove seal rings from input shaft.
   - **Always replace when removed.**

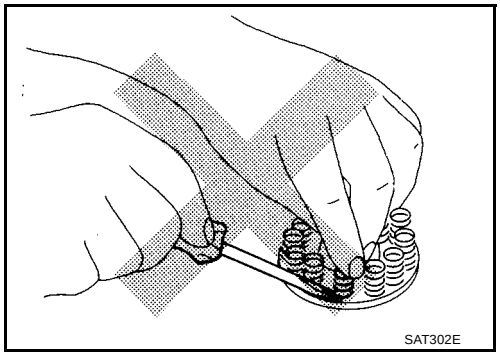


3. Remove snap ring.
4. Remove drive plates, driven plates and retaining plate.

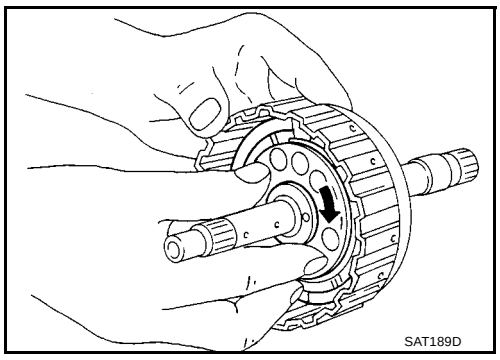


5. Set Tool on spring retainer and remove snap ring from high clutch drum while compressing return springs.
   - **Set Tool directly over springs.**
   - **Do not expand snap ring excessively.**
6. Remove spring retainer and return springs.

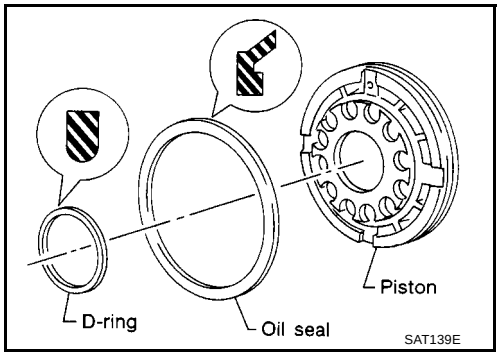
   - **Do not remove return spring from spring retainer.**



7. Remove piston from high clutch drum by turning it.



8. Remove D-ring and oil seal from piston.



INSPECTION

High Clutch Snap Ring, Spring Retainer and Return Springs

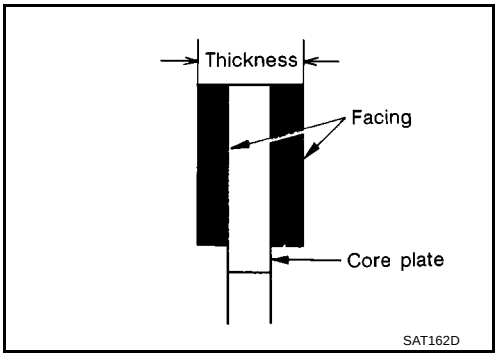
- Check for deformation, fatigue or damage.
- If necessary, replace.
- **When replacing spring retainer and return springs, replace them as a set.**

High Clutch Drive Plates

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

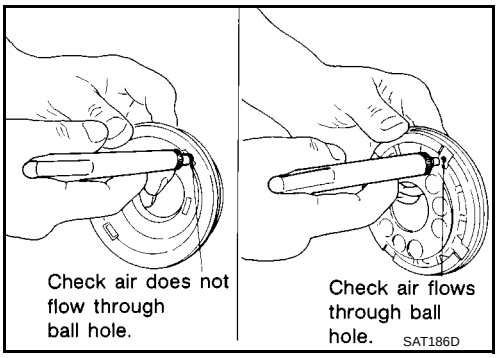
Thickness of drive plate:
Standard value 2.0 mm (0.079 in)
Wear limit 1.8 mm (0.071 in)

- If not within wear limit, replace.



High Clutch Piston

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side to make sure that air leaks past ball.

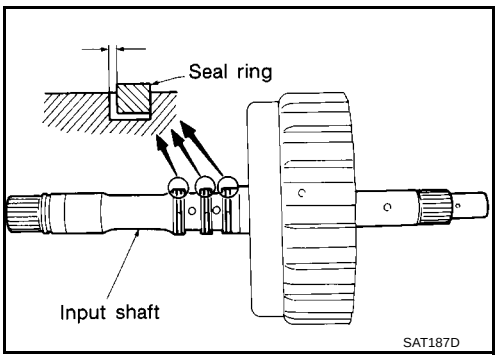


Seal Ring Clearance

- Install new seal rings onto input shaft.
- Measure clearance between seal ring and ring groove.

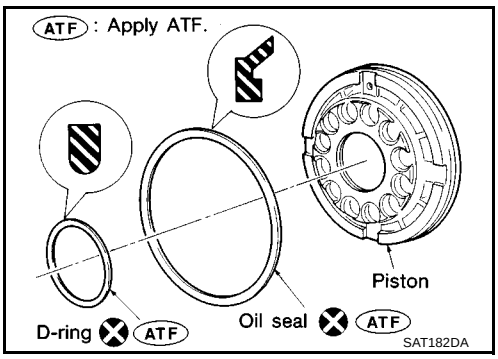
Standard clearance: 0.08 - 0.23 mm (0.0031 - 0.0091 in)
Allowable limit: 0.23 mm (0.0091 in)

- If not within allowable limit, replace input shaft assembly.

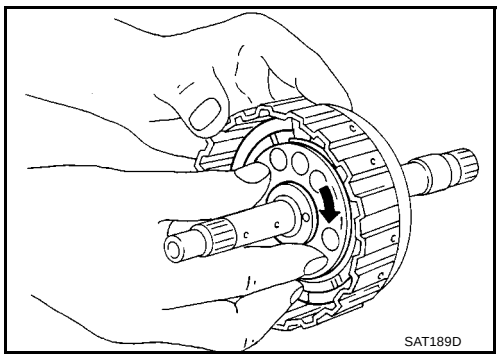


ASSEMBLY

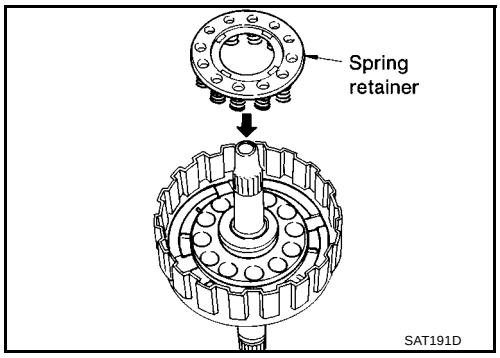
1. Install D-ring and oil seal on piston.
   - **Take care with the direction of the oil seal.**
   - **Apply ATF to both parts.**



2. Install piston assembly by turning it slowly.
   - **Apply ATF to inner surface of drum.**



3. Install return springs and spring retainer on piston.

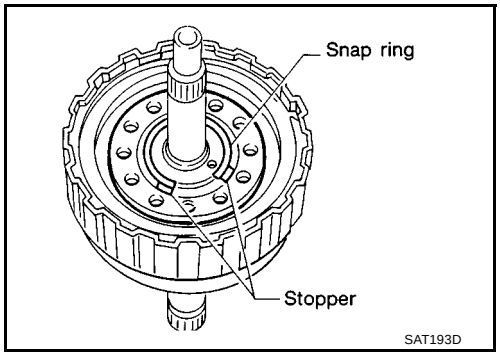


4. Set Tool on spring retainer and install snap ring while compressing return springs.

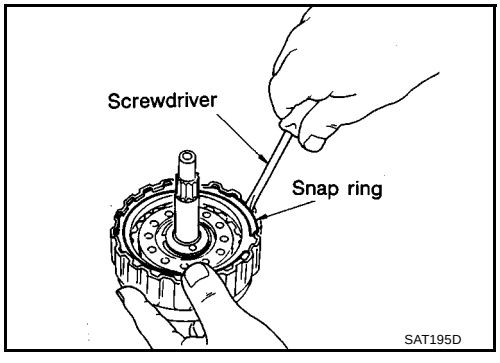
   CAUTION:
   - **Do not reuse the snap ring.**
   - **Set a clutch spring compressor (special service tool) right above return spring.**
   - **Install return spring without tilt.**

   - **Do not align snap ring end gap to spring retainer stopper.**
   - **Install snap ring securely to spring retainer inside stopper and assemble it securely to high clutch drum groove.**

5. Install drive plates, driven plates and retaining plate.
   - **Take care with the order and direction of plates.**



6. Install snap ring.



7. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate.

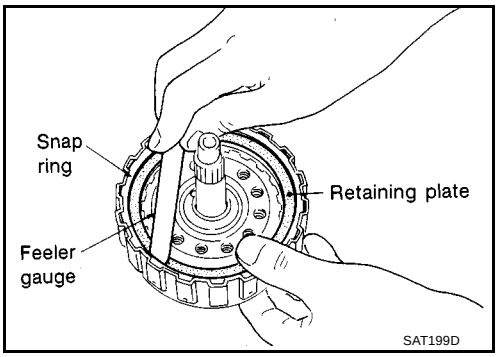
Specified clearance:

Standard 1.4 - 1.8 mm (0.055 - 0.071 in)

Allowable limit 2.4 mm (0.094 in)

Retaining plate:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

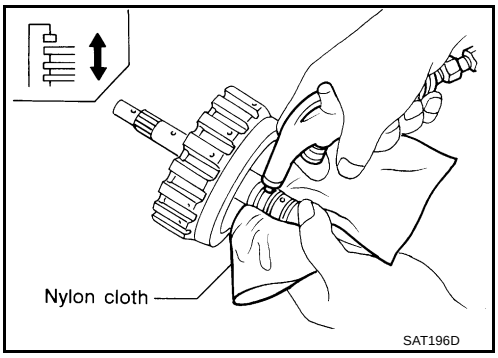


8. Check operation of high clutch.

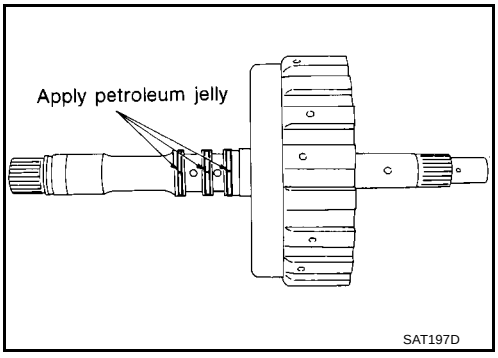
a. Apply compressed air to oil hole of input shaft with nylon cloth.
- **Stop up hole on opposite side of input shaft with nylon cloth.**

b. Check to see that retaining plate moves to snap ring.

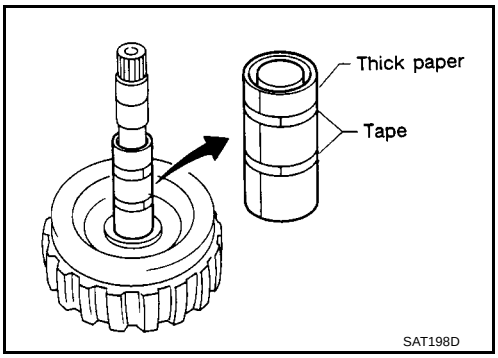
c. If retaining plate does not contact snap ring:
- D-ring might be damaged.
- Oil seal might be damaged.
- Fluid might be leaking past piston check ball.



9. Install seal rings to input shaft.
- **Apply petroleum jelly to seal rings.**
- **Always replace when removed.**



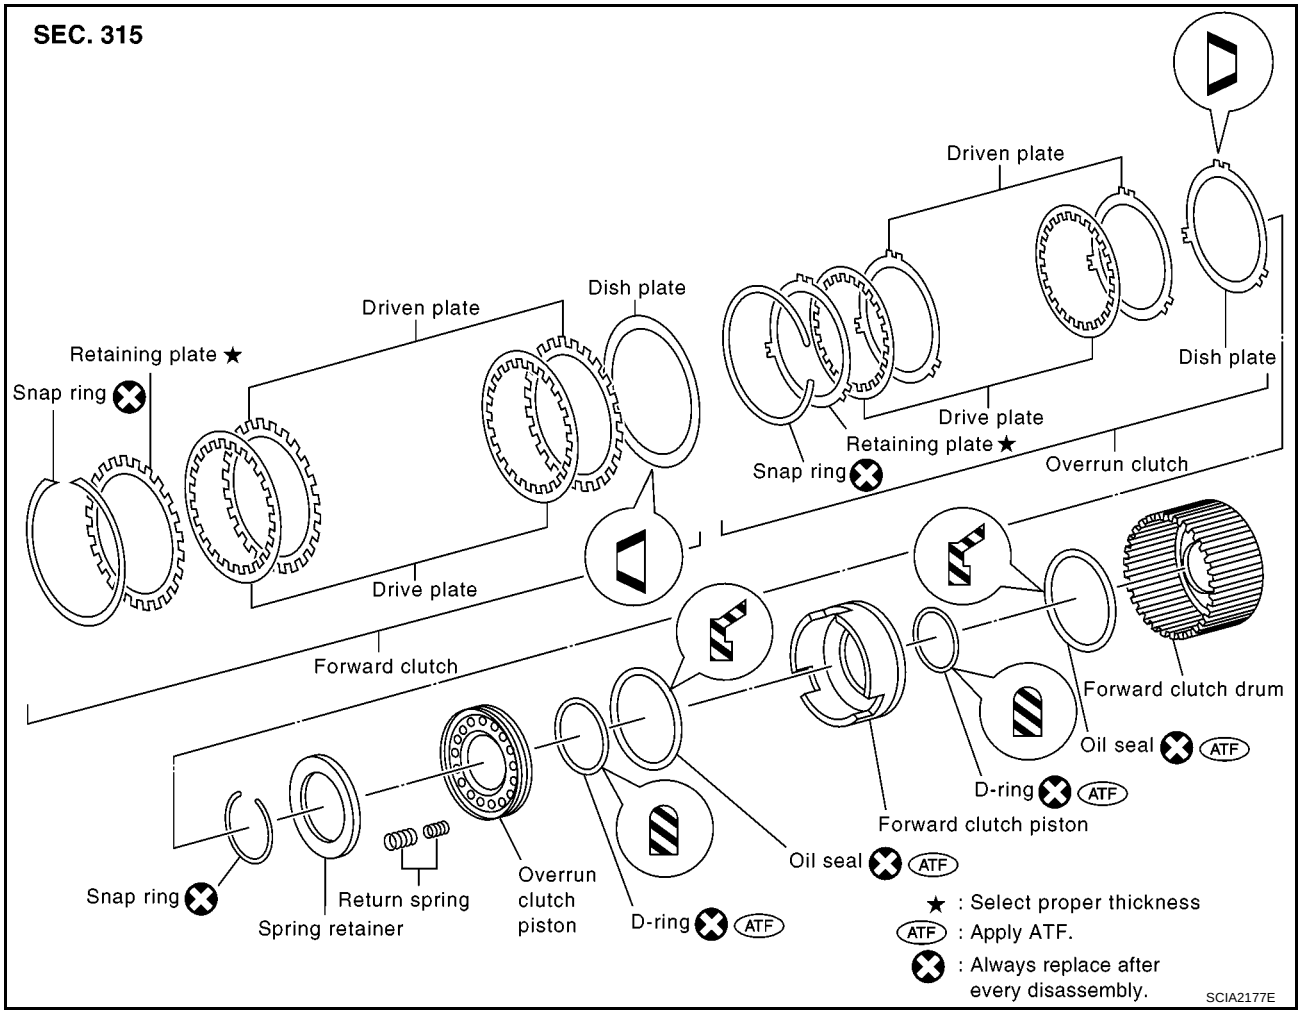
- **Roll paper around seal rings to prevent seal rings from spreading.**

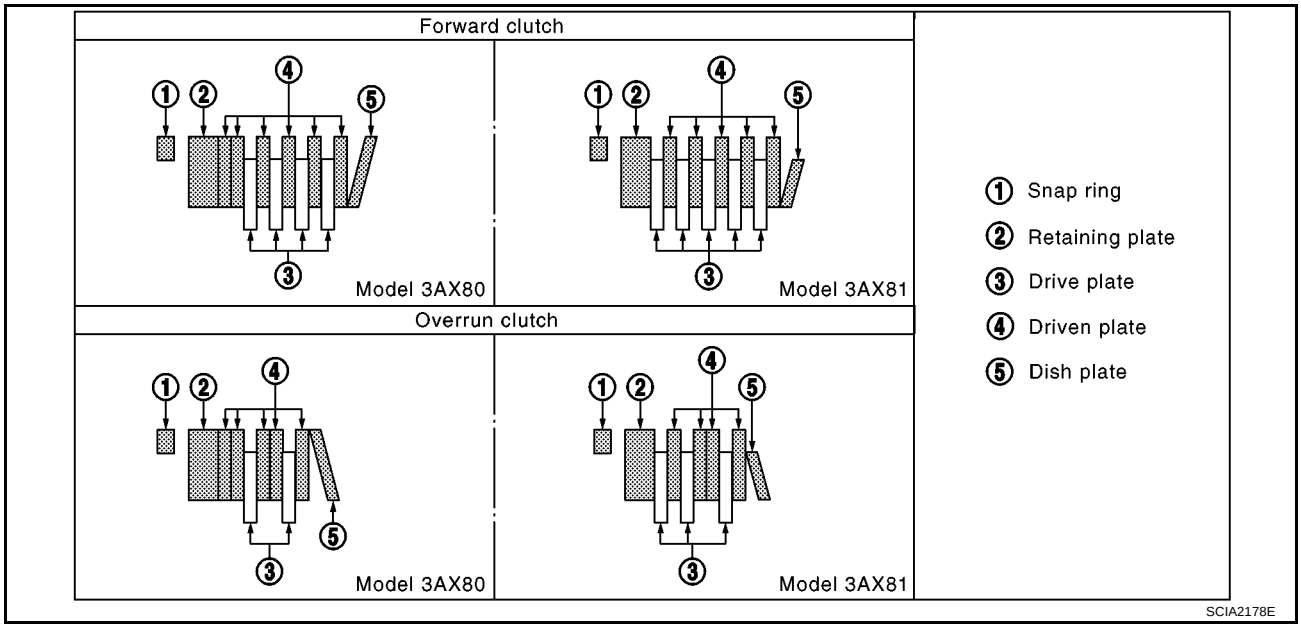


Forward and Overrun Clutches

ECS008ID

COMPONENTS





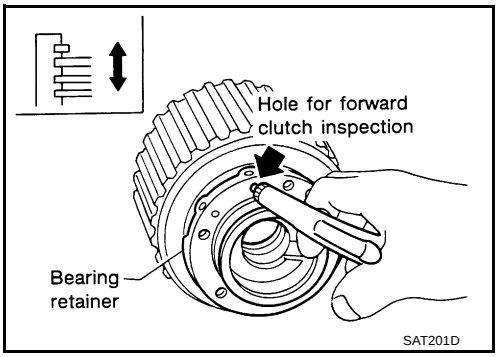
DISASSEMBLY

1. Check operation of forward clutch and overrun clutch.

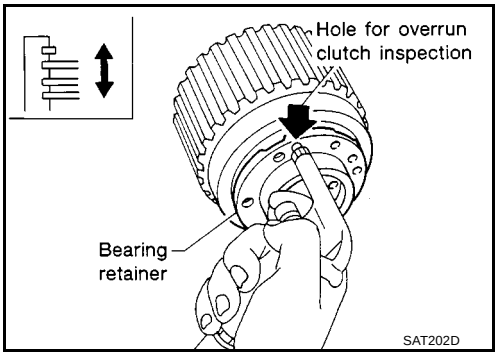
a. Install bearing retainer on forward clutch drum.

b. Apply compressed air to oil hole of forward clutch drum.

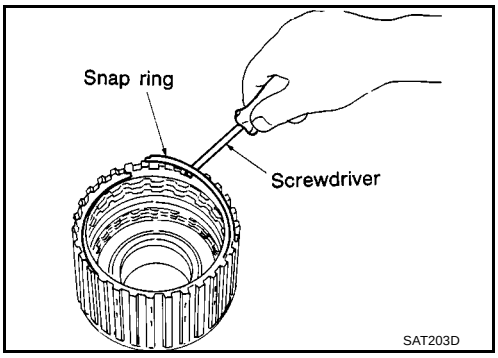
c. Check to see that retaining plate moves to snap ring.



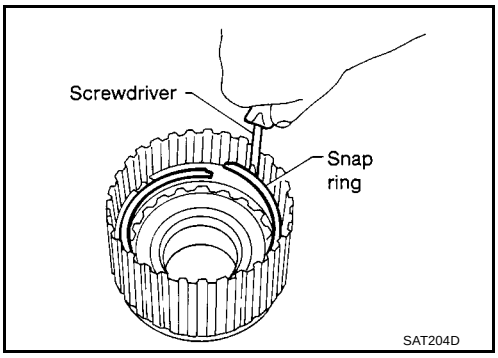
d. If retaining plate does not contact snap ring:
   - D-ring might be damaged.
   - Oil seal might be damaged.
   - Fluid might be leaking past piston check ball.



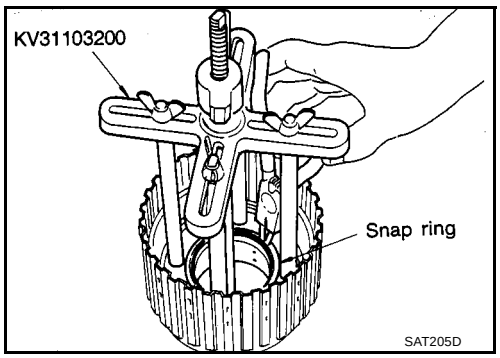
2. Remove snap ring for forward clutch.
3. Remove drive plates, driven plates, retaining plate and dish plate for forward clutch.



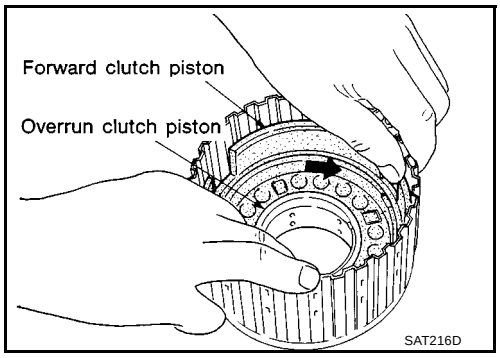
4. Remove snap ring for overrun clutch.
5. Remove drive plates, driven plates, retaining plate and dish plate for overrun clutch.



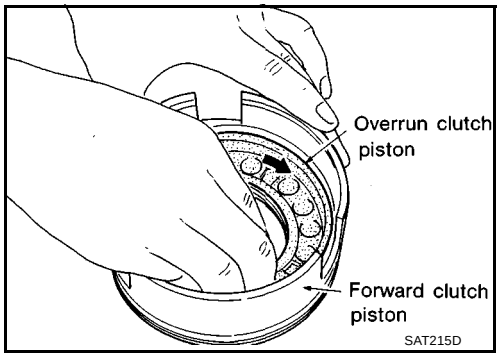
6. Set Tool on spring retainer and remove snap ring from forward clutch drum while compressing return springs.
   - **Set Tool directly over return springs.**
   - **Do not expand snap ring excessively.**
7. Remove spring retainer and return springs.
   - **Do not remove return springs from spring retainer.**



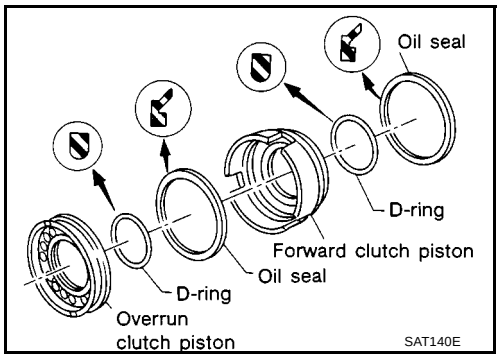
8. Remove forward clutch piston with overrun clutch piston from forward clutch drum by turning it.



9. Remove overrun clutch piston from forward clutch piston by turning it.



10. Remove D-rings and oil seals from forward clutch piston and overrun clutch piston.



INSPECTION

Snap Rings, Spring Retainer

- Check for deformation, fatigue or damage.
- Replace if necessary.

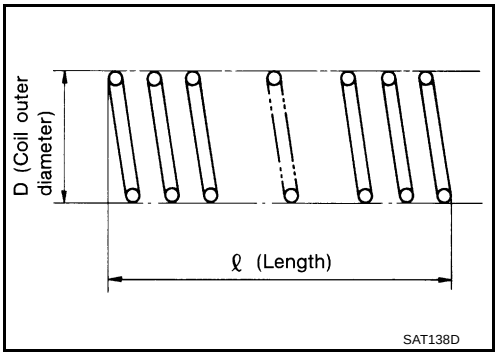
Forward Clutch and Overrun Clutch Return Spring

- Check for deformation or damage.
- Measure free length and outer diameter.

Inspection standard:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

- Replace if deformed or fatigued.



Forward Clutch and Overrun Clutch Drive Plates

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

Thickness of drive plate:

Forward clutch

Standard value: 1.8 mm (0.071 in)

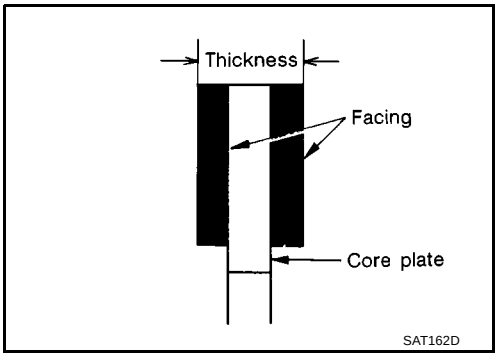
Wear limit: 1.6 mm (0.063 in)

Overrun clutch

Standard value: 1.6 mm (0.063 in)

Wear limit: 1.4 mm (0.055 in)

- If not within wear limit, replace.



Forward Clutch and Overrun Clutch Dish Plates

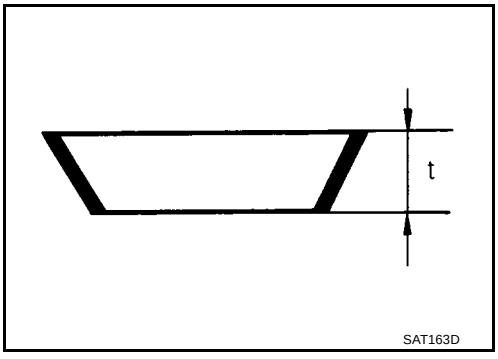
- Check for deformation or damage.
- Measure thickness of dish plate.

Thickness of dish plate "t":

Forward clutch 2.5 mm (0.098 in)

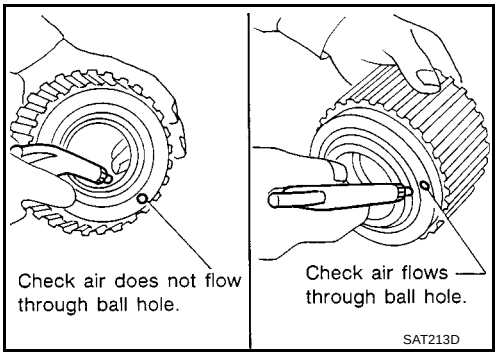
Overrun clutch 2.15 mm (0.0846 in)

- If deformed or fatigued, replace.



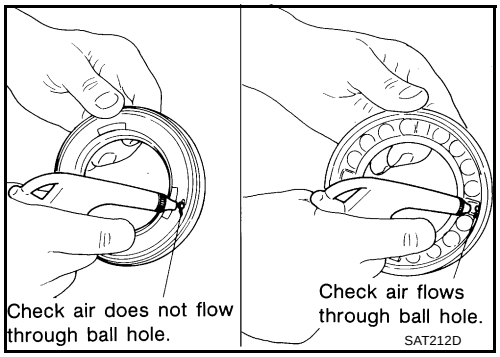
Forward Clutch Drum

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole from outside of forward clutch drum. Make sure air leaks past ball.
- Apply compressed air to oil hole from inside of forward clutch drum. Make sure there is no air leakage.



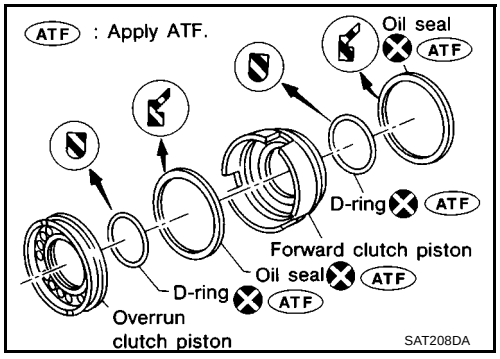
Overrun Clutch Piston

- Make sure that check balls are not fixed.
- Apply compressed air to check ball oil hole opposite the return spring. Make sure there is no air leakage.
- Apply compressed air to oil hole on return spring side. Make sure that air leaks past ball.

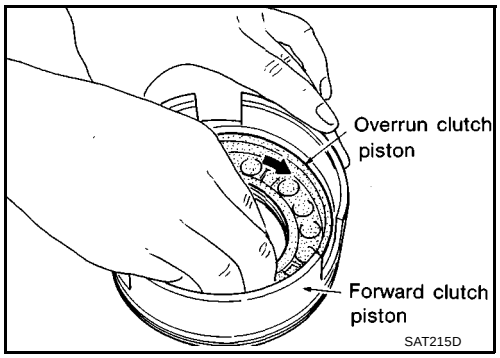


ASSEMBLY

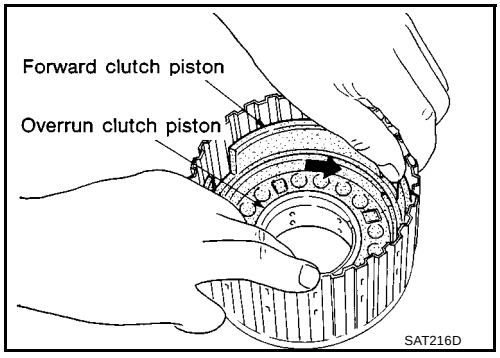
1. Install D-rings and oil seals on forward clutch piston and overrun clutch piston.
   - **Take care with direction of oil seal.**
   - **Apply ATF to both parts.**



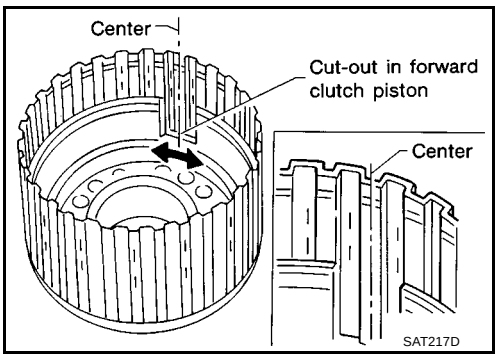
2. Install overrun clutch piston assembly on forward clutch piston by turning it slowly.
   - **Apply ATF to inner surface of forward clutch piston.**



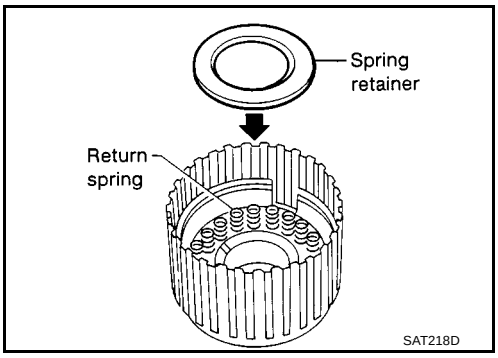
3. Install forward clutch piston assembly on forward clutch drum by turning it slowly.
   - **Apply ATF to inner surface of drum.**



4. Align notch in forward clutch piston with groove in forward clutch drum.



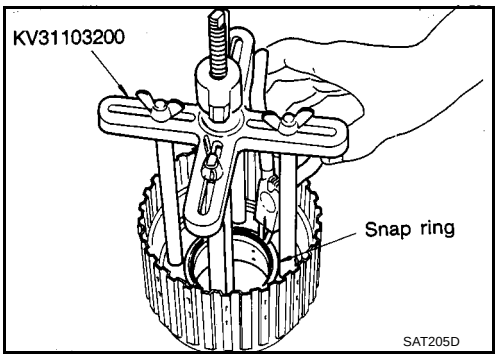
5. Install return spring on piston.
6. Install spring retainer on return springs.



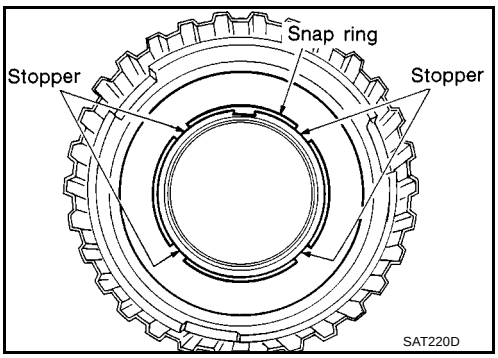
7. Set Tool on spring retainer and install snap ring while compressing return springs.

CAUTION:

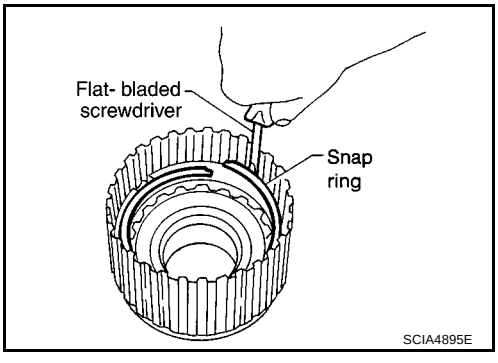
- **Do not reuse the snap ring.**
- **Set a clutch spring compressor right above return spring.**
- **Install return spring without tilt.**



- **Make sure snap ring is assembled securely into groove on reverse clutch drum.**



8. Install drive plates, driven plates, retaining plate and dish plate for overrun clutch.
   - **Take care with order of plates.**
9. Install snap ring for overrun clutch.



10. Measure clearance between overrun clutch retaining plate and snap ring.
If not within allowable limit, select proper retaining plate.

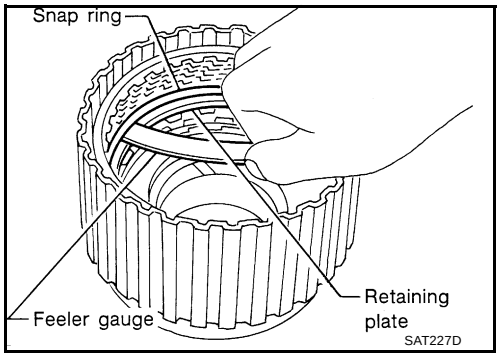
Specified clearance:

Standard 1.0 - 1.4 mm (0.039 - 0.055 in)

Allowable limit 2.0 mm (0.079 in)

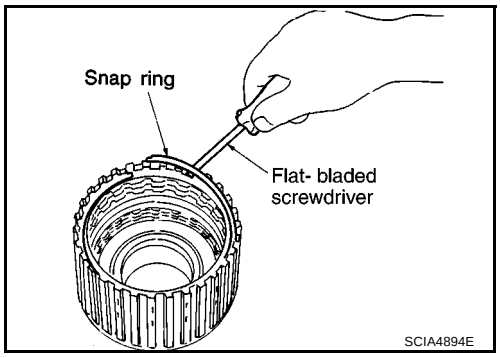
Overrun clutch retaining plate:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



11. Install drive plates, driven plates, retaining plate and dish plate for forward clutch.
- **Take care with order and direction of plates.**

12. Install snap ring for forward clutch.



13. Measure clearance between forward clutch retaining plate and snap ring.
If not within allowable limit, select proper retaining plate.

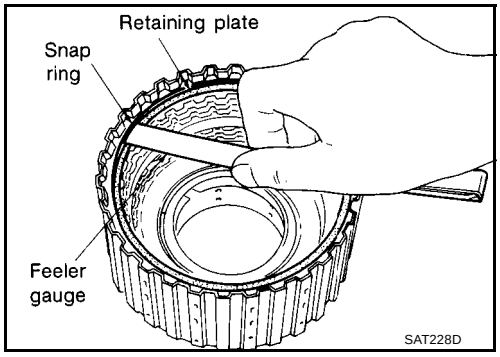
Specified clearance:

Standard 0.45 - 0.85 mm (0.0177 - 0.0335 in)

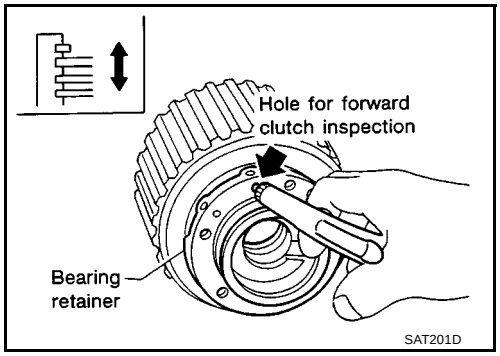
Allowable limit 1.85 mm (0.0728 in)

Forward clutch retaining plate:

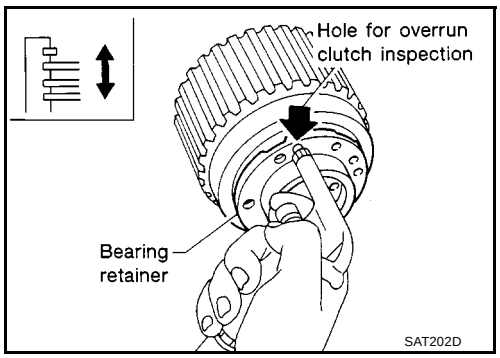
Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



14. Check operation of forward clutch.
Refer to AT-482, "Forward and Overrun Clutches" .



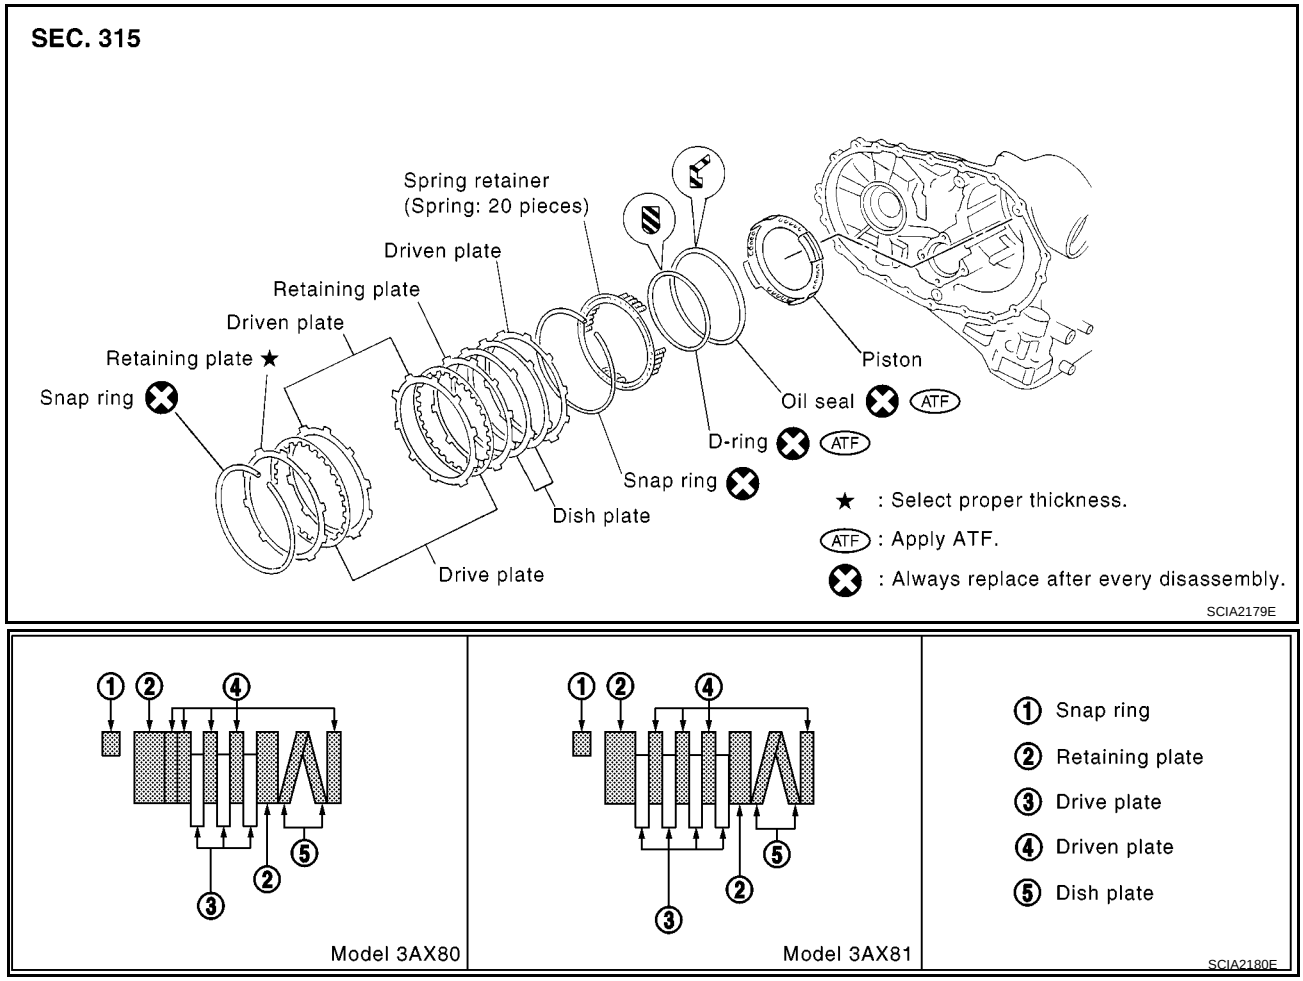
15. Check operation of overrun clutch.
Refer to AT-482, "Forward and Overrun Clutches" .



Low & Reverse Brake

ECS008IE

COMPONENTS



DISASSEMBLY

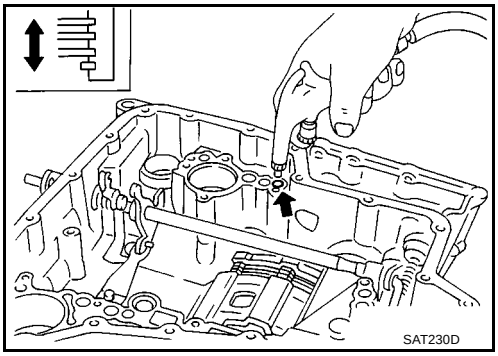
1. Check operation of low & reverse brake.

a. Apply compressed air to oil hole of transmission case.

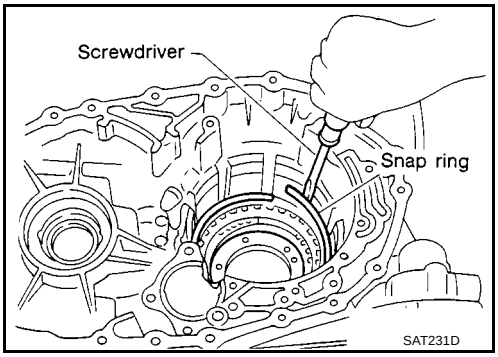
b. Check to see that retaining plate moves to snap ring.

c. If retaining plate does not contact snap ring:

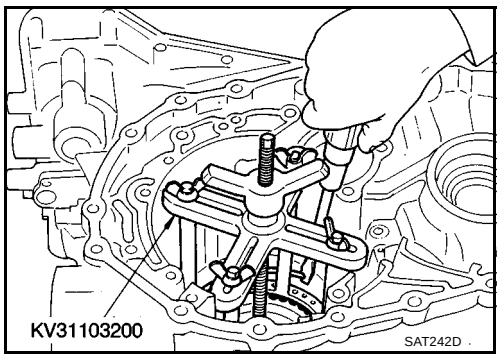
- D-ring might be damaged.
- Oil seal might be damaged.
- Fluid might be leaking past piston check ball.



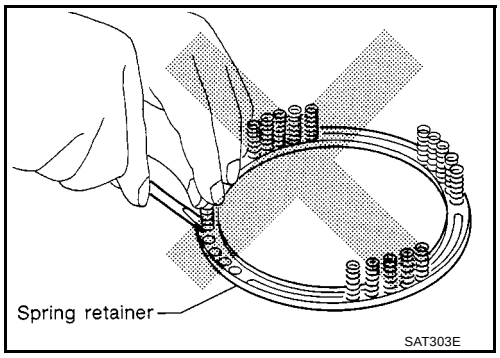
2. Stand transmission case.
3. Remove snap ring.
4. Remove drive plates, driven plates, retaining plate from transmission case.



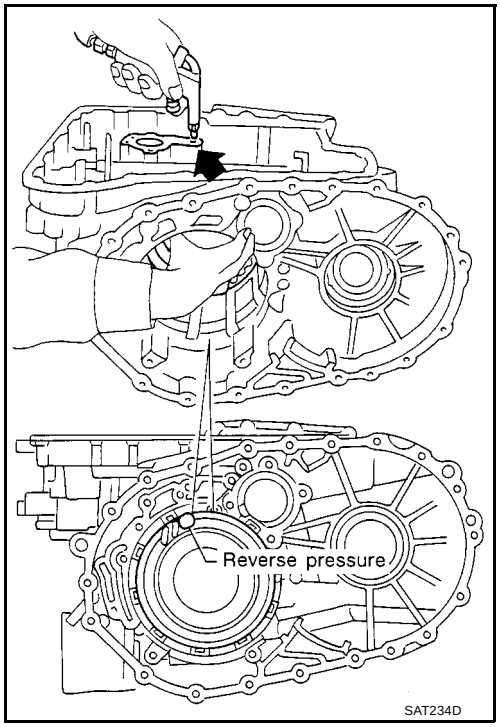
5. Set Tool on spring retainer and remove snap ring while compressing return springs.
   - **Set Tool directly above return springs.**
   - **Do not expand snap ring excessively.**
6. Remove spring retainer and return springs.



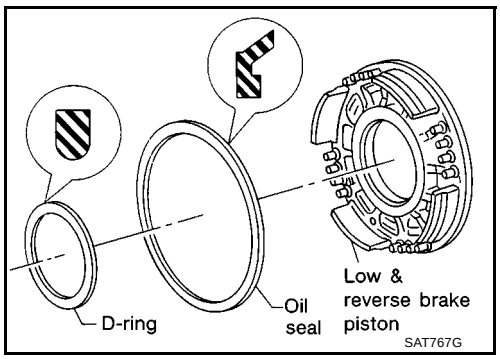
- **Do not remove return springs from spring retainer.**



7. Apply compressed air to oil hole of transmission case while holding piston.
8. Remove piston from transmission case by turning it.



9. Remove D-ring and oil seal from piston.



INSPECTION

Low & Reverse Brake Snap Ring, Spring Retainer and Return Springs

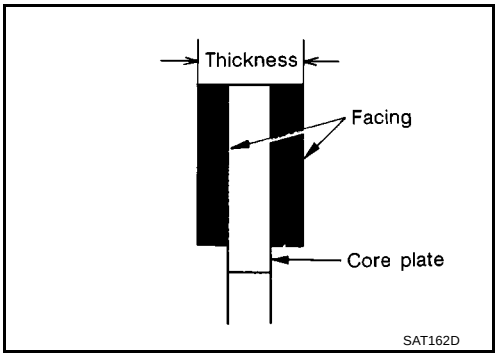
- Check for deformation, fatigue or damage.
- If necessary, replace.
- **When replacing spring retainer and return springs, replace them as a set.**

Low & Reverse Brake Drive Plate

- Check facing for burns, cracks or damage.
- Measure thickness of facing.

Thickness of drive plate:
Standard value 2.0 mm (0.079 in)
Wear limit 1.8 mm (0.071 in)

- If not within wear limit, replace.

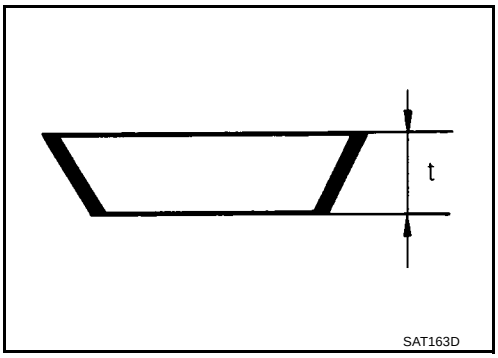


Low & Reverse Brake Dish Plates

- Check for deformation or damage.
- Measure thickness of dish plate.

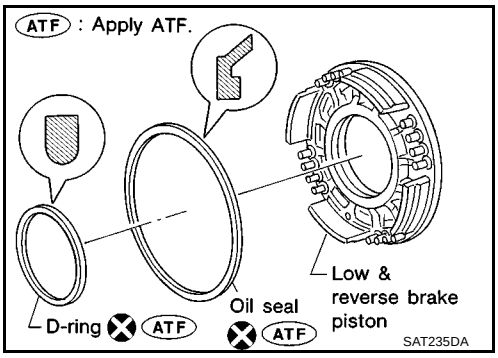
Thickness of dish plate "t": 3.15 mm (0.124 in)

- If deformed or fatigued, replace.

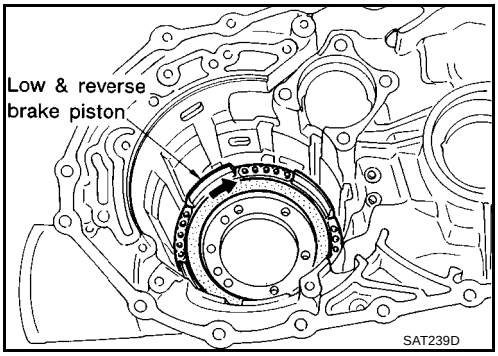


ASSEMBLY

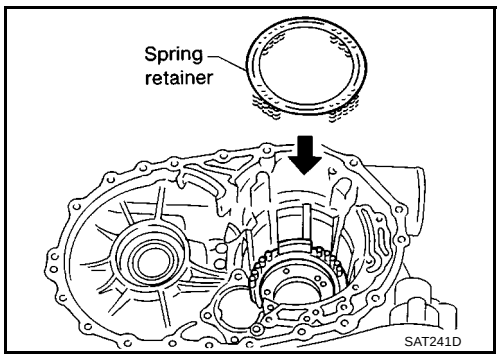
1. Install D-ring and oil seal on piston.
   - **Take care with the direction of the oil seal.**
   - **Apply ATF to both parts.**



2. Stand transmission case.
3. Install piston assembly on transmission case while turning it slowly.
   - **Apply ATF to inner surface of transmission case.**



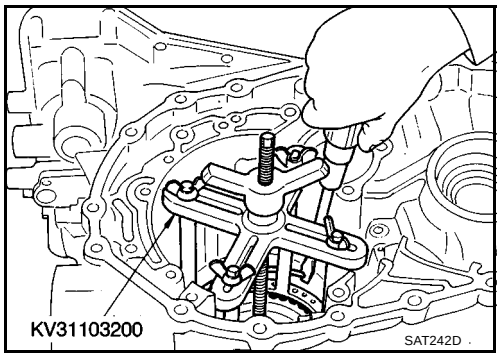
4. Install return springs and spring retainer on piston.



5. Install snap ring while compressing return springs.

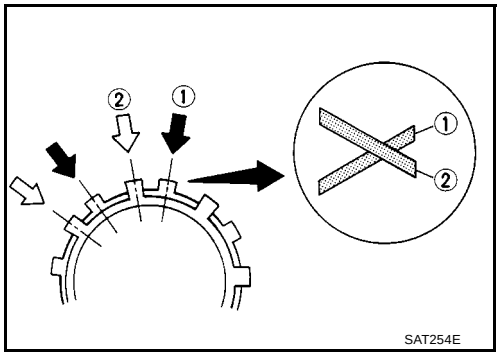
CAUTION:

- **Do not reuse the snap ring.**
- **Set a clutch spring compressor right above return spring.**
- **Install return spring without tilt.**
- **Make sure snap ring is assembled securely into groove on reverse clutch drum.**

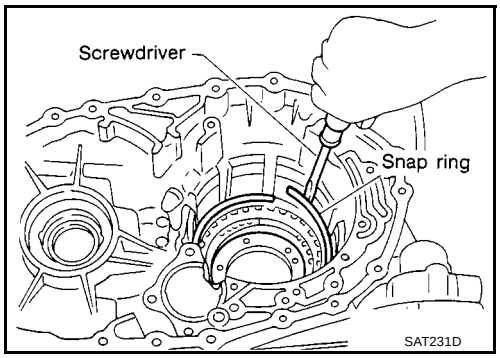


6. Install drive plates, driven plates, retaining plates and dished plates.

- **Do not align the projections on the two dished plates.**
- **Make sure to put the plates in the correct order and direction.**



7. Install snap ring.



8. Measure clearance between retaining plate and snap ring. If not within allowable limit, select proper retaining plate (front side).

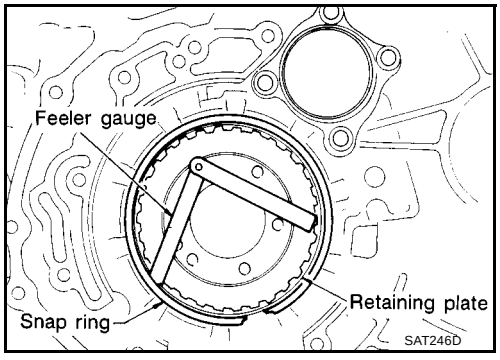
Specified clearance:

Standard 1.4 - 1.8 mm (0.055 - 0.071 in)

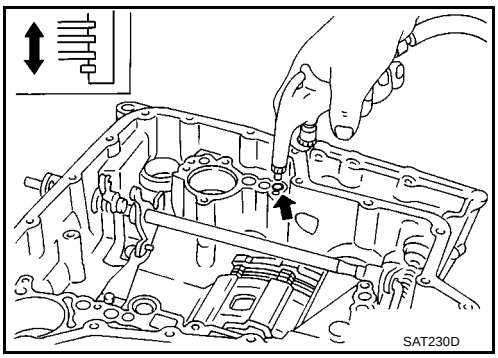
Allowable limit 2.8 mm (0.110 in)

Retaining plate:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



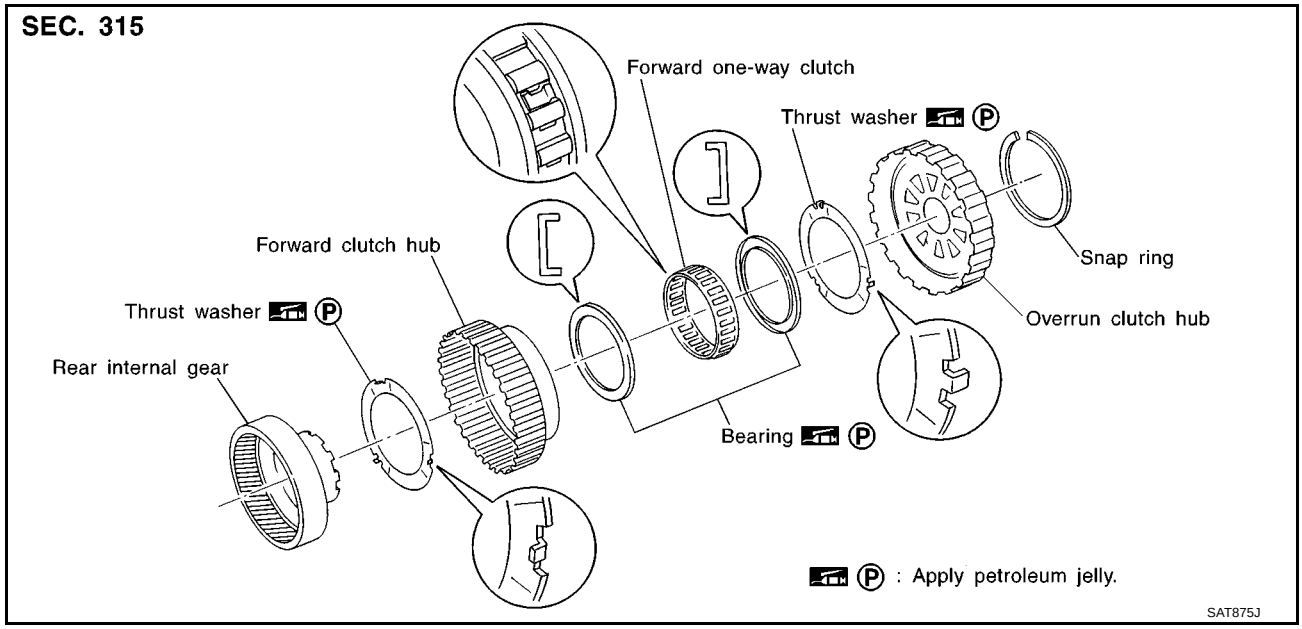
9. Check operation of low & reverse brake. Refer to AT-489, "DISASSEMBLY" .



Rear Internal Gear, Forward Clutch Hub and Overrun Clutch Hub

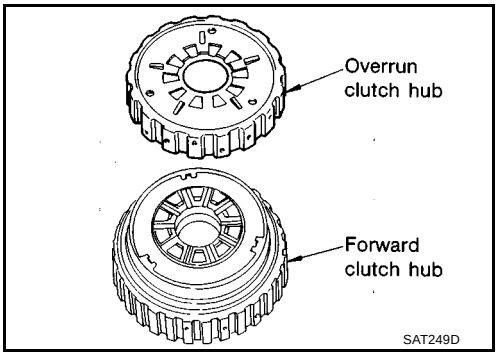
ECS008IF

COMPONENTS

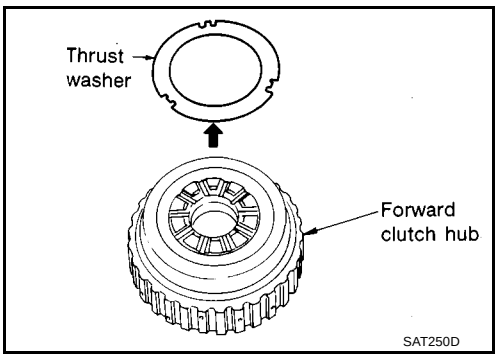


DISASSEMBLY

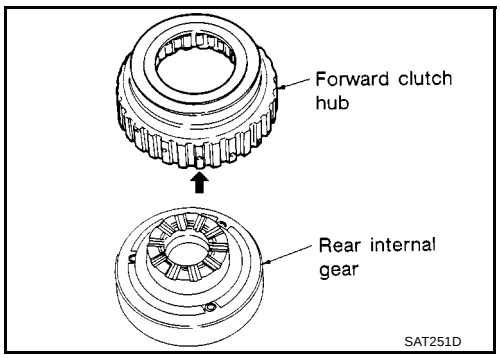
1. Remove snap ring from overrun clutch hub.
2. Remove overrun clutch hub from forward clutch hub.



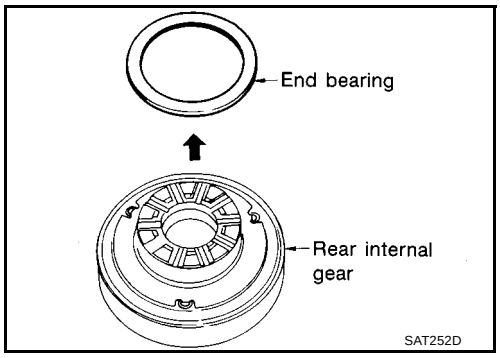
3. Remove thrust washer from forward clutch hub.



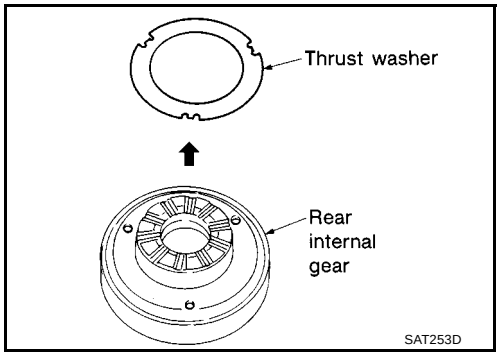
4. Remove forward clutch hub from rear internal gear.



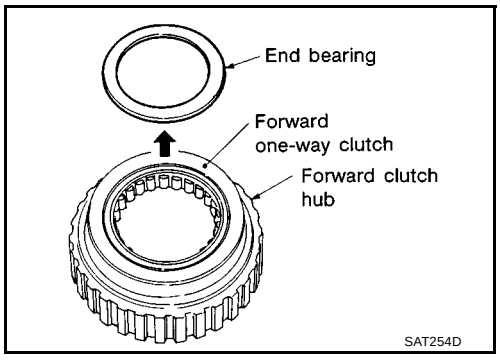
5. Remove end bearing from rear internal gear.



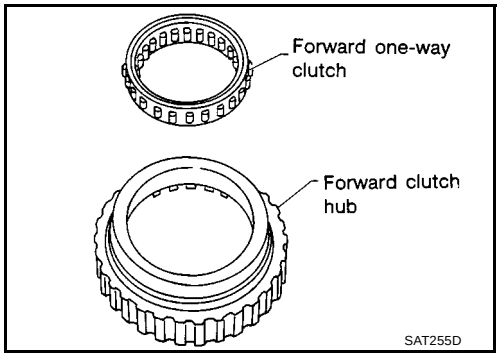
6. Remove thrust washer from rear internal gear.



7. Remove end bearing from forward one-way clutch.



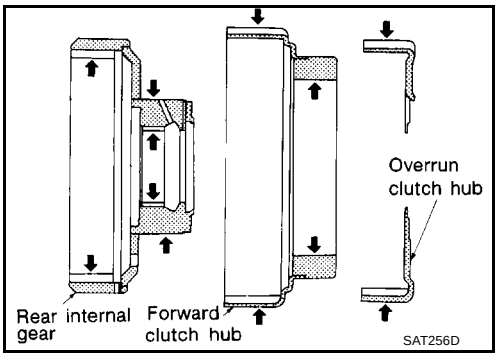
8. Remove forward one-way clutch from forward clutch hub.



INSPECTION

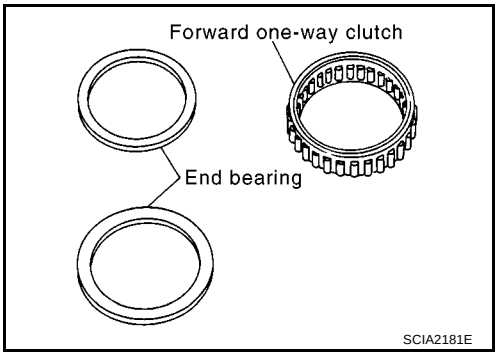
Rear Internal Gear, Forward Clutch Hub and Overrun Clutch Hub

- Check rubbing surfaces for wear or damage.



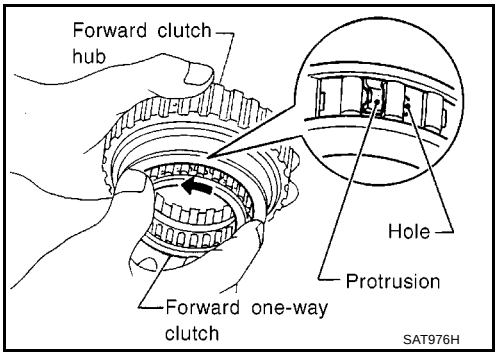
End Bearings and Forward One-way Clutch

- Check end bearings for deformation and damage.
- Check forward one-way clutch for wear and damage.

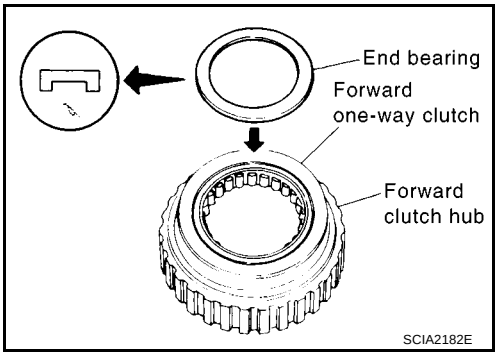


ASSEMBLY

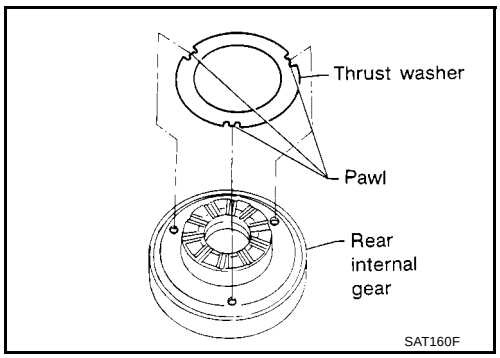
1. Install forward one-way clutch on forward clutch.
   - **Take care with the direction of forward one-way clutch.**



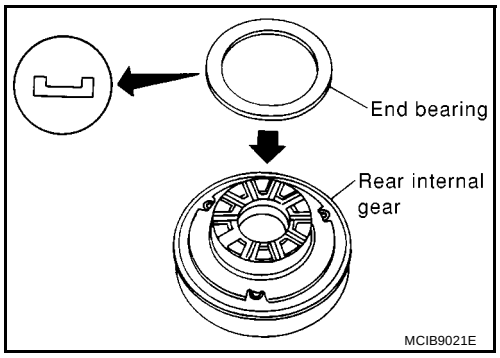
2. Install end bearing on forward one-way clutch.
   - **Apply petroleum jelly to bearing.**



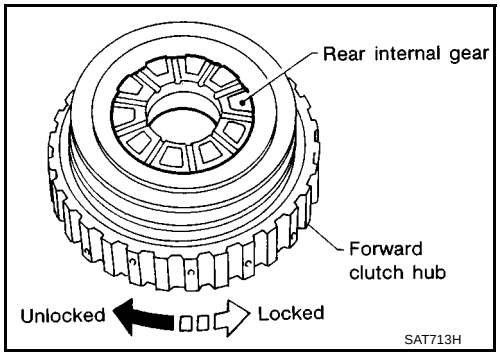
3. Install thrust washer on rear internal gear.
   - **Apply petroleum jelly to thrust washer.**
   - **Align hooks of thrust washer with holes of rear internal gear.**



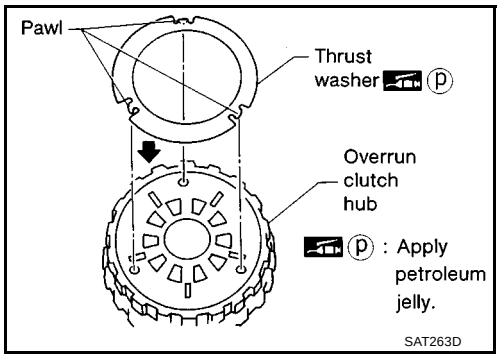
4. Install end bearing on rear internal gear.
   - **Apply petroleum jelly to end bearing.**



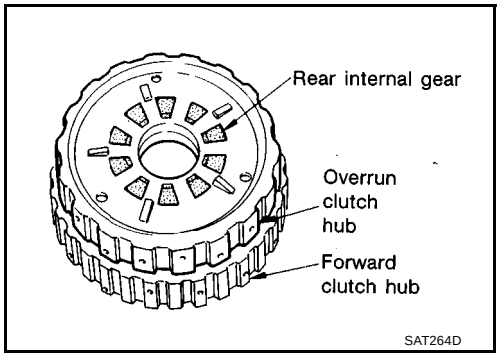
5. Install forward clutch hub on rear internal gear.
   - **Check operation of forward one-way clutch.**
     Hold rear internal gear and turn forward clutch hub.
     Check forward clutch hub for correct locking and unlocking directions.
   - **If not as shown in illustration, check installation direction of forward one-way clutch.**



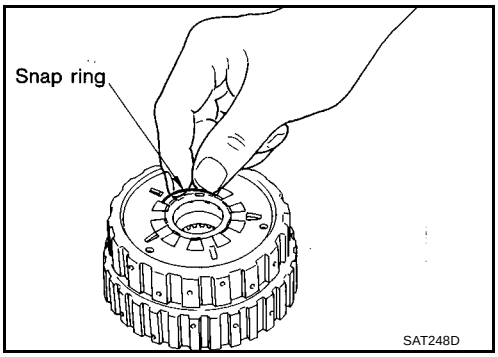
6. Install thrust washer and overrun clutch hub.
   - **Apply petroleum jelly to thrust washer.**
   - **Align pawls of thrust washer with holes of overrun clutch hub.**



7. Install overrun clutch hub on rear internal gear.
   - **Align projections of rear internal gear with holes of overrun clutch hub.**



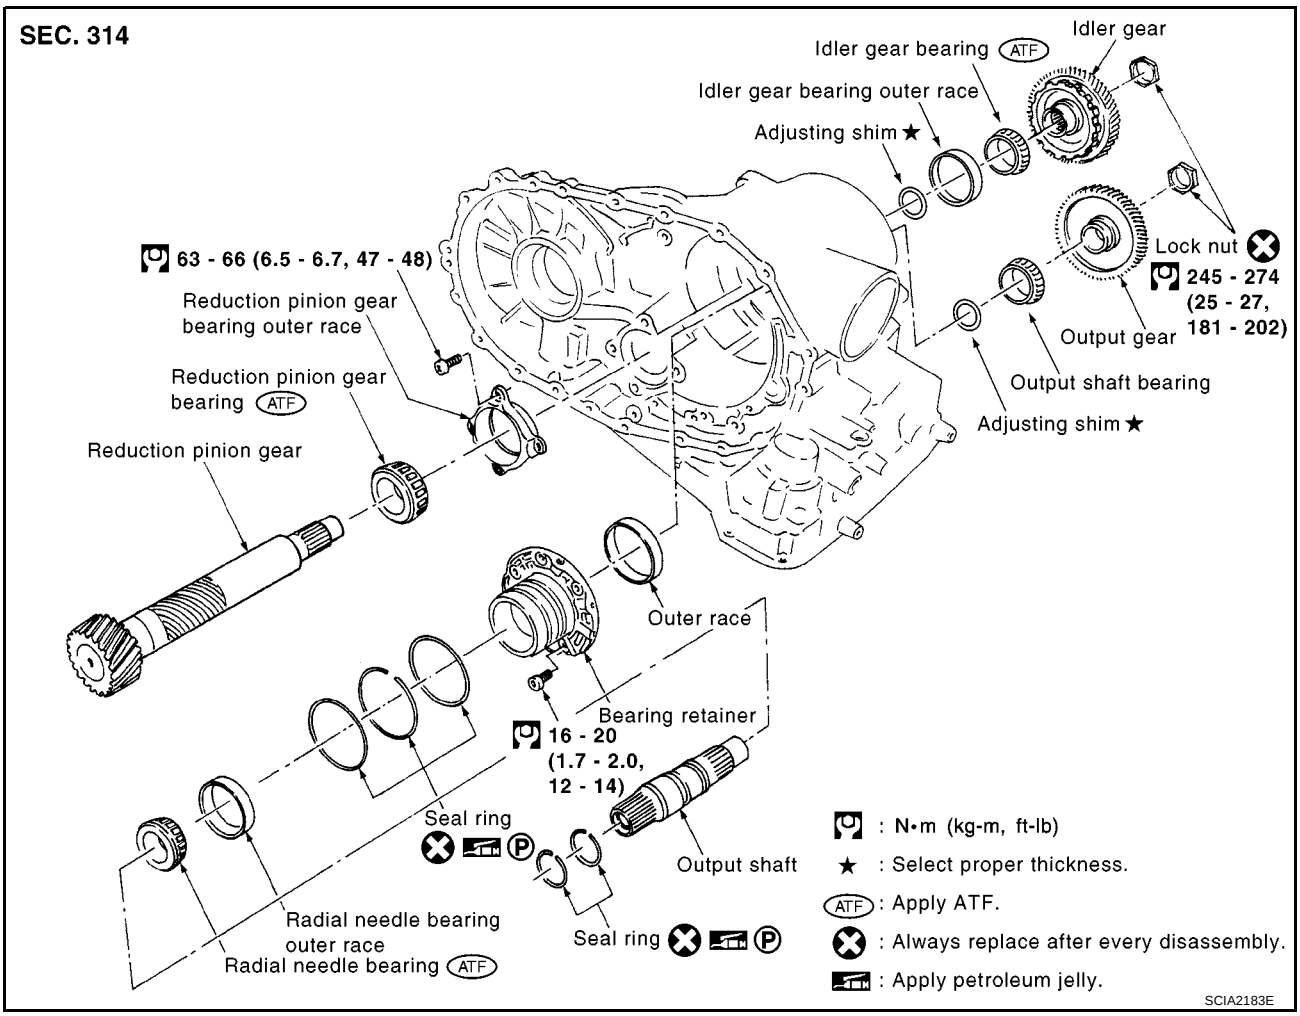
8. Install snap ring to groove of rear internal gear.



Output Shaft, Idler Gear, Reduction Pinion Gear and Bearing Retainer

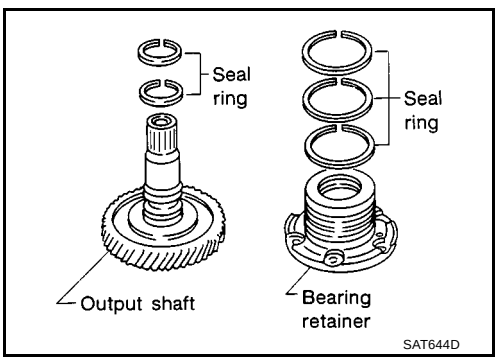
ECS008IG

COMPONENTS



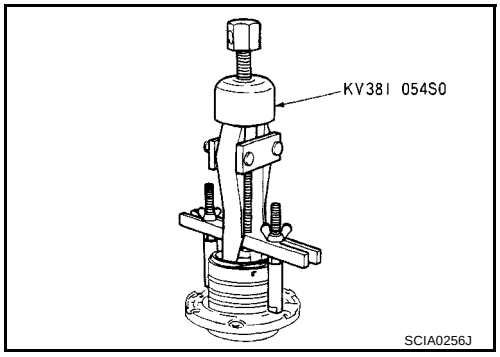
DISASSEMBLY

1. Remove seal rings from output shaft and bearing retainer.



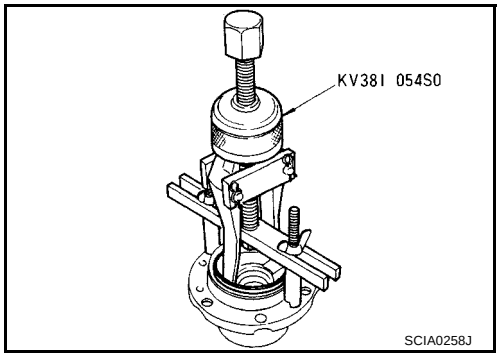
2. Remove output shaft bearing and outer race with the following procedure:
   - Set a drift to output shaft bearing and press out.

   - Using a puller, remove outer race from bearing retainer.



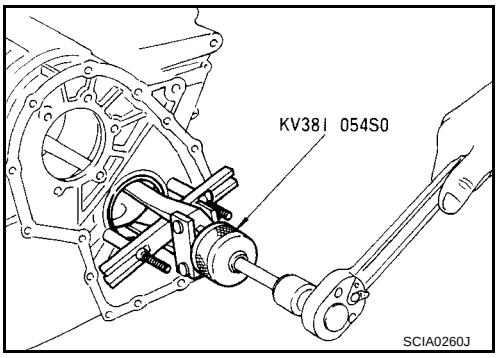
3. Remove output gear bearing and outer race with the following procedure:
   - Set appropriate 33 mm diameter drift and remove bearing using puller.

   - Using a puller, remove outer race from bearing retainer.

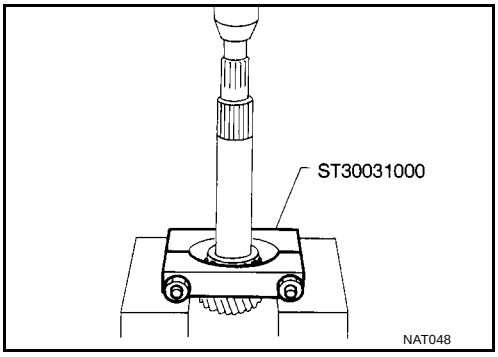


4. Remove idler gear bearing and outer race with the following procedure:
   - Set appropriate 34 mm diameter drift and remove bearing using puller.

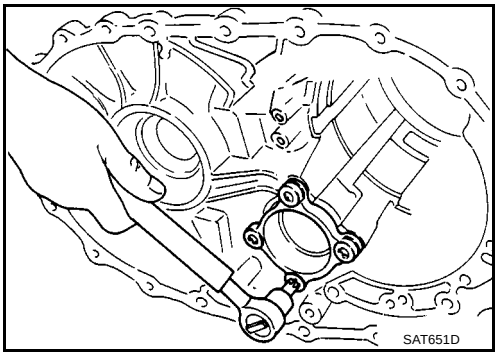
   - Using a puller, remove outer race from transaxle case.



5. Press out reduction pinion gear bearing from reduction pinion gear.



6. Remove reduction pinion gear bearing outer race from transmission case.



INSPECTION

Output Shaft, Idler Gear and Reduction Pinion Gear

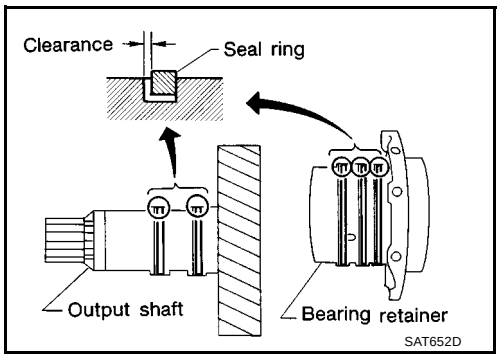
- Check shafts for cracks, wear or bending.
- Check gears for wear, chips and cracks.

Bearing

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.
- **When replacing taper roller bearing, replace outer and inner race as a set.**

Seal Ring Clearance

- Install new seal rings to output shaft.
- Measure clearance between seal ring and ring groove of output shaft.



Standard clearance:

0.10 - 0.25 mm (0.0039 - 0.0098 in)

Allowable limit:

0.25 mm (0.0098 in)

- If not within allowable limit, replace output shaft.
- Install new seal rings to bearing retainer.
- Measure clearance between seal ring and ring groove of bearing retainer.

Standard clearance:

0.10 - 0.25 mm (0.0039 - 0.0098 in)

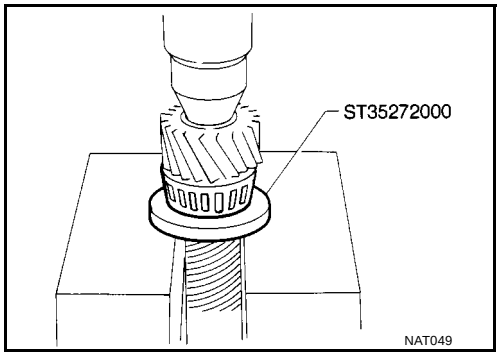
Allowable limit:

0.25 mm (0.0098 in)

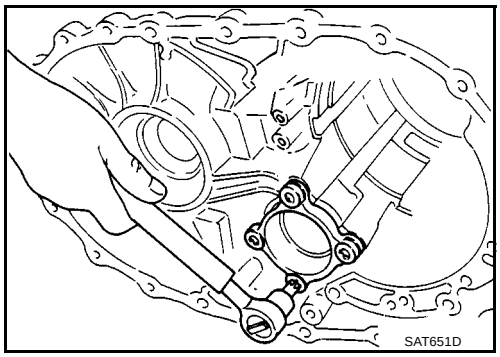
- If not within allowable limit, replace bearing retainer.

ASSEMBLY

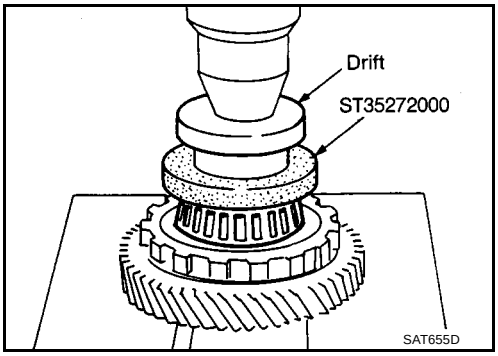
1. Press reduction pinion gear bearing on reduction pinion gear.



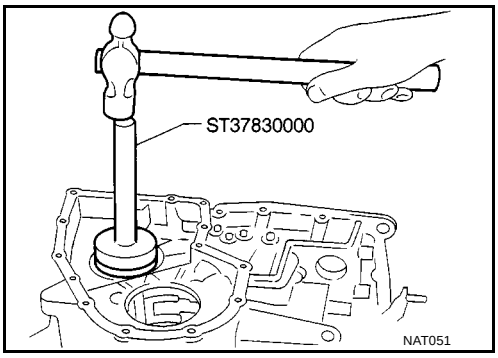
2. Install reduction pinion gear bearing outer race on transmission case.



3. Press idler gear bearing inner race on idler gear.



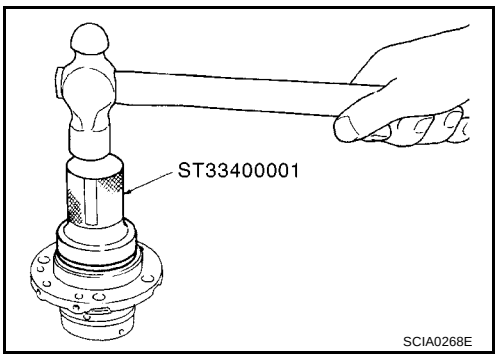
4. Install idler gear bearing outer race on transmission case.



5. Install output gear bearing and outer race with the following procedure:
   - Set a drift to output gear bearing and press out using appropriate drift.

     CAUTION:
     Press a drift onto bearing inner race.

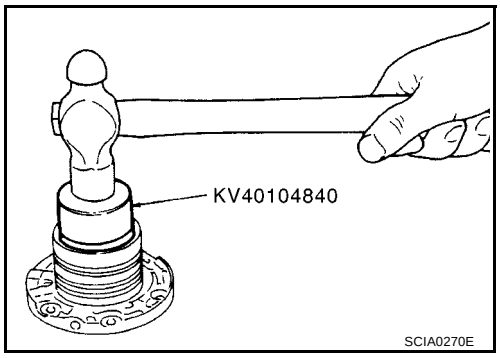
   - Using a drift, press outer race into bearing retainer.



6. Install output shaft bearing and outer race with the following procedure:
   - Set a drift to output shaft bearing and press out.

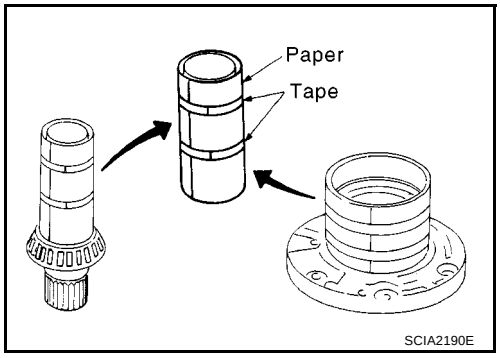
     CAUTION:
     Press a drift onto bearing inner race.

   - Using a drift, install outer race on bearing retainer.



7. After packing ring grooves with petroleum jelly, carefully install new seal rings on output shaft and bearing retainer.

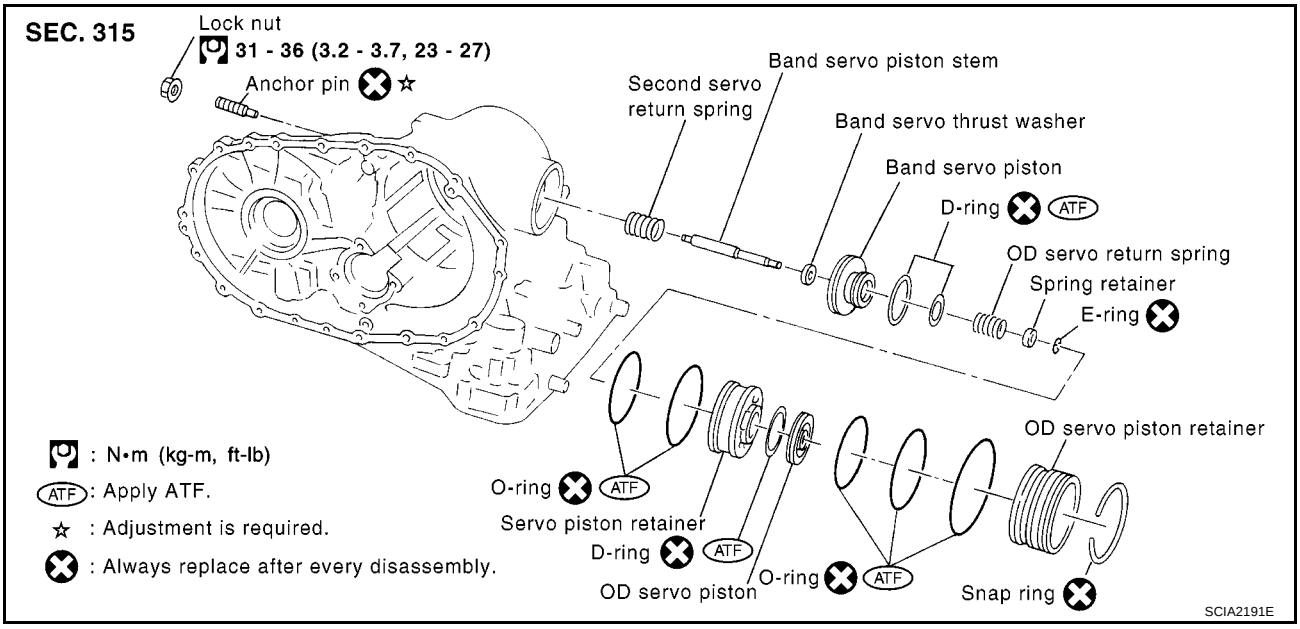
   - **Roll paper around seal rings to prevent seal rings from spreading.**



Band Servo Piston Assembly

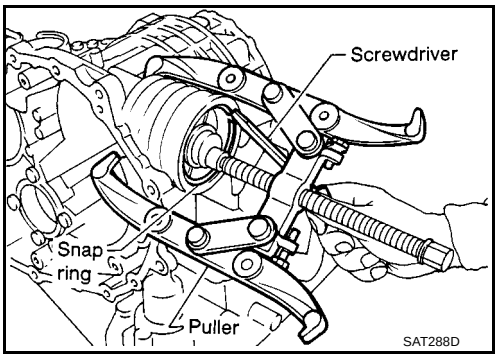
ECS008IH

COMPONENT

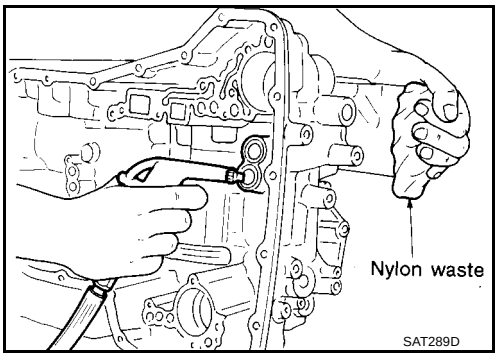


DISASSEMBLY

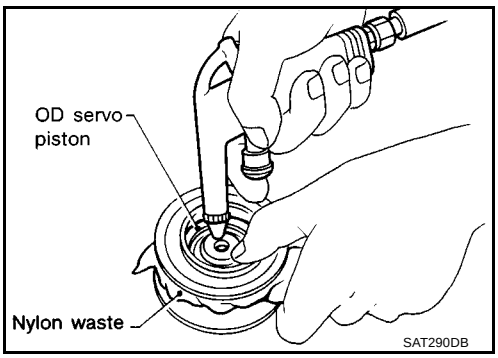
1. Remove band servo piston snap ring.



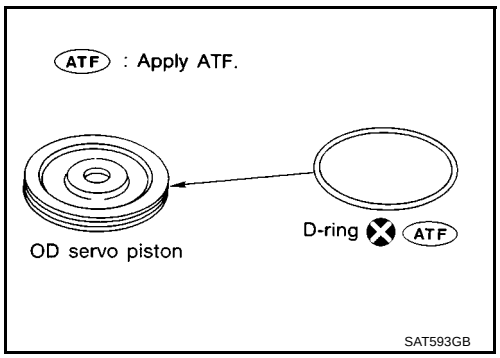
2. Apply compressed air to oil hole in transmission case to remove OD servo piston retainer and band servo piston assembly.
   - **Hold band servo piston assembly with a rag or nylon waste.**



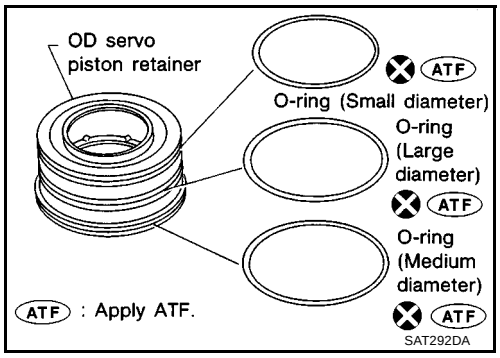
3. Apply compressed air to oil hole in OD servo piston retainer to remove O/D servo piston from retainer.
   - **Hold OD band servo piston while applying compressed air.**



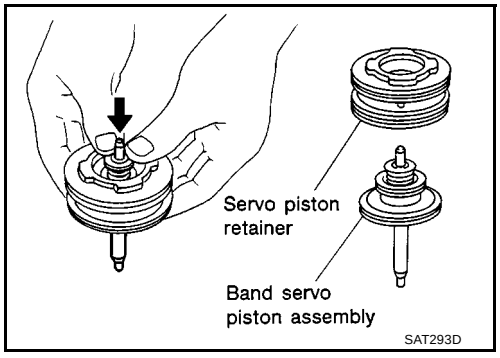
4. Remove D-ring from OD servo piston.



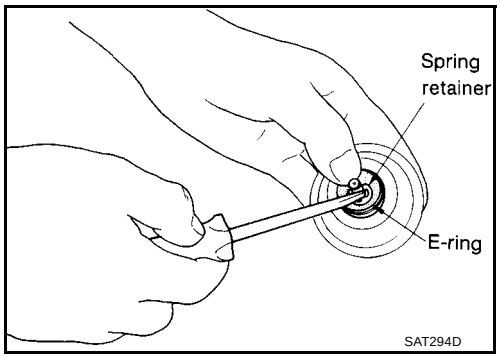
5. Remove O-rings from OD servo piston retainer.



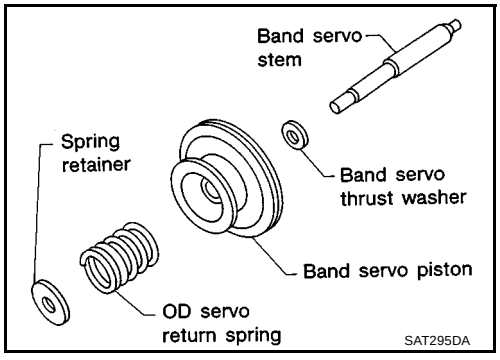
6. Remove band servo piston assembly from servo piston retainer by pushing it forward.



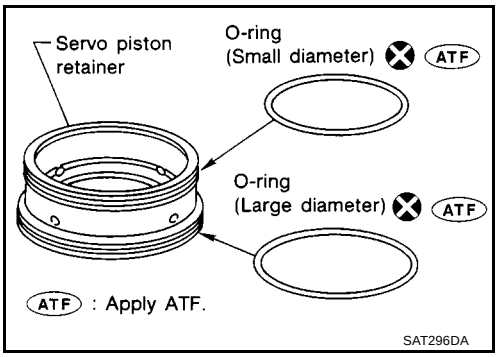
7. Place piston stem end on a wooden block. While pushing servo piston spring retainer down, remove E-ring.



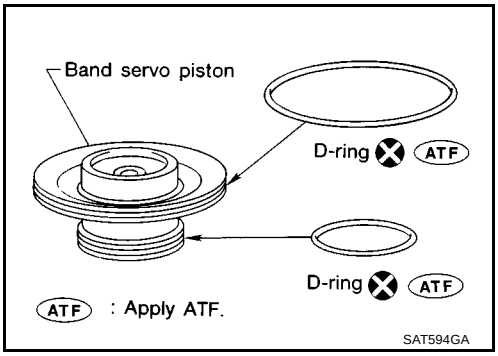
8. Remove OD servo return spring, band servo thrust washer and band servo piston stem from band servo piston.



9. Remove O-rings from servo piston retainer.



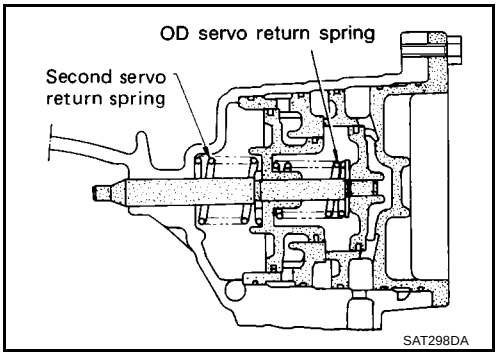
10. Remove D-rings from band servo piston.



INSPECTION

Pistons, Retainers and Piston Stem

- Check frictional surfaces for abnormal wear or damage.

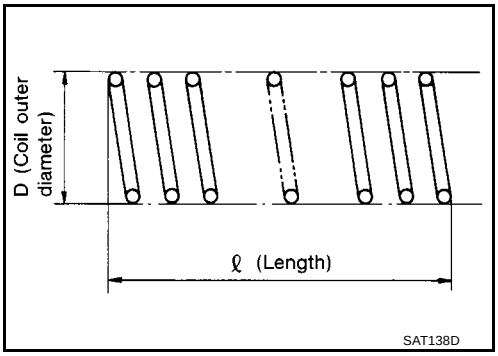


Return Springs

- Check for deformation or damage.
- Measure free length and outer diameter.

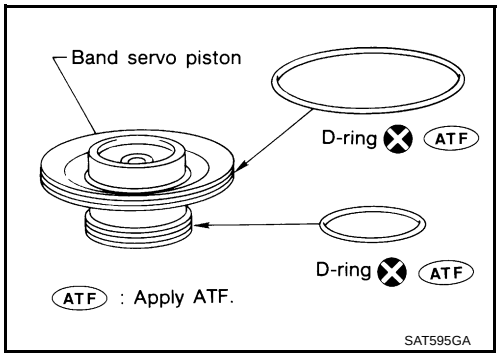
Inspection standard:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"

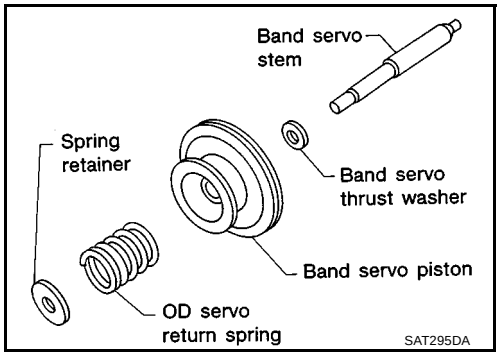


ASSEMBLY

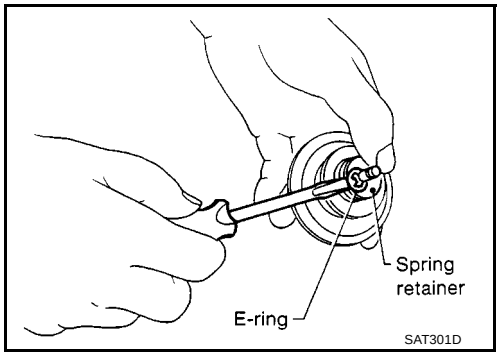
1. Install D-rings to servo piston retainer.
   - **Apply ATF to D-rings.**
   - **Pay attention to position of each D-ring.**



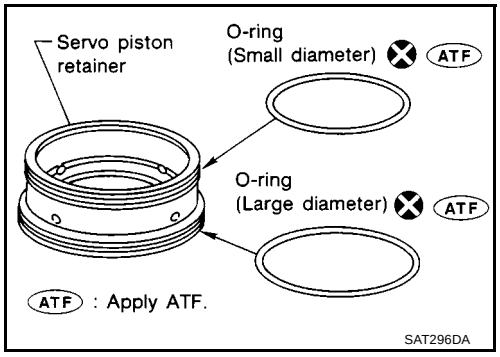
2. Install band servo piston stem, band servo thrust washer, OD servo return spring and spring retainer to band servo piston.



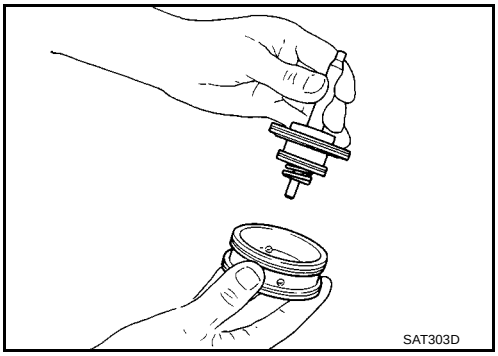
3. Place piston stem end on a wooden block. While pushing servo piston spring retainer down, install E-ring.



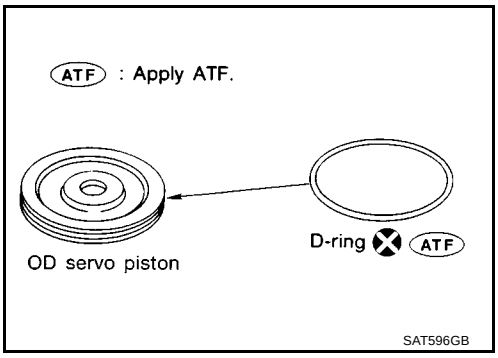
4. Install O-rings to servo piston retainer.
   - **Apply ATF to O-rings.**
   - **Pay attention to position of each O-ring.**



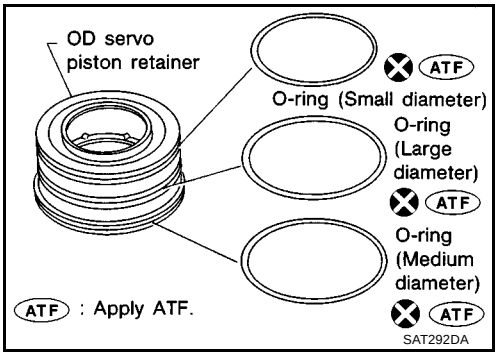
5. Install band servo piston assembly to servo piston retainer by pushing it inward.



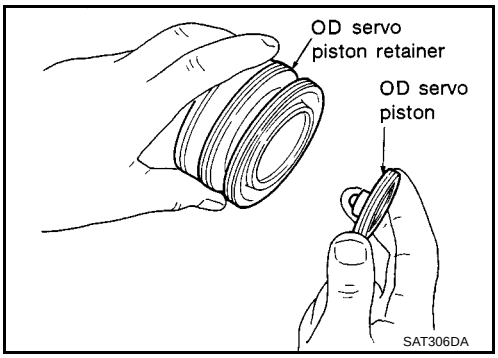
6. Install D-ring to OD servo piston.
   - **Apply ATF to D-ring.**



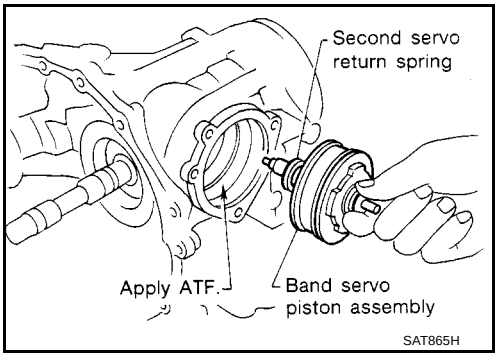
7. Install O-rings to OD servo piston retainer.
   - **Apply ATF to O-rings.**
   - **Pay attention to position of each O-ring.**



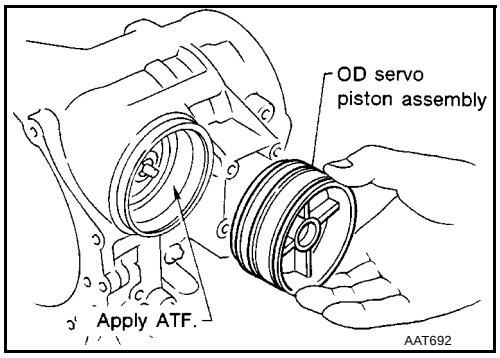
8. Install OD servo piston to OD servo piston retainer.



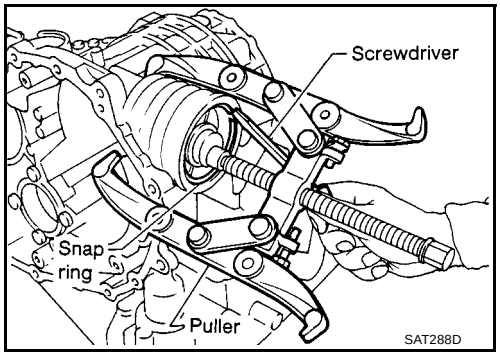
9. Install band servo piston assembly and second servo return spring to transmission case.
   - **Apply ATF to O-ring of band servo piston and transmission case.**



10. Install OD servo piston assembly to transmission case.
    - **Apply ATF to O-ring of band servo piston and transmission case.**



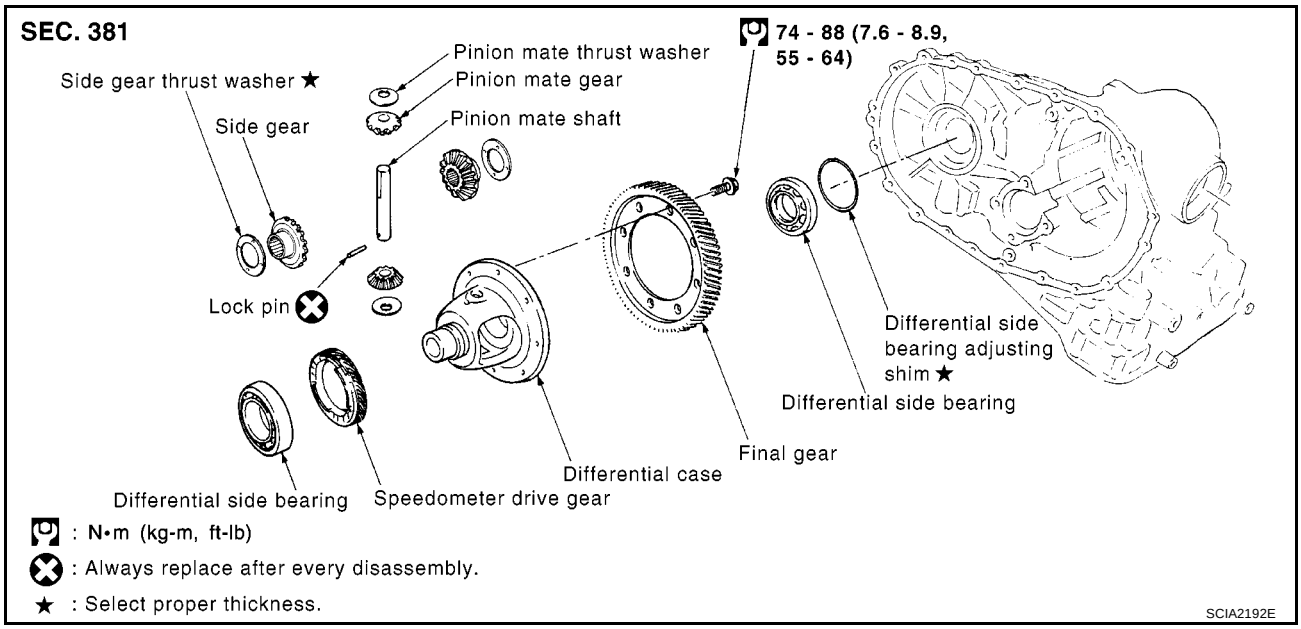
11. Install band servo piston snap ring to transmission case.



Final Drive

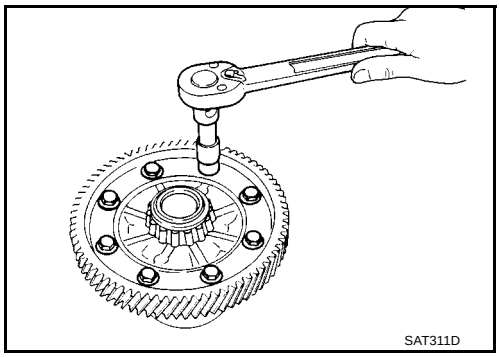
ECS008II

COMPONENTS

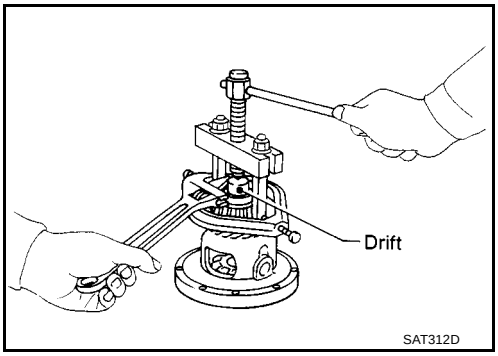


DISASSEMBLY

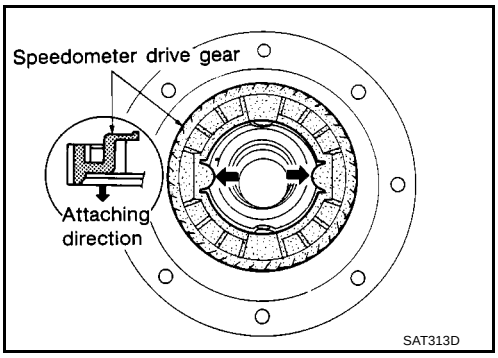
1. Remove final gear.



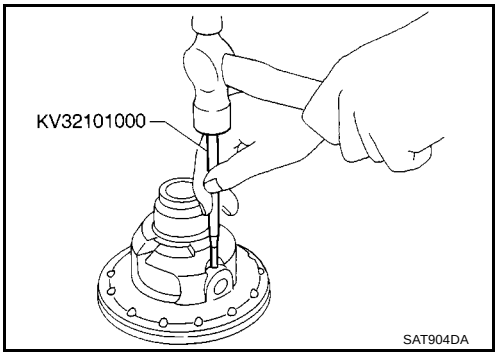
2. Press out differential side bearings.
   - **Be careful not to mix up the right and left bearings.**



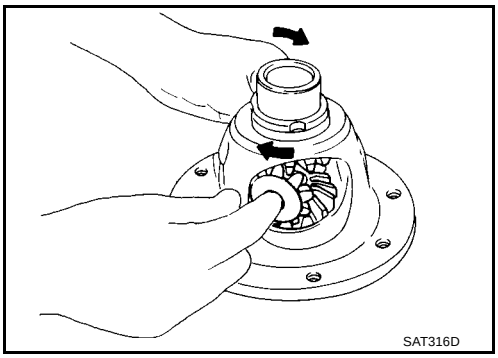
3. Remove speedometer drive gear.



4. Drive out pinion mate shaft lock pin.



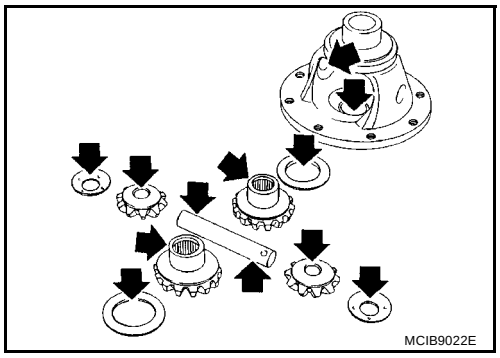
5. Draw out pinion mate shaft lock pin.
6. Remove pinion mate gears and from differential case.



INSPECTION

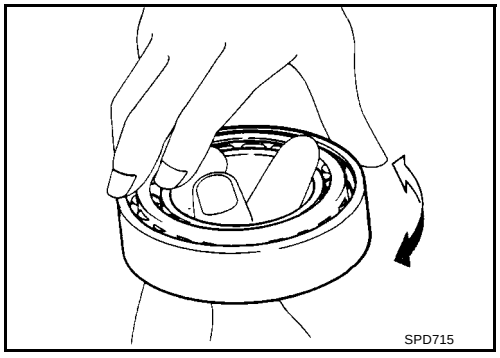
Gear, Washer, Shaft and Case

- Check mating surfaces of differential case, side gears and pinion mate gears.
- Check washers for wear.



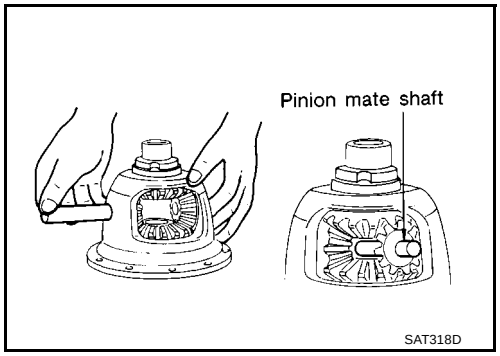
Bearings

- Make sure bearings roll freely and are free from noise, cracks, pitting or wear.
- **When replacing taper roller bearing, replace outer and inner race as a set.**



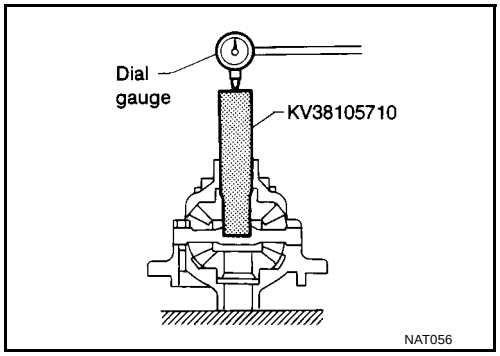
ASSEMBLY

1. Install side gear and thrust washers in differential case.
2. Install pinion mate gears and thrust washers in differential case while rotating them.
   - **When inserting, be careful not to damage pinion mate gear washers.**
   - **Apply ATF to any parts.**



3. Measure clearance between side gear and differential case with washers using the following procedure:

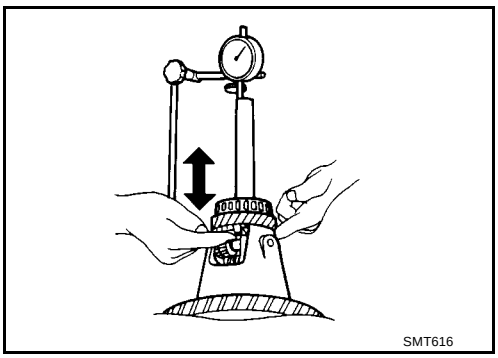
a. Set Tool and dial indicator on side gear.



b. Move side gear up and down to measure dial indicator deflection. Always measure indicator deflection on both side gears.

Clearance between side gear and differential case with washer:

0.1 - 0.2 mm (0.004 - 0.008 in)

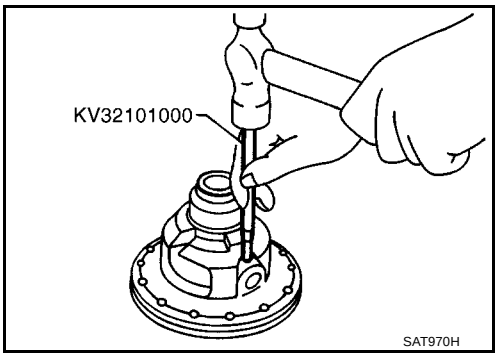


c. If not within specification, adjust clearance by changing thickness of differential side gear thrust washers.

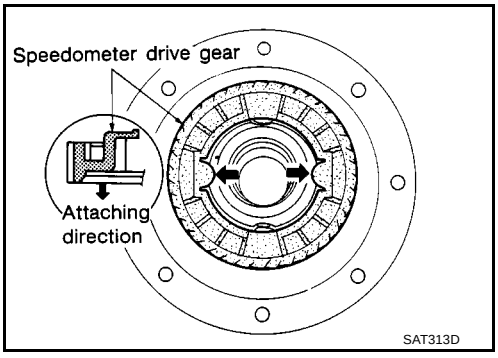
Differential side gear thrust washers:

Refer to **AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"** **.**

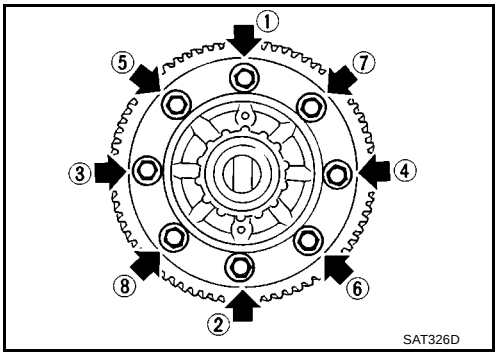
4. Install lock pin.
   - **Make sure that lock pin is flush with case.**



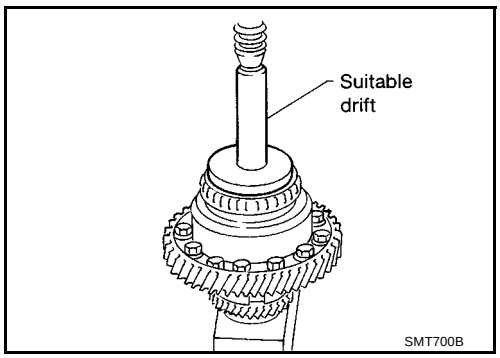
5. Install speedometer drive gear on differential case.
   - **Align the projection of speedometer drive gear with the groove of differential case.**



6. Install final gear and tighten fixing bolts in a numerical order.



7. Press on differential side bearings.



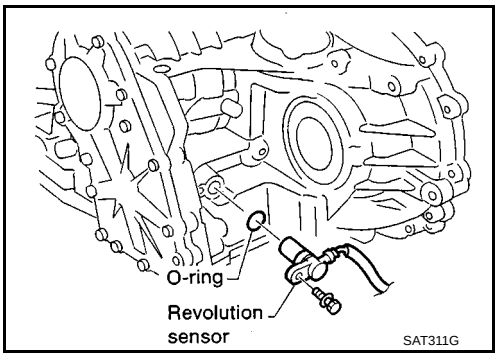
ASSEMBLY

PFP:00000

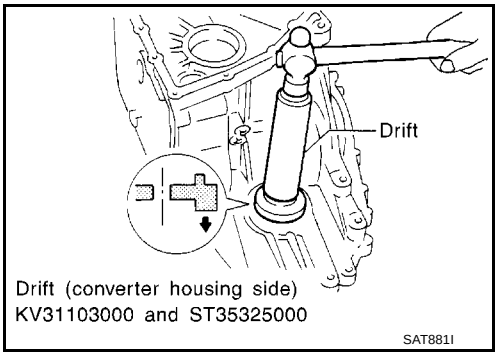
Assembly (1)

ECS008IJ

1. Install revolution sensor from transmission case.
Always use new sealing parts.

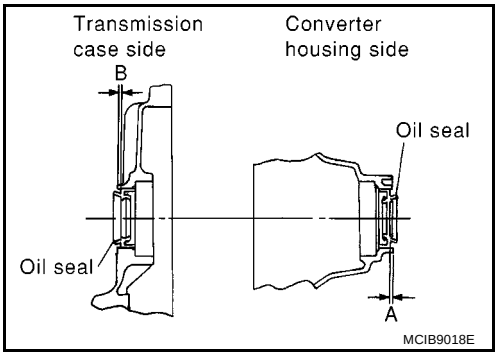


2. Install differential side oil seals on transmission case and converter housing, so that “A” and “B” are with in specification.

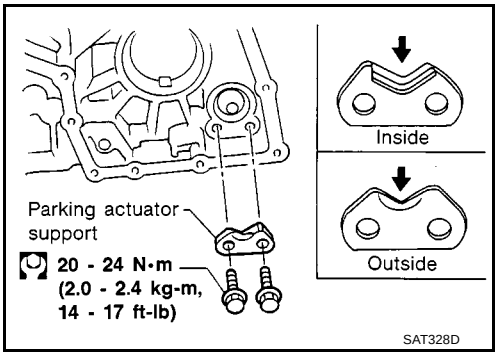


Unit: mm (in)

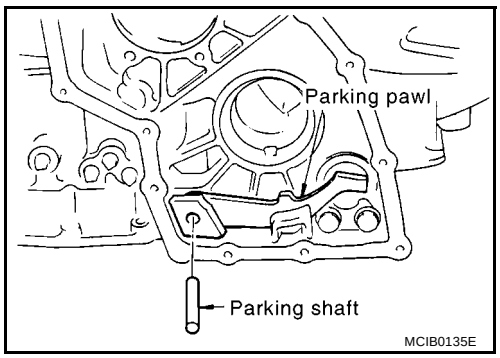
A	B
5.5 - 6.5 (0.217 - 0.256)	–0.5 to 0.5 (–0.020 to 0.020)



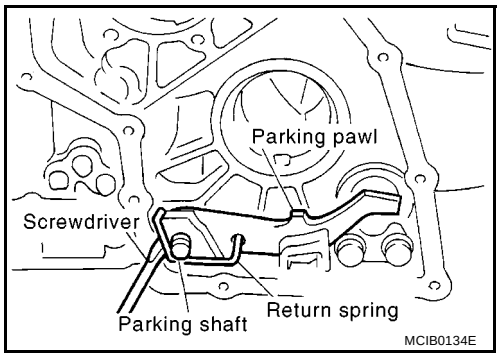
3. Install parking actuator support to transmission case.
- **Pay attention to direction of parking actuator support.**



4. Install parking pawl on transmission case and fix it with parking shaft.



5. Install return spring.



Adjustment (1)

ECS008IK

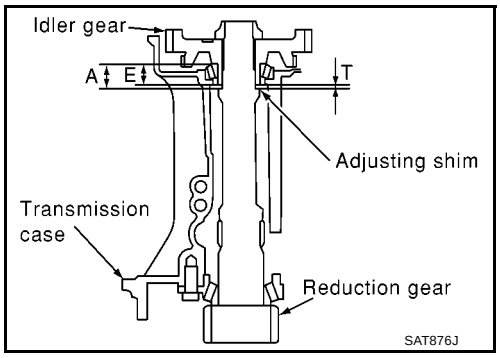
REDUCTION PINION GEAR BEARING PRELOAD

- Be sure to remove final drive assembly before doing this procedure.
- Using caliper and straightedge, calculate a dimension “T” (adjuster shim thickness) in the right figure by the following formula and adjust the inspection standard for pre load (rotating slide torque) as shown below.

T = A – E

Inspection standard for preload:

0.11 - 0.69 N-m (0.02 - 0.07 kg-m, 1 - 6 in-lb)



1. Remove transmission case and final drive assembly from converter housing.
2. Select proper thickness of reduction pinion gear bearing adjusting shim using the following procedures.

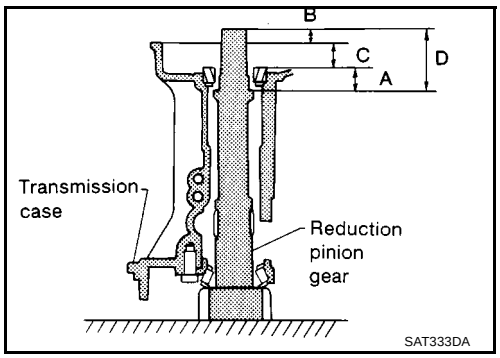
a. Place reduction pinion gear on transmission case as shown.

b. Place idler gear bearing on transmission case.

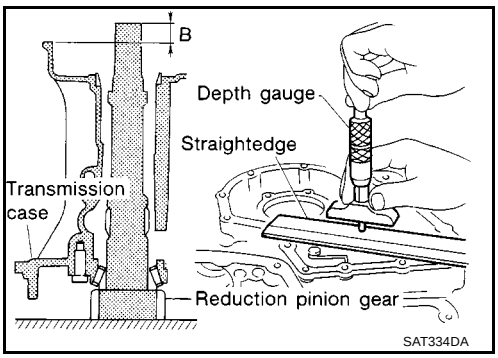
c. Measure dimensions “B” “C” and “D” and calculate dimension “A”.

A = D – (B + C)

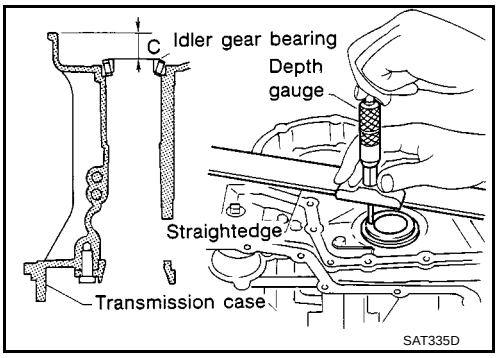
“A”: Distance between the surface of idler gear bearing inner race and the adjusting shim mating surface of reduction pinion gear.



- Measure dimension “B” between the end of reduction pinion gear and the surface of transmission case.
- **Measure dimension “B” in at least two places.**

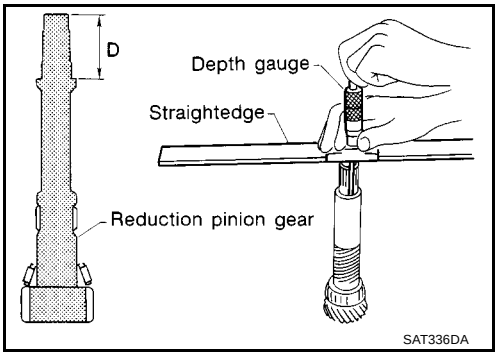


- Measure dimension “C” between the surface of idler gear bearing inner race and the surface of transmission case.
- **Measure dimension “C” in at least two places.**



- Measure dimension “D” between the end of reduction pinion gear and the adjusting shim mating surface of reduction pinion gear.
- **Measure dimension “D” in at least two places.**
- Calculate dimension “A”.

A = D – (B + C)



d. Measure dimension “E” between the end of idler gear and the idler gear bearing inner race mating surface of idler gear.
   - **Measure dimension “E” in at least two places.**

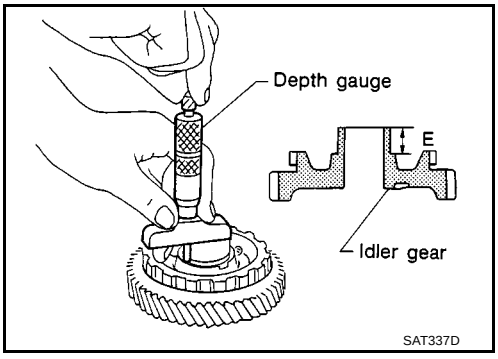
e. Select proper thickness of reduction pinion gear bearing adjusting shim.

Proper shim thickness = A – E – 0.05 mm (0.0020 in)*

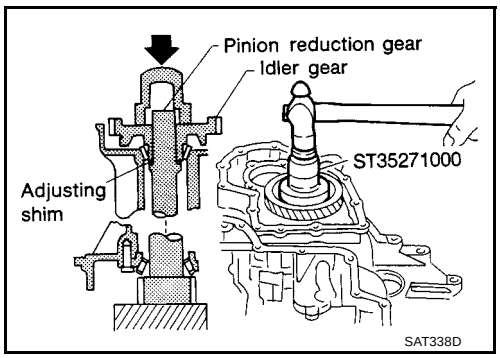
(*... Bearing preload)

Reduction pinion gear bearing adjusting shim:

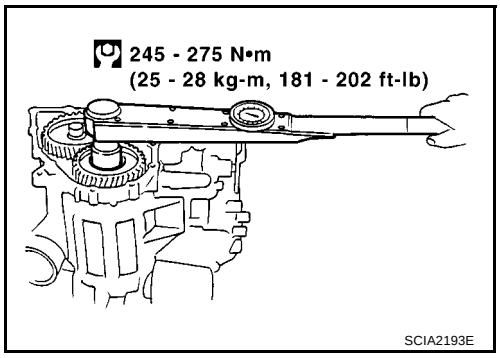
Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



3. Install reduction gear and reduction pinion gear bearing adjusting shim selected in step 2-e on transmission case.
4. Press idler gear bearing inner race on idler gear.
5. Press idler gear on reduction gear.
   - **Press idler gear so-that idler gear can be locked by parking pawl.**



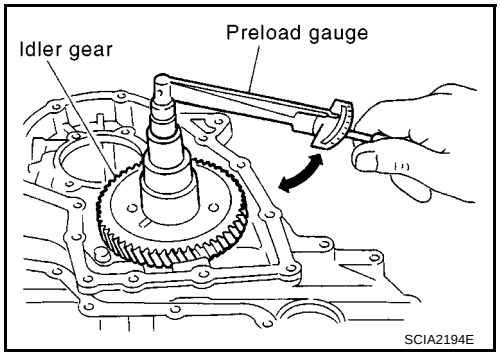
6. Tighten idler gear lock nut to the specified torque.
   - **Lock idler gear with parking pawl when tightening lock nut.**



7. Measure turning torque of reduction pinion gear.
   - **When measuring turning torque, turn reduction pinion gear in both directions several times to seat bearing rollers correctly.**

   Turning torque of reduction pinion gear:

   0.11 - 0.69 N-m (0.02 - 0.07 kg-m, 1 - 6 in-lb)

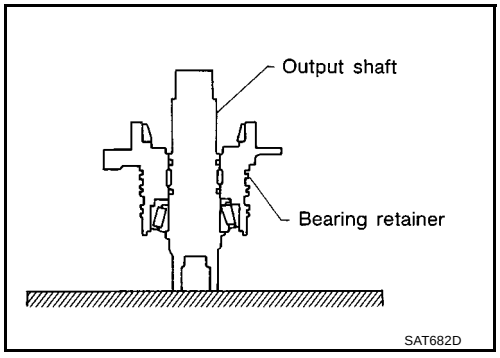


OUTPUT SHAFT END PLAY

1. Select proper thickness of output shaft bearing adjusting spacer using the following procedures.

a. Remove paper rolled around output shaft.

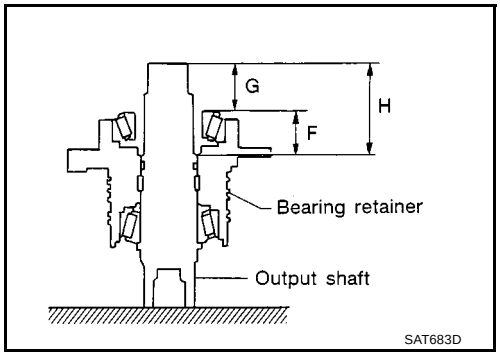
b. Place bearing retainer on output shaft.



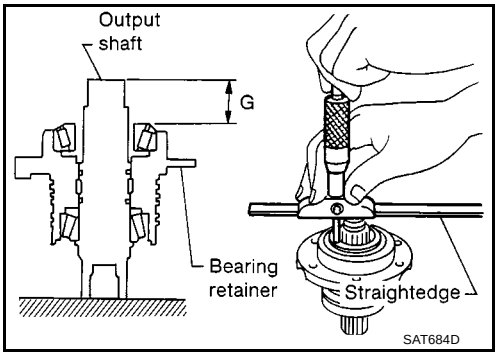
c. Place output gear bearing inner race on bearing retainer.

d. Measure dimensions “G” and “H” and calculate dimension “F”.
   “F”: Distance between the surface of output gear bearing inner race and adjusting shim mating surface of output shaft.

   F = H – G

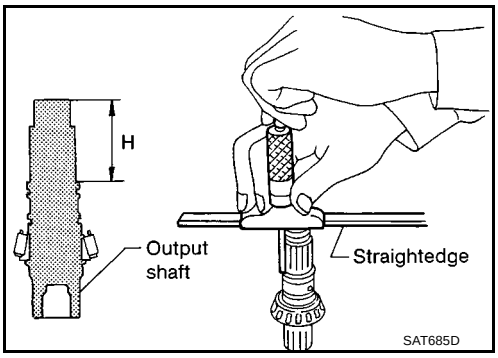


- Measure dimension “G” between end of output shaft and surface of output gear bearing inner race.
- **Measure dimension “G” in at least two places.**

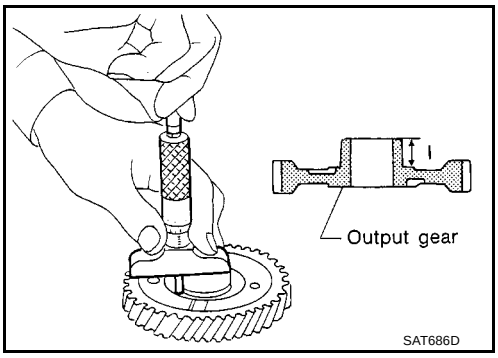


- Measure dimension “H” between end of output shaft and adjusting spacer mating surface of output shaft.
- **Measure dimension “H” in at least two places.**
- Calculate dimension “F”.

F = H – G



e. Measure dimension “I” between end of output gear (adjusting spacer mating surface) and bearing inner race fitting surface.
- **Measure dimension “I” in at least two places.**



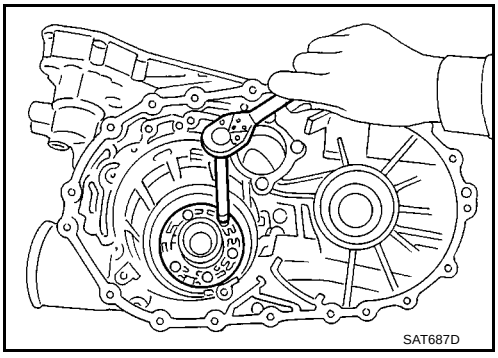
f. Calculate dimension “T_2”.
“T_2”: Distance between adjusting spacer mating surface of output gear and output shaft

T_2 = F – I

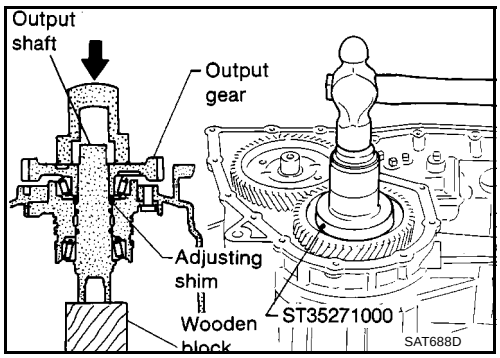
g. Select proper thickness of output shaft bearing adjusting spacer using SDS table as a guide.

Output shaft bearing adjusting spacer:
Refer to AT-534

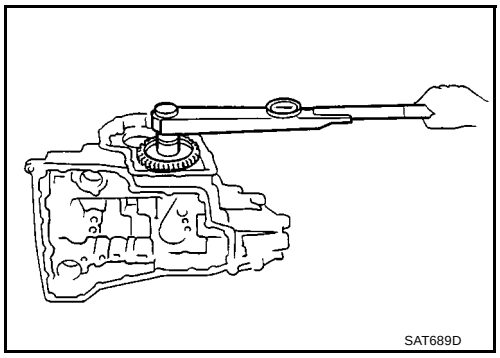
2. Install bearing retainer for output shaft.



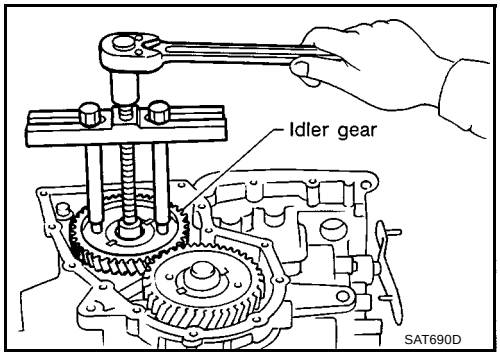
3. Place output shaft on bearing retainer.
4. Place output shaft bearing adjusting spacer selected in step1-g on output shaft.
5. Press output gear bearing inner race on output gear.
6. Press output gear on output shaft.



7. Tighten output gear lock nut to specified torque.



8. Remove idler gear to measure output shaft bearing preload.

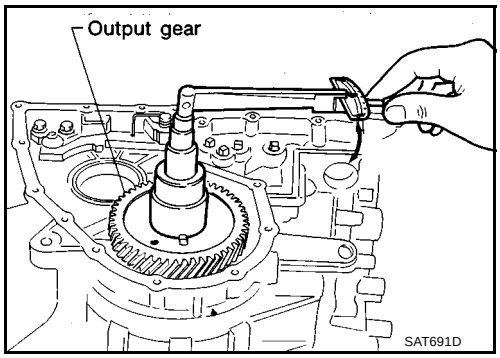


9. Measure output shaft bearing preload.
   - When measuring bearing preload, turn output shaft in both directions several times seat bearing rollers correctly.

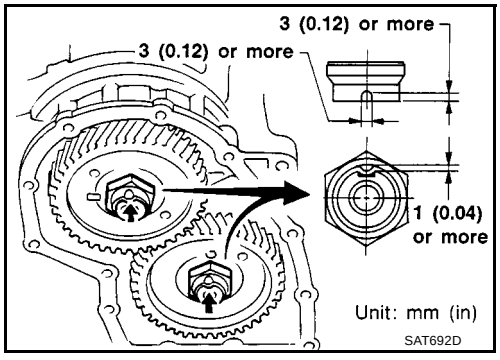
     Output shaft bearing preload:

     0.25 - 0.88 N-m (0.03 - 0.08 kg-m, 3 - 7 in-lb)

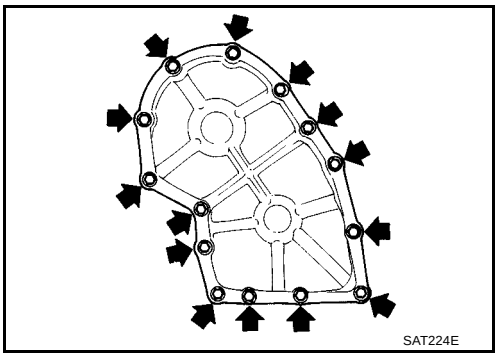
   - If not within specified range, readjust bearing preload.



10. Install idler gear and tighten lock nut to specified torque
11. After properly adjusting bearing preload, clinch idler gear and output gear lock nuts as shown.



12. Install new gasket and side cover on transmission case.
    - **Always replace side cover bolts when removed.**

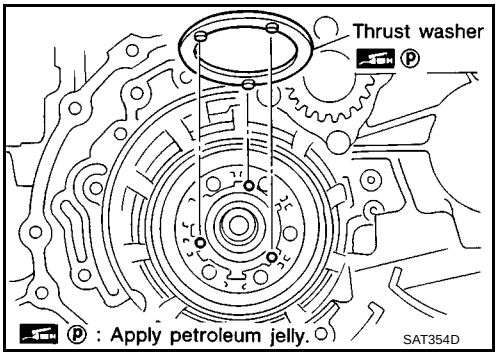


SAT224E

Assembly (2)

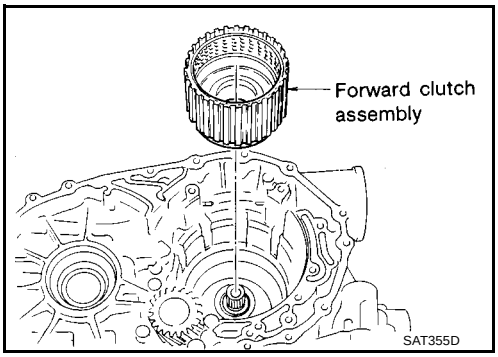
ECS008IL

1. Remove paper rolled around bearing retainer.
2. Install thrust washer on bearing retainer.
    - **Apply petroleum jelly to thrust washer.**



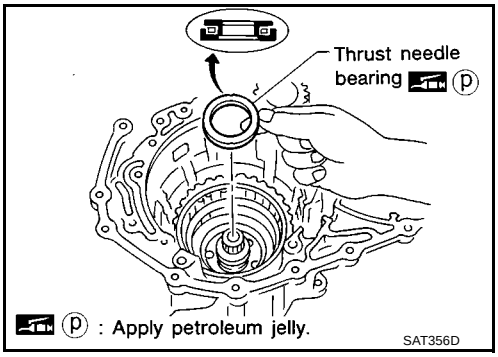
SAT354D

3. Install forward clutch assembly.
    - **Align teeth of low & reverse brake drive plates before installing.**
    - **Make sure that bearing retainer seal rings are not spread.**



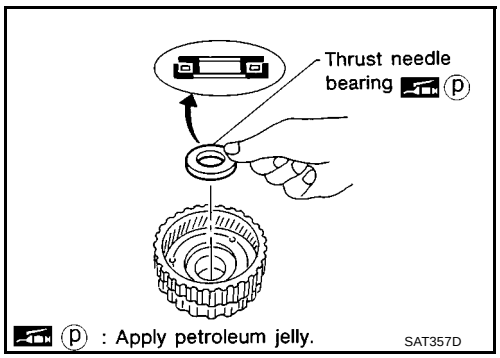
SAT355D

4. Install thrust needle bearing on bearing retainer.
    - **Apply petroleum jelly to thrust bearing.**
    - **Pay attention to direction of thrust needle bearing.**

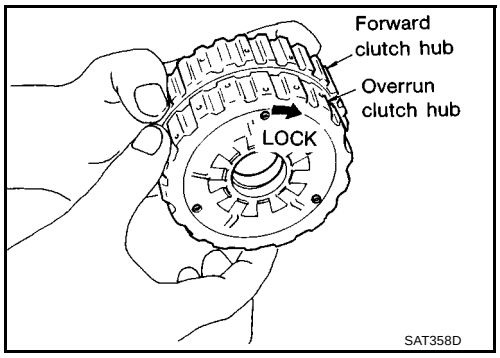


SAT356D

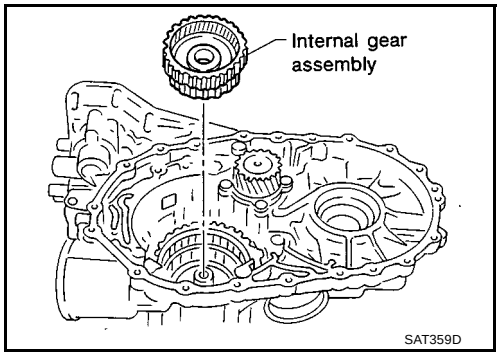
5. Install thrust needle bearing on rear internal gear.
   - **Apply petroleum jelly to thrust needle bearing.**
   - **Pay attention to direction of thrust needle bearing.**



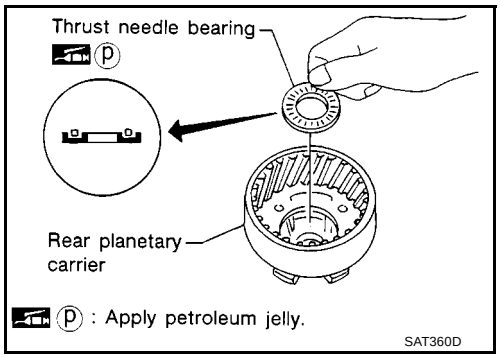
6. Hold forward clutch hub and turn overrun clutch hub.
   Check overrun clutch hub for directions of lock and unlock.
   - If not as shown in illustration, check installed direction of forward one-way clutch.



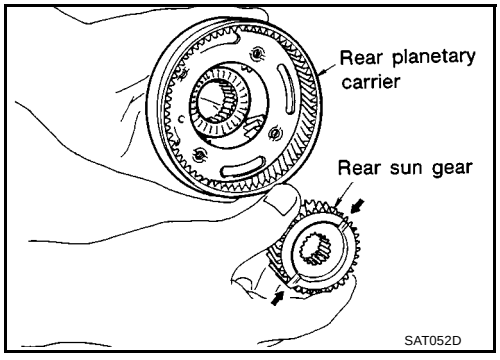
7. Install rear internal gear assembly.
   - **Align teeth of forward clutch and overrun clutch drive plate.**



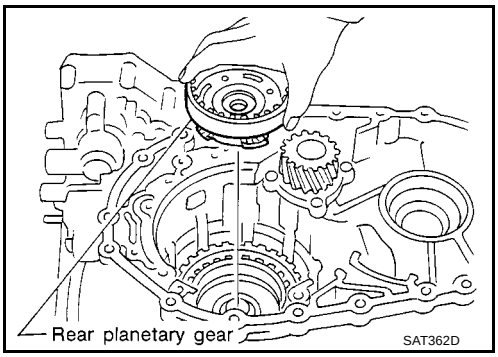
8. Install needle bearing on rear planetary carrier.
   - **Apply petroleum jelly to needle bearing.**
   - **Pay attention to direction of needle bearing.**



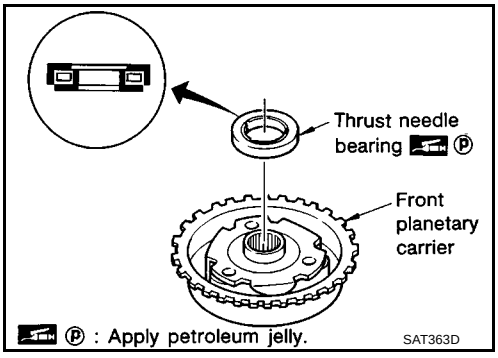
9. Install rear sun gear on rear planetary carrier.
   - **Pay attention to direction of rear sun gear.**



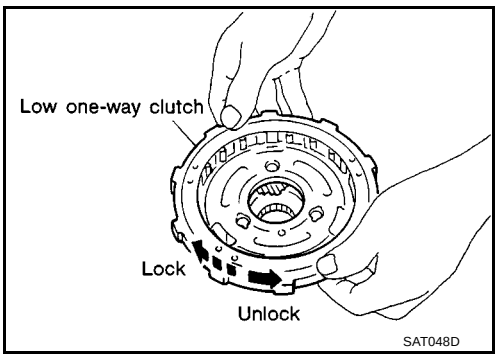
10. Install rear planetary carrier on transmission case.



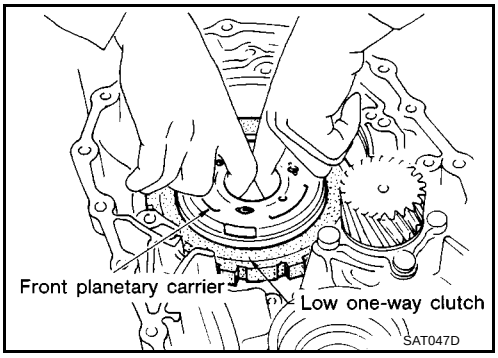
11. Install thrust needle bearing on front planetary carrier.
    - **Apply petroleum jelly to thrust needle bearing.**
    - **Pay attention to direction of thrust needle bearing.**



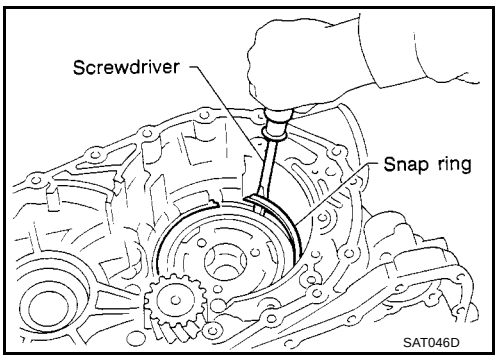
12. Install low one-way clutch to front planetary carrier by turning it in the direction of the arrow as shown.
13. While holding front planetary carrier, turn low one-way clutch. Check low one-way clutch for correct directions of lock and unlock.



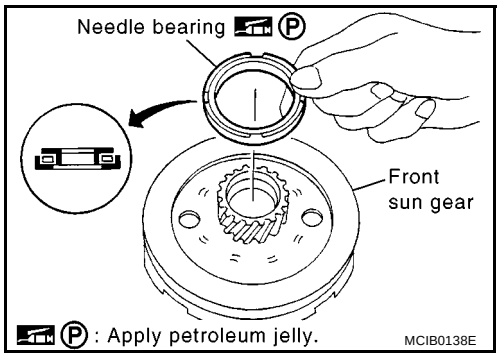
14. Install front planetary carrier assembly on transmission case.



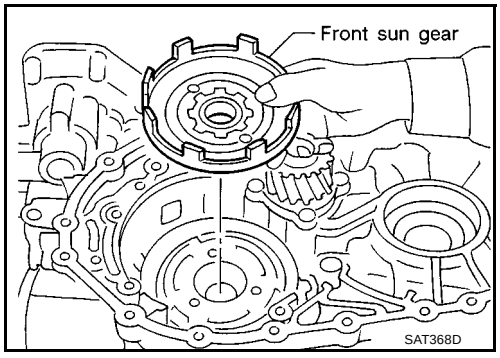
15. Install snap ring with screwdriver.
    - **Forward clutch and bearings must be correctly installed for snap ring to fit groove of transmission case.**



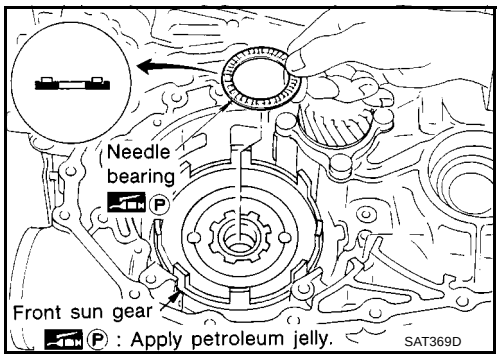
16. Install needle bearing on front sun gear.
    - **Apply petroleum jelly to needle bearing.**
    - **Pay attention to direction of needle bearing.**



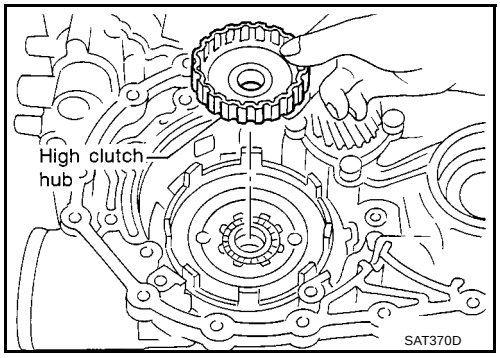
17. Install front sun gear on front planetary carrier.



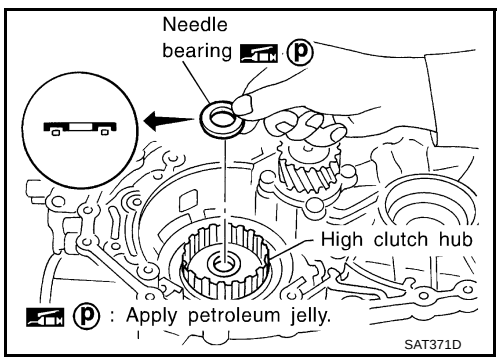
18. Install needle bearing on front sun gear.
    - **Apply petroleum jelly to needle bearing.**
    - **Pay attention to direction of needle bearing.**



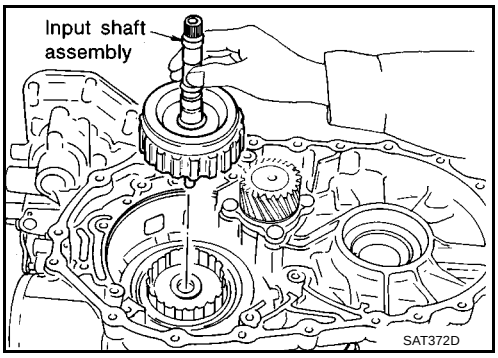
19. Install high clutch hub on front sun gear.



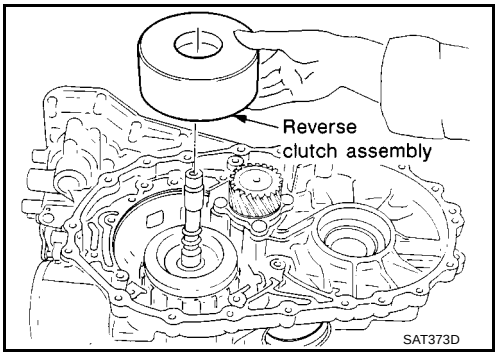
20. Install needle bearing on high clutch hub.
    - **Apply petroleum jelly to needle bearing.**
    - **Pay attention to direction of needle bearing.**



21. Remove paper rolled around input shaft.
22. Install input shaft assembly.



23. Install reverse clutch assembly.
    - **Align teeth of high clutch drive plates before installing.**



Adjustment (2)

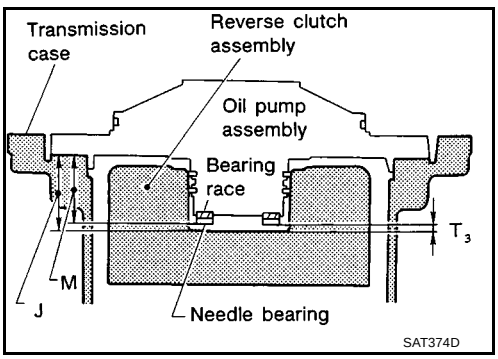
ECS008IM

When any parts listed below are replaced, adjust total end play and reverse clutch end play.

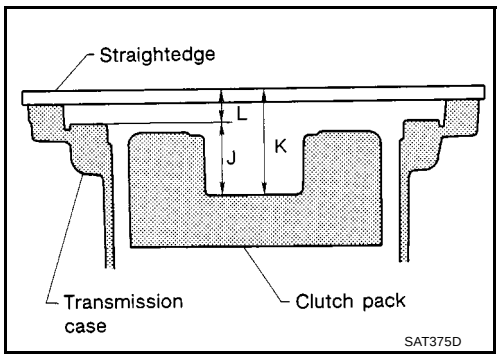
Part name	Total end play	Reverse clutch end play
Transmission case	●	●
Overrun clutch hub	●	●
Rear internal gear	●	●
Rear planetary carrier	●	●
Rear sun gear	●	●
Front planetary carrier	●	●
Front sun gear	●	●
High clutch hub	●	●
High clutch drum	●	●
Oil pump cover	●	●
Reverse clutch drum	—	●

TOTAL END PLAY

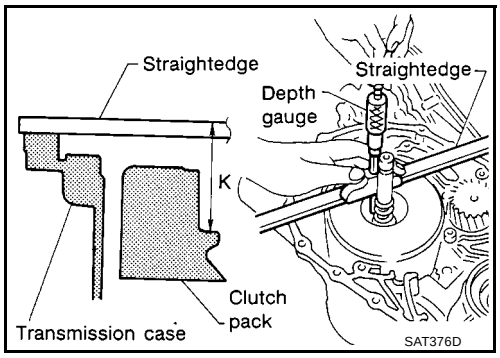
- Measure clearance between reverse clutch drum and needle bearing for oil pump cover.
- Select proper thickness of bearing race so that end play is within specifications.



1. Measure dimensions “K” and “L” and then calculate dimension “J”.



a. Measure dimension “K”.

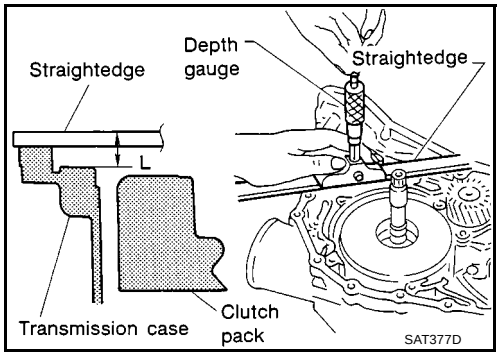


b. Measure dimension “L”.

c. Calculate dimension “J”.

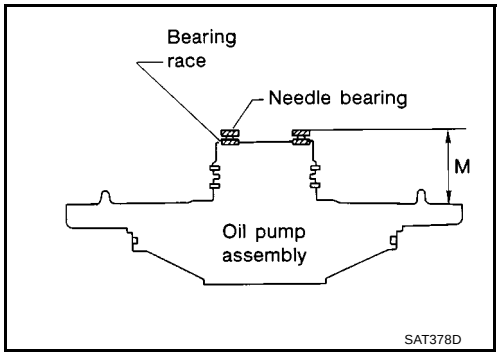
“J”: Distance between oil pump fitting surface of transmission case and needle bearing mating surface of high clutch drum.

J = K – L



2. Measure dimension “M”.

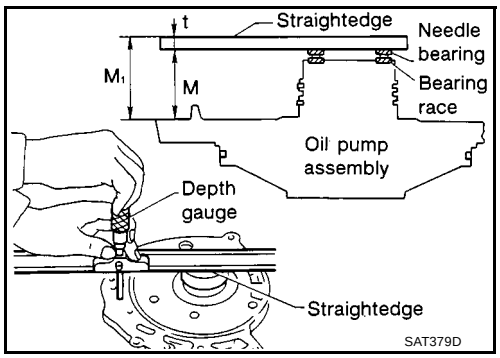
a. Place bearing race and needle bearing on oil pump assembly.



b. Measure dimension “M”.

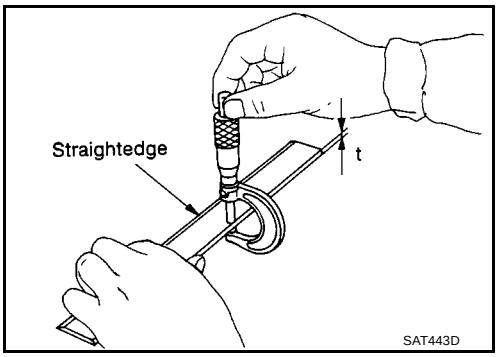
“M”: Distance between transmission case fitting surface of oil pump cover and needle bearing on oil pump cover.

“M_1 ”: Indication of gauge.



c. Measure thickness of straightedge “t”.

$M = M_1 - t$



3. Adjust total end play “T_3 ”.

$T_3 = J - M$

Total end play “T_3 ”:

0.25 - 0.55 mm (0.0098 - 0.0217 in)

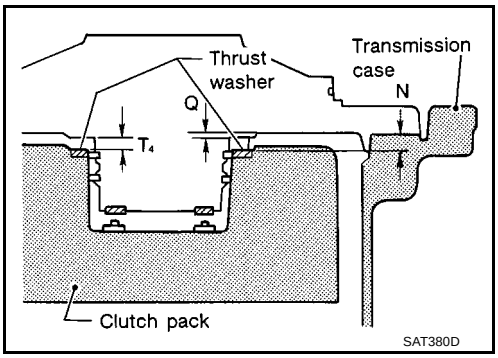
- Select proper thickness of bearing race so that total end play is within specifications.

Bearing races: **Refer to** AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"

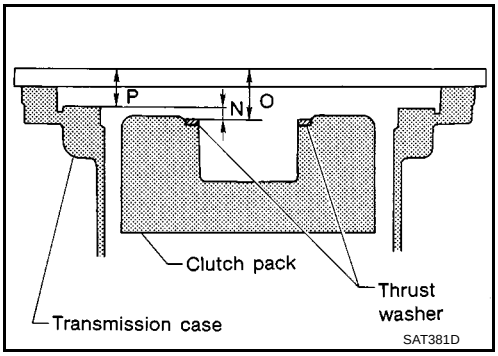
.

REVERSE CLUTCH END PLAY

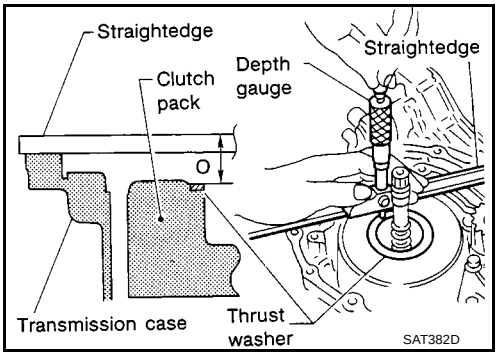
- Measure clearance between oil pump cover and thrust washer for reverse clutch drum.
- Select proper thickness of thrust washer so that end play is within specification.



1. Measure dimensions “O” and “P” and then calculate dimension “N”.



a. Place thrust washer on reverse clutch drum.
b. Measure dimension “O”.

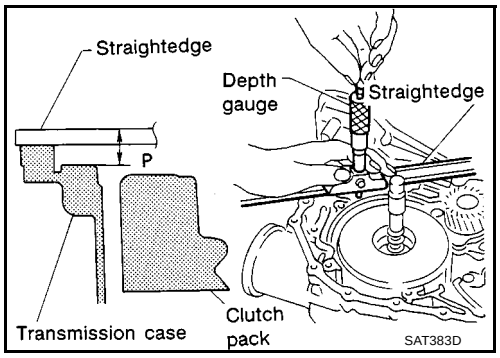


c. Measure dimension “P”.

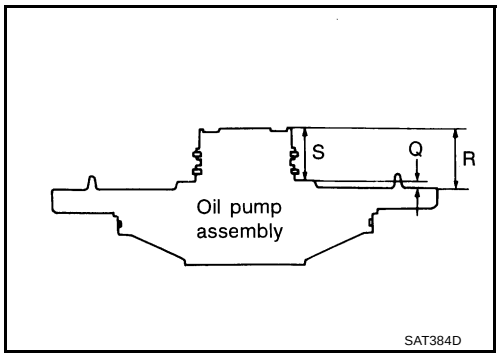
d. Calculate dimension “N”.

“N”: Distance between oil pump fitting surface of transmission case and thrust washer on reverse clutch drum.

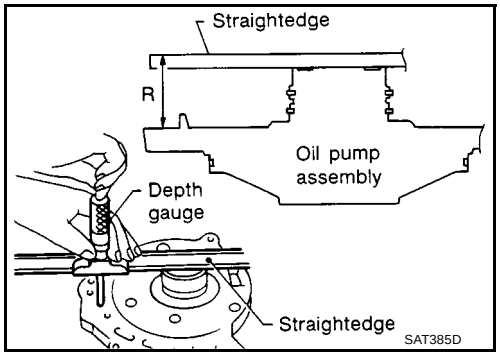
N = O – P



2. Measure dimensions “R” and “S” and then calculate dimension “Q”.



a. Measure dimension “R”.

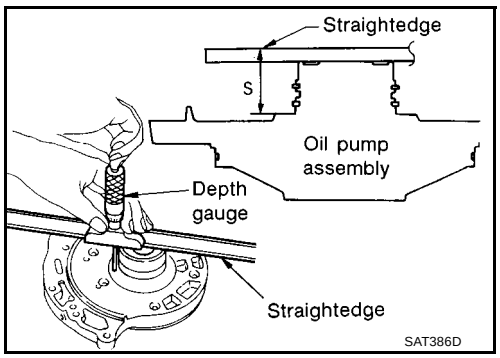


b. Measure dimension “S”.

c. Calculate dimension “Q”.

“Q”: Distance between transmission case fitting surface and thrust washer mating surface.

Q = R – S



3. Adjust reverse clutch end play “T_4 ”.

T_4 = N – Q

Reverse clutch end play:

0.65 - 1.00 mm (0.0256 - 0.0394 in)

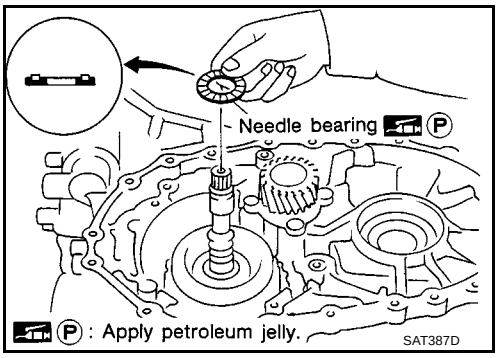
- Select proper thickness of thrust washer so that reverse clutch end play is within specifications.

Thrust washer: Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

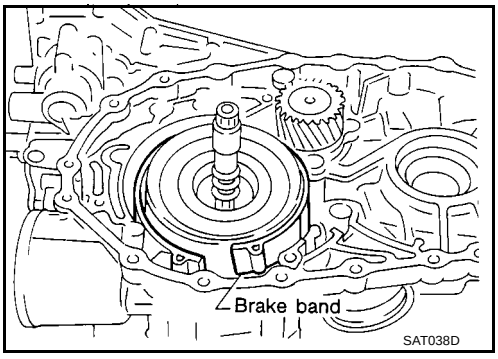
Assembly (3)

ECS008IN

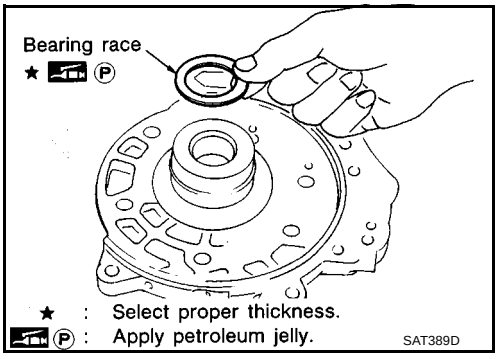
1. Remove reverse clutch assembly and install needle bearing on high clutch assembly.
   - **Pay attention to direction of needle bearing.**
2. Install reverse clutch assembly



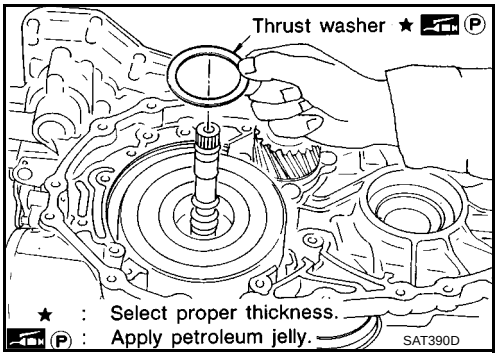
3. Install anchor end pin and lock nut on transmission case.
4. Place brake band on outside of reverse clutch drum. Tighten anchor end pin just enough so that brake band is evenly fitted on reverse clutch drum.



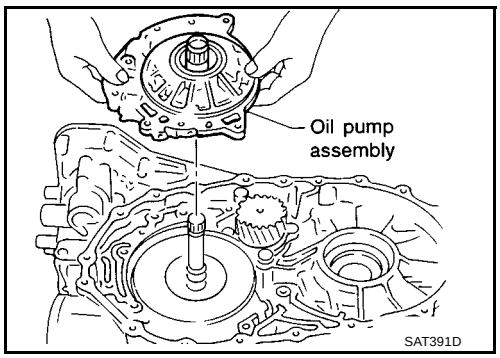
5. Place bearing race selected in total end play adjustment step on oil pump cover.
   - **Apply petroleum jelly to bearing race.**



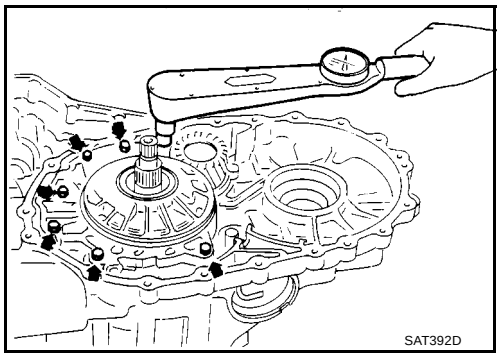
6. Place thrust washer selected in reverse clutch end play step on reverse clutch drum.
   - **Apply petroleum jelly to thrust washer.**



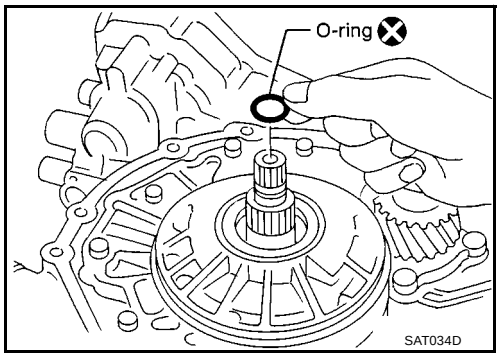
7. Install oil pump assembly on transmission case.



8. Tighten oil pump fixing bolts to the specified torque.



9. Install O-ring to input shaft.
   - **Apply ATF to O-ring.**

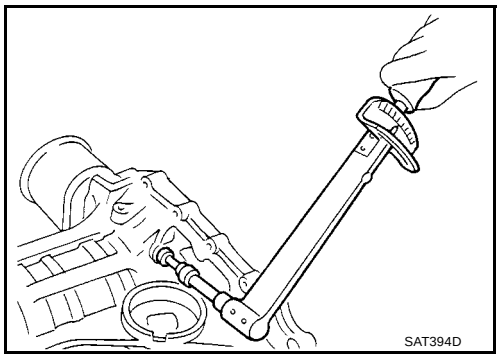


10. Adjust brake band.

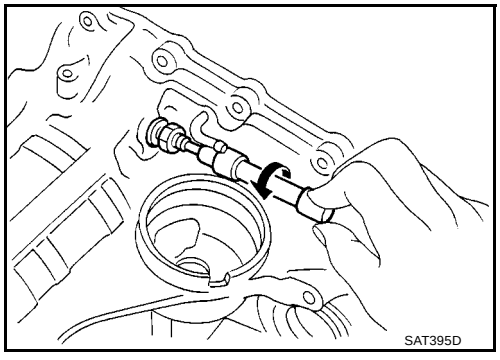
a. Tighten anchor end pin to the specified torque.

Anchor end pin:

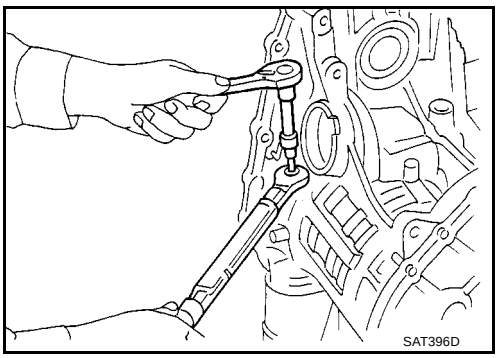
Refer to **AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"** .



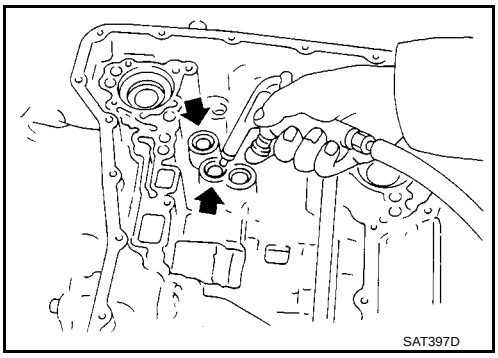
b. Back off anchor end pin two and a half turns.



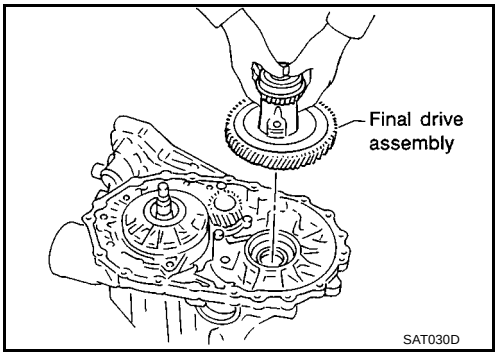
c. While holding anchor end pin, tighten lock nut.



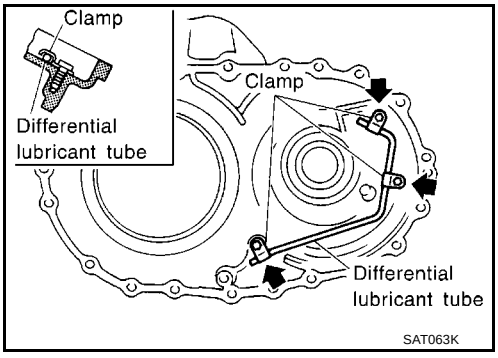
11. Apply compressed air to oil holes of transmission case and check operation of brake band.



12. Install final drive assembly on transmission case.

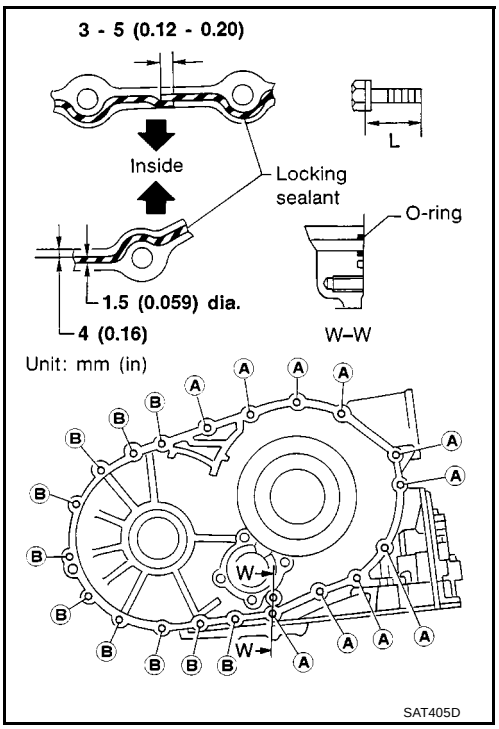


13. Install differential lubricant tube on converter housing. Tighten differential lubricant tube bolts to the specified torque. Refer to AT-433, "OVERHAUL" .



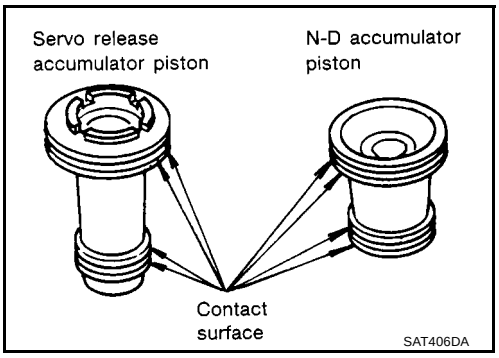
14. Install O-ring on differential oil port of transmission case.
15. Install converter housing on transmission case.
    - **Apply locking sealant to mating surface of converter housing.**

Bolt	Length mm (in)
A	30 (1.18)
B	40 (1.57)



16. Install accumulator piston.

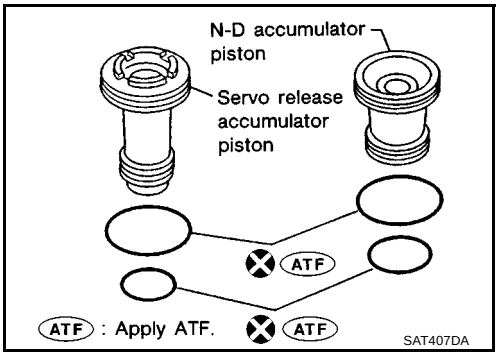
a. Check contact surface of accumulator piston for damage.



b. Install O-rings on accumulator piston.
    - **Apply ATF to O-rings.**

Accumulator piston O-rings:

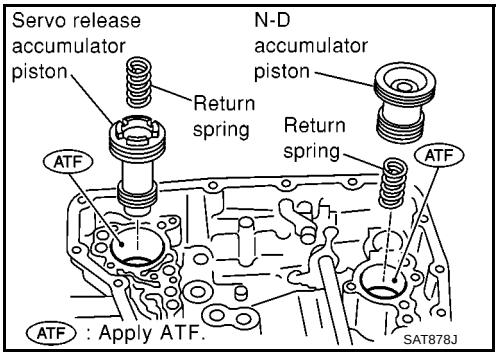
Refer to **AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"** .



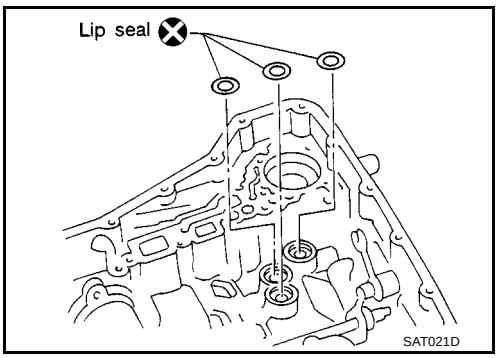
c. Install accumulator pistons and return springs on transmission case.
    - **Apply ATF to inner surface of transmission case.**

Return springs:

Refer to **AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)"** .



17. Install lip seals for band servo oil holes on transmission case.
    - **Apply petroleum jelly to lip seals.**

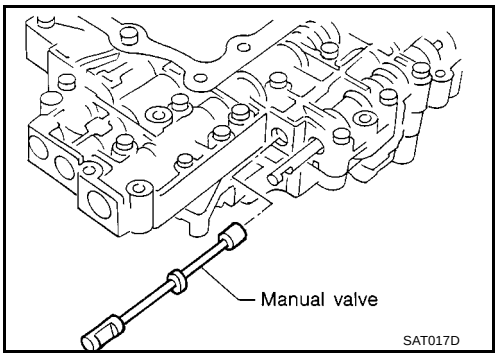


18. Install control valve assembly.

a. Insert manual valve into control valve assembly.
   - **Apply ATF to manual valve.**

b. Pass solenoid harness through transmission case and install terminal body on transmission case by pushing it.

c. Install stopper ring to terminal body.

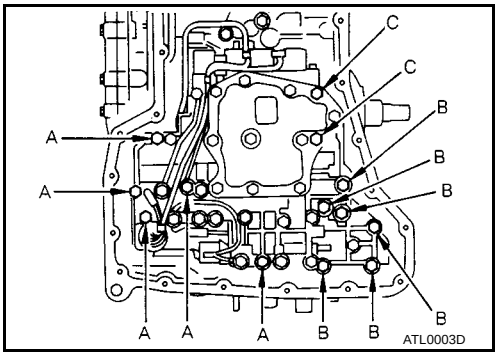


d. Tighten bolts **A** , **B** and **C** .

: 6.9 - 8.8N·m (0.71 - 0.89 kg-m, 61 - 77 in-lb)

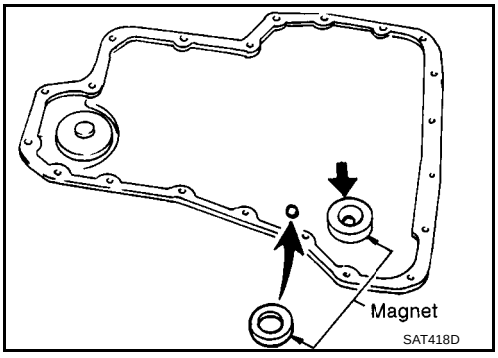
Bolt length, number and location:

Bolt	A	B	C
Bolt length "ℓ"	40 mm (1.57 in)	33 mm (1.30 in)	43.5 mm (1.713 in)
Number of bolts	5	6	2



19. Install oil pan.

a. Attach a magnet to oil pan.

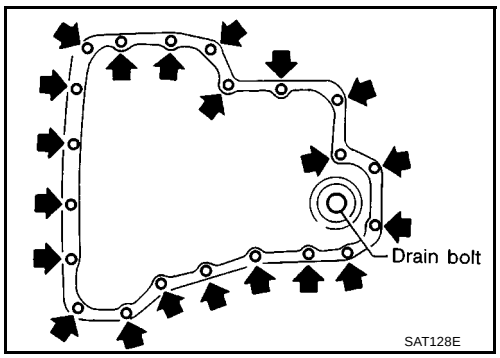


b. Install new oil pan gasket on transmission case.

c. Install oil pan on transmission case.

- **Always replace oil pan bolts as they are self-sealing bolts.**
- **Tighten four bolts in a criss-cross pattern to prevent dislocation of gasket.**

d. Tighten drain plug to specified torque.

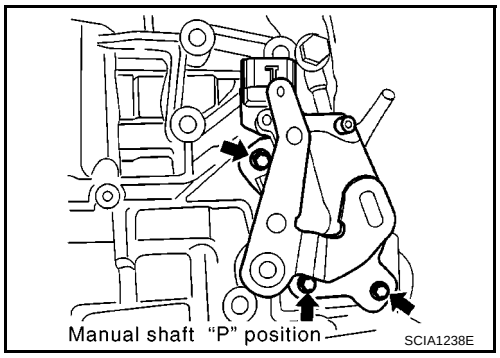


20. Install park/neutral position (PNP) switch.

a. Set manual shaft in P position.

b. Temporarily install park/neutral position (PNP) switch on manual shaft.

c. Move selector lever to N position.



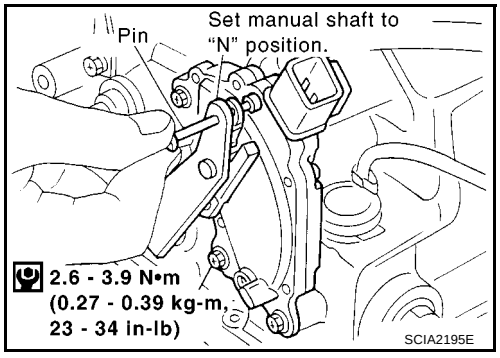
d. Use a 4 mm (0.16 in) pin for this adjustment.

i. Insert the pin straight into the manual shaft adjustment hole.

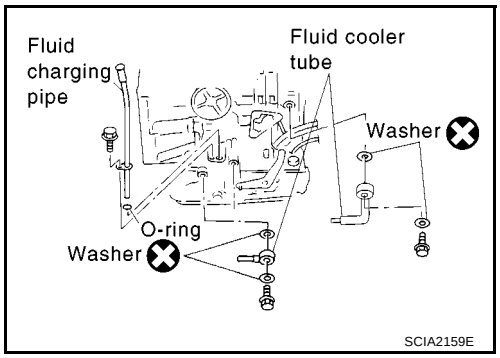
ii. Rotate park/neutral position (PNP) switch until the pin can also be inserted straight into hole in park/neutral position (PNP) switch.

e. Tighten park/neutral position (PNP) switch fixing bolts. Refer to AT-433, "OVERHAUL" .

f. Remove pin from adjustment hole after adjusting park/neutral position (PNP) switch.



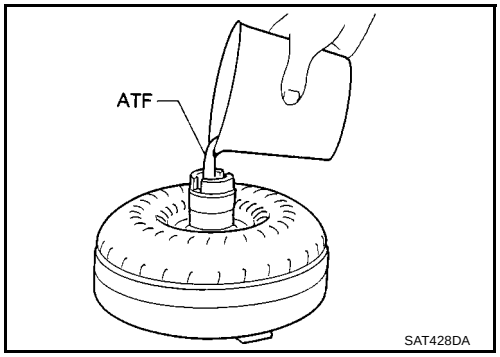
21. Install A/T fluid charging pipe and fluid cooler tube to transmission case. Tighten A/T fluid charging pipe and fluid cooler tube bolts to the specified torque. Refer to AT-433, "OVERHAUL" .



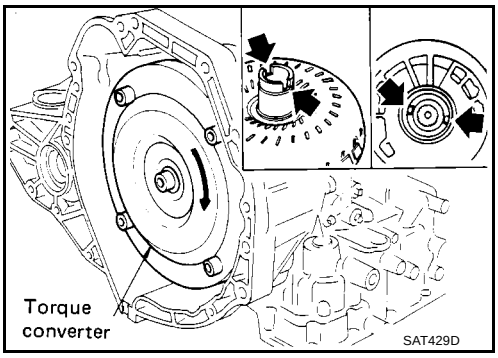
22. Install torque converter.

a. Pour ATF into torque converter.

- **Approximately 1 liter (1-3/4 Imp pt) of fluid is required for a new torque converter.**
- **When reusing old torque converter, add the same amount of fluid as was drained.**



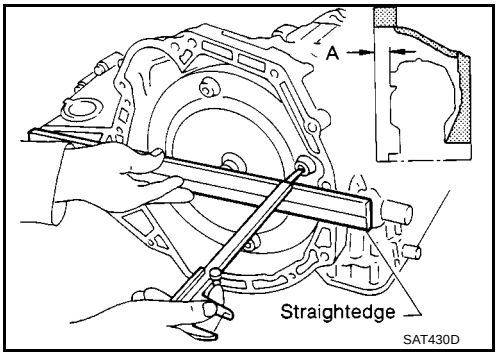
b. Install torque converter while aligning notches of torque converter with notches of oil pump.



c. Measure distance “A” to check that torque converter is in proper position.

Distance A:

Refer to AT-534, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



SERVICE DATA AND SPECIFICATIONS (SDS)

BRAKE BAND

Anchor end pin tightening torque	3.9 - 5.9 N-m (0.4 - 0.6 kg-m, 35 - 52 in-lb)
Number of returning revolutions for anchor end pin	2.5±0.125
Lock nut tightening torque	32 - 36 N-m (3.3 - 3.6 kg-m, 24 - 26 ft-lb)

Clutch and Brake Return Springs

ECS008IU

Unit: mm (in)

Parts		Free length	Outer diameter	Part number*
Forward clutch (Overrun clutch)	Outer (16 pcs)	26.6 (1.047)	10.6 (0.417)	31505-31X02
	Inner (16 pcs)	26.3 (1.035)	7.7 (0.303)	31505-31X03
Reverse clutch (16 pcs)		18.6 (0.732)	8.0 (0.315)	31505-31X00
High clutch (12 pcs)		19.7 (0.776)	11.1 (0.437)	31505-31X01
Low reverse brake (20 pcs)		25.1 (0.988)	7.6 (0.299)	31505-31X04

*: Always check with the Parts Department for the latest parts information.

Oil Pump

ECS008IV

Oil pump side clearance mm (in)		0.02 - 0.04 (0.0008 - 0.0016)
Thickness of inner gears and outer gears		Inner gear
		Thickness mm (in) / Part number*
		9.99 - 10.00 (0.3933 - 0.3937) / 31346-31X00 9.98 - 9.99 (0.3929 - 0.3933) / 31346-31X01 9.97 - 9.98 (0.3925 - 0.3929) / 31346-31X02
		Outer gear
		Thickness mm (in) / Part number*
		9.99 - 10.00 (0.3933 - 0.3937) / 31347-31X00 9.98 - 9.99 (0.3929 - 0.3933) / 31347-31X01 9.97 - 9.98 (0.3925 - 0.3929) / 31347-31X02
Clearance between oil pump housing and outer gear mm (in)	Standard	0.08 - 0.15 (0.0031 - 0.0059)
	Allowable limit	0.15 (0.0059)
Oil pump cover seal ring clearance mm (in)	Standard	0.15 - 0.35 (0.0059 - 0.0138)
	Allowable limit	0.35 (0.0138)

*: Always check with the Parts Department for the latest parts information.

Input Shaft

ECS008IW

Unit: mm (in)

Input shaft seal ring clearance	Standard	0.1 - 0.25 (0.004 - 0.0098)
	Allowable limit	0.25 (0.0098)

Planetary carrier

ECS008IX

Unit: mm (in)

Clearance between planetary carrier and pinion washer	Standard	0.15 - 0.70 (0.0059 - 0.0276)
	Allowable limit	0.80 (0.0315)

Final Drive

ECS008IY

DIFFERENTIAL SIDE GEAR CLEARANCE

Clearance between side gear and differential case with washer	0.1 - 0.2 mm (0.004 - 0.008 in)

DIFFERENTIAL SIDE GEAR THRUST WASHERS

Thickness mm (in)	Part number*
0.75 - 0.80 (0.0295 - 0.0315)	38454-31X00
0.80 - 0.85 (0.0315 - 0.0335)	38454-31X01
0.85 - 0.90 (0.0335 - 0.0354)	38454-31X02
0.90 - 0.95 (0.0354 - 0.0374)	38454-31X03
0.95 - 1.00 (0.0374 - 0.0394)	38454-31X04

*: Always check with the Parts Department for the latest parts information.

BEARING PRELOAD

Differential side bearing preload “T”	0.04 - 0.09 mm (0.0016 - 0.0035 in)

TURNING TORQUE

Turning torque of final drive assembly	0.49 - 1.08 N-m (5.0 - 11.0 kg-cm, 4.3 - 9.5 in-lb)

DIFFERENTIAL SIDE BEARING ADJUSTING SHIMS

Thickness mm (in)	Part number*
0.48 (0.0189)	38454-M8001
0.56 (0.0220)	38454-M8003
0.64 (0.0252)	38454-M8005
0.72 (0.0283)	38454-M8007
0.80 (0.0315)	38454-M8009
0.88 (0.0346)	38454-M8011
0.96 (0.0378)	38454-M8013
1.04 (0.0409)	38454-M8015

*: Always check with the Parts Department for the latest parts information.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EJS004HI

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Working with HFC-134a (R-134a)

EJS004HJ

WARNING:

- **Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor failure is likely to occur.**
- **The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:**
- **When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.**
- **When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.**
- **Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.**
- **Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system, using certified service equipment meeting requirements of SAE J2210 HFC-134a (R-134a) recycling equipment, or J2209 HFC-134a (R-134a) recovery equipment). If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.**
- **Do not allow lubricant (Nissan A/C System Oil Type S or R) to come in contact with styrofoam parts. Damage may result.**

General Refrigerant Precautions

EJS004HK

WARNING:

- **Do not release refrigerant into the air. Use approved recovery/recycling equipment to capture the refrigerant every time an air conditioning system is discharged.**
- **Always wear eye and hand protection (goggles and gloves) when working with any refrigerant or air conditioning system.**
- **Do not store or heat refrigerant containers above 52°C (125°F).**
- **Do not heat a refrigerant container with an open flame; if container warming is required, place the bottom of the container in a warm pail of water.**
- **Do not intentionally drop, puncture, or incinerate refrigerant containers.**
- **Keep refrigerant away from open flames: poisonous gas will be produced if refrigerant burns.**
- **Refrigerant will displace oxygen, therefore be certain to work in well ventilated areas to prevent suffocation.**
- **Do not pressure test or leak test HFC-134a (R-134a) service equipment and/or vehicle air conditioning systems with compressed air during repair. Some mixtures of air and HFC-134a (R-134a)**

have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.

Lubricant Precautions

EJS004HL

- Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor malfunction is likely to occur.
- The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:
- When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.
- When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.
- Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.
- Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system, using certified service equipment meeting requirements of SAE J2210 HFC-134a (R-134a) recycling equipment, or J2209 HFC-134a (R-134a) recovery equipment. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.
- Do not allow lubricant (Nissan A/C System Oil Type R) to come in contact with styrofoam parts. Damage may result.

Precautions for Refrigerant Connection

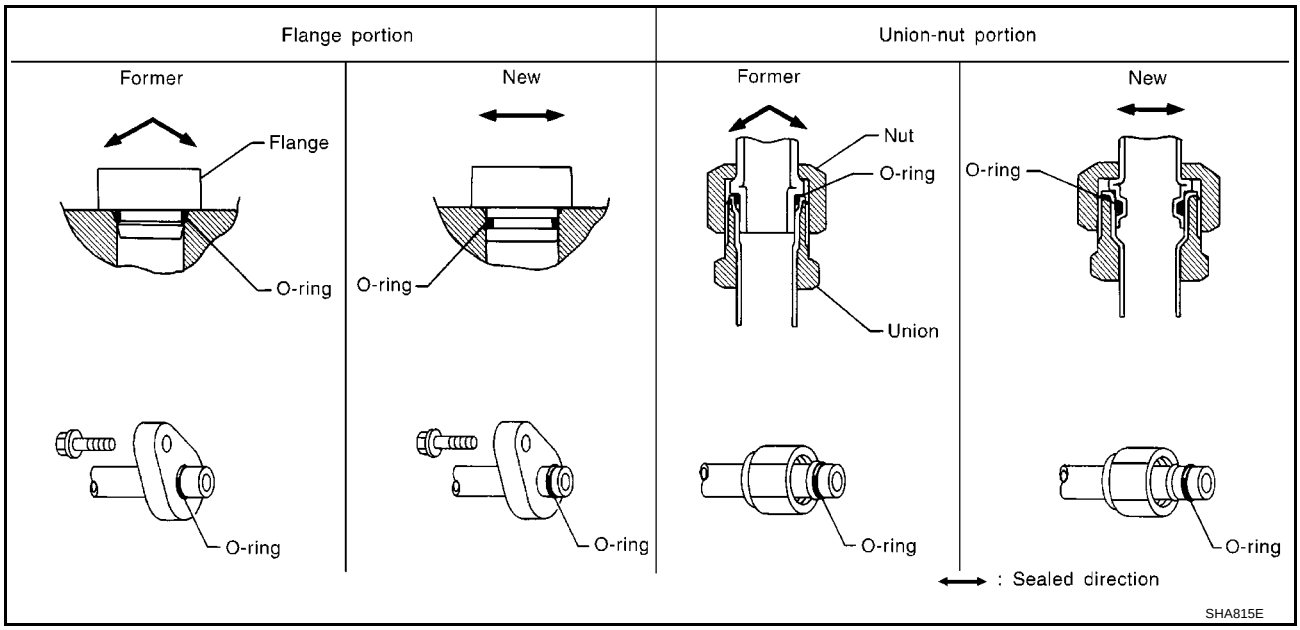
EJS004HM

A new type refrigerant connection has been introduced to all refrigerant lines except the following location.

- Expansion valve to cooling unit
- Refrigerant pressure sensor to liquid tank

FEATURES OF NEW TYPE REFRIGERANT CONNECTION

- The O-ring has been relocated. It has also been provided with a groove for proper installation. This eliminates the chance of the O-ring being caught in, or damaged by, the mating part. The sealing direction of the O-ring is now set vertically in relation to the contacting surface of the mating part to improve sealing characteristics.
- The reaction force of the O-ring will not occur in the direction that causes the joint to pull out, thereby facilitating piping connections.



O-RING AND REFRIGERANT CONNECTION

CAUTION:

The new and former refrigerant connections use different O-ring configurations. Do not confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant will leak at, or around, the connection.

O-Ring Part Numbers and Specifications (CR Engine Models)

Connection type	Location		Part No.	Nominal size
Axle seal-type	Air conditioner unit	Inlet	92471N8210	8 dia.
		Outlet	92743N8210	16 dia.
	Condenser	Inlet	92472N8210	12 dia.
		Outlet	92471N8210	8 dia.
	Compressor	Inlet	92474N8210	19 dia.
		Outlet	92472N8210	12 dia.
	Liquid tank	Inlet	92471N8210	8 dia.
		Outlet		
Conventional	Refrigerant pressure sensor		J247689956	10 dia.
	Expansion valve	Inlet	92477AX000	12 dia.
		Outlet	92477AX005	16 dia.

O-Ring Part Numbers and Specifications (K9K Engine Models)

Connection type	Piping connection point		Part number	Qty.	Remarks
New	Low-pressure flexible hose to heater & cooling unit		77030 65314	2	Renault part
	High-pressure pipe to heater & cooling unit		77030 65318	2	Renault part
	Condenser to high-pressure flexible hose		77030 65316	2	Renault part
	Condenser to high-pressure pipe		77030 65318	2	Renault part
	Compressor to low-pressure flexible hose		77030 65315	2	Renault part
	Compressor to high-pressure flexible hose		77030 65316	2	Renault part
	Liquid tank to condenser pipe		—	—	—
Former	Refrigerant pressure sensor		—	—	—
	Expansion valve to evaporator	Inlet	—	—	—
		Outlet	—	—	—

WARNING:

Make sure all refrigerant is discharged into the recycling equipment and the pressure in the system is less than atmospheric pressure. Then gradually loosen the discharge side hose fitting and remove it.

CAUTION:

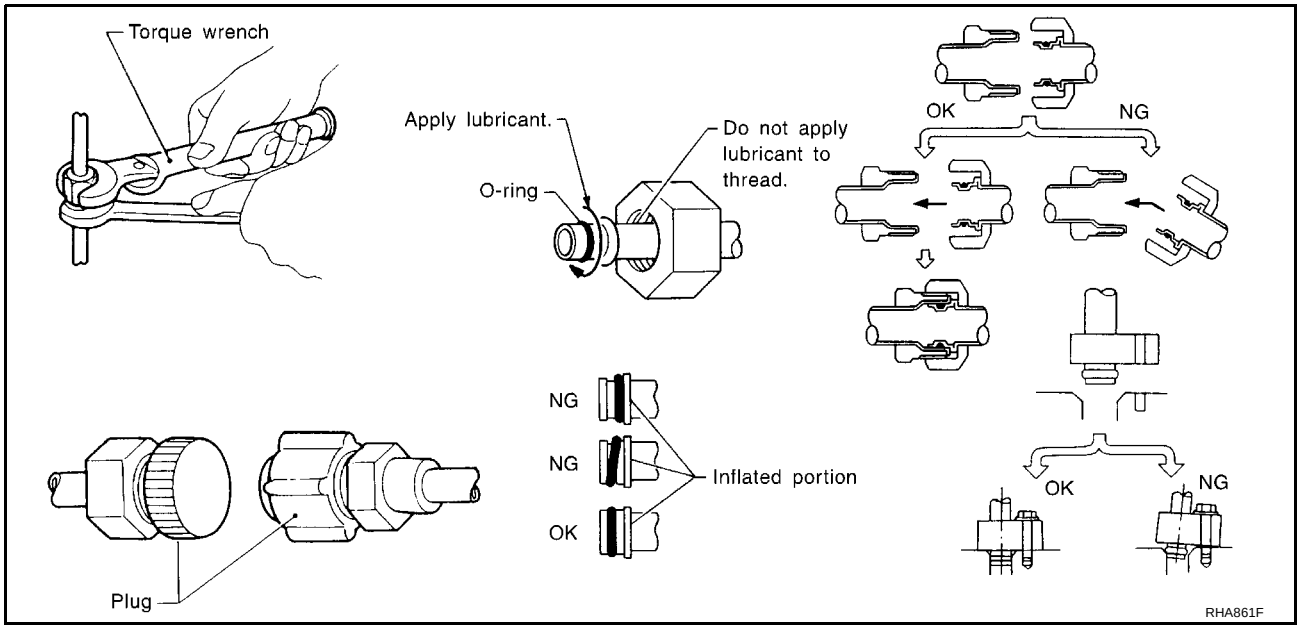
When replacing or cleaning refrigerant cycle components, observe the following.

- **When the compressor is removed, store it in the same position as it is when mounted on the car. Malfunction to do so will cause lubricant to enter the low pressure chamber.**
- **When connecting tubes, always use a torque wrench and a back-up wrench.**
- **After disconnecting tubes, immediately plug all openings to prevent entry of dirt and moisture.**
- **When installing an air conditioner in the vehicle, connect the pipes as the final stage of the operation. Do not remove the seal caps of pipes and other components until just before required for connection.**
- **Allow components stored in cool areas to warm to working area temperature before removing seal caps. This prevents condensation from forming inside A/C components.**
- **Thoroughly remove moisture from the refrigeration system before charging the refrigerant.**
- **Always replace used O-rings.**

- When connecting tube, apply lubricant to circle of the O-rings shown in illustration. Be careful not to apply lubricant to threaded portion.

	KC59G Compressor
Lubricant name:	Nissan A/C System Oil Type R
Part number:	KLH00-PAGR0

- O-ring must be closely attached to dented portion of tube.
- When replacing the O-ring, be careful not to damage O-ring and tube.
- Connect tube until you hear it click, then tighten the nut or bolt by hand until snug. Make sure that the O-ring is installed to tube correctly.
- After connecting line, conduct leak test and make sure that there is no leakage from connections. When the gas leaking point is found, disconnect that line and replace the O-ring. Then tighten connections of seal seat to the specified torque.



Precautions for Servicing Compressor

EJS004HN

- Plug all openings to prevent moisture and foreign matter from entering.
- When the compressor is removed, store it in the same position as it is when mounted on the car.
- When replacing or repairing compressor, follow “Maintenance of Lubricant Quantity in Compressor” exactly. Refer to ATC-14, "Adjustment of Compressor Lubricant Amount" .
- Keep friction surfaces between clutch and pulley clean. If the surface is contaminated, with lubricant, wipe it off by using a clean waste cloth moistened with thinner.
- After compressor service operation, turn the compressor shaft by hand more than five turns in both directions. This will equally distribute lubricant inside the compressor. After the compressor is installed, let the engine idle and operate the compressor for one hour.
- After replacing the compressor magnet clutch, apply voltage to the new one and check for normal operation.

Precautions for Service Equipment

EJS004HO

RECOVERY/RECYCLING EQUIPMENT

Be certain to follow the manufacturers instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

ELECTRONIC LEAK DETECTOR

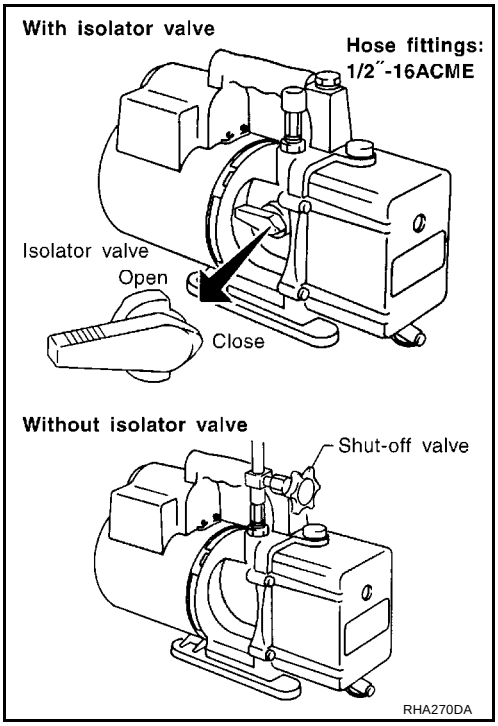
Be certain to follow the manufacturer's instructions for tester operation and tester maintenance.

VACUUM PUMP

The lubricant contained inside the vacuum pump is not compatible with the specified lubricant for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure. So the vacuum pump lubricant may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it.
To prevent this migration, use a manual valve placed near the hose-to-pump connection, as follows.

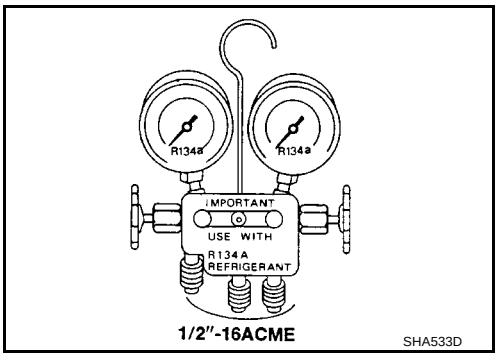
- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut off valve, disconnect the hose from the pump. As long as the hose is connected, the valve is open and lubricating oil may migrate.

Some one-way valves open when vacuum is applied and close under a no vacuum condition. Such valves may restrict the pump's ability to pull a deep vacuum and are not recommended.



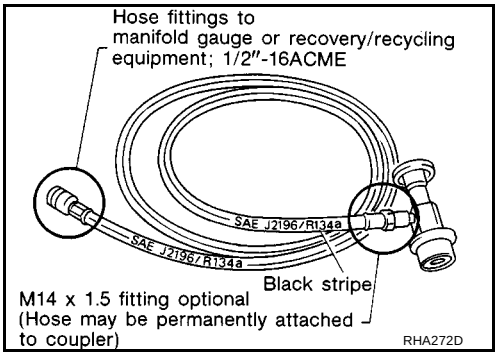
MANIFOLD GAUGE SET

Be certain that the gauge face indicates HFC-134a (R-134a) or 134a. Be sure the gauge set has 1/2″-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) and specified lubricants.



SERVICE HOSES

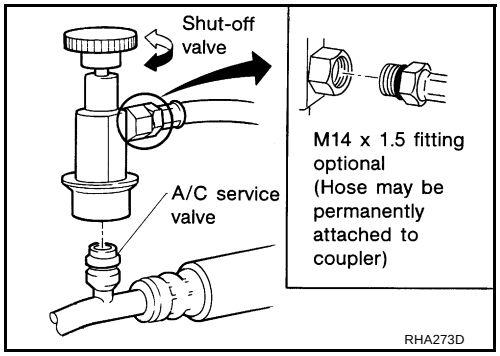
Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shut off devices (either manual or automatic) near the end of the hoses opposite the manifold gauge.



SERVICE COUPLERS

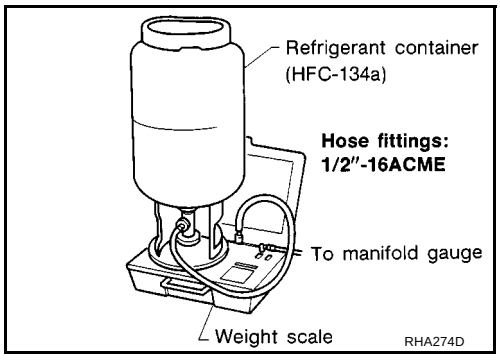
Never attempt to connect HFC-134a (R-134a) service couplers to an CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve
Clockwise	Open
Counterclockwise	Close



REFRIGERANT WEIGHT SCALE

Verify that no refrigerant other than HFC-134a (R-134a) and specified lubricants have been used with the scale. If the scale controls refrigerant flow electronically, the hose fitting must be 1/2″-16 ACME.



CALIBRATING ACR4 WEIGHT SCALE

Calibrate the scale every three months.
To calibrate the weight scale on the ACR4:

1. Press **Shift/Reset** and **Enter** at the same time.
2. Press **8787** . "**A1** " will be displayed.
3. Remove all weight from the scale.
4. Press **0** , then press **Enter** . "**0.00** " will be displayed and change to "**A2** ".
5. Place a known weight (dumbbell or similar weight), between 4.5 and 8.6 kg (10 and 19 lb) on the center of the weight scale.
6. Enter the known weight using four digits. (Example 10 lb = 10.00, 10.5 lb = 10.50)
7. Press **Enter** — the display returns to the vacuum mode.
8. Press **Shift/Reset** and **Enter** at the same time.
9. Press **6** — the known weight on the scale is displayed.
10. Remove the known weight from the scale. "**0.00** " will be displayed.
11. Press **Shift/Reset** to return the ACR4 to the program mode.

CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electronic scale or of quality recycle/recharge equipment.

Precautions for Leak Detection Dye

EJS004HP

- The A/C system contains a fluorescent leak detection dye used for locating refrigerant leaks. An ultraviolet (UV) lamp is required to illuminate the dye when inspecting for leaks.
- Always wear fluorescence enhancing UV safety goggles to protect your eyes and enhance the visibility of the fluorescent dye.
- The fluorescent dye leak detector is not a replacement for an electronic refrigerant leak detector. The fluorescent dye leak detector should be used in conjunction with an electronic refrigerant leak detector to (J-41995) pin-point refrigerant leaks.
- For your safety and your Customer's satisfaction, read and follow all manufacture's operating instructions and precautions prior to performing the work.
- A compressor shaft seal should not be repaired because of dye seepage. The compressor shaft seal should only be repaired after confirming the leak with an electronic refrigerant leak detector (J-41995).
- Always remove any remaining dye from the leak area after repairs are complete to avoid a misdiagnosis during a future service.
- Do not allow dye to come into contact with painted body panels or interior components. If dye is spilled, clean immediately with the approved dye cleaner. Fluorescent dye left on a surface for an extended period of time cannot be removed.
- Do not spray the fluorescent dye cleaning agent on hot surfaces (engine exhaust manifold, etc.).
- Do not use more than one refrigerant dye bottle (1/4 ounce / 7.4 CC) per A/C system.
- Leak detection dyes for HFC-134a (R-134a) and CFC-12 (R-12) A/C systems are different. Do not use HFC-134a (R-134a) leak detection dye in CFC-12 (R-12) A/C system or CFC-12 (R-12) leak detector dye in HFC-134a (R-134a) A/C systems or A/C system damage may result.
- The fluorescent properties of the dye will remain for over three (3) years unless a compressor malfunction occurs.

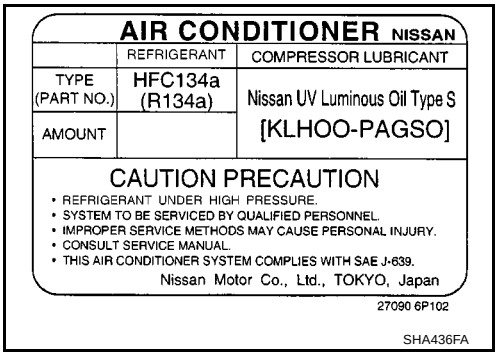
IDENTIFICATION

NOTE:

Vehicles with factory installed fluorescent dye have a green label.
Vehicles without factory installed fluorescent dye have a blue label.

IDENTIFICATION LABEL FOR VEHICLE

Vehicles with factory installed fluorescent dye have this identification label on the front side of hood.



Wiring Diagram and Trouble Diagnosis

EJS004HQ

When you read wiring diagrams, refer to the followings:

- GI-14, "How to Read Wiring Diagrams" in GI section.
- PG-4, "POWER SUPPLY ROUTING" in PG section.

When you perform trouble diagnosis, refer to the followings:

- GI-10, "How to Follow Trouble Diagnoses" in GI section.
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" in GI section.

PREPARATION

PFP:00002

HFC-134a (R-134a) Service Tools and Equipment

EJS004HR

Never mix HFC-134a (R-134a) refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.
Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.
Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.
Adapters that convert one size fitting to another must never be used: refrigerant/lubricant contamination will occur and compressor malfunction will result.

Tool number Tool name	Description	
HFC-134a (R-134a) refrigerant	 S-NT196	Container color: Light blue Container marking: HFC-134a (R-134a) Fitting size: Thread size ● large container 1/2″ -16 ACME
KLH00-PAGR0 Nissan A/C System Oil Type R	 S-NT197	Type: Poly alkaline glycol oil (PAG), type R Application: HFC-134a (R-134a) vane rotary compressors (Nissan only) Lubricity: 40 m ℓ (1.4 Imp fl oz.)
Recovery/Recycling Recharging equipment (ACR4)	 RJIA0195E	Function: Refrigerant Recovery and Recycling and Recharging
Electrical leak detector	 A/C leak detector SHA705EB	Power supply: ● DC 12V (Power socket)

Tool number Tool name	Description	
(J-43926) Refrigerant dye leak detection kit Kit includes: (J-42220) UV lamp and UV safety goggles (J-41459) HFC-134a (R-134a) Dye injector Use with J-41447, 1/4 ounce bottle (J-41447) HFC-134a (R-134a) Fluorescent leak detection dye (Box of 24, 1/4 ounce bottles) (J-43872) Refrigerant dye cleaner	 ZHA200H	Power supply: DC 12V (Battery terminal)
(J-42220) UV lamp and UV safety goggles	 SHA438F	Power supply: DC 12V (Battery terminal) For checking refrigerant leak when fluorescent dye is installed in A/C system. Includes: UV lamp and UV safety goggles
(J-41447) HFC-134a (R-134a) Fluorescent leak detection dye (Box of 24, 1/4 ounce bottles)	 SHA439F	Application: For HFC-134a (R-134a) PAG oil Container: 1/4 ounce (7.4cc) bottle (Includes self-adhesive dye identification labels for affixing to vehicle after charging system with dye.)
(J-41459) HFC-134a (R-134a) Dye injector Use with J-41447, 1/4 ounce bottle	 SHA440F	For injecting 1/4 ounce of fluorescent leak detection dye into A/C system.
(J-43872) Refrigerant dye cleaner	 SHA441F	For cleaning dye spills.
Manifold gauge set (with hoses and couplers)	 RJIA0196E	Identification: ● The gauge face indicates HFC-134a (R-134a). Fitting size: Thread size ● 1/2″ -16 ACME

Tool number Tool name	Description	
Service hoses ● High side hose ● Low side hose ● Utility hose	 S-NT201	Hose color: ● Low hose: Blue with black stripe ● High hose: Red with black stripe ● Utility hose: Yellow with black stripe or green with black stripe Hose fitting to gauge: ● 1/2″ -16 ACME
Service couplers ● High side coupler ● Low side coupler	 S-NT202	Hose fitting to service hose: ● M14 x 1.5 fitting is optional or permanently attached.
Refrigerant weight scale	 S-NT200	For measuring of refrigerant Fitting size: Thread size ● 1/2″ -16 ACME
Vacuum pump (Including the isolator valve)	 S-NT203	Capacity: ● Air displacement:4 CFM ● Micron rating:20 microns ● Oil capacity:482 g (17 oz.) Fitting size: Thread size ● 1/2″ -16 ACME

REFRIGERATION SYSTEM

PFP:KA990

Refrigerant Cycle

EJS004HS

REFRIGERANT FLOW

Refrigerant basically circulates through compressor, condenser, liquid tank and evaporator and returns to compressor. Vaporization of refrigerant is controlled by expansion valve.

Refrigerant System Protection

EJS004HT

REFRIGERANT PRESSURE SENSOR

- Refrigerant system is protected from significant high-pressure or low-pressure by refrigerant pressure sensor attached to condenser.
- If unexpected pressures are detected in the cooler system (approx. 2.74 MPa (approx. 27.9 kg/cm^2) or more or 0.14 MPa (approx. 1.4 kg/cm^2) or less), the compressor is stopped by the refrigerant pressure sensor.
  Note: Values in the ( ) indicate gauge pressure.

LUBRICANT

PFP:KLG00

Adjustment of Compressor Lubricant Amount

EJS004HU

Compressor lubricant circulates through the system with refrigerant. When air conditioner system component is replaced or after the large refrigerant leak, lubricant needs to be added to compressor. Also it is important to maintain lubricant level properly. If lubricant level is not proper, following might happen.

- Insufficient lubricant: Compressor adherence
- Lubricant overfill: Insufficient cooling (insufficient heat exchange)

LUBRICANT

Lubricant name : Nissan A/C System Oil Type R
Part number : KLH00-PAGR0

PROCEDURES FOR LUBRICANT RETURN OPERATION

Follow the steps bellow to adjust the lubricant level.

1. CHECK A/C SYSTEM

1. Make sure A/C system operates normally.
2. Make sure a large amount of refrigerant or lubricant does not leak.

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. LUBRICANT RETURN OPERATION

1. Start the engine. Put it in the following state.
- Engine speed: Idling - 1,200 rpm
- A/C or AUTO switch: ON
- Fan speed: HI
- Air inlet: Recirculation
- Set temperature: FULL HOT
2. Keep running for approximately 10 minutes.
3. Stop the engine.

CAUTION:
When a large leak of refrigerant or lubricant is found, do not perform lubricant return operation.

>> GO TO 3.

3. CHECK COMPRESSOR

Is compressor replaced?

YES >> GO TO ATC-15, "LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPRESSOR" .
NO >> GO TO 4.

4. CHECK OTHER COMPONENTS

Is any other component to be replaced? (evaporator, condenser, liquid tank, large leak of refrigerant or lubricant)

YES >> GO TO ATC-15, "LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPONENTS OTHER THAN COMPRESSOR" .
NO >> GO TO ATC-58, "Insufficient Cooling" .

LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPONENTS OTHER THAN COMPRESSOR

Add compressor lubricant from the high-pressure port of the compressor according to the table below. α indicates lubricant amount that spouts with refrigerant when refrigerant is discharged.

Components to be replaced	Lubricant amount to be added
Evaporator	35+α cm^3
Condenser	15+α cm^3
Liquid tank	5+α cm^3

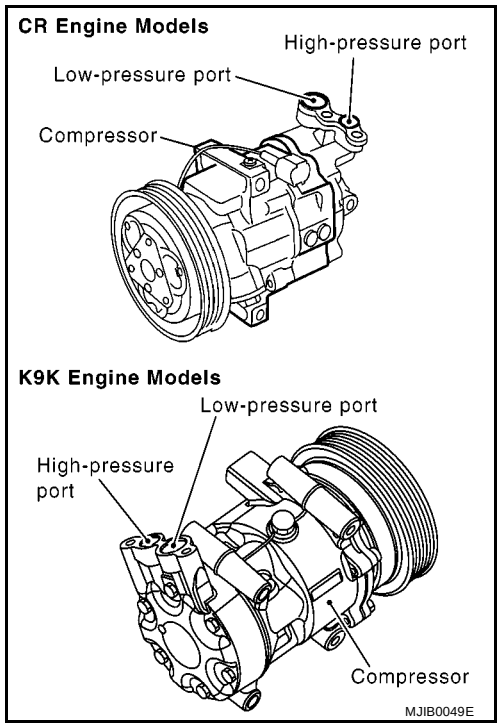
CAUTION:

When replacing 2 or more parts, do not sum up α.

Ex. Lublicant amount to be added to evaporator and liquid tank (cm^3) = 35 + 5 + α

LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPRESSOR

1. Drain the compressor lubricant from the removed compressor's high and low-pressure ports and measure the amount of lubricant.
2. Drain the compressor lubricant from a new compressor according to the formula below. α indicates lubricant amount that spouts with refrigerant when refrigerant is discharged.
   Lubricant amount drained from new compressor (cm^3)
   = Lubricant amount contained in the new compressor (80) - Lubricant amount discharged from the removed compressor - Lubricant amount that adheres to inside of compressor (20) - α
   = 60 - Lubricant amount discharged from the removed compressor - α
3. When adding lubricant, add the appropriate amount of compressor lubricant from the compressor's high-pressure port.



AUTO AIR CONDITIONER SYSTEM

PFP:27500

Description

EJS004HV

- The auto air conditioner detects the vehicle cabin temperature, outside air temperature, intake air temperature, and amount of malfunction sunlight using an interior air sensor, ambient air sensor, intake temperature sensor, and sunload sensor. A comparison of the detected values and temperature set by the temperature setting switch is made by the A/C auto amp (internal controller) and then the blown air temperature, vent blown air volume, vents, and air intake are adjusted to maintain the temperature set for the cabin.

TROUBLE DIAGNOSIS

PFP:00004

CONSULT-II Functions

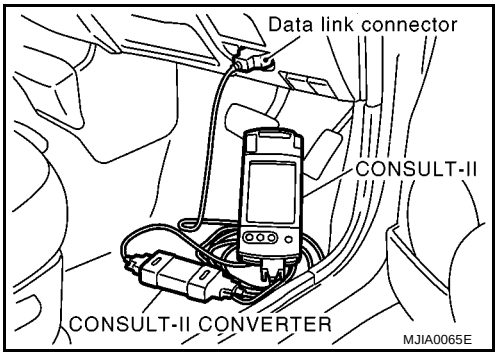
EJS004HW

The CONSULT-II has display functions for work support, self-diagnosis, data monitor, and active tests for each part by combining data reception and command transmission via communication lines from the BCM.

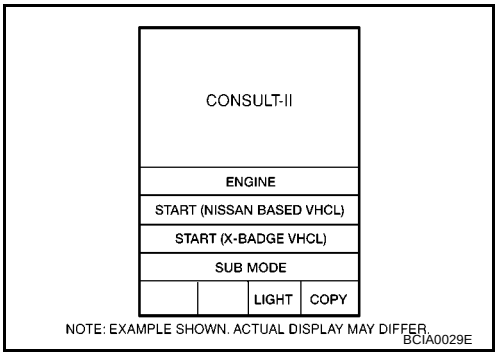
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Air conditioner system	Data monitor	Displays BCM input data in real time.

CONSULT-II BASIC OPERATION

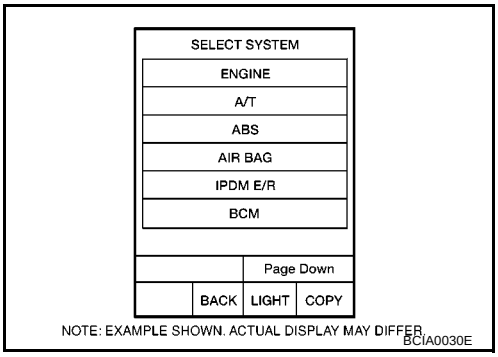
1. Turn ignition switch OFF.
2. Connect the CONSULT-II to data link connector via the CONSULT-II CONVERTER.
   For details, refer to the supplied CONSULT-II Operation Manual (Supplement-III) and CONSULT-II CONVERTER Operation Manual.
   CAUTION:
   If the CONSULT-II is connected without the CONSULT-II, CONVERTER, malfunction may be detected by self-diagnosis in control modules that use CAN communication.
3. Turn ignition switch ON.



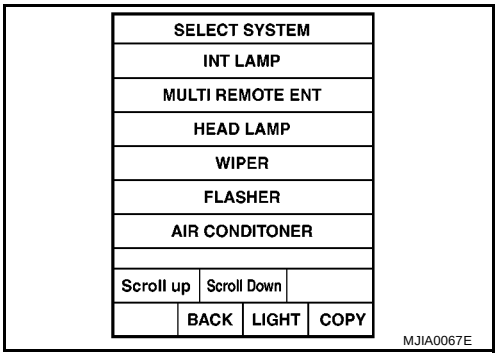
4. Touch “START (NISSAN BASED VHCL)”.



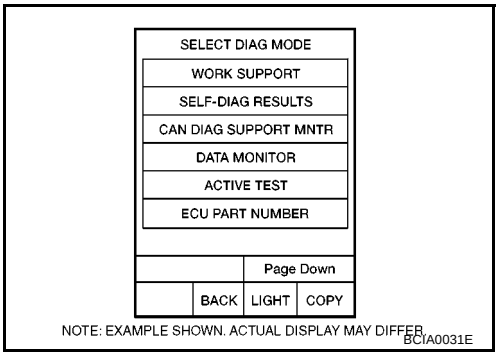
5. Touch “BCM” on the “SELECT SYSTEM” screen.
   - If “BCM” is not displayed, print the “SELECT SYSTEM” screen, and then refer to LAN-4, "PRECAUTIONS" .



6. Touch “AIR CONDITIONER” on the “SELECT TEST ITEM” screen”.



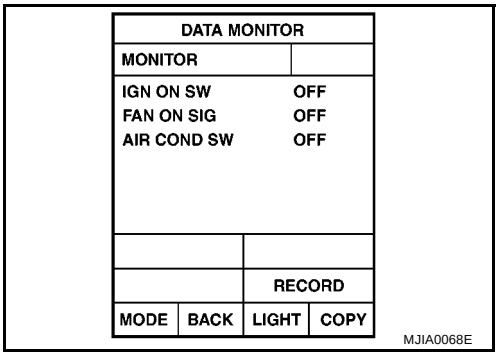
7. Touch “DATA MONITOR” on the “SELET DIAG MODE” screen. For details, refer to separate volume “CONSULT-II Operation Manual”.



DATA MONITOR

Operation Procedure

1. Touch “AIR CONDITIONER” on the “SELECT TEST ITEM” screen”.
2. Touch “DATA MONITOR” on the “SELET DIAG MODE” screen. For details, refer to separate volume “CONSULT-II Operation Manual”.
3. Touch “ALL SIGNALS” on the “DATA MONITOR” screen.
4. Touch “START”.
5. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.



Monitored Item

Monitor item [UNIT]		Contents
FAN ON SIG	[ON/OFF]	Displays status “Blower fan on (ON)/blower fan off (OFF)” as judged by the BCM from the input from the A/C auto amp.
AIR COND SW	[ON/OFF]	Displays status “Compressor on (ON)/compressor off (OFF)” as judged by the BCM from the input from the A/C auto amp.
IGN ON SW	[ON/OFF]	Displays the “ON/OFF, ACC (OFF)” status determined from the ignition switch signal.

Diagnosis Procedure

EJS004HX

DIAGNOSIS CHART BY SYMPTOM

Symptom		Operation inspection	Suspect systems	Possible causes
No air comes out. Airflow volume does not change.		Check blower motor operation.	Blower motor circuit	Refer to ATC-47, "Blower Motor System" and ATC-46, "Coolant Temperature Signal System" .
		The circuit above is normal.	A/C auto amp. circuit	A/C auto amp. malfunction
Inaccurate temperature control	Common items (Check these items for any of the three malfunctions listed below.)	Check installation condition of air mix door motor.	Air mix door circuit	● Improper installation of air mix door rod or air mix door lever. ● Malfunction of air mix door system (damage, locking, etc.)
		Set temperature to 18°C and 32°C. Make sure air mix door operates for its full stroke.	Air mix door motor circuit	Refer to ATC-53, "Air Mix Door Motor System" .
		Malfunction indicated in Self-Diagnosis Step 2.	Sensor circuit	● Sensor Malfunction; Refer to ATC-44, "Intake Sensor System" , ATC-43, "Sunload Sensor System" , ATC-42, "In-Vehicle Sensor System" , ATC-40, "Ambient Sensor System" . ● Sensor harness malfunction
		After normal indication in Self-Diagnosis Step 3, reset the actuator to zero position.	Air mix door circuit	Misreading of the door position of the A/C auto amp. ATC-33, "Self-Diagnosis Function"
		Malfunction indicated in Self-Diagnosis Step 3.	Air mix door motor circuit	Refer to ATC-53, "Air Mix Door Motor System" .
	No cold air comes out. (Normal airflow amount)	With A/C switch ON, check operation of magnetic clutch.	Magnetic clutch circuit	Refer to ATC-54, "Magnetic Clutch System" , ATC-57, "Check Fan ON Signal" .
		● Check refrigerant level. ● Performance check	Air conditioner system	Refer to ATC-58, "Insufficient Cooling" in “Cooling Malfunction”.
		The circuit above is normal.	A/C auto amp. circuit	A/C auto amp. malfunction
	No warm air comes out. (Airflow volume is normal.)	After warming up engine, heater core inlet and outlet sides of the heater hose do not become warm.	Coolant circuit	● Poor engine coolant ● Blockage of heater hose or heater core
		The circuit above is normal.	A/C auto amp. circuit	A/C auto amp. malfunction
	Large difference between set temperature and interior air temperature	Blower motor speed does not change when switching fan switch.	Blower motor circuit	Refer to ATC-47, "Blower Motor System" .
		The inlet of the interior sensor does not draw in smoke when the fan switch is set to speed 4.	Aspirator circuit	● Aspirator malfunction ● Aspirator duct is loose or crushed.
		Check the difference between set temperature and control temperature.	—	Improperly set temperature difference ATC-38, "Difference Between Set Temperature and Control Temperature"
		The circuit above is normal.	A/C auto amp. circuit	A/C auto amp. malfunction

Symptom	Operation inspection	Suspect systems	Possible causes
Unable to switch air outlets to others.	Mode door operation check (manual operation)	Mode door circuit	● Improper installation of mode door rod, mode door link and mode door lever ● Mode door system malfunction (damage, locking, etc.)
	After normal indication in Self-Diagnosis Step 3, reset the actuator to zero position.	Mode door circuit	Misreading of the door position of the A/C auto amp. ATC-33, "Self-Diagnosis Function"
	Malfunction indicated in Self-Diagnosis Step 3.	Mode door motor circuit	Refer to ATC-51, "Mode Door Motor System" .
	The circuit above is normal.	A/C auto amp. circuit	A/C auto amp. malfunction
Unable to switch intake inlets to others.	Intake door operation check (manual operation)	Intake door circuit	● Improper installation of intake door lever ● Intake door system malfunction (damage, locking, etc.)
	Malfunction indicated in Self-Diagnosis Step 3.	Intake door motor circuit	Refer to ATC-51, "Intake Door Motor System" .
	The circuit above is normal.	A/C auto amp. circuit	A/C auto amp. malfunction

Self-Diagnosis Function

EJS004I2

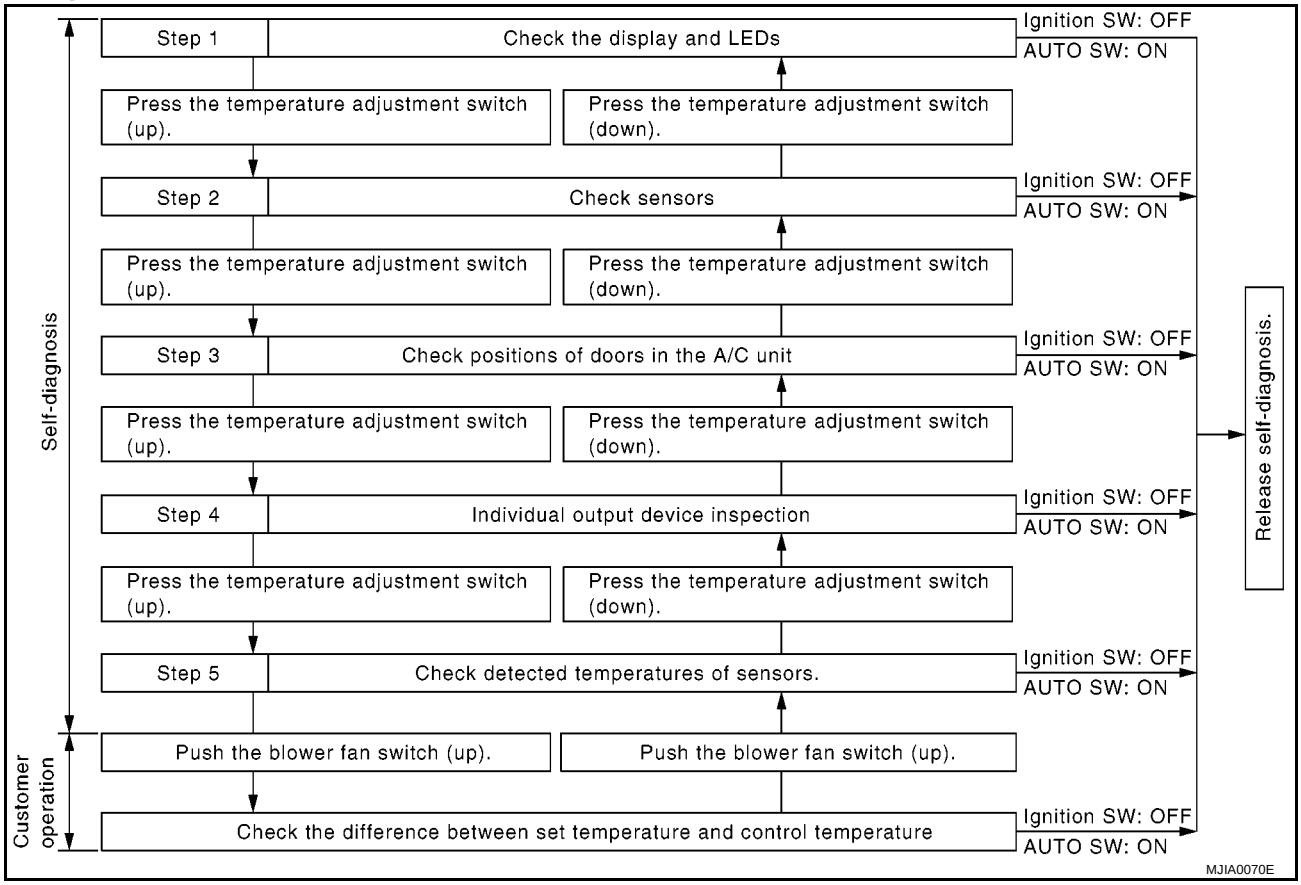
DESCRIPTION

- The self-diagnosis system consists of steps 1 to 5, and diagnosis sensor operations by checking for failures of each sensor and outputting control signals predetermined for each output device.

	Step 1	Step 2	Step 3	Step 4	Step 5
Description	Check the display and LEDs	Check sensors	Check positions of doors in the A/C unit	Individual output device inspection	● Check detected temperatures of sensors
Part to be diagnosed	● Display ● LED	● Ambient sensor ● In-vehicle sensor ● Intake sensor ● Sunload sensor	● Mode door motor ● Air mix door motor	● Mode door motor ● Intake door motor ● Air mix door motor ● Blower motor ● Compressor ● Fan ON signal	● The following sensor – Ambient sensor – In-vehicle sensor – Intake sensor

OPERATION PROCEDURE

Description



Switching to Self-Diagnosis Mode

- Turn ignition switch OFF, then turn it to start engine. Within 10 seconds after starting the engine, press and hold the OFF switch for at least 5 seconds. Self-diagnosis (step1) should start.

  CAUTION:

  Diagnosis should be carried out with the engine running. If the battery voltage drops below 12V during step 3 trouble diagnosis, the actuator speeds become slower and NO results may be returned even for normal operation.

Finishing Self-Diagnosis Mode

- Turn ignition switch OFF or press AUTO switch.

Shifting the Steps

- Use the temperature adjustment switch to switch between steps 1 through 5.

Procedure

1. START SELF-DIAGNOSIS

1. Turn ignition switch from OFF position to engine start. Within 10 seconds of engine start, press and hold OFF switch for approximately 5 seconds or longer.

Is self-diagnosis mode activated?

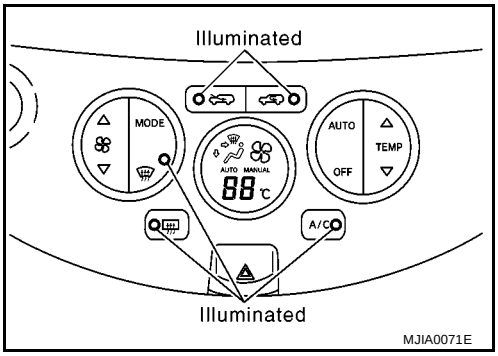
YES >> GO TO 2.
NO >> Replace A/C auto amp.

2. STEP 1 - CHECK DISPLAY AND LEDS

Check LEDs of all controller switches. Check all liquid crystal display segments.
Normal: All segments and LEDs are illuminated.
Error: LEDs and sections of malfunctioning locations are not illuminated.

Are LEDs and display normal?

YES >> GO TO 3.
NO >> Replace A/C auto amp.

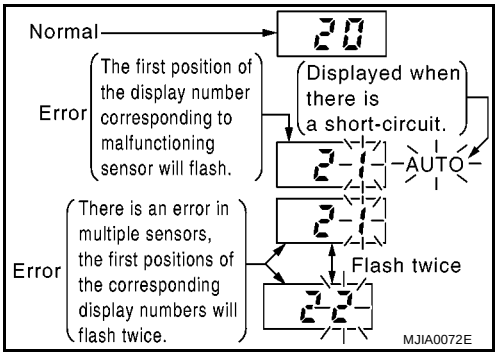


3. STEP 2 - CHECK ALL SENSORS

1. Press temperature adjustment switch (Up:▲) to change to step 2.
2. A “2” is displayed, followed by display of check results.
   Normal: “20” is displayed.
   Error: The first position of the display number corresponding to malfunctioning sensor will flash. “AUTO” is shown on the display when there is a short-circuit.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.



4. CHECK SENSOR MALFUNCTION

When an error occurs, the first position of the display number corresponding to this sensor will flash. If it is determined at this time that there is a short in the sensor circuit, “AUTO” will flash. Further, if there is an error in multiple sensors, the first positions of the corresponding display numbers will flash twice.

Displayed No.	Corresponding sensor	Error return condition		Reference page
		OPEN	SHORT	
21	Ambient sensor	Approx. -42°C or less	Approx. 100°C or more	ATC-40, "Ambient Sensor System"
22	In-vehicle sensor	Approx. -42°C or less	Approx. 100°C or more	ATC-42, "In-Vehicle Sensor System"
24	Intake sensor	Approx. -42°C or less	Approx. 100°C or more	ATC-44, "Intake Sensor System"
25	Sunload sensor	33 W/m^2 (28.4 Kcal/m^2 ·h) or less	1677 W/m^2 (1422 Kcal/m^2 ·h) or more	ATC-43, "Sunload Sensor System"

Example: If there is an open circuit in the ambient sensor, the A/C auto amp. registers extreme cold (-42°C or less) and adjusts the temperature control warmer.

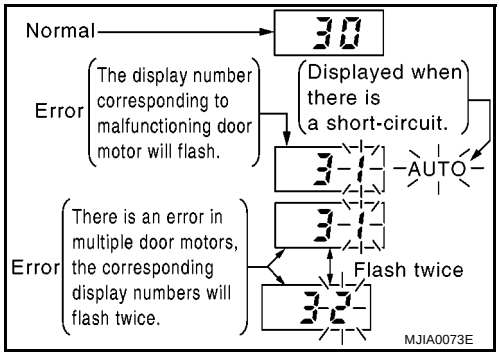
CAUTION:
Sunload sensor may register malfunction when indoors, at dusk, or at other times when light is insufficient.

OK or NG

OK >> End of self-diagnosis
NG >> Malfunction in corresponding sensor system

5. STEP 3 - CHECK AIR MIX DOOR AND MODE DOOR MOTOR

1. Press temperature adjustment switch (Up: ▲) to change to step 3.
2. A “3” is displayed, followed by a display of check results.
   Send output signals to the air mix door motor and mode door motor and inspect both motors.
   Normal: “30” is displayed.
   Error: The indicator lamp for the door position where the error occurred flashes. At this time, if it is judged that there is a short in the door motor circuit, “AUTO” will be displayed. If there is an error in multiple door motors, the corresponding display numbers will flash in ascending order.



door motors corresponding to the DTC

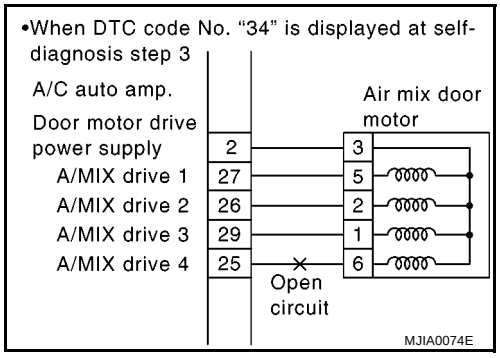
Displayed No.	31, 32, 33, 34	35, 36, 37, 38
Corresponding door motor	Air mix door	Mode door

DTC for an inoperative harness

Corresponding door motor	Air mix door motor				Mode door motor			
Corresponding terminal (Door motor side)	5	2	1	6	5	2	1	6
Corresponding terminal (A/C auto amp. side)	27	26	29	25	32	31	34	30
Displayed number for short circuit	AUTO31	AUTO32	AUTO33	AUTO34	AUTO35	AUTO36	AUTO37	AUTO38
Displayed number for open circuit	31	32	33	34	35	36	37	38

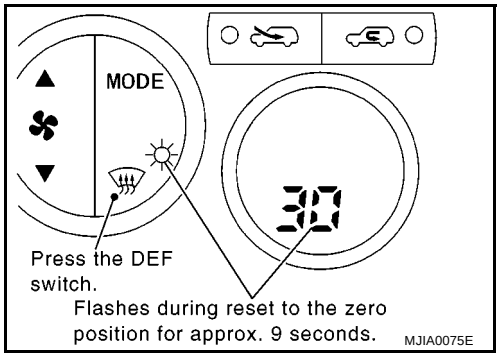
NOTE:

- If all four terminals of each door motor show a DTC for an open circuit, there is probably a disconnected connector or an open circuit in the door motor drive power supply harness.
- If a short circuit occurs in the harness between terminals for each door motor and drive signal, although it cannot be detected by self-diagnosis, the door motor will vibrate when it operates.



Door Motor Zero Position Reset

- Pressing the DEF switch during step 3 will send a reset signal to air mix door and mode door motor to reset them to the zero position.
  During reset: The 30 and DEF switch indicator lamps will flash. (For approx. 9 seconds)



OK or NG

OK >> GO TO 6.
NG >> Refer to ATC-51, "Mode Door Motor System" or ATC-53, "Air Mix Door Motor System" .

6. STEP 4 - CHECK EACH OUTPUT DEVICE

1. Press temperature adjustment switch (Up: ▲) to change to step 4.
2. Each time the DEF switch is pressed, the display will change to 41→42 → 43 → 44 → 45→ 46 → 41.
3. Follow table below and check outlet, inlet, airflow temperature, blower motor applied voltage, magnetic clutch operation, and air mix ratio. Each operating condition should be checked visually, by listening for noise, by touching air outlets with your hand, and so on.

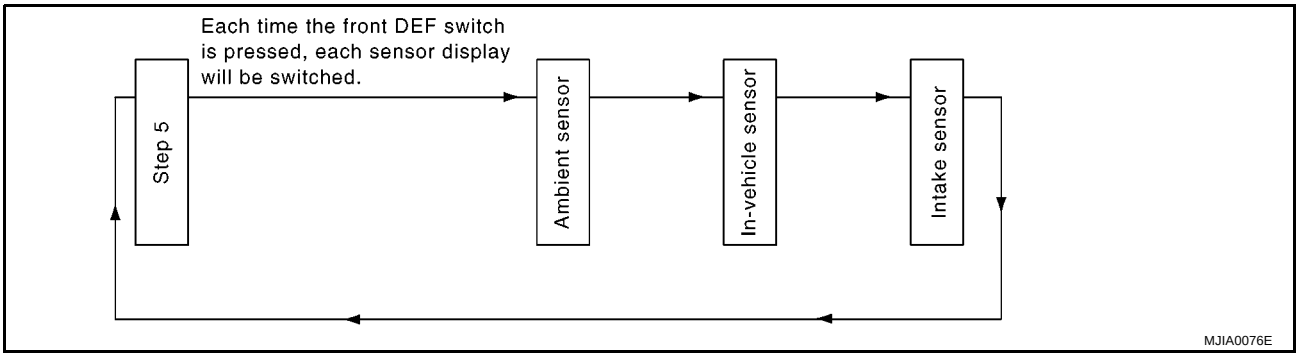
Displayed No.	41	42	43	44	45	46
Mode door	VENT	B/L	B/L	FOOT	D/F	DEF
Intake door	Recirculation	Recirculation	Fresh air	Fresh air	Fresh air	Fresh air
Air mix door position	Full Cold	Full Cold	Halfway (50%)	Halfway (50%)	FULL HOT	FULL HOT
Blower motor Applied voltage	5V	10.5V	8.5V	8.5V	8.5V	Battery voltage
Magnetic clutch	ON	ON	ON	OFF	OFF	ON
Fan ON signal	12V	12V	12V	1V	1V	12V

OK or NG

OK >> GO TO 7.
NG >>
- Outlet does not change: Refer to ATC-51, "Mode Door Motor System" .
- Inlet does not change: Refer to ATC-44, "Intake Sensor System" .
- Airflow temperature does not change: Refer to ATC-53, "Air Mix Door Motor System" .
- Blower motor malfunction: Refer to ATC-47, "Blower Motor System" .
- Magnetic clutch does not engage or operate: Refer to ATC-54, "Magnetic Clutch System" .

7. STEP 5 - DISPLAY OF TEMPERATURE DETECTED AT EACH SENSOR

1. Press temperature adjustment switch (Up: ▲) to change to step 5.
2. Pressing DEF switch once cycles from 5→detected temperature at ambient sensor → detected temperature at in-vehicle sensor → detected temperature at intake sensor →5.



OK or NG

OK >> End of self-diagnosis
NG >>
- Ambient sensor malfunction: Refer to ATC-40, "Ambient Sensor System" .
- Inside air temperature malfunction: Refer to ATC-42, "In-Vehicle Sensor System" .
- Intake sensor malfunction: Refer to ATC-44, "Intake Sensor System" .

Difference Between Set Temperature and Control Temperature

EJS004I3

DESCRIPTION

- If the temperature felt by the customer is different than the airflow temperature controlled by the set temperature, A/C auto amp. control temperature can be adjusted to compensate for the set temperature (displayed temperature).

HOW TO SET

1. Change to self-diagnosis mode. Refer to ATC-34, "Switching to Self-Diagnosis Mode" .
2. In self-diagnosis step 5, press the fan switch (Up: ▲).
3. A “0” is shown in the display.
4. Pressing the temperature adjustment switch increases or decreases the display temperature throughout a range of +3°C through -3°C (in increments of 1°C).At this time, if the setting difference is negative, ″AUTO″ is displayed.

NOTE:
When the set temperature (display temperature) is set to 25°C and -3°C, the temperature controlled by A/C auto amp. is 25°C - 3°C = 22°C and the temperature becomes lower than set temperature.

CAUTION:
When the battery is disconnected or the battery voltage becomes 9V or less, the difference between the set temperature (display) and control temperature is cancelled.

Function Inspection

EJS004I4

1. CHECK FAN SPEED

Operate fan switch to make sure fan speed changes. Confirm operation for all fan speeds.

OK or NG

OK >> Switch fan speed to “4” and GO TO 2.
NG >> Blower motor system malfunction: Refer to ATC-47, "Blower Motor System" .

2. CHECK AIR OUTLET

1. Operate mode switch and DEF switch.
2. Confirm air outlets change according to each indicated air outlet.

OK or NG

OK >> GO TO 3.
NG >> Mode door system malfunction: Refer to ATC-51, "Mode Door Motor System" .

3. CHECK AIR INLET

1. Press REC switch to change recirculation.
2. Listen to intake sound and confirm air inlets change.
3. Press FRE switch to change to fresh air intake.
4. Listen to intake sound and confirm air inlets change.

OK or NG

OK >> GO TO 4.
NG >> Intake door system malfunction: Refer to ATC-51, "Intake Door Motor System" .

4. CHECK WITH TEMPERATURE SETTING LOWERED

1. Turn compressor ON.
2. Press temperature adjustment switch (Down: ▼) and lower temperature setting to 18°C.
3. Confirm cool air blows from outlets.

OK or NG

OK >> GO TO 5.
NG >> Air mix door system malfunction: Refer to ATC-53, "Air Mix Door Motor System" .

5. CHECK WITH TEMPERATURE SETTING RAISED

1. Warm up the engine.
2. Press temperature adjustment switch (Up: ▲) and raise temperature setting to 32°C.
3. Confirm warm air blows from outlets.

OK or NG

OK >> GO TO 6.
NG >> Air mix door system malfunction: Refer to ATC-53, "Air Mix Door Motor System" .

6. CHECK AUTO MODE

1. Press AUTO switch and confirm that ″AUTO″ is displayed.
2. Make sure display and indicator lamp turns on by pressing A/C switch. Listen to make sure compressor is operating. (Temperature of air blowing from outlets and fan speed vary depending on ambient temperature.)

OK or NG

OK >> GO TO 7.
NG >> Refer to ATC-19, "DIAGNOSIS CHART BY SYMPTOM" .

7. CHECK A/C SWITCH

1. Press A/C switch and make sure compressor turns off.
2. Press A/C switch again and make sure compressor turns on.

OK or NG

OK >> If all function checks are normal (no phenomena reoccurrence), refer to ATC-19, "DIAGNOSIS CHART BY SYMPTOM" .
NG >> Refer to ATC-19, "DIAGNOSIS CHART BY SYMPTOM" .

Air Conditioning System

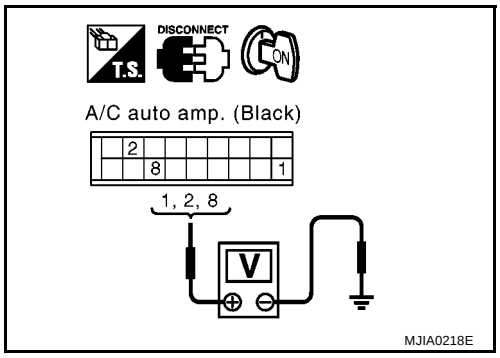
EJS004I5

Symptom: Air conditioner does not operate.

1. CHECK POWER SUPPLY CIRCUIT OF A/C AUTO AMP.

Disconnect the A/C auto amp. connector and check voltage between the ground and terminals 1, 2 and 8.

Connector terminal		Ignition switch	Voltage
A/C auto amp.	Ground		
1		OFF	Battery voltage
2		ON	
8		ON	



OK or NG

OK >> GO TO 2.

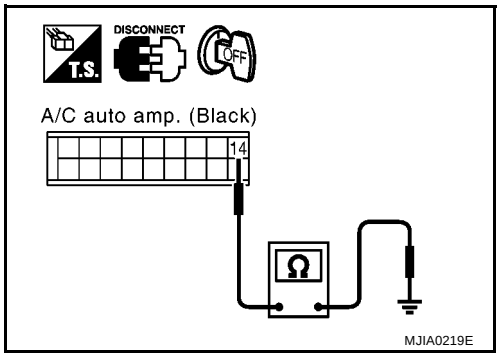
NG >> Check power supply circuit, 10A fuses [Nos. 4 and 8, located in the fuse block (J/B)] and 15A fuses [Nos. 9 and 10, located in the fuse block (J/B)]. Refer to PG-4, "POWER SUPPLY ROUTING" .

- If fuse is OK, check for open circuit in wiring harness. Repair or replace as necessary.
- If NG, replace fuse and check wiring harness for short circuit. Repair or replace as necessary.

2. CHECK GROUND CIRCUIT OF A/C AUTO AMP.

Check continuity between A/C auto amp. terminal 14 and ground.

Connector terminal		Continuity
A/C auto amp.	Ground	Yes
14		



Does continuity exist?

YES >> Replace A/C auto amp.

NO >> Repair harness or connector.

Ambient Sensor System

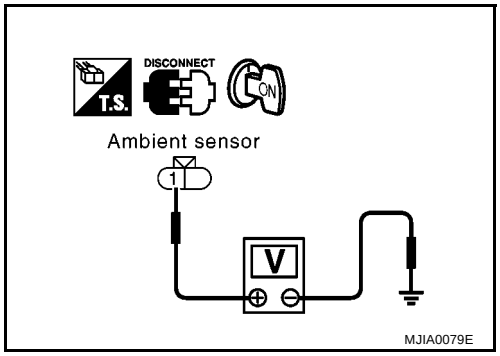
EJS004I6

SMA for VIN >SJN**AK12U1288860

1. CHECK POWER SUPPLY CIRCUIT

Disconnect ambient sensor connector, turn ignition switch ON, and check voltage between the terminal 1 and ground.

Connector terminal		Voltage
Ambient sensor	Ground	Approx. 5V
1		



OK or NG

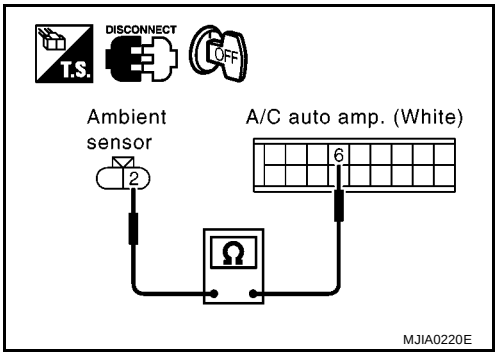
OK >> GO TO 2.

NG >> GO TO 4.

2. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between ambient sensor terminal 2 and A/C auto amp. terminal 6.

Connector terminal		Continuity
Ambient sensor	A/C auto amp.	Yes
2	6	



Does continuity exist?

YES >> GO TO 3.
NO >> Repair harness or connector.

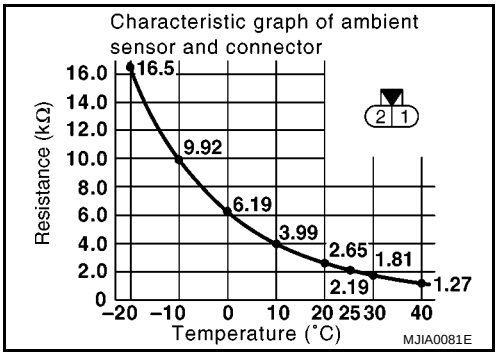
3. CHECK AMBIENT SENSOR

Check resistance between terminals 1 and 2 on ambient sensor.

OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

NG >> 1. Replace ambient sensor.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .



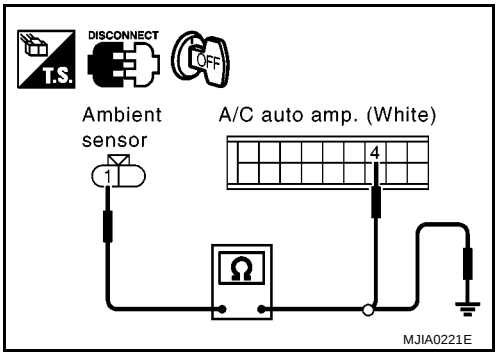
4. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between ambient sensor terminal 1 and A/C auto amp. terminal 4.

Connector terminal		Continuity
Ambient sensor	A/C auto amp.	Yes
1	4	

3. Check continuity between ambient sensor terminal 1 and ground.

Connector terminal		Continuity
Ambient sensor	Ground	None
1		



OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

NG >> Repair harness or connector.

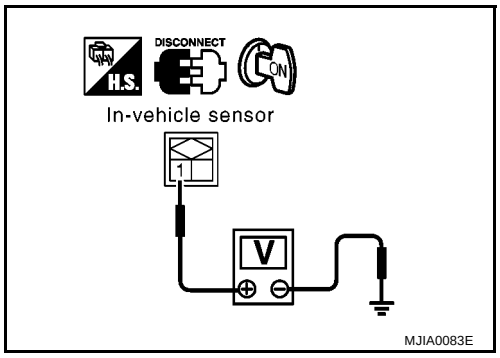
In-Vehicle Sensor System

EJS004I7

1. CHECK POWER SUPPLY CIRCUIT

Disconnect in-vehicle sensor connector, turn ignition switch ON, and check voltage between terminal 1 and ground.

Connector terminal		Voltage
In-vehicle sensor	Ground	Approx. 5V
1		



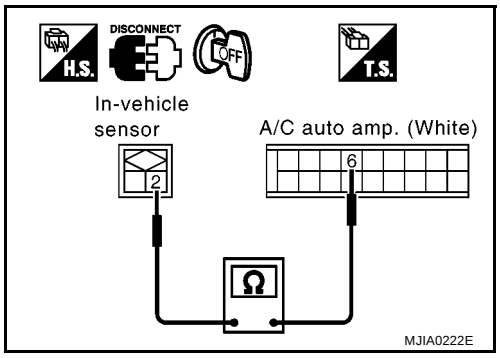
OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between in-vehicle sensor terminal 2 and A/C auto amp. terminal 6.

Connector terminal		Continuity
In-vehicle sensor	A/C auto amp.	Yes
2	6	



Does continuity exist?

YES >> GO TO 3.
NO >> Repair harness or connector.

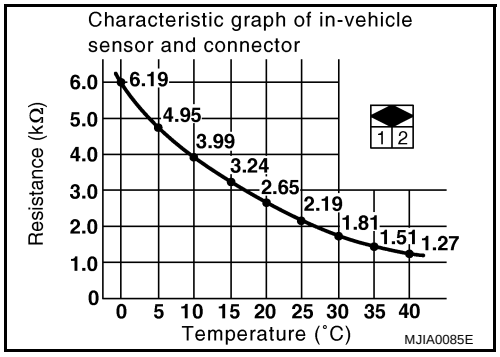
3. CHECK IN-VEHICLE SENSOR

Check the resistance between in-vehicle sensor terminals 1 and 2.

OK or NG

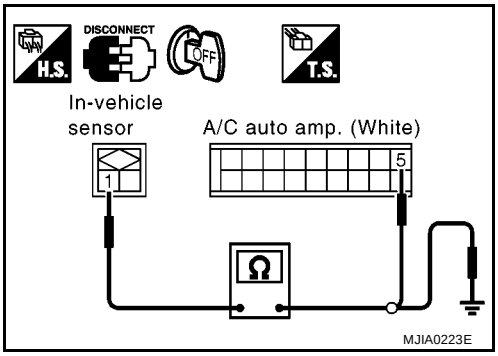
OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

NG >> 1. Replace in-vehicle sensor.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .



4. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between in-vehicle sensor terminal 1 and A/C auto amp. terminal 5.



Connector terminal		Continuity
In-vehicle sensor	A/C auto amp.	Yes
1	5	

3. Check continuity between in-vehicle sensor terminal 1 and ground.

Connector terminal		Continuity
In-vehicle sensor	Ground	None
1		

OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

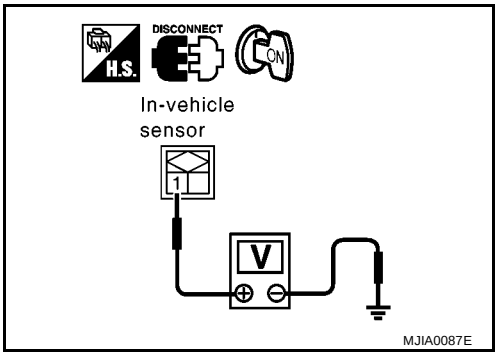
NG >> Repair harness or connector.

Sunload Sensor System

EJS004I8

1. CHECK POWER SUPPLY CIRCUIT

Disconnect sunload sensor connector, turn ignition switch ON, and check voltage between terminal 1 and ground.



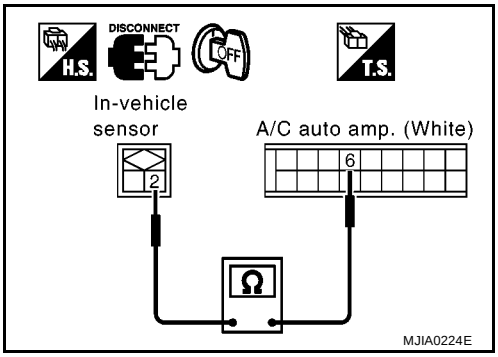
Connector terminal		Voltage
Sunload sensor	Ground	Approx. 5V
1		

OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between sunload sensor terminal 2 and A/C auto amp. terminal 6.



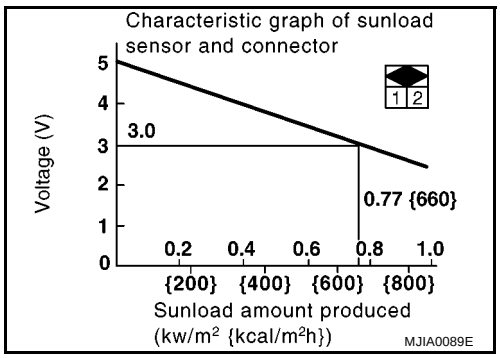
Connector terminal		Continuity
Sunload sensor	A/C auto amp.	Yes
2	6	

Does continuity exist?

YES >> GO TO 3.
NO >> Repair harness or connector.

3. CHECK SUNLOAD SENSOR

1. Connect the sunload sensor and A/C auto amp. connectors.
2. Check voltage between sunload sensor terminal 1 and ground.



NOTE:

- When checking indoors, use a lamp of approximately 60W. Move the lamp towards and away from the sensor to check.
- Sunload amount produced by direct sunshine in fair weather is equivalent to approximately 0.77 W/m^2 (660 kcal/m^2 ·h).

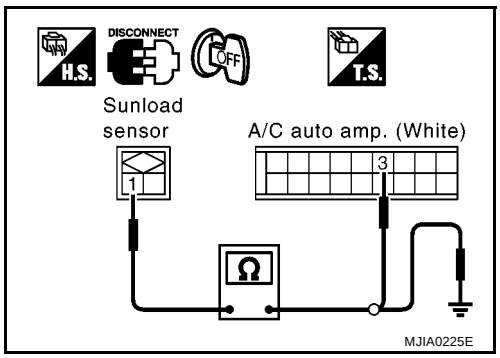
OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

NG >> 1. Replace sunload sensor.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

4. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between sunload sensor terminal 1 and A/C auto amp. terminal 3.



Connector terminal		Continuity
Sunload sensor	A/C auto amp.	Yes
1	3	

3. Check continuity between sunload sensor terminal 1 and ground.

Connector terminal		Continuity
Sunload sensor	Ground	None
1		

OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

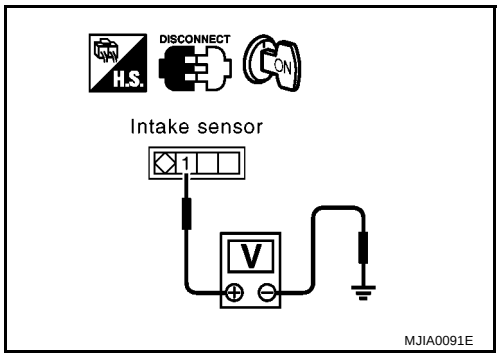
NG >> Repair harness or connector.

Intake Sensor System

EJS004I9

1. CHECK POWER SUPPLY CIRCUIT

Disconnect intake sensor connector, turn ignition switch ON, and check voltage between terminal 1 and ground.



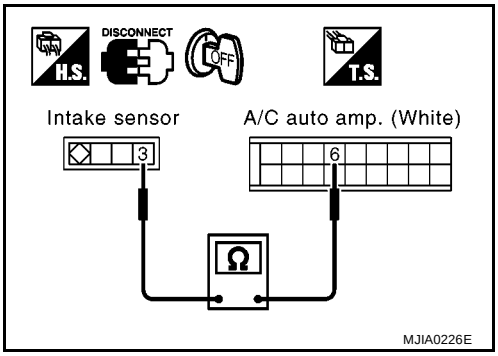
Connector terminal		Voltage
Intake sensor	Ground	Approx. 5V
1		

OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between intake sensor terminal 3 and A/C auto amp. terminal 6.



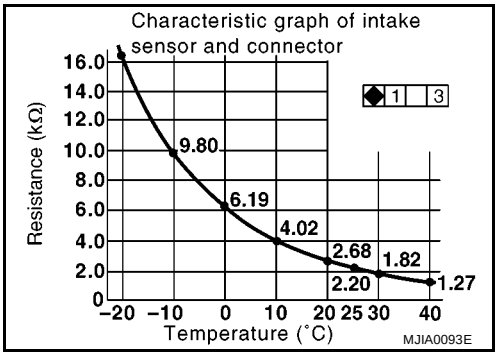
Connector terminal		Continuity
Intake sensor	A/C auto amp.	Yes
3	6	

Does continuity exist?

YES >> GO TO 3.
NO >> Repair harness or connector.

3. CHECK INTAKE SENSOR

Disconnect intake sensor connector and check the resistance between terminals 1 to 3.



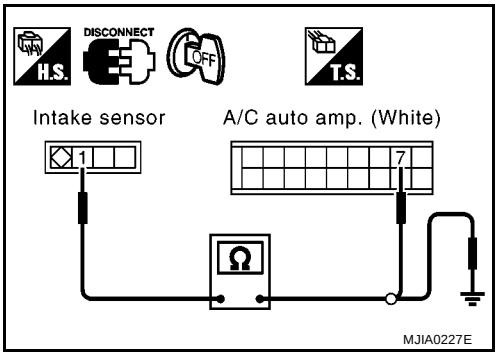
OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

NG >> 1. Replace the intake sensor.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

4. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between intake sensor terminal 1 and A/C auto amp. terminal 7.



Connector terminal		Continuity
Intake sensor	A/C auto amp.	Yes
1	7	

3. Check continuity between intake sensor terminal 1 and ground.

Connector terminal		Continuity
Intake sensor	Ground	None
1		

OK or NG

OK >> 1. Replace A/C auto amp.
2. Perform self-diagnosis step 2. Make sure result is normal. Refer to ATC-33, "Self-Diagnosis Function" .

NG >> Repair harness or connector.

Coolant Temperature Signal System

EJS004IA

Phenomenon: The low coolant temperature startup airflow volume control does not cancel or the lower coolant temperature startup airflow volume is not controlled.

Inspection Procedure

1. CHECK FUNCTION OF COMBINATION METER

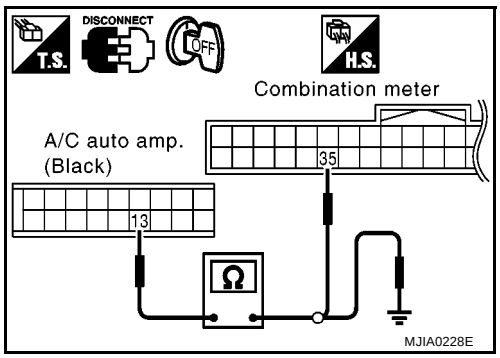
Does the engine coolant temperature gauge operate normally?

OK or NG

OK >> GO TO 2.
NG >> GO TO DI-33, "Inspection/Water Temperature Warning/indicator Lamp" .

2. CHECK HARNESS

1. Disconnect the A/C auto amp. connector and the combination meter connector.
2. Check continuity between A/C auto amp. terminal 13 and combination meter terminal 35.



Connector terminal		Continuity
A/C auto amp.	Combination meter	
13	35	Yes

3. Check continuity between A/C auto amp. terminal 13 and ground.

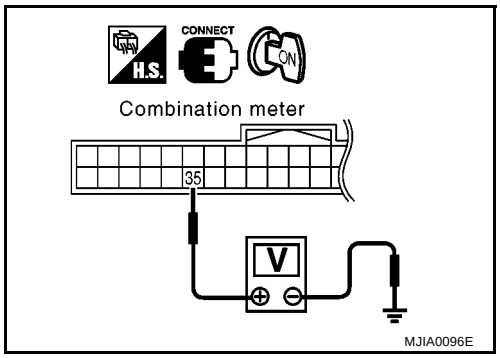
Connector terminal		Continuity
A/C auto amp.	Ground	None
13		

OK or NG

OK >> GO TO 3.
NG >> Repair the harness and connector.

3. CHECK 1: ENGINE COOLANT SIGNAL

1. Connect the A/C auto amp. connector and the combination meter connector.
2. Turn ignition switch ON, and check voltage between combination meter terminal 35 and ground.



Connector terminal		Standard voltage
Combination meter	Ground	Approx. 12V
35		

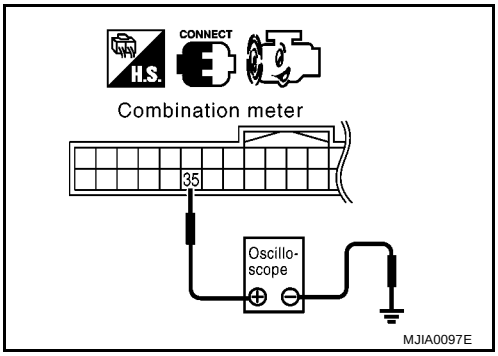
OK or NG

OK >> GO TO 4.
NG >> Replace A/C auto amp.

4. CHECK 2: ENGINE COOLANT TEMPERATURE

After the engine warms up, check voltage waveform between combination meter terminal 35 and ground.

Between terminal 35 and ground	**: Refer to ATC-32, "A/C Auto Amp. Input/Output Signal Standard" .**



OK or NG

OK >> Replace A/C auto amp.
NG >> Replace the combination meter.

Blower Motor System

EJS004IB

SMA for VIN >SJN**AK12U1288860

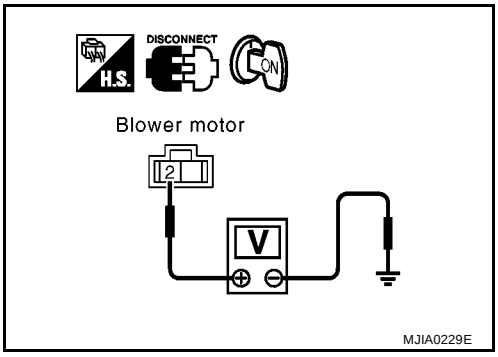
SMA for VIN >SJN**AK12U1309269

Symptom: Operation malfunction of blower motor

1. CHECK POWER SUPPLY CIRCUIT (BLOWER MOTOR)

Turn ignition switch ON, and check voltage between blower motor terminal 2 and ground.

Connector terminal		Voltage
Blower motor	Ground	Battery voltage
2		



OK or NG

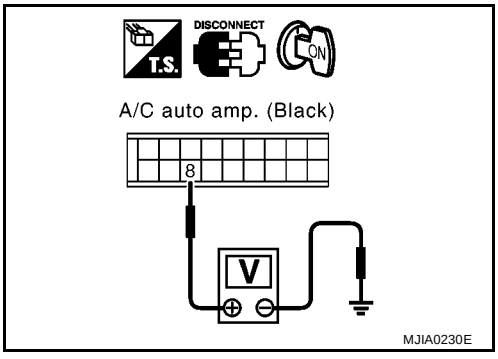
OK >> GO TO 2.
NG >> Check power supply circuit and 15A fuses [Nos. 9 and 10, located in the fuse block (J/B)]. Refer to PG-4, "POWER SUPPLY ROUTING" .

- If OK, check for open circuit in wiring harness. Repair or replace as necessary.
- If NG, replace fuse and check wiring harness for short circuit. Repair or replace as necessary.

2. CHECK POWER SUPPLY CIRCUIT (A/C AUTO AMP.)

1. Disconnect A/C auto amp. connector.
2. Turn ignition switch ON, and check voltage between A/C auto amp. terminal 8 and ground.

Connector terminal		Voltage
A/C auto amp.	Ground	Battery voltage
8		

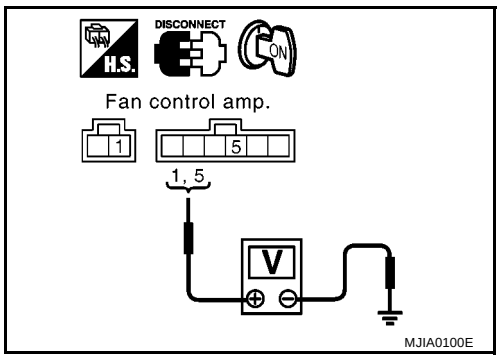


OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK POWER SUPPLY CIRCUIT (FAN CONTROL AMP.)

1. Disconnect the fan control amp. connector.
2. Turn ignition switch ON, and check voltage between fan control amp. terminal 1, 5 and ground.



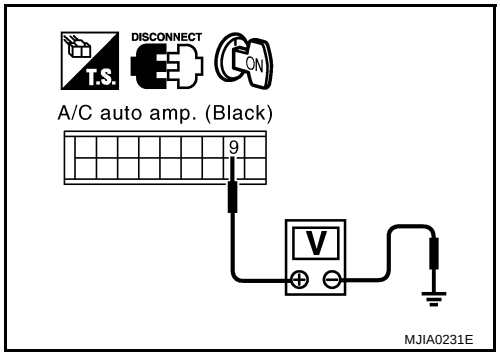
Connector terminal		Voltage
Fan control amp.	Ground	
1		Battery voltage
5		

OK or NG

OK >> GO TO 4.
NG >>
- Between terminal 1 and ground: Repair the harness or connector.
- Between terminal 5 and ground: GO TO 7.

4. CHECK BLOWER MOTOR FEEDBACK SIGNAL

Turn ignition switch ON, and check voltage between A/C auto amp. terminal 9 and ground.



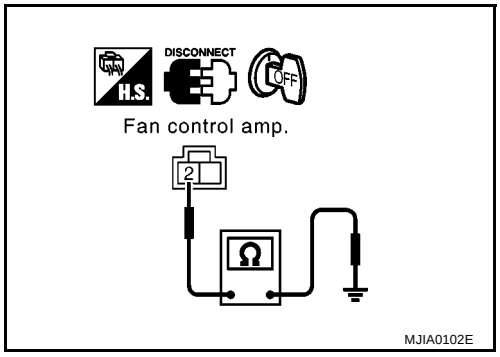
Connector terminal		Voltage
A/C auto amp.	Ground	Approx. 12V
9		

OK or NG

OK >> GO TO 5.
NG >> GO TO 9.

5. CHECK GROUND CIRCUIT

Check continuity between fan control amp. terminal 2 and ground.



Connector terminal		Continuity
Fan control amp.	Ground	Yes
2		

Does continuity exist?

YES >> GO TO 6.
NO >> Repair harness or connector.

6. CHECK 1: FAN CONTROL AMP. CONTROL SIGNAL

Check waveform between fan control amp. terminal 3 and ground.

Fan speed	First	Second	Third	Fourth
Terminal 3 (Oscilloscope)					T1: Approx. 0.37 ms Duty ratio: Approx. 27%	T2: Approx. 0.29 ms Duty ratio: Approx. 42%	T3: Approx. 0.19 ms Duty ratio: Approx. 62%	T4: Approx. 0.04 ms Duty ratio: Approx. 92%

NOTE: Duty ratio = $\frac{\text{Approx. 0.5 ms} - Tx}{\text{Approx. 0.5 ms}} \times 100\ (\%)$

MJIA0103E

OK or NG

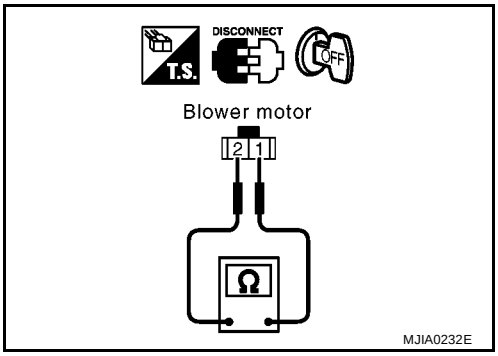
OK >> Replace the fan control amp.

NG >>
- Fan speed is stuck at speed 4: GO TO 11.
- Fan speed is stuck at speed 1: GO TO 12.

7. CHECK BLOWER MOTOR

1. Remove the blower motor.
2. Check continuity between blower motor terminal 1 and terminal 2.

Connector terminal		Continuity
Blower motor		Yes
1	2	



MJIA0232E

Does continuity exist?

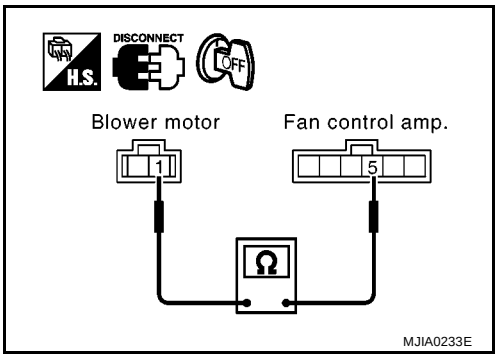
YES >> GO TO 8.

NO >> Replace the blower motor.

8. CHECK CIRCUIT CONTINUITY

1. Disconnect the blower motor and fan control amp. connectors.
2. Check continuity between the blower motor terminal 1 and fan control amp. terminal 5.

Connector terminal		Continuity
Blower motor	Fan control amp.	
1	5	Yes



MJIA0233E

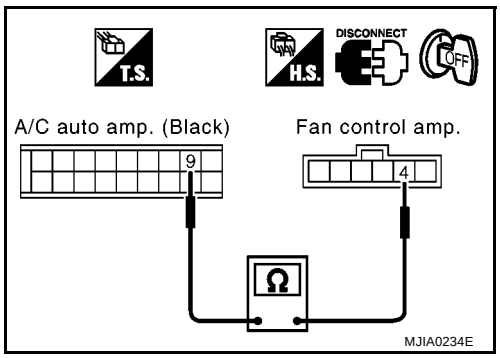
Does continuity exist?

YES >> End of trouble diagnosis

NO >> Repair harness or connector.

9. CHECK CIRCUIT CONTINUITY

1. Disconnect the fan control amp. and A/C auto amp. connectors.
2. Check continuity between fan control amp. terminal 4 and A/C auto amp. terminal 9.



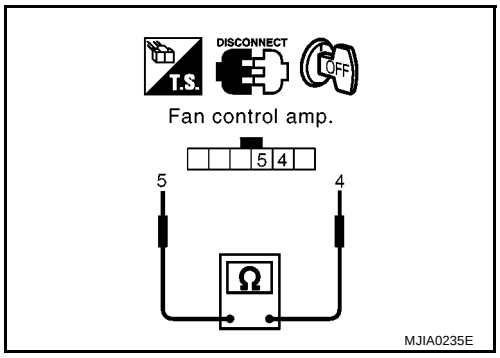
Connector terminal		Continuity
Fan control amp.	A/C auto amp.	
4	9	Yes

Does continuity exist?

YES >> GO TO 10.
NO >> Repair harness or connector.

10. CHECK FAN CONTROL AMP.

Check continuity between fan control amp. terminals 4 and 5.



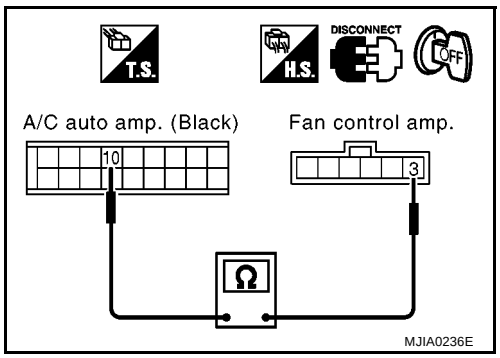
Connector terminal		Continuity
Fan control amp.		
4	5	Yes

Does continuity exist?

YES >> End of trouble diagnosis
NO >> Replace the fan control amp.

11. CHECK CIRCUIT CONTINUITY

1. Disconnect the fan control amp. and A/C auto amp. connectors.
2. Check continuity between fan control amp. terminal 3 and A/C auto amp. terminal 10.



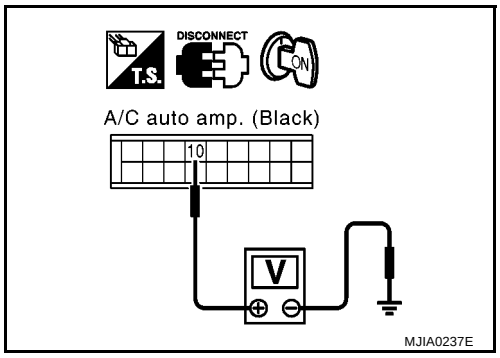
Connector terminal		Continuity
Fan control amp.	A/C auto amp.	
3	10	Yes

Does continuity exist?

YES >> Replace the fan control amp.
NO >> Repair harness or connector.

12. CHECK 2: FAN CONTROL AMP. CONTROL SIGNAL

1. Disconnect the A/C auto amp. connector.
2. Turn ignition switch ON, and check voltage between A/C auto amp. terminal 10 and ground.



Connector terminal		Condition	Voltage
A/C auto amp.	Ground	Fan speed : Speed 1 through Speed 3	Battery voltage
10			

OK or NG

OK >> Replace A/C auto amp.
NG >> Replace the fan control amp.

Intake Door Motor System

EJS004IC

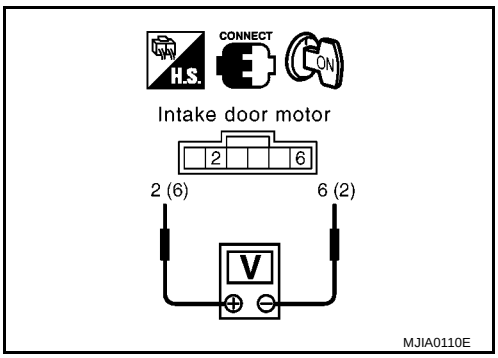
Symptom

- Unable to change the intake door.
- Intake door motor does not operate normally.

1. CHECK INTAKE DOOR MOTOR DRIVE POWER

Turn ignition switch ON, and check voltage between intake door motor terminals 2 and 6.

Connector terminal		Condition	Voltage
Intake door motor			
2(+)	6(-)	FRE→REC	Approx. 12V
6(+)	2(-)	REC→FRE	Approx. 12V



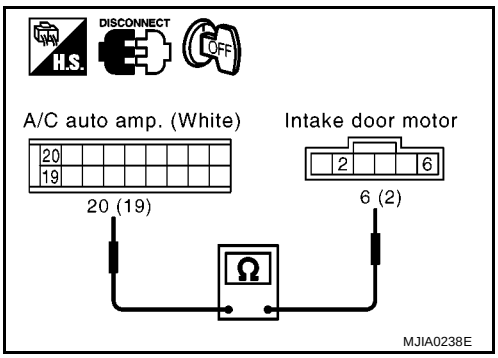
OK or NG

OK >> Replace intake door motor.
NG >> GO TO 2.

2. CHECK CIRCUIT CONTINUITY

Check continuity between A/C auto amp. terminal 19 and 20, and intake door motor terminals 2 and 6.

Connector terminal		Continuity
A/C auto amp.	Intake door motor	
20	6	Yes
19	2	



Does continuity exist?

YES >> Replace A/C auto amp.
NO >> Repair the harness or connector.

Mode Door Motor System

EJS004ID

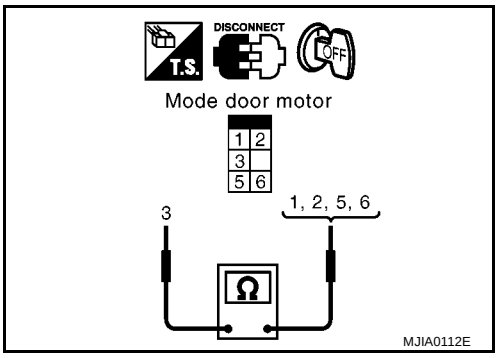
Symptom

- Unable to change air outlets to others.
- Mode door motor does not operate normally.

1. CHECK MODE DOOR MOTOR

1. Disconnect the mode door motor connector.
2. Check continuity between mode door motor terminals 3 and 1, 2, 5, 6.

Connector terminal		Continuity
Mode door motor		
3	1	Yes
	2	
	5	
	6	

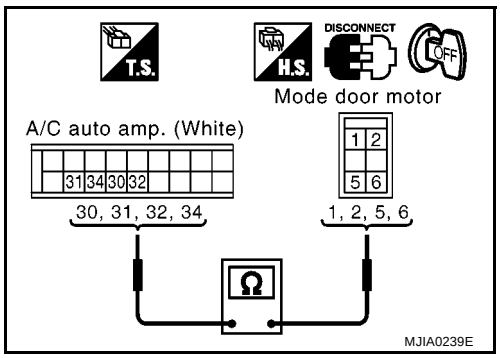


Does continuity exist?

YES >> GO TO 2.
NO >> Replace the mode door motor.

2. CHECK 1: CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity among the A/C auto amp. terminals 30, 31, 32, 34 and the mode door motor terminals 1, 2, 5, and 6.



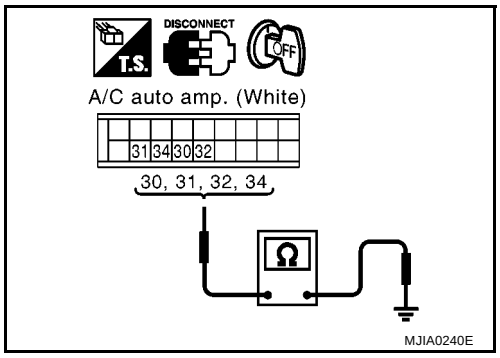
Connector terminal		Continuity
A/C auto amp.	Mode door door	
30	6	Yes
31	2	
32	5	
34	1	

Does continuity exist?

YES >> GO TO 3.
NO >> Repair harness or connector.

3. CHECK 2: CIRCUIT CONTINUITY

Check continuity between the ground and A/C auto amp. terminals 30, 31, 32, and 34.



Connector terminal		Continuity
A/C auto amp.	Ground	None
30		
31		
32		
34		

OK or NG

OK >> Replace A/C auto amp.
NG >> Repair the harness and connector.

Air Mix Door Motor System

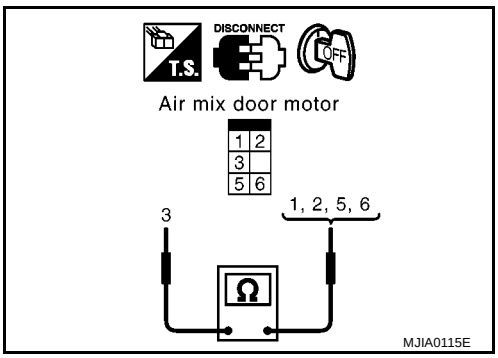
EJS004IE

Symptom:

- Temperature of blowing air does not change.
- Air mix door motor does not operate.

1. CHECK AIR MIX DOOR MOTOR

1. Disconnect the air mix door motor connector.
2. Check continuity between the air mix door motor terminals 3 and 1, 2, 5, 6.



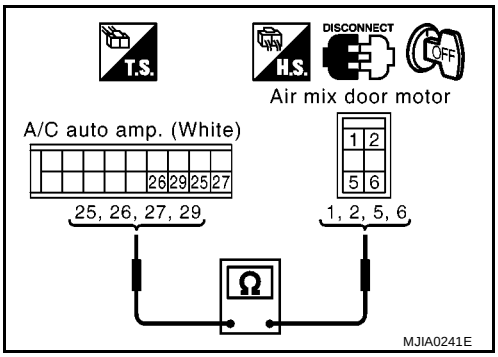
Connector terminal		Continuity
Air mix door motor		
3	1	Yes
	2	
	5	
	6	

Does continuity exist?

YES >> GO TO 2.
NO >> Replace the air mix door motor.

2. CHECK 1: CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. connector.
2. Check continuity between A/C auto amp. terminals 25, 26, 27, 29, and air mix door motor terminals 1, 2, 5, 6.



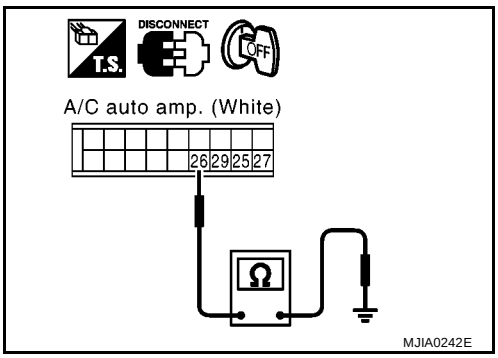
Connector terminal		Continuity
A/C auto amp.	Air mix door motor	
25	6	Yes
26	2	
27	5	
29	1	

Does continuity exist?

YES >> GO TO 3.
NO >> Repair harness or connector.

3. CHECK 2: CIRCUIT CONTINUITY

Check continuity between the ground and A/C auto amp. terminals 25, 26, 27, 29.



Connector terminal		Continuity
A/C auto amp.	Ground	None
25		
26		
27		
29		

OK or NG

OK >> Replace A/C auto amp.
NG >> Repair the harness and connector.

Magnetic Clutch System

EJS004IF

Symptom:

- The magnetic clutch does not operate when the A/C switch is turned to ON when the blower motor is operating.
- The magnetic clutch does not stop. Refer to PG-51, "Diagnosis of IPDM E/R Integrated Relay" .

1. CHECK INTAKE AIR TEMPERATURE SENSOR

Inspect the intake sensor using a self-diagnosis. Refer to ATC-33, "Self-Diagnosis Function" .

OK or NG

OK >> GO TO 2.
NG >> Repair or replace parts according to the inspection results.

2. CHECK WITH AUTO ACTIVE TEST MODE

Perform auto active test to make sure magnetic clutch operates. Refer to PG-42, "Auto Active Test" .

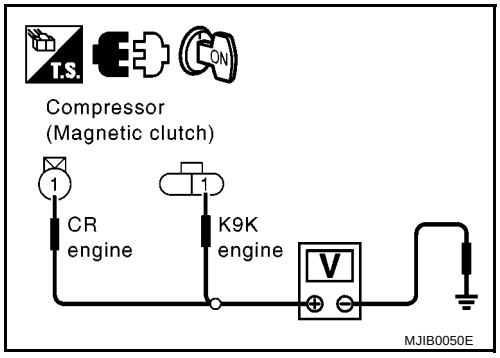
OK or NG

OK >> GO TO 8.
NG >> GO TO 3.

3. CHECK MAGNETIC CLUTCH VOLTAGE

Disconnect compressor connector, turn ignition switch ON, and check voltage between compressor terminal 1 and ground.

Connector terminal		Voltage
Compressor	Ground	Approx. 12V
1		



OK or NG

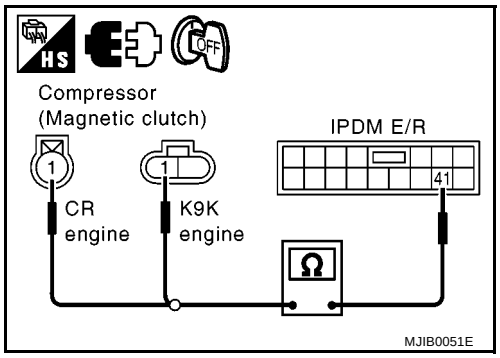
OK >>
- GO TO 5. (CR engine models)
- GO TO 6. (K9K engine models)

NG >> After Inspecting the Fuse (#41), GO TO 4. For Information Regarding the Fuse Block Layout, Refer to PG-4, "POWER SUPPLY ROUTING" .
- If fuse is OK, check for open circuit in harness.
- If a fuse is NG, determine the possible cause, repair circuit and replace blown fuse.

4. CHECK CIRCUIT CONTINUITY

1. Disconnect the IPDM E/R and compressor connectors.
2. Check continuity between IPDM E/R terminal 41 and compressor terminal 1.

Connector terminal		Continuity
IPDM E/R	Compressor	Yes
41	1	



Does continuity exist?

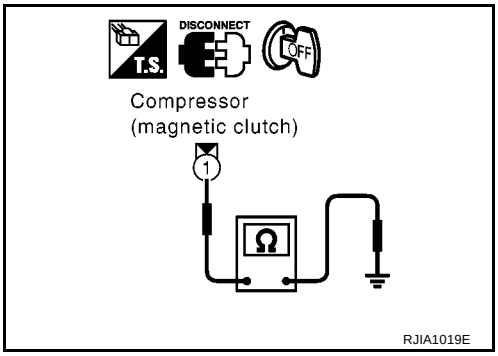
YES >>
- GO TO 5. (CR engine models)
- GO TO 7. (K9K engine models)

NO >> Repair harness or connector.

5. CHECK MAGNETIC CLUTCH

Disconnect compressor connector, and check continuity between terminals 1 and ground.

Connector terminal		Continuity
Compressor	Ground	Yes
1		



Does continuity exist?

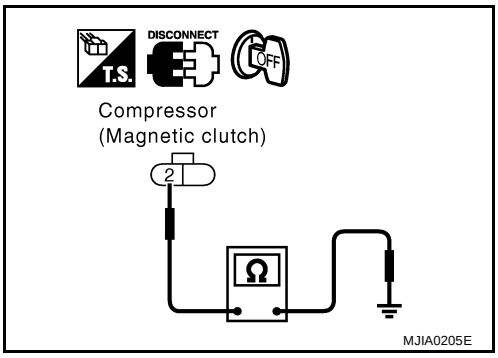
YES >> Apply battery voltage to magnetic clutch directly and check operation sound.
1. If inspection results are NG, replace magnetic clutch.
2. If magnetic clutch is normal, replace IPDM E/R.

NO >> Replace magnetic clutch.

6. CHECK GROUND CIRCUIT

Check continuity between compressor terminal 2 and ground.

Connector terminal		Continuity
Compressor	Ground	Yes
2		



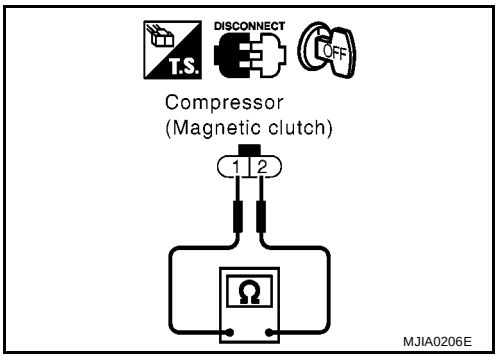
Does continuity exist?

Yes >> GO TO 7.
No >> Repair harness or connector.

7. CHECK MAGNETIC CLUTCH

Disconnect compressor connector, and check continuity between terminals 1 and 2.

Connector terminal		Continuity
Compressor		Yes
1	2	



Does continuity exist?

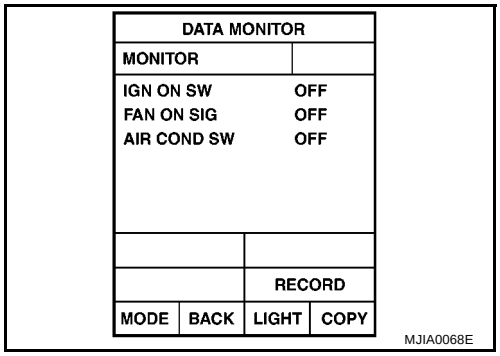
YES >> Apply battery voltage to magnetic clutch directly and check operation sound.
1. If inspection results are NG, replace magnetic clutch.
2. If magnetic clutch is normal, replace IPDM E/R.

NO >> Replace magnetic clutch.

8. CHECK BCM INPUT SIGNAL

With CONSULT-II

- Touch “BCM” → “AIR CONDITIONER” → “DATA MONITOR” → “ALL SIGNALS” and then check ON and OFF operation of compressor. Refer to BCS-22, "CONSULT-II Function (BCM)" .



Without CONSULT-II

- GO TO 10.

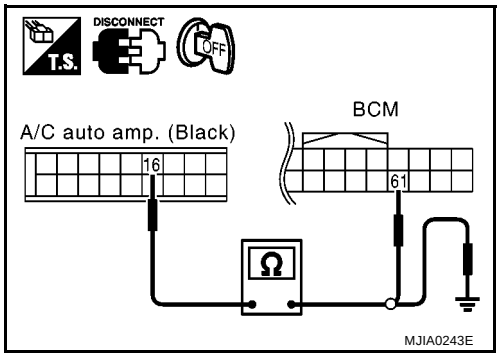
OK or NG

OK >> GO TO 12.
NG >> GO TO 9.

9. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. and BCM connectors.
2. Check continuity between A/C auto amp. terminal 16 and BCM terminal 61, and between A/C auto amp. terminal 16 and ground.

Connector terminal		Continuity
A/C auto amp.	BCM	
16	61	Yes
	Ground	None



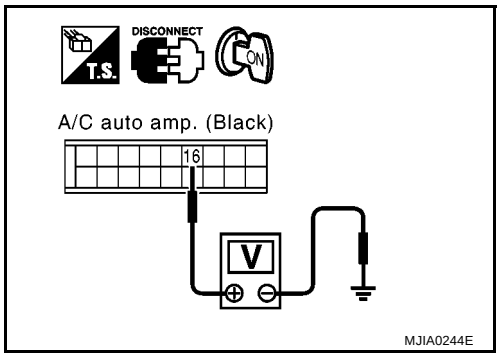
OK or NG

OK >> GO TO 10.
NG >> Repair harness or connector.

10. CHECK COMPRESSOR ON SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON, and check voltage between A/C auto amp. terminal 16 and ground.

Connector terminal		Voltage
A/C auto amp.	Ground	Approx. 5V
16		



OK or NG

OK >> GO TO 12.
NG >> Replace BCM.

11. CHECK REFRIGERANT PRESSURE SENSOR SIGNAL

With CONSULT-II

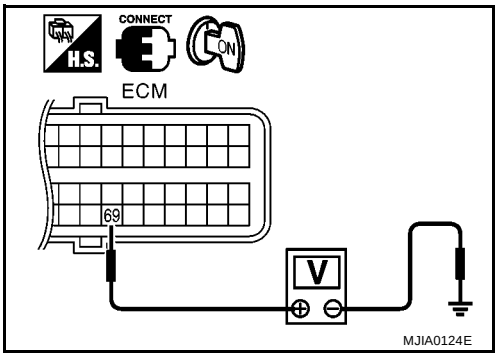
- Check refrigerant pressure sensor (touch “ENGINE” → “DATA MONITOR” → “SELECTION FROM MENU” → “AC PRESS SEN”) input voltage with data monitor.

AC PRESS SEN : Approx. 0.36 - 3.88V

Without CONSULT-II

- Check voltage between ECM terminal 69 and ground.

Connector terminal		Voltage
ECM	Ground	Approx. 0.36 - 3.88V
69		



OK or NG

OK >> GO TO 11.
NG >> GO TO EC-455, "REFRIGERANT PRESSURE SENSOR" (CR engine models) or EC-K9K-236, “Wiring Diagram — Refrigerant Pressure Sensor” (K9K engine models).

12. CHECK CAN COMMUNICATION CIRCUIT

Check the CAN communication between the BCM and ECM, and ECM and IPDM E/R. Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" , PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" .

OK or NG

OK >> Replace ECM.
NG >> Repair or replace parts based on the diagnosis results.

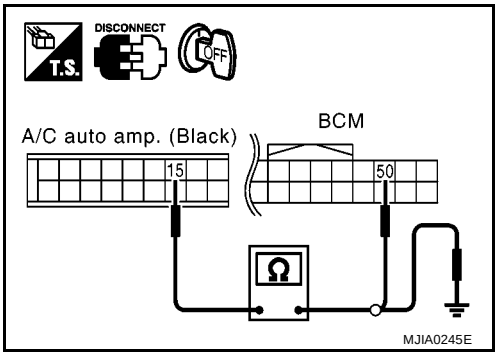
Check Fan ON Signal

EJS004IG

1. CHECK CIRCUIT CONTINUITY

1. Disconnect the A/C auto amp. and BCM connectors.
2. Check continuity between A/C auto amp. terminal 15 and BCM terminal 50, and between A/C auto amp. terminal 15 and ground.

Connector terminal		Continuity
A/C auto amp.	BCM	
15	50	Yes
	Ground	None



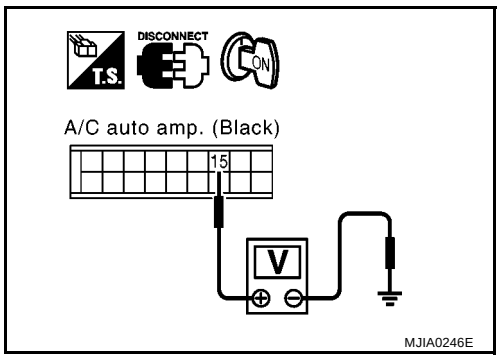
OK or NG

OK >> GO TO 2.
NG >> Repair harness or connector.

2. CHECK FAN ON SIGNAL

1. Disconnect BCM connector.
2. Turn ignition switch ON, and check voltage between A/C auto amp. terminal 15 and ground.

Connector terminal		Voltage
A/C auto amp.	Ground	Approx. 12V
15		



OK or NG

OK >> Replace A/C auto amp.
NG >> Replace BCM.

Insufficient Cooling

EJS004IH

CHECK FUNCTION (FOR CR ENGINE)

Inspection Procedure

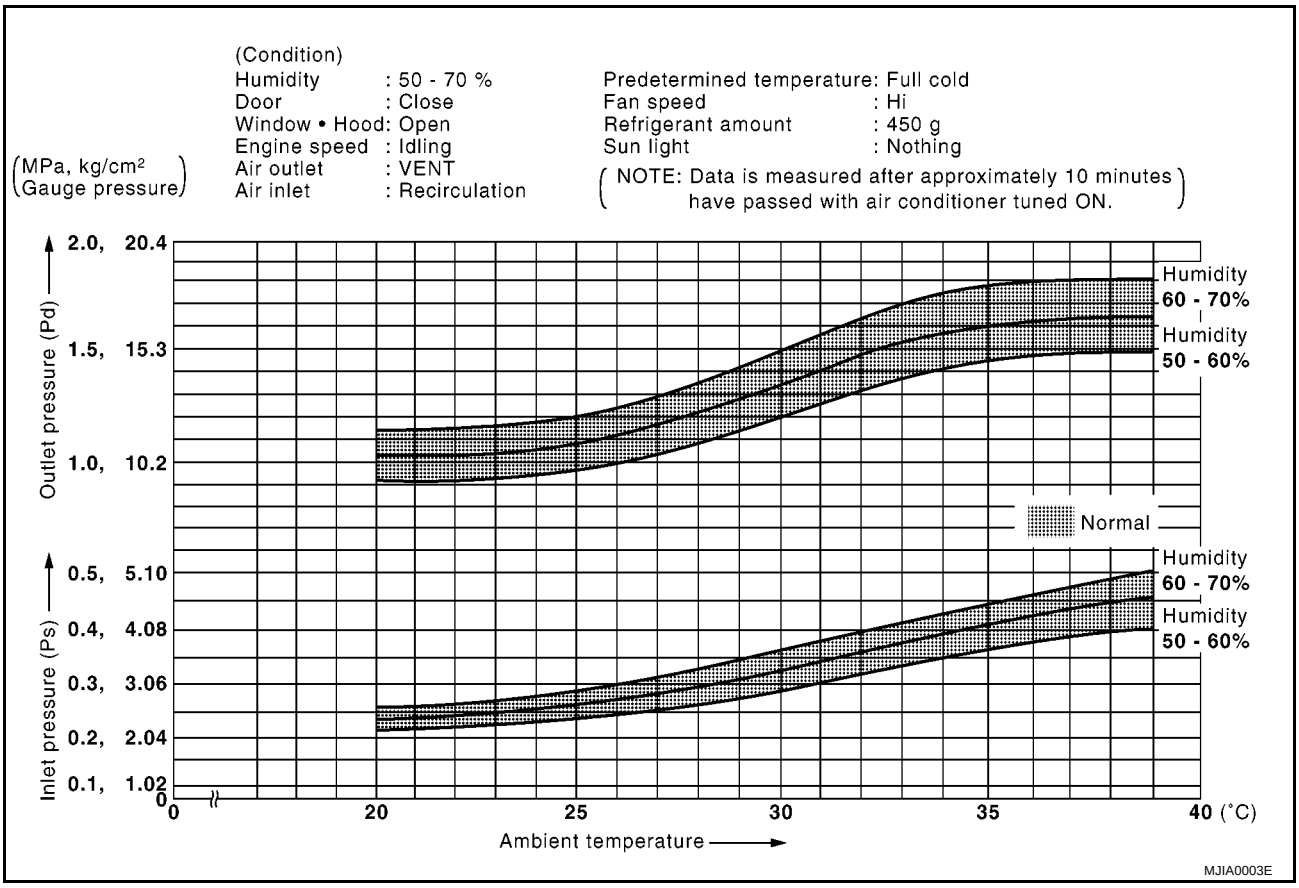
1. Connect manifold gauge to service valve of air conditioner system.
2. Attach a psychrometer to blower unit air inlet (under glove box). Attach a dry-bulb thermometer to right-center of ventilator grille.
3. Start and warm up the engine.
4. After warming-up engine, make sure engine speed is the specified idle speed.
5. Operate compressor. Adjust controller to match conditions below.

Fan speed : HI
Air inlet : Recirculation
Air outlet : Ventilator (VENT)
Predetermined temperature : FULL COLD

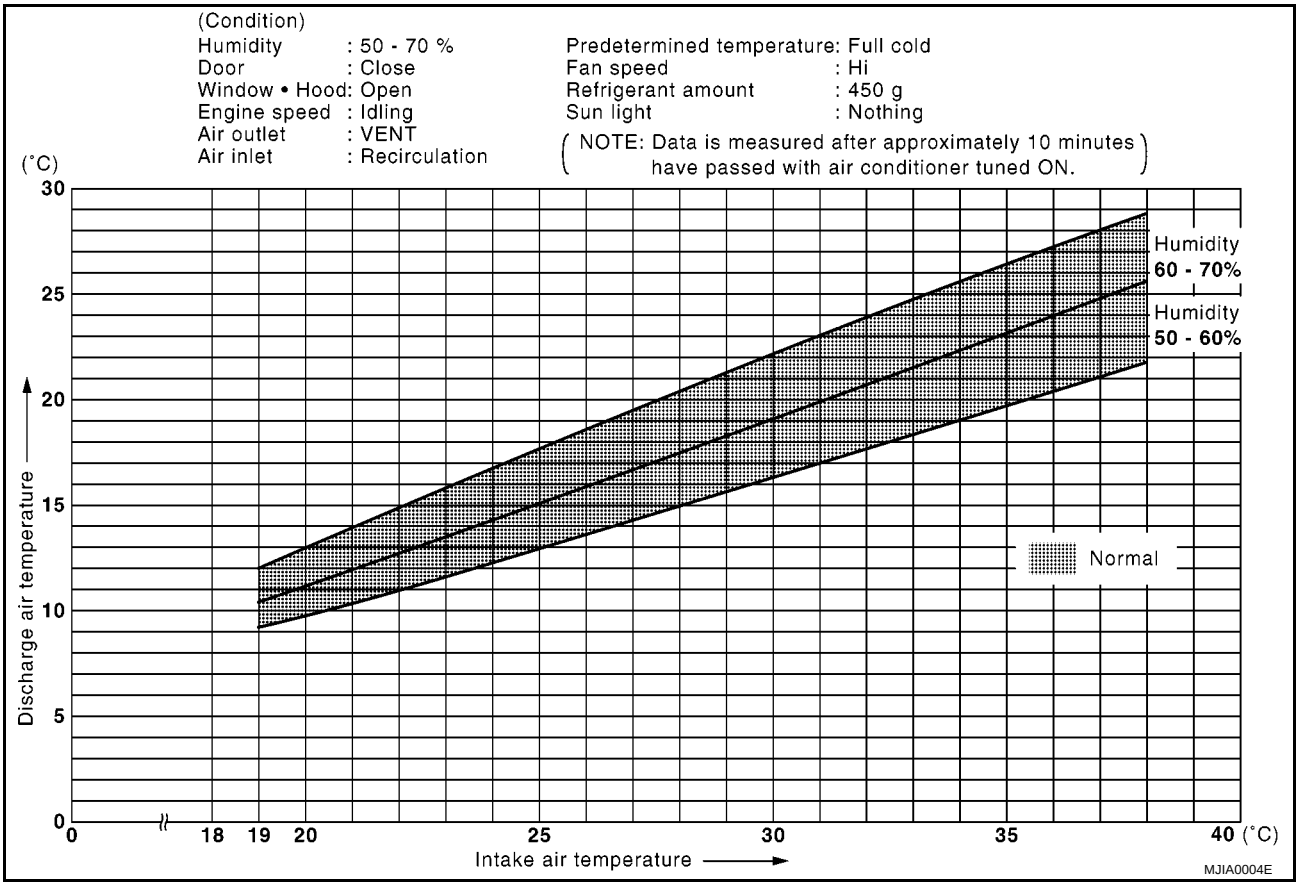
6. Fully open the hood and door windows, and close all the doors.
7. Keep this state until the air conditioner system becomes stable (after approximately 10 minutes).
8. Keep the engine speed at idle.
9. Measure the temperature and humidity at the air inlets, temperature at the air outlets, and the high-pressure and low-pressure of the air conditioner system, and compare them to “Ambient temperature - Pressure characteristic”, “Intake air temperature - Discharge air temperature characteristic” for estimating.

Performance Curve

Ambient temperature - Pressure characteristic



Intake air temperature - Discharge air temperature characteristics



DIAGNOSIS BY PRESSURE GAUGE

Connect a manifold gauge to service valve of air conditioner system, and determine faulty parts and possible causes by pressure in the air conditioning cycle, then troubleshoot.

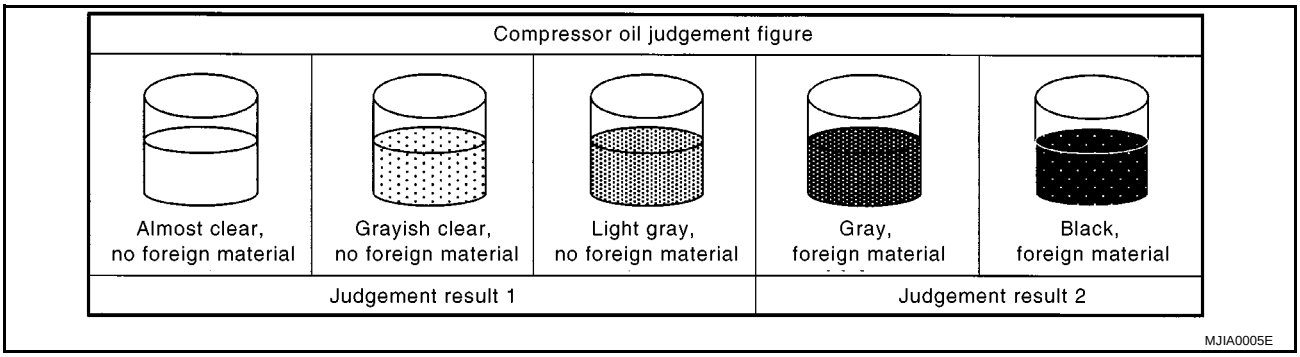
Symptom	Cycle status	Possible causes	Action
High-pressure and low-pressure are both high.	They return to normal when condenser is cooled with water.	Insufficient cooling of condenser ● Operation malfunction of radiator and condenser fan ● Improper installation of air guide ● Clogged condenser or dirty fins	● Repair or replace as necessary ● Clean and repair condenser fins.
		Excessively charged refrigerant	Discharge refrigerant completely, evacuate again, and recharge with proper amount of refrigerant.
	When the compressor has been stopped, pressure drops quickly by approximately 2 kg/cm^2 , and then decreases gradually.	Mixed air in the air conditoner system	Discharge refrigerant completely, evacuate again, and recharge with proper amount of refrigerant.
	Temperature at low-pressure pipe is lower than that at evaporator outlet, or low-pressure pipe becomes frosted.	Expansion valve opened too far (excessive refrigerant flow).	Replace expansion valve.
High-pressure is extremely high.	Temperature differences occur at points where high-pressure pipe is crushed or clogged.	Crushed points or clogs in high-pressure pipe between compressor and condenser	Repair or replace as necessary
High-pressure and low-pressure are both low (low-pressure occasionally becomes minus).	Evaporator outlet is not cold. Frost forms on evaporator inlet.	Expansion valve is blocked. ● Gas leakage around sensor unit. ● Clogged by foreign material	Remove foreign materials from expansion valve or replace expansion valve.
	Temperature differences occur at the top/bottom outlet and inlet of the liquid tank or the liquid tank becomes frosted.	Liquid tank inner malfunction	Replace liquid tank
	Evaporator becomes frosted.	Evaporator fins are clogged or crushed.	Repair or replace.
		Insufficient airflow	ATC-47, "Blower Motor System"
	Some temperature difference occurs between high-pressure and low-pressure pipes of the compressor.	Insufficient refrigerant amount	● Check for refrigerant leaks. ● Discharge refrigerant completely, evacuate again, and recharge with proper amount of refrigerant.
Occasionally high-pressure becomes low, and low-pressure becomes minus.	Sometimes the evaporator outlet side does not become cold. Sometimes frost forms at the evaporator inlet.	Water mixed in cooler system. (Blockage caused by moisture freezing at the expansion valve.)	Discharge refrigerant completely, evacuate again to remove all moisture, and recharge with proper amount of refrigerant. Be certain to replace liquid tank.
High-pressure is low, and low-pressure is high.	The pressure equalizes soon after the compressor is stopped. There is no temperature difference between the compressor high-pressure piping and low-pressure piping.	Compressor malfunction (improper compression) ● Damage or breakage of valve ● Gasket worn or damaged	Replace compressor.

DIAGNOSIS OF COMPRESSOR

If there is a compressor unit malfunction (internal noise, insufficient cooling), follow table below and perform trouble diagnosis.

Symptom	Inspection Method	Checklist	Result	Action
Noise from compressor unit when A/C is ON. (rattling or rolling sound)	Air conditioner system internal pressure	Check with a manifold gauge.	Both high- and low-pressure sides are high. (Refer to Note 2)	Recharge with proper amount of refrigerant.
			High/low-pressures hunt. (Refer to Note 2)	Replace compressor only.
	Check compressor oil condition.	Sample compressor oil and judge.	Refer to the criteria shown in compressor lubricant.	Diagnostic result 1: Replace compressor only. Judgement results 2: Compressor and liquid tank replacement
Insufficient cooling (Refer to Note 1)	Compressor body	Check rotation of compressor. If seized or stuck, sample compressor oil and judge.		
	Air conditioner system internal pressure	Check with a manifold gauge. If the difference between high-pressure and low-pressure is small or if they are almost the same, sample compressor oil and judge.		
Outlet air temperature rises temporarily while driving. (Refer to Note 2)	—	—	—	Replace compressor only.

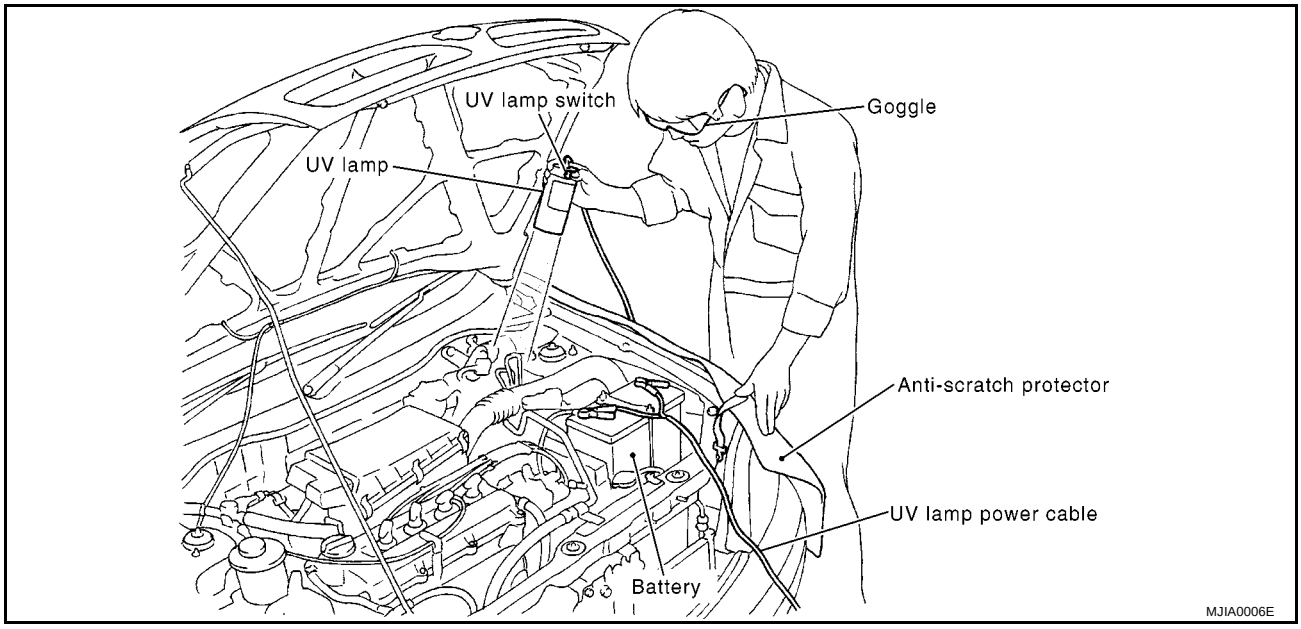
Note 1: First conduct inspection according to trouble diagnosis for each malfunction. Refer to ATC-19, "DIAGNOSIS CHART BY SYMPTOM" .
Note 2: Applicable to variable capacity compressor only.



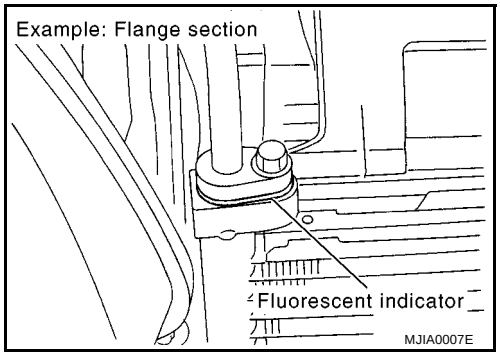
Detecting Leaks With Fluorescent Indicator

EJS004II

METHOD FOR DETECTING REFRIGERANT LEAKAGE.



1. Wear goggles provided with the fluorescent detector.
2. Connect the UV lamp power cable to the negative battery terminal.
3. Press UV lamp switch. Check for air conditioner system leaks. (Light green fluorescent will appear at the leak.)
4. Repair or replace parts with refrigerant leaks and wipe off the fluorescent indicator.



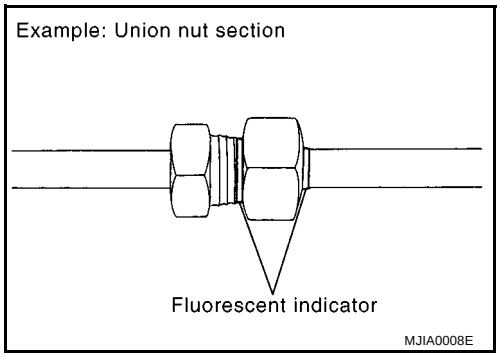
CAUTION:

Completely wipe off all fluorescent indicators. Use a cotton swab or something similar to remove indicator from gaps between parts, screw threads, and similar places.

5. After finishing work, use a UV lamp to make sure no fluorescent indicator remains.

CAUTION:

- **Do not look directly into the UV lamp light source.**
- **For continuous operating time of UV lamp and other details, follow the Operation Manual when performing the operation.**
- **Dust, dirt, and adhesive of packing materials used in condenser, evaporator, and other locations may fluoresce. Be careful to avoid misidentifying leaks.**



Inspection Procedure

- Shine UV lamp on pipe joints from different angles to make sure there are no leaks.
- Use a cotton swab or something similar to wipe water off of drain hoses. By shining UV lamp, a check can also be made to detect leaks from evaporator.
- Use a mirror to check for refrigerant leaks in difficult to see areas.

CONTROL UNIT

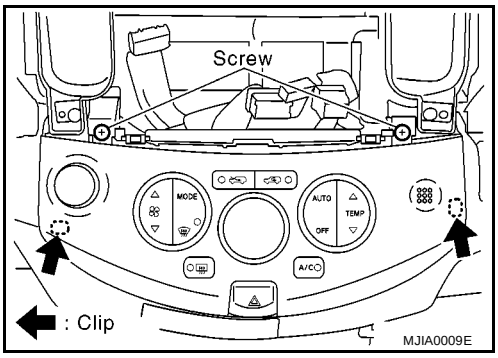
PFP:27500

Removal and Installation

EJS004IJ

REMOVAL

1. Remove cluster lid “C”. Refer to IP-7, "K. Cluster Lid C" .
2. Remove two screws and two clip, then remove controller.

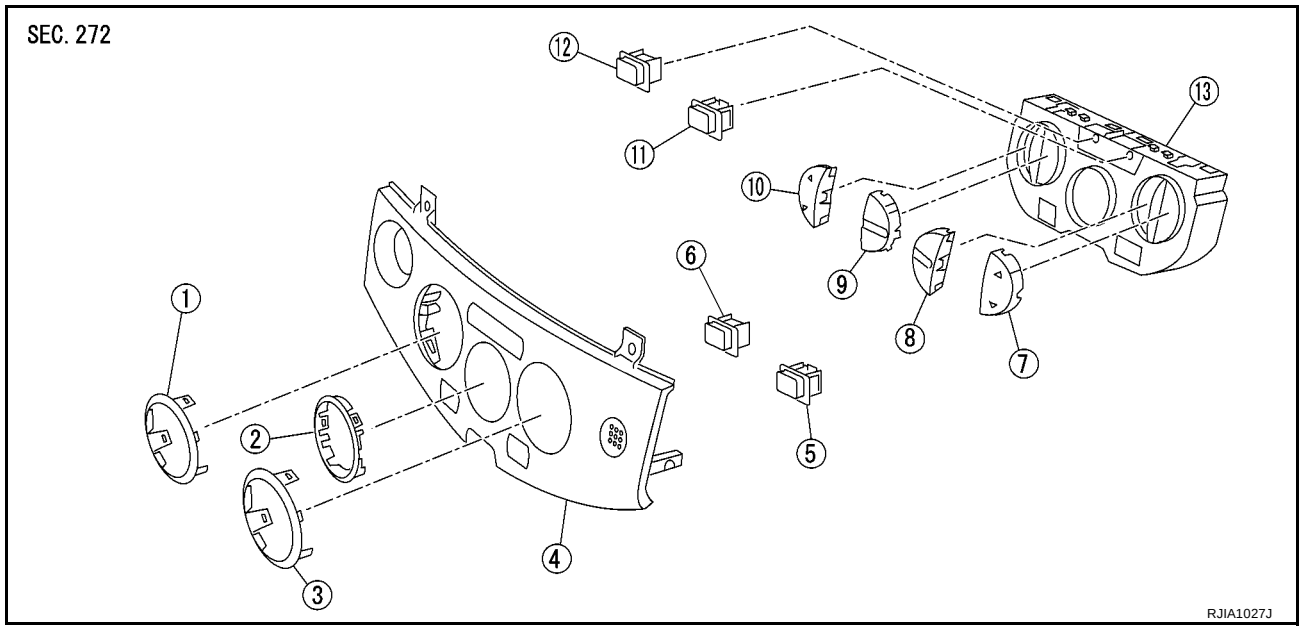


INSTALLATION

Install in the reverse order of removal.

Disassembly and Assembly

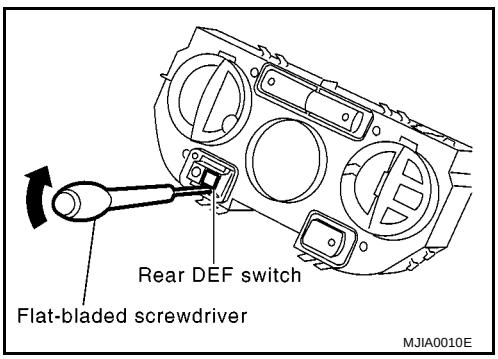
EJS004IK



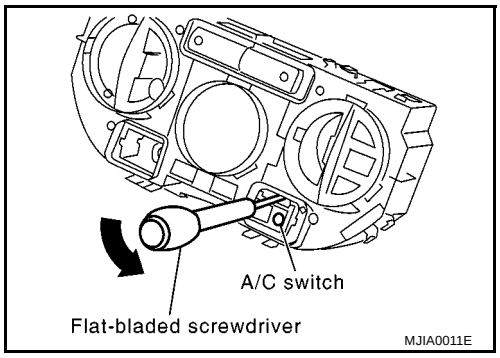
1. MODE ring
2. LCD ring
3. TEMP ring
4. Air conditioner finisher
5. A/C switch
6. Rear DEF switch
7. TEMP switch
8. AUTO switch
9. MODE switch
10. FAN switch
11. REC switch
12. FRE switch
13. Controller assembly

NOTE:

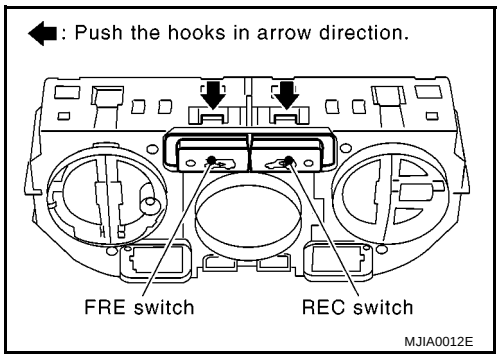
After removing the rear DEF switch, use a flat bladed screwdriver to push the hooks in the arrow direction, and then remove the rear DEF switch.



NOTE:
After removing the A/C switch, use a flat bladed screwdriver to push the hooks in the arrow direction, and then remove the A/C switch.



NOTE:
Use a flat bladed screwdriver to push the hooks in the arrow direction, and then remove the FRE and REC switch.



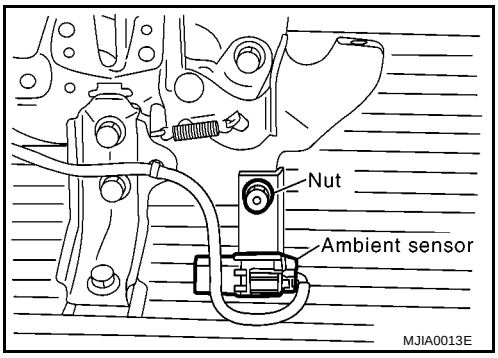
AMBIENT SENSOR

PFP:27722

Removal and Installation

EJS004IL

1. Remove the front grille (LH). Refer to EI-8, "FRONT GRILLE" .
2. Remove the nut and then remove the ambient sensor.



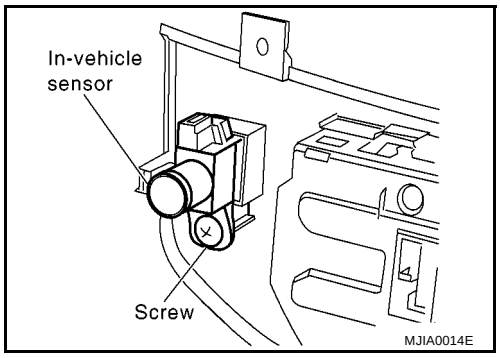
IN-VEHICLE SENSOR

PFP:27720

Removal and Installation

EJS004IM

1. Remove the controller. Refer to ATC-63, "CONTROL UNIT" .
2. Remove the screw and the remove the in-vehicle sensor.



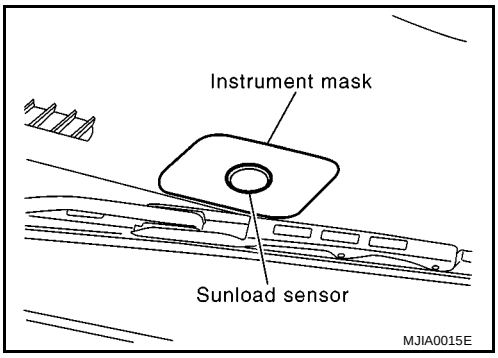
SUNLOAD SENSOR

PFP:27721

Removal and Installation

EJS004IN

1. Remove the instrument mask. Refer to IP-4, "Component Parts Location" .
2. Remove the sunload sensor.



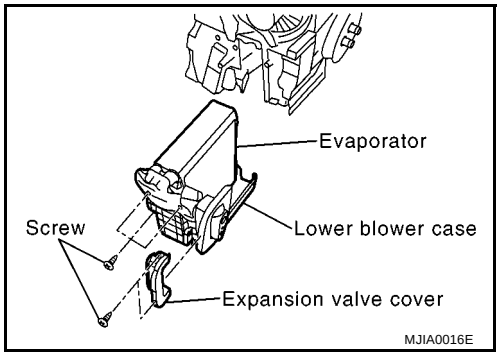
INTAKE SENSOR

PFP:27723

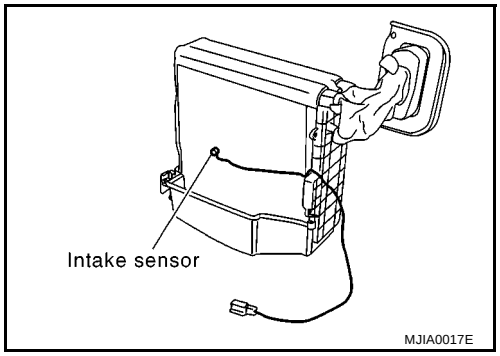
Removal

EJS004IO

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove the A/C unit. Refer to ATC-69, "A/C UNIT ASSEMBLY" .
3. Remove the air conditioner filter, mode door actuator, and foot duct (RH). Refer to ATC-75, "AIR CONDITIONER FILTER" , ATC-77, "MODE DOOR MOTOR" , ATC-83, "FOOT DUCT" .
4. Remove the lower blower case and expansion valve cover.



5. Slide the evaporator and door blower case downward, and remove the intake sensor.



Installation

EJS004IP

CAUTION:

- **Replace the low-pressure and high-pressure flexible hoses and high-pressure pipe O-rings with new ones. Apply compressor lubricant to them during installation.**
- **When replacing the intake air temperature sensor, install the intake sensor thermistor in the same position as the removed intake sensor.**
- **When removing and installing the intake sensor, do not rotate the thermistor insertion part.**
- **After charging with refrigerant, check for refrigerant leaks.**
- **After installing actuator, reset zero position by following Self-Diagnosis Step 3. Refer to ATC-33, "Self-Diagnosis Function" .**

Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.

Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6kg-m, 26 - 52 in-lb)

A/C UNIT ASSEMBLY

PFP:27210

Removal and Installation

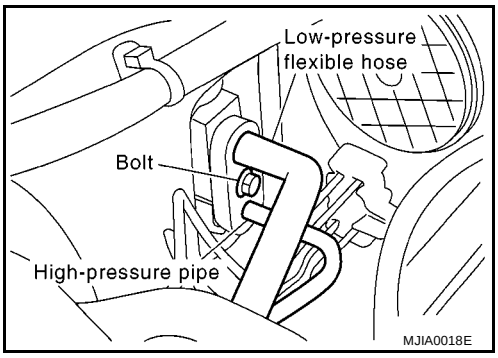
EJS004IQ

REMOVAL

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Drain engine coolant.
3. Disconnect the low-pressure flexible hose and high-pressure pipe from the evaporator.

CAUTION:

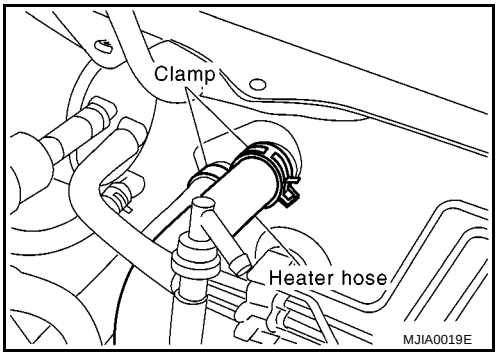
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



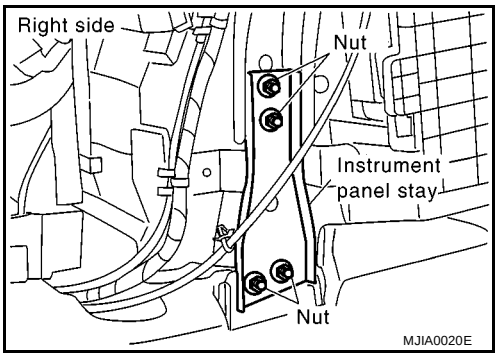
4. Pull out the heater hoses from the heater core.

CAUTION:

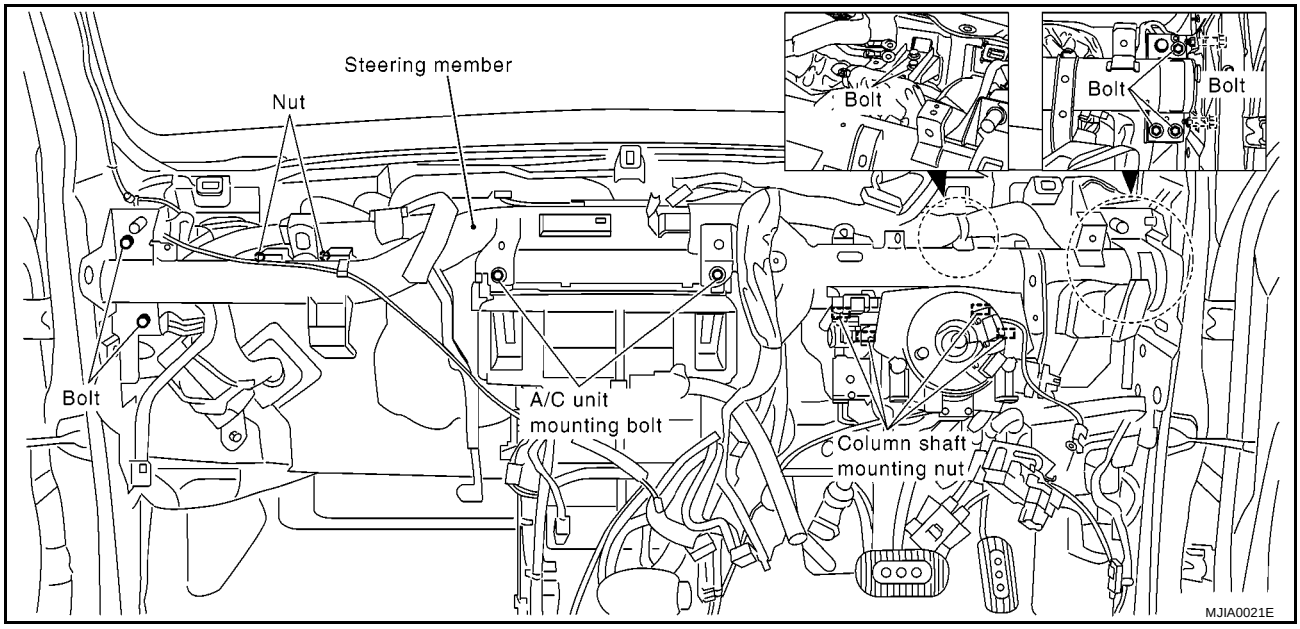
- **Some coolant may spill when heater hoses are disconnected.**
- **Close off the coolant inlet and outlet on the heater core (2 locations) with shop cloths.**



5. Remove instrument panel. Refer to IP-5, "Removal and Installation" .
6. Remove the vehicle harness clips and then remove the instrument panel stay.



NOTE:
This illustration is for RHD model. The layout for LHD model is symmetrically opposite.



7. Remove the ventilator duct mounting screws and clips.
8. Remove the two A/C unit mounting bolts, nine steering member mounting bolts, four column shaft mounting bolts, and the harness clips.
9. Remove the BCM. Refer to BCS-3, "BCM (BODY CONTROL MODULE)" .
10. Remove the steering member, and then remove the A/C unit.

INSTALLATION

CAUTION:

- **Replace all O-rings on the pipes with new ones. Apply a coat of compressor lubricant prior to installation.**
- **After charging with refrigerant, check for refrigerant leaks.**

1. Install the A/C unit.

   CAUTION:
   Confirm that the A/C unit drain and drain hose positions match up.

   
   A/C unit mounting bolt.
   Tightening torque : 5.98 - 7.65 N·m (0.61 - 0.78 kg-m, 53 - 67 in-lb)

2. Perform removal steps 3 through 10 in reverse order.

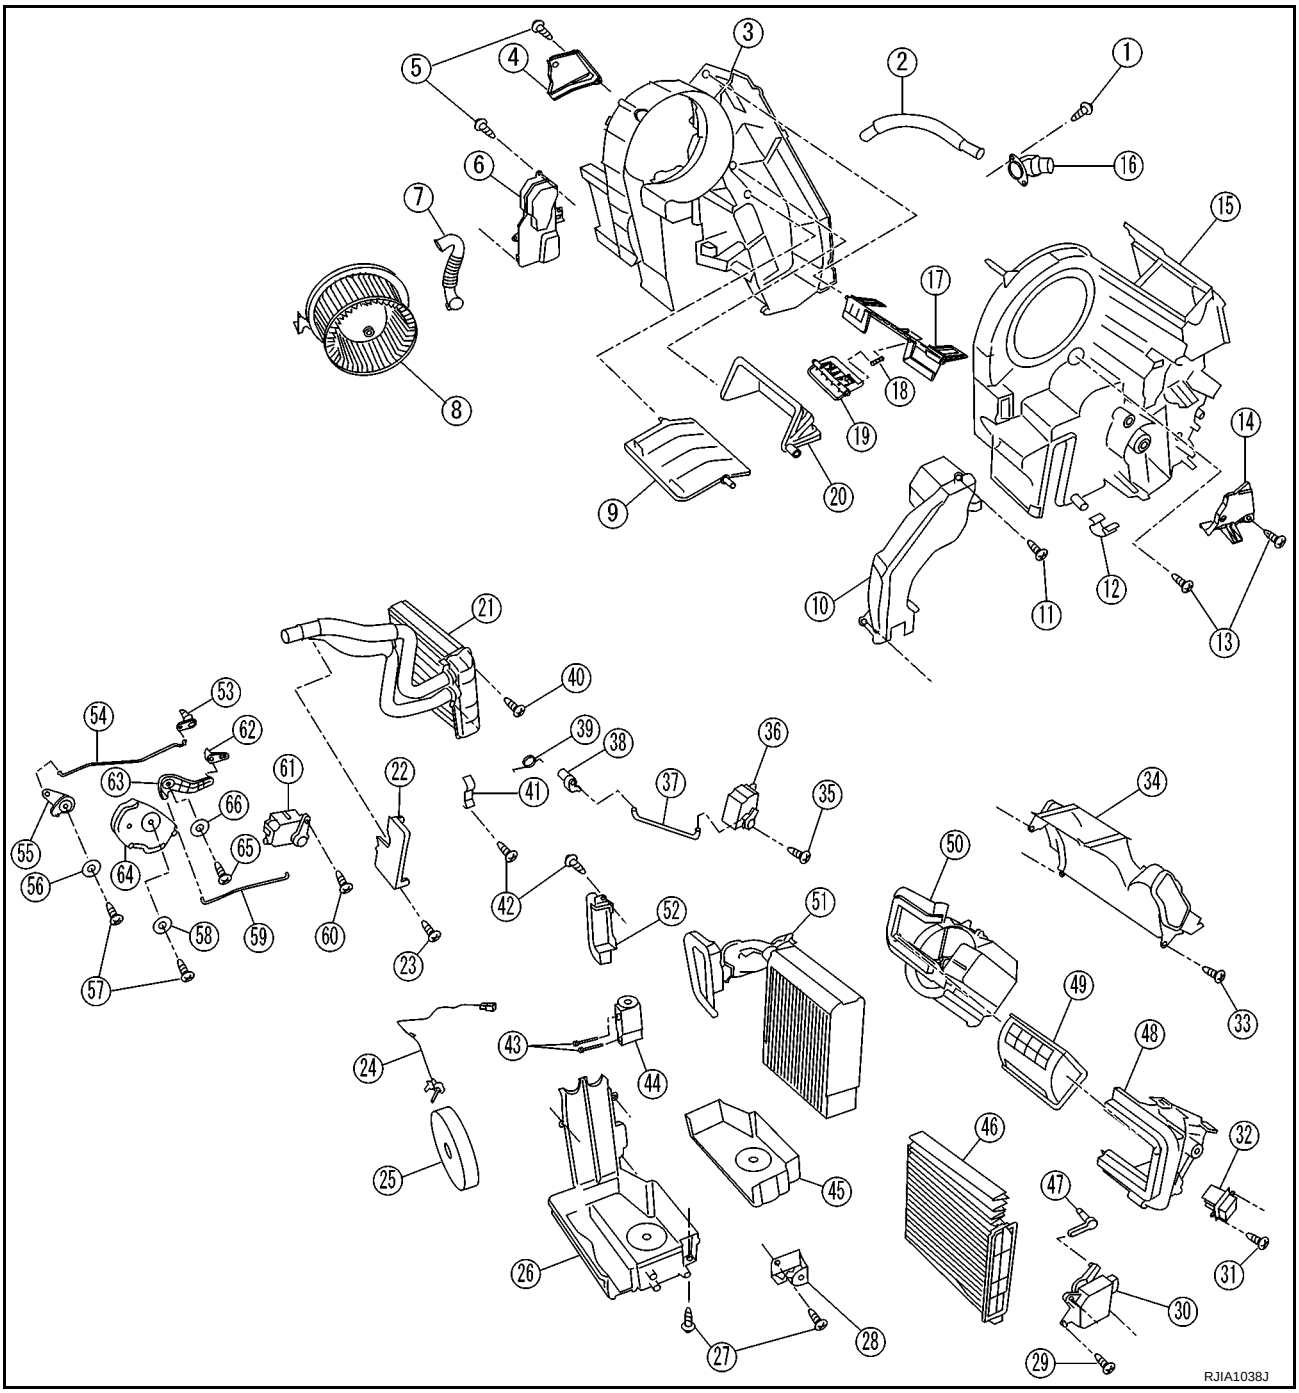
   Steering member mounting nut and bolt
   Tightening torque :11 - 13 N·m (1.1 - 1.4 kg-m, 8.2 - 9.5 ft-lb)

   Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.
   Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6kg-m, 26 - 52 in-lb)

3. Fill engine coolant.
4. Charge refrigerant using refrigerant recovery unit (for HFC134a).

Disassembly and Assembly

EJS004IR



1. Screw
2. Aspirator duct
3. Blower case (RH)
4. Cover (RH)
5. Screw
6. Foot duct (RH)
7. Coolant hose
8. Blower motor

52. Expansion valve cover	53. Vent DEF lever	54. Vent DEF rod
55. Vent DEF link	56. Washer	57. Screw
58. Washer	59. Mode door rod	60. Screw
61. Mode door motor	62. Foot lever	63. Foot link
64. Main link	65. Screw	66. Washer

CAUTION:

After installing actuator, reset zero position by following Self-Diagnosis Step 3. Refer to ATC-33, "Self-Diagnosis Function" .

HEATER CORE

PFP:27140

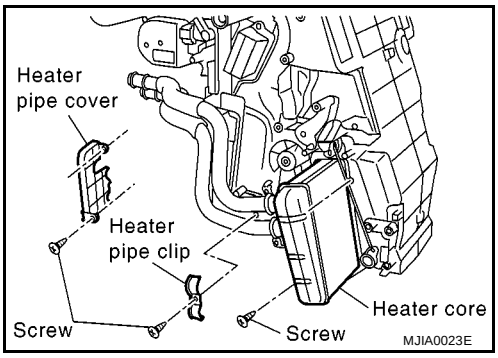
Removal and Installation

EJS004IS

REMOVAL

1. Remove the A/C unit. Refer to ATC-69, "A/C UNIT ASSEMBLY" .
2. Remove the foot duct (LH), two screws, and heater pipe cover.
3. Remove the mode door actuator, main link, and vent DEF link.

   CAUTION:
   After installing actuator, reset zero position by following Self-Diagnosis Step 3. Refer to ATC-33, "Self-Diagnosis Function" .
4. Remove the heater pipe clip, and then pull out heater core from the A/C unit.



INSTALLATION

Install in the reverse order of removal.

BLOWER MOTOR

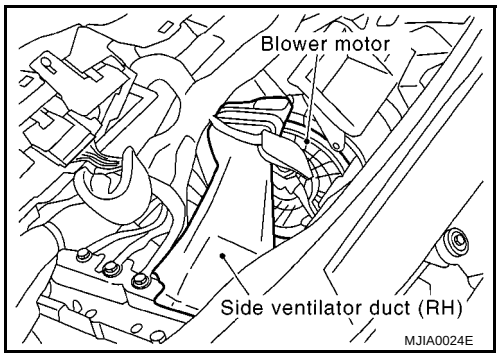
PFP:27226

Removal and Installation

EJS004IT

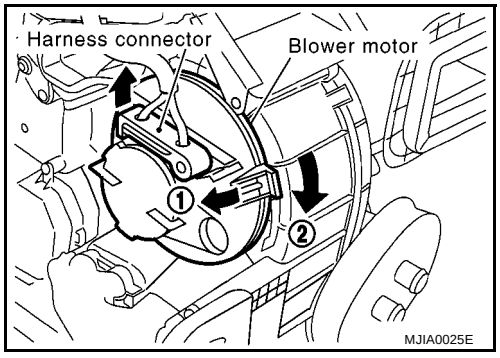
REMOVAL

1. Remove instrument panel. Refer to IP-5, "Removal and Installation" .
2. Remove the side ventilator duct (RH). Refer to ATC-82, "SIDE VENTILATOR DUCT" .



3. Disconnect the harness connector, and remove the blower motor.

CAUTION:
When the blower fan and blower motor are assembled, the balance is adjusted, so do not replace the individual parts.



INSTALLATION

Install in the reverse order of removal.

CAUTION:
Correctly install the blower motor flange holding hooks in the air conditioner unit.

AIR CONDITIONER FILTER

PFP:27277

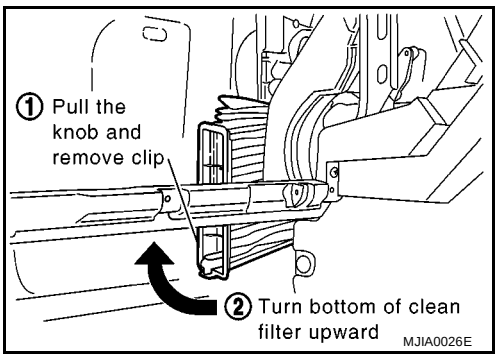
Removal, Replacement and Installation

EJS004IU

REMOVAL

NOTE:
Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Compress the air conditioner filter downward while sliding it to the out side of the vehicle.
3. Turn the bottom of the air conditioner filter upward, and then remove it.

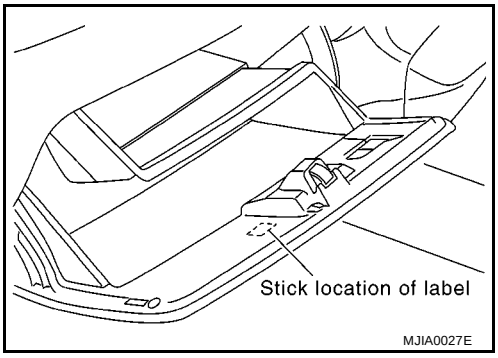


REPLACEMENT

NOTE:
Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

Air conditioner filter Replacement interval : Once a year or every 12,000 km

Fill in the necessary information on the label, and stick it on the inside of the glove box as shown in the figure.



INSTALLATION

Install in the reverse order of removal.

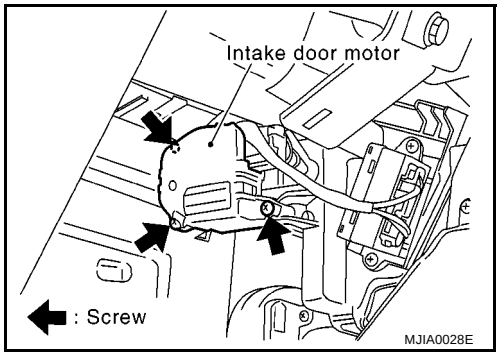
INTAKE DOOR MOTOR

PFP:27730

Removal and Installation

EJS004IV

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the three screws and then remove the intake door motor.



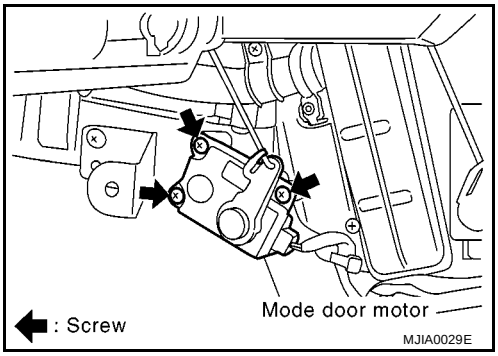
MODE DOOR MOTOR

PFP:27731

Removal and Installation

EJS004IW

1. Remove the instrument panel stay cover. Refer to IP-8, "M. Instrument Panel Stay Cover" .
2. Remove the three screws and then remove the mode door motor.



CAUTION:

After installing actuator, reset zero position by following Self-Diagnosis Step 3. Refer to ATC-33, "Self-Diagnosis Function" .

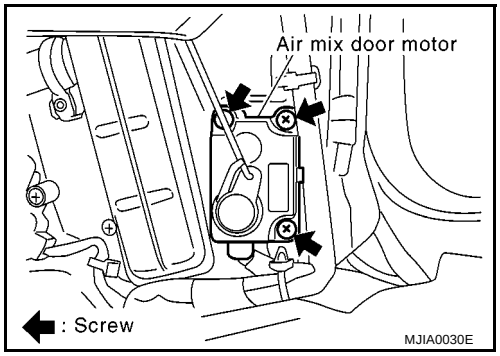
AIR MIX DOOR MOTOR

PFP:27732

Removal and Installation

EJS004IX

1. Remove the instrument panel stay cover. Refer to IP-8, "M. Instrument Panel Stay Cover" .
2. Remove the three screws and then remove the air mix door actuator.



CAUTION:

After installing actuator, reset zero position by following Self-Diagnosis Step 3. Refer to ATC-33, "Self-Diagnosis Function" .

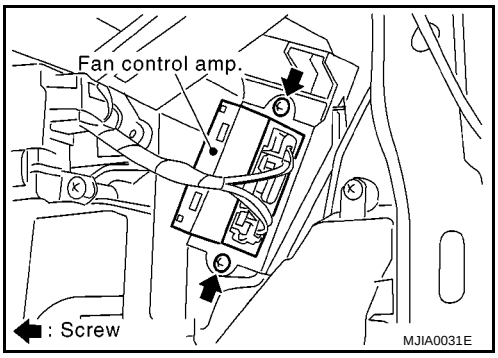
FAN CONTROL AMPLIFIER

PFP:27761

Removal and Installation

EJS004IY

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the two screws and then remove the fan control amp.



DUCTS AND GRILLES

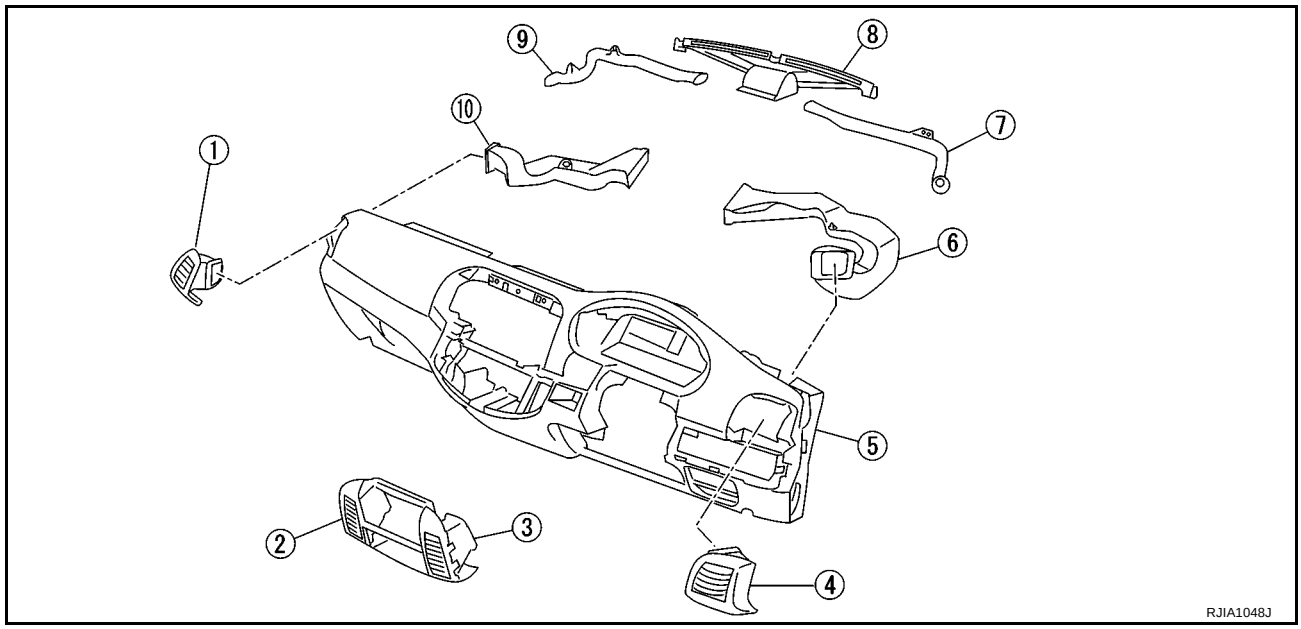
PFP:27860

Removal and Installation

EJS004IZ

COMPONENT PARTS LOCATION

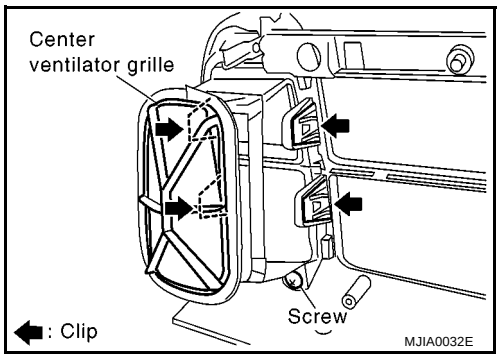
NOTE:
Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.



1. Side ventilator grille (passenger side)
2. Central ventilator grille (passenger side)
3. Central ventilator grille (driver side)
4. Side ventilator grille (driver side)
5. Instrument panel
6. Side ventilator duct (driver side)
7. Side defroster duct (driver side)
8. Defroster nozzle
9. Side defroster duct (passenger side)
10. Side ventilator duct (passenger side)

CENTRAL VENTILATOR GRILLE

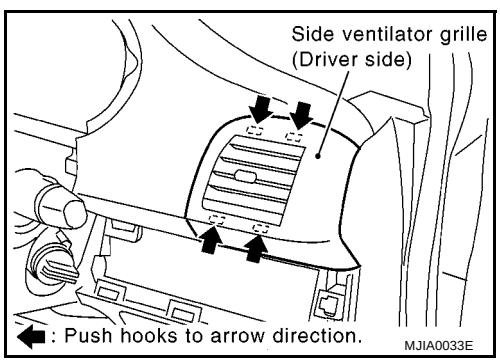
1. Remove cluster lid “C”. Refer to IP-7, "K. Cluster Lid C" .
2. Remove the audio. Refer to AV-3, "AUDIO" , AV-17, "NAVIGATION SYSTEM" .
3. Remove the center ventilator grille.



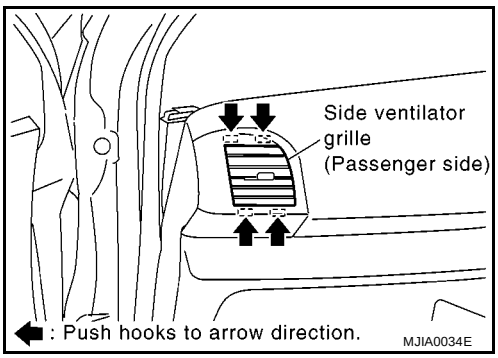
SIDE VENTILATOR GRILLE

NOTE:
Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the upper instrument panel. Refer to IP-6, "B. Upper Instrument Panel" .
2. Remove the switch panel finisher. Refer to IP-6, "E. Switch Panel Finisher" .
3. Remove the side ventilator grille (driver side) hooks from the back side of the instrument panel, and then remove the side ventilator grille (driver side).
4. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .



5. Remove the side ventilator grille (passenger side) hooks from the back side of the instrument panel, and then remove the side ventilator grille (passenger side).

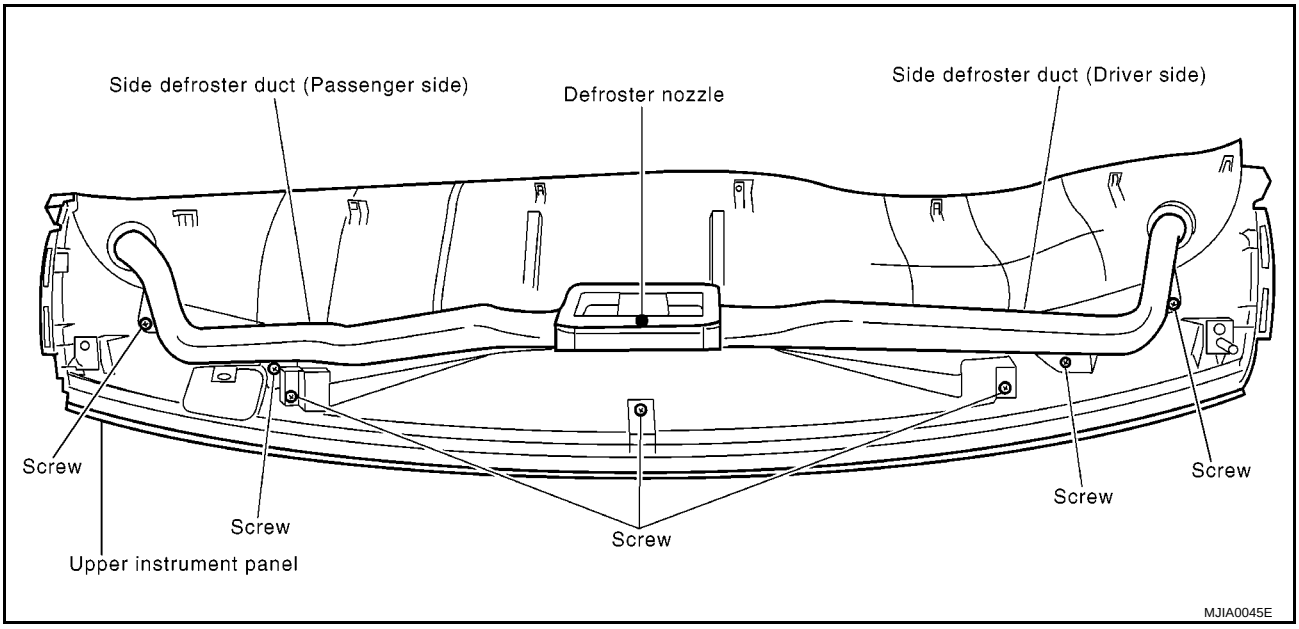


DEFROSTER NOZZLE AND DUCT

NOTE:

Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the upper instrument panel. Refer to IP-6, "B. Upper Instrument Panel" .



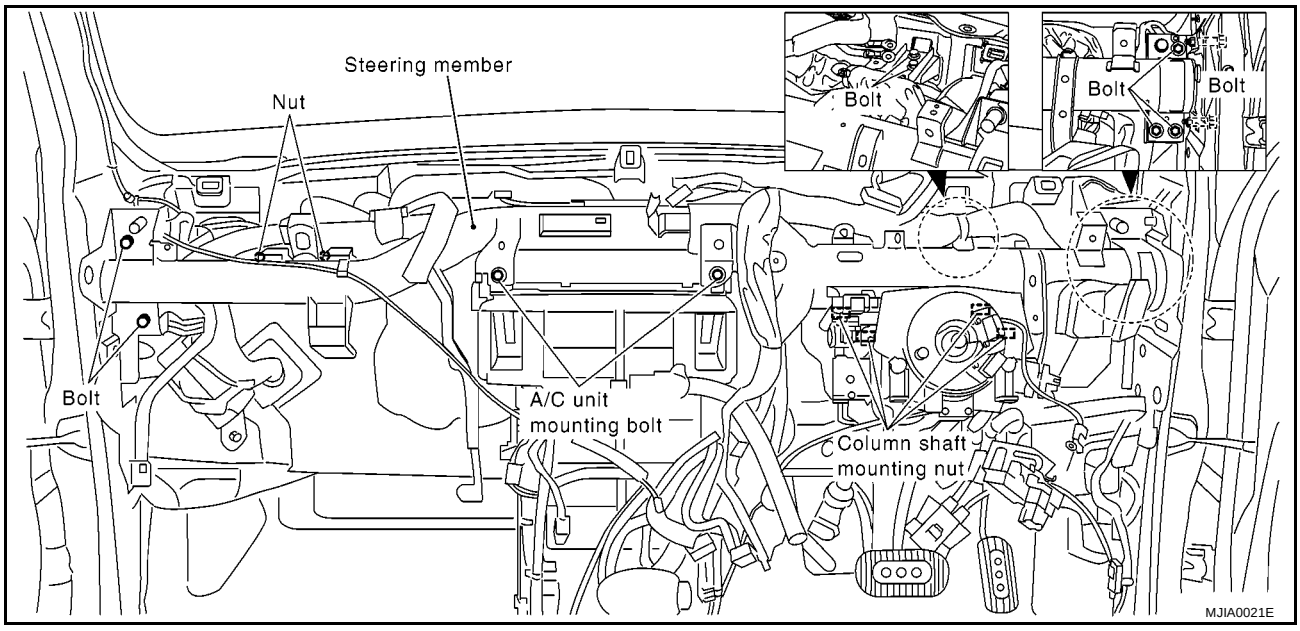
2. Remove the side defroster ducts and defroster nozzles from the upper instrument panel.

SIDE VENTILATOR DUCT

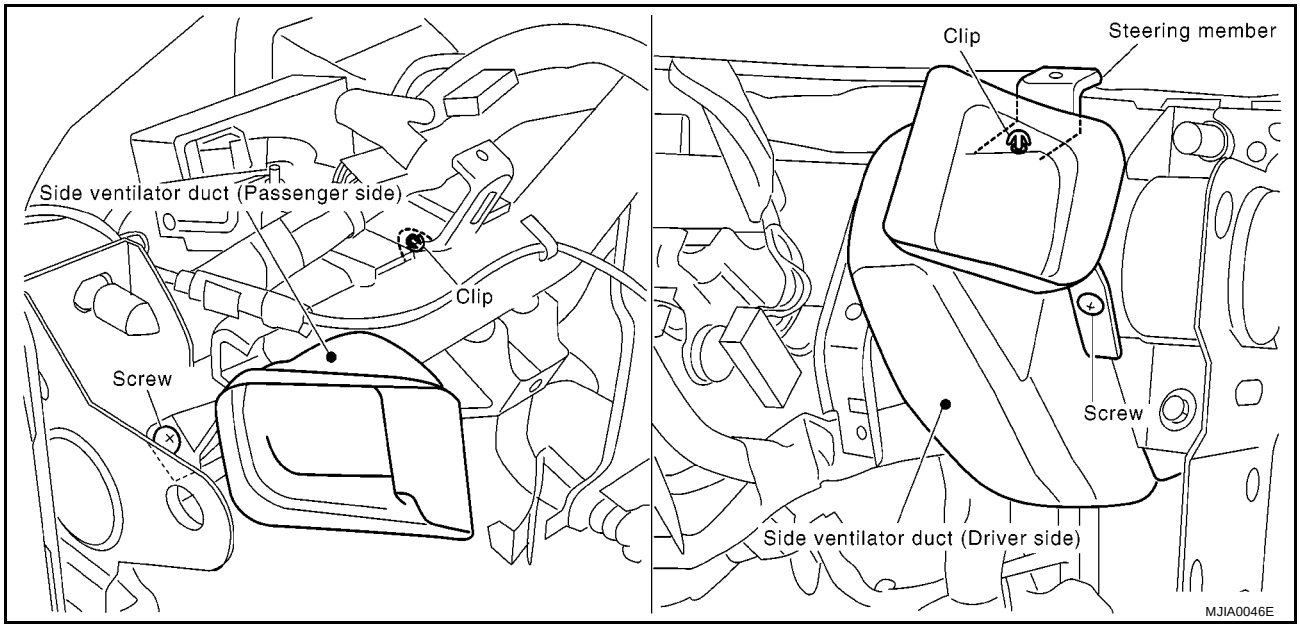
NOTE:

Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the side ventilator duct (passenger side).
3. Remove instrument panel. Refer to IP-5, "Removal and Installation" .
4. Remove the BCM. Refer to BCS-3, "BCM (BODY CONTROL MODULE)" .
5. Remove the two A/C unit mounting bolts, nine steering member mounting bolts, four column shaft mounting bolts, and the harness clips.



6. Remove the steering member, and then remove the side ventilator duct (driver side).

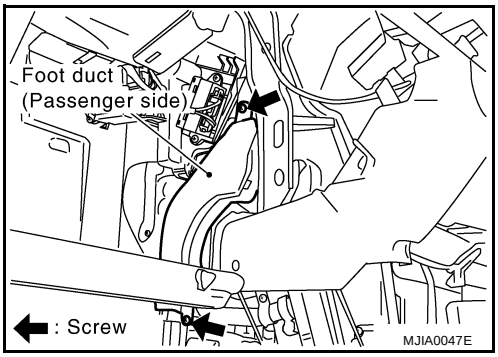


Steering member mounting nut and bolt

Tightening torque :11 - 13 N·m (1.1 - 1.4 kg-m, 8.2 - 9.5 ft-lb)

FOOT DUCT

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the two screws and then remove the food duct (passenger side).



3. Remove the instrument under tray. Refer to IP-6, "D. Instrument Panel Under Tray" .
4. Remove the two screws and intake sensor connector, and then remove the foot duct (driver side).

Removal and Installation for Compressor

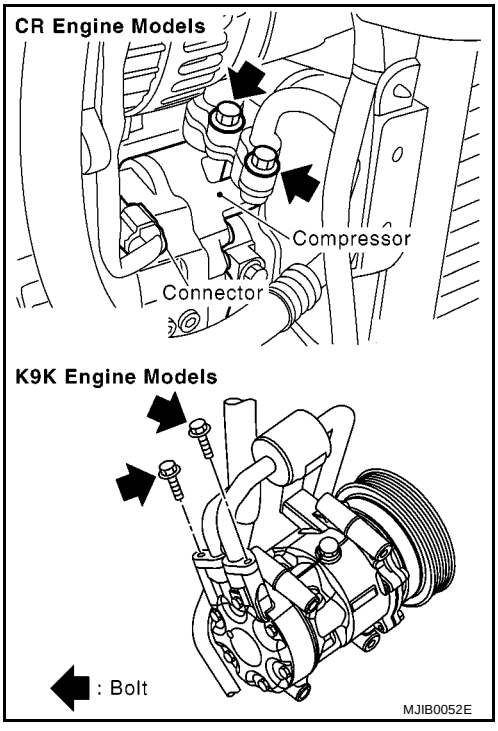
EJS004J1

REMOVAL

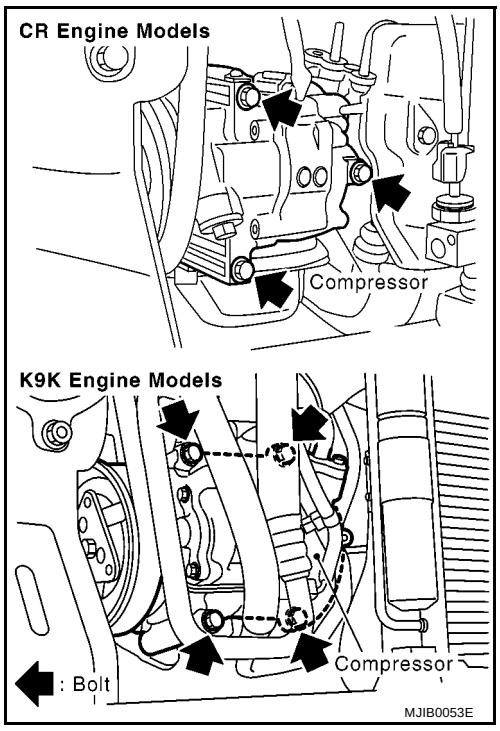
1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove air duct (fresh air intake side). Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Disconnect compressor connector.
4. Remove the high-pressure and low-pressure flexible hose mounting bolts, and then disconnect the high-pressure and low-pressure flexible hose from the compressor.

CAUTION:

- **Cover the compressor high and low-pressure ports with caps to keep the lubricant from spilling.**
- **Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.**



5. Remove the air conditioner compressor belt and alternator belt. Refer to EM-12, "DRIVE BELTS" .
6. Remove compressor mounting bolts.
7. Remove the compressor from under the vehicle.



INSTALLATION

CAUTION:

- **Replace O-rings on high-pressure and low-pressure flexible hoses with new ones. Apply compressor oil when installing new O-rings.**
- **After installing the air conditioner compressor and alternator belt, adjust the belt tension. Refer to EM-12, "DRIVE BELTS" .**
- **When charging refrigerant, check for refrigerant leaks.**

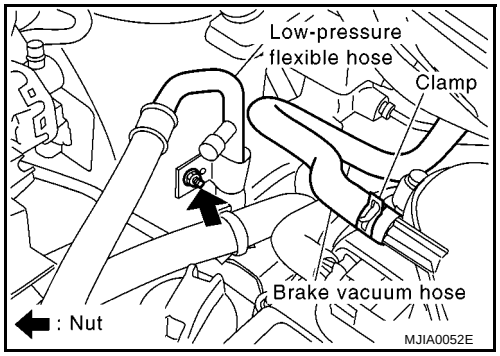
Compressor mounting bolt
Tightening torque : 16.6 - 23.5 N·m (1.7 - 2.3 kg-m, 13 - 17 ft-lb)
High-pressure flexible hose mounting bolt
Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 69 - 173 in-lb)
Low-pressure flexible hose mounting bolt
Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 69 - 173 in-lb)

Removal and Installation for Low-Pressure Flexible Hose (CR Engine Models)

EJS004J2

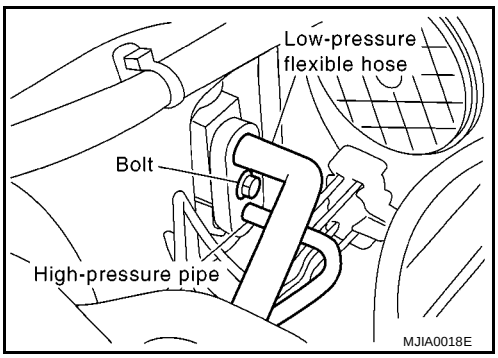
REMOVAL

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove air duct (fresh air intake side). Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Remove the low-pressure flexible hose bracket mounting nut.
4. Remove the brake vacuum hose from the air cleaner case.



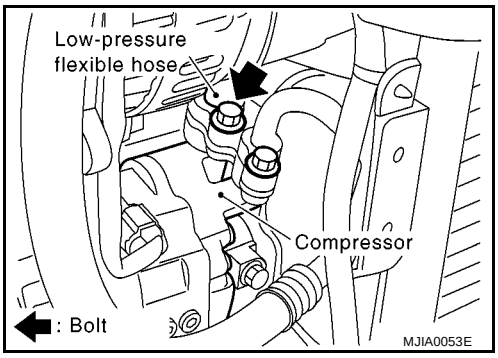
5. Remove the low-pressure flexible hose mounting bolt (air conditioner unit side).

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



6. Remove the low-pressure flexible hose mounting bolt (compressor side) and then remove the low-pressure flexible hose.

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



INSTALLATION

CAUTION:

- **Replace the low-pressure flexible hose O-ring with a new one. Apply a coat of compressor lubricant to the O-ring prior to installation.**
- **When charging refrigerant, check for refrigerant leaks.**

Low-pressure flexible hose mounting bolt (compressor side)
Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 69 - 173 in-lb)
Low-pressure flexible hose mounting bolt (evaporator side)
Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6 kg-m, 26 - 52 in-lb)
Low-pressure flexible hose bracket mounting nut
Tightening torque : 3.82 - 4.51 N·m (0.39 - 0.46 kg-m, 34 - 39 in-lb)

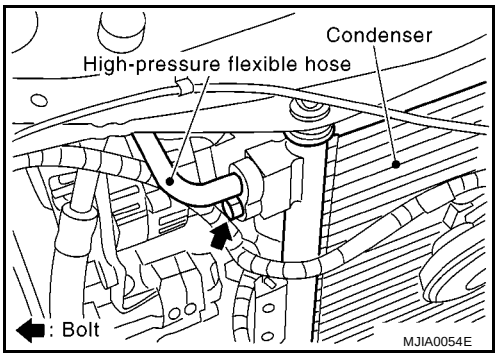
Removal and Installation for High-Pressure Flexible Hose (CR Engine Models)

EJS004J3

REMOVAL

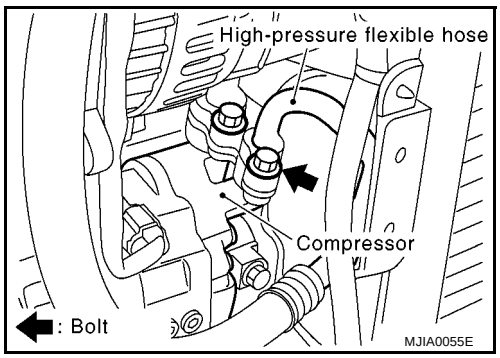
1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove air duct (fresh air intake side). Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Remove the front grille (RH). Refer to EI-8, "FRONT GRILLE" .
4. Remove the high-pressure flexible hose mounting bolt (condenser side).

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



5. Remove the high-pressure flexible hose mounting bolt (compressor side), and then remove the high-pressure flexible hose.

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



INSTALLATION

CAUTION:
- **Replace O-ring on high-pressure flexible hose with a new one. Apply compressor oil when installing new O-rings.**
- **When charging refrigerant, check for refrigerant leaks.**

High-pressure flexible hose mounting bolt

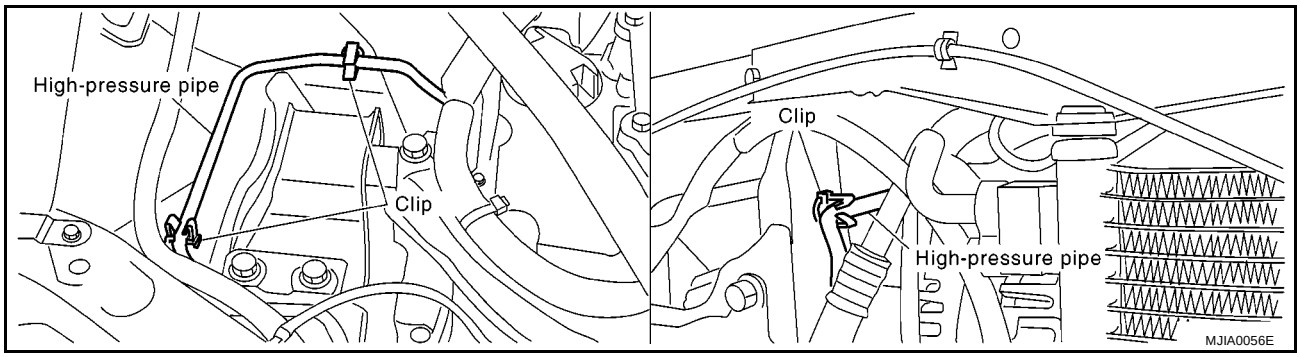
Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 69 - 173 in-lb)

Removal and Installation for High-Pressure Pipe (CR Engine Models)

EJS004J4

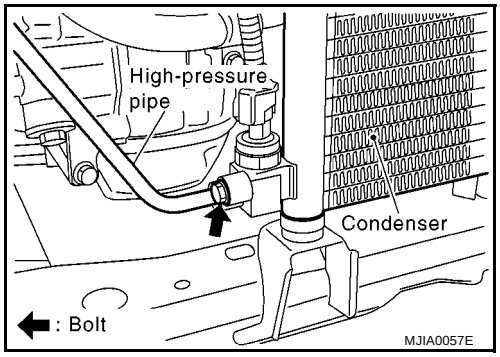
REMOVAL

1. Remove the cowl top and headlamp (RH). Refer to EI-10, "COWL TOP" and halogen headlamp model LT-6, "HEADLAMP -CONVENTIONAL TYPE-" .
2. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
3. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" and BL-12, "RADIATOR CORE SUPPORT" .
4. Remove the low-pressure flexible hose. Refer to ATC-86, "Removal and Installation for Low-Pressure Flexible Hose (CR Engine Models)" .
5. Remove the high-pressure pipe from clips.



6. Remove the high-pressure pipe mounting bolt, and then remove the high-pressure pipe.

CAUTION:
Seal the pipe connection openings with caps, plastic tape, or something similar to prevent them from being exposed to the atmosphere.



INSTALLATION

CAUTION:
- **Replace the O-ring on the high-pressure pipe with new one, and apply compressor lubricant to it before installing.**

- **When charging refrigerant, check for refrigerant leaks.**

High-pressure pipe mounting bolt
Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6 kg-m, 26 - 52 in-lb)
Low-pressure flexible hose and high-pressure pipe mounting bolts (evaporator side)
Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6 kg-m, 26 - 52 in-lb)
Low-pressure flexible hose mounting bolt (compressor side)
Tightening torque : 7.8 - 19.6 N·m (0.8 - 2.0 kg-m, 69 - 173 in-lb)

Removal and Installation for Pipe and Hose (K9K Engine Models)

>SJN**AK12U1255242

REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove the low-pressure flexible hose bracket mounting bolt and nut.
3. Remove the high-pressure pipe and low-pressure flexible hose mounting bolts (air conditioner unit side).

   CAUTION:
   Seal the connecting points of the pipe and hose with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.
4. Remove the low-pressure flexible hose mounting bolt (compressor side) and then remove the low-pressure flexible hose.

   CAUTION:
   Seal the connecting points of the hose with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.
5. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
6. Remove the high-pressure pipe mounting bolt (liquid tank side) and then remove the high-pressure pipe.

CAUTION:
Seal the connecting points of the pipe with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

7. Remove the high-pressure flexible hose mounting bolts and then remove the high-pressure flexible hose.

CAUTION:
Seal the connecting points of the hoses with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

INSTALLATION SMA for VIN

CAUTION: >SJN**AK12U1255242

- **Replace the O-rings on the high-pressure pipe, low-pressure flexible hose, and high-pressure flexible hose with new ones, and apply compressor lubricant to O-rings before installing.**
- **When charging refrigerant, check for refrigerant leaks.**

Removal and Installation for Refrigerant Pressure Sensor

EJS004J5

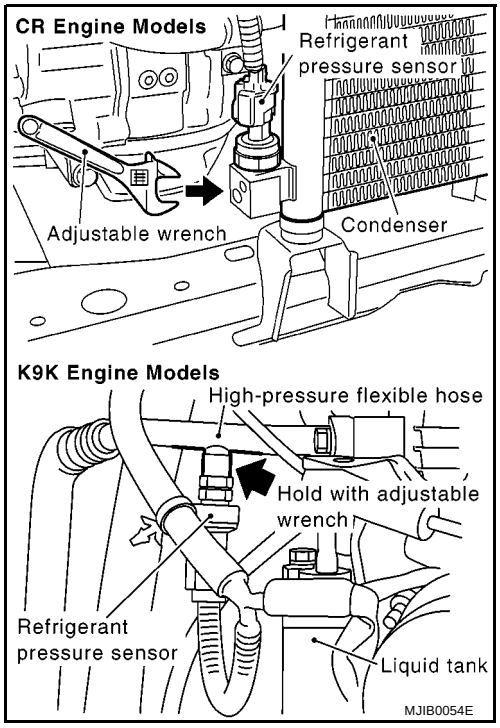
REMOVAL AND INSTALLATION

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" and BL-12, "RADIATOR CORE SUPPORT" .
3. Use a adjustable wrench or other tool to hold the refrigerant pressure sensor mounting block, and then remove the refrigerant pressure sensor from the condenser (CR engine models) or the high-pressure flexible hose (K9K engine models).

CAUTION:
- **Be careful when working so as not to damage the condenser core.**
- **When installing refrigerant pressure sensor, apply compressor lubricant to the O-rings.**

Refrigerant pressure sensor

Tightening torque : 9.8 - 11.7 N·m (1.0 - 1.1 kg-m, 87 - 103 in-lb)



Removal and Installation for Condenser (CR Engine Models)

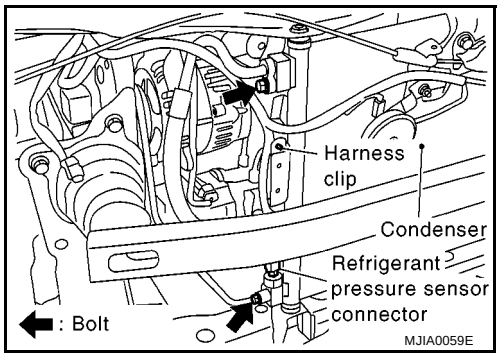
EJS004J6

REMOVAL

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" and BL-12, "RADIATOR CORE SUPPORT" .
3. Disconnect the high-pressure flexible hose and high-pressure pipe from the condenser.

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

4. Disconnect the refrigerant pressure sensor connector, and then remove the harness clip.

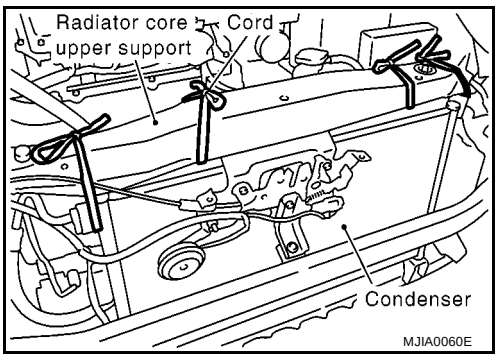


5. Use cord, etc., to hold the condenser and radiator to each radiator core support upper.

   NOTE:
   To prevent the compressor and radiator from being dropped when the radiator core lower support is removed.

6. Remove the mounting bolts, and then remove the radiator core lower support.
7. Remove the condenser from underneath the vehicle.

   CAUTION:
   Do not damage the condenser core.



INSTALLATION

CAUTION:

- **Replace O-rings on the high-pressure pipe and high-pressure flexible hose with new ones. Apply compressor lubricant to O-rings when installing them.**
- **When charging refrigerant, check for refrigerant leaks.**

High-pressure flexible hose bolt

Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 69 - 173 in-lb)

High-pressure pipe mounting bolt

Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6 kg-m, 26 - 52 in-lb)

Radiator core lower support mounting bolts.

Tightening torque : 43.4 - 58.7 N·m (4.5 - 5.9 kg-m, 32 - 43 ft-lb)

Removal and Installation for Condenser (K9K Engine Models)

EJS0057Q

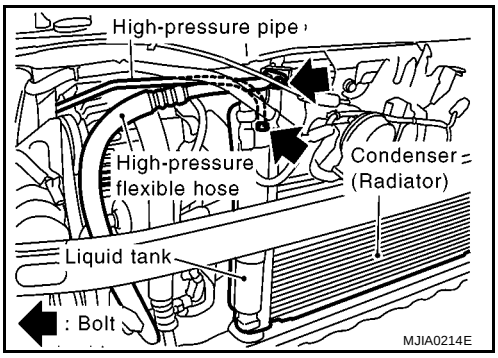
REMOVAL

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
3. Disconnect the high-pressure flexible hose from the condenser. Disconnect the high-pressure pipe from the liquid tank.

   CAUTION:
   Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

4. Remove the radiator assembly. Refer to CO-34, "RADIATOR" .

   CAUTION:
   Do not damage the radiator and condenser core.



INSTALLATION

CAUTION:

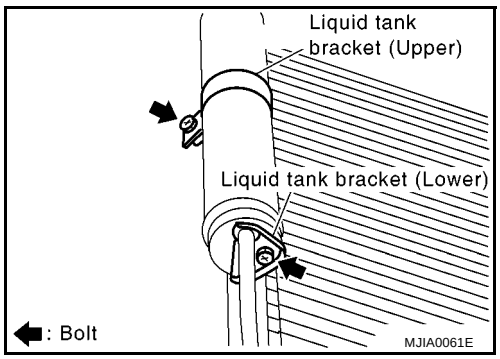
- **Replace O-rings on the high-pressure pipe and high-pressure flexible hose with new ones. Apply compressor lubricant to O-rings when installing them.**
- **When charging refrigerant, check for refrigerant leaks.**

Removal and Installation for Liquid Tank (CR Engien Models)

EJS004J7

REMOVAL

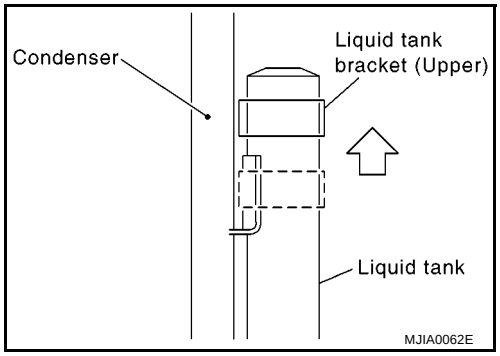
1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove condenser. Refer to ATC-90, "Removal and Installation for Condenser (CR Engine Models)" .
3. Clean around the liquid tank to remove foreign material and corrosion.
4. Remove the liquid tank bracket (upper/lower) mounting bolts.



5. Lift up the liquid tank bracket, and remove it from the condenser protruding area.
6. Lift up the liquid tank and remove it.

CAUTION:

Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

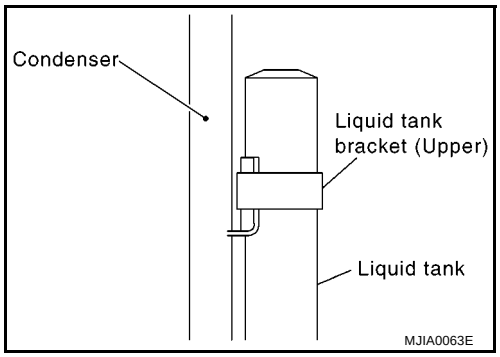


INSTALLATION

Install the liquid tank, and then install liquid tank bracket to the condenser.

CAUTION:

- **Make sure the liquid tank bracket is correctly inserted into the condenser's protruding area (the liquid tank bracket does not move below the center of the liquid tank).**
- **Replace the condenser pipe O-rings with new ones. Apply a coat of compressor lubricant to the O-rings prior to installation.**



Liquid tank bracket (upper) mounting bolt

Tightening torque : 2.94 - 3.82 N·m (0.29 - 0.38 kg-m, 26 - 33 in-lb)

Liquid tank bracket (lower) mounting bolt

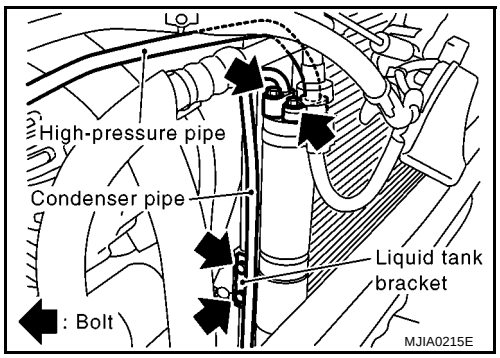
Tightening torque : 5.0 - 6.47 N·m (0.51 - 0.65 kg-m, 45 - 57 in-lb)

Removal and Installation for Liquid Tank (K9K Engine Models)

EJS0057R

REMOVAL

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Clean around the liquid tank to remove foreign material and corrosion.
3. Remove the high-pressure pipe from the liquid tank.
4. Remove the condenser pipe mounting bolt from the liquid tank, and remove pipe from the condenser protruding area.
5. Remove the liquid tank bracket bolts and then remove the liquid tank.



CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

INSTALLATION

Install the liquid tank, and then install liquid tank bracket to the condenser.

CAUTION:
Replace the condenser pipe O-rings with new ones. Apply a coat of compressor lubricant to the O-rings prior to installation.

Removal and Installation for Evaporator

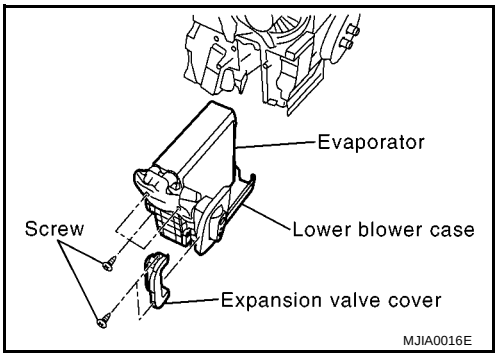
EJS004J8

REMOVAL

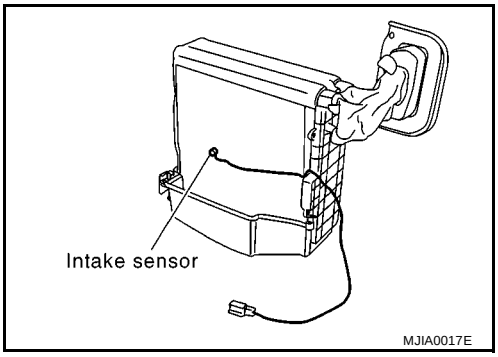
1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Remove the A/C unit. Refer to ATC-69, "A/C UNIT ASSEMBLY" .

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

3. Remove the air conditioner filter, mode door motor, and foot duct (RH). Refer to ATC-75, "AIR CONDITIONER FILTER" , ATC-77, "MODE DOOR MOTOR" and ATC-83, "FOOT DUCT" .
4. Remove the lower blower case and expansion valve cover.



5. Slide the evaporator and lower blower case downward, and remove the intake sensor.
6. Remove the evaporator from the lower blower case.



INSTALLATION

CAUTION:
- **Replace low-pressure flexible hose and high-pressure pipe O-rings with new ones. Apply a coat of compressor lubricant prior to installation.**
- **When installing a new evaporator, install the thermistor of intake air temperature in the same position as the removed intake sensor.**
- **When removing and installing the intake sensor, do not rotate the thermistor insertion part.**

Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.
Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6 kg-m, 26 - 52 in-lb)

Removal and Installation for Expansion Valve

EJS004J9

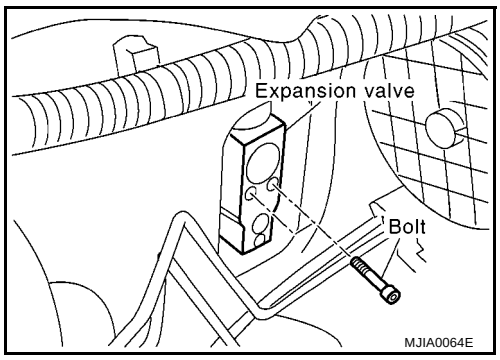
REMOVAL

1. Use refrigerant collecting equipment (for HFC134a) to discharge refrigerant.
2. Disconnect the low-pressure flexible hose and high-pressure pipe from the evaporator.

CAUTION:

Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

3. Remove the two bolts from the expansion valve, and then remove the expansion valve.



INSTALLATION

CAUTION:

Replace the removed O-rings with new ones. Apply a coat of compressor lubricant to the O-rings prior to installation.

Expansion valve mounting bolts

Tightening torque : 2.9 - 5.0 N·m (0.29 - 0.51 kg-m, 26 - 44 in-lb)

Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.

Tightening torque : 2.9 - 5.9 N·m (0.29 - 0.60 kg-m, 26 - 52 in-lb)

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS00778

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Wiring Diagrams and Trouble Diagnosis

EKS00779

When you read wiring diagrams, refer to the following:

- GI-14, "How to Read Wiring Diagrams" in GI section
- PG-4, "POWER SUPPLY ROUTING" for power distribution circuit in PG section

When you perform trouble diagnosis, refer to the following:

- GI-11, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES" in GI section
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" in GI section

AUDIO

PFP:28111

System Description

EKS0077A

AUDIO SYSTEM

Refer to Owner's Manual for audio system operating instructions.

Power is supplied at all times

- through 15A fuse (No. 24, located in the fuse and fusible link box)
- to audio unit terminal 34,

With the ignition switch in the ACC or ON position, power is supplied

- through 10A fuse [No. 12, located in the fuse block (J/B)]
- to audio unit terminal 37,

Ground is supplied through the case of the audio unit.

Ground is also supplied

- through body ground M60,
- to audio unit terminal 38.

Audio signals are supplied

- through audio unit terminals 21, 22, 23, 24, 25, 26, 27, 28
- to terminals 1 and 2 of front door speaker LH and RH
- to terminals 1 and 2 of rear door speaker LH and RH
- to terminals 1 and 2 of tweeter LH and RH.

When one of steering wheel audio control switches is pushed to volume down or seek down, resistance in steering switch circuit changes depending on which button is pushed. This will change voltage. Power is supplied

- from audio unit terminal 11
- through combination switch (spiral cable) terminals 33 and 15
- to steering wheel audio control switch.

Ground is supplied

- from steering wheel audio control switch
- through combination switch (spiral cable) terminals 16 and 32
- from audio unit terminal 12.

When one of steering wheel audio control switches is pushed to volume up, seek up, or mode ON, resistance in steering switch circuit changes depending on which button is pushed. This will change voltage. Power is supplied

- from audio unit terminal 10
- through combination switch (spiral cable) terminals 34 and 14
- to steering wheel audio control switch.

Ground is supplied

- from steering wheel audio control switch
- through combination switch (spiral cable) terminals 16 and 32
- from audio unit terminal 12.

Terminals and Reference Value for Audio Unit

EKS0077E

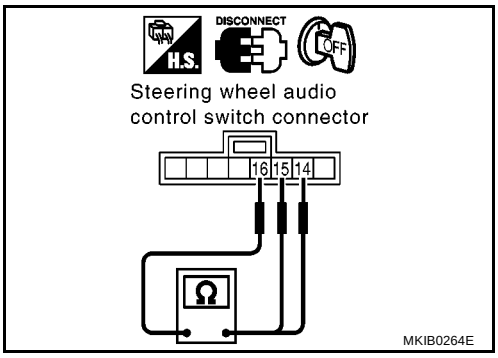
Terminal No. (wire color)		Item	Signal input/ output	Condition		Voltage	Example of symptom
(+)	(–)			Ignition switch	Operation		
10 (L)	Ground	Remote control A	Input	ON	Press MODE switch	Approx. 0V	Steering wheel audio controls do not function.
					Press SEEK UP switch	Approx. 1.68V	
					Press VOL UP switch	Approx. 3.34V	
					Except for above	Approx. 5V	
11 (W)	Ground	Remote control B	Input	ON	Press SEEK DOWN switch	Approx. 1.68V	Steering wheel audio controls do not function.
					Press VOL DOWN switch	Approx. 3.34V	
					Except for above	Approx. 5V	
12 (L)	-	Remote control earth	-	ON	-	Approx. 0V	Steering wheel audio controls do not function.
21 (LG)	22 (GY)	Speaker output (rear RH)	Output	ON	Receive radio broadcast	 SKIA0177E	No sound from rear RH speaker.
23 (G)	24 (R)	Speaker output (front RH)	Output	ON	Receive radio broadcast	 SKIA0177E	No sound from front RH speaker or tweeter RH.
25 (W)	26 (R)	Speaker output (front LH)	Output	ON	Receive radio broadcast	 SKIA0177E	No sound from front LH speaker or tweeter LH.
27 (W)	28 (R)	Speaker output (rear LH)	Output	ON	Receive radio broadcast	 SKIA0177E	No sound from rear LH speaker.

Terminal No. (wire color)		Item	Signal input/ output	Condition		Voltage	Example of symptom
(+)	(–)			Ignition switch	Operation		
34 (BR)	Ground	Battery power	Input	OFF	-	Battery voltage	Audio unit operation is not possible.
36 (G)	Ground	Illumination signal	Input	ON	Lighting switch is ON (position 1).	Battery voltage	Audio unit illumination does not come on when lighting switch is ON (position 1).
					Turn lighting switch OFF.	Approx. 3.0V or less	
37 (L)	Ground	ACC power	Input	ACC	-	Battery voltage	Audio unit operation is not possible.
38 (B)	Ground	Ground	-	ON	-	Approx. 0V	-

Steering Wheel Audio Control Switch Resistance Check

EKS007AT

Terminal		Signal name	Condition	Resistance (Ω)
(+)	(–)			
14	16	Seek up (next)	Depress (station) up switch.	Approx. 165
		Mode	Depress mode switch.	Approx. 0
		Volume (up)	Depress volume up switch.	Approx. 652
15	16	Seek down (previous)	Depress (station) down switch.	Approx. 165
		Volume (down)	Depress volume down switch.	Approx. 652



Trouble Diagnosis

EKS0077J

- The majority of the audio troubles are the result of outside causes (bad CD electromagnetic interference, etc.). Check the inspection items below to diagnose the malfunction.

PROBLEM WITH RADIO AND CD

Symptom	Check items	Possible cause
Inoperative	● Check that the ignition switch is in the ACC position.	● Audio unit ● Audio unit power circuit
No sound	● Check that the volume is not turned down. ● Check that the balance and fader control knobs are centered.	● Audio unit ● Audio unit power circuit ● Speaker ● Sound signal circuit between speaker and Audio unit
Poor sound	● Check that the bass and treble adjustment knobs are centered.	● Audio unit ● Speaker
Noisy	-	● Audio unit ● Each electrical equipment

FOR RADIO ONLY

Symptom	Check items	Possible cause
No sound	● Check that the radio is tuned to a station's frequency.	● Audio unit ● Antenna feeder ● Roof antenna
Noisy	● Check that the radio is tuned to a station's frequency. ● Check that the signal of the received station is not weak. ● Check whether or not the malfunction occurs only in a particular area. (Note)	● Audio unit ● Antenna feeder ● Roof antenna ● Noise prevention parts ● Each electrical equipment ● Wire harness of each piece of electrical equipment
Selected radio stations stored in memory are deleted	-	● Audio unit ● Audio unit power circuit

NOTE:

- This is noise resulting from variations in field strength, such as fading noise and multi-path noise, or external noise from trains and other sources. It is not a malfunction.
  - Fading noise: This noise occurs because of variations in the field strength in a narrow range due to mountains or buildings blocking the signal.
  - Multi-path noise: This noise results from the waves sent directly from the broadcast station arriving at the antenna at a different time from the waves which reflect off of mountains or buildings.

FOR CD ONLY

Symptom	Check items	Possible cause
The CD cannot be played.	● Check that the CD is not upside down. ● Check that there is no dirt, damage, or water on the disc.	● Audio unit
The sound skips, stops suddenly, or is distorted.	● Check that there is no dirt, damage, or water on the disc. ● Check that the trouble is not due to strong vibration.	

Noise Inspection

EKS0077K

The vehicle itself can be a source of noise if noise prevention parts or electrical equipment is malfunction. Check if noise is caused and/or changed by engine rotation, ignition switch turned to each position, and operation of each piece of electrical equipment, and determine the cause.

NOTE:

The source of the noise can be found easily by listening to the noise while removing the fuses of electrical components, one by one.

TYPE OF NOISE AND POSSIBLE CAUSE

Occurrence condition		Possible cause
Occurs only when engine is ON.	A continuous growling noise occurs. The speed of the noise varies with changes in the engine speed.	● Problem with the ignition condenser.
	A whistling noise occurs while the engine speed is high. A booming noise occurs while the engine is running and the lighting switch is ON.	● Problem with the alternator
The occurrence of the noise is linked with the operation of the fuel pump.		● Problem with the fuel pump condenser
Noise only occurs when various electrical components are operating.	A cracking or snapping sound occurs with the operation of various switches.	● Relay malfunction, radio malfunction
	The noise occurs when various motors are operating.	● Problem with the motor case ground ● Problem with the motor

Occurrence condition	Possible cause
The noise occurs constantly, not just under certain conditions.	● Rear defogger coil malfunction ● Open circuit in printed heater ● Poor ground of antenna amplifier or antenna feeder line
A cracking or snapping sound occurs while the vehicle is being driven, especially when it is vibrating excessively.	● Problem with the ground wire of body parts ● Problem with ground due to part installation problem ● Problem with wiring connections or a short circuit

Power Supply Circuit Inspection

EKS0077L

1. CHECK FUSE

- Check that the following fuses of the audio unit are not blown. Refer to PG-106, "FUSE BLOCK - JUNCTION BOX (J/B)" and PG-107, "FUSE AND FUSIBLE LINK BOX" .

Unit	Terminals			Signal name	Fuse No.
	(+)		(-)		
	Connector	Terminal (wire color)			
Audio unit	M27	34 (BR)	Ground	Battery power	24
	M27	37 (L)	Ground	ACC power	12

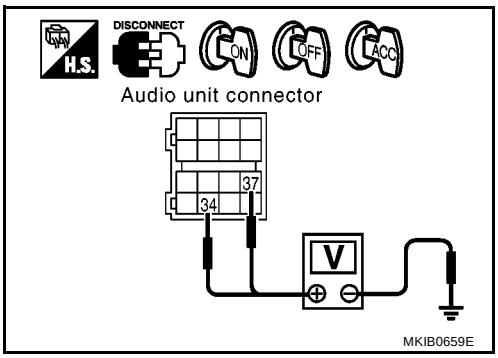
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of problem before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. POWER SUPPLY CIRCUIT CHECK

Disconnect the connector. Check voltage between the following harness connector terminal (+) and body ground (-).

Unit	Terminal No.			Ignition switch		
	(+)		(-)	OFF	ACC	ON
	Connector	Terminal (wire color)				
Audio unit	M27	34 (BR)	Ground	Battery power	Battery voltage	Battery voltage
	M27	37 (L)	Ground	0V	Battery voltage	Battery voltage



OK or NG

OK >> Inspection end.
NG >> Repair or replace harness.

Steering Wheel Audio Control Switch Does Not Operate

EKS007AU

1. STEERING WHEEL AUDIO CONTROL SWITCH RESISTANCE CHECK

1. Disconnect steering wheel audio control switch connector.
2. Check resistance steering wheel audio control switch. Refer to AV-9, "Steering Wheel Audio Control Switch Resistance Check" .

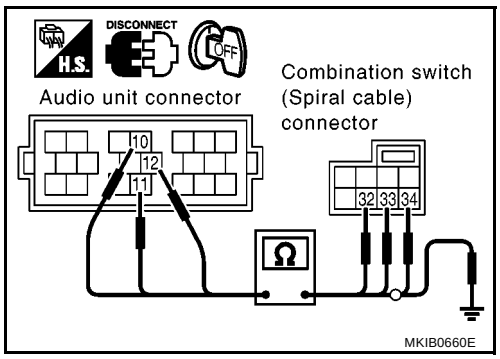
Resistance value is OK?

YES or NO

YES >> GO TO 2.
NO >> Replace steering wheel audio control switch.

2. STEERING WHEEL AUDIO CONTROL SWITCH CIRCUIT CHECK

1. Disconnect audio unit connector.
2. Check continuity between audio unit harness connector M26 and combination switch (spiral cable) harness connector M29.



Terminals				Continuity
Connector	Terminal (wire color)	Connector	Terminal (wire color)	
M26	10 (L)	M29	34 (L)	Yes
	11 (W)		33 (W)	
	12 (L)		32 (L)	

3. Check continuity between audio unit and ground.

Terminals			Continuity
(+)		(-)	
Connector	Terminal (wire color)		
M26	10 (L)	Ground	No
	11 (W)		
	12 (L)		

OK or NG

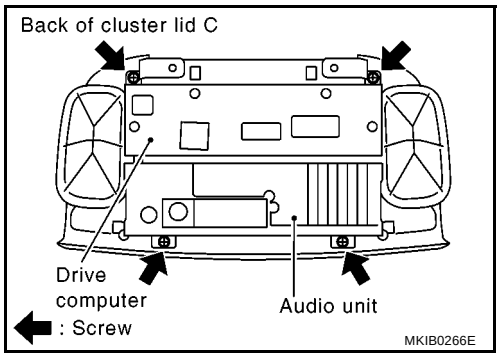
OK >> Check combination switch (spiral cable).
NG >> Replace audio unit.

Removal and Installation of Audio Unit

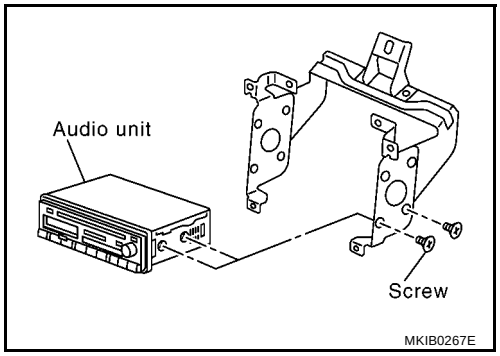
EKS0077N

REMOVAL

1. Remove instrument panel and cluster lid C. Refer to IP-7, "K. Cluster Lid C" .
2. Remove screws and remove audio unit and bracket.



3. Remove screws and remove bracket.



INSTALLATION

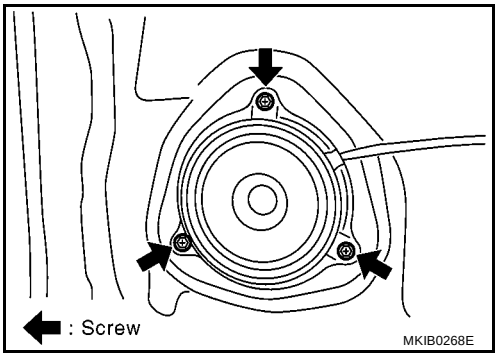
Install in the reverse order of removal.

Removal and Installation of Front Door Speaker

EKS0077O

REMOVAL

1. Remove front door finisher. Refer to EI-16, "DOOR FINISHER" .
2. Remove screws and remove speaker.



INSTALLATION

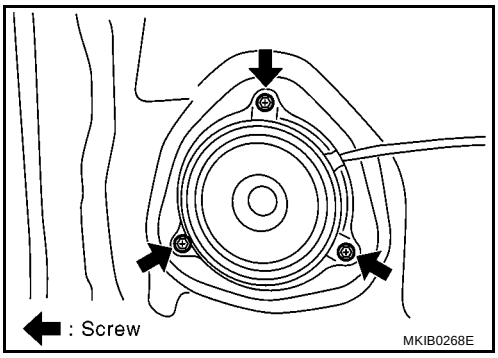
Install in the reverse order of removal.

Removal and Installation of Rear Door Speaker (3 door models)

EKS007PJ

REMOVAL

1. Remove rear door finisher. Refer to EI-16, "DOOR FINISHER" .
2. Remove screws and remove speaker.



INSTALLATION

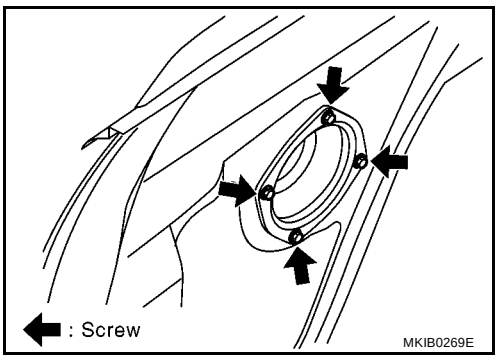
Install in the reverse order of removal.

Removal and Installation of Rear Door Speaker (5 door models)

EKS007PK

REMOVAL

1. Remove rear side finisher. Refer to EI-16, "DOOR FINISHER" .
2. Remove screws and remove speaker.



INSTALLATION

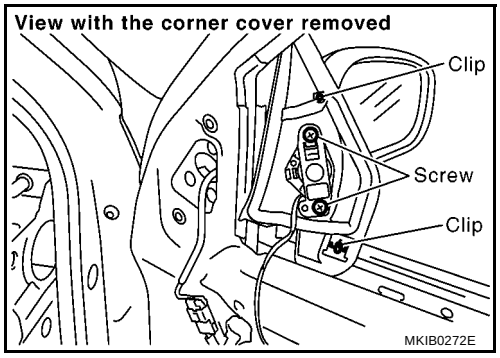
Install in the reverse order of removal.

Removal and Installation of Front Pillar Tweeter

EKS0077P

REMOVAL

1. Remove front door finisher. Refer to EI-19, "BODY SIDE TRIM" .
2. Remove clips and remove corner cover.
3. Remove screws and remove front pillar tweeter.



INSTALLATION

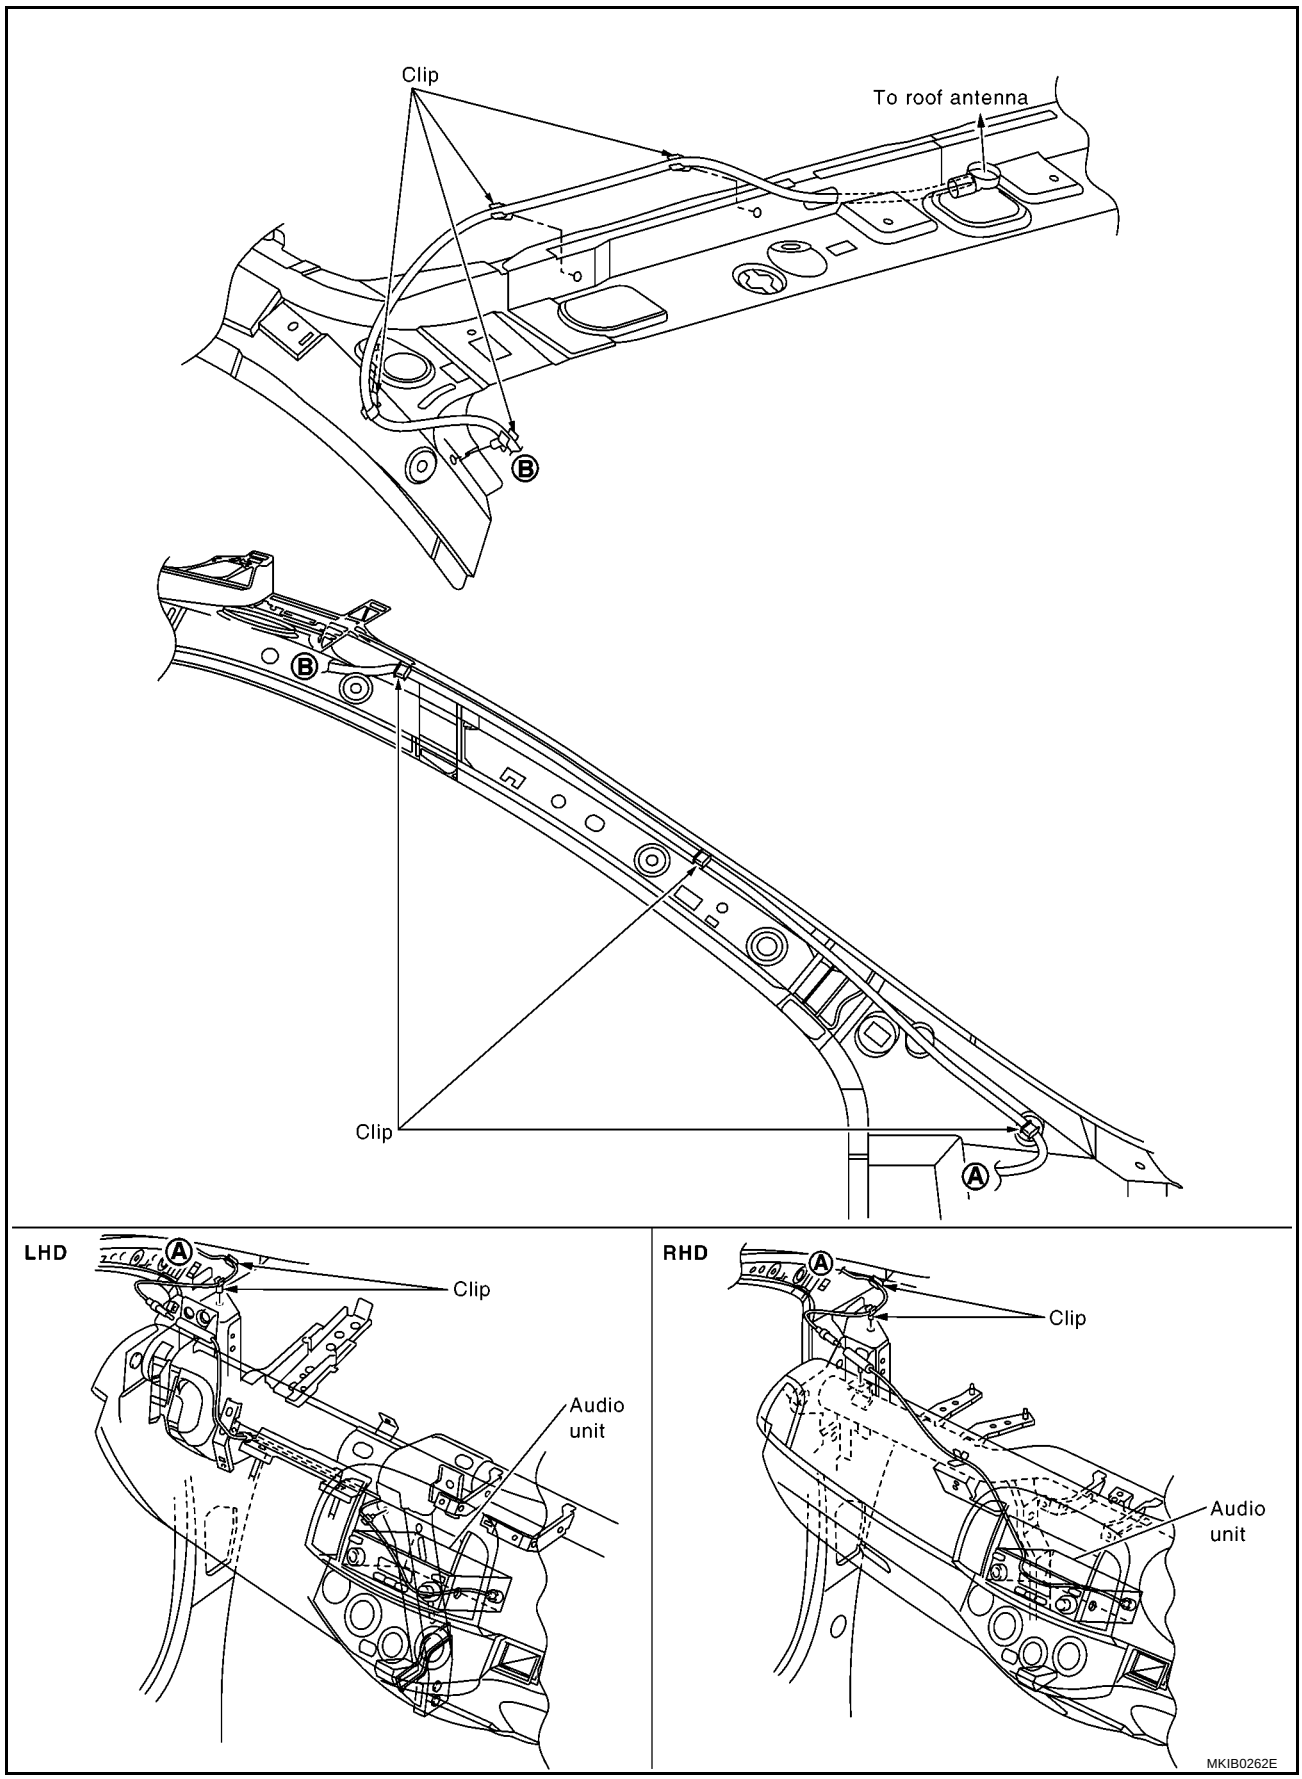
Install in the reverse order of removal.

AUDIO ANTENNA

PFP:28200

Location of Antenna

EKS0077Q

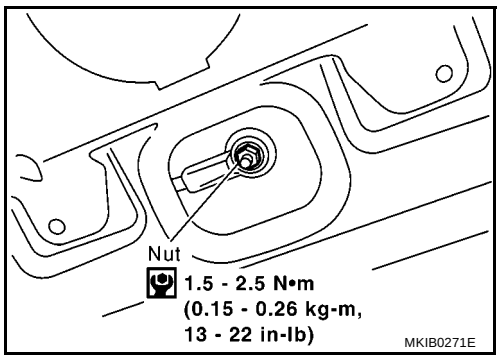


Removal and Installation of Roof Antenna

EKS0077R

REMOVAL

1. Remove headliner. Refer to EI-24, "HEADLINER" .
2. Remove roof antenna mounting nuts, antenna plug. Then remove roof antenna.



INSTALLATION

Install in the reverse order of removal.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS00736

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EKS008WP

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

Wiring Diagrams and Trouble Diagnosis

EKS00737

When you read wiring diagrams, refer to the following:

- GI-14, "How to Read Wiring Diagrams".
- PG-4, "POWER SUPPLY ROUTING" for power distribution circuit.

When you perform trouble diagnosis, refer to the following:

- GI-10, "How to Follow Trouble Diagnoses".
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident".

BCM (BODY CONTROL MODULE)

PFP:284B2

System Description

EKS007SV

BCM (Body Control Module) controls the operation of various electrical units installed on the vehicle.

BCM FUNCTION

BCM has a combination switch reading function for reading the operation of combination switches (light, wiper washer, turn signal) in addition to the function for controlling the operation of various electrical components. Also, it functions as an interface that receives signals from the A/C auto amplifier, and sends signals to ECM using CAN communication.

COMBINATION SWITCH READING FUNCTION

BCM reads combination switch (headlamp, wiper and washer, turn signal) status, and controls various electrical components according to the results.
BCM reads information of 20 switches and 5 diagnostic results by combining five output terminals (Output 1 - 5) and five input terminals (Input 1 - 5).
Refer to LT-189, "COMBINATION SWITCH" .

SYSTEMS CONTROLLED BY BCM

- Power door lock system. Refer to BL-15, "POWER DOOR LOCK SYSTEM" .
- Super lock system. Refer to BL-70, "POWER DOOR LOCK — SUPER LOCK —" .
- Multi-remote control system. Refer toBL-131, "MULTI-REMOTE CONTROL SYSTEM" .
- Power window system. Refer to GW-52, "POWER WINDOW SYSTEM" .
- Interior room lamp timer. Refer to LT-200, "INTERIOR ROOM LAMP" .
- Warning chime. Refer to DI-81, "WARNING CHIME" .
- Turn signal and hazard warning lamps. Refer to LT-121, "TURN SIGNAL AND HAZARD WARNING LAMPS" .
- Rear wiper. Refer to WW-82, "REAR WIPER AND WASHER SYSTEM" .
- Rear fog lamp. Refer to LT-100, "REAR FOG LAMP" .

SYSTEMS CONTROLLED BY BCM AND IPDM E/R

- NATS. Refer to BL-223, "NATS(Nissan Anti-Theft System)" .
- Front wiper. Refer to WW-5, "FRONT WIPER AND WASHER SYSTEM" (without rain sensor) or WW-48, "FRONT WIPER AND WASHER SYSTEM (WITH RAIN SENSOR)" .
- Front washer. Refer to WW-5, "FRONT WIPER AND WASHER SYSTEM" (without rain sensor) or WW-48, "FRONT WIPER AND WASHER SYSTEM (WITH RAIN SENSOR)" .
- Rear window defogger. Refer to GW-14, "REAR WINDOW DEFOGGER" .
- Front fog lamp. Refer to LT-74, "FRONT FOG LAMP" .
- Headlamp washer. Refer to WW-110, "HEADLAMP WASHER" .

SYSTEMS CONTROLLED BY BCM AND INTELLIGENT KEY UNIT

- Intelligent Key system. Refer to BL-152, "INTELLIGENT KEY SYSTEM" .

INPUT/OUTPUT

System	Input	Output

Headlamp	Combination switch	IPDM E/R (headlamp relay)
Tail lamp	Combination switch	IPDM E/R (tail lamp relay)
Rear fog lamp	Combination switch	Rear combination lamp (Refer fog)
Turn signal lamp	Combination switch	● Turn signal lamps ● Combination meter
Hazard warning lamp	Hazard switch	● Turn signal lamps ● Combination meter
Interior room lamp timer	● Key switch ● Intelligent Key unit (key switch signal) ● Remote controller ● Door lock/unlock switch ● Front door switch (driver side) ● Door switches	Interior room lamp
Ignition key warning chime	● Key switch ● Intelligent Key unit (key switch signal) ● Front door switch (driver side)	Combination meter (warning buzzer)
Light warning chime	● Combination switch ● Key switch ● Intelligent Key unit (key switch signal) ● Front door switch (driver side)	Combination meter (warning buzzer)
Front wiper with rain sensor	● Combination switch ● Combination meter ● Rain sensor	IPDM E/R (front wiper relays)
Front washer	Combination switch	Washer motor
Rear wiper	Combination switch	Rear wiper motor
Rear washer	Combination switch	Washer motor
Headlamp washer	Headlamp washer switch	Headlamp washer relay (via IPDM E/R)

System	Input	Output
Rear window defogger	● A/C auto amp. (Rear window defogger switch) (with auto amp). ● Heater control panel (Rear window defogger switch) (with manual A/C).	IPDM E/R (rear window defogger relay)
A/C switch signal	A/C auto amp.	ECM
Blower fan switch signal	A/C auto amp.	ECM

CAN COMMUNICATION CONTROL

CAN communication is capable of dealing with a lot of information through the two communication lines (CAN L line, CAN H line) connecting control units in the system. Also each control unit functions to transmit and receive data, and reads necessary information only.

BCM STATUS CONTROL

BCM changes its status depending on the operation status in order to save power consumption.

1. CAN communication status
   - With ignition switch ON, CAN communicates with other control units normally.
   - Control by BCM is being operated properly.
   - When ignition switch is OFF, switching to sleep mode is possible.
   - Even when ignition switch is OFF, if CAN communication with IPDM E/R and combination meter is active, CAN communication status is active.
2. Pre-sleep status
   - This is the status to stop CAN communication when ignition switch is turned OFF.
   - It transmits sleep request signal to IPDM E/R and combination meter.
   - Two seconds after CAN communication with another control unit stops, it switches to CAN communication inactive status.
3. CAN communication inactive status
   - With ignition switch OFF, CAN communication is not active.
   - With ignition switch OFF, control performed only by BCM is active.
   - Two seconds after CAN communication with another control unit stops, it switches to CAN communication inactive status.
4. Sleep status
   - BCM is activated with low-current-consumption mode.
   - CAN communication is not active.
   - When CAN communication operation is detected, it switches to CAN communication status.
   - When control performed only by BCM is required by switch, it shifts to CAN communication inactive mode.
   - It changes combination switch reading function.

CAN Communication

EKS00KBK

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

CONSULT-II Function (BCM)

EKS007SZ

CONSULT-II can display each diagnostic item using the diagnostic modes shown following. Data is recieved and transmitted via the control module communication line.

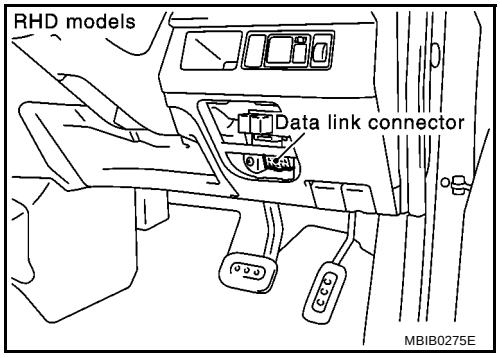
BCM diagnostic test item	Check item, diagnostic test mode	Content
Inspection by part	SELF-DIAGNOSTIC RESULTS	BCM performs self-diagnosis of CAN communication.
	DATA MONITOR	Displays the input data of BCM in real time.
	CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.
	ACTIVE TEST	Gives a drive signal to a load to check the operation.
	ECM PART NUMBER	Displays BCM parts number

CONSULT–II INSPECTION PROCEDURE

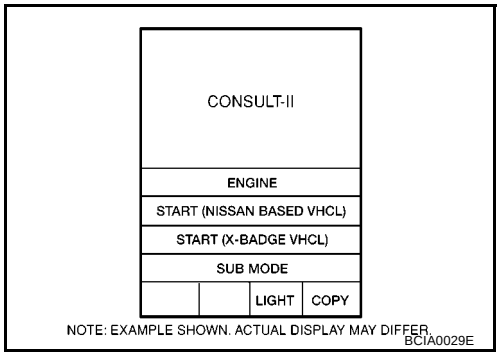
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

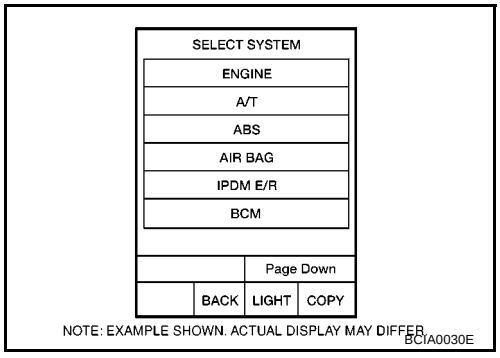
1. With the ignition switch OFF, connect “CONSULT-II” and “CONSULT-II CONVERTER” to the data link connector, then turn the ignition switch ON.



2. Touch “START (NISSAN BASED VHCL)”.



3. Touch “BCM” on “SELECT SYSTEM” screen.
If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



4. Select the desired part to be diagnosed on the “SELECT TEST ITEM” screen.

Configuration

EKS00EJ8

DESCRIPTION

There are two CONFIGURATION functions, as follows.
READ CONFIGURATION is a function for confirming vehicle configuration written on BCM.
WRITE CONFIGURATION is a function for writing a vehicle configuration to BCM.

CAUTION:

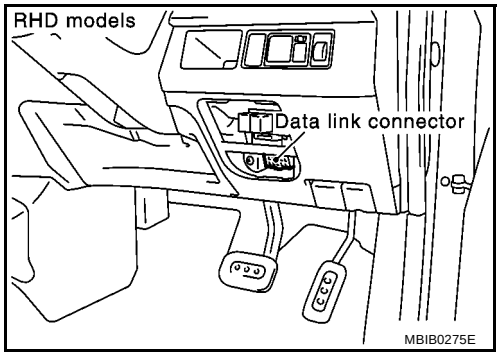
- **When replacing BCM, completely perform WRITE CONFIGURATION with CONSULT-II.**
- **Orderly complete the procedure of WRITE CONFIGURATION.**
- **If you set incorrect WRITE CONFIGURATION, vehicle operation will not be correct.**
- **Configuration is different by each vehicle model, confirm configuration in each case.**

READ CONFIGURATION PROCEDURE

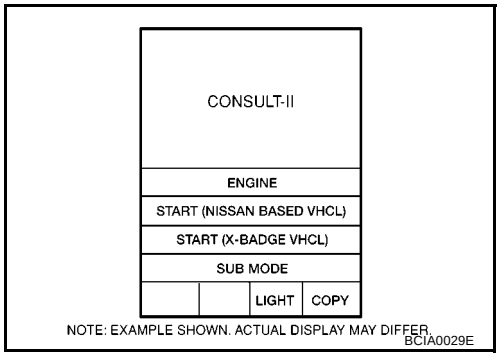
CAUTION:

If CONSULT-II is used with no connection of CONSULT CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

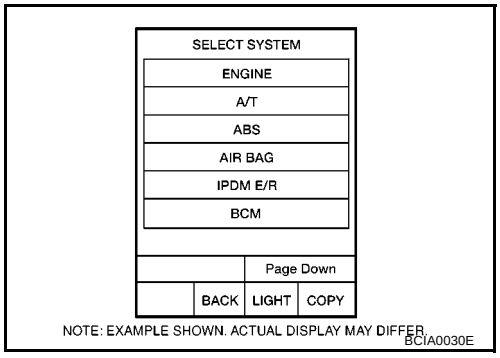
1. With the ignition switch OFF, connect CONSULT-II and CONSULT-II CONVERTER to the data link connector, then turn the ignition switch ON.



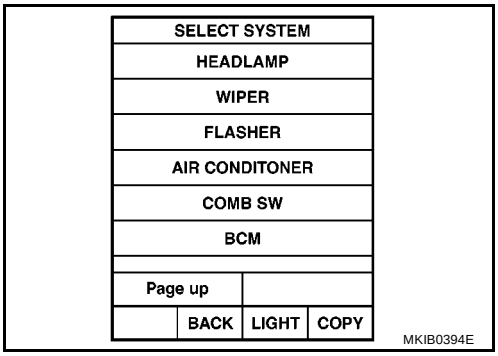
2. Touch “START(NISSAN BASED VHCL)”.



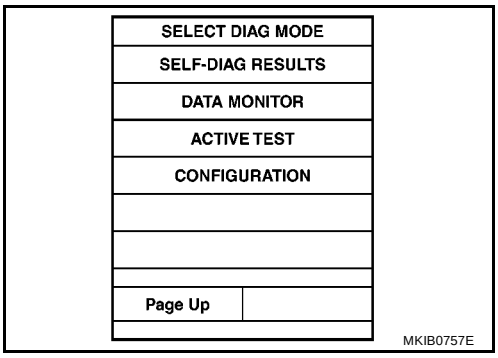
3. Touch “BCM” on “SELECT SYSTEM” screen.
If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



4. Touch “BCM” on “SELECT TEST SYSTEM” screen.

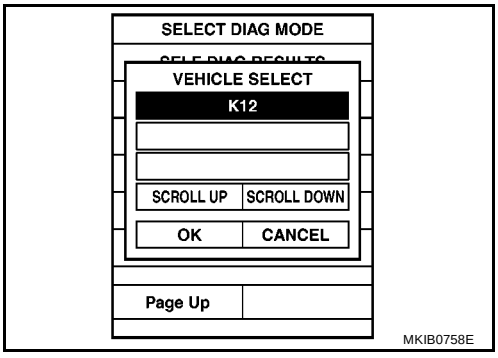


5. Touch “CONFIGURATION” on “SELECT DIAG MODE” screen.

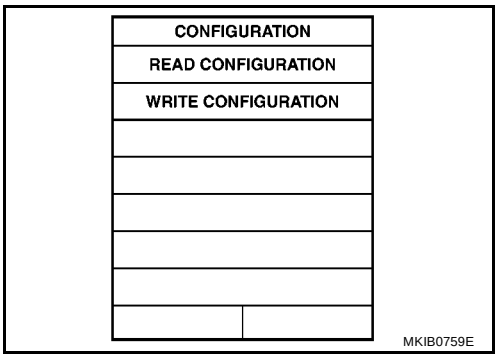


6. Touch “K12”, and “OK” on “VEHICLE SELECT” screen.
For canceling, touch “CANCEL” on “VEHICLE SELECT” screen.

NOTE:
Confirm vehicle model on GI-47, "IDENTIFICATION PLATE" .



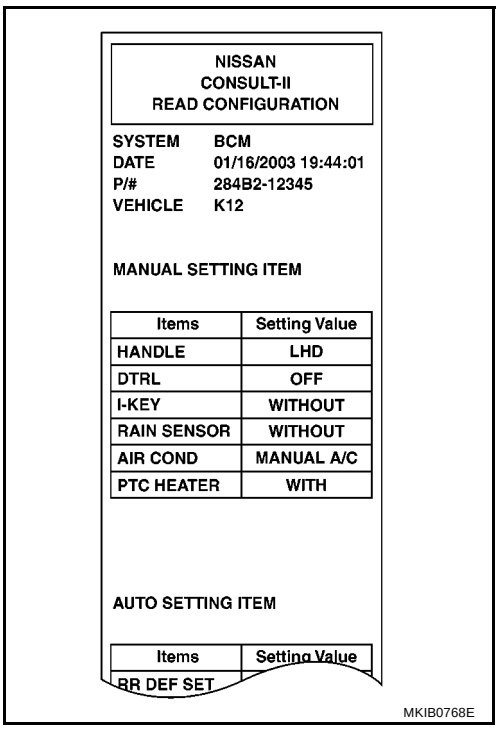
7. Touch “READ CONFIGURATION” on “CONFIGURATION” screen.



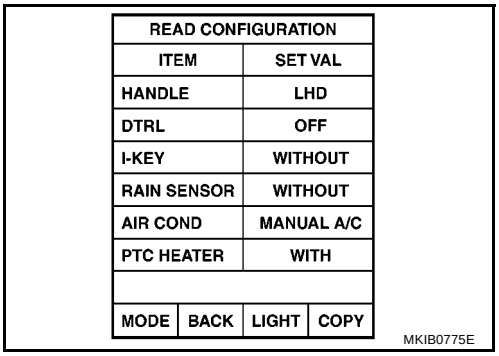
8. Configuration of brand-new BCM are printed out automatically. Configuration of brand-new BCM before executing “WRITE CONFIGURATION” is as follows.

MANUAL SET ITEM	
ITEM	SET VAL
HANDLE	LHD
DTRL	OFF
I-KEY	WITHOUT
RAIN SENSOR	WITHOUT
AIR COND	HEATER
PTC HEATER	WITHOUT

AUTO SET ITEM	
RR DEF SET	YET
H/L WASH FREQ	5
DONGLE	OFF
SUPER LOCK	WITH
DOOR LCK SET 1	5
DOOR LCK SET 2	7
LIT OFF TIMER	ON



9. Touch “BACK” on “ READ CONFIGURATION“screen.

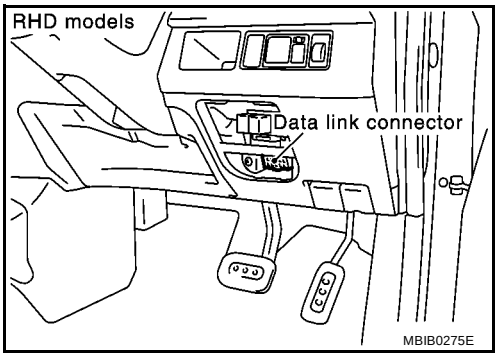


WRITE CONFIGURATION PROCEDURE

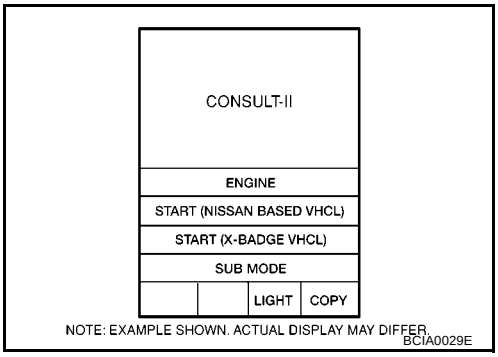
CAUTION:

If CONSULT-II is used with no connection of CONSULT CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

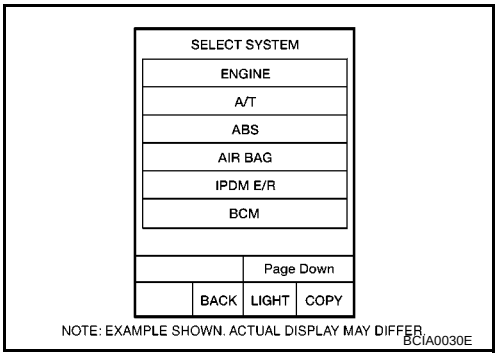
1. With the ignition switch OFF, connect CONSULT-II and CONSULT-II CONVERTER to the data link connector, then turn the ignition switch ON.



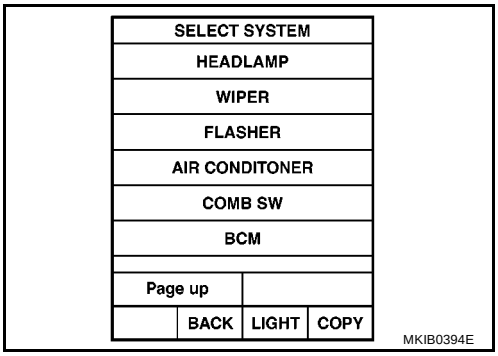
2. Touch “START(NISSAN BASED VHCL)”.



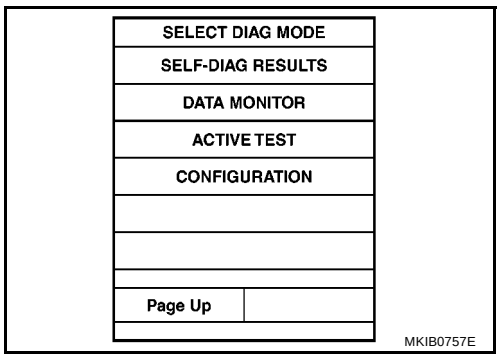
3. Touch “BCM” on “SELECT SYSTEM” screen.
If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



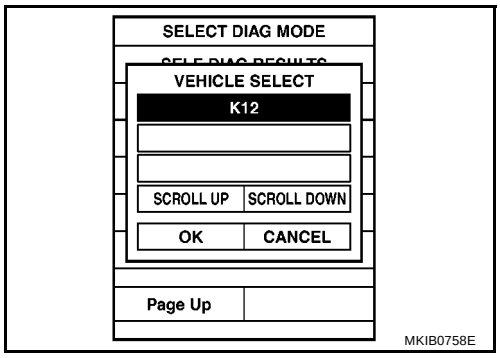
4. Touch “BCM” on “SELECT TEST SYSTEM” screen.



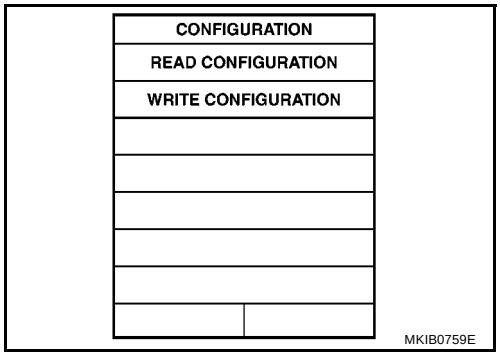
5. Touch “CONFIGURATION” on “SELECT DIAG MODE” screen.



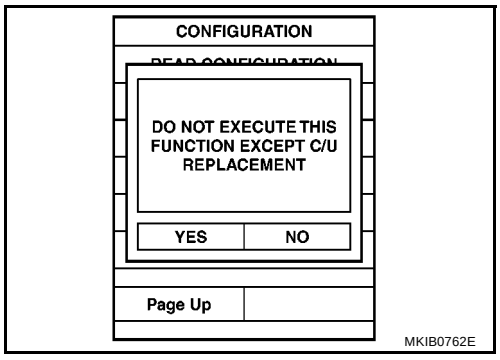
6. Touch “K12”, and “OK” on “VEHICLE SELECT” screen.
For canceling, touch “CANCEL” on “VEHICLE SELECT” screen.
NOTE:
Confirm vehicle model on GI-47, "IDENTIFICATION PLATE" .



7. Touch “WRITE CONFIGURATION” on “CONFIGURATION“screen.

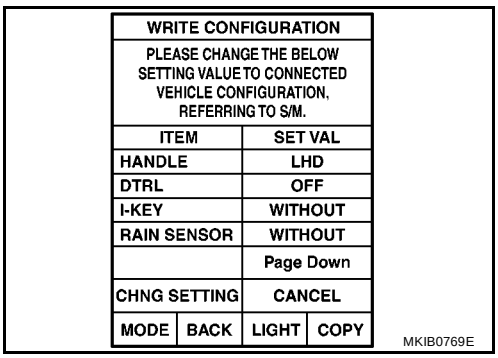


8. Touch “YES”.
For canceling, touch “NO”.

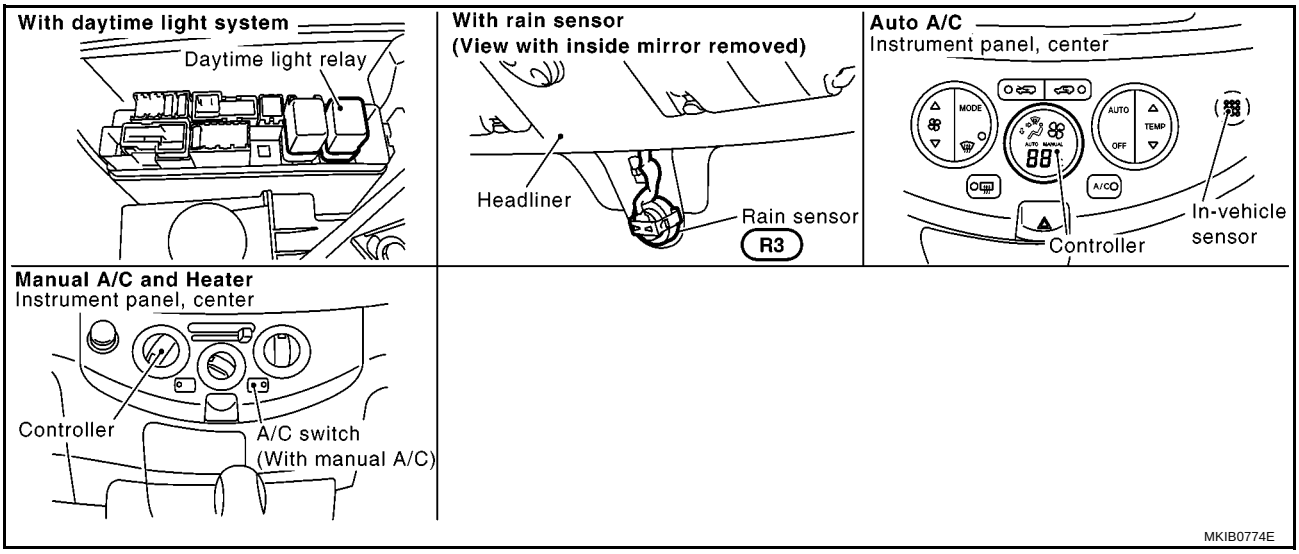


9. Select the configuration for the vehicle on “WRITE CONFIGURATION”screen based on the following ITEM LIST.
< ITEM LIST>

ITEM	SET VAL	NOTE
HANDLE	LHD	For LHD models
	RHD	For RHD models
DTRL (Day time Running Light)	ON	With day time light system*
	OFF	Without day time light system*
I-KEY (Intelligent Key system)	WITH	With Intelligent Key system
	WITHOUT	Without Intelligent Key system
RAIN SENSOR	WITH	With rain sensor*
	WITHOUT	Without rain sensor*
AIR COND	AUTO A/C	With auto A/C*
	MANUAL A/C	With manual A/C*
	HEATER	Heater*
PTC HEATER	WITH	PTC heater is equipped, if 14 digits of the applied model code is marked with “H” or “J”. i.e.:EDHARAFK12EEA “H” …
	WITHOUT	PTC heater is not equipped, if 14 digits of the applied model code is marked without “H” or “J”. i.e.:EDHARAFK12EEA “E” …



*: Refer to bottom illustration to specify the items for “SET VAL”.

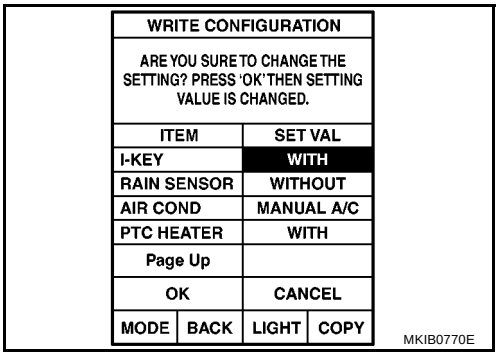


For canceling, touch “CANCEL”.

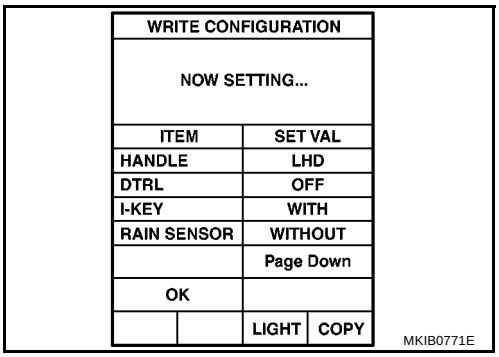
10. Touch “CONFIG” on “WRITE CONFIGURATION“screen.

CAUTION:
Make sure to touch “CONFIG” even if the indicated configuration of brand new BCM is same as the desirable configuration.
If not, configuration which is set automatically by selecting vehicle model can not be memorized.

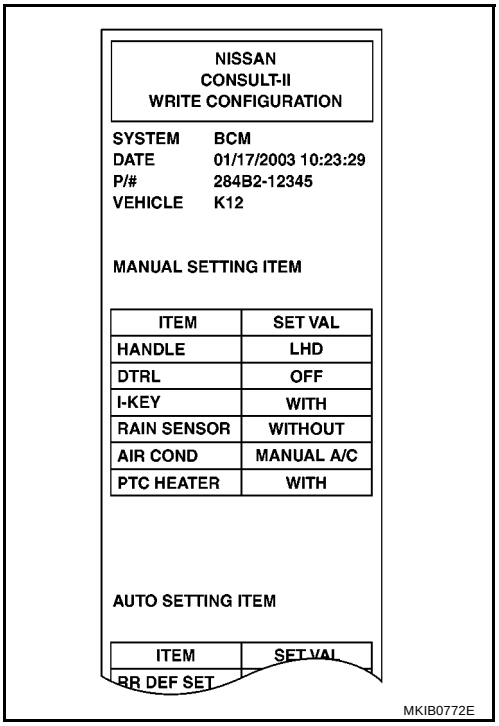
11. Touch “OK” on “WRITE CONFIGURATION”screen. When touched “CANCEL”, go to previous screen.



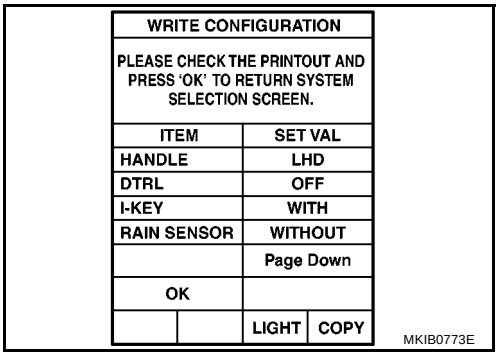
12. Wait until the next screen during setting.



13. WRITE CONFIGURATION results are printed out automatically. Check “WRITE CONFIGURATION” is correctly executed by comparing sheet automatically printed out with desirable configuration.



14. Touch “OK” on “WRITE CONFIGURATION“screen. WRITE CONFIGURATION is completed.



CAN Communication Inspection With CONSULT-II (Self-Diagnosis)

EKS007T0

Go to LAN-4, "Precautions When Using CONSULT-II" .

Removal and Installation of BCM

EKS007T2

CAUTION:

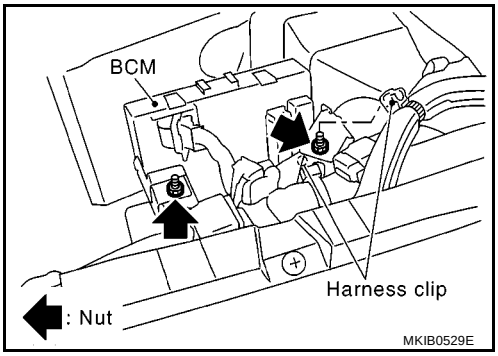
Always replace with new* BCM when the BCM replacement is required.
***: New one means virgin control unit that has never been energized on-board.**

REMOVAL

NOTE:

If possible, before removing BCM, retrieve current BCM configuration to use for reference when configuring brand-new BCM after installation. Refer to BCS-24, "Configuration" .

1. Remove instrument upper panel. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove harness clip.
3. Remove screws to remove BCM.



INSTALLATION

- Install in the reverse order of removal.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS004QW

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EIS004QX

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

RHD MODELS

- BCM (Models without Intelligent Key system)
- Intelligent Key unit (Models with Intelligent Key system)
- ECM
- IPDM E/R
- Combination meter
- EPS control unit

LHD MODELS

- BCM (Models without Intelligent Key system)
- Intelligent Key unit (Models with Intelligent Key system)
- ECM

Precautions

EIS004LF

- After installing removed lids or doors, be sure to adjust hinges and mount points so that lids or doors can open and close properly.
- Confirm parts for proper lubrication, damage or wear. Lubricate, repair or replace as necessary.

CLIP AND FASTENER

PFP:76906

List of Table

EIS004LI

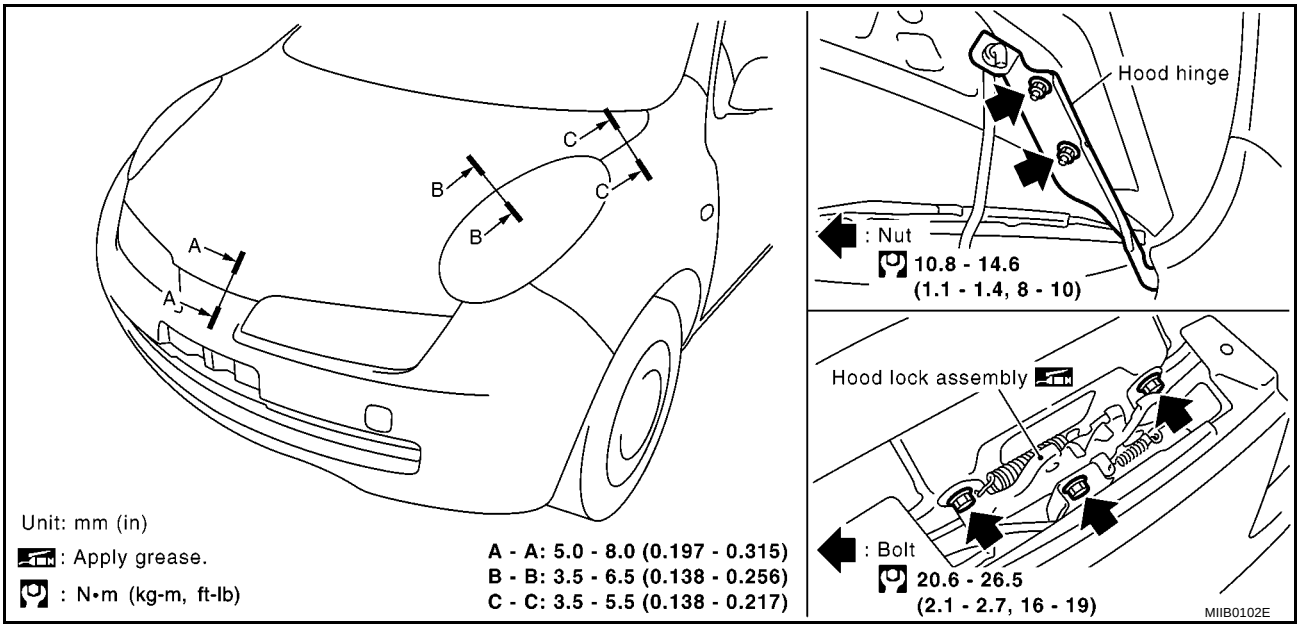
CE103		 PIIA1354J
C205		**Removal:** Flat-bladed screwdriver Clip Finisher MIIB0153E

HOOD

PFP:F5100

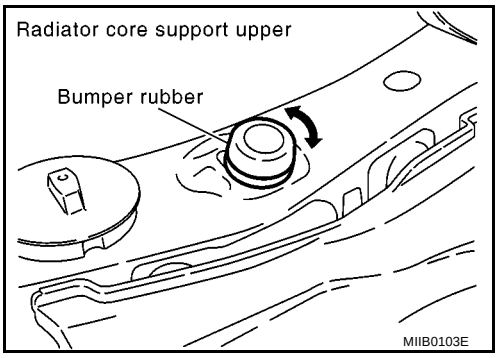
Fitting Adjustment

EIS004LJ



FRONT END HEIGHT ADJUSTMENT AND LATERAL/LONGITUDINAL CLEARANCE ADJUSTMENT

1. Remove hood lock. Rotate bumper rubber to adjust height until hood becomes 1 to 1.5 mm lower than the fender.
2. Position hood lock and engage striker. Check hood lock and striker for looseness. Tighten lock bolts to the specified torque.



CAUTION:

Adjust the clearance between hood and other parts so that the dimensional difference left and right is as follows.

Hood (B) - Headlamp (B) : 1.5 mm or less

Hood (C) - Headlamp (C) : 1.0 mm or less

SURFACE MISMATCH ADJUSTMENT

1. Release hood lock, and adjust surface level difference of hood, fender, and headlamp according to the fitting standard dimension, using RH and LH bumper rubbers.

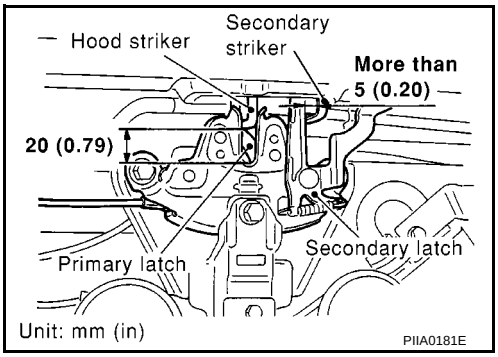
Hood (B) - Headlamp (B) : 1.0 mm

Hood (C) - Headlamp (C) : 0.2 mm

2. Install hood lock, and move hood lock laterally until the centers of striker and lock become vertical when viewed from the front.
3. Make sure the secondary latch is securely engaged with the secondary striker from either the dead weight of the hood (free-fall from approx. 200 mm height), or by applying light pressure (approx. 3 kg).

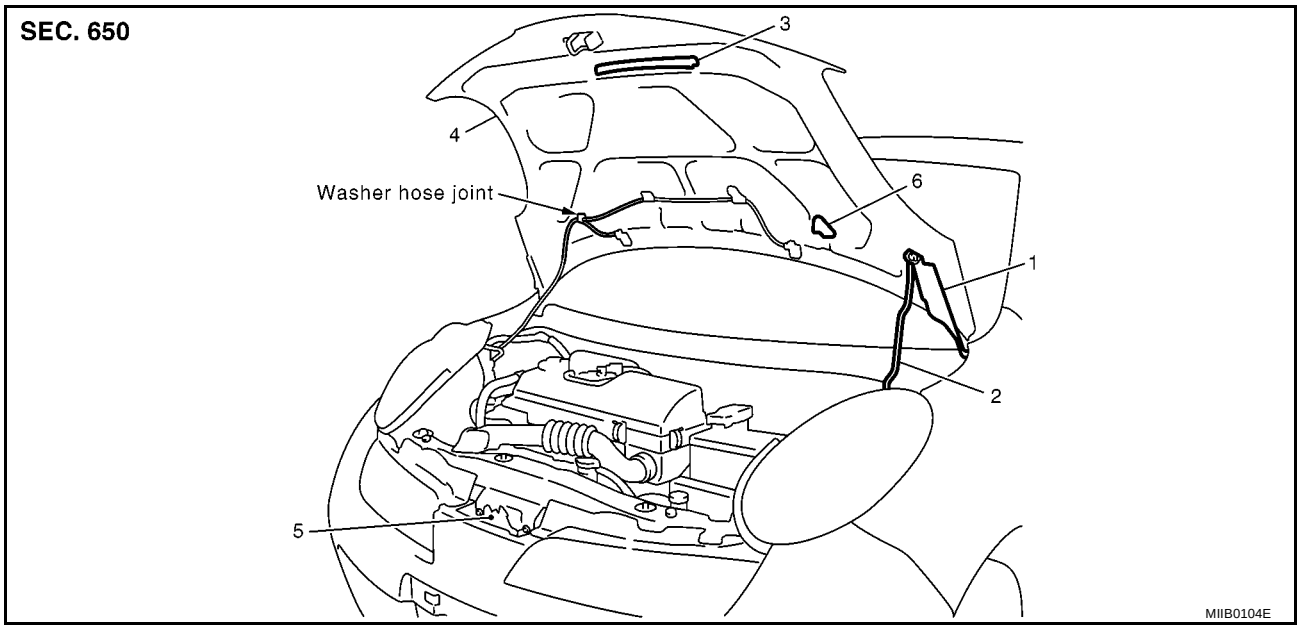
   CAUTION:

   Do not drop hood from a height of 300 mm or more.
4. Move hood lock-up and down until striker smoothly engages the lock when the hood is closed.
5. After adjustment, tighten lock bolts to the specified torque.



Removal and Installation

EIS004LK

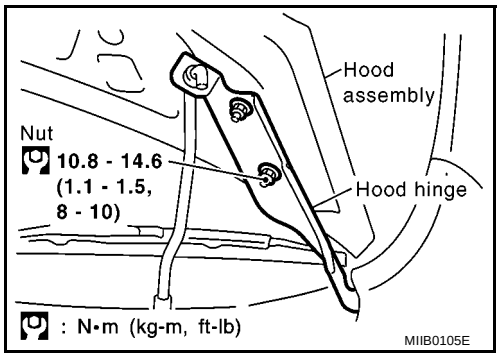


1. Hood hinge
2. Hood stay
3. Radiator core seal rubber
4. Hood assembly
5. Hood lock
6. Hood stay holder

REMOVAL

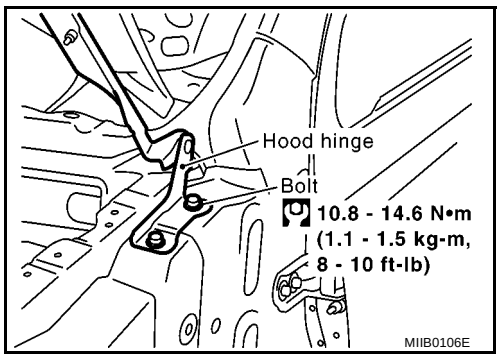
Hood Assembly

1. Disconnect washer hose at the connecting point.
2. Remove hinge nuts on hood and remove hood assembly.



Hood Hinge

1. Remove hood assembly.
2. Remove front fender. Refer to BL-14, "Removal and Installation" .
3. Remove bolts and then remove hood hinge.

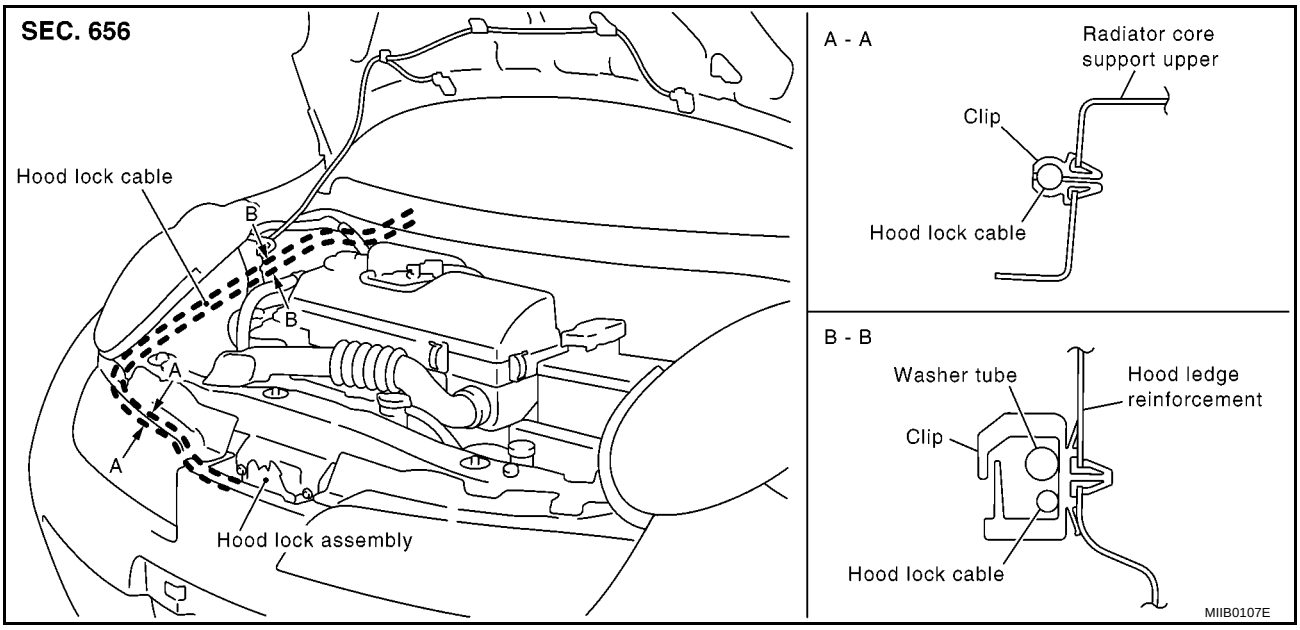


INSTALLATION

- Perform installation in the reverse order of removal while being careful of the following items while performing the work.
- Apply Anti-Corrosion Wax M-97 Super or comparable product to the hood hinge, hood ledge, and hood assembly.
- After installing, perform hood fitting adjustment. Refer to BL-7, "Fitting Adjustment" .

Removal and Installation of Hood Lock Control

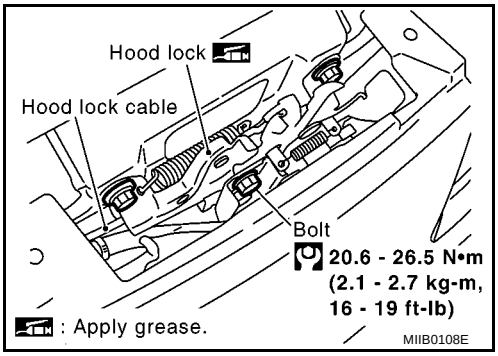
EIS004LL



REMOVAL

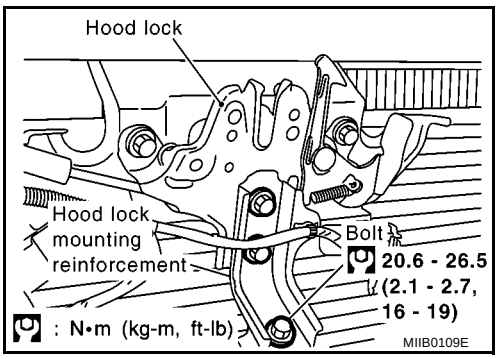
Hood Lock

1. Remove front grille (LH/RH). Refer to EI-8, "Removal and Installation" .
2. Remove hood lock bolts.
3. Remove hood lock cable from hood lock.



Hood Lock Mounting Reinforcement

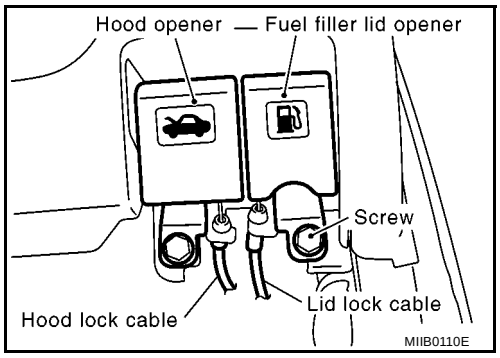
1. Remove front bumper. Refer to EI-4, "Removal and Installation" .
2. Remove bolts, and then remove hood lock mounting reinforcement.



Hood Lock Cable

1. Remove front grille (LH/RH). Refer to EI-8, "Removal and Installation" .
2. Remove fender protector (RH). Refer to EI-11, "Removal and Installation" .
3. Remove hood lock, and remove hood lock cable from hood lock.
4. Remove radiator core upper support and hood ledge clips, and then remove hood lock cable.
5. Remove hood opener on bottom right of instrument panel, and then remove hood lock cable.
6. Remove grommet on lower dashboard, and pull out hood lock cable from passenger room side.

CAUTION:
While pulling the cable, be careful not to damage (peel) hood opener cable outer surface on edges of body through hole.



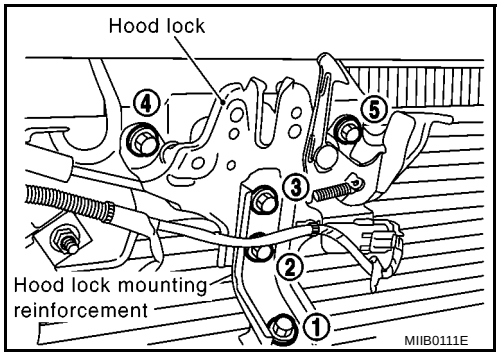
INSTALLATION

- Perform installation in the reverse order of removal while being careful of the following items while performing the work.
- After installing, perform hood fitting adjustment. Refer to BL-7, "Fitting Adjustment" .

Hood Lock Mounting Reinforcement

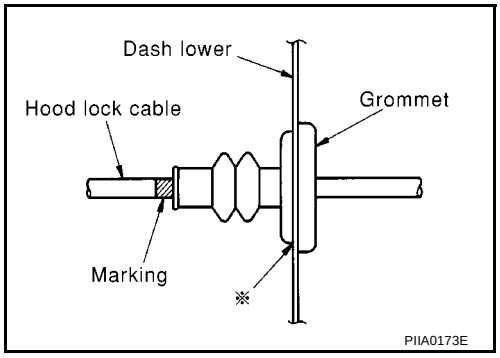
- When installing hood lock mounting reinforcement, loosen hood bolts, and then tighten bolts in the order shown in the figure.

Bolt No. 1 to 5.	**Tightening torque (N·m, (kg-m))** **: 20.6 - 26.5 (2.1 - 2.7)**

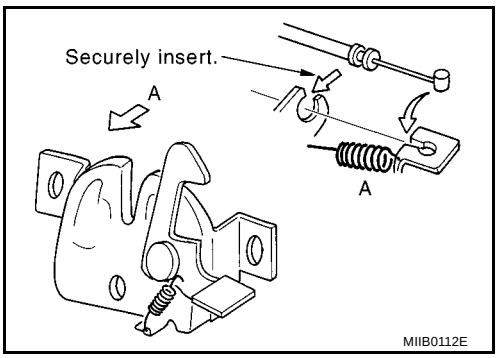


Hood Lock Cable

1. Pass hood lock cable through the opening while keeping the winding radius 100 mm or larger.
2. After confirming grommet is properly positioned, push it securely into the hole.
3. Apply sealant (POS seal) to area on the grommet indicated with the * mark.



4. Install cable securely to lock.
5. After installing, check hood lock adjustment and hood opener operation.



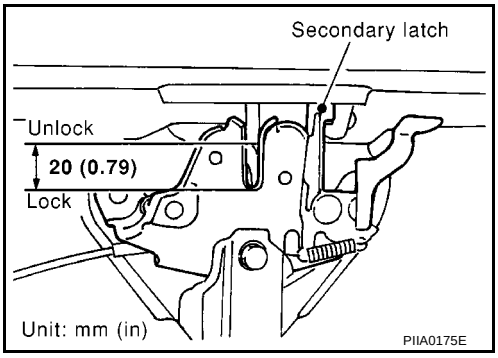
Hood Lock Control Inspection

EIS004LM

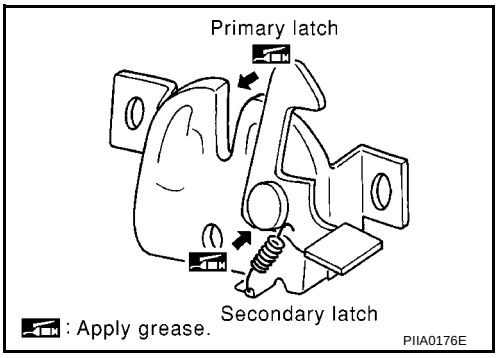
CAUTION:

If hood lock cable is bent or deformed, replace it.

1. Confirm hood lock secondary latch securely engages secondary striker by releasing it from a height of approximately 200 mm.
2. While operating the hood opener carefully, make sure the front end of the hood is lifted by approximately 20 mm. Also, make sure the hood opener returns to the original position.



3. Inspect hood lock grease, and if insufficient, apply grease to the area shown in the figure.

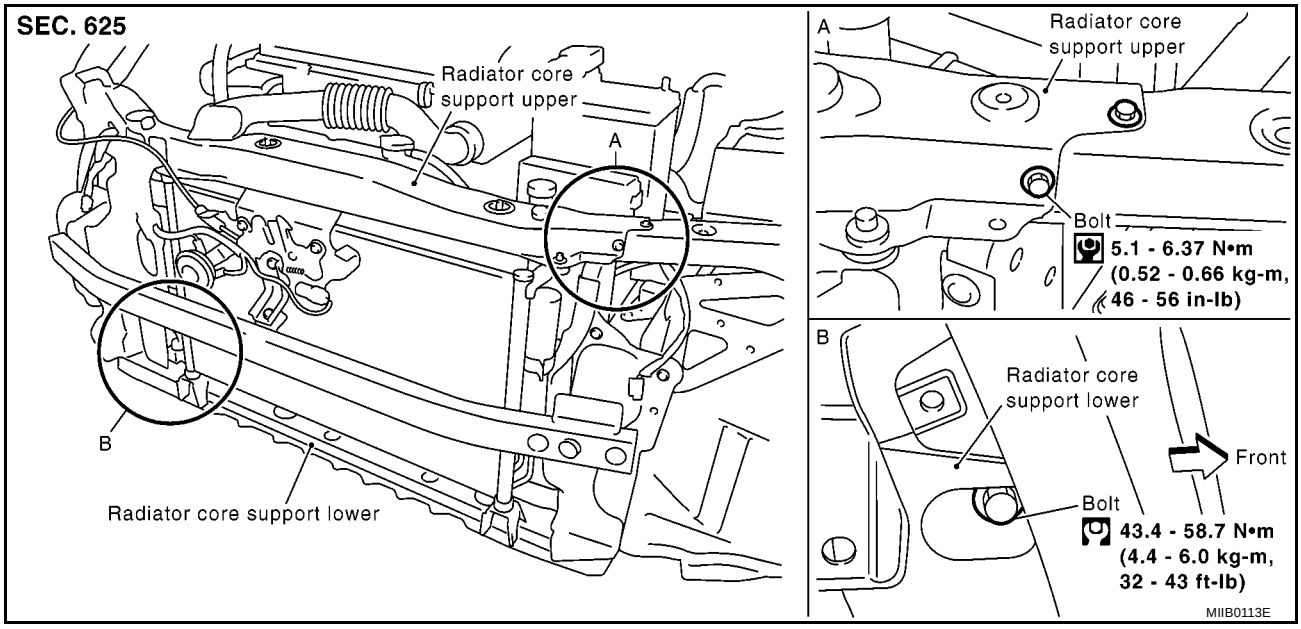


RADIATOR CORE SUPPORT

PFP:62500

Removal and Installation

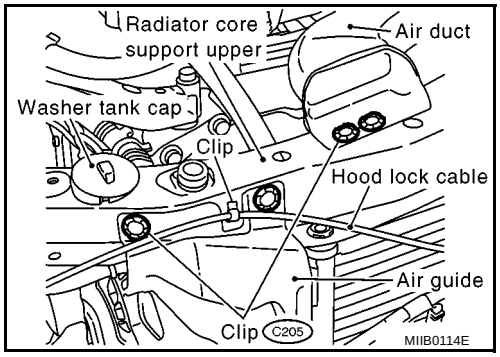
EIS004LN



REMOVAL

Radiator Core Upper Support

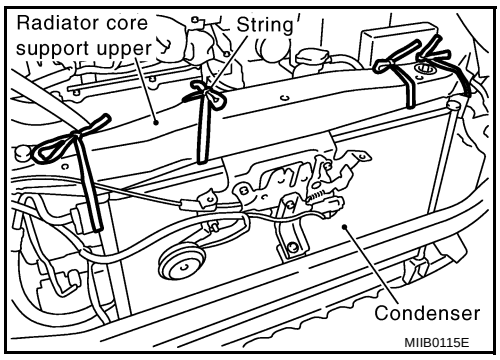
1. Remove headlamp (LH/RH). Refer to LT-41, "Removal and Installation" .
2. Remove hood lock assembly and hood lock mounting reinforcement. Refer to BL-9, "Removal and Installation of Hood Lock Control" .
3. Remove hood lock cable and air duct installation clips at top of air guide (RH).
4. Remove washer tank cap, and then pull washer tank inlet downward to pull it out.
5. Remove bolts, and then remove radiator core upper support.



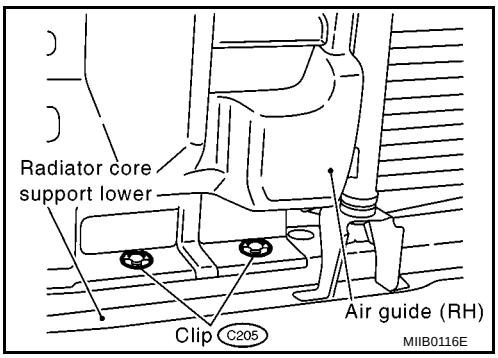
Radiator Core Lower Support

1. Remove front grille (LH/RH). Refer to EI-8, "Removal and Installation" .
2. Remove installation clips on top of air guide (RH).
3. Remove front bumper lower clip. Refer to EI-4, "Removal and Installation" .
4. Remove screws and clips and separate bumper fascia from fender protector left/right.
5. Tie cord to all radiator core upper supports of the radiator and condenser.

   NOTE:
   To prevent the compressor and radiator from being dropped when the radiator core lower support is removed.
6. Remove bolts, and lower radiator core lower supports.



7. Remove air guide (RH) bottom clips, and remove radiator core lower supports from passenger room.



INSTALLATION

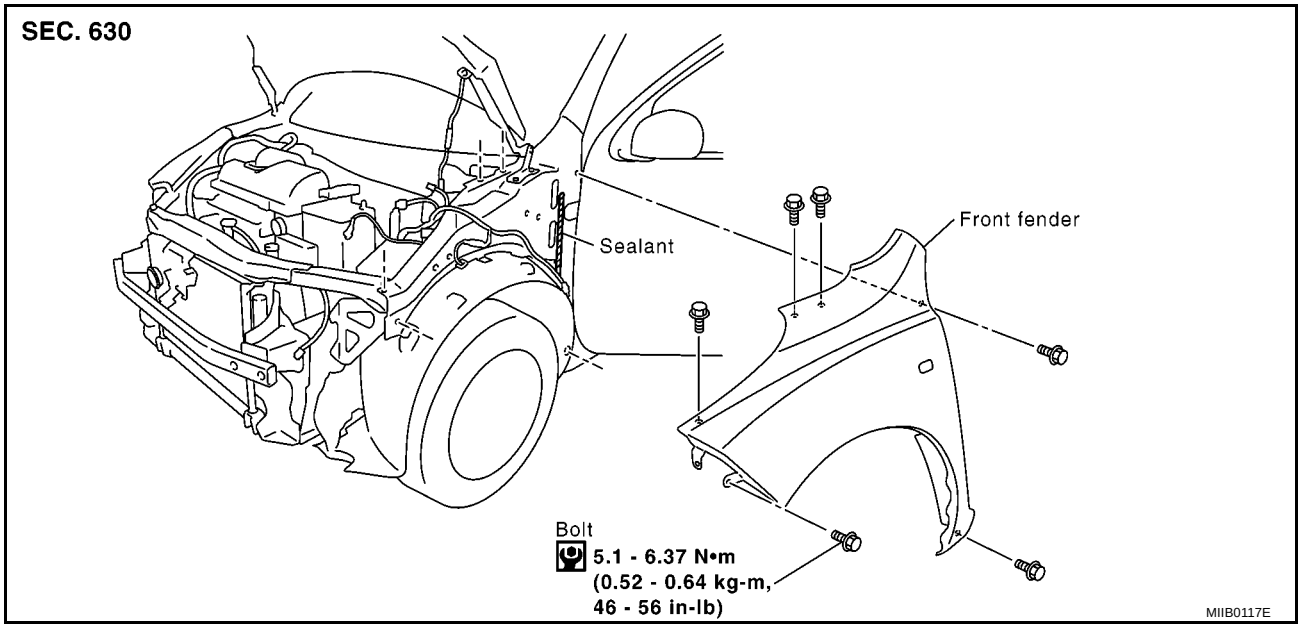
Install in the reverse order of removal.

FRONT FENDER

PFP:63100

Removal and Installation

EIS004LO



REMOVAL

1. Remove side turn signal lamp. Refer to LT-150, "Removal and Installation" .
2. Remove front bumper. Refer to EI-4, "Removal and Installation" .
3. Remove headlamps. Refer to LT-41, "Removal and Installation" .
4. Remove fender protector front fender side clips (2) and screws (3). Refer to EI-11, "Removal and Installation" .
5. Remove bolts and then front fender.

INSTALLATION

Install in the reverse order of removal.

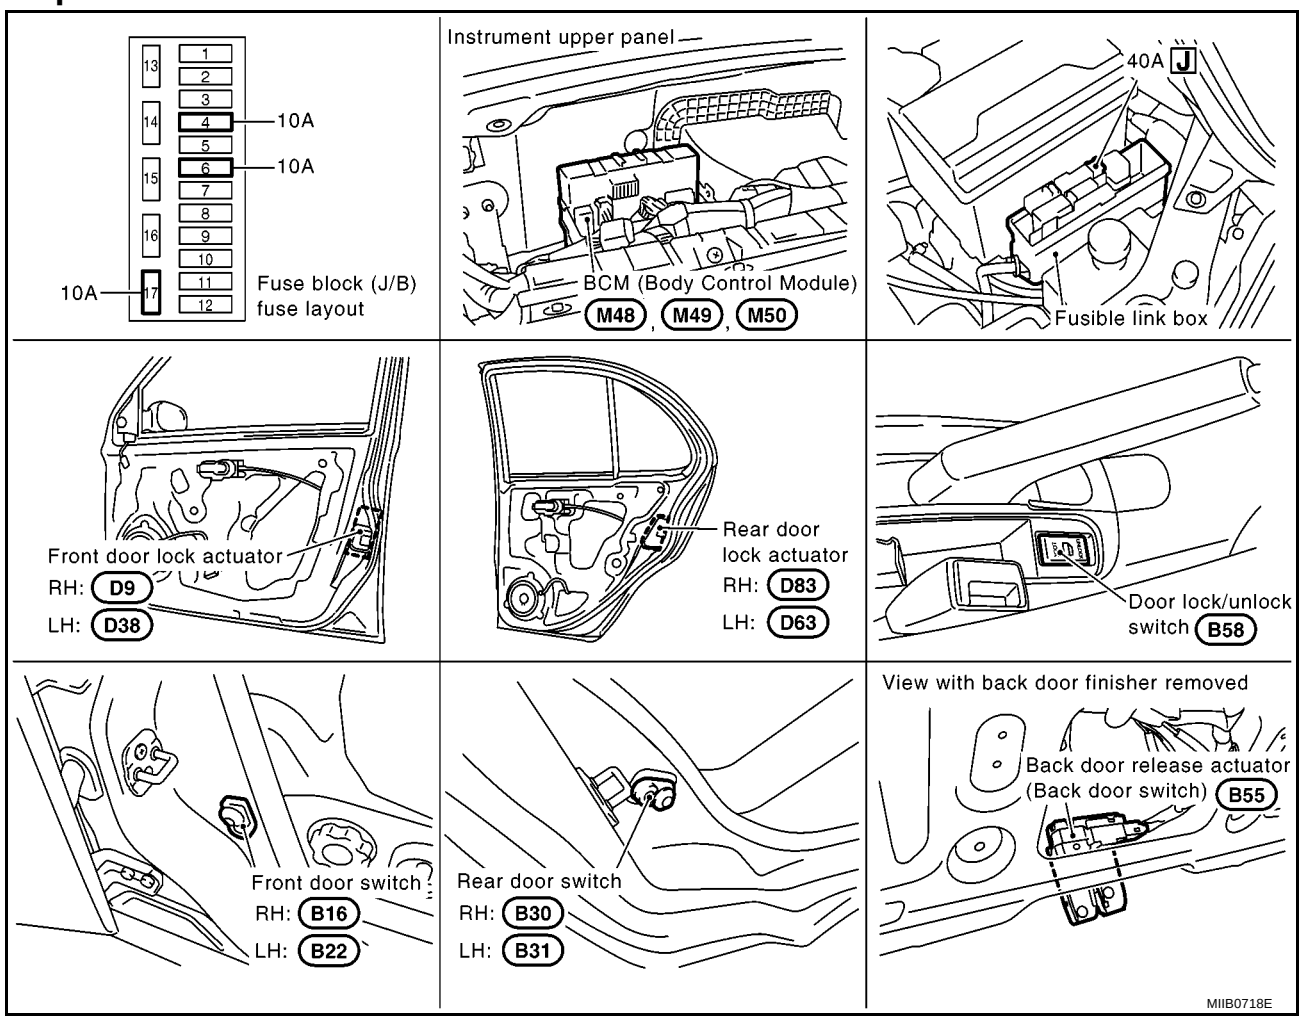
POWER DOOR LOCK SYSTEM

PFP:24814

Component Parts and Harness Connector Location

SMA for VIN >SJN**AK12U1309269

EIS004X9



System Description

EIS004X8

SMA for VIN >SJN**AK12U1309269

OPERATION

Power is supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fusible link box).
- to key switch terminal 1 (Without Intelligent Key system)
- through 10A fuse [No. 6, located in the fuse block (J/B)] (Without Intelligent Key system)
- to key switch and ignition knob switch terminal 3 (With Intelligent Key system)
- through 10A fuse [No. 17, located in the fuse block (J/B)] (With Intelligent Key system).

When the key switch is ON (Ignition key is inserted in ignition key cylinder), power is supplied

- to BCM terminal 3.
- through key switch terminal 2

When the ignition switch is ON or START, power is supplied

- to BCM terminal 24
- through 10A fuse [No. 4, located in the fuse block (J/B)].

Ground is supplied

- to BCM terminals 2 and 70
- through body ground M19 and M20.

When the front door switch LH (LHD Models) or RH (RHD Models) is ON (door is open), ground supplied

- to BCM terminal 29
- through front door switch LH (LHD Models) or RH (RHD Models) terminal 1
- through front door switch LH (LHD Models) or RH (RHD Models) case ground.

When the front door switch RH (LHD Models) or LH (RHD Models) is ON (door is open), ground supplied

- to BCM terminal 30
- through front door switch RH (LHD Models) or LH (RHD Models) terminal 1
- through front door switch RH (LHD Models) or LH (RHD Models) case ground.

When the rear door switch LH is ON (door is open), ground is supplied

- to BCM terminal 59 (5 door models)
- through rear door switch LH terminal 1
- through rear door switch LH case ground.

When the rear door switch RH is ON (door is open), ground is supplied

- to BCM terminal 60 (5 door models)
- through rear door switch RH terminal 1
- through rear door switch RH case ground.

When the back door switch is ON (back door is open), ground is supplied

- to BCM terminal 10
- through back door switch terminals 1 and 2
- through body grounds B17, B23, B44 and B51.

DOOR LOCK AND UNLOCK SWITCH OPERATION

When door lock/unlock switch is in LOCK position, ground is supplied

- through body grounds B23,B17,B44 and B51
- through door lock/unlock switch terminal 4 and 6
- to BCM (Body Control Module) terminal 6.

With power and ground supplied, doors are locked.

When door lock/unlock switch is in UNLOCK position, ground is supplied

- through body grounds B23,B17,B44 and B51
- through door lock/unlock switch terminal 4 and 5
- to BCM (Body Control Module) terminal 25

With power and ground supplied, all doors are unlocked.

Lock/unlock switch indicated by LED when key in switch is on or on with timer.

KEY REMINDER SYSTEM

- If the ignition key is in the ignition key cylinder and driver door is open, setting door lock/unlock switch, key or remote controller to “LOCK” locks the door once but then immediately unlocks all doors.

UNLOCK LINK FUNCTION

When this function is activated, if the car is door lock/unlock switch locked, opening the drivers repossessing door from the inside handle override will cause the whole car to unlock.

Selectable Function

	Door Lock/unlock switch
How to change setting	Unlock press for more than 4 seconds
contents	Unlock link activate/deactivate
How to confirm	All should have buzzer sound for 0.2 seconds

BACK DOOR OPENER OPERTION

Back door can be opened with back door switch: When all door are unlocked, or When back door request switch pushed (With Intelligent Key system).

CAN Communication

EIS008BZ

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EIS00AOQ

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

Terminal and Reference Value for BCM

EIS00554

Terminal	Wire color	Item	Condition	Voltage (V) (Approx.)
2	B	Ground	—	0
3	OR *P	Key switch	Key inserted (ON) → key removed from Ignition key cylinder (OFF)	Battery voltage → 0
5	Y	External back door release switch	Release switch open operation	5 → 0
6	LG	Door lock / unlock switch (Lock signal)	Lock operation (ON)	0
			Other than above (OFF)	5
10	OR	Back door switch	Open (ON) → Close (OFF)	0 → 5
19	R	CAN-H	—	—
24	OR	Ignition power supply	Ignition switch (ON or START position)	Battery voltage
25	BR	Door lock/unlock switch (Unlock signal)	Unlock operation (ON)	0
			Other than above (OFF)	5
29	L	Front door switch RH	Door open (ON) → close (OFF)	0 → Battery voltage
30	LG	Front door switch LH	Door open (ON) → close (OFF)	0 → Battery voltage
32	PU	Door lock status indicator	Goes OFF→ Illuminates (Ignition switch ON and all door closed)	0 → Battery voltage
39	W	CAN-L	—	—
59	L	Rear door switch LH	Door open (ON) → close (OFF)	0 → Battery voltage
60	G	Rear door switch RH	Door open (ON) → close (OFF)	0 → Battery voltage
67	L	Door lock actuator unlock (Passenger and rear LH, RH doors)	Door lock / unlock switch Unlock operation	0 → Battery voltage
68	OR	Back door release actuator	Power window main switch (Trunk or back door release switch) Open operation	Battery voltage → 0
70	B	Ground (Power)	—	0
74	W	Battery power supply (BCM)	—	Battery voltage
76	BR	Door lock actuator unlock (DR side door)	Door lock / unlock switch Unlock operation	0 → Battery voltage
77	L	Door lock actuator lock signal (All doors)	Door lock/unlock switch & remote controller lock operation	0 → Battery voltage
79	Y	Battery power supply (Power)	—	Battery voltage

*: With Intelligent Key system models

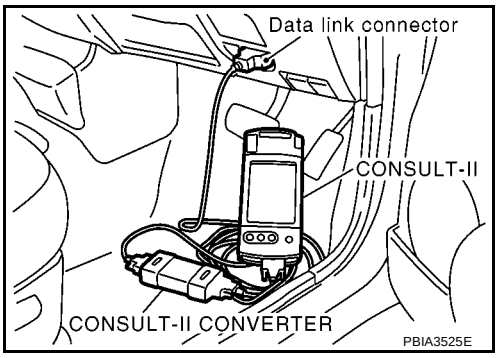
CONSULT- II Inspection Procedure

EIS00555

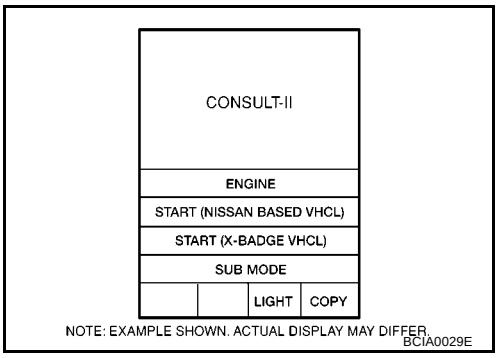
CAUTION:

If CONSULT-II is used with no connector of CONSULT-II CONVERTER, malfunction might be detected in self-diagnosis depending on control which carry out CAN communication.

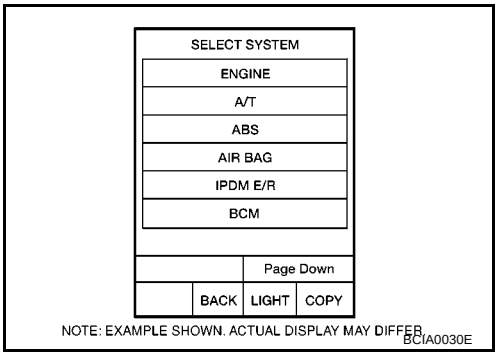
1. Turn ignition switch “OFF”.
2. Connect "CONSULT-II" and "CONSULT-II CONVERTER" to the data link connector.



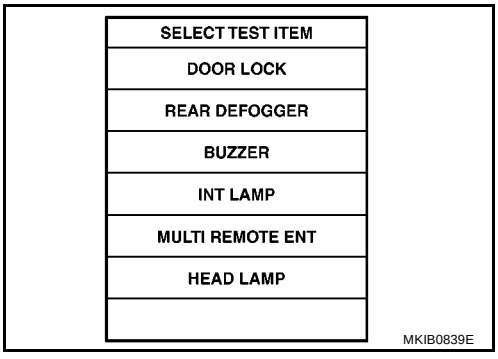
3. Turn ignition switch “ON”.
4. Touch “START (NISSAN BASED VHCL)”.



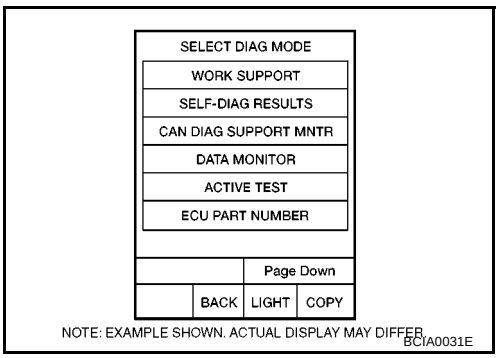
5. Touch “BCM”on “SELECT ITEM” screen. If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “DOOR LOCK”.



7. Touch “WORK SUPPORT”, “DATA MONITOR”,or “ACTIVE TEST” on the “SELECT DIAG MODE” screen.



CONSULT- II Application Items

EIS00556

WORK SUPPORT

Supported Item	Description
SECURITY DOOR LOCK SET	Anti-hijack function mode can be changed in this mode.
AUTO LOCK SET	Auto locking function mode can be changed in this mode.

Security Door Lock Set

	ON	OFF
Anti hijack function	Activation	Deactivation

Auto Lock Set

	MODE1	MODE2	MODE3	MODE4	MODE5	MODE6*	MODE7*	MODE8*
Auto locking function	1 minute	2 minutes	3 minutes	4 minutes	5 minutes	–	–	–

*: These mode are not supported.

DATA MONITOR

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
PUSH SW (*1)	Indicates [ON/OFF] condition of ignition knob switch.
KEY IN SW (*2)	Indicates [ON/OFF] condition of key switch.
CDL LOCK SW	Indicates [ON/OFF] condition of lock signal from door lock/ unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of unlock signal from door lock/ unlock switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch LH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch RH.
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
TRNK OPNR SW	Indicates [ON/OFF] condition of external back door release switch.

*1: Models with Intelligent Key System.
*2: Models without Intelligent Key System.

ACTIVE TEST

Monitored Item	Description
DOOR LOCK	This test is able to check all door lock actuator (except for back door) lock / unlock operation. These actuator lock / unlock when “LOCK” or “UNLOCK” on CONSULT-II screen is touched.
TRUNK / BACK DOOR	This test is able to check back door release actuator open operation. These actuator open when “OPEN” on CONSUT-II screen in touched.

TROUBLE DIAGNOSES CHART BY SYMPTOM/WITHOUT INTELLIGENT KEY SYSTEM

Always check the "Work Flow" before troubleshooting. Refer to Refer to Service Manual

Symptom	Malfunctioning system	Refer to page
Power door lock does not operate with door lock / unlock switch.	1.Check BCM power supply and ground circuit.	BL-49
	2.Check door lock / unlock switch.	BL-50
	3.Check door lock actuator (driver side).	BL-54
	4.Replace BCM.	BCS-31
Specific door lock actuator does not operate.	Check door lock actuator.	BL-54
Front door lock actuator (driver side) does not operate. (All other door lock actuators operate propely)	Check front door lock actuator (driver side).	BL-54
All door lock actuator (except driver side) does not operate.	1.Check door lock actuator circuit.	BL-53
	2. Replace BCM.	BCS-31
Key reminder system does not operate.	1. Check key switch.	BL-51
	2. Check door switch.	BL-58
	3. Replace BCM.	BCS-31
Back door does not open. But power door lock operates properly.	1.Check external back door release switch.	BL-66
	2. Check back door release actuator.	BL-68
	3. Replace BCM.	BCS-31
Door lock/unlock switch indicator does not illumination. (All other door lock system is "OK".	1. Check door lock/unlock switch indicator.	BL-69
	3. Replace BCM.	BCS-31

TROUBLE DIAGNOSES CHART BY SYMPTOM/WITH INTELLIGENT KEY SYSTEM

Always check the "Work Flow" before troubleshooting. Refer to Refer to Service Manual

Symptom	Malfunctioning system	Refer to page
Power door lock does not operate with door lock / unlock switch.	1.Check BCM power supply and ground circuit.	BL-49
	2.Check door lock / unlock switch.	BL-50
	3.Check door lock actuator (driver side).	BL-54
	4.Replace BCM.	BCS-31
Specific door lock actuator does not operate.	Check door lock actuator.	BL-54
Front door lock actuator (driver side) does not operate. (All other door lock actuators operate propely)	Check front door lock actuator (driver side).	BL-54
All door lock actuator (except driver side) does not operate.	1.Check door lock actuator circuit.	BL-53
	2. Replace BCM.	BCS-31
Key reminder system does not operate.	1. Check key switch.	BL-52
	2. Check door switch.	BL-58
	3. Replace BCM.	BCS-31
Back door does not open. But power door lock operates properly.	1.Check external back door release switch.	BL-66
	2. Check back door release actuator.	BL-68
	3. Replace BCM.	BCS-31
Door lock/unlock switch indicator does not illumination. (All other door lock system is "OK".	1. Check door lock/unlock switch indicator.	BL-69
	3. Replace BCM.	BCS-31
All door lock actuator (except passenger side) does not operate.	1. Check door lock/unlock relay circuit.	BL-69

Check Power Supply and Ground Circuit of BCM

EIS00558

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-II, then perform the each trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”, Refer to BCS-22, "CONSULT-II Function (BCM)".

1. FUSE INSPECTION

- Check 10A fuse [No.4, located in fuse block (J/B)]
- Check 40A fusible link (letter **J** located in the fuse and fusible link box).

NOTE:
Refer to BL-15, "Component Parts and Harness Connector Location" .

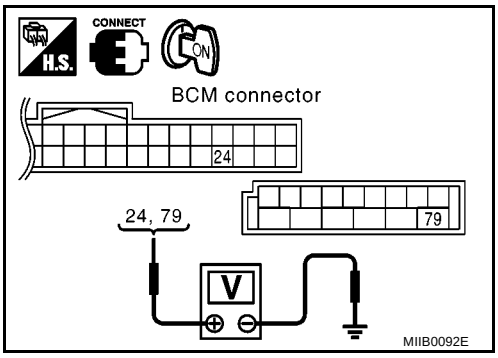
OK or NG

OK >> GO TO 2
NG >> If fuse is blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to.PG-4, "POWER SUPPLY ROUTING"

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between BCM connector M48, M50 terminal 24, 79 and ground.

24 (OR) – Ground :Battery voltage.
79 (Y) – Ground :Battery voltage.



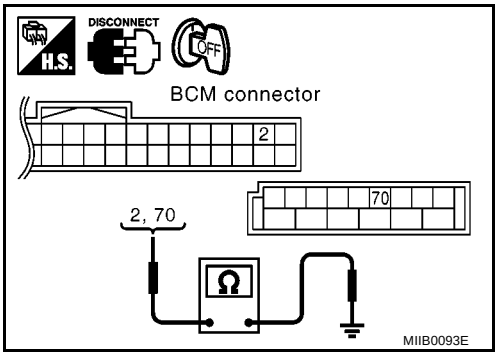
OK or NG

OK >> GO TO 3
NG >> Check BCM power supply circuit for open or short.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector M48, M50 terminal 2, 70 and ground.

2 (B) – Ground :Continuity should exist.
70 (B) – Ground :Continuity should exist.



OK or NG

OK >> Power supply and ground circuit is OK.
NG >> Check BCM ground circuit for open or short.

Check Door Lock / Unlock Switch

EIS00559

1. CHECK DOOR LOCK / UNLOCK SWITCH SIGNAL

With CONSULT- II

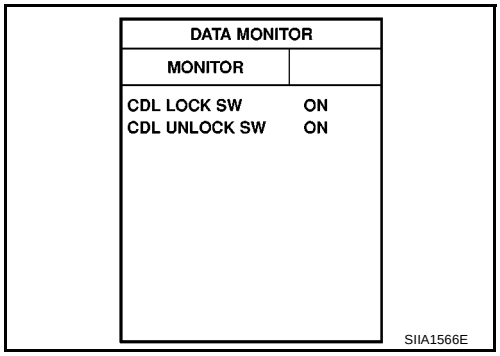
Check door lock / unlock switch input signal (“CDL LOCK SW” “CDL UNLOCK SW”) in “DATA MONITOR” mode with CONSULT- II.

When door lock/unlock switch is turned to LOCK:

CDL LOCK SW ⇒ ON

When door lock/unlock switch is turned to UNLOCK:

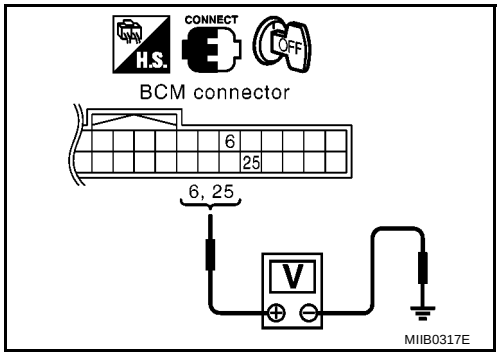
CDL UNLOCK SW ⇒ ON



Without CONSULT- II

Door lock / unlock switch operate, check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	6 (LG)	Ground	Lock	0
			Neutral / Unlock	5
	25 (BR)		Unlock	0
			Neutral / Lock	5



OK or NG

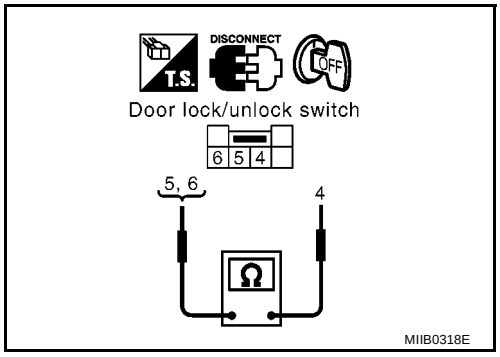
OK >> Door lock / unlock switch is OK.

NG >> GO TO 2.

2. CHECK DOOR LOCK/UNLOCK SWITCH

1. Turn ignition switch OFF.
2. Disconnect door lock / unlock switch connector.
3. Check continuity between door lock / unlock switch terminals 5, 6 and 4.

Terminals		Condition	Continuity
5	4	Unlock	Yes
		Neutral / Lock	No
6		Lock	Yes
		Neutral / Unlock	No



OK or NG

OK >> Check the following.

- Ground circuit for door lock / unlock switch
- Harness for open or short between BCM and door lock / unlock switch.

NG >> Replace door lock / unlock switch.

Check Key Switch /Without Intelligent Key System

EIS0055A

1. CHECK KEY SWITCH INPUT SIGNAL

With CONSULT-II

Check key switch input signal “KEY IN SW” in “DATA MONITOR” mode with CONSULT- II.

When key is inserted in ignition key cylinder:

KEY IN SW ⇒ ON

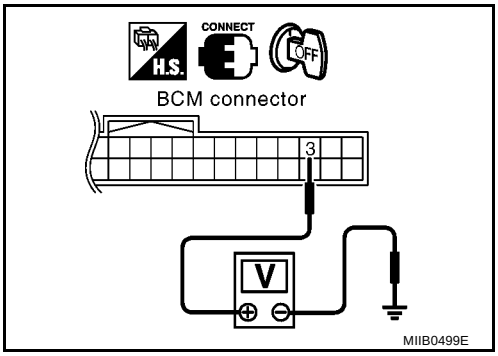
When key is removed from ignition key cylinder:

KEY IN SW ⇒ OFF

Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	3 (OR)	Ground	Key is inserted	Battery voltage
			Key is removed	0



OK or NG

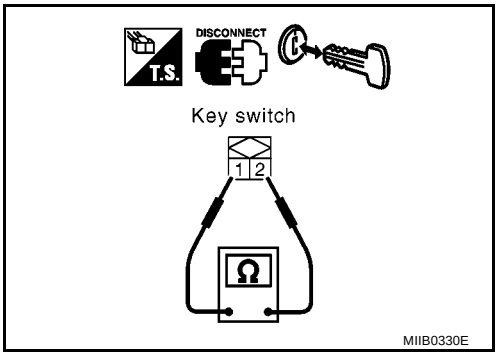
OK >> Key switch is OK.

NG >> GO TO 2.

2. CHECK KEY SWITCH (INSERT)

1. Turn ignition switch OFF.
2. Disconnect key switch connector.
3. Check continuity between key switch terminals 1 and 2.

Terminals		Condition	Continuity
1	2	Key is inserted	YES
		Key is removed	NO



OK or NG?

OK >> Check the following.

- 10A fuse [No. 6, located in fuse block (J/B)].
- Harness for open or short between key switch and fuse.
- Harness for open or short between BCM and key switch.

NG >> Replace key switch.

Check Key Switch/With Intelligent Key System

EIS0056D

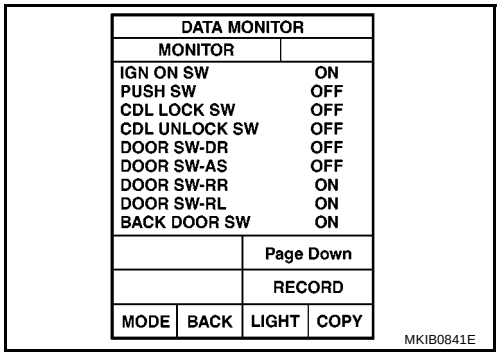
1. KEY SWITCH INSPECTION

With CONSULT-II

Display “PUSH SW” on DATA MONITOR screen, and check if ON-OFF display is linked to ignition knob switch operation.

When ignition knob is pushed : PUSH SW ON

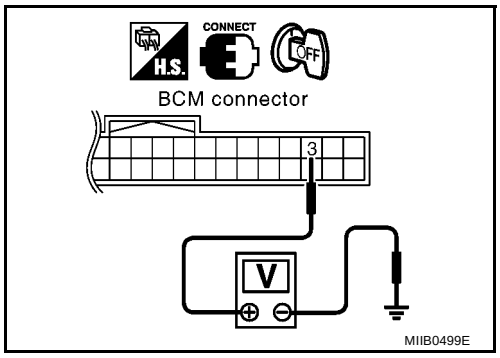
When ignition knob is released : PUSH SW OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	3 (OR)	Ground	Key is inserted	Battery voltage
			Key is removed	0



OK or NG

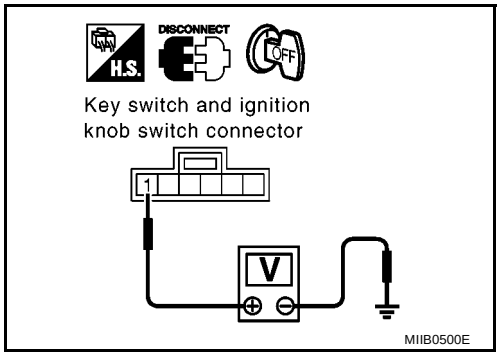
OK >> Key switch is OK.

NG >> GO TO 2.

2. KEY SWITCH POWER SUPPLY CIRCUIT INSPECTION

1. Remove mechanical key from ignition knob.
2. Disconnect key switch and ignition knob switch connector.
3. Check voltage between key switch and ignition knob switch connector M34 terminal 1 and ground.

1 (W) - Ground : Approx. 12V



OK or NG

OK >> GO TO 3.

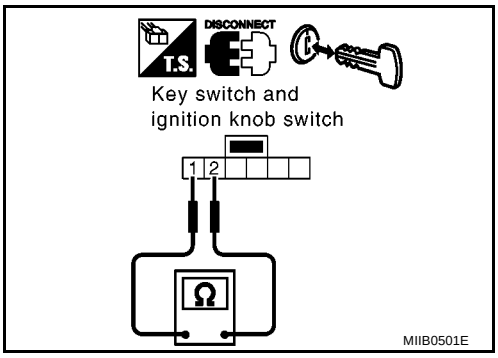
NG >> Repair or replace key switch power supply circuit.

3. KEY SWITCH OPERATION INSPECTION

1. Insert mechanical key into ignition knob.
2. Check continuity between key switch and ignition knob switch connector M34 terminal 1 and 2.

1 - 2

Insert mechanical key into ignition knob.	**: Continuity should exist.**
Remove mechanical key from ignition knob.	**: Continuity should not exist.**



OK or NG

OK >> GO TO 4.
NG >> Replace key switch.

4. KEY SWITCH CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit connector M51 terminal 27 and key switch and ignition knob switch connector M34 terminal 2.

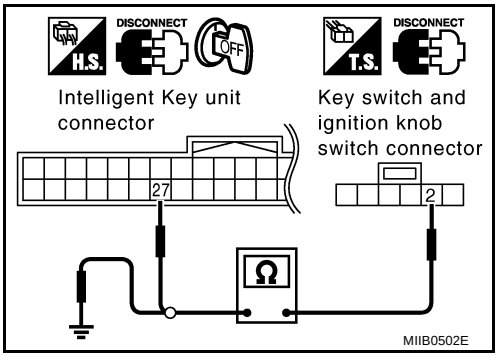
27 (P) - 2 (P) : Continuity should exist.

3. Check continuity between key switch connector M34 terminal 2 and ground.

2 (P) - Ground : Continuity should not exist.

OK or NG

OK >> Key switch is OK.
NG >> Repair or replace harness between Intelligent Key unit and key switch and ignition knob switch.



Check Door Lock Actuator Circuit.

EIS0055B

1. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67 and front door lock actuator (passenger side) connector D38 terminal 2.

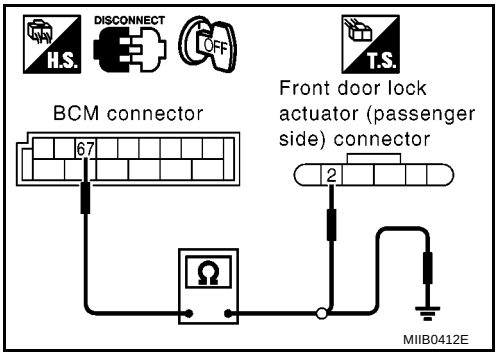
67 (L) – 2 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67 and ground.

67 (L) – Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.



Check Door Lock Actuator

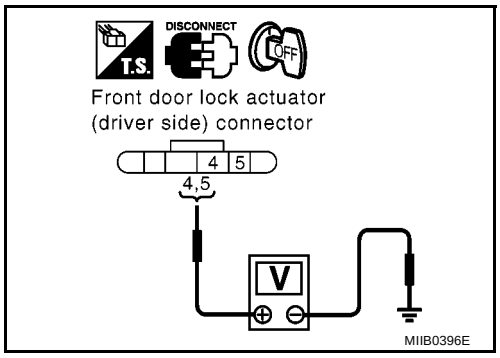
EIS0055C

DRIVER SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect front door lock actuator (driver side) connector.
3. Door lock / unlock switch operate, check voltage between front door lock actuator (driver side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D9	5 (BR)	Ground	Unlock	0 → Battery voltage → 0
	4 (L)		Lock	0 → Battery voltage → 0



OK or NG

OK >> Replace front door lock actuator (driver side).
NG >> GO TO 2.

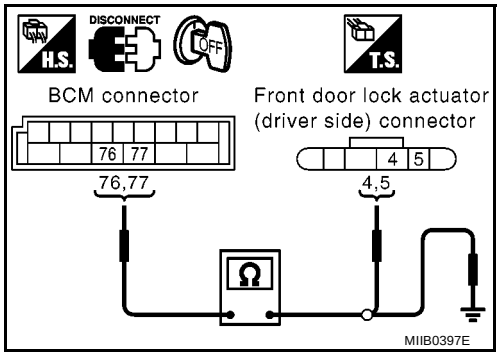
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 76, 77 and front door lock actuator (driver side) connector D9 terminal 4, 5.

76 (BR) – 5 (BR) : Continuity should exist.
77 (L) – 4 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 76, 77 and ground.

76 (BR) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

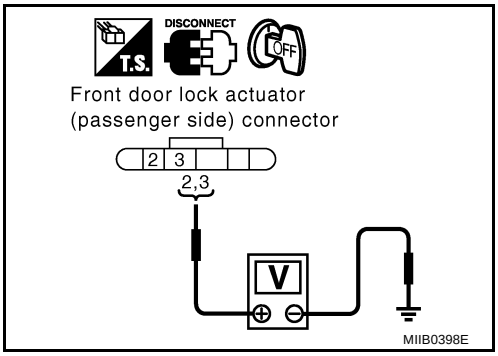
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

PASSENGER SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect front door lock actuator (passenger side) connector.
3. Door lock / unlock switch operate, check voltage between front door lock actuator (passenger side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D38	3 (L)	Ground	Lock	0 → Battery voltage → 0
	2 (L)		Unlock	0 → Battery voltage → 0



OK or NG

OK >> Replace front door lock actuator (passenger side).
NG >> GO TO 2.

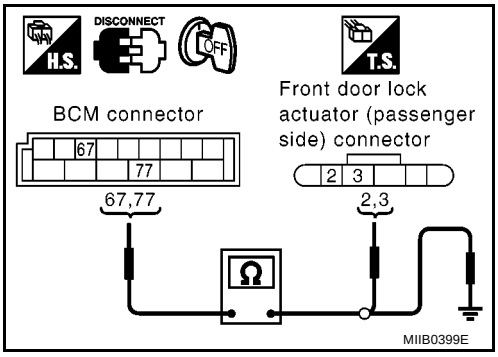
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67, 77 and front door lock actuator (passenger side) connector D38 terminal 2, 3.

67 (L) – 2 (L) : Continuity should exist.
77 (L) – 3 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67, 77 and ground.

67 (L) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

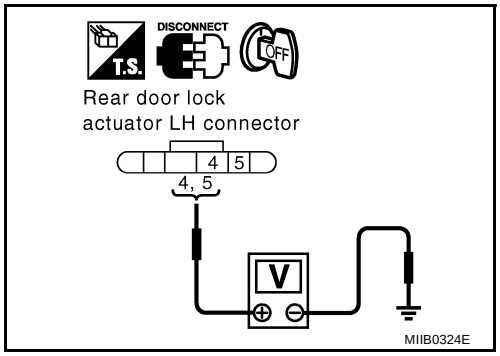
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

REAR LH SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect rear door lock actuator LH connector.
3. Door lock / unlock switch operate, check voltage between rear door lock actuator LH connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D63	4 (BR)	Ground	Lock	0 → Battery voltage → 0
	5 (Y)		Unlock	0 → Battery voltage → 0



OK or NG

OK >> Replace rear door lock actuator LH.
NG >> GO TO 2.

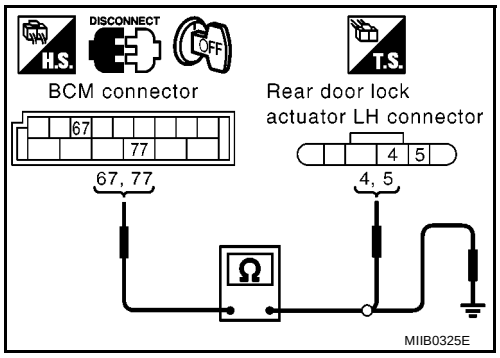
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67, 77 and rear door lock actuator LH connector D63 terminal 4, 5.

67 (L) – 5 (Y) : Continuity should exist.
77 (L) – 4 (BR) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67, 77 and ground.

67 (L) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

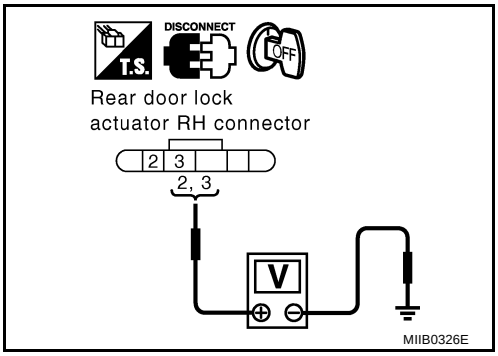
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

REAR RH SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect rear door lock actuator RH connector.
3. Door lock / unlock switch operate, check voltage between rear door lock actuator RH connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D83	2 (Y)	Ground	Unlock	0 → Battery voltage → 0
	3 (L)		Lock	0 → Battery voltage → 0



OK or NG

OK >> Replace rear door lock actuator RH.
NG >> GO TO 2.

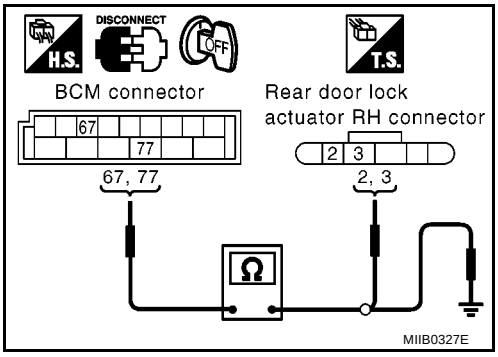
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67, 77 and rear door lock actuator RH connector D83 terminal 2, 3.

67 (L) – 2 (Y) : Continuity should exist.
77 (L) – 3 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67, 77 and ground.

67 (L) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

Check Door Switch

EIS0055D

DRIVER SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

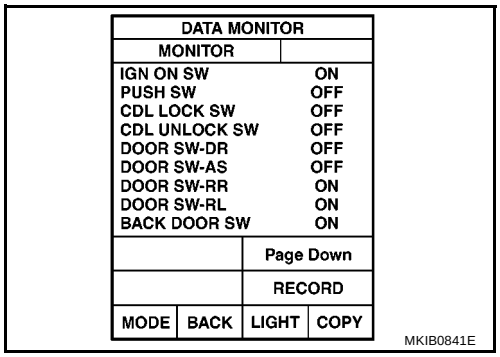
Check door switch “DOOR SW-DR” in “DATA MONITOR” mode with CONSULT- II.

When front door (driver side) is opend:

DOOR SW-DR ⇒ ON

When front door (driver side) is close:

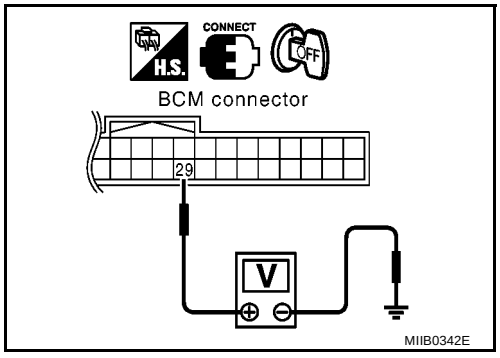
DOOR SW-DR ⇒ OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	29 (L)	Ground	Open	0
			Close	Battery voltage



OK or NG

OK >> Front door switch LH is OK.

NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and front door switch LH connector.
3. Check continuity between BCM connector M48 terminal 29 and front door switch LH connector B22 terminal 1.

   29 (L) – 1 (LG) : Continuity should exist.

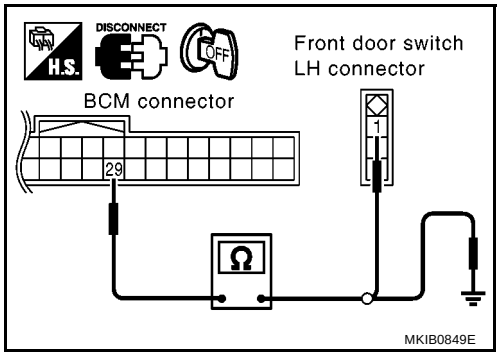
4. Check continuity between BCM connector M48 terminal 29 and ground.

   29 (L) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.

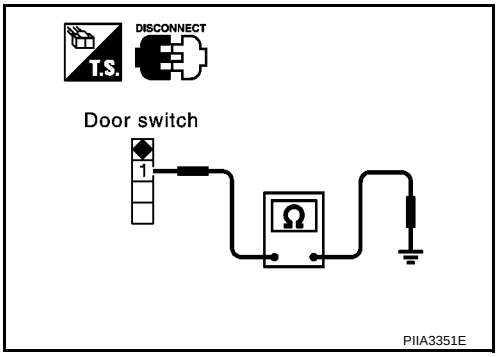
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Body ground part of door switch	Pushed	No
		Released	Yes



OK or NG

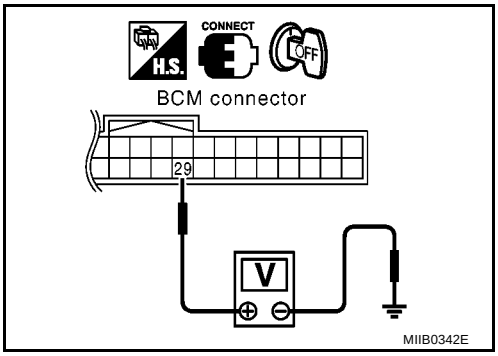
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M48 terminal 29 and ground.

Driver side door is closed.

29 (L) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

PASSENGER SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

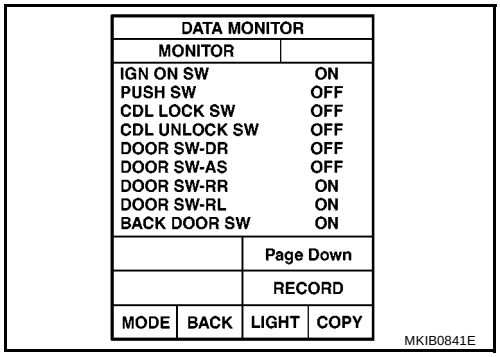
Check door switch “DOOR SW-AS” in “DATA MONITOR” mode with CONSULT- II.

When front door (passenger side) is opend:

DOOR SW-AS ⇒ ON

When front door (passenger side) is close:

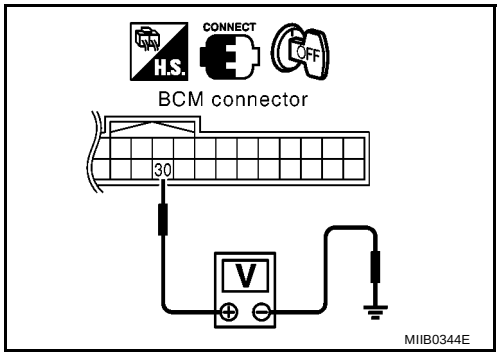
DOOR SW-AS ⇒ OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	30 (LG)	Ground	Open	0
			Close	Battery voltage



OK or NG

OK >> Front door switch RH is OK.

NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and front door switch RH connector.
3. Check continuity between BCM connector M48 terminal 30 and front door switch RH connector B16 terminal 1.

   30 (LG) – 1 (L) : Continuity should exist.

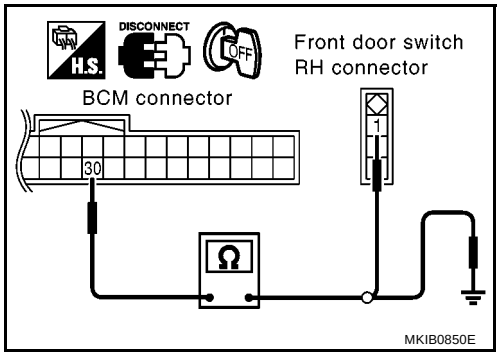
4. Check continuity between BCM connector M48 terminal 30 and ground.

   30 (LG) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.

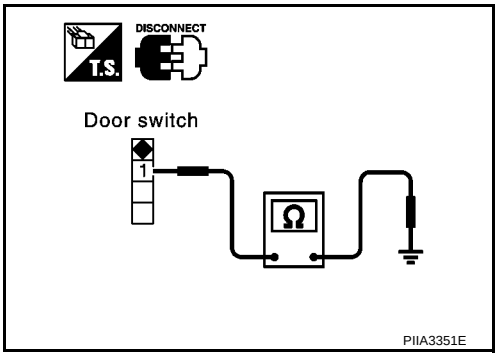
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Ground	Pushed	No
		Released	Yes



OK or NG

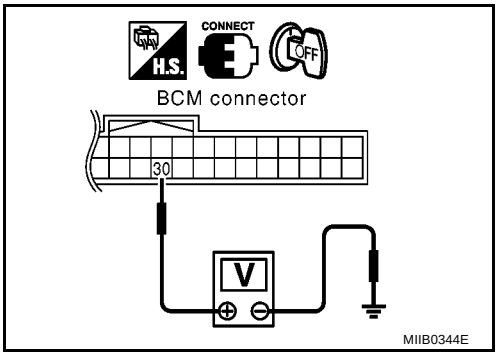
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M48 terminal 30 and ground.

Passenger side door is closed.

30 (LG) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

REAR LH SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

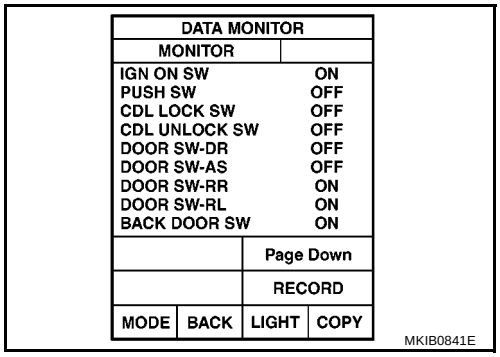
Check door switch “DOOR SW-RL” in “DATA MONITOR” mode with CONSULT- II.

When front door (rear LH side) is opend:

DOOR SW-RL ⇒ ON

When front door (rear LH side) is close:

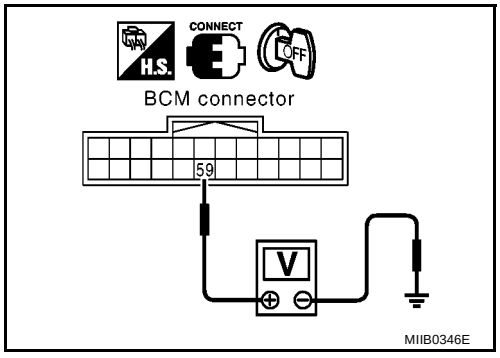
DOOR SW-RL ⇒ OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M49	59 (L)	Ground	Open	0
			Close	Battery voltage



OK or NG

OK >> Rear door switch LH is OK.
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door switch LH connector.
3. Check continuity between BCM connector M49 terminal 59 and rear door switch LH connector B31 terminal 1.

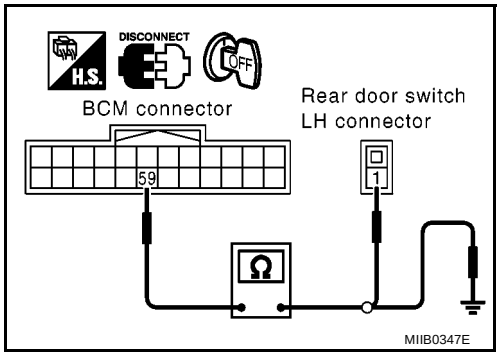
59 (L) – 1 (L) : Continuity should exist.

4. Check continuity between BCM connector M49 terminal 59 and ground.

59 (L) – Ground : Continuity should not exist.

OK or NG

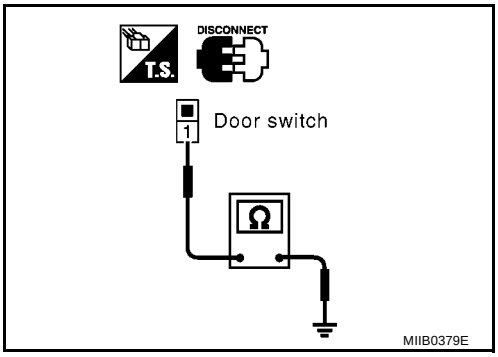
OK >> GO TO 3.
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Ground	Pushed	NO
		Released	YES



OK or NG

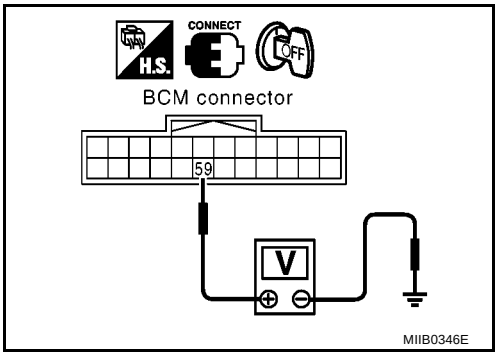
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M49 terminal 59 and ground.

Rear LH door is closed.

59 (L) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

REAR RH SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

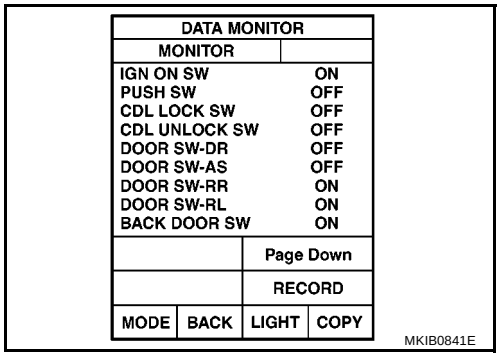
Check door switch “DOOR SW-RR” in “DATA MONITOR” mode with CONSULT- II.

When front door (rear RH side) is opend:

DOOR SW-RR ⇒ ON

When front door (rear RH side) is close:

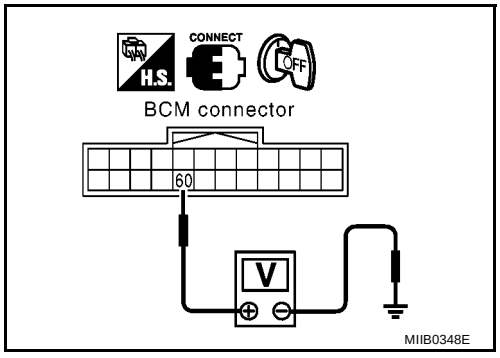
DOOR SW-RR ⇒ OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M49	60 (G)	Ground	Open	0
			Close	Battery voltage



OK or NG

OK >> Rear door switch RH is OK.

NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door switch RH connector.
3. Check continuity between BCM connector M49 terminal 60 and rear door switch RH connector B30 terminal 1.

60 (G) – 1 (G) : Continuity should exist.

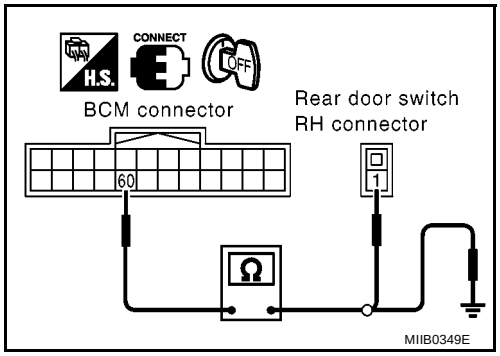
4. Check continuity between BCM connector M49 terminal 60 and ground.

60 (G) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.

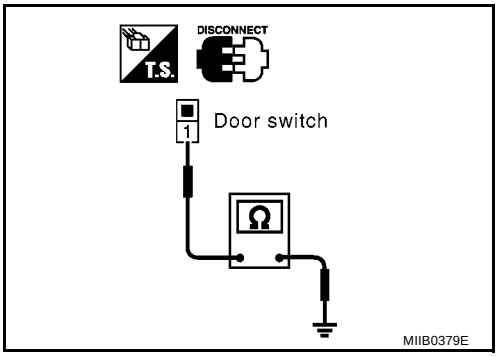
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Ground	Pushed	NO
		Released	YES



OK or NG

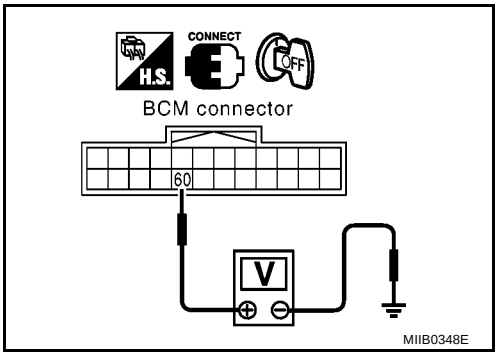
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M49 terminal 60 and ground.

Rear RH door is closed.

60 (G) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

Check External Back Door Release Switch

EIS0055E

1. CHECK EXTERNAL BACK DOOR RELEASE SWITCH INPUT SIGNAL

With CONSULT- II

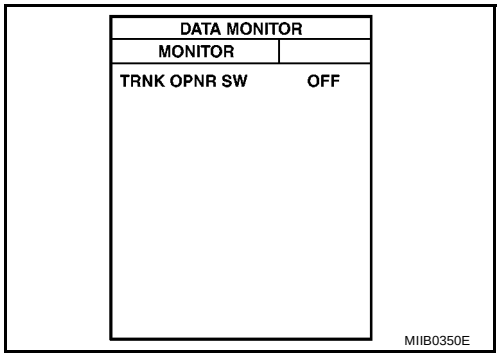
Check external back door release switch “TRNK OPNR SW” in “DATA MONITOR” mode with CONSULT- II.

External back door release switch is pushed

TRNK OPNR SW : ON

External back door release switch is released

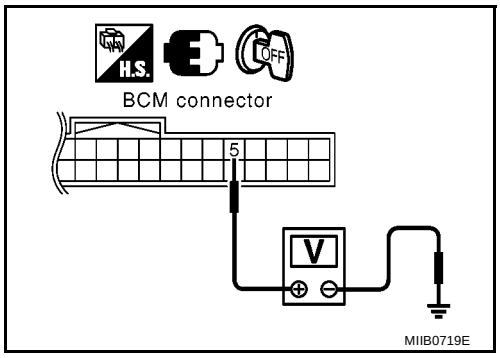
TRNK OPNR SW : OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	5 (Y)	Ground	Pushed	0
			Released	5



OK or NG

OK >> External back door release switch is OK.

NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and external back door release switch connector.
3. Check continuity between BCM connector M48 terminal 5 and external back door release switch connector B52 terminal.

   5 (Y) – 1 (Y) : Continuity should exist.

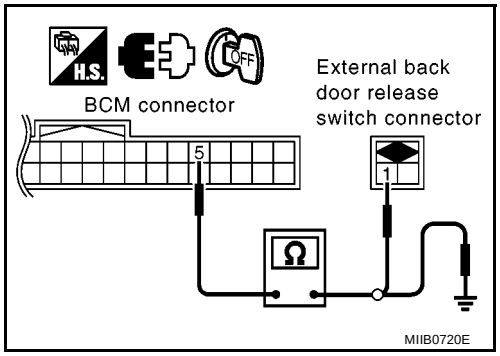
4. Check continuity between BCM connector M48 terminal 5 and ground.

   5 (Y) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.

NG >> Repair or replace harness.



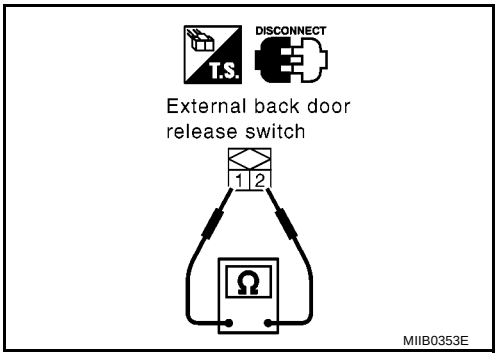
3. CHECK EXTERNAL BACK DOOR RELEASE SWITCH

Check continuity between external back door release switch terminal 1 and 2.

Terminals		Condition	Continuity
1	2	Pushed	Yes
		Released	No

OK or NG

OK >> GO TO 4.
NG >> Replace external back door release switch.



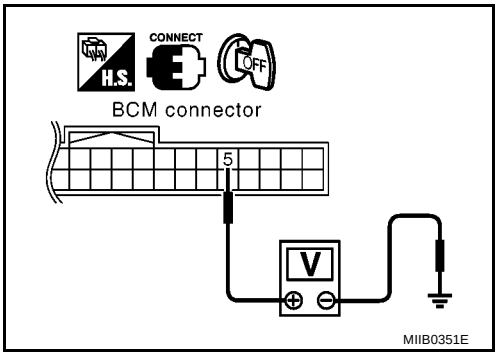
4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M48 terminal 5 and ground.

5 (Y) – Ground : Approx. 5V

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace BCM.



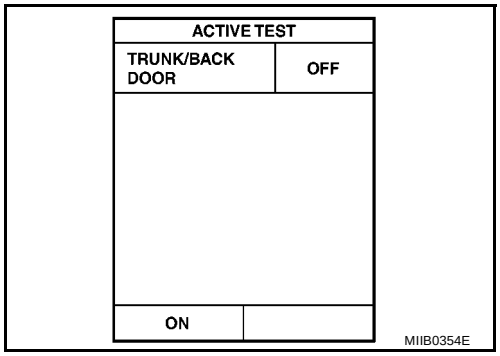
Check Back Door Release Actuator

EIS0055F

1. CHECK BCM OUTPUT SIGNAL

Check back door release output signal
Perform (“TRUNK/BACK DOOR”) in “ACTIVE TEST” mode with CONSULT-II.

When “ACTIVE TEST” is executed, does the back door open?



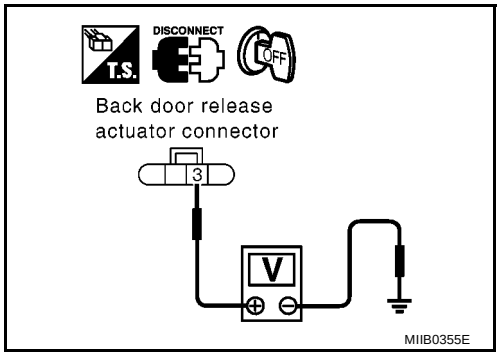
OK or NG

OK >> Back door release output is OK.
NG >> GO TO 2.

2. CHECK BACK DOOR RELEASE ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect back door release actuator connector.
3. External back door release switch operate, check voltage between back door release actuator connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
B55	3 (OR)	Ground	Pushed	0 → Battery voltage → 0



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 68 and back door release actuator connector B55 terminal 3.

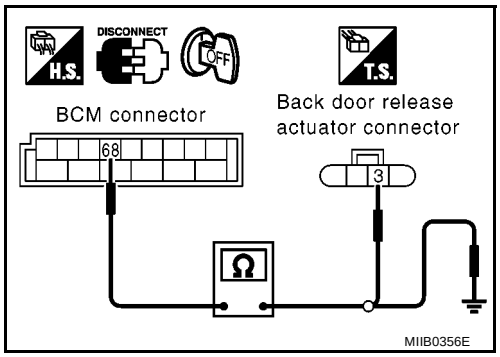
68 (OR) – 3 (OR) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 68 and ground.

68 (OR) – Ground : Continuity should not exist.

OK or NG

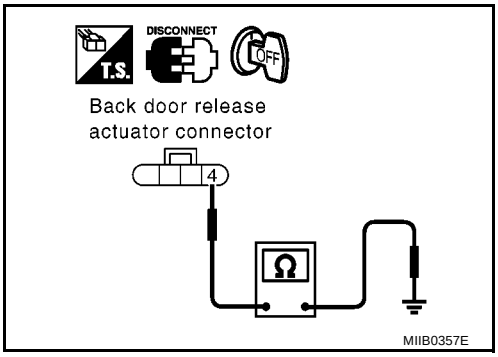
OK >> Replace BCM.
NG >> Repair or replace harness.



4. CHECK GROUND CIRCUIT

Check continuity between back door release actuator connector B55 terminal 4 and ground.

4 (B) – Ground : Continuity should exist.



OK or NG

OK >> Replace back door release actuator.
NG >> Repair or replace harness.

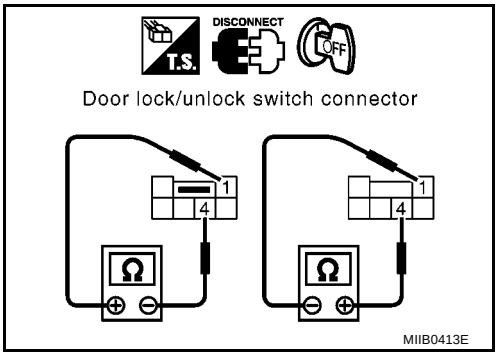
Check Door Lock/Unlock Switch Indicator

EIS00566

1. CHECK DOOR LOCK/UNLOCK SWITCH INDICATOR

Check continuity between door lock/unlock switch indicator harness connector terminal 1 and 4.

Terminals		Continuity
(+)	(-)	
1	4	Yes
4	1	No



OK or NG

OK >> Check harness for open or short between BCM and door lock/unlock switch.
NG >> replace door lock/unlock switch.

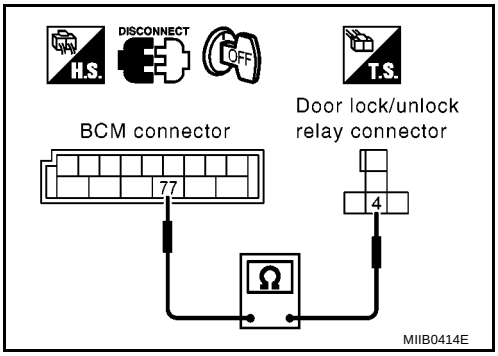
Check Door Lock/Unlock Relay Circuit

EIS00567

1. CHECK HARNESS CONTINUITY

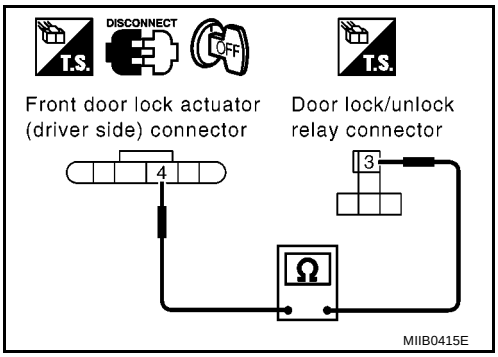
1. Disconnect BCM and door lock/unlock relay and front door lock actuator (driver side).
2. Check continuity between BCM connector M50 terminal 77 and door lock/unlock relay connector M52 terminal 4.

77 (L) – 4 (L) : Continuity should exist.



3. Check continuity between door lock/unlock relay connector M52 terminal 3 and front door lock actuator (driver side) connector D9 terminal 4.

3 (L) – 4 (L) : Continuity should not exist.



OK or NG

OK >> Check door lock/unlock relay.
NG >> Repair or replace harness.

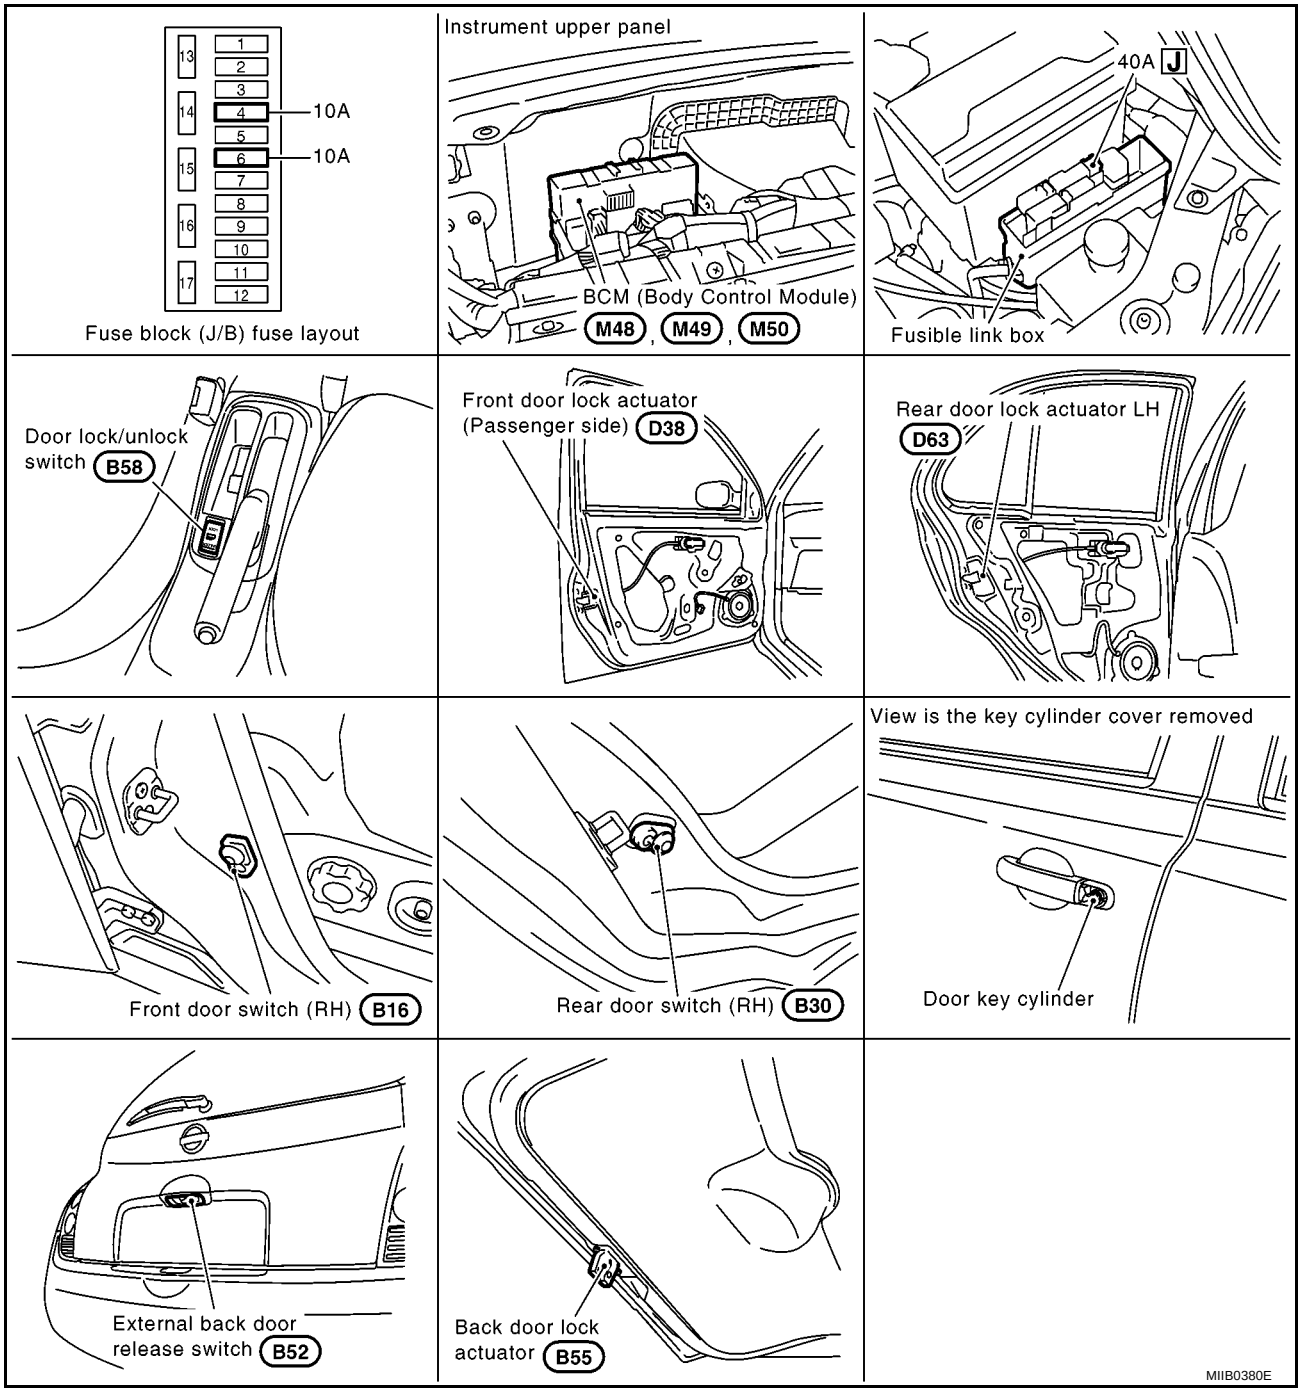
POWER DOOR LOCK — SUPER LOCK —

PFP:24814

Component Parts and Harness Connector Location

SMA for VIN >SJN**AK12U1309269

EIS0054P



System Description

EIS004XP

OUTLINE

Power door lock system with super lock and key reminder is controlled by BCM (Body Control Module). Super lock has a higher anti-theft performance than conventional power door lock systems.
When super lock is in released condition, lock knob operation locks or unlocks door.
When super lock is in set condition, lock knob operation cannot lock nor unlock door.

OPERATION

Power door lock / unlock and super lock set / release operation by remote controller

- Pressing remote controller LOCK button will lock all doors and set super lock. (Super lock will not be set while key is inserted in the ignition key cylinder.)
- Pressing remote controller UNLOCK button once will unlock driver door and release super lock. Then, if an unlock signal is sent from the remote controller again within 5 seconds, all other doors will be unlocked.

Power door lock / unlock and super lock release operation by door key cylinder

With the key inserted into driver door key cylinder, turning it to UNLOCK will unlock passenger door and release super lock.

Power door lock and super lock release operation

When the super lock is set, turning the ignition key switch to ON will release the super lock. All doors will unlock once, but then immediately lock again.

Power door lock / unlock operation by lock / unlock switch

- With door lock / unlock switch on center console setting to LOCK will lock all doors.
- With door lock / unlock switch on center console setting to UNLOCK will unlock all doors.

Door lock / unlock switch operation cannot control super lock

Key reminder system

If the ignition key is in the ignition key cylinder and driver door is open, setting door lock / unlock switch, lock knob, key or remote controller to “LOCK” locks the door once but then immediately unlocks all doors.
(signal from door unlock sensor driver side)

System initialization

- System initialization is required when battery cables are reconnected. Conduct the following to release super lock once;

– insert the key into the ignition key cylinder and turn it to ON.
– LOCK / UNLOCK operation using remote controller.

Back door open operation

Back door open operates when all doors door lock and super lock are unlocked.

CAN Communication

EIS008C1

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EIS00AOR

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

Terminal and Reference Value for Smart Entrance Control Unit

EIS004XS

Terminal	Wire color	Item	Condition	Voltage (V) (Approx.)
2	B	Ground	—	0
3	OR (P)	Key switch	Key inserted (ON) → key removed from IGN key cylinder (OFF)	Battery voltage → 0
5	Y	External back door release switch	Release switch open operation	5 → 0
6	LG	Door lock / unlock switch (Lock signal)	Lock operation (ON)	0
			Other than above (OFF)	5
10	OR	Back door switch	Open (ON) → Close (OFF)	0 → 5
19	R	CAN-H	—	—
24	OR	IGN power supply	Ignition switch (ON or START position)	Battery voltage
25	BR	Door lock/unlock switch (Unlock signal)	Unlock operation (ON)	0
			Other than above (OFF)	5
29	L	Front door switch RH	Door open (ON) → close (OFF)	0 → Battery voltage
30	LG	Front door switch LH	Door open (ON) → close (OFF)	0 → Battery voltage
32	PU	Door lock status indicator	Goes OFF→ Illuminates (Ignition switch ON and all door closed)	0 → Battery voltage
39	W	CAN-L	—	—
59	L	Rear door switch LH	Door open (ON) → close (OFF)	0 → Battery voltage
60	G	Rear door switch RH	Door open (ON) → close (OFF)	0 → Battery voltage
67	L	Door lock actuator & super lock actuator unlock signal (Passenger and rear LH, RH doors)	Door lock / unlock switch & remote controller unlock operation *	0 → Battery voltage
68	OR	Back door release actuator	Power window main switch (Trunk or back door release switch) Open operation	Battery voltage → 0
70	B	Ground (Power)	—	0
74	W	BAT power supply (BCM)	—	Battery voltage
75	R	Super lock actuator lock signal (All doors)	Remote controller lock operation	0 → Battery voltage
76	BR	Door lock actuator & super loci actuator unlock signal (Driver side)	Door lock / unlock switch & remote controller unlock operation *	0 → Battery voltage
77	L	Door lock actuator lock signal (All doors)	Door lock/unlock switch & remote controller lock operation	0 → Battery voltage
79	Y	BAT power supply (PW)	—	Battery voltage

() : With Intelligent Key switch models

* : It is operation only of door lock actuator to operate door lock / unlock switch.

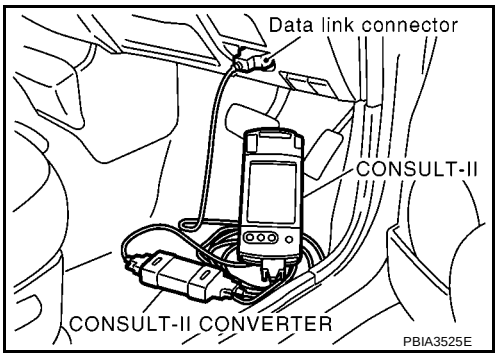
CONSULT- II Inspection Procedure

EIS004XT

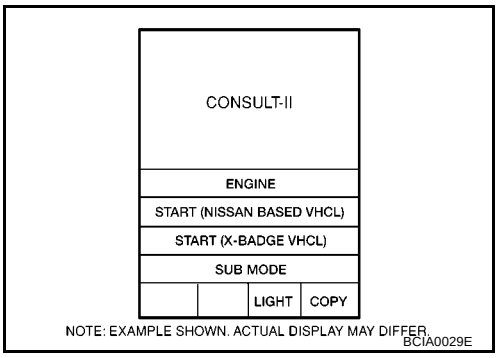
CAUTION:

If CONSULT-II is used with no connector of CONSULT-II CONVERTER, malfunction might be detected in self-diagnosis depending on control which carry out CAN communication.

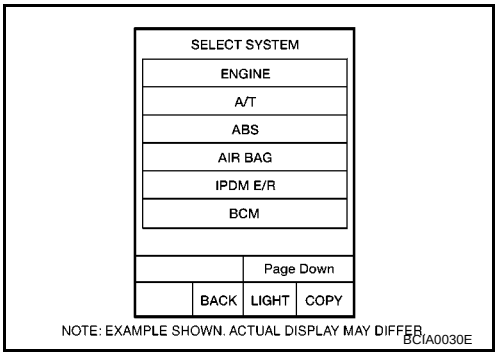
1. Turn ignition switch “OFF”.
2. Connect "CONSULT-II" and "CONSULT-II CONVERTER" to the data link connector.



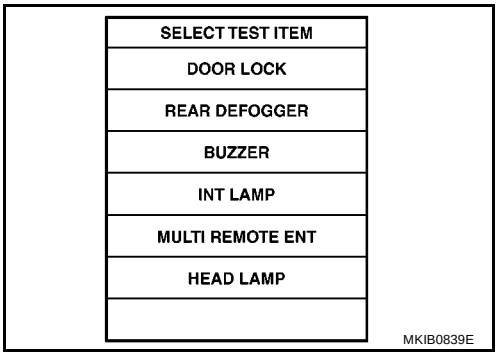
3. Turn ignition switch “ON”.
4. Touch “START (NISSAN BASED VHCL)”.



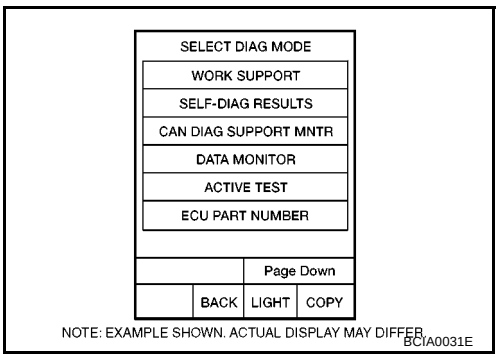
5. Touch “BCM”.



6. Touch “DOOR LOCK” .



7. Select diagnosis mode.
“WORK SUPPORT”, “DATA MONITOR” and “ACTIVE TEST” are available.



CONSULT- II Application Items

EIS004XU

WORK SUPPORT

Supported Item	Description
SECURITY DOOR LOCK SET	Anti-hijack function mode can be changed in this mode.
AUTO LOCK SET	Auto locking function mode can be changed in this mode.

Security Door Lock Set

	ON	OFF
Anti hijack function	Activation	Deactivation

Auto Lock Set

	MODE1	MODE2	MODE3	MODE4	MODE5	MODE6*	MODE7*	MODE8*
Auto locking function	1 minute	2 minutes	3 minutes	4 minutes	5 minutes	–	–	–

*: These mode are not supported.

DATA MONITOR

Monitored Item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
PUSH SW (*1)	Indicates [ON/OFF] condition ignition knob switch.
KEY IN SW (*2)	Indicates [ON/OFF] condition of key switch.
CDL LOCK SW	Indicates [ON/OFF] condition of lock signal from door lock/ unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of unlock signal from door lock/ unlock switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch (RH).
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch (LH).
BACK DOOR SW	Indicates [ON/OFF] condition of back door switch.
TRNK OPNR SW	Indicates [ON/OFF] condition of external back door release switch.

*1: Models with Intelligent Key System.
*2: Models without Intelligent Key System.

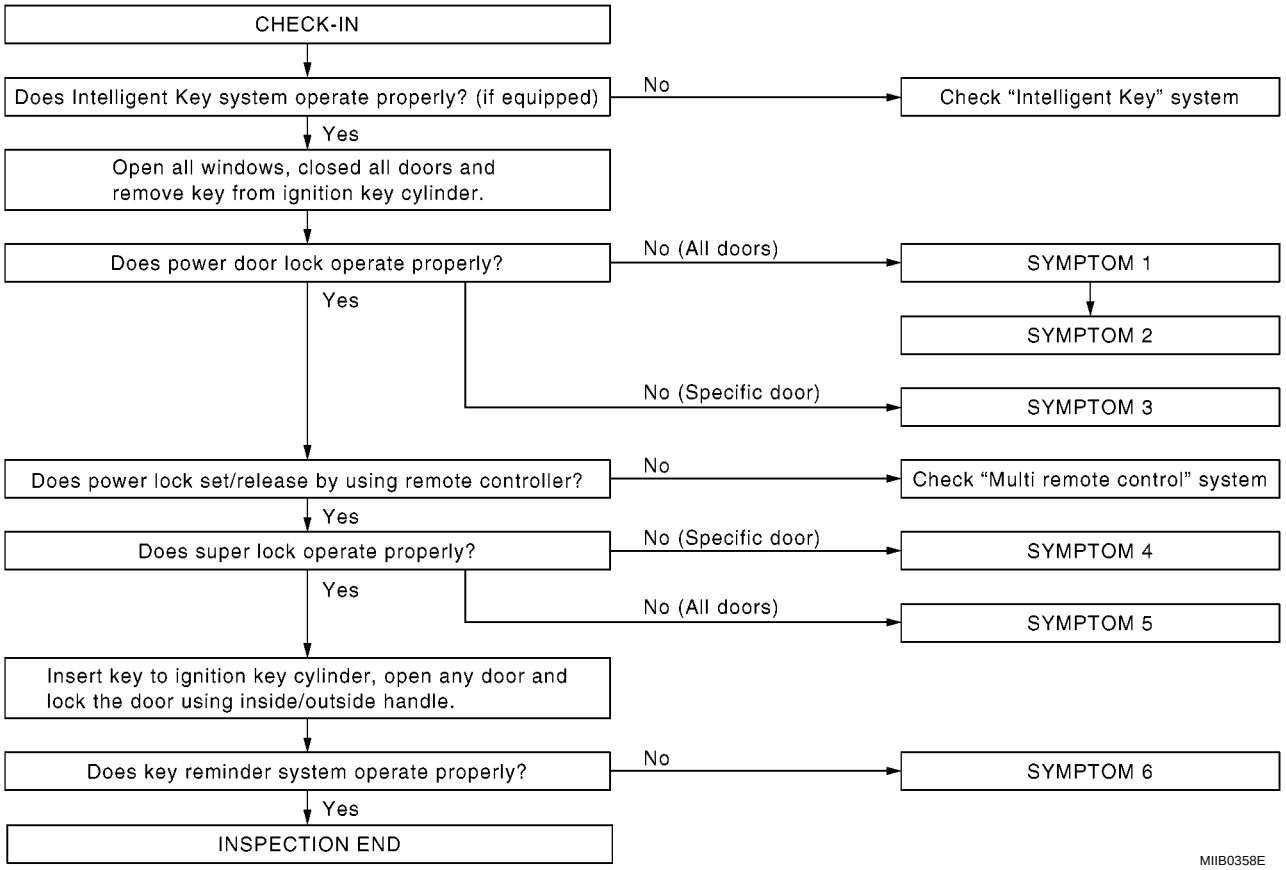
WORK SUPPORT

Monitored Item	Description
DOOR LOCK	This test is able to check all door lock actuator (except for back door) lock / unlock operation. These actuator lock / unlock when “LOCK” or “UNLOCK” on CONSULT-II screen is touched.
TRUNK / BACK DOOR	This test is able to check back door release actuator open operation. These actuator open when “OPEN” on CONSUT-II screen in touched.

Trouble Diagnoses

EIS004XV

PRELIMINARY CHECK



After performing preliminary check, go to SYMPTOM CHART.
Before starting trouble diagnoses below, perform preliminary check.
Symptom numbers in the symptom chart correspond with those of Preliminary check.

SYMPTOM CHART

Symptom	Malfunctioning system	Refer to page
SYMPTOM 1 Power door lock does not operate with door lock / unlock switch	1. Power supply and ground circuit check	BL-105
	2. Key switch check	BL-107
	3. Door lock / unlock switch check.	BL-106
	4. Replace BCM.	BCS-31
SYMPTOM 2 Power door lock does not operate with door lock / unlock switch.	1. Power door lock / unlock output signal check.	BL-109
	2. Replace BCM.	BCS-31
SYMPTOM 3 Specific door lock actuator does not operate.	1. Door lock actuator check.	BL-111
	2. Replace BCM.	BCS-31
SYMPTOM 4 Super lock does not operate.	1. Super lock output signal check.	BL-110
	2. Replace BCM.	BCS-31
SYMPTOM 5 Specific super lock does not unlock operate.	1. Super lock actuator check.	BL-115
	2. Replace BCM.	BCS-31
SYMPTOM 6 Key reminder system does not operate.	1. Door switch check.	BL-119
	2. Replace BCM.	BCS-31
SYMPTOM 7 Back door does not open. But power door lock operate is properly.	1. External back door release switch check.	BL-127
	2. Back door release actuator check.	BL-129
	3. Replace BCM.	BCS-31

Power Supply and Ground Circuit Check

EIS0054S

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-II, then perform the each trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”, Refer to BCS-22, "CONSULT-II Function (BCM)" .

1. FUSE INSPECTION

- Check 10A fuse [No.4, located in fuse block (J/B)]
- Check 40A fusible link (letter **J** located in the fuse and fusible link box).

NOTE:
Refer to BL-70, "Component Parts and Harness Connector Location" .

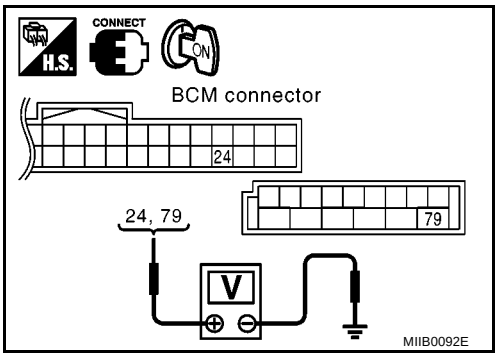
OK or NG

OK >> GO TO 2
NG >> If fuse is blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between BCM connector M48, M50 terminal 24, 79 and ground.

24 (OR) – Ground :Battery voltage.
79 (Y) – Ground :Battery voltage.



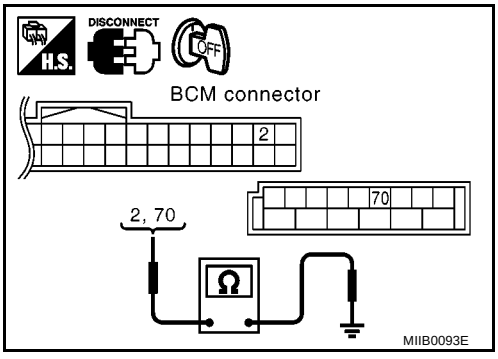
OK or NG

OK >> GO TO 3
NG >> Check BCM power supply circuit for open or short.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector M48, M50 terminal 2, 70 and ground.

2 (B) – Ground :Continuity should exist.
70 (B) – Ground :Continuity should exist.



OK or NG

OK >> Power supply and ground circuit is OK.
NG >> Check BCM ground circuit for open or short.

Door Lock / Unlock Switch Check

EIS004XY

1. CHECK DOOR LOCK / UNLOCK SWITCH SIGNAL

With CONSULT- II

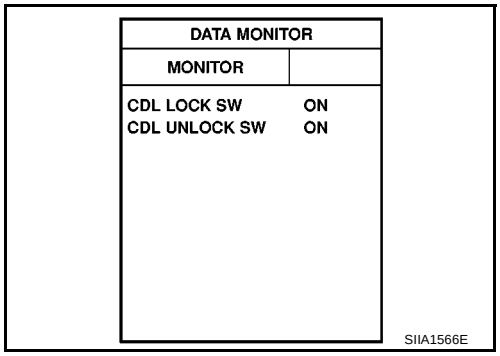
Check door lock / unlock switch input signal (“CDL LOCK SW” “CDL UNLOCK SW”) in “DATA MONITOR” mode with CONSULT- II.

When door lock/unlock switch is turned to LOCK:

CDL LOCK SW ⇒ ON

When door lock/unlock switch is turned to UNLOCK:

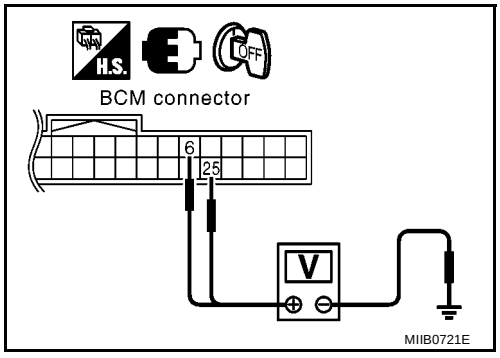
CDL UNLOCK SW ⇒ ON



Without CONSULT- II

Door lock / unlock switch operate, check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	6 (LG)	Ground	Lock	0
			Neutral / Unlock	5
	25 (BR)		Unlock	0
			Neutral / Lock	5



OK or NG

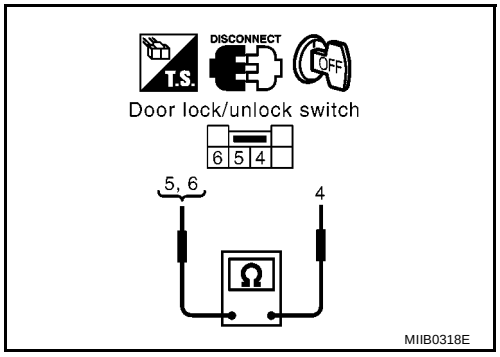
OK >> Door lock / unlock switch is OK.

NG >> GO TO 2.

2. CHECK DOOR LOCK/UNLOCK SWITCH

1. Turn ignition switch OFF.
2. Disconnect door lock / unlock switch connector.
3. Check continuity between door lock / unlock switch terminals 5, 6 and 4.

Terminals		Condition	Continuity
5	4	Unlock	YES
		Neutral / Lock	NO
6		Lock	YES
		Neutral / Unlock	NO



OK or NG

OK >> Check the following.

- Ground circuit for door lock / unlock switch
- Harness for open or short between BCM and door lock / unlock switch.

NG >> Replace door lock / unlock switch.

Check Key Switch /Without Intelligent Key System

EIS00AQ1

1. CHECK KEY SWITCH INPUT SIGNAL

With CONSULT-II

Check key switch input signal “KEY ON SW” in “DATA MONITOR” mode with CONSULT- II.

When key is inserted in ignition key cylinder:

KEY IN SW ⇒ ON

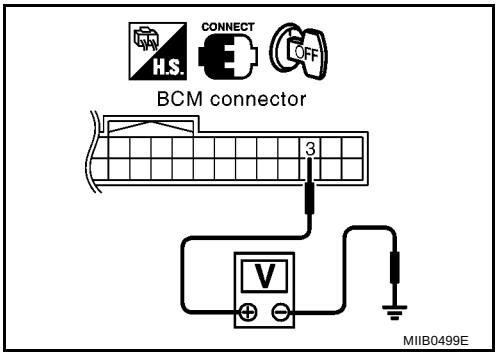
When key is removed from ignition key cylinder:

KEY IN SW ⇒ OFF

Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	3 (OR)	Ground	Key is inserted	Battery voltage
			Key is removed	0



OK or NG

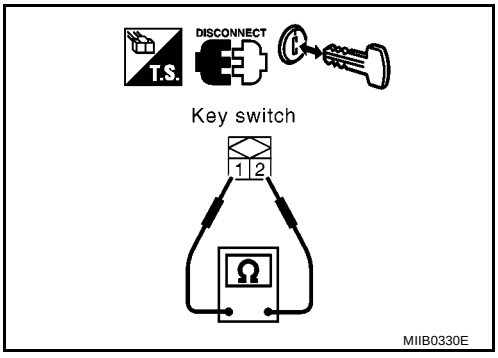
OK >> Key switch is OK.

NG >> GO TO 2.

2. CHECK KEY SWITCH (INSERT)

1. Turn ignition switch OFF.
2. Disconnect key switch connector.
3. Check continuity between key switch terminals 1 and 2.

Terminals		Condition	Continuity
1	2	Key is inserted	YES
		Key is removed	NO



OK or NG?

OK >> Check the following.

- 10A fuse [No. 6, located in fuse block (J/B)].
- Harness for open or short between key switch and fuse.
- Harness for open or short between BCM and key switch.

NG >> Replace key switch.

Check Key Switch/With Intelligent Key System

EIS00AQ2

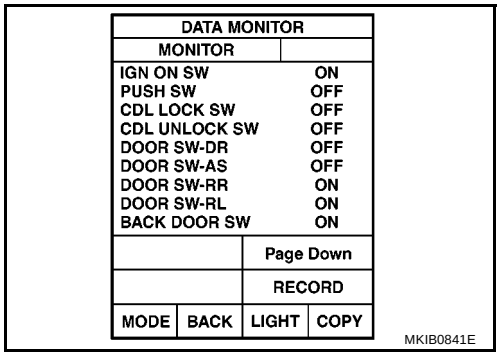
1. KEY SWITCH INSPECTION

With CONSULT-II

Display “PUSH SW” on DATA MONITOR screen, and check if ON-OFF display is linked to ignition knob switch operation.

When ignition knob is pushed : PUSH SW ON

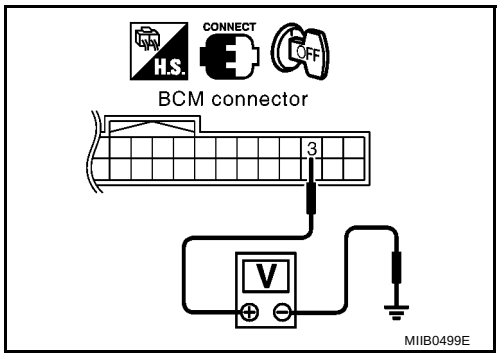
When ignition knob is released : PUSH SW OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	3 (OR)	Ground	Key is inserted	Battery voltage
			Key is removed	0



OK or NG

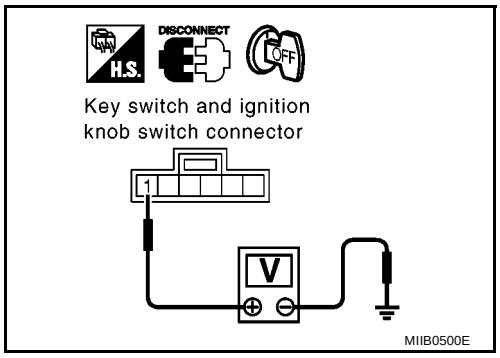
OK >> Key switch is OK.

NG >> GO TO 2.

2. KEY SWITCH POWER SUPPLY CIRCUIT INSPECTION

1. Remove mechanical key from ignition knob.
2. Disconnect key switch and ignition knob switch connector.
3. Check voltage between key switch and ignition knob switch connector M34 terminal 1 and ground.

1 (W) - Ground : Approx. 12V



OK or NG

OK >> GO TO 3.

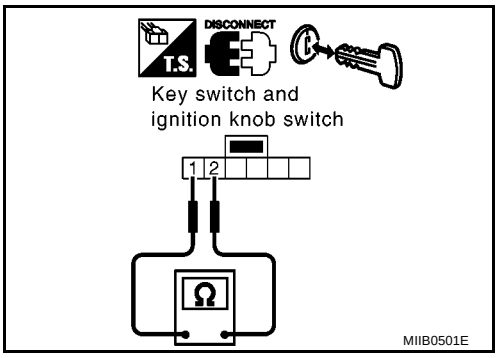
NG >> Repair or replace key switch power supply circuit.

3. KEY SWITCH OPERATION INSPECTION

1. Insert mechanical key into ignition knob.
2. Check continuity between key switch and ignition knob switch connector M34 terminal 1 and 2.

1 - 2

Insert mechanical key into ignition knob.	**: Continuity should exist.**
Remove mechanical key from ignition knob.	**: Continuity should not exist.**



OK or NG

OK >> GO TO 4.
NG >> Replace key switch.

4. KEY SWITCH CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit connector M51 terminal 27 and key switch and ignition knob switch connector M34 terminal 2.

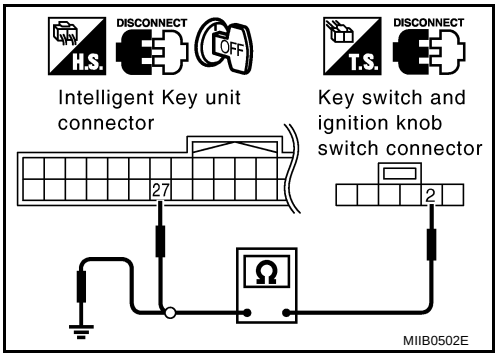
27 (P) - 2 (P) : Continuity should exist.

3. Check continuity between key switch connector M34 terminal 2 and ground.

2 (P) - Ground : Continuity should not exist.

OK or NG

OK >> Key switch is OK.
NG >> Repair or replace harness between Intelligent Key unit and key switch and ignition knob switch.



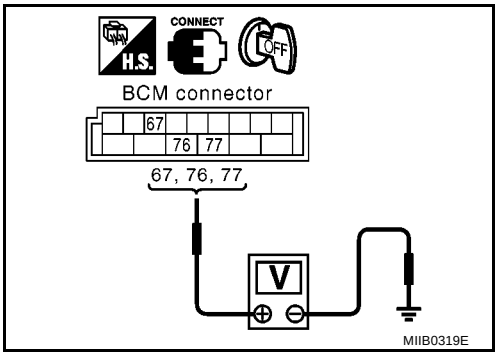
Power Door Lock / Unlock Output Signal Check.

EIS00AQ3

1. CHECK POWER DOOR LOCK OUTPUT SIGNAL

Door lock / unlock switch operate, check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M50	67 (L)	Ground	Unlock	0 → Battery voltage→ 0
	76 (BR)		Unlock	0 → Battery voltage→ 0
	77 (L)		Lock	0 → Battery voltage→ 0



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace BCM.

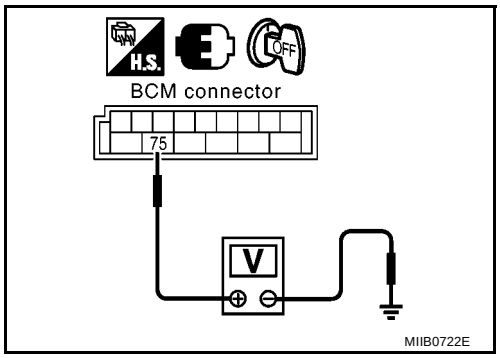
Super Lock Output Signal Check.

EIS00AQ4

1. CHECK SUPER LOCK OUTPUT SIGNAL

Remote controller operate, check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M50	75 (R)	Ground	Lock button is pressed.	0 → Battery voltage→ 0



OK or NG

OK >> Check the condition of the harness and connector.
NG >> Replace BCM.

Door Lock Actuator Check

EIS00AQ5

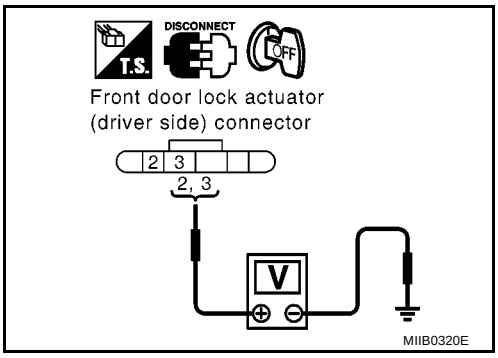
SMA for VIN >SJN**AK12U1309269

DRIVER SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect front door lock actuator (driver side) connector.
3. Door lock / unlock switch operate, check voltage between front door lock actuator (driver side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D9	2 (BR)	Ground	Unlock	0 → Battery voltage → 0
	3 (L)		Lock	0 → Battery voltage → 0



OK or NG

OK >> Replace front door lock actuator (driver side).
NG >> GO TO 2.

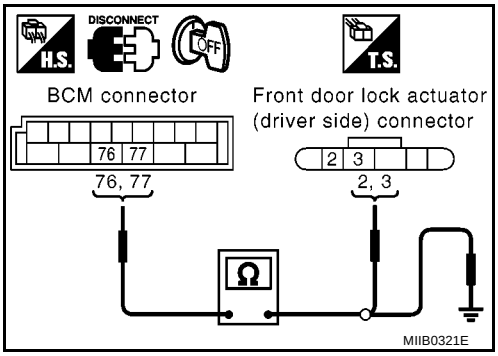
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 76, 77 and front door lock actuator (driver side) connector D9 terminal 2, 3.

76 (BR) – 2 (BR) : Continuity should exist.
77 (L) – 3 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 76, 77 and ground.

76 (BR) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

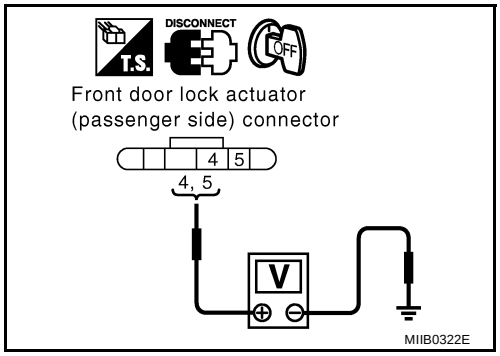
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

PASSENGER SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect front door lock actuator (passenger side) connector.
3. Door lock / unlock switch operate, check voltage between front door lock actuator (passenger side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D38	4 (L)	Ground	Lock	0 → Battery voltage → 0
	5 (L)		Unlock	0 → Battery voltage → 0



OK or NG

OK >> Replace front door lock actuator (passenger side).
NG >> GO TO 2.

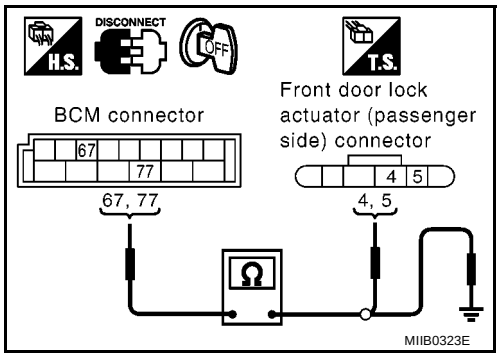
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67, 77 and front door lock actuator (passenger side) connector D38 terminal 4, 5.

67 (L) – 5 (L) : Continuity should exist.
77 (L) – 4 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67, 77 and ground.

67 (L) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

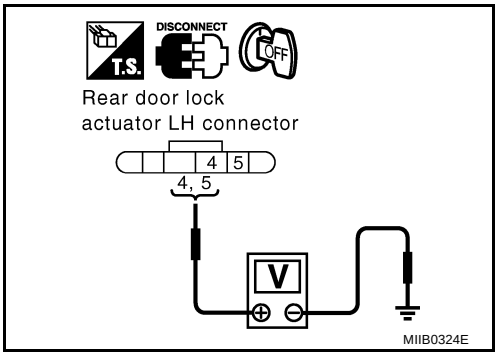
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

REAR LH SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect rear door lock actuator LH connector.
3. Door lock / unlock switch operate, check voltage between rear door lock actuator LH connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D63	4 (BR)	Ground	Lock	0 → Battery voltage → 0
	5 (Y)		Unlock	0 → Battery voltage → 0



OK or NG

OK >> Replace rear door lock actuator LH.
NG >> GO TO 2.

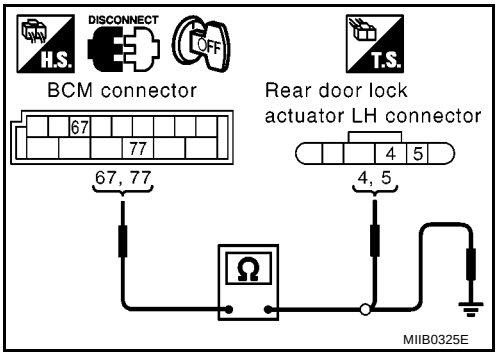
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67, 77 and rear door lock actuator LH connector D63 terminal 4, 5.

67 (L) – 5 (Y) : Continuity should exist.
77 (L) – 4 (BR) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67, 77 and ground.

67 (L) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

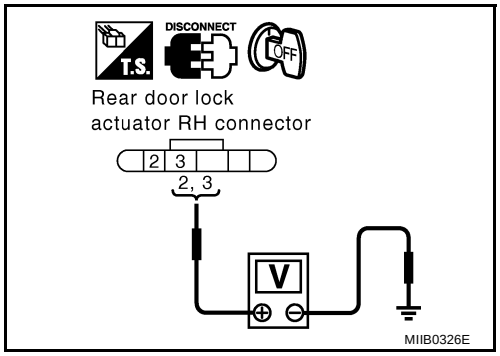
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

REAR RH SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect rear door lock actuator RH connector.
3. Door lock / unlock switch operate, check voltage between rear door lock actuator RH connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D83	2 (Y)	Ground	Unlock	0 → Battery voltage → 0
	3 (L)		Lock	0 → Battery voltage → 0



OK or NG

OK >> Replace rear door lock actuator RH.
NG >> GO TO 2.

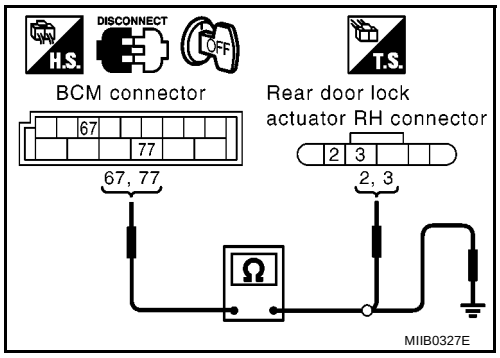
2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 67, 77 and rear door lock actuator RH connector D83 terminal 2, 3.

67 (L) – 2 (Y) : Continuity should exist.
77 (L) – 3 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 67, 77 and ground.

67 (L) – Ground : Continuity should not exist.
77 (L) – Ground : Continuity should not exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

Super Lock Actuator Check

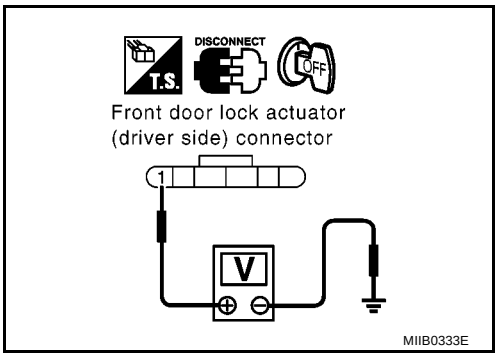
EIS00AQ6

DRIVER SIDE

1. CHECK SUPER LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect front door lock actuator (driver side) connector.
3. Door lock / unlock switch operate, check voltage between front door lock actuator (driver side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D9	1 (OR)	Ground	Lock button is pressed.	0 → Battery voltage → 0



OK or NG

OK >> Replace front door lock actuator (driver side).
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 75 and front door lock actuator (driver side) connector D9 terminal 1.

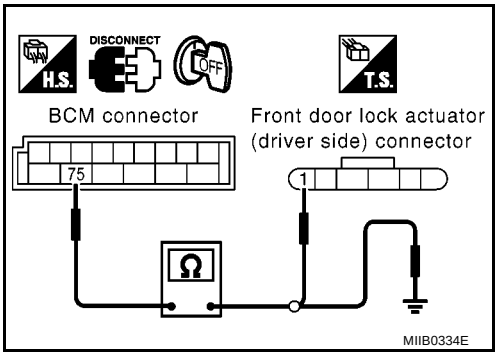
75 (R) – 1 (OR) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 75 and ground.

75 (R) – Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

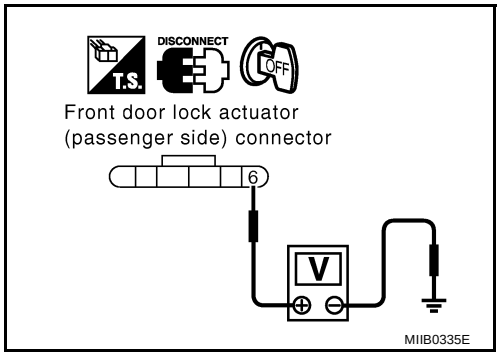


PASSENGER SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect front door lock actuator (passenger side) connector.
3. Remote controller operate, check voltage between front door lock actuator (passenger side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D38	6 (G)	Ground	Lock button is pressed.	0 → Battery voltage → 0



OK or NG

OK >> Replace front door lock actuator (passenger side).
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 75 and front door lock actuator (passenger side) connector D38 terminal 6.

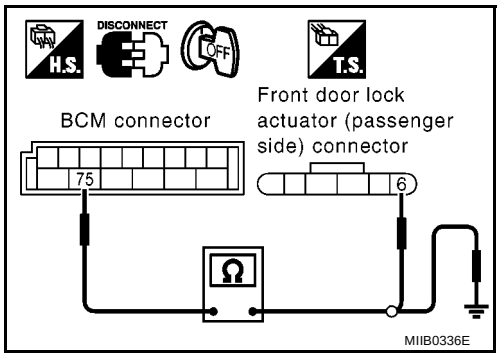
75 (R) – 6 (G) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 75 and ground.

75 (R) – Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

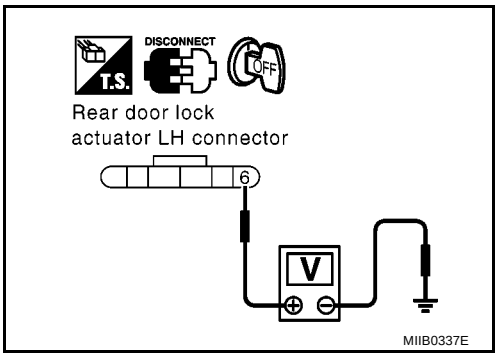


REAR LH SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect rear door lock actuator LH connector.
3. Remote controller operate, check voltage between rear door lock actuator LH connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D63	6 (L)	Ground	Lock button is pressed.	0 → Battery voltage → 0



OK or NG

OK >> Replace rear door lock actuator LH.
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 75 and rear door lock actuator LH connector D63 terminal 6.

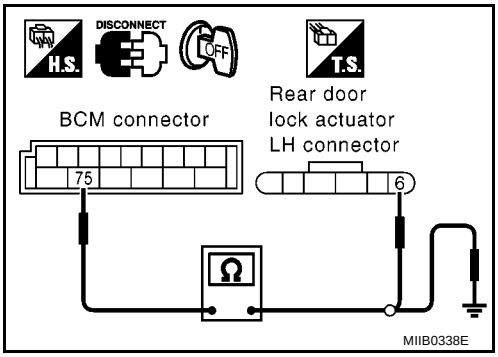
75 (R) – 6 (L) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 75 and ground.

75 (R) – Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

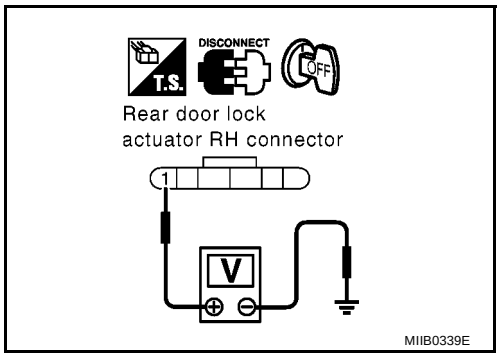


REAR RH SIDE

1. CHECK DOOR LOCK ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect rear door lock actuator RH connector.
3. Remote controller operate, check voltage between rear door lock actuator RH connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D83	1 (R)	Ground	Lock button is pressed.	0 → Battery voltage → 0



OK or NG

OK >> Replace rear door lock actuator RH.
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 75 and rear door lock actuator RH connector D83 terminal 1.

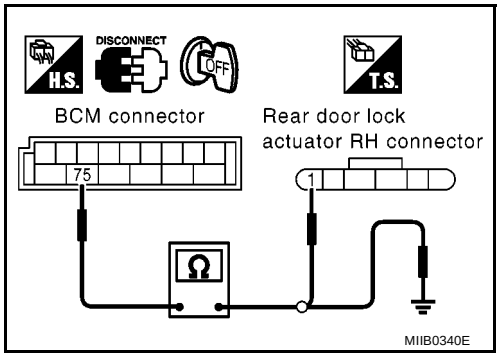
75 (R) – 1 (R) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 75 and ground.

75 (R) – Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.



Door Switch Check

EIS00AQ7

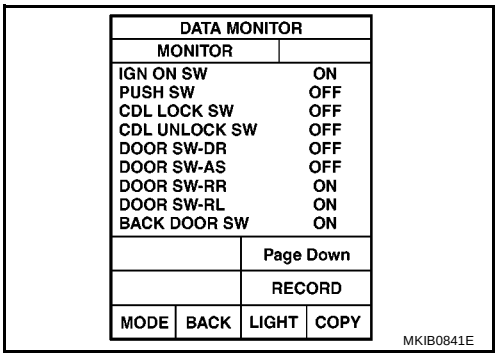
DRIVER SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

Check door switch “DOOR SW-DR” in “DATA MONITOR” mode with CONSULT- II.

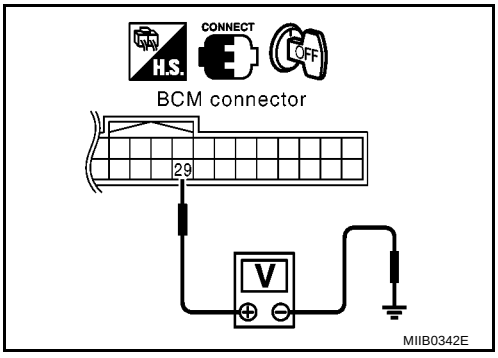
Monitor item	Condition	
DOOR SW-DR	OPEN	: ON
	CLOSE	:OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	29 (L)	Ground	OPEN	0
			CLOSE	Battery voltage



OK or NG

OK >> Front door switch RH is OK.
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and front door switch RH connector.
3. Check continuity between BCM connector M48 terminal 29 and front door switch RH connector B16 terminal 1.

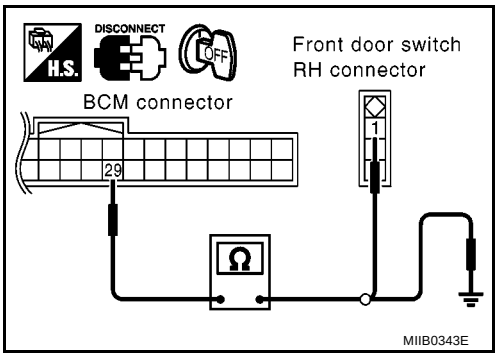
29 (L) – 1 (L) : Continuity should exist.

4. Check continuity between BCM connector M48 terminal 29 and ground.

29 (L) – Ground : Continuity should not exist.

OK or NG

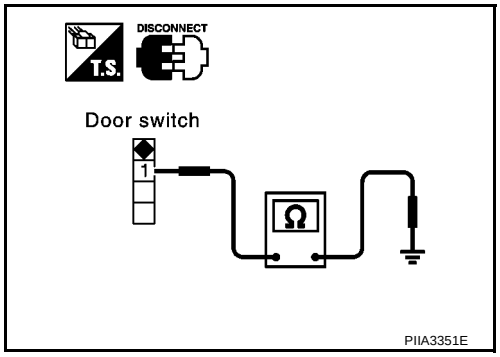
OK >> GO TO 3.
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Body ground part of door switch	Pushed	NO
		Released	YES



OK or NG

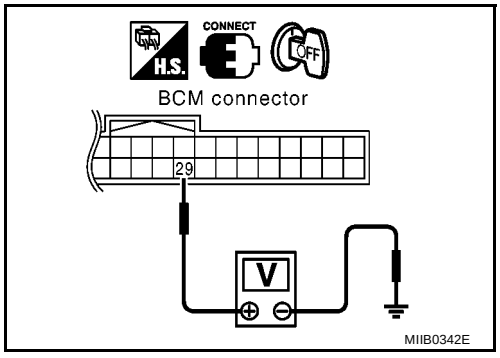
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M48 terminal 29 and ground.

Driver side door is closed.

29 (L) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

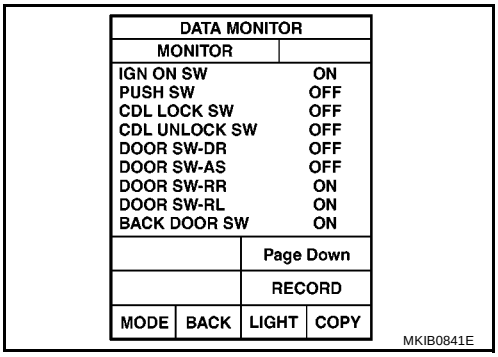
PASSENGER SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

Check door switch “DOOR SW-AS” in “DATA MONITOR” mode with CONSULT- II.

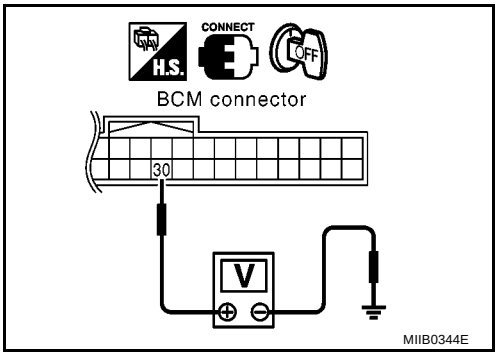
Monitor item	Condition	
DOOR SW-AS	OPEN	: ON
	CLOSE	:OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	30 (LG)	Ground	OPEN	0
			CLOSE	Battery voltage



OK or NG

OK >> Front door switch LH is OK.
NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and front door switch LH connector.
3. Check continuity between BCM connector M48 terminal 30 and front door switch LH connector B22 terminal 1.

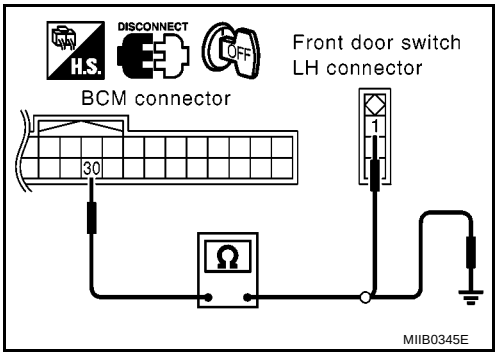
30 (LG) – 1 (LG) : Continuity should exist.

4. Check continuity between BCM connector M48 terminal 29 and ground.

30 (LG) – Ground : Continuity should not exist.

OK or NG

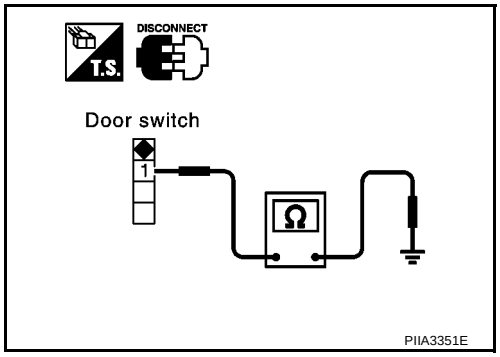
OK >> GO TO 3.
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Body ground part of door switch	Pushed	NO
		Released	YES



OK or NG

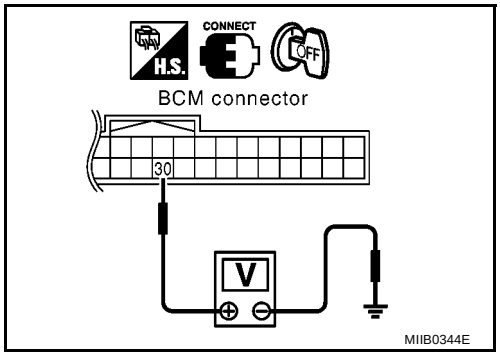
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M48 terminal 30 and ground.

Passenger side door is closed.

30 (LG) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

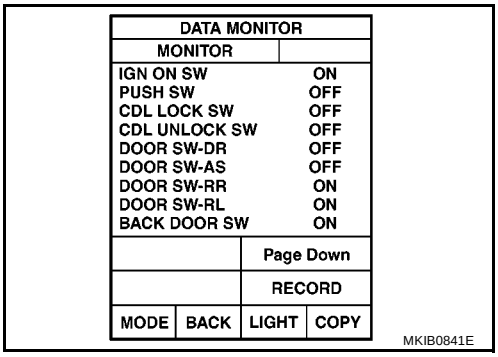
REAR LH SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

Check door switch “DOOR SW-RL” in “DATA MONITOR” mode with CONSULT- II.

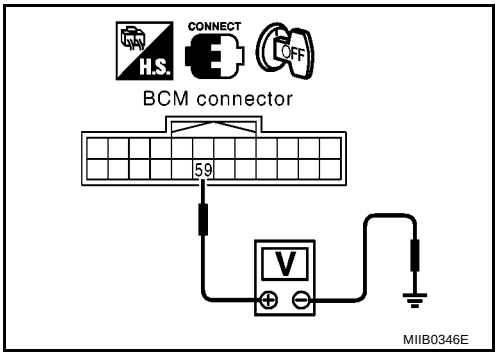
Monitor item	Condition	
DOOR SW-RL	OPEN	: ON
	CLOSE	:OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M49	59 (L)	Ground	OPEN	0
			CLOSE	Battery voltage



OK or NG

OK >> Rear door switch LH is OK.

NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door switch LH connector.
3. Check continuity between BCM connector M49 terminal 59 and rear door switch LH connector B31 terminal 1.

59 (L) – 1 (L) : Continuity should exist.

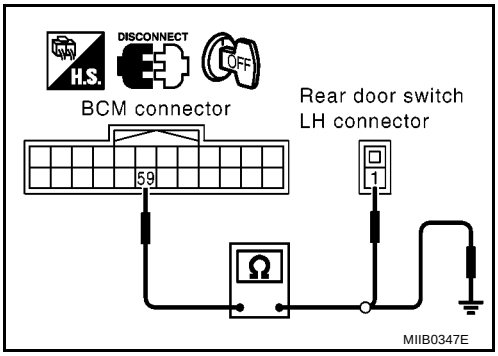
4. Check continuity between BCM connector M49 terminal 59 and ground.

59 (L) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.

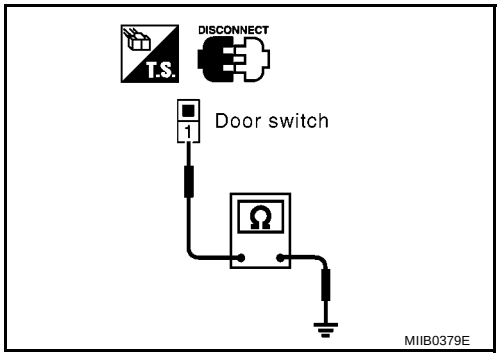
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Body ground part of door switch	Pushed	NO
		Released	YES



OK or NG

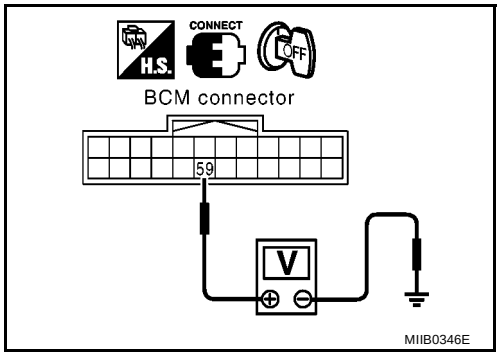
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M49 terminal 59 and ground.

Rear LH door is closed.

59 (L) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

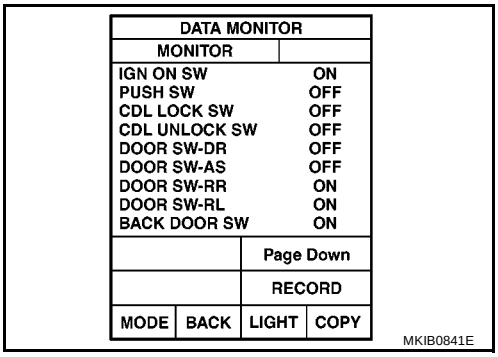
REAR RH SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

With CONSULT- II

Check door switch “DOOR SW-RR” in “DATA MONITOR” mode with CONSULT- II.

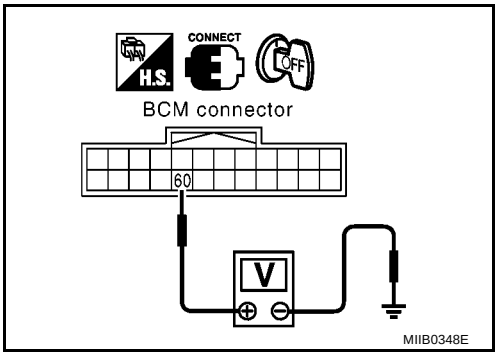
Monitor item	Condition	
DOOR SW-RR	OPEN	: ON
	CLOSE	:OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M49	60 (G)	Ground	OPEN	0
			CLOSE	Battery voltage



OK or NG

OK >> Rear door switch RH is OK.

NG >> GO TO 2.

2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and rear door switch RH connector.
3. Check continuity between BCM connector M49 terminal 60 and rear door switch RH connector B30 terminal 1.

60 (G) – 1 (G) : Continuity should exist.

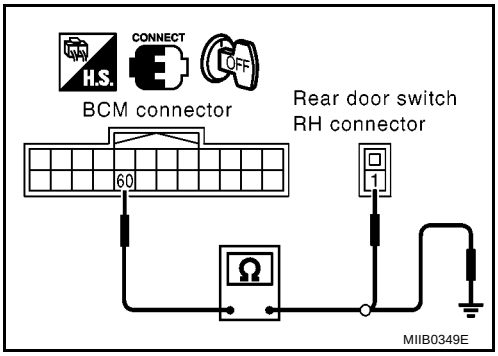
4. Check continuity between BCM connector M49 terminal 60 and ground.

60 (G) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 3.

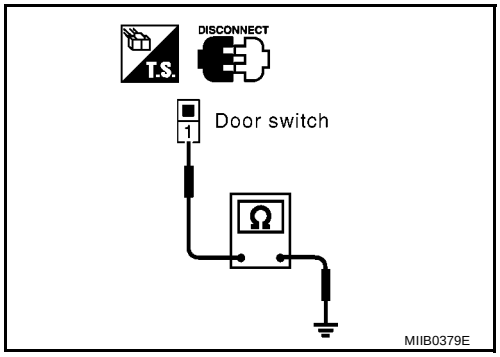
NG >> Repair or replace harness.



3. CHECK DOOR SWITCH

Check continuity between door switch terminal 1 and body ground part of door switch.

Terminals		Condition	Continuity
1	Body ground part of door switch	Pushed	NO
		Released	YES



OK or NG

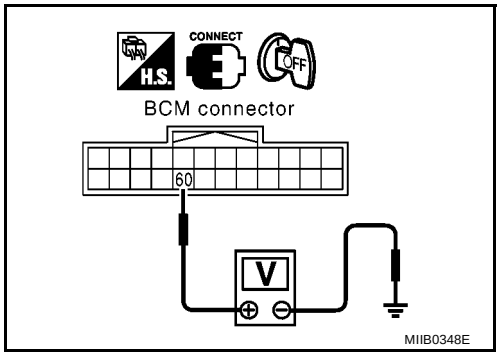
OK >> GO TO 4.
NG >> Replace door switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M49 terminal 60 and ground.

Rear RH door is closed.

60 (G) – Ground : Battery voltage



OK or NG

OK >> Check door switch ground condition.
NG >> Replace BCM.

External Back Door Release Switch Check

EIS00AQ8

1. CHECK EXTERNAL BACK DOOR RELEASE SWITCH INPUT SIGNAL

With CONSULT- II

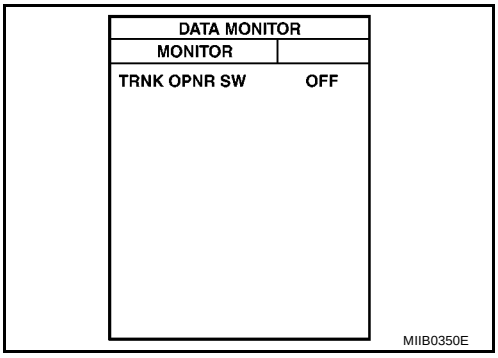
Check external back door release switch “TRNK OPNR SW” in “DATA MONITOR” mode with CONSULT- II.

External back door release switch is pushed

TRNK OPNR SW : ON

External back door release switch is released

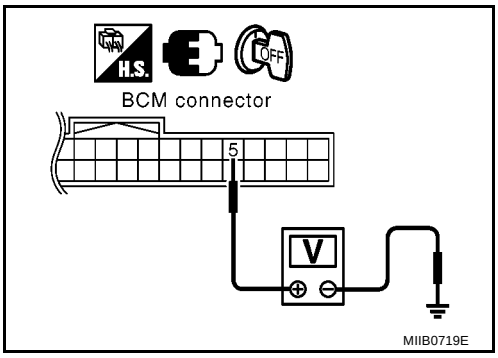
TRNK OPNR SW : OFF



Without CONSULT- II

Check voltage between BCM connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
M48	5 (Y)	Ground	Pushed	0
			Released	5



OK or NG

OK >> External back door release switch is OK.

NG >> GO TO 2.

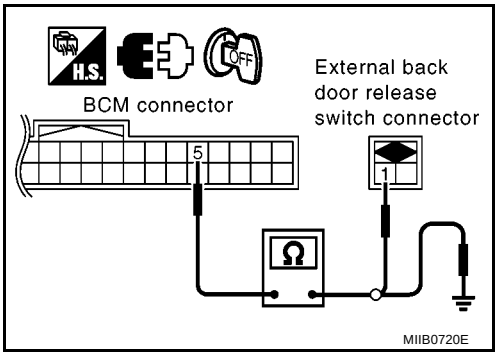
2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and external back door release switch connector.
3. Check continuity between BCM connector M48 terminal 5 and external back door release switch connector B52 terminal.

5 (Y) – 1 (Y) : Continuity should exist.

4. Check continuity between BCM connector M48 terminal 5 and ground.

5 (Y) – Ground : Continuity should not exist.



OK or NG

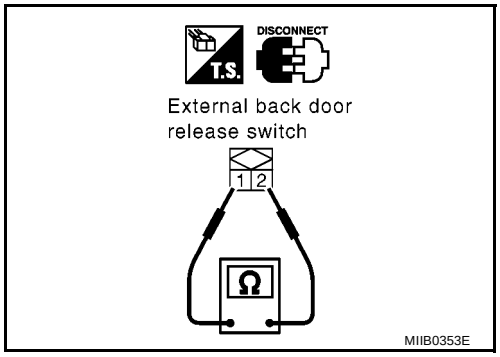
OK >> GO TO 3.

NG >> Repair or replace harness.

3. CHECK EXTERNAL BACK DOOR RELEASE SWITCH

Check continuity between external back door release switch terminal 1 and 2.

Terminals		Condition	Continuity
1	2	Pushed	YES
		Released	NO



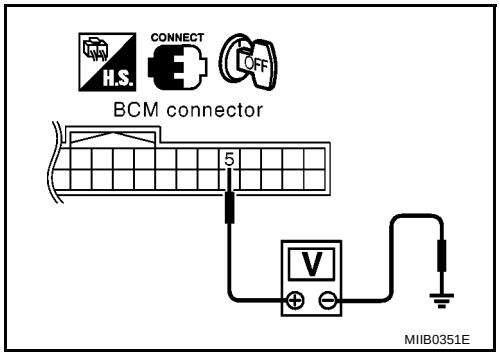
OK or NG

OK >> GO TO 4.
NG >> Replace external back door release switch.

4. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Check voltage between BCM connector M48 terminal 5 and ground.

5 (Y) – Ground : Approx. 5V



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace BCM.

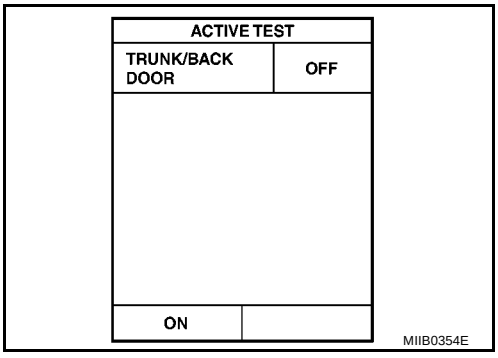
Back Door Release Actuator Check

EIS00AQ9

1. CHECK BCM OUTPUT SIGNAL

Check back door release output signal
Perform (“TRUNK/BACK DOOR”) in “ACTIVE TEST” mode with CONSULT-II.

When “ACTIVE TEST” is executed, does the back door open?



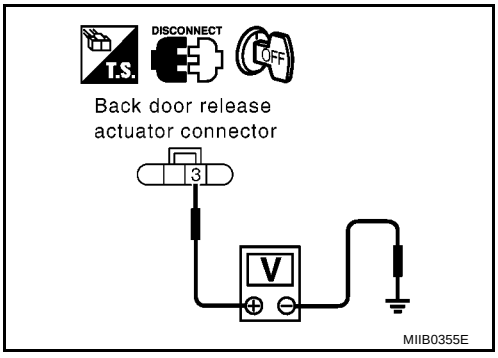
OK or NG

OK >> Back door release output is OK.
NG >> GO TO 2.

2. CHECK BACK DOOR RELEASE ACTUATOR

1. Turn ignition switch OFF.
2. Disconnect back door release actuator connector.
3. External back door release switch operate, check voltage between back door release actuator connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
B55	3 (OR)	Ground	Pushed	0 → Battery voltage → 0



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 68 and back door release actuator connector B55 terminal 3.

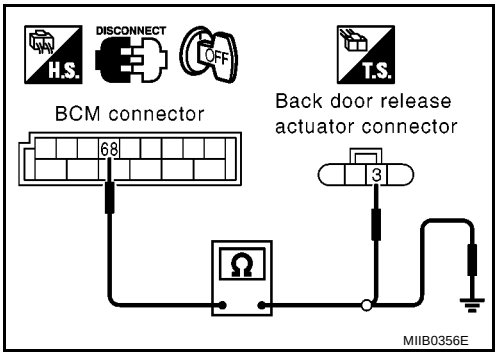
68 (OR) – 3 (OR) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 68 and ground.

68 (OR) – Ground : Continuity should not exist.

OK or NG

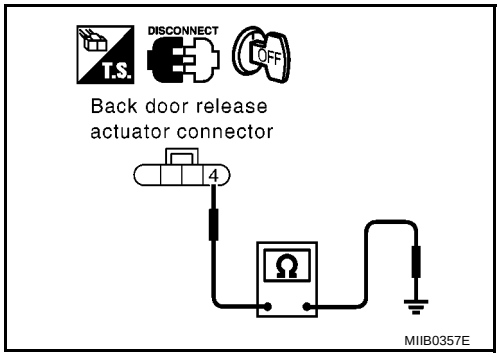
OK >> Replace BCM.
NG >> Repair or replace harness.



4. CHECK GROUND CIRCUIT

Check continuity between back door release actuator connector B55 terminal 4 and ground.

4 (B) – Ground : Continuity should exist.



OK or NG

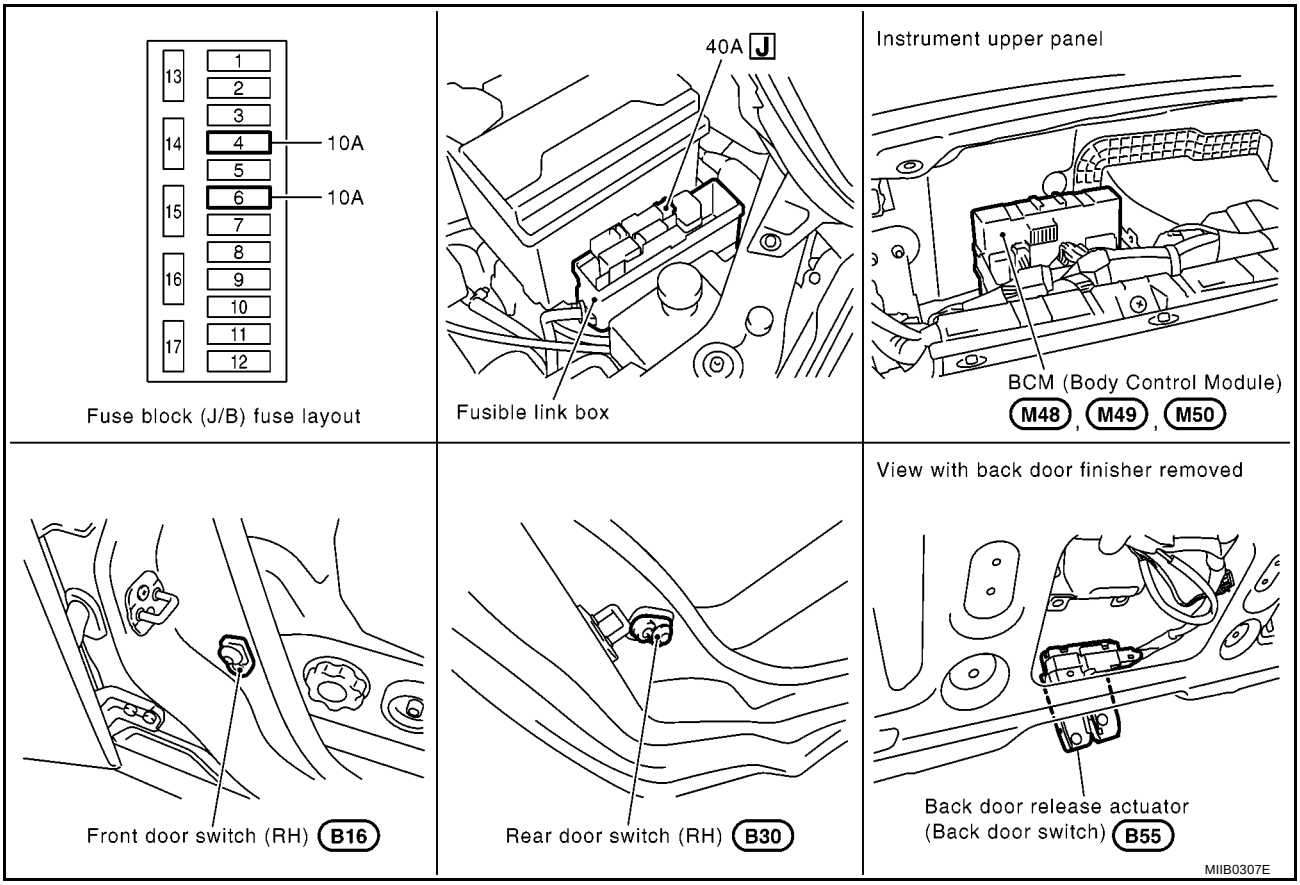
OK >> Replace back door release actuator.
NG >> Repair or replace harness.

MULTI-REMOTE CONTROL SYSTEM

PFP:28596

Component Parts and Harness Connector Location

EIS004Y9



System Description

EIS004YA

INPUTS

Power is supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fusible link box).
- to key switch terminal 1
- through 10A fuse [No. 6, located in the fuse block (J/B)].

When the key switch is ON (Ignition key is inserted in ignition key cylinder), power is supplied

- to BCM terminal 3.
- through key switch terminal 2

When the ignition switch is ON or START, power is supplied

- to BCM terminal 24
- through 10A fuse [No. 4, located in the fuse block (J/B)].

Ground is supplied

- to BCM terminals 2 and 70
- through body grounds M19 and M20.

When the front door switch LH (LHD Models) or RH (RHD Models) is ON (door is open), ground supplied

- to BCM terminal 29
- through front door switch LH (LHD Models) or RH (RHD Models) terminal 1
- through front door switch LH (LHD Models) or RH (RHD Models) case ground.

When the front door switch RH (LHD Models) or LH (RHD Models) is ON (door is open), ground supplied

- to BCM terminal 30
- through front door switch RH (LHD Models) or LH (RHD Models) terminal 1
- through front door switch RH (LHD Models) or LH (RHD Models) case ground.

When the rear door switch LH is ON (door is open), ground is supplied

- to BCM terminal 59
- through rear door switch LH terminal 1
- through rear door switch LH case ground.

When the rear door switch RH is ON (door is open), ground is supplied

- to BCM terminal 60
- through rear door switch RH terminal 1
- through rear door switch RH case ground.

When the back door switch is ON (back door is open), ground is supplied

- to BCM terminal 10
- through back door switch terminals 1 and 2
- through body grounds B17, B23, B44 and B51.

Remote controller signal is inputted to BCM (The antenna of the system is combined with BCM).

OPERATE

The multi-remote control system controls operation of the

- power door lock
- answer back
- auto door lock

OPERATED PROCEDURE

Power Door Lock Operation

NORMAL MODE

BCM receives a LOCK/UNLOCK signal from remote controller.
Then BCM locks/unlocks all doors with input of LOCK/UNLOCK signal from remote controller.

ANTI HI-JACK MODE

BCM receives a LOCK signal from remote controller.

Then BCM locks all doors with input of LOCK signal from remote controller.
When an UNLOCK signal is sent from remote controller once, driver's door will be unlocked.
Then, if an UNLOCK signal is sent from remote controller again within 5 seconds, all door will be unlocked.

HOW TO CHANGE DOOR LOCK FUNCTION MODE

With CONSULT-II

Door lock function can be changed using “SECURITY DOOR LOCK SET” mode in “WORK SUPPORT” of “DOOR LOCK”.
Refer to BL-46, "WORK SUPPORT" .

Without CONSULT-II

When LOCK and UNLOCK signals are sent from the remote controller for more than 5 seconds at the same time, the lock function mode is changed.

Answer Back

When the doors are locked or unlocked by remote controller, supply power to hazard warning lamp flashes as follows

- LOCK operation: Flash once
- UNLOCK operation: Flash twice

Answer back mode can be changed using “HAZARD LAMP SET” mode in “WORK SUPPORT” of “FLUSHER”.
Refer to LT-145, "WORK SUPPORT" .

Auto Door Lock Operation

Auto door lock function signal is sent for operation when any of the following signals are not sent within 2 minutes after the unlock signal is sent from remote controller:

- when door switch is turned on for door open.
- when key switch is turned on.
- when the lock signal is sent from the remote controller.

Auto door lock mode can be changed using “AUTO LOCK SET” mode in “WORK SUPPORT” of “DOOR LOCK”.
Refer to BL-46, "WORK SUPPORT" .

Remote Controller ID Code Entry

A maximum of four remote controller can be entered.
Dedicated remote controller ID registration procedure is not required.
Remote controller ID registration must be completed in conjunction with immobilizer transponder ID registration.

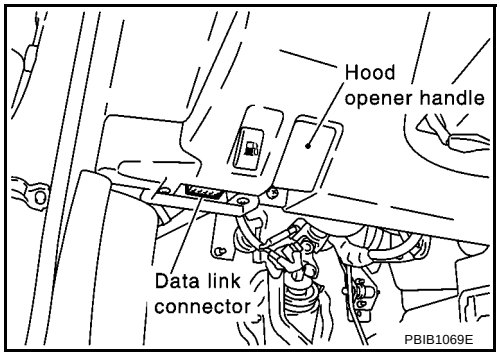
CONSULT- II Inspection Procedure

EIS004YE

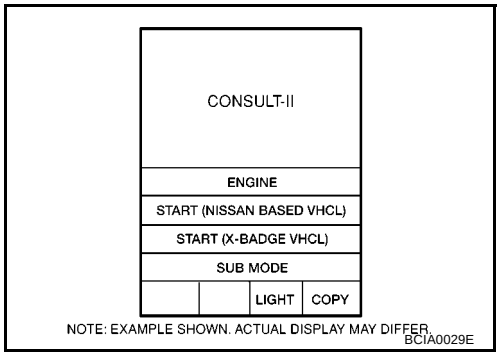
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

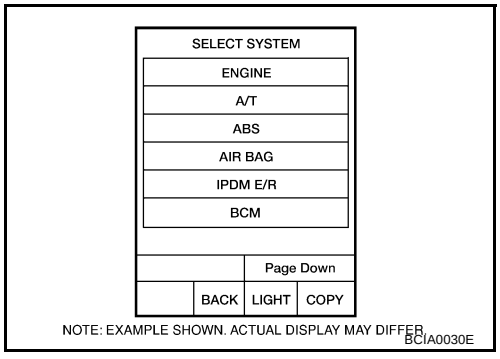
1. Turn ignition switch “OFF”.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to the data link connector.



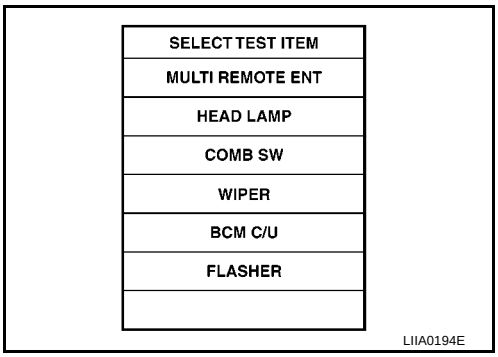
3. Turn ignition switch “ON”.
4. Touch “START(NISSAN BASED VHCL)”.



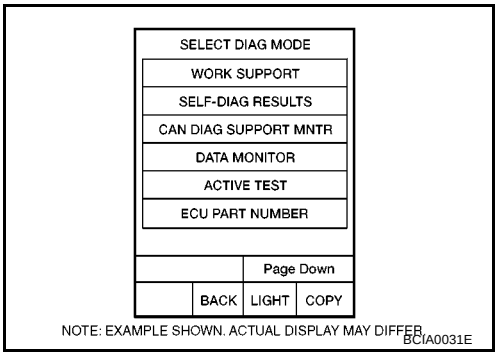
5. Touch “BCM”.
   If “BCM” is not indicated, Refer to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “MULTI REMOTE ENT”.



7. Select diagnosis mode.
“DATA MONITOR” is available.



CONSULT- II Application Items

EIS004YF

DATA MONITOR

Monitored Item	Description
MEMORY 1	Indicates [ON/OFF] condition of remote controller ID code registration.
MEMORY 2	Indicates [ON/OFF] condition of remote controller ID code registration.
MEMORY 3	Indicates [ON/OFF] condition of remote controller ID code registration.
MEMORY 4	Indicates [ON/OFF] condition of remote controller ID code registration.

Work Flow

EIS0055G

1. Check the trouble symptom and customer's requests.
2. Understand outline of system. Refer to BL-132, "System Description" .
3. Confirm that power door lock system operates normally.
Refer to BL-15, "POWER DOOR LOCK SYSTEM" .
4. Refer to trouble diagnosis chart by symptom, repair or replace any malfunctioning parts.
5. INSPECTION END

Trouble Diagnosis Chart by Symptom

EIS004YG

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-II, when perform the each trouble diagnosis. Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .

NOTE:

- Always check “Work Flow” before troubleshooting. Refer to BL-141, "Work Flow" .
- Always check remote controller battery before replacing remote controller.

Symptom	Diagnoses/service procedure	Reference page
All function of multi-remote control system do not operate.	1. Remote controller check	BL-143
	2. Replace remote controller. **NOTE:** If the result of remote controller function check with CONSULT-II is OK, remote controller is not malfunction.	BL-133
	3. Replace BCM.	BCS-31
Door lock or unlock does not function with remote controller. (Power door lock system is “OK”)	1. Remote controller check	BL-143
	2. Key switch check	BL-148
	3. Replace remote controller. **NOTE:** If the result of remote controller function check with CONSULT-II is OK, remote controller is not malfunction.	BL-133
	4. Replace BCM.	BCS-31
Answer back does not activate properly when pressing lock or unlock button of remote controller.	1. Check answer back mode.* *: Answer back mode can be changed. First check the hazard reminder setting.	LT-145
	2. Hazard reminder check	BL-150
	3. Replace BCM.	BCS-31
Auto door lock operation does not activate properly. (All other remote keyless entry system function is “OK”.)	1. Check auto door lock operation mode.* *: Auto door lock operation can be changed. First check the auto door lock operation setting.	BL-46
	2. Door switch check	BL-143
	3. Replace BCM.	BCS-31

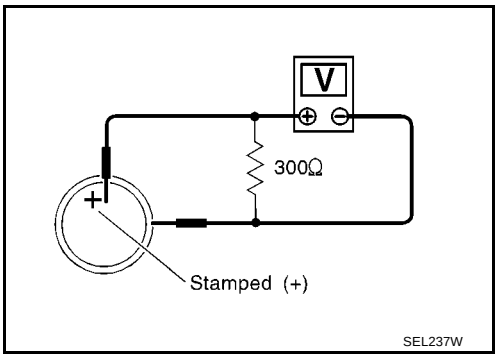
Remote controller Check

EIS004YH

1. CHECK REMOTE CONTROLLER BATTERY

Remove battery and measure voltage across battery positive and negative terminals, (+) and (–).

Battery voltage : 2.5V – 3.0V



NOTE:
Remote controller does not function if battery is not set correctly.

OK or NG

OK >> GO TO 2
NG >> Replace battery. Refer to BL-151, "Remote Controller Battery Replacement" .

2. CHECK REMOTE CONTROLLER FUNCTION

With CONSULT-II
Check remote controller function.

Remote controller function	Check item
Pushing LOCK button	All of doors are locked
Pushing UNLOCK button	All of doors are unlocked

OK or NG

OK >> Remote controller is OK.
NG >> Replace remote controller.

Door Switch Check

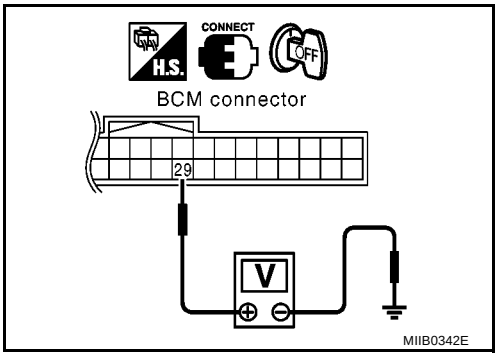
EIS0054Y

DOOR SWITCH DRIVER SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector M48 terminal 29 and ground.

Terminal		Driver door condition	Voltage (V) Approx.
(+)	(–)		
29 (L)	Ground	Closed	5
		Open	0



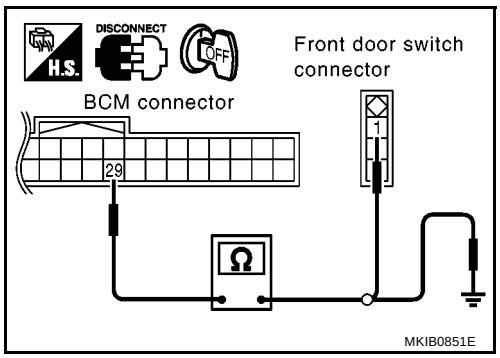
OK or NG

OK >> Door switch circuit is OK.
NG >> GO TO 2.

2. CHECK DOOR SWITCH HARNESS

1. Check continuity between BCM connector M48 terminal 29 and driver door switch connector B22(LHD Models) or B16 (RHD Models) terminal 1.

Terminal		Continuity
LHD Models	29 (L) - 1 (LG)	Yes
RHD Models	29 (L) - 1 (L)	



2. Check continuity between BCM connector M48 terminal 29 and ground.

29 (L) – Ground : Continuity should not exist.

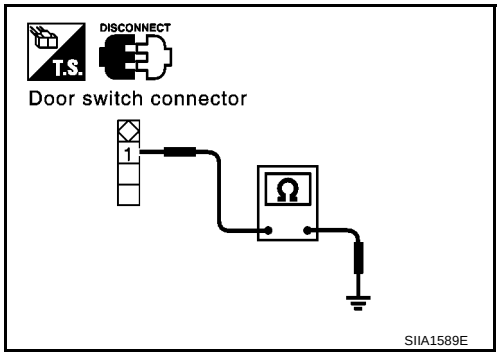
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR SWITCH

Check continuity between driver door switch terminal 1 and ground part of door switch.

Terminal	Driver door switch condition	Continuity
1 - Ground part of door switch	Pushed	No
	Released	Yes



OK or NG

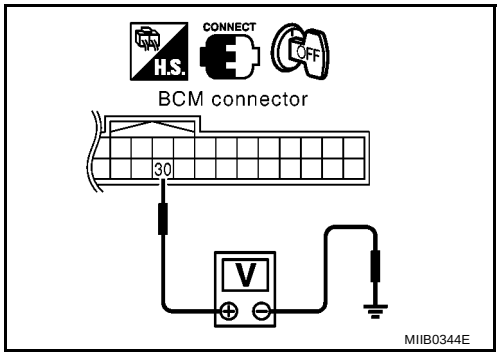
OK >> Check driver door switch ground condition.
NG >> Replace driver door switch.

DOOR SWITCH PASSENGER SIDE

1. CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector M48 terminal 30 and ground.

Terminal		Passenger door condition	Voltage (V) Approx.
(+)	(–)		
30 (LG)	Ground	Closed	5
		Open	0



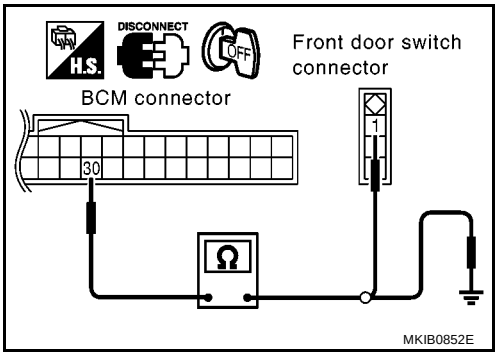
OK or NG

OK >> Door switch circuit is OK.
NG >> GO TO 2

2. CHECK DOOR SWITCH HARNESS

1. Check continuity between BCM connector M48 terminal 30 and passenger door switch connector B16(LHD Models) or B22 (RHD Models) terminal 1.

Terminal		Continuity
LHD Models	30 (LG) - 1 (L)	Yes
RHD Models	30 (LG) - 1 (LG)	



2. Check continuity between BCM connector M48 terminal 30 and ground.

30 (LG) – Ground : Continuity should not exist.

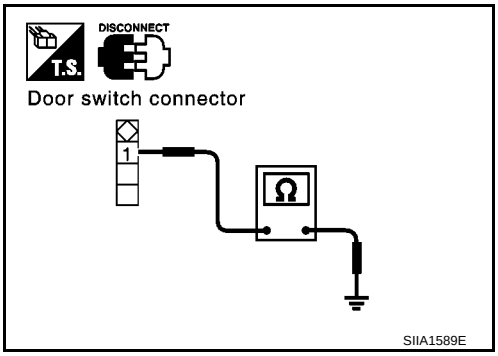
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR SWITCH

Check continuity between passenger door switch terminal 1 and ground part of door switch.

Terminal	Passenger door switch condition	Continuity
1 - Ground part of door switch	Pushed	No
	Released	Yes



OK or NG

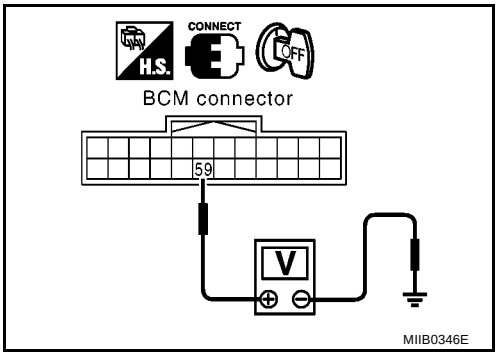
OK >> Check passenger door switch ground condition.
NG >> Replace passenger door switch.

DOOR SWITCH REAR LH

1. CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector M49 terminal 59 and ground.

Terminal		Rear door LH condition	Voltage (V) Approx.
(+)	(–)		
59 (L)	Ground	Closed	5
		Open	0



OK or NG

OK >> Door switch circuit is OK.
NG >> GO TO 2

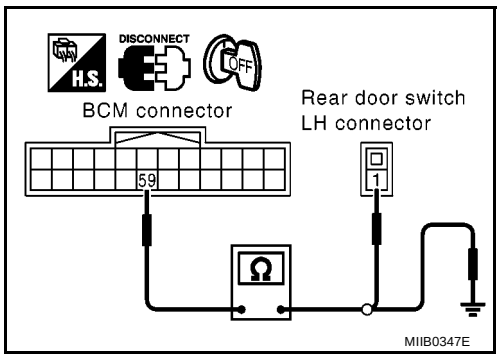
2. CHECK DOOR SWITCH HARNESS

1. Check continuity between BCM connector M49 terminal 59 and rear door switch LH connector B31 terminal 1.

   59 (L) – 1 (L) : Continuity should exist.

2. Check continuity between BCM connector M49 terminal 59 and ground

   59 (L) – Ground : Continuity should not exist.



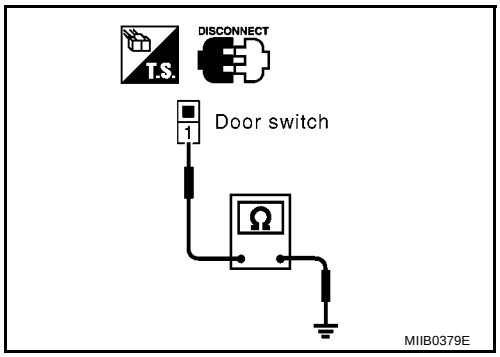
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR SWITCH

Check continuity between rear door switch LH terminal 1 and ground part of door switch.

Terminal	Rear door switch LH condition	Continuity
1 - Ground part of door switch	Pushed	No
	Released	Yes



OK or NG

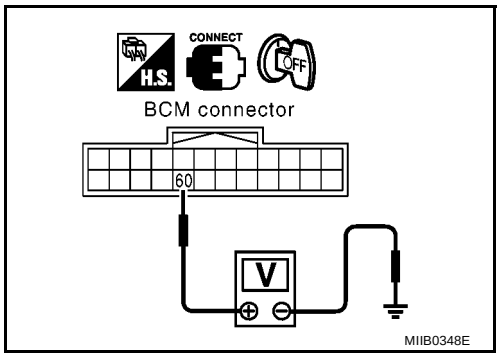
OK >> Check rear door switch LH ground condition.
NG >> Replace rear door switch LH.

DOOR SWITCH REAR RH

1. CHECK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector M49 terminal 60 and ground.

Terminal		Rear door RH condition	Voltage (V) Approx.
(+)	(–)		
60 (G)	Ground	Closed	5
		Open	0



OK or NG

OK >> Door switch circuit is OK.
NG >> GO TO 2

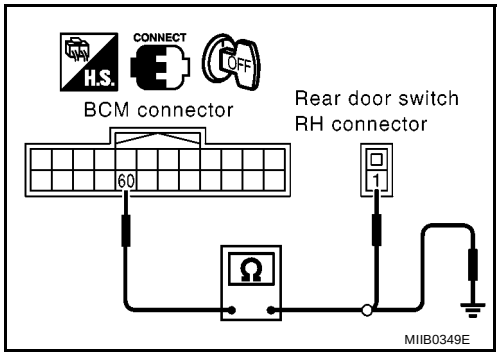
2. CHECK DOOR SWITCH HARNESS

1. Check continuity between BCM connector M49 terminal 60 and rear door switch LH connector B31 terminal 1.

   60 (G) – 1 (G) : Continuity should exist.

2. Check continuity between BCM connector M49 terminal 60 and ground

   60 (G) – Ground : Continuity should not exist.



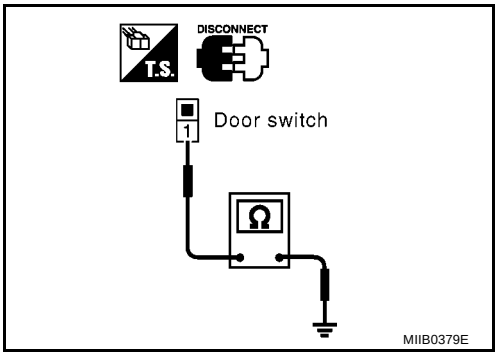
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK DOOR SWITCH

Check continuity between rear door switch RH terminal 1 and ground part of door switch.

Terminal	Rear door switch RH condition	Continuity
1 - Ground part of door switch	Pushed	No
	Released	Yes



OK or NG

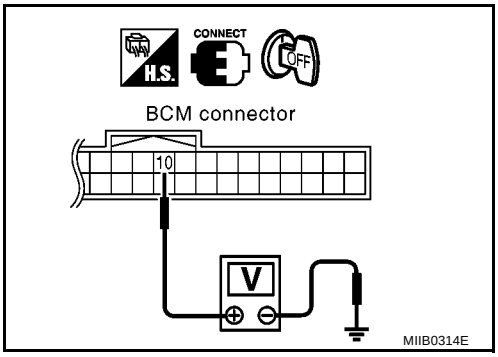
OK >> Check rear door switch RH ground condition.
NG >> Replace rear door switch RH.

BACK DOOR SWITCH

1. CHECK BACK DOOR SWITCH INPUT SIGNAL

1. Turn ignition switch OFF.
2. Check voltage between BCM connector M48 terminal 10 and ground.

Terminal		Back door condition	Voltage (V) Approx.
(+)	(–)		
10 (OR)	Ground	Closed	5
		Open	0



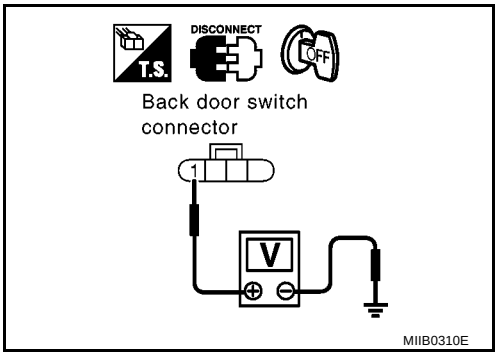
OK or NG

OK >> Back door switch circuit is OK.
NG >> GO TO 2

2. CHECK BACK DOOR SWITCH HARNESS

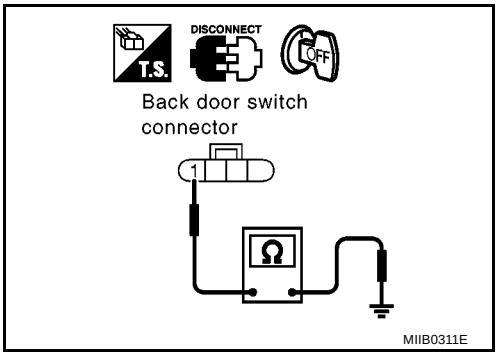
1. Disconnect back door switch connector.
2. Check voltage between back door switch connector B55 terminal 1 and ground. (Check harness for open.)

1 (OR) – Ground : Battery voltage



3. Disconnect BCM connector.
4. Check continuity between back door switch connector B55 terminal 1 and ground. (Check harness for short.)

1 (OR) – Ground : Continuity should not exist.



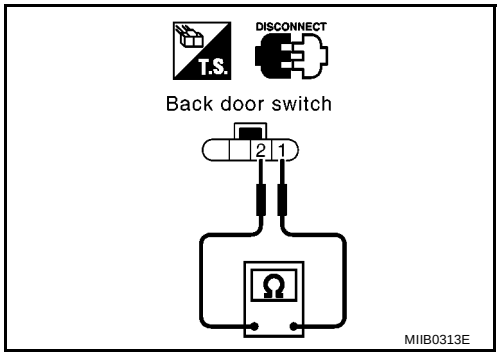
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness.

3. CHECK BACK DOOR SWITCH

Check continuity between back door switch terminal 1 and 2.

Terminal	Rear door condition	Continuity
1 - 2	Closed	No
	Opened	Yes



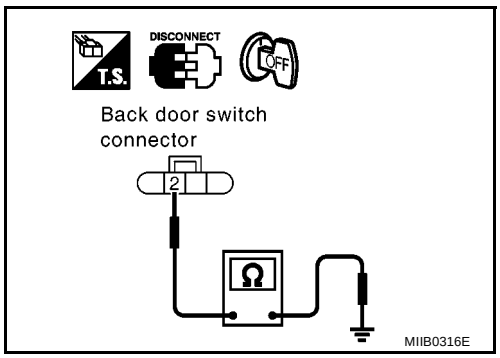
OK or NG

OK >> GO TO 4.
NG >> Replace back door release actuator (back door switch).

4. CHECK BACK DOOR SWITCH GROUND HARNESS

Check continuity between back door switch connector B55 terminal 2 and ground.

2 (B) – Ground : Continuity should not exist.



OK or NG

OK >> Check harness connection.
NG >> Replace back door switch.

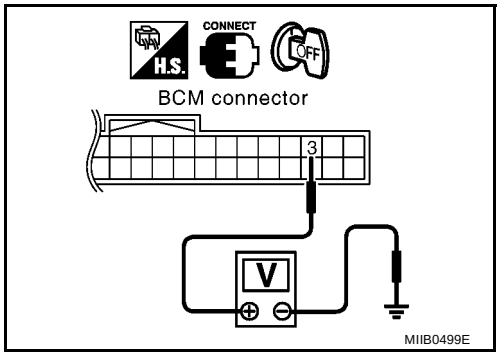
Key Switch Check

EIS0054Z

1. CHECK KEY SWITCH INPUT SIGNAL

Check voltage between BCM connector M48 terminal 3 and ground.

Terminals		Key switch condition	Voltage (V) Approx.
(+)	(–)		
3 (OR)	Ground	Key is inserted in IGN key cylinder (key switch is “ON”.)	Battery voltage
		Key is removed from IGN key cylinder (Key switch is “OFF”.)	0



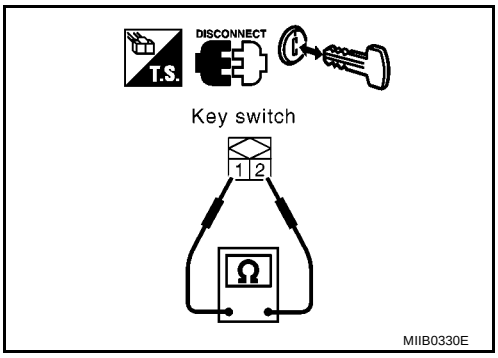
OK or NG

OK >> Key switch circuit is OK.
NG >> GO TO 2

2. CHECK KEY SWITCH (INSERT)

1. Disconnect key switch connector.
2. Check continuity between key switch terminals 1 and 2.

Terminals	Key switch condition	Continuity
1 – 2	Key is inserted in IGN key cylinder (Key switch is “ON”.)	Yes
	Key is removed from IGN key cylinder (Key switch is “OFF”.)	No



OK or NG

OK >> Check the following.
- 10A fuse [No. 6, located in fuse block (J/B)]
- Harness for open or short between key switch and fuse
- Harness for open or short between BCM and key switch

NG >> Replace key switch.

Hazard Reminder Check

EIS004YL

1. CHECK HAZARD WARNING LAMP

Check if hazard warning lamp flashes with hazard switch.

Does hazard warning lamp operate?

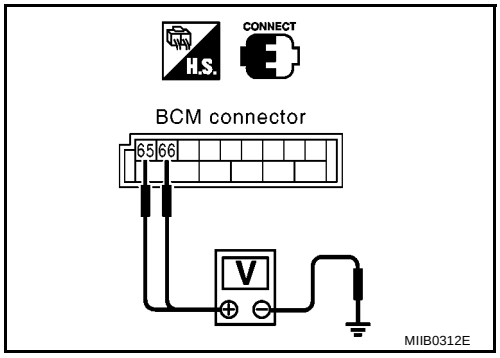
Yes >> GO TO 2

No >> Check hazard warning lamp circuit. Refer to LT-121, "TURN SIGNAL AND HAZARD WARNING LAMPS" .

2. CHECK HAZARD REMINDER OPERATION

Check the following at when push the remote controller switch.

Check voltage between smart entrance control unit harness connector M43 terminal 65, 66 and ground.



Remote controller	Voltage (V) Approx.
Pushing LOCK button	 PIIA2486J
Pushing UNLOCK button	 PIIA2487J

OK or NG

OK >> Check harness for open between BCM and hazard switch.

NG >> Check harness for short between BCM and hazard switch. If check result is “OK”, replace BCM. If check result is “NG”, repair or replace harness.

Remote Controller Battery Replacement

EIS004YN

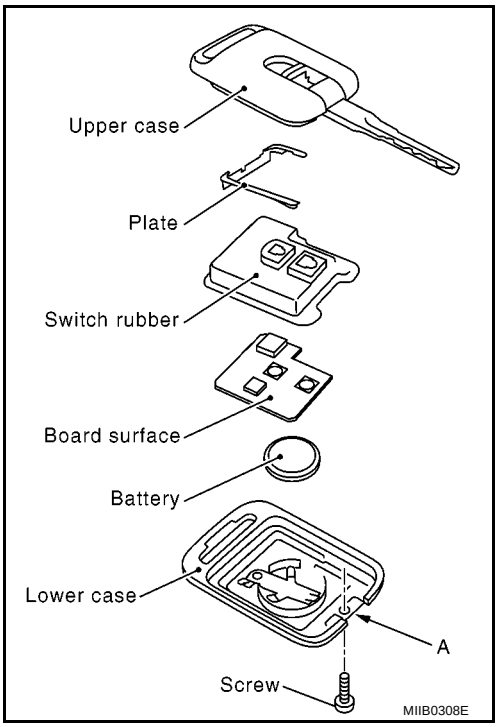
1. Remove installation screw on the rear of remote controller.
2. Place the key with the lower case facing up. Set a screwdriver wrapped with tape into section A of the lower case and separate the lower case from the upper case.
3. When replacing the circuit board assembly, remove circuit board assembly from the upper case.
   (Circuit board assembly: Switch rubber + Board surface)

   CAUTION:
   Be careful not to touch the printed circuits directly.
4. When replacing the battery
   Remove battery from the lower case and replace it.

   Battery replacement : Coin-type lithium battery (CR1620)

   CAUTION:
   When replacing battery, be sure to keep dirt, grease and other foreign materials off the electrode contact area.
5. After replacement, fit the lower and upper cases together, part and tighten with the screw.

   CAUTION:
   After replacing the battery, be sure to check that door locking operates normally using the remote controller.

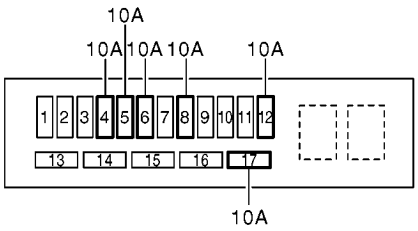


INTELLIGENT KEY SYSTEM

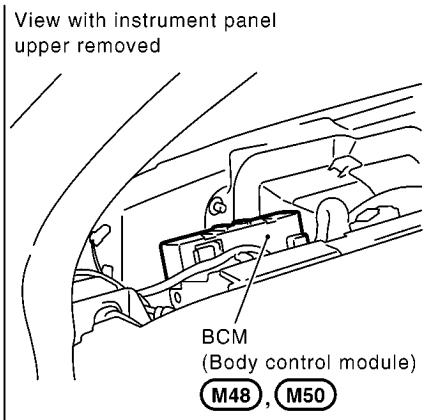
PFP:285e2

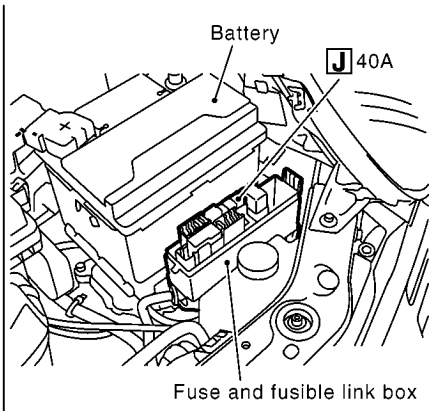
Component Parts and Harness Connector Location

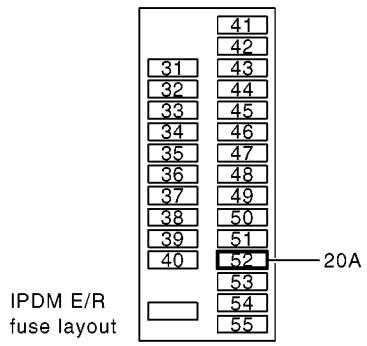
EIS00563

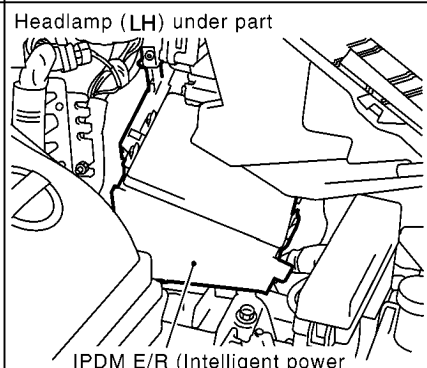


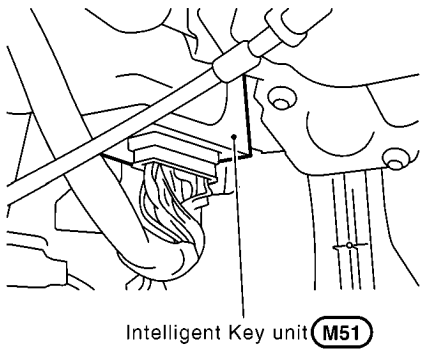
Fuse block (J/B) fuse layout

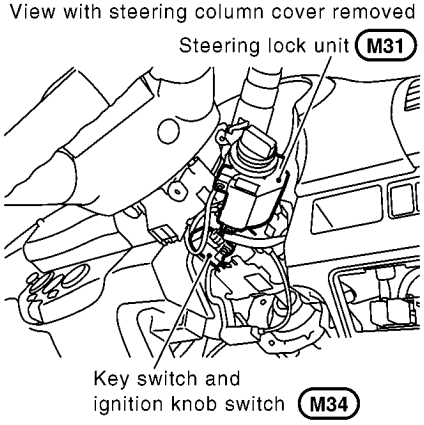


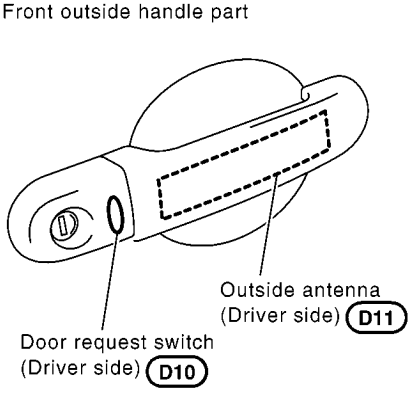


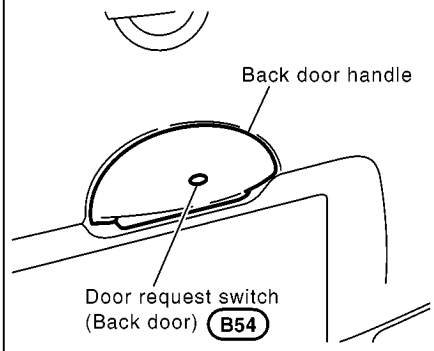


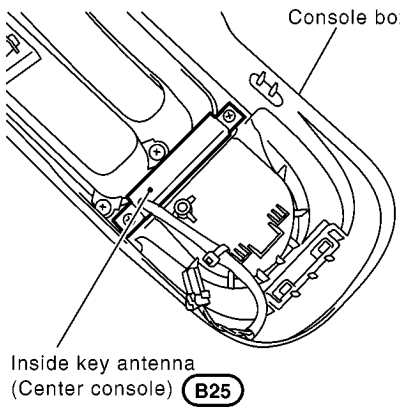


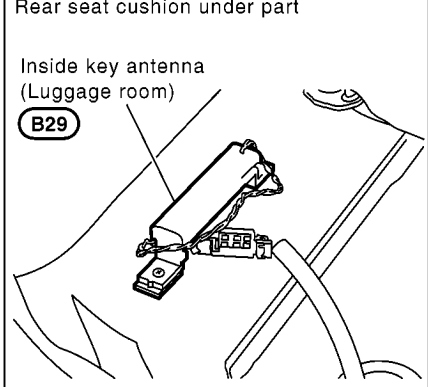


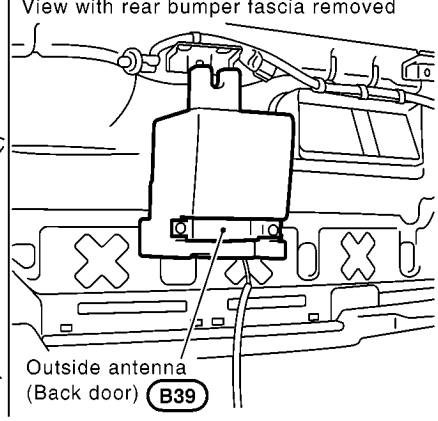




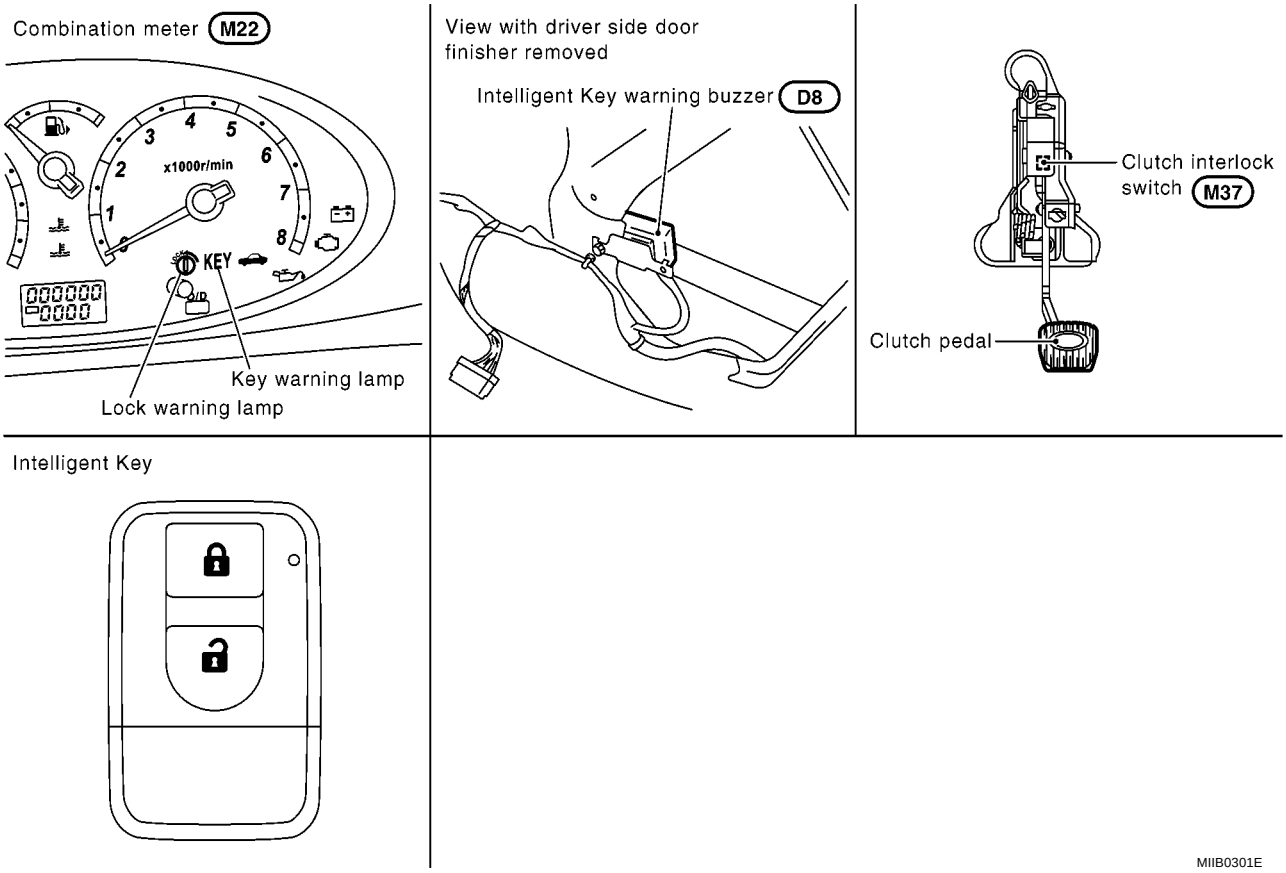








MIIB0723E



MIIB0301E

System Description

EIS004MH

- The Intelligent Key system is a system that makes it possible to lock and unlock the door locks (door lock function) and start the engine (engine start function) by carrying around the Intelligent Key, which operates based on the results of electrical key-ID verification using two-way communications between the Intelligent Key and the vehicle
- Operation of the remote control buttons on the Intelligent Key also provides the same functions as the remote control entry system. (Remote control entry functions)
- As an ignition key warning function, when a door lock is locked or unlocked with entry switch or remote controller button operation, the hazard lamps flash and the Intelligent Key warning buzzer sounds.
- Even if the vehicle or Intelligent Key battery runs down, the door locks can be locked and unlocked and the engine started with the mechanical key built into the Intelligent Key.
- If an Intelligent Key is lost, a new Intelligent Key can be registered. A maximum of 4 Intelligent Keys can be registered.
- It has been made possible to diagnose the system, change the function setting and register an Intelligent Key with the CONSULT-II.

DOOR LOCK FUNCTION

Operation Description

- When the driver door, passenger door, or back door request switch is pressed, Intelligent Key unit sends a request signal from the transmission antenna corresponding to the pressed door request switch, key-ID verification is performed using two-way communication with Intelligent Key, and if ID is successfully verified, a door lock/unlock request signal is sent to BCM (Body Control Module) using CAN communication to lock/unlock the door lock.
- When door is locking, door is unlocked, when door is unlocking, door is locked.
- When door lock is locked/unlocked by door request switch operation, hazard lamps flash and Intelligent Key warning buzzer sounds.
- With the locking operation of door request switch, door lock actuators of all door are locked.

Driver side door request switch operation

- When door request switch (driver side) is pushed (unlock), driver side door lock actuator is unlocked.

- When door request switch (driver side) is pushed (unlock) for the second time within 5 seconds after the first operation, door lock actuators on passenger's and other's doors are unlocked.
- Unlock mode can be changed using “WORK SUPPORT” mode in “DOOR LOCK-UNLOCK SET”. Refer to BL-185, "CONSULT-II Function (INTELLIGENT KEY)" .

Passenger side door request switch operation

- When door request switch (passenger side) is pushed (unlock), passenger side door lock actuator is unlocked.
- When door request switch (passenger side) is pushed (unlock) for the second time with in 5 seconds after the first operation, door lock actuators on driver's and other's doors are unlocked.
- Unlock mode can be changed using “WORK SUPPORT” mode in “DOOR LOCK-UNLOCK SET”. Refer to BL-185, "CONSULT-II Function (INTELLIGENT KEY)" .

Operation Condition

Request switch operation	Operating conditions (When all the conditions below are met)
Door request switch (Driver side) Door request switch (passenger side) Door request switch (back door)	● Closing all doors (door switch: OFF) ● Key switch OFF (key removed) ● Ignition knob switch: OFF (ignition knob switch not pressed) ● The Intelligent Key is in the antenna detection area for the door for which the door request switch was operated.

Operation Range

The antenna detection area for each door is about 80 cm (31.50 in) from the handle of each door (driver door, passenger door and back door). However, this operating range depends on the ambient conditions.

Auto Door Lock Function

After the door request switch in the driver or passenger or back door is operated and the vehicle door locks are unlocked, all the doors are automatically locked unless the mechanical key is inserted into the ignition knob, the ignition knob is pressed, any one of the doors is opened, or an Intelligent Key remote control button is operated within 30 seconds.

Key Reminder Function

Number of times the hazard lamps are flashed and the Intelligent Key warning buzzer buzzed when the door lock is locked or unlocked by door request switch operation.

Vehicle operation	Hazard lamp	Intelligent Key warning buzzer
Door unlock operation	Twice	Twice
Door lock operation	Once	Once

Intelligent Key Lock-in Prevention Function

When Intelligent Key is in vehicle, a door is open, and doors are locked using door lock and unlock switch, driver door lock knob, or door request switch, Intelligent Key unit sends door unlock request signal to BCM via CAN communication to unlock all doors to prevent Intelligent Key from becoming locked in vehicle.

CAUTION:

The above function operates when the Intelligent Key is inside the vehicle. However, there may be times when Intelligent Key cannot be detected and this function will not operate when Intelligent Key is on the instrument panel, rear parcel shelf, or in the glove box. Also, this system some times does not operate if the Intelligent Key is in the door pocket for the open door.

REMOTE CONTROL ENTRY FUNCTIONS

Door Lock Function

- Operating a remote controller button on the Intelligent Key sends the Intelligent Key-ID to the Intelligent Key unit. Intelligent Key unit conducts a verification of the received key-ID, and if the verification is accepted, a door lock or door unlock request signal is sent to BCM via CAN communication to lock/unlock the door lock.
- When door lock/unlock is performed using Intelligent Key remote controller button operation, operation confirmation is conducted by making hazard lamps flash and Intelligent Key warning buzzer sound.

OPERATION CONDITION

Remote control operation	Operation condition
Door lock operation	● All doors closed ● Key switch OFF (key removed) ● Ignition knob switch: OFF (ignition knob not pressed)
Door unlock operation	● Key switch OFF (key removed) ● Ignition knob switch: OFF (ignition knob not pressed)

Map Lamp And Keyhole Illumination Function

When the following conditions come:

- condition of map lamp switch is DOOR position;
- door switch OFF (when all the doors are closed);

Remote keyless entry system turns on interior lamp (for 30 seconds) with input of UNLOCK signal from Intelligent Key.
For detailed description, refer to LT-200, "INTERIOR ROOM LAMP" .

Key Reminder Function

As an operation verification function, when door locks are locked or unlocked using Intelligent Key remote controller button operation, hazard lamps flash and Intelligent Key warning buzzer sounds.

Vehicle operation	Hazard lamp	Intelligent Key warning buzzer
Door unlocking operation	Twice	Twice
Door locking operation	Once	Once

Operation Range

The range for reliable remote control operation is about 80 cm (31.50 in) from each door handle (driver, passenger, and back door). However, this operating range depends on the ambient conditions.

ENGINE STARTUP FUNCTION

Operation Description

- When ignition knob is pressed, Intelligent Key unit sends request signal from inside key antenna, key-ID verification is conducted with Intelligent Key using two-way communication, and if verification is successful, an ignition rotation prohibition latch release signal is sent to steering lock unit. Steering lock unit releases ignition knob rotation prohibition latch. (Ignition knob can now be turned.)
- When it becomes possible to rotate the ignition knob, “KEY” warning lamp in combination meter lights up green to notify driver that ignition knob can be turned.

  NOTE:
  When it becomes impossible to rotate the ignition knob, “KEY” warning lamp in combination meter lights up red.
- When key-ID verification is successful and ignition knob switch is in the ON state, Intelligent Key unit uses CAN communication to send engine start permission signal to BCM.
- When BCM receives engine start permission signal, it uses CAN communication to sent starter request signal to IPDM E/R so that the engine will start when ignition knob is rotated to START position.

Operation Range

Engine can be started when Intelligent Key is in vehicle. However, sometimes engine might not start when Intelligent Key is on instrument panel, rear parcel shelf, or in glove box.

NOTE:
luggage room is not within the operation range, but sometimes it is possible to start the engine from there.

Active Check Function

Confirm whether or not ignition knob can be rotated by checking the color of warning lamp in combination meter.

Condition	Operation
Ignition knob rotation possible	“KEY” warning lamp in combination meter is lit up green.
Ignition knob rotation not possible	“KEY” warning lamp in combination meter is lit up red.

WARNING AND ALARM FUNCTION

Operation Description

The warnings and alarms are as follows and are given to the user as warning information and warnings using combinations of Intelligent Key warning buzzer (in driver door), inside vehicle buzzer (in combination meter), and warning lamps “KEY” and “LOCK.”

- Ignition switch return forgotten warning
  With the ignition in OFF or ACC position, if the driver door is opened, this warning is issued.
- Key left in ignition warning (when mechanical key used)
  With the mechanical key in the ignition knob and the ignition switch is in the OFF, ACC, or LOCK position, if the driver door is opened, this warning is issued.
- Ignition switch OFF position warning (for inside car: when door closed)
  This warning is issued when the user forgets to return the ignition knob to the LOCK position.
- Ignition switch OFF position warning (for outside car: when door opened/closed)
  This warning is issued when the user leaves the car without returning the ignition knob to the LOCK position.
- Warning for removal of Intelligent Key to outside the car (when door open/closed)
  This warning is issued if the Intelligent Key is taken outside the car while the engine is running.
- Warning for removal of Intelligent Key to outside the car (from window)
  This warning is issued if the Intelligent Key is taken outside the car through a window while the engine is running.
- Door lock non-operation warning
  This warning is issued if the door lock (lock) operation by a door request switch is not effected.
- Intelligent Key low battery warning
  This warning is issued when it is detected that the battery in the Intelligent Key has been used up.

Operation Condition

Warning and alarm names	Operating conditions (when all the conditions below are met)
Ignition knob return forgotten warning	● The ignition switch is in the ACC, OFF, or LOCK position (knob pressed) ● The driver door is opened.
Ignition key warning (When mechanical key used)	● The mechanical key is inserted in the ignition knob (key switch: ON) ● The ignition switch is in the ACC, OFF, or LOCK position. ● Driver door closed → open
Ignition knob OFF position warning (for inside car: when door closed)	● The ignition switch is in the OFF or LOCK position (knob pressed) ● In the above state, when the ACC switch is changed from ON to OFF and 1 second passes. (However, this warning is not issued if the mechanical key is inserted in the ignition knob.)
Ignition knob OFF position warning (for outside car: when door opened/closed)	● The ignition switch is in the OFF or LOCK position (knob pressed) ● In the above state, when the ACC switch is changed from ON to OFF and 1 second passes. (However, this warning is not issued if the mechanical key is inserted in the ignition knob.) ● Driver door open → closed
Warning for take out of Intelligent Key to outside the car (when door open/closed)	When Any of the Following Conditions Are Met ● When the ignition knob is pressed in so that it can be rotated (or has been rotated), if any of the doors has been opened, when all the doors are closed, the Intelligent Key unit compares the key-ID with that of the Intelligent Key using the inside key antenna (center console), if the results of the comparison are NG (the Intelligent Key is not found) ● When the ignition knob is pressed in so that it can be rotated (or has been rotated), if any of the doors is open, the Intelligent Key unit compares the key-ID with that of the Intelligent Key every 5 seconds using the inside key antenna (center console), if the results of the comparison are NG (the Intelligent Key is not found) **NOTE:** However, this warning is not issued if the mechanical key is inserted in the ignition knob.

Warning and alarm names	Operating conditions (when all the conditions below are met)
Warning for take out of Intelligent Key to outside the car (from window)	When the ignition knob is pressed in so that it can be rotated (or has been rotated), if the vehicle speed is no greater than 5 km per hour, the Intelligent Key unit compares the key-ID with that of the Intelligent Key every 30 seconds using the inside key antenna (center console), if the results of the comparison are NG (the Intelligent Key is not found) Note: The factory setting for this function is OFF.
Door lock non-operation warning	When any of the following conditions are met Intelligent Key Lock-in Prevention Warning ● When the Intelligent Key is inside the car and the ignition knob is not pressed, when an attempt is made to lock a door lock with a door request switch **NOTE:** This warning is issued even if the Intelligent Key is not in the door antenna detection area corresponding to the door request switch was operated. Knob Return Forgotten Warning ● When the ignition knob is pressed, when an attempt is made to lock a door lock with a door request switch **NOTE:** This warning is only issued if the Intelligent Key is in the door antenna detection area corresponding to the door request switch was operated. Door Ajar Alarm ● When any of the doors is open, when an attempt is made to lock a door lock with a door request switch **NOTE:** This warning is only issued if the Intelligent Key is in the door antenna detection area corresponding to the door request switch was operated.
Intelligent Key low battery prewarning	This warning is issued when it is detected that the battery in the Intelligent Key has been used up.

Warning Procedure

Warning and alarm names	Buzzer		Warning lamp	
	Inside car	Outside car	“KEY”	“LOCK”
Ignition switch return forgotten warning	Buzzer: Continuous	—	—	—
Ignition key warning (When mechanical key used)	Buzzer: Continuous	—	—	—
Ignition switch OFF position warning (for inside car: when door closed)	Buzzer (twice)	—	—	Illuminate
Ignition switch OFF position warning (for outside car: when door opened/closed)	—	Buzzer (3 seconds)	—	Illuminate
Warning for removal of Intelligent Key to outside the car (when door open/closed)	—	Buzzer (3 seconds)	Red illuminate	—
Warning for removal of Intelligent Key to outside the car (from window)	Buzzer (3 seconds)	—	Red illuminate	—
Door lock non-operation warning	—	Buzzer (2 seconds)	—	—
Intelligent Key low battery prewarning	—	—	Green illuminate (30 seconds after ignition switch comes ON)	—

CHANGE SETTINGS FUNCTION

The settings for each function can be changed with the CONSULT-II or Intelligent Key and door request switch operation.

Changing Settings With the Intelligent Key and Door Request Switches

Intelligent Key remote controller button and door request switch operations change the engine startup function settings (startup enabled/disabled) for each Intelligent Key independently.

Settings Change Procedure

1. With the ignition switch is in the LOCK position (ignition knob not pressed), hold down both the LOCK and UNLOCK remote control buttons on the Intelligent Key at the same time for at least 10 seconds (The yard-stick is that the Intelligent Key LED flashes 20 times.)
2. Within 5 seconds of releasing the Intelligent Key remote controller buttons, press the driver door request switch.
3. The KEY warning lamp in combination meter lights up for 3 seconds (engine starting enabled → starting disabled: lights up red, engine starting disabled → flashes green). This completes the settings change.

Changing Settings Using CONSULT-II

The settings for the Intelligent Key system functions can be changed using CONSULT-II (WORK SUPPORT).

NOTE:
Once a function setting is changed, it will remain effective even if the battery is disconnected.

INTELLIGENT KEY REGISTRATION

Intelligent Key-ID registration is executed using the CONSULT-II. Up to 4 can be registered.

CAUTION:

- **After a new Intelligent Key-ID is registered, be sure to check the function.**
- **When registering an additional Intelligent Key-ID, take any Intelligent Keys already registered and Intelligent Keys for any other vehicles out of the vehicle before starting.**

CONSULT-II can be used to check and delete Intelligent Key-IDs.
For future information, see the CONSULT-II Operation Manual NATS.

STEERING LOCK UNIT REGISTRATION

Steering Lock Unit ID Registration

CAUTION:

- **The method for registering a steering lock unit ID depends on the status of the steering lock unit and Intelligent Key unit (new or old unit).**
- **After registration is completed, press ignition knob with a portable unit in the vehicle so that it can be rotated, and confirm that it cannot be rotated even when ignition switch is pressed without a portable unit in the vehicle.**

For future information, see the CONSULT-II Operation Manual NATS.

CAN Communication

EIS00AOS

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EIS00AOT

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

60	G	Rear door switch RH	Door open (ON) → Door close (OFF)	0 → Battery voltage

TER-MINAL	WIRE COLOR	ITEM	CONDITION	VOLTAGE (V) Approx.
65	P	Answer back (Turn signal lamp LH)	When door lock operated using remote controller*1	 PIIA2486J
			When door unlock operated using remote controller*1	 PIIA2487J
66	R	Answer back (Turn signal lamp RH)	When door lock operated using remote controller*1	 PIIA2486J
			When door unlock operated using remote controller*1	 PIIA2487J
67	L	Door lock actuator unlock (ALL Door) (Except driver side)	Door lock/unlock switch UNLOCK operation	0 → Battery voltage
68	OR	Back door opener actuator	Power window main switch (Back door release switch) OPEN operation	Battery voltage → 0
70	B	Ground	—	0
74	W	BAT power supply (fusible link) (BCM)	—	Battery voltage
75*2	R	Super lock set output (All door)	Super lock operation (Set)	0 → Battery voltage
76	BR	Door lock actuator unlock (Driver side)	Door lock/unlock switch Unlock operation	0 → Battery voltage
77	L	Door lock actuator lock (ALL Door)	Door lock/unlock switch LOCK operation	0 → Battery voltage
79	Y	BAT power supply (fusible link) (Power window)	—	Battery voltage

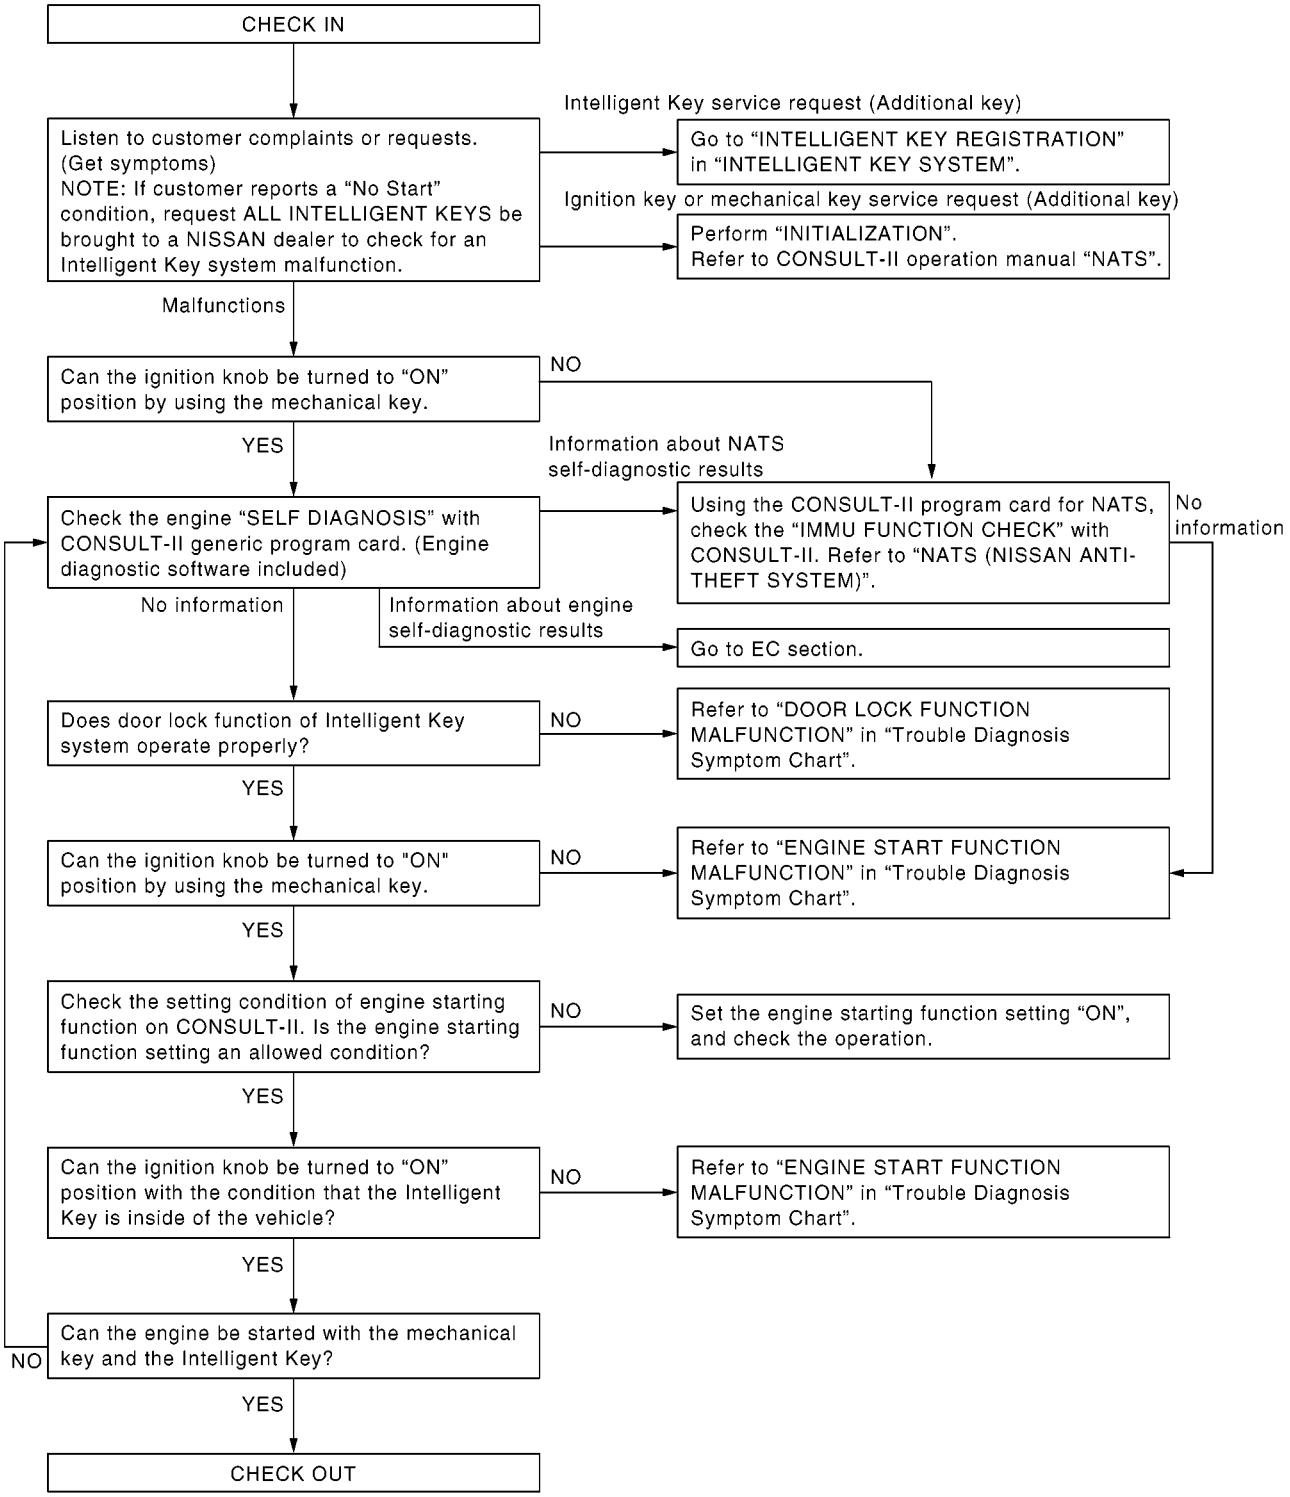
*1 : In the state that answer back operates

*2 : Only the model equipped with super lock system (RHD Models)

Diagnosis Procedure

EIS004MN

WORK FLOW



MIIB0488E

CONSULT-II Function (INTELLIGENT KEY)

EIS004MP

- CONSULT-II has display and inspection functions for work support, self-diagnosis, data monitor, and control unit part number by combining data reception and command transmission via communication lines from the Intelligent Key unit.

Part to be diagnosed	Inspection Item, Diagnosis Mode	Description
Intelligent Key	WORK SUPPORT	● Performs Intelligent Key-ID registration, check, and deletion. ● Performs steering lock unit ID registration. ● Changes settings for each function (ON/OFF).
	SELF-DIAG RESULTS	Intelligent Key unit performs CAN communication diagnosis.
	DATA MONITOR	Displays Intelligent Key unit input data in real time.
	CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.
	ACTIVE TEST	Sends drive signals door lock actuator, buzzer or combination meter to perform operation check.
	ECC PART NUMBER	Displays Intelligent Key unit part No.

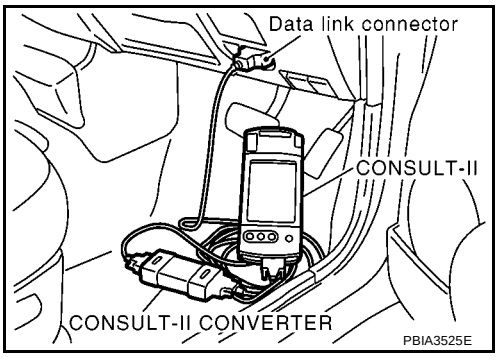
CONSULT-II Inspection Procedure

EIS00564

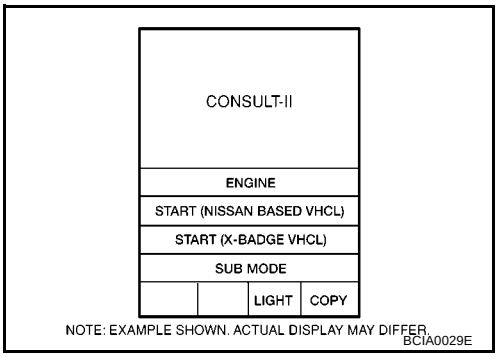
BASIC OPERATION

1. Turn ignition knob to LOCK position.
2. Connect CONSULT-II CONVERTER and CONSULT-II to data link connector.

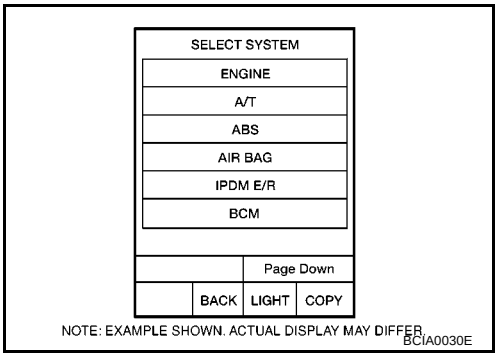
   CAUTION:
   When CONSULT-II is used without connecting CONSULT-II CONVERTER, a malfunction may be detected by self-diagnosis in control modules that use CAN Communication.



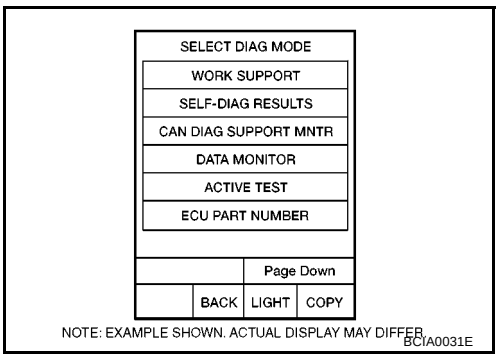
3. Use mechanical key to turn ignition switch to ON.
4. Touch “START (NISSAN BASED VHCL)”.



5. Touch “INTELLIGENT KEY” on “SELECT SYSTEM” screen.
   - If “INTELLIGENT KEY” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Select diagnosis mode. “WORK SUPPORT”, “SELF-DIAG RESULTS”, “DATA MONITOR”, “CAN DIAG SUPPRT MNTR”, “ACTIVE TEST” and “ECU PART NUMBER” are available.



CONSULT-II Application Items

EIS00565

SELF-DIAGNOSTIC RESULTS

In the Intelligent Key unit, the CONSULT-II self-diagnostic results can be used to check for malfunctions in CAN communications.

DATA MONITOR

MAIN SIGNALS Display Item

Monitor item [OPERATION]		Description
PUSH SWITCH	[ON/OFF]	Displays status (Ignition knob switch ON/ignition knob switch OFF) as judged from ignition knob switch signal.
KEY ROT SW	[ON/OFF]	Displays status (Ignition switch ON position: ON/Ignition switch OFF position: OFF) as judged from key rotation detection switch signal.
KEY SW	[ON/OFF]	Displays status (Key inserted: ON/Key removed: OFF) as judged by key switch.
DR REQ SW	[ON/OFF]	Displays status (Operable: ON/Non-operable: OFF) as judged from door request switch (driver side) signal.
AS REQ SW	[ON/OFF]	Displays status (Operable: ON/Non-operable: OFF) as judged from door request switch (passenger side) signal.
BD/TR REQ SW	[ON/OFF]	Displays status (Operable: ON/Non-operable: OFF) as judged from door request switch (back door) signal.
IGN SW	[ON/OFF]	Displays status (Ignition knob ON position: ON/Ignition knob OFF position: OFF) as judged from ignition switch signal.
ACC SW	[ON/OFF]	Displays status (Ignition switch ACC position: ON/Ignition switch OFF position: OFF) as judged from ignition switch signal.
STOP LAMP SW	[ON/OFF]	Displays status (Brake pedal depress: ON/brake pedal not depress: OFF) as judged from stop lamp switch signal.
P RANGE SW*	[ON/OFF]	Displays status from park/neutral position switch ON/OFF condition.
BD OPEN SW	[ON/OFF]	Displays status (Back door open: ON/Back door closed: OFF) as judged from back door opener switch signal.

*: With A/T models only.

ACTIVE TEST

Monitor item	Description
DOOR LOCK/UNLOCK	This test is able to check all door lock actuators lock operation. These actuators lock when “ON” on CONSULT-II screen is touched.
OUTSIDE BUZZER	This test is able to check Intelligent Key warning buzzer operation. The buzzer will be activated on when “ON” on CONSULT-II screen is touched.
INSLDE BUZZER	This test is able to check buzzer (bultin combination meter) operation. The buzzer will be activated on when “ON” on CONSULT-II screen is touched.
INDICATOR	This test is able to check warning lamp operation. The lamp will be turned on when “ON” on CONSULT-II screen is touched.

WORK SUPPORT

Monitor item	Description
INTELLI KEY WARNING	The condition of warning system can be changed.
LOW BATTERY WARNING	The condition of low battery warning system can be changed.
INTELLI KEY FUNCTION	The all of Intelligent Key system functions can be changed.
SELSCTIVE UNLOCK	The condition of select unlock function can be changed.
ANTIKEY LOCK IN	The condition of Intelligent Key lock-in prevention function can be changed.
FLASH WITH REMOTE AND KEY	The condition of ignition key warning function can be changed.
ANSWER BACK WITH I-KEY LOCK	The condition of ignition key warning function (LOCK) can be changed.
ANSWER BAKE WITH I-KEY UNLOCK	The condition of ignition key warning function (UNLOCK) can be changed.
AUTO RELOCK TIMER	Auto locking function mode can be changed in this mode. The function mode will be changed when.
ENG START BY I-KEY	The condition of engine start function can be changed.
LOCK/UNLOCK BY I-KEY	The condition of door lock function can be changed.
FOR TAKE OUT WARN TRIGGER	The condition of Intelligent Key take out warn trigger can be changed.

List of Operation Related Parts

EIS004MQ

Parts marked with × are the parts related to operation.

Will not operate if there is a malfunction in the area where there is a ×.	Intelligent Key	key switch	Ignition knob switch	ACC switch	Ignition switch	Door switch	Door request switch	Inside key antenna	Door antenna	Intelligent Key unit	CAN system	BCM	Combination meter	Stop lamp switch
Door lock/unlock operation using Intelligent Key remote controller button operation	×	×	×			×				×	×	×		
Door lock/unlock operation using door request switch operation	×	×	×			×	×	×	×	×	×	×		
Door lock/unlock operation using mechanical key												×		
Ignition knob rotation permission using Intelligent Key	×	×	×					×		×			×	
Engine start using Intelligent Key	×				×			×		×	×	×		×
Engine start using mechanical key				×	×						×	×		×
Ignition switch return forgotten warning			×	×	×	×				×		×	×	
Ignition key warning (when using mechanical key)		×									×	×	×	
Ignition switch OFF position warning (for inside car: when door closed)			×	×	×					×	×		×	
Ignition switch OFF position warning (for outside car: when door opened/closed)	×		×	×	×	×				×	×	×		
Warning for removal of Intelligent Key to outside the car (when door open/closed)	×		×			×		×		×	×	×	×	
Warning for removal of Intelligent Key to outside the car (from window)	×		×			×		×		×	×		×	
Door lock non-operation warning	×		×			×	×	×		×	×	×		
Intelligent key low battery warning	×				×					×	×		×	

Trouble Diagnosis Symptom Chart

EIS004MR

ALL FUNCTIONS OF THE INTELLIGENT KEY ARE NOT OPERATING

Symptom	Diagnoses service procedure	Refer to page
"KEY" and "LOCK" warning lamps in combination meter do not light up at all.	1. Check Intelligent Key unit power supply and ground circuit	BL-191
	2. Check CAN communication	BL-191
	3. Replace Intelligent Key unit.	—
"KEY" and "LOCK" warning lamps in combination meter turn on, but doors cannot be locked/ unlocked or the engine starter using Intelligent Key.	1. Use CONSULT-II to check if the Intelligent Key has been registered.	BL-158
	2. Use CONSULT-II setting change function to check if Intelligent Key system has been cancelled.	BL-158
	3. Intelligent Key inspection	BL-202
	4. Replace Intelligent Key unit.	BL-202

REMOTE CONTROL ENTRY FUNCTION MALFUNCTION

Symptom	Diagnoses service procedure	Refer to page
Door lock/unlock does not operate (other functions normal) when Intelligent Key remote controller button is operated.	1. Intelligent Key inspection	BL-202
	2. Check key switch	BL-191
	3. Check ignition knob switch	BL-193
	4. Check door switch	BL-143
	5. Replace Intelligent Key unit.	—

DOOR LOCK FUNCTION MALFUNCTION

Before conducting the diagnosis in the following table, check all power door lock system function. Refer to BL-15, "POWER DOOR LOCK SYSTEM" .

Symptom	Diagnoses service procedure	Refer to page
Door lock/unlock does not operate when door request switch operation is used (operates when Intelligent Key remote controller button is operated).	1. Check door request switch	BL-194
	2. Check outside antenna	BL-197
	3. Intelligent Key inspection	BL-202
	4. Replace Intelligent Key unit.	BL-202
Door lock/unlock do not operate using door request switch and Intelligent Key remote controller button operation (power door lock system is normal).	1. Check door switch	BL-143
	2. Check key switch	BL-191
	3. Check ignition knob switch	BL-193
	4. Replace Intelligent Key unit.	BL-202
Hazard lamps do not flash during door lock operation using door request switch and Intelligent Key remote controller button operation. (Turn signal lamp operation is normal.)	Replace Intelligent Key unit.	BL-202
Hazard lamps do not flash during door lock operation using door request switch and Intelligent Key remote controller button operation. (Turn signal lamps do not operate.)	Conduct turn signal lamp inspection.	LT-121
Intelligent Key warning buzzer does not sound during door lock/unlock operation using Intelligent Key (regardless of whether Intelligent Key remote controller button or request switch operation is used).	1. Check if the operation confirmation Intelligent Key warning buzzer was cancelled by the CONSULT-II settings change function.	BL-158
	2. Check Intelligent Key warning buzzer	BL-196
	3. Replace Intelligent Key unit.	BL-202
Door lock/unlock operation confirmation Intelligent Key warning buzzer sounds, but door lock actuator does not operate. (And hazard lamps do not flash.)	1. Check CAN communication	BL-191
	2. Replace Intelligent Key unit.	BL-202

ENGINE START FUNCTION MALFUNCTION

Intelligent Key Operation Inspection

Symptom		Diagnoses service procedure	Refer to page
Ignition knob can not turn	This lights up KEY warning lamp on combination meter in red when ignition knob is pressed. (door lock functions normal)	1. Intelligent Key inspection.	BL-202
		2. Check inside key antenna	BL-198
		3. Replace Intelligent Key unit.	BL-202
	This lights up KEY warning lamp on combination meter in green when ignition knob is pressed.	1. Ignition knob switch system	BL-193
		2. Steering lock unit system	BL-199
		3. Intelligent Key unit power supply and ground circuit system	BL-191
		4. Replace Intelligent Key unit.	BL-202
	Ignition knob turns even without both Intelligent Key and mechanical key.	Replace steering lock unit.	—
	Security indicator will still flash when ignition knob is pressed.	1. Check key switch	BL-191
		2. Replace Intelligent Key unit.	BL-202
	Security indicator does not flash with ignition knob released at LOCK position. (push switch OFF)	1. CAN communication system	BL-191
		2. Ignition knob switch system	BL-193
		3. Intelligent Key unit power supply and ground circuit system	BL-191
		4. Inspect combination meter (warning lamp).	BL-235

Mechanical Key Operation Inspection

Symptom		Diagnoses service procedure	Refer to page
Ignition knob can not turn	Security indicator remains flashing with mechanical key inserted.	1. Check key switch.	BL-191
		2. Replace Intelligent Key unit.	BL-202
	KEY indicator and security indicator does not flashing with mechanical key inserted.	1. Check stop lamp switch	BL-201
		2. Replace Intelligent Key unit	BL-202

WARNING CHIME FUNCTION MALFUNCTION

Before conducting the diagnosis in the following table, check “key reminder function” with power door lock system.

Symptom	Diagnoses service procedure	Refer to page
Ignition knob OFF position warning chime (for inside vehicle) does not sound. (Ignition key warning chime operates)	1. Check CAN communication	BL-191
	2. Check ignition knob switch	BL-193
	3. Check key switch	BL-191
	4. Replace Intelligent Key unit.	BL-202
Ignition key warning chime is inoperative. (When mechanical key used)	1. Check CAN communication	BL-191
	2. Check key switch	BL-191
	3. Check door switch	BL-143
	4. Inspect combination meter (warning).	DI-25
	5. Replace Intelligent Key unit	BL-202

Symptom	Diagnoses service procedure	Refer to page
Ignition knob OFF position warning chime (for outside vehicle: after door open/closed) does not sound.	1. Check CAN communication	BL-191
	2. Check ignition knob switch	BL-193
	3. Check door switch system	BL-143
	4. Check Intelligent Key warning buzzer	BL-196
	5. Replace Intelligent Key unit.	BL-202
Intelligent Key take out warning chime (when door open/closed) does not sound.	1. Check CAN communication	BL-191
	2. Intelligent Key inspection	BL-202
	3. Check ignition knob switch	BL-193
	4. Check door switch system	BL-143
	5. Check Intelligent Key warning buzzer	BL-196
	6. Replace Intelligent Key unit.	BL-202
Intelligent Key take out warning chime (when door opened/closed) sounds even though Intelligent Key is in vehicle.	1. Check inside key antenna	BL-198
	2. Intelligent Key inspection	BL-202
	3. Replace Intelligent Key unit.	BL-202
Intelligent Key take out warning chime (through window) does not sound	1. Check if Intelligent Key removal warning (take out from window) was canceled by CONSULT-II settings change function.	BL-158
	2. Check CAN communication	BL-191
	3. Intelligent Key inspection	BL-202
	4. Check ignition knob switch	BL-193
	5. Replace Intelligent Key unit.	BL-202
Intelligent Key take out warning chime (through window) sounds even though Intelligent Key is in vehicle.	1. Check inside key antenna	BL-198
	2. Intelligent Key inspection	BL-202
	3. Replace Intelligent Key unit.	BL-202
Door lock non-operation warning does not sound.	**Intelligent Key warning chime does not sound**	
	1. Intelligent Key inspection	BL-202
	2. Check door request switch	BL-194
	3. Check inside key antenna	BL-198
	4. Check Intelligent Key warning buzzer	BL-196
	5. Replace Intelligent Key unit.	BL-202
	Ignition knob OFF position warning chime does not sound	
	1. Intelligent Key inspection	BL-202
	2. Check door request switch	BL-194
	3. Check outside antenna	BL-197
	4. Check Intelligent Key warning buzzer	BL-196
	5. Check ignition knob switch	BL-193
	6. Replace Intelligent Key unit.	BL-202
	Door ajar alarm	
	1. Check CAN communications	BL-191
	2. Check door request switch	BL-194
	3. Check outside antenna	BL-197
	4. Check Intelligent Key warning buzzer	BL-196
	5. Check door switch	BL-143
	6. Intelligent Key inspection	BL-202
	7. Replace Intelligent Key unit.	BL-202

Check CAN Communication System

EIS004MS

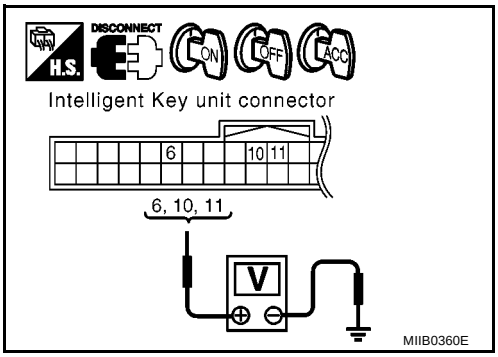
Go to LAN-4, "Precautions When Using CONSULT-II" .

Check Intelligent Key Unit Power Supply and Ground Circuit

EIS004MT

1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition knob OFF position.
2. Disconnect Intelligent Key unit connector M51 and measure the connector terminal (+) and ground (-) shown in the following table.



Terminal (wire color)	Signal Designation	Ignition switch	Standard voltage (V)
6 (W)	Ignition power supply	ON	Battery voltage
10 (L)	ACC power supply	ACC	Battery voltage
11 (BR)	Battery power supply	OFF	Battery voltage

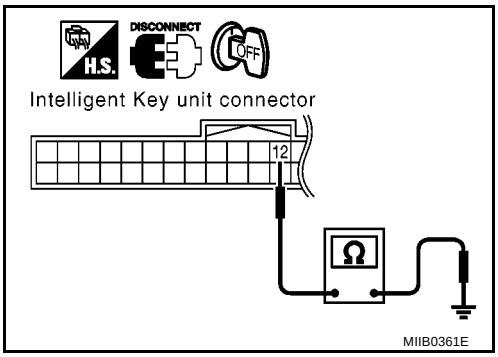
OK or NG

OK >> GO TO 2.
NG >> Repair or replace Intelligent Key power supply circuit.

2. CHECK GROUND CIRCUIT

Check continuity between Intelligent Key unit connector M51 terminal 12 and ground.

12 (B) - Ground : Continuity should exist.



OK or NG

OK >> Power supply and ground circuits are normal.
NG >> Repair or replace the Intelligent Key unit ground circuit.

Check Key Switch

EIS004MV

1. KEY SWITCH INSPECTION

With CONSULT-II

Display “KEY SW” on DATA MONITOR screen, and check if ON-OFF display is linked to insertion of mechanical key in ignition knob.

When key is inserted in ignition knob : ON
When key is removed in ignition knob : OFF

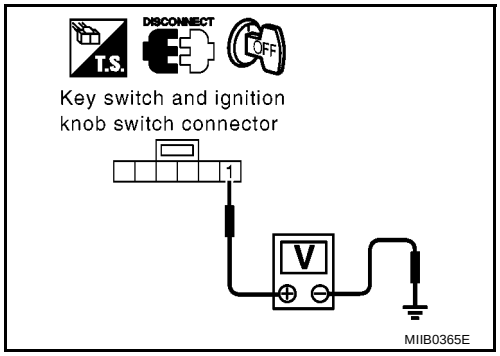
OK or NG

OK >> Key switch is OK.
NG >> GO TO 2.

2. KEY SWITCH POWER SUPPLY CIRCUIT INSPECTION

1. Remove mechanical key from ignition knob.
2. Disconnect key switch and ignition knob switch connector.
3. Check voltage between key switch and ignition knob switch connector M34 terminal 1 and ground.

1 (W) - Ground : Approx. 12V



OK or NG

OK >> GO TO 3.
NG >> Repair or replace key switch power supply circuit.

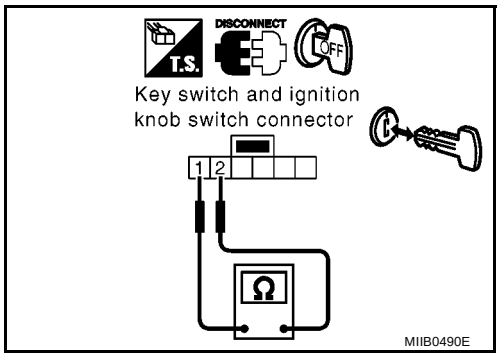
3. KEY SWITCH OPERATION INSPECTION

1. Insert mechanical key into ignition knob.
2. Check continuity between key switch and ignition knob switch connector M34 terminal 1 and 2.

1 - 2

Insert mechanical key into ignition knob. : Continuity should exist.

Remove mechanical key from ignition knob. : Continuity should not exist.



OK or NG

OK >> GO TO 4.
NG >> Replace key switch.

4. KEY SWITCH CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit connector M51 terminal 27 and key switch and ignition knob switch connector M34 terminal 2.

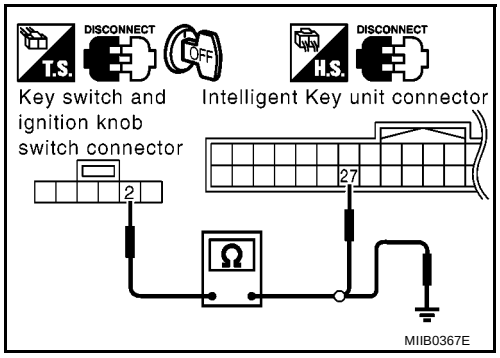
27 (P) - 2 (P) : Continuity should exist.

3. Check continuity between key switch connector M34 terminal 2 and ground.

2 (P) - Ground : Continuity should exist.

OK or NG

OK >> Key switch is OK.
NG >> Repair or replace harness between Intelligent Key unit and key switch and ignition knob switch.



Check Ignition Knob Switch

EIS004MX

1. IGNITION KNOB SWITCH INSPECTION

With CONSULT-II

Display “PUSH SW” on DATA MONITOR screen, and check if ON/OFF display is linked to ignition knob operation.

Press ignition knob.	**: ON**
Return ignition knob (remove hands).	**: OFF**

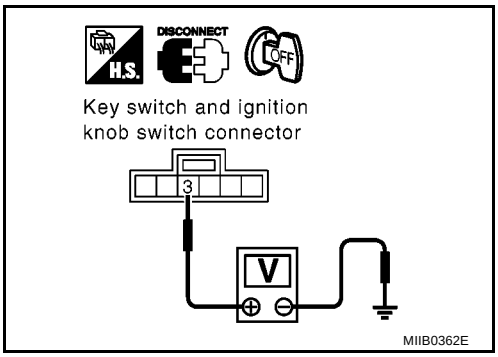
OK or NG

OK >> Ignition knob switch is OK.
NG >> GO TO 2.

2. IGNITION KNOB SWITCH POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition knob LOCK position.
2. Disconnect key switch and ignition knob switch connector.
3. Check voltage between key switch and ignition knob switch connector M34 terminal 3 and ground.

3 (BR) - Ground : Approx. 12V



OK or NG

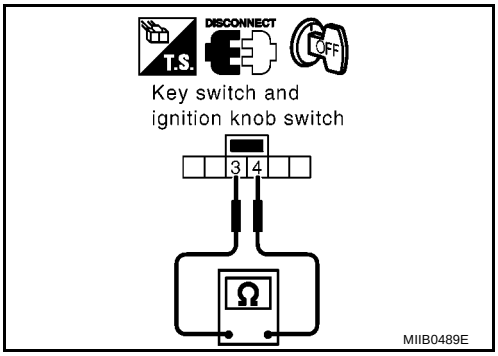
OK >> GO TO 3.
NG >> Repair or replace key switch and ignition knob switch power supply circuit.

3. IGNITION KNOB SWITCH OPERATION INSPECTION

Check continuity between key switch and ignition knob switch connector M34 terminal 3 and 4.

3- 4

Press ignition knob.	**: Continuity should exist.**
Return ignition knob (remove hands).	**: Continuity should not exist.**



OK or NG

OK >> GO TO 4.
NG >> Replace key switch and ignition knob switch.

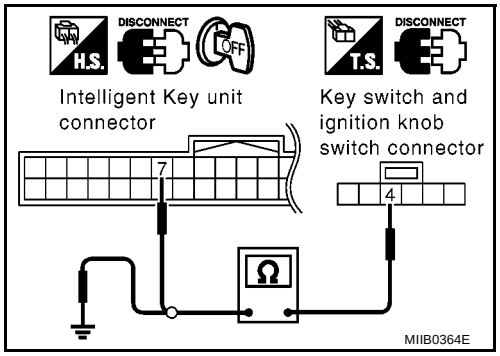
4. IGNITION KNOB SWITCH CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit connector M51 terminal 7 and key switch and ignition knob switch connector M34 terminal 4.

7 (GY) - 4 (GY) : Continuity should exist.

3. Check continuity between key switch and ignition knob switch connector terminal 4 and ground.

4 (GY) - Ground : Continuity should not exist.



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair or replace harness between Intelligent Key unit and key switch and ignition knob switch.

Check Door Request Switch

EIS004MY

1. DOOR REQUEST SWITCH INSPECTION

With CONSULT-II

Display “DR REQ SW” (driver door), “AS REQ SW” (passenger door) and “BD/TR REQ SW” (back door) on DATA MONITOR screen, and check if ON-OFF display is linked to door request switch operation.

Press door request switch. : ON
Release door request switch. : OFF

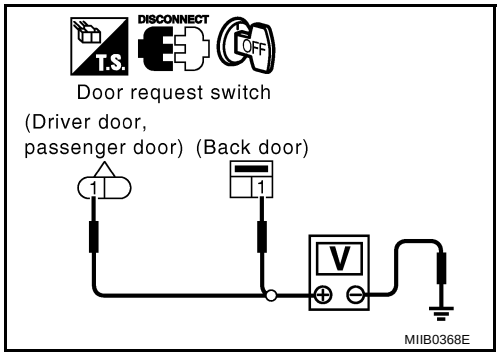
OK or NG

OK >> Door request switch is OK.
NG >> GO TO 2.

2. DOOR REQUEST SWITCH SIGNAL INSPECTION

1. Turn ignition knob LOCK position.
2. Disconnect door request switch connector.
3. Check voltage between door request switch connector D10 (driver door), D39 (passenger door), B54 (back door) terminal 1 and ground.

Driver 1 (OR) - Ground : Approx. 5V
Passenger 1 (LG) - Ground : Approx. 5V
Back door 1 (R) - Ground : Approx. 5V



OK or NG

OK >> GO TO 3.
NG >> GO TO 5.

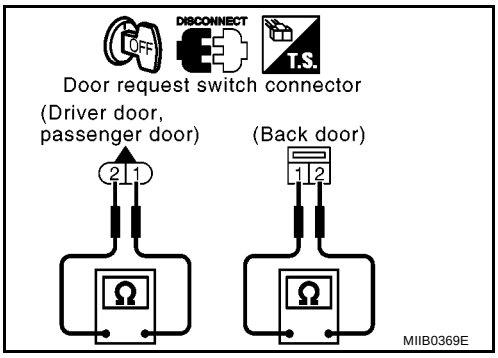
3. DOOR REQUEST SWITCH OPERATION INSPECTION

Check continuity between door request switch connector D10 (driver door), D39 (passenger door), B54 (back door) terminal 1 and 2.

1 - 2

Press door request switch. : **Continuity should exist.**

Return door request switch. : **Continuity should not exist.**



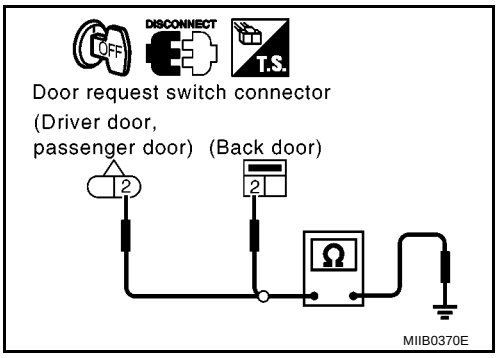
OK or NG

OK >> GO TO 4.
NG >> Replace door request switch.

4. DOOR REQUEST SWITCH GROUND CIRCUIT INSPECTION

Check continuity between door request switch connector 2 and ground.

2 (B) - Ground : **Continuity should exist.**



OK or NG

OK >> GO TO 5.
NG >> Repair or replace door request switch ground circuit.

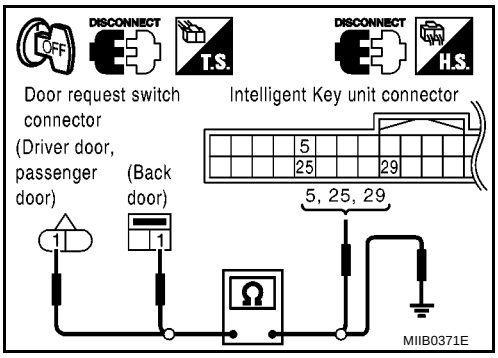
5. DOOR REQUEST SWITCH CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit connector M51 terminals 5 (driver door), 25 (passenger door), and 29 (back door) and door request switch connector D10 (driver door), D39 (passenger door), B54 (back door) terminal 1.

Driver **5 (OR) - 1 (OR)** : **Continuity should exist.**
Passenger **25 (LG) - 1 (LG)** : **Continuity should exist.**
Back door **29 (R) - 1 (R)** : **Continuity should exist.**

3. Check continuity between door request switch connector D10 (driver door), D39 (passenger door), B54 (back door) terminal 1 and ground.

1 - Ground : **Continuity should not exist.**



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair or replace harness between Intelligent Key unit and door request switch.

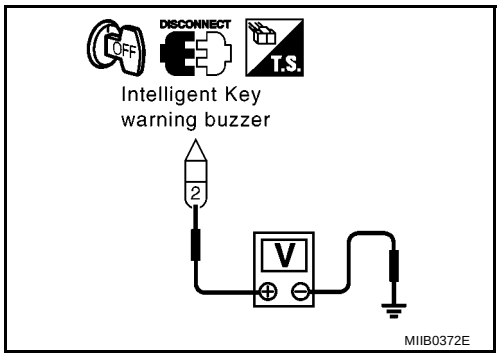
Check Intelligent Key Warning Buzzer

EIS004N1

1. INTELLIGENT KEY WARNING BUZZER POWER SUPPLY CIRCUIT INSPECTION

1. Turn ignition knob LOCK position.
2. Remove Intelligent Key warning buzzer connector.
3. Check voltage between Intelligent Key warning buzzer connector D8 terminal 2 and ground.

2 (G) - Ground : Approx. 12V



OK or NG

OK >> GO TO 2.
NG >> Repair or replace Intelligent Key warning buzzer power supply circuit.

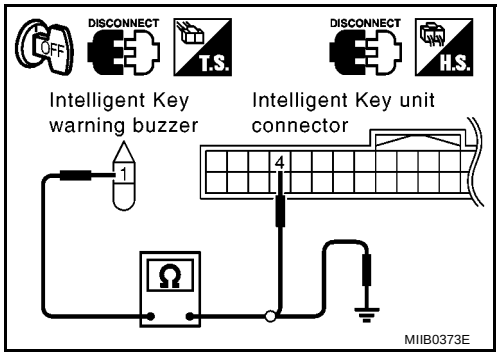
2. INTELLIGENT KEY WARNING BUZZER CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between Intelligent Key unit connector M51 terminal 4 and Intelligent Key warning buzzer connector D8 terminal 1.

4 (P) - 1 (P) : Continuity should exist.

3. Check continuity between Intelligent Key warning buzzer connector D8 terminal 1 and ground.

1 (P) - Ground : Continuity should not exist.



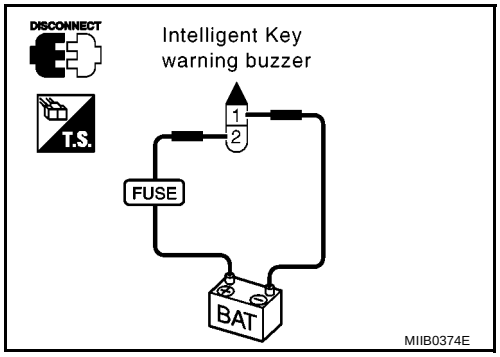
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between Intelligent Key warning buzzer and Intelligent Key unit.

3. INTELLIGENT KEY WARNING BUZZER OPERATION INSPECTION

Connect battery power supply to Intelligent Key warning buzzer connector D8 terminals 1 and 2, and check the operation.

2 (BAT+) - 1 (BAT-) : the buzzer sounds



OK or NG

OK >> Intelligent Key warning buzzer is OK.
NG >> Replace Intelligent Key warning buzzer

Check Outside Antenna

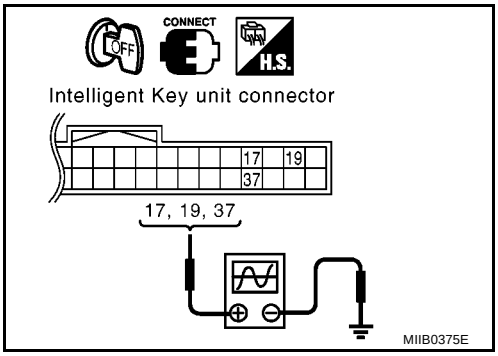
EIS004N2

SMA for VIN >SJN**AK12U1309269

1. OUTSIDE ANTENNA POWER SUPPLY INSPECTION

Operate each door request switch (push), and use an oscilloscope to check voltage waveform of harness between Intelligent Key unit connector M51 terminals 17 (back door), 19 (driver door), and 37 (passenger door) and ground.

Push each door request switch.	
Back door: 17 (LG) - Ground	 SIIA1910J
Driver: 19 (R) - Ground	
Passenger: 37 (BR) - Ground	



MIIB0375E

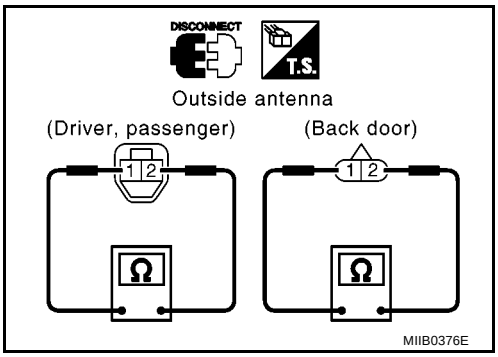
OK or NG

OK >> Outside antenna circuit is OK.
NG >> GO TO 2.

2. OUTSIDE ANTENNA OPERATION INSPECTION

1. Disconnect each door antenna connector.
2. Check continuity between each door antenna connector D11 (driver door), B39 (back door), D40 (passenger door) terminals 1 and 2.

1 - 2 : Continuity should exist.



MIIB0376E

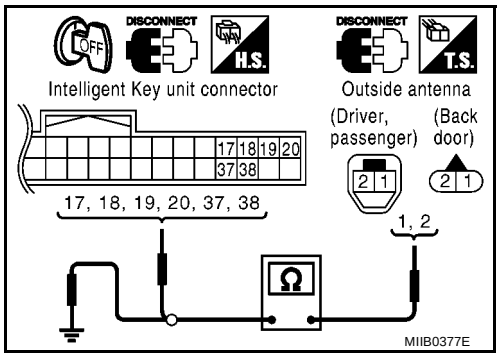
OK or NG

OK >> GO TO 3.
NG >> Replace outside antenna.

3. OUTSIDE ANTENNA CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between each outside antenna connector D11 (driver door), B39 (back door), D40 (passenger door) terminals 1 and 2 and Intelligent Key unit connector M51 terminals 17, 18, 19, 20, 37, and 38.

Back door	**1 (LG) - 17 (LG): Continuity should exist.**
	2 (OR) - 18 (OR): Continuity should exist.
Driver door	**1 (R) - 19 (R): Continuity should exist.**
	2 (W) - 20 (W): Continuity should exist.
Passenger door	**1 (BR) - 37 (BR): Continuity should exist.**
	2 (Y) - 38 (Y): Continuity should exist.



3. Check continuity between each door antenna connector terminals 1 and 2 and ground.

1 - Ground : Continuity should not exist.
2 - Ground : Continuity should not exist.

OK or NG

OK >> Replace Intelligent Key unit.
NG >> Replace harness between door antenna and Intelligent Key unit.

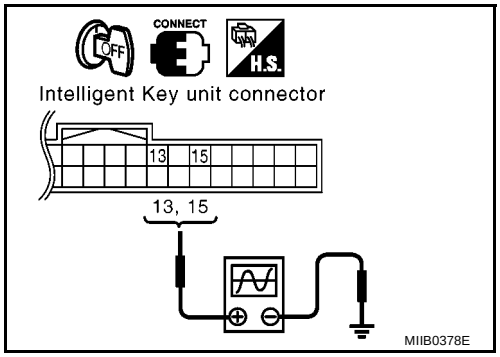
Check Inside Key Antenna

EIS004N3

1. INSIDE KEY ANTENNA POWER SUPPLY CIRCUIT INSPECTION

Operate ignition knob and use an oscilloscope to check voltage waveform between Intelligent Key unit connector M51 terminals 13 (luggage room), 15 (center console) and ground.

Press ignition knob.	
luggage room: 13 (R) - Ground	 SIIA1910J
Center console: 15 (G) - Ground	



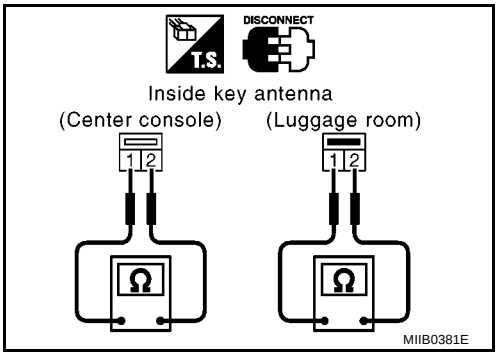
OK or NG

OK >> Inside key antenna circuit is OK.
NG >> GO TO 2.

2. INSIDE KEY ANTENNA OPERATION INSPECTION

1. Disconnect inside key antenna connector.
2. Check continuity between inside key antenna connector B25 (center console), B29 (luggage room) terminals 1 and 2.

1 - 2 : Continuity should exist.



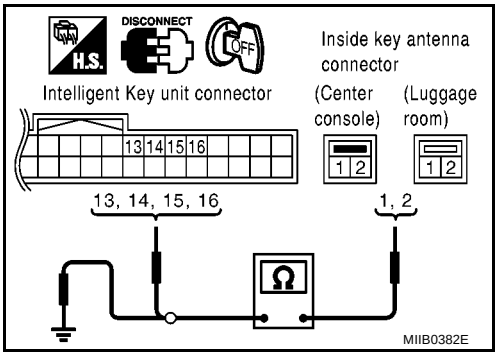
OK or NG

OK >> GO TO 3.
NG >> Replace malfunctioning inside key antenna.

3. INSIDE KEY ANTENNA INSPECTION

1. Disconnect Intelligent Key unit connector.
2. Check continuity between inside key antenna connector B25 (center console), B29 (luggage room) terminals 1 and 2 and Intelligent Key unit connector terminals 13, 14, 15, and 16.

Inside key antenna (luggage room)	**1 (R) - 13 (R): Continuity should exist.**
	2 (BR) - 14 (BR): Continuity should exist.
Inside key antenna (center console)	**1 (G) - 15 (G): Continuity should exist.**
	2 (R) - 16 (R): Continuity should exist.



3. Check continuity between inside key antenna connector B25 (center console), B29 (luggage room) terminals 1 and 2 and ground.

1 (G or R) - Ground : Continuity should not exist.
2 (R or BR) - Ground : Continuity should not exist.

OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair or replace harness between inside key antenna and Intelligent Key unit.

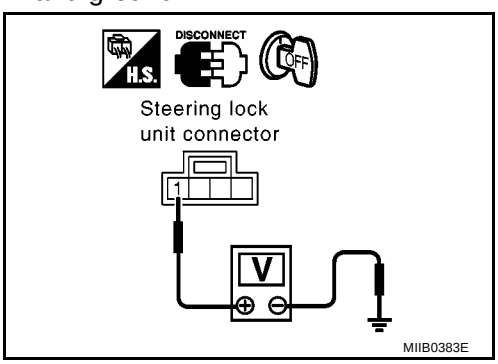
Check Steering Lock Unit

EIS004N4

1. STEERING LOCK UNIT POWER SUPPLY INSPECTION

1. Turn ignition knob LOCK position.
2. Disconnect steering lock unit connector.
3. Check voltage between steering lock unit connector M31 terminal 1 and ground.

1 (BR) - Ground : Approx. 12V



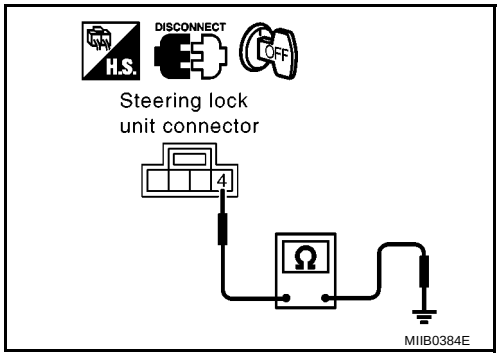
OK or NG

OK >> GO TO 2.
NG >> Repair or replace steering lock unit power supply circuit.

2. STEERING LOCK UNIT GROUND CIRCUIT INSPECTION

Check continuity between steering lock unit connector M31 terminal 4 and ground.

4 (R) - Ground : Continuity should exist.



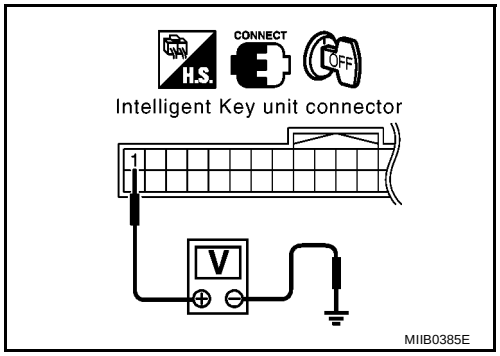
OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. STEERING LOCK COMMUNICATION CIRCUIT INSPECTION

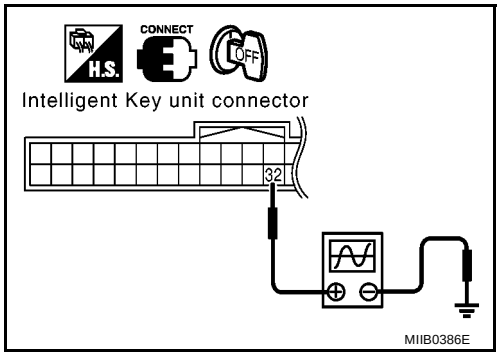
1. Connect steering lock unit connector.
2. Check voltage between Intelligent Key unit connector M51 terminal 1 and ground.

1 (R) - Ground : Approx. 5V



3. Immediately after operating (pushing) ignition knob, use an oscilloscope to check voltage waveform between Intelligent Key unit connector M51 terminal 32 and ground.

Immediately after ignition knob operation (pushing).	
32 (Y) - Ground	



OK or NG

OK >> GO TO 4.
NG >> Replace Intelligent Key unit.

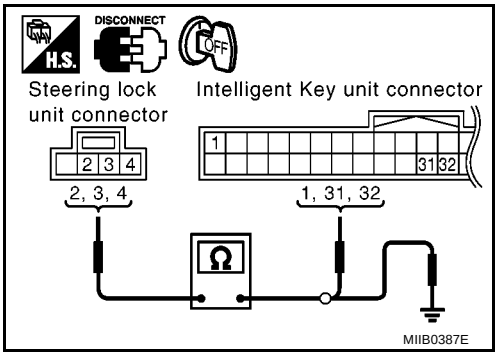
4. STEERING LOCK UNIT COMMUNICATION CIRCUIT INSPECTION

1. Disconnect Intelligent Key unit and steering lock unit connectors.
2. Check continuity between Intelligent Key unit connector M51 terminals 1, 31, and 32 and steering lock unit connector M31 terminals 2, 3, and 4.

1 (R) - 2 (R) : Continuity should exist.
31 (R) - 4 (R) : Continuity should exist.
32 (Y) - 3 (Y) : Continuity should exist.

3. Check continuity between steering lock unit connector M31 terminals 2, 3, 4 and ground.

2 (R) - Ground : Continuity should not exist.
3 (Y) - Ground : Continuity should not exist.
4 (R) - Ground : Continuity should not exist.



OK or NG

OK >> Replace steering lock unit.
- After replacing steering lock unit, Refer to BL-158, "STEERING LOCK UNIT REGISTRATION" .

NG >> Repair or replace harness between steering lock unit and Intelligent Key unit.

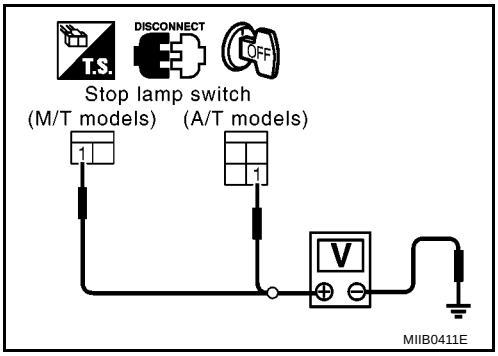
Check Stop Lamp Switch

EIS0055H

1. STOP LAMP SWITCH POWER SUPPLY CIRCIT INAPECTION

1. Check stop lamp switch connector.
2. Check voltage between stop lamp switch connector E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T), M203 (RHD models with A/T) terminal 1 and ground.

1 and ground : Approx. 12V



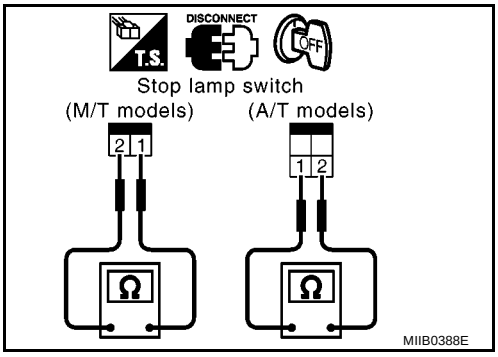
OK or NG

OK >> GO TO 2.
NG >> Repair or replace harness between Intelligent Key unit and stop lamp switch.

2. STOP LAMP SWITCH OPERATION INSPECTION

Check continuity between stop lamp switch connector E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T), M203 (RHD models with A/T) terminal 1 and 2.

1 - 2
Brake pedal depressed : Continuity should exist.
Brake pedal not depressed : Continuity should not exist.



OK or NG

OK >> GO TO 3.
NG >> Replace stop lamp switch.

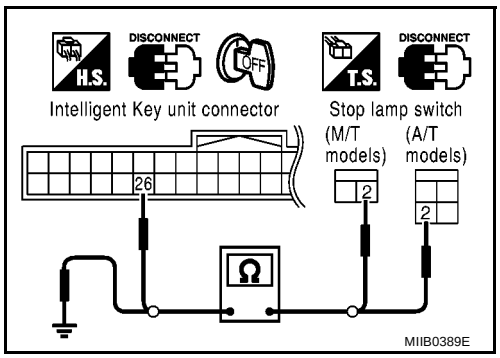
3. STOP LAMP SWITCH GROUND CIRCIT INSPECTION

1. Check continuity between stop lamp switch connector E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T), M203 (RHD models with A/T) terminal 2 and Intelligent Key unit connector M51 terminal 26.

2 (Y) - 26 (PU) : Continuity should exist.

2. Check continuity between stop lamp switch connectorE108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T), M203 (RHD models with A/T) terminal 2 and ground.

2 (Y) - Ground : Continuity should not exist.



OK or NG

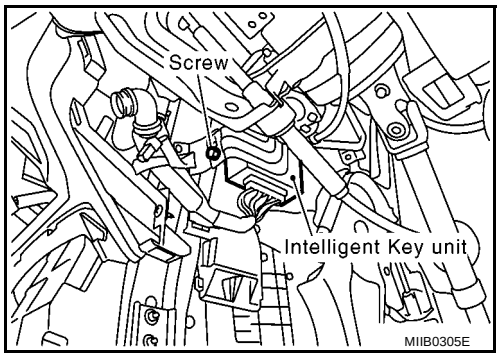
OK >> Stop lamp switch is OK.
NG >> Repair or replace harness.

Removal and Installation of Intelligent key unit

EIS0055J

REMOVAL

1. Remove the instrument lower driver panel. Refer to IP-5, "Removal and Installation" .
2. Disconnect the Intelligent Key unit connector, remove the screw and Intelligent Key unit.



INSTALLATION

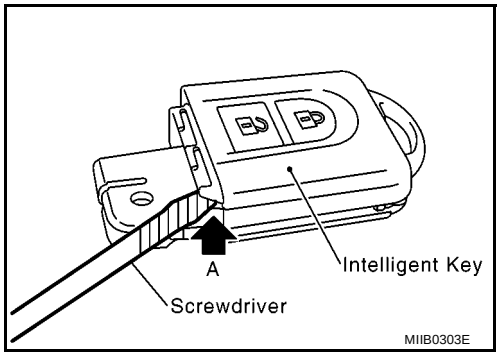
Install in the reverse order of removal.

Intelligent Key Inspection

EIS004N5

INTELLIGENT KEY DISASSEMBLY AND ASSEMBLY

1. Remove Intelligent Key cover.
2. Insert a thin screwdriver wrapped with tape into Area A and then separate lower and upper cases while twisting screwdriver.



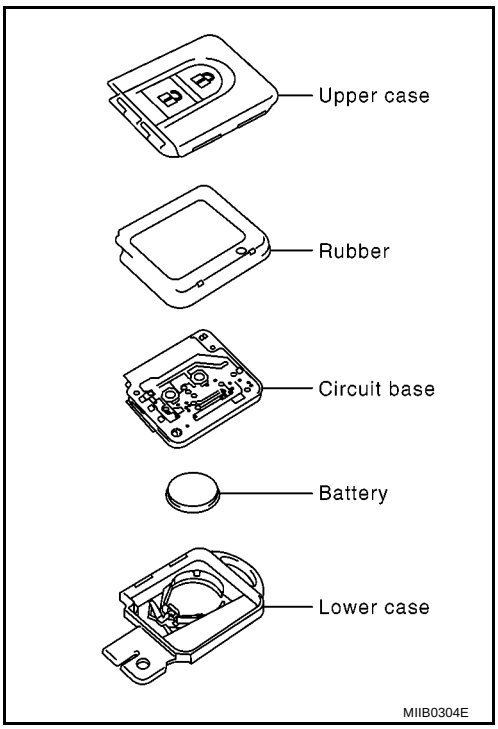
3. When replacing the circuit board or rubber
   - Remove the circuit board assembly from the upper case. (Substrate assembly: circuit board + rubber)
   - Gently press the rubber and remove the circuit board.

   CAUTION:
   Be careful not to touch the printed circuits directly.
4. When replacing the battery
   - Remove the battery from the lower case and replace it.

   Battery replacement : Coin-shaped lithium battery 3V (CR2032)

   CAUTION:
   When replacing battery, be sure to keep dirt, grease, and other foreign materials off the electrode contact area.
5. After replacement, assemble the upper and lower cases by engaging the hooks on their circumference while being careful not to pinch the rubber, etc.

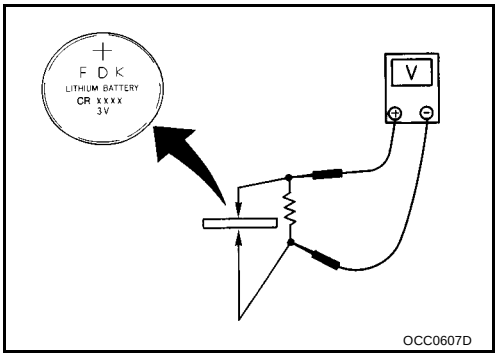
   CAUTION:
   After replacing the battery, check to make sure all Intelligent Key functions work normally.



REMOTE CONTROLLER BATTERY INSPECTION

Check by connecting a resistance (approximately 300Ω) so that the current value becomes about 10 mA.

Standard : Approx. 2.5V - 3.0V

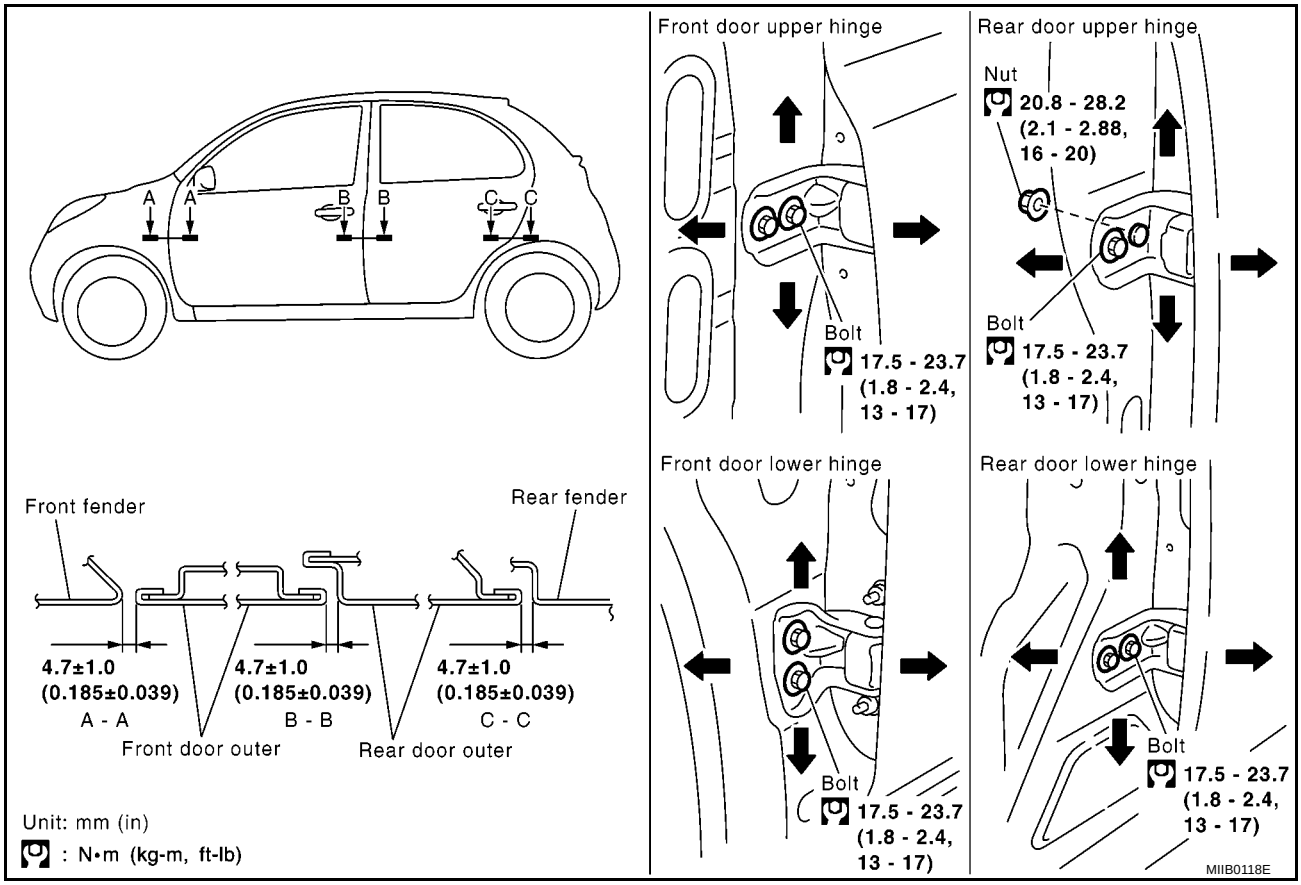


DOOR

PFP:80100

Fitting Adjustment (5-Door Vehicles)

EIS004N6



FRONT DOOR

Longitudinal Gap and Front End Height Difference Adjustment

1. Remove front fender. Refer to BL-14, "Removal and Installation" .
2. Loosen the hinge bolts on body, then lift the rear end of front door to adjust the clearance and surface difference properly.

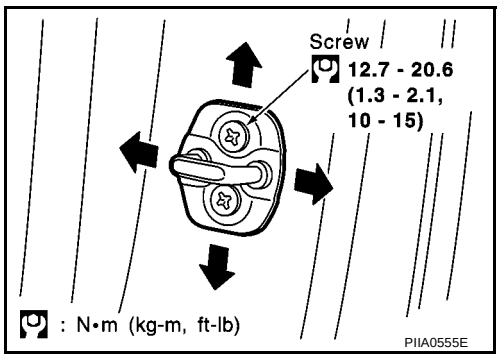
REAR DOOR

Longitudinal Gap and Front End Height Difference Adjustment

1. Remove center pillar upper garnish and center pillar lower garnish. Refer to EI-19, "Removal and Installation (5-Door)" .
2. Working from inside and outside vehicle, loosen bolts and nuts, and then open rear door, and adjust while raising rear door by rear edge.

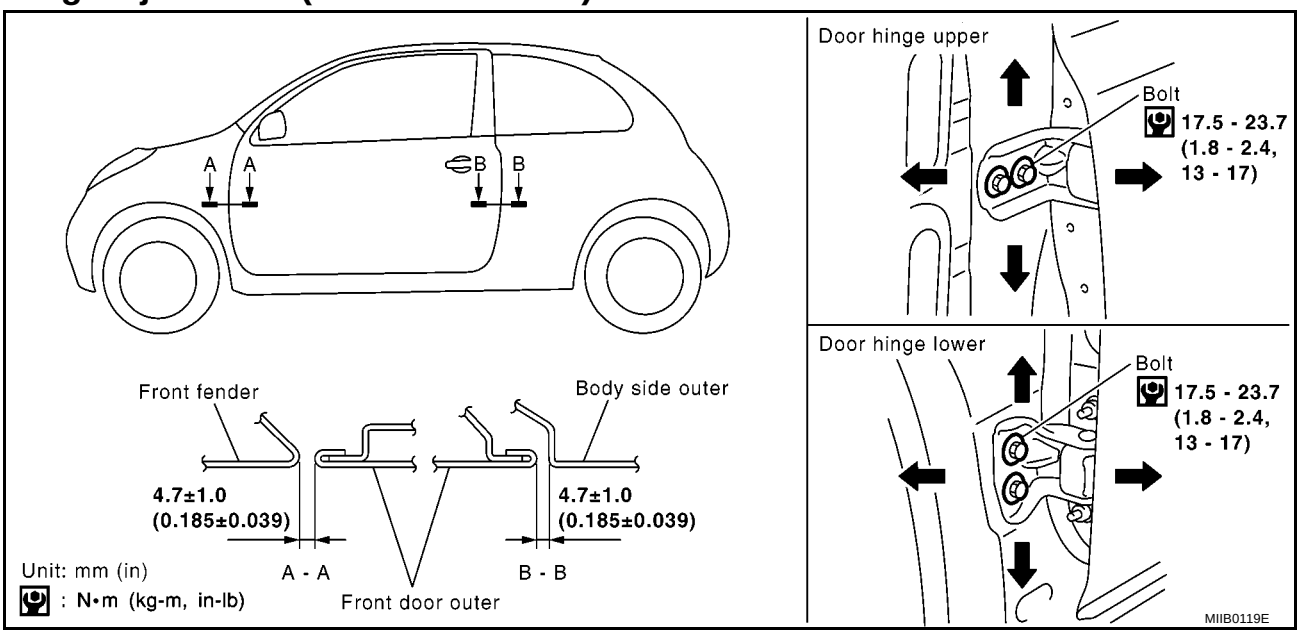
STRIKER ADJUSTMENT

Adjust the striker so that it becomes parallel with the lock inserting direction.



Fitting Adjustment (3-Door Vehicles)

EIS004N7



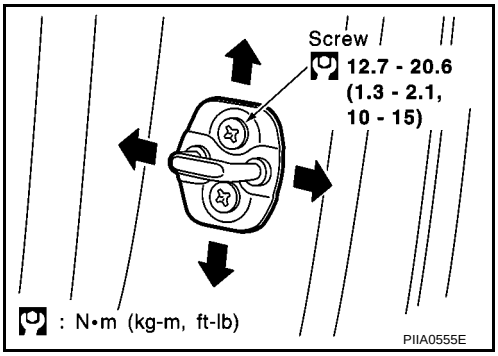
FRONT DOOR

Longitudinal Gap and Front End Height Difference Adjustment

1. Remove front fender. Refer to BL-14, "Removal and Installation" .
2. Loosen the hinge bolts on body, then lift the rear end of front door to adjust the clearance and surface difference properly.

STRIKER ADJUSTMENT

Adjust the striker so that it becomes parallel with the lock inserting direction.



Removal and Installation

EIS004N8

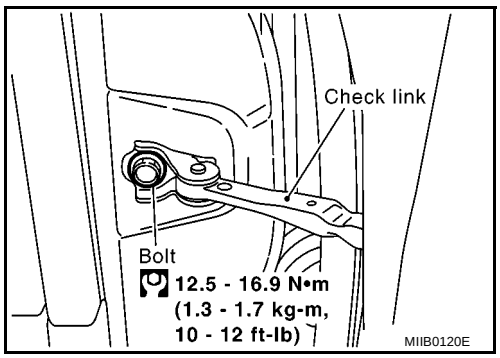
CAUTION:

- **During removal and installation of the door assembly, use a jack to support the door. Place a shop cloth or other suitable material onto the jack plate to protect the door and body from damage.**
- **After removal and installation of the door assembly, always adjust the fit.**
- **Check hinge rotating part for poor lubrication. If necessary, apply “Body Grease”.**

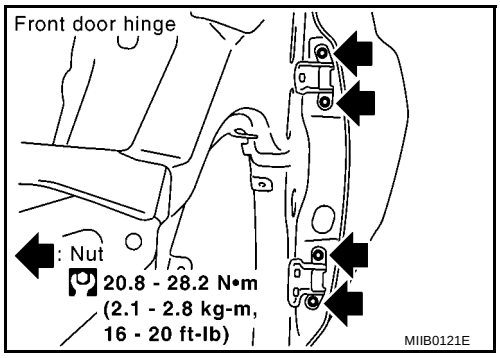
FRONT DOOR

1. Remove front door finisher. Refer to EI-16, "Removal and Installation" .
2. Remove door window. Refer to GW-69, "Removal and Installation" .
3. Remove connectors and harness clamps in front door, and then pull out harness from front door.

4. Remove check link bolts.

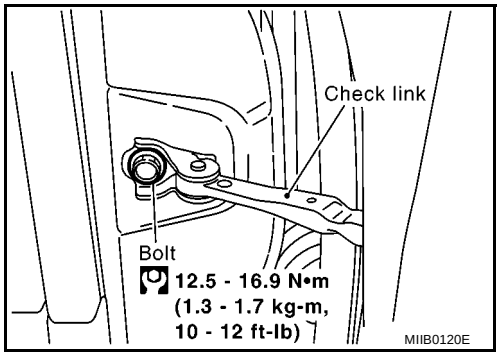


5. Remove hinge nuts on the door and then the door assembly. Install in the reverse order of removal.

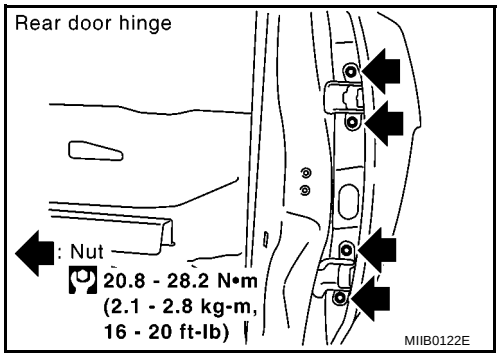


REAR DOOR

1. Remove rear door finisher. Refer to EI-16, "Removal and Installation" .
2. Remove door window. Refer to GW-72, "Removal and Installation" .
3. Remove connectors and harness clamps from rear door and then pull out harness from rear door.
4. Remove check link bolts.



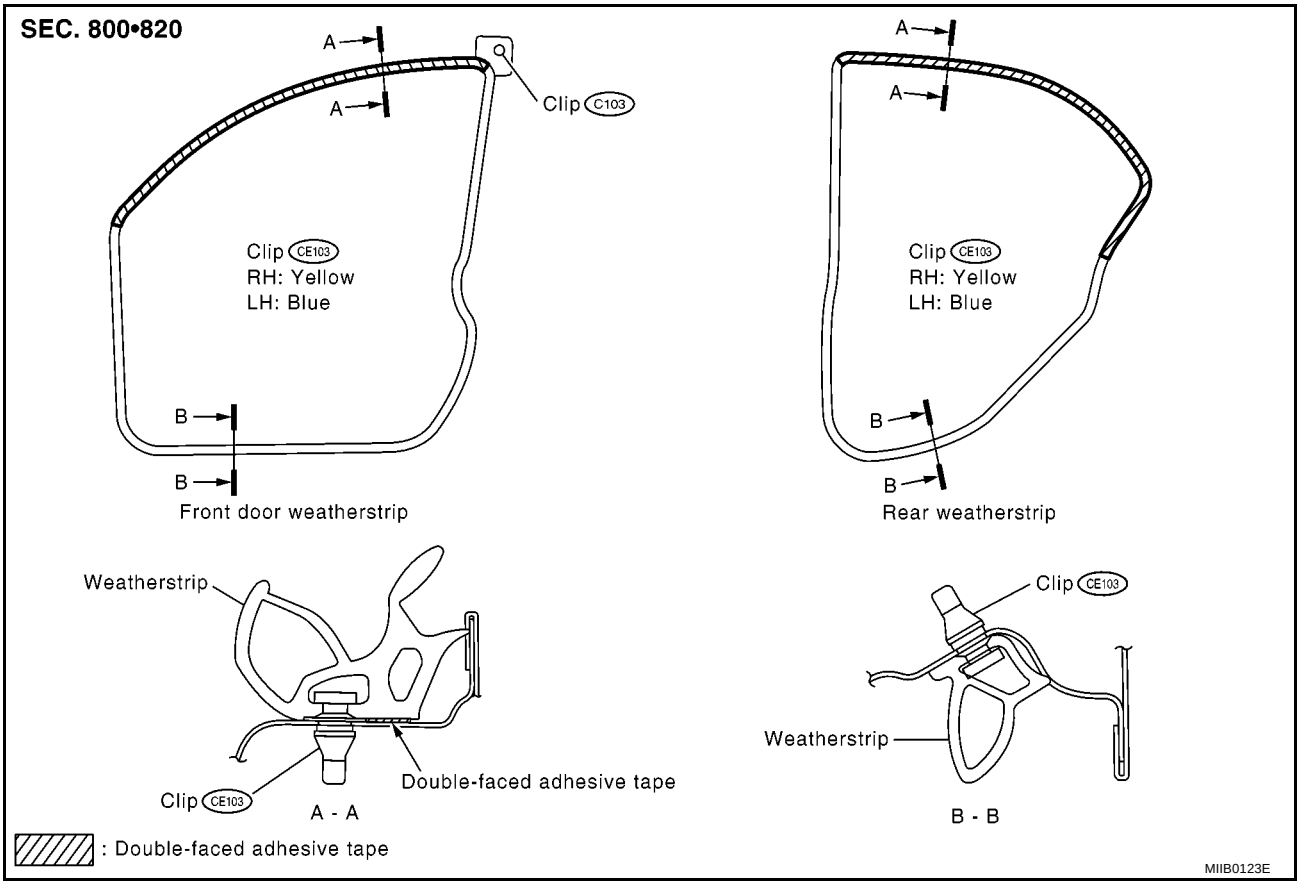
5. Remove hinge nuts on the door and then the door assembly. Install in the reverse order of removal.



Door Weatherstrip

EIS004N9

5 DOORS

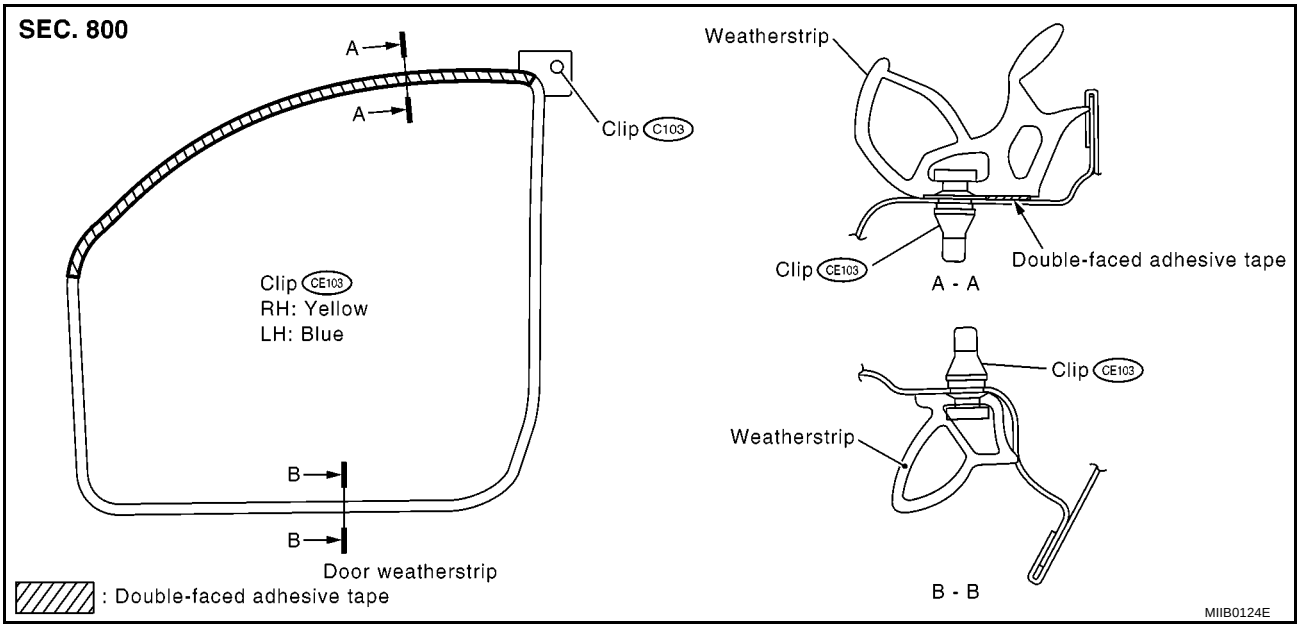


Double-sided tape (0.8 mm thick, 7 mm wide) : Product equivalent to Sumitomo 3M No. 5561

CAUTION:

During removal, if peeling off the double-sided tape is difficult, apply remover (product equivalent to Sumitomo 3M Cleaner 30) and then remove the double-sided tape. When using remover, keep it way from open flame and work in a sufficiently ventilated area.

3 DOORS



Double-sided tape (0.8 mm thick, 7 mm wide) : Product equivalent to Sumitomo 3M No. 5561

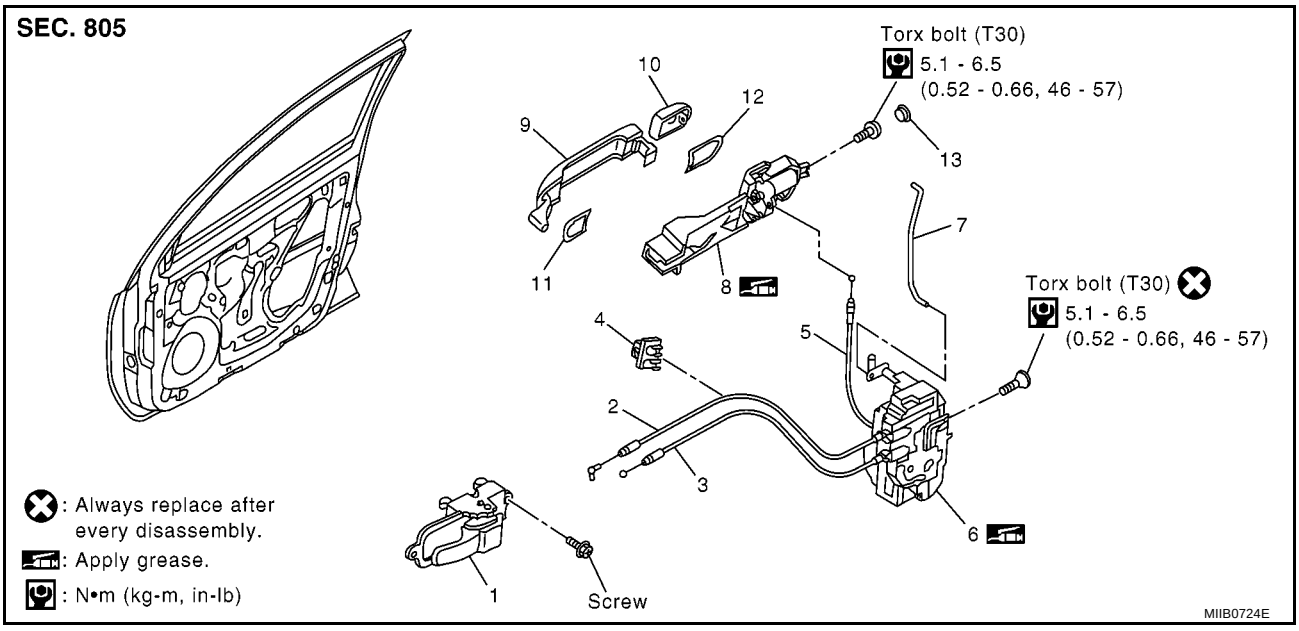
CAUTION:
During removal, if peeling off the double-sided tape is difficult, apply remover (product equivalent to Sumitomo 3M Cleaner 30) and then remove the double-sided tape. When using remover, keep it way from open flame and work in a sufficiently ventilated area.

FRONT DOOR LOCK

PFP:80502

Component Parts Location

EIS004NA



1. Inside handle
2. Lock knob cable
3. Inside handle cable
4. Holder
5. Outside handle cable
6. Door lock assembly
7. Key cylinder connecting rod
8. Outside handle bracket
9. Outside handle
10. *Door key cylinder assembly
11. Front gasket
12. Rear gasket
13. Grommet

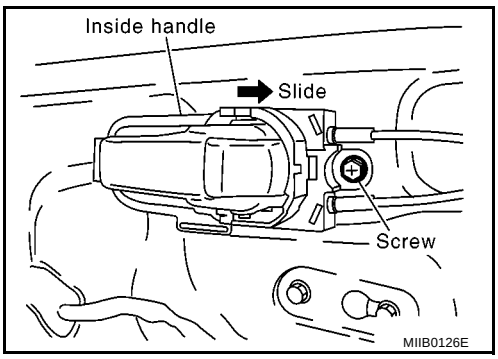
*: Outside handle escutcheon for vehicles with passenger door key cylinders.

Removal and Installation

EIS004NB

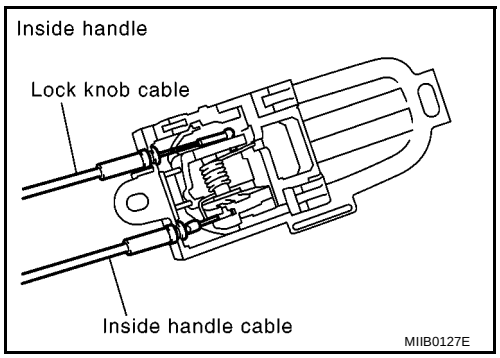
REMOVAL

1. Remove front door finisher. Refer to EI-16, "Removal and Installation" .
2. Fully close front door window.
3. Remove front door lower sash (rear). Refer to GW-69, "Removal and Installation" .
4. Remove inside handle cable and lock knob cable from holder.
5. Remove inside handle screws, slide handle toward rear of vehicle, disengage handle from door panel, and remove inside handle.

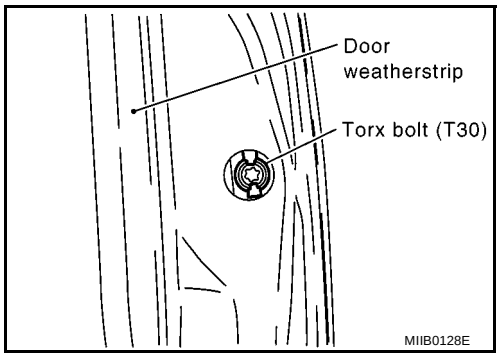


6. Disconnect inside handle cable and lock knob cable from inside handle.

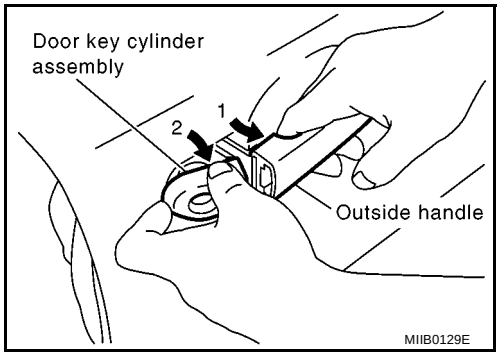
CAUTION:
During removal and installation, work so as not to bend the ends of the lock knob cable and inside handle cable.



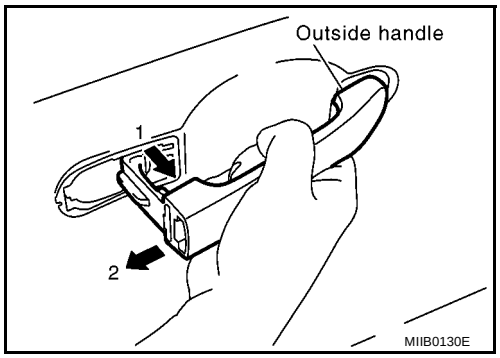
7. Remove door side grommets, and then remove door key cylinder assembly (escutcheon) bolts (Torx T30) from the grommet holes.
8. Remove key cylinder connecting rod (key cylinder side).: If there is no door key cylinder, GO TO 9.
9. Disconnect door antenna and door request switch connector and remove harness clamp. (Vehicle with intelligent key systems only)



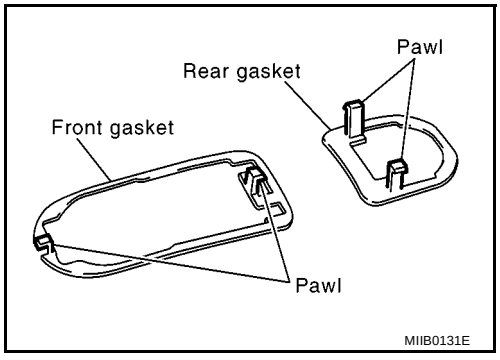
10. Remove door cylinder assembly while pulling outside handle forward.



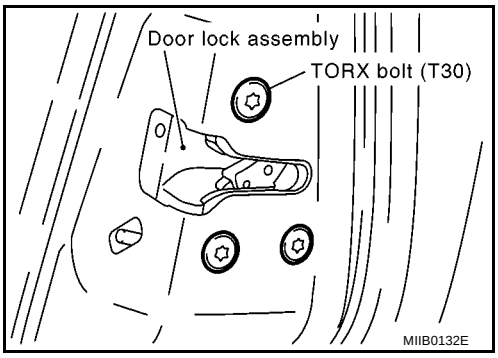
11. Pull outside door handle forward and then slide it toward vehicle rear to remove.



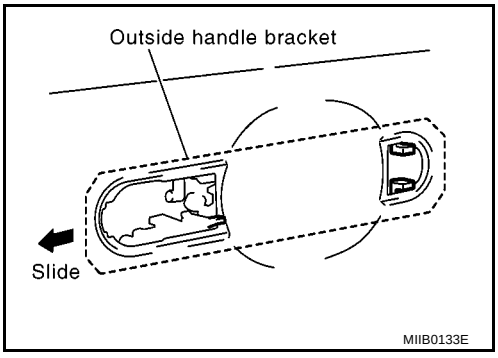
12. Remove front and rear gaskets.



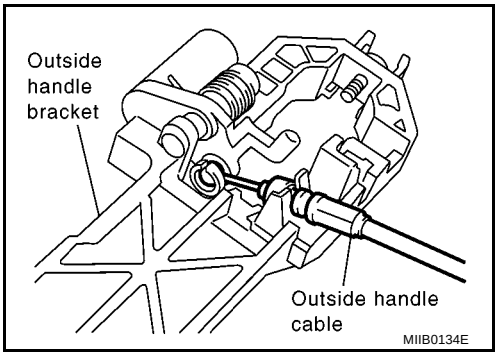
13. Remove door lock assembly bolts (Torx T30).



14. Slide outside handle bracket toward rear of vehicle, and then remove outside handle bracket and door lock assembly.
15. Disconnect door lock assembly connector.



16. Disconnect outside handle cable from outside handle bracket.



Install in the reverse order of removal.

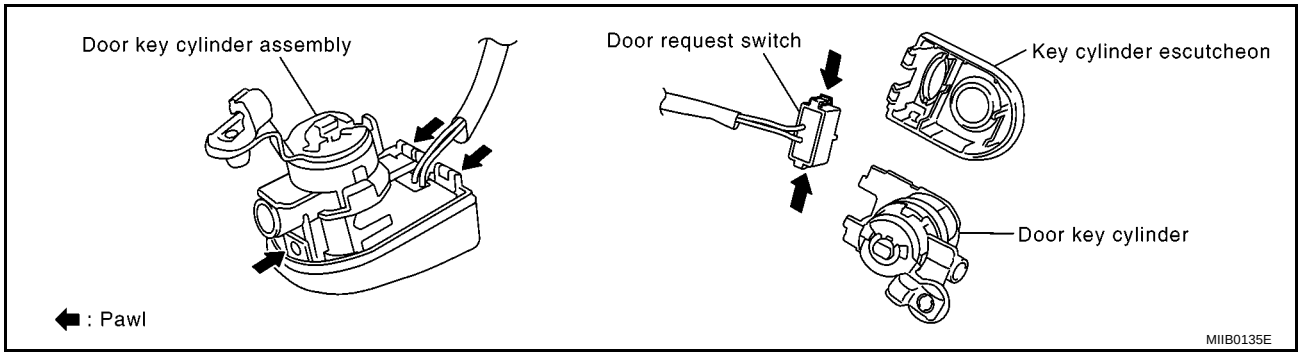
CAUTION:

- **Before installing door lock assembly, apply “anti-corrosion wax M-97 super” onto mounting seat on the body.**
- **Install each rod by rotating the rod holder until it engages with a tactile feel.**

Disassembly and Assembly

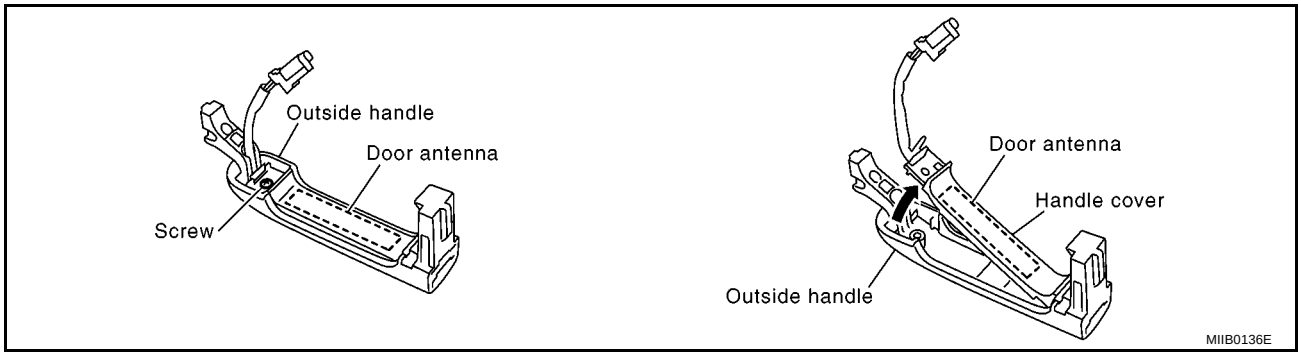
EIS004NC

DOOR KEY CYLINDER ASSEMBLY



1. Remove key cylinder escutcheon engagement (3 locations), and then remove door key cylinder.
2. Remove hook (2 locations) engagements, and then remove door request switch from key cylinder escutcheon. (Vehicles with intelligent key systems only)

OUTSIDE HANDLE



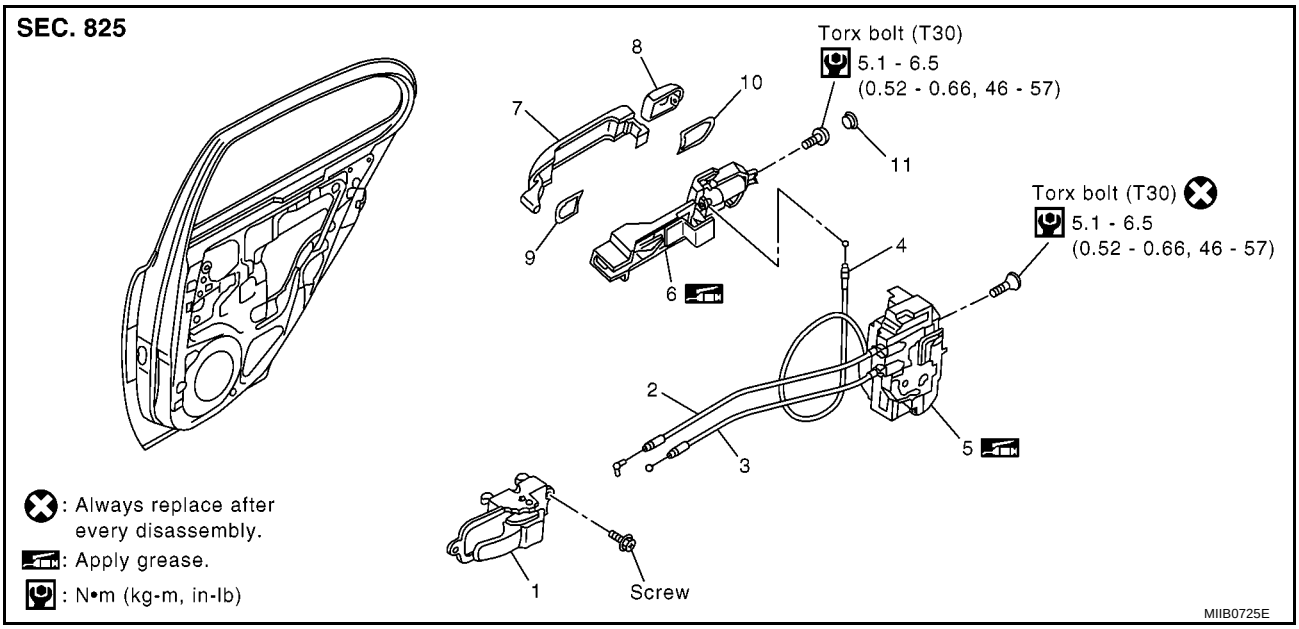
1. Remove handle cover screws.
2. Remove handle cover, and then remove door antenna. (Vehicles with intelligent key systems only)

REAR DOOR LOCK

PFP:82502

Component Parts Location

EIS004ND



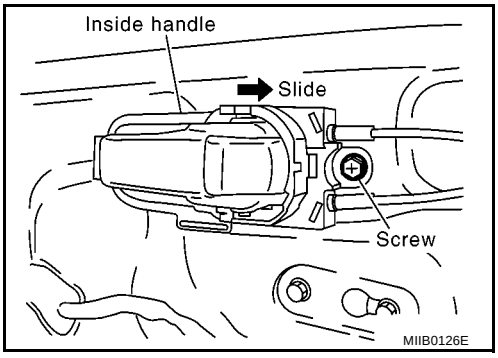
1. Inside handle
2. Lock knob cable
3. Inside handle cable
4. Outside handle cable
5. Door lock assembly
6. Outside handle bracket
7. Outside handle
8. Outside handle escutcheon
9. Front gasket
10. Rear gasket
11. Grommet

Removal and Installation

EIS004NE

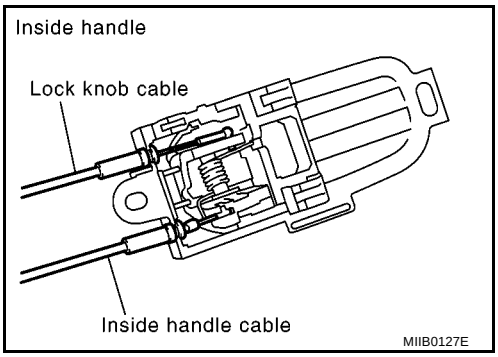
REMOVAL

1. Remove rear door finisher. Refer to EI-16, "Removal and Installation" .
2. Remove partition sash. Refer to GW-72, "Removal and Installation" .
3. Support door glass while lifting it up to the door window completely closed position.
4. Remove inside handle bolts, slide handle toward rear of vehicle, remove engagement with door panel, and remove inside handle.

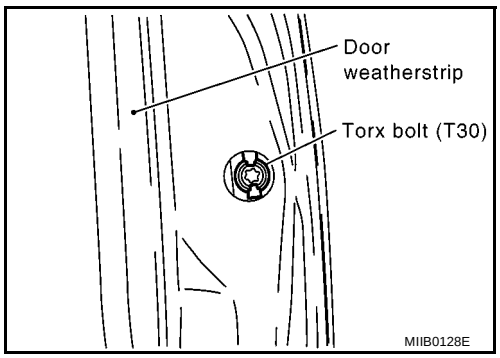


5. Disconnect inside handle cable and lock knob cable from inside handle.

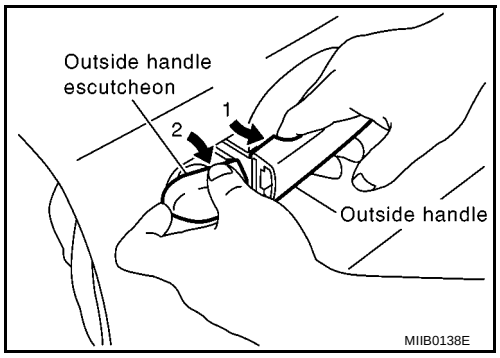
CAUTION:
During removal and installation, work so as not to bend the ends of the lock knob cable and inside handle cable.



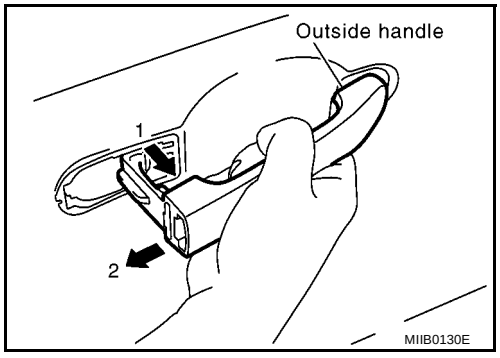
6. Remove door side grommets, and then remove outside handle escutcheon screws (Torx T30) from grommet holes.



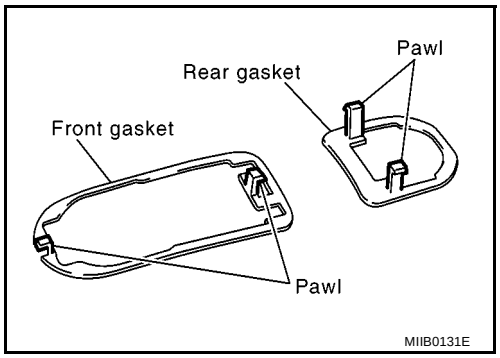
7. Pull outside handle forward while removing outside handle escutcheon.



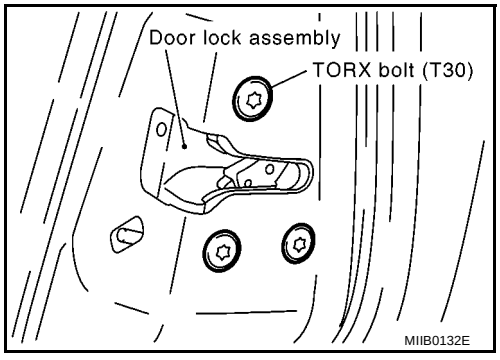
8. Pull outside door handle forward and then slide it toward vehicle rear to remove.



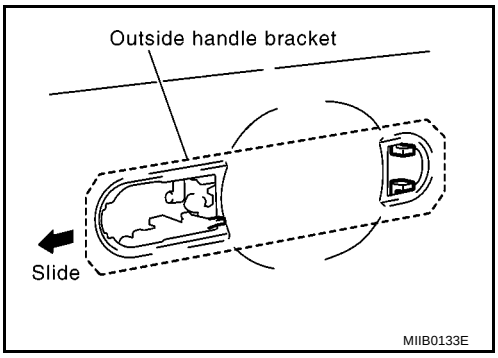
9. Remove front and rear gaskets.



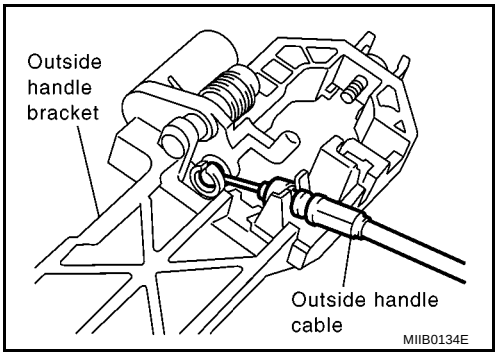
10. Remove door lock assembly screws (Torx T30).



11. Slide outside handle bracket toward rear of vehicle, and then remove outside handle bracket and door lock assembly.
12. Disconnect door lock assembly connector.



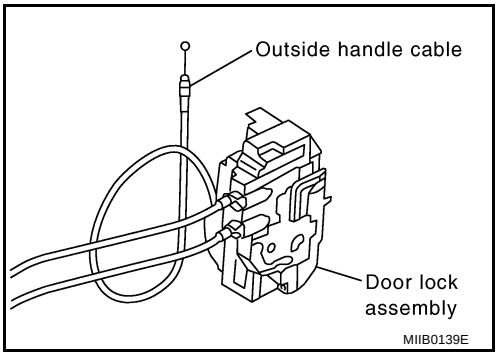
13. Disconnect outside handle cable from outside handle bracket.



Install in the reverse order of removal.

CAUTION:

- **Before installing door lock assembly, apply “anti-corrosion wax M-97 super” onto mounting seat on the body.**
- **When installing door lock assembly, be careful when rotating the outside handle cable as shown in the figure.**
  - **Place the outside handle bracket cable on the outside of door lock assembly before installing.**

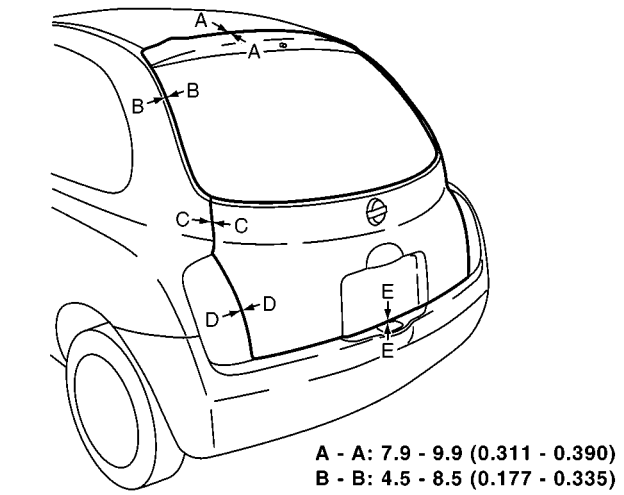


BACK DOOR

PFP:90100

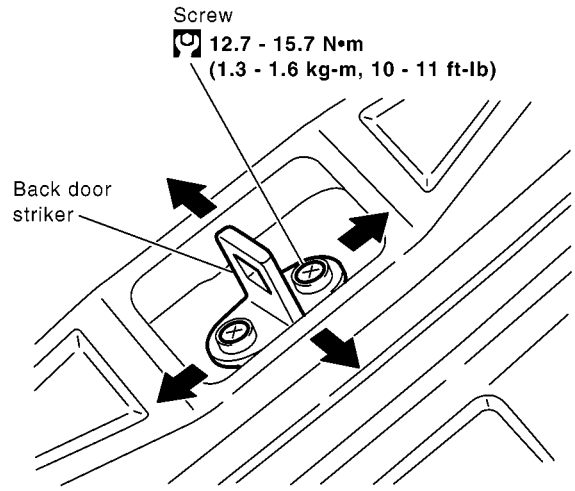
Fitting Adjustment

EIS004NF



A - A: 7.9 - 9.9 (0.311 - 0.390)
B - B: 4.5 - 8.5 (0.177 - 0.335)
C - C: 4.5 - 6.9 (0.177 - 0.272)
D - D: 4.0 - 8.0 (0.157 - 0.315)
E - E: 5.9 - 9.9 (0.232 - 0.390)

Unit: mm (in)



MIIB0140E

VERTICAL/LATERAL CLEARANCE (SURFACE DIFFERENCE) ADJUSTMENT

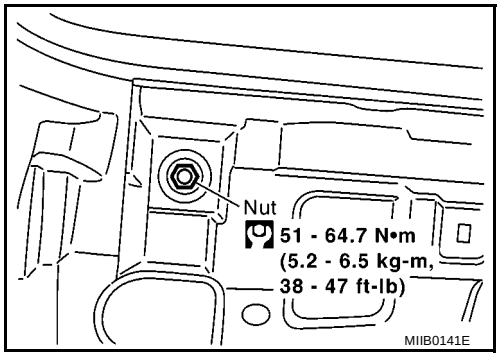
1. Remove luggage rear plate. Refer to EI-26, "Removal and Installation" .
2. Loosen back door striker screws.
3. Use a rubber hammer, etc., to strike back door striker to make the gap on the right and left and with the rear bumper even, and then tighten striker screws to specified torque.

CAUTION:

Adjust gap between back door and other areas to attain the right and left dimensional difference shown below.

Back door glass (B) - Body side outer (B)	**: 2.0 mm or less**
Back door outer (C) - Body side outer (C)	**: 1.5 mm or less**
Back door outer (D) - Rear combination lamp (D)	**: 2.0 mm or less**

4. If following the steps above does not result in fine adjustment, remove headliner and loosen the hinge nuts on vehicle for further adjustment.
   For removing headliner, refer to EI-24, "Removal and Installation" .



MIIB0141E

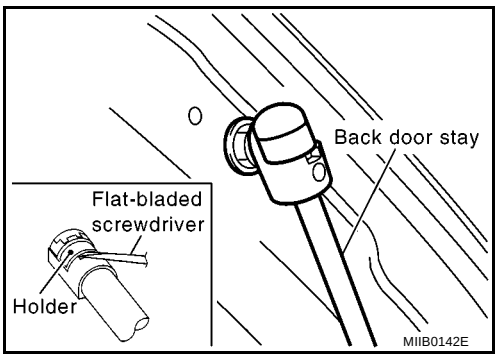
Back Door Assembly

EIS004NG

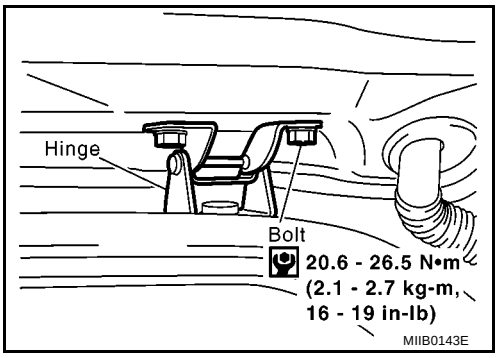
REMOVAL

1. Remove back door finisher. Refer to EI-18, "Removal and Installation" .
2. Disconnect connectors in back door and unclamp harness. Pull out harness from back door.

3. After supporting the back door lock to keep it from falling, use a screwdriver, etc., to remove the back door stay (glass stay) door side hooks, and then pull out back door stay from stud pole.

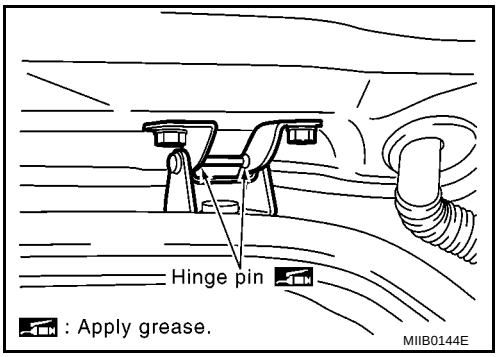


4. Remove back door hinge bolts, and then remove back door assembly.



INSPECTION

1. Check hinges for the following:
   - Unusual noise or door closing and opening effort
   - Component wear or damage
2. Apply body grease to the rotating part of the hinge.

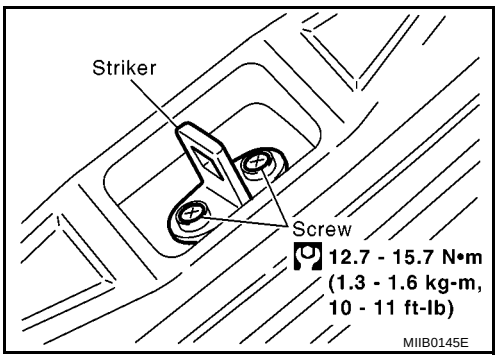


Back Door Striker

EIS004NH

REMOVAL

1. Remove luggage rear plate. Refer to EI-26, "Removal and Installation" .
2. Remove screws and back door striker.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

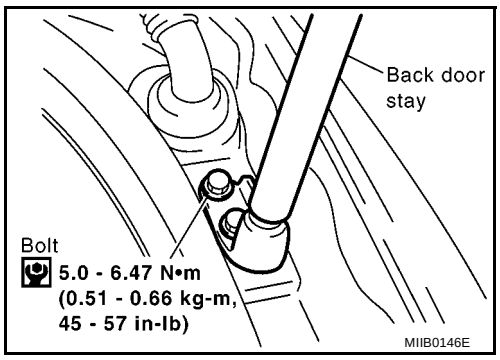
- **After finishing work, confirm proper operation.**
- **After finishing work, adjust fitting. Refer to BL-216, "Fitting Adjustment" .**

Back Door Stay Assembly

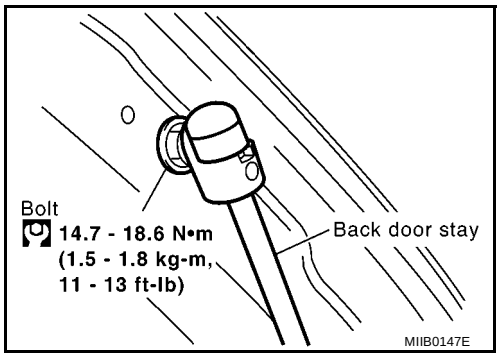
EIS004NI

REMOVAL

1. Support back door lock to prevent it from falling.
2. Remove back door stay assembly (gas stay) vehicle side bracket bolts.



3. Remove back door stud balls, and then remove back door stay assembly from back door.



INSTALLATION

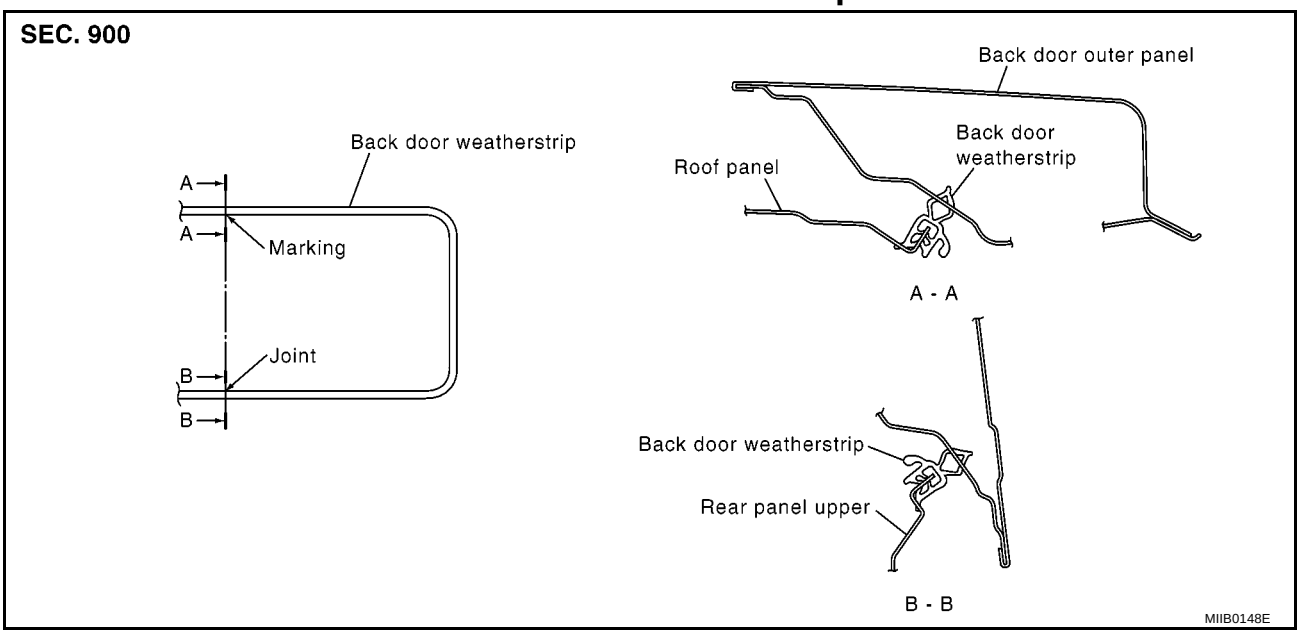
Install in the reverse order of removal.

CAUTION:

- **After finishing work, confirm proper operation.**

Removal and Installation of Back Door Weatherstrip

EIS004NJ



REMOVAL

Pull up and remove engagement with body from weatherstrip joint.

CAUTION:

After removal, do not pull strongly on the weatherstrip.

INSTALLATION

Install in the reverse order of removal.

- Working from the upper section, align weatherstrip mark with vehicle center position mark and install weatherstrip onto the back door.
- For the lower section, align the weatherstrip seam with center of the striker.
- After finishing work, pull weatherstrip lightly to check for looseness.
- Make sure the weatherstrip is fit tightly at each corner and luggage rear plate.

BACK DOOR LOCK

PFP:90504

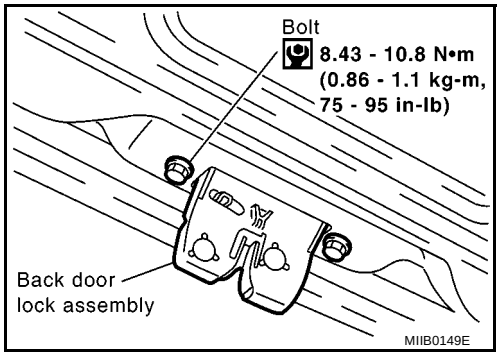
Removal and Installation

EIS004NK

BACK DOOR LOCK ASSEMBLY

Removal

1. Remove back door finisher. Refer to EI-18, "Removal and Installation" .
2. Disconnect back door lock assembly connector.
3. Remove bolts to remove back door lock assembly from inside back door panel.



Installation

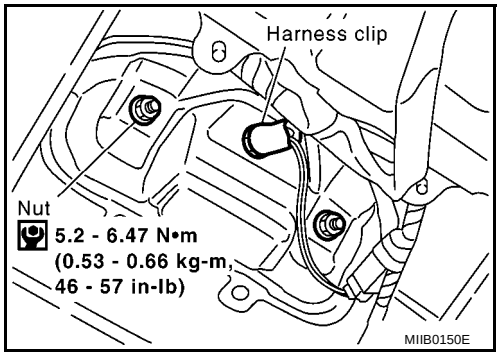
Install in the reverse order of removal.

- If greasing condition in each sliding section on back door assembly is poor, apply “BODY GREASE”.
- After finishing work, confirm proper operation.

BACK DOOR HANDLE ASSEMBLY

Removal

1. Remove back door finisher. Refer to EI-18, "Removal and Installation" .
2. Remove back door request switch (vehicles with intelligent key systems) and back door open switch harness fastening clips and connectors.
3. Remove back door handle assembly nuts, and then remove back door handle assembly.



Installation

Install in the reverse order of removal.

CAUTION:

After finishing work, confirm proper operation.

Disassembly and Assembly

Remove screws, and then remove back door request switch (vehicles with intelligent key systems) and back door open switch.

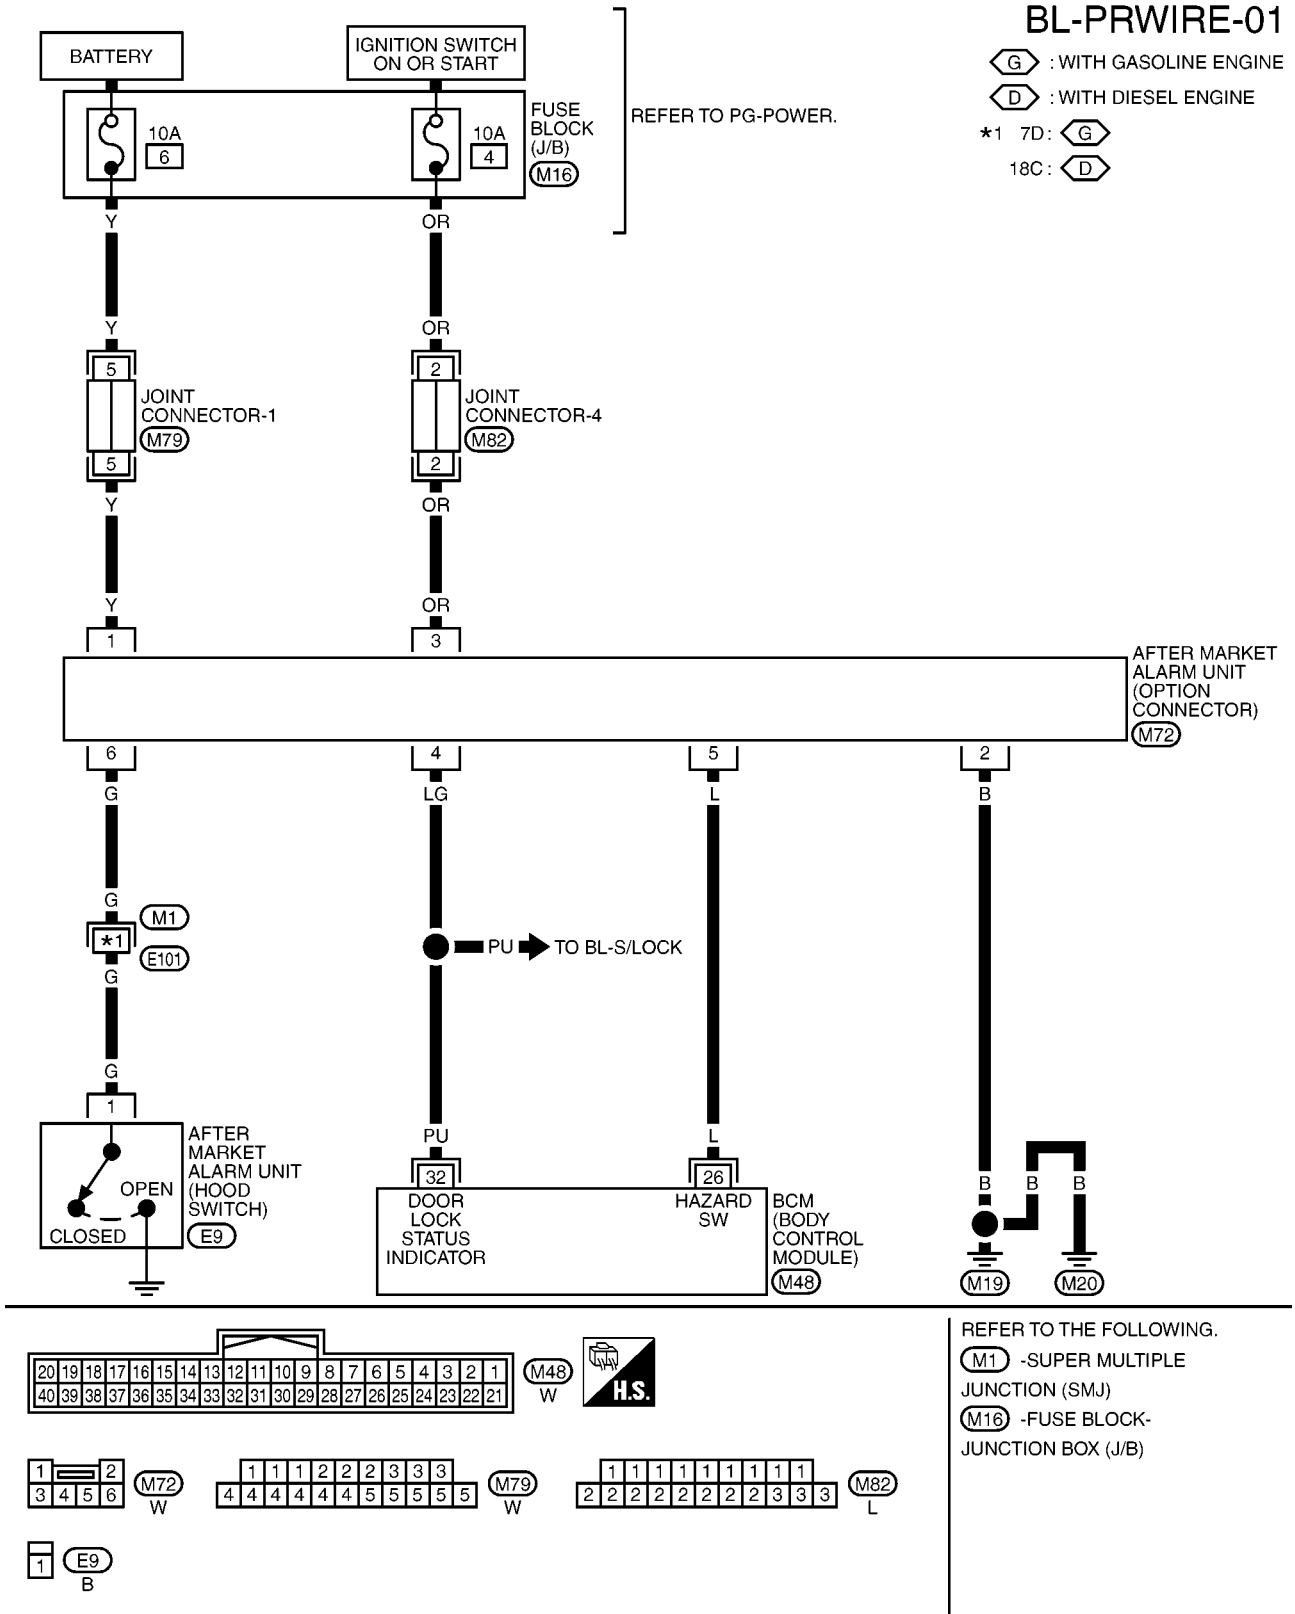
EIS0055I



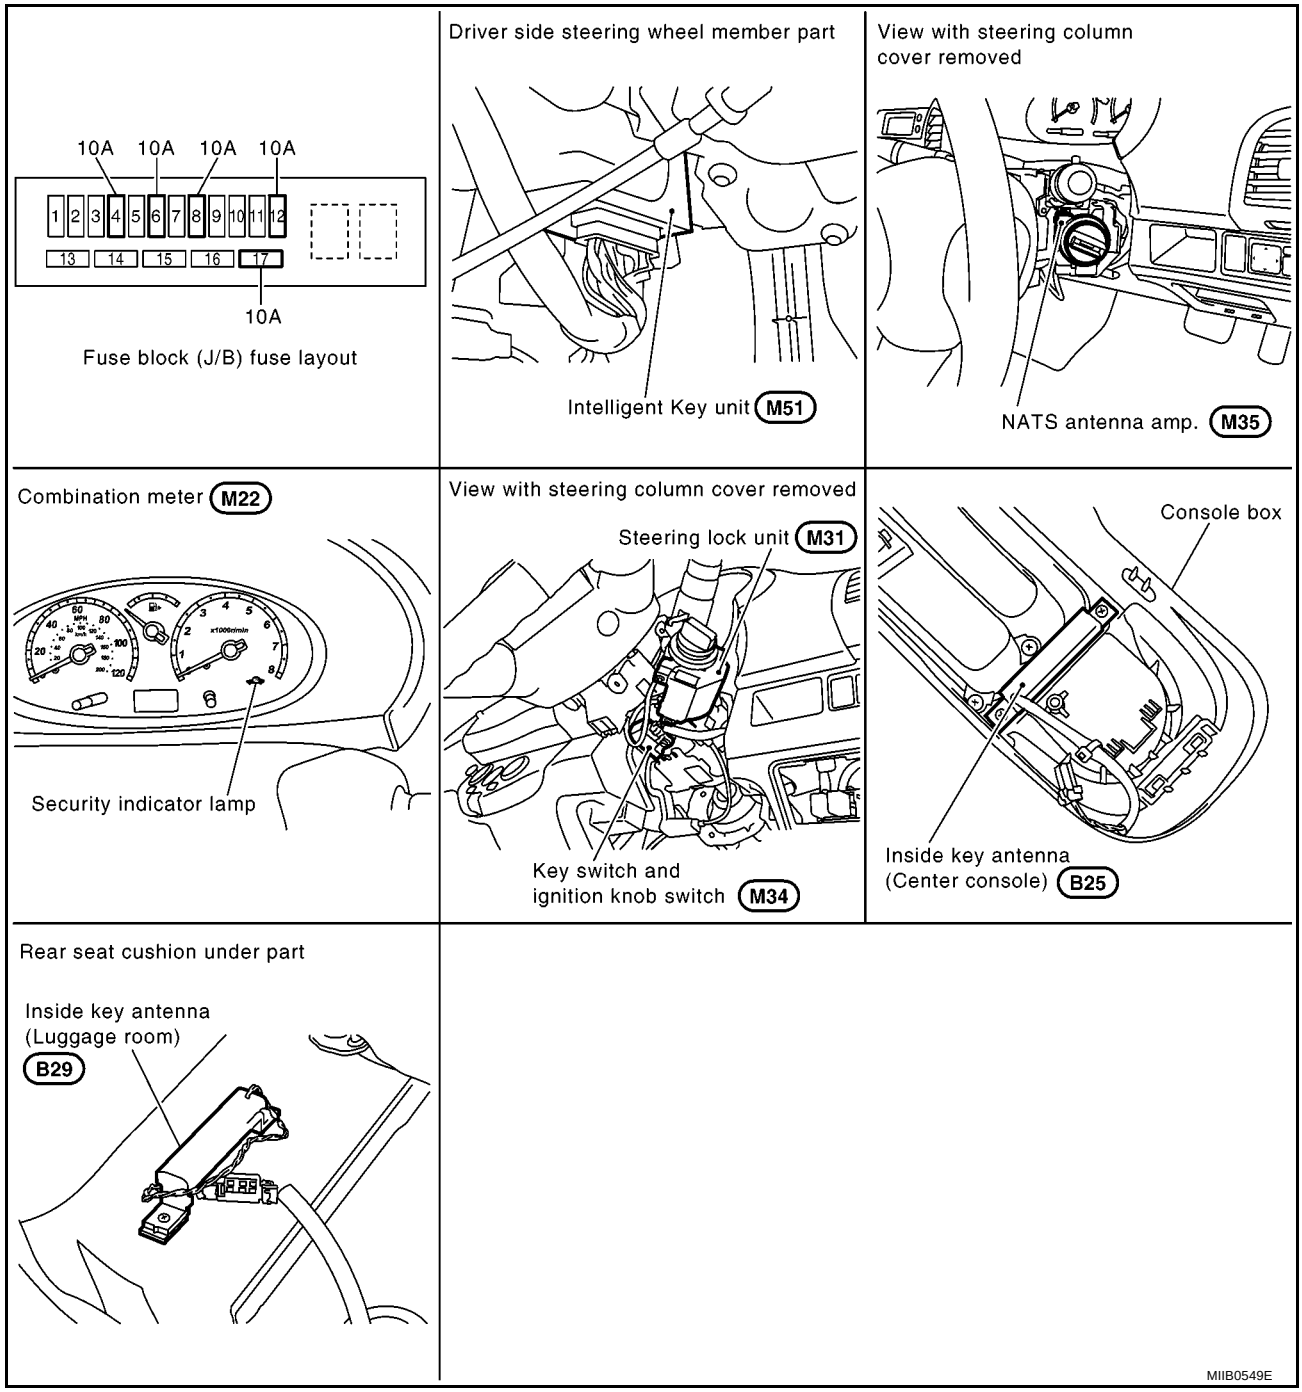
MKWA1797E

NATS(NISSAN ANTI-THEFT SYSTEM)

PFP:28591

Component Parts and Harness Connector Location

EIS004Q1



NOTE:
If customer reports a “NO START” condition, request ALL ignition key (without intelligent key system) or mechanical key (with intelligent key system) to be brought to the dealer to check for a NATS malfunction.

System Description

EIS004Q2

DESCRIPSTION

NATS (Nissan Anti-Theft System) has the following immobilizer functions:

- Engine immobilizer shows high anti-theft performance to prevent engine start by other than the owner (registered key: ignition key, mechanical key and Intelligent Key).

- Only a key with key ID registered in BCM (without Intelligent Key system) or Intelligent Key unit (with Intelligent Key system) and ECM can start engine, and shows high anti-theft performance to prevent key from being copied or stolen.
- In the vehicle without Intelligent Key system, security indicator always flashes with other than ignition switch ON or START position.
- In the vehicle with Intelligent Key system, security indicator always flashes with mechanical key removed condition (key switch OFF) and ignition knob released condition on LOCK position (ignition knob switch OFF).
- Therefore, NATS warns outsiders that the vehicle is equipped with the anti-theft system.
- If system detects malfunction, it turns on security indicator in ignition switch ON position.
- If the owner requires, mechanical key ID can be registered for up to 5 keys.
- During trouble diagnosis or when the following parts have been replaced, and if ignition key or mechanical key is added, registration* is required.
  *: All keys kept by the owner of the vehicle should be registered with ignition key or mechanical key.

– ECM
– BCM (models without Intelligent Key system)
– Intelligent Key unit (models with Intelligent Key system)
– Ignition key (models without Intelligent Key system)
– Mechanical key (models with Intelligent Key system)

- NATS trouble diagnoses, system initialization and additional registration of other ignition key or mechanical key IDs must be carried out using CONSULT-II hardware and CONSULT-II NATS software. When NATS initialization has been completed, the ID of the inserted ignition key or mechanical key is automatically registered. Then, if necessary, additional registration of other ignition key or mechanical key IDs can be carried out. Regarding the procedures of NATS initialization and ignition key or mechanical key ID registration, refer to CONSULT-II operation manual, NATS.

SECURITY INDICATOR

- Warns that the vehicle has NATS (Nissan Anti-Theft System).
- In the vehicle without Intelligent Key system, security indicator always flashes with other than ignition switch ON or START position. In the vehicle with Intelligent Key system, security indicator always flashes with mechanical key removed condition (key switch OFF) and ignition knob released condition on LOCK position (ignition knob switch OFF).

  NOTE:
  Because security indicator is highly efficient, the battery is barely affected.

Condition of Security Indicator (Normal)

WITHOUT INTELLIGENT KEY SYSTEM

Security indicator condition	Ignition key	Operation or condition of ignition key			
		Ignition switch: ON position	Ignition switch: ACC position	Ignition switch: OFF position (Key is inserted.)	Ignition switch: OFF position (Remove key.)
	Register key	OFF	Flashing	Flashing	Flashing
	Ignition key not registered	ON	Flashing	Flashing	Flashing

WITH INTELLIGENT KEY SYSTEM

- In ignition knob operation with Intelligent Key, it always turns on with pushing ignition knob, and always flashes with ignition knob released (ignition knob switch OFF) condition on ignition knob “LOCK” position.
- In ignition knob operation with mechanical key, it turns off on the condition that mechanical key is inserted in key cylinder, and always flashes with ignition knob released (ignition knob switch OFF) condition on mechanical key removed condition.

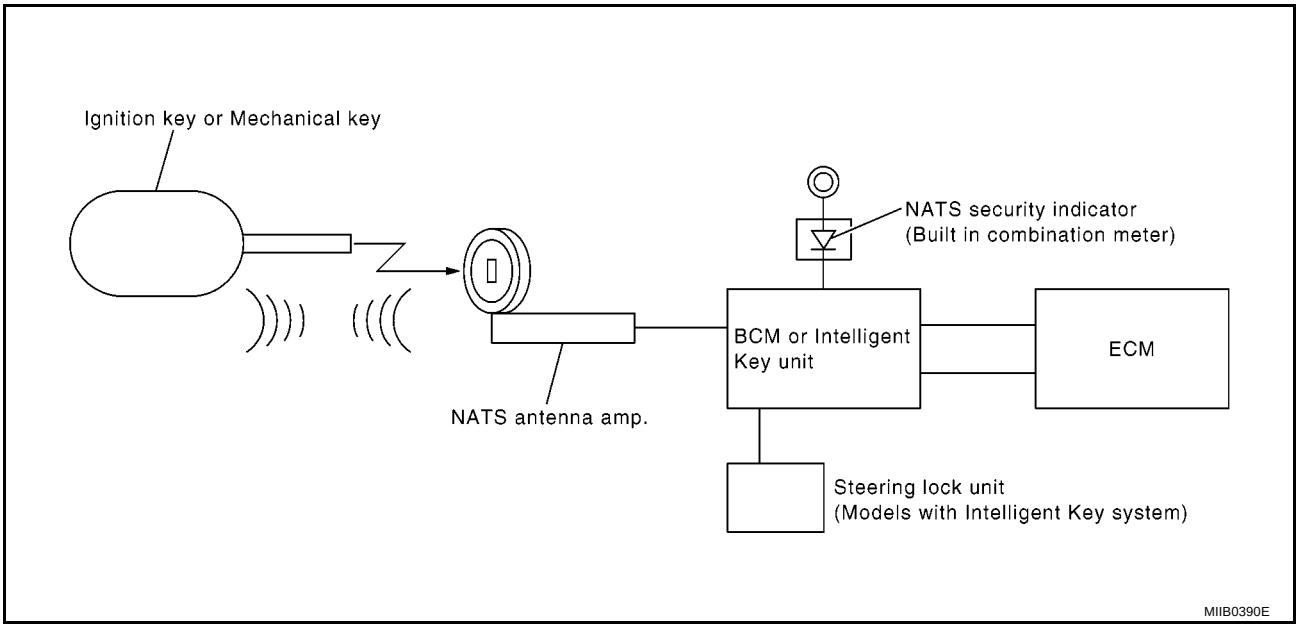
System Composition

EIS004Q3

The immobilizer function of the NATS consists of the following:

- Ignition key (models without Intelligent Key system)
- Mechanical key (models with Intelligent Key system)
- NATS antenna amp.
- Steering lock unit. (models with Intelligent Key system)
- BCM (models without Intelligent Key system)
- Intelligent Key unit (models with Intelligent Key system)
- Engine control module (ECM)
- Security indicator (built-in combination meter)

NOTE:
The communication between ECM and BCM/Intelligent Key unit uses the CAN communication system.



ECM Re-communicating Function

EIS004Q4

Performing following procedure can automatically perform re-communication of ECM and BCM or Intelligent Key unit, but only when the ECM has been replaced with a new one (*1).
*1: New one means a virgin ECM which has never been energized on-board.
(In this step, initialization procedure by CONSULT-II is not necessary)

NOTE:

- **When registering new Key IDs or replacing the ECM other than brand new, refer to CONSULT-II Operation Manual NATS.**
- **If multiple keys are attached to the key holder, separate them before work.**
- **Distinguish keys with unregistered key ID from those with registered ID.**

1. Install ECM.
2. Using a registered key (*2), turn ignition switch to “ON”.
   *2: To perform this step, use the key that has been used before performing ECM replacement.
3. Maintain ignition switch in “ON” position for at least 5 seconds.
4. Turn ignition switch to “OFF”.
5. Start engine.
   If engine can be started, procedure is completed.
   If engine cannot be started, refer to CONSULT-II Operation Manual NATS and initialize control unit.

CONSULT-II

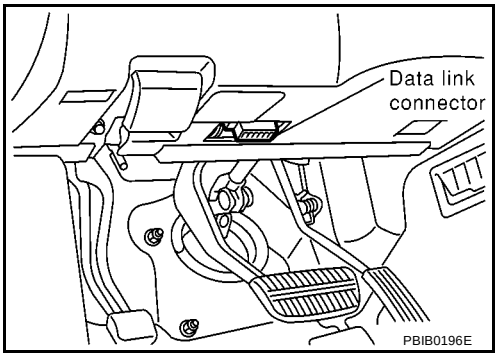
EIS004Q9

CONSULT-II INSPECTION PROCEDURE

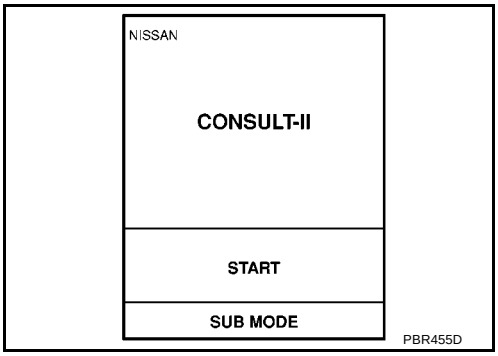
1. Turn ignition switch OFF.
2. Insert NATS program card into CONSULT-II.

Program card : NATS (AEN02C)

3. Connect CONSULT-II and “CONSULT-II CONVERTER” to data link connector.

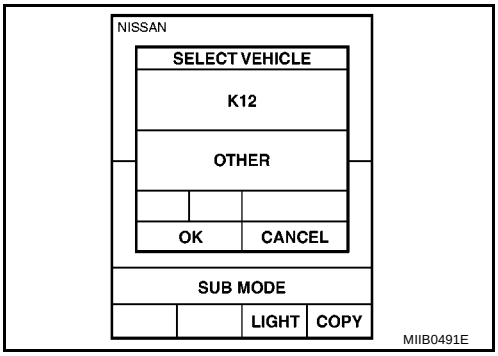


4. Turn ignition switch ON position.
5. Touch “START”.



6. Select “K12”
7. Perform each diagnostic test mode according to each service procedure.

For further information, see the CONSULT-II Operation Manual, NATS.



CONSULT-II DIAGNOSTIC TEST MODE FUNCTION

CONSULT- II DIAGNOSTIC TEST MODE	Description
IMMU INITIALIZE	When replacing any of the following three components, C/U initialization is necessary. [Ignition key or mechanical key/BCM or Intelligent Key unit]
IMMU FUNCTION CHECK	Detected items (screen terms) are as shown in the chart.

NOTE:
When any initialization is performed, all ID numbers previously registered will be erased and all ignition keys or mechanical key must be registered again. The engine cannot be started with an unregistered key. The system will show “DIFFERENCE OF KEY” as a IMMU FUNCTION CHECK on the CONSULT-II screen.

NATS IMMU FUNCTION CHECK RESULT ITEM CHART

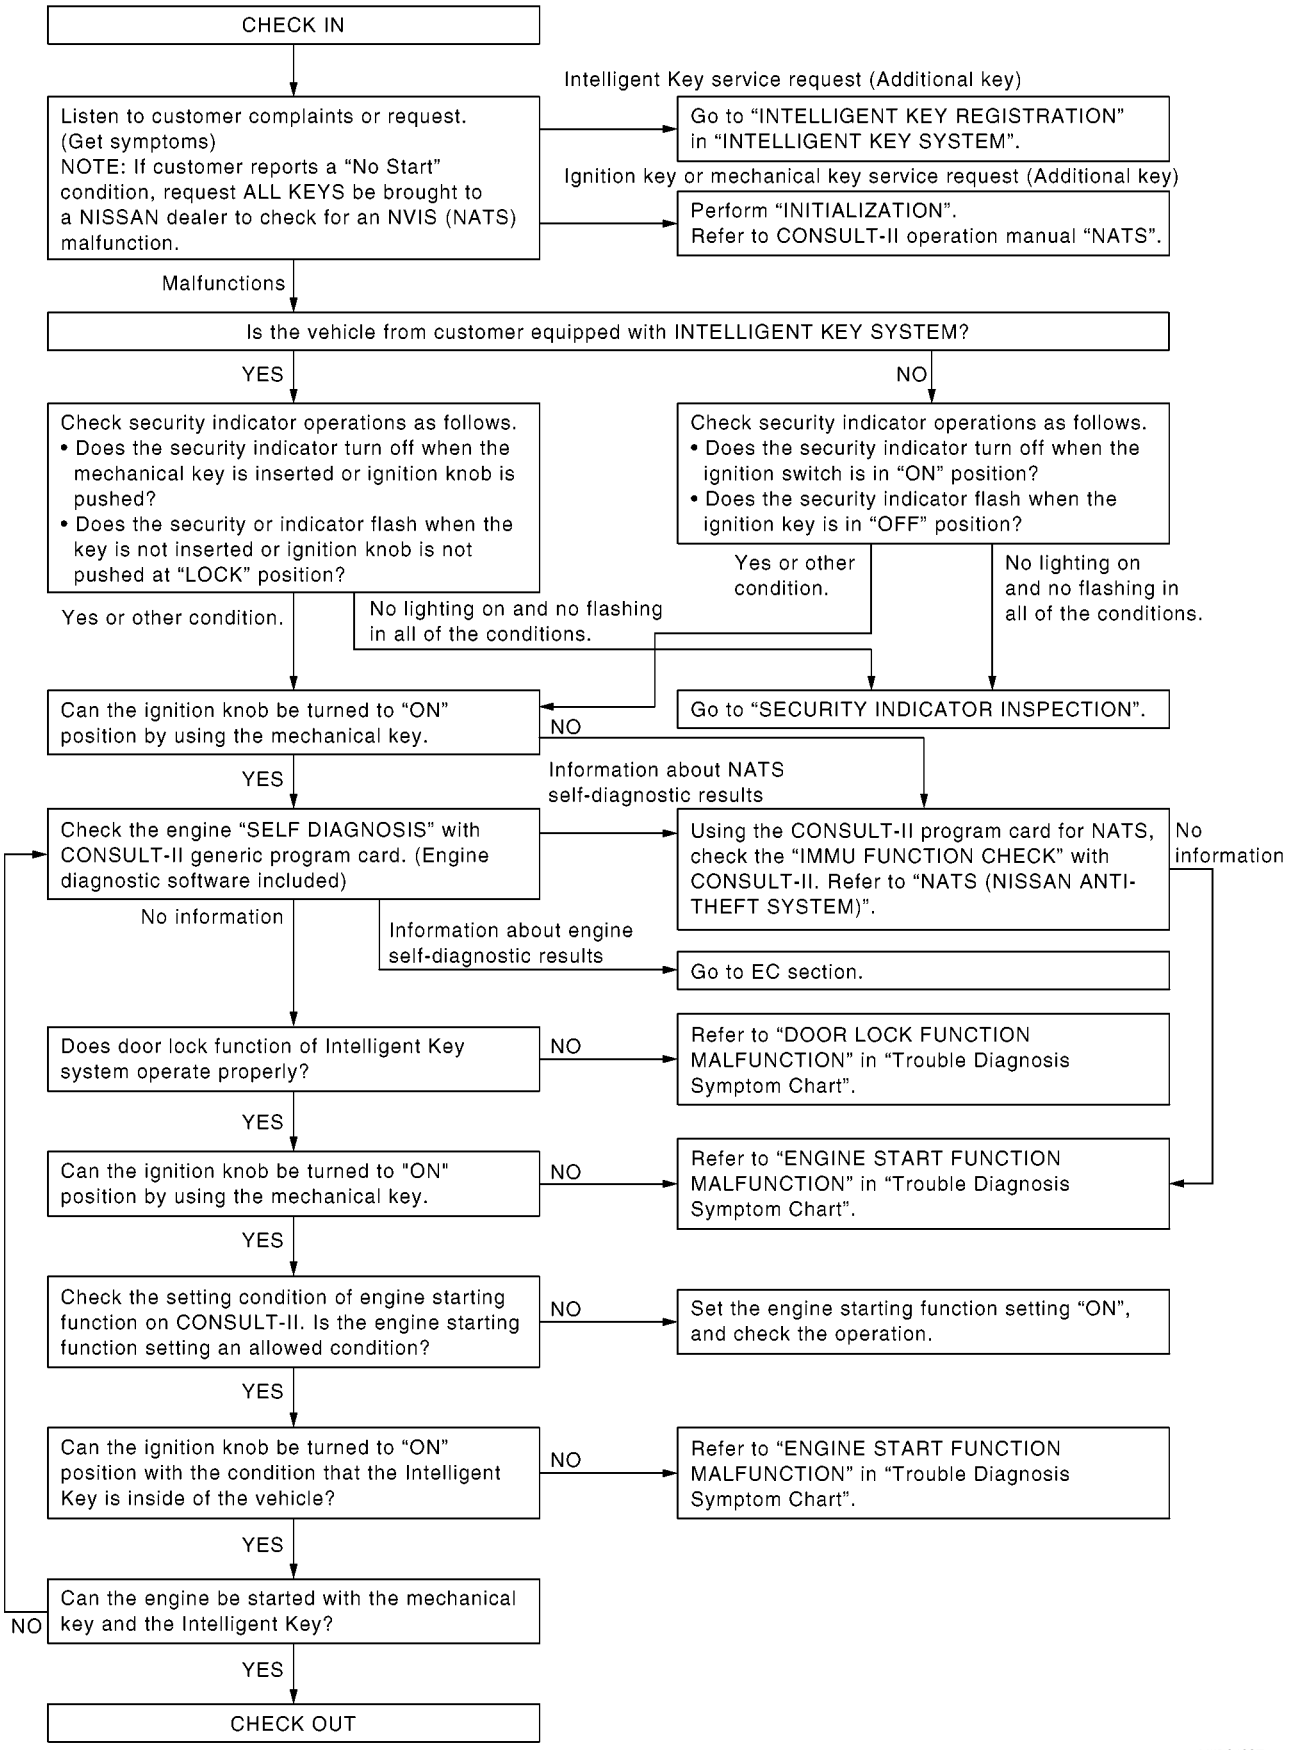
Detected items (Screen terms)	Description
UNREGISTERED BCM*	ID is not registered in BCM
CHAIN OF IMMU-KEY	NATS IMMU cannot receive the key ID signal.
DIFFERENCE OF KEY	BCM or Intelligent Key unit can receive the key ID signal but the result of ID verification between key ID and BCM or Intelligent Key is NG
CHAIN OF IPDM-IMMU*	The communication with IPDM E/R is malfunction.
ID DISCORD IPDM-IMMU	BCM or Intelligent Key unit can receive from IPDM E/R signal but the result of ID verification is NG.
CHAIN OF METER-IMMU*	The communication with combination meter is malfunction.
ID DISCORD METER-IMMU	BCM or Intelligent Key unit can receive from combination meter ID signal but the result of ID verification is NG.
CHAIN OF EPS-IMMU*	The communication with EPS is malfunction.
ID DISCORD EPS-IMMU	BCM or Intelligent Key unit can receive from EPS ID signal but the result of ID verification is NG.
UNREGISTERED ECM	ID is not registered in ECM.
ID DISCORD ECM-IMMU	The result of ID verification between BCM and ECM is NG. System initialization is required.

*: Applied for models without Intelligent Key system.

Diagnosis Procedure

EIS004QA

WORK FLOW



MIIB0492E

Trouble Diagnosis Symptom Chart

EIS004QB

MODELS WITHOUT INTELLIGENT KEY SYSTEM

NOTE:

Perform “Diagnostic Procedure 7”, when “P1610” is displayed by the “SELF-DIAG RESULTS” of the ENGINE. Refer to “CONSULT-II Operation Manual NATS”.

SYMPTOM	Displayed “IMMU FUNCTION CHECK” results on CONSULT-II screen.	Diagnoses service procedure	DIAGNOSTIC PROCEDURE
● Security indicator lighting up* ● Engine hard to start	UNREGISTERED BCM	Replace BCM	Refer to BL-236, "Diagnostic Procedure 1" .
	CHAIN OF IMMU-KEY	1. Check the following parts ● Open or short circuit between BCM and NATS antenna amp. ● Malfunction of key ID chip ● NATS antenna amp.	Refer to BL-236, "Diagnostic Procedure 2" .
		2. If the above system are “OK”, replace BCM	
	DIFFERENCE OF KEY	1. Perform registration key	Refer to BL-240, "Diagnostic Procedure 3" .
		2. If the above system is “OK”, replace BCM	Refer to BCS-31, "Removal and Installation of BCM" .
	CHAIN OF IPDM-IMMU	1. Check CAN communication system	Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .
		2. If CAN communication is “OK”, replace IPDM E/R	Refer to PG-52, "Removal and Installation of IPDM E/R" .
	ID DISCORD IPDM-IMMU	Replace IPDM E/R	Refer to PG-52, "Removal and Installation of IPDM E/R" .
	CHAIN OF METER-IMMU	1. Check CAN communication system	Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .
		2. If CAN communication is “OK”, replace combination meter	Refer to DI-34, "Removal and Installation for Combination Meter" .
	ID DISCORD METER-IMMU	Replace combination meter	Refer to DI-34, "Removal and Installation for Combination Meter" .
	CHAIN OF EPS-IMMU	1. Check CAN communication system	Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .
		2. If CAN communication is “OK”, replace EPS	Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .
	ID DISCORD EPS-IMMU	Replace EPS	Refer to PS-7, "STEERING COLUMN" .
	UNREGISTERED ECM	Replace ECM	Refer to BL-240, "Diagnostic Procedure 4" .
	ID DISCORD ECM-IMMU	Replace ECM	Refer toBL-241, "Diagnostic Procedure 5" .

*: When NATS detects trouble, the security indicator lights up while ignition key is in the “ON” position.

MODELS WITH INTELLIGENT KEY SYSTEM

NOTE:

Perform “Diagnostic Procedure 7”, when “P1610” is displayed by the “SELF-DIAG RESULTS” of the ENGINE. Refer to “CONSULT-II Operation Manual NATS”.

SYMPTOM	Displayed “IMMU FUNCTION CHECK” results on CONSULT-II screen.	Diagnoses service procedure	DIAGNOSTIC PROCEDURE
● Security indicator lighting up* ● Engine hard to start	CHAIN OF IMMU-KEY	1. Check the following parts ● Open or short circuit between BCM and NATS antenna amp. ● Malfunction of key ID chip ● NATS antenna amp.	Refer to BL-236, "Diagnostic Procedure 2" .
		2. If the above system are “OK”, replace Intelligent Key unit	Refer to BL-202, "Removal and Installation of Intelligent key unit" .
	DIFFERENCE OF KEY	1. Perform registration key	Refer to BL-240, "Diagnostic Procedure 3" .
		2. If the above system is “OK”, replace Intelligent Key unit	Refer to BL-202, "Removal and Installation of Intelligent key unit" .
	ID DISCORD IPDM-IMMU	1. Check CAN communication system	Refer to BL-191, "Check CAN Communication System" .
		2. If CAN communication system is “OK”, replace IPDM E/R	Refer to PG-52, "Removal and Installation of IPDM E/R" .
	ID DISCORD METER-IMMU	1. Check CAN communication system	Refer to BL-191, "Check CAN Communication System" .
		2. If CAN communication system is “OK”, replace combination meter	Refer to DI-34, "Removal and Installation for Combination Meter" .
	ID DISCORD EPS-IMMU	1. Check CAN communication system	Refer to BL-191, "Check CAN Communication System" .
		2. If CAN communication system is “OK”, replace EPS	Refer to PS-7, "STEERING COLUMN" .
	ID DISCORD ECM-IMMU	Replace ECM	Refer to BL-241, "Diagnostic Procedure 5" .

*: When NATS detects trouble, the security indicator lights up while mechanical key is inserted.

Security Indicator Inspection

EIS004QC

SYMPTOM	SYSTEM (Malfunctioning part or mode)	DIAGNOSTIC PROCEDURE
Security indicator does not operate*	Security indicator	Refer toBL-241, "Diagnostic Procedure 6" .

	Continuation of initialization mode	
	BCM (models without Intelligent Key system)	
	Intelligent Key unit (models with Intelligent Key system)	

*: CONSULT-II “IMMU FUNCTION CHECK” results display screen “no malfunction is detected”.

Diagnostic Procedure 1

EIS004QE

IMMU FUNCTION CHECK results:
“UNREGISTERD BCM” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “UNREGISTERD BCM” displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as above?

YES >>
- BCM is malfunctioning.
- Replace BCM.
- Perform initialization with CONSULT-II.
  - For initialization, refer to “CONSULT-II Operation Manual NATS”.

NO >> GO TO BL-234, "Trouble Diagnosis Symptom Chart" .

Diagnostic Procedure 2

EIS004QF

MODELS WITHOUT INTELLIGENT KEY SYSTEM

IMMU FUNCTION CHECK results:
“CHAIN OF IMMU-KEY” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “CHAIN OF IMMU-KEY” displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-234, "Trouble Diagnosis Symptom Chart" .

2. CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to BL-244, "Removal and Installation NATS Antenna Amp." .

OK or NG

OK >> GO TO 3.
NG >> Reinstall NATS antenna amp. correctly.

3. CHECK IGNITION KEY ID CHIP

Start engine with another registered ignition key.

Does the engine start?

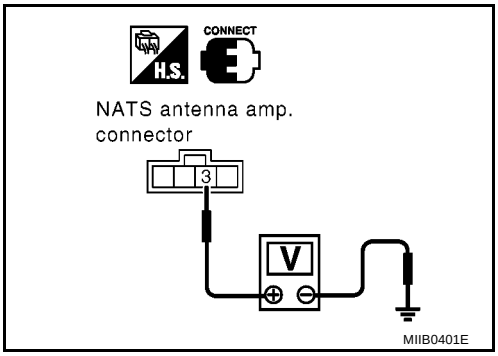
Yes >>
- Ignition key ID chip is malfunctioning.
- Replace the ignition key.
- Perform initialization with CONSULT-II.
  For initialization, refer to “CONSULT-II Operation Manual NATS”.

No >> GO TO 4.

4. CHECK POWER SUPPLY FOR NATS ANTENNA AMP.

1. Turn ignition switch “ON”.
2. Check voltage between NATS antenna amp. connector M36 terminal 3 (LG) and ground with CONSULT-II or tester.

Battery voltage should exist.



OK or NG

OK >> GO TO 5.
NG >> Check harness for open or short between NATS antenna amp. and fuse.

5. CHECK NATS ANTENNA AMP. SIGNAL LINE

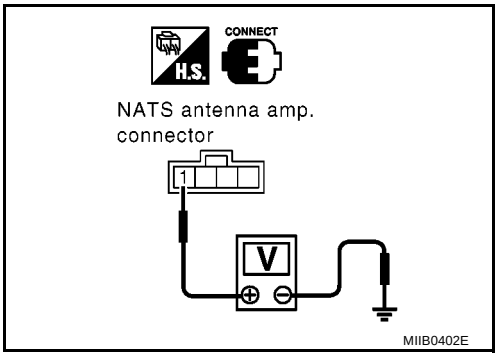
Check voltage between NATS antenna amp. connector M36 terminal 1 (OR) and ground with analogue tester.

Before turning ignition switch “ON”

Voltage: 0V

Just after turning ignition switch “ON”

: Pointer of tester should move.



OK or NG

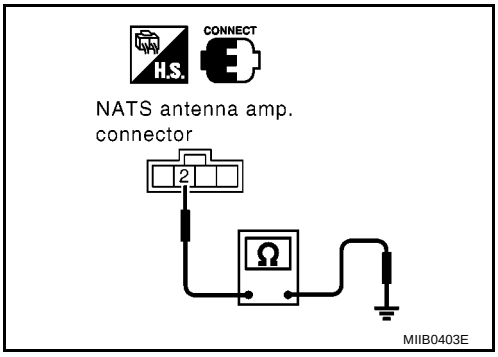
OK >> GO TO 6.
NG >> ● Check harness for open or short between NATS antenna amp. and BCM.

NOTE:
If harness is OK, replace new* BCM, perform initialization with CONSULT-II. For initialization, refer to “CONSULT-II Operation Manual NATS”.
*: New one means virgin control unit that has never been energized on-board.

6. CHECK NATS ANTENNA AMP. GROUND LINE CIRCUIT

1. Turn ignition switch “OFF”.
2. Check continuity between NATS antenna amp. connector M36 terminal 2 (B) and ground.

Continuity should exist.



OK or NG

OK >> NATS antenna amp. is malfunctioning.
NG >> ● Check harness for open or short between NATS antenna amp. and ground.

NOTE:
If harness is OK, replace new* BCM, perform initialization with CONSULT-II. For initialization, refer to “CONSULT-II Operation Manual NATS”.
*: New one means virgin control unit that has never been energized on-board.

MODELS WITH INTELLIGENT KEY SYSTEM

IMMU FUNCTION CHECK results:
“CHAIN OF IMMU-KEY” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “CHAIN OF IMMU-KEY” displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-234, "Trouble Diagnosis Symptom Chart" .

2. CHECK NATS ANTENNA AMP. INSTALLATION

Check NATS antenna amp. installation. Refer to BL-244, "Removal and Installation NATS Antenna Amp." .

OK or NG

OK >> GO TO 3.
NG >> Reinstall NATS antenna amp. correctly.

3. CHECK MECHANICAL KEY ID CHIP

Start engine with another registered mechanical key.

Does the engine start?

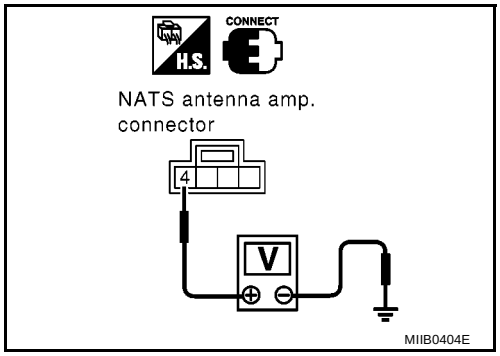
Yes >>
- Mechanical key ID chip is malfunctioning.
- Replace the mechanical key.
- Perform initialization with CONSULT-II.
  For initialization, refer to “CONSULT-II Operation Manual NATS”.

No >> GO TO 4.

4. CHECK POWER SUPPLY FOR NATS ANTENNA AMP.

1. Turn ignition switch “ON”.
2. Check voltage between NATS antenna amp. connector M35 terminal 4 (LG) and ground with CONSULT-II or tester.

Battery voltage should exist.



OK or NG

OK >> GO TO 5.
NG >> Check harness for open or short between NATS antenna amp. and fuse.

5. CHECK NATS ANTENNA AMP. SIGNAL LINE- 1

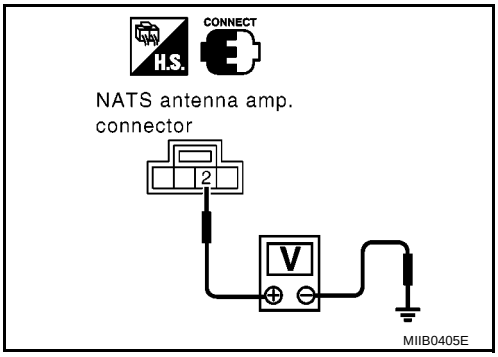
Check voltage between NATS antenna amp. connector M35 terminal 2 (W) and ground with analogue tester.

Before inserting mechanical key in ignition knob

Voltage: 0V

Just after inserting mechanical key in ignition knob

: Pointer of tester should move.



OK or NG

OK >> GO TO 6.

NG >> ● Check harness for open or short between NATS antenna amp. and Intelligent Key unit.

NOTE:

If harness is OK, replace new* Intelligent Key unit, perform initialization with CONSULT-II. For initialization, refer to “CONSULT-II Operation Manual NATS”.

*: New one means virgin control unit that has never been energized on-board.

6. CHECK NATS ANTENNA AMP. SIGNAL LINE- 2

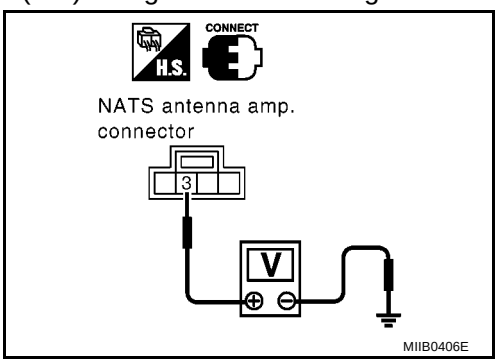
Check voltage between NATS antenna amp. connector M35 terminal 3 (OR) and ground with analogue tester.

Before inserting mechanical key in ignition knob

Voltage: 0V

Just after inserting mechanical key in ignition knob

: Pointer of tester should move.



OK or NG

OK >> GO TO 7.

NG >> ● Check harness for open or short between NATS antenna amp. and Intelligent Key unit.

NOTE:

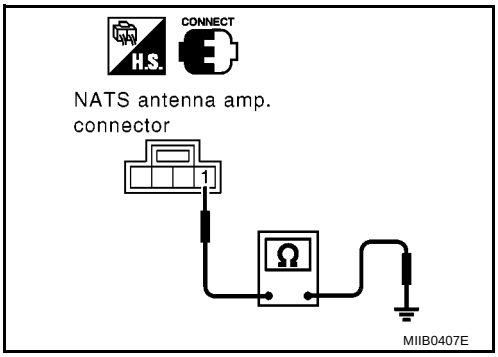
If harness is OK, replace new* Intelligent Key unit, perform initialization with CONSULT-II. For initialization, refer to “CONSULT-II Operation Manual NATS”.

*: New one means virgin control unit that has never been energized on-board.

7. CHECK NATS ANTENNA AMP. GROUND LINE CIRCUIT

1. Turn ignition switch “OFF”.
2. Check continuity between NATS antenna amp. connector M35 terminal 1 (B) and ground.

Continuity should exist.



OK or NG

OK >> NATS antenna amp. is malfunctioning.

NG >> ● Check harness for open or short between NATS antenna amp. and ground.

NOTE:

If harness is OK, replace new* Intelligent Key unit, perform initialization with CONSULT-II. For initialization, refer to “CONSULT-II Operation Manual NATS”.

*: New one means virgin control unit that has never been energized on-board.

Diagnostic Procedure 3

EIS004QG

IMMU FUNCTION CHECK results:
“DIFFERENCE OF KEY” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “DIFFERENCE OF KEY” displayed on CONSULT-II screen.

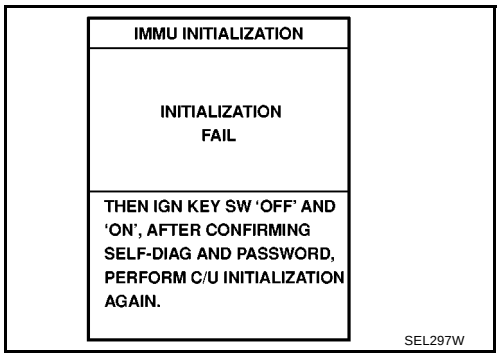
Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-234, "Trouble Diagnosis Symptom Chart" .

2. PERFORM INITIALIZATION WITH CONSULT-II

Perform initialization with CONSULT-II. Re-register all NATS ignition key IDs.
For initialization and registration of NATS ignition key IDs, refer to “CONSULT-II Operation Manual NATS”.

NOTE:
If the initialization is not completed or malfunctions, CONSULT-II shows message on the screen.



Can the system be initialized and can the engine be started with re-registered NATS ignition key?

Yes >>
- Ignition key ID was unregistered.

No >>
- BCM is malfunctioning. (models without Intelligent Key system)
  - Replace new* BCM.
- Intelligent Key unit is malfunctioning. (models with Intelligent Key system)
  - Replace new* Intelligent Key unit.
- Perform initialization with CONSULT-II.
- For initialization, refer to “CONSULT-II Operation Manual NATS”.

*: New one means virgin control unit that has never been energized on-board.

Diagnostic Procedure 4

EIS0056B

IMMU FUNCTION CHECK results:
“UNREGISTERD ECM” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “UNREGISTERD ECM” displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as above?

YES >>
- ECM is malfunctioning.
- Replace ECM.
- Perform initialization or re-communicating function.
  - For initialization, refer to BL-225, "ECM Re-communicating Function" .

NO >> GO TO BL-234, "Trouble Diagnosis Symptom Chart" .

Diagnostic Procedure 5

EIS0056C

IMMU FUNCTION CHECK results:
“ID DISCORD ECM-IMMU” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “UNREGISTERD ECM” displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as above?

YES >>
- ECM is malfunctioning.
- Replace ECM.
- Perform initialization or re-communicating function.
  - For initialization, refer to “CONSULT-II Operation Manual NATS”.

NO >> GO TO BL-234, "Trouble Diagnosis Symptom Chart" .

Diagnostic Procedure 6

EIS0056G

MODELS WITHOUT INTELLIGENT KEY SYSTEM
“Security indicator does not light up”

1. CHECK FUSE

Check 10A fuse [No. 8, located in the fuse block (J/B)]

OK or NG

OK >> GO TO 2.
NG >> Replace fuse.

2. CHECK SECURITY INDICATOR LAMP

1. Install 10A fuse.
2. Start engine and turn ignition switch OFF.
3. Check the security indicator lamp lights up.

Security indicator lamp should light up.

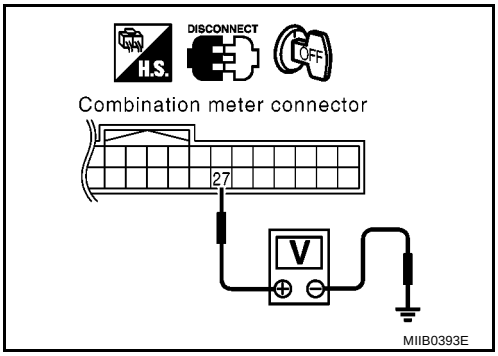
OK or NG

OK >> Inspection END.
NG >> GO TO 3.

3. CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

1. Disconnect combination meter (security indicator lamp) connector.
2. Check voltage between security indicator lamp connector M22 terminal 27 (LG) and ground.

Battery voltage should exist.

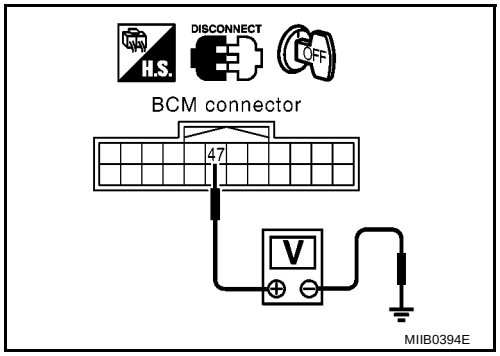


OK or NG

OK >> GO TO 4.
NG >> Check harness for open or short between fuse and security indicator lamp.

4. CHECK BCM FUNCTION

1. Connect combination meter (security indicator lamp) connector.
2. Disconnect BCM connector M3.
3. Check voltage between BCM connector M49 terminal 47 (P) and ground.



Battery voltage should exist.

OK or NG

OK >> BCM is malfunctioning.
- Replace BCM.
- Perform initialization with CONSULT-II.
- For initialization, refer to “CONSULT-II Operation Manual NATS”.

NG >> Check the following.
- Harness for open or short between security indicator lamp and BCM.
- Indicator lamp condition

MODELS WITH INTELLIGENT KEY SYSTEM
“Security indicator does not light up”

1. CHECK FUSE

Check 10A fuse [No. 8, located in the fuse block (J/B)]

OK or NG

OK >> GO TO 2.
NG >> Replace fuse.

2. CHECK SECURITY INDICATOR LAMP

1. Install 10A fuse.
2. Start engine and turn ignition knob OFF position.
3. Check the security indicator lamp lights up.

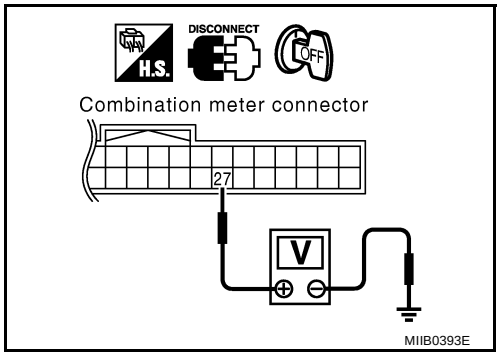
Security indicator lamp should light up.

OK or NG

OK >> Inspection END.
NG >> GO TO 3.

3. CHECK SECURITY INDICATOR LAMP POWER SUPPLY CIRCUIT

1. Disconnect combination meter (security indicator lamp) connector.
2. Check voltage between security indicator lamp connector M22 terminal 27 (LG) and ground.



Battery voltage should exist.

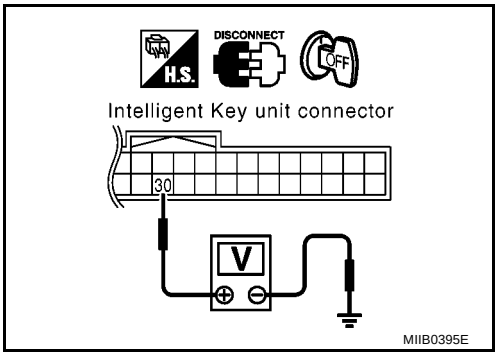
OK or NG

OK >> GO TO 4.
NG >> Check harness for open or short between fuse and security indicator lamp.

4. CHECK INTELLIGENT KEY UNIT FUNCTION

1. Connect combination meter (security indicator lamp) connector.
2. Disconnect Intelligent Key unit connector M51.
3. Check voltage between Intelligent Key unit connector M51 terminal 30 (P) and ground.

Battery voltage should exist.



OK or NG

OK >> Intelligent Key is malfunctioning.
- Replace Intelligent Key unit.
- Perform initialization with CONSULT-II.
- For initialization, refer to “CONSULT-II Operation Manual NATS”.

NG >> Check the following.
- Harness for open or short between security indicator lamp and Intelligent Key unit.
- Indicator lamp condition

Diagnostic Procedure 7

EIS0056H

IMMU FUNCTION CHECK results:
“P1610” displayed on CONSULT-II screen

1. CONFIRM IMMU FUNCTION CHECK

Confirm “IMMU FUNCTION CHECK” results “P1610” (LOCK MODE) is displayed on CONSULT-II screen.

Is CONSULT-II screen displayed as above?

Yes >> GO TO 2.
No >> GO TO BL-233, "WORK FLOW" .

2. ESCAPE FROM LOCK MODE

1. Turn ignition switch OFF.
2. Turn ignition switch ON with registered key. (Do not start engine.) Wait 5 seconds.
3. Return the key to OFF position. Wait 5 seconds.
4. Repeat steps 2 and 3 twice (total of three cycles).
5. Start the engine.

Does engine start?

Yes >> System is OK (Now system is escaped from “LOCK MODE”).
No >> Perform “IMMU FUNCTION CHECK”, and repair the diagnosis result on the display.

Removal and Installation NATS Antenna Amp.

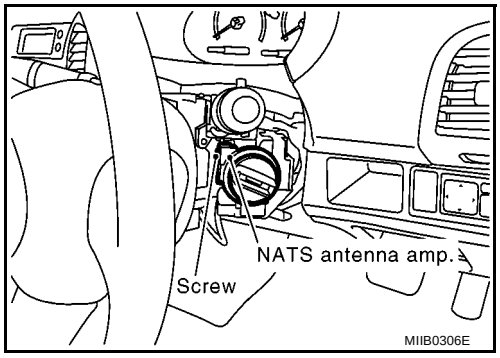
EIS004QK

REMOVAL

CAUTION:

Before servicing SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

1. Remove the spiral cable. Refer to SRS-38, "Removal and Installation" .
2. Disconnect the NATS antenna amp. connect, remove the screw and NATS antenna amp.



INSTALLATION

Install in the reverse order of removal.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EFS002FV

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. This system includes seat belt switch inputs and dual stage front air bag modules. The SRS system uses the seat belt switches to determine the front air bag deployment, and may only deploy one front air bag, depending on the severity of a collision and whether the front occupants are belted or unbelted.
Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

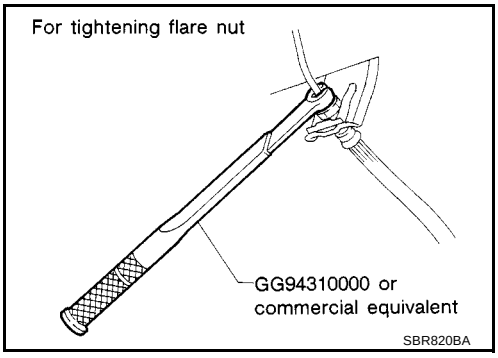
WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Brake System

EFS002FW

- Recommended fluid is brake fluid “DOT 3” or “DOT 4”.
- Never reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas.
- To clean or wash all parts of master cylinder, disc brake caliper and wheel cylinder, use clean brake fluid.
- Never use mineral oils such as gasoline or kerosene. They will ruin rubber parts of the hydraulic system.
- Use flare nut wrench when removing and installing brake tube.
- Always tighten brake lines to the specified torque when installing.
- Before working, turn the ignition switch OFF and disconnect the connectors for the control unit or the battery terminals.
- Burnish the brake contact surfaces after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage.
  Refer to BR-26, "BRAKE BURNISHING PROCEDURE" .



WARNING:

- **Clean brake pads and shoes with a waste cloth, then wipe with a dust collector.**

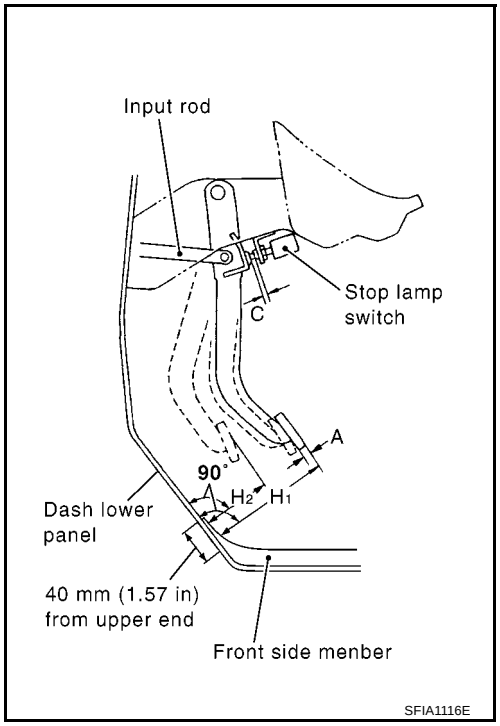
PFP:46501

Inspection and Adjustment

EFS002G6

PLAY AND CLEARANCE BETWEEN BRAKE PEDAL AND FLOOR PANEL WITH PEDAL DEPRESSED.

- Check the pedal play.
- Check the brake pedal free height from the dash floor panel.
- If value is outside the standard, make an adjustment to the following dimension.

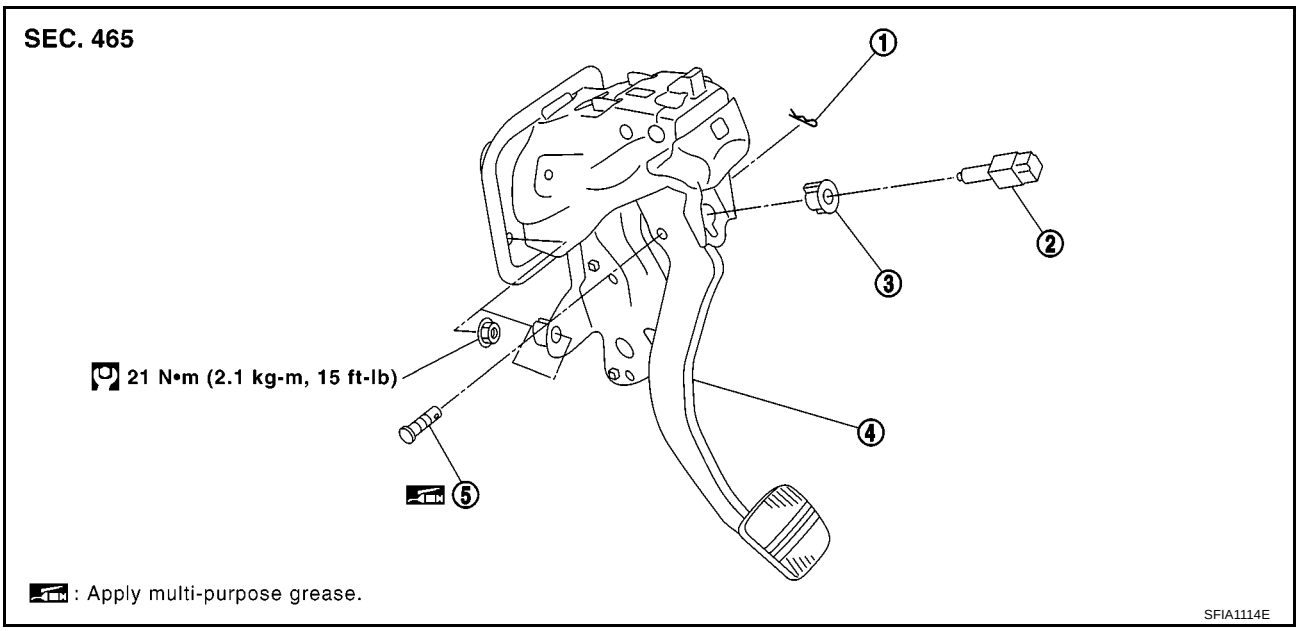


H_1	Brake pedal height	LHD	M/T models	161 - 171 mm (6.34 - 6.73 in)
			A/T models	171 - 181 mm (6.73 - 7.13 in)
		RHD	M/T models	156 - 166 mm (6.14 - 6.54 in)
			A/T models	166 - 176 mm (6.54 - 6.93 in)
H_2	Depressed pedal height [under a force of 490 N (50 kg, 110 lb) with the engine running]		M/T models	80 mm (3.15 in) or more
			A/T models	85 mm (3.35 in) or more
C	Clearance between the stopper rubber and the threaded end of stop lamp switch.			0.74 - 1.96 mm (0.029 - 0.077 in)
A	Pedal play			3 - 11 mm (0.12 - 0.43 in)

Removal and Installation

EFS002G7

COMPONENTS



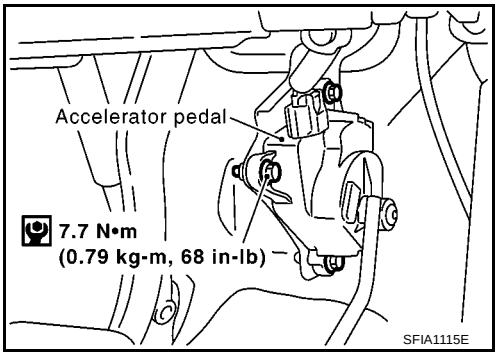
1. Snap pin
2. Stop lamp switch
3. Clip
4. Brake pedal assembly
5. Clevis pin

CAUTION:

- **Be careful not to deform brake tube.**
- **Do not strike the brake pedal assembly against anything during removal and installation.**

REMOVAL

1. Remove instrument lower driver panel. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove accelerator pedal harness clip and connector.
3. Disconnect stop lamp switch harness connector and remove stop lamp switch from the pedal assembly. (Remove it by rotating the switch by 45°)
4. Remove snap pin and clevis pin from the brake booster clevis.
5. Remove pedal assembly mounting nut and then remove pedal assembly from the vehicle while moving the master cylinder and brake booster to the engine room side while being careful not to deform the brake tube.
6. Remove accelerator pedal from the brake pedal.



INSPECTION AFTER REMOVAL

- Check brake pedal for bend, damage, and cracks on the welded parts. Replace applicable part if any non-standard condition is detected.

INSTALLATION

- For information regarding the tightening torque, refer to BR-7, "COMPONENTS" . Install in the reverse order of removal.
- After installing brake pedal assembly to the vehicle, adjust brake pedal.

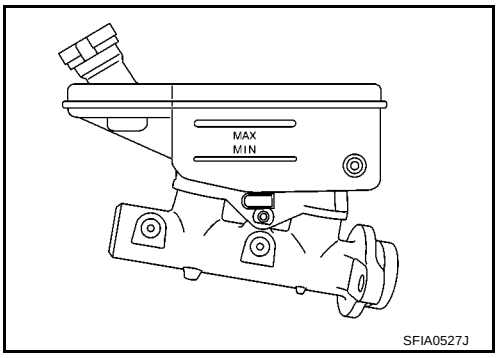
BRAKE FLUID

PFP:KN100

Level Inspection

EFS002G8

- Make sure the fluid level in the reservoir tank is within the standard (between MAX and MIN lines).
- Visually check around the reservoir tank for fluid leaks.
- If fluid level is excessively low, check brake system for leaks.
- If warning lamp remains illuminated after parking lever is released, check brake system for fluid leakage.



SFIA0527J

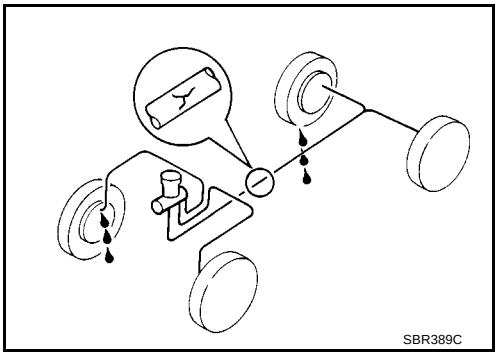
Checking Brake Line

EFS002G9

CAUTION:

If leakage occurs around joints, retighten or, if necessary, replace damaged parts.

1. Check brake line (tubes and hoses) for cracks, deterioration or other damage. Replace any damaged parts.
2. Check for oil leakage by fully depressing brake pedal while engine is running.



SBR389C

Drain and Refill

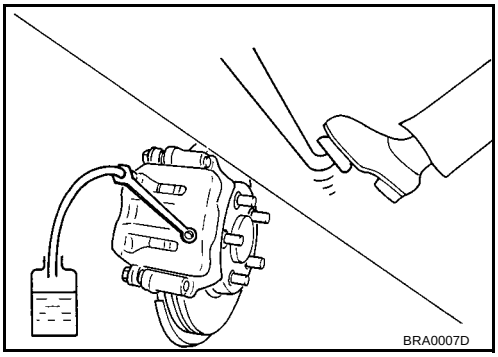
SMA for VIN >SJN**AK12U1000000

EFS002GA

CAUTION:

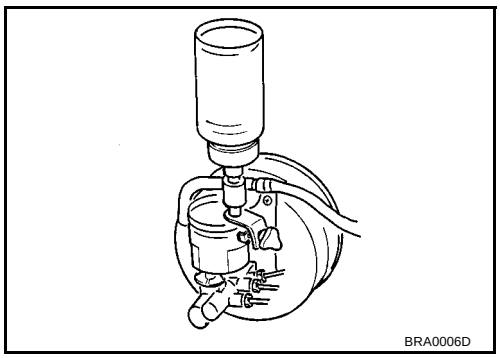
- **Refill with new brake fluid “DOT 3” or “DOT 4”.**
- **Do not mix different types of brake fluid (DOT 3, DOT 4).**
- **Never reuse drained brake fluid.**
- **Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**

1. Turn ignition switch OFF, and remove ABS actuator connector.
2. Connect a vinyl tube to the air bleeder.
3. Drain brake fluid gradually from the air bleeder of each wheel while depressing the brake pedal.



BRA0007D

4. Make sure that there is no foreign material in the reservoir tank, and refill with new brake fluid.
5. Rest foot on brake pedal. Loosen air bleeder. Slowly depress pedal until it stops. Tighten air bleeder. Release brake pedal. Repeat this process a few times, then pause to add new brake fluid to master cylinder. Continue until new brake fluid flows out. For information regarding air bleeding work, refer to BR-10, "Bleeding Brake System" .



BRA0006D

Bleeding Brake System

EFS002GB

CAUTION:

- **While bleeding, pay attention to master cylinder fluid level.**
- **Fill reservoir with new brake fluid “DOT 3” or “DOT 4”**
- **Do not mix different types of brake fluid (DOT 3, DOT 4)**

1. Turn ignition switch OFF, and remove ABS actuator connector.
2. Connect a vinyl tube to the rear left wheel air bleeder.
3. Fully depress brake pedal 4 to 5 times.
4. With brake pedal depressed, loosen air bleeder and bleed air, and then quickly tighten the air bleeder.
5. Repeat steps 3 - 4 until all of the air is out of the brake line.
6. Tighten the air bleeder to the specified torque.

Tightening torque : 10 N·m (1.0 kg-m, 7 ft-lb)

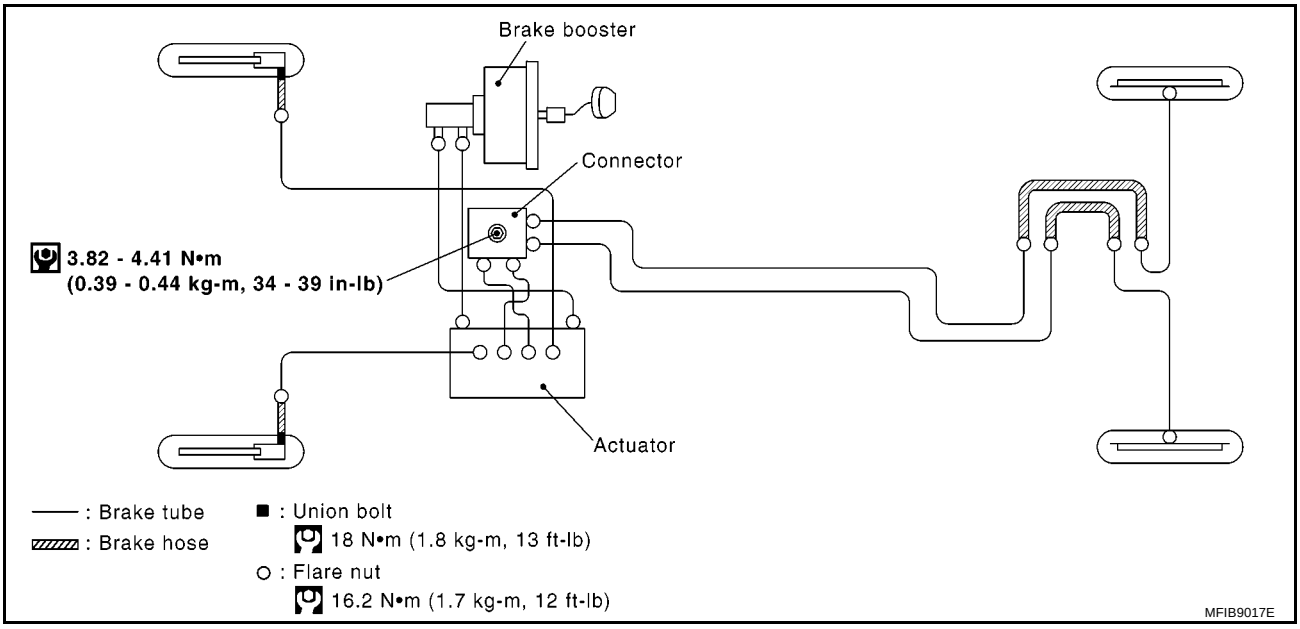
7. Repeat steps 2 to 6. Occasionally refill master cylinder reservoir tank with brake fluid in order to keep it at least half-full. Bleed air in the following order: front RH wheel, RH rear wheel, and front LH wheel.

BRAKE PIPING AND HOSE

PFP:46210

Hydraulic Circuit

EFS002GC



Removal and Installation of Front Brake Piping and Brake Hose

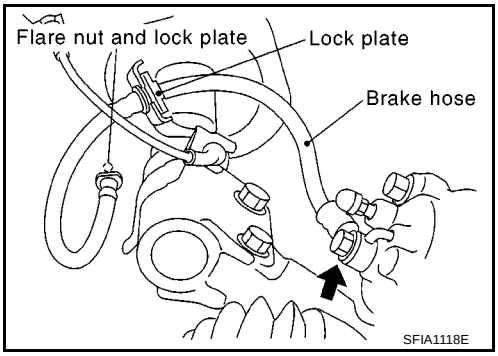
EFS002GD

REMOVAL

CAUTION:

- **Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**
- **All hose must be free from excessive bending, twisting and pulling.**
- **Cover brake fluid line connections to prevent dust and other foreign material from entering.**

1. Drain brake fluid. Refer to BR-9, "Drain and Refill" .
2. Using a flare nut wrench, remove the flare nuts of the brake tube and disconnect the brake tube from the brake hose.
3. Remove brake caliper union bolts and disconnect caliper assembly from brake hose.
4. First remove the lock plate from the mounting positions of brake tubes and struts, and then brake hose.



INSTALLATION

CAUTION:

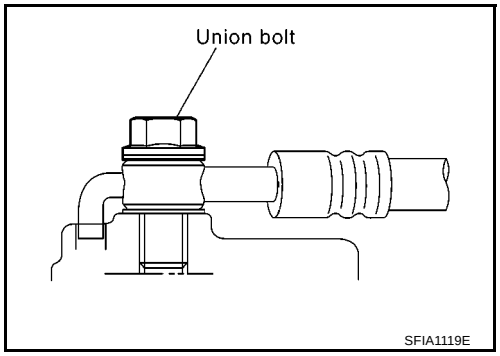
- **Refill with new brake fluid “DOT 3” or “DOT 4”.**
- **Do not mix different types of brake fluid (DOT3, DOT4).**
- **Never reuse the drained brake fluid.**

1. Install the brake hose to the caliper assembly and tighten union bolts to the specified torque.

   Tightening torque : 18 N·m (1.8 kg-m, 13 ft-lb)

   CAUTION:
   - **Install brake hose securely by inserting the hose fitting protrusion into the caliper hole.**
   - **Do not reuse the copper washer for union bolts.**
2. Connect brake hose to the strut and fix with lock plate.
3. Connect brake hose to brake tube. Temporarily tighten flare nuts by hand as far as they will go. Secure them with the lock plate.
4. Using a flare nut torque wrench, tighten to the specified torque.

   Tightening torque : 16.2 N·m (1.7 kg-m, 12 ft-lb)
5. Add new brake fluid. Refer to BR-9, "Drain and Refill" .
6. Bleed the air. Refer to BR-10, "Bleeding Brake System" .



Removal and Installation of Rear Brake Piping and Brake Hose

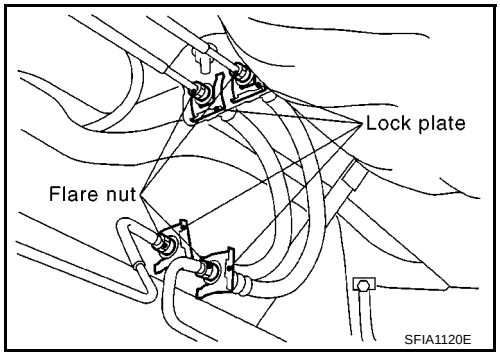
EFS002GE

REMOVAL

CAUTION:

- **Be careful not to splash brake fluid on painted areas; it may cause paint damage. If brake fluid is splashed on painted areas, wash it away with water immediately.**
- **All hose must be free from excessive bending, twisting and pulling.**
- **Cover brake fluid line connections to prevent dust and other foreign material from entering.**

1. Drain brake fluid. Refer to BR-9, "Drain and Refill" .
2. Using a flare nut wrench, remove the flare nuts of the brake tube and disconnect the brake tube from the brake hose.
3. Remove the lock plate and remove the brake hose from the vehicle.



INSTALLATION

CAUTION:

- **Refill with new brake fluid “DOT 3” or “DOT 4”.**
- **Do not mix different types of brake fluid (DOT3, DOT4).**
- **Never reuse the drained brake fluid.**

1. Connect brake hose to the brake tube. Temporarily tighten flare nut by hand as far as it will go.
2. Secure brake hose with the lock plate, and then use a flare nut wrench to tighten the flare nuts to the specified torque.

   Tightening torque : 16.2 N·m (1.7 kg-m, 12 ft-lb)
3. Add new brake fluid. Refer to BR-9, "Drain and Refill" .
4. Bleed the air. Refer to BR-10, "Bleeding Brake System" .

Inspection

EFS002GF

CAUTION:

If leak is detected at the connections, retighten it or replace the damaged part if necessary.

1. Check hose, tube, and connections for fluid leaks, damage, twist, deformation, contact with other parts, and loose connections.
2. While depressing brake pedal with engine running for approximately 5 seconds, check for fluid leak from each part.

BRAKE MASTER CYLINDER

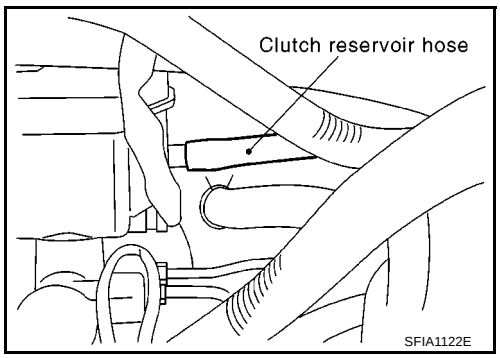
PFP:46010

Removal and Installation

EFS002GG

REMOVAL

1. Drain brake fluid. Refer to BR-9, "Drain and Refill" .
2. Remove harness connector of fluid level sensor.
3. Remove clutch reservoir hose. (M/T models)
4. Using a flare nut wrench, disconnect master cylinder assembly and brake tube.
5. First remove nuts on master cylinder assembly, and then master cylinder assembly from brake booster assembly.



INSTALLATION

1. Install brake tube to the master cylinder assembly and temporarily tighten the flare nuts by hand.
2. Install the master cylinder assembly to the brake booster assembly and tighten mounting nuts to the specified torque.

   Tightening torque : 14 N·m (1.4 kg-m, 10 ft-lb)

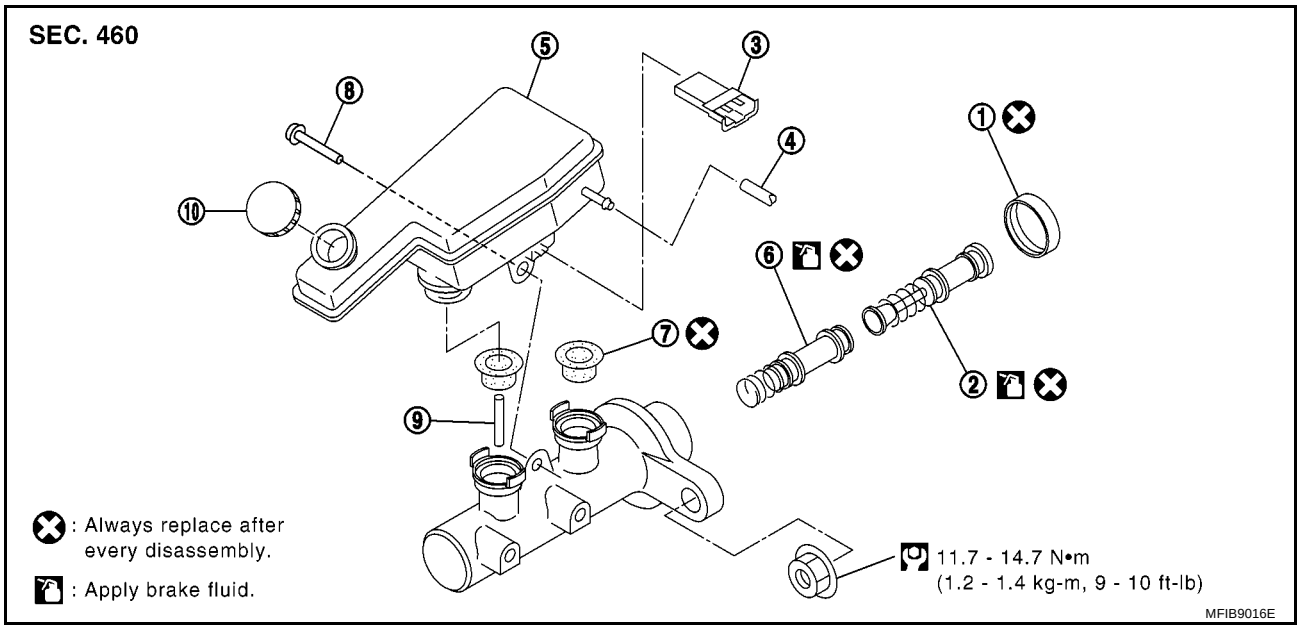
3. Tighten flare nuts of the brake tube to the specified torque.

   Tightening torque : 16.2 N·m (1.7 kg-m, 12 ft-lb)

4. Install the clutch reservoir hose. (M/T models)
5. Add new brake fluid. Refer to BR-9, "Drain and Refill" .
6. Bleed the air. Refer to BR-10, "Bleeding Brake System" .

Disassembly and Assembly

EFS002GH



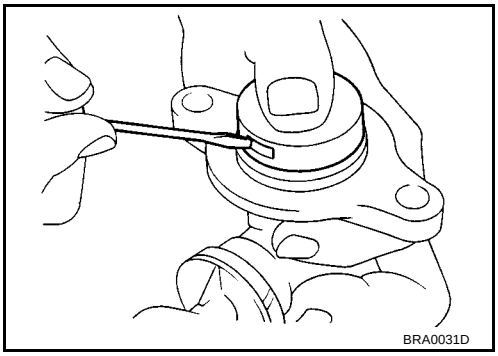
1. Stopper cap
2. Primary piston assembly
3. Fluid level sensor harness connector
4. Clutch reservoir hose (M/T models)
5. Reservoir tank
6. Secondary piston assembly
7. Grommet
8. Screw
9. Piston stopper
10. Reservoir tank cap

DISASSEMBLY

CAUTION:

Remove master cylinder reservoir tank only when necessary.

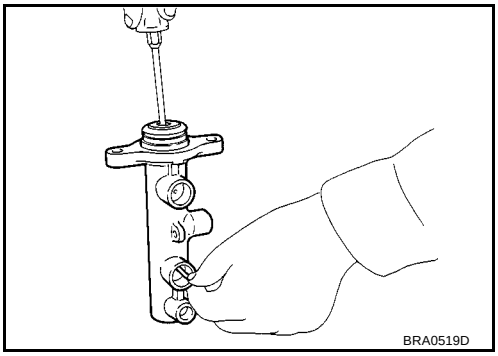
1. As shown in the figure, use a screwdriver to lift up the stopper cap hooks and remove the stopper cap from the master cylinder.



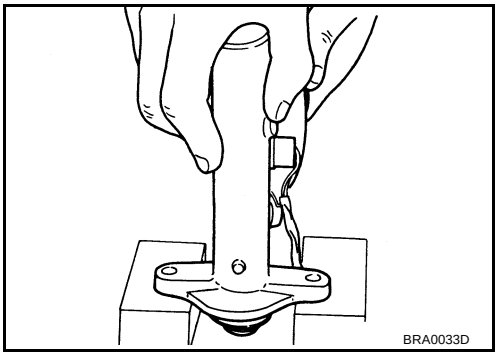
2. Remove reservoir tank mounting screw from cylinder body.
3. Remove reservoir tank and grommet from cylinder body.
4. Using a flat-bladed screwdriver, press and hold piston as shown in the figure. Remove piston stopper from secondary tank boss hole in the cylinder body.

   CAUTION:

   Be careful not to damage the inner wall of the cylinder.
5. Carefully pull the primary piston assembly straight out to prevent cylinder inner wall from being damaged.



6. Tap the flange against a soft block such as wood, and carefully pull the secondary piston assembly straight out to prevent cylinder inner wall from damage.



INSPECTION AFTER DISASSEMBLY

- Check inner wall of master cylinder for damage, wear, corrosion, and pinholes. Replace cylinder if any non-standard condition is detected.

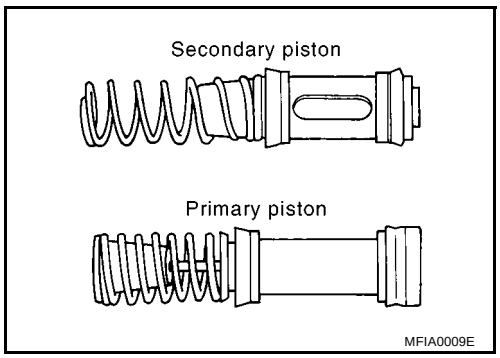
ASSEMBLY

CAUTION:

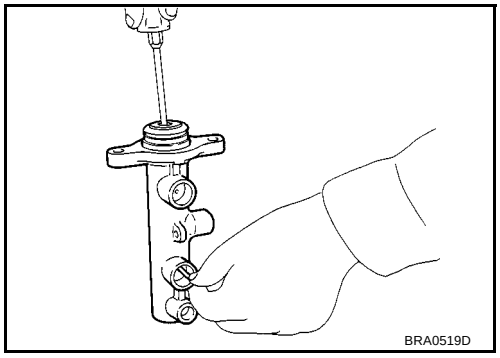
- **Never use mineral oils such as kerosene or gasoline during the cleaning and assembly processes.**
- **Make sure there is no foreign material such as dirt and dust on cylinder inner wall, piston, and cup seal. Be careful not to damage the parts with a service tool when assembling.**
- **Do not drop the parts. Do not use any dropped parts.**

1. Apply brake fluid to the cylinder inner wall body and contact surface of the piston assembly.
2. Insert the secondary piston assembly and primary piston assembly into the cylinder body in this order.

   CAUTION:
   - **Do not reuse primary and secondary piston assemblies.**
   - **Pay attention to direction of piston cups, and insert straight to prevent the cup from being caught by the inner wall of the cylinder.**
   - **Do not disassemble the new part inner kit. Always replace it as a complete assembly.**



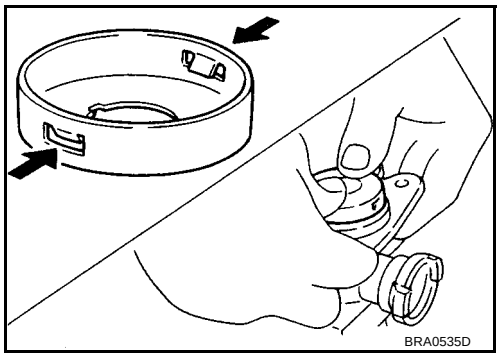
3. Visually check secondary piston slit position through cylinder body secondary tank boss hole and install piston stopper.



4. While holding the piston with the stopper cap, press the stopper cap fully until its tabs are engaged with the groove on the cylinder body to install.

   CAUTION:
   Do not reuse the stopper cap.
5. Apply brake fluid to a grommet, and press it into cylinder body.

   CAUTION:
   Do not reuse the grommet.
6. Install reservoir tank and reservoir tank mounting screw to cylinder body.



BRAKE BOOSTER

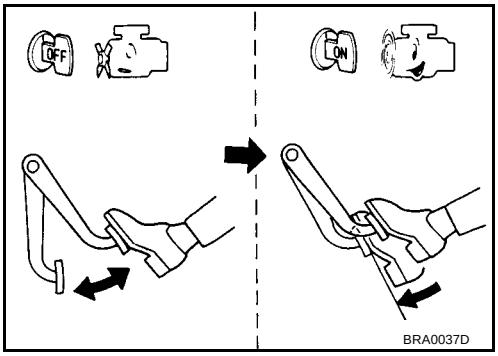
PFP:47200

On-Vehicle Service

EFS002GI

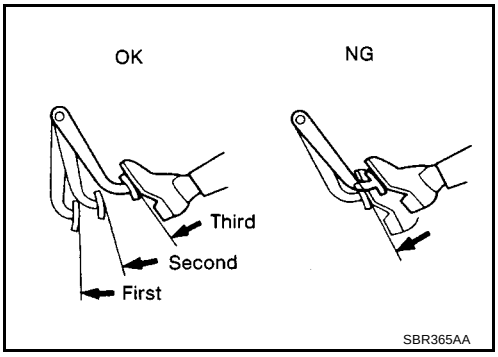
OPERATING CHECK

- Depress brake pedal several times with engine off, and check that there is no change in pedal stroke.
- Depress brake pedal, then start engine. If pedal goes down slightly, operation is normal.



AIRTIGHTNESS INSPECTION

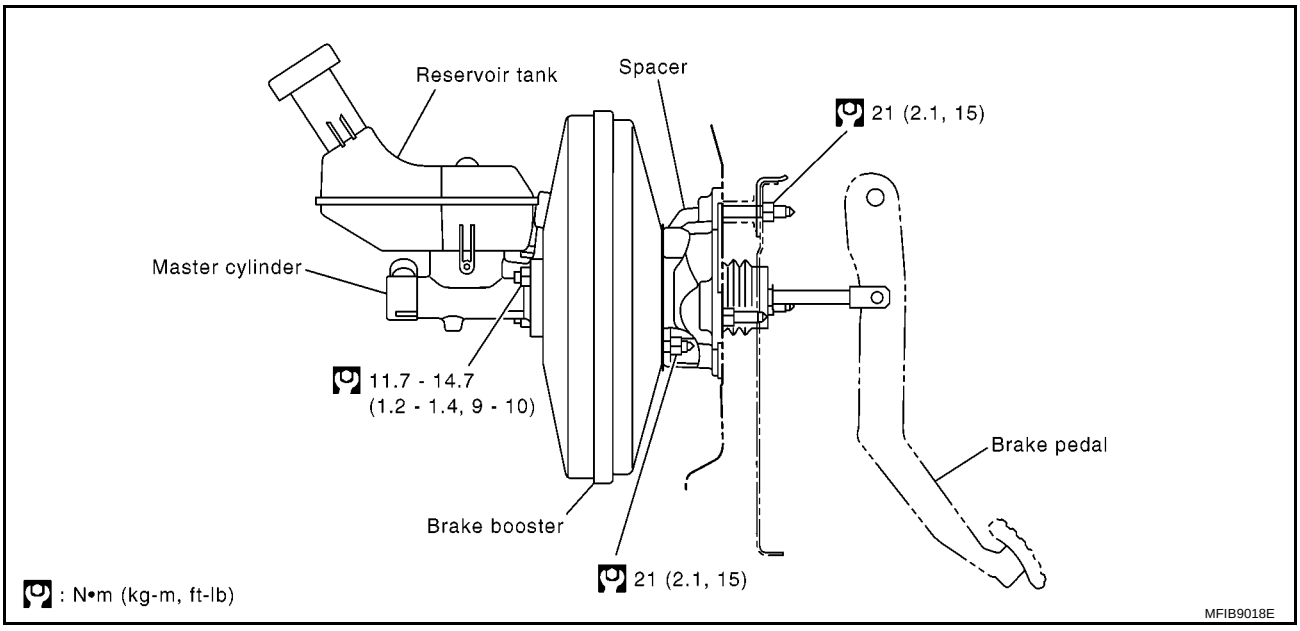
- Start engine, and stop it after one or two minutes. Depress brake pedal several times slowly. If pedal goes further down the first time and gradually rises after second or third time, booster is air-tight.
- Depress brake pedal while engine is running, and stop engine with pedal depressed. If there is no change in pedal stroke after holding pedal down 30 seconds, brake booster is airtight.



Removal and Installation

EFS002GJ

COMPONENTS



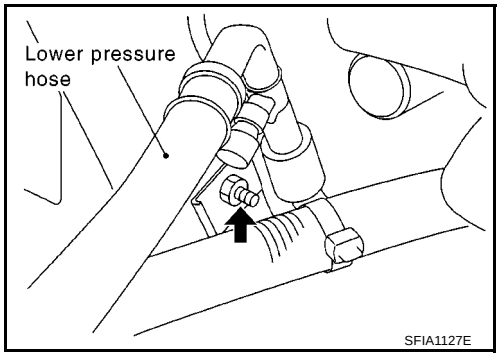
REMOVAL

CAUTION:

- **Be careful not to deform or bend brake piping while removing and installing the brake booster.**
- **Replace clevis pin if it is damaged.**
- **Be careful not to damage brake booster stud bolt threads. If brake booster is tilted or inclined during installation, the dash panel may damage the threads.**
- **Be sure to install check valve in the correct orientation.**

1. Remove the vacuum hose from the brake booster.

2. Remove brake master cylinder. Refer to BR-14, "Removal and Installation" .
3. Remove snap pin and clevis pin from the brake pedal mounting area via the vehicle cabin.
4. Remove brake booster and brake pedal assembly nuts.
5. Remove clutch master cylinder from the panel and pull it out through the engine room side and place it where it will not be in the way. Refer to CL-8, "Removal and Installation" (M/T models).
6. Remove the air conditioner lower pressure hose holding bracket.
7. Remove cowl top cover. Refer to EI-10, "Removal and Installation" .
8. Remove booster assembly from engine room.



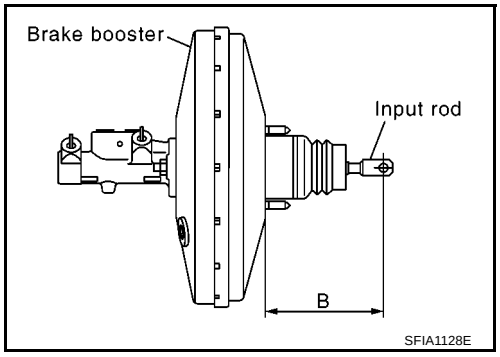
INSTALLATION

1. Check input rod length so that length B (in the figure) satisfies the specified value.

Length B standard

LHD models : 158.25 mm (6.23 in)

RHD models : 115.35 mm (4.54 in)



2. Install booster assembly in the vehicle.

CAUTION:

Be sure to install the gasket between the booster assembly and the vehicle.

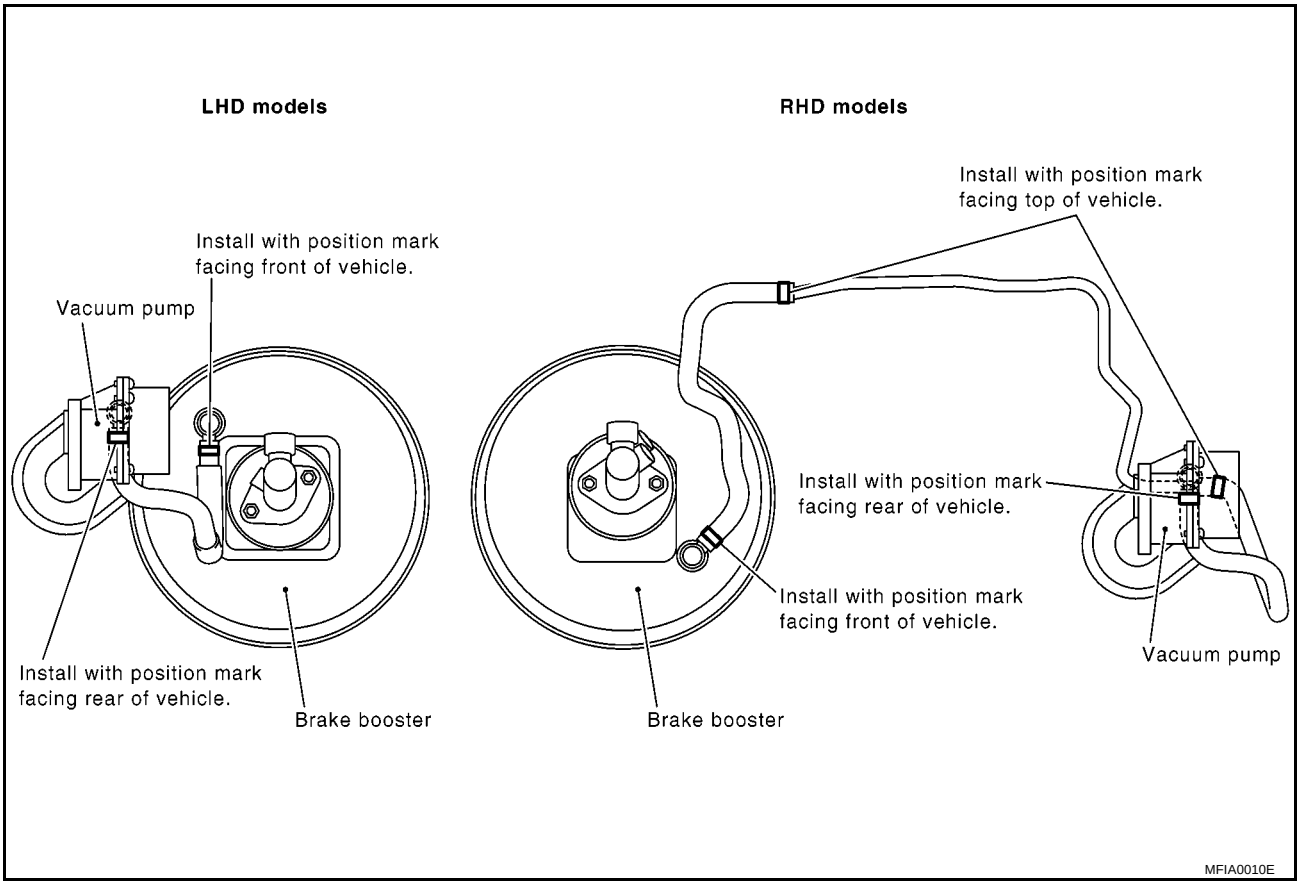
3. Connect the brake pedal with the clevis of the input rod.
4. Install nuts to booster assembly and tighten to the specified torque.
5. Install brake master cylinder to the booster assembly. Refer to BR-14, "Removal and Installation" .
6. Install the clutch master cylinder. Refer to CL-8, "Removal and Installation" (M/T models).
7. Install the air conditioner lower pressure hose holding bracket.
8. Install cowl top cover. Refer to EI-10, "Removal and Installation" .
9. Bleed air. Refer to BR-10, "Bleeding Brake System" .

VACUUM LINES

PFP:41920

Components

EFS005VX



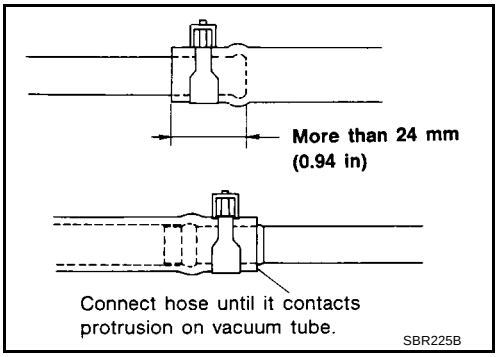
Removal and Installation

EFS002G4

VACUUM HOSE

CAUTION:

- **Because vacuum hose contains a check valve, it must be installed in the correct orientation. Refer to the stamp or label to confirm correct installation. The brake booster will not operate normally if the hose is installed in the wrong direction.**
- **Insert the vacuum hose for at least 24 mm (0.94 in).**
- **Never use lubricating oil during assembly.**



VACUUM PUMP

For information regarding vacuum pump removal and installation, refer to EM-137, "VACUUM PUMP" .

Inspection

EFS002G5

VISUAL INSPECTION

Check for improper assembly, damage and aging.

CHECK VALVE INSPECTION

Airtightness Inspection

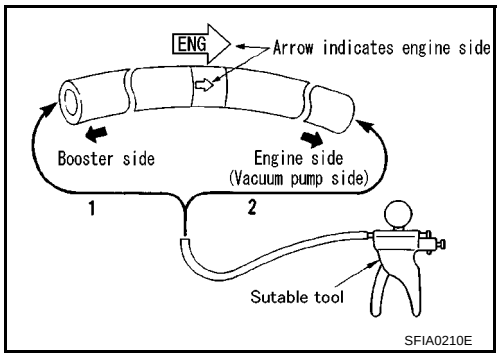
Use a hand-held vacuum pump to check.

When connected to booster side (1):

Vacuum decrease should be within 1.3 kPa (10 mmHg, 0.39 inHg) for 15 seconds under a vacuum of -66.7 kPa (-500 mmHg, -19.69 inHg)

When connected to engine side (2):

Vacuum should not exist.



FRONT DISC BRAKE

PFP:41000

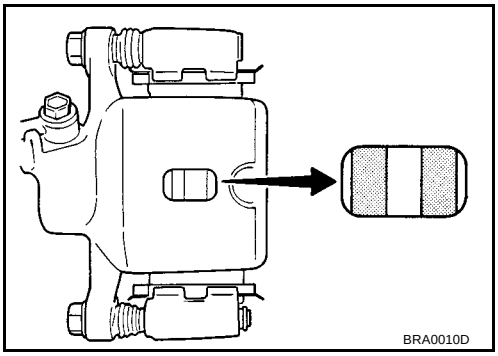
On board Inspection

EFS002GK

PAD WEAR INSPECTION

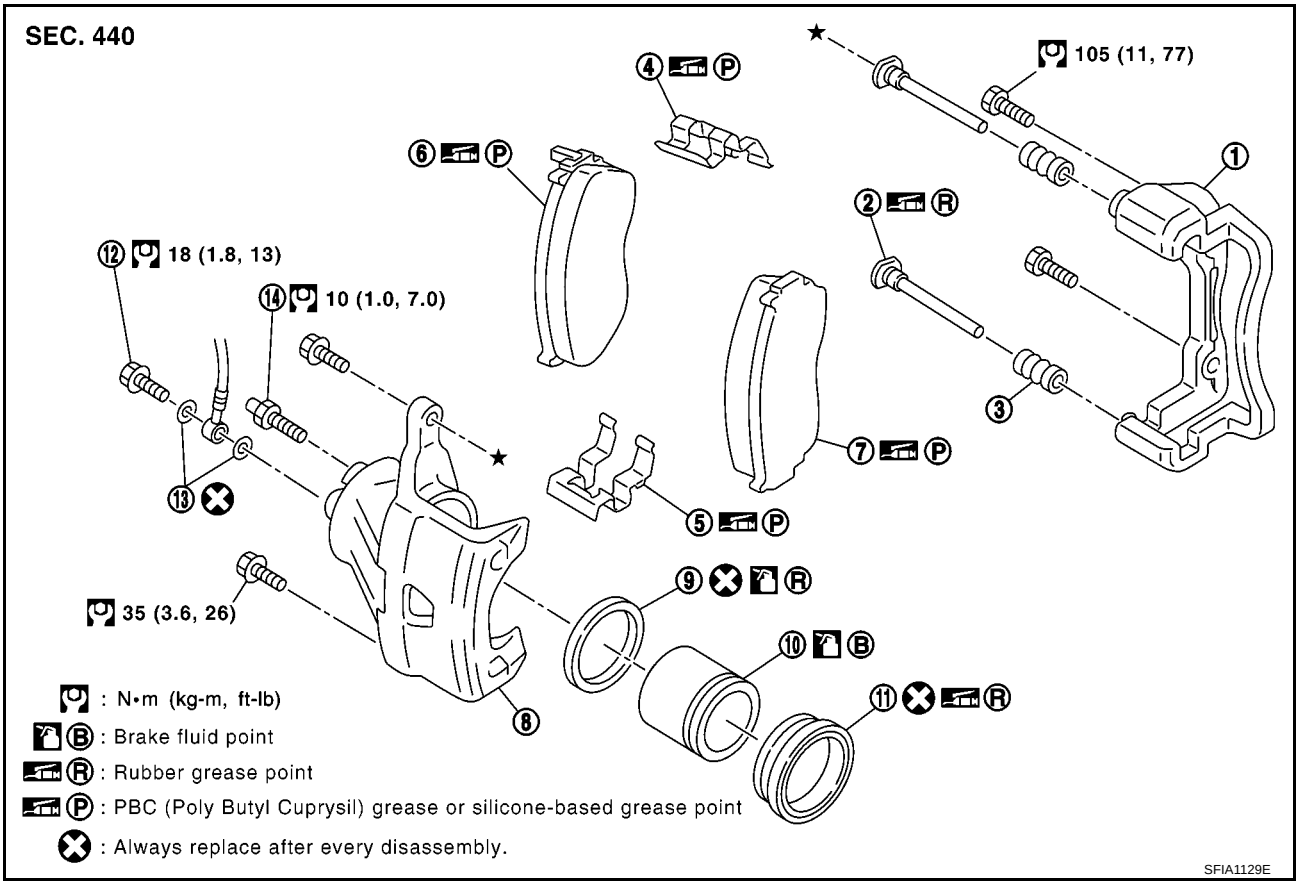
- Inspect the thickness of pad through cylinder body inspection hole. Use a scale for inspection if necessary.

Standard thickness : 12.4 mm (0.488 in)
Wear limit thickness : 2.0 mm (0.079 in)



Components

EFS002GL



1. Torque member	2. Sliding pin	3. Pin boot
4. Pad retainer (upper)	5. Pad retainer (lower)	6. Inner pad
7. Outer pad	8. Cylinder body	9. Piston seal
10. Piston	11. Piston boots	12. Union bolt
13. Copper washer	14. Air bleeder	

CAUTION:

- **Clean dust on the caliper and brake pad with a vacuum dust collector. Do not blow with compressed air.**
- **While removing the cylinder body, do not depress the brake pedal because the piston will pop out.**
- **Do not remove brake hose and torque member bolts unless disassembling or replacing caliper assembly. Hang cylinder body with a wire so that brake hose is not under tension.**
- **Be careful not to damage the piston boot. Do not allow brake fluid to get on the rotor.**

Removal and Installation of Brake Pad

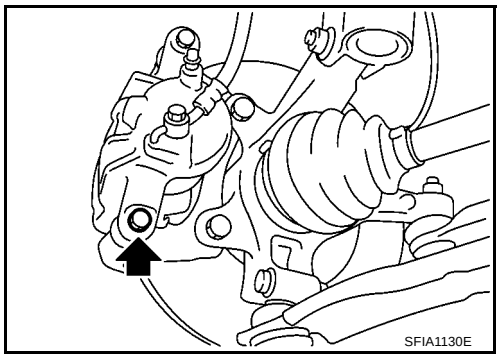
EFS002GM

REMOVAL

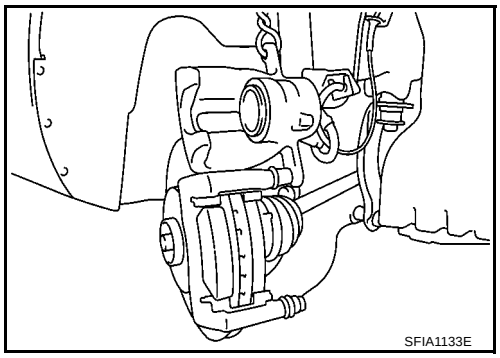
CAUTION:

Always replace the inner cover and outer shim as a set when replacing the brake pads.

1. Remove tyre from vehicle.
2. Remove brake master cylinder reservoir tank cap.
3. Remove lower sliding pin bolt.



4. Hang cylinder body with a wire, and remove pads and pad retainers from torque member.



INSTALLATION

1. Apply PBC (Poly Butyl Cuprysil) or silicone-based grease on inner pad (rear surface) and outer pad (rear surface).
2. Apply PBC (Poly Butyl Cuprysil) or silicone-based grease to pad contact surface on pad retainer. Install pad retainers and pads to the torque member.
3. Install cylinder body to torque member.

   CAUTION:

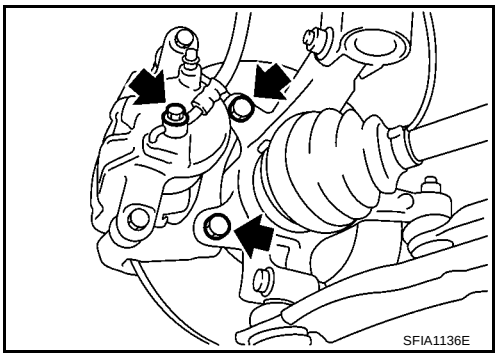
   When replacing pads with new ones, press in piston until pads can be installed. In this case, carefully monitor brake fluid level in the reservoir tank because brake fluid will return to the reservoir tank of master cylinder.
4. Insert the lower sliding pin bolt to tighten to the specified torque.
5. Check brake for drag.

Removal and Installation of Brake Caliper Assembly

EFS002GN

REMOVAL

1. Remove tyre from vehicle.
2. Drain brake fluid. Refer to BR-9, "Drain and Refill" .
3. Remove union bolts and torque member bolts, and remove brake caliper assembly.



INSTALLATION

CAUTION:

- **Refill with new brake fluid “DOT 3” or “DOT 4”.**
- **Do not mix different types of brake fluid (DOT 3, DOT 4).**
- **Never reuse the drained brake fluid.**

1. Install brake caliper assembly to the vehicle, and tighten bolts on torque member to the specified torque.

   CAUTION:

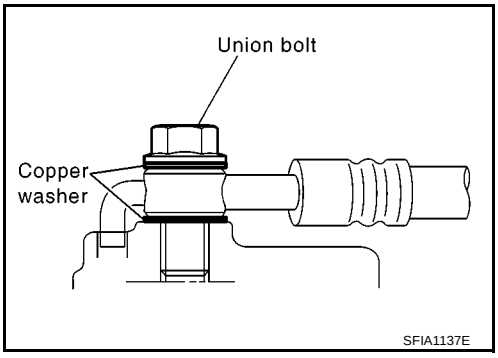
   Before installing brake caliper assembly, wipe off oil and grease on the nut washer seats and brake caliper assembly mounting surface.

2. Install brake hose to the brake caliper assembly, and tighten union bolts to the specified torque.

   CAUTION:

   - **Do not reuse the copper washer for union bolts.**
   - **Assemble brake hose securely to the cylinder body mounting hole.**

3. Add new brake fluid. Refer to BR-9, "Drain and Refill" .
4. Bleed air. Refer to BR-10, "Bleeding Brake System" .



Disassembly and Assembly of Brake Caliper Assembly

EFS002GO

DISASSEMBLY

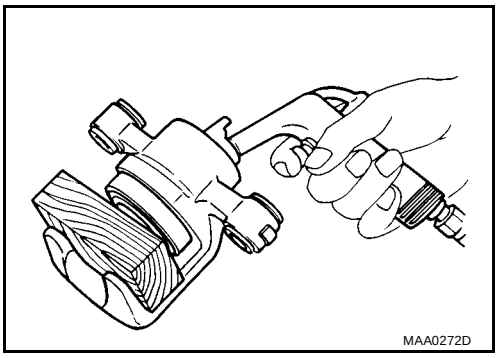
WARNING:

Be careful not to pinch your fingers in the piston.

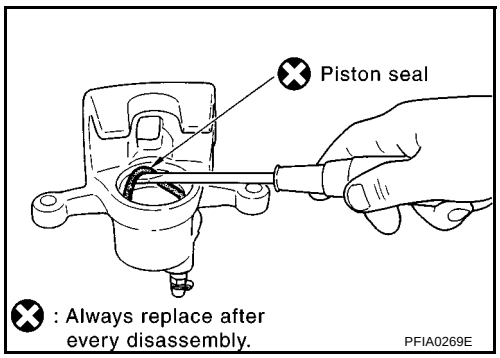
CAUTION:

Be careful not to damage cylinder inner wall.

1. Place a wooden block as shown in the figure, and blow air from the union bolt mounting hole to remove piston and piston boots.



2. Using a flat-bladed screwdriver, remove piston seals.



BRAKE CALIPER INSPECTION

Cylinder Body

CAUTION:

Use new brake fluid to clean. Do not use mineral oils such as gasoline or kerosene.

Check the inner wall of the cylinder for wear or damage. If any non-standard condition is detected, replace the cylinder.

Torque Member

Check for wear, cracks, and damage. If any non-standard condition is detected, replace the applicable part.

Piston

CAUTION:

Piston sliding surface is plated. Do not polish with sandpaper.

Check piston surface for corrosion, wear, and damage. If any non-standard condition is detected, replace applicable part.

Sliding Pin and Pin Boots

Check sliding pin and pin boot for wear, damage, and cracks. If damage or deformation is present, replace the affected part.

ASSEMBLY

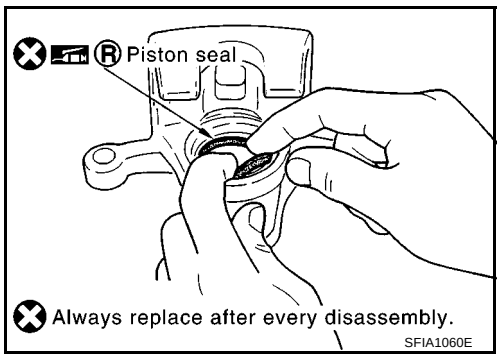
CAUTION:

Do not use rubber grease during assembly.

1. Apply NISSAN rubber lubricant (KRE1200030) or equivalent to the piston seals, and install them to the cylinder body.

   CAUTION:

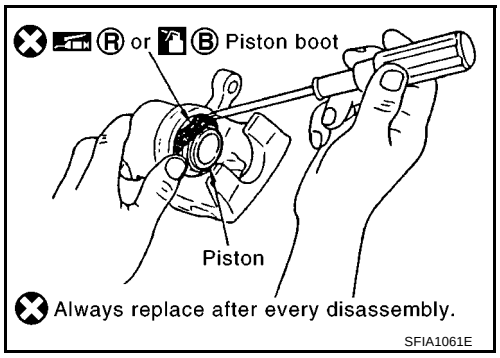
   Do not reuse the piston seals.



2. Apply brake fluid, NISSAN rubber lubricant (KRE1200030) or equivalent to the piston boot, cover the end of the piston with the piston boot, evenly insert the piston boot into the cylinder side, and make sure it is in the cylinder body groove.

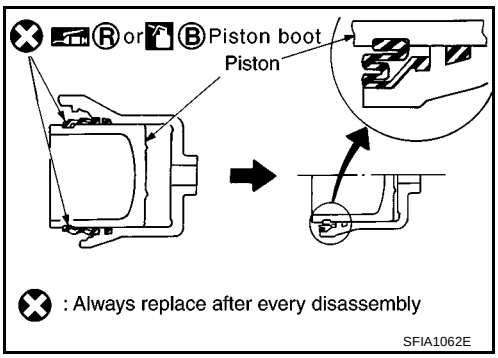
   CAUTION:

   Do not reuse the piston boot.



3. Apply brake fluid, NISSAN rubber lubricant or equivalent to piston. Press piston into cylinder body by hand. Assemble piston side lip on piston boot properly into groove on piston.

CAUTION:
Press the piston evenly and change the pressing point to prevent the inner wall of the cylinder from being rubbed.



Removal and Installation of Disc Rotor

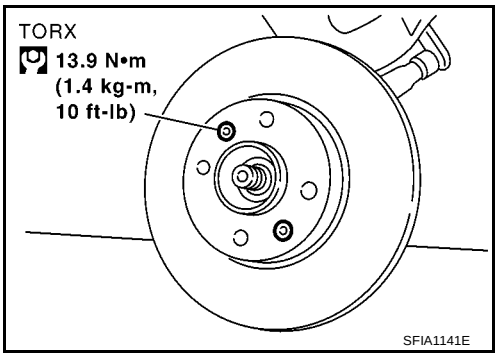
EFS002GP

REMOVAL

1. Remove tyre from vehicle.
2. Remove brake caliper assembly. Refer to BR-23, "REMOVAL" .

CAUTION:
- **Brake hose need not be disconnected brake caliper.**
- **Suspend brake caliper with wire so as not to stretch brake hose.**
- **Be careful not to depress brake pedal, or caliper piston will pop out.**
- **Make sure brake hose is not twisted.**

3. Remove disc rotor mounting screw (torx), then remove disc rotor from front axle.



INSTALLATION

- Install in the reverse order of removal. Tighten the mounting screw (torx) to the specified torque.

CAUTION:
Do not use any disc rotors that have once dropped.

DISC ROTOR INSPECTION

Visual Inspection

Check surface of the disc rotor for uneven wear, cracks, and serious damage. If any non-standard condition is detected, replace applicable part.

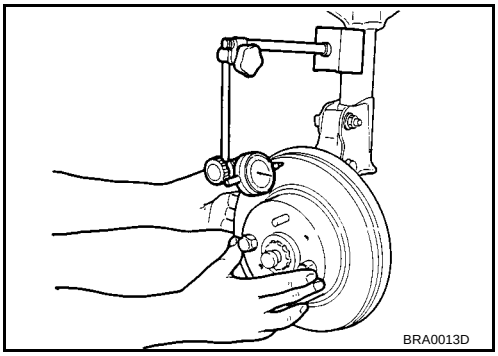
Runout Inspection

1. Using wheel bolts, fix disc rotor to the wheel hub. (2 or more positions)
2. Using a dial indicator, check the runout.

Measurement position
: At a point 10 mm (0.39 in) from outer edge of the disc
Runout limit: 0.058 mm (0.0023 in) or less

NOTE:
Make sure that wheel bearing axial end play is within the specifications before measuring. Refer to FAX-6, "FRONT WHEEL BEARING" .

3. If the runout is outside the limit, find the minimum runout point by shifting the mounting positions of the disc rotor and wheel hub by one hole.

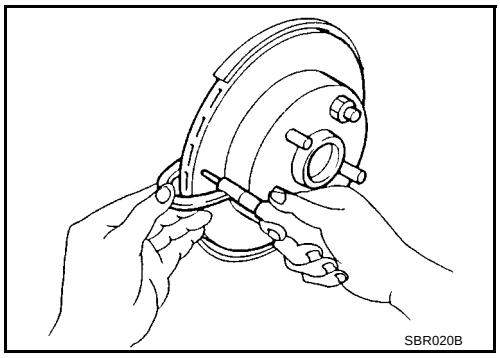


4. If the runout is still out of specification, turn rotor with on-car brake lathe (“MAD DL-8700”, “AMMCO 700 and 705” or equivalent).

Thickness Inspection

Using a micrometer, check thickness of the disc rotor. If thickness is outside the standard, replace disc rotor.

Standard thickness	**: 22.0 mm (0.87 in)**
Wear limit	**: 20.0 mm (0.79 in)**
Maximum uneven wear (measured at 8 positions)	**: 0.03 mm (0.0012 in) or less**



BRAKE BURNISHING PROCEDURE

Burnish the brake contact surfaces according to the following procedure after refinishing or replacing drums or rotors, after replacing pads or linings, or if a soft pedal occurs at very low mileage.

CAUTION:

Only perform this procedure under safe road and traffic conditions. Use extreme caution.

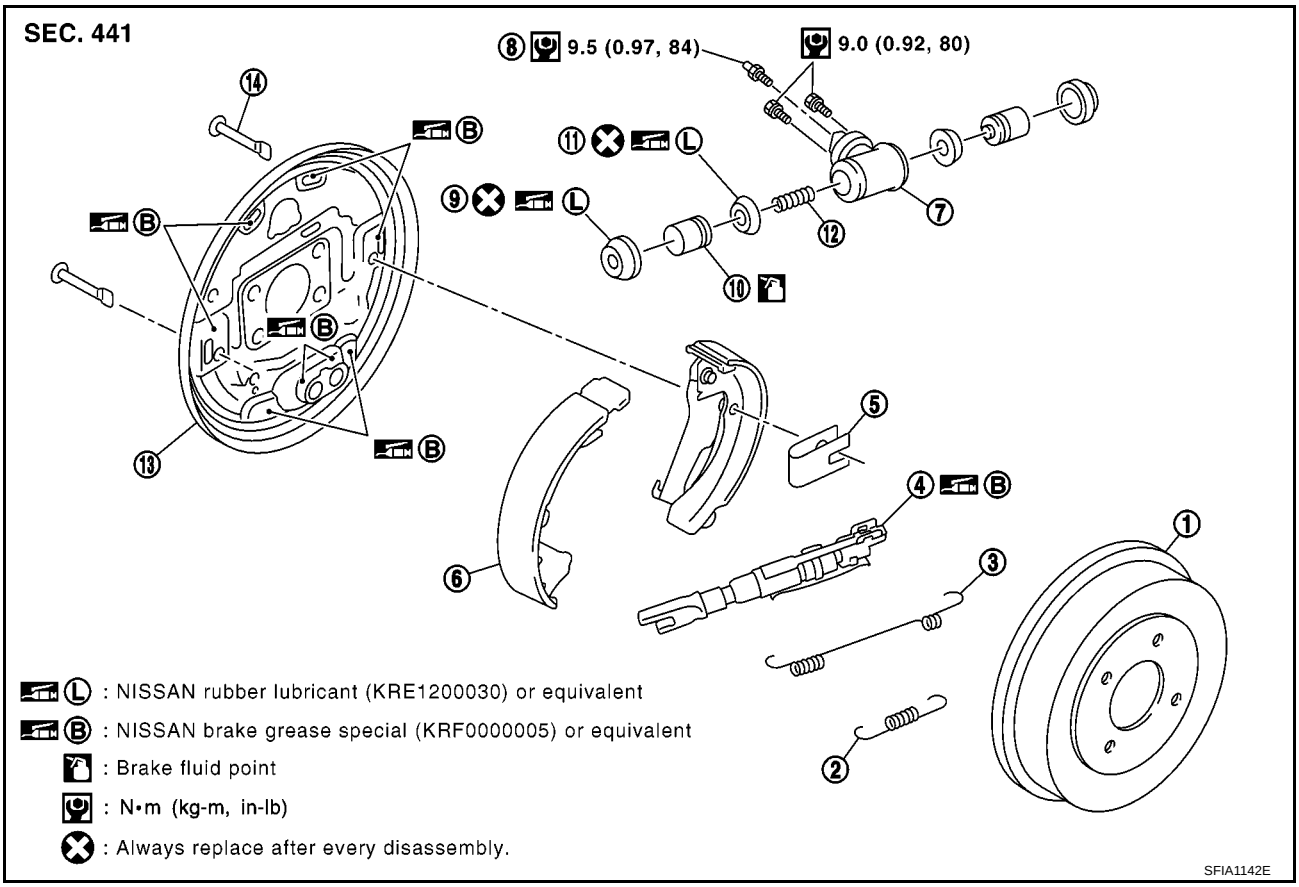
1. **Drive the vehicle on a straight smooth road at 50 km/h (31MPH).**
2. **Use medium brake pedal/foot effort to bring the vehicle to a complete stop from 50 km/h (31 MPH). Adjust brake pedal/foot pressure such that vehicle stopping time equals 3 to 5 seconds.**
3. **To cool the brake system, drive the vehicle at 50 km/h (31 MPH) for 1 minute without stopping.**
4. **Repeat steps 1 to 3, 10 times or more to complete the burnishing procedure.**

REAR DRUM BRAKE

PFP:43206

Components

EFS002GQ



1.	Drum	2.	Return spring (lower)	3.	Return spring (upper)
4.	Adjuster	5.	Retaining clip	6.	Shoe
7.	Cylinder body	8.	Air bleeder	9.	Boots
10.	Piston	11.	Piston cup	12.	Spring
13.	Back plate	14.	Shoe hold pin		

WARNING:

Clean dust on drum and back plate with a vacuum dust collector. Do not blow with compressed air.

CAUTION:

- **While removing drum, never depress brake pedal because the piston will pop out.**
- **Make sure parking brake lever is released completely.**

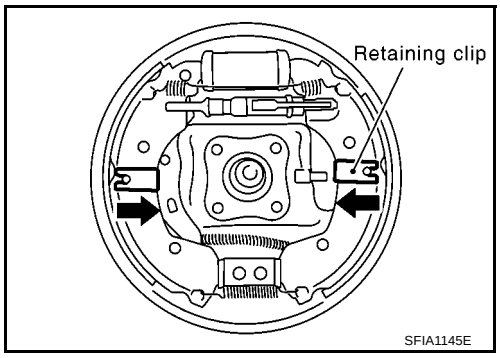
Removal and Installation of Drum Brake Assembly

EFS002GR

REMOVAL

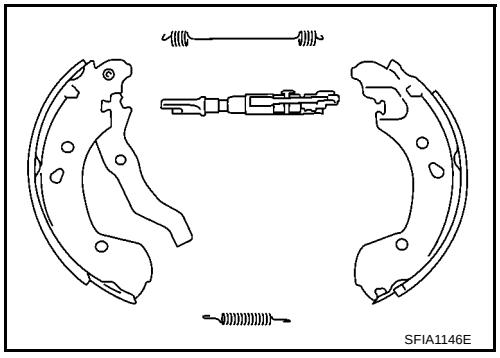
1. Remove tyre from vehicle.
2. With the parking brake lever released, remove the brake drum. Refer to RAX-5, "Removal and Installation" .
3. While pushing and rotating the retainer, pull out shoe hold pin, and remove shoe assembly.

   CAUTION:
   Do not damage the wheel cylinder piston boot.



4. Remove the parking brake cable from the operating lever.

   CAUTION:
   Do not bend the parking brake cable.
5. Disassemble the shoe assembly (shoe, springs, spacer, adjuster).

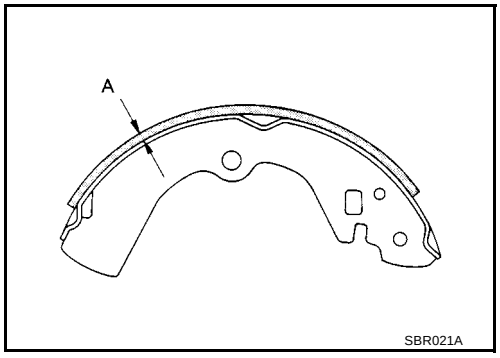


INSPECTION AFTER REMOVAL

Lining Thickness Inspection

Check lining thickness.

Standard thickness	**: 4.5 mm (0.177 in)**
Wear limit of thickness (A)	**: 1.5 mm (0.059 in)**

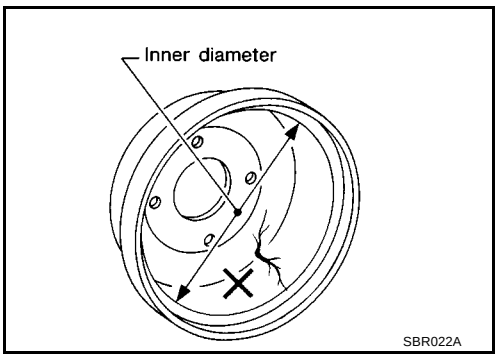


Drum Inner Diameter Inspection

Check the drum inside diameter.

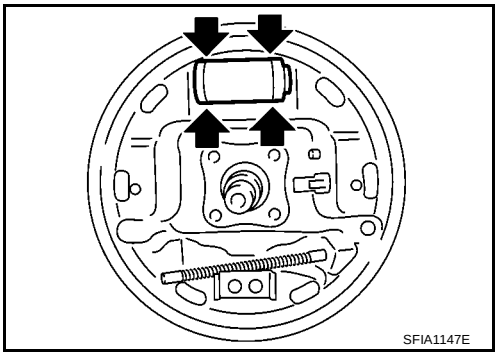
Measurement area: lining contact surface (center)

Standard inner diameter : 202 mm (7.95 in) dia.
Wear limit of inner diameter : 203.2 mm (8.0 in) dia.



Wheel Cylinder Leakage Inspection

- Check wheel cylinder for brake fluid leakage.
- Check for wear, damage, and looseness. If any non-standard condition is found, replace it.

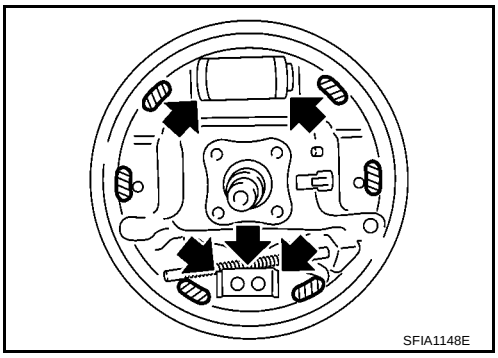


Other Inspections

- Check inside of the drum for excessive wear, damage, and cracks.
- Check lining for excessive wear, damage, and peeling.
- Check shoe sliding surface for excessive wear and damage.
- Check return spring for sagging.
- Check back plate for damage, cracks, and deformation.
- Check bolts on the back plate for looseness.

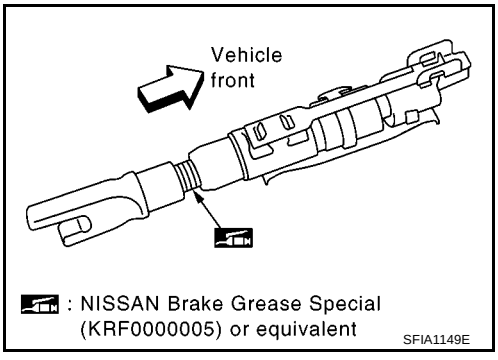
INSTALLATION

1. Apply Nissan brake grease special (KRF0000005) or equivalent to brake shoes sliding surfaces (the shaded areas) and other parts on the back plate as indicated by arrows in the figure.



2. Shorten adjuster by rotating it.

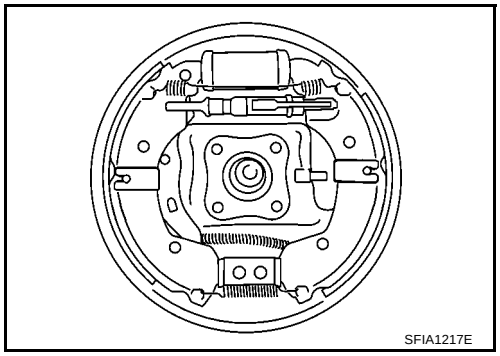
Wheel	Screw
Left	Left-hand thread
Right	Right-hand thread



3. Assemble the shoe, springs, adjuster and spacer to form the shoe assembly.

4. Connect the parking brake cable to the operating lever.
5. Install the shoe assembly. After assembly, be sure that each part is installed properly.

   CAUTION:
   Do not damage the wheel cylinder piston boot.
6. Install the brake drum. Refer to RAX-5, "Removal and Installation" .



SFIA1217E

7. When installing a new wheel cylinder or overhauling wheel cylinder, bleed air. Refer to BR-10, "Bleeding Brake System" .
8. Adjust the parking brake. Refer to PB-3, "Adjustment" .

Removal and Installation of Wheel Cylinder

EFS002GS

REMOVAL

1. Drain brake fluid. Refer to BR-9, "Drain and Refill" .
2. Remove the rear brake shoe assembly.
3. Remove the brake tube from the wheel cylinder.
4. Remove bolts on the wheel cylinder, and then remove wheel cylinder from the back plate.

INSTALLATION

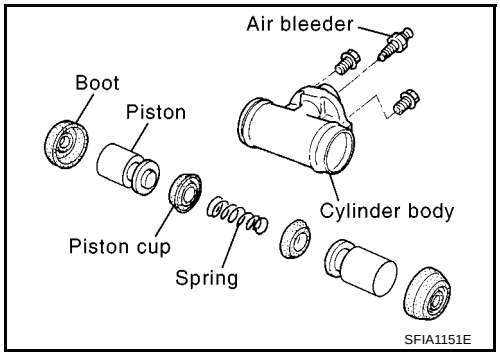
- Install in the reverse order of removal. Tighten bolts to the specified torque. Refer to BR-27, "Components" .
- Refill with new brake fluid and bleed air. Refer to BR-10, "Bleeding Brake System" .

Disassembly and Assembly of Wheel Cylinder

EFS002GT

DISASSEMBLY

1. Remove dust boots at the right and left of the wheel cylinder, and pull out the pistons from cylinder.
2. Remove the piston cups from the pistons.

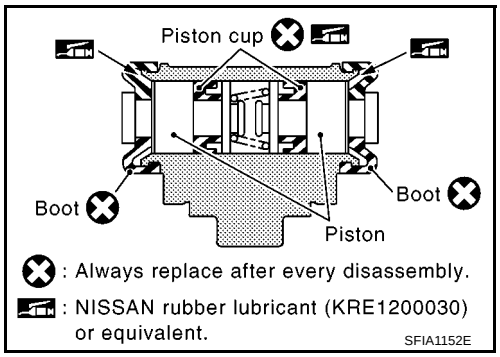


SFIA1151E

ASSEMBLY

CAUTION:
Do not use rubber grease during assembly.

1. Apply brake fluid to the piston sliding surface on the wheel cylinder.
2. Apply NISSAN rubber lubricant (KRE1200030) or equivalent to the cups and boots and assemble as shown in the figure.



SFIA1152E

Wheel Cylinder Inspection

EFS002GU

Check the pistons, piston cups, and inner wall of the cylinder for wear, corrosion, and damage. If a failure is detected, replace the applicable part.

CAUTION:

When inserting the piston, be careful not to scratch the cylinder.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

General Specifications

EFS002FH

Unit: mm (in)

Front brake	Brake model	CL22
	Rotor outer diameter × thickness	260 × 22.0 (10.24 × 0.87)
	Pad (thickness)	12.4 (0.488)
	Piston diameter	53.95 (2.124)
Rear brake	Brake model	LT20
	Drum inner diameter	203.2 (8.0)
	Lining Length × width × thickness	195 × 38 × 4.5 (7.68 × 1.50 × 0.177)
	Cylinder bore diameter	19.05 (3/4)
Master cylinder	Cylinder bore diameter	23.81 (0.94)
Control valve	Valve model	Linkage type load sensing valve

Brake pedal height (from dash panel top surface)	LHD	M/T models	161 - 171 mm (6.34 - 6.73 in)
		A/T models	171 - 181 mm (6.73 - 7.13 in)
	RHD	M/T models	156 - 166 mm (6.14 - 6.54 in)
		A/T models	166 - 176 mm (6.54 - 6.93 in)
Depressed pedal height [under a force of 490 N (50 kg, 110 lb) with the engine running]		M/T models	More than 80 mm (3.15 in)
		A/T models	More than 85 mm (3.35 in)
Clearance between the stopper rubber and the threaded end of stop lamp switch.			0.74 - 1.96 mm (0.029 - 0.077 in)
Pedal play			3 - 11 mm (0.12 - 0.43 in)

Brake Booster

EFS002FJ

Vacuum type

Vacuum leakage [at vacuum of – 66.7 kPa (– 500 mmHg, –19.69 inHg)]		Within 3.3 kPa (25 mmHg, 0.98 inHg) of vacuum for 15 seconds
Input rod installation standard dimension	LHD models	158.25 mm (6.23 in)
	RHD models	115.35 mm (4.54 in)

Check Valve

EFS002FK

Vacuum leakage [at vacuum of – 66.7 kPa(– 500 mmHg, – 19.69 inHg)]	within 1.3 kPa (10 mmHg, 0.39 inHg) of vacuum for 15 seconds

Front Disc Brake

EFS002FL

Brake model		CL22
Brake pad	Standard thickness (new)	12.4 mm (0.488 in)
	Repair limit thickness	2.0 mm (0.079 in)
Disc rotor	Standard thickness (new)	22.0 mm (0.87 in)
	Repair limit thickness	20 mm (0.79 in)
	Maximum uneven wear (measured at 8 positions)	0.03 mm (0.0012 in) or less
	Runout limit (with it attached to the vehicle)	0.058 mm (0.0023 in) or less

Rear Drum Brake

EFS002FM

Brake model		LT20
Lining	Standard thickness (new)	4.5 mm (0.177 in)
	Repair limit thickness	1.5 mm (0.059 in)
Drum	Standard inner diameter (new)	202 mm (7.95 in)
	Repair limit inner diameter	203.2 mm (8.0 in)

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EFS004LN

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

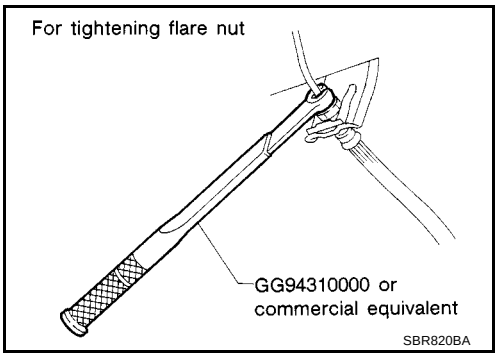
WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harness connectors.**

Precautions for Brake System

EFS004LO

- Recommended fluid is brake fluid “DOT 3” or “DOT 4”.
- Do not reuse the drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Do not use mineral oils such as gasoline or kerosene to clean. They will ruin rubber parts and cause improper operation.
- Using a flare nut torque wrench, securely tighten brake tube flare nuts.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble malfunctioning parts. If any malfunctioning part is found, replace the part with a new one.
- Before working, turn ignition switch OFF and disconnect connectors for ABS actuator and electric unit or battery terminals.
- When installing brake piping, be sure to check tightening torque.



Precautions for Brake Control

EFS004LP

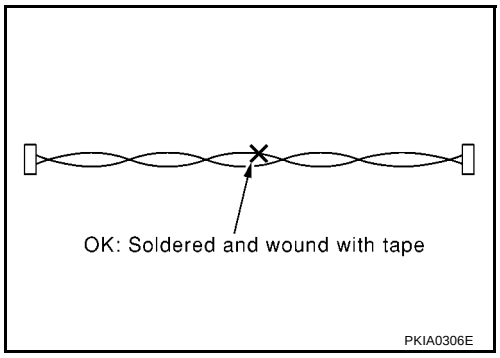
- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- When starting engine, or just after starting vehicle, brake pedal may vibrate or motor operating noise may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from the customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides the electrical system inspection, check booster operation, brake fluid level, and oil leaks.
- If tyre size and type are used in an improper combination, or brake pads are not Genuine Nissan parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near the control unit, ABS system may malfunction or return an error.
- If aftermarket parts (e.g. car stereo equipment, CD player) have been installed, check electrical harnesses for pinches, open, and improper wiring.

Precaution for Harness Repair

EFS005VW

CAN SYSTEM

- Area to be repaired shall be soldered, and wrapped with a tape (be sure that fraying of twisted wire shall be within 110 mm 4.33 in)).



- Do not make a bypass connection to repaired area. (If it is done, branch part will be removed and characteristics of twisted wire will be lost.)

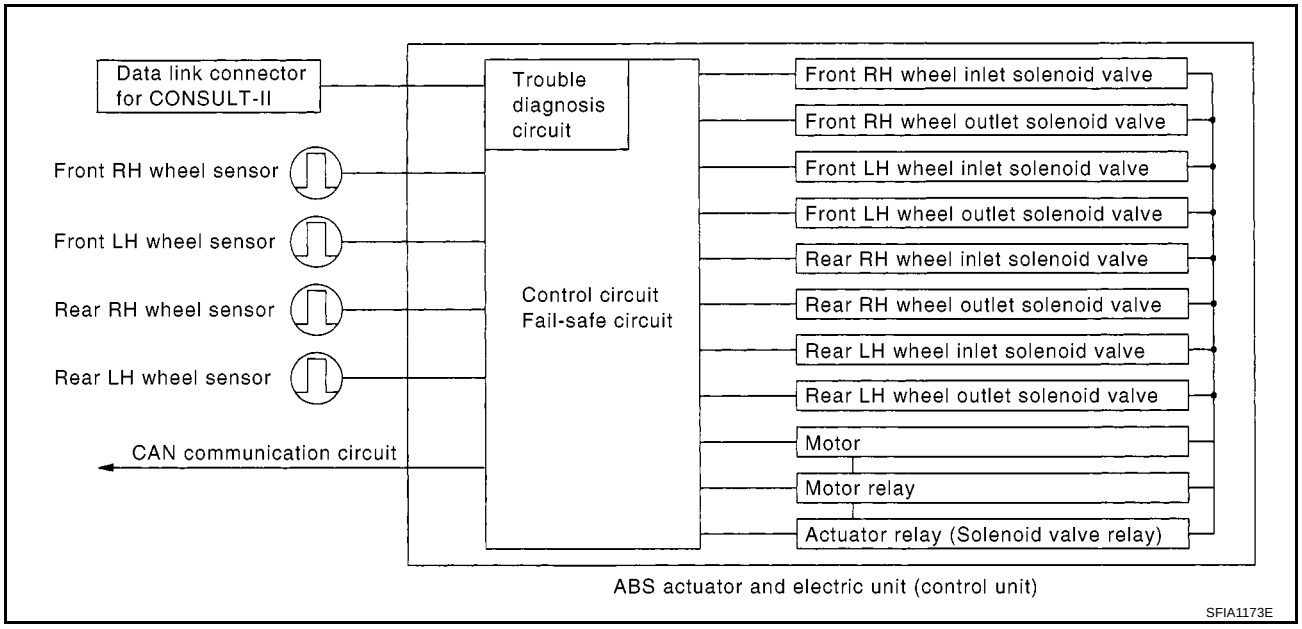
SYSTEM DESCRIPTION

PFP:00000

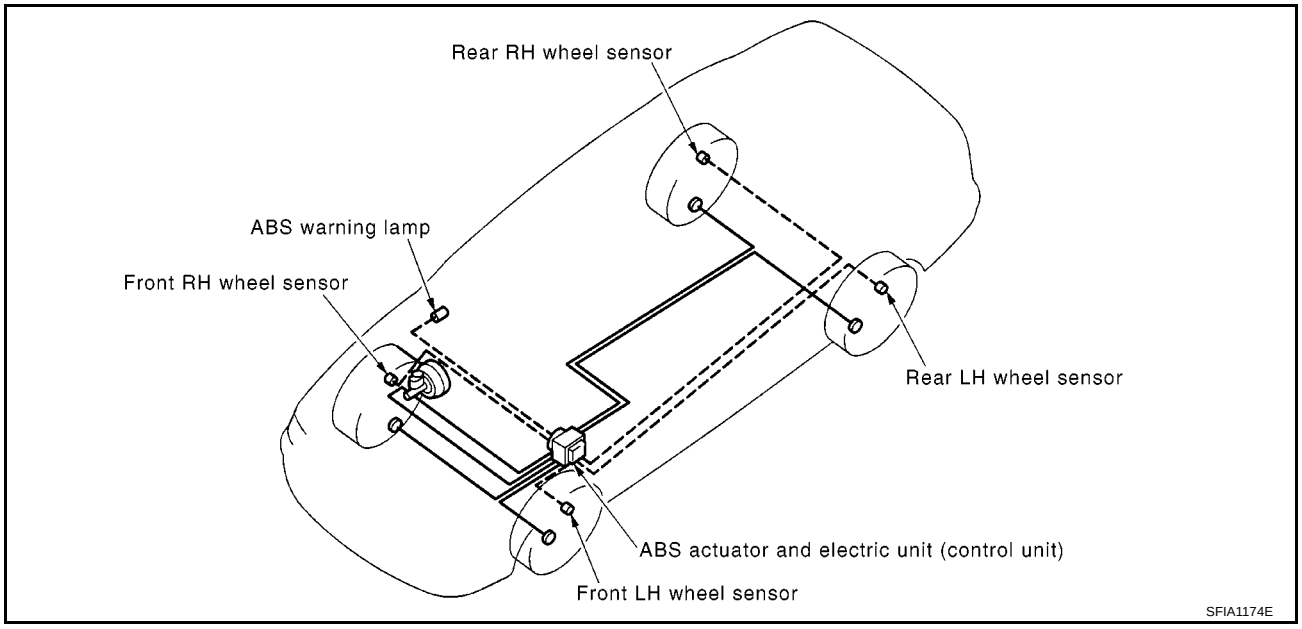
System Diagram

EFS004LR



System Components

EFS004LS



ABS Function

EFS004LT

- Anti-lock Brake System monitors wheel rotation in braking and electronically controls braking force (brake fluid pressure) to prevent wheel locking. Thus, it improves vehicle stability in abrupt braking and allows driver to clear obstacles more easily.
- In the event of an electric system malfunction, the fail-safe function will operate, the vehicle will enter the ABS non-operation state, and ABS warning lamp will come on.
- CONSULT-II can be used to diagnose the electrical system.

EBD Function

EFS004LU

- The electronically controlled braking force distribution unit detects the minute slips that occur in front and rear wheels during braking and uses electronic control to control rear wheel braking force (brake hydraulic pressure) to suppress rear wheel slipping as much as possible to improve stability during braking.
- In the event an electrical system malfunction occurs, the fail-safe function will operate and EBD and ABS will enter non-operational states, and ABS warning lamp and brake warning lamp will come on.
- CONSULT-II can be used to diagnose the electrical system.

Fail-Safe Function

EFS004LV

- If a malfunction occurs in ABS system, “ABS warning lamp” turns ON.
- If a malfunction occurs in EBD, brake warning lamp and ABS warning lamp turn ON.

TROUBLE DIAGNOSIS

PFP:00004

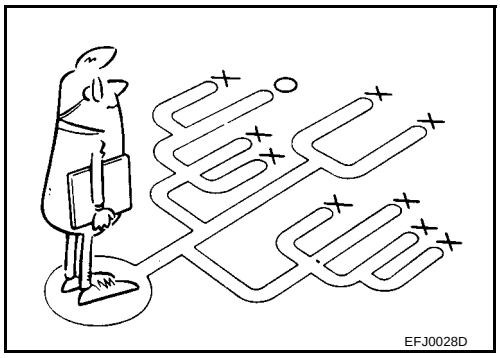
Diagnosis Procedure

EFS004LX

BASIC CONCEPT

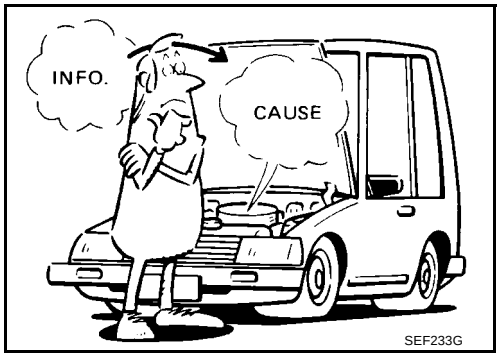
- The most important point in performing trouble diagnosis is to thoroughly understand the vehicle systems (both control and mechanical).
- It is also important to clarify customer concerns before starting the inspection.
  First of all, reproduce the symptom, and understand it fully.
  Ask the customer about his/her complaints carefully. In some cases, it will be necessary to check the symptoms by driving the vehicle with the customer.

  CAUTION:
  Customers are not professional. It is dangerous to make an easy guess like “maybe the customer means that...,” or “maybe the customer mentions this symptom”.



EFJ0028D

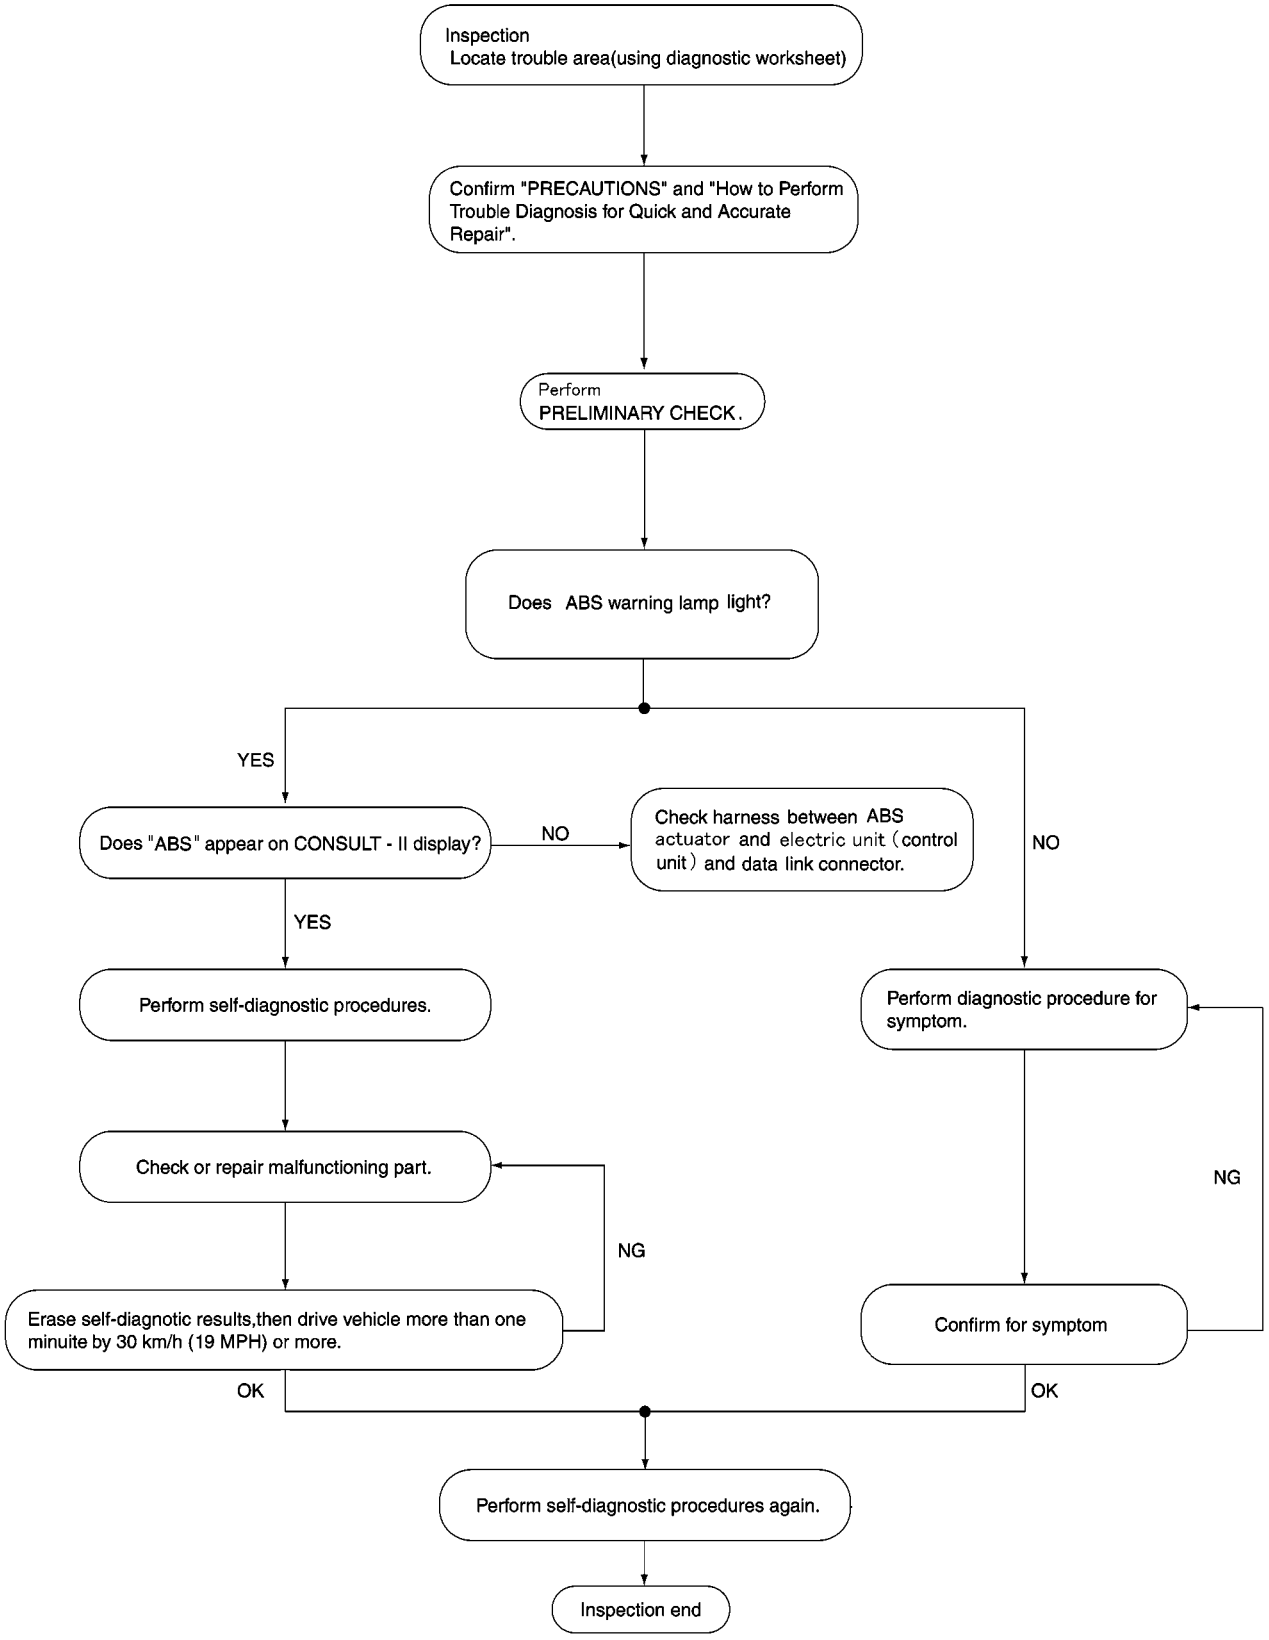
- It is essential to check symptoms right from the beginning in order to repair a error completely.
  For an intermittent error, it is important to reproduce the symptom based on an interview with the customer and past examples. Do not perform an inspection on an ad hoc basis. Most intermittent errors are caused by poor contacts. In this case, it will be effective to shake the suspected harness or connector by hand. When repairs are performed without any symptom diagnosis, no one can judge if the error has actually been eliminated.
- After completing trouble diagnosis, be sure to perform “erase memory”. Refer to BRC-22, "SELF-DIAGNOSIS" .
- For an intermittent error, move the harness or harness connector by hand to check for poor contact or false open circuit.



SEF233G

- Always read the GI section to be aware of the general precautions. Refer to GI-4, "General Precautions" .

DIAGNOSIS FLOW



SFIA0953E

QUESTIONNAIRE

- Complaints against a malfunction vary depending on each person. It is important to clarify the customer complaints.
- Ask the customer about what symptoms are present and under what conditions. Use the information to reproduce the symptom while driving.
- It is also important to use the diagnosis sheet so as not to miss the information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B

EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work. (wheels slip when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

EFS004M1

STANDARDS BY CONSULT-II

CAUTION:

The displayed item is the calculated data by the control unit, so it may indicate a normal value even if an output circuit (harness) is open or shorted.

Monitor item	Display content	Data monitor		Note: Error inspection checklist
		Condition	Reference values for normal operation	
FR LH SENSOR FR RH SENSOR RR LH SENSOR RR RH SENSOR	Vehicle wheel speed	Vehicle stopped	0 (km/h)	BRC-37, "Inspection 1 Wheel Sensor System"
		While driving (Note 1)	Almost in accordance with the speedometer display (within ±10 %)	
STOP LAMP SWITCH	Brake pedal operation	Brake pedal depressed	ON	BRC-41, "Inspection 6 Stop Lamp Switch System"
		Brake pedal not depressed	OFF	
IN SOL	Solenoid valve operation	ABS solenoid activated or fail-safe activated (Note 2)	ON	BRC-39, "Inspection 4 ABS Actuator Relay or ABS Motor Relay Power System"
OUT SOL		Actuator relay is activated and ABS solenoid is not activated	OFF	
ACTUATOR RLY	Actuator relay activated	Vehicle stop (Ignition switch ON)	ON	
		Vehicle stopped (engine running)	ON	
MOTOR RELAY	Motor relay and motor activated	Motor relay and motor activated	ON	
		Motor relay and motor not activated	OFF	
WARN LAMP	ABS warning lamp ON (Note 3)	ABS warning lamp ON	ON	BRC-35, "BASIC INSPECTION 3: ABS WARNING LAMP AND BRAKE WARNING LAMP INSPECTION"
		ABS warning lamp OFF	OFF	
BATTERY VOLT	Battery voltage supplied to control unit	Ignition switch ON	Approximately 10 - 16 V	BRC-38, "Inspection 2 ABS Actuator and Electric Unit Power and Ground System"
INITIAL DIAG	CAN communication condition	CAN communication is normal	OK	BRC-40, "Inspection 5 CAN Communication System"
		CAN communication error	NG	
TRANSMIT DIAG	CAN communication condition	CAN communication is normal	OK	
		CAN communication error	UNKWN	
ECM	CAN communication condition	CAN communication is normal	OK	
		CAN communication error	UNKWN	
EBD SIGNAL	EBD operation signal	EBD is operating	ON	—
		EBD is not operating	OFF	
ABS SIGNAL	ABS operation signal	ABS activated	ON	—
		ABS not activated	OFF	
ABS FAIL SIG	ABS fail signal status	During ABS fail-safe During EBD fail-safe	OFF	ABS system EBD system

NOTE:

1. Confirm tyre pressure is normal.
2. The solenoid turns off when the actuator relay is not operating.
3. ON/OFF timing of ABS warning lamp
   ON: When the switch is turned ON for approximately 1 second or when a malfunction is detected.
   OFF: Approximately 1 second after ignition switch is turned ON (when the system is in normal operation).

CONSULT-II Functions

EFS004M2

CONSULT-II FUNCTION APPLICATION TABLE

- "FUNCTION TEST" shall not be used for diagnosis. For details, refer to separately supplied "CONSULT-II Instruction Manual (FUNCTION TEST)".

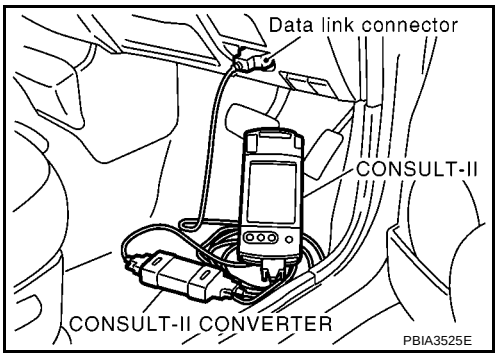
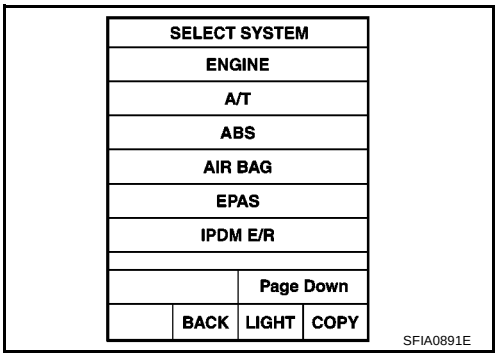
CONSULT-II BASIC OPERATION PROCEDURE

1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER data link connector and turn ignition switch ON or start engine.

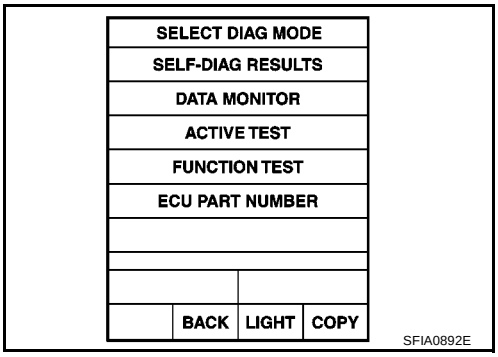
   CAUTION:
   If CONSULT-II is connected without the CONSULT-II CONVERTER, malfunction may be detected by self-diagnosis in Control units that use CAN communication.



3. Touch “START (NISSAN BASED VHCL)”.
4. Touch “ABS” on the “SELECT SYSTEM” screen.



5. Select desired part to be diagnosed on “SELECT DIAG MODE” screen.



SELF-DIAGNOSIS

Description

If a failure occurs in the ABS system, the “ABS warning lamp” turns ON.

Operation Procedure

1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.
3. Start engine and drive at approximately 30 km/h (19 MPH) for approximately 1 minute.
4. After stopping the vehicle, with engine running, touch “START (NISSAN BASED VHCL)”, “ABS”, and “SELF-DIAGNOSIS” on CONSULT-II screen in this order.

   CAUTION:
   Just after starting the engine, or turning ignition switch ON, “ABS” may not be displayed on the system selection screen even if “START (NISSAN BASED VHCL)” is touched. In this case, start over from step 1
5. Self-diagnostic results is displayed. (If necessary, touch “PRINT” to print out self-diagnostic results.)
   - When “NO DTC IS DETECTED” is displayed, check ABS warning lamp. Refer to BRC-35, "Basic Inspection" .
6. Go to appropriate “Inspection” chart according to “Indication item list,” and repair or replace as necessary.
7. Start engine and drive at approximately 30 km/h (19 MPH) for approximately 1 minute.

   CAUTION:
   If wheel sensor [SHORT] is detected, the ABS warning lamp does not turn off until the vehicle is driven at 30km/h (19 MPH) for approximately 1 minute, even in normal conditions.
8. Turn ignition switch OFF to prepare for erasing the memory.
9. Start engine, and touch “START (NISSAN BASED VHCL)”, “ABS”, “SELF-DIAGNOSIS”, and “ERASE MEMORY” on CONSULT-II screen in this order to erase the diagnostic memory.

   CAUTION:
   If memory cannot be erased, start over from step 5.
10. As the final inspection, drive at approximately 30 km/h (19 MPH) for approximately 1 minute, and confirm that the ABS warning lamp is OFF.

Display Item List

Suspect systems	Malfunction detecting condition	Inspection system
FR RH SENSOR 1 (Note 1)	Circuit of FR RH wheel sensor is open or shorted.	Wheel sensor circuit [Inspection 1] (Note 2) BRC-37
FR LH SENSOR 1 (Note 1)	Circuit of FR LH wheel sensor is open or shorted.	
RR RH SENSOR 1 (Note 1)	Circuit of RR RH wheel sensor is open or shorted.	
RR LH SENSOR 1 (Note 1)	Circuit of RR LH wheel sensor is open or shorted.	
FR RH SENSOR 2	When there is a sensor power voltage error in the FR RH wheel sensor, and when the control unit cannot recognize sensor pulse because gap between wheel sensor and sensor rotor is large.	
FR LH SENSOR 2	When there is a sensor power voltage error in the FR LH wheel sensor, and when the control unit cannot recognize sensor pulse because gap between wheel sensor and sensor rotor is large.	
RR RH SENSOR 2	When there is a sensor power voltage error in the RR RH wheel sensor, and when the control unit cannot recognize sensor pulse because gap between wheel sensor and sensor rotor is large.	
RR LH SENSOR 2	When there is a sensor power voltage error in the RR LH wheel sensor, and when the control unit cannot recognize sensor pulse because gap between wheel sensor and sensor rotor is large.	
WHEEL SENSOR	When a rotation sensor signal error is detected in one or more of the four wheels, and when operation of one or more of the wheels continues beyond the specified time.	

Suspect systems	Malfunction detecting condition	Inspection system
FR RH IN ABS SOL	Displays when control unit detects error in FR RH IN SOL system.	ABS actuator relay or ABS motor relay power system (Note 3) [Inspection 3] BRC-39
FR LH IN ABS SOL	Displays when control unit detects error in FR LH IN SOL system.	
RR RH IN ABS SOL	Displays when control unit detects error in RR RH IN SOL system.	
RR LH IN ABS SOL	Displays when control unit detects error in RR LH IN SOL system.	
FR RH OUT ABS SOL	Displays when control unit detects error in FR RH OUT SOL system.	
FR LH OUT ABS SOL	Displays when control unit detects error in FR LH OUT SOL system.	
RR RH OUT ABS SOL	Displays when control unit detects error in RR RH OUT SOL system.	
RR LH OUT ABS SOL	Displays when control unit detects error in RR LH OUT SOL system.	
MAIN RELAY	Displayed when control unit detects malfunction in actuator relay system.	
PUMP MOTOR	Displays when control unit detects errors in motor or motor relay system.	
BATTERY VOLTAGE	Battery voltage of control unit is too high.	ABS control unit power and ground systems [Inspection 2] BRC-38
	Battery voltage of control unit is too low.	
STOP LAMP SWITCH	Stop lamp switch circuit is open.	Stop lamp switch system [Inspection 6] BRC-41
CONTROL UNIT	Processing function of control unit is malfunctioning.	ABS control unit system [Inspection 3] BRC-39
CAN COMM	CAN communication error.	CAN communication system [Inspection 5] BRC-40

NOTE:

1. Note 1: After completing repairs of the shorted sensor circuit, when ignition switch is turned ON, the ABS warning lamp turns on. Make sure the ABS warning lamp turns off while driving the vehicle at approx. 30 km/h for approx. 1 minute according to self-diagnosis procedure.
2. Note 2: Also, when each wheel sensor displays 2, check wheel sensor path and control unit power battery voltage.
3. Note 3: If there are no errors in 1 to 3 below, replace the actuator unit.

– Open or short-circuit in the solenoid power supply, motor power supply, or ground harness.
– Unit side connector pin terminal
– Fusible link

DATA MONITOR

Operation Procedure

1. Touch “DATA MONITOR”.
2. Return to monitor item selection screen, and touch any of “control unit INPUT ITEM”, “MAIN ITEM”, “SELECT ITEM MENU” or “CAN DIAGNOSIS SUPPORT MONITOR”. Refer to BRC-24, "Data Monitor Item Chart" .
3. Touch “START”.
4. Screen of data monitor is displayed.

Data Monitor Item Chart

Item (Unit)	Monitor item selection				Remarks
	ECM INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	CAN DIAG SUPPORT MNTR	
FR RH SENSOR (km/h)	×	×	×	–	Wheel speed calculated by front RH wheel sensor signal is displayed.

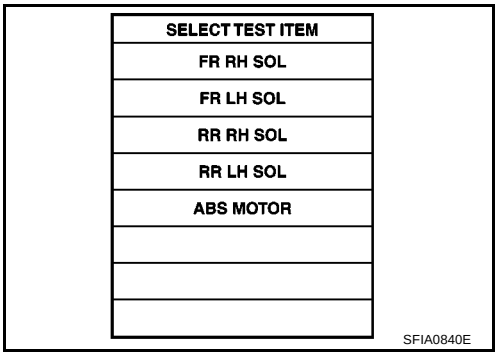
ACTIVE TEST

CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **During active test, ABS and brake warning lamps are on.**

Operation Procedure

1. Touch “ACTIVE TEST”.
2. The “SELECT TEST ITEM” screen is displayed.
3. Touch “TEST ITEM”.
4. Touch “START” with “MAIN SIGNALS” line inverted.
5. The “ACTIVE TEST” screen is displayed, and the following test can be performed.

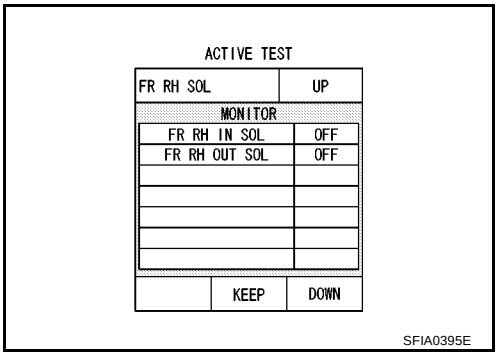


Test Item – ABS Solenoid Valve –

- Touch “UP”, “KEEP” and “DOWN” on the screen to confirm ABS solenoid valves (inlet/outlet) operate as in the following chart.

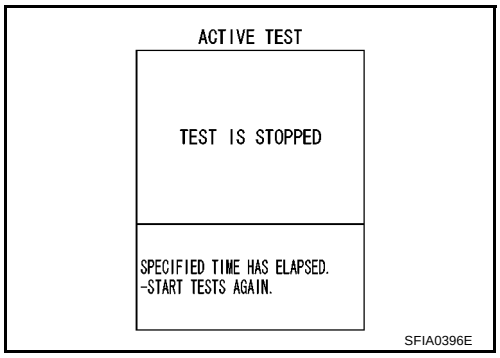
Operation	UP	KEEP	DOWN
ABS inlet S/V	OFF	ON	ON
ABS outlet S/V	OFF	OFF	ON*

*: ON for 1 to 2 seconds after touch, and then OFF



NOTE:

- If active test is performed with brake pedal depressed, pedal stroke may change. This is normal.
- "TEST STOP" is displayed 10 seconds after operation start.
- After "TEST STOP" is displayed, to perform test again, touch "BACK" and repeat step 6.



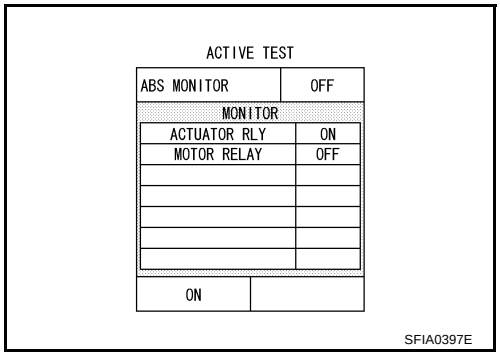
Test Item – ABS Motor –

- Touch "ON" and "OFF" on the screen to confirm the ABS motor relay operates as shown in the following chart.

Operation	ON	OFF
ABS actuator relay	ON	ON
ABS motor relay	ON	OFF

NOTE:

- If active test is performed with brake pedal depressed, pedal stroke may change. This is normal.
- "TEST STOP" is displayed 10 seconds after operation start.



CAN Communication

EFS005XA

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EFS005XB

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door											
Axle	2WD											
Engine	CR10DE/CR12DE/CR14DE								K9K			
Handle	LHD/RHD											
Brake control	ABS											
Transmission	A/T				M/T							
Intelligent Key system	Applicable		Not applicable		Applicable		Not applicable		Applicable		Not applicable	
CAN communication unit												
ECM	×	×	×	×	×	×	×	×	×	×	×	×

For Fast and Accurate Diagnosis

EFS004M4

PRECAUTIONS FOR TROUBLE DIAGNOSIS

- Always read the “GI General Information” to confirm the general precautions. Refer to GI-4, "General Precautions" .
- After completing the trouble diagnosis, always erase the fault memory. Refer to BRC-22, "SELF-DIAGNOSIS" .
- When inspection of the continuity or voltage between control units is performed, check connector terminals for disconnection, looseness, bend, or collapse. If any non-standard condition is detected, repair or replace applicable part.
- Intermittent errors may be caused by a poor connection in the harness, connector, or terminal.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.

Basic Inspection

EFS004M5

BASIC INSPECTION 1: BRAKE FLUID LEVEL, LEAK AND BRAKE PAD INSPECTION

1. Check fluid level in brake reservoir tank. If fluid level is low, refill the brake fluid.
2. Check area around the brake piping and ABS actuator for leaks. If a leak or oozing is detected, check as follows:
   - If ABS actuator connections are loose, tighten piping to the specified torque. Check again for leaks, and make sure there is no fluid leakage.
   - If flare nuts at the connections and the threads of ABS actuator are damaged, replace damaged parts. Then check again for leaks, and make sure that there is no fluid leak.
   - If a leak or oozing is detected on other parts than ABS actuator connections, wipe the applicable part with a clean cloth. Then check again for leaks, and if there is still a leak or oozing, replace damaged part.
   - If leaks or oozing are detected on ABS actuator body, wipe with a clean cloth and check again. If there is still a leak or oozing, replace ABS actuator.

     CAUTION:
     ABS actuator body cannot be disassembled.
3. Check for brake pad wear. Refer to BR-21, "PAD WEAR INSPECTION" .

BASIC INSPECTION 2: INSPECTION OF POWER SUPPLY SYSTEM TERMINAL LOOSENESS AND BATTERY

Check battery for looseness on battery positive/negative cables and ground connection. Also Make sure battery voltage dose not drop.

BASIC INSPECTION 3: ABS WARNING LAMP AND BRAKE WARNING LAMP INSPECTION

1. Make sure ABS warning lamp and brake warning lamp turn on for approximately 1 sec. When ignition switch is turned ON. If they do not turn on, perform CAN communication system diagnosis. Refer to BRC-40, "Inspection 5 CAN Communication System" .
   If CAN communication system is normal, replace combination meter. Refer to DI-34, "Removal and Installation for Combination Meter" .
2. Make sure ABS warning lamp and brake warning lamp turn off after approximately 1 sec. When ignition switch is turned ON. If they do not turn OFF, perform self-diagnosis.
3. Make sure that ABS warning lamp remains off after the vehicle has been driven at approx. 30 km/h (19 MPH) for approx. 1 minute. If it turns on, perform self-diagnosis.
4. After completing self-diagnosis, always erase self-diagnostic results memory. Refer to BRC-22, "SELF-DIAGNOSIS" .

CAUTION:
The brake warning lamp comes on when the parking brake lever is pulled (when switch is on) and when the brake fluid level sensor operates (insufficient brake fluid).

Inspection 1 Wheel Sensor System

EFS004M6

INSPECTION PROCEDURE

After identifying malfunctioning wheel sensor position according to CONSULT-II self-diagnostic results, check the each part and identify the parts to be replaced.

1. CHECK TYRE

Check air pressure, wear and size.

Are air pressure, wear, and size within specifications?

YES >> GO TO 2.
NO >> Adjust air pressure, or replace tyre.

2. CHECK SENSOR AND SENSOR ROTOR

- Inspect the appearance of the sensor and sensor rotor.
- Check sensor rotor rubber bar for damage.
- Check sensor for disconnection or loose.

OK or NG

OK >> GO TO 3.
NG >> Replace sensor rotor.

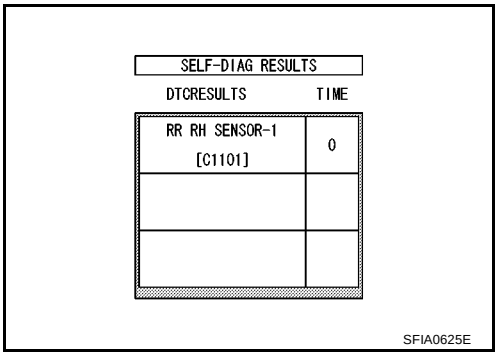
3. SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
FR RH SENSOR 1, 2
FR LH SENSOR 1, 2
RR RH SENSOR 1, 2
RR LH SENSOR 1, 2

Is any of above displayed on self-diagnosis display?

YES >> GO TO 4.
NO >> INSPECTION END



4. CHECK CONNECTOR

1. Disconnect control unit connector E45 and malfunctioning wheel sensor connector E23 (FL), E38 (FR), B35 (RL) or B34 (RR) and check for deformation, disconnected and loose. If there is any non-standard condition, repair the connector.
2. Reconnect connectors, drive the vehicle at 30km/h (19 MPH) for approximately 1 minute, and then perform self-diagnosis.

OK or NG

OK >> The connector terminal contact is loose, damage, open or shorted.
NG >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Disconnect control unit connector E45 and wheel sensor connector E23 (FL), E38 (FR), B35 (RL) and B34 (RR).
2. Check continuity between terminals. (Check resistance as well when turning the steering wheel to the right and left, or moving sensor harness in the wheel well.)

	Power supply system		Signal system		Ground system	
Wheel	Control unit	Wheel sensor	Control unit	Wheel sensor	Control unit (signal)	Control unit (Ground)
Front RH	10 (R)	1 (R)	9 (L)	2 (L)	9 (L), 10 (R)	4 (B)
Front LH	5 (Y)	1 (Y)	16 (BR)	2 (BR)	5 (Y), 16 (BR)	4 (B)
Rear RH	19 (LG)	1 (LG)	8 (OR)	2 (OR)	8 (OR), 19 (LG)	4 (B)
Rear LH	17 (G)	1 (G)	6 (BR)	2 (BR)	6 (BR), 17 (G)	4 (B)

Power supply system : Continuity should exist.
Signal System : Continuity should exist.
Ground system : Continuity should not exist.

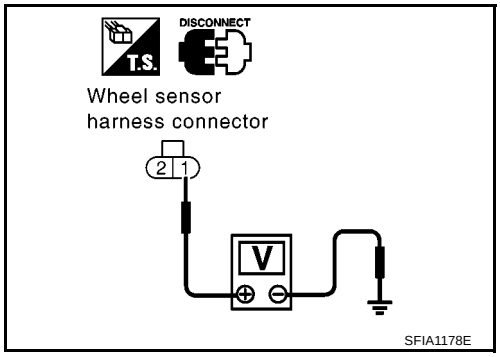
OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness connector between ABS actuator and electric unit (control unit) and wheel sensor.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Connect control unit connector.
2. Turn ignition switch ON.
3. Check voltage between wheel sensor power supply terminal 1 and ground.

Voltage : Approx. 12 V



OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

Inspection 2 ABS Actuator and Electric Unit Power and Ground System

EFS004M7

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

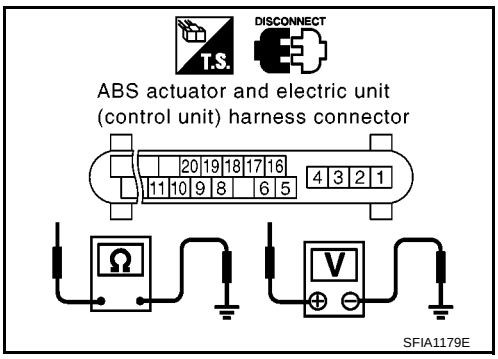
Self-diagnostic results
BATTERY VOLTAGE

Is any of above displayed on self-diagnosis display?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK POWER SUPPLY AND GROUND CIRCUIT

1. Disconnect control unit connector E45.
2. Check continuity and voltage between control unit connector terminals and ground.



Terminal	Signal	Ignition switch	Measured value
18 (PU)	Power supply	ON	Battery voltage (approx. 12 V)
		OFF	Approx. 0 V
4 (B)	Ground	OFF	Continuity should exist.

OK or NG

OK >> Check battery for loose terminal and low voltage for malfunction. If it returns an error, repair it.
NG >> Repair or replace harness connector between ABS actuator and electric unit (control unit) and fuse or ground.

Inspection 3 ABS Control Unit System

EFS004M8

Inspection Procedure

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
CONTROL UNIT

Is any of above displayed on self-diagnosis display?

YES >> Replace ABS actuator and electric unit (control unit).
NO >> INSPECTION END

Inspection 4 ABS Actuator Relay or ABS Motor Relay Power System

EFS004M9

Inspection Procedure

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
IN ABS SOL
OUT ABS SOL
MAIN RELAY
PUMP MOTOR

Is above displayed on self-diagnosis display?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

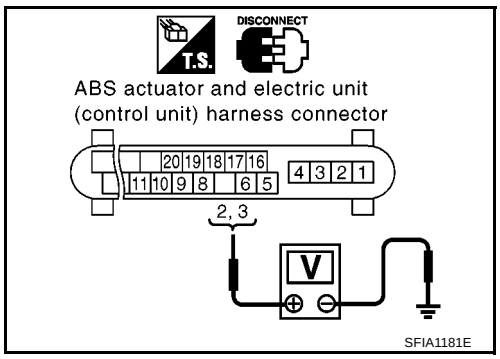
1. Disconnect control unit connector E45. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connector securely, and perform self-diagnosis.

OK or NG

OK >> The connector terminal contact is loose, damaged, open or shorted.
NG >> GO TO 3.

3. ABS ACTUATOR RELAY (SOLENOID VALVE RELAY) OR ABS MOTOR RELAY POWER SYSTEM

1. Disconnect control unit connector E45.
2. For ABS actuator relay (solenoid valve relay), check voltage between control unit connector E45 terminal 3 (W) and ground. For the ABS motor relay, check voltage between control unit connector E45 terminal 2 (Y) and ground.



ABS actuator relay (solenoid valve relay)

3 (W) – Ground : Battery voltage (approx. 12 V)

ABS motor relay

2 (Y) – Ground : Battery voltage (approx. 12 V)

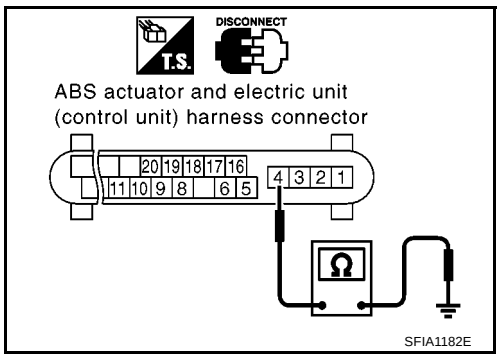
OK or NG

OK >> GO TO 4.

NG >> Repair or replace harness connector between ABS actuator and electric unit (control unit) and fusible link.

4. CHECK GROUND CIRCUIT

Check continuity between control unit connector E45 terminal 4 (B) and ground.



4 (B) – Ground : Continuity should exist.

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).

NG >> Repair or replace ABS actuator and electric unit ground harness.

Inspection 5 CAN Communication System

EFS004MA

INSPECTION PROCEDURE

1. START INSPECTION

1. Using CONSULT-II, perform self-diagnosis.
2. Print the result of the self-diagnosis.
3. Check “CAN communication support monitor” in data monitor.

CAN Diagnosis Support Monitor

Normal	When failure occurs
INITIAL DIAG: OK	INITIAL DIAG: NG
TRANSMIT DIAG: OK	TRANSMIT DIAG: UNKWN
ECM: OK	ECM: UNKWN

>> After printing the monitor items, GO TO “CAN System”. Refer to LAN-4, "Precautions When Using CONSULT-II" .

Inspection 6 Stop Lamp Switch System

EFS004MB

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
STOP LAMP SW

Is above displayed on self-diagnosis display?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect control unit connector E45 and stop lamp switch connector E108, E109, M202 or M203.
2. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
3. Reconnect connector securely, and perform self-diagnosis.

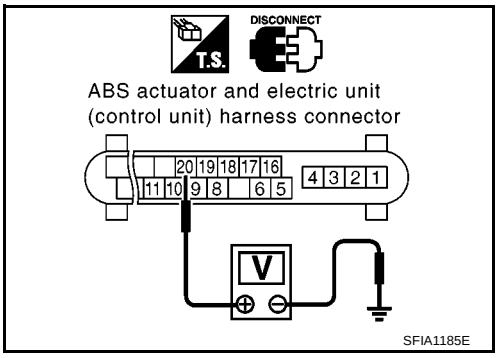
OK or NG

OK >> The connector terminal contact is loose, damaged, open or shorted.
NG >> GO TO 3.

3. CHECK STOP LAMP SWITCH CIRCUIT

1. Disconnect control unit connector E45.
2. Check voltage between control unit connector E45 terminal 20 (Y) and ground.

ABS actuator and electric unit (control unit)	Ground	Measuring condition	Voltage
20	—	Brake pedal depressed	Battery voltage (approx. 12 V)
		Brake pedal not depressed	0 V



OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair or replace harness connector between ABS actuator and electric unit (control unit) and stop lamp switch.

Symptom 1 ABS Works Frequently.

EFS004MC

1. START INSPECTION

Check brake force distribution.

OK or NG

OK >> GO TO 2.
NG >> Check brake system.

2. CHECK FRONT AND REAR AXLE

Check front and real axle for significant “looseness”.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK WHEEL SENSOR

Wheel Sensor Inspection

- Sensor installation and damage inspection
- Sensor rotor installation and damage inspection
- Sensor connector engagement inspection
- Sensor harness inspection

OK or NG

OK >> GO TO 4.
NG >> ● Replace wheel sensor or sensor rotor.
● Repair harness.

4. CHECK INDICATOR DISPLAY OF WARNING LAMP

Make sure warning lamp is off approximately 1 second after ignition switch is turned ON or during driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-22, "SELF-DIAGNOSIS" .

Symptom 2 Unexpected Pedal Reaction

EFS004MD

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is brake pedal stroke not excessive?

YES >> ● Bleed air from brake piping.
● Check for looseness of brake pedal, master back, and master cylinder. Also check brake system for oil leak. Repair as necessary.
NO >> GO TO 2.

2. PERFORMANCE CHECK

Disconnect control unit connector E45 to deactivate ABS. In this condition, make sure braking force is normal after inspection, reconnect connector.

OK or NG

OK >> GO TO 3. Wheel Sensor Inspection in BRC-41, "Symptom 1 ABS Works Frequently." .
NG >> Check brake system.

Symptom 3 Longer Stopping Distance

EFS004ME

CAUTION:
On slippery road, stopping distance could be longer when ABS is activated than when it is not.

1. CHECK FUNCTION

Disconnect control unit connector E45 to deactivate ABS. In this condition, check braking distance After inspection, reconnect connector.

OK or NG

OK >> ● Bleed air from brake piping.
● Check brake system.

NG >> GO TO 3. Wheel Sensor Inspection in BRC-41, "Symptom 1 ABS Works Frequently." .

Symptom 4 ABS Does Not Work

EFS004MF

CAUTION:
ABS does not operate when vehicle speed is 10 km/h (6 MPH) or lower.

1. CHECK INDICATOR DISPLAY OF WARNING LAMP

Make sure warning lamp is off approximately 1 second after ignition switch is turned ON or during driving.

OK or NG

OK >> GO TO 3. Wheel Sensor Inspection in BRC-41, "Symptom 1 ABS Works Frequently." .
NG >> Perform a self-diagnosis. Refer to BRC-22, "SELF-DIAGNOSIS" .

Symptom 5 Pedal Vibration and ABS Operation Noise

EFS004MG

CAUTION:
Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears and operating clutch**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves [50 mm (1.97 in) or more]**
- **When pulling away just after starting engine [at approximately 10 km/h (6 MPH) or higher]**

1. SYMPTOM CHECK 1

Check brake system for pedal vibration or noise at engine start.

OK or NG

OK >> GO TO 2.
NG >> Perform self-diagnosis. Refer to BRC-22, "SELF-DIAGNOSIS" .

2. SYMPTOM CHECK 2

Operate electrical equipment (head lamp or equivalents), and confirm symptoms.

Does symptom occur when electrical switches (head lamp, etc.) are operated?

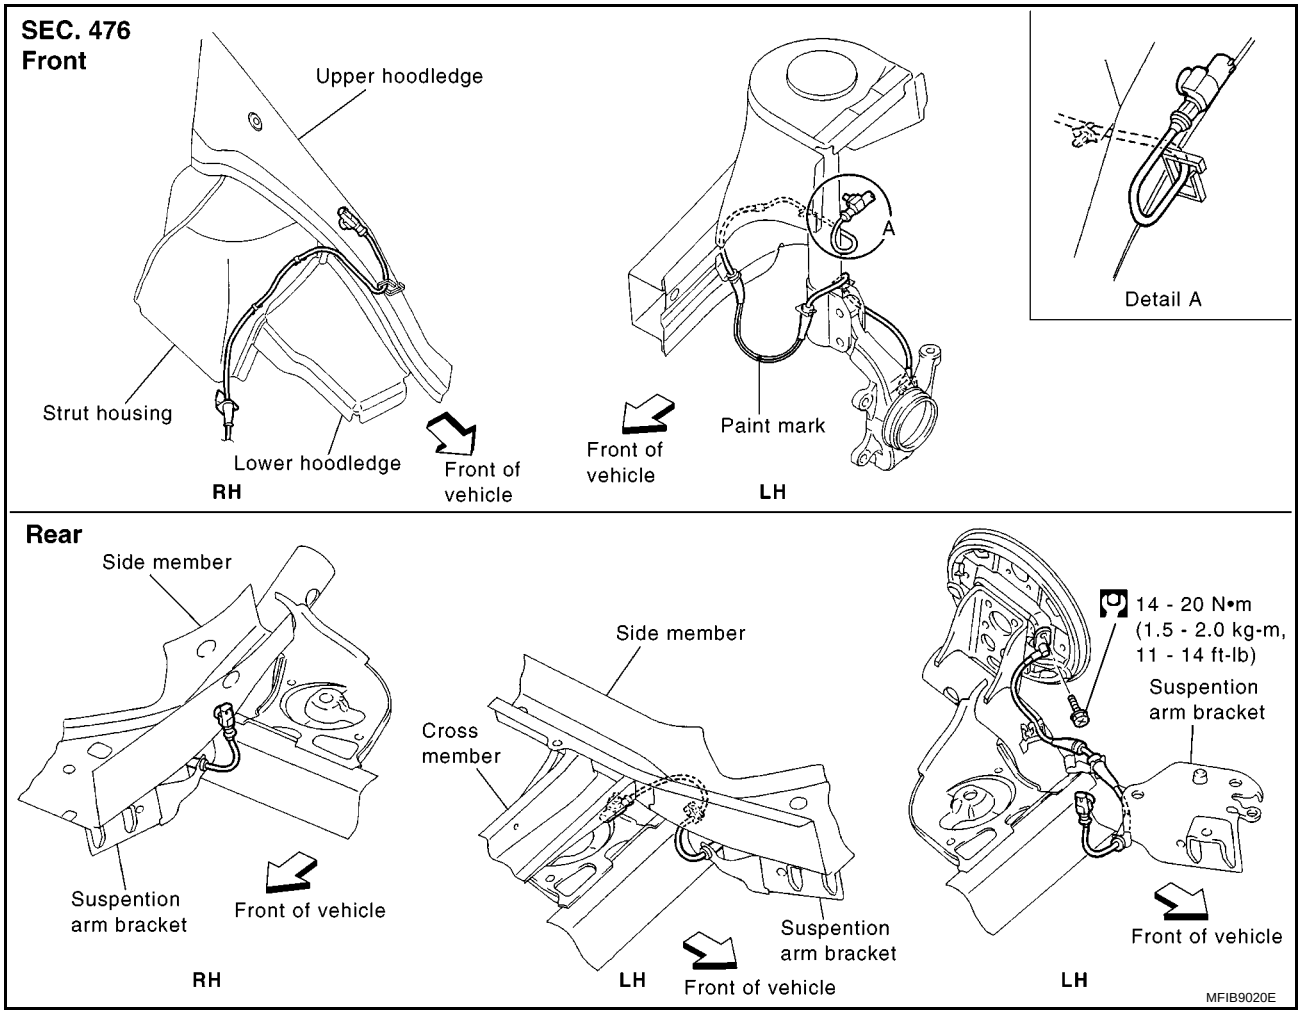
YES >> Check for radio, antenna, and antenna lead-in wires (including wiring) near the control unit. If they are near ABS actuator and electric unit (control unit), move them.
NO >> GO TO 3. Wheel Sensor Inspection in BRC-41, "Symptom 1 ABS Works Frequently." .

WHEEL SENSORS

PFP:47910

Removal and Installation

EFS004MH



REMOVAL

Be careful of the following.

CAUTION:

- **When removing the sensor, do not rotate it if possible, and not forcibly pull the sensor harness.**
- **Before removing front or rear wheel hub, remove wheel sensor to avoid sensor wiring damage.**

INSTALLATION

Be certain to tighten bolts to the specified torque. Be careful of the following:

- Check the inside of the sensor mounting hole for foreign material, the rotor surface for iron chips and other foreign material, and if anything is non-standard, clean it before installation, or replace it.
- When installing the front sensor, completely push in the strut bracket and body bracket rubber grommets until they lock so that the sensor harness does not become twisted. In addition, there should be no twists in the harness when installed. Install the harness so that the painted part faces the outside of the vehicle.
- When installing the rear sensor, completely push in the rubber bracket of the suspension arm bracket and lock the marking area of the side member harness mount so that the sensor harness will not be twisted. In addition, there should be no twists in the harness when installed.

SENSOR ROTOR

PFP:47970

Removal and Installation

EFS004MI

FRONT

- Because the sensor rotor is integrated with the wheel bearing, replace it together with the wheel bearing assembly. Refer to FAX-6, "FRONT WHEEL HUB AND KNUCKLE" .

REAR

- During removal and installation, remove the wheel hub (brake drum). Refer to RAX-5, "WHEEL HUB" .

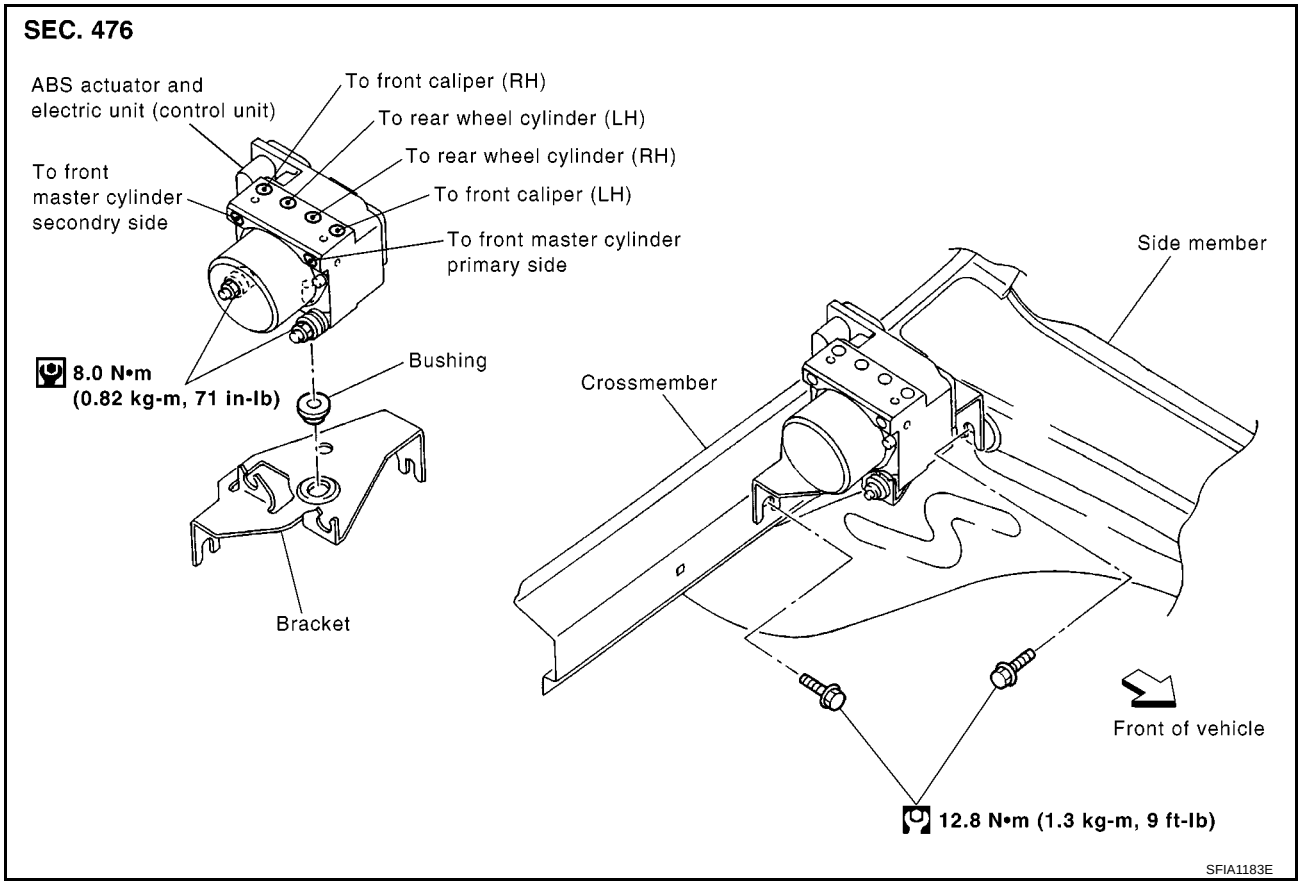
CAUTION:
The sensor rotor is a non-reusable part, it must be replaced by an new part when removing it.

ACTUATOR AND ELECTRIC UNIT (ASSEMBLY)

PFP:47660

Removal and Installation

EFS004MJ



REMOVAL

Be careful of the following.

CAUTION:

- **Before servicing, disconnect the battery cables.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use a flare nut torque wrench and tighten to the specified torque.**
- **Do not apply excessive impact to the actuator, such as dropping it.**

INSTALLATION

Be careful of the following.

- When setting the actuator in the bracket, push it in until it locks.
- Tighten the mounting bolts and nuts to the specified torque.
- After the work, breed the air from the brake piping. Refer to BR-10, "Bleeding Brake System" .
- After installing the vehicle harness connector in the actuator, make sure the connector is securely locked.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EFS004JB

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

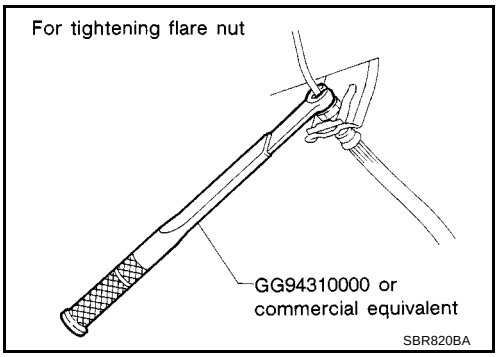
- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Brake System

EFS004JC

SMA for VIN >SJN**AK12U1072423

- Recommended fluid is brake fluid “DOT 3” or “DOT 4”.
- Do not reuse drained brake fluid.
- Be careful not to splash brake fluid on painted areas such as body. If brake fluid is splashed, wipe it off and flush area with water immediately.
- Do not use mineral oils such as gasoline or kerosene to clean. They will ruin rubber parts and cause improper operation.
- Using a flare nut torque wrench, securely tighten brake tube flare nuts.
- Brake system is an important safety part. If a brake fluid leak is detected, always disassemble the affected part. If a malfunction is detected, replace part with a new one.
- Before working, turn ignition switch OFF and disconnect electrical connectors of ABS actuator and electric unit (control unit) or battery negative terminals.
- When installing brake piping, be sure to check torque.



Precautions for Brake Control

EFS004JD

- During ESP/TCS/ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- When starting engine, or just after starting vehicle, brake pedal may vibrate or motor operating noise may be heard from engine room. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.
- When an error is indicated by ABS or another warning lamp, collect all necessary information from the customer (what symptoms are present under what conditions) and check for simple causes before starting diagnostic servicing. Besides the electrical system inspection, check booster operation, brake fluid level, and fluid leaks.
- If tire size and type are used in an improper combination, or brake pads are not Genuine NISSAN parts, stopping distance or steering stability may deteriorate.
- If there is a radio, antenna, or antenna lead-in wire (including wiring) near control module, ESP/TCS/ABS function may have a malfunction or error.
- If aftermarket parts (car stereo, CD player, etc.) have been installed, check for incidents such as harness pinches, open circuits, and improper wiring.

- If the following components are replaced with non-genuine components or converted, ESP OFF indicator lamp and SLIP indicator lamp may turn on or the ESP system may not operate properly. Components related to suspension (Shock Absorber, Strut, Spring, Bush, etc.), Tires, wheels (exclude specified size), components related to brake (Pad, Rotor, Caliper, etc.), components related to engine (Muffler, ECM, etc.), components related to body reinforcement (Roll bar, Tower bar, etc.).
- Driving in the condition of breakage or excessive wear of suspension, tires or components related to the brakes may cause ESP OFF indicator lamp and SLIP indicator lamp turn on, and the ESP system may not operate properly.
- When the TCS or ESP is activated by sudden acceleration or sudden turn, some noise may occur. The noise is a result of the normal operation of the TCS and ESP.
- When driving on roads which have extreme slopes (such as mountainous roads) or high banks (such as sharp carves on a freeway), the ESP may not operate normally, or ESP warning lamp and SLIP indicator lamp may turn on. However, this is not a malfunction, if normal operation can be resumed after restarting engine.
- Sudden turns (such as spin turns, acceleration turns), drifting, etc. When ESP function is OFF (ESP SW ON) may cause the G -sensor system indicate a malfunction. However, this is not a malfunction, if normal operation can be resumed after restarting engine.

Diagnosis Precaution

EFS004JE

CAN SYSTEM

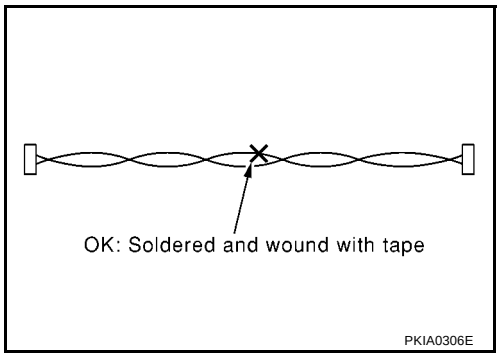
- Do not apply voltage of 7.0 V or higher to terminal to be measured.
- Maximum open terminal voltage of tester in use shall be 7.0 V or lower.
- Before checking harnesses, turn ignition switch OFF and disconnect battery negative cable.

Precaution for Harness Repair

EFS004JF

CAN SYSTEM

- Area to be repaired shall be soldered, and wrapped with a tape [be sure that fraying of twisted wire shall be within 110 mm (4.33 in)].



- Do not make a bypass connection to repaired area. (If it is done, branch part will be removed and characteristics of twisted wire will be lost.)

Adjustment of Steering Angle Sensor Neutral Position

SMA for VIN >SJN**AK12U1309269 EFS004JH

In case of doing work that applies to the list below, make sure to adjust neutral position of steering angle sensor before running vehicle.

Situation	Adjustment of Steering Angle Sensor Neutral Position
Disconnecting/connecting the battery	×
Removing/Installing ABS actuator and electric unit (control unit)	–
Replacing ABS actuator and electric unit (control unit)	×
Removing/Installing steering angle sensor	×
Removing/Installing steering components	×
Removing/Installing suspension components	×
Removing/Installing the same tire to the same position	–
Change 4 tires to new ones	–
Change some of 4 tires to new ones (not 4 tires)	–
Tire rotation	–
Adjusting wheel alignment	×

×: Required
–: Not required

CAUTION:
To adjust neutral position of steering angle sensor, make sure to use CONSULT-II.
(Adjustment cannot be done without CONSULT-II.)

OPERATION PROCEDURE

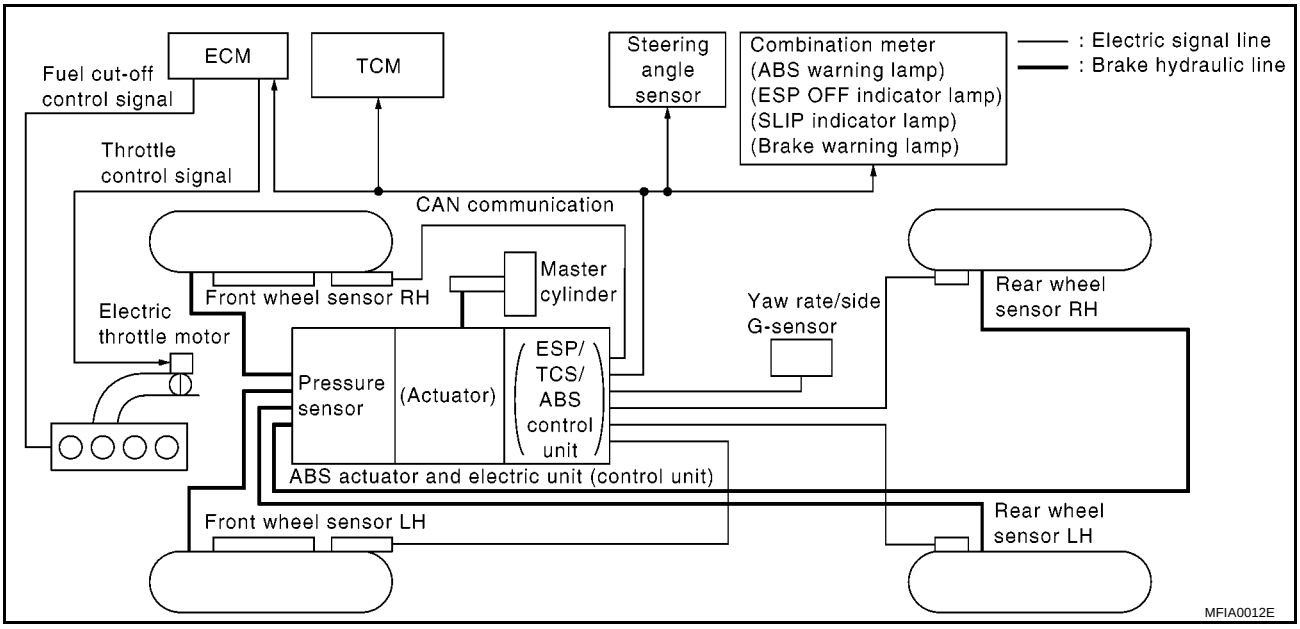
- For operation procedure, refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .

SYSTEM DESCRIPTION

PFP:00000

System Diagram

EFS004JI



ESP Function

EFS004JJ

- In addition to the TCS/ABS function, the driver steering amount and brake operation amount are detected from steering angle sensor and pressure sensor, and the vehicle's driving status (amount of under steering / over steering) is determined from information from G-sensor, wheel sensor, etc., and this information is used to improve vehicle stability by controlling the braking and engine power to all four wheels.
- SLIP indicator lamp flashes to inform the driver of ESP operation.
- During ESP operation, body and brake pedal lightly vibrate and mechanical noises may be heard. This is normal.
- ABS warning lamp, ESP OFF indicator lamp, and SLIP indicator lamp might turn on when vehicle is subject to strong shaking or large vibration, such as when vehicle is on a turn table, a ship or a steep slope such as bank while engine is running. In this case, restart engine on a normal road, and if ABS warning lamp, ESP OFF indicator lamp, and SLIP indicator lamp turn off, there is no problem.

TCS Function

EFS004JK

- The wheel spin of the drive wheels is detected by ABS actuator and electric unit (control unit) from the wheel speed signals from four wheels, so if wheel spin occurs, drive wheel right and left brake fluid pressure control and engine fuel cut are performed while throttle value is restricted to reduce the engine torque and decrease the amount of wheel spin. In addition, the degree throttle is opened is controlled to achieve the optimum engine torque.
- Depending on road circumstances, the driver may have a sluggish feel. This is normal, because the optimum traction has the highest priority under TCS operation.
- TCS may be activated any time vehicle suddenly accelerates, suddenly down/upshifts, or is driven on a road with a varying surface friction coefficient.
- During TCS operation, it informs a driver of system operation by flashing SLIP indicator lamp.

ABS Function

EFS004JL

- The anti-lock brake system is a function that detects wheel revolution while braking, and it improves handling stability during sudden braking by electrically preventing 4 wheel lock. Maneuverability is also improved for avoiding obstacles.
- If the electrical system breaks down, then the fail-safe function starts, the ABS becomes inoperative, and ABS warning lamp turns on.
- Electrical system diagnosis by CONSULT-II is available.
- During ABS operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.

- When starting engine, or just after starting vehicle, brake pedal may vibrate or motor operating noises may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without ABS when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.

EBD Function

EFS004JM

- Electronic brake distributor is a function that detects subtle slippages between front and rear wheels during braking, and it improves handling stability by electronically controlling the brake fluid pressure which results in reduced rear wheel slippage.
- In case of electrical system break down, the fail-safe function is activated, EBD and ABS becomes inoperative, and ABS warning lamp and brake warning lamp are turned on.
- Electrical system diagnosis by CONSULT-II is available.
- During EBD operation, brake pedal lightly vibrates and a mechanical noise may be heard. This is normal.
- When starting engine, or just after starting vehicle, brake pedal may vibrate or motor operating noises may be heard from engine compartment. This is a normal status of operation check.
- Stopping distance may be longer than that of vehicles without EBD when vehicle drives on rough, gravel, or snow-covered (fresh, deep snow) roads.

Fail-Safe Function

EFS004JN

ESP / TCS SYSTEM

In case of malfunction in the ESP/TCS system, ESP OFF indicator lamp and SLIP indicator lamp are turned on, and the condition of vehicle is the same as the condition of vehicles without ESP/TCS system. In case of malfunction in the ESP/TCS system, the ABS control continues to operate normally without ESP/TCS control.

CAUTION:

If the fail-safe function is activated, then perform the self-diagnosis for ESP/TCS/ABS control system.

ABS, EBD SYSTEM

In case of electrical malfunctions with the ABS, ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp will turn on. In case of electrical malfunctions with the EBD, brake warning lamp, ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp will turn on. Simultaneously, the ESP/TCS/ABS become one of the following conditions of the fail-safe function.

1. For malfunction of ABS, only the EBD is activated and the condition of vehicle is the same condition of vehicles without TCS/ABS system.
2. For malfunction of EBD, EBD and ABS become inoperative, and the condition of vehicle is the same as the condition of vehicles without TCS/ABS, EBD system.

NOTE:

In condition 1 described above, an ABS self-diagnosis sound may be heard. That is a normal condition because a self-diagnosis for “Key Switch ON” and “the First Starting” are being performed.

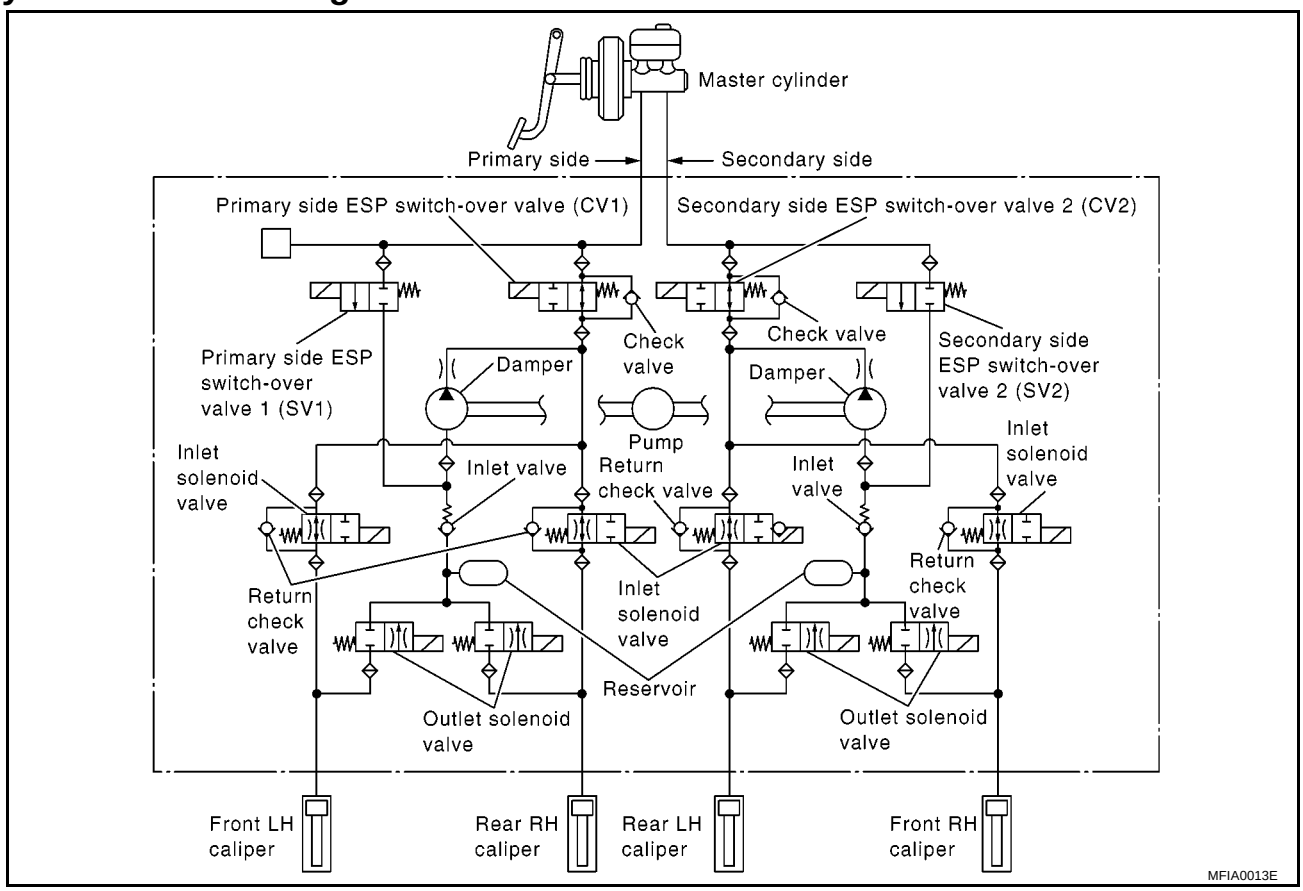
EFS004JO



CAN COMMUNICATION

PFP:23710

System Description

EFS005XC

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EFS005XD

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door							
Axle	2WD							
Engine	CR12DE/CR14DE

TROUBLE DIAGNOSIS

PFP:00004

How to Proceed With Diagnosis

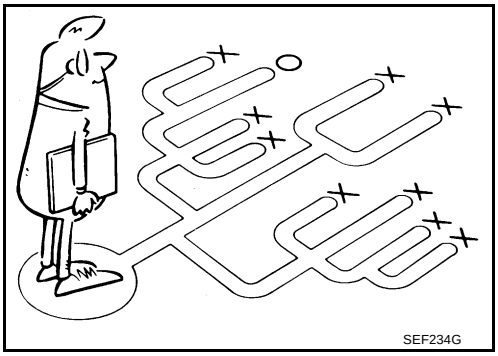
EFS004JR

BASIC CONCEPT

- Most important point to perform diagnosis is to understand systems (control and mechanism) in vehicle thoroughly.

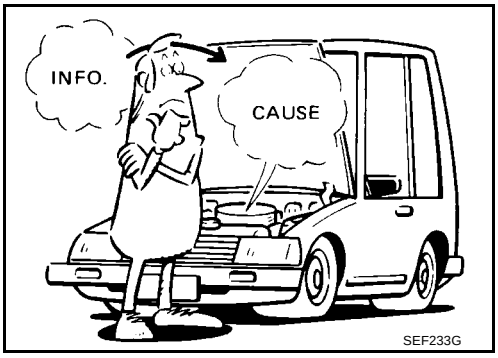
- It is also important to clarify customer complaints before inspection.
  First of all, reproduce symptom, and understand it fully.
  Ask customer about his/her complaints carefully. In some cases, it will be necessary to check symptom by driving vehicle with customer.

  NOTE:
  Customers are not professionals. Do not assume “maybe customer means...” or “maybe customer mentioned this symptom”.



SEF234G

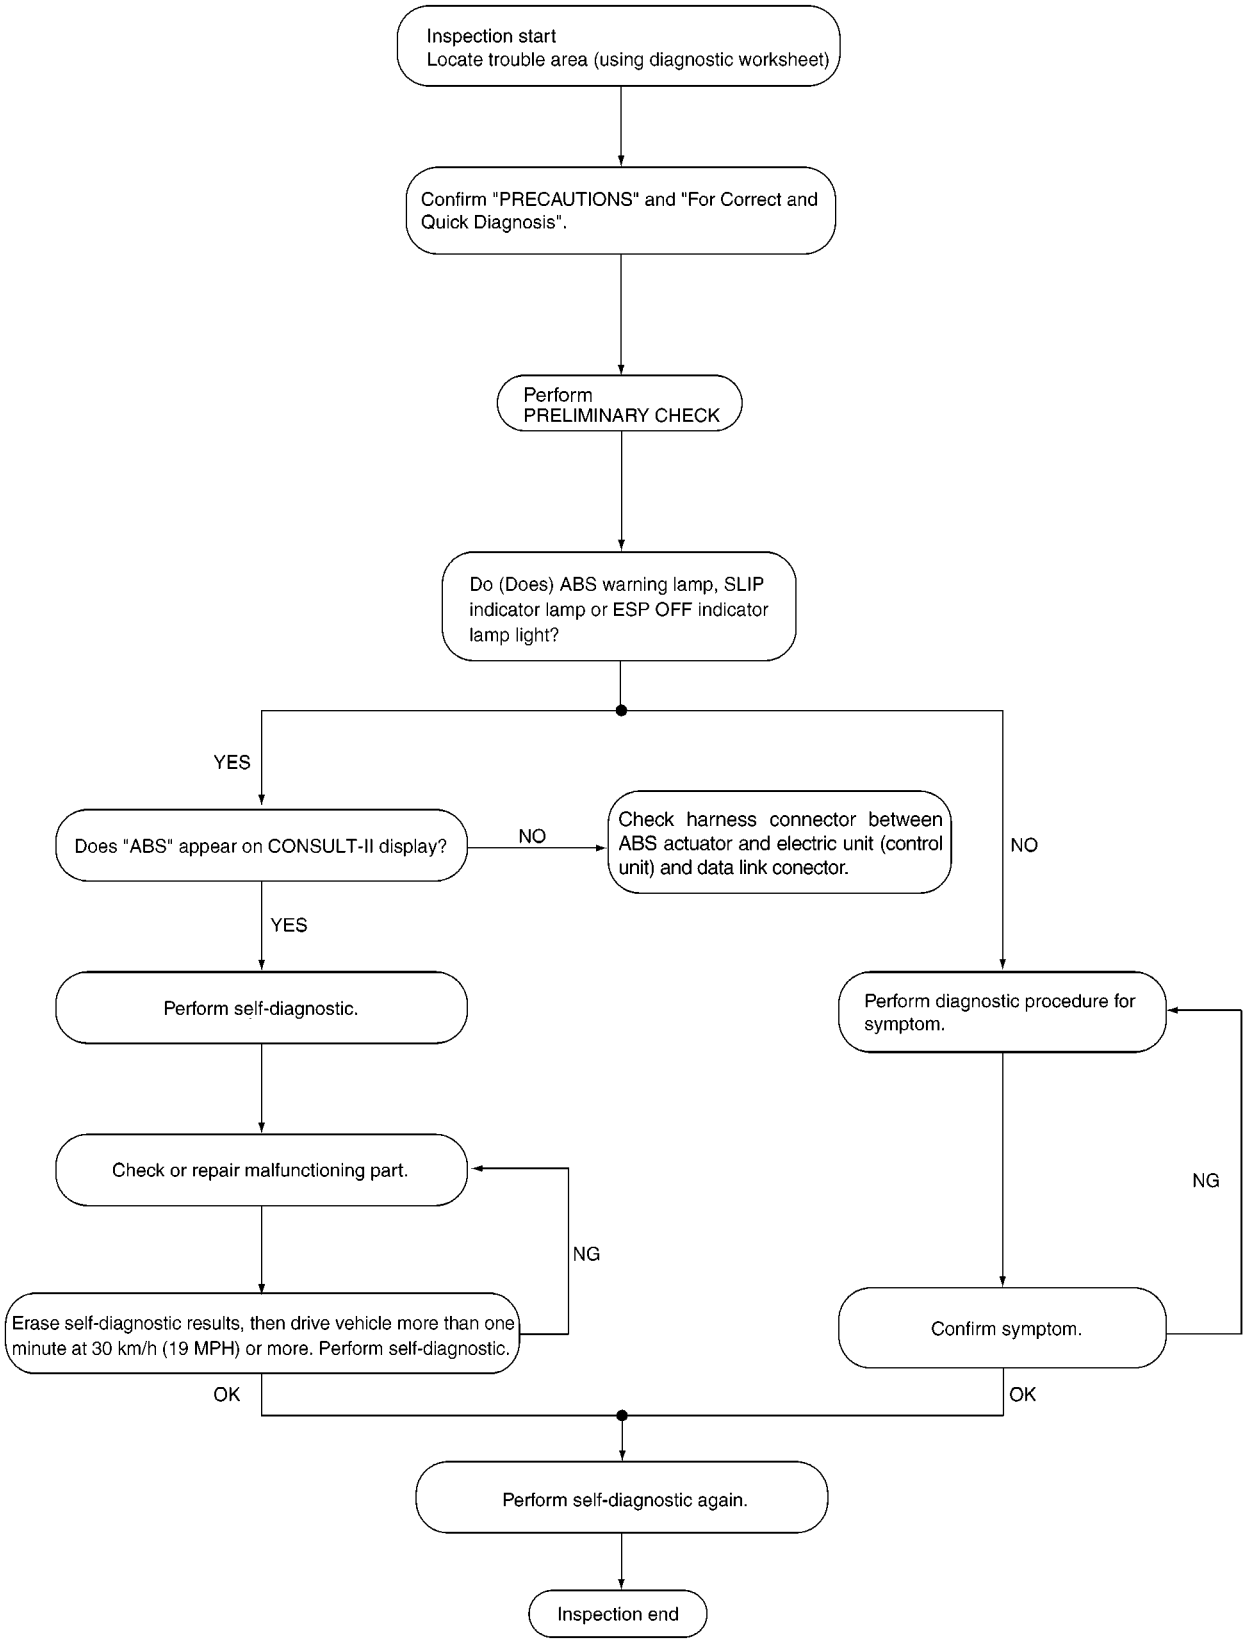
- It is essential to check symptoms right from beginning in order to repair a malfunction completely.
  For an intermittent malfunction, it is important to reproduce symptom based on interview with customer and past examples. Do not perform inspection on ad hoc basis. Most intermittent malfunctions are caused by poor contacts. In this case, it will be effective to shake suspected harness or connector by hand. When repairs are performed without any symptom check, no one can judge if malfunction has actually been eliminated.
- After diagnosis, make sure to carry out “erase memory”. Refer to BRC-75, "SELF-DIAGNOSIS" .
- For an intermittent malfunction, move harness or harness connector by hand to check poor contact or false open circuit.



SEF233G

- Always read “GI General Information” to confirm general precautions. Refer to GI-4, "General Precautions" .

DIAGNOSIS FLOWCHART



MFIA0017E

ASKING COMPLAINTS

- Complaints against malfunction vary depending on each person. It is important to clarify customer complaints.
- Ask customer about what symptoms are present and under what conditions. Use information to reproduce symptom while driving.
- It is also important to use diagnosis sheet so as not to miss information.

KEY POINTS

WHAT ..... Vehicle model
WHEN ..... Date, Frequencies
WHERE ..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SBR339B

EXAMPLE OF DIAGNOSIS SHEET

Customer name MR/MS	Model & Year		VIN
Engine #	Trans.		Mileage
Incident Date	Manuf. Date		In Service Date
Symptoms	☐ Noise and vibration (from engine compartment) ☐ Noise and vibration (from axle)	☐ Warning / Indicator activate	☐ Firm pedal operation Large stroke pedal operation
	☐ TCS does not work (Rear wheels slip when accelerating)	☐ ABS does not work. (wheels slip when braking)	☐ Lack of sense of acceleration
Engine conditions	☐ When starting ☐ After starting		
Road conditions	☐ Low friction road (☐Snow ☐Gravel ☐Other) ☐ Bumps / potholes		
Driving conditions	☐ Full-acceleration ☐ High speed cornering ☐ Vehicle speed: Greater than 10 km/h (6 MPH) ☐ Vehicle speed: 10 km/h (6 MPH) or less ☐ Vehicle is stopped		
Applying brake conditions	☐ Suddenly ☐ Gradually		
Other conditions	☐ Operation of electrical equipment ☐ Shift change ☐ Other descriptions

CAN 5 STAT		CAN communication normal	0	
		CAN communication error	40	

Note 1: Confirm tire pressure is normal.
Note 2: ON/OFF timing of ABS warning lamp
ON: Approx. Within 1.5 seconds after ignition switch is turned ON, or when a malfunction is detected.
OFF: Approx. 1.5 seconds after ignition switch is turned ON (when system is in normal operation) and ESP/TCS function is not activated.
Note 3: ON/OFF timing of ESP OFF indicator lamp
ON: Approx. Within 1.5 seconds after ignition switch is turned ON, or when a malfunction is detected and ESP OFF switch is ON.
OFF: Approx 1.5 seconds after ignition switch is turned ON (when system is in normal operation.) And when ESP OFF switch is OFF.
Note 4: SLIP indicator lamp ON/OFF timing
ON: Approx. Within 1.5 seconds after ignition switch is turned ON, or when a malfunction is detected and ESP/TCS function is activated while driving.
OFF: Approx. 1.5 seconds after ignition switch is turned ON (when system is in normal operation) and ESP/TCS function is not activated.
Blinking: ESP/TCS function is active during driving
Note 5: Serves as EBD warning lamp.
Note 6: CAN status indicates the condition of the CAN communication judged by each signal input.

- Normal: If any problems were not found in the past, CAN status indicated “0”. In case of operating properly at the present in spite of having problem in the past, then CAN status indicates “39-1”.
- Malfunction: If there is a malfunction, CAN indicates “40”.

After returning to normal condition, every time ignition switch is turned OFF from ON, the indication will change like “39”→ “38” → “37” ⋯ “1” and if a malfunction is detected again, CAN status indicates “40”. (Though returning to the normal condition, “0” is not indicated. To reset, select and press the “ERASE” on the “SEFL-DIAGNOSIS” screen.)

CONSULT-II Functions

EFS004JW

CAUTION:

- **Do not use the “function test” for diagnosis. For more information, refer to the separate volume “CONSULT-II OPERATION MANUAL (Function Test)”.**
- **When CONSULT-II is connected and communicating, ABS warning lamp, SLIP indicator lamp, and ESP OFF indicator lamp turn on, and when the communication is interrupted, the lamps will turn off after approximately 2 to 3 sec.**
- **When the self-diagnosis, data monitor, or active test functions are being executed, EBD, ABS, TCS, and ESP control is not performed.**
- **When using CONSULT-II to perform ABS actuator and electric unit (control unit) self-diagnosis, active test, work support, etc., first stop engine, connect CONSULT-II, and select “ABS”.**
- **When an error is shown by the CONSULT-II SELF-DIAG RESULTS and CONSULT-II is used to perform an active test, an engine system malfunction may be shown, but restarting engine will return the status to normal.**
- **When data monitoring is executed by using CONSULT-II, a malfunction code may be indicated as the result of the real time diagnosis. In such a case, execute data monitoring in manual mode. Refer to CONSULT-II Operation Manual.**

CONSULT-II FUNCTION APPLICATION TABLE (MAIN ITEMS)

Item	Self-diagnosis	Data monitor	Active test

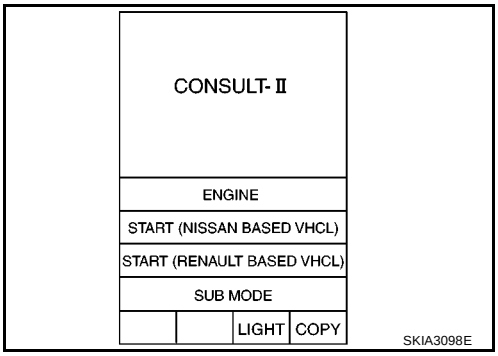
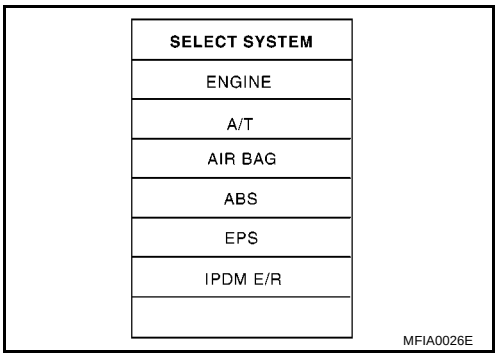
CONSULT-II BASIC OPERATION PROCEDURE

1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.

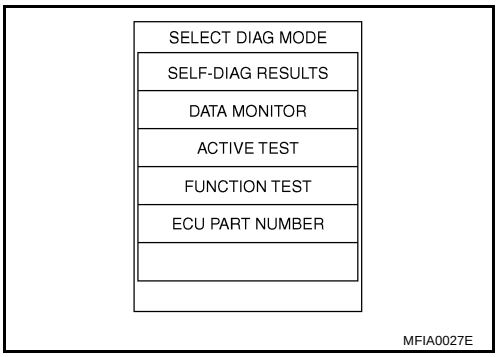
   CAUTION:
   If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



5. Touch “ABS” in the “SELECT SYSTEM” screen.
   If “ABS” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Select the required diagnostic location from the “SELECT DIAG MODE” screen.
   For further information, see CONSULT-II Operation Manual.



SELF-DIAGNOSIS

Description

- If an error is detected in the system, ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp on the combination meter turn on. In this case, perform self-diagnosis as follows:
- While CONSULT-II is used, ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp may be turned on in a case of no malfunctioning.

Operation Procedure

1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.

   CAUTION:
   If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

3. Turn ignition switch ON.
4. Start engine and drive at approximately 30 km/h (19 MPH) for approximately 1 minute.
5. After stopping vehicle, with the engine running, touch “START (NISSAN BASED VHCL)”, “ABS”, “SELF-DIAG RESULTS” in order on the CONSULT-II screen.

   CAUTION:
   If “START (NISSAN BASED VHCL)” is touched immediately after starting engine or turning on the ignition switch, “ABS” might not be displayed in the System Selection screen. In this case, repeat the operation from step 1. If it cannot be shown after several attempts, ABS actuator and electric unit (control unit) may have malfunctioned.
6. The self-diagnostic results are displayed. (If necessary, the self-diagnostic results can be printed out by touching “PRINT”.)
   - When “NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.” is displayed, check ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp.
7. Perform the appropriate inspection from the display item list, and repair or replace the malfunctioning component.
8. Drive the vehicle at approximately 30 km/h (19 MPH) for approximately 1 minute.

   CAUTION:
   - **In a case that a wheel sensor is malfunctioning, ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp will turn on. If vehicle is not driven at approximately 30 km/h (19 MPH) for at least approximately 1 minute after repair of the wheel sensor system, ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp may not turn off even if everything is normal. Check again to make sure that there is no malfunction on other parts.**
9. Turn ignition switch OFF to prepare for erasing the memory.
10. Start engine and touch “START (NISSAN BASED VHCL)”, “ABS”, “SELF-DIAG RESULTS”, “ERASE” in order on the CONSULT-II screen to erase the error memory.
    If “ABS” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .

    CAUTION:
    If the error memory is not erased, re-perform the operation from step 5.
11. For the final inspection, drive at approximately 30 km/h (19 MPH) for approximately 1 minute and confirm that ABS warning lamp, ESP OFF indicator lamp and SLIP indicator lamp are OFF.

Display Item List

Self-diagnostic item	Malfunction detecting condition	Check system
FR LH SENSOR [C101F]	Circuit of front LH wheel sensor is open, shorted or sensor power voltage is unusual.	BRC-85, "Inspection 1: Wheel Sensor System"
RR RH SENSOR [C102F]	Circuit of rear RH wheel sensor is open, shorted or sensor power voltage is unusual.	
FR RH SENSOR [C100F]	Circuit of front RH wheel sensor is open, shorted or sensor power voltage is unusual.	
RR LH SENSOR [C103F]	Circuit of rear LH wheel sensor is open, shorted or sensor power voltage is unusual.	
FR LH SENSOR ROTOR [C1042]	ABS actuator and electric unit (control unit) cannot identify sensor pulses, because of large gap between wheel sensor and sensor rotor.	
RR RH SENSOR ROTOR [C1043]	ABS actuator and electric unit (control unit) cannot identify sensor pulses, because of large gap between wheel sensor and sensor rotor.	
FR RH SENSOR ROTOR [C1041]	ABS actuator and electric unit (control unit) cannot identify sensor pulses, because of large gap between wheel sensor and sensor rotor.	
RR LH SENSOR ROTOR [C1044]	ABS actuator and electric unit (control unit) cannot identify sensor pulses, because of large gap between wheel sensor and sensor rotor.	
STOP LAMP SW CIRC [C10C6]	Stop lamp switch is fixed at “ON” position.	BRC-94, "Inspection 7: Stop Lamp Switch System"

Self-diagnostic item	Malfunction detecting condition	Check system
STOP LAMP OR CONT [C10C6]	Stop lamp switch circuit is open or shorted, or controller failure.	BRC-94, "Inspection 7: Stop Lamp Switch System"
ST ANG SEN [C1158]	Neutral position of steering angle sensor is dislocated, or steering angle sensor is malfunctioning initialize of steering angle sensor is not completed.	BRC-89, "Inspection 4: Steering Angle Sensor System"
YAW RATE/G-SEN [C10F4]	Yaw rate/G-sensor has generated an error, or yaw rate/G-sensor signal line is open or shorted.	BRC-90, "Inspection 5: Yaw Rate/Side G-Sensor System"
ABS SENSOR [C1046]	Wheel sensor input is malfunction or wheel sensor power voltage is too low.	BRC-85, "Inspection 1: Wheel Sensor System" (Note 1)
BATTERY VOLTAGE [C10CC]	Supply voltage for ABS actuator and electric unit (control unit) is too low or too high, or abnormal.	BRC-92, "Inspection 6: ABS Actuator and Electric Unit (Control Unit) Power Supply and Ground System"
CONTROLLER FAILURE [C10C3]	Internal malfunction of ABS actuator and electric unit (control unit)	BRC-89, "Inspection 3: ESP/TCS/ABS Control Unit System"
CAN COMM CIRCUIT [U1000]	● CAN communication line is open or shorted. ● ABS actuator and electric unit (control unit) internal malfunction ● Battery voltage for ECM is suddenly interrupted for approximately 0.5 seconds or more.	BRC-96, "Inspection 9: CAN Communication System" (Note 1)
ECM [C1180]	● CAN communication line is open or shorted. ● CAN communication signal form ECM cannot be received.	BRC-88, "Inspection 2: Engine System", BRC-96, "Inspection 9: CAN Communication System"
AT [C1188]	● CAN communication line is open or shorted. ● CAN communication signal from TCM cannot be received.	BRC-96, "Inspection 9: CAN Communication System"
BR FLUID LEVEL LOW [C1155]	Brake fluid level drops or circuit between ABS actuator and electric unit (control unit) and brake fluid level switch is open or shorted.	BRC-96, "Inspection 8: Brake Fluid Level Switch System"

Note 1: If multiple malfunctions are detected including CAN communication line [U1000], perform diagnosis for CAN communication line first.

DATA MONITOR

Operation Procedure

1. After turning OFF ignition switch, connect CONSULT-II and CONVERTER to data link connector.

   CAUTION:
   If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.
2. Turn ignition switch ON.
3. Touch “START (NISSAN BASED VHCL)”, “ABS”, “DATA MONITOR” in order on the CONSULT-II screen. If “ABS” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .

   CAUTION:
   When “START (NISSAN BASED VHCL)” is touched immediately after starting engine or turning on ignition switch, “ABS” might not be displayed in the system selection screen. In this case, repeat the operation from step 1.
4. Return to the Monitor Item Selection screen, and touch “ECU INPUT SIGNALS”, “MAIN SIGNALS” or “SELECTION FROM MENU”. Refer to the following information.
5. When “START” is touched, the data monitor screen is displayed.

Display Item List

Item (Unit)	Data monitor item selection				Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	CAN DIAG SUPPORT MNTR	
GEAR	×	×	×	–	Gear position judged by PNP switch signal is displayed.
FR RH SENSOR (km/h, MPH)	×	×	×	–	Wheel speed calculated by front RH wheel sensor signal is displayed.
FR LH SENSOR (km/h, MPH)	×	×	×	–	Wheel speed calculated by front LH wheel sensor signal is displayed.
RR RH SENSOR (km/h, MPH)	×	×	×	–	Wheel speed calculated by rear RH wheel sensor signal is displayed.
RR LH SENSOR (km/h, MPH)	×	×	×	–	Wheel speed calculated by rear LH wheel sensor signal is displayed.
BATTERY VOLT (V)	×	×	×	–	Voltage supplied to ABS actuator and electric unit (control unit) is displayed.
ACCEL POS SIG (%)	–	–	×	–	Throttle valve open/close status judged by CAN communication signal is displayed.
ENGINE SPEED (rpm)	–	–	×	–	Engine speed judged by CAN communication signal is displayed.
STR ANGLE SIG (deg)	–	–	×	–	Steering angle detected by steering angle sensor is displayed.
YAW RATE SEN (d/s)	–	–	×	–	Yaw rate detected by yaw rate sensor is displayed.
SIDE G-SENSOR (G)	–	–	×	–	Lateral acceleration detected by side G-sensor is displayed.
PRESS SENSOR (bar)	–	–	×	–	Brake fluid pressure detected by pressure sensor is displayed.
STOP LAMP SW (ON/OFF)	–	–	×	–	Stop lamp switch (ON/OFF) status is displayed.
OFF SW (ON/OFF)	–	–	×	–	ESP OFF switch (ON/OFF) status is displayed.
ABS WARN LAMP (ON/OFF)	–	×	×	–	ABS warning lamp (ON/OFF) status is displayed.
SLIP LAMP (ON/OFF)	–	–	×	–	SLIP indicator lamp (ON/OFF) status is displayed.
FR LH IN SOL (ON/OFF)	–	×	×	–	Front LH IN ABS solenoid (ON/OFF) status is displayed.
FR LH OUT SOL (ON/OFF)	–	×	×	–	Front LH OUT ABS solenoid (ON/OFF) status is displayed.
RR RH IN SOL (ON/OFF)	–	×	×	–	Rear RH IN ABS solenoid (ON/OFF) status is displayed.
RR RH OUT SOL (ON/OFF)	–	×	×	–	Rear RH OUT ABS solenoid (ON/OFF) status is displayed.
FR RH IN SOL (ON/OFF)	–	×	×	–	Front RH IN ABS solenoid (ON/OFF) status is displayed.

Item (Unit)	Data monitor item selection				Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	CAN DIAG SUPPORT MNTR	
FR RH OUT SOL (ON/OFF)	–	×	×	–	Front RH OUT ABS solenoid (ON/OFF) status is displayed.
RR LH IN SOL (ON/OFF)	–	×	×	–	Rear LH IN ABS solenoid (ON/OFF) status is displayed.
RR LH OUT SOL (ON/OFF)	–	×	×	–	Rear LH OUT ABS solenoid (ON/OFF) status is displayed.
OFF LAMP (ON/OFF)	–	–	×	–	OFF Lamp (ON/OFF) status is displayed.
MOTOR RELAY (ON/OFF)	–	×	×	–	ABS motor relay signal (ON/OFF) status is displayed.
ACTUATOR RLY (ON/OFF)	–	×	×	–	ABS actuator relay signal (ON/OFF) status is displayed.
HSV [FL-RR] (ON/OFF)	–	–	×	–	Primary side switch-over solenoid valve 1 (cut valve 1) (ON/OFF) status is displayed.
HSV [FR-RL] (ON/OFF)	–	–	×	–	Secondary side switch-over solenoid valve 2 (cut-valve 2) (ON/OFF) status is displayed.
USV [FL-RR] (ON/OFF)	–	–	×	–	Primary side switch-over solenoid valve 1 (suction valve 1) (ON/OFF) status is displayed.
USV [FR-RL] (ON/OFF)	–	–	×	–	Secondary side switch-over solenoid valve 2 (suction valve 2) (ON/OFF) status is displayed.
FLUID LEV SW (ON/OFF)	–	–	×	–	Brake fluid level switch (ON/OFF) status is displayed.
EBD WARN LAMP (ON/OFF)	–	–	×	–	Brake warning lamp (ON/OFF) status is displayed. (Note 1)
CRANKING SIG (ON/OFF)	–	–	×	–	Cranking condition (ON/OFF) status is displayed.
PARK BRAKE SW (ON/OFF)	–	–	×	–	Park brake operation (ON/OFF) status is displayed.
CAN CIRC 1 (OK/UNKWN)	–	–	–	×	CAN communication signal (OK/UNKWN) status is displayed.
CAN CIRC 2 (OK/UNKWN)	–	–	–	×	
CAN CIRC 3 (OK/UNKWN)	–	–	–	×	
CAN CIRC 4 (OK/UNKWN)	–	–	–	×	
CAN CIRC 5 (OK/UNKWN)	–	–	–	×	

Item (Unit)	Data monitor item selection				Remarks
	ECU INPUT SIGNALS	MAIN SIGNALS	SELECTION FROM MENU	CAN DIAG SUPPORT MNTR	
CAN 1 STAT (0 - 40)	–	–	–	×	CAN communication line (0 - 40) status is displayed.
CAN 2 STAT (0 - 40)	–	–	–	×	
CAN 3 STAT (0 - 40)	–	–	–	×	
CAN 4 STAT (0 - 40)	–	–	–	×	
CAN 5 STAT (0 - 40)	–	–	–	×	

×:Applicable
–:Not applicable
Note 1: Serves as EBD warning lamp.
Note 2: CAN status indicates the condition of the CAN communication judged by each signal input.

- Normal: If any problems were not found in the past, CAN status indicated “0”. In case of operating properly at the present in spite of having problem in the past, then CAN status indicates “39-1”.
- Malfunction: If there is a malfunction, CAN indicates “40”.

After returning to normal condition, every time ignition switch is turned OFF from ON, the indication will change like “39”→ “38” → “37” ⋯ “1” and if a malfunction is detected again, CAN status indicates “40”. (Though returning to the normal condition, “0” is not indicated. To reset, select and press the “ERASE” on the “SEFL-DIAGNOSIS” screen.)

ACTIVE TEST

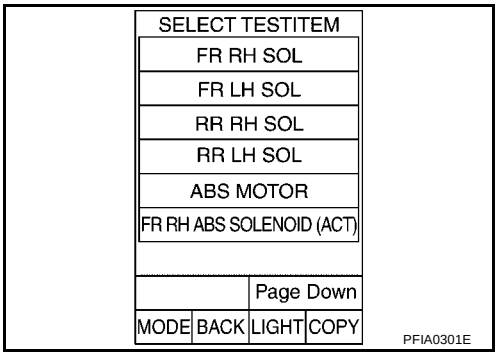
CAUTION:

- **Do not perform active test while driving.**
- **Make sure to completely bleed air from the brake system.**
- **Active test cannot be performed when EBD, ABS, TCS or ESP operation is malfunction.**
- **ABS and brake warning lamps turn on during the active test.**

Operation Procedure

1. Connect CONSULT-II and CONVERTER to data link connector and start engine.

   CAUTION:
   If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.
2. Touch “START (NISSAN BASED VHCL) ” on the display screen.
3. Touch “ABS”.
   If “ABS” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .
4. Touch “ACTIVE TEST”.
5. The test item selection screen is displayed.
6. Touch necessary test item.



7. With the “MAIN SIGNALS” display shown in reverse, touch “START”.
8. The “ACTIVE TEST” screen will be displayed, so perform the following test.

Solenoid Valve Operation Chart

Operation	ABS solenoid valve			ABS solenoid valve (ACT)		
	UP	KEEP	DOWN	UP	ACTUATOR UP	ACTUATOR KEEP
FR RH SOL	OFF	ON	ON	OFF	OFF	OFF
FR LH SOL	OFF	ON	ON	OFF	OFF	OFF
RR RH SOL	OFF	ON	ON	OFF	OFF	OFF
RR LH SOL	OFF	ON	ON	OFF	OFF	OFF
FR RH ABS SOLENOID (ACT)	OFF	OFF	OFF	OFF	ON*	OFF
FR LH ABS SOLENOID (ACT)	OFF	OFF	OFF	OFF	ON	ON
RR RH ABS SOLENOID (ACT)	OFF	OFF	OFF	OFF	ON*	OFF
RR RL ABS SOLENOID (ACT)	OFF	OFF	OFF	OFF	ON	ON

*: ON for 1 to 2 seconds after the touch, and then OFF

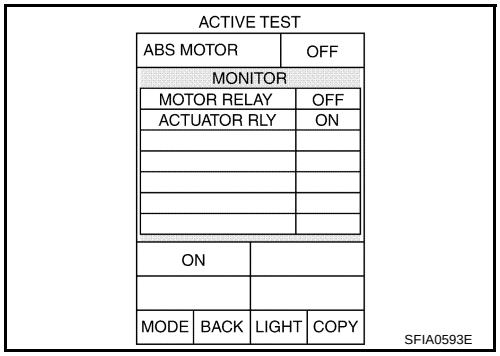
NOTE:

- If active test is performed with brake pedal depressed, pedal stroke may change. This is normal.
- “TEST IS STOPPED” is displayed approximately 10 seconds after operation starts.
- After “TEST IS STOPPED” is displayed, touch “BACK” and conduct the test from the Step 8.

ABS Motor

Touch “ON” and “OFF” on the screen. Make sure ABS motor relay operates as shown in table below.

Operation	ON	OFF
MOTOR RELAY	ON	OFF
ACTUATOR RELAY	ON	ON



NOTE:

- If active test is performed with brake pedal depressed, pedal stroke may change. This is normal.
- “TEST IS STOPPED” is displayed approximately 10 seconds after operation starts.

For Fast and Accurate Diagnosis

EFS004JX

PRECAUTIONS FOR DIAGNOSIS

- Before performing diagnosis, always read precautions. Refer to BRC-61, "How to Proceed With Diagnosis" .
- If ABS actuator and electric unit (control unit), steering angle sensor, steering system parts or suspension system parts have been replaced, or if alignment has been adjusted, be sure to adjust neutral position of steering angle sensor before driving. Refer to BRC-50, "Adjustment of Steering Angle Sensor Neutral Position" .
- After diagnosis is finished, be sure to erase memory. Refer to BRC-75, "SELF-DIAGNOSIS" .
- When checking continuity and voltage between units, be sure to check for disconnection, looseness, bend, or collapse of connector terminals. If any malfunction is found, repair or replace connector terminals.
- For intermittent symptoms, possible cause is malfunction in harness, harness connector, or terminals. Move harness, harness connector, and terminals to check for poor connections.
- If a circuit tester is used for the check, be careful not to forcibly extend any connector terminal.
- To use CONSULT-II to perform self-diagnosis of ABS actuator and electric unit (control unit), active tests, or work support, first stop work, then connect CONSULT-II and select “ABS”.
- While self-diagnostic results of CONSULT-II shows malfunction, if CONSULT-II active test is performed, an engine system error may be indicated. In this case, start engine to resume the normal screen.
- ESP/TCS/ABS system electronically controls brake operation and engine output. The following symptoms may be caused by normal operations:

Symptom	Symptom description	Result
Motor operation noise	This is noise of motor inside ABS actuator and electric unit (control unit). Slight noise may occur during ESP, TCS, and ABS operation.	Normal
	When the vehicle speed goes over 10 km/h (6 MPH), motor and valves operating noise may be heard. It happens only once after IGN (ignition) is ON. This is a normal status of the system operation check.	
System operation check noise	When engine starts, slight “click” noise may be heard from engine room. This is normal and is part of system operation check.	Normal
ESP/TCS operation (SLIP indicator lamp blinking)	TCS may activate momentarily if wheel speed changes when driving over location where friction coefficient varies, when up/downshifting, or when fully depressing accelerator pedal.	Normal Cancel the ESP/TCS function for the inspection on a chassis dynamometer.
	For inspection of speedometer or other instruments, press ESP OFF SW to turn ESP/TCS function off.	
	When accelerator pedal is depressed on a chassis dynamometer, vehicle speed will not increase. This is not normal. It is result of TCS being activated by stationary front wheels. Warning lamp may also illuminate to indicate “sensor system error”. This is also normal, and is the result of the stationary front wheels being detected. To be certain, restart engine, and drive vehicle at 30 km/h (19 MPH) or above. Make sure warning lamp does not illuminate.	
ABS operation (Longer stopping distance)	On roads with low friction coefficients, such as snowy roads or gravel roads, vehicles with ABS may require a longer stopping distance. Therefore, when driving on such roads, avoid overconfidence and keep speed sufficiently low.	Normal
Insufficient feeling of acceleration	Depending on road conditions, driver may feel that feeling of acceleration is insufficient. This is because traction control, which controls engine and brakes to achieve optimal traction, has the highest priority (for safety). As a result, there may be times when acceleration is slightly less than usual for the same accelerator pedal operation.	Normal

ON and OFF Timing for ABS Warning Lamp, ESP OFF Indicator Lamp, SLIP Indicator Lamp, Brake Warning Lamp

×: ON –: OFF

Condition	ABS warning lamp	ESP OFF indicator lamp	SLIP indicator lamp	Remarks
Ignition SW OFF.	–	–	–	—
Approx. 1.5 seconds after ignition switch is turned ON.	×	×	×	—
Approx. 1.5 seconds later after ignition switch ON.	–	–	–	Go out 1.5 seconds after ignition switch is turned ON.
ESP OFF SW is turned ON. (ESP/TCS function is OFF.)	–	×	–	—
ESP/TCS/ABS error.	×	×	×	There is an ABS actuator and electric unit (control unit) error. (Power, ground or system malfunction)
When ESP/TCS is not functioning normally.	–	×	×	—

NOTE:

1. Brake warning lamp will turn on in case of operating parking brake (switch turned on) or of actuating brake fluid level switch (brake fluid is insufficient).

Basic Inspection

SMA for VIN >SJN**AK12U1072423

EFS004JY

BASIC INSPECTION 1: BRAKE FLUID AMOUNT, LEAKS, AND BRAKE PADS INSPECTION

1. Check fluid level in the brake reservoir tank. If fluid level is low, refill brake fluid.
2. Check brake piping and around ABS actuator and electric unit (control unit) for leaks. If there is leaking or oozing fluid, check the following items.
   - If ABS actuator and electric unit (control unit) connection is loose, tighten piping to the specified torque and re-perform the leak inspection to make sure there are no leaks.
   - If there is damage to the connection flare nut or ABS actuator and electric unit (control unit) screw, replace the damaged part and re-perform the leak inspection to make sure there are no leaks.
   - When there is fluid leaking or oozing from a part other than ABS actuator and electric unit (control unit) connection, if fluid is just oozing out, use a clean cloth to wipe off the oozing fluid and re-check for leaks. If fluid is still oozing out, replace the damaged part.
   - When there is fluid leaking or oozing at ABS actuator and electric unit (control unit), if fluid is just oozing out, use a clean cloth to wipe off oozing fluid and re-check for leaks. If fluid is still oozing out, replace ABS actuator and electric unit (control unit) body.

     CAUTION:
     ABS actuator and electric unit (control unit) body cannot be disassembled.
3. Check brake pad degree of wear. Refer to BR-21, "FRONT DISC BRAKE" and BR-27, "REAR DRUM BRAKE" .

BASIC INSPECTION 2: POWER SYSTEM TERMINAL LOOSENESS AND BATTERY INSPECTION

Make sure battery positive cable, negative cable and ground connection are not loose. If looseness is detected, tighten the cables. In addition, check the battery voltage to make sure it has not dropped and alternator is normal.

BASIC INSPECTION 3: ABS WARNING LAMP, ESP OFF INDICATOR LAMP AND SLIP INDICATOR LAMP INSPECTION

1. Make sure ABS warning lamp, ESP OFF indicator lamp (when ESP OFF switch is OFF), and SLIP indicator lamp turns on approximately 1.5 second when ignition switch is turned ON. If they do not, check ESP OFF indicator lamp and then ESP OFF switch. Refer to BRC-97, "ESP OFF SWITCH" . Check CAN communications. Refer to “CAN Communication Inspection”. If there are no errors with ESP OFF switch and CAN communication system, check combination meter. Refer to DI-5, "COMBINATION METERS" .
2. Make sure ABS warning lamp, ESP OFF indicator lamp, SLIP indicator lamp turn off approximately 1.5 second after turn ignition switch ON. If lamps do not turn off, perform self-diagnosis.
3. With engine running, make sure ESP OFF indicator lamp turns on and off when ESP OFF switch is turned ON and OFF. If indicator lamp status does not correspond to switch operation, check the ESP OFF switch system. Refer to BRC-97, "ESP OFF SWITCH" .
4. Make sure ABS warning lamp, ESP OFF indicator lamp, and SLIP indicator lamp turn off 1.5 seconds after engine is started. If ABS warning lamp, ESP OFF indicator lamp, and SLIP indicator lamp have not turned off 10 seconds after engine has been started, perform self-diagnosis of ABS actuator and electric unit (control unit).
5. After performing the self-diagnosis, be sure to erase the error memory. Refer to BRC-75, "SELF-DIAGNOSIS" .

Inspection 1: Wheel Sensor System

EFS004JZ

DTC C100F-C103F, C1041-C1043, C1046

After using the CONSULT-II SELF-DIAG RESULTS to determine the location of the malfunctioning wheel sensor, check all areas to determine the component to be replaced.

CAUTION:

- **Do not measure the resistance value and also voltage between sensor terminal with tester etc., because sensor is an active sensor.**
- **Do not expand terminal of connector with a tester terminal stick, when it does the inspection with tester.**

INSPECTION PROCEDURE

1. CHECK TIRE

Check air pressure, wear and size.

Are air pressure, wear, and size within the standard values?

YES >> GO TO 2.
NO >> Adjust air pressure, or replace tire.

2. CHECK SENSOR AND SENSOR ROTOR

- Check the condition of the sensor mount (for looseness, etc.).
- Check the surface of front sensor rotor rubber for damage.
- Check rear sensor rotor for damage.

OK or NG

OK >> GO TO 3.
NG >> Repair sensor mount or replace sensor rotor.

3. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnosis results
FR RH SENSOR
FR LH SENSOR
RR RH SENSOR
RR LH SENSOR
FR RH SENSOR ROTOR
FR LH SENSOR ROTOR
RR RH SENSOR ROTOR
RR LH SENSOR ROTOR

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 4.
NO >> INSPECTION END.

4. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector E47 and malfunctioning wheel sensor connector E23 (FR-LH), E38 (FR-RH), B35 (RR-LH) or B34 (RR-RH). Check terminal for deformation, open circuit, poor contact, etc., and repair or replace if any malfunctioning condition is found.
2. Reconnect connectors, drive at a speed of approximately 30 km/h (19 MPH) for approximately 1minute, and perform self-diagnosis.

OK or NG

OK >> Connector terminal contact is loose, damaged, open or shorted.
NG >> GO TO 5.

5. CHECK WHEEL SENSOR HARNESS

1. Turn ignition switch OFF and disconnect malfunctioning wheel sensor connector E23 (FR-LH), E38 (FR-RH), B34 (RR-RH) or B35 (RR-LH) and ABS actuator and electric unit (control unit) connector E47.
2. Check continuity between terminals. (Also check the continuity when steering wheel is turned right and left and when sensor harness inside wheel well is moved.)

	Power system		Signal system		Ground system	
Wheel	ABS actuator and electric unit (control unit) harness connector E47	Wheel sensor harness connector E23, E38, B35 or B34	ABS actuator and electric unit (control unit) harness connector E47	Wheel sensor harness connector E23, E38, B35 or B34	ABS actuator and electric unit (control unit) harness connector E47 (signal)	ABS actuator and electric unit (control unit) harness connector E47 (ground)
Front RH (E38)	9 (L)	2 (L)	10 (R)	1 (R)	10 (R), 9 (L)	1 (B), 4 (B)
Front LH (E23)	26 (BR)	2 (BR)	5 (Y)	1 (Y)	26 (BR), 5 (Y)	
Rear RH (B34)	8 (OR)	2 (OR)	29 (LG)	1 (LG)	8 (OR), 29 (LG)	
Rear LH (B35)	6 (BR)	2 (BR)	27 (G)	1 (G)	6 (BR), 27 (G)	

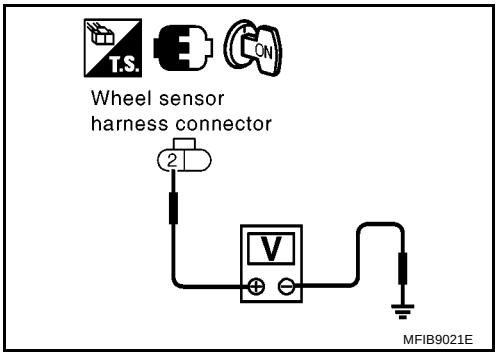
Power system : Continuity should exist.
Signal system : Continuity should exist.
Ground system : Continuity should not exist.

OK or NG

OK >> GO TO 6.
NG >> Repair harness and connector between ABS actuator and electric unit (control unit) and wheel sensor.

6. CHECK WHEEL SENSOR POWER SUPPLY CIRCUIT

1. Connect ABS actuator and electric unit (control unit) connector E47.
2. Turn ignition switch ON and check voltage between malfunctioning wheel sensor harness connector power terminal and ground.



Voltage		
Front RH wheel sensor (Harness connector E38)	**2 (L) - Ground**	**8 V or more**
Front LH wheel sensor (Harness connector E23)	**2 (BR) - Ground**	**8 V or more**
Rear RH wheel sensor (Harness connector B34)	**2 (OR) - Ground**	**8 V or more**
Rear LH wheel sensor (Harness connector B35)	**2 (BR) - Ground**	**8 V or more**

OK or NG

OK >> Replace wheel sensor.
NG >> Replace ABS actuator and electric unit (control unit).

Inspection 2: Engine System

EFS004K0

DTC C1180

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
ECM

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK ENGINE SYSTEM

1. Perform an ECM self-diagnosis refer to EC-69, "TROUBLE DIAGNOSIS" (with EURO-OBD), EC-515, "TROUBLE DIAGNOSIS" (without EURO-OBD) and repair or replace malfunctioning items. Re-perform ECM self-diagnosis.
2. Re-perform ABS actuator and electric unit (control unit) self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace malfunctioning items. Re-perform the self-diagnosis.

Inspection 3: ESP/TCS/ABS Control Unit System

Self-diagnostic results
CONTROLLER FAILURE

Is the above displayed in the self-diagnosis display items?

YES >> Replace ABS actuator and electric unit (control unit). Re-perform the self-diagnosis.
NO >> INSPECTION END

Inspection 4: Steering Angle Sensor System

EFS004K3

DTC C1158

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS-1

Check the self-diagnostic results.

Self-diagnosis results
CAN COMM CIRCUIT

Is the above displayed in the self-diagnosis item?

YES >> GO TO Inspection 9, refer to BRC-96, "Inspection 9: CAN Communication System" .
NO >> GO TO 2.

2. CHECK SELF-DIAGNOSTIC RESULTS-2

Check the self-diagnostic results.

Self-diagnosis results
ST ANG SEN

Is the above displayed in the self-diagnosis item?

YES >> GO TO 3.
NO >> INSPECTION END

3. CHECK EPS SYSTEM

1. Perform an EPS self-diagnosis refer to STC-6, "TROUBLE DIAGNOSIS" and repair or replace malfunctioning items. Re-perform EPS self-diagnosis.
2. Re-perform ABS actuator and electric unit (control unit) self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace malfunctioning items. Re-perform the self-diagnosis.

Inspection 5: Yaw Rate/Side G-Sensor System

EFS004K4

DTC C10F4

CAUTION:

Sudden turns (such as spin turns, acceleration turns), drifting, etc. May cause the G-sensor system indicate a malfunction. However, this is not a malfunction, if normal operation can be resumed after restarting engine.

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
YAW RATE/G-SEN

CAUTION:

When on a turntable, such as at a parking structure entrance, or when on a moving object with engine running, ESP OFF indicator lamp might turn on and self-diagnosis using CONSULT-II the yaw rate/side G-sensor system might be displayed, but in this case there is no malfunction in yaw rate/side G-sensor system. As soon as vehicle leaves turntable or moving object, restart engine to return the system to normal.

Is the above displayed in the self-diagnosis display items?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

1. Disconnect yaw rate/side G-sensor connector B61 and ABS actuator and electric unit (control unit) connector E47 and check terminals for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
2. Reconnect connectors and re-perform a ABS actuator and electric unit (control unit) self-diagnosis.

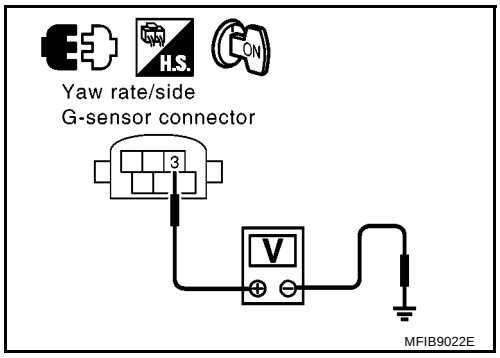
OK or NG

OK >> Connector terminal contact is loose, damaged, open or shorted.
NG >> GO TO 3.

3. CHECK YAW RATE/SIDE G-SENSOR POWER SUPPLY

1. Turn ignition switch OFF and disconnect yaw rate/side G-sensor harness connector B61.
2. Turn ignition switch ON.
3. Check voltage between yaw rate/side G-sensor harness connector B61 and ground.

Yaw rate/side G-sensor (harness connector B61)	Ground	Voltage (V) (Approx.)
3 (PU)	—	12 V

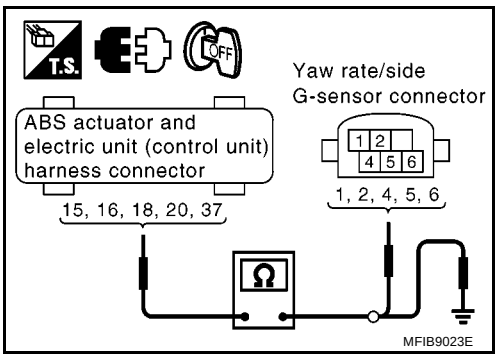


OK or NG

OK >> GO TO 4.
NG >> Repair or replace power supply circuit.

4. CHECK YAW RATE/SIDE G-SENSOR HARNESS

1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector E47.
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E47 and yaw rate/side G-sensor harness connector B61.



ABS actuator and electric unit (control unit) (Harness connector E47)	Yaw rate/side G-sensor (Harness connector B61)	Continuity
15 (GY)	6 (GY)	Yes
16 (G)	4 (G)	Yes
18 (Y)	1 (Y)	Yes
20 (W)	5 (W)	Yes
37 (OR)	2 (OR)	Yes

3. Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 15 (GY), 16 (G), 18 (Y), 20 (W) and 37 (OR) and ground. Continuity should not exist.

OK or NG

OK >> GO TO 5.
NG >> If the open or short in harness, repair or replace harness.

5. CHECK YAW RATE/SIDE G-SENSOR

1. Connect yaw rate/side G-sensor connector B61 and ABS actuator and electric unit (control unit) connector E47.
2. Use CONSULT-II “DATA MONITOR” to check if yaw rate/side G-sensor are normal.

Vehicle status	Yaw rate sensor (Data monitor standard)	Side G-sensor (Data monitor standard)
When stopped	–4 to +4 d/s	–1.1 to +1.1 G
Right turn	Negative value	Negative value
Left turn	Positive value	Positive value

OK or NG

OK >> Re-perform ABS actuator and electric unit (control unit) self-diagnosis.
NG >> Replace malfunctioning yaw rate/side G-sensor, and then re-perform self-diagnosis for ABS actuator and electric unit (control unit).

Inspection 6: ABS Actuator and Electric Unit (Control Unit) Power Supply and Ground System

EFS004K7

DTC C10CC

Inspection Procedure

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
BATTERY VOLTAGE

Does “BATTERY VOLTAGE” appear in self-diagnostic results display?

YES >> GO TO 2.
NO >> INSPECTION END

2. STARTING INSPECTION

1. Disconnect ABS actuator and electric unit (control unit) connector E47. Then reconnect it securely.
2. Perform self-diagnosis.

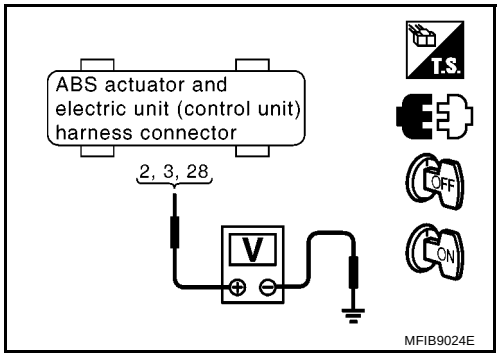
Do any self-diagnosis item appear?

YES >> GO TO 3.
NO >> Poor connection. Repair or replace connector.

3. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY (1)

1. Disconnect ABS actuator and electric unit (control unit) connector E47.
2. Turn ignition switch OFF. Check voltage between ABS actuator and electric unit (control unit) harness connector E47 and ground.

ABS actuator and electric unit (control unit) (Harness connector E47)	Ground	Voltage (V) (Approx.)
2 (Y), 3 (W)	—	12 V



3. Turn ignition switch ON (but do not start engine). Check voltage between ABS actuator and electric unit (control unit) harness connector E47 and ground.

ABS actuator and electric unit (control unit) (Harness connector E47)	Ground	Voltage (V) (Approx.)
28 (PU)	—	12 V

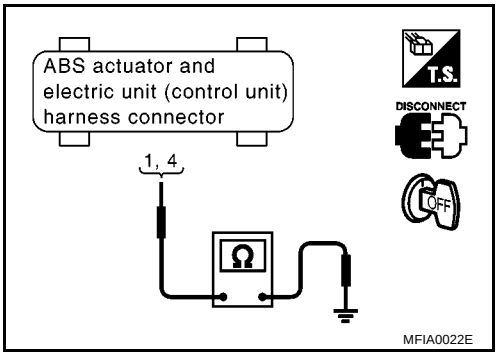
OK or NG

OK >> GO TO 4.
NG >> GO TO 5.

4. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) GROUND SYSTEM

Check ABS actuator and electric unit (control unit) ground system.

ABS actuator and electric unit (control unit) (Harness connector E47)	Ground	Continuity
1 (B), 4 (B)	—	Yes



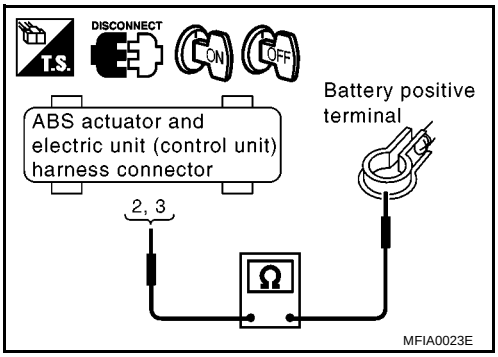
OK or NG

OK >> Perform ABS actuator and electric unit (control unit) self-diagnosis again.
NG >> Repair or replace harness or connectors.

5. CHECK ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) POWER SUPPLY (2)

1. Check fusible links 40A (terminal 2) and 30A (terminal 3).
2. Turn ignition switch OFF and check continuity between battery positive terminal and ABS actuator and electric unit (control unit) harness connector E47.

ABS actuator and electric unit (control unit) (Harness connector E47)	Battery positive terminal	Continuity
2 (Y), 3 (W)	—	Yes



3. Check fuse 10A (terminal 28)
4. Check continuity between 10A fuse and ABS actuator and electric unit (control unit) harness connector.

OK or NG

OK >> Check for non-standard conditions in battery (terminal looseness, low voltage, etc.) and alternator.
NG >>
- Replace fusible link 40A or 30A or fuse 10A.
- Open or short in harness.

Inspection 7: Stop Lamp Switch System

EFS004K8

DTC C10C6

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Self-diagnostic results
STOP LAMP SW

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 2.
NO >> INSPECTION END

2. CHECK CONNECTOR

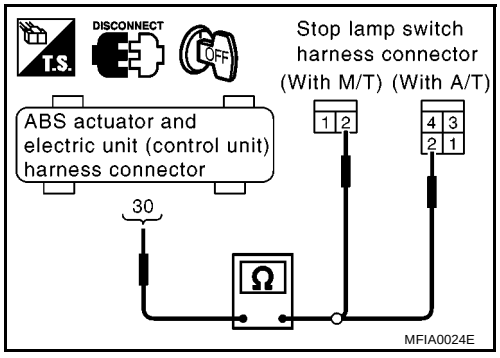
1. Disconnect stop lamp switch connector E108 (LHD MODELS WITH M/T), E109 (LHD MODELS WITH A/T), M202 (RHD MODELS WITH M/T) or M203 (RHD MODELS WITH A/T) and ABS actuator and electric unit (control unit) connector E47 and check terminals for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
2. Securely reconnect connectors.
3. perform self-diagnosis again.

OK or NG

OK >> Connector terminal contact is loose, damaged, open or shorted.
NG >> GO TO 3.

3. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF and disconnect stop lamp switch connector E108 (LHD MODELS WITH M/T), E109 (LHD MODELS WITH A/T), M202 (RHD MODELS WITH M/T) or M203 (RHD MODELS WITH A/T) and ABS actuator and electric unit (control unit) connector E47.
2. Check continuity between stop lamp switch harness connector E108 (LHD MODELS WITH M/T), E109 (LHD MODELS WITH A/T), M202 (RHD MODELS WITH M/T) or M203 (RHD MODELS WITH A/T) and ABS actuator and electric unit (control unit) harness connector E47.



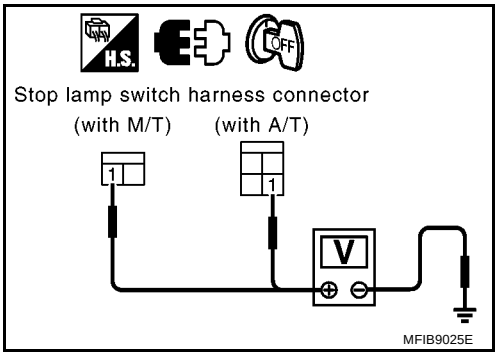
ABS actuator and electric unit (control unit) (Harness connector E47)	Stop lamp switch (Harness connector E108, E107, M202 or M203)	Continuity
30 (Y)	2 (Y)	Yes

OK or NG

OK >> GO TO 4.
NG >> Open or short in harness between stop lamp switch and ABS actuator and electric unit (control unit). Repair or replace applied harness.

4. CHECK STOP LAMP SWITCH POWER SUPPLY

1. Turn ignition switch OFF and disconnect stop lamp switch harness connector E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T) or M203 (RHD models with A/T).
2. Check voltage between stop lamp switch harness connector E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T) or M203 (RHD models with A/T) and ground.



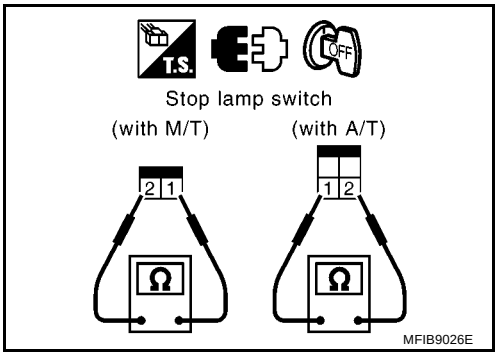
Stop lamp switch (harness connector E108, E109, M202 or M203)	Ground	Voltage (V) (approx.)
1 (L)	—	12 V

OK or NG

OK >> GO TO 5.
NG >> Repair or replace power supply circuit.

5. CHECK STOP LAMP SWITCH

1. Turn ignition switch OFF and disconnect stop lamp switch E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T) or M203 (RHD models with A/T).
2. Check continuity between stop lamp switch harness connector E108 (LHD models with M/T), E109 (LHD models with A/T), M202 (RHD models with M/T) or M203 (RHD models with A/T) terminals 1 and 2.



Terminals		Condition	Continuity
1	2	Depressed	Yes
		Released	No

OK or NG

OK >> Connect connectors and conduct an ABS actuator and electric unit (control unit) self-diagnosis.
NG >> Replace stop lamp switch.

Inspection 8: Brake Fluid Level Switch System

EFS004K9

DTC C1155

INSPECTION PROCEDURE

1. CHECK SELF-DIAGNOSTIC RESULTS-1

Check the self-diagnostic results.

Self-diagnosis results
CAN COMM CIRCUIT

Is the above displayed in the self-diagnosis item?

YES >> GO TO Inspection 9, refer to BRC-96, "Inspection 9: CAN Communication System" .
NO >> GO TO 2.

2. CHECK SELF-DIAGNOSTIC RESULTS-2

1. Check fluid level in brake fluid reservoir tank. If the level is low, add brake fluid.
2. Clear the stored self-diagnostic results and check self-diagnosis results.

Self-diagnostic results
BR FLUID LEVEL LOW

Is the above displayed in the self-diagnosis display item?

YES >> GO TO 3.
NO >> INSPECTION END

3. CHECK WARNING LAMP SYSTEM

1. Perform an WARNING LAMP self-diagnosis refer to DI-65, "WARNING LAMPS" and repair or replace malfunctioning items. Re-perform WARNING LAMP self-diagnosis.
2. Re-perform ABS actuator and electric unit (control unit) self-diagnosis.

OK or NG

OK >> INSPECTION END
NG >> Repair or replace malfunctioning items. Re-perform the self-diagnosis.

Inspection 9: CAN Communication System

EFS004KC

DTC U1000, C1180, C1188

INSPECTION PROCEDURE

1. CHECK CONNECTOR

1. Turn ignition switch OFF and disconnect ABS actuator and electric unit (control unit) connector E47. Check terminal for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace terminal.
2. Securely reconnect connectors and perform self-diagnosis.

Is “CAN COMM CIRCUIT”, “ECM” or “A/T” displayed in the self-diagnosis display items?

YES >> Print out self-diagnostic results and go to 2.
NO >> Connector terminal connection is loose, damaged, open or shorted.

2. CHECK CAN COMMUNICATION SYSTEM

Check data monitor item “CAN Diagnosis Support Monitor”.

Normal	Error (example)
CAN CIRC 1: OK	CAN CIRC 1: UNKWN
CAN CIRC 2: OK	CAN CIRC 2: UNKWN
CAN CIRC 3: OK	CAN CIRC 3: UNKWN
CAN CIRC 4: UNKWN (Note 1)	CAN CIRC 4: UNKWN
CAN CIRC 5: OK	CAN CIRC 5: UNKWN
CAN 1 STAT: 0 (Note2)	CAN 1 STAT: 40
CAN 2 STAT: 0	CAN 2 STAT: 40
CAN 3 STAT: 0	CAN 3 STAT: 40
CAN 4 STAT: 0	CAN 4 STAT: 40
CAN 5 STAT: 0	CAN 5 STAT: 40

Note 1: Model with A/T is OK.
Note 2: CAN status indicates the condition of the CAN communication judged by each signal input.

- **Normal: If any problems were not found in the past, CAN status indicated “0”. In case of operating properly at the present in spite of having problem in the past, then CAN status indicates “39-1”.**
- **Malfunction: If there is a malfunction, CAN indicates “40”.**

After returning to normal condition, every time ignition switch is turned OFF from ON, the indication will change like “39” → “38” → “37” ··· “1” and if a malfunction is detected again, CAN status indicates “40”. (Though returning to the normal condition, “0” is not indicated. To reset, select and press the “ERASE” on the “SEFL-DIAGNOSIS” screen.)

>> After printing out the monitor items, go to CAN system. Refer to LAN-6, "CAN COMMUNICATION" .

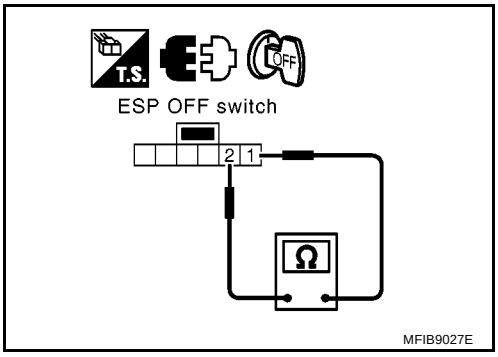
Component Inspection

EFS004KD

ESP OFF SWITCH

- Turn ignition switch OFF and disconnect ESP OFF switch connector M14, and check continuity between ESP OFF switch connector terminals 1 and 2.

1 -2 :Continuity should exist when pushing switch.
continuity should not exist when releasing switch.



Symptom 1: Excessive ABS Function Operation Frequency

EFS004KE

1. FRONT AND REAR AXLE INSPECTION

Make sure there is no excessive looseness in the front and rear axles.

OK or NG

OK >> GO TO 2.
NG >> Check front or rear axle system.

2. WHEEL SENSOR INSPECTION

Perform following inspection for wheel sensor:

- Sensor mount and damage inspection
- Sensor rotor mount and damage inspection
- Sensor connector connection inspection
- Sensor harness inspection

OK or NG

OK >> GO TO 3.
NG >> Sensor or sensor rotor replacement

3. ABS WARNING LAMP DISPLAY CHECK

Make sure warning lamp turns off approximately 2 sec. After turn ignition switch ON or when driving.

OK or NG

OK >> Normal
NG >> Perform self-diagnosis. Refer to BRC-75, "SELF-DIAGNOSIS" .

Symptom 2: Unexpected Pedal Reaction

EFS004KF

1. CHECK BRAKE PEDAL STROKE

Check brake pedal stroke.

Is the stroke too long?

YES >>
- Bleed air from brake piping.
- Check brake pedal, brake booster, and master cylinder mount for play, looseness, and brake system for fluid leaks, etc. If any malfunctions are found, make repair.

NO >> GO TO 2.

2. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector E47 and make sure that braking force is sufficient when ABS in not operating. After the inspection, reconnect connector.

OK or NG

OK >> GO TO symptom 1 “Step 2”. Refer to BRC-97, "Symptom 1: Excessive ABS Function Operation Frequency" .
NG >> Check brake system.

Symptom 3: The Braking Distance Is Long

EFS004KG

CAUTION:
On slippery road surfaces, the stopping distance might be longer with the ABS operating than when the ABS is not operating.

1. CHECK FUNCTION

Disconnect ABS actuator and electric unit (control unit) connector E47 to deactivate ABS. In this condition, check stopping distance. After inspection, connect connector.

OK or NG

OK >>
- Bleed air from brake piping.
- Check brake system.

NG >> GO TO symptom 1 “Step 2”. Refer to BRC-97, "Symptom 1: Excessive ABS Function Operation Frequency" .

Symptom 4: The ABS Function Does Not Operate

EFS004KH

CAUTION:
The ABS does not operate when the speed is 10 km/h (6 MPH) or less.

1. CHECK ABS WARNING LAMP DISPLAY

Make sure warning lamp turns off approximately 2 second after the ignition switch is turned on or when driving.

OK or NG

OK >> GO TO symptom 1 “Step 2”. Refer to BRC-97, "Symptom 1: Excessive ABS Function Operation Frequency" .
NG >> Perform self-diagnosis. Refer to BRC-75, "SELF-DIAGNOSIS" .

Symptom 5: Pedal Vibration or ABS Operation Sound Occurs

EFS004KI

CAUTION:
Under the following conditions, when brake pedal is lightly depressed (just place a foot on it), ABS is activated and vibration is felt. However, this is normal.

- **When shifting gears**
- **When driving on slippery road**
- **During cornering at high speed**
- **When passing over bumps or grooves**
- **When pulling away just after starting engine [at approximately 10 km/h (6MPH) or higher]**

1. SYMPTOM CHECK 1

Check if pedal vibration or operation sound occurs when engine is started.

OK or NG

OK >> Perform self-diagnosis. Refer toBRC-75, "SELF-DIAGNOSIS" .
NG >> GO TO 2.

2. SYMPTOM CHECK 2

Check symptom when electrical component (headlamps, etc.) switches are operated.

Does the symptom occur when the electrical component (headlamp, etc.) switches are operated?

YES >> Check if there is a radio, antenna, antenna lead wire, or wiring close to ABS actuator and electric unit (control unit) (or its wiring), and if there is, move it farther away.
NO >> GO TO symptom 1 “Step 2”. Refer to BRC-97, "Symptom 1: Excessive ABS Function Operation Frequency" .

Symptom 6: Vehicle Jerks During ESP/TCS/ABS Control

EFS004KJ

1. CHECK ENGINE SPEED SIGNAL

Perform CONSULT-II “DATA MONITOR” to check engine speed.

Is engine speed at idle 400 rpm or higher?

YES >> GO TO 3.
NO >> GO TO 2.

2. ABS WARNING LAMP DISPLAY CHECK

Make sure warning lamp turns off approximately 2 sec. After turn ignition switch ON or when driving.

OK or NG

OK >> System is normal.
NG >> GO TO 3.

3. CHECK ECM SELF-DIAGNOSTIC RESULTS

Perform ECM self-diagnosis.

Are self-diagnosis items displayed?

YES >> Check the corresponding items. Refer to EC-69, "TROUBLE DIAGNOSIS" (with EURO-OBD), EC-515, "TROUBLE DIAGNOSIS" (without EURO-OBD).
NO >> GO TO 4.

4. CHECK A/T SELF-DIAGNOSTIC RESULTS

Perform A/T self-diagnosis.

OK or NG

OK >> GO TO 5.
NG >> Check the corresponding items. Refer to AT-35, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION" (with EURO-OBD), AT-251, "ON BOARD DIAGNOSTIC SYSTEM DESCRIPTION" (without EURO-OBD).

5. CHECK SELF-DIAGNOSTIC RESULTS 1

Perform self-diagnosis of ABS actuator and electric unit (control unit).

Are self-diagnosis items displayed?

YES >> Check the corresponding items, make repairs, and re-perform ABS actuator and electric unit (control unit) self-diagnosis.
NO >> GO TO 6.

6. CHECK CONNECTOR

1. Disconnect ABS actuator and electric unit (control unit) connector E47 and ECM connector, check terminals for deformation, disconnection, looseness, and so on. If any malfunction is found, repair or replace connector.
2. Securely reconnect connector and perform self-diagnosis.

OK or NG

OK >> If poor connect, damaged, open or short circuit is found, repair or replace connector terminal.
NG >> GO TO 7.

7. CHECK SELF-DIAGNOSTIC RESULTS 2

Re-perform ABS actuator and electric unit (control unit) self-diagnosis.

Are self-diagnosis items displayed?

YES >> Repair or replace malfunctioning items.
NO >> GO TO 8.

8. CHECK CIRCUIT BETWEEN ABS ACTUATOR AND ELECTRIC UNIT (CONTROL UNIT) AND ECM

Check CAN communication system. Refer to BRC-96, "Inspection 9: CAN Communication System" .

OK or NG

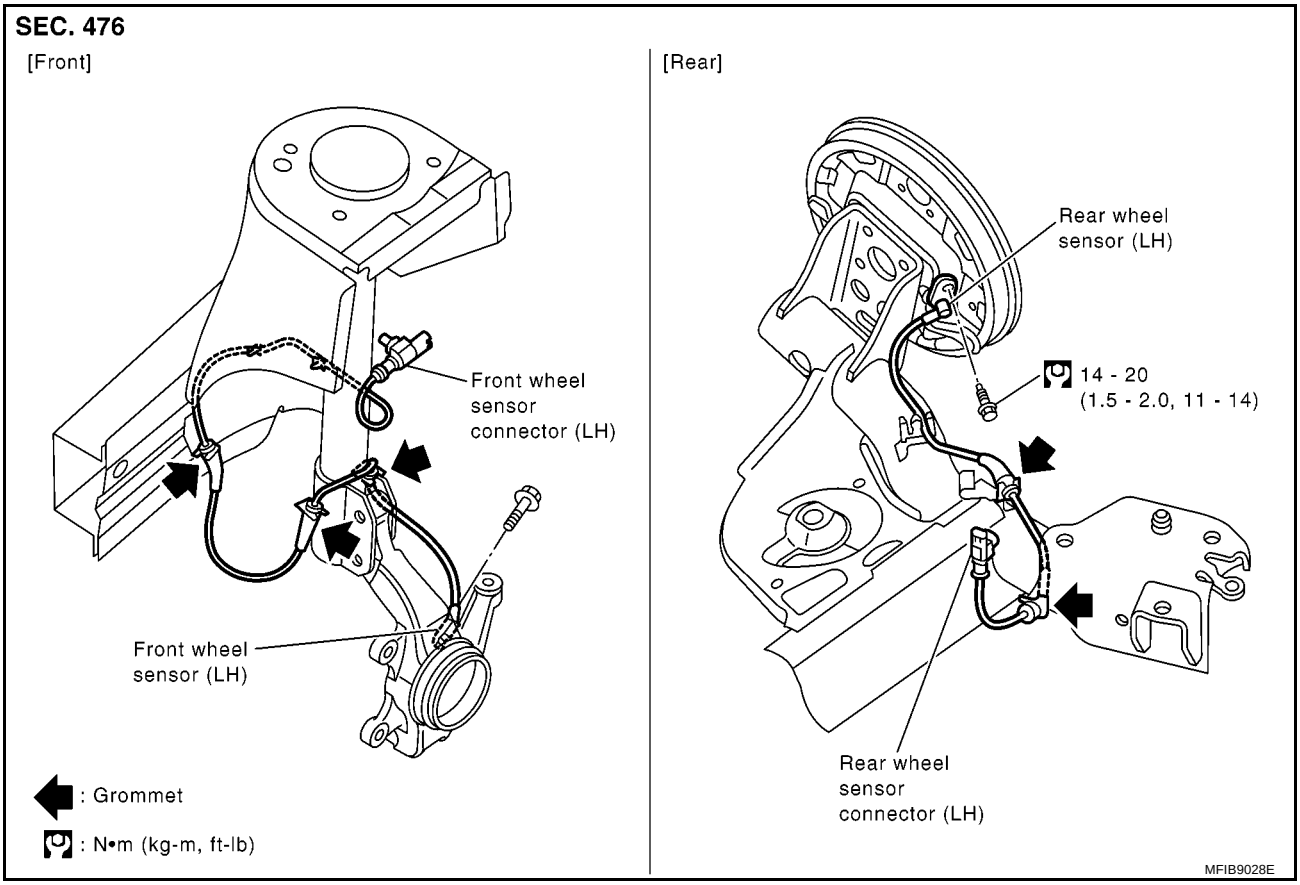
OK >> INSPECTION END
NG >> Connect connectors, and re-perform ABS actuator and electric unit (control unit) self-diagnosis.

WHEEL SENSORS

PFP:47910

Removal and Installation

EFS004KK



REMOVAL

Be careful of the following.

CAUTION:

- **When removing the sensor, do not rotate it if possible, and not forcibly pull the sensor harness.**
- **Before removing front or rear wheel hub, remove wheel sensor to avoid sensor wiring damage.**

INSTALLATION

Be certain to tighten bolts to the specified torque. Be careful of the following:

- Check the inside of the sensor mounting hole for foreign material, the rotor surface for iron chips and other foreign material, and if anything is non-standard, clean it before installation, or replace it.
- When installing the front sensor, completely push in the strut bracket and body bracket rubber grommets until they lock so that the sensor harness does not become twisted. In addition, there should be no twists in the harness when installed. Install the harness so that the painted part faces the outside of the vehicle.
- When installing the rear sensor, completely push in the rubber bracket of the suspension arm bracket and lock the marking area of the side member harness mount so that the sensor harness will not be twisted. In addition, there should be no twists in the harness when installed.

SENSOR ROTOR

PFP:47970

Removal and Installation

EFS004KL

FRONT

- Because the sensor rotor is integrated with the wheel bearing, replace it together with the wheel bearing assembly. Refer to FAX-6, "FRONT WHEEL HUB AND KNUCKLE" .

REAR

- During removal and installation, remove the wheel hub (brake drum). Refer to RAX-5, "WHEEL HUB" .

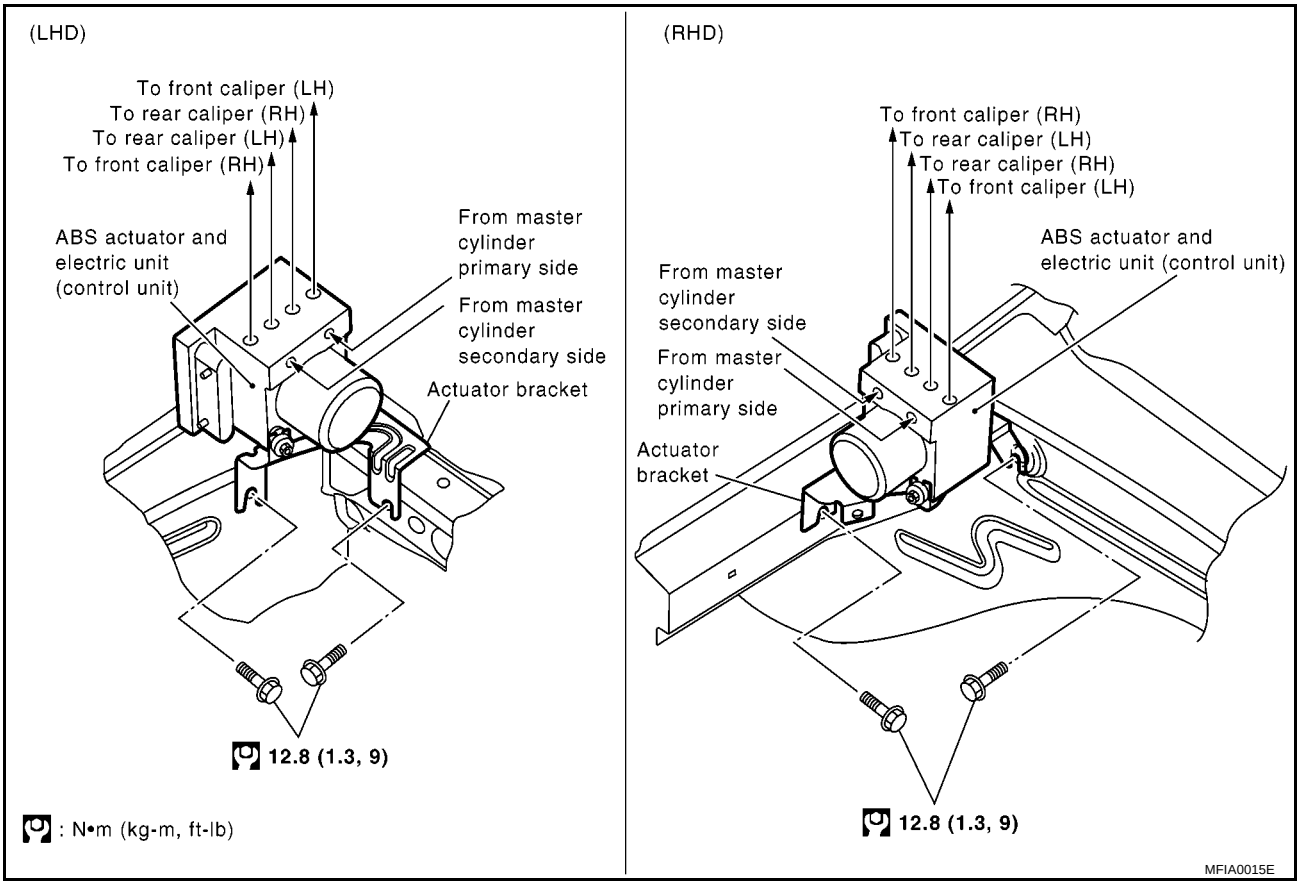
CAUTION:
The sensor rotor is a non-reusable part, it must be replaced by an new part when removing it.

ACTUATOR AND ELECTRIC UNIT (ASSEMBLY)

PFP:47660

Removal and Installation

EFS004KM



REMOVAL

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Loosen brake tube flare nuts, then remove brake tubes from ABS actuator and electric unit (control unit).
3. Remove ABS actuator and electric unit (control unit) mounting nuts.
4. Remove ABS actuator and electric unit (control unit) from vehicle.

CAUTION:

Be careful of the following when removing ABS actuator and electric unit (control unit).

- **If the part number on the part number label (pasted on actuator upper surface) is the same, ABS actuator and electric unit (control unit) cannot be used on another vehicle.**
  If it is used on another vehicle, ABS warning lamp, SLIP indicator lamp and ESP OFF indicator lamp may turn ON or ESP/TCS/ABS may not operate normally.
  When replacing ABS actuator and electric unit (control unit), must use new service parts.
- **Before servicing, disconnect battery cables.**
- **To remove brake tube, use a flare nut wrench to prevent flare nuts and brake tube from being damaged. To install, use a flare nut torque wrench (commercial service tool) and tighten to the specified torque.**
- **Do not apply excessive impact to actuator, such as dropping it.**
- **Do not remove and install ABS actuator and electric unit (control unit) by holding harness.**

INSTALLATION

To install, follow procedure for removal in reverse order.

CAUTION:

Be careful of the following when installing ABS actuator and electric unit (control unit).

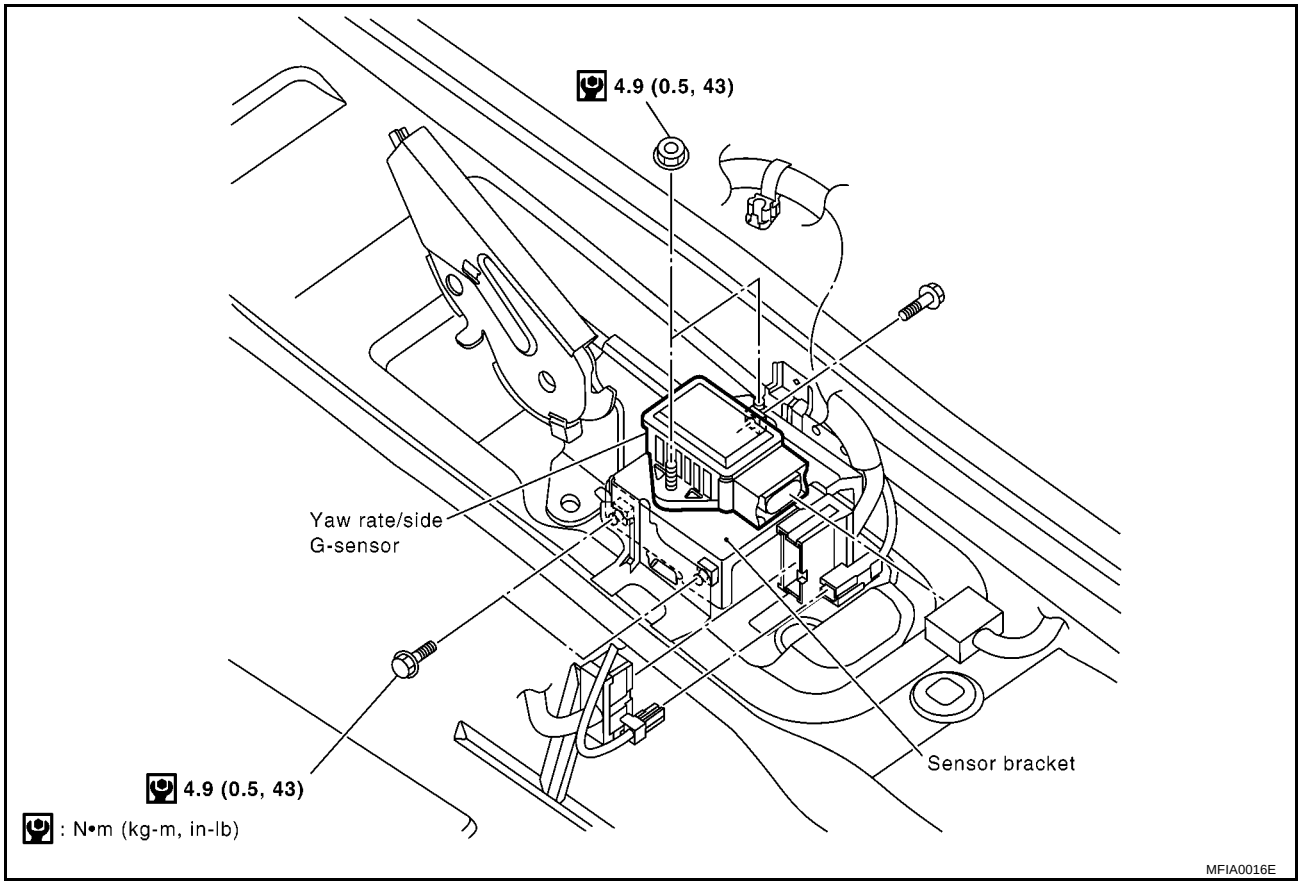
- **Tighten the mounting bolts and nuts to the specified torque.**
- **After the work, bleed air from brake piping. Refer to BR-10, "Bleeding Brake System" .**
- **After installing vehicle harness connector in the actuator, make sure connector is securely locked.**

YAW RATE/SIDE G SENSOR

PFP:47931

Removal and Installation

EFS004KN



REMOVAL

1. Remove center console. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect yaw rate/side G-sensor harness connector.
3. Remove yaw rate/side G-sensor mounting bolts. Then remove yaw rate/side G-sensor from vehicle.

CAUTION:

- **Do not drop or strike yaw rate/side G-sensor, because it has little endurance to impact.**
- **Do not use power tool etc., because yaw rate/side G-sensor is weak for the impact.**

INSTALLATION

To install, follow procedure for removal in reverse order.

CAUTION:

- **Do not drop or strike yaw rate/side G-sensor, because it has little endurance to impact.**

STEERING ANGLE SENSOR

PFP:25554

Removal and Installation

EFS004KO

For removal and installation of steering angle sensor, refer to PS-7, "STEERING COLUMN" .

PRECAUTIONS

PFP:00001

Caution

ECS008JC

- **Recommended fluid is brake fluid “DOT 3” or "DOT 4". Refer to** MA-18, "Fluids and Lubricants".
- **Never reuse drained brake fluid.**
- **Be careful not to splash brake fluid on painted areas.**
- **Use new brake fluid to clean or wash all parts of master cylinder and concentric slave cylinder.**
- **Never use mineral oils such as gasoline or kerosene. It will ruin the rubber parts of the hydraulic system.**
- **If manual transaxle is removed from the vehicle, always replace CSC (concentric slave cylinder). CSC insert is returned to original position to remove transaxle. Dust on clutch disc sliding parts may damage CSC seal and may cause fluid leak.**
- **Do not disassemble master cylinder and CSC.**

WARNING:

After cleaning clutch disc, wipe it with a dust collector. Do not use compressed air.

PFP:46540

ECS008JE

On Board Inspection

HEIGHT INSPECTION

1. Make sure clutch pedal height H_1 from upper surface of the dash panel is within the specified range.

Pedal height H_1

: 164 - 174 mm (6.46 - 6.85 in) (CR engine)

: 160 - 169 mm (6.30 - 6.65 in) (LHD with K9K engine)

: 164 - 173 mm (6.46 - 6.81 in) (RHD with K9K engine)

2. If pedal height H_1 is outside the specification, replace pedal assembly.
3. Make sure free play A at pedal pad top surface and pedal height H_2 when clutch is disengaged are within the ranges specified below.

A: Pedal free play at the pedal pad

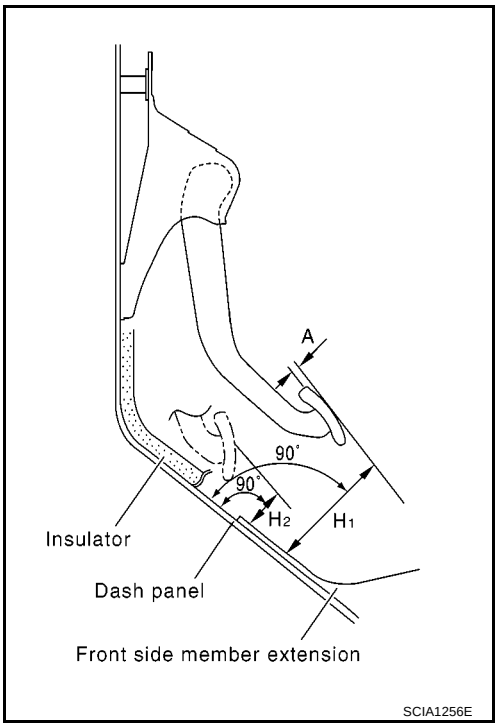
: 2 - 8 mm (0.08 - 0.31 in) (CR engine)

: 5 mm (0.20 in) (K9K engine)

Pedal height H_2 when clutch is disengaged

: 100 mm (3.94 in) or more (CR engine)

4. If free play A at pedal pad top surface and pedal height H_2 when clutch is disengaged are outside the specification, replace clutch pedal assembly.



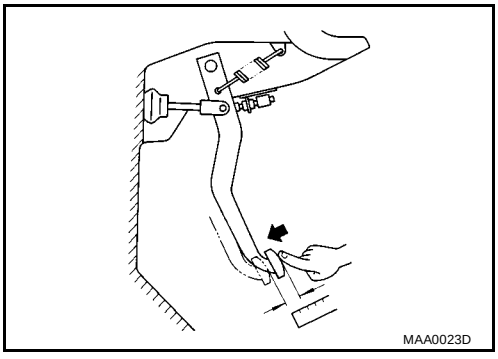
PLAY INSPECTION

- Press the clutch pedal by hand until certain resistance can be felt. Using a scale, Make sure the free play is within the specified range.

Pedal free play

: 2 - 8 mm (0.08 - 0.31 in) (CR engine)

: 5 mm (0.20 in) (K9K engine)

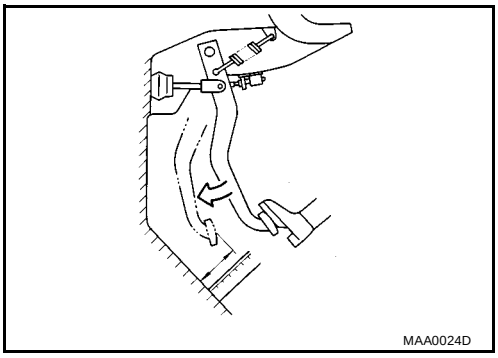


CLEARANCE CHECK

1. Start the engine and let it idle.
2. Apply parking brake.
3. Depress the brake pedal.
4. Fully depress clutch pedal and shift to 1st gear.
5. Release clutch pedal gradually. Using a scale, check the clearance between the clutch pedal and floor panel to see if it is within the specified range.

Pedal height when the clutch disengages

: 100 mm (3.94 in) or more (CR engine)



NOTE:

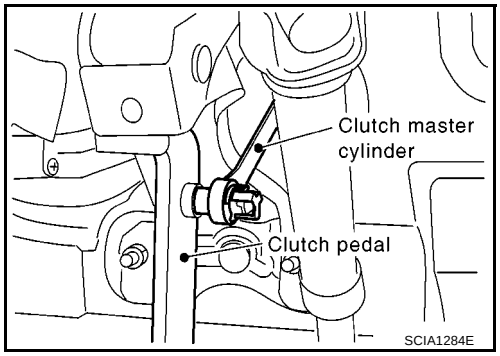
Pedal height at clutch disengagement varies slightly from the clutch engagement point. Despite this, pedal height at clutch engagement is commonly used for both cases in order to simplify the inspection.

Removal and Installation

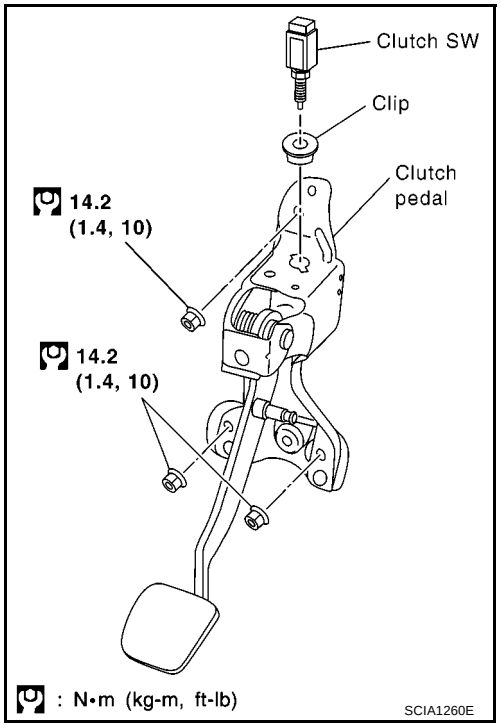
ECS008JF

REMOVAL

1. Remove instrument panel under tray. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Unlock master cylinder rod end and separate master cylinder from clutch pedal.
3. Remove clutch switch harness clamp from pedal bracket.
4. Disconnect clutch switch connector.



5. Remove nuts (3), and remove clutch pedal assembly.



INSPECTION AFTER REMOVAL

- Check clutch pedal for bend, damage, and a cracked weld. If bend, damage, or a cracked weld is found, replace clutch pedal assembly.

INSTALLATION

- Install in the reverse order of removal.

CLUTCH FLUID

PFP:00017

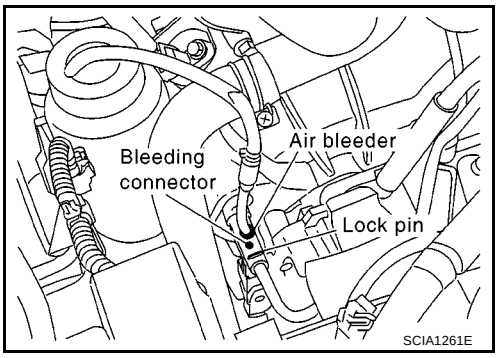
Air Bleeding Procedure

ECS008JG

CAUTION:

- **Monitor fluid level in the reservoir tank to make sure it does not empty.**
- **Do not spill brake fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.**
- **Bleed the bleeding connector.**

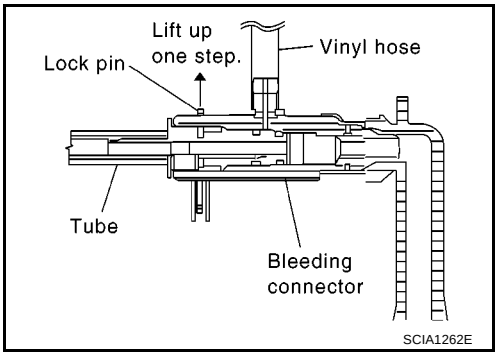
1. Fill the master cylinder reservoir tank with new brake fluid.
2. Remove rubber cap and connect a transparent vinyl hose to air bleeder of bleeding connector.



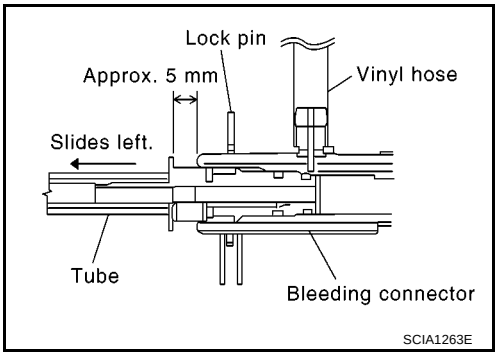
3. Lift tube side lock pin of bleeding connector up one step.

   CAUTION:
   Do not remove lock pin.
4. "Depress" and "release" the clutch pedal slowly and fully 15 times at an interval of 2 to 3 seconds and hold it.

   CAUTION:
   Hold it to prevent releasing tube from bleeding connector when fluid pressure is applied in the tube.



5. Slide tube 5 mm (0.20 in) to the direction shown by the arrow and drain clutch fluid.
6. Return tube to its original position.
7. Release clutch pedal and wait for 5 seconds.
8. Repeat steps 4 to 7 until no bubbles can be observed in the brake fluid.



CLUTCH MASTER CYLINDER

PFP:30610

Removal and Installation

ECS008JH

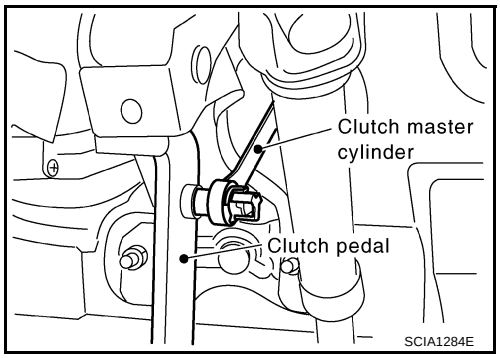
REMOVAL

1. Drain brake fluid from reservoir tank and remove hose from the nipple.

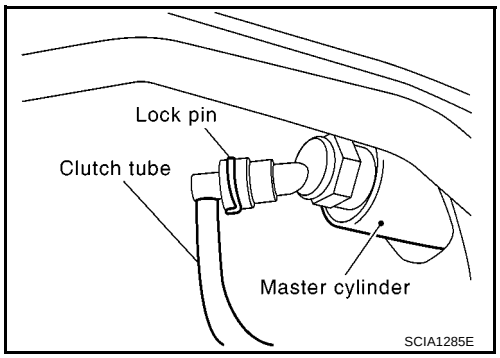
   CAUTION:

   Do not spill brake fluid onto painted surfaces. If it spills, wipe up immediately and wash the affected area with water.

2. Unlock master cylinder rod end in the passenger room and separate master cylinder from clutch pedal.

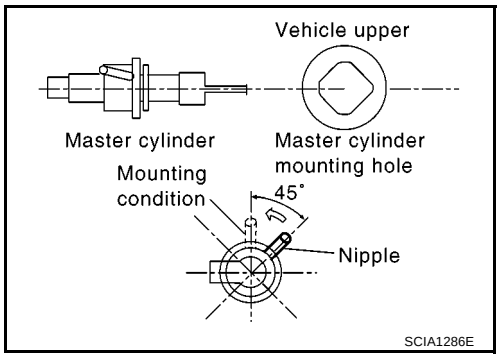


3. Remove lock pin from master cylinder and separate clutch tube.
4. Rotate master cylinder clockwise by 45° and remove from the vehicle.



INSTALLATION

1. Tilt master cylinder clockwise by 45° and insert to the mounting hole. Rotate counter clockwise and secure it. At this time, nipple is upward of the vehicle.
2. After finishing work, perform clutch pedal height inspection and clutch piping air bleeding.
   - Refer to CL-5, "On Board Inspection" ,CL-7, "Air Bleeding Procedure"



CSC (CONCENTRIC SLAVE CYLINDER)

PFP:30500

Removal and Installation

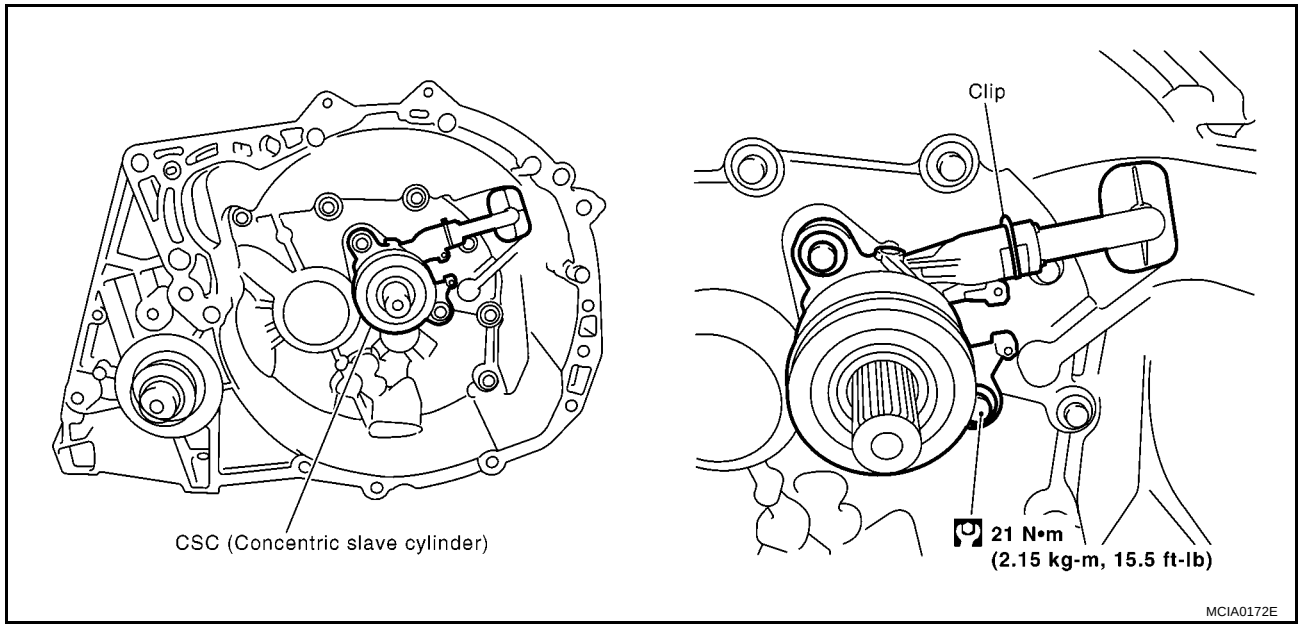
ECS00CW5

CAUTION:

- **Do not spill brake fluid onto painted surfaces.**
  If it spills, wipe up immediately and wash the affected area with water.
- **If manual transaxle is removed from the vehicle, always replace CSC (concentric slave cylinder). CSC insert is returned to original position to remove transaxle. Dust on clutch disc sliding parts may damage CSC seal and may cause brake fluid leak.**

REMOVAL

1. Remove manual transaxle. Refer to MT-7, "REMOVAL AND INSTALLATION" (JH3) or MT-37, "REMOVAL AND INSTALLATION" (JR5).
2. Remove bolts and CSC from manual transaxle.



INSPECTION

NOTE:

- Cannot disassemble CSC and release bearing because they are integral parts. Replace them as an assembly.

Inspect for the following, and replace parts if necessary

- CSC: damage, foreign material, wear or pinholes on the cylinder outer surface.
- Release bearing: damage, incorrect rotation direction, or has poor aligning function, and dust seal is deformed or cracked.

INSTALLATION

1. Install new CSC to manual transaxle. Tighten to the specified torque.

   Tightening torque

   : 21 N·m (2.15 kg-m, 15.5 ft- lb)

   CAUTION:
   Do not insert and operate CSC because piston and stopper of CSC components may fall off.
2. Install manual transaxle to the vehicle. Refer to MT-7, "REMOVAL AND INSTALLATION" (JH3) or MT-37, "REMOVAL AND INSTALLATION" (JR5).
3. Bleed air from the clutch piping. Refer to CL-7, "Air Bleeding Procedure" .

CLUTCH DISC, CLUTCH COVER AND FLYWHEEL

PFP:30100

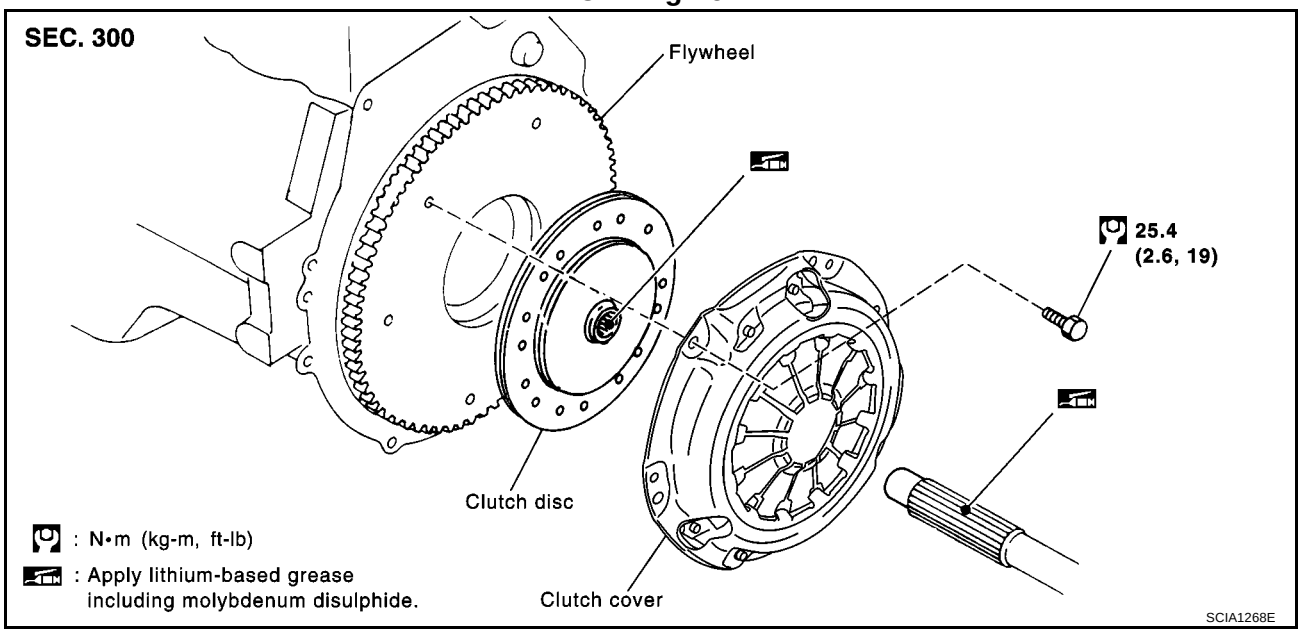
Removal and Installation

ECS008JJ

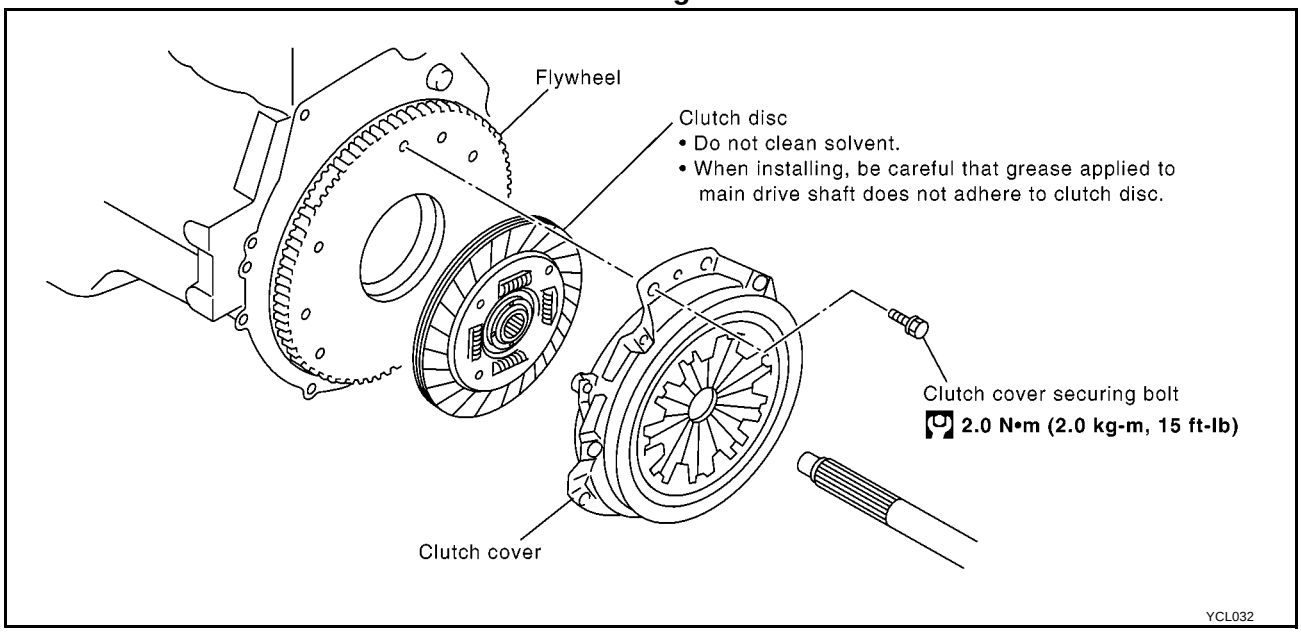
CAUTION:

- **If manual transaxle is removed from the vehicle, always replace CSC (concentric slave cylinder). CSC insert is returned to original position to remove transaxle. Dust on clutch disc sliding parts may damage CSC seal and may cause brake fluid leak.**
- **Be careful not to bring any grease into contact with the clutch disc facing, pressure plate surface, or flywheel surface.**

CR Engine



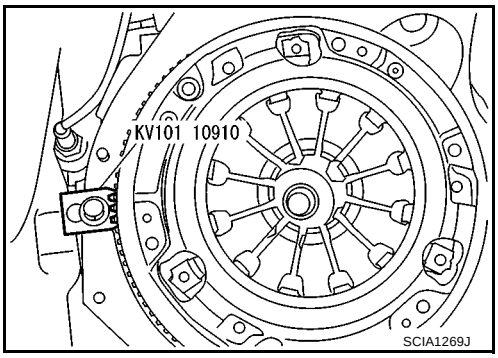
K9K Engine



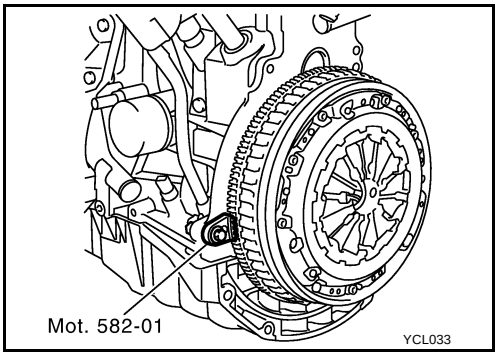
REMOVAL

1. Remove manual transaxle from the vehicle. Refer to MT-7, "REMOVAL AND INSTALLATION" (JH3) or MT-37, "REMOVAL AND INSTALLATION" (JR5).
2. Install a rear gear stopper adapter (SST).

CR Engine



K9K Engine



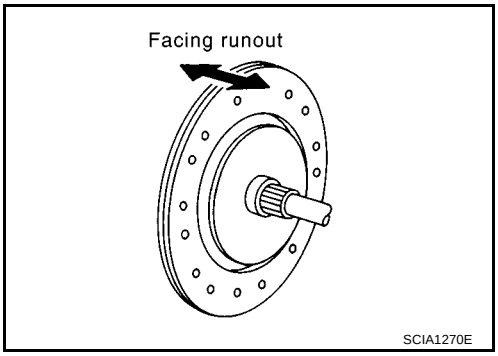
3. Loosen clutch cover mounting bolts evenly. Remove clutch cover and clutch disc.

INSPECTION AND ADJUSTMENT AFTER REMOVAL (CR ENGINE)

Clutch Disc

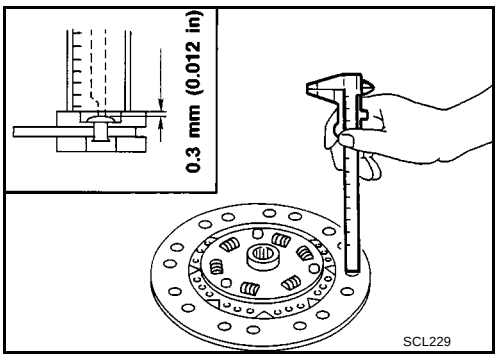
- Measure circumferential runout relative to the clutch disc center spline. If it is outside the specification, replace the clutch disc.

Runout limit/diameter of the area to be measured:
: 0.7 mm (0.028 in) or less/170 (6.69 in) mm dia.



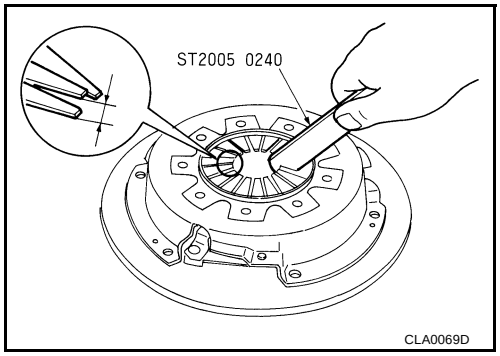
- Using calipers, measure the depth to the clutch disc facing rivet heads. If it exceeds the allowable wear limit, replace the clutch disc.

Facing wear limit (depth to the rivet head)
: 0.3 mm (0.012 in)



Clutch Cover

Check diaphragm spring lever claws for unevenness with the lever still on the vehicle. If they exceed the tolerance, adjust lever height using a diaphragm adjusting wrench (SST).



Tolerance for diaphragm spring lever unevenness

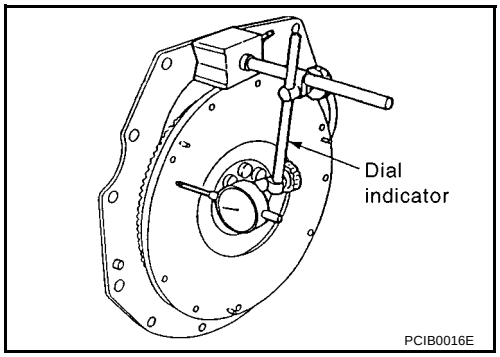
: 0.7 mm (0.028 in)

- Check clutch cover thrust ring for wear or breakage. If wear or breakage is found, replace clutch cover assembly.

  NOTE:
  - Worn thrust ring will generate a beating noise when tapped at the rivet with a hammer.
  - Broken thrust ring will make a clinking sound when cover is shaken up and down.
- If a trace of burn or discoloration is found on the clutch cover pressure plate to clutch disc contact surface, repair the surface with sandpaper. If surface is damaged or distorted, replace the assembly.

Flywheel Runout

Using a dial gauge, measure runout at the flywheel clutch contact surface. If runout is outside the specification, replace the flywheel. If a trace of burn or discoloration is found on the surface, repair it with sandpaper.



Flywheel surface runout

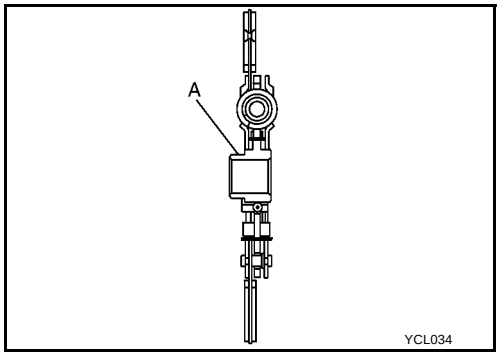
: EM-92, "FLYWHEEL RUNOUT" .

CAUTION:

Measure it at flywheel outer face (not on knock pin and clutch cover mounting hole).

INSPECTION AND ADJUSTMENT AFTER REMOVAL (K9K ENGINE)

Clutch Disc



- The hubs of the clutch discs are nickle plated to improve their sliding performance.
- Clean the splines of the clutch shaft and install the assembly without lubricant.
- Degrease the friction face of the flywheel.
- Install the clutch disc (offset (A) from the hub on the flywheel side).

CAUTION:

Reworking on the clutch face is not permitted.

Flywheel Runout

Replace the flywheel if it has been damaged.

INSTALLATION

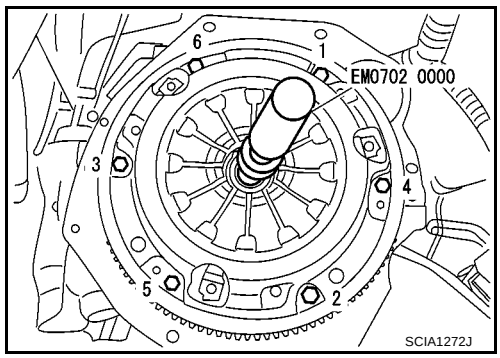
1. Clean input shaft spline by removing grease and dust from wear.
2. Apply recommended Grease to clutch disk and input shaft spline.

   NOTE:

   Applied amount of grease is 0.4 g. Film pressure is 1 mm (0.04 in) or less.
3. Insert clutch disc to input shaft. Wipe off any grease oozing from the parts.

   CAUTION:
   - **Excessive grease may cause slip or judder. And if it adheres to CSC seal, it cause clutch fluid leak. Wipe off excess grease.**
   - **If grease is not applied, it may cause noise, poor disengagement, or damage to the clutch. Be sure to apply grease.**

4. Install clutch disc and clutch cover. Pre-tighten mounting bolts and install a clutch aligner (SST).
5. Tighten clutch cover attaching bolts evenly in two steps in the order shown in the figure. (CR engine)



Tightening torque

First step	**: 9.9 - 19 N·m (1.0 - 2.0 kg-m, 8 - 14 ft-lb)**
Final step	**: 22 - 29 N·m (2.2 - 3.0 kg-m, 17 - 21 ft-lb)**

Tighten clutch cover attaching bolts order shown in the figure. (K9K engine)

6. Install manual transaxle. Refer to MT-7, "REMOVAL AND INSTALLATION" (JH3) or MT-37, "REMOVAL AND INSTALLATION" (JR5).

PRECAUTIONS

PFP:00001

Precautions For Liquid Gasket

EBS00OJI

REMOVAL OF LIQUID GASKET SEALING

- After removing the mounting bolts and nuts, separate the mating surface using a seal cutter and remove the liquid gasket.

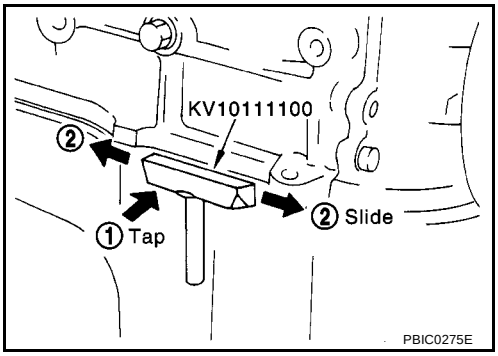
CAUTION:

Be careful not to damage the mating surfaces.

- In areas where the seal cutter is difficult to use, use a plastic hammer to lightly tap the gasket area.

CAUTION:

If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.

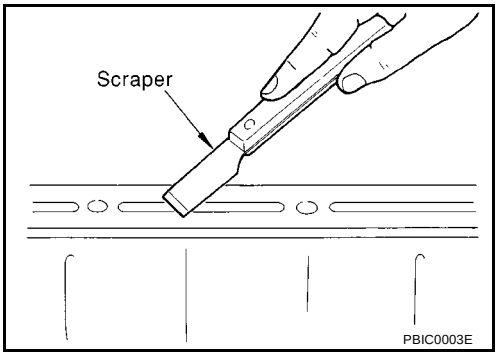


LIQUID GASKET APPLICATION PROCEDURE

1. Using a scraper, remove the old liquid gasket adhering to the gasket application surface and the mating surface.

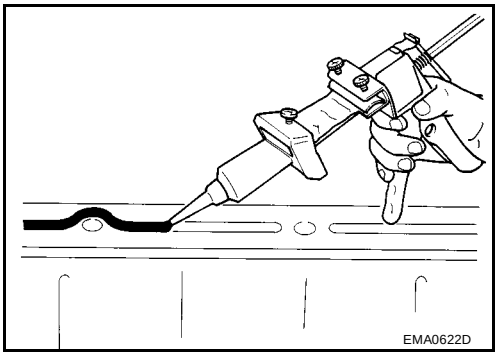
- Remove the liquid gasket completely from the groove of the gasket application surface, mounting bolts and bolt holes.

2. Wipe the gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.
3. Attach the liquid gasket to the tube presser.
   Use Genuine Liquid Gasket or equivalent.



4. Apply the gasket without breaks to the specified location with the specified dimensions.

- If there is a groove for the liquid gasket application, apply the gasket to the groove.



- As for the bolt holes, normally apply the gasket inside the holes. Occasionally, it should be applied outside the holes. Make sure to read the instruction in this manual.
- Within five minutes of gasket application, install the mating component.
- If the liquid gasket protrudes, wipe it off immediately.
- Do not retighten after the installation.
- After 30 minutes or more have passed from the installation, fill the engine oil and coolant.

CAUTION:

If there are additional instructions in this manual, observe them.

			Water pump	Poor sealing
			Radiator cap	Loose
				Poor sealing
			Radiator	O-ring for damage, deterioration or improper fitting
				Cracked radiator tank
				Cracked radiator core
			Reservoir tank	Cracked reservoir tank
		Overflowing reservoir tank	Exhaust gas leaks into cooling system	Cylinder head deterioration
				Cylinder head gasket deterioration

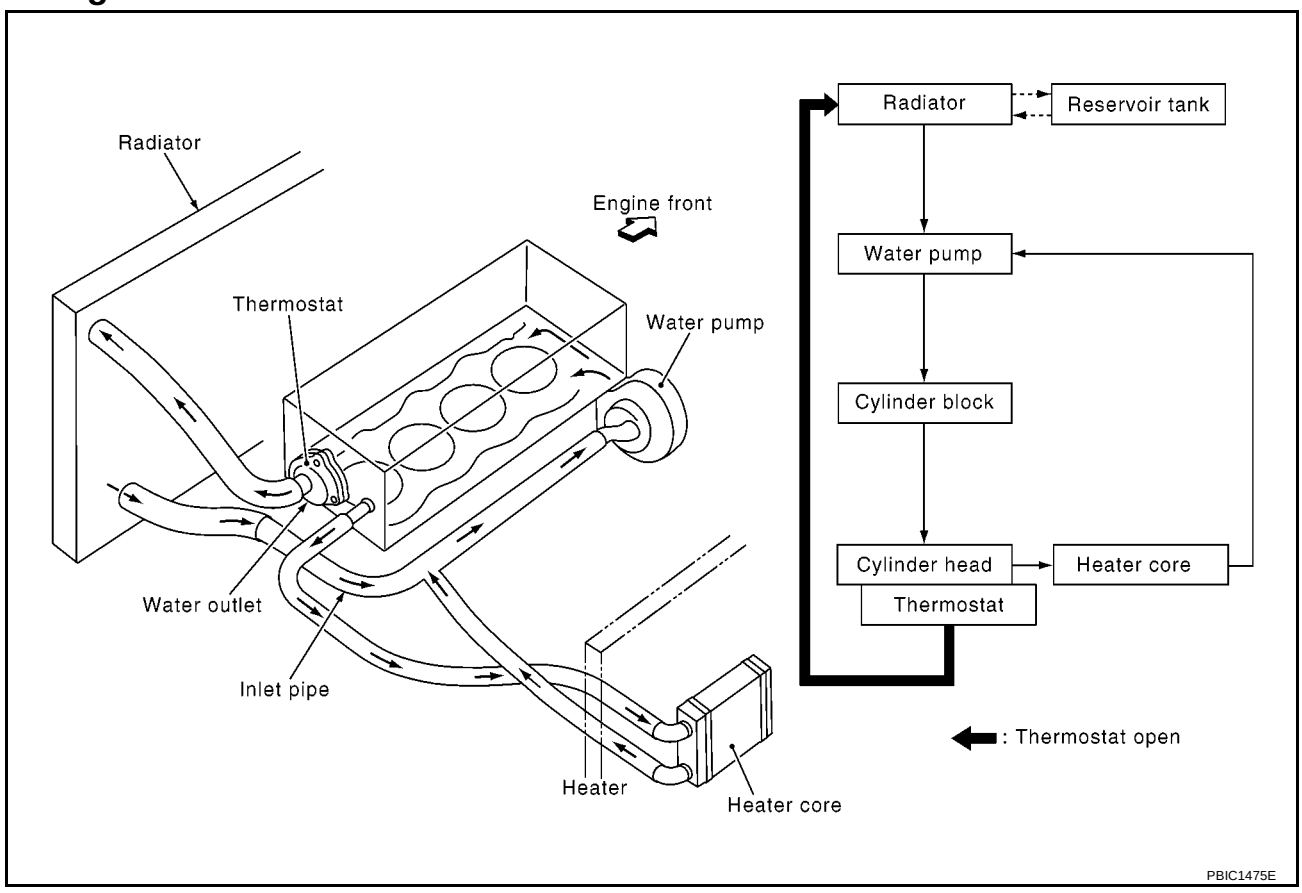
	Symptom		Check items	
Except cooling system parts malfunction	—	Overload on engine	Abusive driving	High engine rpm under no load
				Driving in low gear for extended time
				Driving at extremely high speed
			Powertrain system malfunction	—
			Installed improper size wheels and tires	
			Dragging brakes	
			Improper ignition timing	
	Blocked or restricted air flow	Blocked bumper	—	—
		Blocked radiator grille	Installed car brassiere	
			Mud contamination or paper clogging	
		Blocked radiator	—	
		Blocked condenser	Blocked air flow	
		Installed large fog lamp		

COOLING SYSTEM

PFP:21020

Cooling Circuit

EBS00OIS



ENGINE COOLANT

PFP:KQ100

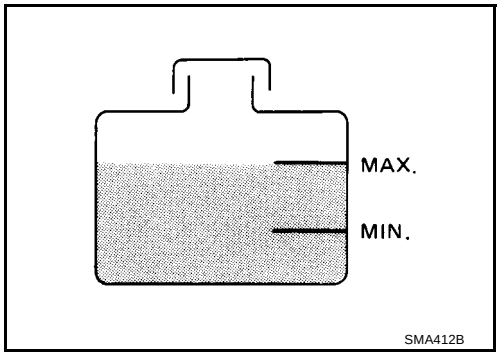
Inspection

SMA for VIN>SJN**AK12U1000000

EBS00OJK

LEVEL CHECK

- Check if the reservoir tank coolant level is within MIN to MAX when engine is cool.
- Drain or refill coolant when it is too much or too little.



LEAK CHECK

- To check for leakage, apply pressure to the cooling system with a tester.

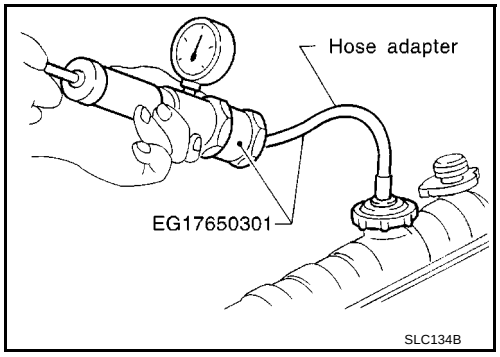
Testing pressure : 157 kPa (1.57 bar, 1.6 kg/cm^2 , 23 psi)

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

CAUTION:

Higher pressure than specified may cause radiator damage.



Changing Engine coolant

EBS00OIV

WARNING:

- **To avoid being scalded, never change the coolant when the engine is hot.**
- **Wrap a thick cloth around cap and carefully remove the cap. First, turn the cap a quarter of a turn to release built-up pressure. Then turn the cap all the way.**

DRAINING ENGINE COOLANT

1. Disconnect radiator lower hose and radiator cap.

   CAUTION:

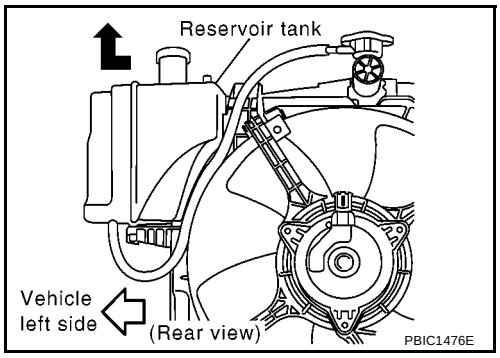
   - **Make sure to drain when the engine coolant temperature is cold.**
   - **Be careful not to allow coolant to contact drive belts.**

2. Remove reservoir tank and drain the engine coolant in the following procedures.

a. Move relay case in front of the battery.

b. Disconnect the reservoir tank from fan shroud to remove. With force applied in the left direction of vehicle, pull up reservoir tank.

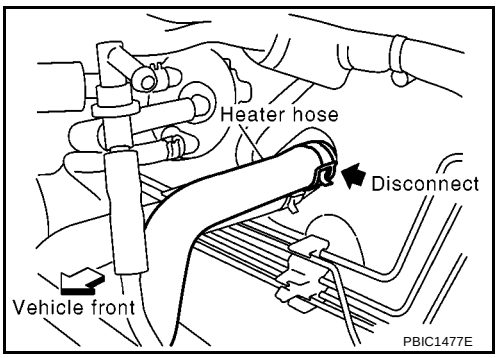
3. Check drain coolant for contaminants such as rust, corrosion or discoloration.
   If contaminated, flush engine cooling system. Refer to CO-10, "FLUSHING COOLING SYSTEM" .



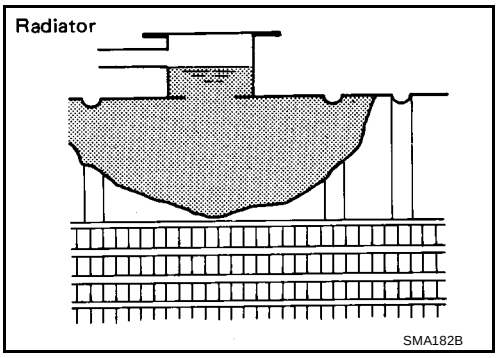
REFILLING ENGINE COOLANT

1. Install reservoir tank.
2. Connect radiator lower hose.

3. Disconnect heater hose (at heater hose outlet side: upper side) as shown in figure. Keep hose end at the same height as that of before removal.



4. Fill radiator and reservoir tank to specified level.
   - **Pour coolant slowly of less than 2 ℓ (1-3/4 Imp qt) a minute to allow air in system to escape.**
   - **When coolant from heater hose starts to drain, connect heater hose and continue to fill.**
   - **Use Genuine Nissan Anti-freeze Coolant or equivalent mixed with water (distilled or demineralized).**
     Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS".



Engine coolant capacity (With reservoir tank):

Except M/T models with A/C

: Approx. 4.9 ℓ (4-3/8 Imp qt)

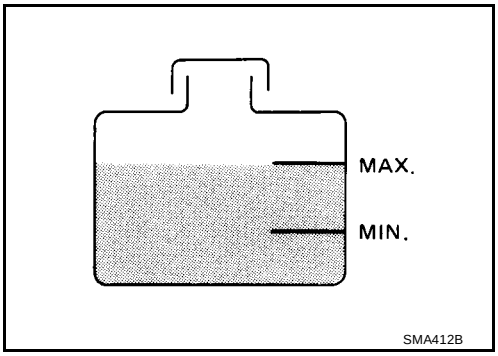
M/T models with A/C

: Approx. 5.3 ℓ (4-5/8 Imp qt)

Reservoir tank:

Except M/T models with A/C : 0.7 ℓ (5/8 Imp qt)

M/T models with A/C : 1.2 ℓ (1-1/8 Imp qt)



5. Warm up engine to normal operating temperature with radiator cap installed.
6. Warm up until thermostat opens. Keep warming at 3,000 rpm for approximately 10 minutes as guide.
   - For thermostat opening, touch radiator upper hose by hand to insure that water flow is hot.

   CAUTION:
   Be careful not to overheat.
7. Stop the engine.
8. After cooling engine [approximately 50°C (122 °F) or lower], remove radiator cap and check coolant level. If the level is low, fill up to the radiator neck again and repeat from step 5.
9. When the coolant level stabilizes, fill reservoir tank up to the “MAX” line.
10. Check cooling system for leaks with engine running.
11. Allow the engine to cool [approximately 50°C (122°F) or lower].
12. Start the engine. Perform the following cycle 3 times. Keep an engine speed of 1,000 rpm for approximately 30 seconds. Then increase it gradually to 3,000 rpm.
13. During the above step 12, make sure water flow sound is not heard from heater core.

- Sound may be noticeable at heater unit.

14. If water flow sound is heard, repeat from step 4 to 13.

- **Clean excess coolant from engine.**

FLUSHING COOLING SYSTEM

1. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
2. Run engine and warm it up to normal operating temperature.
3. Rev engine two or three times under no-load.
4. Stop engine and wait until it cools down.
5. Drain water.
6. Repeat steps 1 through 5 until clear water begins to drain from radiator.

REMOVAL

Operation Description: Remove radiator core support (lower), and pull out radiator and cooling fan assembly to the underside of vehicle.

1. Drain coolant. Refer to CO-8, "ENGINE COOLANT" .

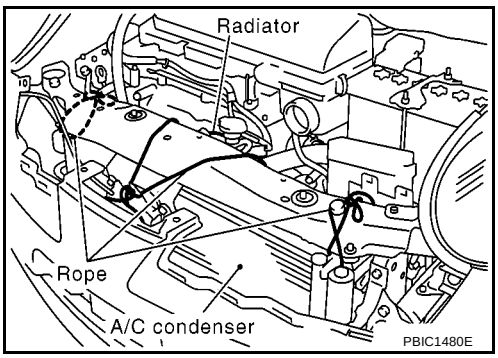
   CAUTION:
   Make sure to drain when the engine coolant temperature is cold.

   WARNING:
   Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.
2. Remove mounting bolts to make relay case movable.
3. Remove the following parts.
   - RH/LH front fender protector
   - RH/LH front grille; Refer to EI-8, "FRONT GRILLE" .
   - Air Duct; Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
4. Remove radiator hose (upper) and (lower).
5. Remove A/T oil cooler hoses. (A/T models)

   CAUTION:
   Install plug to hoses and fluid pipes removed, and be sure to prevent fluid leak.

6. Fix with ropes so that A/C condenser and RH/LH upper mount units of radiator and cooling fan assembly are placed on radiator core support (upper).

CAUTION:
Taking parts strength into consideration, lift up at locations where damage may not occur.



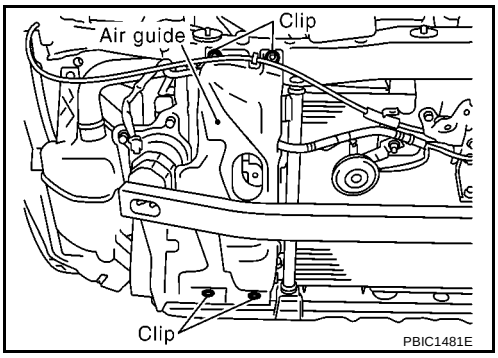
Remove radiator core support (lower) with the following procedures.

a. Remove air guide upper clips at radiator right side.

NOTE:
In figure, bumper fascia is omitted for explanation.

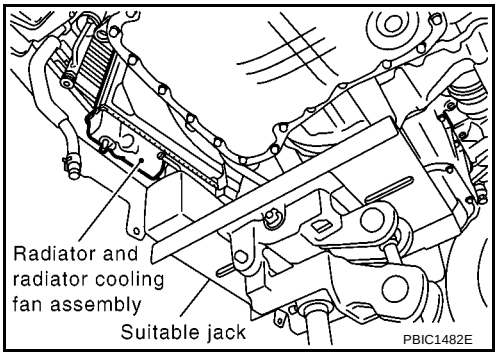
b. Remove radiator core support (lower) mounting bolts (RH/LH). Refer to BL-12, "RADIATOR CORE SUPPORT" .

c. Remove air guide lower clips and remove radiator core support (lower).

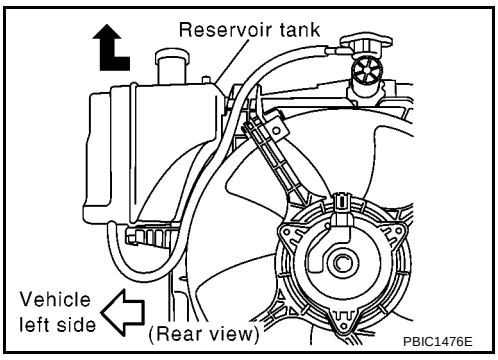


7. Loosen ropes, and pull out radiator and cooling fan assembly to the underside of vehicle, supporting the bottom with suitable jack.

CAUTION:
Be careful not to damage radiator core and A/C condenser core.



8. Remove reservoir tank.
   - Disconnect the reservoir tank from fan shroud to remove. With force applied in the left direction of vehicle, pull up reservoir tank.



9. Remove cooling fan assembly from radiator.

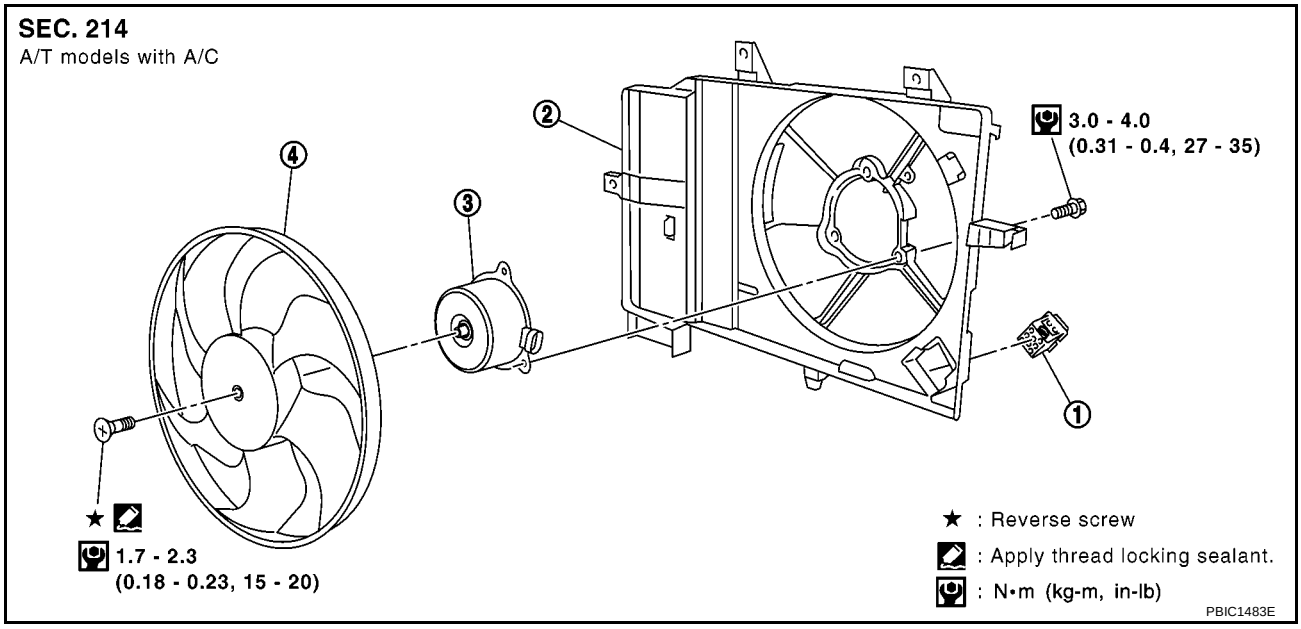
INSTALLATION

Install in the reverse order of removal which being careful of the following.

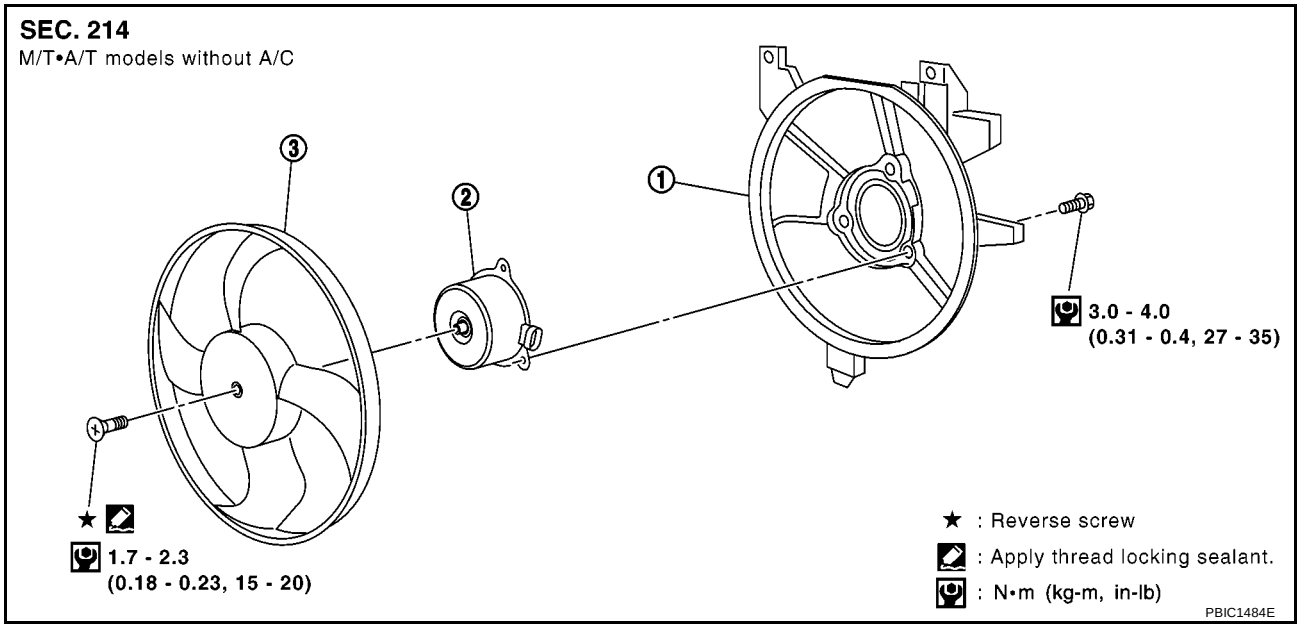
- When installing radiator core support (lower), make sure upper and lower mount units of radiator and A/C condenser are fitted in mounting holes of radiator core support (upper/lower).

Disassembly and Assembly of Cooling Fan

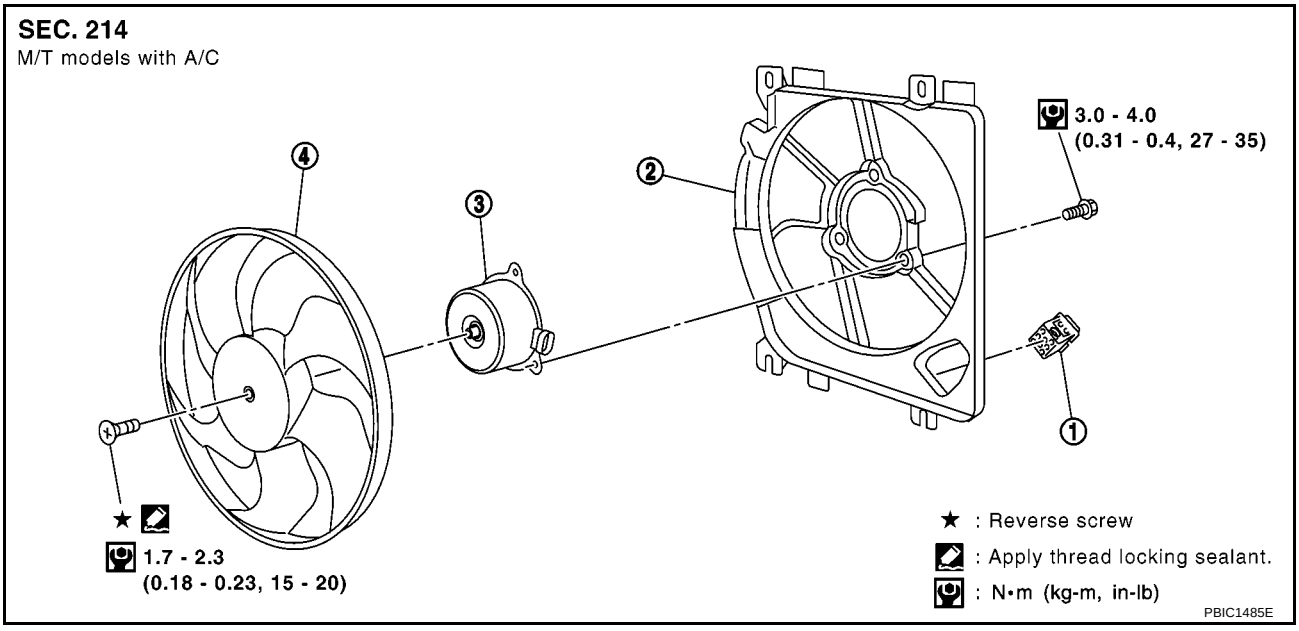
EBS00OIY



1. Resistor
2. Fan shroud
3. Fan motor
4. Fan



1. Fan shroud
2. Fan motor
3. Fan



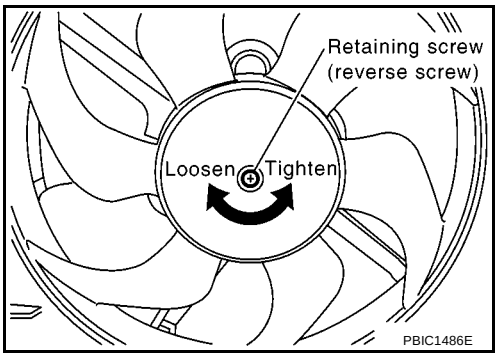
1. Resistor
2. Fan shroud
3. Fan motor
4. Fan

DISASSEMBLY

1. Remove fan.

CAUTION:
Reverse screw are used for the fan attachment screw.When removing or attaching, turn the screw the opposite way as for a normal screw.

2. Remove fan motor from fan shroud.



ASSEMBLY

Assemble cooling fan in the reverse order of disassembly.

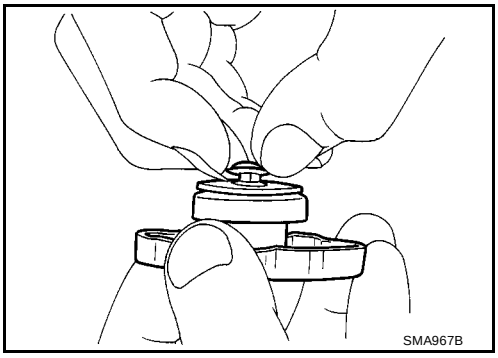
- Apply thread locking sealant and tighten screw to assemble the fan.

Checking Radiator Cap

EBS00OSD

1. Pull the negative-pressure valve to open it and check that it closes completely when released.

- Check that there is no dirt or damage on the valve seat of the radiator cap negative-pressure valve.
- Check that there are no unusual conditions in the opening and closing conditions of the negative-pressure valve.



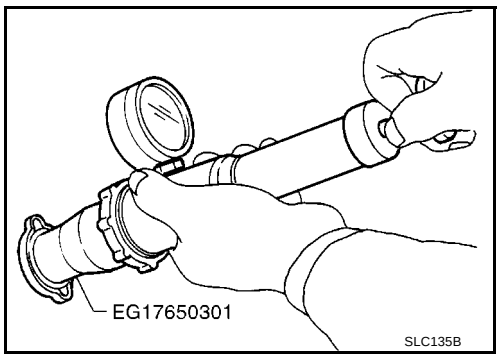
2. Check radiator cap relief pressure.

Standard :

78 - 98 kPa (0.78 - 0.98 bar, 0.8 - 1.0 kg/cm^2 , 11 - 14 psi)

Limit :

59 kPa (0.59 bar, 0.6 kg/cm^2 , 9 psi)



- When connecting the radiator cap to the tester, apply water or engine coolant to the cap seal part.
- Replace the radiator cap if there is an unusual conditions in the negative-pressure valve, or if the open-valve pressure is outside of the standard values.

Checking Radiator

EBS00OSE

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, fan shroud and horns. Then tape the harness and connectors to prevent water from entering.

1. Apply water by hose to the back side of the radiator core vertically downwards.
2. Apply water again to all radiator core surface once per minute.
3. Stop washing if any stains no longer flow out from the radiator.
4. Blow air into the back side of radiator core vertically downwards.

- Use compressed air lower than 490 kPa (4.9 bar, 5 kg/cm^2 , 71 psi) and keep distance more than 30 cm (11.8 in).

5. Blow air again into all the radiator core surface once per minute until no water sprays out.

Checking Cooling System Hoses

EBS00OSF

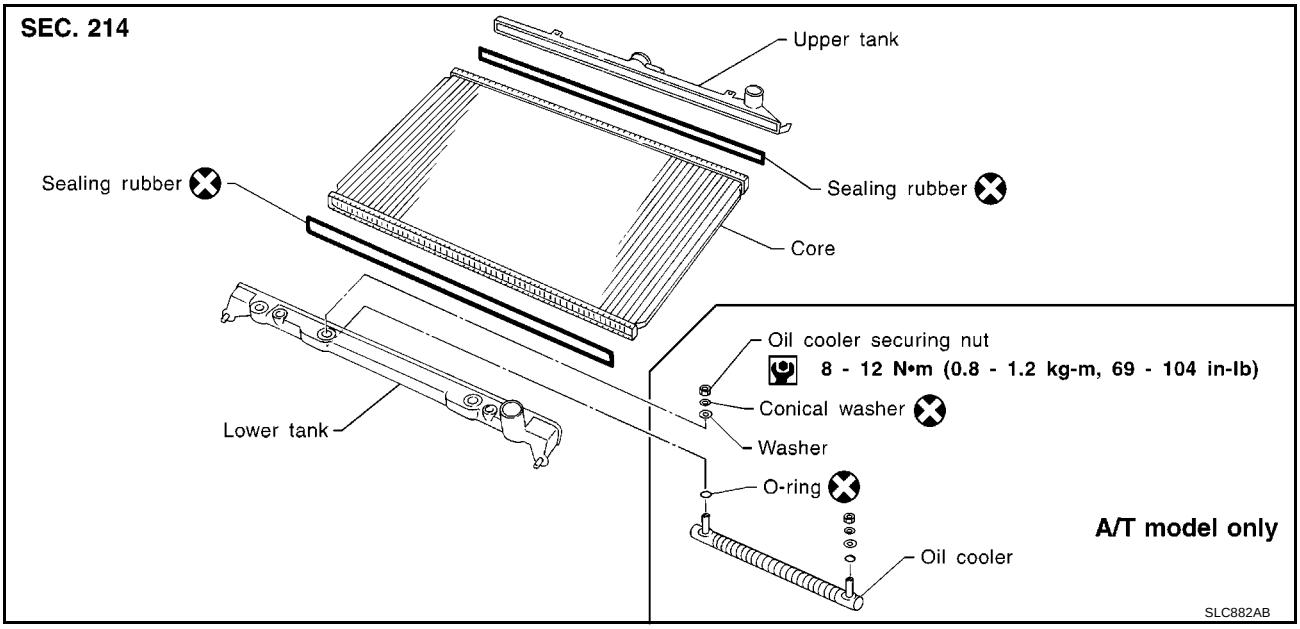
Check hoses for improper attachment, leaks, cracks, damage, loose connections, chaffing and deterioration.

RADIATOR (ALUMINUM TYPE)

PFP:21460

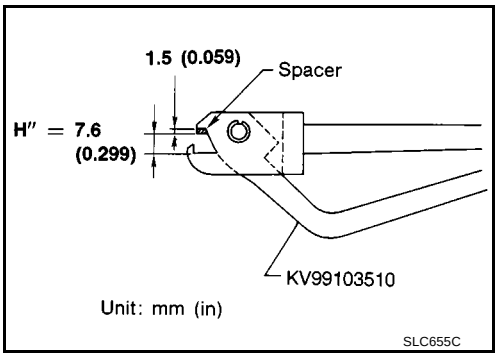
Disassembly and Assembly

EBS00OJ0



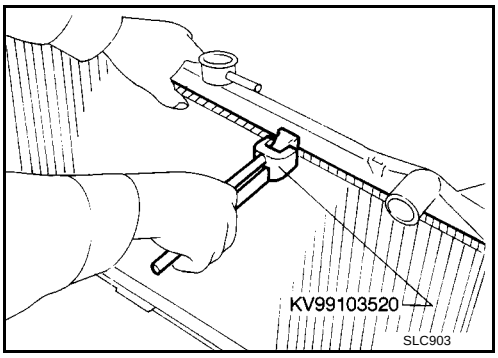
PREPARATION

1. Attach the spacer to the tip of the radiator plate pliers A. Spacer specification: 1.5 mm (0.059 in) thick x 18 mm (0.71 in) wide x 8.5 mm (0.335 in) long.
2. Make sure that when radiator plate pliers A are closed dimension H″ is approx. 7.6 mm (0.299 in).
3. Adjust dimension H″ with the spacer, if necessary.



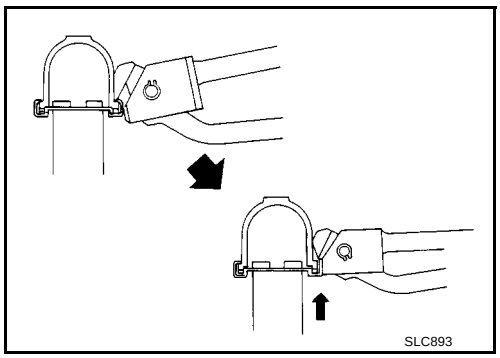
DISASSEMBLY

1. Remove tank with Tool.



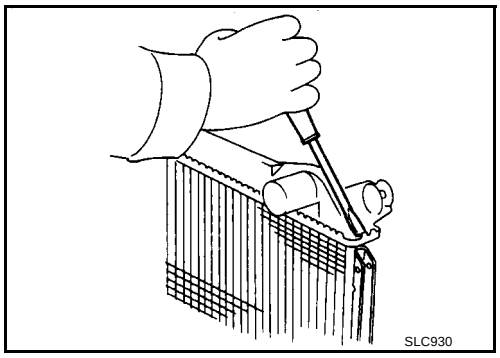
- Grip the crimped edge and bend it upwards so that Tool slips off.

Do not bend excessively.

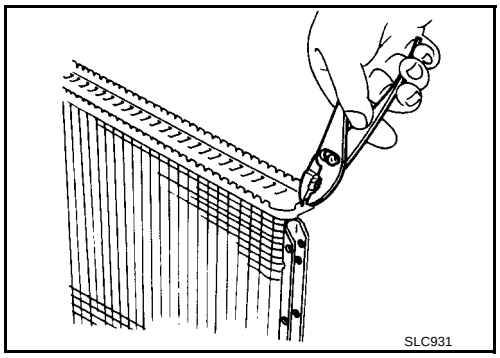


- In areas where Tool cannot be used, use a screwdriver to bend the edge up.

Be careful not to damage tank.



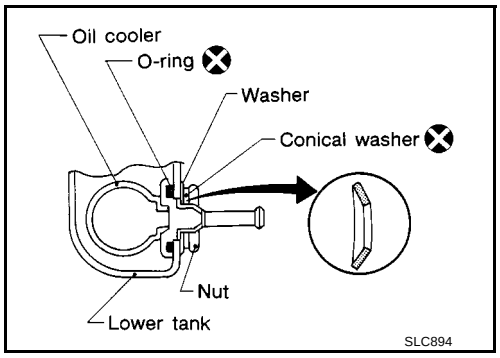
2. Make sure the edge stands straight up.
3. Remove oil cooler from tank. (A/T model only)



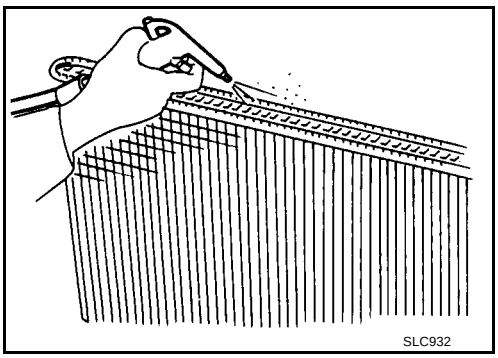
ASSEMBLY

1. Install oil cooler. (A/T model only)

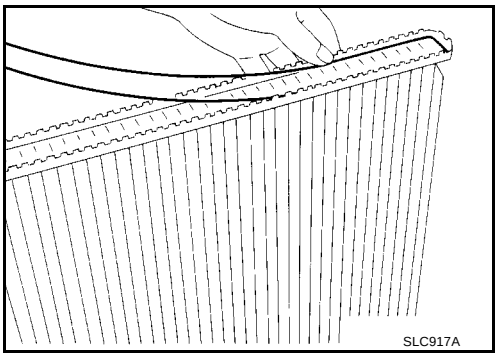
Pay attention to direction of conical washer.



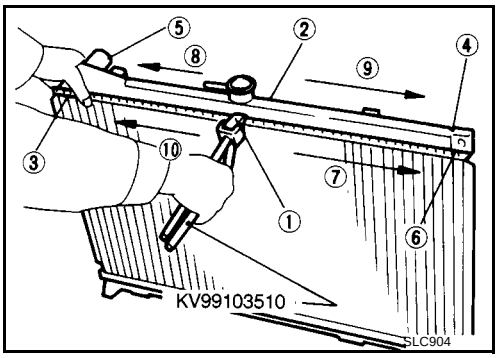
2. Clean contact portion of tank.

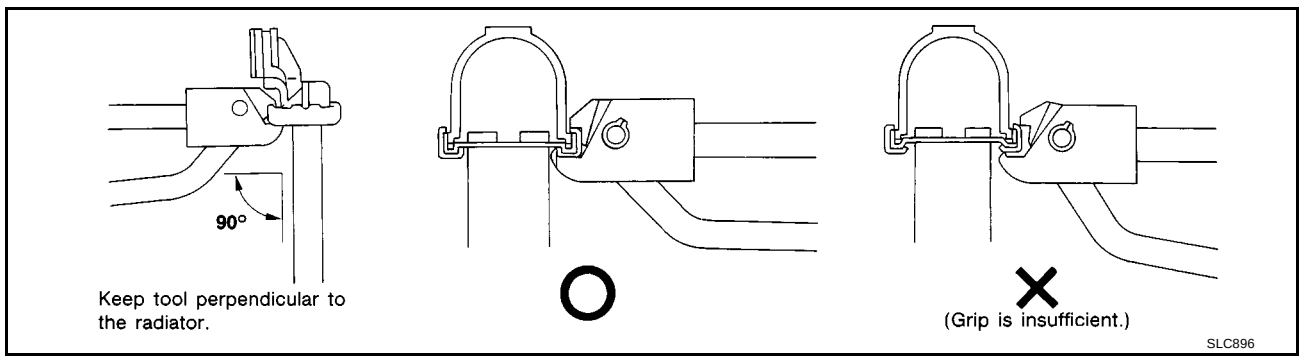


3. Install sealing rubber.
Push it in with fingers.
Be careful not to twist sealing rubber.

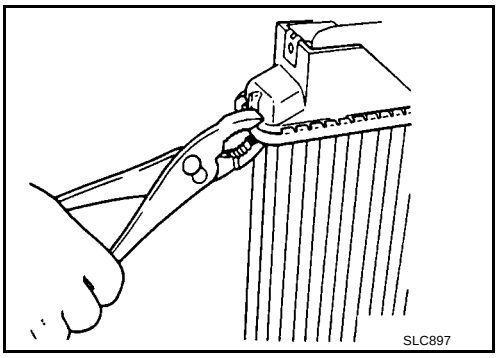


4. Caulk tank in specified sequence with Tool.



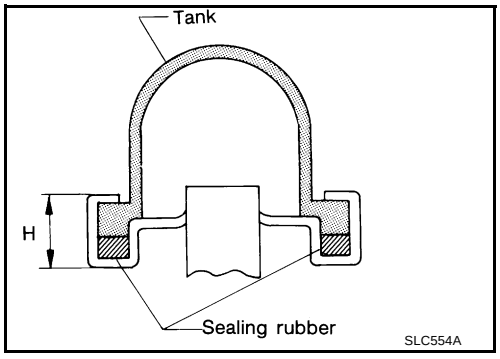


- Use pliers in the locations where Tool cannot be used.



5. Make sure that the rim is completely crimped down.

Standard height "H" : 8.0 - 8.4 mm (0.315 - 0.331 in)



6. Confirm that there is no leakage.

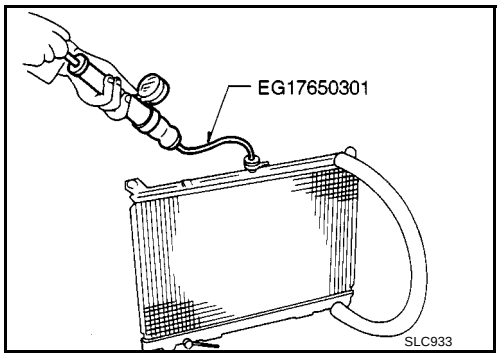
Refer to CO-8, "Inspection" .

INSPECTION

1. Apply pressure with Tool.

Specified pressure value

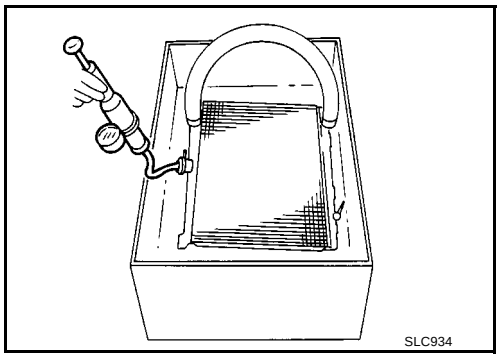
: 157 kPa (1.57 bar, 1.6 kg/cm^2 , 23 psi)



WARNING:

To prevent the risk of the hose coming undone while under pressure, securely fasten it down with a hose clamp.
Attach a hose to the oil cooler to seal its inlet and outlet. (A/T model only)

2. Check for leakage by soaking radiator in water container.

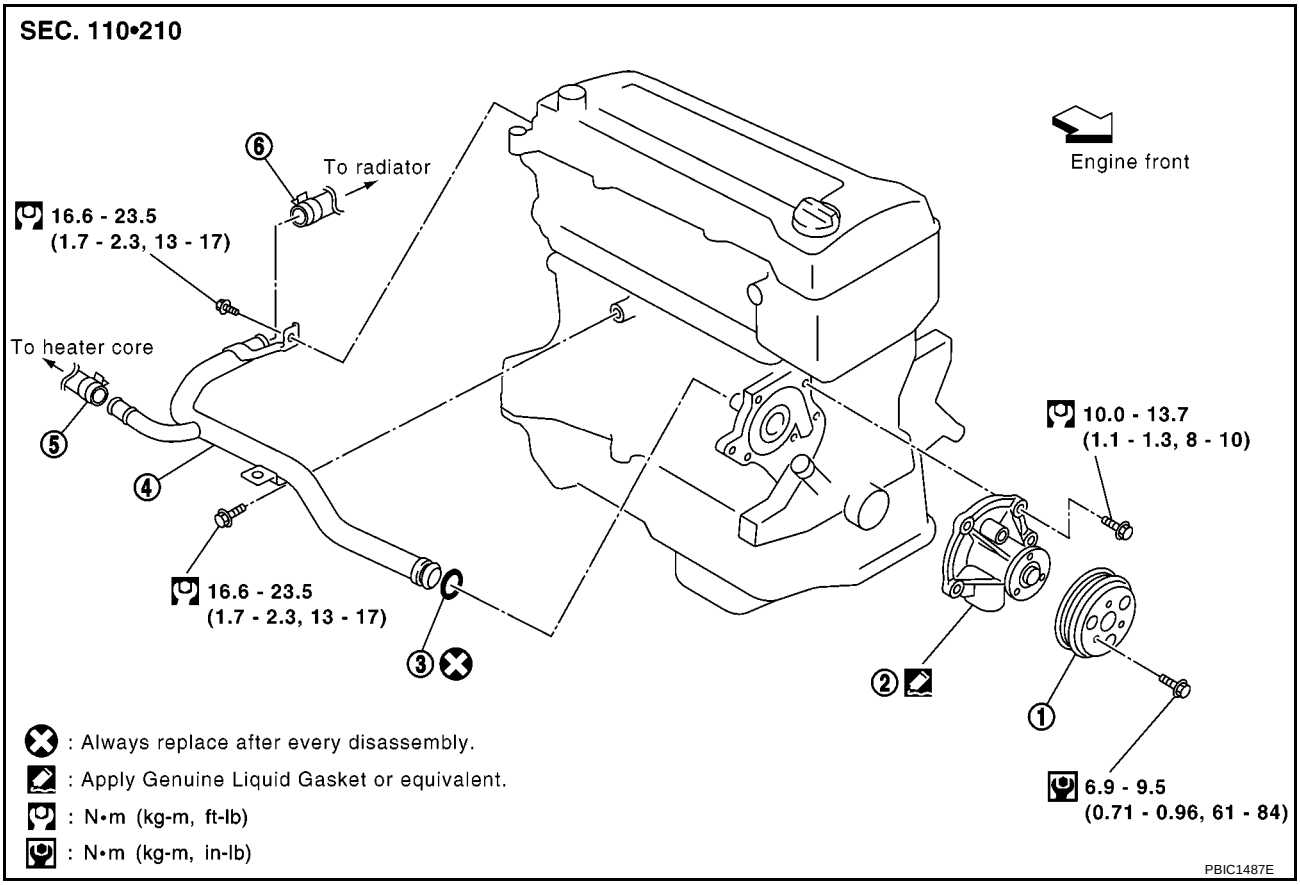


WATER PUMP

PFP:21020

Removal and Installation

EBS00OJ1



1. Water pump pulley
2. Water pump
3. O-ring
4. Water suction pipe
5. Heater hose
6. Radiator hose (lower)

REMOVAL

1. Drain coolant. Refer to CO-8, "ENGINE COOLANT" .

   CAUTION:
   Make sure to drain when the engine coolant temperature is cold.

   WARNING:
   Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.
2. Remove drive belt from water pump pulley. Refer to EM-12, "DRIVE BELTS" .
3. Remove the water pump pulley.

   NOTE:
   To remove it easily, loosen water pump pulley mounting bolt, then water pump belt.
4. Remove water pump.
   - Place a piece of wood or something onto water pump, and tap it with a hammer. Disconnect liquid gasket to remove.
   - Coolant remaining in the engine is drained. Use tray to collect it.

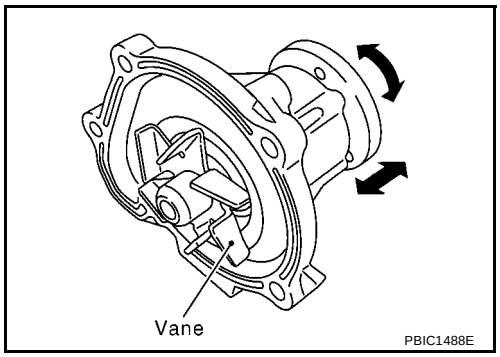
   CAUTION:
   - **Handle the water pump vane so that it does not contact any other parts.**
   - **Water pump cannot be disassembled and should be replaced as a unit.**
5. Remove water suction pipe in the following procedures.

a. Remove air cleaner case assembly. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
b. Remove radiator hose (upper and lower), and heater hose.
c. Move harnesses around suction pipe.

d. Remove mounting bolts, and pull water suction pipe toward engine rear side.
   - Coolant remaining in the engine is drained. Use tray to collect it.

INSPECTION AFTER REMOVAL

- Visually check that there is no significant dirt or rusting on the water pump body and vane.
- Check that there is no looseness in the vane shaft, and that it turns smoothly when rotated by hand.
- If unusualness is found, replace the water pump.



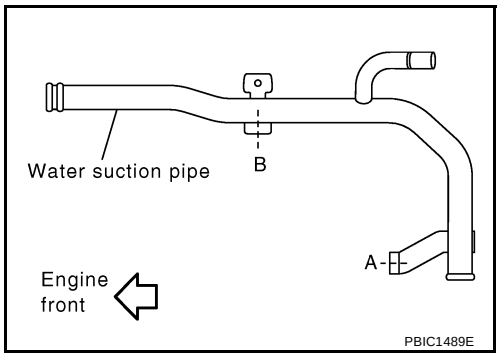
INSTALLATION

- Install in the reverse order of removal which being careful of the following.

Water Suction Pipe Installation

1. Apply neutral detergent on O-ring. Fit O-ring in the groove securely.
2. Tighten mounting bolts with the following procedures.

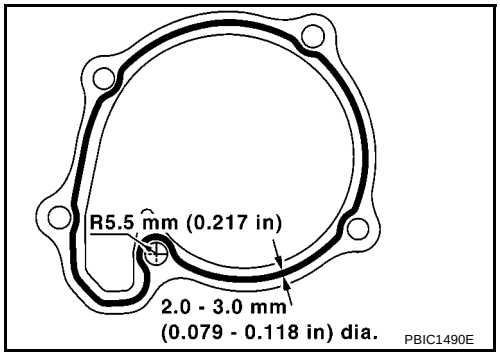
a. Temporarily tighten bolts in order: A to B.
b. Tighten bolts in order: B to A



Water Pump Installation

- Apply liquid gasket as shown in figure, and install.
  Use Genuine Liquid Gasket or equivalent.

  CAUTION:
  Wait at least 30 minutes after water pump installation. Refill coolant and start the engine.

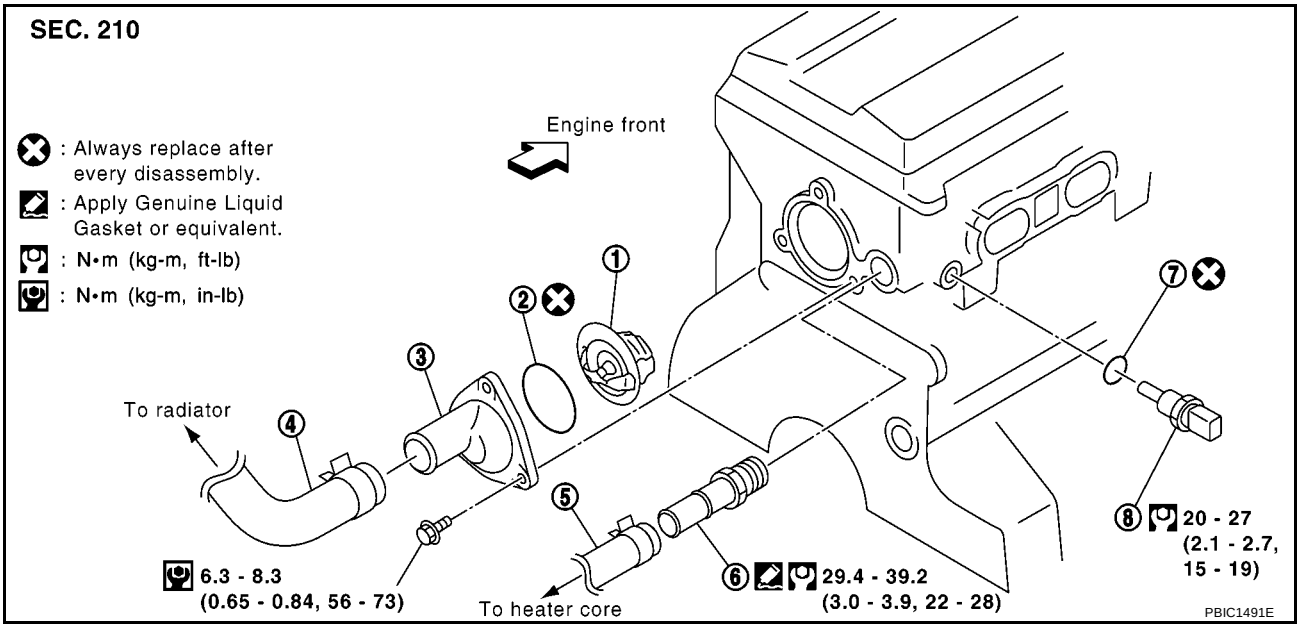


THERMOSTAT

PFP:21200

Removal and Installation

EBS00OJ2



1. Thermostat
2. Rubber ring
3. Water outlet
4. Radiator hose (upper)
5. Heater hose
6. Heater pipe
7. Copper washer
8. Engine coolant temperature sensor

REMOVAL

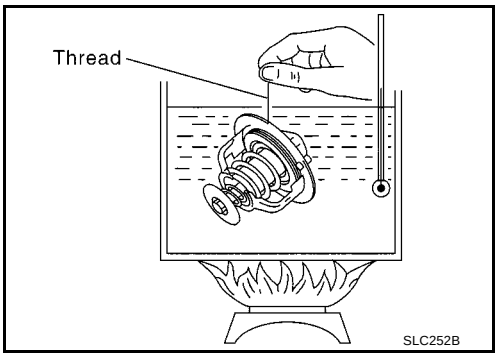
1. Drain engine coolant. Refer to CO-8, "ENGINE COOLANT" .

   CAUTION:
   Make sure to drain when the engine coolant temperature is cold.

   WARNING:
   Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.
2. Remove air duct and air cleaner body. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Remove radiator hose (upper).
4. Remove water outlet and thermostat.
   - Coolant remaining in the engine is drained. Use tray to collect it.
5. Remove engine coolant temperature sensor if necessary.
6. Remove heater pipe if necessary.

INSPECTION AFTER REMOVAL

- Place a thread so that it is caught in the valves of the thermostat. Immerse fully in a container filled with water. Heat while stirring. (The example in the figure shows the thermostat.)
- The valve opening temperature is the temperature at which the valve opens and falls from the thread.
- Continue heating. Check the full-open lift amount.
- After checking the full-open lift amount, lower the water temperature and check the valve closing temperature.
- If the measured value is out of the standard value or unusual valve seating condition is found, replace the thermostat.



Standard values

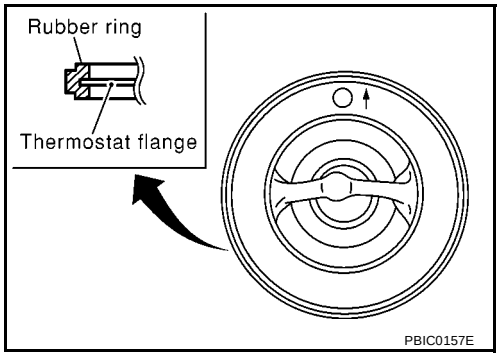
	Thermostat
Valve opening temperature	86.5 - 89.5°C (188 - 193°F)
Full-open lift amount	8 mm or more/ 101°C (0.31 in/ 214 °F)
Valve closing temperature	83°C (181°F)

INSTALLATION

Install in the reverse order of removal which being careful of the following.

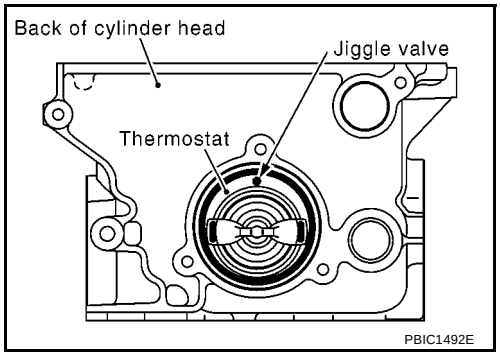
Installation of Thermostat

1. Install the thermostat with the whole circumference of each flange part fit securely inside the rubber ring.



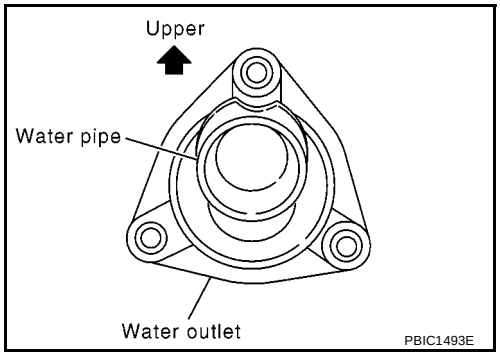
2. Install thermostat with jiggle valve facing the direction shown in the figure.

   NOTE:
   Care must be taken not to trap the thermostat jiggle valve.



Water Outlet Installation

- Install water pipe with it facing upward.
- Install thermostat in place.



Heater Pipe Installation

- Apply liquid gasket to the threads, and install.
  Use Genuine Liquid Gasket or equivalent.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

EBS00OJL

CAPACITY

SMA for VIN>SJN**AK12U1000000

Unit: ℓ (Imp qt)

Coolant capacity [With reservoir tank (MAX level)]	Except M/T models with A/C	Approximately 4.9 (4-3/8)
	M/T models with A/C	Approximately 5.3 (4-5/8)
Reservoir tank	Except M/T models with A/C	0.7 (5/8)
	M/T models with A/C	1.2 (1-1/8)

THERMOSTAT

Valve opening temperature	86.5 - 89.5°C (188 - 193°F)
Valve lift	8 mm or more/ 101°C (0.31 in/ 214°F)
Valve closing temperature	83°C (181°F)

RADIATOR

Unit: kPa (bar, kg/cm^2 , psi)

Cap relief pressure	Standard	78 - 98 (0.78 - 0.98, 0.8 - 1.0, 11 - 14)
	Limit	59 (0.59, 0.6, 9)
Leakage test pressure		157 (1.57, 1.6, 23)

Tightening Torque

EBS00OJ4

*1: Parts to be tightened in particular orders

Unit: N·m (kg-m, ft-lb)
Unit: N·m (kg-m, in-lb)*2

	Cooling fan assembly	3.8 - 4.5 (0.39 - 0.45, 34 - 39)*2
	Reservoir tank (M/T models with A/C)	3.8 - 4.5 (0.39 - 0.45, 34 - 39)*2
	Cooling fan motor	3.0 - 4.0 (0.31 - 0.40, 27 - 35)*2
	Cooling fan (reverse screw)	1.7 - 2.3 (0.18 - 0.23, 15 - 20)*2
	Water pump	10.0 - 13.7(1.1 - 1.3, 8 - 10)
	Water pump pulley	6.9 - 9.5 (0.71 - 0.96, 61 - 84)*2
*1	Water suction pipe	16.6 - 23.5 (1.7 - 2.3, 13 - 17)
	Water outlet	6.3 - 8.3 (0.65 - 0.84, 56 - 73)*2
	Heater pipe	29.4 - 39.2 (3.0 - 3.9, 22 - 28)
	Engine coolant temperature sensor	20 - 27(2.1 - 2.7, 15 - 19)

PRECAUTIONS

PFP:00001

Precautions For Liquid Gasket

EBS01C7N

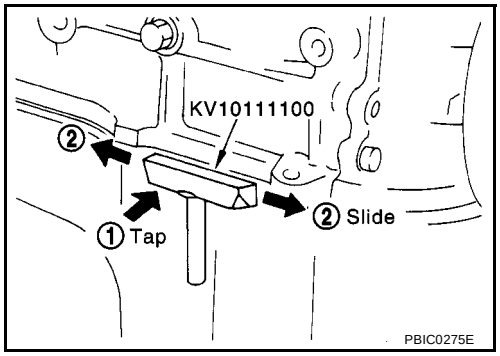
REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, separate the mating surface using a seal cutter and remove the liquid gasket.

  CAUTION:
  Be careful not to damage the mating surfaces.

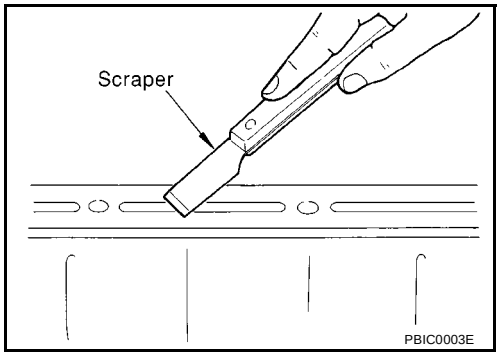
- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the gasket applied area.

  CAUTION:
  If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.



LIQUID GASKET APPLICATION PROCEDURE

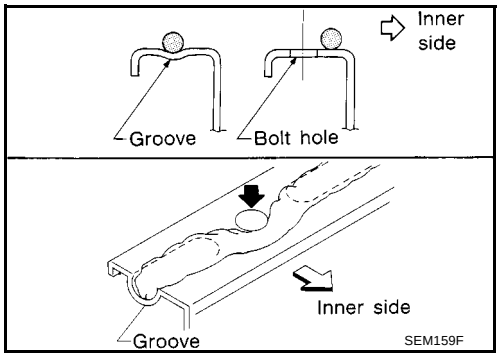
1. Using a scraper, remove the old liquid gasket adhering to the gasket application surface and the mating surface.
   - Remove the liquid gasket completely from the groove of the gasket application surface, mounting bolts and bolt holes.
2. Wipe the gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.
3. Attach the liquid gasket to the tube presser.
   Use Genuine Liquid Gasket or equivalent.



4. Apply the gasket without breaks to the specified location with the specified dimensions.
   - If there is a groove for the liquid gasket application, apply the gasket to the groove.

   - As for the bolt holes, normally apply the gasket inside the holes. If specified, it should be applied outside the holes. Make sure to read the instruction in this manual.
   - Within five minutes of gasket application, install the mating component.
   - If the liquid gasket protrudes, wipe it off immediately.
   - Do not retighten after the installation.
   - After 30 minutes or more have passed from the installation, fill the engine oil and coolant.

   CAUTION:
   If there are instructions in this manual, observe them.



PREPARATION

PFP:00002

OVERHEATING CAUSE ANALYSIS

PFP:00012

Troubleshooting Chart

EBS01C7P

	Symptom		Check items	
Cooling system parts malfunction	Poor heat transfer	Water pump malfunction	Worn timing belt	—
		Thermostat stuck closed	—	
		Damaged fins	Dust contamination or paper clogging	
			Mechanical damage	
		Clogged radiator cooling tube	Excess foreign material (rust, dirt, sand, etc.)	
	Reduced air flow	Cooling fan does not operate	Fan assembly	—
		High resistance to fan rotation		
		Damaged fan blades		
	Damaged radiator shroud	—	—	—
	Improper coolant mixture ratio	—	—	—
	Poor coolant quality	—	—	—
	Insufficient coolant	Coolant leaks	Cooling hose	Loose clamp
				Cracked hose
			Water pump	Poor sealing
			Reservoir tank cap	Loose
				Poor sealing
			Radiator	O-ring for damage, deterioration or improper fitting
				Cracked radiator tank
				Cracked radiator core
			Reservoir tank	Cracked reservoir tank
		Overflowing reservoir tank	Exhaust gas leaks into cooling system	Cylinder head deterioration
				Cylinder head gasket deterioration

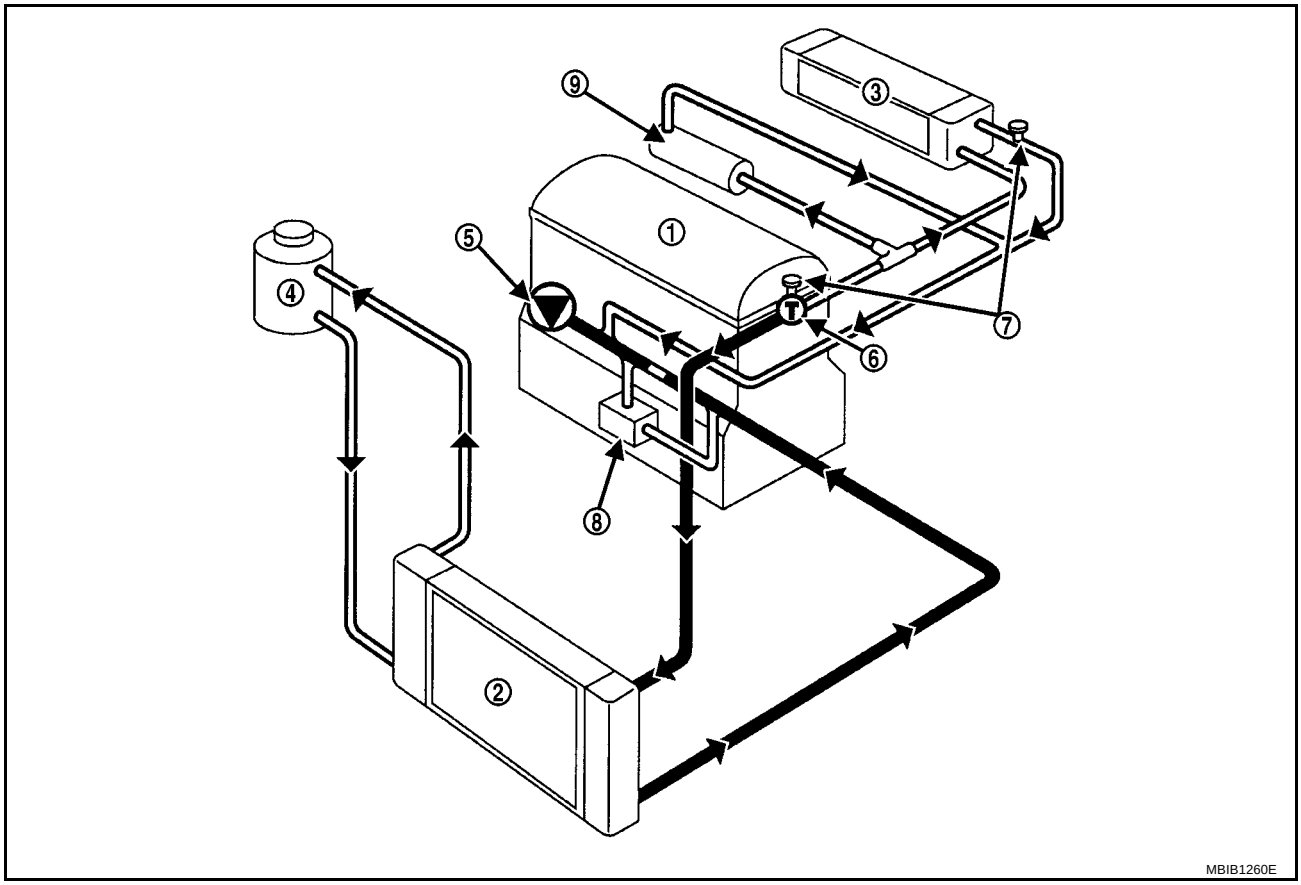
	Symptom		Check items	
Except cooling system parts malfunction	—	Overload on engine	Abusive driving	High engine rpm under no load
				Driving in low gear for extended time
				Driving at extremely high speed
			Powertrain system malfunction	—
			Installed improper size wheels and tires	
			Dragging brakes	
			Improper ignition timing	
	Blocked or restricted air flow	Blocked bumper	—	—
		Blocked radiator grille	Installed car brassiere	
			Mud contamination or paper clogging	
		Blocked radiator	—	
		Blocked condenser	—	
		Installed large fog lamp		

COOLING SYSTEM

PFP:21020

Cooling Circuit

EBS01FHO



1. Engine
2. Radiator
3. Heater core
4. Reservoir tank
5. Water pump
6. Thermostat
7. Air relief plug
8. Oil cooler
9. EGR cooler

ENGINE COOLANT

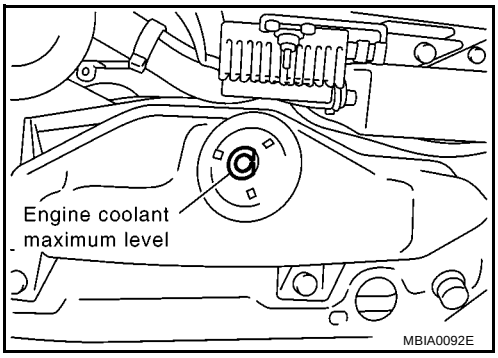
PFP:KQ100

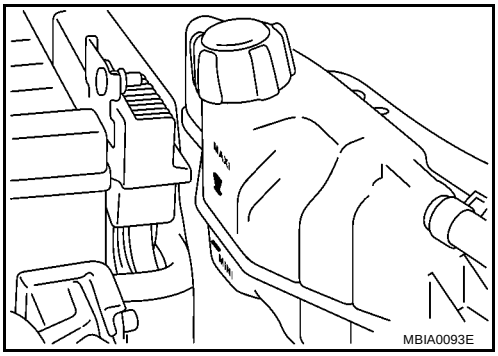
Inspection

EBS01C7Q

LEVEL CHECK

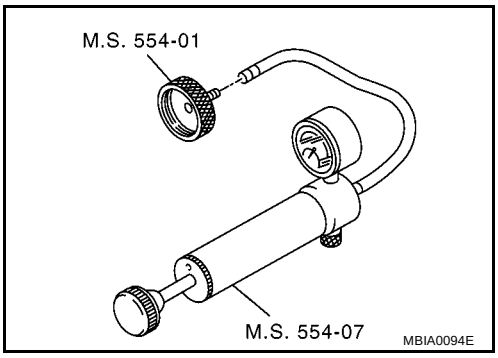
- Check if the reservoir tank coolant level is within MIN to MAX when engine is cool.
- Adjust coolant if too much or too little.





LEAK CHECK

- To check for leakage, fit the adapter to the reservoir tank, and then connect it to the tester as shown.
- Warm up the engine and turn it off.
- Apply pressure to the cooling system and stop pumping at **10 kPa (0.1 bar, 0.10 kg/cm^2 , 1.5psi)** .
- If the pressure drops, look for leakage.
- Unscrew slowly the adapter from the reservoir tank to reduce the pressure in cooling system, and install the reservoir tank cap.



WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure engine coolant escaping from the radiator.

CAUTION:

Higher pressure than specified may cause radiator damage.

Changing Engine Coolant

EBS01C7R

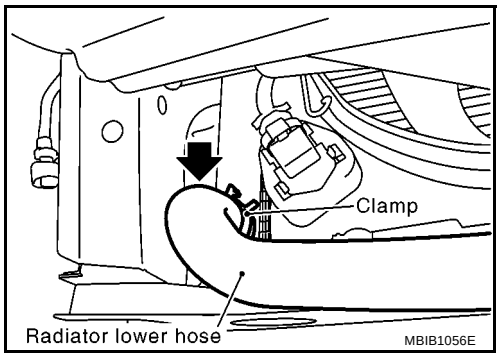
SMA for VIN >SJN**AK12U1107568

WARNING:

- **To avoid being scalded, never change the coolant when the engine is hot.**
- **Wrap a thick cloth around cap and carefully remove the cap. First, turn the cap a quarter of a turn to release built-up pressure. Then turn the cap all the way.**

DRAINING ENGINE COOLANT

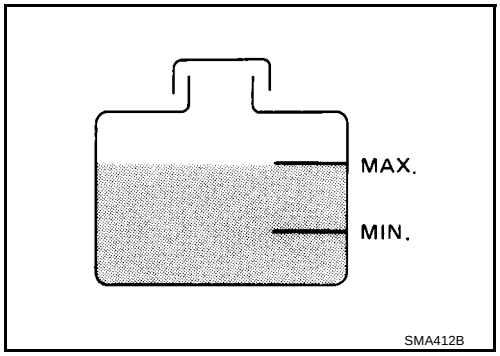
1. Remove engine undercover.
2. Disconnect lower radiator hose, and remove reservoir tank cap and air relief plug.
3. Remove reservoir tank, drain coolant, then clean reservoir tank.
4. Check drained coolant for contaminants such as rust, corrosion or discoloration.
   If contaminated, flush engine cooling system. Refer to CO-33, "FLUSHING COOLING SYSTEM" .
5. Remove air relief plug from water outlet.
   Refer to CO-42, "WATER OUTLET" .



REFILLING ENGINE COOLANT

- **Before start working, turn off the automatic air conditioner and the blower motor.**

1. Install reservoir tank, lower radiator hose and air relief plug.
2. Fill reservoir tank slowly with coolant until coolant spills from the air relief hole. Refer to CO-42, "WATER OUTLET" .
   - **Put a cloth under the air relief plug to prevent engine coolant to dampen the crankshaft position sensor.**
   - Fill coolant to the MAX level line of the reservoir tank at a rate of 2 litre (1-3/4 lmp qt)/min or lower.



3. Close the air relief plug.

   CAUTION:
   If the filling rate is too fast, this could lead to air being mixed in the coolant. Be sure to fill the coolant slowly according to the rate indicated above.
   Use genuine Nissan anti-freeze coolant or equivalent mixed with water (distilled or demineralised). Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS" .

   Engine coolant capacity (With reservoir tank):
   6.5 litre (5-3/4 lmp qt)

   Reservoir tank capacity 1.2 litre (1-1/8 lmp qt)

4. Warm up the engine for approximately five minutes without reservoir tank cap installed, and then turn off the engine and loose air relief plug until coolant spills from air relief hole.
   - **If coolant overflows reservoir tank hole, install filler cap.**
   - **Watch engine coolant temperature warning light so as not overheat the engine during all of the operation.**

WARNING:

- **Be careful not be scaled with hot engine coolant or vacuum pump when operating.**
- **Radiator fan blade can start at any time and make personal injuries.**

5. Close the air relief plug and run the engine at 2,000 rpm until the upper hose comes hot and radiator fan operates. Let the engine running approximately 5 minutes at idle speed and check for sound of coolant flow while running engine from idle up to 3,000 rpm.
   - Sound may be noticeable at heater water cock.
6. If sound is heard, bleed air from cooling system by repeating steps 4 through 5 until coolant lever no longer drops.
   - Check the radiator lower hose for any signs of leakage.
7. Turn off the engine and let it cool down.
   - Cool down using a fan to reduce the time.
8. After cooling period, loose the air relief plug and check if coolant spills from the air relief hole. In other case, remove the air relief plug until the coolant spills, and then close the relief air plug. Bleed air from cooling system by repeating steps 5 through 8 until the coolant spills immediately.
9. Check the engine coolant level when engine is cool and refill to MAX level line if the level is lower.
   - Clean excess coolant from engine.

FLUSHING COOLING SYSTEM

1. Fill reservoir tank with water until water spills from the air relief hole, then close air relief plug. Reinstall reservoir tank cap.
2. Run engine and warm it up to normal operating temperature.
3. Rev engine two or three times under no-load.
4. Stop engine and wait until it cools down.
5. Drain water.
6. Repeat steps 1 through 5 until clear water begins to drain from radiator.
7. Blow compressed air into cooling circuit through the reservoir tank valve hole to drain all the water.

RADIATOR

4. Hose clamp
5. Hose clamp
6. Reservoir tank hose
7. Reservoir tank
8. Cooling fan assembly
9. Hose clamp
10. Radiator hose (lower)
11. Hose clamp
12. Reservoir tank hose
13. Mounting rubber

WARNING:
Never remove the reservoir tank cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator. Wrap a thick cloth around the cap. Slowly turn it a quarter turn to allow built-up pressure to escape. Carefully remove the cap by turning it all the way.

REMOVAL

1. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
2. Remove air cleaner case and air duct (inlet). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
3. Remove reservoir tank hose bracket bolt from radiator upper mounting bracket (RH side).
4. Remove radiator fan motor harnesses.
5. Remove engine undercover.
6. Drain engine coolant. Refer to CO-32, "DRAINING ENGINE COOLANT" .

   CAUTION:
   Perform when engine is cold.
7. Disconnect radiator upper hose, reservoir tank hose and mounting bracket.
8. Remove radiator and radiator fan assembly.

- For model with A/C, remove radiator and condenser assembly. Refer to ATC-84, "REFRIGERANT LINES" .
- For model with charge air cooler. Refer to EM-125, "CHARGE AIR COOLER" .

CAUTION:
- **Do not damage or scratch radiator core when removing.**

INSTALLATION

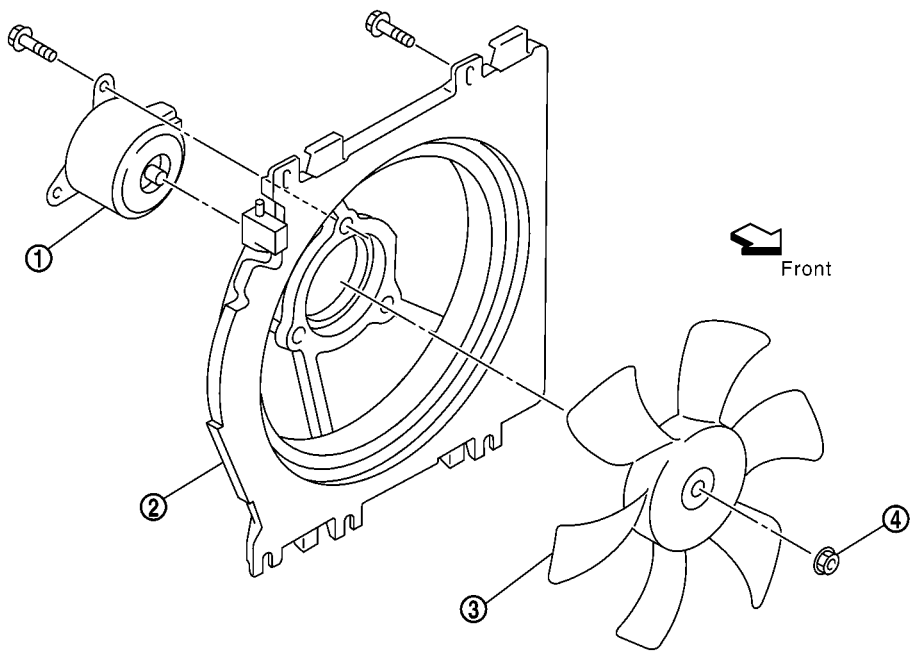
- Reinstall any parts removed in reverse order of removal.
- Check for engine coolant leaks. Refer to CO-31, "LEAK CHECK" .

Disassembly and Assembly Radiator Fan

EBS01C7T

SEC. 214
Models with A/C

SMA for VIN >SJN**AK12U1309269



MBIB1061E

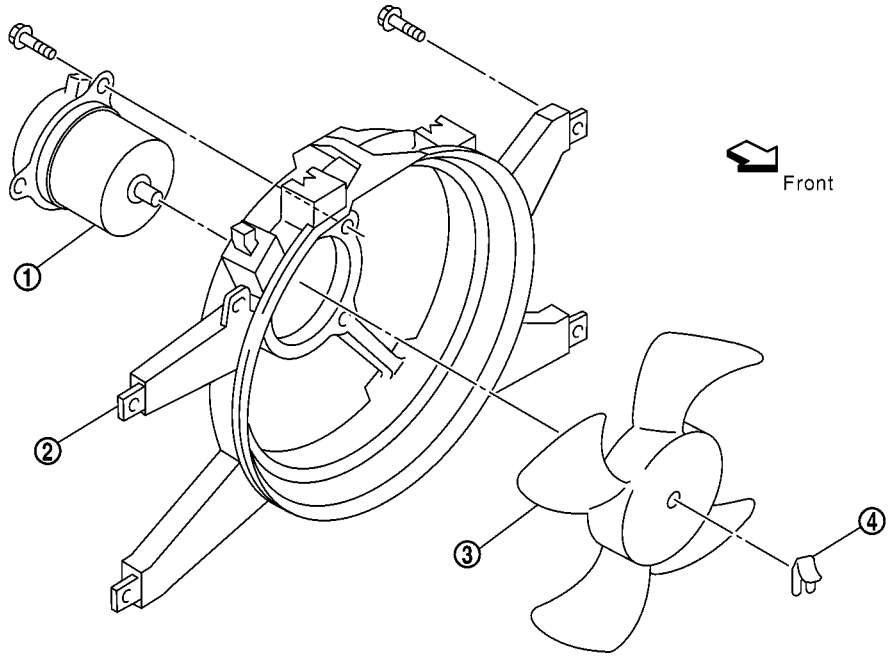
3. Radiator fan
4. Retaining nut

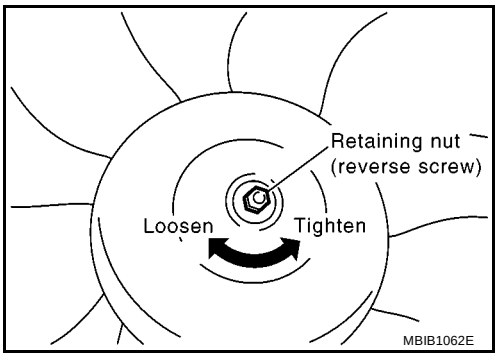
SEC. 214
Models without A/C

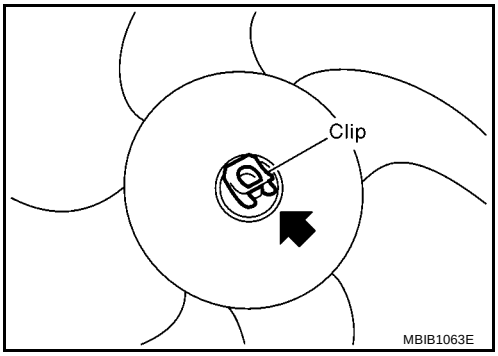


1. Radiator fan motors
2. Radiator fan shroud
3. Radiator fan
4. Clip

DISASSEMBLY

1. Remove radiator fan and shroud assembly.
2. Remove radiator fan as shown.





3. Remove fan motor from fan shroud.

ASSEMBLY

Install in the reverse order of removal.

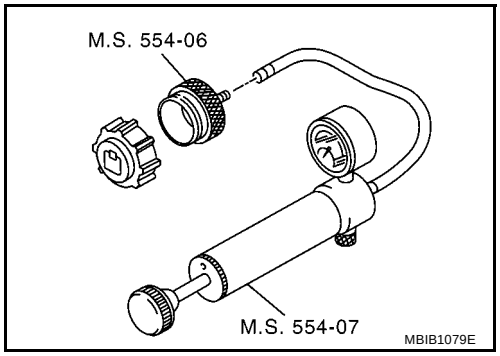
Checking Reservoir Tank Cap

EBS01C7U

- Fit the adapter to the tester as shown.
- When connecting the reservoir tank cap to the tester, apply water or LLC to the cap seal part.
- Check reservoir tank cap relief pressure.

130 - 150 kPa (1.3 - 1.5 bar, 1.33 - 1.53 kg/cm^2 , 18.9 - 21.8 psi)

- Replace the reservoir tank cap if the engine coolant passes through it, or if any fur signs is detected.



Checking Radiator

EBS01C7V

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as radiator fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

1. Apply water by hose to the back side of the radiator core vertically downwards.
2. Apply water again to all radiator core surface once per minute.
3. Stop washing if any stains no longer flow out from the radiator.
4. Blow air into the back side of radiator core vertically downwards.

- Use compressed air lower than 490 kPa (4.9 bar 5 kg/cm^2 , 71psi) and keep distance more than 30 cm (11.8 in).

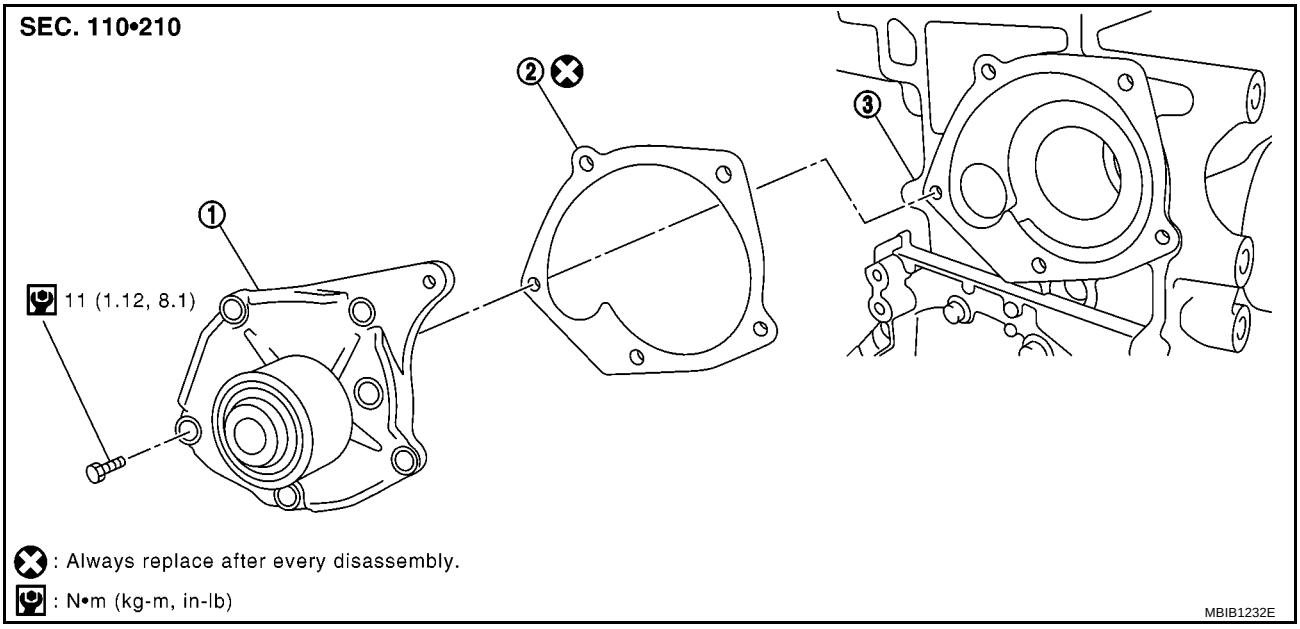
5. Blow air again into all the radiator core surface once per minute until no water sprays out.

WATER PUMP

PFP:21020

Removal and Installation

EBS01C7W



1. Water pump
2. Gasket
3. Cylinder block

WARNING:
Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

REMOVAL

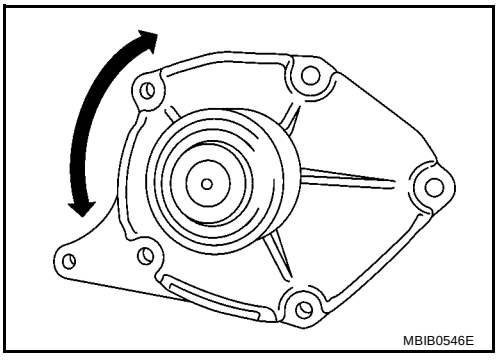
1. Remove the following parts.
   - Battery ground cable
   - Undercover
   - RH front wheel
2. Remove right side splash cover.
3. Remove drive belt. Refer to EM-121, "DRIVE BELTS" .
4. Drain engine coolant. Refer to CO-32, "DRAINING ENGINE COOLANT" .

   CAUTION:
   Perform when engine is cold.
5. Remove timing belt and inner cover. Refer to EM-140, "TIMING BELT" .
6. Remove the water pump.
   - Coolant will leak from the cylinder block, so have a receptacle ready below.

   CAUTION:
   - **Handle the water pump vane so that it does not contact any other parts.**
   - **Water pump cannot be disassembled and should be replaced as a unit.**

INSPECTION AFTER REMOVAL

- Visually make sure there is no significant dirt or rusting on the water pump body and vane.
- Make sure there is no looseness in the vane shaft, and that it turns smoothly when rotated by hand.
- If there are any unusualness, replace the water pump assembly.



INSTALLATION

- Install in the reverse order of removal.

INSPECTION AFTER INSTALLATION

- Check for engine coolant leaks using reservoir tank cap tester. Refer to CO-31, "LEAK CHECK" .

THERMOSTAT

PFP:21200

Inspection

EBS01FHN

- Place a thread so that it is caught in the valves of the thermostat. Immerse fully in a container filled with water. Heat while stirring. (The example in the figure shows the thermostat.)
- The valve opening temperature is the temperature at which the valve opens and falls from the thread.
- Continue heating. Check the full-open lift amount.
- After checking the full-open lift amount, lower the water temperature and check the valve closing temperature.
- If the measured value is out of the standard value or unusual valve seating condition is found, replace the thermostat.

	Temperature °C (°F)
Start of opening	89 (192)
End of opening	97 - 101 (207 - 214)

WATER OUTLET

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS0086Z

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EKS008W0

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

RHD MODELS

- BCM (Models without Intelligent Key system)
- Intelligent Key unit (Models with Intelligent Key system)

Precautions For Trouble Diagnosis

EKS008WG

CAN SYSTEM

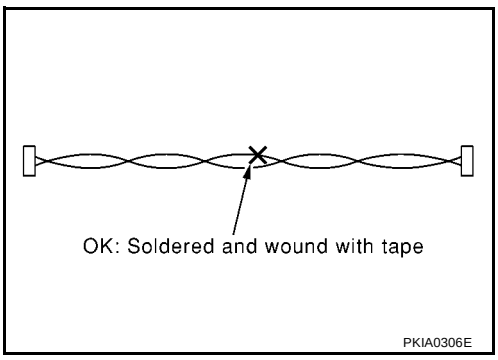
- Do not apply voltage of 7.0V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0V or less.
- Be sure to turn ignition switch off and disconnect negative battery cable before checking the circuit.

Precautions For Harness Repair

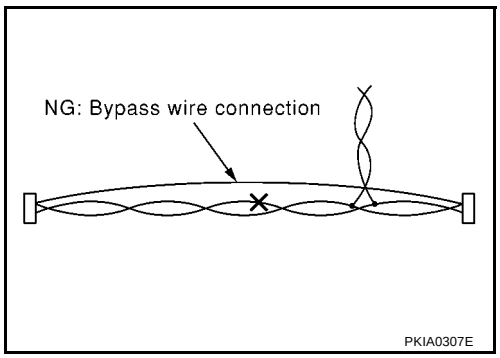
EKS008WH

CAN SYSTEM

- Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in)]



- Do not perform bypass wire connections for the repair parts. (The spliced wire will become separated and the characteristics of twisted line will be lost.)



Wiring Diagrams and Trouble Diagnosis

EKS006ZV

When you read wiring diagrams, refer to the following:

- GI-14, "How to Read Wiring Diagrams" in GI section
- PG-4, "POWER SUPPLY ROUTING" for power distribution circuit in PG section

When you perform trouble diagnosis, refer to the following:

- GI-10, "How to Follow Trouble Diagnoses" in GI section
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" in GI section

COMBINATION METERS

PFP:24814

System Description

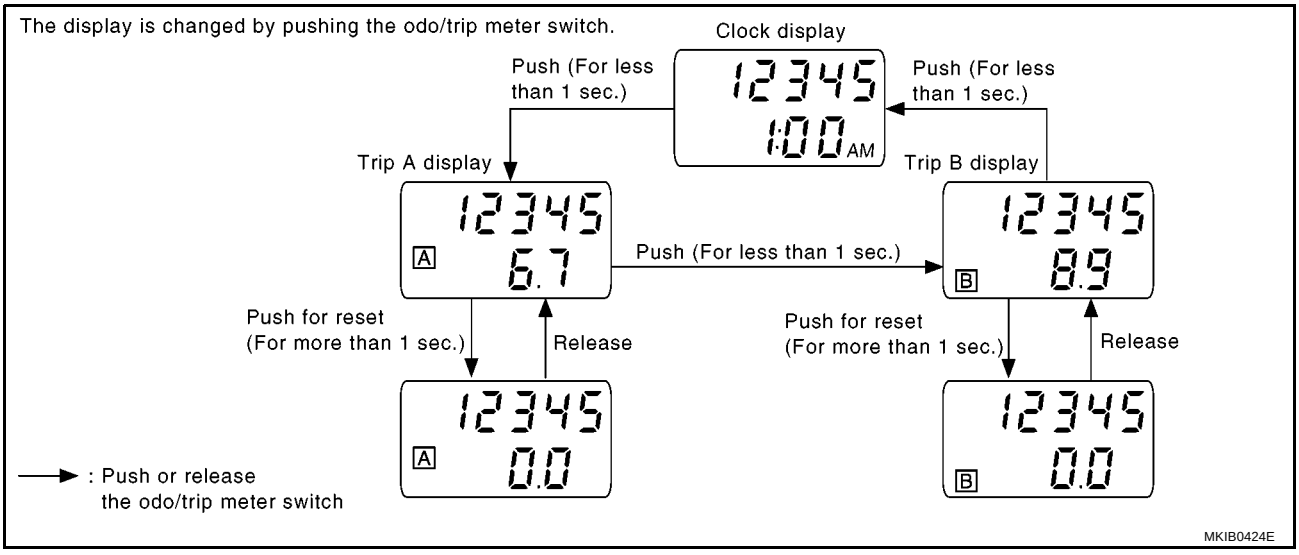
EKS00822

UNIFIED CONTROL METER

- Speedometer, odo/trip meter, tachometer, fuel gauge and water temperature lamps are controlled totally by control unit built in combination meter.
- Signal of speedometer, odo/trip meter, tachometer and water temperature indicator/warning lamps are received via CAN communication line.
- Engine coolant temperature is indicated by water temperature (High) warning lamp and water temperature (Low) indicator lamp.
- Digital meter is adopted for odo/trip meter*.
  *: The record of the odometer is kept even if the battery cable is disconnected. The record of the trip meter is erased when the battery cable is disconnected.
- Odo/trip meter display segments can be checked in self-diagnosis mode.
- Meter/gauge can be checked in self-diagnosis mode.

HOW TO CHANGE THE DISPLAY FOR ODO/TRIP METER

- The CAN communication signals (vehicle speed signal) from ABS actuator and electric unit (control unit), and the memory signals from the meter memory circuit are processed by the combination meter, and the mileage is displayed.
- Operating the odo/trip meter switch allows switching the mode in the following order.



- The odo/trip meter display switching and trip display resetting can be identified by the time from pressing the odo/trip meter switch to releasing it.
- When resetting with trip A displayed, only trip A display is reset (same as trip B).

POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times

- through 10A fuse [No. 8, located in the fuse block (J/B)]
- to combination meter terminal 27.

With the ignition switch in the ON or START position, power is supplied

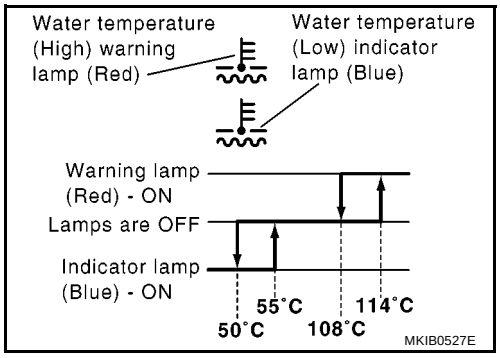
- through 10A fuse [No. 2, located in the fuse block (J/B)]
- to combination meter terminal 28.

Ground is supplied

- to combination meter terminals 21, 22 and 23
- through body grounds M19 and M20.

WATER TEMPERATURE WARNING/INDICATOR LAMP

The water temperature warning/indicator lamp indicate the engine coolant temperature.
ECM provides a engine coolant temperature signal to combination meter for water temperature warning/indicator lamp via CAN communication line.
When turn ignition switch ON, water temperature (High) warning lamp and water temperature (Low) indicator lamp will be ON for 2 seconds.
After engine started,



- Water temperature (Low) indicator lamp will be ON while engine coolant temperature is less than 55 °C.
- Water temperature (Low) indicator lamp will be OFF while engine coolant temperature is more than 55 °C.
- Water temperature (High) warning lamp and water temperature (Low) indicator lamp will be OFF, while engine coolant temperature is between 55 °C and 114 °C.
- Water temperature (High) warning lamp will be ON, while engine coolant temperature is more than 114 °C.

TACHOMETER

The tachometer indicates engine speed in revolution per minutes (rpm).
ECM provides an engine speed signal to combination meter for tachometer via CAN communication line.

FUEL GAUGE

The fuel gauge indicates the approximate fuel level in the fuel tank.
The fuel gauge is regulated by a variable resistor signal supplied

- to combination meter terminal 6 for the fuel level sensor
- from terminal 2 of the fuel level sensor unit
- through terminal 4 of the fuel level sensor unit and
- through combination meter terminal 24.

SPEEDOMETER

ABS actuator and electric unit (control unit) provides a vehicle speed signal to the combination meter for the speedometer via CAN communication line.

CAN Communication

EKS00K37

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00K38

Go to CAN system, when selecting your car model from the following table.

Combination Meter Self-Diagnosis

EKS00828

PERFORMING SELF-DIAGNOSIS MODE

1. Turn the ignition switch to the “LOCK” position.
2. Press both reset buttons on the combination meter and keep them depressed.
3. Turn the ignition switch to the “ON” position, while keeping the reset buttons pressed.
4. Release both reset buttons then self-diagnosis will start. The sequence (A to J) is activated by pressing the either reset buttons.

   NOTE:
   If either reset button is not pressed for 20 seconds at each step or if the ignition switch is turned OFF, the self-diagnosis mode is exited.

	Check items	Display	Remarks
A)	Segment test	 MKIB0526E	All odo/trip meter, segments are ON.
B)	Work instruction code	 This code is an example. MKIB0002E	This information is not used for service. Skip this step.
C)	Software code	 This code is an example. MKIB0003E	This information is not used for service. Skip this step.
D)	EEPROM code	 This code is an example. MKIB0004E	This information is not used for service. Skip this step.
E)	Hardware code	 This code is an example. MKIB0005E	This information is not used for service. Skip this step.

	Check items	Display	Remarks
F)	PCB code	 This code is an example. MKIB0006E	This information is not used for service. Skip this step.
G)	Meter/gauge test (Sweeping movement)	 Flashing MKIB0007E	Tachometer, speedometer, fuel level gauge and have sweeping movement test. (The meter/gauges operate MIN. → MAX., MAX. → MIN. for 2 times) Water temperature (High) warning lamp and water temperature (Low) indicator lamp are ON. during the sweep movement. The odo/trip meter segment flashes during the sweep movement.
H)	Error 1 (Bit 0 - Bit 3)	 This value is an example. MKIB0008E	The segment of each bit displays “0”, meaning no malfunction. If the bit(s) displays figures other than “0”, the item of the bit has malfunctioned. For details, refer to DI-27, "Malfunction Chart for “Error 1” and “Error E”" .
I)	Error E (Bit 4 - Bit 7)	 This value is an example. MKIB0009E	
J)	Fuel warning lamp test	 Flashing MKIB0010E	All warning lamp and indicator lamp are ON [Except for water temperature (High) warning lamp, water temperature (Low) indicator lamp and security indicator lamp] and odo/trip meter segment “FUEL” flashes.

Malfunction Chart for “Error 1” and “Error E”

Bit	Detectable items	Description of the malfunction		Displayed figure on the bit	
				Malfunction	No malfunction
0	Speedometer input signal	No input signal When no signal is detected for 30 minutes continuously with the ignition ON, it should be judged as signal malfunction. (If input signal is detected later, then the judgement will be canceled immediately.)		1	0
		Unusual input signal When any signal of frequency which would not exist in normal conditions is detected, it should be judged as signal malfunction.		2	
1	Tachometer input signal	No input signal When no signal is detected for 30 minutes continuously with the ignition ON, it should be judged as signal malfunction. (If input signal is detected later, then the judgement will be canceled immediately.)		1	0
		Unusual input signal When any signal of frequency which would not exist in normal conditions is detected, it should be judged as signal malfunction.		2	
2	Fuel level input signal	Short circuit When short circuit of the signal line is detected for 5 seconds or more, it should be judged as short-circuit malfunction.		1	0
		Open circuit When open circuit of the signal line is detected for 5 seconds or more, it should be judged as open-circuit malfunction.		2

Trouble Diagnoses

EKS00829

PRELIMINARY CHECK

1. CHECK POWER SUPPLY

1. Turn ignition switch ON.
2. Warning lamps should illuminate (seat belt warning or door warning etc.).

Do warning lamps illuminate?

YES >> GO TO 2.
NO >> Power supply and ground check. Refer to DI-31, "Power Supply and Ground Circuit Check" .

2. CHECK OPERATION OF SELF-DIAGNOSIS MODE

Perform self-diagnosis mode. Refer to DI-25, "Performing Self-Diagnosis Mode" .

Can self-diagnosis mode be activated?

YES >> GO TO 3.
NO >> Replace combination meter. Refer to DI-34, "Removal and Installation for Combination Meter" .

3. CHECK OPERATION OF METER/GAUGE

Check meter/gauge operation in self-diagnosis mode (Meter/gauge test). Refer to DI-25, "Performing Self-Diagnosis Mode" .

Is any malfunction indicated in self-diagnosis mode?

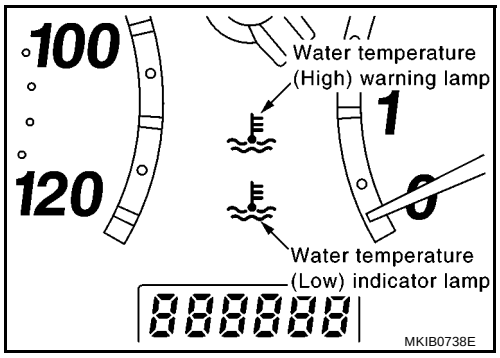
YES >> GO TO “Symptom Chart 1”. Refer to DI-30, "Symptom Chart 1" .
NO >> GO TO 4.

4. CHECK WATER TEMPERATURE WARNING/INDICATOR

Check meter/gauge operation in self-diagnosis mode (Meter/gauge test). Refer to DI-25, "Combination Meter Self-Diagnosis" .

Does water temperature (High) warning lamp and water temperature (Low) indicator is ON?

Yes >> GO TO 5.
Both lamps are OFF>>Replace combination meter.
Only water temperature (High) warning lamp is ON>> Replace combination meter.
Only water temperature (Low) indicator lamp is ON>> Check bulb.

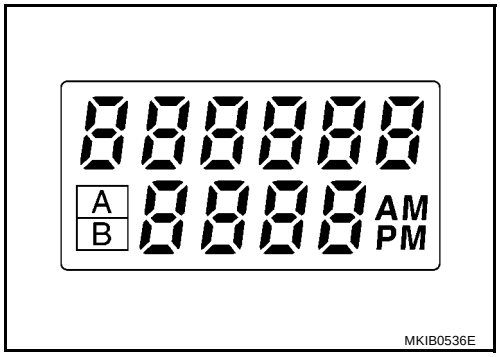


5. CHECK SEGMENTS

Check all odo/trip meter segments in self-diagnosis mode (Odo/trip meter segment test). Refer to DI-25, "Performing Self-Diagnosis Mode" .

Is any malfunction indicated in self-diagnosis mode?

YES >> GO TO “Symptom Chart 1”. Refer to DI-30, "Symptom Chart 1" .
NO >> GO TO 6.



6. CHECK WARNING INDICATOR LAMP

Check fuel warning lamp in self-diagnosis mode (Fuel warning lamp test). Refer to DI-25, "Performing Self-Diagnosis Mode" .

All warning/indicator lamp should turn ON.*

*** Except for water temperature (High) warning lamp, water temperature (Low) indicator lamp and security indicator lamp.**

OK or NG

OK >> GO TO 7.
NG >> Replace combination meter.

7. CHECK INPUT SIGNALS

Check input signals from each sensors in self-diagnosis mode (Error 1 and Error E). Refer to DI-27, "Malfunction Chart for “Error 1” and “Error E”" .

OK or NG

OK >> GO TO 8.
NG >> GO TO “Symptom Chart 2”. Refer to DI-30, "Symptom Chart 2" .

8. CHECK OTHER MALFUNCTION

Check each malfunction according to the instruction of the “SYMPTOM CHART 3”. Refer to DI-30, "Symptom Chart 3" .

OK or NG

OK >> Combination meter is OK.
NG >> Check the case of malfunction.

SYMPTOM CHART

Symptom Chart 1

Symptom	Possible causes	Repair order
Odo/trip meter indicates malfunction in Diagnosis mode.	Unified meter control unit	Replace combination meter. Refer to DI-34, "Removal and Installation for Combination Meter" .
Multiple meter/gauge indicate malfunction in Diagnosis mode.		
One of speedometer/tachometer/fuel gauge/Water temperature (High) warning lamp. indicates malfunction in Diagnosis mode.		

Symptom Chart 2

Symptom	Possible causes	Repair order
Speedometer input signal indicates malfunction in Diagnosis mode.	Speedometer input signal	Check signal for speedometer. Refer toDI-31, "Inspection/Vehicle Speed Signal" .
Tachometer input signal indicates malfunction in Diagnosis mode.	Tachometer input signal	Check signal for tachometer. Refer to DI-31, "Inspection/Engine Revolution Signal" .
Fuel level input signal indicates malfunction in Diagnosis mode.	Fuel level input signal	Check fuel level signal. Refer to DI-32, "Inspection/Fuel Level Sensor Unit" .
Water temperature input signal Indicates malfunction in Diagnosis mode.	Water temp. warning/indicator lamps input signal	Check water temperature signal. Refer to DI-33, "Inspection/Water Temperature Warning/indicator Lamp" .
Reset buttons indicates malfunction in Diagnosis mode.	Unified meter control unit	Combination meter. Refer toDI-34, "Removal and Installation for Combination Meter" .
CPU indicates malfunction in Diagnosis mode.	Unified meter control unit	Combination meter. Refer toDI-34, "Removal and Installation for Combination Meter" .

Symptom Chart 3

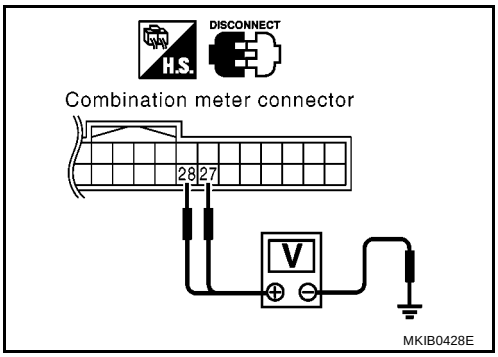
Symptom	Possible causes	Repair order
Fuel gauge pointer fluctuates, Indicator wrong value or varies.	-	Check the case of malfunction. Refer to DI-33, "Fuel Gauge Pointer Fluctuates Indicator Wrong Value or Varies" .
Fuel gauge does not move to “F” position.	-	Check the case of malfunction. Refer to DI-33, "Fuel Gauge Does Not Move to FULL position" .
Fuel gauge does not work.	-	Check the case of malfunction. Refer to DI-34, "Fuel Gauge Does Not Work" .

Power Supply and Ground Circuit Check

EKS0082A

1. CHECK POWER SUPPLY CIRCUIT

1. Disconnect combination meter connector.
2. Check voltage between combination meter harness connector and ground in the following conditions.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M22	27 (LG)	Ground	Battery voltage	Battery voltage	Battery voltage
M22	28 (GY)	Ground	0V	0V	Battery voltage

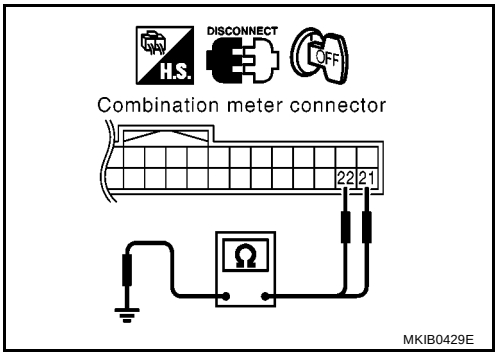
OK or NG

OK >> GO TO 2.
NG >> Check the following.

- 10A fuse [No. 2, located in fuse block (J/B)].
- 10A fuse [No. 8, located in fuse block (J/B)].
- Harness for open or short between fuse and combination meter.

2. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between combination meter and ground.



Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M22	21 (B)	Ground	Yes
M22	22 (B)	Ground	Yes

OK or NG

OK >> INSPECTION END
NG >> Harness for open ground circuit.

Inspection/Vehicle Speed Signal

EKS0082C

1. CHECK ABS ACTUATOR AND ELECTRIC UNIT SYSTEM

Perform ABS actuator and electric unit (control unit) self-diagnosis. Refer to BRC-20, "CONSULT-II Functions".

OK or NG

OK >> Perform “PRELIMINARY CHECK” again.
NG >> Perform “Diagnostic procedure” for displayed self-diagnosis result.

Inspection/Engine Revolution Signal

EKS0082D

1. CHECK ECM SYSTEM

Perform ECM self-diagnosis. Refer to EC-48, "Emission-related Diagnostic Information" (CR engine models with EURO-OBD), EC-508, "Emission-related Diagnostic Information" (CR engine models without EURO-OBD) or EC-K9K-57, “Trouble diagnosis — Introduction”, “DIESEL INJECTION” (K9K engine models).

OK or NG

OK >> Perform “PRELIMINARY CHECK” again.
NG >> Perform “Diagnostic procedure” for displayed DTC.

Inspection/Fuel Level Sensor Unit

EKS0082E

FUEL LEVEL SENSOR UNIT

The following symptoms do not indicate a malfunction.

- Depending on vehicle posture or driving circumstance, the fuel level in the tank varies, and the pointer may fluctuate.
- If the vehicle is fueled with the ignition switch ON, the pointer will move slowly.

LOW-FUEL WARNING LAMP

Depending on vehicle posture or driving circumstance, the fuel level in the tank varies, and the warning lamp ON timing may be changed.

1. CHECK HARNESS CONNECTOR

1. Turn ignition switch OFF.
2. Check combination meter, fuel level sensor unit and terminals (meter-side, module-side, and harness-side) for poor connection and bend.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace terminals or connectors.

2. CHECK FUEL LEVEL SENSOR INPUT SIGNAL CIRCUIT

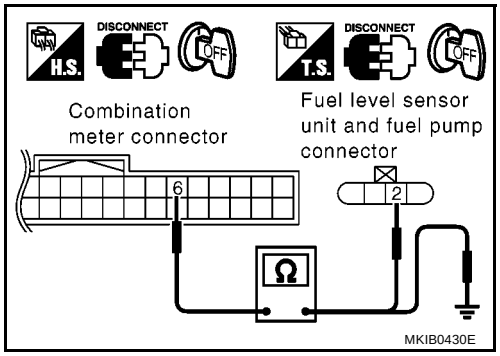
1. Disconnect fuel level sensor unit connector and combination meter connector.
2. Check the following.

– Harness continuity between fuel level sensor unit and fuel pump harness connector B28 terminal 2 (BR) and combination meter harness connector M22 terminal 6 (BR).

2 (BR) – 6 (BR) : Continuity should exist.

– Harness continuity between combination meter harness connector M22 terminal 6 (BR) and ground.

6 (BR) – Ground : Continuity should not exist.



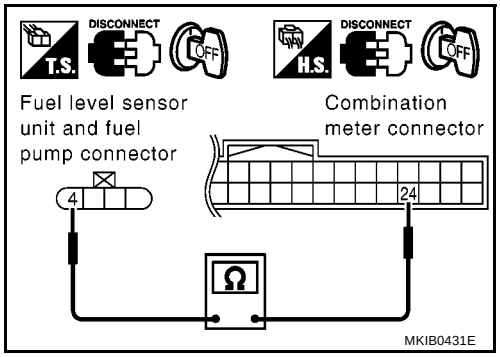
OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK FUEL LEVEL SENSOR GROUND CIRCUIT

Check harness continuity between fuel level sensor unit and fuel pump harness connector B28 terminal 4 (PU) and combination meter connector M22 terminal 24 (PU).

4 (PU) – 24 (PU) : Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK FUEL LEVEL SENSOR UNIT

Refer to DI-34, "FUEL LEVEL SENSOR UNIT CHECK" .

OK or NG

OK >> GO TO 5.
NG >> Replace fuel level sensor unit.

5. CHECK INSTALLATION CONDITION

Check fuel level sensor unit installation, and check whether the float arm interferes or binds with any components inside the arm.

OK or NG

OK >> Replace combination meter.
NG >> Install fuel level sensor unit properly.

Inspection/Water Temperature Warning/indicator Lamp

EKS0082F

1. CHECK ECM SYSTEM

Perform ECM self-diagnosis. Refer to EC-48, "Emission-related Diagnostic Information" (CR engine models with EURO-OBD), EC-508, "Emission-related Diagnostic Information" (CR engine models without EURO-OBD) or EC-K9K-57, “Trouble diagnosis — Introduction”, “DIESEL INJECTION” (K9K engine models).

OK or NG

OK >> Perform “PRELIMINARY CHECK” again.
NG >> Perform “Diagnostic procedure” for displayed DTC.

Fuel Gauge Pointer Fluctuates Indicator Wrong Value or Varies

EKS0082G

1. CHECK FUEL GAUGE FLUCTUATION

Test drive vehicle to see if gauge fluctuates only during driving or at the instant of stopping.

Does the indication value vary only during driving or at the instant of stopping?

YES >> The pointer fluctuation may be caused by fuel level change in the fuel tank. Condition is normal.
NO >> Ask the customer about the situation when the symptom occurs in detail, and perform the trouble diagnosis.

Fuel Gauge Does Not Move to FULL position

EKS0082H

1. QUESTION 1

Does it take a long time for the pointer to move to FULL position?

YES or NO

YES >> GO TO 2.
NO >> GO TO 3.

2. QUESTION 2

Was the vehicle fueled with the ignition switch ON?

YES or NO

YES >> Be sure to fuel the vehicle with the ignition switch OFF. Otherwise it will take a long time to move to FULL position because of the characteristic of the fuel gauge.
NO >> GO TO 3.

3. QUESTION 3

Is the floor or the vehicle inclined?

YES or NO

YES >> It may not be filled fully.
NO >> GO TO 4.

4. QUESTION 4

During driving, does the fuel gauge pointer move gradually toward EMPTY position?

YES or NO

YES >> Check the components. Refer to DI-34, "Electrical Components Inspection" .
NO >> The float arm may interfere or bind with any of the components in the fuel tank.

Fuel Gauge Does Not Work

EKS0082I

1. CHECK HARNESS CONNECTOR

1. Turn ignition switch OFF.
2. Check combination meter, fuel level sensor unit and terminals (meter-side, and harness-side) for poor connection and bend.

OK or NG

OK >> GO TO 2.
NG >> Repair connector.

2. CHECK INSTALLATION CONDITION

Check fuel level sensor unit installation [refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" (CR engine models) or FL-17, "FUEL LEVEL SENSOR UNIT" (K9K engine models)], and check whether the float arm interferes or binds with any components inside the arm.

OK or NG

OK >> Perform “PRELIMINARY CHECK” again.
NG >> Check fuel level sensor unit. Refer to DI-34, "Electrical Components Inspection" .

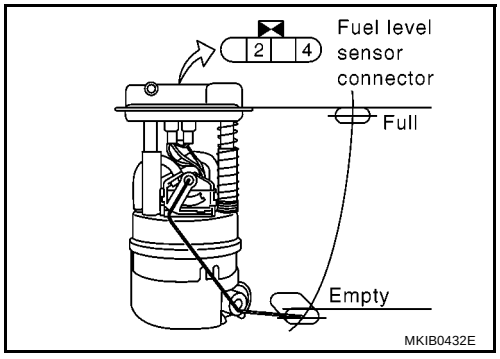
Electrical Components Inspection

EKS0082J

FUEL LEVEL SENSOR UNIT CHECK

For removal, refer to [refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" (CR engine models) or FL-17, "FUEL LEVEL SENSOR UNIT" (K9K engine models)].
Check the resistance between terminals 2 and 4.

Ohmmeter		Float position	Resistance value [Ω]
(+)	(–)		
4	2	Full	Approx. 46
		Empty	Approx. 320



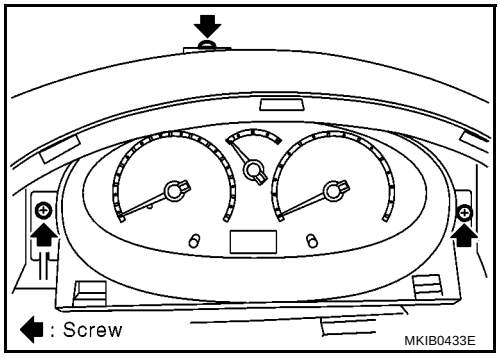
Removal and Installation for Combination Meter

EKS0082K

CAUTION:
Always replace with new* combination meter when the combination meter replacement is required.
***: New one means virgin control unit that has never been energized on-board.**

REMOVAL

1. Remove the upper instrument panel. Refer to IP-6, "B. Upper Instrument Panel" .
2. Remove the steering column cover. Refer to IP-6, "F. Steering Column Cover" .
3. Remove the cluster lid A. Refer to IP-7, "H. Cluster lid “A”" .
4. Remove the screws (4), and pull out combination meter.
5. Disconnect connectors and remove combination meter.

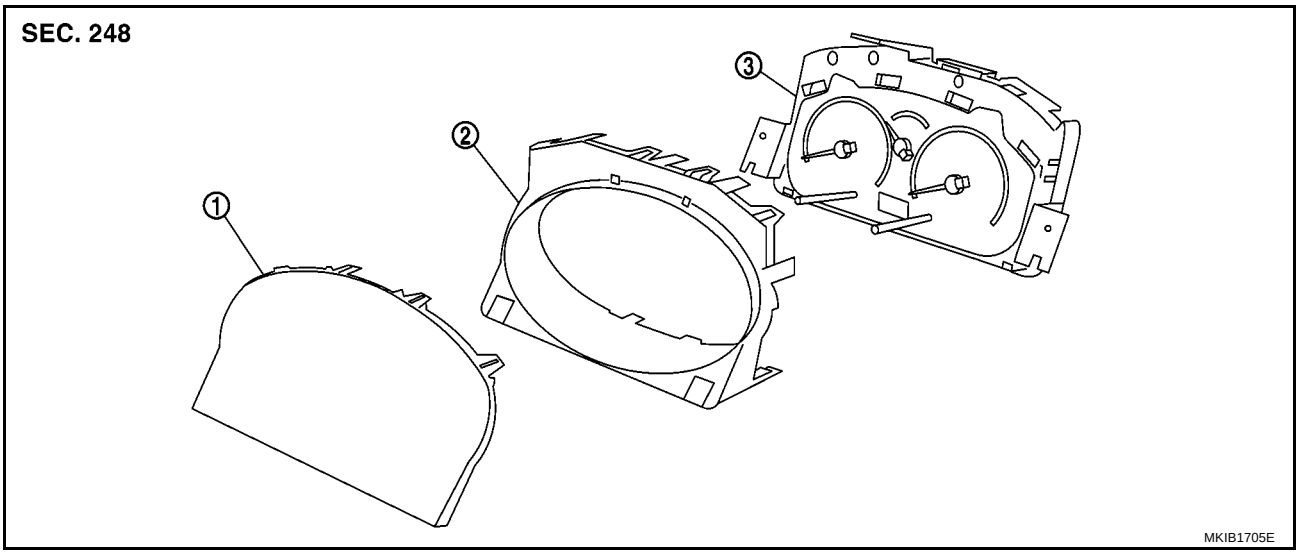


INSTALLATION

- Install in the reverse order of removal.

Disassembly and Assembly for Combination Meter

EKS0082L



1. Front cover
2. Upper housing
3. Unified meter control unit assembly

1. Disengage the tabs (13) to separate upper housing.
2. Disengage the tabs (7) to separate front cover.

DRIVE COMPUTER

PFP:24859

System Description

EKS0082M

Refer to Owner's Manual for drive computer operating instructions.
Drive computer can be set anniversary information, maintenance information, clock and calender, etc.
And, drive computer is displayed drive information, outside temperature and warning information, etc.

POWER SUPPLY AND GROUND

Power is supplied at all times

- through 10A fuse [No. 8, located in fuse block (J/B)]
- to drive computer terminal 6 and
- to combination meter terminals 27.

When ignition switch is in ACC or ON position, power is supplied

- through 10A fuse [No. 12, located in fuse block (J/B)]
- to drive computer terminal 5.

When ignition switch is in ON or START position, power is supplied

- through 10A fuse [No. 4, located in fuse block (J/B)]
- to display unit terminal 4, and
- through 10A fuse [No. 2, located in fuse block (J/B)]
- to combination meter terminal 28.

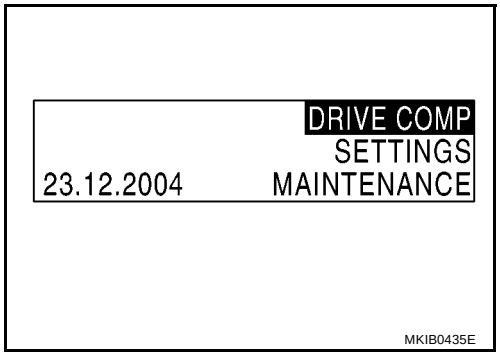
Ground is supplied

- to drive computer terminals 12
- to combination meter terminals 21, 22 and 23
- through body grounds, M19 and M20.

DISPLAY MENU

Turn ignition switch ON, the following function is displayed.

- CLOCK: This clock is to have 12/24 hour mode
- CALENDAR: Calendar is displayed
- OUTSIDE AIR TEMPERATURE
- DRIVE COMP
- SETTINGS
- MAINTENANCE



OUTSIDE AIR TEMPERATURE

Outside air temperature is displayed ON when ignition switch ON after 2.5 seconds.

- When the outside air temperature is lower than -30°C or higher than 56°C the display shows. only "– – –" though it is operating. This is not a malfunction.
- When the outside air temperature drops below freezing point (Approx. 3°C), it display as following. (Low temperature warning)

– Outside air temperature is 3°C⋯"3°C" is flushed.
– Outside air temperature is -2°C⋯"°C" is flushed.
– Outside air temperature is more than 4°C low temperature warning is canceled.

Drive computer should read outside air temperature sensor.
The outside air temperature sensor is regulated by a variable resistor signal supplied

- to drive computer terminal 3
- from outside air temperature sensor terminal 1
- through outside air temperature sensor terminal 2 and
- through drive computer terminal 2.

DRIVE COMPUTER

1. Select “DRIVE COMP”.
2. Drive computer has following function.
   - Fuel economy
   - Trip computer
   - Global reset

   Indication can be changed by in the following order by pushing “▼” button.
   Fuel economy→ Trip computer→ Global reset→ Fuel economy

Display items		Display contents
Fuel Economy	Average fuel economy (l/100km)	Displays fuel economy with ignition switch ON, average fuel economy each 30 minutes.
	Instantaneous fuel economy (l/100km)	Displays fuel economy each approx. 100 ms.
	History (l/100 km)	Displays average fuel consumption history.
Trip Computer	Range	Displays range to empty with a range of 0 to 2000km.
	Trip distance (km)	Displays driving distance with a range of 0 to 9999.
	Trip time	Displays driving time with a range of 0 to 99 hour 59 minutes.
	Average speed (km/h)	Displays average speed with a range of 0 to 260 km/h (160 MPH).
Global Reset	Drive computer functions are all reset	

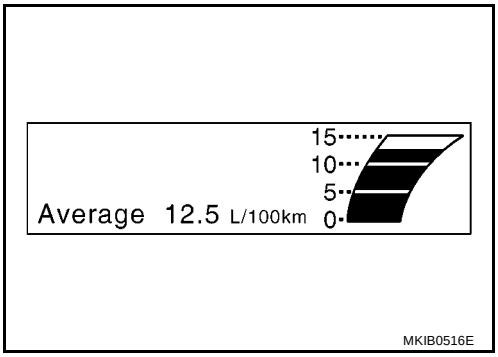
Fuel Economy

1. Select “Fuel Economy”.
2. Fuel Economy has average fuel economy, instantaneous fuel economy and history functions.

Indication can be changed by following order by pushing “▼” button.
Average fuel economy → Instantaneous fuel economy → History

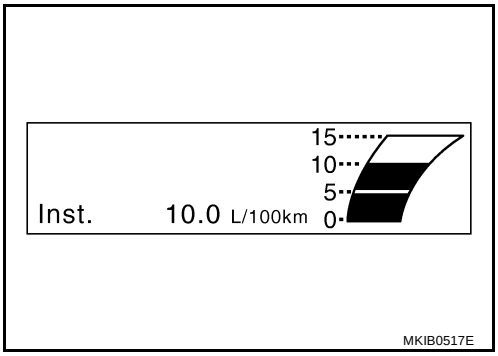
Average fuel economy

- The average fuel economy is conducted by combination meter and sent to drive computer as CAN communication line. Combination meter calculate the average fuel economy by fuel consumption signal and vehicle speed signal.
- Indication will be renewed every 30 seconds.
- When pushing “OK” switch more than approx.1 second, average fuel economy will be reset.
- After reset operation, the display shows “– –.–” until the vehicle is driven 500 m (1,600 ft) or 30 seconds has passed.
- Fuel economy with a range is 0 to 99.9 (ℓ/100 km).



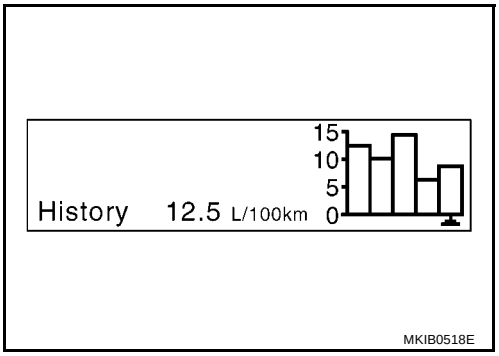
Instantaneous fuel economy

- The instantaneous fuel economy is conducted by combination meter and sent to drive computer as CAN communication line. Combination meter calculate the instantaneous fuel economy by fuel consumption signal and vehicle speed signal.
- Indication will be renewed every 2 seconds (number) and 100ms (bar graph)
- After reset operation, the display shows “– –.–” until the vehicle speed is below than 20 km/h (**MPH).
- Displays fuel economy with a range is 0 to 99.9 (ℓ/100 km).



History

- History displays previous 4 average fuel economy values and current average fuel economy value.
- With average fuel economy displayed, press “OK” switch more than 1 seconds then average fuel economy resets and added to history record. Current history data is same as average fuel economy data.



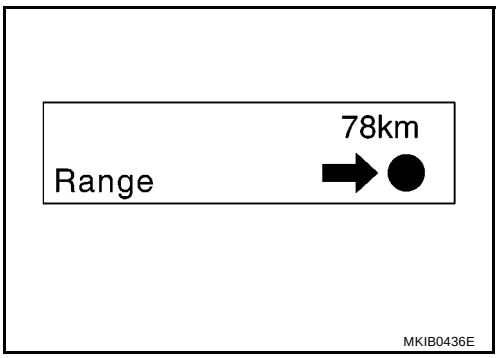
Trip Computer

1. Select “Trip Computer”.
2. .Trip computer has following functions.
   - Range
   - Trip distance
   - Trip time
   - Average speed

Indication can be changed by following order by pushing “▼” button.
Range → Trip distance → Trip time → Average speed → Range.

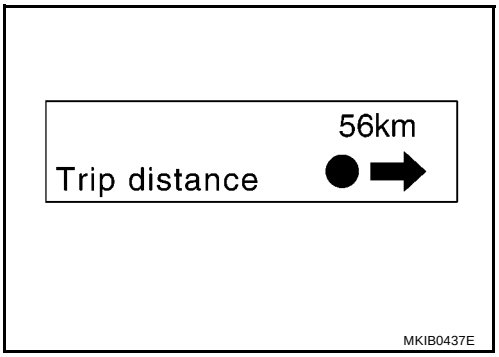
Range

- The elapsed time indication provides driver with an estimation of the distance that can be driven before refuelling.The range is conducted by fuel tank level sensor unit (fuel remaining), ECM pulse signal (fuel consumption) and vehicle speed signal.
- Indication will be renewed every 30 seconds.
- The range is conducted by combination meter and sent to drive computer as CAN communication line. Combination meter calculate the range by fuel level sensor unit (fuel remaining), ECM pulse signal (fuel consumption signal) and vehicle speed signal.
- When combination meter low fuel warning lamp is ON, if drive computer detects low fuel warning lamp signal from combination meter via CAN communication line. Display will be changed range automatically and flashing as following.
  Range reached < 16km
  Range display (number, symbol and unit) will be flashing “– –.–”.
  Range changed > 34km
  Number will be displayed. Flashing or not flashing is depending on combination meter (low fuel warning lamp) condition.



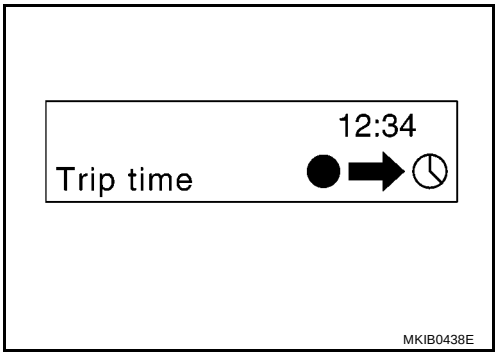
Trip distance

- Trip distance indication is conducted by vehicle speed signal via CAN communication line.
- When pushing “OK” switch more than approximately 1 second, trip distance will be reset.



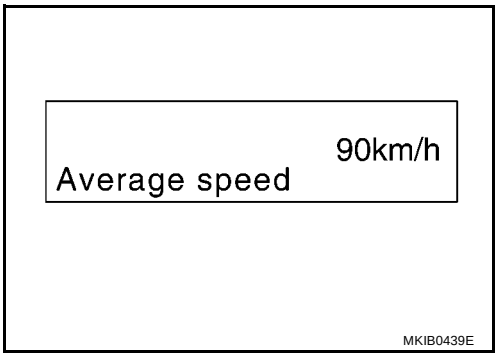
Trip time

- Trip time is calculated by drive computer as elapsed time since last reset.
- It only increases with ignition switch ON.
- When pushing “OK” switch more than approximately 1 second, trip time distance will be reset.



Average vehicle speed

- Average vehicle speed indication is conducted by trip distance and trip time.
- Indication will be renewed every 30 seconds.
- When pushing “OK” switch more than approximately 1 second, average speed will be reset.
- If average vehicle speed is reset, average fuel consumption will be reset at the same time.
- After reset operation, the displays shows “– –.–” for 30 seconds.



SETTING

1. Select “SETTING”.
2. SETTING has following functions.
   - TIME/DATE
   - LANGUAGE
   - ANNIVERSARY

   Indication can be changed by in the following order by pushing “▼” button.
   TIME/DATE→ LANGUAGE→ ANNIVERSARY→ TIME/DATE

Time/Date

This function is used to set clock and calendar.

Timer

- Default time is 12:00 AM
- This function is used to change hour, minutes or 12/24 hour.

Calendar

- Default date is “01.01.2003”
- This function is used to change day, month or year.

Language

The display text can be changed to the following languages:

- ENGLISH (mile)
- ENGLISH (km)
- FRENCH
- GERMAN
- DUTCH
- SPANISH
- ITALIAN
- DANISH
- SWEDISH

NOTE:
Disconnect the battery cable erase memories Time/Date.

MAINTENANCE

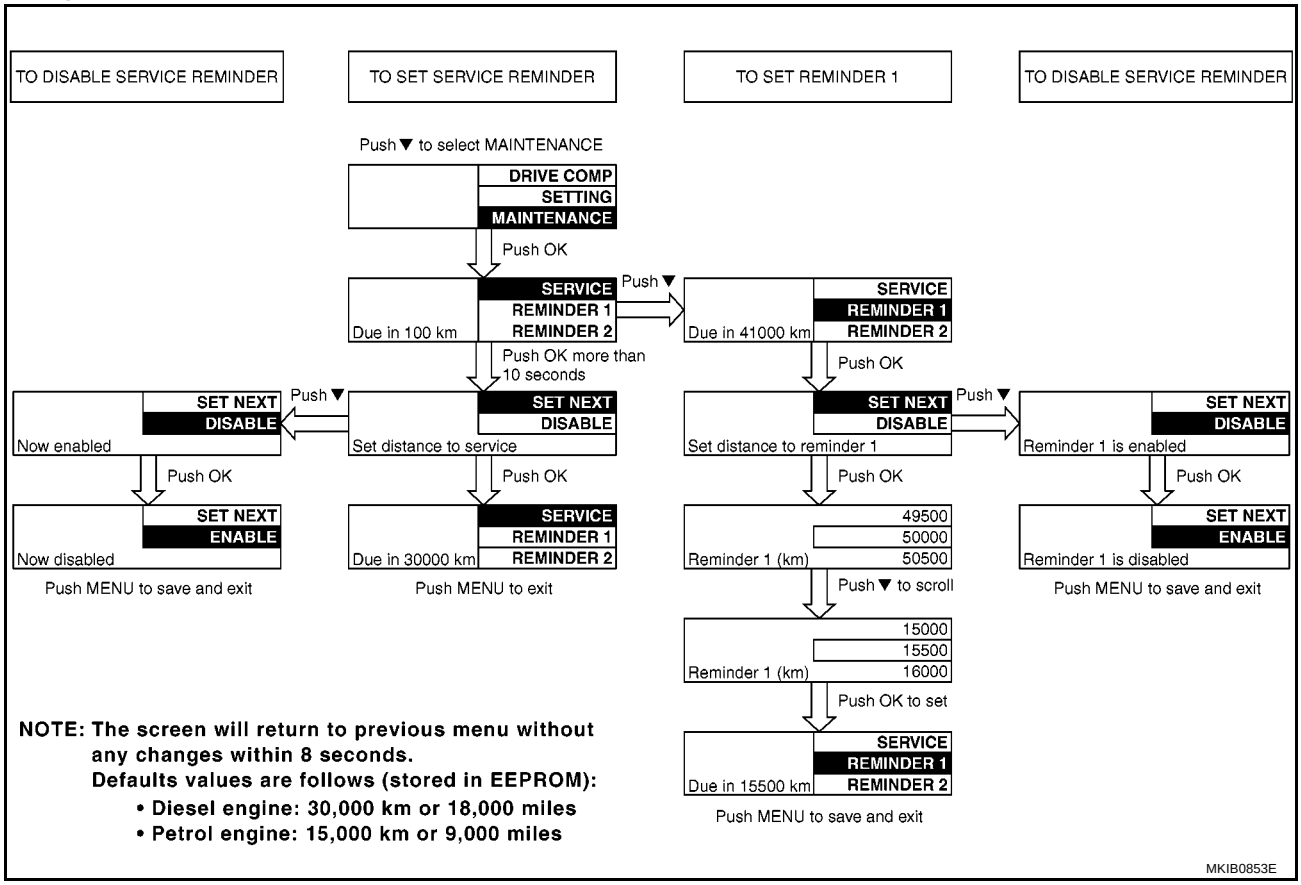
1. Select “MAINTENANCE”.
2. MAINTENANCE has following functions.
   - SERVICE
   - REMINDER1
   - REMINDER2

   Indication can be changed in the following order by pushing “▼” button.
   SERVICE→ REMINDER1→ REMINDER2 →SERVICE

Service, Reminder1/2 Function

- When maintenance information is displayed, pressing any button return to at last ignition OFF screen.
- Maintenance reminder counts will not reset if battery disconnected.
- Maintenance reminder count down is disabled for 500 km (300 miles) after first battery on.
- To set a maintenance information for service or any reminder (tire change, drive belts change, air cleaner filter change, etc.)
- “SERVICE” information should provide a information to the driver at the accumulated distance, or 12 months whichever comes first.
- The service information screen should appear 8 seconds at every ignition switch ON after 12 months (petrol engine), 24 months (diesel engine) or 1,500 km (1,000 miles) before the scheduled service is due. Whichever comes first.
- The 12 months, 24 months timer should start after the accumulated distance 300 km (200 miles).
- Reminder 1 or reminder 2 are controlled by only distance.

Setting



WARNING INDICATIONS

When combination meter receives warning signal from some control units or sensors, then combination meter warning lamp is illuminated.
Then combination meter sends warning signal to drive computer warning indications on the screen.

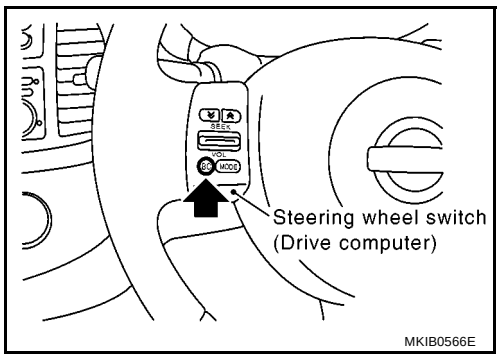
Control items	Active massage	Warning indicators	Warning detection and cancel conditions		Cases of malfunction
ENGINE	Contact a NISSAN dealer	ENGINE CHECK WARNING	Detection condition	Warning lamp ON signal is detected while engine is running.	ECM malfunction
			Cancel condition	Warning lamp OFF signal is detected.	
Engine oil pressure	STOP and contact a NISSAN dealer	ENGINE OIL WARNING	Detection condition	Warning lamp ON signal is detected for at least approx. 5 seconds while engine is running.	Engine oil pressure decreases.
			Cancel condition	Warning lamp OFF signal is detected.	
Front right door	Check door	DOOR OPEN	Detection condition	Vehicle is running [approx. 5 km/h (3 MPH) or faster] and door ajar of any of the doors is detected.	Door is open
Front left door					
Rear right door			Cancel condition	Vehicle is stopped and all the doors lock	
Rear left door					
Back door	Check tail gate	TAIL GATE OPEN	Detection condition	Vehicle is running [approx. 5 km/h (3 MPH) or faster] and door ajar of any of the doors is detected.	Back door is open
			Cancel condition	Vehicle is stopped and all the doors lock	
ANY DOORS (More than two doors)	Check doors	DOORS OPEN	Detection condition	Vehicle is running [approx. 5 km/h (3 MPH) or faster] and door ajar of any of the doors is detected.	Any door is open
			Cancel condition	Vehicle is stopped and all the doors lock	
Air bag	Contact a NISSAN dealer	AIR BAG WARNING	Detection condition	Warning lamp ON signal is detected for at least approx. 10 seconds after ignition switch is turned ON.	SRS air bag system malfunction
			Cancel condition	Warning lamp OFF signal is detected.	
Over heat	STOP and contact a NISSAN dealer	ENGINE TEMPERATURE WARNING	Detection condition	Engine coolant temperature as being approx. 105°C (246°F) min.	Engine cooling system malfunction
			Cancel condition	Engine coolant temperature as being approx. 105°C (221°F) max.	
Charge	Contact a NISSAN dealer	CHARGE WARNING	Detection condition	Warning lamp ON signal is detected while engine is running. Charging system malfunction	Charging system malfunction
			Cancel condition	Warning lamp OFF signal is detected.	
Fuel level	Refuel when possible	LOW FUEL WARNING	Detection condition	After warning lamp ON signal is detected, vehicle is driven for over specified distance.	Low fuel level
			Cancel condition	Warning lamp OFF signal is detected.	
ABS	Contact a NISSAN dealer	ABS WARNING	Detection condition	Warning lamp ON signal is detected when engine is running.	ABS control system malfunction
			Cancel condition	Warning lamp OFF signal is detected.	

Control items	Active massage	Warning indicators	Warning detection and cancel conditions		Cases of malfunction
EPS	Contact a NISSAN dealer	POWER STEERING WARNING	Detection condition	Warning lamp ON signal is detected after ignition switch is turned ON.	EPS system malfunction
			Cancel condition	Warning lamp OFF signal is detected.	

HOW TO CHANGE FOR STEERING SWITCH

- Indication can be changed in the following order by pushing steering switch.

Range → Trip Distance → Trip Time → Average Vehicle Speed → Average Fuel Economy → Instantaneous Fuel Economy → Range



CAN Communication

EKS00K39

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00K3A

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

Self-Diagnosis Function

EKS0082R

DESCRIPTION

Self-diagnosis items are as follows.

- Screen of all segments check
- Software version of drive computer is displayed. (This information is not used for service, skip this step.)
- EEPROM code of drive computer is displayed. (This information is not used for service, skip this step)

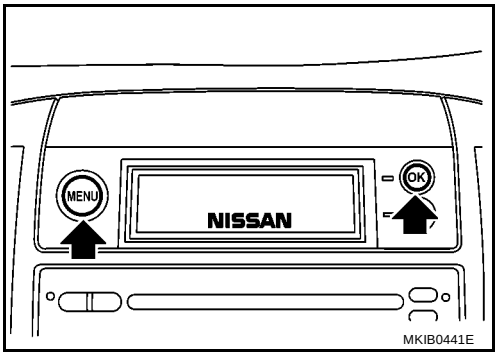
Performing Self-Diagnosis Mode

EKS0082S

OPERATION PROCEDURES

1. Turn ignition switch ACC.
2. Press “OK” button 3 times with holding “MENU” button.

NOTE:
If any button is not pressed for 20 seconds at each step or if the ignition switch is turned OFF, the self-diagnosis mode is exited.

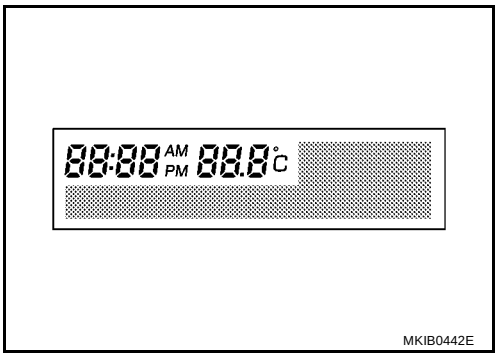


MKIB0441E

SELF-DIAGNOSIS RESULT ITEM

Display of all segments indicate

This mode is checking the display of all segments.
If any of the segment is not displayed, replace the drive computer.



MKIB0442E

Power Supply and Ground Circuit Check

EKS0082T

1. CHECK FUSE

Check that the following fuses in drive computer are blown.

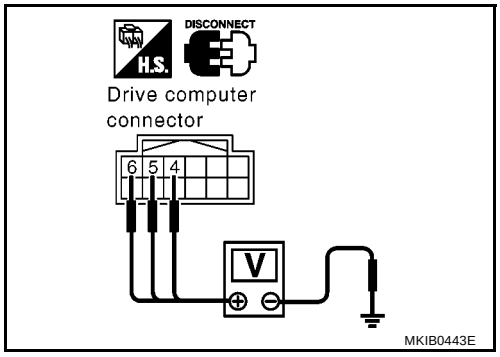
Unit	Power source	Fuse No.
Drive computer	Power source (BAT)	8
	Ignition switch (IGN)	4
	Ignition switch (ACC)	12

OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Disconnect display connector.
2. Check voltage between drive computer and ground.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M28	4 (W)	Ground	0V	0V	Battery voltage
	5 (L)	Ground	0V	Battery voltage	Battery voltage
	6 (R)	Ground	Battery voltage	Battery voltage	Battery voltage

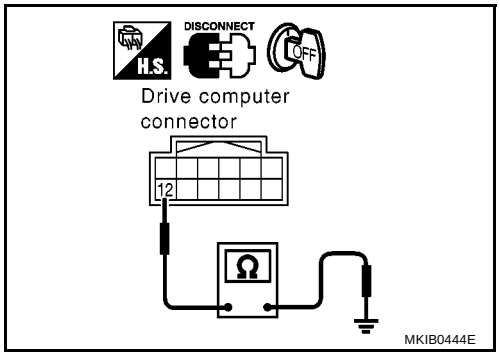
OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between drive computer and fuse.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between drive computer harness connector M28 terminal 12 (B) and ground.

12 (B) - Ground : Continuity should exist.



OK or NG

OK >> INSPECTION END
NG >> Harness for open ground circuit.

Outside Air Temperature is not Displayed

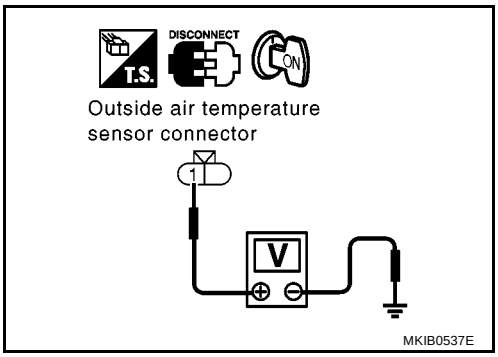
EKS008IG

SMA for VIN >SJN**AK12U1309269

1. CHECK OUTSIDE AIR TEMPERATURE SENSOR IN PUT SIGNAL

1. Disconnect outside air temperature sensor connector.
2. Turn ignition switch ON.
3. Check voltage between outside air temperature sensor harness connector E52 terminal 1 (LG) and ground.

1 (LG) – Ground : Approx. 5V



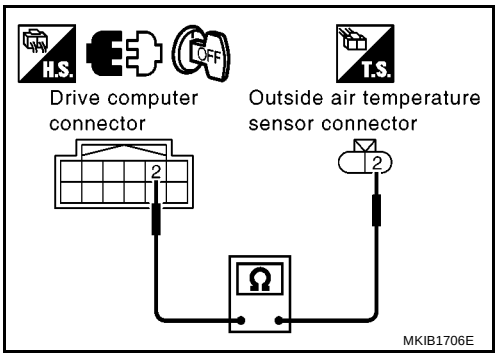
OK or NG

OK >> GO TO 2.
NG >> GO TO 4.

2. CHECK OUTSIDE AIR TEMPERATURE SENSOR GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect drive computer harness connector.
3. Check continuity between outside air temperature sensor harness connector E52 terminal 2 (OR) and drive computer harness connector M28 terminal 2 (OR).

2 (OR) - 2 (OR) : Continuity should exist.



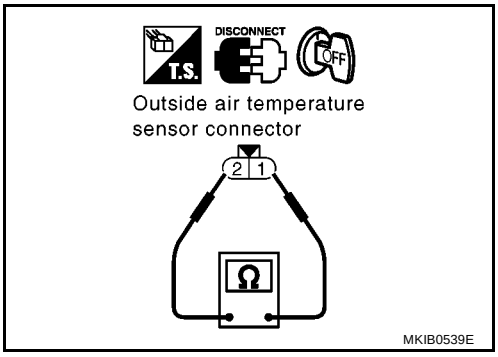
OK or NG

OK >> GO TO 3.
NG >> Repair harness or connector.

3. CHECK OUTSIDE AIR TEMPERATURE

Check outside air temperature sensor harness connector E52 terminals 1 and 2.

Temperature °C	Resistance [kΩ]
–20	16.53
–10	9.93
0	6.19
10	3.99
20	2.65
30	1.81
40	1.27
50	0.91



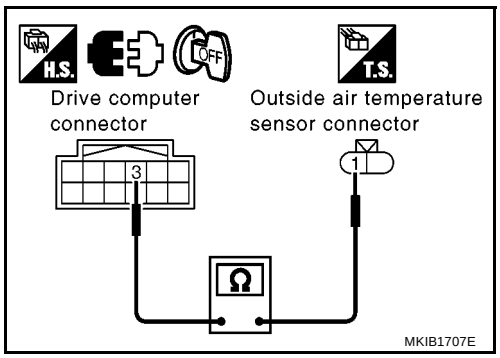
OK or NG

OK >> Replace drive computer.
NG >> Replace outside air temperature sensor.

4. CHECK OUTSIDE AIR TEMPERATUE SENSOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect drive computer connector.
3. Check continuity between outside air temperature harness connector E52 terminal 1 (LG) and drive computer harness connector M28 terminal 3 (LG).

1 (LG) - 3 (LG) : Continuity should exist.



OK or NG

OK >> Replace drive computer.
NG >> Repair harness or connector.

All of Display is not Displayed Properly

EKS0082Z

1. DISPLAY SELF-DIAGNOSIS

1. Perform self-diagnosis drive computer. Refer to DI-59, "Performing Self-Diagnosis Mode" .
2. All display segments are ON.

OK or NG

OK >> Power supply and ground circuit check. Refer to DI-60, "Power Supply and Ground Circuit Check" .
NG >> Replace drive computer.

Drive Computer of Display Items are not Displayed. (ex, “– –.– km”)

EKS00830

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery cable.
3. Check the terminals and connector of drive computer for damage, bend and loose connection (control unit-side and harness-side).

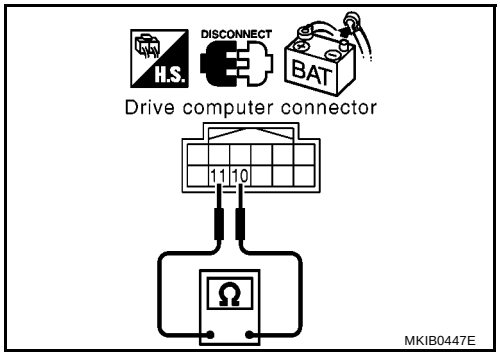
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect drive computer connector.
2. Check resistance between drive computer harness connector M28 terminals 11 (R) and 10 (W).

11 (R) – 10 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace drive computer.
NG >> Repair harness between drive computer and data link connector.

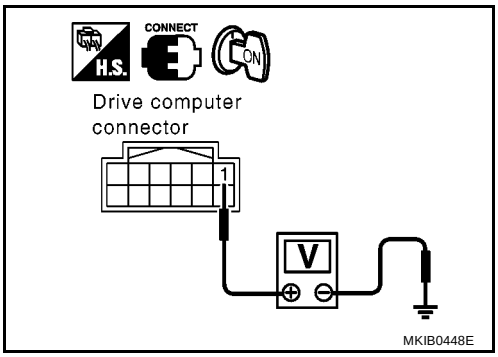
Steering Wheel Switch Does Not Operate

EKS0088R

1. CHECK DRIVE COMPUTER INPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between drive computer and ground.

Connector	Terminals (Wire color)		Condition	Voltage [V] (Approx.)
	(+)	(-)		
M28	1 (G)	Ground	Steering wheel switch is pushed.	0
			Steering wheel switch is released.	Battery voltage



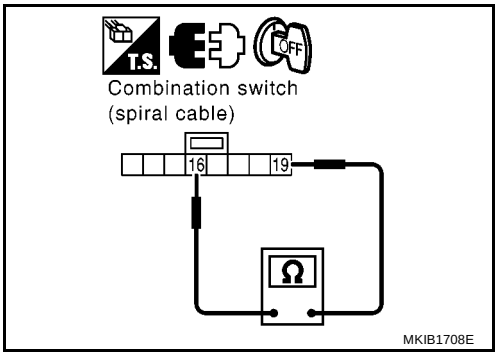
OK or NG

OK >> Replace drive computer.
NG >> GO TO 2.

2. CHECK STEERING WHEEL SWITCH

1. Turn ignition switch OFF.
2. Disconnect steering wheel switch.
3. Check steering wheel switch (drive computer).

Connector	Terminals (Wire color)		Condition	Continuity
	(+)	(-)		
M502	16	19	Steering wheel switch is pushed.	No
			Steering wheel switch is released.	Yes



OK or NG

OK >> GO TO 3.
NG >> Replace steering wheel switch.

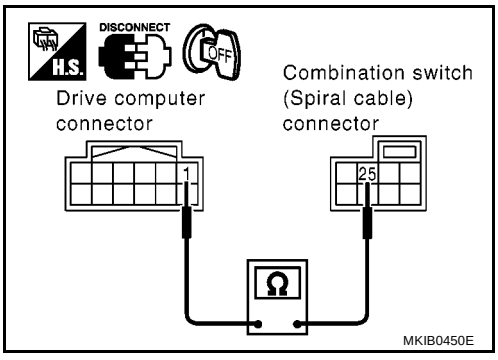
3. CHECK STEERING WHEEL SWITCH CIRCUIT

1. Disconnect drive computer connector.
2. Check continuity between drive computer harness connector M28 terminal 1(G) and combination switch (spiral cable) harness connector M29 terminal 25 (G).

1 (G) - 25 (G) : Continuity should exist.

OK or NG

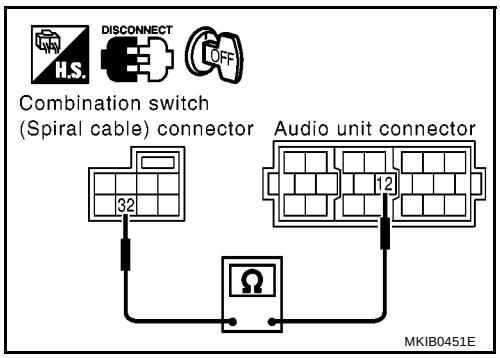
OK >> GO TO 4.
NG >> Replace harness or connector.



4. CHECK STEERING WHEEL SWITCH GROUND CIRCUIT

1. Disconnect audio unit connector.
2. Check continuity between combination switch harness connector M29 terminal 32 (L) and audio unit harness connector M26 terminal 12 (L).

32 (L) - 12 (L) : Continuity should exist.



OK or NG

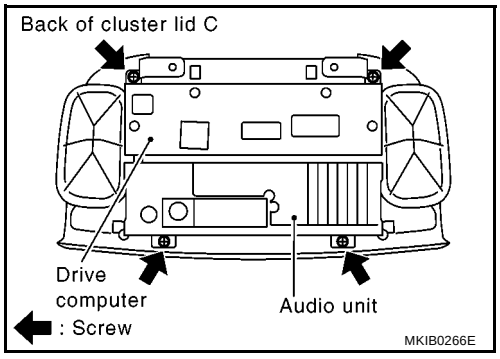
OK >> Check audio unit ground circuit. Refer to AV-11, "Power Supply Circuit Inspection" .

NG >> Repair harness or connector.

Removal and Installation of Drive Computer

EKS00832

1. Remove cluster lid C. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove screws and remove drive computer and bracket.



3. Remove screws and remove bracket.

CONSULT-II Functions

EKS00870

CONSULT-II performs the following functions with combination of data receiving, command and transmission using the CAN communication line from the IPDM E/R.

Inspection Item, Diagnosis Mode	Description
SELF-DIAG RESULTS	The IPDM E/R performs diagnosis of the CAN communication and self-diagnosis.
DATA MONITOR	The input/output data of the IPDM E/R is displayed in real time.
ACTIVE TEST	The IPDM E/R sends a drive signal to electronic components to check their operation.

Oil Pressure Warning Lamp Stays Off (Ignition Switch ON)

EKS00833

1. CHECK IPDM SELF-DIAGNOSIS

1. Perform IPDM E/R self-diagnosis. Refer to PG-33, "CONSULT-II Function (IPDM E/R)" .

self-diagnostic results content

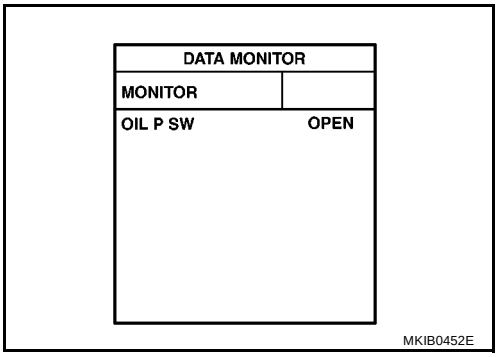
NON DTC IS DETECTED >>GO TO 2.
CAN COMMUNICATION CIRCUIT >>Check IPDM. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" .

2. CHECK IPDM E/R DATA MONITOR

With CONSULT-II

Check oil pressure switch (“OIL PSW”) in “DATA MONITOR” mode with CONSULT-II.

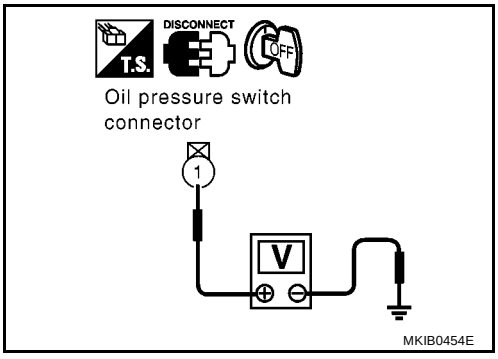
Engine is stopped (IGN ON) : OIL P SW CLOSE
Engine is running : OIL P SW OPEN



Without CONSULT-II

1. Disconnect oil pressure switch.
2. Turn the ignition switch ON.
3. Check voltage between oil pressure switch harness connector F25 terminal 1 (W) and ground.

1 (W) - Ground : Battery voltage should exist.



OK or NG

OK >> Replace combination meter.
NG >> GO TO 3.

3. CHECK OIL PRESSURE SWITCH

1. Check oil pressure switch. Refer to DI-80, "OIL PRESSURE SWITCH CHECK" .

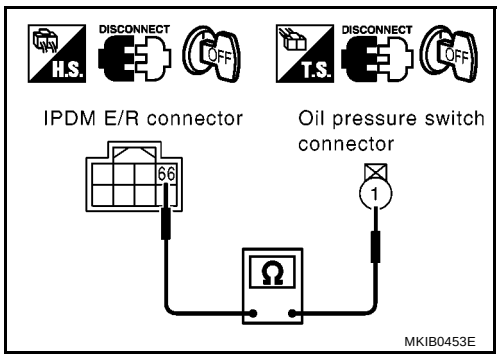
OK or NG

OK >> GO TO 4.
NG >> Replace the oil pressure switch.

4. CHECK OIL PRESSURE SWITCH CIRCUIT

1. Disconnect IPDM E/R connector and oil pressure switch connector.
2. Check continuity between IPDM E/R harness connector E17 terminal 66 (W) and oil pressure switch harness connector F25 terminal 1 (W).

66 (W) - 1 (W) : Continuity should exist.



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

Oil Pressure Warning Lamp Does Not Turn Off (Oil Pressure Is Normal)

EKS00834

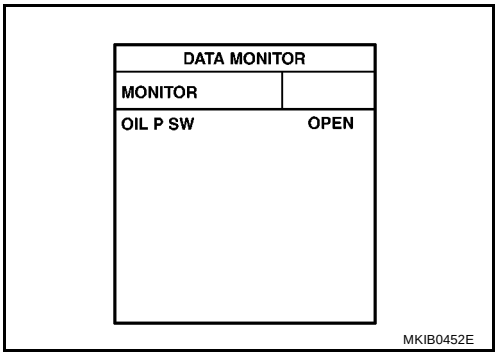
NOTE:
For oil pressure inspection, refer to LU-4, "OIL PRESSURE CHECK" (CR engine models) or LU-12, "OIL PRESSURE CHECK" (K9K engine models).

1. CHECK OIL PRESSURE SWITCH INPUT

With CONSULT-II

Check oil pressure switch ("OIL PSW") in "DATA MONITOR" mode with CONSULT-II.

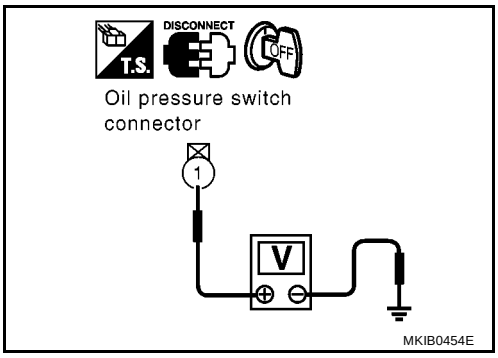
Engine is stopped (IGN ON) : OIL P SW CLOSE
Engine is running : OIL P SW OPEN



Without CONSULT-II

1. Disconnect oil pressure switch.
2. Turn the ignition switch ON.
3. Check voltage between oil pressure switch harness connector F25 terminal 1 (W) and ground.

1 (W) - Ground : Battery voltage should exist.



OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK OIL PRESSURE SWITCH

1. Check oil pressure switch. Refer to DI-80, "OIL PRESSURE SWITCH CHECK" .

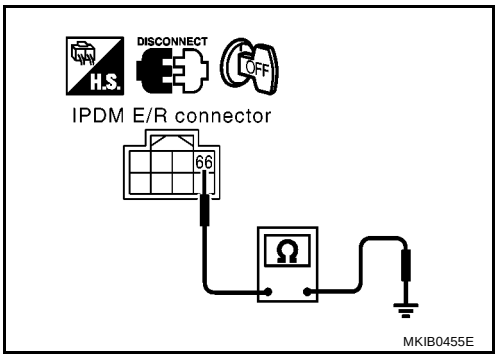
OK or NG

OK >> Replace combination meter.
NG >> Replace the oil pressure switch.

3. CHECK OIL PRESSURE SWITCH CIRCUIT

1. Disconnect IPDM E/R connector turn ignition switch OFF.
2. Check continuity between IPDM E/R harness connector E17 terminal 66 (W) and ground.

66 (W) - Ground : Continuity should not exist.



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

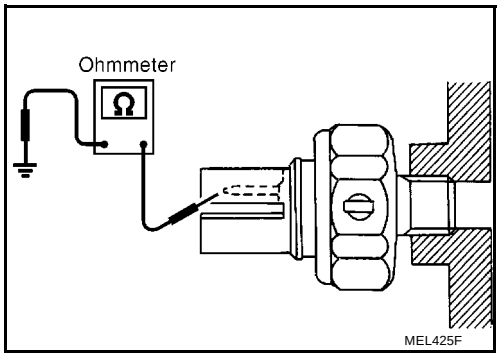
Electrical Components Inspection

EKS0072J

OIL PRESSURE SWITCH CHECK

	Oil pressure kPa (bar, kg/cm^2 , psi)	Continuity
Engine running	More than 10 - 20 (0.10 - 0.20, 0.1 - 0.2, 1 - 3)	No
Engine not running	Less than 10 - 20 (0.10 - 0.20, 0.1 - 0.2, 1 - 3)	Yes

Check the continuity between the terminals of oil pressure switch and body ground.



WARNING CHIME

PFP:24814

System Description

EKS0072L

The warning chime is controlled by the BCM.
The warning chime is located in the combination meter.

POWER SUPPLY AND GROUND CIRCUIT

Power is supplied at all times

- through 40A fusible link (letter **J** , located in fuse and fusible link box)
- to BCM terminals 74 and 79
- through 10A fuse [No. 8, located in fuse block (J/B)]
- to combination meter terminal 27
- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to key switch terminal 1 (without Intelligent Key system)
- through 10A fuse [No. 17, located in the fuse block (J/B)]
- to key switch and ignition knob terminals 1 and 3 (with Intelligent Key system).

With ignition switch in ON or START position, power is supplied

- through 10A fuse [No. 4, located in the fuse block (J/B)]
- to BCM terminal 24.
- through 10 A fuse [No. 2, located in the fuse block (J/B)]
- to combination meter terminals 28

Ground is supplied

- to BCM terminals 2 and 70, and
- to combination meter terminals 21, 22 and 23,
- through body grounds, M19 and M20.

IGNITION KEY WARNING CHIME

With the key in the ignition key cylinder, the ignition switch in OFF or ACC position, and the driver's door open, the warning chime will sound. Power is supplied

- through key switch terminal 2 (without Intelligent Key system) or
- through key switch and ignition knob terminal 2 (with Intelligent Key system)
- to BCM terminal 3.

Ground is supplied

- from front door switch LH (LHD models) or RH (RHD models) terminal 1
- to BCM terminal 29.

Ground is supplied through the case of the front door switch LH (LHD models) or RH (RHD models).
BCM sends buzzer output signal to combination meter via CAN communication line.
When combination meter receives buzzer output signal, it sounds warning chime.

IGNITION SWITCH OFF WARNING CHIME (WITH INTELLIGENT KEY SYSTEM)

When ignition knob switch is pushed (ignition switch is OFF position), and the driver's door open, the earning chime will sound. Power is supplied

- through key switch and ignition knob terminal 4
- to Intelligent Key unit terminal 7.

Ground is supplied

- from front door switch LH (LHD models) or RH (RHD models) terminal 1
- to BCM terminal 29.

Ground is supplied through the case of the front door switch LH (LHD models) or RH (RHD models).
BCM sends door switch signal (driver side) to Intelligent Key unit via CAN communication line.
Then, Intelligent Key unit sends buzzer output signal to combination meter via CAN communication line.
When combination meter receives buzzer output signal, it sounds warning chime.

LIGHT WARNING CHIME

With ignition switch OFF position, driver's door open, and lighting switch in 1ST or 2ND position, warning chime will sound. [Except when headlamp battery saver control operates (for 5 minutes after ignition switch is turned to OFF or ACC position) and headlamps do not illuminate.]
Signal is supplied

- from combination switch (lighting switch) terminals 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10
- to BCM terminals 7, 8, 9, 13, 14, 15, 27, 28, 33 and 34

NOTE:
BCM detection lighting switch in 1st or 2nd position, refer to LT-189, "COMBINATION SWITCH READING FUNCTION" .
Ground is supplied

- from front door switch LH (LHD models) or RH (RHD models) terminal 1
- to BCM terminal 29.

Ground is supplied through the case of the front door switch LH (LHD models) or RH (RHD models).
BCM sends buzzer output signal to combination meter via CAN communication line. when combination meter receives buzzer output signal, it sounds warning chime.

CAN Communication

EKS00K3B

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00K3C

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door																			
Axle	2WD																			
Engine	CR10DE/CR12DE/CR14DE								CR12DE/CR14DE								K9K

CONSULT-II Inspection Procedure

EKS0072O

CONSULT-II executes the following functions by combining data reception and command transmission via the communication line from BCM. And data monitor, Active test and self-diagnostic display.

DIAGNOSTIC ITEMS DESCRIPTION

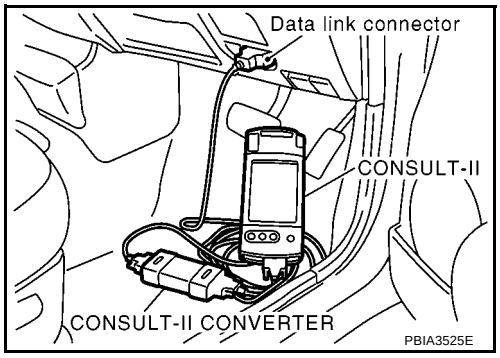
BCM diagnosis position	Diagnosis mode	Description
BUZZER	Data monitor	The input data to the BCM is displayed in real time.
	Active test	Operation of electrical loads can be checked by sending driving signal to them.
BCM	Self-diagnosis	BCM performs self-diagnosis of CAN communication.

CONSULT-II BASIC OPERATION

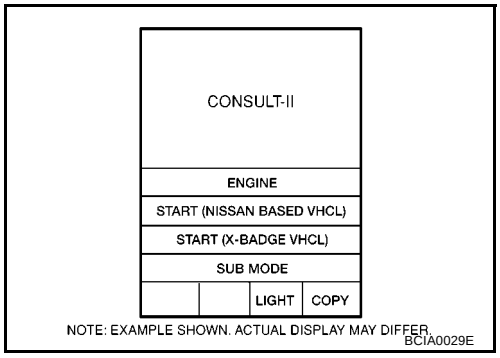
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

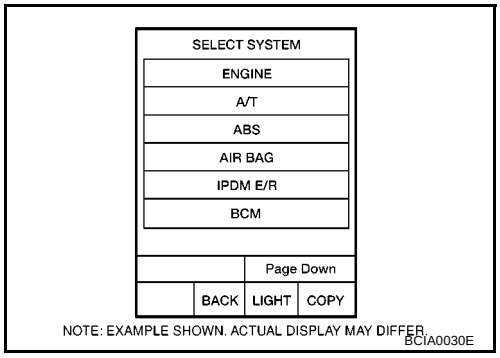
1. Turn ignition switch “OFF”.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to the data link connector.



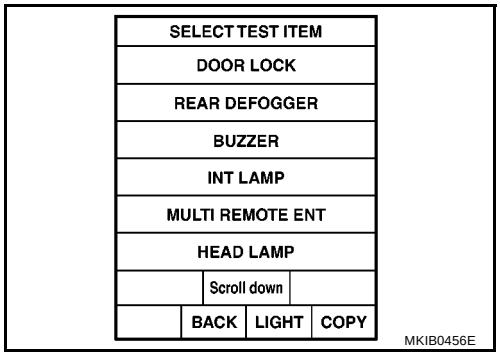
3. Turn ignition switch “ON”.
4. Touch “START” (NISSAN BASED VHCL).



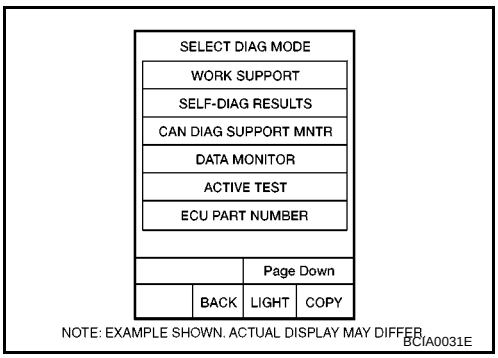
5. Touch “BCM” on “SELECT SYSTEM” screen. If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “BUZZER” on “SELECT TEST ITEM”.



7. Touch “DATA MONITOR” or “ACTIVE TEST” on “SETECT DIAG MODE” screen.



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER.
BCIA0031E

CONSULT- II Application Items

EKS008WL

DATA MONITOR

Monitored item	Description
IGN ON SW	Indicates [ON/OFF] condition of ignition switch.
PUSH SW (*1)	Indicates [ON/OFF] condition of ignition knob switch.
KEY IN SW (*2)	Indicates [ON/OFF] condition of key switch.
DOOR SW-DR	Indicates [ON/OFF] condition of front door switch (driver side).
DOOR SW-AS	Indicates [ON/OFF] condition of front door switch (passenger side).
DOOR SW-RR	Indicates [ON/OFF] condition of rear door switch RH.
DOOR SW-RL	Indicates [ON/OFF] condition of rear door switch LH.
BACKDOOR SW	Indicates [ON/OFF] condition of back door switch.
CDL LOCK SW	Indicates [ON/OFF] condition of door lock/unlock switch.
CDL UNLOCK SW	Indicates [ON/OFF] condition of door lock/unlock switch.
LIGHTING SW	Indicates [ON/OFF] condition of lighting switch.
TRANK OPNR SW	Indicates [ON/OFF] condition of back door release actuator.

*1: displayed for models with Intelligent Key System.
*2: displayed for models without Intelligent Key System.

ACTIVE TEST

Test item	Description
LIGHT WARN ALM	This test is check light warning chime operation. Light warning chime sounds for 2 seconds after touching “ON” on CONSULT-II screen.
KEY REMINDER WARN	This test is check key warning chime operation. Key warning chime sounds for 2 seconds after touching “ON” on CONSULT-II screen.
BACK DR OPEN WARN	This test is check back door open warning chime operation. Back door open warning chime sounds for 2 seconds after touching “ON” on CONSULT-II screen.
DOOR WARNIG IND	This test is check door warning chime operation. Door warning chime sounds for 2 seconds after touching “ON” on CONSULT-II screen.

Symptom Chart

EKS0072P

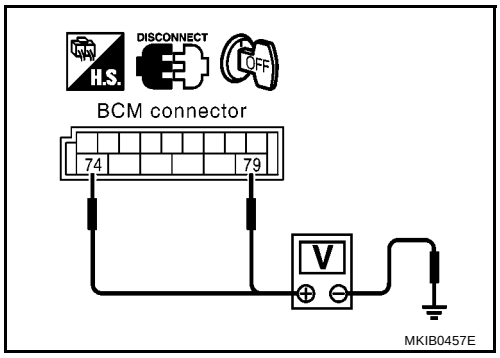
Symptom	Diagnoses/Service procedure	Reference page
Light warning chime does not activate.	● Power supply and ground circuit check	DI-104
	● Lighting switch check	DI-105
	● Front door switch (driver side) check	DI-111
	● Ignition ON signal check	DI-110
Key warning chime does not activate.	● Power supply and ground circuit check	DI-104
	● Key switch signal check/with Intelligent Key system	DI-107
	● Key switch signal check/without Intelligent Key system	DI-105
	● Front door switch (driver side) check	DI-111
	● Ignition ON signal check	DI-110
Ignition switch OFF warning chime does not activate./With Intelligent Key system	● Power supply and ground circuit check	DI-104
	● Ignition knob switch signal check	DI-108
	● Front door switch (driver side) check	DI-111
	● Ignition ON signal check	DI-110
All warning chimes do not activate.	● Power supply and ground circuit check	DI-104
	● BCM self-diagnosis check	BCS-22

Power Supply and Ground Circuit Check

EKS0072Q

1. CHECK POWER SUPPLY CIRCUIT

1. Disconnect smart entrance control unit connector.
2. Check the following.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
	79 (Y)	Ground	Battery voltage	Battery voltage	Battery voltage

OK or NG

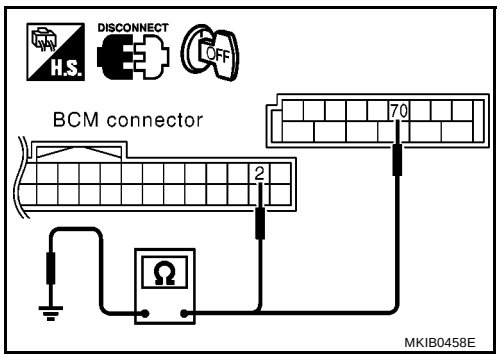
OK >> GO TO 2.
NG >> Check the following.

- 40A fusible link [letter **J** , located in fuse and fusible link box.]
- Harness for open or short between BCM and fuse

2. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector M48 terminal 2 (B), M50 terminal 70 (B) and ground.

2 (B) - Ground : Continuity should exist.
70 (B) - Ground : Continuity should exist.



OK or NG

OK >> INSPECTION END
NG >> Repair ground harness.

Lighting Switch Input Signal Check

EKS0072R

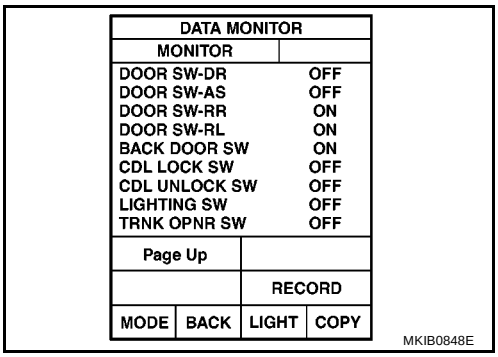
1. CHECK LIGHTING SWITCH INPUT SIGNAL

With CONSULT-II

Check lighting switch (“LIGHTING SW”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 1st or 2nd position : LIGHTING SW ON

When lighting switch is in OFF position : LIGHTING SW OFF



OK or NG

OK >> GO TO 2.

NG >> Check combination switch. Refer to LT-196, "Check Combination Switch" .

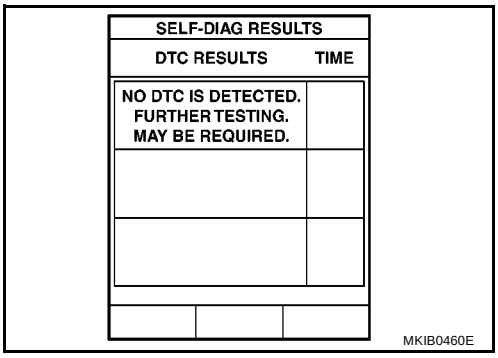
2. CHECK BCM SELF-DAIAGNOSIS

Perform BCM self-diagnosis. Refer to BCS-22, "CONSULT-II Function (BCM)" in BCS section.

Self-diagnosis result contents

NO DTC DETECTED>>Replace BCM.

CAN communication circuit>>Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .



Key Switch Signal Check/Without Intelligent Key System

EKS0072S

1. CHECK KEY SWITCH INPUT SIGNAL

With CONSULT-II

Check key switch (“KEY IN SW”) in “DATA MONITOR” mode with CONSULT-II.

When key is inserted to ignition key cylinder : KEY IN SW ON

When key is withdrawn from ignition key cylinder : KEY IN SW OFF

Without CONSULT-II

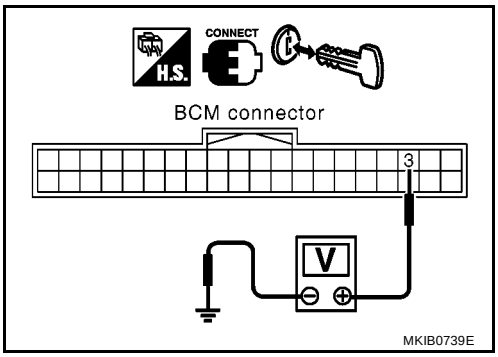
Check voltage between BCM and ground.

Connector	Terminal (Wire color)		Condition	Voltage [V]
	(+)	(-)		
M48	3 (OR)	Ground	Key is inserted	Battery voltage
			key is withdrawn	Approx. 0

OK or NG

OK >> Key switch is OK.

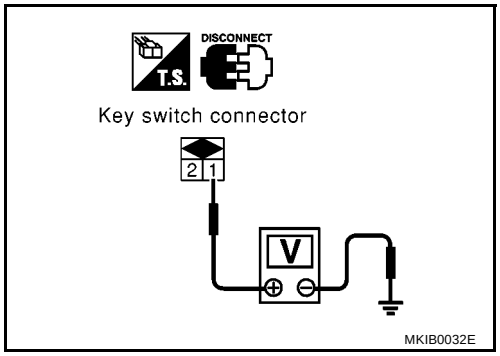
NG >> GO TO 2.



2. CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Disconnect key switch harness connector.
2. Check voltage between key switch harness connector M33 terminal 1 (Y) and ground.

1 (Y) – Ground : Battery voltage should exist.



OK or NG

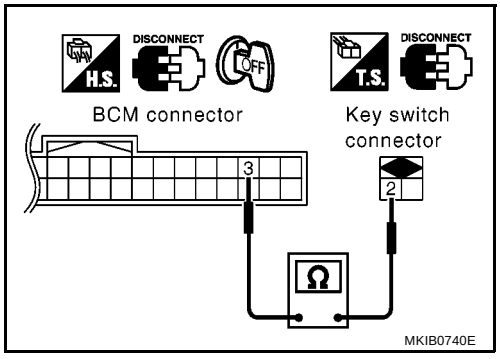
OK >> GO TO 3.
NG >> Check the following.

- 10A fuse [No. 6, located in fuse block (J/B)]
- Harness for open or short between key switch and fuse

3. CHECK KEY SWITCH INPUT SIGNAL CIRCUIT

Check harness continuity between key switch harness connector M33 terminal 2 (OR) and BCM harness connector M48 terminal 3 (OR).

2 (OR) – 3 (OR) : Continuity should exist.



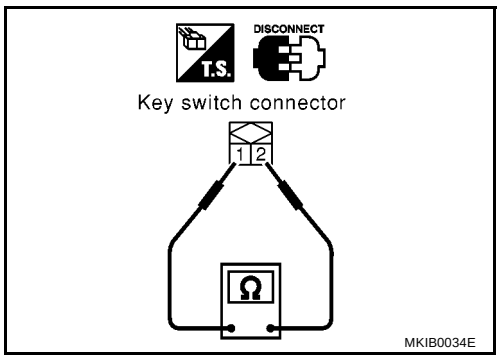
OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

4. CHECK KEY SWITCH

Check continuity between key switch harness connector M33 terminals 1 and 2.

Terminals			Condition	Continuity
(+)		(–)		
Connector	Terminal	Terminal		
M33	1	2	Key is inserted.	Yes
			key is withdrawn.	No



OK or NG

OK >> Key switch is OK.
NG >> Replace key switch.

Key Switch Signal Check/With Intelligent Key System

EKS008IH

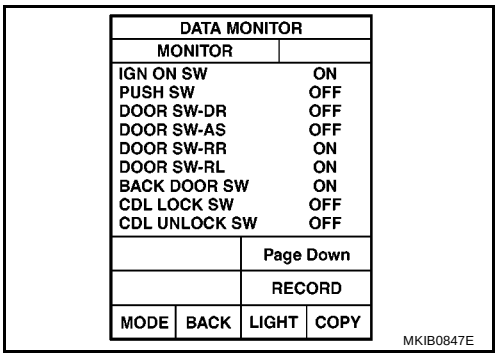
1. CHECK KEY SWITCH INPUT SIGNAL

With CONSULT-II

Check ignition knob switch (“PUSH SW”) in “DATA MONITOR” mode with CONSULT-II.

When ignition knob is pushed : PUSH SW ON

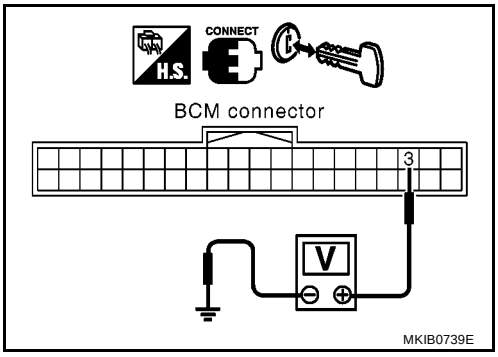
When ignition knob is released : PUSH SW OFF



Without CONSULT-II

Check voltage between BCM and ground.

Connector	Terminal (wire color)		Condition	Voltage [V]
	(+)	(-)		
M48	3 (P)	Ground	Key is inserted.	Battery voltage
			key is with-drawn.	Approx. 0



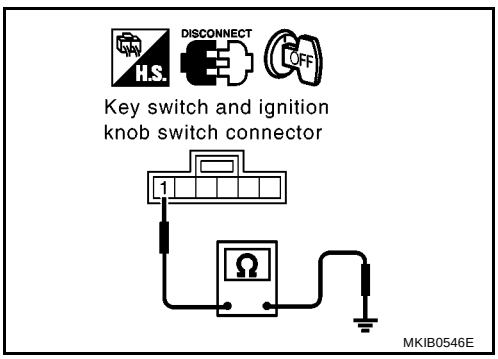
OK or NG

OK >> Key switch and ignition knob switch is OK.
NG >> GO TO 2.

2. CHECK KEY SWITCH POWER SUPPLY CIRCUIT

1. Disconnect key switch and ignition knob switch harness connector.
2. Check voltage between key switch and ignition knob switch harness connector M34 terminal 1 (W) and ground.

1 (W) – Ground : Battery voltage should exist.



OK or NG

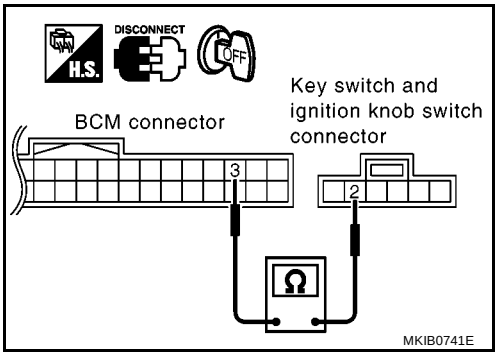
OK >> GO TO 3.
NG >> Check the following.

- 10A fuse [No. 6 located in fuse block (J/B)]
- Harness for open or short between key switch and ignition knob switch and fuse

3. CHECK KEY SWITCH INPUT SIGNAL CIRCUIT

Check harness continuity between key switch and ignition knob switch harness connector M34 terminal 2 (P) and BCM harness connector M48 terminal 3 (P).

2 (P) – 3 (P) : Continuity should exist.



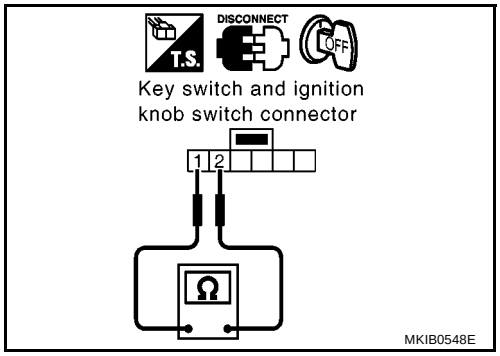
OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

4. CHECK KEY SWITCH AND IGNITION KNOB SWITCH

Check continuity between key switch and ignition knob switch harness connector M34 terminals 1 and 2.

Terminals			Condition	Continuity
(+)		(–)		
Connector	Terminal	Terminal		
M34	1	2	Key is inserted.	Yes
			key is withdrawn.	No



OK or NG

OK >> Key switch and ignition knob switch is OK.
NG >> Replace key switch and ignition knob switch.

Ignition Knob Switch Signal Check

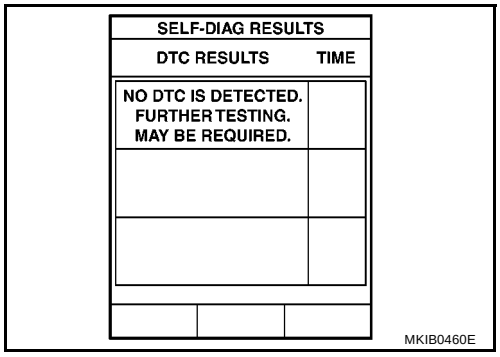
EKS008II

1. PERFORM INTELLIGENT KEY UNIT SELF-DAIAGNOSIS

Perform Intelligent Key unit self-diagnosis, Refer to BL-185, "CONSULT-II Function (INTELLIGENT KEY)" .

Self-diagnosis result contents

NO DTC DETECTED>>GO TO 2.
CAN communication circuit>>Refer to BL-191, "Check CAN Communication System" .



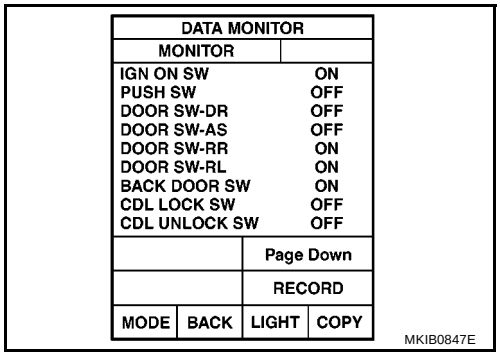
2. CHECK KEY SWITCH INPUT SIGNAL

With CONSULT-II

Check ignition knob switch (“PUSH SW”) in “DATA MONITOR” mode with CONSULT-II.

When ignition knob switch is pushed : PUSH SW ON

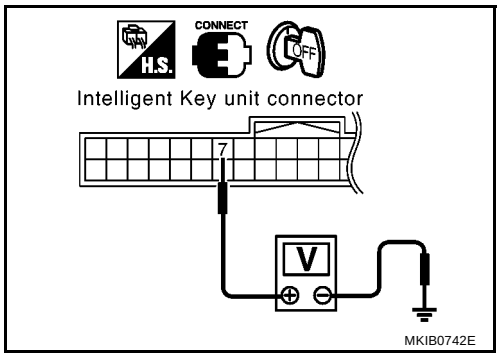
When ignition knob switch is leaved : PUSH SW OFF



Without CONSULT-II

Check voltage between Intelligent Key unit and ground.

Connector	Terminal (Wire color)		Condition	Voltage [V]
	(+)	(-)		
M51	7 (GY)	Ground	Ignition knob switch is pushed.	Battery voltage
			Ignition knob switch is leaved.	Approx. 0



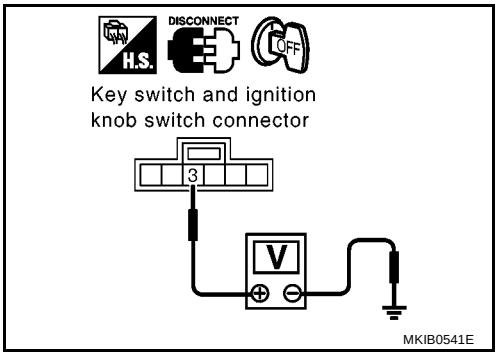
OK or NG

OK >> Key switch and ignition knob switch is OK.
NG >> GO TO 3.

3. CHECK IGNITION KNOB SWITCH POWER SUPPLY CIRCUIT

1. Disconnect key switch and ignition knob switch harness connector.
2. Check voltage between key switch and ignition knob switch harness connector M34 terminal 3 (BR) and ground.

3 (BR) – Ground : Battery voltage should exist.



OK or NG

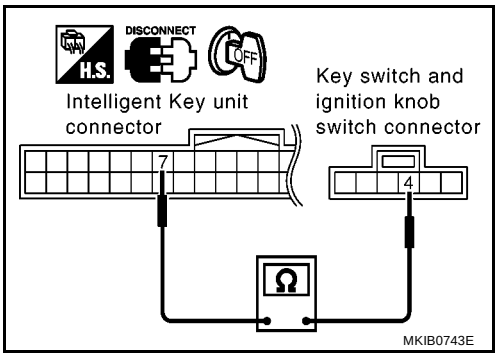
OK >> GO TO 4.
NG >> Check the following.

- 10A fuse [No. 17, located in fuse block (J/B)]
- Harness for open or short between key switch and ignition knob switch and fuse

4. CHECK KEY SWITCH AND IGNITION KNOB SWITCH INPUT SIGNAL CIRCUIT

Check harness continuity between key switch and ignition knob switch harness connector M34 terminal 4 (GY) and Intelligent Key unit harness connector M51 terminal 7 (GY).

4 (GY) – 7 (GY) : Continuity should exist.



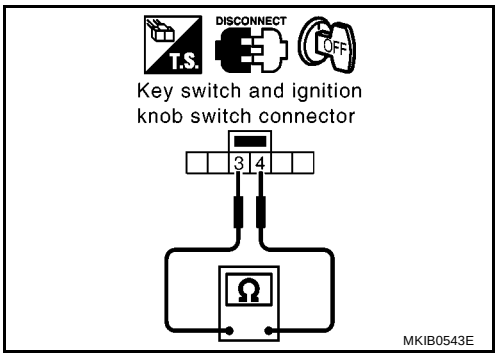
OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness.

5. CHECK KEY SWITCH AND IGNITION KNOB SWITCH

Check continuity between key switch and ignition knob switch harness connector M34 terminals 3 and 4.

Terminals			Condition	Continuity
(+)		(–)		
Connector	Terminal	Terminal		
M34	3	4	Ignition knob switch is pushed.	Yes
			Ignition knob switch is leaved.	No



OK or NG

OK >> Key switch and ignition knob switch is OK.
NG >> Replace key switch and ignition knob switch.

Ignition ON Signal Check

EKS0087C

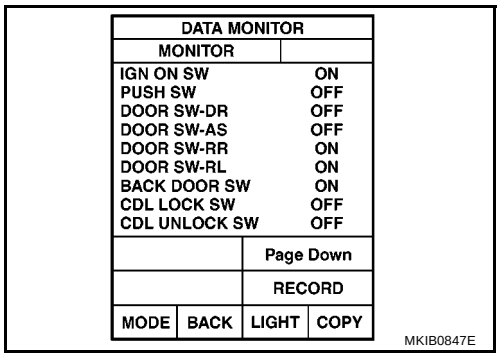
1. CHECK IGNITION ON SIGNAL

With CONSULT-II

Check ignition switch “ON” signal (“IGN ON SW”) in “DATA MONITOR” mode with CONSULT-II.

When ignition switch is ON : IGN ON SW ON

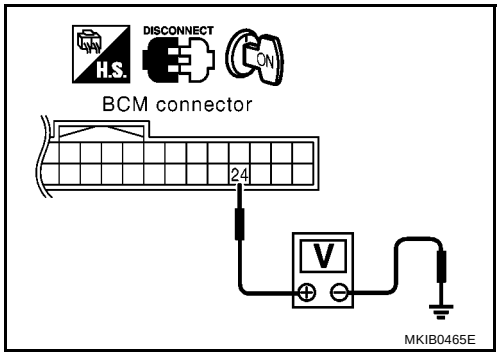
When ignition switch is OFF : IGN ON SW OFF



Without CONSULT-II

Check voltage between BCM harness connector M48 terminal 24 (OR) and ground.

Terminal		Ignition switch position		
(+)	(-)	OFF	ACC	ON
24	Ground	0V	0V	Battery voltage



OK or NG

OK >> INSPECTION END

NG >> Check the following.

- 10A fuse [No. 4, located in fuse block (J/B)].
- Harness for open or short between BCM and fuse.

Front Door Switch (Driver side) Check

EKS0072T

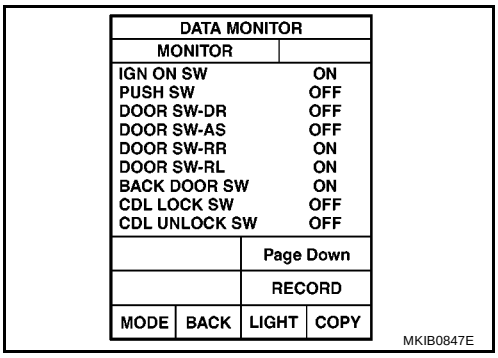
1. CHECK FRONT DOOR SWITCH (DRIVER SIDE) INPUT SIGNAL

With CONSULT-II

Check front door switch (“DOOR SW-DR”) in “DATA MONITOR” mode with CONSULT-II.

When driver's door is open : DOOR SW-DR ON

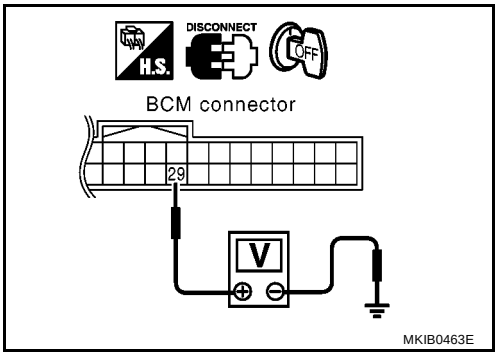
When driver's door is closed : DOOR SW-DR OFF



Without CONSULT-II

Check voltage between BCM harness and ground.

Connector	Terminal (wire color)		Condition (Driver's door)	Voltage [V]
	(+)	(–)		
M48	29 (L)	Ground	Door is opened.	0
			Door is closed.	Battery voltage



OK or NG

OK >> INSPECTION END

NG >> GO TO 2.

2. CHECK DOOR SWITCH OPEN OR SHORT CIRCUIT

1. Disconnect BCM connector and front door switch (driver side) connector.
2. Check the following.

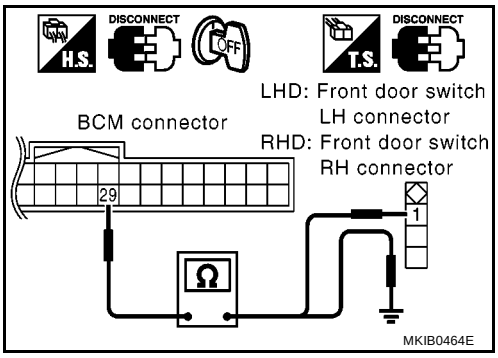
– Harness continuity between BCM harness connector M48 terminal 29 (L) and front door switch (driver side) connector B22 (LHD models) terminal 1 (LG) or B16 (RHD models) terminal 1 (L).

29 (L) - 1 (*) : Continuity should exist.

*** LG: LHD models**
L: RHD models

– Harness continuity between BCM harness connector M48 terminal 29 (L) and ground.

29 (L) - Ground : Continuity should not exist.



OK or NG

OK >> Check front door switch (driver side) ground condition.

NG >> Repair harness or connector.

INDEX FOR DTC

PFP:00024

Alphabetical Index

EBS00O2P

Check if the vehicle is a model with Euro-OBD (E-OBD) system or not by the “Type approval number” on the identification plate. Refer to GI-44, "IDENTIFICATION INFORMATION" .

NOTE:
If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-130, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by ISO 15031-5.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: When engine is running.
*5: The troubleshooting for this DTC needs CONSULT-II.

DTC No. Index

EBS00O2Q

NOTE:
If DTC U1000 or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-130, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by ISO 15031-5.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: When engine is running.
*5: The troubleshooting for this DTC needs CONSULT-II.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EBS00OS5

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EBS011US

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

On Board Diagnostic (OBD) System of Engine and A/T

EBS00O2S

The ECM has an on board diagnostic system. It will light up the malfunction indicator (MI) to warn the driver of a malfunction causing emission deterioration.

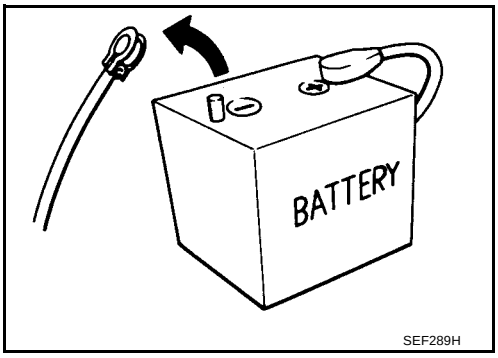
CAUTION:

- **Be sure to turn the ignition switch OFF and disconnect the battery ground cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MI to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MI to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG-99, "HARNESS CONNECTOR" .**
- **Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MI to light up due to the short circuit.**
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MI to light up due to the malfunction of the fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM and TCM (Transmission control module) before returning the vehicle to the customer.**

Precaution

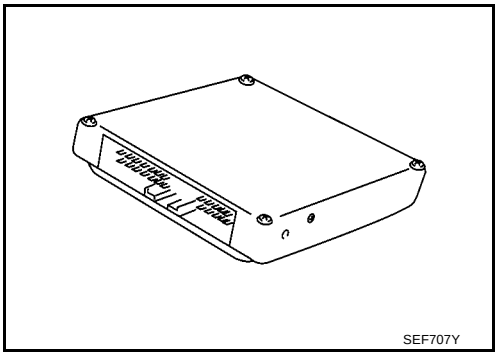
EBS00O2T

- **Always use a 12 volt battery as power source.**
- **Do not attempt to disconnect battery cables while engine is running.**
- **Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect battery ground cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned off.**
- **Before removing parts, turn ignition switch OFF and then disconnect battery ground cable.**



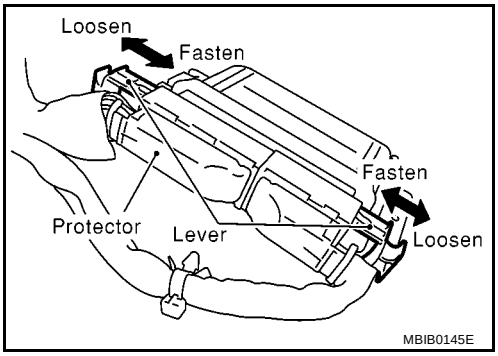
SEF289H

- **Do not disassemble ECM.**
- **If battery cable is disconnected, the memory will return to the initial ECM values.**
  The ECM will now start to self-control at its initial values. Engine operation can vary slightly when the cable is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.



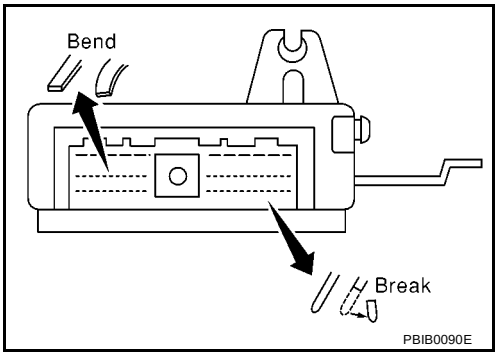
SEF707Y

- **When connecting ECM harness connector, fasten it securely with levers as far as they will go as shown in the figure.**



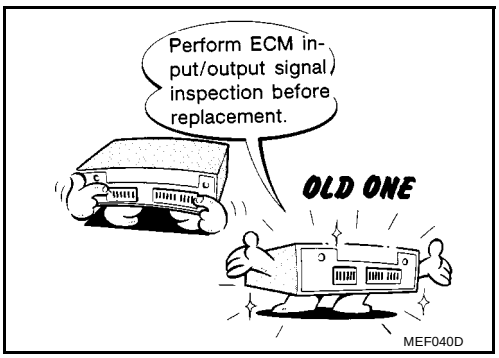
MBIB0145E

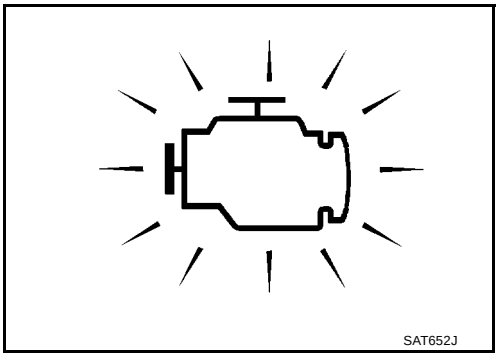
- **When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).**
  Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.
- **Securely connect ECM harness connectors.**
  A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- **Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.**
- **Keep engine control system parts and harness dry.**



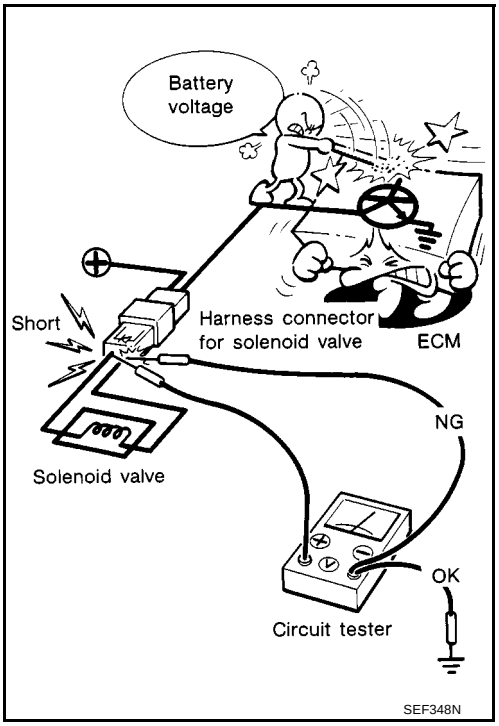
PBIB0090E

- **Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to EC-94, "ECM Terminals and Reference Value" .**
- **Handle manifold absolute pressure sensor carefully to avoid damage.**
- **Do not clean air clear element with any type of detergent.**
- **Do not disassemble electric throttle control actuator.**
- **Even a slight leak in the air intake system can cause serious incidents.**
- **Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).**
- **After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Overall Function Check.**
  The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Overall Function Check should be a good result if the repair is completed.

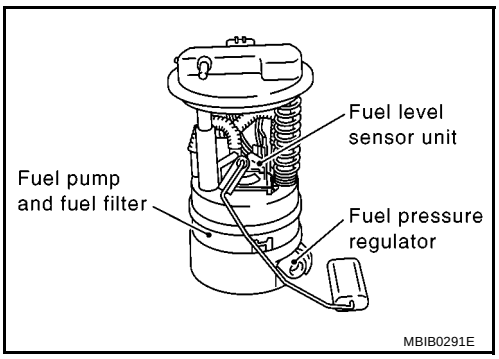




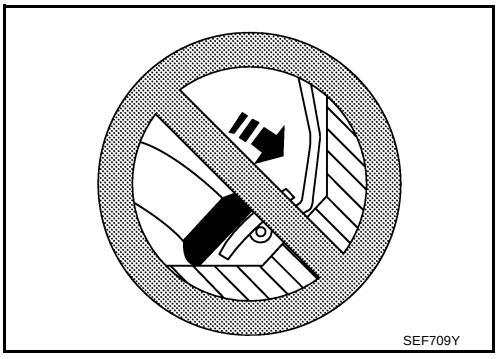
- **When measuring ECM signals with a circuit tester, connect a break-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.**
- **When measuring ECM signals with a circuit tester, never allow the two tester probes to contact.**
  Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- **Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**



- **Do not operate fuel pump when there is no fuel in lines.**
- **Tighten fuel hose clamps to the specified torque.**

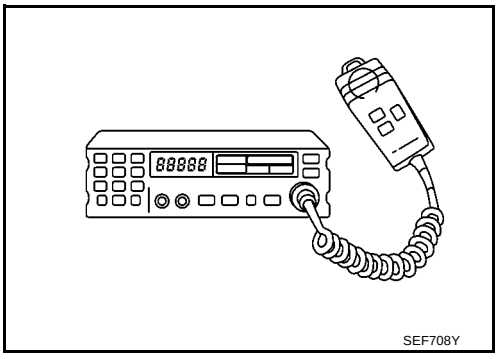


- **Do not depress accelerator pedal when starting.**
- **Immediately after starting, do not rev up engine unnecessarily.**
- **Do not rev up engine just prior to shutdown.**



SEF709Y

- **When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.**
  - **Keep the antenna as far as possible from the electronic control units.**
  - **Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls.**
    Do not let them run parallel for a long distance.
  - **Adjust the antenna and feeder line so that the standing-wave radio can be kept smaller.**
  - **Be sure to ground the radio to vehicle body.**



SEF708Y

Wiring Diagrams and Trouble Diagnosis

EBS00O2U

When you read wiring diagrams, refer to the following:

- GI-14, "How to Read Wiring Diagrams"
- PG-4, "POWER SUPPLY ROUTING" for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- GI-11, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident"

*3: This output signal is sent from the ECM through CAN communication line.

Multiport Fuel Injection (MFI) System

EBS00O30

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*3 and piston position	Fuel injection & mixture ratio control	Fuel injectors
Manifold absolute pressure sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Heated oxygen sensor 1	Density of oxygen in exhaust gas		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Park/neutral position (PNP) switch	Gear position		
Knock sensor	Engine knocking condition		
Battery	Battery voltage*3		
Heated oxygen sensor 2*1	Density of oxygen in exhaust gas		
Vehicle speed signal*2	Vehicle speed		
Air conditioner switch*2	Air conditioner operation		

*1: This sensor is not used to control the engine system under normal conditions.
*2: This signal is sent to the ECM through CAN communication line.
*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined

by input signals (for engine speed and intake air volume) from the crankshaft position sensor, the manifold absolute pressure sensor and intake air temperature sensor.

VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

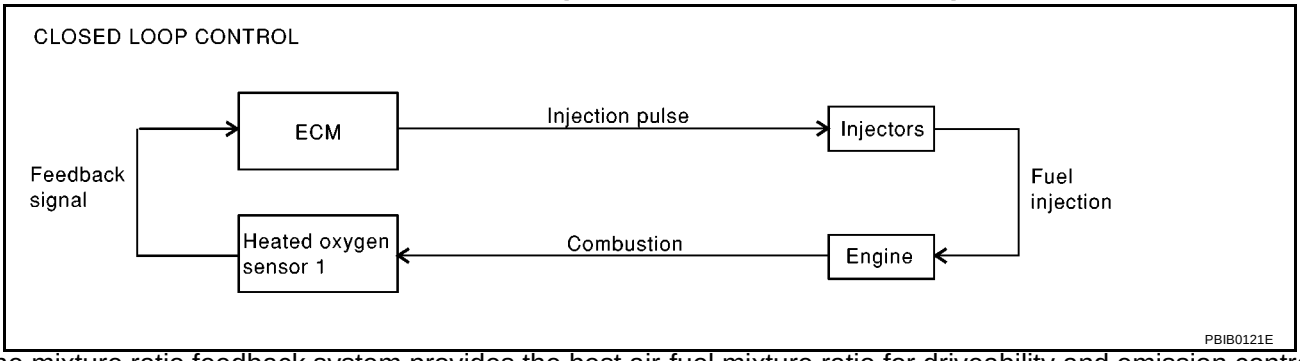
<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from N to D (A/T models)
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)



The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst (manifold) can then better reduce CO, HC and NOx emissions. This system uses heated oxygen sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about heated oxygen sensor 1, refer to EC-169 . This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).
This stage is referred to as the closed loop control condition.
Heated oxygen sensor 2 is located downstream of the three way catalyst (manifold). Even if the switching characteristics of heated oxygen sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions.
Feedback control stops in order to maintain stabilized fuel combustion.

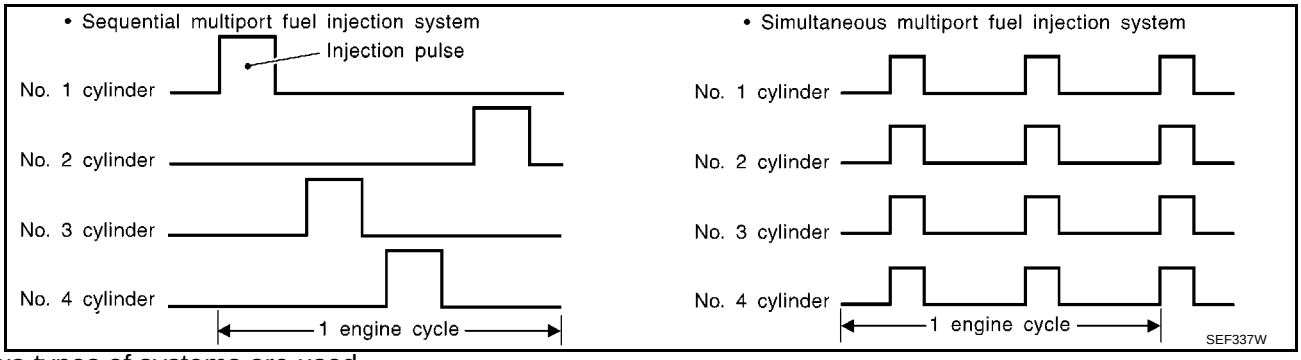
- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of heated oxygen sensor 1 or its circuit
- Insufficient activation of heated oxygen sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D (A/T models)
- When starting the engine

MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from heated oxygen sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as orig-

inally designed. Both manufacturing differences (i.e., manifold absolute pressure sensor silicon diaphragm) and characteristic changes during operation (i.e., injector clogging) directly affect mixture ratio.
Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of “injection pulse duration” to automatically compensate for the difference between the two ratios.
“Fuel trim” refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.
“Short term fuel trim” is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from heated oxygen sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.
“Long term fuel trim” is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

FUEL INJECTION TIMING



Two types of systems are used.

Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all four cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.
The four injectors will then receive the signals two times for each engine cycle.
This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration or operation of the engine at excessively high speeds.

Electronic Ignition (EI) System

EBS00O31

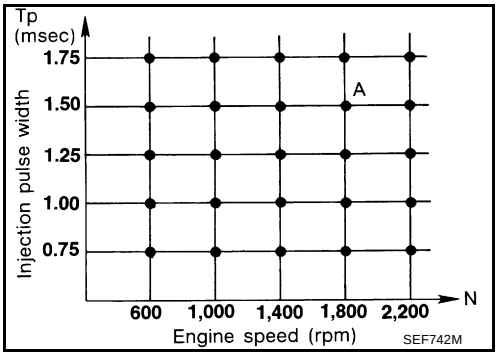
INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2 and piston position	Ignition timing control	Power transistor
manifold absolute pressure sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Knock sensor	Engine knocking		
Park/neutral position (PNP) switch	Gear position		
Battery	Battery voltage*2		
Vehicle speed signal*1	Vehicle speed		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM. This data forms the map shown.
The ECM receives information such as the injection pulse width and camshaft position sensor signal. Computing this information, ignition signals are transmitted to the power transistor.
e.g., N: 1,800 rpm, Tp: 1.50 msec
A °BTDC
During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.



- At starting
- During warm-up
- At idle
- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

Air Conditioning Cut Control

EBS00O32

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Air conditioner switch*1	Air conditioner ON signal	Air conditioner cut control	Air conditioner relay
Throttle position sensor	Throttle valve opening angle		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2		
Engine coolant temperature sensor	Engine coolant temperature		
Refrigerant pressure sensor	Refrigerant pressure		
Vehicle speed signal*1	Vehicle speed		
Battery	Battery voltage*2		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used.
Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

Fuel Cut Control (at No Load and High Engine Speed)

EBS00O33

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Park/neutral position (PNP) switch	Neutral position	Fuel cut control	Fuel injectors
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Vehicle speed signal*1	Vehicle speed		

*1: This signal is sent to the ECM through CAN communication line.

SYSTEM DESCRIPTION

If the engine speed is above 2,500 rpm with no load (for example, the shift position is neutral and engine speed is over 2,500 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed.
Fuel cut will operate until the engine speed reaches 2,000 rpm, then fuel cut is cancelled.

NOTE:
This function is different from deceleration control listed under EC-24, "Multiport Fuel Injection (MFI) System" .

CAN Communication

EBS00O34

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

BASIC SERVICE PROCEDURE

PFP:00018

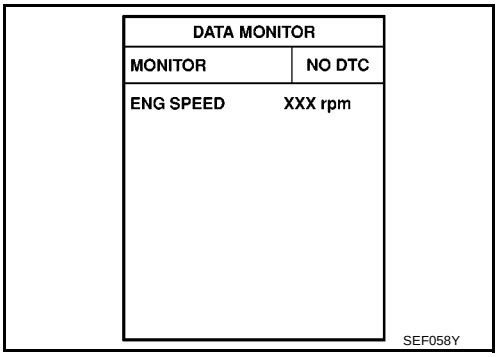
Idle Speed and Ignition Timing Check

EBS00O35

IDLE SPEED

With CONSULT-II

Check idle speed in “DATA MONITOR” mode with CONSULT-II.

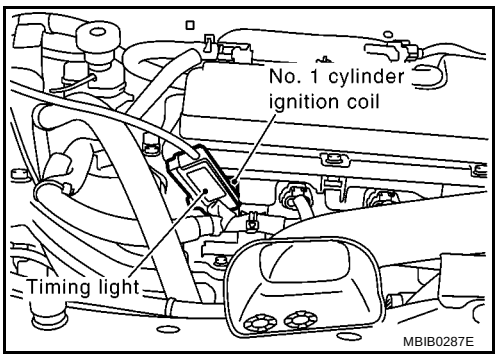


With GST

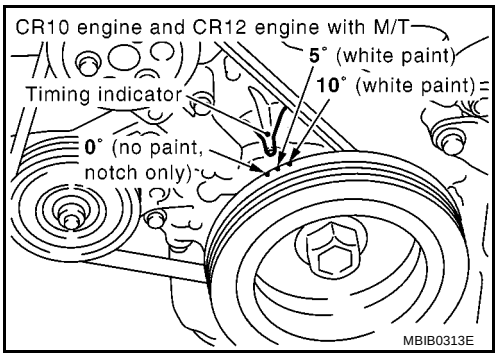
Check idle speed in “MODE 1" with GST.

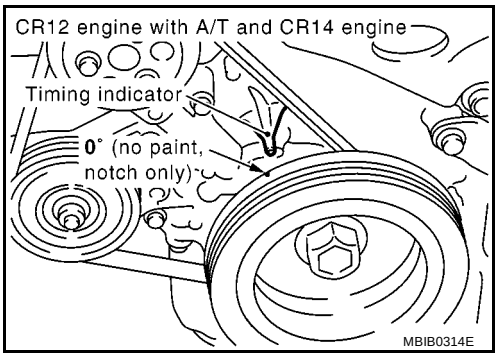
IGNITION TIMING

1. Slide the harness protector of ignition coil No.1 to clear the wires.
2. Attach timing light to the wires as shown in the figure.



3. Check ignition timing.





Accelerator Pedal Released Position Learning

EBS00O36

DESCRIPTION

Accelerator Pedal Released Position Learning is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON and wait at least 2 seconds.
3. Turn ignition switch OFF wait at least 10 seconds.
4. Turn ignition switch ON and wait at least 2 seconds.
5. Turn ignition switch OFF wait at least 10 seconds.

Throttle Valve Closed Position Learning

EBS00O37

DESCRIPTION

Throttle Valve Closed Position Learning is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
   Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

Idle Air Volume Learning

EBS00O38

DESCRIPTION

Idle Air Volume Learning is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

PREPARATION

Before performing Idle Air Volume Learning, make sure that all of the following conditions are satisfied.
Learning will be cancelled if any of the following conditions are missed for even a moment.

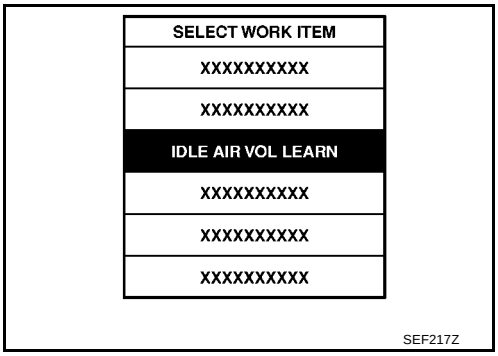
- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 95°C (158 - 203°F)
- PNP switch: ON
- Electric load switch: OFF
  (Air conditioner, headlamp, rear window defogger)
  On vehicles equipped with daytime light systems, set lighting switch to the 1st position to light only small lamps.
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up
  For A/T models with CONSULT-II, drive vehicle until “FLUID TEMP SE” in “DATA MONITOR” mode of “A/T” system indicates less than 0.9V.
  For A/T models without CONSULT-II and M/T models, drive vehicle for 10 minutes.

OPERATION PROCEDURE

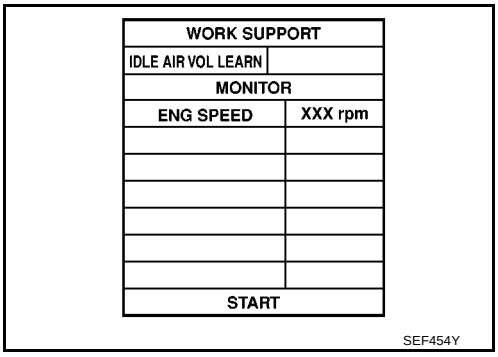
With CONSULT-II

1. Perform EC-42, "Accelerator Pedal Released Position Learning" .
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.

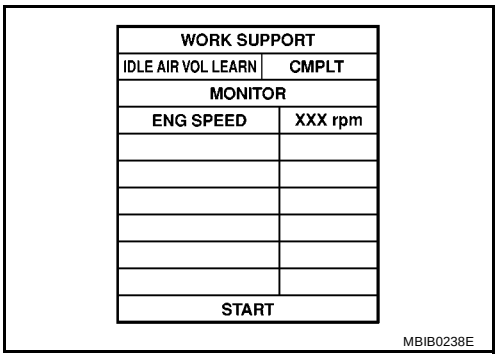
5. Select “IDLE AIR VOL LEARN” in “WORK SUPPORT” mode.



6. Touch “START” and wait 20 seconds.



7. Make sure that “CMPLT” is displayed on CONSULT-II screen. If “CMPLT” is not displayed, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the Diagnostic Procedure below.
8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.



ITEM	SPECIFICATION
Idle speed	M/T: 650±50 rpm A/T: 700±50 rpm (in P or N position)
Ignition timing	M/T: 5±2° BTDC A/T: 5±2° BTDC (in P or N position)

Without CONSULT-II

NOTE:

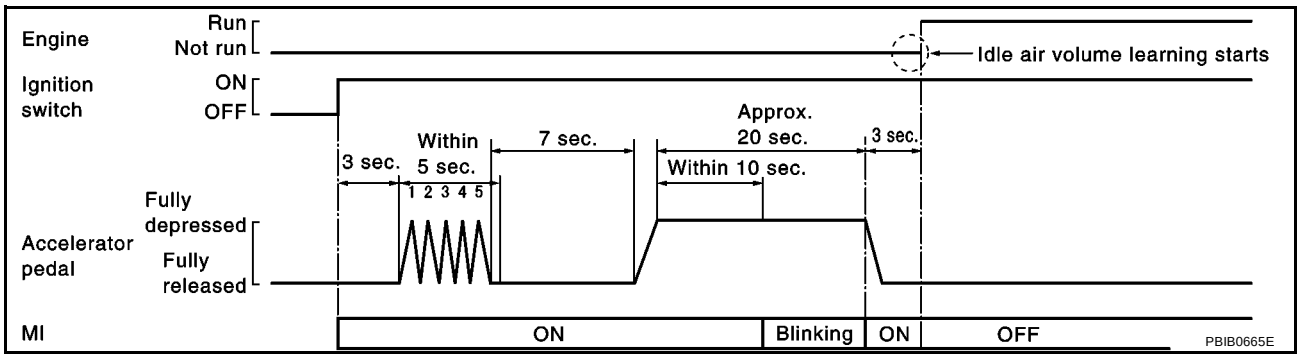
- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**

1. Perform EC-42, "Accelerator Pedal Released Position Learning" .
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
7. Repeat the following procedure quickly five times within 5 seconds.

a. Fully depress the accelerator pedal.
b. Fully release the accelerator pedal.

8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MI stops blinking and turned ON.
9. Fully release the accelerator pedal within 3 seconds after the MI turned ON.
10. Start engine and let it idle.

11. Wait 20 seconds.



12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	M/T: 650±50 rpm A/T: 700±50 rpm (in P or N position)
Ignition timing	M/T: 5±2° BTDC A/T: 5±2° BTDC (in P or N position)

13. If idle speed and ignition timing are not within the specification, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the Diagnostic Procedure below.

DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

1. **Check that throttle valve is fully closed.**
2. **Check PCV valve operation.**
3. **Check that downstream of throttle valve is free from air leakage.**
4. **When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.**
   It is useful to perform EC-119, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .
5. **If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle air volume learning all over again:**
   - **Engine stalls.**
   - **Erroneous idle.**

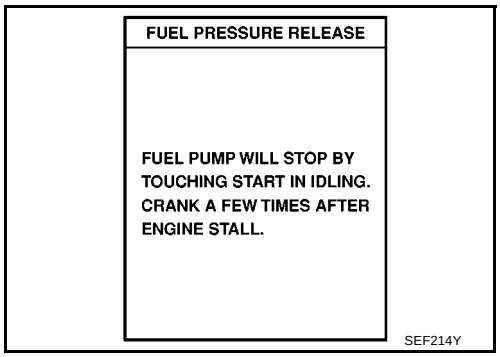
Fuel Pressure Check

EBS00O39

FUEL PRESSURE RELEASE

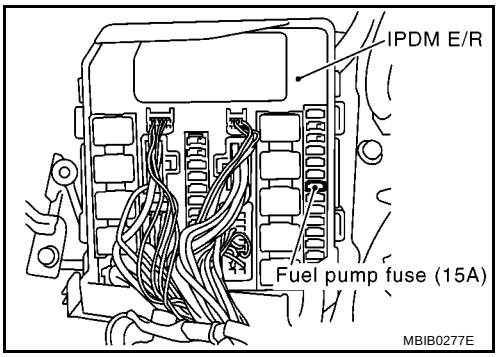
With CONSULT-II

1. Turn ignition switch ON.
2. Perform “FUEL PRESSURE RELEASE” in “WORK SUPPORT” mode with CONSULT-II.
3. Start engine.
4. After engine stalls, crank it 2 or 3 times to release all fuel pressure.
5. Turn ignition switch OFF.



Without CONSULT-II

1. Remove fuel pump fuse located in IPDM E/R.
2. Start engine.
3. After engine stalls, crank it 2 or 3 times to release all fuel pressure.
4. Turn ignition switch OFF.
5. Reinstall fuel pump fuse after servicing fuel system.



FUEL PRESSURE CHECK

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.

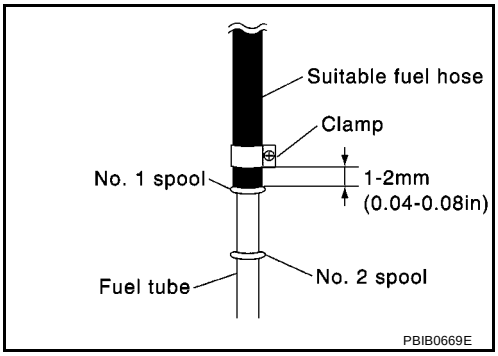
NOTE:

Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because CR engine models do not have fuel return system.

CAUTION:

- **The fuel hose connection method used when taking fuel pressure check must not be used for other purposes.**
- **Be careful not to scratch or put debris around connection area when servicing, so that the quick connector maintains sealability with O-rings inside.**
- **When installing fuel hose quick connector, refer to EM-16, "AIR CLEANER AND AIR DUCT" .**

1. Release fuel pressure to zero. Refer to EC-44, "FUEL PRESSURE RELEASE" .
2. Prepare fuel hose and fuel hose clamp for fuel pressure check, and connect fuel pressure gauge.
   - Use suitable fuel hose for fuel pressure check (genuine NISSAN fuel hose without quick connector).
   - To avoid unnecessary force or tension to hose, use moderately long fuel hose for fuel pressure check.
   - Do not use the fuel hose for checking fuel pressure with damage or cracks on it.
   - Use Pressure Gauge to check fuel pressure.
3. Remove fuel hose. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
   - Do not twist or kink fuel hose because it is plastic hose.
   - Do not remove fuel hose from quick connector.
   - Keep the original fuel hose to be free from intrusion of dust or foreign substances with a suitable cover.
4. Install the fuel pressure gauge as shown in the figure.
   - Wipe off oil or dirt from hose insertion part using cloth moistened with gasoline.
   - Apply proper amount of gasoline between top of the fuel tube and No.1 spool.
   - Insert fuel hose for fuel pressure check until it touches the No.1 spool on fuel tube.
   - Use NISSAN genuine hose clamp (part number: 16439 N4710 or 16439 40U00).
   - When reconnecting fuel line, always use new clamps.
   - When reconnecting fuel hose, check the original fuel hose for damage and abnormality.
   - Use a torque driver to tighten clamps.

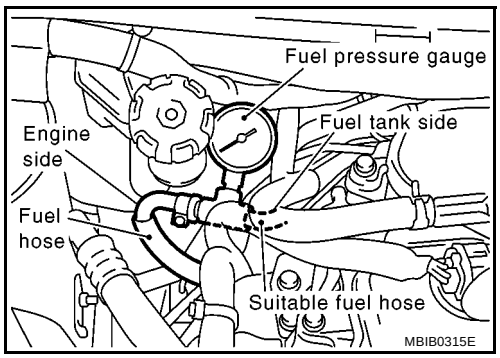


- Install hose clamp to the position within 1 - 2 mm (0.04 - 0.08 in).

Tightening torque:

1 - 1.5 N·m (0.1 - 0.15 kg-m, 9 - 13 in-lb)

- Make sure that clamp screw does not contact adjacent parts.



5. After connecting fuel hose for fuel pressure check, pull the hose with a force of approximately 98 N (10 kg, 22 lb) to confirm fuel tube does not come off.
6. Turn ignition switch ON, and check for fuel leakage.
7. Start engine and check for fuel leakage.
8. Read the indication of fuel pressure gauge.
   - Do not perform fuel pressure check with system operating. Fuel pressure gauge may indicate false readings.
   - During fuel pressure check, confirm for fuel leakage from fuel connection every 3 minutes.

At idling: Approximately 350 kPa (3.5 bar, 3.57 kg/cm^2 , 51 psi)

9. If result is unsatisfactory, go to next step.
10. Check the following.
    - Fuel hoses and fuel tubes for clogging
    - Fuel filter for clogging
    - Fuel pump
    - Fuel pressure regulator for clogging

    If OK, replace fuel pressure regulator.
    If NG, repair or replace.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

Introduction

EBS00O3A

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information	ISO Standard
Diagnostic Trouble Code (DTC)	Mode 3 of ISO 15031-5
Freeze Frame data	Mode 2 of ISO 15031-5
System Readiness Test (SRT) code	Mode 1 of ISO 15031-5
1st Trip Diagnostic Trouble Code (1st Trip DTC)	Mode 7 of ISO 15031-5
1st Trip Freeze Frame data	
Test values and Test limits	Mode 6 of ISO 15031-5
Calibration ID	Mode 9 of ISO 15031-5

The above information can be checked using procedures listed in the table below.

×: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data	SRT code	Test value
CONSULT-II	×	×	×	×	×	—
GST	×	×*1	×	—	×	×
ECM	×	×*2	—	—	—	—

*1: 1st trip DTCs for self-diagnoses concerning SRT items cannot be shown on the GST display.
*2: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator (MI) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to EC-75 .)

Two Trip Detection Logic

EBS00O3B

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MI will not light up at this stage. <1st trip>
If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MI lights up. The MI lights up at the same time when the DTC is stored. <2nd trip>
The “trip” in the “Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation. Specific on board diagnostic items will cause the ECM to light up or blink the MI, and store DTC and Freeze Frame data, even in the 1st trip, as shown below.

×: Applicable —: Not applicable

Items	MI				DTC		1st trip DTC	
	1st trip		2nd trip		1st trip displaying	2nd trip displaying	1st trip displaying	2nd trip displaying
	Blinking	Lighting up	Blinking	Lighting up				
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	×	—	—	—	—	—	×	—
Misfire (Possible three way catalyst damage) — DTC: P0300 - P0304 is being detected	—	—	×	—	—	×	—	—
One trip detection diagnoses (Refer to EC-11)	—	×	—	—	×	—	—	—
Except above	—	—	—	×	—	×	×	—

When there is an open circuit on MI circuit, the ECM can not warn the driver by lighting MI up when there is a malfunction on engine control system.
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system has malfunction and MI circuit is open by means of operating fail-safe function.

The fail-safe function also operate when above diagnoses except MI circuit are detected, and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

*1: 1st trip DTC No. is the same as DTC No.
*2: This number is prescribed by ISO 15031-5.
*3: In Diagnostic Test Mode II (Self-diagnostic results), this number is controlled by NISSAN.
*4: This is not displayed with GST.
*5: The troubleshooting for this DTC needs CONSULT-II.

DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.
If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MI will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MI lights up. In other words, the DTC is stored in the ECM memory and the MI lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored. For malfunctions that blink or light up the MI during the 1st trip, the DTC and 1st trip DTC are stored in the ECM memory.
Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
For malfunctions in which 1st trip DTCs are displayed, refer to EC-48, "EMISSION-RELATED DIAGNOSTIC INFORMATION ITEMS" . These items are required by legal regulations to continuously monitor the system/component. In addition, the items monitored non-continuously are also displayed on CONSULT-II.
1st trip DTC is specified in Mode 7 of ISO 15031-5. 1st trip DTC detection occurs without lighting up the MI and therefore does not warn the driver of a malfunction. However, 1st trip DTC detection will not prevent the vehicle from being tested, for example during Inspection/Maintenance (I/M) tests.
When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step II, refer to EC-70, "WORK FLOW" . Then perform DTC Confirmation Procedure or Overall Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

With CONSULT-II

With GST

CONSULT-II or GST (Generic Scan Tool) Examples: P0340, P0740, P0745, etc.
These DTCs are prescribed by ISO 15031-5.
(CONSULT-II also displays the malfunctioning component or system.)

No Tools

The number of blinks of the MI in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0102, 0340 etc.

These DTCs are controlled by NISSAN.

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, GST or the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.**

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.
If the DTC is being detected currently, the time data will be [0].
If a 1st trip DTC is stored in the ECM, the time data will be [1t].

DTC display

SELF DIAG RESULTS	
DTC RESULTS	TIME
CKP SEN/CIRCUIT [P0335]	0

1st trip DTC display

SELF DIAG RESULTS	
DTC RESULTS	TIME
CKP SEN/CIRCUIT [P0335]	1t

PBIB0911E

FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, base fuel schedule and intake air temperature at the moment a malfunction is detected.
Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II or GST. The 1st trip freeze frame data can only be displayed on the CONSULT-II screen, not on the GST. For details, see EC-105, "Freeze Frame Data and 1st Trip Freeze Frame Data" .
Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MI on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. The ECM has the following priorities to update the data.

Priority	Items	
1	Freeze frame data	Misfire — DTC: P0300 - P0304 Fuel Injection System Function — DTC: P0171, P0172
2		Except the above items (Includes A/T related items)
3	1st trip freeze frame data	

For example, the EGR malfunction (Priority: 2) was detected and the freeze frame data was stored in the 2nd trip. After that when the misfire (Priority: 1) is detected in another trip, the freeze frame data will be updated from the EGR malfunction to the misfire. The 1st trip freeze frame data is updated each time a different malfunction is detected. There is no priority for 1st trip freeze frame data. However, once freeze frame data is stored in the ECM memory, 1st trip freeze data is no longer stored (because only one freeze frame data or 1st trip freeze frame data can be stored in the ECM). If freeze frame data is stored in the ECM memory and freeze frame data with the same priority occurs later, the first (original) freeze frame data remains unchanged in the ECM memory.
Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

SYSTEM READINESS TEST (SRT) CODE

System Readiness Test (SRT) code is specified in Mode 1 of ISO 15031-5.

As part of an enhanced emissions test for Inspection & Maintenance (I/M), certain states require the status of SRT be used to indicate whether the ECM has completed self-diagnosis of major emission systems and components. Completion must be verified in order for the emissions inspection to proceed.
If a vehicle is rejected for a State emissions inspection due to one or more SRT items indicating “INCMP”, use the information in this Service Manual to set the SRT to “CMPLT”.
In most cases the ECM will automatically complete its self-diagnosis cycle during normal usage, and the SRT status will indicate “CMPLT” for each application system. Once set as “CMPLT”, the SRT status remains “CMPLT” until the self-diagnosis memory is erased.
Occasionally, certain portions of the self-diagnostic test may not be completed as a result of the customer's normal driving pattern; the SRT will indicate “INCMP” for these items.

NOTE:
The SRT will also indicate “INCMP” if the self-diagnosis memory is erased for any reason or if the ECM memory power supply is interrupted for several hours.
If, during the state emissions inspection, the SRT indicates “CMPLT” for all test items, the inspector will continue with the emissions test. However, if the SRT indicates “INCMP” for one or more of the SRT items the vehicle is returned to the customer untested.

NOTE:
If MI is ON during the state emissions inspection, the vehicle is also returned to the customer untested even though the SRT indicates “CMPLT” for all test items. Therefore, it is important to check SRT (“CMPLT”) and DTC (No DTCs) before the inspection.

SRT Item

The table below shows required self-diagnostic items to set the SRT to “CMPLT”.

SRT item (CONSULT-II indication)	Performance Priority*	Required self-diagnostic items to set the SRT to “CMPLT”	Corresponding DTC No.
CATALYST	2	Three way catalyst function	P0420
HO2S	1	Heated oxygen sensor 1	P0132
		Heated oxygen sensor 1	P0133
		Heated oxygen sensor 1	P0134
		Heated oxygen sensor 1	P1143
		Heated oxygen sensor 1	P1144
		Heated oxygen sensor 2	P0138
		Heated oxygen sensor 2	P0139
		Heated oxygen sensor 2	P1146
		Heated oxygen sensor 2	P1147
HO2S HTR	1	Heated oxygen sensor 1 heater	P0031, P0032
		Heated oxygen sensor 2 heater	P0037, P0038

*: If completion of several SRTs is required, perform driving patterns (DTC confirmation procedure), one by one based on the priority for models with CONSULT-II.

SRT Set Timing

SRT is set as “CMPLT” after self-diagnosis has been performed one or more times. Completion of SRT is done regardless of whether the result is OK or NG. The set timing is different between OK and NG results and is shown in the table below.

Self-diagnosis result		Example				
		Diagnosis	Ignition cycle ← ON → OFF ← ON → OFF ← ON → OFF ← ON →			
All OK	Case 1	P0400	OK (1)	— (1)	OK (2)	— (2)
		P0402	OK (1)	— (1)	— (1)	OK (2)
		P1402	OK (1)	OK (2)	— (2)	— (2)
		SRT of EGR	“CMPLT”	“CMPLT”	“CMPLT”	“CMPLT”
	Case 2	P0400	OK (1)	— (1)	— (1)	— (1)
		P0402	— (0)	— (0)	OK (1)	— (1)
		P1402	OK (1)	OK (2)	— (2)	— (2)
		SRT of EGR	“INCMP”	“INCMP”	“CMPLT”	“CMPLT”
NG exists	Case 3	P0400	OK	OK	—	—
		P0402	—	—	—	—
		P1402	NG	—	NG	NG (Consecutive NG)
		(1st trip) DTC	1st trip DTC	—	1st trip DTC	DTC (= MI “ON”)
		SRT of EGR	“INCMP”	“INCMP”	“INCMP”	“CMPLT”

OK: Self-diagnosis is carried out and the result is OK.
NG: Self-diagnosis is carried out and the result is NG.
—: Self-diagnosis is not carried out.

When all SRT related self-diagnoses showed OK results in a single cycle (Ignition OFF-ON-OFF), the SRT will indicate “CMPLT”. → Case 1 above
When all SRT related self-diagnoses showed OK results through several different cycles, the SRT will indicate “CMPLT” at the time the respective self-diagnoses have at least one OK result. → Case 2 above

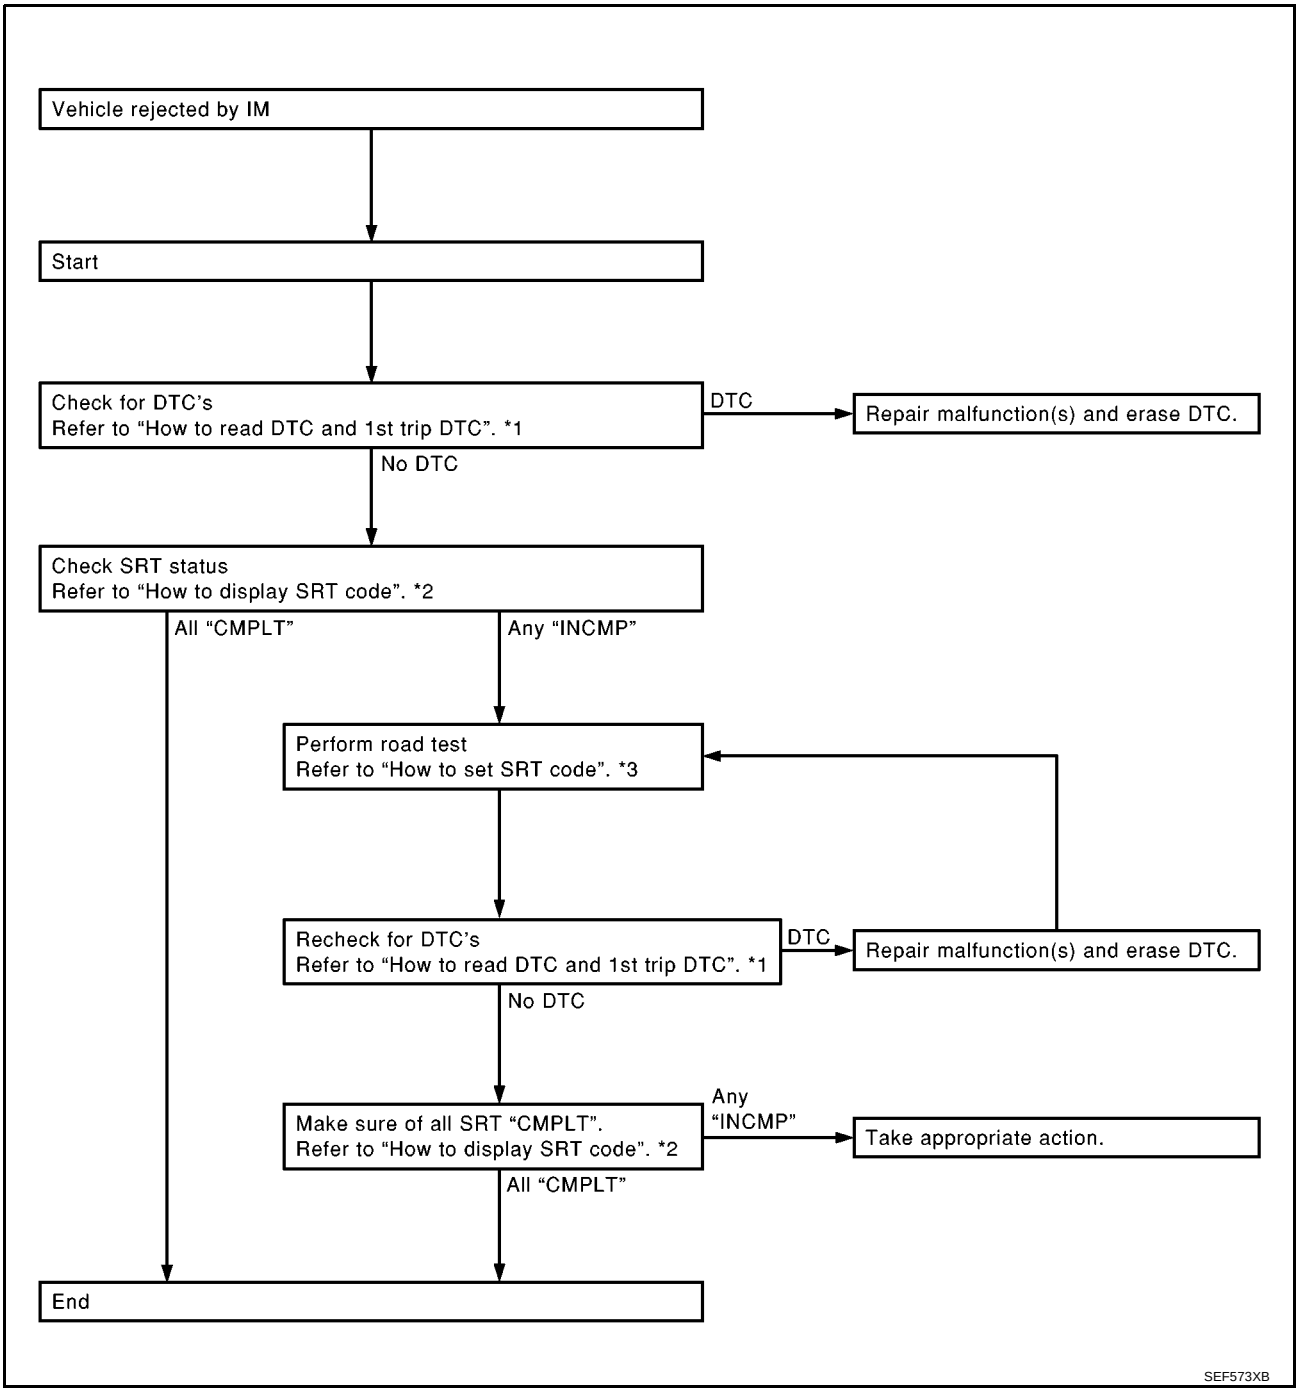
If one or more SRT related self-diagnoses showed NG results in 2 consecutive cycles, the SRT will also indicate “CMPLT”. → Case 3 above
The table above shows that the minimum number of cycles for setting SRT as “INCMP” is one (1) for each self-diagnosis (Case 1 & 2) or two (2) for one of self-diagnoses (Case 3). However, in preparation for the state emissions inspection, it is unnecessary for each self-diagnosis to be executed twice (Case 3) for the following reasons:

- The SRT will indicate “CMPLT” at the time the respective self-diagnoses have one (1) OK result.
- The emissions inspection requires “CMPLT” of the SRT only with OK self-diagnosis results.
- When, during SRT driving pattern, 1st trip DTC (NG) is detected prior to “CMPLT” of SRT, the self-diagnosis memory must be erased from ECM after repair.
- If the 1st trip DTC is erased, all the SRT will indicate “INCMP”.

  NOTE:
  SRT can be set as “CMPLT” together with the DTC (s). Therefore, DTC check must always be carried out prior to the state emission inspection even though the SRT indicates “CMPLT”.

SRT Service Procedure

If a vehicle has failed the state emissions inspection due to one or more SRT items indicating “INCMP”, review the flowchart diagnostic sequence on the next page.



*1 EC-50 *2 EC-55 *3 EC-56

How to Display SRT Code

WITH CONSULT-II

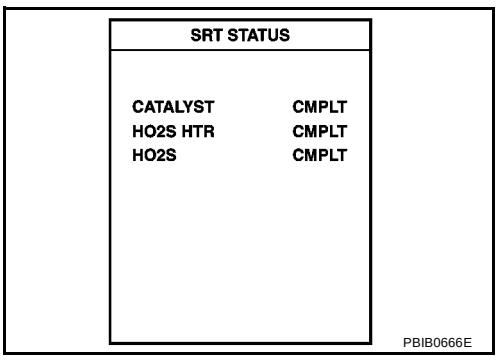
Selecting "SRT STATUS" in "DTC CONFIRMATION" mode with CONSULT-II.

For items whose SRT codes are set, a "CMPLT" is displayed on the CONSULT-II screen; for items whose SRT codes are not set, "INCMP" is displayed.

A sample of CONSULT-II display for SRT code is shown at right.

"INCMP" means the self-diagnosis is incomplete and SRT is not set.

"CMPLT" means the self-diagnosis is complete and SRT is set.



WITH GST

Selecting Mode 1 with GST (Generic Scan Tool)

How to Set SRT Code

To set all SRT codes, self-diagnosis for the items indicated above must be performed one or more times. Each diagnosis may require a long period of actual driving under various conditions.

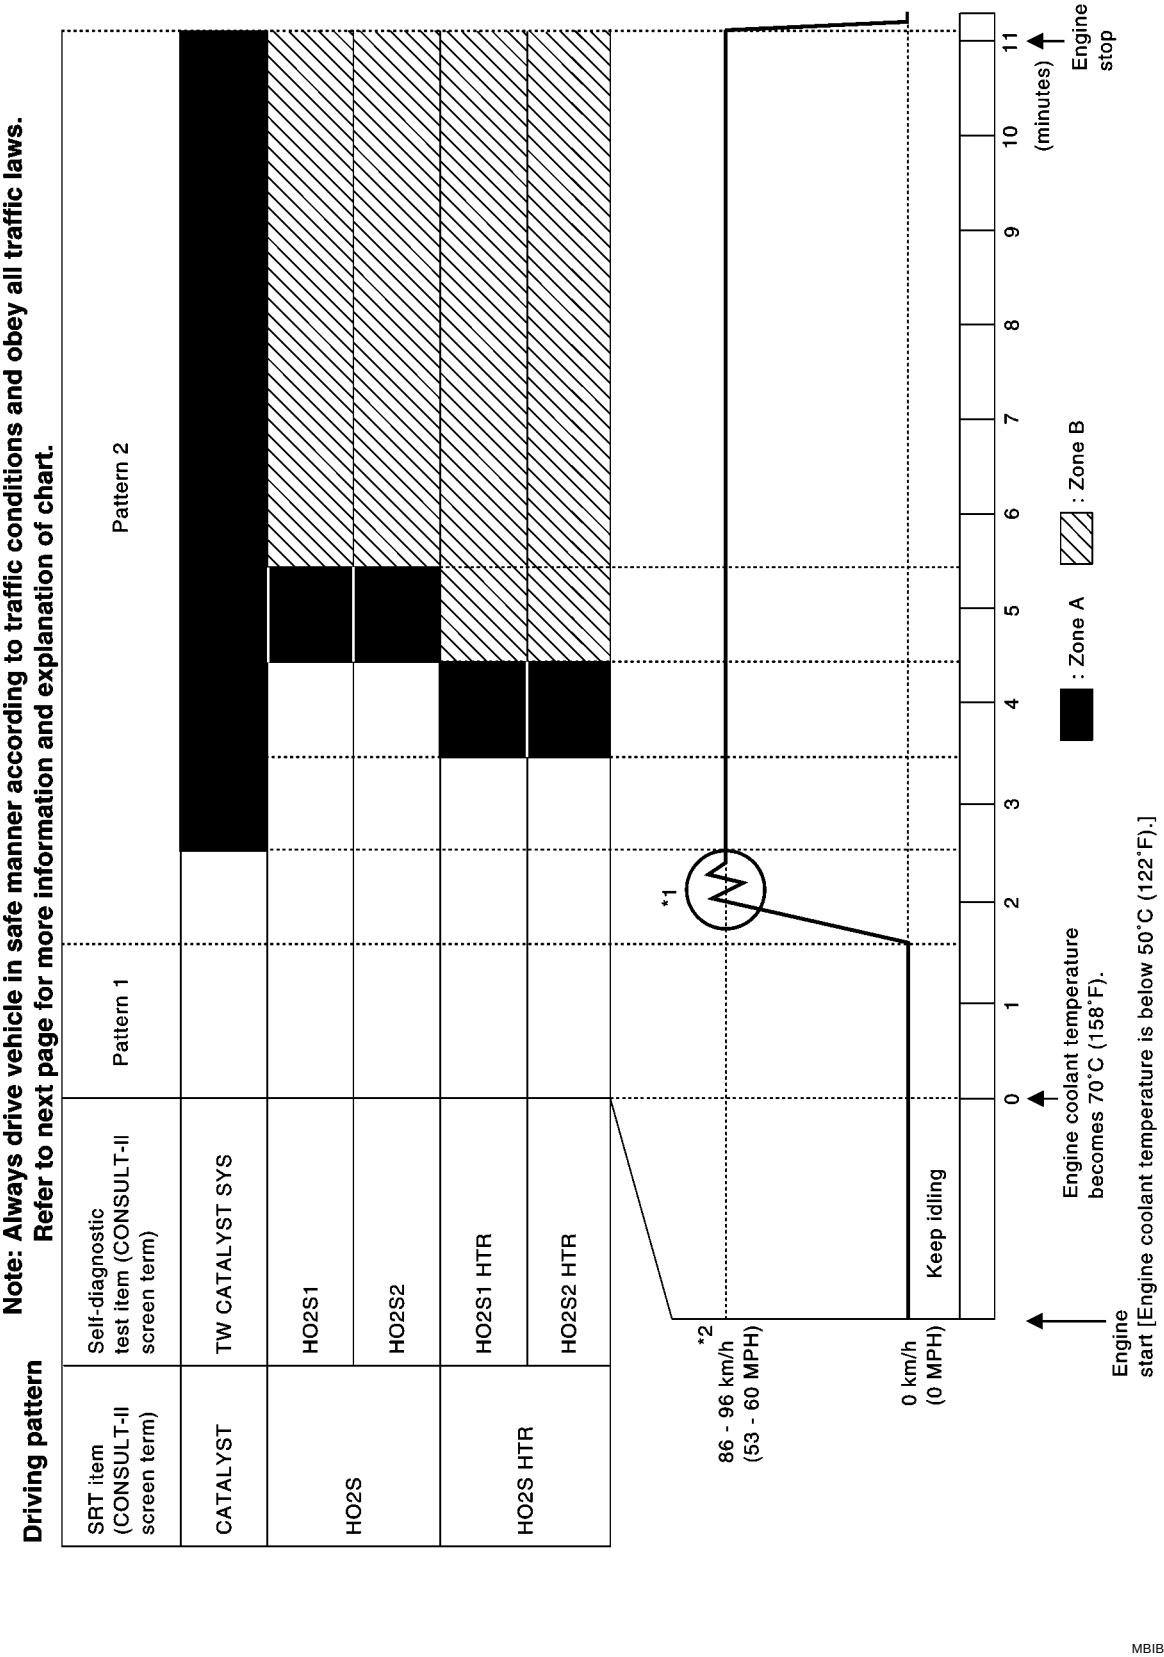
WITH CONSULT-II

Perform corresponding DTC Confirmation Procedure one by one based on Performance Priority in the table on EC-53 .

WITHOUT CONSULT-II

The most efficient driving pattern in which SRT codes can be properly set is explained on the next page. The driving pattern should be performed one or more times to set all SRT codes.

Driving Pattern



MBIB0241E

- The time required for each diagnosis varies with road surface conditions, weather, altitude, individual driving habits, etc.
  Zone A refers to the range where the time, required for the diagnosis under normal conditions*, is the shortest.
  Zone B refers to the range where the diagnosis can still be performed if the diagnosis is not completed within zone A.

*: Normal conditions refer to the following:

- Sea level
- Flat road
- Ambient air temperature: 20 - 30°C (68 - 86°F)
- Diagnosis is performed as quickly as possible under normal conditions.
  Under different conditions [For example: ambient air temperature other than 20 - 30°C (68 - 86°F)], diagnosis may also be performed.

Pattern 1:

- **The engine is started at the engine coolant temperature of −10 to 35°C (14 to 95°F) (where the voltage between the ECM terminal 72 and ground is 3.0 - 4.3V).**
- **The engine must be operated at idle speed until the engine coolant temperature is greater than 70°C (158°F) (where the voltage between the ECM terminal 72 and ground is lower than 1.4V).**

Pattern 2:

- When steady-state driving is performed again even after it is interrupted, each diagnosis can be conducted. In this case, the time required for diagnosis may be extended.

*1: Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH), then release the accelerator pedal and keep it released for more than 10 seconds. Depress the accelerator pedal until vehicle speed is 90 km/h (56 MPH) again.
*2: Checking the vehicle speed with GST is advised.

TEST VALUE AND TEST LIMIT (GST ONLY — NOT APPLICABLE TO CONSULT-II)

The following is the information specified in Mode 6 of ISO 15031-5.
The test value is a parameter used to determine whether a system/circuit diagnostic test is OK or NG while being monitored by the ECM during self-diagnosis. The test limit is a reference value which is specified as the maximum or minimum value and is compared with the test value being monitored.
Items for which these data (test value and test limit) are displayed are the same as SRT code items.
These data (test value and test limit) are specified by Test ID (TID) and Component ID (CID) and can be displayed on the GST screen.

×: Applicable —: Not applicable

SRT item	Self-diagnostic test item	Test value (GST display)		Test limit	Application
		TID	CID		
CATALYST	Three way catalyst function	01H	01H	Max.	×
HO2S	Heated oxygen sensor 1	09H	04H	Max.	×
		0AH	84H	Min.	×
		0BH	04H	Max.	×
		0CH	04H	Max.	×
		0DH	04H	Max.	×
	Heated oxygen sensor 2	19H	86H	Min.	×
		1AH	86H	Min.	×
		1BH	06H	Max.	×
		1CH	06H	Max.	×
HO2S HTR	Heated oxygen sensor 1 heater	29H	08H	Max.	×
		2AH	88H	Min.	×
	Heated oxygen sensor 2 heater	2DH	0AH	Max.	×
		2EH	8AH	Min.	×

HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

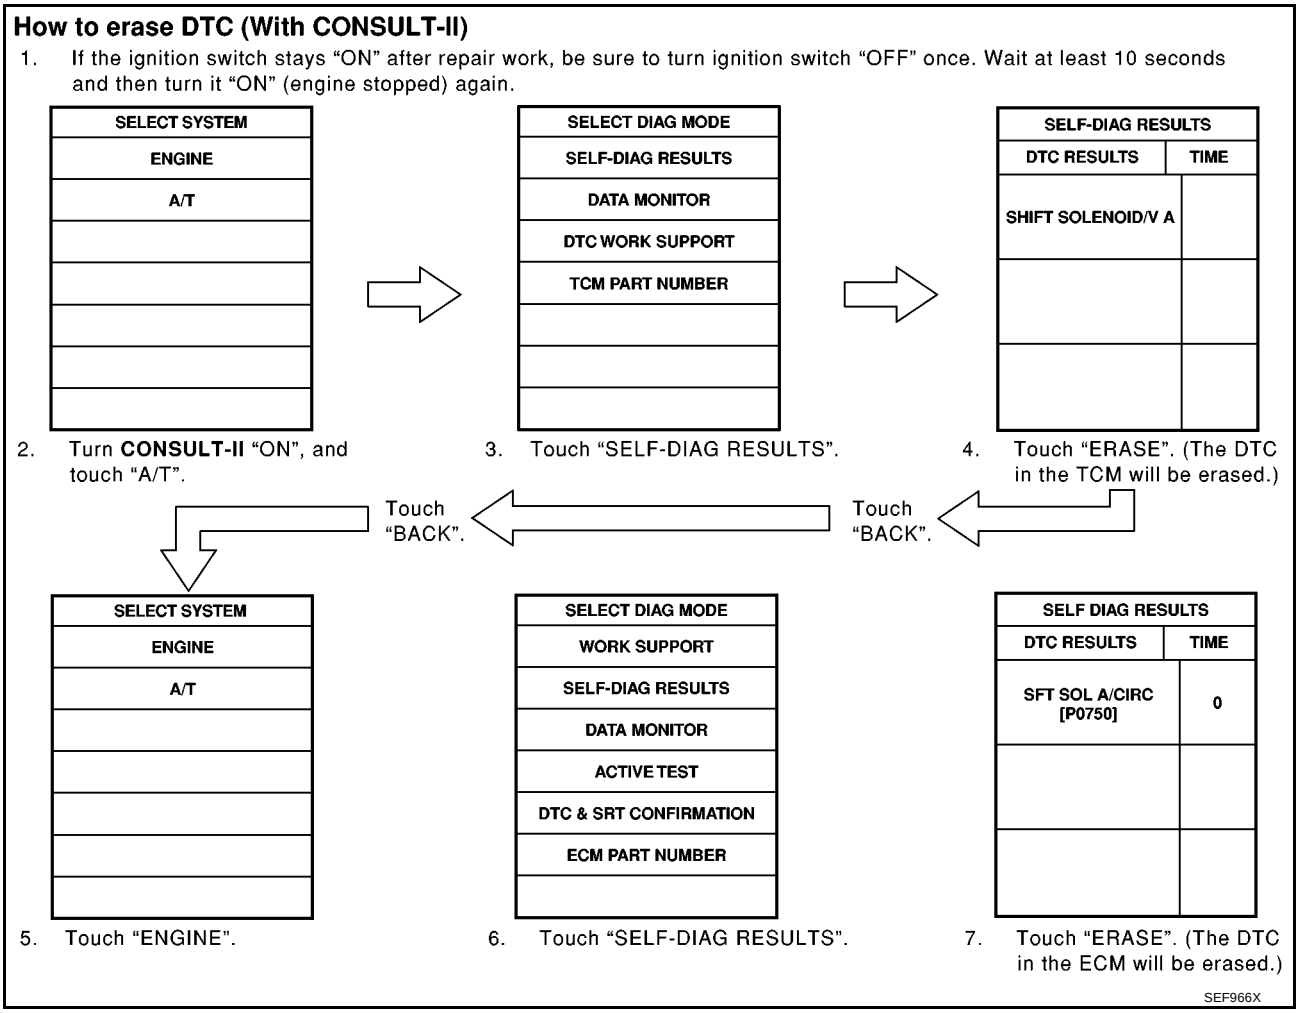
How to Erase DTC

With CONSULT-II

The emission related diagnostic information in the ECM can be erased by selecting “ERASE” in the “SELF-DIAG RESULTS” mode with CONSULT-II.
If DTCs are displayed for both ECM and TCM (Transmission control module), they need to be erased individually from the ECM and TCM (Transmission control module).

NOTE:
If the DTC is not for A/T related items (see EC-11), skip steps 2 through 4.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Turn CONSULT-II ON and touch “A/T”.
3. Touch “SELF-DIAG RESULTS”.
4. Touch “ERASE”. [The DTC in the TCM (Transmission control module) will be erased.] Then touch “BACK” twice.
5. Touch “ENGINE”.
6. Touch “SELF-DIAG RESULTS”.
7. Touch “ERASE”. (The DTC in the ECM will be erased.)



With GST

The emission related diagnostic information in the ECM can be erased by selecting Mode 4 with GST.

NOTE:
If the DTC is not for A/T related items (see EC-11), skip step 2.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.

2. Perform SELF-DIAGNOSTIC PROCEDURE (Without CONSULT-II) in A/T section titled TROUBLE DIAGNOSIS, Self-diagnosis. (The engine warm-up step can be skipped when performing the diagnosis only to erase the DTC.)
3. Select Mode 4 with GST (Generic Scan Tool).

No Tools

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once.
2. Wait at least 10 seconds and then turn it ON (engine stopped) again.
3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to EC-62, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .

- **If the battery is disconnected, the emission-related diagnostic information will be lost within 24 hours.**
- **The following data are cleared when the ECM memory is erased.**

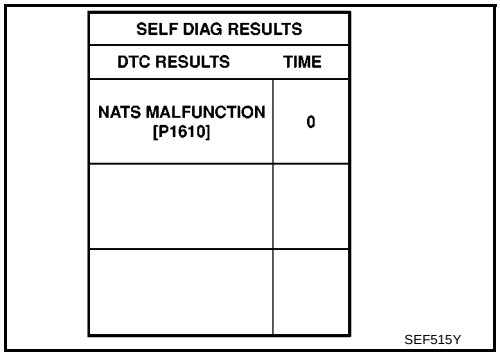
– Diagnostic trouble codes
– 1st trip diagnostic trouble codes
– Freeze frame data
– 1st trip freeze frame data
– System readiness test (SRT) codes
– Test values
– Others

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.

NATS (Nissan Anti-theft System)

EBS00O3D

- **If the security indicator lights up with the ignition switch in the ON position or "NATS MALFUNCTION" is displayed on "SELF-DIAG RESULTS" screen, perform self-diagnostic results mode with CONSULT-II using NATS program card. Refer to BL-223, "NATS(Nissan Anti-Theft System)" .**
- **Confirm no self-diagnostic results of NATS is displayed before touching "ERASE" in "SELF-DIAG RESULTS" mode with CONSULT-II.**
- **When replacing ECM, initialization of NATS system and registration of all NATS ignition key IDs must be carried out with CONSULT-II using NATS program card.**
  Therefore, be sure to receive all keys from vehicle owner.
  Regarding the procedures of NATS initialization and NATS ignition key ID registration, refer to CONSULT-II operation manual, NATS.



Malfunction Indicator (MI)

EBS00O3E

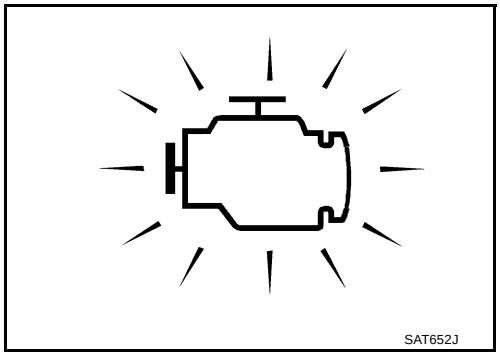
DESCRIPTION

The MI is located on the instrument panel.

1. The MI will light up when the ignition switch is turned ON without the engine running. This is a bulb check.

- If the MI does not light up, refer to DI-65, "WARNING LAMPS" or see EC-462 .

2. When the engine is started, the MI should go off.
   If the MI remains on, the on board diagnostic system has detected an engine system malfunction.



ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following four functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in ON position Engine stopped	BULB CHECK	This function checks the MI bulb for damage (blown, open circuit, etc.). If the MI does not come on, check MI circuit.
	Engine running	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MI will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MI in the 1st trip. ● Misfire (Possible three way catalyst damage) ● One trip detection diagnoses
Mode II	Ignition switch in ON position Engine stopped	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.
	Engine running	HEATED OXYGEN SENSOR 1 MONITOR	This function allows the fuel mixture condition (lean or rich), monitored by heated oxygen sensor 1, to be read.

When there is an open circuit on MI circuit, the ECM can not warn the driver by lighting MI up when there is malfunction on engine control system.
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system has a malfunction and MI circuit is open by means of operating fail-safe function.
The fail-safe function also operate when above diagnoses except MI circuit are detected, and demands the driver to repair the a malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

MI Flashing without DTC

If the ECM is in Diagnostic Test Mode II, MI may flash when engine is running. In this case, check ECM diagnostic test mode. EC-62, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .
How to switch the diagnostic test (function) modes, and details of the above functions are described later, EC-62, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .
The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- Others

HOW TO SWITCH DIAGNOSTIC TEST MODE

NOTE:

- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**
- **Always ECM returns to Diagnostic Test Mode I after ignition switch is turned OFF.**

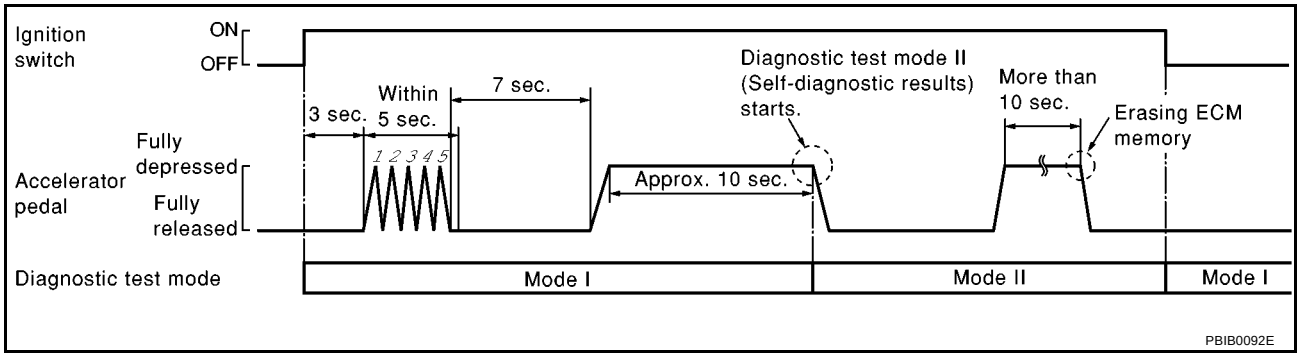
How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
2. Repeat the following procedure quickly five times within 5 seconds.

a. Fully depress the accelerator pedal.

b. Fully release the accelerator pedal.

3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MI starts blinking.
4. Fully release the accelerator pedal.
   ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).



How to Set Diagnostic Test Mode II (Heated Oxygen Sensor 1 Monitor)

1. Set the ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to EC-62, "How to Set Diagnostic Test Mode II (Self-diagnostic Results)" .
2. Start Engine.
   ECM has entered to Diagnostic Test Mode II (Heated oxygen sensor 1 monitor).

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to EC-62, "How to Erase Diagnostic Test Mode II (Self-diagnostic Results)" .
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.
   The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MI on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to DI-65, "WARNING LAMPS" or see EC-462 .

DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING

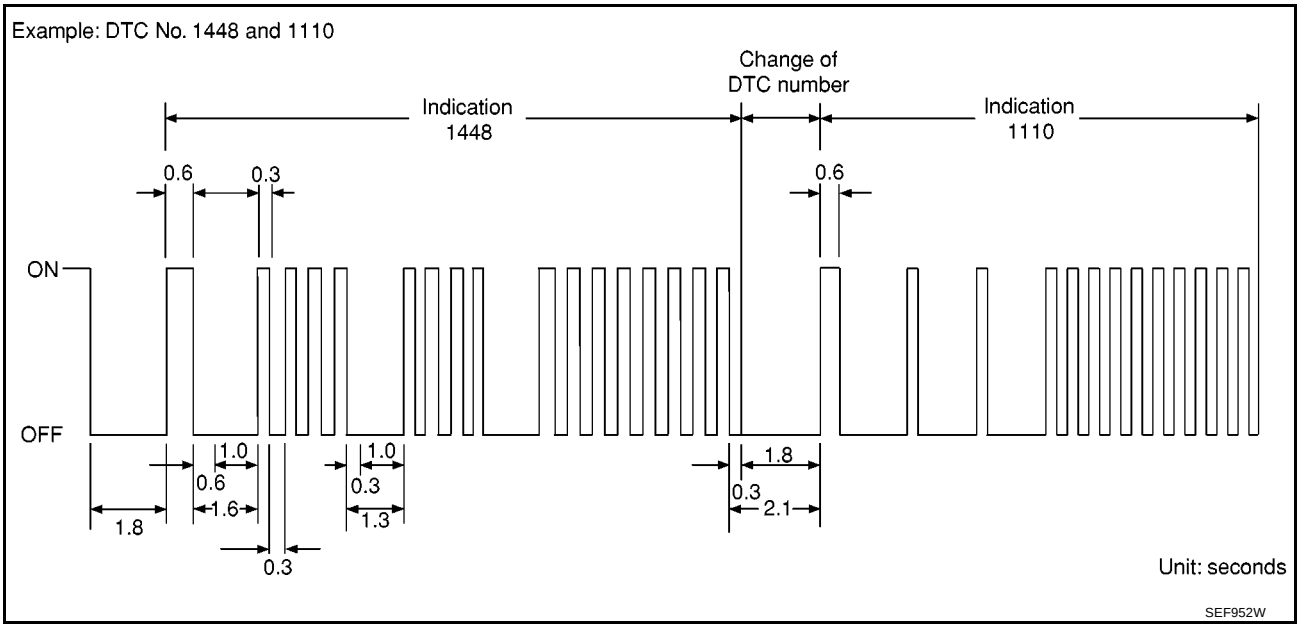
MI	Condition
ON	When the malfunction is detected.
OFF	No malfunction.

- These DTC numbers are clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MI as shown below.
The DTC and 1st trip DTC are displayed at the same time. If the MI does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MI illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These unidentified

codes can be identified by using the CONSULT-II or GST. A DTC will be used as an example for how to read a code.



A particular trouble code can be identified by the number of four-digit numeral flashes. The “zero” is indicated by the number of ten flashes. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.
The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle.
A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.
A change from one trouble code to another occurs at an interval of 1.8-second OFF.
In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. (See EC-11, "INDEX FOR DTC")

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to EC-62, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .

- **If the battery is disconnected, the DTC will be lost from the backup memory within 24 hours.**
- **Be careful not to erase the stored memory before starting trouble diagnoses.**

DIAGNOSTIC TEST MODE II — HEATED OXYGEN SENSOR 1 MONITOR

In this mode, the MI displays the condition of the fuel mixture (lean or rich) which is monitored by the heated oxygen sensor 1.

MI	Fuel mixture condition in the exhaust gas	Air-fuel ratio feedback control condition
ON	Lean	Closed loop system
OFF	Rich	
*Remains ON or OFF	Any condition	Open loop system

*: Maintains conditions just before switching to open loop.

To check the heated oxygen sensor 1 function, start engine in the Diagnostic Test Mode II and warm it up until engine coolant temperature indicator points to the middle of the gauge.
Next run engine at about 2,000 rpm for about 2 minutes under no load conditions. Then make sure that the MI comes ON more than 5 times within 10 seconds with engine running at 2,000 rpm under no load.

OBD System Operation Chart

EBS00O3F

RELATIONSHIP BETWEEN MI, 1ST TRIP DTC, DTC, AND DETECTABLE ITEMS

- When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data are stored in the ECM memory.
- When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data are stored in the ECM memory, and the MI will come on. For details, refer to EC-47, "Two Trip Detection Logic" .

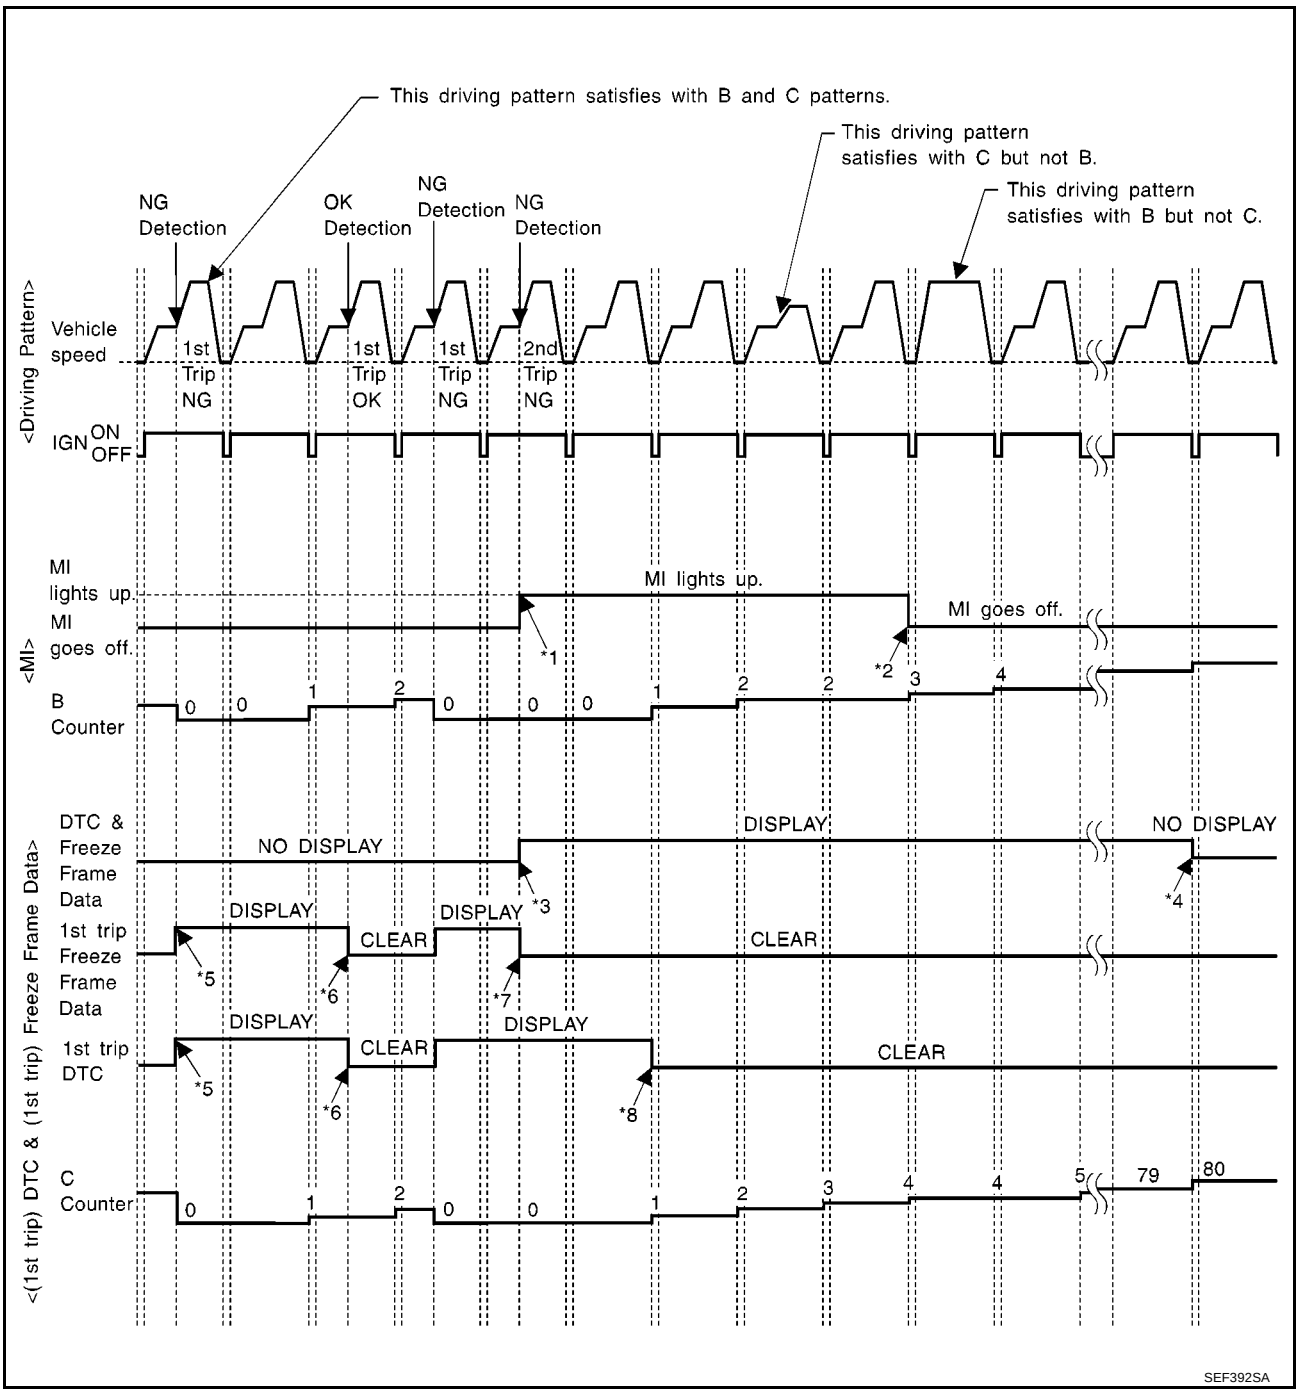
- The MI will go off after the vehicle is driven 3 times with no malfunction. The drive is counted only when the recorded driving pattern is met (as stored in the ECM). If another malfunction occurs while counting, the counter will reset.
- The DTC and the freeze frame data will be stored until the vehicle is driven 40 times (driving pattern A) without the same malfunction recurring (except for Misfire and Fuel Injection System). For Misfire and Fuel Injection System, the DTC and freeze frame data will be stored until the vehicle is driven 80 times (driving pattern C) without the same malfunction recurring. The “TIME” in “SELF-DIAGNOSTIC RESULTS” mode of CONSULT-II will count the number of times the vehicle is driven.
- The 1st trip DTC is not displayed when the self-diagnosis results in OK for the 2nd trip.

SUMMARY CHART

Items	Fuel Injection System	Misfire	Other
MI (goes off)	3 (pattern B)	3 (pattern B)	3 (pattern B)
DTC, Freeze Frame Data (no display)	80 (pattern C)	80 (pattern C)	40 (pattern A)
1st Trip DTC (clear)	1 (pattern C), *1	1 (pattern C), *1	1 (pattern B)
1st Trip Freeze Frame Data (clear)	*1 , *2	*1 , *2	1 (pattern B)

For details about patterns “B” and “C” under “Fuel Injection System” and “Misfire”, see EC-66 .
For details about patterns “A” and “B” under “Other”, see EC-68 .
*1: Clear timing is at the moment OK is detected.
*2: Clear timing is when the same malfunction is detected in the 2nd trip.

RELATIONSHIP BETWEEN MI, DTC, 1ST TRIP DTC AND DRIVING PATTERNS FOR "MISFIRE" <EXHAUST QUALITY DETERIORATION>, "FUEL INJECTION SYSTEM"



*1: When the same malfunction is detected in two consecutive trips, MI will light up.

*2: MI will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 80 times (pattern C) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

*6: The 1st trip DTC and the 1st trip freeze frame data will be cleared at the moment OK is detected.

*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

*8: 1st trip DTC will be cleared when vehicle is driven once (pattern C) without the same malfunction after DTC is stored in ECM.

EXPLANATION FOR DRIVING PATTERNS FOR “MISFIRE <EXHAUST QUALITY DETERIORATION>”, “FUEL INJECTION SYSTEM”

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:
All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunction.
- The MI will go off when the B counter reaches 3. (*2 in OBD SYSTEM OPERATION CHART)

<Driving Pattern C>

Driving pattern C means the vehicle operation as follows:

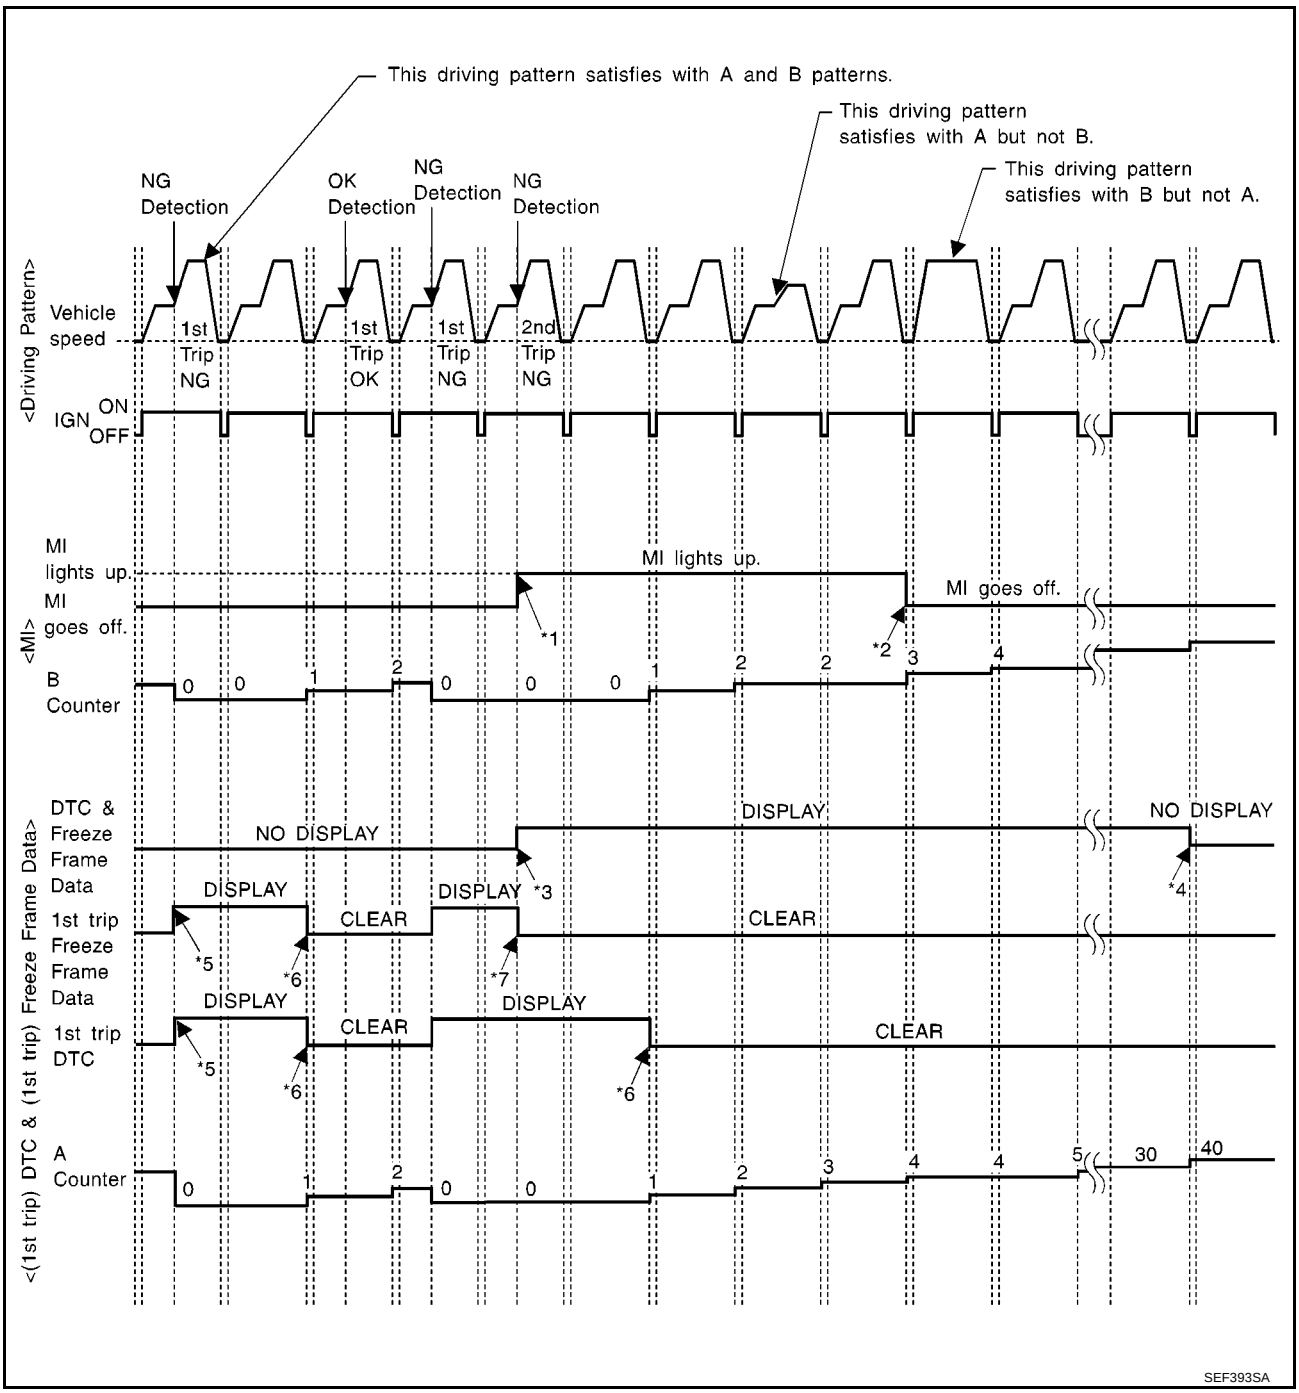
1. The following conditions should be satisfied at the same time:
   Engine speed: (Engine speed in the freeze frame data) ±375 rpm
   Calculated load value: (Calculated load value in the freeze frame data) x (1±0.1) [%]
   Engine coolant temperature (T) condition:

- When the freeze frame data shows lower than 70°C (158°F), T should be lower than 70°C (158°F).
- When the freeze frame data shows higher than or equal to 70°C (158°F), T should be higher than or equal to 70°C (158°F).

Example:
If the stored freeze frame data is as follows:
Engine speed: 850 rpm, Calculated load value: 30%, Engine coolant temperature: 80°C (176°F)
To be satisfied with driving pattern C, the vehicle should run under the following conditions:
Engine speed: 475 - 1,225 rpm, Calculated load value: 27 - 33%, Engine coolant temperature: more than 70°C (158°F)

- The C counter will be cleared when the malfunction is detected regardless of vehicle conditions above.
- The C counter will be counted up when vehicle conditions above is satisfied without the same malfunction.
- The DTC will not be displayed after C counter reaches 80.
- The 1st trip DTC will be cleared when C counter is counted once without the same malfunction after DTC is stored in ECM.

RELATIONSHIP BETWEEN MI, DTC, 1ST TRIP DTC AND DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"



*1: When the same malfunction is detected in two consecutive trips, MI will light up.

*2: MI will go off after vehicle is driven 3 times (pattern B) without any malfunctions.

*3: When the same malfunction is detected in two consecutive trips, the DTC and the freeze frame data will be stored in ECM.

*4: The DTC and the freeze frame data will not be displayed any longer after vehicle is driven 40 times (pattern A) without the same malfunction. (The DTC and the freeze frame data still remain in ECM.)

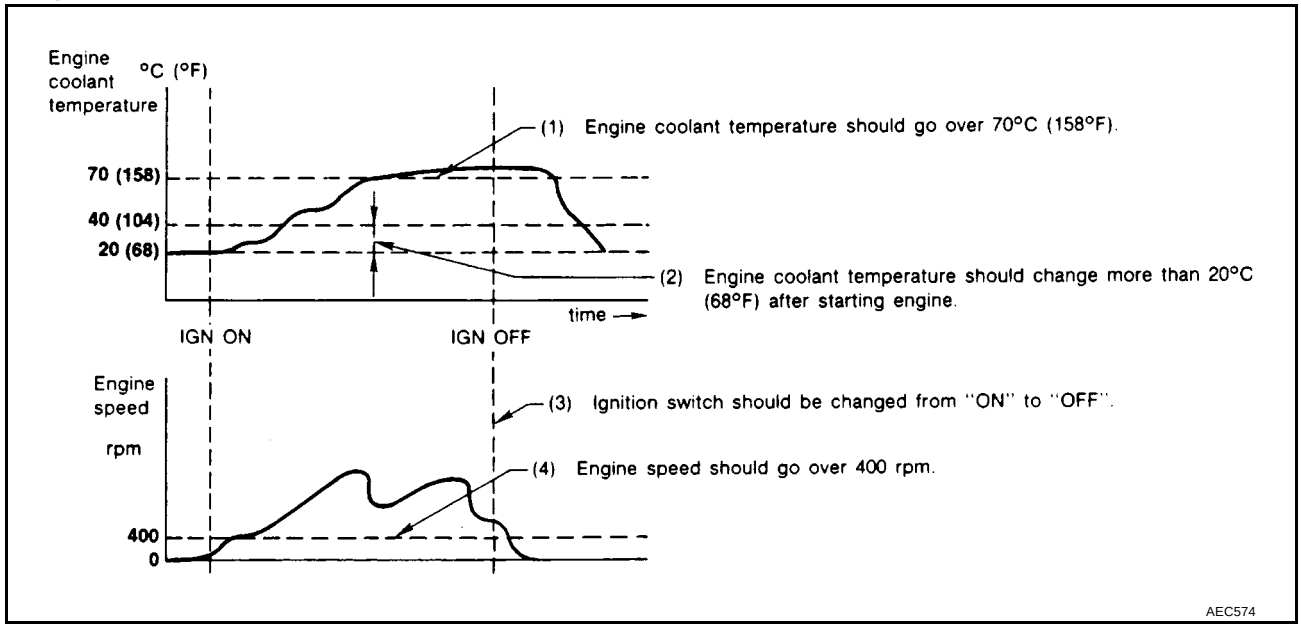
*5: When a malfunction is detected for the first time, the 1st trip DTC and the 1st trip freeze frame data will be stored in ECM.

*6: 1st trip DTC will be cleared after vehicle is driven once (pattern B) without the same malfunction.

*7: When the same malfunction is detected in the 2nd trip, the 1st trip freeze frame data will be cleared.

EXPLANATION FOR DRIVING PATTERNS EXCEPT FOR "MISFIRE <EXHAUST QUALITY DETERIORATION>", "FUEL INJECTION SYSTEM"

<Driving Pattern A>



- The A counter will be cleared when the malfunction is detected regardless of (1) - (4).
- The A counter will be counted up when (1) - (4) are satisfied without the same malfunction.
- The DTC will not be displayed after the A counter reaches 40.

<Driving Pattern B>

Driving pattern B means the vehicle operation as follows:
All components and systems should be monitored at least once by the OBD system.

- The B counter will be cleared when the malfunction is detected once regardless of the driving pattern.
- The B counter will be counted up when driving pattern B is satisfied without any malfunctions.
- The MI will go off when the B counter reaches 3 (*2 in OBD SYSTEM OPERATION CHART).

TROUBLE DIAGNOSIS

PFP:00004

Trouble Diagnosis Introduction

EBS00O3G

INTRODUCTION

The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.
It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.
A visual check only may not find the cause of the incidents. A road test with CONSULT-II (or GST) or a circuit tester connected should be performed. Follow the Work Flow on EC-70 .
Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A Diagnostic Worksheet like the example on EC-73 should be used.
Start your diagnosis by looking for conventional malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.

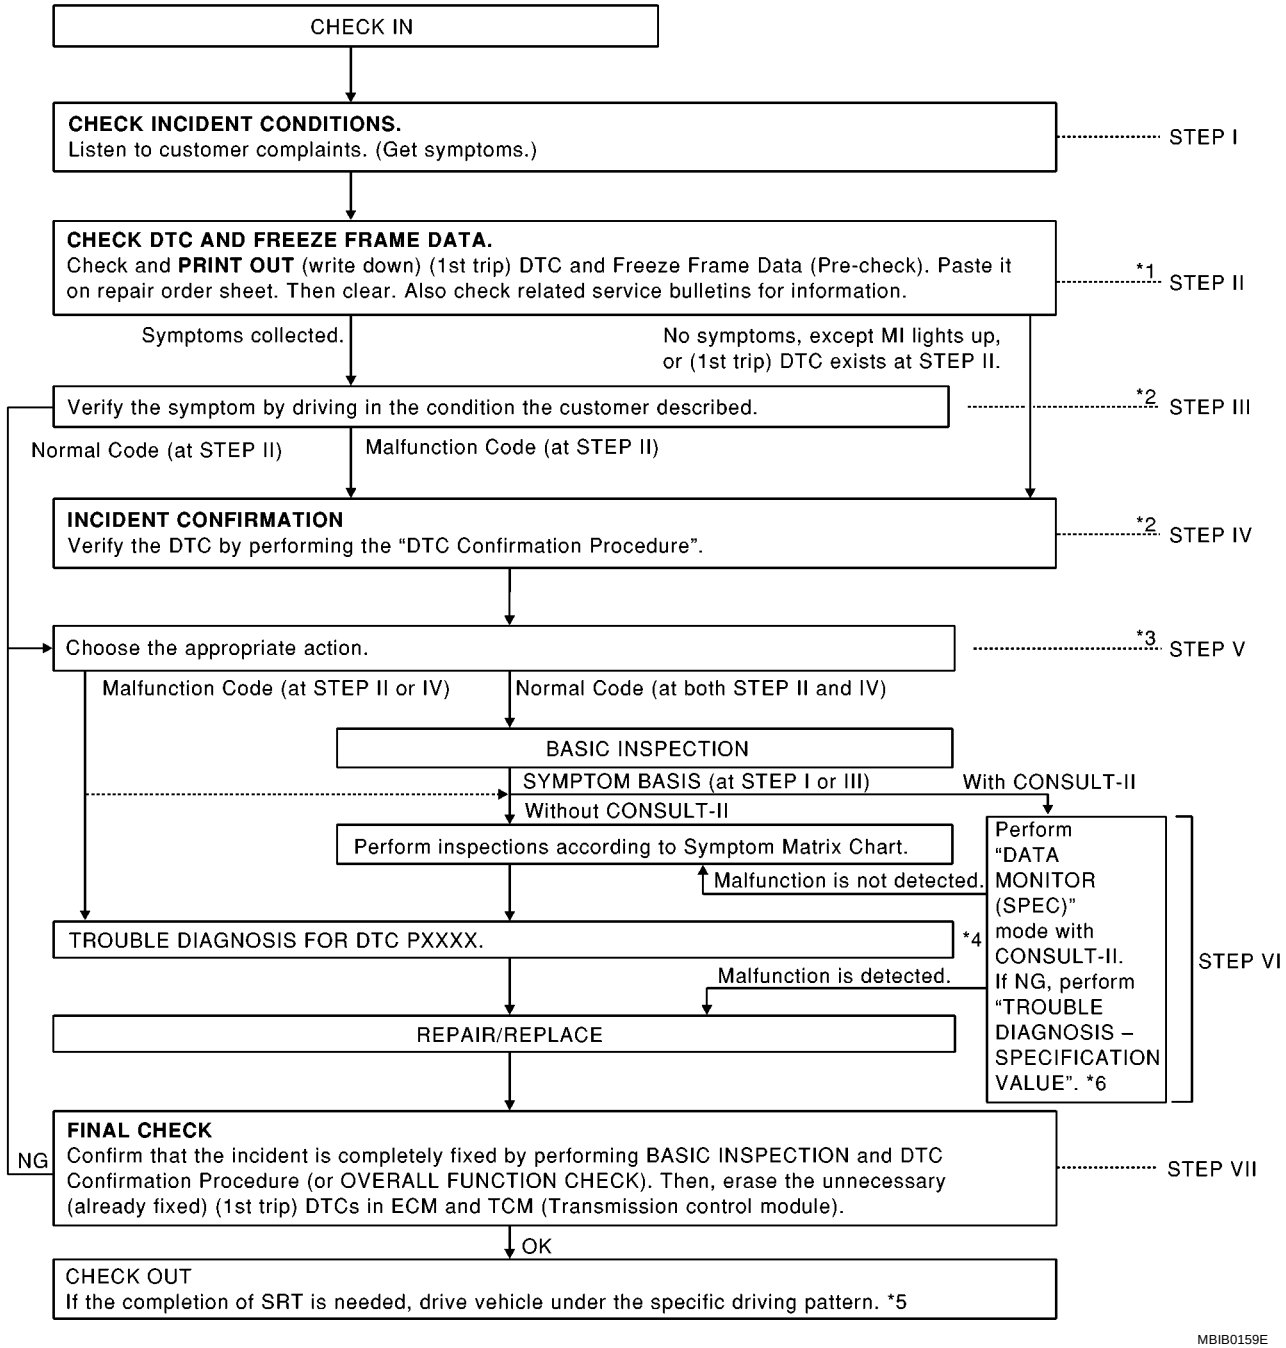
SEF234G

WORK FLOW
Flow Chart



MBIB0159E

*1 If time data of "SELF-DIAG RESULTS" is other than [0] or [1t], perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

*2 If the incident cannot be verified, perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

*3 If the on board diagnostic system cannot be performed, check main power supply and ground circuit. Refer to EC-125, "POWER SUPPLY CIRCUIT FOR ECM" .

*4 If malfunctioning part cannot be detected, perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

*5 EC-57

*6 EC-119

Description for Work Flow

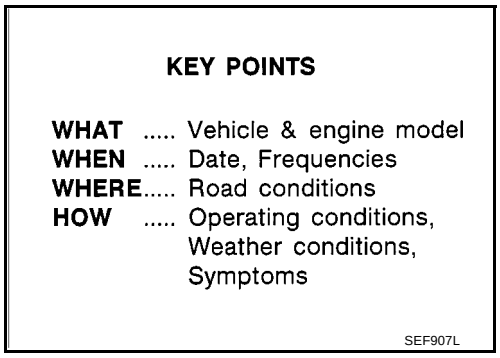
STEP	DESCRIPTION
STEP I	Get detailed information about the conditions and the environment when the incident/symptom occurred using the DIAGNOSTIC WORK SHEET, EC-72 .
STEP II	Before confirming the concern, check and write down (print out using CONSULT-II or GST) the (1st trip) DTC and the (1st trip) freeze frame data, then erase the DTC and the data. (Refer to EC-59 .) The (1st trip) DTC and the (1st trip) freeze frame data can be used when duplicating the incident at STEP III & IV. If the incident cannot be verified, perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" . Study the relationship between the cause, specified by (1st trip) DTC, and the symptom described by the customer. (The Symptom Matrix Chart will be useful. See EC-82 .) Also check related service bulletins for information.
STEP III	Try to confirm the symptom and under what conditions the incident occurs. The DIAGNOSTIC WORK SHEET and the freeze frame data are useful to verify the incident. Connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot be verified, perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" . If the malfunction code is detected, skip STEP IV and perform STEP V.
STEP IV	Try to detect the (1st trip) DTC by driving in (or performing) the DTC Confirmation Procedure. Check and read the (1st trip) DTC and (1st trip) freeze frame data by using CONSULT-II or GST. During the (1st trip) DTC verification, be sure to connect CONSULT-II to the vehicle in “DATA MONITOR (AUTO TRIG)” mode and check real time diagnosis results. If the incident cannot be verified, perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" . In case the DTC Confirmation Procedure is not available, perform the Overall Function Check instead. The (1st trip) DTC cannot be displayed by this check, however, this simplified check is an effective alternative. The NG result of the Overall Function Check is the same as the (1st trip) DTC detection.
STEP V	Take the appropriate action based on the results of STEP I through IV. If the malfunction code is indicated, proceed to TROUBLE DIAGNOSIS FOR DTC PXXXX. If the normal code is indicated, proceed to the BASIC INSPECTION. (Refer to EC-77 .) If COSULT-II is available, perform “DATA MONITOR (SPEC)” mode with CONSULT-II and proceed to the TOROUBLE DIAGNOSIS – SPECIFICATION VALUE. (Refer to EC-119 .) (If malfunction is detected, proceed to PERAIR/REPLACE.) Then perform inspections according to the Symptom Matrix Chart. (Refer to EC-82 .)
STEP VI	Identify where to begin diagnosis based on the relationship study between symptom and possible causes. Inspect the system for mechanical binding, loose connectors or wiring damage using (tracing) Harness Layouts. Gently shake the related connectors, components or wiring harness with CONSULT-II set in “DATA MONITOR (AUTO TRIG)” mode. Check the voltage of the related ECM terminals or monitor the output data from the related sensors with CONSULT-II. Refer to EC-94 , EC-113 . The Diagnostic Procedure in EC section contains a description based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to Circuit Inspection in GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" . Repair or replace the malfunction parts. If malfunctioning part cannot be detected, perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
STEP VII	Once you have repaired the circuit or replaced a component, you need to run the engine in the same conditions and circumstances which resulted in the customer's initial complaint. Perform the DTC Confirmation Procedure and confirm the normal code [DTC No. P0000] is detected. If the incident is still detected in the final check, perform STEP VI by using a method different from the previous one. Before returning the vehicle to the customer, be sure to erase the unnecessary (already fixed) (1st trip) DTC in ECM and TCM (Transmission control module). (Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" and AT-37, "HOW TO ERASE DTC" .)

DIAGNOSTIC WORKSHEET

Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a incident. It is important to fully understand the symptoms or conditions for a customer complaint.
Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.
Some conditions may cause the MI to come on steady or blink and DTC to be detected. Examples:

- Vehicle ran out of fuel, which caused the engine to misfire.
- Fuel filler cap was left off or incorrectly screwed on, allowing fuel to evaporate into the atmosphere.



Worksheet Sample

Customer name MR/MS		Model & Year	VIN
Engine #		Trans.	Mileage
Incident Date		Manuf. Date	In Service Date
Fuel and fuel filler cap		☐ Vehicle ran out of fuel causing misfire ☐ Fuel filler cap was left off or incorrectly screwed on.	
Symptoms	☐ Startability	☐ Impossible to start ☐ No combustion ☐ Partial combustion ☐ Partial combustion affected by throttle position ☐ Partial combustion NOT affected by throttle position ☐ Possible but hard to start ☐ Others [ ]	
	☐ Idling	☐ No fast idle ☐ Unstable ☐ High idle ☐ Low idle ☐ Others [ ]	
	☐ Driveability	☐ Stumble ☐ Surge ☐ Knock ☐ Lack of power ☐ Intake backfire ☐ Exhaust backfire ☐ Others [ ]	
	☐ Engine stall	☐ At the time of start ☐ While idling ☐ While accelerating ☐ While decelerating ☐ Just after stopping ☐ While loading	
Incident occurrence		☐ Just after delivery ☐ Recently ☐ In the morning ☐ At night ☐ In the daytime	
Frequency		☐ All the time ☐ Under certain conditions ☐ Sometimes	
Weather conditions		☐ Not affected	
	Weather	☐ Fine ☐ Raining ☐ Snowing ☐ Others [ ]	
	Temperature	☐ Hot ☐ Warm ☐ Cool ☐ Cold ☐ Humid °F	
Engine conditions		☐ Cold ☐ During warm-up ☐ After warm-up Engine speed 0 2,000 4,000 6,000 8,000 rpm	
Road conditions		☐ In town ☐ In suburbs ☐ Highway ☐ Off road (up/down)	
Driving conditions		☐ Not affected ☐ At starting ☐ While idling ☐ At racing ☐ While accelerating ☐ While cruising ☐ While decelerating ☐ While turning (RH/LH) Vehicle speed 0 10 20 30 40 50 60 MPH	
Malfunction indicator lamp		☐ Turned on ☐ Not turned on	

MTBL0017

DTC Inspection Priority Chart

EBS00O3H

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:

If DTC U1000 and/or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000 and U1001. Refer to EC-130, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

Priority	Detected items (DTC)
1	● U1000 U1001 CAN communication line ● P0107 P0108 Manifold absolute pressure sensor ● P0112 P0113 Intake air temperature sensor ● P0117 P0118 Engine coolant temperature sensor ● P0122 P0123 P0222 P0223 P1225 P1226 P2135 Throttle position sensor ● P0221 P0222 P0223 P1223 P1224 P1225 P1226 Throttle position sensor ● P0226 P0227 P0228 P1227 P1228 Accelerator pedal position sensor ● P0327 P0328 Knock sensor ● P0335 Crankshaft position sensor (POS) ● P0340 Camshaft position sensor (PHASE) ● P0500 Vehicle speed sensor ● P0605 ECM ● P0705 Park/Neutral position (PNP) switch ● P1171 Intake error ● P1229 Sensor power supply ● P1610-P1615 NATS ● P1706 Park/Neutral position (PNP) switch ● P2122 P2123 P2127 P2128 P2138 Accelerator pedal position sensor
2	● P0031 P0032 Heated oxygen sensor 1 heater ● P0037 P0038 Heated oxygen sensor 2 heater ● P0132 P0133 P0134 P1143 P1144 Heated oxygen sensor 1 ● P0138 P0139 P1146 P1147 Heated oxygen sensor 2 ● P0444 EVAP canister purge volume control solenoid valve ● P0710 P0720 P0725 P0731 P0732 P0733 P0734 P0740 P0745 P0750 P0755 P1705 P1760 A/T related sensors, solenoid valves and switches ● P1065 ECM power supply ● P1111 Intake valve timing control solenoid valve ● P1122 Electric throttle control function ● P1124 P1126 Throttle control motor relay ● P1128 Throttle control mother ● P1805 Brake switch
3	● P0011 Intake valve timing control ● P0171 P0172 Fuel injection system function ● P0300 - P0304 Misfire ● P0420 Three way catalyst function ● P1121 Electric throttle control actuator ● P1211 ESP control unit ● P1212 ESP communication line ● P1217 Engine over temperature (OVERHEAT)

Fail-safe Chart

EBS00O3I

- When the DTC listed bellow is detected, the ECM enters fail-safe mode and the MI lights up.

DTC No.	Detected items	Engine operating condition in fail-safe mode
P0107 P0108	Manifold absolute pressure sensor circuit	Engine speed will not rise more than 2,500 rpm due to the fuel cut.
P0112 P0113	Intake air temperature sensor circuit	Intake air temperature is deter mined as 30° (86°F).
P0117 P0118	Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-II displays the engine coolant temperature decided by ECM.
		Condition: Just as ignition switch is turned ON or Start — Engine coolant temperature decided (CONSULT-II display): 40°C (104°F)
		Condition: More than approx. 4 minutes after ignition ON or Start — Engine coolant temperature decided (CONSULT-II display): 80°C (176°F)
		Condition: Except as shown above — Engine coolant temperature decided (CONSULT-II display): 40 - 80°C (104 - 176°F) (Depends on the time)
		When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.
P0122 P0123 P0222 P0223 P2135	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P0221 P0222 P0223 P1223 P1224	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P0226 P0227 P0228 P1227 P1228	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P1121	Electric throttle control actuator	(When electric throttle control actuator does not function properly due to the return spring malfunction:) ECM controls the electric throttle control actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
		(When throttle valve opening angle in fail-safe mode is not in specified range:) ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
		(When ECM detects the throttle valve is stuck open:) While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.
P1122	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1124 P1126	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1128	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1171	Intake air	When accelerator pedal is depressed, engine speed will not rise more than 2,500 rpm due to fuel cut.

DTC No.	Detected items	Engine operating condition in fail-safe mode
P1229	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

- When there is an open circuit on MI circuit, the ECM can not warn the driver by lighting MI up when there is a malfunction on engine control system.
  Therefore, when electrical controlled throttle and part of ECM related diagnoses is continuously detected as NG for 5 trips, ECM warns the driver that engine control system has a malfunction and MI circuit is open by means of operating fail-safe function.
  The fail-safe function also operate when above diagnoses except MI circuit are detected, and demands the driver to repair the malfunction.

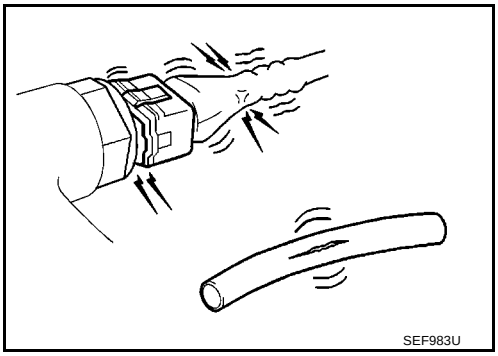
Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

Basic Inspection

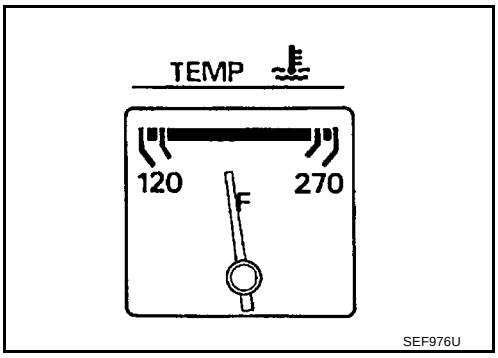
EBS00O3J

1. INSPECTION START

1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
   - Harness connectors for improper connections
   - Wiring harness for improper connections, pinches and cut
   - Vacuum hoses for splits, kinks and improper connections
   - Hoses and ducts for leaks
   - Air cleaner clogging
   - Gasket
3. Confirm that electrical or mechanical loads are not applied.
   - Headlamp switch is OFF.
   - Air conditioner switch is OFF.
   - Rear window defogger switch is OFF.
   - Steering wheel is in the straight-ahead position, etc.
4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
   Ensure engine stays below 1,000 rpm.



SEF983U

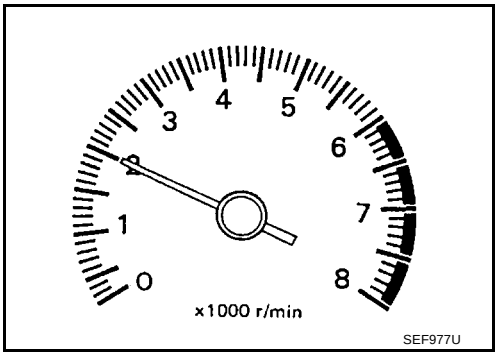


SEF976U

5. Run engine at about 2,000 rpm for about 2 minutes under no load.
6. Make sure that no DTC is displayed with CONSULT-II or GST.

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



SEF977U

2. REPAIR OR REPLACE

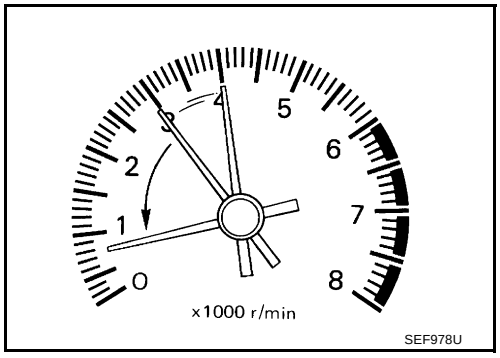
Repair or replace components as necessary according to corresponding Diagnostic Procedure.

>> GO TO 3

3. CHECK TARGET IDLE SPEED

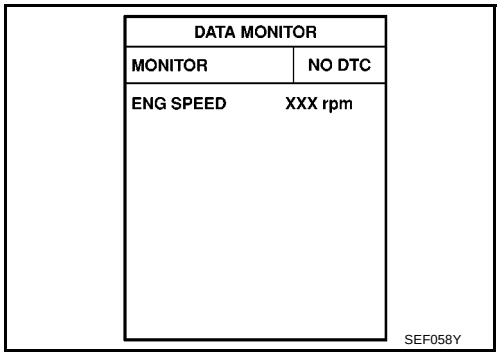
With CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.



3. Read idle speed in “DATA MONITOR” mode with CONSULT-II.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)



Without CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-42, "Accelerator Pedal Released Position Learning" .

>> GO TO 5.

5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-42, "Throttle Valve Closed Position Learning" .

>> GO TO 6.

6. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-42, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 7.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

7. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-II.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to EC-267 .
- Check crankshaft position sensor (POS) and circuit. Refer to EC-261 .

OK or NG

OK >> GO TO 9.
NG >> 1. Repair or replace.
2. GO TO 4.

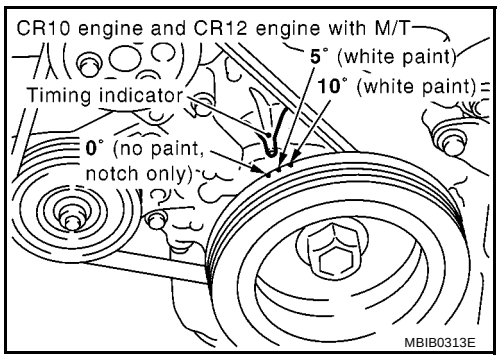
9. CHECK ECM FUNCTION

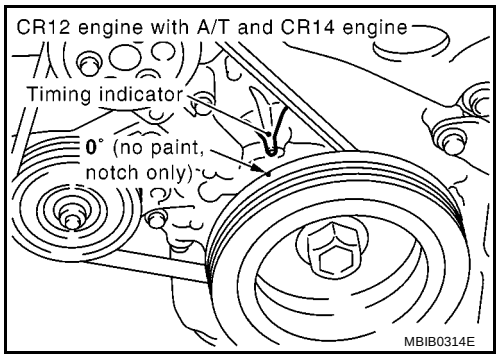
1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NATS system and registration of NATS ignition key IDs. Refer to EC-60 .

>> GO TO 4.

10. CHECK IGNITION TIMING

1. Run engine at idle.
2. Check ignition timing with a timing light.





M/T: 5 ± 2° BTDC
A/T: 5 ± 2° BTDC (in P or N position)

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 11.

11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-42, "Accelerator Pedal Released Position Learning" .

>> GO TO 12.

12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-42, "Throttle Valve Closed Position Learning" .

>> GO TO 13.

13. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-42, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 14.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

14. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-II.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

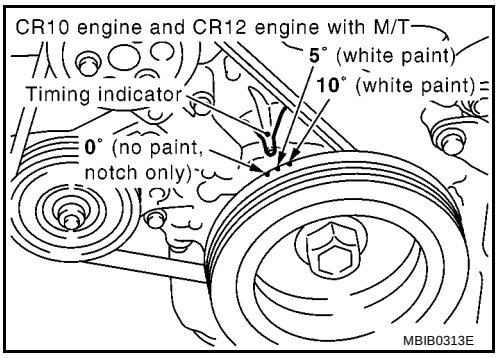
M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

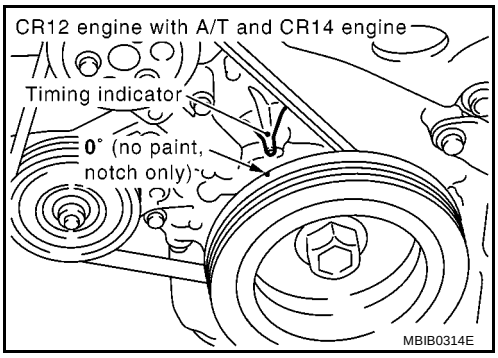
OK or NG

OK >> GO TO 15.
NG >> GO TO 17.

15. CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.





M/T: 5 ± 2° BTDC
A/T: 5 ± 2° BTDC (in P or N position)

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 16.

16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to EM-48, "TIMING CHAIN" .

OK or NG

OK >> GO TO 17.
NG >> 1. Repair the timing chain installation.
2. GO TO 4.

17. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to EC-267 .
- Check crankshaft position sensor (POS) and circuit. Refer to EC-261 .

OK or NG

OK >> GO TO 18.
NG >> 1. Repair or replace.
2. GO TO 4.

18. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NATS system and registration of NATS ignition key IDs. Refer to EC-60 .

>> GO TO 4.
