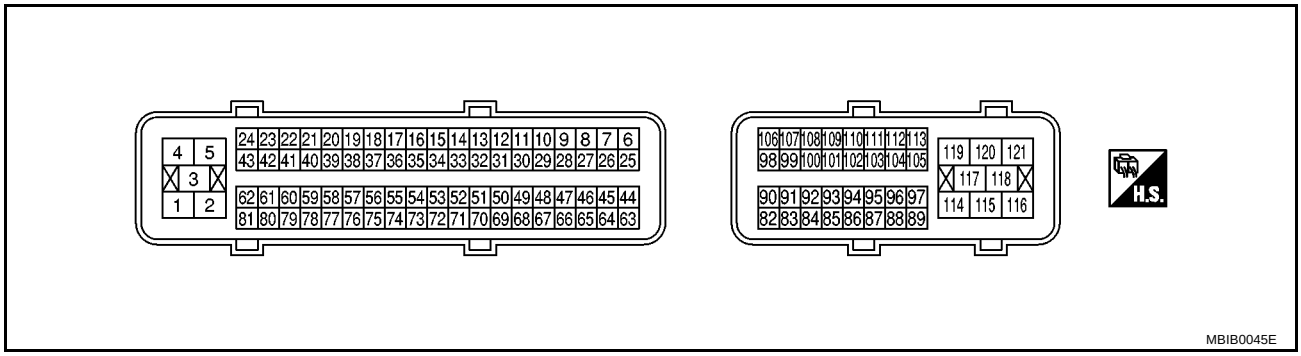
ECM Harness Connector Terminal Layout

EBS00O3N

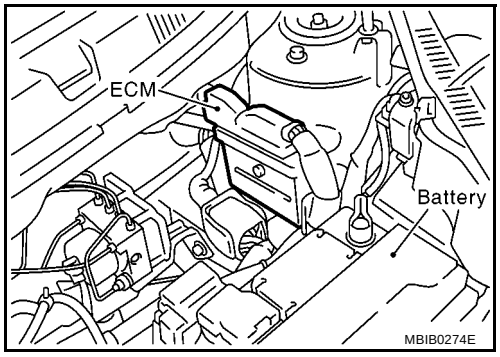


ECM Terminals and Reference Value

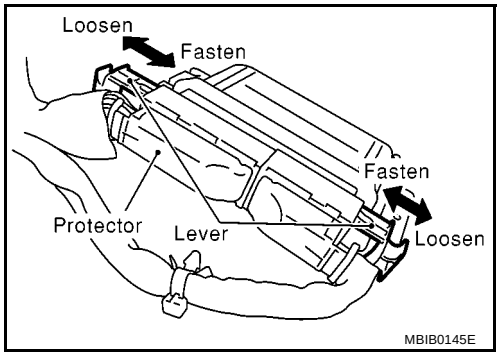
EBS00O3O

PREPARATION

1. ECM is located left hand side of the engine room.
2. Remove ECM harness protector.



3. When disconnecting ECM harness connector, loosen it with levers as far as they will go as shown at right.
4. Connect a break-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.
   - Use extreme care not to touch 2 pins at one time.
   - Data is for comparison and may not be exact.



ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	B	ECM ground	**[Engine is running]** ● Idle speed	Engine ground

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	GY	Heated oxygen sensor 2 heater	**[Engine is running]** ● Engine speed is below 3,600 rpm (A/T models), 3,800 rpm (M/T models) after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - 1.0V
			[Ignition switch ON] ● Engine stopped **[Engine is running]** ● Engine speed is above 3,600 rpm (A/T models), 3,800 rpm (M/T models)	BATTERY VOLTAGE (11 - 14V)
3	LG	Throttle control motor relay power supply	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
4	L	Throttle control motor (Close)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Released	0 - 14V★  PBIB0534E
5	P	Throttle control motor (Open)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB0533E
13	Y	Crankshaft position sensor (POS)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	Approximately 3.0V★  PBIB0527E
			[Engine is running] ● Engine speed is 2,000 rpm	Approximately 3.0V★  PBIB0528E

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
14	R	Camshaft position sensor (PHASE)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	1.0 - 4.0V★  PBIB0525E
			[Engine is running] ● Engine speed is 2,000 rpm.	1.0 - 4.0V★  PBIB0526E
15	W	Knock sensor	**[Engine is running]** ● Idle speed	Approximately 2.5V
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● **Warm-up condition** ● Engine speed is below 3,600 rpm (A/T models), 3,800 rpm (M/T models) after the following conditions are met. ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - Approximately 1.0V
19	LG	EVAP canister purge volume control solenoid valve	**[Engine is running]** ● Idle speed	BATTERY VOLTAGE (11 - 14V)★  PBIB0050E
			[Engine is running] ● Engine speed is about 2,000 rpm (More than 100 seconds after starting engine)	Approximately 10V★  PBIB0520E

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
22 23 41 42	OR L R GY	Injector No. 3 Injector No. 1 Injector No. 4 Injector No. 2	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	BATTERY VOLTAGE (11 - 14V)★  PBIB0529E
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm	BATTERY VOLTAGE (11 - 14V)★  PBIB0530E
24	Y	Heated oxygen sensor 1 heater	**[Engine is running]** ● **Warm-up condition** ● Engine speed is below 3,600 rpm.	Approximately 7.0V★  PBIB0519E
			[Engine is running] ● Engine speed is above 3,600 rpm.	BATTERY VOLTAGE (11 - 14V)
29	B	Sensor ground (Camshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
30	B	Sensor ground (Crankshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
34	OR	Intake air temperature sensor	**[Engine is running]**	Approximately 0 - 4.8V Output voltage varies with intake air temperature.
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
45	L	Sensor power supply	**[Ignition switch ON]**	Approximately 5V
46	W	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch ON]**	Approximately 5V
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V
51	W	Manifold absolute pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 1.5V
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	Approximately 1.2V
54	—	Sensor ground (Knock sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
56	B	Sensor ground (Manifold absolute pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
57	Y	Sensor ground (Refrigerant pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
60 61 79 80	Y PU G BR	Ignition signal No. 3 Ignition signal No. 1 Ignition signal No. 4 Ignition signal No. 2	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	0 - 0.1V★  PBIB0521E
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - 0.2V★  PBIB0522E

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
62	LG	Intake valve timing control solenoid valve	**[Engine is running]** ● **Warm-up condition** ● Idle speed	BATTERY VOLTAGE (11 - 14V)★
			[Engine is running] ● **Warm-up condition** ● When revving engine up to 2,000 rpm quickly	Approximately 4V - BATTERY VOLTAGE (11 - 14V)★  PBIB1790E
66	B	Sensor ground (Throttle position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V
69	BR	Refrigerant pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Both A/C switch and blower switch are ON (Compressor operates.)	1.0 - 4.0V
72	P	Engine coolant temperature sensor	**[Engine is running]**	Approximately 0 - 4.8V Output voltage varies with engine coolant temperature.
73	B	Sensor ground (Engine coolant temperature sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
82	B	Sensor ground (APP sensor 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
83	B	Sensor ground (APP sensor 2)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
85	LG	DATA link connector	**[Ignition switch ON]** ● CONSULT-II or GST is disconnected.	BATTERY VOLTAGE (11 - 14V)
86	W	CAN communication line	**[Ignition switch ON]**	1.0 - 2.5V
90	OR	Sensor power supply (APP sensor 1)	**[Ignition switch ON]**	Approximately 5V

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
91	BR	Sensor power supply (APP sensor 2)	**[Ignition switch ON]**	Approximately 5V
92	GY	Throttle position sensor signal output (A/T models)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position is D (A/T models) ● Accelerator pedal: Fully released	Approximately 0.5V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Accelerator pedal: Fully depressed	Approximately 4.2V
94	R	CAN communication line	**[Ignition switch ON]**	2.5 - 4.0V
98	GY	Accelerator pedal position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Accelerator pedal: Fully released	0.3 - 0.6V
			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	1.95 - 2.4V
101	W	Stop lamp switch	**[Ignition switch ON]** ● Brake pedal: Fully released	Approximately 0V
			[Ignition switch ON] ● Brake pedal: Depressed	BATTERY VOLTAGE (11 - 14V)
102	GY	PNP switch	**[Ignition switch ON]** ● Gear position: P or N (A/T models), Neutral (M/T models)	Approximately 0V
			[Ignition switch ON] ● Except the above gear position	BATTERY VOLTAGE (11 - 14V)
103	L/OR	Tachometer signal output (A/T models)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	10 - 11V★  MBIB0053E
			[Engine is running] ● Engine speed is 2,000 rpm	10 - 11V★  MBIB0054E
104	G	Throttle control motor relay	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch ON]	0 - 1.0V

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
106	W	Accelerator pedal position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Accelerator pedal: Fully released	0.6 - 0.9V
			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	3.9 - 4.7V
109	PU	Ignition switch	**[Ignition switch OFF]**	0V
			[Ignition switch ON]	BATTERY VOLTAGE (11 - 14V)
111	P	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.0V
			[Ignition switch OFF] ● More than a few seconds passed after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
113	R	Fuel pump relay	**[Ignition switch ON]** ● For 1 second after turning ignition switch ON **[Engine is running]**	0 - 1.0V
			[Ignition switch ON] ● More than 1 second after turning ignition switch ON	BATTERY VOLTAGE (11 - 14V)
115 116	B B	ECM ground	**[Engine is running]** ● Idle speed	Engine ground
119 120	G G	Power supply for ECM	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
121	BR	Power supply for ECM (Back-up)	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

CONSULT-II Function (ENGINE)

EBS00O3P

FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-II unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*
Data monitor	Input/Output data in the ECM can be read.
Data monitor (SPEC)	Input/Output of the specification for Basic fuel schedule, A/F feedback control value and the other data monitor items can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
Function test	This mode is used to inform customers when their vehicle condition requires periodic maintenance.
DTC & SRT confirmation	The status of system monitoring tests and the self-diagnosis status/result can be confirmed.
ECM part number	ECM part number can be read.

*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes

- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- System readiness test (SRT) codes
- Test values
- Others

X: Applicable

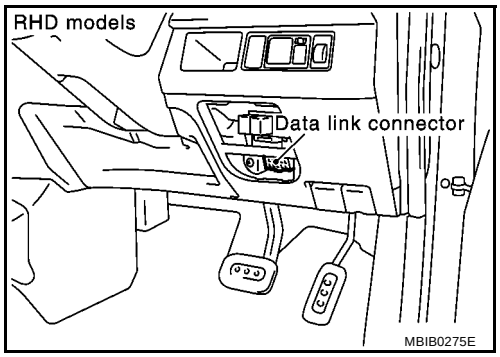
*1: This item includes 1st trip DTCs.
*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to EC-51 .

INSPECTION PROCEDURE

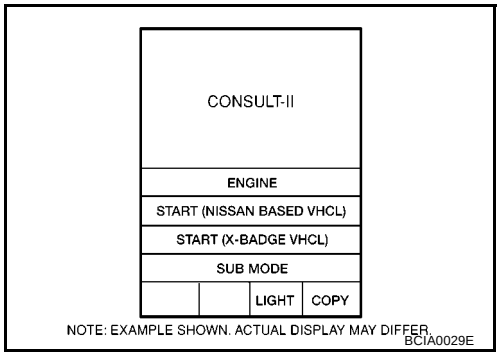
CAUTION:

If CONSULT-II is used with no connection to CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

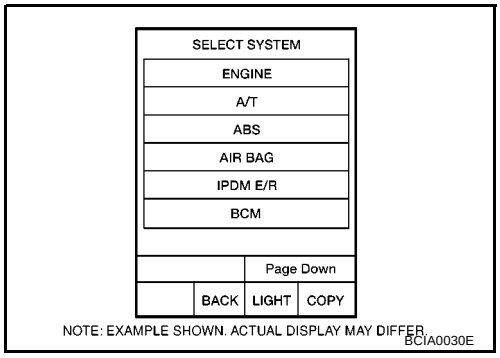
1. Turn ignition switch OFF.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to data link connector, which is located under drivers side dash panel.
3. Turn ignition switch ON.



4. Touch “START(NISSAN BASED VHCL)”.

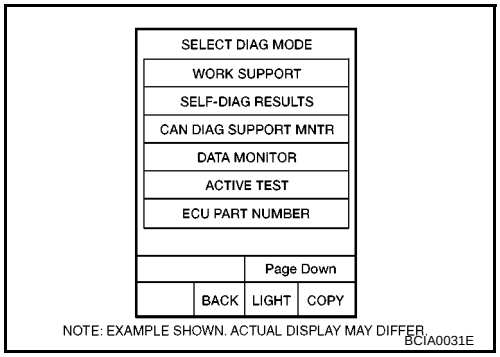


5. Touch “ENGINE”.
   If “ENGINE” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Perform each diagnostic test mode according to each service procedure.

For further information, see the CONSULT-II Operation Manual.



WORK SUPPORT MODE

Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	● FUEL PUMP WILL STOP BY TOUCHING “START” DURING IDLING. CRANK A FEW TIMES AFTER ENGINE STALLS.	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	● THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.	When learning the idle air volume
SELF-LEARNING CONT	● THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEFFICIENT.	When clearing the coefficient of self-learning control value
TARGET IGN TIM ADJ*	● IDLE CONDITION	When adjusting target ignition timing
TARGET IDLE RPM ADJ*	● IDLE CONDITION	When setting target idle speed

*: This function is not necessary in the usual service procedure.

SELF-DIAG RESULTS MODE

Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to EC-11, "INDEX FOR DTC" .

Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	● The engine control component part/control system has a trouble code, it is displayed as “PXXXX”. (Refer to EC-11, "INDEX FOR DTC" .)
FUEL SYS-B1	● Fuel injection system status at the moment a malfunction is detected is displayed. ● One mode in the following is displayed. Mode2: Open loop due to detected system malfunction Mode3: Open loop due to driving conditions (power enrichment, deceleration enleanment) Mode4: Closed loop - using oxygen sensor(s) as feedback for fuel control Mode5: Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	● The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	● The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRM-B1 [%]	● “Long-term fuel trim” at the moment a malfunction is detected is displayed. ● The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRM-B1 [%]	● “Short-term fuel trim” at the moment a malfunction is detected is displayed. ● The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.
ENGINE SPEED [rpm]	● The engine speed at the moment a malfunction is detected is displayed.
VEHICL SPEED [km/h] or [mph]	● The vehicle speed at the moment a malfunction is detected is displayed.
B/FUEL SCHDL [msec]	● The base fuel schedule at the moment a malfunction is detected is displayed.
INT/A TEMP SE [°C] or [°F]	● The intake air temperature at the moment a malfunction is detected is displayed.

*: The items are the same as those of 1st trip freeze frame data.

DATA MONITOR MODE
Monitored Item

×: Applicable

Monitored item [Unit]	ECM INPUT SIG-NALS	MAIN SIG-NALS	Description	Remarks
ENG SPEED [rpm]	×	×	● Indicates the engine speed computed from the signals of the crankshaft position sensor (POS) and camshaft position sensor (PHASE).	● Accuracy becomes poor if engine speed drops below the idle rpm. ● If the signal is interrupted while the engine is running, an abnormal value may be indicated.
COOLAN TEMP/S [°C] or [°F]	×	×	● The engine coolant temperature (determined by the signal voltage of the engine coolant temperature sensor) is displayed.	● When the engine coolant temperature sensor is open or short-circuited, ECM enters fail-safe mode. The engine coolant temperature determined by the ECM is displayed.
HO2S1 (B1) [V]	×	×	● The signal voltage of the heated oxygen sensor 1 is displayed.	
HO2S2 (B1) [V]	×		● The signal voltage of the heated oxygen sensor 2 is displayed.	
HO2S1 MNTR (B1) [RICH/LEAN]	×	×	● Display of heated oxygen sensor 1 signal during air-fuel ratio feedback control: RICH ... means the mixture became “rich”, and control is being affected toward a leaner mixture. LEAN ... means the mixture became “lean”, and control is being affected toward a rich mixture.	● After turning ON the ignition switch, “RICH” is displayed until air-fuel mixture ratio feedback control begins. ● When the air-fuel ratio feedback is clamped, the value just before the clamping is displayed continuously.
HO2S2 MNTR (B1) [RICH/LEAN]	×		● Display of heated oxygen sensor 2 signal: RICH ... means the amount of oxygen after three way catalyst is relatively small. LEAN ... means the amount of oxygen after three way catalyst is relatively large.	● When the engine is stopped, a certain value is indicated.
A/F ALPHA-B1 [%]		×	● The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	● When the engine is stopped, a certain value is indicated. ● This data also includes the data for the air-fuel ratio learning control.
VHCL SPEED SE [km/h] or [mph]	×	×	● The vehicle speed computed from the vehicle speed signal is displayed.	
BATTERY VOLT [V]	×	×	● The power supply voltage of ECM is displayed.	
B/FUEL SCHDL [msec]		×	● “Base fuel schedule” indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	
ACCEL SEN 1 [V]	×	×	● The accelerator pedal position sensor signal voltage is displayed.	
ACCEL SEN 2 [V]	×			
THRTL SEN 1 [V]	×	×	● The throttle position sensor signal voltage is displayed.	
THRTL SEN 2 [V]	×			
INT/A TEMP SE [°C] or [°F]	×	×	● The intake air temperature (determined by the signal voltage of the intake air temperature sensor) is indicated.	
TURBO BST SEN [V]	×		● The signal voltage of the manifold absolute pressure sensor is displayed.	

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks
START SIGNAL [ON/OFF]	×	×	● Indicates start signal status [ON/OFF] computed by the ECM according to the signals of engine speed and battery voltage.	● After starting the engine, [OFF] is displayed regardless of the starter signal.
CLSD THL POS [ON/OFF]	×	×	● Indicates idle position [ON/OFF] computed by the ECM according to the accelerator pedal position sensor signal.	
AIR COND SIG [ON/OFF]	×	×	● Indicates [ON/OFF] condition of the air conditioner switch as determined by the air conditioner signal.	
P/N POSI SW [ON/OFF]	×	×	● Indicates [ON/OFF] condition from the park/neutral position (PNP) switch signal.	
PW/ST SIGNAL [ON/OFF]	×	×	● [ON/OFF] condition of the power steering oil pressure switch as determined by the power steering oil pressure signal is indicated.	
LOAD SIGNAL [ON/OFF]	×	×	● Indicates [ON/OFF] condition from the electrical load signal. ON ... Rear window defogger switch is ON and/or lighting switch is in 2nd position. OFF ... Both rear window defogger switch and lighting switch are OFF.	
IGNITION SW [ON/OFF]	×		● Indicates [ON/OFF] condition from ignition switch.	
HEATER FAN SW [ON/OFF]	×		● Indicates [ON/OFF] condition from the heater fan switch signal.	
BRAKE SW [ON/OFF]	×		● Indicates [ON/OFF] condition from the stop lamp switch signal.	
INJ PULSE-B1 [msec]		×	● Indicates the actual fuel injection pulse width compensated by ECM according to the input signals.	● When the engine is stopped, a certain computed value is indicated.
IGN TIMING [BTDC]		×	● Indicates the ignition timing computed by ECM according to the input signals.	● When the engine is stopped, a certain value is indicated.
CAL/LD VALUE [%]			● “Calculated load value” indicates the value of the current airflow divided by peak airflow.	
MASS AIRFLOW [g·m/s]			● Indicates the mass air flow computed by ECM according to the signal voltage of manifold absolute pressure sensor.	
PURG VOL C/V [%]			● Indicates the EVAP canister purge volume control solenoid valve control value computed by the ECM according to the input signals. ● The opening becomes larger as the value increases.	
INT/V TIM (B1) [°CA]			● Indicates [°CA] of intake camshaft advanced angle.	
INT/V SOL (B1) [%]			● The control value of the intake valve timing control solenoid valve (determined by ECM according to the input signals) is indicated. ● The advance angle becomes larger as the value increases.	

Monitored item [Unit]	ECM INPUT SIG-NALS	MAIN SIG-NALS	Description	Remarks
AIR COND RLY [ON/OFF]		×	● The air conditioner relay control condition (determined by ECM according to the input signals) is indicated.	
FUEL PUMP RLY [ON/OFF]		×	● Indicates the fuel pump relay control condition determined by ECM according to the input signals.	
THRTL RELAY [ON/OFF]		×	● Indicates the throttle control motor relay control condition determined by the ECM according to the input signals.	
COOLING FAN [HI/LOW/OFF]		×	● Indicates the condition of the cooling fan (determined by ECM according to the input signals). HI ... High speed operation LOW ... Low speed operation OFF ... Stop	
HO2S1 HTR (B1) [ON/OFF]			● Indicates [ON/OFF] condition of heated oxygen sensor 1 heater determined by ECM according to the input signals.	
HO2S2 HTR (B1) [ON/OFF]			● Indicates [ON/OFF] condition of heated oxygen sensor 2 heater determined by ECM according to the input signals.	
IDL A/V LEARN [YET/CMPLT]			● Display the condition of idle air volume learning YET ... Idle air volume learning has not been performed yet. CMPLT ... Idle air volume learning has already been performed successfully.	
TRVL AFTER MIL [km] or [mile]			● Distance traveled while MI is activated.	
O2 SEN HTR DTY [%]			● Indicates the heated oxygen sensor 1 heater control valve computed by the ECM according to the input signals.	
AC PRESS SEN [V]	×		● The signal voltage from the refrigerant pressure sensor is displayed.	
Voltage [V]			● Voltage, frequency, duty cycle or pulse width measured by the probe.	● Only “#” is displayed if item is unable to be measured. ● Figures with “#”s are temporary ones. They are the same figures as an actual piece of data which was just previously measured.
Frequency [msec], [Hz] or [%]				
DUTY-HI				
DUTY-LOW				
PLS WIDTH-HI				
PLS WIDTH-LOW				

NOTE:

- Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

DATA MONITOR (SPEC) MODE

Monitored Item

Monitored item [Unit]	ECM input signals	Main signals	Description	Remarks
ENG SPEED [rpm]	×		● Indicates the engine speed computed from the signal of the crankshaft position sensor (POS).	
B/FUEL SCHDL [msec]			● “Base fuel schedule” indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	● When engine is running specification range is indicated.
A/F ALPHA-B1 [%]		×	● The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	● When engine is running specification range is indicated. ● This data also includes the data for the air-fuel ratio learning control.

NOTE:
- Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

ACTIVE TEST MODE

Test Item

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
FUEL INJECTION	● Engine: Return to the original trouble condition ● Change the amount of fuel injection using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Fuel injectors ● Heated oxygen sensor 1
IGNITION TIMING	● Engine: Return to the original trouble condition ● Timing light: Set ● Retard the ignition timing using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Perform Idle Air Volume Learning.
POWER BALANCE	● Engine: After warming up, idle the engine. ● A/C switch: OFF ● Shift lever: N ● Cut off each injector signal one at a time using CONSULT-II.	Engine runs rough or dies.	● Harness and connectors ● Compression ● Fuel injectors ● Power transistor ● Spark plugs ● Ignition coils
COOLING FAN*1	● Ignition switch: ON ● Turn the cooling fan ON and OFF with CONSULT-II.	Cooling fan moves and stops.	● Harness and connectors ● Cooling fan relay ● Cooling fan motor
ENG COOLANT TEMP	● Engine: Return to the original trouble condition ● Change the engine coolant temperature using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Engine coolant temperature sensor ● Fuel injectors
FUEL PUMP RELAY	● Ignition switch: ON (Engine stopped) ● Turn the fuel pump relay ON and OFF using CONSULT-II and listen to operating sound.	Fuel pump relay makes the operating sound.	● Harness and connectors ● Fuel pump relay

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
PURG VOL CONT/V	● Engine: After warming up, run engine at 1,500 rpm. ● Change the EVAP canister purge volume control solenoid valve opening percent using CONSULT-II.	Engine speed changes according to the opening percent.	● Harness and connectors ● Solenoid valve
V/T ASSIGN ANGLE	● Engine: Return to the original trouble condition ● Change intake valve timing using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Intake valve timing control solenoid valve

*1:Leaving cooling fan OFF with CONSULT-II while engine is running may cause the engine to overheat.

DTC & SRT CONFIRMATION MODE

SRT STATUS Mode

For details, refer to EC-51, "SYSTEM READINESS TEST (SRT) CODE" .

SRT Work Support Mode

This mode enables a technician to drive a vehicle to set the SRT while monitoring the SRT status.

DTC Work Support Mode

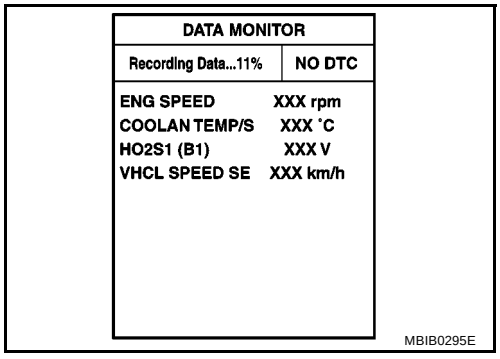
Test mode	Test item	Condition	Reference page
HO2S1	HO2S1 (B1) P0133	Refer to corresponding trouble diagnosis for DTC.	EC-175
	HO2S1 (B1) P0134		EC-185
	HO2S1 (B1) P1143		EC-315
	HO2S1 (B1) P1144		EC-321
H02S2	HO2S2 (B1) P0139		EC-199
	HO2S2 (B1) P1146		EC-327
	HO2S2 (B1) P1147		EC-337

REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA)

Description

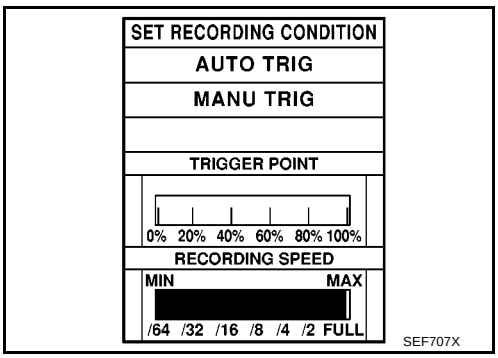
CONSULT-II has two kinds of triggers and they can be selected by touching “SETTING” in “DATA MONITOR” mode.

1. “AUTO TRIG” (Automatic trigger):
   - The malfunction will be identified on the CONSULT-II screen in real time.
     In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.
     At the moment a malfunction is detected by ECM, “MONITOR” in “DATA MONITOR” screen is changed to “Recording Data ... xx%” as shown in the figure, and the data after the malfunction detection is recorded. Then when the percentage reached 100%, “REAL-TIME DIAG” screen is displayed. If “STOP” is touched on the screen during “Recording Data ... xx%”, “REAL-TIME DIAG” screen is also displayed.
     The recording time after the malfunction detection and the



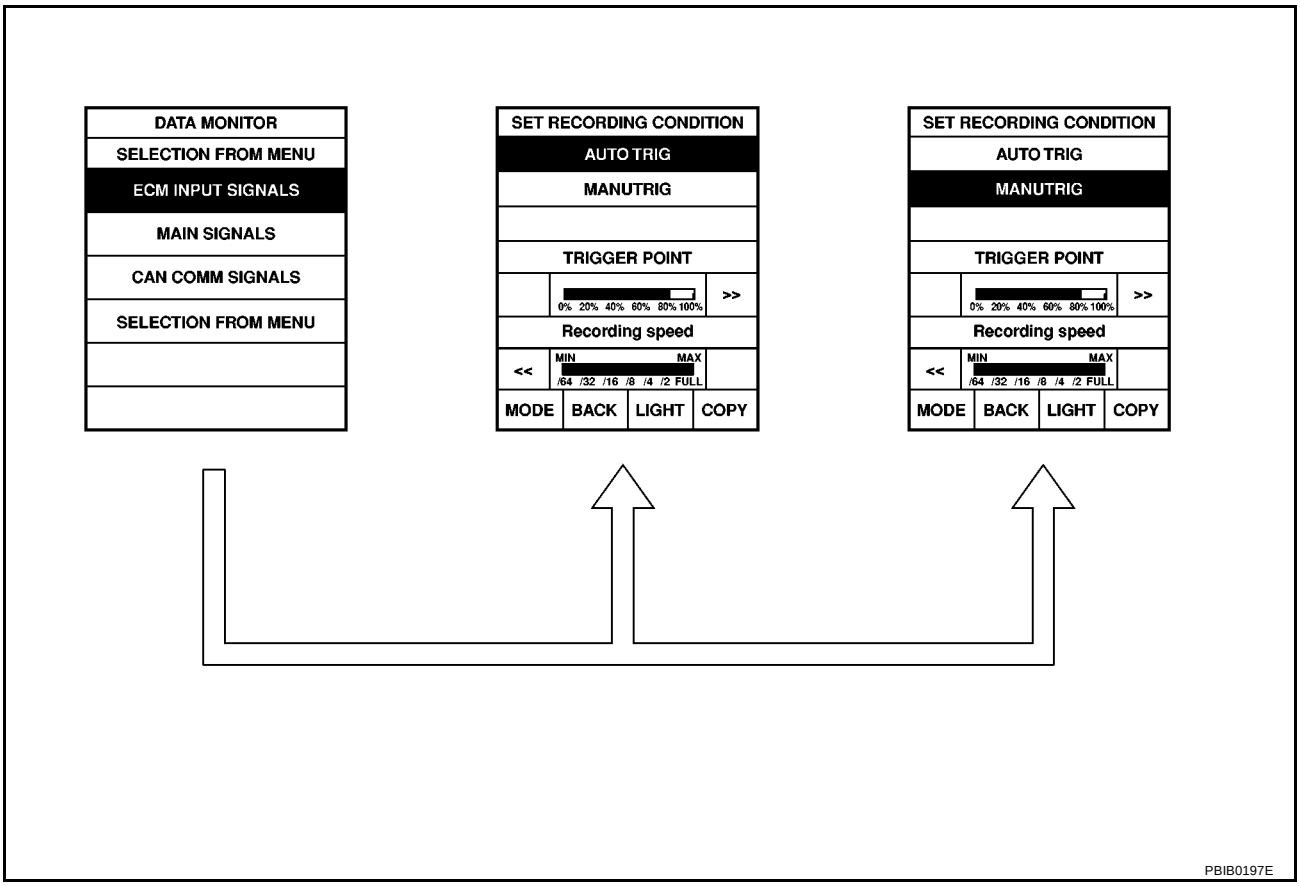
recording speed can be changed by “TRIGGER POINT” and “Recording Speed”. Refer to CONSULT-II OPERATION MANUAL.

2. “MANU TRIG” (Manual trigger):
   - DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.
     DATA MONITOR can be performed continuously even though a malfunction is detected.



Operation

1. “AUTO TRIG”
   - While trying to detect the DTC/1st trip DTC by performing the DTC Confirmation Procedure, be sure to select to “DATA MONITOR (AUTO TRIG)” mode. You can confirm the malfunction at the moment it is detected.
   - While narrowing down the possible causes, CONSULT-II should be set in “DATA MONITOR (AUTO TRIG)” mode, especially in case the incident is intermittent.
     When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the DTC Confirmation Procedure, the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to Incident Simulation Tests in GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" .)
2. “MANU TRIG”
   - If the malfunction is displayed as soon as “DATA MONITOR” is selected, reset CONSULT-II to “MANU TRIG”. By selecting “MANU TRIG” you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.

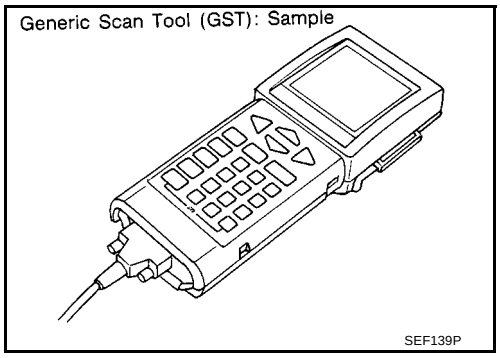


Generic Scan Tool (GST) Function

EBS00O3Q

DESCRIPTION

Generic Scan Tool (OBDII scan tool) complying with ISO 15031 has 8 different functions explained below.
ISO9141 is used as the protocol.
The name GST or Generic Scan Tool is used in this service manual.

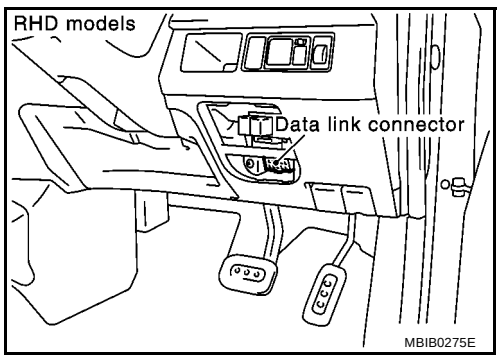


FUNCTION

Diagnostic test mode		Function
MODE 1	READINESS TESTS	This mode gains access to current emission-related data values, including analog inputs and outputs, digital inputs and outputs, and system status information.
MODE 2	(FREEZE DATA)	This mode gains access to emission-related data value which were stored by ECM during the freeze frame. For details, refer to EC-51, "FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA" .
MODE 3	DTCs	This mode gains access to emission-related power train trouble codes which were stored by ECM.
MODE 4	CLEAR DIAG INFO	This mode can clear all emission-related diagnostic information. This includes: ● Clear number of diagnostic trouble codes (MODE 1) ● Clear diagnostic trouble codes (MODE 3) ● Clear trouble code for freeze frame data (MODE 1) ● Clear freeze frame data (MODE 2) ● Reset status of system monitoring test (MODE 1) ● Clear on board monitoring test results (MODE 6 and 7)
MODE 6	(ON BOARD TESTS)	This mode accesses the results of on board diagnostic monitoring tests of specific components/systems that are not continuously monitored.
MODE 7	(ON BOARD TESTS)	This mode enables the off board test drive to obtain test results for emission-related powertrain components/systems that are continuously monitored during normal driving conditions.
MODE 8	—	This mode is not applicable on this vehicle.
MODE 9	(CALIBRATION ID)	This mode enables the off-board test device to request specific vehicle information such as Vehicle Identification Number (VIN) and Calibration IDs.

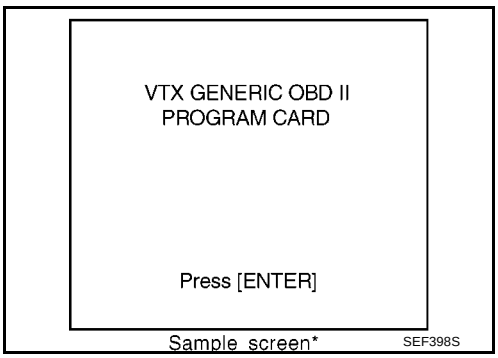
INSPECTION PROCEDURE

1. Turn ignition switch OFF.
2. Connect GST to data link connector, which is located under drivers side dash panel near the fuse box cover.
3. Turn ignition switch ON.



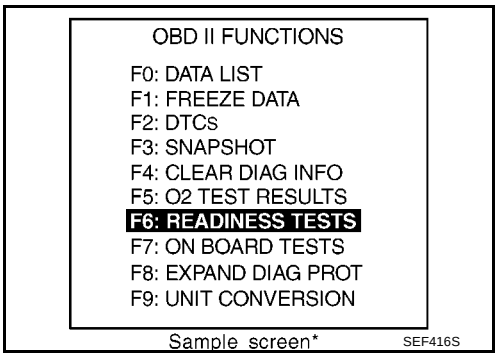
4. Enter the program according to instruction on the screen or in the operation manual.

(*: Regarding GST screens in this section, sample screens are shown.)



5. Perform each diagnostic mode according to each service procedure.

For further information, see the GST Operation Manual of the tool maker.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O3R

Remarks:
- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
  * Specification data may not be directly related to their components signals/values/operations.
  i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM according to the signals input from the camshaft position sensor and other ignition timing related sensors.

MONITOR ITEM	CONDITION		SPECIFICATION
ENG SPEED	● Tachometer: Connect ● Run engine and compare CONSULT-II value with the tachometer indication.		Almost the same speed as the tachometer indication.
B/FUEL SCHDL	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	2.5 - 3.5 msec
		2,000 rpm	2.5 - 3.5 msec
A/F ALPHA-B1	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	54% - 155%
COOLAN TEMP/S	● Engine: After warming up		More than 70°C (158°F)
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 MNTR (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	LEAN ←→ RICH
VEH SPEED SE	● Turn drive wheels and compare CONSULT-II value with the speedometer indication.		Almost the same speed as the speedometer indication.
BATTERY VOLT	● Ignition switch: ON (Engine stopped)		11 - 14V
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
THRTL SEN1 THRTL SEN2*1	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V
TURBO BST SEN	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	At idle	Approximately 1.5V
		At 2,500 rpm	Approximately 1.2V
START SIGNAL	● Ignition switch: ON → START → ON		OFF → ON → OFF
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates.)	ON
P/N POSI SW	● Ignition switch: ON	Shift lever: P or N (A/T models) Neutral (M/T models)	ON
		Shift lever: Except above	OFF
PW/ST SIGNAL	● Engine: After warming up, idle the engine	Steering wheel is in neutral position. (Forward direction)	OFF
		Steering wheel is turned.	ON
LOAD SIGNAL	● Ignition switch: ON	Rear window defogger switch is ON and/or lighting switch is in 2nd.	ON
		Rear window defogger switch is OFF and lighting switch is OFF.	OFF
IGNITION SW	● Ignition switch: ON → OFF → ON		ON → OFF → ON
HEATER FAN SW	● Engine: After warming up, idle the engine	Heater fan is operating.	ON
		Heater fan is not operating	OFF
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

MONITOR ITEM	CONDITION		SPECIFICATION
INJ PULSE-B1	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	2.0 - 3.0 msec
		2,000 rpm	1.9 - 2.9 msec
IGN TIMING	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	0° - 10° BTDC
		2,000 rpm	25° - 45° BTDC
CAL/LD VALUE	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	10% - 35%
		2,500 rpm	10% - 35%
MASS AIRFLOW	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	1.0 - 4.0 g·m/s
		2,500 rpm	4.0 - 10.0 g·m/s
PURG VOL C/V	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	0%
		2,000 rpm	20 - 30%
INT/V TIM (B1)	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		When revving up to 2,000 rpm quickly	Approx. 0° - 20°CA
INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		When revving up to 2,000 rpm quickly	Approx. 0% - 50%
AIR COND RLY	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates)	ON
FUEL PUMP RLY	● For 1 second after turning ignition switch ON ● Engine running or cranking		ON
	● Except above conditions		OFF
THRTL RELAY	● Ignition switch: ON		ON

MONITOR ITEM	CONDITION		SPECIFICATION
COOLING FAN	● Engine: After warming up, idle the engine ● Air conditioner switch: OFF	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (210°F)	LOW*2
		Engine coolant temperature is 105°C (212°F) or more	HIGH*2
HO2S1 HTR (B1)	● Engine: After warming up ● Engine speed: Below 3,600 rpm		ON
	● Engine speed: Above 3,600 rpm		OFF
HO2S2 HTR (B1)	● Engine speed is below 3,800 rpm (M/T models), 3,600 rpm (A/T models) after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.		ON
	● Engine speed: Above 3,800 rpm (M/T models), 3,600 rpm (A/T models)		OFF
TRVL AFTER MIL	● Ignition switch: ON	Vehicle has traveled after MI has turned ON.	0 - 65,535 km (0 - 40,723 mile)
O2SEN HTR DTY	● Engine coolant temperature when engine started: More than 80°C (176°F) ● Engine speed: below 3,600 rpm		Approx. 50%
AC PRESS SEN	● Ignition switch: ON (Engine stopped)		Approx. 0V
	● Engine: Idle ● Air conditioner switch: OFF		1.0 - 4.0V

*1 : Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.
*2: Models without air conditioner, cooling fan operates only ON and OFF operation, but CONSULT-II display will change OFF, LOW and HI depends on engine coolant temperature.

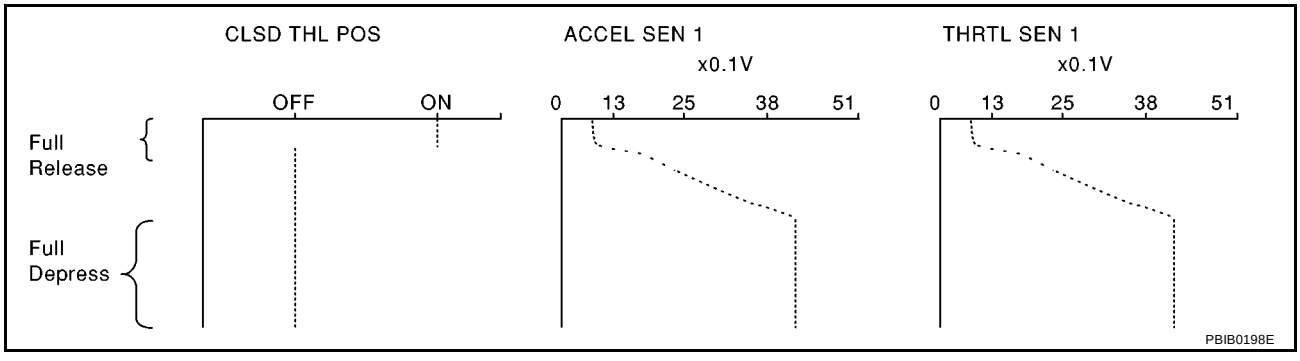
Major Sensor Reference Graph in Data Monitor Mode

EBS00O3S

The following are the major sensor reference graphs in “DATA MONITOR” mode.

CLSD THL POS, ACCEL SEN 1, THRTL SEN 1

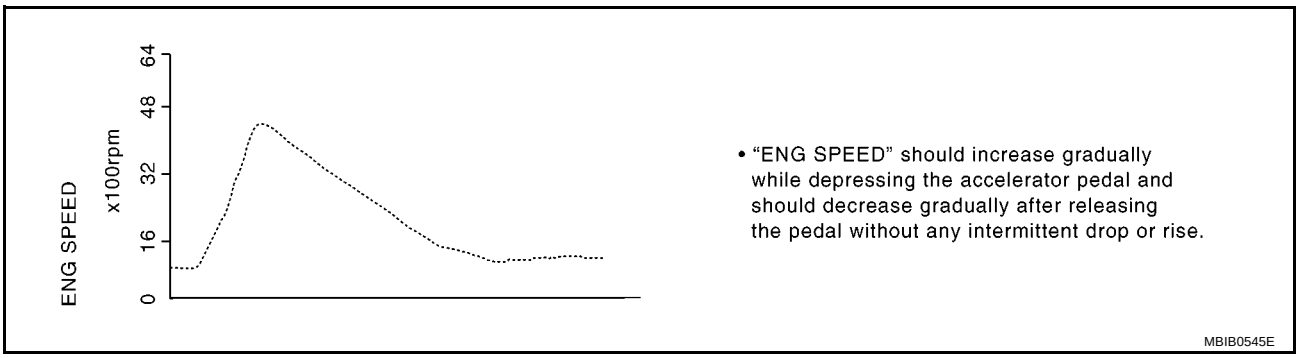
Below is the data for “CLSD THL POS”, “ACCEL SEN 1” and “THRTL SEN 1” when depressing the accelerator pedal with the ignition switch ON and with selector lever in D position (A/T models) or with shift lever in 1st position (M/T models).
The signal of “ACCEL SEN 1” and “THRTL SEN 1” should rise gradually without any intermittent drop or rise after “CLSD THL POS” is changed from “ON” to “OFF”.

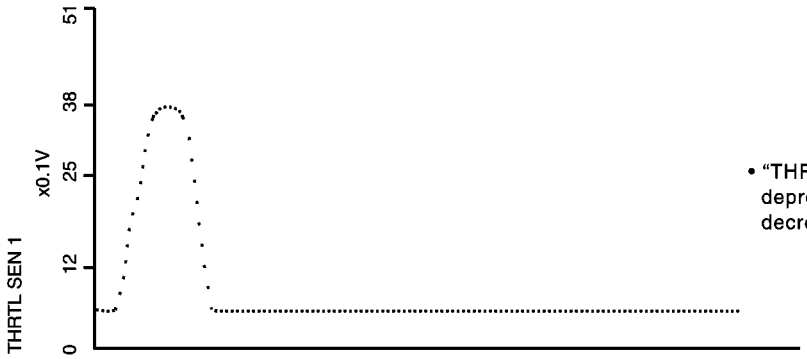


ENG SPEED, THRTL SEN 1, HO2S2 (B1), HO2S1 (B1), INJ PULSE-B1

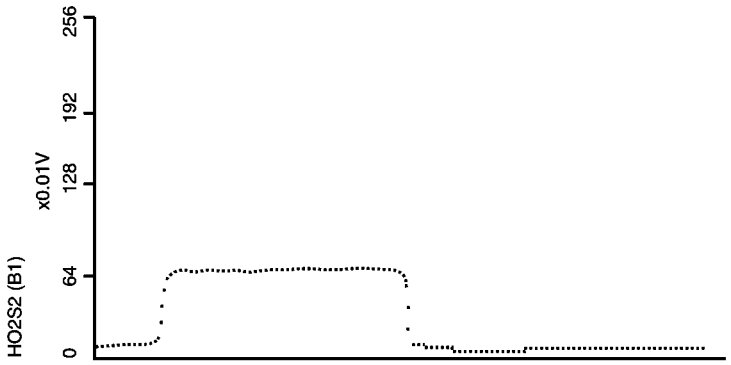
Below is the data for “ENG SPEED”, “THRTL SEN 1”, “HO2S2 (B1)”, “HO2S1 (B1)” and “INJ PULSE-B1” when revving engine quickly up to 4,800 rpm under no load after warming up engine sufficiently.

Each value is for reference, the exact value may vary.

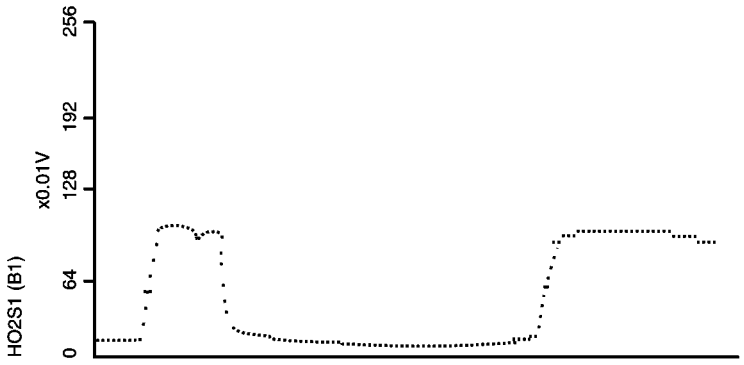




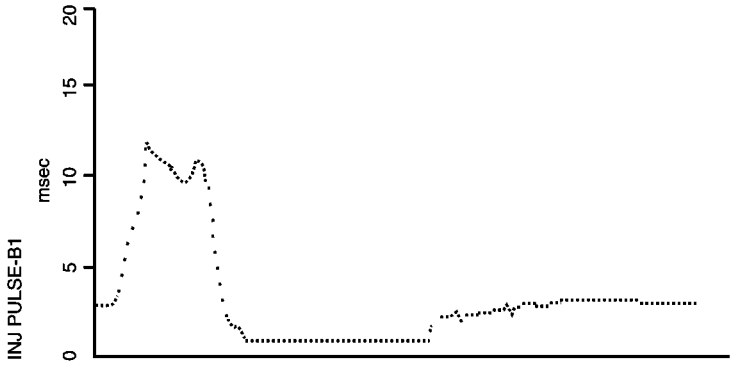
• "THRTL SEN 1" should increase while depressing the accelerator pedal and should decrease while releasing it.



• "HO2S2 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.



• "HO2S1 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.



• "INJ PULSE-B1" should increase when depressing the accelerator pedal and should decrease when the pedal is released.

PBIB0668E

TROUBLE DIAGNOSIS - SPECIFICATION VALUE

PFP:00031

Description

EBS00O3T

The specification (SP) value indicates the tolerance of the value that is displayed in “DATA MONITOR (SPEC)” mode of CONSULT-II during normal operation of the Engine Control System. When the value in “DATA MONITOR (SPEC)” mode is within the SP value, the Engine Control System is confirmed OK. When the value in “DATA MONITOR (SPEC)” mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.
The SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the MI.
The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1 (The mean value of air-fuel ratio feedback correction factor per cycle)

Testing Condition

EBS00O3U

- Vehicle driven distance: More than 5,000 km (3,017 miles)
- Barometric pressure: 98.3 - 104.3 kPa (0.983 - 1.043 bar, 1.003 - 1.064 kg/cm^2 , 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up*1
- Electrical load: Not applied*2
- Engine speed: Idle

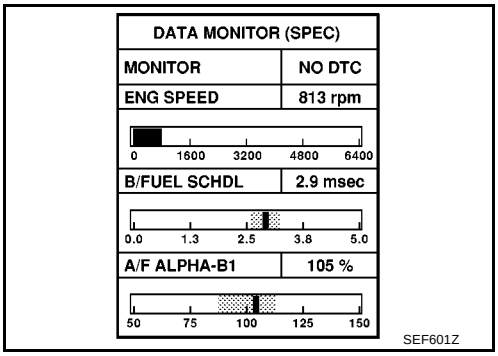
*1: For A/T models, after the engine is warmed up to normal operating temperature, drive vehicle until “FLUID TEMP SE” (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).
For M/T models, after the engine is warmed up to normal operating temperature, drive vehicle for 5 minutes.
*2: Rear window defogger switch, air conditioner switch, lighting switch are “OFF”. Steering wheel is straight ahead.

Inspection Procedure

EBS00O3V

NOTE:
Perform “DATA MONITOR (SPEC)” mode in maximum scale display.

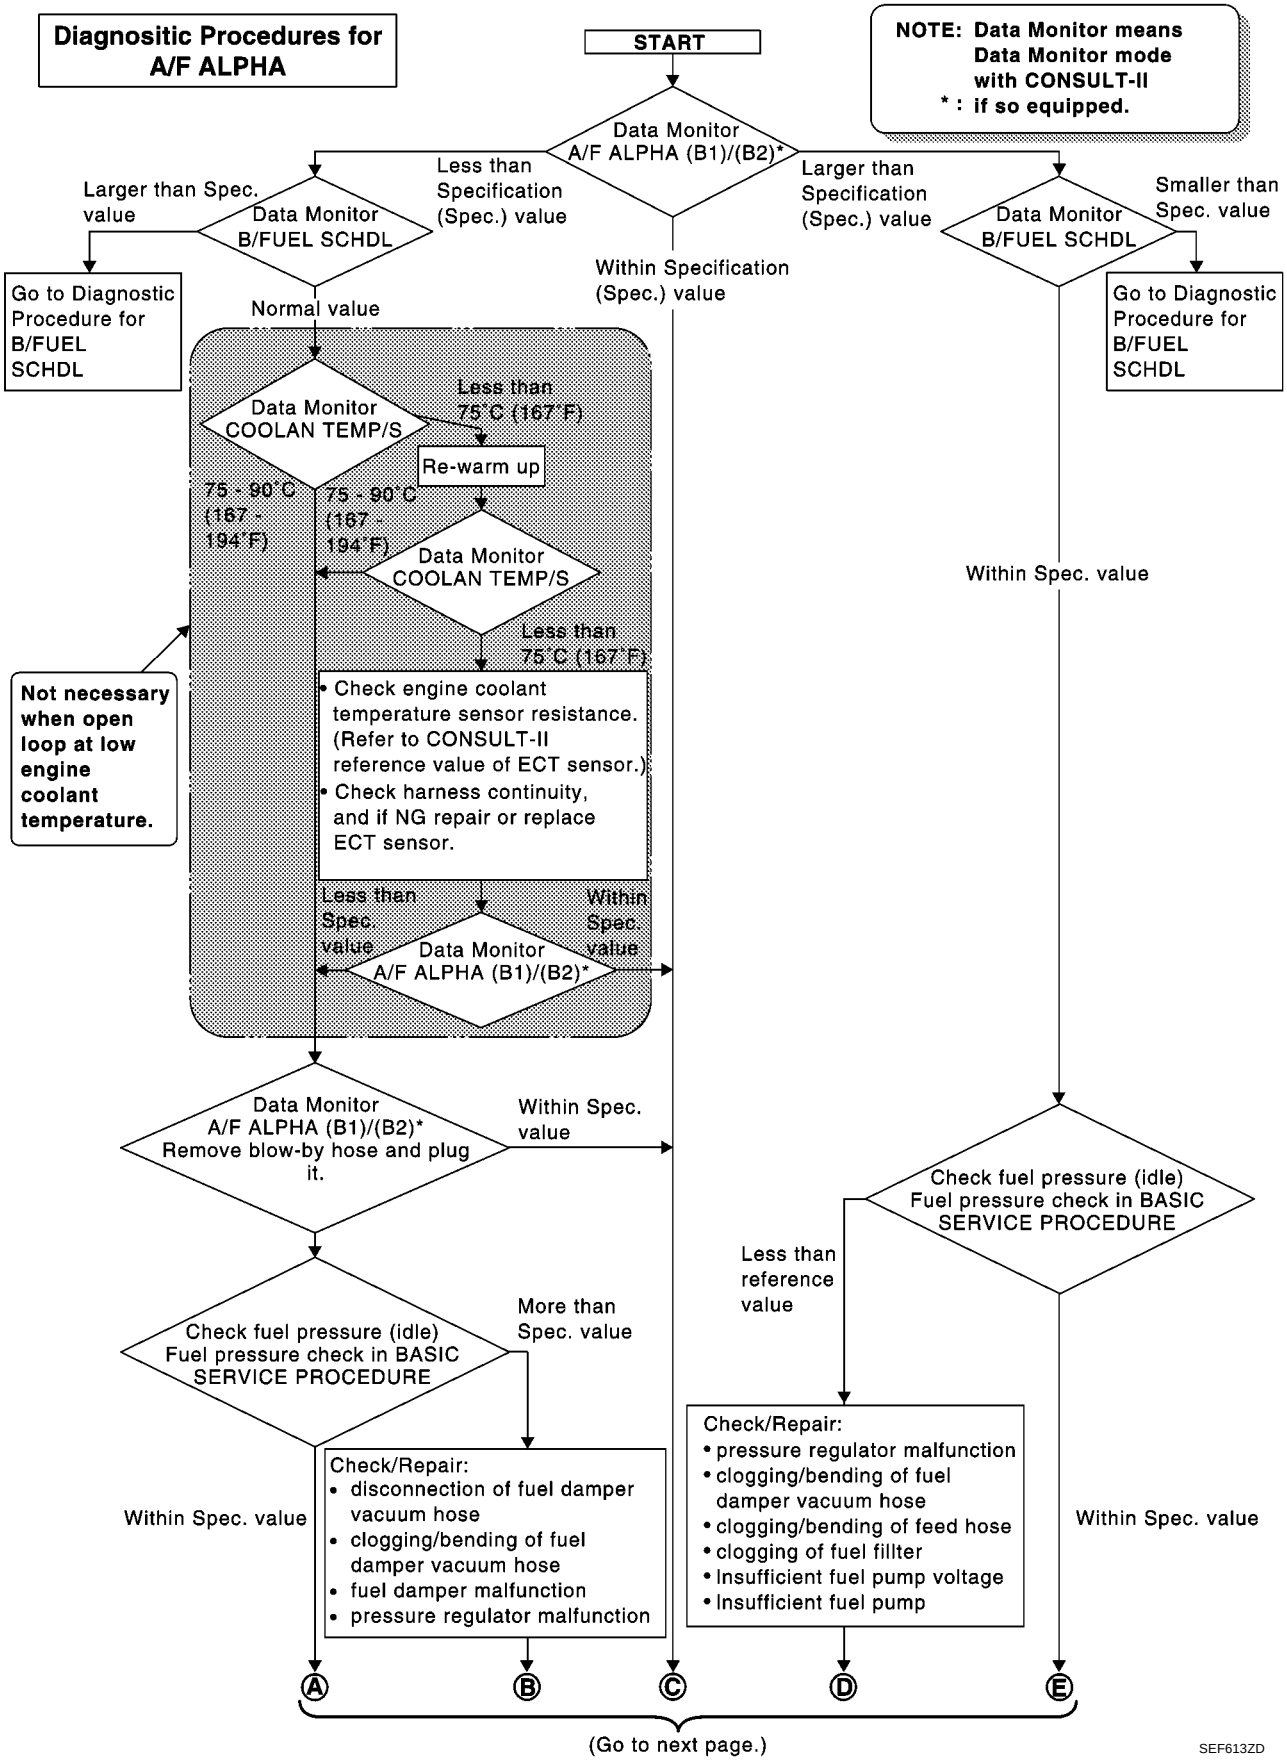
1. Perform EC-77, "Basic Inspection" .
2. Confirm that the testing conditions indicated above are met.
3. Select “B/FUEL SCHDL” and “A/F ALPHA-B1” in “DATA MONITOR (SPEC)” mode with CONSULT-II.
4. Make sure that monitor items are within the SP value.
5. If NG, go to EC-120, "Diagnostic Procedure" .

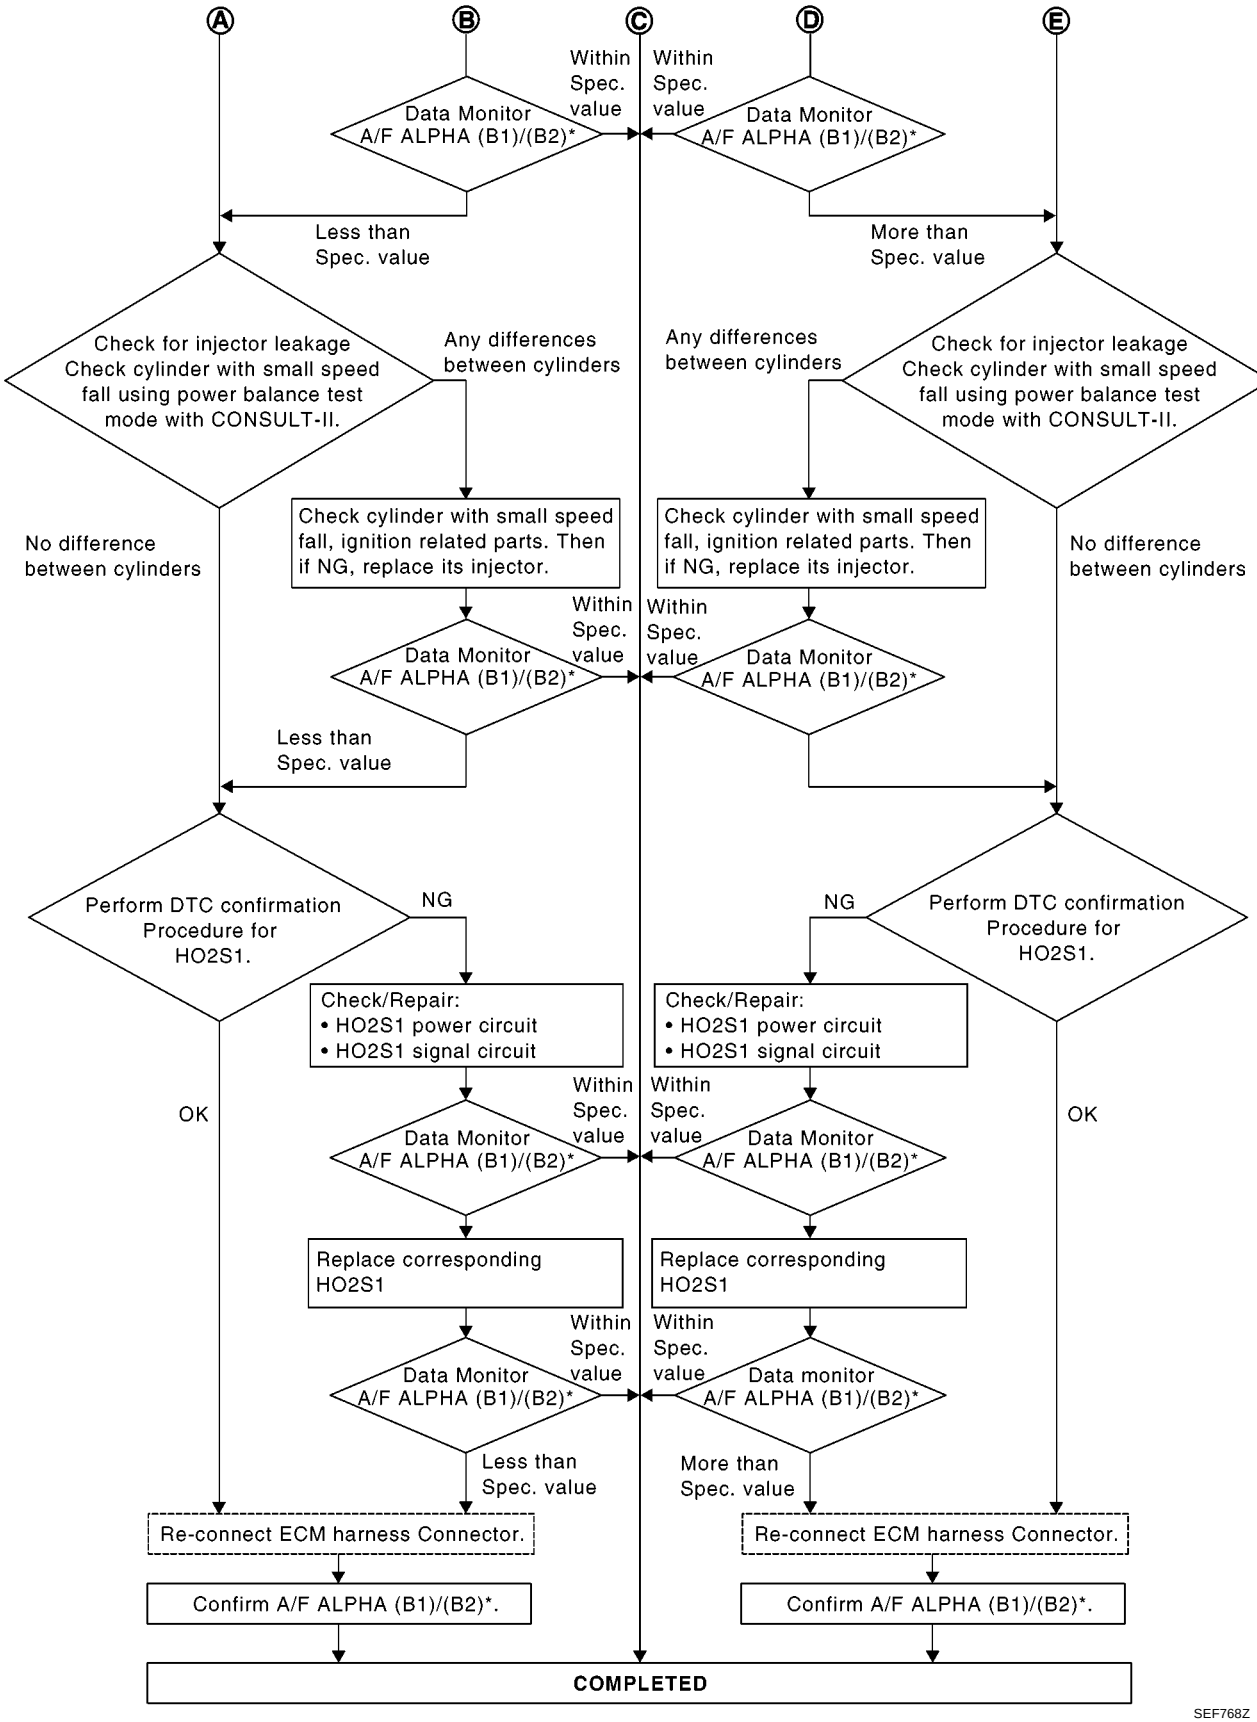


Diagnostic Procedure

EBS00O3W

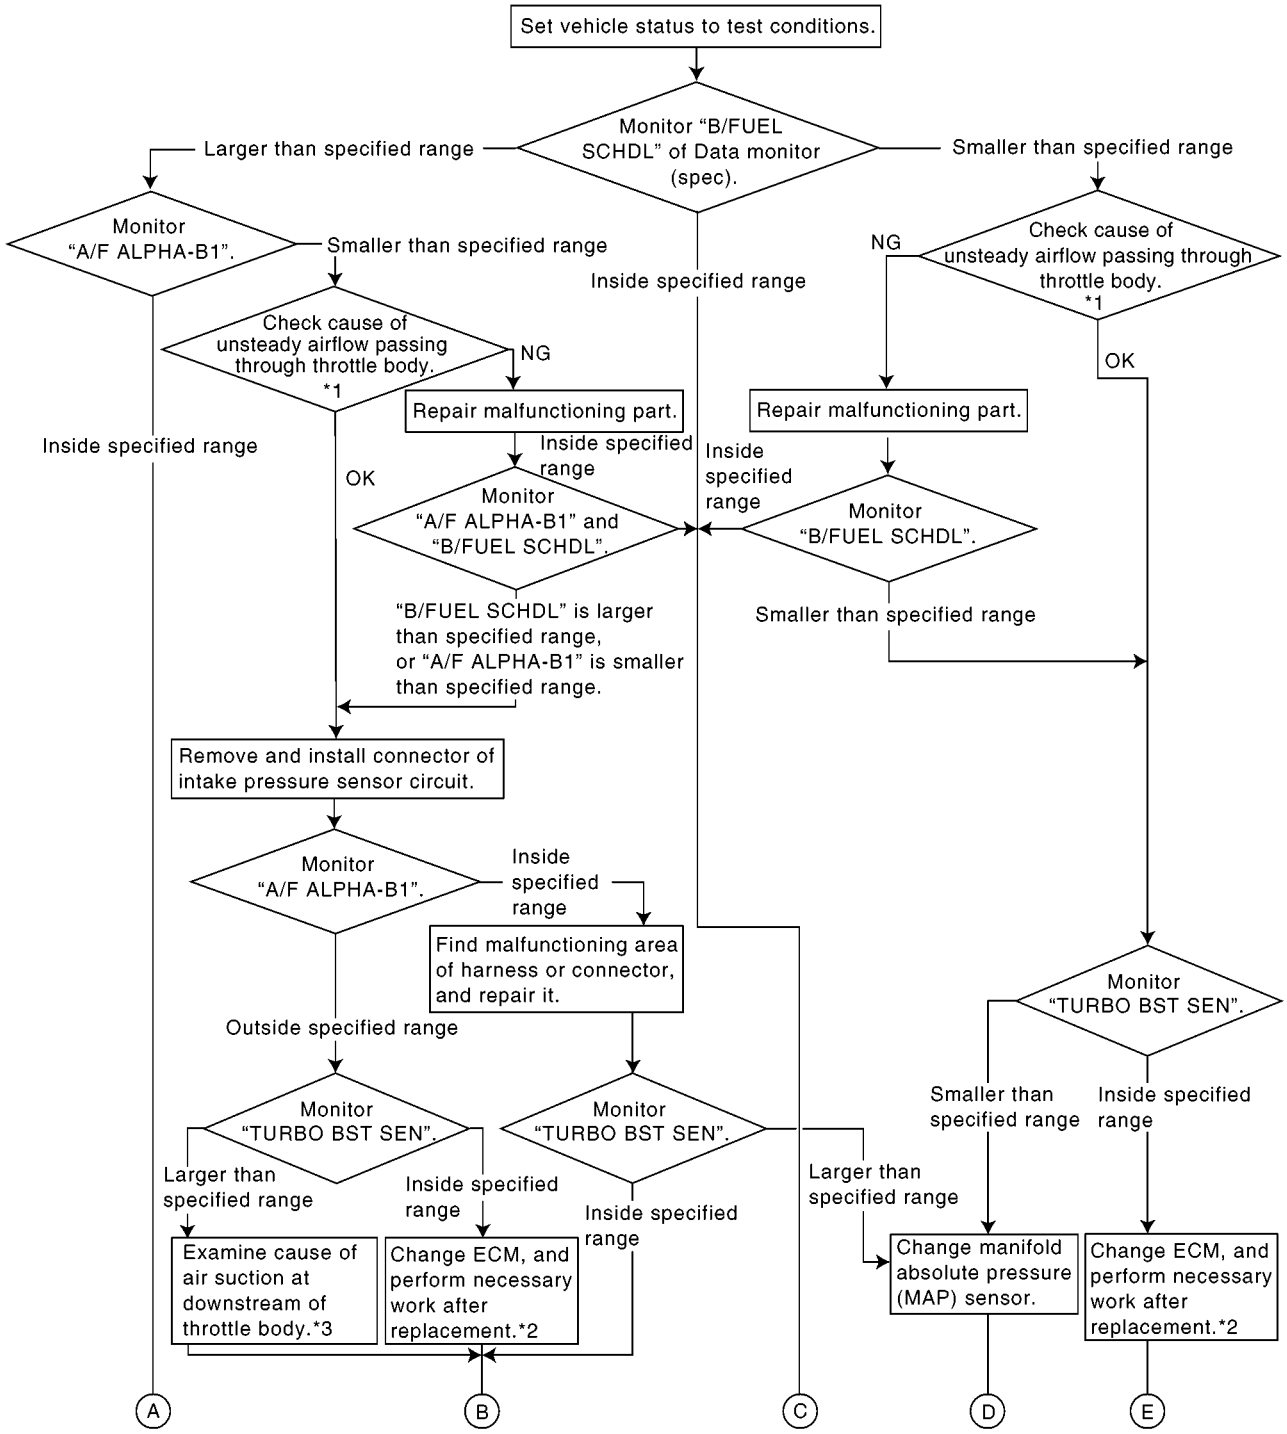
CHECK A/F ALPHA–B1





Ⓐ
Ⓑ
Ⓒ
Ⓓ
Ⓔ
Within Spec. value
Data Monitor A/F ALPHA (B1)/(B2)*
Less than Spec. value
More than Spec. value
Check for injector leakage Check cylinder with small speed fall using power balance test mode with CONSULT-II.
Any differences between cylinders
No difference between cylinders
Check cylinder with small speed fall, ignition related parts. Then if NG, replace its injector.
Perform DTC confirmation Procedure for HO2S1.
NG
OK
Check/Repair:
• HO2S1 power circuit
• HO2S1 signal circuit
Replace corresponding HO2S1
Data monitor A/F ALPHA (B1)/(B2)*
Re-connect ECM harness Connector.
Confirm A/F ALPHA (B1)/(B2)*.
COMPLETED
SEF768Z

CHECK B/FUEL SCHDL



*1
Inspection Location
- Crushed air duct
- Improper sealing of air cleaner element
- Unevenly dirty air cleaner element
- Different specification of intake air system part

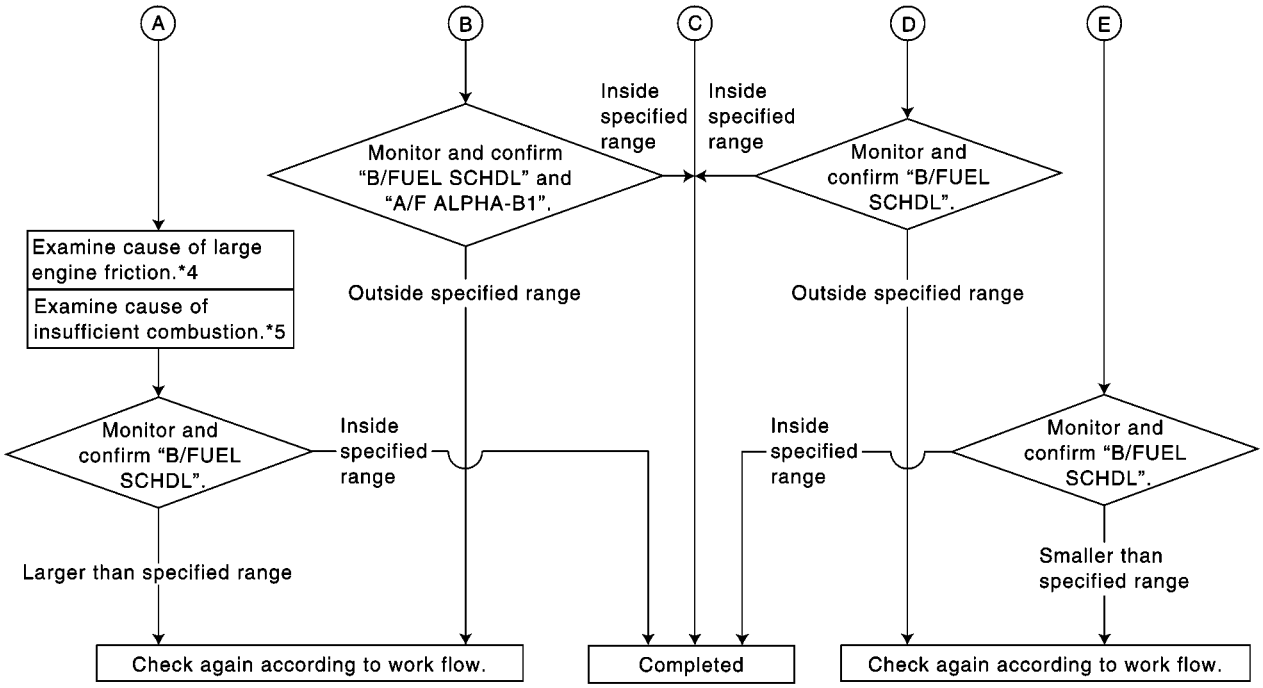
etc.

*2
Refer to ECM Removal and Installation procedure in Service Manual.

*3
Inspection Location
- Disconnection, looseness, or cracks of air duct
- Looseness of oil filler cap
- Disconnection of oil level gauge
- Open sticking, breakage, hose disconnection, or cracks of blow-by gas control valve
- Disconnection or cracks of EVAP canister purge hose, open sticking of EVAP canister purge volume control valve
- Improper sealing of rocker cover gasket
- Disconnection, looseness, or cracks of hoses, such as vacuum hose, connecting to intake air system parts.
- Improper sealing of intake air system part gasket

etc.

PBIA1516E



*4
Inspection Location
- Overhigh engine oil level
- Engine oil viscosity
- Over-tensioned belt of power steering, alternator, and air conditioner compressor, unusual noise, or binding of pulley
- Unusual noise of engine
- Unusual noise of gear change

etc.

*5
Inspection Location
- EGR valve sticking
- Improper valve clearance
- Malfunction of intake valve timing control function
- Improper installation of camshaft sprocket

etc.

MBIB0658E

TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

PFP:00006

Description

EBS00O3X

Intermittent incidents (I/I) may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on (1st trip) DTC visits. Realize also that the most frequent cause of I/I occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

Common I/I Report Situations

STEP in Work Flow	Situation
II	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than “0” or “[1t]”.
III	The symptom described by the customer does not recur.
IV	(1st trip) DTC does not appear during the DTC Confirmation Procedure.
VI	The Diagnostic Procedure for PXXXX does not indicate the malfunctioning area.

Diagnostic Procedure

EBS00O3Y

1. INSPECTION START

Erase (1st trip) DTCs. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

>> GO TO 2.

2. CHECK GROUND TERMINALS

Check ground terminals for corroding or loose connection.
Refer to GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" , “Incident Simulation Tests”, “Ground Inspection”.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. SEARCH FOR ELECTRICAL INCIDENT

Perform GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" , “Incident Simulation Tests”.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace.

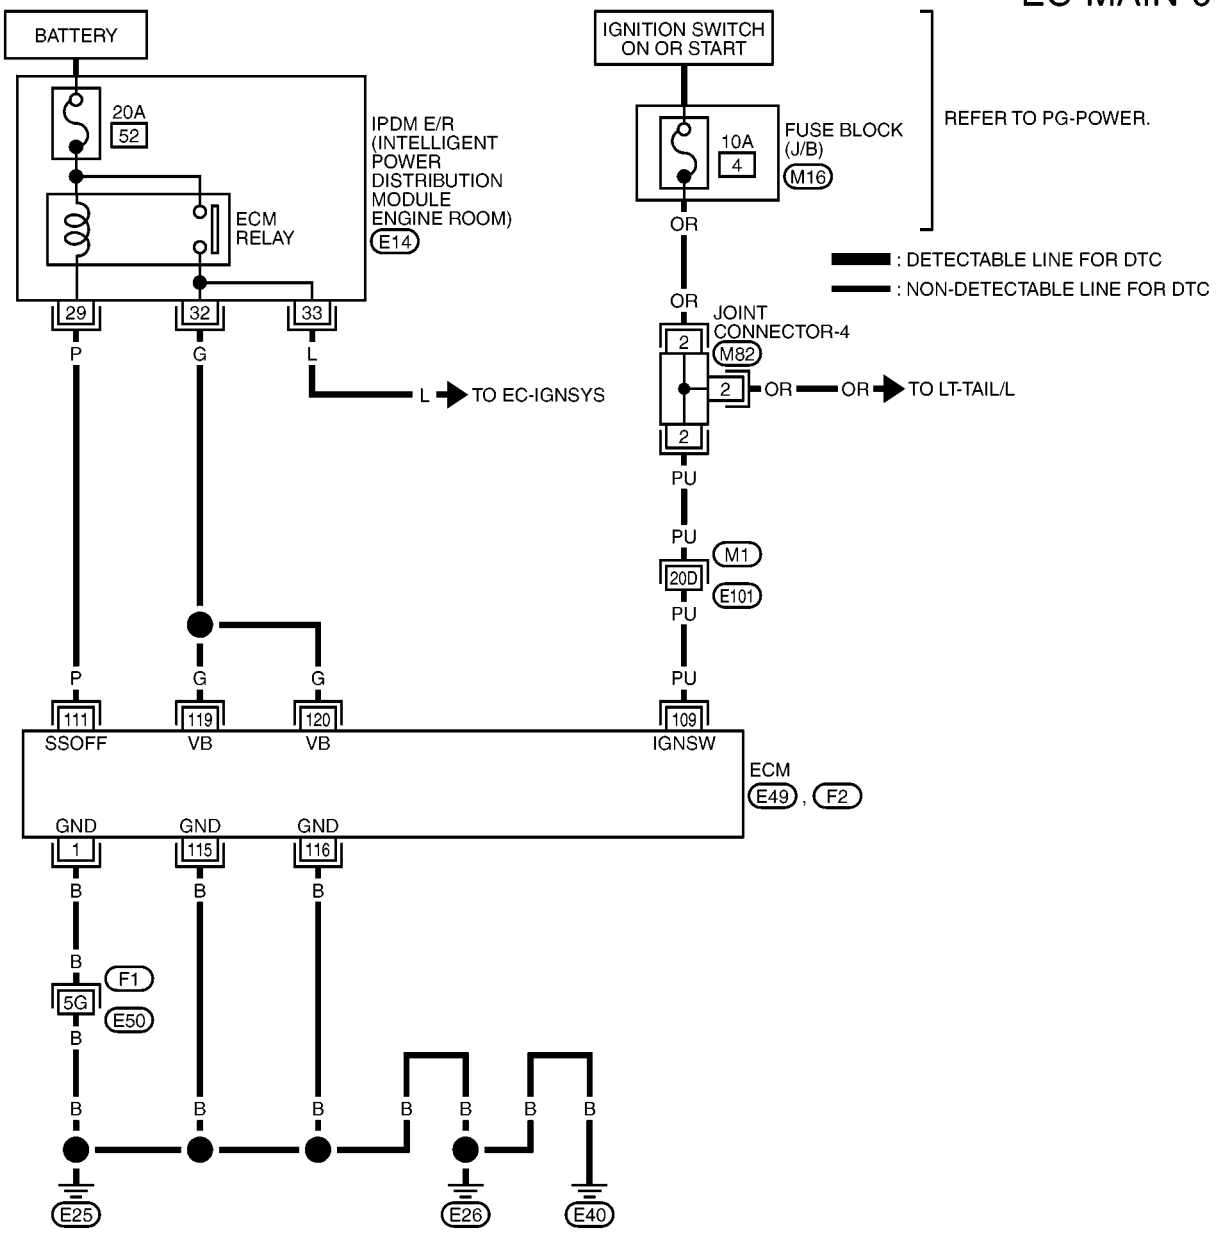
POWER SUPPLY CIRCUIT FOR ECM

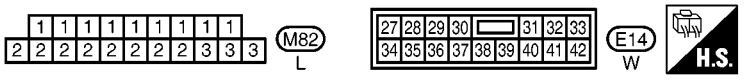
PFP:24110

Wiring Diagram

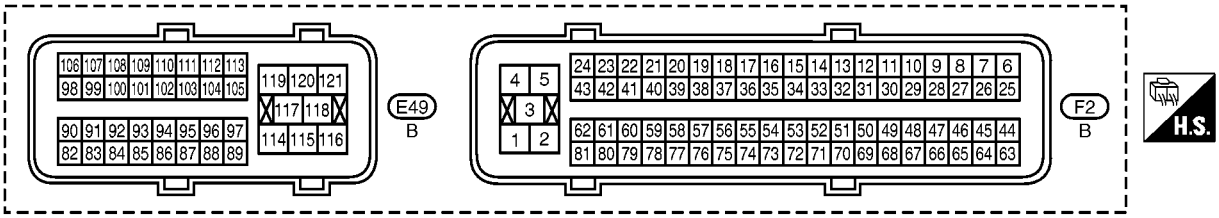
EBS00O3Z

EC-MAIN-01





REFER TO THE FOLLOWING.
M1 , F1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)



MBWA0570E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1 115 116	B B B	ECM ground	**[Engine is running]** ● Idle speed	Engine ground
109	PU	Ignition switch	**[Ignition switch OFF]**	0V
			[Ignition switch ON]	BATTERY VOLTAGE (11 - 14V)
111	P	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.0V
			[Ignition switch OFF] ● More than a few seconds passed after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
119 120	G G	Power supply for ECM	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

EBS00O40

1. INSPECTION START

Start engine.

Is engine running?

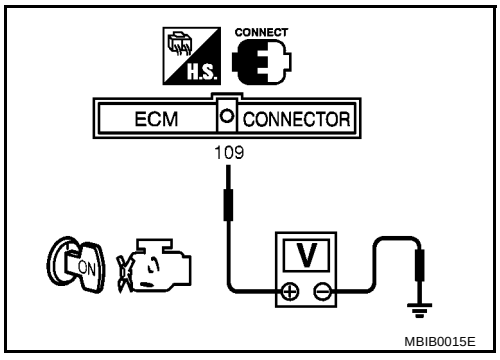
Yes or No

Yes >> GO TO 8.
No >> GO TO 2.

2. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF and then ON.
2. Check voltage between ECM terminal 109 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101
- Fuse block (J/B) connector M16
- Joint connector-4
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair harness or connectors.

4. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116 and engine ground. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- Harness for open or short between ECM and engine ground

>> Repair open circuit or short to power in harness or connectors.

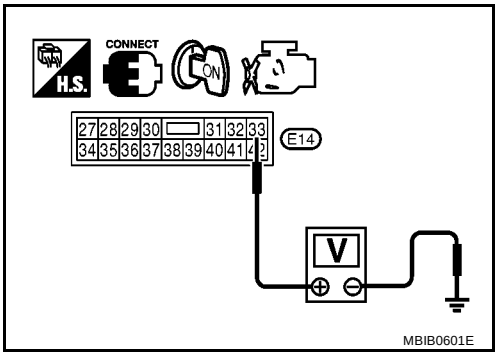
6. CHECK ECM POWER SUPPLY CIRCUIT-II

1. Reconnect ECM harness connector.
2. Turn ignition switch ON.
3. Check voltage between IPDE E/R harness connector E14 terminal 33 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

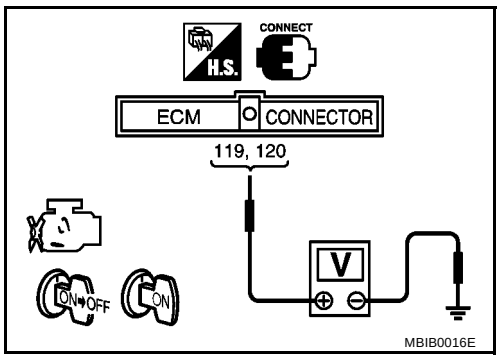
OK >> Go to EC-435, "IGNITION SIGNAL" .
NG >> GO TO 7.



7. CHECK ECM POWER SUPPLY CIRCUIT-III

1. Turn ignition switch ON and then OFF.
2. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

Voltage: After turning ignition switch OFF, battery voltage will exist for a few seconds, then drop approximately 0V.



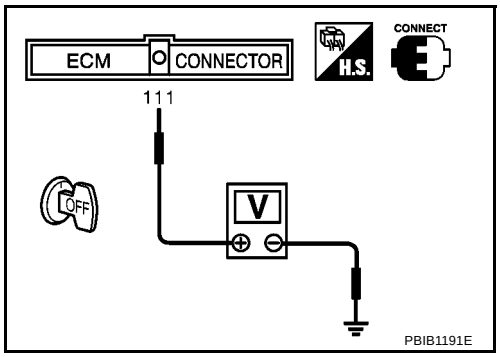
OK or NG

OK >> GO TO 13.
NG (Battery voltage does not exist.)>>GO TO 8.
NG (Battery voltage exists for more than a few seconds.)>>GO TO 13.

8. CHECK ECM POWER SUPPLY CIRCUIT-IV

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 111 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 11.
NG >> GO TO 9.

9. CHECK ECM POWER SUPPLY CIRCUIT-V

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check harness continuity between ECM terminal 111 and IPDM E/R terminal 29. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 10.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK 20A FUSE

1. Disconnect 20A fuse from IPDM E/R.
2. Check 20A fuse.

OK or NG

OK >> GO TO 13.
NG >> Replace 20A fuse.

11. CHECK ECM POWER SUPPLY CIRCUIT-VI

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check harness continuity between ECM terminals 119, 120 and IPDM E/R terminal 32. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116 and engine ground. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 13.
NG >> Repair open circuit or short to power in harness or connectors.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair open circuit or short to power in harness or connectors.

DTC U1000, U1001 CAN COMMUNICATION LINE

PFP:23710

Description

EBS00O42

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

EBS00O43

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000*1 1000*1	CAN communication line	● ECM cannot communicate to other control units. ● ECM cannot communicate for more than the specified time.	● Harness or connectors (CAN communication line is open or shorted.)
U1001*2 1001*2			

*1:This self-diagnosis has the one trip detection logic.
*2:The MI will not light up for this self-diagnosis.

DTC Confirmation Procedure

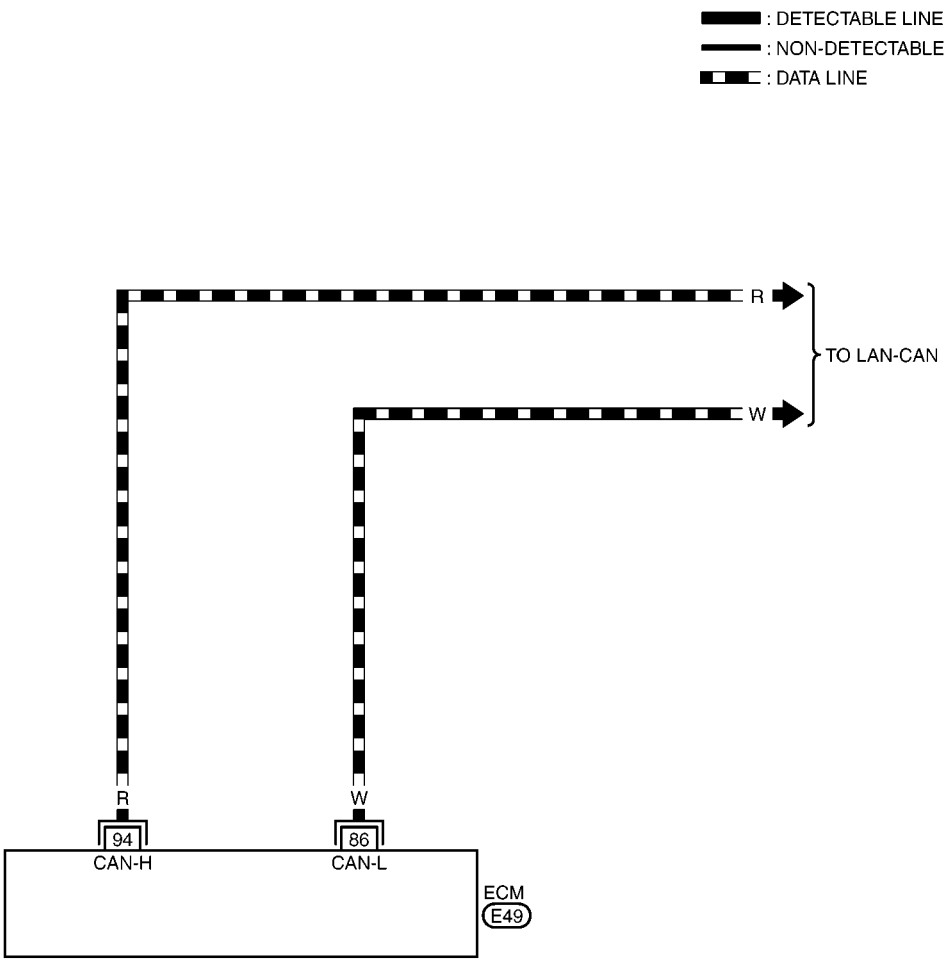
EBS00O44

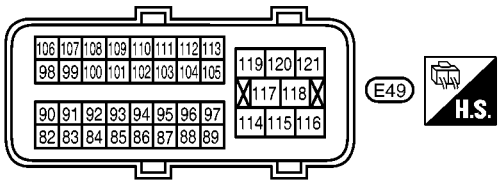
1. Turn ignition switch ON and wait at least 3 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. If 1st trip DTC or DTC is detected, go to EC-132, "Diagnostic Procedure" .

Wiring Diagram

EBS00O45

EC-CAN-01





MBWA0268E

Diagnostic Procedure

EBS00O46

Go to LAN-4, "Precautions When Using CONSULT-II" .

DTC P0011 IVT CONTROL

PFP:23796

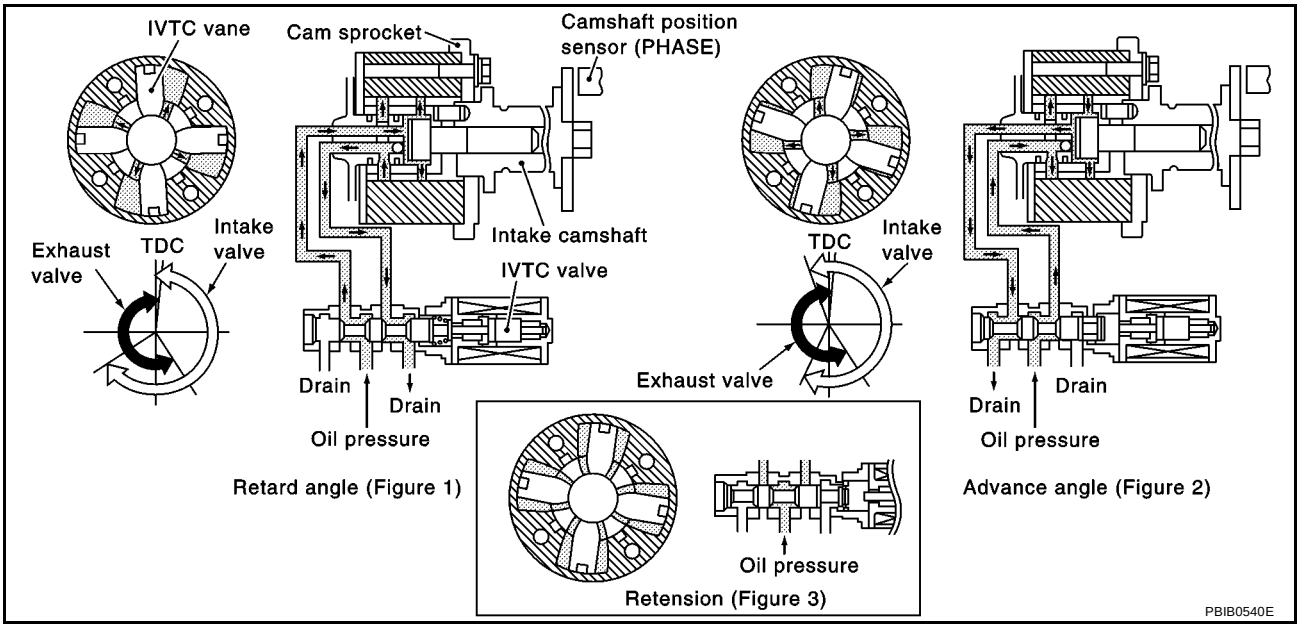
Description

EBS00O47

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed signal*	Vehicle speed		

*: This signal is sent to the ECM through CAN communication line.



This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

CONSULT-II Reference Value in Data Monitor Mode

EBS00O48

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V TIM (B1)	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA
		When revving up to 2,000 rpm quickly	Approx. 0° - 20°CA
INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		When revving up to 2,000 rpm quickly	Approx. 0% - 50%

On Board Diagnosis Logic

EBS00O49

The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	Detecting condition	Possible cause
P0011 0011	Intake valve timing control performance	There is a gap between angle of target and phase-control angle degree.	● Crankshaft position sensor (POS) ● Camshaft position sensor (PHASE) ● Accumulation of debris to the signal pick-up portion of the camshaft

FAIL-SAFE MODE

ECM enters fail-safe mode when the malfunction is detected.

Detected items	Engine operating condition in fail-safe mode
Intake valve timing control	The signal is not energized to the solenoid valve and the valve control does not function

DTC Confirmation Procedure

EBS00O4A

CAUTION:
Always drive at a safe speed.

NOTE:

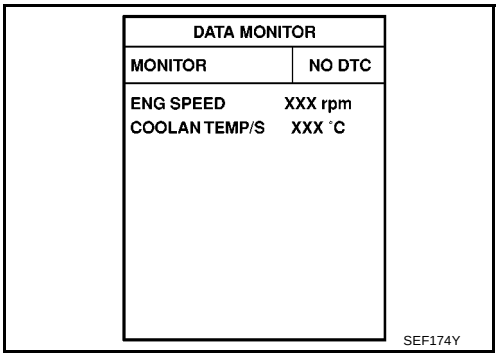
- **If DTC P0011 is displayed with DTC P1111, first perform trouble diagnosis for DTC P1111. See EC-293 .**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is between 10V and 16V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Maintain the following conditions for at least 20 consecutive seconds.

ENG SPEED	1,700 - 3,175 rpm (A constant rotation is maintained.)
COOLANT TEMPS	70 - 105°C (148 - 221°F)
Selector lever	1st or 2nd position
Driving location uphill	Driving vehicle uphill (Increased engine load will help maintain the driving conditions required for this test.)



4. If 1st trip DTC is detected, go to EC-135, "Diagnostic Procedure" .

WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

EBS00O4B

1. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-265, "Component Inspection" .

OK or NG

OK >> GO TO 2.
NG >> Replace crankshaft position sensor (POS).

2. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-271, "Component Inspection" .

OK or NG

OK >> GO TO 3.
NG >> Replace camshaft position sensor (PHASE).

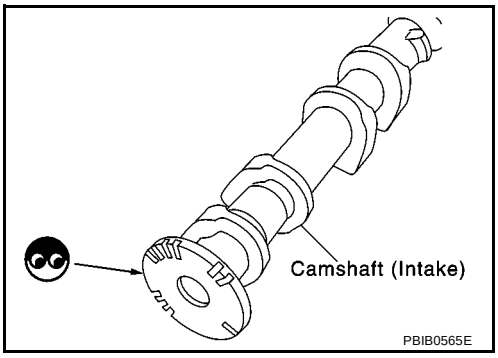
3. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 4.
NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.



4. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
For wiring diagram refer to CKP sensor (POS) EC-262 and CMP sensor (PHASE) EC-268 .

>> **INSPECTION END**

DTC P0031, P0032 HO2S1 HEATER

PFP:22690

Description

EBS00O4C

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Heated oxygen sensor 1 heater control	Heated oxygen sensor 1 heater
Engine coolant temperature sensor	Engine coolant temperature		

The ECM performs ON/OFF duty control of the heated oxygen sensor 1 heater corresponding to the engine speed and engine coolant temperature. The duty percent varies with engine coolant temperature when engine is started.

OPERATION

Engine speed rpm	Heated oxygen sensor 1 heater
Above 3,600	OFF
Below 3,600 after warming up	ON

CONSULT-II Reference Value in Data Monitor Mode

EBS00O4D

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S1 HTR (B1)	● Engine: After warming up ● Engine speed: Below 3,600 rpm	ON
	● Engine speed: Above 3,600 rpm	OFF

On Board Diagnosis Logic

EBS00O4E

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0031 0031	Heated oxygen sensor 1 heater control circuit low	The current amperage in the heated oxygen sensor 1 heater circuit is out of the normal range. (An excessively low voltage signal is sent to ECM through the heated oxygen sensor 1 heater.)	● Harness or connectors (The heated oxygen sensor 1 heater circuit is open or shorted.) ● Heater oxygen sensor 1 heater
P0032 0032	Heated oxygen sensor 1 heater control circuit high	The current amperage in the heated oxygen sensor 1 heater circuit is out of the normal range. (An excessively high voltage signal is sent to ECM through the heated oxygen sensor 1 heater.)	● Harness or connectors (The heated oxygen sensor 1 heater circuit is shorted.) ● Heater oxygen sensor 1 heater

DTC Confirmation Procedure

EBS00O4F

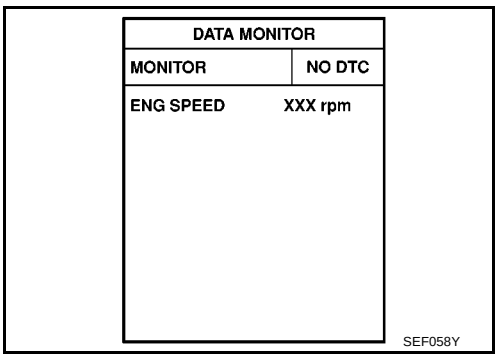
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.

3. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
4. Start engine and run it for at least 6 seconds at idle speed.
5. If 1st trip DTC is detected, go to EC-139, "Diagnostic Procedure" .



WITH GST

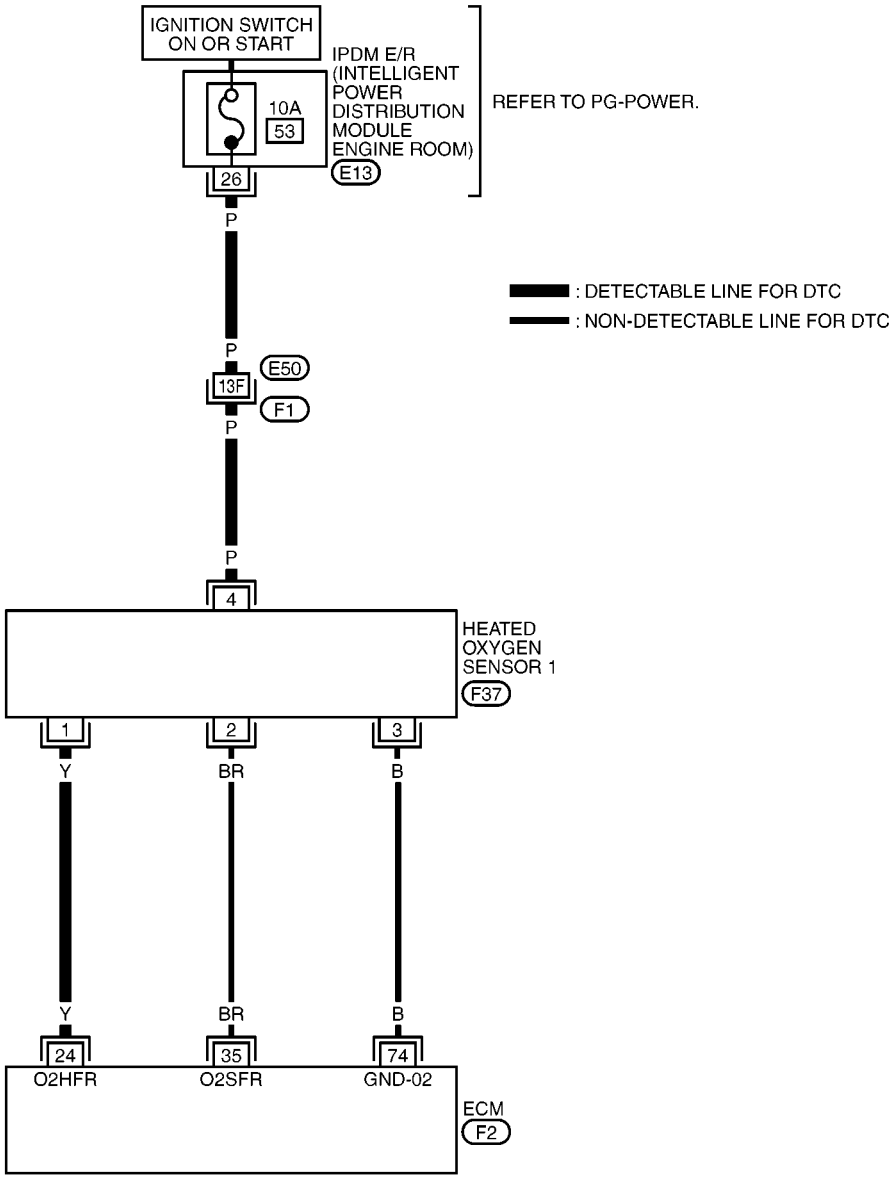
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and run it for at least 6 seconds at idle speed.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Start engine and run it for at least 6 seconds at idle speed.
6. Select “MODE 3” with GST.
7. If DTC is detected, go to EC-139, "Diagnostic Procedure" .

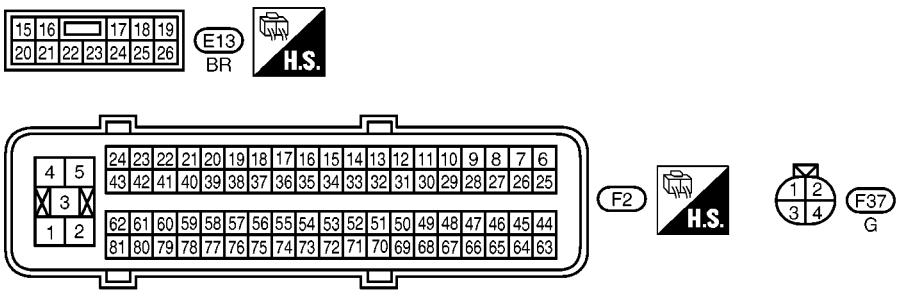
- **When using GST, DTC Confirmation Procedure should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

Wiring Diagram

EBS00O4G

EC-HO2S1H-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0269E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
24	Y	Heated oxygen sensor 1 heater	**[Engine is running]** ● **Warm-up condition.** ● Engine speed is below 3,600 rpm.	Approximately 7.0V★  PBIB0519E
			[Engine is running] ● Engine speed is above 3,600 rpm.	BATTERY VOLTAGE (11 - 14V)

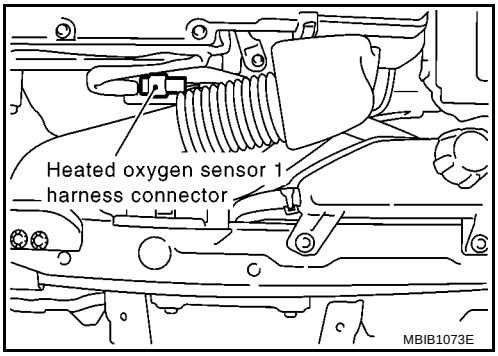
★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00O4H

1. CHECK HO2S1 POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 harness connector.
3. Turn ignition switch ON.



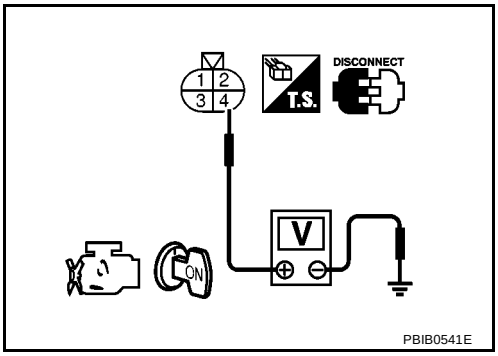
MBIB1073E

4. Check voltage between HO2S1 terminal 4 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



PBIB0541E

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R connector E13
- 10A fuse
- Harness for open or short between heated oxygen sensor 1 and fuse

>> Repair harness or connectors.

3. CHECK HO2S1 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 24 and HO2S1 terminal 1.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to EC-141, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace malfunctioning heated oxygen sensor 1.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

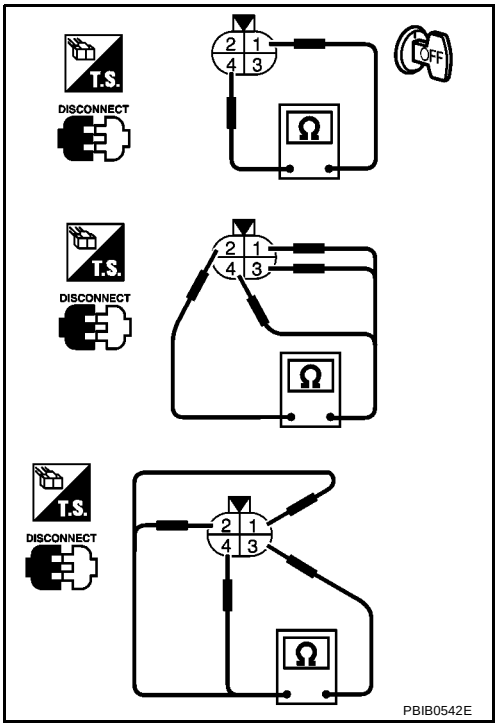
EBS00O4I

HEATED OXYGEN SENSOR 1 HEATER

1. Check resistance between HO2S1 terminals as follows.

Terminal No.	Resistance
1 and 4	3.3 - 4.0 Ω at 25°C (77°F)
2 and 1, 3, 4	∞ Ω (Continuity should not exist)
3 and 1, 2, 4	

2. If NG, replace heated oxygen sensor 1.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00O4J

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

DTC P0037, P0038 HO2S2 HEATER

PFP:226A0

Description

EBS00O4K

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Camshaft position sensor (PHASE)	Engine speed	Heated oxygen sensor 2 heater control	Heated oxygen sensor 2 heater
Crankshaft position sensor (POS)			
Engine coolant temperature sensor	Engine coolant temperature		
Manifold absolute pressure (MAP) sensor	Amount of intake air		

OPERATION

Engine speed rpm	Heated oxygen sensor 2 heater
Above 3,600 (A/T models), 3,800 (M/T models)	OFF
Below 3,600 rpm (A/T models), 3,800 rpm (M/T models) after the following conditions are met. ● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	ON

CONSULT-II Reference Value in Data Monitor Mode

EBS00O4L

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
HO2S2 HTR (B1)	● Engine speed is Below 3,600 rpm (A/T models) 3,800 rpm (M/T models) after the following conditions are met. – Engine: After warming up – Keeping the engine speed at between 3,500 to 4,000 rpm for 1 minute and at idle for 1 minute under no load	ON
	● Engine speed: Above 3,600 rpm (A/T models), 3,800 rpm (M/T models)	OFF

On Board Diagnosis Logic

EBS00O4M

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0037 0037	Heated oxygen sensor 2 heater control circuit low	The current amperage in the heated oxygen sensor 2 heater circuit is out of the normal range. (An excessively low voltage signal is sent to ECM through the heated oxygen sensor 2 heater.)	● Harness or connectors (The heated oxygen sensor 2 heater circuit is open or shorted.) ● Heater oxygen sensor 2 heater
P0038 0038	Heated oxygen sensor 2 heater control circuit high	The current amperage in the heated oxygen sensor 2 heater circuit is out of the normal range. (An excessively high voltage signal is sent to ECM through the heated oxygen sensor 2 heater.)	● Harness or connectors (The heated oxygen sensor 2 heater circuit is shorted.) ● Heater oxygen sensor 2 heater

DTC Confirmation Procedure

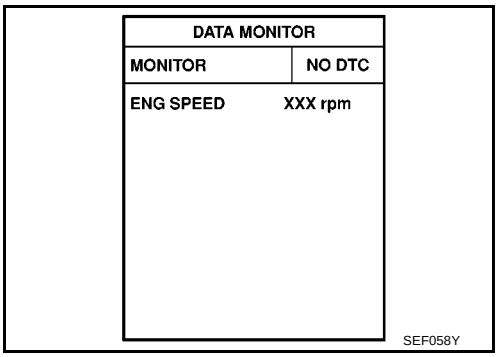
EBS00O4N

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is between 10.5V and 16V at idle.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.
6. If 1st trip DTC is detected, go to EC-145, "Diagnostic Procedure" .



WITH GST

1. Start engine and warm it up the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 1 minute.
8. Select “MODE 3” with GST.
9. If DTC is detected, go to EC-145, "Diagnostic Procedure" .

- **When using GST, DTC Confirmation Procedure should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

Wiring Diagram

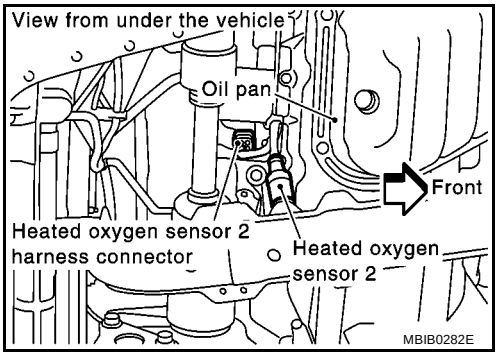
			[Ignition switch "ON"] ● Engine stopped **[Engine is running]** ● Engine speed is above 3,600 rpm (A/T models), 3,800 rpm (M/T models).	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

EBS00O4P

1. CHECK HO2S2 POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Turn ignition switch ON.

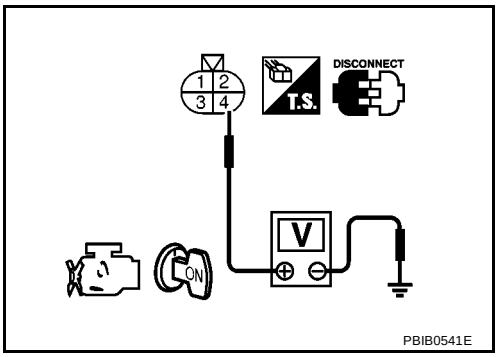


4. Check voltage between HO2S2 terminal 4 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R connector E13
- 10A fuse
- Harness for open or short between heated oxygen sensor 2 and fuse

>> Repair harness or connectors.

3. CHECK HO2S2 OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 2 and HO2S2 terminal 1.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HEATED OXYGEN SENSOR 2 HEATER

Refer to EC-147, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace malfunctioning heated oxygen sensor 2.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

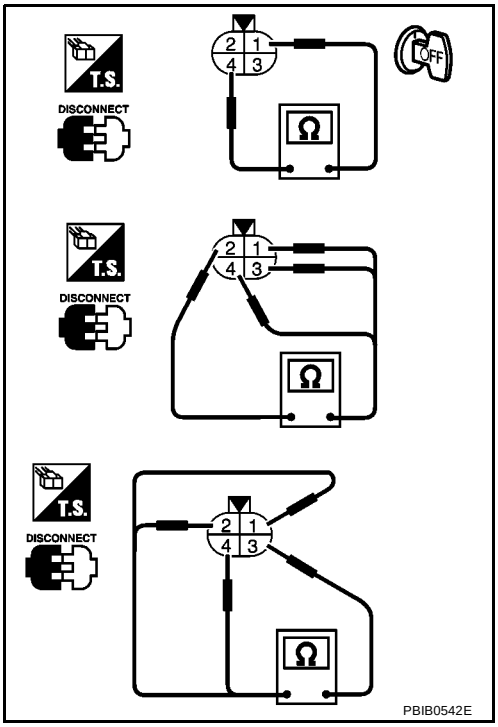
EBS00O4Q

HEATED OXYGEN SENSOR 2 HEATER

1. Check resistance between HO2S2 terminals as follows.

Terminal No.	Resistance
1 and 4	3.3 - 4.0 Ω at 25°C (77°F)
2 and 1, 3, 4	∞ Ω (Continuity should not exist)
3 and 1, 2, 4	

2. If NG, replace heated oxygen sensor 2.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**

Removal and Installation

EBS00O4R

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

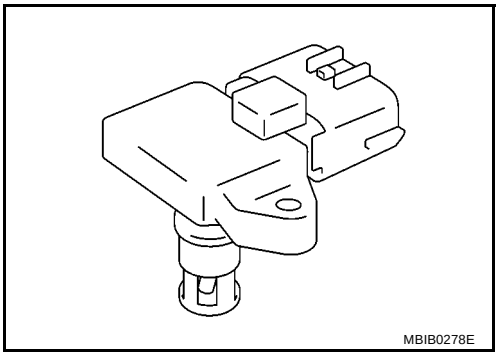
DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR

PFP:22365

Component Description

EBS00OE1

The manifold absolute pressure (MAP) sensor is placed intake manifold corrector. It detects intake manifold pressure and sends the voltage signal to the ECM, ECM uses the signal to compute intake air volume value.
The sensor uses a silicon diaphragm which is sensitive to the change in pressure. As the pressure increase, the voltage rises.



MBIB0278E

On Board Diagnosis Logic

EBS00OE2

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0107 0107	Manifold absolute pressure sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Manifold absolute pressure sensor
P0108 0108	Manifold absolute pressure sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted) ● Manifold absolute pressure sensor ● Intake air leaks

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and MI lights up.

Detected items	Engine operating condition in fail-safe mode
Manifold absolute pressure sensor circuit	Engine speed will not rise more than 2,500 rpm due to the fuel cut.

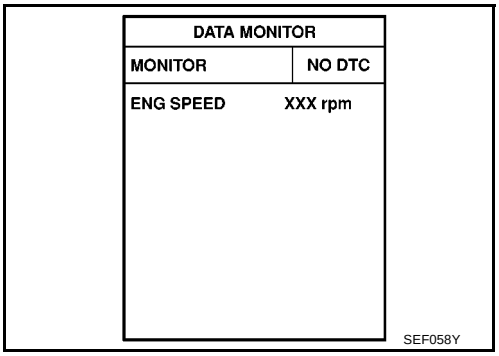
DTC Confirmation Procedure

EBS00OE3

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If the 1st trip DTC is detected, go to EC-150, "Diagnostic Procedure" .



SEF058Y

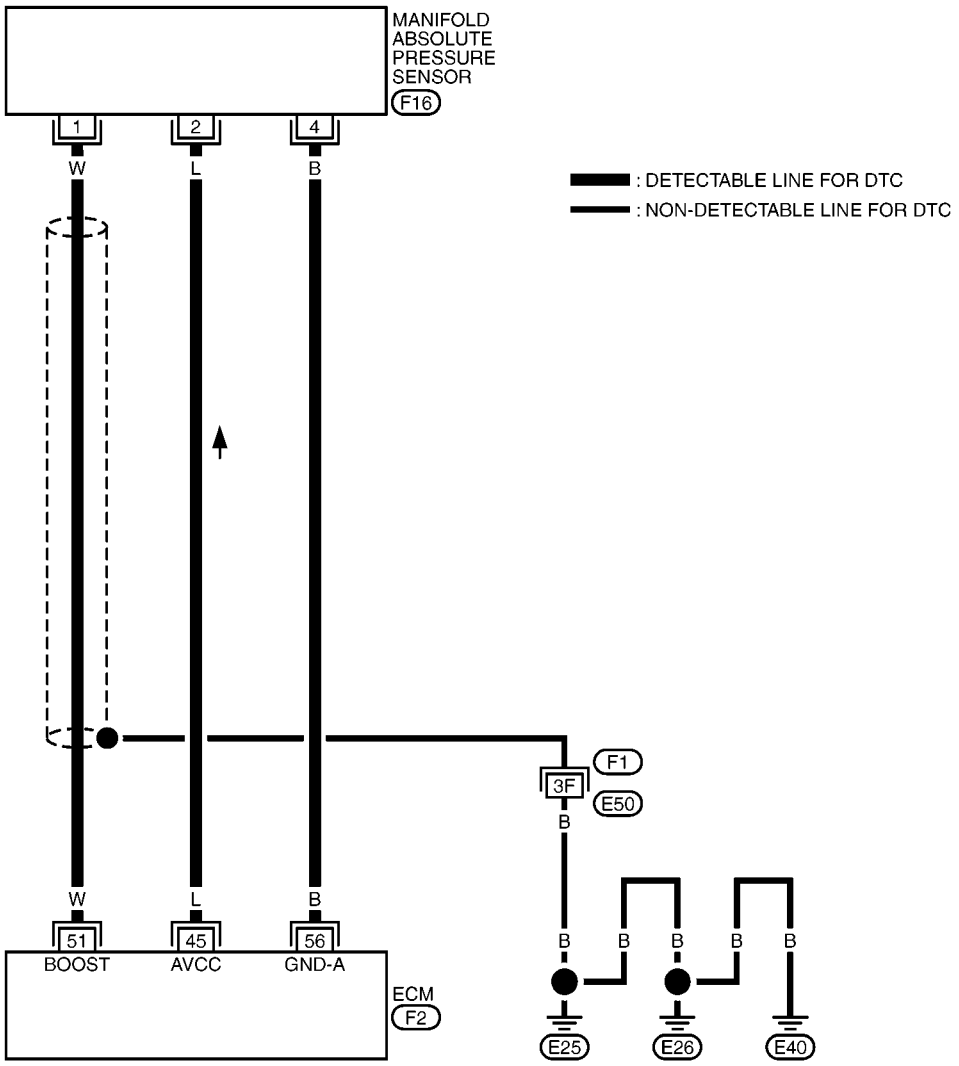
WITH GST

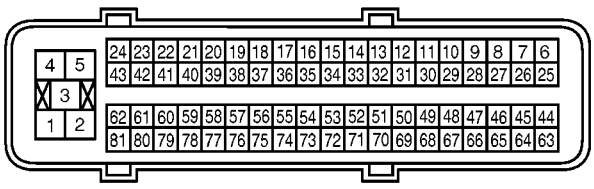
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00OE4

EC-AP/SEN-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0304E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

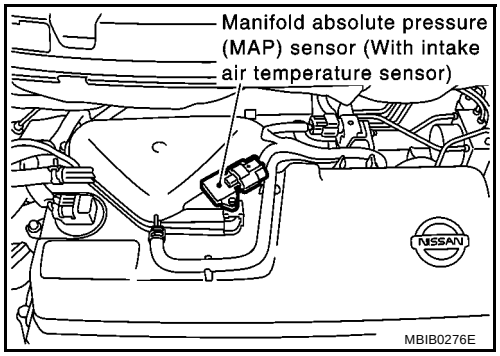
TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
51	W	Manifold absolute pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 1.5V
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	Approximately 1.2V

Diagnostic Procedure

EBS00OE5

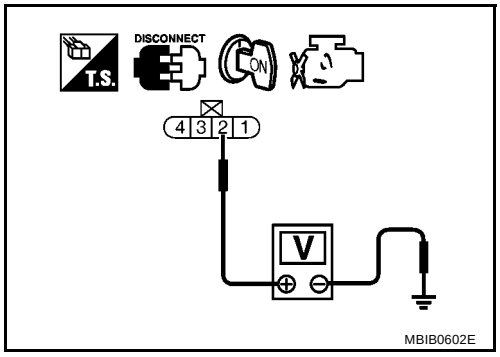
1. CHECK MAP SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect manifold absolute pressure sensor harness connector.
3. Turn ignition switch ON.



4. Check voltage between MAP sensor terminal 2 and ground.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 2.
NG >> Repair harness or connectors.

2. CHECK MAP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between MAP sensor terminal 4 and ECM terminal 56
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK MAP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between MAP sensor terminal 1 and ECM terminal 51.
   Refer to Wiring Diagram

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK MAP SENSOR

Refer to EC-151, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace manifold absolute pressure sensor.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

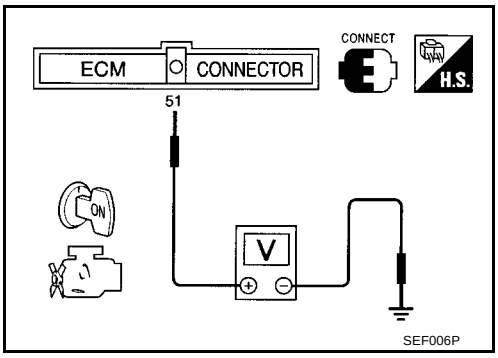
Component Inspection

EBS00OE6

MANIFOLD ABSOLUTE PRESSURE SENSOR

1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF, wait at least 5 seconds and then turn ON.
4. Check voltage between ECM terminal 51 (manifold absolute pressure sensor signal) and ground.

   NOTE:
   - To avoid the affection of intake manifold vacuum, check the voltage 1 or more minutes past after engine is stopped.
   - Because the sensor is absolute pressure sensor, output value may differ depends on atmospheric pressure and altitude.



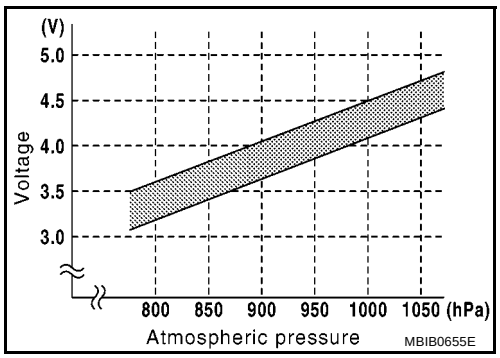
5. Measure the atmospheric pressure.

   NOTE:
   As atmospheric pressure describe on synoptic chart is value at sea level, please compensate the actual pressure with the following chart.

Altitude	Compensated pressure
0m	0hPa
200m	-24hPa
400m	-47hPa
600m	-70hPa
800m	-92hPa
1,000m	-114hPa
1,500m	-168hPa
2,000m	-218hPa

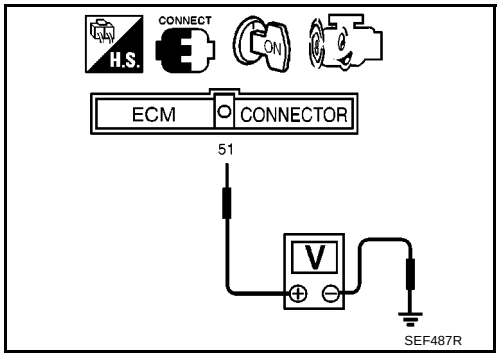
6. Check the manifold absolute pressure sensor value corresponds to the atmospheric pressure.

Atmospheric pressure	Voltage
800hPa	3.2 - 3.6v
850hPa	3.4 - 3.8v
900hPa	3.7 - 4.1v
960hPa	3.9 - 4.3v
1,000hPa	4.1 - 4.5v
1,050hPa	4.3 - 4.7v



7. Start engine and let it idle.
8. Check the voltage between ECM terminal 51 and ground at idling and confirm the voltage difference between engine is stopped and at idling is within following chart.

Intake manifold vacuum	Voltage difference
-40kPa (-300mmHg)	1.6 - 2.0v
-53.3kPa (-400mmHg)	2.2 - 2.6v
-66.7kPa (-500mm)	2.8 - 3.2v
-80kPa (-600mmHg)	3.4 - 3.8v



EBS00OE7

Removal and Installation

MANIFOLD ABSOLUTE PRESSURE SENSOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

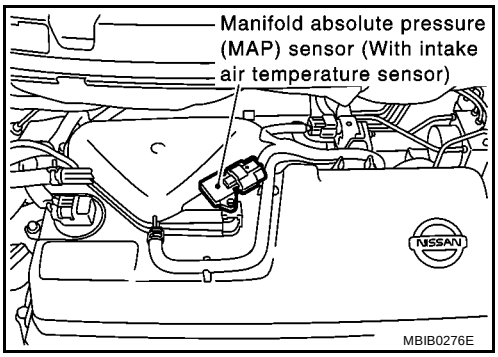
DTC P0112, P0113 IAT SENSOR

PFP:22630

Component Description

EBS00O50

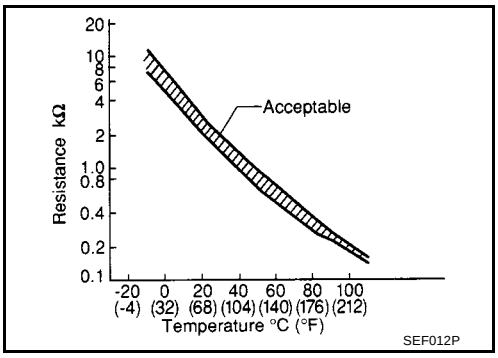
The intake air temperature sensor is built into manifold absolute pressure sensor. The sensor detects intake air temperature and transmits a signal to the ECM.
The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.



<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

*: These data are reference values and are measured between ECM terminal 34 (Intake air temperature sensor) and ground.



CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

EBS00O51

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0112 0112	Intake air temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Intake air temperature sensor
P0113 0113	Intake air temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and MI lights up.

Detected items	Engine operating condition in fail-safe mode
Intake air temperature sensor circuit	Intake air temperature is determined as 30°C (86°F).

DTC Confirmation Procedure

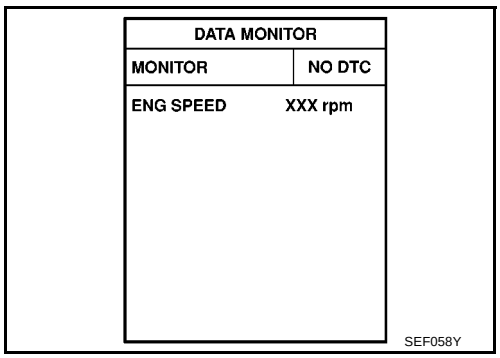
EBS00O52

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.

2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to EC-156, "Diagnostic Procedure"
.



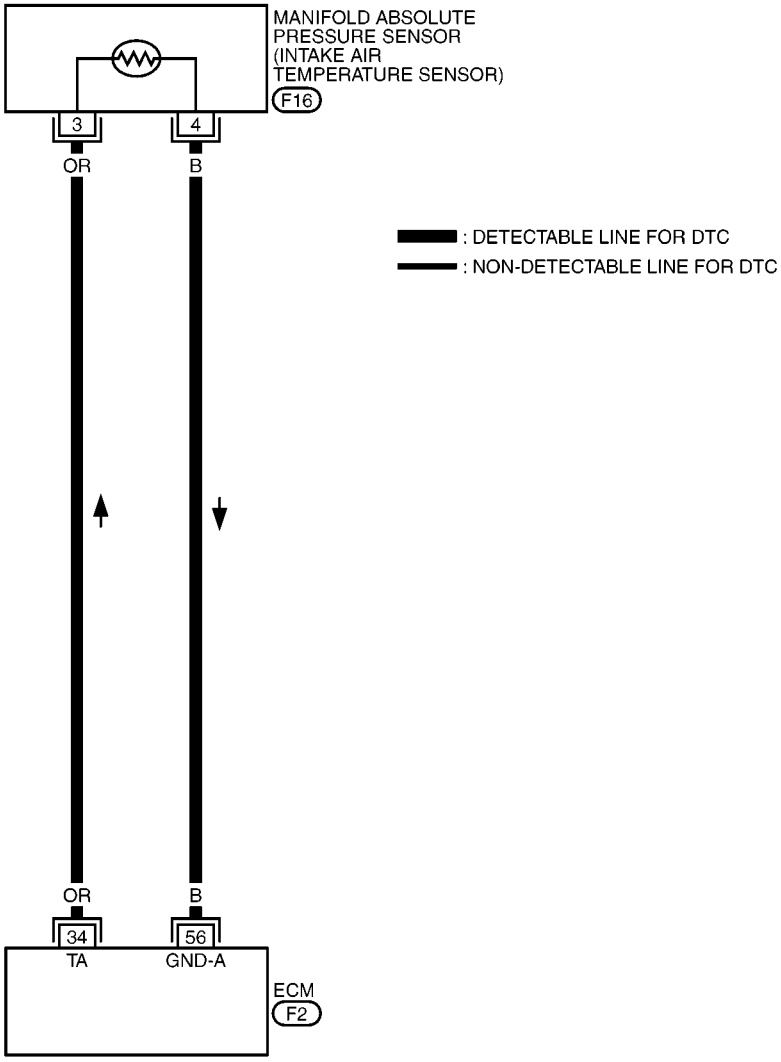
WITH GST

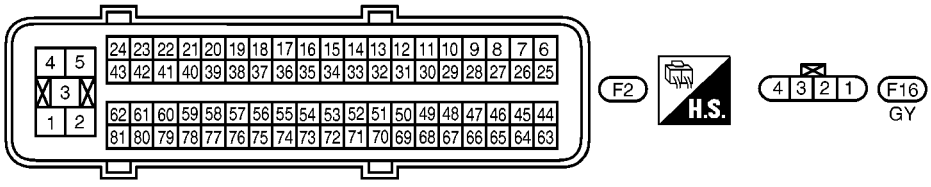
Follow the procedure “With CONSULT-II” above.

Wiring Diagram

EBS00O53

EC-IATS-01





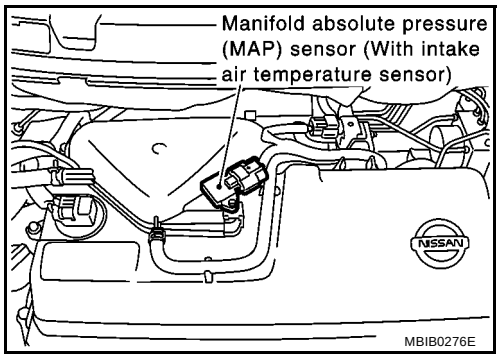
MBWA0462E

Diagnostic Procedure

EBS00O54

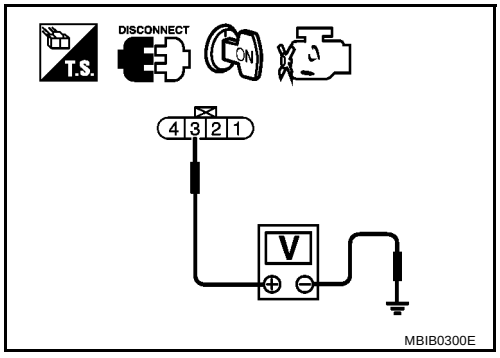
1. CHECK INTAKE AIR TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect manifold absolute pressure sensor (intake air temperature sensor is built-into) harness connector.
3. Turn ignition switch ON.



4. Check voltage between MAP sensor terminal 3 and ground.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 2.
NG >> Repair harness or connectors.

2. CHECK INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between MAP sensor terminal 4 and ECM terminal 56.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to EC-157, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> Replace manifold absolute pressure sensor (with intake air temperature sensor).

4. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

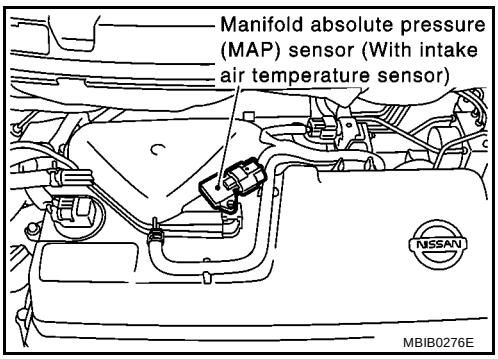
EBS00O55

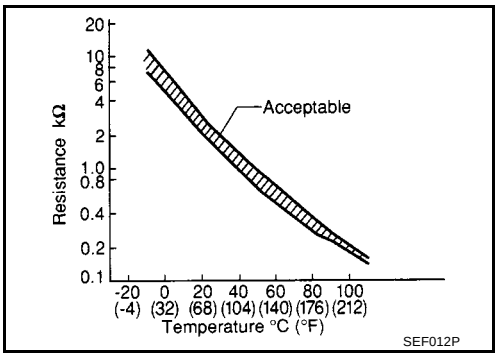
INTAKE AIR TEMPERATURE SENSOR

1. Check resistance between manifold absolute pressure sensor terminals 3 and 4 under the following conditions.

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.9 - 2.1

2. If NG, replace manifold absolute pressure sensor (with intake air temperature sensor).





Removal and Installation

EBS00O56

MANIFOLD ABSOLUTE PRESSURE SENSOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

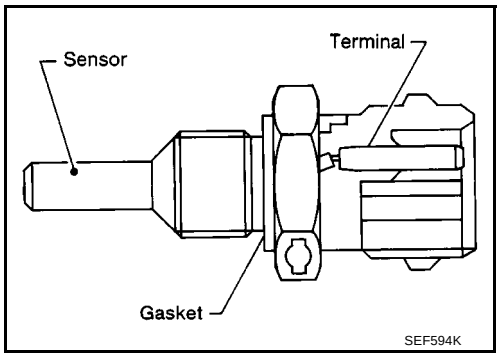
DTC P0117, P0118 ECT SENSOR

PFP:22630

Component Description

EBS00O57

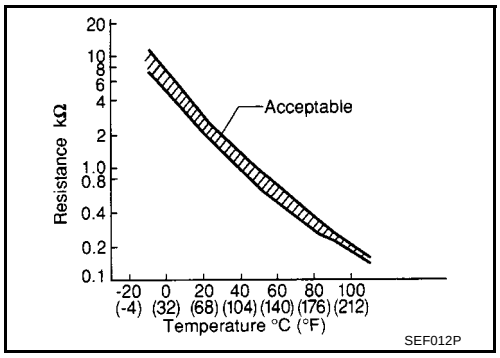
The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.



<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

*: These data are reference values and are measured between ECM terminal 72 (Engine coolant temperature sensor) and ground.



CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

EBS00O58

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0117 0117	Engine coolant temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Engine coolant temperature sensor
P0118 0118	Engine coolant temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

FAIL-SAFE MODE

When this malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Detected items	Engine operating condition in fail-safe mode	
Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or "START". CONSULT-II displays the engine coolant temperature decided by ECM.	
	Condition	Engine coolant temperature decided (CONSULT-II display)
	Just as ignition switch is turned ON or Start	40°C (104°F)
	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)
	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
	When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.	

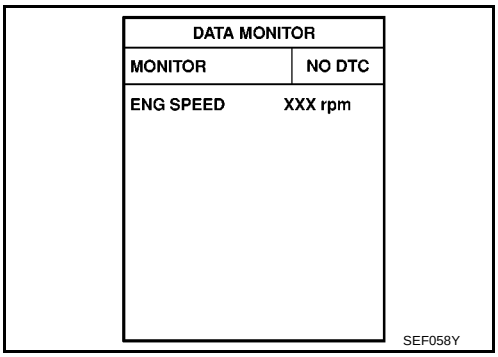
DTC Confirmation Procedure

EBS00O59

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If DTC is detected, go to EC-161, "Diagnostic Procedure" .



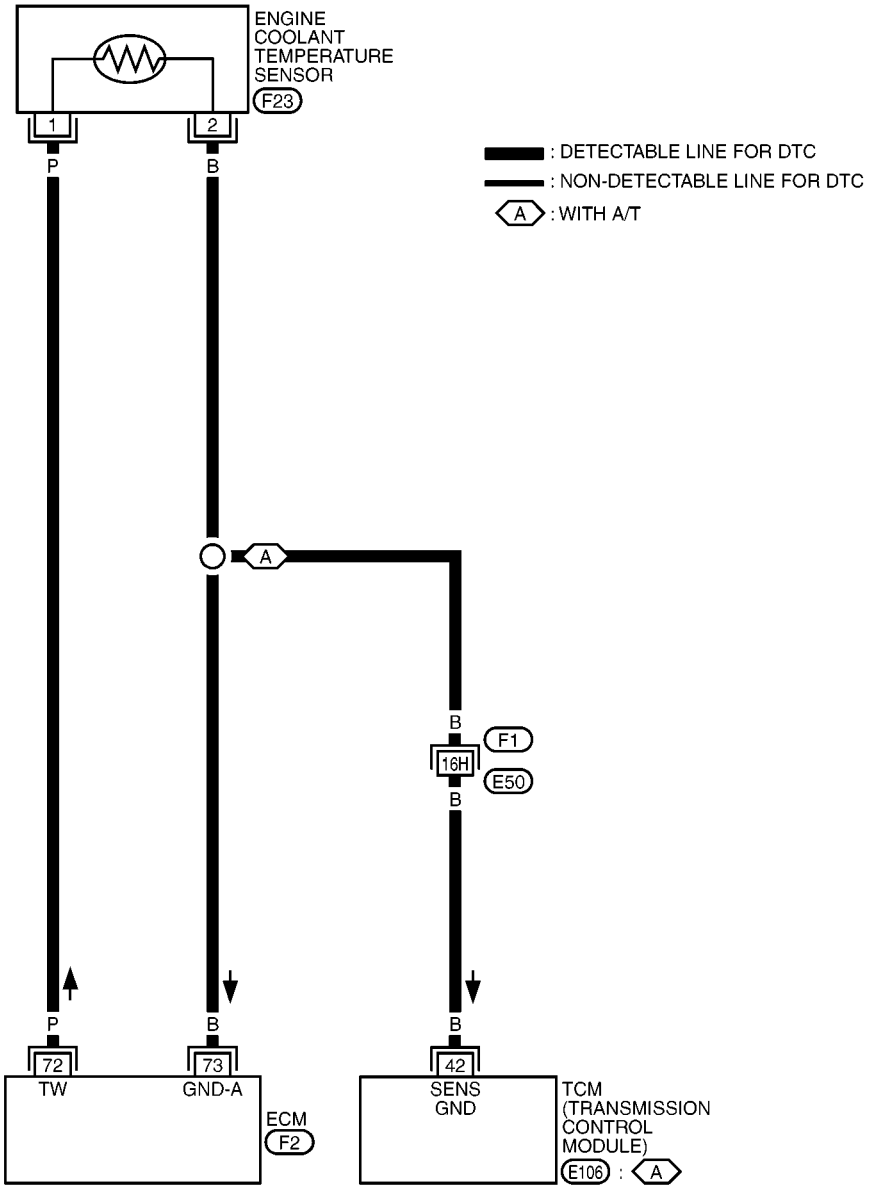
WITH GST

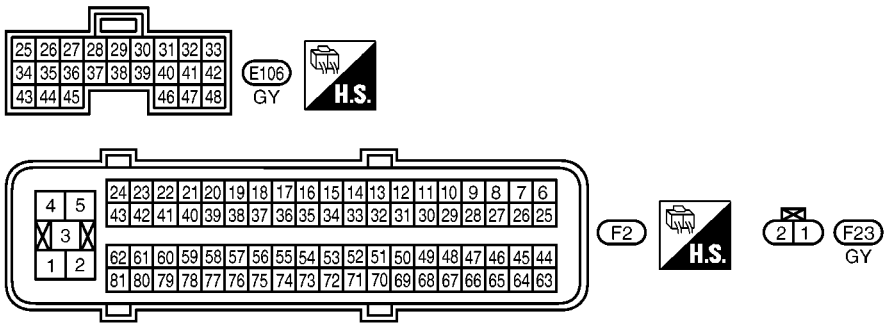
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00O5A

EC-ECTS-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

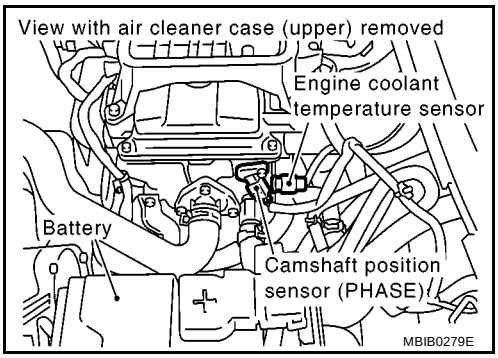
MBWA0271E

Diagnostic Procedure

EBS00O5B

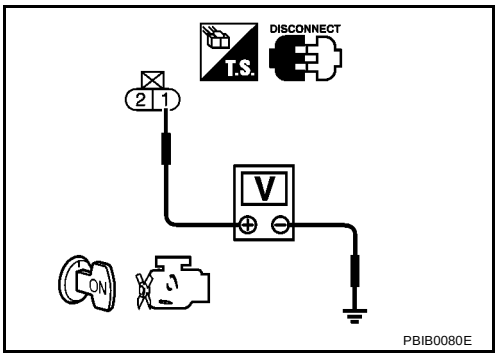
1. CHECK ECT SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature (ECT) sensor harness connector.
3. Turn ignition switch ON.



4. Check voltage between ECT sensor terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 2.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

2. CHECK ECT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect TCM harness connector.
4. Check harness continuity between ECT sensor terminal 2 and ECM terminal 73, TCM terminal 42. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between engine coolant temperature sensor and ECM
- Harness for open or short between engine coolant temperature sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-162, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace engine coolant temperature sensor.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

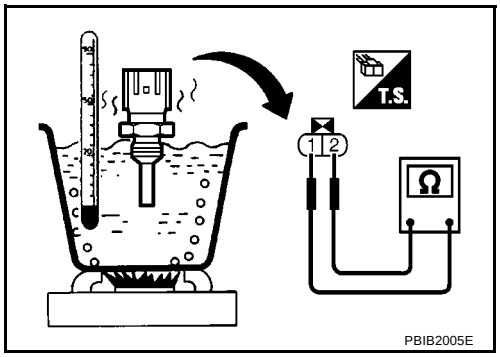
>> **INSPECTION END**

Component Inspection

EBS00O5C

ENGINE COOLANT TEMPERATURE SENSOR

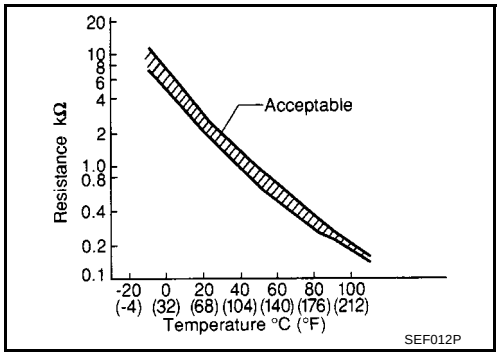
1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.



<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

*: These data are reference values and are measured between ECM terminal 72 (Engine coolant temperature sensor) and ground.



2. If NG, replace engine coolant temperature sensor.

Removal and Installation

EBS00O5D

ENGINE COOLANT TEMPERATURE SENSOR

Refer to CO-23, "THERMOSTAT" .

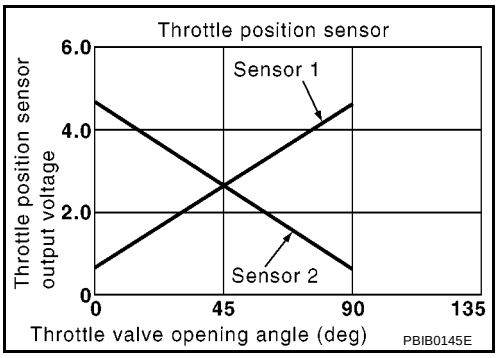
DTC P0122, P0123 TP SENSOR

PFP:16119

Component Description

EBS010BT

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS010BU

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS010BV

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0122 0122	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	● Harness or connectors (The TP sensor 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 2)
P0123 0123	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

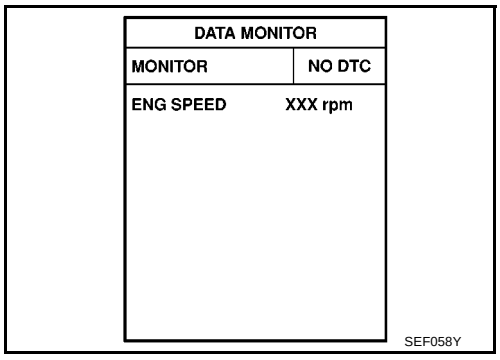
DTC Confirmation Procedure

EBS010BW

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-166, "Diagnostic Procedure" .



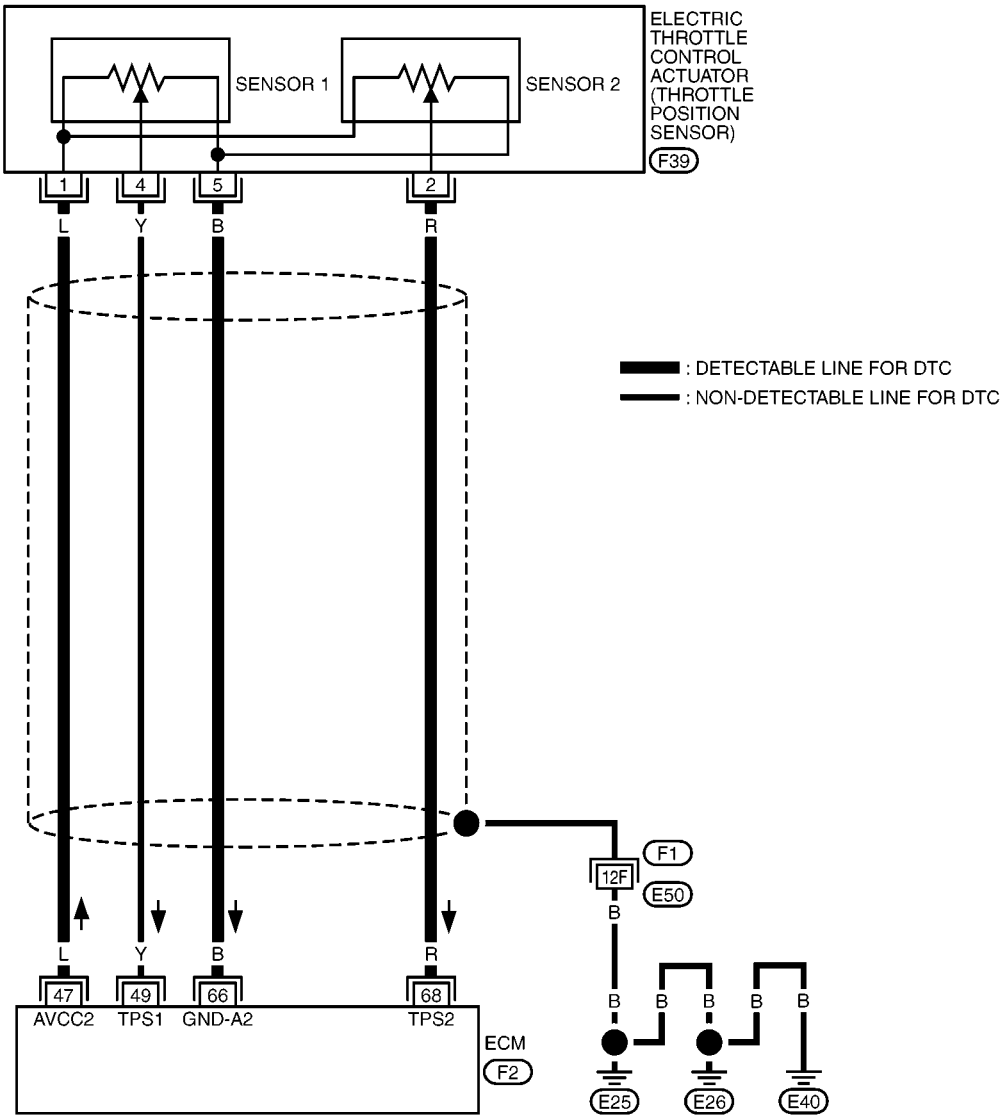
WITH GST

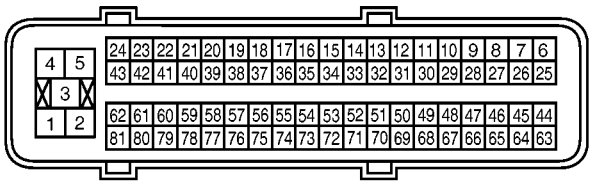
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS010BX

EC-TPS2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0291E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V
66	B	Sensor ground (Throttle position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V

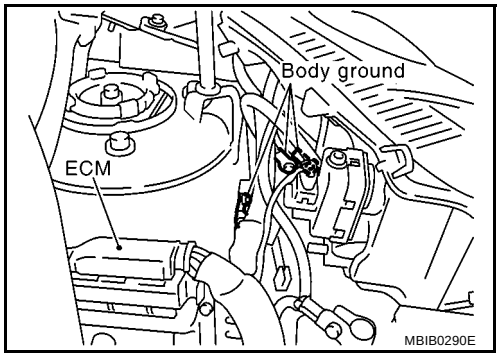
Diagnostic Procedure

EBS010BY

1. RETIGHTEN GROUND SCREWS

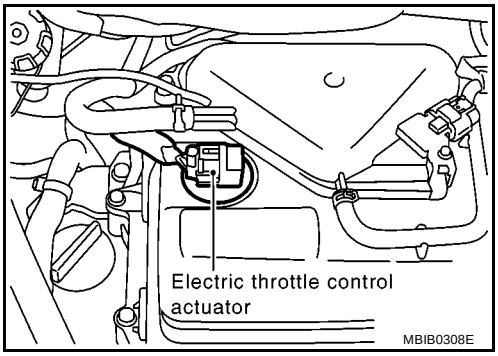
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



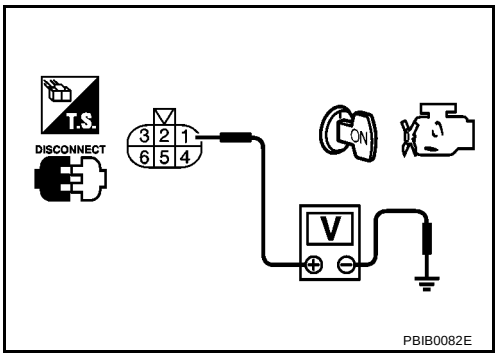
2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.



3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 68 and electric throttle control actuator terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-168, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

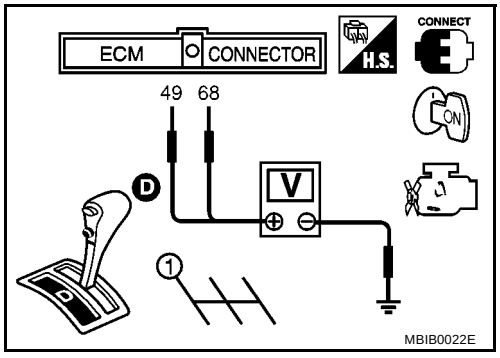
Component Inspection

EBS010BZ

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set selector lever to D position (A/T models) or 1st position (M/T models).
5. Check voltage between ECM terminals 49 (TP sensor 1 signal), 68 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
49 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
68 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V



6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-42, "Throttle Valve Closed Position Learning" .
8. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS010C0

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

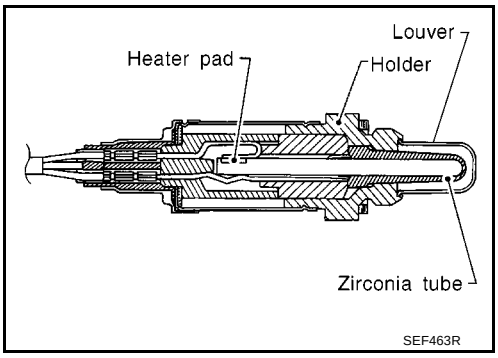
DTC P0132 HO2S1

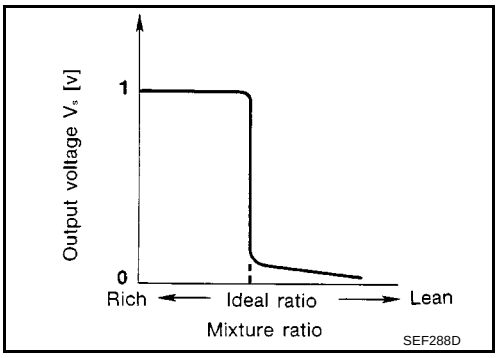
PFP:22690

Component Description

EBS00O5E

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00O5F

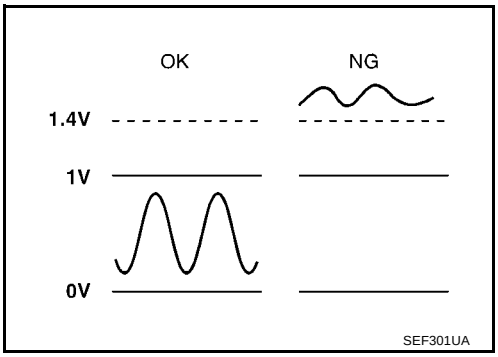
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00O5G

To judge the malfunction, the diagnosis checks that the heated oxygen sensor 1 output is not inordinately high.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0132 0132	Heated oxygen sensor 1 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 1

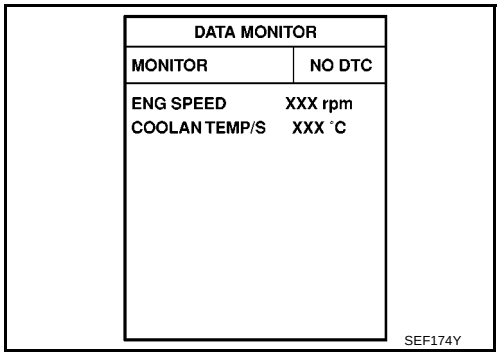
DTC Confirmation Procedure

EBS00O5H

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Select “DATA MONITOR” mode with CONSULT-II.
5. Restart engine and let it idle for 2 minutes.
6. If 1st trip DTC is detected, go to EC-172, "Diagnostic Procedure" .



WITH GST

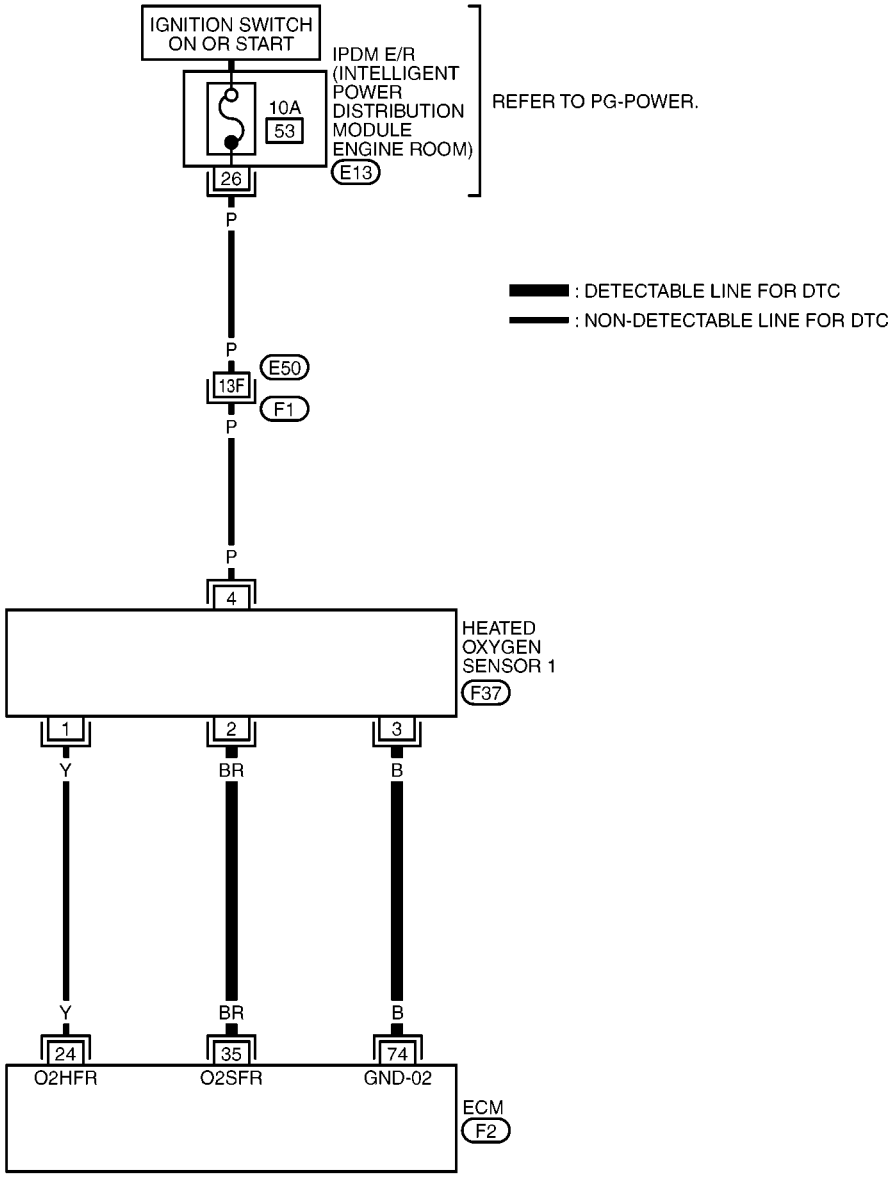
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Restart engine and let it idle for 2 minutes.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Restart engine and let it idle for 2 minutes.
6. Select “MODE 3” with GST.
7. If DTC is detected, go to EC-172, "Diagnostic Procedure" .

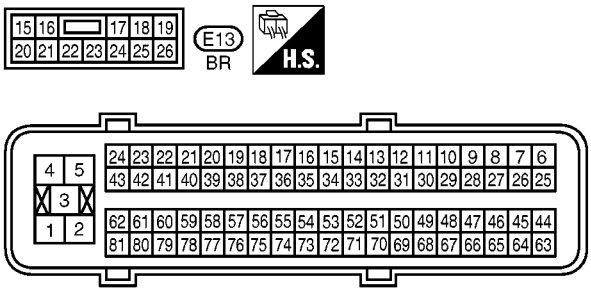
- **When using GST, DTC Confirmation Procedure should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

Wiring Diagram

EBS00O5I

EC-HO2S1-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0272E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

Diagnostic Procedure

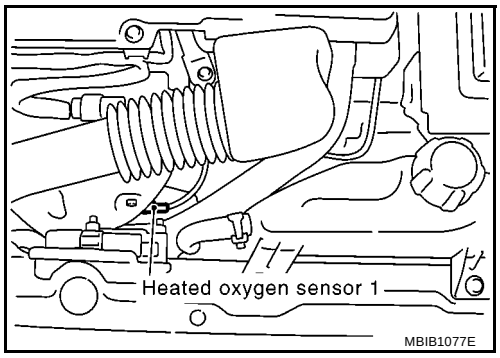
EBS00O5J

1. RETIGHTEN HEATED OXYGEN SENSOR 1

1. Turn ignition switch OFF.
2. Loosen and retighten heated oxygen sensor 1.

Tightening torque: 40 - 60 N·m (4.1 - 6.2 kg-m, 30 - 44 ft-lb)

>> GO TO 2.



2. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

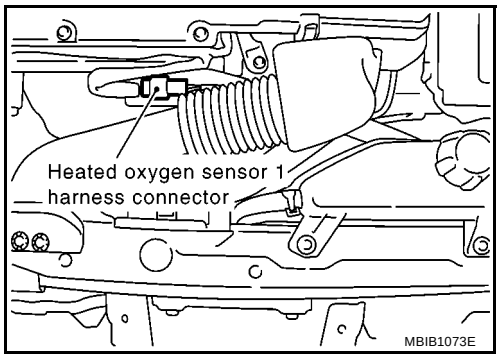
1. Disconnect heated oxygen sensor 1 harness connector.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 74 and HO2S1 terminal 3.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



3. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2. Refer to Wiring Diagram.

Continuity should exist.

3. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground. Refer to Wiring Diagram.

Continuity should not exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S1 CONNECTOR FOR WATER

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 harness connector
3. Check connectors for water

Water should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-173, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 1.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

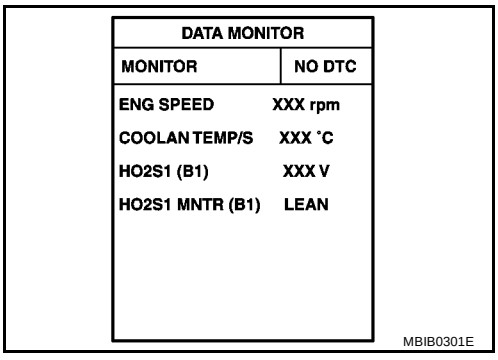
Component Inspection

EBS00O5K

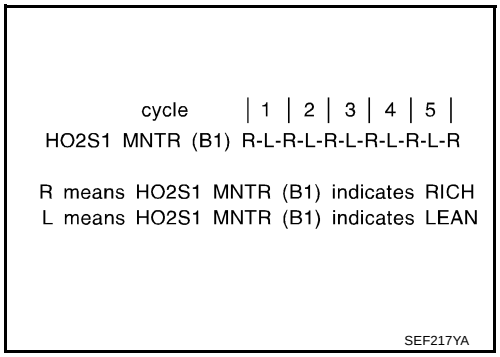
HEATED OXYGEN SENSOR 1

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” and adjust “TRIGGER POINT” to 100% in “DATA MONITOR” mode with CONSULT-II.
3. Select “HO2S1 (B1)” and “HO2S1 MNTR (B1)”.
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch “RECORD” on CONSULT-II screen.



6. Check the following.
   - “HO2S1 MNTR (B1)” in “DATA MONITOR” mode changes from “RICH” to “LEAN” to “RICH” more than 5 times in 10 seconds.
     5 times (cycles) are counted as shown at right.
   - “HO2S1 (B1)” voltage goes above 0.6V at least once.
   - “HO2S1 (B1)” voltage goes below 0.3V at least once.
   - “HO2S1 (B1)” voltage never exceeds 1.0V.



Trigger	ENG SPEED	HO2S1 (B1)
	rpm	V
XXX	XXX	XXX
XXX	XXX	XXX

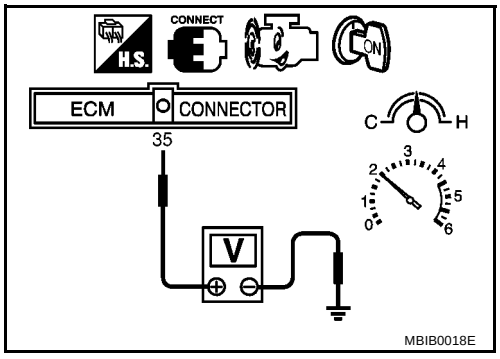
CAUTION:
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
   - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
   - The maximum voltage is over 0.6V at least one time.
   - The minimum voltage is below 0.3V at least one time.
   - The voltage never exceeds 1.0V.

   1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V
   2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V



CAUTION:
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00O5L

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

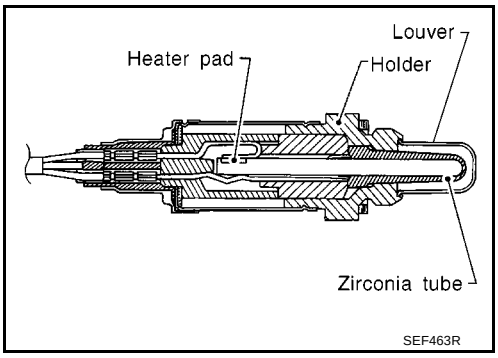
DTC P0133 HO2S1

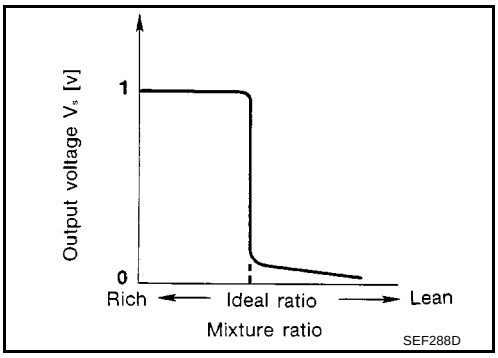
PFP:22690

Component Description

EBS00O5M

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00O5N

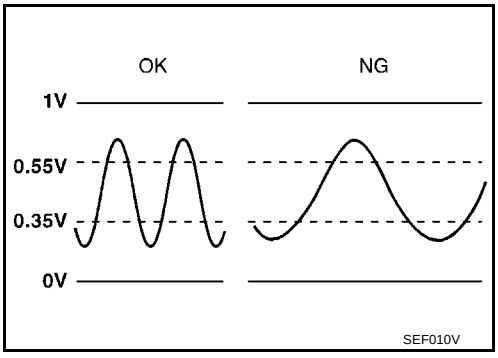
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00O5O

To judge the malfunction of heated oxygen sensor 1, this diagnosis measures response time of heated oxygen sensor 1 signal. The time is compensated by engine operating (speed and load), fuel feedback control constant, and heated oxygen sensor 1 temperature index. Judgment is based on whether the compensated time (heated oxygen sensor 1 cycling time index) is inordinately long or not.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0133 0133	Heated oxygen sensor 1 circuit slow response	The response of the voltage signal from the sensor takes more than the specified time.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 1 ● Heated oxygen sensor 1 heater ● Fuel pressure ● Injectors ● Intake air leaks ● Exhaust gas leaks ● Manifold absolute pressure sensor

DTC Confirmation Procedure

EBS00O5P

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

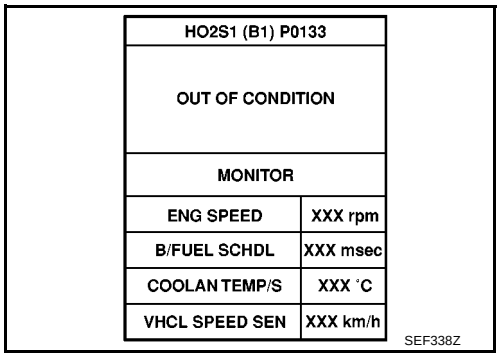
TESTING CONDITION:

- **Always perform at a temperature above −10°C (14°F).**
- **Before performing the following procedure, confirm that battery voltage is more than 11V at idle.**

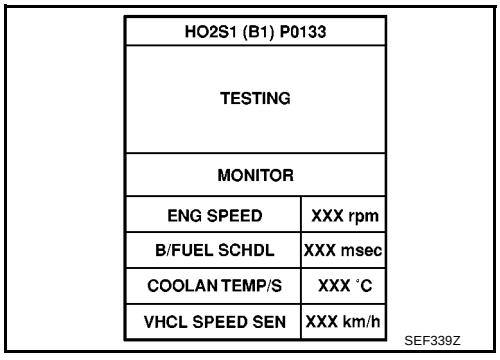
WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Turn ignition switch ON and select “HO2S1 (B1) P0133” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

   NOTE:
   Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.



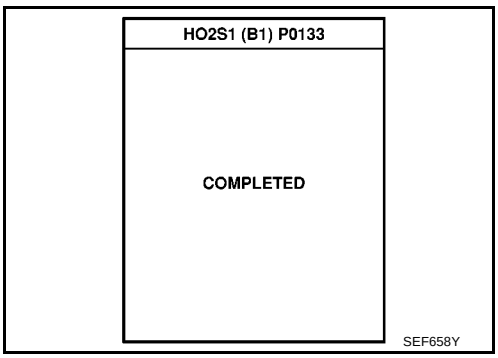
6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 40 to 60 seconds.)



ENG SPEED	2,750 - 4,350 rpm (M/T models with CR 10 engine) 2,450 - 3,950 rpm (M/T models with CR 12 engine) 2,550 - 4,100 rpm (M/T models with CR 14 engine) 2,100 - 3,300 rpm (A/T models with CR 12 engine) 2,100 - 3,400 rpm (A/T models with CR 14 engine)
Vehicle speed	More than 80 km/h (50 MPH)
B/FUEL SCHDL	3.3 - 6.5 msec
Selector lever	Suitable position

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to EC-179, "Diagnostic Procedure" .



Overall Function Check

EBS00O5Q

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

WITH GST

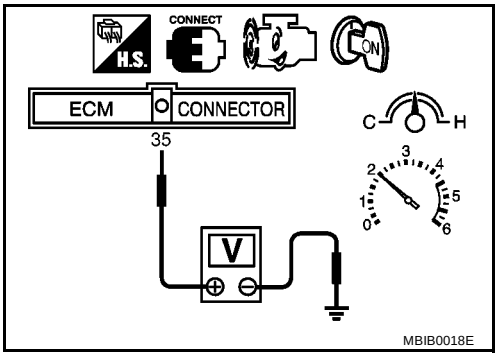
1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.

1 time: **0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V**

2 times: **0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V**

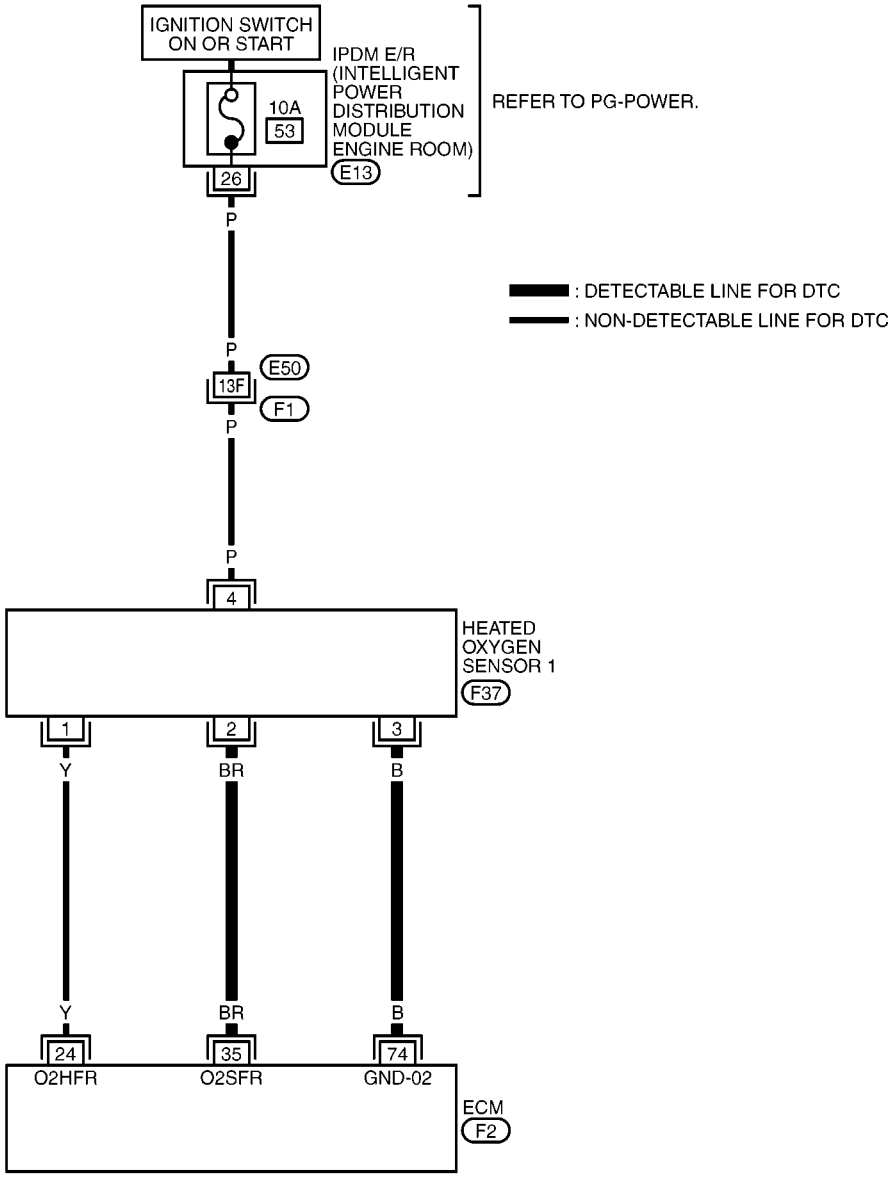
4. If NG, go to EC-179, "Diagnostic Procedure" .

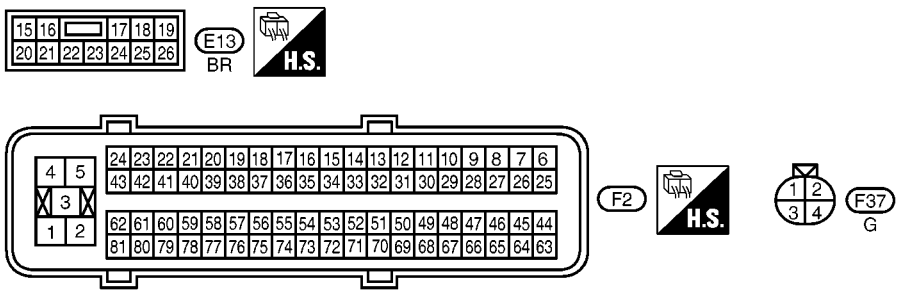


Wiring Diagram

EBS00O5R

EC-HO2S1-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0272E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

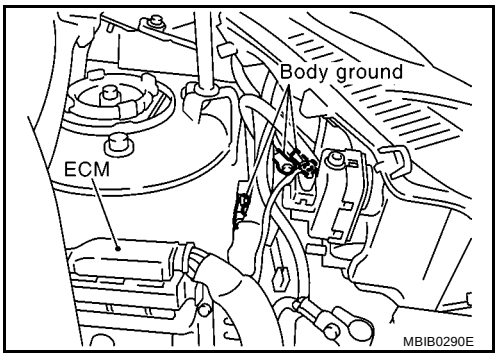
Diagnostic Procedure

EBS00O5S

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.

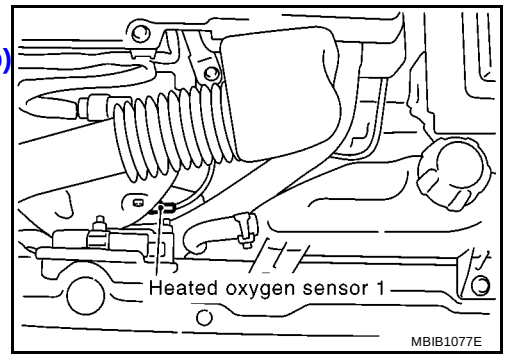


2. RETIGHTEN HEATED OXYGEN SENSOR 1

Loosen and retighten heated oxygen sensor 1.

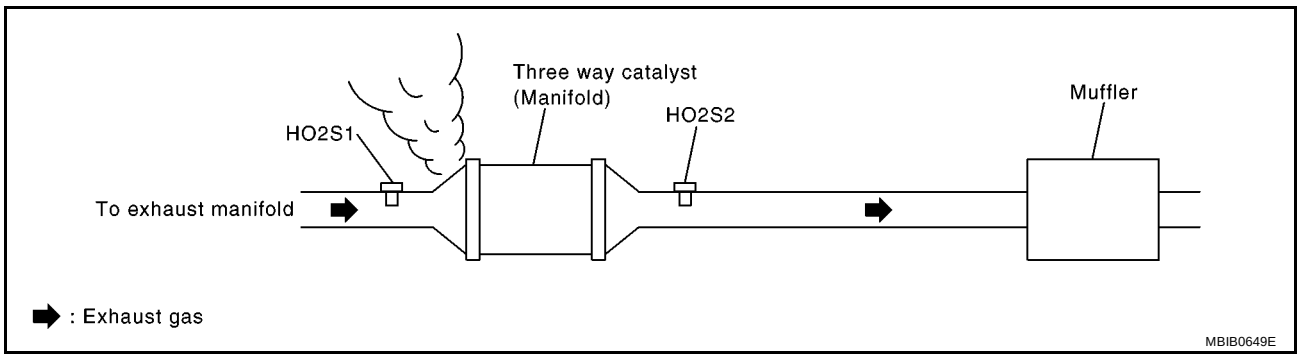
Tightening torque: 40 - 60 N·m (4.1 - 6.2 kg-m, 30 - 44 ft-lb)

>> GO TO 3.



3. CHECK FOR EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst (Manifold).



OK or NG

OK >> GO TO 4.
NG >> Repair or replace.

4. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the manifold absolute pressure sensor.

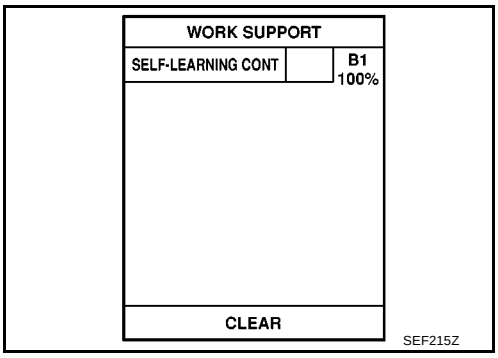
OK or NG

OK >> GO TO 5.
NG >> Repair or replace.

5. CLEAR THE SELF-LEARNING DATA

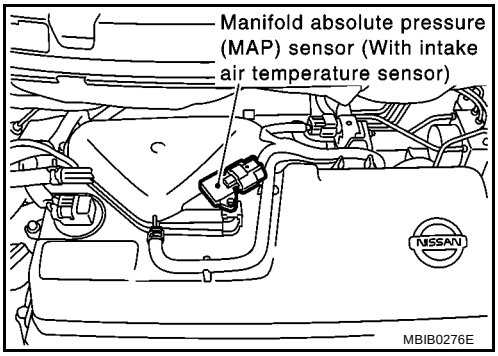
With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 or P0172 detected?
   Is it difficult to start engine?



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect manifold absolute pressure sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Make sure that DTC P0107 is displayed.
6. Erase the DTC memory. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 or P0172 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171 or DTC P0172 (Refer to EC-208 or EC-215).
No >> GO TO 6.

6. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

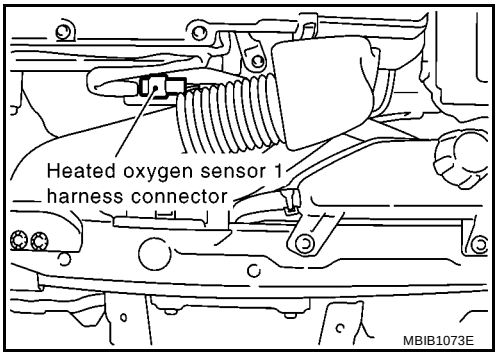
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S1 terminal 3. Refer to Wiring Diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



7. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 8.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to EC-141, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace malfunctioning heated oxygen sensor 1.

9. CHECK MANIFOLD ABSOLUTE PRESSURE SENSOR

Refer to EC-151, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> Replace manifold absolute pressure sensor.

10. CHECK PCV VALVE

Refer to EC-468, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace PCV valve.

11. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-182, "Component Inspection" .

OK or NG

OK >> GO TO 12.
NG >> Replace heated oxygen sensor 1.

12. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

EBS00O5T

HEATED OXYGEN SENSOR 1

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” and adjust “TRIGGER POINT” to 100% in “DATA MONITOR” mode with CONSULT-II.

3. Select “HO2S1 (B1)” and “HO2S1 MNTR (B1)”.
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch “RECORD” on CONSULT-II screen.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
MAS A/F SE-B1	XXX V
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
HO2S1 MNTR (B1)	LEAN

SEF646Y

6. Check the following.
   - “HO2S1 MNTR (B1)” in “DATA MONITOR” mode changes from “RICH” to “LEAN” to “RICH” more than 5 times in 10 seconds.
     5 times (cycles) are counted as shown at right.
   - “HO2S1 (B1)” voltage goes above 0.6V at least once.
   - “HO2S1 (B1)” voltage goes below 0.3V at least once.
   - “HO2S1 (B1)” voltage never exceeds 1.0V.

Removal and Installation

EBS00O5U

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

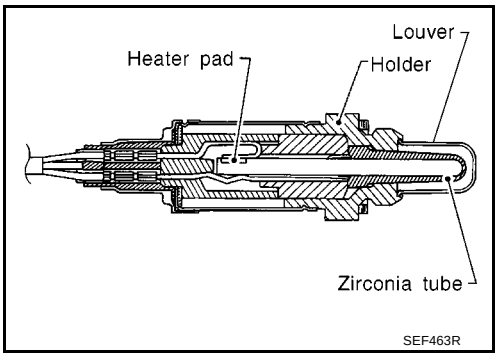
DTC P0134 HO2S1

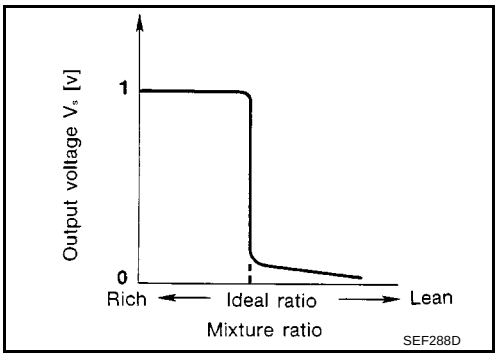
PFP:22690

Component Description

EBS00O5V

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00O5W

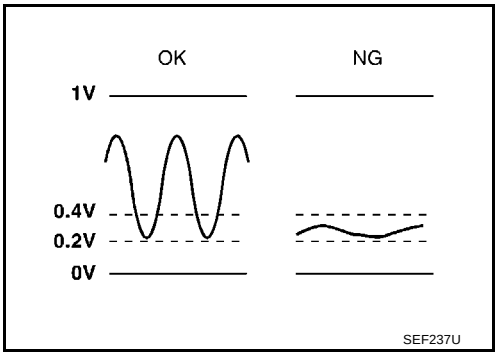
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00O5X

Under the condition in which the heated oxygen sensor 1 signal is not input, the ECM circuits will read a continuous approximately 0.3V. Therefore, for this diagnosis, the time that output voltage is within 200 to 400 mV range is monitored, and the diagnosis checks that this time is not inordinately long.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0134 0134	Heated oxygen sensor 1 circuit no activity detected	The voltage from the sensor is constantly approx. 0.3V.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 1

DTC Confirmation Procedure

EBS00O5Y

CAUTION:
Always drive vehicle at a safe speed.

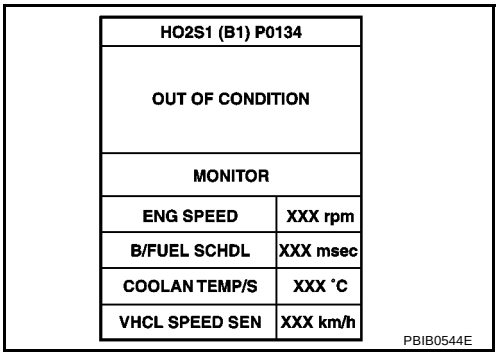
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V at idle.

WITH CONSULT-II

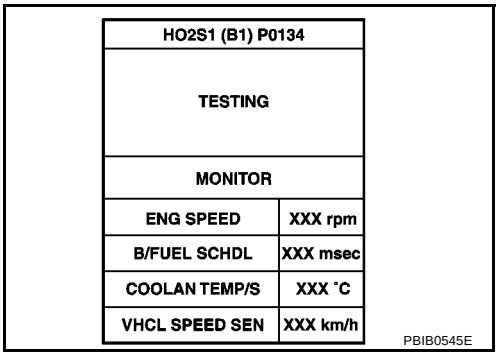
1. Start engine and warm it up to normal operating temperature.
2. Select “HO2S1 (B1) P0134” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
3. Touch “START”.
4. Let it idle for at least 3 minutes.

   NOTE:
   Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 4.



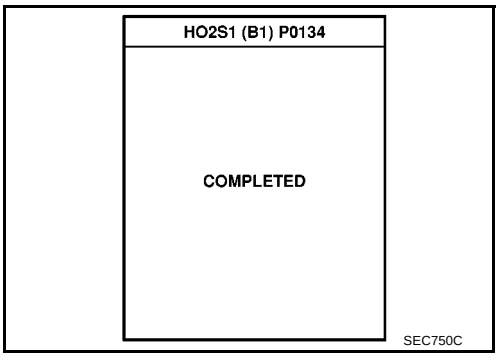
5. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 10 to 60 seconds.)

ENG SPEED	2,400 - 4,700 rpm (M/T models with CR10 engine) 2,150 - 4,250 rpm (M/T models with CR12 engine) 2,200 - 4,400 rpm (M/T models with CR14 engine) 1,650 - 3,650 rpm (A/T models)
Vehicle speed	More than 64 km/h (40 MPH)
B/FUEL SCHDL	2.9 - 7.2 msec
Selector lever	Suitable position



If “TESTING” is not displayed after 5 minutes, retry from step 2.

6. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to EC-189, "Diagnostic Procedure" .



Overall Function Check

EBS00O5Z

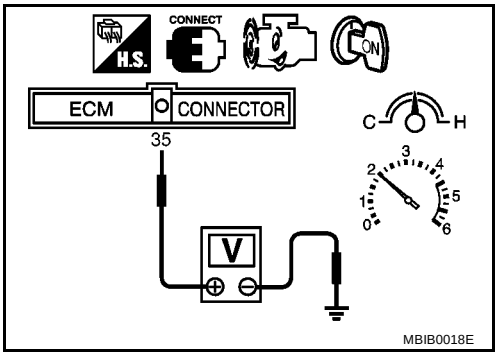
Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage does not remain in the range of 0.2 to 0.4V.

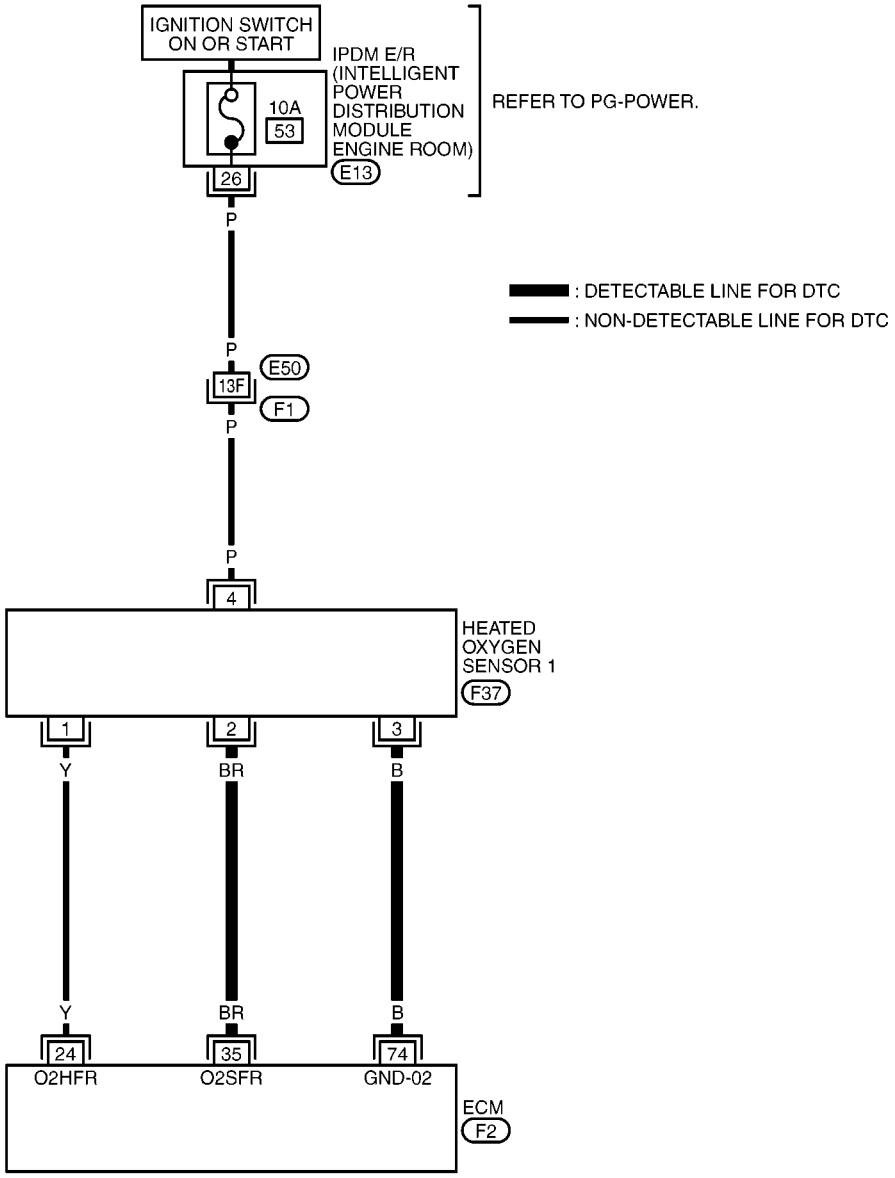
4. If NG, go to EC-189, "Diagnostic Procedure" .

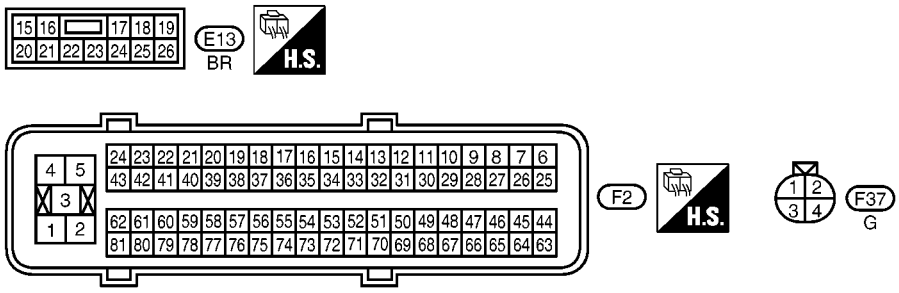


Wiring Diagram

EBS00O60

EC-HO2S1-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0272E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

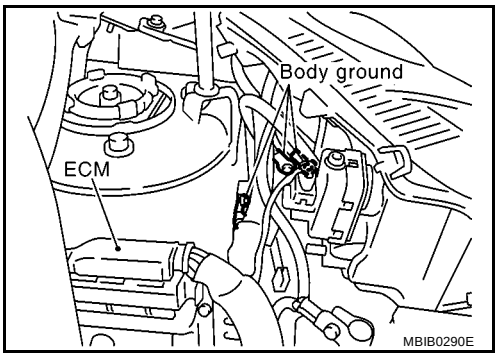
Diagnostic Procedure

EBS00O61

1. INSPECTION START

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



2. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

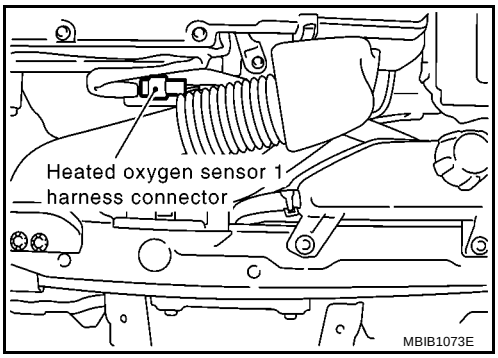
1. Disconnect heated oxygen sensor 1 harness connector.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 74 and HO2S1 terminal 3. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



3. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-190, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace heated oxygen sensor 1.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

Removal and Installation

EBS00O63

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

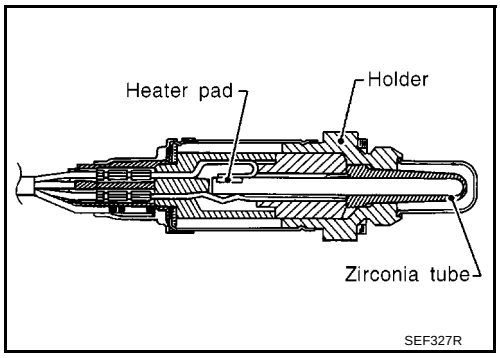
DTC P0138 HO2S2

PFP:226A0

Component Description

EBS00O64

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.
Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O65

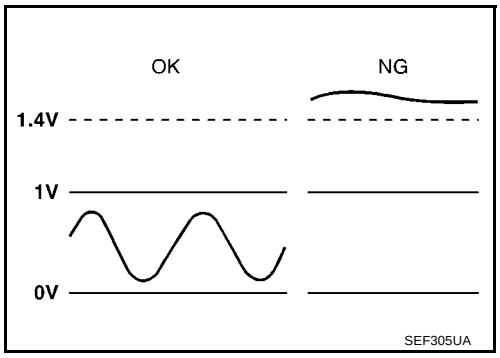
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ←→ RICH

On Board Diagnosis Logic

EBS00O66

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during the various driving condition such as fuel-cut.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0138 0138	Heated oxygen sensor 2 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 2

DTC Confirmation Procedure

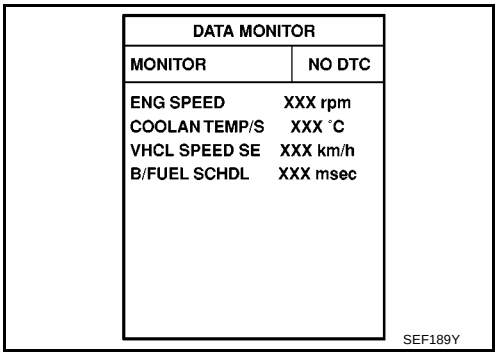
EBS00O67

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 2 minutes.
6. If 1st trip DTC is detected, go to EC-195, "Diagnostic Procedure" .



WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 2 minutes.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 2 minutes.
8. Select “MODE 3” with GST.
9. If NG, go to EC-195, "Diagnostic Procedure" .

- **When using GST, DTC Confirmation Procedure should be performed twice as much as when using CONSULT-II because GST cannot display MODE 7 (1st trip DTC) concerning this diagnosis. Therefore, using CONSULT-II is recommended.**

Wiring Diagram

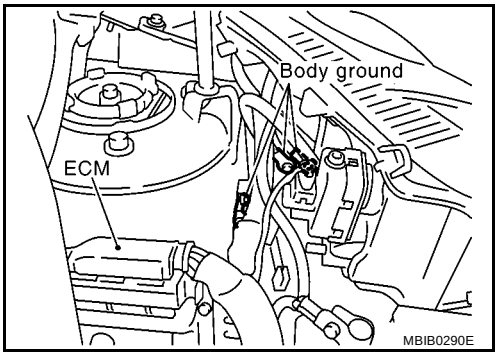
Diagnostic Procedure

EBS00O6A

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



2. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

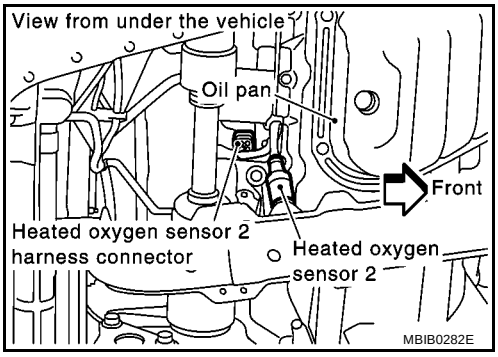
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S2 terminal 3.
   Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



3. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 16 and HO2S2 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 16 or HO2S2 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-196, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace heated oxygen sensor 2.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

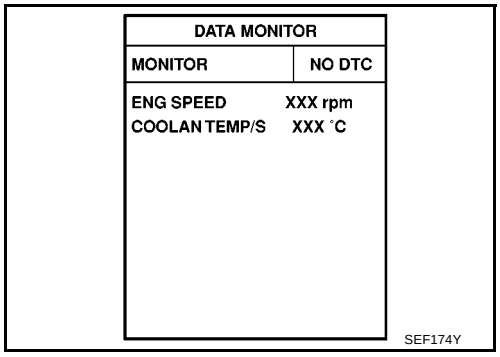
Component Inspection

EBS00O6B

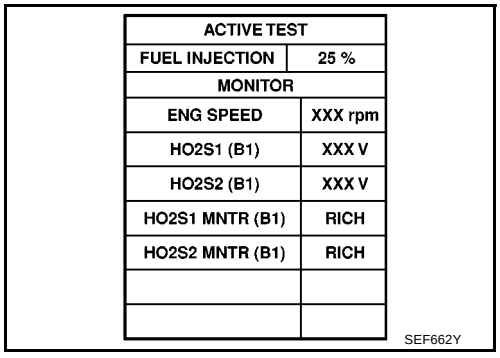
HEATED OXYGEN SENSOR 2

With CONSULT-II

1. Turn ignition switch ON and select ″DATA MONITOR″ mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.

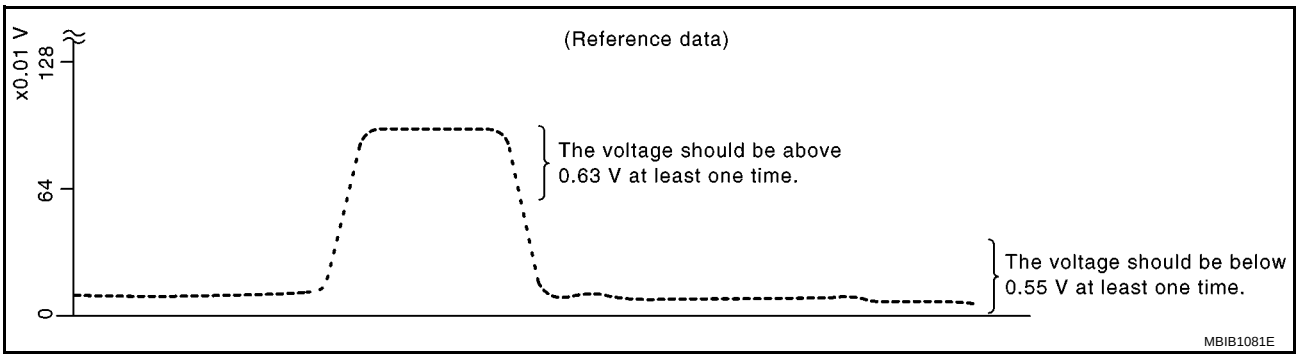


6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2(B1)” as the monitor item with CONSULT-II.



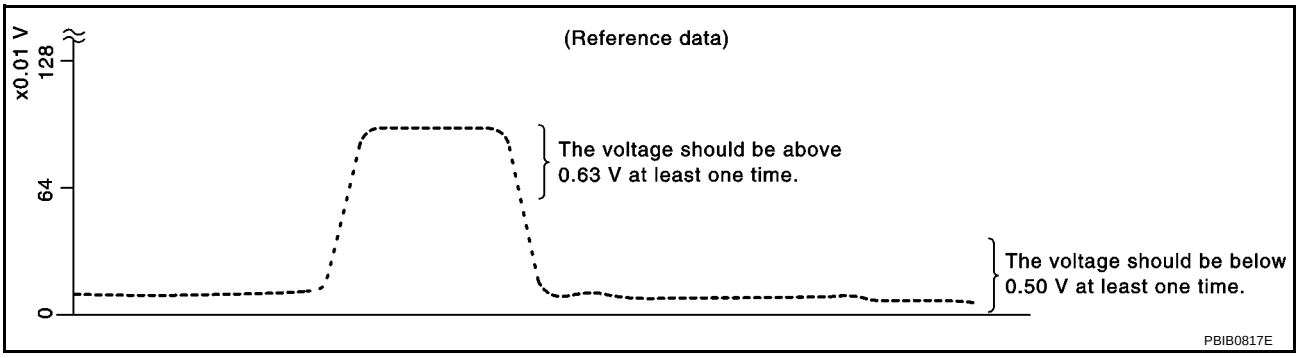
7. Check “HO2S2 (B1)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

[CR10 engine models]



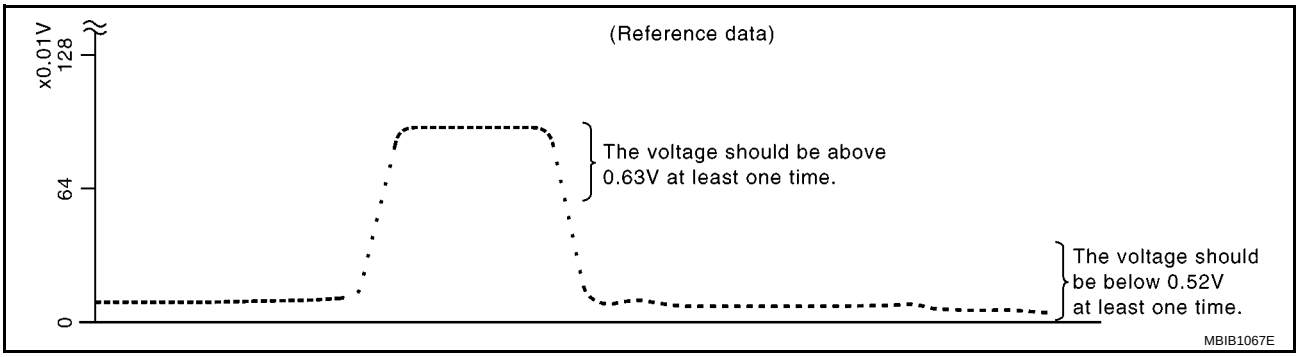
"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.55V at least once when the "FUEL INJECTION" is −25%.

[A/T models with CR14 engine without ESP]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.50V at least once when the "FUEL INJECTION" is −25%.

[Except above models]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is −25%.

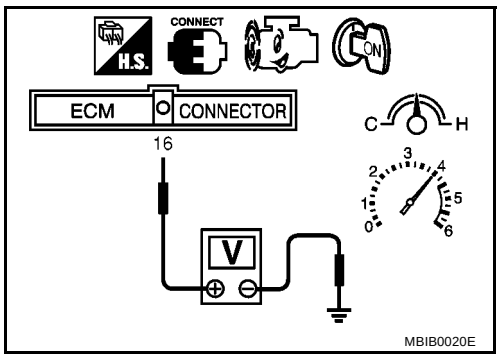
CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
(Depress and release accelerator pedal as soon as possible.)
The voltage should be above 0.63V at least once during this procedure.
If the voltage is above 0.63V at step 6, step 7 is not necessary.
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
The voltage should be below 0.55V (CR10 engine models), 0.50V (A/T models with CR14 engine without ESP), 0.52V (Other models) at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00O6C

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

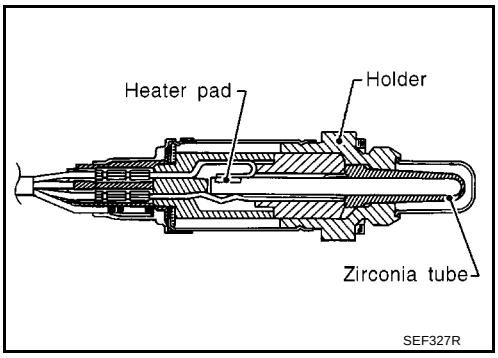
DTC P0139 HO2S2

PFP:226A0

Component Description

EBS00O6D

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.
Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O6E

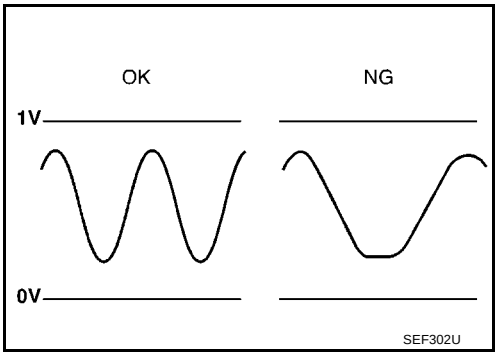
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ←→ RICH

On Board Diagnosis Logic

EBS00O6F

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the switching response of the sensor's voltage is faster than specified during the various driving condition such as fuel-cut.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0139 0139	Heated oxygen sensor 2 circuit slow response	It takes more time for the sensor to respond between rich and lean than the specified time.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 2 ● Fuel pressure ● Injectors ● Intake air leaks

DTC Confirmation Procedure

EBS00O6G

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
- **"COMPLETED" will appear on CONSULT-II screen when all tests "COND1", "COND2" and "COND3" are completed.**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Never stop engine during this procedure. If the engine is stopped, retry this procedure from step 2 in Procedure for COND1.

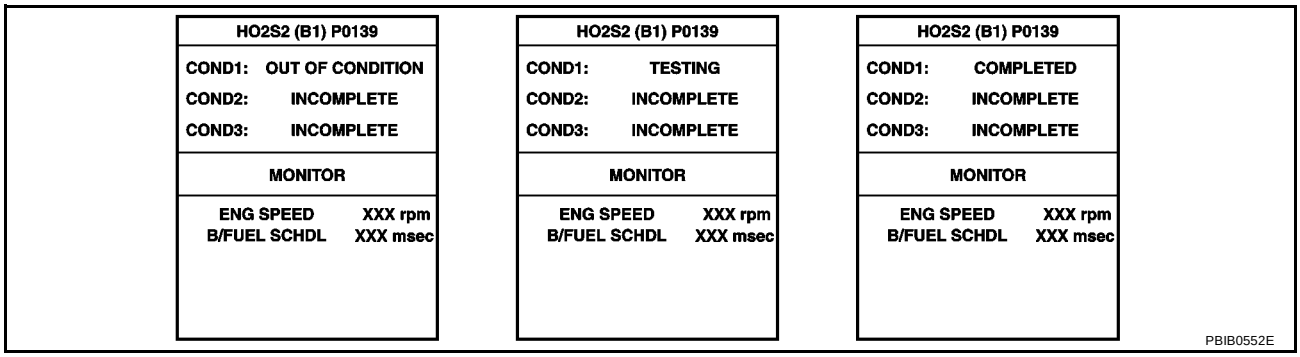
WITH CONSULT-II

Procedure for COND1

For the best results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°(32 to 86°F).

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle 1 minute.
5. Select "HO2S2 (B1) P0139" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
6. Touch "START".
7. Start engine and let it idle for at least 30 seconds.
8. Rev engine up to 2,000 rpm 2 or 3 times quickly under no load.
   If "COMPLETED" appears on CONSULT-II screen, go to step 2 in "Procedure for COND3".
   If "COMPLETED" does not appear on CONSULT-II screen, go to the following step.
9. When the following conditions are met, "TESTING" will be displayed at "COND1" on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take approximately 60 seconds.)

ENG SPEED	More than 1,000 rpm
B/FUEL SCHDL	More than 1.0 msec
COOLANT TEMP/S	70 - 105 °C (158 - 221°F)
Selector level	Suitable position

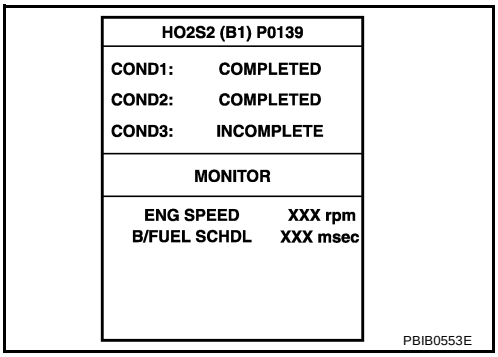


NOTE:
- **If "TESTING" is not displayed after 5 minutes, retry from step 2 in Procedure for COND1.**
- **If "COMPLETED" already appears at "COND2" on CONSULT-II screen before Procedure for COND2 is conducted, it is unnecessary to conduct step 1 in Procedure for COND2.**

Procedure for COND2

1. While driving, release accelerator pedal completely from the above condition [step 9] until “INCOMPLETE” at “COND2” on CONSULT-II screen has turned to “COMPLETED”. (It will take approximately 4 seconds.)

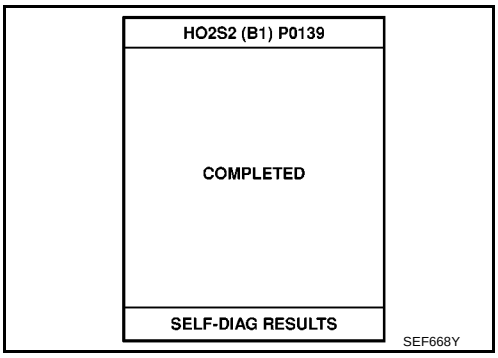
NOTE:
If “COMPLETED” already appears at “COND3” on CONSULT-II screen before Procedure for COND3 is conducted, it is unnecessary to conduct step 1 in Procedure for COND3.



Procedure for COND3

1. Stop vehicle and let it idle until “INCOMPLETE” of “COND3” on CONSULT-II screen has turned to “COMPLETED”. (It will take a maximum of approximately 6 minutes.)
2. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.
   If “NG” is displayed, refer to EC-203, "Diagnostic Procedure" .
   If “CAN NOT BE DIAGNOSED” is displayed, perform the following.

a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
b. Turn ignition switch ON and select “COOLANTEMP/S” in “DATA MONITOR” mode with CONSULT-II.
c. Start engine and warm it up while monitoring “COOLANTEMP/S” indication on CONSULT-II.
d. When “COOLANTEMP/S” indication reaches to 70°(158°F), go to procedure for COND1 step 3.



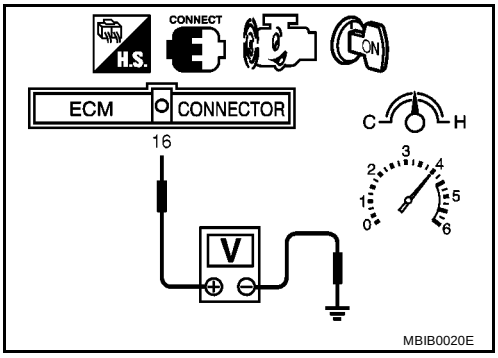
Overall Function Check

EBS00O6H

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

WITH GST

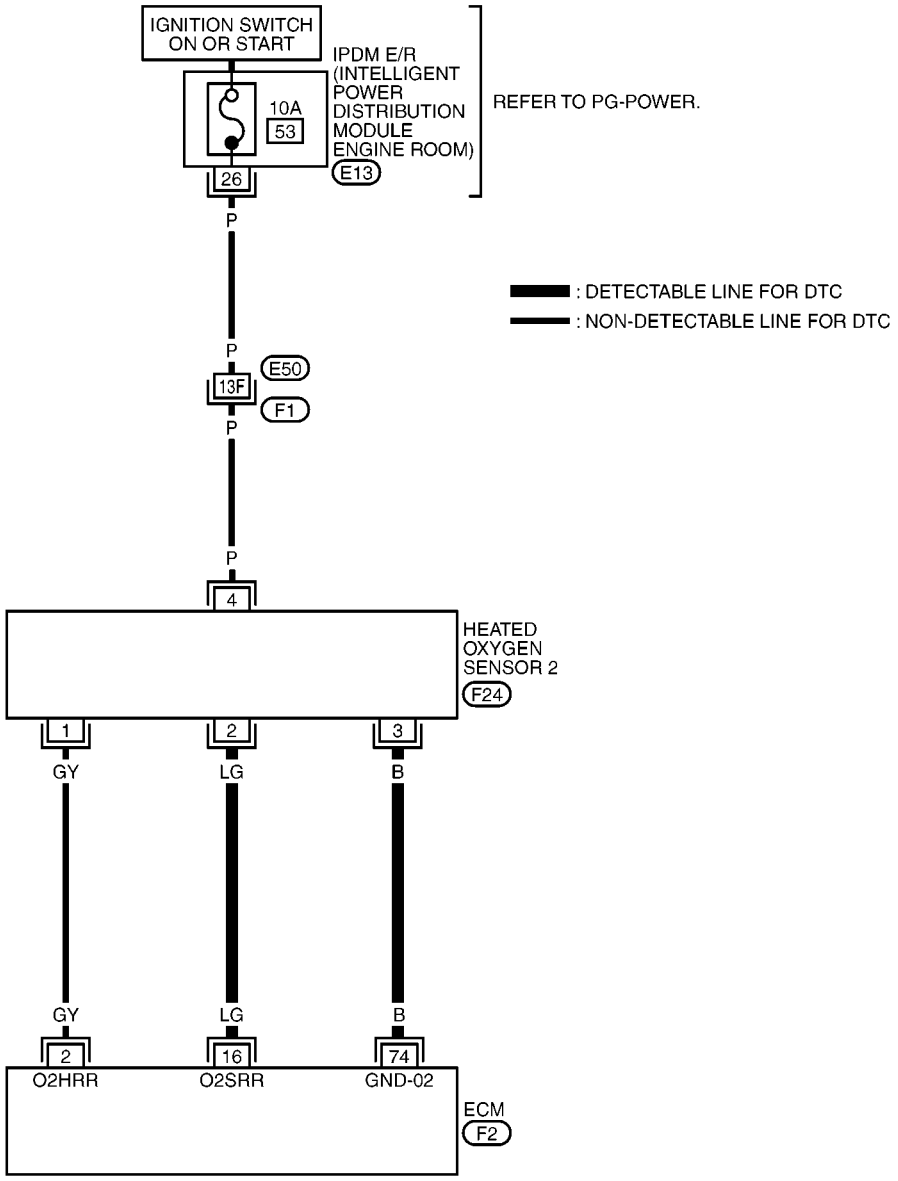
1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   A change of voltage should be more than 0.06V for 1 second during this procedure.
   If the voltage can be confirmed in step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
   A change of voltage should be more than 0.06V for 1 second during this procedure.
8. If NG, go to EC-203, "Diagnostic Procedure" .

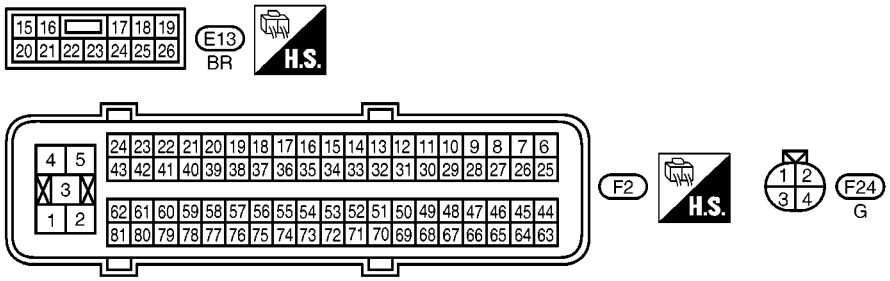


Wiring Diagram

EBS00O6I

EC-HO2S2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0273E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● **Warm-up condition** ● Revving engine from idle to 3,000 rpm quickly after the following conditions are met. ● Keeping the engine speed at between 3,500 to 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - Approximately 1.0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

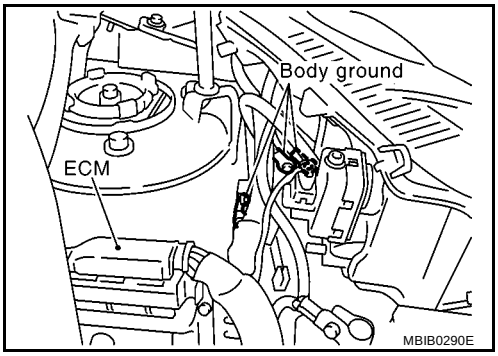
Diagnostic Procedure

EBS00O6J

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

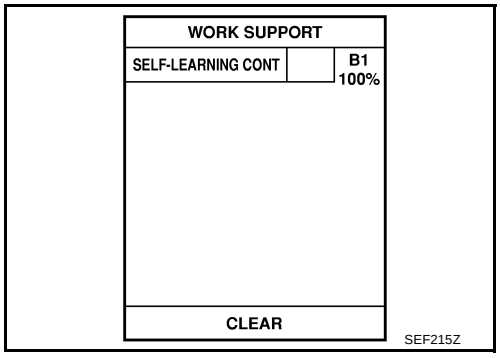
>> GO TO 2.



2. CLEAR THE SELF-LEARNING DATA

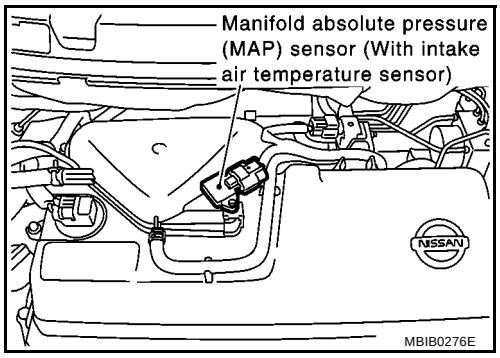
With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 or P0172 detected?
   Is it difficult to start engine?



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect manifold absolute pressure sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Make sure that DTC P0107 is displayed.
6. Erase the DTC memory. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 or P0172 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171 or P0172. Refer to EC-208 or EC-215 .
No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

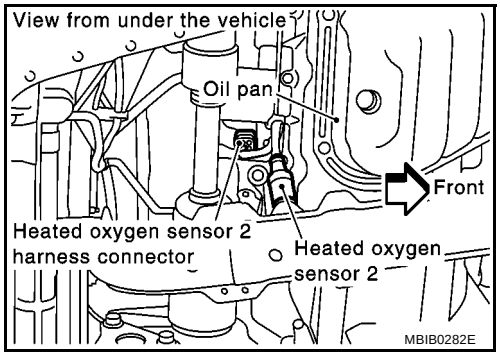
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S2 terminal 3.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 16 and HO2S2 terminal 2. Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 16 or HO2S2 terminal 2 and ground. Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-205, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

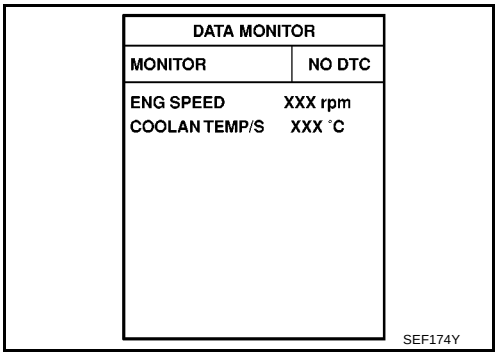
Component Inspection

EBS00O6K

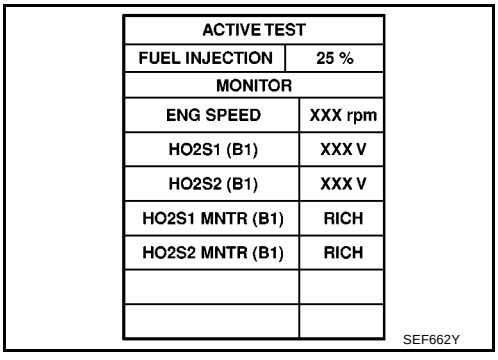
HEATED OXYGEN SENSOR 2

With CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.

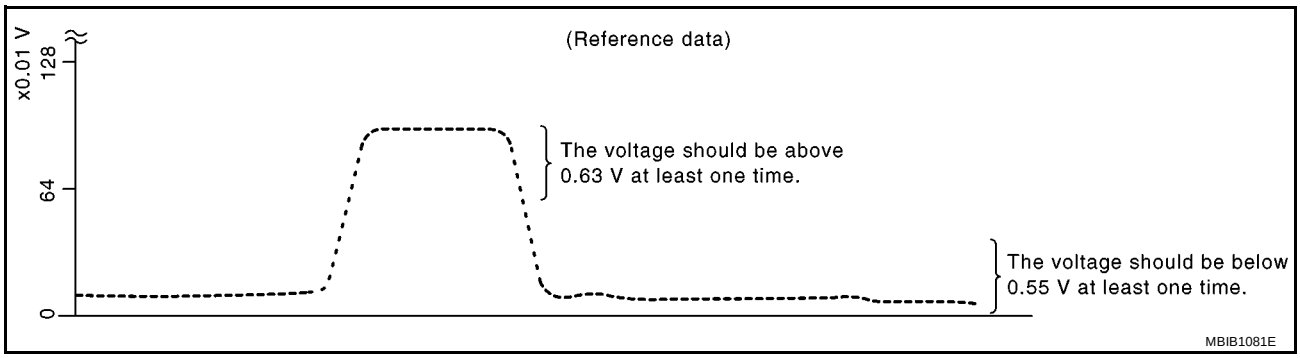


6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2 (B1)” as the monitor item with CONSULT-II.



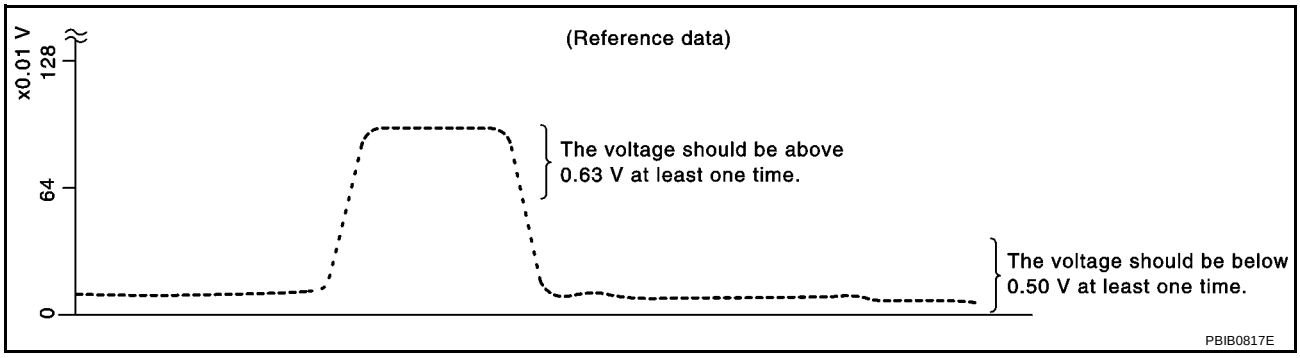
7. Check “HO2S2 (B1)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

[CR10 engine models]



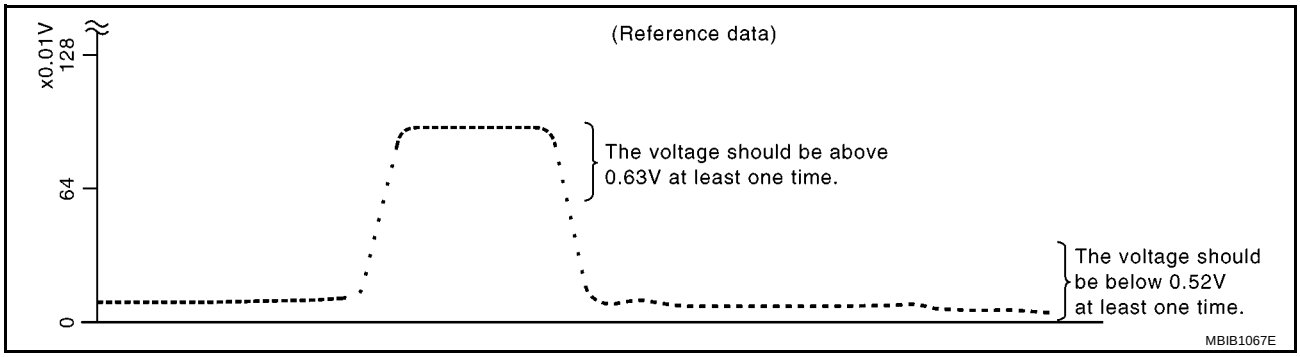
"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.55V at least once when the "FUEL INJECTION" is −25%.

[A/T models with CR14 engine without ESP]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.50V at least once when the "FUEL INJECTION" is −25%.

[Except above models]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is −25%.

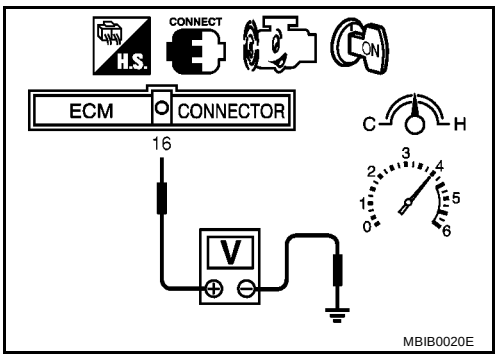
CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

⊗ Without CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
(Depress and release accelerator pedal as soon as possible.)
The voltage should be above 0.63V at least once during this procedure.
If the voltage is above 0.63V at step 6, step 7 is not necessary.
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
The voltage should be below 0.55V (CR10 engine models), 0.50V (A/T models with CR14 engine without ESP), 0.52V (Other models) at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00O6L

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

DTC P0171 FUEL INJECTION SYSTEM FUNCTION

PFP:16600

On Board Diagnosis Logic

EBS00O6M

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the heated oxygen sensor 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.
In case the amount of the compensation value is extremely large (The actual mixture ratio is too lean.), the ECM judges the condition as the fuel injection system malfunction and lights up the MI (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0171 0171	Fuel injection system too lean	● Fuel injection system does not operate properly. ● The amount of mixture ratio compensation is too large. (The mixture ratio is too lean.)	● Intake air leaks ● Heated oxygen sensor 1 ● Injectors ● Exhaust gas leaks ● Incorrect fuel pressure ● Lack of fuel ● Manifold absolute pressure sensor ● Incorrect PCV hose connection

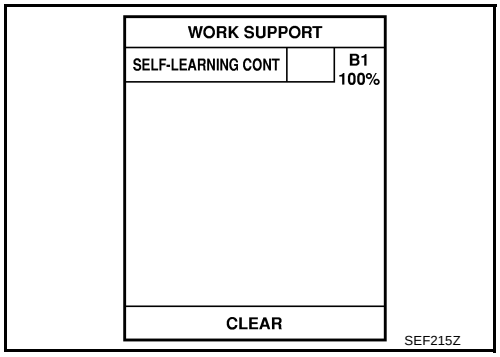
DTC Confirmation Procedure

EBS00O6N

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

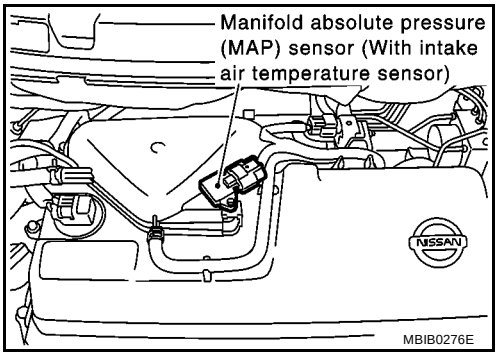
WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
4. Clear the self-learning control coefficient by touching “CLEAR”.
5. Select “DATA MONITOR” mode with CONSULT-II.
6. Start engine again and let it idle for at least 10 minutes.
   The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to EC-211, "Diagnostic Procedure" .
7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
8. Crank engine while depressing accelerator pedal. If engine starts, go to EC-211, "Diagnostic Procedure" . If engine does not start, check exhaust and intake air leak visually.



WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Disconnect manifold absolute pressure sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Select “MODE 3” with GST. Make sure DTC P0107 is detected.
6. Select “MODE 4” with GST and erase the DTC P0107.
7. Start engine again and let it idle for at least 10 minutes.
8. Select “MODE 7” with GST. The 1st trip DTC P0171 should be detected at this stage, if a malfunction exists. If so, go to EC-211, "Diagnostic Procedure" .

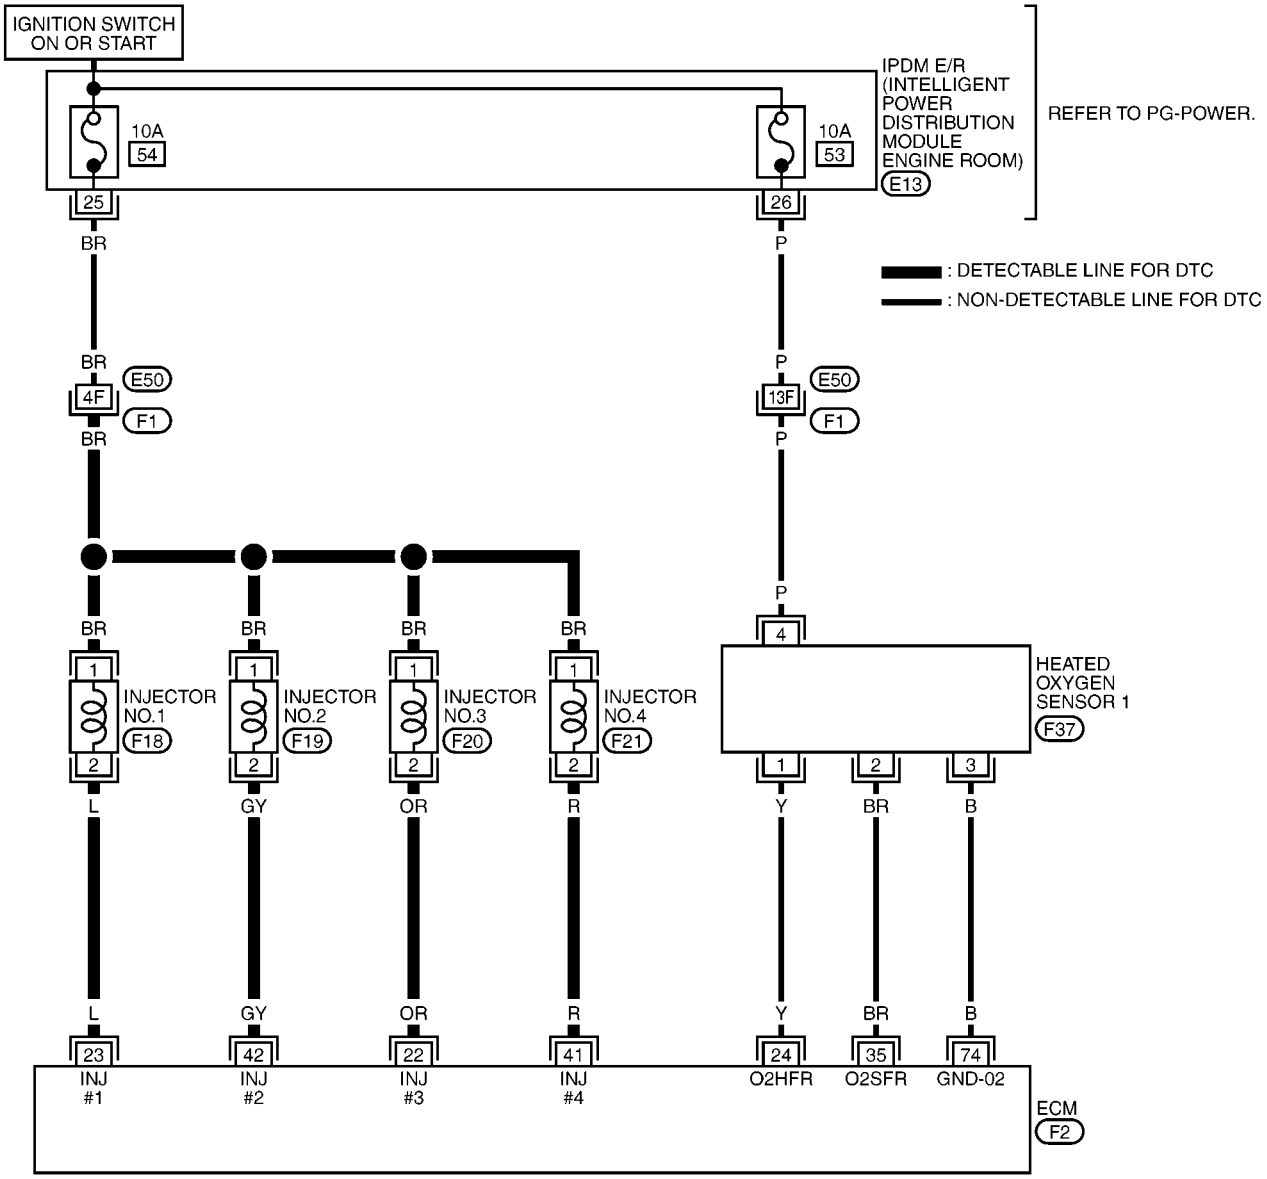


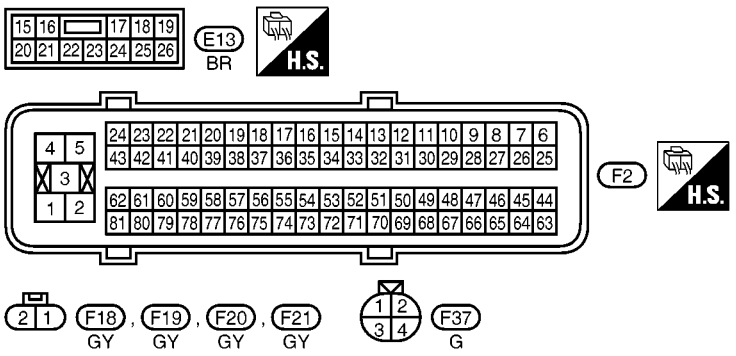
9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal. If engine starts, go to EC-211, "Diagnostic Procedure" . If engine does not start, check exhaust and intake air leak visually.

Wiring Diagram

EBS00O6O

EC-FUEL-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

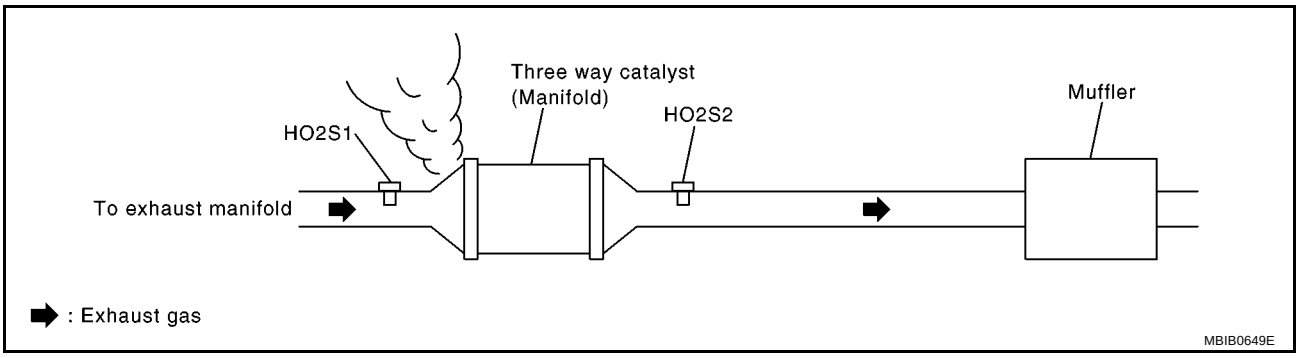
MBWA0274E

Diagnostic Procedure

EBS00O6P

1. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before three way catalyst (manifold).



OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Listen for an intake air leak after the manifold absolute pressure sensor.
2. Check PCV hose connection.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

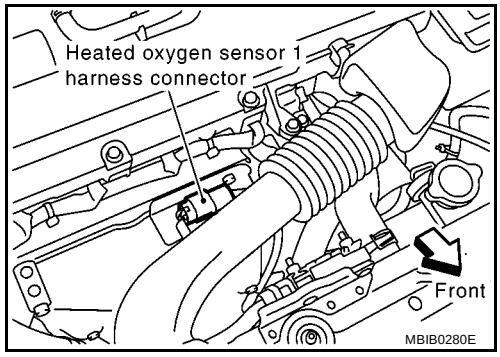
3. CHECK HEATED OXYGEN SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 (HO2S1) harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.



6. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to EC-44, "FUEL PRESSURE RELEASE" .
2. Install fuel pressure gauge and check fuel pressure. Refer to EC-45, "FUEL PRESSURE CHECK" .

At idling: Approximately 350 kPa (3.5 bar, 3.57 kg/cm^2 , 51 psi)

OK or NG

OK >> GO TO 5.
NG >> Follow the construction of “FUEL PRESSURE CHECK” (EC-44).

5. CHECK MANIFOLD ABSOLUTE PRESSUR SENSOR

With CONSULT-II

1. Install all removed parts.
2. Check manifold absolute pressure sensor signal with CONSULT-II.

Approximately 1.5V: at idling
Approximately 1.2V: at 2,500 rpm

With GST

1. Install all removed parts.
2. Check manifold absolute pressure sensor signal in MODE 1 with GST.

Approximately 1.5V: at idling
Approximately 1.2V: at 2,500 rpm

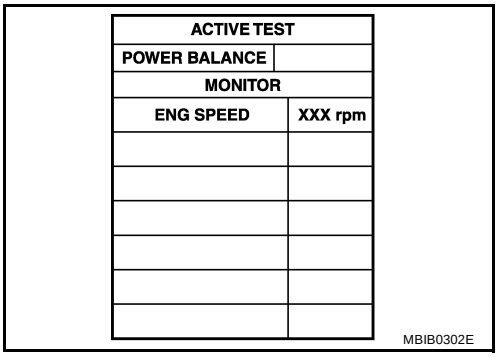
OK or NG

OK >> GO TO 6.
NG >> Check connectors for rusted terminals or loose connections in the manifold absolute pressure sensor circuit or engine grounds. Refer to EC-148, "DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR" .

6. CHECK FUNCTION OF INJECTORS

With CONSULT-II

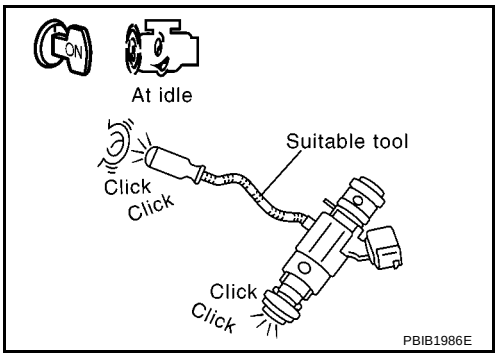
1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.



Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.

Clicking noise should be heard.



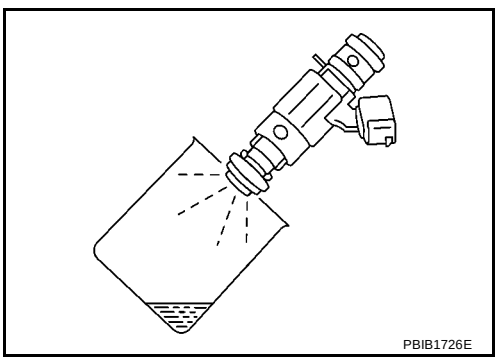
OK or NG

OK >> GO TO 7.
NG >> Perform trouble diagnosis for “INJECTORS”, EC-444, "INJECTOR CIRCUIT" .

7. CHECK INJECTOR

1. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
2. Turn ignition switch OFF.
3. Remove injector gallery assembly. Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .
   Keep fuel hose and all injectors connected to injector gallery.
   The injector harness connectors should remain connected.
4. Disconnect all ignition coil harness connectors.
5. Prepare pans or saucers under each injector.
6. Crank engine for about 3 seconds. Make sure that fuel sprays out from injectors.

Fuel should be sprayed evenly for each injector.



OK or NG

OK >> GO TO 8.
NG >> Replace injectors from which fuel does not spray out. Always replace O-ring with new ones.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P0172 FUEL INJECTION SYSTEM FUNCTION

PFP:16600

On Board Diagnosis Logic

EBS00O6Q

With the Air/Fuel Mixture Ratio Self-Learning Control, the actual mixture ratio can be brought closely to the theoretical mixture ratio based on the mixture ratio feedback signal from the heated oxygen sensors 1. The ECM calculates the necessary compensation to correct the offset between the actual and the theoretical ratios.
In case the amount of the compensation value is extremely large (The actual mixture ratio is too rich.), the ECM judges the condition as the fuel injection system malfunction and lights up the MI (2 trip detection logic).

Sensor	Input Signal to ECM	ECM function	Actuator
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)	Fuel injection control	Fuel injectors

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0172 0172	Fuel injection system too rich	● Fuel injection system does not operate properly. ● The amount of mixture ratio compensation is too large. (The mixture ratio is too rich.)	● Heated oxygen sensor 1 ● Injectors ● Exhaust gas leaks ● Incorrect fuel pressure ● Manifold absolute pressure sensor

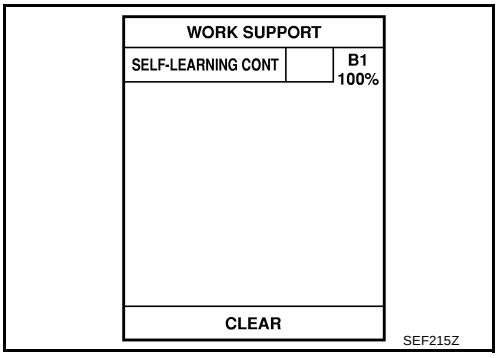
DTC Confirmation Procedure

EBS00O6R

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

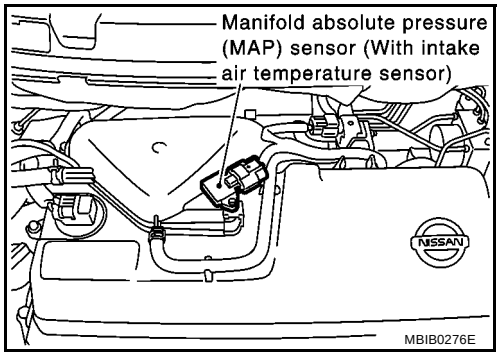
WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON and select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
4. Clear the self-learning control coefficient by touching “CLEAR”.
5. Select “DATA MONITOR” mode with CONSULT-II.
6. Start engine again and let it idle for at least 10 minutes.
   The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to EC-218, "Diagnostic Procedure" .
7. If it is difficult to start engine at step 6, the fuel injection system has a malfunction, too.
8. Crank engine while depressing accelerator pedal.
   If engine starts, go to EC-218, "Diagnostic Procedure" . If engine does not start, remove ignition plugs and check for fouling, etc.



WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Disconnect manifold absolute pressure sensor harness connector. Then restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Select “MODE 3” with GST. Make sure DTC P0107 is detected.
6. Select “MODE 4” with GST and erase the DTC P0107.
7. Start engine again and let it idle for at least 10 minutes.
8. Select “MODE 7” with GST. The 1st trip DTC P0172 should be detected at this stage, if a malfunction exists. If so, go to EC-218, "Diagnostic Procedure" .



9. If it is difficult to start engine at step 7, the fuel injection system has a malfunction.
10. Crank engine while depressing accelerator pedal.
    If engine starts, go to EC-218, "Diagnostic Procedure" . If engine does not start, remove ignition plugs and check for fouling, etc.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK FOR INTAKE AIR LEAK

Listen for an intake air leak after the manifold absolute pressure sensor.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

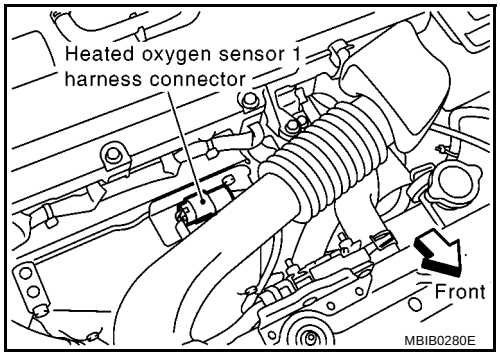
3. CHECK HEATED OXYGEN SENSOR 1 CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 (HO2S1) harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.



6. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK FUEL PRESSURE

1. Release fuel pressure to zero. Refer to EC-44, "FUEL PRESSURE RELEASE" .
2. Install fuel pressure gauge and check fuel pressure. Refer to EC-45, "FUEL PRESSURE CHECK" .

   At idling: 350 kPa (3.5 bar, 3.57 kg/cm2, 51 psi)

OK or NG

OK >> GO TO 5.
NG >> Follow the construction of “FUEL PRESSURE CHECK”.

5. CHECK MANIFOLD ABSOLUTE PRESSUR SENSOR

With CONSULT-II

1. Install all removed parts.
2. Check manifold absolute pressure sensor signal with CONSULT-II.

Approximately 1.5V: at idling
Approximately 1.2V: at 2,500 rpm

With GST

1. Install all removed parts.
2. Check manifold absolute pressure sensor signal in MODE 1 with GST.

Approximately 1.5V: at idling
Approximately 1.2V: at 2,500 rpm

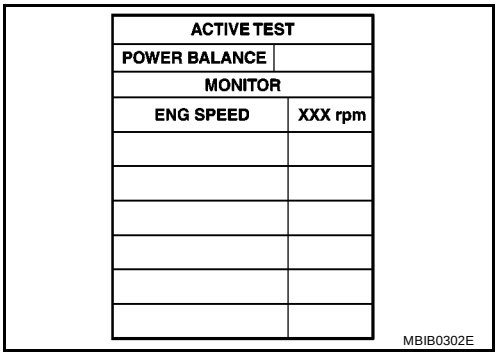
OK or NG

OK >> GO TO 6.
NG >> Check connectors for rusted terminals or loose connections in the manifold absolute pressure sensor circuit or engine grounds. Refer to EC-148, "DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR" .

6. CHECK FUNCTION OF INJECTORS

With CONSULT-II

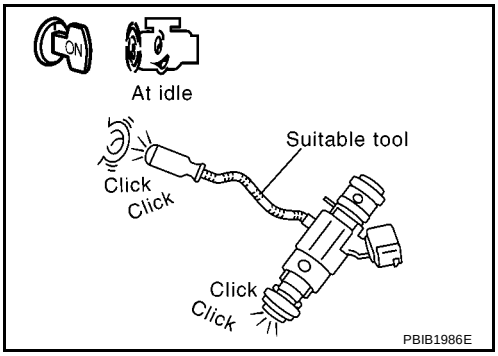
1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.



Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.

Clicking noise should be heard.



OK or NG

OK >> GO TO 7.
NG >> Perform trouble diagnosis for INJECTORS, refer to EC-444, "INJECTOR CIRCUIT" .

7. CHECK INJECTOR

1. Remove injector assembly. Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .
   Keep fuel hose and all injectors connected to injector gallery.
2. Confirm that the engine is cooled down and there are no fire hazards near the vehicle.
3. Disconnect injector harness connectors.
4. Disconnect all ignition coil harness connectors.
5. Prepare pans or saucers under each injectors.
6. Crank engine for about 3 seconds.
   Make sure fuel does not drip from injector.

OK or NG

OK (Does not drip.)>>GO TO 8.
NG (Drips.)>>Replace the injectors from which fuel is dripping. Always replace O-ring with new one.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

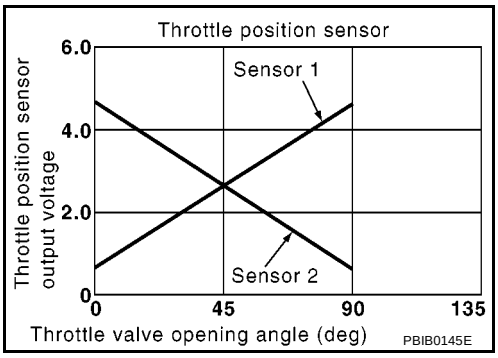
DTC P0221 TP SENSOR

PFP:16119

Component Description

EBS00O6U

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O6V

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00O6W

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0221 0221	Throttle position sensor circuit range/performance problem	Rationally incorrect voltage is sent to ECM compared with the signals from TP sensor 1 and TP sensor 2.	● Harness or connector (The TP sensor 1 and 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

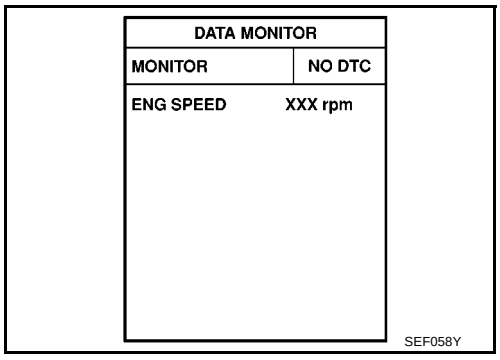
DTC Confirmation Procedure

EBS00O6X

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-224, "Diagnostic Procedure" .



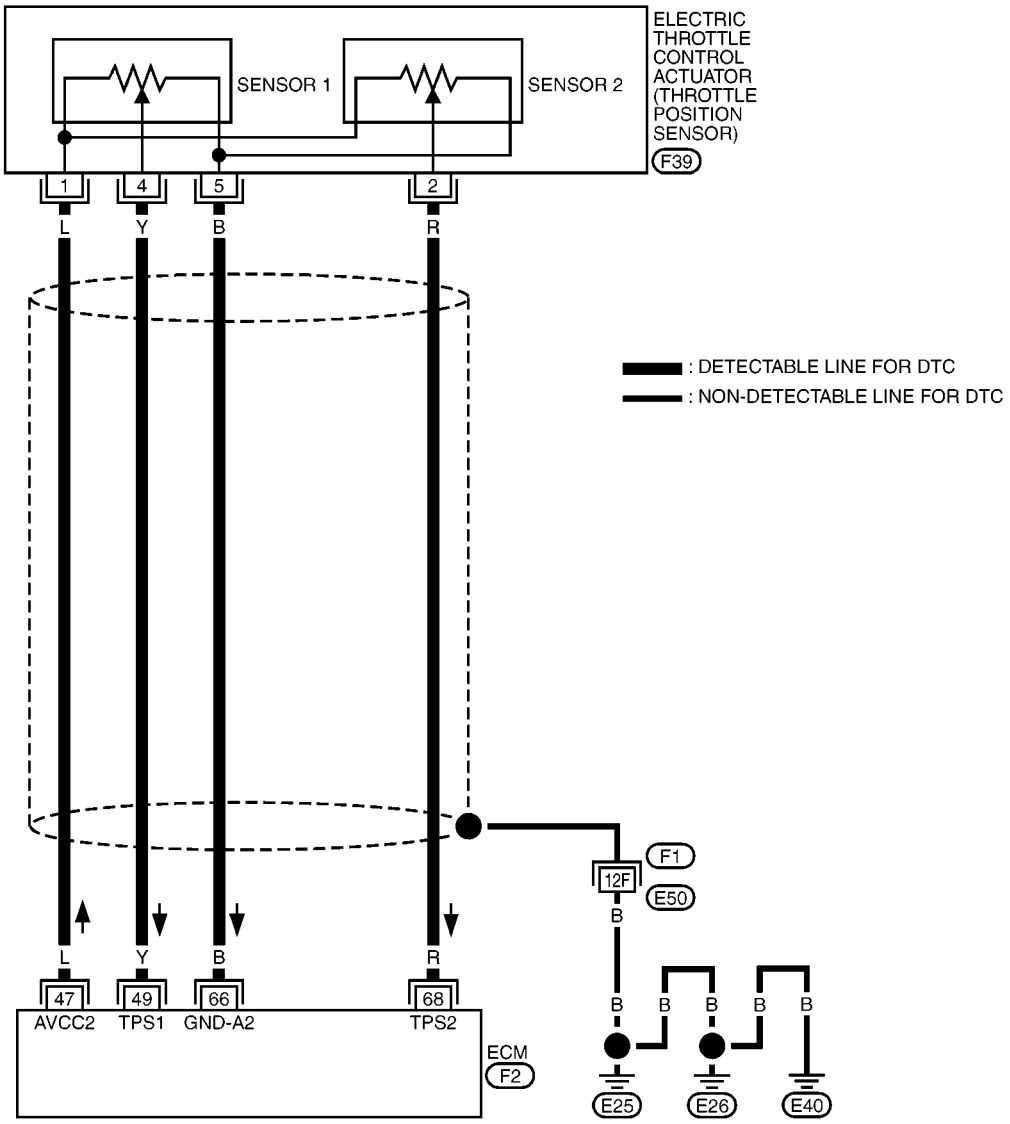
WITH GST

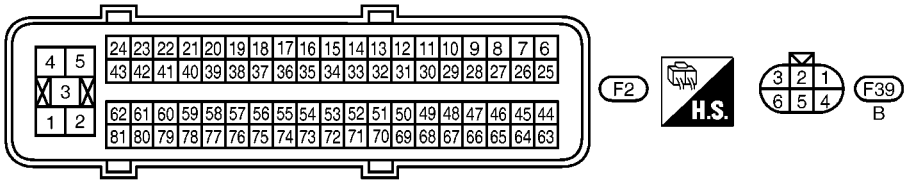
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00O6Y

EC-TPS3-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0275E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V

68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V

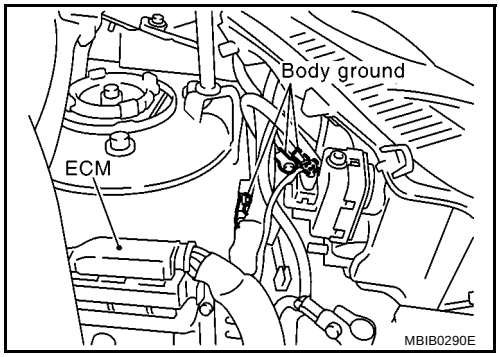
Diagnostic Procedure

EBS00O6Z

1. RETIGHTEN GROUND SCREWS

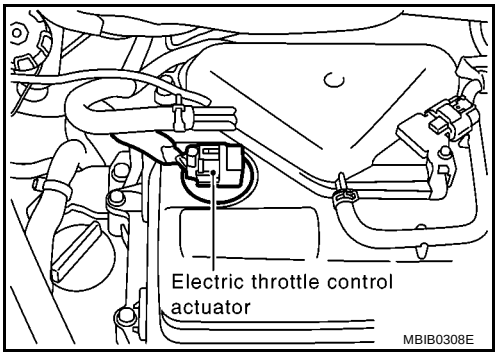
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



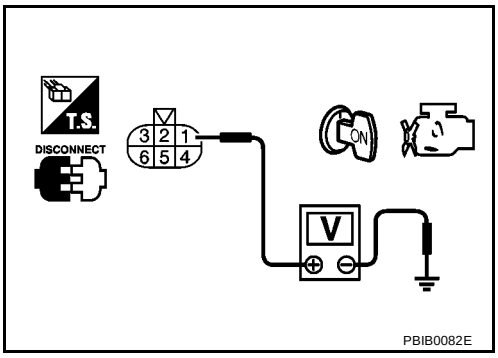
2. CHECK THROTTLE POSITION SENSOR POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.



3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK THROTTLE POSITION SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 49 and electric throttle control actuator terminal 4, ECM terminal 68 and electric throttle control actuator terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-226, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

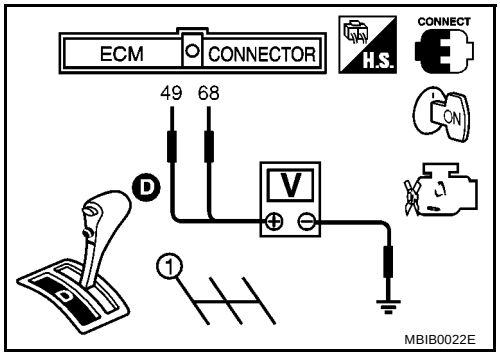
Component Inspection

EBS00O70

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set selector lever to D position (A/T models) or 1st position (M/T models).
5. Check voltage between ECM terminals 49 (TP sensor 1 signal), 68 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
49 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
68 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V



6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-42, "Throttle Valve Closed Position Learning" .
8. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS00O71

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

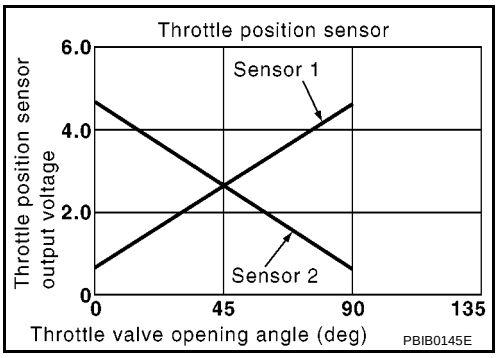
DTC P0222, P0223 TP SENSOR

PFP:16119

Component Description

EBS00O72

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O73

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00O74

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0222 0222	Throttle position sensor 1 circuit low input	An excessively low voltage from the TP sensor 1 is sent to ECM.	● Harness or connectors (The TP sensor 1 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1)
P0223 0223	Throttle position sensor 1 circuit high input	An excessively high voltage from the TP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

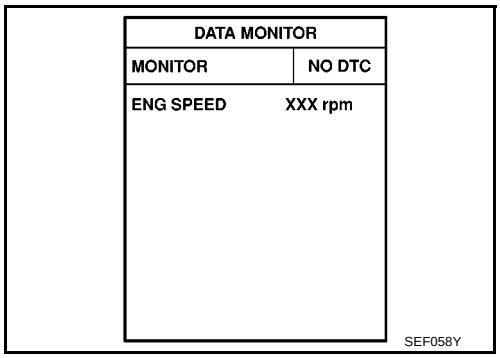
DTC Confirmation Procedure

EBS00O75

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-230, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

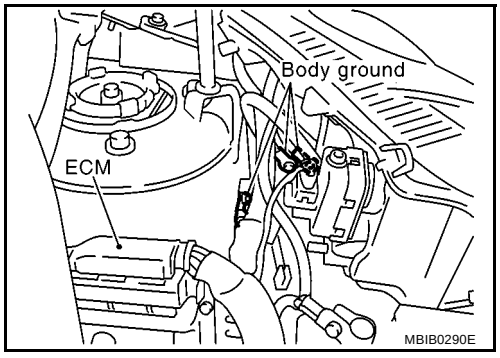
EBS00O7F

1. RETIGHTEN GROUND SCREWS

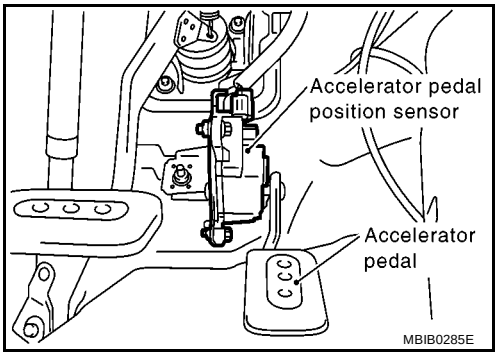
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



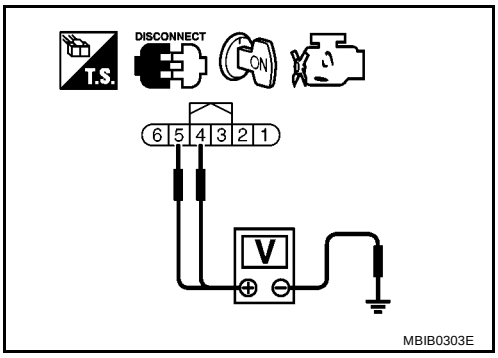
2. CHECK APP SENSOR POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminals 4, 5 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 82 and APP sensor terminal 2, ECM terminal 83 and APP sensor terminal 1.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 106 and APP sensor terminal 3, ECM terminal 98 and APP sensor terminal 6.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.

P0228 0228	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

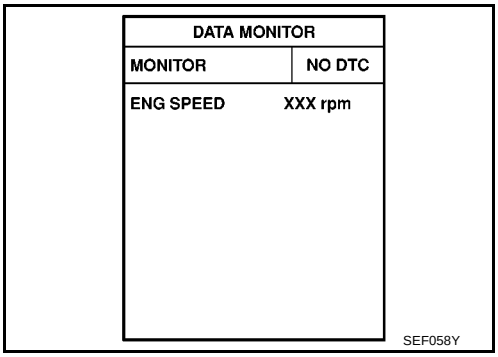
DTC Confirmation Procedure

EBS00O7L

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-247, "Diagnostic Procedure" .

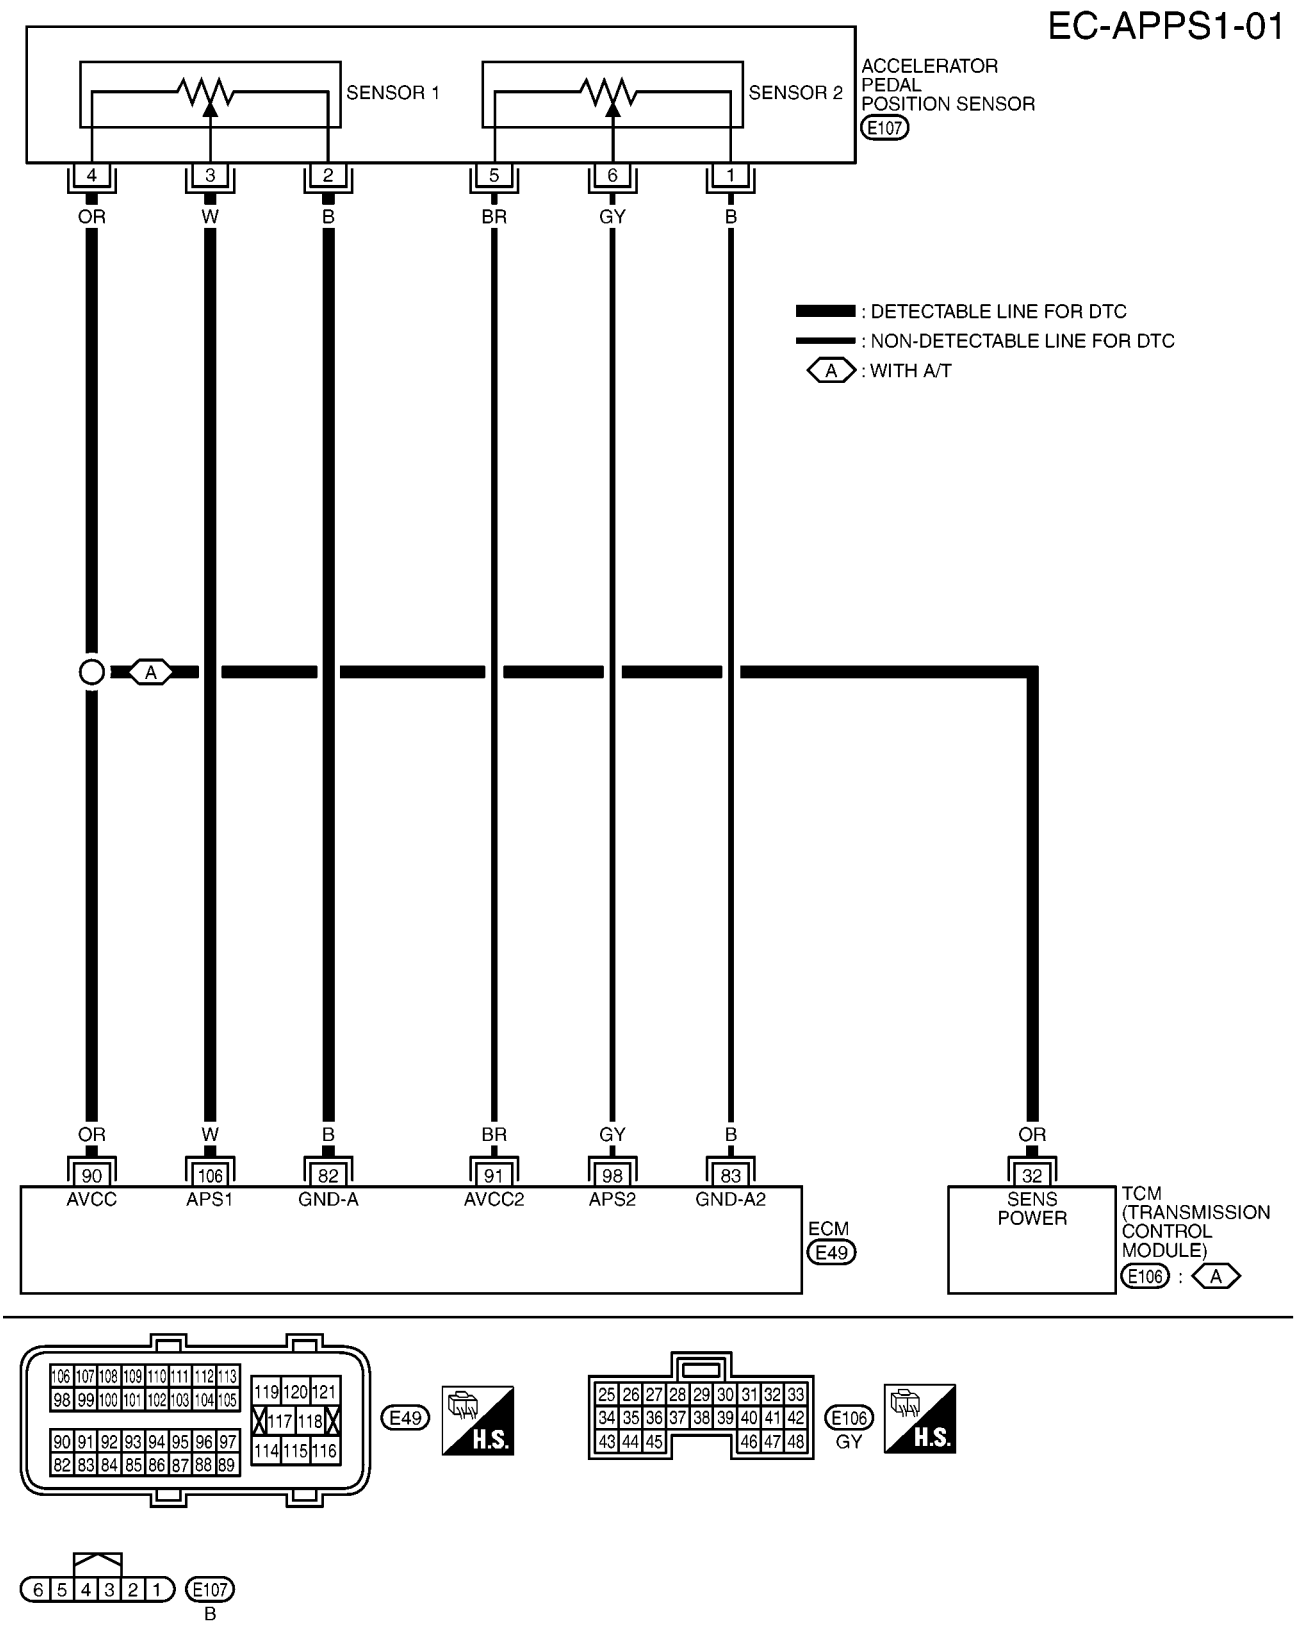


WITH GST

Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram
LHD MODELS

EBS00O7M



MBWA0279E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
82	B	Sensor ground (APP sensor 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

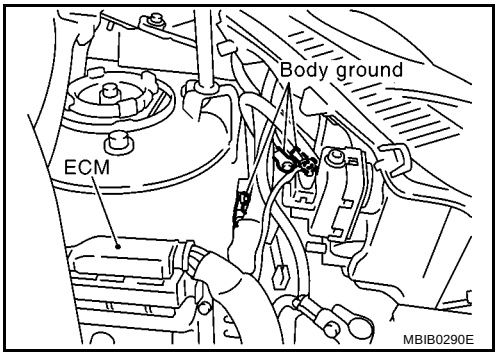
Diagnostic Procedure

EBS00O7N

1. RETIGHTEN GROUND SCREWS

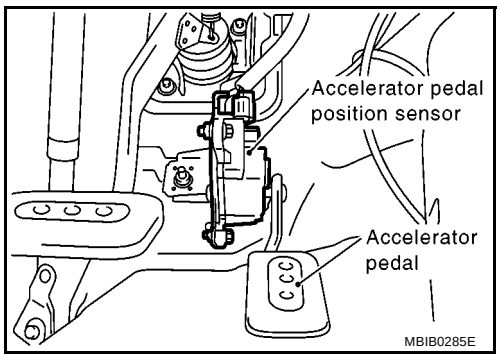
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



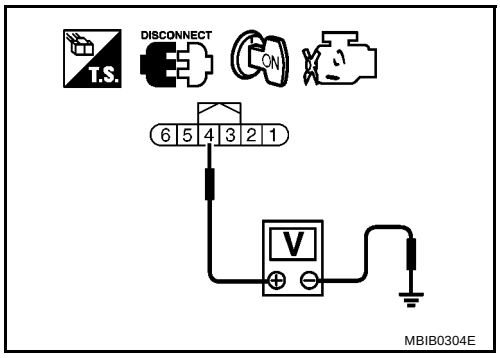
2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 4 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 82 and APP sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 106 and APP sensor terminal 3. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-249, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. REPLACE APP SENSOR

1. Replace the accelerator pedal position sensor.
2. Perform EC-42, "Accelerator Pedal Released Position Learning" .
3. Perform EC-42, "Throttle Valve Closed Position Learning" .
4. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

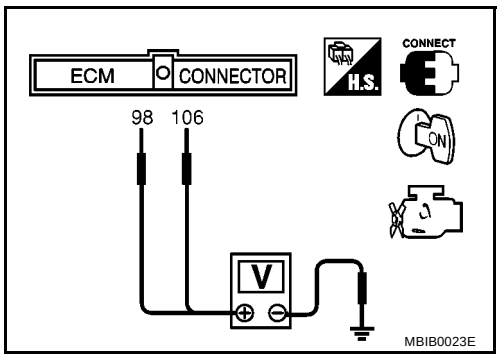
EBS00O7O

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V



4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-42, "Accelerator Pedal Released Position Learning" .
6. Perform EC-42, "Throttle Valve Closed Position Learning" .
7. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS00O7P

ACCELERATOR PEDAL

Refer to ACC-2, "ACCELERATOR CONTROL SYSTEM" .

DTC P0300 - P0304 MULTIPLE CYLINDER MISFIRE, NO. 1 - 4 CYLINDER MISFIRE

PFP:00000

On Board Diagnosis Logic

EBS00O7Q

When a misfire occurs, engine speed will fluctuate. If the engine speed fluctuates enough to cause the crankshaft position (CKP) sensor (POS) signal to vary, ECM can determine that a misfire is occurring.

Sensor	Input Signal to ECM	ECM Function
Crankshaft position sensor (POS)	Engine speed	On board diagnosis of misfire

The misfire detection logic consists of the following two conditions.

1. One Trip Detection Logic (Three Way Catalyst Damage)
   On the first trip that a misfire condition occurs that can damage the three way catalyst (TWC) due to overheating, the MI will blink.
   When a misfire condition occurs, the ECM monitors the CKP sensor (POS) signal every 200 engine revolutions for a change.
   When the misfire condition decreases to a level that will not damage the TWC, the MI will turn off.
   If another misfire condition occurs that can damage the TWC on a second trip, the MI will blink.
   When the misfire condition decreases to a level that will not damage the TWC, the MI will remain on.
   If another misfire condition occurs that can damage the TWC, the MI will begin to blink again.
2. Two Trip Detection Logic (Exhaust quality deterioration)
   For misfire conditions that will not damage the TWC (but will affect vehicle emissions), the MI will only light when the misfire is detected on a second trip. During this condition, the ECM monitors the CKP sensor signal every 1,000 engine revolutions.
   A misfire malfunction can be detected on any one cylinder or on multiple cylinders.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0300 0300	Multiple cylinder misfire detected	Multiple cylinder misfire.	● Improper spark plug ● Insufficient compression ● Incorrect fuel pressure ● The injector circuit is open or shorted ● Fuel injectors ● Intake air leak ● The ignition signal circuit is open or shorted ● Lack of fuel ● Drive plate or flywheel ● Heated oxygen sensor 1 ● Incorrect PCV hose connection
P0301 0301	No.1 cylinder misfire detected	No. 1 cylinder misfires.	
P0302 0302	No. 2 cylinder misfire detected	No. 2 cylinder misfires.	
P0303 0303	No. 3 cylinder misfire detected	No. 3 cylinder misfires.	
P0304 0304	No. 4 cylinder misfire detected	No. 4 cylinder misfires.	

DTC Confirmation Procedure

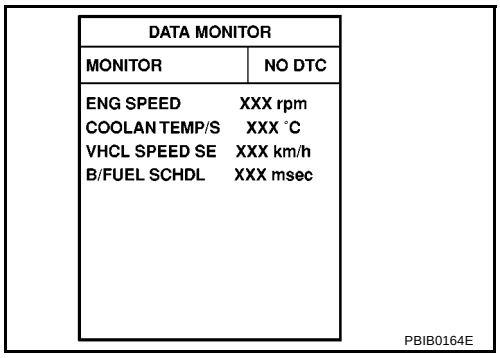
EBS00O7R

CAUTION:
Always drive vehicle in safe manner according to traffic conditions and obey all traffic laws when driving.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON, and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Restart engine and let it idle for about 15 minutes.
5. If 1st trip DTC is detected, go to EC-252, "Diagnostic Procedure" .



NOTE:
If 1st trip DTC is not detected during above procedure, performing the following procedure is advised.

1. Turn ignition switch OFF and wait at least 10 seconds.
2. Start engine and drive the vehicle under the similar conditions to (1st trip) Freeze Frame Data for a certain time. Refer to table below.
   Hold the accelerator pedal as steady as possible.

   Similar conditions to (1st trip) Freeze Frame Data means the vehicle operation that the following conditions should be satisfied at the same time:

Engine speed	Engine speed in the freeze frame data ± 400 rpm
Vehicle speed	Vehicle speed in the freeze frame data ± 10 km/h (5 MPH)
Engine coolant temperature (T) condition	When the freeze frame data shows lower than 70°C (158°F), T should be lower than 70°C (158°F).
	When the freeze frame data shows higher than or equal to 70°C (158°F), T should be higher than or equal to 70°C (158°F).

   The time to drive varies according to the engine speed in the freeze frame data.
   Refer to the following table.

Engine speed	Time
Around 1,000 rpm	Approximately 10 minutes
Around 2,000 rpm	Approximately 5 minutes
More than 3,000 rpm	Approximately 3.5 minutes

WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

EBS00O7S

1. CHECK FOR INTAKE AIR LEAK AND PCV HOSE

1. Start engine and run it at idle speed.
2. Listen for the sound of the intake air leak.
3. Check PCV hose connection.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK FOR EXHAUST SYSTEM CLOGGING

Stop engine and visually check exhaust tube, three way catalyst and muffler for dents.

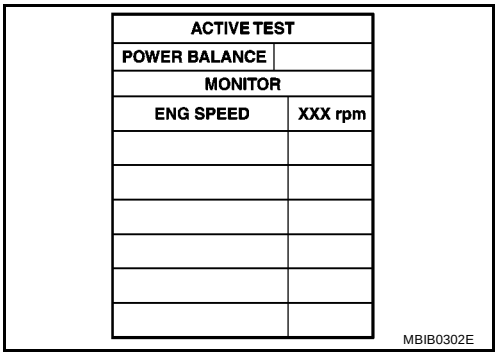
OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. PERFORM POWER BALANCE TEST

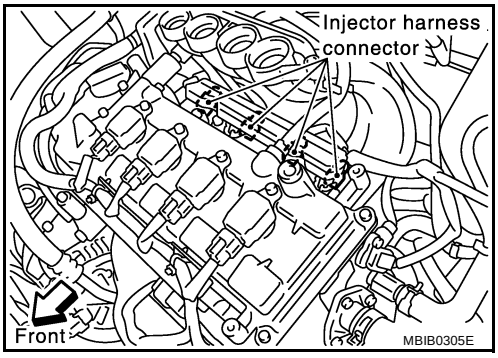
With CONSULT-II

1. Perform “POWER BALANCE” in “ACTIVE TEST” mode.
2. Is there any cylinder which does not produce a momentary engine speed drop?



Without CONSULT-II

When disconnecting each injector harness connector one at a time, is there any cylinder which does not produce a momentary engine speed drop?



Yes or No

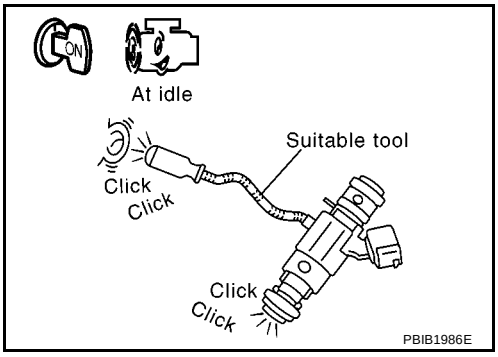
Yes >> GO TO 4.
No >> GO TO 7.

4. CHECK INJECTOR

Does each injector make an operating sound at idle?

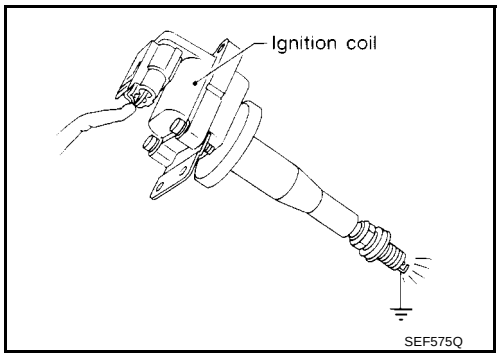
Yes or No

Yes >> GO TO 5.
No >> Check injector(s) and circuit(s). Refer to EC-444, "INJECTOR CIRCUIT" .



5. CHECK IGNITION SPARK

1. Disconnect ignition coil assembly from rocker cover.
2. Connect a known-good spark plug to the ignition coil assembly.
3. Disconnect all injector harness connectors.
4. Place end of spark plug against a suitable ground and crank engine.
5. Check for spark.

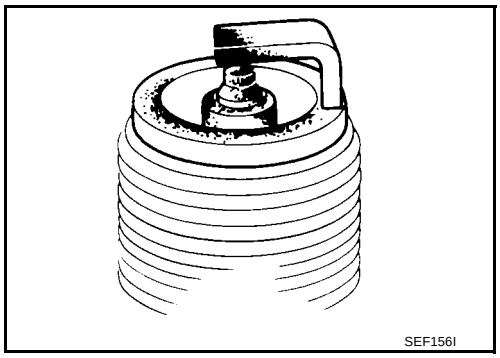


OK or NG

OK >> GO TO 6.
NG >> Check ignition coil, power transistor and their circuits. Refer to EC-435, "IGNITION SIGNAL" .

6. CHECK SPARK PLUGS

Remove the spark plugs and check for fouling, etc.



OK or NG

OK >> GO TO 7.
NG >> Repair or replace spark plug(s) with standard type one(s). For spark plug type, refer to MA-28, "Changing Spark Plugs" .

7. CHECK COMPRESSION PRESSURE

Check compression pressure. Refer to EM-59, "COMPRESSION PRESSURE INSPECTION" .

[kPa (bar, kg/cm^2 , psi)/350rpm]

Engine type	CR10DE	CR12DE, CR14DE
Standard	1,432 (14.32, 14.6, 208)	1,383 (13.83, 14.1, 201)
minimum	1,236 (12.36, 12.6, 179)	1,187 (11.87, 12.1, 172)
Difference limit among cylinders	98 (0.98, 1.0, 14)	98 (0.98, 1.0, 14)

OK or NG

OK >> GO TO 8.
NG >> Check pistons, piston rings, valves, valve seats and cylinder head gaskets.

8. CHECK FUEL PRESSURE

1. Install all removed parts.
2. Release fuel pressure to zero. Refer to EC-44, "FUEL PRESSURE RELEASE" .
3. Install fuel pressure gauge and check fuel pressure. Refer to EC-45, "FUEL PRESSURE CHECK" .

At idle: Approx. 350 kPa (3.5 bar, 3.57 kg/cm^2 , 51 psi)

OK or NG

OK >> GO TO 9.
NG >> Follow the construction of FUEL PRESSURE CHECK.

9. CHECK IGNITION TIMING

Check the following items. Refer to EC-77, "Basic Inspection" .

Items		Specifications
Target idle speed	A/T	700 ± 50 rpm (in P or N position)
	M/T	650 ± 50 rpm
Ignition timing	A/T	5 ± 2° BTDC (in P or N position)
	M/T	5 ± 2° BTDC

OK or NG

OK >> GO TO 10.
NG >> Follow the Basic Inspection.

10. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-173, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace heated oxygen sensor 1.

11. CHECK MANIFOLD ABSOLUTE PRESSUR SENSOR

With CONSULT-II
Check manifold absolute pressure sensor signal in “DATA MONITOR” mode with CONSULT-II.

Approximately 1.5V: at idling
Approximately 1.2V: at 2,500 rpm

With GST
Check manifold absolute pressure sensor signal in MODE 1 with GST.

Approximately 1.5V: at idling
Approximately 1.2V: at 2,500 rpm

OK or NG

OK >> GO TO 12.
NG >> Check connectors for rusted terminals or loose connections in the manifold absolute pressure sensor circuit or engine grounds. Refer to EC-148, "DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR" .

12. CHECK SYMPTOM MATRIX CHART

Check items on the rough idle symptom in EC-82, "Symptom Matrix Chart" .

OK or NG

OK >> GO TO 13.
NG >> Repair or replace.

13. ERASE THE 1ST TRIP DTC

Some tests may cause a 1st trip DTC to be set.
Erase the 1st trip DTC from the ECM memory after performing the tests. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

>> GO TO 14.

14. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

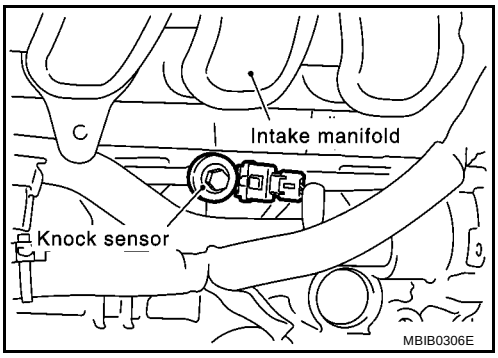
DTC P0327, P0328 KS

PFP:22060

Component Description

EBS00O7T

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.



On Board Diagnosis Logic

EBS00O7U

The MI will not light up for these self-diagnoses.

DTC No.	Trouble Diagnosis Name	DTC Detected Condition	Possible Cause
P0327 0327	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Knock sensor
P0328 0328	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

DTC Confirmation Procedure

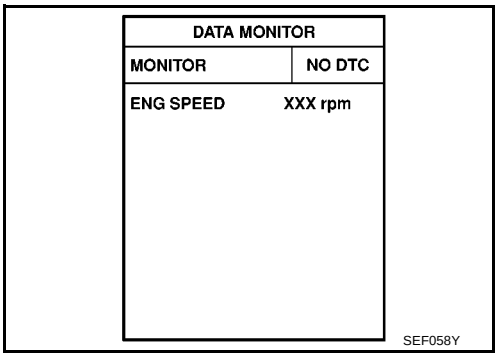
EBS00O7V

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to EC-259, "Diagnostic Procedure"
.



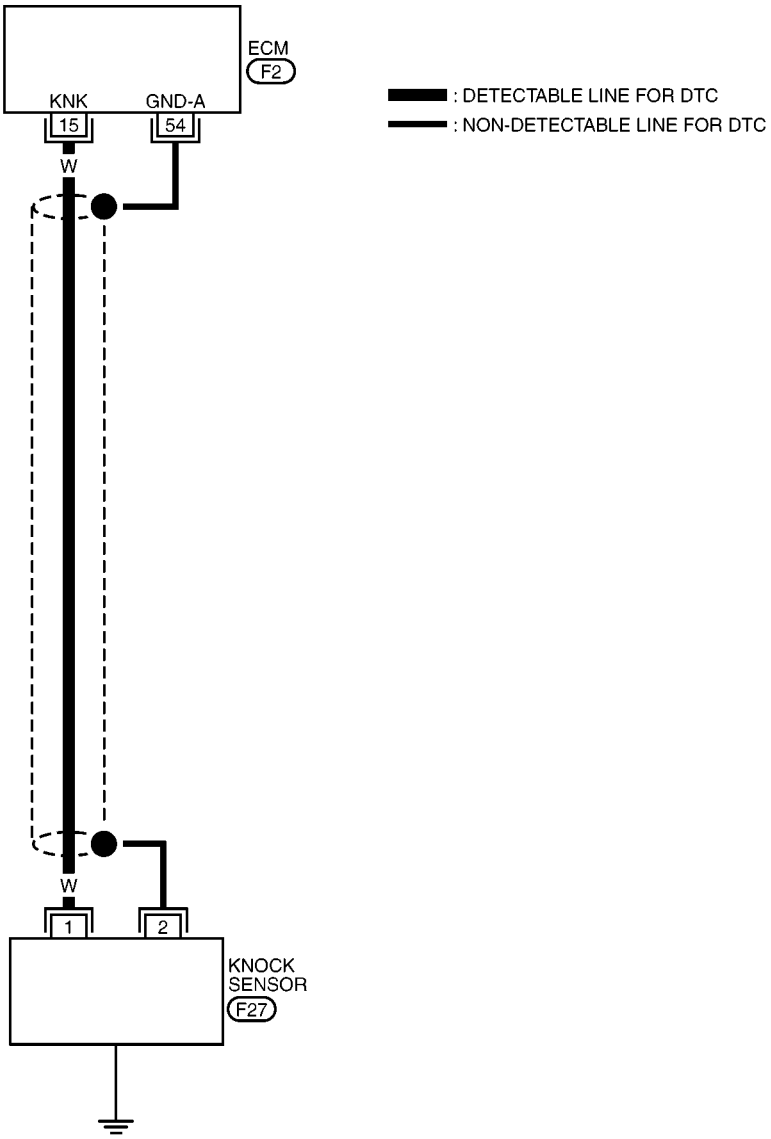
WITH GST

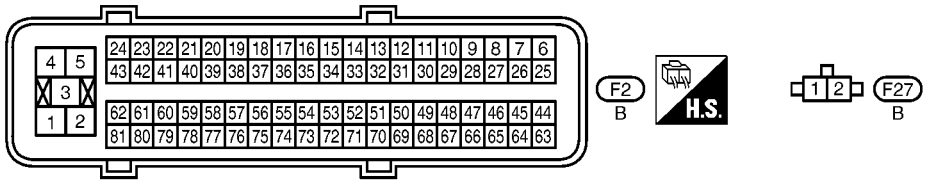
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00O7W

EC-KS-01





MBWA1173E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
15	W	Knock sensor	**[Engine is running]** ● Idle speed	Approximately 2.5V
54	—	Sensor ground (Knock sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

Diagnostic Procedure

EBS00O7X

1. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check resistance between ECM terminal 15 and engine ground. Refer to Wiring Diagram.

   NOTE:
   It is necessary to use an ohmmeter which can measure more than 10 MΩ.

   Resistance: Approximately 530 - 590kΩ [at 20°C (68°F)]

4. Also check harness for short to ground and short to power.

OK or NG

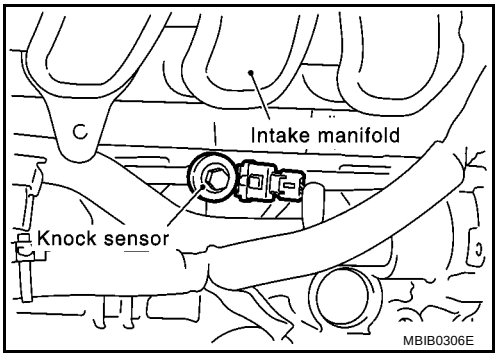
OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-II

1. Disconnect knock sensor harness connector.
2. Check harness continuity between ECM terminal 15 and knock sensor terminal 1.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK KNOCK SENSOR

Refer to EC-260, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace knock sensor.

4. CHECK KNOCK SENSOR SHIELD CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 54 and engine ground.

Continuity should exist

2. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to power in harness or connectors.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

EBS00O7Y

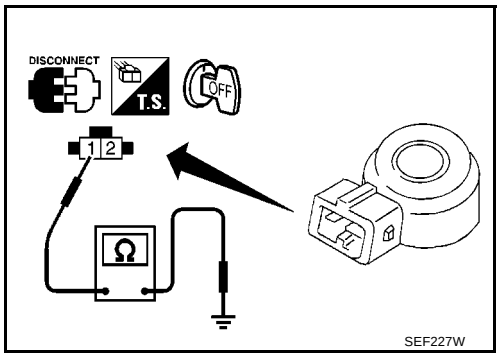
KNOCK SENSOR

Check resistance between knock sensor terminal 1 and ground.

NOTE:
It is necessary to use an ohmmeter which can measure more than 10 MΩ.

Resistance: Approximately 530 - 590kΩ [at 20°C (68°F)]

CAUTION:
Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.



Removal and Installation

EBS00O7Z

KNOCK SENSOR

Refer to EM-73, "CYLINDER BLOCK" .

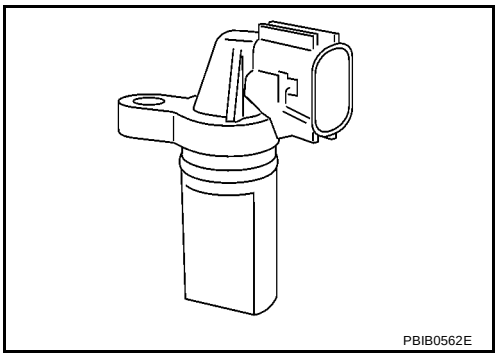
DTC P0335 CKP SENSOR (POS)

PFP:23731

Component Description

EBS00O80

The crankshaft position sensor (POS) is located on the cylinder block rear housing facing the gear teeth (cogs) of the signal plate at the end of the crankshaft. It detects the fluctuation of the engine revolution.
The sensor consists of a permanent magnet and Hall IC.
When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.
The changing gap causes the magnetic field near the sensor to change.
Due to the changing magnetic field, the voltage from the sensor changes.
The ECM receives the voltage signal and detects the fluctuation of the engine revolution.



PBIB0562E

CONSULT-II Reference Value in Data Monitor Mode

EBS00O81

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	● Tachometer: Connect ● Run engine and compare CONSULT-II value with the tachometer indication.	Almost the same speed as the tachometer indication.

On Board Diagnosis Logic

EBS00O82

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0335 0335	Crankshaft position sensor (POS) circuit	● The crankshaft position sensor (POS) signal is not detected by the ECM during the first few seconds of engine cranking. ● The proper pulse signal from the crankshaft position sensor (POS) is not sent to ECM while the engine is running. ● The crankshaft position sensor (POS) signal is not in the normal pattern during engine running.	● Harness or connectors (The sensor circuit is open or shorted.) ● Crankshaft position sensor (POS) ● Signal plate

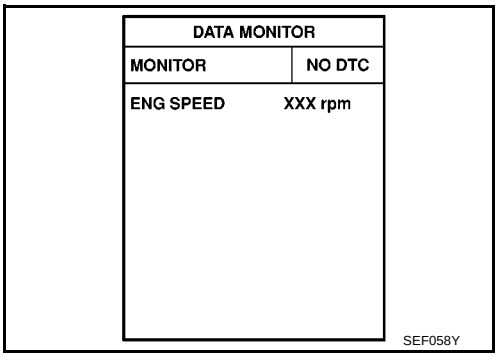
DTC Confirmation Procedure

EBS00O83

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to EC-263, "Diagnostic Procedure" .



SEF058Y

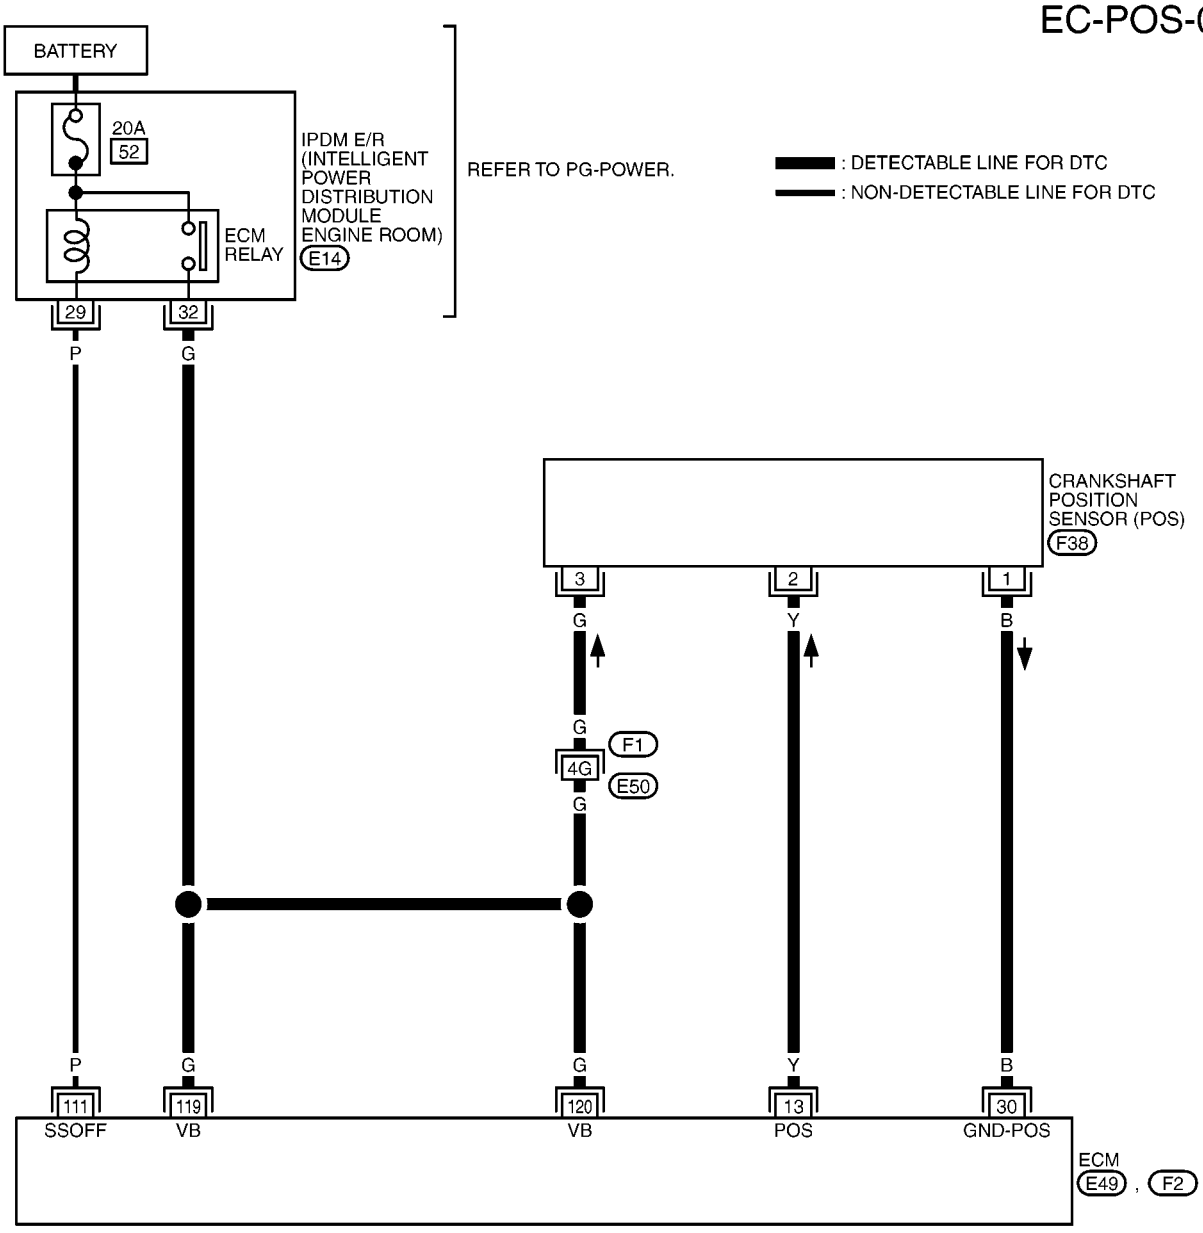
WITH GST

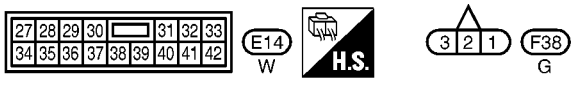
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

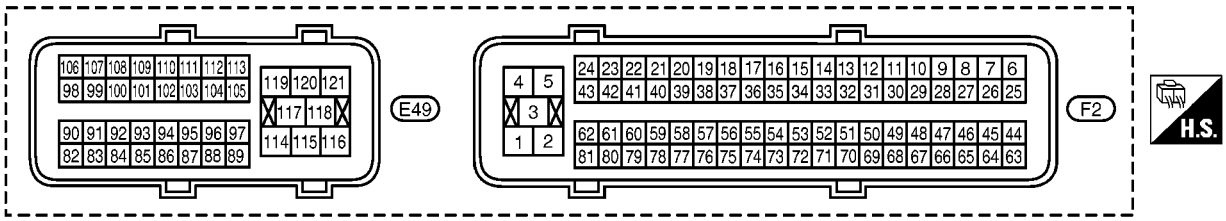
EBS00O84

EC-POS-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)



MBWA0282E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
13	Y	Crankshaft position sensor (POS)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	Approximately 3.0V★  PBIB0527E
			[Engine is running] ● Engine speed is 2,000 rpm	Approximately 3.0V★  PBIB0528E
30	B	Sensor ground (Crankshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

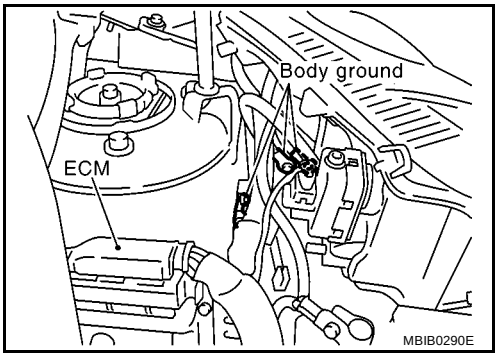
Diagnostic Procedure

EBS00O85

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

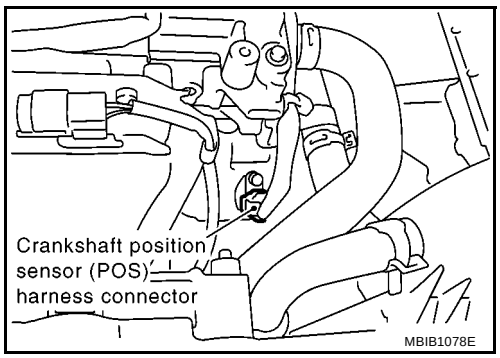
>> GO TO 2.



MBIB0290E

2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT

1. Disconnect crankshaft position (CKP) sensor (POS) harness connector.
2. Turn ignition switch ON.



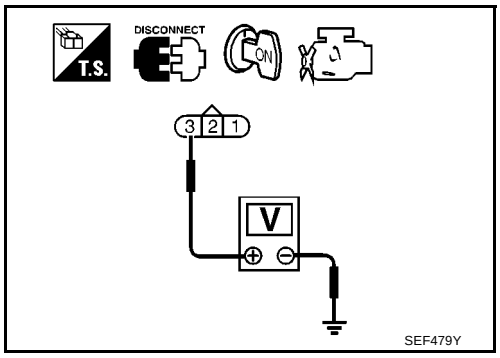
3. Check voltage between CKP sensor (POS) terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.



3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- Harness for open or short between crankshaft position sensor (POS) and ECM
- Harness for open or short between crankshaft position sensor (POS) and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 30 and CKP sensor (POS) terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 13 and CKP sensor (POS) terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-265, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace crankshaft position sensor (POS).

7. CHECK GEAR TOOTH

Visually check for chipping signal plate gear tooth.

OK or NG

OK >> GO TO 8.
NG >> Replace the signal plate.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

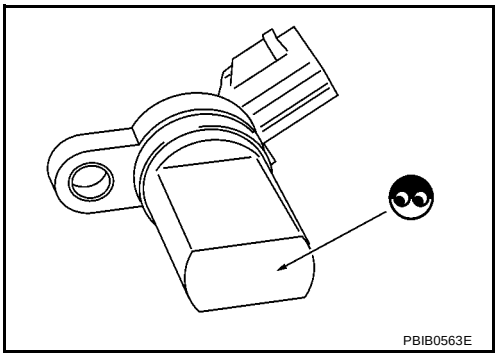
>> **INSPECTION END**

Component Inspection

EBS00O86

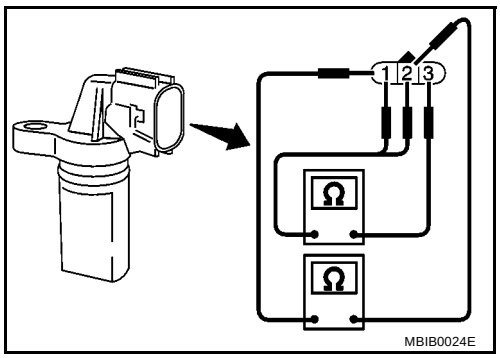
CRANKSHAFT POSITION SENSOR (POS)

1. Loosen the fixing bolt of the sensor.
2. Disconnect crankshaft position sensor (POS) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.



5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or ∞
3 (+) - 2 (-)	
2 (+) - 1 (-)	



6. If NG, replace crankshaft position sensor (POS).

Removal and Installation

EBS00O87

CRANKSHAFT POSITION SENSOR (POS)

Refer to EM-73, "CYLINDER BLOCK" .

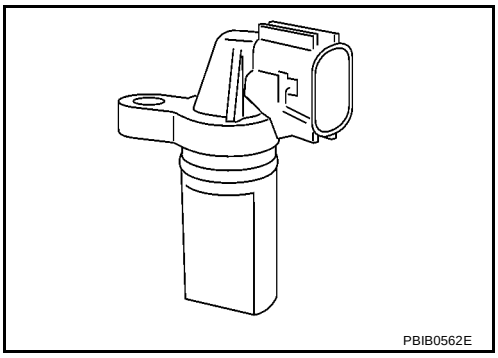
DTC P0340 CMP SENSOR (PHASE)

PFP:23731

Component Description

EBS00O88

The camshaft position sensor (PHASE) senses the retraction of intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.
When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.
The sensor consists of a permanent magnet and Hall IC.
When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.
The changing gap causes the magnetic field near the sensor to change.
Due to the changing magnetic field, the voltage from the sensor changes.



PBIB0562E

On Board Diagnosis Logic

EBS00O89

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0340 0340	Camshaft position sensor (PHASE) circuit	● The cylinder No. signal is not sent to ECM for the first few seconds during engine cranking. ● The cylinder No. signal is not set to ECM during engine running. ● The cylinder No. signal is not in the normal pattern during engine running.	● Harness or connectors (The sensor circuit is open or shorted.) ● Camshaft position sensor (PHASE) ● Camshaft (Intake) ● Starter motor (Refer to SC-39 .) ● Starting system circuit (Refer to SC-39 .) ● Dead (Weak) battery

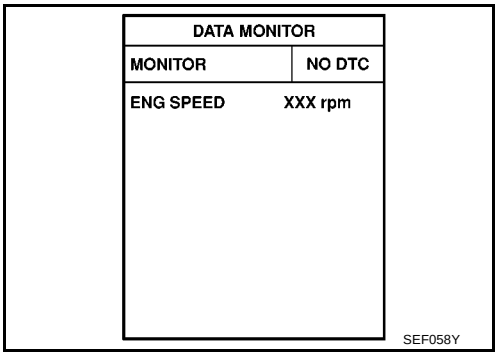
DTC Confirmation Procedure

EBS00O8A

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
4. If 1st trip DTC is detected, go to EC-269, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to next step.
5. Maintain engine speed at more than 800 rpm for at least 5 seconds.
6. If 1st trip DTC is detected, go to EC-269, "Diagnostic Procedure" .



SEF058Y

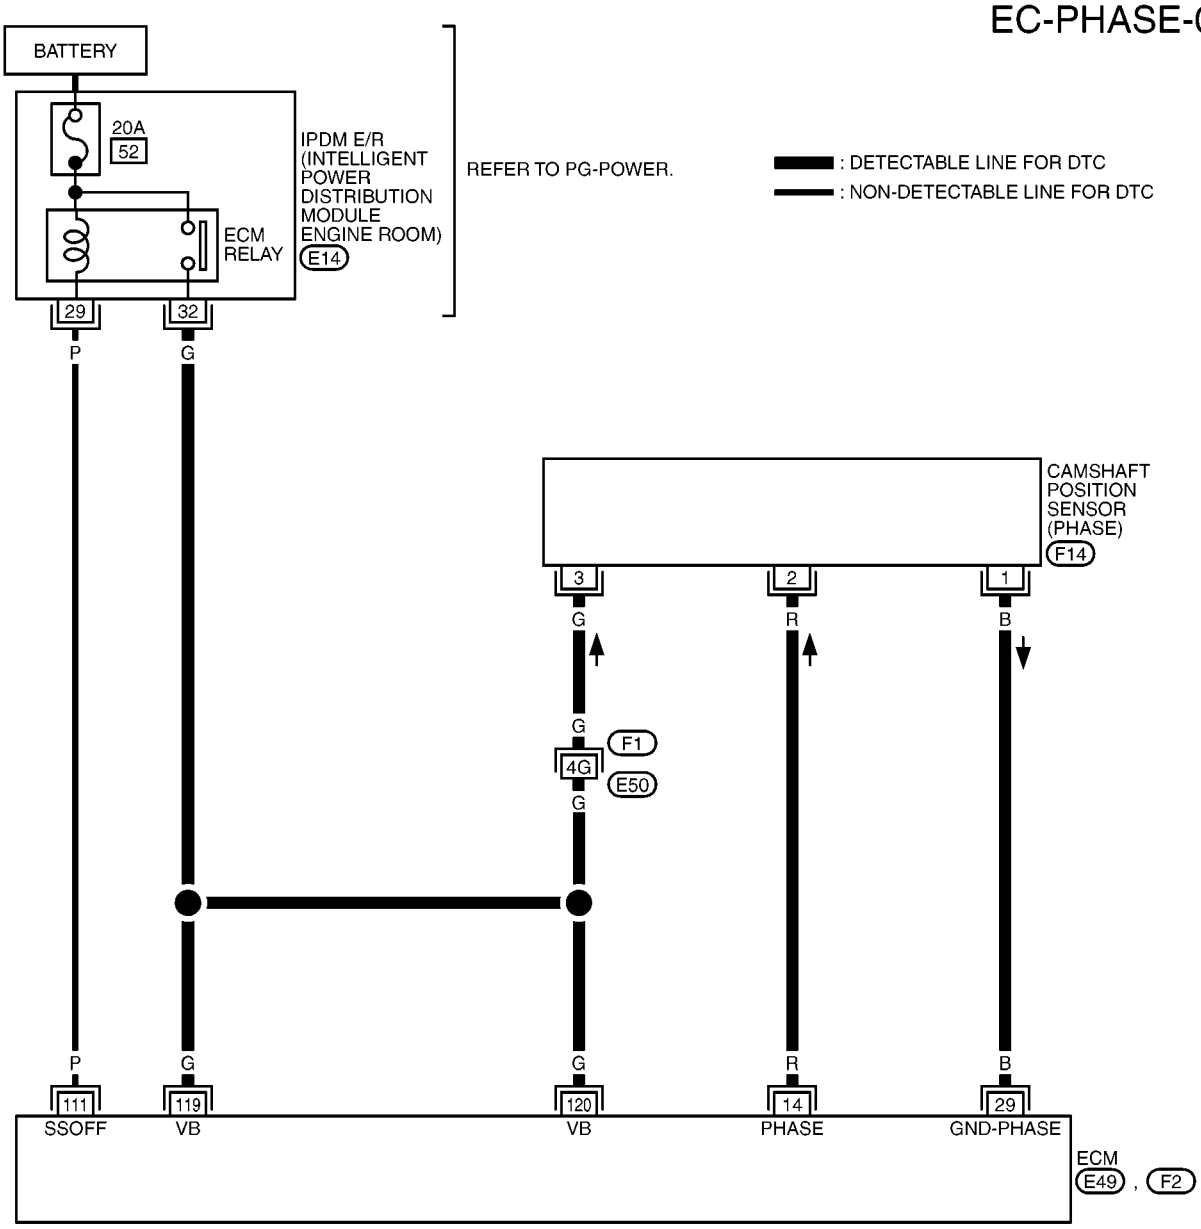
WITH GST

Follow the procedure “WITH CONSULT-II” above.

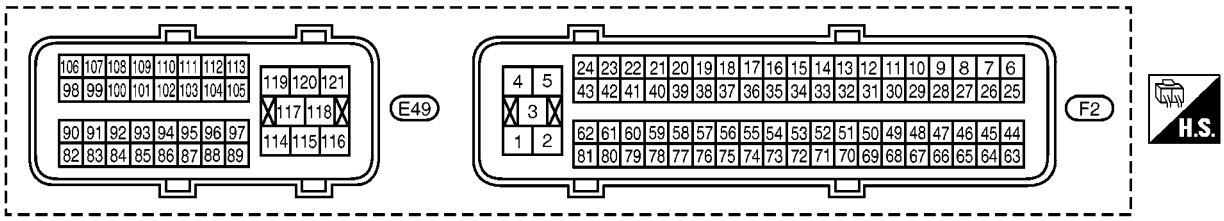
Wiring Diagram

EBS00O8B

EC-PHASE-01



REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)



MBWA0283E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
14	R	Camshaft position sensor (PHASE)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	1.0 - 4.0V★  PBIB0525E
			[Engine is running] ● Engine speed is 2,000 rpm.	1.0 - 4.0V★  PBIB0526E
29	B	Sensor ground (Camshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00O8C

1. CHECK STARTING SYSTEM

Turn ignition switch to START position.

Does the engine turn over?

Does the starter motor operate?

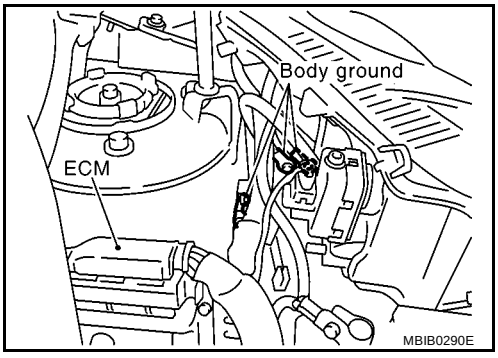
Yes or No

Yes >> GO TO 2.
No >> Check starting system. (Refer to SC-39, "STARTING SYSTEM" .)

2. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

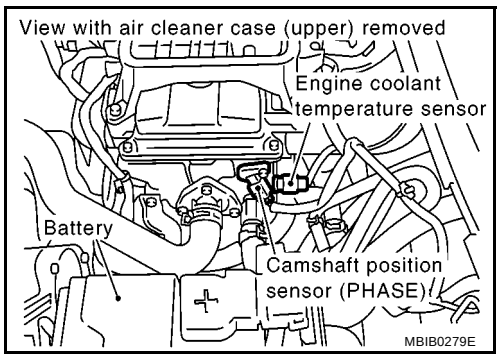
>> GO TO 3.



MBIB0290E

3. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT

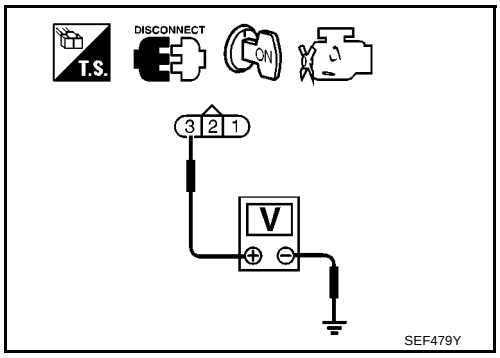
1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.
2. Turn ignition switch ON.



3. Check voltage between CMP sensor (PHASE) terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

4. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- Harness for open or short between camshaft position sensor (PHASE) and ECM
- Harness for open or short between camshaft position sensor (PHASE) and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 29 and CMP sensor (PHASE) terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 14 and CMP sensor (PHASE) terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-271, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace camshaft position sensor (PHASE).

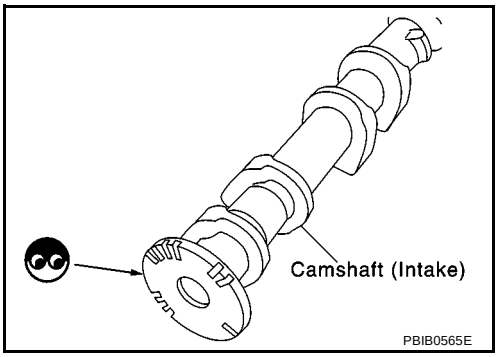
8. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 9.
NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.



9. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

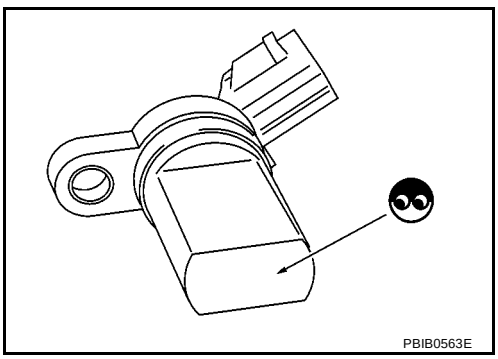
>> **INSPECTION END**

Component Inspection

EBS00O8D

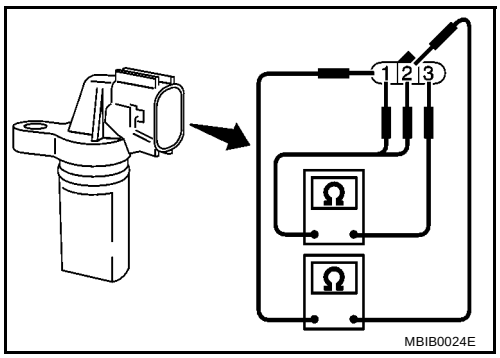
CAMSHAFT POSITION SENSOR (PHASE)

1. Loosen the fixing bolt of the sensor.
2. Disconnect camshaft position sensor (PHASE) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.



5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or ∞
3 (+) - 2 (-)	
2 (+) - 1 (-)	



Removal and Installation

EBS00O8E

CAMSHAFT POSITION SENSOR (PHASE)

Refer to EM-36, "CAMSHAFT" .

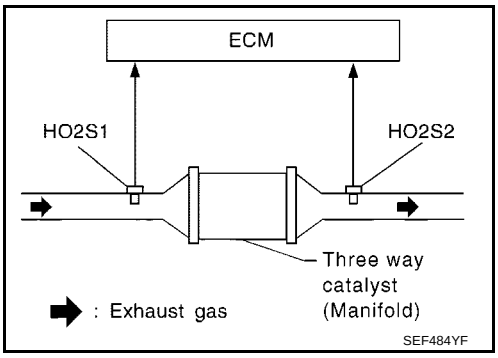
DTC P0420 THREE WAY CATALYST FUNCTION

PFP:20905

On Board Diagnosis Logic

EBS00O8F

The ECM monitors the switching frequency ratio of heated oxygen sensors 1 and 2.
A three way catalyst (Manifold) with high oxygen storage capacity will indicate a low switching frequency of heated oxygen sensor 2. As oxygen storage capacity decreases, the heated oxygen sensor 2 switching frequency will increase.
When the frequency ratio of heated oxygen sensors 1 and 2 approaches a specified limit value, the three way catalyst (Manifold) malfunction is diagnosed.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0420 0420	Catalyst system efficiency below threshold	● Three way catalyst (Manifold) does not operate properly. ● Three way catalyst (Manifold) does not have enough oxygen storage capacity.	● Three way catalyst (Manifold) ● Exhaust tube ● Intake air leaks ● Fuel injectors ● Fuel injector leaks ● Spark plug ● Improper ignition timing

DTC Confirmation Procedure

EBS00O8G

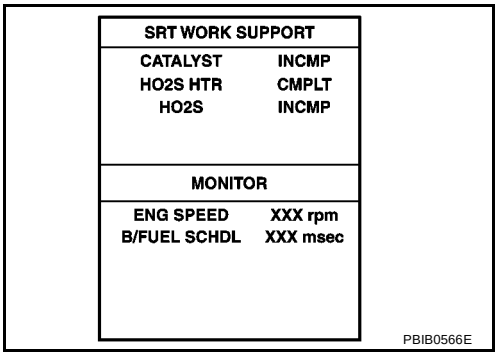
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

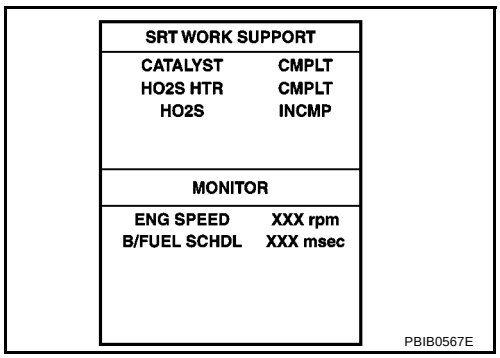
TESTING CONDITION:

- **Open engine hood before conducting the following procedure.**
- **Do not hold engine speed for more than the specified minutes below.**

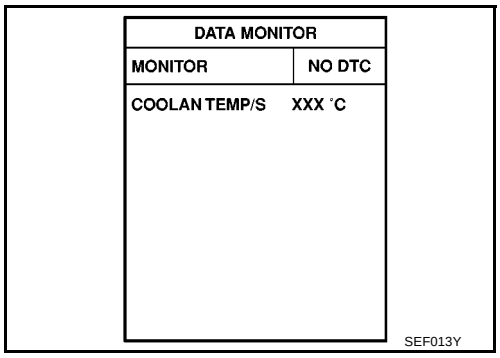
1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Select “DTC & SRT CONFIRMATION” then “SRT WORK SUPPORT” mode with CONSULT-II.
6. Rev engine up to 2,000 to 3,000 rpm and hold it for 3 consecutive minutes then release the accelerator pedal completely.
   If “INCMP” of “CATALYST” changed to “COMPLT”, go to step 10
7. Wait 5 seconds at idle.



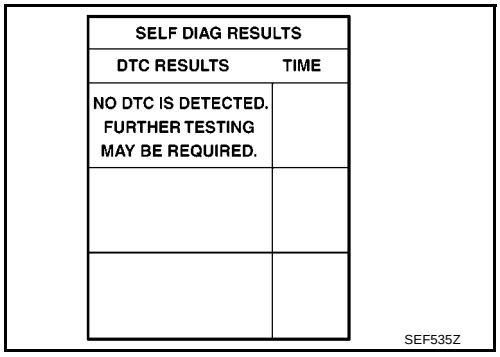
8. Rev engine up to 2,000 to 3,000 rpm and maintain it until “INCMP” of “CATALYST” changes to “CMPLT” (It will take approximately 5 minutes).
   If not “CMPLT”, stop engine and cool it down to less than 70°C (158 °F) and then retest from step 1.



a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle)
b. Turn ignition switch ON and select “COOLAN TEMP/S” in “DATA MONITOR” mode with CONSULT-II.
c. Start engine and warm it up while monitoring “COOLAN TEMP/S” indication on CONSULT-II.
d. When “COOLANTEMP/S” indication reaches to 70°(158°F), go to step 3.



9. Select “SELF-DIAG RESULTS” mode with CONSULT-II.
10. Confirm that the 1st trip DTC is not detected.
    If the 1st trip DTC is detected, go to EC-275, "Diagnostic Procedure" .



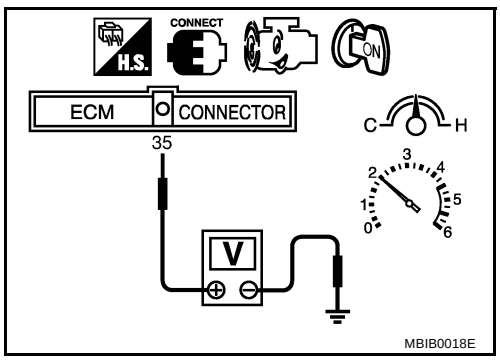
Overall Function Check

EBS00O8H

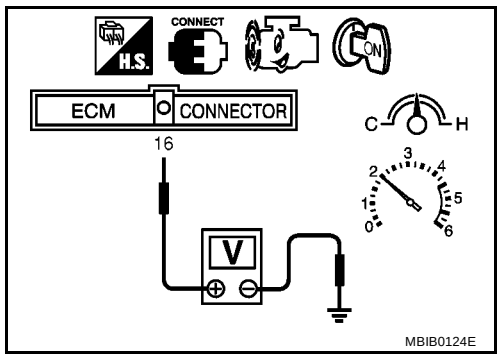
Use this procedure to check the overall function of the three way catalyst (Manifold). During this check, a 1st trip DTC might not be confirmed.

WITH GST

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,00 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Open engine hood.
6. Set voltmeters probes between ECM terminal 35 (HO2S1 signal) and engine ground, and ECM terminal 16 (HO2S2 signal) and engine ground.
7. Keep engine speed at 2,000 rpm constant under no load.



8. Make sure that the voltage switching frequency (high & low) between ECM terminal 16 and engine ground is very less than that of ECM terminal 35 and engine ground.
Switching frequency ratio = A/B
A: Heated oxygen sensor 2 voltage switching frequency
B: Heated oxygen sensor 1 voltage switching frequency
This ratio should be less than 0.75.
If the ratio is greater than above, it means three way catalyst (manifold) does not operate properly. Go to EC-275, "Diagnostic Procedure" .



NOTE:
If the voltage at terminal 35 does not switch periodically more than 5 times within 10 seconds at step 8, perform trouble diagnosis for DTC P0133 first. (See EC-179 .)

Diagnostic Procedure

EBS00O8I

1. CHECK EXHAUST SYSTEM

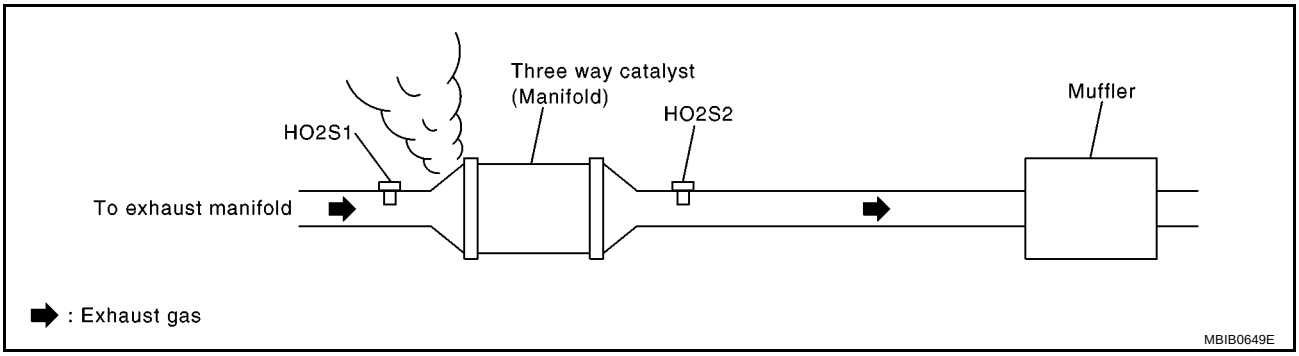
Visually check exhaust tubes and muffler for dent.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK EXHAUST GAS LEAK

1. Start engine and run it at idle.
2. Listen for an exhaust gas leak before the three way catalyst (Manifold).



OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the manifold absolute pressure sensor.

OK or NG

OK >> GO TO 4.
NG >> Repair or replace.

4. CHECK IGNITION TIMING

Check the following items. Refer to EC-77, "Basic Inspection" .

Items		Specifications
Ignition timing	A/T	5° ± 2° BTDC (in P or N position)
	M/T	5° ± 2° BTDC
Target idle speed	A/T	700 ± 50 rpm (in P or N position)
	M/T	650 ± 50 rpm

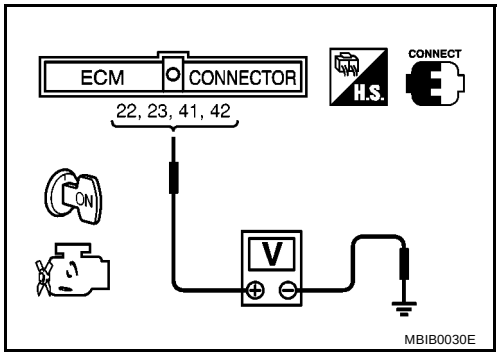
OK or NG

OK >> GO TO 5.
NG >> Follow the EC-77, "Basic Inspection" .

5. CHECK INJECTORS

1. Stop engine and then turn ignition switch ON.
2. Refer to Wiring Diagram for Injectors, EC-445 .
3. Check voltage between ECM terminals 22, 23, 41, 42 and ground with CONSULT-II or tester.

Battery voltage should exist.

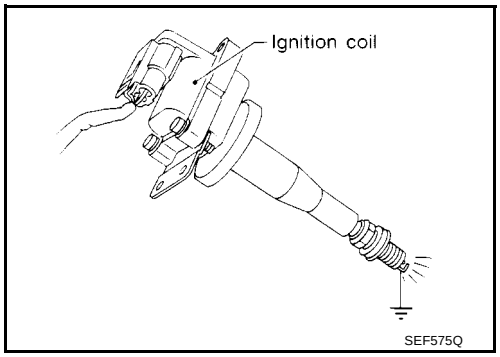


OK or NG

OK >> GO TO 6.
NG >> Perform EC-446, "Diagnostic Procedure" .

6. CHECK IGNITION SPARK

1. Turn ignition switch OFF.
2. Disconnect ignition coil assembly from rocker cover.
3. Connect a known-good spark plug to the ignition coil assembly.
4. Disconnect all injector harness connectors.
5. Place end of spark plug against a suitable ground and crank engine.
6. Check for spark.



OK or NG

OK >> GO TO 7.
NG >> Check ignition coil with power transistor and their circuit. Refer to EC-435, "IGNITION SIGNAL" .

7. CHECK INJECTOR

1. Turn ignition switch OFF.
2. Remove injector assembly.
   Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .
   Keep fuel hose and all injectors connected to injector gallery.
3. Reconnect all injector harness connectors.
4. Disconnect all ignition coil harness connectors.
5. Turn ignition switch ON.
   Make sure fuel does not drip from injector.

OK or NG

OK (Does not drip.)>>GO TO 8.
NG (Drips.)>>Replace the injector(s) from which fuel is dripping.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

Trouble is fixed.>>**INSPECTION END**
Trouble is not fixed.>>Replace three way catalyst (Manifold).

DTC P0444 EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PFP:14920

Description

EBS00O8J

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Manifold absolute pressure sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*1		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Heated oxygen sensor 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Vehicle speed signal*2	Vehicle speed		

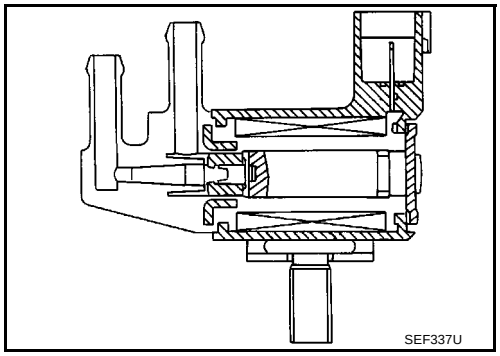
*1: ECM determines the start signal status by the signals of engine speed and battery voltage.

*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O8K

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PURG VOL C/V	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	0%
		2,000 rpm	20 - 30%

On Board Diagnosis Logic

EBS00O8L

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0444 0444	EVAP canister purge volume control solenoid valve circuit open	An excessively low voltage signal is sent to ECM through the valve	● Harness or connectors (The solenoid valve circuit is open or shorted.) ● EVAP canister purge volume control solenoid valve

DTC Confirmation Procedure

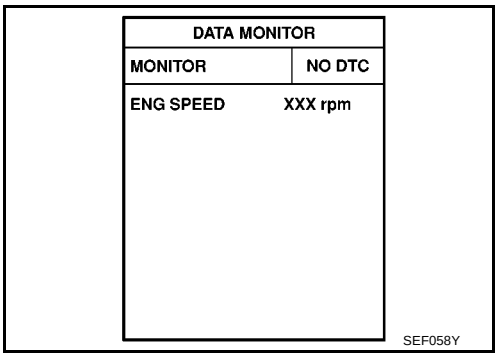
EBS00O8M

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm battery voltage is more than 11V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for at least 13 seconds.
4. If 1st trip DTC is detected, go to EC-281, "Diagnostic Procedure"
.

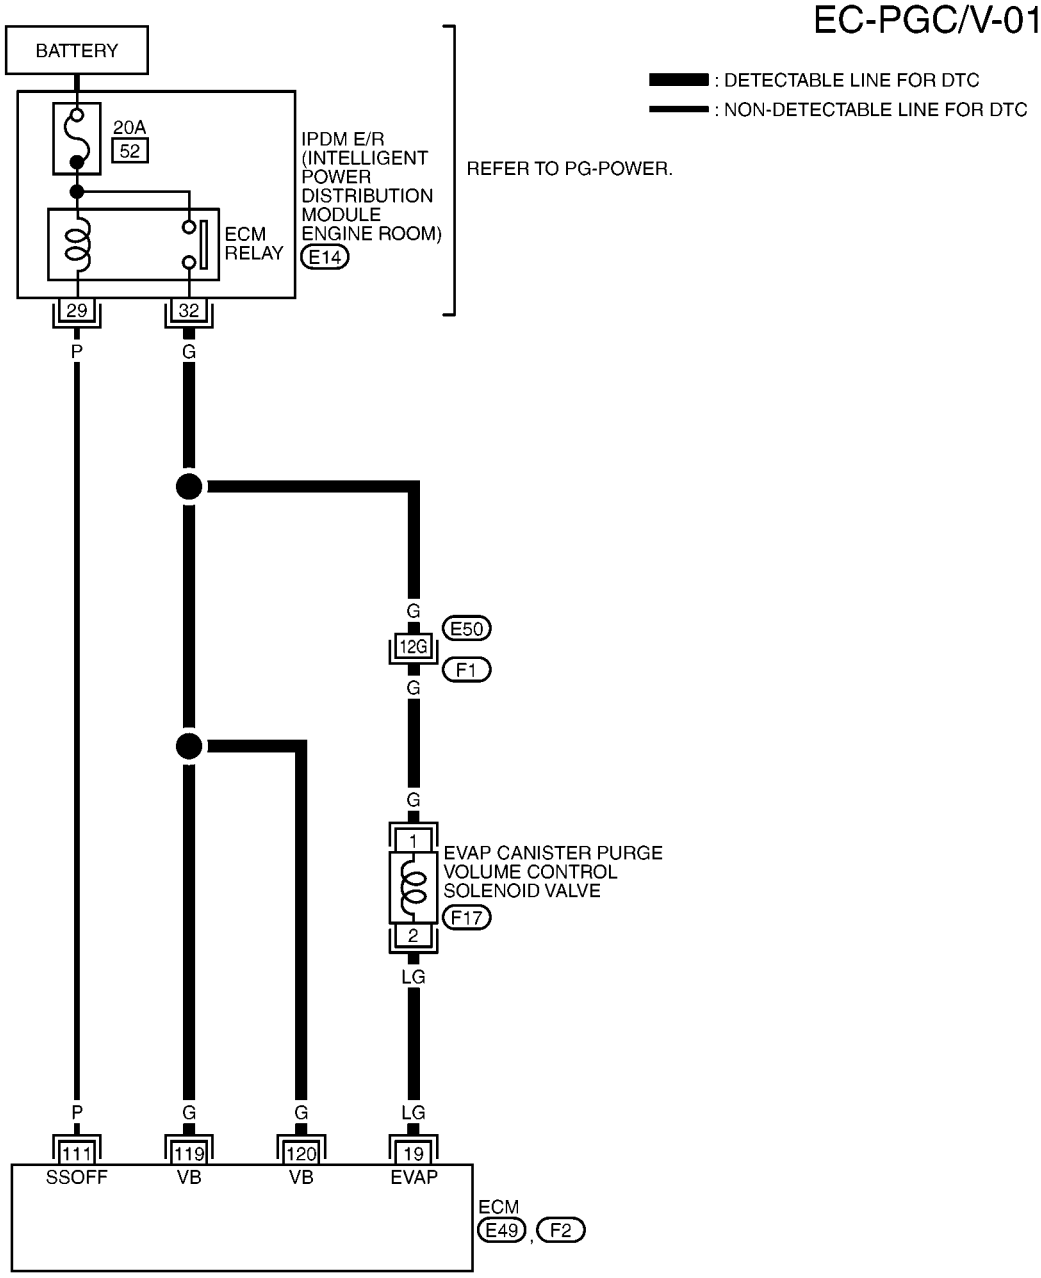


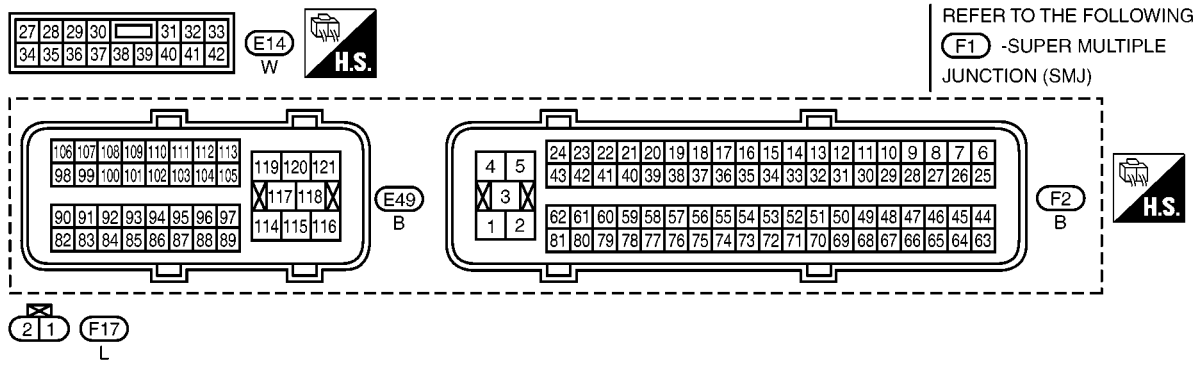
WITH GST

Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00O8N





MBWA0572E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
19	LG	EVAP canister purge volume control solenoid valve	**[Engine is running]** ● Idle speed	BATTERY VOLTAGE (11 - 14V)★  PBIB0050E
			[Engine is running] ● Engine speed is about 2,000 rpm (More than 100 seconds after starting engine)	Approximately 10V★  PBIB0520E

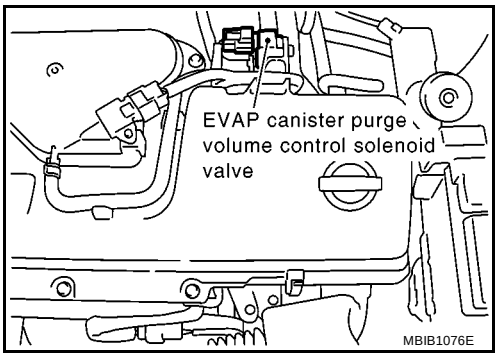
★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00O8O

1. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch ON.



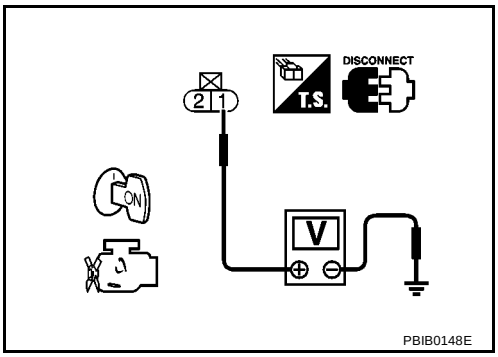
MBIB1076E

4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



PBIB0148E

2. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between EVAP canister purge volume control solenoid valve and E/R
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair harness or connectors.

3. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 19 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK (With CONSULT-II)>>GO TO 4.
OK (Without CONSULT-II)>>GO TO 5.
NG >> Repair open circuit or short to ground and short to power in harness or connectors.

4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

With CONSULT-II

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR	
ENG SPEED	XXX rpm
A/F ALPHA-B1	XXX %
HO2S1 MNTR (B1)	LEAN

PBIB0569E

5. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-283, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace EVAP canister purge volume control solenoid valve.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

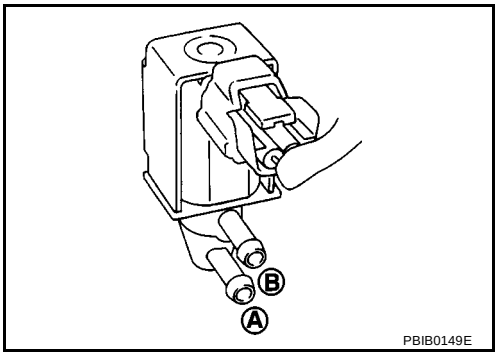
EBS00O8P

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

With CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition (PURG VOL CONT/V value)	Air passage continuity between A and B
100%	Yes
0%	No

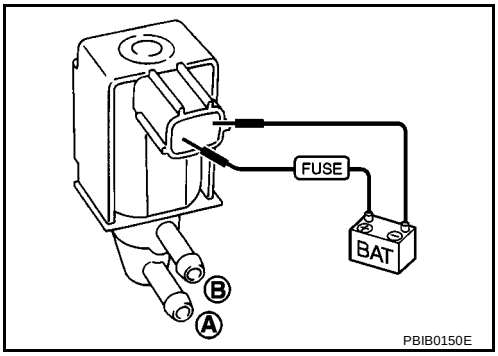


PBIB0149E

Without CONSULT-II

Check air passage continuity of EVAP canister purge volume control solenoid valve under the following conditions.

Condition	Air passage continuity between A and B
12V direct current supply between terminals 1 and 2	Yes
No supply	No



PBIB0150E

Removal and Installation

EBS00O8Q

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

DTC P0500 VSS

PFP:32702

Description

EBS00O8R

NOTE:
If DTC P0500 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-130, "DTC U1000, U1001 CAN COMMUNICATION LINE" .
The vehicle speed signal is sent to the combination meter from the “ABS actuator and electric unit (control unit)” through CAN communication line. The combination meter then sends a signal to the ECM through CAN communication line.

On Board Diagnosis Logic

EBS00O8S

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0500 0500	Vehicle speed sensor	The almost 0 km/h (0 MPH) signal from vehicle speed sensor is sent to ECM even when vehicle is being driven.	● Harness or connectors (The CAN communication line is open or shorted.) ● ABS control unit ● ABS actuator and electric unit (control unit) ● Wheel sensor ● Combination meter

DTC Confirmation Procedure

EBS00O8T

CAUTION:
Always drive vehicle at a safe speed.

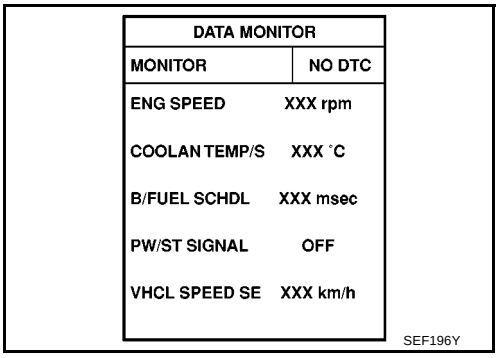
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Steps 1 and 2 may be conducted with the drive wheels lifted in the shop or by driving the vehicle. If a road test is expected to be easier, it is unnecessary to lift the vehicle.

WITH CONSULT-II

1. Start engine.
2. Read “VHCL SPEED SE” in “DATA MONITOR” mode with CONSULT-II. The vehicle speed on CONSULT-II should exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
   If NG, go to EC-285, "Diagnostic Procedure" .
   If OK, go to following step.
3. Select “DATA MONITOR” mode with CONSULT-II.
4. Warm engine up to normal operating temperature.
5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	More than 1,900 rpm (A/T models) More than 2,300 rpm (M/T models)
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	4.5 - 31.8 msec
Selector lever	Suitable position
PW/ST SIGNAL	OFF



6. If 1st trip DTC is detected, go to EC-285, "Diagnostic Procedure" .

Overall Function Check

EBS00O8U

Use this procedure to check the overall function of the vehicle speed signal circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

1. Lift up drive wheels.
2. Start engine.
3. Read vehicle speed signal in “MODE 1” with GST.
   The vehicle speed signal on GST should be able to exceed 10 km/h (6 MPH) when rotating wheels with suitable gear position.
4. If NG, go to EC-285, "Diagnostic Procedure" .

Diagnostic Procedure

EBS00O8V

1. CHECK DTC

Refer to BRC-8, "TROUBLE DIAGNOSIS" (models without ESP) or BRC-61, "TROUBLE DIAGNOSIS" (models with ESP).

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK COMBINATION METER

Check combination meter function.
Refer to DI-5, "COMBINATION METERS" .

>> **INSPECTION END**

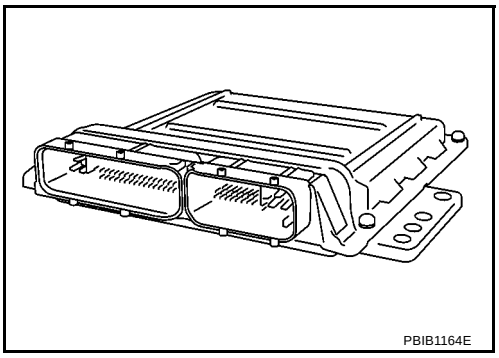
DTC P0605 ECM

PFP:23710

Component Description

EBS00O8W

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.



PBIB1164E

On Board Diagnosis Logic

EBS00O8X

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	● ECM
		B)	ECM EEP-ROM system is malfunctioning.	
		C)	ECM self shut-off function is malfunctioning.	

FAIL-SAFE MODE

ECM enters fail-safe mode when malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

EBS00O8Y

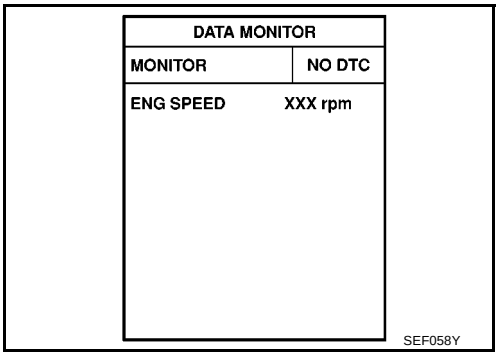
Perform PROCEDURE FOR MALFUNCTION A first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B. If there is no malfunction on PROCEDURE FOR MALFUNCTION B, perform PROCEDURE FOR MALFUNCTION C.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

With CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. If DTC is detected, go to EC-287, "Diagnostic Procedure" .



SEF058Y

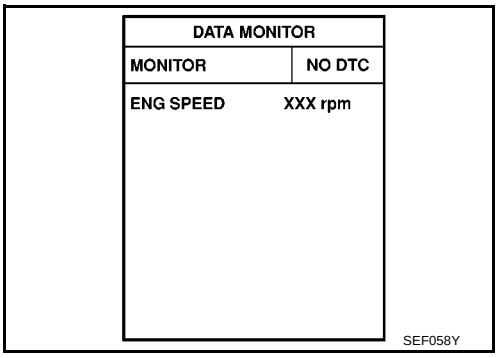
With GST

Follow the procedure “With CONSULT-II” above.

PROCEDURE FOR MALFUNCTION B

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
4. If 1st trip DTC is detected, go to EC-287, "Diagnostic Procedure" .



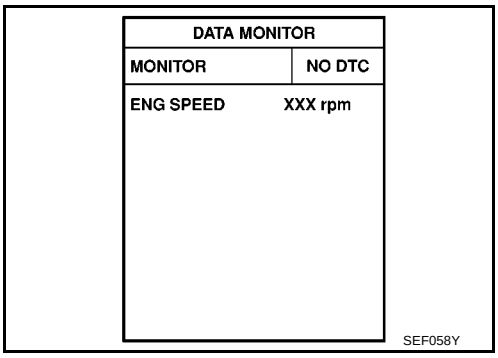
With GST

Follow the procedure “With CONSULT-II” above.

PROCEDURE FOR MALFUNCTION C

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
4. Repeat step 3 for 32 times.
5. If 1st trip DTC is detected, go to EC-287, "Diagnostic Procedure" .



With GST

Follow the procedure “With CONSULT-II” above.

Diagnostic Procedure

EBS00O8Z

1. INSPECTION START

With CONSULT-II

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-II.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-286 .
5. Is the 1st trip DTC P0605 displayed again?

With GST

1. Turn ignition switch ON.
2. Select MODE 4 with GST.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-286 .
5. Is the 1st trip DTC P0605 displayed again?

Yes or No

Yes >> GO TO 2.
No >> **INSPECTION END**

2. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NATS system and registration of all NATS ignition key IDs. Refer to EC-60, "NATS (Nissan Anti-theft System)" .
3. Perform EC-42, "Accelerator Pedal Released Position Learning" .
4. Perform EC-42, "Throttle Valve Closed Position Learning" .
5. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

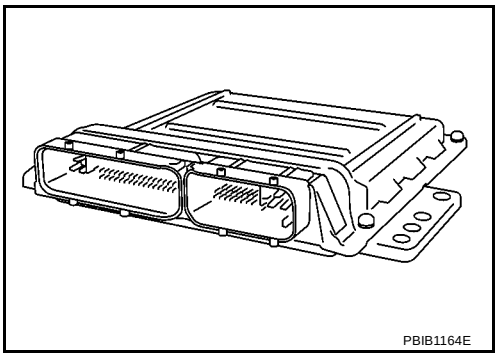
DTC P1065 ECM POWER SUPPLY

PFP:23710

Component Description

EBS00O90

Battery voltage is supplied to the ECM even when the ignition switch is turned OFF for the ECM memory function of the DTC memory, the air-fuel ratio feedback compensation value memory, the idle air volume learning value memory, etc.



PBIB1164E

On Board Diagnosis Logic

EBS00O91

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1065 1065	ECM power supply circuit	ECM back-up RAM system does not function properly.	● Harness or connectors [ECM power supply (back-up) circuit is open or shorted.] ● ECM

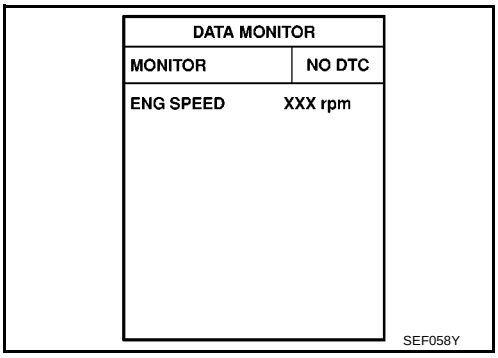
DTC Confirmation Procedure

EBS00O92

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
5. Repeat steps 3 and 4 for 4 times.
6. If 1st trip DTC is detected, go to EC-291, "Diagnostic Procedure".



SEF058Y

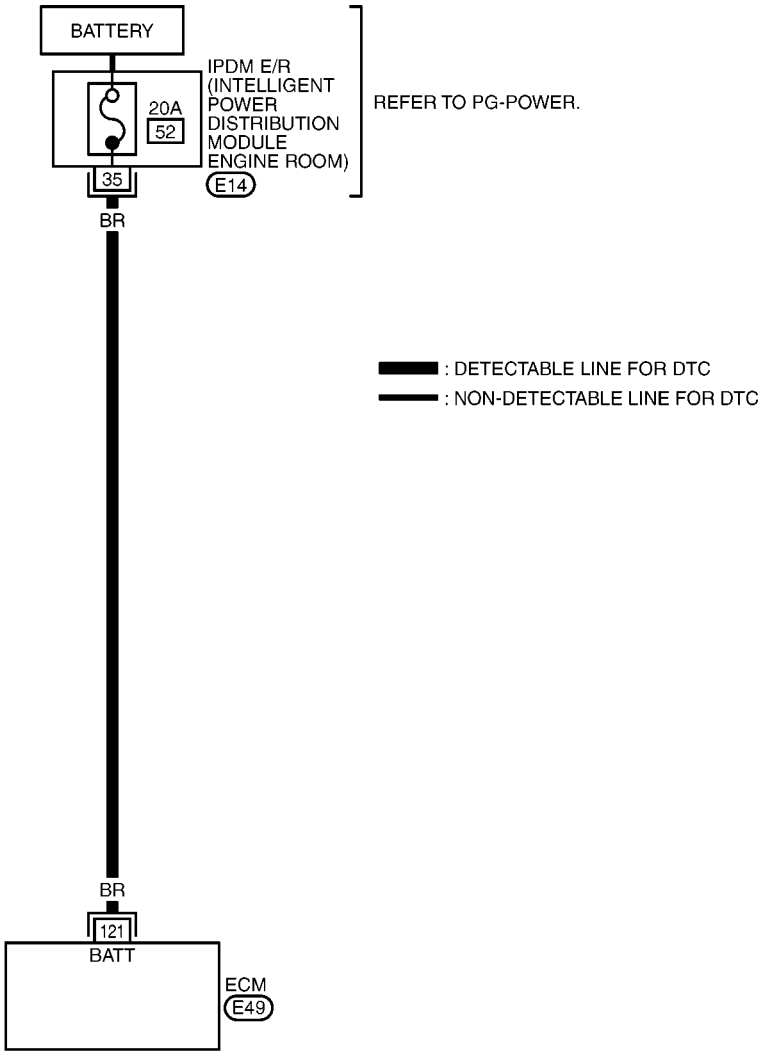
WITH GST

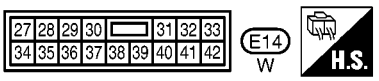
Follow the procedure “WITH CONSULT-II” above.

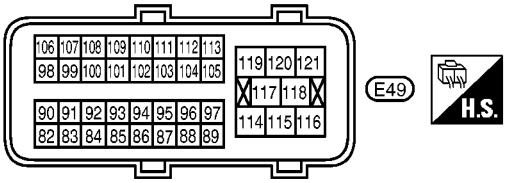
Wiring Diagram

EBS00O93

EC-ECM/PW-01







MBWA0285E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
121	BR	Power supply for ECM (Buck-up)	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)

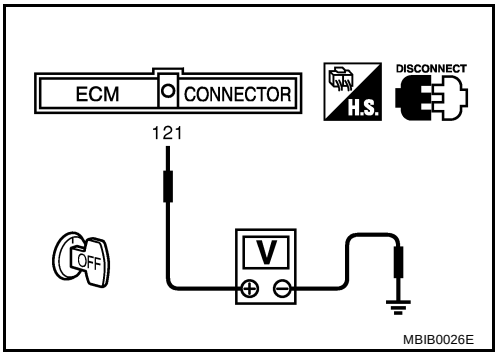
Diagnostic Procedure

EBS00O94

1. CHECK ECM POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check voltage between ECM terminal 121 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- 20A fuse
- IPDM E/R harness connector E14
- Harness for open or short between ECM and IPDM E/R

>> Repair or replace harness or connectors.

3. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connectors.

4. PERFORM DTC CONFIRMATION PROCEDURE

With CONSULT-II

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-II.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-289 .
5. Is the 1st trip DTC P1065 displayed again?

With GST

1. Turn ignition switch ON.
2. Select MODE 4 with GST.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-289 .
5. Is the 1st trip DTC P1065 displayed again?

Yes or No

Yes >> GO TO 5.
No >> **INSPECTION END**

5. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NATS system and registration of all NATS ignition key IDs. Refer to EC-60, "NATS (Nissan Anti-theft System)" .
3. Perform EC-42, "Accelerator Pedal Released Position Learning" .
4. Perform EC-42, "Throttle Valve Closed Position Learning" .
5. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

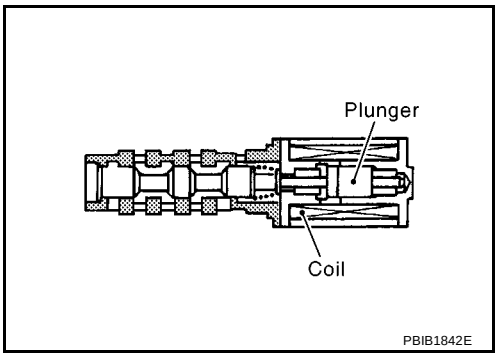
DTC P1111 IVT CONTROL SOLENOID VALVE

PFP:23796

Component Description

EBS00O95

Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.
The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.
The longer pulse width advances valve angle.
The shorter pulse width retards valve angle.
When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.



CONSULT-II Reference Value in Data Monitor Mode

EBS00O96

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V SOL (B1)	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	0% - 2%
		When revving engine up to 2,000 rpm quickly	Approx. 0% - 50%

On Board Diagnosis Logic

EBS00O97

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1111 1111	Intake valve timing control solenoid valve circuit	An improper voltage is sent to the ECM through intake valve timing control solenoid valve.	● Harness or connectors (Intake valve timing control solenoid valve circuit is open or shorted.) ● Intake valve timing control solenoid valve

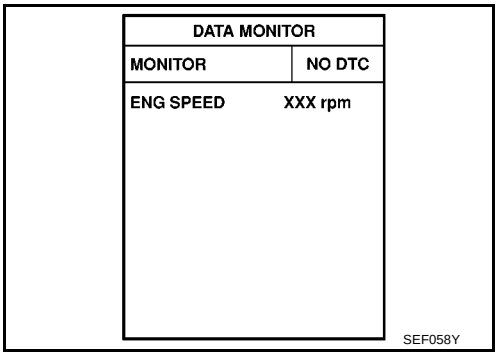
DTC Confirmation Procedure

EBS00O98

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If 1st trip DTC is detected, go to EC-295, "Diagnostic Procedure" .

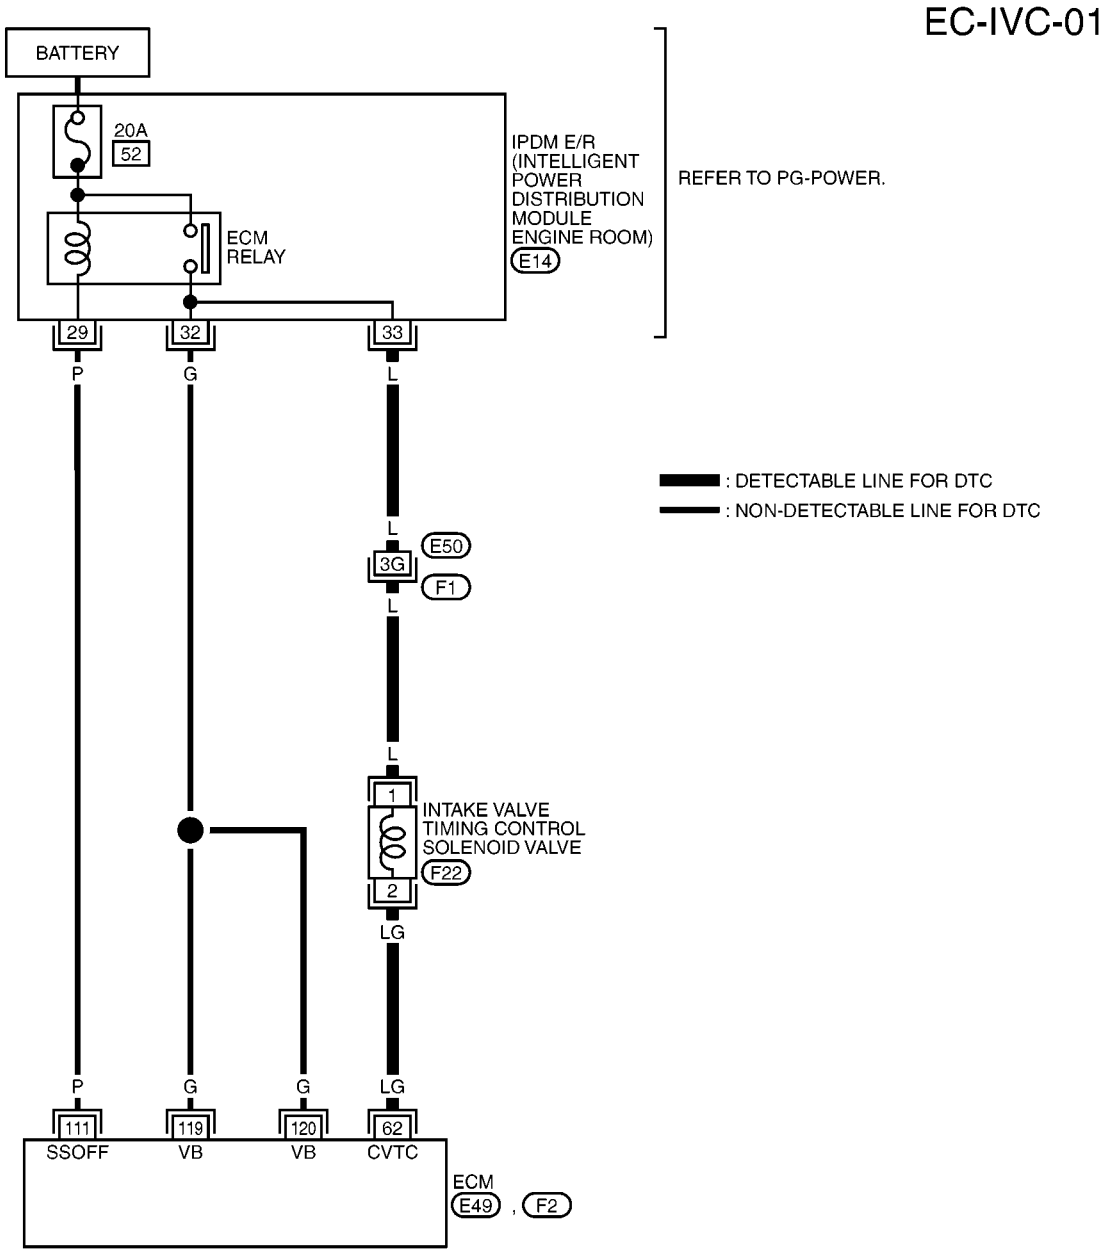


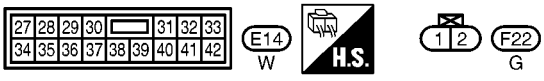
WITH GST

Following the procedure “WITH CONSULT-II” above.

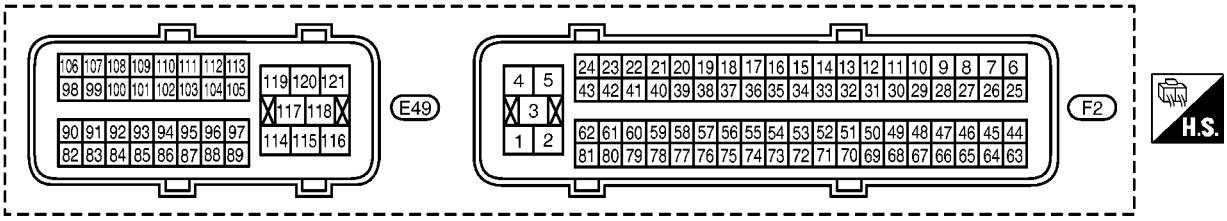
Wiring Diagram

EBS00O99





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)



MBWA0303E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
62	LG	Intake valve timing control solenoid valve	**[Engine is running]** ● **Warm-up condition** ● Idle speed	BATTERY VOLTAGE (11 - 14V)
			[Engine is running] ● **Warm-up condition** ● When revving engine up to 2,000 rpm quickly	Approximately 4V - BATTERY VOLTAGE (11 - 14V)★  PBIB1790E

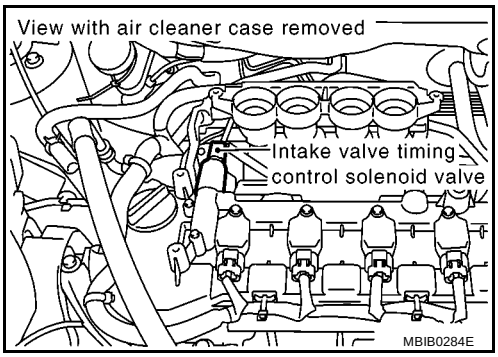
★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00O9A

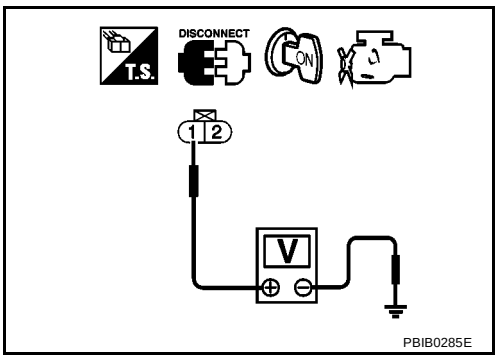
1. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect intake valve timing control solenoid valve harness connector.
3. Turn ignition switch ON.



4. Check voltage between intake valve timing control solenoid valve terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTION PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between intake valve timing control solenoid valve and IPDM E/R

>> Repair or replace harness or connectors.

3. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 62 and intake valve timing control solenoid valve terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EC-296, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace intake valve timing control solenoid valve.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

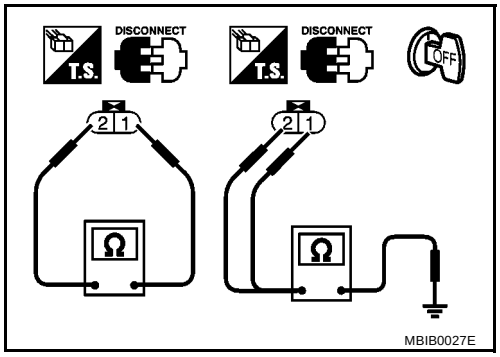
Component Inspection

EBS00O9B

INTAKE VALVE TIMING CONTROL SOLENOID VALVE

1. Disconnect intake valve timing control solenoid valve harness connector.
2. Check resistance between intake valve timing control solenoid valve terminals 1 and 2 under the following conditions.

Terminals	Resistance
1 and 2	Approximately 7.2Ω at 20°C (68°F)
1 or 2 and ground	∞Ω (Continuity should not exist)



Removal and Installation

EBS00O9C

INTAKE VALVE TIMING CONTROL SOLENOID VALVE

Refer to EM-33, "ROCKER COVER" .

DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

PFP:16119

Component Description

EBS00O9D

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.
The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

EBS00O9E

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P1121 1121	Electric throttle control actuator	A)	Electric throttle control actuator does not function properly due to the return spring malfunction.	● Electric throttle control actuator
		B)	Throttle valve opening angle in fail-safe mode is not in specified range.	
		C)	ECM detect the throttle valve is stuck open.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	The ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.

DTC Confirmation Procedure

EBS00O9F

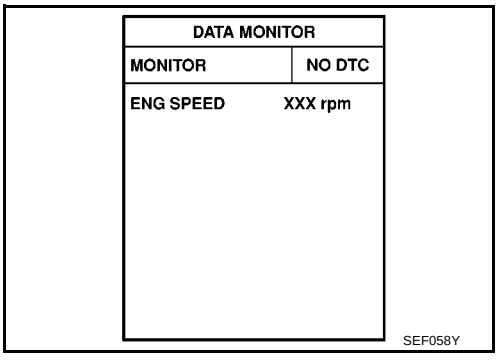
NOTE:

- **Perform PROCEDURE FOR MALFUNCTION A AND B first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION C.**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A AND B

With CONSULT-II

1. Turn ignition witch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Shift selector lever to D position (A/T), 1st position (M/T) and wait at least 2 seconds.
4. Shift selector lever to P position (A/T), Neutral position (M/T).
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Turn ignition switch ON and wait at least 1 second.
7. Shift selector lever to D position (A/T), 1st position (M/T) and wait at least 2 seconds.
8. Shift selector lever to P position (A/T), Neutral position (M/T).
9. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
10. If 1st trip DTC is detected, go to EC-298, "Diagnostic Procedure" .



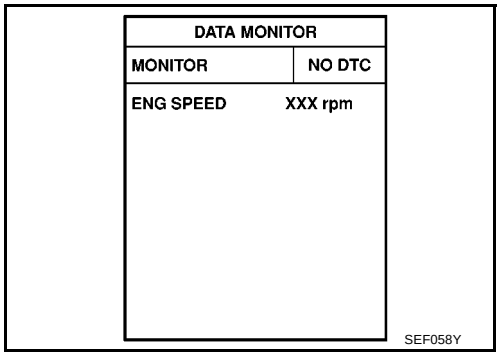
With GST

Follow the procedure “With CONSULT-II” above.

PROCEDURE FOR MALFUNCTION C

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Shift selector lever to D position (A/T), 1st position (M/T) and wait at least 2 seconds.
4. Shift selector lever to N or P position (A/T) or Neutral position (M/T).
5. Start engine and let it idle for 3 seconds.
6. If DTC is detected, go to EC-298, "Diagnostic Procedure" .



With GST

Follow the procedure “With CONSULT-II” above.

Diagnostic Procedure

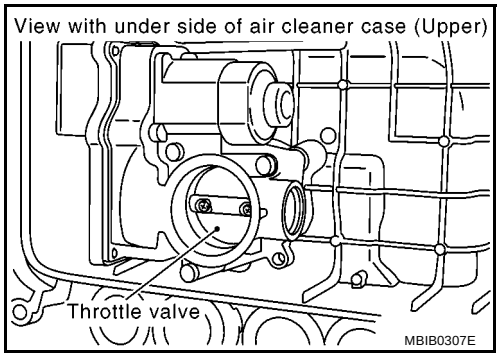
EBS00O9G

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if a foreign matter is caught between the throttle valve and the housing.

OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.



2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

PFP:16119

Description

EBS00O9I

NOTE:
If DTC P1122 is displayed with DTC P1121 or 1126, first perform the trouble diagnosis for DTC P1121 or P1126. Refer to EC-297 or EC-305 .
Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.
The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

EBS00O9J

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1122 1122	Electric throttle control performance problem	Electric throttle control function does not operate properly.	● Harness or connectors (Throttle control motor circuit is open or shorted.) ● Electric throttle control actuator

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

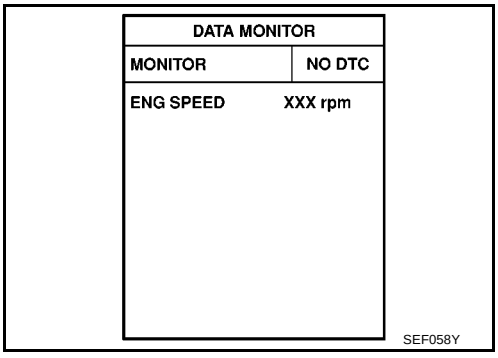
DTC Confirmation Procedure

EBS00O9K

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V when engine is running.

WITH CONSULT-II

1. Turn ignition switch ON and wait at least 2 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to EC-301, "Diagnostic Procedure" .



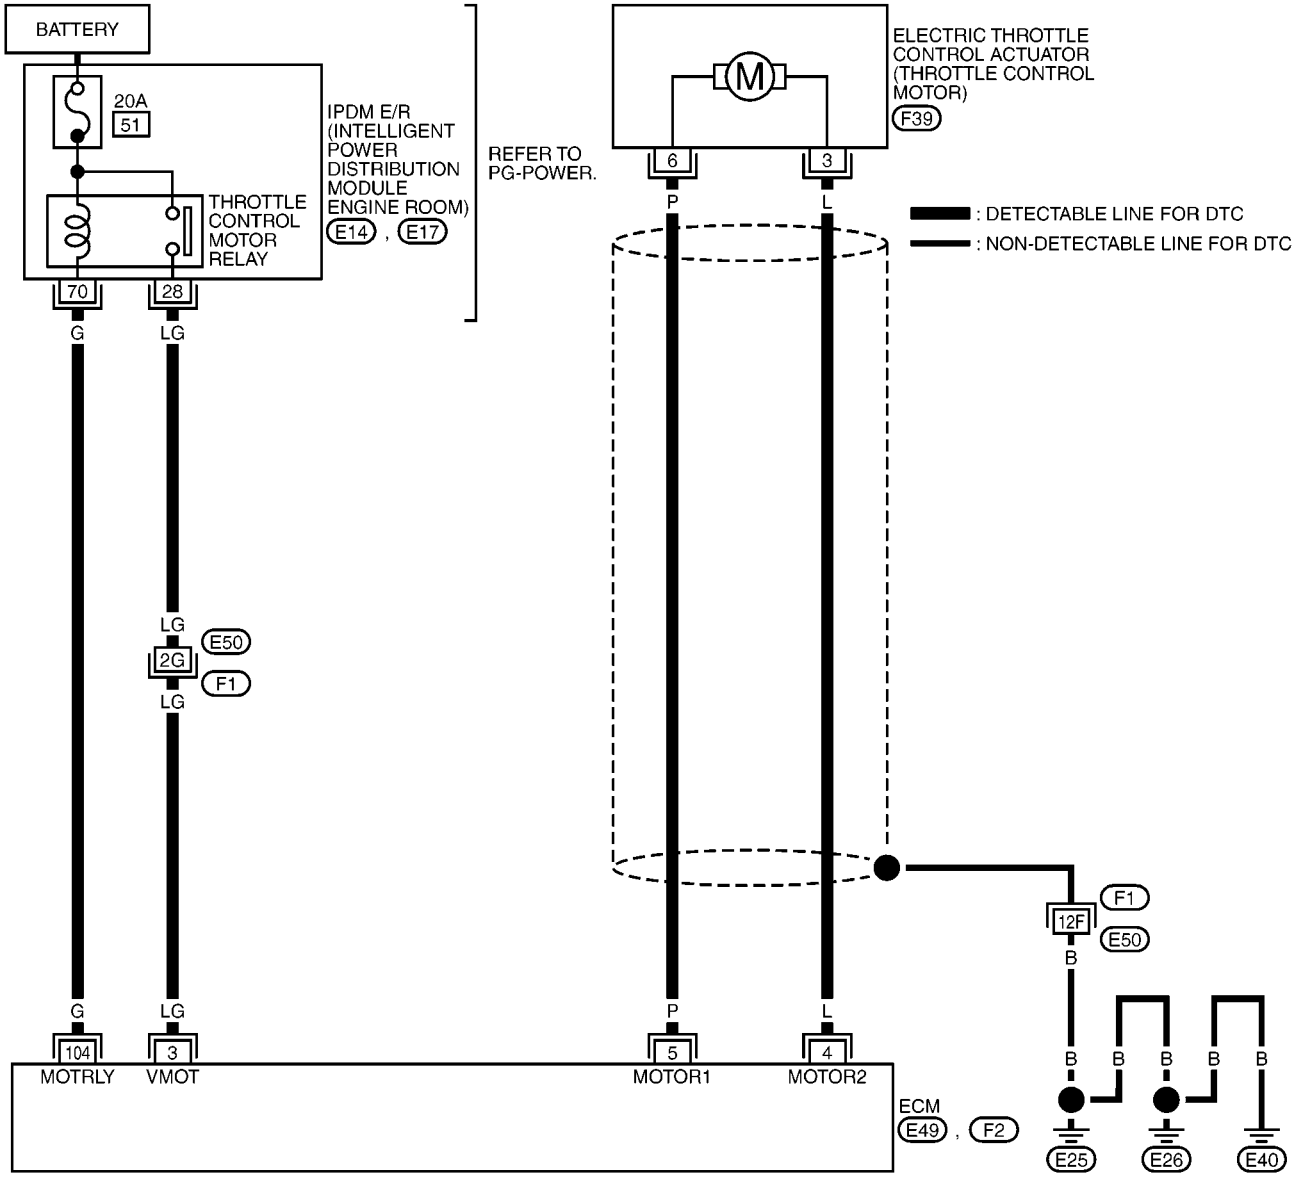
WITH GST

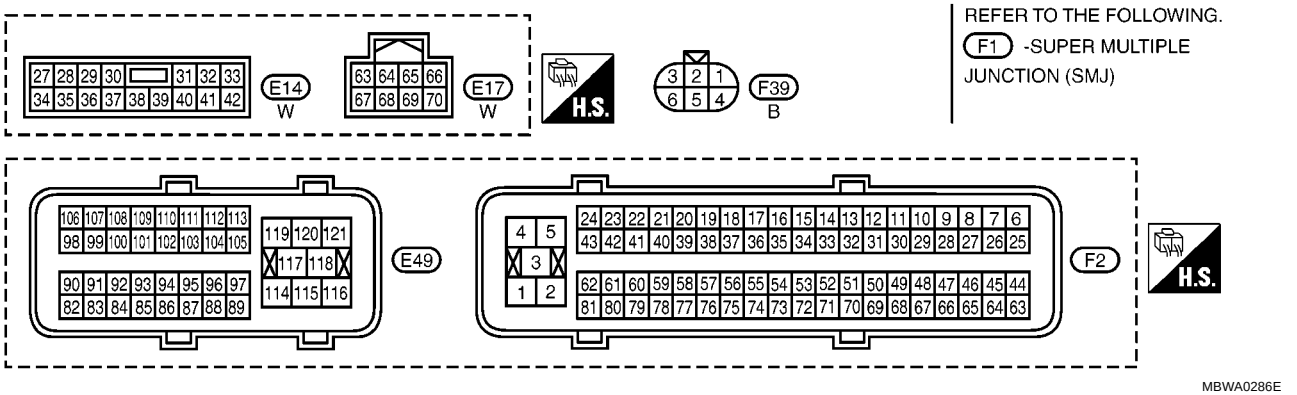
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00O9L

EC-ETC1-01





MBWA0286E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
3	LG	Throttle control motor relay power supply	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
4	L	Throttle control motor (Close)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Released	0 - 14V★  PBIB0534E
5	P	Throttle control motor (Open)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB0533E
104	G	Throttle control motor relay	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch ON]	0 - 1.0V

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

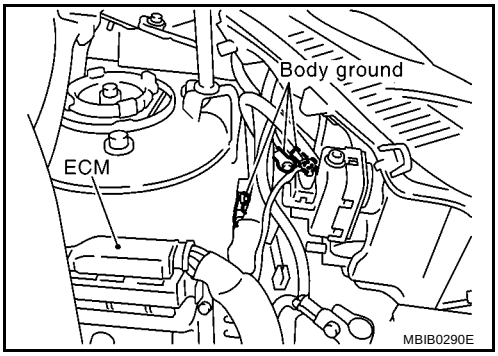
Diagnostic Procedure

EBS00O9M

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.

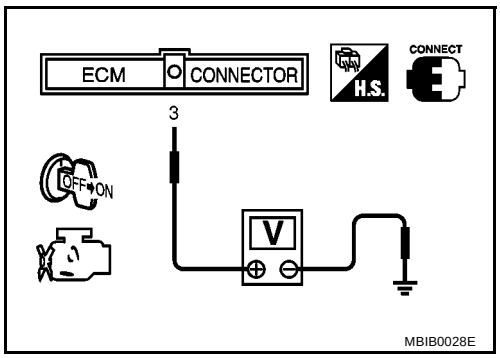


MBIB0290E

2. CHECK THROTTLE CONTROL MOTOR RELAY SIGNAL CIRCUIT-I

Check voltage between ECM terminal 3 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)



OK or NG

OK >> GO TO 10.
NG >> GO TO 3.

3. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect IPDM E/R harness connector E14.
4. Check harness continuity between ECM terminal 3 and IPDM E/R terminal 28. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

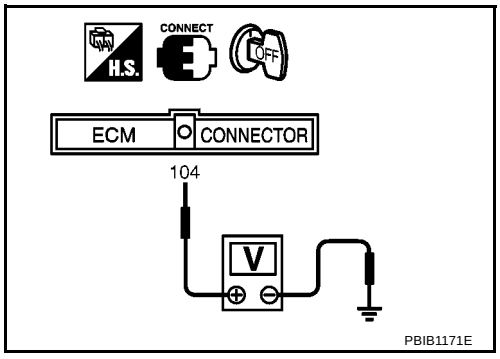
- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch OFF.
3. Check voltage between ECM terminal 104 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 9.
NG >> GO TO 6.

6. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E17.
3. Check continuity between ECM terminal 104 and IPDM E/R terminal 70. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- IPDM E/R harness connector E17
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK FUSE

1. Disconnect 20A fuse.
2. Check 20A fuse for blown.

OK or NG

OK >> GO TO 9.
NG >> Replace 20A fuse.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

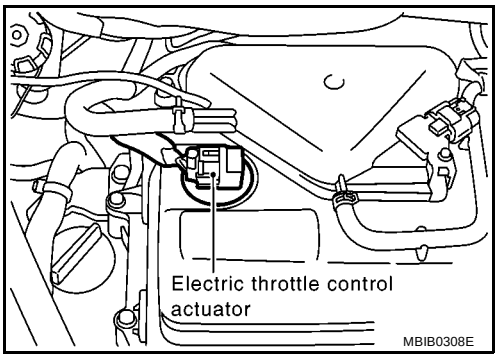
OK or NG

OK >> Replace IPDM E/R. Refer to PG-18, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .
NG >> Repair or replace harness or connectors.

10. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

Electric throttle control actuator terminal	ECM terminal	Continuity
3	5	Should not exist
	4	Should exist
6	5	Should exist
	4	Should not exist



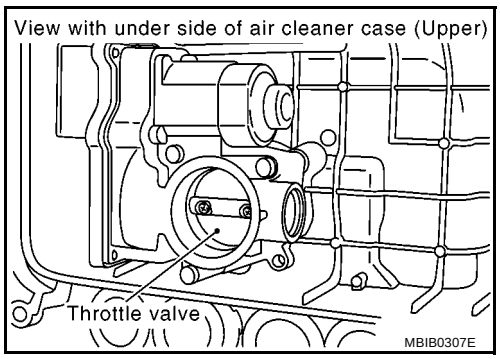
5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 11.
NG >> Repair or replace.

11. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.



OK or NG

OK >> GO TO 12.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

12. CHECK THROTTLE CONTROL MOTOR

Refer to EC-304, "Component Inspection" .

OK or NG

OK >> GO TO 13.
NG >> GO TO 14.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 14.
NG >> Repair or replace harness or connectors.

14. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

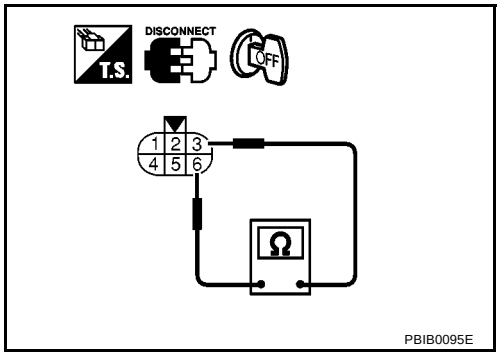
Component Inspection

EBS00O9N

THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]



3. If NG, replace electric throttle control actuator and go to next step.
4. Perform EC-42, "Throttle Valve Closed Position Learning" .
5. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS00O9O

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY

PFP:16119

Component Description

EBS00O9P

Power supply for the Throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

CONSULT-II Reference Value in Data Monitor Mode

EBS00O9Q

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	● Ignition switch: ON	ON

On Board Diagnosis Logic

EBS00O9R

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1124 1124	Throttle control motor relay circuit short	ECM detects the throttle control motor relay is stuck ON.	● Harness or connectors (Throttle control motor relay circuit is shorted.) ● Throttle control motor relay
P1126 1126	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	● Harness or connectors (Throttle control motor relay circuit is open.) ● Throttle control motor relay

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

EBS00O9S

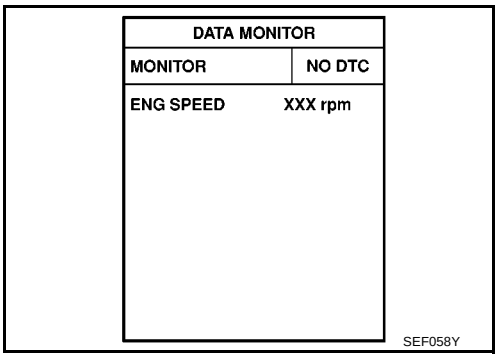
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR DTC P1124

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V.

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. If DTC is detected, go to EC-308, "Diagnostic Procedure" .



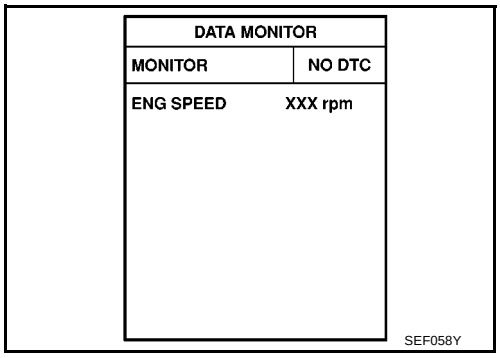
With GST

Follow the procedure “With CONSULT-II” above.

PROCEDURE FOR DTC P1126

With CONSULT-II

1. Turn ignition switch ON and wait at least 2 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to EC-308, "Diagnostic Procedure" .



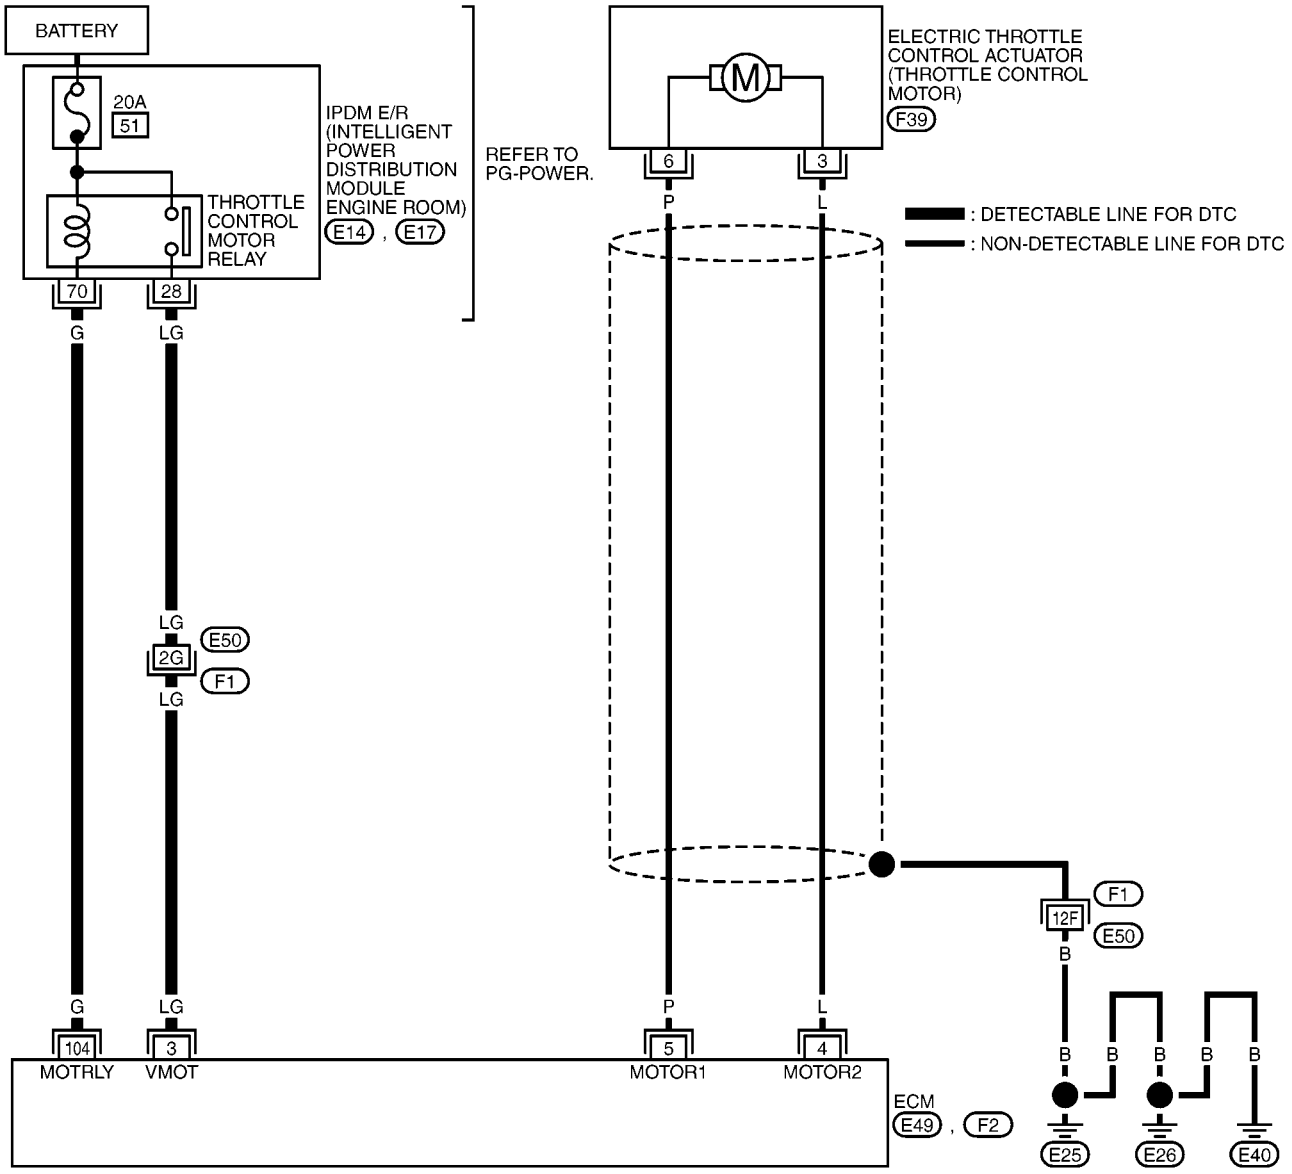
With GST

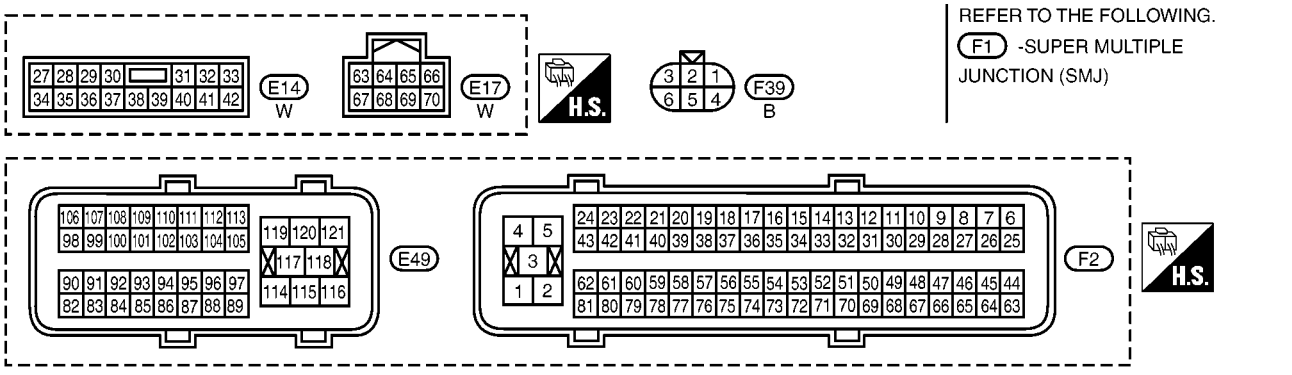
Follow the procedure “With CONSULT-II” above.

Wiring Diagram

EBS00O9T

EC-ETC2-01





MBWA0287E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
3	LG	Throttle control motor relay power supply	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
104	G	Throttle control motor relay	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch ON]	0 - 1.0V

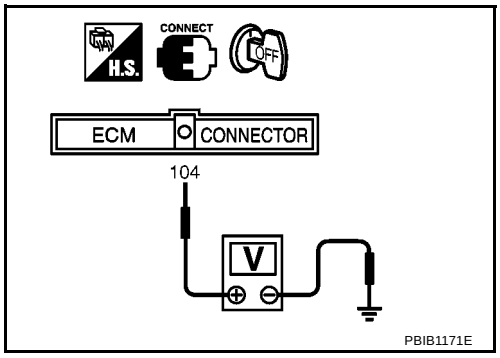
Diagnostic Procedure

EBS00O9U

1. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 104 and ground with CONSULT-II or tester.

Voltage: Battery voltage.



OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E17.
3. Check continuity between ECM terminal 104 and IPDM E/R terminal 70.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- IPDM E/R harness connector E17
- Harness for open or shot between ECM and IPDM E/R

>> Repair open circuit of short to ground or short to power in harness or connectors.

4. CHECK FUSE

1. Disconnect 20A fuse.
2. Check 20A fuse for blown.

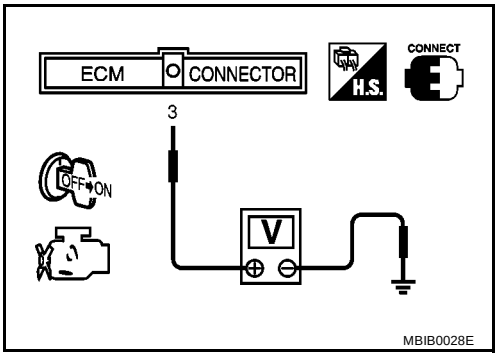
OK or NG

OK >> GO TO 8.
NG >> Replace 20A fuse.

5. CHECK THROTTLE CONTROL MOTOR RELAY SIGNAL CIRCUIT-I

1. Reconnect all disconnected connectors.
2. Check voltage between ECM terminal 3 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)



OK or NG

OK >> GO TO 8.
NG >> GO TO 6.

6. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect IPDM E/R harness connector E14.
4. Check continuity between ECM terminal 3 and IPDM E/R terminal 28. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-18, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .
NG >> Repair or replace harness or connectors.

DTC P1128 THROTTLE CONTROL MOTOR

PFP:16119

Component Description

EBS00O9W

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

EBS00O9X

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1128 1128	Throttle control motor circuit short	ECM detects short in both circuits between ECM and throttle control motor.	● Harness or connectors (Throttle control motor circuit is shorted.) ● Electric throttle control actuator (Throttle control motor)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

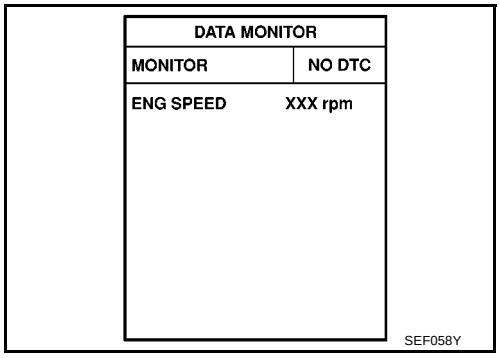
DTC Confirmation Procedure

EBS00O9Y

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON and wait at least 2 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to EC-312, "Diagnostic Procedure" .



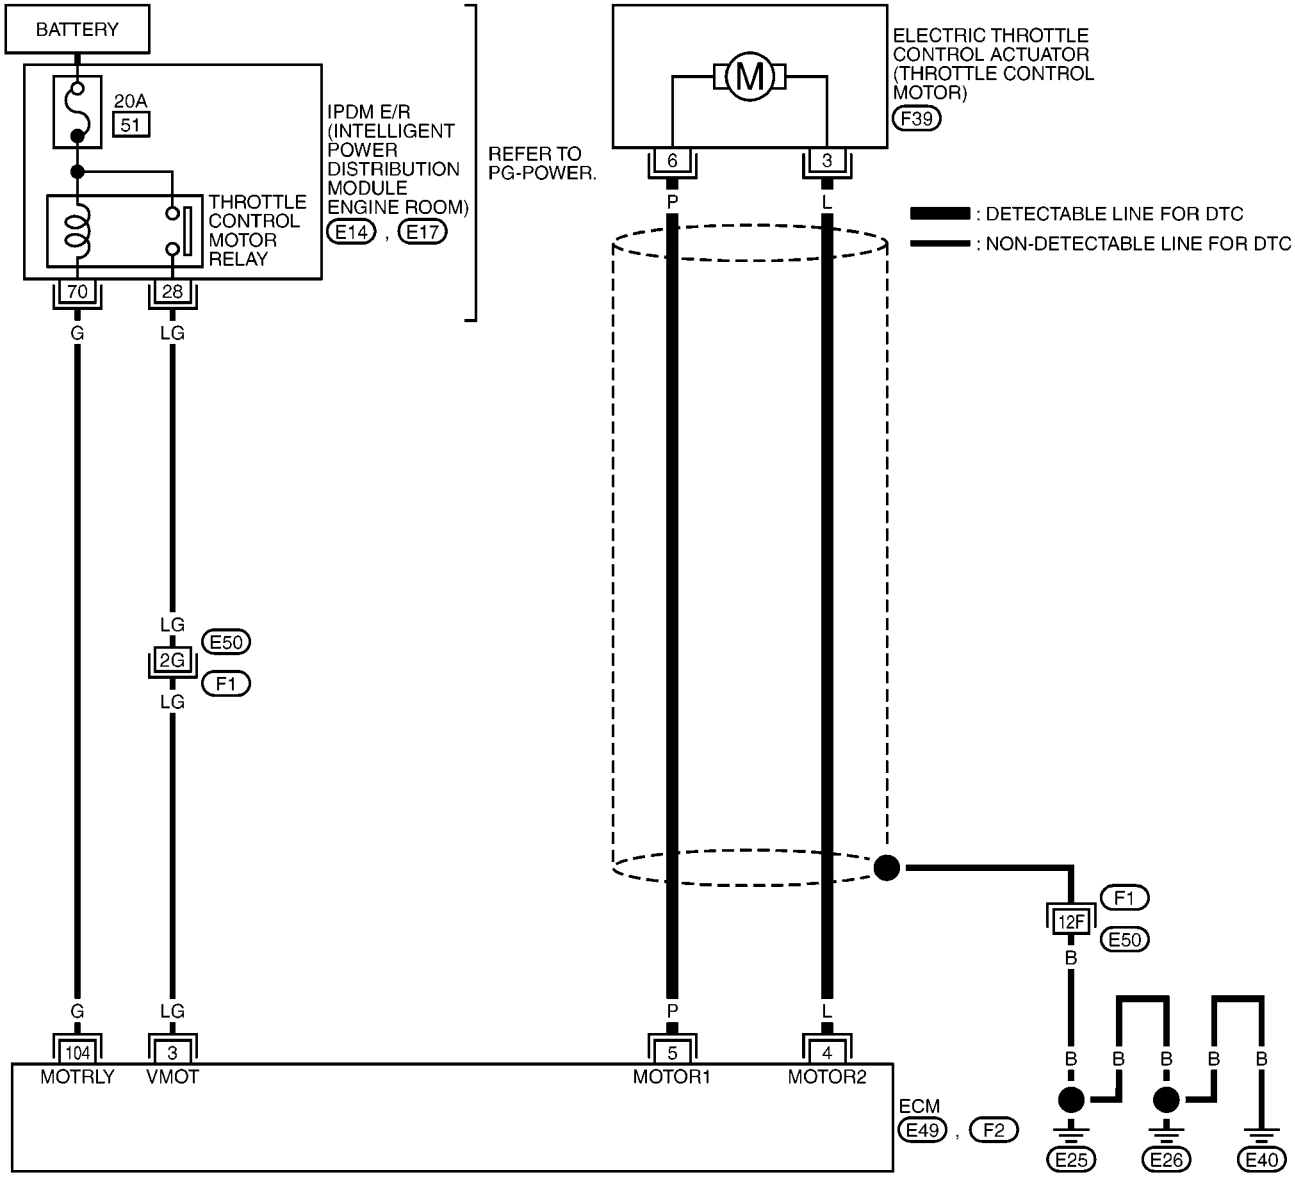
WITH GST

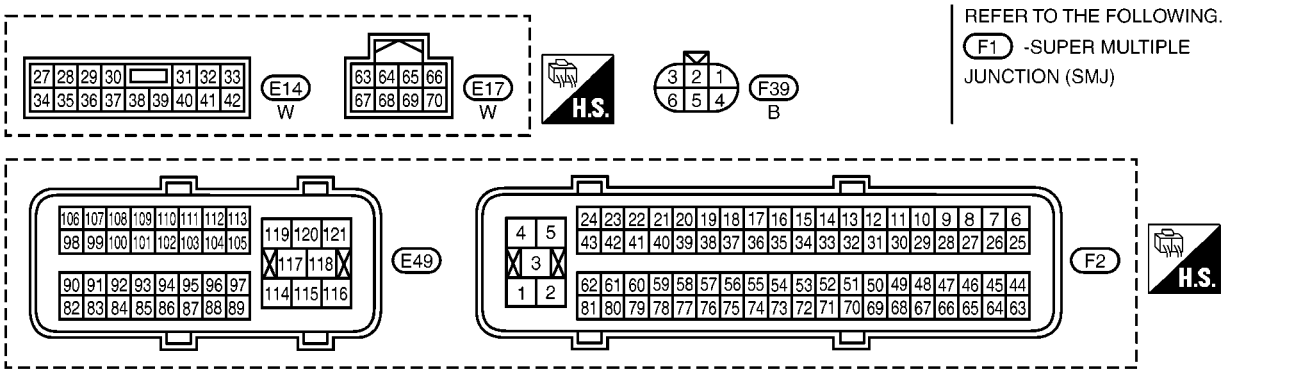
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00O9Z

EC-ETC3-01





MBWA0288E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
4	L	Throttle control motor (Close)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Released	0 - 14V★  PBIB0534E
5	P	Throttle control motor (Open)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB0533E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

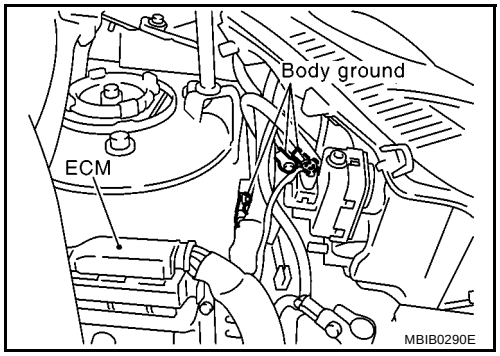
Diagnostic Procedure

EBS00OA0

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

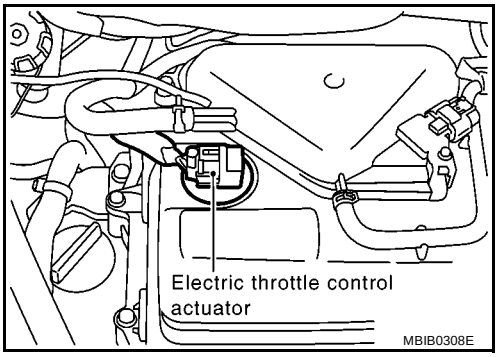
>> GO TO 2.



MBIB0290E

2. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.



Electric throttle control actuator terminal	ECM terminal	Continuity
3	4	Should exist
	5	Should not exist
6	4	Should not exist
	5	Should exist

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK THROTTLE CONTROL MOTOR

Refer to EC-313, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> GO TO 5.

4. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

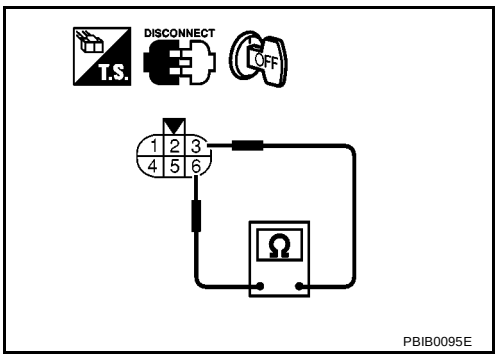
Component Inspection

EBS00OA1

THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]



3. If NG, replace electric throttle control actuator and go to next step.
4. Perform EC-42, "Throttle Valve Closed Position Learning" .
5. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS00OA2

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

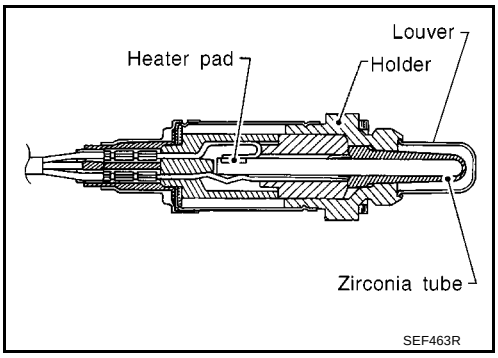
DTC P1143 HO2S1

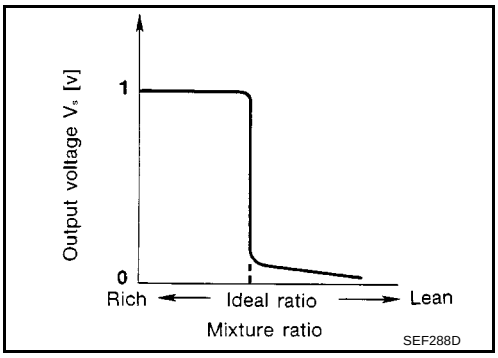
PFP:22690

Component Description

EBS00OA3

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00OA4

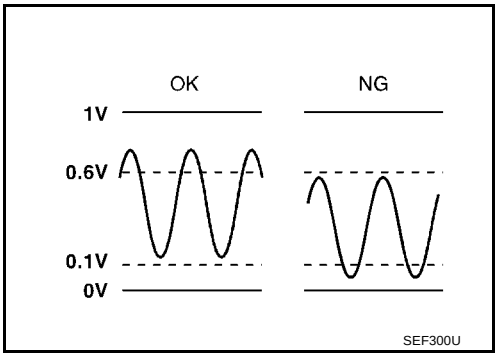
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00OA5

To judge the malfunction, the output from the heated oxygen sensor 1 is monitored to determine whether the “rich” output is sufficiently high and whether the “lean” output is sufficiently low. When both the outputs are shifting to the lean side, the malfunction will be detected.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1143 1143	Heated oxygen sensor 1 lean shift monitoring	The maximum and minimum voltage from the sensor are not reached to the specified voltages.	● Heated oxygen sensor 1 ● Heated oxygen sensor 1 heater ● Fuel pressure ● Injectors ● Intake air leaks

DTC Confirmation Procedure

EBS00OA6

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

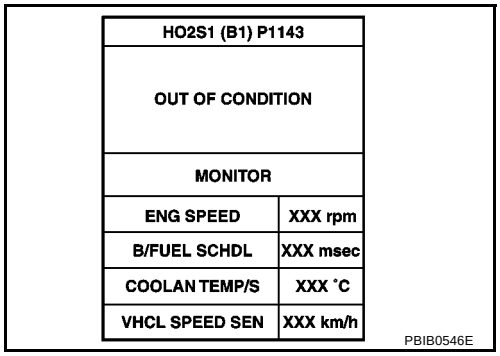
TESTING CONDITION:

- **Always perform at a temperature above −10°C (14°F).**
- **Before performing following procedure, confirm that battery voltage is more than 11V at idle.**

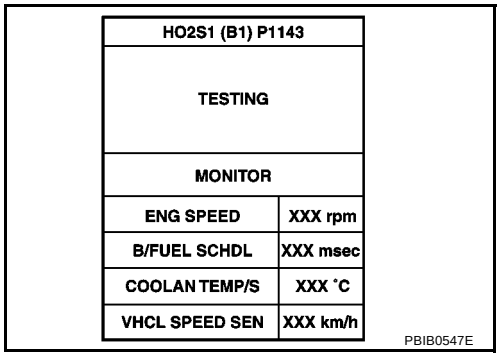
WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Turn ignition switch ON and select “HO2S1 (B1) P1143” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

   NOTE:
   Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.



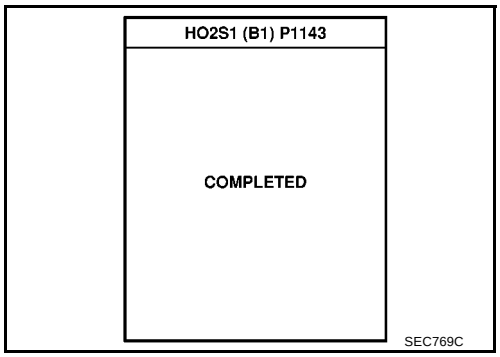
6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 50 seconds or more.)



ENG SPEED	1,700 - 3,700 rpm (M/T models with CR10 engine) 1,500 - 3,350 rpm (M/T models with CR12 engine) 1,600 - 3,450 rpm (M/T models with CR14 engine) 1,300 - 2,850 rpm (A/T models)
Vehicle speed	50 - 100 km/h (31 - 62 MPH)
B/FUEL SCHDL	1.8 - 5.1 msec (M/T models) 2.4 - 6.1 msec (A/T models)
Selector lever	Suitable position

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to EC-317, "Diagnostic Procedure" .



Overall Function Check

EBS00OA7

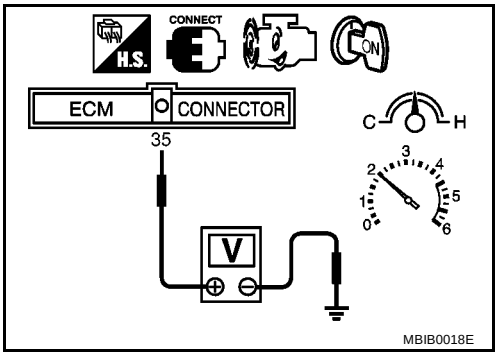
Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check one of the following with engine speed held at 2,000 rpm constant under no load.

- The maximum voltage is over 0.6V at least one time.
- The minimum voltage is over 0.1V at least one time.

4. If NG, go to EC-317, "Diagnostic Procedure" .



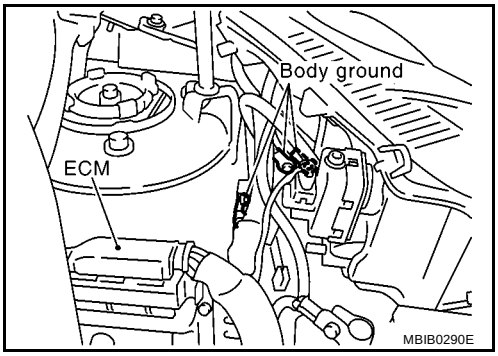
Diagnostic Procedure

EBS00OA8

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.

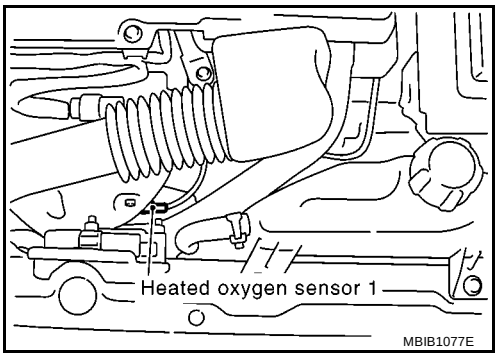


2. RETIGHTEN HEATED OXYGEN SENSOR 1

Loosen and retighten heated oxygen sensor 1.

Tightening torque: 40 - 60 N·m (4.1 - 6.2 kg-m, 30 - 44 ft-lb)

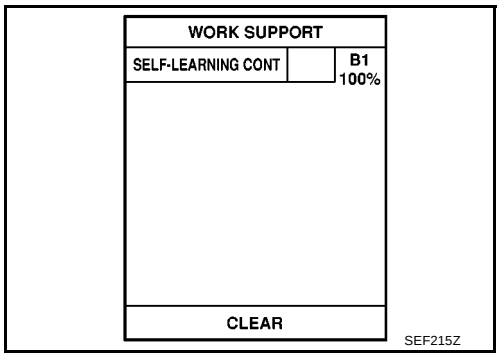
>> GO TO 3.



3. CLEAR THE SELF-LEARNING DATA

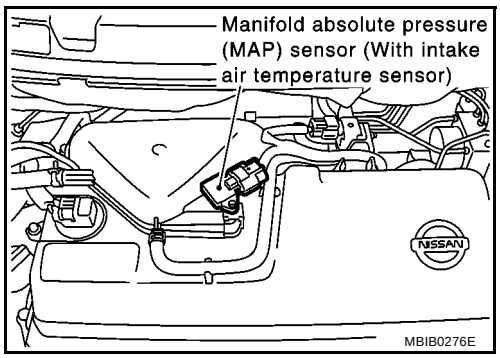
With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 detected?
   Is it difficult to start engine?



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect manifold absolute pressure sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Make sure that DTC P0107 is displayed.
6. Erase the DTC memory. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171. Refer to EC-208 .
No >> GO TO 4.

4. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to EC-141, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace heated oxygen sensor 1.

5. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-319, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace heated oxygen sensor 1.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
For circuit, refer to EC-171, "Wiring Diagram" .

>> **INSPECTION END**

Component Inspection

EBS00OA9

HEATED OXYGEN SENSOR 1

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” and adjust “TRIGGER POINT” to 100% in “DATA MONITOR” mode with CONSULT-II.
3. Select “HO2S1 (B1)” and “HO2S1 MNTR (B1)”.
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch “RECORD” on CONSULT-II screen.

DATA MONITOR	
MONITOR	NO DTC
ENG SPEED	XXX rpm
COOLAN TEMP/S	XXX °C
HO2S1 (B1)	XXX V
HO2S1 MNTR (B1)	LEAN

MBIB0301E

6. Check the following.
   - “HO2S1 MNTR (B1)” in “DATA MONITOR” mode changes from “RICH” to “LEAN” to “RICH” more than 5 times in 10 seconds.
     5 times (cycles) are counted as shown in the figure.
   - “HO2S1 (B1)” voltage goes above 0.6V at least once.
   - “HO2S1 (B1)” voltage goes below 0.3V at least once.
   - “HO2S1 (B1)” voltage never exceeds 1.0V.

cycle	1	2	3	4	5
HO2S1 MNTR (B1)	R-L	R-L	R-L	R-L	R-L

R means HO2S1 MNTR (B1) indicates RICH
L means HO2S1 MNTR (B1) indicates LEAN

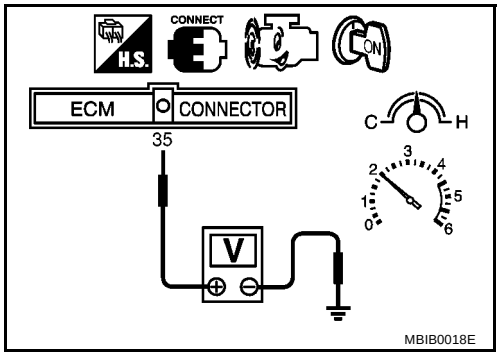
CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
   - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
   - The maximum voltage is over 0.6V at least one time.
   - The minimum voltage is below 0.3V at least one time.
   - The voltage never exceeds 1.0V.

   1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V
   2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00OAA

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

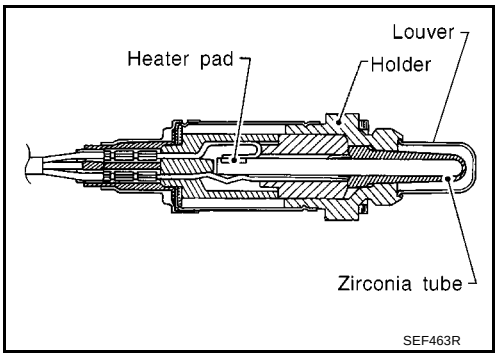
DTC P1144 HO2S1

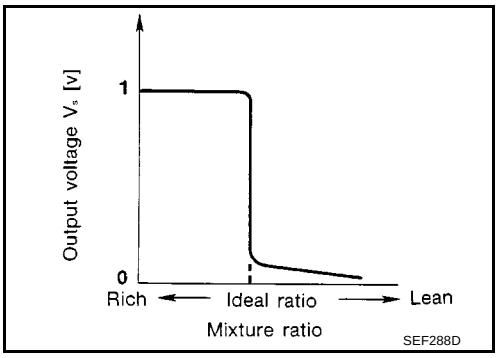
PFP:22690

Component Description

EBS00OAB

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00OAC

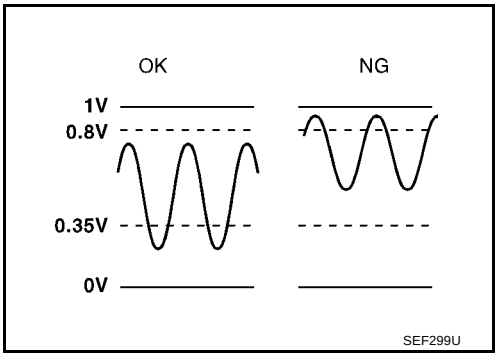
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00OAD

To judge the malfunction, the output from the heated oxygen sensor 1 is monitored to determine whether the “rich” output is sufficiently high and whether the “lean” output is sufficiently low. When both the outputs are shifting to the rich side, the malfunction will be detected.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1144 1144	Heated oxygen sensor 1 rich shift monitoring	The maximum and minimum voltages from the sensor are beyond the specified voltages.	● Heated oxygen sensor 1 ● Heated oxygen sensor 1 heater ● Fuel pressure ● Injectors

DTC Confirmation Procedure

EBS00OAE

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

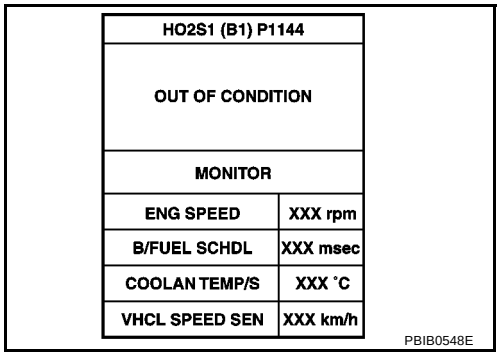
TESTING CONDITION:

- **Always perform at a temperature above −10°C (14°F).**
- **Before performing the following procedure, confirm that battery voltage is more than 11V at idle.**

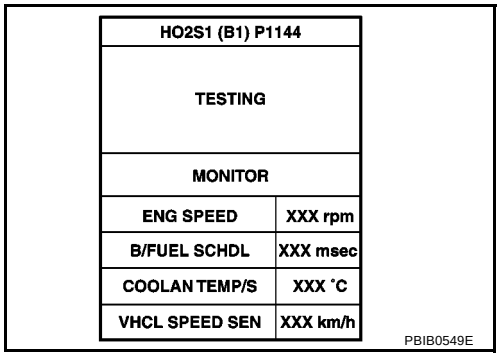
WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 5 seconds.
3. Turn ignition switch ON and select “HO2S1 (B1) P1144” of “HO2S1” in “DTC WORK SUPPORT” mode with CONSULT-II.
4. Touch “START”.
5. Start engine and let it idle for at least 3 minutes.

   NOTE:
   Never raise engine speed above 3,600 rpm after this step. If the engine speed limit is exceeded, return to step 5.



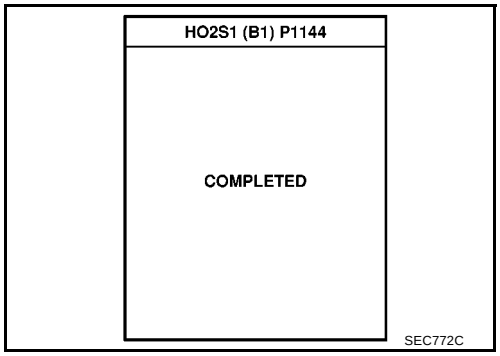
6. When the following conditions are met, “TESTING” will be displayed on the CONSULT-II screen. Maintain the conditions continuously until “TESTING” changes to “COMPLETED”. (It will take approximately 50 seconds or more.)



ENG SPEED	1,700 - 3,700 rpm (M/T models with CR10 engine) 1,500 - 3,350 rpm (M/T models with CR12 engine) 1,600 - 3,450 rpm (M/T models with CR14 engine) 1,300 - 2,850 rpm (A/T models)
Vehicle speed	50 - 100 km/h (31 - 62 MPH)
B/FUEL SCHDL	1.8 - 5.1 msec (M/T models) 2.4 - 6.1 msec (A/T models)
Selector lever	Suitable position

If “TESTING” is not displayed after 5 minutes, retry from step 2.

7. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”. If “NG” is displayed, refer to EC-323, "Diagnostic Procedure" .



Overall Function Check

EBS00OAF

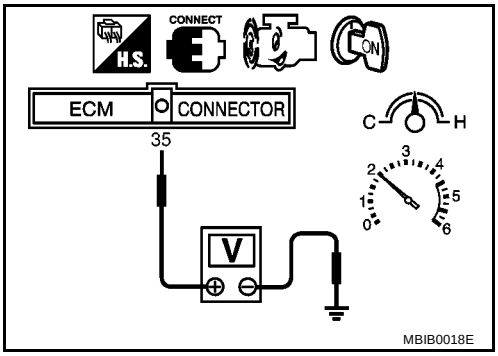
Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

WITH GST

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check one of the following with engine speed held at 2,000 rpm constant under no load.

- The maximum voltage is below 0.8V at least one time.
- The minimum voltage is below 0.35V at least one time.

4. If NG, go to EC-323, "Diagnostic Procedure" .



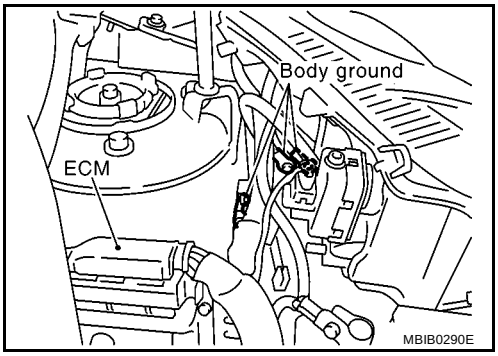
Diagnostic Procedure

EBS00OAG

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.

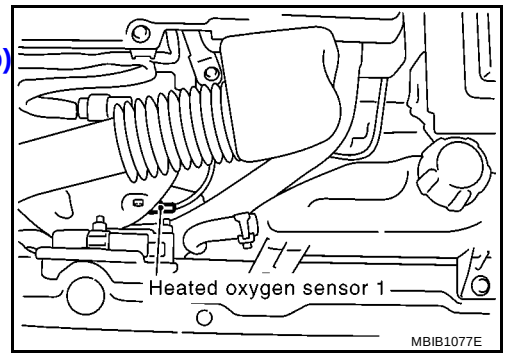


2. RETIGHTEN HEATED OXYGEN SENSOR 1

Loosen and retighten heated oxygen sensor 1.

Tightening torque: 40 - 60 N·m (4.1 - 6.2 kg-m, 30 - 44 ft-lb)

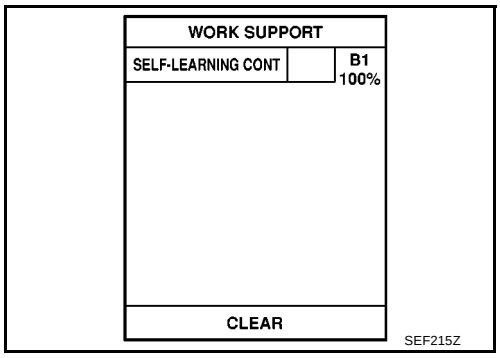
>> GO TO 3.



3. CLEAR THE SELF-LEARNING DATA

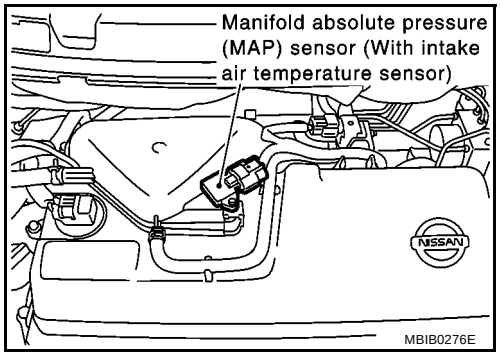
With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0172 detected?
   Is it difficult to start engine?



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect manifold absolute pressure sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Make sure that DTC P0107 is displayed.
6. Erase the DTC memory. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0172 detected?
   Is it difficult to start engine?



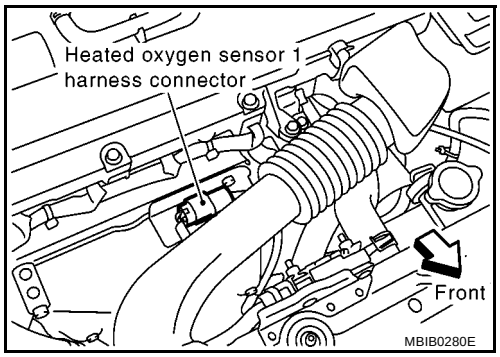
Yes or No

Yes >> Perform trouble diagnosis for DTC P0172. Refer to EC-215 .
No >> GO TO 4.

4. CHECK HO2S1 CONNECTOR FOR WATER

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 harness connector.
3. Check connectors for water.

Water should not exist.



OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 1 HEATER

Refer to EC-141, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace heated oxygen sensor 1.

6. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-325, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace heated oxygen sensor 1.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
For circuit, refer to EC-171, "Wiring Diagram" .

>> **INSPECTION END**

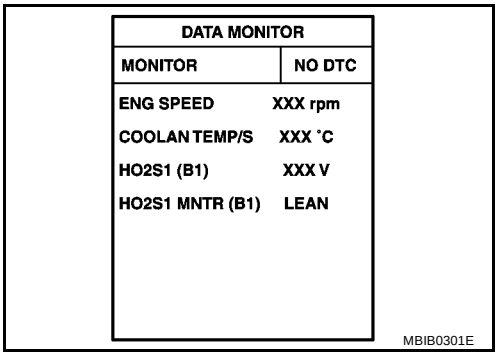
Component Inspection

EBS00OAH

HEATED OXYGEN SENSOR 1

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” and adjust “TRIGGER POINT” to 100% in “DATA MONITOR” mode with CONSULT-II.
3. Select “HO2S1 (B1)” and “HO2S1 MNTR (B1)”.
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch “RECORD” on CONSULT-II screen.



6. Check the following.
   - “HO2S1 MNTR (B1)” in “DATA MONITOR” mode changes from “RICH” to “LEAN” to “RICH” more than 5 times in 10 seconds.
     5 times (cycles) are counted as shown in the figure.
   - “HO2S1 (B1)” voltage goes above 0.6V at least once.
   - “HO2S1 (B1)” voltage goes below 0.3V at least once.
   - “HO2S1 (B1)” voltage never exceeds 1.0V.

Removal and Installation

EBS00OAI

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

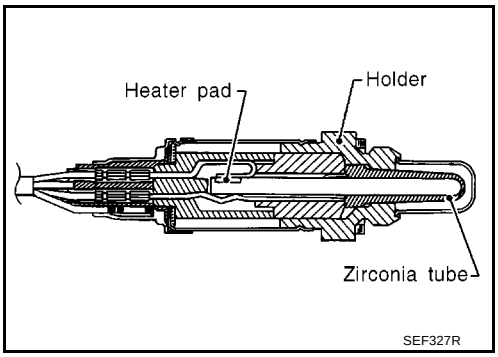
DTC P1146 HO2S2

PFP:226A0

Component Description

EBS00OAJ

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.
Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OAK

Specification data are reference values.

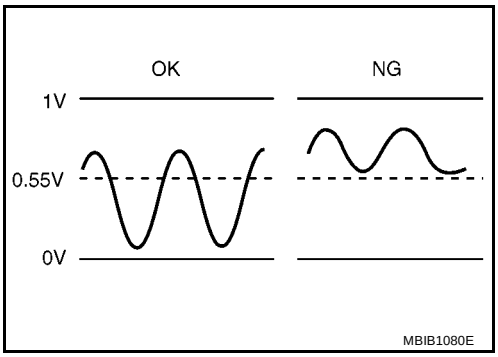
MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ←→ RICH

On Board Diagnosis Logic

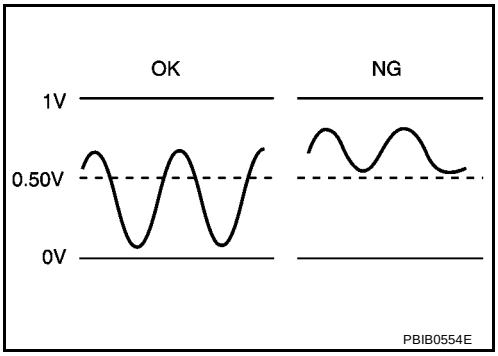
EBS00OAL

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity of the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the minimum voltage of sensor is sufficiently low during the various driving condition such as fuel-cut.

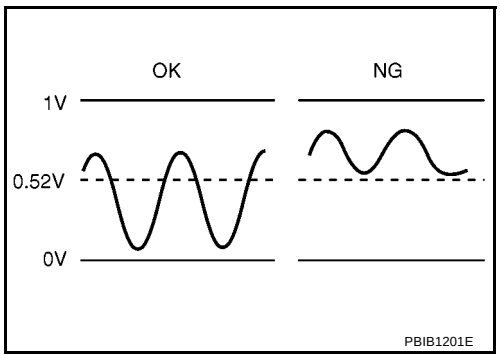
CR10 engine models



A/T models with CR14 engine without ESP



Except above models



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1146 1146	Heated oxygen sensor 2 minimum voltage monitoring	The minimum voltage from the sensor is not reached to the specified voltage.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 2 ● Fuel pressure ● Injectors

DTC Confirmation Procedure

EBS00OAM

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
- **"COMPLETED" will appear on CONSULT-II screen when all tests "COND1", "COND2" and "COND3" are completed.**
- If DTC confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Never stop engine during this procedure. If the engine is stopped, retry procedure from step 2 in Procedure for COND1.

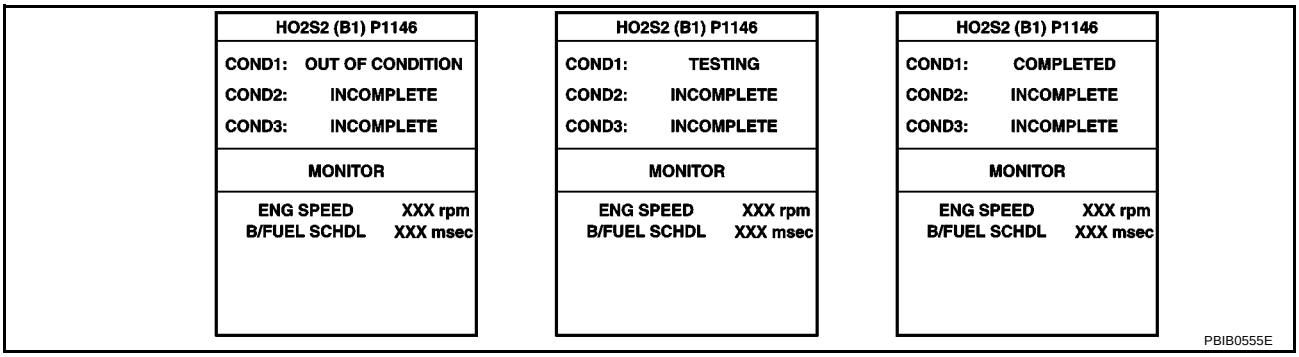
WITH CONSULT-II

Procedure for COND1

For the Best results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C(32 to 86°F).

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle 1 minute.
5. Select "HO2S2 (B1) P1146" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
6. Touch "START".
7. Start engine and let it idle for at least 30 seconds.
8. Rev engine up to 2,000 rpm 2 or 3 times quickly under no load.
   If "COMPLETED" appears on CONSULT-II screen, go to step 2 in Procedure for COND3".
   If "COMPLETED" does not appear on CONSULT-II screen, go to the following step.
9. When the following conditions are met, "TESTING" will be displayed at "COND1" on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take approximately 60 seconds.)

ENG SPEED	More than 1,500 rpm
B/FUEL SCHDL	More than 1.0 msec
COOLANT TEMP/S	70 - 105°C
Selector lever	Suitable position

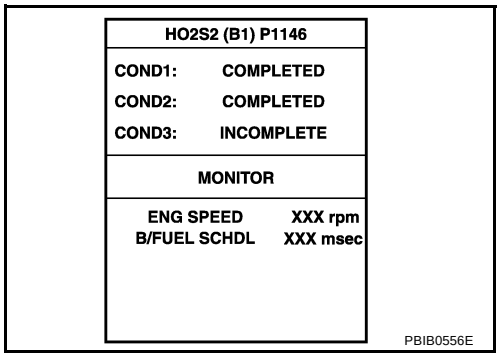


NOTE:
- **If "TESTING" is not displayed after 5 minutes, retry from step 2 in Procedure for COND1.**
- **If "COMPLETED" already appears at "COND2" on CONSULT-II screen before Procedure for COND2 is conducted, it is unnecessary to conduct step 1 in Procedure for COND2.**

Procedure for COND2

1. While driving, release accelerator pedal completed from the above condition [step 9] until “INCOMPLETE” at “COND2” on CONSULT-II screen has turned to “COMPLETED” (It will take approximately 4 seconds.)

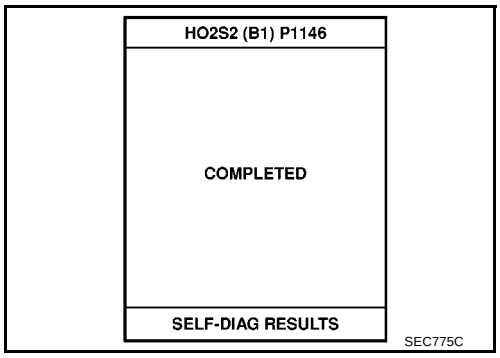
   NOTE:
   If “COMPLETE” already appears at “COND3” on CONSULT-II screen before Procedure for COND3 is conducted, it is unnecessary to conduct step 1 in Procedure for COND3.



Procedure for COND3

1. Stop vehicle and let it idle until “INCOMPLETE” of “COND3” on CONSULT-II screen has turned to “COMPLETED”. (It will take a maximum of approximately 6 minutes.)
2. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.
   If “NG” is displayed, refer to EC-332, "Diagnostic Procedure" .
   If “CAN NOT BE DIAGNOSED” is displayed, performed the following.

a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
b. Turn ignition switch ON and select “COOLANTEMP/S” in “DATA MONITOR” mode with CONSULT-II.
c. Start engine and warm it up while monitoring “COOLANTEMP/S” indication on CONSULT-II.
d. When “COOLANTEMP/S” indication reaches to 70°C(158°F), go to procedure for COND1 step 3.



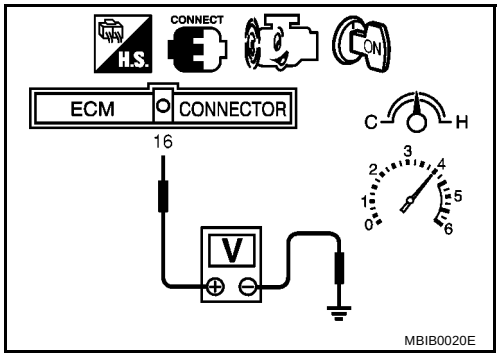
Overall Function Check

EBS00OAN

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

WITH GST

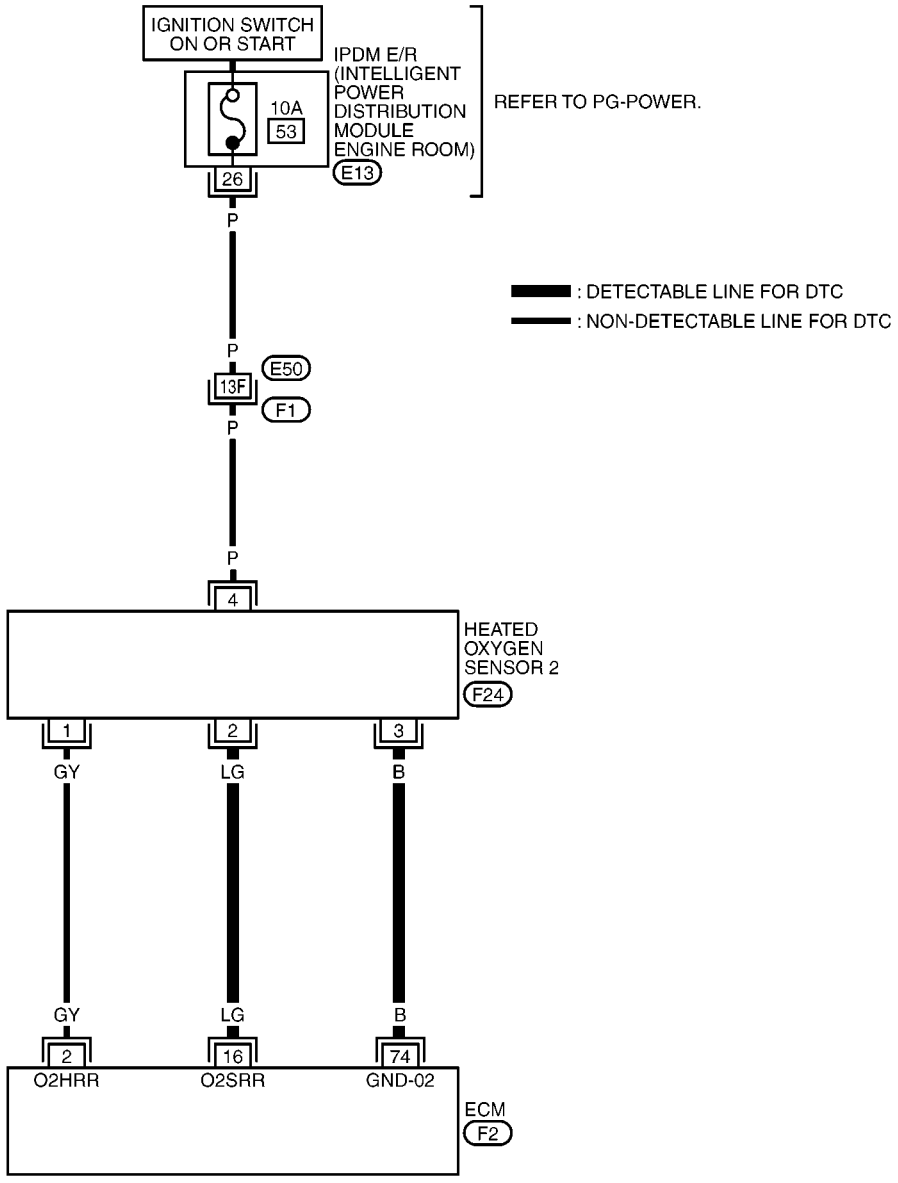
1. Start engine and warm it up to the operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be below 0.52V at least once during this procedure.
   If the voltage can be confirmed in step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
   The voltage should be below 0.52V at least once during this procedure.
8. If NG, go to EC-332, "Diagnostic Procedure" .

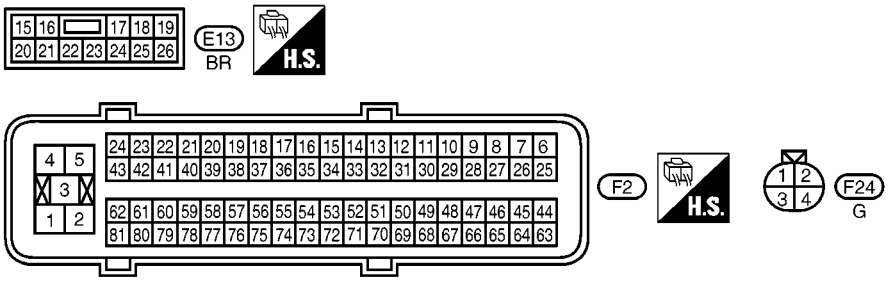


Wiring Diagram

EBS00OAO

EC-HO2S2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0273E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● Revving engine from idle to 3,000 rpm quickly after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - Approximately 1.0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

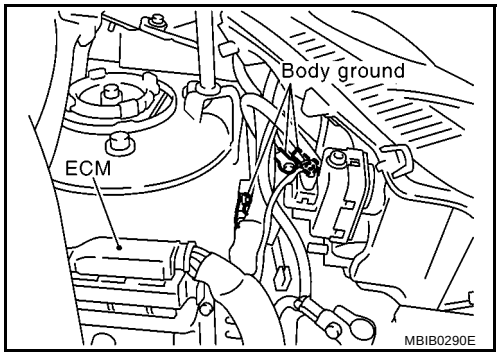
Diagnostic Procedure

EBS00OAP

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

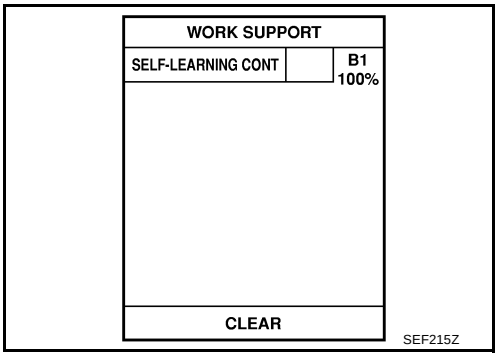
>> GO TO 2.



2. CLEAR THE SELF-LEARNING DATA

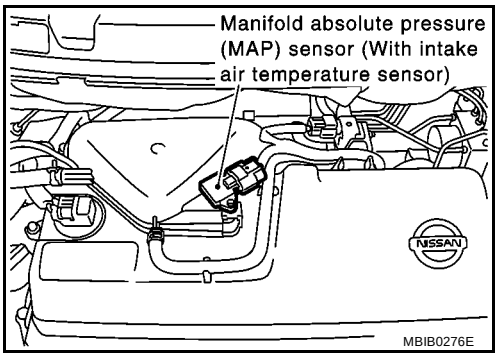
With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0172 detected?
   Is it difficult to start engine?



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect manifold absolute pressure sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Make sure that DTC P0107 is displayed.
6. Erase the DTC memory. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0172 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0172. Refer to EC-215 .
No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

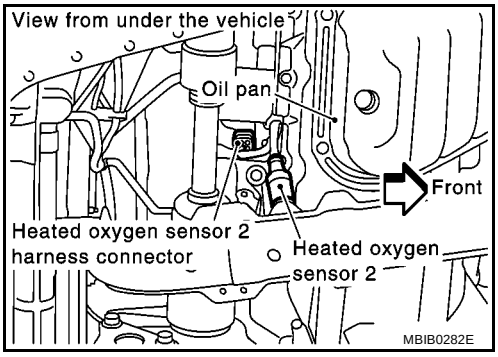
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S2 terminal 3.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 16 and HO2S2 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 16 or HO2S2 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-334, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

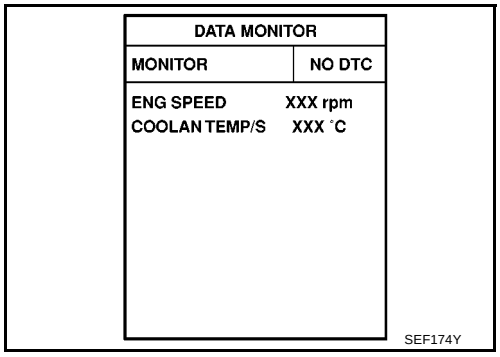
Component Inspection

EBS00OAQ

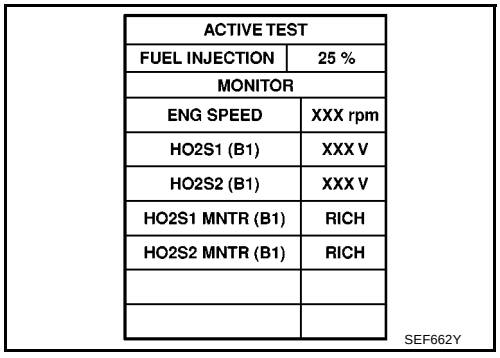
HEATED OXYGEN SENSOR 2

With CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.

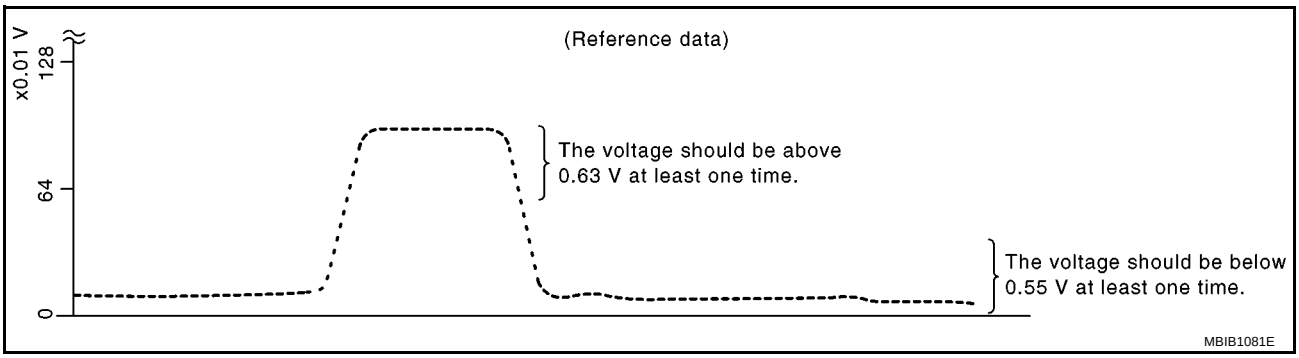


6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2 (B1)” as the monitor item with CONSULT-II.



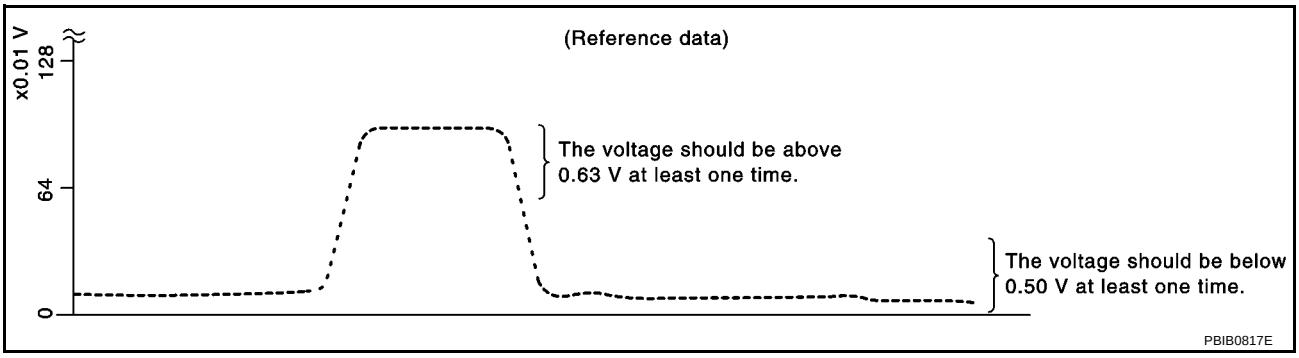
7. Check “HO2S2 (B1)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

[CR10 engine models]



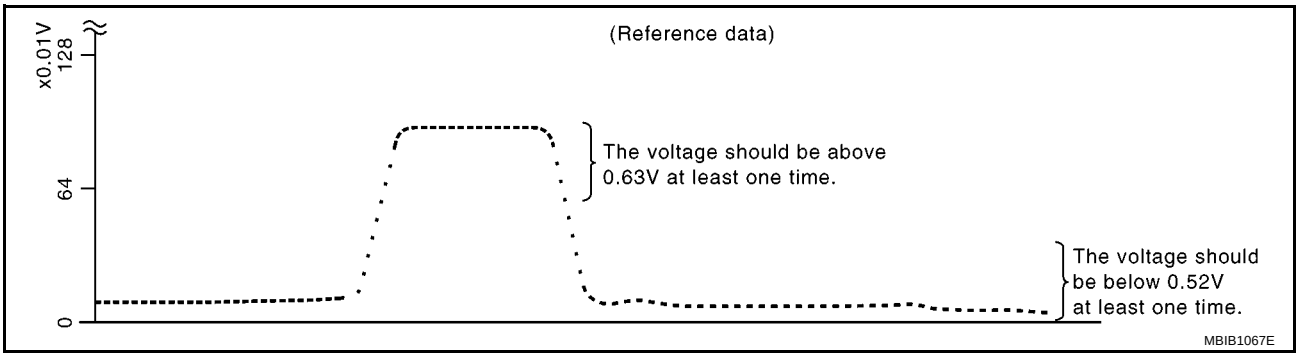
"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.55V at least once when the "FUEL INJECTION" is −25%.

[A/T models with CR14 engine without ESP]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.50V at least once when the "FUEL INJECTION" is −25%.

[Except above models]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is −25%.

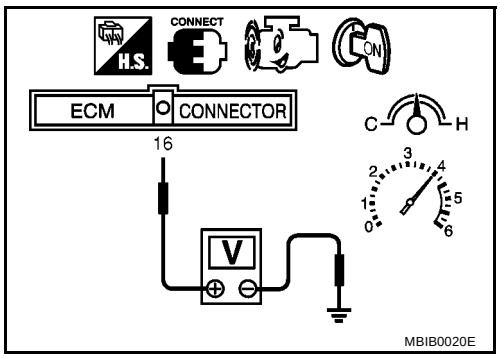
CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

⊗ Without CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
(Depress and release accelerator pedal as soon as possible.)
The voltage should be above 0.63V at least once during this procedure.
If the voltage is above 0.63V at step 6, step 7 is not necessary.
7. Keep vehicle at idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
The voltage should be below 0.55V (CR10 engine models), 0.50V (A/T models with CR14 engine without ESP), 0.52V (Other models) at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00OAR

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

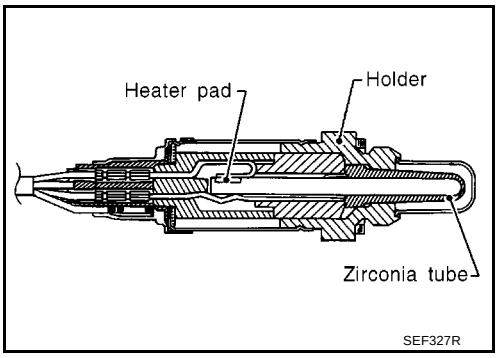
DTC P1147 HO2S2

PFP:226A0

Component Description

EBS00OAS

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.
Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OAT

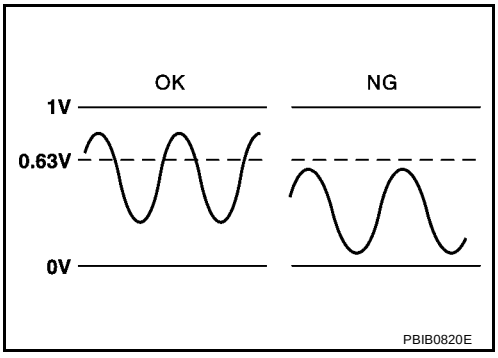
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ←→ RICH

On Board Diagnosis Logic

EBS00OAU

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity of the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the maximum voltage of the sensor is sufficiently high during the various driving condition such as fuel-cut.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1147 1147	Heated oxygen sensor 2 maximum voltage monitoring	The maximum voltage from the sensor is not reached to the specified voltage.	● Harness or connectors (The sensor circuit open or shorted.) ● Heated oxygen sensor 2 ● Fuel pressure ● Injectors ● Intake air leaks

DTC Confirmation Procedure

EBS00OAV

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
- **"COMPLETED" will appear on CONSULT-II screen when all tests "COND1", "COND2" and "COND3" are completed.**
- If DTC confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Never stop engine during this procedure. If the engine is stopped, retry procedure from step 2 in Procedure for COND1.

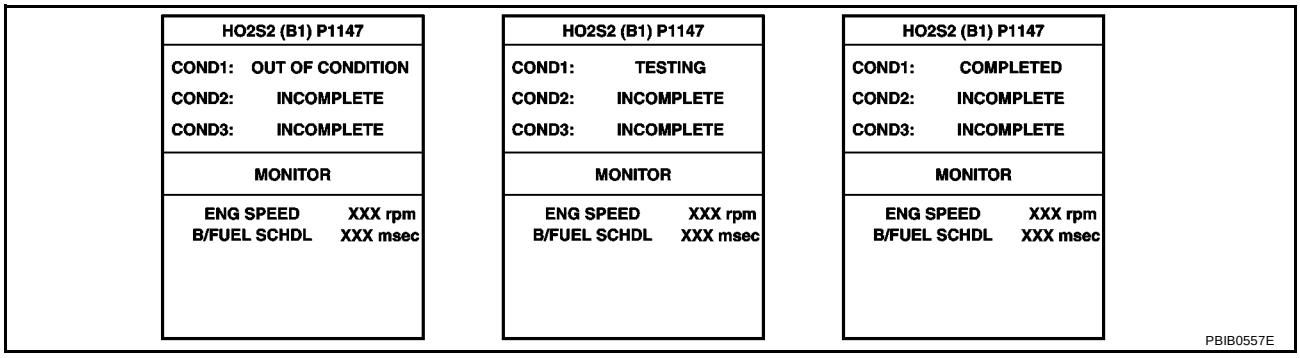
WITH CONSULT-II

Procedure for COND1

For the best results, perform "DTC WORK SUPPORT" at a temperature of 0 to 30°C(32 to 86°F).

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle 1 minute.
5. Select "HO2S2 (B1) P1147" of "HO2S2" in "DTC WORK SUPPORT" mode with CONSULT-II.
6. Touch "START".
7. Start engine and let it idle for at least 30 seconds.
8. Rev engine up to 2,000 rpm 2 or 3 times quickly under no load.
   If "COMPLETED" appears on CONSULT-II screen, go to step 2 in Procedure for COND3.
   If "COMPLETED" does not appear on CONSULT-II screen, go to the following step.
9. When the following conditions are met, "TESTING" will be displayed at "COND1" on the CONSULT-II screen. Maintain the conditions continuously until "TESTING" changes to "COMPLETED". (It will take approximately 60 seconds.)

ENG SPEED	More than 1,500 rpm
B/FUEL SCHDL	More than 1.0 msec
COOLANT TEMP/S	70 - 105°C
Selector lever	Suitable position

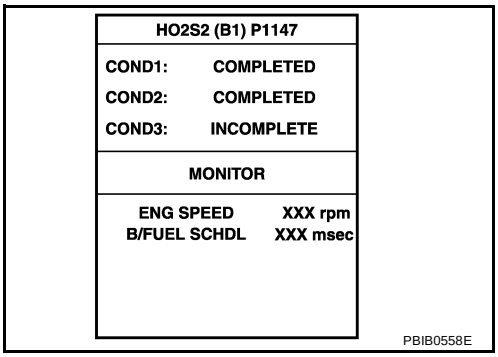


NOTE:
- **If "TESTING" is not displayed after 5 minutes, retry from step 2 in Procedure for COND1.**
- **If "COMPLETED" already appears at "COND2" on CONSULT-II screen before Procedure for COND2 is conducted, it is unnecessary to conduct step 1 in Procedure for COND2.**

Procedure for COND2

1. While driving, release accelerator pedal completed from the above condition [step 9] until “INCOMPLETE” at “COND2” on CONSULT-II screen has turned to “COMPLETED” (It will take approximately 4 seconds.)

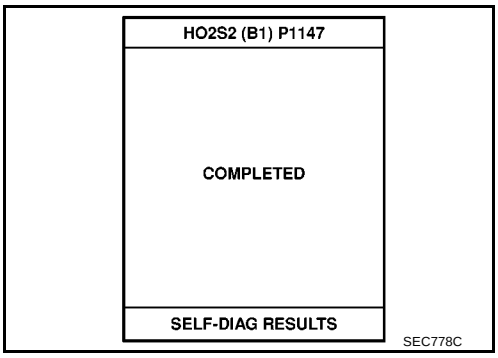
   NOTE:
   If “COMPLETE” already appears at “COND3” on CONSULT-II screen before Procedure for COND3 is conducted, it is unnecessary to conduct step 1 in Procedure for COND3.



Procedure for COND3

1. Stop vehicle and let it idle until “INCOMPLETE” of “COND3” on CONSULT-II screen has turned to “COMPLETED”. (It will take a maximum of approximately 6 minutes.)
2. Make sure that “OK” is displayed after touching “SELF-DIAG RESULTS”.
   If “NG” is displayed, refer to EC-341, "Diagnostic Procedure" .
   If “CAN NOT BE DIAGNOSED” is displayed, perform the following.

a. Turn ignition switch OFF and leave the vehicle in a cool place (soak the vehicle).
b. Turn ignition switch ON and select “COOLAN TEMP/S” in “DATA MONITOR” mode with CONSULT-II.
c. Start engine and warm it up while monitoring “COOLAN TEMP/S” indication on CONSULT-II.
d. When “COOLANTEMP/S” indication reaches to 70°C(158°F), go to procedure for COND1 step 3.



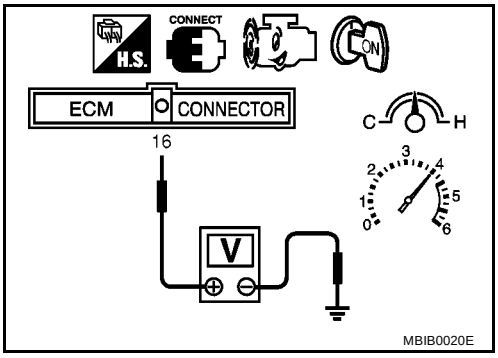
Overall Function Check

EBS00OAW

Use this procedure to check the overall function of the heated oxygen sensor 2 circuit. During this check, a DTC might not be confirmed.

WITH GST

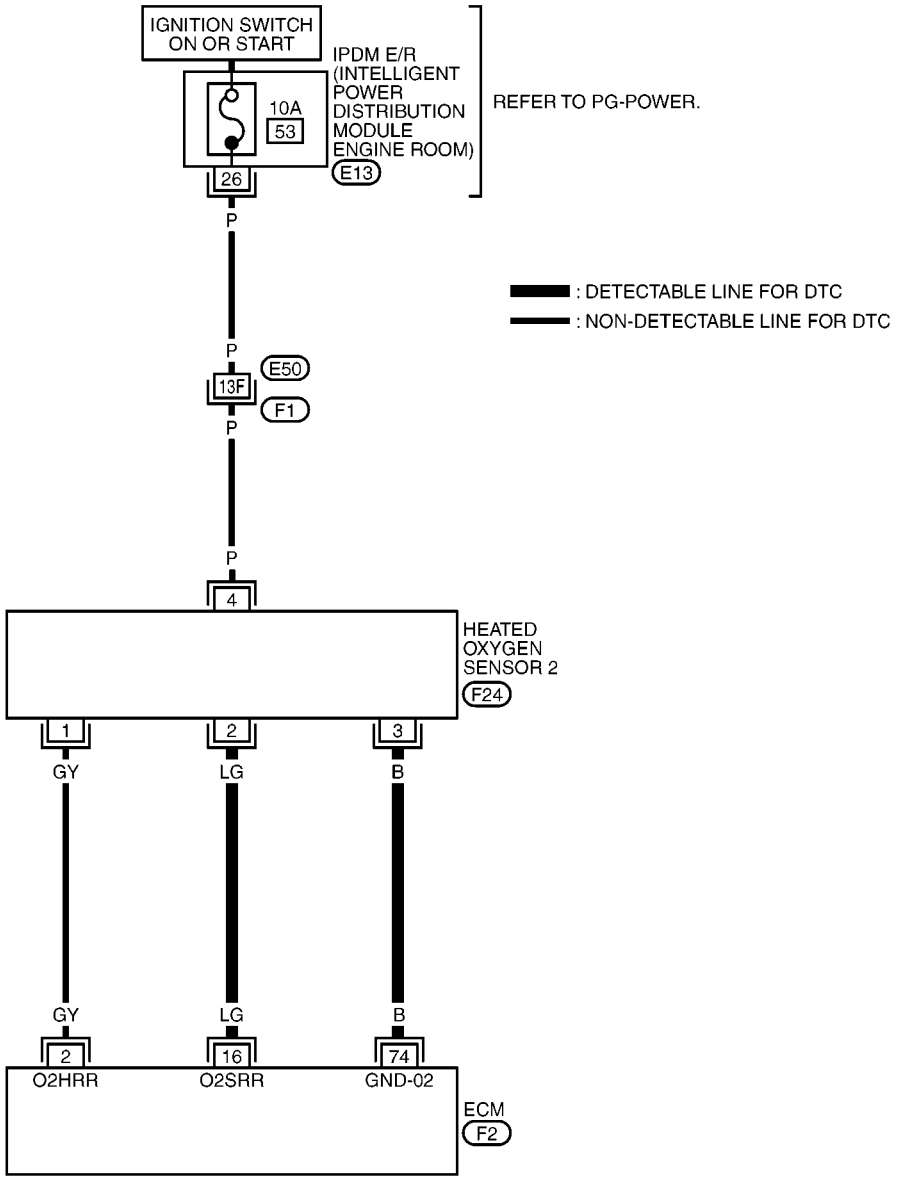
1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be above 0.63V at least once during this procedure.
   If the voltage can be confirmed in step 6, step 7 is not necessary.
7. Keep vehicle idling for 10 minutes, then check the voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
   The voltage should be above 0.63V at least once during this procedure.
8. If NG, go to EC-341, "Diagnostic Procedure" .

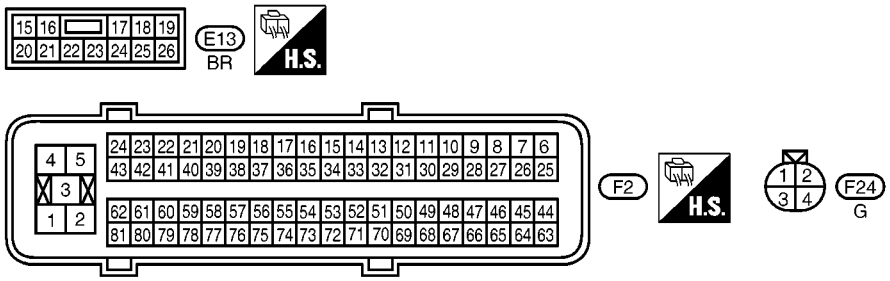


Wiring Diagram

EBS00OAX

EC-HO2S2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0273E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● Revving engine from idle to 3,000 rpm quickly after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - Approximately 1.0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

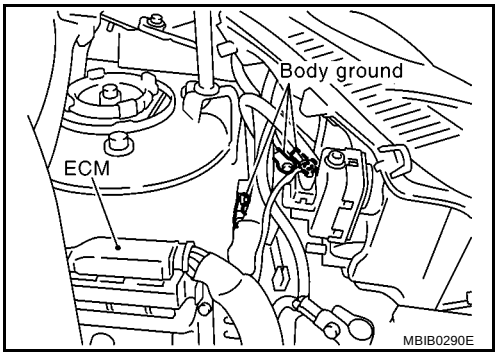
Diagnostic Procedure

EBS00OAY

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

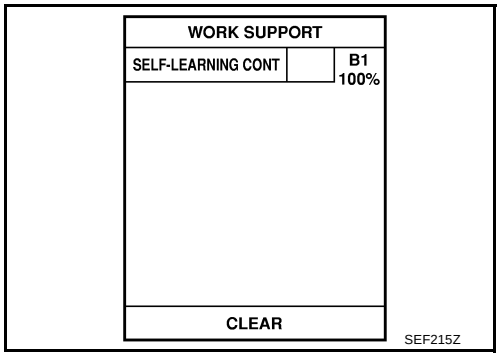
>> GO TO 2.



2. CLEAR THE SELF-LEARNING DATA

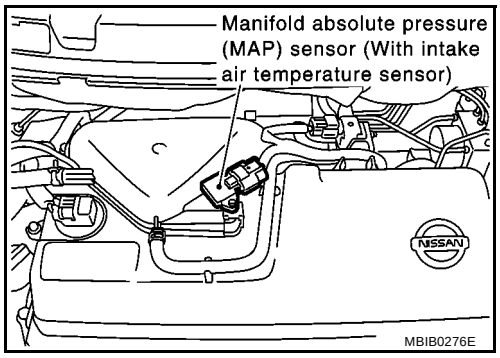
With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “SELF-LEARNING CONT” in “WORK SUPPORT” mode with CONSULT-II.
3. Clear the self-learning control coefficient by touching “CLEAR”.
4. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 detected?
   Is it difficult to start engine?



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF.
3. Disconnect manifold absolute pressure sensor harness connector, and restart and run engine for at least 5 seconds at idle speed.
4. Stop engine and reconnect manifold absolute pressure sensor harness connector.
5. Make sure that DTC P0107 is displayed.
6. Erase the DTC memory. Refer to EC-59, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
7. Make sure that DTC P0000 is displayed.
8. Run engine for at least 10 minutes at idle speed.
   Is the 1st trip DTC P0171 detected?
   Is it difficult to start engine?



Yes or No

Yes >> Perform trouble diagnosis for DTC P0171. Refer to EC-208 .
No >> GO TO 3.

3. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

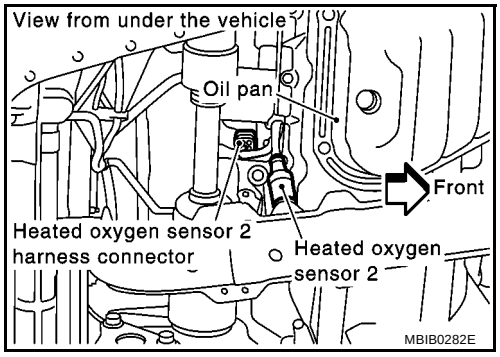
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S2 terminal 3.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



4. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 16 and HO2S2 terminal 2. Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 16 or HO2S2 terminal 2 and ground. Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-343, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace heated oxygen sensor 2.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

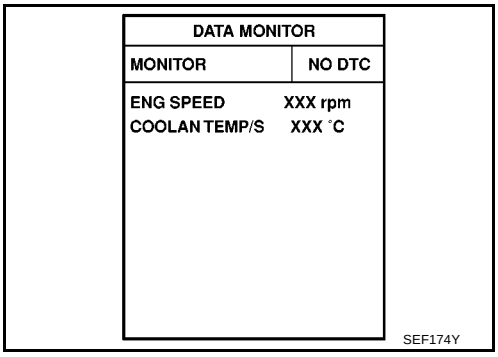
Component Inspection

EBS00OAZ

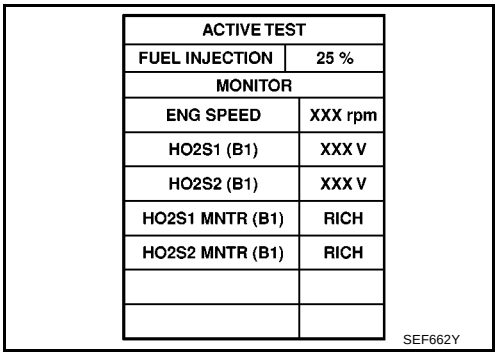
HEATED OXYGEN SENSOR 2

With CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.

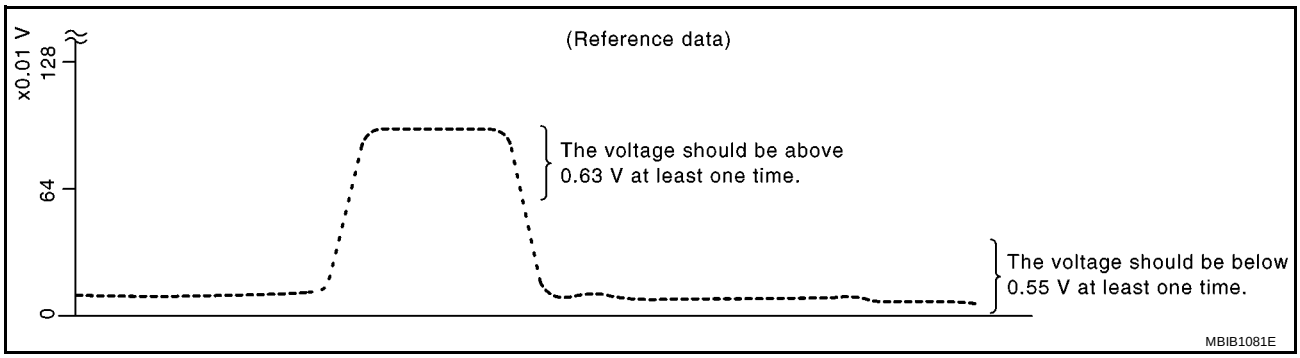


6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2 (B1)” as the monitor item with CONSULT-II.



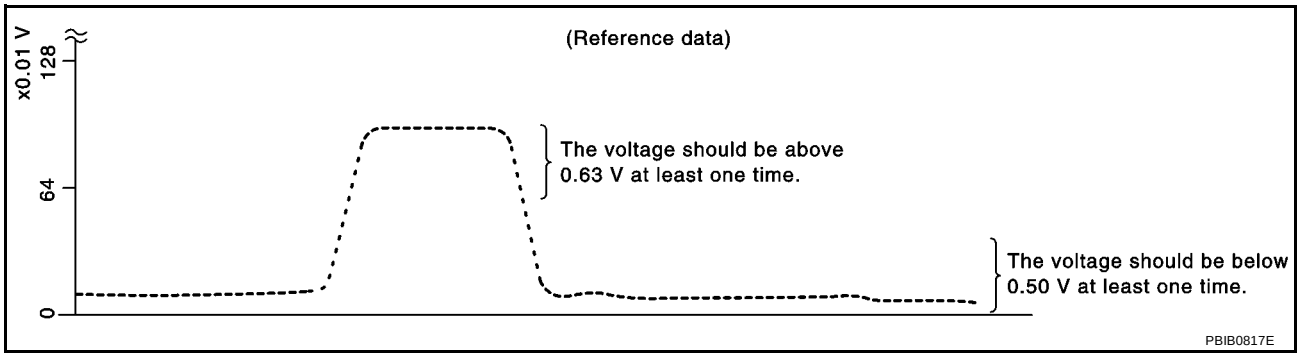
7. Check “HO2S2 (B1)” at idle speed when adjusting “FUEL INJECTION” to ±25%.

[CR10 engine models]



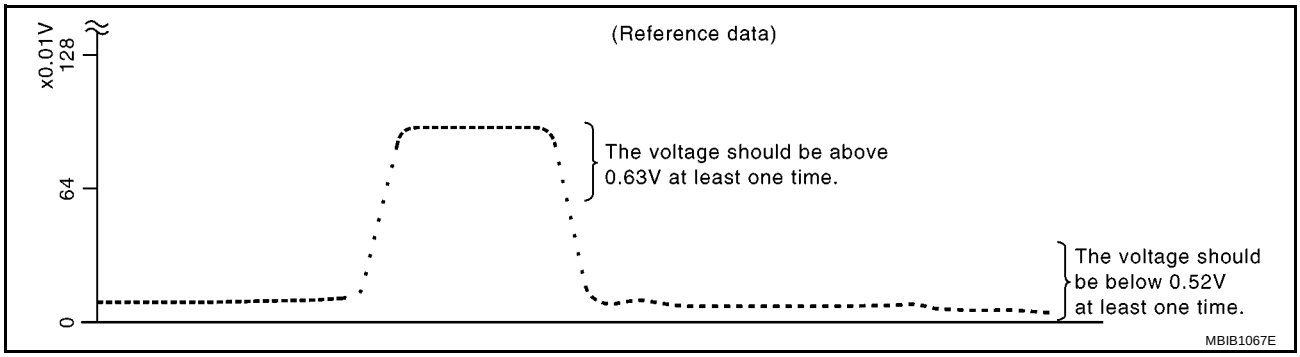
"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.55V at least once when the "FUEL INJECTION" is −25%.

[A/T models with CR14 engine without ESP]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.50V at least once when the "FUEL INJECTION" is −25%.

[Except above models]



"HO2S2 (B1)" should be above 0.63V at least once when the "FUEL INJECTION" is +25%.
"HO2S2 (B1)" should be below 0.52V at least once when the "FUEL INJECTION" is −25%.

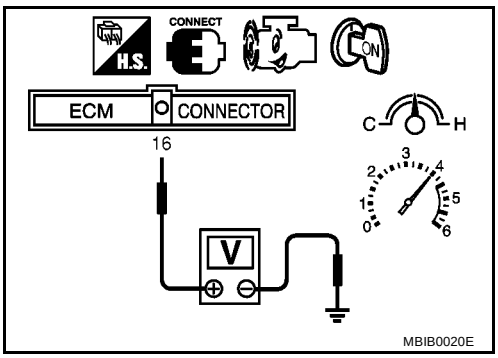
CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

⊗ Without CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.

6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
(Depress and release accelerator pedal as soon as possible.)
The voltage should be above 0.63V at least once during this procedure.
If the voltage is above 0.63V at step 6, step 7 is not necessary.
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
The voltage should be below 0.55V (CR10 engine models), 0.50V (A/T models with CR14 engine without ESP), 0.52V (Other models) at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00OB0

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

DTC P1171 INTAKE ERROR

PFP:22365

On Board Diagnosis Logic

EBS00OSO

NOTE:
If DTC 1171 is displayed with DTC P0108, first perform the trouble diagnosis for DTC P0108.
Refer to EC-148, "DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR"
ECM computes two intake air volume values.
1: Computed from manifold absolute pressure signal and intake air temperature signal.
2: Computed from engine revolution signal and throttle position signal.

In normal condition, value 1 is used for engine control.
If intake air leak occurred between throttle valve and intake air port, manifold absolute pressure sensor signal might increase, and then ECM increases amount of fuel injected. In this case, ECM uses value 2 for engine control instead of value1.
ECM monitors the difference between value 1 and value 2. If the difference is extremely large, ECM judges intake air leak occurs and light up the MI

This diagnosis has one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1171 1171	Intake error	An excessively high voltage from manifold absolute pressure sensor is sent to ECM.	● Harness or connectors (The manifold absolute pressure sensor circuit is open or shorted.) ● Manifold absolute pressure ● Intake air leaks ● Vacuum hoses

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and MI lights up.

Detected items	Engine operating condition in fail-safe mode
Intake air system problem	When accelerator pedal is depressed, engine speed will not rise more than 2,500 rpm due to fuel cut.

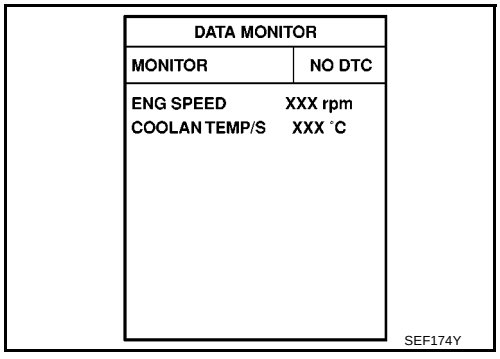
DTC Confirmation Procedure

EBS00OSP

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and wait at least 5 seconds.
4. If DTC is detected, go to EC-348, "Diagnostic Procedure" .



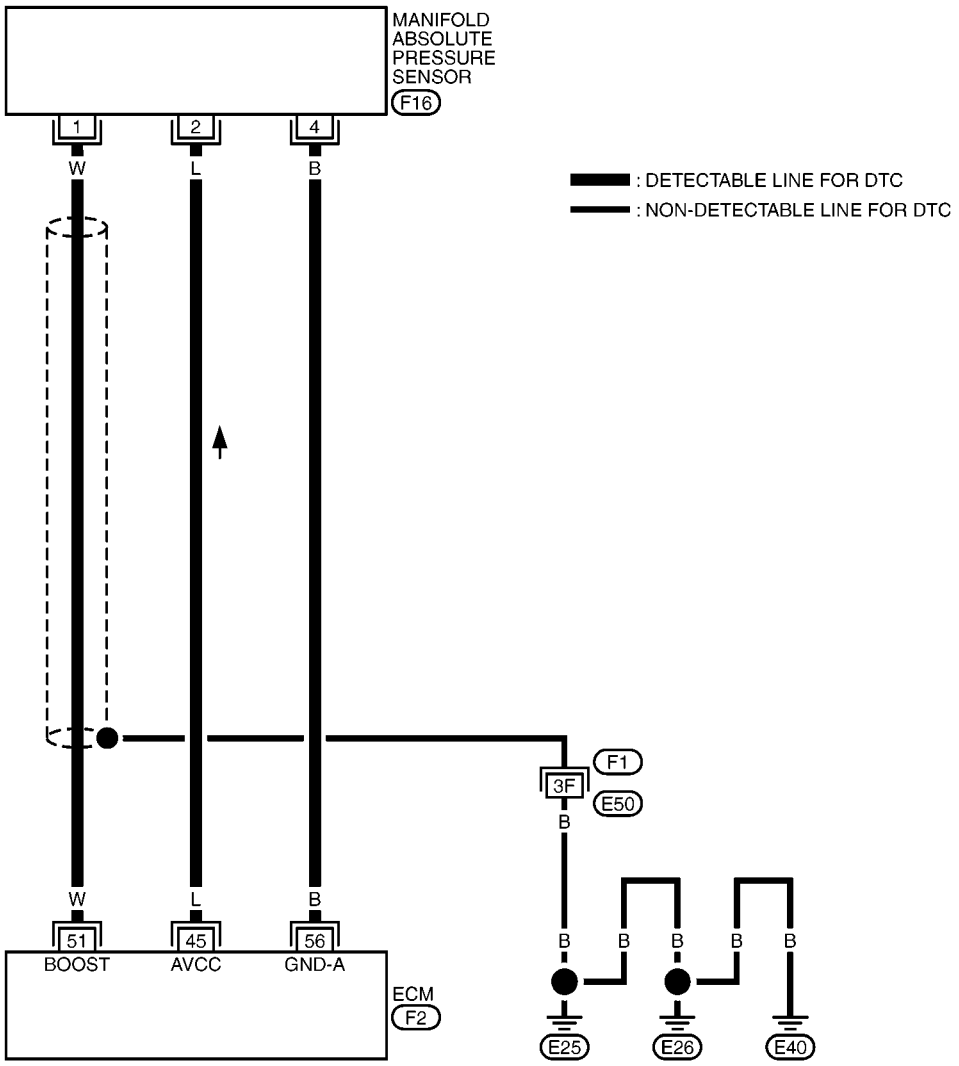
WITH GST

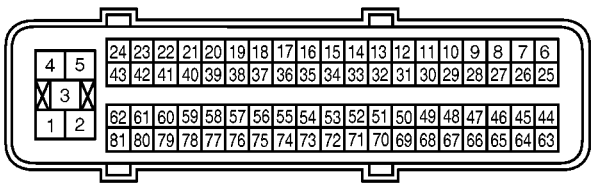
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00OSQ

EC-AP/SEN-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0304E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
51	W	Manifold absolute pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 1.5V
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	Approximately 1.2V

Diagnostic Procedure

EBS00OSR

1. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the air cleaner element.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK VACUUM HOSE

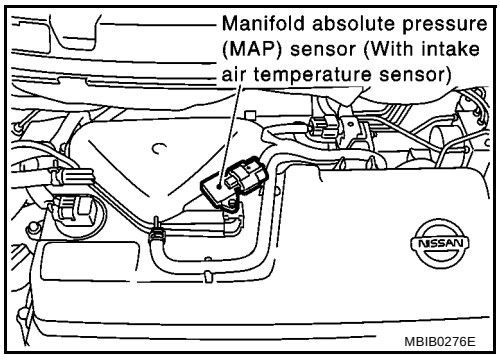
1. Check intake manifold vacuum hoses for clogging or disconnection. Refer to EC-23, "Vacuum Hose Drawing" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

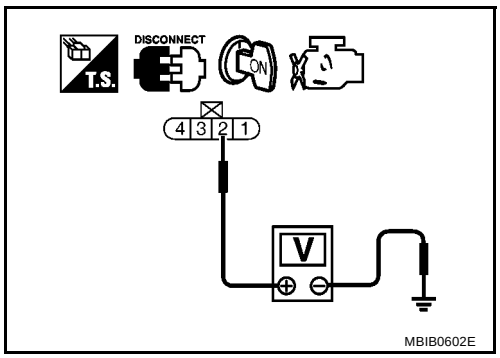
3. CHECK MAP SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect manifold absolute pressure sensor harness connector.
3. Turn ignition switch ON.



4. Check voltage between manifold absolute pressure sensor terminal 2 and ground.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> Repair harness or connectors.

4. CHECK MAP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between manifold absolute pressure sensor terminal 4 and ECM terminal 56. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK MAP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between manifold absolute pressure sensor terminal 1 and ECM terminal 51.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK MAP SENSOR

Refer to EC-151, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace sensor.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P1211 TCS CONTROL UNIT

PFP:47850

Description

EBS010C1

The malfunction information related to TCS is transferred through the CAN communication line from “ABS actuator and electric unit (control unit)” to ECM.
Be sure to erase the malfunction information such as DTC not only for “ABS actuator and electric unit (control unit)” but also for ECM after TCS related repair.

On Board Diagnosis Logic

EBS010C2

Freeze frame data is not stored in the ECM for this self-diagnosis.
The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1211 1211	TCS control unit	ECM receives a malfunction information from “ABS actuator and electric unit (control unit)”.	● ABS actuator and electric unit (control unit) ● TCS related parts

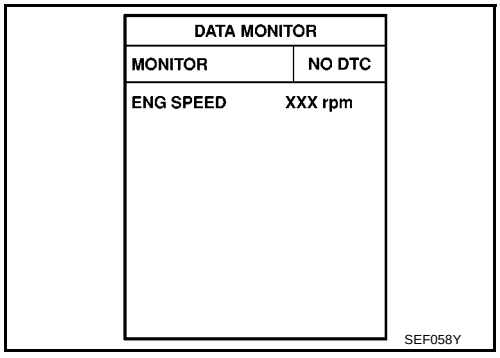
DTC Confirmation Procedure

EBS010C3

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for at least 60 seconds.
4. If 1st trip DTC is detected, go to EC-350, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

EBS010C4

Go to BRC-8, "TROUBLE DIAGNOSIS" (models without ESP) or BRC-61, "TROUBLE DIAGNOSIS" (models with ESP).

DTC P1212 TCS COMMUNICATION LINE

PFP:47850

Description

EBS010C5

NOTE:
If DTC P1212 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-130, "DTC U1000, U1001 CAN COMMUNICATION LINE" .
This CAN communication line is used to control the smooth engine operation during the TCS operation. Pulse signals are exchanged between ECM and “ABS actuator and electric unit (control unit)”.
Be sure to erase the malfunction information such as DTC not only for “ABS actuator and electric unit (control unit)” but also for ECM after TCS related repair.

On Board Diagnosis Logic

EBS010C6

The MI will not light up for this self-diagnosis.
Freeze frame data is not stored in the ECM for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1212 1212	TCS communication line	ECM can not receive the information from “ABS actuator and electric unit (control unit)” continuously.	● Harness or connectors (The CAN communication line is open or shorted.) ● ABS actuator and electric unit (control unit). ● Dead (Weak) battery

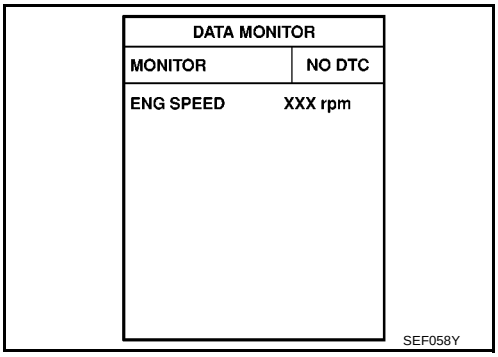
DTC Confirmation Procedure

EBS010C7

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for at least 10 seconds.
4. If a 1st trip DTC is detected, go to EC-351, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

EBS010C8

1. CHECK “ABS ACTUATTOR AND ELECTRIC UNIT (CONTROL UNIT)” FUNCTION

Refer to BRC-8, "TROUBLE DIAGNOSIS" (models without ESP) or BRC-61, "TROUBLE DIAGNOSIS" (models with ESP).

>> **INSPECTION END**

DTC P1217 ENGINE OVER TEMPERATURE

PFP:00000

System Description

EBS00OB1

NOTE:
If DTC P1217 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-130, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

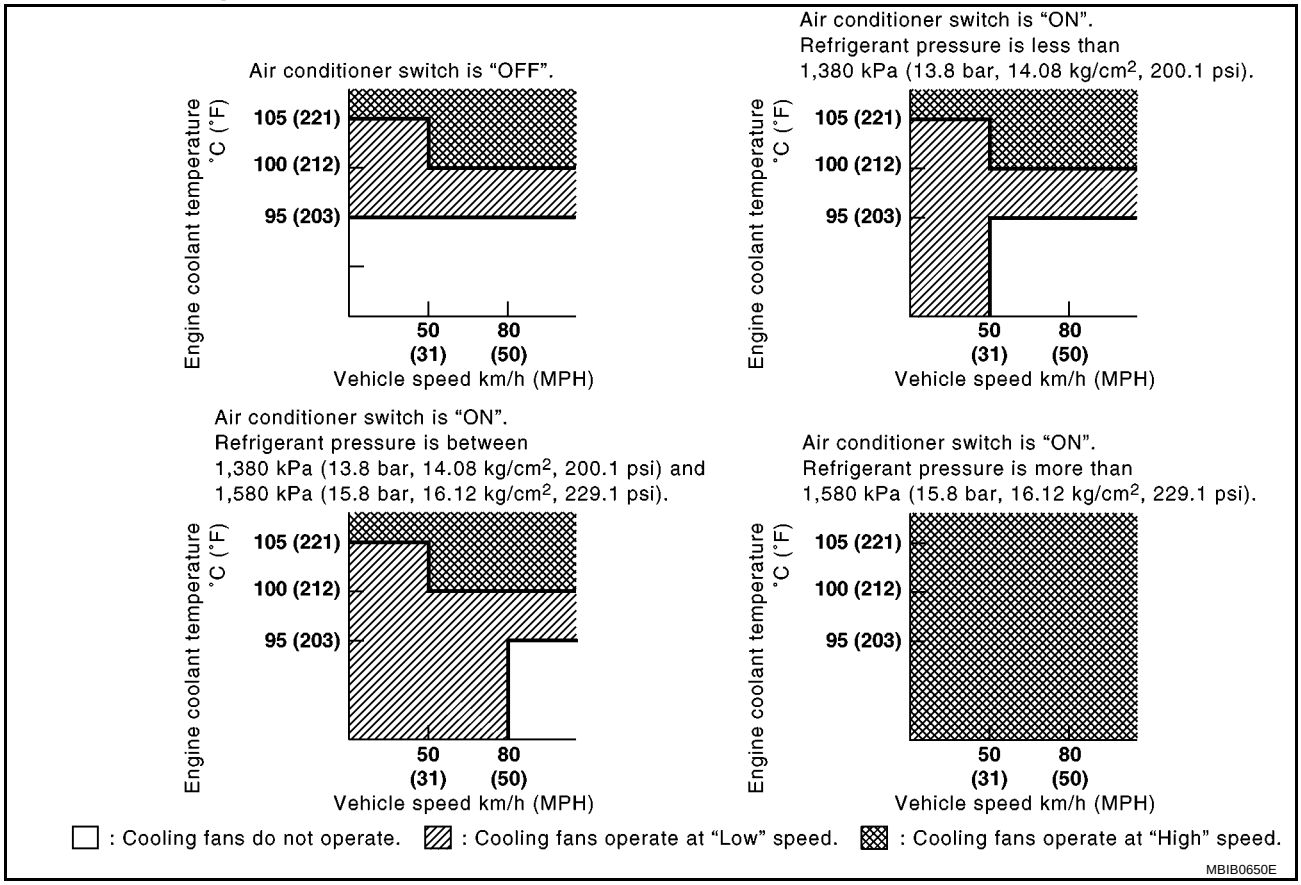
COOLING FAN CONTROL

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	Cooling fan control	IPDM E/R (Cooling fan relay)
Battery	Battery voltage*1		
Vehicle speed signal	Vehicle speed*2		
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch*3	Air conditioner ON signal*2		
Refrigerant pressure sensor*3	Refrigerant pressure		

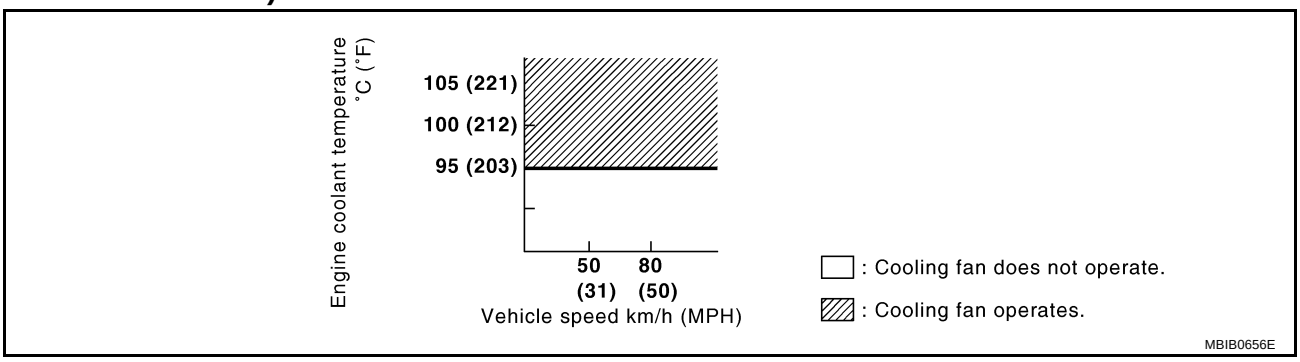
*1: ECM determines the start signal status by the signals of engine speed and battery voltage.
*2: This signal is sent to ECM through CAN communication line.
*3: Models with air conditioner.

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF] (models with A/C) or 2 step control [ON/OFF] (models without A/C).
The ECM controls cooling fan relays through CAN communication line.

OPERATION
(Models with A/C)



(Models without A/C)



CONSULT-II Reference Value in Data Monitor Mode

EBS00OB2

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates.)	ON
COOLING FAN	(Models with A/C) ● Engine: After warming up, idle the engine ● Air conditioner switch: OFF	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (210°F)	LOW*
		Engine coolant temperature is 105°C (212°F) or more	HI*

*:Models without air conditioner, cooling fan operates only ON and OFF operation, but CONSULT-II display will change OFF, LOW and HI depends on engine coolant temperature.

On Board Diagnosis Logic

EBS00OB3

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise. When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1217 1217	Engine over temperature (Overheat)	● Cooling fan does not operate properly (Overheat). ● Cooling fan system does not operate properly (Overheat). ● Engine coolant was not added to the system using the proper filling method. ● Engine coolant is not within the specified range.	● Harness or connectors (The cooling fan circuit is open or shorted.) ● Cooling fan ● Radiator hose ● Radiator ● Radiator cap ● Water pump ● Thermostat For more information, refer to EC-365, "Main 12 Causes of Overheating" .

CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to CO-8, "Changing Engine coolant" . Also, replace the engine oil. Refer to LU-5, "Changing Engine Oil" .

1. **Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to MA-20, "Engine Coolant Mixture Ratio" .**
2. **After refilling coolant, run engine to ensure that no water-flow noise is emitted.**

Overall Function Check

EBS00OB4

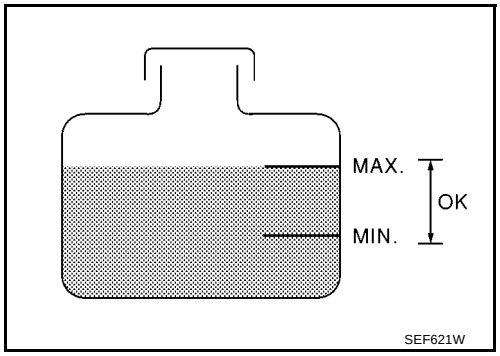
Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

WARNING:

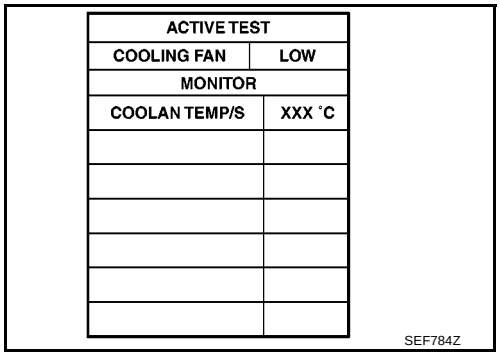
Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.
Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

WITH CONSULT-II

1. Check the coolant level in the reservoir tank and radiator.
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-358, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-358, "Diagnostic Procedure" .
3. Turn ignition switch ON.



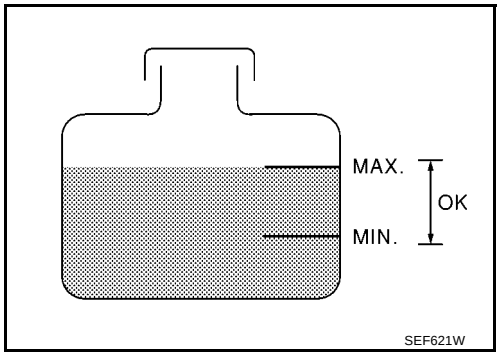
4. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-II.
5. If the results are NG, go to EC-358, "Diagnostic Procedure" .



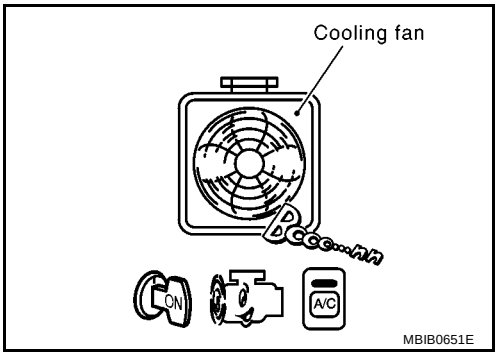
WITH GST

(Models with air conditioner)

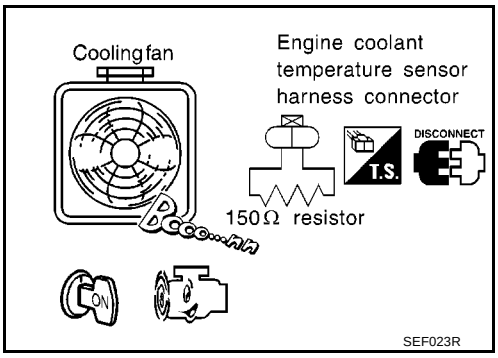
1. Check the coolant level in the reservoir tank and radiator.
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-358, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-358, "Diagnostic Procedure" .
3. Start engine.
   Be careful not to overheat engine.
4. Set temperature control lever to full cold position.
5. Turn air conditioner switch ON.
6. Turn blower fan switch ON.
7. Run engine at idle for a few minutes with air conditioner operating.
   Be careful not to overheat engine.



8. Make sure that cooling fans operates at low speed.
   If NG, go to EC-358, "Diagnostic Procedure" .
   If OK, go to the following step.
9. Turn ignition switch OFF.
10. Turn air conditioner switch and blower fan switch OFF.
11. Disconnect engine coolant temperature sensor harness connector.
12. Connect 150Ω resistor to engine coolant temperature sensor harness connector.

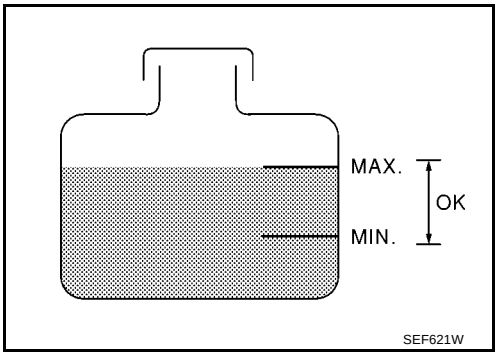


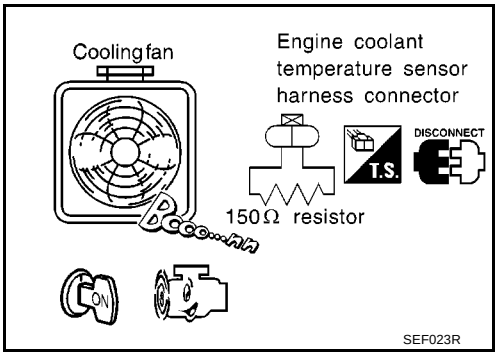
13. Restart engine and make sure that cooling fan operates at higher speed than low speed.
    Be careful not to overheat engine.
14. If NG, go to EC-358, "Diagnostic Procedure" .



(Models without air conditioner)

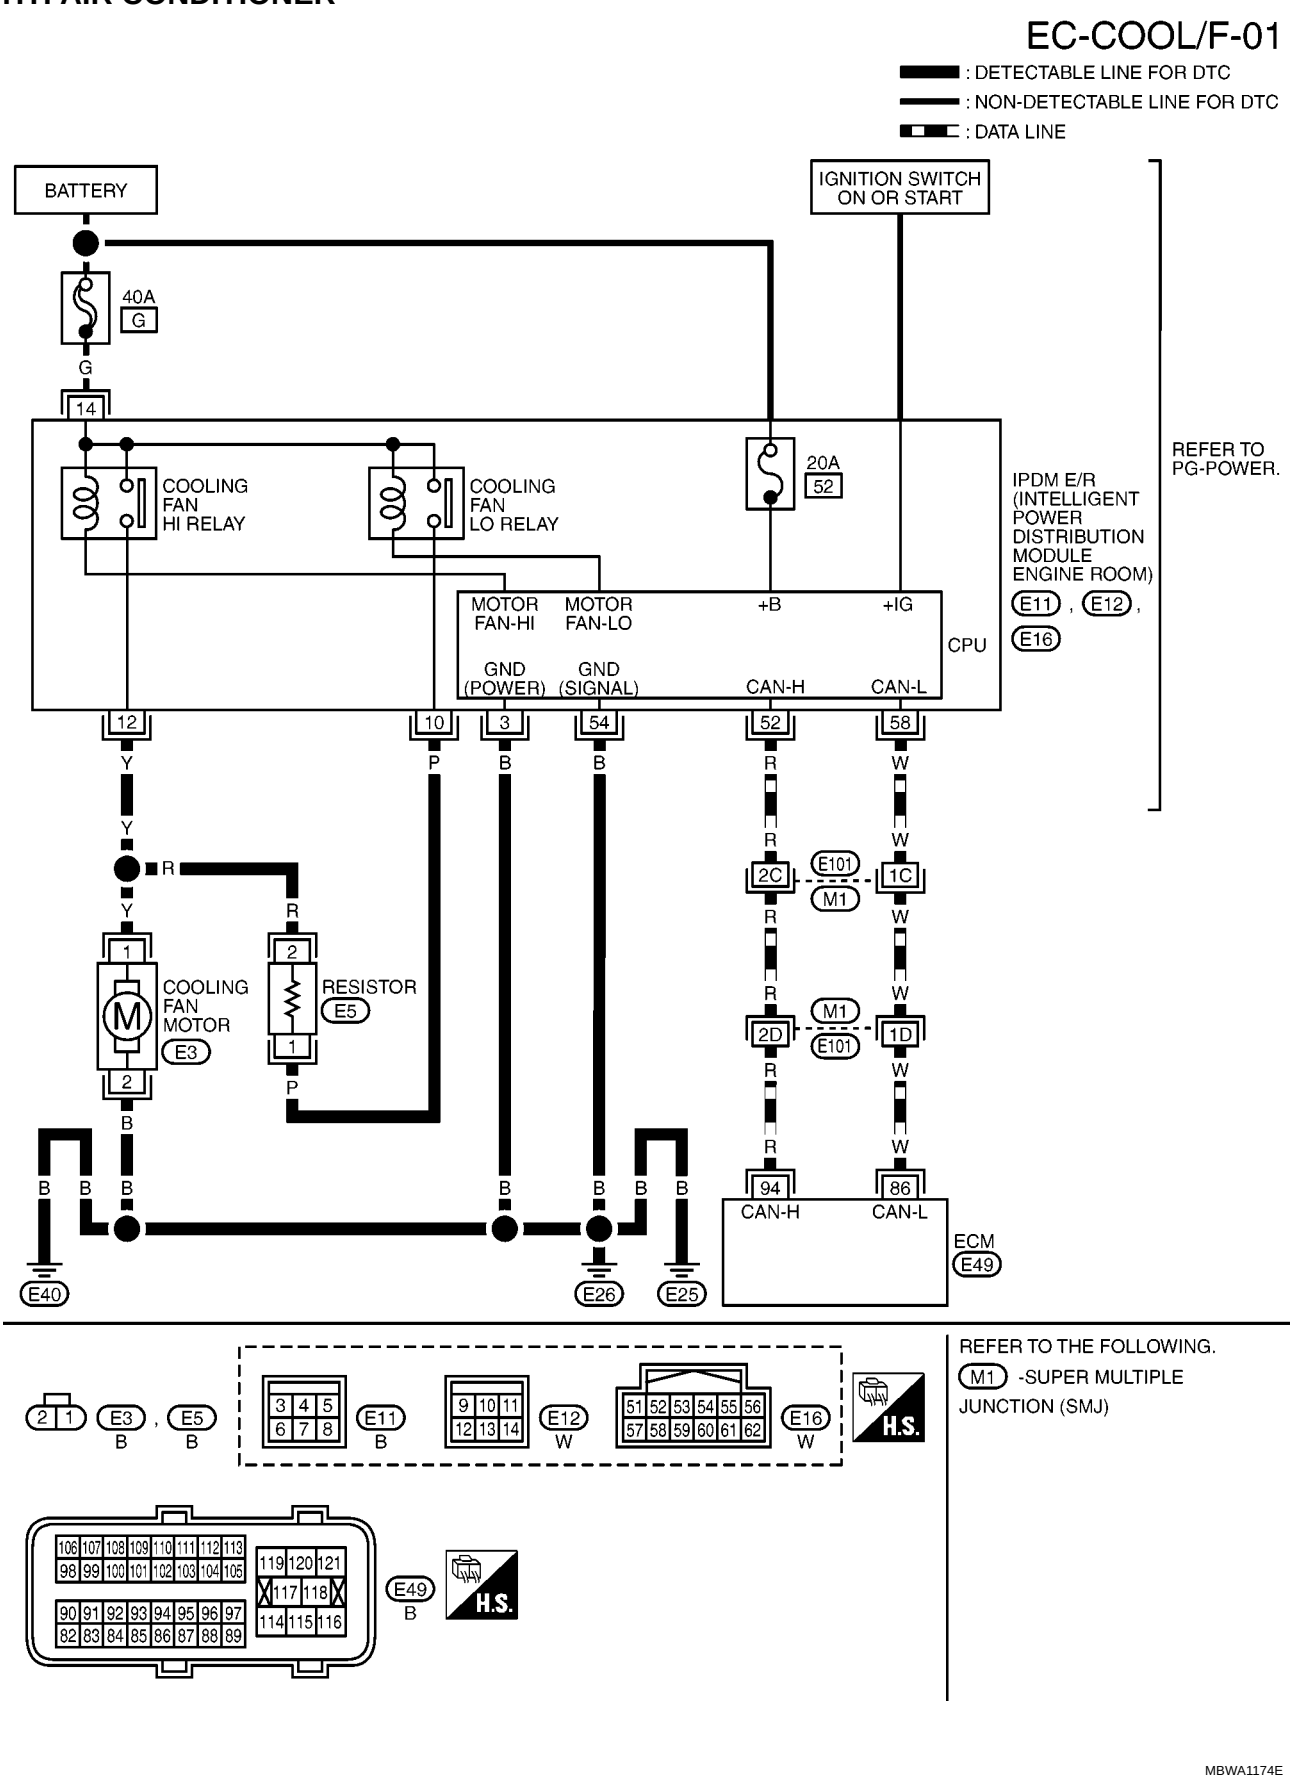
1. Check the coolant level in the reservoir tank and radiator.
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-358, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-358, "Diagnostic Procedure" .
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
5. Start engine and make that cooling fan operates. Be careful not to overheat engine.
6. If NG, go to EC-358, "Diagnostic Procedure" .





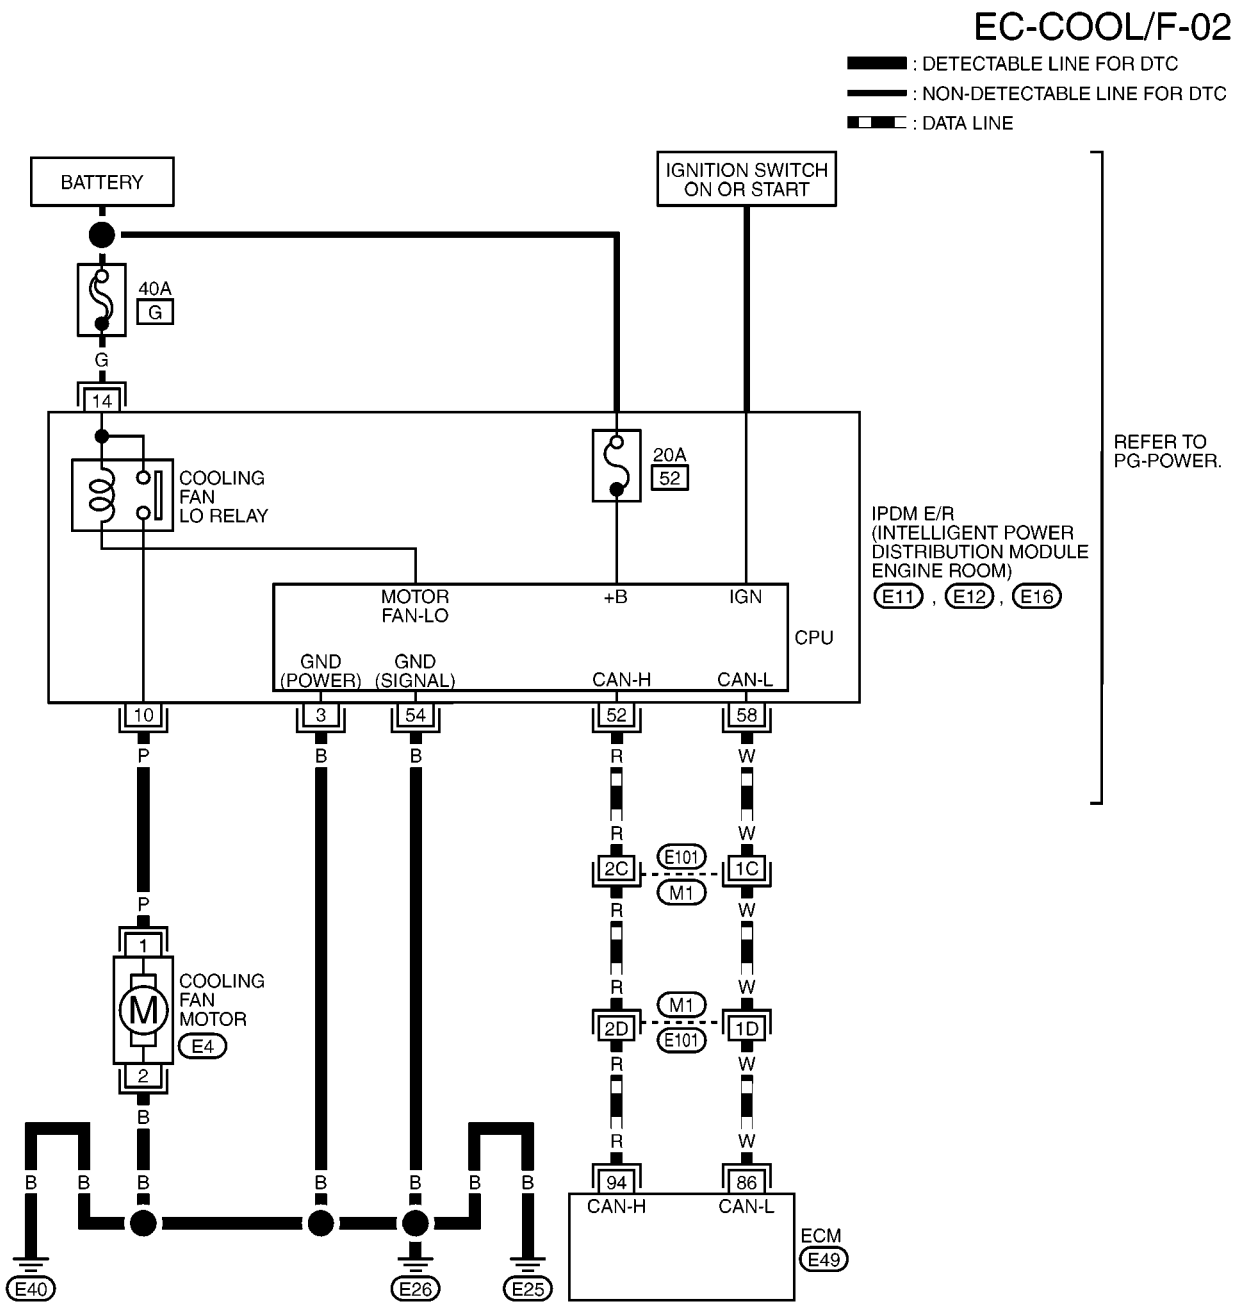
Wiring Diagram
WITH AIR CONDITIONER

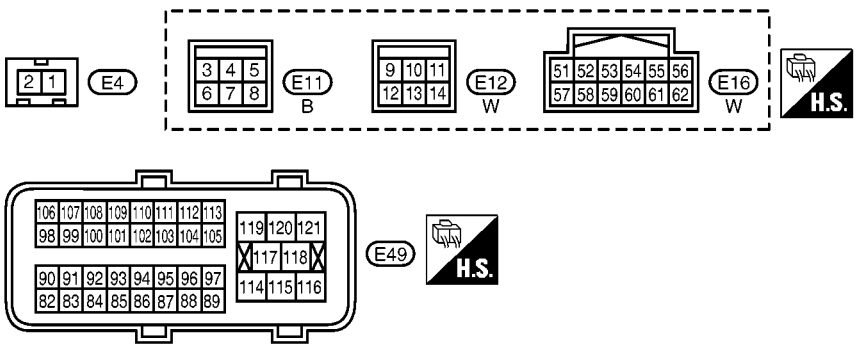
EBS00OB5



MBWA1174E

WITHOUT AIR CONDITIONER





REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0290E

Diagnostic Procedure

EBS00OB6

PROCEDURE FOR MODELS WITH AIR CONDITIONER

1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.
No >> GO TO 4.

2. CHECK COOLING FAN LOW SPEED OPERATION

With CONSULT-II

1. Turn ignition switch ON.
2. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-II and touch “LOW” on the CONSULT-II screen.
3. Make sure that cooling fan operates at low speed.

OK or NG

OK >> GO TO 3.
NG >> Check cooling fan low speed control circuit. (Go to EC-363, "PROCEDURE A" .)

ACTIVE TEST	
COOLING FAN	LOW
MONITOR	
COOLAN TEMP/S	XXX °C

SEF784Z

3. CHECK COOLING FAN HIGH SPEED OPERATION

With CONSULT-II

1. Touch “HIGH” on the CONSULT-II screen.
2. Make sure that cooling fan operates at higher speed than low speed.

OK or NG

OK >> GO TO 6.
NG >> Check cooling fan high speed control circuit. (Go to EC-363, "PROCEDURE A" .)

ACTIVE TEST	
COOLING FAN	HIGH
MONITOR	
COOLAN TEMP/S	XXX °C

SEF785Z

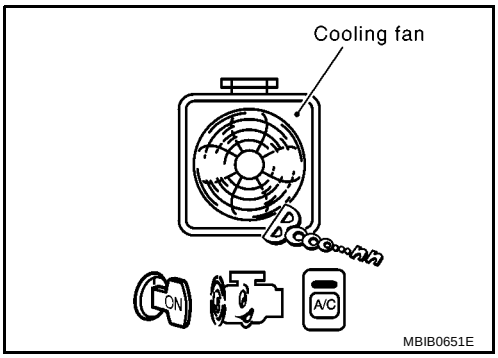
4. CHECK COOLING FAN LOW SPEED OPERATION

Without CONSULT-II

1. Start engine and let it idle.
2. Turn air conditioner switch ON.
3. Turn blower fan switch ON.
4. Make sure that cooling fan operates at low speed.

OK or NG

OK >> GO TO 5.
NG >> Check cooling fan low speed control circuit. (Go to EC-363, "PROCEDURE A" .)



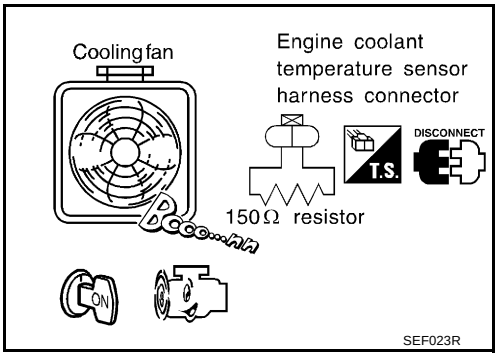
5. CHECK COOLING FAN HIGH SPEED OPERATION

Without CONSULT-II

1. Turn ignition switch OFF.
2. Turn air conditioner switch and blower fan switch OFF.
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
5. Restart engine and make sure that cooling fan operates at higher speed than low speed.

OK or NG

OK >> GO TO 6.
NG >> Check cooling fan high speed control circuit. (Go to EC-363, "PROCEDURE A" .)



6. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

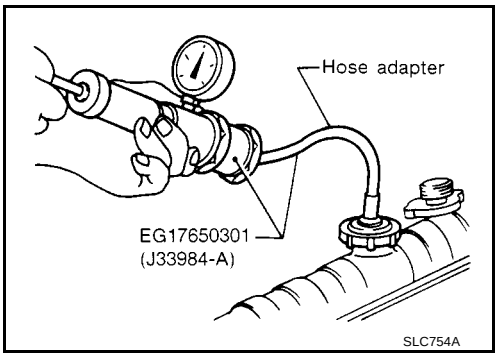
Testing pressure: 157 kPa (1.57 bar, 1.6 kg/cm^2 , 23psi)

CAUTION:
Higher than the specified pressure may cause radiator damage.

Pressure should not drop.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.



7. DETECT MALFUNCTIONING PART

Check the following for leak.

- Hose
- Radiator
- Water pump (Refer to CO-21, "WATER PUMP" .)

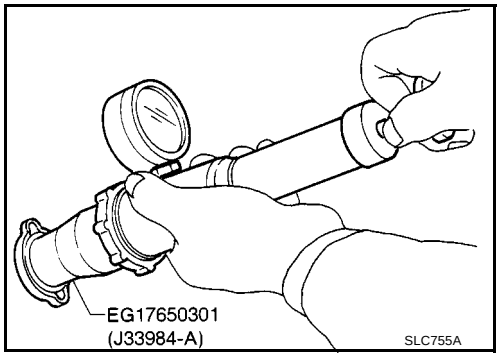
>> Repair or replace.

8. CHECK RADIATOR CAP

Apply pressure to cap with a tester and check radiator cap relief pressure.

Radiator cap relief pressure:

59 - 98 kPa (0.59 - 0.98 bar, 0.6 - 1.0 kg/cm^2 , 9 - 14 psi)



OK or NG

OK >> GO TO 9.
NG >> Replace radiator cap.

9. CHECK THERMOSTAT

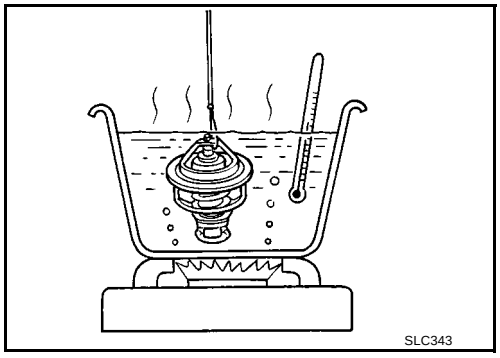
1. Remove thermostat.
2. Check valve seating condition at normal room temperatures.
   It should seat tightly.
3. Check valve opening temperature and valve lift.

Valve opening temperature:

80.5 - 83.5 °C (177 - 182 °F)

Valve lift:

More than 8 mm/95 °C (0.31 in/203 °F)



4. Check if valve is closed at 5°C (9°F) below valve opening temperature. For details, refer to CO-23, "THERMOSTAT" .

OK or NG

OK >> GO TO 10.
NG >> Replace thermostat.

10. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-162, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace engine coolant temperature sensor.

11. CHECK MAIN 12 CAUSES

If the cause cannot be isolated, go to EC-365, "Main 12 Causes of Overheating" .

>> **INSPECTION END**

PROCEDURE FOR MODELS WITHOUT AIR CONDITIONER

1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

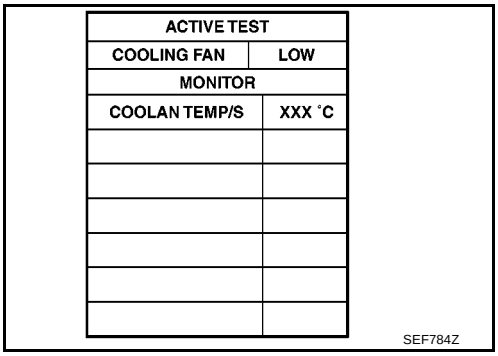
2. CHECK COOLING FAN OPERATION

With CONSULT-II

1. Turn ignition switch ON.
2. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-II and touch “ON” on the CONSULT-II screen.
3. Make sure that cooling fan operates.

OK or NG

OK >> GO TO4.
NG >> Check cooling fan low speed control circuit. (Go to EC-363, "PROCEDURE A" .)



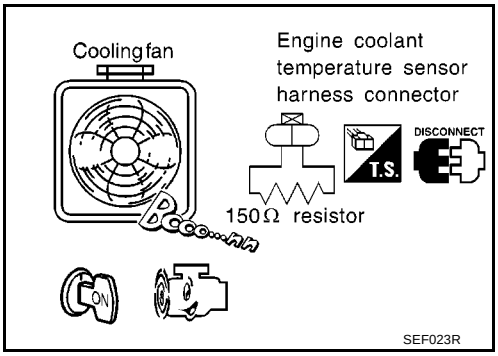
3. CHECK COOLING FAN OPERATION

Without CONSULT-II

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature sensor harness connector.
3. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
4. Restart engine and make sure that cooling fan operates.

OK or NG

OK >> GO TO 4.
NG >> Check cooling fan high speed control circuit-1. (Go to EC-363, "PROCEDURE A" .)



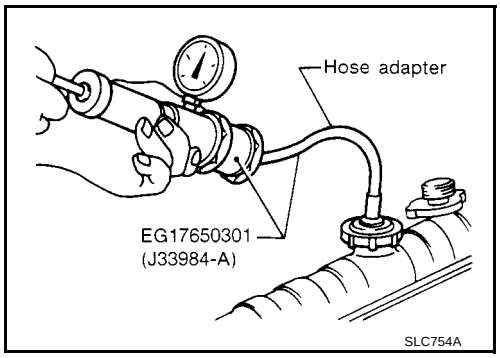
4. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

Testing pressure: 157 kPa (1.57 bar, 1.6 kg/cm^2 , 23psi)

CAUTION:
Higher than the specified pressure may cause radiator damage.

Pressure should not drop.



OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following for leak.

- Hose
- Radiator
- Water pump (Refer to CO-21, "WATER PUMP" .)

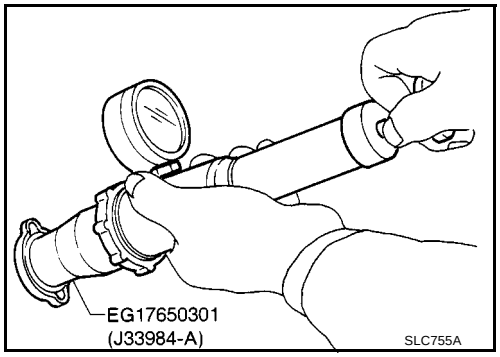
>> Repair or replace.

6. CHECK RADIATOR CAP

Apply pressure to cap with a tester and check radiator cap relief pressure.

Radiator cap relief pressure:

59 - 98 kPa (0.59 - 0.98 bar, 0.6 - 1.0 kg/cm^2 , 9 - 14 psi)



OK or NG

OK >> GO TO 7.
NG >> Replace radiator cap.

7. CHECK THERMOSTAT

1. Remove thermostat.
2. Check valve seating condition at normal room temperatures.
   It should seat tightly.
3. Check valve opening temperature and valve lift.

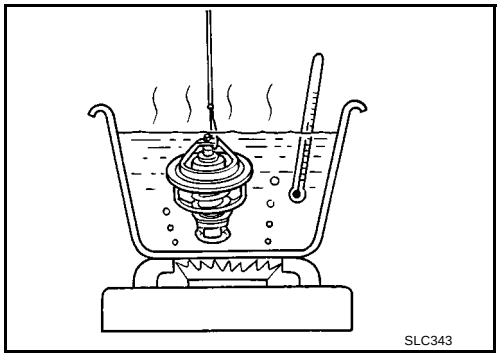
   Valve opening temperature:

   80.5 - 83.5 °C (177 - 182 °F)

   Valve lift:

   More than 8 mm/95 °C (0.31 in/203 °F)

4. Check if valve is closed at 5°C (9°F) below valve opening temperature. For details, refer to CO-23, "THERMOSTAT" .



OK or NG

OK >> GO TO 8.
NG >> Replace thermostat.

8. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-162, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace engine coolant temperature sensor.

9. CHECK MAIN 12 CAUSES

If the cause cannot be isolated, go to EC-365, "Main 12 Causes of Overheating" .

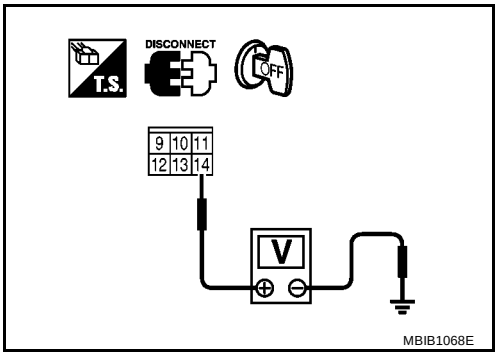
>> **INSPECTION END**

PROCEDURE A

1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E12.
3. Check voltage between IPDM E/R terminal 14 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

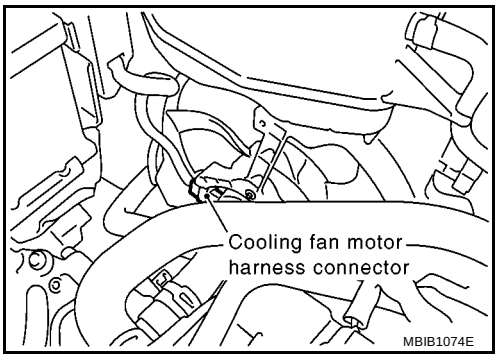
- 40A fusible links
- Harness for open or short between IPDM E/R and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK COOLING FAN MOTORS CIRCUIT

1. Disconnect cooling fan motor harness connector.
2. Check harness continuity between cooling fan motor terminal 1 and IPDM E/R terminal 12 (with A/C) or 10 (without A/C), cooling fan motor terminal 2 and ground.
Refer to wiring diagram.

Continuity should exist.



3. Also check harness for short to ground and short to power.
4. For models with air conditioner, check harness continuity between IPDM E/R terminal 10 and cooling fan motor terminal 1.
Refer to wiring diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between cooling fan motor and IPDM E/R
- Harness for open or short between cooling fan motor and ground
- Harness for open or short between resistor and IPDM E/R (models with A/C)
- Harness for open or short between resistor and cooling fan motor (models with A/C)
- Resistor E5 (models with A/C)

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK COOLING FAN MOTORS

Refer to EC-365, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace cooling fan motors.

6. CHECK INTERMITTENT INCIDENT

Perform EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-18, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .
NG >> Repair or replace harness or connector.

Main 12 Causes of Overheating

EBS00OB7

Engine	Step	Inspection item	Equipment	Standard	Reference page
OFF	1	● Blocked radiator ● Blocked condenser ● Blocked radiator grille ● Blocked bumper	● Visual	No blocking	—
	2	● Coolant mixture	● Coolant tester	50 - 50% coolant mixture	See MA-20, "Engine Coolant Mixture Ratio" .
	3	● Coolant level	● Visual	Coolant up to MAX level in reservoir tank and radiator filler neck	See CO-8, "LEVEL CHECK" .
	4	● Radiator cap	● Pressure tester	59 - 98 kPa (0.59 - 0.98 bar, 0.6 - 1.0 kg/cm^2 , 9 - 14 psi) (Limit)	See CO-15, "Checking Radiator Cap" .
ON*2	5	● Coolant leaks	● Visual	No leaks	See CO-8, "LEAK CHECK" .
ON*2	6	● Thermostat	● Touch the upper and lower radiator hoses	Both hoses should be hot	See CO-23, "THERMOSTAT" , and CO-11, "RADIATOR" .
ON*1	7	● Cooling fan	● CONSULT-II	Operating	See trouble diagnosis for DTC P1217 (EC-358).
OFF	8	● Combustion gas leak	● Color checker chemical tester 4 Gas analyzer	Negative	—
ON*3	9	● Coolant temperature gauge	● Visual	Gauge less than 3/4 when driving	—
		● Coolant overflow to reservoir tank	● Visual	No overflow during driving and idling	See CO-8, "Changing Engine coolant" .
OFF*4	10	● Coolant return from reservoir tank to radiator	● Visual	Should be initial level in reservoir tank	See CO-8, "LEVEL CHECK" .
OFF	11	● Cylinder head	● Straight gauge feeler gauge	0.1 mm (0.004 in) Maximum distortion (warping)	See EM-59, "CYLINDER HEAD" .
	12	● Cylinder block and pistons	● Visual	No scuffing on cylinder walls or piston	See EM-73, "CYLINDER BLOCK" .

*1: Turn the ignition switch ON.
*2: Engine running at 3,000 rpm for 10 minutes.
*3: Drive at 90 km/h (55 MPH) for 30 minutes and then let idle for 10 minutes.
*4: After 60 minutes of cool down time.
For more information, refer to CO-5, "OVERHEATING CAUSE ANALYSIS" .

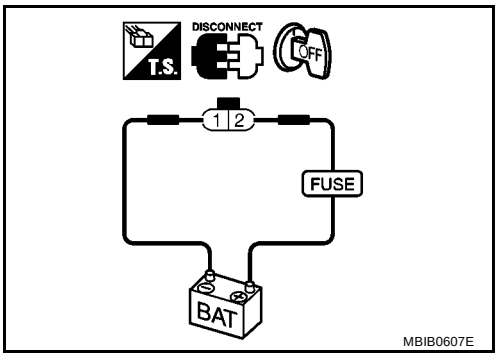
Component Inspection

EBS00OB8

COOLING FAN MOTOR

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Terminals	
	(+)	(-)
Cooling fan motor	1	2



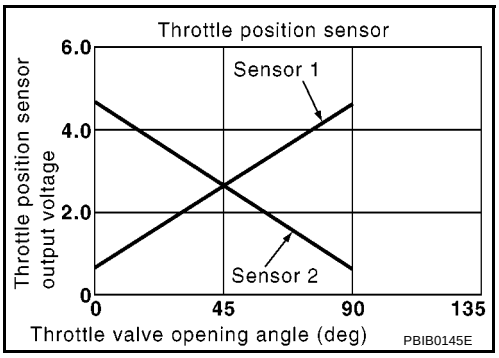
DTC P1223, P1224 TP SENSOR

PFP:16119

Component Description

EBS00OB9

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OBA

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T model) 1st (M/T model)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00OBB

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1223 1223	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	● Harness or connectors (The TP sensor 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 2)
P1224 1224	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

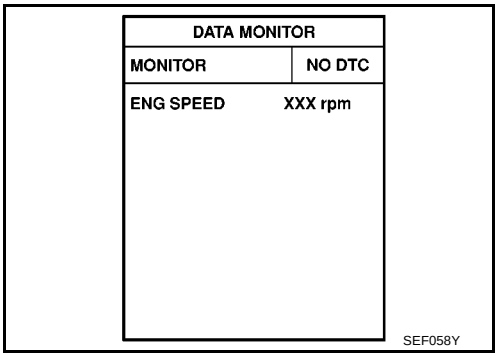
DTC Confirmation Procedure

EBS00OBC

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-369, "Diagnostic Procedure" .



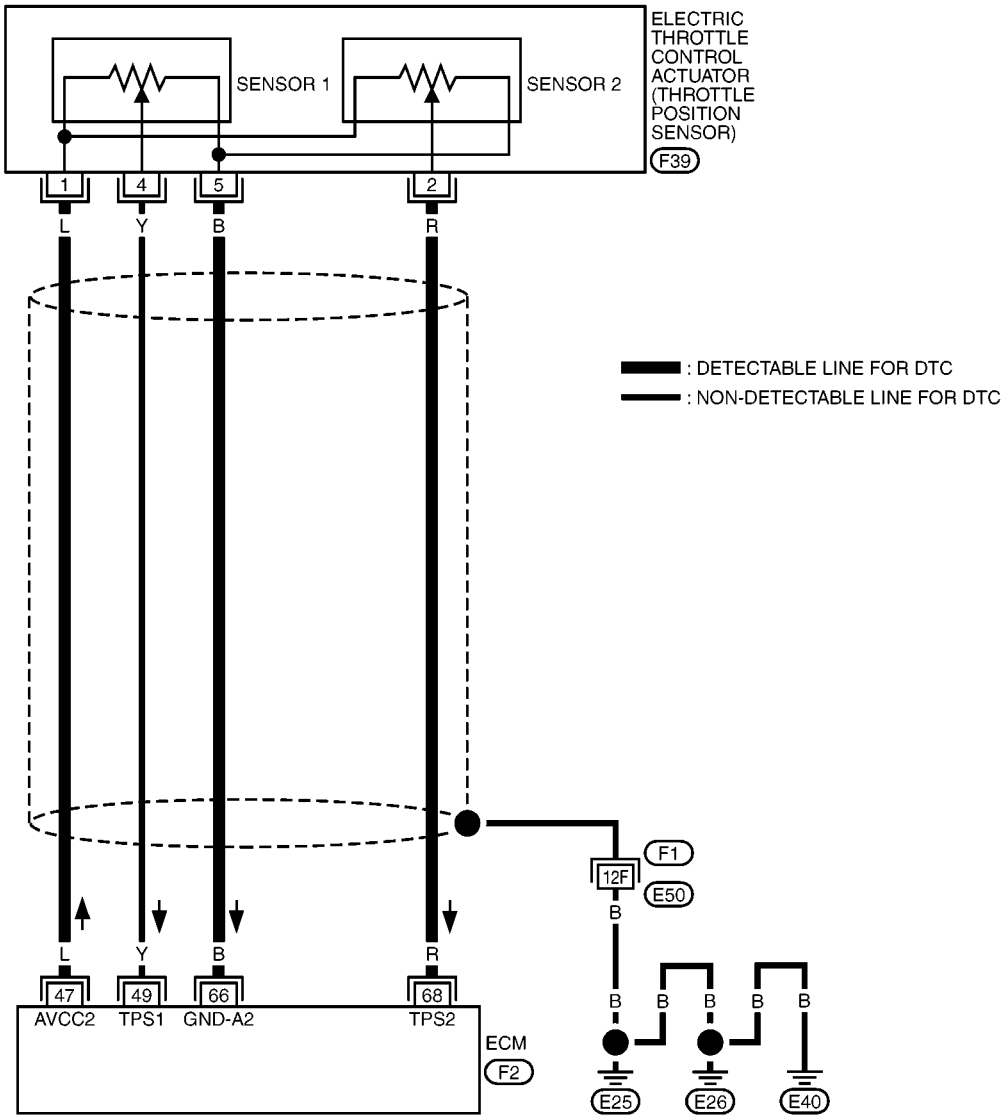
WITH GST

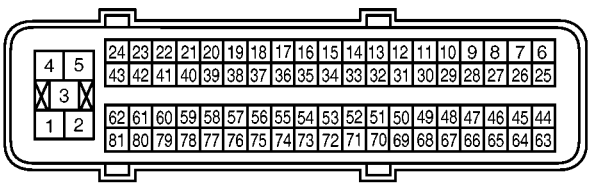
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00OBD

EC-TPS2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0291E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V
66	B	Sensor ground (Throttle position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V

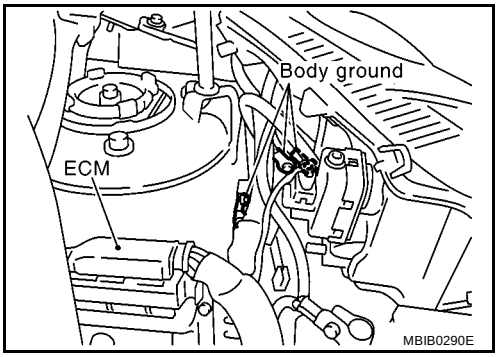
Diagnostic Procedure

EBS00OBE

1. RETIGHTEN GROUND SCREWS

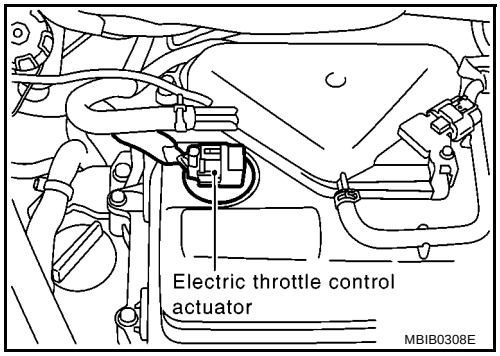
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



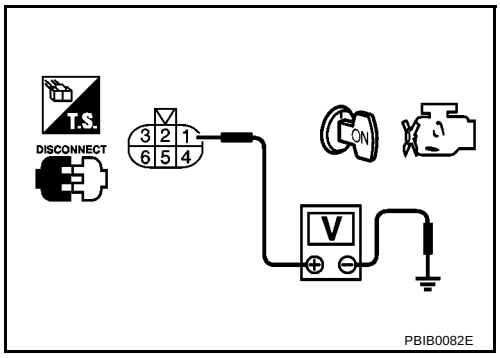
2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.



3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 68 and electric throttle control actuator terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-371, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

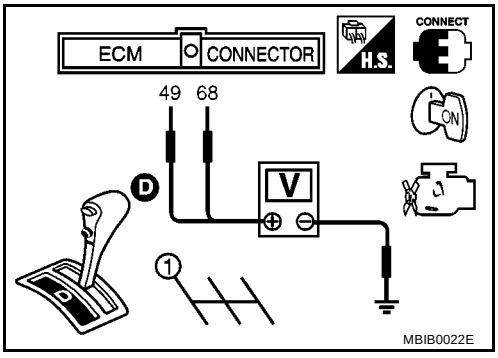
Component Inspection

EBS00OBF

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set selector lever to D position (A/T models) or 1st position (M/T models).
5. Check voltage between ECM terminals 49 (TP sensor 1 signal), 68 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
49 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
68 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V



6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-42, "Throttle Valve Closed Position Learning" .
8. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS00OBG

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

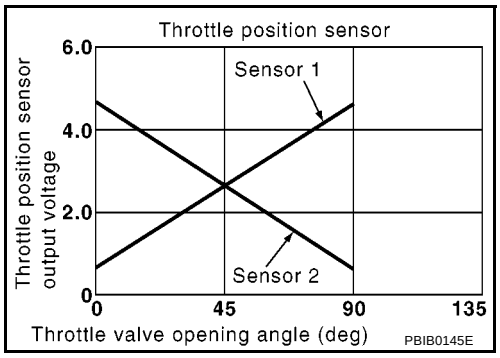
DTC P1225 TP SENSOR

PFP:16119

Component Description

EBS00OBH

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



On Board Diagnosis Logic

EBS00OBI

The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance problem	Closed throttle position learning value is excessively low.	● Electric throttle control actuator (TP sensor 1 and 2)

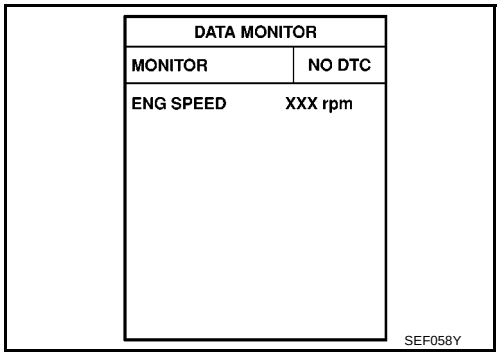
DTC Confirmation Procedure

EBS00OBJ

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds.
4. Turn ignition switch ON.
5. If 1st trip DTC is detected, go to EC-373, "Diagnostic Procedure"
.



WITH GST

Follow the procedure “With CONSULT-II” above.

Diagnostic Procedure

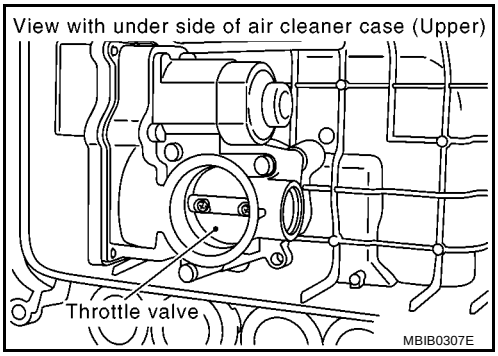
EBS00OBK

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.

OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.



2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

Remove and Installation

EBS00OBL

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

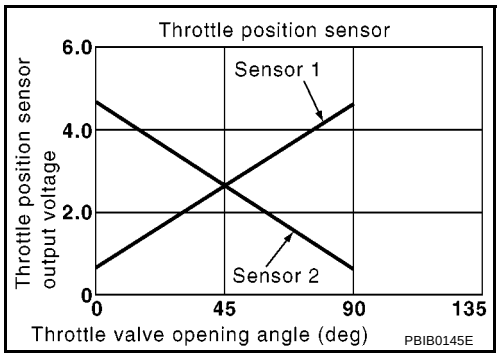
DTC P1226 TP SENSOR

PFP:16119

Component Description

EBS00OBM

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



On Board Diagnosis Logic

EBS00OBN

The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1226 1226	Closed throttle position learning performance problem	Closed throttle position learning is not performed successfully, repeatedly.	● Electric throttle control actuator (TP sensor 1 and 2)

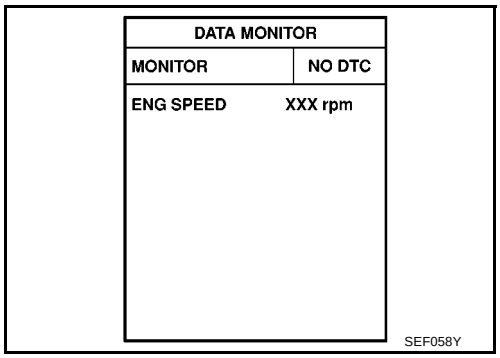
DTC Confirmation Procedure

EBS00OBO

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds.
4. Turn ignition switch ON.
5. Repeat steps 3 and 4 for 32 times.
6. If 1st trip DTC is detected, go to EC-375, "Diagnostic Procedure"
.



WITH GST

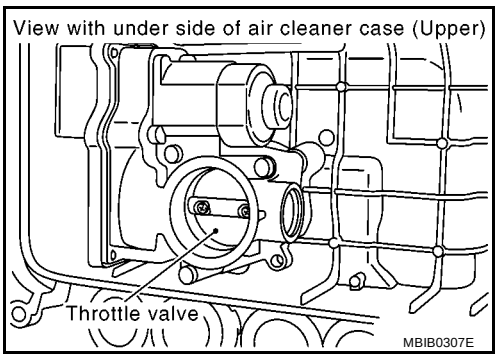
Follow the procedure “With CONSULT-II” above.

Diagnostic Procedure

EBS00OBP

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.



OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

Remove and Installation

EBS00OBQ

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

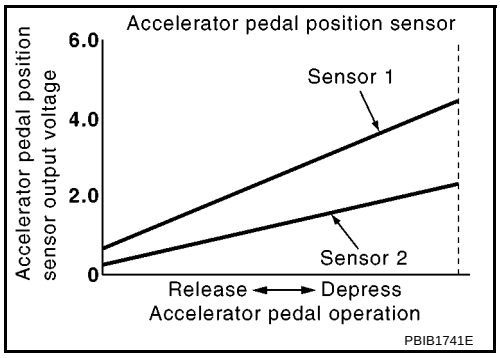
DTC P1227, P1228 APP SENSOR

PFP:18002

Component Description

EBS00OBR

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OBS

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differ from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00OBT

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1227 1227	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	● Harness or connectors (The APP sensor 2 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 2)
P1228 1228	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of throttle valve to be slower than the normal condition. So, the acceleration will be poor.

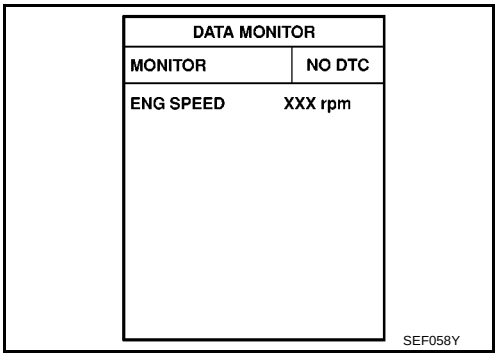
DTC Confirmation Procedure

EBS00OBU

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-381, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
82	B	Sensor ground (APP sensor 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
83	B	Sensor ground (APP sensor 2)	**[Ignition switch ON]** ● **Warm-up condition** ● Idle speed	Approximately 0V
90	OR	Sensor power supply (APP sensor 1)	**[Ignition switch ON]**	Approximately 5V
91	BR	Sensor power supply (APP sensor 2)	**[Ignition switch ON]**	Approximately 5V
98	GY	Accelerator pedal position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Accelerator pedal: Fully released	0.3 - 0.6V
			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	1.95 - 2.4V
106	W	Accelerator pedal position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Accelerator pedal: Fully released	0.6 - 0.9V
			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	3.9 - 4.7V

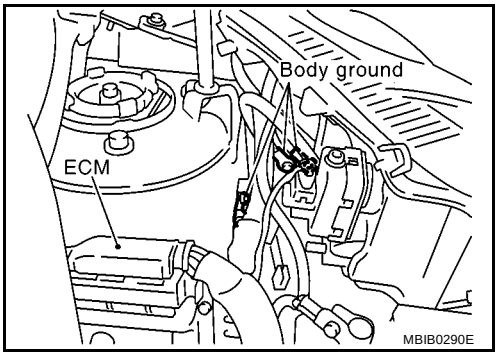
Diagnostic Procedure

EBS00OBW

1. RETIGHTEN GROUND SCREWS

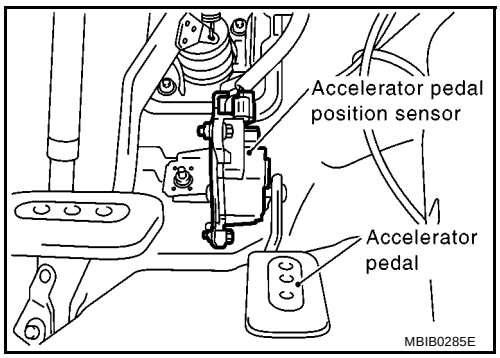
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



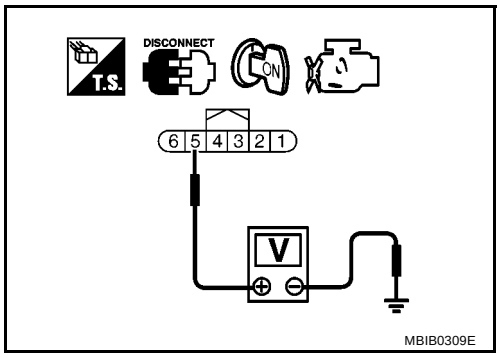
2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 5 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 83 and APP sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 98 and APP sensor terminal 6. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-383, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. REPLACE APP SENSOR

1. Replace the accelerator pedal position sensor.
2. Perform EC-42, "Accelerator Pedal Released Position Learning" .
3. Perform EC-42, "Throttle Valve Closed Position Learning" .
4. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

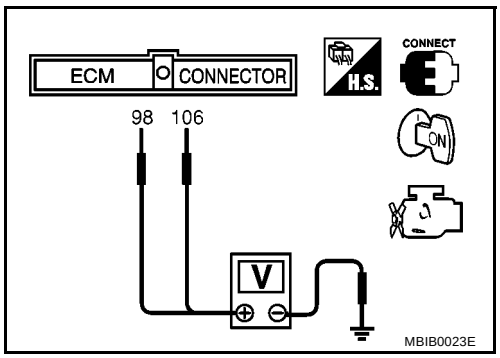
EBS00OBX

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V



4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-42, "Accelerator Pedal Released Position Learning" .
6. Perform EC-42, "Throttle Valve Closed Position Learning" .
7. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS00OBY

ACCELERATOR PEDAL

Refer to ACC-2, "ACCELERATOR CONTROL SYSTEM" .

DTC P1229 SENSOR POWER SUPPLY

PFP:16119

On Board Diagnosis Logic

EBS00OBZ

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1229 1229	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	● Harness or connectors (The TP sensor 1 and 2 circuit is shorted.) ● Electric throttle control actuator (TP sensor 1 and 2) ● ECM pin terminal

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

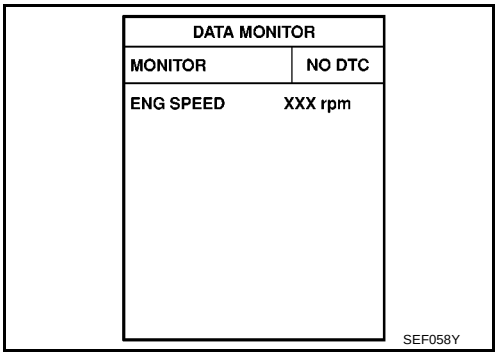
DTC Confirmation Procedure

EBS00OC0

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-387, "Diagnostic Procedure" .



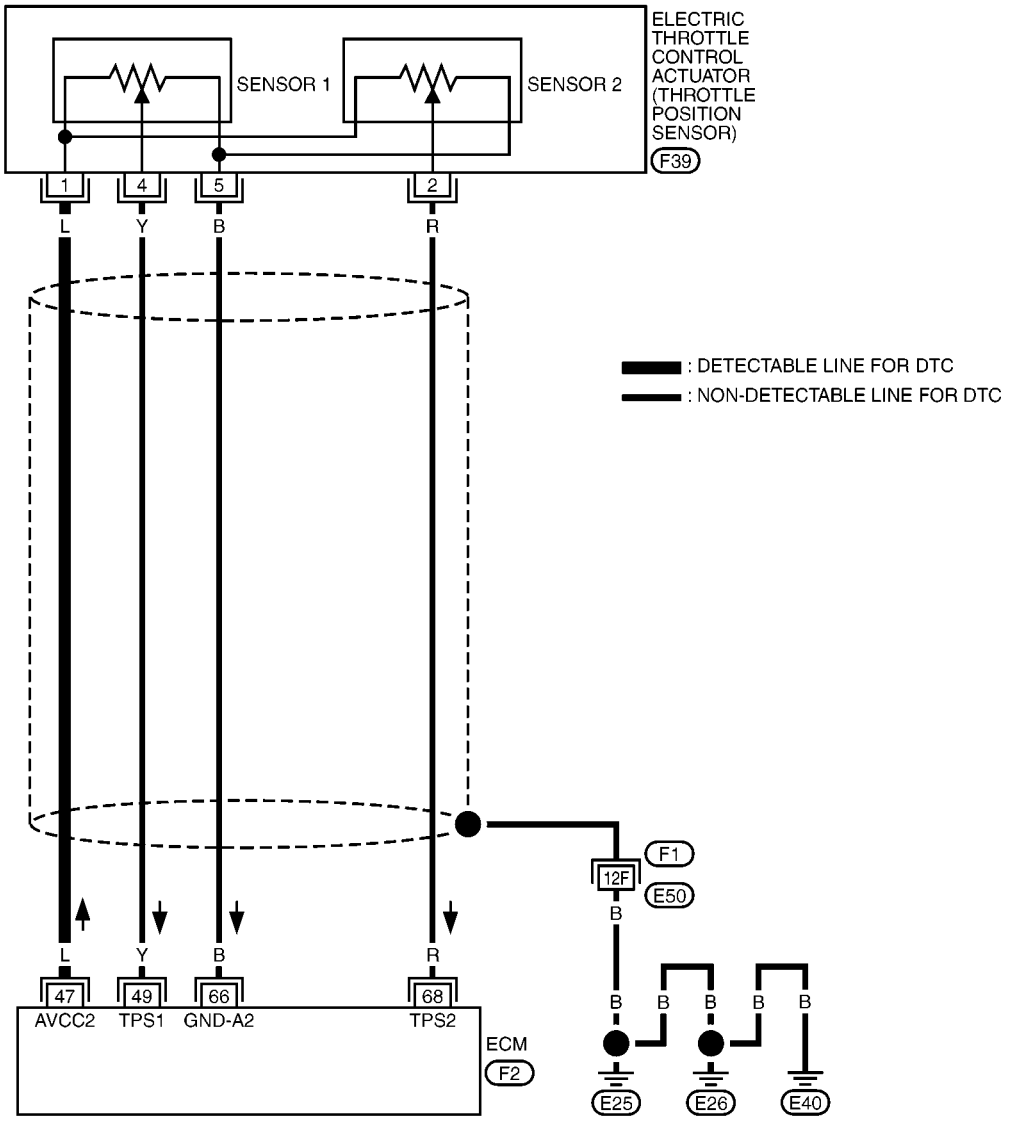
WITH GST

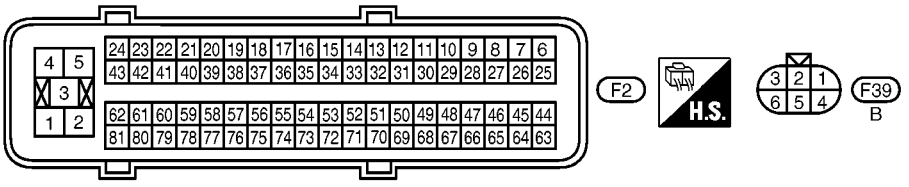
Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram

EBS00OC1

EC-SEN/PW-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0463E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V

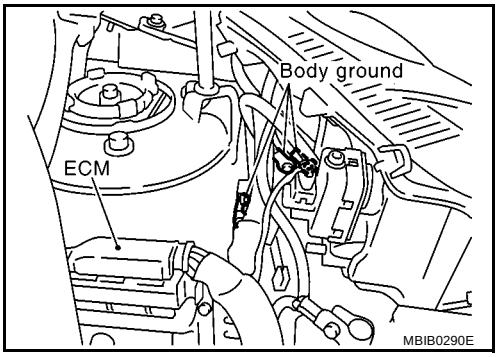
Diagnostic Procedure

EBS00OC2

1. RETIGHTEN GROUND SCREWS

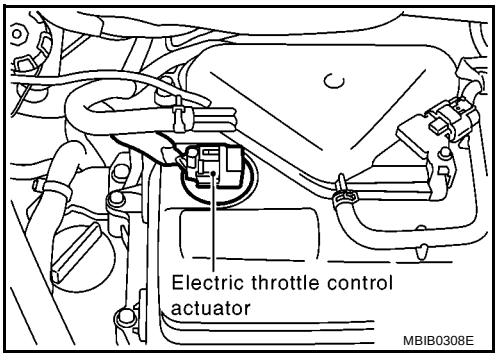
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



2. CHECK THROTTLE POSITION SENSOR POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.

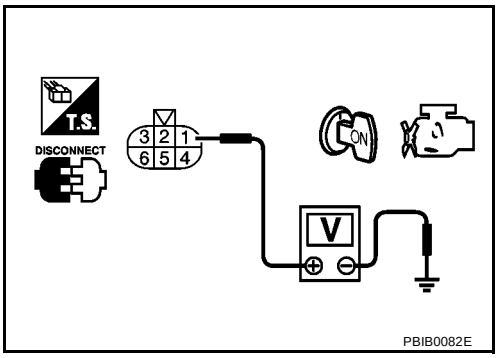


3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.



3. CHECK SENSOR POWER SUPPLY CIRCUITS FOR SHORT

Check the following.

- Harness for short to power and short to ground between ECM terminal 47 and electric throttle control actuator terminal 1.
- ECM pin terminal.

OK or NG

OK >> GO TO 4.
NG >> Repair short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR

Refer to EC-232, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace electric throttle control actuator.
2. Perform EC-42, "Throttle Valve Closed Position Learning" .
3. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

6. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P1706 PNP SWITCH

PFP:32006

Component Description

EBS00OC3

When the shift lever position is P or N (A/T models), Neutral (M/T models), park/neutral position (PNP) switch is ON.
ECM detects the position because the continuity of the line (the ON signal) exists.

CONSULT-II Reference Value in Data Monitor Mode

EBS00OC4

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
P/N POSI SW	● Ignition switch: ON	Shift lever: P or N (A/T models), Neutral (M/T models)	ON
		Shift lever: Except above	OFF

On Board Diagnosis Logic

EBS00OC5

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1706 1706	Park/neutral position switch	The signal of the park/neutral position (PNP) switch is not changed in the process of engine starting and driving.	● Harness or connectors [The park/neutral position (PNP) switch circuit is open or shorted.] ● Park/neutral position (PNP) switch

DTC Confirmation Procedure

EBS00OC6

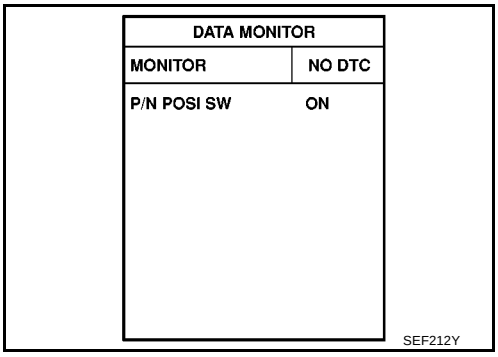
CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “P/N POSI SW” in “DATA MONITOR” mode with CONSULT-II. Then check the “P/N POSI SW” signal under the following conditions.

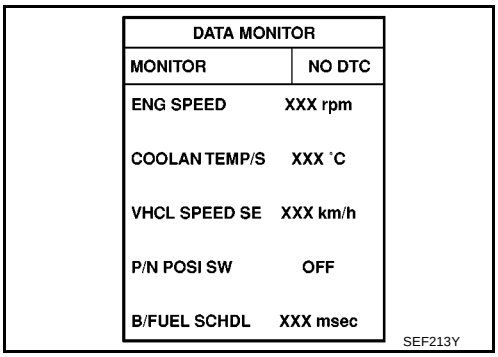
Position (Selector lever)	Known-good signal
N and P position (A/T) Neutral position (M/T)	ON
Except the above position	OFF



If NG, go to EC-392, "Diagnostic Procedure" .
If OK, go to following step.

3. Select “DATA MONITOR” mode with CONSULT-II.
4. Start engine and warm it up to normal operating temperature.
5. Maintain the following conditions for at least 60 consecutive seconds.

ENG SPEED	1,700 - 4,700 rpm (M/T models with CR10 engine) 1,500 - 4,200 rpm (M/T models with CR12 engine) 1,600 - 4,400 rpm (M/T models with CR14 engine) 1,250 - 3,600 rpm (A/T models)
COOLAN TEMP/S	More than 70°C (158°F)
B/FUEL SCHDL	1.8 - 6.2 msec (M/T models) 2.3 - 7.5 msec (A/T models)
VHCL SPEED SE	More than 46 km/h (29 MPH)
Selector lever	Suitable position



6. If 1st trip DTC is detected, go to EC-392, "Diagnostic Procedure" .

Overall Function Check

EBS00OC7

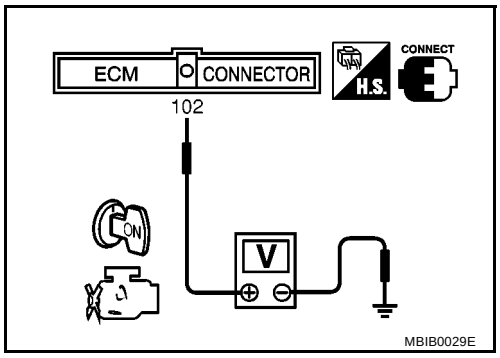
Use this procedure to check the overall function of the park/neutral position (PNP) switch circuit. During this check, a 1st trip DTC might not be confirmed.

WITH GST

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 102 (PNP switch signal) and body ground under the following conditions.

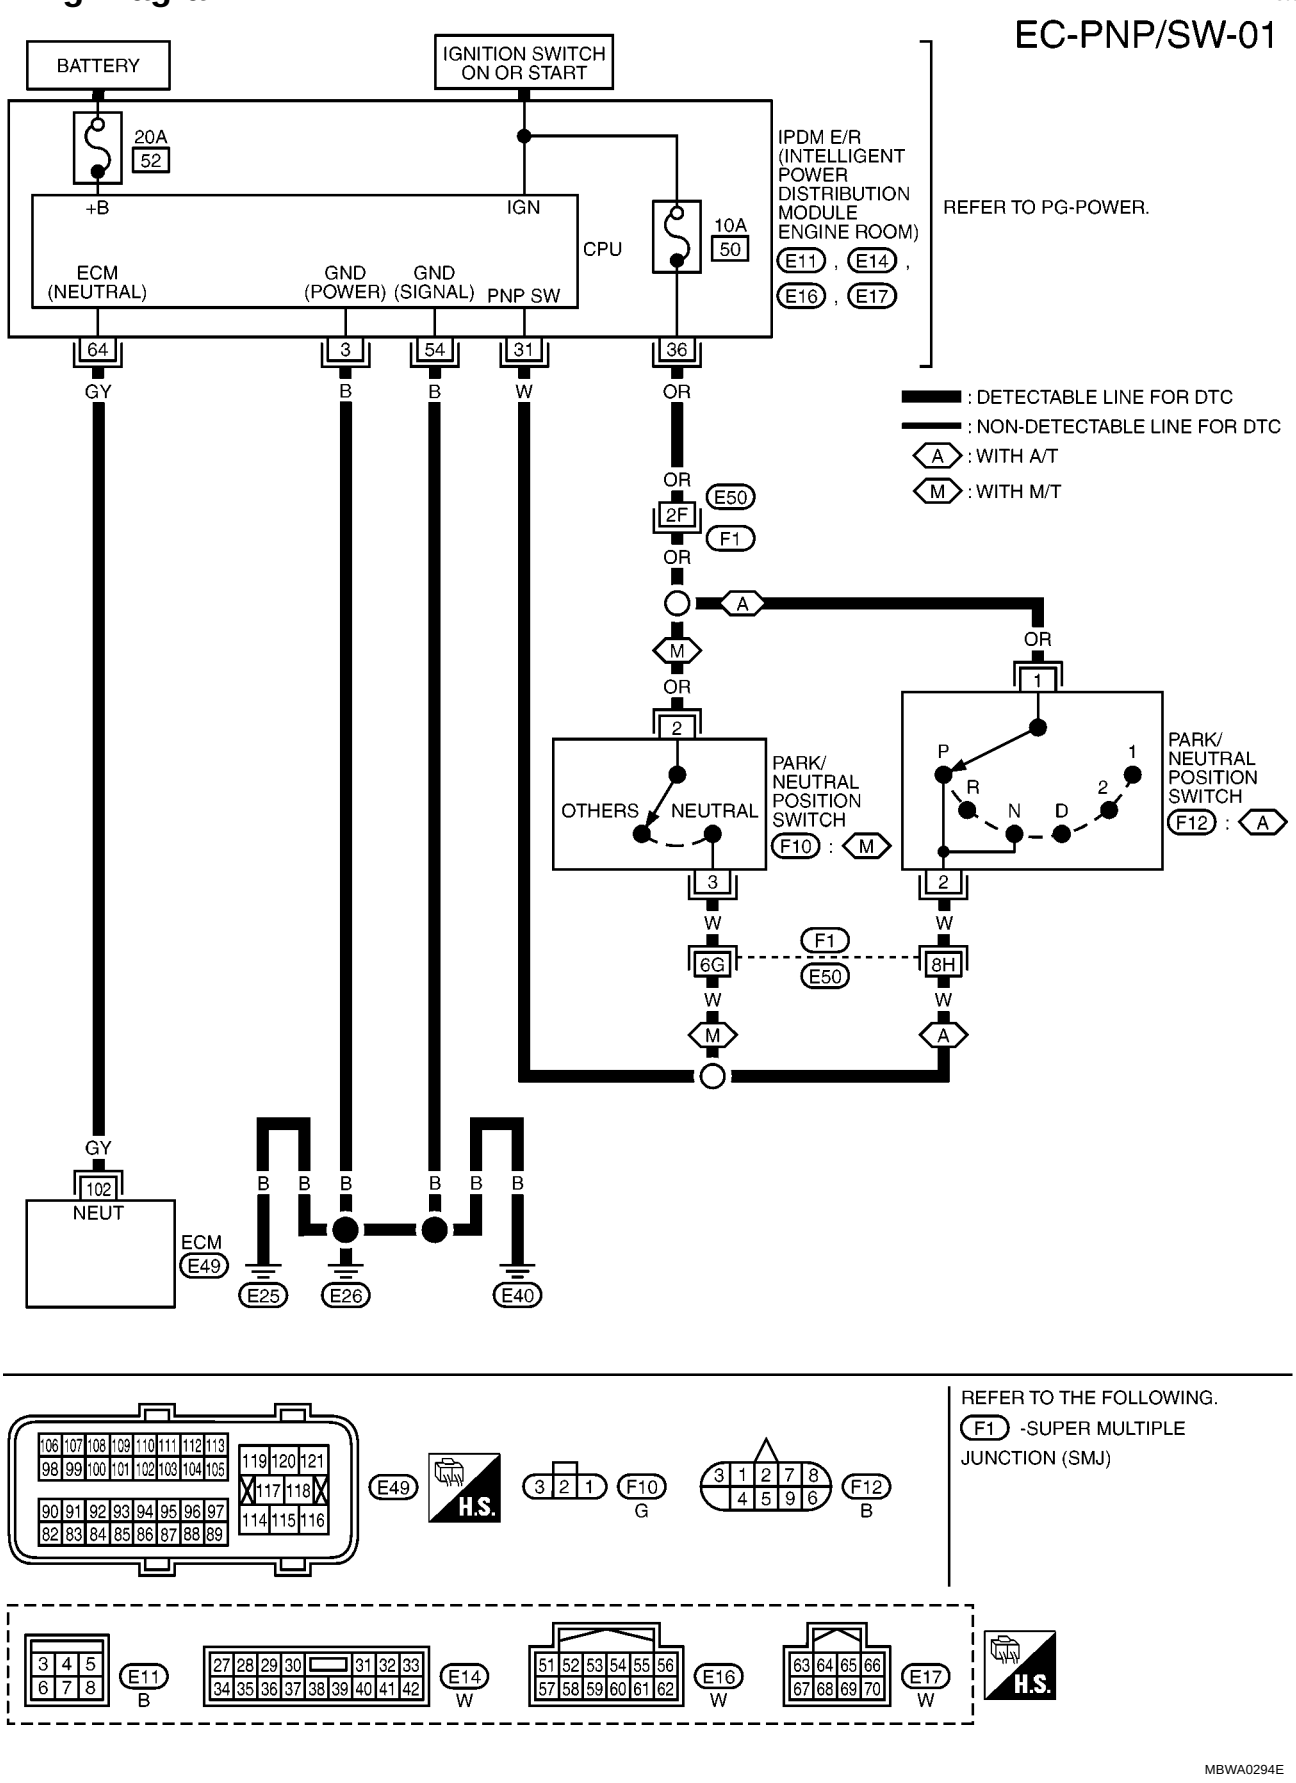
Condition (Gear position)	Voltage V (Known-good data)
N and P position (A/T) Neutral position (M/T)	Approx. 0
Except the above position	BATTERY VOLTAGE (11 - 14V)

3. If NG, go to EC-392, "Diagnostic Procedure" .



Wiring Diagram

EBS00OC8



MBWA0294E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
102	GY	PNP switch	**[Ignition switch ON]** ● Shift lever position: P or N (A/T models), Neutral (M/T models).	Approximately 0V
			[Ignition switch ON] ● Except the above gear position	BATTERY VOLTAGE (11 - 14V)

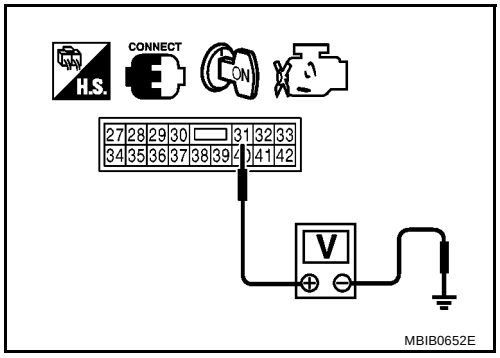
Diagnostic Procedure

EBS00OC9

1. CHECK PNP SWITCH CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between IPDM E/R terminal 31 and ground under following condition.

Shift lever position	Voltage
P or N (A/T models) Neutral (M/T models)	Battery voltage (11- 14V)
Except above position	Approximately 0V

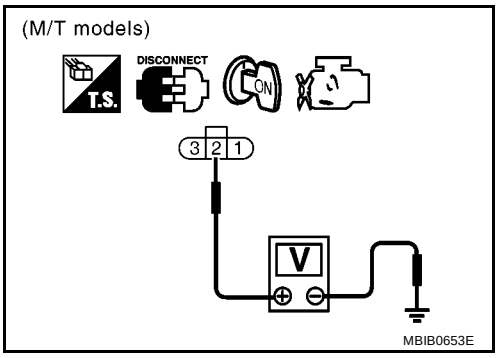


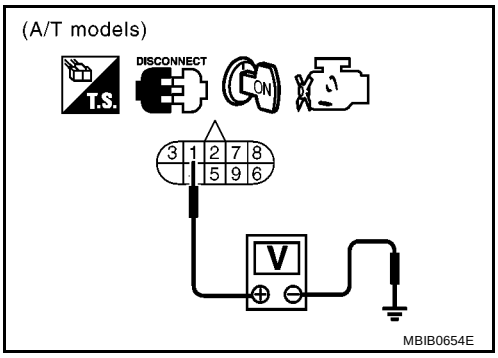
OK or NG

OK >> GO TO 7.
NG >> GO TO 2.

2. CHECK PNP SWITCH POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect PNP switch harness connector.
3. Turn ignition switch ON.
4. Check voltage between PNP switch terminal 1 (A/T models), 2 (M/T models) and ground with CONSULT-II or tester.





Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PARTS

Check the following.

- 10A fuse
- Harness connectors E50, F1
- IPDM E/R connector E14
- Harness for short or open between PNP switch and fuse

>> Repair or replace harness or connectors.

4. CHECK HARNESS CONTINUTY BETWEEN PNP SWITCH AND IPDM E/R

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E14.
3. Check harness continuity between IPDM E/R terminal 31 and PNP switch terminal 2 (A/T models), 3 (M/T models).

Continuity should exist.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PARTS

Check the following.

- Harness connectors E50, F1
- Harness for short or open between PNP switch and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK PNP SWITCH

Refer to AT-119, "Component Inspection" (A/T models).

OK or NG

OK >> GO TO 8.
NG >> Replace PNP switch.

7. CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E17
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 102 and IPDM E/R terminal 64.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO OT 8.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

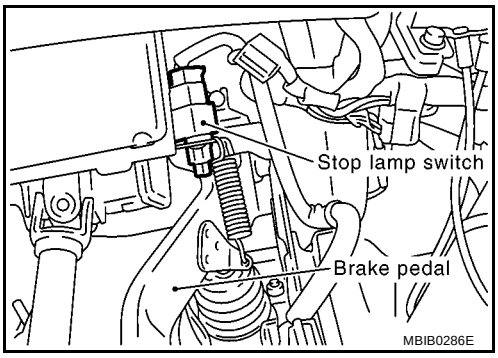
DTC P1805 BRAKE SWITCH

PFP:25320

Description

EBS00OCA

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OCB

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

On Board Diagnosis Logic

EBS00OCC

The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for an extremely long time while the vehicle is driving.	● Harness or connectors (Stop lamp switch circuit is open or shorted.) ● Stop lamp switch

FAIL-SAFE MODE

EBS00OCD

When the malfunction is detected, the ECM enters fail-safe mode.

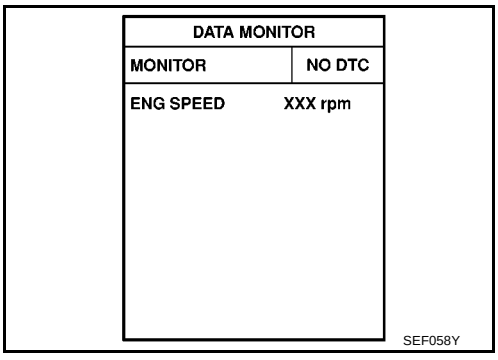
Engine operation condition in fail-fail safe mode	
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range.Therefore,acceleration will be poor.	
Vehicle condition	Driving condition
When engine is idling	Normal
When accelerating	Poor acceleration

DTC Confirmation Procedure

EBS00OCE

WITH CONSULT-II

1. Turn ignition switch ON.
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC with CONSULT-II.
4. Select “DATA MONITOR” mode with CONSULT-II.
5. If 1st trip DTC is detected, go to EC-398, "Diagnostic Procedure"
.



WITH GST

Follow the procedure “WITH CONSULT-II” above.

REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)

MBWA0574E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	W	Stop lamp switch	**[Engine is running]** ● Brake pedal: Fully released	Approximately 0V
			[Engine is running] ● Brake pedal: Depressed	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

EBS00OCG

1. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Check the stop lamp when depressing and releasing the brake pedal.

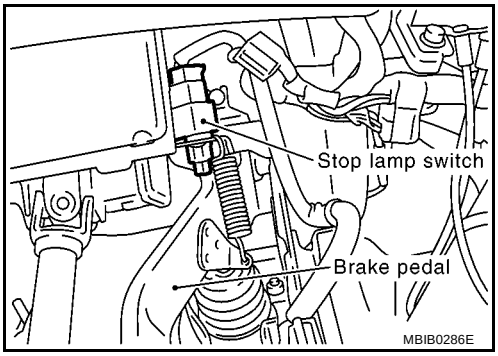
Brake pedal	Stop lamp
Fully released	Not illuminated
Depressed	Illuminated

OK or NG

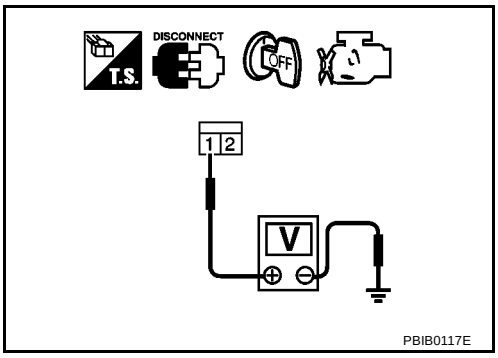
OK >> GO TO 4.
NG >> GO TO 2.

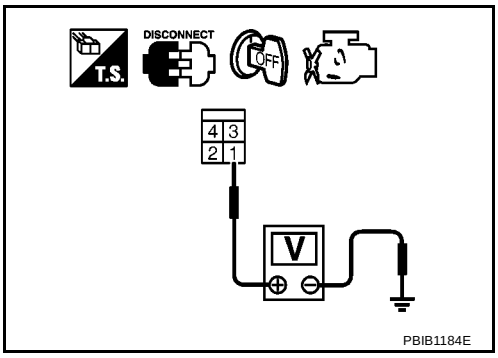
2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.



2. Check voltage between stop lamp switch terminal 1 and ground with CONSULT-II or tester.





Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector M16
- Harness connectors M1, E101 (LHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open and short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 101 and stop lamp switch terminal 2.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Joint connector-3 (RHD models)
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK STOP LAMP SWITCH

Refer to EC-401, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace stop lamp switch.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

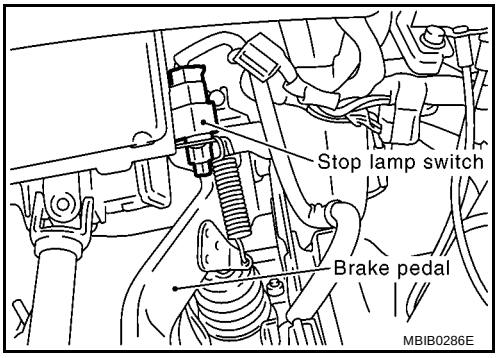
>> **INSPECTION END**

Component Inspection

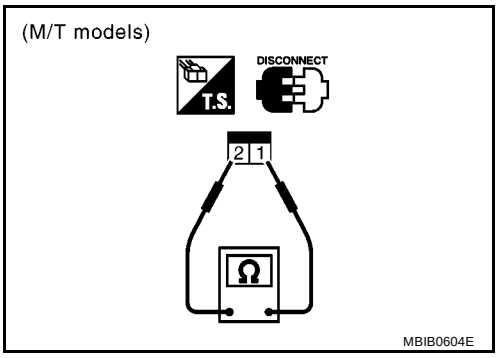
EBS00OCH

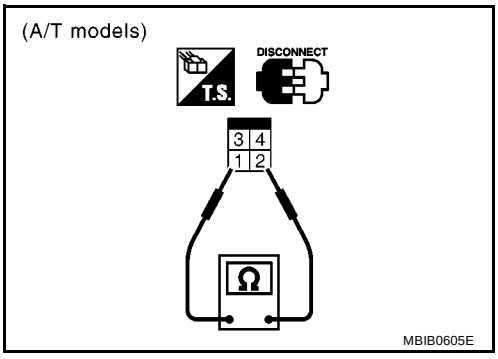
STOP LAMP SWITCH

1. Disconnect stop lamp switch harness connector.



2. Check continuity between stop lamp switch terminals 1 and 2 under the following conditions.





Conditions	Continuity
Brake pedal fully released	Should not exist.
Brake pedal depressed	Should exist.

If NG, adjust brake pedal installation, refer to BR-6, "BRAKE PEDAL" , and perform step 2 again.

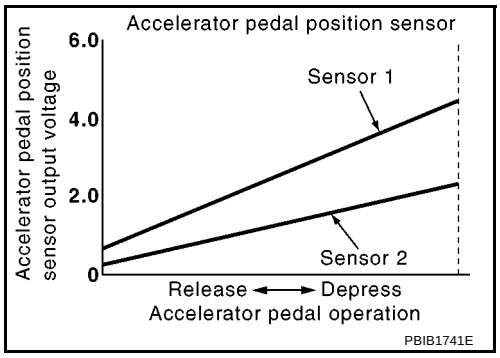
DTC P2122, P2123 APP SENSOR

PFP:18002

Component Description

EBS010C9

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.



CONSULT-II Reference Value in Data Monitor Mode

EBS010CA

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage.

On Board Diagnosis Logic

EBS010CB

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	● Harness or connectors (The APP sensor 1 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 1)
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

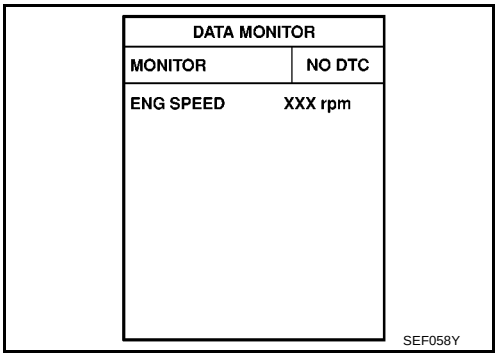
DTC Confirmation Procedure

EBS010CC

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-407, "Diagnostic Procedure" .

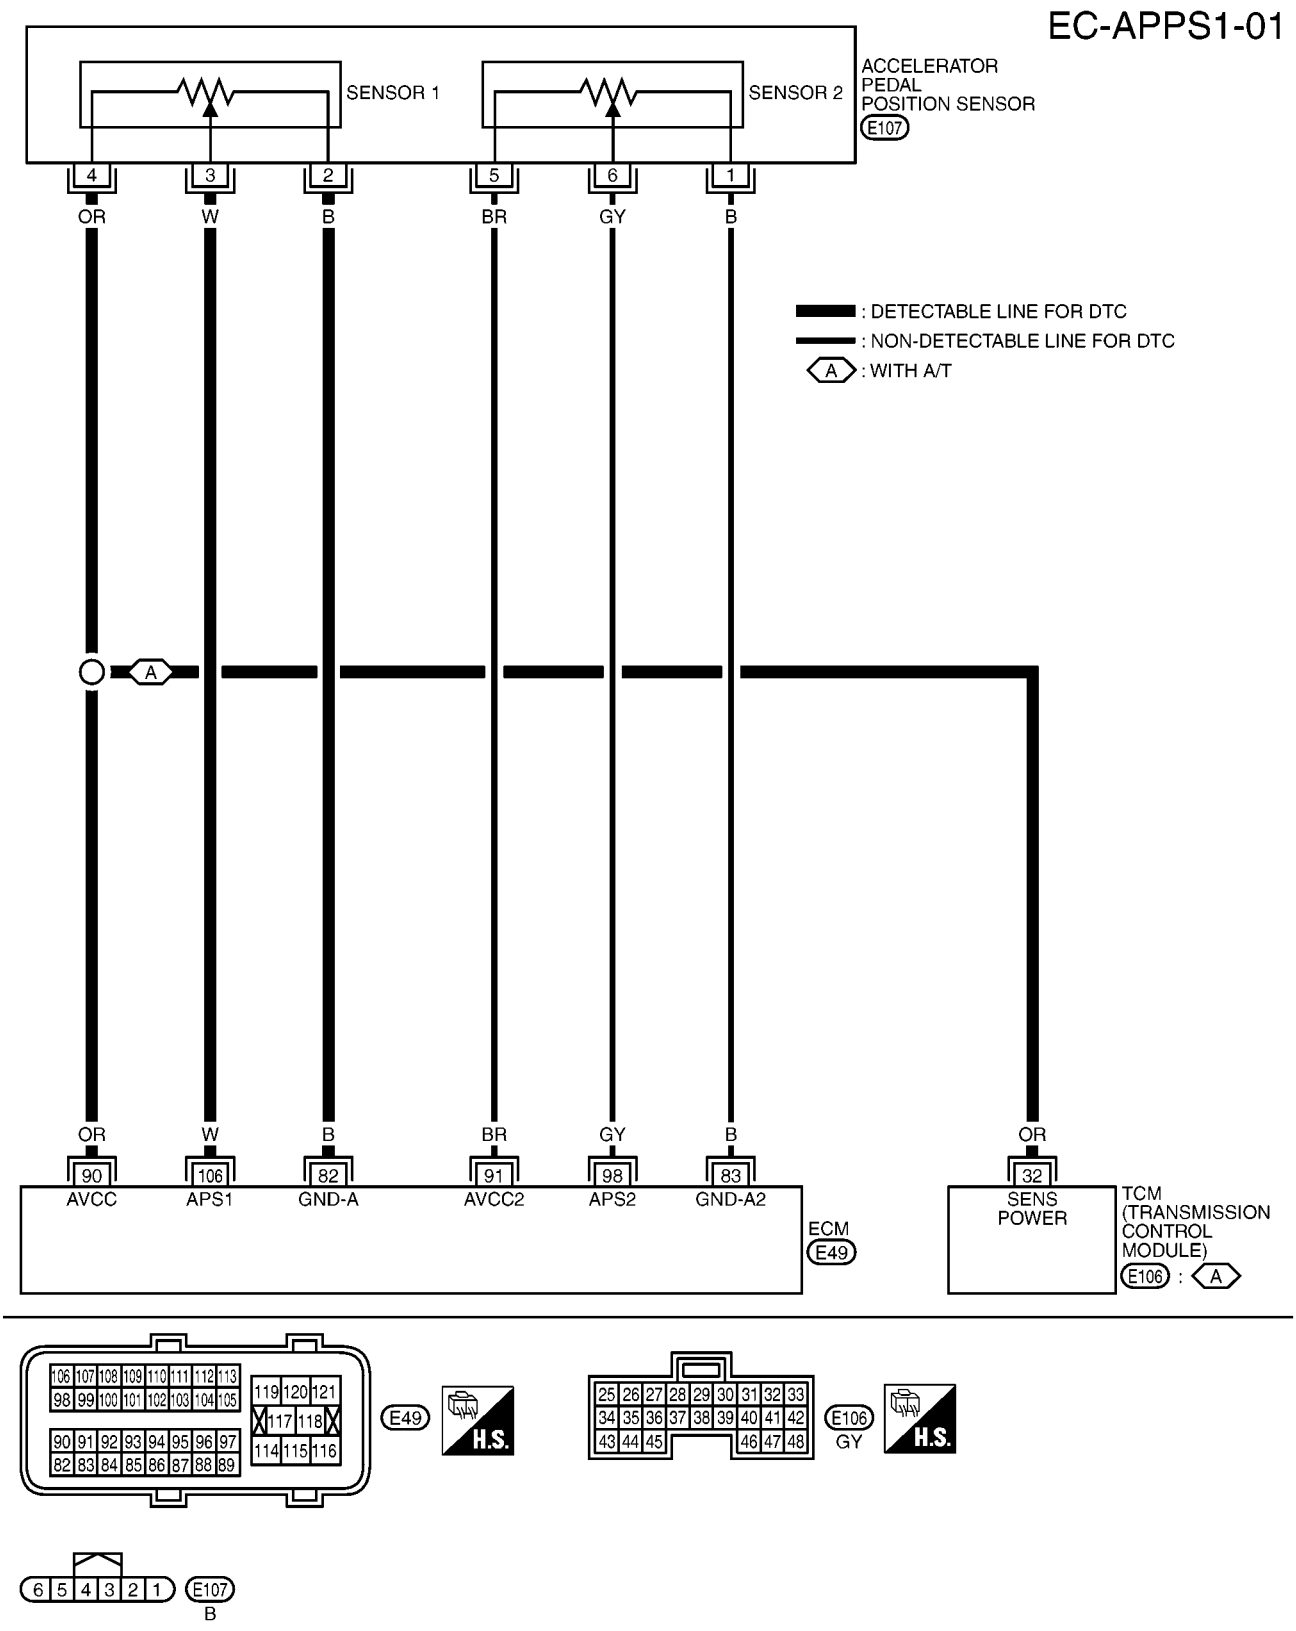


WITH GST

Follow the procedure “WITH CONSULT-II” above.

Wiring Diagram
LHD MODELS

EBS010CD



MBWA0279E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	3.9 - 4.7V

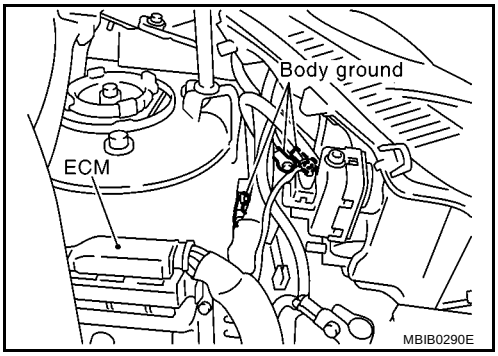
Diagnostic Procedure

EBS010CE

1. RETIGHTEN GROUND SCREWS

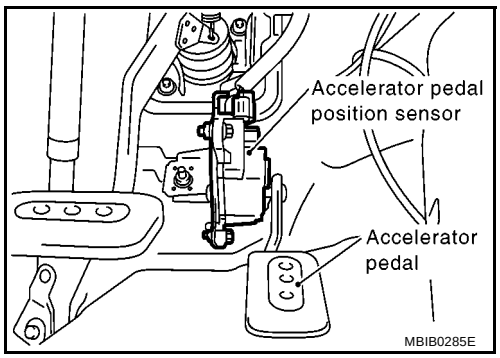
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



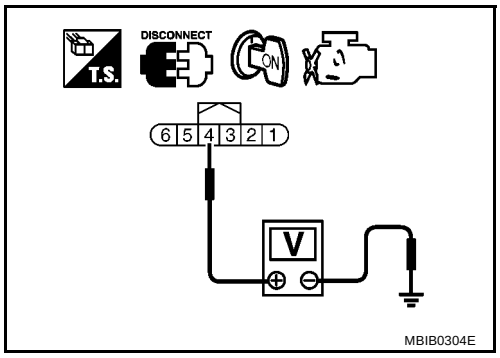
2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 4 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 82 and APP sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 106 and APP sensor terminal 3. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-409, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. REPLACE APP SENSOR

1. Replace the accelerator pedal position sensor.
2. Perform EC-42, "Accelerator Pedal Released Position Learning" .
3. Perform EC-42, "Throttle Valve Closed Position Learning" .
4. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

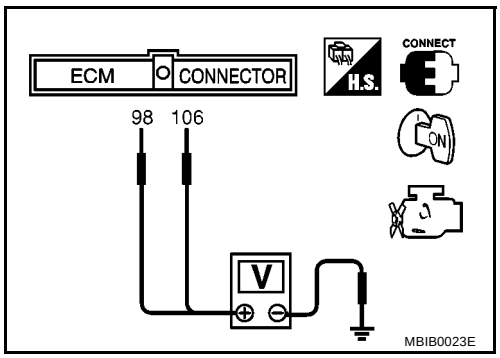
EBS010CF

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V



4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-42, "Accelerator Pedal Released Position Learning" .
6. Perform EC-42, "Throttle Valve Closed Position Learning" .
7. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS010CG

ACCELERATOR PEDAL

Refer to ACC-2, "ACCELERATOR CONTROL SYSTEM" .

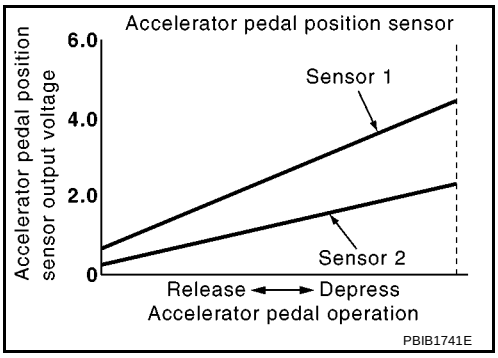
DTC P2127, P2128 APP SENSOR

PFP:18002

Component Description

EBS010CH

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.



CONSULT-II Reference Value in Data Monitor Mode

EBS010CI

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differ from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS010CJ

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2127 2127	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	● Harness or connectors (The APP sensor 2 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 2)
P2128 2128	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of throttle valve to be slower than the normal condition. So, the acceleration will be poor.

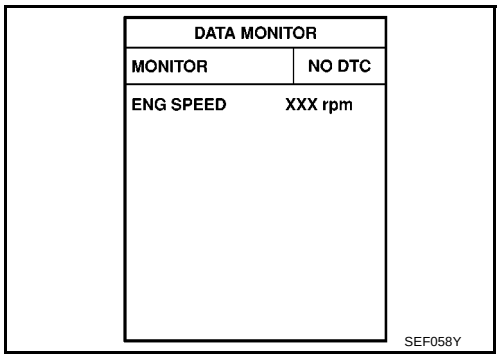
DTC Confirmation Procedure

EBS010CK

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-416, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

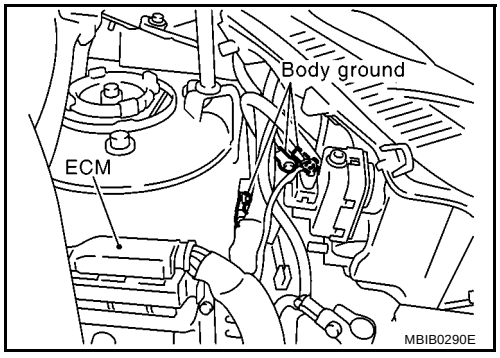
Diagnostic Procedure

EBS010CM

1. RETIGHTEN GROUND SCREWS

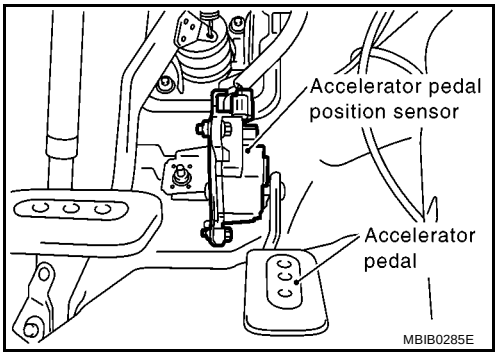
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



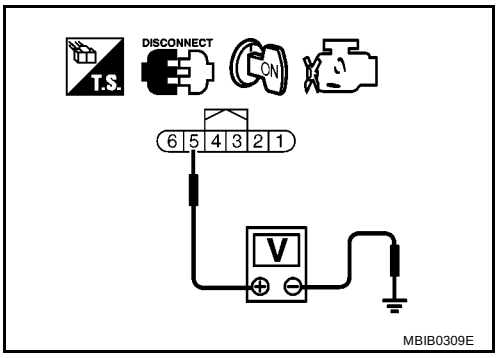
2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 5 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 83 and APP sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 98 and APP sensor terminal 6.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-418, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. REPLACE APP SENSOR

1. Replace the accelerator pedal position sensor.
2. Perform EC-42, "Accelerator Pedal Released Position Learning" .
3. Perform EC-42, "Throttle Valve Closed Position Learning" .
4. Perform EC-42, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

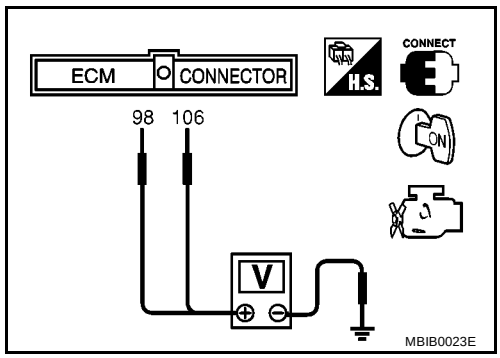
EBS010CN

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V



4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-42, "Accelerator Pedal Released Position Learning" .
6. Perform EC-42, "Throttle Valve Closed Position Learning" .
7. Perform EC-42, "Idle Air Volume Learning" .

Remove and Installation

EBS010CO

ACCELERATOR PEDAL

Refer to ACC-2, "ACCELERATOR CONTROL SYSTEM" .

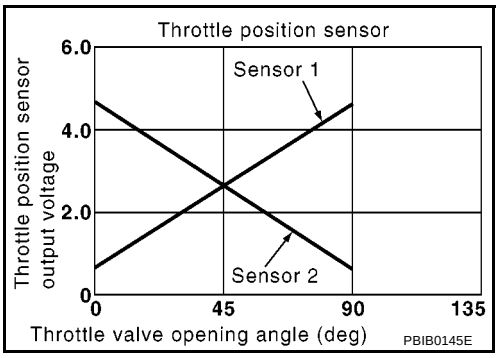
DTC P2135 TP SENSOR

PFP:16119

Component Description

EBS010CP

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS010CQ

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T model) 1st (M/T model)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS010CR

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2135 2135	Throttle position sensor circuit range/performance problem	Rationally incorrect voltage is sent to ECM compared with the signals from TP sensor 1 and TP sensor 2.	● Harness or connector (The TP sensor 1 and 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

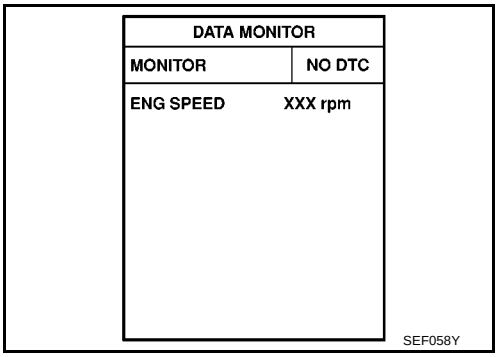
DTC Confirmation Procedure

EBS010CS

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-423, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

IGNITION SIGNAL

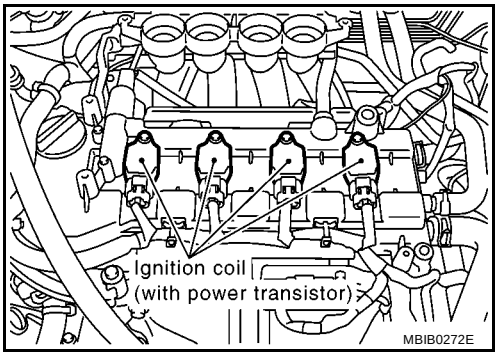
PFP:22448

Component Description

EBS00OCI

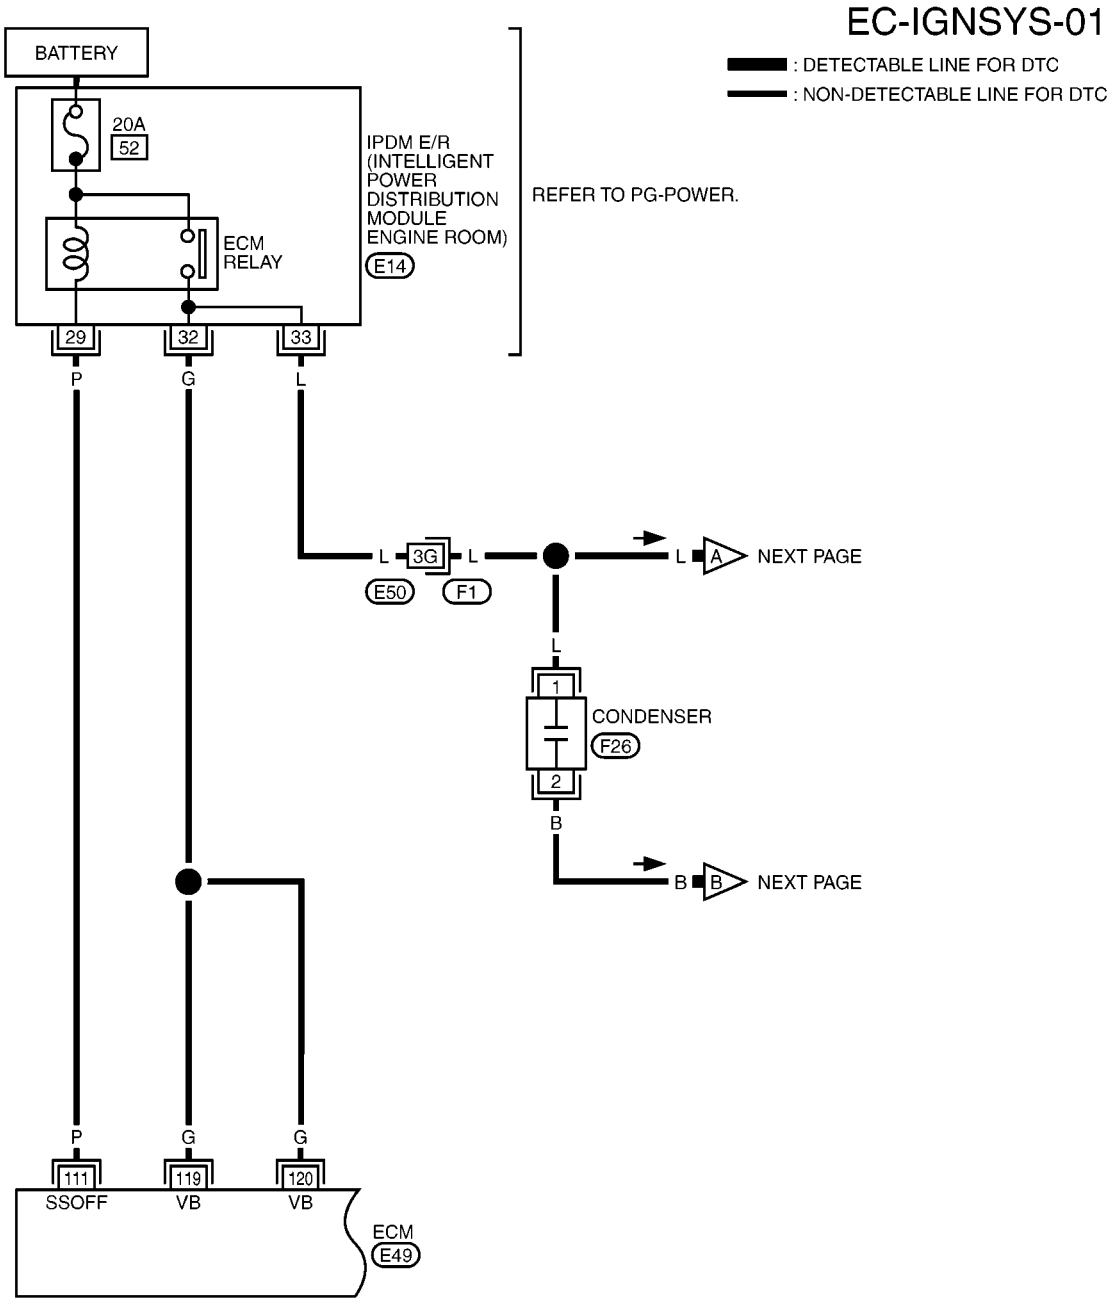
IGNITION COIL & POWER TRANSISTOR

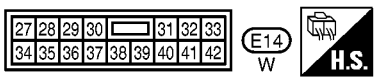
The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns on and off the ignition coil primary circuit. This on-off operation induces the proper high voltage in the coil secondary circuit.

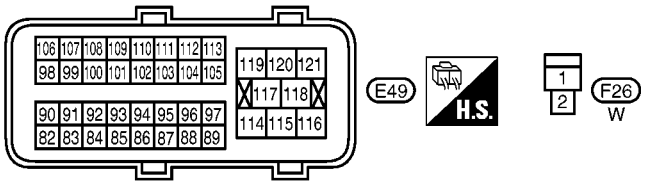


Wiring Diagram

EBS00OCJ







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0296E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - 0.2V★  PBIB0522E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00OCK

1. CHECK ENGINE START

Turn ignition switch OFF, and restart engine.
Is engine running?

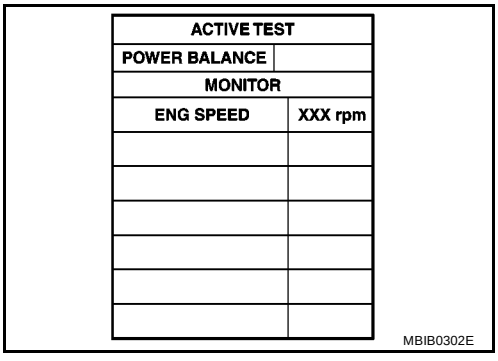
Yes or No

Yes (With CONSULT-II)>>GO TO 2.
Yes (Without CONSULT-II)>>GO TO 3.
No >> GO TO 4.

2. CHECK OVERALL FUNCTION

With CONSULT-II

1. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-II.
2. Make sure that each circuit produces a momentary engine speed drop.



OK or NG

OK >> **INSPECTION END**
NG >> GO TO 9.

3. CHECK OVERALL FUNCTION

Without CONSULT-II

1. Let engine idle.
2. Read the voltage signal between ECM terminals 60, 61, 79, 80 and ground with an oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown in the figure.

NOTE:
The pulse cycle changes depending on rpm at idle.

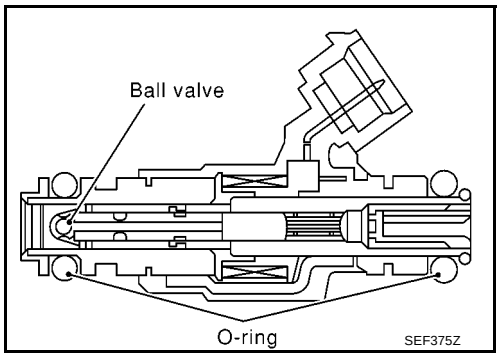
INJECTOR CIRCUIT

PFP:16600

Component Description

EBS00OCN

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the injector circuit, the coil in the injector is energized. The energized coil pulls the needle valve back and allows fuel to flow through the injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OCO

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
B/FUEL SCHDL	● Engine: After warming up ● Shift lever: N (A/T), Neutral (M/T) ● Air conditioner switch: OFF ● No load	Idle	2.5 - 3.5 msec

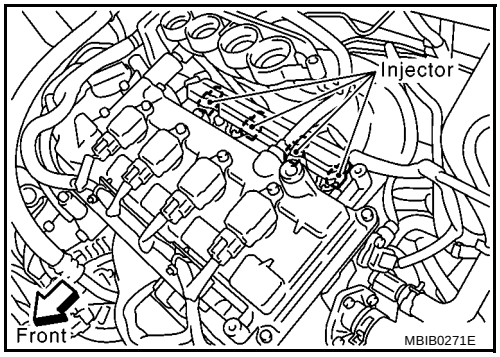
3. Turn ignition switch ON.

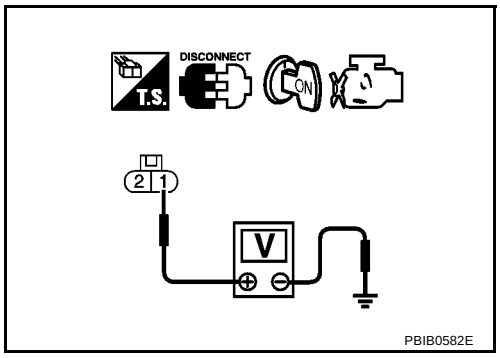


4. Check voltage between injector terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.



4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- IPDM E/R connector E13
- 10A fuse
- Harness for open or short between injector and fuse

>> Repair harness or connectors.

5. CHECK INJECTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between injector terminal 2 and ECM terminals 22, 23, 41, 42. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK INJECTOR

Refer to EC-449, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace injector.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

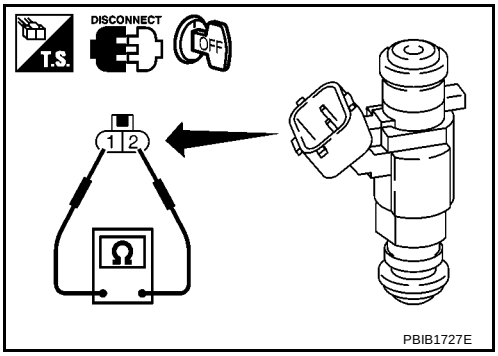
Component Inspection

EBS00OCR

INJECTOR

1. Disconnect injector harness connector.
2. Check resistance between terminals as shown in the figure.

Resistance: 12.1 - 12.9Ω [at 20°C (68°F)]



Removal and Installation

EBS00OCS

INJECTOR

Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .

FUEL PUMP CIRCUIT

PFP:17042

Description

EBS00OCT

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay
Battery	Battery voltage*		

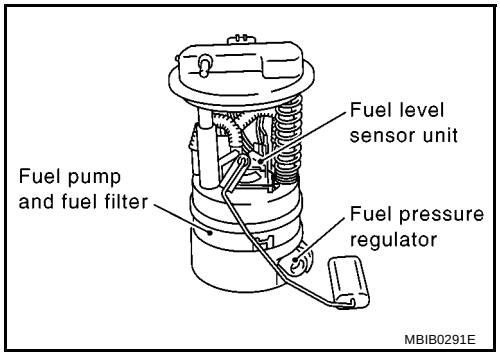
*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned on to improve engine startability. If the ECM receives a engine speed signal from the crankshaft position sensor (POS) and camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation
Ignition switch is turned to ON.	Operates for 1 second.
Engine running and cranking	Operates.
When engine is stopped	Stops in 1.5 seconds.
Except as shown above	Stops.

COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OCU

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION

EBS00OCY

FUEL PUMP

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

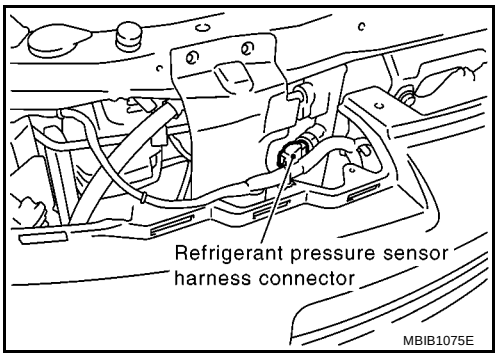
REFRIGERANT PRESSURE SENSOR

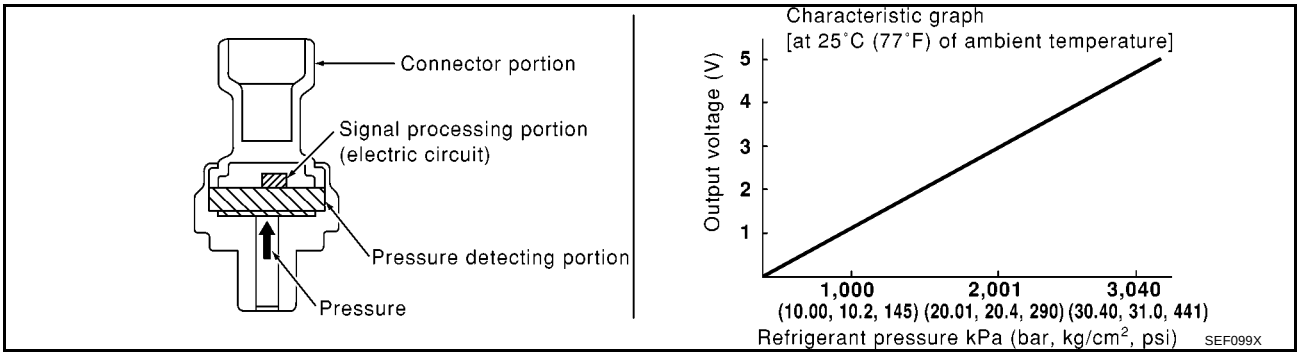
PFP:92136

Component Description

EBS00OCZ

The refrigerant pressure sensor is installed at the liquid tank of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

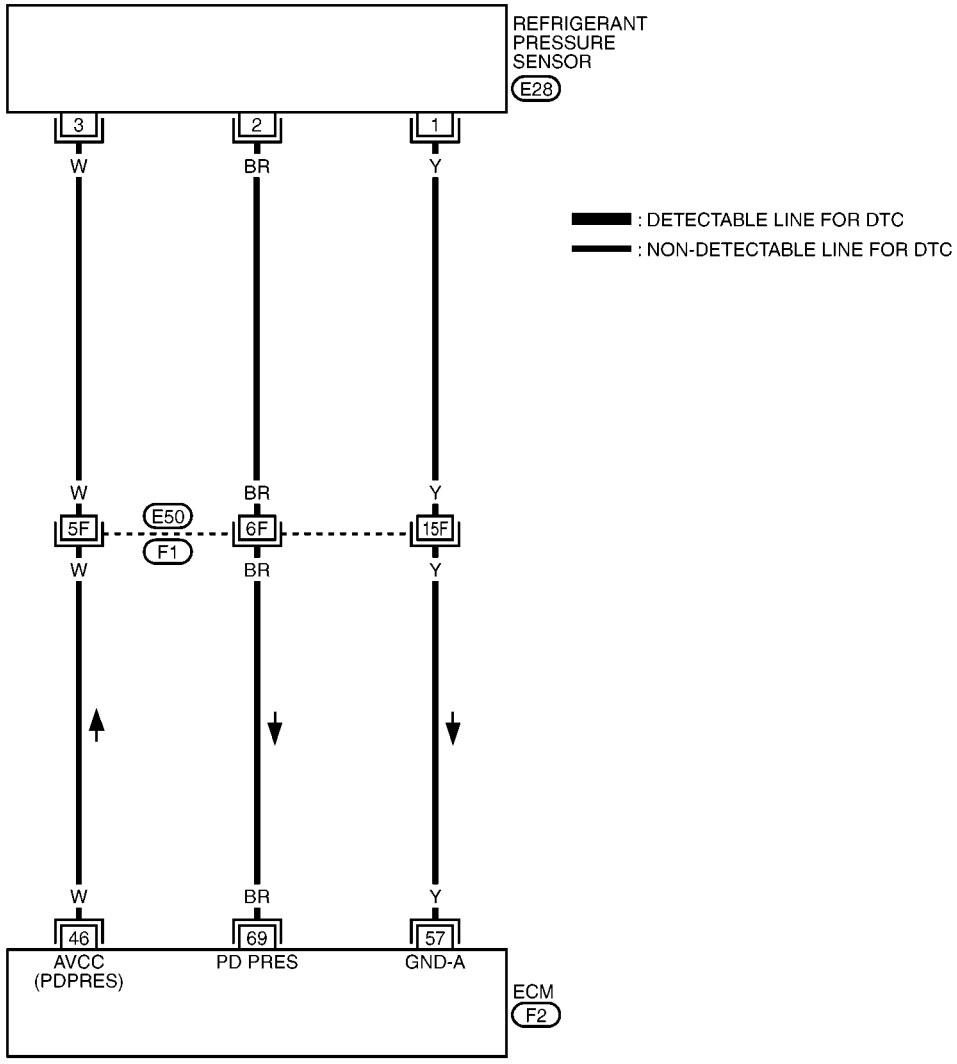


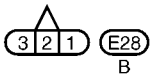


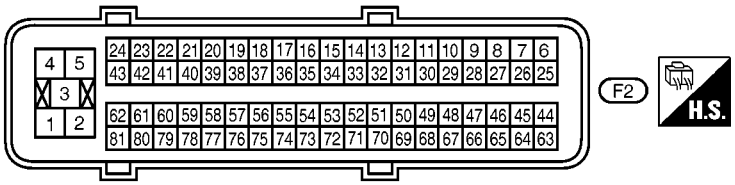
Wiring Diagram

EBS00OD0

EC-RP/SEN-01







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0300E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
46	W	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch ON]**	Approximately 5V
57	Y	Sensor ground (Refrigerant pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
69	BR	Refrigerant pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Both A/C switch and blower switch are ON. (Compressor operates.)	1.0 - 4.0V

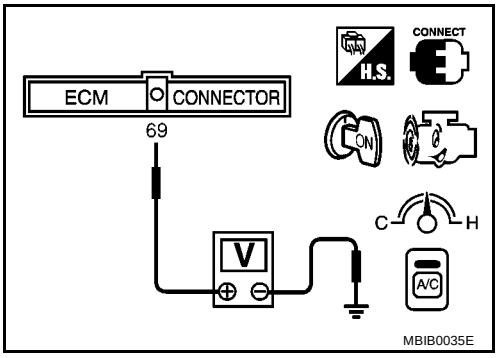
Diagnostic Procedure

EBS00OD1

1. CHECK REFRIGERANT PRESSURE SENSOR OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and blower switch ON.
3. Check voltage between ECM terminal 69 and ground with CONSULT-II or tester.

Voltage: 1.0 - 4.0V

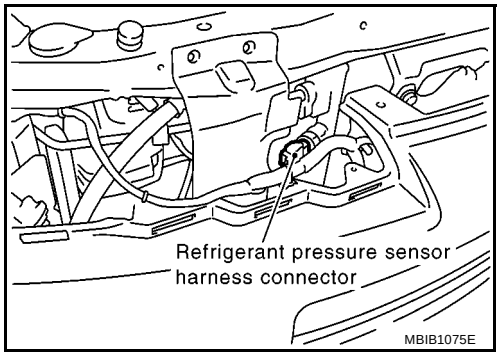


OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

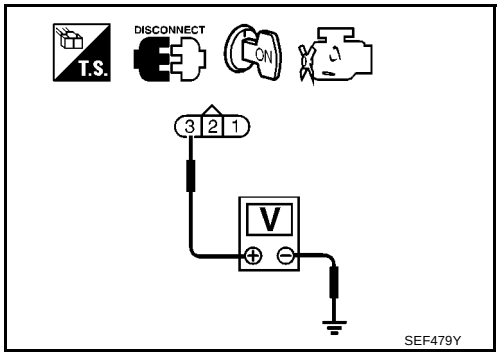
2. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn A/C switch and blower switch OFF.
2. Stop engine.
3. Disconnect refrigerant pressure sensor harness connector.
4. Turn ignition switch ON.



5. Check voltage between refrigerant pressure sensor terminal 3 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair harness or connectors.

4. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 57 and refrigerant pressure sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 69 and refrigerant pressure sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-124, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace refrigerant pressure sensor.
NG >> Repair or replace.

Removal and Installation

EBS00OD2

REFRIGERANT PRESSURE SENSOR

Refer to ATC-84, "REFRIGERANT LINES" (Automatic air conditioner models) or MTC-61, "REFRIGERANT LINES" (Manual air conditioner models).

ELECTRICAL LOAD SIGNAL

PFP:25350

Description

EBS00OD3

The electrical load signal (Headlamp switch signal, rear window defogger switch signal, etc.) is transferred through the CAN communication line from IPDM E/R to ECM.

CONSULT-II Reference Value in Data Monitor Mode

EBS00OD4

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
LOAD SIGNAL	● Ignition switch: ON	Rear window defogger switch is ON and/or lighting switch is 2nd.	ON
		Rear window defogger switch is OFF and lighting switch is OFF.	OFF

Diagnostic Procedure

EBS00OD5

1. INSECTION START

Do you have CONSULT-II?

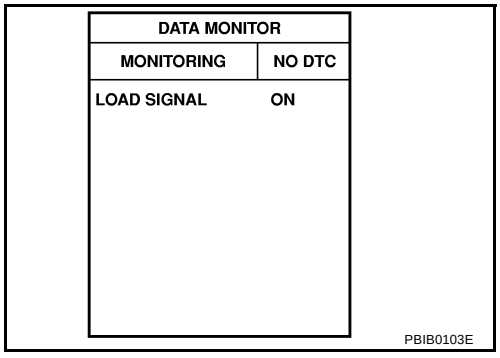
Yes or No

Yes >> GO TO 2.
No >> GO TO 6.

2. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-I

1. Turn ignition switch ON.
2. Connect CONSULT-II and select “DATA MONITOR” mode.
3. Select “LOAD SIGNAL” and check indication under the following conditions.

Condition	Indication
Rear window defogger switch ON	ON
Rear window defogger switch OFF	OFF



OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

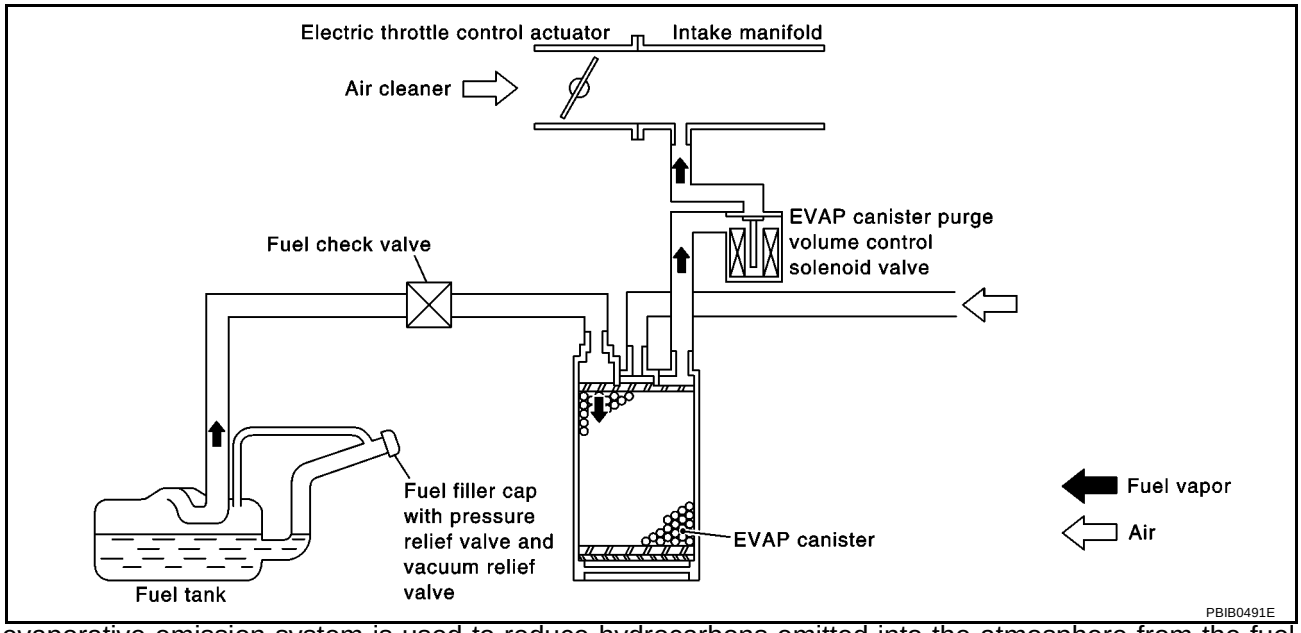
EVAPORATIVE EMISSION SYSTEM

PFP:14950

Description

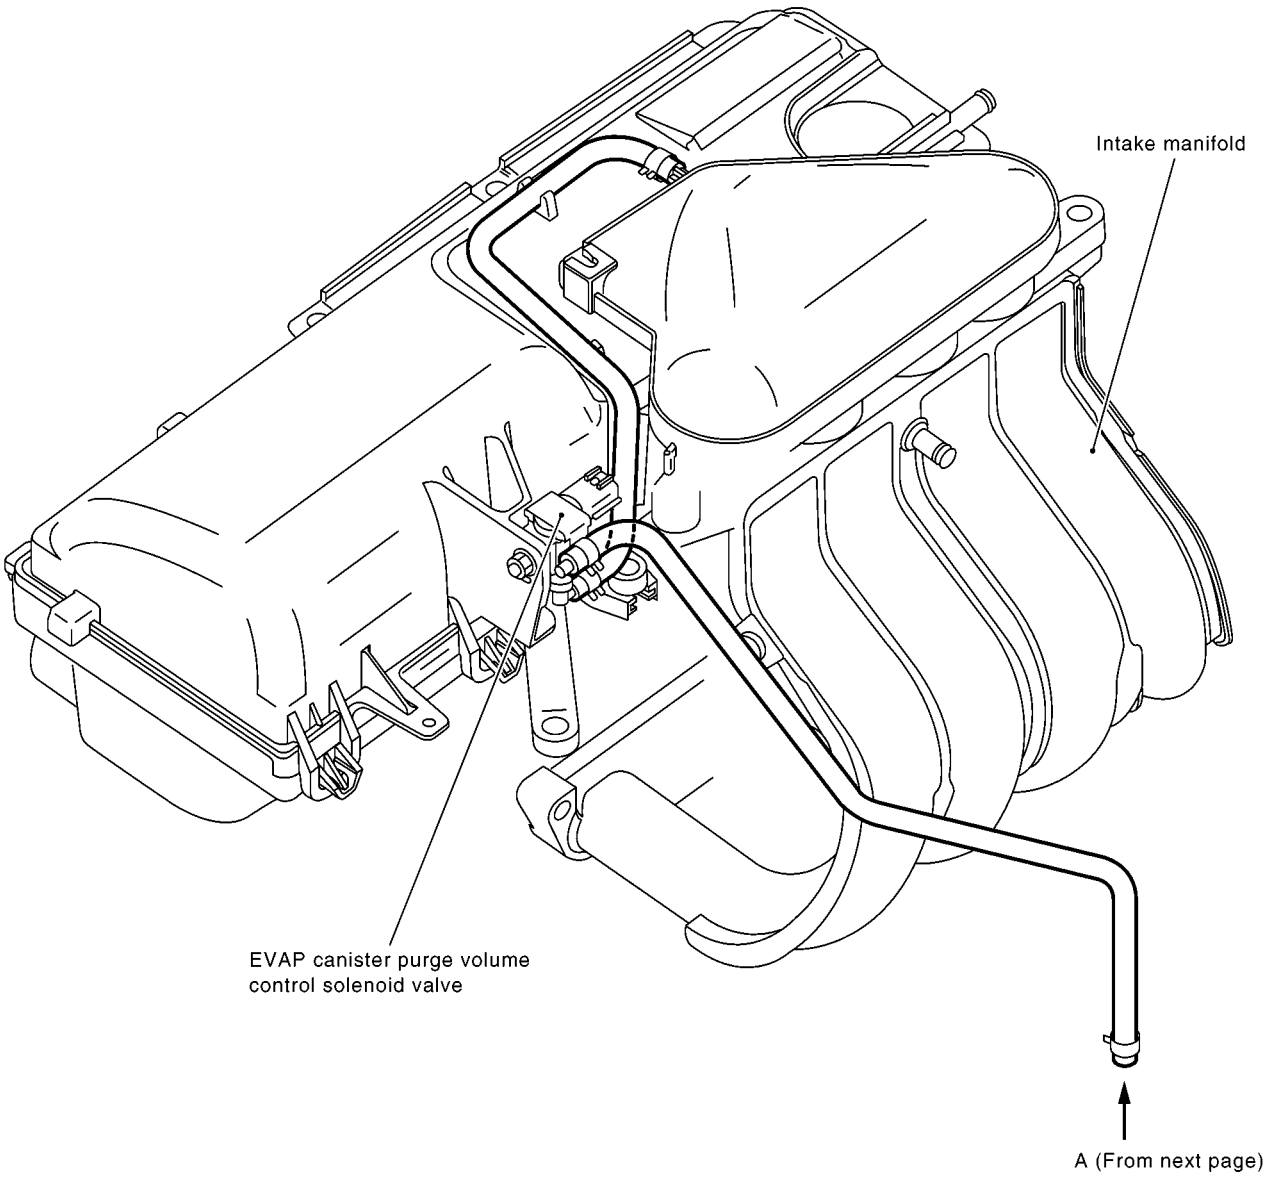
EBS00OD8

SYSTEM DESCRIPTION



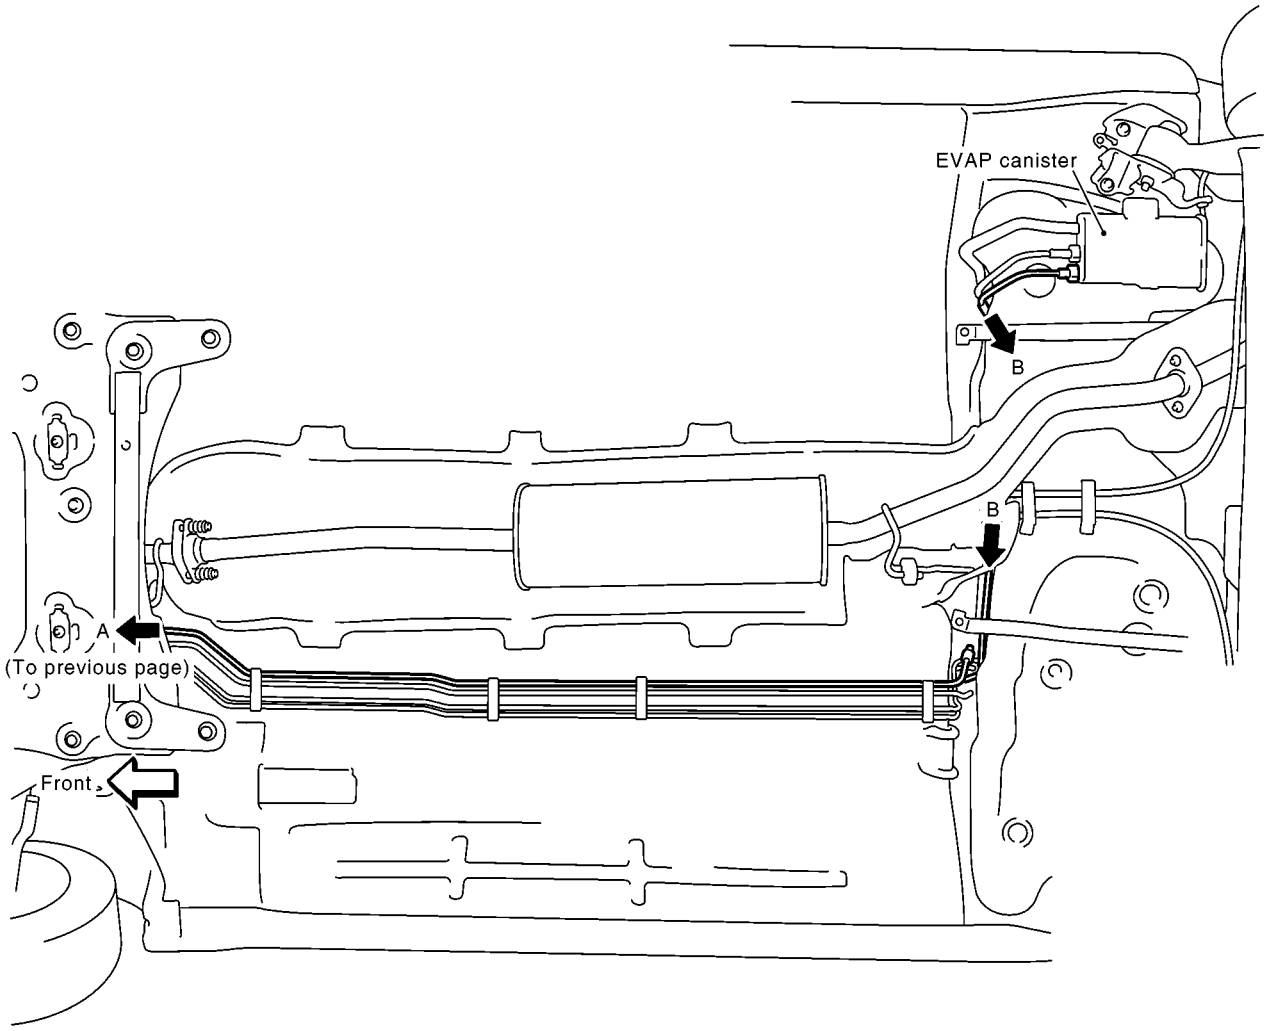
The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.
The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.
The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.
EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

EVAPORATIVE EMISSION LINE DRAWING



NOTE: Do not use soapy water or any type of solvent while installing vacuum hose or purge hoses.

MBIB0544E



MBIB0541E

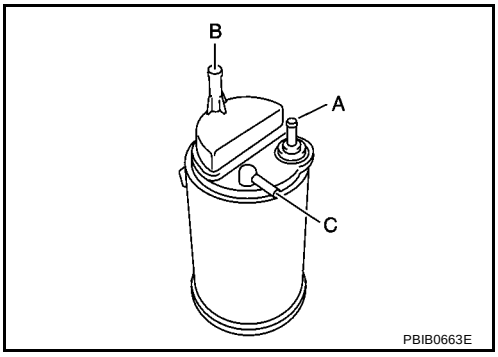
Component Inspection

EBS00OD9

EVAP CANISTER

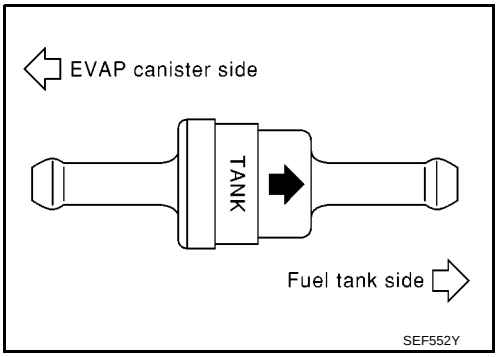
Check EVAP canister as follows:

1. Block port **B** . Orally blow air through port **A** . Check that air flows freely through port **C** .
2. Block port **A** . Orally blow air through port **B** . Check that air flows freely through port **C** .



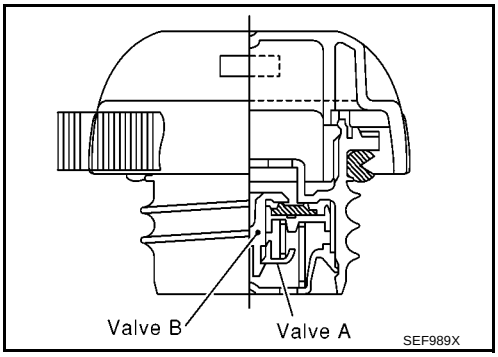
FUEL CHECK VALVE

1. Blow air through connector on fuel tank side. A considerable resistance should be felt and a portion of air flow should be directed toward the EVAP canister side.
2. Blow air through connector on EVAP canister side. Air flow should be smoothly directed toward fuel tank side.
3. If fuel check valve is suspected of not properly functioning in steps 1 and 2 above, replace it.



FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

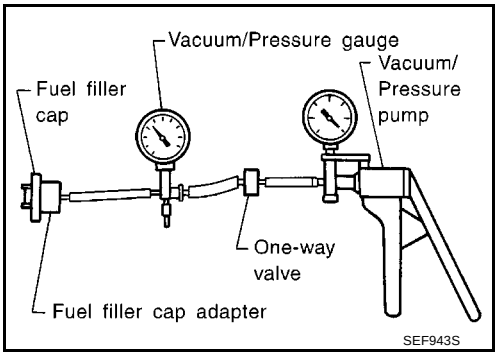
1. Wipe clean valve housing.



2. Check valve opening pressure and vacuum.

Pressure:	**15.3 - 20.0 kPa (0.153 - 0.200 bar, 0.156 - 0.204 kg/cm^2 , 2.22 - 2.90 psi)**
Vacuum:	**–6.0 to –3.4 kPa (–0.060 to –0.034 bar, –0.061 to –0.035 kg/cm^2 , –0.87 to –0.49 psi)**

3. If out of specification, replace fuel filler cap as an assembly.



EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-283, "Component Inspection" .

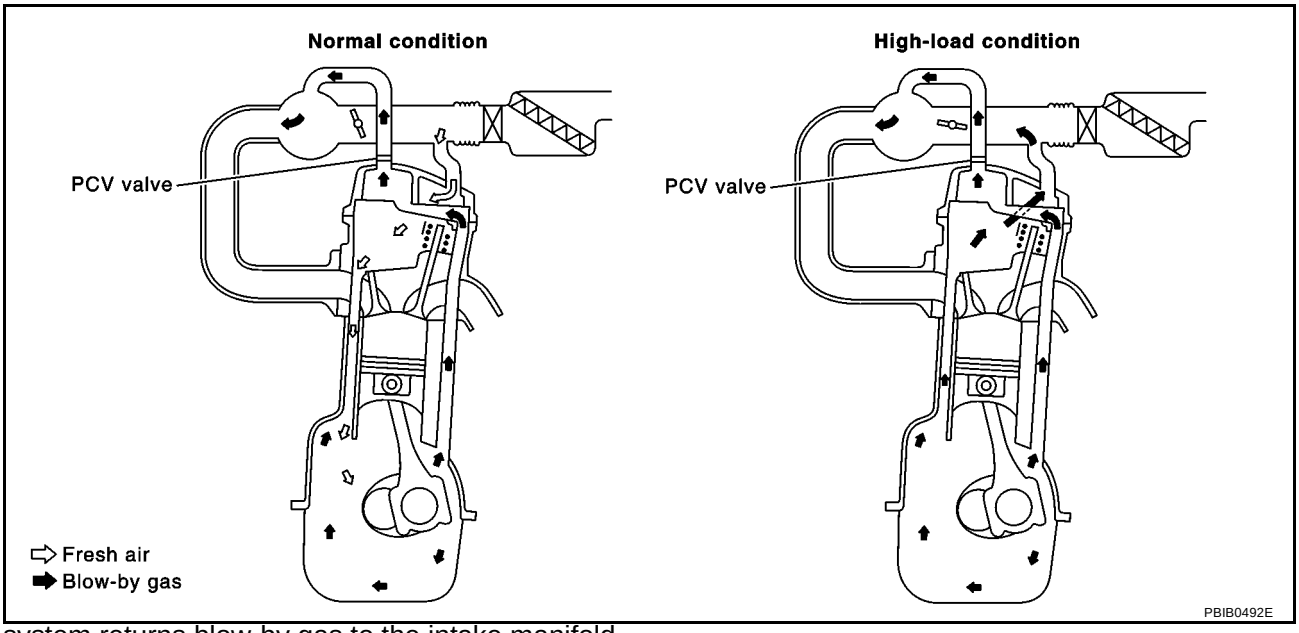
POSITIVE CRANKCASE VENTILATION

PFP:11810

Description

EBS00ODA

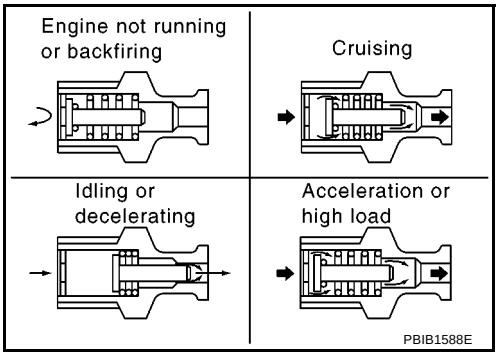
SYSTEM DESCRIPTION



This system returns blow-by gas to the intake manifold.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

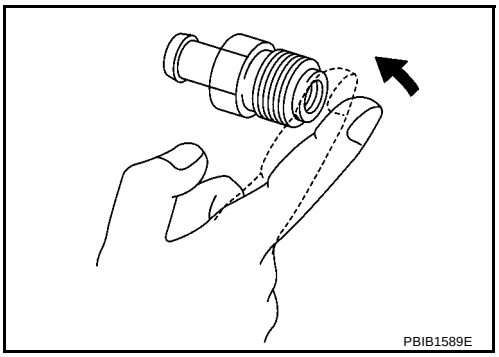


Component Inspection

EBS00ODB

PCV (POSITIVE CRANKCASE VENTILATION) VALVE

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.



PCV VALVE VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EBS00OS4

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EBS011UT

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

RHD MODELS

On Board Diagnostic (OBD) System of Engine and A/T

EBS00OJU

The ECM has an on board diagnostic system. It will light up the malfunction indicator (MI) to warn the driver of a malfunction causing emission deterioration.

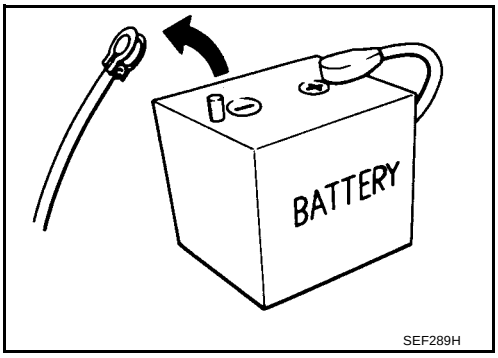
CAUTION:

- **Be sure to turn the ignition switch OFF and disconnect the battery ground cable before any repair or inspection work. The open/short circuit of related switches, sensors, solenoid valves, etc. will cause the MI to light up.**
- **Be sure to connect and lock the connectors securely after work. A loose (unlocked) connector will cause the MI to light up due to the open circuit. (Be sure the connector is free from water, grease, dirt, bent terminals, etc.)**
- **Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG-99, "HARNESS CONNECTOR" .**
- **Be sure to route and secure the harnesses properly after work. The interference of the harness with a bracket, etc. may cause the MI to light up due to the short circuit.**
- **Be sure to connect rubber tubes properly after work. A misconnected or disconnected rubber tube may cause the MI to light up due to the malfunction of the fuel injection system, etc.**
- **Be sure to erase the unnecessary malfunction information (repairs completed) from the ECM.**

Precaution

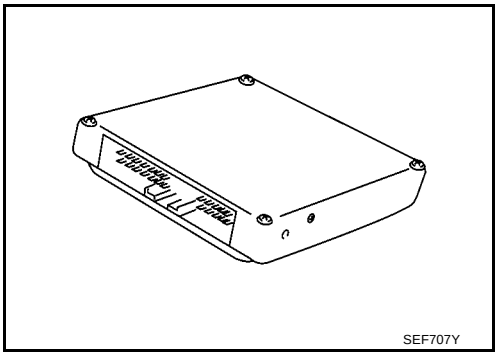
EBS00OJV

- **Always use a 12 volt battery as power source.**
- **Do not attempt to disconnect battery cables while engine is running.**
- **Before connecting or disconnecting the ECM harness connector, turn ignition switch OFF and disconnect battery ground cable. Failure to do so may damage the ECM because battery voltage is applied to ECM even if ignition switch is turned off.**
- **Before removing parts, turn ignition switch OFF and then disconnect battery ground cable.**



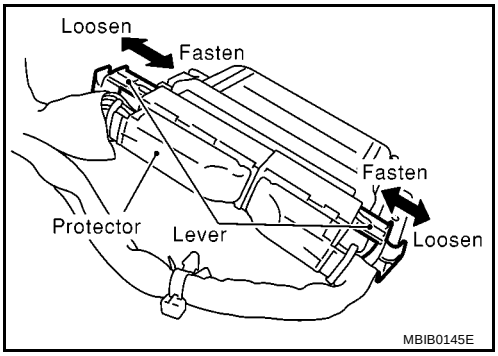
SEF289H

- **Do not disassemble ECM.**
- **If battery cable is disconnected, the memory will return to the initial ECM values.**
  The ECM will now start to self-control at its initial values. Engine operation can vary slightly when the cable is disconnected. However, this is not an indication of a malfunction. Do not replace parts because of a slight variation.



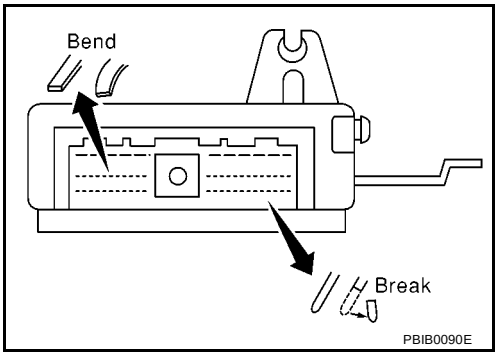
SEF707Y

- **When connecting ECM harness connector, fasten it securely with levers as far as they will go as shown in the figure.**



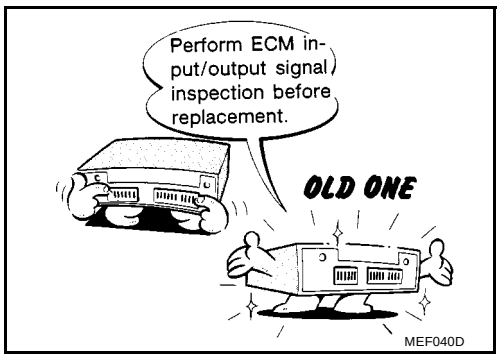
MBIB0145E

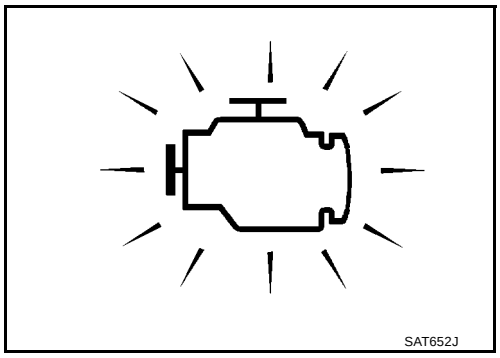
- **When connecting or disconnecting pin connectors into or from ECM, take care not to damage pin terminals (bend or break).**
  Make sure that there are not any bends or breaks on ECM pin terminal, when connecting pin connectors.
- **Securely connect ECM harness connectors.**
  A poor connection can cause an extremely high (surge) voltage to develop in coil and condenser, thus resulting in damage to ICs.
- **Keep engine control system harness at least 10 cm (4 in) away from adjacent harness, to prevent engine control system malfunctions due to receiving external noise, degraded operation of ICs, etc.**
- **Keep engine control system parts and harness dry.**



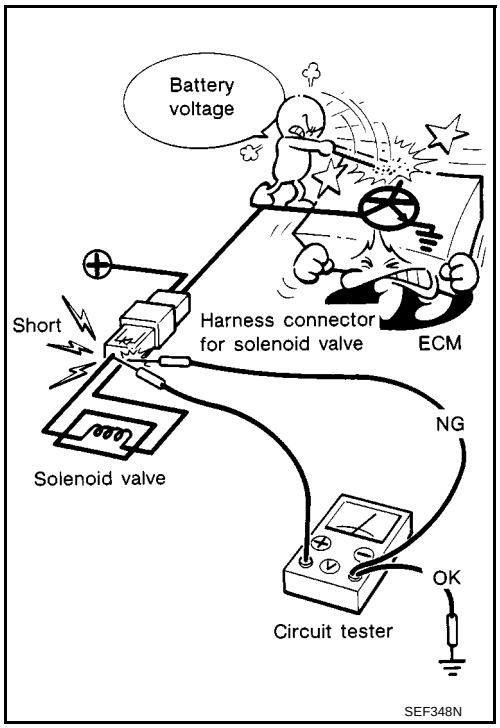
PBIB0090E

- **Before replacing ECM, perform ECM Terminals and Reference Value inspection and make sure ECM functions properly. Refer to EC-539, "ECM Terminals and Reference Value" .**
- **Handle manifold absolute pressure sensor carefully to avoid damage.**
- **Do not clean air clear element with any type of detergent.**
- **Do not disassemble electric throttle control actuator.**
- **Even a slight leak in the air intake system can cause serious incidents.**
- **Do not shock or jar the camshaft position sensor (PHASE), crankshaft position sensor (POS).**
- **After performing each TROUBLE DIAGNOSIS, perform DTC Confirmation Procedure or Overall Function Check.**
  The DTC should not be displayed in the DTC Confirmation Procedure if the repair is completed. The Overall Function Check should be a good result if the repair is completed.

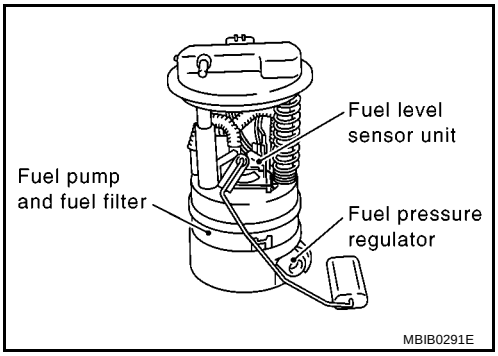




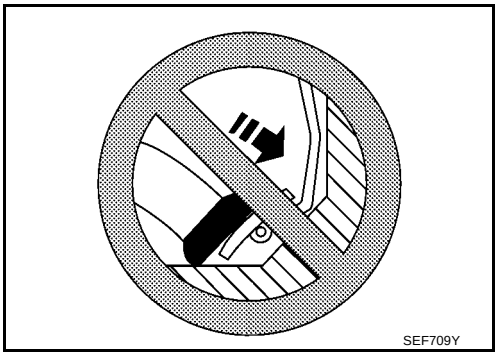
- **When measuring ECM signals with a circuit tester, connect a break-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.**
- **When measuring ECM signals with a circuit tester, never allow the two tester probes to contact.**
  Accidental contact of probes will cause a short circuit and damage the ECM power transistor.
- **Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.**



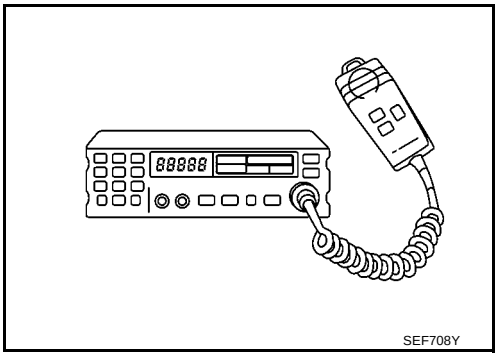
- **Do not operate fuel pump when there is no fuel in lines.**
- **Tighten fuel hose clamps to the specified torque.**



- **Do not depress accelerator pedal when starting.**
- **Immediately after starting, do not rev up engine unnecessarily.**
- **Do not rev up engine just prior to shutdown.**



- **When installing C.B. ham radio or a mobile phone, be sure to observe the following as it may adversely affect electronic control systems depending on installation location.**
  - **Keep the antenna as far as possible from the electronic control units.**
  - **Keep the antenna feeder line more than 20 cm (8 in) away from the harness of electronic controls.**
    Do not let them run parallel for a long distance.
  - **Adjust the antenna and feeder line so that the standing-wave radio can be kept smaller.**
  - **Be sure to ground the radio to vehicle body.**



Wiring Diagrams and Trouble Diagnosis

EBS00OJW

When you read wiring diagrams, refer to the following:

- GI-14, "How to Read Wiring Diagrams"
- PG-4, "POWER SUPPLY ROUTING" for power distribution circuit

When you perform trouble diagnosis, refer to the following:

- GI-11, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES"
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident"

Knock sensor	Engine knocking condition		
Battery	Battery voltage*3		
Heated oxygen sensor 2*1	Density of oxygen in exhaust gas		
Vehicle speed signal*2	Vehicle speed		
Air conditioner switch*2	Air conditioner operation		

*1: This sensor is not used to control the engine system under normal conditions.
*2: This signal is sent to the ECM through CAN communication line.
*3: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

The amount of fuel injected from the fuel injector is determined by the ECM. The ECM controls the length of time the valve remains open (injection pulse duration). The amount of fuel injected is a program value in the ECM memory. The program value is preset by engine operating conditions. These conditions are determined

by input signals (for engine speed and intake air volume) from the crankshaft position sensor, the manifold absolute pressure sensor and intake air temperature sensor.

VARIOUS FUEL INJECTION INCREASE/DECREASE COMPENSATION

In addition, the amount of fuel injected is compensated to improve engine performance under various operating conditions as listed below.

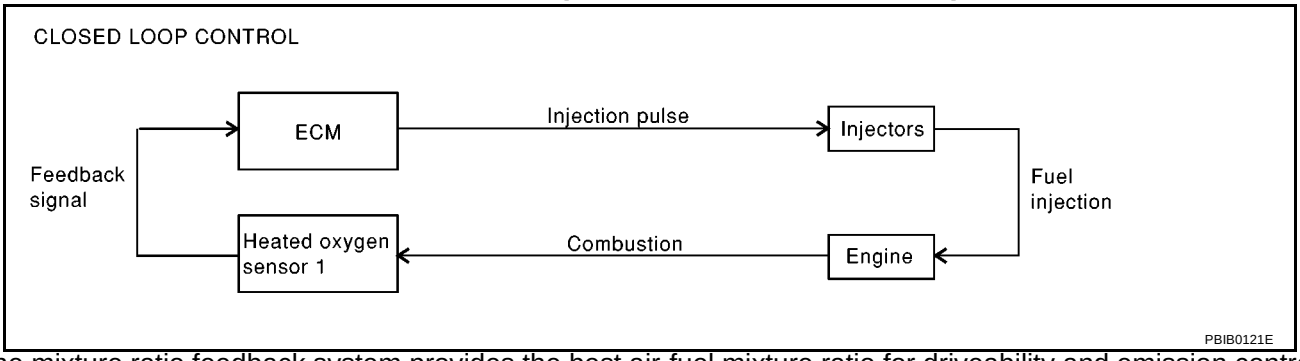
<Fuel increase>

- During warm-up
- When starting the engine
- During acceleration
- Hot-engine operation
- When selector lever is changed from N to D (A/T models)
- High-load, high-speed operation

<Fuel decrease>

- During deceleration
- During high engine speed operation

MIXTURE RATIO FEEDBACK CONTROL (CLOSED LOOP CONTROL)



The mixture ratio feedback system provides the best air-fuel mixture ratio for driveability and emission control. The three way catalyst (manifold) can then better reduce CO, HC and NOx emissions. This system uses heated oxygen sensor 1 in the exhaust manifold to monitor whether the engine operation is rich or lean. The ECM adjusts the injection pulse width according to the sensor voltage signal. For more information about heated oxygen sensor 1, refer to EC-591 . This maintains the mixture ratio within the range of stoichiometric (ideal air-fuel mixture).

This stage is referred to as the closed loop control condition.

Heated oxygen sensor 2 is located downstream of the three way catalyst (manifold). Even if the switching characteristics of heated oxygen sensor 1 shift, the air-fuel ratio is controlled to stoichiometric by the signal from heated oxygen sensor 2.

Open Loop Control

The open loop system condition refers to when the ECM detects any of the following conditions. Feedback control stops in order to maintain stabilized fuel combustion.

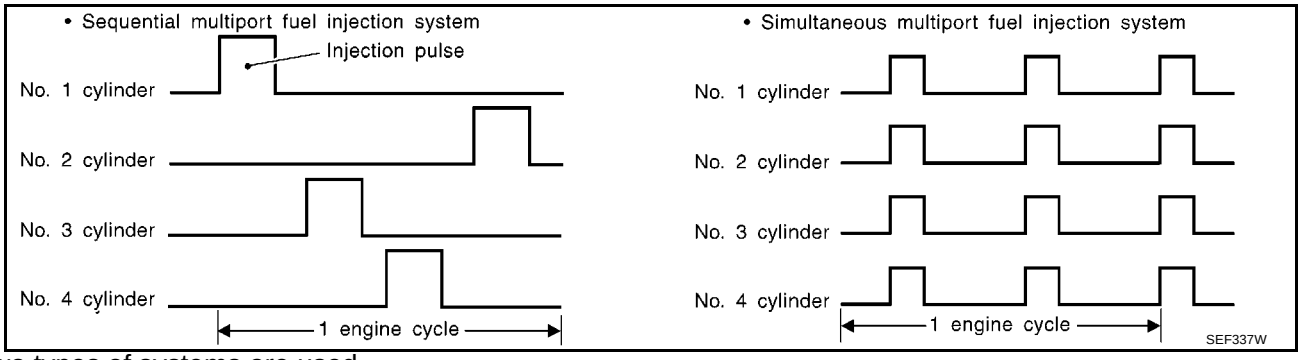
- Deceleration and acceleration
- High-load, high-speed operation
- Malfunction of heated oxygen sensor 1 or its circuit
- Insufficient activation of heated oxygen sensor 1 at low engine coolant temperature
- High engine coolant temperature
- During warm-up
- After shifting from N to D (A/T models)
- When starting the engine

MIXTURE RATIO SELF-LEARNING CONTROL

The mixture ratio feedback control system monitors the mixture ratio signal transmitted from heated oxygen sensor 1. This feedback signal is then sent to the ECM. The ECM controls the basic mixture ratio as close to the theoretical mixture ratio as possible. However, the basic mixture ratio is not necessarily controlled as orig-

inally designed. Both manufacturing differences (i.e., manifold absolute pressure sensor silicon diaphragm) and characteristic changes during operation (i.e., injector clogging) directly affect mixture ratio.
Accordingly, the difference between the basic and theoretical mixture ratios is monitored in this system. This is then computed in terms of “injection pulse duration” to automatically compensate for the difference between the two ratios.
“Fuel trim” refers to the feedback compensation value compared against the basic injection duration. Fuel trim includes short term fuel trim and long term fuel trim.
“Short term fuel trim” is the short-term fuel compensation used to maintain the mixture ratio at its theoretical value. The signal from heated oxygen sensor 1 indicates whether the mixture ratio is RICH or LEAN compared to the theoretical value. The signal then triggers a reduction in fuel volume if the mixture ratio is rich, and an increase in fuel volume if it is lean.
“Long term fuel trim” is overall fuel compensation carried out long-term to compensate for continual deviation of the short term fuel trim from the central value. Such deviation will occur due to individual engine differences, wear over time and changes in the usage environment.

FUEL INJECTION TIMING



Two types of systems are used.

Sequential Multiport Fuel Injection System

Fuel is injected into each cylinder during each engine cycle according to the firing order. This system is used when the engine is running.

Simultaneous Multiport Fuel Injection System

Fuel is injected simultaneously into all four cylinders twice each engine cycle. In other words, pulse signals of the same width are simultaneously transmitted from the ECM.
The four injectors will then receive the signals two times for each engine cycle.
This system is used when the engine is being started and/or if the fail-safe system (CPU) is operating.

FUEL SHUT-OFF

Fuel to each cylinder is cut off during deceleration or operation of the engine at excessively high speeds.

Electronic Ignition (EI) System

EBS00OK3

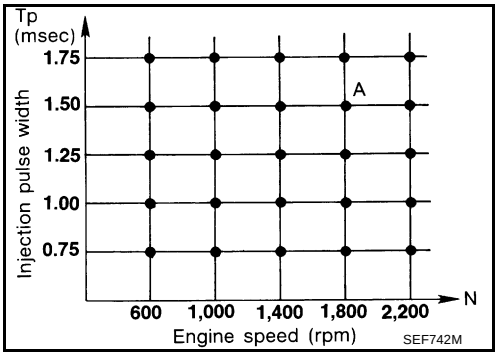
INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2 and piston position	Ignition timing control	Power transistor
manifold absolute pressure sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Knock sensor	Engine knocking		
Park/neutral position (PNP) switch	Gear position		
Battery	Battery voltage*2		
Vehicle speed signal*1	Vehicle speed		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

The ignition timing is controlled by the ECM to maintain the best air-fuel ratio for every running condition of the engine. The ignition timing data is stored in the ECM. This data forms the map shown.
The ECM receives information such as the injection pulse width and camshaft position sensor signal. Computing this information, ignition signals are transmitted to the power transistor.
e.g., N: 1,800 rpm, Tp: 1.50 msec
A °BTDC
During the following conditions, the ignition timing is revised by the ECM according to the other data stored in the ECM.



- At starting
- During warm-up
- At idle
- At low battery voltage
- During acceleration

The knock sensor retard system is designed only for emergencies. The basic ignition timing is programmed within the anti-knocking zone, if recommended fuel is used under dry conditions. The retard system does not operate under normal driving conditions. If engine knocking occurs, the knock sensor monitors the condition. The signal is transmitted to the ECM. The ECM retards the ignition timing to eliminate the knocking condition.

Air Conditioning Cut Control

EBS00OK4

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Air conditioner switch*1	Air conditioner ON signal	Air conditioner cut control	Air conditioner relay
Throttle position sensor	Throttle valve opening angle		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*2		
Engine coolant temperature sensor	Engine coolant temperature		
Refrigerant pressure sensor	Refrigerant pressure		
Vehicle speed signal*1	Vehicle speed		
Battery	Battery voltage*2		

*1: This signal is sent to the ECM through CAN communication line.
*2: ECM determines the start signal status by the signals of engine speed and battery voltage.

SYSTEM DESCRIPTION

This system improves engine operation when the air conditioner is used.
Under the following conditions, the air conditioner is turned off.

- When the accelerator pedal is fully depressed.
- When cranking the engine.
- At high engine speeds.
- When the engine coolant temperature becomes excessively high.
- When engine speed is excessively low.
- When refrigerant pressure is excessively low or high.

Fuel Cut Control (at No Load and High Engine Speed)

EBS00OK5

INPUT/OUTPUT SIGNAL CHART

Sensor	Input Signal to ECM	ECM Function	Actuator
Park/neutral position (PNP) switch	Neutral position	Fuel cut control	Fuel injectors
Accelerator pedal position sensor	Accelerator pedal position		
Engine coolant temperature sensor	Engine coolant temperature		
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed		
Vehicle speed signal*1	Vehicle speed		

*1: This signal is sent to the ECM through CAN communication line.

SYSTEM DESCRIPTION

If the engine speed is above 2,500 rpm with no load (for example, the shift position is neutral and engine speed is over 2,500 rpm) fuel will be cut off after some time. The exact time when the fuel is cut off varies based on engine speed.
Fuel cut will operate until the engine speed reaches 2,000 rpm, then fuel cut is cancelled.

NOTE:
This function is different from deceleration control listed under EC-484, "Multiport Fuel Injection (MFI) System"
.

CAN Communication

EBS01CDB

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

BASIC SERVICE PROCEDURE

PFP:00018

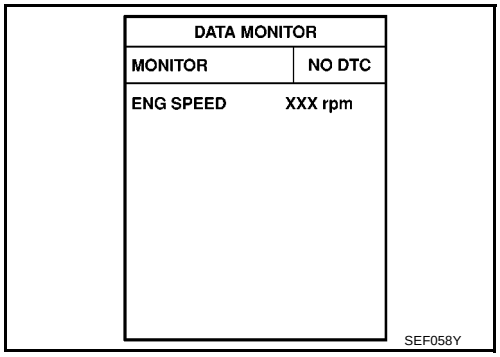
Idle Speed and Ignition Timing Check

EBS00OK7

IDLE SPEED

With CONSULT-II

Check idle speed in “DATA MONITOR” mode with CONSULT-II.



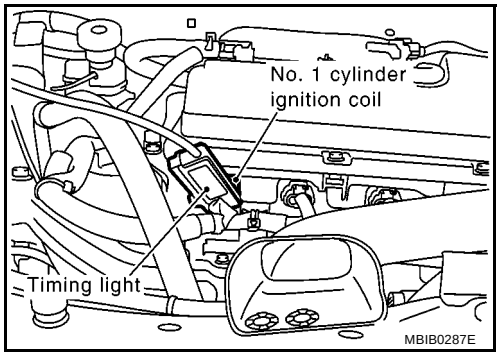
Without CONSULT-II

Check idle speed by installing the pulse type tachometer clamp on the loop wire or on suitable high-tension wire which installed between No. 1 ignition coil and No. 1 spark plug.

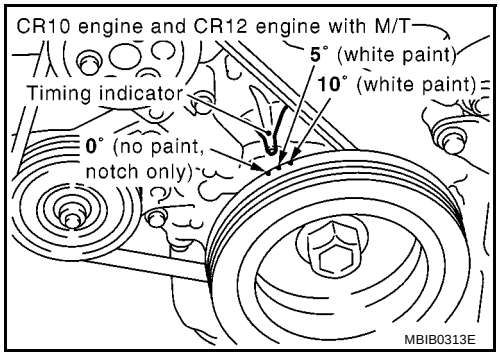
NOTE:
For the method of installing the tachometer, refer to EC-502, "IGNITION TIMING" .

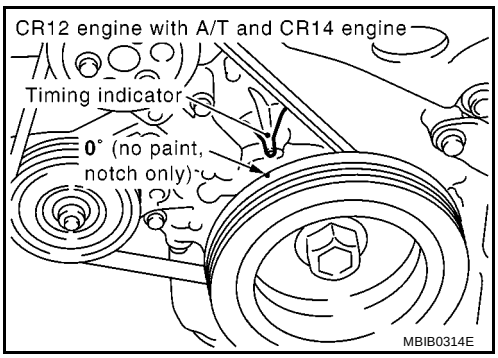
IGNITION TIMING

1. Slide the harness protector of ignition coil No.1 to clear the wires.
2. Attach timing light to the wires as shown in the figure.



3. Check ignition timing.





Accelerator Pedal Released Position Learning

EBS00OK8

DESCRIPTION

Accelerator Pedal Released Position Learning is an operation to learn the fully released position of the accelerator pedal by monitoring the accelerator pedal position sensor output signal. It must be performed each time harness connector of accelerator pedal position sensor or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON and wait at least 2 seconds.
3. Turn ignition switch OFF wait at least 10 seconds.
4. Turn ignition switch ON and wait at least 2 seconds.
5. Turn ignition switch OFF wait at least 10 seconds.

Throttle Valve Closed Position Learning

EBS00OK9

DESCRIPTION

Throttle Valve Closed Position Learning is an operation to learn the fully closed position of the throttle valve by monitoring the throttle position sensor output signal. It must be performed each time harness connector of electric throttle control actuator or ECM is disconnected.

OPERATION PROCEDURE

1. Make sure that accelerator pedal is fully released.
2. Turn ignition switch ON.
3. Turn ignition switch OFF and wait at least 10 seconds.
   Make sure that throttle valve moves during above 10 seconds by confirming the operating sound.

Idle Air Volume Learning

EBS00OKA

DESCRIPTION

Idle Air Volume Learning is an operation to learn the idle air volume that keeps each engine within the specific range. It must be performed under any of the following conditions:

- Each time electric throttle control actuator or ECM is replaced.
- Idle speed or ignition timing is out of specification.

PREPARATION

Before performing Idle Air Volume Learning, make sure that all of the following conditions are satisfied.
Learning will be cancelled if any of the following conditions are missed for even a moment.

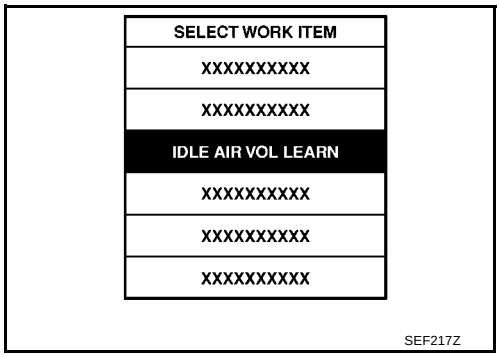
- Battery voltage: More than 12.9V (At idle)
- Engine coolant temperature: 70 - 95°C (158 - 203°F)
- PNP switch: ON
- Electric load switch: OFF
  (Air conditioner, headlamp, rear window defogger)
  On vehicles equipped with daytime light systems, set lighting switch to the 1st position to light only small lamps.
- Steering wheel: Neutral (Straight-ahead position)
- Vehicle speed: Stopped
- Transmission: Warmed-up

For A/T models with CONSULT-II, drive vehicle until “FLUID TEMP SE” in “DATA MONITOR” mode of “A/T” system indicates less than 0.9V.
For A/T models without CONSULT-II and M/T models, drive vehicle for 10 minutes.

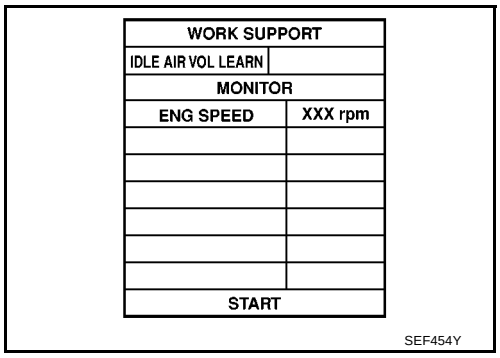
OPERATION PROCEDURE

With CONSULT-II

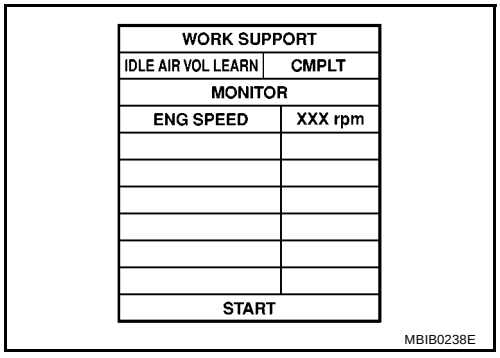
1. Perform EC-503, "Accelerator Pedal Released Position Learning" .
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.
5. Select “IDLE AIR VOL LEARN” in “WORK SUPPORT” mode.



6. Touch “START” and wait 20 seconds.



7. Make sure that “CMPLT” is displayed on CONSULT-II screen. If “CMPLT” is not displayed, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the Diagnostic Procedure below.
8. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.



ITEM	SPECIFICATION
Idle speed	M/T: 650±50 rpm A/T: 700±50 rpm (in P or N position)
Ignition timing	M/T: 5±2° BTDC A/T: 5±2° BTDC (in P or N position)

Without CONSULT-II

NOTE:

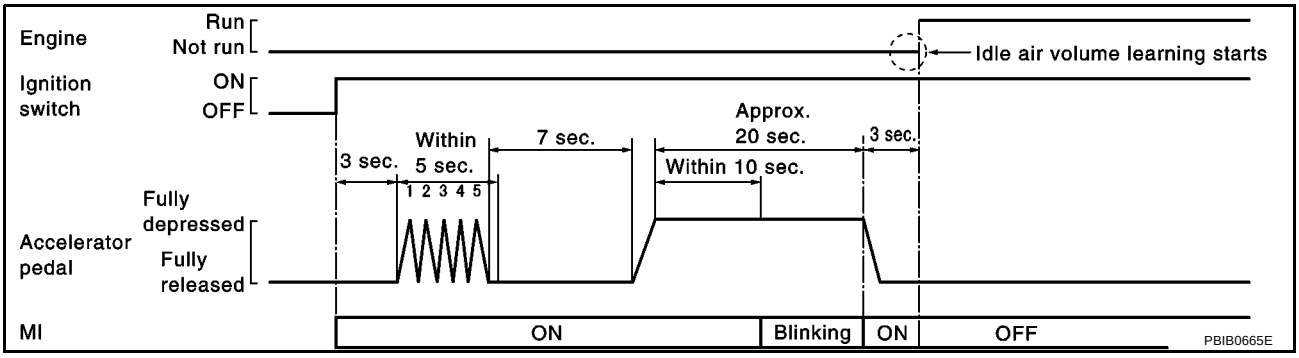
- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**

1. Perform EC-503, "Accelerator Pedal Released Position Learning" .
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Start engine and warm it up to normal operating temperature.
4. Check that all items listed under the topic PREPARATION (previously mentioned) are in good order.

5. Turn ignition switch OFF and wait at least 10 seconds.
6. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
7. Repeat the following procedure quickly five times within 5 seconds.

a. Fully depress the accelerator pedal.
b. Fully release the accelerator pedal.

8. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 20 seconds until the MI stops blinking and turned ON.
9. Fully release the accelerator pedal within 3 seconds after the MI turned ON.
10. Start engine and let it idle.
11. Wait 20 seconds.



12. Rev up the engine two or three times and make sure that idle speed and ignition timing are within the specifications.

ITEM	SPECIFICATION
Idle speed	M/T: 650±50 rpm A/T: 700±50 rpm (in P or N position)
Ignition timing	M/T: 5±2° BTDC A/T: 5±2° BTDC (in P or N position)

13. If idle speed and ignition timing are not within the specification, Idle Air Volume Learning will not be carried out successfully. In this case, find the cause of the incident by referring to the Diagnostic Procedure below.

DIAGNOSTIC PROCEDURE

If idle air volume learning cannot be performed successfully, proceed as follows:

1. **Check that throttle valve is fully closed.**
2. **Check PCV valve operation.**
3. **Check that downstream of throttle valve is free from air leakage.**
4. **When the above three items check out OK, engine component parts and their installation condition are questionable. Check and eliminate the cause of the incident.**
   It is useful to perform EC-561, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE" .
5. **If any of the following conditions occur after the engine has started, eliminate the cause of the incident and perform Idle air volume learning all over again:**
   - **Engine stalls.**
   - **Erroneous idle.**

Fuel Pressure Check

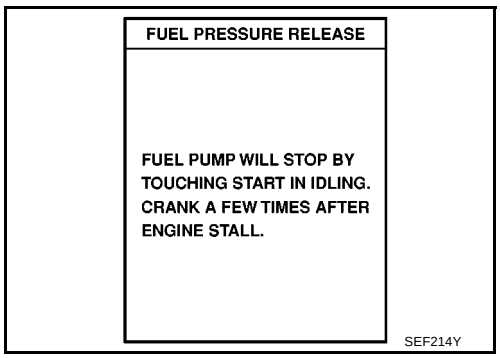
EBS00OKB

FUEL PRESSURE RELEASE

With CONSULT-II

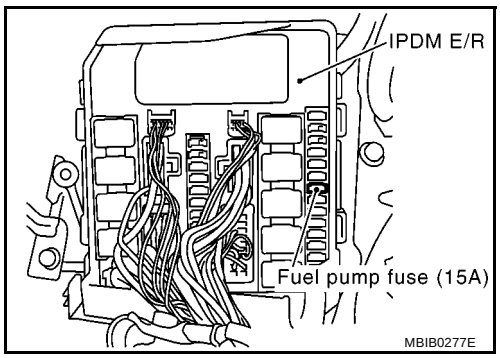
1. Turn ignition switch ON.

2. Perform “FUEL PRESSURE RELEASE” in “WORK SUPPORT” mode with CONSULT-II.
3. Start engine.
4. After engine stalls, crank it two or three times to release all fuel pressure.
5. Turn ignition switch OFF.



Without CONSULT-II

1. Remove fuel pump fuse located in IPDM E/R.
2. Start engine.
3. After engine stalls, crank it two or three times to release all fuel pressure.
4. Turn ignition switch OFF.
5. Reinstall fuel pump fuse after servicing fuel system.



FUEL PRESSURE CHECK

Before disconnecting fuel line, release fuel pressure from fuel line to eliminate danger.

NOTE:
Prepare pans or saucers under the disconnected fuel line because the fuel may spill out. The fuel pressure cannot be completely released because QR engine models do not have fuel return system.

CAUTION:

- **The fuel hose connection method used when taking fuel pressure check must not be used for other purposes.**
- **Be careful not to scratch or put debris around connection area when servicing, so that the quick connector maintains sealability with O-rings inside.**
- **When installing fuel hose quick connector, refer to EM-16, "AIR CLEANER AND AIR DUCT" .**

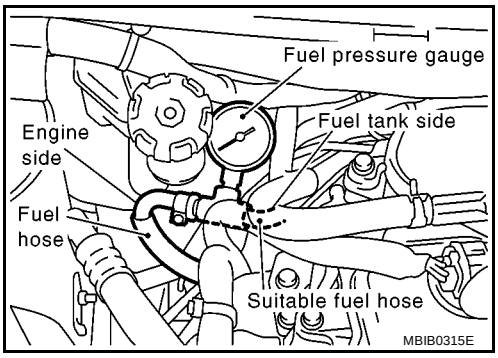
1. Release fuel pressure to zero. Refer to EC-505, "FUEL PRESSURE RELEASE" .
2. Prepare fuel hose and fuel hose clamp for fuel pressure check, and connect fuel pressure gauge.
   - Use suitable fuel hose for fuel pressure check (genuine NISSAN fuel hose without quick connector).
   - To avoid unnecessary force or tension to hose, use moderately long fuel hose for fuel pressure check.
   - Do not use the fuel hose for checking fuel pressure with damage or cracks on it.
   - Use Pressure Gauge to check fuel pressure.
3. Remove fuel hose. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
   - Do not twist or kink fuel hose because it is plastic hose.
   - Do not remove fuel hose from quick connector.
   - Keep the original fuel hose to be free from intrusion of dust or foreign substances with a suitable cover.

4. Install the fuel pressure gauge as shown in the figure.
   - Wipe off oil or dirt from hose insertion part using cloth moistened with gasoline.
   - Apply proper amount of gasoline between top of the fuel tube and No.1 spool.
   - Insert fuel hose for fuel pressure check until it touches the No.1 spool on fuel tube.
   - Use NISSAN genuine hose clamp (part number: 16439 N4710 or 16439 40U00).
   - When reconnecting fuel line, always use new clamps.
   - When reconnecting fuel hose, check the original fuel hose for damage and abnormality.
   - Use a torque driver to tighten clamps.
   - Install hose clamp to the position within 1 - 2 mm (0.04 - 0.08 in).

   Tightening torque:

   1 - 1.5 N·m (0.1 - 0.15 kg-m, 9 - 13 in-lb)

   - Make sure that clamp screw does not contact adjacent parts.



5. After connecting fuel hose for fuel pressure check, pull the hose with a force of approximately 98 N (10 kg, 22 lb) to confirm fuel tube does not come off.
6. Turn ignition switch ON, and check for fuel leakage.
7. Start engine and check for fuel leakage.
8. Read the indication of fuel pressure gauge.
   - Do not perform fuel pressure check with system operating. Fuel pressure gauge may indicate false readings.
   - During fuel pressure check, confirm for fuel leakage from fuel connection every 3 minutes.

   At idling: Approximately 350 kPa (3.5 bar, 3.57 kg/cm^2 , 51 psi)
9. If result is unsatisfactory, go to next step.
10. Check the following.
    - Fuel hoses and fuel tubes for clogging
    - Fuel filter for clogging
    - Fuel pump
    - Fuel pressure regulator for clogging

    If OK, replace fuel pressure regulator.
    If NG, repair or replace.

ON BOARD DIAGNOSTIC (OBD) SYSTEM

PFP:00028

Introduction

EBS00OKC

The ECM has an on board diagnostic system, which detects malfunctions related to engine sensors or actuators. The ECM also records various emission-related diagnostic information including:

Emission-related diagnostic information
Diagnostic Trouble Code (DTC)
Freeze Frame data
1st Trip Diagnostic Trouble Code (1st Trip DTC)
1st Trip Freeze Frame data

The above information can be checked using procedures listed in the table below.

×: Applicable —: Not applicable

	DTC	1st trip DTC	Freeze Frame data	1st trip Freeze Frame data
CONSULT-II	×	×	×	×
ECM	×	×*	—	—

*: When DTC and 1st trip DTC simultaneously appear on the display, they cannot be clearly distinguished from each other.

The malfunction indicator (MI) on the instrument panel lights up when the same malfunction is detected in two consecutive trips (Two trip detection logic), or when the ECM enters fail-safe mode. (Refer to EC-520 .)

Two Trip Detection Logic

EBS00OKD

When a malfunction is detected for the first time, 1st trip DTC and 1st trip Freeze Frame data are stored in the ECM memory. The MI will not light up at this stage. <1st trip>
If the same malfunction is detected again during the next drive, the DTC and Freeze Frame data are stored in the ECM memory, and the MI lights up. The MI lights up at the same time when the DTC is stored. <2nd trip>
The “trip” in the “Two Trip Detection Logic” means a driving mode in which self-diagnosis is performed during vehicle operation.
When there is an open circuit on MI circuit, the ECM can not warn the driver by lighting MI up when there is a malfunction on engine control system.
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system has malfunction and MI circuit is open by means of operating fail-safe function.
The fail-safe function also operate when above diagnoses except MI circuit are detected, and demands the driver to repair the malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

Emission-related Diagnostic Information

EBS00OKE

DTC AND 1ST TRIP DTC

The 1st trip DTC (whose number is the same as the DTC number) is displayed for the latest self-diagnostic result obtained. If the ECM memory was cleared previously, and the 1st trip DTC did not reoccur, the 1st trip DTC will not be displayed.
If a malfunction is detected during the 1st trip, the 1st trip DTC is stored in the ECM memory. The MI will not light up (two trip detection logic). If the same malfunction is not detected in the 2nd trip (meeting the required driving pattern), the 1st trip DTC is cleared from the ECM memory. If the same malfunction is detected in the 2nd trip, both the 1st trip DTC and DTC are stored in the ECM memory and the MI lights up. In other words, the DTC is stored in the ECM memory and the MI lights up when the same malfunction occurs in two consecutive trips. If a 1st trip DTC is stored and a non-diagnostic operation is performed between the 1st and 2nd trips, only the 1st trip DTC will continue to be stored.
For fail-safe items, DTC is stored in the ECM memory even in the 1st trip.
Procedures for clearing the DTC and the 1st trip DTC from the ECM memory are described in EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION"
When a 1st trip DTC is detected, check, print out or write down and erase (1st trip) DTC and Freeze Frame data as specified in Work Flow procedure Step II, refer to EC-516, "WORK FLOW" . Then perform DTC Confirmation Procedure or Overall Function Check to try to duplicate the malfunction. If the malfunction is duplicated, the item requires repair.

How to Read DTC and 1st Trip DTC

DTC and 1st trip DTC can be read by the following methods.

With CONSULT-II

CONSULT-II displays the DTC in “SEFL-DIAG RESULTS” mode. Examples: P0117, P0340, P1065, etc. (CONSULT-II also displays the malfunctioning component or system.)

Without CONSULT-II

The number of blinks of the MI in the Diagnostic Test Mode II (Self-Diagnostic Results) indicates the DTC. Example: 0107, 0340 etc.

- **1st trip DTC No. is the same as DTC No.**
- **Output of a DTC indicates a malfunction. However, the Diagnostic Test Mode II do not indicate whether the malfunction is still occurring or has occurred in the past and has returned to normal. CONSULT-II can identify malfunction status as shown below. Therefore, using CONSULT-II (if available) is recommended.**

A sample of CONSULT-II display for DTC and 1st trip DTC is shown below. DTC or 1st trip DTC of a malfunction is displayed in SELF-DIAGNOSTIC RESULTS mode of CONSULT-II. Time data indicates how many times the vehicle was driven after the last detection of a DTC.
If the DTC is being detected currently, the time data will be [0].
If a 1st trip DTC is stored in the ECM, the time data will be [1t].

DTC display

SELF DIAG RESULTS	
DTC RESULTS	TIME
CKP SEN/CIRCUIT [P0335]	0

1st trip DTC display

SELF DIAG RESULTS	
DTC RESULTS	TIME
CKP SEN/CIRCUIT [P0335]	1t

PBIB0911E

FREEZE FRAME DATA AND 1ST TRIP FREEZE FRAME DATA

The ECM records the driving conditions such as fuel system status, calculated load value, engine coolant temperature, short term fuel trim, long term fuel trim, engine speed, vehicle speed, base fuel schedule and intake air temperature at the moment a malfunction is detected.
Data which are stored in the ECM memory, along with the 1st trip DTC, are called 1st trip freeze frame data. The data, stored together with the DTC data, are called freeze frame data and displayed on CONSULT-II. For details, see EC-549, "Freeze Frame Data and 1st Trip Freeze Frame Data" .
Only one set of freeze frame data (either 1st trip freeze frame data or freeze frame data) can be stored in the ECM. 1st trip freeze frame data is stored in the ECM memory along with the 1st trip DTC. There is no priority for 1st trip freeze frame data and it is updated each time a different 1st trip DTC is detected. However, once freeze frame data (2nd trip detection/MI on) is stored in the ECM memory, 1st trip freeze frame data is no longer stored. Remember, only one set of freeze frame data can be stored in the ECM. Both 1st trip freeze frame data and freeze frame data (along with the DTCs) are cleared when the ECM memory is erased. Procedures for clearing the ECM memory are described in EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION

How to Erase DTC

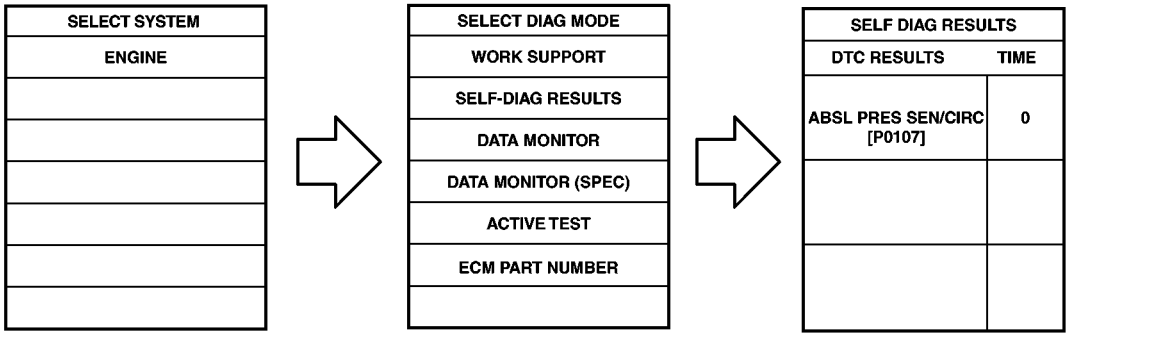
With CONSULT-II

The emission related diagnostic information in the ECM can be erased by selecting “ERASE” in the “SELF-DIAG RESULTS” mode with CONSULT-II.

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once. Wait at least 10 seconds and then turn it ON (engine stopped) again.
2. Touch “ENGINE”.
3. Touch “SELF-DIAG RESULTS”.
4. Touch “ERASE”. (The DTC in the ECM will be erased.)

How to erase DTC (With CONSULT-II)

1. If the ignition switch stays “ON” after repair work, be sure to turn ignition switch “OFF” once. Wait at least 10 seconds and then turn it “ON” again.



2. Turn **CONSULT-II** “ON” and touch “ENGINE”.
3. Touch “SELF-DIAG RESULTS”.
4. Touch “ERASE”. (The DTC in the ECM will be erased.)

MBIB0657E

Without CONSULT-II

1. If the ignition switch stays ON after repair work, be sure to turn ignition switch OFF once.
2. Wait at least 10 seconds and then turn it ON (engine stopped) again.
3. Change the diagnostic test mode from Mode II to Mode I by depressing the accelerator pedal. Refer to EC-512, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .

- **If the battery is disconnected, the emission-related diagnostic information will be lost within 24 hours.**
- **The following data are cleared when the ECM memory is erased.**
  - Diagnostic trouble codes
  - 1st trip diagnostic trouble codes
  - Freeze frame data
  - 1st trip freeze frame data
  - Others

Actual work procedures are explained using a DTC as an example. Be careful so that not only the DTC, but all of the data listed above, are cleared from the ECM memory during work procedures.

NATS (Nissan Anti-theft System)

EBS00OKF

- **If the security indicator lights up with the ignition switch in the ON position or "NATS MALFUNCTION" is displayed on "SELF-DIAG RESULTS" screen, perform self-diagnostic results mode with CONSULT-II using NATS program card. Refer to BL-223, "NATS(Nissan Anti-Theft System)" .**
- **Confirm no self-diagnostic results of NATS is displayed before touching "ERASE" in "SELF-DIAG RESULTS" mode with CONSULT-II.**
- **When replacing ECM, initialization of NATS system and registration of all NATS ignition key IDs must be carried out with CONSULT-II using NATS program card.**
  Therefore, be sure to receive all keys from vehicle owner.
  Regarding the procedures of NATS initialization and NATS ignition key ID registration, refer to CONSULT-II operation manual, NATS.

SELF DIAG RESULTS	
DTC RESULTS	TIME
NATS MALFUNCTION [P1610]	0

SEF515Y

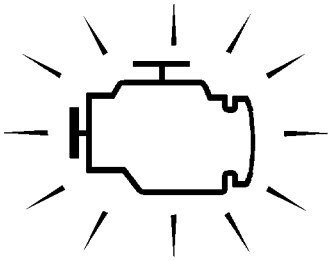
Malfunction Indicator (MI)

EBS00OKG

DESCRIPTION

The MI is located on the instrument panel.

1. The MI will light up when the ignition switch is turned ON without the engine running. This is a bulb check.
   - If the MI does not light up, refer to DI-65, "WARNING LAMPS" or see EC-838 .
2. When the engine is started, the MI should go off.
   If the MI remains on, the on board diagnostic system has detected an engine system malfunction.



SAT652J

ON BOARD DIAGNOSTIC SYSTEM FUNCTION

The on board diagnostic system has the following four functions.

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode I	Ignition switch in ON position Engine stopped	BULB CHECK	This function checks the MI bulb for damage (blown, open circuit, etc.). If the MI does not come on, check MI circuit.
	Engine running	MALFUNCTION WARNING	This is a usual driving condition. When a malfunction is detected twice in two consecutive driving cycles (two trip detection logic), the MI will light up to inform the driver that a malfunction has been detected. The following malfunctions will light up or blink the MI in the 1st trip. ● One trip detection diagnoses

Diagnostic Test Mode	KEY and ENG. Status	Function	Explanation of Function
Mode II	Ignition switch in ON position Engine stopped	SELF-DIAGNOSTIC RESULTS	This function allows DTCs and 1st trip DTCs to be read.
	Engine running	HEATED OXYGEN SENSOR 1 MONITOR	This function allows the fuel mixture condition (lean or rich), monitored by heated oxygen sensor 1, to be read.

When there is an open circuit on MI circuit, the ECM can not warn the driver by lighting MI up when there is malfunction on engine control system.
Therefore, when electrical controlled throttle and part of ECM related diagnoses are continuously detected as NG for 5 trips, ECM warns the driver that engine control system has a malfunction and MI circuit is open by means of operating fail-safe function.
The fail-safe function also operate when above diagnoses except MI circuit are detected, and demands the driver to repair the a malfunction.

Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

MI Flashing without DTC

If the ECM is in Diagnostic Test Mode II, MI may flash when engine is running. In this case, check ECM diagnostic test mode. EC-512, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .
How to switch the diagnostic test (function) modes, and details of the above functions are described later, EC-512, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .
The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes
- Freeze frame data
- 1st trip freeze frame data
- Others

HOW TO SWITCH DIAGNOSTIC TEST MODE

NOTE:

- **It is better to count the time accurately with a clock.**
- **It is impossible to switch the diagnostic mode when an accelerator pedal position sensor circuit has a malfunction.**
- **Always ECM returns to Diagnostic Test Mode I after ignition switch is turned OFF.**

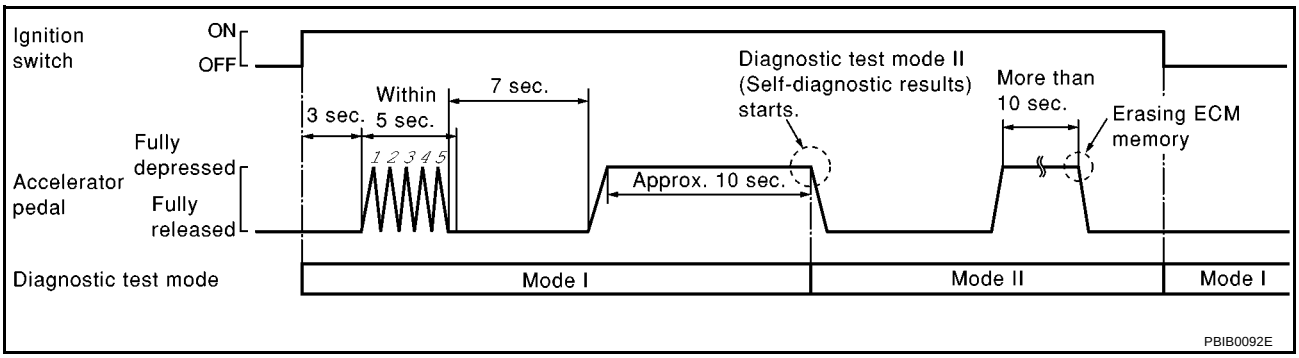
How to Set Diagnostic Test Mode II (Self-diagnostic Results)

1. Confirm that accelerator pedal is fully released, turn ignition switch ON and wait 3 seconds.
2. Repeat the following procedure quickly five times within 5 seconds.

a. Fully depress the accelerator pedal.
b. Fully release the accelerator pedal.

3. Wait 7 seconds, fully depress the accelerator pedal and keep it for approx. 10 seconds until the MI starts blinking.
4. Fully release the accelerator pedal.

ECM has entered to Diagnostic Test Mode II (Self-diagnostic results).



How to Set Diagnostic Test Mode II (Heated Oxygen Sensor 1 Monitor)

1. Set the ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to EC-512, "How to Set Diagnostic Test Mode II (Self-diagnostic Results)" .
2. Start Engine.
   ECM has entered to Diagnostic Test Mode II (Heated oxygen sensor 1 monitor).

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

1. Set ECM in Diagnostic Test Mode II (Self-diagnostic results). Refer to EC-512, "How to Set Diagnostic Test Mode II (Self-diagnostic Results)" .
2. Fully depress the accelerator pedal and keep it for more than 10 seconds.
   The emission-related diagnostic information has been erased from the backup memory in the ECM.
3. Fully release the accelerator pedal, and confirm the DTC 0000 is displayed.

DIAGNOSTIC TEST MODE I — BULB CHECK

In this mode, the MI on the instrument panel should stay ON. If it remains OFF, check the bulb. Refer to DI-65, "WARNING LAMPS" or see EC-838 .

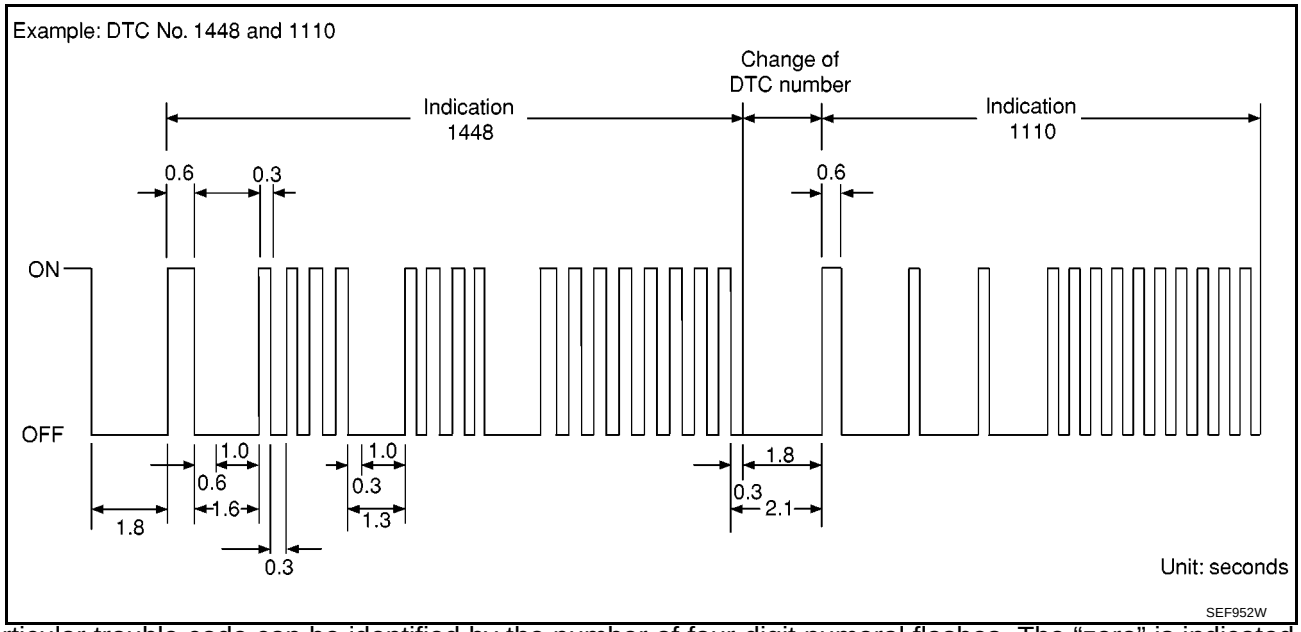
DIAGNOSTIC TEST MODE I — MALFUNCTION WARNING

MI	Condition
ON	When the malfunction is detected.
OFF	No malfunction.

- These DTC numbers are clarified in Diagnostic Test Mode II (SELF-DIAGNOSTIC RESULTS)

DIAGNOSTIC TEST MODE II — SELF-DIAGNOSTIC RESULTS

In this mode, the DTC and 1st trip DTC are indicated by the number of blinks of the MI as shown below.
The DTC and 1st trip DTC are displayed at the same time. If the MI does not illuminate in diagnostic test mode I (Malfunction warning), all displayed items are 1st trip DTCs. If only one code is displayed when the MI illuminates in diagnostic test mode II (SELF-DIAGNOSTIC RESULTS), it is a DTC; if two or more codes are displayed, they may be either DTCs or 1st trip DTCs. DTC No. is same as that of 1st trip DTC. These unidentified codes can be identified by using the CONSULT-II. A DTC will be used as an example for how to read a code.



A particular trouble code can be identified by the number of four-digit numeral flashes. The “zero” is indicated by the number of ten flashes. The length of time the 1,000th-digit numeral flashes on and off is 1.2 seconds consisting of an ON (0.6-second) - OFF (0.6-second) cycle.
The 100th-digit numeral and lower digit numerals consist of a 0.3-second ON and 0.3-second OFF cycle.
A change from one digit numeral to another occurs at an interval of 1.0-second OFF. In other words, the later numeral appears on the display 1.3 seconds after the former numeral has disappeared.
A change from one trouble code to another occurs at an interval of 1.8-second OFF.
In this way, all the detected malfunctions are classified by their DTC numbers. The DTC 0000 refers to no malfunction. (See EC-472, "INDEX FOR DTC")

How to Erase Diagnostic Test Mode II (Self-diagnostic Results)

The DTC can be erased from the back up memory in the ECM by depressing accelerator pedal. Refer to EC-512, "HOW TO SWITCH DIAGNOSTIC TEST MODE" .

- **If the battery is disconnected, the DTC will be lost from the backup memory within 24 hours.**
- **Be careful not to erase the stored memory before starting trouble diagnoses.**

DIAGNOSTIC TEST MODE II — HEATED OXYGEN SENSOR 1 MONITOR

In this mode, the MI displays the condition of the fuel mixture (lean or rich) which is monitored by the heated oxygen sensor 1.

MI	Fuel mixture condition in the exhaust gas	Air-fuel ratio feedback control condition
ON	Lean	Closed loop system
OFF	Rich	
*Remains ON or OFF	Any condition	Open loop system

*: Maintains conditions just before switching to open loop.

To check the heated oxygen sensor 1 function, start engine in the Diagnostic Test Mode II and warm it up until engine coolant temperature indicator points to the middle of the gauge.
Next run engine at about 2,000 rpm for about 2 minutes under no load conditions. Then make sure that the MI comes ON more than 5 times within 10 seconds with engine running at 2,000 rpm under no load.

TROUBLE DIAGNOSIS

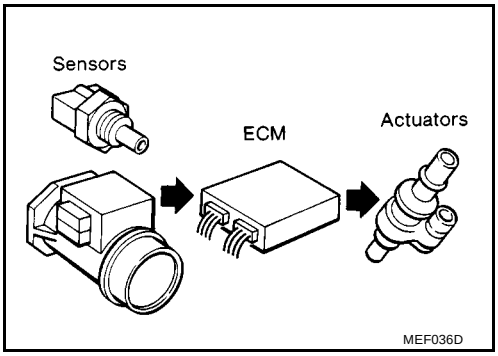
PFP:00004

Trouble Diagnosis Introduction

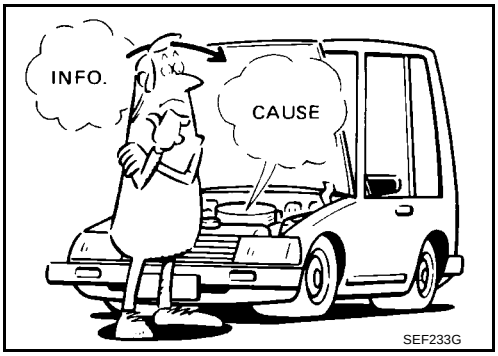
EBS00OKI

INTRODUCTION

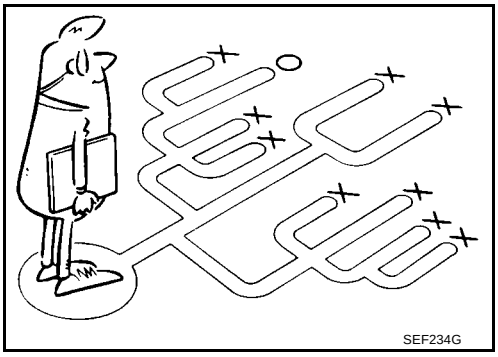
The engine has an ECM to control major systems such as fuel control, ignition control, idle air control system, etc. The ECM accepts input signals from sensors and instantly drives actuators. It is essential that both input and output signals are proper and stable. At the same time, it is important that there are no malfunctions such as vacuum leaks, fouled spark plugs, or other malfunctions with the engine.
It is much more difficult to diagnose an incident that occurs intermittently rather than continuously. Most intermittent incidents are caused by poor electric connections or improper wiring. In this case, careful checking of suspected circuits may help prevent the replacement of good parts.
A visual check only may not find the cause of the incidents. A road test with CONSULT-II or a circuit tester connected should be performed. Follow the Work Flow on EC-516 .
Before undertaking actual checks, take a few minutes to talk with a customer who approaches with a driveability complaint. The customer can supply good information about such incidents, especially intermittent ones. Find out what symptoms are present and under what conditions they occur. A Diagnostic Worksheet like the example on EC-518 should be used.
Start your diagnosis by looking for conventional malfunctions first. This will help troubleshoot driveability malfunctions on an electronically controlled engine vehicle.



MEF036D



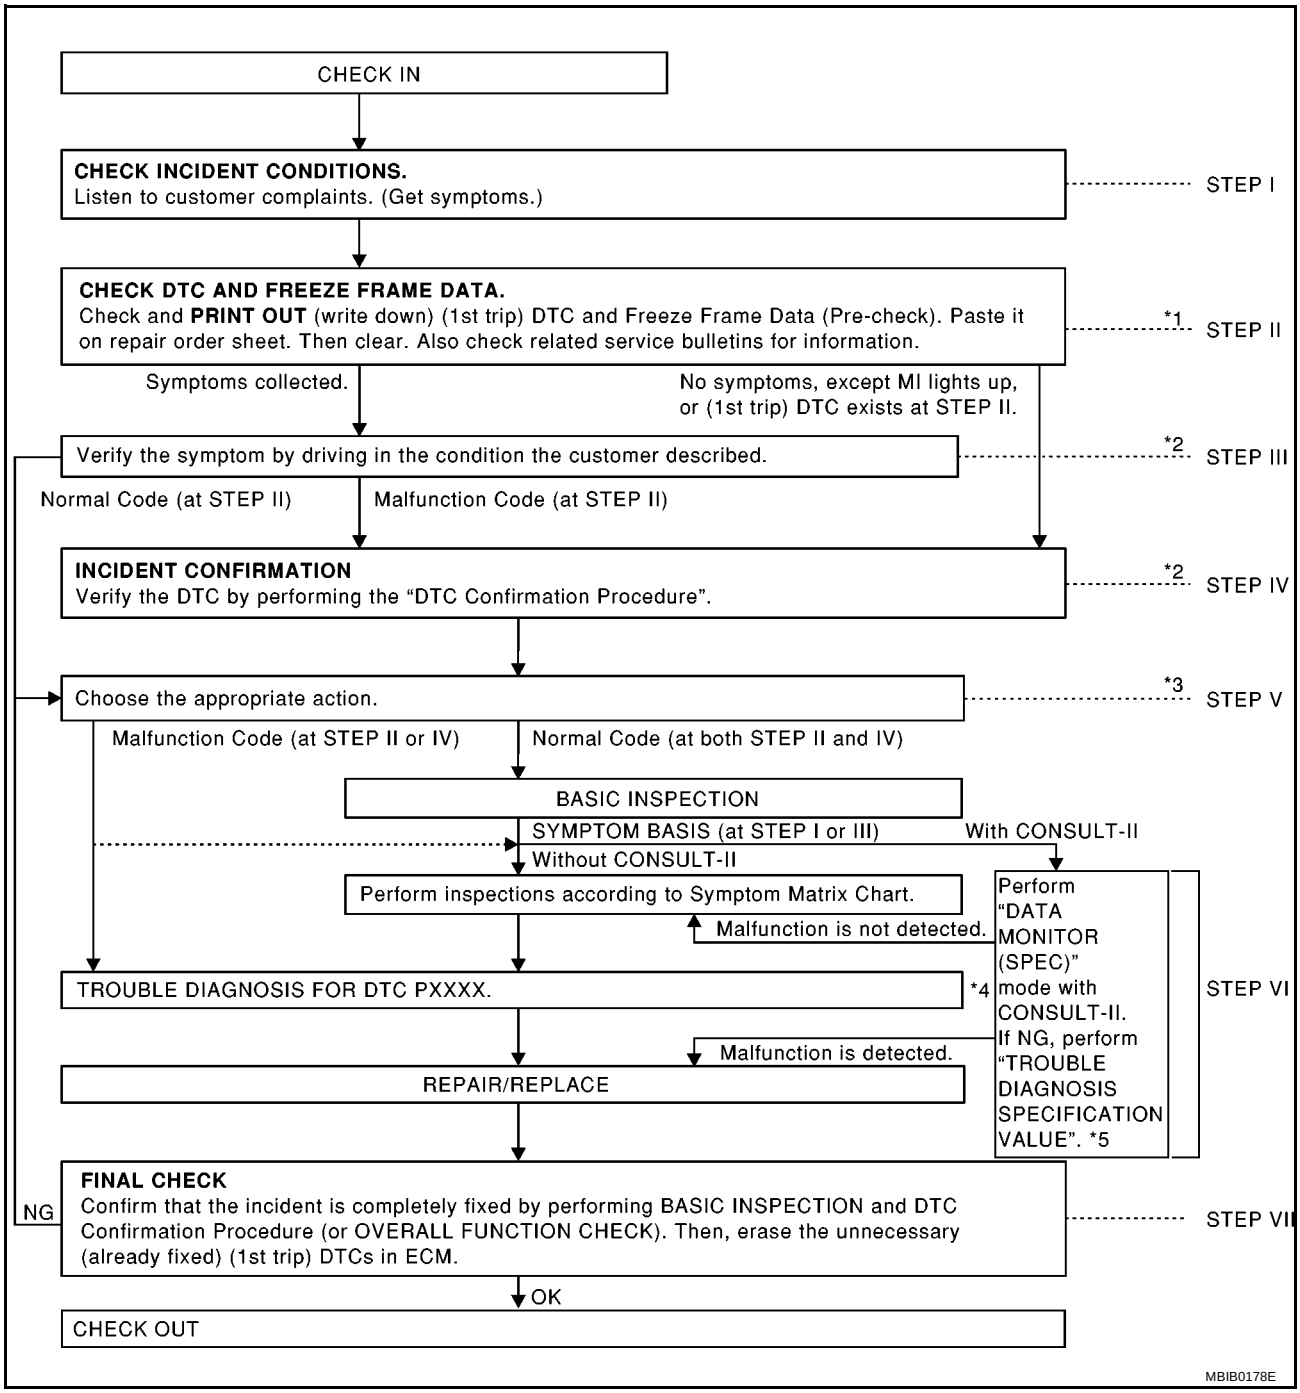
SEF233G



SEF234G

WORK FLOW

Flow Chart



*1 If time data of “SELF-DIAG RESULTS” is other than [0] or [1t], perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

*2 If the incident cannot be verified, perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

*3 If the on board diagnostic system cannot be performed, check main power supply and ground circuit. Refer to EC-567, "POWER SUPPLY CIRCUIT FOR ECM" .

*4 If malfunctioning part cannot be detected, perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

*5 EC-561, "TROUBLE DIAGNOSIS - SPECIFICATION VALUE"

Description for Work Flow

STEP	DESCRIPTION
STEP I	Get detailed information about the conditions and the environment when the incident/symptom occurred using the DIAGNOSTIC WORK SHEET, EC-518 .
STEP II	Before confirming the concern, check and write down (print out using CONSULT-II) the (1st trip) DTC and the (1st trip) freeze frame data, then erase the DTC and the data. (Refer to EC-510 .) The (1st trip) DTC and the (1st trip) freeze frame data can be used when duplicating the incident at STEP III & IV. If the incident cannot be verified, perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" . Study the relationship between the cause, specified by (1st trip) DTC, and the symptom described by the customer. (The Symptom Matrix Chart will be useful. See EC-527 .) Also check related service bulletins for information.
STEP III	Try to confirm the symptom and under what conditions the incident occurs. The DIAGNOSTIC WORK SHEET and the freeze frame data are useful to verify the incident. Connect CONSULT-II to the vehicle in DATA MONITOR (AUTO TRIG) mode and check real time diagnosis results. If the incident cannot be verified, perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" . If the malfunction code is detected, skip STEP IV and perform STEP V.
STEP IV	Try to detect the (1st trip) DTC by driving in (or performing) the DTC Confirmation Procedure. Check and read the (1st trip) DTC and (1st trip) freeze frame data by using CONSULT-II. During the (1st trip) DTC verification, be sure to connect CONSULT-II to the vehicle in “DATA MONITOR (AUTO TRIG)” mode and check real time diagnosis results. If the incident cannot be verified, perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" . In case the DTC Confirmation Procedure is not available, perform the Overall Function Check instead. The (1st trip) DTC cannot be displayed by this check, however, this simplified check is an effective alternative. The NG result of the Overall Function Check is the same as the (1st trip) DTC detection.
STEP V	Take the appropriate action based on the results of STEP I through IV. If the malfunction code is indicated, proceed to TROUBLE DIAGNOSIS FOR DTC PXXXX. If the normal code is indicated, proceed to the BASIC INSPECTION. (Refer to EC-522 .) If COSULT-II is available, perform “DATA MONITOR (SPEC)” mode with CONSULT-II and proceed to the TOROUBLE DIAGNOSIS – SPECIFICATION VALUE. (Refer to EC-561 .) (If malfunction is detected, proceed to PERAIR/REPLACE.) Then perform inspections according to the Symptom Matrix Chart. (Refer to EC-527 .)
STEP VI	Identify where to begin diagnosis based on the relationship study between symptom and possible causes. Inspect the system for mechanical binding, loose connectors or wiring damage using (tracing) Harness Layouts. Gently shake the related connectors, components or wiring harness with CONSULT-II set in “DATA MONITOR (AUTO TRIG)” mode. Check the voltage of the related ECM terminals or monitor the output data from the related sensors with CONSULT-II. Refer to EC-539 , EC-555 . The Diagnostic Procedure in EC section contains a description based on open circuit inspection. A short circuit inspection is also required for the circuit check in the Diagnostic Procedure. For details, refer to Circuit Inspection in GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" . Repair or replace the malfunction parts. If malfunctioning part cannot be detected, perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .
STEP VII	Once you have repaired the circuit or replaced a component, you need to run the engine in the same conditions and circumstances which resulted in the customer's initial complaint. Perform the DTC Confirmation Procedure and confirm the normal code [DTC No. P0000] is detected. If the incident is still detected in the final check, perform STEP VI by using a method different from the previous one. Before returning the vehicle to the customer, be sure to erase the unnecessary (already fixed) (1st trip) DTC in ECM and TCM (Transmission control module). (Refer to EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION")

DIAGNOSTIC WORKSHEET

Description

There are many operating conditions that lead to the malfunction of engine components. A good grasp of such conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about an incident. It is important to fully understand the symptoms or conditions for a customer complaint.
Utilize a diagnostic worksheet like the one on the next page in order to organize all the information for troubleshooting.

KEY POINTS

WHAT ..... Vehicle & engine model
WHEN ..... Date, Frequencies
WHERE..... Road conditions
HOW ..... Operating conditions, Weather conditions, Symptoms

SEF907L

Worksheet Sample

Customer name MR/MS		Model & Year	VIN
Engine #		Trans.	Mileage
Incident Date		Manuf. Date	In Service Date
Fuel and fuel filler cap		☐ Vehicle ran out of fuel causing misfire ☐ Fuel filler cap was left off or incorrectly screwed on.	
Symptoms	☐ Startability	☐ Impossible to start ☐ No combustion ☐ Partial combustion ☐ Partial combustion affected by throttle position ☐ Partial combustion NOT affected by throttle position ☐ Possible but hard to start ☐ Others [ ]	
	☐ Idling	☐ No fast idle ☐ Unstable ☐ High idle ☐ Low idle ☐ Others [ ]	
	☐ Driveability	☐ Stumble ☐ Surge ☐ Knock ☐ Lack of power ☐ Intake backfire ☐ Exhaust backfire ☐ Others [ ]	
	☐ Engine stall	☐ At the time of start ☐ While idling ☐ While accelerating ☐ While decelerating ☐ Just after stopping ☐ While loading	
Incident occurrence		☐ Just after delivery ☐ Recently ☐ In the morning ☐ At night ☐ In the daytime	
Frequency		☐ All the time ☐ Under certain conditions ☐ Sometimes	
Weather conditions		☐ Not affected	
	Weather	☐ Fine ☐ Raining ☐ Snowing ☐ Others [ ]	
	Temperature	☐ Hot ☐ Warm ☐ Cool ☐ Cold ☐ Humid °F	
Engine conditions		☐ Cold ☐ During warm-up ☐ After warm-up Engine speed 0 2,000 4,000 6,000 8,000 rpm	
Road conditions		☐ In town ☐ In suburbs ☐ Highway ☐ Off road (up/down)	
Driving conditions		☐ Not affected ☐ At starting ☐ While idling ☐ At racing ☐ While accelerating ☐ While cruising ☐ While decelerating ☐ While turning (RH/LH) Vehicle speed 0 10 20 30 40 50 60 MPH	
Malfunction indicator lamp		☐ Turned on ☐ Not turned on	

MTBL0017

DTC Inspection Priority Chart

EBS00OKJ

If some DTCs are displayed at the same time, perform inspections one by one based on the following priority chart.

NOTE:
If DTC U1000 and/or U1001 is displayed with other DTC, first perform the trouble diagnosis for DTC U1000 and U1001. Refer to EC-572, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

Priority	Detected items (DTC)
1	● U1000 U1001 CAN communication line ● P0107 P0108 Manifold absolute pressure sensor ● P0117 P0118 Engine coolant temperature sensor ● P0122 P0123 P0222 P0223 P1225 P1226 P2135 Throttle position sensor ● P0221 P0222 P0223 P1223 P1224 P1225 P1226 Throttle position sensor ● P0226 P0227 P0228 P1227 P1228 Accelerator pedal position sensor ● P0327 P0328 Knock sensor ● P0335 Crankshaft position sensor (POS) ● P0340 Camshaft position sensor (PHASE) ● P0605 ECM ● P1171 Intake error ● P1229 Sensor power supply ● P1610-P1615 NATS ● P2122 P2123 P2127 P2128 P2138 Accelerator pedal position sensor
2	● P0132 P0134 Heated oxygen sensor 1 ● P0138 Heated oxygen sensor 2 ● P1065 ECM power supply ● P1122 Electric throttle control function ● P1124 P1126 Throttle control motor relay ● P1128 Throttle control mother ● P1805 Brake switch
3	● P1121 Electric throttle control actuator ● P1211 ESP control unit ● P1212 ESP communication line ● P1217 Engine over temperature (OVERHEAT)

Fail-safe Chart

EBS00OKK

- When the DTC listed bellow is detected, the ECM enters fail-safe mode and the MI lights up.

DTC No.	Detected items	Engine operating condition in fail-safe mode
P0107 P0108	Manifold absolute pressure sensor circuit	Engine speed will not rise more than 2,500 rpm due to the fuel cut.
P0117 P0118	Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-II displays the engine coolant temperature decided by ECM.
		Condition: Just as ignition switch is turned ON or Start — Engine coolant temperature decided (CONSULT-II display): 40°C (104°F)
		Condition: More than approx. 4 minutes after ignition ON or Start — Engine coolant temperature decided (CONSULT-II display): 80°C (176°F)
		Condition: Except as shown above — Engine coolant temperature decided (CONSULT-II display): 40 - 80°C (104 - 176°F) (Depends on the time)
		When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.
P0122 P0123 P0222 P0223 P2135	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P0221 P0222 P0223 P1223 P1224	Throttle position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P0226 P0227 P0228 P1227 P1228	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.
P1121	Electric throttle control actuator	(When electric throttle control actuator does not function properly due to the return spring malfunction:) ECM controls the electric throttle control actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
		(When throttle valve opening angle in fail-safe mode is not in specified range:) ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
		(When ECM detects the throttle valve is stuck open:) While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.
P1122	Electric throttle control function	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1124 P1126	Throttle control motor relay	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1128	Throttle control motor	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P1171	Intake air	When accelerator pedal is depressed, engine speed will not rise more than 2,500 rpm due to fuel cut.

DTC No.	Detected items	Engine operating condition in fail-safe mode
P1229	Sensor power supply	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.
P2122 P2123 P2127 P2128 P2138	Accelerator pedal position sensor	The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

- When there is an open circuit on MI circuit, the ECM can not warn the driver by lighting MI up when there is a malfunction on engine control system.
  Therefore, when electrical controlled throttle and part of ECM related diagnoses is continuously detected as NG for 5 trips, ECM warns the driver that engine control system has a malfunction and MI circuit is open by means of operating fail-safe function.
  The fail-safe function also operate when above diagnoses except MI circuit are detected, and demands the driver to repair the malfunction.

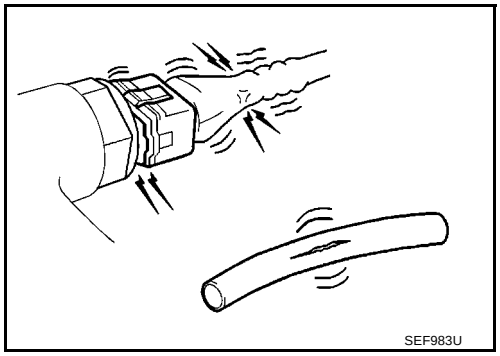
Engine operating condition in fail-safe mode	Engine speed will not rise more than 2,500 rpm due to the fuel cut

Basic Inspection

EBS00OKL

1. INSPECTION START

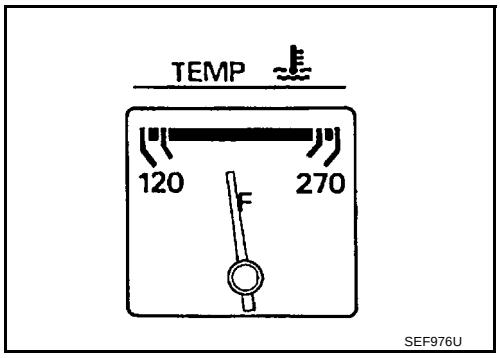
1. Check service records for any recent repairs that may indicate a related malfunction, or a current need for scheduled maintenance.
2. Open engine hood and check the following:
- Harness connectors for improper connections
- Wiring harness for improper connections, pinches and cut
- Vacuum hoses for splits, kinks and improper connections
- Hoses and ducts for leaks
- Air cleaner clogging
- Gasket



SEF983U

3. Confirm that electrical or mechanical loads are not applied.
- Headlamp switch is OFF.
- Air conditioner switch is OFF.
- Rear window defogger switch is OFF.
- Steering wheel is in the straight-ahead position, etc.

4. Start engine and warm it up until engine coolant temperature indicator points the middle of gauge.
Ensure engine stays below 1,000 rpm.

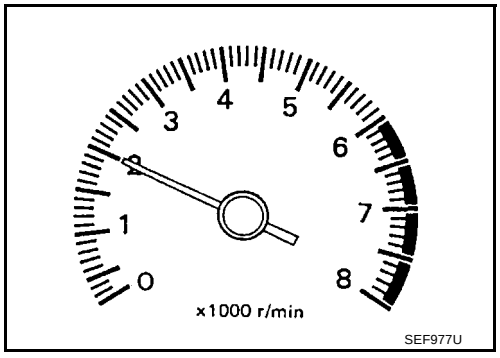


SEF976U

5. Run engine at about 2,000 rpm for about 2 minutes under no load.
6. Make sure that no DTC is displayed with CONSULT-II.

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.



SEF977U

2. REPAIR OR REPLACE

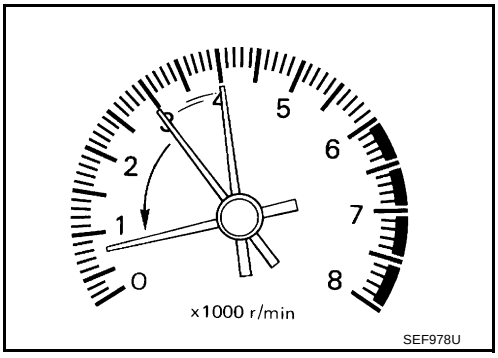
Repair or replace components as necessary according to corresponding Diagnostic Procedure.

>> GO TO 3

3. CHECK TARGET IDLE SPEED

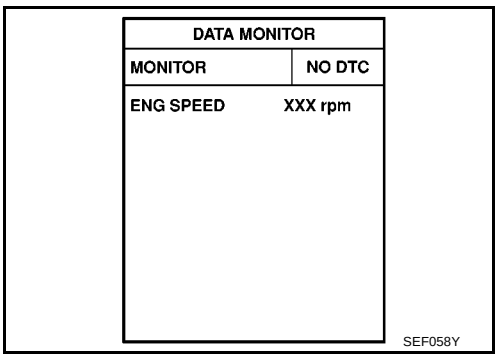
With CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.



3. Read idle speed in “DATA MONITOR” mode with CONSULT-II.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)



Without CONSULT-II

1. Run engine at about 2,000 rpm for about 2 minutes under no load.
2. Rev engine (2,000 to 3,000 rpm) two or three times under no load, then run engine at idle speed for about 1 minute.
3. Check idle speed.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 4.

4. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-503, "Accelerator Pedal Released Position Learning" .

>> GO TO 5.

5. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-503, "Throttle Valve Closed Position Learning" .

>> GO TO 6.

6. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-503, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 7.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

7. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-II.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

OK or NG

OK >> GO TO 10.
NG >> GO TO 8.

8. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to EC-650 .
- Check crankshaft position sensor (POS) and circuit. Refer to EC-643 .

OK or NG

OK >> GO TO 9.
NG >> 1. Repair or replace.
2. GO TO 4.

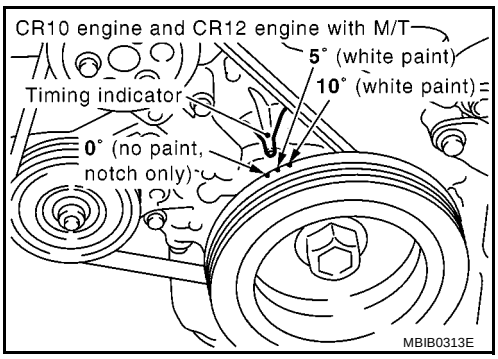
9. CHECK ECM FUNCTION

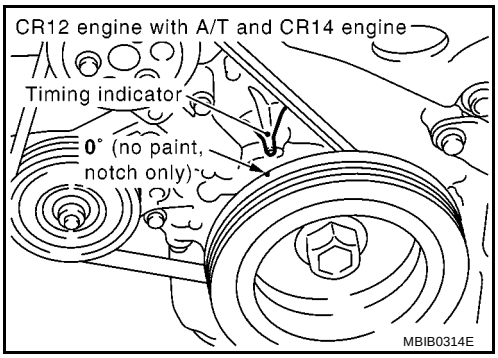
1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NATS system and registration of NATS ignition key IDs. Refer to EC-511, "NATS (Nissan Anti-theft System)" .

>> GO TO 4.

10. CHECK IGNITION TIMING

1. Run engine at idle.
2. Check ignition timing with a timing light.





M/T: 5 ± 2° BTDC
A/T: 5 ± 2° BTDC (in P or N position)

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 11.

11. PERFORM ACCELERATOR PEDAL RELEASED POSITION LEARNING

1. Stop engine.
2. Perform EC-503, "Accelerator Pedal Released Position Learning" .

>> GO TO 12.

12. PERFORM THROTTLE VALVE CLOSED POSITION LEARNING

Perform EC-503, "Throttle Valve Closed Position Learning" .

>> GO TO 13.

13. PERFORM IDLE AIR VOLUME LEARNING

Refer to EC-503, "Idle Air Volume Learning" .
Is Idle Air Volume Learning carried out successfully?

Yes or No

Yes >> GO TO 14.
No >> 1. Follow the instruction of Idle Air Volume Learning.
2. GO TO 4.

14. CHECK TARGET IDLE SPEED AGAIN

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Read idle speed in “DATA MONITOR” mode with CONSULT-II.

M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Check idle speed.

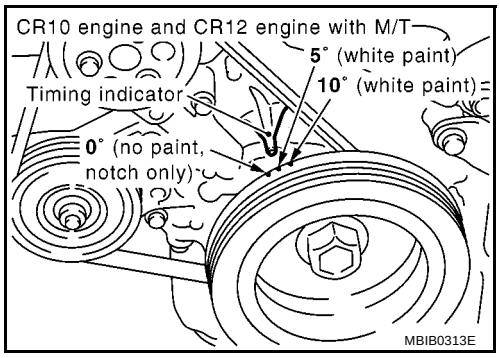
M/T: 650 ± 50 rpm
A/T: 700 ± 50 rpm (in P or N position)

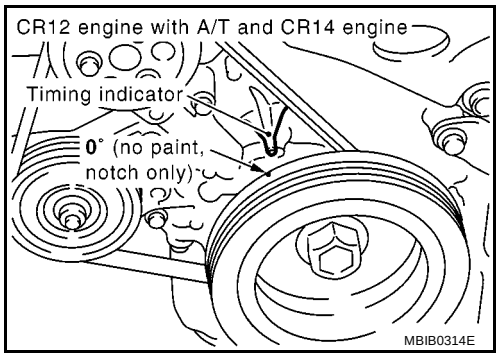
OK or NG

OK >> GO TO 15.
NG >> GO TO 17.

15. CHECK IGNITION TIMING AGAIN

1. Run engine at idle.
2. Check ignition timing with a timing light.





M/T: 5 ± 2° BTDC
A/T: 5 ± 2° BTDC (in P or N position)

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 16.

16. CHECK TIMING CHAIN INSTALLATION

Check timing chain installation. Refer to EM-48, "TIMING CHAIN" .

OK or NG

OK >> GO TO 17.
NG >> 1. Repair the timing chain installation.
2. GO TO 4.

17. DETECT MALFUNCTIONING PART

Check the following.

- Check camshaft position sensor (PHASE) and circuit. Refer to EC-650 .
- Check crankshaft position sensor (POS) and circuit. Refer to EC-643 .

OK or NG

OK >> GO TO 18.
NG >> 1. Repair or replace.
2. GO TO 4.

18. CHECK ECM FUNCTION

1. Substitute another known-good ECM to check ECM function. (ECM may be the cause of an incident, but this is a rare case.)
2. Perform initialization of NATS system and registration of NATS ignition key IDs. Refer to EC-511, "NATS (Nissan Anti-theft System)" .

>> GO TO 4.

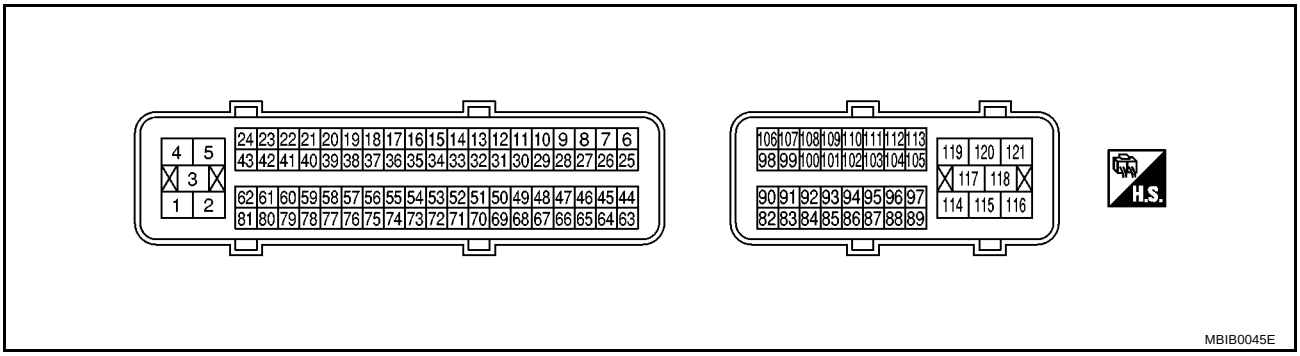
ECM Harness Connector Terminal Layout

EBS00OKP

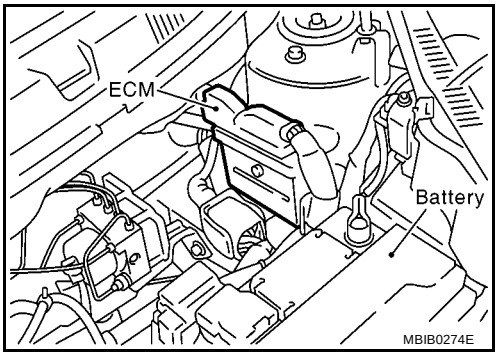


ECM Terminals and Reference Value

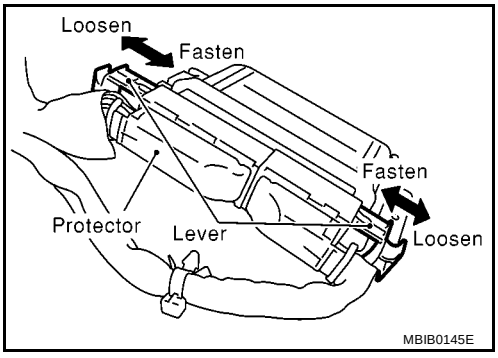
EBS00OKQ

PREPARATION

1. ECM is located left hand side of the engine room.
2. Remove ECM harness protector.



3. When disconnecting ECM harness connector, loosen it with levers as far as they will go as shown in the figure.
4. Connect a break-out box (SST) and Y-cable adapter (SST) between the ECM and ECM harness connector.
   - Use extreme care not to touch 2 pins at one time.
   - Data is for comparison and may not be exact.



ECM INSPECTION TABLE

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1	B	ECM ground	**[Engine is running]** ● Idle speed	Engine ground

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
2	GY	Heated oxygen sensor 2 heater	**[Engine is running]** ● Engine speed is below 3,600 rpm (A/T models), 3,800 rpm (M/T models) after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - 1.0V
			[Ignition switch ON] ● Engine stopped **[Engine is running]** ● Engine speed is above 3,600 rpm (A/T models), 3,800 rpm (M/T models).	BATTERY VOLTAGE (11 - 14V)
3	LG	Throttle control motor relay power supply	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
4	L	Throttle control motor (Close)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Released	0 - 14V★  PBIB0534E
5	P	Throttle control motor (Open)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB0533E
13	Y	Crankshaft position sensor (POS)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	Approximately 3.0V★  PBIB0527E
			[Engine is running] ● Engine speed is 2,000 rpm	Approximately 3.0V★  PBIB0528E

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
14	R	Camshaft position sensor (PHASE)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	1.0 - 4.0V★  PBIB0525E
			[Engine is running] ● Engine speed is 2,000 rpm.	1.0 - 4.0V★  PBIB0526E
15	W	Knock sensor	**[Engine is running]** ● Idle speed	Approximately 2.5V
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● **Warm-up condition** ● Engine speed is below 3,600 rpm (A/T models), 3,800 rpm (M/T models) after the following conditions are met. ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - Approximately 1.0V
19	LG	EVAP canister purge volume control solenoid valve	**[Engine is running]** ● Idle speed	BATTERY VOLTAGE (11 - 14V)★  PBIB0050E
			[Engine is running] ● Engine speed is about 2,000 rpm (More than 100 seconds after starting engine)	Approximately 10V★  PBIB0520E

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
22 23 41 42	OR L R GY	Injector No. 3 Injector No. 1 Injector No. 4 Injector No. 2	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	BATTERY VOLTAGE (11 - 14V)★  PBIB0529E
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm	BATTERY VOLTAGE (11 - 14V)★  PBIB0530E
24	Y	Heated oxygen sensor 1 heater	**[Engine is running]** ● **Warm-up condition** ● Engine speed is below 3,600 rpm.	Approximately 7.0V★  PBIB0519E
			[Engine is running] ● Engine speed is above 3,600 rpm.	BATTERY VOLTAGE (11 - 14V)
29	B	Sensor ground (Camshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
30	B	Sensor ground (Crankshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
34	OR	Intake air temperature sensor	**[Engine is running]**	Approximately 0 - 4.8V Output voltage varies with intake air temperature.
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
45	L	Sensor power supply	**[Ignition switch ON]**	Approximately 5V
46	W	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch ON]**	Approximately 5V
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V
51	W	Manifold absolute pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 1.5V
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	Approximately 1.2V
54	—	Sensor ground (Knock sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
56	B	Sensor ground (Manifold absolute pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
57	Y	Sensor ground (Refrigerant pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
60 61 79 80	Y PU G BR	Ignition signal No. 3 Ignition signal No. 1 Ignition signal No. 4 Ignition signal No. 2	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	0 - 0.1V★  PBIB0521E
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - 0.2V★  PBIB0522E

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
62	LG	Intake valve timing control solenoid valve	**[Engine is running]** ● **Warm-up condition** ● Idle speed	BATTERY VOLTAGE (11 - 14V)
			[Engine is running] ● **Warm-up condition** ● When revving engine up to 2,000 rpm quickly	Approximately 4V - BATTERY VOLTAGE (11 - 14V)★  PBIB1790E
66	B	Sensor ground (Throttle position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V
69	BR	Refrigerant pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Both A/C switch and blower switch are ON (Compressor operates.)	1.0 - 4.0V
72	P	Engine coolant temperature sensor	**[Engine is running]**	Approximately 0 - 4.8V Output voltage varies with engine coolant temperature.
73	B	Sensor ground (Engine coolant temperature sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
82	B	Sensor ground (APP sensor 1)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
83	B	Sensor ground (APP sensor 2)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
85	LG	DATA link connector	**[Ignition switch ON]** ● CONSULT-II is disconnected.	BATTERY VOLTAGE (11 - 14V)
86	W	CAN communication line	**[Ignition switch ON]**	1.0 - 2.5V
90	OR	Sensor power supply (APP sensor 1)	**[Ignition switch ON]**	Approximately 5V

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
91	BR	Sensor power supply (APP sensor 2)	**[Ignition switch ON]**	Approximately 5V
92	GY	Throttle position sensor signal output (A/T models)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Accelerator pedal: Fully released	Approximately 0.8V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Accelerator pedal: Fully depressed	Approximately 4.6V
94	R	CAN communication line	**[Ignition switch ON]**	2.5 - 4.0V
98	GY	Accelerator pedal position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Accelerator pedal: Fully released	0.3 - 0.6V
			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	1.95 - 2.4V
101	W	Stop lamp switch	**[Ignition switch ON]** ● Brake pedal: Fully released	Approximately 0V
			[Ignition switch ON] ● Brake pedal: Depressed	BATTERY VOLTAGE (11 - 14V)
102	GY	PNP switch	**[Ignition switch ON]** ● Gear position: P or N (A/T models) Neutral (M/T models)	Approximately 0V
			[Ignition switch ON] ● Except the above gear position	BATTERY VOLTAGE (11 - 14V)
103	L/OR	Tachometer signal output (A/T models)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	10 - 11V★  MBIB0053E
			[Engine is running] ● Engine speed is 2,000 rpm	10 - 11V★  MBIB0054E
104	G	Throttle control motor relay	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch ON]	0 - 1.0V

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
106	W	Accelerator pedal position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Accelerator pedal: Fully released	0.6 - 0.9V
			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	3.9 - 4.7V
109	PU	Ignition switch	**[Ignition switch OFF]**	0V
			[Ignition switch ON]	BATTERY VOLTAGE (11 - 14V)
111	P	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.0V
			[Ignition switch OFF] ● More than a few seconds passed after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
113	R	Fuel pump relay	**[Ignition switch ON]** ● For 1 second after turning ignition switch ON **[Engine is running]**	0 - 1.0V
			[Ignition switch ON] ● More than 1 second after turning ignition switch ON	BATTERY VOLTAGE (11 - 14V)
115 116	B B	ECM ground	**[Engine is running]** ● Idle speed	Engine ground
119 120	G G	Power supply for ECM	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
121	BR	Power supply for ECM (Back-up)	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

CONSULT-II Function (ENGINE)

EBS00OKR

FUNCTION

Diagnostic test mode	Function
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on the CONSULT-II unit.
Self-diagnostic results	Self-diagnostic results such as 1st trip DTC, DTCs and 1st trip freeze frame data or freeze frame data can be read and erased quickly.*
Data monitor	Input/Output data in the ECM can be read.
Data monitor (SPEC)	Input/Output of the specification for Basic fuel schedule, A/F feedback control value and the other data monitor items can be read.
CAN diagnostic support monitor	The results of transmit/receive diagnosis of CAN communication can be read.
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECMs and also shifts some parameters in a specified range.
Function test	This mode is used to inform customers when their vehicle condition requires periodic maintenance.
ECM part number	ECM part number can be read.

*: The following emission-related diagnostic information is cleared when the ECM memory is erased.

- Diagnostic trouble codes
- 1st trip diagnostic trouble codes

- Freeze frame data
- 1st trip freeze frame data
- Others

X: Applicable

*1: This item includes 1st trip DTCs.

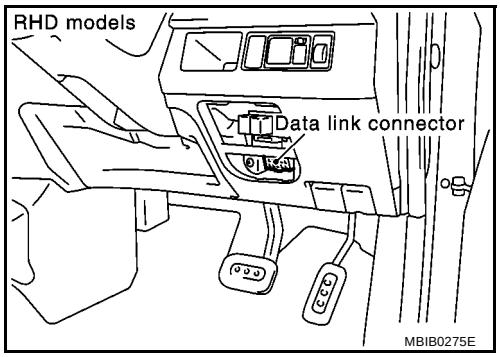
*2: This mode includes 1st trip freeze frame data or freeze frame data. The items appear on CONSULT-II screen in freeze frame data mode only if a 1st trip DTC or DTC is detected. For details, refer to EC-509 .

INSPECTION PROCEDURE

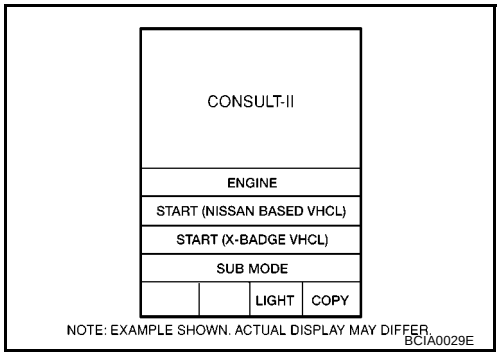
CAUTION:

If CONSULT-II is used with no connection to CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

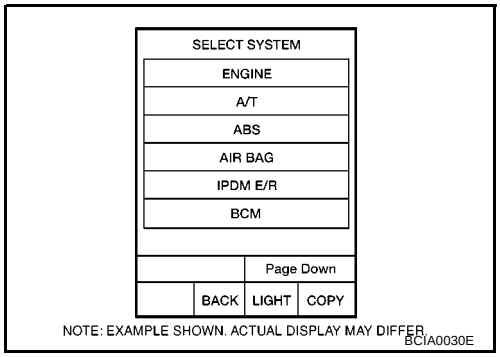
1. Turn ignition switch OFF.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to data link connector, which is located under drivers side dash panel.
3. Turn ignition switch ON.



4. Touch “START(NISSAN BASED VHCL)”.

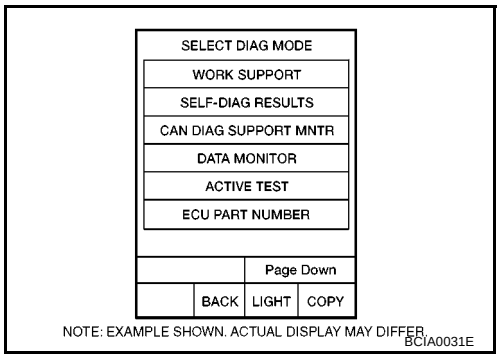


5. Touch “ENGINE”.
   If “ENGINE” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Perform each diagnostic test mode according to each service procedure.

For further information, see the CONSULT-II Operation Manual.



WORK SUPPORT MODE

Work Item

WORK ITEM	CONDITION	USAGE
FUEL PRESSURE RELEASE	● FUEL PUMP WILL STOP BY TOUCHING START DURING IDLING. CRANK A FEW TIMES AFTER ENGINE STALLS.	When releasing fuel pressure from fuel line
IDLE AIR VOL LEARN	● THE IDLE AIR VOLUME THAT KEEPS THE ENGINE WITHIN THE SPECIFIED RANGE IS MEMORIZED IN ECM.	When learning the idle air volume
SELF-LEARNING CONT	● THE COEFFICIENT OF SELF-LEARNING CONTROL MIXTURE RATIO RETURNS TO THE ORIGINAL COEFFICIENT.	When clearing the coefficient of self-learning control value
TARGET IGN TIM ADJ*	● IDLE CONDITION	When adjusting target ignition timing
TARGET IDLE RPM ADJ*	● IDLE CONDITION	When setting target idle speed

*: This function is not necessary in the usual service procedure.

SELF-DIAG RESULTS MODE

Self Diagnostic Item

Regarding items of DTC and 1st trip DTC, refer to EC-472, "INDEX FOR DTC" .

Freeze Frame Data and 1st Trip Freeze Frame Data

Freeze frame data item*	Description
DIAG TROUBLE CODE [PXXXX]	● The engine control component part/control system has a trouble code, it is displayed as “PXXXX”. (Refer to EC-472, "INDEX FOR DTC" .)
FUEL SYS-B1	● Fuel injection system status at the moment a malfunction is detected is displayed. ● One mode in the following is displayed. Mode2: Open loop due to detected system malfunction Mode3: Open loop due to driving conditions (power enrichment, deceleration enleanment) Mode4: Closed loop - using oxygen sensor(s) as feedback for fuel control Mode5: Open loop - has not yet satisfied condition to go to closed loop
CAL/LD VALUE [%]	● The calculated load value at the moment a malfunction is detected is displayed.
COOLANT TEMP [°C] or [°F]	● The engine coolant temperature at the moment a malfunction is detected is displayed.
L-FUEL TRM-B1 [%]	● “Long-term fuel trim” at the moment a malfunction is detected is displayed. ● The long-term fuel trim indicates much more gradual feedback compensation to the base fuel schedule than short-term fuel trim.
S-FUEL TRM-B1 [%]	● “Short-term fuel trim” at the moment a malfunction is detected is displayed. ● The short-term fuel trim indicates dynamic or instantaneous feedback compensation to the base fuel schedule.
ENGINE SPEED [rpm]	● The engine speed at the moment a malfunction is detected is displayed.
VEHICL SPEED [km/h] or [mph]	● The vehicle speed at the moment a malfunction is detected is displayed.
B/FUEL SCHDL [msec]	● The base fuel schedule at the moment a malfunction is detected is displayed.
INT/A TEMP SE [°C] or [°F]	● The intake air temperature at the moment a malfunction is detected is displayed.

*: The items are the same as those of 1st trip freeze frame data.

DATA MONITOR MODE
Monitored Item

×: Applicable

Monitored item [Unit]	ECM INPUT SIG-NALS	MAIN SIG-NALS	Description	Remarks
ENG SPEED [rpm]	×	×	● Indicates the engine speed computed from the signals of the crankshaft position sensor (POS) and camshaft position sensor (PHASE).	● Accuracy becomes poor if engine speed drops below the idle rpm. ● If the signal is interrupted while the engine is running, an abnormal value may be indicated.
COOLAN TEMP/S [°C] or [°F]	×	×	● The engine coolant temperature (determined by the signal voltage of the engine coolant temperature sensor) is displayed.	● When the engine coolant temperature sensor is open or short-circuited, ECM enters fail-safe mode. The engine coolant temperature determined by the ECM is displayed.
HO2S1 (B1) [V]	×	×	● The signal voltage of the heated oxygen sensor 1 is displayed.	
HO2S2 (B1) [V]	×		● The signal voltage of the heated oxygen sensor 2 is displayed.	
HO2S1 MNTR (B1) [RICH/LEAN]	×	×	● Display of heated oxygen sensor 1 signal during air-fuel ratio feedback control: RICH ... means the mixture became “rich”, and control is being affected toward a leaner mixture. LEAN ... means the mixture became “lean”, and control is being affected toward a rich mixture.	● After turning ON the ignition switch, “RICH” is displayed until air-fuel mixture ratio feedback control begins. ● When the air-fuel ratio feedback is clamped, the value just before the clamping is displayed continuously.
HO2S2 MNTR (B1) [RICH/LEAN]	×		● Display of heated oxygen sensor 2 signal: RICH ... means the amount of oxygen after three way catalyst is relatively small. LEAN ... means the amount of oxygen after three way catalyst is relatively large.	● When the engine is stopped, a certain value is indicated.
A/F ALPHA-B1 [%]		×	● The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	● When the engine is stopped, a certain value is indicated. ● This data also includes the data for the air-fuel ratio learning control.
VHCL SPEED SE [km/h] or [mph]	×	×	● The vehicle speed computed from the vehicle speed signal is displayed.	
BATTERY VOLT [V]	×	×	● The power supply voltage of ECM is displayed.	
B/FUEL SCHDL [msec]		×	● “Base fuel schedule” indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	
ACCEL SEN 1 [V]	×	×	● The accelerator pedal position sensor signal voltage is displayed.	
ACCEL SEN 2 [V]	×			
THRTL SEN 1 [V]	×	×	● The throttle position sensor signal voltage is displayed.	
THRTL SEN 2 [V]	×			
INT/A TEMP SE [°C] or [°F]	×	×	● The intake air temperature (determined by the signal voltage of the intake air temperature sensor) is indicated.	
TURBO BST SEN [V]	×		● The signal voltage of the manifold absolute pressure sensor is displayed.	

Monitored item [Unit]	ECM INPUT SIGNALS	MAIN SIGNALS	Description	Remarks
START SIGNAL [ON/OFF]	×	×	● Indicates start signal status [ON/OFF] computed by the ECM according to the signals of engine speed and battery voltage.	● After starting the engine, [OFF] is displayed regardless of the starter signal.
CLSD THL POS [ON/OFF]	×	×	● Indicates idle position [ON/OFF] computed by the ECM according to the accelerator pedal position sensor signal.	
AIR COND SIG [ON/OFF]	×	×	● Indicates [ON/OFF] condition of the air conditioner switch as determined by the air conditioner signal.	
P/N POSI SW [ON/OFF]	×	×	● Indicates [ON/OFF] condition from the park/neutral position (PNP) switch signal.	
PW/ST SIGNAL [ON/OFF]	×	×	● [ON/OFF] condition of the power steering oil pressure switch as determined by the power steering oil pressure signal is indicated.	
LOAD SIGNAL [ON/OFF]	×	×	● Indicates [ON/OFF] condition from the electrical load signal. ON ... Rear window defogger switch is ON and/or lighting switch is in 2nd position. OFF ... Both rear window defogger switch and lighting switch are OFF.	
IGNITION SW [ON/OFF]	×		● Indicates [ON/OFF] condition from ignition switch.	
HEATER FAN SW [ON/OFF]	×		● Indicates [ON/OFF] condition from the heater fan switch signal.	
BRAKE SW [ON/OFF]	×		● Indicates [ON/OFF] condition from the stop lamp switch signal.	
INJ PULSE-B1 [msec]		×	● Indicates the actual fuel injection pulse width compensated by ECM according to the input signals.	● When the engine is stopped, a certain computed value is indicated.
IGN TIMING [BTDC]		×	● Indicates the ignition timing computed by ECM according to the input signals.	● When the engine is stopped, a certain value is indicated.
CAL/LD VALUE [%]			● “Calculated load value” indicates the value of the current airflow divided by peak airflow.	
MASS AIRFLOW [g·m/s]			● Indicates the mass air flow computed by ECM according to the signal voltage of manifold absolute pressure sensor.	
PURG VOL C/V [%]			● Indicates the EVAP canister purge volume control solenoid valve control value computed by the ECM according to the input signals. ● The opening becomes larger as the value increases.	
INT/V TIM (B1) [°CA]			● Indicates [°CA] of intake camshaft advanced angle.	
INT/V SOL (B1) [%]			● The control value of the intake valve timing control solenoid valve (determined by ECM according to the input signals) is indicated. ● The advance angle becomes larger as the value increases.	

Monitored item [Unit]	ECM INPUT SIG-NALS	MAIN SIG-NALS	Description	Remarks
AIR COND RLY [ON/OFF]		×	● The air conditioner relay control condition (determined by ECM according to the input signals) is indicated.	
FUEL PUMP RLY [ON/OFF]		×	● Indicates the fuel pump relay control condition determined by ECM according to the input signals.	
THRTL RELAY [ON/OFF]		×	● Indicates the throttle control motor relay control condition determined by the ECM according to the input signals.	
COOLING FAN [HI/LOW/OFF]		×	● Indicates the condition of the cooling fan (determined by ECM according to the input signals). HI ... High speed operation LOW ... Low speed operation OFF ... Stop	
HO2S1 HTR (B1) [ON/OFF]			● Indicates [ON/OFF] condition of heated oxygen sensor 1 heater determined by ECM according to the input signals.	
HO2S2 HTR (B1) [ON/OFF]			● Indicates [ON/OFF] condition of heated oxygen sensor 2 heater determined by ECM according to the input signals.	
IDL A/V LEARN [YET/CMPLT]			● Display the condition of idle air volume learning YET ... Idle air volume learning has not been performed yet. CMPLT ... Idle air volume learning has already been performed successfully.	
TRVL AFTER MIL [km] or [mile]			● Distance traveled while MI is activated.	
O2 SEN HTR DTY [%]			● Indicates the heated oxygen sensor 1 heater control valve computed by the ECM according to the input signals.	
AC PRESS SEN [V]	×		● The signal voltage from the refrigerant pressure sensor is displayed.	
Voltage [V]			● Voltage, frequency, duty cycle or pulse width measured by the probe.	● Only “#” is displayed if item is unable to be measured. ● Figures with “#”s are temporary ones. They are the same figures as an actual piece of data which was just previously measured.
Frequency [msec], [Hz] or [%]				
DUTY-HI				
DUTY-LOW				
PLS WIDTH-HI				
PLS WIDTH-LOW				

NOTE:

- Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

DATA MONITOR (SPEC) MODE

Monitored Item

Monitored item [Unit]	ECM input signals	Main signals	Description	Remarks
ENG SPEED [rpm]	×		● Indicates the engine speed computed from the signal of the crankshaft position sensor (POS).	
B/FUEL SCHDL [msec]			● “Base fuel schedule” indicates the fuel injection pulse width programmed into ECM, prior to any learned on board correction.	● When engine is running specification range is indicated.
A/F ALPHA-B1 [%]		×	● The mean value of the air-fuel ratio feedback correction factor per cycle is indicated.	● When engine is running specification range is indicated. ● This data also includes the data for the air-fuel ratio learning control.

NOTE:
- Any monitored item that does not match the vehicle being diagnosed is deleted from the display automatically.

ACTIVE TEST MODE

Test Item

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
FUEL INJECTION	● Engine: Return to the original trouble condition ● Change the amount of fuel injection using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Fuel injectors ● Heated oxygen sensor 1
IGNITION TIMING	● Engine: Return to the original trouble condition ● Timing light: Set ● Retard the ignition timing using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Perform Idle Air Volume Learning.
POWER BALANCE	● Engine: After warming up, idle the engine. ● A/C switch: OFF ● Shift lever: N ● Cut off each injector signal one at a time using CONSULT-II.	Engine runs rough or dies.	● Harness and connectors ● Compression ● Fuel injectors ● Power transistor ● Spark plugs ● Ignition coils
COOLING FAN*1	● Ignition switch: ON ● Turn the cooling fan ON and OFF with CONSULT-II.	Cooling fan moves and stops.	● Harness and connectors ● Cooling fan relay ● Cooling fan motor
ENG COOLANT TEMP	● Engine: Return to the original trouble condition ● Change the engine coolant temperature using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Engine coolant temperature sensor ● Fuel injectors
FUEL PUMP RELAY	● Ignition switch: ON (Engine stopped) ● Turn the fuel pump relay ON and OFF using CONSULT-II and listen to operating sound.	Fuel pump relay makes the operating sound.	● Harness and connectors ● Fuel pump relay

TEST ITEM	CONDITION	JUDGEMENT	CHECK ITEM (REMEDY)
PURG VOL CONT/V	● Engine: After warming up, run engine at 1,500 rpm. ● Change the EVAP canister purge volume control solenoid valve opening percent using CONSULT-II.	Engine speed changes according to the opening percent.	● Harness and connectors ● Solenoid valve
V/T ASSIGN ANGLE	● Engine: Return to the original trouble condition ● Change intake valve timing using CONSULT-II.	If trouble symptom disappears, see CHECK ITEM.	● Harness and connectors ● Intake valve timing control solenoid valve

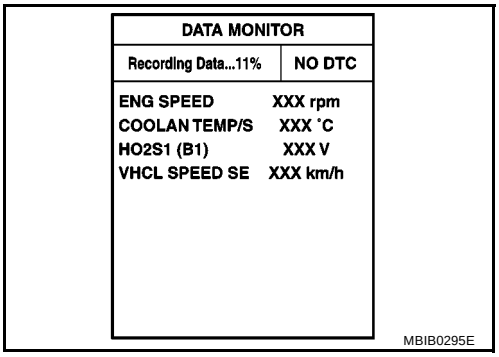
*1:Leaving cooling fan OFF with CONSULT-II while engine is running may cause the engine to overheat.

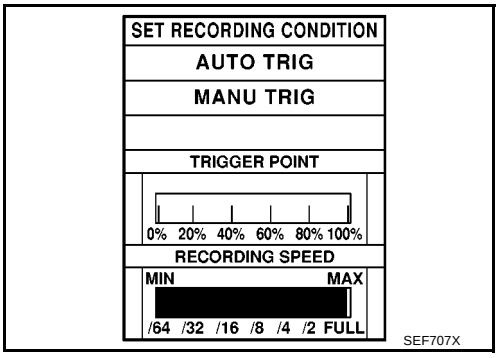
REAL TIME DIAGNOSIS IN DATA MONITOR MODE (RECORDING VEHICLE DATA)

Description

CONSULT-II has two kinds of triggers and they can be selected by touching “SETTING” in “DATA MONITOR” mode.

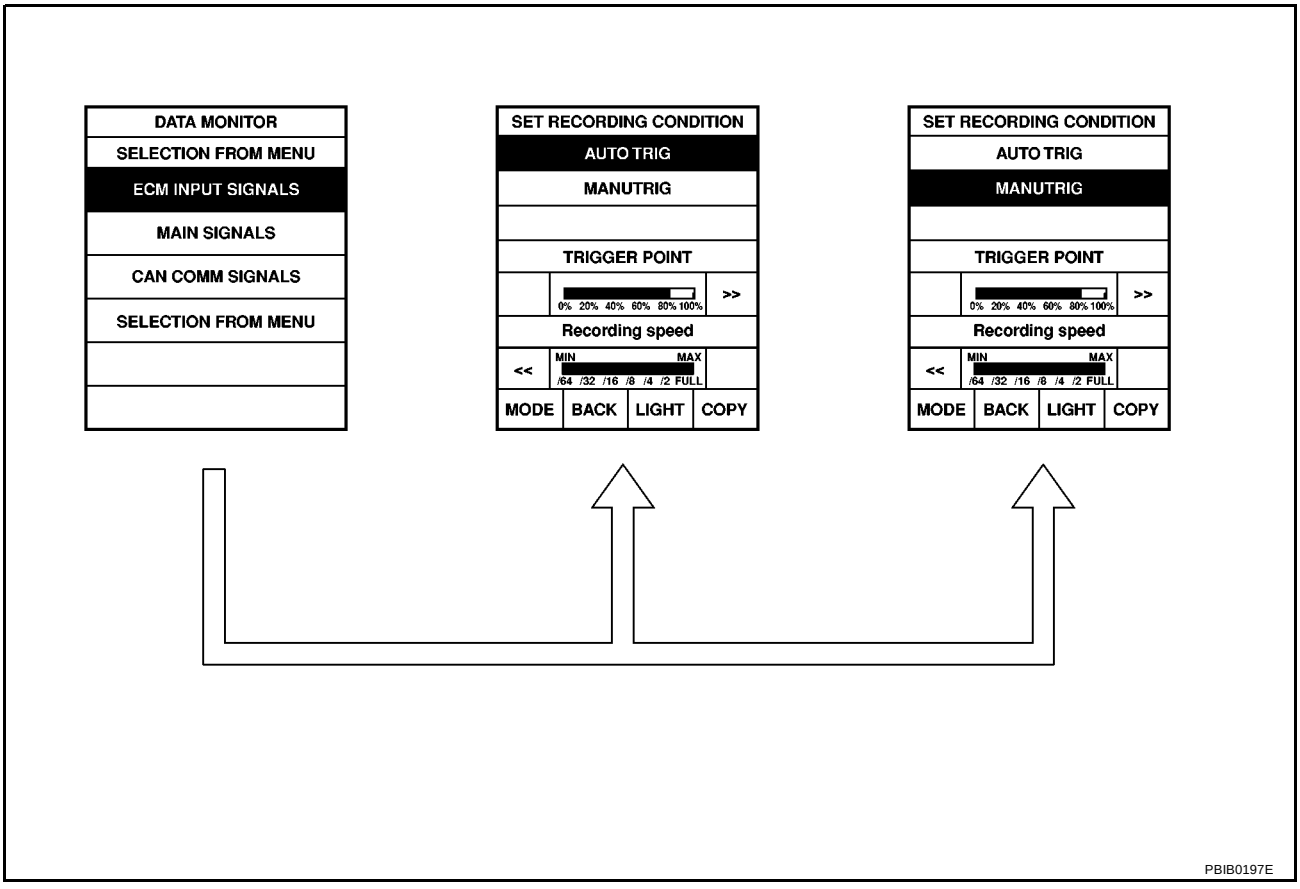
1. “AUTO TRIG” (Automatic trigger):
   - The malfunction will be identified on the CONSULT-II screen in real time.
     In other words, DTC/1st trip DTC and malfunction item will be displayed if the malfunction is detected by ECM.
     At the moment a malfunction is detected by ECM, “MONITOR” in “DATA MONITOR” screen is changed to “Recording Data ... xx%” as shown in the figure, and the data after the malfunction detection is recorded. Then when the percentage reached 100%, “REAL-TIME DIAG” screen is displayed. If “STOP” is touched on the screen during “Recording Data ... xx%”, “REAL-TIME DIAG” screen is also displayed.
     The recording time after the malfunction detection and the recording speed can be changed by “TRIGGER POINT” and “Recording Speed”. Refer to CONSULT-II OPERATION MANUAL.
2. “MANU TRIG” (Manual trigger):
   - DTC/1st trip DTC and malfunction item will not be displayed automatically on CONSULT-II screen even though a malfunction is detected by ECM.
     DATA MONITOR can be performed continuously even though a malfunction is detected.





Operation

1. “AUTO TRIG”
   - While trying to detect the DTC/1st trip DTC by performing the DTC Confirmation Procedure, be sure to select to “DATA MONITOR (AUTO TRIG)” mode. You can confirm the malfunction at the moment it is detected.
   - While narrowing down the possible causes, CONSULT-II should be set in “DATA MONITOR (AUTO TRIG)” mode, especially in case the incident is intermittent.
     When you are inspecting the circuit by gently shaking (or twisting) the suspicious connectors, components and harness in the DTC Confirmation Procedure, the moment a malfunction is found the DTC/1st trip DTC will be displayed. (Refer to Incident Simulation Tests in GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" .)
2. “MANU TRIG”
   - If the malfunction is displayed as soon as “DATA MONITOR” is selected, reset CONSULT-II to “MANU TRIG”. By selecting “MANU TRIG” you can monitor and store the data. The data can be utilized for further diagnosis, such as a comparison with the value for the normal operating condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OKT

Remarks:
- Specification data are reference values.
- Specification data are output/input values which are detected or supplied by the ECM at the connector.
  * Specification data may not be directly related to their components signals/values/operations.
  i.e. Adjust ignition timing with a timing light before monitoring IGN TIMING, because the monitor may show the specification data in spite of the ignition timing not being adjusted to the specification data. This IGN TIMING monitors the data calculated by the ECM according to the signals input from the camshaft position sensor and other ignition timing related sensors.

MONITOR ITEM	CONDITION		SPECIFICATION
ENG SPEED	● Tachometer: Connect ● Run engine and compare CONSULT-II value with the tachometer indication.		Almost the same speed as the tachometer indication.
B/FUEL SCHDL	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T modes) ● Air conditioner switch: OFF ● No load	Idle	2.5 - 3.5 msec
		2,000 rpm	2.5 - 3.5 msec
A/F ALPHA-B1	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	54% - 155%
COOLAN TEMP/S	● Engine: After warming up		More than 70°C (158°F)
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.
HO2S2 MNTR (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	LEAN ←→ RICH
VEH SPEED SE	● Turn drive wheels and compare CONSULT-II value with the speedometer indication.		Almost the same speed as the speedometer indication.
BATTERY VOLT	● Ignition switch: ON (Engine stopped)		11 - 14V
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*2	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
THRTL SEN1 THRTL SEN2*1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	More than 0.36V
	● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully depressed	Less than 4.75V
TURBO BST SEN	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	At idle	Approximately 1.5V
		At 2,500 rpm	Approximately 1.2V
START SIGNAL	● Ignition switch: ON → START → ON		OFF → ON → OFF
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates.)	ON
P/N POSI SW	● Ignition switch: ON	Shift lever: P or N (A/T models) Neutral (M/T models)	ON
		Shift lever: Except above	OFF
PW/ST SIGNAL	● Engine: After warming up, idle the engine	Steering wheel is in neutral position. (Forward direction)	OFF
		Steering wheel is turned.	ON
LOAD SIGNAL	● Ignition switch: ON	Rear window defogger switch is ON and/or lighting switch is in 2nd.	ON
		Rear window defogger switch is OFF and lighting switch is OFF.	OFF
IGNITION SW	● Ignition switch: ON → OFF → ON		ON → OFF → ON
HEATER FAN SW	● Engine: After warming up, idle the engine	Heater fan is operating.	ON
		Heater fan is not operating	OFF
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

MONITOR ITEM	CONDITION		SPECIFICATION
INJ PULSE-B1	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	Idle	2.0 - 3.0 msec
		2,000 rpm	1.9 - 2.9 msec
IGN TIMING	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	Idle	0° - 10° BTDC
		2,000 rpm	25° - 45° BTDC
CAL/LD VALUE	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	Idle	10% - 35%
		2,500 rpm	10% - 35%
MASS AIRFLOW	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	Idle	1.0 - 4.0 g·m/s
		2,500 rpm	4.0 - 10.0 g·m/s
PURG VOL C/V	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	0%
		2,000 rpm	20 - 30%
INT/V TIM (B1)	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	Idle	–5° - 5°CA
		When revving up to 2,000 rpm quickly	Approx. 0° - 20°CA
INT/V SOL (B1)	● Engine: After warming up ● Air conditioner switch: OFF ● Shift lever: N (A/T models) Neutral (M/T models) ● No load	Idle	0% - 2%
		When revving up to 2,000 rpm quickly	Approx. 0% - 50%
AIR COND RLY	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates)	ON
FUEL PUMP RLY	● For 1 second after turning ignition switch ON ● Engine running or cranking		ON
	● Except above conditions		OFF
THRTL RELAY	● Ignition switch: ON		ON

MONITOR ITEM	CONDITION		SPECIFICATION
COOLING FAN	● Engine: After warming up, idle the engine ● Air conditioner switch: OFF	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (210°F)	LOW*2
		Engine coolant temperature is 105°C (212°F) or more	HIGH*2
HO2S1 HTR (B1)	● Engine: After warming up ● Engine speed: Below 3,600 rpm		ON
	● Engine speed: Above 3,600 rpm		OFF
HO2S2 HTR (B1)	● Engine speed is below 3,600 rpm (A/T models), 3,800 rpm (M/T models) after the following conditions are met. – Engine: After warming up – Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.		ON
	● Engine speed: Above 3,600 rpm (A/T models), 3,800 rpm (M/T models)		OFF
TRVL AFTER MIL	● Ignition switch: ON	Vehicle has traveled after MI has turned ON.	0 - 65,535 km (0 - 40,723 mile)
O2SEN HTR DTY	● Engine coolant temperature when engine started: More than 80°C (176°F) ● Engine speed: below 3,600 rpm		Approx. 50%
AC PRESS SEN	● Ignition switch: ON (Engine stopped)		Approx. 0V
	● Engine: Idle ● Air conditioner switch: OFF		1.0 - 4.0V

*1 : Accelerator pedal position sensor 2 signal and throttle position sensor 2 signal are converted by ECM internally. Thus, they differ from ECM terminals voltage signal.

*2 : Models without air conditioner, cooling fan operates only ON and OFF operation, but CONSULT-II display will change OFF, LOW and HI depends on engine coolant temperature.

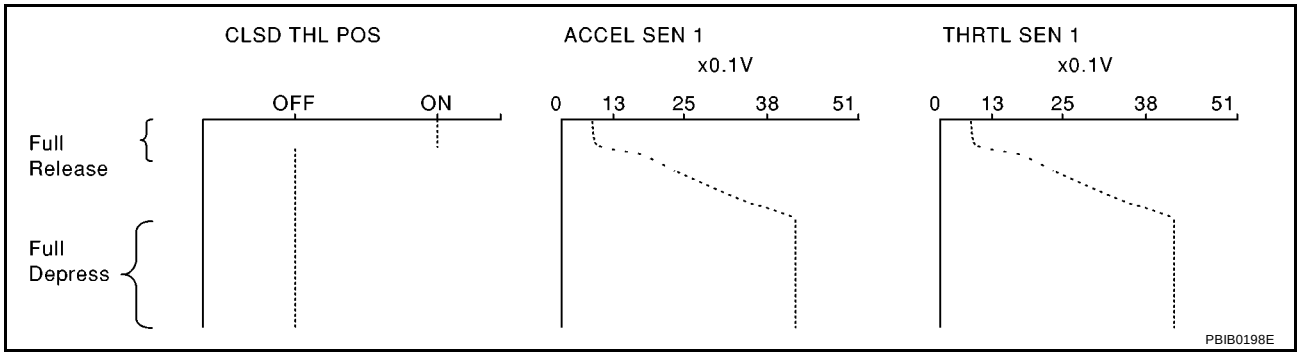
Major Sensor Reference Graph in Data Monitor Mode

EBS00OKU

The following are the major sensor reference graphs in “DATA MONITOR” mode.

CLSD THL POS, ACCEL SEN 1, THRTL SEN 1

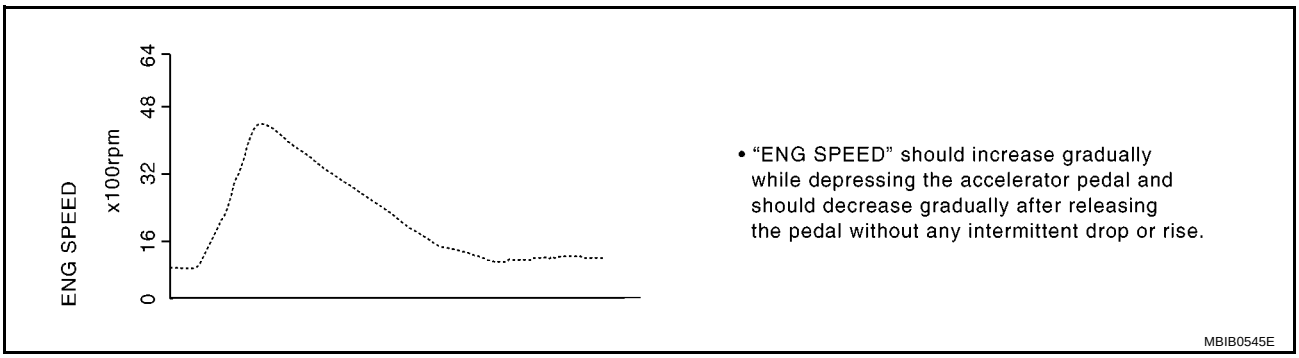
Below is the data for “CLSD THL POS”, “ACCEL SEN 1” and “THRTL SEN 1” when depressing the accelerator pedal with the ignition switch ON and with selector lever in D position (A/T models) or with shift lever in 1st position (M/T models).
The signal of “ACCEL SEN 1” and “THRTL SEN 1” should rise gradually without any intermittent drop or rise after “CLSD THL POS” is changed from “ON” to “OFF”.

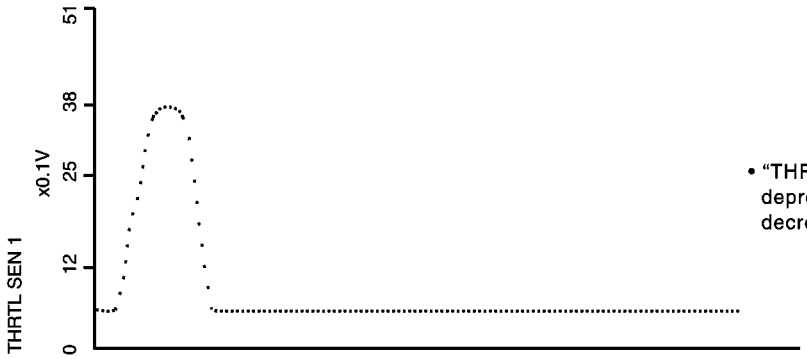


ENG SPEED, THRTL SEN 1, HO2S2 (B1), HO2S1 (B1), INJ PULSE-B1

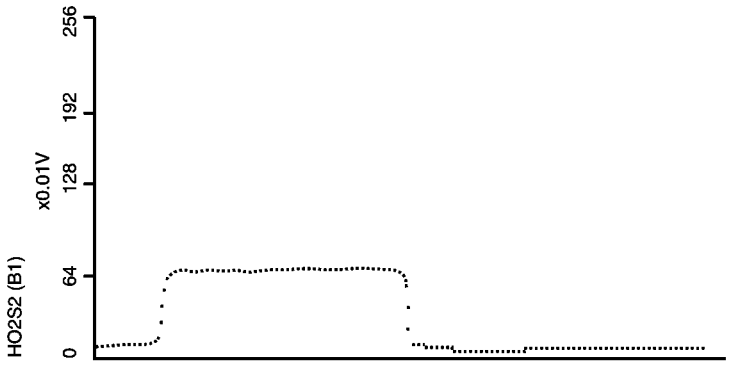
Below is the data for “ENG SPEED”, “THRTL SEN 1”, “HO2S2 (B1)”, “HO2S1 (B1)” and “INJ PULSE-B1” when revving engine quickly up to 4,800 rpm under no load after warming up engine sufficiently.

Each value is for reference, the exact value may vary.

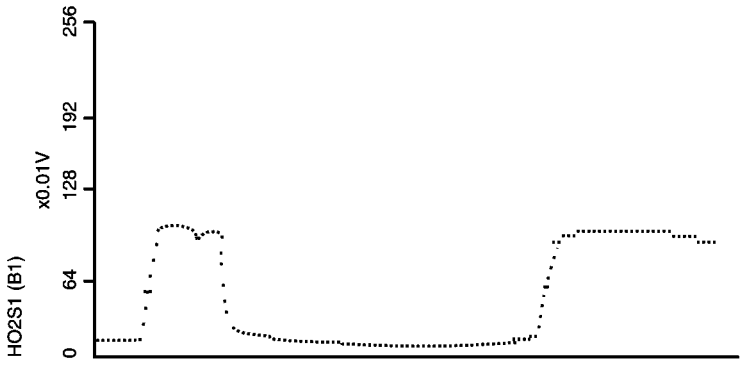




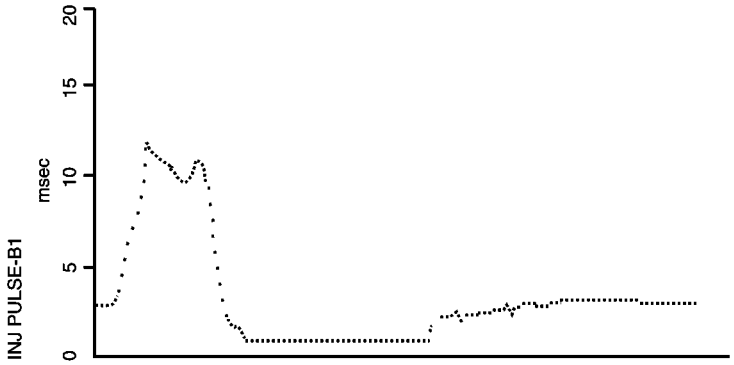
• "THRTL SEN 1" should increase while depressing the accelerator pedal and should decrease while releasing it.



• "HO2S2 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.



• "HO2S1 (B1)" may increase immediately after depressing the accelerator pedal and may decrease after releasing the pedal.



• "INJ PULSE-B1" should increase when depressing the accelerator pedal and should decrease when the pedal is released.

PBIB0668E

TROUBLE DIAGNOSIS - SPECIFICATION VALUE

PFP:00031

Description

EBS00OKV

The specification (SP) value indicates the tolerance of the value that is displayed in “DATA MONITOR (SPEC)” mode of CONSULT-II during normal operation of the Engine Control System. When the value in “DATA MONITOR (SPEC)” mode is within the SP value, the Engine Control System is confirmed OK. When the value in “DATA MONITOR (SPEC)” mode is NOT within the SP value, the Engine Control System may have one or more malfunctions.
The SP value is used to detect malfunctions that may affect the Engine Control System, but will not light the MI.
The SP value will be displayed for the following three items:

- B/FUEL SCHDL (The fuel injection pulse width programmed into ECM prior to any learned on board correction)
- A/F ALPHA-B1 (The mean value of air-fuel ratio feedback correction factor per cycle)

Testing Condition

EBS00OKW

- Vehicle driven distance: More than 5,000 km (3,017 miles)
- Barometric pressure: 98.3 - 104.3 kPa (0.983 - 1.043 bar, 1.003 - 1.064 kg/cm^2 , 14.25 - 15.12 psi)
- Atmospheric temperature: 20 - 30°C (68 - 86°F)
- Engine coolant temperature: 75 - 95°C (167 - 203°F)
- Transmission: Warmed-up*1
- Electrical load: Not applied*2
- Engine speed: Idle

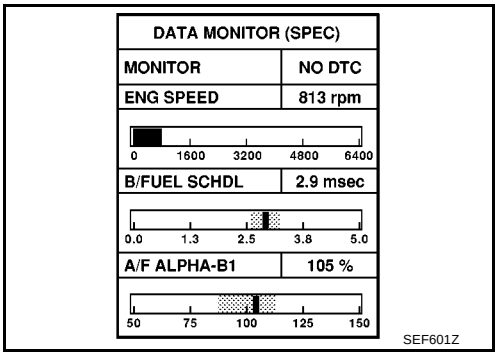
*1: For A/T models, after the engine is warmed up to normal operating temperature, drive vehicle until “FLUID TEMP SE” (A/T fluid temperature sensor signal) indicates more than 60°C (140°F).
For M/T models, after the engine is warmed up to normal operating temperature, drive vehicle for 5 minutes.
*2: Rear window defogger switch, air conditioner switch, lighting switch are “OFF”. Steering wheel is straight ahead.

Inspection Procedure

EBS00OKX

NOTE:
Perform “DATA MONITOR (SPEC)” mode in maximum scale display.

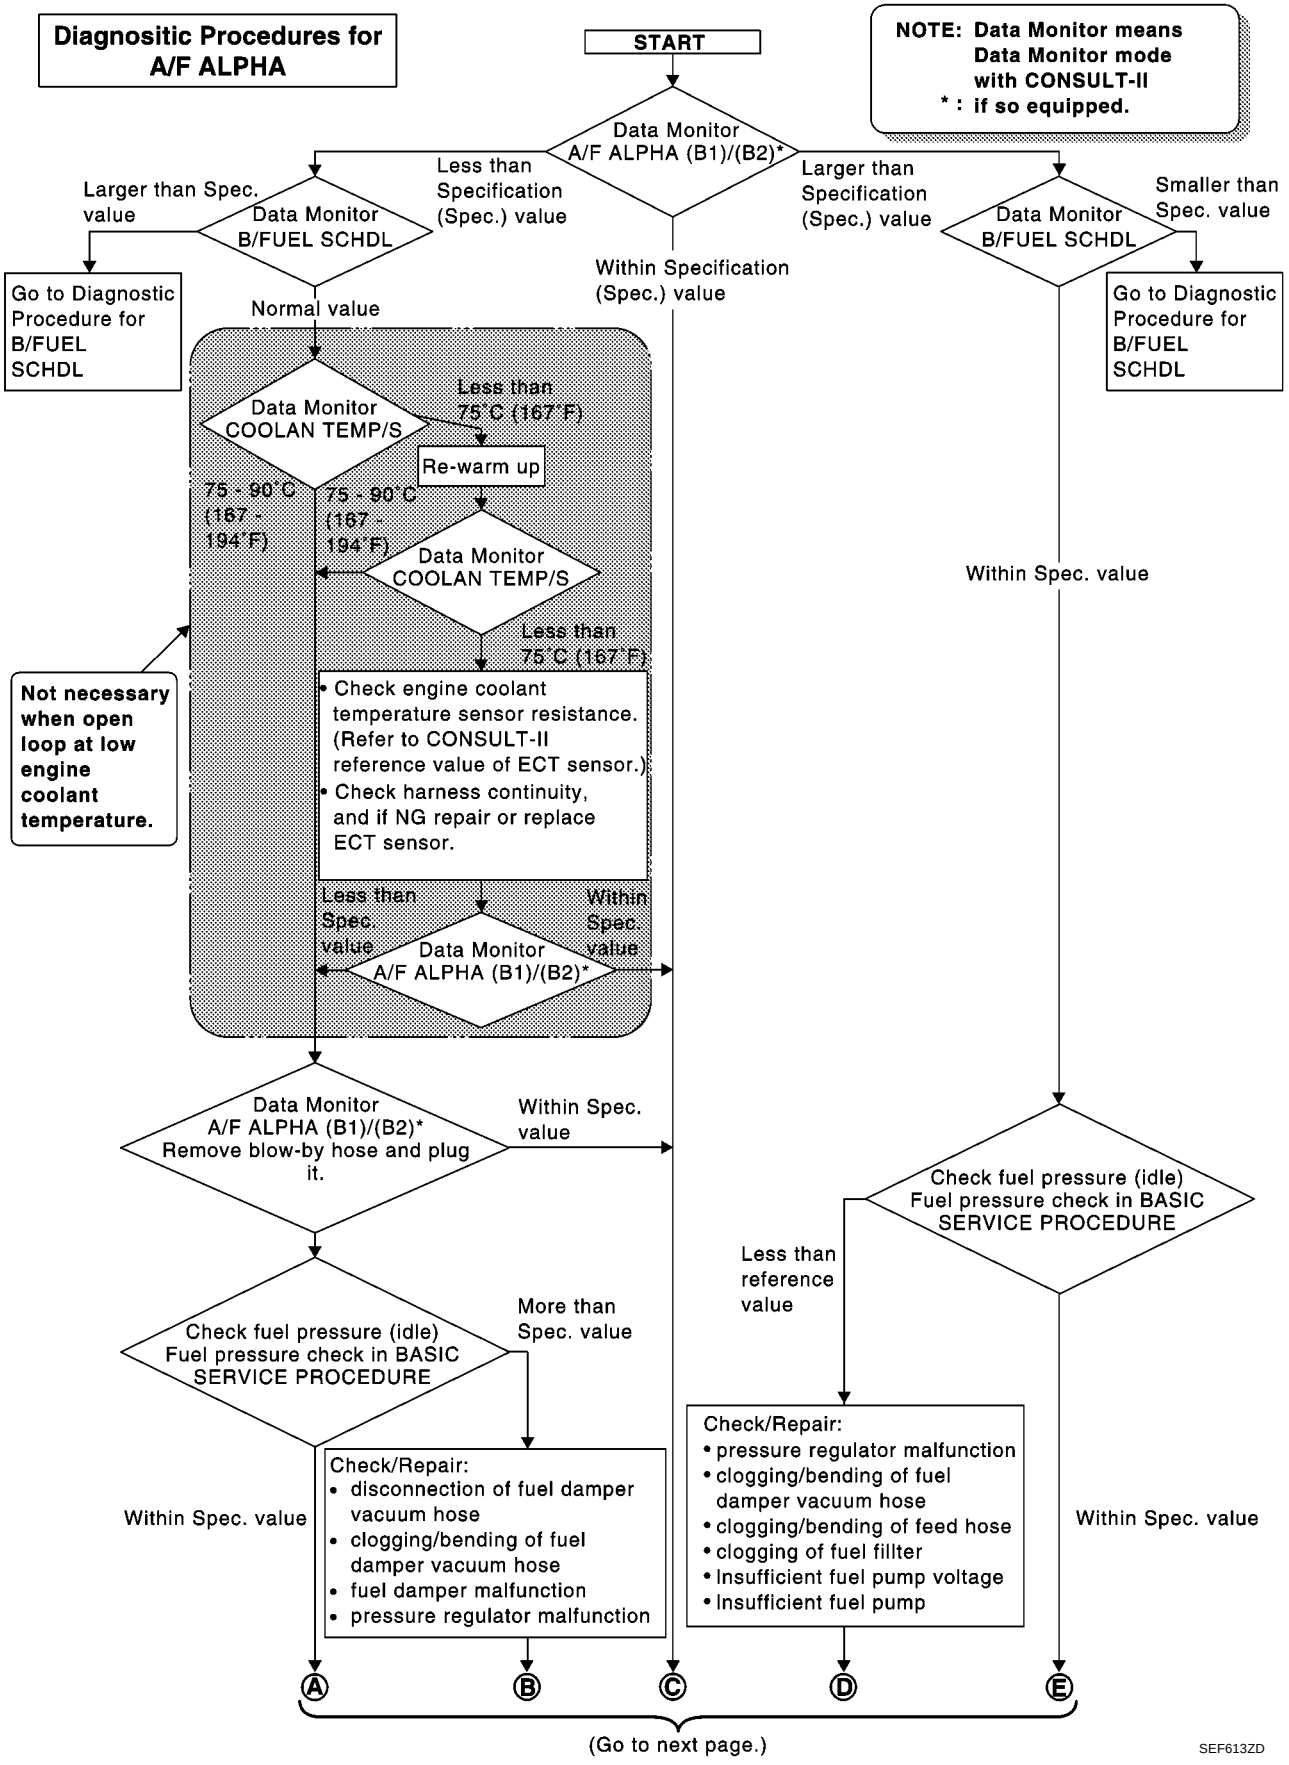
1. Perform EC-522, "Basic Inspection" .
2. Confirm that the testing conditions indicated above are met.
3. Select “B/FUEL SCHDL” and “A/F ALPHA-B1” in “DATA MONITOR (SPEC)” mode with CONSULT-II.
4. Make sure that monitor items are within the SP value.
5. If NG, go to EC-562, "Diagnostic Procedure" .

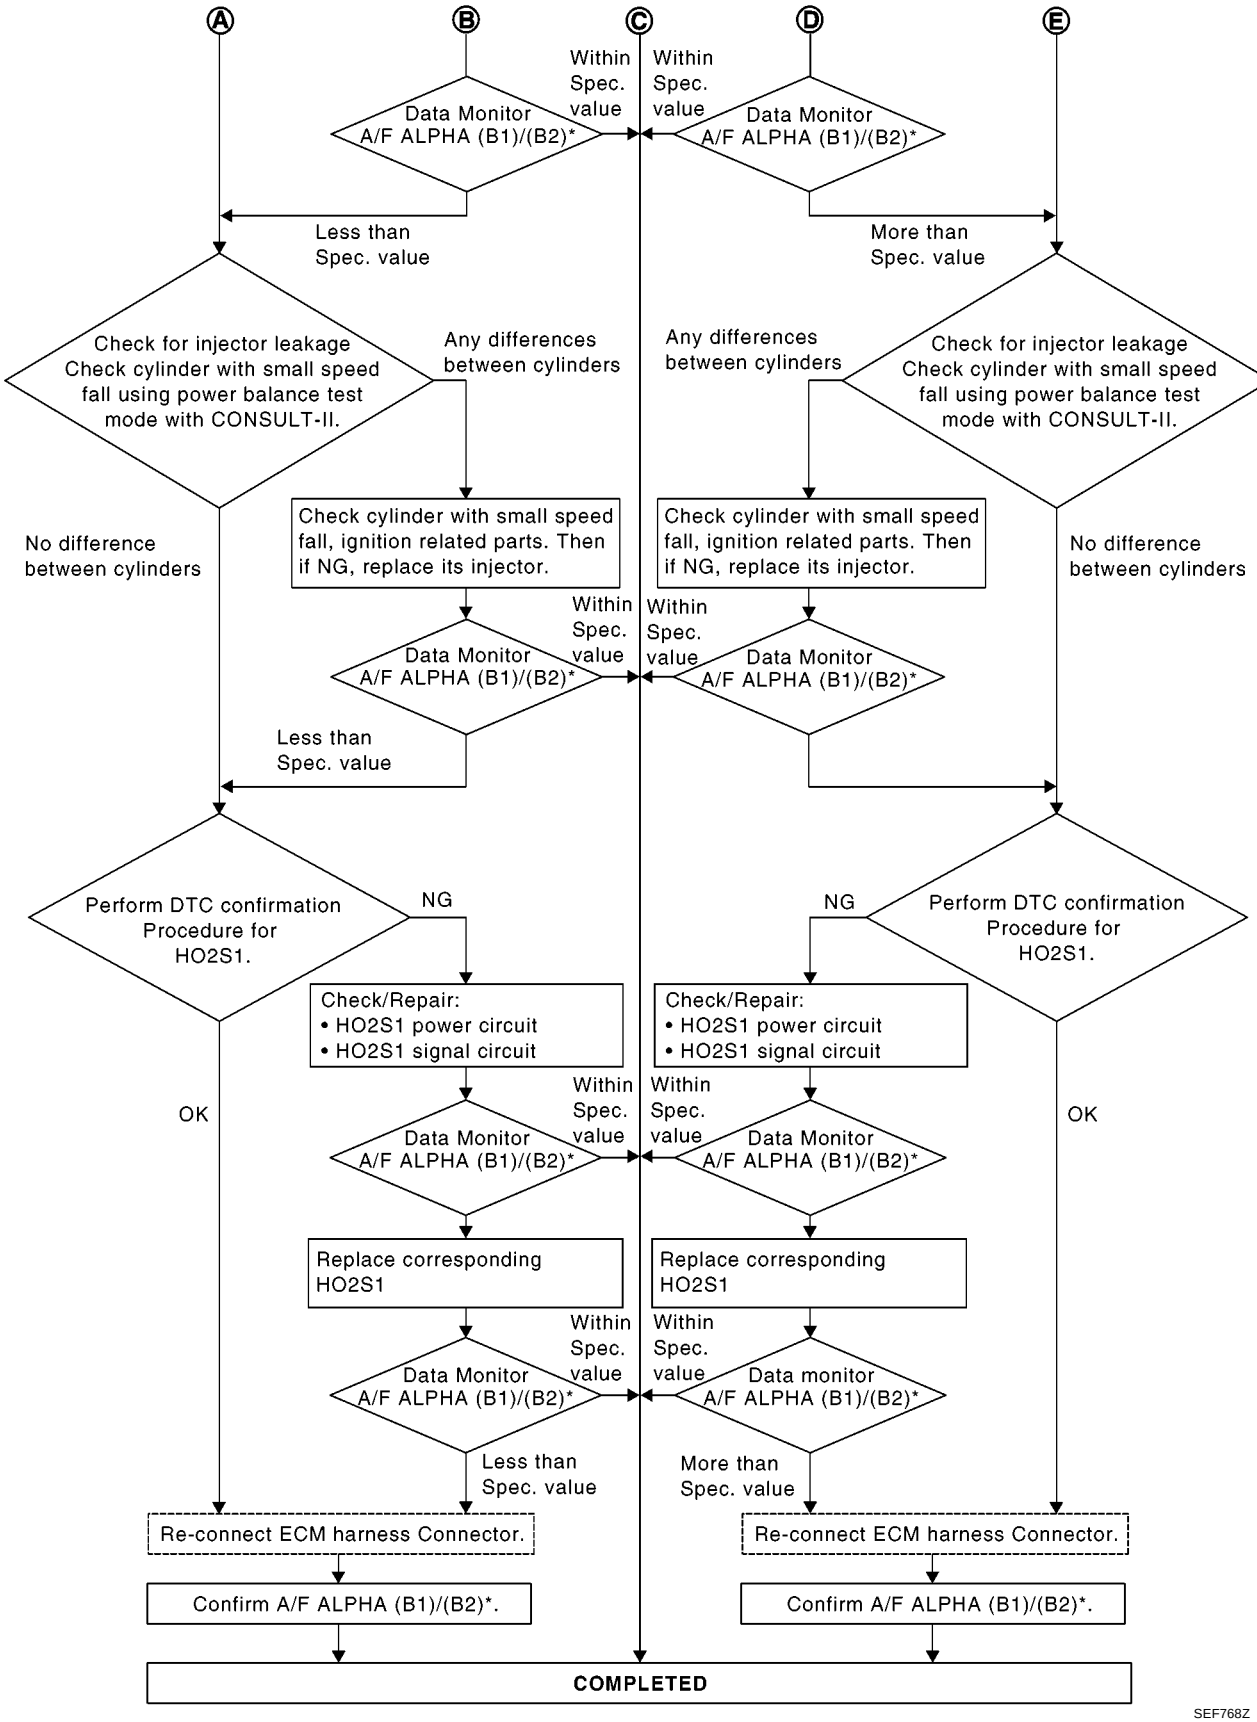


Diagnostic Procedure

EBS00OKY

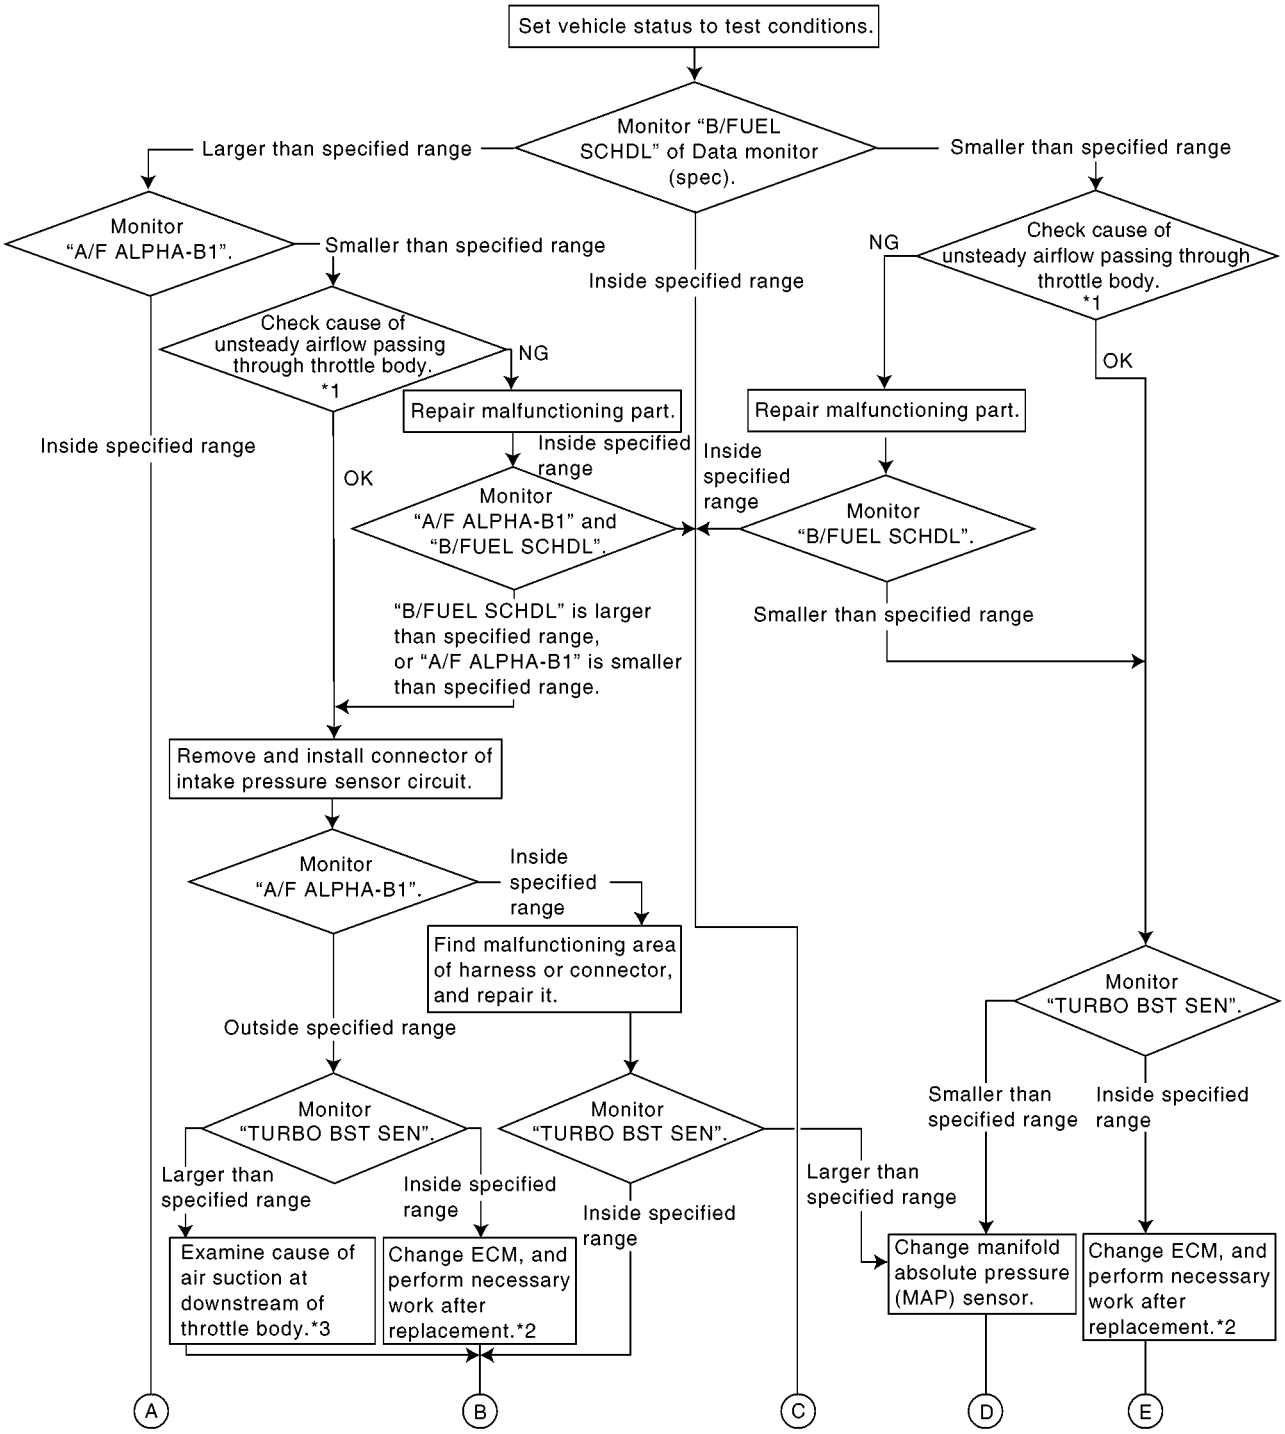
CHECK A/F ALPHA–B1





Ⓐ
Ⓑ
Ⓒ
Ⓓ
Ⓔ
Within Spec. value
Data Monitor A/F ALPHA (B1)/(B2)*
Less than Spec. value
More than Spec. value
Check for injector leakage Check cylinder with small speed fall using power balance test mode with CONSULT-II.
Any differences between cylinders
No difference between cylinders
Check cylinder with small speed fall, ignition related parts. Then if NG, replace its injector.
Perform DTC confirmation Procedure for HO2S1.
NG
OK
Check/Repair:
• HO2S1 power circuit
• HO2S1 signal circuit
Replace corresponding HO2S1
Data monitor A/F ALPHA (B1)/(B2)*
Re-connect ECM harness Connector.
Confirm A/F ALPHA (B1)/(B2)*.
COMPLETED
SEF768Z

CHECK B/FUEL SCHDL



*1
Inspection Location
- Crushed air duct
- Improper sealing of air cleaner element
- Unevenly dirty air cleaner element
- Different specification of intake air system part

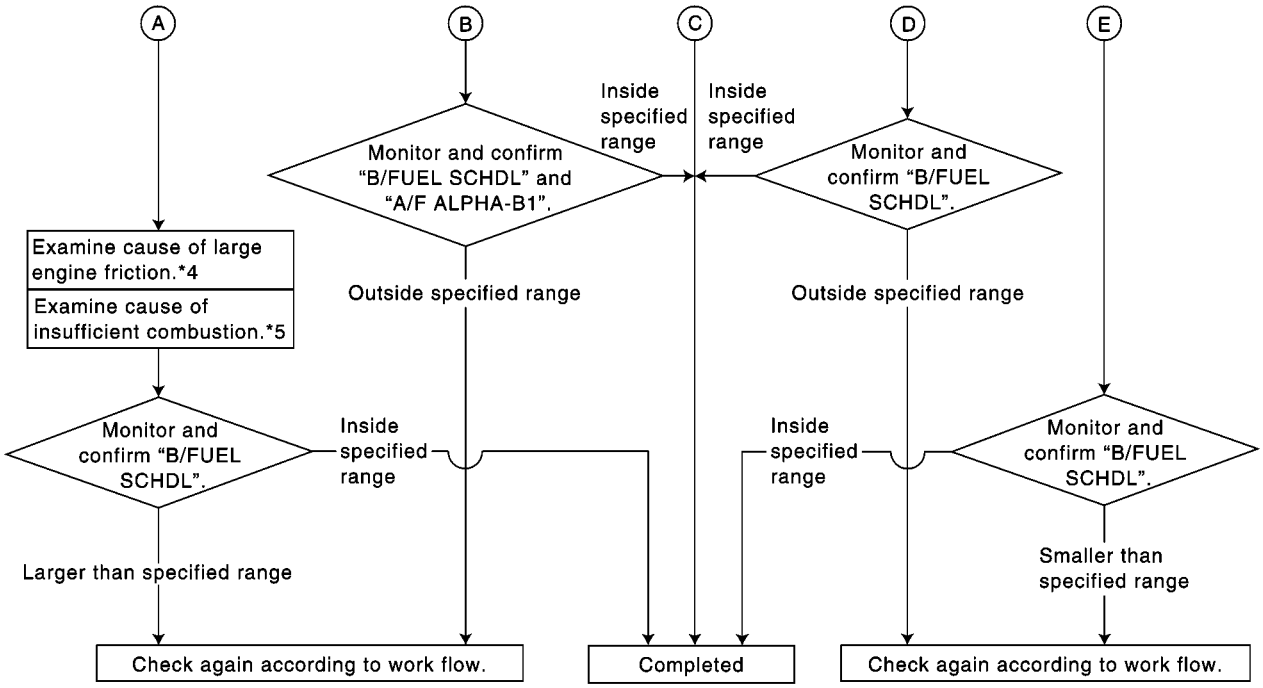
etc.

*2
Refer to ECM Removal and Installation procedure in Service Manual.

*3
Inspection Location
- Disconnection, looseness, or cracks of air duct
- Looseness of oil filler cap
- Disconnection of oil level gauge
- Open sticking, breakage, hose disconnection, or cracks of blow-by gas control valve
- Disconnection or cracks of EVAP canister purge hose, open sticking of EVAP canister purge volume control valve
- Improper sealing of rocker cover gasket
- Disconnection, looseness, or cracks of hoses, such as vacuum hose, connecting to intake air system parts.
- Improper sealing of intake air system part gasket

etc.

PBIA1516E



*4
Inspection Location
- Overhigh engine oil level
- Engine oil viscosity
- Over-tensioned belt of power steering, alternator, and air conditioner compressor, unusual noise, or binding of pulley
- Unusual noise of engine
- Unusual noise of gear change

etc.

*5
Inspection Location
- EGR valve sticking
- Improper valve clearance
- Malfunction of intake valve timing control function
- Improper installation of camshaft sprocket

etc.

MBIB0658E

TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT

PFP:00006

Description

EBS00OKZ

Intermittent incidents (I/I) may occur. In many cases, the malfunction resolves itself (the part or circuit function returns to normal without intervention). It is important to realize that the symptoms described in the customer's complaint often do not recur on (1st trip) DTC visits. Realize also that the most frequent cause of I/I occurrences is poor electrical connections. Because of this, the conditions under which the incident occurred may not be clear. Therefore, circuit checks made as part of the standard diagnostic procedure may not indicate the specific malfunctioning area.

Common I/I Report Situations

STEP in Work Flow	Situation
II	The CONSULT-II is used. The SELF-DIAG RESULTS screen shows time data other than 0 or [1t].
III	The symptom described by the customer does not recur.
IV	(1st trip) DTC does not appear during the DTC Confirmation Procedure.
VI	The Diagnostic Procedure for PXXXX does not indicate the malfunctioning area.

Diagnostic Procedure

EBS00OL0

1. INSPECTION START

Erase (1st trip) DTCs. Refer to EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .

>> GO TO 2.

2. CHECK GROUND TERMINALS

Check ground terminals for corroding or loose connection.
Refer to GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" , “Incident Simulation Tests”, “Ground Inspection”.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. SEARCH FOR ELECTRICAL INCIDENT

Perform GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" , “Incident Simulation Tests”.

OK or NG

OK >> **INSPECTION END**
NG >> Repair or replace.

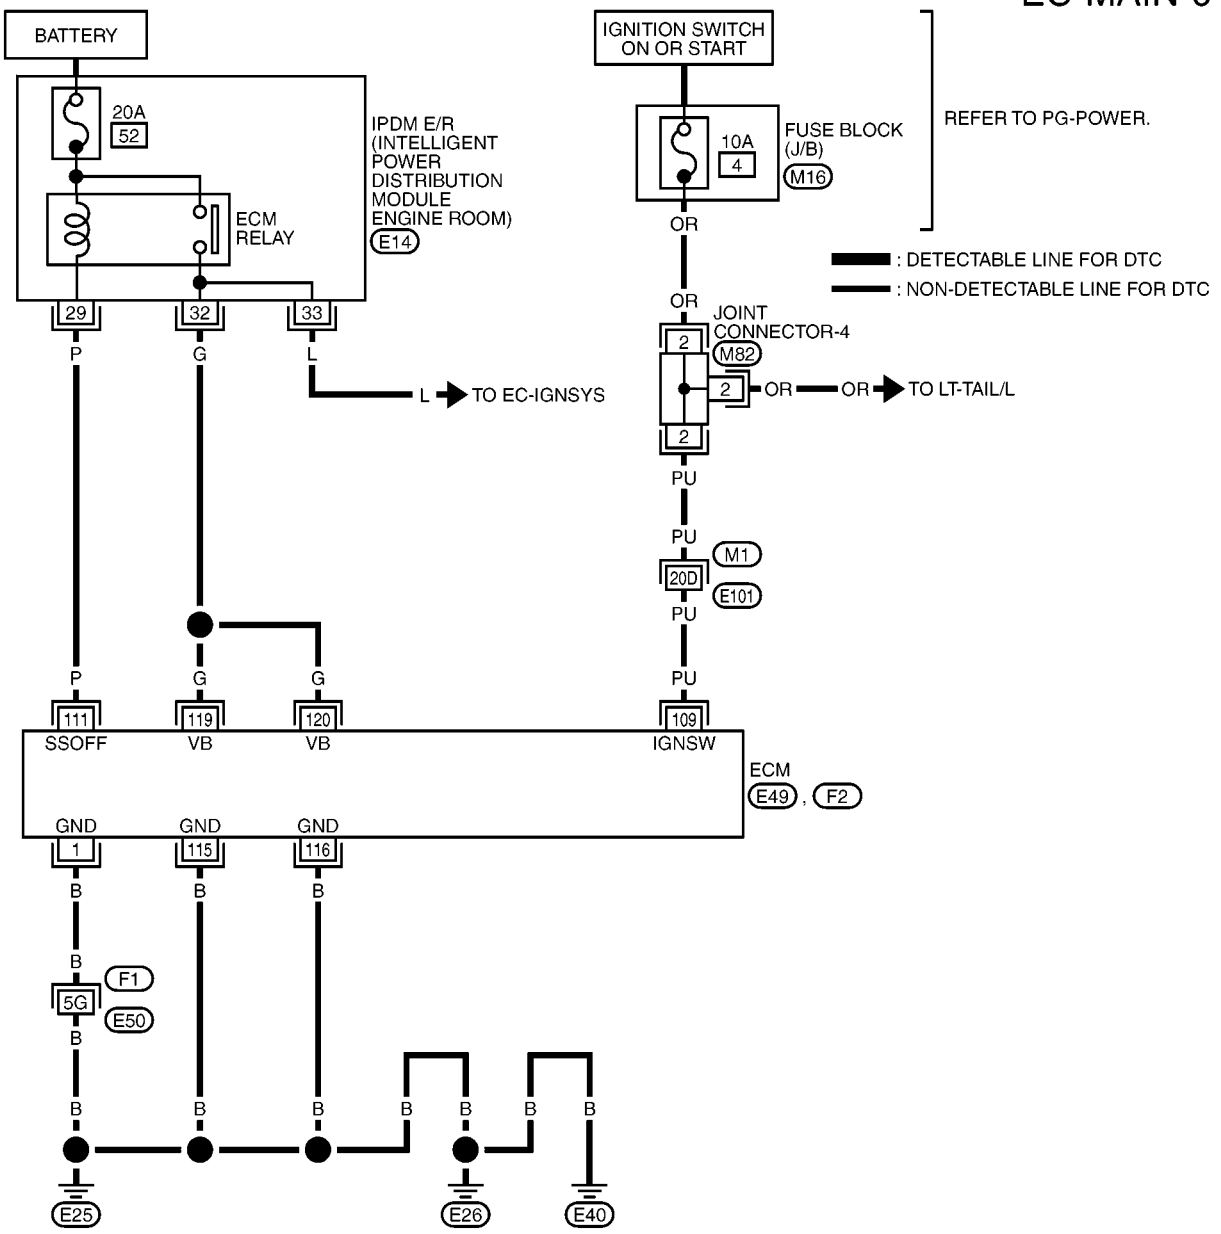
POWER SUPPLY CIRCUIT FOR ECM

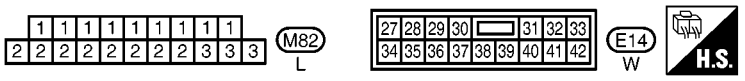
PFP:24110

Wiring Diagram

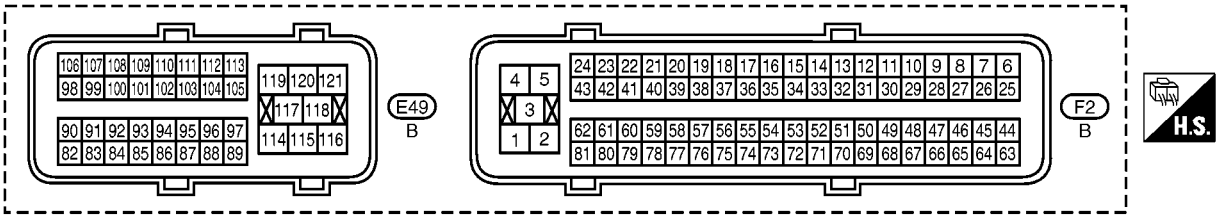
EBS00OL1

EC-MAIN-01





REFER TO THE FOLLOWING.
M1 , F1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)



MBWA0570E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
1 115 116	B B B	ECM ground	**[Engine is running]** ● Idle speed	Engine ground
109	PU	Ignition switch	**[Ignition switch OFF]**	0V
			[Ignition switch ON]	BATTERY VOLTAGE (11 - 14V)
111	P	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.0V
			[Ignition switch OFF] ● More than a few seconds passed after turning ignition switch OFF	BATTERY VOLTAGE (11 - 14V)
119 120	G G	Power supply for ECM	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

EBS00OL2

1. INSPECTION START

Start engine.

Is engine running?

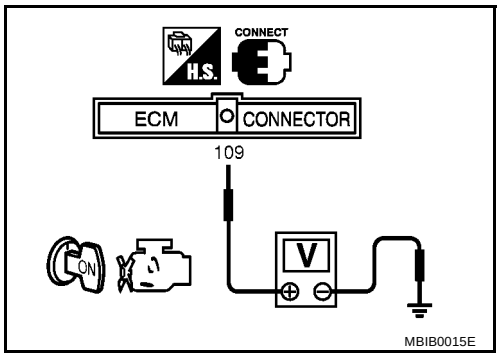
Yes or No

Yes >> GO TO 8.
No >> GO TO 2.

2. CHECK ECM POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF and then ON.
2. Check voltage between ECM terminal 109 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101
- Fuse block (J/B) connector M16
- Joint connector-4
- 10A fuse
- Harness for open or short between ECM and fuse

>> Repair harness or connectors.

4. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116 and engine ground. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- Harness for open or short between ECM and engine ground

>> Repair open circuit or short to power in harness or connectors.

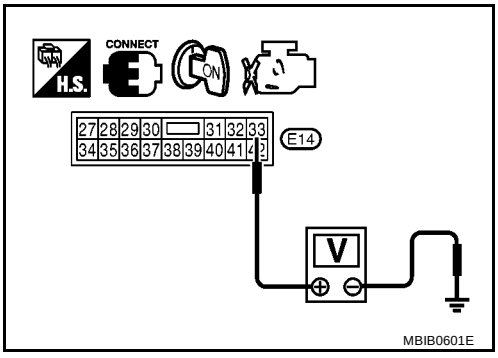
6. CHECK ECM POWER SUPPLY CIRCUIT-II

1. Reconnect ECM harness connector.
2. Turn ignition switch ON.
3. Check voltage between IPDE E/R harness connector E14 terminal 33 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

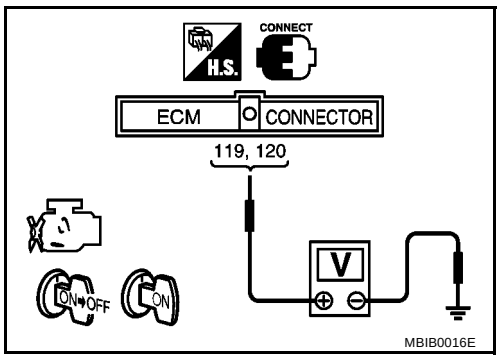
OK >> Go to EC-792, "IGNITION SIGNAL" .
NG >> GO TO 7.



7. CHECK ECM POWER SUPPLY CIRCUIT-III

1. Turn ignition switch ON and then OFF.
2. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

Voltage: After turning ignition switch "OFF", battery voltage will exist for a few seconds, then drop approximately 0V.



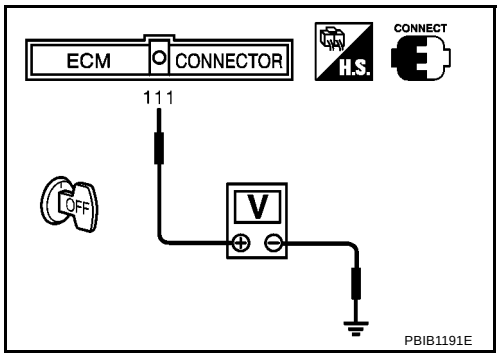
OK or NG

OK >> GO TO 13.
NG (Battery voltage does not exist.)>>GO TO 8.
NG (Battery voltage exists for more than a few seconds.)>>GO TO 13.

8. CHECK ECM POWER SUPPLY CIRCUIT-IV

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 111 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 11.
NG >> GO TO 9.

9. CHECK ECM POWER SUPPLY CIRCUIT-V

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check harness continuity between ECM terminal 111 and IPDM E/R terminal 29. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 10.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

10. CHECK 20A FUSE

1. Disconnect 20A fuse from IPDM E/R.
2. Check 20A fuse.

OK or NG

OK >> GO TO 13.
NG >> Replace 20A fuse.

11. CHECK ECM POWER SUPPLY CIRCUIT-VI

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector.
3. Check harness continuity between ECM terminals 119, 120 and IPDM E/R terminal 32. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 12.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

12. CHECK ECM GROUND CIRCUIT FOR OPEN AND SHORT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminals 1, 115, 116 and engine ground. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 13.
NG >> Repair open circuit or short to power in harness or connectors.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair open circuit or short to power in harness or connectors.

DTC U1000, U1001 CAN COMMUNICATION LINE

PFP:23710

Description

EBS00OL3

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

On Board Diagnosis Logic

EBS00OL4

The MI will not light up for these self-diagnoses.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
U1000 1000	CAN communication line	● ECM cannot communicate to other control units. ● ECM cannot communicate for more than the specified time.	● Harness or connectors (CAN communication line is open or shorted.)
U1001 1001			

DTC Confirmation Procedure

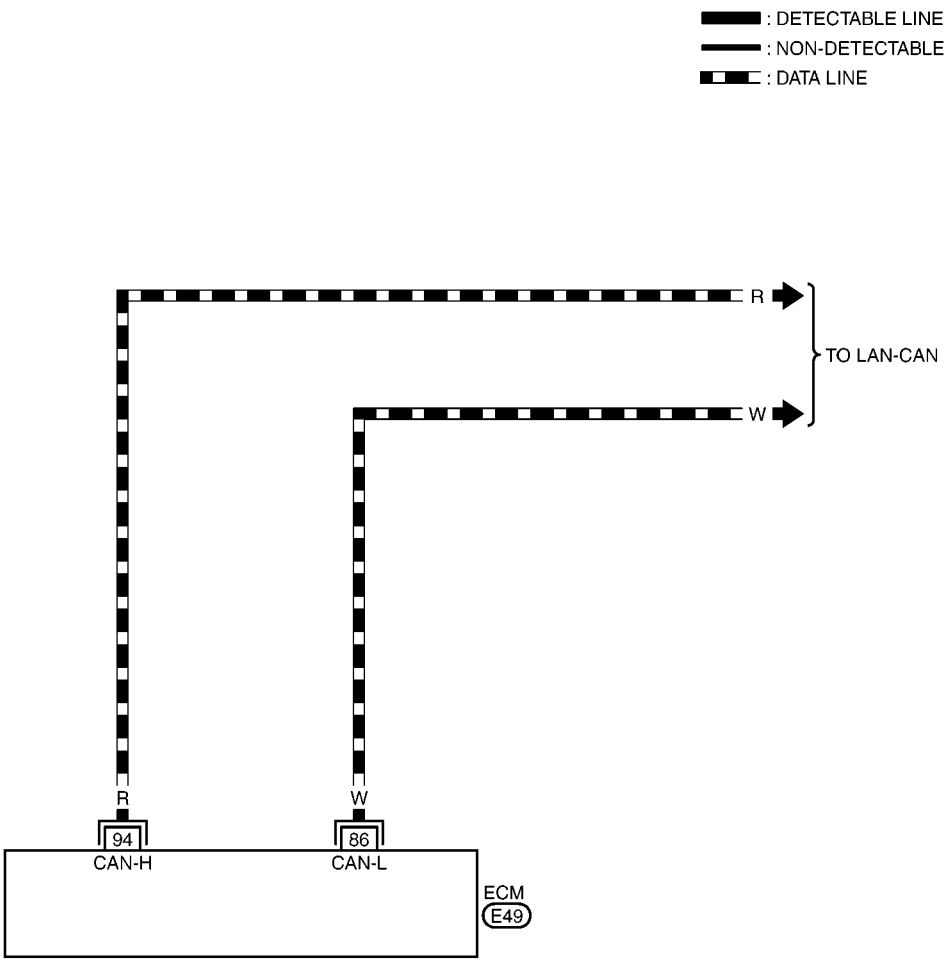
EBS00OL5

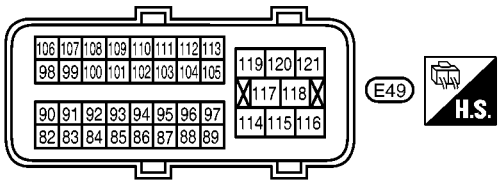
1. Turn ignition switch ON and wait at least 3 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. If 1st trip DTC or DTC is detected, go to EC-574, "Diagnostic Procedure" .

Wiring Diagram

EBS00OL6

EC-CAN-01





MBWA0268E

Diagnostic Procedure

EBS00OL7

Go to LAN-4, "Precautions When Using CONSULT-II" .

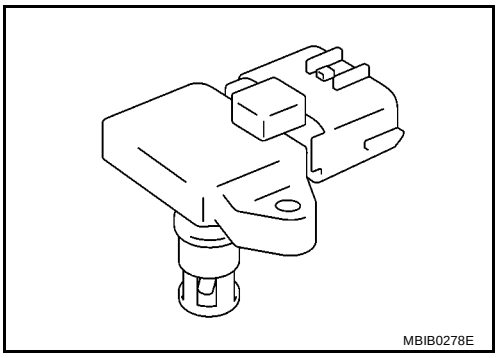
DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR

PFP:22365

Component Description

EBS00OL8

The manifold absolute pressure (MAP) sensor is placed intake manifold corrector. It detects intake manifold pressure and sends the voltage signal to the ECM, ECM uses the signal to compute intake air volume value.
The sensor uses a silicon diaphragm which is sensitive to the change in pressure. As the pressure increase, the voltage rises.



MBIB0278E

On Board Diagnosis Logic

EBS00OL9

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0107 0107	Manifold absolute pressure sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Manifold absolute pressure sensor
P0108 0108	Manifold absolute pressure sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted) ● Manifold absolute pressure sensor ● Intake air leaks

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and MI lights up.

Detected items	Engine operating condition in fail-safe mode
Manifold absolute pressure sensor circuit	Engine speed will not rise more than 2,500 rpm due to the fuel cut.

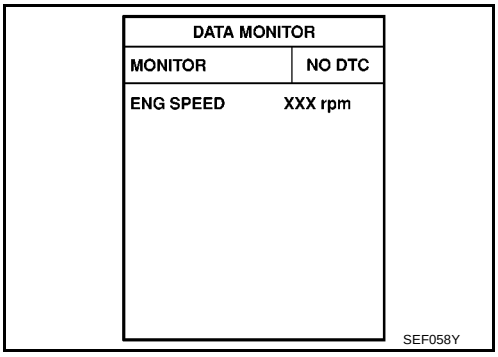
DTC Confirmation Procedure

EBS00OLA

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If the 1st trip DTC is detected, go to EC-577, "Diagnostic Procedure" .



SEF058Y

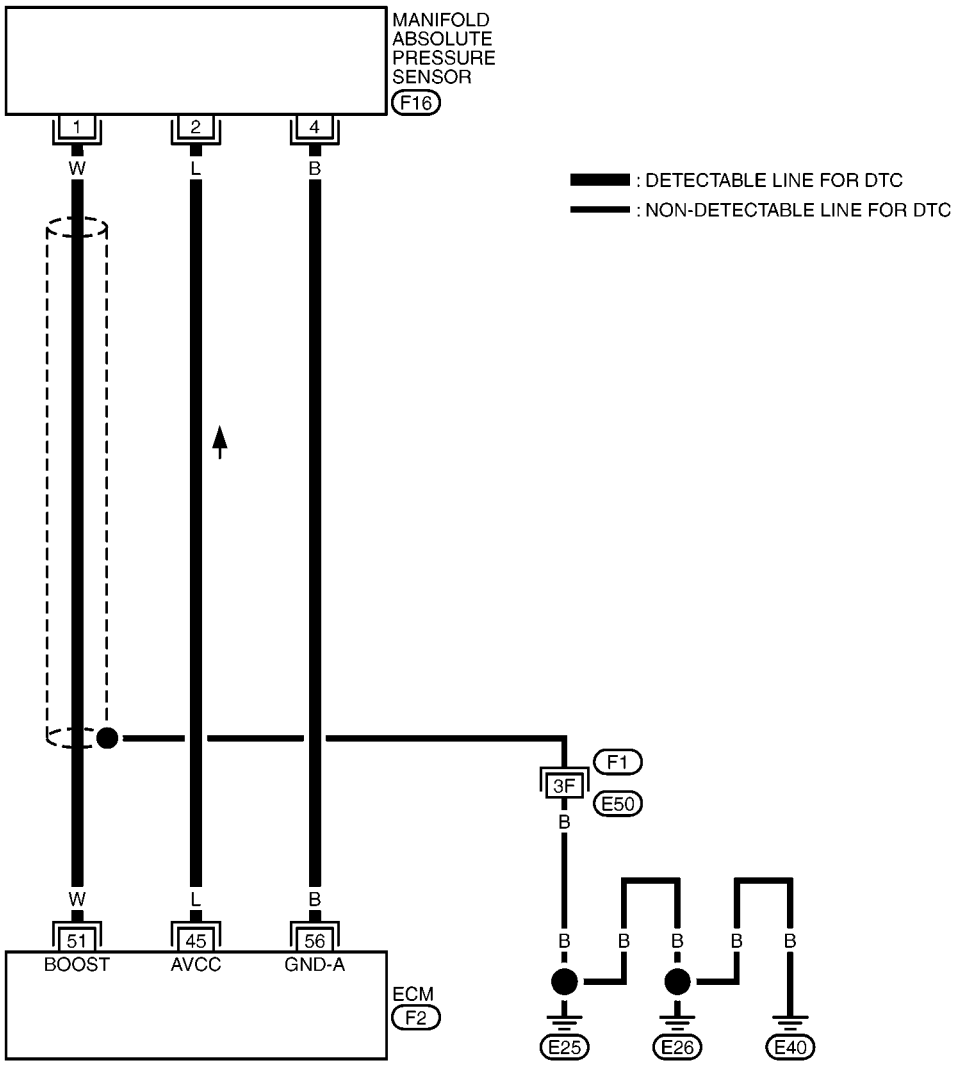
WITHOUT CONSULT-II

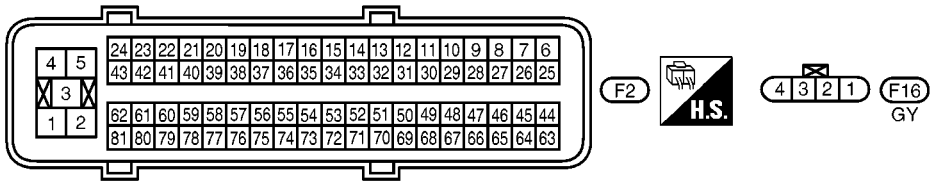
1. Turn ignition switch ON and wait at least 5 seconds.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-577, "Diagnostic Procedure" .

Wiring Diagram

EBS00OLB

EC-AP/SEN-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0304E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

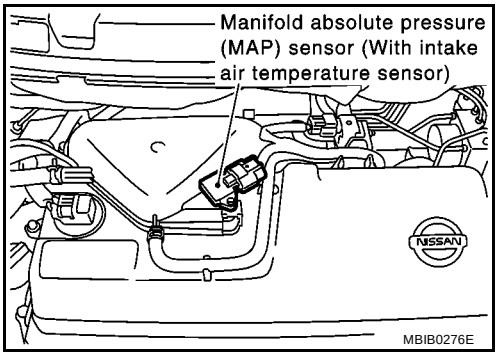
TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
51	W	Manifold absolute pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 1.5V
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	Approximately 1.2V

Diagnostic Procedure

EBS00OLC

1. CHECK MAP SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect manifold absolute pressure sensor harness connector.
3. Turn ignition switch ON.

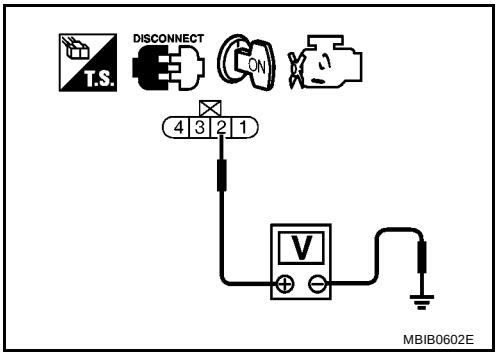


4. Check voltage between MAP sensor terminal 2 and ground.

Voltage: Approximately 5V

OK or NG

OK >> GO TO 2.
NG >> Repair harness or connectors.



2. CHECK MAP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between MAP sensor terminal 4 and ECM terminal 56
   Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK MAP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between MAP sensor terminal 1 and ECM terminal 51.
   Refer to Wiring Diagram

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK MAP SENSOR

Refer to EC-578, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace manifold absolute pressure sensor.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

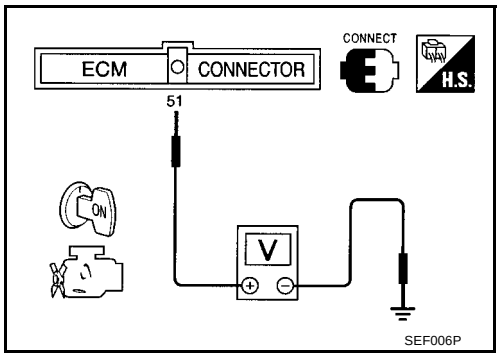
Component Inspection

EBS00OLD

MANIFOLD ABSOLUTE PRESSURE SENSOR

1. Reconnect all harness connectors disconnected.
2. Start engine and warm it up to normal operating temperature.
3. Turn ignition switch OFF, wait at least 5 seconds and then turn ON.
4. Check voltage between ECM terminal 51 (manifold absolute pressure sensor signal) and ground.

   NOTE:
   - To avoid the affection of intake manifold vacuum, check the voltage 1 or more minutes past after engine is stopped.
   - Because the sensor is absolute pressure sensor, output value may differ depends on atmospheric pressure and altitude.



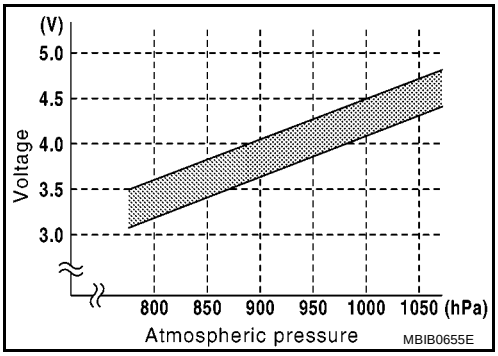
5. Measure the atmospheric pressure.

   NOTE:
   As atmospheric pressure describe on synoptic chart is value at sea level, please compensate the actual pressure with the following chart.

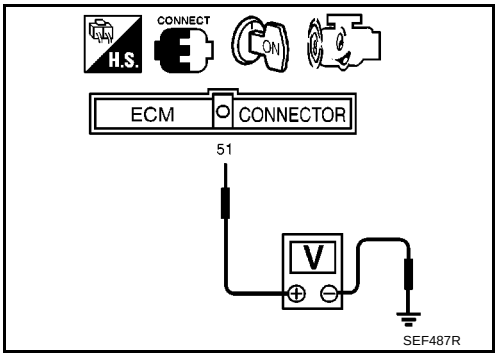
Altitude	Compensated pressure
0m	0hPa
200m	-24hPa
400m	-47hPa
600m	-70hPa
800m	-92hPa
1,000m	-114hPa
1,500m	-168hPa
2,000m	-218hPa

6. Check the manifold absolute pressure sensor value corresponds to the atmospheric pressure.

Atmospheric pressure	Voltage
800hPa	3.2 - 3.6v
850hPa	3.4 - 3.8v
900hPa	3.7 - 4.1v
960hPa	3.9 - 4.3v
1,000hPa	4.1 - 4.5v
1,050hPa	4.3 - 4.7v



7. Start engine and let it idle.
8. Check the voltage between ECM terminal 51 and ground at idling and confirm the voltage difference between engine is stopped and at idling is within following chart.



Intake manifold vacuum	Voltage difference
-40kPa (-300mmHg)	1.6 - 2.0v
-53.3kPa (-400mmHg)	2.2 - 2.6v
-66.7kPa (-500mm)	2.8 - 3.2v
-80kPa (-600mmHg)	3.4 - 3.8v

EBS00OLE

Removal and Installation

MANIFOLD ABSOLUTE PRESSURE SENSOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

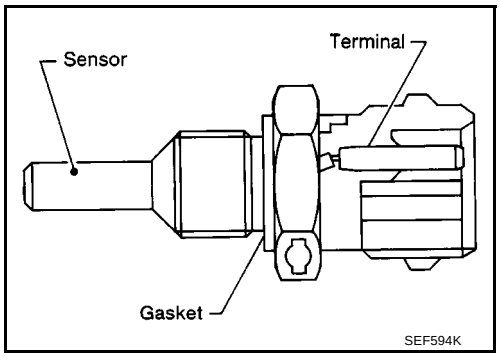
DTC P0117, P0118 ECT SENSOR

PFP:22630

Component Description

EBS00OLF

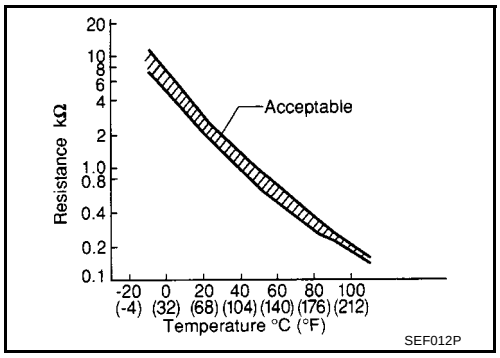
The engine coolant temperature sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the ECM. The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature. The electrical resistance of the thermistor decreases as temperature increases.



<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.4	7.0 - 11.4
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

*: These data are reference values and are measured between ECM terminal 72 (Engine coolant temperature sensor) and ground.



CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

On Board Diagnosis Logic

EBS00OLG

DTC No.	Trouble Diagnosis Name	DTC Detecting Condition	Possible Cause
P0117 0117	Engine coolant temperature sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Engine coolant temperature sensor
P0118 0118	Engine coolant temperature sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

FAIL-SAFE MODE

When this malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Detected items	Engine operating condition in fail-safe mode	
Engine coolant temperature sensor circuit	Engine coolant temperature will be determined by ECM based on the time after turning ignition switch ON or START. CONSULT-II displays the engine coolant temperature decided by ECM.	
	Condition	Engine coolant temperature decided (CONSULT-II display)
	Just as ignition switch is turned ON or Start	40°C (104°F)
	More than approx. 4 minutes after ignition ON or Start	80°C (176°F)
	Except as shown above	40 - 80°C (104 - 176°F) (Depends on the time)
	When the fail-safe system for engine coolant temperature sensor is activated, the cooling fan operates while engine is running.	

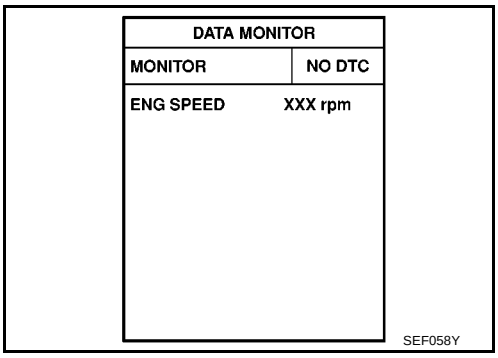
DTC Confirmation Procedure

EBS00OLH

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Wait at least 5 seconds.
4. If 1st trip DTC is detected, go to EC-583, "Diagnostic Procedure" .



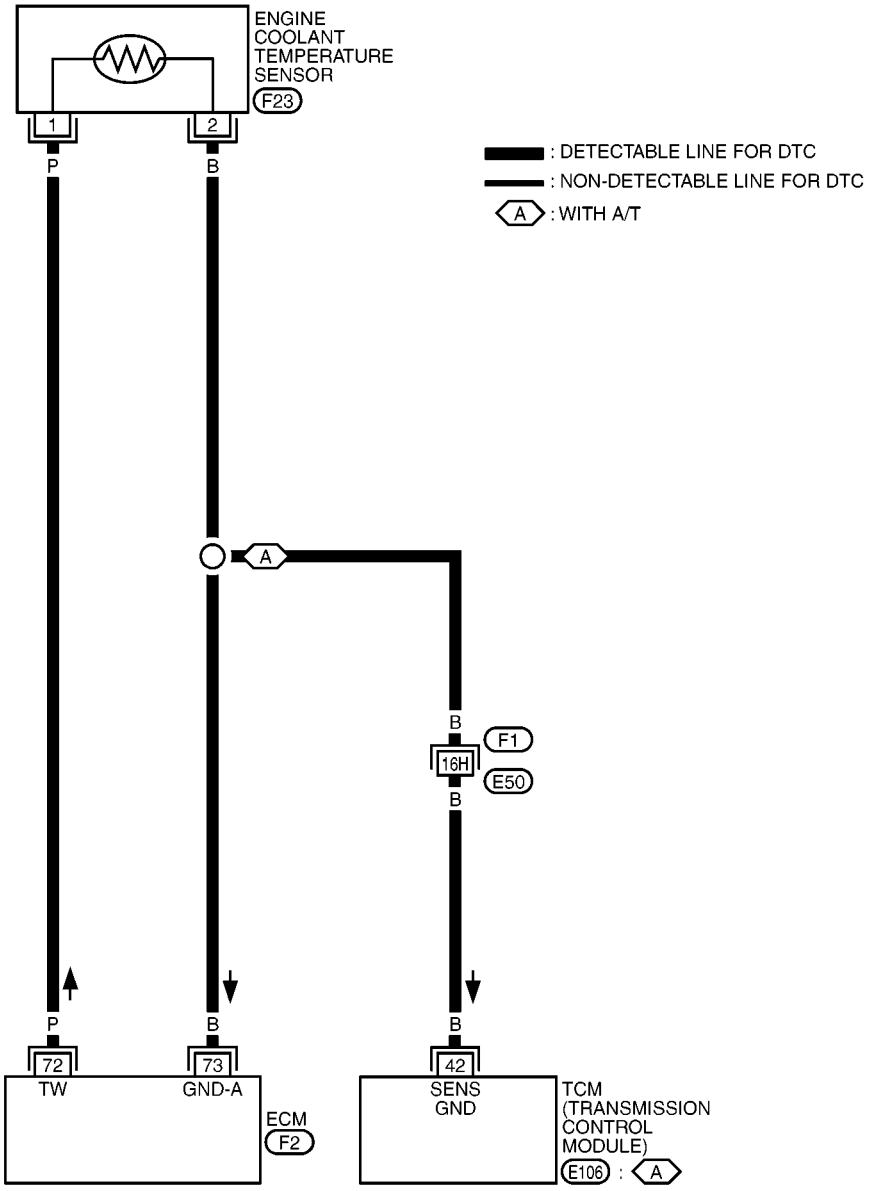
WITHOUT CONSULT-II

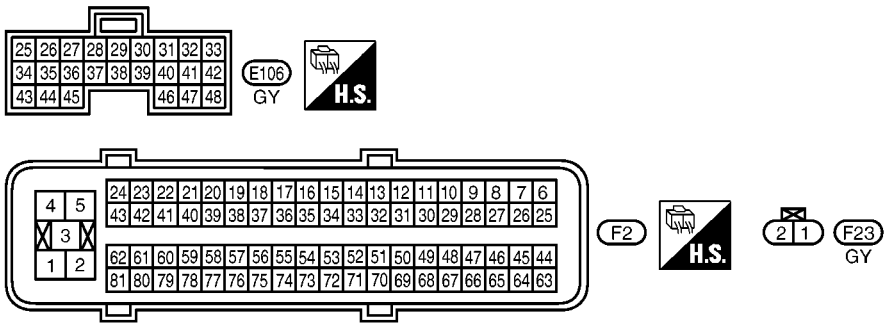
1. Turn ignition switch ON and wait at least 5 seconds.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-583, "Diagnostic Procedure" .

Wiring Diagram

EBS00OLI

EC-ECTS-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

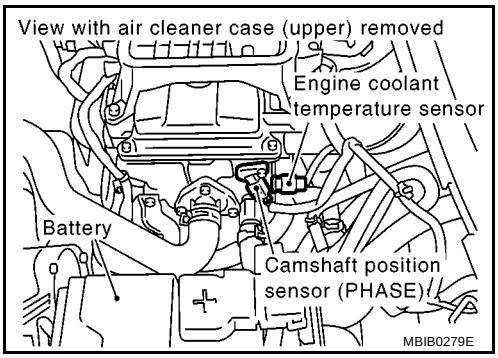
MBWA0271E

Diagnostic Procedure

EBS00OLJ

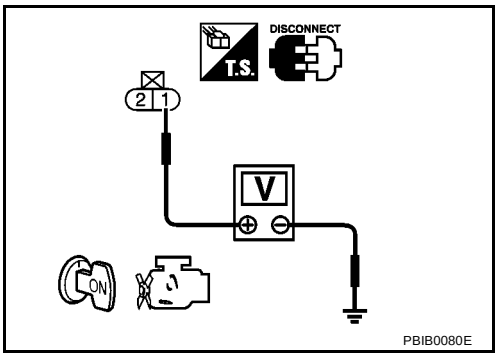
1. CHECK ECT SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature (ECT) sensor harness connector.
3. Turn ignition switch ON.



4. Check voltage between ECT sensor terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 2.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

2. CHECK ECT SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect TCM harness connector.
4. Check harness continuity between ECT sensor terminal 2 and ECM terminal 73, TCM terminal 42. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between engine coolant temperature sensor and ECM
- Harness for open or short between engine coolant temperature sensor and TCM

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-584, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace engine coolant temperature sensor.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

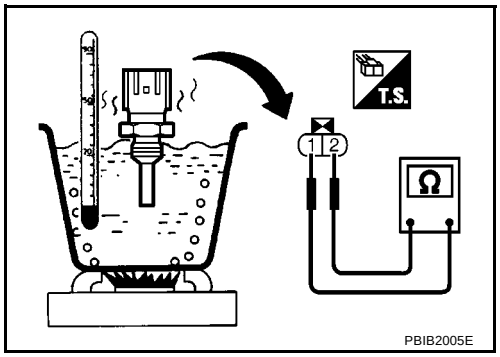
>> **INSPECTION END**

Component Inspection

EBS00OLK

ENGINE COOLANT TEMPERATURE SENSOR

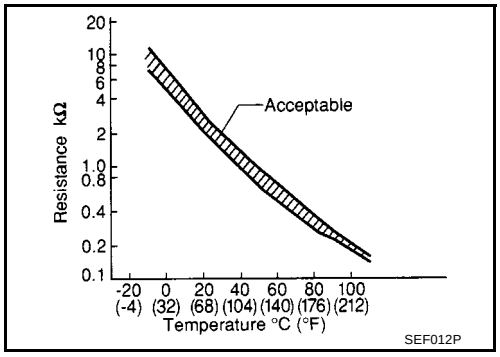
1. Check resistance between engine coolant temperature sensor terminals 1 and 2 as shown in the figure.



<Reference data>

Engine coolant temperature °C (°F)	Voltage* V	Resistance kΩ
20 (68)	3.5	2.1 - 2.9
50 (122)	2.2	0.68 - 1.00
90 (194)	0.9	0.236 - 0.260

*: These data are reference values and are measured between ECM terminal 72 (Engine coolant temperature sensor) and ground.



2. If NG, replace engine coolant temperature sensor.

Removal and Installation

EBS00OLL

ENGINE COOLANT TEMPERATURE SENSOR

Refer to CO-23, "THERMOSTAT" .

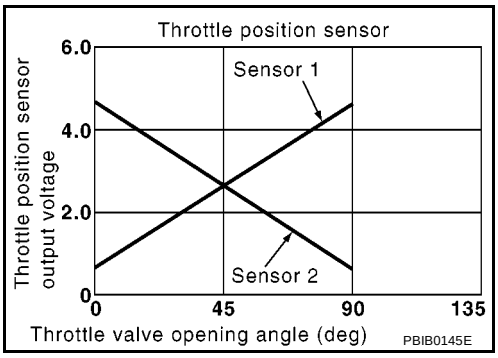
DTC P0122, P0123 TP SENSOR

PFP:16119

Component Description

EBS010D5

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS010D6

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS010D7

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0122 0122	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	● Harness or connectors (The TP sensor 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 2)
P0123 0123	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

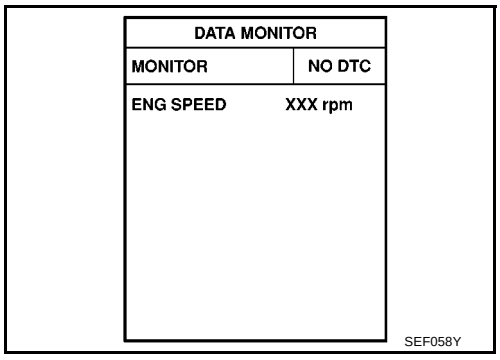
DTC Confirmation Procedure

EBS010D8

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-588, "Diagnostic Procedure" .



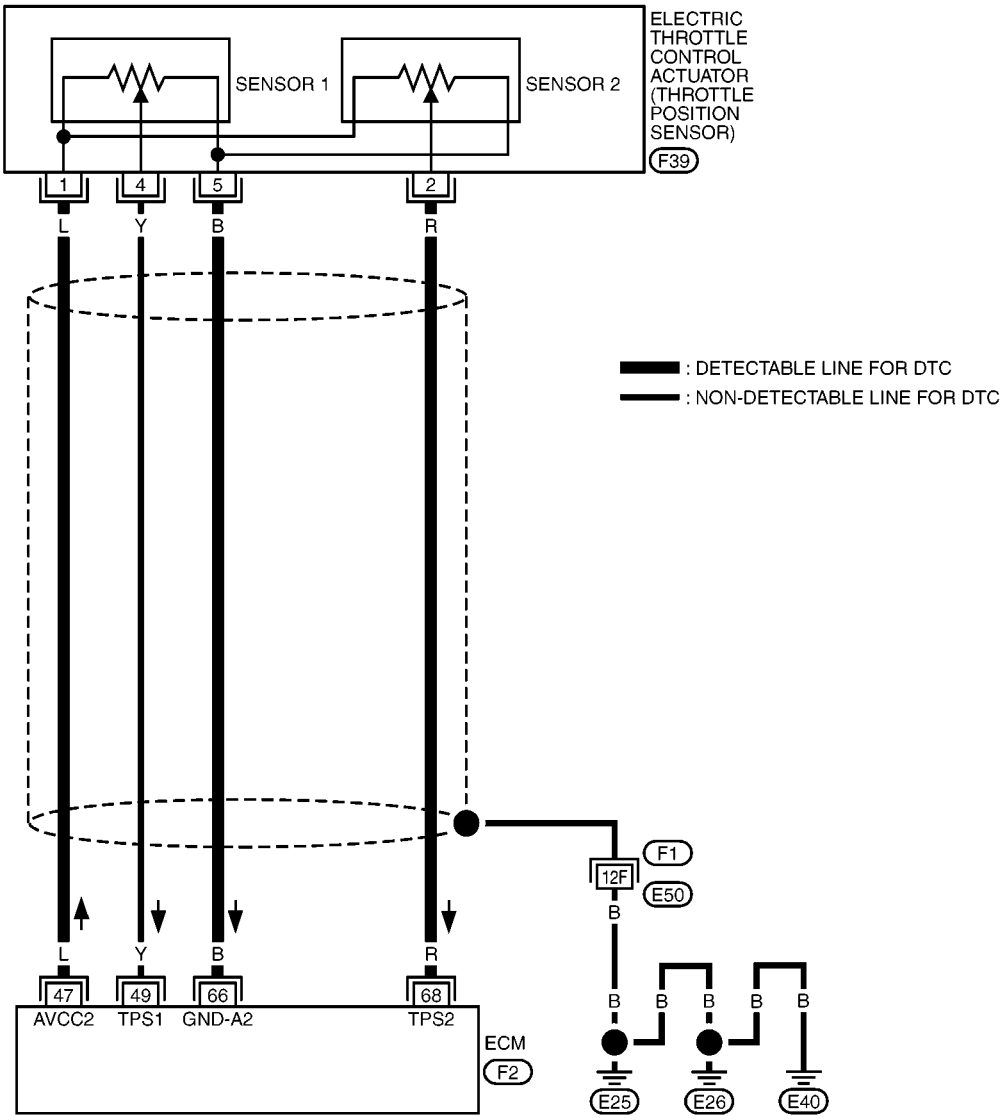
WITHOUT CONSULT-II

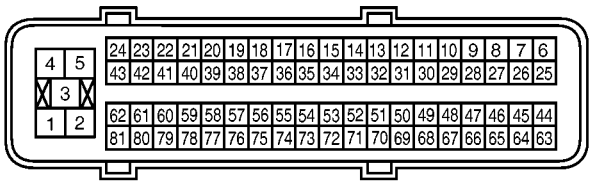
1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-588, "Diagnostic Procedure" .

Wiring Diagram

EBS010D9

EC-TPS2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0291E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V
66	B	Sensor ground (Throttle position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V

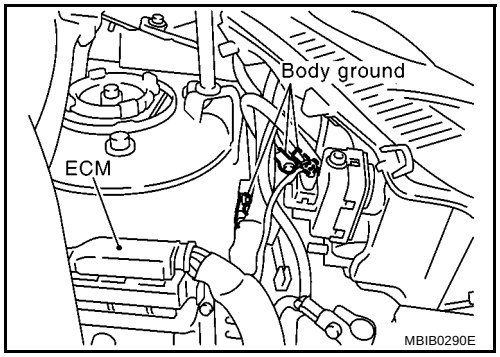
Diagnostic Procedure

EBS010DA

1. RETIGHTEN GROUND SCREWS

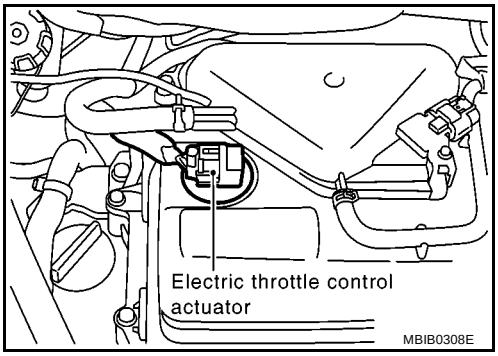
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



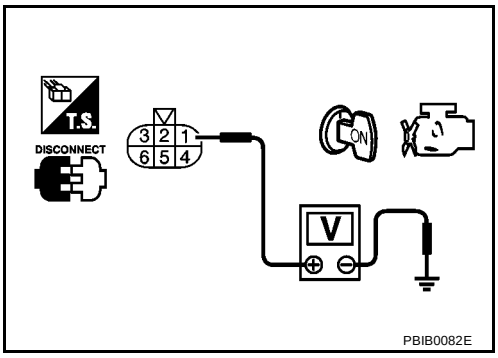
2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.



3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 68 and electric throttle control actuator terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-590, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

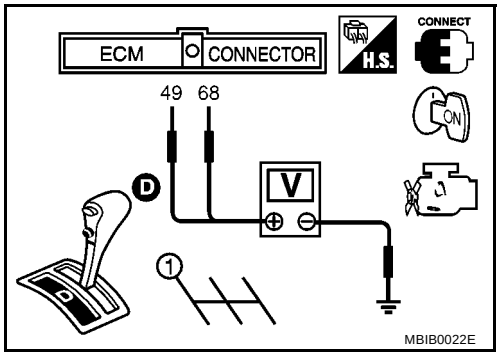
Component Inspection

EBS010DB

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set selector lever to D position (A/T models) or 1st position (M/T models).
5. Check voltage between ECM terminals 49 (TP sensor 1 signal), 68 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
49 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
68 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V



6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-503, "Throttle Valve Closed Position Learning" .
8. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS010DC

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

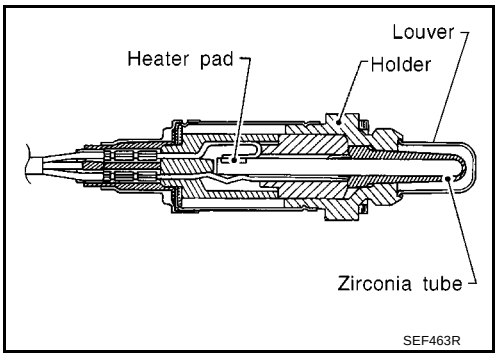
DTC P0132 HO2S1

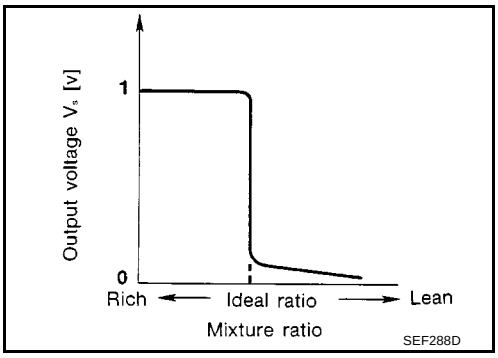
PFP:22690

Component Description

EBS00OLM

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00OLN

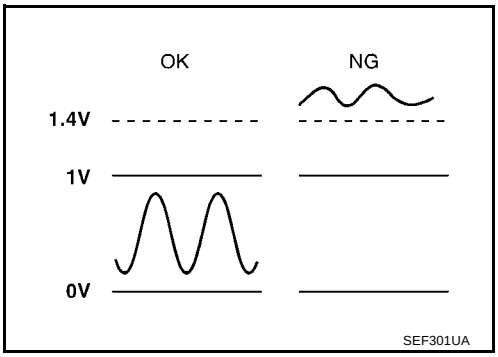
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00OLO

To judge the malfunction, the diagnosis checks that the heated oxygen sensor 1 output is not inordinately high.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0132 0132	Heated oxygen sensor 1 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 1

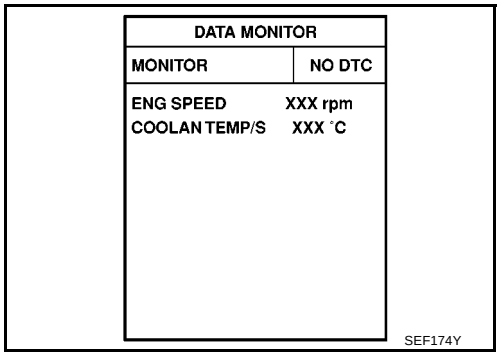
DTC Confirmation Procedure

EBS00OLP

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Select “DATA MONITOR” mode with CONSULT-II.
5. Restart engine and let it idle for 2 minutes.
6. If 1st trip DTC is detected, go to EC-594, "Diagnostic Procedure" .



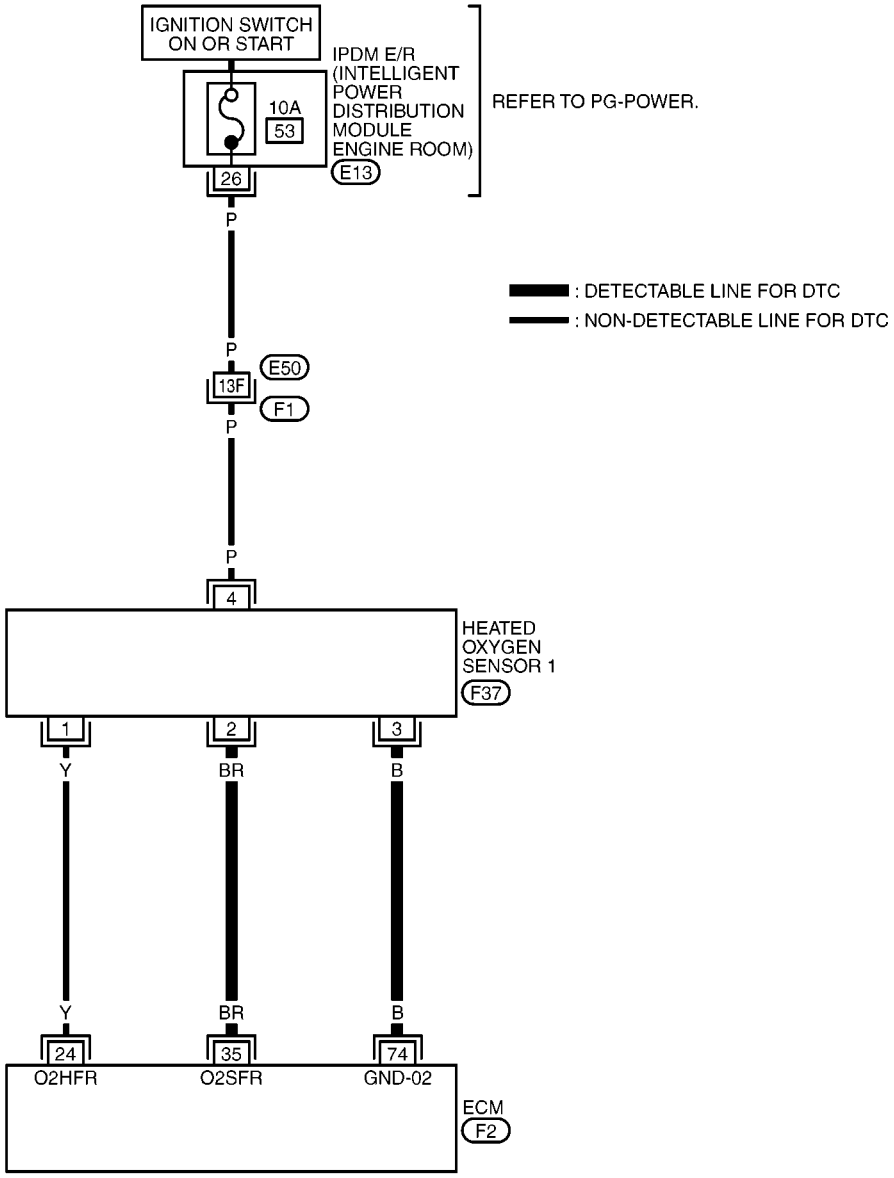
WITHOUT CONSULT-II

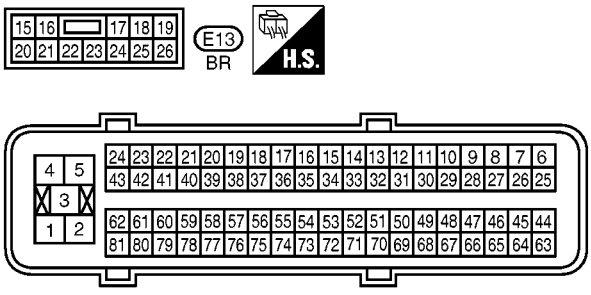
1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Restart engine and let it idle for 2 minutes.
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
6. If 1st trip DTC is detected, go to EC-594, "Diagnostic Procedure" .

Wiring Diagram

EBS00OLQ

EC-HO2S1-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0272E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

Diagnostic Procedure

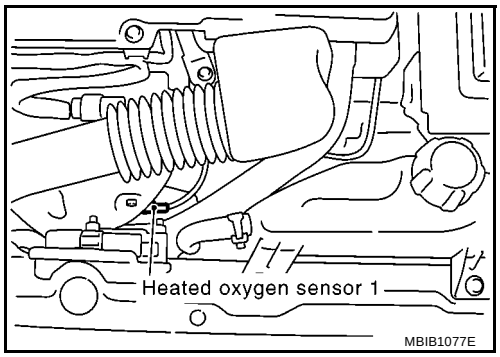
EBS00OLR

1. RETIGHTEN HEATED OXYGEN SENSOR 1

1. Turn ignition switch OFF.
2. Loosen and retighten heated oxygen sensor 1.

Tightening torque: 40 - 60 N·m (4.1 - 6.2 kg-m, 30 - 44 ft-lb)

>> GO TO 2.



2. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

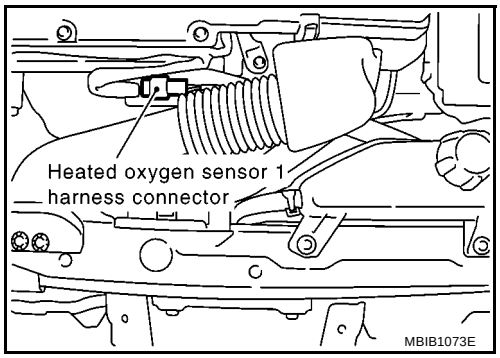
1. Disconnect heated oxygen sensor 1 harness connector.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 74 and HO2S1 terminal 3.
   Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



3. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2. Refer to Wiring Diagram.

Continuity should exist.

3. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground. Refer to Wiring Diagram.

Continuity should not exist.

4. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S1 CONNECTOR FOR WATER

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 harness connector
3. Check connectors for water

Water should not exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-595, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace malfunctioning heated oxygen sensor 1.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

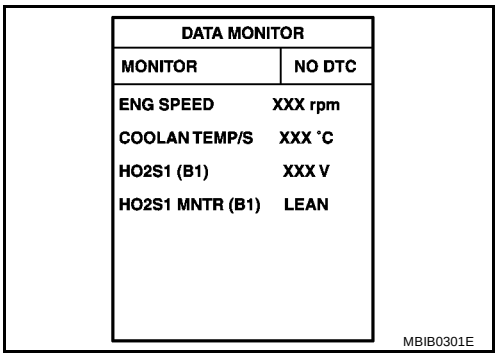
Component Inspection

EBS00OLS

HEATED OXYGEN SENSOR 1

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” and adjust “TRIGGER POINT” to 100% in “DATA MONITOR” mode with CONSULT-II.
3. Select “HO2S1 (B1)” and “HO2S1 MNTR (B1)”.
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch “RECORD” on CONSULT-II screen.



6. Check the following.
   - “HO2S1 MNTR (B1)” in “DATA MONITOR” mode changes from “RICH” to “LEAN” to “RICH” more than 5 times in 10 seconds.
     5 times (cycles) are counted as shown in the figure.
   - “HO2S1 (B1)” voltage goes above 0.6V at least once.
   - “HO2S1 (B1)” voltage goes below 0.3V at least once.
   - “HO2S1 (B1)” voltage never exceeds 1.0V.

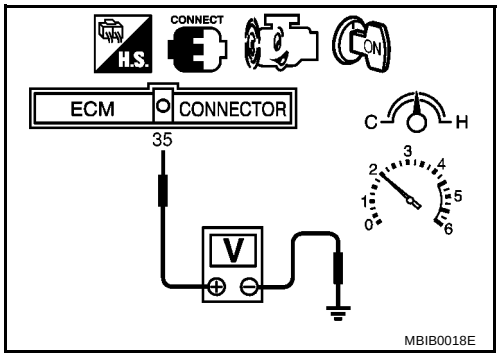
CAUTION:
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
   - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
   - The maximum voltage is over 0.6V at least one time.
   - The minimum voltage is below 0.3V at least one time.
   - The voltage never exceeds 1.0V.

   1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V
   2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V



CAUTION:
- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00OLT

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

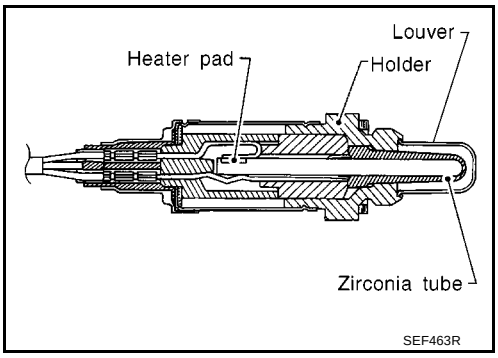
DTC P0134 HO2S1

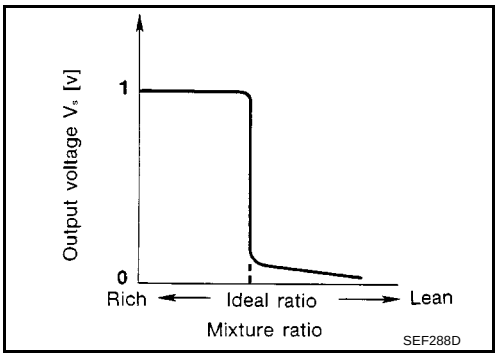
PFP:22690

Component Description

EBS00OLU

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00OLV

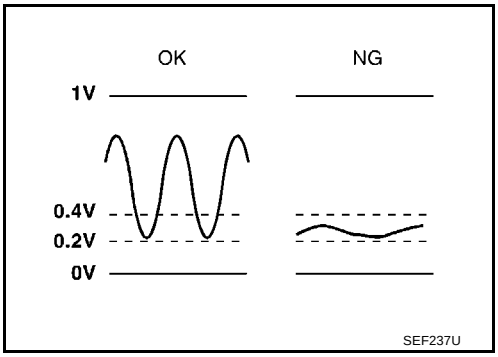
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ⟷ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ⟷ RICH Changes more than 5 times during 10 seconds.

On Board Diagnosis Logic

EBS00OLW

Under the condition in which the heated oxygen sensor 1 signal is not input, the ECM circuits will read a continuous approximately 0.3V. Therefore, for this diagnosis, the time that output voltage is within 200 to 400 mV range is monitored, and the diagnosis checks that this time is not inordinately long.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0134 0134	Heated oxygen sensor 1 circuit no activity detected	The voltage from the sensor is constantly approx. 0.3V.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 1

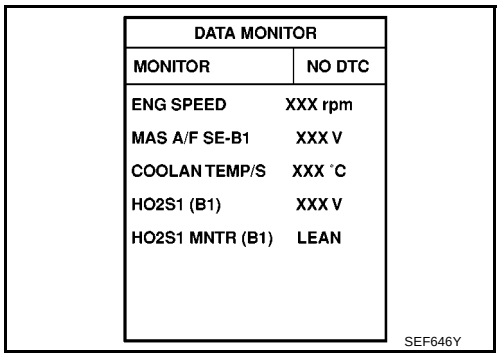
Overall Function Check

EBS00OLY

Use this procedure to check the overall function of the heated oxygen sensor 1 circuit. During this check, a DTC might not be confirmed.

WITH CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” in “DATA MONITOR” mode with CONSULT-II, and select “H02S1 (B1)”.
3. Hold engine speed at 2,000 rpm under no load.
4. Make sure that the indications do not remain in the range between 0.2V to 0.4V.
5. If NG, go to EC-600, "Diagnostic Procedure" .

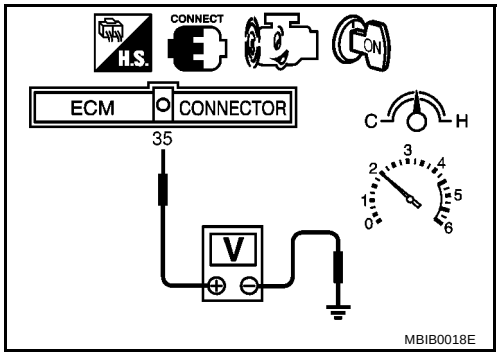


WITHOUT CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 (HO2S1 signal) and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.

- The voltage does not remain in the range of 0.2 - 0.4V.

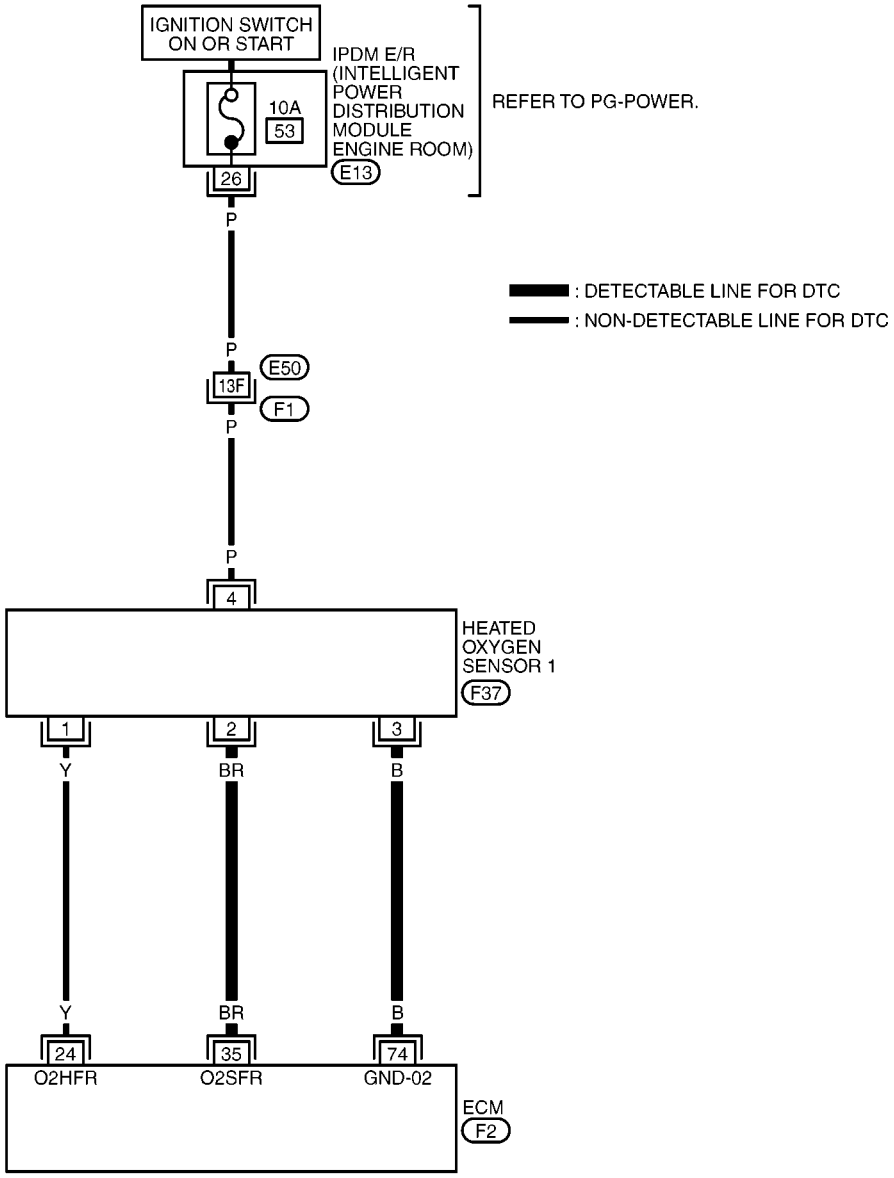
4. If NG, go to EC-600, "Diagnostic Procedure" .

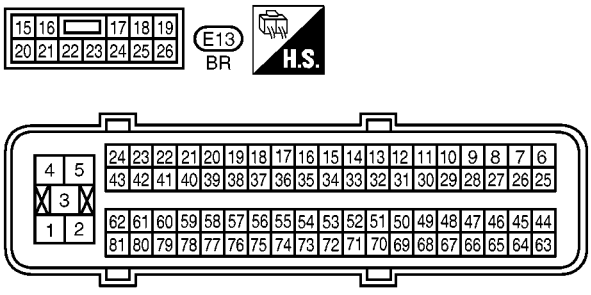


Wiring Diagram

EBS00OLZ

EC-HO2S1-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0272E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

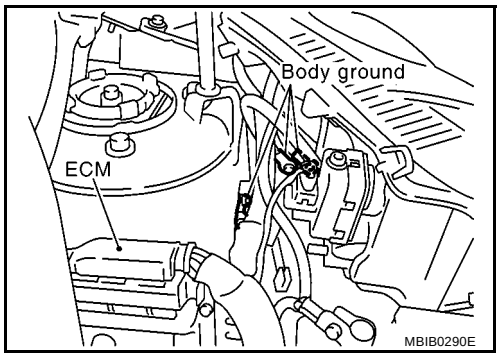
Diagnostic Procedure

EBS00OM0

1. INSPECTION START

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



2. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

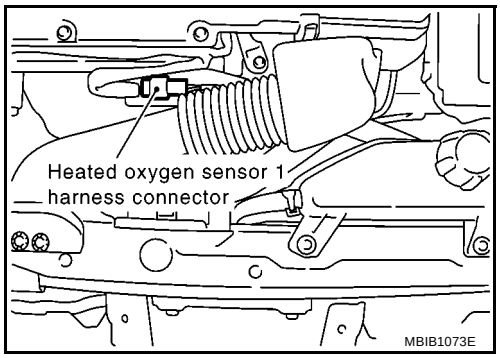
1. Disconnect heated oxygen sensor 1 harness connector.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 74 and HO2S1 terminal 3. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



3. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-601, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace heated oxygen sensor 1.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

Removal and Installation

EBS00OM2

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

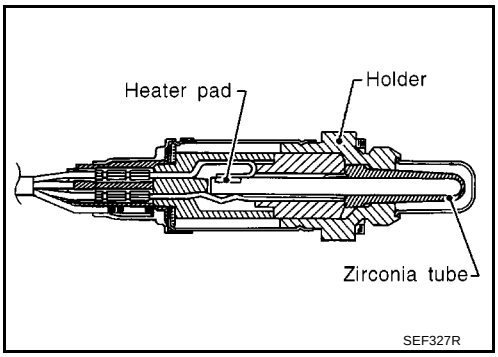
DTC P0138 HO2S2

PFP:226A0

Component Description

EBS00OM3

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas.
Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air-fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OM4

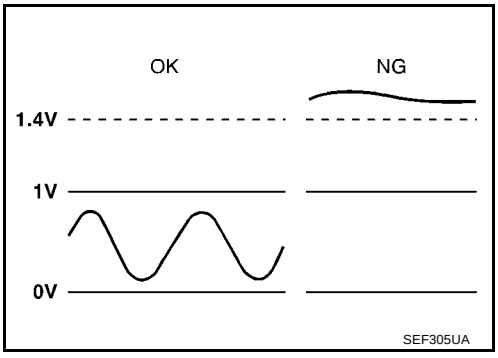
Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	● Engine: After warming up ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)			LEAN ←→ RICH

On Board Diagnosis Logic

EBS00OM5

The heated oxygen sensor 2 has a much longer switching time between rich and lean than the heated oxygen sensor 1. The oxygen storage capacity before the three way catalyst (manifold) causes the longer switching time. To judge the malfunctions of heated oxygen sensor 2, ECM monitors whether the voltage is unusually high during the various driving condition such as fuel-cut.



DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0138 0138	Heated oxygen sensor 2 circuit high voltage	An excessively high voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Heated oxygen sensor 2

DTC Confirmation Procedure

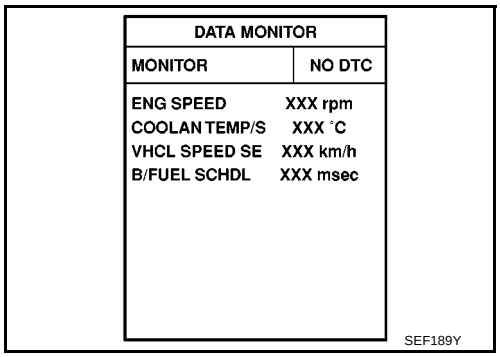
EBS00OM6

CAUTION:
Always drive vehicle at a safe speed.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 2 minutes.
6. If 1st trip DTC is detected, go to EC-606, "Diagnostic Procedure" .



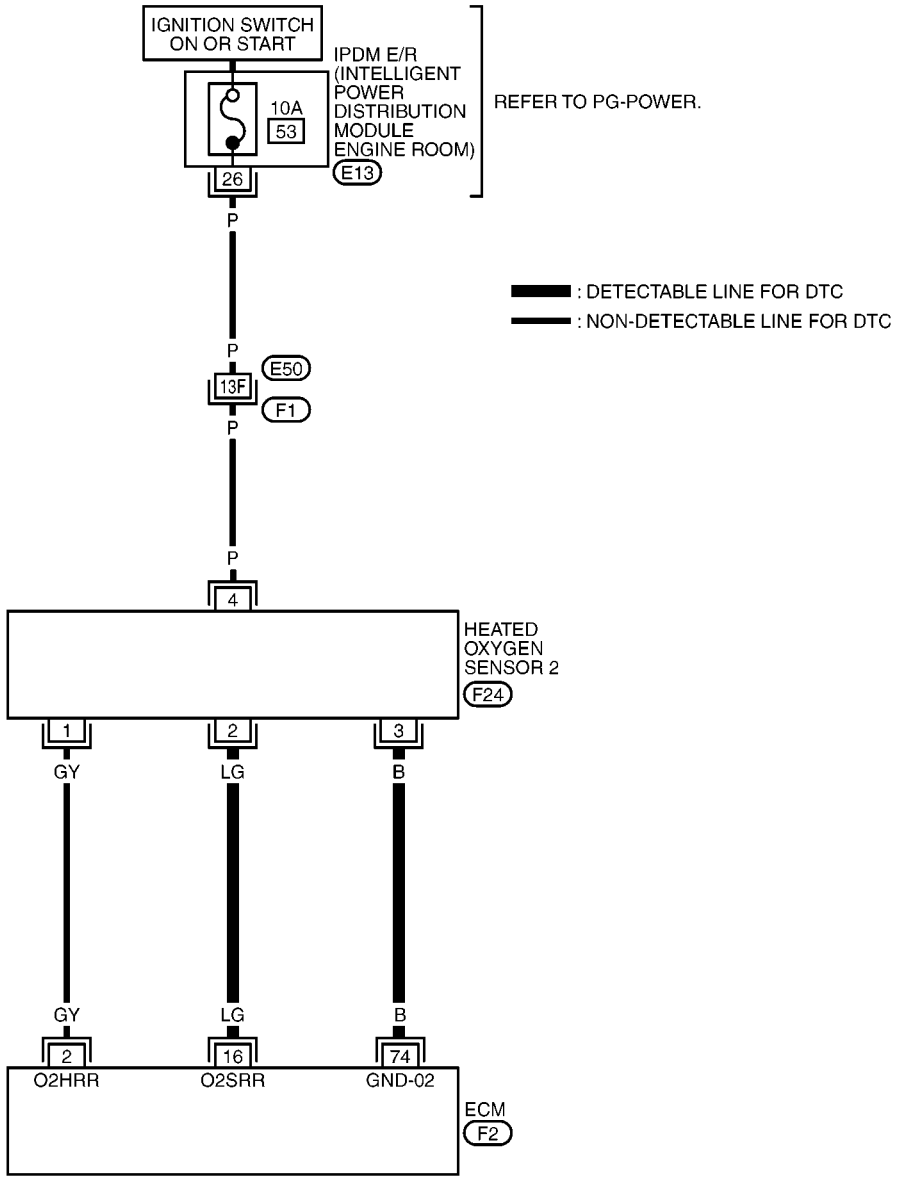
WITHOUT CONSULT-II

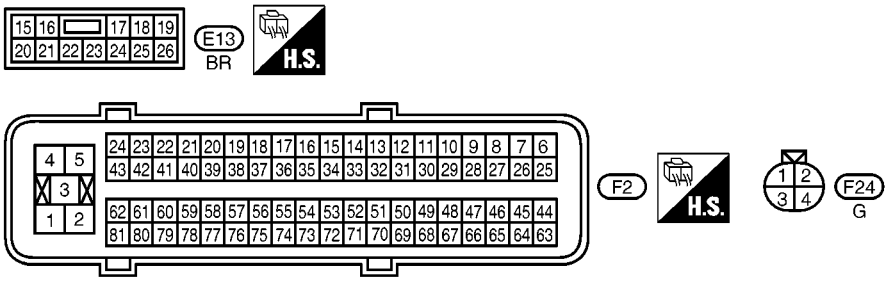
1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 2 minutes.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
7. Let engine idle for 2 minutes.
8. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
9. If DTC is detected, go to EC-606, "Diagnostic Procedure" .

Wiring Diagram

EBS00OM7

EC-HO2S2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0273E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● **Warm-up condition** ● Revving engine from idle to 3,000 rpm quickly after the following conditions are met. ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load.	0 - Approximately 1.0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

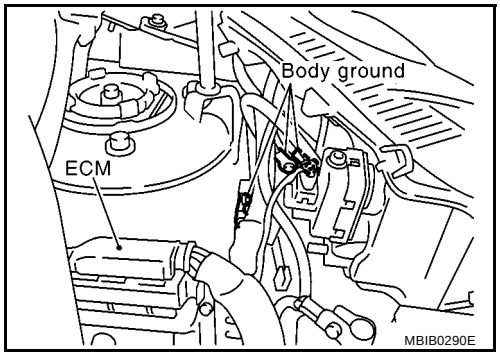
Diagnostic Procedure

EBS00OM8

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



2. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

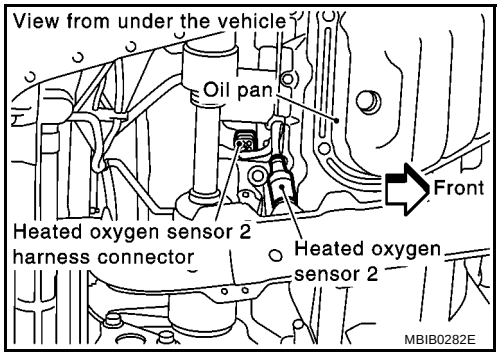
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S2 terminal 3.
   Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



3. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 16 and HO2S2 terminal 2. Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 16 or HO2S2 terminal 2 and ground. Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-607, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace heated oxygen sensor 2.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

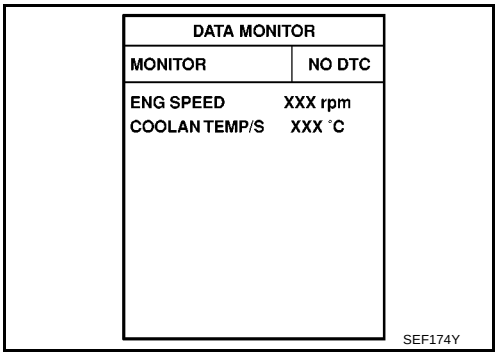
Component Inspection

EBS00OM9

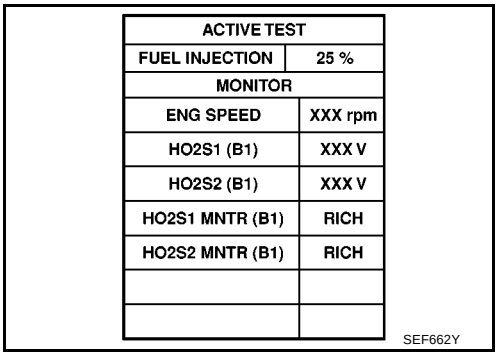
HEATED OXYGEN SENSOR 2

With CONSULT-II

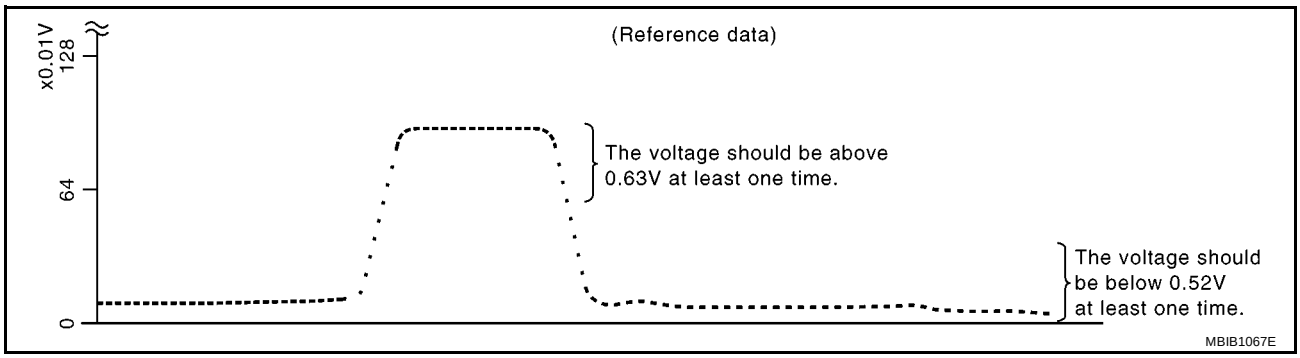
1. Turn ignition switch ON and select ″DATA MONITOR″ mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.



6. Select “FUEL INJECTION” in “ACTIVE TEST” mode, and select “HO2S2(B1)” as the monitor item with CONSULT-II.



7. Check “HO2S2 (B1)” at idle speed when adjusting “FUEL INJECTION” to ±25%.



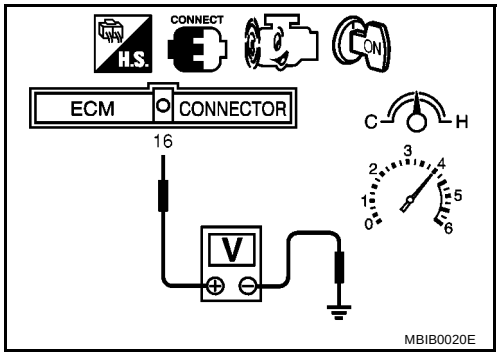
“HO2S2 (B1)” should be above 0.63V at least once when the “FUEL INJECTION” is +25%.
“HO2S2 (B1)” should be below 0.52V at least once when the “FUEL INJECTION” is −25%.

CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be above 0.63V at least once during this procedure.
   If the voltage is above 0.63V at step 6, step 7 is not necessary.



7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
   The voltage should be below 0.52V at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.

CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00OMA

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

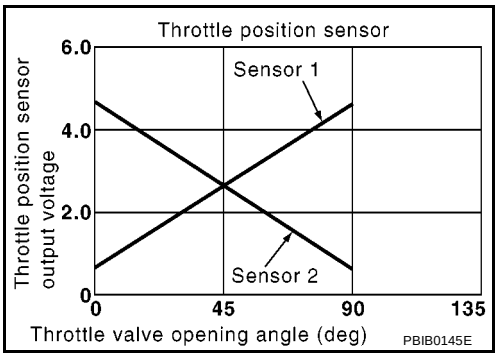
DTC P0221 TP SENSOR

PFP:16119

Component Description

EBS00OMB

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OMC

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T model) 1st (M/T model)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00OMD

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0221 0221	Throttle position sensor circuit range/performance problem	Rationally incorrect voltage is sent to ECM compared with the signals from TP sensor 1 and TP sensor 2.	● Harness or connector (The TP sensor 1 and 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

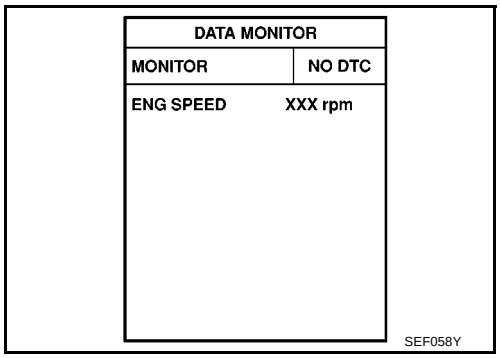
DTC Confirmation Procedure

EBS00OME

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-612, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-612, "Diagnostic Procedure" .

Wiring Diagram

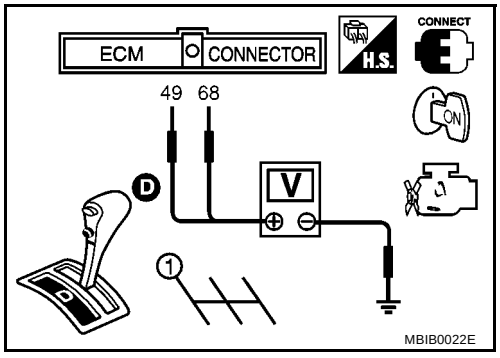
THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set selector lever to D position (A/T models) or 1st position (M/T models).
5. Check voltage between ECM terminals 49 (TP sensor 1 signal), 68 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
49 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
68 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V



6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-503, "Throttle Valve Closed Position Learning" .
8. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS00OMI

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

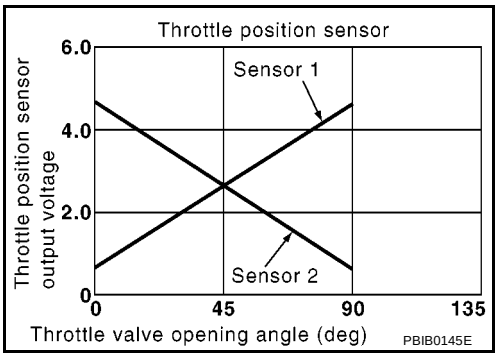
DTC P0222, P0223 TP SENSOR

PFP:16119

Component Description

EBS00OMJ

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. the throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OMK

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00OML

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0222 0222	Throttle position sensor 1 circuit low input	An excessively low voltage from the TP sensor 1 is sent to ECM.	● Harness or connectors (The TP sensor 1 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1)
P0223 0223	Throttle position sensor 1 circuit high input	An excessively high voltage from the TP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

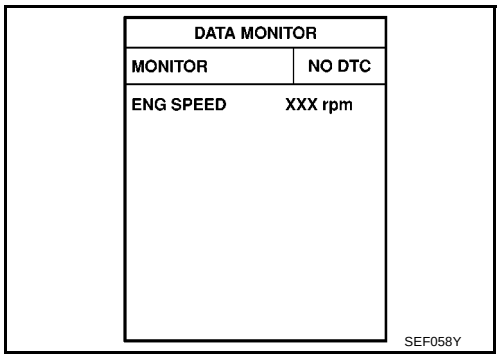
DTC Confirmation Procedure

EBS00OMM

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-618, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-618, "Diagnostic Procedure" .

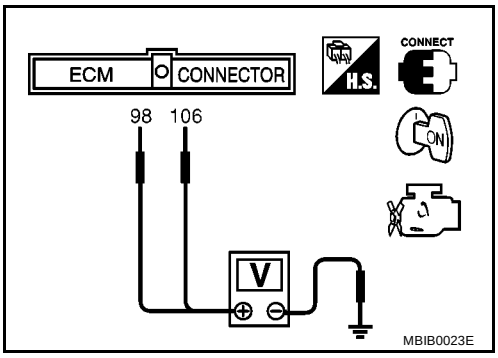
3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.



Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V

4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-503, "Accelerator Pedal Released Position Learning" .
6. Perform EC-503, "Throttle Valve Closed Position Learning" .
7. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS00ON6

ACCELERATOR PEDAL

Refer to ACC-2, "ACCELERATOR CONTROL SYSTEM" .

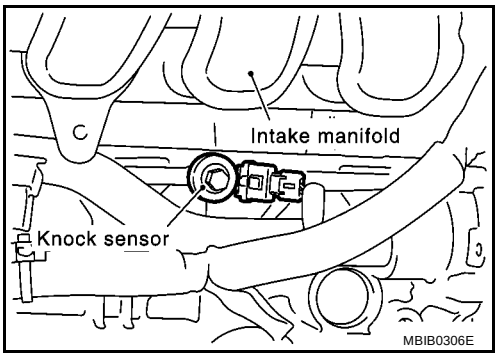
DTC P0327, P0328 KS

PFP:22060

Component Description

EBS00OS6

The knock sensor is attached to the cylinder block. It senses engine knocking using a piezoelectric element. A knocking vibration from the cylinder block is sensed as vibrational pressure. This pressure is converted into a voltage signal and sent to the ECM.



On Board Diagnosis Logic

EBS00OS7

The MI will not light up for these self-diagnoses.

DTC No.	Trouble Diagnosis Name	DTC Detected Condition	Possible Cause
P0327 0327	Knock sensor circuit low input	An excessively low voltage from the sensor is sent to ECM.	● Harness or connectors (The sensor circuit is open or shorted.) ● Knock sensor
P0328 0328	Knock sensor circuit high input	An excessively high voltage from the sensor is sent to ECM.	

DTC Confirmation Procedure

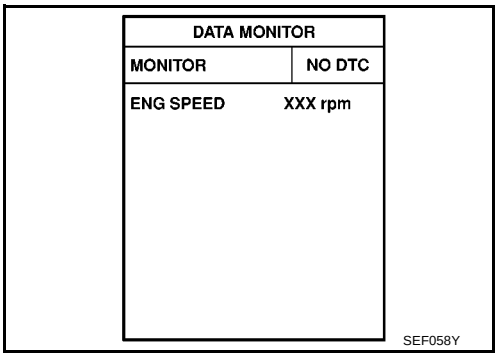
EBS00OS8

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to EC-641, "Diagnostic Procedure" .



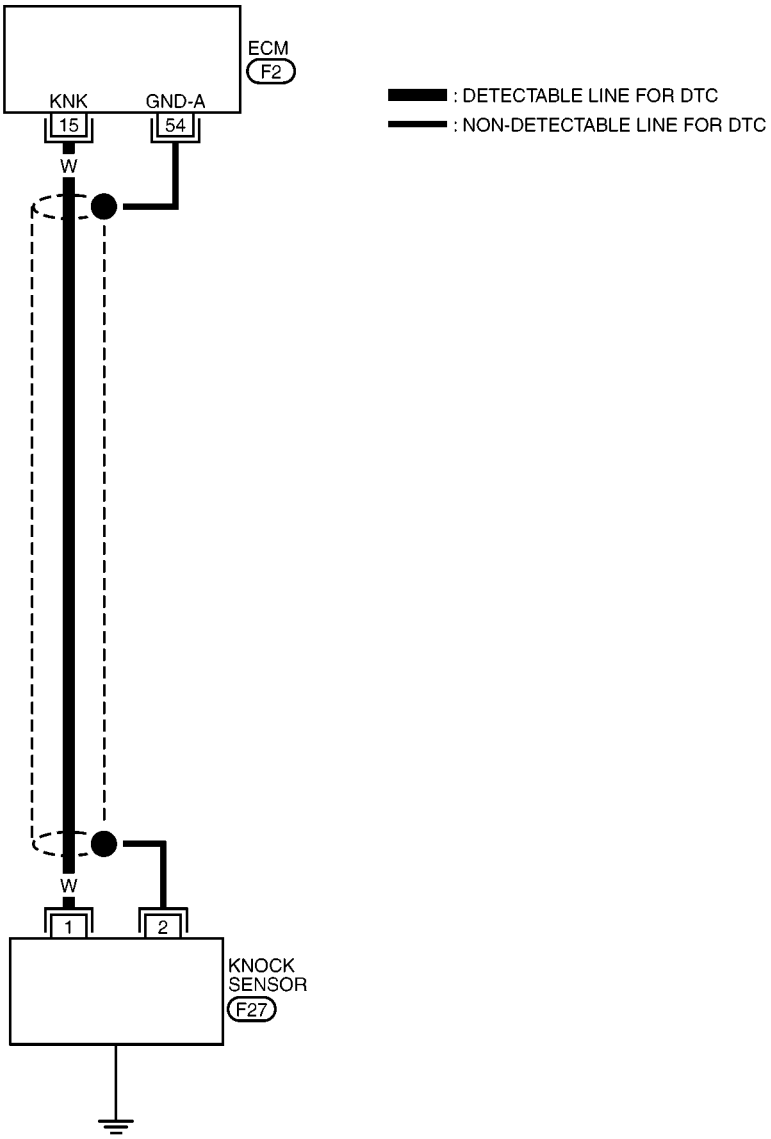
WITHOUT CONSULT-II

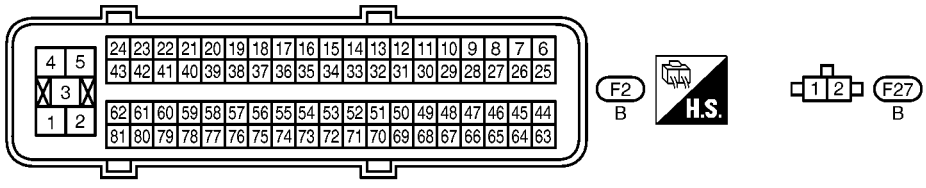
1. Start engine and run it for at least 5 seconds at idle speed.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-641, "Diagnostic Procedure" .

Wiring Diagram

EBS00OS9

EC-KS-01





MBWA1173E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
15	W	Knock sensor	**[Engine is running]** ● Idle speed	Approximately 2.5V
54	—	Sensor ground (Knock sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

Diagnostic Procedure

EBS00OSA

1. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-I

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check resistance between ECM terminal 15 and engine ground. Refer to Wiring Diagram.

   NOTE:
   It is necessary to use an ohmmeter which can measure more than 10 MΩ.

   Resistance: Approximately 530 - 590kΩ [at 20°C (68°F)]

4. Also check harness for short to ground and short to power.

OK or NG

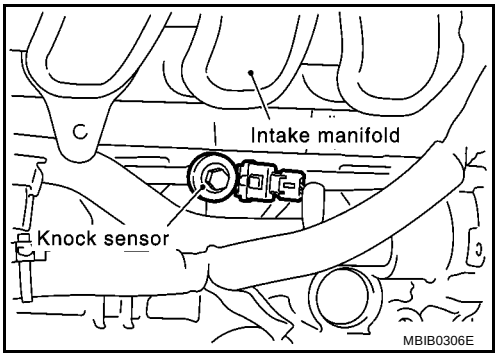
OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK KNOCK SENSOR INPUT SIGNAL CIRCUIT-II

1. Disconnect knock sensor harness connector.
2. Check harness continuity between ECM terminal 15 and knock sensor terminal 1.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK KNOCK SENSOR

Refer to EC-642, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace knock sensor.

4. CHECK KNOCK SENSOR SHIELD CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 54 and engine ground.

Continuity should exist

2. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to power in harness or connectors.

5. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

EBS00OSB

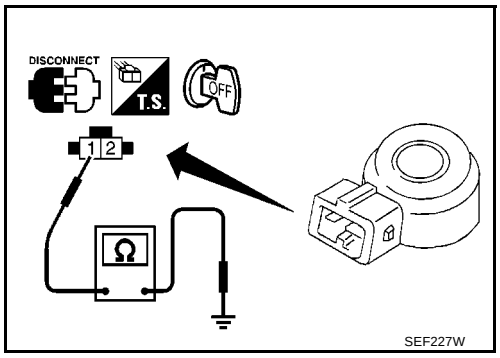
KNOCK SENSOR

Check resistance between knock sensor terminal 1 and ground.

NOTE:
It is necessary to use an ohmmeter which can measure more than 10 MΩ.

Resistance: Approximately 530 - 590kΩ [at 20°C (68°F)]

CAUTION:
Do not use any knock sensors that have been dropped or physically damaged. Use only new ones.



Removal and Installation

EBS00OSC

KNOCK SENSOR

Refer to EM-73, "CYLINDER BLOCK" .

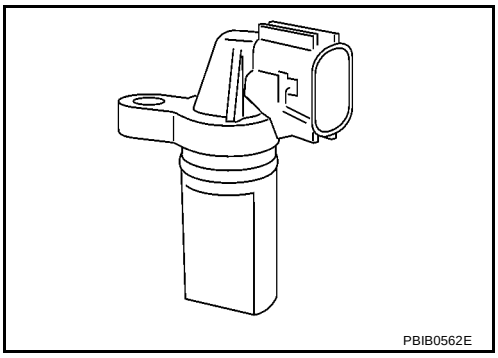
DTC P0335 CKP SENSOR (POS)

PFP:23731

Component Description

EBS00ONA

The crankshaft position sensor (POS) is located on the cylinder block rear housing facing the gear teeth (cogs) of the signal plate at the end of the crankshaft. It detects the fluctuation of the engine revolution.
The sensor consists of a permanent magnet and Hall IC.
When the engine is running, the high and low parts of the teeth cause the gap with the sensor to change.
The changing gap causes the magnetic field near the sensor to change.
Due to the changing magnetic field, the voltage from the sensor changes.
The ECM receives the voltage signal and detects the fluctuation of the engine revolution.



PBIB0562E

CONSULT-II Reference Value in Data Monitor Mode

EBS00ONB

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
ENG SPEED	● Tachometer: Connect ● Run engine and compare CONSULT-II value with the tachometer indication.	Almost the same speed as the tachometer indication.

On Board Diagnosis Logic

EBS00ONC

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0335 0335	Crankshaft position sensor (POS) circuit	● The crankshaft position sensor (POS) signal is not detected by the ECM during the first few seconds of engine cranking. ● The proper pulse signal from the crankshaft position sensor (POS) is not sent to ECM while the engine is running. ● The crankshaft position sensor (POS) signal is not in the normal pattern during engine running.	● Harness or connectors (The sensor circuit is open or shorted.) ● Crankshaft position sensor (POS) ● Signal plate

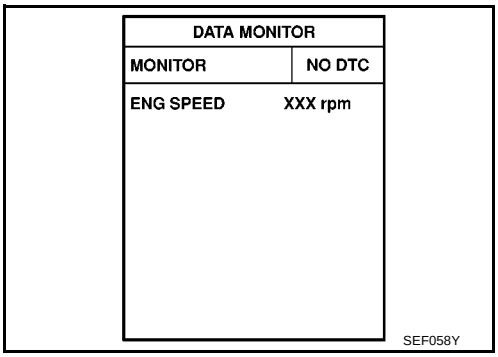
DTC Confirmation Procedure

EBS00OND

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

WITH CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
3. If 1st trip DTC is detected, go to EC-646, "Diagnostic Procedure" .



SEF058Y

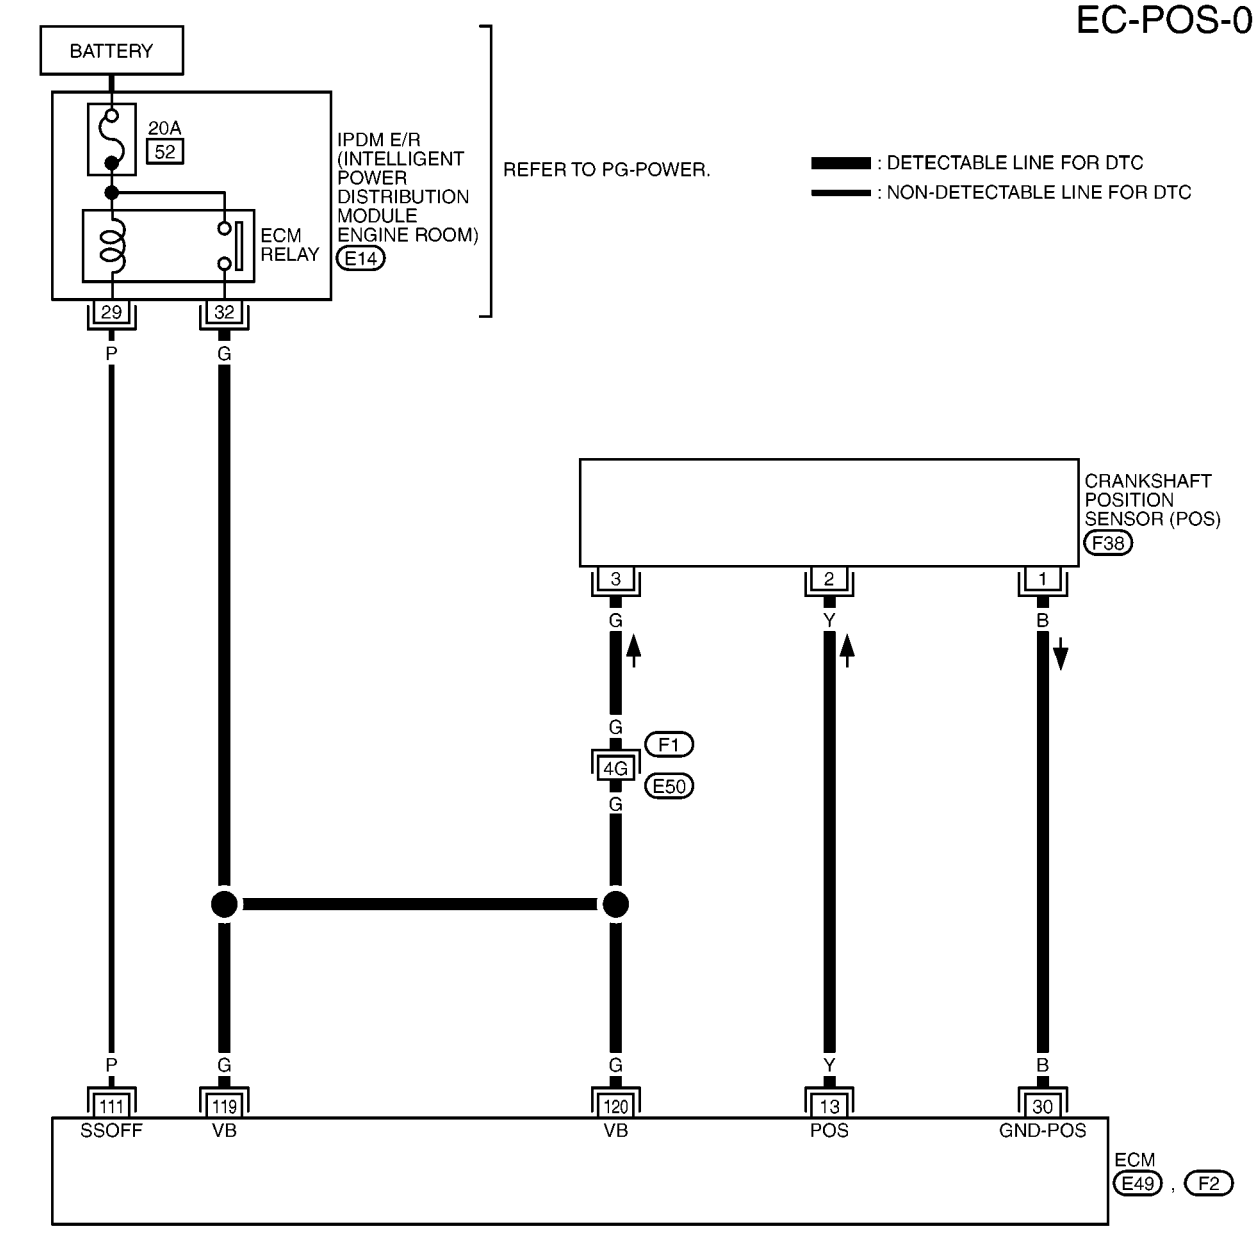
WITHOUT CONSULT-II

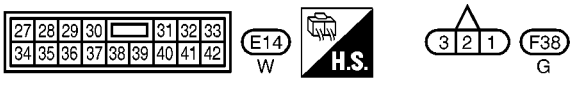
1. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-646, "Diagnostic Procedure" .

Wiring Diagram

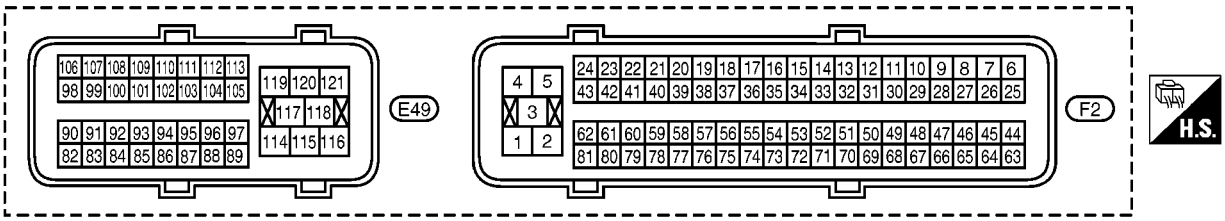
EBS00ONE

EC-POS-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)



MBWA0282E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
13	Y	Crankshaft position sensor (POS)	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	Approximately 3.0V★  PBIB0527E
			[Engine is running] ● Engine speed is 2,000 rpm	Approximately 3.0V★  PBIB0528E
30	B	Sensor ground (Crankshaft position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

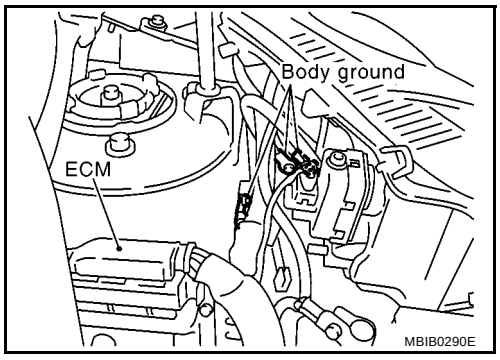
Diagnostic Procedure

EBS00ONF

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

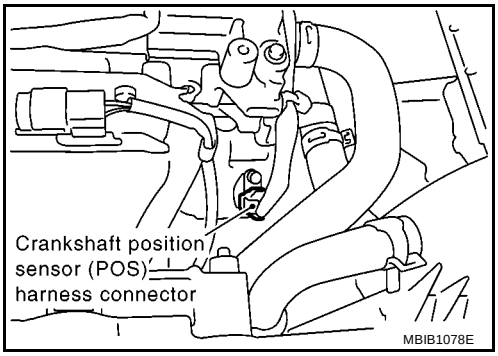
>> GO TO 2.



MBIB0290E

2. CHECK CRANKSHAFT POSITION (CKP) SENSOR (POS) POWER SUPPLY CIRCUIT

1. Disconnect crankshaft position (CKP) sensor (POS) harness connector.
2. Turn ignition switch ON.



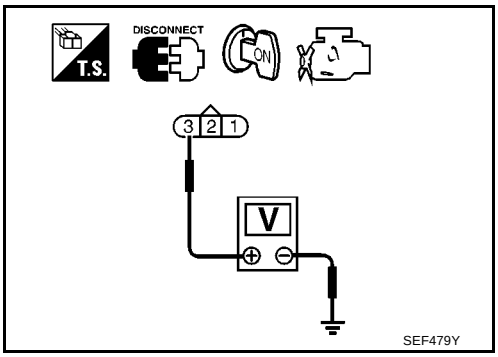
3. Check voltage between CKP sensor (POS) terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.



3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- Harness for open or short between crankshaft position sensor (POS) and ECM
- Harness for open or short between crankshaft position sensor (POS) and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK CKP SENSOR (POS) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 30 and CKP sensor (POS) terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK CKP SENSOR (POS) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 13 and CKP sensor (POS) terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK CRANKSHAFT POSITION SENSOR (POS)

Refer to EC-648, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace crankshaft position sensor (POS).

7. CHECK GEAR TOOTH

Visually check for chipping signal plate gear tooth.

OK or NG

OK >> GO TO 8.
NG >> Replace the signal plate.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

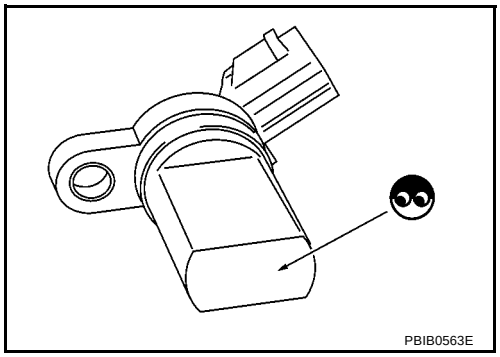
>> **INSPECTION END**

Component Inspection

EBS00ONG

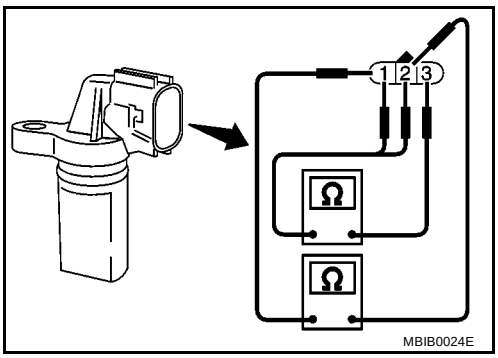
CRANKSHAFT POSITION SENSOR (POS)

1. Loosen the fixing bolt of the sensor.
2. Disconnect crankshaft position sensor (POS) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.



5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or ∞
3 (+) - 2 (-)	
2 (+) - 1 (-)	



6. If NG, replace crankshaft position sensor (POS).

Removal and Installation

CRANKSHAFT POSITION SENSOR (POS)

EBS00ONH

Refer to EM-73, "CYLINDER BLOCK" .

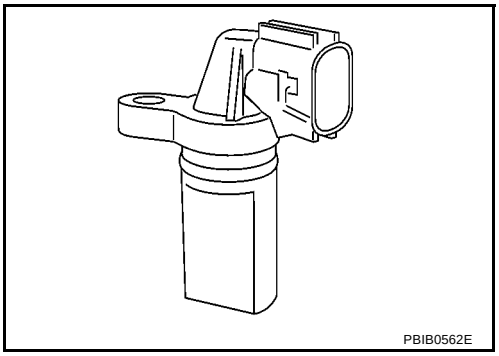
DTC P0340 CMP SENSOR (PHASE)

PFP:23731

Component Description

EBS00ONI

The camshaft position sensor (PHASE) senses the retraction with intake valve camshaft to identify a particular cylinder. The camshaft position sensor (PHASE) senses the piston position.
When the crankshaft position sensor (POS) system becomes inoperative, the camshaft position sensor (PHASE) provides various controls of engine parts instead, utilizing timing of cylinder identification signals.
The sensor consists of a permanent magnet and Hall IC.
When engine is running, the high and low parts of the teeth cause the gap with the sensor to change.
The changing gap causes the magnetic field near the sensor to change.
Due to the changing magnetic field, the voltage from the sensor changes.



PBIB0562E

On Board Diagnosis Logic

EBS00ONJ

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P0340 0340	Camshaft position sensor (PHASE) circuit	● The cylinder No. signal is not sent to ECM for the first few seconds during engine cranking. ● The cylinder No. signal is not set to ECM during engine running. ● The cylinder No. signal is not in the normal pattern during engine running.	● Harness or connectors (The sensor circuit is open or shorted.) ● Camshaft position sensor (PHASE) ● Camshaft (Intake) ● Starter motor (Refer to SC-39 .) ● Starting system circuit (Refer to SC-39 .) ● Dead (Weak) battery

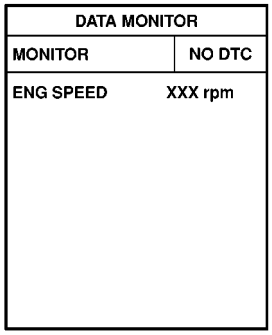
DTC Confirmation Procedure

EBS00ONK

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V with ignition switch ON.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
4. If 1st trip DTC is detected, go to EC-653, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to next step.
5. Maintain engine speed at more than 800 rpm for at least 5 seconds.
6. If 1st trip DTC is detected, go to EC-653, "Diagnostic Procedure" .



SEF058Y

WITHOUT CONSULT-II

1. Crank engine for at least 2 seconds and run it for at least 5 seconds at idle speed.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-653, "Diagnostic Procedure" .
   If 1st trip DTC is not detected, go to next step.
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Start engine and maintain engine speed at more than 800 rpm for at least 5 seconds.

7. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
8. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
9. If DTC is detected, go to EC-653, "Diagnostic Procedure" .

Wiring Diagram

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00ONM

1. CHECK STARTING SYSTEM

Turn ignition switch to START position.

Does the engine turn over?

Does the starter motor operate?

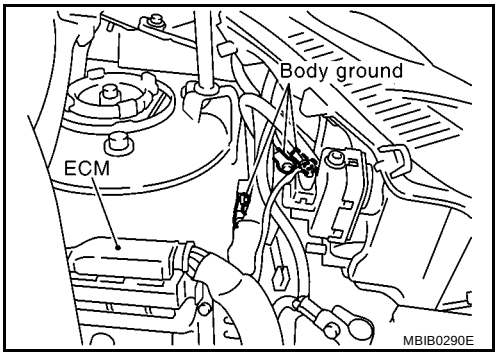
Yes or No

Yes >> GO TO 2.
No >> Check starting system. (Refer to SC-39, "STARTING SYSTEM" .)

2. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

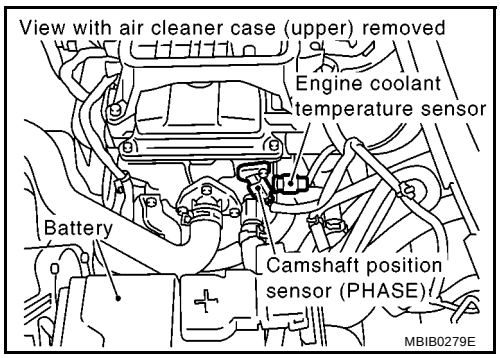
>> GO TO 3.



MBIB0290E

3. CHECK CAMSHAFT POSITION (CMP) SENSOR (PHASE) POWER SUPPLY CIRCUIT

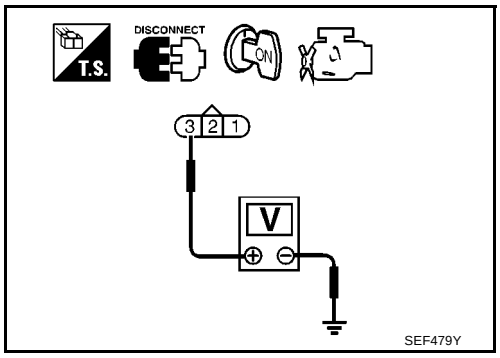
1. Disconnect camshaft position (CMP) sensor (PHASE) harness connector.
2. Turn ignition switch ON.



3. Check voltage between CMP sensor (PHASE) terminal 3 and ground with CONSULT-II or tester.

Voltage: Battery voltage

4. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- Harness for open or short between camshaft position sensor (PHASE) and ECM
- Harness for open or short between camshaft position sensor (PHASE) and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK CMP SENSOR (PHASE) GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 29 and CMP sensor (PHASE) terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK CMP SENSOR (PHASE) INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 14 and CMP sensor (PHASE) terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground or short to power.

OK or NG

OK >> GO TO 7.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK CAMSHAFT POSITION SENSOR (PHASE)

Refer to EC-655, "Component Inspection" .

OK or NG

OK >> GO TO 8.
NG >> Replace camshaft position sensor (PHASE).

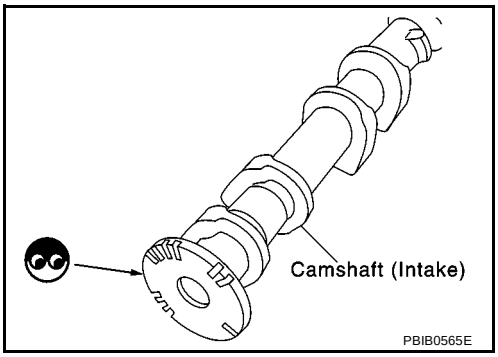
8. CHECK CAMSHAFT (INTAKE)

Check the following.

- Accumulation of debris to the signal plate of camshaft rear end
- Chipping signal plate of camshaft rear end

OK or NG

OK >> GO TO 9.
NG >> Remove debris and clean the signal plate of camshaft rear end or replace camshaft.



9. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

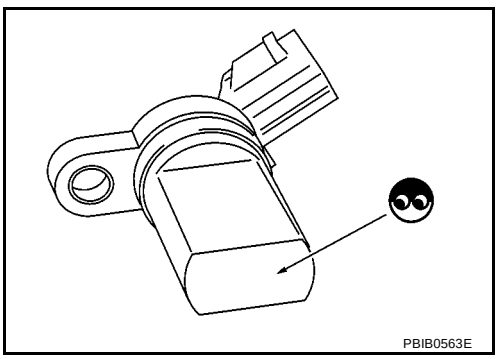
>> **INSPECTION END**

Component Inspection

EBS00ONN

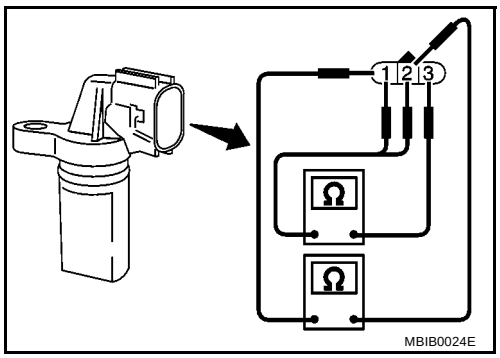
CAMSHAFT POSITION SENSOR (PHASE)

1. Loosen the fixing bolt of the sensor.
2. Disconnect camshaft position sensor (PHASE) harness connector.
3. Remove the sensor.
4. Visually check the sensor for chipping.



5. Check resistance as shown in the figure.

Terminal No. (Polarity)	Resistance Ω [at 25°C (77°F)]
3 (+) - 1 (-)	Except 0 or ∞
3 (+) - 2 (-)	
2 (+) - 1 (-)	



Removal and Installation

EBS00ONO

CAMSHAFT POSITION SENSOR (PHASE)

Refer to EM-36, "CAMSHAFT" .

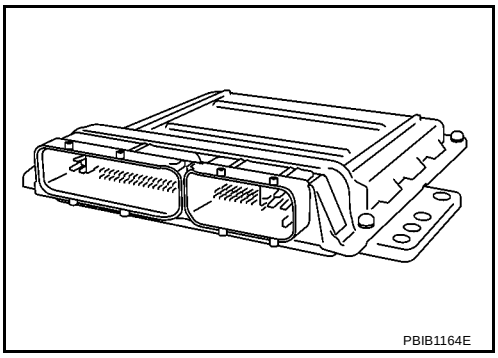
DTC P0605 ECM

PFP:23710

Component Description

EBS00ONP

The ECM consists of a microcomputer and connectors for signal input and output and for power supply. The ECM controls the engine.



PBIB1164E

On Board Diagnosis Logic

EBS00ONQ

This self-diagnosis has one or two trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P0605 0605	Engine control module	A)	ECM calculation function is malfunctioning.	● ECM
		B)	ECM EEP-ROM system is malfunctioning.	
		C)	ECM self shut-off function is malfunctioning.	

FAIL-SAFE MODE

ECM enters fail-safe mode when malfunction A is detected.

Detected items	Engine operation condition in fail-safe mode
Malfunction A	ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

EBS00ONR

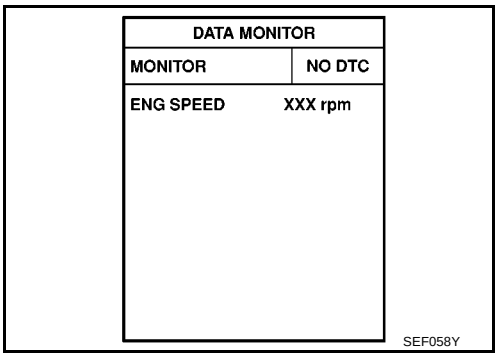
Perform PROCEDURE FOR MALFUNCTION A first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION B. If there is no malfunction on PROCEDURE FOR MALFUNCTION B, perform PROCEDURE FOR MALFUNCTION C.

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A

With CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. If DTC is detected, go to EC-659, "Diagnostic Procedure" .



SEF058Y

Without CONSULT-II

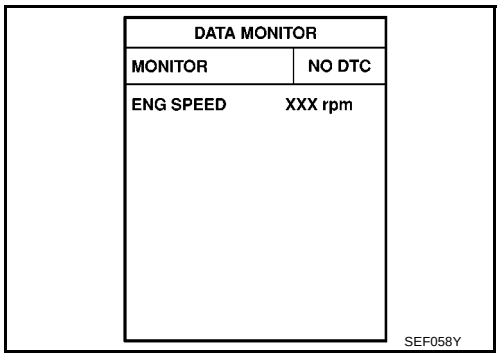
1. Turn ignition switch ON.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.

4. If DTC is detected, go to EC-659, "Diagnostic Procedure" .

PROCEDURE FOR MALFUNCTION B

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
4. If 1st trip DTC is detected, go to EC-659, "Diagnostic Procedure" .



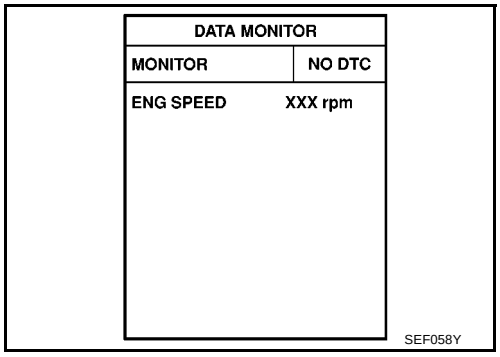
Without CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-659, "Diagnostic Procedure" .

PROCEDURE FOR MALFUNCTION C

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
4. Repeat step 3 for 32 times.
5. If 1st trip DTC is detected, go to EC-659, "Diagnostic Procedure" .



Without CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Repeat step 2 for 32 times.
4. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
5. If 1st trip DTC is detected, go to EC-659, "Diagnostic Procedure" .

Diagnostic Procedure

EBS00ONS

1. INSPECTION START

With CONSULT-II

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-II.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-657 .
5. Is the 1st trip DTC P0605 displayed again?

Without CONSULT-II

1. Turn ignition switch ON.
2. Erase the Diagnostic Test Mode II (Self-diagnostic results) memory. Refer to EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
3. **Perform DTC Confirmation Procedure.**
   See EC-657 .
4. Is the 1st trip DTC P0605 displayed again?

Yes or No

Yes >> GO TO 2.
No >> **INSPECTION END**

2. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NATS system and registration of all NATS ignition key IDs. Refer to EC-511, "NATS (Nissan Anti-theft System)" .
3. Perform EC-503, "Accelerator Pedal Released Position Learning" .
4. Perform EC-503, "Throttle Valve Closed Position Learning" .
5. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

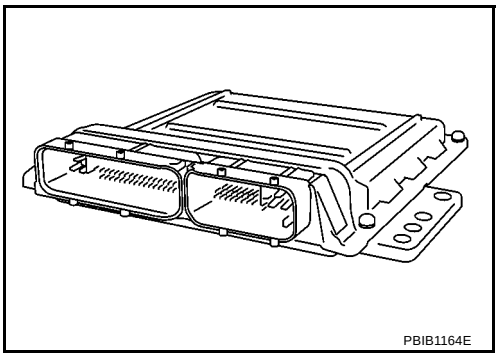
DTC P1065 ECM POWER SUPPLY

PFP:23710

Component Description

EBS00ONT

Battery voltage is supplied to the ECM even when the ignition switch is turned OFF for the ECM memory function of the DTC memory, the air-fuel ratio feedback compensation value memory, the idle air volume learning value memory, etc.



PBIB1164E

On Board Diagnosis Logic

EBS00ONU

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1065 1065	ECM power supply circuit	ECM back-up RAM system does not function properly.	● Harness or connectors [ECM power supply (back-up) circuit is open or shorted.] ● ECM

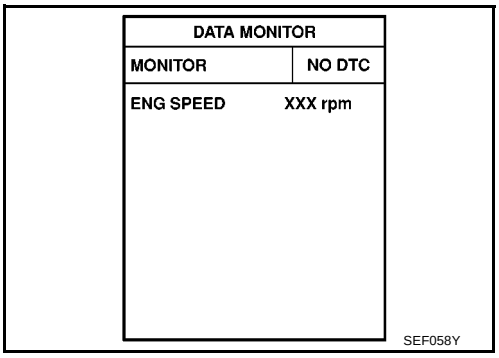
DTC Confirmation Procedure

EBS00ONV

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
5. Repeat steps 3 and 4 for 4 times.
6. If 1st trip DTC is detected, go to EC-662, "Diagnostic Procedure" .



SEF058Y

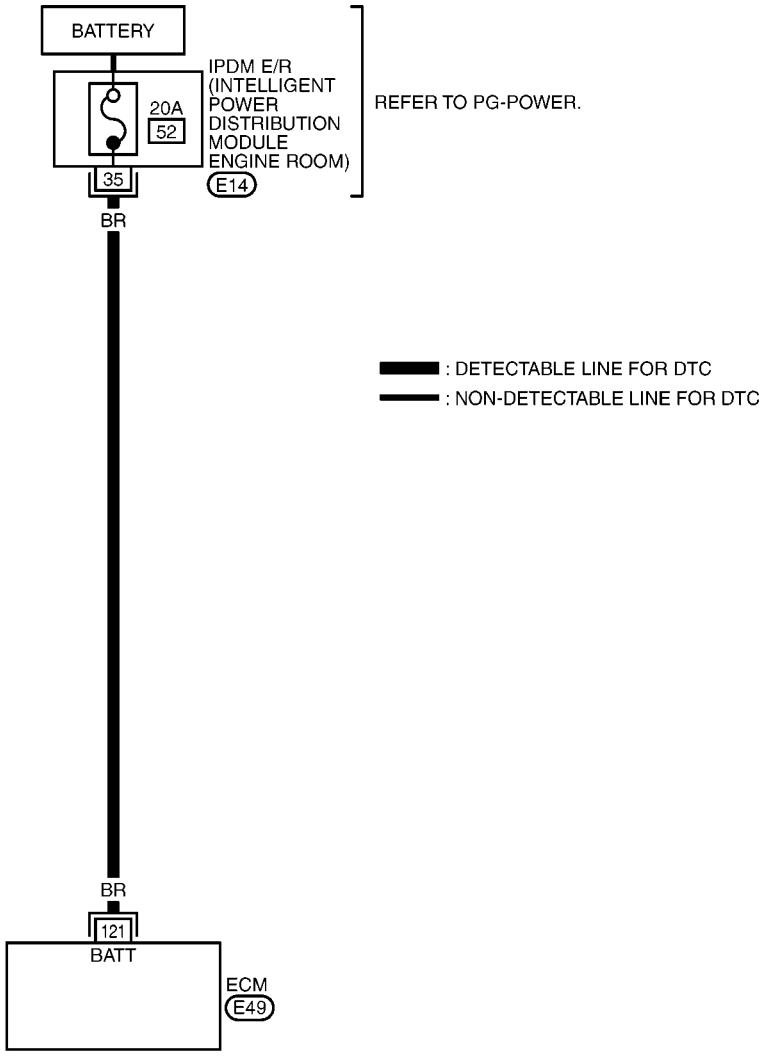
WITHOUT CONSULT-II

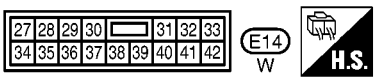
1. Turn ignition switch ON and wait at least 1 second.
2. Start engine and let it idle for 1 second.
3. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
4. Repeat steps 2 and 3 for 4 times.
5. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
6. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
7. If DTC is detected, go to EC-662, "Diagnostic Procedure" .

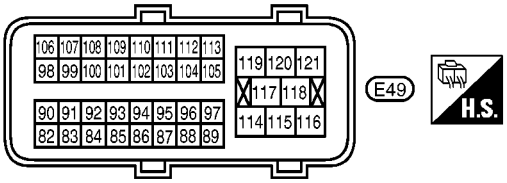
Wiring Diagram

EBS00ONW

EC-ECM/PW-01







MBWA0285E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
121	BR	Power supply for ECM (Buck-up)	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)

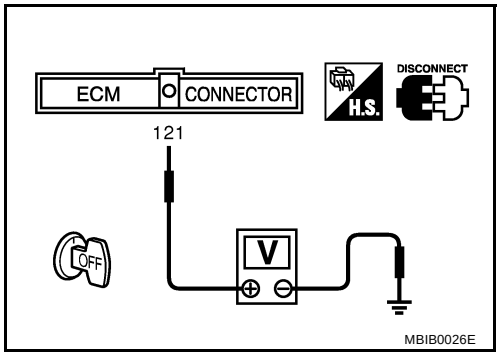
Diagnostic Procedure

EBS00ONX

1. CHECK ECM POWER SUPPLY

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check voltage between ECM terminal 121 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

- 20A fuse
- IPDM E/R harness connector E14
- Harness for open or short between ECM and IPDM E/R

>> Repair or replace harness or connectors.

3. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connectors.

4. PERFORM DTC CONFIRMATION PROCEDURE

With CONSULT-II

1. Turn ignition switch ON.
2. Select “SELF DIAG RESULTS” mode with CONSULT-II.
3. Touch “ERASE”.
4. **Perform DTC Confirmation Procedure.**
   See EC-660 .
5. Is the 1st trip DTC P1065 displayed again?

Without CONSULT-II

1. Turn ignition switch ON.
2. Erase the Diagnostic Test Mode II (Self-diagnostic results) memory. Refer to EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
3. **Perform DTC Confirmation Procedure.**
   See EC-660 .
4. Is the 1st trip DTC P1065 displayed again?

Yes or No

Yes >> GO TO 5.
No >> **INSPECTION END**

5. REPLACE ECM

1. Replace ECM.
2. Perform initialization of NATS system and registration of all NATS ignition key IDs. Refer to EC-511, "NATS (Nissan Anti-theft System)" .

5. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P1121 ELECTRIC THROTTLE CONTROL ACTUATOR

PFP:16119

Component Description

EBS00ONY

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.
The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The throttle position sensor detects the throttle valve position, and the opening and closing speed of the throttle valve and feeds the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

EBS00ONZ

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition		Possible cause
P1121 1121	Electric throttle control actuator	A)	Electric throttle control actuator does not function properly due to the return spring malfunction.	● Electric throttle control actuator
		B)	Throttle valve opening angle in fail-safe mode is not in specified range.	
		C)	ECM detect the throttle valve is stuck open.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MIL lights up.

Detected items	Engine operating condition in fail-safe mode
Malfunction A	The ECM controls the electric throttle actuator by regulating the throttle opening around the idle position. The engine speed will not rise more than 2,000 rpm.
Malfunction B	ECM controls the electric throttle control actuator by regulating the throttle opening to 20 degrees or less.
Malfunction C	While the vehicle is driving, it slows down gradually by fuel cut. After the vehicle stops, the engine stalls. The engine can restart in N or P position, and engine speed will not exceed 1,000 rpm or more.

DTC Confirmation Procedure

EBS00OO0

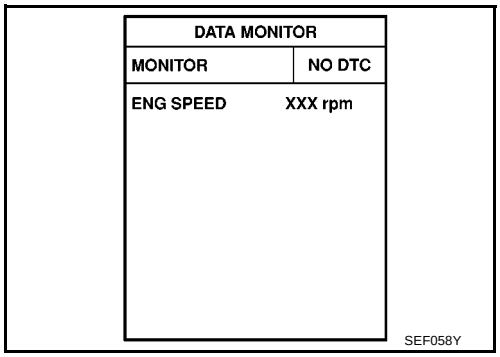
NOTE:

- **Perform PROCEDURE FOR MALFUNCTION A AND B first. If the DTC cannot be confirmed, perform PROCEDURE FOR MALFUNCTION C.**
- If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR MALFUNCTION A AND B

With CONSULT-II

1. Turn ignition witch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Shift selector lever to D position (A/T models), 1st position (M/T models) and wait at least 2 seconds.
4. Shift selector lever to P position (A/T models), Neutral position (M/T models).
5. Turn ignition switch OFF and wait at least 10 seconds.
6. Turn ignition witch ON and wait at least 1 second.
7. Shift selector lever to D position (A/T models), 1st position (M/T models) and wait at least 2 seconds.
8. Shift selector lever to P position (A/T models), Neutral position (M/T models).



9. Turn ignition switch OFF, wait at least 10 seconds, and then turn ON.
10. If 1st trip DTC is detected, go to EC-665, "Diagnostic Procedure" .

Without CONSULT-II

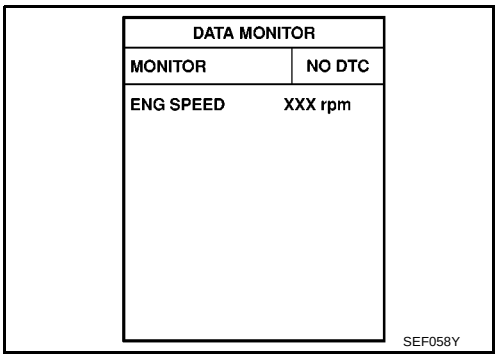
1. Turn ignition switch ON and wait at least 1 second.

2. Shift selector lever to D position (A/T models), 1st position (M/T models) and wait at least 2 seconds.
3. Shift selector lever to P position (A/T models), Neutral position (M/T models).
4. Turn ignition switch OFF and wait at least 10 seconds.
5. Turn ignition witch ON and wait at least 1 second.
6. Shift selector lever to D position (A/T models), 1st position (M/T models) and wait at least 2 seconds.
7. Shift selector lever to P position (A/T models), Neutral position (M/T models).
8. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
9. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
10. If DTC is detected, go to EC-665, "Diagnostic Procedure" .

PROCEDURE FOR MALFUNCTION C

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Shift selector lever to D position (A/T models), 1st position (M/T models) and wait at least 2 seconds.
4. Shift selector lever to N or P position (A/T models), Neutral position (M/T models).
5. Start engine and let it idle for 3 seconds.
6. If DTC is detected, go to EC-665, "Diagnostic Procedure" .



Without CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Shift selector lever to D position (A/T models), 1st position (M/T models) and wait at least 2 seconds.
3. Shift selector lever to N or P position (A/T models), Neutral position (M/T models).
4. Start engine and let it idle for the 3 seconds.
5. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
6. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
7. If DTC is detected, go to EC-665, "Diagnostic Procedure" .

Diagnostic Procedure

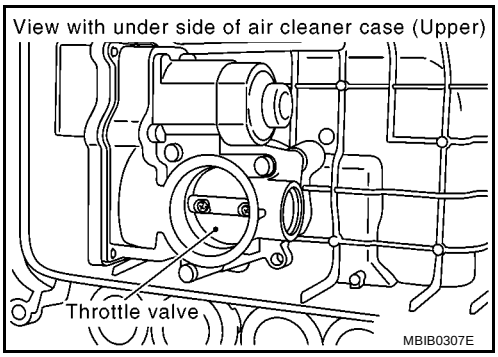
EBS00OO1

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if a foreign matter is caught between the throttle valve and the housing.

OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.



2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

DTC P1122 ELECTRIC THROTTLE CONTROL FUNCTION

PFP:16119

Description

EBS00OO2

NOTE:
If DTC P1122 is displayed with DTC P1121 or 1126, first perform the trouble diagnosis for DTC P1121 or P1126. Refer to EC-664 or EC-673 .
Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc.
The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

EBS00OO3

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1122 1122	Electric throttle control performance problem	Electric throttle control function does not operate properly.	● Harness or connectors (Throttle control motor circuit is open or shorted.) ● Electric throttle control actuator

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

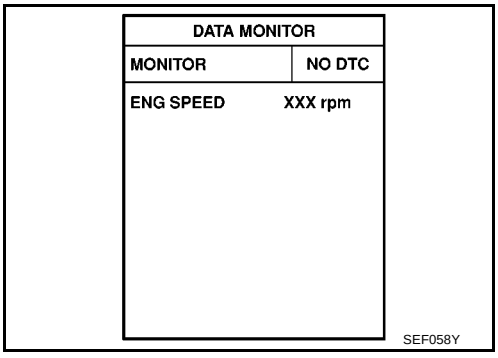
DTC Confirmation Procedure

EBS00OO4

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 11V when engine is running.

WITH CONSULT-II

1. Turn ignition switch ON and wait at least 2 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to EC-669, "Diagnostic Procedure" .



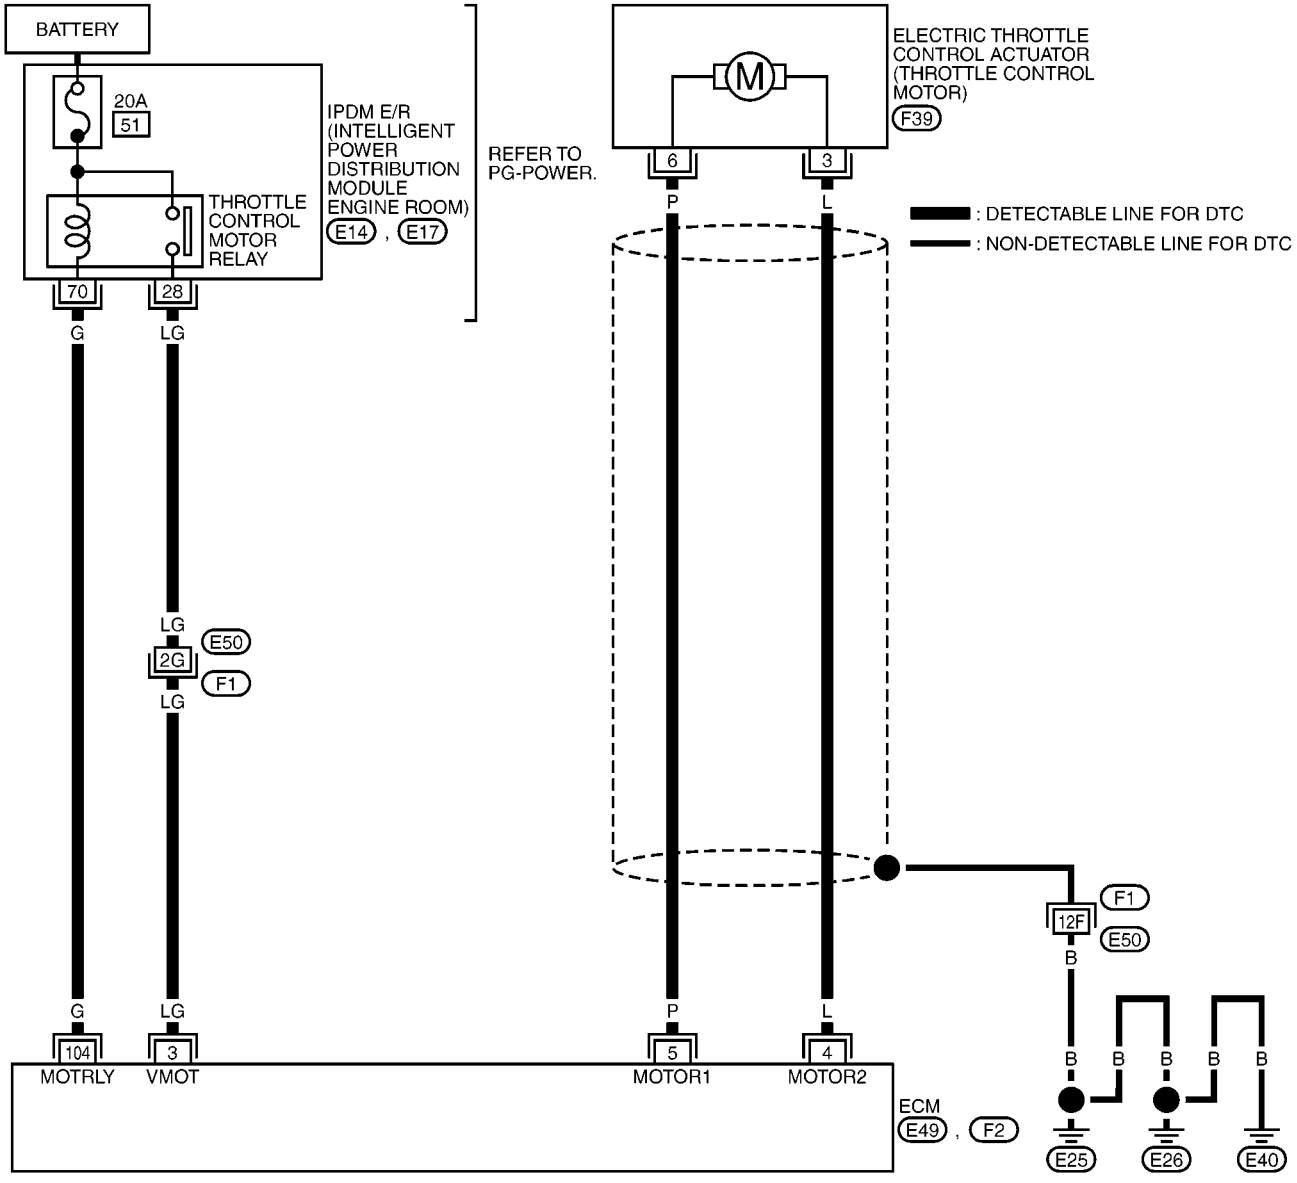
WITHOUT CONSULT-II

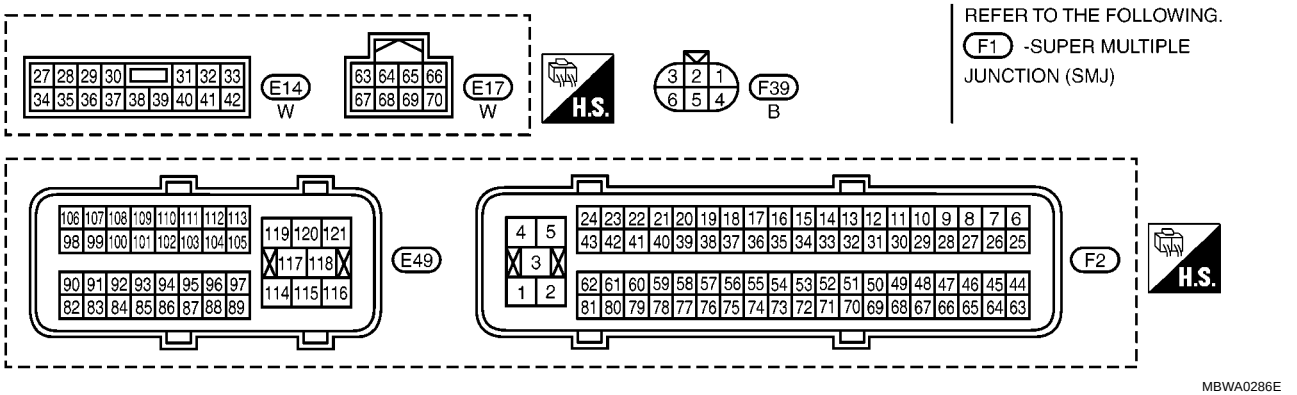
1. Turn ignition switch ON and wait at least 2 seconds.
2. Start engine and let it idle for 5 seconds.
3. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
4. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
5. If DTC is detected, go to EC-669, "Diagnostic Procedure" .

Wiring Diagram

EBS00OO5

EC-ETC1-01





MBWA0286E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
3	LG	Throttle control motor relay power supply	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
4	L	Throttle control motor (Close)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Released	0 - 14V★  PBIB0534E
5	P	Throttle control motor (Open)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB0533E
104	G	Throttle control motor relay	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch ON]	0 - 1.0V

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

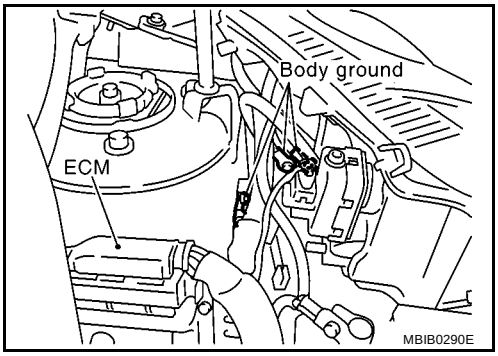
Diagnostic Procedure

EBS00OO6

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.

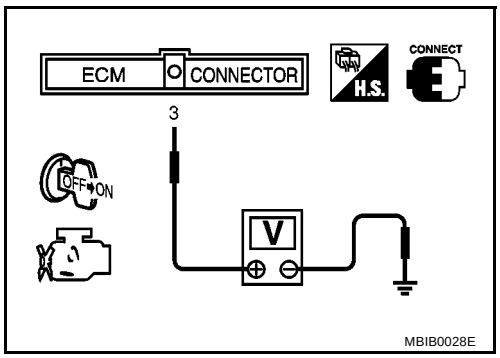


MBIB0290E

2. CHECK THROTTLE CONTROL MOTOR RELAY SIGNAL CIRCUIT-I

Check voltage between ECM terminal 3 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)



OK or NG

OK >> GO TO 10.
NG >> GO TO 3.

3. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect IPDM E/R harness connector E14.
4. Check harness continuity between ECM terminal 3 and IPDM E/R terminal 28. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

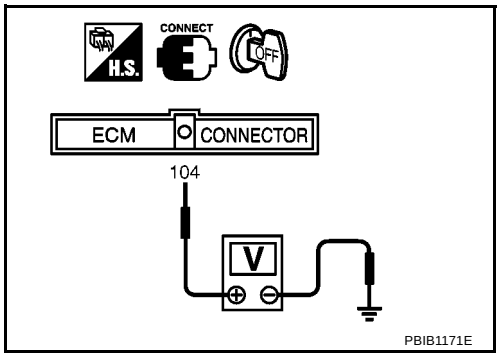
- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch OFF.
3. Check voltage between ECM terminal 104 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 9.
NG >> GO TO 6.

6. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E17.
3. Check continuity between ECM terminal 104 and IPDM E/R terminal 70. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- IPDM E/R harness connector E17
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK FUSE

1. Disconnect 20A fuse.
2. Check 20A fuse for blown.

OK or NG

OK >> GO TO 9.
NG >> Replace 20A fuse.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

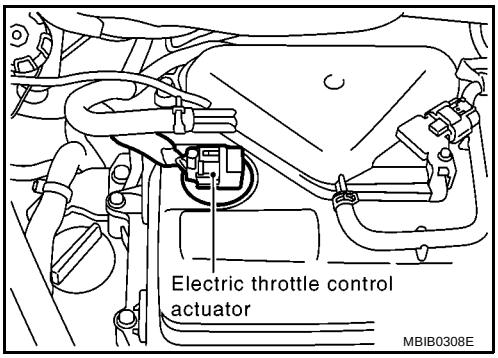
OK or NG

OK >> Replace IPDM E/R. Refer to PG-18, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .
NG >> Repair or replace harness or connectors.

10. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.

Electric throttle control actuator terminal	ECM terminal	Continuity
3	5	Should not exist
	4	Should exist
6	5	Should exist
	4	Should not exist



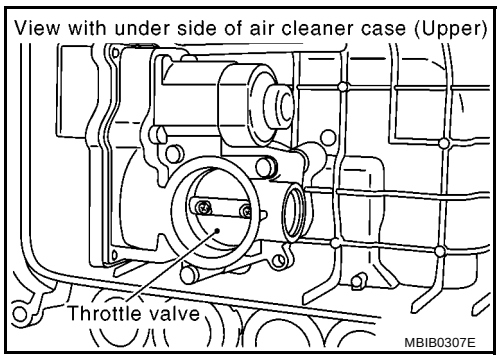
5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 11.
NG >> Repair or replace.

11. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Remove the intake air duct.
2. Check if foreign matter is caught between the throttle valve and the housing.



OK or NG

OK >> GO TO 12.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

12. CHECK THROTTLE CONTROL MOTOR

Refer to EC-672, "Component Inspection" .

OK or NG

OK >> GO TO 13.
NG >> GO TO 14.

13. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 14.
NG >> Repair or replace harness or connectors.

14. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

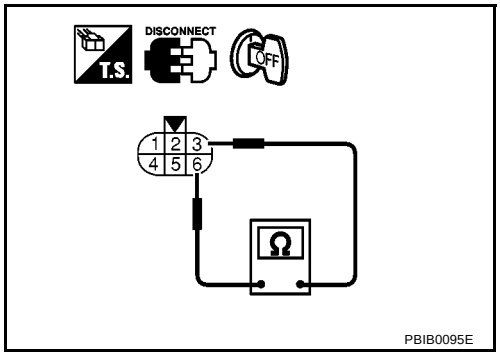
Component Inspection

EBS00OO7

THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]



3. If NG, replace electric throttle control actuator and go to next step.
4. Perform EC-503, "Throttle Valve Closed Position Learning" .
5. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS00OO8

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY

PFP:16119

Component Description

EBS00OO9

Power supply for the Throttle control motor is provided to the ECM via throttle control motor relay. The throttle control motor relay is ON/OFF controlled by the ECM. When the ignition switch is turned ON, the ECM sends an ON signal to throttle control motor relay and battery voltage is provided to the ECM. When the ignition switch is turned OFF, the ECM sends an OFF signal to throttle control motor relay and battery voltage is not provided to the ECM.

CONSULT-II Reference Value in Data Monitor Mode

EBS00OOA

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
THRTL RELAY	● Ignition switch: ON	ON

On Board Diagnosis Logic

EBS00OOB

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1124 1124	Throttle control motor relay circuit short	ECM detects the throttle control motor relay is stuck ON.	● Harness or connectors (Throttle control motor relay circuit is shorted.) ● Throttle control motor relay
P1126 1126	Throttle control motor relay circuit open	ECM detects a voltage of power source for throttle control motor is excessively low.	● Harness or connectors (Throttle control motor relay circuit is open.) ● Throttle control motor relay

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

DTC Confirmation Procedure

EBS00OOC

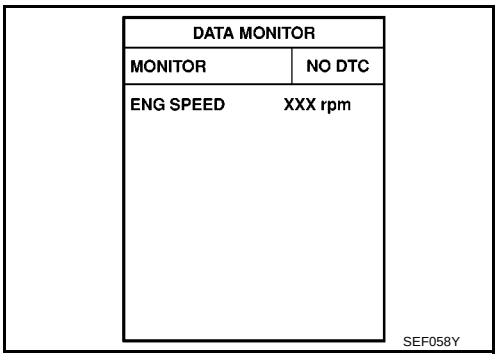
NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

PROCEDURE FOR DTC P1124

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 8V.

With CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. If DTC is detected, go to EC-676, "Diagnostic Procedure" .



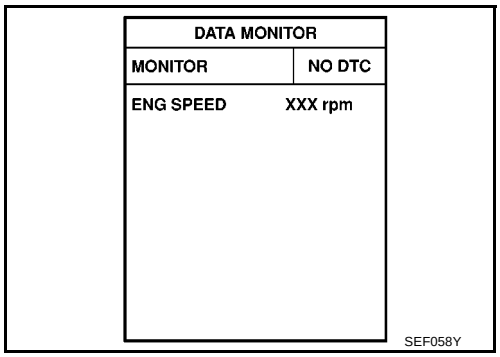
Without CONSULT-II

1. Turn ignition switch ON and wait at least 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. If DTC is detected, go to EC-676, "Diagnostic Procedure" .

PROCEDURE FOR DTC P1126

With CONSULT-II

1. Turn ignition switch ON and wait at least 2 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to EC-676, "Diagnostic Procedure" .



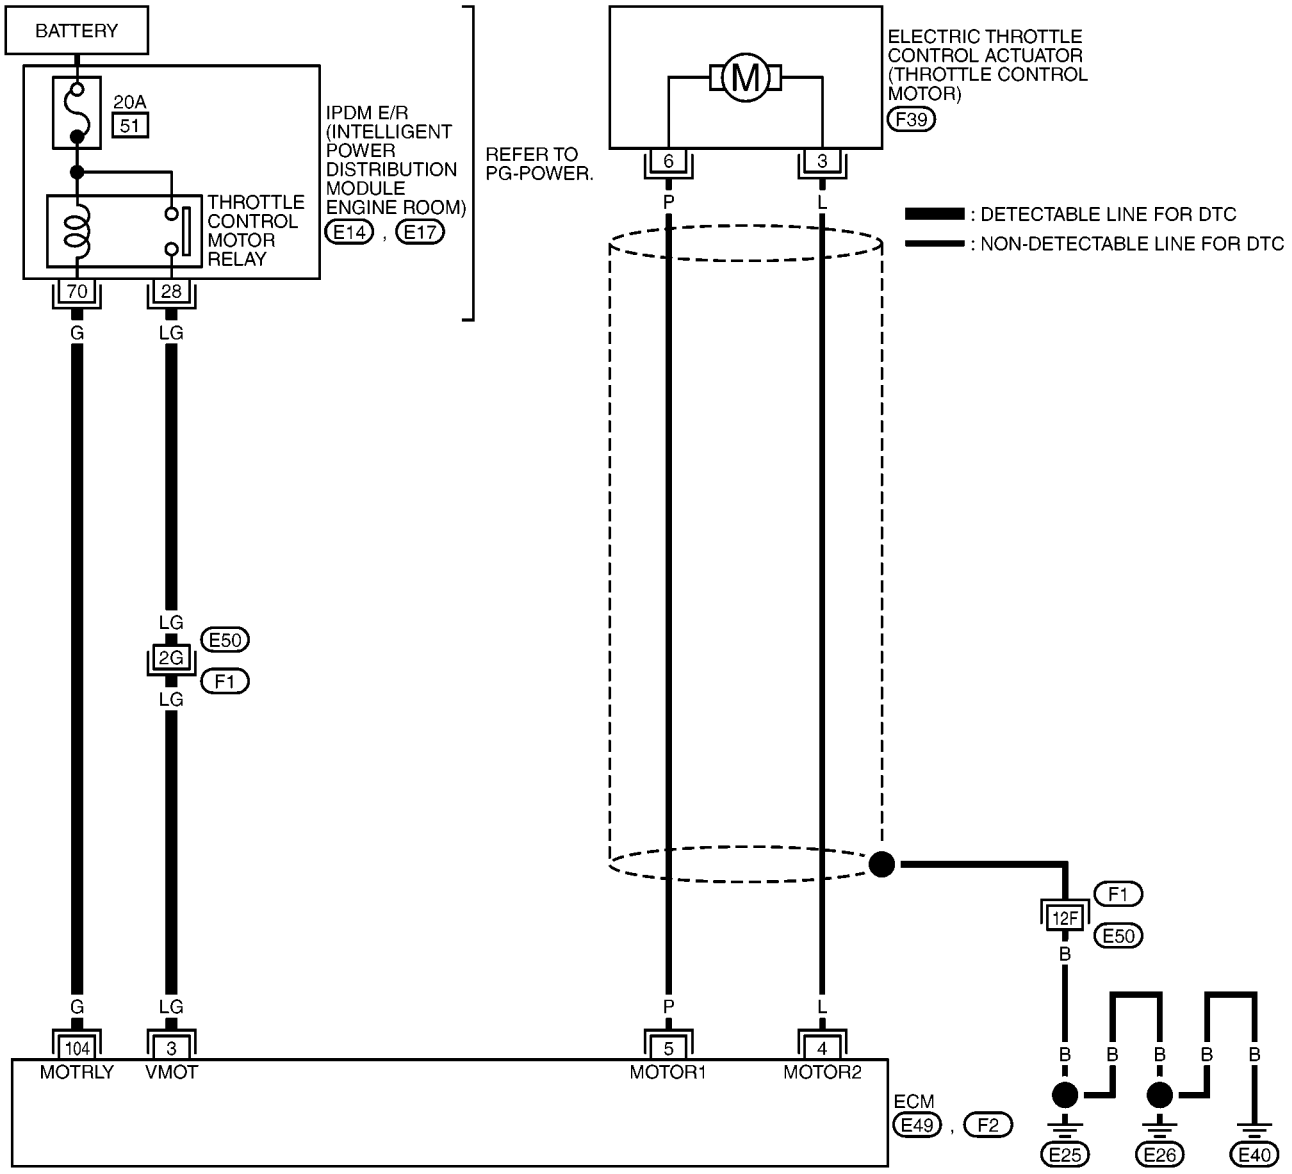
Without CONSULT-II

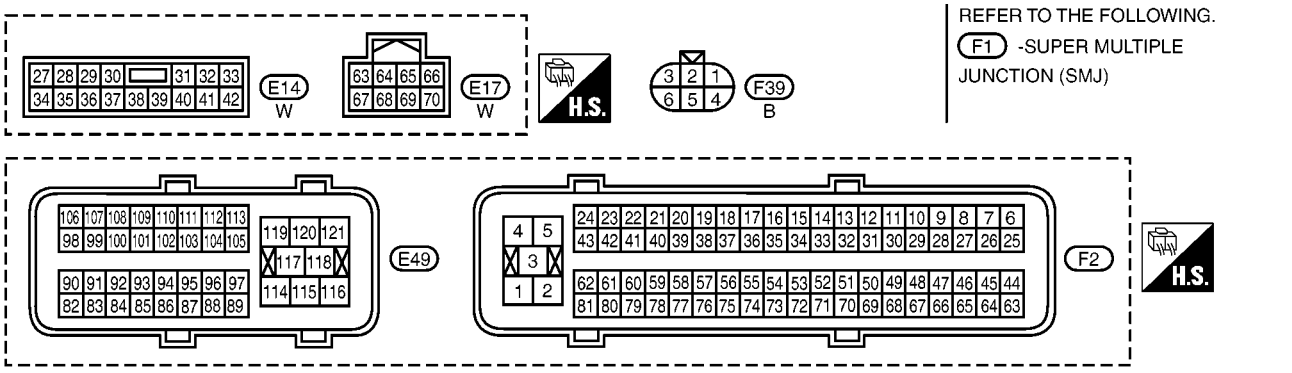
1. Turn ignition switch ON and wait at least 2 second.
2. Start engine and let it idle for 5 seconds.
3. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
4. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
5. If DTC is detected, go to EC-676, "Diagnostic Procedure" .

Wiring Diagram

EBS00OOD

EC-ETC2-01





MBWA0287E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
3	LG	Throttle control motor relay power supply	**[Ignition switch ON]**	BATTERY VOLTAGE (11 - 14V)
104	G	Throttle control motor relay	**[Ignition switch OFF]**	BATTERY VOLTAGE (11 - 14V)
			[Ignition switch ON]	0 - 1.0V

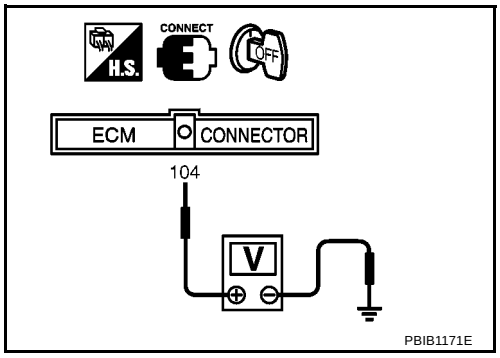
Diagnostic Procedure

EBS00OOE

1. CHECK THROTTLE CONTROL MOTOR RELAY POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Check voltage between ECM terminal 104 and ground with CONSULT-II or tester.

Voltage: Battery voltage.



OK or NG

OK >> GO TO 4.
NG >> GO TO 2.

2. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Disconnect ECM harness connector.
2. Disconnect IPDM E/R harness connector E17.
3. Check continuity between ECM terminal 104 and IPDM E/R terminal 70.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- IPDM E/R harness connector E17
- Harness for open or shot between ECM and IPDM E/R

>> Repair open circuit of short to ground or short to power in harness or connectors.

4. CHECK FUSE

1. Disconnect 20A fuse.
2. Check 20A fuse for blown.

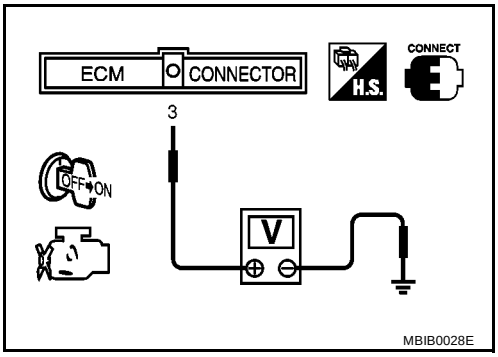
OK or NG

OK >> GO TO 8.
NG >> Replace 20A fuse.

5. CHECK THROTTLE CONTROL MOTOR RELAY SIGNAL CIRCUIT-I

1. Reconnect all disconnected connectors.
2. Check voltage between ECM terminal 3 and ground under the following conditions with CONSULT-II or tester.

Ignition switch	Voltage
OFF	Approximately 0V
ON	Battery voltage (11 - 14V)



OK or NG

OK >> GO TO 8.
NG >> GO TO 6.

6. CHECK THROTTLE CONTROL MOTOR RELAY INPUT SIGNAL CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Disconnect IPDM E/R harness connector E14.
4. Check continuity between ECM terminal 3 and IPDM E/R terminal 28. Refer to Wiring Diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between ECM and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-18, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .
NG >> Repair or replace harness or connectors.

DTC P1128 THROTTLE CONTROL MOTOR

PFP:16119

Component Description

EBS00OOF

The throttle control motor is operated by the ECM and it opens and closes the throttle valve.
The current opening angle of the throttle valve is detected by the throttle position sensor and it provides feedback to the ECM to control the throttle control motor to make the throttle valve opening angle properly in response to driving condition.

On Board Diagnosis Logic

EBS00OOG

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1128 1128	Throttle control motor circuit short	ECM detects short in both circuits between ECM and throttle control motor.	● Harness or connectors (Throttle control motor circuit is shorted.) ● Electric throttle control actuator (Throttle control motor)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

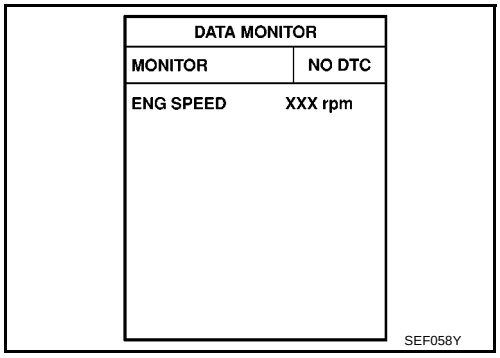
DTC Confirmation Procedure

EBS00OOH

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON and wait at least 2 seconds.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 5 seconds.
4. If DTC is detected, go to EC-680, "Diagnostic Procedure" .



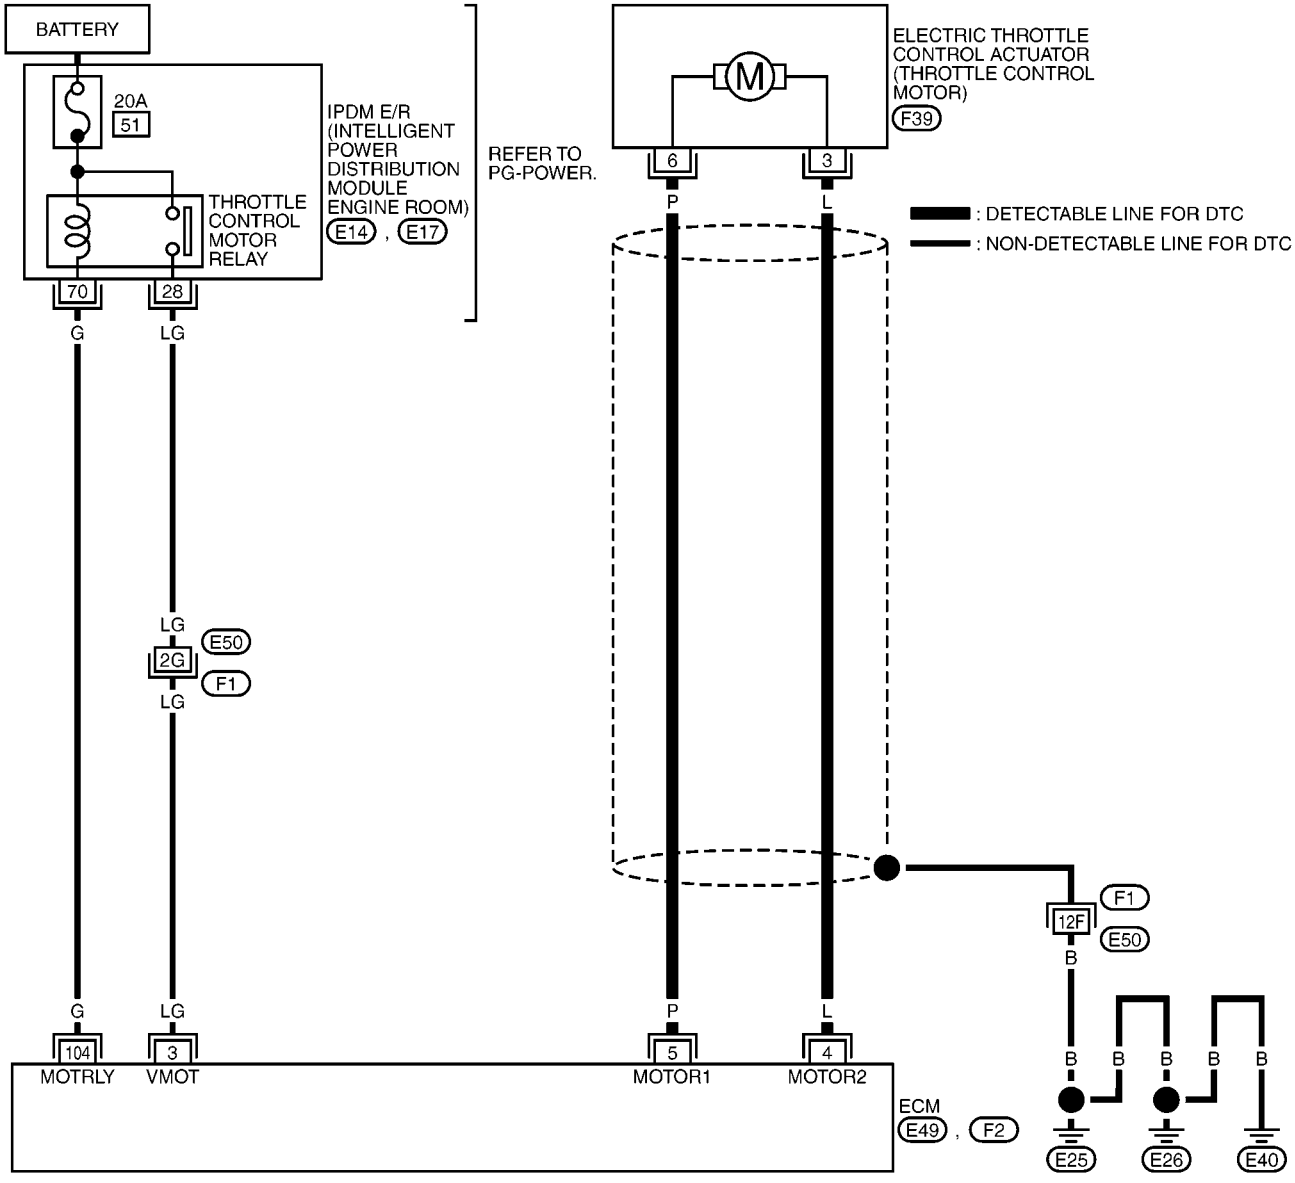
WITHOUT CONSULT-II

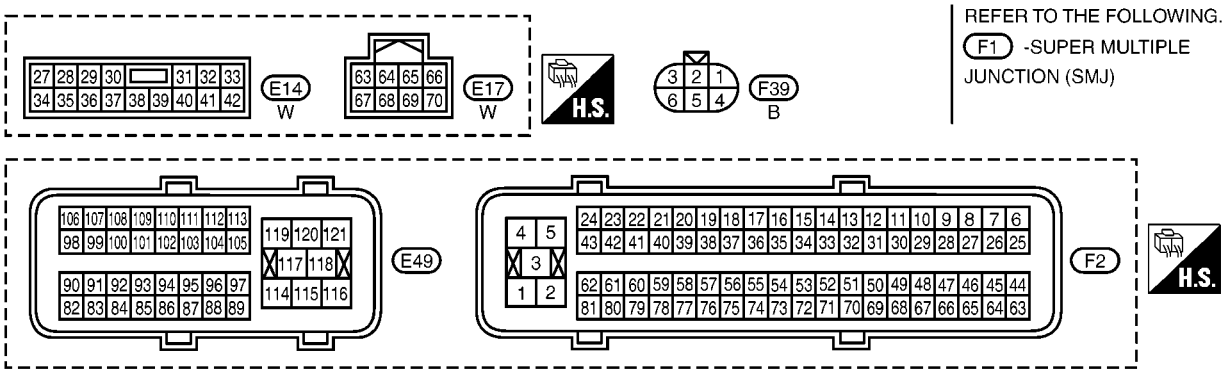
1. Turn ignition switch ON and wait at least 2 second.
2. Start engine and let it idle for 5 seconds.
3. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
4. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
5. If DTC is detected, go to EC-680, "Diagnostic Procedure" .

Wiring Diagram

EBS00OOI

EC-ETC3-01





MBWA0288E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
4	L	Throttle control motor (Close)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Released	0 - 14V★  PBIB0534E
5	P	Throttle control motor (Open)	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	0 - 14V★  PBIB0533E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

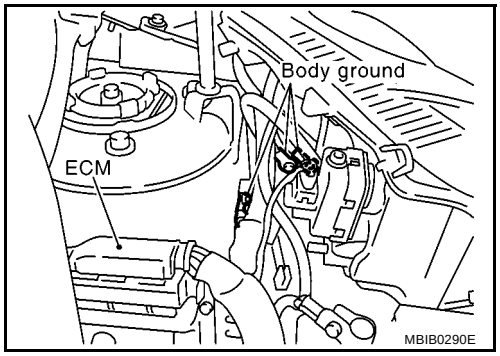
Diagnostic Procedure

EBS00OOJ

1. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

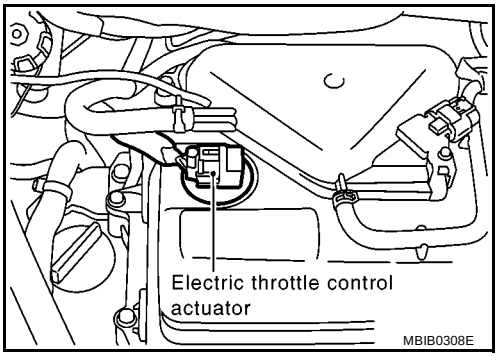
>> GO TO 2.



MBIB0290E

2. CHECK THROTTLE CONTROL MOTOR OUTPUT SIGNAL CIRCUIT FOR OPEN OR SHORT

1. Turn ignition switch OFF.
2. Disconnect electric throttle control actuator harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between the following terminals. Refer to Wiring Diagram.



Electric throttle control actuator terminal	ECM terminal	Continuity
3	4	Should exist
	5	Should not exist
6	4	Should not exist
	5	Should exist

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

3. CHECK THROTTLE CONTROL MOTOR

Refer to EC-681, "Component Inspection" .

OK or NG

OK >> GO TO 4.
NG >> GO TO 5.

4. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connectors.

5. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

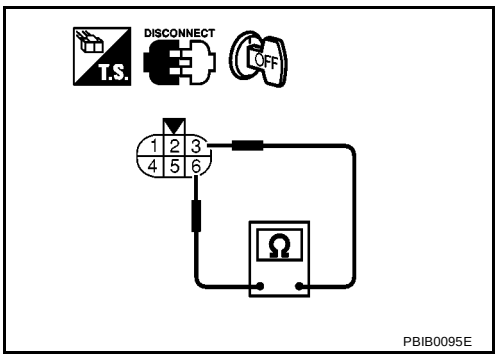
Component Inspection

EBS00OOK

THROTTLE CONTROL MOTOR

1. Disconnect electric throttle control actuator harness connector.
2. Check resistance between terminals 3 and 6.

Resistance: Approximately 1 - 15 Ω [at 25 °C (77°F)]



3. If NG, replace electric throttle control actuator and go to next step.
4. Perform EC-503, "Throttle Valve Closed Position Learning" .
5. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS00OOL

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

DTC P1171 INTAKE ERROR

PFP:22365

On Board Diagnosis Logic

EBS00OSS

NOTE:
If DTC 1171 is displayed with DTC P0108, first perform the trouble diagnosis for DTC P0108.
Refer to EC-575, "DTC P0107, P0108 MANIFOLD ABSOLUTE PRESSURE SENSOR" .
ECM computes two intake air volume values.
1: Computed from manifold absolute pressure signal and intake air temperature signal.
2: Computed from engine revolution signal and throttle position signal.

In normal condition, value 1 is used for engine control.
If intake air leak occurred between throttle valve and intake air port, manifold absolute pressure sensor signal might increase, and then ECM increases amount of fuel injected. In this case, ECM uses value 2 for engine control instead of value1.
ECM monitors the difference between value 1 and value 2. If the difference is extremely large, ECM judges intake air leak occurs and light up the MI

This diagnosis has one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1171 1171	Intake error	An excessively high voltage from manifold absolute pressure sensor is sent to ECM.	● Harness or connectors (The manifold absolute pressure sensor circuit is open or shorted.) ● Manifold absolute pressure ● Intake air leaks ● Vacuum hoses

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and MI lights up.

Detected items	Engine operating condition in fail-safe mode
Intake air system problem	When accelerator pedal is depressed, engine speed will not rise more than 2,500 rpm due to fuel cut.

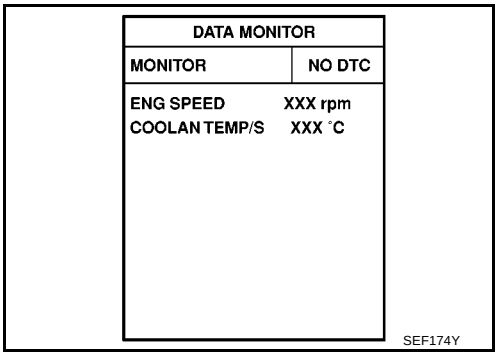
DTC Confirmation Procedure

EBS00OST

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and wait at least 5 seconds.
4. If DTC is detected, go to EC-685, "Diagnostic Procedure" .



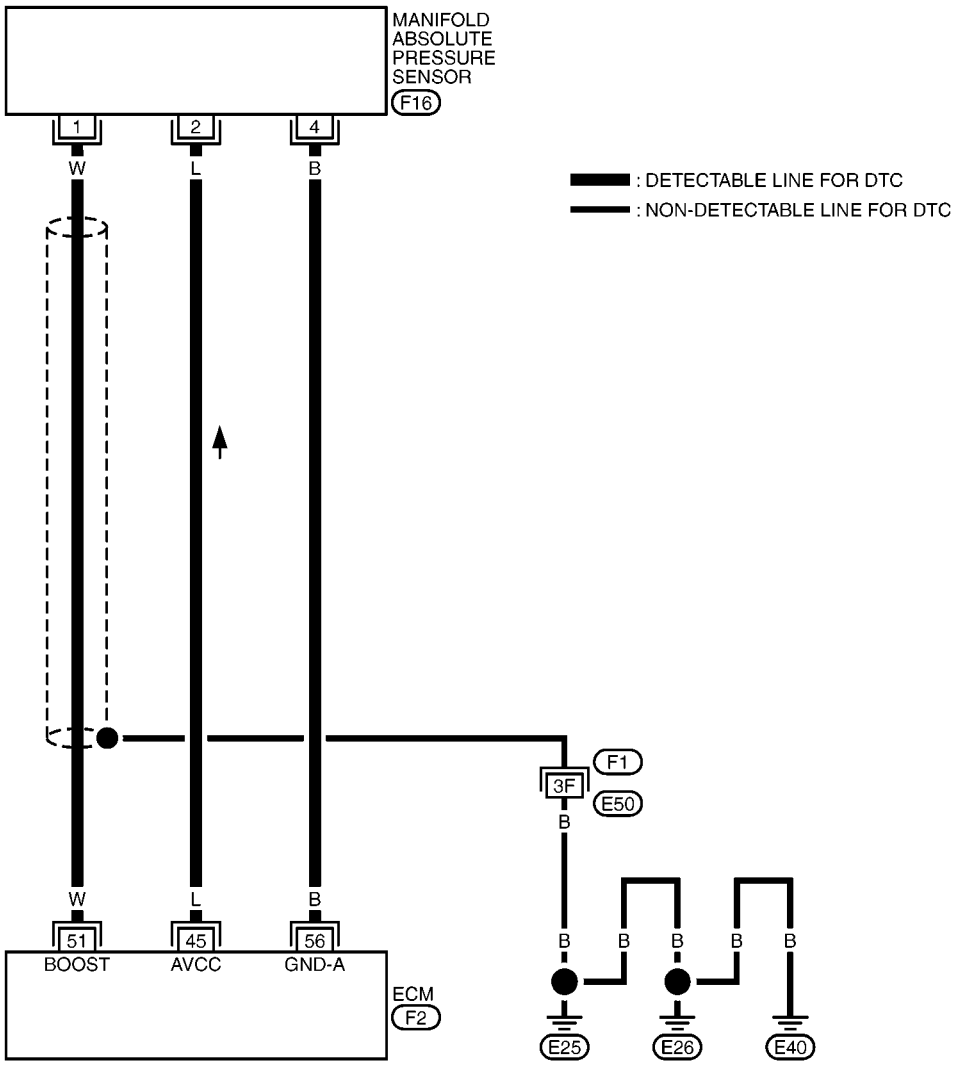
WITHOUT CONSULT-II

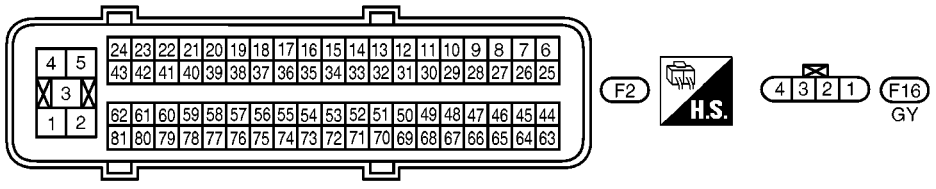
1. Turn ignition switch ON and wait at least 5 seconds.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If trip DTC is detected, go to EC-685, "Diagnostic Procedure" .

Wiring Diagram

EBS00OSU

EC-AP/SEN-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0304E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
51	W	Manifold absolute pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 1.5V
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	Approximately 1.2V

Diagnostic Procedure

EBS00OSV

1. CHECK INTAKE AIR LEAK

Listen for an intake air leak after the air cleaner element.

OK or NG

OK >> GO TO 2.
NG >> Repair or replace.

2. CHECK VACUUM HOSE

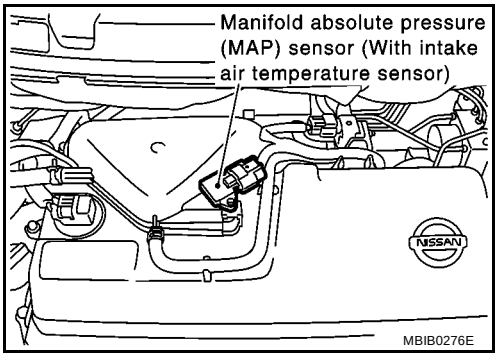
1. Check intake manifold vacuum hoses for clogging or disconnection. Refer to EC-483, "Vacuum Hose Drawing" .

OK or NG

OK >> GO TO 3.
NG >> Repair or replace.

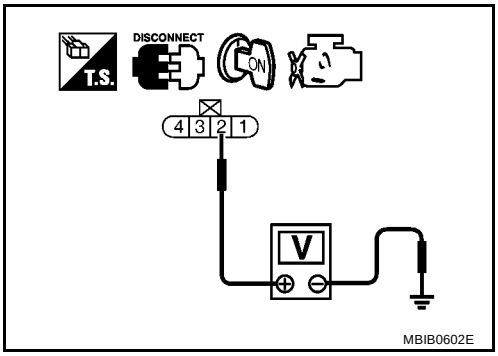
3. CHECK MAP SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect manifold absolute pressure sensor harness connector.
3. Turn ignition switch ON.



4. Check voltage between manifold absolute pressure sensor terminal 2 and ground.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> Repair harness or connectors.

4. CHECK MAP SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between manifold absolute pressure sensor terminal 4 and ECM terminal 56. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK MAP SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between manifold absolute pressure sensor terminal 1 and ECM terminal 51.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK MAP SENSOR

Refer to EC-578, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Repair or replace sensor.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

DTC P1211 TCS CONTROL UNIT

PFP:47850

Description

EBS010DD

The malfunction information related to TCS is transferred through the CAN communication line from “ABS actuator and electric unit (control unit)” to ECM.
Be sure to erase the malfunction information such as DTC not only for “ABS actuator and electric unit (control unit)” but also for ECM after TCS related repair.

On Board Diagnosis Logic

EBS010DE

Freeze frame data is not stored in the ECM for this self-diagnosis.
The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1211 1211	TCS control unit	ECM receives a malfunction information from “ABS actuator and electric unit (control unit)”.	● ABS actuator and electric unit (control unit) ● TCS related parts

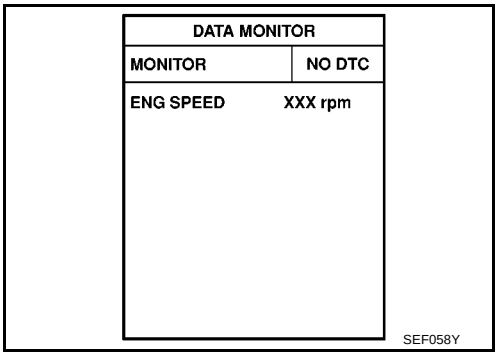
DTC Confirmation Procedure

EBS010DF

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for at least 60 seconds.
4. If 1st trip DTC is detected, go to EC-687, "Diagnostic Procedure"
.



WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

EBS010DG

Go to BRC-8, "TROUBLE DIAGNOSIS" (models without ESP) or BRC-61, "TROUBLE DIAGNOSIS" (models with ESP).

DTC P1212 TCS COMMUNICATION LINE

PFP:47850

Description

EBS010DH

NOTE:
If DTC P1212 is displayed with DTC U1000 or U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-572, "DTC U1000, U1001 CAN COMMUNICATION LINE" .
This CAN communication line is used to control the smooth engine operation during the TCS operation. Pulse signals are exchanged between ECM and “ABS actuator and electric unit (control unit)”.
Be sure to erase the malfunction information such as DTC not only for “ABS actuator and electric unit (control unit)” but also for ECM after TCS related repair.

On Board Diagnosis Logic

EBS010DI

The MI will not light up for this self-diagnosis.
Freeze frame data is not stored in the ECM for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1212 1212	TCS communication line	ECM can not receive the information from “ABS actuator and electric unit (control unit)” continuously.	● Harness or connectors (The CAN communication line is open or shorted.) ● ABS actuator and electric unit (control unit). ● Dead (Weak) battery

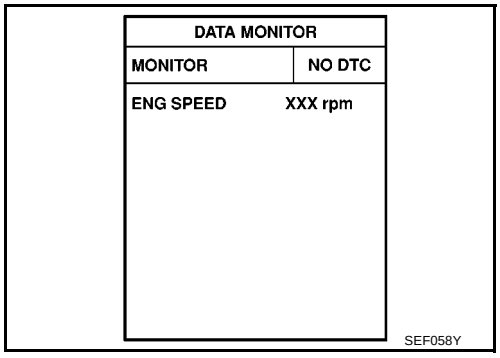
DTC Confirmation Procedure

EBS010DJ

TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10.5V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for at least 10 seconds.
4. If a 1st trip DTC is detected, go to EC-688, "Diagnostic Procedure" .



WITH GST

Follow the procedure “WITH CONSULT-II” above.

Diagnostic Procedure

EBS010DK

1. CHECK “ABS ACTUATTOR AND ELECTRIC UNIT (CONTROL UNIT)” FUNCTION

Refer to BRC-8, "TROUBLE DIAGNOSIS" (models without ESP) or BRC-61, "TROUBLE DIAGNOSIS" (models with ESP).

>> **INSPECTION END**

DTC P1217 ENGINE OVER TEMPERATURE

PFP:00000

System Description

EBS00OOM

NOTE:
If DTC P1217 is displayed with DTC U1000, U1001, first perform the trouble diagnosis for DTC U1000, U1001. Refer to EC-572, "DTC U1000, U1001 CAN COMMUNICATION LINE" .

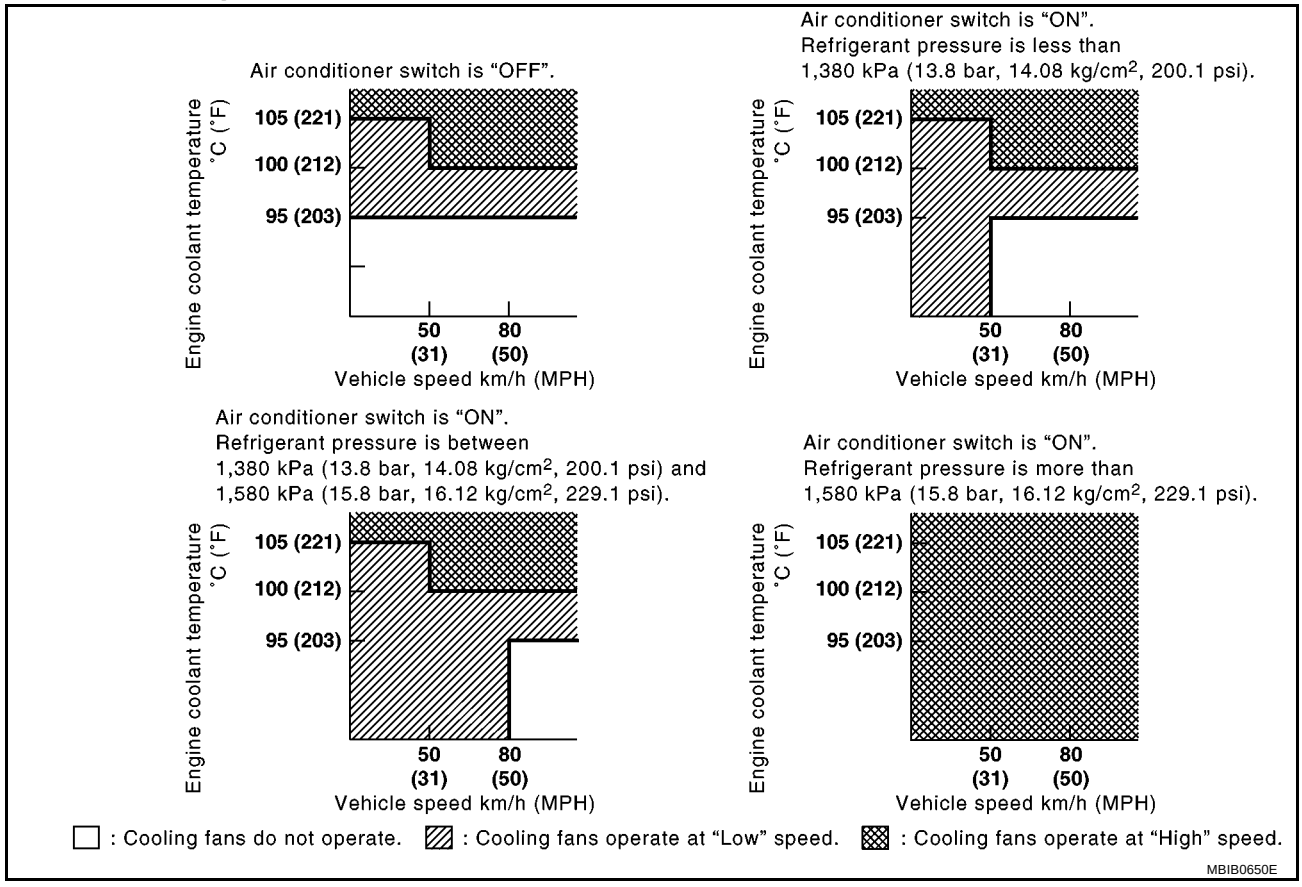
COOLING FAN CONTROL

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	Cooling fan control	IPDM E/R (Cooling fan relay)
Battery	Battery voltage*1		
Vehicle speed signal	Vehicle speed*2		
Engine coolant temperature sensor	Engine coolant temperature		
Air conditioner switch*3	Air conditioner ON signal*2		
Refrigerant pressure sensor*3	Refrigerant pressure		

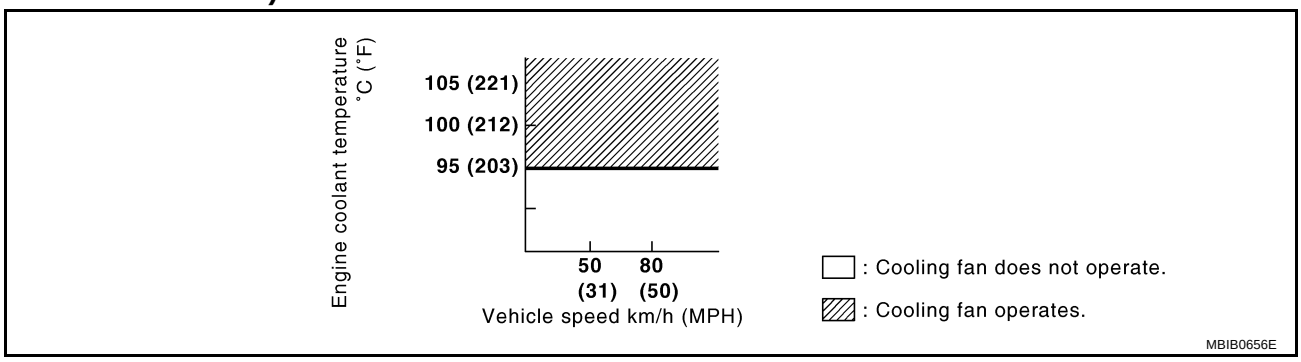
*1: ECM determines the start signal status by the signals of engine speed and battery voltage.
*2: This signal is sent to ECM through CAN communication line.
*3: Models with air conditioner.

The ECM controls the cooling fan corresponding to the vehicle speed, engine coolant temperature, refrigerant pressure, and air conditioner ON signal. The control system has 3-step control [HIGH/LOW/OFF] (models with A/C) or 2 step control [ON/OFF] (models without A/C).
The ECM controls cooling fan relays through CAN communication line.

OPERATION
(Models with A/C)



(Models without A/C)



CONSULT-II Reference Value in Data Monitor Mode

EBS00OON

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
AIR COND SIG	● Engine: After warming up, idle the engine	Air conditioner switch: OFF	OFF
		Air conditioner switch: ON (Compressor operates.)	ON
COOLING FAN	(Models with A/C) ● Engine: After warming up, idle the engine ● Air conditioner switch: OFF	Engine coolant temperature is 94°C (201°F) or less	OFF
		Engine coolant temperature is between 95°C (203°F) and 104°C (210°F)	LOW*
		Engine coolant temperature is 105°C (212°F) or more	HI*

*:Models without air conditioner, cooling fan operates only ON and OFF operation, but CONSULT-II display will change OFF, LOW and HI depends on engine coolant temperature.

On Board Diagnosis Logic

EBS00OOO

If the cooling fan or another component in the cooling system malfunctions, engine coolant temperature will rise. When the engine coolant temperature reaches an abnormally high temperature condition, a malfunction is indicated.

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1217 1217	Engine over temperature (Overheat)	● Cooling fan does not operate properly (Overheat). ● Cooling fan system does not operate properly (Overheat). ● Engine coolant was not added to the system using the proper filling method. ● Engine coolant is not within the specified range.	● Harness or connectors (The cooling fan circuit is open or shorted.) ● Cooling fan ● Radiator hose ● Radiator ● Radiator cap ● Water pump ● Thermostat For more information, refer to EC-702, "Main 12 Causes of Overheating" .

CAUTION:

When a malfunction is indicated, be sure to replace the coolant. Refer to CO-8, "Changing Engine coolant" . Also, replace the engine oil. Refer to LU-5, "Changing Engine Oil" .

1. **Fill radiator with coolant up to specified level with a filling speed of 2 liters per minute. Be sure to use coolant with the proper mixture ratio. Refer to MA-20, "Engine Coolant Mixture Ratio" .**
2. **After refilling coolant, run engine to ensure that no water-flow noise is emitted.**

Overall Function Check

EBS00OOP

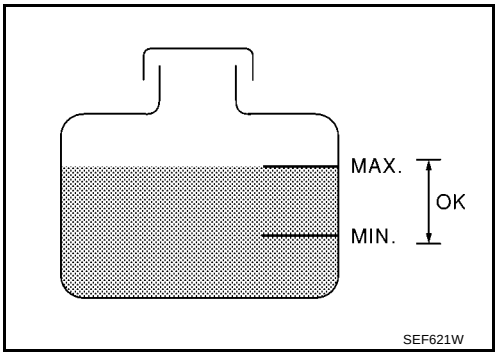
Use this procedure to check the overall function of the cooling fan. During this check, a DTC might not be confirmed.

WARNING:

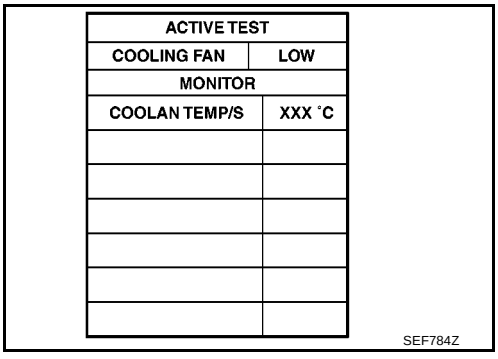
Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator.
Wrap a thick cloth around cap. Carefully remove the cap by turning it a quarter turn to allow built-up pressure to escape. Then turn the cap all the way off.

WITH CONSULT-II

1. Check the coolant level in the reservoir tank and radiator.
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-695, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-695, "Diagnostic Procedure" .
3. Turn ignition switch ON.



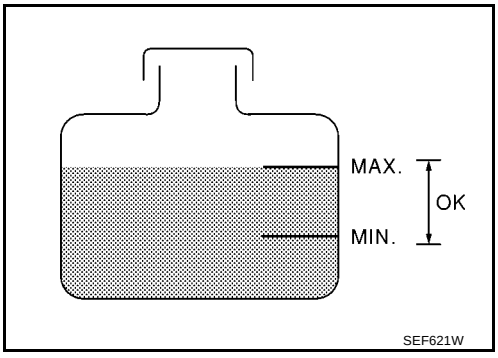
4. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-II.
5. If the results are NG, go to EC-695, "Diagnostic Procedure" .



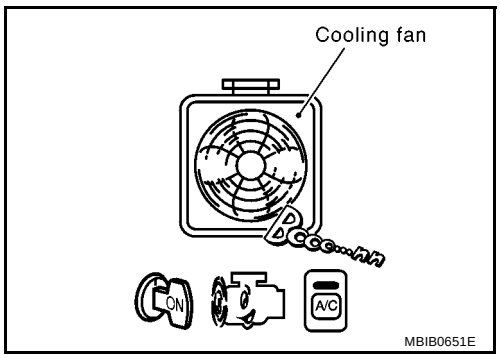
WITHOUT CONSULT-II

(Models with air conditioner)

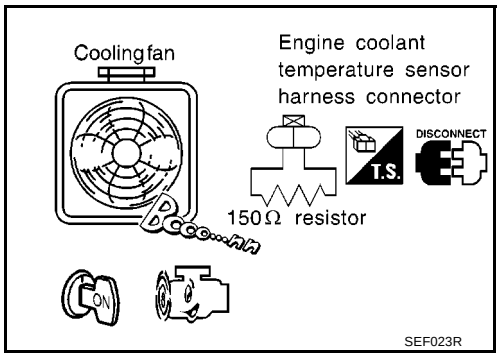
1. Check the coolant level in the reservoir tank and radiator.
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-695, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-695, "Diagnostic Procedure" .
3. Start engine.
   Be careful not to overheat engine.
4. Set temperature control lever to full cold position.
5. Turn air conditioner switch ON.
6. Turn blower fan switch ON.
7. Run engine at idle for a few minutes with air conditioner operating.
   Be careful not to overheat engine.



8. Make sure that cooling fans operates at low speed.
   If NG, go to EC-695, "Diagnostic Procedure" .
   If OK, go to the following step.
9. Turn ignition switch OFF.
10. Turn air conditioner switch and blower fan switch OFF.
11. Disconnect engine coolant temperature sensor harness connector.
12. Connect 150Ω resistor to engine coolant temperature sensor harness connector.

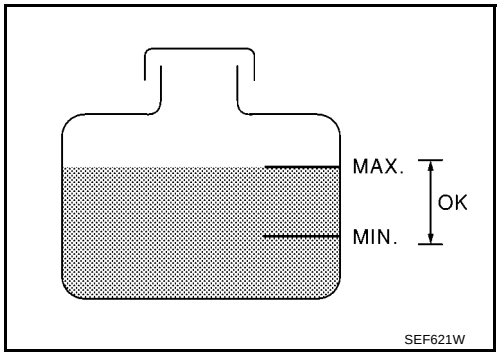


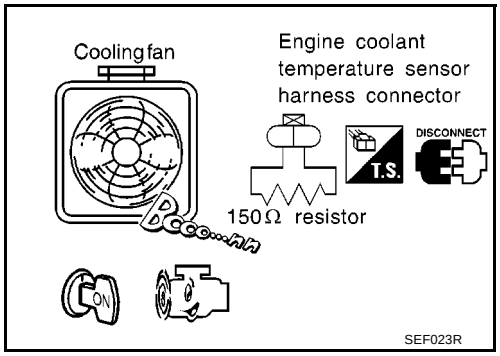
13. Restart engine and make sure that cooling fan operates at higher speed than low speed.
    Be careful not to overheat engine.
14. If NG, go to EC-695, "Diagnostic Procedure" .



(Models without air conditioner)

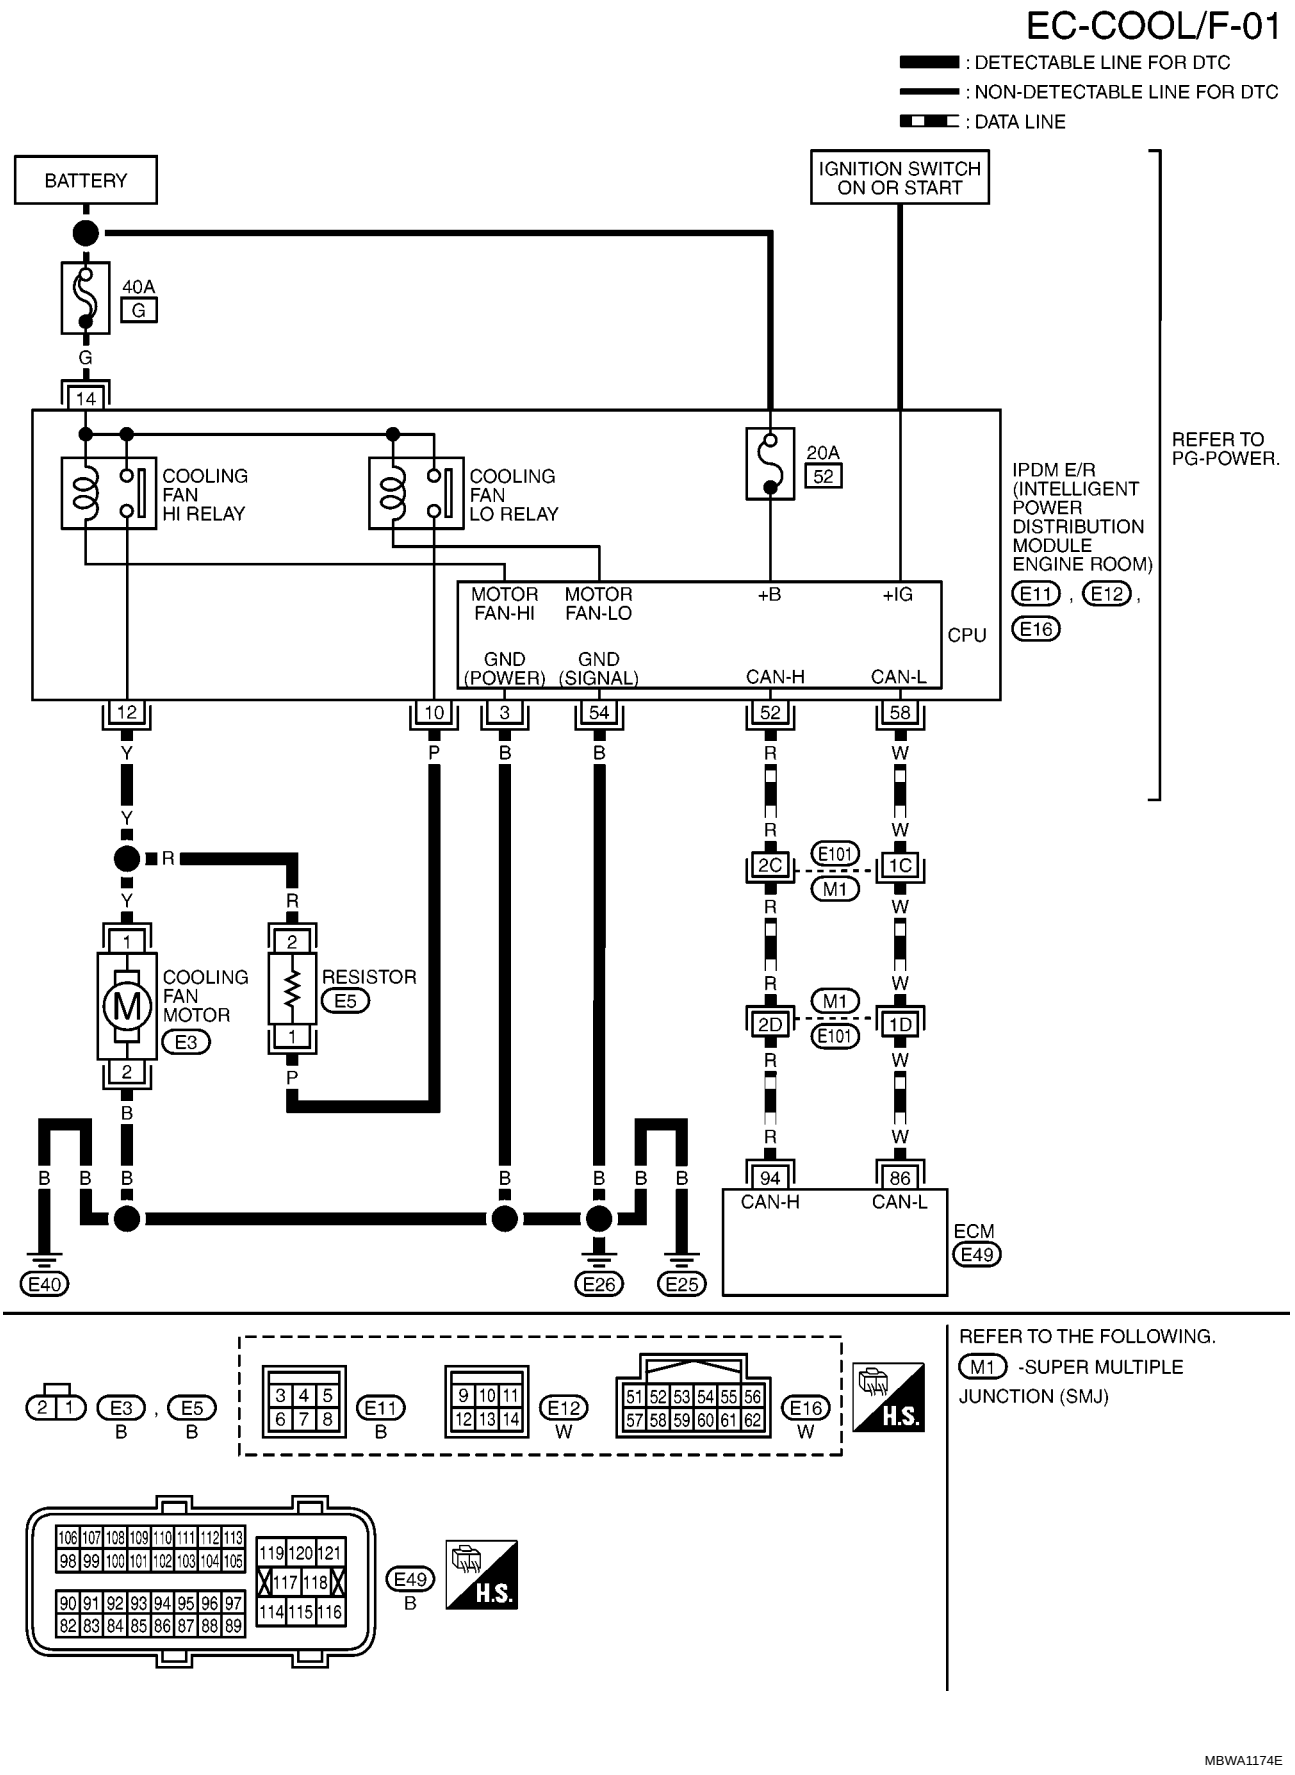
1. Check the coolant level in the reservoir tank and radiator.
   Allow engine to cool before checking coolant level.
   If the coolant level in the reservoir tank and/or radiator is below the proper range, skip the following steps and go to EC-695, "Diagnostic Procedure" .
2. Confirm whether customer filled the coolant or not. If customer filled the coolant, skip the following steps and go to EC-695, "Diagnostic Procedure" .
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
5. Start engine and make that cooling fan operates. Be careful not to overheat engine.
6. If NG, go to EC-695, "Diagnostic Procedure" .





Wiring Diagram
WITH AIR CONDITIONER

EBS00OOQ

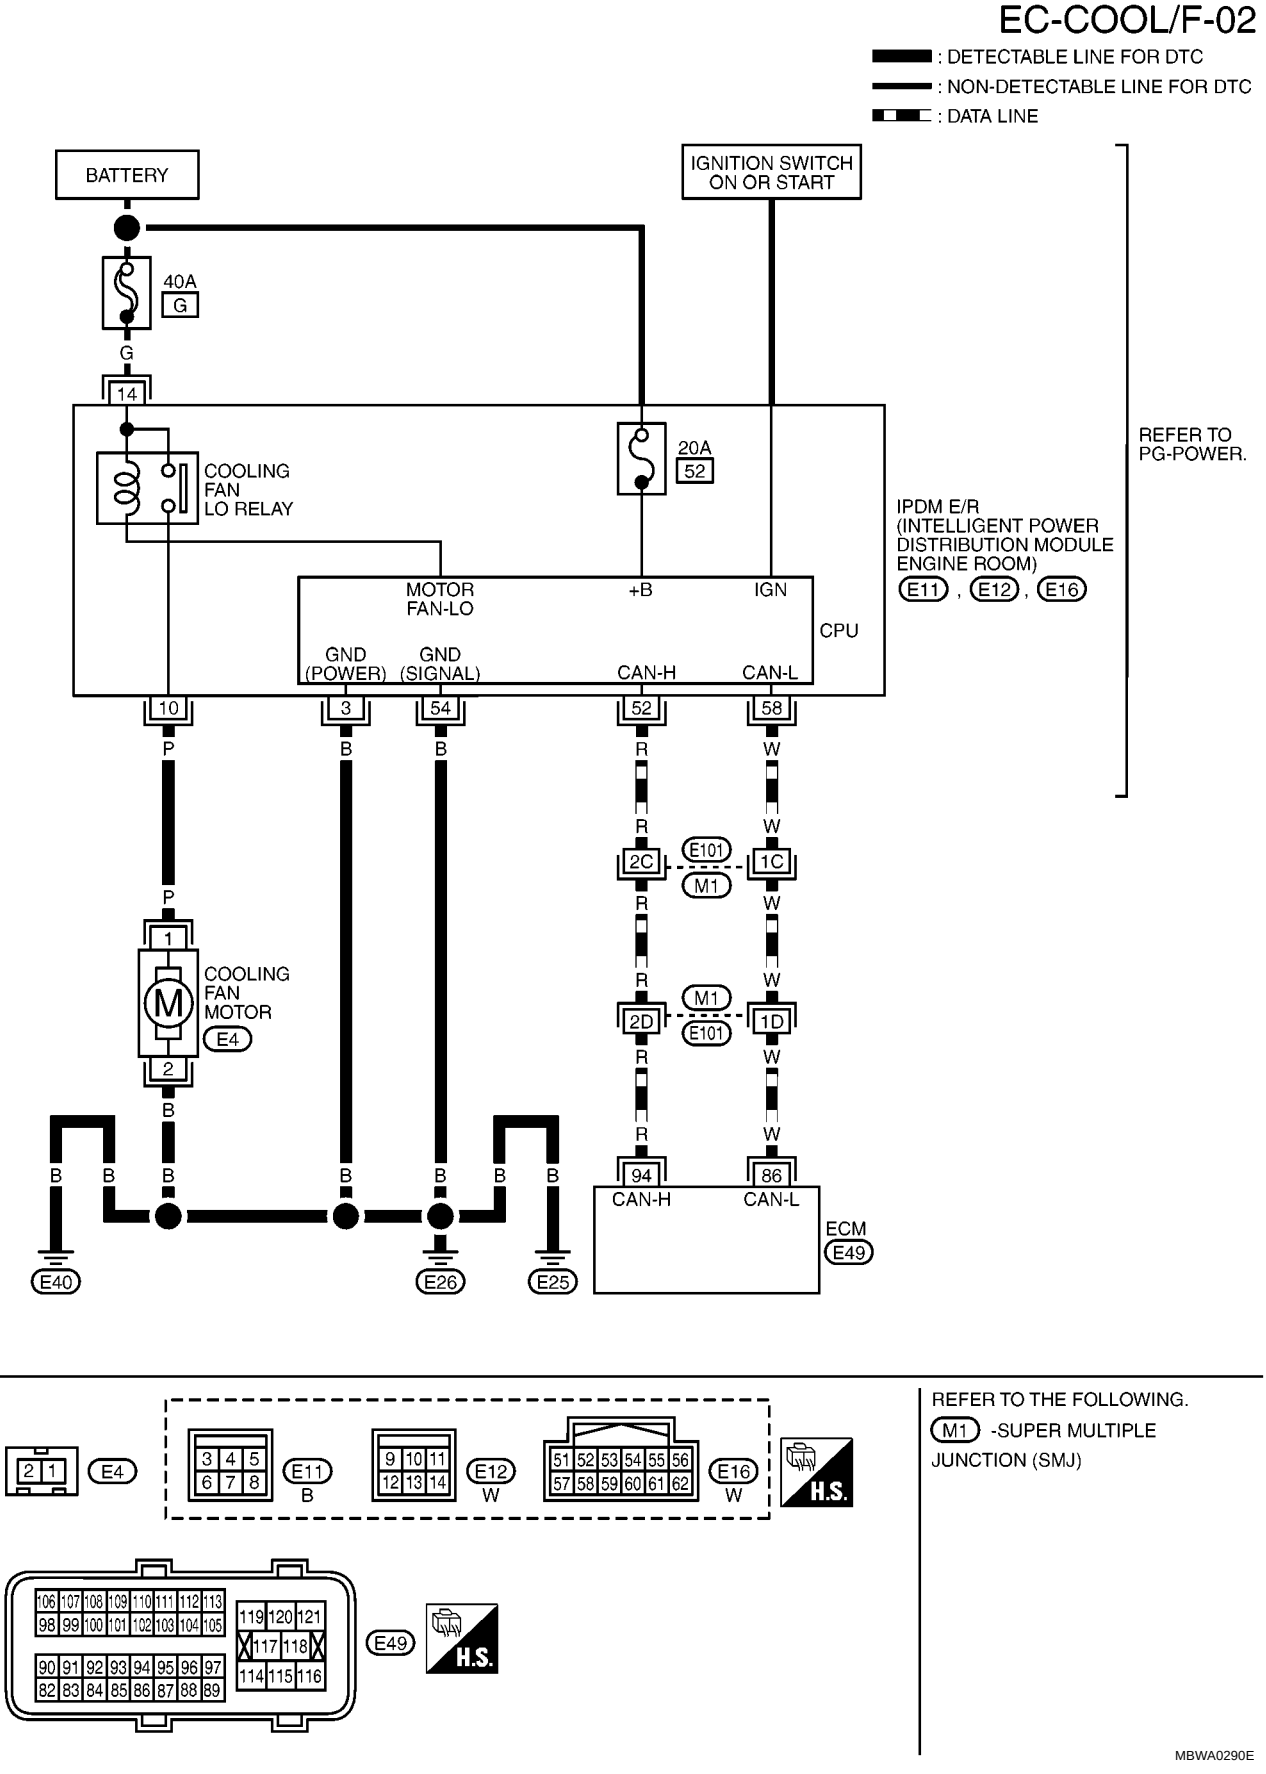


REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA1174E

WITHOUT AIR CONDITIONER

EC-COOL/F-02



Diagnostic Procedure

EBS00OOR

PROCEDURE FOR MODELS WITH AIR CONDITIONER

1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.
No >> GO TO 4.

2. CHECK COOLING FAN LOW SPEED OPERATION

With CONSULT-II

1. Turn ignition switch ON.
2. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-II and touch “LOW” on the CONSULT-II screen.
3. Make sure that cooling fan operates at low speed.

OK or NG

OK >> GO TO 3.
NG >> Check cooling fan low speed control circuit. (Go to EC-700, "PROCEDURE A" .)

ACTIVE TEST	
COOLING FAN	LOW
MONITOR	
COOLAN TEMP/S	XXX °C

SEF784Z

3. CHECK COOLING FAN HIGH SPEED OPERATION

With CONSULT-II

1. Touch “HIGH”on the CONSULT-II screen.
2. Make sure that cooling fan operates at higher speed than low speed.

OK or NG

OK >> GO TO 6.
NG >> Check cooling fan high speed control circuit. (Go to EC-700, "PROCEDURE A" .)

ACTIVE TEST	
COOLING FAN	HIGH
MONITOR	
COOLAN TEMP/S	XXX °C

SEF785Z

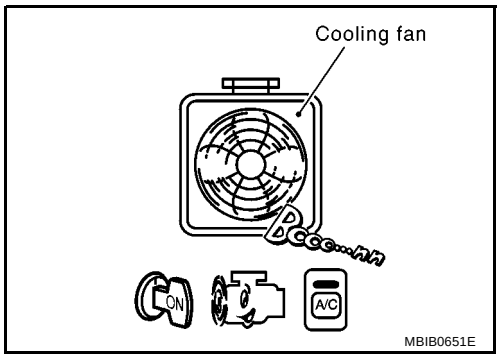
4. CHECK COOLING FAN LOW SPEED OPERATION

Without CONSULT-II

1. Start engine and let it idle.
2. Turn air conditioner switch ON.
3. Turn blower fan switch ON.
4. Make sure that cooling fan operates at low speed.

OK or NG

OK >> GO TO 5.
NG >> Check cooling fan low speed control circuit. (Go to EC-700, "PROCEDURE A" .)



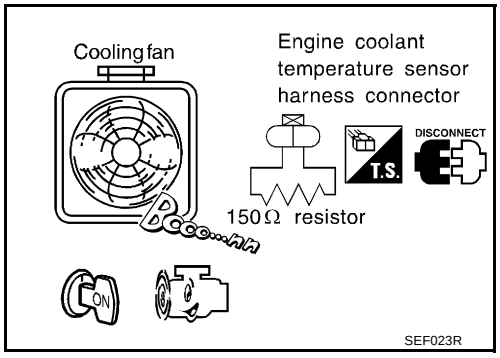
5. CHECK COOLING FAN HIGH SPEED OPERATION

Without CONSULT-II

1. Turn ignition switch OFF.
2. Turn air conditioner switch and blower fan switch OFF.
3. Disconnect engine coolant temperature sensor harness connector.
4. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
5. Restart engine and make sure that cooling fan operates at higher speed than low speed.

OK or NG

OK >> GO TO 6.
NG >> Check cooling fan high speed control circuit. (Go to EC-700, "PROCEDURE A" .)



6. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

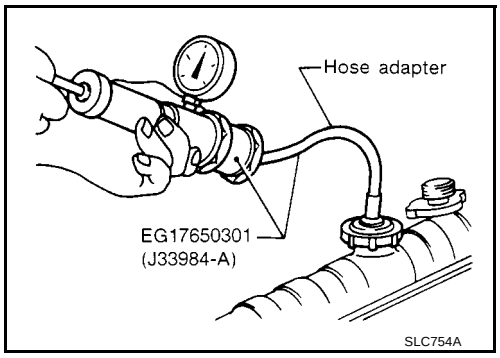
Testing pressure: 157 kPa (1.57 bar, 1.6 kg/cm^2 , 23psi)

CAUTION:
Higher than the specified pressure may cause radiator damage.

Pressure should not drop.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.



7. DETECT MALFUNCTIONING PART

Check the following for leak.

- Hose
- Radiator
- Water pump (Refer to CO-21, "WATER PUMP" .)

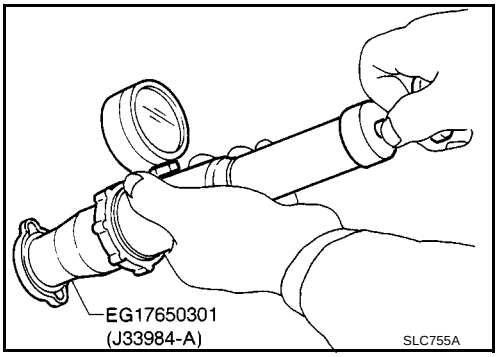
>> Repair or replace.

8. CHECK RADIATOR CAP

Apply pressure to cap with a tester and check radiator cap relief pressure.

Radiator cap relief pressure:

59 - 98 kPa (0.59 - 0.98 bar, 0.6 - 1.0 kg/cm^2 , 9 - 14 psi)



OK or NG

OK >> GO TO 9.
NG >> Replace radiator cap.

9. CHECK THERMOSTAT

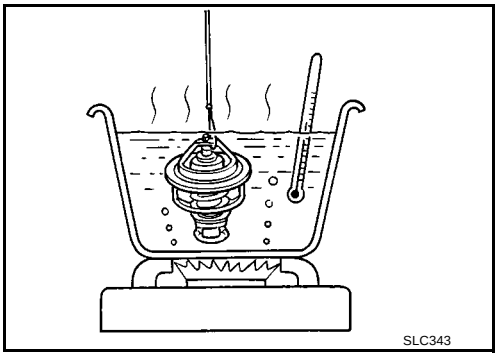
1. Remove thermostat.
2. Check valve seating condition at normal room temperatures.
   It should seat tightly.
3. Check valve opening temperature and valve lift.

Valve opening temperature:

80.5 - 83.5 °C (177 - 182 °F)

Valve lift:

More than 8 mm/95 °C (0.31 in/203 °F)



4. Check if valve is closed at 5°C (9°F) below valve opening temperature. For details, refer to CO-23, "THERMOSTAT" .

OK or NG

OK >> GO TO 10.
NG >> Replace thermostat.

10. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-584, "Component Inspection" .

OK or NG

OK >> GO TO 11.
NG >> Replace engine coolant temperature sensor.

11. CHECK MAIN 12 CAUSES

If the cause cannot be isolated, go to EC-702, "Main 12 Causes of Overheating" .

>> **INSPECTION END**

PROCEDURE FOR MODELS WITHOUT AIR CONDITIONER

1. INSPECTION START

Do you have CONSULT-II?

Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

2. CHECK COOLING FAN OPERATION

With CONSULT-II

1. Turn ignition switch ON.
2. Perform “COOLING FAN” in “ACTIVE TEST” mode with CONSULT-II and touch “ON” on the CONSULT-II screen.
3. Make sure that cooling fan operates.

OK or NG

OK >> GO TO4.
NG >> Check cooling fan low speed control circuit. (Go to EC-700, "PROCEDURE A" .)

ACTIVE TEST	
COOLING FAN	LOW
MONITOR	
COOLAN TEMP/S	XXX °C

SEF784Z

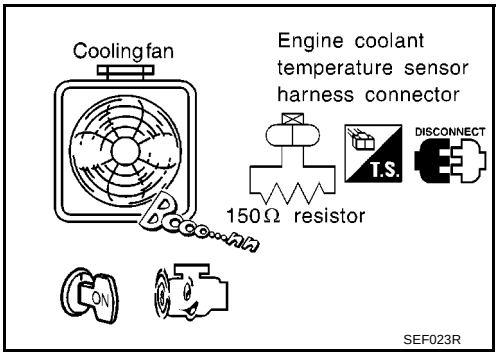
3. CHECK COOLING FAN OPERATION

Without CONSULT-II

1. Turn ignition switch OFF.
2. Disconnect engine coolant temperature sensor harness connector.
3. Connect 150Ω resistor to engine coolant temperature sensor harness connector.
4. Restart engine and make sure that cooling fan operates.

OK or NG

OK >> GO TO 4.
NG >> Check cooling fan high speed control circuit-1. (Go to EC-700, "PROCEDURE A" .)



SEF023R

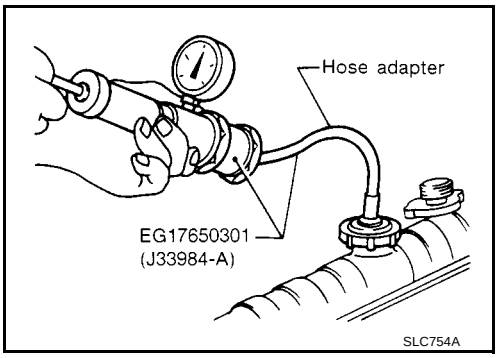
4. CHECK COOLING SYSTEM FOR LEAK

Apply pressure to the cooling system with a tester, and check if the pressure drops.

Testing pressure: 157 kPa (1.57 bar, 1.6 kg/cm^2 , 23psi)

CAUTION:
Higher than the specified pressure may cause radiator damage.

Pressure should not drop.



OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following for leak.

- Hose
- Radiator
- Water pump (Refer to CO-21, "WATER PUMP" .)

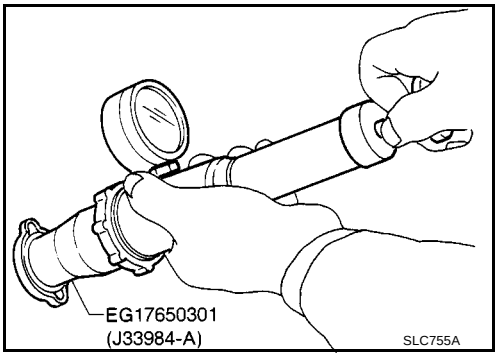
>> Repair or replace.

6. CHECK RADIATOR CAP

Apply pressure to cap with a tester and check radiator cap relief pressure.

Radiator cap relief pressure:

59 - 98 kPa (0.59 - 0.98 bar, 0.6 - 1.0 kg/cm^2 , 9 - 14 psi)



OK or NG

OK >> GO TO 7.
NG >> Replace radiator cap.

7. CHECK THERMOSTAT

1. Remove thermostat.
2. Check valve seating condition at normal room temperatures.
   It should seat tightly.
3. Check valve opening temperature and valve lift.

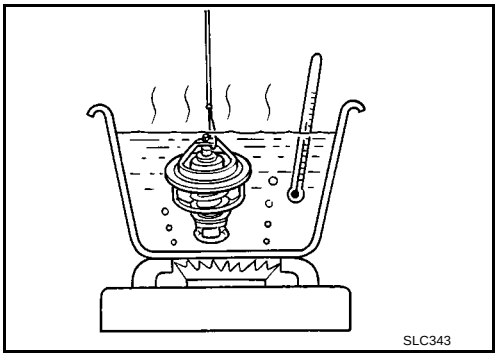
   Valve opening temperature:

   80.5 - 83.5 °C (177 - 182 °F)

   Valve lift:

   More than 8 mm/95 °C (0.31 in/203 °F)

4. Check if valve is closed at 5°C (9°F) below valve opening temperature. For details, refer to CO-23, "THERMOSTAT" .



OK or NG

OK >> GO TO 8.
NG >> Replace thermostat.

8. CHECK ENGINE COOLANT TEMPERATURE SENSOR

Refer to EC-584, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace engine coolant temperature sensor.

9. CHECK MAIN 12 CAUSES

If the cause cannot be isolated, go to EC-702, "Main 12 Causes of Overheating" .

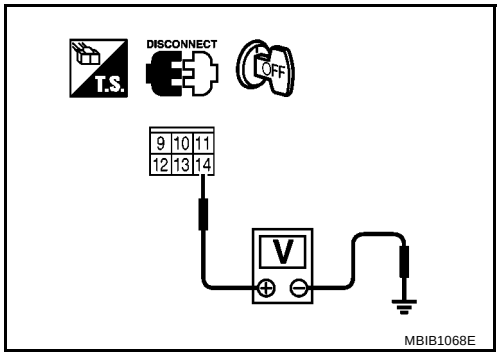
>> **INSPECTION END**

PROCEDURE A

1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E12.
3. Check voltage between IPDM E/R terminal 14 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. DETECT MALFUNCTIONING PART

Check the following.

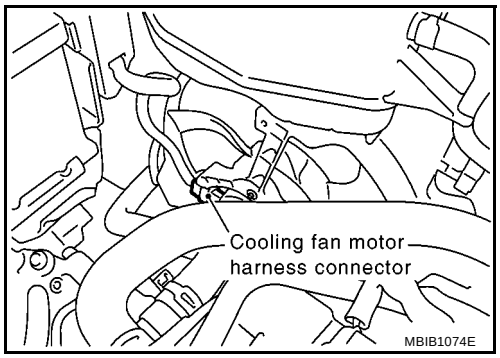
- 40A fusible links
- Harness for open or short between IPDM E/R and battery

>> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK COOLING FAN MOTORS CIRCUIT

1. Disconnect cooling fan motor harness connector.
2. Check harness continuity between cooling fan motor terminal 1 and IPDM E/R terminal 12 (models with A/C) or 10 (models without A/C), cooling fan motor terminal 2 and ground.
   Refer to wiring diagram.

Continuity should exist.



3. Also check harness for short to ground and short to power.
4. For models with air conditioner, check harness continuity between IPDM E/R terminal 10 and cooling fan motor terminal 1.
   Refer to wiring diagram.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PART

Check the following.

- Harness for open or short between cooling fan motor and IPDM E/R
- Harness for open or short between cooling fan motor and ground
- Harness for open or short between resistor and IPDM E/R (models with A/C)
- Harness for open or short between resistor and cooling fan motor (models with A/C)
- Resistor E5 (models with A/C)

>> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK COOLING FAN MOTORS

Refer to EC-702, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace cooling fan motors.

6. CHECK INTERMITTENT INCIDENT

Perform EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R. Refer to PG-18, "IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)" .
NG >> Repair or replace harness or connector.

Main 12 Causes of Overheating

EBS00OOS

Engine	Step	Inspection item	Equipment	Standard	Reference page
OFF	1	● Blocked radiator ● Blocked condenser ● Blocked radiator grille ● Blocked bumper	● Visual	No blocking	—
	2	● Coolant mixture	● Coolant tester	50 - 50% coolant mixture	See MA-20, "Engine Coolant Mixture Ratio" .
	3	● Coolant level	● Visual	Coolant up to MAX level in reservoir tank and radiator filler neck	See CO-8, "LEVEL CHECK" .
	4	● Radiator cap	● Pressure tester	59 - 98 kPa (0.59 - 0.98 bar, 0.6 - 1.0 kg/cm^2 , 9 - 14 psi) (Limit)	See CO-15, "Checking Radiator Cap" .
ON*2	5	● Coolant leaks	● Visual	No leaks	See CO-8, "LEAK CHECK" .
ON*2	6	● Thermostat	● Touch the upper and lower radiator hoses	Both hoses should be hot	See CO-23, "THERMOSTAT" , and CO-11, "RADIATOR" .
ON*1	7	● Cooling fan	● CONSULT-II	Operating	See trouble diagnosis for DTC P1217 (EC-695).
OFF	8	● Combustion gas leak	● Color checker chemical tester 4 Gas analyzer	Negative	—
ON*3	9	● Coolant temperature gauge	● Visual	Gauge less than 3/4 when driving	—
		● Coolant overflow to reservoir tank	● Visual	No overflow during driving and idling	See CO-8, "Changing Engine coolant" .
OFF*4	10	● Coolant return from reservoir tank to radiator	● Visual	Should be initial level in reservoir tank	See CO-8, "LEVEL CHECK" .
OFF	11	● Cylinder head	● Straight gauge feeler gauge	0.1 mm (0.004 in) Maximum distortion (warping)	See EM-59, "CYLINDER HEAD" .
	12	● Cylinder block and pistons	● Visual	No scuffing on cylinder walls or piston	See EM-73, "CYLINDER BLOCK" .

*1: Turn the ignition switch ON.
*2: Engine running at 3,000 rpm for 10 minutes.
*3: Drive at 90 km/h (55 MPH) for 30 minutes and then let idle for 10 minutes.
*4: After 60 minutes of cool down time.
For more information, refer to CO-5, "OVERHEATING CAUSE ANALYSIS" .

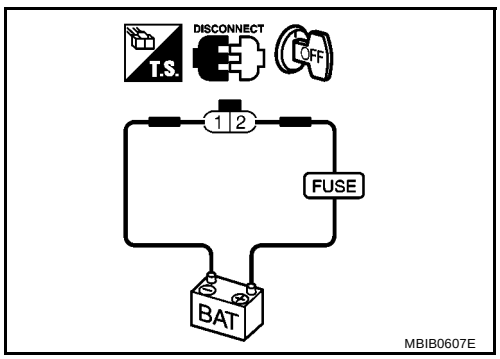
Component Inspection

EBS00OOT

COOLING FAN MOTOR

1. Disconnect cooling fan motor harness connectors.
2. Supply cooling fan motor terminals with battery voltage and check operation.

	Terminals	
	(+)	(-)
Cooling fan motor	1	2



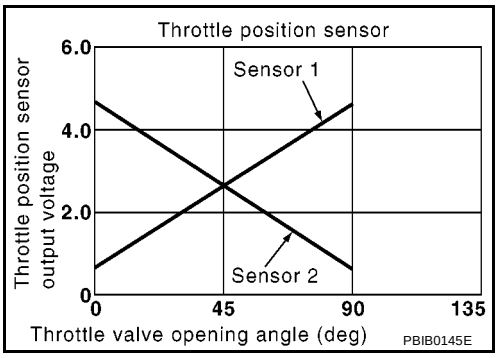
DTC P1223, P1224 TP SENSOR

PFP:16119

Component Description

EBS00OSG

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OSH

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T models) 1st (M/T models)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00OSI

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1223 1223	Throttle position sensor 2 circuit low input	An excessively low voltage from the TP sensor 2 is sent to ECM.	● Harness or connectors (The TP sensor 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 2)
P1224 1224	Throttle position sensor 2 circuit high input	An excessively high voltage from the TP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

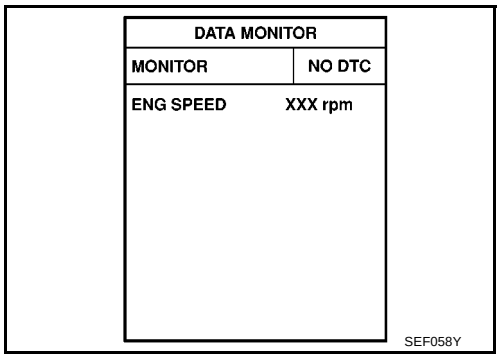
DTC Confirmation Procedure

EBS00OSJ

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-706, "Diagnostic Procedure" .



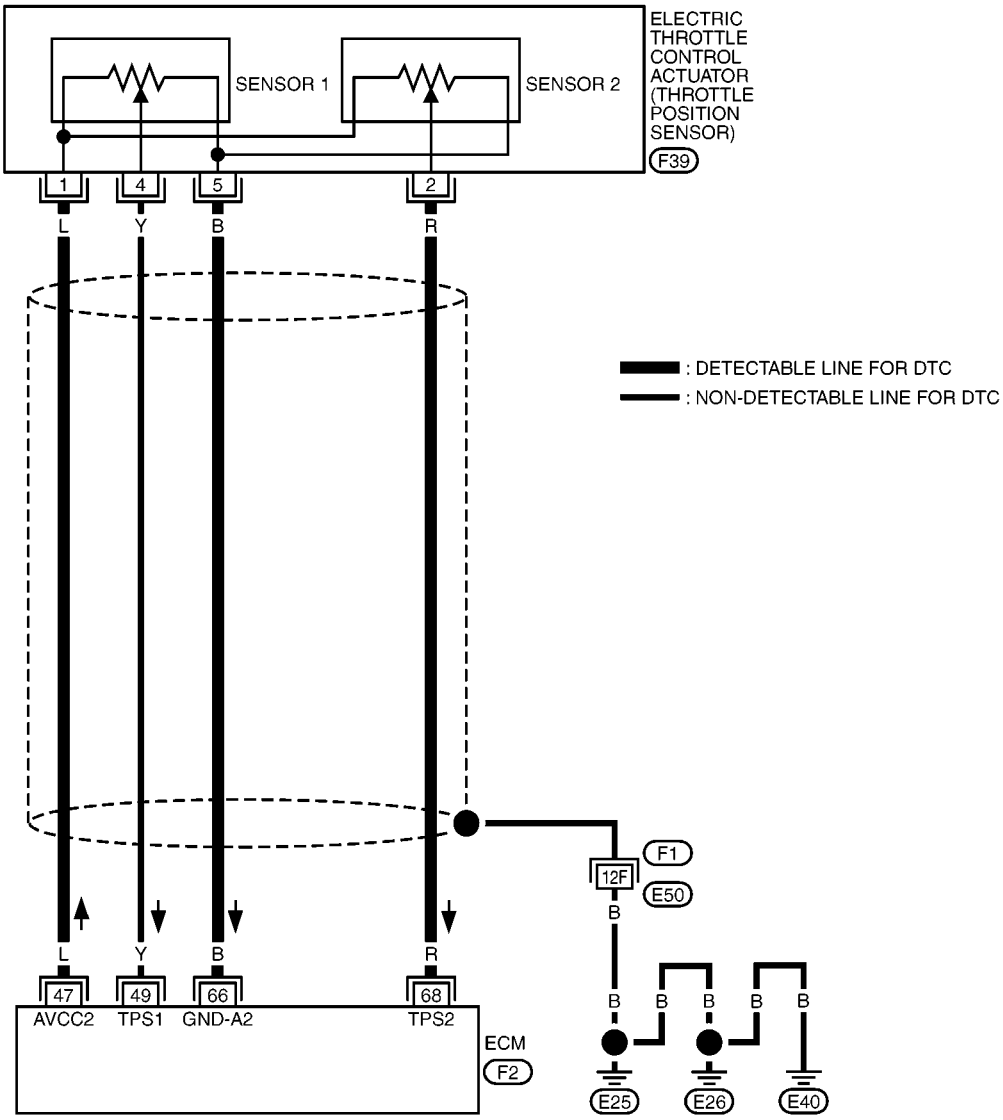
WITHOUT CONSULT-II

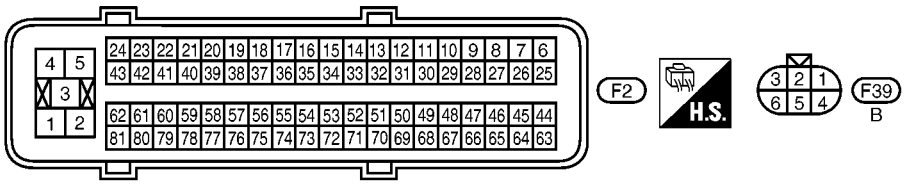
1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-706, "Diagnostic Procedure" .

Wiring Diagram

EBS00OSK

EC-TPS2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0291E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
47	L	Sensor power supply (Throttle position sensor)	**[Ignition switch ON]**	Approximately 5V
49	Y	Throttle position sensor 1	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	More than 0.36V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	Less than 4.75V
66	B	Sensor ground (Throttle position sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
68	R	Throttle position sensor 2	**[Ignition switch ON]** ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully released	Less than 4.75V
			[Ignition switch ON] ● **Engine stopped** ● Shift lever position: D (A/T models) ● Shift lever position: 1st (M/T models) ● Accelerator pedal: Fully depressed	More than 0.36V

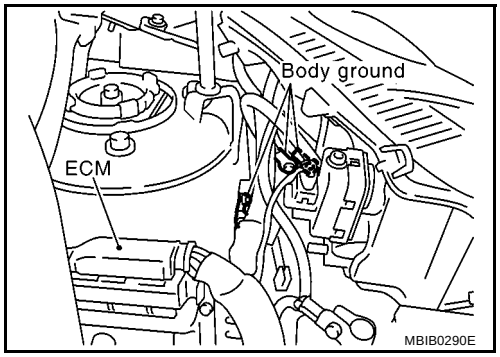
Diagnostic Procedure

EBS00OSL

1. RETIGHTEN GROUND SCREWS

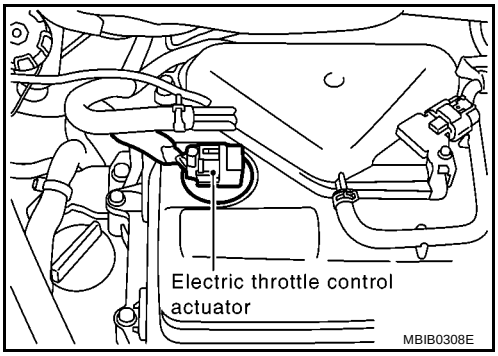
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



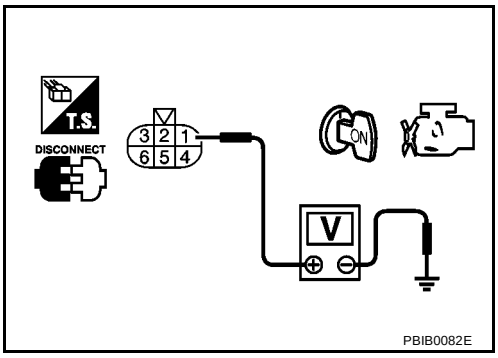
2. CHECK THROTTLE POSITION SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect electric throttle control actuator harness connector.
2. Turn ignition switch ON.



3. Check voltage between electric throttle control actuator terminal 1 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 3.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

3. CHECK THROTTLE POSITION SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 66 and electric throttle control actuator terminal 5. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK THROTTLE POSITION SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 68 and electric throttle control actuator terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK THROTTLE POSITION SENSOR

Refer to EC-708, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

7. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

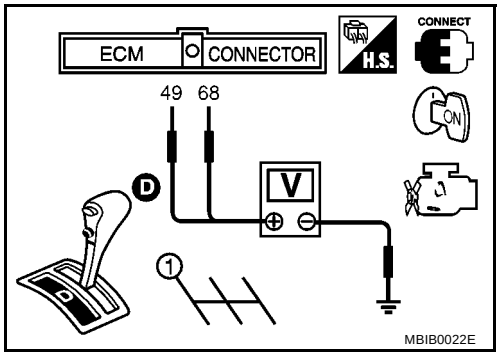
Component Inspection

EBS00OSM

THROTTLE POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Turn ignition switch ON.
4. Set selector lever to D position (A/T models) or 1st position (M/T models).
5. Check voltage between ECM terminals 49 (TP sensor 1 signal), 68 (TP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
49 (Throttle position sensor 1)	Fully released	More than 0.36V
	Fully depressed	Less than 4.75V
68 (Throttle position sensor 2)	Fully released	Less than 4.75V
	Fully depressed	More than 0.36V



6. If NG, replace electric throttle control actuator and go to the next step.
7. Perform EC-503, "Throttle Valve Closed Position Learning" .
8. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS00OSN

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

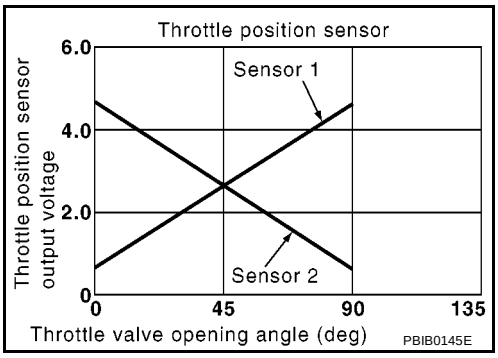
DTC P1225 TP SENSOR

PFP:16119

Component Description

EBS00OOU

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



On Board Diagnosis Logic

EBS00OOV

The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1225 1225	Closed throttle position learning performance problem	Closed throttle position learning value is excessively low.	● Electric throttle control actuator (TP sensor 1 and 2)

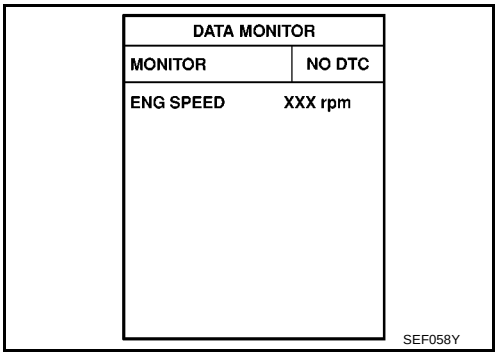
DTC Confirmation Procedure

EBS00OOW

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds.
4. Turn ignition switch ON.
5. If 1st trip DTC is detected, go to EC-710, "Diagnostic Procedure" .



WITHOUT CONSULT-II

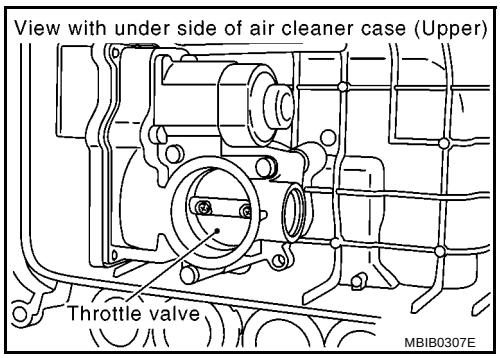
1. Turn ignition switch ON.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If 1st trip DTC is detected, go to EC-710, "Diagnostic Procedure" .

Diagnostic Procedure

EBS00OOX

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.



OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

Remove and Installation

EBS00OOY

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

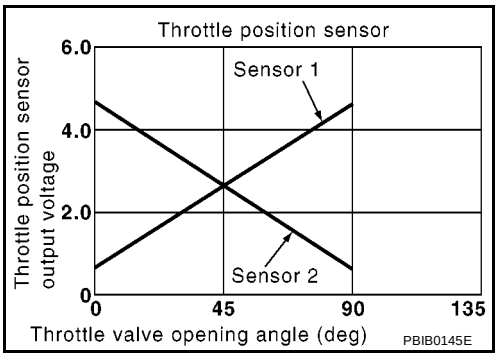
DTC P1226 TP SENSOR

PFP:16119

Component Description

EBS00OOZ

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



On Board Diagnosis Logic

EBS00OP0

The MI will not light up for this self-diagnosis.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1226 1226	Closed throttle position learning performance problem	Closed throttle position learning is not performed successfully, repeatedly.	● Electric throttle control actuator (TP sensor 1 and 2)

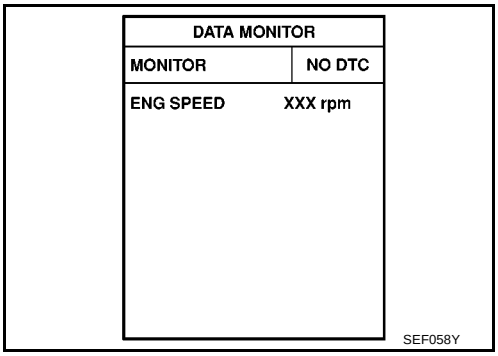
DTC Confirmation Procedure

EBS00OP1

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Turn ignition switch OFF, wait at least 10 seconds.
4. Turn ignition switch ON.
5. Repeat steps 3 and 4 for 32 times.
6. If 1st trip DTC is detected, go to EC-712, "Diagnostic Procedure" .



WITHOUT CONSULT-II

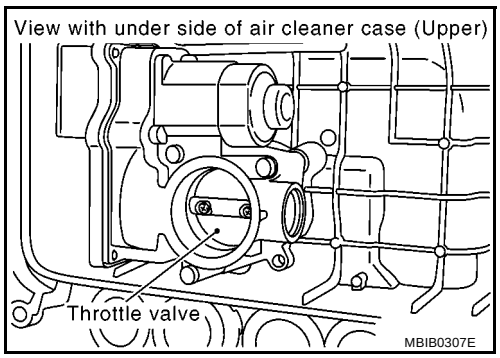
1. Turn ignition switch ON.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Repeat step 2 for 32 times.
4. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
5. If 1st trip DTC is detected, go to EC-712, "Diagnostic Procedure" .

Diagnostic Procedure

EBS00OP2

1. CHECK ELECTRIC THROTTLE CONTROL ACTUATOR VISUALLY

1. Turn ignition switch OFF.
2. Remove the intake air duct.
3. Check if foreign matter is caught between the throttle valve and the housing.



OK or NG

OK >> GO TO 2.
NG >> Remove the foreign matter and clean the electric throttle control actuator inside.

2. REPLACE ELECTRIC THROTTLE CONTROL ACTUATOR

1. Replace the electric throttle control actuator.
2. Perform EC-503, "Throttle Valve Closed Position Learning" .
3. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

Remove and Installation

EBS00OP3

ELECTRIC THROTTLE CONTROL ACTUATOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

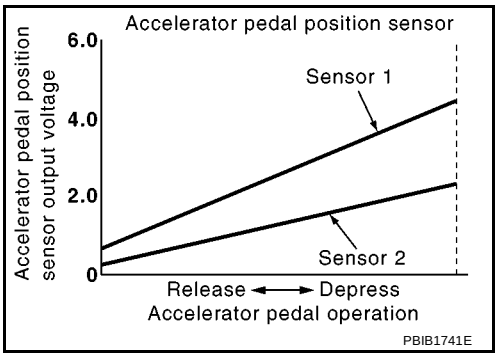
DTC P1227, P1228 APP SENSOR

PFP:18002

Component Description

EBS00OP4

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OP5

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differ from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS00OP6

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1227 1227	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	● Harness or connectors (The APP sensor 2 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 2)
P1228 1228	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of throttle valve to be slower than the normal condition. So, the acceleration will be poor.

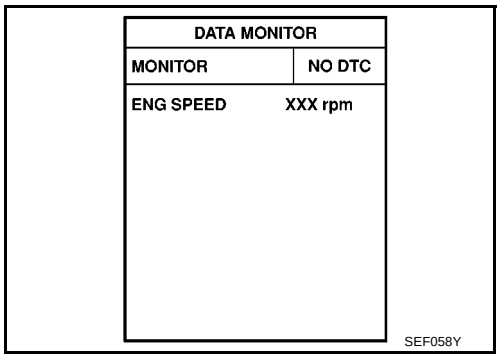
DTC Confirmation Procedure

EBS00OP7

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-718, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 seconds.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-718, "Diagnostic Procedure" .

			[Ignition switch ON] ● **Engine stopped** ● Accelerator pedal: Fully depressed	3.9 - 4.7V

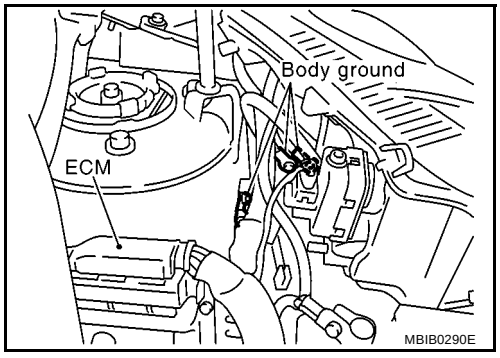
Diagnostic Procedure

EBS00OP9

1. RETIGHTEN GROUND SCREWS

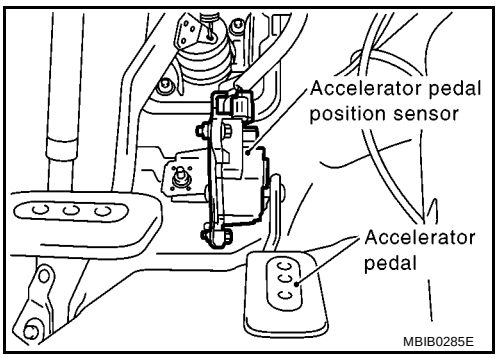
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



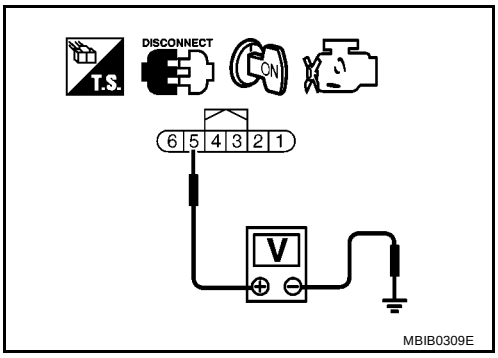
2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 5 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 83 and APP sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 98 and APP sensor terminal 6.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-720, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. REPLACE APP SENSOR

1. Replace the accelerator pedal position sensor.
2. Perform EC-503, "Accelerator Pedal Released Position Learning" .
3. Perform EC-503, "Throttle Valve Closed Position Learning" .
4. Perform EC-503, "Idle Air Volume Learning" .

>> **INSPECTION END**

10. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

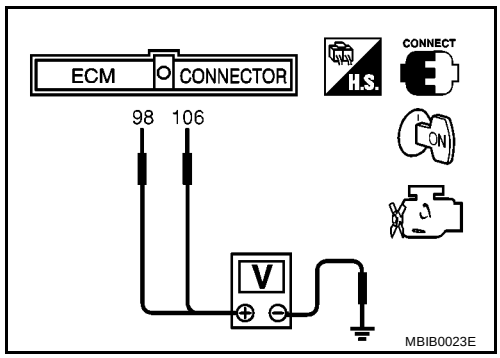
Component Inspection

EBS00OPA

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.



Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V

4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-503, "Accelerator Pedal Released Position Learning" .
6. Perform EC-503, "Throttle Valve Closed Position Learning" .
7. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS00OPB

DTC P1229 SENSOR POWER SUPPLY

PFP:16119

On Board Diagnosis Logic

EBS00OPC

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1229 1229	Sensor power supply circuit short	ECM detects a voltage of power source for sensor is excessively low or high.	● Harness or connectors (The TP sensor 1 and 2 circuit is shorted.) ● Electric throttle control actuator (TP sensor 1 and 2) ● ECM pin terminal

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
ECM stops the electric throttle control actuator control, throttle valve is maintained at a fixed opening (approx. 5 degrees) by the return spring.

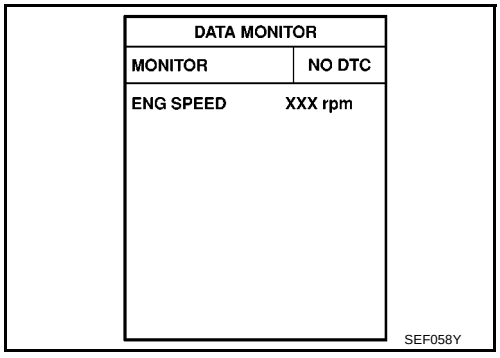
DTC Confirmation Procedure

EBS00OPD

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-724, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 seconds.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-724, "Diagnostic Procedure" .

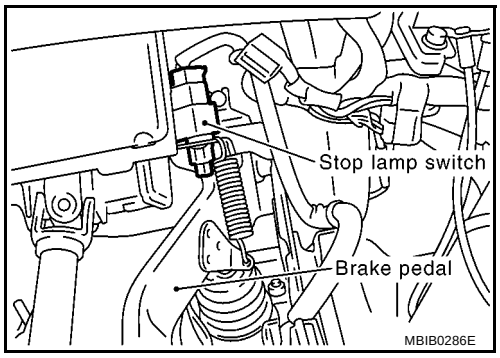
DTC P1805 BRAKE SWITCH

PFP:25320

Description

EBS00OPG

Brake switch signal is applied to the ECM through the stop lamp switch when the brake pedal is depressed. This signal is used mainly to decrease the engine speed when the vehicle is driving.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OPH

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
BRAKE SW	● Ignition switch: ON	Brake pedal: Fully released	OFF
		Brake pedal: Slightly depressed	ON

On Board Diagnosis Logic

EBS00OPI

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P1805 1805	Brake switch	A brake switch signal is not sent to ECM for an extremely long time while the vehicle is driving.	● Harness or connectors (Stop lamp switch circuit is open or shorted.) ● Stop lamp switch

FAIL-SAFE MODE

EBS00OPJ

When the malfunction is detected, the ECM enters fail-safe mode.

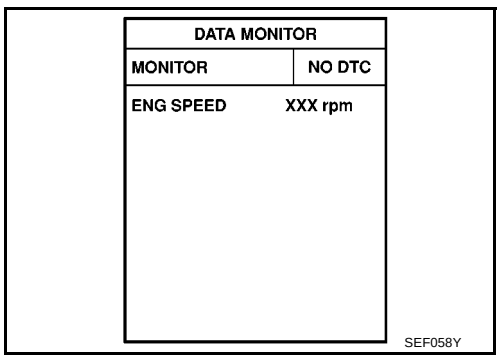
Engine operation condition in fail-fail safe mode	
ECM controls the electric throttle control actuator by regulating the throttle opening to a small range.Therefore,acceleration will be poor.	
Vehicle condition	Driving condition
When engine is idling	Normal
When accelerating	Poor acceleration

DTC Confirmation Procedure

EBS00OPK

WITH CONSULT-II

1. Turn ignition switch ON.
2. Fully depress the brake pedal for at least 5 seconds.
3. Erase the DTC with CONSULT-II.
4. Select “DATA MONITOR” mode with CONSULT-II.
5. If DTC is detected, go to EC-729, "Diagnostic Procedure" .



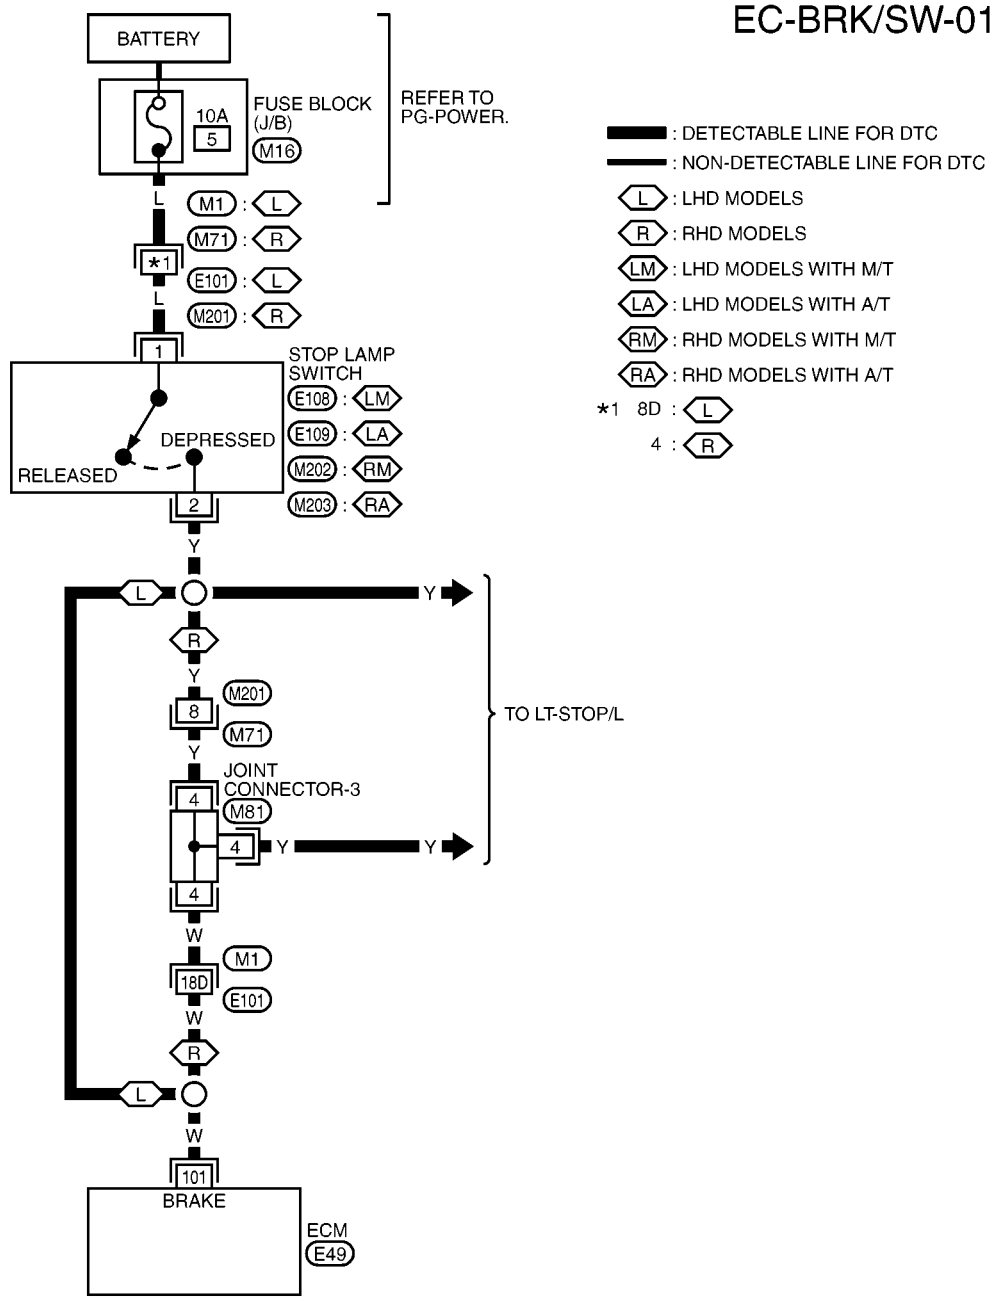
WITHOUT CONSULT-II

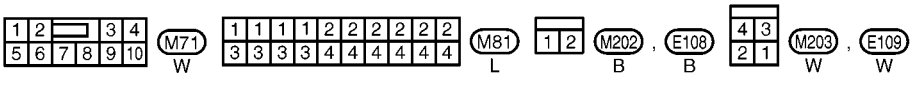
1. Turn ignition switch ON.
2. Fully depress the brake pedal at least 5 seconds.
3. Erase the Diagnostic Test Mode II (Self-diagnostic results) memory. Refer to EC-510 .
4. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
5. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
6. If DTC is detected, go to EC-729, "Diagnostic Procedure" .

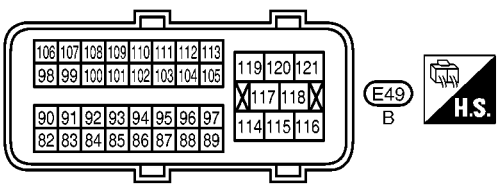
Wiring Diagram

EBS00OPL

EC-BRK/SW-01







REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)

MBWA0574E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
101	W	Stop lamp switch	**[Engine is running]** ● Brake pedal: Fully released	Approximately 0V
			[Engine is running] ● Brake pedal: Depressed	BATTERY VOLTAGE (11 - 14V)

Diagnostic Procedure

EBS00OPM

1. CHECK STOP LAMP SWITCH CIRCUIT

1. Turn ignition switch OFF.
2. Check the stop lamp when depressing and releasing the brake pedal.

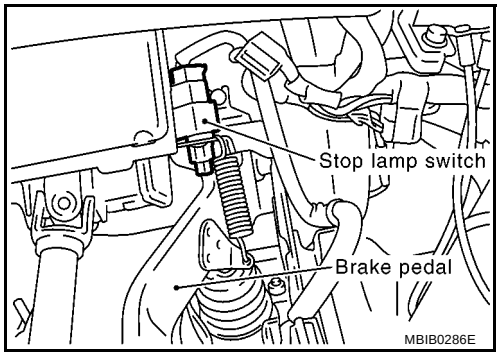
Brake pedal	Stop lamp
Fully released	Not illuminated
Depressed	Illuminated

OK or NG

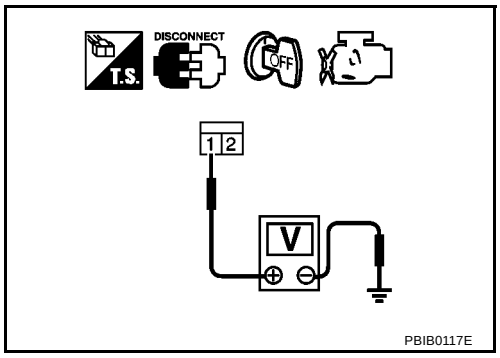
OK >> GO TO 4.
NG >> GO TO 2.

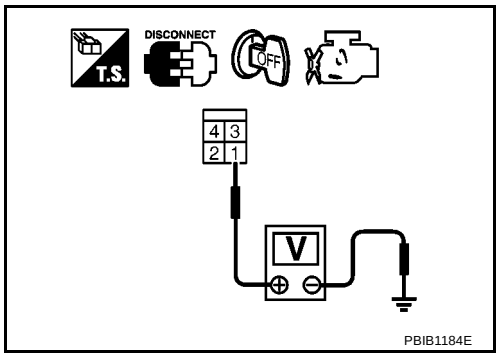
2. CHECK STOP LAMP SWITCH POWER SUPPLY CIRCUIT

1. Disconnect stop lamp switch harness connector.



2. Check voltage between stop lamp switch terminal 1 and ground with CONSULT-II or tester.





Voltage: Battery voltage

OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- 10A fuse
- Fuse block (J/B) connector M16
- Harness connectors M1, E101 (LHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open and short between stop lamp switch and fuse

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK STOP LAMP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 101 and stop lamp switch terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Joint connector-3 (RHD models)
- Harness for open or short between ECM and stop lamp switch

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK STOP LAMP SWITCH

Refer to EC-732, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace stop lamp switch.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

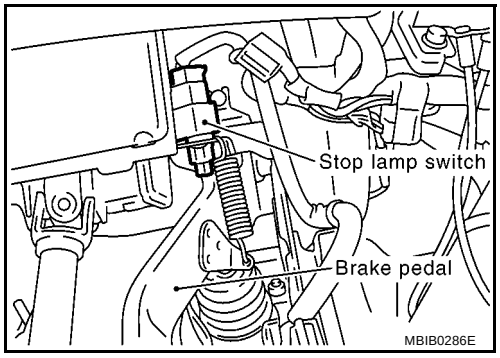
>> **INSPECTION END**

Component Inspection

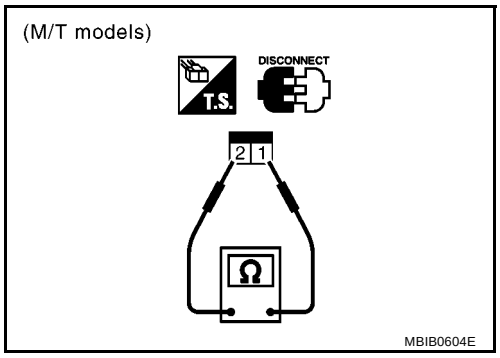
EBS00OPN

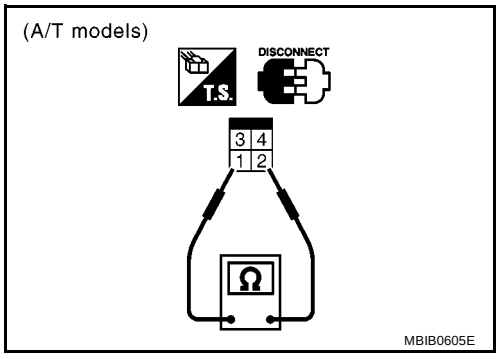
STOP LAMP SWITCH

1. Disconnect stop lamp switch harness connector.



2. Check continuity between stop lamp switch terminals 1 and 2 under the following conditions.





Conditions	Continuity
Brake pedal fully released	Should not exist.
Brake pedal depressed	Should exist.

If NG, adjust brake pedal installation, refer to BR-6, "BRAKE PEDAL" , and perform step 2 again.

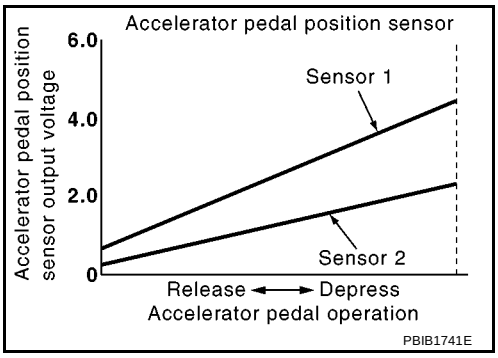
DTC P2122, P2123 APP SENSOR

PFP:18002

Component Description

EBS010DL

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.
Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.
Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.



CONSULT-II Reference Value in Data Monitor Mode

EBS010DM

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage.

On Board Diagnosis Logic

EBS010DN

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2122 2122	Accelerator pedal position sensor 1 circuit low input	An excessively low voltage from the APP sensor 1 is sent to ECM.	● Harness or connectors (The APP sensor 1 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 1)
P2123 2123	Accelerator pedal position sensor 1 circuit high input	An excessively high voltage from the APP sensor 1 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

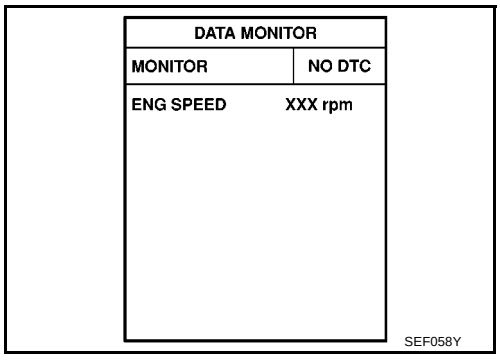
DTC Confirmation Procedure

EBS010DO

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-738, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-738, "Diagnostic Procedure" .

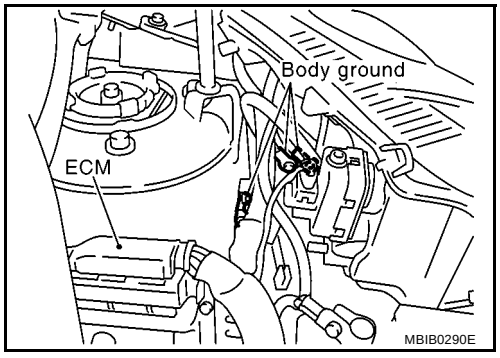
Diagnostic Procedure

EBS010DQ

1. RETIGHTEN GROUND SCREWS

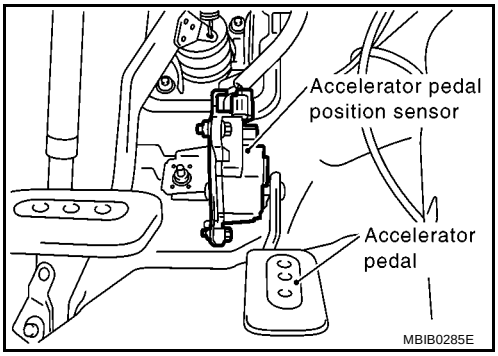
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



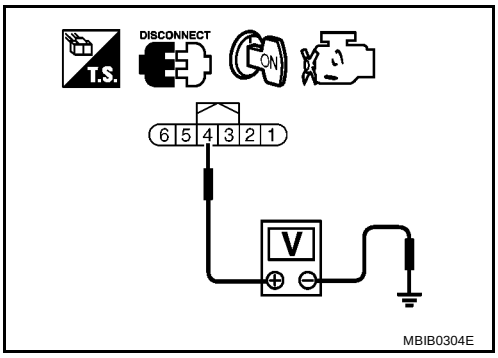
2. CHECK APP SENSOR 1 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 4 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 82 and APP sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 106 and APP sensor terminal 3. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M1, E101 (RHD models)
- Harness connectors M71, M201 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-740, "Component Inspection" .

OK or NG

OK >> GO TO 10.
NG >> GO TO 9.

9. REPLACE APP SENSOR

1. Replace the accelerator pedal position sensor.
2. Perform EC-503, "Accelerator Pedal Released Position Learning" .
3. Perform EC-503, "Throttle Valve Closed Position Learning" .
4. Perform EC-503, "Idle Air Volume Learning" .

10. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

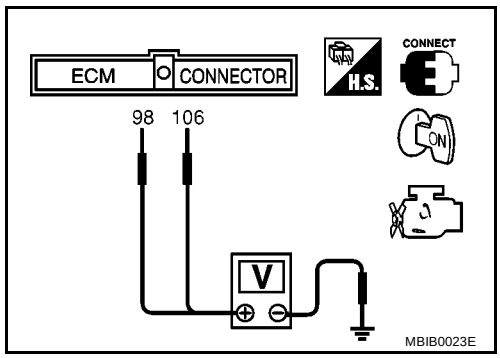
EBS010DR

ACCELERATOR PEDAL POSITION SENSOR

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.

3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V



4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-503, "Accelerator Pedal Released Position Learning" .
6. Perform EC-503, "Throttle Valve Closed Position Learning" .
7. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS010DS

ACCELERATOR PEDAL

Refer to ACC-2, "ACCELERATOR CONTROL SYSTEM" .

DTC P2127, P2128 APP SENSOR

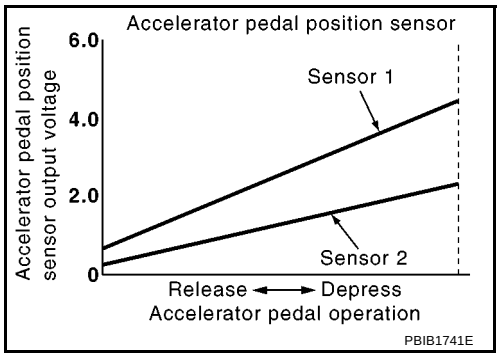
PFP:18002

Component Description

EBS010DT

The accelerator pedal position sensor is installed on the upper end of the accelerator pedal assembly. The sensor detects the accelerator position and sends a signal to the ECM.

Accelerator pedal position sensor has two sensors. These sensors are a kind of potentiometers which transform the accelerator pedal position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the accelerator pedal and feed the voltage signals to the ECM. The ECM judges the current opening angle of the accelerator pedal from these signals and controls the throttle control motor based on these signals.



Idle position of the accelerator pedal is determined by the ECM receiving the signal from the accelerator pedal position sensor. The ECM uses this signal for the engine operation such as fuel cut.

CONSULT-II Reference Value in Data Monitor Mode

EBS010DU

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
ACCEL SEN1	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	4.0 - 4.8V
ACCEL SEN2*	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	0.6 - 0.9V
		Accelerator pedal: Fully depressed	3.9 - 4.8V
CLSD THL POS	● Ignition switch: ON (Engine stopped)	Accelerator pedal: Fully released	ON
		Accelerator pedal: Slightly depressed	OFF

*: Accelerator pedal position sensor 2 signal is converted by ECM internally. Thus, it differ from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS010DV

These self-diagnoses have the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2127 2127	Accelerator pedal position sensor 2 circuit low input	An excessively low voltage from the APP sensor 2 is sent to ECM.	● Harness or connectors (The APP sensor 2 circuit is open or shorted.) ● Accelerator pedal position sensor (Accelerator pedal position sensor 2)
P2128 2128	Accelerator pedal position sensor 2 circuit high input	An excessively high voltage from the APP sensor 2 is sent to ECM.	

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operating condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of throttle valve to be slower than the normal condition. So, the acceleration will be poor.

DTC Confirmation Procedure

EBS010DW

NOTE:

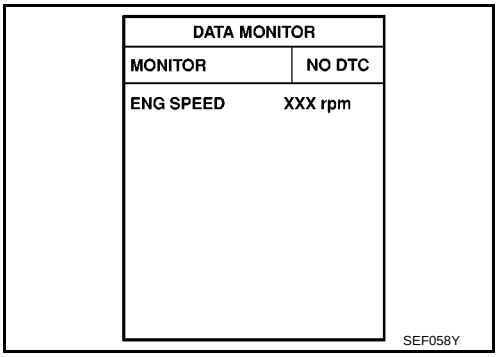
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.

TESTING CONDITION:

Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-747, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 seconds.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-747, "Diagnostic Procedure" .

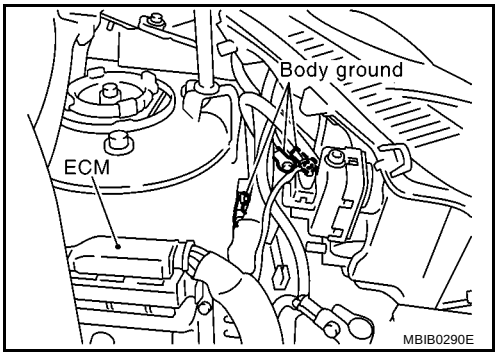
Diagnostic Procedure

EBS010DY

1. RETIGHTEN GROUND SCREWS

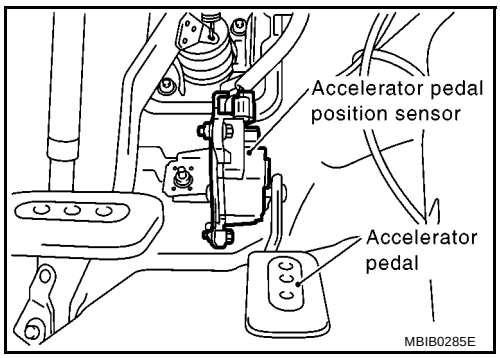
1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 2.



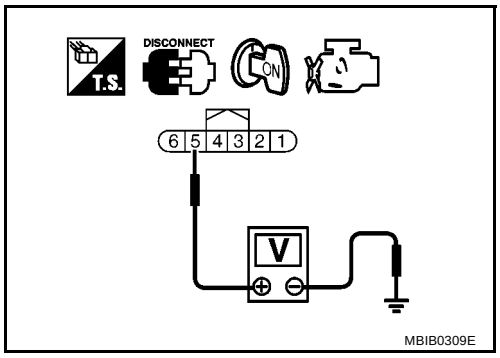
2. CHECK APP SENSOR 2 POWER SUPPLY CIRCUIT

1. Disconnect accelerator pedal position (APP) sensor harness connector.
2. Turn ignition switch ON.



3. Check voltage between APP sensor terminal 5 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK APP SENSOR 2 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 83 and APP sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK APP SENSOR 2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 98 and APP sensor terminal 6. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors M71, M201 (RHD models)
- Harness connectors M1, E101 (RHD models)
- Harness for open or short between ECM and accelerator pedal position sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK APP SENSOR

Refer to EC-749, "Component Inspection" .

OK or NG

OK >> GO TO 10.

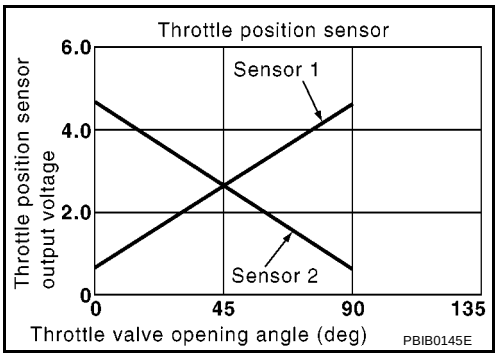
DTC P2135 TP SENSOR

PFP:16119

Component Description

EBS010E1

Electric throttle control actuator consists of throttle control motor, throttle position sensor, etc. The throttle position sensor responds to the throttle valve movement.
The throttle position sensor has the two sensors. These sensors are a kind of potentiometers which transform the throttle valve position into output voltage, and emit the voltage signal to the ECM. In addition, these sensors detect the opening and closing speed of the throttle valve and feed the voltage signals to the ECM. The ECM judges the current opening angle of the throttle valve from these signals and the ECM controls the throttle control motor to make the throttle valve opening angle properly in response to driving condition.



CONSULT-II Reference Value in Data Monitor Mode

EBS010E2

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
THRTL SEN1 THRTL SEN2*	● Ignition switch: ON (Engine stopped) ● Shift lever: D (A/T model) 1st (M/T model)	Accelerator pedal: Fully released	More than 0.36V
		Accelerator pedal: Fully depressed	Less than 4.75V

*: Throttle position sensor 2 signal is converted by ECM internally. Thus, it differs from ECM terminal voltage signal.

On Board Diagnosis Logic

EBS010E3

This self-diagnosis has the one trip detection logic.

DTC No.	Trouble diagnosis name	DTC detecting condition	Possible cause
P2135 2135	Throttle position sensor circuit range/performance problem	Rationally incorrect voltage is sent to ECM compared with the signals from TP sensor 1 and TP sensor 2.	● Harness or connector (The TP sensor 1 and 2 circuit is open or shorted.) ● Electric throttle control actuator (TP sensor 1 and 2)

FAIL-SAFE MODE

When the malfunction is detected, the ECM enters fail-safe mode and the MI lights up.

Engine operation condition in fail-safe mode
The ECM controls the electric throttle control actuator in regulating the throttle opening in order for the idle position to be within +10 degrees. The ECM regulates the opening speed of the throttle valve to be slower than the normal condition. So, the acceleration will be poor.

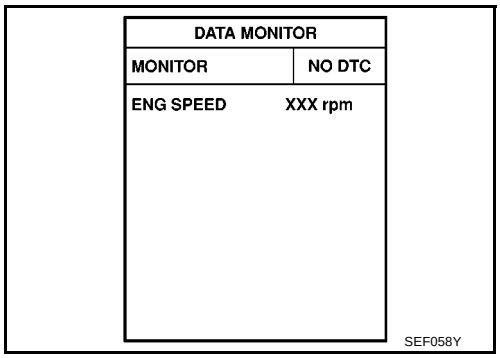
DTC Confirmation Procedure

EBS010E4

NOTE:
If DTC Confirmation Procedure has been previously conducted, always turn ignition switch OFF and wait at least 10 seconds before conducting the next test.
TESTING CONDITION:
Before performing the following procedure, confirm that battery voltage is more than 10V at idle.

WITH CONSULT-II

1. Turn ignition switch ON.
2. Select “DATA MONITOR” mode with CONSULT-II.
3. Start engine and let it idle for 1 second.
4. If DTC is detected, go to EC-754, "Diagnostic Procedure" .



WITHOUT CONSULT-II

1. Start engine and let it idle for 1 second.
2. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
3. Perform Diagnostic Test Mode II (Self-diagnostic results) with ECM.
4. If DTC is detected, go to EC-754, "Diagnostic Procedure" .

1. Reconnect all harness connectors disconnected.
2. Turn ignition switch ON.
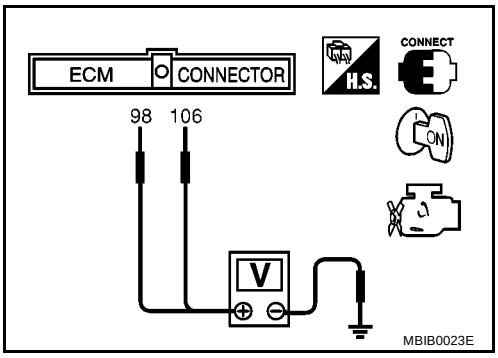
3. Check voltage between ECM terminals 106 (APP sensor 1 signal), 98 (APP sensor 2 signal) and engine ground under the following conditions.

Terminal	Accelerator pedal	Voltage
106 (Accelerator pedal position sensor 1)	Fully released	0.6 - 0.9V
	Fully depressed	3.9 - 4.7V
98 (Accelerator pedal position sensor 2)	Fully released	0.3 - 0.6V
	Fully depressed	1.95 - 2.4V



4. If NG, replace accelerator pedal assembly and go to the next step.
5. Perform EC-503, "Accelerator Pedal Released Position Learning" .
6. Perform EC-503, "Throttle Valve Closed Position Learning" .
7. Perform EC-503, "Idle Air Volume Learning" .

Remove and Installation

EBS010EG

HO2S1 HEATER

PFP:22690

Description

EBS00OPO

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Camshaft position sensor (PHASE) Crankshaft position sensor (POS)	Engine speed	Heated oxygen sensor 1 heater control	Heated oxygen sensor 1 heater
Engine coolant temperature sensor	Engine coolant temperature		

The ECM performs ON/OFF duty control of the heated oxygen sensor 1 heater corresponding to the engine speed and engine coolant temperature. The duty percent varies with engine coolant temperature when engine is started.

OPERATION

Engine speed rpm	Heated oxygen sensor 1 heater
Above 3,600	OFF
Below 3,600 after warming up	ON

CONSULT-II Reference Value in Data Monitor Mode

EBS00OPP

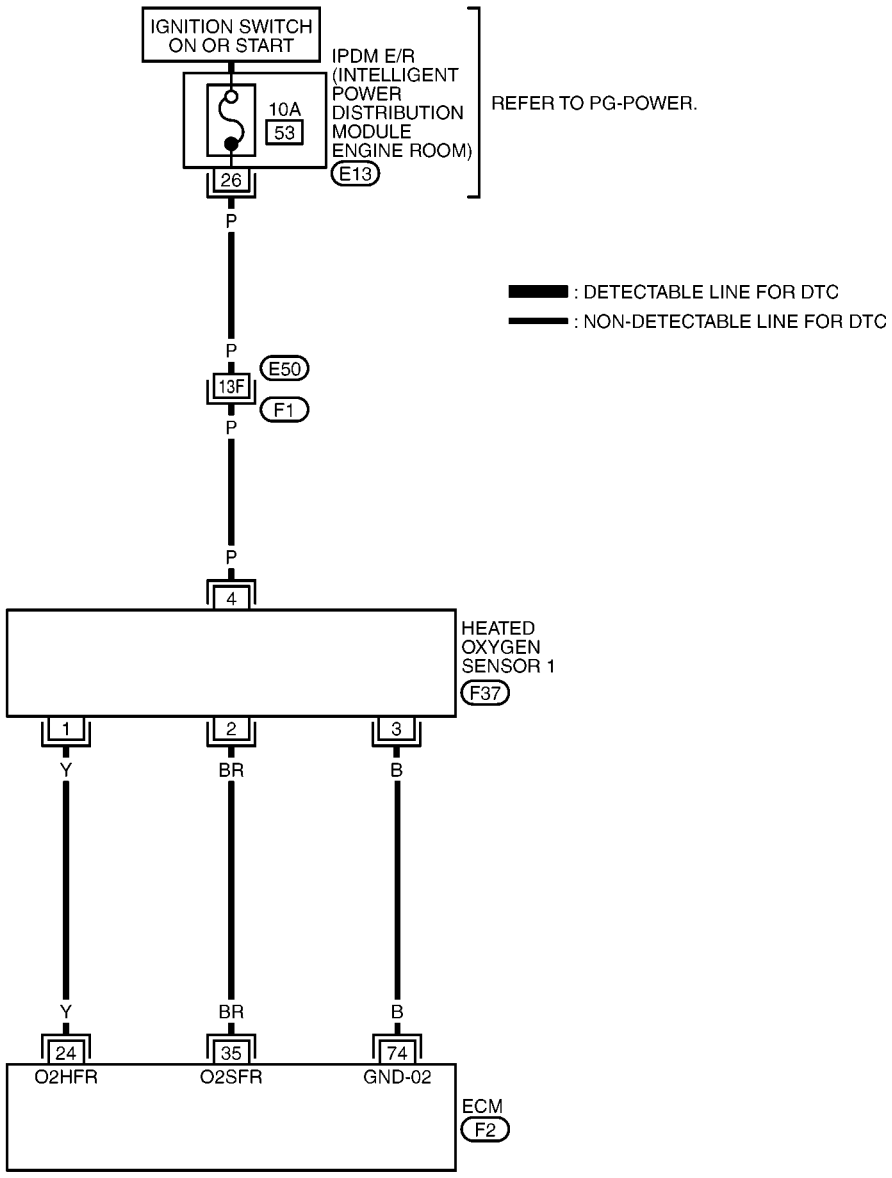
Specification data are reference values.

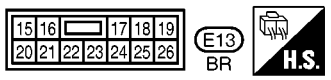
MONITOR ITEM	CONDITION	SPECIFICATION
HO2S1 HTR (B1)	● Engine: After warming up ● Engine speed: Below 3,600 rpm	ON
	● Engine speed: Above 3,600 rpm	OFF

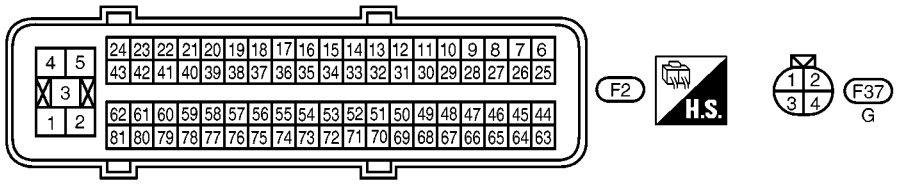
Wiring Diagram

EBS00OPQ

EC-FRO2-01







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0464E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
24	Y	Heated oxygen sensor 1 heater	**[Engine is running]** ● **Warm-up condition.** ● Engine speed is below 3,600 rpm.	Approximately 7.0V★  PBIB0519E
			[Engine is running] ● Engine speed is above 3,600 rpm.	BATTERY VOLTAGE (11 - 14V)

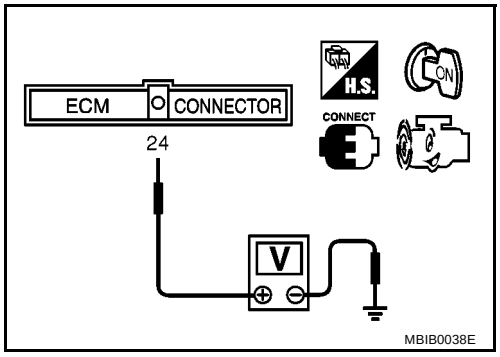
★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00OPR

1. CHECK OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Turn ignition switch ON.
4. Set tester prove between ECM terminal 24 (HO2S1 heater signal) and ground.
5. Start engine and let it idle.
6. Check the voltage under the following conditions.
   Verify that the oscilloscope screen shows the signal waves as shown below.



MBIB0038E

Conditions	Voltage
At idle	Approximately 7.0V★  PBIB0519E
Engine speed is above 3,600 rpm.	BATTERY VOLTAGE (11 - 14V)

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

OK or NG

OK >> **INSPECTION END**

>> **INSPECTION END**

Component Inspection

EBS00OPY

HEATED OXYGEN SENSOR 2 HEATER

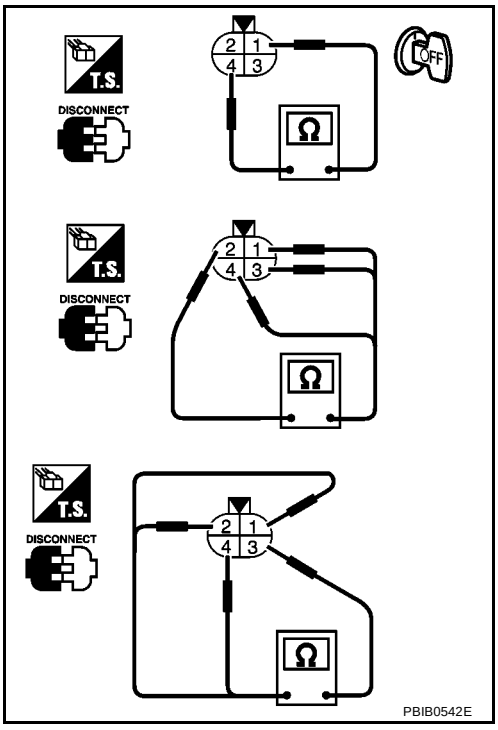
1. Check resistance between HO2S2 terminals as follows.

Terminal No.	Resistance
1 and 4	3.3 - 4.0 Ω at 25°C (77°F)
2 and 1, 3, 4	∞ Ω (Continuity should not exist)
3 and 1, 2, 4	

2. If NG, replace heated oxygen sensor 2.

CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**



Removal and Installation

EBS00OPZ

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

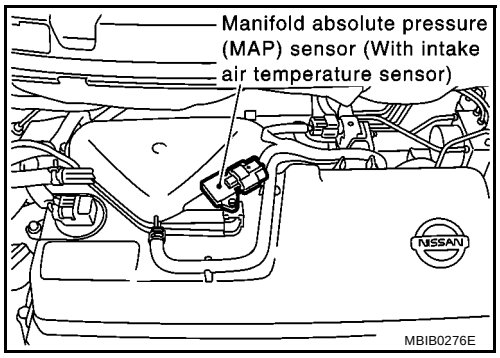
IAT SENSOR

PFP:22630

Component Description

EBS00OQ0

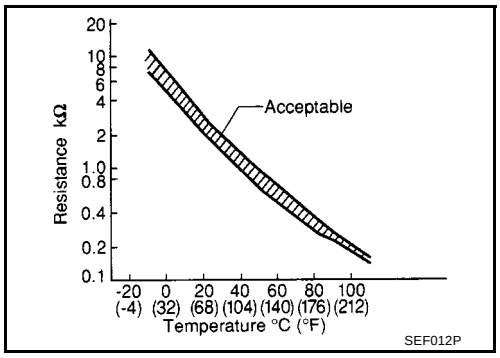
The intake air temperature sensor is built into manifold absolute pressure sensor. The sensor detects intake air temperature and transmits a signal to the ECM.
The temperature sensing unit uses a thermistor which is sensitive to the change in temperature. Electrical resistance of the thermistor decreases in response to the temperature rise.



<Reference data>

Intake air temperature °C (°F)	Voltage* V	Resistance kΩ
–10 (14)	4.43	7.9 - 9.3
25 (77)	3.32	1.9 - 2.1
80 (176)	1.23	0.31 - 0.37

*: These data are reference values and are measured between ECM terminal 34 (Intake air temperature sensor) and ground.

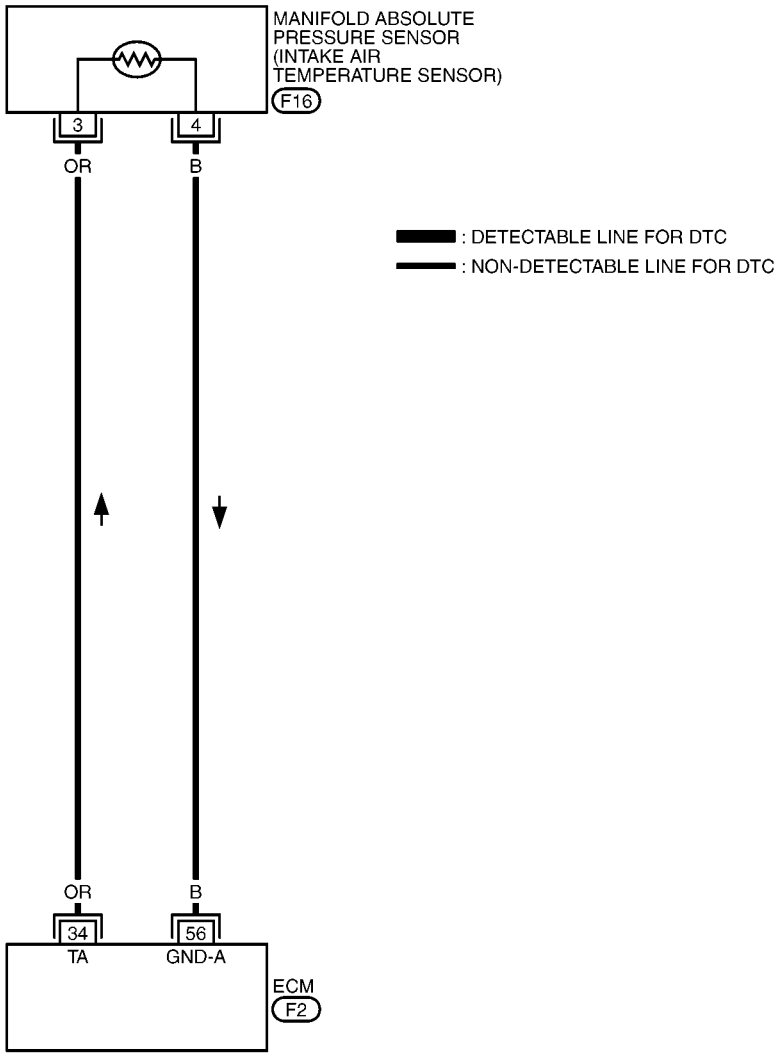


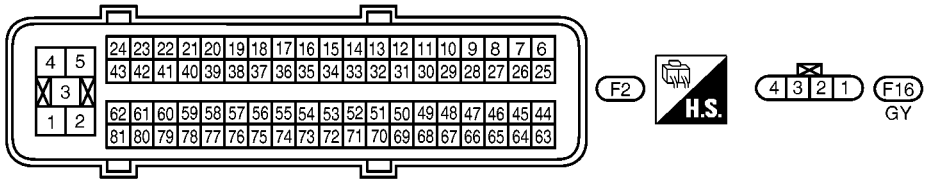
CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

Wiring Diagram

EBS00OQ1

EC-IATSEN-01





MBWA0466E

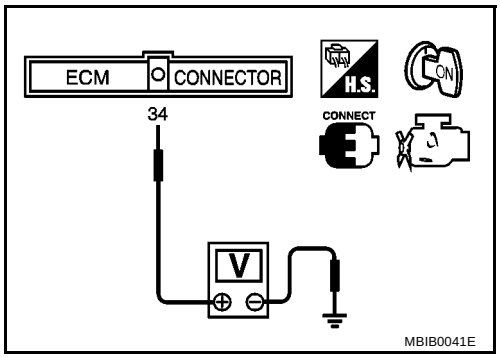
Diagnostic Procedure

EBS00OQ2

1. CHECK OVERALL FUNCTION

1. Turn ignition switch ON.
2. Check voltage between ECM terminal 34 and ground with CONSULT-II or tester.

Voltage: 0.04 - 4.84V

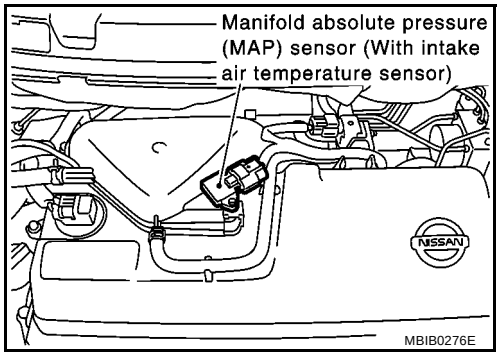


OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

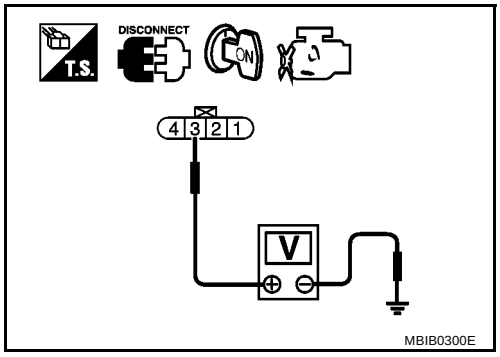
2. CHECK INTAKE AIR TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect manifold absolute pressure sensor (intake air temperature sensor is built-into) harness connector.
3. Turn ignition switch ON.



4. Check voltage between MAP sensor terminal 3 and ground.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 3.
NG >> Repair harness or connectors.

3. CHECK INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between MAP sensor terminal 4 and ECM terminal 56.
   Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK INTAKE AIR TEMPERATURE SENSOR

Refer to EC-779, "Component Inspection" .

OK or NG

OK >> GO TO 5.
NG >> Replace manifold absolute pressure sensor (with intake air temperature sensor).

5. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

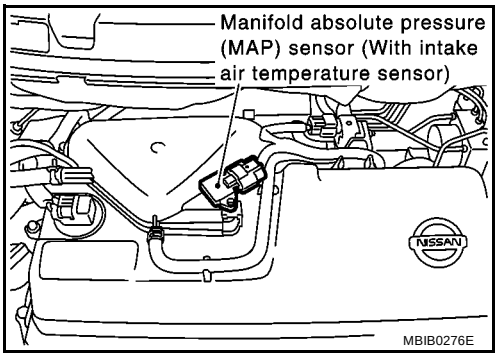
EBS00OQ3

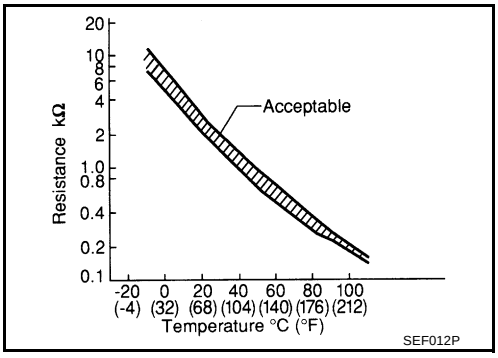
INTAKE AIR TEMPERATURE SENSOR

1. Check resistance between manifold absolute pressure sensor terminals 3 and 5 under the following conditions.

Intake air temperature °C (°F)	Resistance kΩ
25 (77)	1.9 - 2.1

2. If NG, replace manifold absolute pressure sensor (with intake air temperature sensor).





Removal and Installation

EBS00OQ4

MANIFOLD ABSOLUTE PRESSURE SENSOR

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

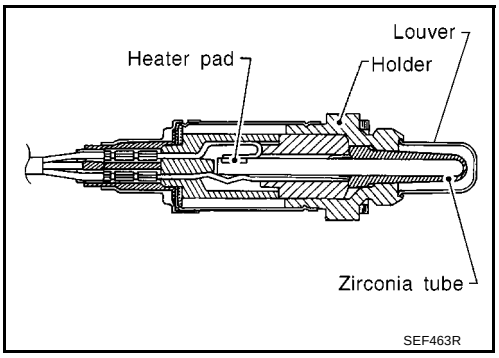
HO2S1

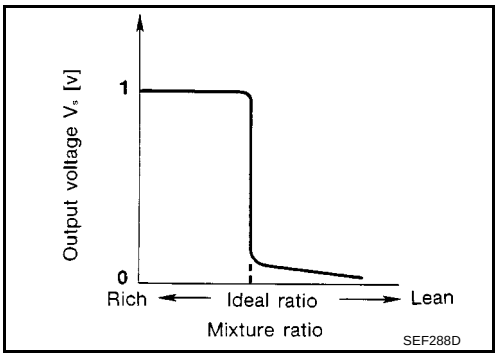
PFP:22690

Component Description

EBS00OQ5

The heated oxygen sensor 1 is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions. The heated oxygen sensor 1 signal is sent to the ECM. The ECM adjusts the injection pulse duration to achieve the ideal air-fuel ratio. The ideal air-fuel ratio occurs near the radical change from 1V to 0V.





CONSULT-II Reference Value in Data Monitor Mode

EBS00OQ6

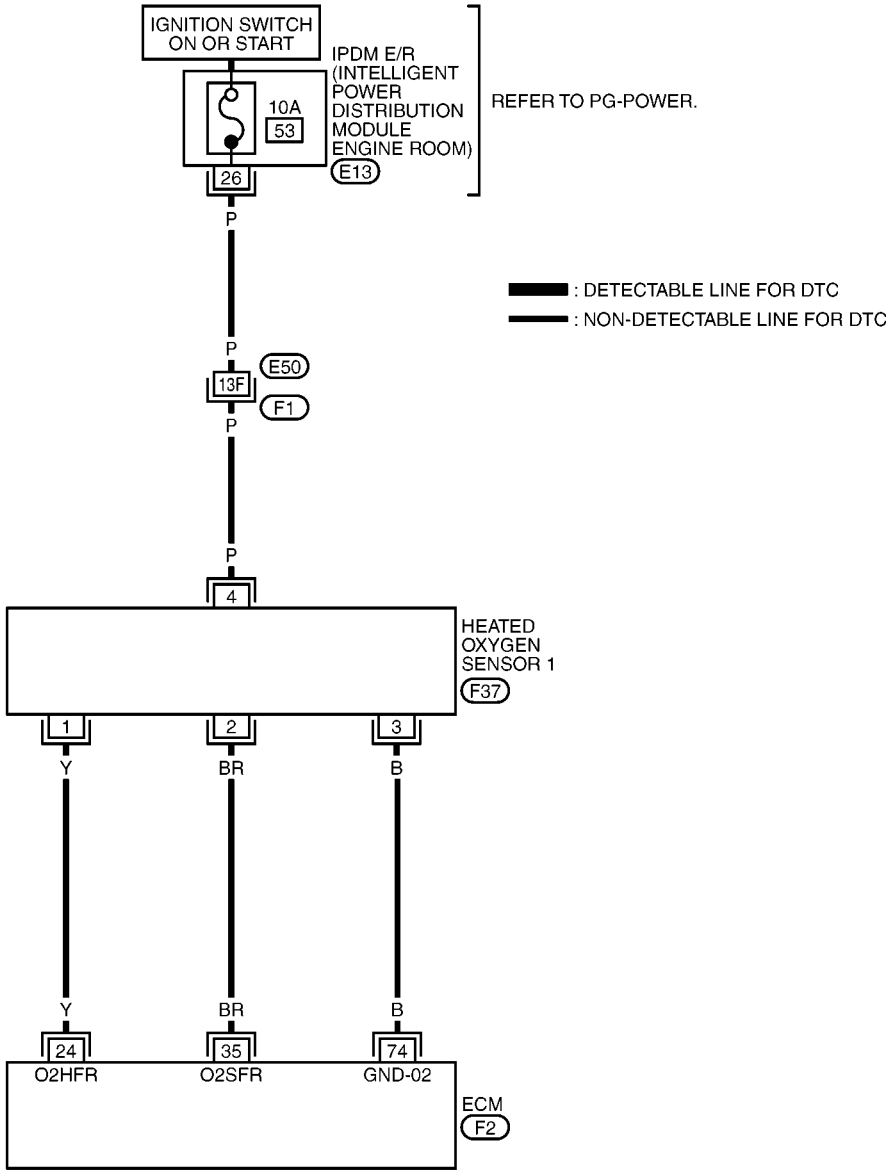
Specification data are reference values.

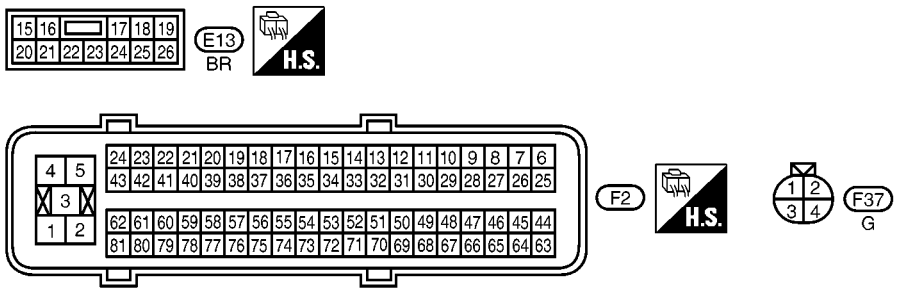
MONITOR ITEM	CONDITION		SPECIFICATION
HO2S1 (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S1 MNTR (B1)	● Engine: After warming up	Maintaining engine speed at 2,000 rpm	LEAN ←→ RICH Changes more than 5 times during 10 seconds.

Wiring Diagram

EBS00OQ7

EC-FRO2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0464E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
35	BR	Heated oxygen sensor 1	**[Engine is running]** ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - Approximately 1.0V (Periodically change)
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

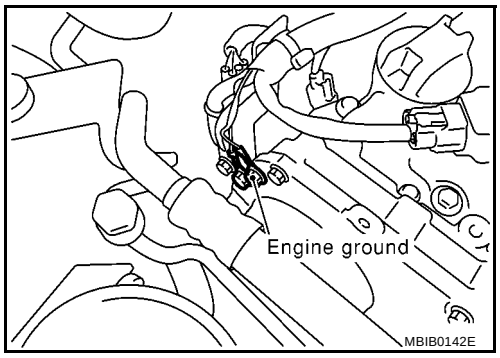
Diagnostic Procedure

EBS00OQ8

1. INSPECTION START

1. Turn ignition switch OFF.
2. Loosen and retighten engine ground screws.

>> GO TO 2.



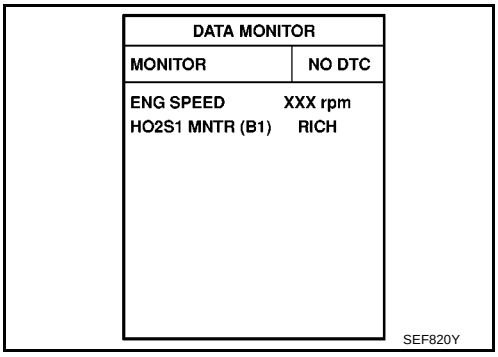
2. CHECK OVERALL FUNCTION

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “HO2S1 MNTR (B1)” in “DATA MONITOR” mode with CONSULT-II.
3. Keep the engine speed at 2,000 rpm under no load, and make sure that the monitors fluctuates between LEAN and RICH more than 5 times in 10 seconds.

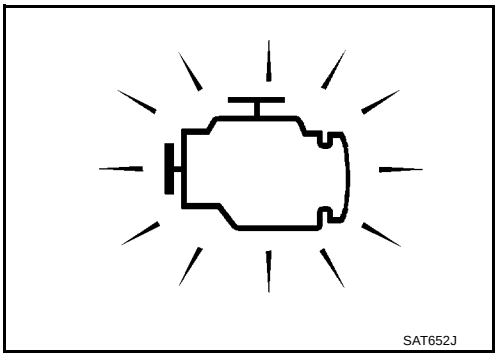
   1 time: RICH → LEAN → RICH

   2 times: RICH → LEAN → RICH → LEAN →RICH



Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Stop engine and wait at least 10 seconds.
3. Set ECM in Diagnostic test mode - II (Heated oxygen sensor 1 monitor).
   Refer to EC-510, "HOW TO ERASE EMISSION-RELATED DIAGNOSTIC INFORMATION" .
4. Keep the engine speed at 2,000 rpm under no load, and make sure that the MI comes ON more than 5 times in 10 seconds.



OK or NG

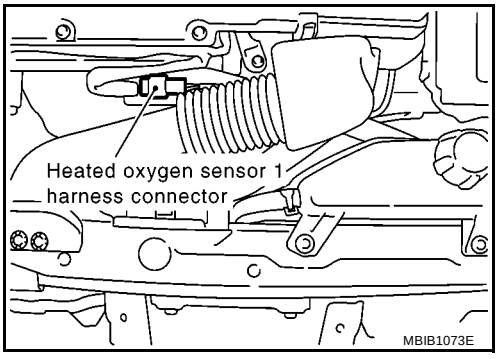
OK >> **INSPECTION END**
NG >> GO TO 3.

3. CHECK HO2S1 GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 1 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S1 terminal 3.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.



OK or NG

OK >> GO TO 4.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

4. CHECK HO2S1 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 35 and HO2S1 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 35 or HO2S1 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

5. CHECK HEATED OXYGEN SENSOR 1

Refer to EC-784, "Component Inspection" .

OK or NG

OK >> GO TO 6.
NG >> Replace heated oxygen sensor 1.

6. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

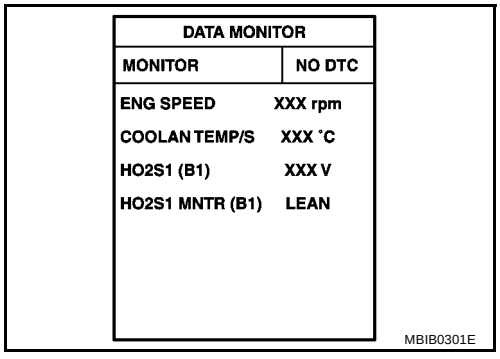
Component Inspection

EBS00OQ9

HEATED OXYGEN SENSOR 1

With CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Select “MANU TRIG” and adjust “TRIGGER POINT” to 100% in “DATA MONITOR” mode with CONSULT-II.
3. Select “HO2S1 (B1)” and “HO2S1 MNTR (B1)”.
4. Hold engine speed at 2,000 rpm under no load during the following steps.
5. Touch “RECORD” on CONSULT-II screen.



6. Check the following.
   - “HO2S1 MNTR (B1)” in “DATA MONITOR” mode changes from “RICH” to “LEAN” to “RICH” more than 5 times in 10 seconds.
     5 times (cycles) are counted as shown at right.
   - “HO2S1 (B1)” voltage goes above 0.6V at least once.
   - “HO2S1 (B1)” voltage goes below 0.3V at least once.
   - “HO2S1 (B1)” voltage never exceeds 1.0V.

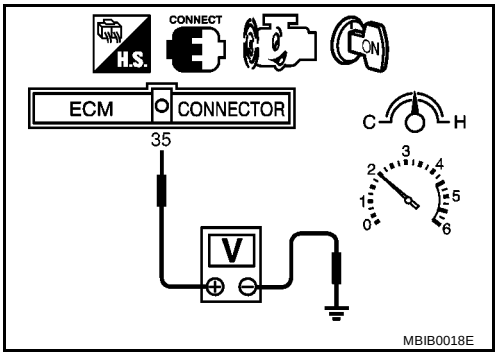
CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

⊗ Without CONSULT-II

1. Start engine and warm it up to normal operating temperature.
2. Set voltmeter probes between ECM terminal 35 [HO2S1 (B1) signal] and engine ground.
3. Check the following with engine speed held at 2,000 rpm constant under no load.
   - The voltage fluctuates between 0 to 0.3V and 0.6 to 1.0V more than 5 times within 10 seconds.
   - The maximum voltage is over 0.6V at least one time.
   - The minimum voltage is below 0.3V at least one time.
   - The voltage never exceeds 1.0V.

   1 time: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V
   2 times: 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V → 0.6 - 1.0V → 0 - 0.3V



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

EBS00OQA

HEATED OXYGEN SENSOR 1

Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .

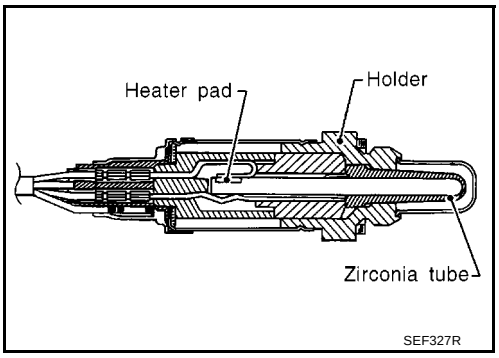
HO2S2

PFP:226A0

Component Description

EBS00OQB

The heated oxygen sensor 2, after three way catalyst (manifold), monitors the oxygen level in the exhaust gas on each bank.
Even if switching characteristics of the heated oxygen sensor 1 are shifted, the air fuel ratio is controlled to stoichiometric, by the signal from the heated oxygen sensor 2.
This sensor is made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
Under normal conditions the heated oxygen sensor 2 is not used for engine control operation.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OQC

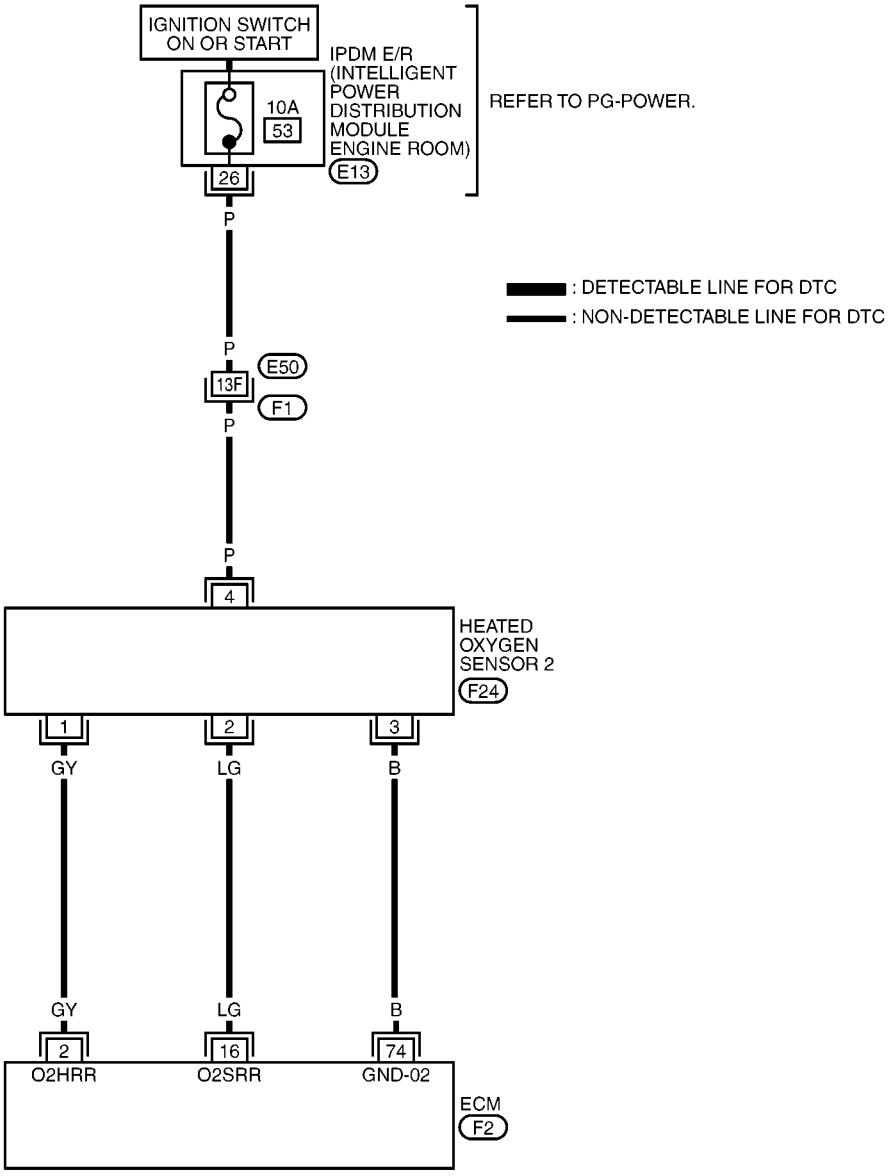
Specification data are reference values.

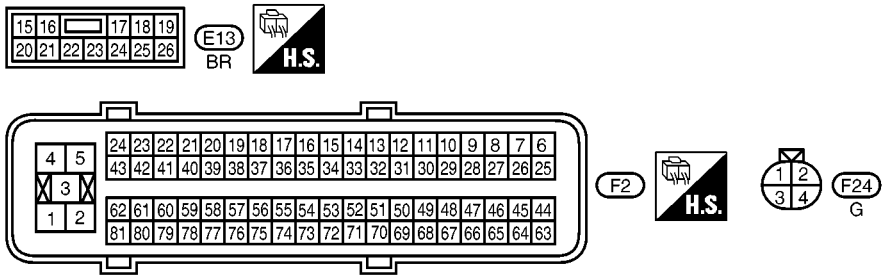
MONITOR ITEM	CONDITION		SPECIFICATION
HO2S2 (B1)	● Engine: After warming up	Revving engine from idle to 3,000 rpm quickly.	0 - 0.3V ←→ Approx. 0.6 - 1.0V
HO2S2 MNTR (B1)	● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load		LEAN ←→ RICH

Wiring Diagram

EBS00OQD

EC-RRO2-01





REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0465E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
16	LG	Heated oxygen sensor 2	**[Engine is running]** ● **Warm-up condition** ● Revving engine from idle to 3,000 rpm quickly after the following conditions are met. ● Keeping the engine speed between 3,500 and 4,000 rpm for 1 minute and at idle for 1 minute under no load	0 - Approximately 1.0V
74	B	Sensor ground (Heated oxygen sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V

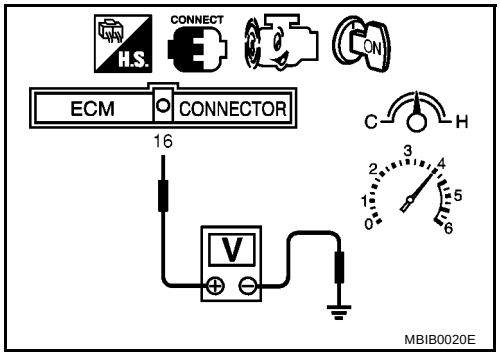
Diagnostic Procedure

EBS00OQE

1. CHECK OVERALL FUNCTION-I

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 (HO2S2 signal) and ground.
6. Check the voltage while revving up to 4,000 rpm under no load at least 10 times. (Depress and release the accelerator pedal as quickly as possible.)

The voltage does not remain in the range of 0.2 - 0.4V



OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

2. CHECK OVERALL FUNCTION-II

Keep engine at idle for 10 minutes, then check the voltage between ECM terminal 16 and ground, or check voltage when coasting 80 km/h (50 MPH) in 3rd gear (M/T) or D position (A/T).

The voltage does not remain in the range of 0.2 - 0.4V

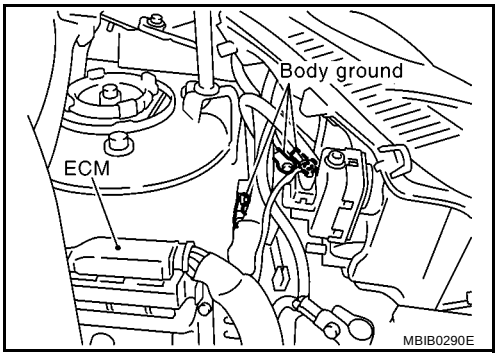
OK or NG

OK >> **INSPECTION END**
NG >> GO TO 3.

3. RETIGHTEN GROUND SCREWS

1. Turn ignition switch OFF.
2. Loosen and retighten body ground screws.

>> GO TO 4.



4. CHECK HO2S2 GROUND CIRCUIT FOR OPEN AND SHORT

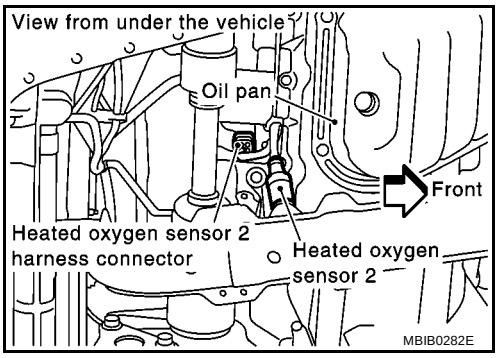
1. Turn ignition switch OFF.
2. Disconnect heated oxygen sensor 2 harness connector.
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 74 and HO2S2 terminal 3.
   Refer to Wiring Diagram.

   Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 5.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.



5. CHECK HO2S2 INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 16 and HO2S2 terminal 2.
   Refer to Wiring Diagram.

   Continuity should exist.

2. Check harness continuity between ECM terminal 16 or HO2S2 terminal 2 and ground.
   Refer to Wiring Diagram.

   Continuity should not exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK HEATED OXYGEN SENSOR 2

Refer to EC-790, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace heated oxygen sensor 2.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

EBS00OQF

HEATED OXYGEN SENSOR 2

With CONSULT-II

1. Turn ignition switch ON and select “DATA MONITOR” mode with CONSULT-II.
2. Start engine and warm it up to the normal operating temperature.
3. Turn ignition switch OFF and wait at least 10 seconds.
4. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
5. Let engine idle for 1 minute.

DATA MONITOR	
MONITOR	NO DTC

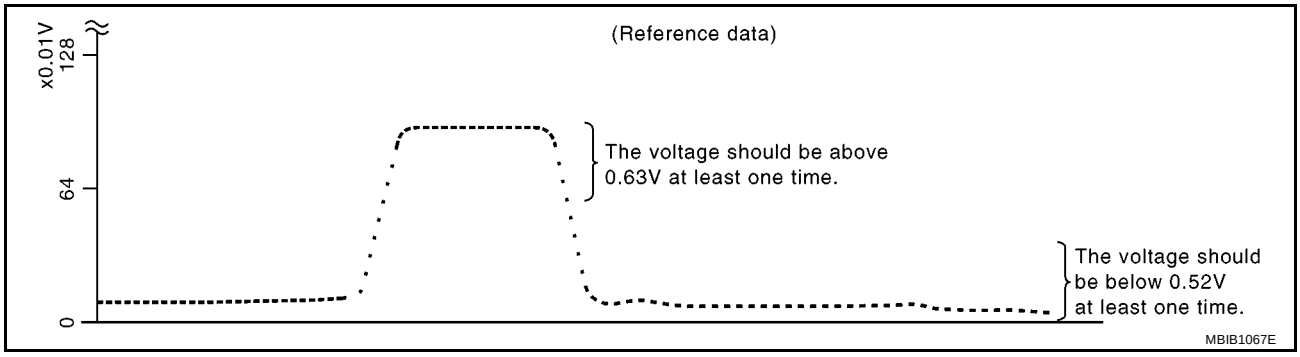
SEF662Y

7. Check “HO2S2 (B1)” at idle speed when adjusting “FUEL INJECTION” to ±25%.



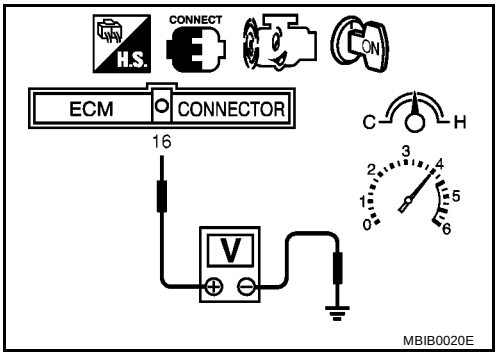
“HO2S2 (B1)” should be above 0.63V at least once when the “FUEL INJECTION” is +25%.
“HO2S2 (B1)” should be below 0.52V at least once when the “FUEL INJECTION” is −25%.

CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Without CONSULT-II

1. Start engine and warm it up to the normal operating temperature.
2. Turn ignition switch OFF and wait at least 10 seconds.
3. Start engine and keep the engine speed between 3,500 and 4,000 rpm for at least 1 minute under no load.
4. Let engine idle for 1 minute.
5. Set voltmeter probes between ECM terminal 16 [HO2S2 (B1) signal] and engine ground.
6. Check the voltage when revving up to 4,000 rpm under no load at least 10 times.
   (Depress and release accelerator pedal as soon as possible.)
   The voltage should be above 0.63V at least once during this procedure.
   If the voltage is above 0.63V at step 6, step 7 is not necessary.
7. Keep vehicle idling for 10 minutes, then check voltage. Or check the voltage when coasting from 80 km/h (50 MPH) in D position (A/T), 3rd gear position (M/T).
   The voltage should be below 0.52V at least once during this procedure.
8. If NG, replace heated oxygen sensor 2.



CAUTION:

- **Discard any heated oxygen sensor which has been dropped from a height of more than 0.5 m (19.7 in) onto a hard surface such as a concrete floor; use a new one.**
- **Before installing new oxygen sensor, clean exhaust system threads using Oxygen Sensor Thread Cleaner tool J-43897-18 or J-43897-12 and approved anti-seize lubricant.**

Removal and Installation

HEATED OXYGEN SENSOR 2

Refer to EX-3, "EXHAUST SYSTEM" .

IGNITION SIGNAL

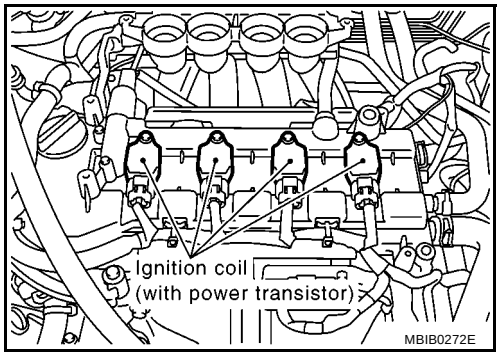
PFP:22448

Component Description

EBS00OQH

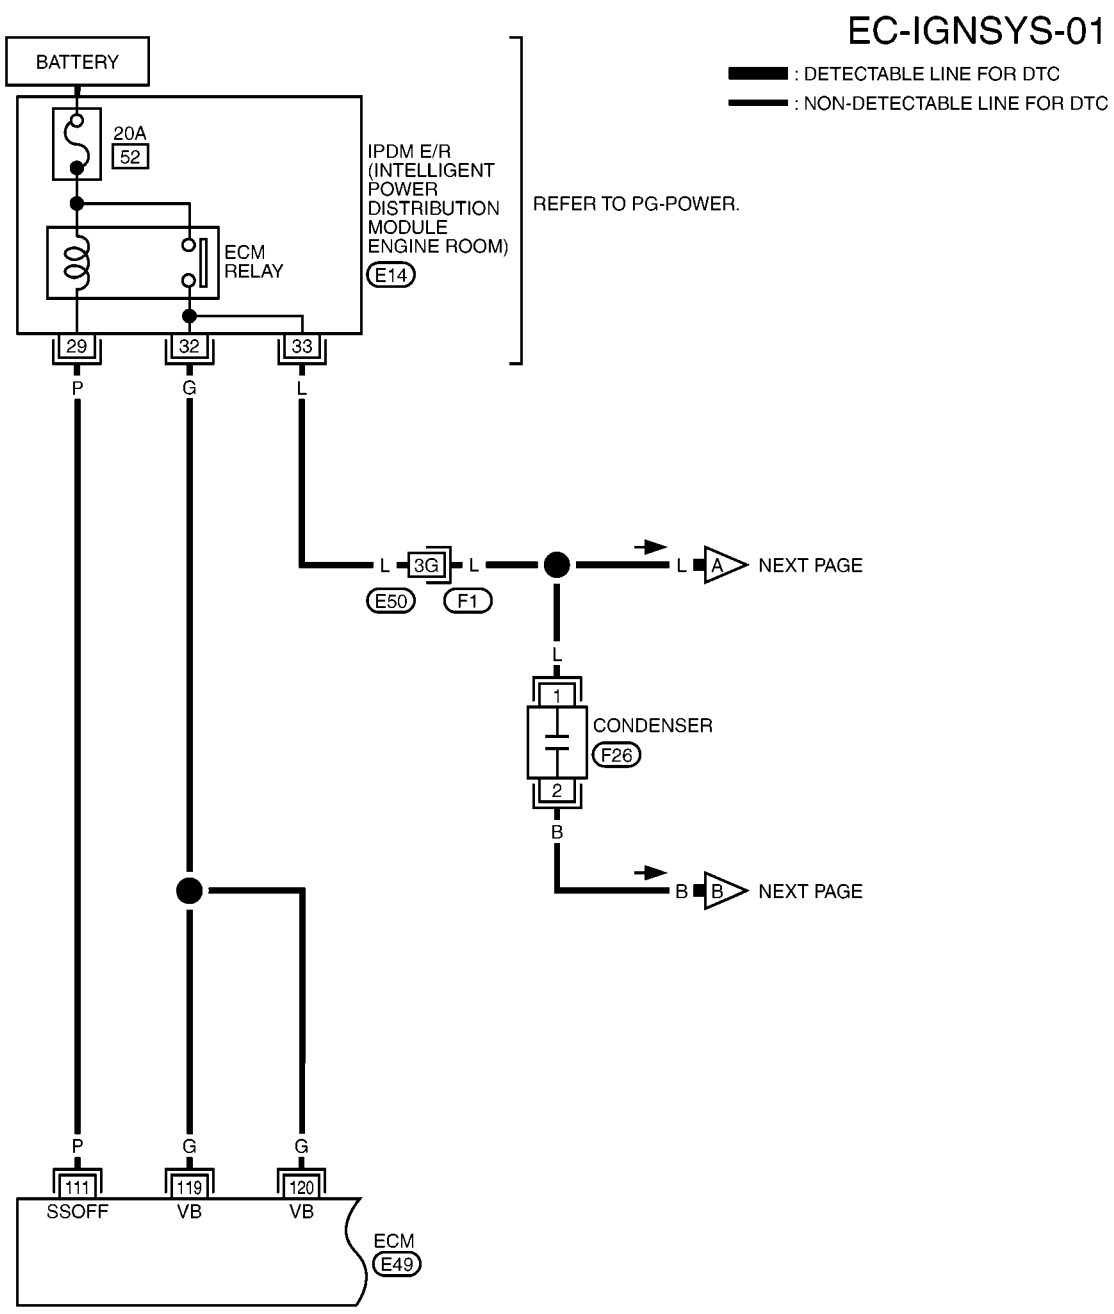
IGNITION COIL & POWER TRANSISTOR

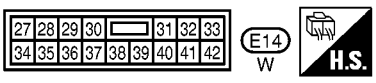
The ignition signal from the ECM is sent to and amplified by the power transistor. The power transistor turns on and off the ignition coil primary circuit. This on-off operation induces the proper high voltage in the coil secondary circuit.

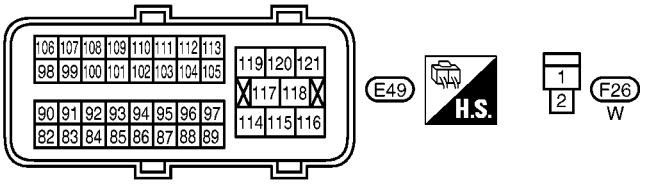


Wiring Diagram

EBS00OQI







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0296E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
111	P	ECM relay (Self shut-off)	**[Engine is running]** **[Ignition switch OFF]** ● For a few seconds after turning ignition switch OFF	0 - 1.0V

			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm.	0 - 0.2V★  PBIB0522E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00OQJ

1. CHECK ENGINE START

Turn ignition switch OFF, and restart engine.
Is engine running?

Yes or No

Yes (With CONSULT-II)>>GO TO 2.
Yes (Without CONSULT-II)>>GO TO 3.
No >> GO TO 4.

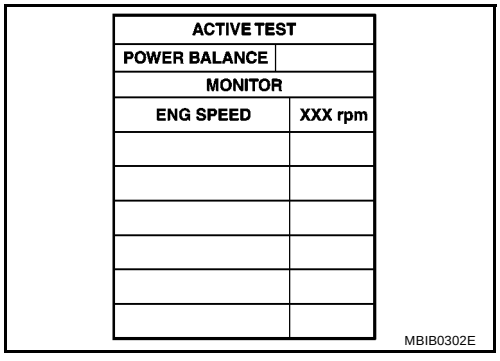
2. CHECK OVERALL FUNCTION

With CONSULT-II

1. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-II.
2. Make sure that each circuit produces a momentary engine speed drop.

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 9.



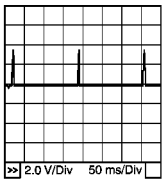
MBIB0302E

3. CHECK OVERALL FUNCTION

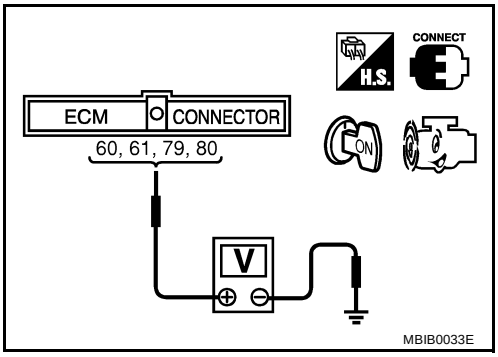
Without CONSULT-II

1. Let engine idle.
2. Read the voltage signal between ECM terminals 60, 61, 79, 80 and ground with an oscilloscope.
3. Verify that the oscilloscope screen shows the signal wave as shown below.

NOTE:
The pulse cycle changes depending on rpm at idle.



PBIB0521E



MBIB0033E

OK or NG

OK >> **INSPECTION END**
NG >> GO TO 9.

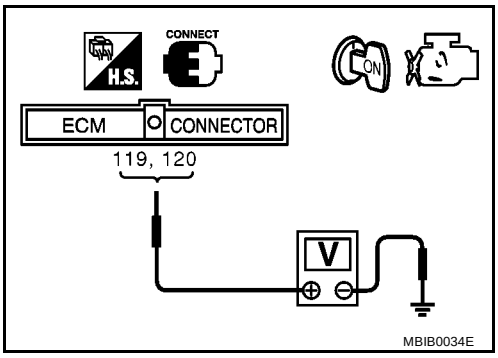
4. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF, wait at least 10 seconds and then turn ON.
2. Check voltage between ECM terminals 119, 120 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> Go to EC-567, "POWER SUPPLY CIRCUIT FOR ECM"
.



MBIB0034E

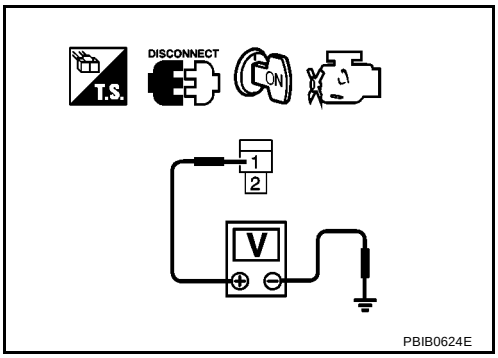
5. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-II

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.
3. Turn ignition switch ON.
4. Check voltage between condenser terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.



PBIB0624E

6. DETECT MALFUNCTION PART

Check the following.

- IPDM E/R harness connector E14
- Harness connectors E50, F1
- Harness for open or short between condenser and IPDM E/R

>> Repair or replace

7. CHECK CONDENSER GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between condenser terminal 2 and ground.
   Refer to Wiring diagram.

Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 8.
NG >> Repair open circuit or short to power in harness or connector.

8. CHECK CONDENSER

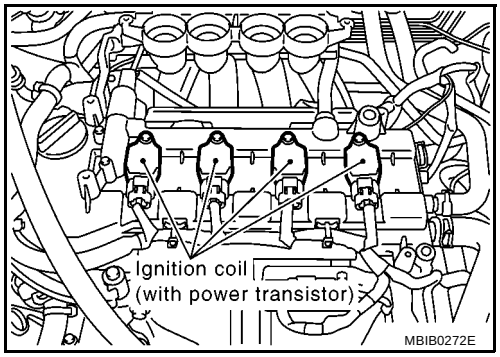
Refer to EC-799, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace condenser.

9. CHECK IGNITION COIL POWER SUPPLY CIRCUIT-V

1. Turn ignition switch OFF.
2. Reconnect all harness connectors disconnected.
3. Disconnect ignition coil harness connector.
4. Turn ignition switch ON.

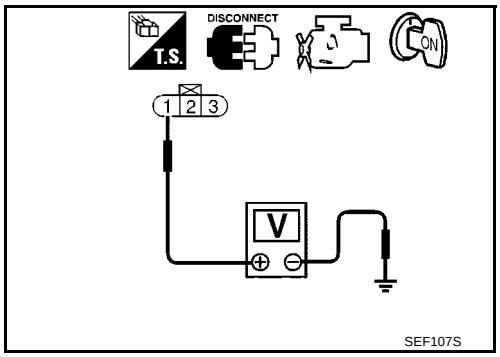


5. Check voltage between ignition coil terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 11.
NG >> GO TO 10.



10. DETECT MALFUNCTIONING PART

Check harness for open or short between ignition coil and IPDM E/R.

>> Repair or replace harness or connectors.

11. CHECK IGNITION COIL GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Check harness continuity between ignition coil terminal 2 and engine ground.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to power.

OK or NG

OK >> GO TO 12.
NG >> Repair open circuit or short to power in harness or connectors.

12. CHECK IGNITION COIL OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminals 60, 61, 79, 80 and ignition coil terminal 3.
   Refer to Wiring Diagram.

   Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 13.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

13. CHECK IGNITION COIL WITH POWER TRANSISTOR

Refer to EC-799, "Component Inspection" .

OK or NG

OK >> GO TO 14.
NG >> Replace ignition coil with power transistor.

14. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

Component Inspection

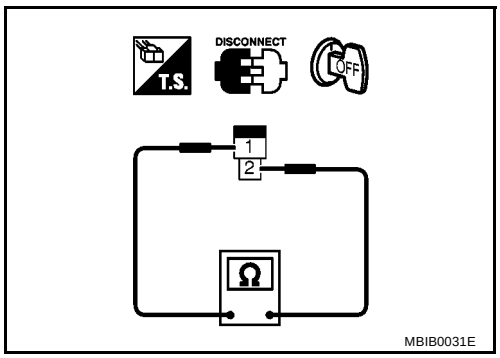
EBS00OQK

CONDENSER

1. Turn ignition switch OFF.
2. Disconnect condenser harness connector.

3. Check resistance between condenser terminals 1 and 2.

Resistance: Above 1 MΩ at 25°C (77°F)



IGNITION COIL WITH POWER TRANSISTOR

1. Turn ignition switch OFF.
2. Disconnect ignition coil harness connector.
3. Check resistance between ignition coil terminals as follows.

Terminal No.	Resistance Ω [at 25°C (77°F)]
2 and 3	Except 0 or ∞
1 and 2	Except 0
1 and 3

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

PFP:14920

Description

EBS00OQM

SYSTEM DESCRIPTION

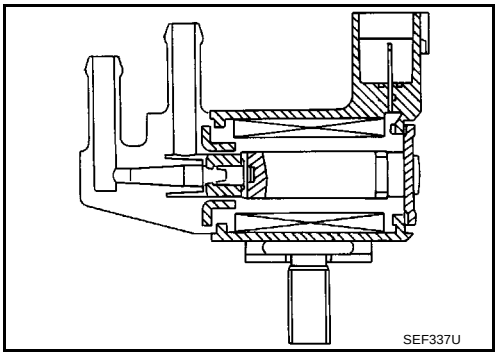
Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*1	EVAP canister purge flow control	EVAP canister purge volume control solenoid valve
Manifold absolute pressure sensor	Amount of intake air		
Engine coolant temperature sensor	Engine coolant temperature		
Battery	Battery voltage*1		
Throttle position sensor	Throttle position		
Accelerator pedal position sensor	Accelerator pedal position		
Heated oxygen sensors 1	Density of oxygen in exhaust gas (Mixture ratio feedback signal)		
Vehicle speed signal*2	Vehicle speed		

*1: ECM determines the start signal status by the signals of engine speed and battery voltage.
*2: This signal is sent to the ECM through CAN communication line.

This system controls flow rate of fuel vapor from the EVAP canister. The opening of the vapor by-pass passage in the EVAP canister purge volume control solenoid valve changes to control the flow rate. The EVAP canister purge volume control solenoid valve repeats ON/OFF operation according to the signal sent from the ECM. The opening of the valve varies for optimum engine control. The optimum value stored in the ECM is determined by considering various engine conditions. When the engine is operating, the flow rate of fuel vapor from the EVAP canister is regulated as the air flow changes.

COMPONENT DESCRIPTION

The EVAP canister purge volume control solenoid valve uses a ON/OFF duty to control the flow rate of fuel vapor from the EVAP canister. The EVAP canister purge volume control solenoid valve is moved by ON/OFF pulses from the ECM. The longer the ON pulse, the greater the amount of fuel vapor that will flow through the valve.



CONSULT-II Reference Value in Data Monitor Mode

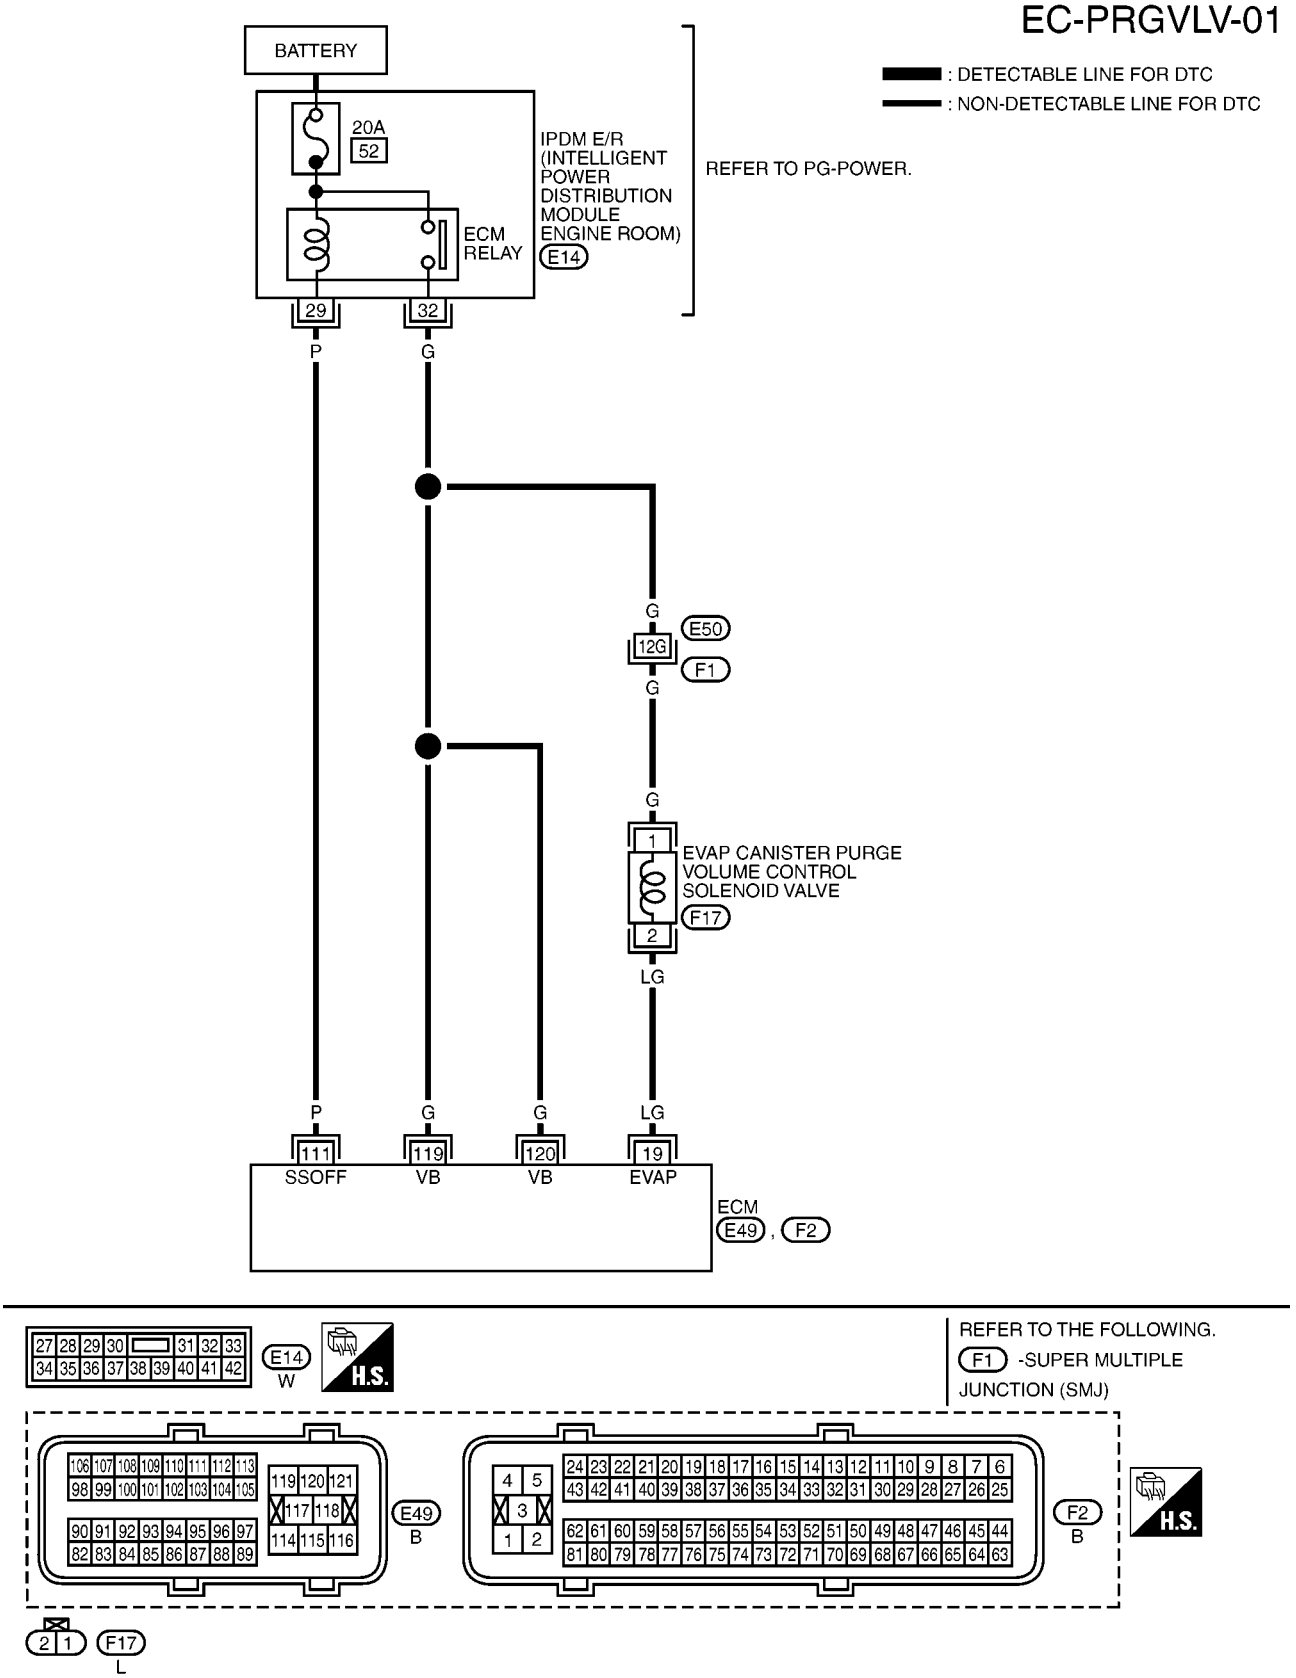
EBS00OQN

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
PURG VOL C/V	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	0%
		2,000 rpm	20 - 30%

Wiring Diagram

EBS00OQO



MBWA0578E

Specification data are reference values and are measured between each terminal and ground.
Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
19	LG	EVAP canister purge volume control solenoid valve	**[Engine is running]** ● Idle speed	BATTERY VOLTAGE (11 - 14V)★  PBIB0050E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

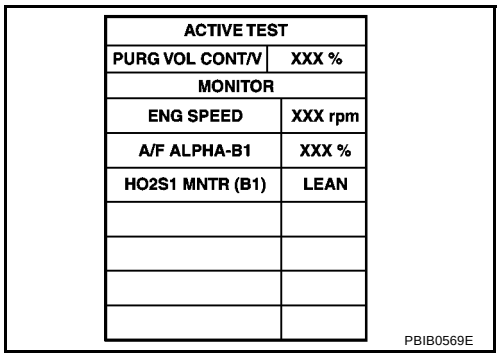
Diagnostic Procedure

EBS00OQP

1. CHECK OVERALL FUNCTION

With CONSULT-II

1. Turn ignition switch OFF.
2. Disconnect the EVAP purge hose connected to the EVAP canister.
3. Turn ignition switch ON, and select “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-II.
4. Start engine and let it idle.



5. Change the valve opening percentage with touching “Qu” or “Qd” on CONSULT-II screen, and check for vacuum existence at the EVAP purge hose under the following conditions.

Conditions (PURG VOL CONT/V value)	Vacuum
0%	Should not exist.
100%	Should exist.

Without CONSULT-II

1. Turn ignition switch OFF.
2. Disconnect the EVAP purge hose connected to the EVAP canister.
3. Start engine and let it idle for at least 80 seconds.
4. Check for vacuum existence at the EVAP purge hose under the following conditions.

Conditions	Vacuum
At idle	Should not exist.
Engine speed is about 2,000 rpm.	Should exist.

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK EVAP CANISTER

Refer to EC-843, "Component Inspection" .

OK or NG

OK >> **INSPECTION END**
NG >> Replace EVAP canister.

3. CHECK EVAP PURGE LINE

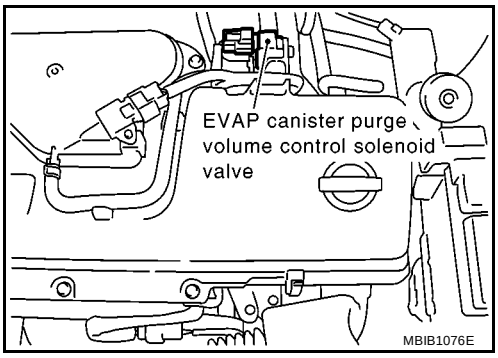
Check EVAP purge line (pipe, rubber tube, fuel tank and EVAP canister) for cracks or improper connection.
Refer to EC-840, "EVAPORATIVE EMISSION SYSTEM" .

OK or NG

OK >> GO TO 4.
NG >> Repair or reconnect the hose.

4. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect EVAP canister purge volume control solenoid valve harness connector.
3. Turn ignition switch ON.

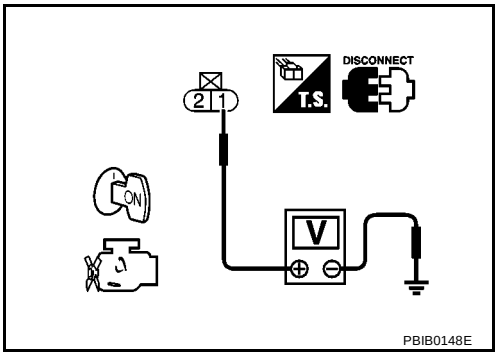


4. Check voltage between EVAP canister purge volume control solenoid valve terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.



5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- IPDM E/R harness connector E14
- Harness for open or short between EVAP canister purge volume control solenoid valve and IPDM E/R
- Harness for open or short between EVAP canister purge volume control solenoid valve and ECM

>> Repair harness or connectors.

6. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 19 and EVAP canister purge volume control solenoid valve terminal 2. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK (With CONSULT-II)>>GO TO 7.
OK (Without CONSULT-II)>>GO TO 8.
NG >> Repair open circuit or short to ground and short to power in harness or connectors.

7. CHECK EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE OPERATION

With CONSULT-II

1. Reconnect all harness connectors disconnected.
2. Start engine.
3. Perform “PURG VOL CONT/V” in “ACTIVE TEST” mode with CONSULT-II. Check that engine speed varies according to the valve opening.

OK or NG

OK >> GO TO 9.
NG >> GO TO 8.

ACTIVE TEST	
PURG VOL CONT/V	XXX %
MONITOR

EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EM-16, "AIR CLEANER AND AIR DUCT" .

VSS

PFP:32702

Description

EBS00OSW

The vehicle speed signal is sent to the combination meter from the “ABS actuator and electric unit (control unit)” through CAN communication line. The combination meter then sends a signal to the ECM through CAN communication line.

Diagnostic Procedure

EBS00OSX

1. INSPECTION START

Do you have CONSULT-II?

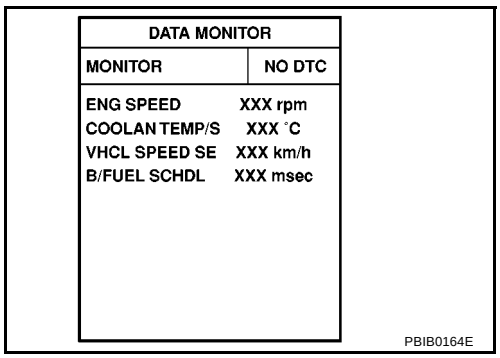
Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

2. CHECK OVERRALL FUNCTION

1. Turn ignition switch OFF.
2. Lift up the vehicle.
3. Start engine and let it idle
4. Select “VHCL SPEED SE” in“DATA MONITOR” mode with CONSULT-II.
5. Select “VHCL SPEED SE” indication when rotating wheels with suitable gear position.

“VHCL SPEED SE” indication should exceed 10km/h (6MPH).



OK or NG

OK >> **INSPECTION END**.
NG >> GO TO 3.

3. CHECK DTC

Refer to BRC-8, "TROUBLE DIAGNOSIS" (models without ESP) or BRC-61, "TROUBLE DIAGNOSIS" (models with ESP).

OK or NG

OK >> GO TO 4.
NG >> Repair or replace.

4. CHECK COMBINATION METER

Check combination meter function.
Refer to DI-5, "COMBINATION METERS" .

>> **INSPECTION END**

IVT CONTROL SOLENOID VALVE

PFP:23796

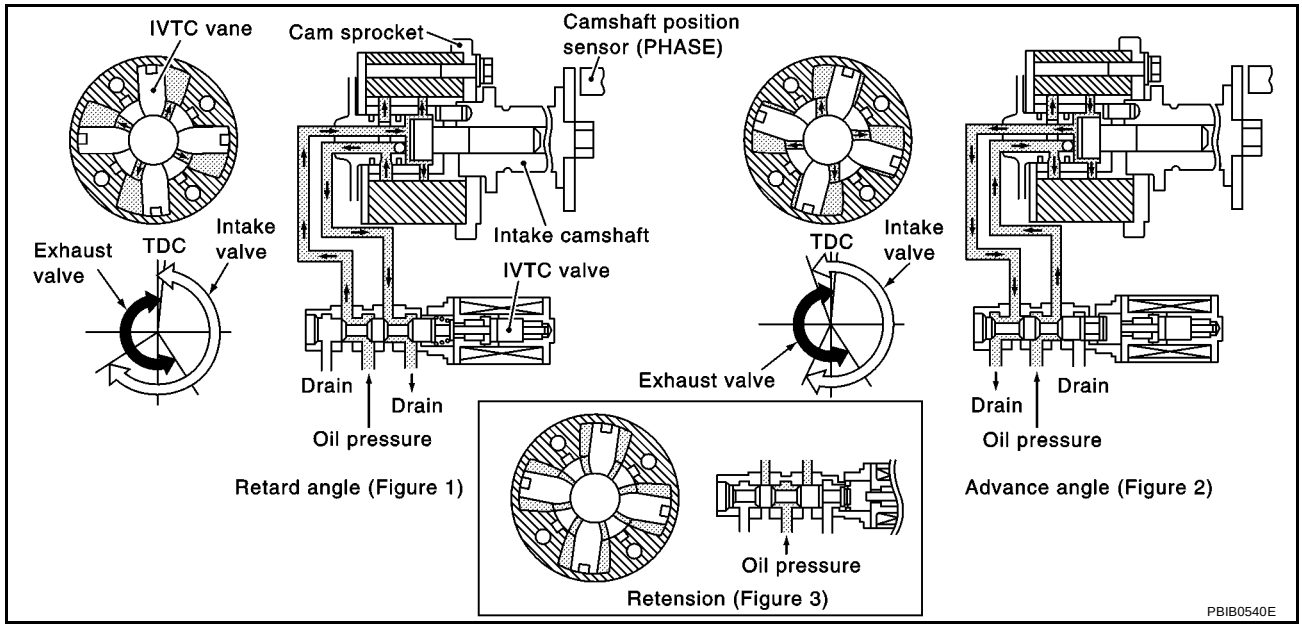
Description

EBS00OQS

SYSTEM DESCRIPTION

Sensor	Input signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS)	Engine speed	Intake valve timing control	Intake valve timing control solenoid valve
Camshaft position sensor (PHASE)			
Engine coolant temperature sensor	Engine coolant temperature		
Vehicle speed signal*	Vehicle speed		

*: This signal is sent to the ECM through CAN communication line.



This mechanism hydraulically controls cam phases continuously with the fixed operating angle of the intake valve.

The ECM receives signals such as crankshaft position, camshaft position, engine speed, and engine coolant temperature. Then, the ECM sends ON/OFF pulse duty signals to the intake valve timing control solenoid valve depending on driving status. This makes it possible to control the shut/open timing of the intake valve to increase engine torque in low/mid speed range and output in high-speed range.

COMPONENT DESCRIPTION

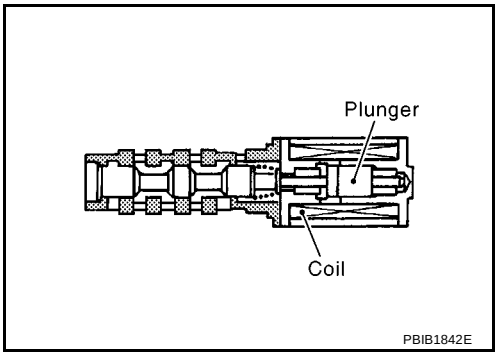
Intake valve timing control solenoid valve is activated by ON/OFF pulse duty (ratio) signals from the ECM.

The intake valve timing control solenoid valve changes the oil amount and direction of flow through intake valve timing control unit or stops oil flow.

The longer pulse width advances valve angle.

The shorter pulse width retards valve angle.

When ON and OFF pulse widths become equal, the solenoid valve stops oil pressure flow to fix the intake valve angle at the control position.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OQT

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
INT/V TIM (B1)	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	–5° - 5°CA

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. DETECT MALFUNCTIONING PARTS

Check the following.

- 10A fuse
- Harness connectors E50, F1
- IPDM E/R connector E14
- Harness for short or open between PNP switch and fuse

>> Repair or replace harness or connectors.

5. CHECK HARNESS CONTINUTY BETWEEN PNP SWITCH AND IPDM E/R

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E14.
3. Check harness continuity between IPDM E/R terminal 31 and PNP switch terminal 2 (A/T models), 3 (M/T models).

Continuity should exist.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PARTS

Check the following.

- Harness connectors E50, F1
- Harness for short or open between PNP switch and IPDM E/R

>> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK PNP SWITCH

Refer to AT-361, "COMPONENT INSPECTION" (A/T models).

OK or NG

OK >> GO TO 9.
NG >> Replace PNP switch.

8. CHECK PNP SWITCH INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E17
3. Disconnect ECM harness connector.
4. Check harness continuity between ECM terminal 102 and IPDM E/R terminal 64.

Continuity should exist.

5. Also check harness for short to ground and short to power.

OK or NG

OK >> GO OT 9.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

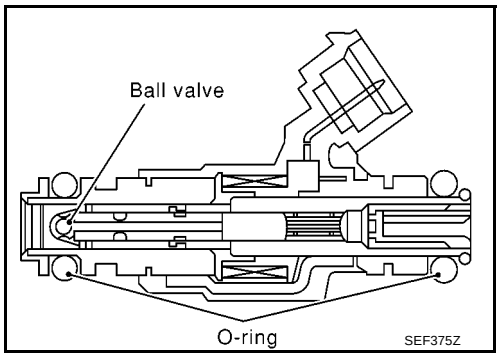
INJECTOR CIRCUIT

PFP:16600

Component Description

EBS00OR2

The fuel injector is a small, precise solenoid valve. When the ECM supplies a ground to the injector circuit, the coil in the injector is energized. The energized coil pulls the needle valve back and allows fuel to flow through the injector into the intake manifold. The amount of fuel injected depends upon the injection pulse duration. Pulse duration is the length of time the injector remains open. The ECM controls the injection pulse duration based on engine fuel needs.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OR3

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
B/FUEL SCHDL	● Engine: After warming up ● Shift lever: N (A/T models) Neutral (M/T models) ● Air conditioner switch: OFF ● No load	Idle	2.5 - 3.5 msec

Pulse signal is measured by CONSULT-II.

CAUTION:
Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
22 23 41 42	OR L R GY	Injector No. 3 Injector No. 1 Injector No. 4 Injector No. 2	**[Engine is running]** ● **Warm-up condition** ● Idle speed **NOTE:** The pulse cycle changes depending on rpm at idle.	BATTERY VOLTAGE (11 - 14V)★  PBIB0529E
			[Engine is running] ● **Warm-up condition** ● Engine speed is 2,000 rpm	BATTERY VOLTAGE (11 - 14V)★  PBIB0530E

★: Average voltage for pulse signal (Actual pulse signal can be confirmed by oscilloscope.)

Diagnostic Procedure

EBS00OR5

1. INSPECTION START

Turn ignition switch to START.
Is any cylinder ignited?

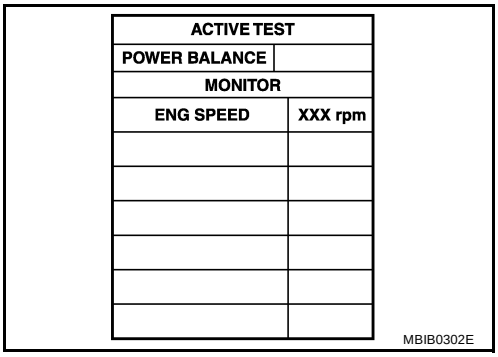
Yes or No

Yes >> GO TO 2.
No >> GO TO 3.

2. CHECK OVERALL FUNCTION

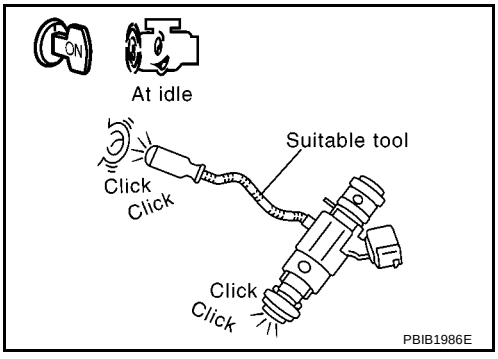
With CONSULT-II

1. Start engine.
2. Perform “POWER BALANCE” in “ACTIVE TEST” mode with CONSULT-II.
3. Make sure that each circuit produces a momentary engine speed drop.



Without CONSULT-II

1. Start engine.
2. Listen to each injector operating sound.
   Clicking noise should be heard.

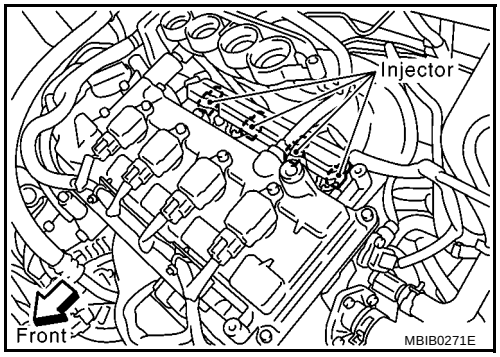


OK or NG

OK >> **INSPECTION END**
NG >> GO TO 3.

3. CHECK INJECTOR POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect injector harness connector.
3. Turn ignition switch ON.

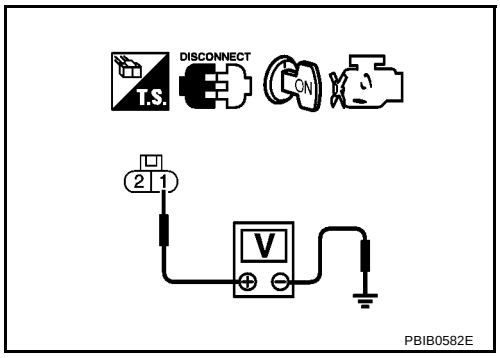


4. Check voltage between injector terminal 1 and ground with CONSULT-II or tester.

Voltage: Battery voltage

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.



4. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors F1, E50
- IPDM E/R connector E13
- 10A fuse
- Harness for open or short between injector and fuse

>> Repair harness or connectors.

5. CHECK INJECTOR OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between injector terminal 2 and ECM terminals 22, 23, 41, 42. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK INJECTOR

Refer to EC-825, "Component Inspection" .

OK or NG

OK >> GO TO 7.
NG >> Replace injector.

7. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

>> **INSPECTION END**

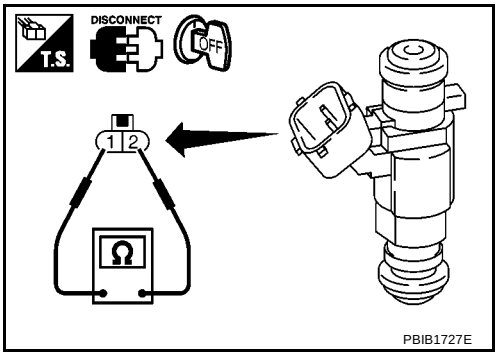
Component Inspection

EBS00OR6

INJECTOR

1. Disconnect injector harness connector.
2. Check resistance between terminals as shown in the figure.

Resistance: 12.1 - 12.9Ω [at 20°C (68°F)]



Removal and Installation

EBS00OR7

INJECTOR

Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .

FUEL PUMP CIRCUIT

PFP:17042

Description

EBS00OR8

SYSTEM DESCRIPTION

Sensor	Input Signal to ECM	ECM Function	Actuator
Crankshaft position sensor (POS) Camshaft position sensor (PHASE)	Engine speed*	Fuel pump control	Fuel pump relay
Battery	Battery voltage*		

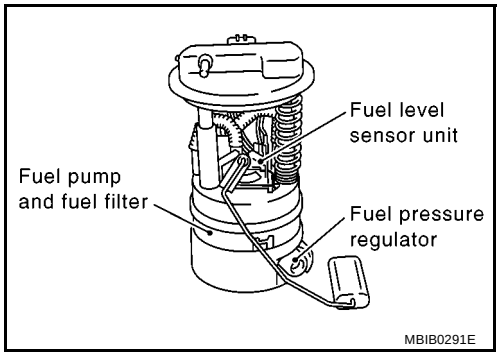
*: ECM determines the start signal status by the signals of engine speed and battery voltage.

The ECM activates the fuel pump for several seconds after the ignition switch is turned on to improve engine startability. If the ECM receives a engine speed signal from the crankshaft position sensor (POS) and camshaft position sensor (PHASE), it knows that the engine is rotating, and causes the pump to operate. If the engine speed signal is not received when the ignition switch is ON, the engine stalls. The ECM stops pump operation and prevents battery discharging, thereby improving safety. The ECM does not directly drive the fuel pump. It controls the ON/OFF fuel pump relay, which in turn controls the fuel pump.

Condition	Fuel pump operation
Ignition switch is turned to ON.	Operates for 1 second.
Engine running and cranking	Operates.
When engine is stopped	Stops in 1.5 seconds.
Except as shown above	Stops.

COMPONENT DESCRIPTION

A turbine type design fuel pump is used in the fuel tank.



CONSULT-II Reference Value in Data Monitor Mode

EBS00OR9

Specification data are reference values.

MONITOR ITEM	CONDITION	SPECIFICATION
FUEL PUMP RLY	● For 1 second after turning ignition switch ON ● Engine running or cranking	ON
	● Except above conditions	OFF

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
113	R	Fuel pump relay	**[Ignition switch ON]** ● For 1 second after turning ignition switch ON **[Engine is running]**	0 - 1.0V
			[Ignition switch ON] ● More than 1 second after turning ignition switch ON	BATTERY VOLTAGE (11 - 14V)

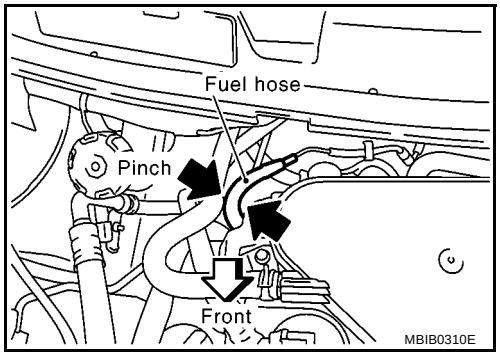
Diagnostic Procedure

SMA for VIN >SJN**AK12U1309296

EBS00ORB

1. CHECK OVERALL FUNCTION

1. Turn ignition switch ON.
2. Pinch fuel feed hose with two fingers.
   Fuel pressure pulsation should be felt on the fuel hose for 1 second after ignition switch is turned ON.



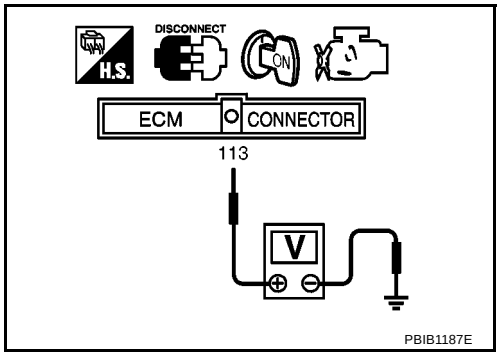
OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

2. CHECK FUEL PUMP RELAY POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Turn ignition switch ON.
4. Check voltage between ECM terminals 113 and ground with CONSULT-II or tester.

Voltage: Battery voltage



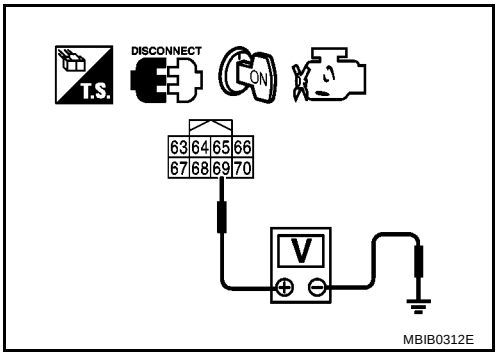
OK or NG

OK >> GO TO 5.
NG >> GO TO 3.

3. CHECK FUEL PUMP POWER SUPPLY CIRCUIT-I

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R harness connector E17.
3. Turn ignition switch ON.
4. Check voltage between IPDM E/R terminal 69 and ground with CONSULT-II or tester.

Voltage: Battery voltage



OK or NG

OK >> GO TO 4.
NG >> GO TO 9.

4. DETECT MALFUNCTIONING PART

Check the following.

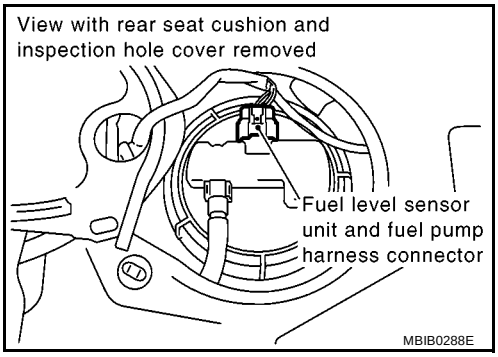
- IPDM E/R connector E17
- Harness for open or short between IPDM E/R and ECM

>> Repair harness or connectors.

5. CHECK FUEL PUMP POWER SUPPLY AND GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect “fuel level sensor unit and fuel pump” harness connector.
3. Check harness continuity between IPDM E/R connector E13 terminal 20 and “fuel level sensor unit and fuel pump” terminal 1, “fuel level sensor unit and fuel pump” terminal 3 and body ground.
   Refer to Wiring Diagram.

Continuity should exist.



4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 7.
NG >> GO TO 6.

6. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E112, B59 (Models with ESP)
- Harness connectors M1, E101 (Models without ESP)
- Harness connectors B1, M10 (Models without ESP)
- Harness for open or short between “fuel level sensor unit and fuel pump” and IPDM E/R
- Harness for open or short between “fuel level sensor unit and fuel pump” and body ground

>> Repair open circuit or short to ground or short to power in harness or connectors.

7. CHECK FUEL PUMP RELAY OUTPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Disconnect ECM harness connector.
2. Check harness continuity between ECM terminal 113 and IPDM E/R connector E17 terminal 69. Refer to Wiring Diagram.

Continuity should exist.

3. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> Repair open or short between ECM and IPDM E/R.

8. CHECK FUEL PUMP

Refer to EC-830, "Component Inspection" .

OK or NG

OK >> GO TO 9.
NG >> Replace fuel pump.

9. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace IPDM E/R
NG >> Repair or replace harness or connector
>> **INSPECTION END**

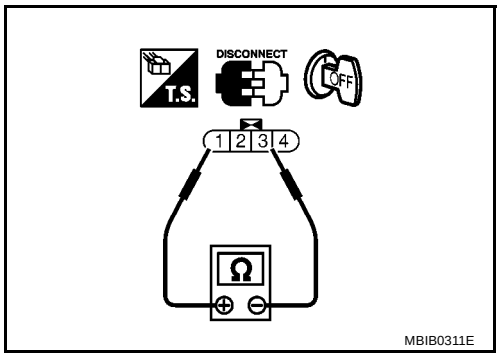
Component Inspection

EBS00ORC

FUEL PUMP

1. Disconnect “fuel level sensor unit and fuel pump” harness connector.
2. Check resistance between “fuel level sensor unit and fuel pump” terminals 1 and 3.

Resistance: Approximately 1.0Ω [at 25°C (77°F)]



MBIB0311E

Removal and Installation

EBS00ORD

FUEL PUMP

Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .

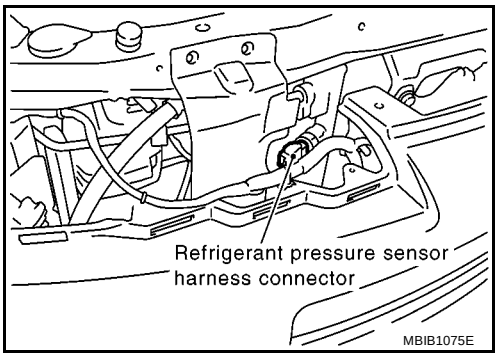
REFRIGERANT PRESSURE SENSOR

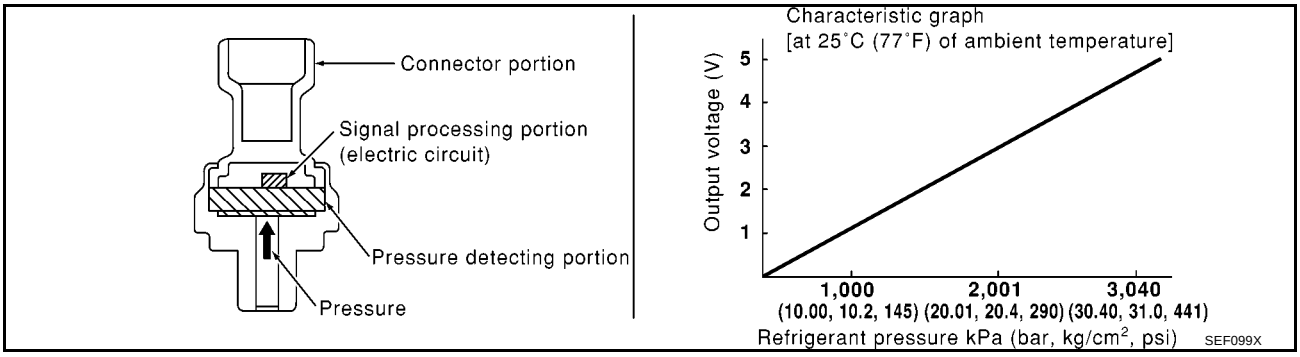
PFP:92136

Component Description

EBS00ORE

The refrigerant pressure sensor is installed at the liquid tank of the air conditioner system. The sensor uses an electrostatic volume pressure transducer to convert refrigerant pressure to voltage. The voltage signal is sent to ECM, and ECM controls cooling fan system.

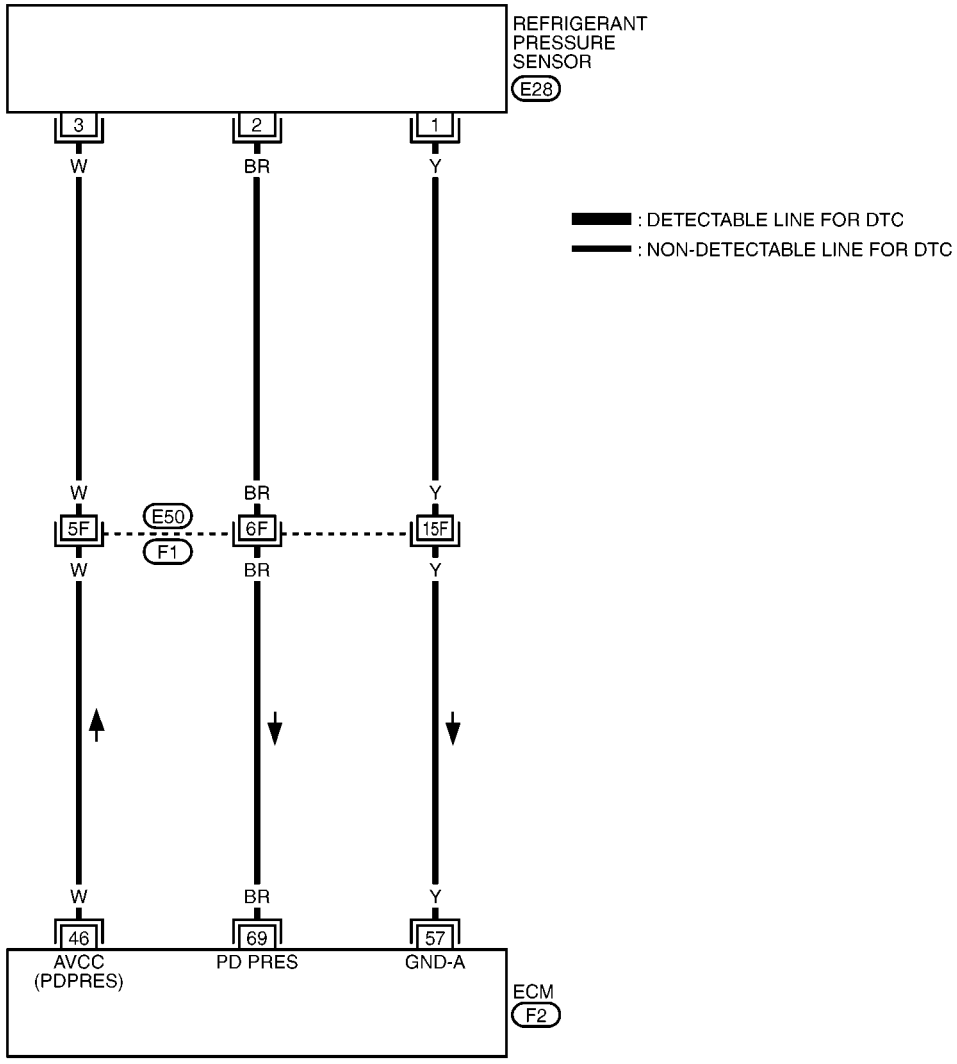


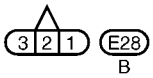


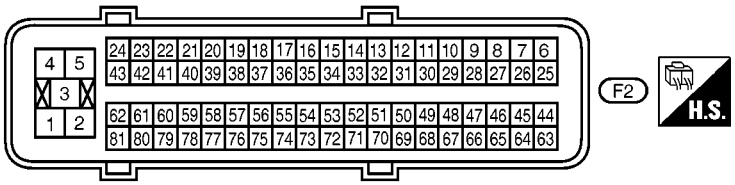
Wiring Diagram

EBS00ORF

EC-RP/SEN-01







REFER TO THE FOLLOWING.
F1 -SUPER MULTIPLE JUNCTION (SMJ)

MBWA0300E

Specification data are reference values and are measured between each terminal and ground.

CAUTION:

Do not use ECM ground terminals when measuring input/output voltage. Doing so may result in damage to the ECM's transistor. Use a ground other than ECM terminals, such as the ground.

TERMINAL NO.	WIRE COLOR	ITEM	CONDITION	DATA (DC Voltage)
57	Y	Sensor ground (Refrigerant pressure sensor)	**[Engine is running]** ● **Warm-up condition** ● Idle speed	Approximately 0V
46	W	Sensor power supply (Refrigerant pressure sensor)	**[Ignition switch ON]**	Approximately 5V
69	BR	Refrigerant pressure sensor	**[Engine is running]** ● **Warm-up condition** ● Both A/C switch and blower switch are ON. (Compressor operates.)	1.0 - 4.0V

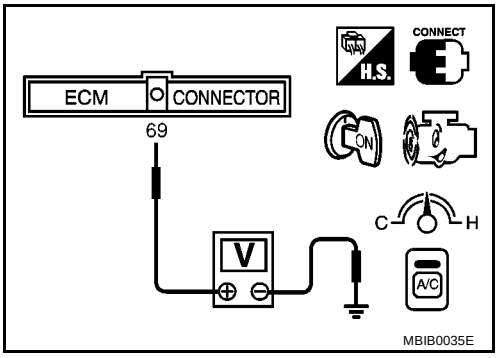
Diagnostic Procedure

EBS00ORG

1. CHECK REFRIGERANT PRESSURE SENSOR OVERALL FUNCTION

1. Start engine and warm it up to normal operating temperature.
2. Turn A/C switch and blower switch ON.
3. Check voltage between ECM terminal 69 and ground with CONSULT-II or tester.

Voltage: 1.0 - 4.0V

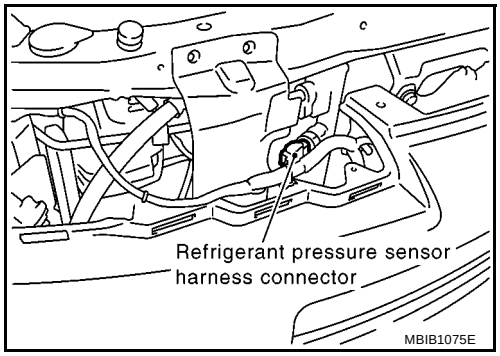


OK or NG

OK >> **INSPECTION END**
NG >> GO TO 2.

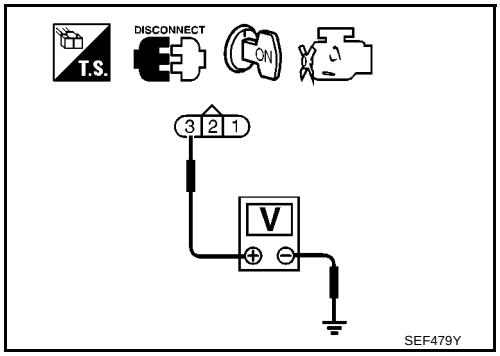
2. CHECK REFRIGERANT PRESSURE SENSOR POWER SUPPLY CIRCUIT

1. Turn A/C switch and blower switch OFF.
2. Stop engine.
3. Disconnect refrigerant pressure sensor harness connector.
4. Turn ignition switch ON.



5. Check voltage between refrigerant pressure sensor terminal 3 and ground with CONSULT-II or tester.

Voltage: Approximately 5V



OK or NG

OK >> GO TO 4.
NG >> GO TO 3.

3. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair harness or connectors.

4. CHECK REFRIGERANT PRESSURE SENSOR GROUND CIRCUIT FOR OPEN AND SHORT

1. Turn ignition switch OFF.
2. Disconnect ECM harness connector.
3. Check harness continuity between ECM terminal 57 and refrigerant pressure sensor terminal 1. Refer to Wiring Diagram.

Continuity should exist.

4. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 6.
NG >> GO TO 5.

5. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

6. CHECK REFRIGERANT PRESSURE SENSOR INPUT SIGNAL CIRCUIT FOR OPEN AND SHORT

1. Check harness continuity between ECM terminal 69 and refrigerant pressure sensor terminal 2. Refer to Wiring Diagram.

Continuity should exist.

2. Also check harness for short to ground and short to power.

OK or NG

OK >> GO TO 8.
NG >> GO TO 7.

7. DETECT MALFUNCTIONING PART

Check the following.

- Harness connectors E50, F1
- Harness for open or short between ECM and refrigerant pressure sensor

>> Repair open circuit or short to ground or short to power in harness or connectors.

8. CHECK INTERMITTENT INCIDENT

Refer to EC-566, "TROUBLE DIAGNOSIS FOR INTERMITTENT INCIDENT" .

OK or NG

OK >> Replace refrigerant pressure sensor.
NG >> Repair or replace.

Removal and Installation

EBS00ORH

REFRIGERANT PRESSURE SENSOR

Refer to ATC-84, "REFRIGERANT LINES" (Automatic air conditioner models) or MTC-61, "REFRIGERANT LINES" (Manual air conditioner models).

ELECTRICAL LOAD SIGNAL

PFP:25350

Description

EBS00ORI

The electrical load signal (Headlamp switch signal, rear window defogger switch signal, etc.) is transferred through the CAN communication line from IPDM E/R to ECM.

CONSULT-II Reference Value in Data Monitor Mode

EBS00ORJ

Specification data are reference values.

MONITOR ITEM	CONDITION		SPECIFICATION
LOAD SIGNAL	● Ignition switch: ON	Rear window defogger switch is ON and/or lighting switch is 2nd.	ON
		Rear window defogger switch is OFF and lighting switch is OFF.	OFF

Diagnostic Procedure

EBS00ORK

1. INSECTION START

Do you have CONSULT-II?

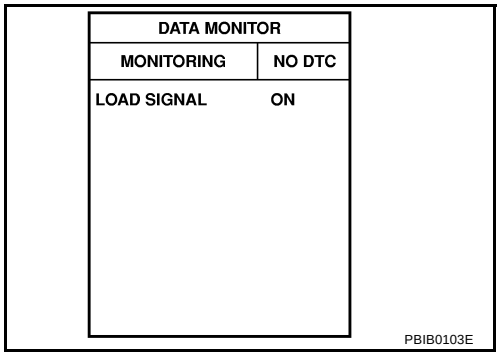
Yes or No

Yes >> GO TO 2.
No >> GO TO 6.

2. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-I

1. Turn ignition switch ON.
2. Connect CONSULT-II and select “DATA MONITOR” mode.
3. Select “LOAD SIGNAL” and check indication under the following conditions.

Condition	Indication
Rear window defogger switch ON	ON
Rear window defogger switch OFF	OFF



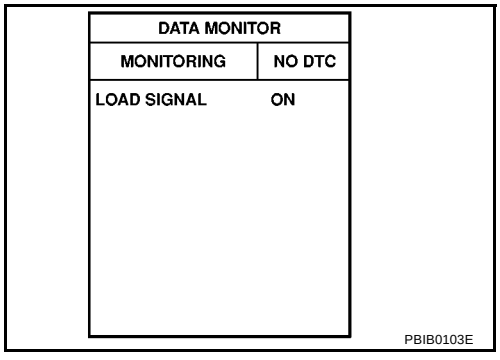
OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK LOAD SIGNAL CIRCUIT OVERALL FUNCTION-II

Check “LOAD SIGNAL” indication under the following conditions.

Condition	Indication
Lighting switch ON at 2nd position	ON
Lighting switch OFF	OFF



OK or NG

OK >> **INSPECTION END**
NG >> GO TO 5.

4. CHECK REAR WINDOW DEFOGGER SYSTEM

Refer to GW-14, "REAR WINDOW DEFOGGER" .

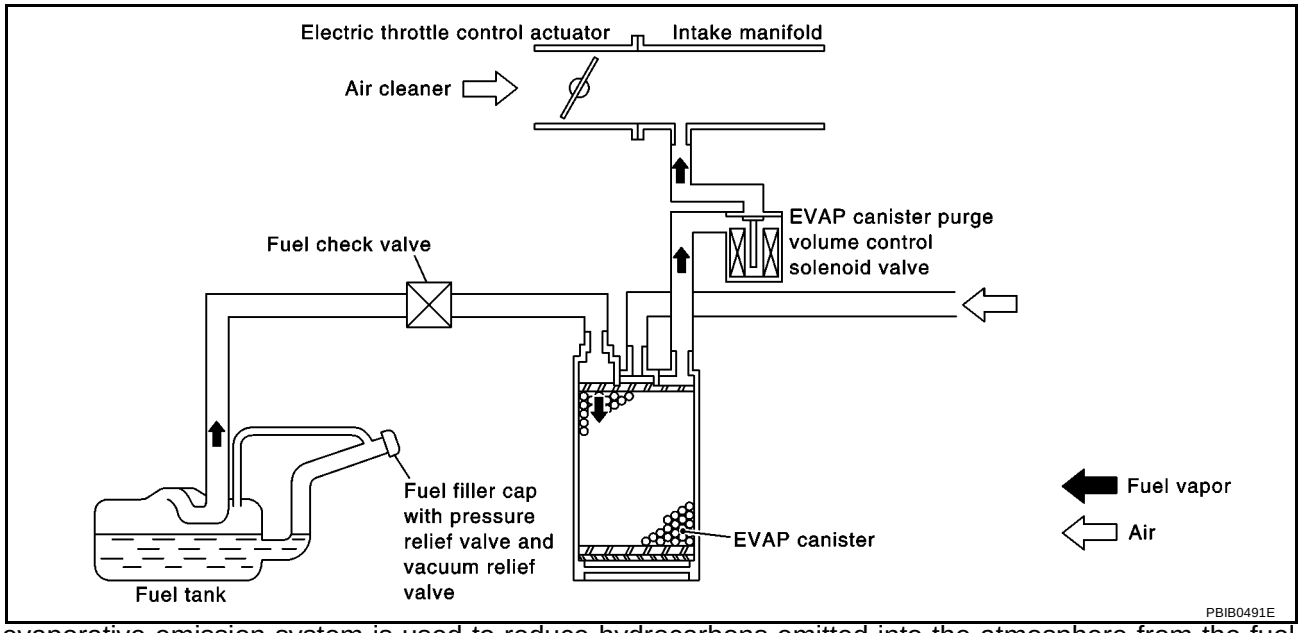
EVAPORATIVE EMISSION SYSTEM

PFP:14950

Description

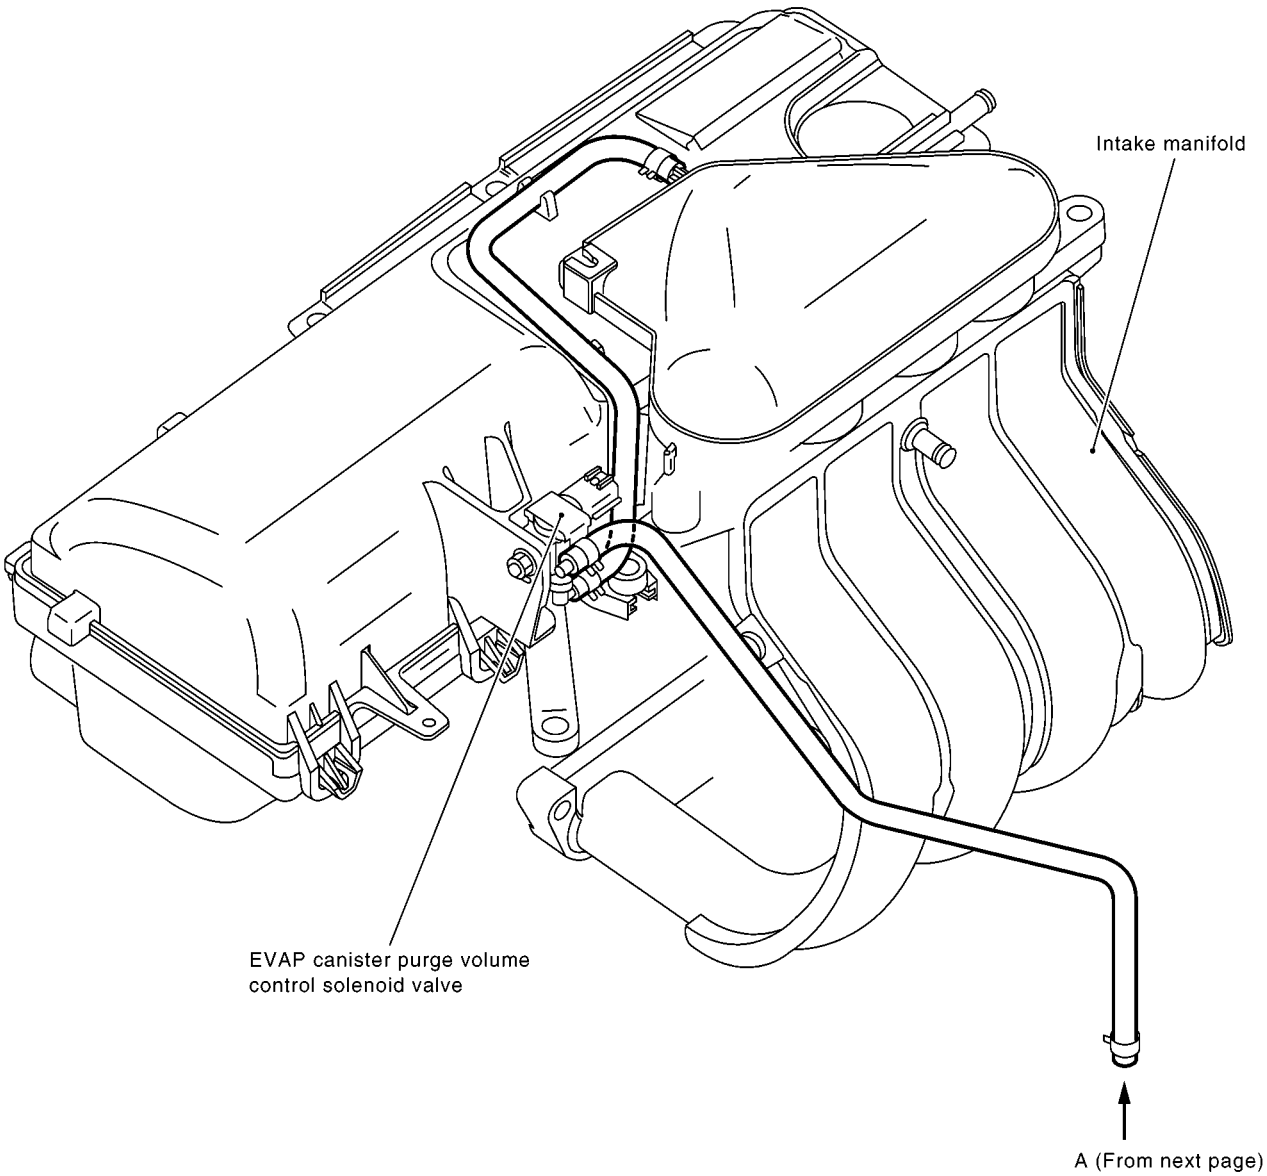
EBS00ORN

SYSTEM DESCRIPTION



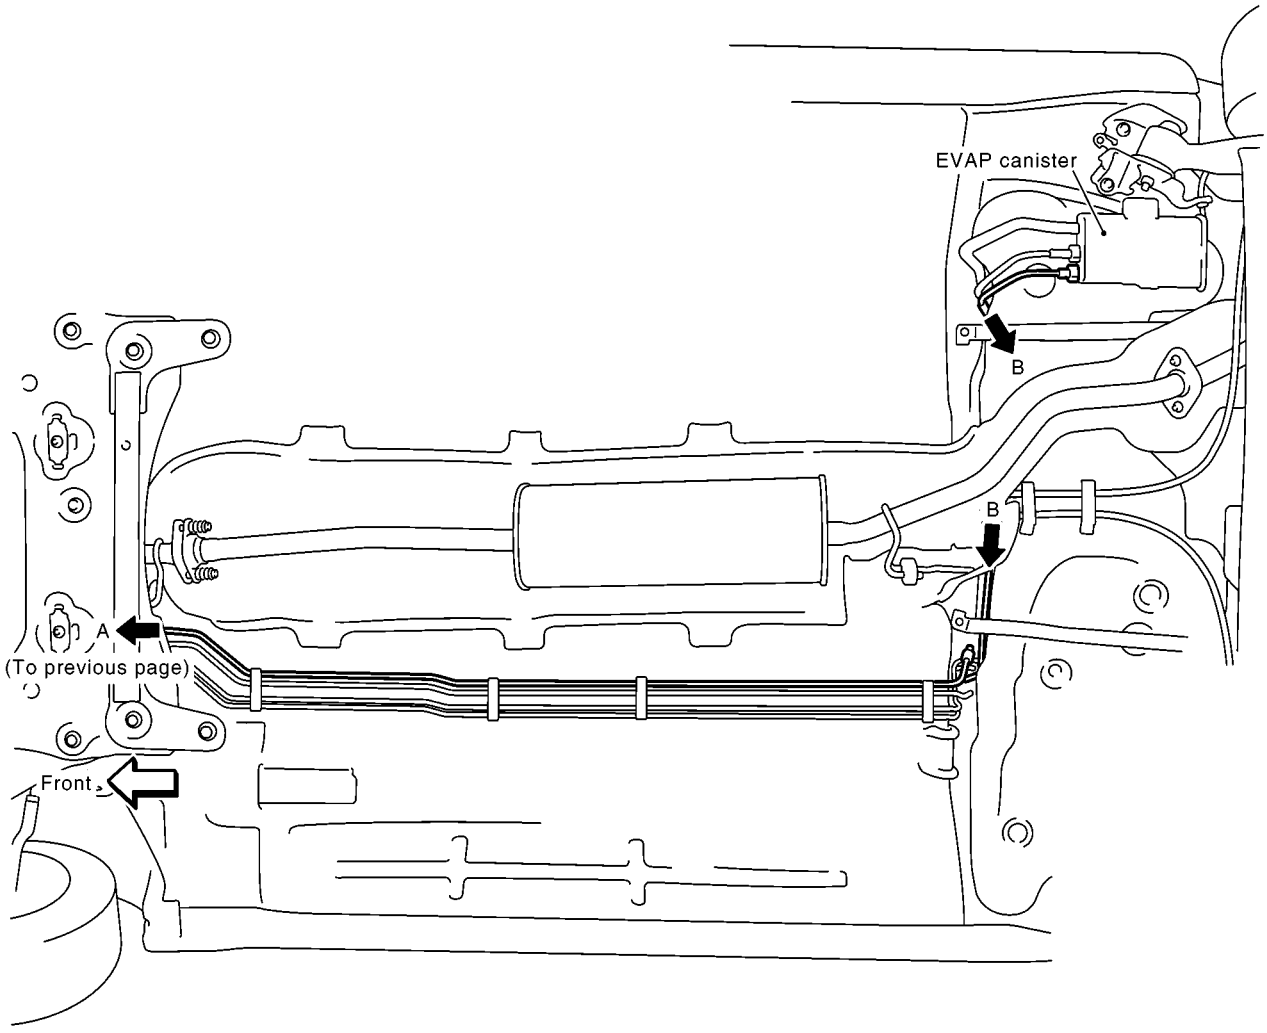
The evaporative emission system is used to reduce hydrocarbons emitted into the atmosphere from the fuel system. This reduction of hydrocarbons is accomplished by activated charcoals in the EVAP canister.
The fuel vapor in the sealed fuel tank is led into the EVAP canister which contains activated carbon and the vapor is stored there when the engine is not operating or when refueling to the fuel tank.
The vapor in the EVAP canister is purged by the air through the purge line to the intake manifold when the engine is operating. EVAP canister purge volume control solenoid valve is controlled by ECM. When the engine operates, the flow rate of vapor controlled by EVAP canister purge volume control solenoid valve is proportionally regulated as the air flow increases.
EVAP canister purge volume control solenoid valve also shuts off the vapor purge line during decelerating and idling.

EVAPORATIVE EMISSION LINE DRAWING



NOTE: Do not use soapy water or any type of solvent while installing vacuum hose or purge hoses.

MBIB0544E



MBIB0541E

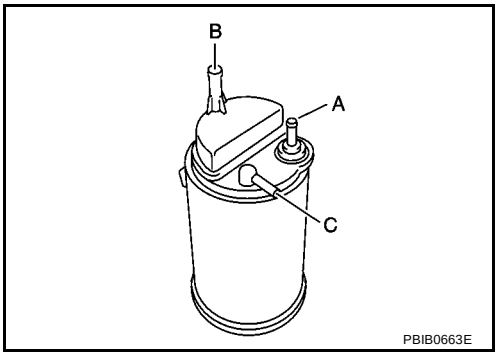
Component Inspection

EBS00ORO

EVAP CANISTER

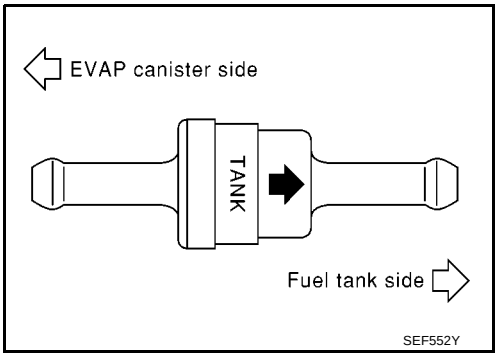
Check EVAP canister as follows:

1. Block port **B** . Orally blow air through port **A** . Check that air flows freely through port **C** .
2. Block port **A** . Orally blow air through port **B** . Check that air flows freely through port **C** .



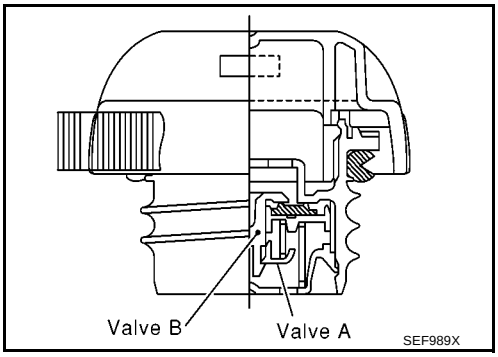
FUEL CHECK VALVE

1. Blow air through connector on fuel tank side.
   A considerable resistance should be felt and a portion of air flow should be directed toward the EVAP canister side.
2. Blow air through connector on EVAP canister side.
   Air flow should be smoothly directed toward fuel tank side.
3. If fuel check valve is suspected of not properly functioning in steps 1 and 2 above, replace it.



FUEL TANK VACUUM RELIEF VALVE (BUILT INTO FUEL FILLER CAP)

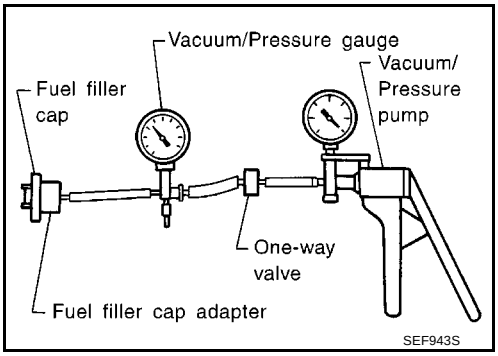
1. Wipe clean valve housing.



2. Check valve opening pressure and vacuum.

Pressure:	**15.3 - 20.0 kPa (0.153 - 0.200 bar, 0.156 - 0.204 kg/cm^2 , 2.22 - 2.90 psi)**
Vacuum:	**–6.0 to –3.4 kPa (–0.060 to –0.034 bar, –0.061 to –0.035 kg/cm^2 , –0.87 to –0.49 psi)**

3. If out of specification, replace fuel filler cap as an assembly.



EVAP CANISTER PURGE VOLUME CONTROL SOLENOID VALVE

Refer to EC-806, "Component Inspection" .

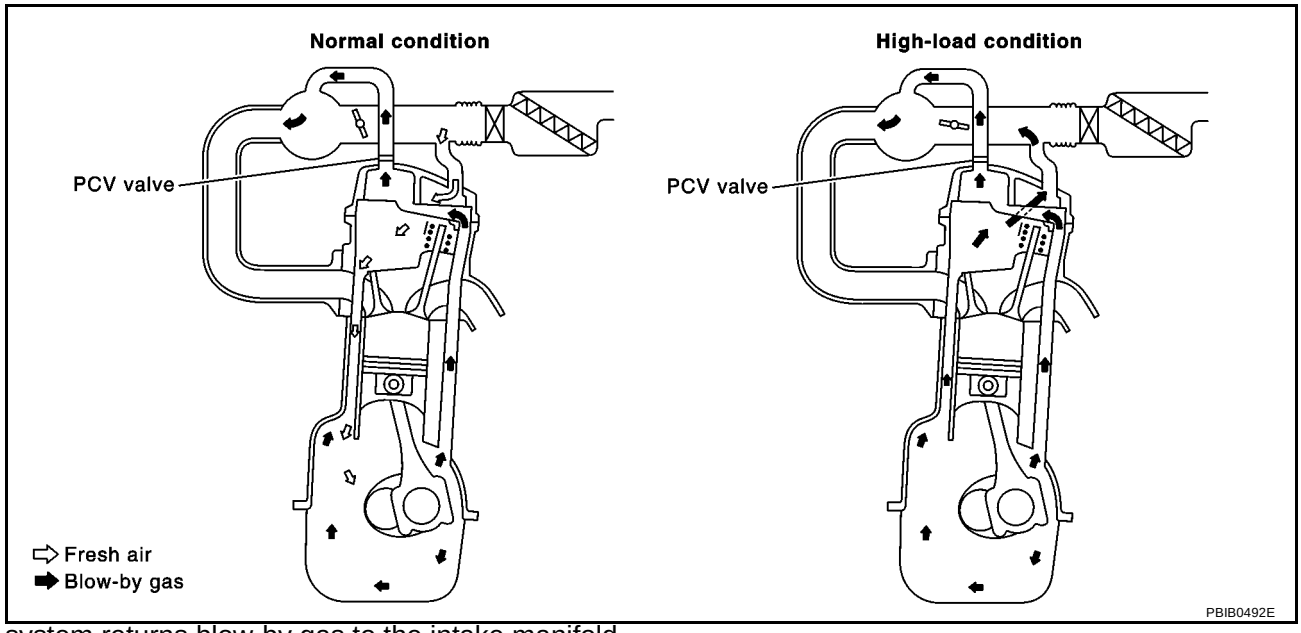
POSITIVE CRANKCASE VENTILATION

PFP:11810

Description

EBS00ORP

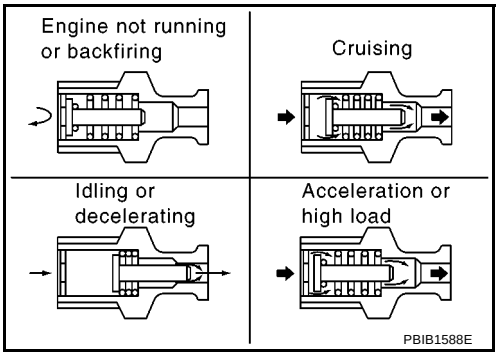
SYSTEM DESCRIPTION



This system returns blow-by gas to the intake manifold.

The positive crankcase ventilation (PCV) valve is provided to conduct crankcase blow-by gas to the intake manifold. During partial throttle operation of the engine, the intake manifold sucks the blow-by gas through the PCV valve. Normally, the capacity of the valve is sufficient to handle any blow-by and a small amount of ventilating air. The ventilating air is then drawn from the air inlet tubes into the crankcase. In this process the air passes through the hose connecting air inlet tubes to rocker cover. Under full-throttle condition, the manifold vacuum is insufficient to draw the blow-by flow through the valve. The flow goes through the hose connection in the reverse direction.

On vehicles with an excessively high blow-by, the valve does not meet the requirement. This is because some of the flow will go through the hose connection to the air inlet tubes under all conditions.

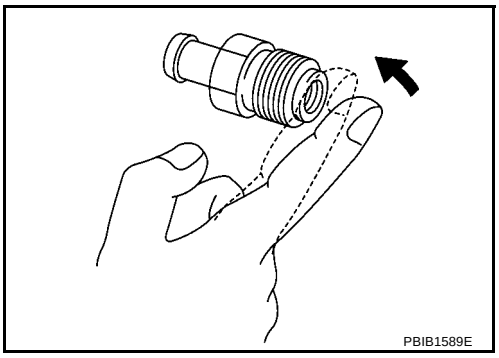


Component Inspection

EBS00ORQ

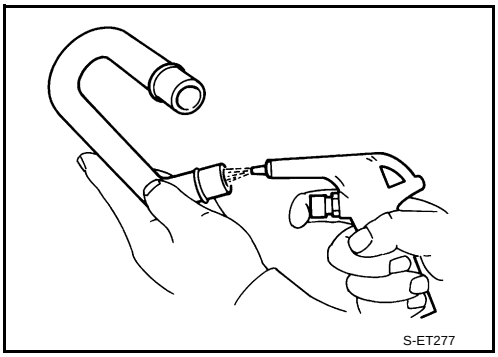
PCV (POSITIVE CRANKCASE VENTILATION) VALVE

With engine running at idle, remove PCV valve from rocker cover. A properly working valve makes a hissing noise as air passes through it. A strong vacuum should be felt immediately when a finger is placed over valve inlet.



PCV VALVE VENTILATION HOSE

1. Check hoses and hose connections for leaks.
2. Disconnect all hoses and clean with compressed air. If any hose cannot be freed of obstructions, replace.



SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Fuel Pressure

EBS00ORR

Fuel pressure at idle	Approximately 350 kPa (3.5bar, 3.57kg/cm^2 , 51psi)

Idle Speed and Ignition Timing

EBS00ORS

Target idle speed	No load*1 (in P or N position)	M/T: 650±50 rpm A/T: 700±50 rpm
Ignition timing	In P or N position	5°±2° BTDC

*1: Under the following conditions:

- Air conditioner switch: OFF
- Electric load: OFF (Lights, heater fan & rear window defogger)
- Steering wheel: Kept in straight-ahead position

Calculated Load Value

EBS00ORT

Condition	Calculated load value% (Using CONSULT-II)
At idle	10 - 35
At 2,500 rpm	10 - 35

Manifold absolute pressure sensor

EBS00ORU

Supply voltage	Approximately 5.0V
Output voltage at idle	1.4 - 1.5V*

*: Engine is warmed up to normal operating temperature and running under no-load.

DIESEL EQUIPMENT
Cleanliness

CLEANLINESS INSTRUCTIONS WHICH MUST BE FOLLOWED WHEN WORKING ON THE HIGH PRESSURE DIRECT INJECTION SYSTEM

Risks relating to contamination

The system is very sensitive to contamination. The risks caused by the introduction of contamination are:
– damage or destruction of the high pressure injection system and the engine,
– seizing or leaking of a component.

All After-Sales operations must be performed under very clean conditions. This means that no impurities (particles a few microns in size) get into the system during dismantling or into the circuits via the fuel unions.

The cleanliness principle must be applied from the filter to the injectors.

WHAT ARE THE SOURCES OF CONTAMINATION?

Contamination is caused by:
– metal or plastic chips,
– paint,
– fibres:
  - boxes,
  - brushes,
  - paper,
  - clothing,
  - cloths,
– foreign bodies such as hair,
– ambient air,
– etc.

IMPORTANT: It is not possible to clean the engine using a high pressure washer because of the risk of damaging connections. In addition, moisture may collect in the connectors and create electrical connection problems.

INSTRUCTIONS TO BE FOLLOWED BEFORE ANY WORK IS CARRIED OUT ON THE INJECTION SYSTEM

- Ensure that you have the plugs for the unions to be opened (bag of plugs sold at the Parts Stores - Nissan part No.: 16830 BN700, Renault part No.: 77 01 206 804). Plugs are to be used once only. After use, they must be thrown away (once used they are soiled and cleaning is not sufficient to make them reusable). Unused plugs must be thrown away.

- Ensure that you have hermetically resealable plastic bags for storing removed parts. Stored parts will therefore be less subject to the risk of impurities. The bags must be used only once, and after use they must be thrown away.

- Lint-free towelettes to be used for injection pump related service purpose. The use of a normal cloth or paper for cleaning purposes is forbidden. These are not lint-free and may contaminate the fuel circuit of the system. Each lint-free cloth should only be used once.

INSTRUCTIONS TO BE FOLLOWED BEFORE OPENING THE FUEL CIRCUIT

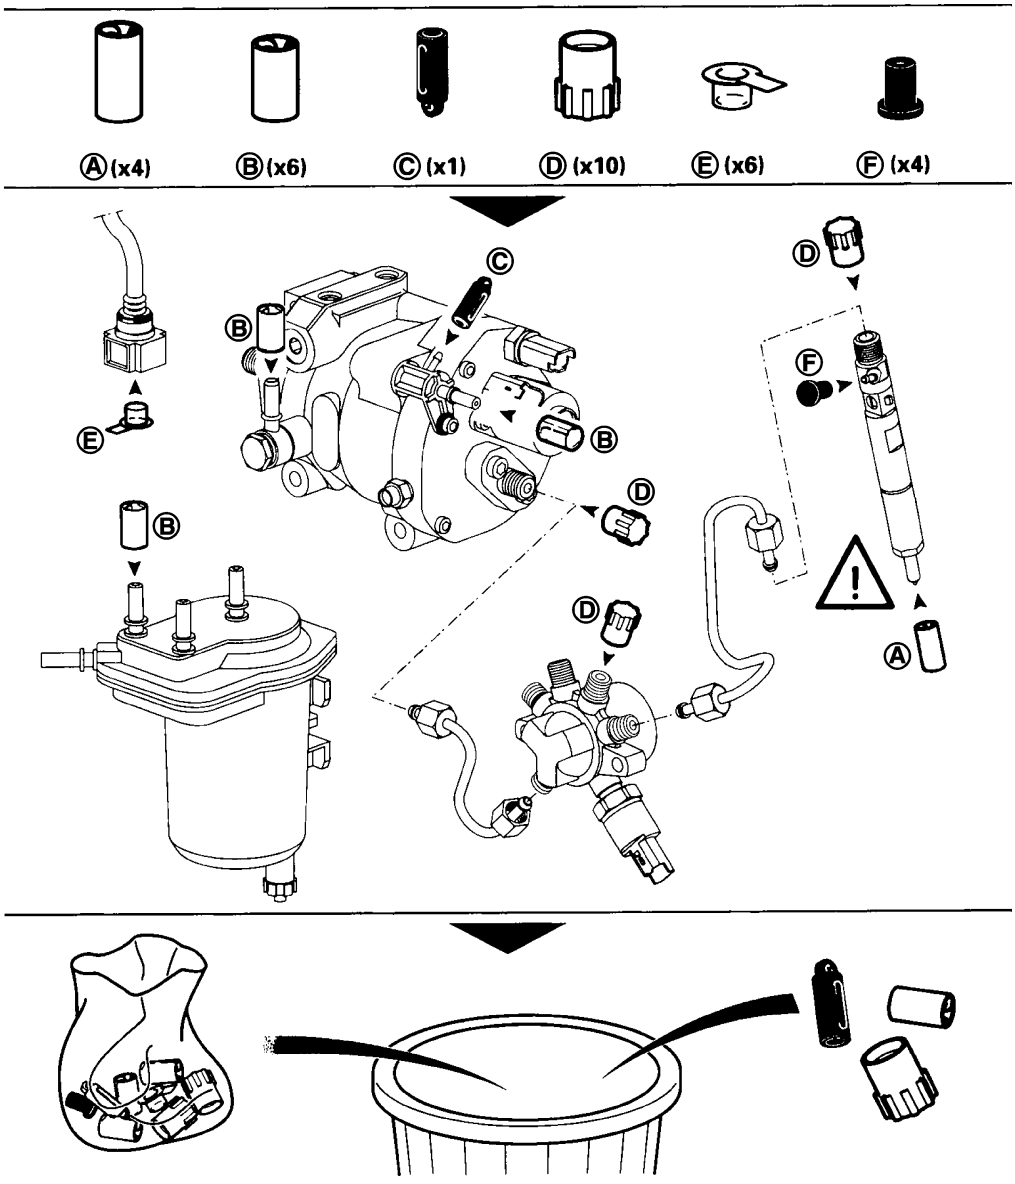
- For each operation, use new thinner (used thinner contains impurities). Pour it into a clean receptacle.
- For each operation, use a clean brush which is in good condition (the brush must not shed its bristles).
- Use a brush and thinners to clean the connections to be opened.
- Blow compressed air over the cleaned parts (tools, cleaned the same way as the parts, connections and injection system zone). Check that no bristles remain adhered.
- Wash your hands before and during the operation if necessary.
- When wearing leather protective gloves, cover these with latex gloves.

INSTRUCTIONS TO BE FOLLOWED DURING THE OPERATION

- As soon as the circuit is open, all openings must be plugged to prevent impurities from entering the system. The plugs to be used are available from the Parts Stores - Nissan part No.: 16830 BN700, Renault part No.: 77 01 206 804. They must not, under any circumstances, be reused.
- Close the hermetically sealed bag, even if it has to be reopened shortly afterwards. Ambient air carries contamination.
- All components of the injection system that are removed must be stored in a hermetically sealed plastic bag once the plugs have been inserted.
- The use of a brush, thinner, bellows, sponge or normal cloth is strictly forbidden once the circuit has been opened. These items are likely to allow impurities to enter the system.
- A new component replacing an old one must not be removed from its packaging until it is to be fitted to the vehicle.

Instructions For Fitting The Plugs

Nissan part number: 16830 BN700
(Renault part number: 77 01 206 804)



MBIB0321E

CAUTION:

- **The engine must not run with:**
  - **Diesel containing more than 10% diester**
  - **Petrol, even in very small amounts.**
- **The system can inject the diesel into the engine at a pressure of up to 140,000 kPa (1,400 bar, 1,428 kg/cm^2, 20,300 psi). Before carrying out any work, check that the injector rail is no longer pressurized and that the fuel temperature is not too high.**
- **You must respect the cleaning and safety advice specified in this document for any work on the high pressure injection system.**

The high pressure injection system is intended to deliver a specific quantity of diesel to the engine at a specific time.

DESCRIPTION

- **DELPHI and type "DDCR"** injection controlling **112 terminals** ECM.

- The system consists of:
– a priming pump on the low pressure circuit,
– a diesel fuel filter,
– a high pressure pump incorporating a low pressure pump (transfer pump),
– a flow actuator attached to the pump,
– an injector rail,
– a pressure sensor located in the rail,
– four solenoid injectors,
– a fuel temperature sensor,
– an engine coolant temperature sensor,
– an intake (upstream) air temperature sensor,
– a camshaft position sensor (cylinder reference sensor),
– a turbocharger air pressure sensor,
– a knock sensor (accelerometer),
– an EGR solenoid valve,
– an accelerator pedal potentiometer,
– and an ECM.

- The "common rail" direct high pressure injection system works sequentially (based on the operation of multipoint injection for petrol engines).

- This new injection system reduces operating noise, reduces the volume of pollutant gases and particles and produces high engine torque at low engine speeds thanks to a pre-injection procedure.

- The high pressure pump generates the high pressure sent to the injector rail. The flow actuator on the pump controls the quantity of diesel engine fuel supplied according to the demand determined by the ECM. The rail supplies each injector through a steel pipe.

- The ECM:
  - determines the value of injection pressure necessary for the engine to operate well and then controls the pressure regulator. It checks that the pressure value is correct by analysing the value transmitted by the pressure sensor located on the rail,
  - determines the injection time necessary to deliver the right quantity of diesel and the moment when injection should be started,
  - controls each injector electrically and individually after determining these two values.

- The injected flow to the engine is determined by:
  - the duration of injector control,
  - the injector opening and closing speed,
  - the needle travel (determined by a constant for the type of injector),
  - the nominal hydraulic flow of the injector (unique to each injector),
  - the high pressure rail pressure controlled by the ECM.

- The ECM controls:
  - the idle speed adjustment,
  - the exhaust gas flow reinjected into the inlet,
  - the fuel supply control (advance, flow and rail pressure),
  - the cooling fan control,
  - the heat adjustment of the coolant circuit (thermoplungers),
  - the glow plug (pre/post heating) control.

- The high pressure pump is supplied at low pressure by an integrated low pressure pump (transfer pump). It supplies the rail whose pressure is controlled for charge by the flow actuator and for discharging by the injector valves. Falls in pressure can be compensated for in this way. The flow actuator allows the high pressure pump to provide just the amount of diesel fuel necessary to maintain the pressure in the rail. Thanks to this element, heat generation is minimised and engine output improved.
  In order to discharge the rail using the injector valves, the valves are controlled by short electrical impulses:
  - short enough not to open the injector, (through the return circuit from the injectors),
  - long enough to open the valves and discharge the rail.

- The ECM controls the cooling fans and the coolant temperature warning light on the instrument panel.

IMPORTANT

- **The engine must not operate with:**
  – **diesel engine fuel containing more than 10% diester,**
  – **petrol, even in tiny quantities.**

- **The system can inject the diesel into the engine at a pressure up to 1400 bars. Before carrying out any work, check that the injector rail is not under pressure and that the fuel temperature is not too high.**

- **You must respect the cleaning and safety advice specified in this document for any work on the high pressure injection system.**

- **Removal of the interior of the pump and injectors is prohibited. Only the flow actuator, the fuel temperature sensor and the venturi can be replaced.**

- **For safety reasons, it is strictly forbidden to slacken a high pressure pipe union when the engine is running.**

- **It is not possible to remove the pressure sensor from the fuel rail because this may cause circuit contamination problems. If the pressure sensor fails, the pressure sensor, the rail and the five high pressure pipes must be replaced.**

- **It is strictly forbidden to remove any injection pump pulley marked number 070 575. If the pump is being replaced, the pulley must be replaced.**

- **It is forbidden to repair the wiring connecting the knock sensor (accelerometer) and the CKP sensor (engine speed sensor). If the wiring should fail, it has to be replaced with new wiring.**

- **Applying 12 volts directly to any component in the system is prohibited.**

- **Ultrasonic carbon removal and cleaning are prohibited.**

- **Never start the engine without the battery being connected correctly.**

- **Disconnect the injection system ECM when carrying out any welding work on the vehicle.**

- **It is essential to replace all the disconnected air inlet plastic pipes.**

There is a 16 digit code on the injectors called individual injector correction. This code is specific to each injector, and takes into account differences in manufacture and specifies the flow injected by each of them.

When an injector is replaced, it is necessary to program the code of the new injector into the ECM.

When an ECM is replaced, it is necessary to program the codes of the four injectors.

<u>There are two possibilities:</u>

- **If it is possible to communicate with the ECM:**
  - **read out the data from the ECM using the "SAVE DATA FOR REPLACE" in "WORK SUPPORT" mode with CONSULT-II**
  - **turn ignition switch OFF.**
  - **remove battery negative cable.**
  - **change the ECM**
  - **reprogram the data from the "WRITE DATA AFTER REPLACE" in "WORK SUPPORT" mode with CONSULT-II to the replaced ECM**
  - **after replacement, ensure that the ECM has not detected malfunctions relating to the injector codes and check that the instrument panel warning light is off.**

- **If it is not possible to communicate with the ECM:**
  - **turn ignition switch OFF.**
  - **remove battery negative cable.**
  - **change the ECM**
  - **read the data on the injectors**
    Refer to EC-K9K-39 for individual injector correction value location.
  - **enter the data in the ECM using the "ENTER INJCTR CALIB DATA" in "WORK SUPPORT" mode with CONSULT-II manually**
  - **reconfigure the different elements such as the power-assisted steering pump assembly and the thermoplungers etc.**
  - **using CONSULT-II, ensure that the ECM has not detected malfunctions relating to the injector codes and check that the instrument panel warning light is off.**

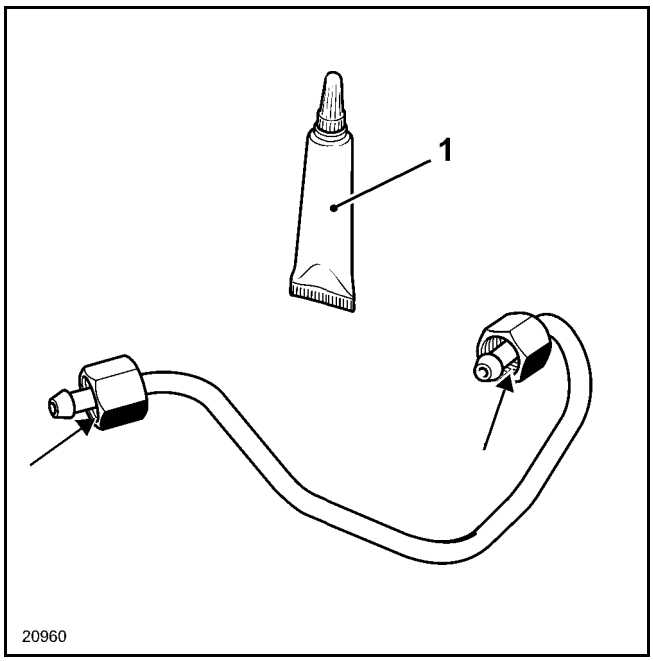
All the high pressure pipe removed must be systematically replaced along with the clips.

TIGHTENING THE HIGH PRESSURE PIPES

NOTE: fit the pump/rail pipe before the rail/injector pipes.

Rail-pump pipe

– Undo the rail,
– Grease the threads of the high pressure pipe nuts,
– Insert the high pressure pipe olive into the taper of the high pressure pump outlet,
– Insert the high pressure pipe olive into the taper of the high pressure rail inlet.
– Move the nut into position by hand, on the rail side then the pump side,
– Tighten the rail,
– Tighten the high pressure pipe nuts on the rail side then on the pump side.



Rail/injector pipes

– Undo the rail,
– Grease the threads of the high pressure pipe nuts,
– Insert the high pressure pipe olive into the taper of the high pressure injector inlet,
– Insert the high pressure pipe olive into the taper of the high pressure rail outlet,
– Move the nuts into position by hand, on the injector side then the rail side,
– Tighten the rail,
– Ensure that the new clip, supplied with the new high pressure pipe, is fitted,
– Tighten the nuts of the high pressure pipes on the injector side first and then on the fuel rail side.

NOTE: Before fitting a new high pressure pipe, move back the nuts on the pipe then lightly lubricate the nut threads with the oil from the sachet (1) provided in the parts kit.

CHECKING SEALING AFTER REPAIR

After any operation, check that there are no diesel leaks.

Reprime the circuit using the priming pump.

Start the engine and allow to warm up at idle speed, visually inspecting for any fuel leaks.

Apply tracing fluid around the high pressure connections of the pipe that has been replaced.

Once the engine coolant temperature is above **50°C** and provided there are no malfunctions present, carry out a road test, taking the engine speed up to **4000 rpm** at least once to check that there are no leaks.

Perform a visual inspection after the road test to make sure that there are no high pressure leaks.

Clean off the tracing fluid.

REPLACING THE ECM

The system can be reprogrammed using CONSULT-II.

Before an ECM is replaced in after-sales, the following must be done.

- Check the individual correction value from "WORK SUPPORT" mode using print out function of CONSULT-II.
- After replacing ECM, enter each injector's individual correction value using "WORK SUPPORT" mode with CONSULT-II.
- Also set the system configuration using "CONFIGURATION" mode with CONSULT-II.

REPLACING THE INJECTORS

NOTE: Individual injector correction is a factory calibration carried out on each injector to adjust the flow of each one precisely, taking into account differences in manufacture.

The correction values are written on a label affixed to each injector then entered in the ECM which can then control each injector by taking account of their differences in manufacture.

The system can be programmed "WORK SUPPORT" mode with CONSULT-II.

The correction values (16 digit code) must be replaced after replacing an injector. (Refer to special features)

- **Entering each injector's individual correction value**, when replacing the ECM.

DESCRIPTION	MARQUE/TYPE	SPECIAL NOTES
High pressure pump	DELPHI	0 to 1400 bars continuous pressure
Fuel pump	DELPHI	Incorporated into the high pressure pump
Common rail fuel pressure sensor	DELPHI	Incorporated into the rail Non measurable resistance
Injectors	DELPHI	Solenoid injector Maximum pressure **1400 bar** Non measurable resistance
Diesel flow actuator	DELPHI	Located on the high pressure pump Resistance: **5.3 ± 0.5 Ω at 20ºC**
ECM	DELPHI	ECM (computer) (112 terminals)
Pre/postheating unit (glow)	NAGARES BED 7-12	With pre-postheating function controlled by the ECM (computer)
Pre-heater plugs (glow)	BERU	Resistance: **Less than 1 Ω** connector disconnected
Accelerator pedal potentiometer (APP sensor)	CTS	Double track potentiometer Resistance: – terminals 1: 4 (earth) and 6 (+5 V): **1.7 ± 0.9 kΩ** – terminals 2: 5 (earth) and 3 (+5 V): **2.85 ± 2.0 kΩ**
Intake air temperature sensors	JAEGER	CTN thermistor Resistance: **5000 ± 6800 Ω at - 40°C** **9500 ± 900 Ω at - 10°C** **2051 ± 120 Ω at 25°C** **810 ± 47 Ω at 50°C** **310 ± 17 Ω at 80°C**

DESCRIPTION	MARQUE/TYPE	SPECIAL NOTES
Fuel temperature sensor	DELPHI	Located on the high pressure pump CTN thermistor Resistance: **2.2 kΩ at 25°C**
Engine coolant temperature sensor	ELTH	CTN thermistor Resistance: **76000 ± 7000 Ω at - 40°C** **12500 ± 1130 Ω at - 10°C** **2252 ± 112 Ω at 25°C** **810 ± 40 Ω at 50°C** **280 ± 8 Ω at 80°C** **115 ± 3 Ω at 110°C** **88 ± 2 Ω at 120°C**
Crankshaft position (Engine speed) sensor	MGI	Variable reluctance sensor Resistance: **760 Ω**
Atmospheric pressure sensor	DELPHI	Built into the computer
Charge air (Turbocharger) pressure sensor	DELCO ELECTRONICS	Resistance: – terminals A and B: **9 kΩ** – terminals A and C: **4 kΩ** – terminals B and C: **5 kΩ**  *DI1330*
Camshaft position sensor	SAGEM	Hall effect sensor
Knock sensor (accelerometer)	SAGEM	Non measurable resistance
Turbocharging air temperature and pressure sensor	BOSCH / LDF6T 20-250	Pressure sensor with a negative temperature coefficient thermistor Supply voltage **+5V** Resistance between terminals 1 and 2: – **20,376 Ω ± 1110.5 at −25°C** – **15,614 Ω ± 829 at −20°C** – **9426 Ω ± 475 at −10°C** – **5887 Ω ± 281.5 at 0°C** – **3791 Ω ± 172.5 at 10°C** – **2511 Ω ± 109 at 20°C** – **1715.5 Ω ± 71 at 30°C** – **1200 Ω ± 47 at 40°C** – **851 Ω ± 32 at 50°C** – **612 Ω ± 22 at 60°C** – **446 Ω ± 15 at 70°C** – **330 Ω ± 11 at 80°C** 4-track connector: – 1: earth – 2: air temperature sensor signal – 3: **+5V** supply – 4: pressure sensor signal

DESCRIPTION	MARQUE/TYPE	SPECIAL NOTES
EGR solenoid valve EGR valve position potentiometer	PIERBURG	Resistance: – terminals 4 and 6: **8 ± 0.5 Ω at 25°C** Incorporated into the EGR solenoid valve Resistance: – terminals 2 and 3: **1 ± 0.5 kΩ at 20°C** – terminals 1 and 2: **4 ± 1.6 kΩ at 20°C**

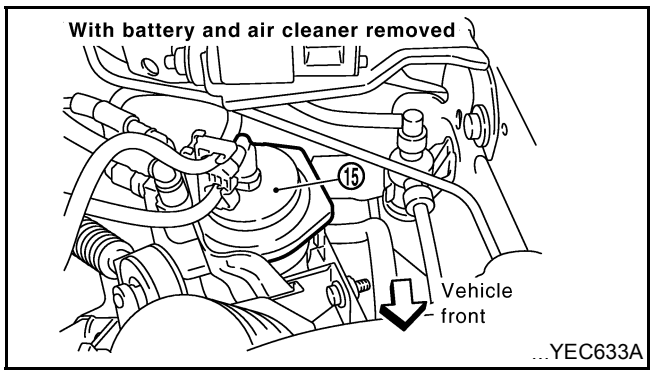
IMPORTANT: Before carrying out any work, wait for the fuel temperature to drop.

REMOVAL - REFITTING

Disconnect the battery.

Remove fuel filter:

RHD models
After removing battery and air cleaner
15Fuel filter (RHD models)



LHD models
After removing front wipers, cowl top cover, front wiper motor assembly and cowl top panel/tray.

Release the diesel fuel filter from its support.

Fit the new diesel fuel filter (do not remove the plugs until the last moment).

Disconnect all the snap fasteners beginning with the three vertical snap fasteners. Prevent the snap fasteners from coming into contact with the environment.

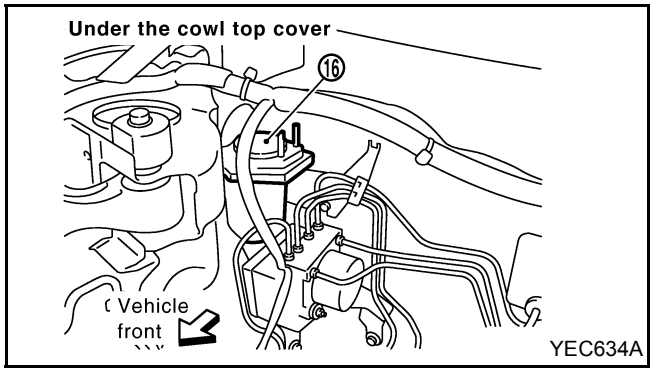
Disconnect the pump outlet snap fastener last of all; reconnect it immediately when the new filter is installed.

Reconnect the other snap fasteners.

Prime the system using the priming bulb (automatic degassing).

Reconnect the battery.

16Fuel filter (LHD models)



IMPORTANT: It is strictly forbidden to remove any injection pump pulley marked number 070 575. If the pump is being replaced, the pulley must be replaced.

SPECIAL TOOLING REQUIRED	
Nissan No. KV113E0010 (Mot. 1566)	Tool for removing and refitting high pressure pipes

EQUIPMENT REQUIRED

Low torque wrench

High pressure pipe wrench (for example, Facom "DM19" wrench).

Pipe socket for tightening the injector-rail high pressure pipes (for example, Facom Crowfoot 18-17 wrench).

Pipe socket for tightening the pump-rail high pressure pipe (for example, Facom Crowfoot 19-17 wrench).

TIGHTENING TORQUES (in daNm)	
High pressure pipe nuts	3.8
Rail nuts	2.8 ± 0.3
Filler neck nut on the rail	2.1
High pressure pump mounting bolts	2.1 ± 2

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

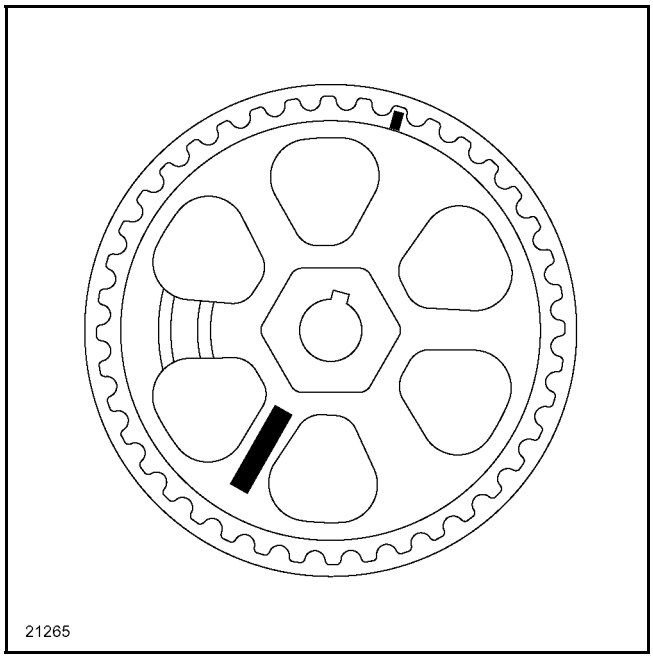
Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

REMOVAL

YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

It is strictly forbidden to remove any injection pump pulley marked **number 070 575** (see diagram). If the pump is being replaced, the pulley must be replaced.



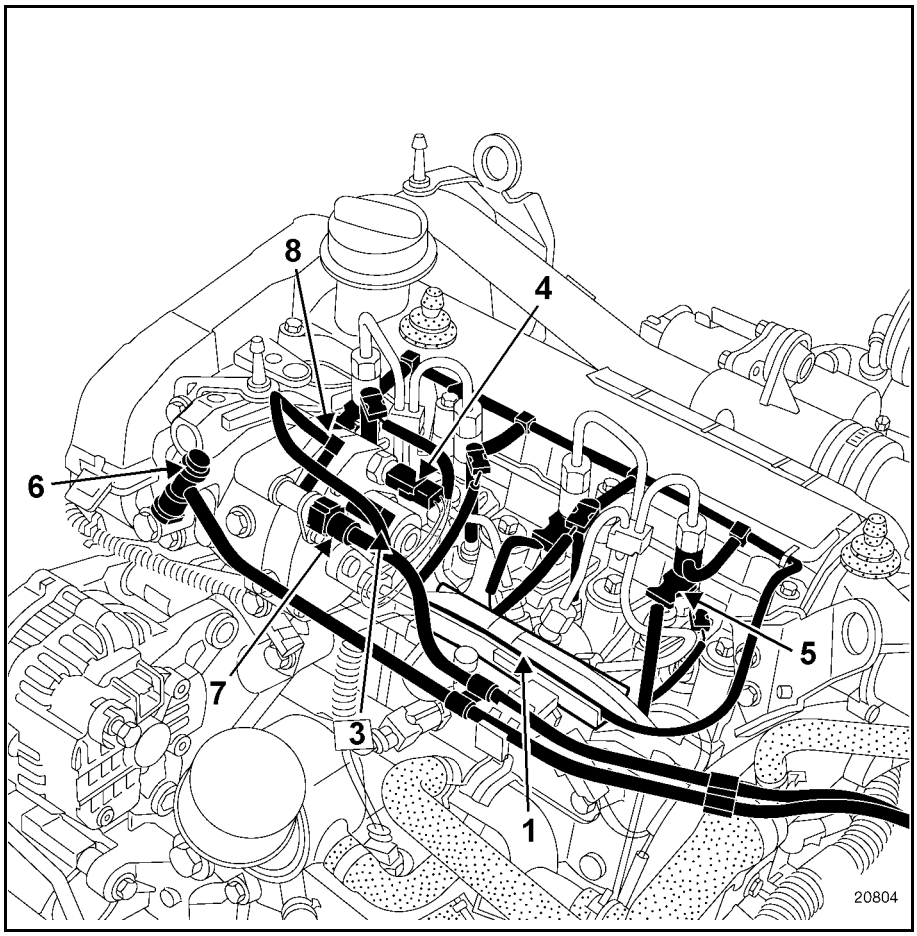
The high pressure pump may be removed after having first removed the timing belt

Disconnect the battery.

Remove:
– the neck (1) located on the fuel rail,
– the dipstick guide and plug the hole.

Undo the mounting nuts of the rail (2) a few turns.

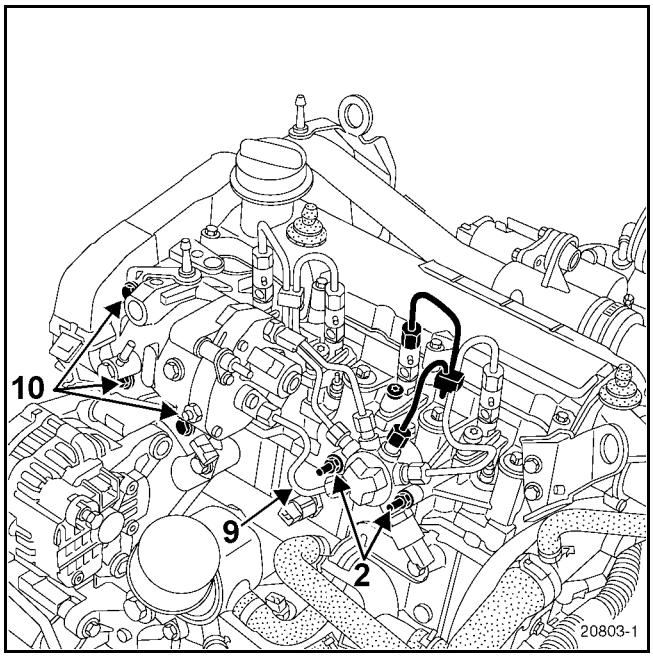
Carefully disconnect:
– the connectors from the flow actuator (3) and fuel temperature sensor (4),
– the pre-heater (glow) plugs and the injectors (5),
– the return pipe (8) connecting the injector with the pump.



Remove the high pressure pipe (9) connecting the pump to the rail. To do this:
– undo the nut on the pump side then the nut on the rail side,
– Move the nut along the tube keeping the olive in contact with the taper.

Plug all the holes of the injection circuit.

Remove the three mounting bolts (10) from the injection pump then remove it.



REFITTING

Fit the pump then position the mounting bolts without tightening them.

IMPORTANT: All the high pressure pipes removed must be systematically replaced.

Before fitting the new high pressure pipe, lightly lubricate the nut threads with the oil from the sachet provided in the new parts kit.

Refit the high pressure pipe, to do this:
– remove the protective plugs,
– insert the high pressure pipe olive into the taper of the high pressure pump outlet,
– insert the high pressure pipe olive into the taper of the high pressure rail inlet.

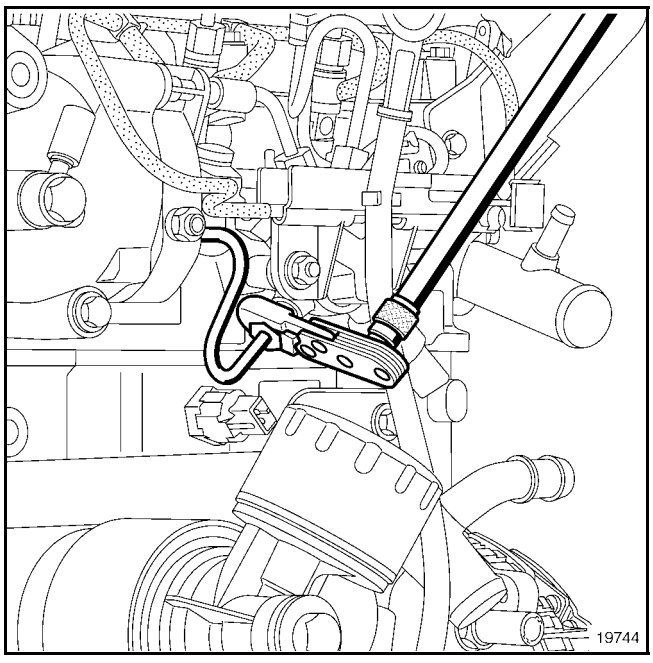
Finger tighten the nuts of the high pressure pipe starting with the one located on the rail side.

Tighten the mounting bolts (10) on the high pressure pump to a torque of **2.1 daN.m**.

IMPORTANT: Do not touch the pipes with the wrench when torque tightening.

Using the recommended tools, tighten the following in the order and to the torques shown:
– the nut on the rail side to **3.8 daN.m**,
– the nut on the pump side to **3.8 daN.m**,

Tighten the rail mounting nuts to a torque setting of **2.8 daNm**.



Refit in the reverse order to removal for the other refitting operations.

Test the sealing of the high pressure after it has been repaired (refer to **"Special features"**).

EQUIPMENT REQUIRED
Low torque wrench
Pipe socket for tightening the high pressure pipe (for example, Facom Crowfoot 18-17 wrench).

TIGHTENING TORQUES (in daNm)	
Flow actuator mounting bolt	**0.55 ± 0.06**

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

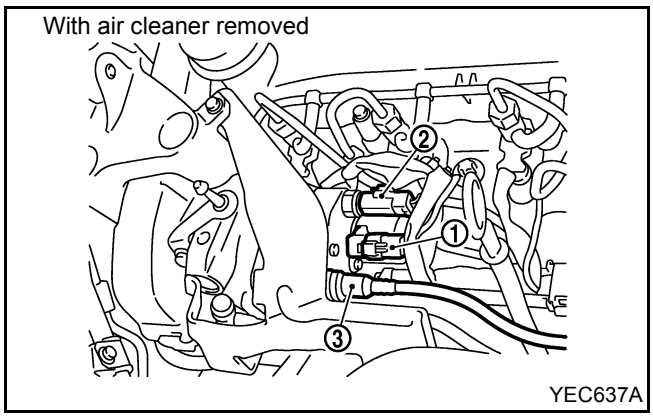
REMOVAL

YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

Disconnect the battery.

Remove the engine cover.

Disconnect the connector from the flow actuator (1) and from the fuel temperature sensor carefully (2).

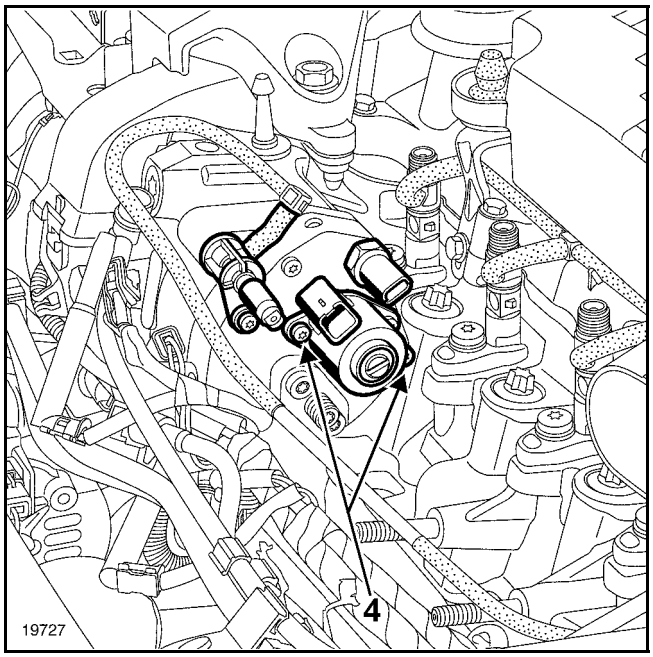


Disconnect the fuel return pipe (3).

Remove the high pressure pipe from injector no. 4 (refer to high pressure pipes).

Plug the holes in the injection circuit.

Disconnect the pre-heater plug and the injectors from cylinders 3 and 4.



Unscrew the two retaining bolts from the bracket (4).

Withdraw the flow actuator (by hand using small successive turns. Do not use the electrical connector as a lever arm).

REFITTING

Remove the new component from its packaging just before fitting it.

NOTE: Do not lubricate the seals with grease or used diesel oil. Use the applicator provided in the kit for the new part.

Position the actuator. (Important: when fitting the regulator, do not mark the seal.)

Position the two mounting bolts then tighten them.

Fit a new high pressure pipe to injector no. 4 plus a new clip (refer to high pressure pipes).

Reconnect:
– the diesel return pipe,
– the electrical connectors.

Refit in the reverse order to removal for the other refitting operations.

Test the sealing of the high pressure circuit after it has been repaired (refer to **"Special features"**).

EQUIPMENT REQUIRED
Low torque wrench

TIGHTENING TORQUES (in daNm)	
Fuel temperature sensor	1.5 ± 0.15

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

REMOVAL

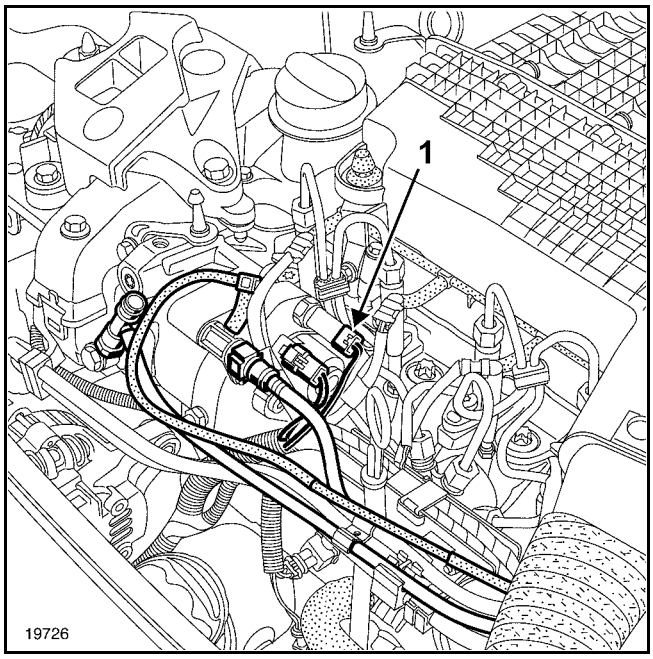
YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

Disconnect the battery.

Remove the engine cover.

Disconnect the connector from the fuel temperature sensor carefully (1).

Undo then remove the fuel temperature sensor.



REFITTING

Grease the O-ring with the lubricant from the sachet provided with the new part.

Take care not to damage the O-ring when installing the sensor.

Position the fuel temperature sensor then tighten to torque.

Reconnect:
– the electrical connector.
– the battery.

Test the sealing of the high pressure after it has been repaired (refer to **"Special features"**).

EQUIPMENT REQUIRED
Low torque wrench

TIGHTENING TORQUES (in daNm)	
Venturi mounting bolts	0.55 ± 0.06

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

REMOVAL

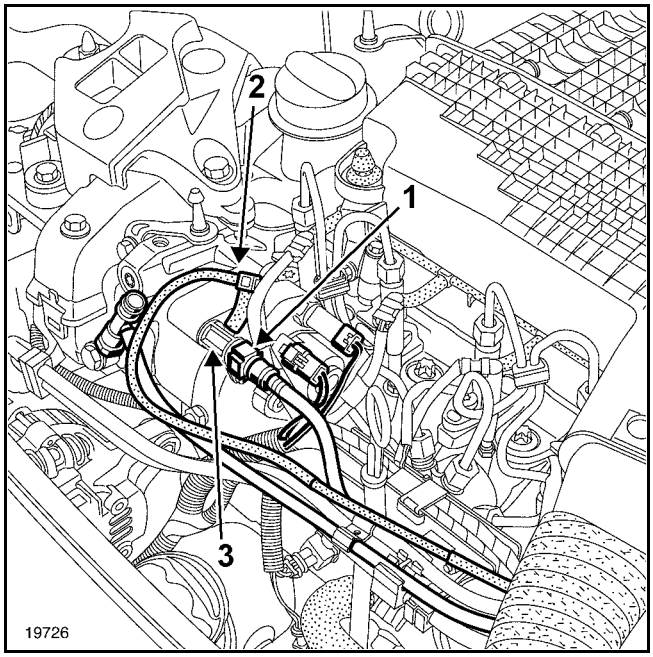
YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

Disconnect the battery.

Remove the engine cover.

Disconnect:
– the fuel return pipe on the pump (1).
– the return pipe (2) connecting the injector with the pump.

Remove the venturi mounting bolts (3) then take it out.



REFITTING

Grease the O-ring with the lubricant from the sachet provided with the new part.

Take care not to damage the O-ring when installing the venturi.

Position the venturi then tighten it to torque.

Reconnect the different pipes.

Test the sealing of the high pressure circuit after it has been repaired (refer to **"Special features"**).

SPECIAL TOOLING REQUIRED	
Nissan No. KV113E0010 (Mot. 1566)	**Tool for removing and refitting high pressure pipes**

EQUIPMENT REQUIRED
Low torque wrench
High pressure pipe wrench (for example, Facom "DM19" wrench).
Pipe socket for tightening the injector-rail high pressure pipes (for example, Facom Crowfoot 18-17 wrench).
Pipe socket for tightening the pump-rail high pressure pipe (for example, Facom Crowfoot 19-17 wrench).

TIGHTENING TORQUES (in daNm)	
High pressure pipe nuts	**3.8**
Rail nuts	**2.8 ± 0.3**
Filler neck nut on the rail	**2.1**

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

IMPORTANT: The pressure sensor cannot be separated from the rail.

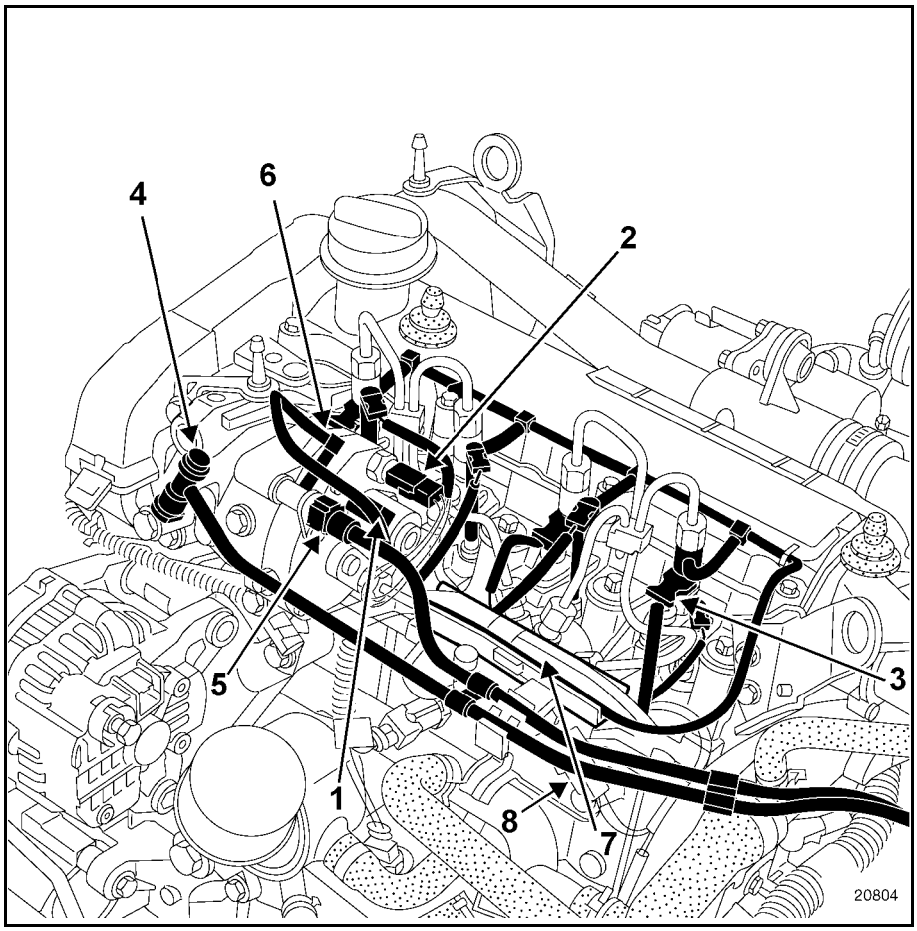
REMOVAL

YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

Disconnect the battery.

Remove the engine cover.

Carefully disconnect:
– the connectors from the flow actuator (1),
– the connectors from the fuel temperature sensor (2),
– the injector connectors (3),
– the glow (heater) plugs,
– on the pump, the fuel supply (4) and return (5) pipes.
– the return pipe (6) connecting the injectors with the pump.



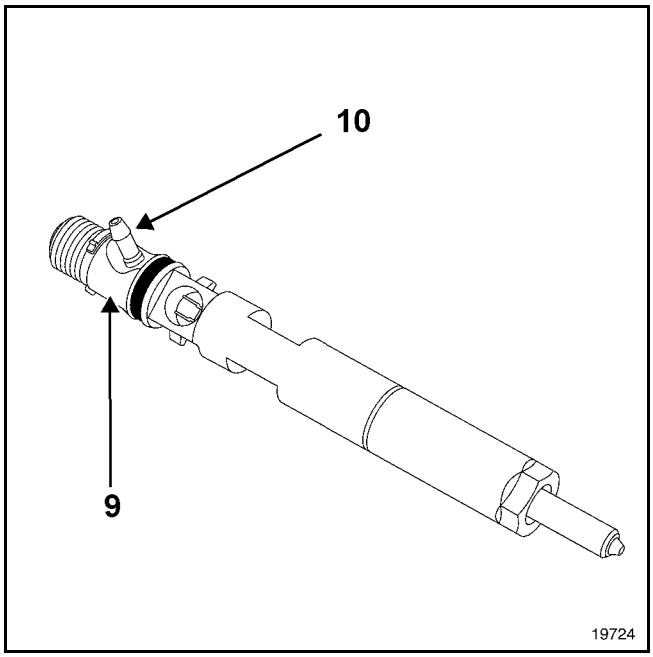
Remove:
– the neck (7) located on the fuel rail,
– the dipstick guide and plug the hole.

Disconnect the pressure sensor connector from the rail (8).

Remove the clips connecting the high pressure pipes.

IMPORTANT: When undoing the high pressure pipes, it is essential to maintain the central union of the injector (9).

IMPORTANT: Do not damage the injector's leak return duct (10).



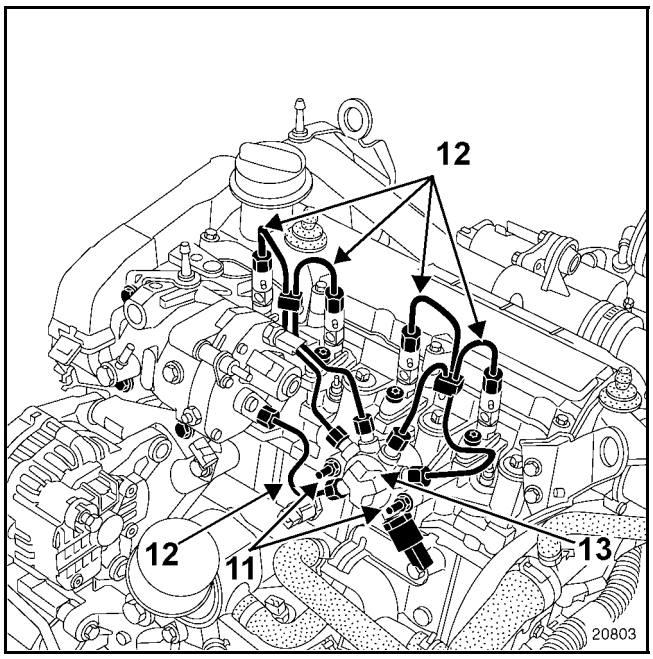
Undo the mounting nuts of the rail (11) a few turns.

**NOTE: Undo the nut on the pump side or the injector side, then the nut located on the rail side.
Undo the nuts for each pipe in turn.
Move the nut along the pipe keeping the olive in contact with the taper.**

Remove all the high pressure pipes (12).

Plug all the holes in the injection circuit.

Remove the rail (13).



REFITTING

IMPORTANT: All the high pressure pipes removed must be replaced as a matter of course.

Fit a new high pressure rail on the studs.

Finger tighten the nuts.

Before fitting the new high pressure pipes, lightly lubricate the nut threads with the oil from the sachet provided in the new parts kit.

NOTE: Fit the pump/rail pipe before the rail/injector pipes.

Fit the pump-rail high pressure pipe:

– remove the protective plugs from the high pressure pump outlet, the high pressure rail inlet and the pipe.
– insert the high pressure pipe olive into the taper of the high pressure pump outlet,
– insert the high pressure pipe olive into the taper of the high pressure rail inlet.
– finger tighten the nuts of the high pressure pipe starting with the one located on the rail side.

Fit the rail-injector high pressure pipe:

IMPORTANT: When tightening the high pressure pipes, it is essential to maintain the central union of the injector (10).

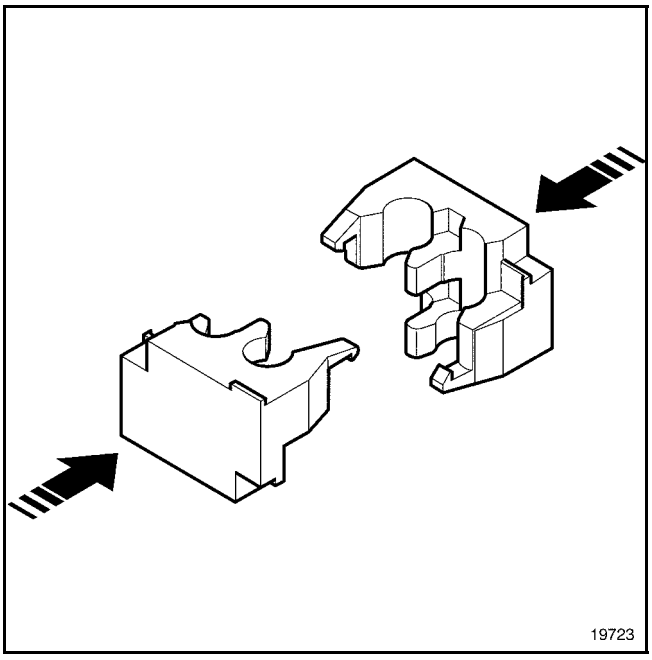
– remove the protective plugs from the high pressure rail outlet, the injector high pressure inlet and the pipe.
– insert the high pressure pipe olive into the taper of the high pressure injector inlet,
– insert the high pressure pipe olive into the taper of the high pressure rail outlet.
– finger tighten the nuts of the high pressure pipe starting with the one located on the injector side.

Fit the remaining high pressure pipes as you did previously.

NOTE: The order in which the pipes are installed is not important.

Fit the clips supplied with the new pipes onto the high pressure pipes:
– Insert the first half of the clip using adjustable pliers,
– Insert the second half of the clip using adjustable pliers.

IMPORTANT: Pay attention to the direction of installation of the second clip. The tabs located in the centre of the clip will only fit together in one position.



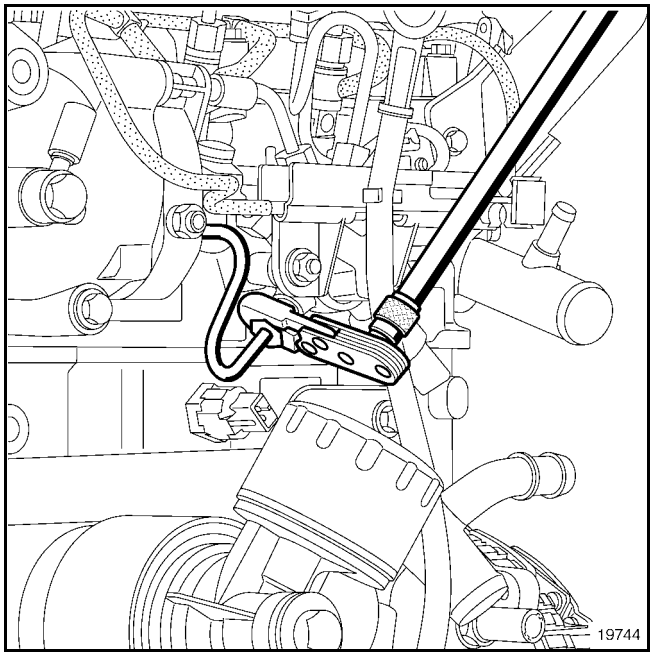
Tighten the rail nuts to a torque of **2.8 daNm.**

IMPORTANT: Do not touch the pipes with the wrench when torque tightening.

IMPORTANT: Follow the order and tightening torque of the high pressure pipes.

Using the recommended tools, tighten the nuts on the rail - pump high pressure pipe:

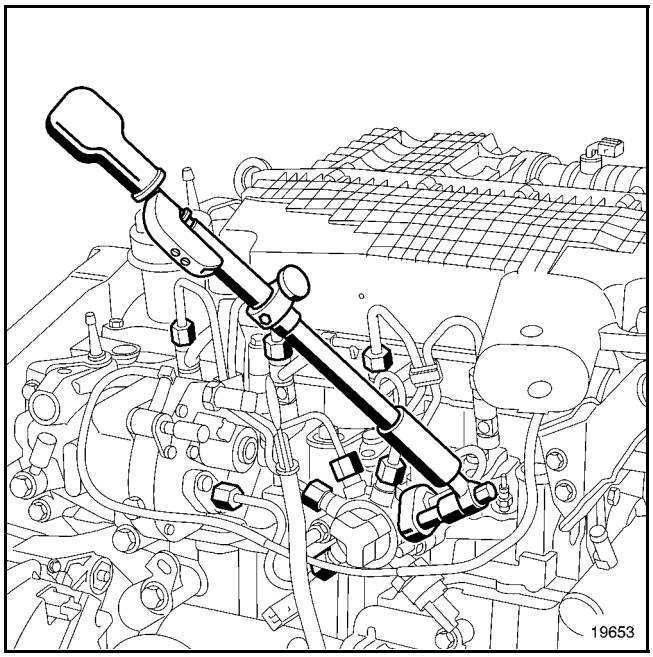
– tighten the nut on the rail side to a torque of **3.8 daN.m**.
– tighten the nut on the pump side to a torque of **3.8 daN.m**.



Using the recommended tools, tighten the nuts on the rail - injector high pressure pipes:

– tighten the nut on the injector side to a torque of **3.8 daN.m**.
– tighten the nut on the rail side to a torque of **3.8 daN.m**.

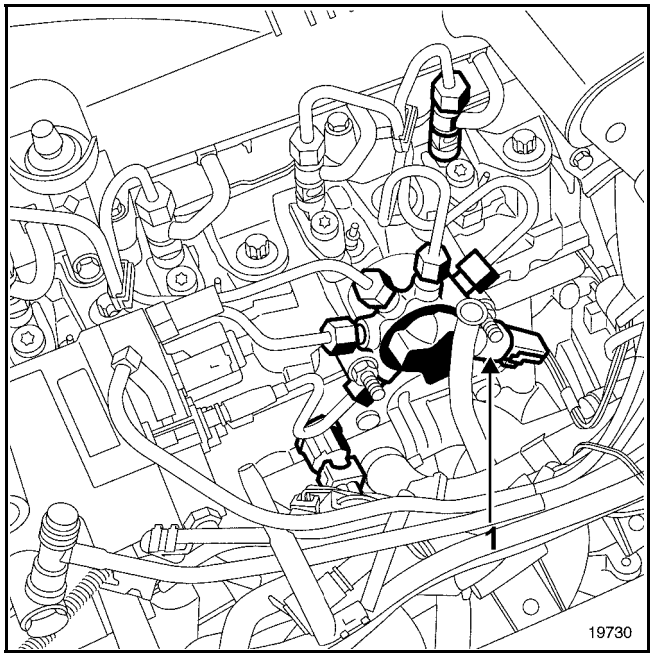
NOTE: Tighten one pipe fully before moving on to the next pipe.



Refit in the reverse order to removal for the other refitting operations.

Test the sealing of the high pressure after it has been repaired (refer to **"Special features"**).

The pressure sensor (1) cannot be separated from the fuel rail. If the pressure sensor malfunctions, the pressure sensor assembly - rail and high pressure pipes - must be replaced (refer to **fuel rail** section).



SPECIAL TOOLING REQUIRED	
Nissan No. KV113E0010 (Mot. 1566)	Tool for removing and refitting high pressure pipes

EQUIPMENT REQUIRED
Low torque wrench
High pressure pipe wrench (for example, Facom DM19 wrench).
Pipe socket for tightening the injector-rail high pressure pipes (for example, Facom Crowfoot 18-17 wrench).
Pipe socket for tightening the pump-rail high pressure pipe (for example, Facom Crowfoot 19-17 wrench).

TIGHTENING TORQUES (in daNm)	
High pressure pipe nuts	3.8
Rail nuts	2.8 ± 0.3
Injector mounting	2.8 ± 0.3
Filler neck nut on the rail	2.1

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

IMPORTANT: It is forbidden to open an injector. If you open an injector by mistake, you will have to change it. This is because of the manufacturing and installation tolerances and because there is a risk of contaminating the inside of the injector.
The rod filter of the injector must not be removed.

REMOVAL

NOTE: It is possible to replace a single high pressure pipe.

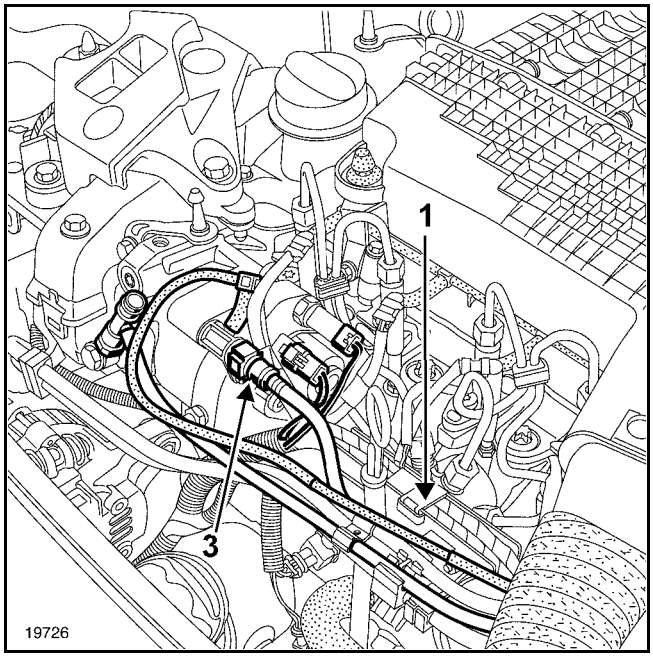
YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

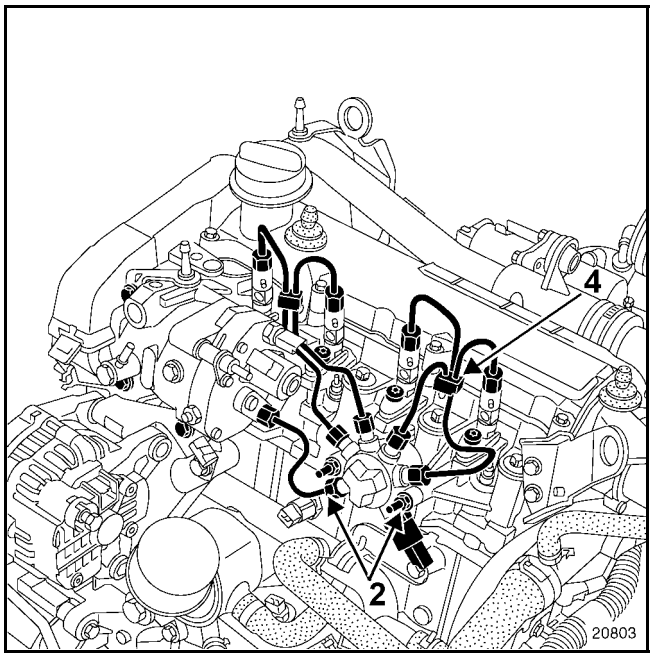
Disconnect the battery.

Remove:
– the engine cover,
– the neck (1) located on the high pressure rail,
– the dipstick guide then plug the hole.

Undo the mounting nuts of the rail (2) a few turns.

Disconnect:
– the fuel return pipe (3),
– the injector electrical connector.





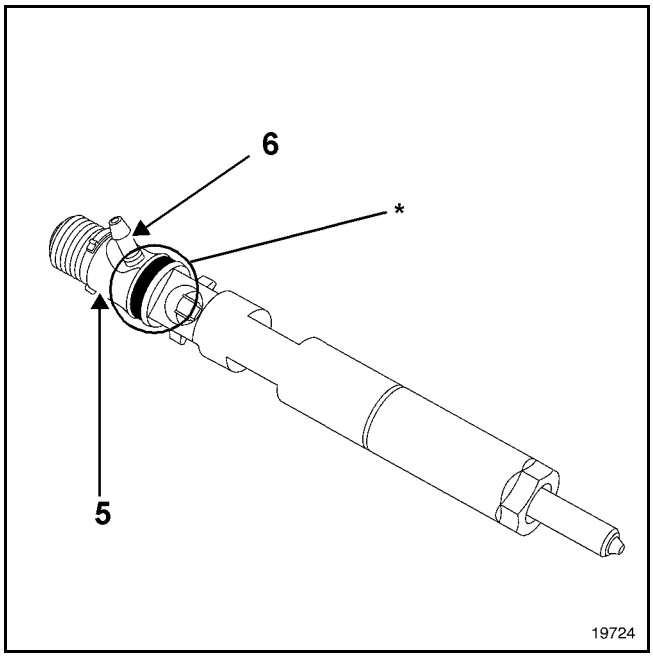
Remove the clip (4) connecting the high pressure pipes.

IMPORTANT: When undoing the high pressure pipes, it is essential to maintain the central union of the injector (5).

Undo the nut on the injector side, then the nut located on the rail side of the high pressure pipe.

Move the nut along the tube keeping the olive in contact with the taper.

IMPORTANT: Do not damage the injector's leak return duct (6).



* 16 digit code

Remove the high pressure pipe (7).

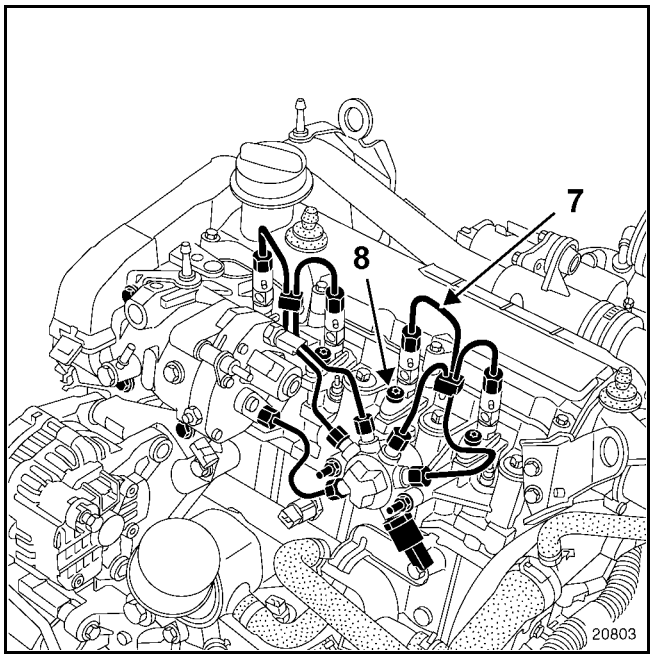
Disconnect the diesel return pipe on the injector.

Plug all the holes of the injection circuit.

Unscrew the injector bracket (8).

Remove the injector.

Pull off the flameshield washer.



REFITTING

NOTE: Read the 16 digit code on the new injector before refitting it and programming the code into the ECM using the CONSULT-II (see section "Special features, Replacing injectors"). The code is unique to each injector, it specifies the flow.

Clean the injector sockets and the injector bodies, as well as their brackets using a lint-free cloth (use the wipes recommended for this purpose, dipped in clean solvent.

Dry off using a different new wipe.

Replace the flameshield washer with a new one.

Position the injector.

Tighten its mounting clamp to a torque of **2.8 daN.m**.

IMPORTANT: All the high pressure pipes removed must be systematically replaced.

Before fitting the new high pressure pipe, lightly lubricate the nut threads with the oil from the sachet provided in the new parts kit.

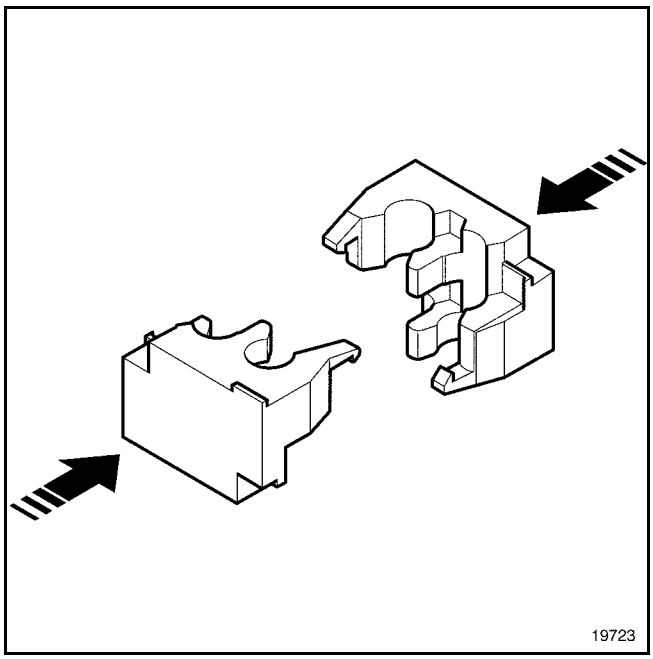
Fit the high pressure pipe:

– remove the protective plugs from the rail, the injector inlet and the pipe.
– insert the high pressure pipe olive into the taper of the injector inlet,
– insert the high pressure pipe olive into the taper of the rail outlet.

Move the nut into position by hand, injector side first then the rail side.

Fit a new clip supplied with the new pipes onto the high pressure pipes:
– Insert the first half of the clip using adjustable pliers,
– Insert the second half of the clip using adjustable pliers.

IMPORTANT: Pay attention to the direction of installation of the second clip. The tabs located in the centre of the clip will only fit together in one position.

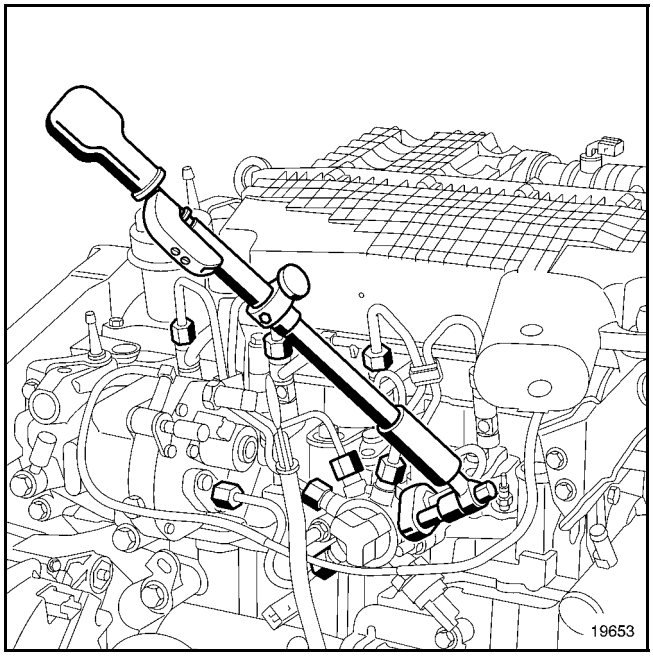


Tighten the rail nuts to a torque of **2.8 daNm.**

IMPORTANT: Do not touch the pipes with the wrench when torque tightening.

IMPORTANT: When tightening the high pressure pipes, it is essential to maintain the central union of the injector.

Using the recommended tools, tighten the following in the order and to the torques shown:
– the nut on the injector side to a torque of **3.8 daN.m**.
– the nut on the rail side to a torque of **3.8 daN.m**.



Refit in the reverse order to removal for the other refitting operations.

Test the sealing of the high pressure after it has been repaired (refer to **"Special features"**).

SPECIAL TOOLING REQUIRED	
Nissan No. KV113E0010 (Mot. 1566)	**Tool for removing and refitting high pressure pipes**

EQUIPMENT REQUIRED

Low torque wrench

High pressure pipe wrench (for example, Facom DM19 wrench).

Pipe socket for tightening the injector-rail high pressure pipes (for example, Facom Crowfoot 18-17 wrench).

Pipe socket for tightening the pump-rail high pressure pipe (for example, Facom Crowfoot 19-17 wrench).

TIGHTENING TORQUES (in daNm)	
High pressure pipe nuts	**3.8**
Rail nuts	**2.8 ± 0.3**
Filler neck nut on the rail	**2.1**

IMPORTANT: Before carrying out any work, connect the CONSULT-II, set up communication with the ECM and check that the injection rail is not under pressure.

Wait until the fuel temperature drops.

Order the special high pressure injection circuit plug kit.

REMOVAL

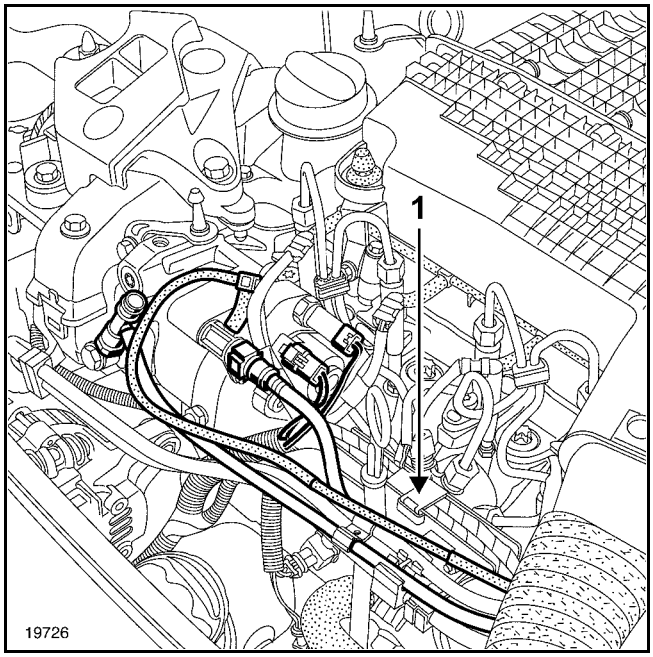
NOTE: It is possible to replace a single high pressure pipe.

YOU SHOULD FOLLOW THE CLEANNESS INSTRUCTIONS CLOSELY

Disconnect the battery.

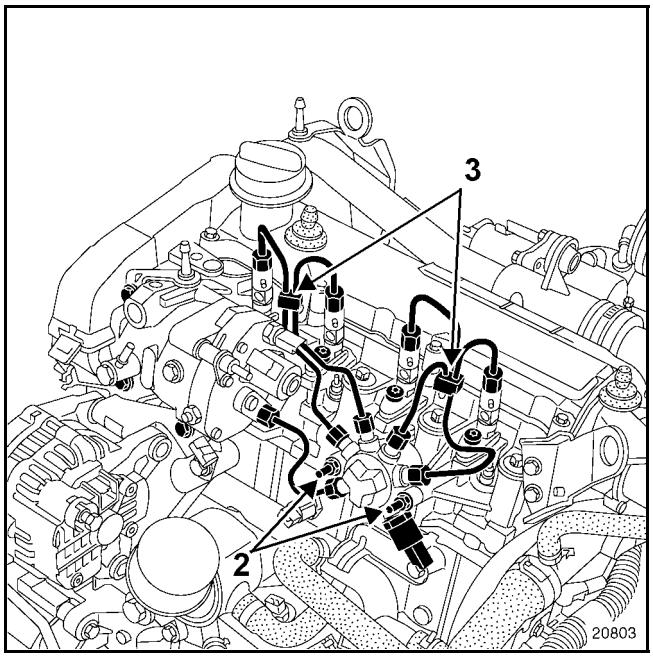
Remove:
– the engine cover,
– the neck (1) located on the high pressure rail,
– the dipstick guide then plug the hole.

Undo the mounting nuts of the rail (2) a few turns.



Remove the clip (3) connecting the high pressure pipes.

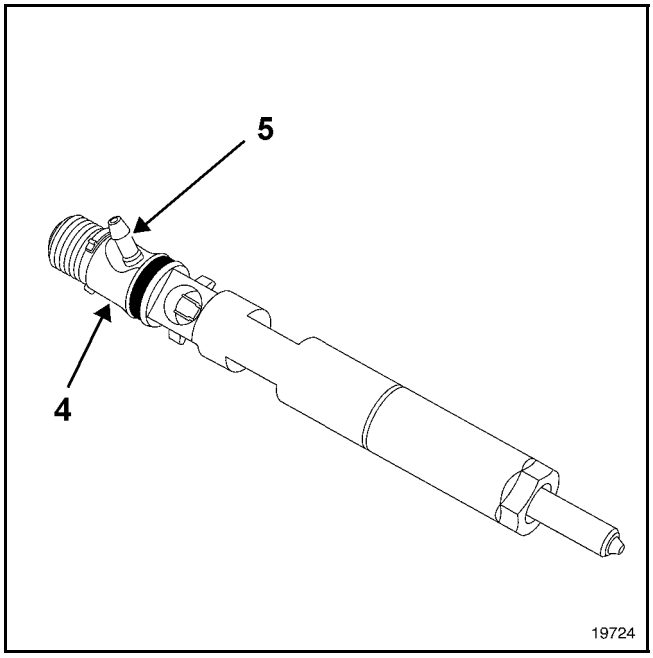
IMPORTANT: When undoing the high pressure pipes, it is essential to maintain the central union of the injector (4).



Undo the nut on the pump side or the injector side, then the nut located on the rail side.

Move the nut along the tube keeping the olive in contact with the taper.

IMPORTANT: Do not damage the injector's leak return duct (5).



Remove the high pressure pipe(s).

Plug all the holes of the injection circuit.

REFITTING

NOTE: Fit the pump/rail pipe before the rail/injector pipes.

Before fitting the new high pressure pipes, lightly lubricate the nut threads with the oil from the sachet provided in the new parts kit.

Fit the pump-rail high pressure pipe:

– remove the protective plugs from the high pressure pump outlet, the high pressure rail inlet and the pipe.
– insert the high pressure pipe olive into the taper of the high pressure pump outlet,
– insert the high pressure pipe olive into the taper of the high pressure rail inlet.
– finger tighten the nuts of the high pressure pipe starting with the one located on the rail side.

Fit the rail-injector high pressure pipe:

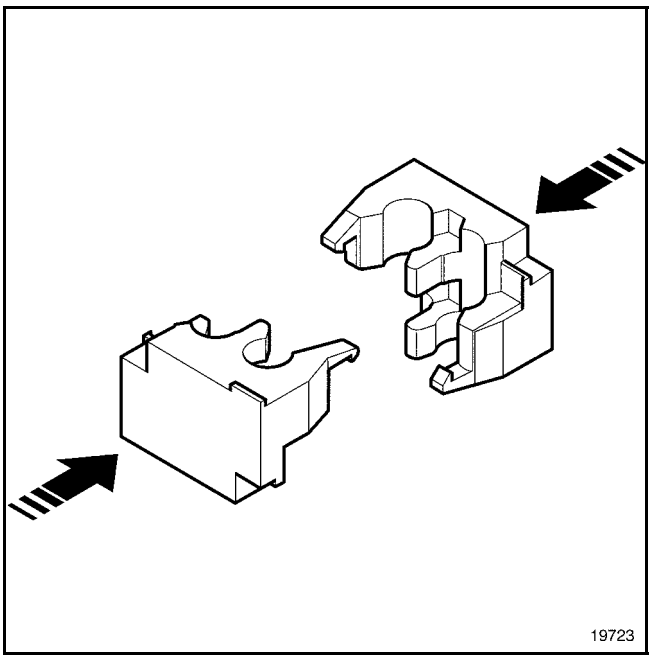
– remove the protective plugs from the high pressure rail outlet, the injector high pressure inlet and the pipe.
– insert the high pressure pipe olive into the taper of the high pressure injector inlet,
– insert the high pressure pipe olive into the taper of the high pressure rail outlet,
– finger tighten the nuts of the high pressure pipe starting with the one located on the injector side.

Fit the remaining high pressure pipes as you did previously.

IMPORTANT: All the high pressure pipes removed must be systematically replaced.

Fit a new clip supplied with the new pipes onto the high pressure pipes:
– insert the first half of the clip using adjustable pliers,
– insert the second half of the clip using adjustable pliers.

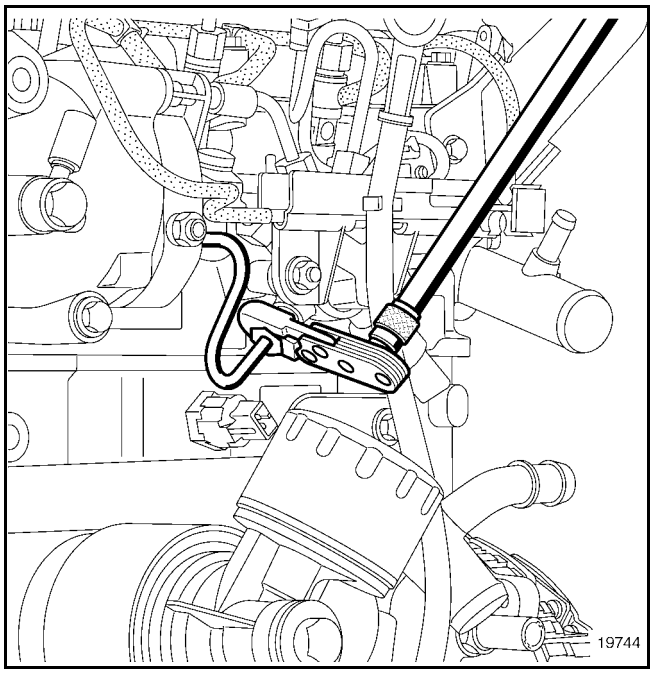
IMPORTANT: Pay attention to the direction of installation of the second clip. The tabs located in the centre of the clip will only fit together in one position.



Tighten the rail nuts to a torque of **2.8 daN.m.**

IMPORTANT: Do not touch the pipes with the wrench when torque tightening.

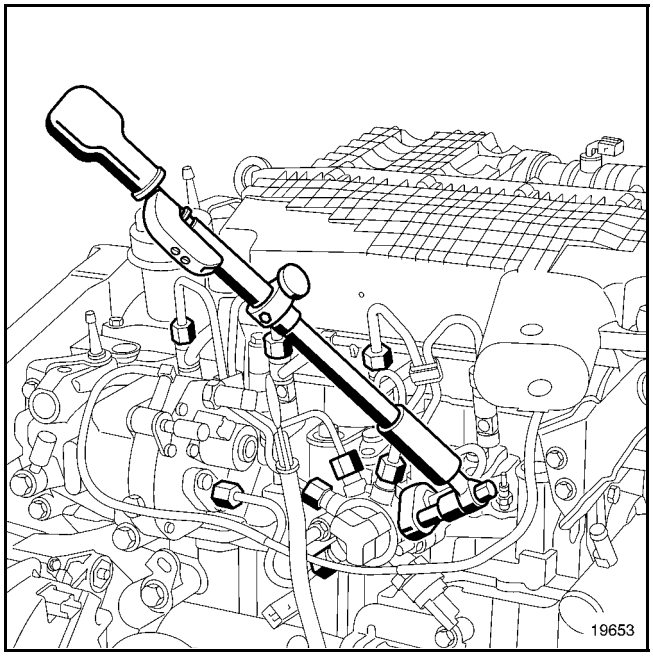
Using the recommended tools, tighten the following in the order and to the torques shown:
– the nut on the pump - rail high pressure pipe starting with the one located on the rail side to a torque of **3.8 daN.m**.
– the nut on the pump side to a torque of **3.8 daN.m**.



IMPORTANT: When tightening the high pressure pipes, it is essential to maintain the central union of the injector (4).

Using the recommended tools, tighten the following in the order and to the torques shown:
– the nut on the injector side to a torque of **3.8 daN.m**.
– the nut on the rail side to a torque of **3.8 daN.m**.

NOTE: Tighten one pipe fully before moving on to the next pipe.



Refit in the reverse order to removal for the other refitting operations.

Test the sealing of the high pressure after it has been repaired (refer to **"Special features"**).

NOTE: When replacing an ECM, it is necessary to program the individual injector correction and the other vehicle configurations using CONSULT-II.

REPLACING THE ECM

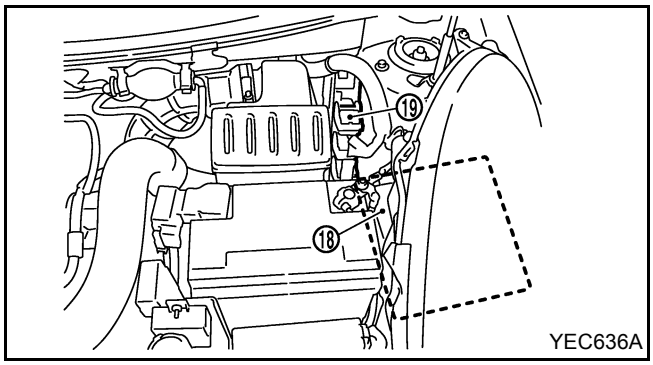
Before an ECM is replaced in after-sales, the following must be checked using CONSULT-II:

- Injectors individual correction value (16 digit code)
- System configulation

REMOVAL

Disconnect:
– the battery,
– the ECM harness connectors.

Remove the mounting nuts from the ECM (19).



REFITTING

Fit the new ECM, taking care to engage the positioning tab, then fit the ECM on its mounting studs.

Tighten the ECM mounting nuts.

Reconnect the ECM.

Connect the battery.

Turn the engine on and read the DTC using the CONSULT-II.

If necessary repair the DTC that appear then clear them.

Check that the vehicle is operating correctly.

This vehicle is fitted with an engine immobilizer system which is controlled by a key recognition system.

REPLACING THE ECM

The ECM are supplied without a code but they must all be programmed with one.

If an ECM is replaced, it must be programmed with the code of the vehicle and the correct operation of the engine immobilizer function must be checked. (Refer to BL section.)

WARNING:

These vehicles have a special ECM which does not function unless it is coded.

Consequently, it is strongly recommended that you do not carry out tests using ECMs borrowed from the warehouse or on another vehicle to prevent coding and uncoding problems which may leave the ECM useless.

UNCODING PROCEDURE

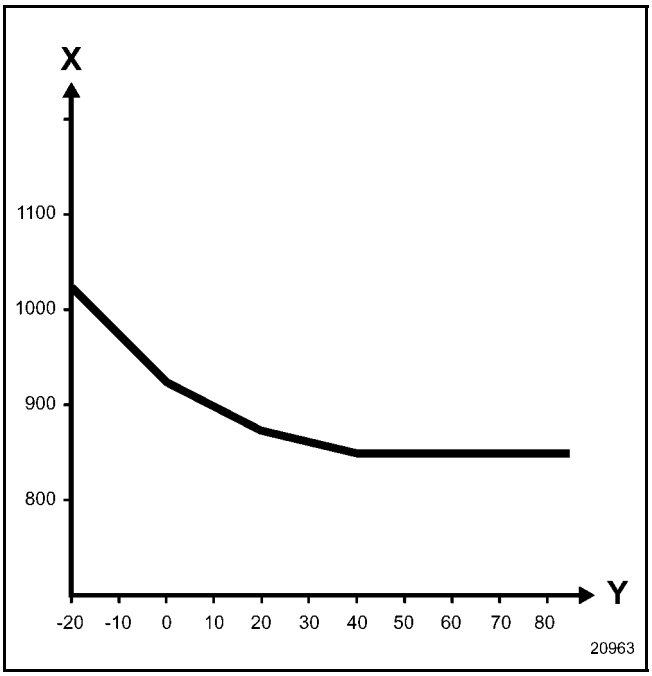
If the ECM has learnt a code and must be returned to the workshop it is imperative that you uncode it before removing it. (See the repair manual or the engine immobilizer TSB).

The ECM takes over calculation of the idle speed to maintain the idle speed at the recommended level and to compensate for any variation in the mechanical or electrical couple as regards:
– the engine coolant temperature,
– battery voltage,
– the gear selected on the transmission,
– the electrical consumers (climate control system, cooling fan assembly etc.),
– any malfunctions found.

At the engine operating temperature, without high electrical consumer, the idle speed is **850 rpm**.

IDLE SPEED CORRECTION ACCORDING TO ENGINE COOLANT TEMPERATURE

X. Engine speed in **rpm**
Y. Temperature in °**C**



SPEED ADJUSTMENT WHEN THERE IS AN ACCELERATOR PEDAL POSITION SENSOR (POTENTIOMETER) MALFUNCTION

- **If one or both terminals** of the accelerator pedal position sensor (potentiometer) are suspected, the ECM overrides the idle speed to maintain it at **1100 rpm**. This defect mode limits performance. The orange injection warning light lights up and flashes.

- **If the accelerator pedal position sensor (potentiometer) is blocked**, **is no longer being supplied, or is not transmitting an output signal,** the ECM overrides the idle speed to maintain it at **1300 rpm**. This mode limits performance. The orange injection warning light lights up and flashes.

- In both cases, when the brake pedal is depressed, the idle speed is stabilised at the **recommended speed**.

- **If the information from the accelerator pedal position sensor (potentiometer) and the brake switch information does not correspond, the speed is changed to 1100 rpm.**

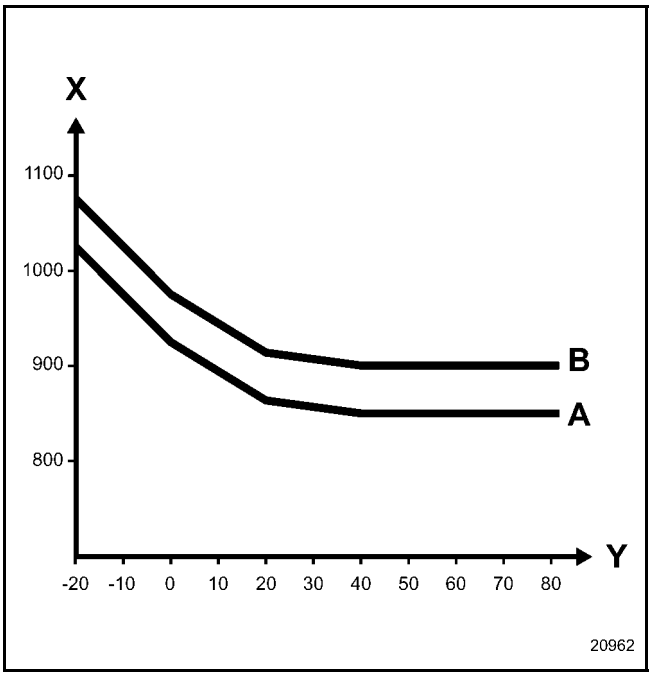
IDLE SPEED ADJUSTMENT WHEN THERE IS AN INJECTOR CODE MALFUNCTION

When there is an injector code malfunction, the ECM overrides the idle speed to maintain it at **1300 rpm**. This mode limits performance. The orange injection warning light lights up and flashes.

CORRECTION OF THE IDLING SPEED ACCORDING TO THE GEAR RATIOS

The idling speed is modified according to the gear selected in the transmission:
– **in neutral, 1st and 2nd gear**, the speed is (at the engine operating temperature) **850 rpm** (graph **A**),
– **for the other gears**, the speed is (at the engine operating temperature) **900 rpm** (graph **B**).

X. Engine speed in **rpm**
Y. Temperature in °**C**



AIR CONDITIONING CONTROL

The compressor is a variable displacement type.

The air conditioning relays are controlled by wires:

COMPRESSOR OPERATION PROGRAMMING

During certain stages of operation, the ECM stops the compressor from functioning.

Engine starting program

The compressor is prevented from operating for **4 seconds** after the engien has started.

Thermal protection program

The compressor is not engaged when the engine temperature is higher than **115** °**C** or from **110** °**C** at high speed, **4500 rpm** for more than **3 seconds.**

Fan assembly control programming

At idling speed and also when driving, with the air conditioning activated, the speed of the fan assembly is determined according to the refrigerant fluid pressure and the vehicle speed.

Recovery of performance

When pressure is applied to the accelerator pedal above **70%**, the compressor is disengaged for **5 seconds**.

Recovery of output when the vehicle starts moving

In order to help the vehicle move off, the air conditioning compressor is disengaged if the position of the accelerator pedal is above **35 %** and the idling speed less than **1250 rpm**.

Anti-stall protection

The compressor is disengaged if the engine speed is lower than **750 rpm.**

Engine overspeed timed protection program

The compressor is disengaged when the speed reaches **4500 rpm** for more than **3 seconds**.

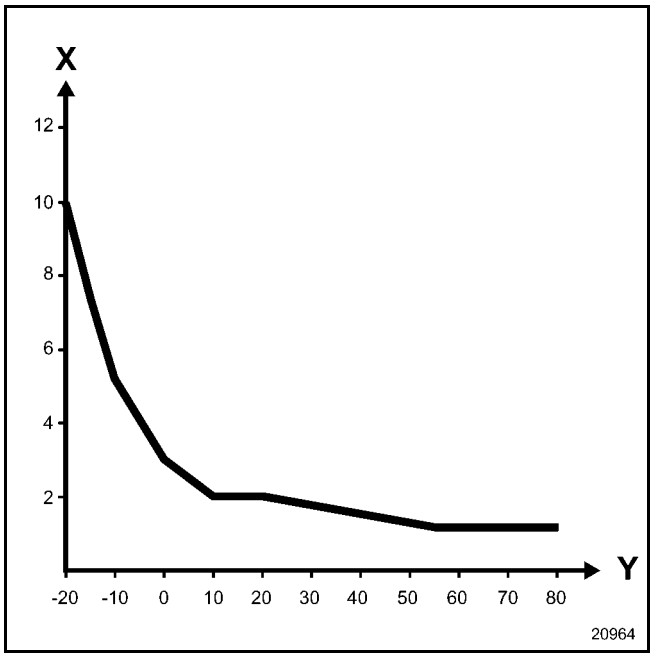
NOTE: The time between the compressor being disengaged twice is always greater than **10 seconds**.

The pre/postheating function is controlled by the preheating unit.

PRE/POSTHEATING (glow plug) OPERATING PRINCIPLE

1) Ignition on "preheating"

a) Variable preheating
The time period for the warning light to light up and the feed to heater plugs depends on the coolant temperature and the battery voltage.



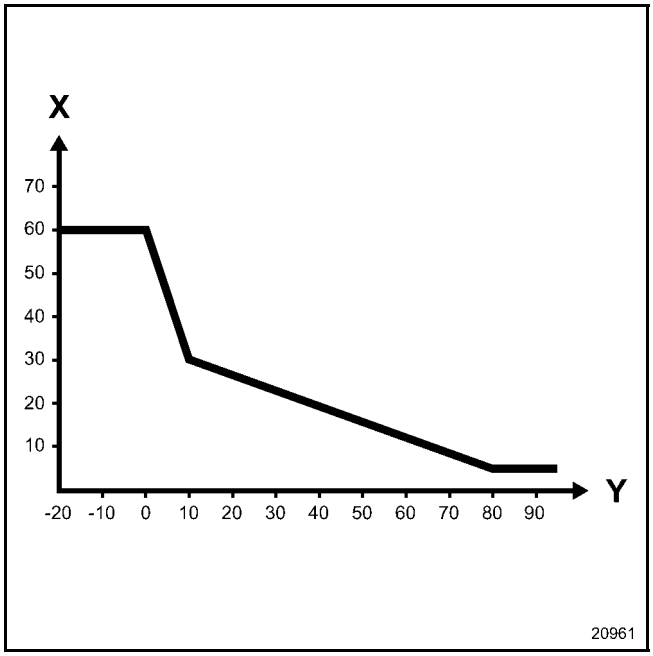
X. Time in seconds
Y. Temperature in °C

Whatever the situation, the preheating warning light cannot be lit for more than **15 seconds** (except in the event of an engine coolant temperature sensor malfunction).

b) Fixed preheating
After the warning light goes out the plugs remain supplied for a fixed period of **5 seconds**.

2) "Post heating" with the engine running

During this phase the plugs are supplied continuously according to engine coolant temperature.



X. Time in seconds
Y. Temperature in °C

For idle speed without pressing the accelerator pedal.

The resistance of a glow plug is **0.6** Ω.

TIGHTENING TORQUE (in daNm)	
Glow plug	**1.5**

Plugs may be removed without having to open the high pressure circuit.

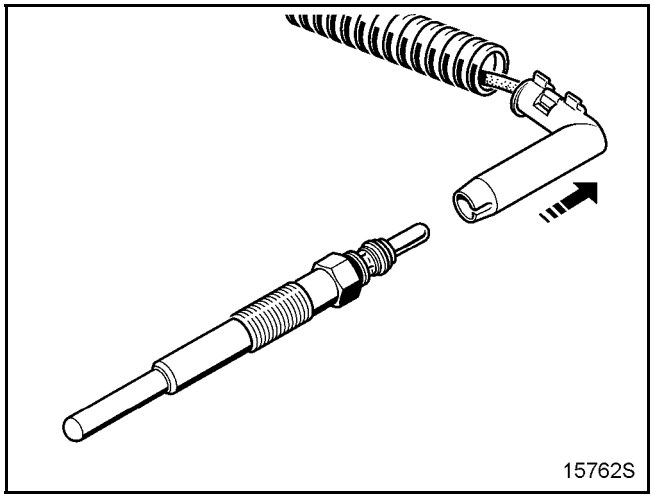
REMOVAL

Disconnect the battery.

Unclip the plug connector.

Clean the outside of the plug to avoid any dirt entering the cylinder.

Loosen and remove the plugs.



To undo the plug on cylinder 4 use a **10 mm** long radio socket attached to a universal joint. Once the plug is loosened use a hose to unscrew it completely.

REFITTING

Proceed in the reverse order to removal.

The cooling fan unit is controlled by the ECM.

COOLING FAN ASSEMBLY OPERATION WITH THE ENGINE RUNNING

The cooling fan assembly is controlled:

- at slow speed if the engine coolant temperature exceeds **99**°**C** or if there is an engine coolant temperature sensor malfunction, and is switched off when the temperature falls below **96**°**C**.
- at high speed if the engine coolant temperature exceeds **102**°**C** or if there is a low speed malfunction, and is switched off when the temperature falls below **99**°**C.**

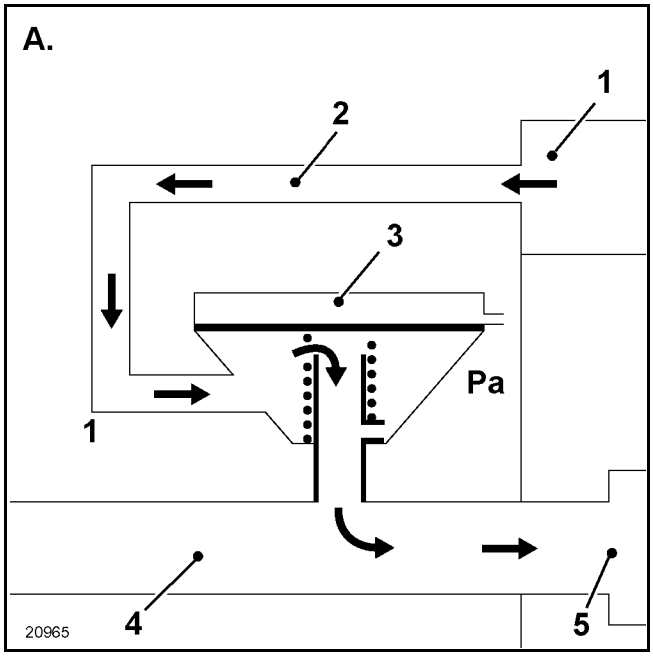
The cooling fan assembly low and high speeds are controlled when the air conditioning function is selected on the instrument panel.

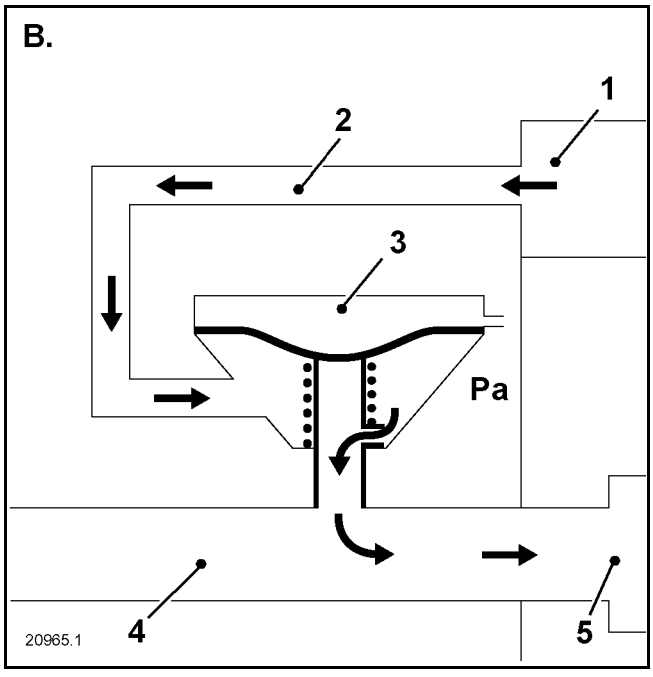
If the low speed setting is suspected, the high speed setting operates under the low speed conditions.

OPERATION OF THE ENGINE COOLANT TEMPERATURE WARNING LIGHT

The engine coolant temperature warning light remains lit if the engine coolant temperature exceeds **114**°**C**. It goes out when the temperature falls below **111**°**C**.

CIRCUIT DIAGRAM





1 Cylinder head cover
2 Oil vapour rebreathing duct
3 Oil vapour recirculation valve
4 Air inlet duct
5 Turbocharger
Pa Atmospheric pressure

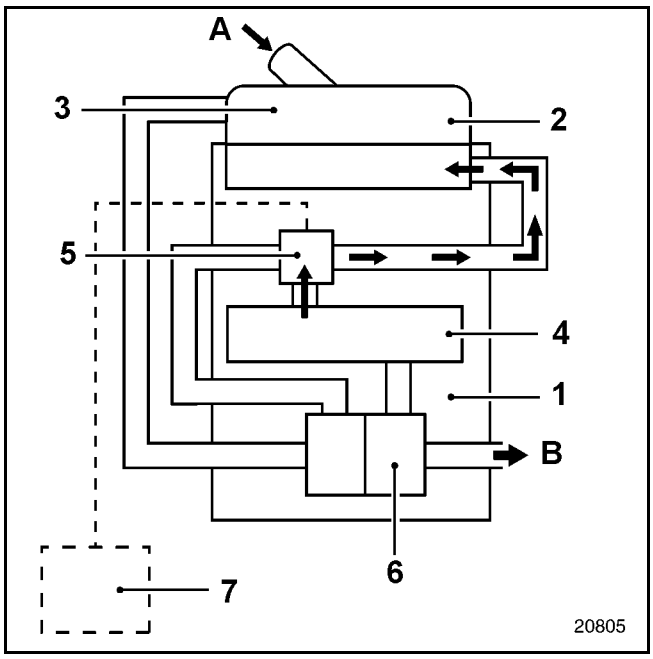
A. When there is a low charge, the vacuum in the air intake duct is below the spring set point. The oil vapours are extensively rebreathed by the vacuum in the air intake duct.

B. When there is a medium or high charge, the pressure in the air intake duct exhausts the valve diaphragm, the oil vapours are breathed in small quantities via a calibrated hole.

CHECKING

To ensure the correct operation of the anti-pollution system, the oil vapour rebreathing circuit must be kept clean and in good condition.

CIRCUIT DIAGRAM



1 Engine
2 Air filter unit
3 Air distributor
4 Exhaust manifold
5 EGR unit with solenoid valve
6 Turbocharger
7 ECM
A Air inlet
B Exhaust gas outlet

PURPOSE OF THE EGR SYSTEM

Exhaust gas recirculation is used to reduce the nitrogen oxide (NOx) content of the exhaust gases.

The ECM authorises gas to pass by controlling a solenoid valve.

1. SCOPE OF THIS DOCUMENT

This document presents the trouble diagnosis method applicable to all ECMs with the following specifications:

Vehicle(s): **K12** with **K9K** *Function concerned:* **DELPHI K9 DIESEL DIRECT COMMON RAIL INJECTION** (DDCR)	Name of ECM: **DDCR INJECTION** Program No.: **BE 88** VDIAG No.: 44

2. PREREQUISITES FOR TROUBLE DIAGNOSIS

To begin trouble diagnosis, it is essential to have the following items available:

Documentation type

Diagnostic procedures:
– Assisted with CONSULT-II, Service Manual.
– Wiring diagrams.

Specia tool required PLUGGED RAIL tools

3. REMINDERS

Trouble diagnosis:

There are **present** DTCs and **stored** DTCs (which appeared in a certain context and have since disappeared or which are still present but have not had trouble diagnosis performed on them in the current context).

The "present" or "stored" status of DTCs must be considered when activating the diagnostic tool after power is supplied to the ECM (without activating the system components).

Deal with **present DTCs** according to the procedure specified in the corresponding DTC trouble diagnosis.

For stored DTCs, note the DTCs displayed and follow the instructions in the **Notes** section.

If the DTC is **confirmed** when the instructions in the **Notes** section are applied, the malfunction is present. Deal with the DTC.

If the DTC is not confirmed, check:
– the electrical lines which correspond to the malfunction,
– the connectors for these lines (for oxidation, bent pins, etc.),
– the resistance of the malfunction component,
– the condition of the wires (melted or cut insulation, wear).

Conformity check

The conformity check is designed to check the states and data monitor items which do not display any DTCs on the diagnostic tool when inconsistent. This phase therefore allows:
– diagnoses malfunctions that do not have a DTC display, and which may correspond to a customer complaint.
– Checks that the system is operating correctly and that there is no risk of a DTC reappearing after repairs.

This section gives the trouble diagnosis procedures for states and parameters and the conditions for checking them.

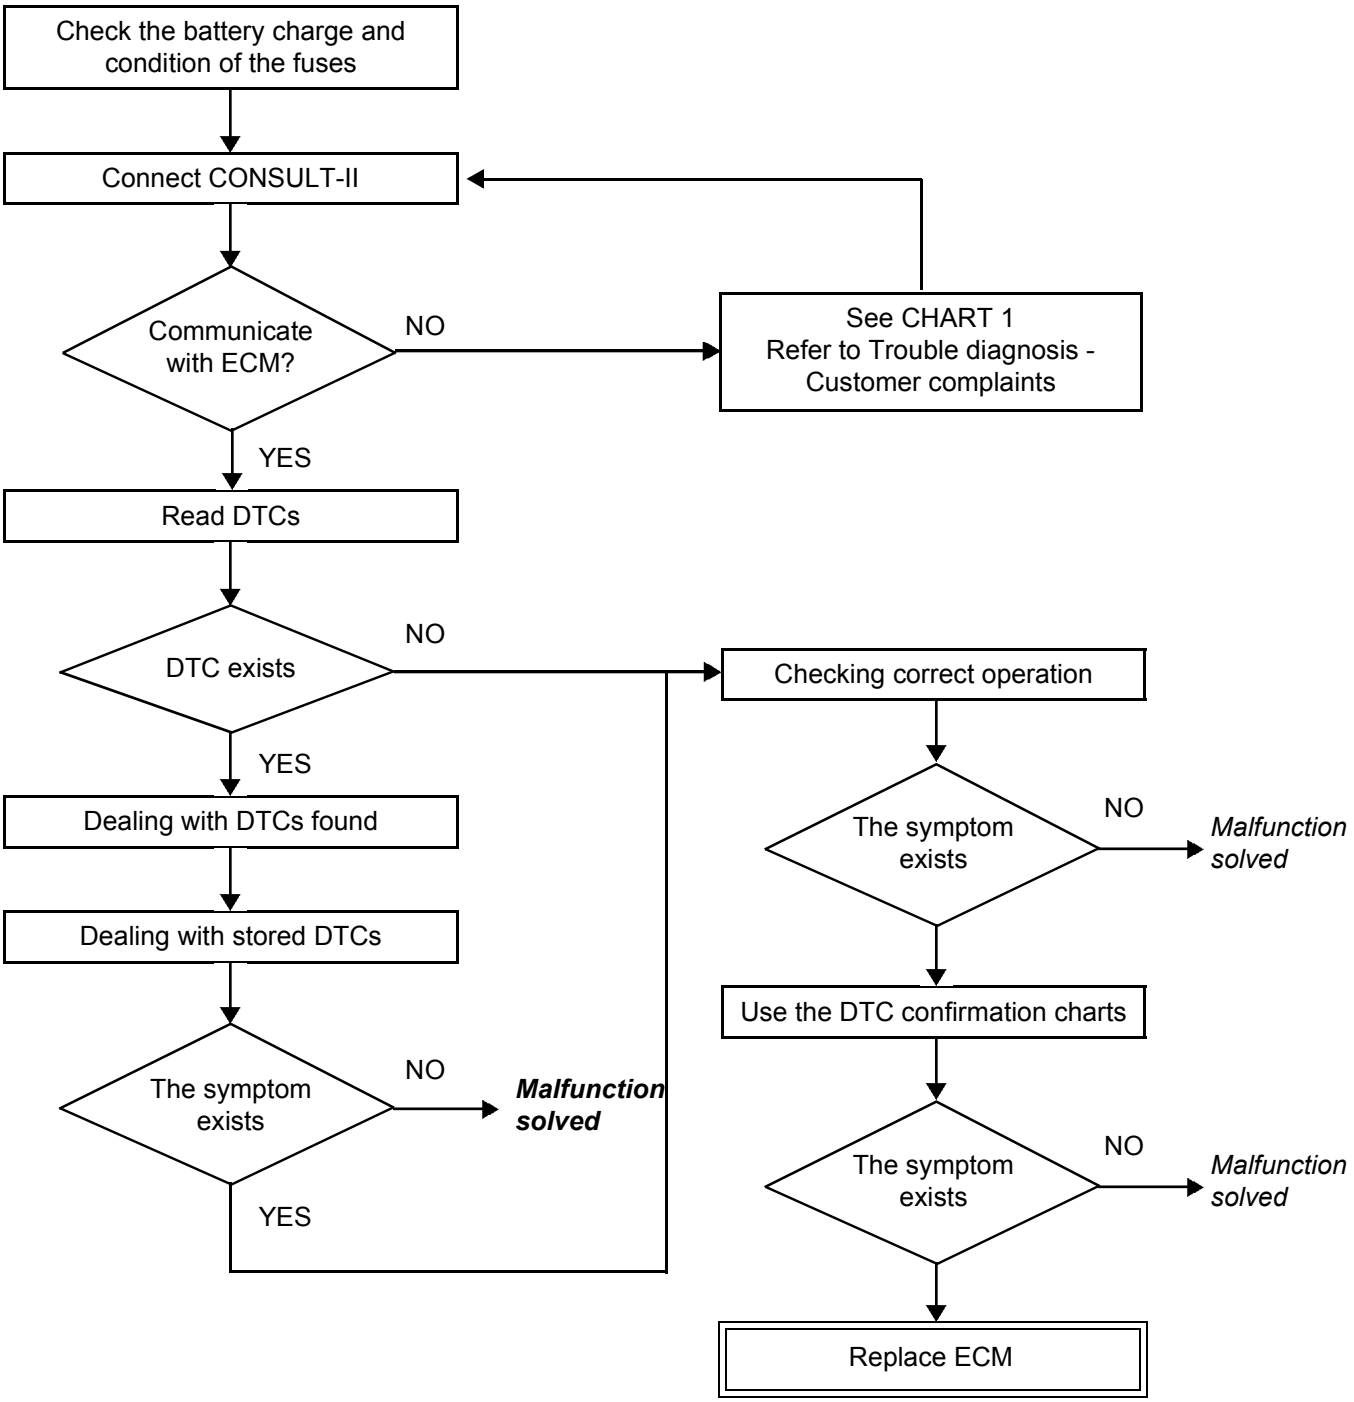
If a state is not operating normally or a data monitor value is outside permitted tolerance values, you should consult the corresponding trouble diagnosis page.

Customer complaints - trouble diagnosis

If the test with the CONSULT-II is OK, but the customer complaint still present, the malfunction should be treated by **customer complaints**.

A synopsis of the general procedure to follow is provided on the next page in the form of a flow chart.

4. DIAGNOSTIC PROCEDURE



5. SAFETY INSTRUCTIONS

All work on components requires that the safety rules be obeyed to prevent damage or injury:
– Make sure the battery is properly charged to avoid damaging the ECMs with a low charge.
– Use the proper tools.

Cleanliness instructions which must be followed when working on the high-pressure direct injection system:

Risks relating to contamination:

The system is very sensitive to contamination. The risks caused by the introduction of contamination are: damage to or destruction of the high-pressure injection system and the engine, seizing or incorrect sealing of a component.

All After-Sales operations must be performed under very clean conditions. This means that no impurities (particles a few microns in size) get into the system during dismantling or into the circuits via the fuel unions.

The cleanliness guidelines must be applied from the filter through to the injectors.

- What are the sources of contamination?

Contamination is caused by:
– metal or plastic chips,
– paint,
– fibres from: cardboard,
brushes,
paper,
clothing,
cloths.
– foreign bodies such as hair,
– ambient atmosphere,
– etc.

WARNING:
Before working on the injection system, ensure that the system pressure is nearing 0 bar.

CAUTION: it is not possible to clean the engine using a high-pressure washer because of the risk of damaging the connections. In addition, moisture may collect in the connectors and cause electrical connection malfunctions.

5. SAFETY INSTRUCTIONS (CONTINUED):

Instructions to be followed before any work is carried out on the injection system:

- Ensure that you have the plugs for the unions to be opened (bag of plugs available from the Parts Stores, NISSAN part No:**16830 BN700**, Renault part No: **77 01 206 804**). Plugs are to be used once only. After use, they must be thrown away (once used they are soiled and cleaning is not sufficient to make them reusable). Unused plugs must be thrown away.
- Ensure that you have hermetically resealable plastic bags for storing removed parts. There is less risk of parts stored in this way being exposed to contamination. The bags must be used only once, and after use they must be thrown away.
- Ensure that lint-free towelettes are used for injection pump related service purposes. The use of a normal cloth or paper for cleaning purposes is prohibited. They are not lint-free and may contaminate the fuel circuit of the system. A lint-free cloth should only be used once.

5. SAFETY INSTRUCTIONS (CONTINUED):

Instructions to be followed before opening the fuel circuit:

Use new thinner for each operation (used thinner contains impurities). Pour it into a clean receptacle.

For each operation, use a clean brush in good condition (the brush must not shed its bristles).

Use a brush and thinners to clean the connections to be opened.

Blow compressed air over the cleaned parts (tools, cleaned the same way as the parts, connections and injection system zone). Check that no bristles remain adhering.

Wash your hands before and during the operation if necessary.

When wearing leather protective gloves, cover them with latex gloves.

Instructions to be followed during the operation:

As soon as the circuit is open, all openings must be plugged to prevent impurities from entering the system. The plugs to be used are available from the Parts Stores. They must not, under any circumstances, be reused .

Close the resealable bag, even if it has to be reopened shortly afterwards. The ambient atmosphere carries impurities.

All components removed from the injection system must be stored in a hermetically sealed plastic bag once the plugs have been inserted.

The use of a brush, thinner, bellows, sponge or normal cloth is strictly forbidden once the circuit has been opened. These items are likely to allow contaminants to enter the system.

A new component replacing an old one must not be removed from its packaging until it is to be fitted to the vehicle.

SYSTEM OPERATION

The high-pressure injection system is designed to deliver a precise quantity of diesel to the engine at a specific time.

It is fitted with a "DDCR" type **112-terminals DELPHI** made ECM.

The system consists of:

- a priming bulb on the low-pressure circuit,
- a diesel filter,
- a high-pressure pump combined with a low-pressure pump (transfer pump),
- a high-pressure regulator mounted on the pump,
- an injector rail,
- a pressure sensor located in the rail,
- four solenoid injectors,
- a fuel temperature sensor,
- an engine coolant temperature sensor,
- an intake air temperature sensor,
- a camshaft position sensor,
- a crankshaft position sensor,
- a turbocharger air pressure sensor,
- a knock sensor (accelerometer),
- an EGR control valve,
- an accelerator pedal position sensor,
- an ECM,
- a mass air flow sensor,

The **common rail** high-pressure direct injection system works sequentially (based on the operation of multipoint injection for petrol engines).

This injection system reduces operating noise, reduces the volume of pollutant gases and particles and produces high engine torque at low engine speeds thanks to a pre-injection procedure.

The high-pressure pump generates the high-pressure sent to the injector rail. The actuator located on the pump controls the quantity of diesel supplied, according to the demand determined by the ECM. The rail supplies each injector through a steel pipe.

The ECM:
It determines the value of injection pressure necessary for the engine to operate correctly and then controls the pressure regulator. It checks that the pressure value is correct by analyzing the value transmitted by the common rail pressure sensor located on the rail.
It determines the injection time necessary to deliver the right quantity of diesel and the moment when injection should start,
It controls each injector electrically and individually after determining these two values.

The injected flow to the engine is determined by:
- the duration of injector control,
- the common rail pressure (regulated by the ECM),
- the injector opening and closing speed,
- the needle travel (determined by a constant for the type of injector),
- the nominal hydraulic flow of the injector (specific to each injector).

The ECM controls:
- the idle speed regulation,
- the EGR control into the intake manifold,
- the fuel supply monitoring (advance, flow and common rail pressure),
- the cooling fan,
- the air conditioning,
- the glow plug control (pre/post heating),

The high-pressure pump is supplied at low-pressure by an integrated low-pressure pump (transfer pump).
It supplies the rail the pressure in which is controlled for charging by the fuel flow actuator and for discharging by the injector valves. Drops in pressure may also be compensated for. The flow actuator allows the high-pressure pump to supply the exact quantity of diesel fuel required to maintain the pressure in the rail. This feature allows heat generation to be minimised and engine output to be improved.
Before discharging the rail using the injector valves, the valves are controlled by short electrical impulses:
short enough not to open the injector, (passing through the return circuit from the injectors),
and long enough to open the valves and discharge the rail.

The fan assembly and coolant temperature warning light on the instrument panel are controlled by the ECM (centralised coolant temperature management function).

The connections between the vehicle's various control units are multiplexed. Therefore, the malfunction warning lights on the instrument panel are lit via the CAN communication line.

There is no vehicle speed sensor in the transmission (transaxle). The vehicle speed signal on the instrument panel is transmitted by the ABS control unit or the wheel speed sensor via a wire connection and is then transmitted on the CAN by the instrument panel.

Some vehicles have a sensor located in the filter for detecting water in the diesel. If there is water present in the diesel, the orange injection and pre/postheating (glow) warning light comes on.

IMPORTANT

The engine must not operate with:
- diesel containing more than **10 %** diester,
- petrol, even in tiny quantities.

The system injects the diesel fuel into the engine at a pressure of up to 1400 bar. Before carrying out any work, check that the injector rail is not pressurised and that the fuel temperature is not too high.

You must respect the cleaning and safety advice specified in this document for any work on the high-pressure injection system.

Removal of the internal parts of the pump and injectors is prohibited. Only the fuel flow actuator, the fuel temperature sensor and the venturi can be replaced.

For safety reasons, it is strictly forbidden to undo a high-pressure pipe union when the engine is running.

It is not possible to remove the common rail fuel pressure sensor from the fuel rail because this may cause circuit contamination malfunction. If the pressure sensor fails, the pressure sensor, the rail and the five high-pressure pipes must be replaced.

It is strictly forbidden to remove any injection pump pulley bearing the number 070 575. If the pump is being replaced, the pulley must be replaced.

Applying 12 V directly to any component in the system is prohibited.

Ultrasonic decoking and cleaning are prohibited.

Never start the engine unless the battery is connected correctly.

Disconnect the injection system computer when carrying out any welding work on the vehicle.

It is essential to replace all the disconnected air inlet plastic pipes.

Functions included

Air conditioning control assistance:

For vehicles with air conditioning, the ECM can deactivate the air conditioning in certain conditions of use:
- when requested by the driver,
- when starting the engine,
- if the engine overheats (in order to reduce the power the engine has to supply),
- when the engine speed is very high (to protect the compressor),
- during transition phases (e.g. under heavy acceleration when overtaking, anti-stalling and moving off strategies). These conditions are only taken into account when they occur repeatedly, so as to prevent system instabilities (incorrect deactivation).
- when reading certain malfunctions.

Cold loop air conditioning control:

The air conditioning is controlled in a cold loop and this function is controlled by several control units. The ECM is responsible for:
- Authorising requests for cold according to passenger compartment, refrigerant pressure, coolant temperature.
- Calculating the power absorbed by the compressor (from the refrigerant pressure).
- The control of the fan assembly according to the vehicle speed, refrigerant pressure and engine coolant temperature.

The driver asks for the air conditioning to be switched on using the air conditioning switch. This request for cold air is either authorised or not, depending on the measured pressure. If this pressure is outside the operating limits, the cold loop strategy is not activated.

> Note:
> Requests to operate the fan assembly can be made by the ECM but these are sent on the CAN. These requests depend on the air conditioning but also on the coolant temperature and vehicle speed.

Thermal regulation of the passenger compartment heating circuit:

In a direct injection engine, fuel is injected directly into the combustion chamber. This leads to heat being lost through the upper part of the engine and consequently, the cylinder head cooling circuit is smaller in size.

The effect of this is that the temperature of the coolant which flows through this circuit rises more slowly. However, this coolant is used by the passenger compartment heating system. In very cold conditions, it is therefore difficult to reach a comfortable passenger compartment temperature quickly.

WARNING LAMP CONTROL

Instrument panel display:

The ECM displays certain information on the instrument panel relating to engine operation. This concerns five functions: MI (Malfunction Indicator) for the EOBD (European On Board Diagnostic), pre/post heating (glow), coolant temperature and engine malfunctions: Severity 1 (non-critical malfunction) and Severity 2 (stop immediately). These five functions are represented by 3 warning lights or messages displayed by the ECM.

Pre/post heating (glow) warning light:

This warning light is used as an operating indicator light and as a system malfunction indicator light:
– Permanently lit during + after turning ignition switch "ON": indicates preheating of the glow plugs.

After preheating and an automatic 3 second off period, the warning light will come on if a level 1 malfunction occurs (leading to reduced operation and reduced safety levels). The driver should carry out repairs as soon as possible.

Temperature/emergency stop warning light:

This warning light is used as an operating indicator light and as a system malfunction indicator light. It lights up for **3 seconds** when the ignition is switched on (automatic test procedure controlled by the instrument panel).
– Permanently on: indicates engine overheating or a level 2 malfunction.

If the malfunction reaches a critical level, the injection is cut off automatically after a few seconds.
In the event of overheating, it is up to the driver whether to stop the vehicle or continue driving.

PROGRAMMING OF WARNING LIGHTS ON THE INSTRUMENT PANEL:

Orange SERVICE warning light (level 1):

This warning light comes on and is **accompanied by the injection faulty message**.

The driver should carry out repairs as soon as possible.

Red STOP warning light (level 2):

This warning light comes on and is **accompanied by the injection malfunction message**.

The driver should carry out repairs as soon as possible.

Excess pollution orange OBD warning light:

This warning light, in the form of an engine symbol, comes on for about 3 seconds when the ignition is switched on then goes out. It never comes on when the engine is running.

ECM REPLACEMENT, PROGRAMMING OR REPROGRAMMING OPERATION

Following items can be (re)programmed via the DLC using the CONSULT-II
- System configuration
- Injector's indivisual correction parameter (value)

Before replacing the ECM in after-sales operations, the following data must be readout using CONSULT-II:

– The **individual injector correction** parameters to be noted to appropriate paper or CONSULT-II copying function.

NOTE: The individual injector correction value for each injector must be entered manually after the ECM has been replaced or (re)programmed by reading the individual injector correction value on each injector (Refer to replacing injectors).

IMPORTANT: It is not possible to test an ECM from the parts stores because it cannot be fitted to any other vehicle.

REPLACING THE INJECTORS

NOTE: The individual injector correction is a calibration made on **each injector** in the factory in order to **adjust its flow** precisely.

These correction values are written on a label affixed to each injector then entered into the computer which then controls each injector taking into account its individual **manufacturing variations**.

When replacing one or more injectors, the parameters of the injector output concerned must be modified. **The system can be configured using the CONSULT-II** (Refer to injector).

P0089 **DF053** **STORED**	COMMON RAIL FUEL PRESSURE REGULATION FUNCTION 1.DEF : At minimum limit 2.DEF : At maximum limit 3.DEF : Below minimum threshold 4.DEF : Above maximum threshold 5.DEF : High flow current < minimum 6.DEF : High flow current > maximum 7.DEF : Low flow current < minimum 8.DEF : Low flow current > mimimum

NOTES	**Special notes:** If **DTC P0089** is present: engine may stop with malfunction indicator lights up **(levels 1 and 2)**.
	Priority when dealing with a number of DTCs: If DTC **P0089** and **DTC P0180 or P0190** are present, deal with **P0180 or P0190** first.
	Conditions for applying the diagnostic procedure to the stored DTCs: The fault is declared present with the **engine running**.

4.DEF ***6.DEF*** ***8.DEF***	***NOTES***	**Special notes:** None.

Check the fuel flow actuator connection. Repair if necessary.
Measure the resistance between **terminal 1 and 2 of the fuel flow actuator,** if it is not approximately **5.3 Ω ± 0.5 Ω at 20°C, replace the actuator.**
Check the condition of the ECM (**F134**) harness connector and replace it if necessary.
Check the insulation, continuity **and absence of interference resistance of the connection:** ● ECM (**F134**) terminal 39 and fuel flow actuator harness connector terminal 2 (Refer to wiring diagram "EC-IMV/D-01".) Repair if necessary.
Check: – **that fuel is present** in the tank, – **that there is no air** in the fuel circuit, – the condition of the **fuel filter**. Repair if necessary.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0089 **DF053** Cont'd	

1.DEF ***2.DEF*** ***3.DEF*** ***5.DEF*** ***7.DEF***	***NOTES***	**Special notes:** None.

Check **for fuel** in the tank.
Carry out **Test 7 "High pressure system check"**.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0087 **DF130** **STORED**	FLOW CAPACITY FUNCTION

NOTES	**Special notes:** If this DTC is present, engine may stop when malfunction indicator illuminates (levels 1 and 2).
	Condition for applying the diagnostic procedure to stored DTCs: The DTC is declared present **when the engine is running**

Check the **connection** of the fuel flow actuator **(IMV)** and repair if necessary.
Measure the resistance across terminals 1 and 2 of the fuel flow actuator. **Replace the flow actuator** if the resistance is not approximately **5.3** Ω ± **0.5** Ω **at 20 °C**.
Check the condition of the ECM (**F134**) harness connector. Repair if necessary.
Check the **insulation, continuity and absence of unwanted resistance** on the following connection: ● ECM (**F134**) terminal 39 and fuel flow actuator harness connector 2. Repair if necessary
Check: - **that fuel is present** in the tank, - **that there is no air** in the fuel circuit, - the condition of the **fuel filter**. Repair if necessary.
If the DTC persists, carry out a **"HIGH-PRESSURE PUMP" test (see TEST section)**.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0110 **DF039** **PRESENT**	INTAKE AIR TEMPERATURE SENSOR CIRCUIT CC.0 : Short circuit to earth (ground) CO.1 : Open circuit or short circuit + 12V

NOTES	**Priority when dealing with a number of DTCs:** If DTCs P0110 and P0608 are present, deal with DTC P0608 (sensor voltage supply) first.
	Special notes: None

Check the condition of the **intake air temperature sensor harness connector** and repair it if necessary.
Check the condition of the ECM harness connector (F134) and repair if necessary.
At the terminal, measure the **resistance** of the **intake air temperature sensor,** if it is not approximately **2051** Ω ± **20** Ω **at 25** °**C** replace the air temperature sensor.
Check the **insulation, continuity and absence of interference resistance** of the connections: ● ECM (F134) terminal 51 and intake air temperature sensor harness connector terminal 1 ● ECM (F134) terminal 61 and intake air temperature sensor harness connector terminal 2 (Refer to wiring diagram "EC-IATS-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0115 **DF001** **PRESENT**	ENGINE COOLANT TEMPERATURE SENSOR CIRCUIT CC.0 : Short circuit to earth (ground) CO.1 : Open circuit or short circuit to + 12V

NOTES	**Special notes:** If DTC **P0115** with low speed cooling fan motor operation is present . If cooling fan 1 is suspected, then cooling fan motor 2 is switched on for vehicles with air conditioning.

Check the condition of the **engine coolant temperature sensor harness connector.**
Repair it if necessary.

Check the condition of the ECM harness connector (F134) and repair if necessary.

At the terminal, measure the **resistance** of the **engine coolant temperature sensor,** if it is not approximately **2252** Ω ± **112.16** Ω **at 25** °**C,** replace the engine coolant temperature sensor.

Check the **insulation, continuity and absence of interference resistance** of the connections:

- ECM (F134) terminal 63 and ECT sensor terminal 1
- ECM (F134) terminal 53 and ECT sensor terminal 4
  (Refer to wiring diagram "EC-ECTS-01".)

Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0180 **DF098** **PRESENT**	FUEL TEMPERATURE SENSOR CIRCUIT CC.0 : Short circuit to earth (ground) CO.1 : Open circuit or short circuit + 12V

NOTES	**Special notes:** None.

Check the condition of the **fuel temperature sensor harness connector** and repair it if necessary.
Check the condition of the ECM harness connector (F134) and repair if necessary.
At the terminal, measure the **resistance** of the **fuel temperature sensor,** if it is not approximately **2.2k Ω at 25 °C,** replace the fuel temperature sensor.
Check the **insulation, continuity and absence of interference resistance** of the connections: ● ECM (F134) terminal 64 and fuel temperature sensor harness connector terminal 1 ● ECM (F134) terminal 54 and fuel temperature sensor harness connector terminal 2 (Refer to wiring diagram "EC-FTS-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0190 **DF007** **STORED**	COMMON RAIL FUEL PRESSURE SENSOR CIRCUIT 1.DEF : Inconsistency 2.DEF : Below minimum threshold 3.DEF : Above maximum threshold CC.0 : Short circuit to earth (ground) CO.1 : Open circuit or short circuit to + 12V

NOTES	**Priority when dealing with a number of DTCs:** If DTCs **P0190** and **P0608** are both present, deal with DTC **P0608** (sensor voltage supply) first.
	Conditions for applying the diagnostic procedure to the stored DTC: The DTC is declared present after the engine is started.
	If **P0190 is present, the engine stops and is impossible to restart.** **Malfunction indicator lights up (level 1).**

Check the condition of the **common rail fuel pressure sensor harness connector** and repair if necessary.

Check the condition of the **ECM harness connector** (F134) and repair if necessary.

Check the **insulation, continuity and absence of interference resistance of the connections:**

- ECM (F134) terminal 67 and common rail fuel pressure sensor harness connector terminal 2
- ECM (F134) terminal 57 and common rail fuel pressure sensor harness connector terminal 3
- ECM (F134) terminal 47 and common rail fuel pressure sensor harness connector terminal 1

(Refer to wiring diagram "EC-CRFPS-01".)
Repair if necessary.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0200 **DF052** **PRESENT**	INJECTOR CONTROL CIRCUIT CC.0 : Short circuit to earth CC.1 : Short circuit to + 12 volts

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC:** DTC declared present: **engine at idle speed.**
	Priorities when dealing with more than one DTC: If DTC **P0200** and DTCs **P0201, P0202, P0203 and P0204** are present, the diagnostic procedure remains the same, but you can determine the suspected injector.
	Special notes: The engine stalls when the DTC appears. **Level 1 warning light comes on**.

Turn off the ignition switch and check the injector **connections**. Repair if necessary.
Disconnect the injectors and turn on the ignition switch on. Check to see if the DTC is still present. Using CONSULT-II, check for the changes to P0200. Is P0220 present or stored?

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0200 PRESENT	If the DTC **disappears when the injectors are disconnected**, check the condition of the **ECM harness connector** (F134) and replace it if necessary. Check the **insulation, continuity and absence of interference resistance of the connections:** ● ECM (F134) terminal 80 and No.1 injector terminal 2 (+) ● ECM (F134) terminal 79 and No.1 injector terminal 1 (ground) ● ECM (F134) terminal 74 and No.2 injector terminal 2 (+) ● ECM (F134) terminal 73 and No.2 injector terminal 1 (ground) ● ECM (F134) terminal 78 and No.3 injector terminal 2 (+) ● ECM (F134) terminal 77 and No.3 injector terminal 1 (ground) ● ECM (F134) terminal 76 and No.4 injector terminal 2 (+) ● ECM (F134) terminal 75 and No.4 injector terminal 1 (ground) (Refer to wiring diagram "EC-INJECT-01 and -02".) Repair if necessary.
P0200 STORED	Injector(s) malfunctioning. Replace the injector identified by **P0201 to P0204** if present. If none of the faults identifying the malfunctioning injector circuit are present: – Switch off the engine. – Reconnect one of the four injectors. – Switch the ignition back on and, if the malfunctioning reappears as present, replace the reconnected injector. **Carry out the same procedure for the remaining injectors.**

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0201 **DF026** **PRESENT** **OR** **STORED**	CYLINDER 1 INJECTOR CIRCUIT CO : Open circuit CC : Short circuit 1.DEF : At minimum stop

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC:** STC declared present: **engine at idlie speed**.
	Special notes: When this DTC appears, the idle speed is stuck at **1000 rpm**, with engine noise, unstable engine speed, reduced engine performance and **malfunction indicator lights up (level 1)**.

CO ***CC***	***NOTES***	**Special notes:** None.

With the ignition switched off, wait 15 seconds.
Check the connection and condition of the **injector 1 harness connector**.
Repair if necessary.

Check the condition of the ECM harness connector (F134) and replace it if necessary.

Use command **"INJECTOR CYLINDER 1"** with CONSULT.
If 5 actuation cycles of injector 1 cannot be heard working, connect the cylinder 2 injector harness connector to the cylinder 1 injector and use command **"INJECTOR CYLINDER 2"**.
Does this injector actuation cycle work?

YES	Injector 1 is not malfunctioning, malfunction with injector 1 control circuit. Check **for continuity and make sure there is no extraneous resistance on the following connections**: ● ECM (F134) terminal 80 and injector 1 harness connector terminal 2. ● ECM (F134) terminal 79 and injector 1 harness connector terminal 1. Also check for insulation between these 2 connections. (Refer to wiring diagram "EC-INJECT-02"). Repair if necessary. If the DTC persists, replace ECM.
NO	Injector 1 malfunctioning, replace the cylinder 1 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0201 **DF026** **PRESENT** **OR** **STORED** Cont'd	

1.DEF	***NOTES***	**Special notes:** None.

Check that the injector correction value is correctly programmed into the ECM.

- Check the knock sensor shielding on ECM (F134) harness connector terminal 41.
  (Refer to wiring diagram "EC-INJECT-02".)

Check that the knock sensor is secure on the engine.
If the DTC persists, replace the cylinder 1 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0202 **DF027** **PRESENT** **OR** **STORED**	CYLINDER 2 INJECTOR CIRCUIT CO : Open circuit CC : Short circuit 1.DEF : At minimum stop

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC:** DTC declared present: **engine at idlie speed**.
	Special notes: When this DTC appears, the idle speed is stuck at **1000 rpm**, with engine noise, unstable engine speed, reduced engine performance and **malfunction indicator light comes on (level 1)**.

CO ***CC***	***NOTES***	**Special notes:** None.

With the ignition switched off, wait 15 seconds.
Check the connection and condition of the **injector 1 harness connector**.
Repair if necessary.

Check the condition of the ECM harness connector (F134) and replace it if necessary.

Use command **"INJECTOR CYLINDER 2"** with CONSULT.
If 5 actuation cycles of injector 2 cannot be heard working, connect the cylinder 3 injector harness connector to the cylinder 2 injector and use command **"INJECTOR CYLINDER 3"**.
Does this injector actuation cycle work?

YES	Injector 2 is not malfunctioning, malfunction with injector 2 control circuit. Check **for continuity and make sure there is no extraneous resistance on the following connections**: ● ECM (F134) terminal 74 and injector 2 harness connector terminal 2. ● ECM (F134) terminal 73 and injector 2 harness connector terminal 1. Also check for insulation between these 2 connections. (Refer to wiring diagram "EC-INJECT-02"). Repair if necessary. If the DTC persists, replace ECM.
NO	Injector 2 malfunctioning, replace the cylinder 2 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0202 **DF027** **PRESENT** **OR** **STORED** Cont'd	

1.DEF	***NOTES***	**Special notes:** None.

Check that the injector correction value is correctly entered on the ECM.

- Check the knock sensor shielding on ECM (F134) harness connector terminal 41.
  (Refer to wiring diagram "EC-INJECT-02".)

Check that the knock sensor is secure on the engine.
If the DTC persists, replace the cylinder 2 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0203 **DF028** **PRESENT** **OR** **STORED**	CYLINDER 3 INJECTOR CIRCUIT CO : Open circuit CC : Short circuit 1.DEF : At minimum stop

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC:** STC declared present: **engine at idlie speed**.
	Special notes: When this DTC appears, the idle speed is stuck at **1000 rpm**, with engine noise, unstable engine speed, reduced engine performance and **malfunction indicator light comes on (level 1)**.

CO ***CC***	***NOTES***	**Special notes:** None.

Switch off the ignition and wait **15 seconds**.
Check the connection and condition of the **injector connector**. Repair if necessary.

Check the condition of the **ECM harness connector** (F134). Repair if necessary.

Use **"INJECTOR 3 CYLINDER"** in active test mode with CONSULT-II.
If 5 actuation cycles of injector 3 cannot be heard working, connect the cylinder 4 injector harness connector to the cylinder 3 injector and use command **"INJECTOR 4 CYILINDER"**.
Does this injector actuation cycle work?

YES

Injector 3 is not malfunctioning, malfunction with injector 3 control circuit.
Check **for continuity and make sure there is no extraneous resistance on the connections**:

- ECM (F134) terminal 78 and injector 3 terminal 2.
- ECM (F134) terminal 77 and injector 3 terminal 1.

Also check for insulation between these 2 connections.
(Refer to wiring diagram "EC-INJECT-02"). Repair if necessary.
If the DTC persists, replace ECM.

NO

Injector 3 malfunctioning, replace the cylinder 3 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0203 **DF028** **PRESENT** **OR** **STORED** Cont'd	

1.DEF	***NOTES***	**Special notes:** None.

Check that the injector correction value is correctly entered on the ECM.

- Check the knock sensor shielding on ECM (F134) harness connector terminal 41.
  (Refer to wiring diagram "EC-INJECT-02".)

Check that the knock sensor is secure on the engine.
If the DTC persists, replace the cylinder 3 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0204 **DF029** **PRESENT** **OR** **STORED**	INJECTOR CYLINDER 4 CONTROL CIRCUIT CO : Open circuit CC : Short circuit 1.DEF : At minimum stop

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC:** STC declared present: **engine at idlie speed**.
	Special notes: When this DTC appears, the idle speed is stuck at **1000 rpm**, with engine noise, unstable engine speed, reduced engine performance and **malfunction indicator light comes on (level 1)**.

CO ***CC***	***NOTES***	**Special notes:** None.

Switch off the ignition and wait **15 seconds**. Check the connection and condition of the **injector connector**. Repair if necessary.
Check the condition of the **ECM harness connector** (F134). Repair if necessary.
Use **"INJECTOR 4 CYLINDER"** in active test mode with CONSULT-II. If 5 actuation cycles of injector 4 cannot be heard working, connect the cylinder 1 injector harness connector to the cylinder 1 injector and use command **"INJECTOR 1 CYILINDER"**. **Does this injector actuation cycle work?**

NO	Injector 4 is not malfunctioning, malfunction with injector 4 control circuit. Check **for continuity and make sure there is no extraneous resistance on the connections**: ● ECM (F134) terminal 76 and injector 4 terminal 2. ● ECM (F134) terminal 75 and injector 4 terminal 1. Also check for insulation between these 2 connections. (Refer to wiring diagram "EC-INJECT-02"). Repair if necessary. If the DTC persists, replace ECM.
YES	Injector 4 malfunctioning, replace the cylinder 4 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0204 **DF029** **PRESENT** **OR** **STORED** Cont'd	

1.DEF	***NOTES***	**Special notes:** None.

Check that the injector correction value is correctly entered on the ECM.

- Check the knock sensor shielding on ECM (F134) harness connector terminal 41.
  (Refer to wiring diagram "EC-INJECT-02".)

Check that the knock sensor is secure on the engine.
If the DTC persists, replace the cylinder 4 injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0225 **DF008** **PRESENT**	PEDAL SENSOR CIRCUIT TRACK 1 (APP SENSOR 1) 1.DEF : Inconsistency CO.0 : Open circuit or short circuit to earth (ground) CC.1 : Short circuit to 12 volts 2.DEF : No signal 3.DEF : Blocked component

NOTES	**Priority when dealing with a number of DTCs:** If DTCs **P0225** and **P0608** are both present, deal with **DTC P0608 "SENSOR SUPPLY VOLTAGE"** first.
	Special notes: if **DTC P0225** is present: engine speed maintained **above 1000 rpm**, and malfunction indicator lights up **(level 1)**. If **DTC P0225 and DTC P2120** both present: engine speed is fixed at **1300 rpm and** the malfunction indicator lights up **(level 1)**.

1.DEF ***3.DEF***	***NOTES***	**Special notes:** None.

Disconnect ECM harness connector (E61) from the ECM and the connector from the APP sensor and test the insulation between the two lines.

- ECM (E61) terminal 30 and 29 (Refer to wiring diagram).

Repair if necessary.
Replace the APP sensor if the DTC persists.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0225 **DF008** **(Cont'd)**	

CO.0 **CC.1** **2.DEF**	***NOTES***	**Special notes:** None.

Check the condition of the **APP sensor harness connector** and repair it if necessary.
Check the condition of the ECM harness connector (E61) and replace it if necessary.
Measure the **resistance** at the **APP sensor terminals:** **terminal 4** (+5 V) **and terminal 2** (ground) If it is not approximately **1.7 kΩ ± 0.9 kΩ**, replace the pedal potentiometer.
Check the **insulation, continuity and absence of interference resistance of the connections:** ● ECM (E61) terminal 29 and APP sensor harness connector terminal 4 ● ECM (E61) terminal 30 and APP sensor harness connector terminal 3 ● ECM (E61) terminal 28 and APP sensor harness connector terminal 2 (Refer to wiring diagram "EC-APPS-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0231 **DF024** **PRESENT**	LOW-PRESSURE ACTUATOR CONTROL CIRCUIT CO.0 : Open circuit or short circuit to earth CC.1 : short circuit to 12 volts

NOTES	**Special notes:** If fault **P0231** is present with **CO.0 or CC.1 level 1** warning light comes on. The fuel flow actuator is fully opened and the engine is stopped to prevent it from racing.

Check the connection and condition of the **fuel flow actuator connector**. Repair if necessary.
Check the condition of the ECM harness connector (F134). Repair if necessary.
Measure the resistance between the terminals **1 and 2 of the fuel flow actuator**. Replace the flow actuator if the resistance is not approximately **5.3** Ω ± **0.5** Ω **at 20** °**C**.
Check the **insulation, continuity and absence of unwanted resistance** on the following connection: ● ECM (F134) terminal 39 and fuel flow actuator harness connector terminal 2. (Refer to wiring diagram "EC-IMV/D-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0235 **DF089** **PRESENT**	TURBOCHARGER BOOST PRESSURE SENSOR CIRCUIT 1.DEF : Permanent low signal 2.DEF : Permanent high signal 3.DEF : Below minimum threshold 4.DEF : Above maximum threshold 5.DEF : Inconsistency 6.DEF : At maximum stop 7.DEF : At minimum stop

NOTES	**Priority when dealing with a number of DTCs:** in the event of a combination of faults **P0235** and **P0608** are both present, deal with **DTC P0608 "SENSOR SUPPLY VOLTAGE"** first.
	Special notes: Malfunction indicator lights up **(level 1)**.

1.DEF **2.DEF** **3.DEF** **4.DEF**	Check the condition of the **TC boost pressure sensor harness connector** and repair if necessary.
	Check the condition of the **ECM harness connector** (F134) and replace it if necessary.
	Check the **insulation, continuity and absence of interference resistance of the connections:** ● ECM (F134) terminal 68 and TC boost pressure sensor harness connector terminal 2 ● ECM (F134) terminal 58 and TC boost pressure sensor harness connector terminal 3 ● ECM (F134) terminal 48 and TC boost pressure sensor harness connector terminal 1 (Refer to wiring diagram "EC-TCBST-01" models without intercooler, "EC-TCBST-02" models with intercooler.) Repair if necessary.

5.DEF **6.DEF** **7.DEF**	Visually check that the turbocharger circuit is leak tight. Repair if necessary.
	Remove the air supply ducts and check that they are not blocked. Repair if necessary.
	Check the consistency between the **BARO pressure and TC boost pressure sensor**. With the engine stopped, the pressure should be approximately the same between the two sensors. Replace the TC boost pressure sensor if necessary.
	Check the **turbocharger**. Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0301 **DF059** **STORED**	CYLINDER 1 MISFIRE

NOTES	**Special notes:** If **DTC0301** is present, engine speed maintained at **1000 rpm, engine performance is reduced to 75 % and the malfunction indicator lights up (level 1)**.
	Condition for applying diagnostic procedure to the stored DTCs: DTC declared present: **engine at idle speed**.
	Priority when dealing with a number of DTCs: in the event of a combination of **DTC P0201 (CC or CO)** and **DTC P0301** deal with **DTC P0201 "CYLINDER 1 INJECTOR CONTROL CIRCUIT" (CC or CO)** first. **Priority when dealing with a number of DTCs:** in the event of a combination of **DTC P0089 (1.DEF, 2.DEF, 7.DEF)** and **DTC P0301** deal with **DTC P0089 "Pressure regulation"** first.

Check the tightness of the **cylinder** and repair if necessary.
Check the **valve clearances** and adjust them if necessary.
Check the **air inlet conduits** and the **EGR valve** and clean them if necessary.
Replace the injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0302 **DF060** **STORED**	CYLINDER 2 MISFIRE

NOTES	**Special notes:** If **DTC0302** is present, engine speed maintained at **1000 rpm, engine performance is reduced to 75 % and the malfunction indicator lights up (level 1)**.
	Condition for applying diagnostic procedure to the stored DTCs: DTC declared present: **engine at idle speed**.
	Priority when dealing with a number of DTCs: in the event of a combination of **DTC P0202 (CC or CO)** and **DTC P0302** deal with **DTC P0202 "CYLINDER 2 INJECTOR CONTROL CIRCUIT" (CC or CO)** first. **Priority when dealing with a number of DTCs:** in the event of a combination of **DTC P0089 (1.DEF, 2.DEF, 7.DEF)** and **DTC P0302** deal with **DTC P0089 "Pressure regulation"** first.

Check the tightness of the **cylinder** and repair if necessary.
Check the **valve clearances** and adjust them if necessary.
Check the **air inlet conduits** and the **EGR valve** and clean them if necessary.
Replace the injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0303 **DF061** **STORED**	CYLINDER 3 MISFIRE

NOTES	**Special notes:** If **DTC0303** is present, engine speed maintained at **1000 rpm, engine performance is reduced to 75 % and the malfunction indicator lights up (level 1)**.
	Condition for applying diagnostic procedure to the stored DTCs: DTC declared present: **engine at idle speed**.
	Priority when dealing with a number of DTCs: in the event of a combination of **DTC P0203 (CC or CO)** and **DTC P0303** deal with **DTC P0203 "CYLINDER 3 INJECTOR CONTROL CIRCUIT" (CC or CO)** first. **Priority when dealing with a number of DTCs:** in the event of a combination of **DTC P0089 (1.DEF, 2.DEF, 7.DEF)** and **DTC P0303** deal with **DTC P0089 "Pressure regulation"** first.

Check the tightness of the **cylinder** and repair if necessary.
Check the **valve clearances** and adjust them if necessary.
Check the **air inlet conduits** and the **EGR valve** and clean them if necessary.
Replace the injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0304 **DF062** **STORED**	CYLINDER 4 MISFIRE

NOTES	**Special notes:** If **DTC0304** is present, engine speed maintained at **1000 rpm, engine performance is reduced to 75 % and the malfunction indicator lights up (level 1)**.
	Condition for applying diagnostic procedure to the stored DTCs: DTC declared present: **engine at idle speed**.
	Priority when dealing with a number of DTCs: in the event of a combination of **DTC P0204 (CC or CO)** and **DTC P0304** deal with **DTC P0204 "CYLINDER 4 INJECTOR CONTROL CIRCUIT" (CC or CO)** first. **Priority when dealing with a number of DTCs:** in the event of a combination of **DTC P0089 (1.DEF, 2.DEF, 7.DEF)** and **DTC P0304** deal with **DTC P0089 "Pressure regulation"** first.

Check the tightness of the **cylinder** and repair if necessary.
Check the **valve clearances** and adjust them if necessary.
Check the **air inlet conduits** and the **EGR valve** and clean them if necessary.
Replace the injector.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0325 **DF121** **STORED**	KNOCK SENSOR CIRCUIT (ACCELEROMETER CIRCUIT)

NOTES	**Processing priority in the event of a number of DTCs:** If DTCs **P0115, P0180, P2226** are present, first deal with DTCs **P2226: Coolant temperature, P0180: Fuel temperature, and P2226: Atmospheric pressure**. A DTC on one of these sensors could lead to an incorrect trouble diagnosis on the knock sensor (accelerometer).
	Conditions for applying the diagnostic procedure to the stored DTC: DTC declared present: **engine at idle speed.**

Check the **conformity of the injectors** fitted to the vehicle in relation to the **type of vehicle and engine number** (low injector, high or very high pressure).

Check the knock sensor connection.
Repair if necessary.

Check the condition of the **ECM harness connector** (F134) and the sensor shielding on track **ECM** (F134) **terminal 41**. Repair if necessary.

Check the **insulation, continuity and absence of interference resistance of the connections:**

- ECM (F134) terminal 45 and knock sensor harness connector terminal 1
- ECM (F134) terminal 44 and knock sensor harness connector terminal 2

(Refer to wiring diagram "EC-KS-01".)
Repair if necessary.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0335 **DF005** **PRESENT** **OR** **STORED**	CRANKSHAFT POSITION SENSOR CIRCUIT (FLYWHEEL) 1.DEF : Inconsistency 2.DEF : No signal 3.DEF : Too many additional teeth 4.DEF : Teeth missing 5.DEF : Additional teeth 6.DEF : Too many teeth missing

NOTES	**Special notes:** If **1.DEF, 2.DEF, 3.DEF, 6.DEF present: engine stops** and malfunction indicator lights up **(level 1)**. If **4.DEF, 5.DEF**, 75 % engine performance, malfunction indicator will not light up.
	Conditions for applying diagnostic procedure for stored DTCs: DTC declared present with the engine **cranking or idling**.

Check the condition of the **crankshaft position sensor harness connector** and repair if necessary.
Check the condition of the ECM harness connector (F134) and repair if necessary.
At the terminal, measure the **resistance** of the **crankshaft position sensor,** if it is not approximately **760**Ω replace the flywheel signal sensor.
Check the **insulation, continuity and absence of interference resistance of the connections:** ● ECM (F134) terminal 55 and crankshaft position sensor harness connector terminal 1 ● ECM (F134) terminal 65 and crankshaft position sensor harness connector terminal 2 (Refer to wiring diagram "EC-CKPS-01".) Repair if necessary.
Check that the flywheel ring gear is not suspected (missing teeth).

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0340 **DF112** **STORED**	CAMSHAFT POSITON SENSOR CIRCUIT 1.DEF : Signal Absent 2.DEF : Inconsistency

NOTES	**Priority when dealing with a number of DTCs:** If DTCs **P0340** and **P0608** are both present, deal with DTC **P0608** (sensor voltage supply) first.
	Conditions for applying the diagnostic procedure to the stored DTC: The DTC is declared **present** when the **engine is started or at idle speed (800±50 rpm).**

Check the condition of the **camshaft position sensor harness connector** and repair if necessary.

Check the condition of the **ECM harness connector** (F134) and repair if necessary.

Check the **insulation, continuity and absence of interference resistance of the connections:**

- ECM (F134) terminal 56 and CMP sensor harness connector terminal 2
- ECM (F134) terminal 66 and CMP sensor harness connector terminal 3
- Check power supply between CMP sensor harness connector terminal 1 and IPDM E/R terminal 33 (Refer to wiring diagram "EC-CMPS-01".)

If necessary, replace the sensor.

Check the timing gear setting. Refer to "EM section".

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0380 **DF025** **PRESENT**	GLOW PLUG DIAGNOSTIC CONNECTION CO : open circuit

NOTES	**Special notes:** This DTC only detects an open circuit.

Check the condition and connection of the **glow relay harness connector.** Change it if necessary.
Check the condition and connection of the **glow plug harness connectors.** Change them, if necessary.
Check the condition of the ECM harness connector (F134) and replace it if necessary.
Measure the resistance of each **glow plug**. The resistance should be **less than 2 Ω.** If not, replace the suspected plugs.
Check the **insulation, continuity and absence of interference resistance of the connection:** ● ECM (F134) terminal 98 and glow relay harness connector terminal 1 (Refer to wiring diagram "EC-GLOW-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0382 **DF017** **PRESENT**	GLOW RELAY CONTROL CIRCUIT (PRE HEAT) CC.1 : Short circuit to +12 volts CC.0 : Open circuit or short circuit to earth (ground)

NOTES	**Special notes:** If **P0382** is present starting is difficult (or impossible when cold). **CC.1:** plugs permanently controlled with risk of being damaged and risk of damaging the engine.

Check the condition and connection of the glow relay unit **connector**.
Repair if necessary.

Check the condition of the ECM harness connector (F134) and repair if necessary.

Check the **insulation, continuity and absence of interference resistance of the connections:**

- Glow relay (E102) terminal 5 for power supply circuit
- ECM (F134) terminal 98 and glow relay harness connector terminal 1
- ECM (F134) terminal 90 and glow relay harness connector terminal 6
  (Refer to wiring diagram "EC-GLOW-01".)

Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0400 **DF114** **STORED**	EGR CONTROL SOLENOID VALVE CIRCUIT 1.DEF : At minimum stop 2.DEF : At maximum stop 3.DEF : Inconsistency 4.DEF : Valve jammed 5.DEF : Valve clogged

NOTES	**Condition for applying the diagnostic procedure to the DTC stored:** DTC is declared present **at idle speed**.
	Special notes: If **DTC P0400** is present, engine will be unsteady, with possible stalling. Starting problems, or even impossible when cold, with malfunction indicator lights up **(level 1)"**.

Check the condition and connection of the EGR volume control solenoid valve harness connector and repair it if necessary.
Check the condition of the ECM harness connector (F134) and repair if necessary.
Measure the resistance between **terminal 4 and 6 of the EGR volume control solenoid valve,** if it is not approximately **8**Ω ± **0.5**Ω **at 25**°, replace the solenoid valve.
Check the insulation, continuity and absence of interference resistance of the connections: ● EGR volume control solenoid valve terminal 4 for power supply circuit ● ECM (F134) terminal 38 and EGR volume control solenoid valve harness connector terminal 6 (Refer to wiring diagram "EC-EGRC/V-01".) Repair if necessary.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0403 **DF016** **STORED**	EGR VOLUME CONTROL SOLENOID VALVE CIRCUIT CC.1 : Short circuit to +12 volts CO.0 : Open circuit or short circuit to earth (ground)

NOTES	**Conditions for applying the diagnostic procedure to the DTC stored:** DTC declared present: **at idle speed.**
	Special notes: If DTC **P0403** is present **Malfunction indicator (level 1)** lights up. Difficult to start engine or even impossible when cold.

Check the condition and connection of EGR volume control solenoid valve harness connector and repair it if necessary.

Check the condition of the ECM harness connector (F134) and repair if necessary.

Measure the resistance at the EGR volume control solenoid valve harness connector terminal.
Replace the solenoid valve if resistance is not approximately 4 kΩ ± 1.6 kΩ at 20°C between terminals 1 and 2 and approximately 1kΩ ± 0.5kΩ at 20°C between terminals 2 and 3.

Check the insulation, continuity and absence of interference resistance of the connections:
- EGR volume control solenoid valve terminal 4 for power supply circuit
- ECM (F134) terminal 38 and EGR volume control solenoid valve harness connector terminal 6 (Refer to wiring diagram "EC-EGRC/V-01".)

Repair if necessary.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0408 **DF010** **STORED**	EGR VALVE POSITION SENSOR CIRCUIT CO.0 : Open circuit or short circuit to earth (ground) CC.1 : Short-circuit to + 12V 1.DEF : Above minimum threshold 2.DEF : Below maximum threshold

NOTES	**Priority when dealing with a number of DTCs:** If DTCs **P0409** and **P0608** are both present, deal with DTC **P0608** first.
	Conditions for applying the diagnostic procedure to the stored DTC: The DTC is **declared present** after **starting the engine**.

Check the condition of the **EGR volume control** solenoid valve harness connector and repair if necessary.

Check the condition of the **ECM harness connector** (F134) and repair if necessary.

Measure the **resistance** at the **EGR control solenoid valve terminal,** if it is not approximately **4 kΩ ± 1.6kΩ at 20°C** between **terminals 1 and 2** and approximately **1 kΩ ± 0.5kΩ at 20°C** between **terminals 2 and 3**, replace the solenoid valve.

Check the **insulation, continuity and absence of interference resistance of the connections:**

- ECM (F134) terminal 49 and EGR volume control solenoid valve harness connector terminal 1
- ECM (F134) terminal 59 and EGR volume control solenoid valve harness connector terminal 3
- ECM (F134) terminal 69 and EGR volume control solenoid valve harness connector terminal 2
  (Refer to wiring diagram "EC-EGRC/V-01".)

Repair if necessary.

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0500 **DF014** **PRESENT**	VEHICLE SPEED INFORMATION

NOTES	**Special notes:** None.

For this type of vehicle, the ABS control unit or an additional unit (if the vehicle does not have ABS) transmits the vehicle speed on the CAN.
Test the multiplex network to be able to work on the CAN (Malfunction on the CAN H and CAN L lines between the ECM and the ABS). Also check there are no malfanctions in the ABS part or in the system which supplies the vehicle speed.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0513 **DF037** **PRESENT**	IMMOBILISER

NOTES	**Special notes:** None.

Carry out a trouble diagnosis on the multiplex network. (LAN section)
Refer to the trouble diagnosis for the keyless vehicle function. (BL section)

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0530 **DF049** **STORED**	REFRIGERANT FLUID SENSOR CIRCUIT CO.1 : Open circuit or short circuit to + 12 volts CC.0 : Short circuit to earth

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC:** DTC declared present: **engine and the air conditioning are activating**.
	Priority when dealing with a number of DTCs: If DTC **P0530** and **P0608** are both present, deal with **DTC P0608 "SENSOR SUPPLY VOLTAGE"** first.

Check the **pressure sensor connection**.
Repair if necessary.

Check the condition of the **ECM (F134) harness connector**.
Repair if necessary.

Check the **insulation, continuity and absence of interference resistance of the connections**:

- ECM (F134) terminal 83 and refrigerant pressure sensor harness connector terminal 3
- ECM (F134) terminal 89 and refrigerant pressure sensor harness connector terminal 2
- ECM (F134) terminal 107 and refriqerant pressure sensor harness connector terminal 1
  (Refer to wiring diagram "EC-RP/SEN-01".)

Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0560 **DF047** **STORED**	COMPUTER SUPPLY VOLTAGE (ECM) 1.DEF : Above maximum threshold 2.DEF : Below minimum threshold

NOTES	**Condition for applying the diagnostic procedure to stored DTC:** the DTC is declared present **when the engine is running above 1000 rpm**.

Check **the battery voltage** when the ignition is switched on. If the **battery voltage < 10 V** recharge the battery.
Check the condition of the **battery terminals**. Repair if necessary.
Check the vehicle's **charge circuit**. Repair if necessary.
Check the condition of the **ECM (E61) harness connector**. Repair if necessary.
Check the **insulation, continuity and absence of interference resistance of the connections**: ● ECM (E61) terminal 22 and fuse block (M16) harness connector. ● ECM (F34) terminal 111, 112 and engine ground. (Refer to wiring diagram "EC-MAIN-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0571 DF050 PRESENT OR STORED	STOP LIGHT SWITCH CIRCUIT 1.DEF : Signal absent 2.DEF : Inconsistency

NOTES	Conditions for applying diagnostic procedure to a stored DTC: the DTC is declared present when the ignition is switched on, when decelerating or when the brake pedal is depressed. Deal with the DTC even if it is stored.

Check the **switch connection** and repair if necessary.
Check for the presence of **+ 12 volts** on the switch supply. Repair if necessary.
Check the condition of the ECM harness connector (E61) and repair if necessary.
Check that the **switch is working.** Change it if necessary.
Check the **insulation, continuity and absence of interference resistance of the connections:** ● Stop lamp switch terminal 1 for power supply circuit ● ECM (E61) terminal 5 and stop lamp switch harness connector terminal 2 (Refer to wiring diagram "EC-BRK/SW-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0604 **DF107** **STORED**	ECM MEMORY

NOTES	**Conditions for applying the diagnostic procedure to the stored DTC**: The DTC is declared present: **with the engine running.**
	If DTC **P0604** is present: it is impossible to stop and restart the engine. **Malfunction indicator lights up (level 1).**

Re-enter **injector's individual correction value** using the **CONSULT-II.**
If the DTC persists, replace the **ECM.**

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0606 **DF038** **PRESENT**	ECM 1.DEF : Analogue/digital converter 2.DEF : Write EEPROM memory 3.DEF : Read EEPROM memory 4.DEF : Injection calibration data 5.DEF : Memory self-test 6.DEF : Non refreshed watchdog 7.DEF : Interference on the injector control line 8.DEF : Watchdog activation

NOTES	None.

7.DEF	Check the condition of the ECM harness connector (F134). Repair it if necessary.
	Check the **insulation, continuity and absence of interference resistance** of the connections: ● ECM (F134) terminal 80 and No.1 injector terminal 2 ● ECM (F134) terminal 79 and No.1 injector terminal 1 ● ECM (F134) terminal 74 and No.2 injector terminal 2 ● ECM (F134) terminal 73 and No.2 injector terminal 1 ● ECM (F134) terminal 78 and No.3 injector terminal 2 ● ECM (F134) terminal 77 and No.3 injector terminal 1 ● ECM (F134) terminal 76 and No.4 injector terminal 2 ● ECM (F134) terminal 75 and No.4 injector terminal 1 (Refer to wiring diagram "EC-INJECT-01 AND -02".) Repair if necessary.
	If the DTC persists, replace ECM.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0606 **DF038** Continued	

4.DEF	Check the condition of the ECM harness connector (F134). Repair it if necessary.
	Check that the **individual injection correction (value)** matches the injectors. If NG, write the individual correction value codes (see "Trouble diagnosis - Introduction").
	If the value corresponds correctly to the injectors, **replace ECM.**

1.DEF **2.DEF** **3.DEF** **5.DEF** **6.DEF** **8.DEF**	**Replace ECM.**

AFTER REPAIR	Follow the instructions to confirm repair. Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0608 **DF113** **PRESENT**	SENSOR SUPPLY VOLTAGE 1.DEF : AT minimum stop 2.DEF : AT maximum stop

NOTES	**Priority when dealing with a number of DTCs:** If DTCs **P0608 and P0190, P0225, P0409, P0110, P0530, P0100, P0235** are present, deal with DTC **P0608 "SENSOR SUPPLY VOLTAGE"** first.
	Special notes: If DTC **P0608** is present: the engine stops immediately and it is impossible to restart. Malfunction indicator lights up **(Level 1)**.

Check the condition and connection of all the sensor connectors **as follows:**
- engine coolant temperature sensor
- turbocharger air pressure sensor
- common rail fuel pressure sensor
- APP sensor
- EGR valve position sensor
- camshaft position sensor

Repair if necessary.

Check the condition of **ECM harness connector** (F134) **and** (E61) and repair them if necessary.

Connect the bornier in place of the ECM and check the **insulation, continuity and absence of interference resistance** of the connections:
- ECM (F134) terminal 83 and refrigerant pressure sensor harness connector terminal 1
- ECM (F134) terminal 48 and turbocharger air pressure sensor harness connector terminal 1
- ECM (F134) terminal 47 and common rail fuel pressure sensor harness connector terminal 1
- ECM (E61) terminal 29 and APP sensor 1 harness connector terminal 2
- ECM (F134) terminal 49 and EGR control valve harness connector terminal 1
- Power supply circuit between IPDM E/R terminal 33 and camshaft position sensor harness connector terminal 1
  (Refer to wiring diagram)

Repair if necessary.

If the DTC persists, **apply the trouble diagnosis strategy** to each sensor **supplied by an external terminal.**

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0609 **DF122** **PRESENT**	SUPPLY VOLTAGE PEDAL POTENTIOMETER TRACK 2 (APP sensor 2) CO.1 : Open circuit or short circuit to + 12 volts CC.0 : Short circuit to earth

NOTES	**Special notes:** When this fault appears, the idle speed is set to 1000 rpm, engine performance is reduced to 75 % and the **level 1 warning light comes on**.

CC.0	***NOTES***	**Special notes:** None.

Check the condition of the **APP sensor harness connector**. Repair if necessary.
Check the condition of the **ECM** (E61) **harness connector**. Repair if necessary.
Measure the **resistance** at the **APP sensor** terminals: **APP sensor** harness connector terminals 1 and 5 (+5V) Replace the potentiometer pedal if the resistance is not approximately **2.85 kΩ ± 2.05 kΩ**.
Disconnect **ECM** (E61) and the **APP sensor harness connector**. Check **the insulation to ground** of the connection on **terminal 18** of **ECM harness connector** (E61). Repair if necessary.
Check **the continuity of the connection** between: **APP sensor** terminal 5 and **ECM** (E61) terminal 18 Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0609 **DF122** **CONTINUED**	

CO.1	***NOTES***	**Special notes:** None.

Check the condition of the **APP sensor harness connector**. Repair if necessary.
Check the condition of the **ECM (E61) harness connector**. Repair if necessary.
Measure the **resistance** at the **APP sensor** terminals: **APP sensor** harness connector terminals 1 and 5 (+5V) Replace the APP sensor if the resistance is not approximately **2.85 kΩ ± 2.05 kΩ**.
Check the **insulation, continuity and absence of interference resistance of the connection**: ● **ECM (E61)** terminal 18 and **APP sensor** harness connector terminal 5. Repair if necessary.
Disconnect **ECM (E61) harness connector** and the **APP sensor harness connector**. Check **the insulation to +12 volts** of the connection on **terminal 18** of **ECM harness connector (E61)**. Repair if necessary.
Check **the continuity of the connections**: ● ECM (E61) terminal 18 and APP sensor 1 harness connector terminal 5 ● ECM (E61) terminal 6 and APP sensor 1 harness connector terminal 1 Repair if necessary.
Disconnect **ECM harness connector** and the **APP sensor harness connector**. **Check the insulation** between **terminal 18 and terminal 12** on **ECM harness connector (E61).** Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P0685 **DF015** **PRESENT**	ECM RELAY CONTROL CIRCUIT 1.DEF : Permanent low signal 2.DEF : Permanent high signal

NOTES	**Special notes**: The ECM relay is incorporated in the IPDM E/R.

Check the main relay supply fuse in the IPDM E/R: (20A).
Change it if necessary.

Check the condition and connection of the IPDM E/R connector and replace it if necessary.

Check the condition of the **ECM harness connector** (F134) and replace it if necessary.

Check the **insulation, continuity and absence of interference resistance of the connections:**

- ECM (F134) terminal 104 and IPDM E/R terminal 29
- ECM (F134) terminal 109, 110 and IPDM E/R terminal 32
- ECM (F134) terminal 111, 112 and ground
  (Refer to wiring diagram "EC-MAIN-01".)

Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P2120 **DF009** **PRESENT**	ACCELERATOR PEDAL POSITION SENSOR 2 CO.0 : Open circuit or short circuit to eartrh (ground) CC.1 : Short circuit to + 12V

NOTES	**Priority when dealing with a number of DTCs:** If DTCs **P2120** and **P0609** are both present, deal with DTC **P0609** first.
	Special note: If DTC **P2120** is present: engine speed maintained above **1000 rpm.** **Malfunction indicator lights up (level 1).** If DTCs **P2120 and P0225** are present: engine speed fixed at **1300 rpm.** **Malfunction indicator lights up (level 1).**

CO.0	***NOTES***	**Special notes:** None.

Check the condition of the **APP harness connector** and repair it if necessary.
Check the condition of the **ECM harness connector** (E61) and repair if necessary.
Measure the **resistance** at the **APP sensor terminal:** **terminal 1** (ground) **and terminal 5** (+5 V) If it is not approximately **2.85 kΩ ± 2.05 kΩ**, replace the APP sensor.
Check **the insulation against earth (ground) and the continuity of the connection:** ● ECM (E61) terminal 12 and APP sensor harness connector terminal 6 (Refer to wiring diagram "EC-APPS-01 or 02".) Repair if necessary.
Check the continuity of the connection between: ● ECM (E61) terminal 18 and APP sensor harness connector terminal 5 (Refer to wiring diagram "EC-APPS-01 or 02".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P2120 **DF009** CONTINUED 3	

CC.1	***NOTES***	**Special notes:** None.

Check the condition of the **APP sensor harness connector** and repair it if necessary.
Check the condition of the **ECM harness connector** (E61) and replace it if necessary.
Measure the **resistance** at the **APP sensor terminals:** APP sensor terminal 1 (Ground) and 5 (+ 5V) If it is not approximately **2.85 kΩ ± 2.05 kΩ**, replace the APP sensor.
Check the **insulation, continuity and absence of interference resistance of the connection:** ● ECM (E61) terminal 12 and APP sensor harness connector terminal 6 (Refer to wiring diagram "EC-APPS-01".) Repair if necessary.
Check **the insulation against + 12 volts of the connections:** ● ECM (E61) terminal 18 and APP sensor harness connector terminal 5 (Refer to wiring diagram "EC-APPS-01".) Repair if necessary.
Check **the continuity of the connections:** ● ECM (E61) terminal 6 and APP sensor harness connector terminal 1 ● ECM (E61) terminal 18 and APP sensor harness connector terminal 5 (Refer to wiring diagram "EC-APPS-01".)
Disconnect connector (E61) from the computer and the connector from the APP sensor and test the insulation between the two lines: ● ECM (E61) terminal 12 and 18 (Refer to wiring diagram "EC-APPS-01".) Repair if necessary.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

P2226 **DF003** **PRESENT**	ATMOSPHERIC PRESSURE SENSOR CIRCUIT(BARO) CC.1 : Short-circuit to + 12 volts CO.0 : Open circuit or short circuit to earth (ground)

NOTES	**Special note**: None.

Replace the ECM.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

PC001 **DF116** **PRESENT**	MULTIPLEX NETWORK (CAN COMMUNICATION LINE) 1.DEF: Carry out the multiplex network trouble diagnosis

CAN Communication Line

Description

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.
For the input/output signal chart, refer to LAN section.

Diagnostic Procedure

1. INSPECTION START

1. Turn ignition switch "ON".

2. Select "CAN DIAG SUPPORT MNTR" in "DATA MONITOR" mode with CONSULT-II.

3. Print out the CONSULT-II screen.

OK data

DATA MONITOR	
MONITOR	
CAN CIRC 1	OK
CAN CIRC 2	OK
CAN CIRC 3	OK
CAN CIRC 4	OK

YEC641A

Check that the print out data is matched with above. If NG, go to "CAN COMMUNICATION" in LAN section.

AFTER REPAIR	Deal with any other possible DTCs. Erase the stored DTCs after repair.

SUMMARY TABLE OF DDCR INJECTION PARAMETERS:

Tool parameter code	Diagnostic tool description
PR005	EGR valve opening setpoint
PR008	Rail pressure setpoint
PR010	Rail regulation setting (reference)
PR017	Fuel flow
PR030	Accelerator pedal position
PR032	Inlet pressure
PR035	Atmospheric pressure
PR037	Refrigerant pressure
PR038	Rail pressure
PR051	EGR valve position feedback
PR055	Engine speed
PR059	Inlet air temperature
PR061	External air temperature
PR063	Fuel temperature
PR064	Coolant temperature
PR074	Battery voltage
PR077	EGR valve position sensor voltage
PR080	Rail pressure sensor voltage
PR081	Inlet temperature sensor voltage
PR086	Accelerator pedal position sensor 1 voltage
PR088	Accelerator pedal position sensor 2 voltage
PR089	Vehicle speed
PR125	Power used by the AC compressor
PR127	Heating resistor maximum authorised power
PR132	Air flow

SUMMARY TABLE OF DDCR INJECTION STATES:

TOOL STATE CODE	Diagnostic tool description
ET001	Computer + after ignition feed
ET003	Immobiliser
ET004	Air conditioning authorised
ET006	Code programmed
ET008	EGR solenoid control
ET012	Primary brake contact
ET013	Secondary brake contact
ET018	Air conditioning request
ET021	High-speed fan request
ET022	Fan low-speed request
ET023	Fast idle speed request
ET038	Engine
ET040	Clutch pedal
ET042	Cruise control - speed limiter
ET076	Starting
ET079	Air conditioning present
ET088	Request to start compressor

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

ECM STATES AND PARAMETERS:

Order	Function	Parameter or state check or action	Display and notes	Trouble diagnosis
1	**Battery voltage**	**PR074:** Battery voltage	**12 V < PR074 < 13.5 V**	**In the event of a malfunction, run the trouble diagnostic procedure for the "Charging circuit".**
2	**Engine speed**	**PR055:** Engine speed	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for P0335 Engine speed sensor circuit.**
3	**Accelerator pedal position**	**PR030:** Accelerator pedal position **0%**	**Gives the position of the accelerator pedal as a %.** **PR030 = 0 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for malfunctions **Pedal sensor circuit, track 1 and track 2** (**P0225** and **P2120**) and **P0608** "Sensor reference voltage".
4	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**
5	**External air temperature**	**PR061:** External air temperature	**Gives the external air temperature in °C. This parameter is controlled by the BCM and transmitted to the injection on the multiplex network.** Default value: 20 °C.	**In the event of a malfunction, apply the trouble diagnostic procedure for this malfunction described in the BCM document.**

ECM STATES AND PARAMETERS:(Continued 1)

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
6	**Intake air temperature**	**PR059:** Intake air temperature Cold = PR061 Warm: 30 °C	**Gives the inlet air temperature in °C. This information is provided by the air temperature/ pressure sensor.** Default value: 30 °C.	**In the event of a malfunction, refer to parameter interpretation PR059 "Inlet air temperature".**
7	**Fuel temperature**	**PR063:** Fuel temperature Cold = PR064 Warm: 50C	**Gives the fuel temperature in °C. This value is given by the fuel temperature sensor.** Default value: 30 °C.	**In the event of a malfunction, apply the diagnostic procedure for malfunction DF098 Fuel temperature sensor circuit.**
8	**Air circuit pressure**	**PR035:** Atmospheric pressure	**Gives the atmospheric pressure in mbar. The sensor is incorporated in the computer.**	**If not consistent, check PR035 = PR032 = local atmospheric pressure, with the engine stopped and ignition on.**
		PR032 Inlet pressure	**Shows the pressure in the inlet circuit in mbar.**	
9	**Rail pressure**	**PR038:** Rail pressure Warm or cold - 90 bar <PR038> 90 bar	**Gives the pressure of the diesel in the injection rail in Bar. This pressure is supplied by the sensor on the rail.** Default value: 2000 Bar.	**In the event of a malfunction, apply the diagnostic procedure for malfunction P0190 Rail pressure sensor circuit.**

ECM STATES AND PARAMETERS:(Continued 2)

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
10	**Engine**	**ET038:** Engine **+ after ignition feed**	**Gives the current status of the engine.** – **+ after ignition feed** – **CRANKING** – **RUNNING** – **MAINTAINED SUPPLY:** Supply maintained during the power latch phase. – **Stalled: When the engine has stalled.** – **PROTECTED:** When a level 2 malfunction appears or when the engine speed is limited to a certain engine speed.	**NONE.**
11	**Immobiliser**	**ET003:** Immobiliser **INACTIVE**	**Gives the status of the immobiliser system.** – **INACTIVE:** The ECM has recognised the immobiliser code transmitted by the Inteligent Key unit or BCM. – **ACTIVE:** The ECM does not recognise the immobiliser code transmitted by the Inteligent Key unit or BCM.	If **ACTIVE, follow the associated "help" given in the tool.**
12	**Code programmed**	**ET006:** **Code programmed** **YES**	**States whether the immobiliser code has been programmed by the computer or not.** – **YES:** Code programmed – **NO:** Code not programmed by the ECM.	If **NO, replace ECM.**
13	**Vehicle speed**	**PR089:** Vehicle speed	**Gives the vehicle speed in kph. This parameter is transmitted by the ABS computer or vehicle speed ECU. This information is transmitted to the injection on the multiplex network.**	**Test the multiplex network.** **Refer to ABS or vehicle speed ECU trouble diagnosis.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

START SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**ECM + after ignition feed**	**ET001:** ECM + after ignition feed **PRESENT**	**Indicates that the computer is supplied with a + after ignition feed.** **– Present** **– Absent**	**In the event of a malfunction, carry out the diagnostic procedure for P0560 "Computer supply voltage" or P0685 "Main relay circuit".**
2	**Starting**	**ET076:** Starting **AUTHORISED**	**Indicates whether or not starting has been authorised by the injection** **AUTHORISED: The injection has given starting authorisation.** **PROHIBITED: The injection has not given starting authorisation.**	**If PROHIBITED carry out a full diagnostic procedure on the preheating system.**
3	**Engine**	**ET038:** Engine **+ after ignition feed**	**Gives the current status of the engine.** **– + after ignition feed** **– CRANKING** **– RUNNING** **– MAINTAINED SUPPLY: Supply maintained during the power latch phase.** **– Stalled: When the engine has stalled.** **– Protected: When a malfunction appears or when the engine speed is limited to a certain engine speed.**	**NONE.**
4	**Battery voltage**	**PR074:** Battery voltage	**12 < PR074 < 13.5 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

PROTECTION SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Immobiliser**	**ET003:** Immobiliser **INACTIVE**	**Gives the status of the immobiliser system.** **– INACTIVE: The injection computer has recognised the immobiliser code transmitted by the Inteligent Key unit or BCM.** **– ACTIVE: The ECM does not recognise the immobiliser code transmitted by the Inteligent Key unit or BCM.**	If **ACTIVE, follow the associated "help" given in the tool.**
2	**Code programmed**	**ET006:** Code programmed **YES**	**States whether the immobiliser code has been programmed by the computer or not.** **– YES: Code programmed** **– NO: Code not programmed by the ECM.**	If **NO, replace ECM.**
3	**Battery voltage**	**PR074:** Battery voltage	**12 V < PR074 < 13.5 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

SUB SYSTEM COLD LOOP:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Air conditioning present**	**ET079:** Air conditioning present **YES**	**States whether the vehicle is fitted with air conditioning or not.** – **YES:** Air conditioning is detected by the injection computer. – **NO:** Air conditioning is not detected by the injection computer.	**If not consistent with the vehicle equipment, carry out the multiplex network test and apply the relevant procedure.**
2	**Compressor engagement request**	**ET088:** Request to start compressor **INACTIVE**	**The injection requests the IPDM E/R (via the multiplex network) to start the compressor** – **ACTIVE:** The multiplex network should not be suspected on the Automatic Transmission, IPDM E/R or Inteligent Key unit or BCM system. The Inteligent Key unit or BCM should request the injection to be engaged. The coolant pressure sensor should not be suspected. Satisfactory engine operating conditions (coolant temperature, engine load etc.). – **INACTIVE: One of the above conditions has not been fulfilled.**	**NONE.**

SUB SYSTEM COLD LOOP (Continuation 1):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
3	Air conditioning authorisation	**ET004:** Air conditioning authorised **NO**	**Non operational information, designed solely for trouble diagnosis purposes.** – **YES:** Satisfactory engine operating conditions (coolant temperature, engine load etc.). The vehicle is not in a specific movement phase (hill start or stop etc.). – **NO:** One of the above conditions has not been fulfilled.	**NONE.**
4	**Refrigerant pressure**	**PR037:** Refrigerant pressure	**Gives the value in BAR for the refrigerant fluid in the system.** **2 Bar < PR037 < 27 Bar** Default value: 0 Bar.	**If there is a problem: apply the diagnostic procedure for P0530 "Refrigerant fluid sensor circuit". If the DTC persists, replace the refrigerant sensor.**
5	**Engine speed**	**PR055:** Engine speed	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the trouble diagnosis procedure for P0335 Engine speed sensor circuit.**
6	**Fast idle speed request**	**ET023:** Fast idle speed request **ABSENT**	**The Inteligent Key unit or BCM requests fast idle speed from the injection.** – **ABSENT:** The Inteligent Key unit or BCM did not make the request – **PRESENT:** The Inteligent Key unit or BCM has made a request	**If ET023is incorrect, carry out a multiplex network test using the diagnostic tool. If the test is correct refer to the Inteligent Key unit or BCM trouble diagnosis.**
7	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

SUBSYSTEM: COLD LOOP (continuation 2)

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
8	**Vehicle speed**	**PR089:** Vehicle speed	**Gives the vehicle speed in kph. This parameter is transmitted by the ABS control unit. This information is transmitted to the injection on the multiplex network.**	**Test the multiplex network. Refer to ABS trouble diagnosis.**
9	**Power used by the AC compressor**	**PR125:** Power used by the AC compressor **0 WATT**	**Gives the power used by the compressor**	**NONE.**
10	**Fan speed request ***	**ET022:** Fan low-speed request **INACTIVE**	**The injection requests the IPDM E/R to start the fans.** – **INACTIVE:** Engine speed = 0 rpm. – **ACTIVE:** Engine speed = idle speed, correct refrigerant pressure and vehicle speed = 0 km/h or high coolant temperature.	**NONE.**
11	**Fan speed request ***	**ET021:** High-speed fan request **INACTIVE**	**The injection requests the IPDM E/R to start the fans.** – **INACTIVE:** Engine speed = 0 rpm. – **ACTIVE:** Engine speed = idle speed. Refrigerant pressure > 15 Bar, vehicle speed = 0 km/h or high coolant temperature.	**NONE.**

***: When climate control is requested with the engine at idle speed and vehicle speed = 0 km/h, ET022 will always be "ACTIVE" and ET021 "INACTIVE" (except refrigerant pressure> 15 bar, vehicle speed = 0 km/h and high coolant temperature). The fans are prevented from operating under certain coolant temperature conditions when driving.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

HEATING SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

LPG/FUEL CIRCUIT SUB FUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Fuel temperature**	**PR063:** Fuel temperature Cold = PR064 Warm: 50 °C	**Gives the fuel temperature in °C.** Default value: 30 °C.	**In the event of a malfunction, perform the diagnostic procedure for malfunction: P0180 "Fuel temperature sensor circuit".**
2	**Fuel flow**	**PR017:** Fuel flow **0.0 mg/piston stroke**	**Shows the fuel flow injected in mg/piston stroke for each injector.** PR017 = 0 mg/piston stroke.	**NONE.**
3	**Rail pressure**	**PR038:** rail pressure Cold and warm: - 90 bar <PR038> 90 bar	**Gives the pressure of the diesel in the injection rail in Bar. This pressure is supplied by the sensor on the rail.** Default value: 2000 Bar.	**In the event of a malfunction, apply the diagnostic procedure for malfunction P0190 Rail pressure sensor circuit.**
4	**Rail pressure setpoint**	**PR008:** Rail pressure setpoint **375 bar** (Engine starting pressure instruction) Cold: 500 Bar Warm: 300 Bar	**Gives a theoretical pressure value for optimum engine operation.** 300 bar < PR008 < 500 bar.	**NONE.**
5	**Rail pressure sensor voltage**	**PR080:** Rail pressure sensor voltage Cold: 0.5 V Cold: 4.5 V	**Shows the voltage delivered by the computer on the rail pressure sensor.** 0.5 V < PR080 < 4.5 V Default value: 4.5 V	**NONE.**
6	**Engine speed**	**PR055:** Engine speed.	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for P0335 Engine speed sensor circuit.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

PRE-HEATING/IGNITION SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**
2	**External air temperature**	**PR061:** External air temperature	**Gives the external air temperature in °C. This parameter is controlled by the Inteligent Key unit or BCM and transmitted to the ECM on the multiplex network.** Default value: 20 °C.	**In the event of a malfunction, apply the diagnostic procedure for this malfunction described in the Inteligent Key unit or BCM document.**
3	**Inlet air temperature**	**PR059:** Inlet air temperature Cold = PR061 Warm: 30 °C	**Gives the inlet air temperature in °C. This information is provided by the air temperature/ pressure sensor.** Default value: 30 °C.	**In the event of a malfunction, refer to parameter interpretation PR059 "Inlet air temperature".**
4	**Battery voltage**	**PR074:** Battery voltage	**12 V < PR074 < 13.5 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

AIR CIRC SUBFUNCTION (TURBOCHARGING/INLET.):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Inlet air temperature**	**PR059:** Inlet air temperature Cold = PR061 Warm: 30 °C	**Gives the inlet air temperature in °C. This information is provided by the air temperature/ pressure sensor.** Default value: 30 °C.	**In the event of a malfunction, refer to parameter interpretation PR059 "Inlet air temperature".**
2	**Air circuit pressure**	**PR035:** Atmospheric pressure **PR032:** Inlet pressure	**Gives the atmospheric pressure in mbar. The sensor is incorporated in the computer.** **Shows the pressure in the inlet circuit in mbar.**	**If not consistent, check PR035 = PR032 = local atmospheric pressure, with the engine stopped and ignition on.**
3	**Air flow**	**PR132:** Air flow	**Air flow estimated by the injection computer.**	**NONE.**
4	**Inlet temperature sensor voltage**	**PR081:** Inlet temperature sensor voltage	**Shows the voltage delivered by the computer to supply the inlet temperature sensor**	**NONE.**
5	**Engine speed**	**PR055:** Engine speed	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for P0335 Engine speed sensor circuit.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

ENGINE COOLING SUB FUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

DRIVER PARAMETERS SUB FUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Accelerator pedal position**	**PR030:** Accelerator pedal position **0 %**	Indicates the percentage of the pedal position between no load and full load position **0 % < PR030 < 100 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for malfunction **Pedal sensor circuit, track 1 and track 2** (**P0225** and **P2120**) and **P0608** "Sensor reference voltage".
2	**Pedal potentiometer tracks voltage**	**PR086:** Pedal potentiometer track 1 voltage **16 %** **PR088:** Pedal potentiometer track 2 voltage **7 %**	**Shows the voltage supply percentage for tracks 1 and 2 of the pedal potentiometer.** **10 % < PR086 < 20 %** **5 % < PR088 < 15 %.**	**In the event of a malfunction**, apply the **diagnostic procedure** for malfunction **Pedal sensor circuit, track 1 and track 2** (**P0225** and **P2120**) and **P0608** "Sensor reference voltage".

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given for reference purposes only. **Application condition:** engine **off, ignition on**.

ANTIPOLLUTION / OBD SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**EGR electronic control**	**ET008:** EGR solenoid control **INACTIVE**	**Shows the condition of the EGR valve control.** – **INACTIVE:** The valve is not controlled by the computer. – **ACTIVE:** The valve is controlled by the computer.	**NONE.**
2	**Atmospheric pressure**	**PR035:** Atmospheric pressure	**Gives the atmospheric pressure in mbar. The sensor is incorporated in the computer.**	**If not consistent, check PR035 = PR032 = local atmospheric pressure, with the engine stopped and ignition on.**
3	**Air flow**	**PR132:** Air flow	**Air flow estimated by the injection computer.**	**NONE.**
4	**Fuel flow**	**PR017:** Fuel flow **0.0 mg/piston stroke**	**Shows the fuel flow out of the high-pressure pump in mg/piston stroke.**	**NONE.**
5	**EGR solenoid valve control**	**PR005:** EGR valve opening setpoint Warm or cold = - 50	**Gives a theoretical EGR valve opening value for optimum engine operation.** PR005 = PR051	**NONE.**

ANTIPOLLUTION / OBD SUBFUNCTION (cont.):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
6	**EGR valve position feedback**	**PR051:** EGR valve position feedback Warm or cold = - 50	**Gives the actual value of the EGR valve position.** PR051 = PR005	**NONE.**
7	**EGR valve position sensor voltage**	**PR077:** EGR valve position sensor voltage **1.09 V**	**Gives the EGR valve voltage according to its position.** – **INACTIVE:** The valve is not controlled by the computer. – **ACTIVE:** The valve is controlled by the computer. **0.5 V < PR077 < 4.8 V**	**NONE.**
8	**Accelerator pedal position**	**PR030:** Accelerator pedal position **0 %**	**Indicates the percentage of the pedal position between no load and full load position** **PR030 = 0 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for malfunction **Pedal sensor circuit, track 1 and track 2** (**P0225** and **P2120**) and **P0608** "Sensor reference voltage".
9	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

MAIN COMPUTER STATES AND PARAMETERS:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Battery voltage**	**PR074:** Battery voltage.	**13 V < PR074 < 14 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**
2	**Engine speed**	**PR055:** Engine speed. Cold: 900 rpm V Warm: 805 rpm	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for P0335 Engine speed sensor circuit.**
3	**Accelerator pedal position**	**PR030:** Accelerator pedal position **0 %**	**Gives the position of the accelerator pedal as a %.** **PR030 = 0 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for DTCs **P0225** and **P2120** Pedal sensor circuit, track 1 and track 2 and **P0608** "Sensor reference voltage".
4	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**
5	**External air temperature**	**PR061:** External air temperature	**Gives the external air temperature in °C. This parameter is controlled by the Inteligent Key unit or BCM and transmitted to the injection on the multiplex network.** Default value: 20 °C.	**In the event of a malfunction, apply the diagnostic procedure for this malfunction described in the Inteligent Key unit or BCM document.**

MAIN COMPUTER STATES AND PARAMETERS:(Continued 1)

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
6	**Inlet air temperature**	**PR059:** Inlet air temperature Cold = PR061 Warm: 30 °C	**Gives the inlet air temperature in °C. This information is provided by the air temperature/ pressure sensor.** Default value: 20 °C.	**In the event of a malfunction, refer to parameter interpretation PR059 "Inlet air temperature".**
7	**Fuel temperature**	**PR063:** Fuel temperature Cold = PR064 Warm: 50 °C	**Gives the fuel temperature in °C. This value is given by the fuel temperature sensor.** Default value: 30 °C.	**In the event of a malfunction, apply the diagnostic procedure for malfunction P0180 Fuel temperature sensor circuit.**
8	**Air circuit pressure**	**PR035:** Atmospheric pressure	**Gives the atmospheric pressure in mbar. The sensor is incorporated in the computer.** 600 mbar < Cold < 1050 mbar 600 mbar < Warm < 1050 mbar	**If not consistent, check PR035 = PR032 = local atmospheric pressure, with the engine stopped and ignition on.**
		PR032: Inlet pressure	**Shows the pressure in the inlet circuit in mbar.** PR032 = local atmospheric pressure	
9	**Rail pressure**	**PR038:** Rail pressure Cold: 260 Bar Warm: 230 Bar	**Gives the pressure of the diesel in the injection rail in Bar. This pressure is supplied by the sensor on the rail.** Default value: 2000 Bar.	**In the event of a malfunction, apply the diagnostic procedure for malfunction P0190 Rail pressure sensor circuit.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

START SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Computer + after ignition feed**	**ET001:** Computer + after ignition feed **PRESENT**	**Indicates that the computer is supplied with a + after ignition feed.** **– Present** **– Absent**	**In the event of a malfunction, carry out the diagnostic procedure for P0560 "Computer supply voltage" or P0685 "Main relay circuit".**
2	**Starting**	**ET076:** Starting **AUTHORISED**	**Indicates whether or not starting has been authorised by the injection** **AUTHORISED: The injection has given starting authorisation.** **PROHIBITED: The injection has not given starting authorisation.**	**If PROHIBITED, carry out a full diagnostic procedure on the preheating system.**
3	**Engine**	**ET038:** Engine **+ after ignition feed**	**Gives the current status of the engine.** **– + after ignition feed** **– CRANKING** **– RUNNING** **– MAINTAINED SUPPLY: Supply maintained during the power latch phase.** **– Stalled: When the engine has stalled.** **– Protected: When a malfunction appears or when the engine speed is limited to a certain engine speed.**	**NONE.**
4	**Battery voltage**	**PR074:** Battery voltage	**13 V < PR074 < 14 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

PROTECTION SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Immobiliser**	**ET003:** Immobiliser **INACTIVE**	**Gives the status of the immobiliser system.** **– INACTIVE: The injection computer has recognised the immobiliser code transmitted by the UCH.** **– ACTIVE: The injection computer does not recognise the immobiliser code transmitted by the Inteligent Key unit or BCM.**	If **ACTIVE, follow the associated "help" given in the tool.**
2	**Code programmed**	**ET006:** Code programmed **YES**	**States whether the immobiliser code has been programmed by the computer or not.** **– YES:** Code programmed **– NO: Code not programmed by the ECM.**	If **NO, replace ECM.**
3	**Battery voltage**	**PR074:** Battery voltage	**13 V < PR074 < 14 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

SUB SYSTEM COLD LOOP:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Air conditioning present**	**ET079:** Air conditioning present **YES**	**States whether the vehicle is fitted with air conditioning or not.** – **YES:** Air conditioning is detected by the ECM. – **NO:** Air conditioning is not detected by the ECM.	**If not consistent with the vehicle equipment, carry out the multiplex network test and apply the relevant procedure.**
2	**Compressor engagement request**	**ET088:** Request to start compressor **INACTIVE**	**The injection requests the IPDM E/R (via the multiplex network) to start the compressor** – **ACTIVE:** The multiplex network should not be faulty on the Automatic Transmission, IPDM E/R. The UCH should request the injection to be engaged. The refrigerant pressure sensor should not be faulty. Satisfactory engine operating conditions (coolant temperature, engine load etc.). – **INACTIVE:** One of the above conditions has not be fulfilled or no request has been made by the driver so **ET004 = NO**.	**NONE.**

SUB SYSTEM COLD LOOP (Continuation 1):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
3	Air conditioning authorisation	**ET004:** Air conditioning authorised **NO**	**Non operational information, designed solely for trouble diagnosis purposes.** – **YES:** Satisfactory engine operating conditions (coolant temperature, engine load etc.). The vehicle is not in a specific movement phase (hill start or stop etc.). – **INACTIVE:** One of the above conditions has not be fulfilled or no request has been made by the driver so **ET088 = INACTIVE**.	**NONE.**
4	**Refrigerant pressure**	**PR037:** Refrigerant pressure.	**Gives the value in BAR for the refrigerant fluid in the system.** **2 Bar < PR037 < 27 Bar** Default value: 0 Bar.	**If there is a problem: apply the diagnostic procedure for P0530 "Refrigerant fluid sensor circuit". If the DTC persists, replace the refrigerant sensor.**
5	**Engine speed**	**PR055:** Engine speed Cold: 900 rpm V Warm: 805 rpm	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for P0335 Engine speed sensor circuit.**

SUBSYSTEM: COLD LOOP (continuation 2)

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
6	**Fast idle speed request**	**ET023:** Fast idle speed request **ABSENT**	**The BCM requests fast idle speed from the injection.** – **ABSENT:** The IPDM E/R did not make the request – **PRESENT:** The IPDM E/R has made a request	**If ET023 is incorrect, carry out a multiplex network test using the diagnostic tool. If the test is correct refer to the IPDM E/R diagnostic procedure**
7	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**
8	**Vehicle speed**	**PR089:** Vehicle speed	**Gives the vehicle speed in kph. This parameter is transmitted by the ABS control unit. This information is transmitted to the injection on the multiplex network.**	**Test the multiplex network.** **Refer to ABS trouble diagnosis.**

COLD LOOP SUBSYSTEM (continuation 3):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
9	**Power used by the AC compressor**	**PR125:** Power used by the AC compressor **0 WATT**	**Gives the power used by the compressor**	**NONE.**
10	**Fan speed request ***	**ET022:** Fan low-speed request **INACTIVE**	**The injection requests the IPDM E/R to start the fans.** – **INACTIVE:** The request is not made by the injection because ET088 = INACTIVE and ET004 = NO. – **ACTIVE:** The request is made by the injection. ET088 = ACTIVE and ET004 = YES. (correct refrigerant pressure and vehicle speed = 0 km/h or high coolant temperature).	**NONE.**
		ET021: High-speed fan request **INACTIVE**	**The injection requests the UPC to start the fans.** – **INACTIVE:** The request is not made by the injection because ET088 = INACTIVE and ET004 = NO. – **ACTIVE:** The request is made by the injection. ET088 = ACTIVE and ET004 = YES. Refrigerant pressure > 15 Bar, vehicle speed = 0 km/h or high engine coolant temperature.	

***: When climate control is requested with the engine at idle speed and vehicle speed = 0 km/h, ET022 will always be "ACTIVE" and ET021 "INACTIVE" (except refrigerant pressure> 15 bar, vehicle speed = 0 km/h and high coolant temperature). The fans are prevented from operating under certain coolant temperature conditions when driving.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

HEATING SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

LPG/FUEL CIRCUIT SUB FUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Fuel temperature**	**PR063:** Fuel temperature Cold = PR064 Warm: 50 °C	**Gives the fuel temperature in °C.** Default value: 30 °C.	**In the event of a malfunction, perform the diagnostic procedure for DTC P0180 "Fuel temperature sensor circuit".**
2	**Fuel flow**	**PR017:** Fuel flow 10 < Cold < 2 mg/ piston stroke 4 < Warm < 6 mg/ piston stroke	**Shows the fuel flow injected in mg/ piston stroke for each injector.**	**None.**
3	**Rail pressure**	**PR038:** Rail pressure Cold: 260 Bar Warm: 230 Bar	**Gives the pressure of the diesel in the injection rail in Bar. This pressure is supplied by the sensor on the rail.** Default value: 2000 Bar.	**In the event of a malfunction, apply the diagnostic procedure for DTC P0190 Rail pressure sensor circuit.**
4	**Rail pressure setpoint**	**PR008:** Rail pressure specification **375 bar**. (Engine starting pressure specification). Cold: 260 Bar Warm: 230 Bar	**Gives a theoretical pressure value for optimum engine operation.**	**None.**
5	**Rail pressure sensor voltage**	**PR080:** Rail pressure sensor voltage	**Shows the voltage delivered by the computer on the rail pressure sensor.** 0.5 V (0 bar) < PR080 < 4.5 V (1600 bar)	**None.**
6	**Engine speed**	**PR055:** Engine speed. Cold: 900 rpm V Warm: 805 rpm	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for DTC P0335 Engine speed sensor circuit.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

PRE-HEATING/IGNITION SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**
2	**External air temperature**	**PR061:** External air temperature	**Gives the external air temperature in °C. This parameter is controlled by the BCM and transmitted to the injection on the multiplex network.** Default value: 20 °C.	**In the event of a malfunction, apply the diagnostic procedure for this malfunction described in the BCM document.**
3	**Inlet air temperature**	**PR059:** Inlet air temperature Cold = PR061 Warm: 30 °C	**Gives the inlet air temperature in °C. This information is provided by the air temperature/ pressure sensor.** Default value: 30 °C.	**In the event of a malfunction, refer to parameter interpretation PR059 "Inlet air temperature".**
4	**Battery voltage**	**PR074:** Battery voltage	**12 V < PR074 < 14 V**	**In the event of a malfunction, run the diagnostic procedure for the "Charging circuit".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

AIR CIRC SUBFUNCTION (TURBOCHARGING/INLET.):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Inlet air temperature**	**PR059:** Inlet air temperature Cold = PR061 Warm: 30 °C	**Gives the inlet air temperature in °C. This information is provided by the air temperature/ pressure sensor.** Default value: 30 °C.	**In the event of a malfunction, refer to parameter interpretation PR059 "Inlet air temperature".**
2	**Air circuit pressure**	**PR035:** Atmospheric pressure **PR032:** Inlet pressure	**Gives the atmospheric pressure in mbar. The sensor is incorporated in the ECM.** **Shows the pressure in the inlet circuit in mbar.**	**If not consistent, check PR035 = PR032 = local atmospheric pressure, with the engine stopped and ignition on.**
3	**Air flow**	**PR132:** Air flow 350 < Cold < 400 mg/piston stroke 300 < Warm < 350 mg/piston stroke	**Air flow estimated by the ECM.**	**None.**
4	**Inlet temperature sensor voltage**	**PR081:** Inlet temperature sensor voltage	**Shows the voltage delivered by the computer to supply the inlet temperature sensor**	**None.**
5	**Engine speed**	**PR055:** Engine speed. Cold: 900 rpm V Warm: 805 rpm	**Gives the engine's rotational speed in rpm.**	**In the event of a malfunction, apply the diagnostic procedure for P0335 Engine speed sensor circuit.**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

ENGINE COOLING SUB FUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

DRIVER PARAMETERS SUB FUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**Accelerator pedal position (APP sensor)**	**PR030:** Accelerator pedal position **0 %**	**Indicates the percentage of the pedal position between no load and full load position** **0 % < PR030 < 100 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for DTCs **P0225** and **P2120** Pedal sensor circuit, track 1 and track 2 and **P0608** "Sensor reference voltage"
2	**Pedal potentiometer tracks voltage (APP sensor)**	**PR086:** Pedal potentiometer track 1 voltage **16 %** **PR088:** Pedal potentiometer track 2 voltage **7 %**	**Shows the voltage supply percentage for tracks 1 and 2 of the pedal potentiometer.** **10 % < PR086 < 20 %** **5 % < PR088 < 15 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for DTCs **P0225** and **P2120** Pedal sensor circuit, track 1 and track 2 and **P0608** "Sensor reference voltage"

NOTES	Only carry out conformity check after a **full check** using the diagnostic tool. The values indicated in this conformity check are given as examples. **Test conditions:** Engine **at idle speed**.

ANTIPOLLUTION / OBD SUBFUNCTION:

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
1	**EGR solenoid valve control**	**ET008:** EGR solenoid control **INACTIVE**	**Shows the condition of the EGR valve control.** – **INACTIVE:** The valve is not controlled by the computer. – **ACTIVE:** The valve is controlled by the computer.	**None.**
2	**Atmospheric pressure**	**PR035:** Atmospheric pressure	**Gives the atmospheric pressure in mbar. The sensor is incorporated in the ECM.**	**If not consistent, check PR035 = PR032 = local atmospheric pressure, with the engine stopped and ignition on.**
3	**Air flow**	**PR132:** Air flow 350 < Cold < 400 mg/piston stroke 300 < Warm < 350 mg/piston stroke	**Air flow estimated by the ECM.**	**None.**
4	**Fuel flow**	**PR017:** Fuel flow 10 < Cold < 12 mg/piston stroke 4 < Warm < 6 mg/piston stroke	**Shows the fuel flow out of the high-pressure pump in mg/piston stroke.**	**None.**
5	**EGR valve opening setpoint**	**PR005:** EGR valve opening setpoint Warm: 20%	**Gives a theoretical EGR valve opening value for optimum engine operation.**	**None.**

ANTIPOLLUTION / OBD SUBFUNCTION (cont.):

Order	Function	Parameter or state Check or action	Display and notes	Trouble diagnosis
6	**EGR valve position feedback**	**PR051:** EGR valve position feedback Warm approximately 20%	**Gives the actual value of the EGR valve position.** Default value: 30%	**NONE.**
7	**EGR valve position sensor voltage**	**PR077:** EGR valve position sensor voltage	**Gives the EGR valve voltage according to its position.** – **INACTIVE:** The valve is not controlled by the computer. – **ACTIVE:** The valve is controlled by the computer. **0.5 V < PR077 < 4.8 V**	**NONE.**
8	**Accelerator pedal position**	**PR030:** Accelerator pedal position **0 %**	**Indicates the percentage of the pedal position between no load and full load position** **0 < PR030 < 100 %**	**In the event of a malfunction**, apply the **diagnostic procedure** for DTCs **P0225** and **P2120** Pedal sensor circuit, track 1 and track 2 and **P0608** "Sensor reference voltage"
9	**Coolant temperature**	**PR064:** Coolant temperature Warm: 90 °C	**Gives the coolant temperature in °C.** Default value: 80 °C.	**In the event of a malfunction, refer to parameter interpretation PR064 "Coolant temperature".**

PR059	INLET AIR TEMPERATURE SENSOR

NOTES	**Special notes:** Only perform the checks if the parameter is incorrect.

Check the condition of the turbocharger air temperature pressure sensor connections.
If necessary replace the sensor.
Measure the **resistance** across **terminals 1 and 2** of the air temperature - pressure sensor:

8950 < R in Ω at **- 10** °**C < 9901**
7054 < R in Ω at **- 5** °**C < 7784**
5605 < R in Ω at **- 0** °**C < 6169**
3618 < R in Ω at **- 10** °**C < 3964**
2400 < R in Ω at **- 20** °**C < 2620**
1645 < R in Ω at **- 30** °**C < 1787**

Replace the air temperature - pressure sensor, if necessary.

PR064	ENGINE COOLANT TEMPERATURE

NOTES	**Special notes:** Only perform the checks if the parameter is incorrect.

Check the condition of the engine coolant temperature sensor connections.
If necessary replace the sensor.
Measure the **resistance** between terminals **1** and **4** of the **coolant temperature sensor**.

- **R at - 10 °C =** 12.46 kΩ ± 1128 Ω.
- **R at 25 °C =** 2252 Ω ± 112.6 Ω.
- **R at 50 °C =** 811.4 Ω ± 38.4 Ω.
- **R at 80 °C =** 282.6 Ω ± 7.83 Ω.

If the value is incorrect, replace the engine coolant temperature sensor.

NOTES	**Only consult the tests after following the diagnostic procedure chart.**

Some specific checks are grouped under the << tests >> heading and are used as required in different diagnostic charts.

TEST 1: Low pressure circuit check

TEST 2: Electrical circuit check

TEST 3: Injector check

TEST 4: Parameter check

TEST 5: Air inlet circuit check

TEST 6: ECM check

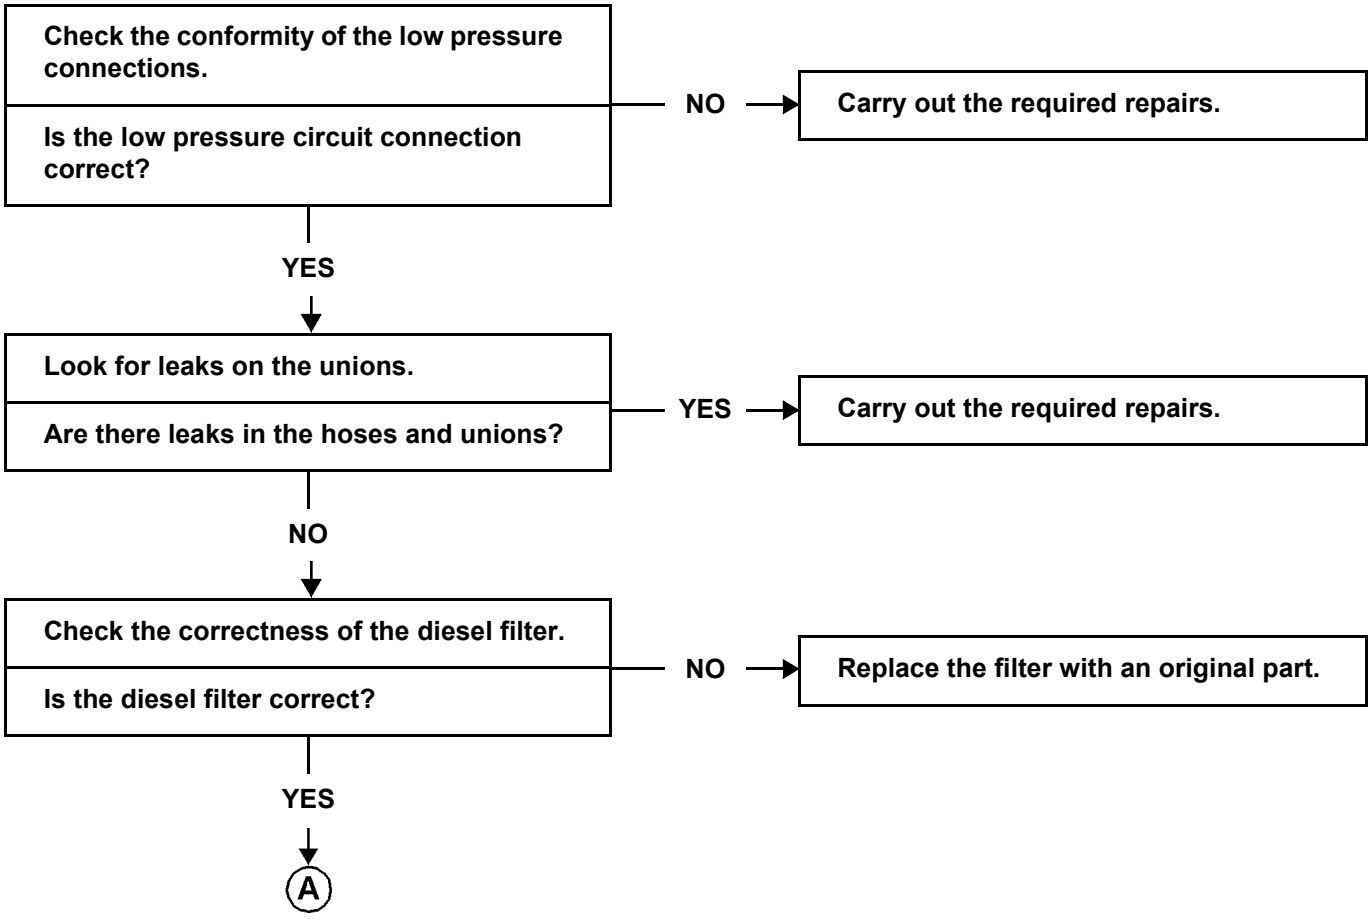
TEST 7: High pressure pump check

TEST 8: High pressure circuit tightness check

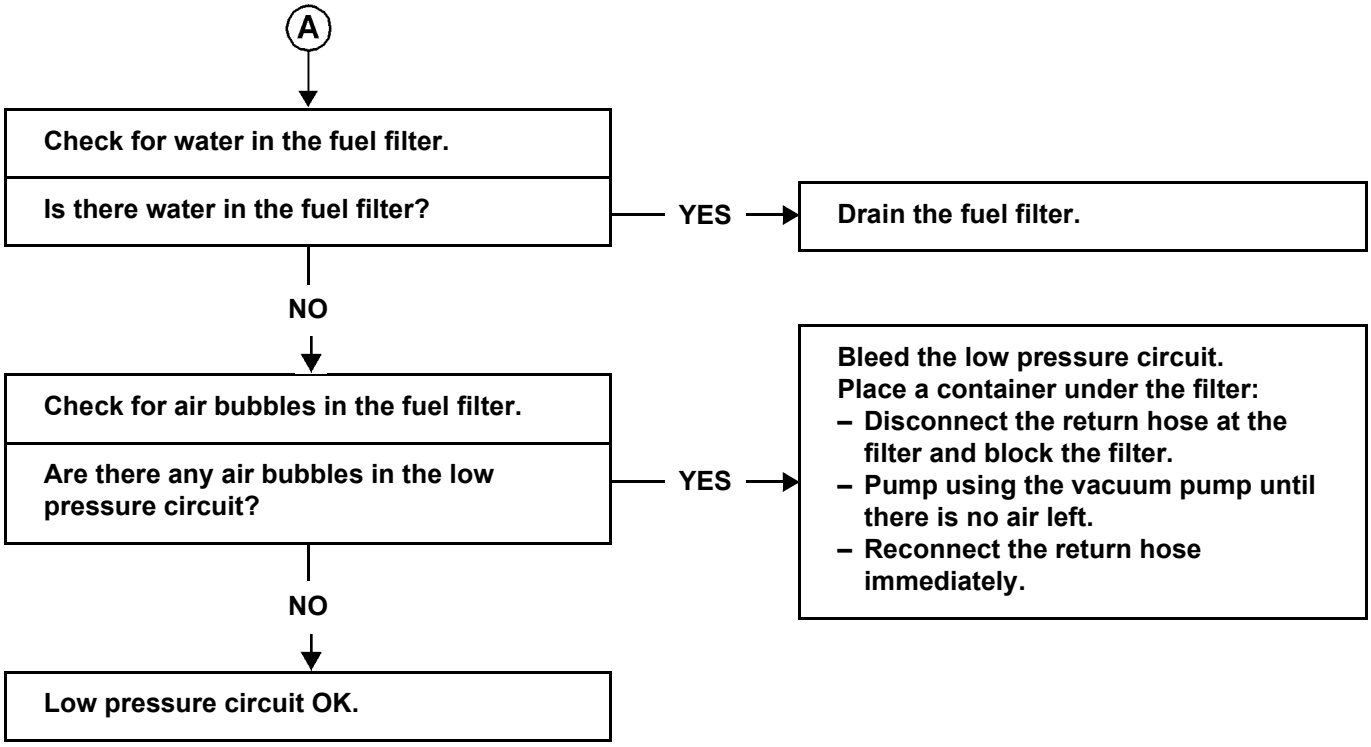
TEST 9: Injector tightness check

TEST 10: Injector return flow in starting phase

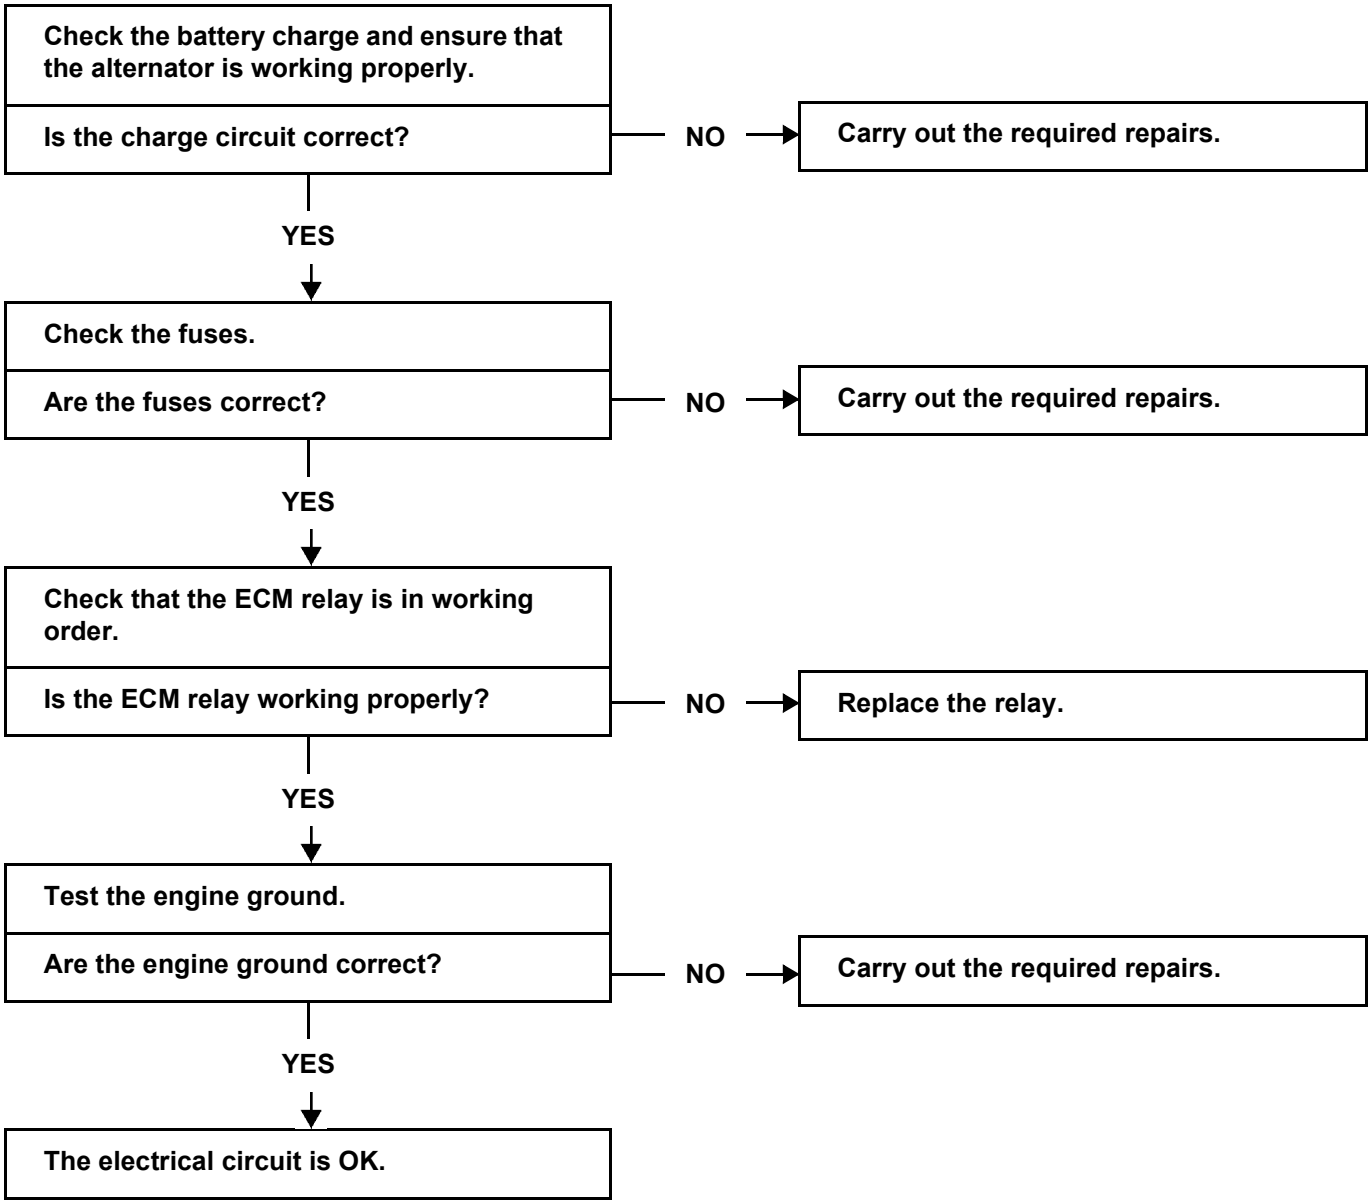
TEST 1	LOW PRESSURE CIRCUIT CHECK



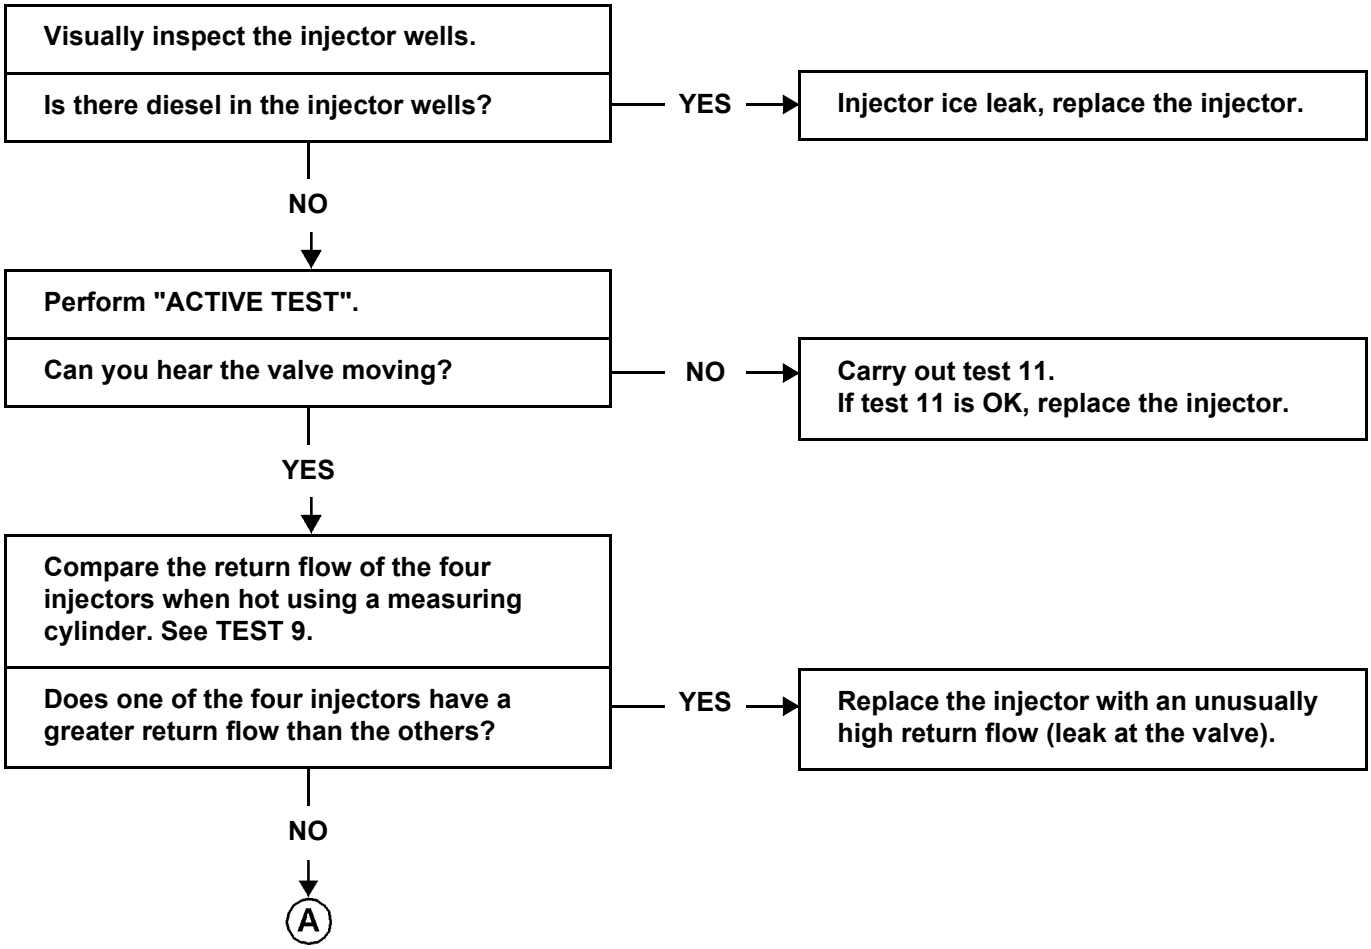
TEST 1 Cont'd	



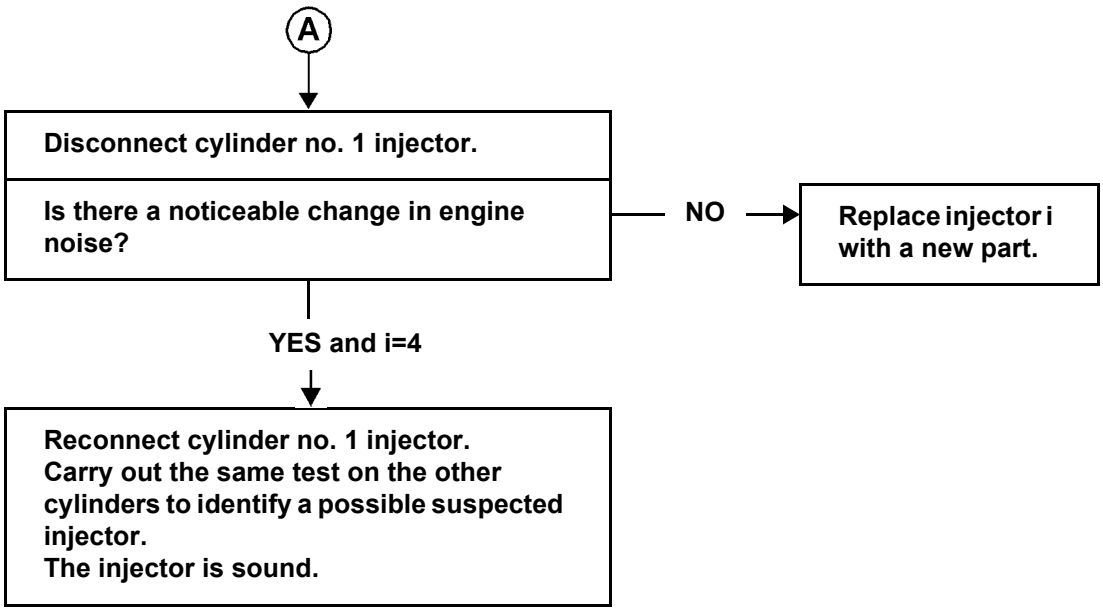
TEST 2	ELECTRICAL CIRCUIT CHECK



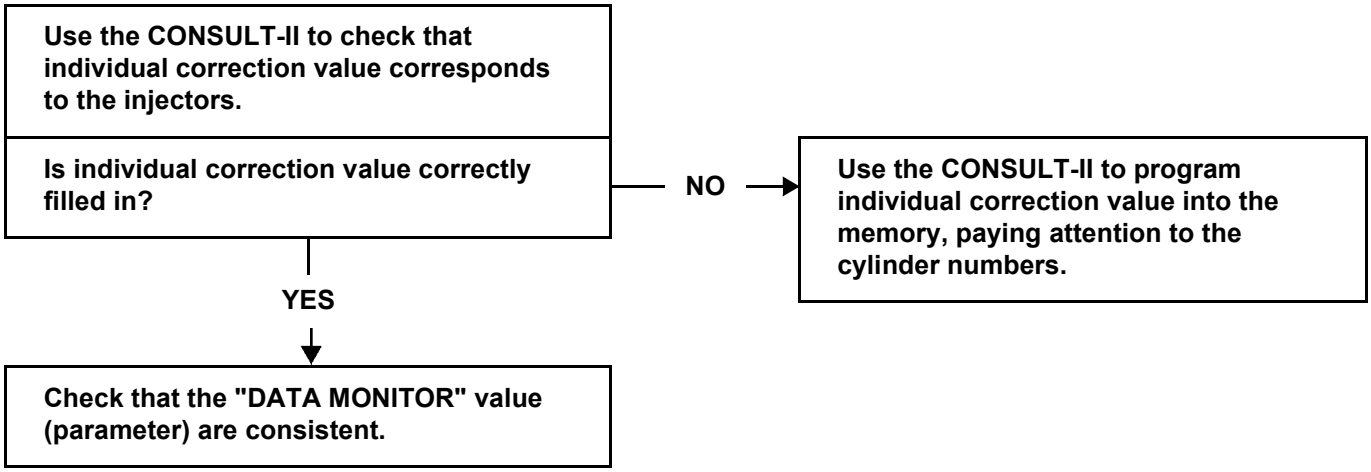
TEST 3	INJECTOR CHECK



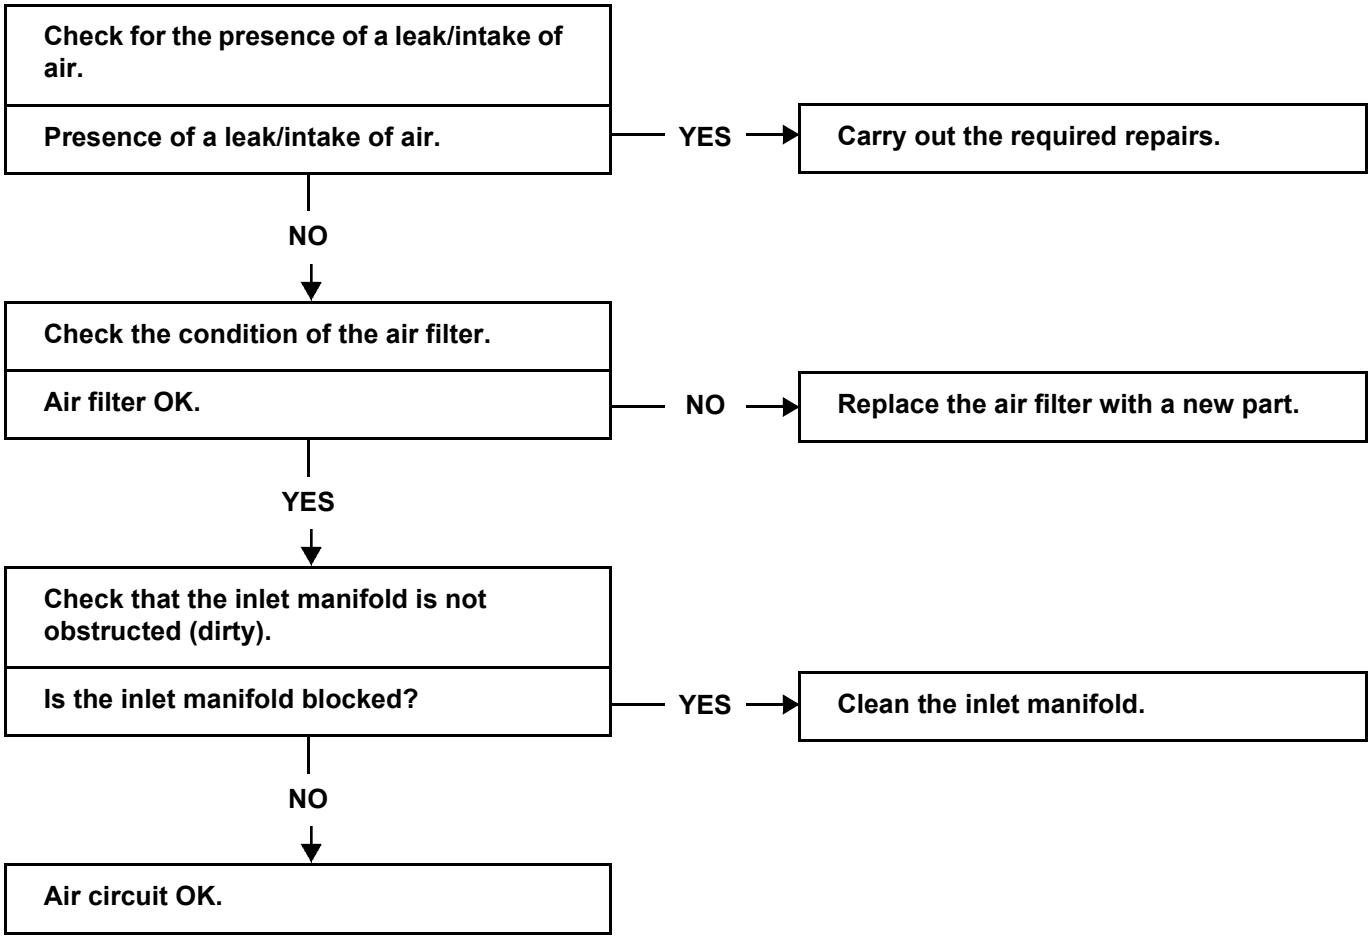
TEST 3 Cont'd	



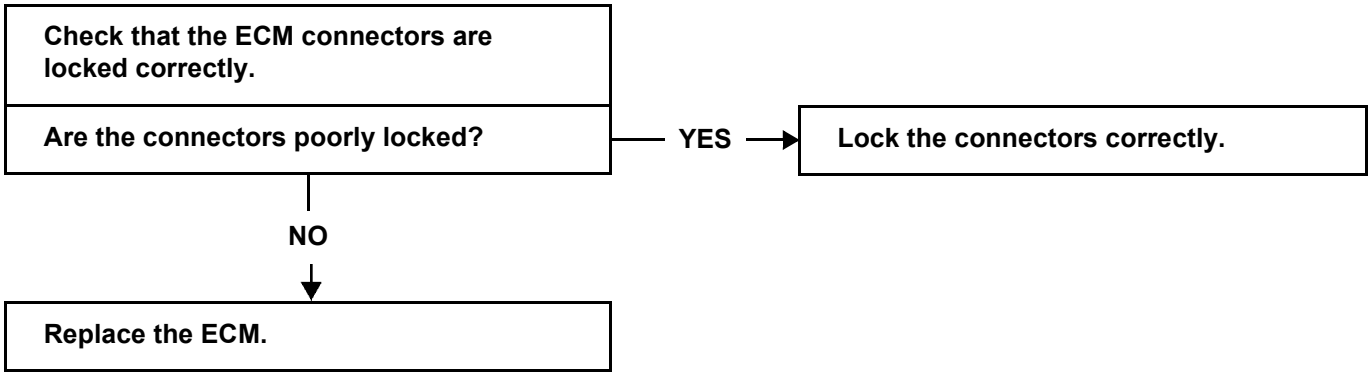
TEST 4	PARAMETER CHECK



TEST 5	AIR INLET CIRCUIT CHECK



TEST 6	ECM CHECK (COMPUTER)



TEST 7	High pressure system check

NOTES	**Special notes:** Certain malfunctions make it impossible to carry out this test, deal with them first. **IMPORTANT: It is useless and dangerous to engage the starter motor for more than 5 seconds.**

It is possible to check the high pressure supply pump capacity by carrying out the following procedure:
- **With the ignition off, disconnect** the low pressure actuator from the pump (**IMV brown connector**) and connect a test adaptor (test IMV).
- Disconnect the 4 injectors.
- Switch on the ignition, connect the fault finding tool and re-establish dialogue with the injection system.
- On the screen, display **Main states and parameters** of the ECM.
- Brake and press the "START" button. **The starter will cut out automatically** after **5 secs**.
- Read the maximum rail pressure value **PR038** during the test on the fault finding tool.

Is the rail pressure greater than 1050 bar?

NO

Is the rail pressure greater than 900 bar?

NO

Make sure that the ignition circuit is working correctly (minimum engine speed **200 rpm**). Switch off the ignition and reconnect the 4 injectors and low pressure actuator electrically. Switch the ignition back on, and clear the injection faults using the fault finding tool.

Carry out TEST 11.

YES

Repeat the test when cold. Coolant temperature = Ambient air temperature.

Is the rail pressure greater than 1050 bar?

YES

NO

Make sure that the ignition circuit is working correctly (minimum engine speed **200 rpm**). Switch off the ignition and reconnect the 4 injectors and low pressure actuator electrically. Switch the ignition back on, and clear the injection faults using the fault finding tool.

Carry out TEST 11.

YES

The pump can supply the operating pressure. Switch off the ignition and reconnect the 4 injectors and low pressure actuator electrically. Switch the ignition back on, and clear the injection faults using the fault finding tool.
Carry out fault finding on the injectors by checking the return volume of the 4 injectors **(See TEST 9 injector sealing check).**

Carry out fault finding on the injectors by checking the return volume of the 4 injectors.
See TEST 9 or TEST 10 if the engine does not start.

Is **TEST 9 or TEST 10** correct?

NO

Replace the faulty injector(s).

YES

Replace the high pressure pump.

TEST 8	High-pressure circuit leak check

NOTES	**Special notes:** Certain malfunctions make it impossible to carry out this test, deal with them first.

There is a command that performs a leak test on the high-pressure circuit when the engine is running.
This command can detect a leak on the high-pressure circuit if a union is improperly fitted or bolted, but cannot detect a small leak if a union is not torque tightened.
This command can only be used if the engine temperature is **above 60°C**.

Use command **AC029 "high pressure circuit sealing test"** the engine will automatically carry out one cycle of 4 accelerations to raise the pressure in the rail and check whether there are leaks in the high pressure circuit.

Watch out for any objects (tools, etc) on the sides of the engine housing during the four accelerations (vibrations possible).

TEST 9	Injector leak check

NOTES	**Special notes:** Certain faults make it impossible to carry out this test, deal with them first.

Command AC029 also allows you to check the return volume of each injector to detect a leak inside the injectors.

Tooling required:
- **It is essential to use 4 transparent pipes with an internal diameter of 4 mm and a length of approximately 50 cm.**
- **4 graduated measuring cylinders.**

PROCEDURE
- Check that the engine coolant temperature is **above 60°C**.
- Switch off the ignition.
- Disconnect the return pipes from the 4 injectors.
- Fit a plug in the pump venturi tube to prevent the low-pressure circuit from depriming.
- Connect the 4 transparent pipes with an internal diameter of **4 mm** and a length of **50 cm** in place of the return pipes.
- Immerse these 4 pipes into 4 graduated measuring cylinders.

Having carried out these preparations, start the engine, then let it run for **2 minutes** at idle speed.
- **Activate** command **AC029 "high pressure circuit sealing test"**: the engine will automatically perform one cycle of 4 accelerations to raise the pressure in the rail and measure the leaks inside the injectors in these conditions.
- **Once the cycle is complete, activate command AC029 again** for the correct reading of the return volume of each injector.
  At the end of both cycles, the return volume of each injector should be **35 ml at maximum**. If the return volume of one of the injectors is above **35 ml**, replace the faulty injector.
- Disconnect the 4 transparent pipes and reconnect the injector return circuit.

Watch out for any objects (tools, etc.) at the sides of the engine housing during the four cycles (vibrations possible).

TEST 10	Injector return flow in starting phase.

NOTES	**Special notes:** Certain faults make it impossible to carry out this test, deal with them first. **IMPORTANT: It is useless and dangerous to engage the starter motor for more that 5 seconds.**

In the event the engine does not start, only the static leak can be measured, that is the leak with the injector closed, inactive and not subject to any high pressure.

Make sure that the starting circuit is working correctly (minimum speed 200 rpm).

Tooling required:

- **It is essential to use four transparent pipes with an internal diameter of 4 mm and approximately 50 cm long.**
- **A test adapter (TEST IMV)**

PROCEDURE:

1 – Switch off the ignition.
2 – Disconnect the four injector return pipes.
3 – Fit a plug in the pump venturi tube to prevent the low-pressure circuit from depriming.
4 – Connect the four transparent pipes with an internal diameter of **4 mm** and a length of **approximately 50 cm**.
5 – Disconnect the low pressure actuator from the pressure (brown IMV connector) and connect the test adapter (test IMV).
6 – **Electrically disconnect the 4 injectors.**
7 – Switch on the ignition, brake and press the "START" button. **The starter cuts in automatically after 5 seconds.**
8 – Measure the amount of diesel in each pipe.

Replace the injector(s) whose leak return is greater than 10 cm.

Disconnect the four transparent diesel pipes and reconnect the injector return circuit.

Disconnect the test IMV and reconnect the low pressure actuator to the pump.

TEST 11	Diesel filter check

Check the conformity of the diesel filter.

Is the diesel filter correct?

NO → **Replace the filter with an original part.**

YES ↓

Switch off the ignition, analyse the diesel fuel in the diesel filter.
- Disconnect the diesel supply and return hoses from the filter.
- Block the filter inlets and outlets straight away with appropriate plugs.
- Remove the filter from its holder and **shake it well**, keeping the caps in place and empty the contents of the filter into a glass container by lifting up a protective cap and undoing the bleed screw.

Can you see at the bottom of the container a deposit of black particles?

NO ↓ **Diesel filter correct.**

YES ↓

Pass a magnet beneath the container to collect only all the metal particles. Take the magnet away from the container.

Do the particles collected using the magnet cover a surface area greater than 1 cm^2?

YES ↓ Replace the entire injection system.

NO ↓ **Diesel filter correct.**

NOTES	**Only consult this customer complaint after a complete check using the diagnostic tool.**

No communication with the ECM — **CHART 1**

Starting malfunction

CHART 1	NO COMMUNICATION WITH THE ECM

NOTES	**Only consult this customer complaint after a complete check using the diagnostic tool.**

Ensure that the diagnostic tool is not causing the fault by trying to establish dialogue with a computer on another vehicle. If the tool is not at fault, and dialogue cannot be established with any other computer on the same vehicle, the cause could be a faulty computer interfering on the multiplex network.
Check the voltage of the battery and carry out the operations necessary to obtain a voltage which is to specification (**9.5 volts < U battery < 17.5 volts**).

Perform fault finding on the multiplex network using the diagnostic tool.

Check **the ECM earth (ground) point** on the left hand front shock absorber cage.

Check:
– the connection between the CONSULT-II and the DLC (wiring in good condition),
– the engine and passenger compartment fuses.

Check for the presence of **+ 12 volts before ignition** on **terminal 16**, **+ 12 volts after ignition** on **terminal 8** and an **earth (ground)** on **terminals 4 and 5** of the diagnostic socket.
Repair if necessary.

Connect the CONSULT-II and check the **insulation, continuity and absence of interference resistance of the connections:**

- ECM (F134) terminal 109 and IPDM E/R harness connector terminal 32
- ECM (F134) terminal 110 and IPDM E/R harness connector terminal 32
- ECM (E61) terminal 22 and Fuse block (M16)
- ECM (F134) terminal 104 and IPDM E/R harness connector terminal 29
- ECM (F134) terminal 111 and ground
- ECM (F134) terminal 112 and ground
- ECM (E61) terminal 2 and DLC terminal 7
  (Refer to wiring diagram "EC-MAIN-01".)

Repair if necessary.

CHART 2	THE ENGINE DOES NOT START

NOTES	Only consult this customer complaint after a complete check using the CONSULT-II.

Check that the fuel tank is correctly filled and that the fuel type is suitable.

Is the fuel type suitable and the tank correctly filled?

NO → **Refill the fuel tank correctly.**

YES

Is the starter motor working properly?

NO → **Carry out the required repairs.**

YES

Check the low pressure circuit using TEST 1.

Check for leaks in the high pressure circuit.

Check the electrical circuit using TEST 2.

Ⓐ

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS004PB

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions

EIS004PC

- When removing or disassembling any part, be careful not to damage or deform it. Protect parts, which may get in the way with cloth.
- When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
- Keep removed parts protected with cloth.
- If a clip is deformed or damaged, replace it.
- If an unreusable part is removed, replace it with a new one.
- Tighten bolts and nuts firmly to the specified torque.
- After re-assembly has been completed, make sure each part functions correctly.
- Remove stains in the following way.

Water-soluble stains:
Dip a soft cloth in warm water, and then squeeze it tightly. After wiping the stain, wipe with a soft dry cloth.
Oil stain:
Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water and squeeze it tightly. Then clean off the detergent completely. Then wipe the area with a soft dry cloth.

- Do not use any organic solvent, such as thinner or benzine.

CLIP AND FASTENER

PFP:76906

Clip and Fastener

EIS004PD

Symbol No.	Shapes	Removal & Installation
C101		**Removal:** Remove by bending up with flat-bladed screwdrivers or clip remover.
C103		 **Removal:** Remove with a clip remover.
C203		**Removal:** Push center pin to catching position. (Do not remove center pin by hitting it.)  Push  Push **Installation:**
C205		**Removal:** Flat-bladed screwdriver  Clip Finisher
C206		**Removal:** 
SIIA0315E

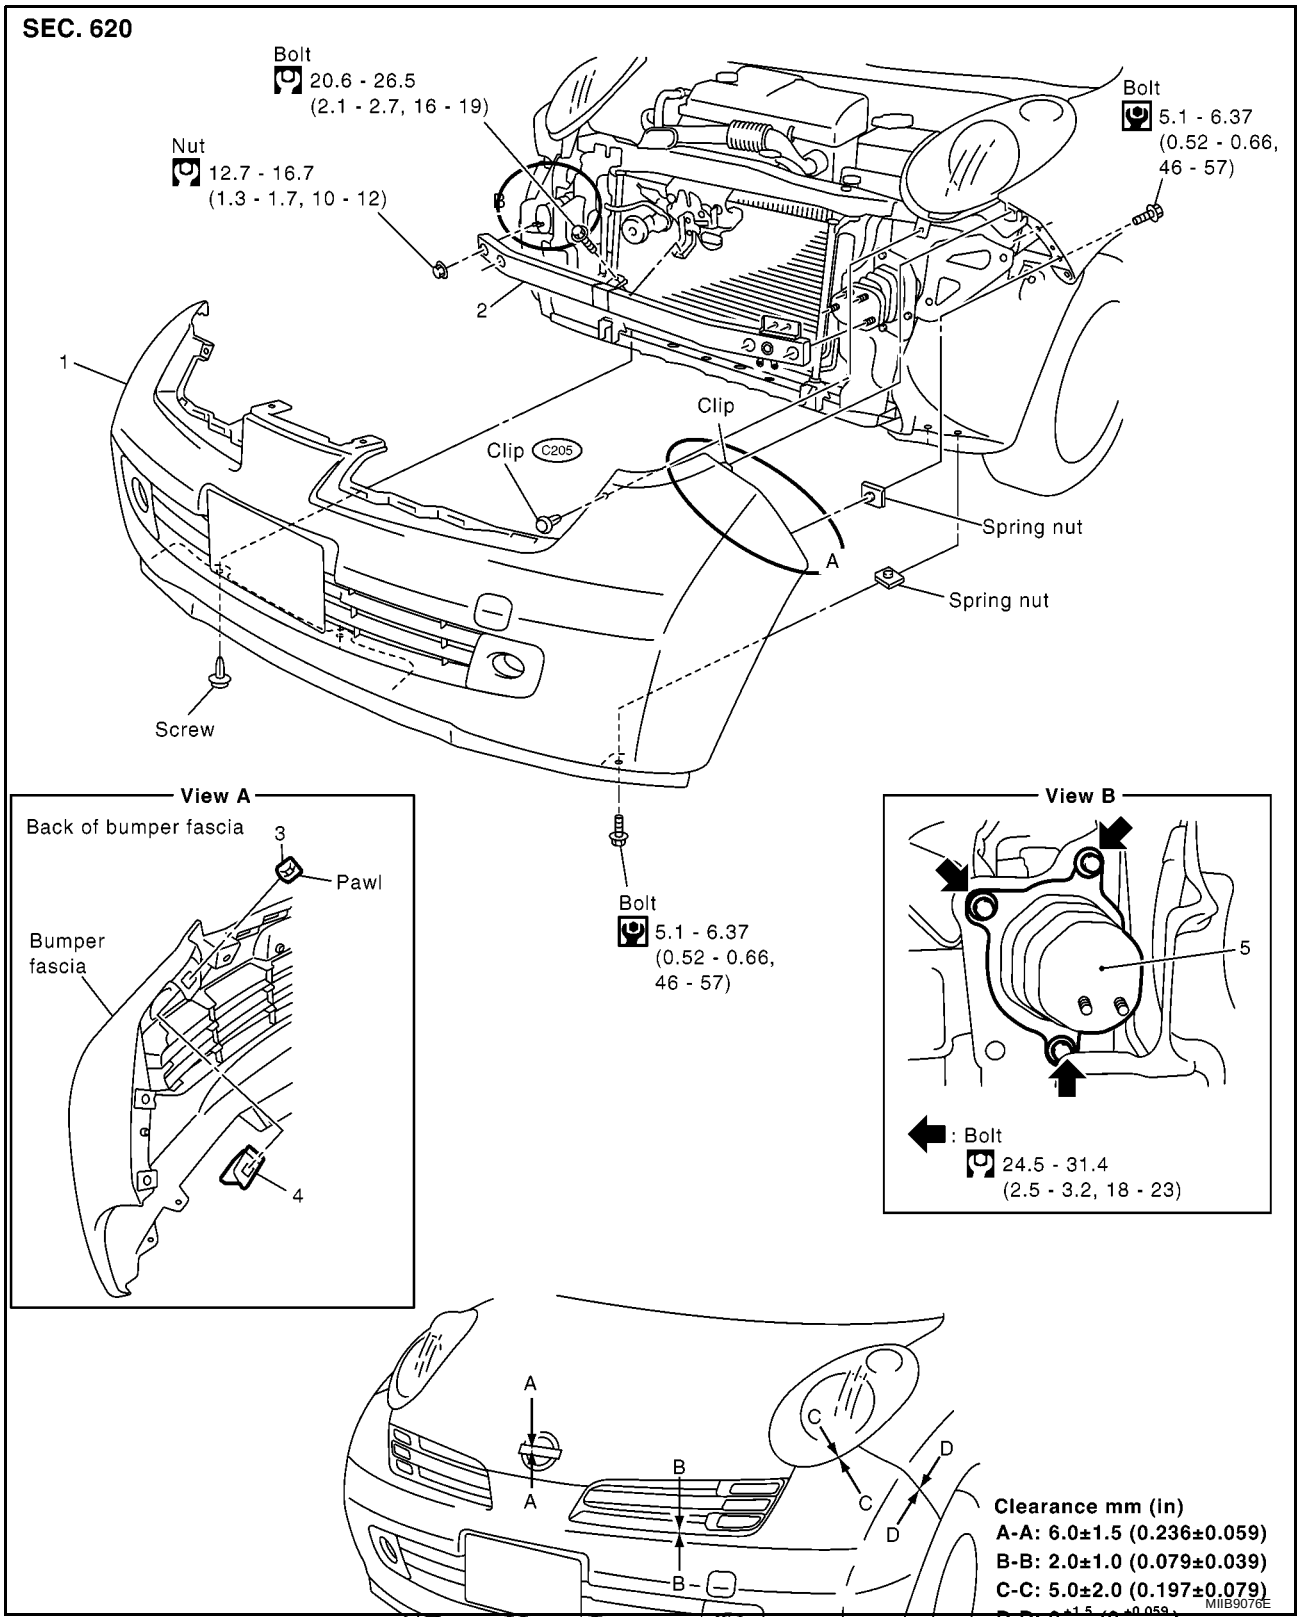
FRONT BUMPER

PFP:F2022

Removal and Installation

EIS004NZ

- Bumper fascia is made of plastic. Do not use excessive force and be sure to protect it from exposure to oil.



1. Bumper fascia
2. Bumper reinforcement
3. Bumper side bracket (upper)
4. Bumper side bracket (lower)
5. Bumper stay

REMOVAL

1. Remove front grille. Refer to EI-8, "FRONT GRILLE" in EI section.
2. Remove bumper fascia installation clip.
3. Remove fender protectors (right, left). Refer to EI-11, "FENDER PROTECTOR" in EI section.
4. Remove the bolts holding bumper fascia to front fender.
5. Pull the bumper fascia horizontal from front fender mounting surface, disengage the clip, and remove.
6. Remove the bumper side brackets (upper and lower) from the bumper fascia.
7. Remove bolts and nuts and then remove bumper reinforcement.
8. Remove bolts and bumper stay.

INSTALLATION

Install in the reverse order of removal.

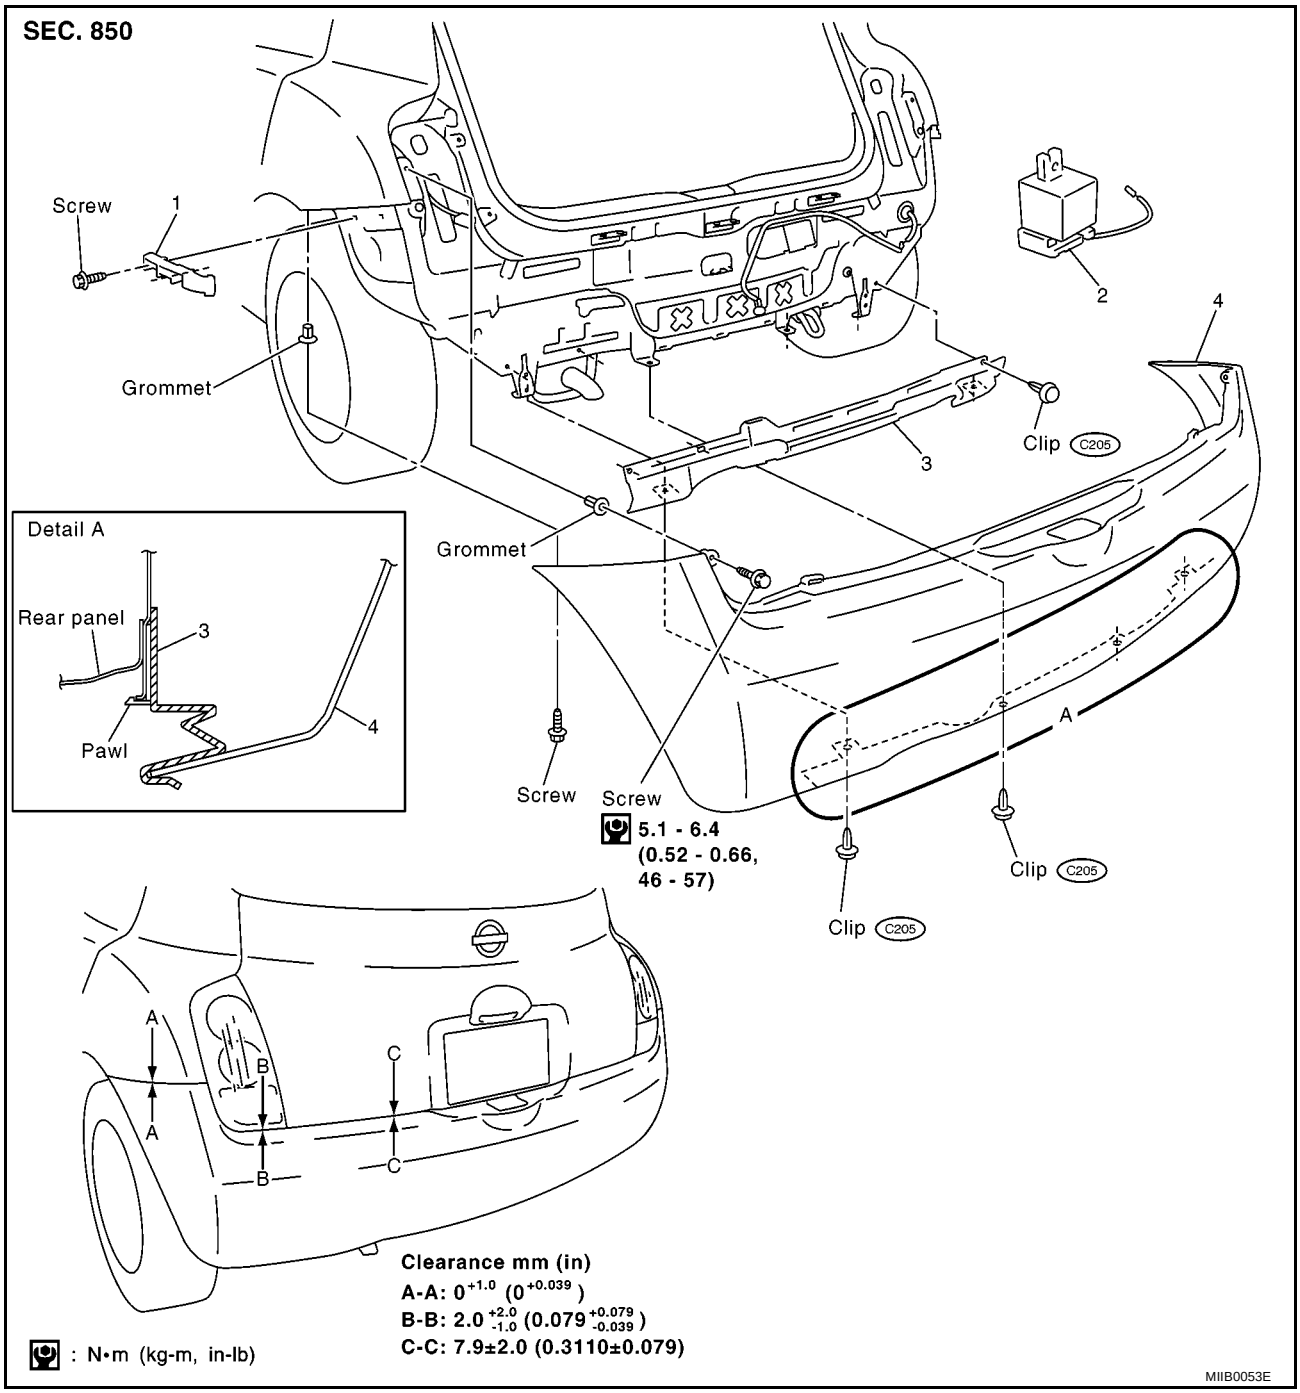
REAR BUMPER

PFP:H5022

Removal and Installation

EIS004O0

Bumper fascia is made of plastic. Do not use excessive force and be sure to protect it from exposure to oil.

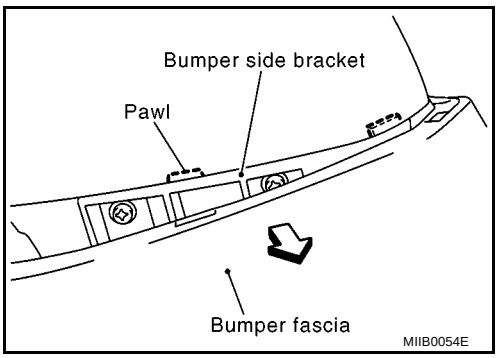


1. Bumper side bracket
2. Bumper energy shock absorber
3. Rear panel (lower)
4. Bumper fascia
5. Bumper stay

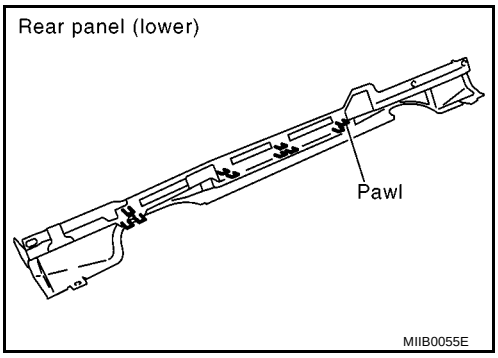
REMOVAL

1. Remove rear combination lamps (LH/RH). Refer to LT-186, "Removal and Installation" .
2. Remove bumper fascia lower bottom installation clip
3. Remove bumper fascia screws.

4. Remove bumper fascia side engaged hooks in the direction shown by the arrows in the figure.



5. Remove license plate lamp, and then pull bumper fascia straight out toward back of vehicle to remove it. Refer to LT-180, "LICENSE PLATE LAMP" .
6. Remove bumper energy shock absorber.
7. Remove the engaged rear panel (lower) mounting clips and hooks, and remove rear panel.



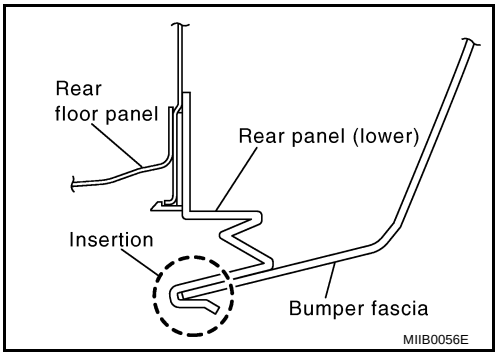
8. Remove bolts and bumper stay.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

Make sure the bumper fascia bottom edge is inserted in the rear panel (lower) insertion area.

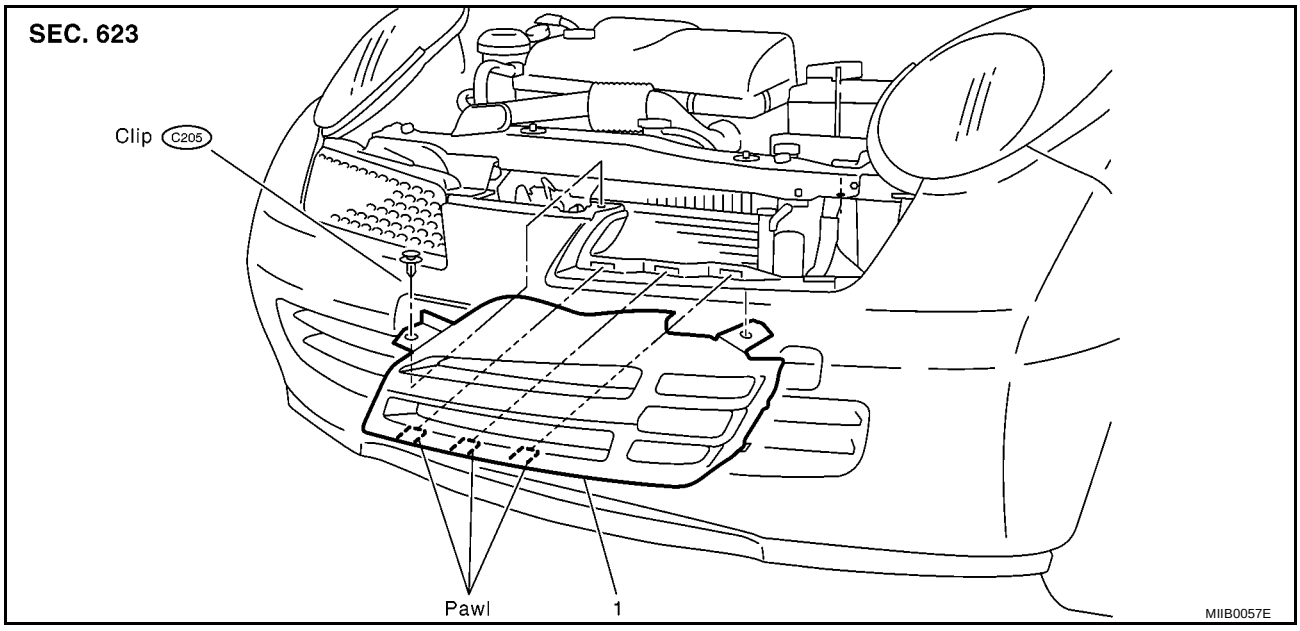


FRONT GRILLE

PFP:62310

Removal and Installation

EIS004O1



1. Front grille

REMOVAL

1. Remove mounting clips from top of front grille.
2. Insert your hand between the front grille and radiator core support (upper), and remove the front grille back hooks in order from the vehicle's center side to its outside.
3. After all hooks have been disengaged, pull front grille vehicle center side forward and remove the front turn signal lamp back insertion area and panel connector to remove the front grille vehicle center side.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:

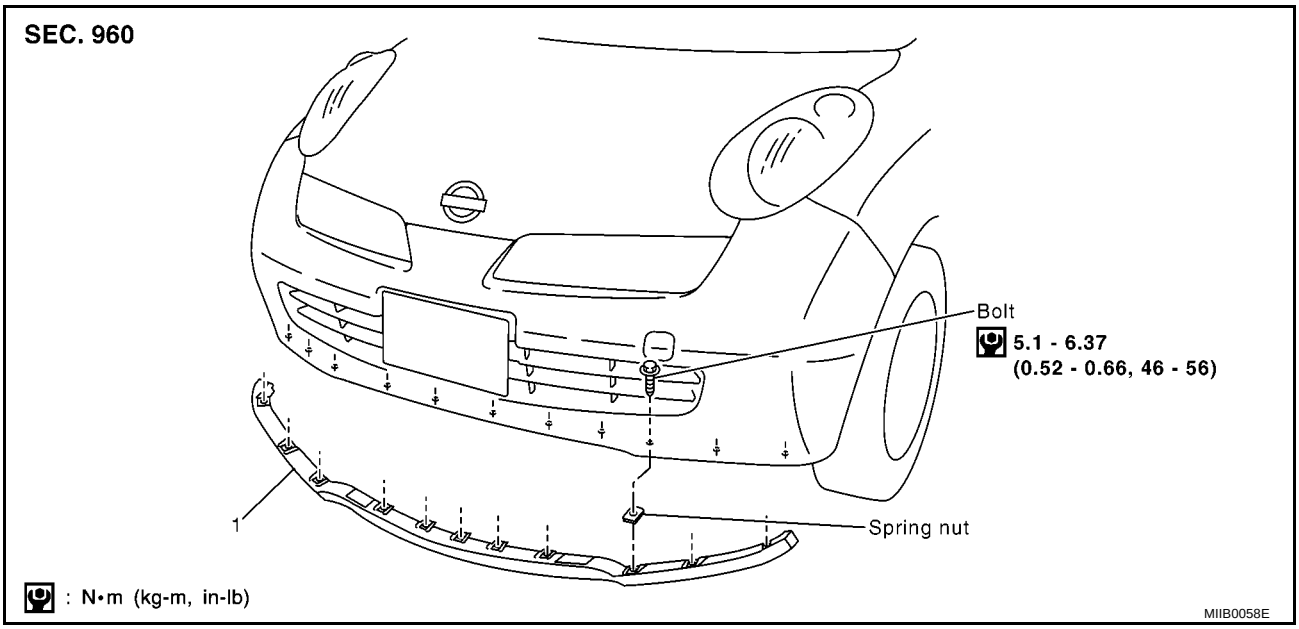
Before engaging the front grille back hooks, make sure the front turn signal lamp back insertion area is correctly inserted in the inside of the bumper fascia.

FRONT DEFLECTOR

PFP:96015

Removal and Installation

EIS004O2



1. Front deflector

REMOVAL

1. Remove front bumper. Refer to EI-4, "FRONT BUMPER" in EI section.
2. Remove bolts from front bumper inner side, and then remove front deflector.

INSTALLATION

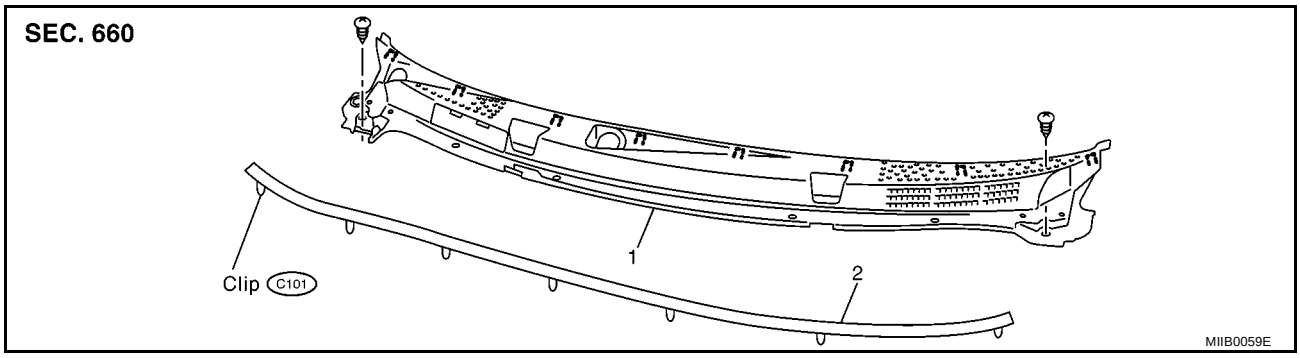
Install in the reverse order of removal.

COWL TOP

PFP:66100

Removal and Installation

EIS004O3



1. Cowl top cover
2. Cowl top seal rubber

REMOVAL

1. Remove front wiper arms (left and right). Refer to WW-5, "FRONT WIPER AND WASHER SYSTEM" , WW-48, "FRONT WIPER AND WASHER SYSTEM (WITH RAIN SENSOR)" in WW section.
2. Remove mounting screws, and the remove slat covers (LH/RH).
3. Remove cowl top seal rubber.
4. Pull cowl top over forward to remove it.

INSTALLATION

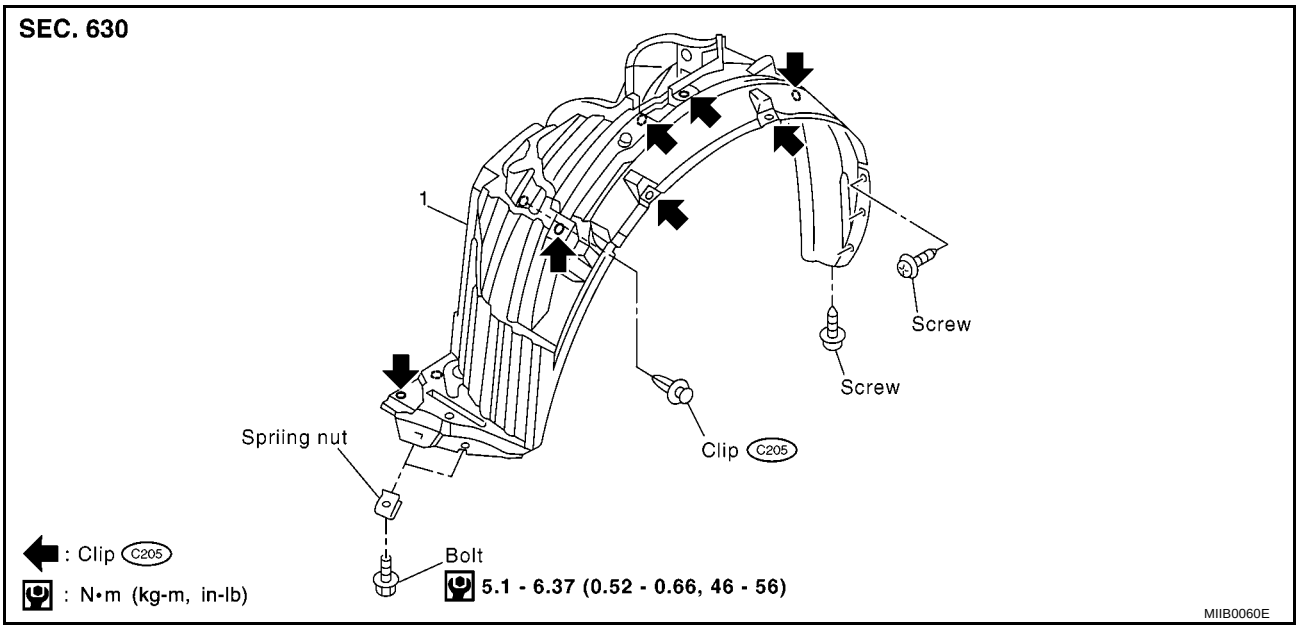
Install in the reverse order of removal.

FENDER PROTECTOR

PFP:63840

Removal and Installation

EIS004O4



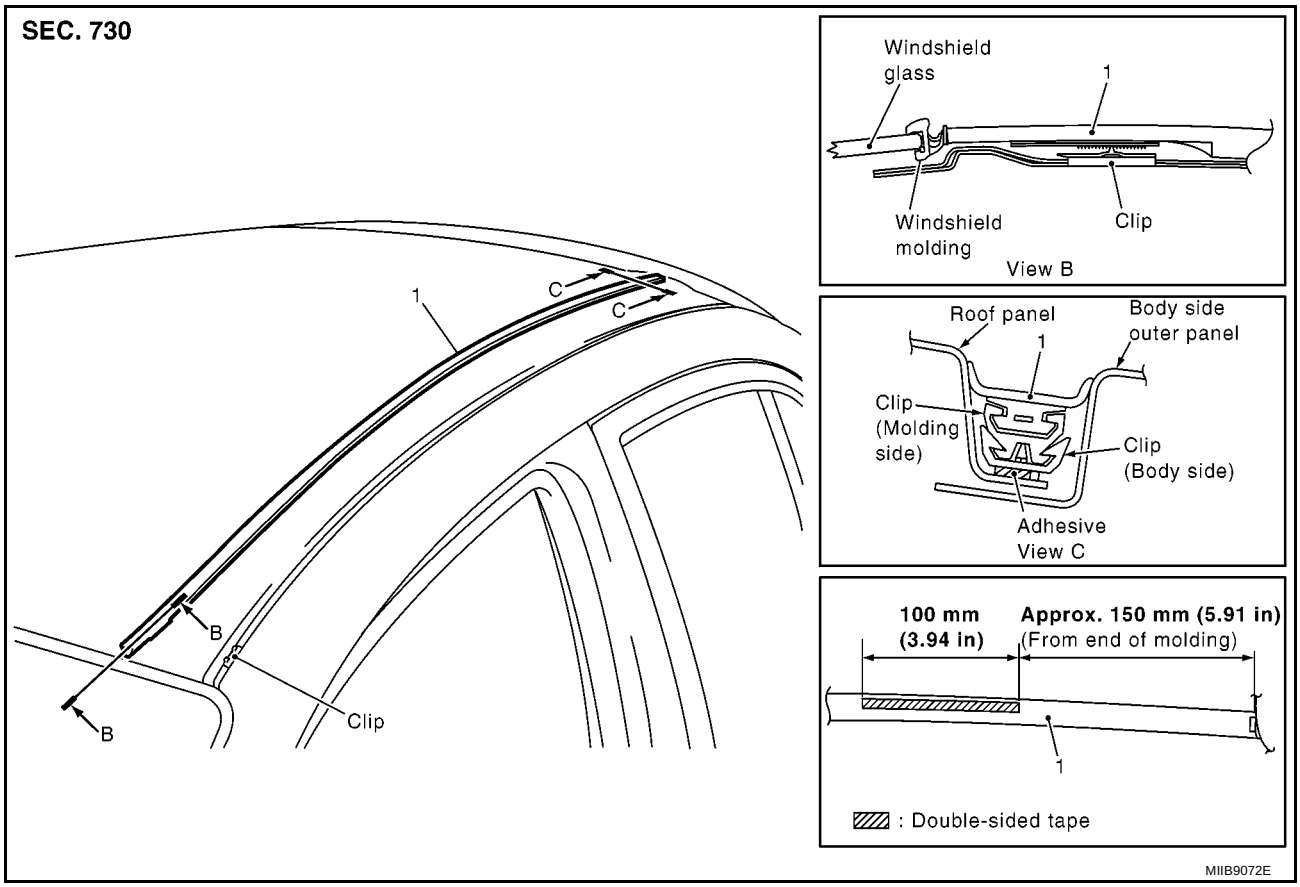
1. Fender protector

ROOF SIDE MOLDING

PFP:73854

Removal and Installation

EIS004O5



1. Roof side molding

REMOVAL

1. Use a plastic knife, etc., and lift up the end of roof side molding (back end), remove clip, and peel off double-sided tape to remove it.
2. Remove the double-sided tape remaining on roof side molding back and vehicle body.

   NOTE:
   Double-sided tape can be easily removed using double-sided tape removal agent.

INSTALLATION

NOTE:
When only installing roof side molding, conduct the following procedure from Step 3.

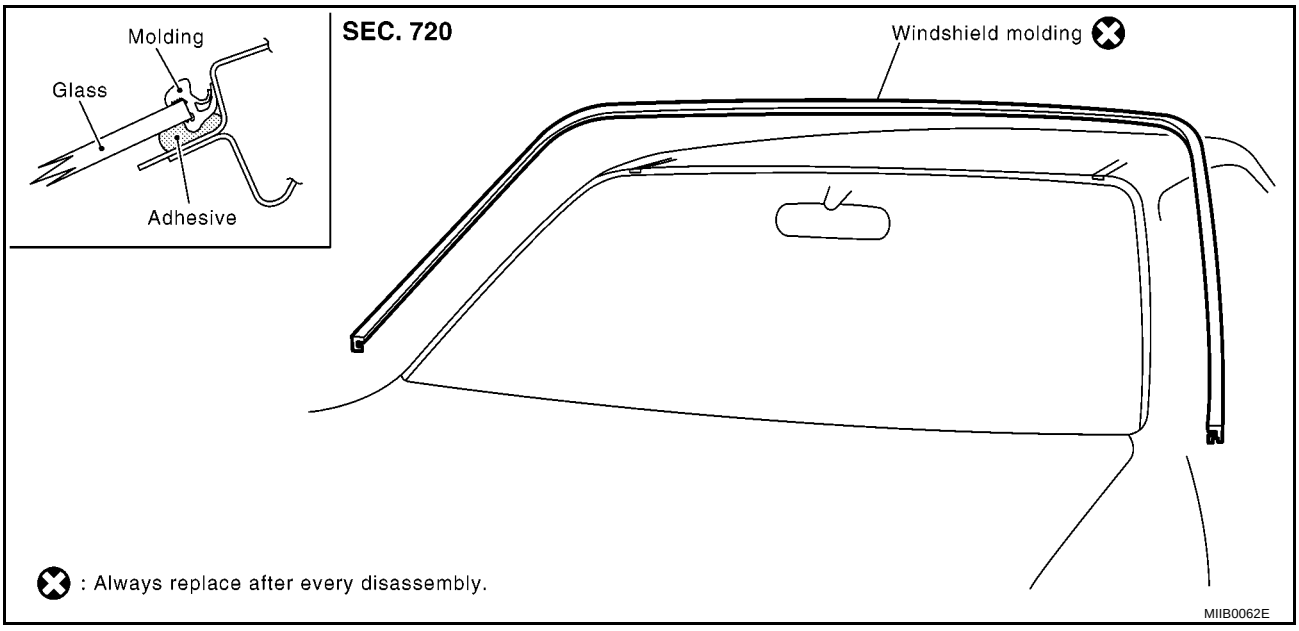
1. Clean the roof side molding clip attachment surface (body side).
2. Bond roof side molding clip (body side) to vehicle body and let sit for 40 min.
3. Apply primer (Sumitomo3M N200 or comparable product) to roof side molding back double-sided tape application area.
4. Apply double-sided tape to roof side molding back (position in figure).
5. After butting roof side molding front end against window seal molding, push in molding from front to back end, and then affix to body using clips and double-sided tape.

WINDSHIELD MOLDING

PFP:72750

Removal and Installation

EIS004O6

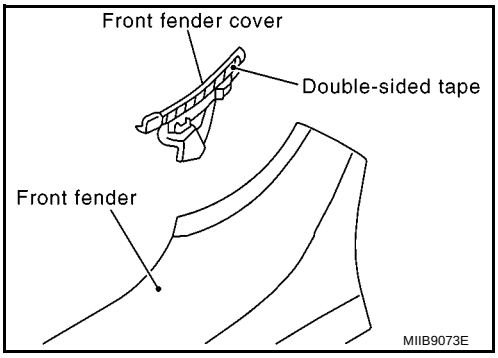


CAUTION:

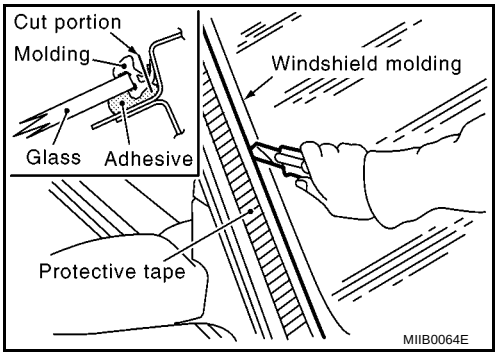
Be careful when handling adhesive and primer.

REMOVAL

1. Remove cowl top cover. Refer to EI-10, "COWL TOP" in EI section.
2. Peel off double-sided tape and remove front fender covers (LH/RH) from front fenders (LH/RH).

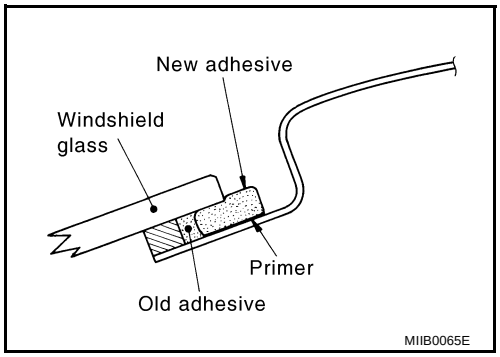


3. Apply protective tape along the contour of windshield molding and cut molding lip with cutter knife.
4. Tear off excess molding from end of molding to glass.
5. With pliers, draw out all the remaining molding left in flanged area of body to remove it completely from adhering surface on glass.



INSTALLATION

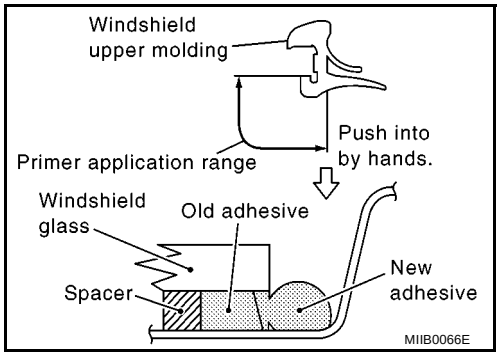
1. Apply primer between glass and panel then apply enough adhesive to allow molding adhesion.



NOTE:

- The essential function of primers is to strengthen adhesion between glass and painted surface.
- There are 2 types of primer. Never confuse the application methods.
  Primer M ⋯ for painted surfaces
  Primer G ⋯ for glass
- If primer M overflows onto a painted surface other than bonding area, quickly remove it with white gasoline.

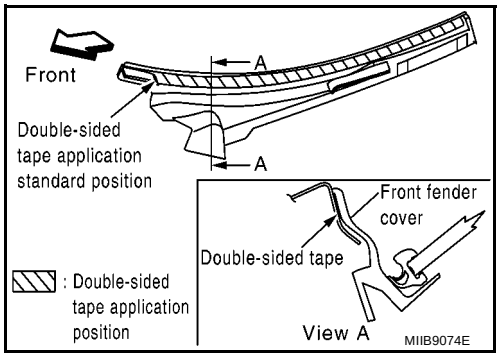
2. Apply primer to entire perimeter of molding area shown in the figure.
3. Align molding positioning mark (center of molding: white) with glass top edge center spacer positioning mark, push in so that molding's lower chin hooks onto glass, then continuing pushing toward the outside.



CAUTION:

After installing molding, make sure there are no non-standard conditions, such as a lip sticking out or wave in molding.

4. Remove protective tape.
5. Remove double-sided tape from front fender cover and apply primer (Sumitomo 3M K520) to double-sided tape application position shown in the figure. Then apply new double-sided tape and install front fender.



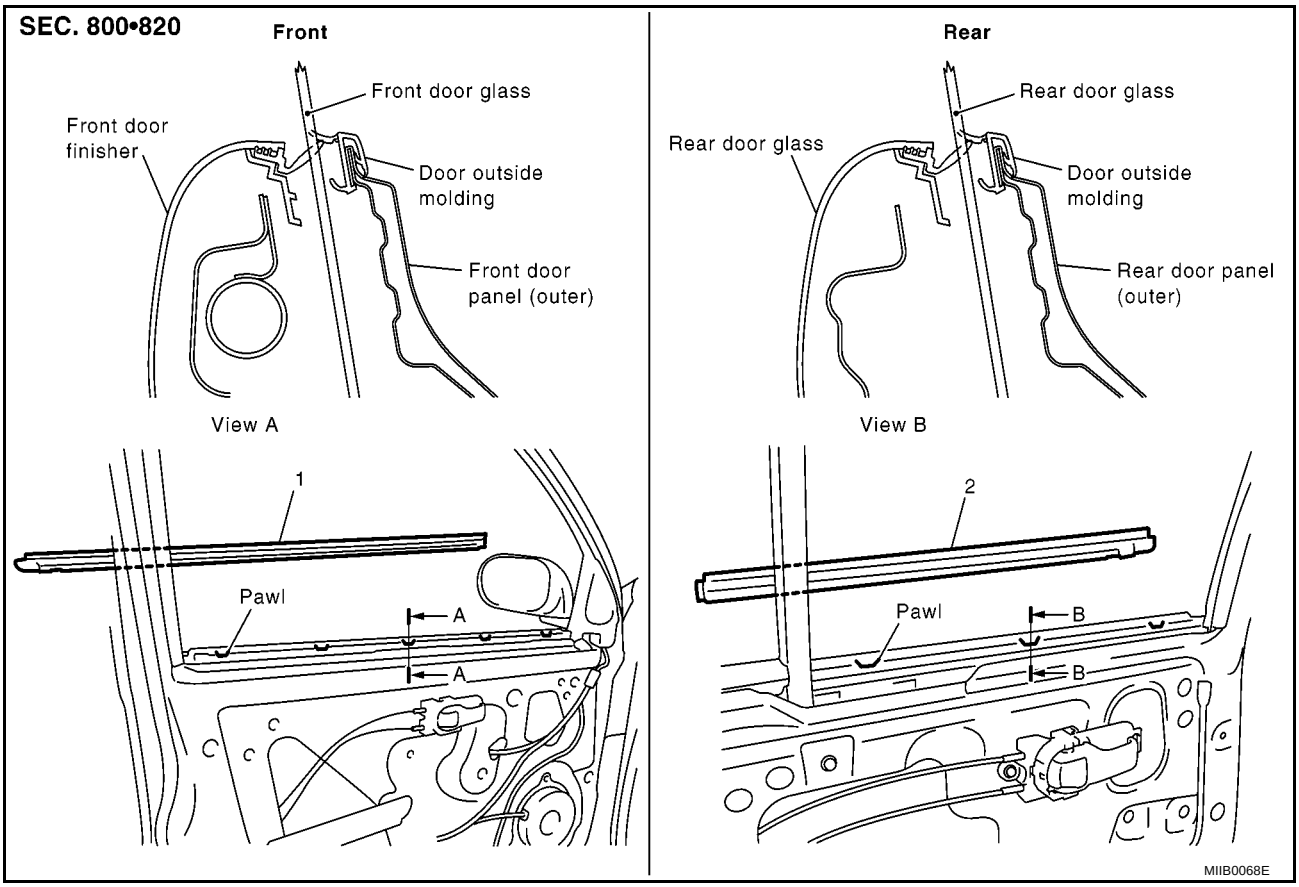
6. Install cowl top cover. Refer to EI-10, "COWL TOP" in EI section.

DOOR OUTSIDE MOLDING

PFP:82820

Removal and Installation

EIS004O7



1. Front door outside molding
2. Rear door outside molding

REMOVAL

Front

1. Fully open door glass.
2. Hold molding back end straight up and release engagement with flange hooks in order of back to front.
3. After disengaging the flange hooks, with the molding back end held up, pull molding slanted backwards to remove it.

CAUTION:

After removal, visually inspect molding, and if it is deformed, replace it with new molding.

Rear

1. Fully open door glass.
2. Hold molding straight up and remove it.

CAUTION:

After removal, visually inspect molding, and if it is deformed, replace it with new molding.

INSTALLATION

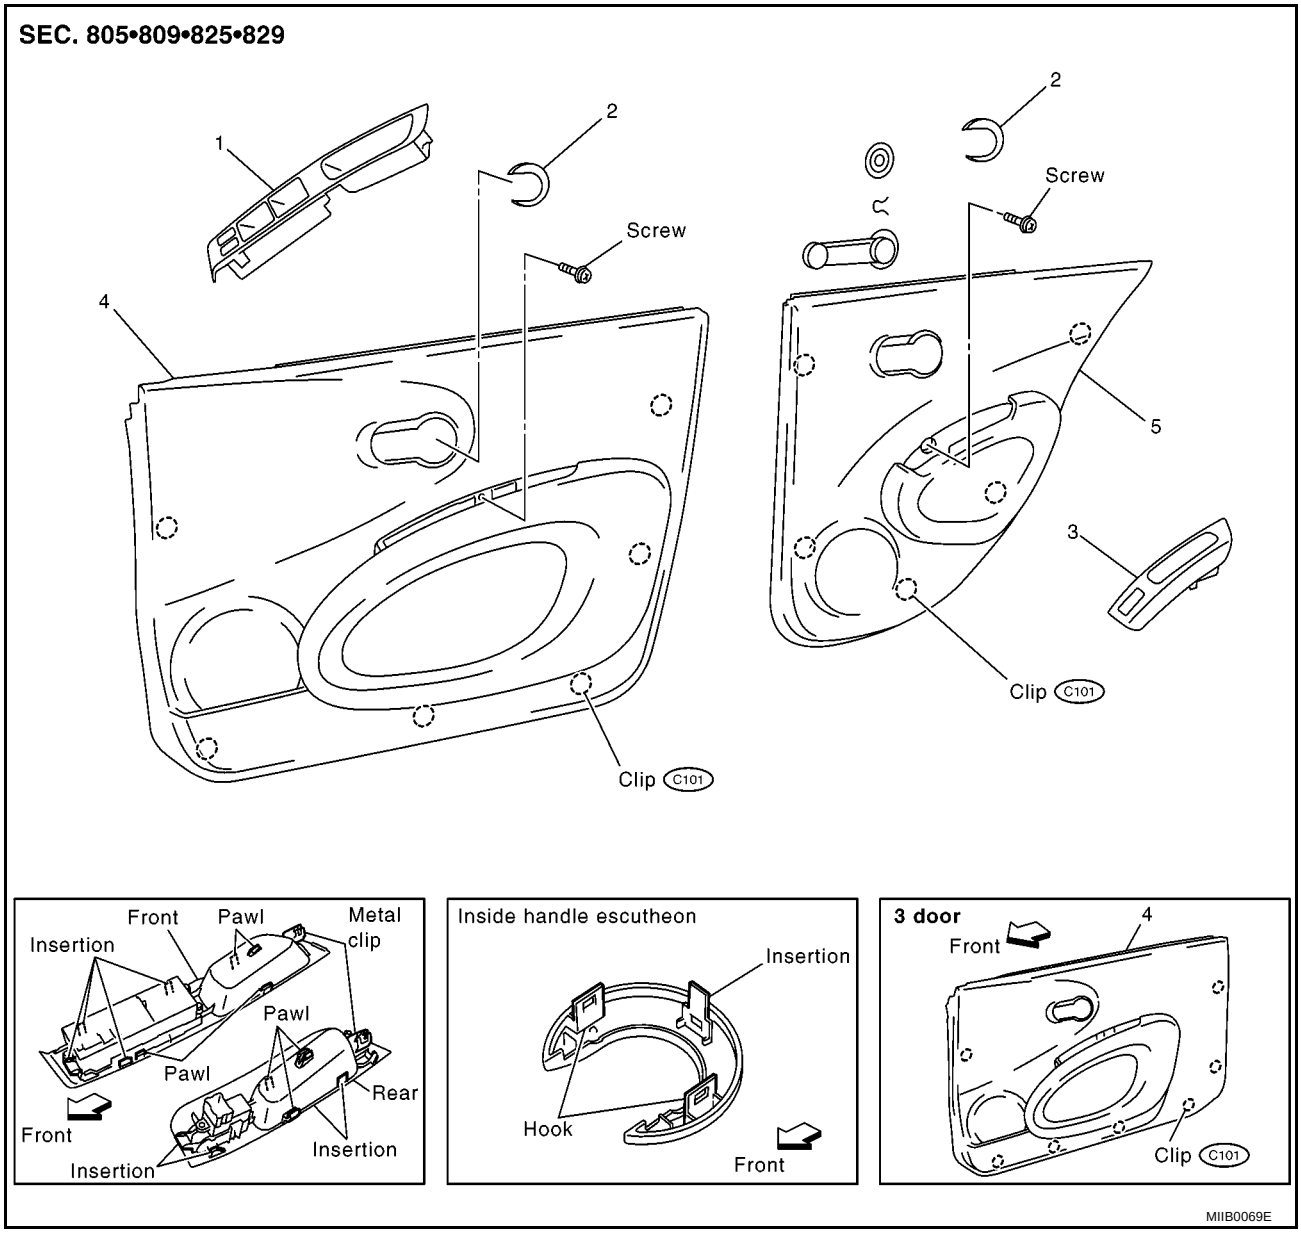
Install in the reverse order of removal.

DOOR FINISHER

PFP:80900

Removal and Installation

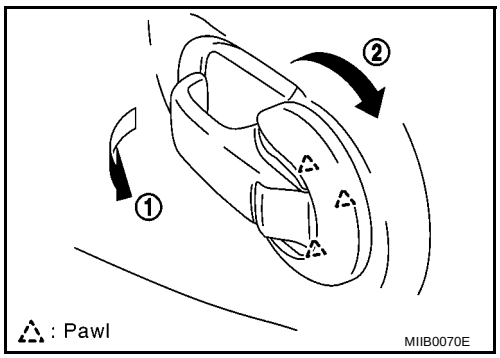
EIS004O8



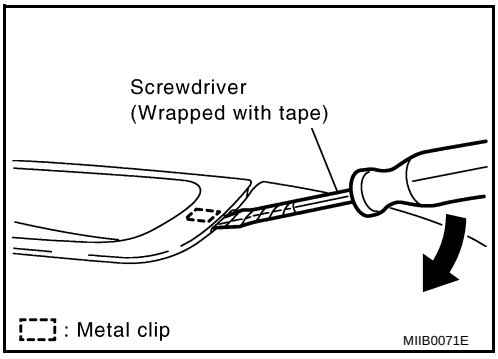
1. Power window switch finisher (front door)
2. Inside handle escutcheon
3. Power window switch finisher (rear door)
4. Front door finisher
5. Rear door finisher

REMOVAL

1. Fully open door glass.
2. Pull up inside handle lever, and then spread inside handle escutcheon top and bottom to release top and bottom hooks.
3. Slide inside handle escutcheon backwards, disengage bottom, and remove from door finisher.



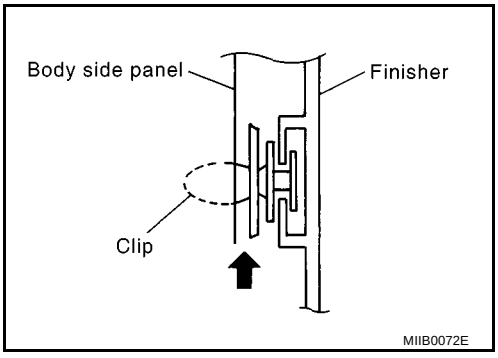
4. Insert a screwdriver wrapped with tape into back of power window switch finisher, hold up the back end, and disengage metal clips.
5. Hold up front side, remove inserted area, and remove. Pull back rear side, remove inserted area, and remove.
6. Separate the power window switch finisher back harness connector and remove it.



7. Remove door finisher screw.

8. Insert clip driver or clip clamp remover into door finisher back clip and remove clip.

NOTE:
Insert a clip driver or clip clamp remover into the part shown by the arrow (between the body side panel and the clips). Remove finisher.



9. Pull door finisher upwards to remove it from door panel.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:
When installing finisher, confirm clips are accurately aligned with the holes on body side panel, then press in.

BACK DOOR TRIM

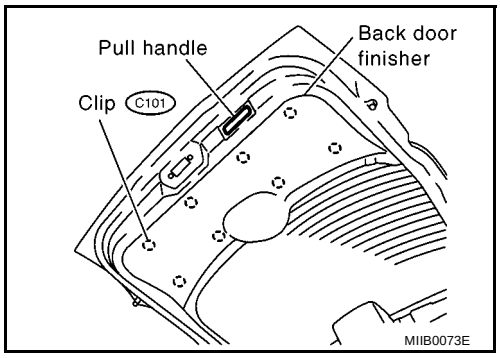
PFP:90900

Removal and Installation

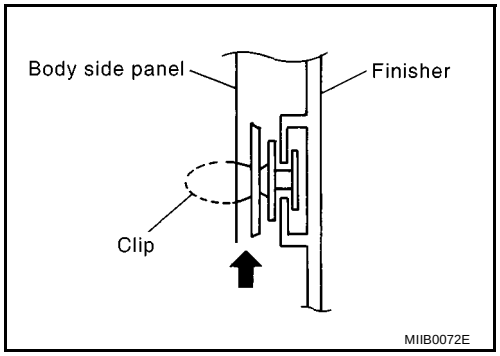
EIS004O9

REMOVAL

1. Insert clip driver or clip clamp remover into back door finisher back mounting clip area and remove clip.



NOTE:
Insert a clip driver or clip clamp remover into the part shown by the arrow (between the clips and the body side panel). Remove clips.



2. Pull back door finisher forward and remove it from back door.

INSTALLATION

Note the following, and install in the reverse order of removal.

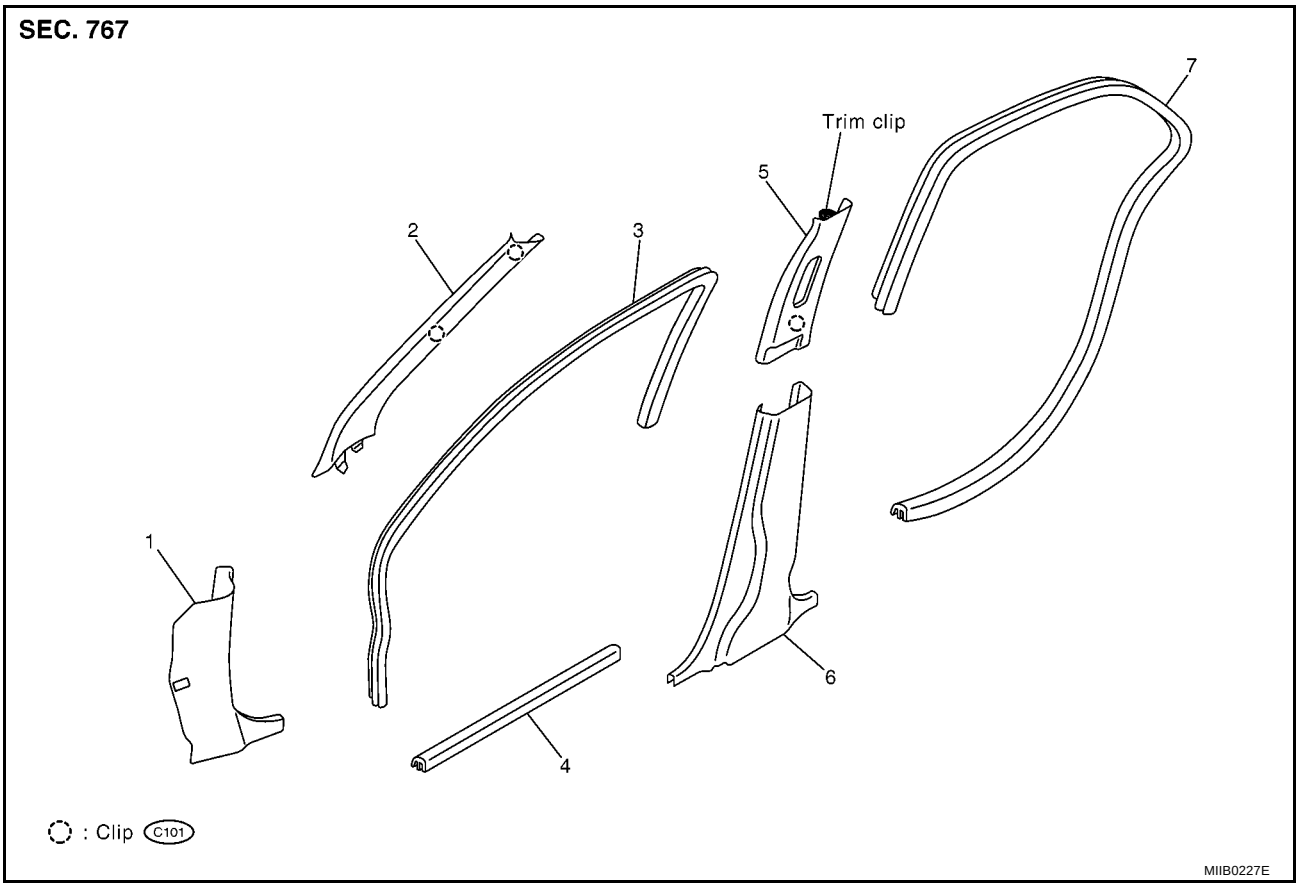
CAUTION:
When installing, confirm clips are accurately aligned with the holes on body side panel, then press in.

BODY SIDE TRIM

PFP:76913

Removal and Installation (5-Door)

EIS004OA



1. Dashboard side finisher
2. Front pillar garnish
3. Front body side welt (upper)
4. Front body side welt (lower)
5. Center pillar upper garnish
6. Center pillar lower garnish
7. Rear body side welt

REMOVAL

Dashboard Side Finisher

Pull dash side finisher slanted backwards to remove it.

Front Body Side Welt (Upper)

1. Remove the dashboard side finisher.
2. Remove front body side welt (upper) from vehicle.

Front Pillar Garnish

1. Remove front body side welt (upper).
2. Remove the mounting clips, pull the front pillar garnish from inside the passenger room, and remove it.

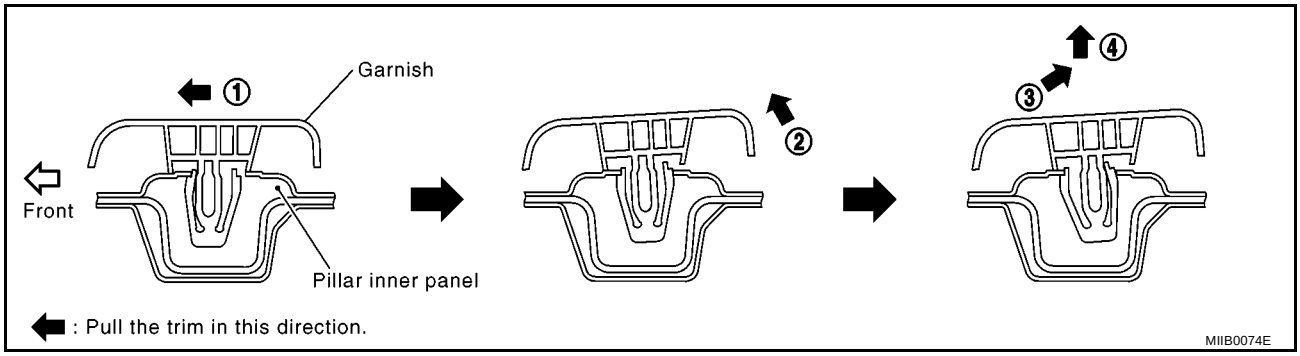
Center Pillar Lower Garnish

Spread the area engaged in the center pillar flange, remove front side first and then remove rear side in the same manner.

Center Pillar Upper Garnish

1. Remove front body side welt (upper)
2. Remove center pillar lower garnish.
3. Remove front seat belt shoulder anchor. Refer to SB-3, "Removal and Installation of Front Seat Belt" in SB section.

4. Pull center pillar upper garnish from inside passenger room, disengage clips as instructed in the figure, and remove garnish from vehicle.

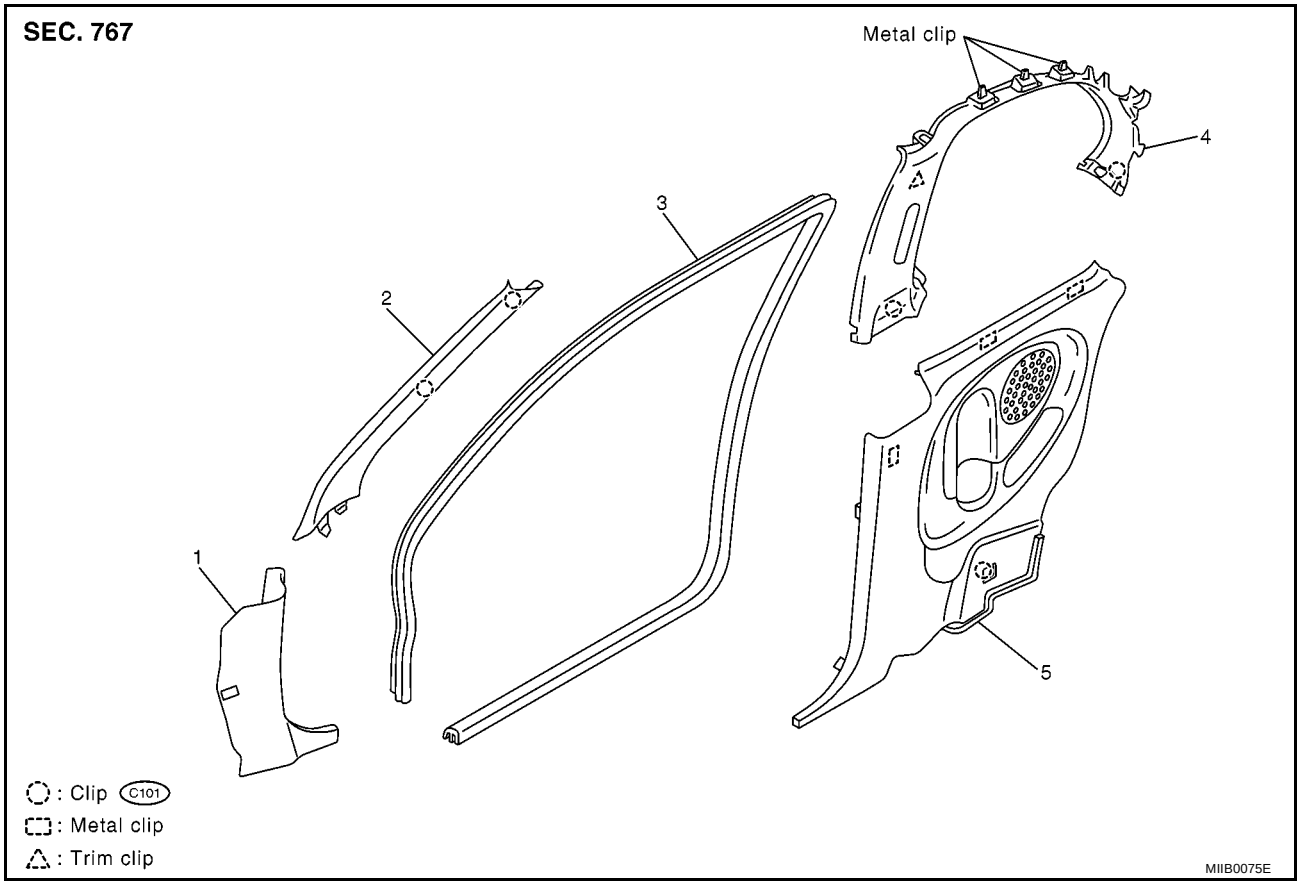


INSTALLATION

Install in the reverse order of removal.

Removal and Installation (3-Door)

EIS004OB



1. Dashboard side finisher
2. Front pillar garnish
3. Body side welt
4. Lock pillar upper garnish
5. Rear side finisher

REMOVAL

Front Pillar Garnish

1. Remove body side welt.
2. Remove the mounting clips, pull the front pillar garnish from inside the passenger room, and remove it.

Dashboard Side Finisher

Pull dash side finisher slanted backwards to remove it.

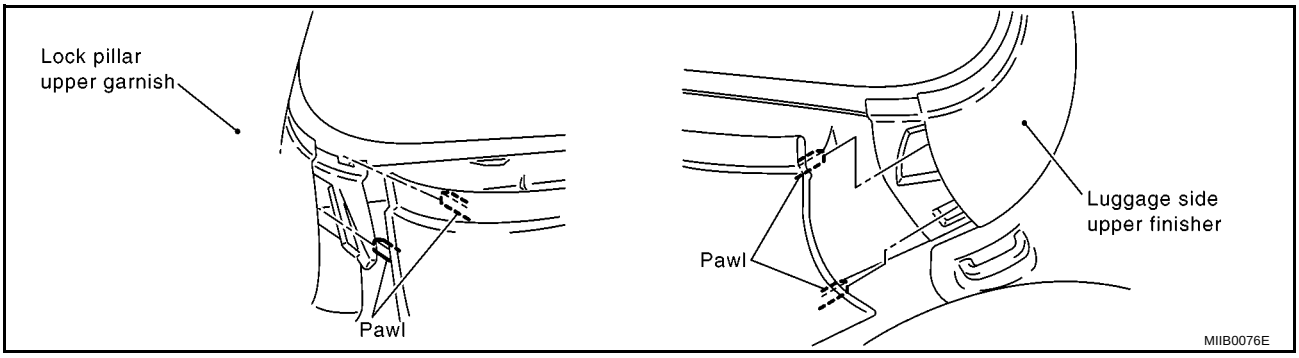
Body Side Welt

1. Remove the dashboard side finisher.

2. Remove body side welt from vehicle.

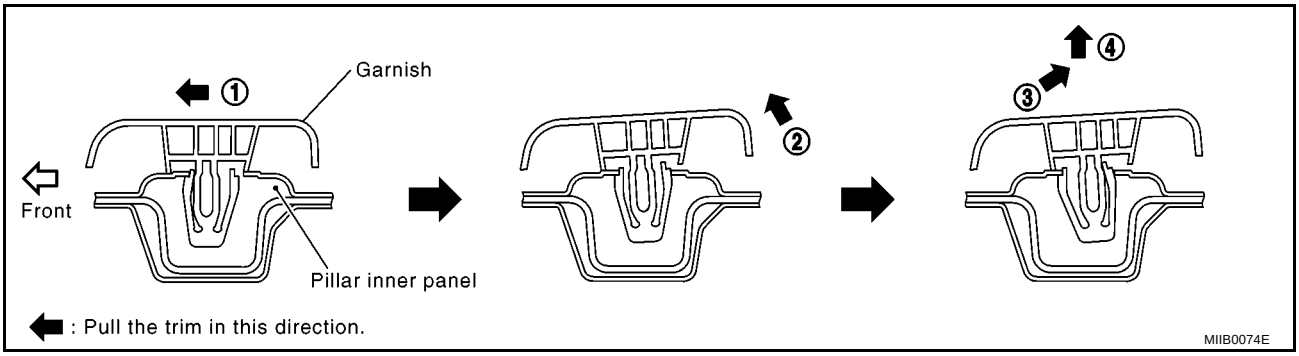
Rear Side Finisher

1. Remove body side welt.
2. Remove rear seat cushion. Refer to SE-11, "REAR SEAT" in SE section.
3. Pull rear side finisher forward, remove mounting clips, disengage lock pillar upper garnish, and remove from vehicle.



Lock Pillar Upper Garnish

1. Remove luggage side upper finisher. Refer to EI-26, "LUGGAGE FLOOR TRIM" in EI section.
2. Remove rear seat cushion. Refer to SE-11, "REAR SEAT" in SE section.
3. Remove rear side finisher.
4. Remove front seat belt shoulder anchor. Refer to SB-3, "Removal and Installation of Front Seat Belt" in SB section.
5. Disengage lock pillar upper garnish bottom clips.
6. Lower lock pillar upper garnish to bottom and disengage metal clips.
7. Pull lock pillar garnish toward passenger room, disengage clips following instructions in the figure, and remove it from vehicle.



INSTALLATION

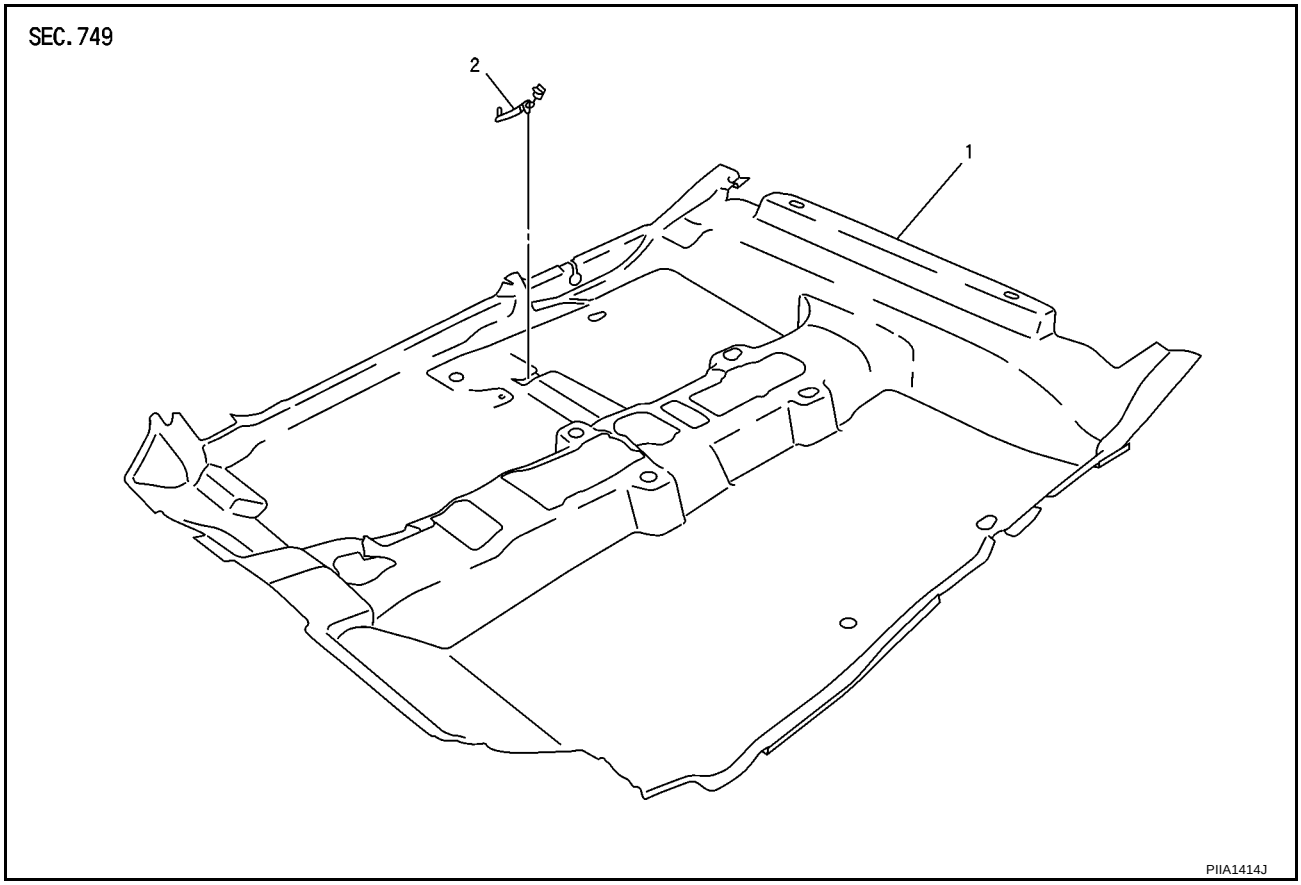
Install in the reverse order of removal.

FLOOR TRIM

PFP:74902

Removal and Installation

EIS004OC

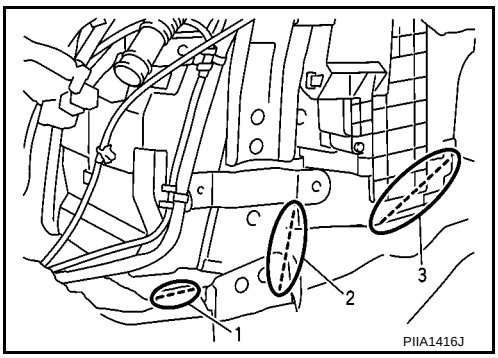


1. Floor carpet
2. Carpet hook

REMOVAL

1. Remove front seats (LH/RH) and rear seat cushion. Refer to SE-7, "FRONT SEAT" and SE-11, "REAR SEAT" in SE section.
2. Remove console box. Refer to IP-9, "REMOVAL AND INSTALLATION OF CONSOLE BOX." in IP section.
3. Remove air bag sensor unit harness connector and harness clips. Refer to SRS-48, "DIAGNOSIS SENSOR UNIT" in SRS section.
4. Remove instrument panel stay cover. Refer to IP-5, "Removal and Installation" in IP section.
5. For 5-door vehicles, remove center pillar lower garnish (LH/RH). Refer to EI-19, "Removal and Installation (5-Door)" in EI section.
6. For 3-door vehicles, remove rear side finishers (LH/RH) and luggage side lower finishers (LH/RH). Refer to EI-20, "Removal and Installation (3-Door)" and EI-26, "LUGGAGE FLOOR TRIM" in EI section.
7. Remove dash side finishers (LH/RH). Refer to EI-19, "BODY SIDE TRIM" in EI section.
8. Remove body side welts (LH/RH).
9. Remove carpet hook.
10. Remove instrument panel stay (LH).

11. Use a cutter knife, etc., to cut out sections 1 and 2 shown in the figure.
12. Rotate floor carpet until the cut out section 3 is visible, then cut out the section 3.
13. Remove floor carpet from vehicle.



INSTALLATION

Install in the reverse order of removal.

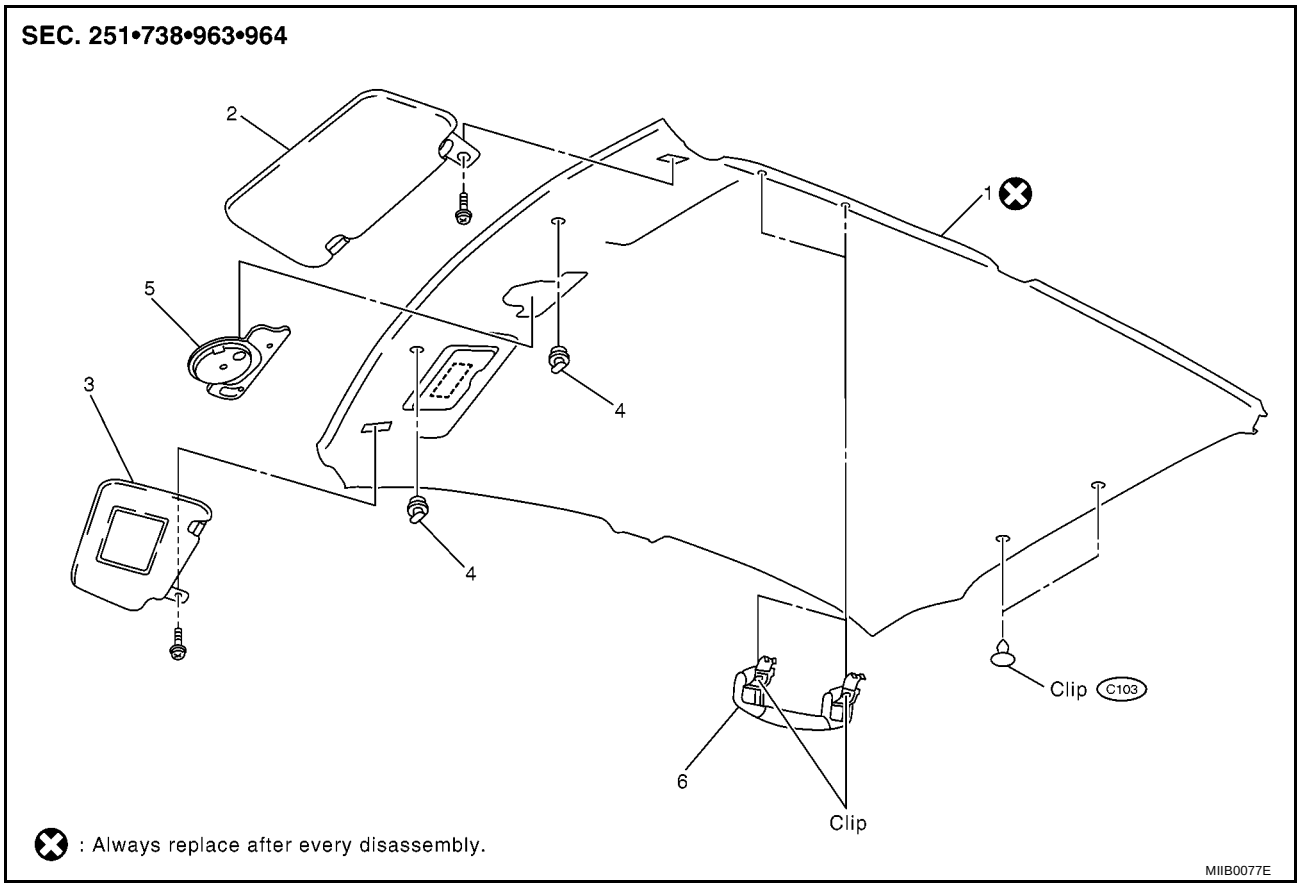
HEADLINER

PFP:73910

Removal and Installation

SMA for VIN >SJN**AK12U1353780

EIS004OD

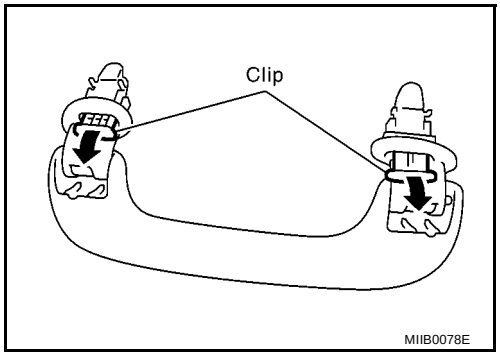


1. Headliner
2. Sunvisor (LH)
3. Sunvisor (RH)
4. Sunvisor holder
5. Room lamp (with map lamp function)
6. Assist grip (passenger seat)

REMOVAL

1. Remove front pillar garnish. Refer to EI-19, "BODY SIDE TRIM" in EI section.
2. Remove back door weatherstrip.
3. Remove luggage side upper finishers (LH/RH). Refer to EI-26, "LUGGAGE FLOOR TRIM" in EI section.
4. Remove center pillar upper garnish (5-door vehicles) and lock pillar upper garnish (3-door vehicles). Refer to EI-19, "BODY SIDE TRIM" in EI section.
5. Remove assist grip.

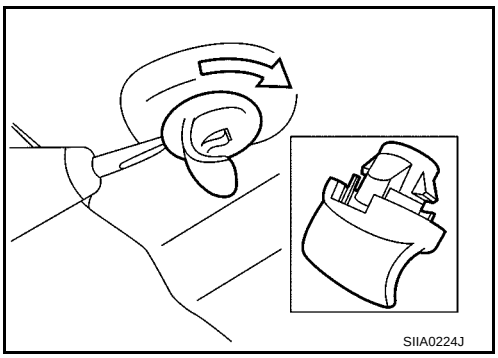
   NOTE:
   When removing assist grip, insert a thin screwdriver, etc., into the clip and move the clip outside.



6. Remove sunvisors (LH/RH).
7. Remove room lamp (with map lamp function). Refer to LT-229, "Removal and Installation" in LT section.

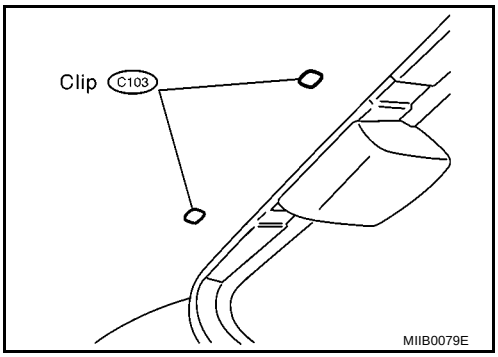
8. Remove sunvisor holder.

NOTE:
Insert a screwdriver into the cutout and rotate 90° to remove.



9. Remove vehicle rear clips.
10. Peel off headliner adhesive and remove headliner from back door opening.

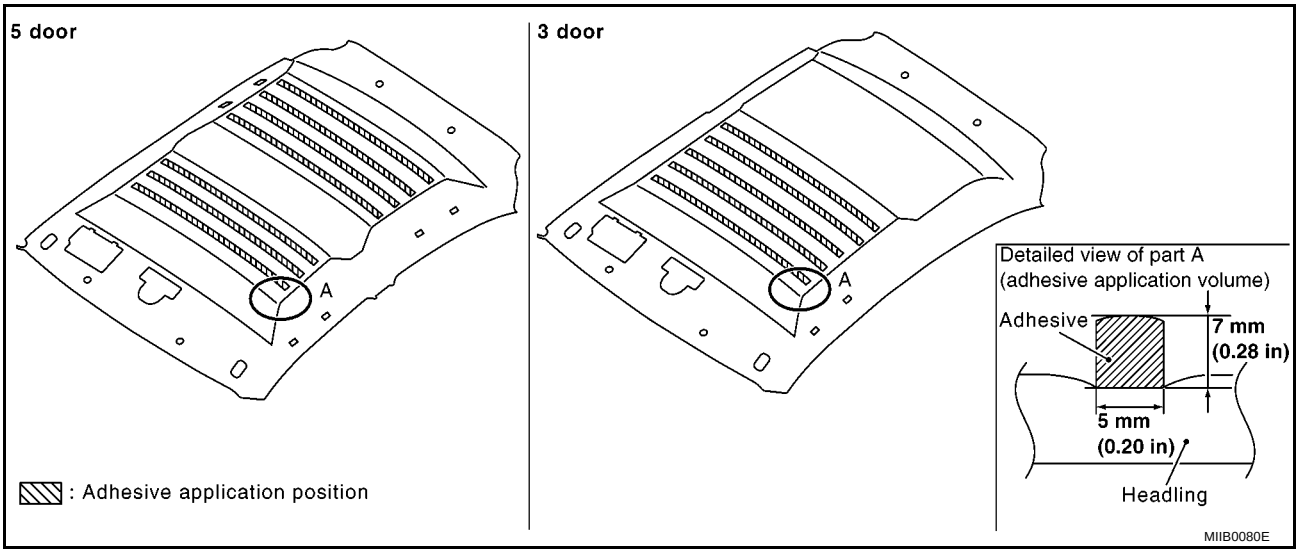
CAUTION:
The roof panel could be deformed, so do not strongly pull the headliner.



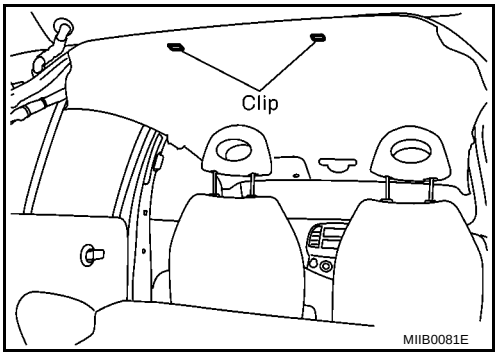
INSTALLATION

1. Remove any adhesive left on the vehicle side.
2. Apply adhesive to headliner.

Adhesive:	Yokohama Rubber Hammer Tight YM-21



3. Move front seats (LH/RH) toward front of vehicle, and fix headrests (LH/RH) in top position.
4. Place the headliner front section on the headrest and fasten the headliner rear section with the clips.
5. After installing sunvisor holder, install in the reverse order of removal.

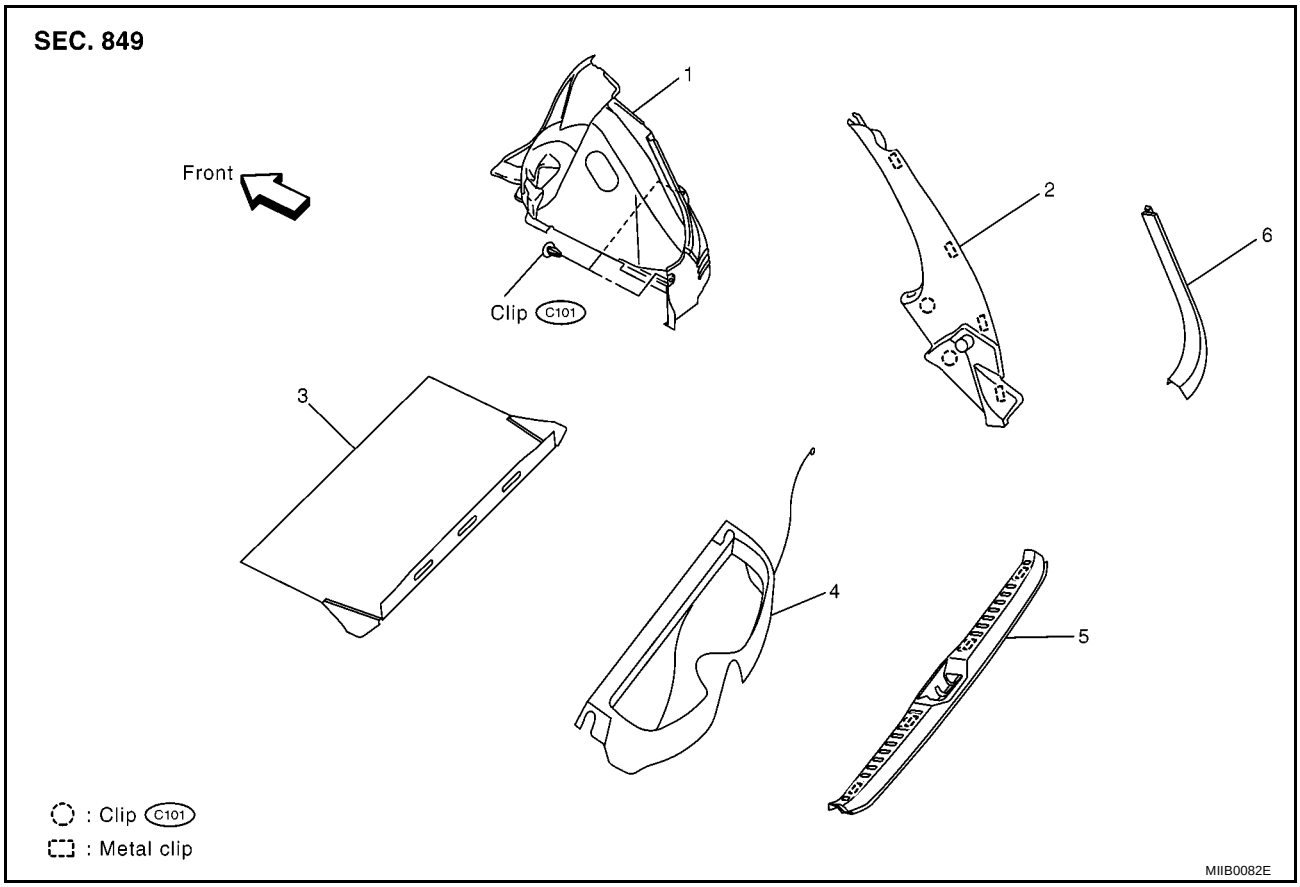


LUGGAGE FLOOR TRIM

PFP:84999

Removal and Installation

EIS004OE

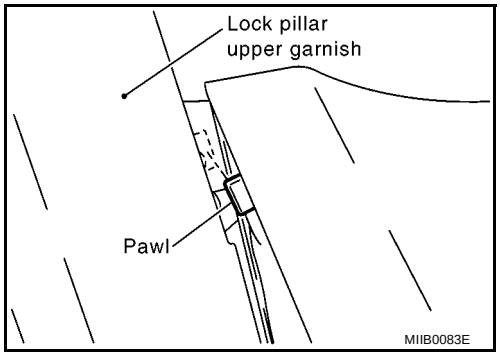


1. Luggage side lower finisher
2. Luggage side upper finisher
3. Luggage floor carpet
4. Rear parcel shelf finisher
5. Luggage rear kickplate
6. Luggage rear plate

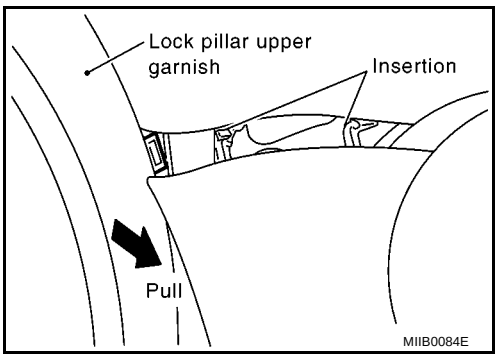
REMOVAL

Luggage Side Upper Finisher

1. Remove rear parcel shelf finisher.
2. Remove back door weather strip.
3. For 5-door vehicles, remove plastic clips and metal clips in order from luggage side upper finisher bottom.
4. For 3-door vehicles, remove the plastic clips and metal clips in order from luggage side upper finisher bottom, pull finisher straight forward, and disengage from lock pillar upper garnish.



5. Remove headliner insert, and remove luggage side upper finisher.



Luggage Side Lower Finisher (5-Door Vehicles)

1. Remove rear body side welt.
2. Remove luggage side upper finisher and luggage rear kickplate. Refer to EI-19, "BODY SIDE TRIM" and EI-26, "LUGGAGE FLOOR TRIM" in EI section.
3. Remove rear seat cushion and rear seatback. Refer to SE-11, "REAR SEAT" in SE section.
4. Remove mounting clips and then remove luggage side lower finisher.

Luggage Side Lower Finisher (3-Door Vehicles)

1. Remove body side welt.
2. Remove luggage side upper finisher and luggage rear kickplate. Refer to EI-20, "Removal and Installation (3-Door)" and EI-26, "LUGGAGE FLOOR TRIM" in EI section.
3. Remove rear seat cushion and rear seatback. Refer to SE-11, "REAR SEAT" in SE section.
4. Remove rear side finisher. Refer to EI-20, "Removal and Installation (3-Door)" in EI section.
5. Remove mounting clips and then remove luggage side lower finisher.

Luggage Rear Plate

1. Remove back door weather strip.
2. Hold up luggage rear plate, disengage metal clips, and remove plate.

Luggage Rear Kickplate

1. Remove rear parcel shelf finisher.
2. Remove back door weather strip.
3. Remove luggage rear plate.
4. Remove luggage side upper finisher.
5. Remove luggage rear kickplate.

INSTALLATION

Install in the reverse order of removal.

PRECAUTIONS

PFP:00001

Precautions for Draining Coolant

EBS00OEB

- Drain coolant only after the engine has cooled down.

Precautions for Disconnecting Fuel Piping

EBS00OHR

- Before starting work, make sure no fire or spark producing items are in the work area.
- Release fuel pressure before disassembly.
- After disconnecting pipes, plug openings to stop fuel leakage.

Precautions for Removal and Disassembly

EBS00OED

- Use correct special service tool in the specified position. Always pay attention to safety.
- Be careful not to damage surface accuracy of mating or sliding surfaces.
- To prevent foreign material from entering the engine, close openings with appropriate tape as necessary.
- Arrange disassembled parts in their normal positions in order to simplify locating the cause of damage or excessive wear and to insure correct reassembly.
- The removal order of nuts and bolts should in principle move diagonally from the outside. Locations for which order is stipulated should follow that order.

Precautions for Inspections, Repairs, and Replacement

EBS00OEE

- Thoroughly inspect each part following inspection procedure, then correct or replace as necessary. Inspect new parts in the same way, and replace if necessary.

Precautions for Assembling and Installing

EBS00OEF

- Always use a torque wrench when tightening nuts and bolts.
- Unless otherwise specified, tighten nuts and bolts from inside to outside in crisscross pattern. Tighten them gradually and evenly in two to three steps.
- Always replace gasket, packing, oil seals, and O-rings with new ones.
- Thoroughly wash, clean, and blow dry each part. Be sure that engine oil and coolant passages are free of clogs.
- Remove any dirt and lint on sliding and mating surfaces. Before assembly, apply ample amount of engine oil to sliding surfaces.
- If coolant was drained, bleed air from the system.
- Follow the procedure below to make sure there are no fuel leaks.
  - Turn the ignition switch to ON (do not start engine), and with fuel pressure applied in the fuel line, check to make sure there are no fuel leaks from the connection.
  - Start the engine, and at in creased speed, check again to see if there are any fuel leaks from the connection.
- After assembly, start engine and increase the engine speed, then check coolant, fuel, oil, grease, and exhaust gas for leakage.

Parts Requiring Angle Tightening

EBS00OEG

- Use an angle wrench when attaching the following parts.
  - Cylinder head bolt
  - Main bearing cap bolt
  - Connecting rod cap nut
- The specified torque written for these parts is not the final tightening value, but is the torque used for tightening before angle tightening.
- When tightening, make sure there is no debris on the threads or mating surfaces, and lubricate the threads with engine oil.

Precautions for Liquid Gasket

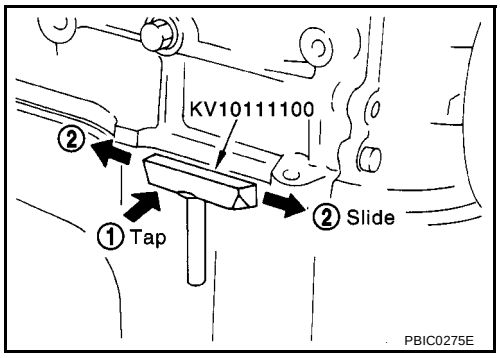
EBS00OEH

REMOVAL OF LIQUID GASKET SEALING

- Unscrew nuts and bolts. Use a seal cutter to cut the liquid gasket and remove the joined parts.

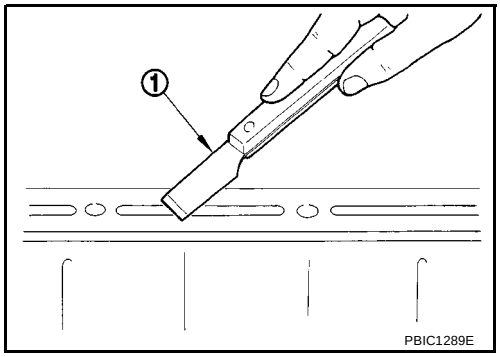
  CAUTION:
  Be careful not to damage the mating surfaces.
- In positions where a seal cutter is difficult to use, lightly tap with a plastic hammer and remove.

  CAUTION:
  When using a screwdriver, be careful not to scratch the mating surfaces.



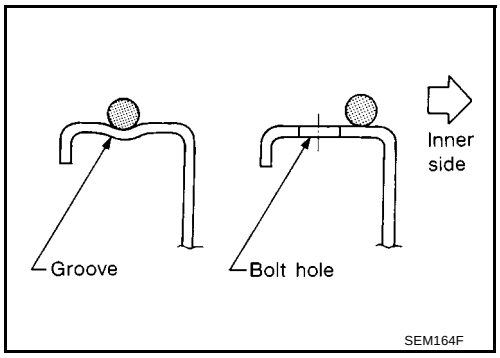
LIQUID GASKET APPLICATION PROCEDURE

1. Using a scraper (1), remove any old liquid gasket remaining on the gasket application surface and its mating surface.
   - Remove any old liquid gasket remaining in the gasket application groove and on the threads of bolts and bolt holes.
2. Using white gasoline, wipe the gasket application surface and its mating surface to remove any moisture, oil, and foreign material.
3. Set the genuine liquid gasket in a tube presser.



4. Apply a continuous bead of liquid gasket to the specified position at the specified diameter.
   - Apply liquid gasket in the application groove.

   - Apply liquid gasket inside bolt holes. There may be times when application to the exterior is required, so follow those instructions if such are found in the text.
   - Attaching should be done within 5 minutes after gasket application.
   - Immediately wipe off any protruding liquid gasket.
   - Do nor retighten nuts and bolts after installation.
   - After finishing work, wait at least 30 minutes before refilling engine oil and coolant.



CAUTION:
Follow all specific instructions in this manual.

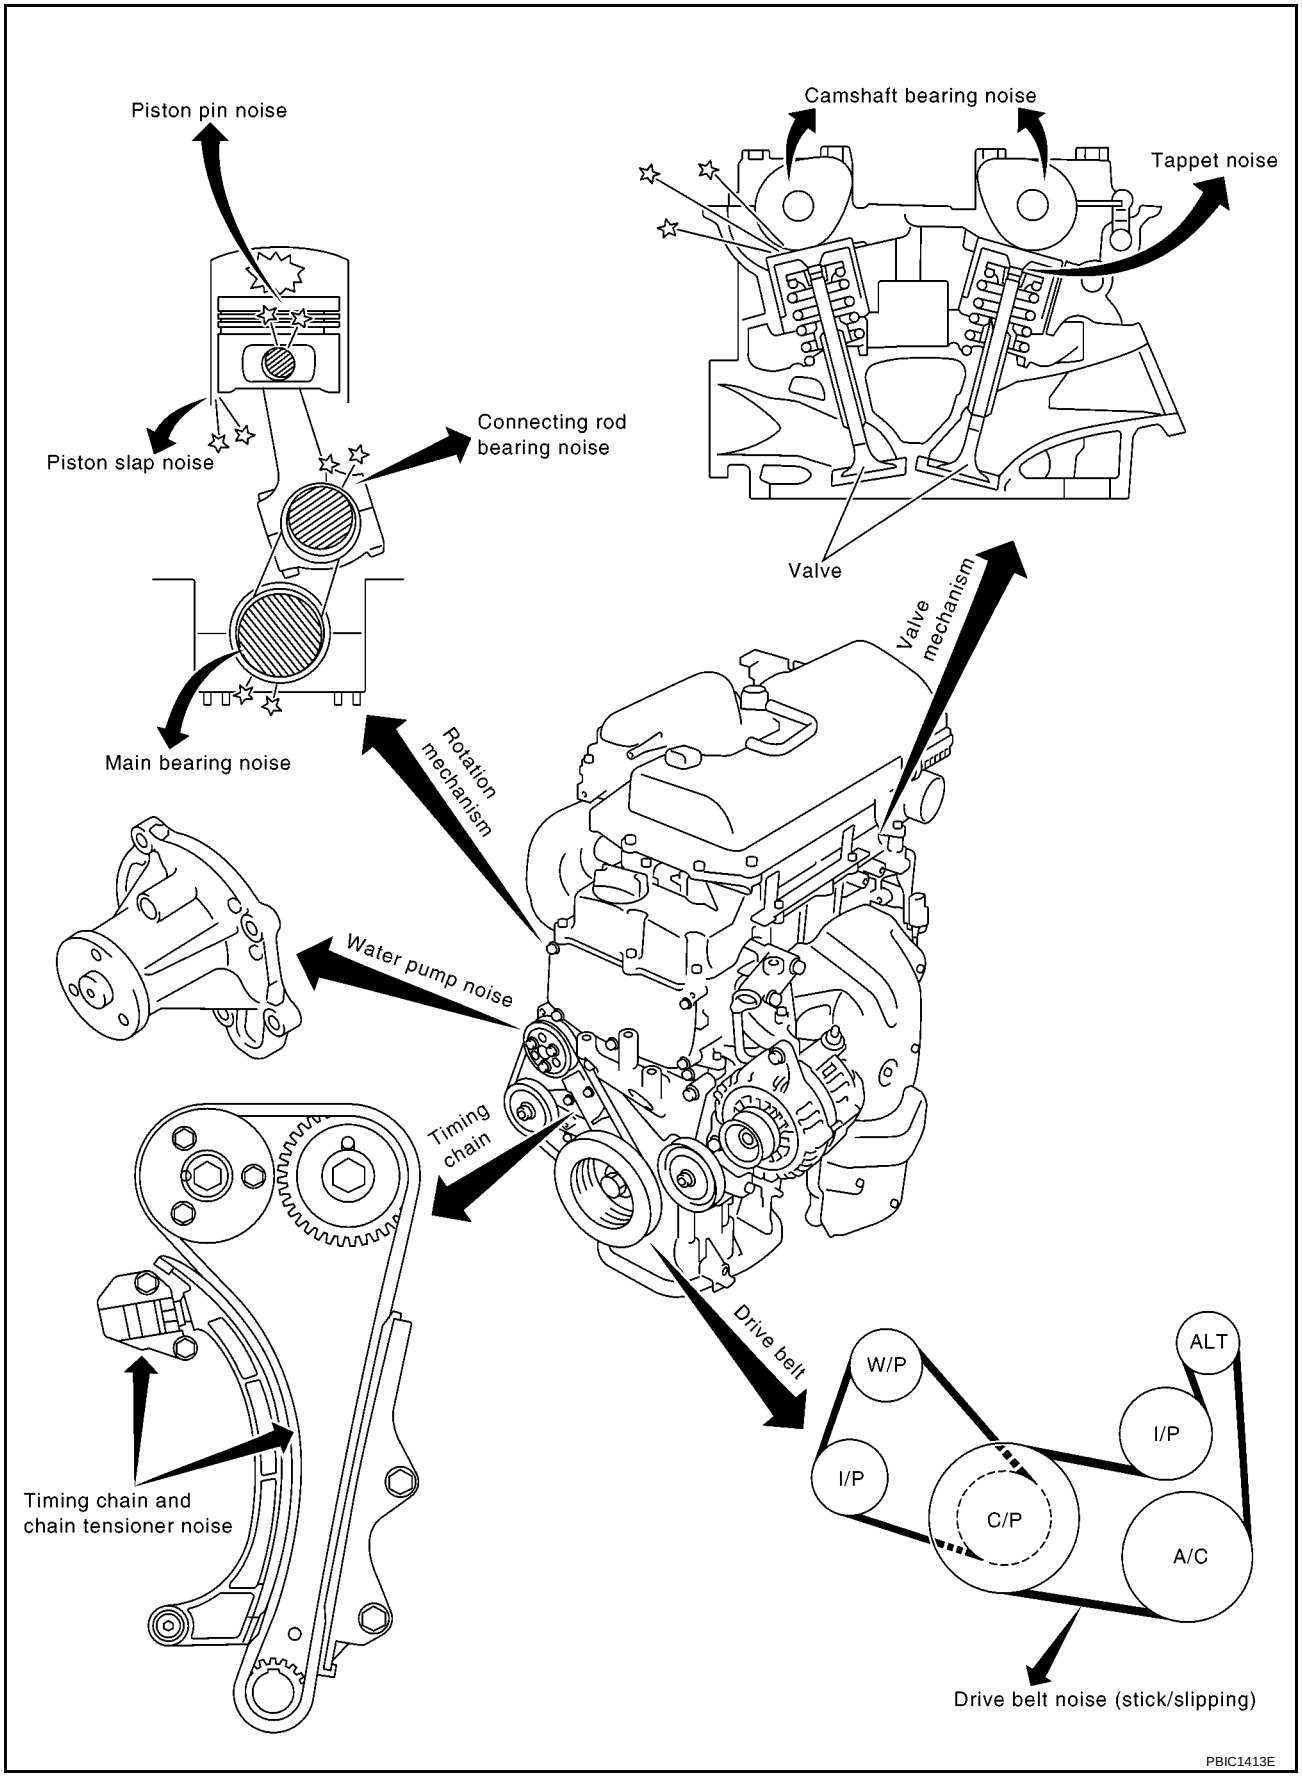
Valve seat cutter set  NT048	Finishing valve seat dimensions
Piston ring expander  NT030	Removing and installing piston ring
Valve guide drift  NT015	Removing and installing valve guide **Intake & Exhaust:** **a: 9.5 mm (0.374 in) dia.** **b: 5.5 mm (0.217 in) dia.**
Valve guide reamer  NT016	Reaming valve guide **1** or hole for oversize valve guide **2** **Intake & Exhaust:** **d_1 : 5.0 mm (0.217 in) dia.** **d_2 : 9.675 mm (0.381 in) dia.**

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting —Engine Noise

EBS00OGA



Use the Chart Below to Help You Find the Cause of the Symptom.

EBS00OGB

1. Locate the area where noise occurs.
2. Confirm the type of noise.
3. Specify the operating condition of engine.
4. Check specified noise source.

If necessary, repair or replace these parts.

Location of noise	Type of noise	Operating condition of engine						Source of noise	Check item	Reference page
		Before warm-up	After warm-up	When starting	When idling	When racing	While driving			
Top of engine Rocker cover Cylinder head	Ticking or clicking	C	A	—	A	B	—	Tappet noise	Valve clearance	EM-45
	Rattle	C	A	—	A	B	C	Camshaft bearing noise	Camshaft journal clearance Camshaft runout	EM-43 EM-43
Crankshaft pulley Cylinder block (Side of engine) Oil pan	Slap or knock	—	A	—	B	B	—	Piston pin noise	Piston and piston pin clearance Connecting rod bushing clearance	EM-85 EM-87

	Squall Creak	A	B	—	B	A	B	Water pump noise	Water pump operation	CO-21, "WATER PUMP"

A: Closely related B: Related C: Sometimes related —: Not related

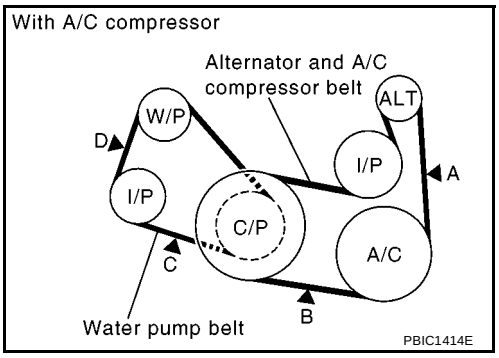
DRIVE BELTS

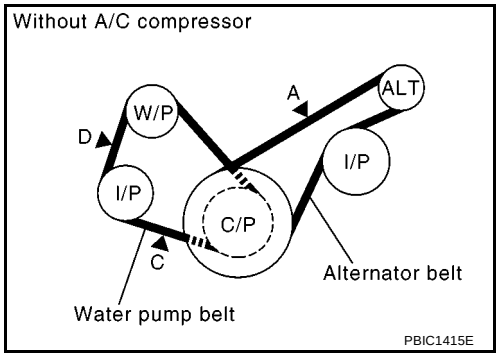
PFP:02117

Checking drive Belts

EBS00OGC

- Inspection should be done only when engine is cold or over 30 minutes after the engine is stopped.
- Turn the crankshaft pulley two times clockwise, and make sure tension on all pulleys is equal before doing the test.
- Visually check the belts for wear, damage, and cracks on inside and edges.
- When measuring deflection, apply 98.1 N (10 kg, 22lb) at the ▼ marked point.





CAUTION:

When measuring belt tension immediately after the belt is installed, first set the tension to the standard, rotate the crankshaft for more than two turns in order to eliminate variance in the belt tension between pulleys, then measure and adjust tension to the standard again.

Location	Tension [N (kg, lb)]			Deflection [mm (in)] [When pressed by force of 98.1N (10 kg, 22lb)]			
	New	At adjustment	Limit	Measuring point	New belt	At adjustment	Limit
Alternator and A/C compressor belt	603 - 691 (61.5 - 70.5, 135.6 - 155.3)	495 - 583 (50.5 - 59.5, 111.3 - 131.1)	196 (20, 44.1)	A	6.6 - 7.8 (0.260 - 0.307)	7.3 - 8.5 (0.287 - 0.335)	13.8 (0.543)
				B	5.6 - 6.6 (0.220 - 0.260)	7.1 - 8.3 (0.280 - 0.327)	11.9 (0.469)
Alternator belt	603 - 691 (61.5 - 70.5, 135.6 - 155.3)	495 - 583 (50.5 - 59.5, 111.3 - 131.1)	196 (20, 44.1)	A	3.1 - 4.1 (0.122 - 0.161)	9.8 - 10.6 (0.386 - 0.417)	13.8 (0.543)
Water pump belt	446 - 534 (45.5 - 54.5, 100.3 - 120.0)	348 - 436 (35.5 - 44.5, 78.2 - 98.0)	137 (14, 30.9)	C	6.7 - 7.3 (0.264 - 0.287)	7.6 - 8.6 (0.299 - 0.339)	12.4 (0.448)
				D	4.7 - 5.6 (0.185 - 0.220)	7.0 - 7.7 (0.276 - 0.303)	8.6 (0.339)

Tension Adjustment

EBS00OGD

Location	Location of adjuster and tightening method
Alternator and A/C compressor drive belt	Adjusting bolt on idler pulley
Water pump belt	Adjusting bolt on idler pulley

CAUTION:

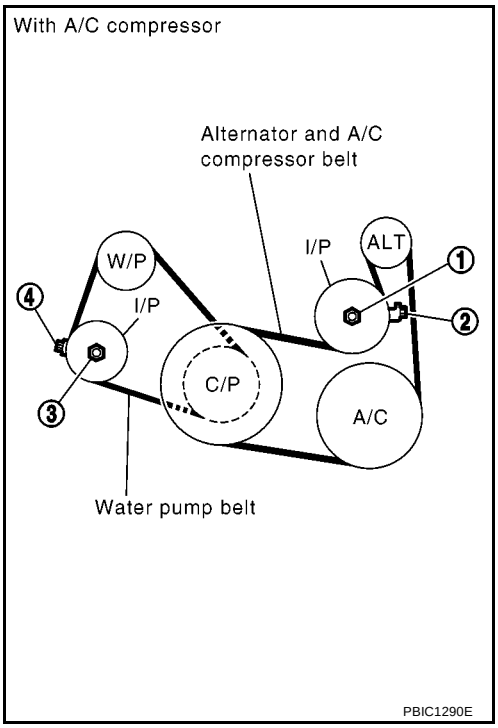
- **When the belt is replaced with new one, adjust the belt tension to the value for “New belt”, because new belt will not fully seat in the pulley groove.**
- **When tension of the belt being used exceeds “Limit”, adjust it to the value for “At adjustment”.**
- **When installing a belt, make sure that it is correctly engaged with the pulley groove.**
- **Do not allow oil or engine coolant to get on the belt.**
- **Do not twist or bend the belt strongly.**

ALTERNATOR AND A/C COMPRESSOR BELT (WITH A/C MODELS)

1. Remove RH front fender protector.
2. Loosen lock nut (1).
3. Tighten lock nut (1) with fingers.
4. Loosen lock nut (1) half a turn counter-clockwise.
5. Adjust the belt tension by turning the adjuster bolt (2).
   For the specified belt tension, refer to EM-12, "Checking drive Belts" .
6. Tighten lock nut (1).

   Nut (1) :

   : 24.5 - 31.4 N·m (2.5 - 3.2 kg-m, 18 - 23 ft-lb)
7. Turn the crankshaft pulley two times clockwise.
8. Check that the belt tension is within the standard. Refer to MA-21, "Checking drive Belts" .

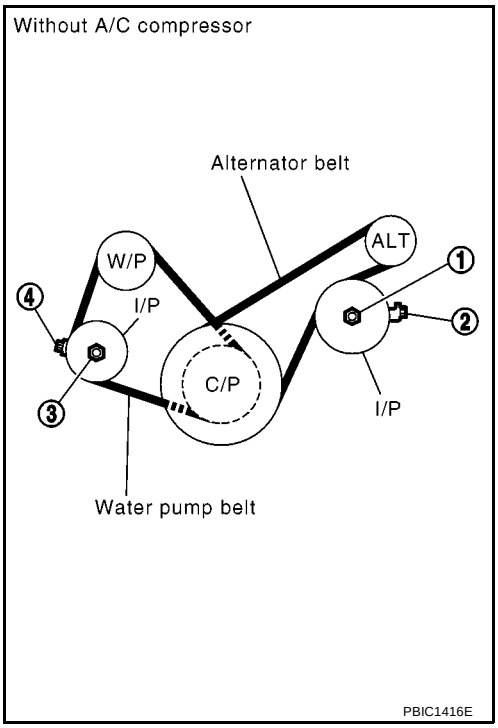


ALTERNATOR BELT (WITHOUT A/C MODELS)

1. Remove RH front fender protector.
2. Loosen lock nut (1).
3. Tighten lock nut (1) with fingers.
4. Loosen lock nut (1) half a turn counter-clockwise.
5. Adjust the belt tension by turning the adjuster bolt (2).
   For the specified belt tension, refer to EM-12, "Checking drive Belts" .
6. Tighten lock nut (1).

   Nut (1) :

   : 24.5 - 31.4 N·m (2.5 - 3.2 kg-m, 18 - 23 ft-lb)
7. Turn the crankshaft pulley two times clockwise.
8. Check that the belt tension is within the standard. Refer to MA-21, "Checking drive Belts" .



WATER PUMP BELT

1. Remove RH front fender protector.
2. Loosen lock nut (3).
3. Tighten lock nut (3) with fingers.
4. Adjust the belt tension by turning the adjuster bolt (4).
   For the specified belt tension, refer to EM-12, "Checking drive Belts" .
5. Tighten lock nut (3).

Nut (3) :

: 24.5 - 31.4 N·m (2.5 - 3.2 kg-m, 18 - 23 ft-lb)

6. Turn the crankshaft pulley two times clockwise.
7. Check that the belt tension is within the standard. Refer to MA-21, "Checking drive Belts" .

Removal and Installation

EBS00OGE

REMOVAL

- Fully loosen each belt while referring to EM-12, "Tension Adjustment" . Remove them one by one, starting with the one in the front.

INSTALLATION

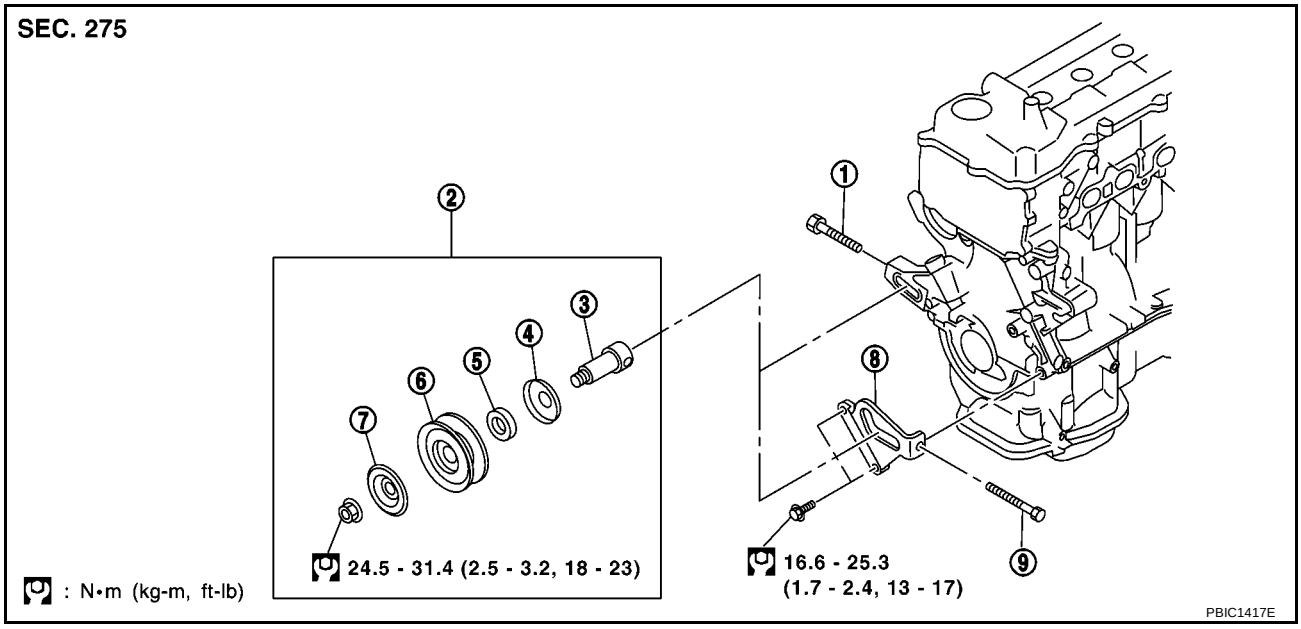
1. Install belts to the pulley in the reverse order of removal.

   CAUTION:
   - **Make sure the belt is securely inside the groove on each pulley.**
   - **Make sure there is no oil, grease, or coolant in pulley grooves.**
2. Adjust tension of each belt.

   CAUTION:
   - **When measuring belt tension immediately after the belt is installed, first set the tension to the standard, rotate the crankshaft for more than two turns in order to eliminate variance in the belt tension between pulleys, then measure and adjust tension to the standard.**
   - **When measuring belt tension, hand tighten idler pulley lock nut to eliminate any looseness.**
3. Tighten the lock nut of adjustment parts to the specified torque.
4. Make sure that tension of each belt is within the standard.

Removal and Installation of Drive Belt Idler Pulley

EBS00OGF



1. Adjuster bolt (for water pump belt)
2. Idler pulley assembly
3. Shaft

4. Cover
5. Spacer
6. Idler pulley
7. Cover
8. Bracket
9. Adjuster bolt (for alternator and A/C compressor belt)

REMOVAL

1. Remove drive belts. Refer to EM-14, "Removal and Installation" .
2. Pull the adjuster bolt out from the shaft.
3. Move the idler pulley assembly along the bracket slide groove and remove by turning the shaft end at the wider part of the groove. (For alternator and A/C compressor belt)
4. Remove the lock nut and remove the shaft by pulling towards the rear of the engine. (For water pump belt)

INSTALLATION

1. Install belts to pulley in reverse order of removal.

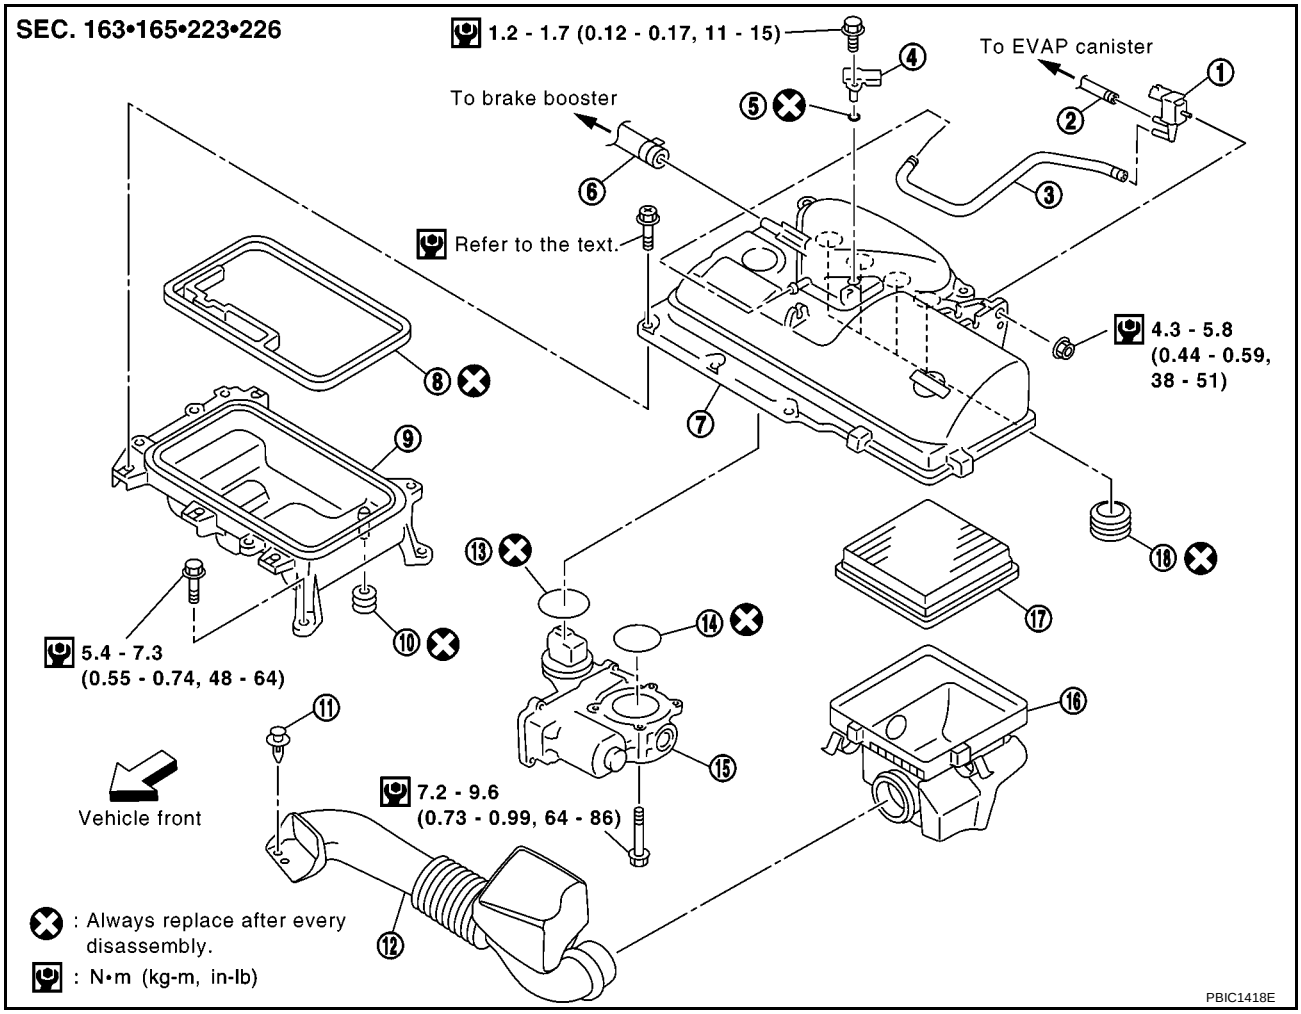
   CAUTION:
   - **Make sure belt is correctly engaged with the pulley groove.**
   - **Check for oil and coolant on belt and each pulley groove.**
2. Adjust belt tension. Refer to EM-12, "Tension Adjustment" .
3. Tighten each adjusting bolt and nut to the specified torque.
4. Make sure that tension of each belt is within the standard.

AIR CLEANER AND AIR DUCT

PFP:16500

Removal and Installation

EBS00OEO



1.	EVAP canister purge volume control solenoid valve	2.	Vacuum hose	3.	Vacuum hose
4.	Manifold absolute pressure sensor	5.	O-ring	6.	Vacuum hose
7.	Air cleaner case (upper)	8.	Gasket	9.	Air cleaner case (lower)
10.	Gasket	11.	Clip	12.	Air duct
13.	Gasket	14.	Gasket	15.	Electric throttle control actuator
16.	Air cleaner body	17.	Air cleaner filter	18.	Gasket

REMOVAL

NOTE:

The steps 1 to 2 can be skipped, moving straight to the step 3 (separation of harnesses and hoses, etc. cannot be skipped)

1. Remove the harness connector and then the manifold absolute pressure sensor.

   CAUTION:

   - **Handle manifold absolute pressure sensor with care. Avoid impacts.**
   - **Make sure no foreign matter is attached to the sensor (oils, chemicals, etc.)**

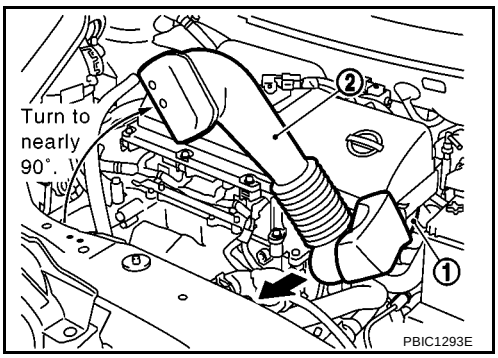
2. Remove the harness connector and vacuum hose and then the EVAP canister purge volume control solenoid valve.

   CAUTION:

   Handle EVAP canister purge volume control solenoid valve with care. Avoid impacts.

3. Remove air duct.

- Remove the clips, and with air duct (2) turned to nearly 90 degrees, pull off from the air cleaner body (1).

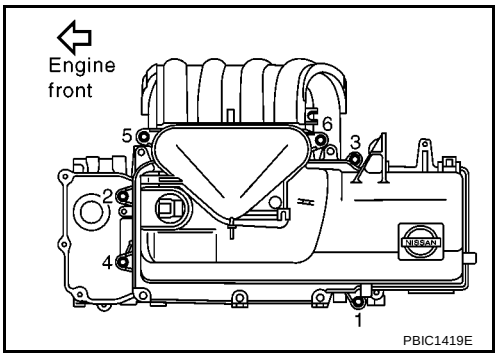


4. Remove the clips, pull the air cleaner body down then forward, and then remove the air cleaner body and the air cleaner filter.

NOTE:
Removal and disassembly of the air cleaner case (upper) and (lower) follows below.

5. Move the transaxle breather hose.
6. Remove the air cleaner case assembly in the following order.
   - The entire air cleaner case (upper and lower) is referred to as the air cleaner case assembly.

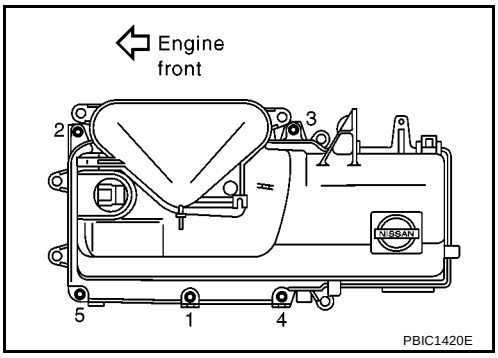
a. Separate the harness connector from the electronic throttle control actuator.
b. Separate the brake booster vacuum hose.
c. Loosen bolts in the reverse of the order shown in figure.



7. Remove the air cleaner case assembly by raising.
   - Slowly raise the force evenly on the intake manifold joint to lift it and remove the air cleaner case assembly.

CAUTION:
- **To avoid damaging parts, do not use sudden force.**
- **Block the intake manifold openings with tape to make sure no foreign particles get inside it while you are removing the air cleaner case assembly.**

8. Loosen the bolts in reverse of the order shown in the figure and separate the air cleaner case (upper) and (lower).



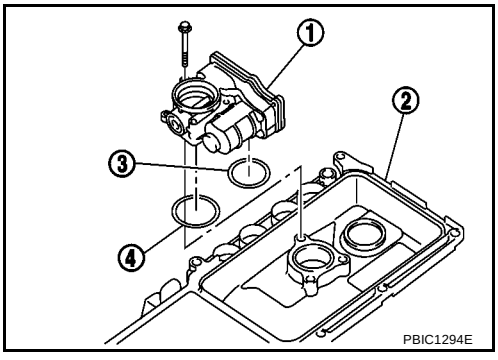
9. Remove the electronic throttle control actuator from the air cleaner case (upper).
   - Turn the air cleaner case (upper) over on the protective sheet to make sure the surface does not get scratched.
   - The electronic throttle control actuator should be handled with the following precautions in mind.

CAUTION:
- **Handle electronic throttle control actuator with care. Avoid impacts.**
- **Do not disassemble or adjust.**

INSTALLATION

1. Install the electronic throttle control actuator (1) to the air cleaner case (upper) (2) in the following procedure:

a. Install the gasket (3) to the connector base.
b. Attach the gasket (4) to the outer groove on the throttle bore on the side of the air cleaner case (upper) (2).
c. Install electronic throttle control actuator.
   - There is no pre-determined order in which the mounting bolts should be tightened.
   - Perform the “Throttle Valve Closed Position Learning” when harness connector of the electric throttle control actuator is



disconnected. Refer to EC-42, "Throttle Valve Closed Position Learning" (WITH EURO-OBD), EC-503, "Throttle Valve Closed Position Learning" (WITHOUT EURO-OBD).

- Perform the “Idle Air Volume Learning” and “Throttle Valve Closed Position Learning” when the electric throttle control actuator is replaced. Refer to EC-42, "Idle Air Volume Learning" and EC-42, "Throttle Valve Closed Position Learning" (WITH EURO-OBD), EC-503, "Idle Air Volume Learning" and EC-503, "Throttle Valve Closed Position Learning" (WITHOUT EURO-OBD).

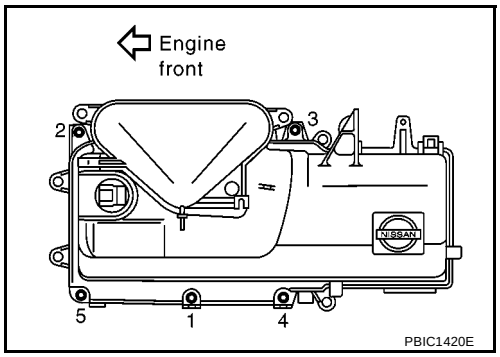
2. Assemble the air cleaner case (upper) and (lower).
   - Tighten bolts evenly in two steps in the order shown in figure.

   1st step

   : 1.9 - 2.2 N·m (0.20 - 0.22 kg-m, 17 - 19 in-lb)

   2nd step

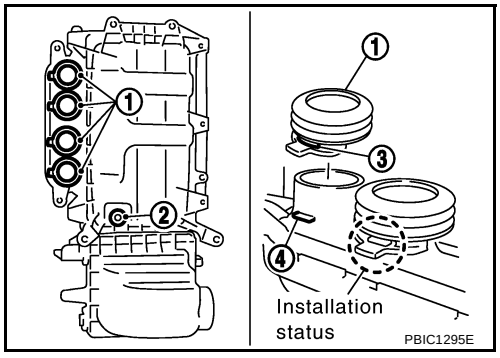
   : 3.8 - 4.4 N·m (0.40 - 0.44 kg-m, 35 - 38 in-lb)



3. Attach the air cleaner case assembly in the following order.

a. Attach the gasket (for the intake manifold (1) and the PCV path (2))
   - Attach for the intake manifold so that the case protrusion (4) fit into the cutout hole (3) on the side of the gasket.
   - Make sure foreign particles do not attach to the gasket or the sealing area.

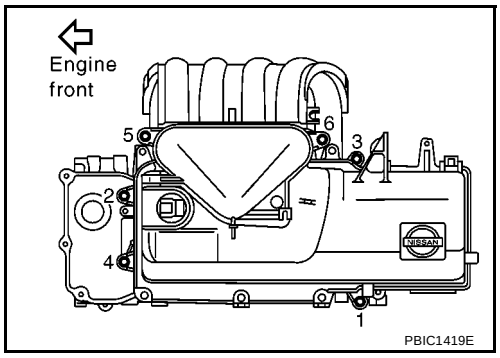
b. Insert the air cleaner case assembly into the intake manifold.
   - At the same time, insert the bottom path protrusions into the PCV path holes on the rocker cover.



CAUTION:
Insert straight, making sure the axis is lined up, to prevent the gaskets from being crooked or twisted.

c. Tighten bolts in the numerical order shown in figure.
   - Tighten bolts evenly in several steps.

CAUTION:
Tighten after making sure the positioning of bolts 5 and 6 is true.



4. Install air cleaner body and air cleaner filter. Refer to EM-19, "Changing Air Cleaner Filter" .
5. Attach air duct.
6. Attach EVAP canister purge volume control solenoid valve.
7. Attach the manifold absolute pressure sensor.
   - Make sure no foreign particles attach to the flange, O-ring, or attachment hole.
   - Tighten the mounting bolt after making sure it is fully inserted into the mounting hole.

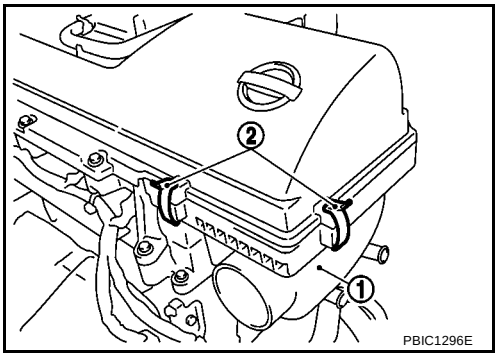
Changing Air Cleaner Filter

EBS00OEP

REMOVAL

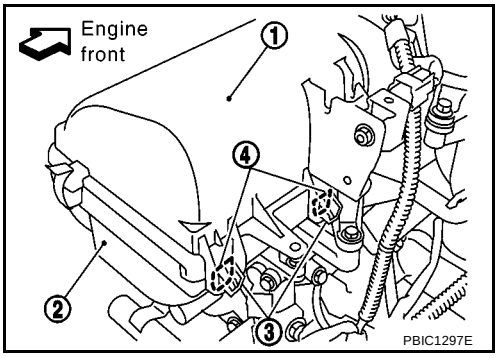
1. Remove air duct. Refer to EM-16, "REMOVAL" .
2. Remove clips (2) of air cleaner body (1).
3. After moving the air cleaner body downward, remove it by pulling it forward.
   - While pressing down the radiator upper hose, remove air cleaner body (1).
4. Remove air cleaner filter from the air cleaner body.

   NOTE:
   In some cases the air cleaner filter might remain in the air cleaner case (upper).



INSTALLATION

1. Set the air cleaner filter on the air cleaner case (upper) (1).
2. Insert the two projections (3) on the air cleaner body (2) into the two notch holes (4) on the rear of the air cleaner case (upper) (1), then lift up and fasten with the clip.
3. Attach air duct.

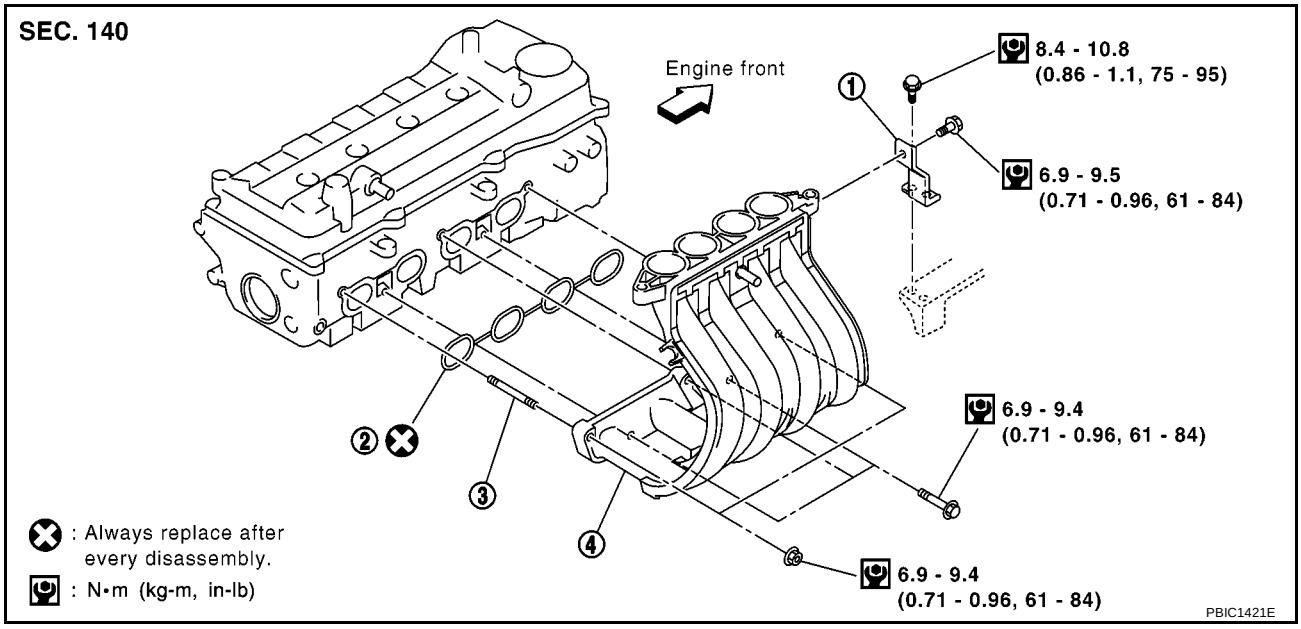


INTAKE MANIFOLD

PFP:14003

Removal and Installation

EBS00OEQ

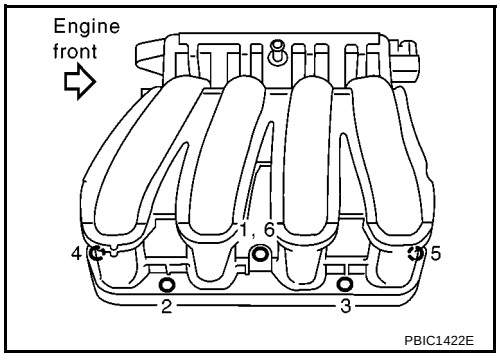


1. Support bracket
2. Gasket
3. Stud bolt
4. Intake manifold

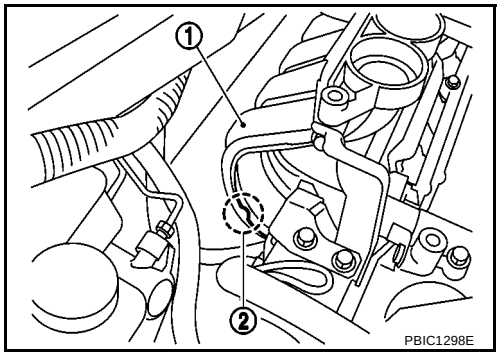
REMOVAL

1. Remove air duct and air cleaner case assembly. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
2. Remove the PCV hose (between the intake manifold and the rocker cover) from the intake manifold side.
3. Remove the support bracket mounting bolt (No. 1 port upper engine front side)
4. Loosen nuts and bolts in the reverse of the order shown in the figure to remove the intake manifold.

CAUTION:
Disregard No. 6 shown in figure in the loosening order.



NOTE:
Removal and installation of No. 5 nut is made easier by inserting the tool into the recommended cutout part (2) on the No. 1 port (1). (The same applies to No. 4 nut)



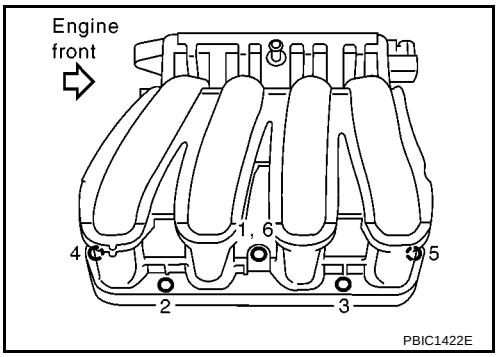
INSTALLATION

- Install in the reverse order of removal paying attention to the following.

Attachment of the Intake Manifold

- Check for damage or foreign material on the mounting surfaces.
- Tighten nuts and bolts in numerical order shown in figure.

  NOTE:
  No. 6 in the figure shows the 2nd tightening of No. 1 bolt.
- When installing support bracket, refer to EM-31, "INSTALLATION" .

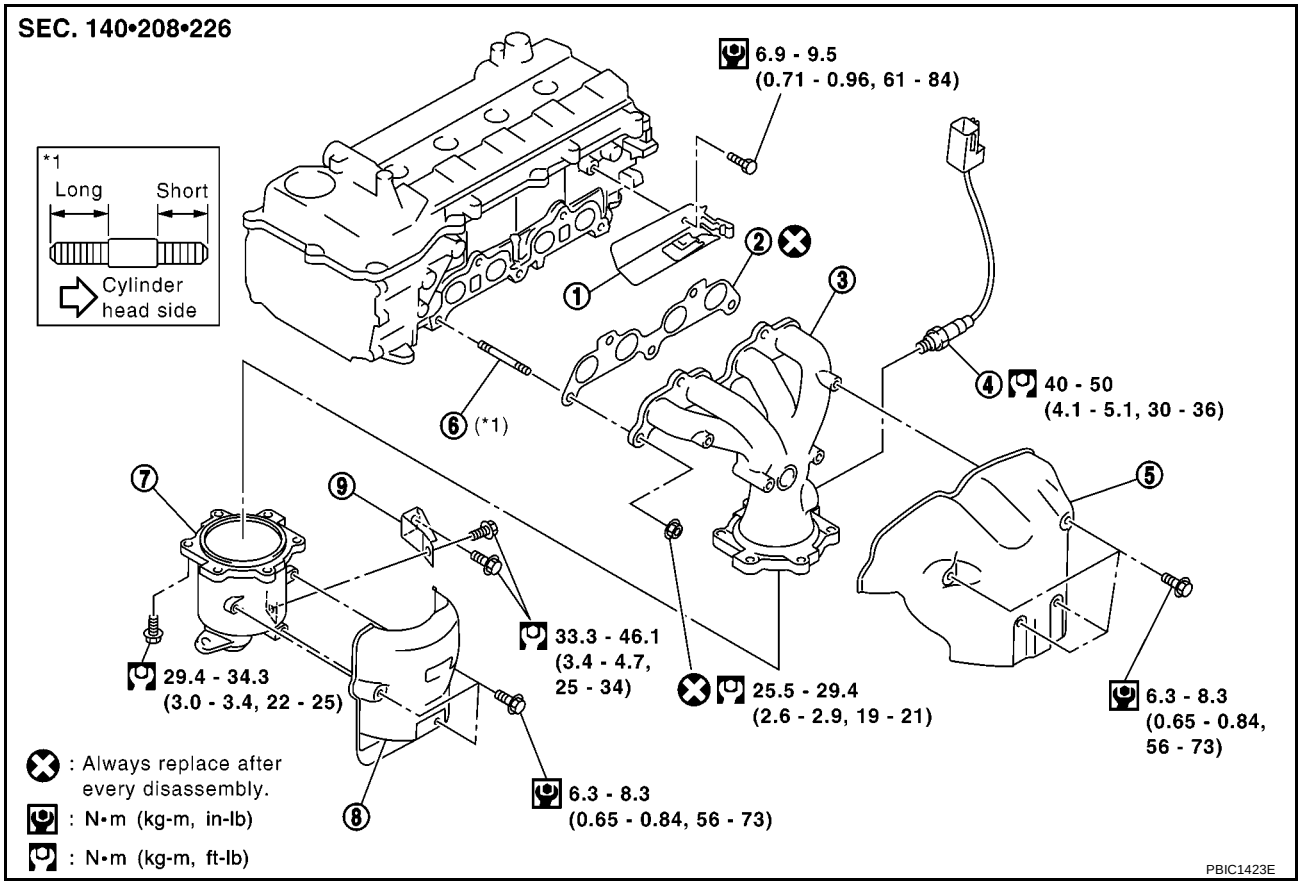


EXHAUST MANIFOLD AND THREE WAY CATALYST

PFP:14004

Removal and Installation

EBS00OI8



1. Bracket
2. Gasket
3. Exhaust manifold
4. Heated oxygen sensor 1
5. Exhaust manifold cover
6. Stud bolt
7. Three way catalyst (manifold)
8. Three way catalyst cover
9. Support

REMOVAL

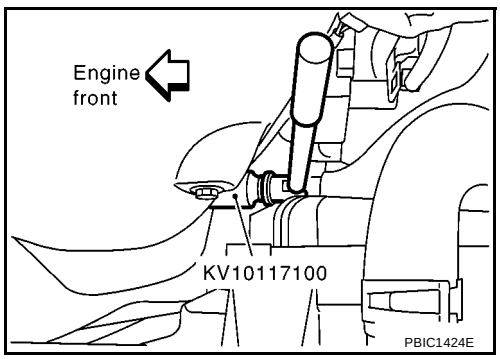
1. Remove air duct. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
2. Remove RH front fender protector.
3. Remove alternator and A/C compressor belt. Refer to EM-12, "DRIVE BELTS" .
4. Remove A/C compressor with piping connected, move A/C compressor to body side and secure it onto body with a rope.
5. Remove exhaust front tube connection at front. Refer to EX-3, "EXHAUST SYSTEM" .
6. Remove RH engine mount stay and alternator bracket.
7. Loosen the lower bolt and move the alternator to the front of the vehicle.
8. As needed, remove the heated oxygen sensor 1 in the following order.

   NOTE:
   Steps 2 to 7 above are not needed for heated oxygen sensor 1 removal.

a. Separate the harness connector and remove it from bracket.

b. Using heated oxygen sensor wrench (special service tool), remove heated oxygen sensor 1.

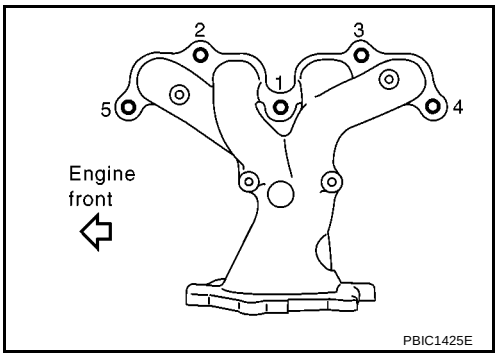
   CAUTION:
   - **Handle it carefully, avoid any chance of impact caused by dropping.**



- **Do not over torque the heated oxygen sensor. Doing so may cause damage to the heated oxygen sensor, resulting in the MI coming on.**

9. Remove exhaust manifold cover.
10. Remove the three way catalyst cover.
11. Loosen nuts and bolts in the reverse of the order shown in figure to remove the exhaust manifold and three way catalyst.

CAUTION:
Be careful not to damage the A/C piping.



12. Separate the exhaust manifold and three way catalyst.

CAUTION:
Avoid impacts to three way catalyst.

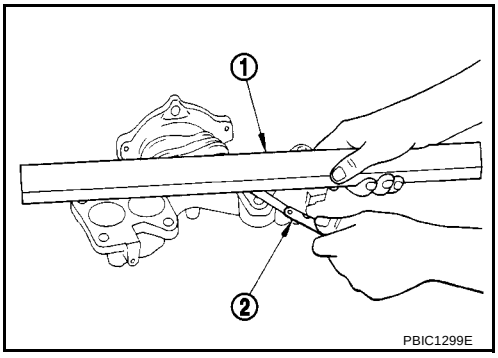
INSPECTION AFTER REMOVAL

Surface Distortion

- Using a reliable straightedge (1) and feeler gauge (2), check distortion of mounting surface on exhaust manifold.

Limit : 0.3 mm (0.012 in)

- If it exceeds the limit, replace the exhaust manifold.

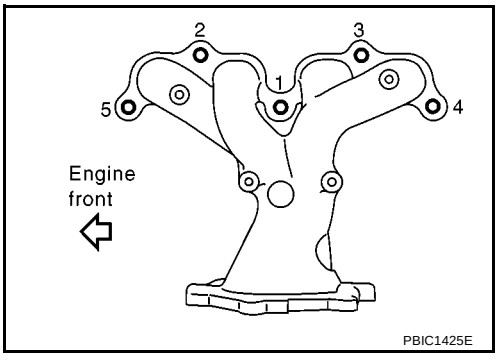


INSTALLATION

- Install in the reverse order of removal paying attention to the following.

Installation of Exhaust Manifold and Three Way Catalyst

- Check for damage or foreign material on the mounting surfaces.
- Tighten nuts in numerical order shown in figure.



Installation of Heated Oxygen Sensor 1

CAUTION:

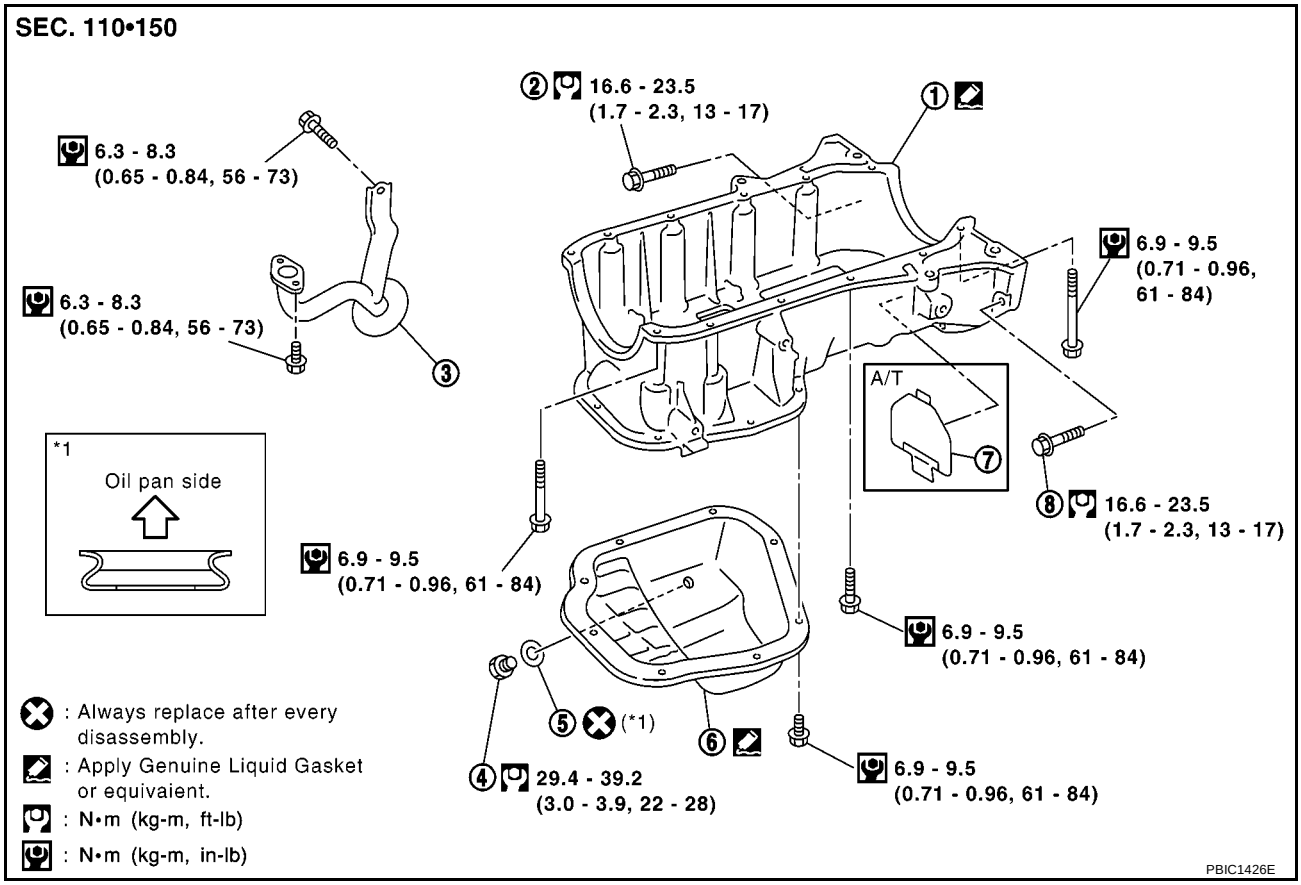
- **Do not over torque the heated oxygen sensor. Doing so may cause damage to the heated oxygen sensor, resulting in the MI coming on.**

OIL PAN AND OIL STRAINER

PFP:11110

Removal and Installation

EBS00OES



1. Oil pan (upper)
2. Transaxle connecting bolt
3. Oil strainer
4. Drain plug
5. Washer
6. Oil pan (lower)
7. Rear plate cover
8. Transaxle connecting bolt

REMOVAL

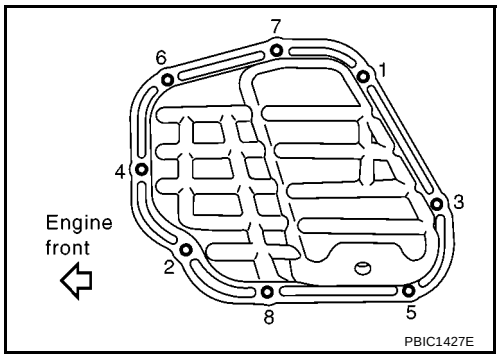
NOTE:

Installation and removal of manual transmission vehicle oil pan (upper) require removal of the transaxle.

1. Remove RH front fender protector.
2. Drain the engine oil.
3. Remove the oil pan (lower) in the following order.

a. Loosen bolts in the reverse of the order shown in figure.

b. Insert seal cutter (special service tool) between oil pan (upper) and oil pan (lower). Slide seal cutter by tapping on the side of the tool with a hammer. Remove oil pan (lower).



CAUTION:

Exercise care not to damage mating surface.

NOTE:

The following is the order for removing the oil pan (upper).

4. Remove the oil level gauge.
5. Remove drive belts. Refer to EM-12, "DRIVE BELTS" .
6. Remove the A/C compressor with piping connected and move the A/C compressor aside.

CAUTION:

Hang it with rope and temporarily tighten to body to avoid putting stress on air conditioner piping.

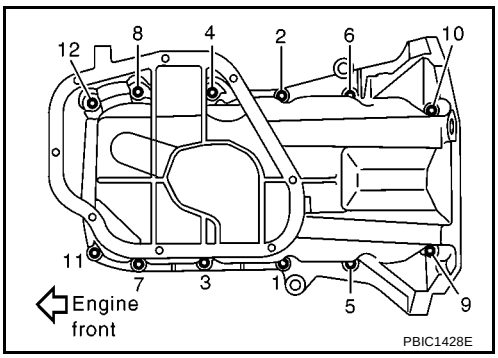
7. Remove the exhaust front tube. Refer to EX-3, "EXHAUST SYSTEM" .

8. Remove three way catalyst support. Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .
9. Remove the transaxle in the following order. (M/T models)

a. Mount engine slingers on cylinder head. Refer to EM-60, "Removal and Installation" .
b. Lift with a hoist and position engine.
c. Remove transaxle. Refer to EM-69, "Removal and Installation" .

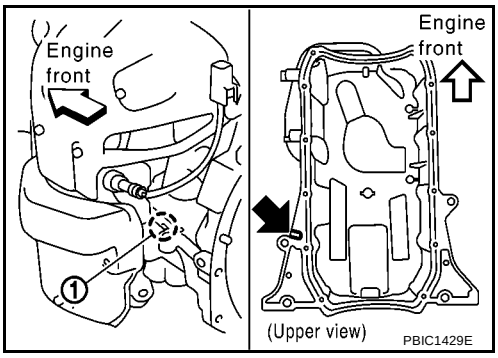
10. Remove oil pan (upper) with the following procedure.

a. Remove oil pan (upper) to transaxle connecting bolts (A/T models). Refer to AT-430, "REMOVAL AND INSTALLATION" .
b. Loosen oil pan (upper) mounting bolts in the reverse of the order shown in figure.



c. Insert a flathead offset screwdriver into the cutout (1) shown in figure and create a crack between the oil pan and cylinder block.
d. Insert seal cutter (special service tool) between oil pan (upper) and cylinder block. Slide seal cutter by tapping on the side of the tool with a hammer. Remove oil pan (upper).

CAUTION:
Exercise care not to damage mating surface.



11. Remove oil strainer.

INSTALLATION

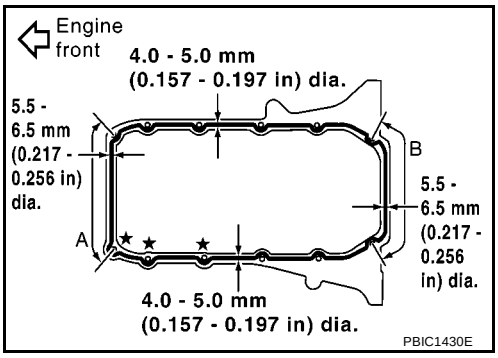
1. Install oil strainer.

NOTE:
Do not use O-ring, gasket, or other seal parts.

2. Attach the oil pan (upper) in the following order.

a. Apply the liquid gasket to the position shown in figure.
Use Genuine Liquid Gasket or equivalent.

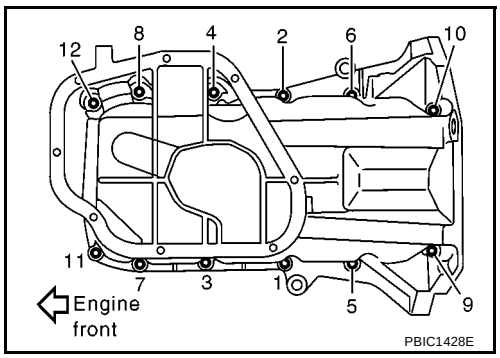
CAUTION:
- **For bolt holes with ★ marks (3 locations), apply liquid gasket outside the holes.**
- **Apply a bead of 5.5 to 6.5 mm (0.127 - 0.256 in) in diameter to area “A” and “B”.**



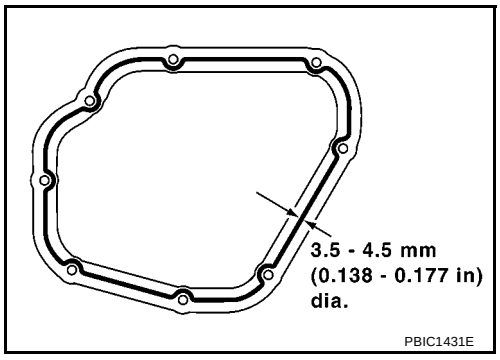
b. Tighten bolts in the numerical order shown in figure.

NOTE:
See below for mounting positions of bolts

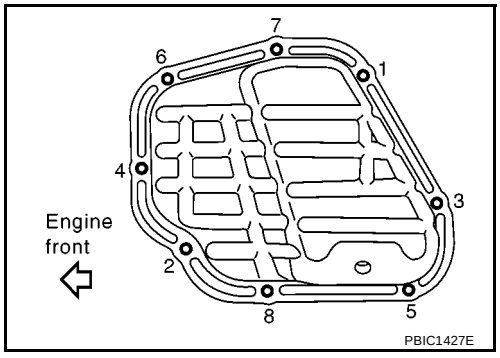
Under head 70 mm (2.76 in) : 4, 8, 12
Under head 90 mm (3.54 in) : 9,10
Under head 25 mm (0.98 in) : Other than the above



c. Tighten transaxle connecting bolts. (A/T models)
3. Install transaxle assembly. (M/T models)
4. Install oil pan (lower) in the following procedure:
a. Apply the liquid gasket to the position shown in figure.
Use Genuine Liquid Gasket or equivalent.



b. Tighten bolts in the numerical order shown in figure.



5. Install oil pan drain plug.
   - For washer installation direction, refer to components figure on EM-24, "Removal and Installation" .
6. Reinstall removed parts in reverse order of removal.

CAUTION:
Engine oil should be filled at least 30 minutes after the oil pan is installed.

INSPECTION AFTER INSTALLATION

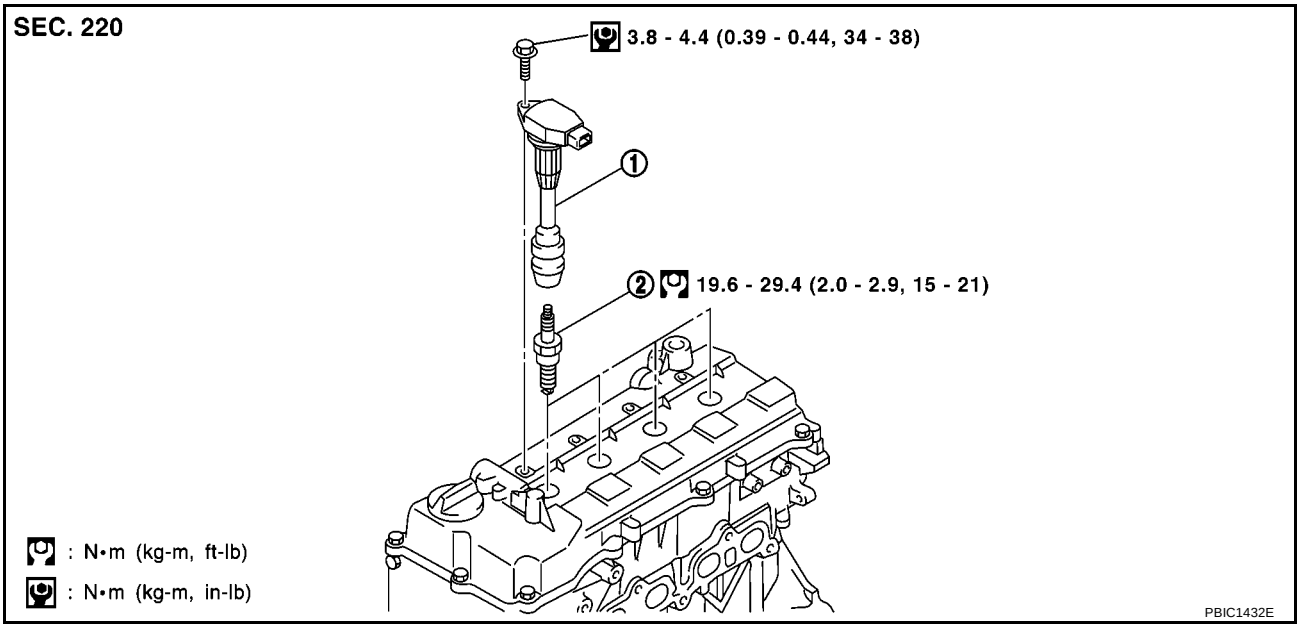
- Check engine oil level. Refer to LU-4, "ENGINE OIL" .
- Warm up engine and check the oil amount and no leakage of oil. Refer to LU-4, "ENGINE OIL" .

IGNITION COIL

PFP:22448

Removal and Installation

EBS00OET



1. Ignition coil
2. Spark plug

REMOVAL

1. Remove air duct and air cleaner case assembly. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
2. Disconnect harness connector from the ignition coil.
3. Remove ignition coil.

CAUTION:

- **Handle ignition coil with care. Avoid impacts.**
- **Do not disassemble.**

INSTALLATION

Install in the reverse order of removal.

SPARK PLUG (PLATINUM-TIPPED TYPE)

PFP:22401

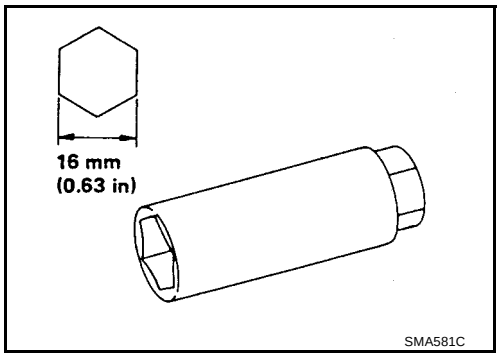
Removal and Installation

EBS00OEU

REMOVAL

1. Remove ignition coil. Refer to EM-27, "IGNITION COIL" .
2. Remove spark plugs with a spark plug wrench.

CAUTION:
Handle spark plug with care. Avoid impacts.



INSPECTION AFTER REMOVAL

- Use standard type spark plug for normal condition.
- The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:
  - Frequent engine starts
  - Low ambient temperatures
- The cold type spark plug is suitable when spark plug knock occurs with the standard type spark plug under conditions such as:
  - Extended highway driving
  - Frequent high engine revolution

Make	NGK	Champion
Standard type	LFR5AP-11	REC10PYC4
Hot type	LFR4AP-11	—
Cold type	LFR6AP-11	—

Gap (Nominal) : 1.1 mm (0.043 in)

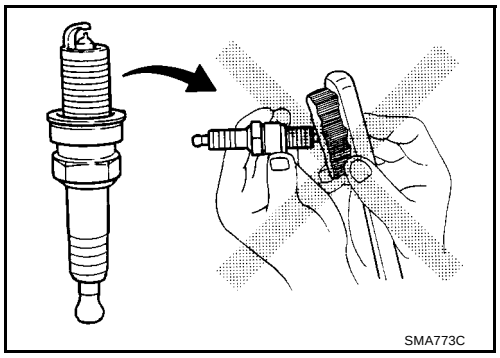
CAUTION:
- **Do not use a wire brush for cleaning.**
- **If plug tip is covered with carbon, spark plug cleaner may be used.**

Cleaner air pressure:

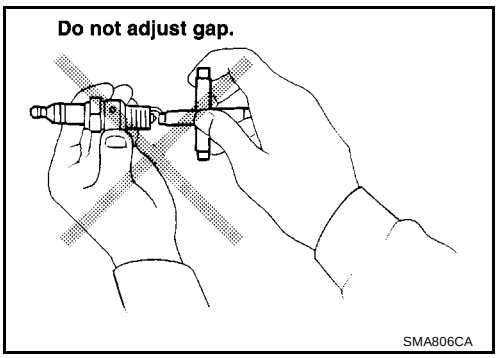
Less than 588 kPa (6 kg/cm^2 , 85 psi)

Cleaning time:

Less than 20 seconds



- **Checking and adjusting plug gap is not required between change intervals.**



INSTALLATION

Install in the reverse order of removal.

Spark plug

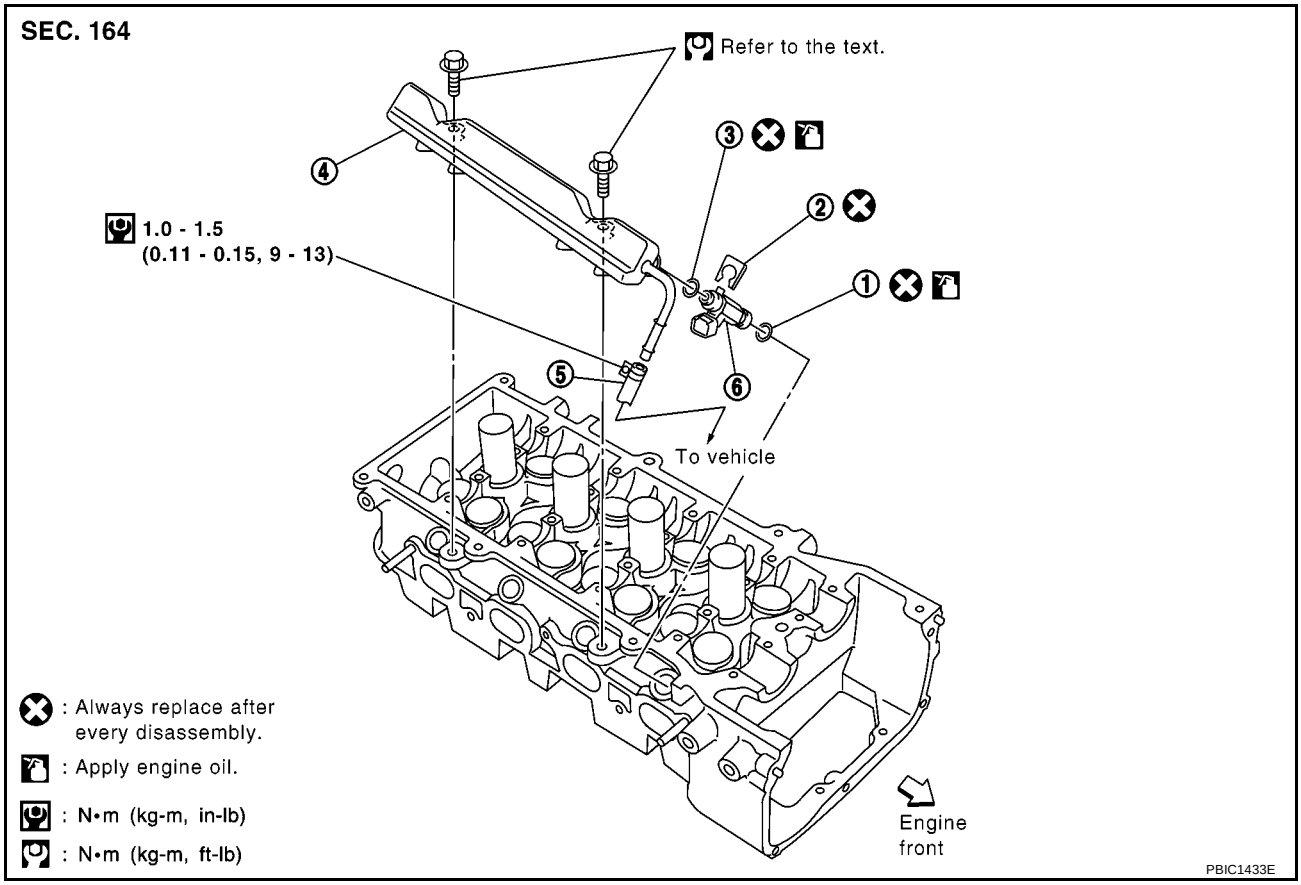
: 19.6 - 29.4 N·m (2.0 - 3.0 kg-m, 15 - 21 ft-lb)

FUEL INJECTOR AND FUEL TUBE

PFP:16600

Removal and Installation

EBS00OGG



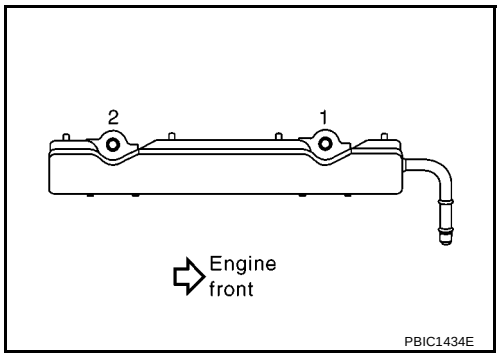
1. O-ring (brown)
2. Clip
3. O-ring (black)
4. Fuel tube
5. Fuel feed hose
6. Fuel injector

REMOVAL

1. Release fuel pressure. Refer to EC-44, "FUEL PRESSURE RELEASE" (WITH EURO-OBD), EC-505, "FUEL PRESSURE RELEASE" (WITHOUT EURO-OBD).
2. Remove air duct and air cleaner case assembly. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Remove intake manifold support bracket.
4. Remove the fuel hose on the side of the fuel tube.

   CAUTION:
   Attach a plug to the removed hose to prevent fuel leaks.
5. Separate the fuel injector harness and move to a position where it will not get in the way of work.
   - If it is stuck or otherwise difficult to remove, remove the fuel injector and fuel tube assembly from the cylinder head and separate fuel injector harness in a better position.
6. Loosen bolts in the reverse of the order shown in the figure and then remove the fuel injector and fuel tube assembly.

   CAUTION:
   - **Make sure the fuel injector nozzle does not touch the other parts.**
   - **Take out without tipping, as this will cause fuel to leak.**



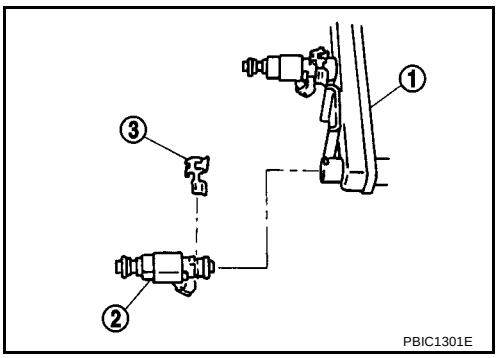
7. Remove the fuel injector (2) from the fuel tube (1) in the following order.

a. Open and pull out the clip (3).

b. Remove fuel injector from the fuel tube by pulling straight.

CAUTION:

- **Be careful not to damage the nozzle.**
- **Do not drop or impact the fuel injector.**
- **Do not disassemble or adjust fuel injector.**



INSTALLATION

1. Keep in mind the following points when attaching the O-ring to the fuel injector.

CAUTION:

- **The upper and lower O-rings are different, so use caution when attaching them.**

Fuel tube side	**: Black**
Nozzle side	**: Brown**

- **Handle O-ring with bare hands. Never wear gloves.**
- **Lubricate O-ring with engine oil.**
- **Do not clean O-ring with solvent.**
- **Make sure the O-ring and its mating part are free of foreign material.**
- **When installing the O-ring, be careful not to scratch it with tools or your fingernails. Also be careful not to twist or stretch O-ring. If O-ring is stretched while it is being attached, do not insert it into fuel tube immediately.**

2. Install the fuel injector onto the fuel tube in the following procedure:

a. Insert the clip (3) into the clip mounting groove (2) on the fuel injector (1).

- Insert clip cutout (5) into fuel injector protrusion (4).

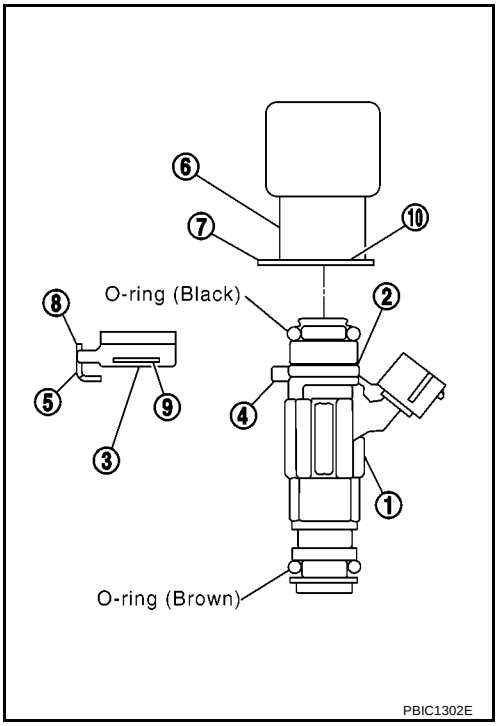
CAUTION:

- **Always replace clip with new one.**
- **Make sure the clip does not interfere with the O-ring. If it does, replace the O-ring.**

b. With the clip assembly as is, insert the fuel injector (1) into the fuel tube (6).

- Make sure the axis is lined up when inserting.
- Insert clip cutout (8) into fuel tube protrusion (7).
- Make sure the flange (10) on the fuel tube fits securely in the clip flange groove (9).

c. Make sure the fuel injector does not spin or come off.



3. Install fuel tube and injector assembly onto cylinder head.

CAUTION:
Make sure the injector nozzle does not touch the other parts.

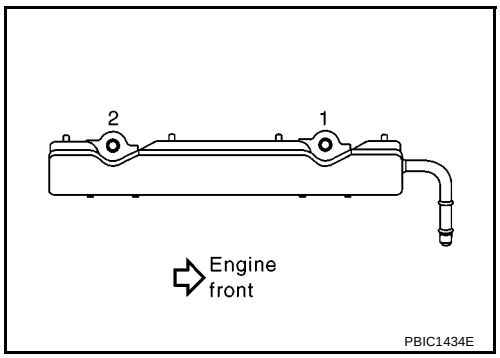
- Tighten bolts evenly in two steps in the order shown in figure.

1st step

: 11.8 - 13.8 N·m (1.2 - 1.4 kg-m, 9 - 10 ft-lb)

2ne step

: 20.8 - 28.2 N·m (2.1 - 2.9 kg-m, 16 - 20 ft-lb)



4. Connect fuel feed hose.·

CAUTION:
Securely tighten the hose clamp at a position where it does not get in the way of the bulge.

5. Install intake manifold support bracket.

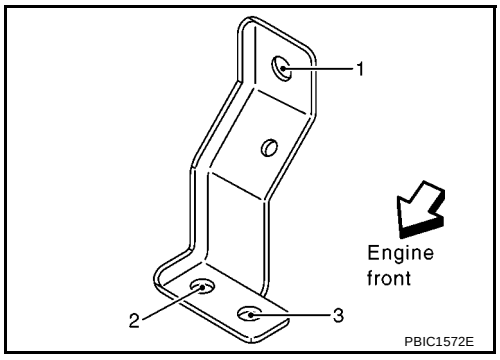
- Tighten mounting bolts in the following order.
  - Tighten bolts temporarily in numerical order shown in the figure.
  - Tighten bolts to the specification in numerical order shown in the figure.

Bolt 1

: 6.9 - 9.5 N·m (0.7 - 0.96 kg-m, 61 - 84 in-lb)

Bolts 2 and 3

: 8.4 - 10.8 N·m (0.86 - 1.1 kg-m, 75 - 95 in-lb)



6. Reinstall removed parts in reverse order of removal.

INSPECTION AFTER INSTALLATION

- Follow the procedure below to make sure there are no fuel leaks.

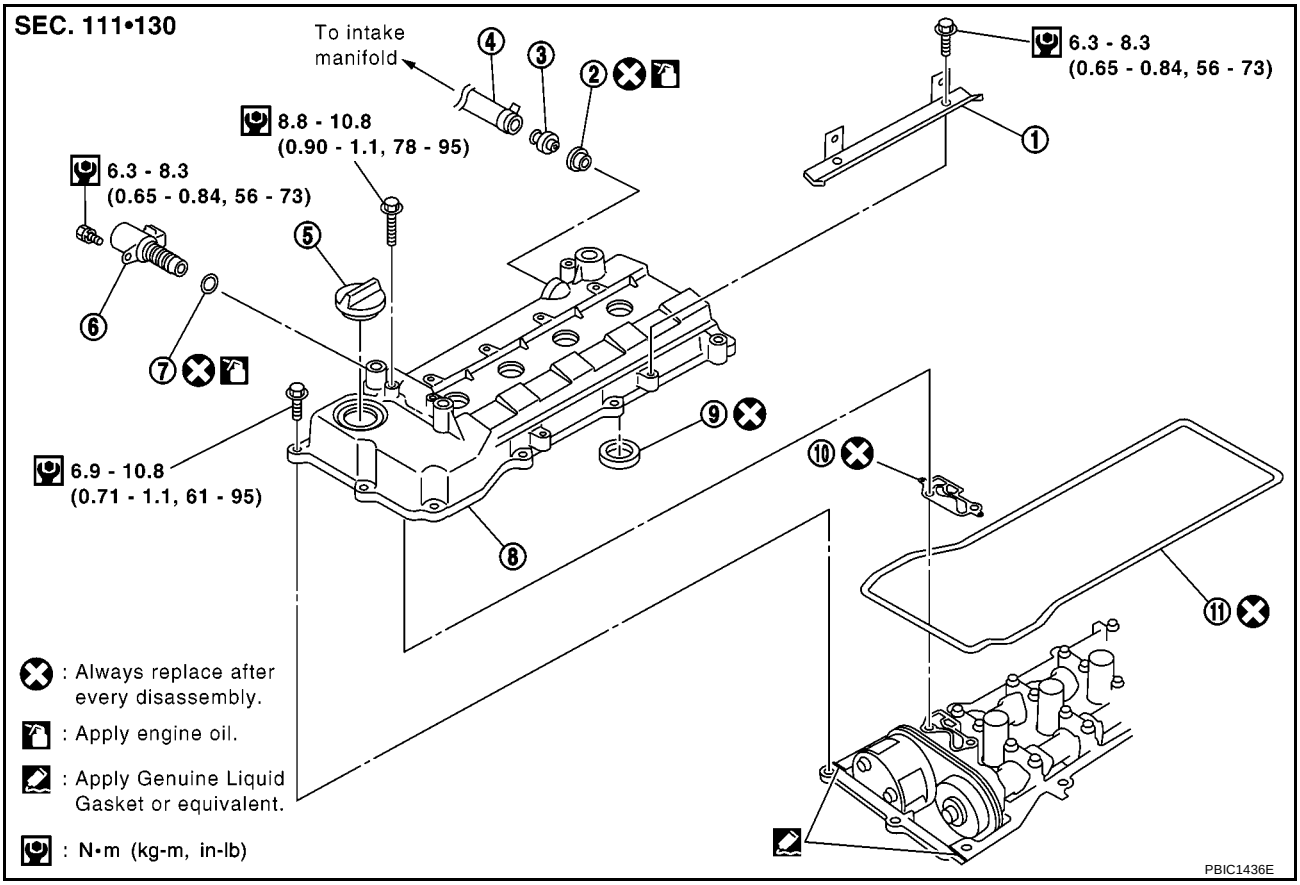
1. Turn the ignition switch to ON (do not start engine), and with fuel pressure applied in the fuel line, check to make sure there no fuel leaks from the connection.
2. Start the engine, and with the increased speed, check again to see if there are any fuel leaks from the connection.

ROCKER COVER

PFP:13264

Removal and Installation

EBS00OEX



1. Harness bracket	2. Grommet	3. PCV control valve
4. PCV hose	5. Oil filler cap	6. Intake valve timing control solenoid valve
7. O-ring	8. Rocker cover	9. Rocker cover oil seal
10. Gasket	11. Gasket	

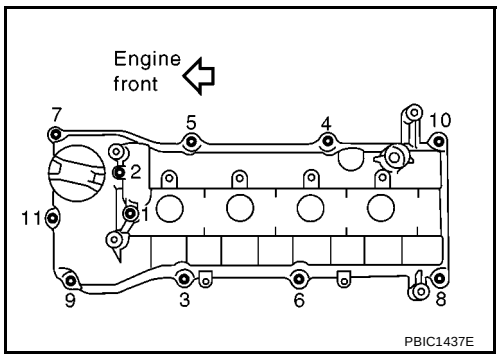
REMOVAL

1. Remove air duct and air cleaner case assembly. Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
2. Remove RH engine mount stay. Refer to EM-69, "Removal and Installation" .

   NOTE:
   It is not necessary to support the engine using a jack.
3. Remove ignition coil. Refer to EM-27, "IGNITION COIL" .
4. Remove ignition coil harness bracket.
5. Disconnect PCV hose and intake valve timing control sorenoid valve harness connector.
6. Remove the PCV control valve if necessary.
7. Remove the intake valve timing control solenoid valve if necessary.

   CAUTION:
   - **Handle intake valve timing control solenoid valve with care. Avoid impacts.**
   - **Do not disassemble.**

8. Loosen bolts in the reverse of the order shown in the figure to remove rocker cover.

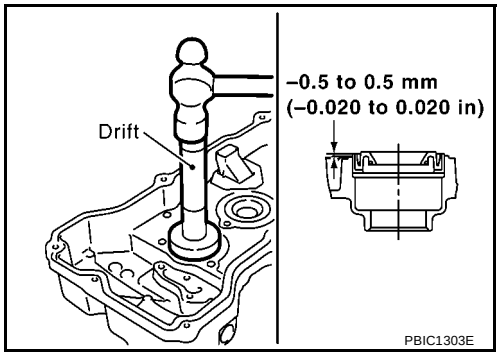


9. Remove the rocker cover oil seal using a screwdriver.

CAUTION:
Be careful not to damage the rocker cover.

INSTALLATION

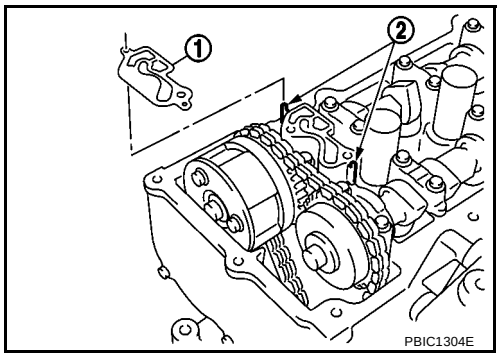
1. Install rocker cover oil seal.
   - Using drift with outer diameter 97 mm (3.82 in) and inner diameter 83 mm (3.27 in) to 88 mm (3.46 in), press oil seal in.
   - Press-fit the oil seal evenly to the mounting surface.



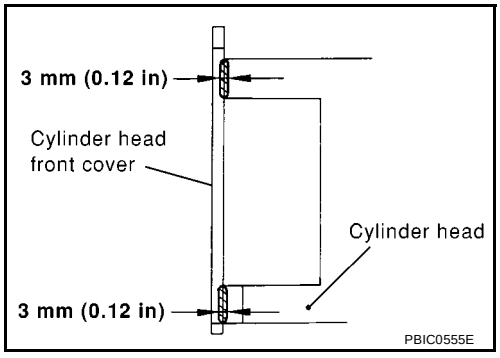
2. Install the rocker cover in the following procedure:

a. Install the gasket (1) to the No. 1 camshaft bracket upper surface.
   - Match up the positioning pins (2) and gasket holes in the direction of the shape of the camshaft bracket when attaching.

b. Install the gasket to the rocker cover mounting groove.



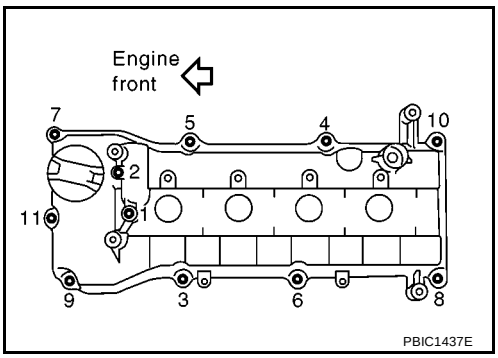
c. Apply the liquid gasket to the position shown in figure.
Use Genuine Liquid Gasket or equivalent.



d. Tighten bolts evenly in two steps in the order shown in the figure, to the specified torque.
   - See below for mounting positions of bolts

   Under head 45 mm (1.77 in) : 1, 2 (inside bolts)

   Under head 20 mm (0.79 in) : Other than above (outside bolts)



3. Install intake valve timing control solenoid valve.
   - Make sure no foreign particles attach to the flange, O-ring, or attachment hole.
   - Tighten the mounting bolt after making sure it is fully inserted into the mounting hole.
4. Install PCV control valve.
   - Insert until the flange is flush with the grommet.
5. Reinstall removed parts in reverse order of removal.

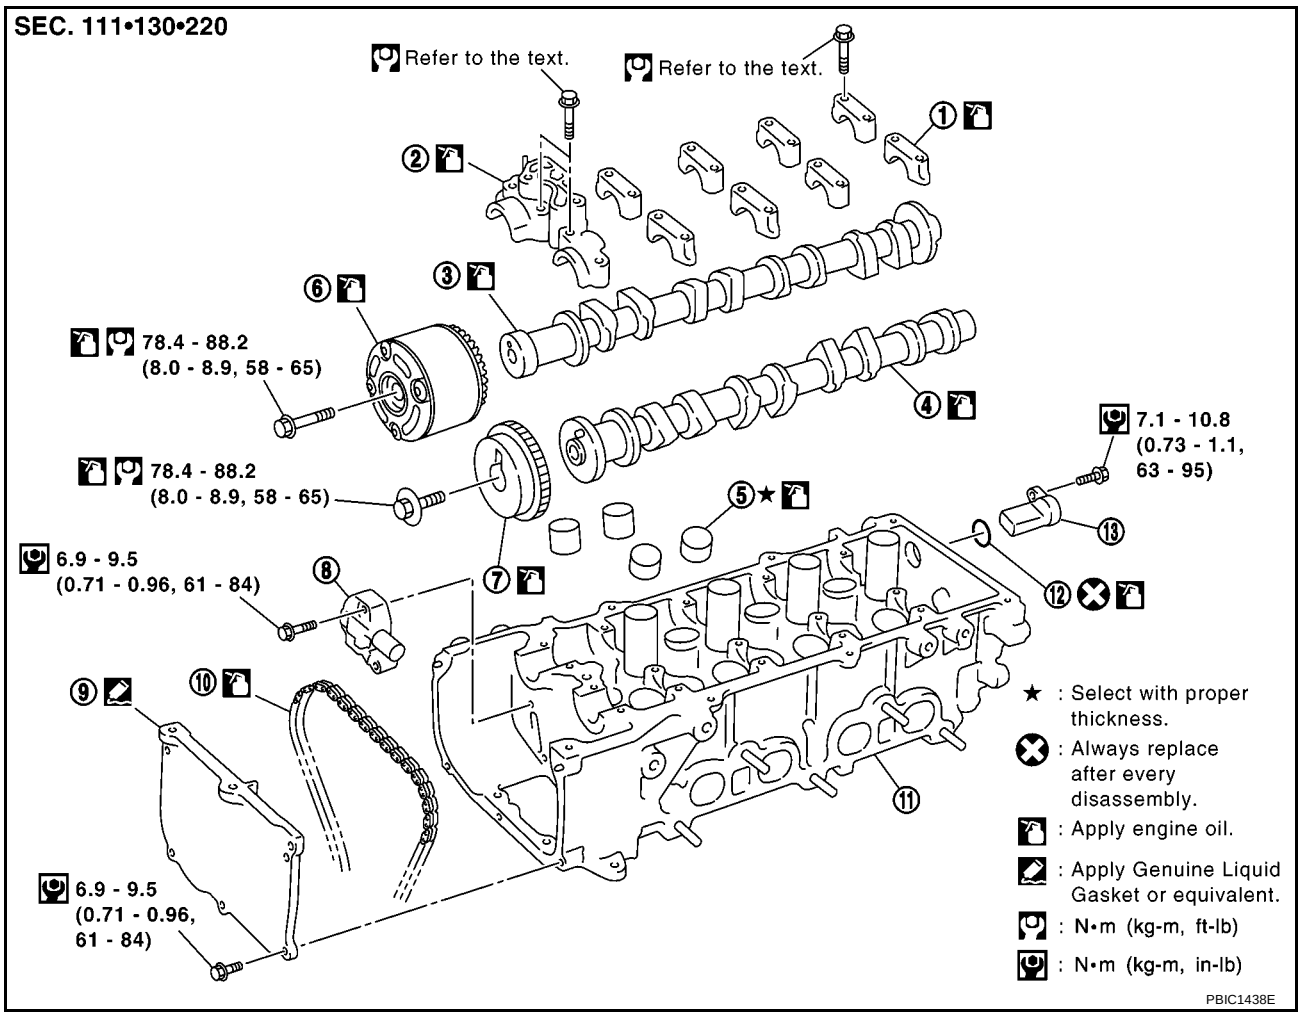
CAMSHAFT

PFP:13001

Removal and Installation

SMA for VIN >SJN**AK12U1133450

EBS00OEY



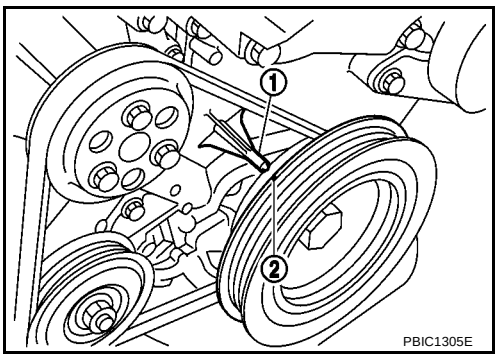
1. Camshaft bracket (No. 2 - 5)
2. Camshaft bracket (No. 1)
3. Camshaft (intake)
4. Camshaft (exhaust)
5. Valve lifter
6. Camshaft sprocket (intake)
7. Camshaft sprocket (exhaust)
8. Chain tensioner
9. Cylinder head front cover
10. Timing chain
11. Cylinder head
12. O-ring
13. Camshaft position sensor (PHASE)

REMOVAL

1. Remove RH front fender protector.
2. Secure the engine position using one of the following methods. Remove RH engine mount stay and engine mount bracket (upper). Refer to EM-69, "Removal and Installation" .
   - Mount engine slingers and hook with hoist. Refer to EM-69, "Removal and Installation" .
   - Support the oil pan bottom with a jack stand, etc.
3. Remove rocker cover. Refer to EM-33, "ROCKER COVER" .
4. Remove the camshaft position sensor (PHASE) from the back of the cylinder head if necessary.

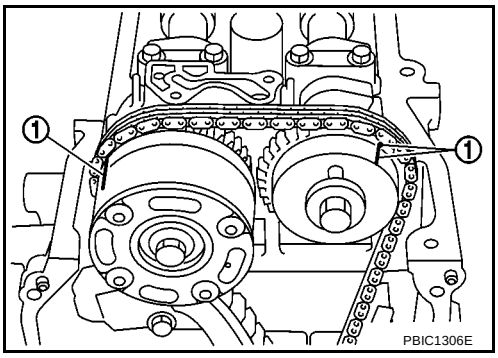
   CAUTION:
   - **Handle camshaft position sensor (PHASE) with care. Avoid impacts.**
   - **The tip of the sensor is magnetic, so do not let metal dust get on it or place it next to objects which can be affected by magnets.**
5. Remove RH headlamp. Refer to LT-6, "HEADLAMP -CONVENTIONAL TYPE-" .
6. Remove the cylinder head front cover.
7. Following the procedure below, place cylinder No. 1 at TDC of its compression stroke

a. Turn the crankshaft pulley clockwise as seen from the engine front, and match up the crankshaft pulley TDC mating mark (no color) (2) with the timing indicator (1) on the front cover.



b. Confirm mating marks (1) stamped on intake and exhaust sprockets are located as shown.
   - If there is no position mark at the position in the figure, turn the crankshaft pulley once more to position them as in the figure.

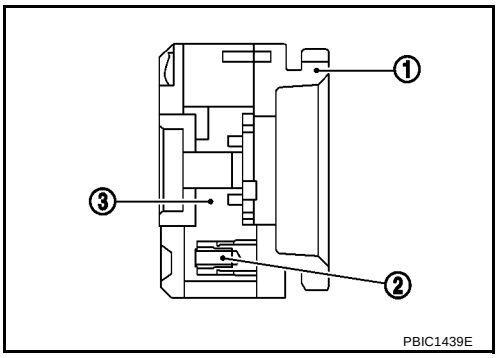
c. Make sure mating marks on intake and exhaust camshaft sprockets are located as shown in the figure, then paint mating marks on the timing chain links.



8. Make sure the intake camshaft sprocket is in the most advanced position.

CAUTION:
Installation and removal of the intake camshaft sprocket must be done in the most advanced position for the following reasons, so make sure you follow the procedure exactly.

- **The sprocket (1) and vane (camshaft coupling) (3) are designed to spin and move within the range of a certain angle.**
- **With the engine stopped the vane (3) is in the most retarded position. It will not spin because it is locked to the sprocket side by the internal lock pin (2).**
- **If the camshaft sprocket mounting bolts are turned in the situation described above (the most retarded position), the lock pin (2) will become damaged and cause malfunctions because of the increased horizontal load (cutting force) on the lock pin (2).**

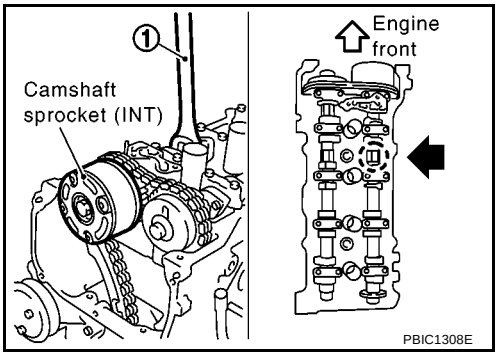


- Put the intake camshaft sprocket in the most advance position in the following steps.

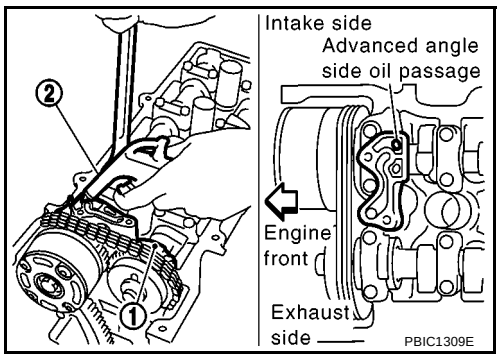
CAUTION:
The chain tensioner must not be removed before doing this step.

NOTE:
The spinning direction in the following description is as seen from the engine front.

a. Immobilize the hexagonal part of the camshaft with a wrench (1) to prevent the intake camshaft from moving.



b. Apply air pressure with an air gun (2) to the advanced angle side oil passage of the intake valve timing control on the top surface of the No. 1 camshaft bracket (1).



Compression pressure

: 300 kPa (3.00 bar, 3 kg/cm^2 , 43.5 psi) or more

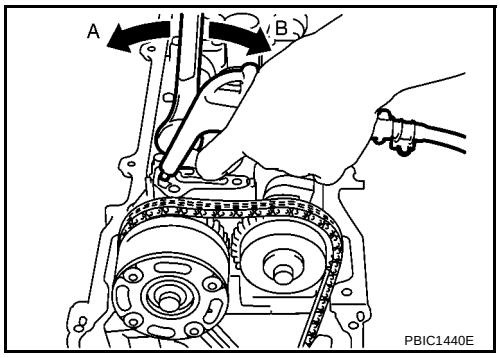
NOTE:
The air pressure is used to move the lock pin into the disengage position.

- Keep applying air pressure until step “e” is completed.

CAUTION:

- **Be sure not to damage the oil passage with the tip of the air gun.**
- **Wipe all the oil off on the top surface of the No. 1 camshaft bracket to prevent oil from being blown with the air, and the area around the air gun should be covered with a rag when applying air pressure. Eye protection should be worn as needed.**

c. Turn the intake camshaft slowly counter-clockwise in direction A (towards the intake manifold).



- Keep the air pressure on.

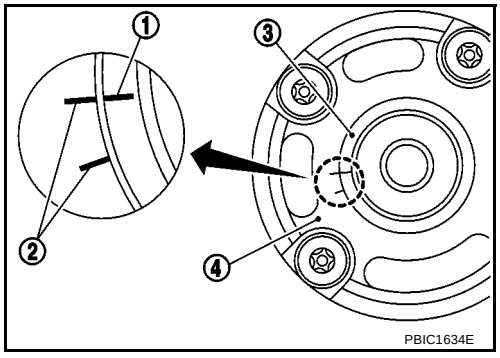
CAUTION:
Also be sure the wrench immobilizing the camshaft does not come loose.

d. While doing the above, once you hear a click (the sound of the internal lock pin disengaging) from inside the intake camshaft sprocket, start turning the intake camshaft in the opposite direction, direction B (clockwise: towards the exhaust manifold) and to the most advanced angle position.

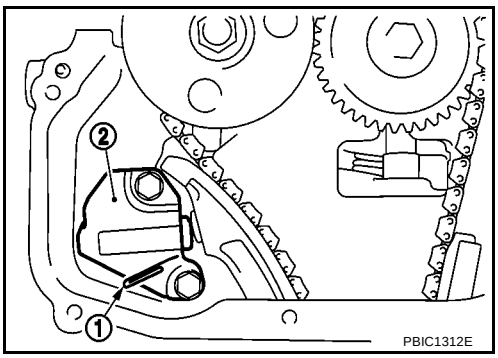
- Keep the air pressure on.
- If there is no click, as soon as the vane (camshaft coupling) starts moving independently of the camshaft sprocket, the lock pin has become disengaged.
- If the lock pin does not become disengaged, shake the wrench immobilizing the camshaft slightly.
- If this still does not help in disengaging the lock pin, tap the intake camshaft front very lightly with a plastic hammer.

e. Once the vane starts to spin and then the camshaft sprocket starts to spin with the camshaft, it has reached the most advanced position, so stop.

- Make sure the most advanced position locating intake valve timing control advance mark (1) of vane (3) and alignment mark (2) of sprocket (4) as shown in the figure.



9. Attach the stopper pin (1) such as a paper clip to secure the plunger in the full compressed position and remove the chain tensioner (2).

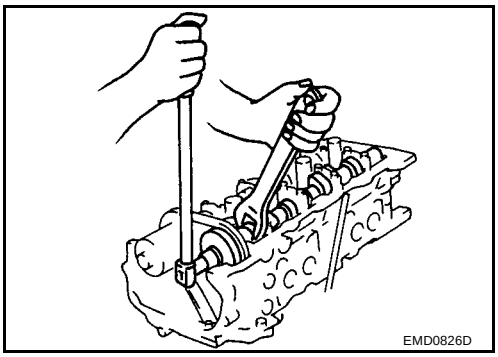


10. Keeping the wrench on the camshaft hexagonal part, loosen the mounting bolts and remove the intake and exhaust camshaft sprockets.

CAUTION:

- **Make sure the tools do not come in contact with the A/C piping.**
- **Do not loosen mounting bolts with securing anything other than the camshaft hexagonal part or with tensioning the timing chain.**

NOTE:
With the front cover attached, the timing chain and crankshaft sprocket will not come off, so there is no need to take steps to maintain the timing chain tension.



- The intake camshaft sprocket should be handled with the following precautions in mind.

CAUTION:

- **When removing intake camshaft sprocket, using adhesive tape or equivalent, prevent vane from rotating so that lock pin will not rejoin in the most retarded position.**
- **Handle it carefully, and avoid any chance of impact caused by dropping.**
- **Do not disassemble. (Do not loosen the four front bolts.)**

NOTE:
While removing the intake camshaft sprocket, if the lock pin has been rejoined in the most retarded position, do the following to restore it.

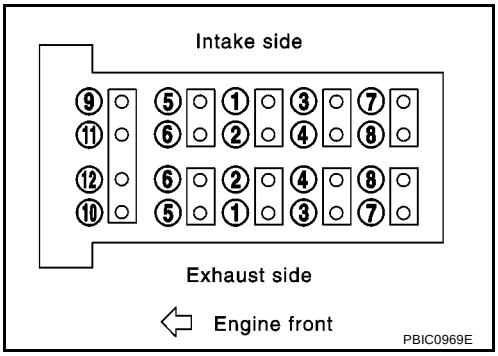
a. Reinstall the intake camshaft sprocket to the intake camshaft and tighten the mounting bolts enough to prevent air leaking out when the air pressure is applied later.

CAUTION:
To prevent internal lock pin from damaging, keep the torque on the mounting bolts to the minimum required to prevent air from escaping.

b. Apply the air pressure, disengage the lock pin following step 8, and turn the vane to the most advanced position. (The timing chain need not be attached for this step.)

c. Remove the intake camshaft sprocket from camshaft.

11. Remove camshaft brackets.
    - Loosen bolts in several steps in reverse order shown in the figure.



12. Remove camshaft.

CAUTION:
Do not deform or damage intake camshaft rear end signal plate.

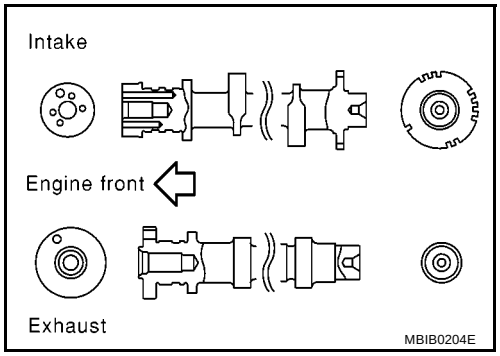
13. Remove valve lifter.
    - Identify installation position of each valve. Arrange removed valve lifters so they cannot be mixed up.

INSTALLATION

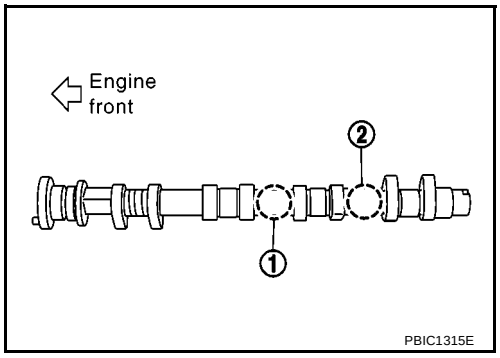
1. Install valve lifter.

- Install it in its original positions.

2. Install camshaft.
   - You can distinguish between the intake and the exhaust by looking at the different shapes of the front and rear ends of the camshaft.

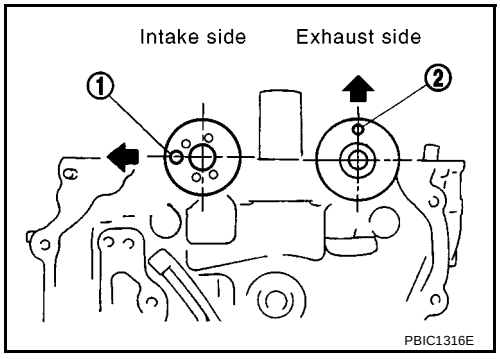


NOTE:
- Paint distinguishing the applicable engine (1) can be found between the cams for cylinders No. 2 to 3.
- Paint distinguishing the applicable engine (2) can be found between the cams for cylinders No. 3 to 4.(CR12DE, CR14DE)

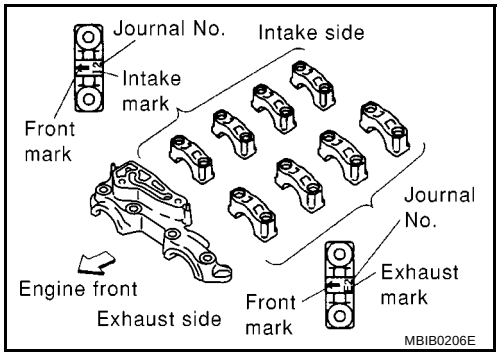


Paint distinguishing the applicable engine		(1)	(2)
CR10DE	INT	Green	—
	EXH	White	—
CR12DE, CR14DE	INT	Green	Green
	EXH	Red	Red

- Install the camshaft front ends dowel pin hole (1) and dowel pin (2) so that they are positioned as shown in the figure.



3. Install camshaft brackets.
   - Completely remove any foreign material on bottom surfaces of camshaft brackets and top surface of cylinder head.
   - Referring to the marks on top of the camshaft bracket, install so that it is in the same position and facing the same direction as when removed.



4. Tighten camshaft bracket bolts in the following order.

a. Bolt sizes vary with installation position. Refer to the following when installing bolts.

Bolt color

1 - 10 : Black

11, 12 : Gold

b. First tighten bolts 9 through 12, then tighten bolts 1 through 8 in numerical order.

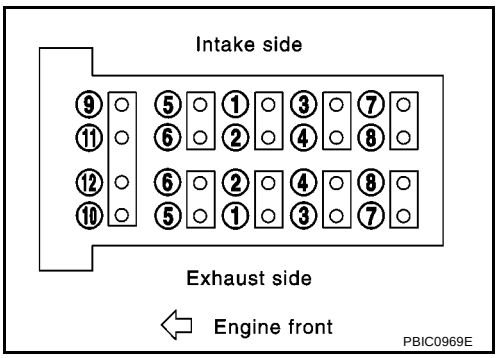
: 2.0 N·m (0.2 kg-m, 18 in-lb)

c. Tighten all bolts in numerical order shown in the figure.

: 5.9 N·m (0.6 kg-m, 52 in-lb)

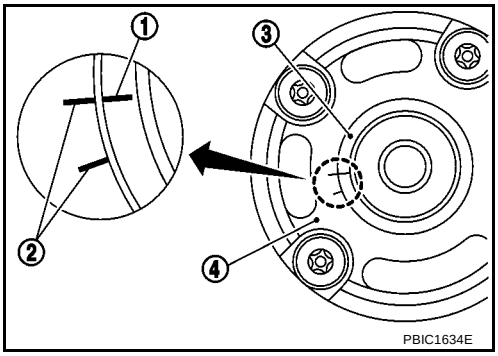
d. Retighten all bolts in numerical order shown in the figure.

: 9.0 - 11.8 N·m (0.92 - 1.2 kg-m, 80 - 104 in-lb)



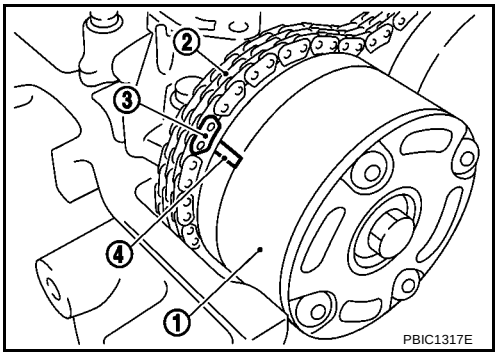
5. Install the intake camshaft sprocket in the following procedure:

- Make sure the most advanced position checking intake valve timing control advance mark (1) of vane (3) and alignment mark (2) of sprocket (4) are located as shown in the figure.

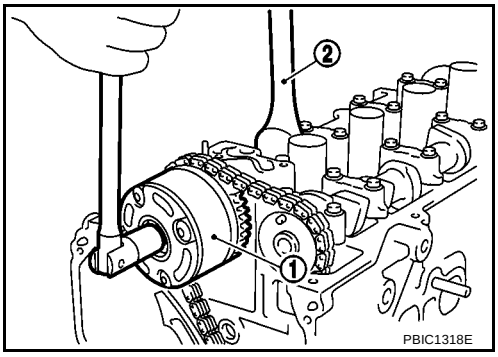


a. Install timing chain (2) by aligning its mating mark (3) (marked when timing chain is removed) with mark (4) on camshaft sprocket (1).

- Install by aligning the dowel pin on the back of the camshaft sprocket with dowel pin hole on the camshaft.



b. Keeping the camshaft hexagonal part still with the wrench (2), tighten the mounting bolt for the intake camshaft sprocket (1).



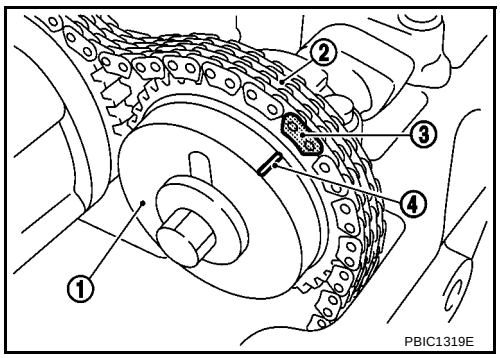
c. Remove adhesive tape or equivalent from camshaft sprocket.

6. Install the exhaust camshaft sprocket (1) in the following procedure:

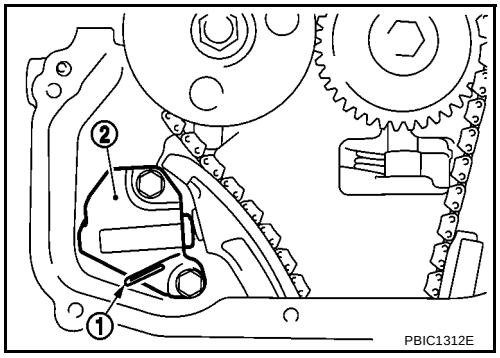
a. Install timing chain (2) by aligning its mating mark (3) (marked when timing chain is removed) with mark (4) on camshaft sprocket (1).
   - Install by aligning the dowel pin groove of the sprocket with dowel pin on the camshaft.

b. Keeping the camshaft hexagonal part still with the wrench, tighten the mounting bolt for the exhaust camshaft sprocket.

c. Make sure the markings for the intake and the exhaust camshaft sprockets and the timing chain are all lined up.



7. Install chain tensioner (2).
   - Install the stopper pin (1) with plunger secured.
   - After installation, remove the stopper pin (1) and release the plunger.
   - Make sure again that mating marks on the intake and exhaust camshaft sprockets and mating marks on timing chain are aligned.

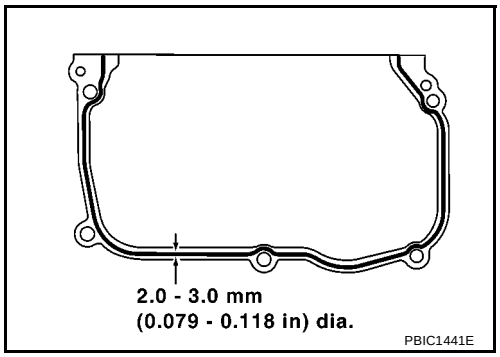


8. Turn the crankshaft pulley (1) slowly clockwise to return the intake camshaft sprocket to the most retarded position.

   - When first turning the crankshaft the intake camshaft sprocket will turn. Once it is turned more, and the vane (camshaft) also turns, then it has reached the most retarded position.
   - After spinning the crankshaft slightly in a counterclockwise direction, you can make sure the lock pin has joined by seeing if the vane and the sprocket move together.

9. Install the cylinder head front cover.
   - Evenly apply the liquid gasket to the position shown in figure. Use Genuine Liquid Gasket or equivalent.
   - Install so that the cylinder head front cover matches up with the dowel pin on the cylinder head side.

10. Install camshaft position sensor (PHASE).
   - Make sure no foreign particles attach to the flange, O-ring, or attachment hole.
   - Tighten the mounting bolt after making sure it is fully inserted into the mounting hole.



11. Inspect and adjust valve clearance. Refer to EM-45, "Valve Clearance" .

12. Reinstall removed parts in reverse order of removal.

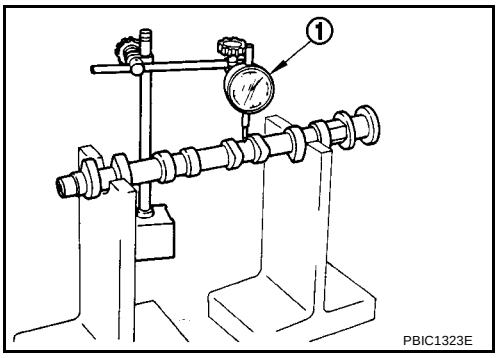
INSPECTION AFTER REMOVAL

Camshaft Runout

- Put V block on precise flat bed, and support No. 2 and No. 5 journal of camshaft.

  CAUTION:
  Do not support journal No. 1 (on the side of the camshaft sprocket) because it has a different diameter from the other four locations.
- Set a dial gauge (1) vertically onto journal No. 3.
- Rotate the camshaft in one direction by hand and read indication on the gauge. (Total indication reading)

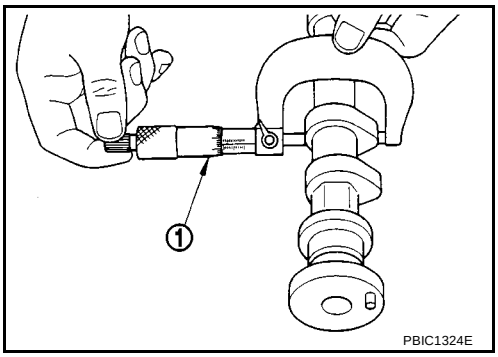
  Limit : 0.04 mm (0.0016 in) or less
- If exceeds the limit, replace the camshaft.



Camshaft Cam Height

- Measure with a micrometer (1).

  Standard
  CR10DE
  Intake : 39.155 - 39.345 mm (1.5415 - 1.5490 in)
  Exhaust : 39.155 - 39.345 mm (1.5415 - 1.5490 in)
  CR12DE, CR14DE
  Intake : 40.359 - 40.549 mm (1.5889 - 1.5964 in)
  Exhaust : 39.743 - 39.933 mm (1.5647 - 1.5722 in)
- If it exceeds the standard, replace the camshaft.

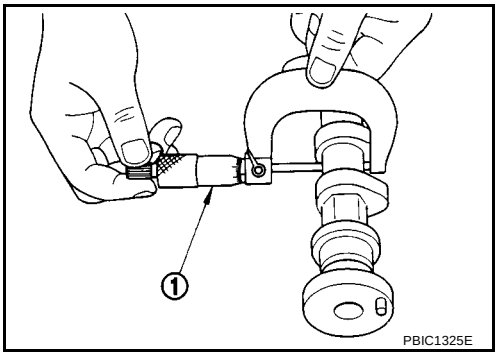


Camshaft Journal Clearance

Outer Diameter of Camshaft Journal

- Measure with a micrometer (1).

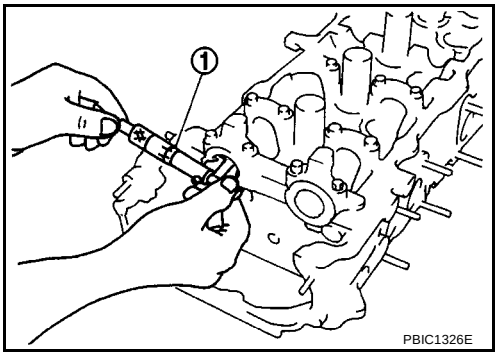
  Standard
  No. 1
  : 27.935 - 27.955 mm (1.0998 - 1.1006 in)
  No. 2 to No. 5
  : 23.450 - 23.470 mm (0.9232 - 0.9240 in)



Inner Diameter of Camshaft Journal

- Tighten camshaft bracket bolts to the specified torque.
- Using an inside micrometer (1), measure inner diameter of the camshaft bracket.

  Standard
  No. 1
  : 28.000 - 28.021 mm (1.1024 - 1.1032 in)
  No. 2 to No. 5
  : 23.500 - 23.525 mm (0.9252 - 0.9262 in)



Calculation of Camshaft Journal Clearance
(Journal clearance) = (inner diameter of camshaft bracket) - (outer diameter of camshaft journal).

Standard

No. 1

: 0.045 - 0.086 mm (0.0018 - 0.0034 in)

No. 2 to No. 5

: 0.030 - 0.071 mm (0.0012 - 0.0028 in)

- If clearance exceeded the standard, replace the camshaft and/or the cylinder head. Refer to the standard values for each individual part.

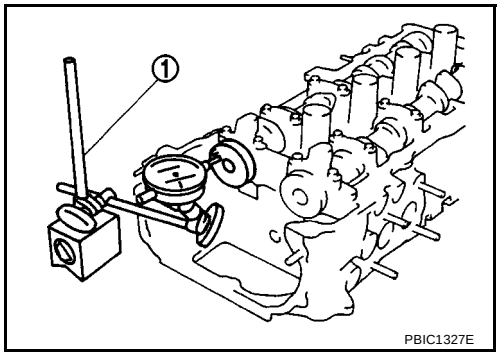
NOTE:
Since the camshaft brackets and the cylinder head are machined together, replacement must be done using the cylinder head assembly.

Camshaft End Play

- Set a dial gauge (1) to the camshaft front end in thrust direction. Move the camshaft back and forth (axially) and read indication on the gauge.

Standard : 0.070 - 0.143 mm (0.0028 - 0.0056 in)

- When out of the standard, replace with new camshaft and measure again.
- When out of the standard again, replace with new cylinder head.



Camshaft Sprocket Runout

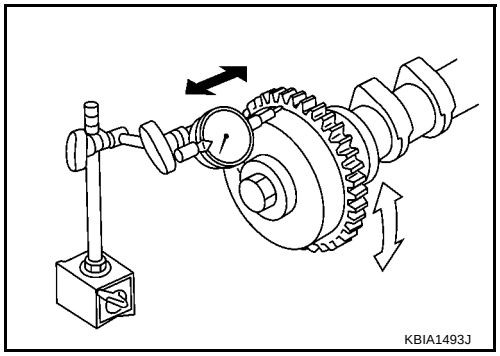
- Put V block on precise flat bed, and support No. 2 and No. 5 journal of camshaft.
- Using a dial gauge, measure camshaft sprocket runout.

Limit

Intake : 0.20 mm (0.0079 in)

Exhaust : 0.15 mm (0.0059 in)

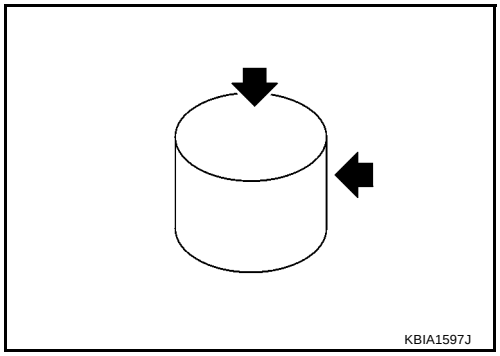
- If it exceeds the limit, replace camshaft sprocket.



Valve Lifter

Check for cracks and wear on valve lifter surface.

- If anything above is found, replace valve lifter.

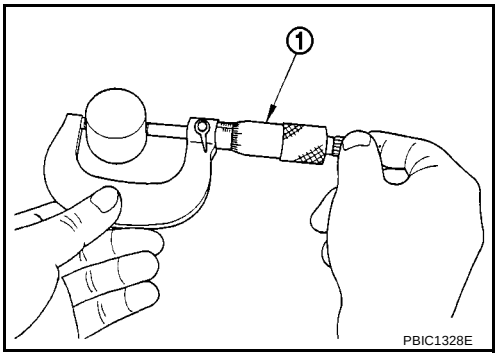


Valve Lifter Clearance

Outer Diameter of Valve Lifter

- Measure with a micrometer (1).

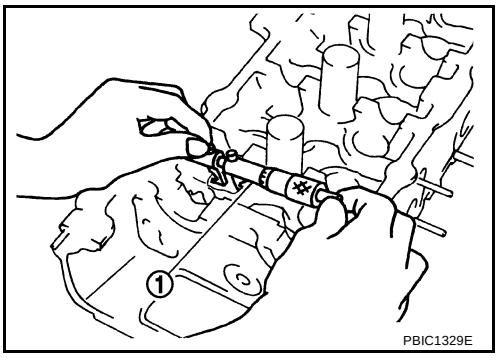
Standard : 29.960 - 29.975 mm(1.1795 - 1.1801 in) dia.



Valve Lifter Hole Diameter

- Using an inside micrometer (1), measure the valve lifter hole diameter in cylinder head.

Standard : 30.000 - 30.021 mm (1.1811 - 1.1819 in) dia.



Calculation of valve lifter clearance
(Valve lifter clearance) = (valve lifter hole diameter) - (outer diameter of valve lifter)

Standard : 0.025 - 0.061 mm (0.0010 - 0.0024 in)

- If clearance exceeded the standard, replace either one or both of valve lifter and cylinder head. Refer to the standard values for valve lifter outer diameter and hole diameter.

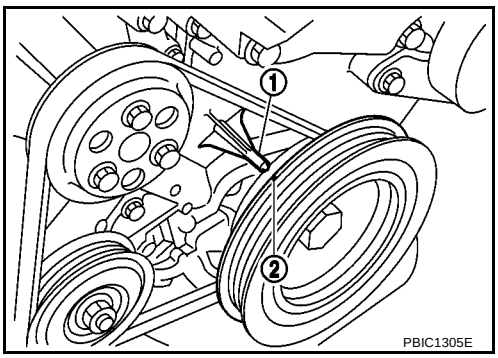
Valve Clearance

EBS00OEZ

INSPECTION

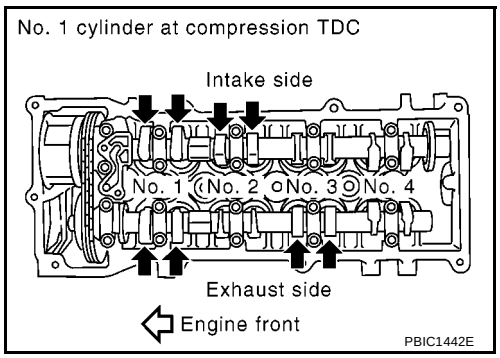
- Whenever the camshaft and valve related parts are removed and installed or replaced, or symptoms due to changes in valve clearance as a result of aging (poor starting, rough idle, unusual noise) are obvious, check valve clearance with the following procedure:

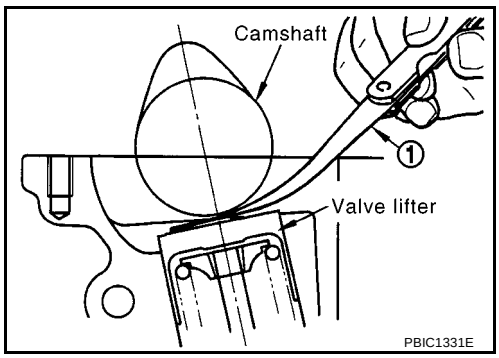
1. Warm up engine and stop it.
2. Remove the following parts.
   - RH front fender protector
   - Rocker cover; Refer to EM-33, "ROCKER COVER" .
3. Turn the crankshaft pulley clockwise as seen from the engine front, and match up the crankshaft pulley TDC mating mark (no color) (2) with the timing indicator (1) on the front cover.
4. When doing this, make sure both the intake and exhaust cam noses on cylinder No. 1 are facing outwards. (No. 1 cylinder at TDC of its compression stroke)
   - If they are not facing out, turn the crankshaft pulley further. It is OK to do step 6 first (checking when No. 4 cylinder at TDC of its compression stroke).



5. Referring to the figure, measure valve clearances of valves with × in table below using a feeler gauge (1).

Cylinder		No. 1	No. 2	No. 3	No. 4
No. 1 cylinder at TDC of its compression stroke.	INT	×	×		
	EXH	×		×	



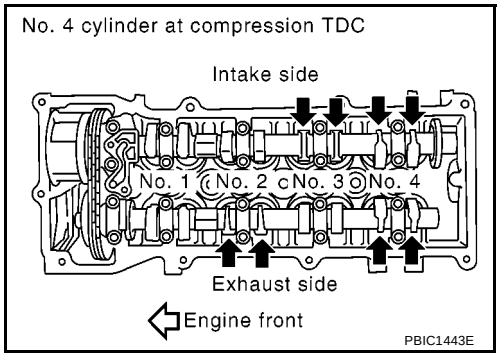


Valve clearance standard:

Hot	**Intake**	**: 0.314 - 0.426 mm (0.012 - 0.017 in)**
	Exhaust	**: 0.338 - 0.462 mm (0.013 - 0.018 in)**
Cold*	**Intake**	**: 0.29 - 0.37 mm (0.011 - 0.015 in)**
	Exhaust	**: 0.32 - 0.40 mm (0.013 - 0.016 in)**

***: Approximately 20°C (68°F) (Reference data)**
When adjusted for cold engine, the standard values for warm engine must be checked to see if they are correct, too.

6. Rotate crankshaft by 360° clockwise (when viewed from font) to align No. 4 cylinder at TDC of its compression stroke.
7. Referring to the figure, measure valve clearances of valves with × in table below.



Cylinder		No. 1	No. 2	No. 3	No. 4
No. 4 cylinder at TDC of its compression stroke.	INT			×	×
	EXH		×		×

8. Adjustment of places outside range of standard values is done as follows.

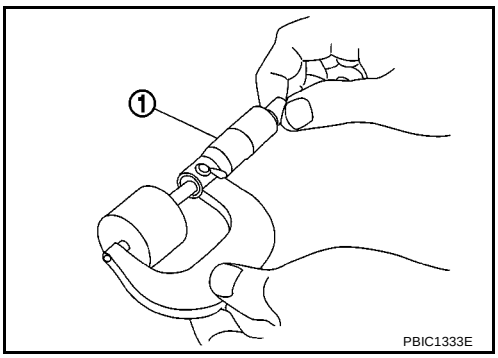
ADJUSTMENT

NOTE:

- The adjustment is made by selecting the thickness of the head of the valve lifter. (An adjuster shim is not used)
- The set thickness for the valve filter is measured at normal temperature, but any changes in dimension because of temperature differences maybe ignored. Accordingly, adjustment should use values for a warmed up engine (ready for inspection).

1. Remove camshaft. Refer to EM-36, "Removal and Installation" .
2. Remove the valve lifters for parts which are outside the range of standard values.

3. Using a micrometer (1), measure thickness of the removed valve lifter center part.



4. Measure the thickness of the valve lifter to be replaced using the following formula.

How to determine valve lifer thickness : $t = t_1 + (C_1 - C_2)$

t = Valve lifter thickness to be replaced

t_1 = Removed valve lifter thickness

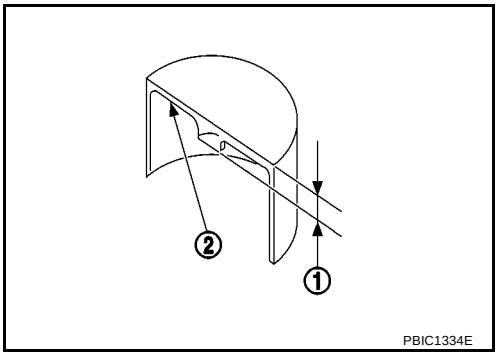
C_1 = Valve clearance measurement

C_2 = Standard valve clearance

Intake : 0.37 mm (0.015 in)

Exhaust : 0.40 mm (0.016 in)

- New valve lifter thickness (1) can be identified by stamp marks (2) on the reverse side (inside of cylindrical part).



Stamp mark	Valve lifter thickness
00	3.00 mm (0.1181 in)
02	3.02 mm (0.1189 in)
.	.
.	.
68	3.68 mm (0.1449 in)

- Valve lifter thickness settings: Thickness 3.00 - 3.68 mm (0.1181 - 0.1449 in) in 0.02 mm (0.0008 in) intervals and 35 types.

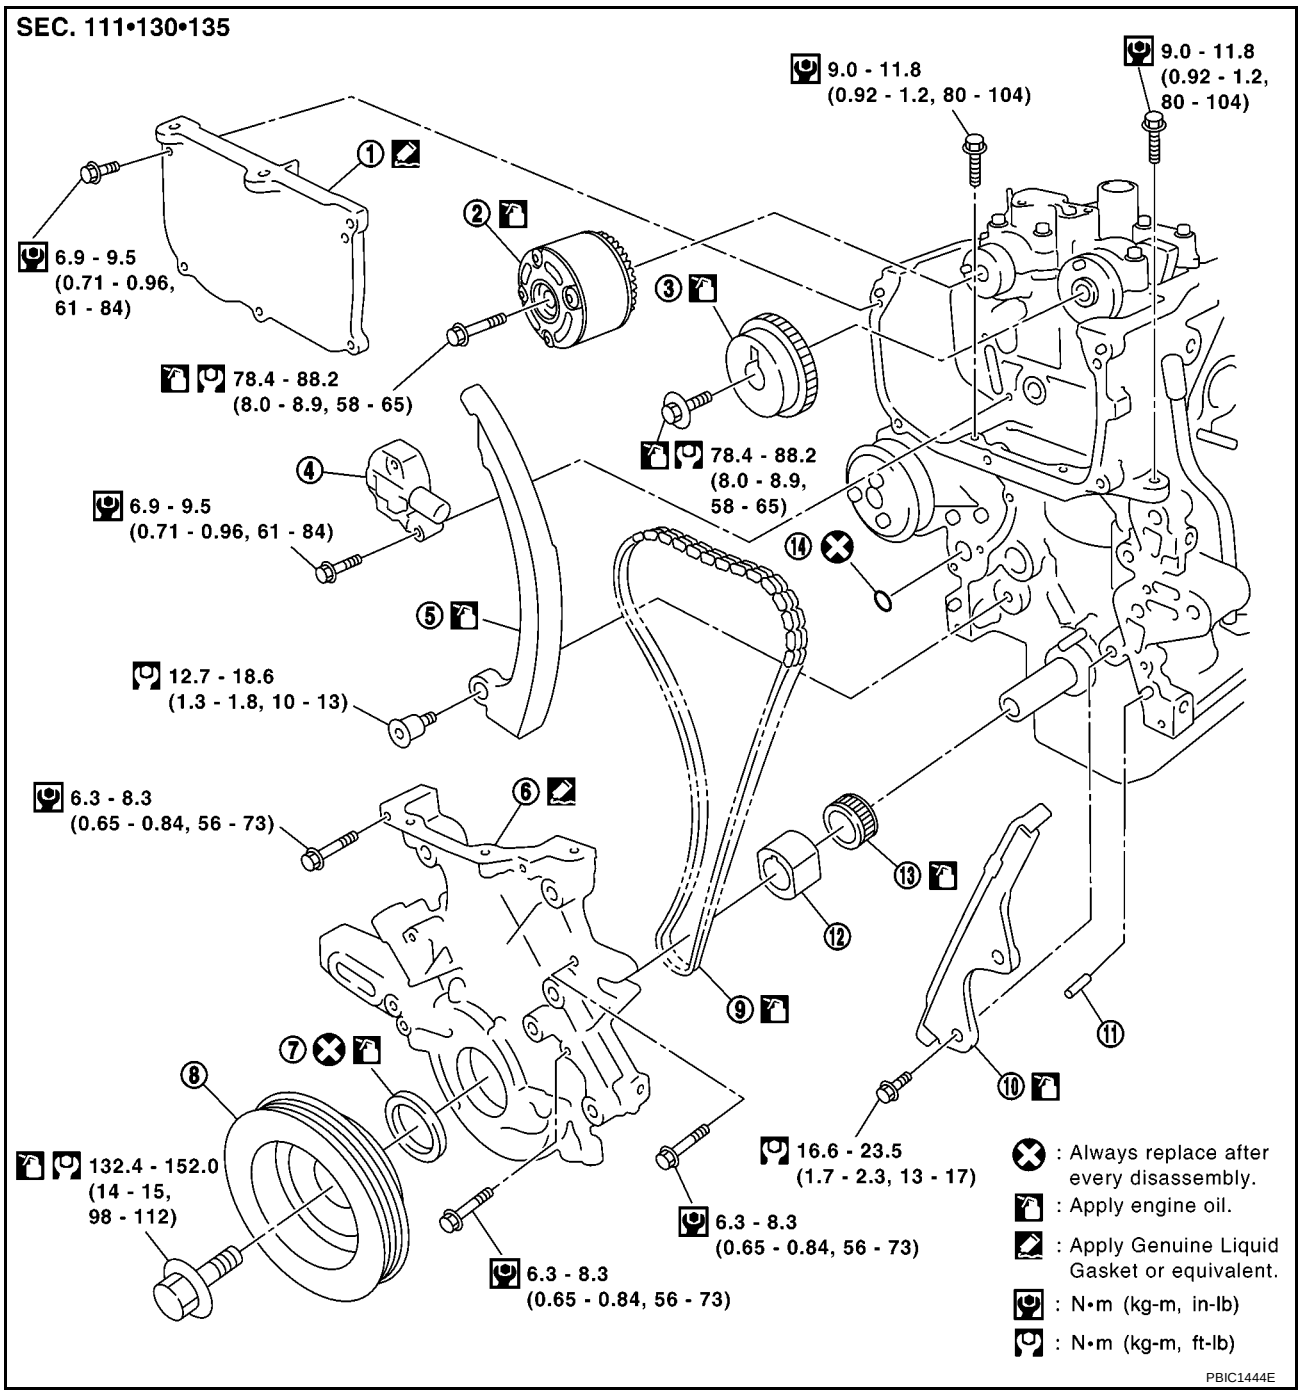
5. Install selected valve lifter.
6. Install camshaft. Refer to EM-36, "Removal and Installation" .
7. Manually turn crankshaft a few turns.
8. Make sure that the valve clearance is within the standard using the reference value when engine is cold.
9. After restoring, make sure the valve clearance is within the range of standard values with the engine warmed up.

TIMING CHAIN

PFP:13028

Removal and Installation

EBS00OF0



1. Cylinder head front cover
2. Camshaft sprocket (intake)
3. Camshaft sprocket (exhaust)
4. Chain tensioner
5. Slack guide
6. Front cover
7. Front oil seal
8. Crankshaft pulley
9. Timing chain
10. Tension guide
11. Dowel pin
12. Oil pump drive spacer
13. Crankshaft sprocket
14. O-ring

REMOVAL

Operation Description

M/T models

1.Remove engine and transaxle assembly from the vehicle. Refer to EM-69, "Removal and Installation" .

2.Separate engine from transaxle. Refer to EM-69, "Removal and Installation" .

3.Remove parts remaining in step 3 and proceed to step 5.

A/T models

: Start from step 1 with the engine mounted in the vehicle.

NOTE:

The reason for doing work with the engine by itself for M/T models is stated below.

- It is necessary to remove the transaxle when removing and installing the oil pan (upper).
- For this reason, the entirety of the supporting engine mount disappears when removing and installing the front cover.

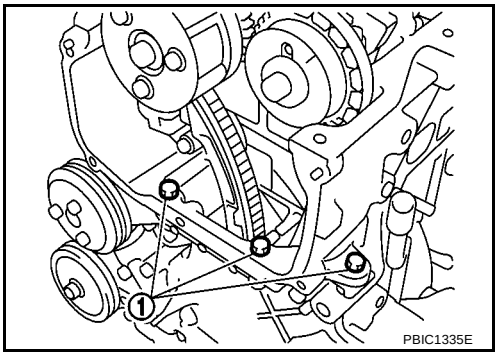
1. Remove RH front wheel and RH front fender protector.
2. Drain the engine oil.
3. Remove the following parts.
   - Drive belts and drive belt idler pulleys; Refer to EM-12, "DRIVE BELTS" .
   - Rocker cover; Refer to EM-33, "ROCKER COVER" .
   - Exhaust front tube; Refer to EX-3, "EXHAUST SYSTEM" .
   - Starter motor; Refer to SC-39, "STARTING SYSTEM" .
   - Oil pan (lower and upper) and oil strainer; Refer to EM-24, "OIL PAN AND OIL STRAINER" .
   - RH headlamp; Refer to LT-6, "HEADLAMP -CONVENTIONAL TYPE-" .
4. Using the following procedure, remove the RH engine mount stay and the RH engine mount brackets (upper and lower).

a. The engine should be immobilized using any one of the following methods.
   - Mount engine slingers and hook with hoist. Refer to EM-69, "Removal and Installation" .
   - Support the transaxle bottom with a jack stand, etc.

   CAUTION:
   Make sure the transaxle is not scratched while the bottom is being supported.

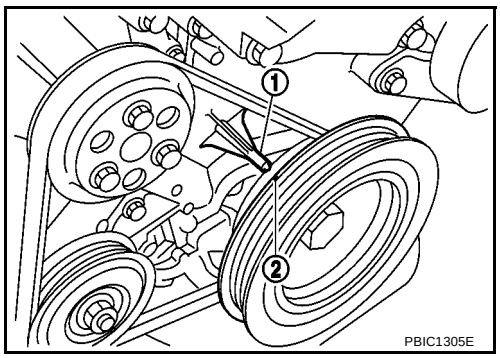
b. Remove RH engine mount stay and RH engine mount bracket (upper and lower). Refer to EM-69, "Removal and Installation" .

5. Remove alternator. Refer to SC-15, "CHARGING SYSTEM" .
6. Remove cylinder head front cover. Refer to EM-36, "CAMSHAFT" .
7. Remove the cylinder head auxiliary bolts (1).



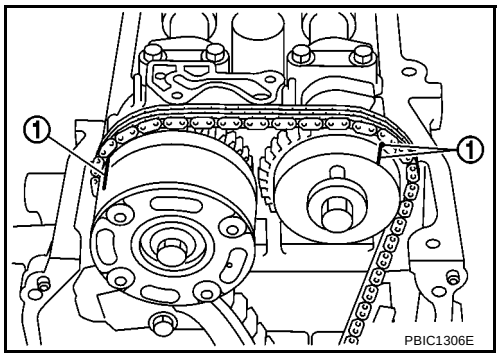
8. Set No. 1 cylinder at TDC on its compression stroke.

a. Turn the crankshaft pulley clockwise as seen from the engine front, and match up the crankshaft pulley TDC mating mark (no color) (2) with the timing indicator (1) on the front cover.



b. Confirm mating marks (1) stamped on intake and exhaust sprockets are rotated as shown.

- If there is no position mark in the figure, turn the crankshaft pulley once more to position them as in the figure.



9. Remove the crankshaft pulley in the following order.

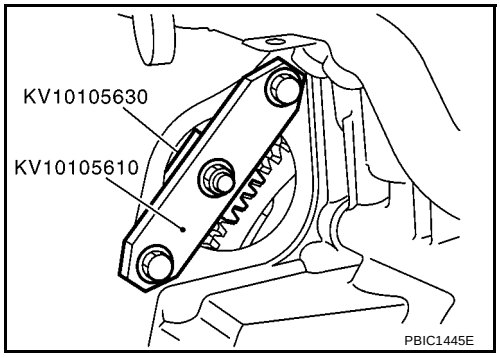
a. Using the starter motor mounting hole, attach a ring gear stopper (special service tool) and secure the crankshaft.

- You can also secure the crankshaft counterweight using hammer handle, etc., after removing the oil pan (upper). Make sure no foreign matter gets inside the engine.

b. Loosen crankshaft bolt and pull it out.

CAUTION:

Do not remove the mounting bolts as they will be used as a supporting point for the pulley puller.

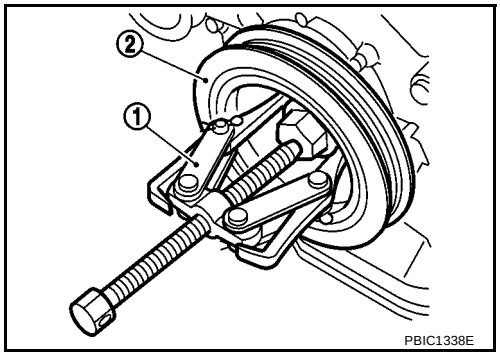


c. Place the crankshaft pulley puller (1) tab on the crank pulley hole, and pull the crankshaft pulley (2) through.

CAUTION:

Do not put the pulley tab on the crank pulley wide-diameter pulley, as this will damage the internal dampers.

10. Remove the idler pulley bracket assembly for drive belts from the front cover. Refer to EM-12, "DRIVE BELTS" .



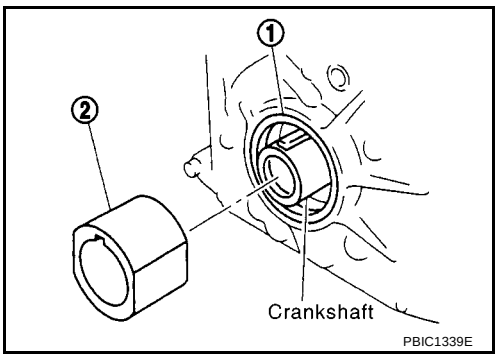
11. Remove the front cover in the following order.

a. To give more freedom to the front cover position during installation and removal, pull out the oil pump drive spacer (2) over the front oil seal (1).

- Pull out straight, using long nosed pliers or two screwdrivers, etc.

CAUTION:

Be careful not to damage oil pump drive spacer surface.

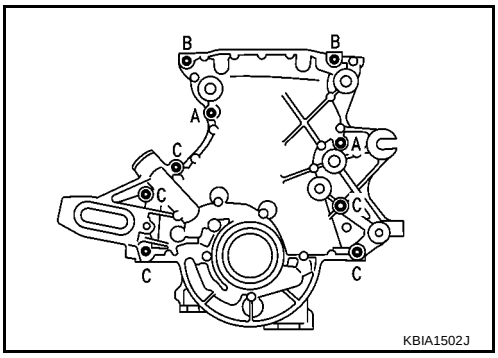


b. Remove front cover carefully.

- Remove bolts A to C shown in the figure.

CAUTION:

- **To prevent the front of the cylinder head gasket from getting bent or damaged, remove so that it comes apart cleanly from the front cover top and the gasket bottom.**
- **Replace the cylinder head gasket with a new one if it is damaged.**



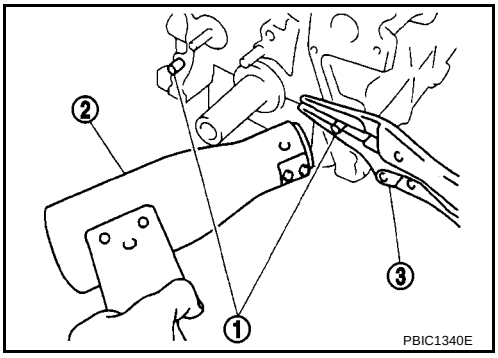
c. Remove O-ring from the cylinder block.

12. Remove the front cover dowel pins (1) from the cylinder block.

- After warming with an industrial drier (2), use locking pliers (3) to pull out the dowel pins.

NOTE:

This step is in preparation for installing the front cover. If the timing chain is to be removed, it can be done later.



13. Remove the front oil seal from the front cover.

- Insert a screwdriver behind the oil seal and pull up to remove.

14. Secure the intake camshaft sprocket in the most advanced position. Refer to EM-36, "CAMSHAFT" .

NOTE:

The following steps are for removing the timing chain and other related parts.

15. Remove chain tensioner. Refer to EM-36, "CAMSHAFT" .

16. Remove camshaft sprocket. Refer to EM-36, "CAMSHAFT" .

NOTE:

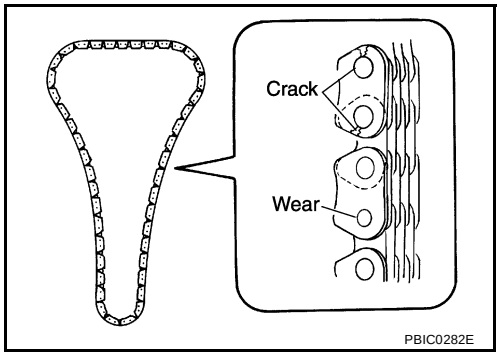
No markings are needed between the camshaft sprocket and timing chain.

17. Remove timing chain, the timing chain slack guide, and the tension guide.

18. Remove the crankshaft sprocket.

INSPECTION AFTER REMOVAL

Make sure there are no noticeable cracks or wear on the timing chain, and replace if there are.



INSTALLATION

CAUTION:

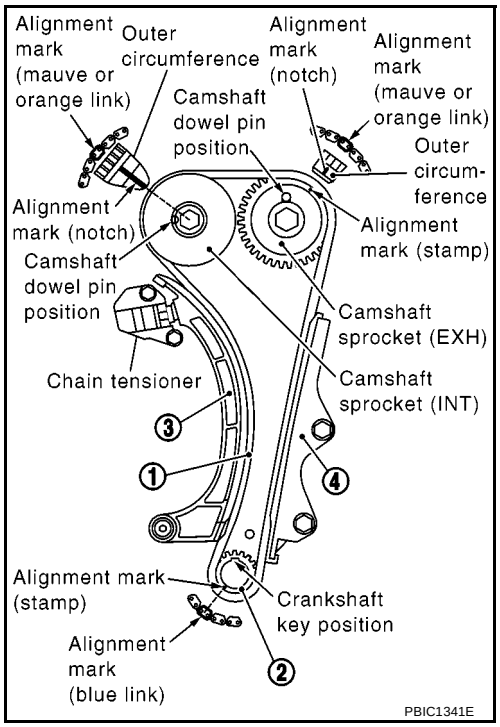
- **Completely remove liquid gasket attached to mounting surfaces using a scraper, and clean off with white gasoline.**
- **After installation, wipe off any extra liquid gasket.**

1. Install the timing chain and related parts in the following steps.
   - See the figure for positions sprockets, timing chain (1), and installation of other parts.
   - Attach each sprocket with its mating mark towards the engine front.

a. Install timing chain and crankshaft sprocket (2).
   - You can make sure the No. 1 cylinder is at the TDC of its compression stroke by checking if the crankshaft key is straight up.
   - Place the timing chain on the front of the camshaft to make sure it does not fall.

b. Install timing chain slack guide (3) and the tension guide (4).

c. Install camshaft sprockets. Refer to EM-36, "CAMSHAFT" .
   - Align the mating marks on camshaft sprocket and timing chain here.



d. Install chain tensioner. Refer to EM-36, "CAMSHAFT" .

e. Check again to make sure all the mating marks are in place.

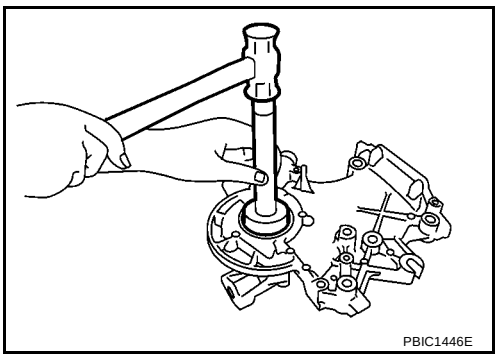
f. Temporarily install the oil pump drive spacer, the crankshaft pulley, and the crankshaft pulley bolt, and make it so that the crankshaft can be turned.

g. Turn the crankshaft clockwise viewing from engine front. Place intake side camshaft in the most retarded position. Refer to EM-36, "CAMSHAFT" .

h. Turn the crankshaft a few more times clockwise and make sure nothing is wrong with it.

i. Remove the parts installed in step f.

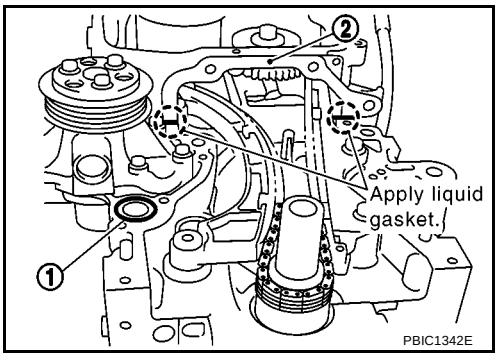
2. Install front oil seal to front cover.
   - Make sure the oil seal lettering is towards the engine front.
   - Using suitable drift, press oil seal in until it is flush with end surface of mounting position.
   - Do this without damaging the outer diameter of the oil seal.



3. Install the front cover with the following procedure:

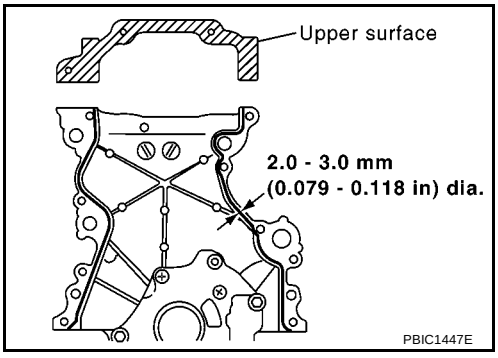
a. Install O-ring (1) to the cylinder block.

b. Apply liquid gasket to the contact area between the bottom of the cylinder head gasket (2) and the cylinder block (two places in the figure) using a screwdriver.
Use Genuine Liquid Gasket or equivalent.



c. Evenly apply the liquid gasket to the back of the front cover as per the position in the figure.

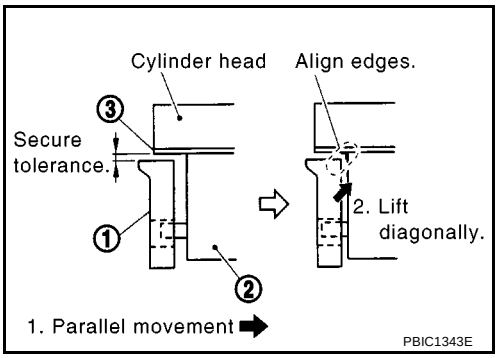
d. Apply a thin, even layer of liquid gasket to the entire upper surface of the front cover.
Use Genuine Liquid Gasket or equivalent.



e. With the inner rotor internal diameter part of the oil pump resting on the top of the crankshaft [with a space between the top of the front cover and the bottom of the cylinder head gasket (3)], bring the front cover (1) as close as possible to the cylinder block. (To the left in the figure)

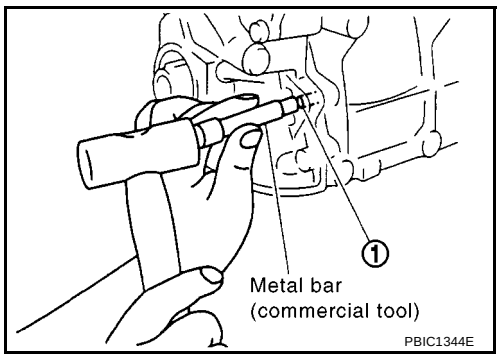
f. To make sure the front cover comes into contact with the cylinder head gasket (3) bottom and the cylinder block (2) front at the same time, lift it diagonally and set it in the mounting position. (To the right in the figure)

CAUTION:
- **Be careful not to damage the cylinder head gasket (3).**
- **Attach using caution not to let the liquid gasket get cut off by getting attached to unnecessary parts.**



g. Temporarily secure the front cover so it does not move using several bolts.

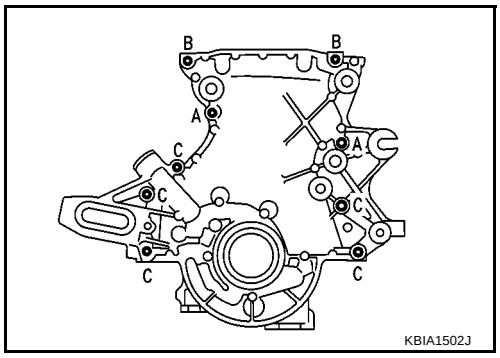
h. Press fit dowel pins (1) to the cylinder block through the front cover.



i. Temporarily tighten the front cover bolts.
- A [Under head length: 25 mm (0.98 in)], B [Under head length: 40 mm (1.57 in)], C [Under head length: 50 mm (1.97 in)]

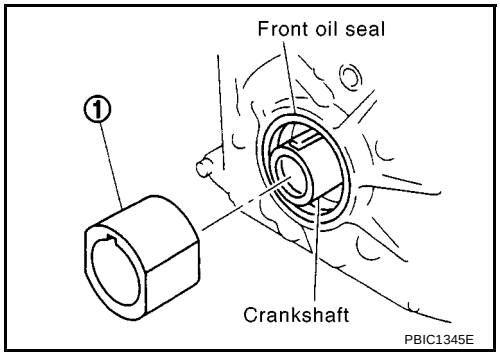
j. Temporarily tighten the cylinder head auxiliary bolts.

k. Tighten front cover bolts and the cylinder head auxiliary bolts to the specified torque.



4. Install oil pump drive spacer (1).
- When installing, align with flat face of oil pump inner rotor.
- If they are not aligned properly, turn the inner rotor with a screwdriver until they do.

CAUTION:
Be careful not to damage the oil seal lip.

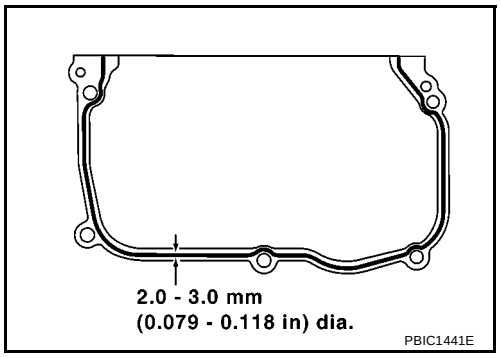


5. Install the drive belt idler pulley bracket assembly. Refer to EM-12, "DRIVE BELTS" .
6. Install crankshaft pulley.
- When installing, make sure the front oil seal lip does not fold back and the garter spring of oil seal lip does not fall.
- Secure the crankshaft as in “REMOVAL” and tighten the bolts.

CAUTION:
The bolt seats have a special lubricant applied in order to stabilize torque, so do not wipe off or apply oil.

7. Install the cylinder head front cover.
- Evenly apply the liquid gasket to the position shown in figure. Use Genuine Liquid Gasket or equivalent

8. Install RH engine mount bracket and RH engine mount stay. Refer toEM-69, "Removal and Installation" .
9. Reinstall removed parts in reverse order of removal.



INSPECTION AFTER INSTALLATION

- In order to allow liquid gasket to be cured, perform inspection at least 30 minutes after the last step in which parts sealed with liquid gasket are installed.
- With engine warmed up, check each part for engine oil leakage.

OIL SEAL

PFP:12279

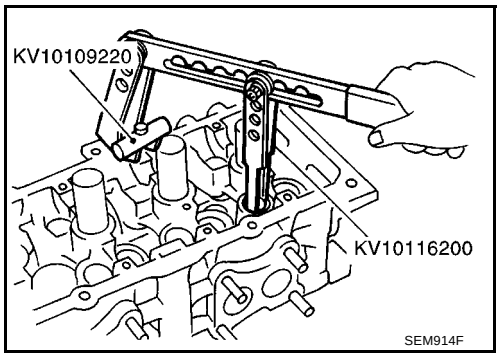
Removal and Installation of Valve Oil Seal

EBS00OF1

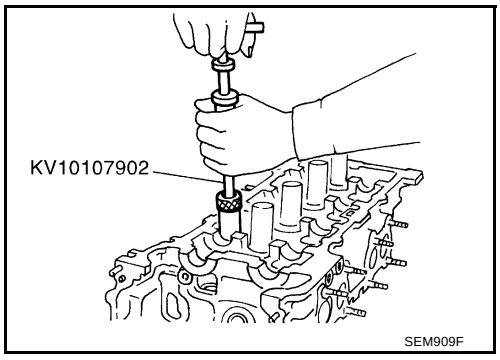
REMOVAL

1. Remove camshaft. Refer to EM-36, "CAMSHAFT" .
2. Remove valve lifter. Refer to EM-36, "CAMSHAFT" .
3. Turn the crankshaft, put the cylinder to have the oil seal removed in the TDC position to prevent the valve from falling into the cylinder.

   CAUTION:
   When rotating the crankshaft, make sure the timing chain does not get caught in the front cover.
4. Using a valve spring compressor (special service tool), remove the valve collet, valve spring retainer, and valve spring.

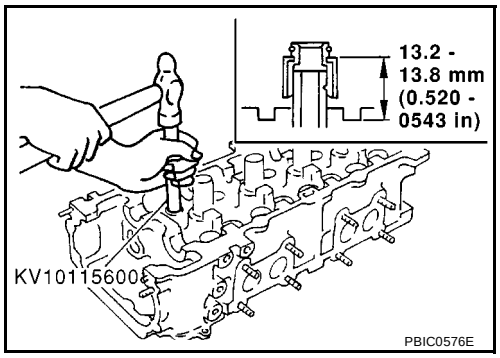


5. Using a valve oil seal puller (special service tool), remove the valve oil seal.



INSTALLATION

1. Apply engine oil to the new valve oil seal joint and seal lip.
2. Using a valve oil seal drift (special service tool), press fit the valve oil seal to the height shown in the figure.
3. Reinstall removed parts in reverse order of removal.



Removal and Installation of Front Oil Seal

EBS00OF2

REMOVAL

1. Remove the following parts.
   - RH front fender protector
   - Drive belt; Refer to EM-12, "DRIVE BELTS" .
   - Crankshaft pulley; Refer to EM-48, "TIMING CHAIN" .
2. Using a screwdriver, remove the front oil seal.

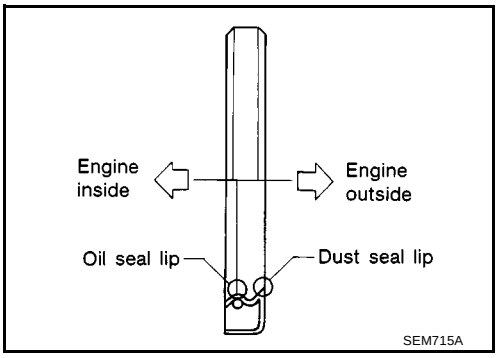
   CAUTION:
   Be careful not to damage the front cover or the crankshaft.

INSTALLATION

1. Apply engine oil to the new front oil seal joint and seal lip.
2. Using a suitable drift (1), press fit until the front end of front oil seal is level with the mounting surface.
   - Suitable drift (1) : outer diameter 50 mm (1.97 in), inner diameter 44 mm (1.73 in).

   CAUTION:
   - **Be careful not to damage the front cover or the crankshaft.**
   - **Press in straight, making sure the oil seal does not curl or tilt.**

   - See the figure for the direction the front oil seal should be fitted.



3. Reinstall removed parts in reverse order of removal.

Removal and Installation of Rear Oil Seal

EBS00OF3

REMOVAL

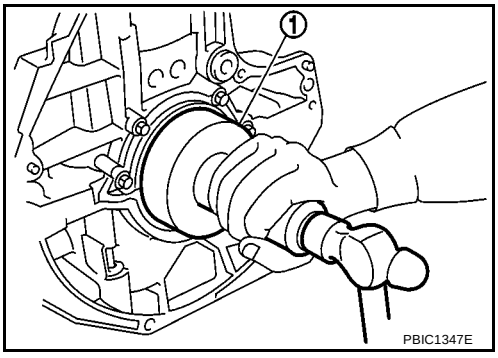
1. Remove transaxle assembly.
   - M/T: Refer to MT-7, "REMOVAL AND INSTALLATION" .
   - A/T: Refer to AT-430, "REMOVAL AND INSTALLATION" .
2. Remove clutch cover and clutch disc. (M/T models) Refer to CL-10, "CLUTCH DISC, CLUTCH COVER AND FLYWHEEL" .
3. Remove flywheel (M/T models), drive plate and adopter (A/T models). Refer to EM-73, "CYLINDER BLOCK" .
4. Using a screwdriver, remove the rear oil seal.

   CAUTION:
   Be careful not to damage the mounting surface.

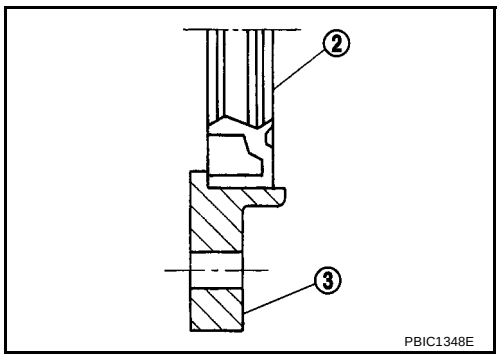
INSTALLATION

1. Using a suitable drift (1), press fit until the rear end of front oil seal is level with the mounting surface.
   - Suitable drift (1): outer diameter 102 mm (4.02 in), inner diameter 90 mm (3.54 in).

   CAUTION:
   - **Do not touch the grease applied to the oil seal lip.**
   - **Be careful not to damage the rear oil seal retainer or the crankshaft.**
   - **Press in straight, making sure the oil seal does not curl or tilt.**



- **Press rear oil seal (2) into rear oil seal retainer (3) so that it does not project from the end.**



2. Reinstall removed parts in reverse order of removal.

CYLINDER HEAD

PFP:11041

On Vehicle Inspection

EBS00OF4

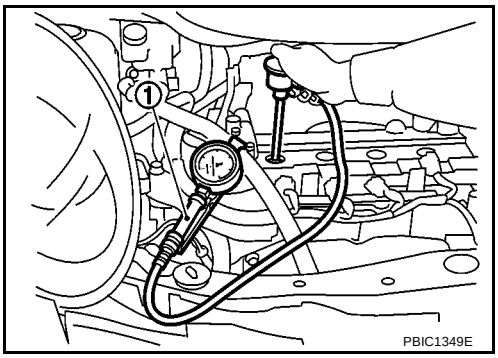
COMPRESSION PRESSURE INSPECTION

1. Warm up engine thoroughly. Then, stop it.
2. Release fuel pressure with the following procedure.

a. Remove rear seat assembly.
b. Open the inspection hole cover.
c. Disconnect fuel level sensor unit, fuel filter, and fuel pump assembly connector, and start engine. Refer to FL-4, "FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY" .
d. After you stop the engine, crank it two or three times to consume the fuel in the pipes.

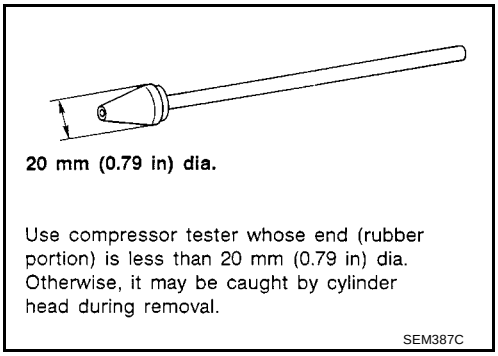
CAUTION:
After release the fuel pressure and until the compression pressure inspection, leave the harness connector off.

3. Remove ignition coil and spark plug from all the cylinders. Refer to EM-27, "IGNITION COIL" and EM-28, "SPARK PLUG (PLATINUM-TIPPED TYPE)" .
4. Attach a engine tachometer (not required in use of CONSULT-II).
5. Install compression tester (1) with adapter onto spark plug hole.



- Use compression tester whose picking up end inserted to spark plug hole is smaller than 20 mm (0.79 in) in diameter. Otherwise, it may be caught by cylinder head during removal.

6. With accelerator pedal fully depressed, turn ignition switch to “START” for cranking. When the gauge pointer stabilizes, read the compression pressure and engine rpm. Perform these steps to check each cylinder.



[kPa (bar, kg/cm^2 , psi)/350rpm]

Engine type	CR10DE	CR12DE, CR14DE
Standard	1,432 (14.32, 14.6, 208)	1,383 (13.83, 14.1, 201)
Minimum	1,236 (12.36, 12.6, 179)	1,187 (11.87, 12.1, 172)
Difference limit among cylinders	98 (0.98, 1.0, 14)	98 (0.98, 1.0, 14)

CAUTION:
Always use a fully charged battery to obtain specified engine speed.

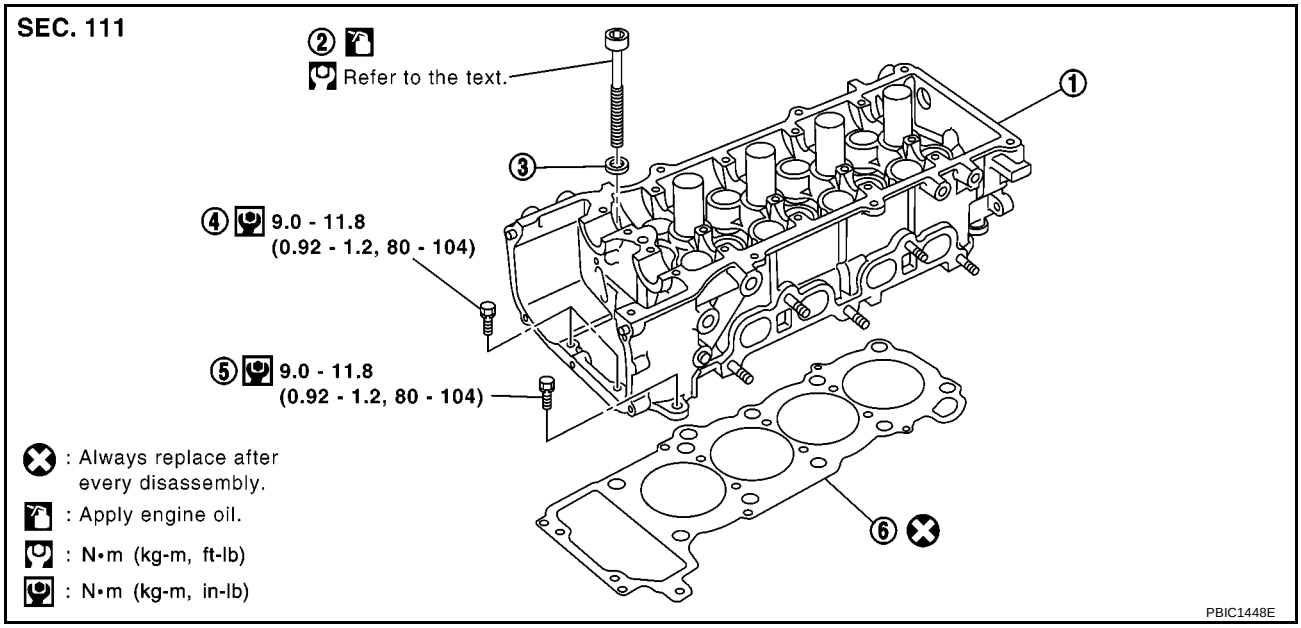
- If the engine speed is out of specified range, check battery liquid for proper gravity. Check engine speed again with normal battery gravity.
- If compression pressure is below minimum value, check valve clearances and parts associated with combustion chamber (Valve, valve seat, piston, piston ring, cylinder bore, cylinder head, cylinder head gasket). After the checking, measure compression pressure again.
- If some cylinders have low compression pressure, pour small amount of engine oil into the spark plug hole of the cylinder to re-check it for compression.
  - If the added engine oil improves the compression, the piston rings may be worn out or damaged. Check the piston rings and replace if necessary.

- If the compression pressure remains at low level despite the addition of engine oil, the valves may be malfunctioning. Check the valves for damage. Replace the valve or valve seat accordingly.
- If two adjacent cylinders have respectively low compression pressure and their compression remains low even after the addition of engine oil, the gasket is leaking. In such a case, replace the cylinder head gasket.

7. After inspection, install removed parts in reverse order of removal.

Removal and Installation

EBS00OF5



1. Cylinder head assembly
2. Cylinder head bolt
3. Washer
4. Cylinder head auxiliary bolt
5. Cylinder head auxiliary bolt
6. Gasket

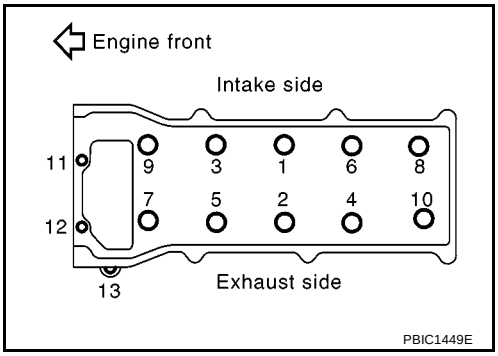
REMOVAL

1. Release the fuel pressure. Refer to EC-44, "FUEL PRESSURE RELEASE" (WITH EURO-OBD), EC-505, "FUEL PRESSURE RELEASE" (WITHOUT EURO-OBD).
2. Drain engine coolant. Refer to CO-8, "ENGINE COOLANT" .
3. Remove the following components and related parts.
   - RH front fender protector
   - Alternator and A/C compressor drive belt; Refer to EM-12, "DRIVE BELTS" .
   - Air duct and air cleaner case assembly; Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
   - Intake manifold; Refer to EM-20, "INTAKE MANIFOLD" .
   - Fuel injector and fuel tube assembly; Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .
   - Radiator upper hose and lower hose; Refer to CO-11, "RADIATOR" .
   - Alternator and alternator bracket; Refer to SC-15, "CHARGING SYSTEM" .
   - Exhaust manifold and three way catalyst assembly; Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .
   - Ignition coil; Refer to EM-27, "IGNITION COIL" .
   - Rocker cover; Refer to EM-33, "ROCKER COVER" .
   - Camshaft; Refer to EM-36, "CAMSHAFT" .

     CAUTION:
     For the method for maintaining engine position, select the method which supports the bottom of the oil pan.
   - Heated oxygen sensor harness bracket; Refer to EM-22, "EXHAUST MANIFOLD AND THREE WAY CATALYST" .
   - Water outlet, thermostat, engine coolant temperature sensor and heater pipe; Refer to CO-23, "THERMOSTAT" .

- Water suction pipe mounting bolt; Refer to CO-21, "WATER PUMP" .

4. Loosen bolts in the reverse order shown in the figure and then remove the cylinder head assembly.
5. Remove cylinder head gasket.



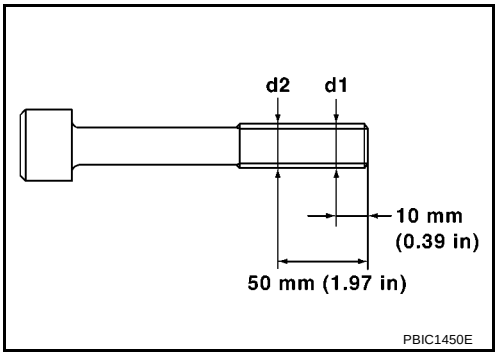
INSPECTION AFTER REMOVAL

Cylinder Head Bolt Outer Diameter

- Cylinder head bolts are tightened by plastic zone tightening method. Whenever the size difference between d1 and d2 exceeds the limit, replace them with new one.

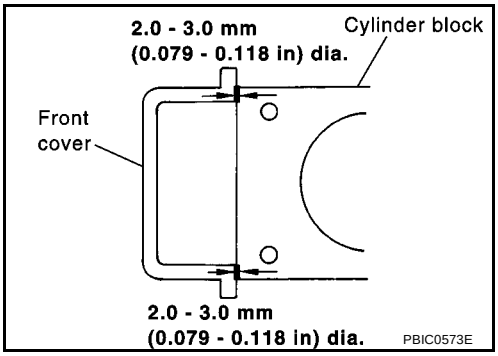
  Limit (d1 - d2) : 0.12 mm (0.0047 in)

- If reduction of outer diameter appears in a position other than d2, use it as d2 point.



INSTALLATION

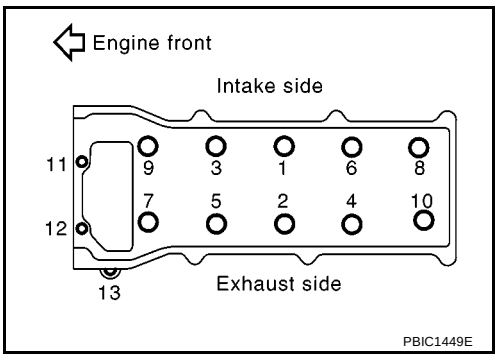
1. Evenly apply the liquid gasket to the position in the figure and then install the cylinder head gasket.
   Use Genuine Liquid Gasket or equivalent.



2. Attach the cylinder head assembly and then tighten bolts 1 to 10 in the order shown in the figure.

   CAUTION:
   For step c, loosen them in reverse of the order in the figure.

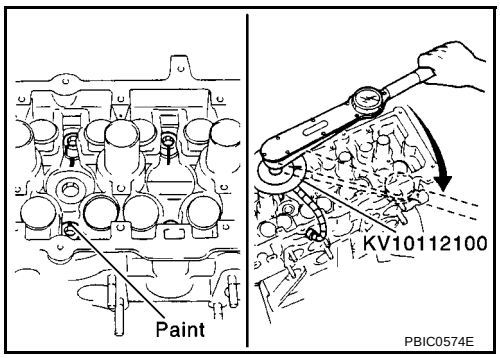
   NOTE:
   Bolts 11 to 13 should be tightened in step 3 after tightening bolts 1 to 10.



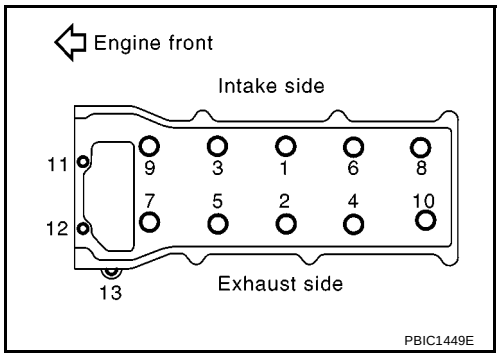
a. Apply new engine oil to threads and seat surfaces of bolts.
b. Tighten at 61.7 - 71.7 N·m (6.3 - 7.3 kg-m, 46 - 52 ft-lb).
c. Loosen completely to 0 N·m (0 kg-m).
d. Tighten at 22.5 - 32.5 N·m (2.3 - 3.3 kg-m, 17 - 23 ft-lb).
e. Tighten with 90 - 95 degrees clockwise [Target: 90 degrees]. (Angle tightening)

   CAUTION:
   Check and confirm the tightening angle by using angle wrench (special service tool). Avoid judgment by visual inspection without the tool.

- Check tightening angle indicated on the angle wrench indicator plate.



3. Tighten auxiliary bolts (11 to 13) in the numerical order shown in the figure.

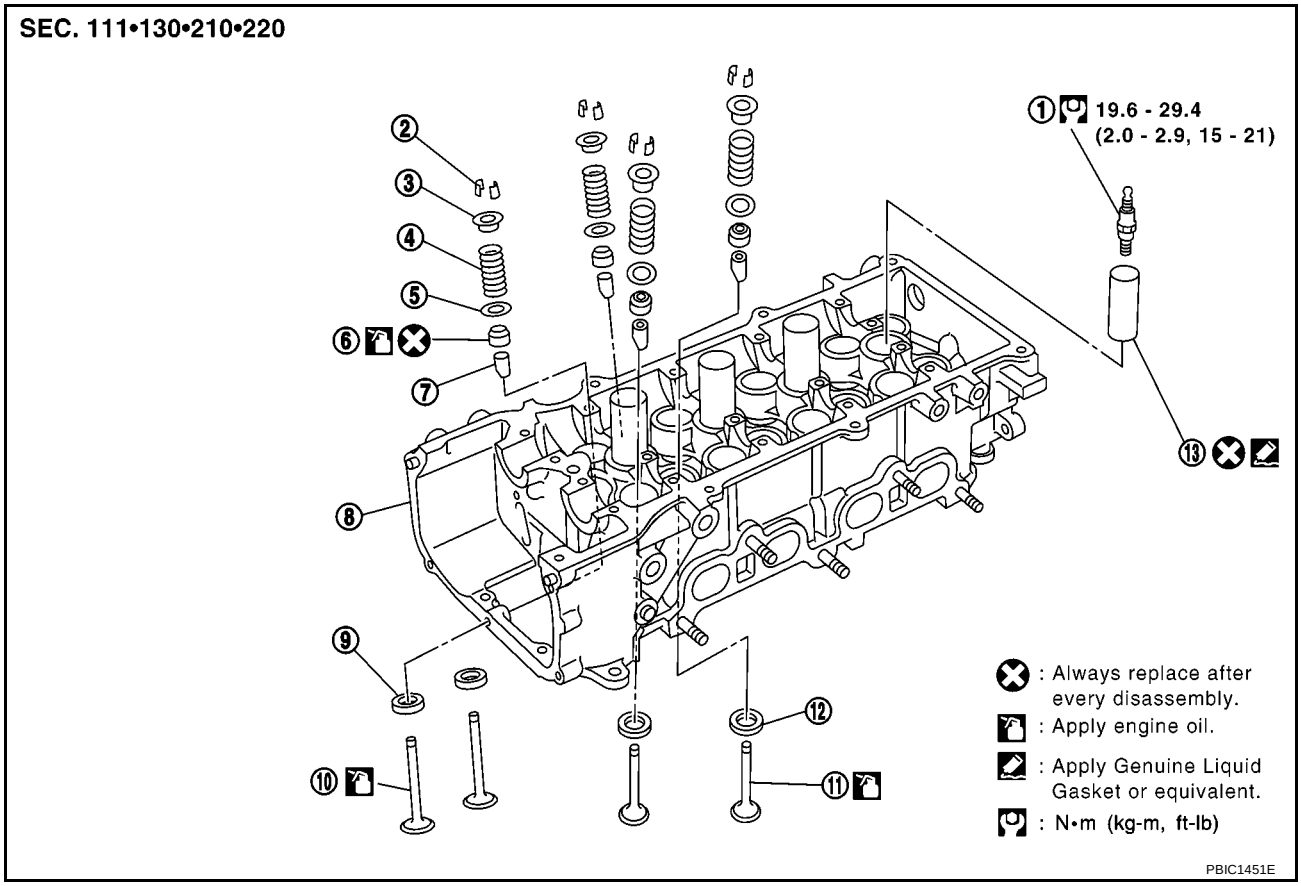


4. Reinstall removed parts in reverse order of removal.

Disassembly and Assembly

EBS00OF6

SEC. 111•130•210•220



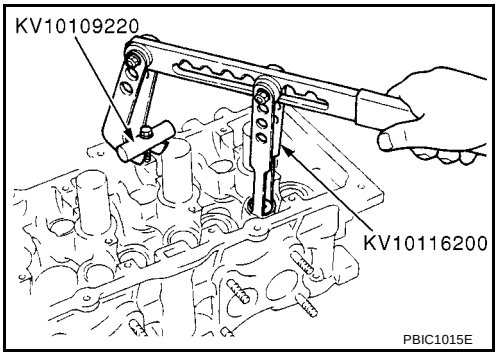
1. Spark plug
2. Valve collet
3. Valve spring retainer
4. Valve spring
5. Valve spring seat
6. Valve oil seal
7. Valve guide
8. Cylinder head
9. Valve seat (INT)

10. Valve (INT)
11. Valve (EXH)
12. Valve seat (EXH)
13. Spark plug tube

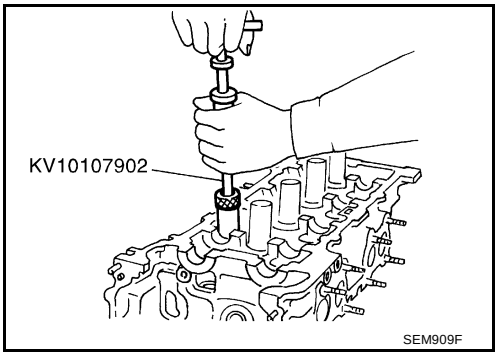
DISASSEMBLY

1. Remove spark plugs with a spark plug wrench.
2. Remove valve lifter.
   - Mark position on valve lifter for assembly.
3. Remove valve collet.
   - Compress the valve spring with a valve spring compressor (special service tool). Remove valve collet with a magnetic driver.

   CAUTION:
   When working, take care not to damage valve lifter holes.



4. Remove valve spring retainer and valve spring.
5. Push the valve stem toward the combustion chamber side and remove the valve.
   - Before removal, check valve guide clearance. Refer to EM-65, "Valve Guide Clearance" .
   - Mark position on valve for assembly.
6. Remove valve oil seal.
   - Use valve oil seal puller (special service tool).

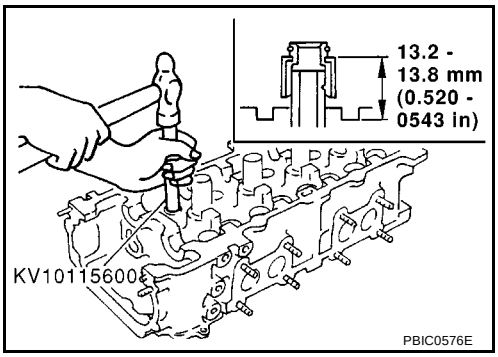


7. Remove valve spring seat.
8. When valve seat replacement is necessary, refer to EM-66, "Replacement of Valve Seat" .
9. When valve guide replacement is necessary, refer to EM-65, "Valve Guide Replacement" .
10. Remove spark plug tube, as necessary.
    - Using a pair of pliers, pull spark plug tube out of cylinder head.

    CAUTION:
    - **Take care not to damage cylinder head.**
    - **Once removed, a spark plug tube will be deformed and cannot be reused. Do not remove it unless absolutely necessary.**

ASSEMBLY

1. Install valve guide. Refer to EM-65, "Valve Guide Replacement" .
2. Install valve seat. Refer to EM-66, "Replacement of Valve Seat" .
3. Install valve oil seal.
   - Using a valve oil seal drift (special service tool), install to the dimensions specified in the figure.

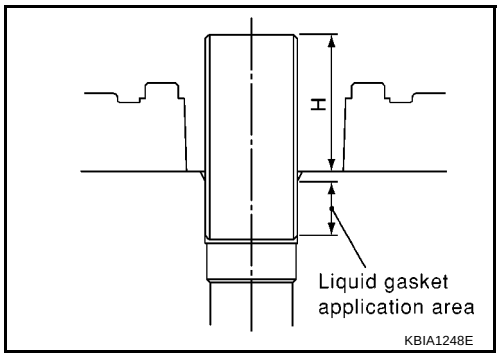


4. Install valve spring seat.
5. Install valve.
   - Valves of larger diameter are for intake side.
6. Install valve spring.
7. Install valve spring retainer.
8. Install valve collet.
   - Use a valve spring compressor (special service tool) to compress the valve spring, then install collet with a magnetic finger.

- After installing valve component parts, tap valve stem tip with a plastic hammer to assure a proper fit.

9. Install valve lifter.
   - Install it in its original positions.
10. Install spark plug tube.
   - Press-fit into cylinder head in the following order.

a. Remove the old liquid gasket which has become attached to the cylinder head mounting hole.
b. Apply the liquid gasket to the area around the spark plug tube press-fit.
   - Use Genuine Liquid Gasket or equivalent.
c. Using a drift, press-fit spark plug tube so that its height “H” is as specified in the figure.



Standard press-fit height “H”

: 41.0 - 42.0 mm (1.614 - 1.654 in)

CAUTION:
- **Press-fit, making sure not to deform the spark plug tube.**
- **After press-fitting, wipe off liquid gasket protruding onto cylinder head upper face.**

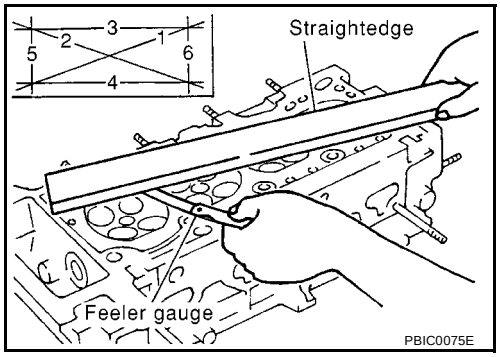
11. Install spark plug.
   - Use a spark plug wrench.

INSPECTION AFTER DISASSEMBLY

Cylinder Head Distortion

1. Using a scraper, wipe off oil, scale, gasket, sealant, and carbon deposits from surface of cylinder head.

   CAUTION:
   Do not allow gasket fragments to enter oil or engine coolant passages.
2. Check flatness of the cylinder head lower surface. Measure distortion in six directions shown in figure, at several points in each direction.

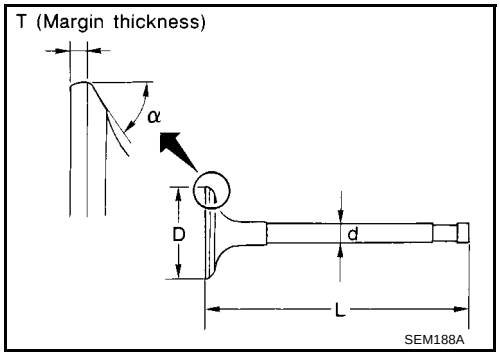


Limit : 0.1 mm (0.004 in)

- if it exceeds the limit, replace the cylinder head.

Valve Dimensions

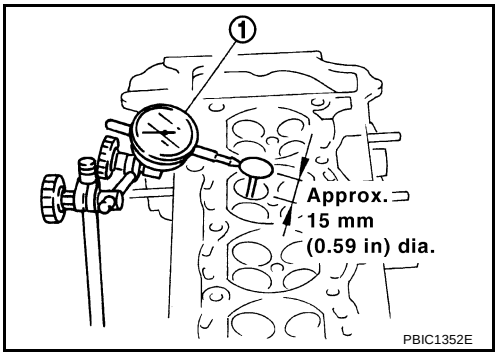
- Check dimensions of each valve. For dimensions, refer to EM-95, "VALVE" .
- If dimensions are out of the standard, replace valve.



Valve Guide Clearance

Check valve guide clearance before removing the valve guide.

1. Make sure valve stem diameter is within the standard.
2. Push the valve out toward combustion chamber for approximately 15 mm (0.59 in). Measure runout while pushing the valve toward the dial gauge (1).
3. The half of the dial gauge reading is the valve guide clearance.



Standard

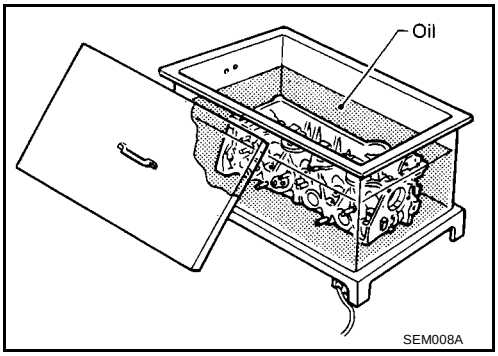
Intake : 0.020 - 0.053 mm (0.0008 - 0.0021 in)

Exhaust : 0.040 - 0.073 mm (0.0016 - 0.0029 in)

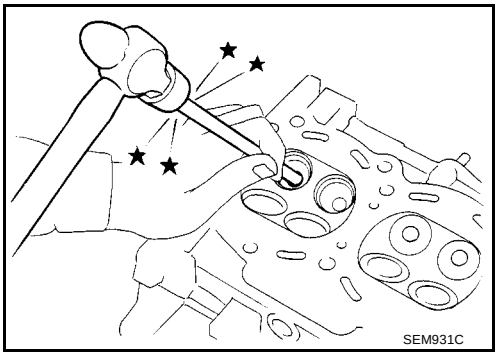
Valve Guide Replacement

When valve guide is removed, replace with oversized [0.2 mm (0.008 in)] valve guide.

1. To remove valve guide, heat cylinder head to 110 to 130°C (230 to 266°F) by soaking in heated oil.



2. Drive out valve guide with a press [under a 20 kN (2 ton, 2.2 US ton, 2.0 lmp ton) pressure] or hammer and suitable tool.

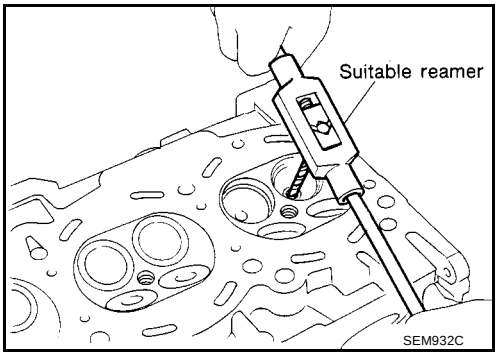


3. Ream cylinder head valve guide hole.

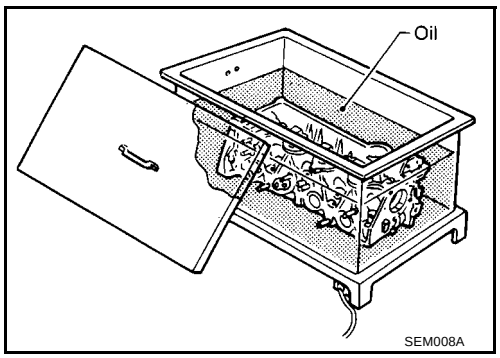
Valve guide hole diameter (for service parts):

Intake and exhaust

: 9.685 - 9.696 mm (0.3813 - 0.3817 in) dia.

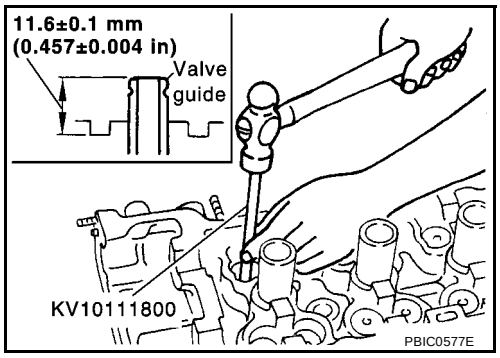


4. Heat cylinder head to 110 to 130°C (230 to 266°F) by soaking in heated oil.



5. Press valve guide from camshaft side to dimensions as in illustration.

CAUTION:
Cylinder head contains heat. When working, wear protective equipment to avoid getting burned.

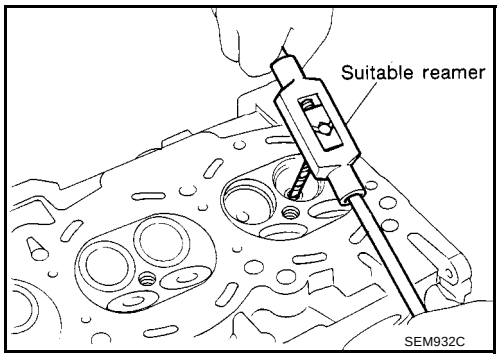


6. Using valve guide reamer, apply reamer finish to valve guide.

Standard

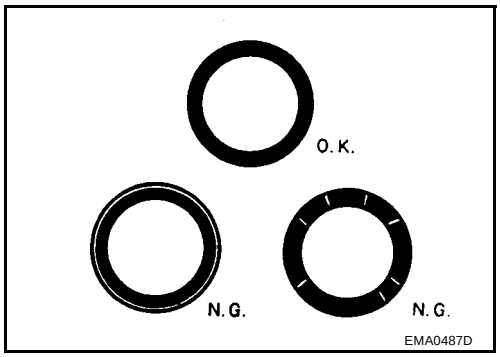
Intake and exhaust

: 5.500 - 5.518 mm (0.2165 - 0.2172 in) dia.



Valve Seat Contact

- After confirming that the dimensions of valve guides and valves are within specifications, perform this procedure.
- Apply prussian blue (or white lead) onto contacting surface of valve seat to check the condition of the valve contact on the surface.
- Check if the contact area band is continuous all around the circumference.
- If not, grind to adjust valve fitting and check again. If the contacting surface still has N.G conditions even after the re-check, replace valve seat.



Replacement of Valve Seat

When valve seat is removed, replace with oversized [0.5 mm (0.020 in)] valve seat.

1. Bore out old seat until it collapses. Boring should not continue beyond the bottom face of the seat recess in cylinder head. Set the machine depth stop to ensure this.

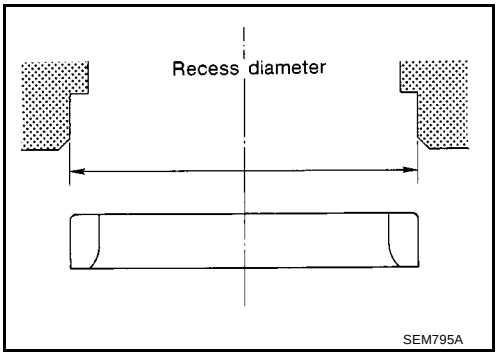
2. Ream cylinder head recess diameter for service valve seat.

Oversize [0.5 mm (0.020 in)]:

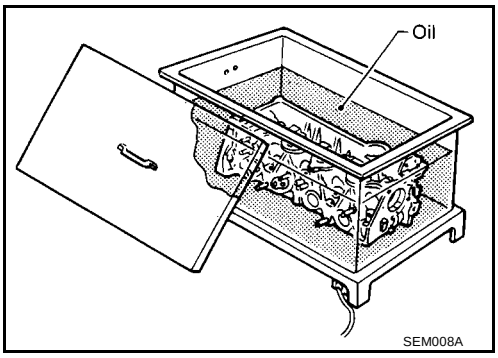
Intake: 29.000 - 29.016 mm (1.1417 - 1.1424 in)

Exhaust: 24.000 - 24.016 mm (0.9449 - 0.9455 in)

- Be sure to ream in circles concentric to the valve guide center.
- This will enable valve seat to fit correctly.



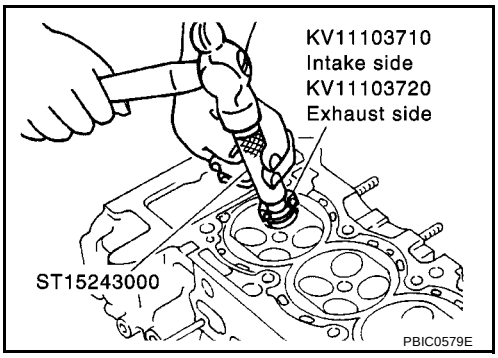
3. Heat cylinder head to 110 to 130°C (230 to 266°F) by soaking in heated oil.



4. Provide valve seats cooled well with dry ice. Force fit valve seat into cylinder head.

CAUTION:

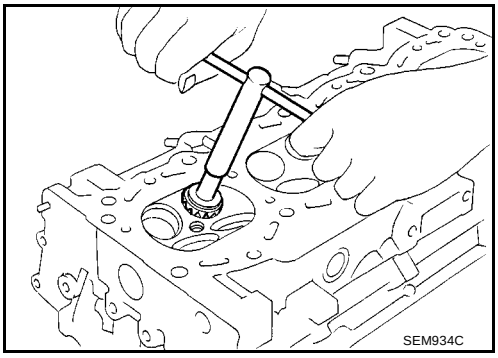
- **Avoid directly to touching cold valve seats.**
- **Cylinder head contains heat. When working, wear protective equipment to avoid getting burned.**



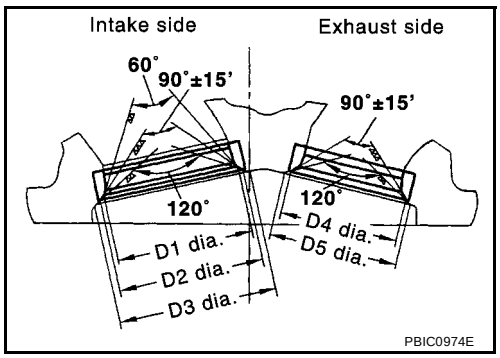
5. Using valve seat cutter set (commercial service tool) or valve seat grinder, finish the seat to the specified dimensions.

CAUTION:

When using valve seat cutter, firmly grip the cutter handle with both hands. Then, press on the contacting surface all around the circumference to cut in a single drive. Improper pressure on with the cutter or cutting many different times may result in stage valve seat.



Grind to obtain the dimensions indicated in figure.



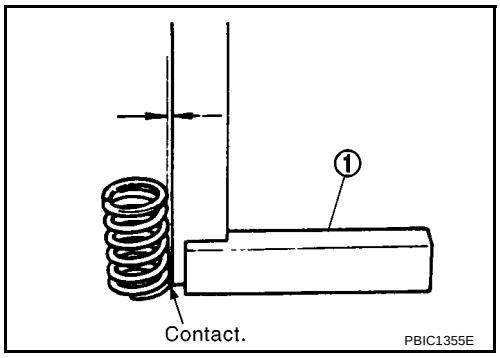
Standard:

D1 dia. : 25.4 mm (1.000 in)
D2 dia. : 27.0 - 27.2 mm (1.062 - 1.070 in)
D3 dia. : 28.7 - 28.9 mm (1.129 - 1.137 in)
D4 dia. : 22.0 - 22.2 mm (0.866 - 0.874 in)
D5 dia. : 23.7 - 23.9 mm (0.933 - 0.940 in)

6. Using compound, grind to adjust valve fitting.
7. Check again for normal contact.

Valve Spring Squareness

Set try square (1) along the side of valve spring and rotate the spring. Measure the maximum clearance between the top face of spring and try square (1).

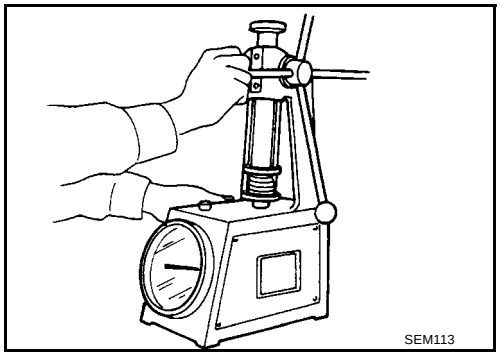


Limit : 1.6 mm (0.063 in)

- if exceeds the limit, replace the valve spring.

Valve Spring Dimensions and Valve Spring Pressure Load

- Check valve spring pressure load at specified spring height.



Standard

Free height	**:**	**53.3 mm (2.098 in)**
Installation height	**:**	**32.82 mm (1.2921 in)**
Installation load	**:**	**149 - 165 N (15.2 - 16.8 kg, 33.5 - 37 lb)**
Height during valve open	**:**	**24.73 mm (0.9736 in)**
Load with valve open	**:**	**228 - 250 N (23.3 - 25.5 kg, 51.3 - 56.2 lb)**

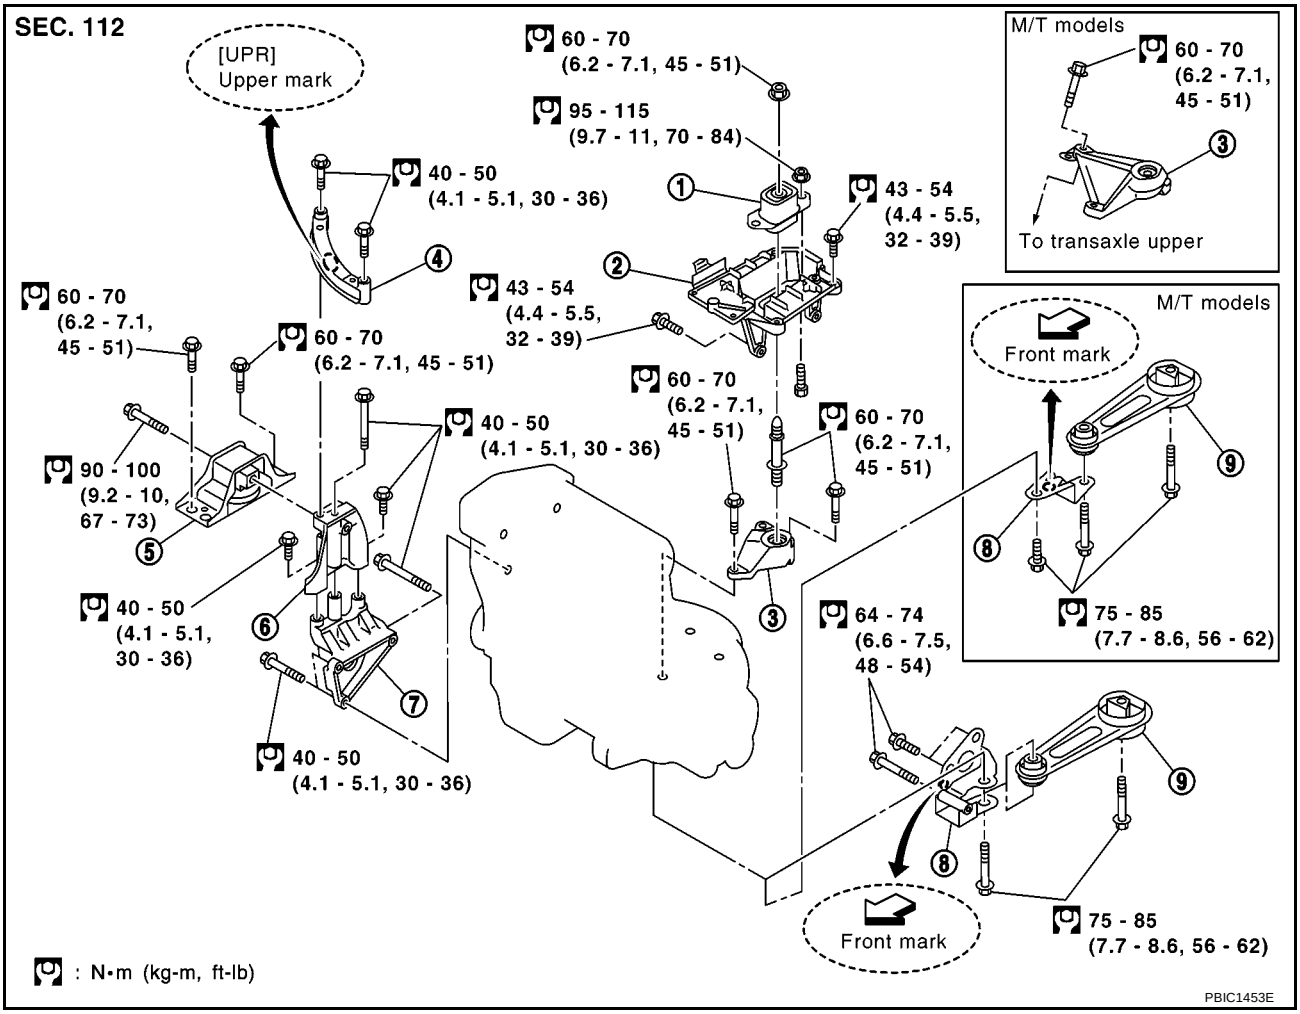
- If the dimensions exceed the standard, replace the valve spring.

ENGINE ASSEMBLY

PFP:10001

Removal and Installation

EBS00OF7



1. LH engine mount insulator	2. LH engine mount bracket (vehicle side)	3. LH engine mount bracket (transaxle side)
4. RH engine mount stay (The shape may not be the same as figure)	5. RH engine mount insulator	6. RH engine mount bracket (upper)
7. RH engine mount bracket (lower)	8. Rear engine mount bracket	9. Rear torque rod

WARNING:

- **Situate vehicle on a flat and solid surface.**
- **Place chocks at front and back of rear wheels.**
- **For engines not equipped with engine slingers, attach proper slingers and bolts described in PARTS CATALOG.**

CAUTION:

- **Always be careful to work safely, avoid forceful or uninstructed operations.**
- **Do not start working until exhaust system and engine coolant are cool enough.**
- **If items or work required are not covered by the engine main body section, refer to the applicable sections.**
- **Always use the support point specified for lifting.**
- **Use either 2-pole lift type or separate type lift as best you can. If board-on type is used for unavoidable reasons, support at the rear axle jacking point with transmission jack or similar tool before starting work, in preparation for the backward shift of center of gravity.**
- **For supporting points for lifting and jacking point at rear axle, refer to GI-38, "Garage Jack and Safety Stand" .**

REMOVAL

Description of work

Remove engine and transaxle assembly from vehicle, and separate engine and transaxle.

Preparation

1. When engine can be hoisted, remove engine hood.
2. Release fuel pressure. Refer to EC-44, "FUEL PRESSURE RELEASE" (WITH EURO-OBD), EC-505, "FUEL PRESSURE RELEASE" (WITHOUT EURO-OBD).
3. Drain engine coolant. Refer to CO-8, "ENGINE COOLANT" .
4. Remove the following parts.
   - RH and LH front wheel
   - RH and LH front fender protector
   - Exhaust front tube; Refer to EX-3, "EXHAUST SYSTEM" .
   - Drive belt; Refer toEM-12, "DRIVE BELTS" .
   - Air duct; Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
   - Battery
   - Radiator; Refer to CO-11, "RADIATOR" .

Engine room LH

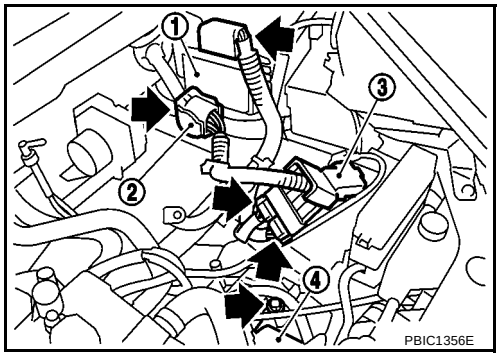
5. Disconnect the harness connectors and terminals from the following parts.

   NOTE:
   Figure shows A/T models. The position of the ground wire on the transaxle side is different for M/T models.

   - Remove the ECM (1) from the bracket and disconnect the two harness connectors.

   CAUTION:
   Avoid impacts to ECM.

   - Disconnect the intermediate connector (2) for the main harness between the vehicle and the engine room below the ECM.
   - Disconnect the harness connectors on the battery positive terminal (3).
   - Disconnect the ground wire on the transaxle (4) side.



6. Disconnect heater hose. Plug the hose immediately to prevent engine coolant from draining.
7. Disconnect the shift cable and the control cable (M/T models) or control cable (A/T models) from the transaxle.
   - M/T: Refer to MT-12, "CONTROL LINKAGE" .
   - A/T: Refer to AT-418, "A/T SHIFT LOCK SYSTEM" .
8. Disconnect the clutch tube from the transaxle side and temporarily fasten to vehicle. (M/T models)
   - Install the plug to prevent the clutch fluid from leaking.
9. Remove the crankshaft position sensor (POS) from the transaxle.

   CAUTION:
   Handle it carefully, avoid any chance of impact caused by dropping.

Engine room front and RH

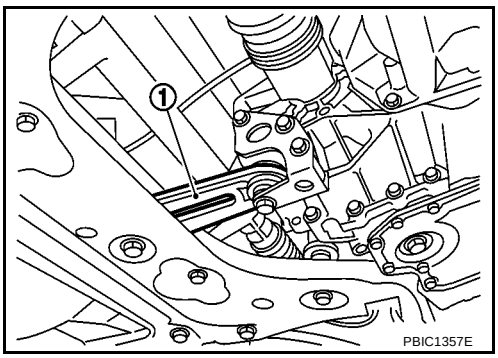
10. Remove the ground wire between the alternator bracket and the vehicle.
11. Remove RH engine mount stay, alternator bracket, and alternator.
12. Remove A/C compressor from engine with piping connected, and temporarily install it to vehicle with rope to avoid putting stress on air conditioner pipes.
13. Remove fuel tube protector. Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .
14. Disconnect fuel hose. Plug the hose immediately to prevent fuel from draining.

Vehicle underbody

15. Remove the ABS wheel sensor from the steering knuckle.

16. Remove brake caliper from steering knuckle. Temporarily fix on vehicle side with rope or so to avoid putting stress on brake hose. Refer to BR-21, "FRONT DISC BRAKE" .
17. Remove RH and LH drive shafts. Refer to FAX-10, "FRONT DRIVE SHAFT" .
18. Remove rear torque rod (1).

NOTE:
Figure shows A/T models. The shape of the bracket on the transaxle side is different for M/T models.



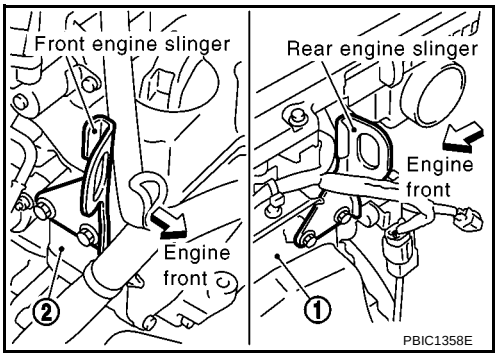
Removal

19. Install engine slinger to cylinder head front left side (1) and rear right side (2) and support the engine position with a hoist.

NOTE:
Front side and rear side engine slinger are common parts.

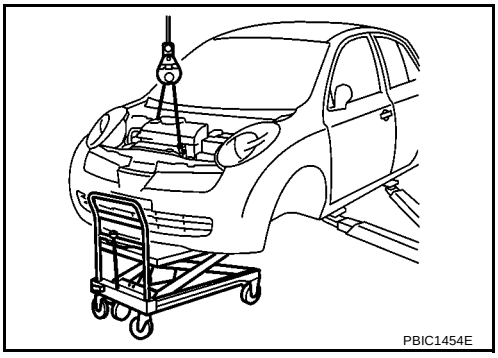
: 16.6 - 23.5 N·m (1.7 - 2.3 kg-m, 13 - 17 in)

- For front side, remove harness bracket under fuel tube protector and mount by using harness bracket mounting hole. Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .

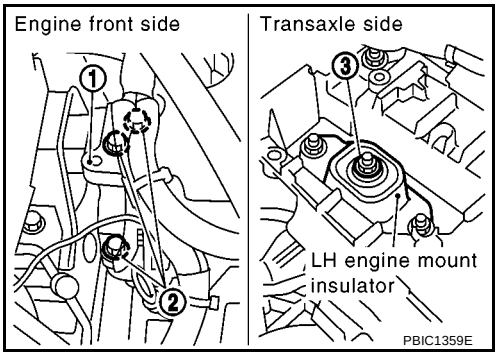


20. Lift to a height sufficient to allow easy work, support the bottom of the engine with either a manual lift table caddy (commercial service tool) or two suitable jacks, and adjust the tension of the hoist.

CAUTION:
- **Put a piece of wood or something similar as the supporting surface, secure a completely stable condition.**
- **Make sure the hanging chain or hanging hook does not come into contact with the A/C piping or the vehicle (cowl top). Also make sure they do not get in the way by moving while the work is being done.**



21. Remove the RH engine mount bracket (upper) (1) mounting bolts (2).
22. Remove the LH engine mount bolt-securing nut (3).



23. Carefully lower the manual lift table caddy or suitable jack, (or carefully raise the lift), and remove the engine and transaxle assembly from the vehicle.
- If you are going to lower the engine side, do this in tandem with the hoist.

CAUTION:
- **This should be done making sure it does not come in contact with the vehicle.**
- **Check that all connection points have been disconnected.**

- **Make sure the hanging chain or hanging hook does not come into contact with the A/C piping or the vehicle (cowl top).**
- **During engine and transaxle assembly removal, always be careful to prevent the vehicle from falling off the lift due to changes in the center of gravity.**
- **If necessary, support the rear side of the vehicle with jack to prevent it from falling off.**

Separation Work

- On level ground, separate engine and transaxle with the following procedure:

CAUTION:
During the operation, securely support the engine by placing a piece of wood under the engine oil pan, transaxle oil pan, and suspension member, and suspend the engine slingers by hoist.

24. Remove the starter motor. Refer to SC-39, "STARTING SYSTEM" .
25. Separate the engine and the transaxle.
    - M/T: Refer to MT-7, "REMOVAL AND INSTALLATION" .
    - A/T: Refer to AT-430, "REMOVAL AND INSTALLATION" .

INSTALLATION

Install in the reverse order of removal while being careful of the following.

- Do not allow the engine mount insulator to be damaged and be careful no oil gets on it.
- For a part with a specified installation orientation, refer to component figure in EM-69, "Removal and Installation" .
- Make sure all mount insulators are seated properly, then tighten nuts and bolts.

INSPECTION AFTER INSTALLATION

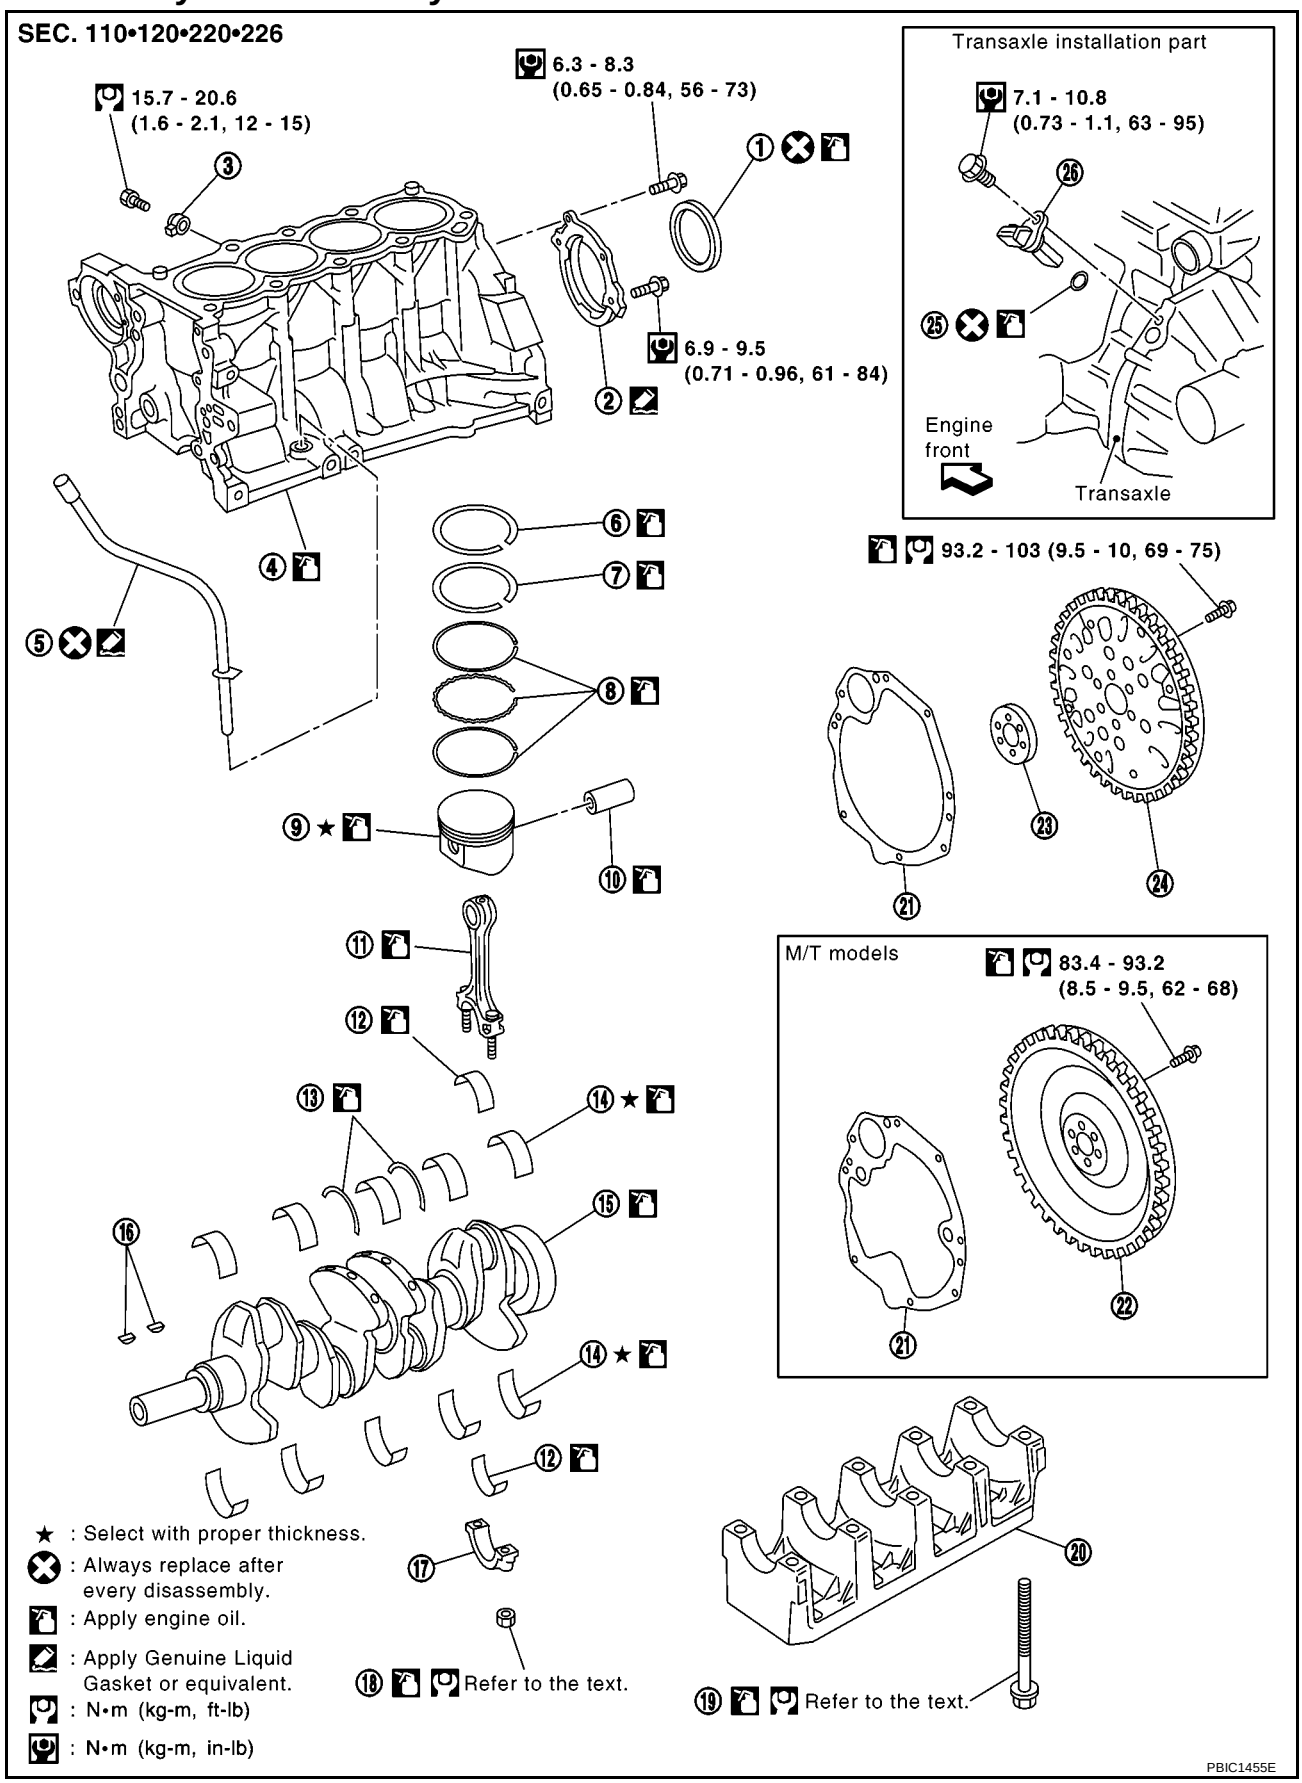
- Before starting engine, check the levels of engine coolant, lubrications and working oils. If less than required quantity, fill to the specified level.
- Use procedure below to check for fuel leakage.
  - Turn ignition switch ON (with engine stopped). With fuel pressure applied to fuel piping, check for fuel leakage at connection points.
  - Start engine. With engine speed increased, check again for fuel leakage at connection points.
- Run engine to check for unusual noise and vibration.
- Warm up engine thoroughly to make sure there is no leakage of engine coolant, lubricants, working oil, fuel and exhaust gas.
- Bleed air from passages in pipes and tubes of applicable lines, such as in cooling system.
- After cooling down engine, again check amounts of engine coolant, lubricants, oil, and fluid. Refill to specified level, if necessary.

CYLINDER BLOCK

PFP:11010

Disassembly and Assembly

EBS00OGH



1. Rear oil seal
2. Rear oil seal retainer
3. Knock sensor
4. Cylinder block
5. Oil level gauge guide
6. Top ring
7. Second ring
8. Oil ring
9. Piston
10. Piston pin
11. Connecting rod
12. Connecting rod bearing
13. Thrust bearing
14. Main bearing
15. Crankshaft
16. Key
17. Connecting rod cap
18. Connecting rod nut
19. Main bearing cap bolt
20. Main bearing cap
21. Rear plate
22. Flywheel (M/T models)
23. Adapter (A/T models)
24. Drive plate (A/T models)
25. O-ring
26. Crankshaft position sensor (POS)

DISASSEMBLY

1. Remove engine and transaxle assembly from the vehicle and separate transaxle from the vehicle. Refer to EM-69, "Removal and Installation" .
2. Install engine to engine stand in the following procedure.

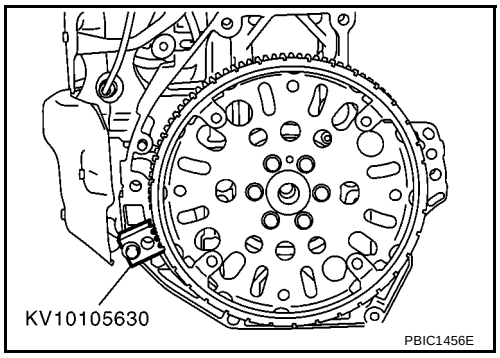
   NOTE:
   We will use as an example the engine stand (commercial service tool) specified to support the cylinder block rear (transaxle mounting surface).

a. Remove clutch cover and clutch disc. (M/T models) Refer to CL-10, "CLUTCH DISC, CLUTCH COVER AND FLYWHEEL" .

b. Remove the flywheel (M/T models), the drive plate and the adapter (A/T models).

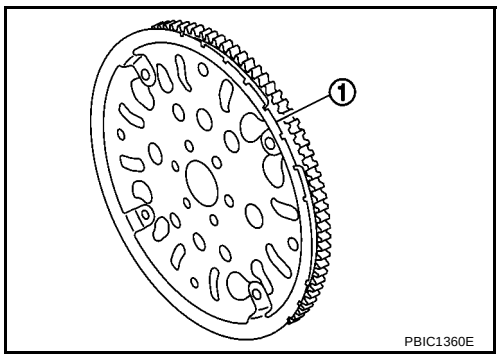
- Using a ring gear stopper (special service tool), secure the crankshaft, loosen the bolts diagonally and remove.

  NOTE:
  Figure shows the drive plate.



CAUTION:
Make sure signal plate (1) are not damaged or deformed.

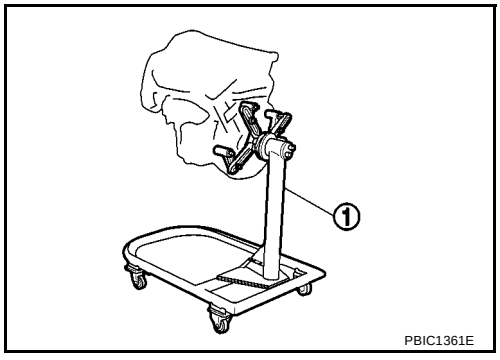
NOTE:
Figure shows the drive plate.



c. Remove rear plate.

d. Lift engine using a hoist and mount it on an engine stand (1).

- For installation of engine slingers, refer to EM-69, "Removal and Installation" .

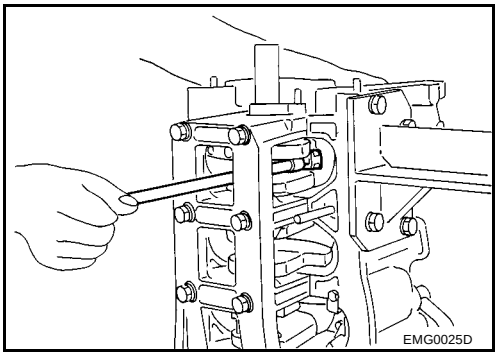


3. Drain engine oil and engine coolant from engine.
4. Remove following components and related parts.
   - Air cleaner case assembly; Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
   - Intake manifold; Refer to EM-20, "INTAKE MANIFOLD" .
   - Fuel injector and fuel tube assembly; Refer to EM-30, "FUEL INJECTOR AND FUEL TUBE" .
   - Ignition coil; Refer to EM-27, "IGNITION COIL" .
   - Rocker cover; Refer to EM-33, "ROCKER COVER" .
   - Oil pan and oil strainer; Refer to EM-24, "OIL PAN AND OIL STRAINER" .
   - Front cover and timing chain; Refer to EM-48, "TIMING CHAIN" .
   - Camshaft; Refer to EM-36, "CAMSHAFT" .
   - Cylinder head assembly; Refer to EM-59, "CYLINDER HEAD" .
   - Oil filter; Refer to LU-6, "OIL FILTER" .
   - Oil pressure switch; Refer to LU-4, "OIL PRESSURE CHECK" .
5. Remove knock sensor.

   CAUTION:
   Avoid impact such as a dropping.
6. Remove oil level gauge guide, if necessary.

   CAUTION:
   Once removed, it cannot be reused. Do not remove it unless absolutely necessary.
7. Remove rear oil seal retainer.
   - Remove by inserting a screwdriver between main bearing cap and rear oil seal retainer.
8. Remove rear oil seal from rear oil seal retainer.
   - Remove by driving it out using a screwdriver.

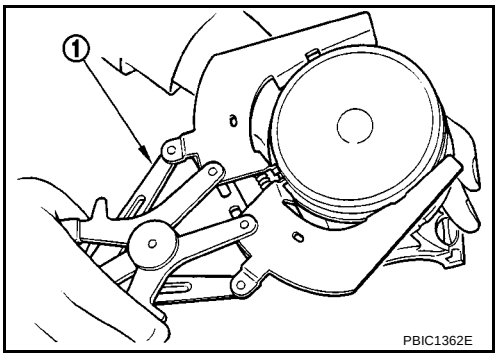
   CAUTION:
   Make sure the rear oil seal retainer is not damaged.
9. Remove piston and connecting rod assembly.
   - Before removing connecting rod, check connecting rod side clearance. Refer to EM-85, "CONNECTING ROD SIDE CLEARANCE" .



a. Position the crankshaft pin corresponding to the connecting rod to be removal onto the bottom dead center.
b. Remove connecting rod cap.
c. Push the piston and connecting rod assembly out toward cylinder head side with handle of a hammer.
10. Remove connecting rod bearings from connecting rod and connecting rod cap.

    CAUTION:
    When removing, check each part, and arrange them in a way that prevents mixing them up.
11. Remove piston rings from piston.
    - Use piston ring expander (1).

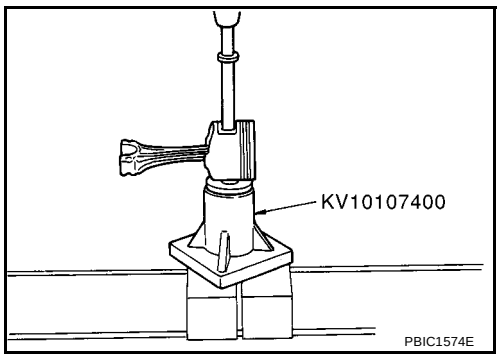
    CAUTION:
    - **Be careful not to damage piston.**
    - **Do not expand piston rings excessively. It can damage piston rings.**
    - Before removal of piston ring, check piston ring side clearance. Refer to EM-85, "PISTON RING SIDE CLEARANCE" .



12. Remove piston from connecting rod.
    - Use a piston pin press stand and a press to remove the piston pin.

    NOTE:
    The joint between the connecting rod and the piston pin is a press fit.

    CAUTION:
    Be careful not to damage the piston and connecting rod.



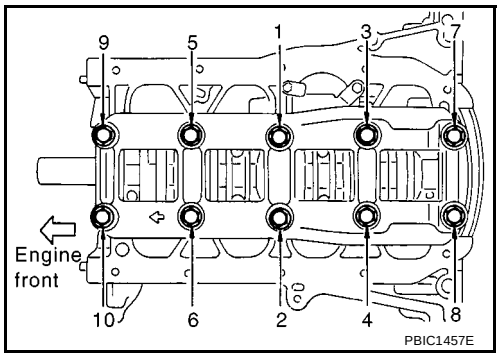
13. Remove the main bearing cap in the following order.

a. Loosen and remove bolts in several steps in reverse of the numerical order shown in figure.
    - Before loosening main bearing cap bolts, measure the crankshaft side clearance. Refer to EM-84, "CRANKSHAFT SIDE CLEARANCE" .

b. Tapping lightly with a plastic hammer, remove the main bearing cap.

14. Remove crankshaft.

15. Remove main bearing and thrust bearing from cylinder block and main bearing cap.

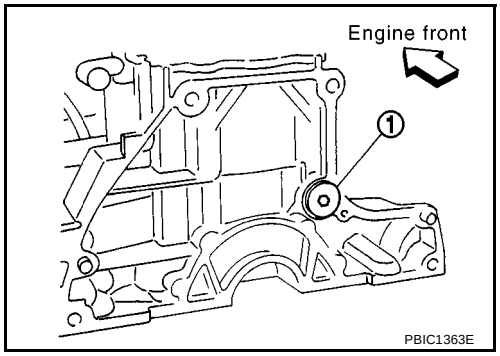


CAUTION:
Identify installation position of each part. Arrange removed parts so as not to mix them up.

ASSEMBLY

1. Thoroughly clean engine coolant and oil passages in cylinder block, as well as inside of crank case and cylinder bores, with compressed air.
2. If the plug (1) in figure is removed, apply liquid gasket to the plug screw.
   Use Genuine Liquid Gasket or equivalent.
   - Do not reuse washer. Replace it with a new washer.
   - Tighten to the specified torque.

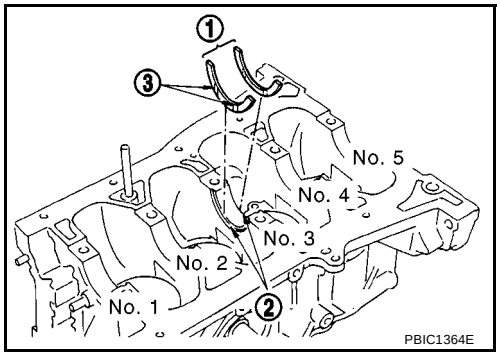
     : 58.8 - 68.6 N·m (6.0 - 6.9 kg-m, 44 - 50 ft-lb)



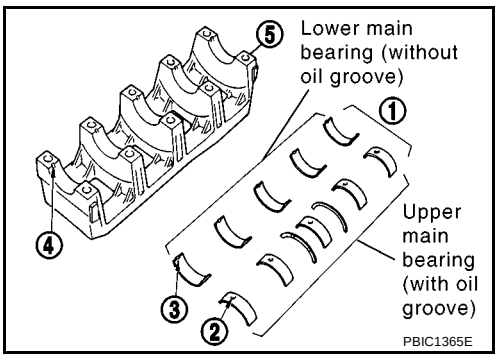
3. Install main bearings and thrust bearings.

a. Clean bearing mounting surfaces on cylinder block and main bearing cap to remove any foreign material, dust, and oil on them.

b. Install thrust bearings (1) on both sides of cylinder block No. 3 housing (2).
   - Install thrust bearing with its oil groove (3) facing crankshaft arm side (outer side).



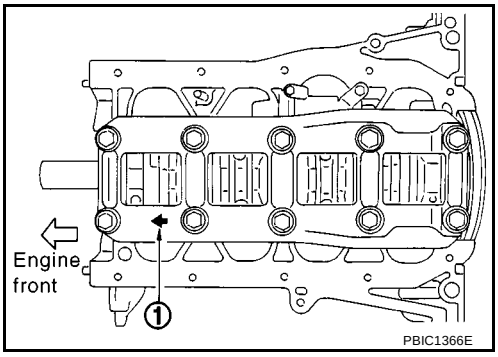
c. Install main bearing (1) in paying attention to the direction.
- Install main bearing with oil groove and oil hole (2) to cylinder block, and the one without oil groove and oil hole to main bearing cap (5).
- Before installing the main bearing, lubricate bearing surface (inside) with new engine oil. Do not apply engine oil to back surface, but thoroughly clean it.
- When installing, align the bearing stopper (3) to the notch (4).
- Make sure that oil holes in cylinder block and main bearing are aligned.



4. Install crankshaft to cylinder block.
- Rotate crankshaft by hand and make sure it turns smoothly.

5. Install main bearing cap.
- Install main bearing cap with its front mark (1) facing front of engine.

NOTE:
Since it is machined together with the cylinder block, it cannot be replaced on its own.

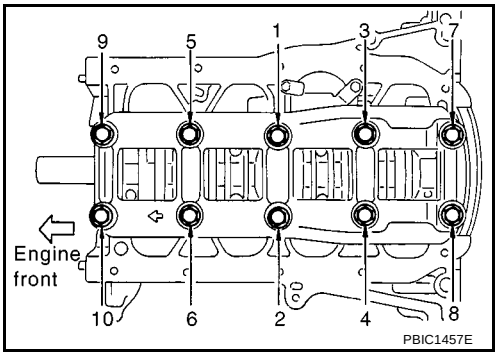


6. Tighten main bearing cap bolts in numerical order shown in figure with the following steps.

a. Lubricate threads and seat surface of each bolt with new engine oil.

b. Tighten it to 24.5 - 30.3 N·m (2.5 - 3.0 kg-m, 18 - 22 ft-lb).

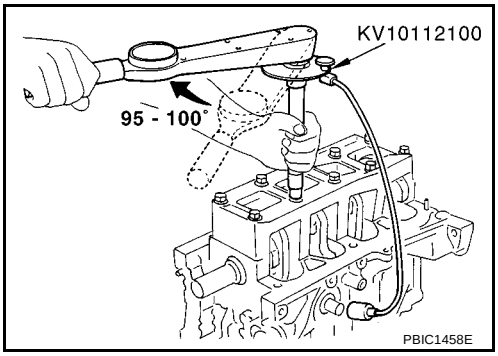
c. Tighten with 95 - 100 degrees clockwise [Target: 95 degrees].(Angle tightening)



- Use an angle wrench (special service tool) to check tightening angle.

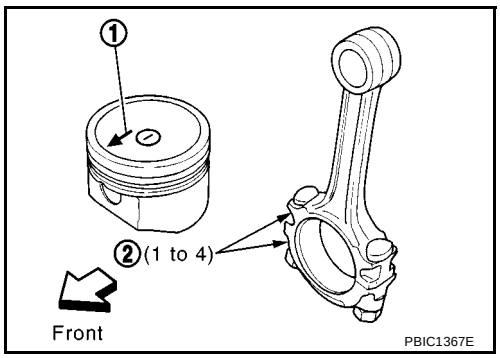
CAUTION:
Check tightening angle with an angle wrench. Do not visually check the tightening angle.

- After tightening main bearing cap bolts, rotate crankshaft by hand and make sure that it turns smoothly.
- Check crankshaft side clearance. Refer to EM-84, "CRANKSHAFT SIDE CLEARANCE" .



7. Install the piston onto the connecting rod in the following procedure:

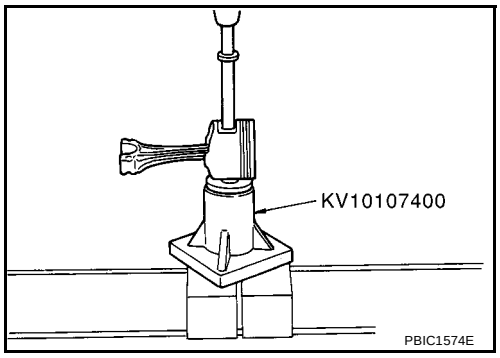
a. Set so that the piston front mark (1) on the piston head and the connecting rod cylinder number (2) engraving are in the position shown in figure.



b. Press fit the piston pin using the piston pin press stand (special service tool).

NOTE:
The joint between the connecting rod and the piston pin is a press fit.

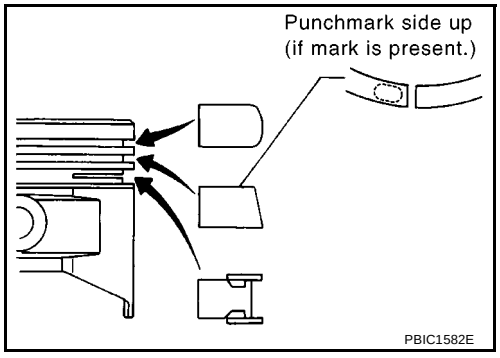
- After finishing work, make sure the piston moves freely.



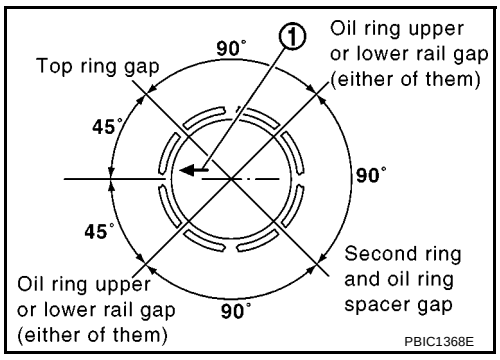
8. Install piston rings with piston ring expander as shown in the figure.

CAUTION:

- **Be careful not to damage piston.**
- **Make sure the piston ring does not spread out too much and break.**

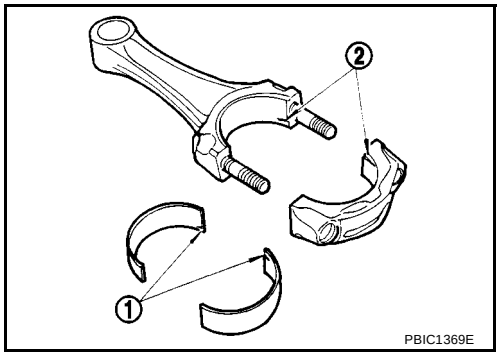


- Against the piston front mark (1), position end gaps of each piston ring as shown in figure.
- Install top ring and second ring with stamp mark side facing up.

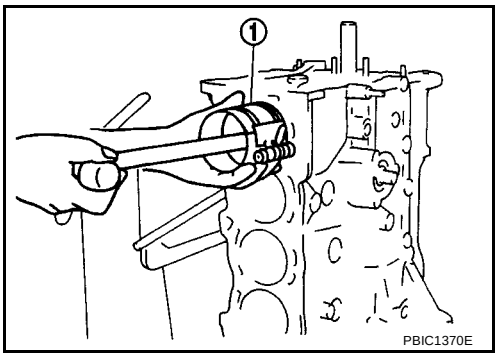


9. Install connecting rod bearing to connecting rod and connecting rod cap.

- When installing connecting rod bearing, lubricate bearing surface (inside) with new engine oil. Do not apply engine oil to back surface, but thoroughly clean it.
- Install connecting rod bearing by aligning the stopper protrusion (1) with notch (2) on connecting rod.

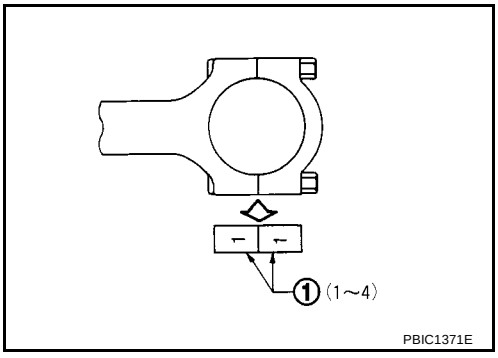


10. Install piston and connecting rod assembly to crankshaft.
    - Position the crankshaft pin corresponding to the connecting rod to be removal onto the bottom dead center.
    - Apply enough engine oil to cylinder bore, piston and crankshaft pin.
    - Install connecting rod to cylinder position corresponding to cylinder No. stamped on it.
    - Using a piston ring compressor (special service tool) (1), install piston so that piston grade number on piston head faces toward engine front.



CAUTION:
Be careful not to damage the cylinder wall and crankshaft pin, resulting from an interference of the connecting rod big end.

11. Install connecting rod cap.
    - Be sure that cylinder No. (1) on connecting rod and connecting rod cap match.

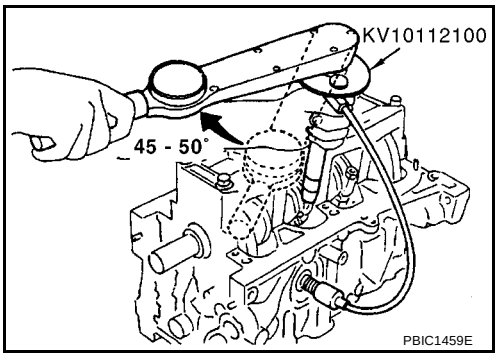


12. Tighten connecting rod nuts in following steps.

a. Lubricate threads and seat surface of connecting rod nuts and bolts with new engine oil.

b. Tighten at 13.7 - 15.7 N·m (1.4 - 1.6 kg-m, 10.1 - 11.5 ft-lb).

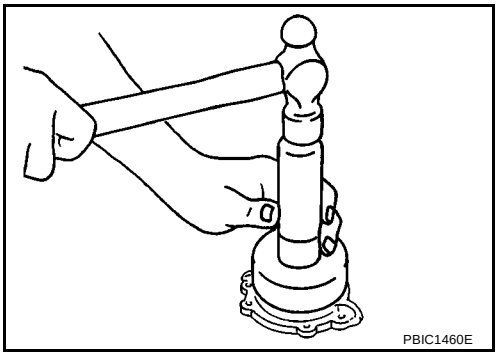
c. Tighten with 45 - 50 degrees clockwise [Target: 45 degrees]. (Angle tightening)



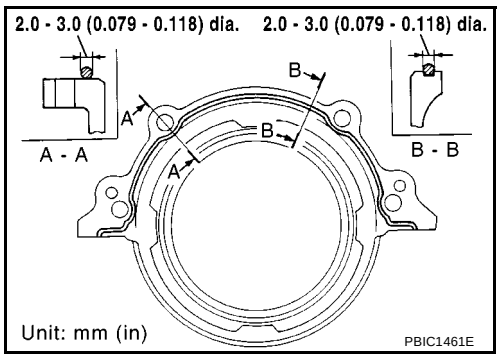
CAUTION:
Check tightening angle with an angle wrench (special service tool). Do not visually check the tightening angle.

- After the nuts were tightened, rotate crankshaft by hand and make sure that it turns smoothly.
- Check connecting rod side clearance. Refer to EM-85, "CONNECTING ROD SIDE CLEARANCE" .

13. Install rear oil seal.
    - Make sure the area surrounding the oil seal is not damaged, and use an oil seal drift to press fit.
    - Press fit until the end of rear oil seal is level with the edges of the retainer.

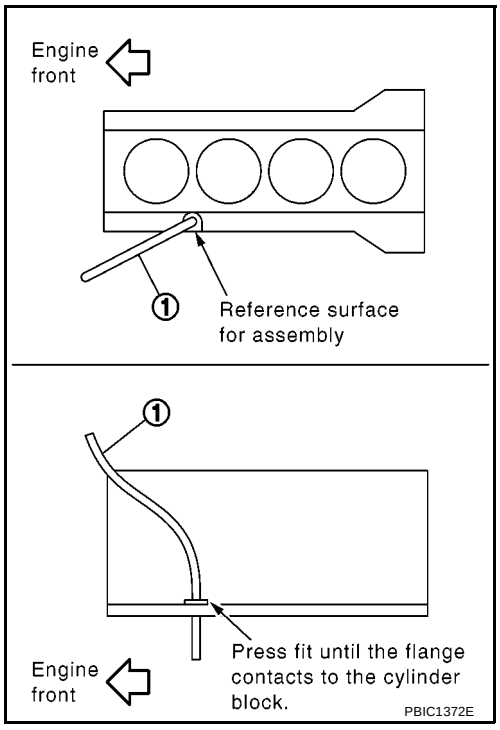


14. Install rear oil seal retainer.
    - Evenly apply the liquid gasket to the position shown in figure. Use Genuine Liquid Gasket or equivalent.
    - Install so that it matches up with the dowel pin on the cylinder block side.



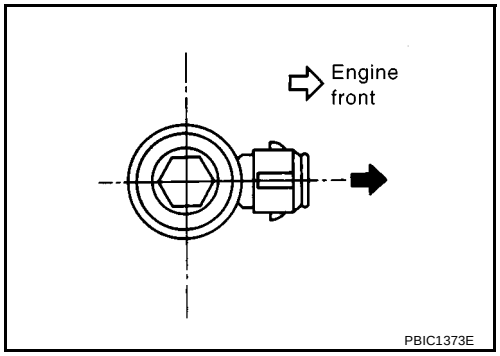
15. Install oil level gauge guide (1).
    - Press fit the oil level gauge guide (1) into the cylinder block with the assembly reference surface on the plate set as shown in the figure.
    - Apply sealant to the press fit areas.

    CAUTION:
    Replace used oil level gauges with new ones.



16. Install knock sensor.
    - Install connector so that it is positioned towards the engine front.

    CAUTION:
    - **Handle it carefully to avoid impact. If any impact is applied, replace it with new one.**
    - **Confirm no foreign material adhere to cylinder block and knock sensor mounting surfaces.**
    - **Be sure to use specified bolts.**
    - **Do not hold connector when tightening bolts.**
    - **Make sure installed sensor connector is away from contact with other parts.**



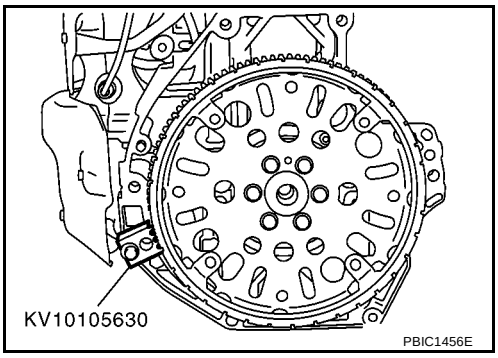
17. For the following, install the parts disassembled in step 4 in the reverse order.
18. Secure the position of the engine with the hoist, remove the bolts, and lower from the engine stand.
19. Install rear plate.

20. Install the flywheel (M/T models) (1), the adapter (A/T models) (2), and the drive plate (A/T models) (3).
    - Install so that signal plate (4) is towards the back of the engine.
    - Install by aligning the dowel pin hole (6) with the dowel pin (5) on the back of the crankshaft.

    NOTE:
    Figure shows A/T models.

    CAUTION:
    Make sure signal plate (4) are not damaged or deformed.

    - Using a ring gear stopper (special service tool), secure the crankshaft, and tighten the bolts diagonally.



21. Reinstall removed parts remained in reverse order of removal.

How to Select Piston and Bearing

EBS00OGI

DESCRIPTION

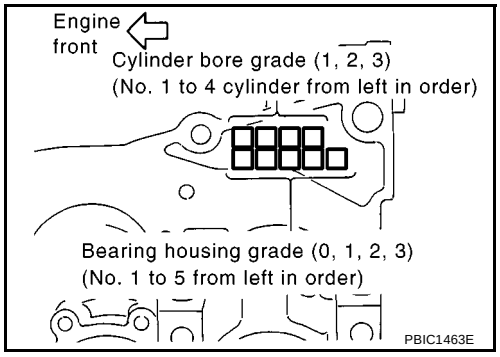
Selection points	Selection parts	Selection items	Selection methods
Between cylinder block and crankshaft	Main bearing	Main bearing grade (Bearing thickness)	Determined by cylinder block bearing housing grade (inner diameter of housing) and crankshaft journal grade (outer diameter of journal).
Between cylinder block and piston	Piston and piston pin assembly Note: Piston and piston pin are a set. They make up one part as an assembly.	Piston grade (Piston outer diameter)	Piston grade = cylinder bore grade (inner diameter of bore)

- The identification grade stamped on each part is the grade for the dimension measured in new condition. This grade cannot apply to reused parts.
- For reused or repaired parts, measure the dimension accurately. Determine the grade by comparing the measurement with the values of each selection table.
- For details of the measurement method of each part, the reuse standards and the selection method of the selective fitting parts, refer to the text.

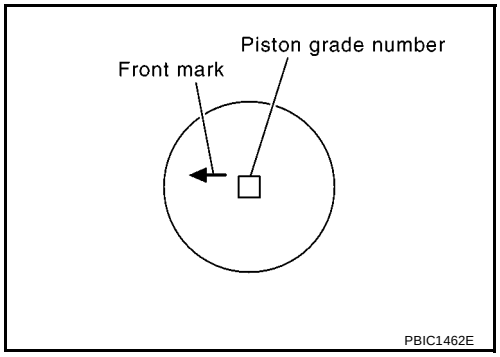
HOW TO SELECT PISTON

When New Cylinder Block is Used

- Check cylinder bore grade (1, 2, or 3) on cylinder block bottom rear surface and select piston of the same grade.



NOTE:
The piston head shape varies from engine to engine, as do their positions shown in figure.



When Cylinder Block is Reused

1. Measure cylinder bore inner diameter.
2. Determine the bore grade by comparing the measurement with the values under the cylinder bore inner diameter of the “Piston Selection Table”.
3. Select the piston of the same grade.

Piston selection Table

CR10DE,CR12DE

Unit: mm (in)

Grade	1	2	3
Inner diameter of cylinder bore	71.000 - 71.010 (2.7953 - 2.7957)	71.010 - 71.020 (2.7957 - 2.7961)	71.020 - 71.030 (2.7961 - 2.7965)
Outer diameter of piston	70.980 - 70.990 (2.7945 - 2.7949)	70.990 - 71.000 (2.7949 - 2.7953)	71.000 - 71.010 (2.7953 - 2.7957)

CR14DE

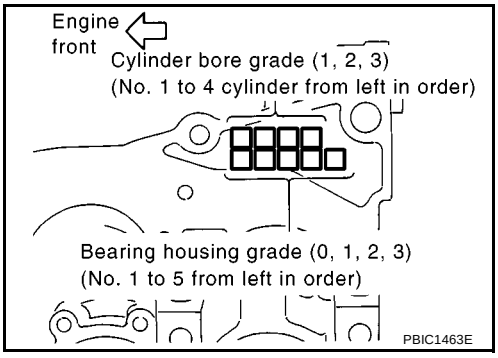
Unit: mm (in)

Grade	1	2	3
Inner diameter of cylinder bore	73.000 - 73.010 (2.8740 - 2.8744)	73.010 - 73.020 (2.8744 - 2.8748)	73.020 - 73.030 (2.8748 - 2.8752)
Outer diameter of piston	72.980 - 72.990 (2.8732 - 2.8736)	72.990 - 73.000 (2.8736 - 2.8740)	73.000 - 73.010 (2.8740 - 2.8744)

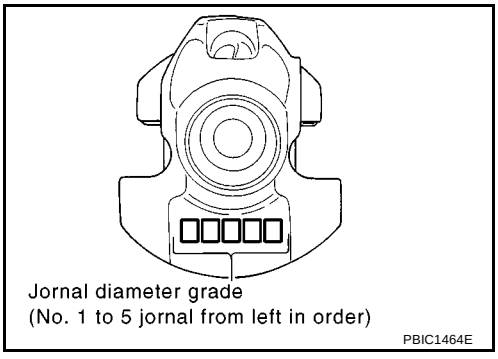
HOW TO SELECT MAIN BEARING

When New Cylinder Block and Crankshaft are Used

1. “Main Bearing Selection Table” rows correspond to bearing housing grade (0, 1, 2, or 3) on cylinder block bottom rear surface.



2. Apply journal diameter grade (0, 1, 2, or 3) stamped on crankshaft front side to column in “Main Bearing Selection Table”.
3. Select main bearing (STD 1 to 7) at the point where selected row and column meet in the following selection table.



When Cylinder Block and Crankshaft are Reused

1. Measure inner diameter of cylinder block main bearing housing and outer diameter of crankshaft journal.
2. Find measured dimension in “Cylinder block bearing housing inner diameter” row of “Main Bearing Selection Table”.
3. Find the measured dimension in “Crankshaft main journal diameter” column in the following selection table.
4. Select main bearing (STD 1 to 7) at the point where selected row and column meet in the following selection table.

Main bearing Selection Table

Units: mm (in)

Cylinder block main bearing housing inner diameter		-	49.004/49.000 (1.9293/1.9291)	49.008/49.004 (1.9294/1.9293)	49.012/49.008 (1.9296/1.9294)	49.016/49.012 (1.9298/1.9296)
Crankshaft journal diameter	Grade (stamped)	-	0	1	2	3
44.970/44.966 (1.7705/1.7703)	0	● Bearing grade No. ● Bearing thickness ● Identification color	STD1 2.002/2.006 (0.0788/0.0790) Red	STD 2 2.004/2.008 (0.0789/0.0791) Green	STD 3 2.006/2.010 (0.0790/0.0791) Yellow	STD 4 2.008/2.012 (0.0791/0.0792) Blue
44.966/44.962 (1.7703/1.7702)	1	● Bearing grade No. ● Bearing thickness ● Identification color	STD 2 2.004/2.008 (0.0789/0.0791) Green	STD 3 2.006/2.010 (0.0790/0.0791) Yellow	STD 4 2.008/2.012 (0.0791/0.0792) Blue	STD 5 2.010/2.014 (0.0791/0.0793) Pink
44.962/44.958 (1.7702/1.7700)	2	● Bearing grade No. ● Bearing thickness ● Identification color	STD 3 2.006/2.010 (0.0790/0.0791) Yellow	STD 4 2.008/2.012 (0.0791/0.0792) Blue	STD 5 2.010/2.014 (0.0791/0.0793) Pink	STD 6 2.012/2.016 (0.0792/0.0794) White
44.958/44.954 (1.7700/1.7698)	3	● Bearing grade No. ● Bearing thickness ● Identification color	STD 4 2.008/2.012 (0.0791/0.0792) Blue	STD 5 2.010/2.014 (0.0791/0.0793) Pink	STD 6 2.012/2.016 (0.0792/0.0794) White	STD 7 2.014/2.018 (0.0793/0.0794) Blue/yellow

Undersize Bearing Usage Guide

- If specified oil clearance cannot be obtained by standard size main bearing, use undersize (US) bearing.
- When using undersize bearing, install it, measure bearing inner diameter, and grind journal to obtain specified oil clearance.

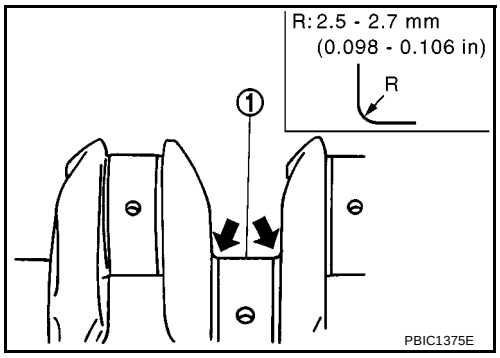
Bearing undersize table

Unit: mm (in)

Size	Thickness
US 0.25 (0.0098)	2.123 - 2.131 (0.836 - 0.839)

CAUTION:

Keep fillet R when grinding crankshaft journal (1) in order to use undersize bearing (All journals).



Inspection After Disassembly

EBS00OGJ

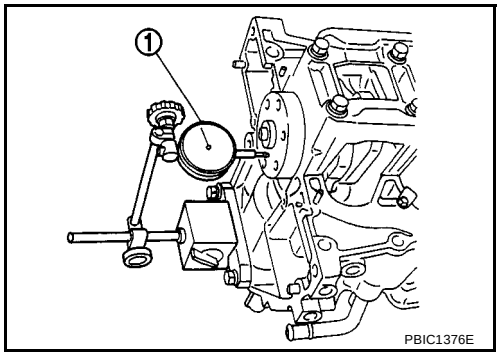
CRANKSHAFT SIDE CLEARANCE

- Using a dial gauge (1), measure the clearance between the thrust bearings and the crankshaft arm when the crankshaft is moved fully forward or backward.

  Standard : 0.060 - 0.260 mm (0.0024 - 0.0102 in)

  Limit : 0.3 mm (0.012 in)

- If the measured value exceeds the limit, replace the thrust bearings, and measure again. If it still exceeds the limit, replace the crankshaft also.

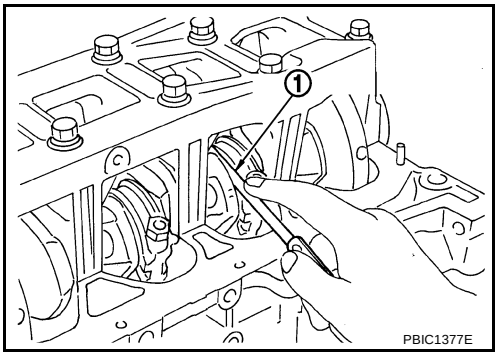


CONNECTING ROD SIDE CLEARANCE

- Measure side clearance between connecting rod and crankshaft arm with feeler gauge (1).

Standard : 0.050 - 0.420 mm (0.0020 - 0.0165 in)
Repair limit : 0.5 mm (0.0197 in)

- If the measured value exceeds the limit, replace the connecting rod, and measure again. If it still exceeds the limit, replace the crankshaft also.

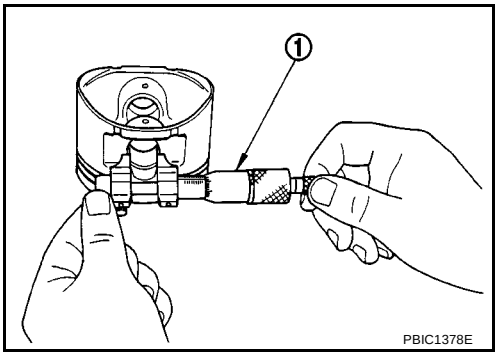


PISTON AND PISTON PIN CLEARANCE

Inner Diameter of Piston Pin

- Measure the inner diameter of piston pin bore with an inside micrometer (1).

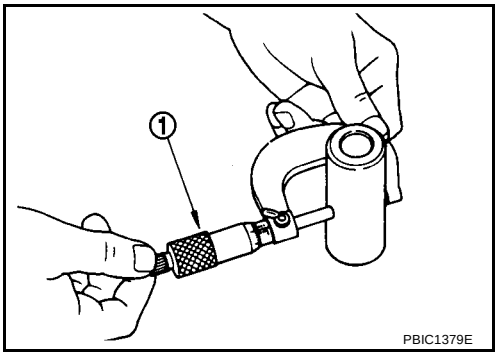
Standard : 18.008 - 18.012 mm (0.7090 - 0.7091 in)



Outer Diameter of Piston Pin

- Using a micrometer (1), measure piston pin outer diameter.

Standard : 17.996 - 18.000 mm (0.7085 - 0.7087 in)



Piston and Piston pin Clearance

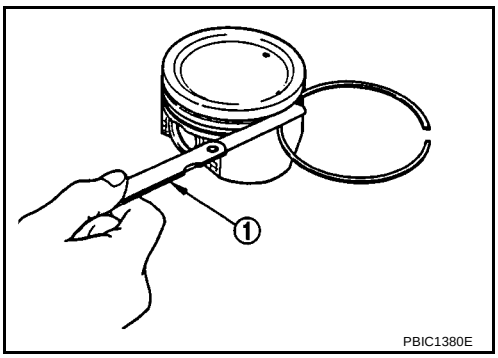
(Piston pin clearance) = (Piston pin bore diameter) – (Outer diameter of piston pin)

Standard : 0.008 - 0.016 mm (0.0003 - 0.0006 in)

- If clearance exceeds the standard, replace piston and piston pin assembly.
- When replacing piston and piston pin assembly, refer to EM-82, "HOW TO SELECT PISTON"

PISTON RING SIDE CLEARANCE

- Measure side clearance of piston ring and piston ring groove with feeler gauge (1).



Standard:

Top ring	**: 0.040 - 0.080 mm (0.0016 - 0.0031 in)**
2nd ring	**: 0.025 - 0.070 mm (0.0010 - 0.0028 in)**
Oil ring	**: 0.030 - 0.140 mm (0.0021 - 0.0055 in)**

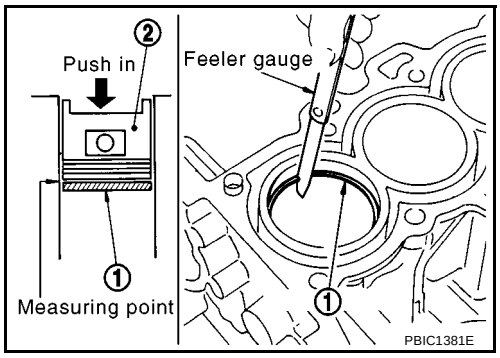
Limit:

Top ring	**: 0.11 mm (0.0043 in)**
2nd ring	**: 0.1 mm (0.0039 in)**

- If out of specification, replace piston and/or piston ring assembly.

PISTON RING END GAP

- Check if inner diameter of cylinder bore is within specification. Refer to EM-88, "PISTON TO CYLINDER BORE CLEARANCE" .
- Insert piston ring (1) until middle of cylinder with piston (2), and measure gap.



Standard:

Top ring	**: 0.18 - 0.33 mm (0.0071 - 0.0130 in)**
2nd ring	**: 0.50 - 0.65 mm (0.0197 - 0.0256 in)**
Oil ring	**: 0.20 - 0.70 mm (0.0079 - 0.0276 in)**

Limit:

Top ring	**: 0.57 mm (0.0224 in)**
2nd ring	**: 0.85 mm (0.0335 in)**
Oil ring	**: 0.96 mm (0.0378 in)**

- If out of specification, replace piston ring. If gap still exceeds the limit even with a new ring, re-bore cylinder and use oversized piston and piston ring.

CONNECTING ROD BEND AND TORSION

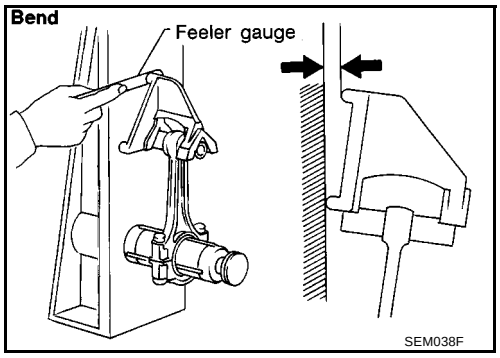
- Check connecting rod bend and torsion with a connecting rod aligner.

Bend:

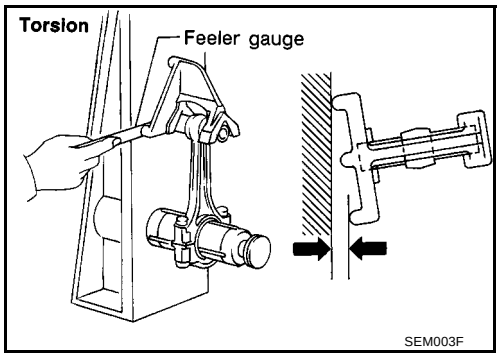
Limit : 0.15 mm (0.0059 in) per 100 mm (3.94 in) length

Torsion:

Limit : 0.30 mm (0.0118 in) per 100 mm (3.94 in) length



- If it exceeds the limit, replace connecting rod assembly.

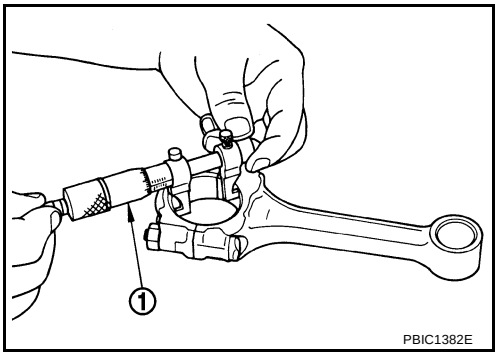


CONNECTING ROD BEARING HOUSING DIAMETER (BIG END)

- Install the connecting rod cap without the connecting rod bearing installed. After tightening the connecting rod bolt to the specified torque, measure the connecting rod big end inner diameter using an inside micrometer (1). Refer to EM-76, "ASSEMBLY" for the tightening procedure.

Standard : 43.000 - 43.013 mm (1.6929 - 1.6934 in) dia.

- If it exceeds the standard, replace the connecting rod.

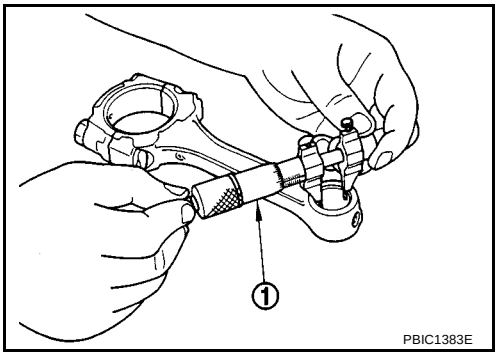


CONNECTING ROD BUSHING OIL CLEARANCE DIAMETER (SMALL END)

Inner Diameter of Connecting Rod Bushing (Small End)

- Using an inside micrometer (1), measure inner diameter of bushing.

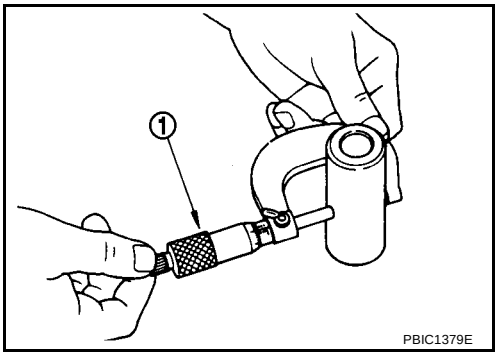
Standard : 17.962 - 17.978 mm (0.7072 - 0.7078 in) dia.



Outer Diameter of Piston Pin

- Using a micrometer (1), measure piston pin outer diameter.

Standard : 17.996 - 18.000 mm (0.7996 - 0.7087 in) dia.



Connecting Rod Bushing Oil Clearance (Small End)

(Connecting rod small end oil clearance) = (Inner diameter of connecting rod small end) – (Outer diameter of piston pin)

Standard : –0.018 - –0.038 mm (–0.0007 - –0.0015 in)

- If the measured value exceeds the standard, replace the connecting rod assembly and/or piston and piston pin assembly.
- If replacing the piston and piston pin assembly, refer to EM-82, "HOW TO SELECT PISTON" .

CYLINDER BLOCK DISTORTION

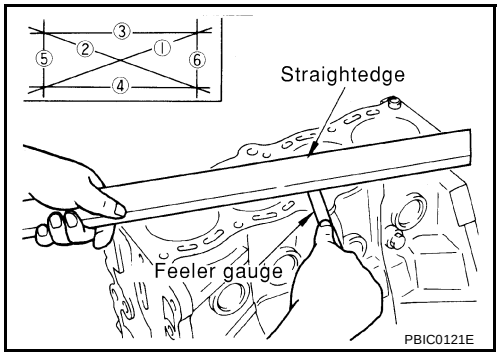
- Using a scraper, remove gasket on the cylinder block surface, and also remove oil, scale, carbon, or other contamination.

  CAUTION:
  Be careful not to allow gasket flakes to enter the oil or coolant passages.

- Measure the distortion on the block upper face at some different points in 6 directions.

  Limit : 0.1 mm (0.004 in)

- If out of the distortion limit, replace the cylinder block.



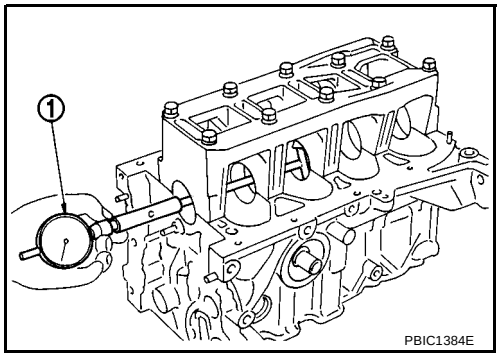
INNER DIAMETER OF MAIN BEARING HOUSING

- Install the main bearing cap with the main bearings removed, and tighten the mounting bolts to the specified torque. Refer to EM-76, "ASSEMBLY" for the tightening procedure.
- Using a bore gauge (1), measure the inner diameter of the main bearing housing.

  Standard : 49.000 - 49.016 mm (1.9291 - 1.9298 in) dia.

- If out of specification, replace cylinder block and main bearing cap as an assembly.

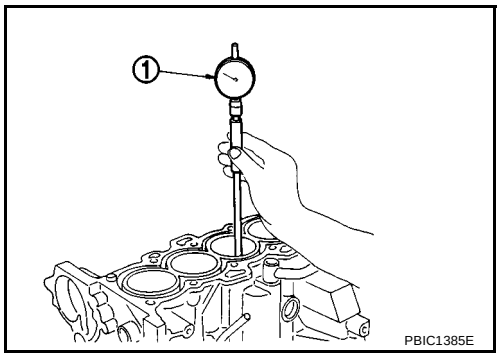
  NOTE:
  Cylinder block cannot be replaced as a single part because it is machined together with main bearing cap.



PISTON TO CYLINDER BORE CLEARANCE

Inner Diameter of Cylinder Bore

- Using a bore gauge (1), measure cylinder bore for wear, out-of-round and taper at 6 different points on each cylinder. (X and Y directions at A, B and C) (Y is in longitudinal direction of engine)



Standard inner diameter:

CR10DE, CR12DE : 71.000 - 71.030 mm (2.7953 - 2.7965 in) dia.

CR14DE : 73.000 - 73.030 mm (2.8740 - 2.8744 in) dia.

Wear limit:

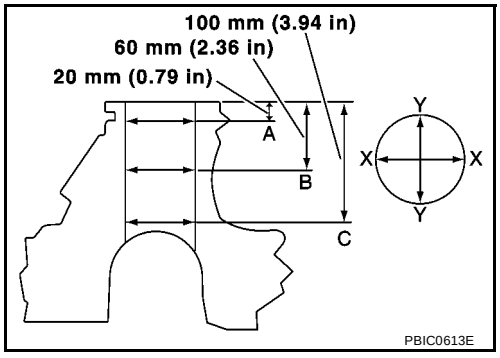
0.2 mm (0.008 in)

Out-of-round (Difference between X and Y):

0.015 mm (0.0006 in)

Taper limit (Difference between A and C):

0.01 mm (0.0004 in)



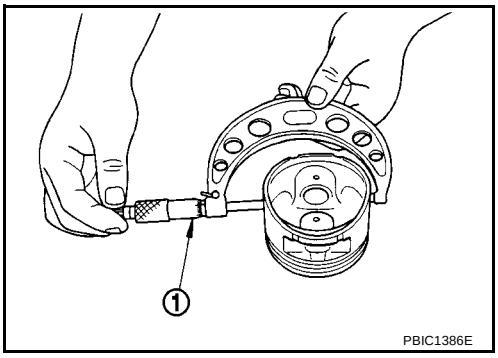
- If the measured value exceeds the limit, or if there are scratches and/or seizure on the cylinder inner wall, hone or rebore the inner wall.

- An oversize piston is provided. When using an oversize piston, rebore the cylinder so that the clearance of the piston-to-cylinder bore satisfies the standard.
- When using an oversize piston, use it for all cylinders with oversize piston rings.

Oversize (OS) : 0.2 mm (0.008 in)

Outer Diameter of piston

- Measure piston skirt outer diameter using micrometer (1).



Measurement point (Distance from the top)
CR10DE : 37.3 mm (1.469 in)
CR12DE : 34.3 mm (1.350 in)
CR14DE : 32.3 mm (1.272 in)
Standard
CR10DE : 70.980 - 71.010 mm (2.7945 - 2.7949 in) dia.
CR12DE : 70.980 - 71.010 mm (2.7949 - 2.7953 in) dia.
CR14DE : 72.980 - 73.010 mm (2.7953 - 2.7957 in) dia.

Piston to Cylinder Bore Clearance

- Calculate by outer diameter of piston skirt and inner diameter of cylinder (direction X, position B).
(Clearance) = (Inner diameter of cylinder) – (Outer diameter of piston skirt).

Standard : 0.010 - 0.030 mm (0.0004 - 0.0012 in)

- If clearance exceeds the standard, replace piston and piston pin assembly. Refer to EM-82, "HOW TO SELECT PISTON" .

Reboring Cylinder Bore

1. Cylinder bore size is determined by adding piston-to-cylinder bore clearance to piston diameter “A”.

Rebored size calculation: D = A + B - C
where,
D: Bored diameter
A: Piston diameter as measured
B: Piston - to - cylinder bore clearance (standard value)
C: Honing allowance 0.02 mm (0.0008 in)

2. Install main bearing caps, and tighten to the specified torque. Otherwise, cylinder bores may be distorted in final assembly.
3. Cut cylinder bores.

- When any cylinder needs boring, all other cylinders must also be bored.
- Do not cut too much out of cylinder bore at a time. Cut only 0.05 mm (0.0020 in) or so in diameter at a time.

4. Hone cylinders to obtain specified piston-to-cylinder bore clearance.
5. Measure finished cylinder bore for out-of-round and taper.

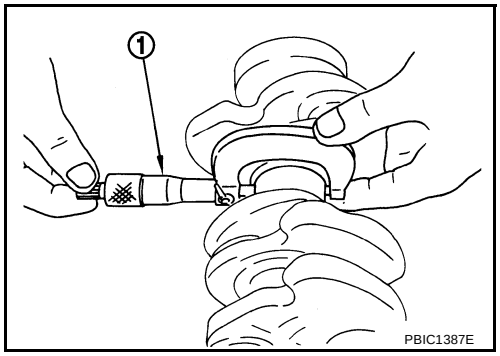
- Measurement should be done after cylinder bore cools down.

OUTER DIAMETER OF CRANKSHAFT JOURNAL

- Using a micrometer (1), measure outer diameter of crankshaft journals.

  Standard : 44.954 - 44.970 mm (1.7698 - 1.7705 in) dia.

- If it is out of the standard, measure the main bearing oil clearance. Then use the undersize bearing. Refer to EM-91, "OIL CLEARANCE OF MAIN BEARING" .



OUTER DIAMETER OF CRANKSHAFT PIN

- Using a micrometer, measure outer diameter of crankshaft pin.

  Standard : 39.961 - 39.974 mm (1.5733 - 1.5738 in) dia.

- If it is out of the standard, measure the connecting rod bearing oil clearance. Then use the undersize bearing. Refer to EM-91, "OIL CLEARANCE OF CONNECTING ROD BEARING" .

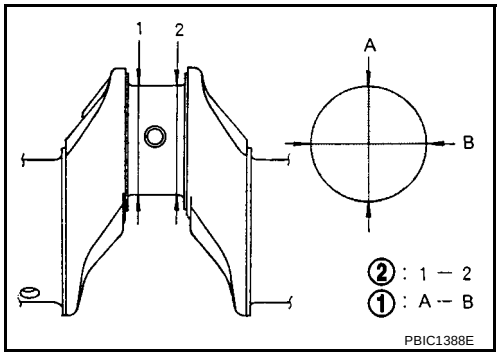
OUT-OF-ROUND AND TEPER OF CRANKSHAFT

- Using a micrometer, measure the dimensions at 4 different points shown in the figure on each journal and pin.
- Out-of-round (1) is indicated by the difference in dimensions between 1 and 2 at A and B.
- Taper (2) is indicated by the difference in dimension between A and B at 1 and 2.

  Limit:

  Out-of-round (X – Y) : 0.005 mm (0.0002 in)

  Taper (1 – 2) : 0.005 mm (0.0002 in)



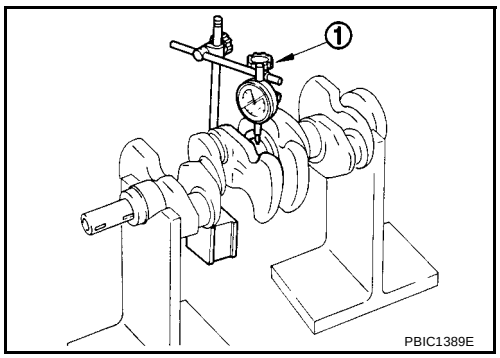
- If the measured value exceeds the limit, correct or replace the crankshaft.
- If corrected, measure the bearing oil clearance of the corrected journal or pin. Then select the main bearing or connecting rod bearing. Refer to EM-91, "OIL CLEARANCE OF MAIN BEARING" or EM-91, "OIL CLEARANCE OF CONNECTING ROD BEARING" .

CRANKSHAFT RUNOUT

- Place a V-block on a precise flat table to support the journals on the both end of the crankshaft.
- Place a dial gauge (1) straight up on the No. 3 journal.
- Rotate crankshaft and read indication on the gauge. (Total indicator reading)

  Limit : 0.05 mm (0.002 in)

- If it exceeds the limit, replace the crankshaft.

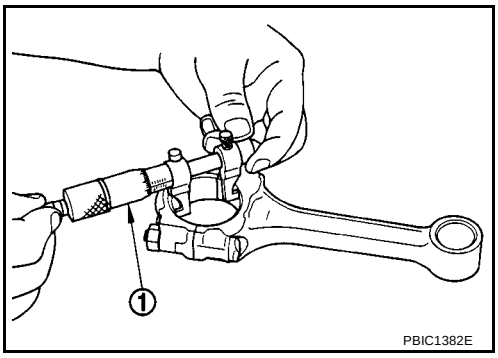


OIL CLEARANCE OF CONNECTING ROD BEARING

Method of Measurement

- Install the connecting rod bearings to the connecting rod and the cap, and tighten the connecting rod nuts to the specified torque. Using a inside micrometer (1) measure the inner diameter of connecting rod bearing. Refer to EM-76, "ASSEMBLY" for the tightening procedure.
  (Oil clearance) = (Inner diameter of connecting rod bearing) – (Outer diameter of crankshaft pin)

  Standard : 0.010 - 0.044 mm (0.0004 - 0.0017 in)
  Limit : 0.064 mm (0.0025 in)

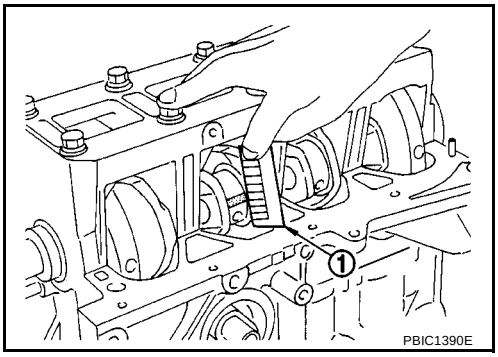


- When exceeding limit, use undersize bearing so that oil clearance remains within the standard value. Refer to EM-91, "Undersize Bearing Usage Guide" .

Method of Using Plastigage

- Remove oil and dust on the crankshaft pin and the surfaces of each bearing completely.
- Cut a plastigage (1) slightly shorter than the bearing width, and place it in crankshaft axial direction, avoiding oil holes.
- Install the connecting rod bearings to the connecting rod cap, and tighten the connecting rod nuts to the specified torque. Refer to EM-76, "ASSEMBLY" for the tightening procedure.

  CAUTION:
  Never rotate crankshaft while Plastigage is in place.
- Remove the connecting rod cap and bearings, and using the scale on the plastigage bag, measure the plastigage width.



NOTE:
The procedure when the measured value exceeds the limit is same as that described in the “Method of Measurement”.

Undersize Bearing Usage Guide

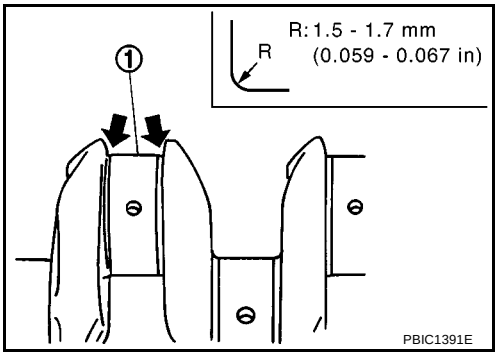
- If specified oil clearance cannot be obtained by standard size connecting rod bearing, use undersize (US) bearing.
- When using undersize bearing, install it, measure bearing inner diameter, and grind crankshaft pin to obtain specified oil clearance.

Bearing undersize table

Unit: mm (in)

Size	Thickness
STD (Reference)	1.504 - 1.508 (0.0529 - 0.0594)
US 0.25 (0.0098)	1.627 - 1.635 (0.0641 - 0.0644)

CAUTION:
Keep fillet R when grinding crankshaft pin (1) in order to use undersize bearing (All crankshaft pin).



OIL CLEARANCE OF MAIN BEARING

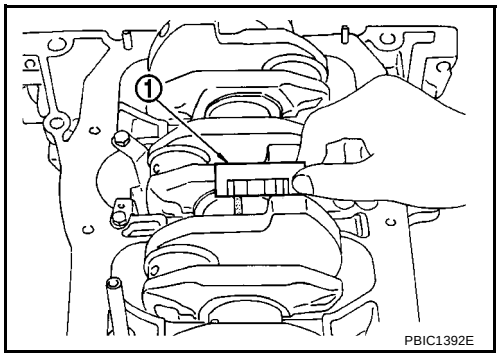
Method of Measurement

- Install the main bearings to the cylinder block and bearing cap. Measure the main bearing inner diameter with the bearing cap bolt tightened with main bearing cap to the specified torque. Refer to EM-76, "ASSEMBLY" for the tightening procedure.
  (Oil clearance) = (Inner diameter of main bearing) – (Outer diameter of crankshaft journal)

  Standard : 0.018 - 0.034 mm (0.0007 - 0.0013 in)
  Limit : 0.05 mm (0.002 in)

- If the measured value exceeds the limit, select main bearings (including the undersize) referring to the main bearing inner diameter and crankshaft journal outer diameter, so that the oil clearance satisfies the standard. Refer to EM-83, "HOW TO SELECT MAIN BEARING" .

Method of Using Plastigage

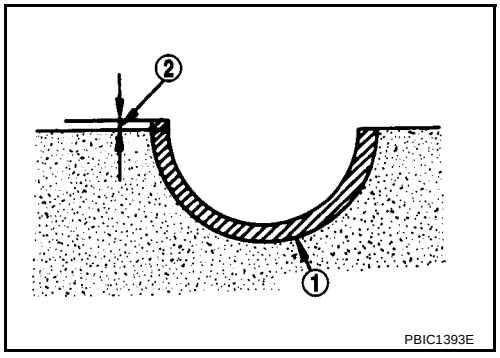


- Remove oil and dust on the crankshaft journal and the surfaces of each bearing completely.
- Cut a plastigage (1) slightly shorter than the bearing width, and place it in crankshaft axial direction, avoiding oil holes.
- Tighten the main bearing bolts with main bearing cap to the specified torque. Refer to EM-76, "ASSEMBLY" for the tightening procedure.

  CAUTION:
  Never rotate crankshaft while Plastigage is in place.
- Remove the bearing cap and bearings, and using the scale on the plastigage bag, measure the plastigage width.

NOTE:
The procedure when the measured value exceeds the limit is same as that described in the “Method of Measurement”.

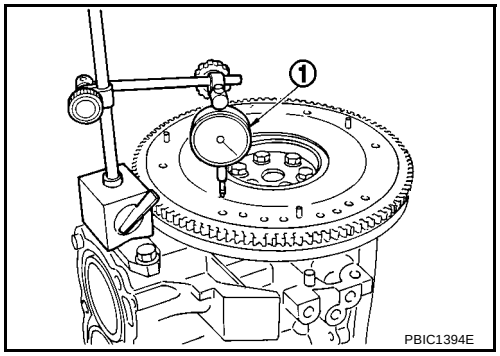
CRUSH HEIGHT OF MAIN BEARING OR CONNECTING ROD BEARING



- When the bearing cap is removed after being tightened to the specified torque with main bearings or connecting rod bearings (1) installed, the tip end of bearing must protrude. Refer to EM-76, "ASSEMBLY" for the tightening procedure.

  Standard : There must be crush height (2).
- If the standard is not met, replace main bearings or connecting bearings.

FLYWHEEL RUNOUT



- The runout of the clutch contact surface of the flywheel should be measured using a dial gauge (1). (Total indicator reading)

  Flywheel (M/T models)
  Limit : 0.15 mm (0.0059 in)

		Exhaust		78.4 - 88.2 (8.0 - 8.9, 58 - 65)

*1	Camshaft bracket	1)	2.0 (0.2, 18)*2
		2)	5.9 (0.6, 52)*2
		3)	9.0 - 11.8 (0.92 - 1.2, 80 - 104)*2
	Chain tension guide		16.6 - 23.5 (1.7 - 2.3, 13 - 17)
	Chain slack guide		12.7 - 18.6 (1.3 - 1.8, 10 - 13)
	Crankshaft pulley		132.4 - 152.0 (14 - 15, 98 - 112)
	Front cover		6.3 - 8.3 (0.65 - 0.84, 56 - 73)*2
*1	Cylinder head bolt	1)	61.7 - 71.7 (6.3 - 7.3, 46 - 52)
		2)	0 (0.0, 0)
		3)	22.5 - 32.5 (2.3 - 3.3, 17 - 23)
		4)	90° - 95° (Angle tightening)
*1	Cylinder head auxiliary bolt		9.0 - 11.8 (0.92 - 1.2, 80 - 104)*2
	Engine slinger		16.6 - 23.5 (1.7 - 2.3, 13 - 17)
	LH engine mount insulator		95 - 115 (9.7 - 11, 70 - 84)
	LH engine mount bracket (vehicle side)		43 - 54 (4.4 - 5.5, 32 - 39)
	LH engine mount bracket (transaxle side)		60 - 70 (6.2 - 7.1, 45 - 51)
	RH engine mount stay		40 - 50 (4.1 - 5.1, 30 - 36)
	RH engine mount insulator RH		60 - 70 (6.2 - 7.1, 45 - 51)
	RH engine mount bracket (upper)		40 - 50 (4.1 - 5.1, 30 - 36)
	RH engine mount bracket (lower)		40 - 50 (4.1 - 5.1, 30 - 36)
	Rear engine mount bracket	A/T models M/T models	64 - 74 (6.6 - 7.5, 48 - 54) 75 - 85 (7.7 - 8.7, 56 - 62)
	Rear torque rod		75 - 85 (7.7 - 8.7, 56 - 62)
	Connecting nut between LH engine mount insulator and LH engine mount bracket (transaxle side)		60 - 70 (6.2 - 7.1, 45 - 51)
	Connecting bolt between RH engine mount insulator and RH engine mount bracket (upper)		90 - 100 (9.2 - 10, 67 - 73)
*1	Main bearing cap	1)	24.5 - 30.3 (2.5 - 3.0, 18 - 22)
		2)	95° - 100° (Angle tightening)
	Connecting rod cap	1)	13.7 - 15.7 (1.4 - 1.6, 10.1 - 11.5)
		2)	45° - 50° (Angle tightening)
	Rear oil seal retainer		6.9 - 9.5 (0.71 - 0.96, 61 - 84)*2
	Flywheel (M/T)		83.4 - 93.2 (8.5 - 9.5, 62 - 68)
	Drive plate (A/T)		93.2 - 103 (9.5 - 10, 69 - 75)
	Knock sensor		15.7 - 20.6 (1.6 - 2.1, 12 - 15)
	Crankshaft position sensor (POS) [Note: transaxle side mounting parts]		7.1 - 10.8 (0.73 - 1.1, 63 - 95)*2

PRECAUTIONS

PFP:00001

Precautions for Drain Coolant

EBS01C5X

Drain coolant when engine is cooled.

Precautions for Disconnecting Fuel Piping

EBS01C5Y

- Before starting work, make sure no fire or spark producing items are in the work area.
- Release fuel pressure before disassembly.
- After disconnecting pipes, plug openings to stop fuel leakage.

Precautions for Removal and Disassembly

EBS01C5Z

- When instructed to use special service tools, use the specified tools. Always be careful to work safely, avoid forceful or uninstructed operations.
- Exercise maximum care to avoid damage to mating or sliding surfaces.
- Cover openings of engine system with tape or the equivalent, if necessary, to seal out foreign materials.
- Mark and arrange disassembly parts in an organized way for easy troubleshooting and re-assembly.
- When loosening nuts and bolts, as a basic rule, start with the one furthest outside, then the one diagonally opposite, and so on. If the order of loosening is specified, do exactly as specified.

Precautions for Inspection, Repair and Replacement

EBS01C60

Before repairing or replacing, thoroughly inspect parts. Inspect new replacement parts in the same way, and replace if necessary.

Precautions for Assembly and Installation

EBS01C61

- Use torque wrench to tighten bolts or nuts to specified value.
- When tightening nuts and bolts, as a basic rule, equally tighten in several different steps starting with the ones in center, then ones on inside and outside diagonally in this order. If the order of tightening is specified, do exactly same as specified.
- Replace with new gasket, packing, oil seal or O-ring.
- Thoroughly wash, clean, and air-blow each part. Carefully check oil or coolant passages for any restriction and blockage.
- Avoid damaging sliding or mating surfaces. Completely remove foreign materials such as cloth lint or dust. Before assemble, spread the oil on sliding surfaces well.
- Release air within route when refilling after draining coolant.
- Before starting engine, apply fuel pressure to fuel lines with turning ignition switch ON (with engine stopped). Then make sure that there are no leaks at fuel line connections.
- After repairing, start engine and increase engine speed to check coolant, fuel, oil, and exhaust systems for leakage.

Parts Requiring Angular Tightening

EBS01C62

- Use an angle wrench for the final tightening of the following engine parts.
  - Cylinder head bolts
  - Lower cylinder block bolts
  - Connecting rod cap bolts
  - Crankshaft pulley bolt (No angle wrench is required as the bolt flange is provided with notches for angular tightening)
- Do not use a torque value for final tightening.
- The torque value for these parts are for a preliminary step.
- Ensure thread and seat surfaces are clean and coated with engine oil.

Precautions For Liquid Gasket

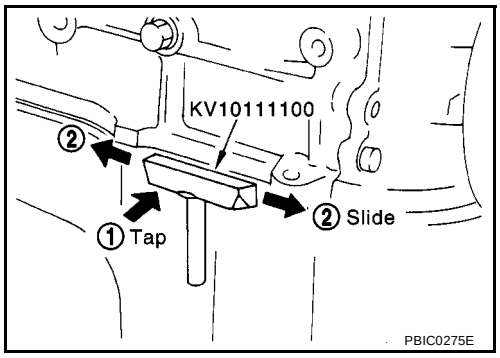
EBS01C63

REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, separate the mating surface using a seal cutter and remove the liquid gasket.

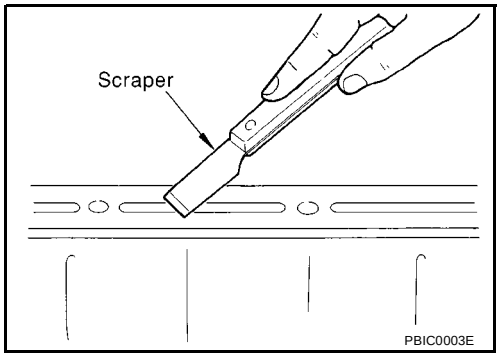
  CAUTION:
  Be careful not to damage the mating surfaces.
- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the liquid gasket applied area.

  CAUTION:
  If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.



LIQUID GASKET APPLICATION PROCEDURE

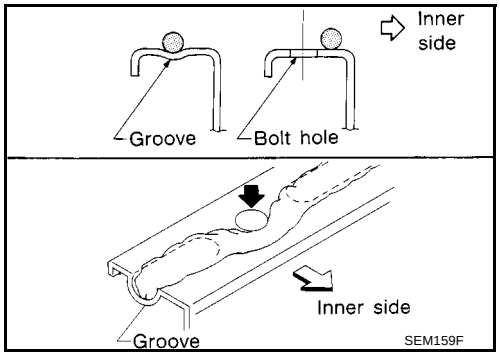
1. Using a scraper, remove the old liquid gasket adhering to the gasket application surface and the mating surface.
   - Remove the liquid gasket completely from the groove of the gasket application surface, mounting bolts and bolt holes.
2. Wipe the gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.
3. Attach the liquid gasket to the tube presser.
   Use Genuine Liquid Gasket or equivalent.



4. Apply the liquid gasket without breaks to the specified location with the specified dimensions.
   - If there is a groove for the liquid gasket application, apply the gasket to the groove.

   - As for the bolt holes, normally apply the gasket inside the holes. If specified, it should be applied outside the holes. Make sure to read the instruction in this manual.
   - Within five minutes of gasket application, install the mating component.
   - If the liquid gasket protrudes, wipe it off immediately.
   - Do not retighten after the installation.
   - After 30 minutes or more have passed from the installation, fill the engine oil and coolant.

   CAUTION:
   If there are instructions in this manual, observe them.



Cleanliness Instructions Which Must Be Followed When Working On The High Pressure Direct Injection System

EBS01C64

RISKS RELATING TO CONTAMINATION

The system is very sensitive to contamination. The risks caused by the introduction of contamination are:

- Damage to or destruction of the high pressure injection system,
- Seizing or leaking of a component.

All After-Sales operations must be performed under very clean conditions. This means that no impurities (particles a few microns in size) must be allowed to enter the system during dismantling or into the circuits via the fuel unions. The cleanliness principle must be applied from the filter to the injectors.

The Sources Of Contamination

EBS01C65

Contamination is caused by:

- Metal or plastic chips,
- Paint,
- Fibres,
  - Of cardboard,
  - Brushes,
  - Paper,
  - Clothing,
  - Cloths.
- Foreign bodies such as hairs,
- Ambient air,
- Etc.

CAUTION:

It is forbidden to clean the engine using a high pressure washer because of the risk of damaging connections. Also moisture may collect in the connectors and cause electrical connection problems.

Precautions To Be Followed Before Any Work Is Carried Out On The Injection System

EBS01C66

- Ensure that you have the plugs for the unions to be opened [bag of plugs sold by the Parts Stores - Nissan part No.: 16830 BN700 (Renault part No.: 77 01 206 804)]. Plugs are to be used once only. After use, they must be thrown away (once used they are soiled and cleaning is not sufficient to make them reusable). Unused plugs must be thrown away.
- Ensure that you have the resealable plastic bags for storing removed parts. There is less risk of parts stored in this way being exposed to contamination. The bags must be used only once, and after use they must be thrown away.
- Make sure that lint-free cleaning cloths are available. The use of conventional cloth or paper is prohibited. These are not lint-free and may contaminate the fuel circuit of the system. Each lint-free cloth should only be used once.

Cleaning Precautions To Be Followed Before Carrying Out Any Work On The Fuel System

EBS01C67

- For each operation, use new thinner (used thinner contains impurities). Pour it into a clean receptacle.
- For each operation, use a clean brush which is in good condition (the brush must not shed its bristles).
- Use a brush and thinners to clean the connections to be opened.
- Blow compressed air over the cleaned parts (tools, bench and parts, connections and injection system zone). Check that no bristles remain adhered.
- Wash your hands before and during the operation if necessary.
- When wearing leather protective gloves, cover these with latex gloves.

Precautions To Be Followed During The Operation

EBS01C68

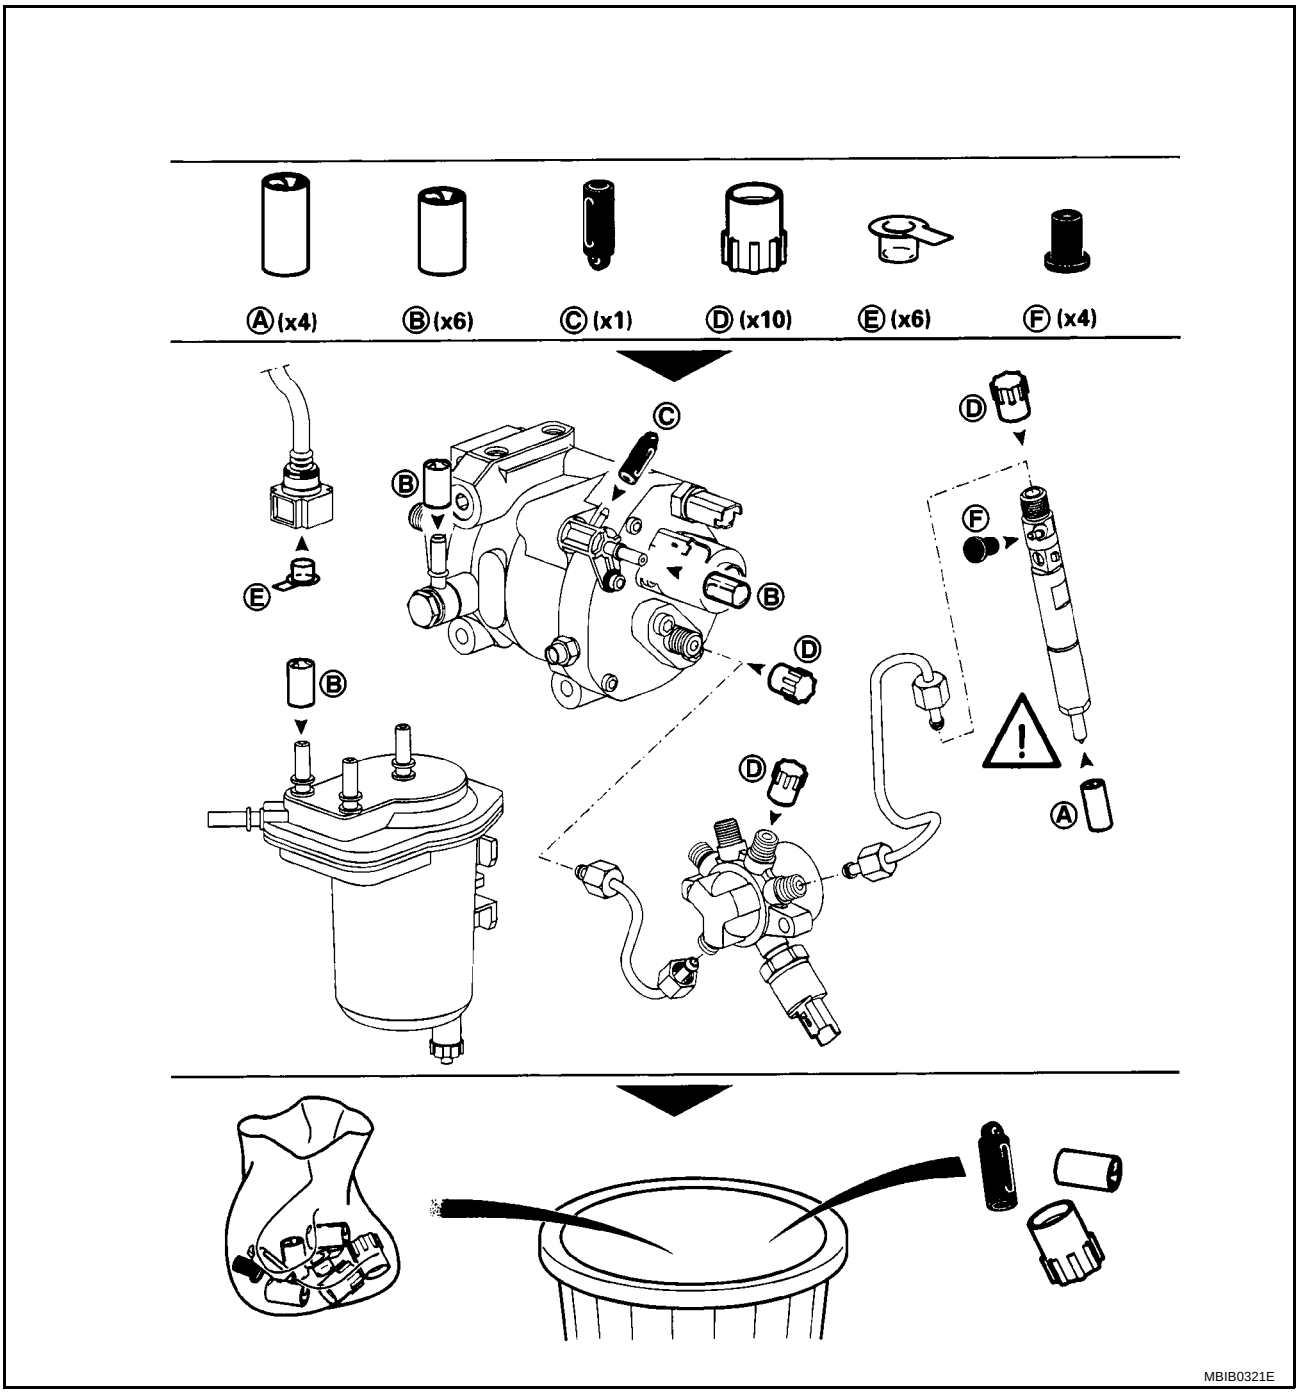
- As soon as the circuit is open, all openings must be plugged to prevent impurities from entering the system. The plugs to be used are available from the Parts Stores [Nissan Part No.: 16830 BN700 (Renault Part No.: 77 01 206 804)]. They must not be reused under any circumstances.
- Close the hermetically sealed bag, even if it has to be reopened shortly afterwards. Ambient air carries contamination.
- All components of the injection system that are removed must be stored in a hermetically sealed plastic bag once the plugs have been inserted.
- The use of a brush, thinner, bellows, sponge or normal cloth is strictly forbidden once the circuit has been opened. In fact, these items are likely to result in impurities entering the system.

- A new component replacing an old one must not be removed from its packaging until it is to be fitted to the vehicle.

Instructions For Fitting The Plugs

EBS01C69

NISSAN part number: 16830 BN700
(Renault part number: 77 01 206 804)



CAUTION:

- **The engine must not run with:**
  - **Diesel containing more than 10% diester**
  - **Petrol, even in very small amounts.**
- **The system can inject the diesel into the engine at a pressure of up to 140,000 kPa (1,400 bar, 1,428 kg/cm^2 , 20,300 psi). Before carrying out any work, check that the injector rail is no longer pressurized and that the fuel temperature is not too high.**
- **You must respect the cleaning and safety advice specified in this document for any work on the high pressure injection system.**

- **Removal of the interior of the pump and injectors is prohibited. Only the flow actuator, the diesel temperature sensor and the venturi may be changed on the pump.**
- **For safety reasons, it is strictly forbidden to undo a high pressure pipe union when the engine is running.**
- **It is forbidden to remove the pressure sensor from the fuel rail because this may cause contamination problems. If the pressure sensor develops a fault, the pressure sensor, fuel rail and the five high pressure pipes must be replaced.**
- **It is strictly forbidden to remove any fuel injection pump pulley bearing the Renault part No. 070 575. The pulley must be replaced when the high pressure pump is replaced.**
- **It is forbidden to repair the wiring connecting the accelerometer and the engine speed sensor. If the wiring should fail, it has to be replaced with new wiring.**
- **Applying 12 volts directly to any component in the system is prohibited.**
- **Ultrasonic decoking and cleaning are prohibited.**
- **Never start the engine if the battery is not connected correctly.**
- **Disconnect the injection system computer when carrying out any welding work on the vehicle.**
- **All disconnected plastic air inlet hoses must be replaced.**

A 16 character code called C2I (Individual Injector Corrector) is marked on the injectors. This code, specific to each injector, takes into account any manufacturing variations and specifies the flow injected by each injector.
The code of the new injector must be programmed into the computer when injector is replaced.
The code of the four injectors must be programmed into the computer when the computer is replaced.
There are two possibilities:

- If it is possible to communicate with the computer:
  - Upload the data from the computer into the diagnostic tool.
  - Change the computer.
  - Download the data from the diagnostic tool to the computer.
  - Using the diagnostic tool, ensure that the computer has not detected errors relating to the injector codes and check that the instrument panel warning light is off.
- If it is not possible to communicate with the computer:
  - Change the computer.
  - Read the data on the injectors.
  - Store the data in the computer using the diagnostic tool.
  - Using the diagnostic tool, ensure that the computer has not detected faults relating to the injector codes and check that the instrument panel warning light is off.

PREPARATION

PFP:00002

Special Service Tools

EBS01C6A

NISSAN tool number (RENAULT tool No.) Tool name		Description
KV113B0020 **(Emb. 880)** **Sliding hammer**	 MBIB0358E	Inertia extractor
KV113B0030 **(Mot. 11)** **Crankshaft bearing remover**	 MBIB0359E	Crankshaft bearing extractor
KV113B0040 **(Mot. 251-01)** **Dial gauge stand set**	 MBIB0360E	Gauge stand used with KV113B0050 (Mot. 252-01)
KV113B0050 **(Mot. 252-01)** **Dial gauge stand set**	 MBIB0361E	Thrust plate for measuring the protrusion of cylinder liners used with KV113B0040 (Mot. 251-01).
KV113B0060 **(Mot. 582-01)** **Ring gear stopper**	 MBIB0363E	Flywheel immobilizing tool.
KV113B0070 **(Mot. 792-03)** **Engine sub-attachment**	 MBIB0367E	Engine mounting plate for engine stand
KV113B0080 **(Mot. 799-01)** **Camshaft pulley holder**	 MBIB0368E	Tool for locking sprockets for toothed timing belt

NISSAN tool number (RENAULT tool No.) Tool name	Description
KV113B0090 **(Mot. 1335)** **Valve seal remover**  MBIB0370E	Tool for removing valve stem seals
KV113B0100 **(Mot. 1378)** **Engine sub-attachment**  MBIB0371E	X and Y engine pins

KV113B0120 **(Mot. 1485-01)** **Oil jet remover** MBIB0372E	Tool for removing the piston bottom oil jets
KV113B0130 **(Mot. 1489)** **TDC set pin**  MBIB0373E	TDC setting pin
KV113B0140 **(Mot. 1492)** **Bearing assembling set**  MBIB0374E	Tool for installing connecting rod bearing
KV113B0150 **(Mot. 1492-03)** **Bearing assembling adapter**  MBIB0375E	Adaptation kit for installing the detachable cap connecting rod bearing
KV113B0160 **(Mot. 1493-01)** **Bearing insert**  MBIB0376E	Tool for installing main bearing

NISSAN tool number (RENAULT tool No.) Tool name	Description
KV113B0170 **(Mot. 1494)** **Oil jet remover plate**	Tool for removing oil jets
KV113B0180 **(Mot. 1511-01)** **Valve seal drift**  MBIB0378E	Tool for installing valve stem seals
KV113E0010 **(Mot. 1566)** **Fuel spill tube spanner**  MBIB0379E	Spanner for installing and removing high pressure pipes
KV113B0190 **(Mot. 1567)** **Clip pliers**	Pliers for exhaust gas recycling pipe clips
KV113B0200 **(Mot. 1573)** **Cylinder head stand**  MBIB0380E	Cylinder head support
KV113B0210 **(Mot. 1585)** **Front oil seal drift**  MBIB0381E	Tool for installing crankshaft seals, flywheel end
KV113B0220 **(Mot. 1586)** **Front oil seal drift set**	Tool for installing crankshaft seals, timing end
KV113B0230 **(Mot. 1632)** **Camshaft seal insert**	Tool for installing inlet camshaft seals
KV113B0240 **(Rou. 15-01)** **Shaft protector**	Internal shaft protector **16 mm (0.63 in) dia.**
EM03470000 **(—)** **Piston ring compressor**  NT044	Installing piston assembly into cylinder bore

NISSAN tool number (RENAULT tool No.) Tool name	Description
KV10111100 **(—)** **Seal cutter**  NT046	Removing oil pan
WS39930000 **(—)** **Tube presser**  NT052	Pressing the tube of liquid gasket
KV10112100 **(—)** **Angle wrench**  NT014	Tightening bolts for bearing cap, cylinder head, etc. in angle

Commercial Service Tools

EBS01C6B

(RENAULT tool No.) Tool name	Description
Manual lift table caddy  ZZA1210D	Removing and installing engine
Piston ring expander  NT030	Removing and installing piston ring
(Mot. 588)  MBIB0364E	Liner retaining strap

(RENAULT tool No.) Tool name	Description
(664000) Cylinder head test container  MBIB0383E	Tool for testing the cylinder head, including: a tray and the various kits suited for each model of cylinder head (plug, sealing plate, blanking plate).
Torx socket	Standard 1/2" (12.7 mm) square drive 8/12 / 14 female torx socket.
(Mot. 1505) MBIB0384E	Tool for installing valve stem seals
Glow plug wrench  MBIB0387E	Articulated wrench for removing and installing the glow plugs
Main bearing wrench  MBIB0388E	Wrench for removing main bearings
(Mot. 1638) Belt tension gauge  MBIB0382E	Checking drive belt tension
Engine support bar  MBIB0961E	Using with engine support chain A: Approx. 12.5 mm (0.492in)
Engine support chain  MBIB0962E	Using with engine support bar

IDENTIFICATION INFORMATION

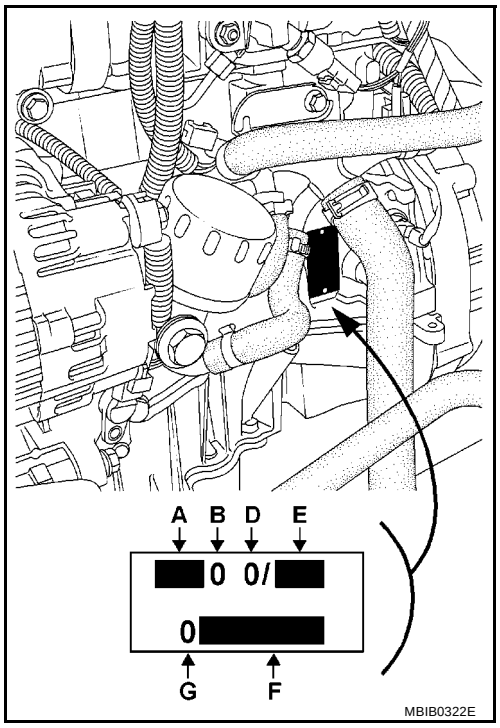
PFP:00010

Engine Identification

EBS01C6C

Identification is by means of an engraved plate on the cylinder block which carries:

- A: engine type
- B: engine type approval letter
- D: code
- E: engine suffix
- F: engine serial number
- G: engine assembly plant



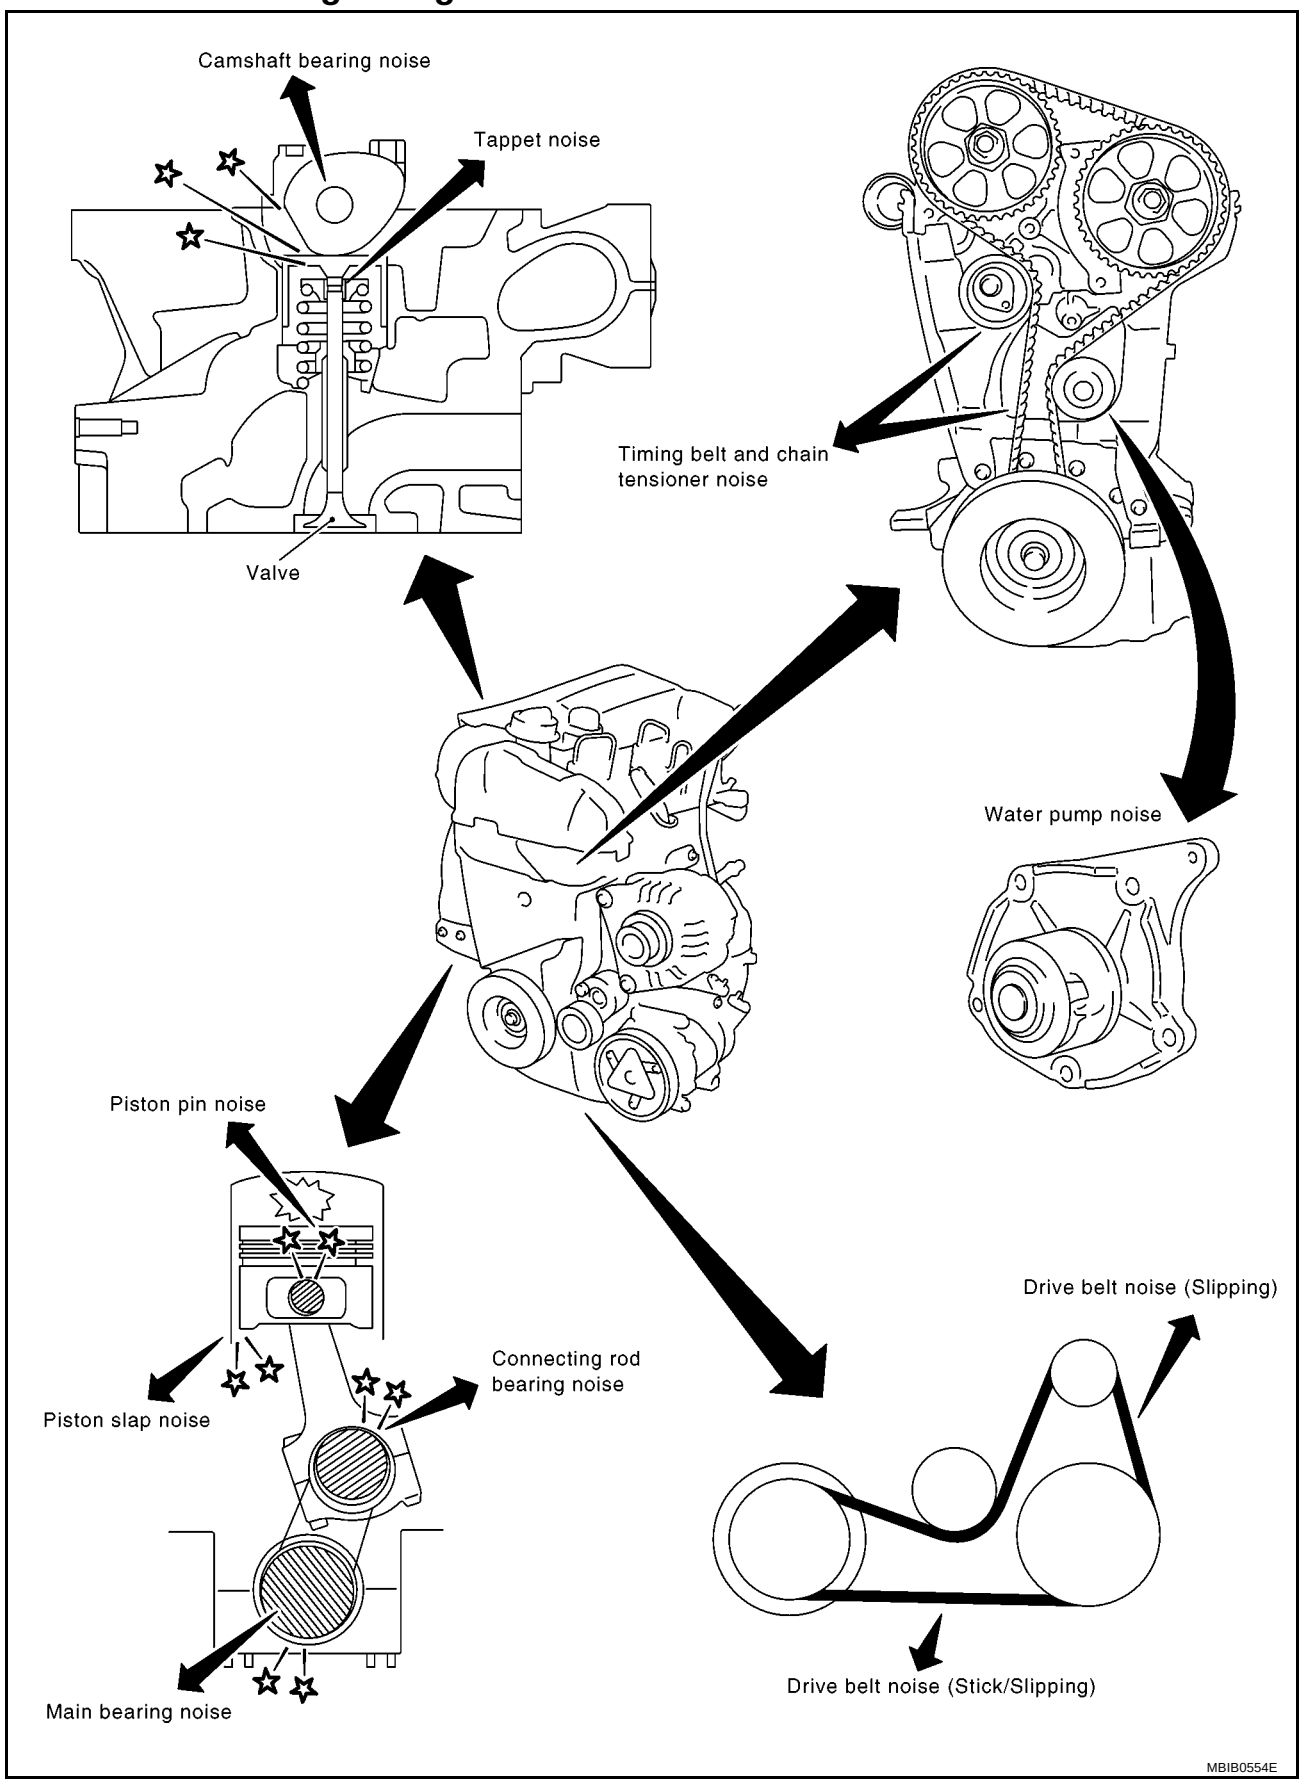
Engine	Compression ratio	Bore and stroke mm (in)	Displacement cm^3 (cu in)
K9K	18.25/1	76 x 80.5 (2.992 x 3.169)	1,461 (89.15)

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting —Engine Noise

EBS01C6D



Use the Chart Below to Help You Find the Cause of the Symptom.

EBS01C6E

1. Locate the area where noise occurs.
2. Confirm the type of noise.
3. Specify the operating condition of engine.
4. Check specified noise source.

If necessary, repair or replace these parts.

Location of noise	Type of noise	Operating condition of engine						Source of noise	Check item	Reference page
		Before warm-up	After warm-up	When starting	When idling	When racing	While driving			
Top of engine Rocker cover Cylinder head	Ticking or clicking	C	A	—	A	B	—	Tappet noise	Valve clearance	EM-194
Crankshaft pulley Cylinder block (Side of engine) Oil pan	Slap or rap	A	—	—	B	B	A	Piston slap noise	Piston ring end gap	EM-197
Front of engine Timing belt cover	Tapping or ticking	A	A	—	B	B	B	Timing belt tensioner noise	Timing belt tensioner operation	EM-140
Front of engine	Squeaking or fizzing	A	B	—	B	—	C	Drive belts (Sticking or slipping)	Drive belts deflection	EM-121
	Squall Creak	A	B	—	B	A	B	Water pump noise	Water pump operation	CO-39

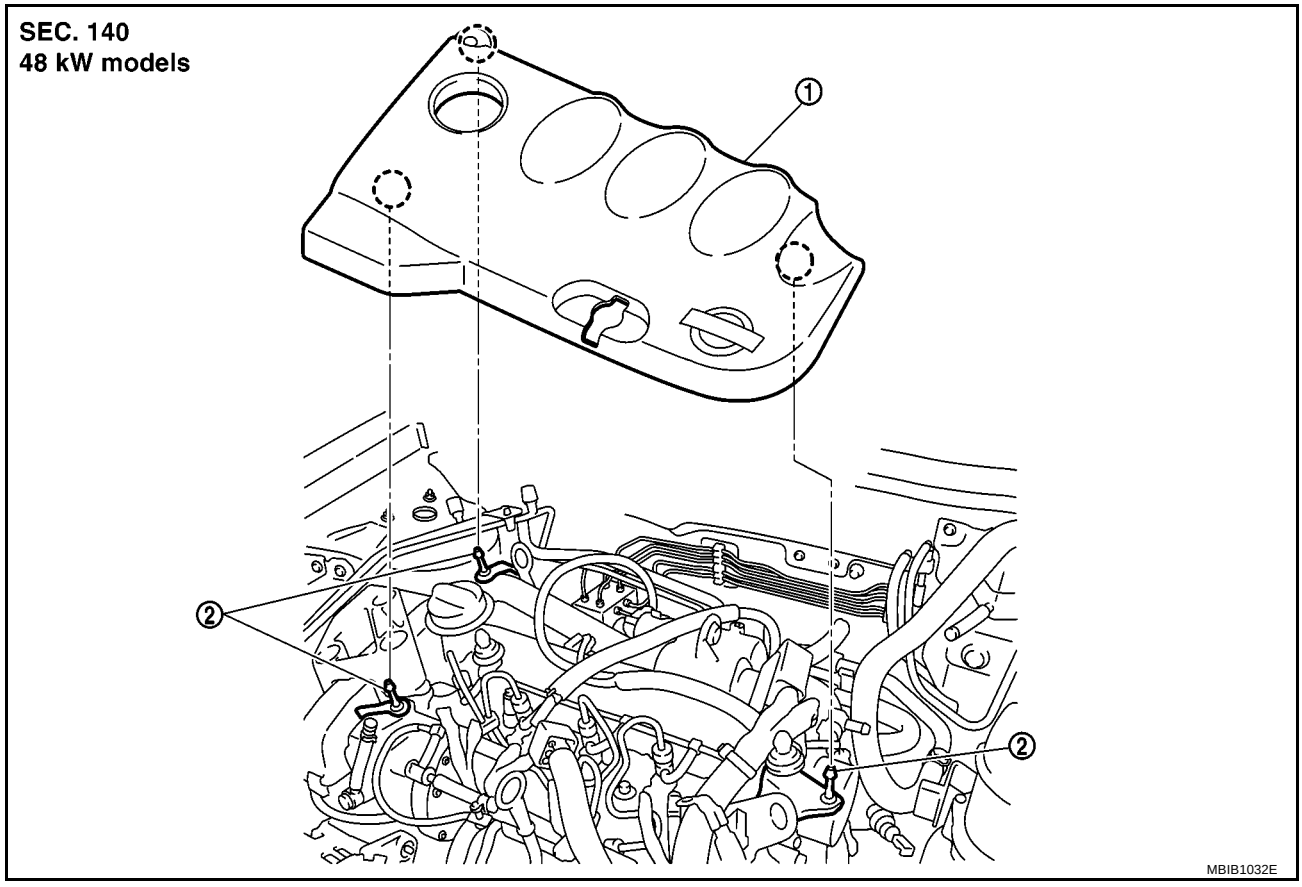
A: Closely related B: Related C: Sometimes related —: Not related

ENGINE ROOM COVER

PFP:14049

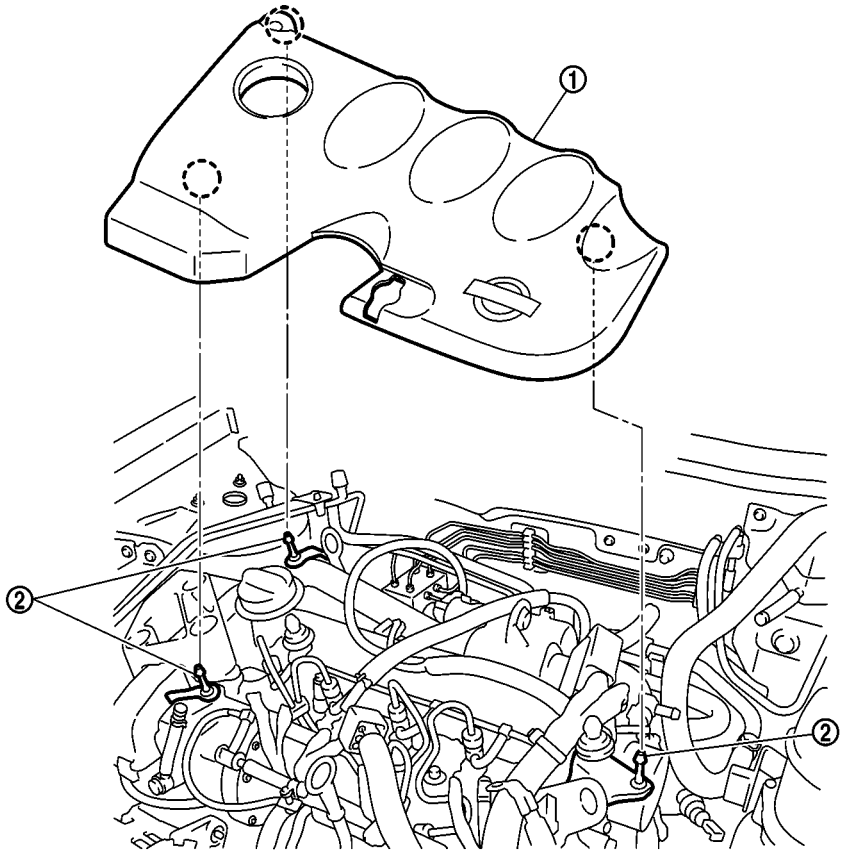
Removal and Installation

EBS01C6F



1. Engine room cover
2. Engine room cover bracket

SEC. 140
60 kW models



1. Engine room cover
2. Engine room cover bracket

REMOVAL

- Remove engine room cover from engine room cover bracket.

CAUTION:
Do not damage or scratch cover when installing or removing.

INSTALLATION

- Install in the reverse order of removal.

  NOTE:
  Press engine room cover until hearing the “click”.

DRIVE BELTS

PFP:02117

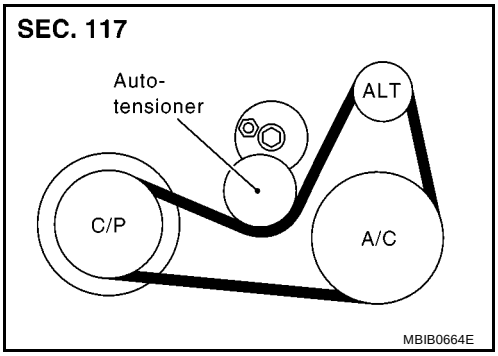
Checking Drive Belts

EBS01C6G

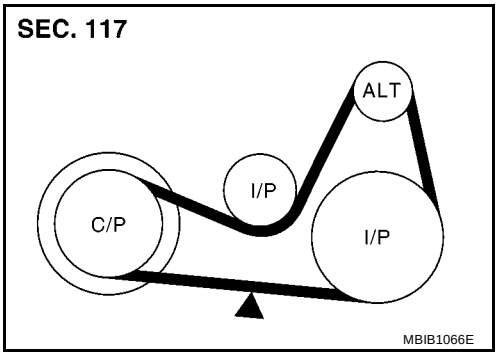
WARNING:

Be sure to perform when the engine is stopped.

1. Inspect belts for cracks, fraying, wear and oil. If necessary, replace.
2. Tighten auto-tensioner lock nut (models with A/C compressor) or idler pulley lock nut (models without A/C compressor) by hand and measure deflection or tension without looseness.



3. When measuring deflection, apply 98 N (10 kg, 22 lb) at the ▼ marked point as shown (models without A/C compressor).



Tension Adjustment

EBS01C6H

MODELS WITH A/C COMPRESSOR

Belt tensioning is not necessary, as it is automatically adjusted by auto-tensioner.

MODELS WITHOUT A/C COMPRESSOR

Belt tightening method for adjustment	Adjusting bolt on idler pulley

- The tension value is 234±10 Hz.

NOTE:

The engine must be turned through two revolutions in order to position the belt correctly.

CAUTION:

- **When checking belt tension immediately after installation, first adjust it to the specified value. Then, after turning the crankshaft two turns or more, re-adjust to the specified value to avoid variation in deflection between pulleys.**
- **When installing belt, make sure that it is correctly engaged with pulley groove.**
- **Keep oil and water away from belt.**
- **Do not twist or bend belt excessively.**

Removal and Installation

EBS01C6I

CAUTION:

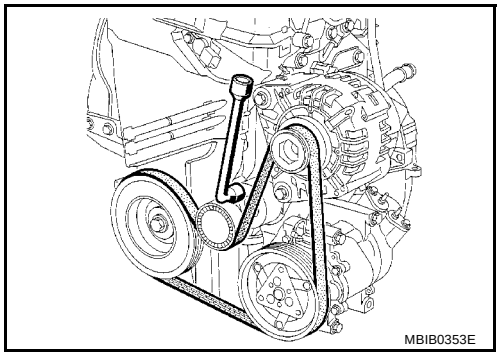
- **Replace any belt that has been removed with a new one.**
- **Auto-tensioner and idle pulley must be replaced with a new one when the belt is replaced.**
- **Do not run the engine without the drive belts to avoid damaging the crankshaft pulley.**

REMOVAL

1. Remove engine undercover.
2. Remove RH front wheel.
3. Remove right side splash cover.

4. Remove RH head light assembly.
5. Remove drive belt.

- Turn clockwise adjusting bolt.



6. If necessary, remove auto-tensioner (models with A/C compressor) or idler pulley (models without A/C compressor).

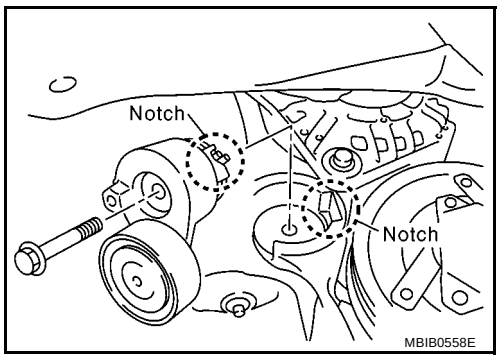
INSTALLATION

1. Install auto-tensioner mounting bolt (models with A/C compressor) or idler pulley mounting bolt (models without A/C compressor).

Auto-tensioner mounting bolt (models with A/C compressor) : **40 N·m (4.1 kg-m, 30 ft-lb)**

Idler pulley mounting bolt (models without A/C compressor) : **30 N·m (3.1 kg-m, 22 ft-lb)**

- The right figure is for example of models with A/C compressor. Align the notch and tighten mounting bolt.

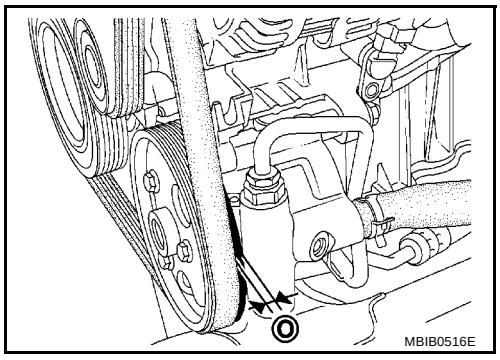


2. Install the drive belt.

CAUTION:

- **Make sure belt is correctly engaged with the pulley groove.**
- **Check for oil and coolant on belt and each pulley groove.**

NOTE:
The drive belt has five teeth as opposed to the pulleys which have six. It is therefore essential to ensure that tooth (O) remains free when installing the belt.



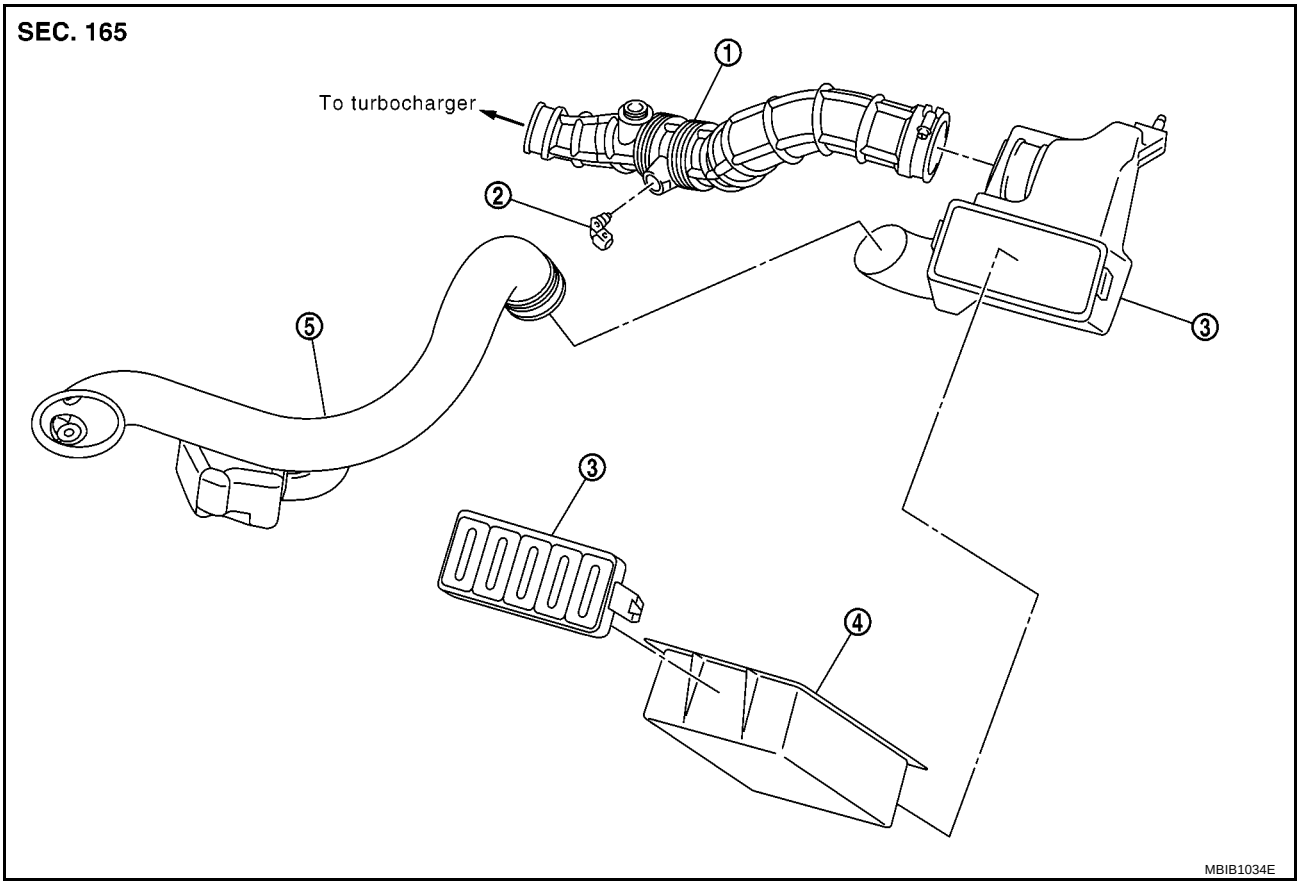
3. Adjust belt tension (models without A/C compressor). Refer to EM-121, "Tension Adjustment" .
4. Make sure that tension of each belt is within the standard.

AIR CLEANER AND AIR DUCT

PFP:16500

Removal and Installation

EBS01C6J



1. Air duct (suction)
2. Intake air temperature sensor (Models without charge air cooler)
3. Air cleaner case
4. Air cleaner filter
5. Air duct (inlet)

REMOVAL

1. Disconnect battery ground cable.
2. Disconnect battery positive cable.
3. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
4. Remove air duct (suction) mounting clip and remove air duct (suction).
5. Remove battery.
6. Disconnect the harness connector from the temperature sensor. (Models without charge air cooler)
7. Remove air duct (inlet) by loosing clamp screw.
8. Remove temperature sensor from air duct (inlet). (Models without charge air cooler)
9. Remove air cleaner case by sliding the air cleaner case frontward.

CAUTION:

Handle temperature sensor with care.

- **Do not shock it.**
- **Do not disassemble it.**
- **Do not touch its sensor.**

INSTALLATION

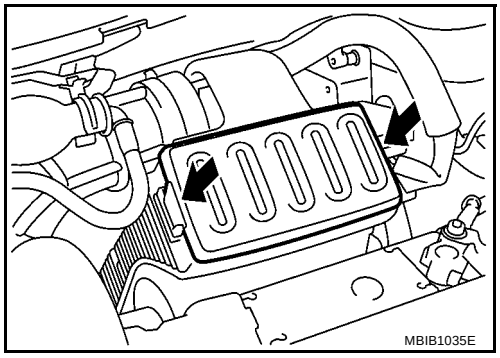
- Install in the reverse order of removal.

Changing Air Cleaner Filter

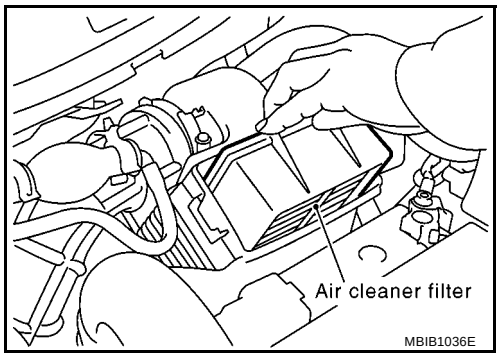
EBS01C6K

REMOVAL

1. Open air cleaner case.



2. Remove air cleaner filter.



INSTALLATION

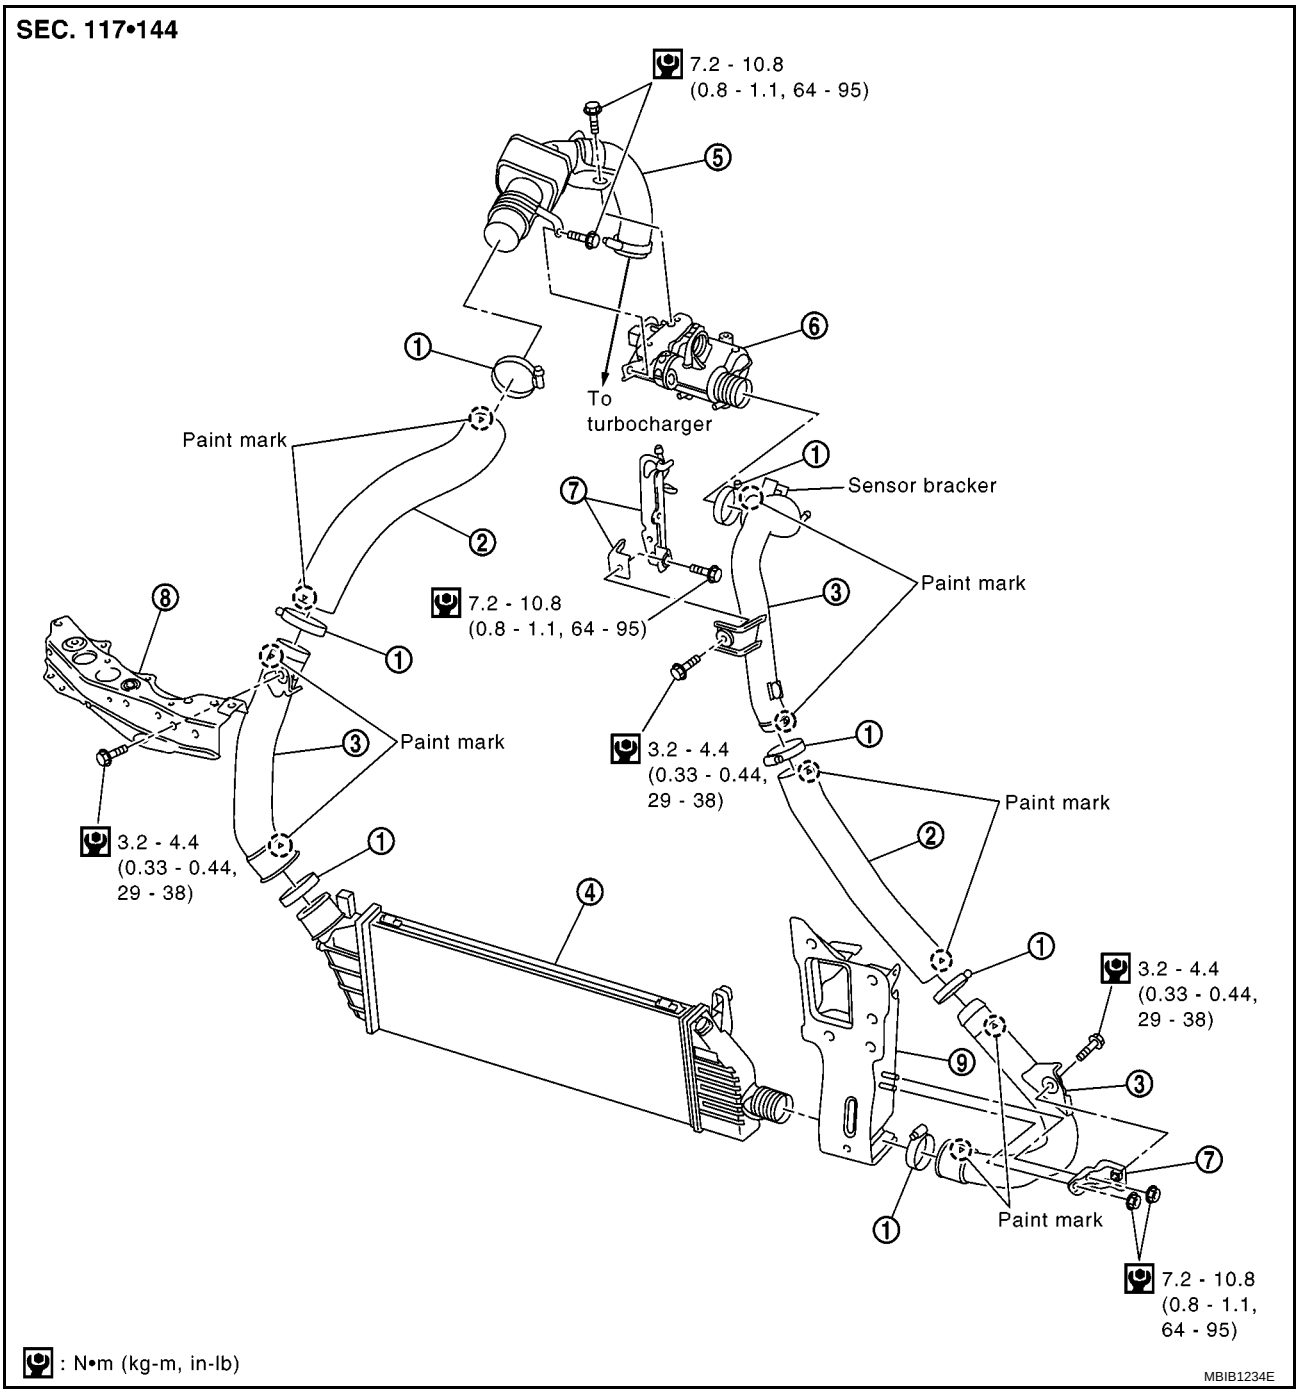
Install in the reverse order of removal.

CHARGE AIR COOLER

PFP:14461

Removal and Installation

EBS01C6L

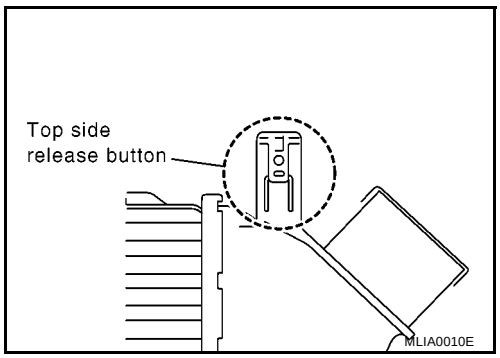


1. Hose clamp
2. Air inlet hose
3. Air inlet tube
4. Charge air cooler
5. Inlet pipe assembly
6. EGR control solenoid
7. Bracket
8. Radiator core support upper
9. Reinforcement

REMOVAL

1. Remove the front bumper. Refer to EI-4, "FRONT BUMPER" .
2. Remove the engine room cover.
3. Remove air inlet hose and tube between inlet pipe assembly and charge air cooler.

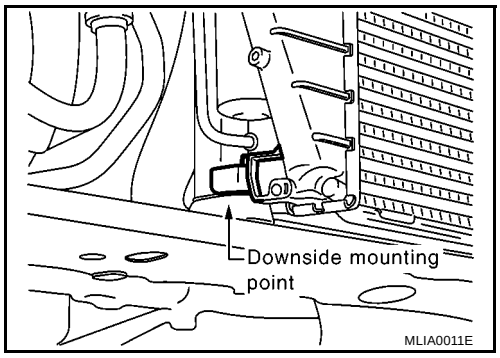
4. Push releases buttons on each topside of the charge air cooler and release it from downside mounting points.



5. Pull the charge air cooler to right side to disconnect it from the air inlet tube.

CAUTION:

- **Avoid interference between the charge air cooler and radiator.**
- **When removing charge air cooler, close opening on turbo charger and intake manifold with shop cloth or other suitable material.**



INSPECTION AFTER REMOVAL

1. Check that the charge air cooler is not full of oil. In that case, clean it with cleaning agent and then let it dry.
2. Check air passages of charge air cooler core and fins for clogging, leaks or deformation. Clean or replace charge air cooler in necessary.

- Be careful not to deform core fins.
- For cleaning procedure of charge air cooler core, refer to CO-38, "Checking Radiator" .

INSTALLATION

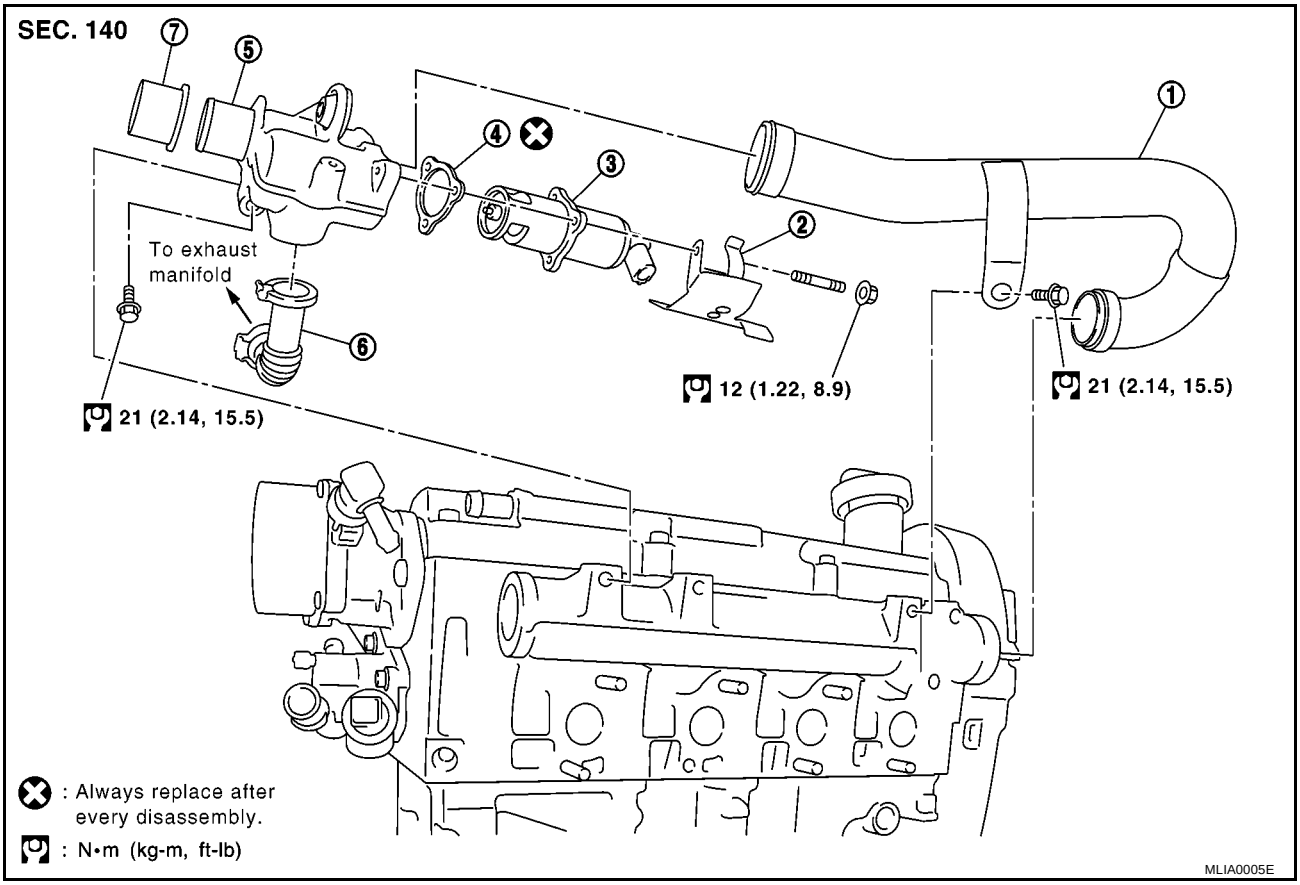
Apply a neutral detergent (fluid) to the joint between hoses and pipes (oil is not permissible).
Pay attention to identification mark and direction.
When installing air inlet hoses and tubes. Refer to EM-125, "Removal and Installation" .

EGR UNIT

PFP:14710

Removal and Installation

EBS01C6M

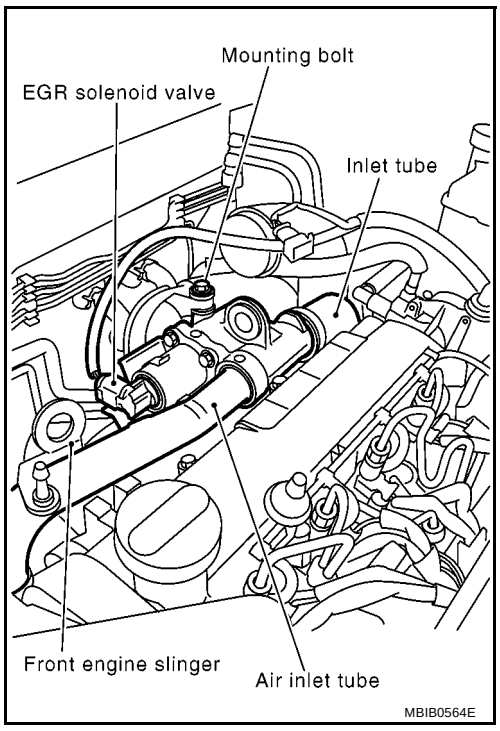


1. Air inlet tube
2. Heat insulator
3. EGR solenoid valve
4. Gasket
5. EGR unit housing
6. EGR tube
7. Joint

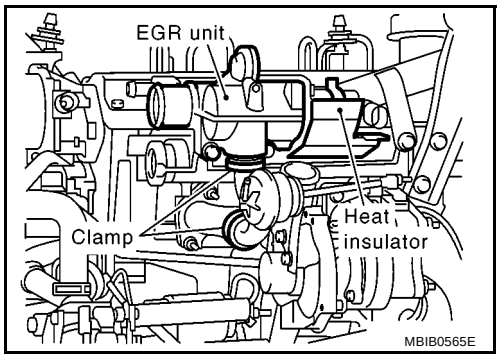
REMOVAL

1. Remove battery ground cable.
2. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
3. Remove air cleaner case and air duct (inlet). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
4. Remove wiper assembly.
5. Remove bulk head cover.

6. Disconnect EGR solenoid valve connector.
7. Remove mounting bolt.
8. Loosen turbocharger inlet tube.
9. Remove front engine slinger. Refer to EM-147, "ENGINE ASSEMBLY" .
10. Remove air inlet tube.



11. Remove heat insulator.
12. Remove EGR tube clamp.
13. Remove air duct assembly.
14. Remove EGR unit housing and EGR tube.



INSTALLATION

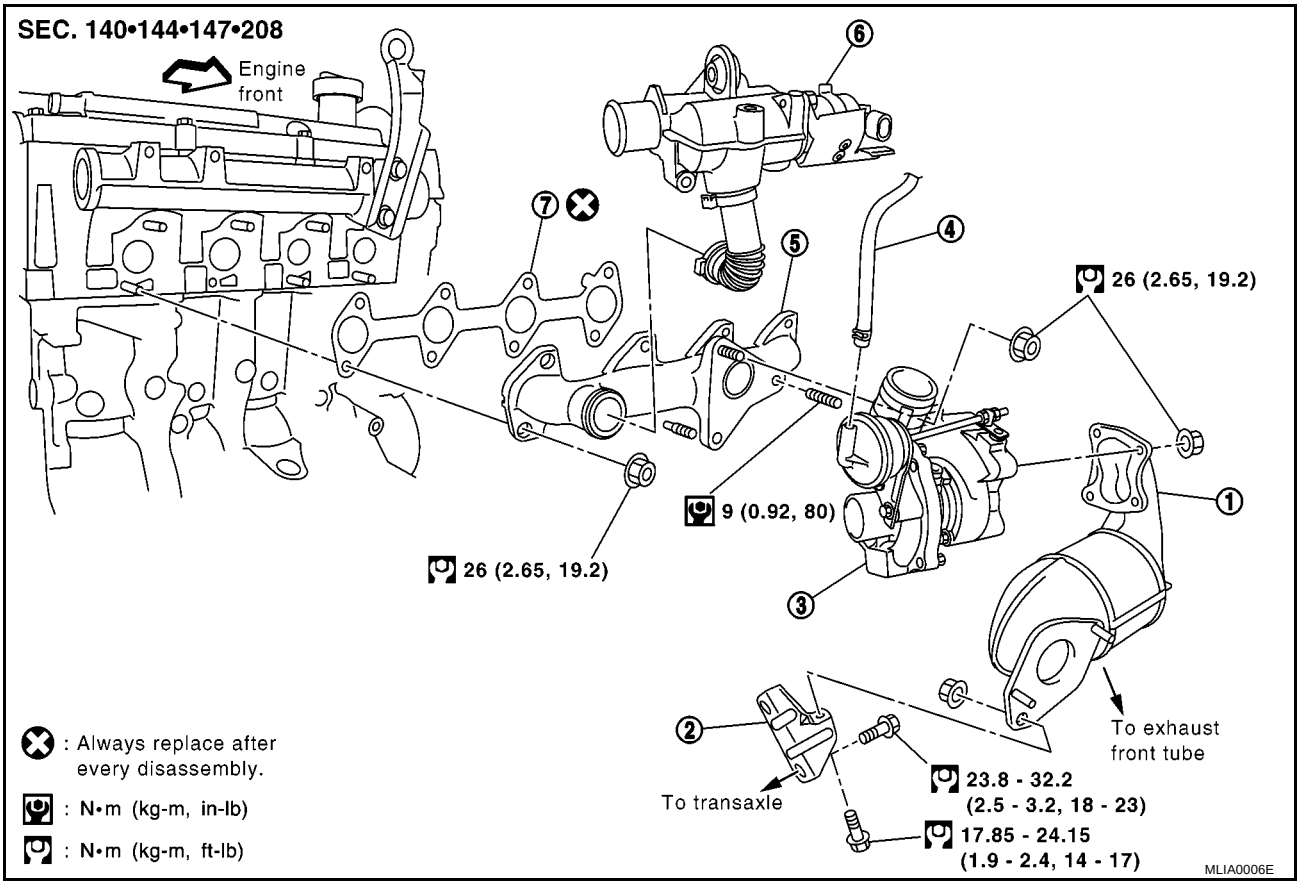
- Install in the reverse order of removal.

EXHAUST MANIFOLD, TURBOCHARGER, CATALYST

PFP:14004

Removal and Installation

EBS01C6N



1. Catalyst
2. Bracket
3. Turbocharger assembly
4. Hose
5. Exhaust manifold
6. EGR unit
7. Gasket

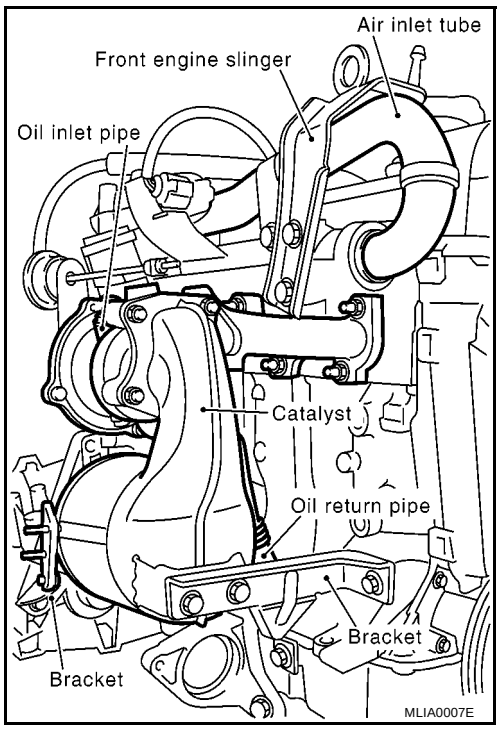
REMOVAL

1. Remove battery ground cable.
2. Remove engine undercover.
3. Remove air cleaner case and air duct (inlet). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
4. Remove wiper assembly.
5. Remove bulk head cover.
6. Remove EGR unit assembly. Refer to EM-127, "EGR UNIT" .
7. Remove turbocharger assembly as follows:

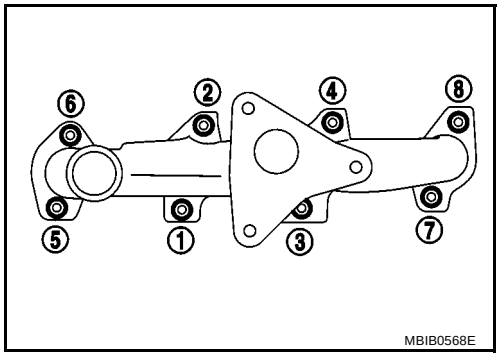
a. Remove catalyst mounting bolts and brackets.
b. Remove exhaust front tube. Refer to EX-3, "Removal and Installation" .

CAUTION:
Temporarily fix on vehicle side with rope or so to avoid putting stress on exhaust center tube.

c. Remove catalyst.



8. Each wiring and piping (disconnect/move).
9. Loosen exhaust manifold mounting nuts in the reverse order as shown.

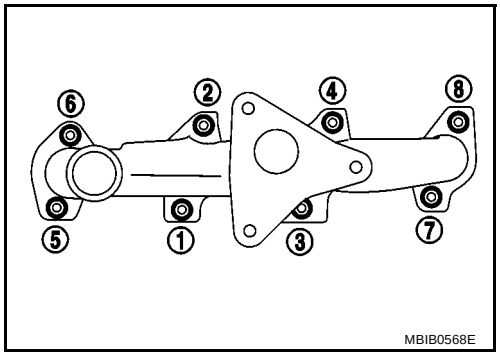


10. Rotate the exhaust manifold and turbocharger assembly so that the rear side (EGR tube mounting side) faces upward. And then pull out the assembly from between the engine and the air conditioning piping.

CAUTION:
Be careful not to deform each turbocharger piping when pulling out the assembly.

INSTALLATION

1. Tighten the mounting nuts in numerical order as shown.



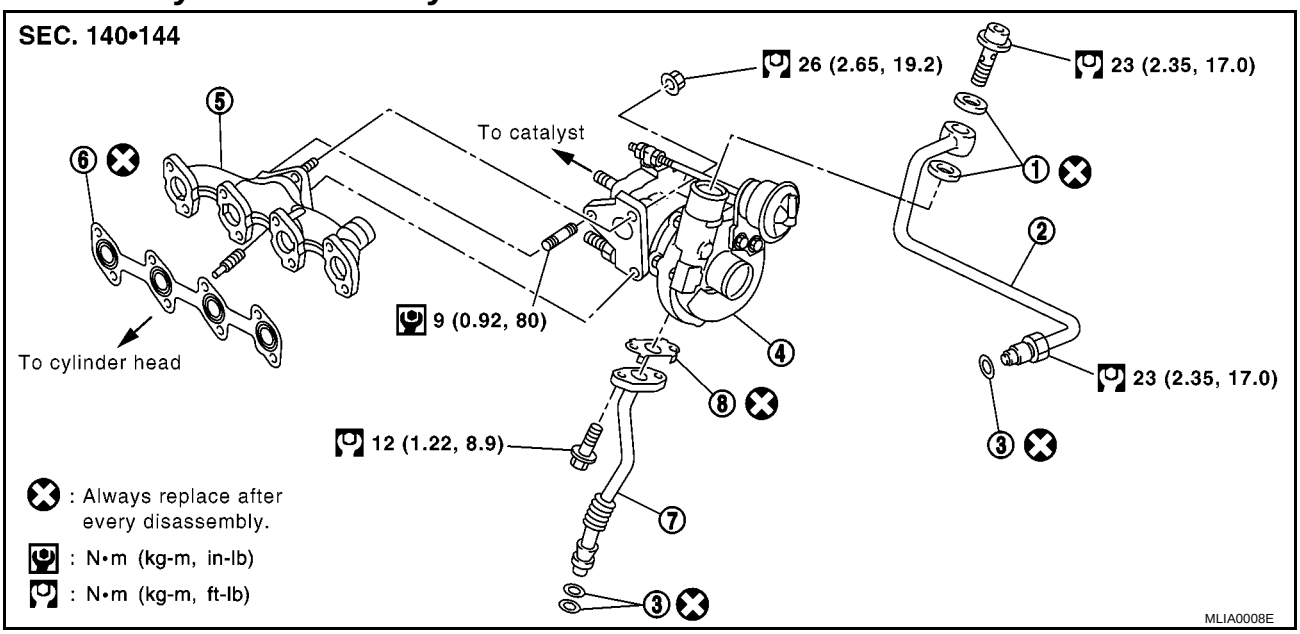
2. Install in reverse order of removal after this step.

INSPECTION AFTER INSTALLATION

Start engine and raise engine speed to check no exhaust emission leaks.

Disassembly and Assembly

EBS01C6O



1. Washer
2. Oil tube
3. O-ring
4. Turbocharger
5. Exhaust manifold
6. Gasket
7. Turbocharger oil outlet pipe
8. Gasket

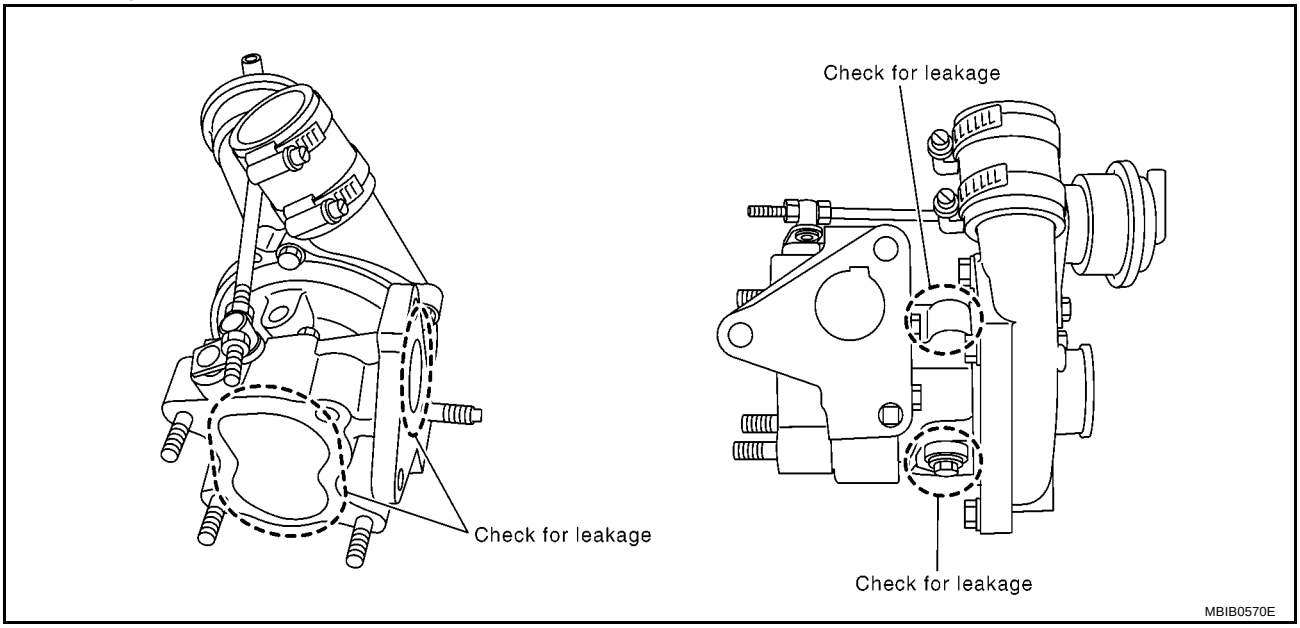
DISASSEMBLY

- After applying penetrative lubricant to the mounting nuts, check for the penetration of the lubricant, and then loosen the nuts to remove.

CAUTION:
Do not disassemble or adjust the turbocharger body.

INSPECTION AFTER DISASSEMBLY

Turbocharger



CAUTION:
When the compressor wheel turbine wheel or rotor shaft is damaged, remove all the fragments and foreign matter left in the following passages in order to prevent a secondary failure:

Suction side : Between turbocharger and air cleaner
Exhaust side : Between turbocharger and catalyst

ASSEMBLY

- Install in the reverse order of removal.

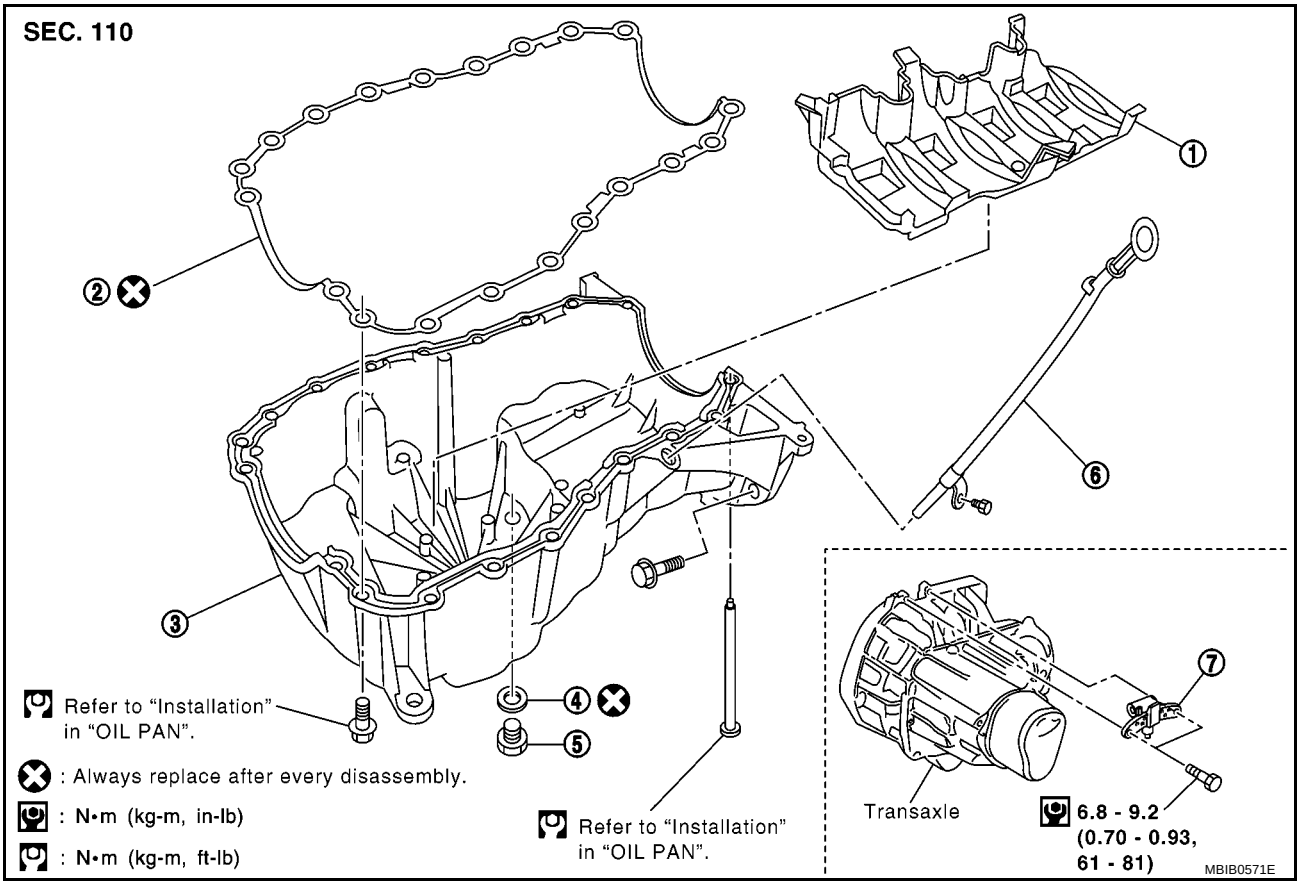
NOTE:
Apply LOCTITE FRENETANCH or equivalent to the threads of the turbocharger oil inlet pipe union to the cylinder head.

OIL PAN

PFP:11110

Removal and Installation

EBS01C6P



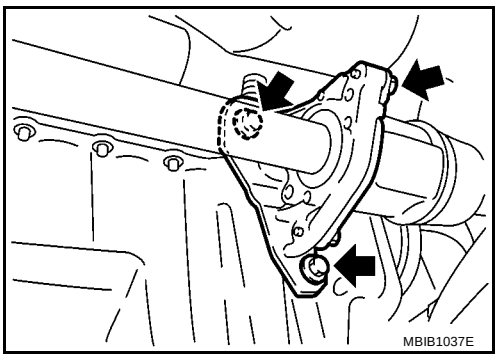
1. Baffle plate
2. Gasket
3. Oil pan
4. O-ring
5. Drain plug
6. Oil level gauge
7. Crankshaft position sensor (POS)

CAUTION:

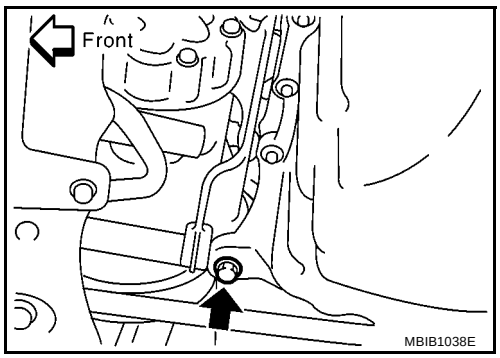
To avoid the danger of being scalded, never drain the engine oil when the engine is hot.

REMOVAL

1. Remove engine undercover.
2. Remove RH front wheel.
3. Remove right side splash cover.
4. Remove drive shaft assembly RH side. Refer to FAX-10, "FRONT DRIVE SHAFT" .
5. Remove center bearing bracket as shown.



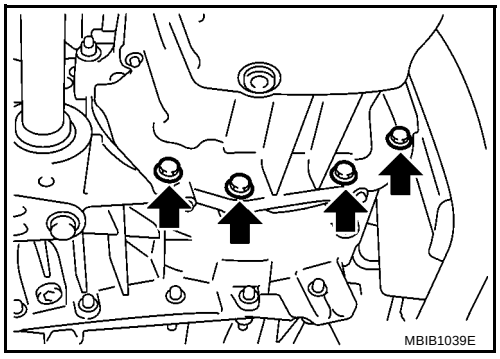
6. Remove A/C compressor bracket mounting bolt as shown.



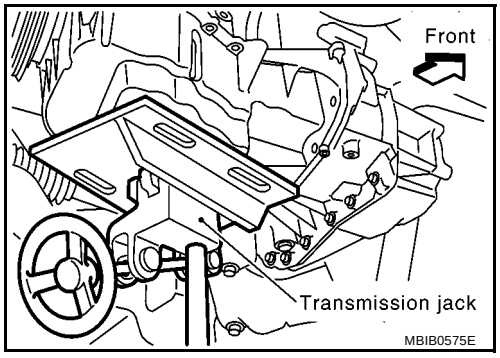
7. Remove oil level gauge guide.
8. Drain engine oil. Refer to LU-13, "Changing Engine Oil" .

CAUTION:
Perform when engine is cold.

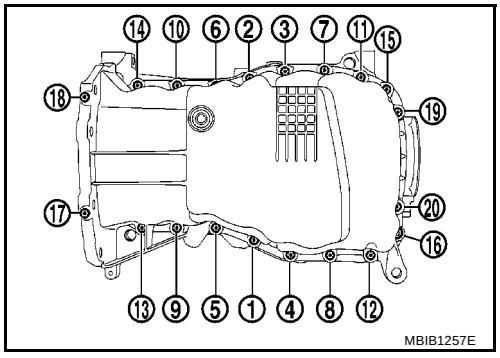
9. Remove oil pan and transaxle joint bolts.



10. Support the engine bottom of the oil pan with a transmission jack etc.

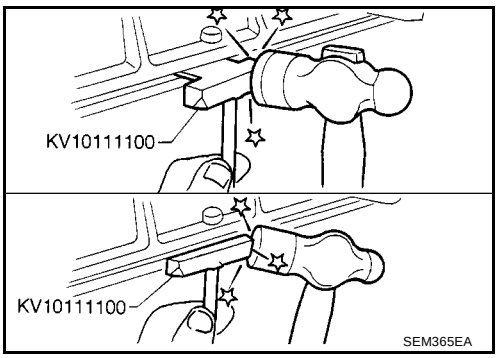


11. Remove oil pan bolt reverse order as shown.



- Insert seal cutter (special service tool) between upper oil pan and cylinder block. Slide tool by tapping on the side of the tool with a hammer.

CAUTION:
Exercise care not to damage mating surface.



12. Remove oil pan and baffle plate.

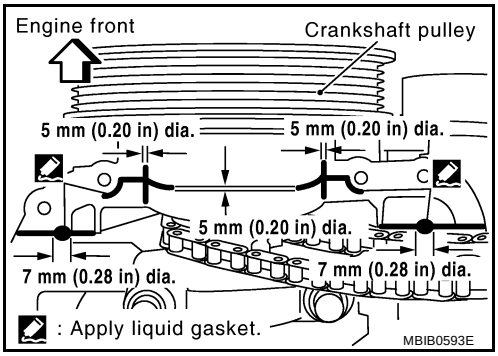
INSPECTION AFTER REMOVAL

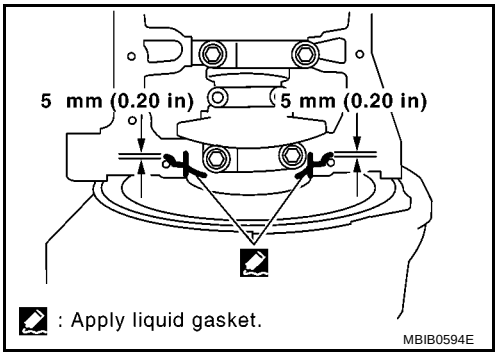
Clean oil pump assembly if any object attached.

INSTALLATION

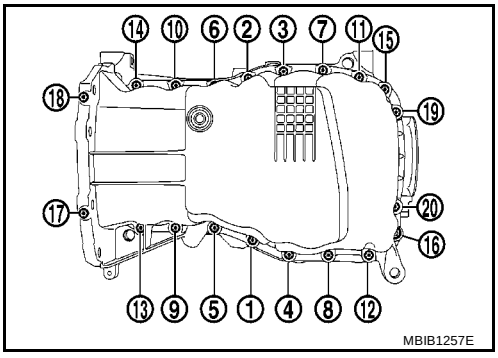
- Install in the reverse order of removal paying attention to the following.

1. Apply liquid gasket as shown.
   - Use Genuine Liquid Gasket or equivalent.





2. Install baffle plate.
3. Install oil pan bolts in numerical order as shown.
   - Tighten the bolts in the numerical order shown in the figure to a torque of 8 N·m (0.8 kg-m, 71 in-lb).
   - Tighten the mounting bolts of oil pan on the clutch housing without locking.
   - Tighten the bolts in the numerical order shown in the figure to a torque of 15 N·m (1.5 kg-m, 11 ft-lb).
   - Tighten the mounting bolts of oil pan on the clutch housing to a torque of 44 N·m (4.5 kg-m, 32 ft-lb).
4. At least 30 minutes after oil pan is installed, pour engine oil.



INSPECTION AFTER INSTALLATION

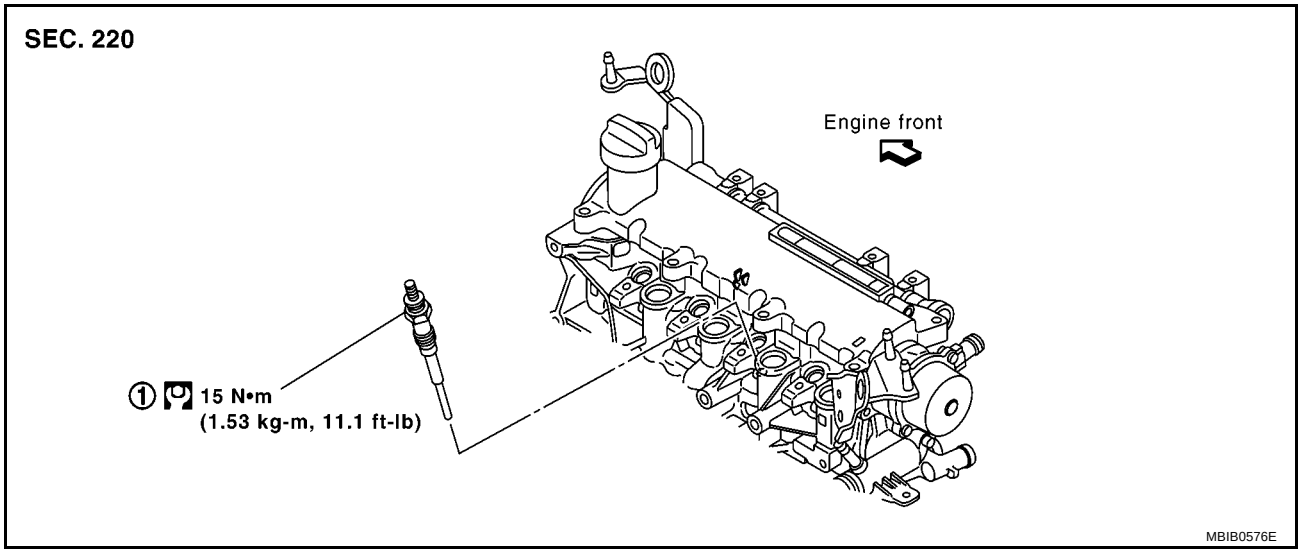
- Inspection the engine oil level. Refer to LU-12, "ENGINE OIL" .
- Start the engine, and make sure there is no leak of engine oil. Refer to LU-12, "ENGINE OIL" .

GLOW PLUG

PFP:22401

Removal and Installation

EBS01C6Q



1. Glow plug

REMOVAL

CAUTION:

Remove glow plug only if necessary. If carbon adheres, it may be stuck and broken.

1. Disconnect battery ground cable.
2. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
3. Disconnect harness connector from glow plug.
4. Remove glow plug.

CAUTION:

- **When removing or installing, do not use such tools as an air impact wrench.**
- **Handle it carefully without giving any impact, even after removal. [As a guide, if it drops from height of 10 cm (3.94 in) or higher, always replace it.]**

INSTALLATION

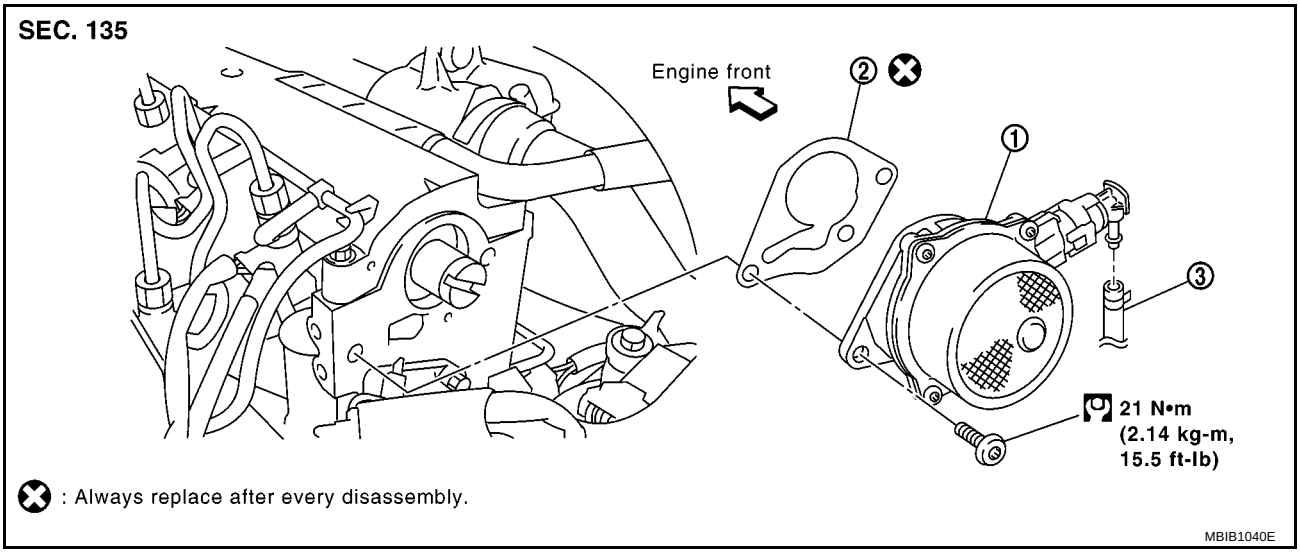
1. Remove adhered carbon from glow plug installation hole with a reamer.
2. Install glow plug.
3. Install remaining parts in reverse order of removal.

VACUUM PUMP

PFP:41920

Removal and Installation

EBS01C6R



1. Vacuum pump
2. Gasket
3. Vacuum hose

REMOVAL

1. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
2. Remove battery.
3. Remove air cleaner case and air duct (suction). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
4. Remove rear engine slinger. Refer to EM-147, "ENGINE ASSEMBLY" .
5. Disconnect vacuum hose from vacuum pump side.
6. Remove vacuum pump.

INSTALLATION

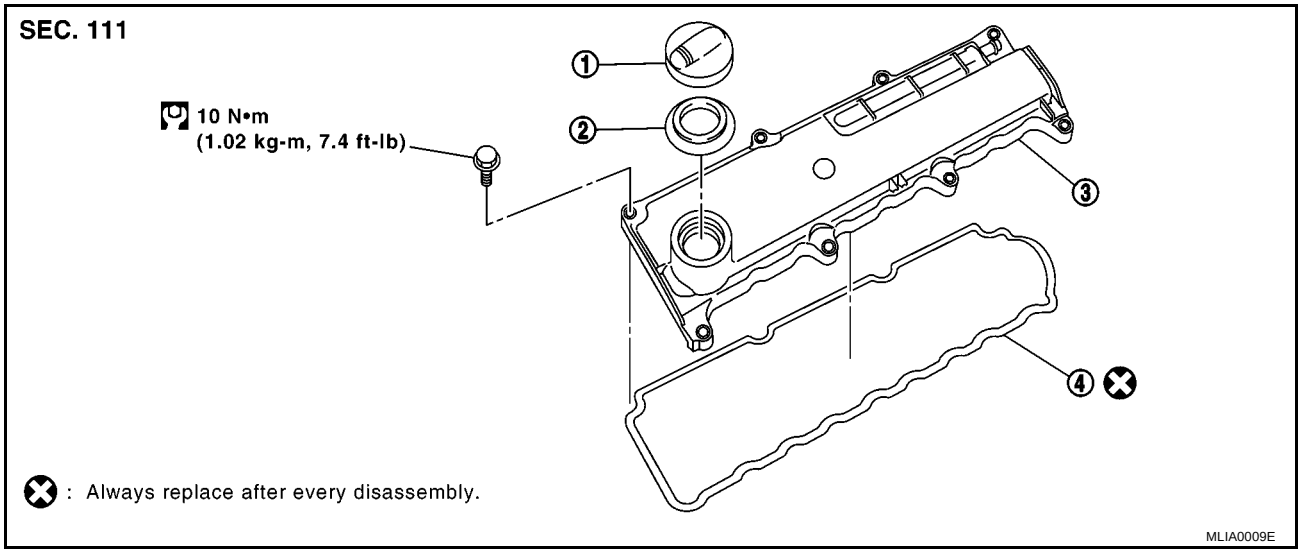
- Install in the reverse order of removal.

ROCKER COVER

PFP:13264

Removal and Installation

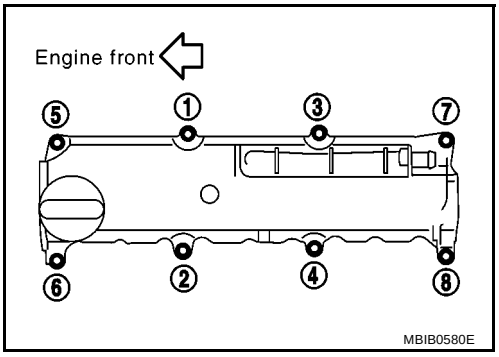
EBS01C6S



1. Oil filler cap
2. Oil catcher
3. Rocker cover
4. Gasket

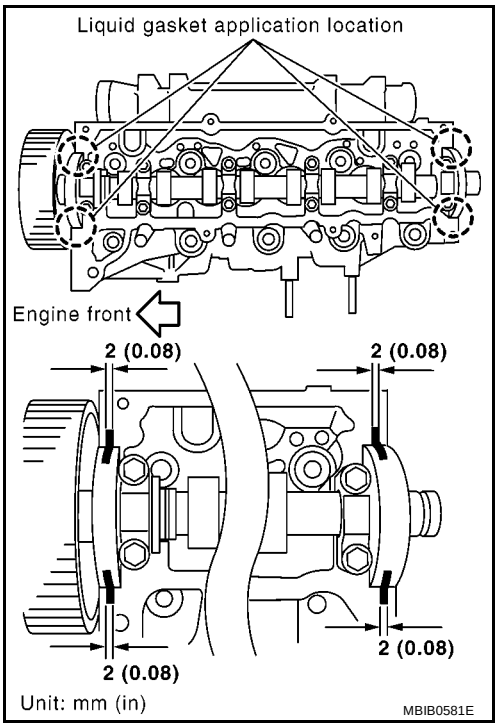
REMOVAL

1. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
2. Remove battery.
3. Remove air cleaner case and air duct (suction). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
4. Remove rocker cover.
   - Loosen holding bolts in the reverse order as shown in the figure and remove.



INSTALLATION

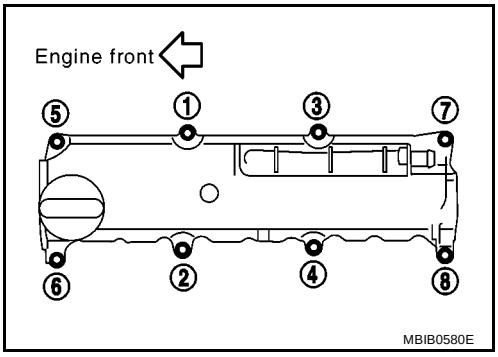
1. Apply liquid gasket on locations shown in the figure.
   - Use Genuine Liquid gasket or equivalent.



2. Tighten holding bolts in the numerical order as shown in the figure.

   : 10 N·m (1.02 kg-m, 7.4 ft-lb)

3. Install in the reverse order of removal after this steps.

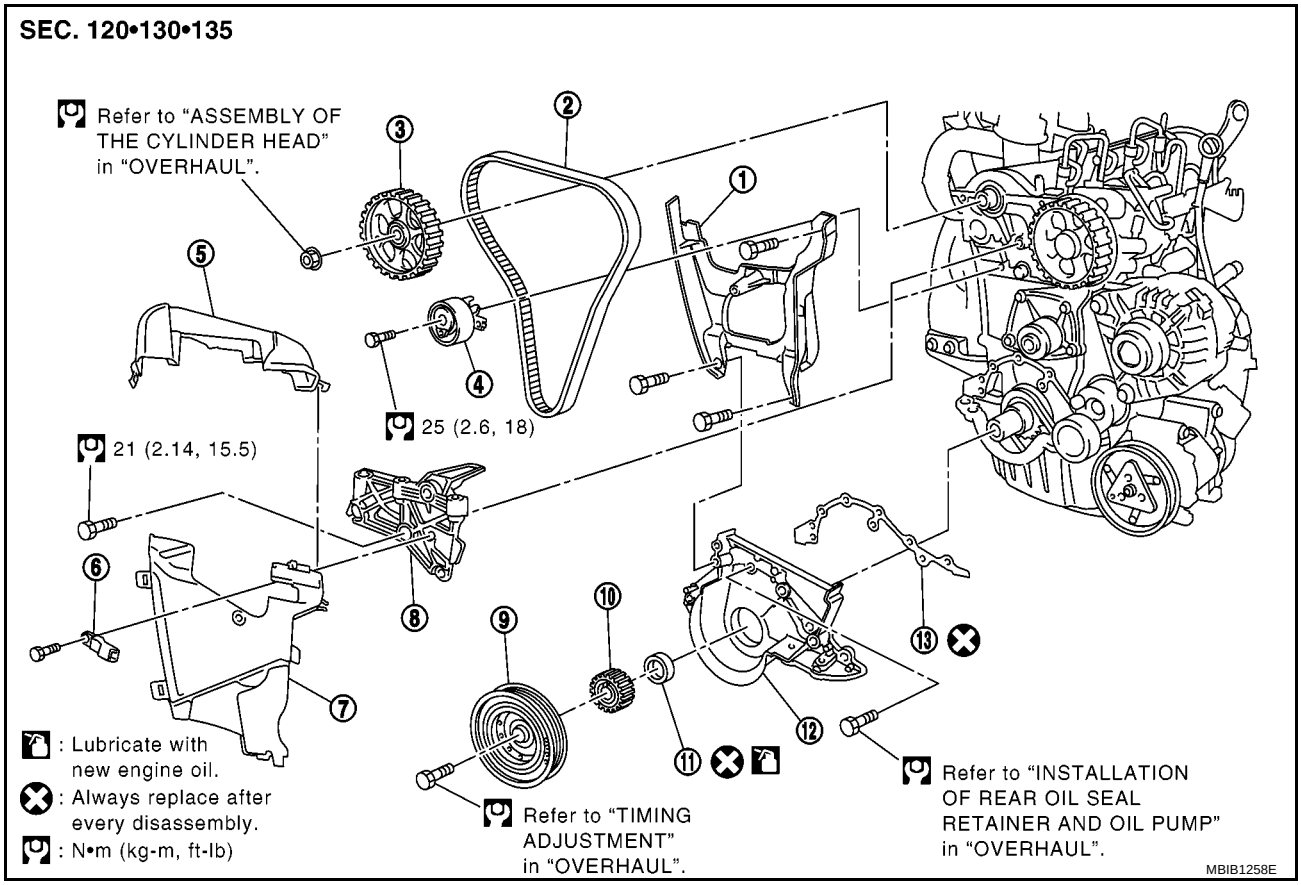


TIMING BELT

PFP:13028

Removal and Installation

EBS01C6T



1. Timing belt inner cover
2. Timing belt
3. Camshaft sprocket
4. Timing belt tensioner
5. Timing belt upper cover
6. Camshaft position sensor
7. Timing belt lower cover
8. Cylinder head suspended bracket
9. Crankshaft pulley
10. Crankshaft sprocket
11. Rear oil seal
12. Rear oil seal retainer
13. Gasket

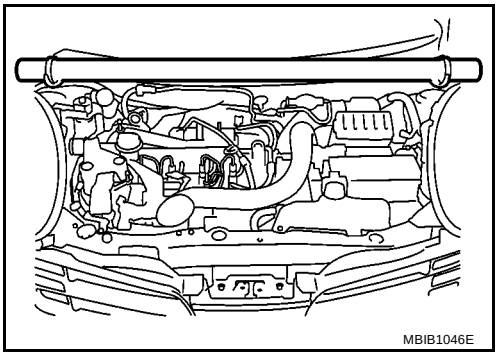
CAUTION:

- **Apply new engine oil to parts marked in illustration before installation.**
- **Replace any belt that has been removed.**
- **Never turn the engine in the direction opposite to that of normal operation.**
- **When replacing the timing belt, be sure to replace the timing belt tensioner.**
- **Do not run the engine without the drive belts to avoid damaging the crankshaft pulley.**

REMOVAL

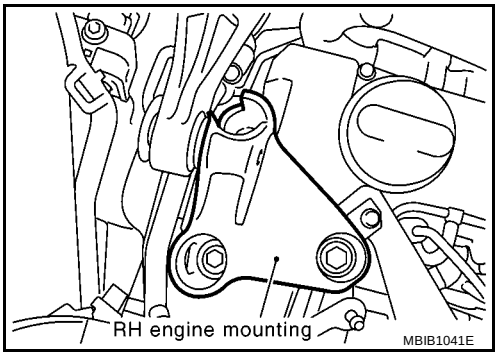
1. Remove the following parts.
   - Battery ground cable
   - Undercover
   - RH front wheel
   - RH head light assembly
2. Remove right side splash cover.
3. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
4. Remove air cleaner case and air duct (suction). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
5. Remove drive shaft lock pin and lock nut. Refer to FAX-10, "FRONT DRIVE SHAFT" .
6. Remove ABS sensor from brake caliper.
7. Remove strut lower bolts.

8. Remove drive shaft assembly RH side.
9. Remove drive belt. Refer to EM-121, "DRIVE BELTS" .
10. Remove oil pan. Refer to EM-133, "OIL PAN" .
11. Install engine slingers. Refer to EM-147, "ENGINE ASSEMBLY" .
12. Set the engine support bar (commercial service tool) or suitable tool, and secure the engine in position.



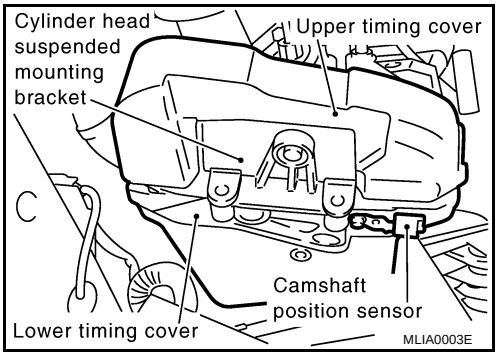
MBIB1046E

13. Remove RH engine torque rod.
14. Remove RH engine mounting.



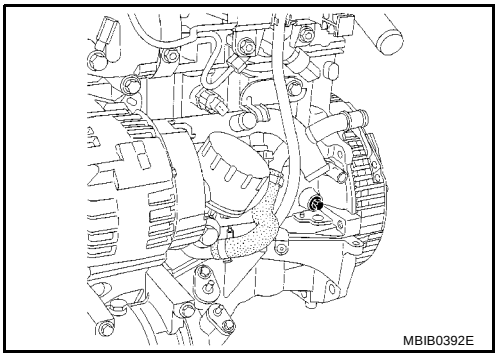
MBIB1041E

15. Remove RH engine mounting support bracket, RH engine mounting insulator and reservoir tank.
16. Remove upper timing cover, camshaft position sensor and cylinder head suspended mounting bracket.



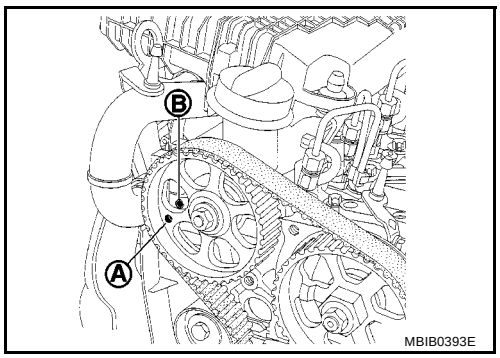
MLIA0003E

17. Remove the TDC pin cap.

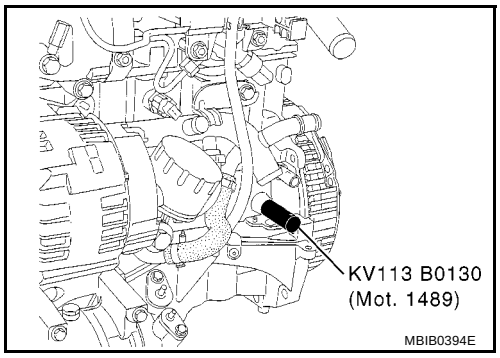


MBIB0392E

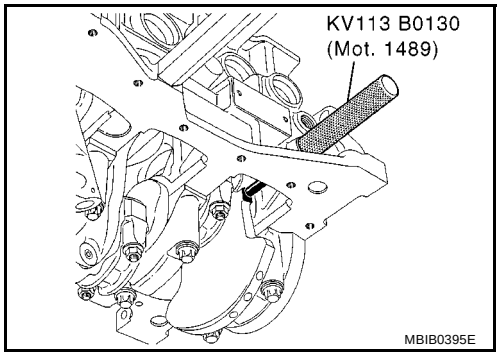
18. Position the hole (A) of the camshaft pulley almost opposite the hole (B) of the cylinder head.



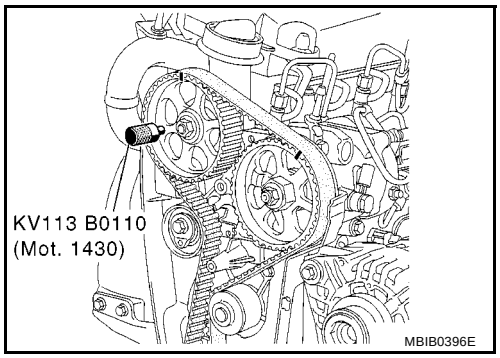
19. Screw in the TDC pin (special service tool).



20. Turn the engine clockwise (timing side) until the crankshaft touches the TDC pin (special service tool).



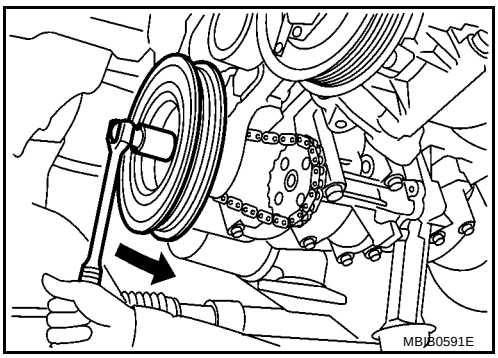
21. The pin (special service tool) must engage in the camshaft pulley and cylinder head holes.
22. Remove TDC pin (special service tool).



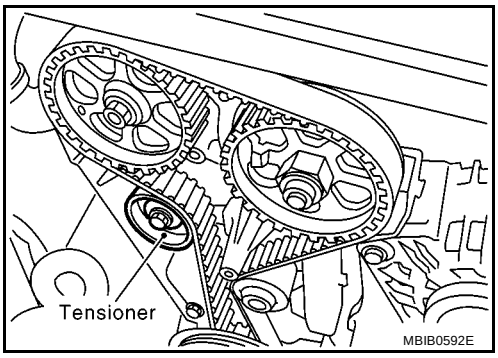
23. Remove crankshaft pulley as follows:

- Loosen the crankshaft pulley fixing bolts by locking the flywheel with a screwdriver and pull crankshaft pulley with both hands to remove it.

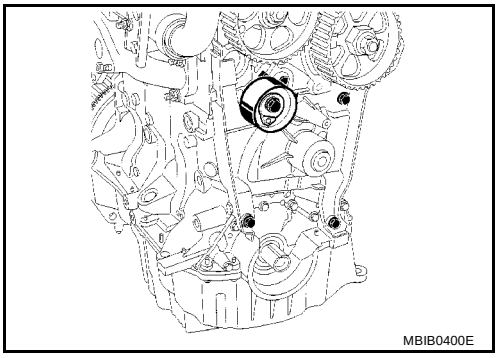
  CAUTION:
  Do not remove fixing bolts. Keep loosened fixing bolts in place to protect removed crankshaft pulley from dropping.



24. Slacken the timing belt by loosening the bolt of tensioner, then remove timing belt.



25. Remove crankshaft sprocket.
26. Remove timing belt tensioner and inner timing cover.



27. If necessary, remove rear oil seal retainer.

INSTALLATION

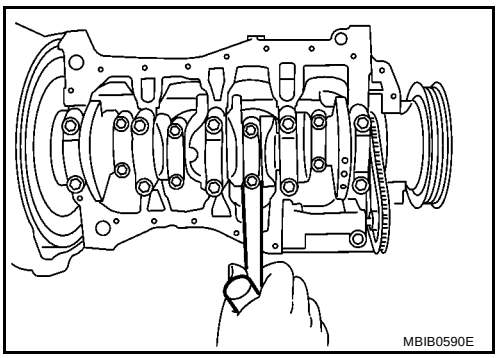
- Install in the reverse order of removal paying attention to the following.

Rear Oil Seal Retainer

- Refer to EM-179, "INSTALLATION OF REAR OIL SEAL RETAINER AND OIL PUMP" .

Timing Belt

- Refer to EM-186, "TIMING ADJUSTMENT" .
- When install crankshaft pulley, lock crankshaft with a hammer handle or similar tool.

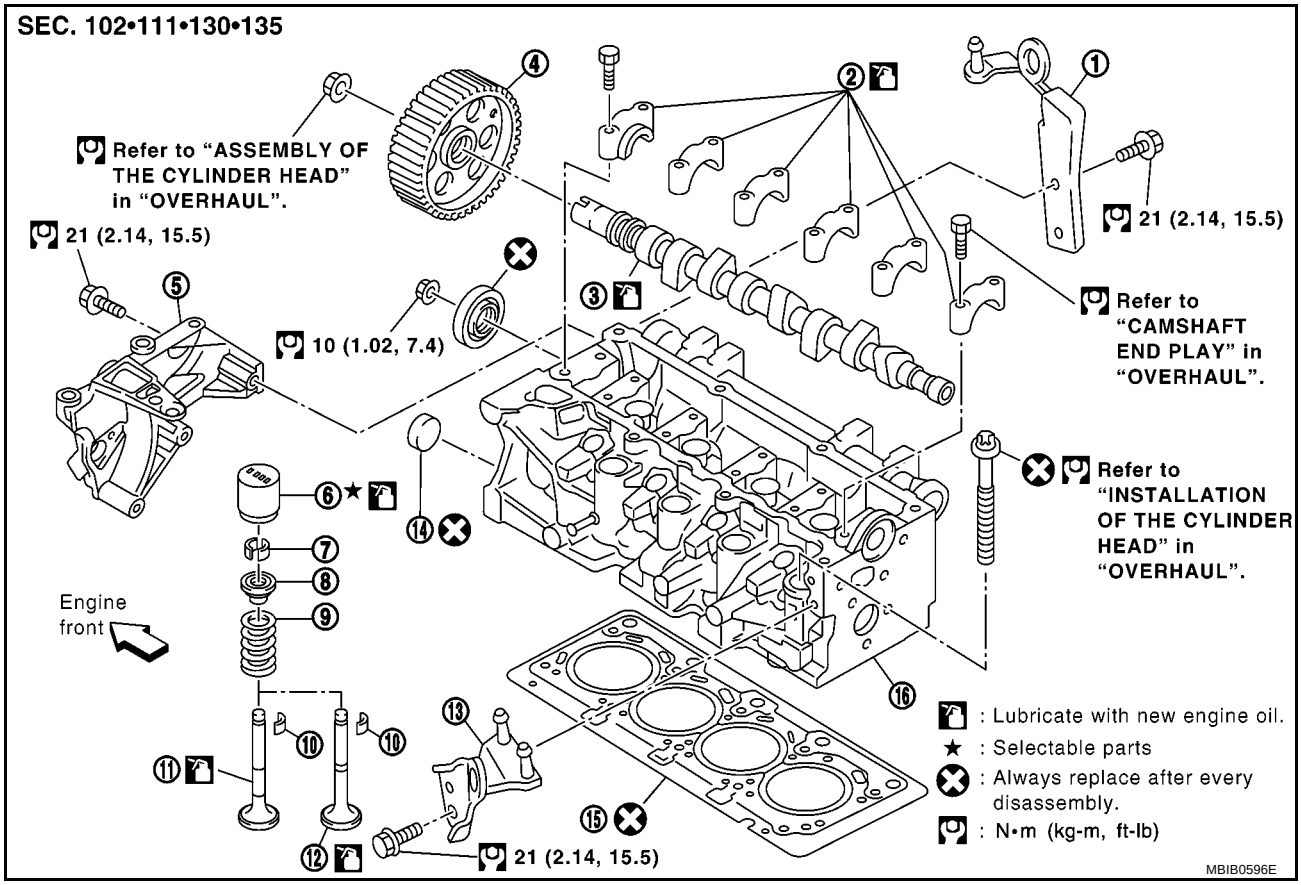


CYLINDER HEAD

PFP:11041

Removal and Installation

EBS01C6U



1. Front engine slinger
2. Camshaft bracket
3. Camshaft
4. Camshaft sprocket
5. Cylinder head suspended bracket
6. Shim
7. Valve rotator
8. Valve spring retainer
9. Valve spring
10. Valve cotter
11. Exhaust valve
12. Intake valve
13. Rear engine slinger
14. Cap
15. Cylinder head gasket
16. Cylinder head

CAUTION:
Apply new engine oil to parts marked in illustration before installation.

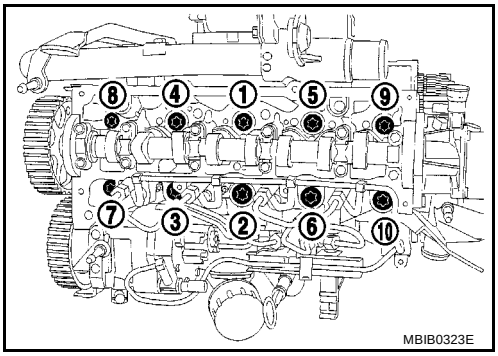
REMOVAL

1. Remove the following parts.
   - Battery ground cable
   - Undercover
   - RH front wheel
   - RH head light assembly
2. Remove right side splash cover.
3. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
4. Drain engine coolant. Refer to CO-32, "DRAINING ENGINE COOLANT" .
   CAUTION:
   Perform when engine is cold.
5. Remove air cleaner case and air duct (suction). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
6. Remove radiator upper hose. Refer to CO-34, "RADIATOR" .
7. Disconnect fuel feed tube and return tube from fuel injection pump. Refer to EC-K9K-31, “Injector rail”, “DIESEL EQUIPMENT” in EC section.
8. Remove oil level gauge guide.

9. Remove harnesses and connectors.
10. Remove heater hoses.
11. Remove turbocharger assembly. Refer to EM-129, "EXHAUST MANIFOLD, TURBOCHARGER, CATALYST" .
12. Remove drive belt. Refer to EM-121, "DRIVE BELTS" .
13. Remove rocker cover. Refer to EM-138, "ROCKER COVER" .
14. Support underneath of engine by setting a manual lift table caddy (commercial service tool) or equivalent tool.

    CAUTION:
    Put a piece of wood or something similar as supporting surface, secure a completely stable condition.
15. Remove timing belt. Refer to EM-140, "TIMING BELT" .
16. Remove engine support bar.

    CAUTION:
    During the removal operation, always be careful to prevent engine moves downward from the vehicle.
17. Remove cylinder head bolt in the reverse order as shown.



18. Remove cylinder head assembly.

INSTALLATION

- Install in the reverse order of removal paying attention to the following.

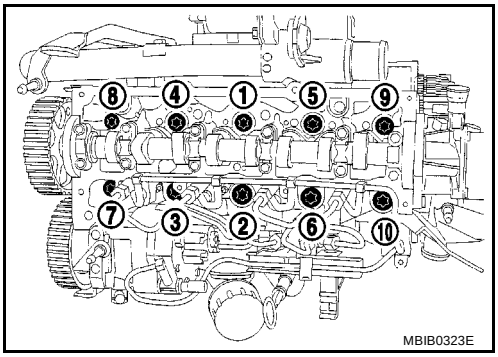
Cylinder Head Bolts

NOTE:
Use a syringe to remove any oil which may have entered the cylinder head mounting bolt holes to achieve correct tightening of the bolts.

CAUTION:
All bolts must always be changed after removal. Do not oil the new bolts.

- Tighten all the bolts in the numerical order as shown.

  : 25 N·m (2.6 kg-m, 18 ft-lb)



- Check that all the bolts are correctly tightened to 25 N·m (2.6 kg-m, 18 ft-lb), then angle tightening of 245 to 265 degrees.

  CAUTION:
  - **Use an angle wrench (special service tool) to check tightening angle.**
  - **Do not retighten the cylinder head bolts after preforming this procedure.**

Disassembly and Assembly

EBS01C6V

DISASSEMBLY

- Refer to EM-158, "DISASSEMBLY OF THE CYLINDER HEAD" .

INSPECTION AFTER DISASSEMBLY

- Refer to EM-160, "Inspection" .

- Refer to EM-161, "Valve Clearance" .
- Refer to EM-191, "Cylinder Head" .

ASSEMBLY

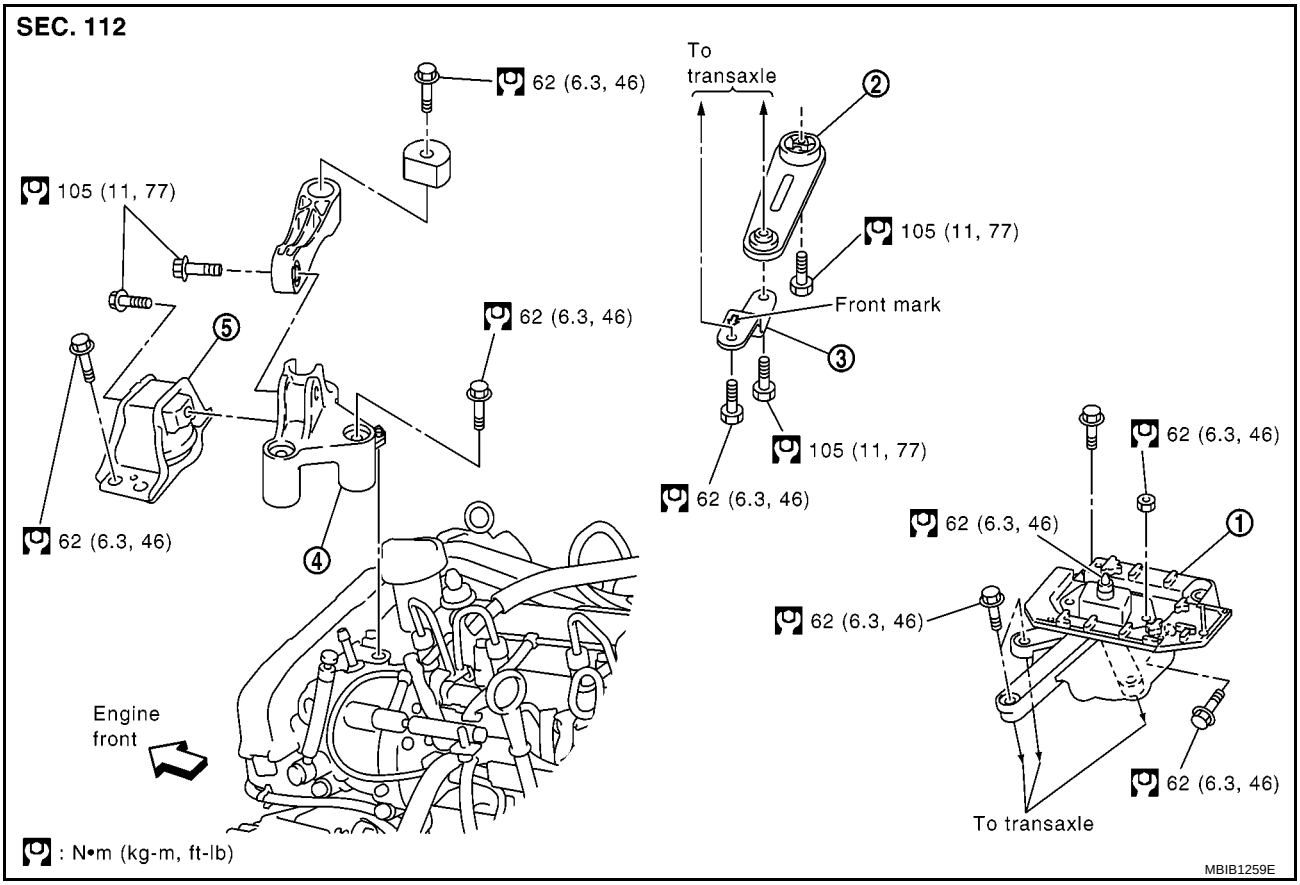
- Refer toEM-170, "Assembly" .

ENGINE ASSEMBLY

PFP:10001

Removal and Installation

EBS01C6W



1. LH engine mounting
2. Rear torque rod
3. Engine rear mounting bracket
4. RH engine mounting
5. RH engine mounting insulator

WARNING:

- **Situate vehicle on a flat and solid surface.**
- **Place chocks at front and back of rear wheels.**
- **For engines not equipped with engine slingers, attach proper slingers and bolts described in PARTS CATALOG.**

CAUTION:

- **Always be careful to work safely, avoid forceful or uninstructed operations.**
- **Do not start working until exhaust system and coolant are cool enough.**
- **If items or work required are not covered by the engine main body section, refer to the applicable sections.**
- **Always use the support point specified for lifting.**
- **Use either 2-pole lift type or separate type lift as best you can. If board-on type is used for unavoidable reasons, support at the rear axle jacking point with transmission jack or similar tool before starting work, in preparation for the backward shift of center of gravity.**
- **For supporting points for lifting and jacking point at rear axle, refer to GI-38, "LIFTING POINT" .**

REMOVAL

Description of work

Remove engine and transaxle assembly from vehicle down ward. Separate engine and transaxle.

Preparation

1. Remove the following parts.
   - Battery ground cable
   - Undercover

- Right side splash cover
- LH/RH front wheel
- RH head light assembly

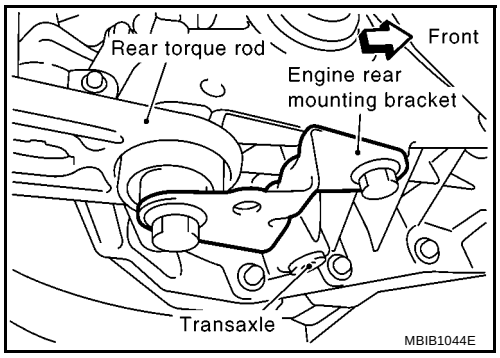
Engine room

2. Drain engine coolant. Refer to LU-13, "Changing Engine Oil" .

   CAUTION:
   Perform when engine is cold.
3. Remove engine room cover. Refer to EM-119, "ENGINE ROOM COVER" .
4. Remove air cleaner case and air duct (suction). Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
5. Remove radiator upper hose. Refer to CO-34, "RADIATOR" .
6. Remove reservoir tank and hoses. Refer to CO-34, "RADIATOR" .
7. Remove fuel feed and return tubes. Refer to EC-K9K-31, “Injection rail”, “DIESEL EQUIPMENT”.
8. Remove vacuum hose. Refer to EM-137, "VACUUM PUMP" .
9. Remove turbocharger air duct. Refer to EM-129, "EXHAUST MANIFOLD, TURBOCHARGER, CATALYST" .
10. Disconnect heater hoses.
11. Disconnect engine room harness from the engine side and set it aside for easier work.
12. Disconnect transaxle side harness and clutch hose. Refer to CL-10, "CLUTCH DISC, CLUTCH COVER AND FLYWHEEL" .
13. Disconnect drain hose transaxle side.
14. Disconnect shift cable and select cable. Refer to MT-12, "CONTROL LINKAGE" (with JH3 transaxle) or MT-42, "CONTROL LINKAGE" (with JR5 transaxle).
15. Loosen wire bracket.
16. Disconnect all the body-side vacuum hoses and air hoses at engine side.
17. Disconnect fuel feed and return hoses, and plug it to prevent fuel from draining.

Vehicle underbody

18. Remove drive shaft lock pin and lock nut. Refer to FAX-10, "FRONT DRIVE SHAFT" .
19. Remove ABS sensor from brake caliper.
20. Remove strut lower bolts.
21. Remove drive shaft assembly RH and LH.
22. Remove drive belt. Refer to EM-121, "DRIVE BELTS" .
23. Remove A/C compressor with piping connected from engine (with A/C compressor models). Temporarily secure it on body with a rope to avoid putting load on it.
24. Remove exhaust front tube. Refer to EX-3, "Removal and Installation" .
25. Remove engine rear mounting bracket.

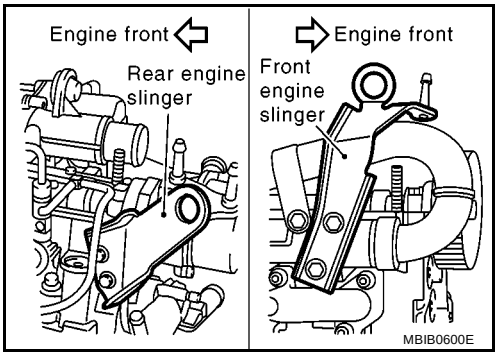


Removal

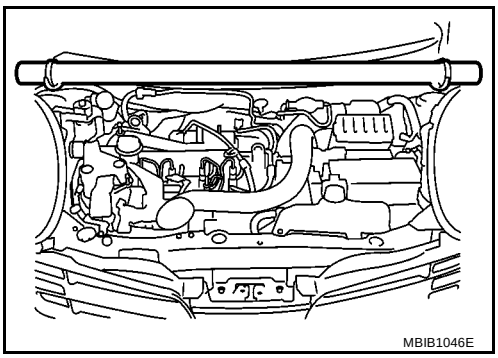
26. Install engine slingers into front right of cylinder head and rear left of cylinder head.

Slinger bolts:

: 21 N·m (2.14 kg-m, 15.5 ft-lb)



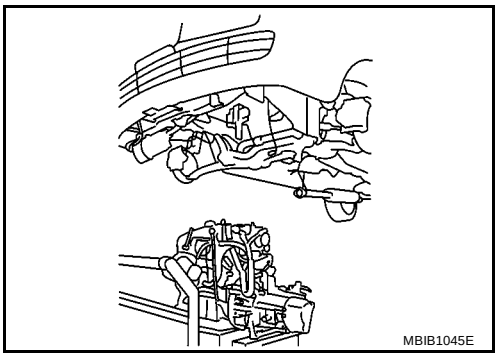
27. Set the engine support bar (commercial service tool) or suitable tool, and secure the engine in position.



- Use a manual lift table caddy (commercial service tool) or equivalently rigid tool such as a jack or trestle. Securely support bottom of engine and transaxle.

CAUTION:
Put a piece of wood or something similar as the supporting surface, secure a completely stable condition.

28. Remove RH and LH engine mounting bolts.
29. Remove engine and transaxle assembly from vehicle downward by carefully operating supporting tools.



CAUTION:
- **During the operation, make sure that no part interferes with body side.**
- **Before and during this lifting, always check if any harnesses are left connected.**
- **During the removal operation, always be careful to prevent vehicle from falling off the lift due to changes in the center of gravity.**
- **If necessary, support vehicle by setting a jack or equivalent tool at the rear.**

Separation Work

CAUTION:
During the operation, secure support the engine by placing a piece of wood under the engine oil pan, transaxle oil pan and suspended the engine slinger by baby crane (movable hoist) etc.

30. Remove starter motor.
31. Separate engine and transaxle.

INSTALLATION

Install in the reverse order of removal.

- Do not allow oil to get on mounting insulator. Be careful not to damage mounting insulator.
- When installation directions are specified, install parts according to the direction marks on them referring to components illustration.
- Make sure that each mounting insulator is seated properly, and tighten mounting bolts and nuts.

INSPECTION AFTER INSTALLATION

- Before starting engine check the levels of coolant, lubrications and working oils. If less than required quantity, fill to the specified level.

- Before starting engine, bleed air from fuel piping. Refer to FL-16, "Bleeding Fuel Filter" .
- Run engine to check for unusual noise and vibration.
- Warm up engine thoroughly to make sure there is no leakage of coolant, lubricants, working oil, fuel and exhaust gas.
- Bleed air from passages in pipes and tubes of applicable lines.

OVERHAUL

PFP:00000

Tightening Torques

EBS01C6X

UPPER ENGINE

Unit: N·m (kg-m, in-lb)*2 Unit: N·m (kg-m, ft-lb)

Tightening torque	Cylinder head	: *1
	Camshaft bearing	: 10 (1.0, 7)
	Camshaft pulley	: 30 (3.1, 22) + 84° (Angle tightening)
	Vacuum pump	: 21 (2.1, 15)
	Cylinder head coolant outlet unit	: 10 (1.0, 7)
	Exhaust manifold	: 26 (2.7, 19)
	Glow plug	: 15 (1.5, 11)
	Rocker cover	: 10 (1.0, 7)
	Turbocharger-manifold mounting	: 26 (2.7, 19)
	Turbocharger oil return pipe	: 9 (0.9, 80)*2
	Turbocharger oil delivery pipe	: 23 (2.3, 17)
	Timing tensioner	: 25 (2.6, 18)
	TDC cap	: 20 (2.0, 15)
	Cylinder head suspended mounting bracket	: 21 (2.1, 15)

*1: Refer to tightening procedure in the text.

BOTTOM ENGINE

Unit: N·m (kg-m, in-lb)*2 Unit: N·m (kg-m, ft-lb)

Tightening torque	Oil cooler connector bolt	: 45 (4.6, 33)
	Oil filter bracket	: 45 (4.6, 33)
	Main bearing cap	: 27 (2.8, 20) + 47°±5° (Angle tightening)
	Connecting rod	: 20 (2.0, 15) + 45°±6° (Angle tightening)
	Knock sensor	: 20 (2.0, 15)
	Oil level sensor	: 22 (2.2, 16)
	Oil pump	: 25 (2.6, 18)
	Oil pan	: *1
	Water pump	: 11 (1.1, 8)

	Crankshaft pulley	: 20 (2.0, 15) + 130°±15° (Angle tightening)
	Water pump inlet pipe	: 20 (2.0, 15)
	Alternator bracket	: 44 (4.5, 32)
	Alternator	: 25 (2.6, 18)
	A/C compressor	: 21 (2.1, 15)

*1: Refer to tightening procedure in the text.

Standard Replacement

EBS01C6Y

PREPARING USED ENGINE

The engine should be cleaned and drained (oil and water).

Leave on the used engine or include in the return box:

- Oil filter
- Oil pressure switch
- Water pump
- Fuel injection pump
- Rail
- Injectors
- Glow plugs
- Oil level gauge
- Vacuum pump
- Flywheel

Remember to remove:

- All coolant pipes
- Exhaust manifold
- Alternator
- Power steering pump
- A/C compressor
- Alternator bracket
- Oil level sensor
- Cylinder head coolant outlet unit

The used engine should be secured to the base under the same conditions as the overhauled engine:

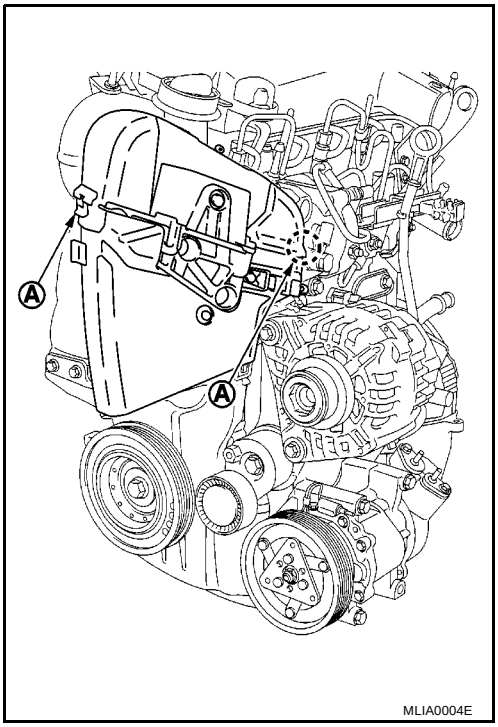
- Plastic plugs and covers fitted
- Cardboard cover over the assembly

Disassembly

EBS01C6Z

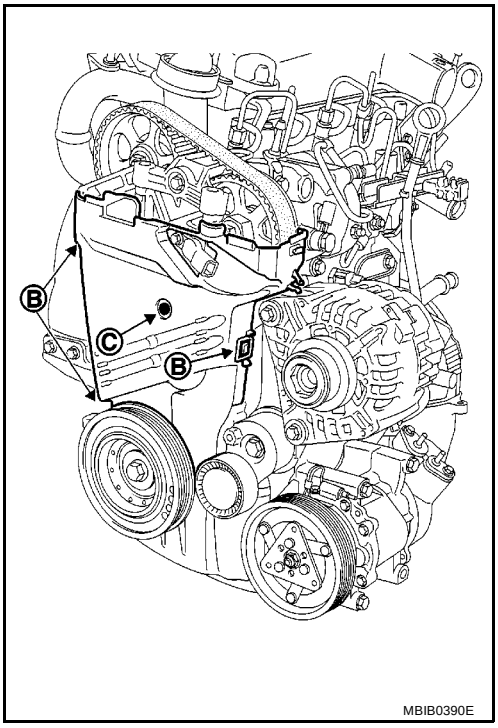
REMOVING THE UPPER ENGINE

1. Remove the upper timing cover by unclipping the two tabs (A).



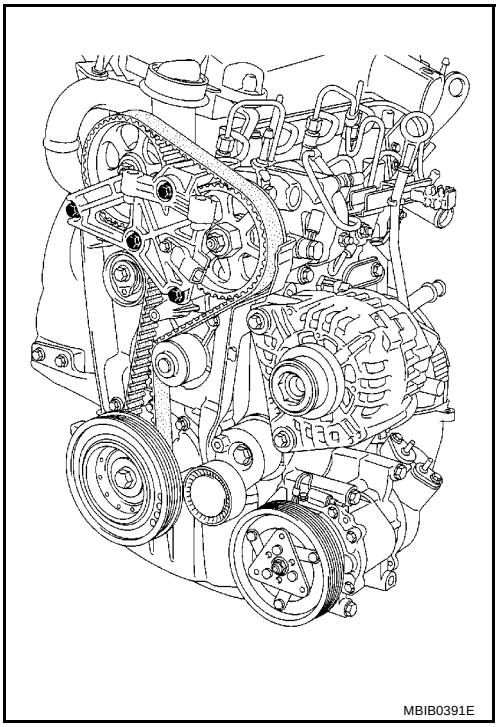
MLIA0004E

2. Remove the lower timing cover by unclipping the three tabs (B) and pulling out the plastic bolt (C).



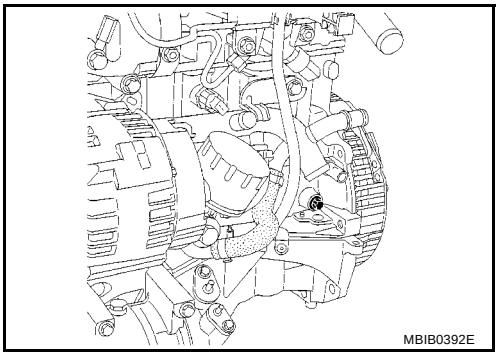
MBIB0390E

3. Remove the cylinder head suspended mounting bracket.



MBIB0391E

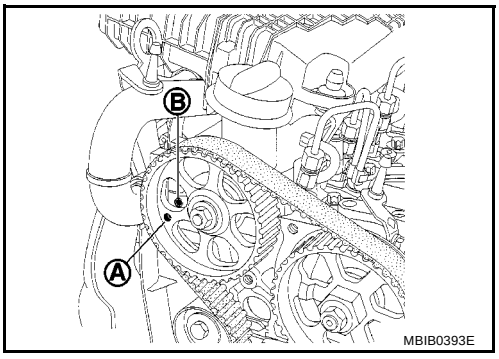
4. Remove the TDC pin cap.



MBIB0392E

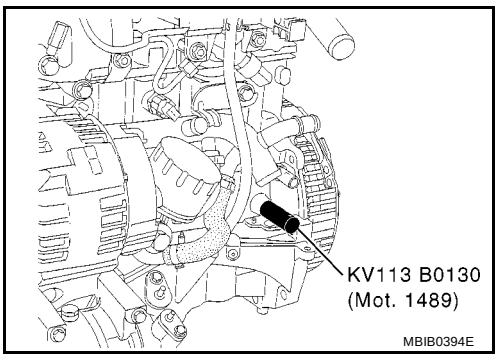
POSITIONING THE BELT AT THE TIMING POINT

1. Position the hole (A) of the camshaft pulley almost opposite the hole (B) of the cylinder head.

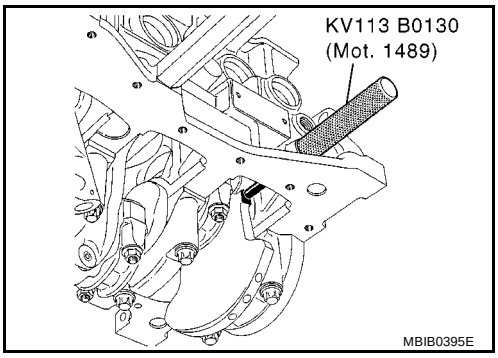


MBIB0393E

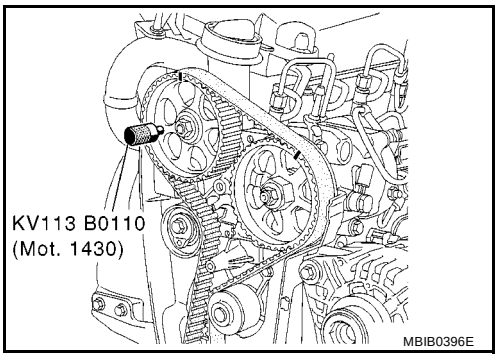
2. Screw in the Tool KV113B0130 (Mot. 1489).



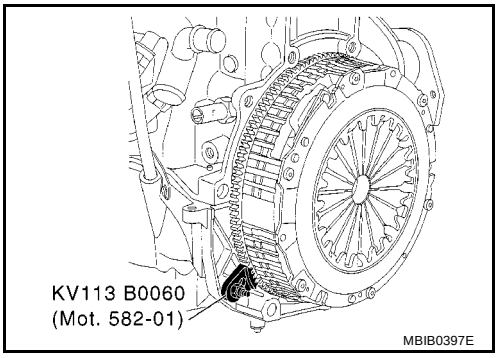
3. Turn the engine clockwise (timing side) until the crankshaft touches the Tool KV113B0130 (Mot. 1489).



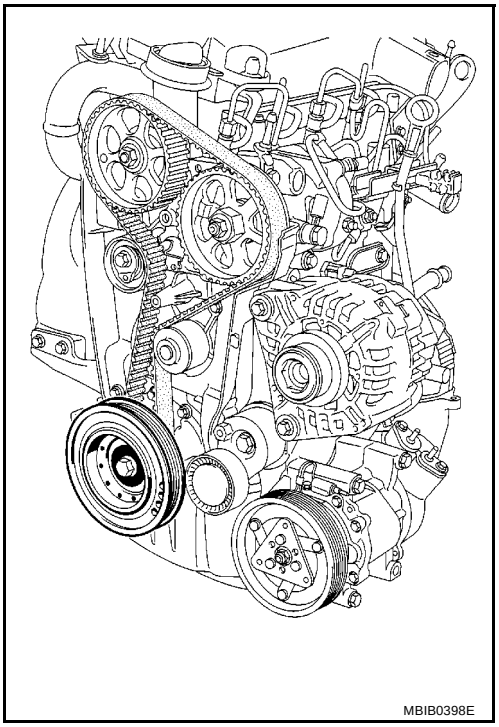
4. The Tool KV113B110 (Mot. 1430) must engage in the camshaft pulley and cylinder head holes.
5. Remove Tool KV113B0130 (Mot. 1489).



6. Install the Tool KV113B0060 (Mot. 582-01).

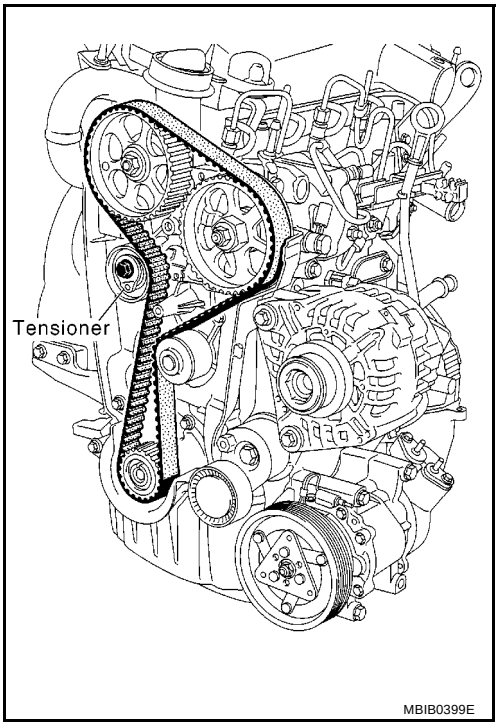


7. Remove the crankshaft pulley.



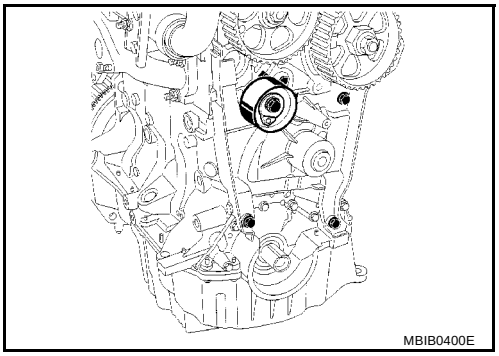
MBIB0398E

8. Slacken the timing belt by loosening the bolt of the tensioner, then remove the timing belt.



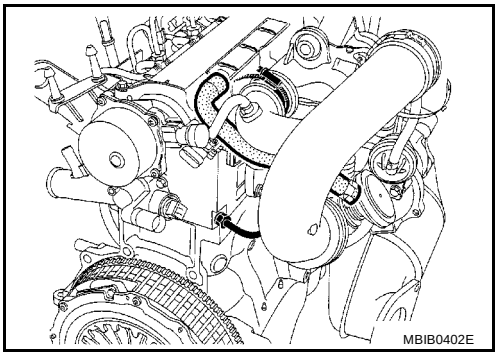
MBIB0399E

9. Remove the timing belt tensioner and inner timing cover.

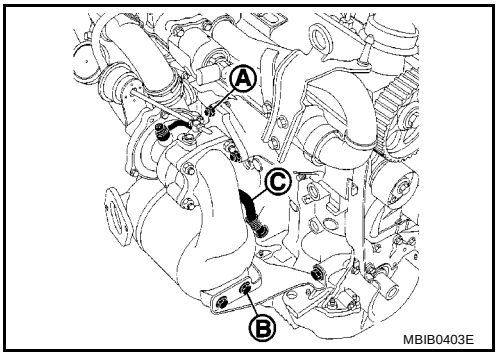


MBIB0400E

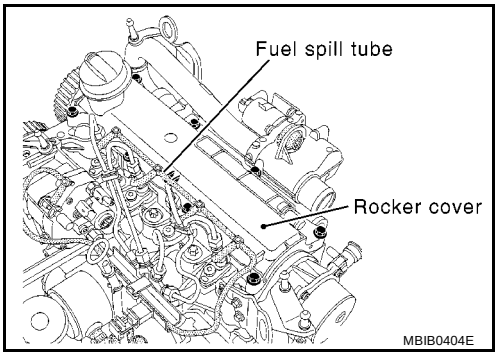
10. Remove air cleaner case. Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
11. Remove the clamp, oil vapor rebreathing pipe and turbocharger oil supply pipe on the cylinder head side.



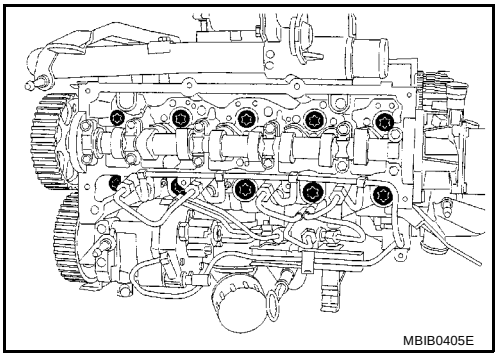
12. Remove the turbocharger oil supply pipe on the turbocharger side, nuts (A) and the torx bolt of the turbocharger flange, bolts (B) of the catalytic converter bracket, and turbocharger oil return pipe (C).



13. Unclip the fuel return pipe from the cylinder head cover at the fuel spill tube, then remove the rocker cover.



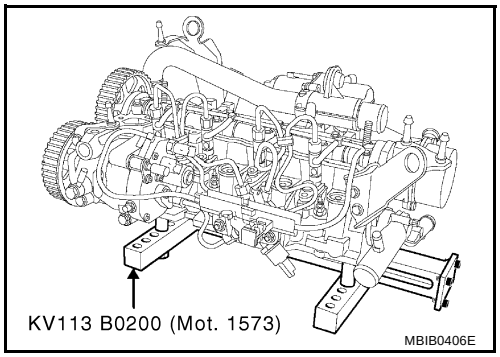
14. Remove the oil level gauge guide and cylinder head.



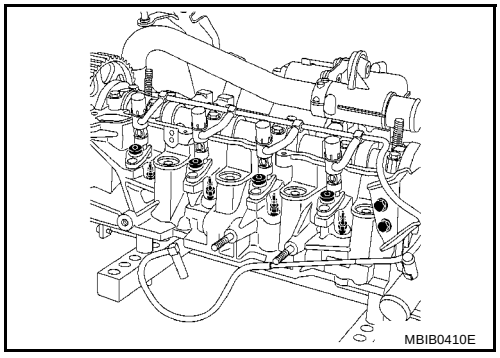
DISASSEMBLY OF THE CYLINDER HEAD

1. Place the cylinder head on Tool KV113B0200 (Mot. 1573).

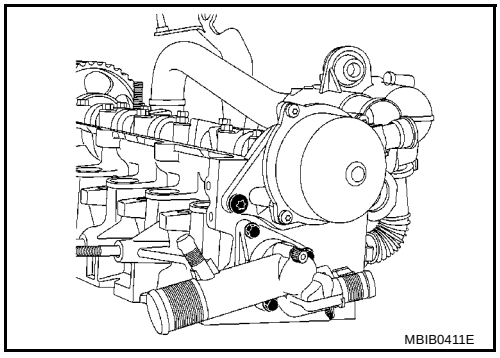
   CAUTION:
   Pay strict attention to the rules regarding cleanliness. Refer to EM-105, "PRECAUTIONS" .



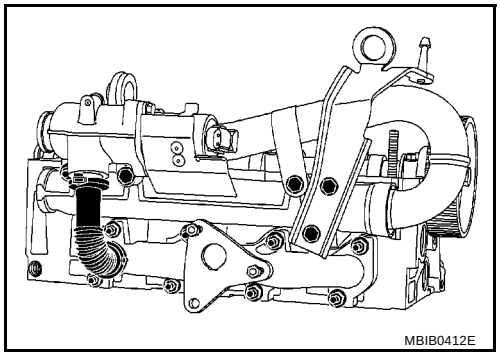
2. Remove fuel injection pump and related parts. Refer to EC-K9K-20, “High pressure pump”, “DIESEL EQUIPMENT” in EC section.
3. Remove the injectors (by marking them in relation to their cylinder), glow plugs using Tool KV113E0010 (Mot. 1566), and rear engine slinger.



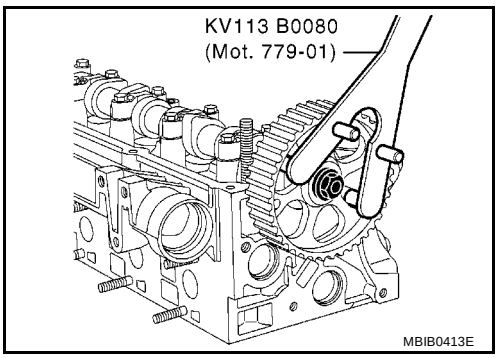
4. Remove the vacuum pump and water outlet.



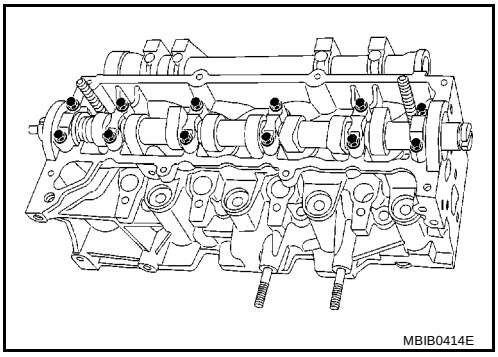
5. Remove the front engine slinger, EGR unit, air inlet pipe and exhaust manifold.



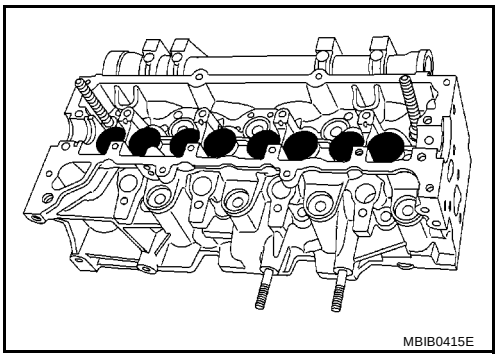
6. Remove the camshaft pulley using Tool KV113B0080 (Mot. 799-01).



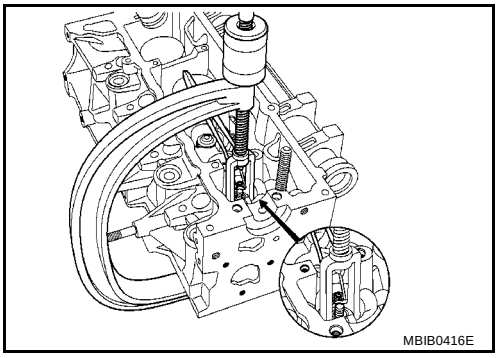
7. Remove the camshaft brackets.



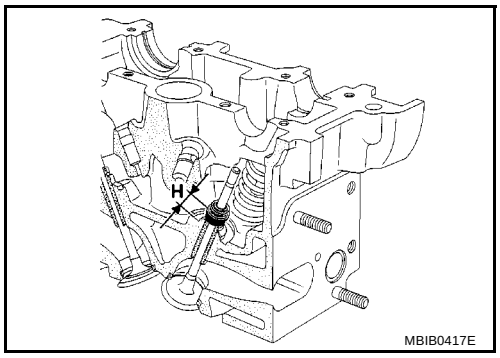
8. Remove the tappets, noting their position.



9. Compress the valve springs using the valve lifter. Remove the keys, upper cups and springs.

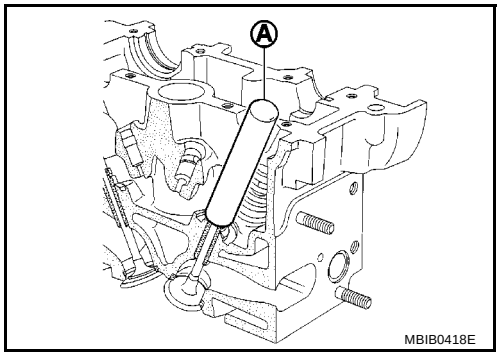


NOTE:
Before removing the valves and the valve stem seals, it is vital to measure position "H" of one of the old seals in relation to the cylinder head using Tool KV113B0180 (Mot. 1511-01) or suitable tool.

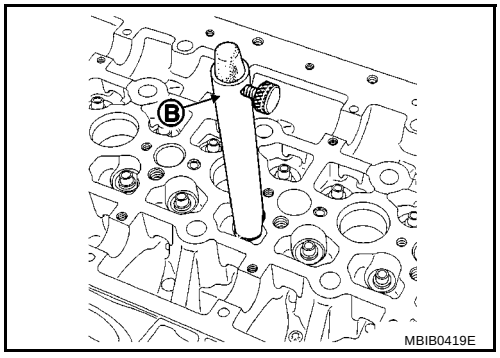


10. Install the push rod (A) of Tool KV113B0180 (Mot. 1511-01) on the valve stem seal.

    NOTE:
    The inner diameter of the push rod must be identical to that of the valve. In addition, the bottom of the push rod must come into contact with the metal upper section of the valve stem seal.



11. Install the guide tube (B) over the push rod until the guide tube comes into contact with the cylinder head, locking the push rod with the knurled wheel.
12. Remove the guide tube assembly plus push rod, being careful not to loosen the knurled wheel.
13. Remove the valves and valve guide seals using the Tool KV113B0090 (Mot. 1335).



Cleaning

EBS01C70

- It is very important not to scratch the gasket faces of any aluminium components.
- Use suitable tool to dissolve any part of the seal which remains stuck to the metal surface.
- Apply the dissolving product to the part to be cleaned, wait approximately 10 minutes, then remove it using a wooden spatula.
- Wear gloves while carrying out this operation.
- Do not allow this dissolving product to drip on to the paintwork.
- **Great care should be taken when performing this operation, to prevent foreign objects from entering the pipes taking oil under pressure to the camshafts (pipes in both the cylinder head and its cover) and the oil return pipes.**
- **Failure to follow these instructions could lead to the blocking of the oilways, resulting in rapid and serious damage to the engine.**

Inspection

EBS01C71

GASKET FACE

- Inspect mating surface bow using a ruler and a set of shims.

Maximum bow : 0.05 mm (0.0020 in)

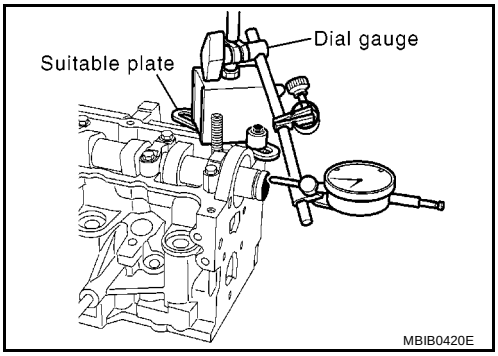
- Test the cylinder head to detect possible cracks using the cylinder head test tools (comprising a tray and a kit suited to the cylinder head, plug, sealing plate and blanking plate). The approval number of the cylinder head test container (commercial service tool) is 664000.

CAMSHAFT END PLAY

NOTE:
Set the dial gauge to the cylinder head and inspect following dimensions:

Outer diameter : 18 mm (0.71 in)
Height : 15 mm (0.59 in)

1. Install the camshaft.
2. Install the camshaft brackets (positioning them correctly with bracket 1 on the flywheel end), then tighten the bolts to a torque of 10 N·m (1.0 kg-m, 7 ft-lb).
   Check the end play, which must be between 0.08 mm (0.0031 in) and 0.178 mm (0.0070 in).
   Remove the camshaft brackets and the camshaft.



Valve Clearance

EBS01C72

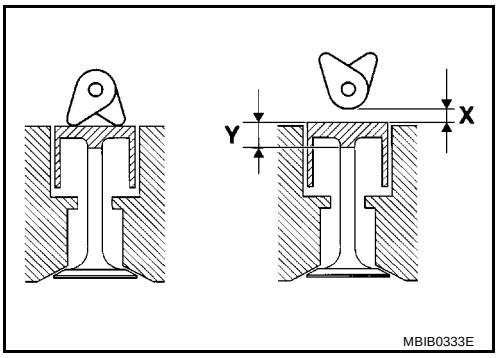
CHECKING AND ADJUSTING THE VALVE CLEARANCE

1. Install the tappet.
2. Install the camshaft.
3. Install the camshaft brackets.

   : 10 N·m (1.0 kg-m, 7 ft-lb)

4. Place the valves of the cylinder concerned at the “end of exhaust - beginning of inlet” position and check the clearance (X).

   NOTE:
   Dimension (Y) corresponds to the tappet thickness sizes (there are 25 sizes at the service parts).

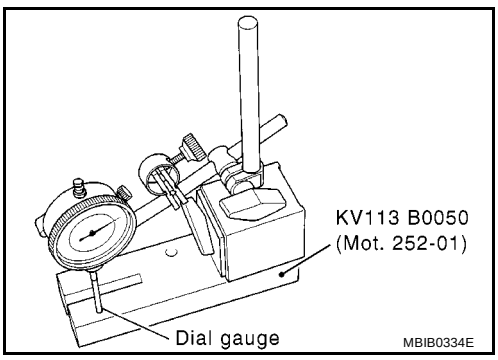


1	4
3	2
4	1
2	3

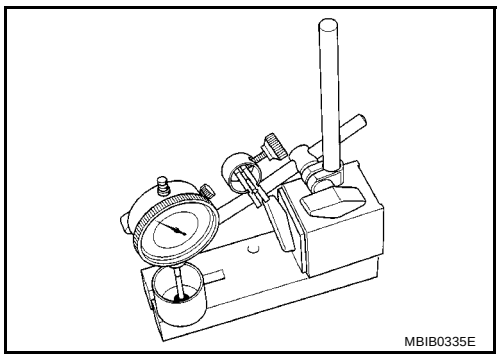
5. Compare the values recorded with the values specified, then replace the tappets which are not within tolerance.

   Clearance, under cold condition:
   Intake : 0.125 - 0.25 mm (0.0049 - 0.0098 in)
   Exhaust : 0.325 - 0.45 mm (0.0128 - 0.0177 in)

6. Remove the camshaft brackets.
7. Remove the camshaft.
8. Remove the tappet not within tolerance.
   Determining dimension Y.
   Set up the following assembly using KV113B0050 (Mot. 252-01) and dial gauge, then calibrate the gauge.



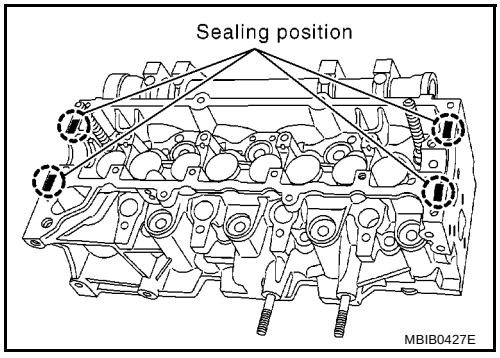
9. Raise the gauge extension (without modifying the position of the magnetic support/gauge assembly), then slide in the tappet to be measured.
   - Note dimension (Y) and repeat the operation for the tappets where the valve clearance is not within tolerance.
   - Refer to the Replacement Parts Catalogue for the vehicle concerned to select the various thicknesses of the tappet(s).
10. Check the valve clearance again.
11. Remove the camshaft brackets.
12. Remove the camshaft.
13. Remove the tappet(s) not within tolerance.



MBIB0335E

14. Grease the underside of the tappets and the camshaft brackets.
15. Degrease the gasket faces (of the cylinder head and brackets 1 and 6). They should be clean, dry and free from grease (in particular, remove finger marks).
16. Lay four beads of Loctite with a width of 1 mm (0.04 in) on brackets 1 and 6 of the cylinder head.
17. Install the camshaft.
18. Install the camshaft brackets (these are numbered from 1 to 6 and bearing (1) should be positioned on the flywheel end).

: 10 N·m (1.0 kg-m, 7 ft-lb)



MBIB0427E

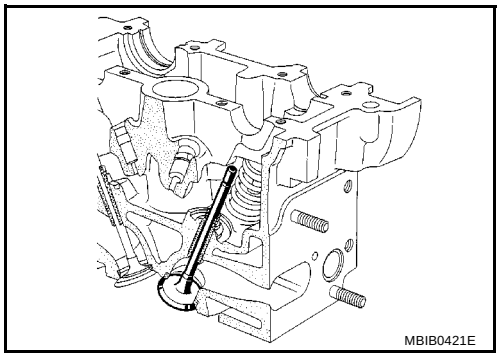
Assembly

EBS01C73

ASSEMBLY OF THE CYLINDER HEAD

1. Install new valves and grind them gently into their respective seats. Clean all the parts thoroughly, mark them for identification purposes, then carry out the refitting operation.
   Lubricate the inside of the valve guide.
   - It is imperative to fit the valve stem seals using Tool KV113B0180 (Mot. 1511-01) or suitable tool.

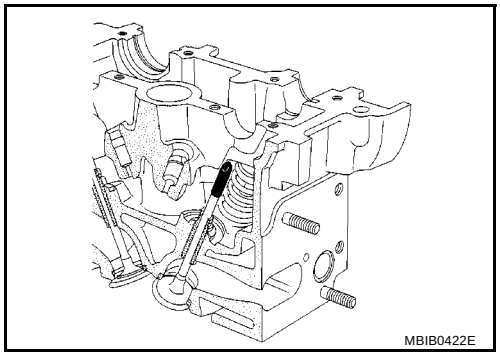
   NOTE:
   Do not lubricate the valve stem seals before fitting them.



MBIB0421E

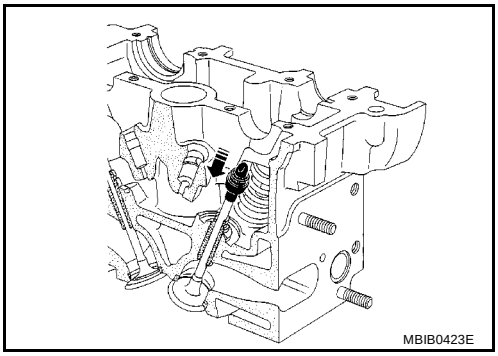
New Valve Stem Seals

1. Place the valve in the cylinder head.
2. Place the barrel of Tool KV113B0180 (Mot. 1511-01) over the valve stem (the inner diameter of the barrel must be identical to the diameter of the valve stem).



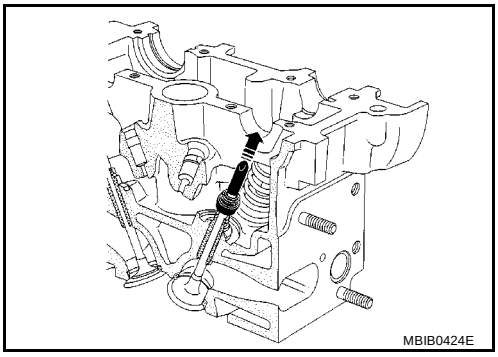
MBIB0422E

3. Keep the valve pressed against its seat.
4. Place the valve stem seal (not lubricated) over the tool barrel.



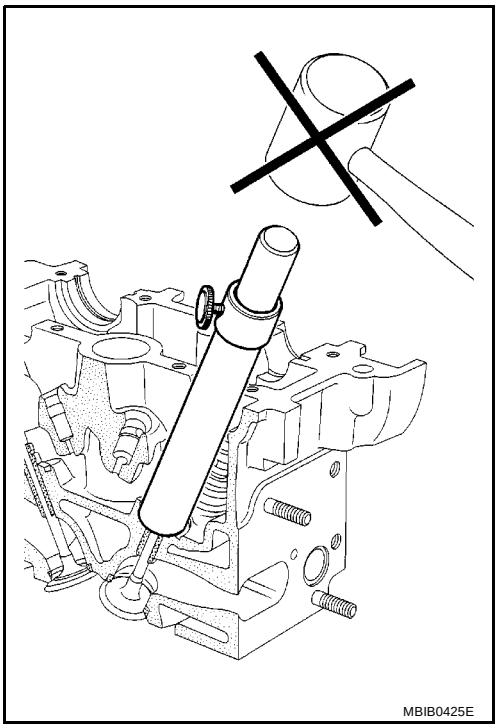
MBIB0423E

5. Push the valve stem seal past the tool barrel, then withdraw the barrel.



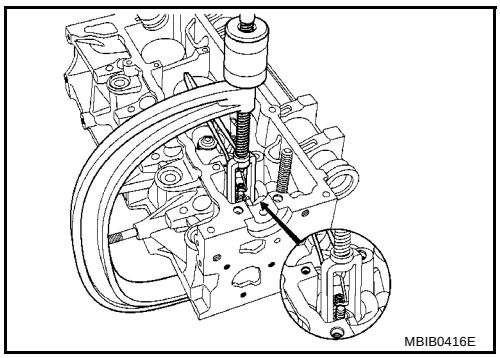
MBIB0424E

6. Place the guide tube plus push rod assembly on the valve stem seal.
7. Push the valve stem seal down by tapping the top of the sleeve with the palm of your hand until the guide tube touches the cylinder head.
8. Repeat these operations for all the valves.



MBIB0425E

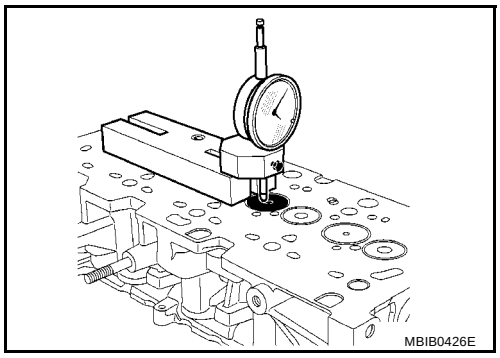
9. Install the valve springs and upper cups using valve spring compressor.
10. Install the keys using tweezers.



MBIB0416E

11. Check the valve protrusion using KV113B0040 (Mot. 251-01) and KV113B0050 (Mot. 252-01) as shown.

Valve protrusion : −0.07 to 0.07 mm (−0.0028 to 0.0028 in)

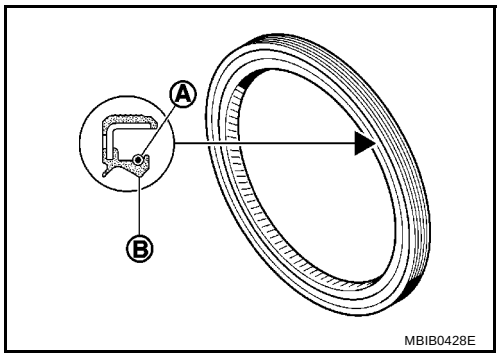


MBIB0426E

Camshaft Seal

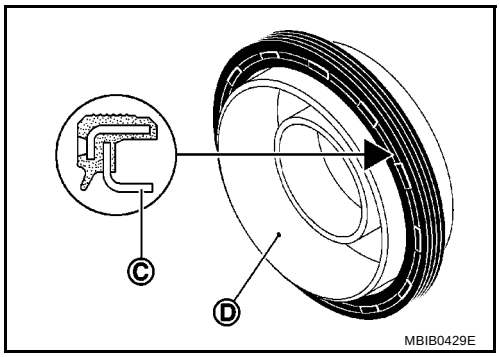
- This engine can be fitted with two different types of seals. Old and new seals are easily recognized.

1. The old rubber seal is installed with a spring (A) and has a “V”-shaped sealing lip (B).



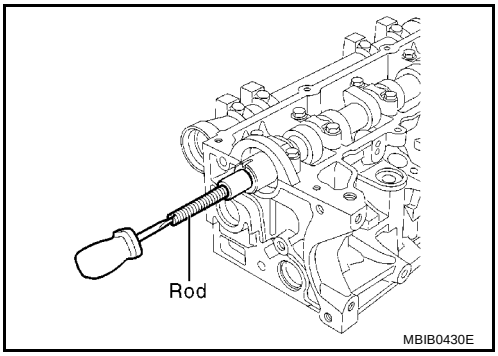
MBIB0428E

2. The new rubber seal has a flat sealing lip (C) and a protector (D) which also assists in installing the seal to the engine.

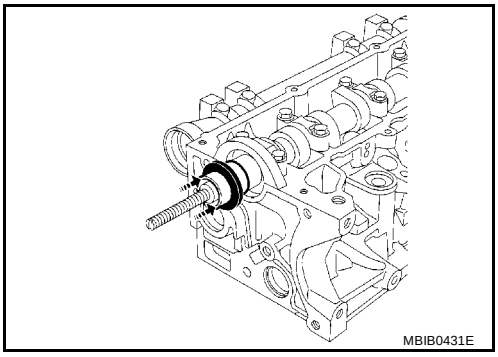


MBIB0429E

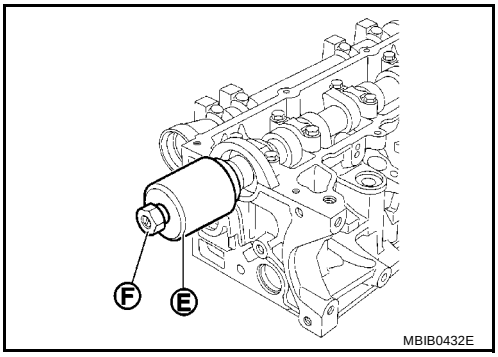
3. Screw the shouldered rod of Tool KV113B0230 (Mot. 1632) onto the stud of the camshaft.
4. Install the old seal on the camshaft.



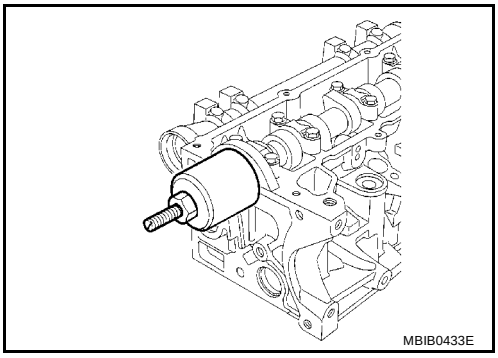
5. For the new seal, put the protector with the seal on the camshaft, taking care not to touch the seal.



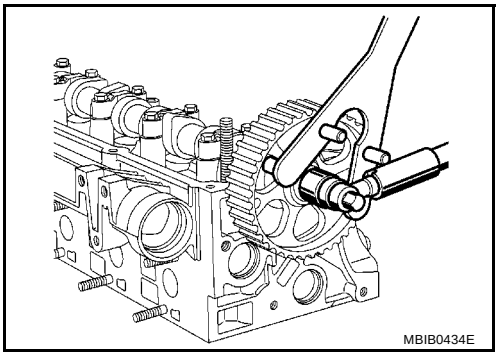
6. Install the cover (E) and the collar nut (F) of Tool KV113B0230 (Mot. 1632).



7. Screw the collar nut until the cover touches the cylinder head.

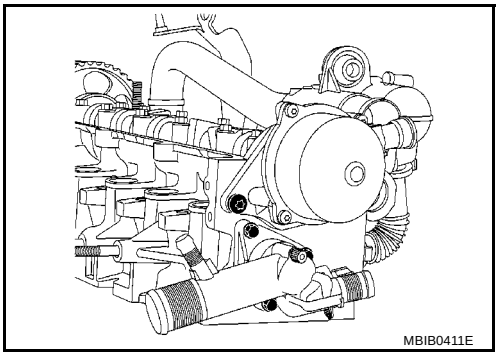


8. Remove the nut, the cover, the protector and the shouldered rod.
9. Install the camshaft pulley. Tighten the new nut to a torque of 30 N·m (3.1 kg-m, 22 ft-lb) plus an angle tightening of 84°.



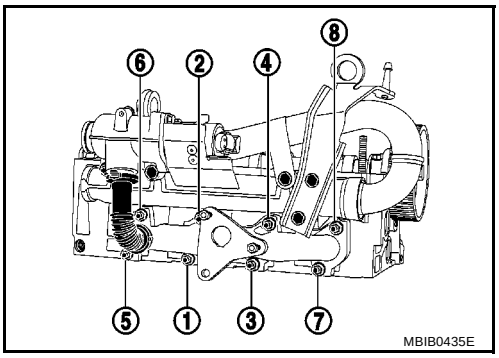
MBIB0434E

10. Install the vacuum pump with a new gasket. Tighten the bolts to a torque of 21 N·m (2.1 kg-m, 15 ft-lb).
11. Install water outlet unit with a new gasket. Tighten the bolts to a torque of 26 N·m (2.7 kg-m, 19 ft-lb).



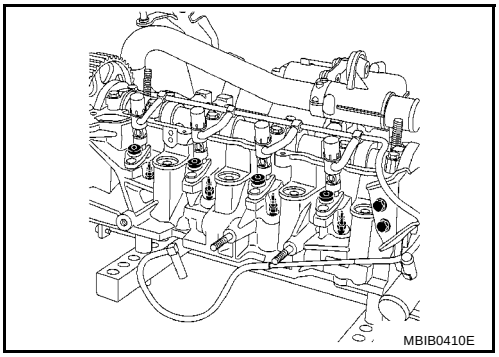
MBIB0411E

12. Install the exhaust manifold with new gasket. Tighten the bolts to a torque of 26 N·m (2.7 kg-m, 19 ft-lb) in the numerical order as shown.
13. Install the EGR unit with new clips. Tighten the mounting bolts of the valve to a torque of 21 N·m (2.1 kg-m, 15 ft-lb), then tighten the clips of the pipe using Tool KV113B0190 (Mot. 1567).
14. Install the air inlet pipe with a new seal.
15. Install the front engine slinger.



MBIB0435E

16. Clean the injector sockets and the injector bodies, as well as their brackets using a lint-free cloth (use the wipes recommended for this purpose) dipped in clean solvent.
    Dry off using a different new wipe.
    Replace the compression washer with a new washer.
17. Install the injectors (using the marks made during removal). Tighten the mounting flanges to a torque of 28 N·m (2.9 kg-m, 21 ft-lb).
18. Install the glow plugs. Tighten them to a torque of 15 N·m (1.5 kg-m, 11 ft-lb).
19. Install the rear engine slinger.



MBIB0410E

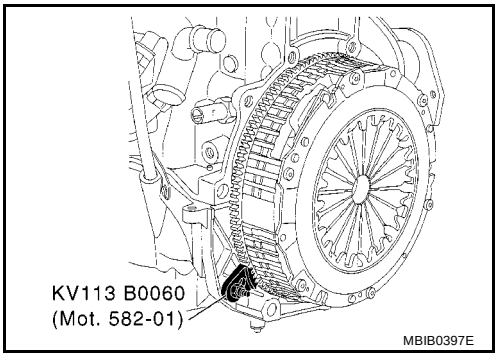
20. Install fuel injection pump and related parts. Refer to EC-K9K-20, “High pressure pump”, “DIESEL EQUIPMENT” in EC section.

Disassembly of The Bottom Engine

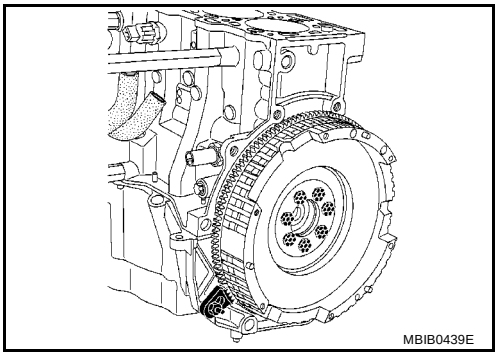
EBS01C74

REMOVAL

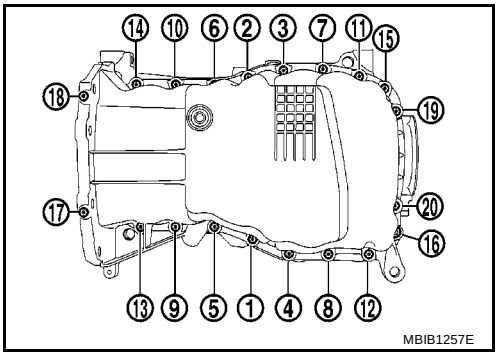
1. Install the Tool KV113B0060 (Mot. 582-01).



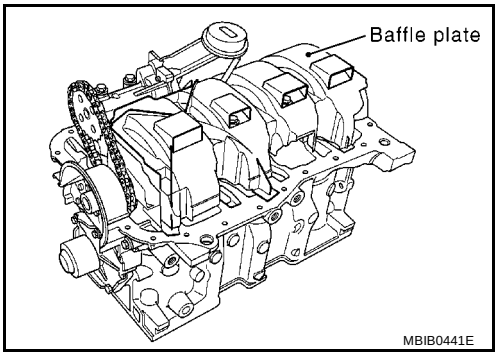
2. Remove the clutch housing.
3. Remove the flywheel.



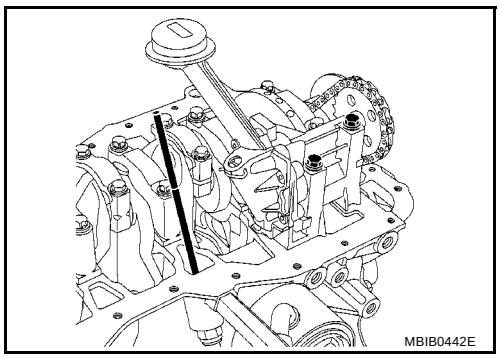
4. Remove the oil pan bolt in reverse order as shown.



5. Remove the baffle plate.

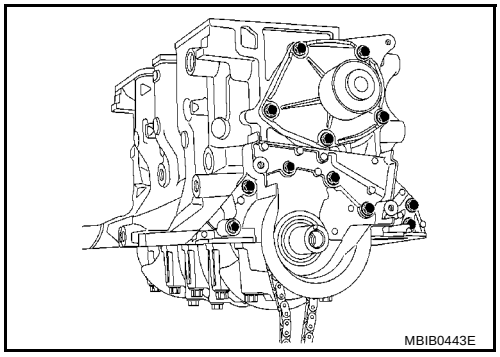


6. Remove the oil level sensor.
7. Remove the oil pump.



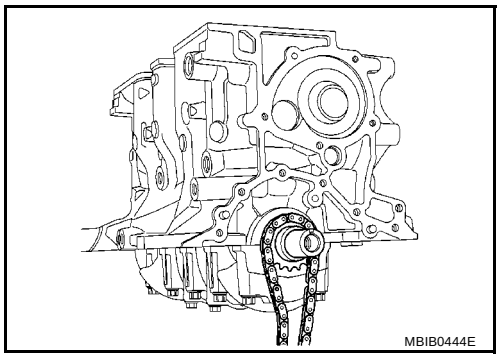
MBIB0442E

8. Remove the rear oil seal retainer.
9. Remove the water pump.



MBIB0443E

10. Remove the oil pump chain.
11. Remove the oil pump drive sprocket.

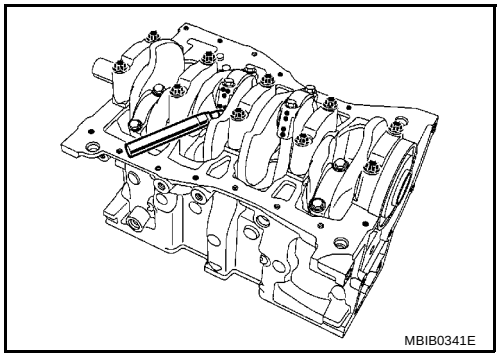


MBIB0444E

WARNING:
Do not use a sharp point to mark the bearing caps in relation to their connecting rods to avoid starting a crack in the rod. Use a permanent marker pen.

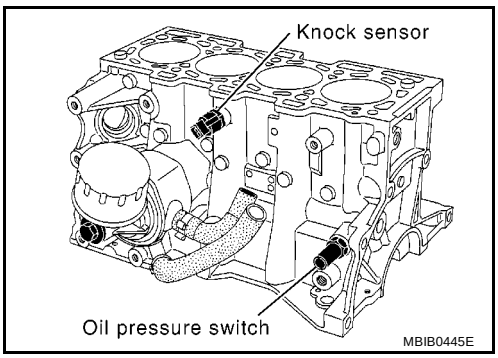
12. Remove the big end cap bolts and the connecting rod/piston assemblies.

    NOTE:
    It is essential to mark the position of the main bearing cap, as the category may be different for each bearing.
13. Remove the main bearing caps.
14. Remove the crankshaft.

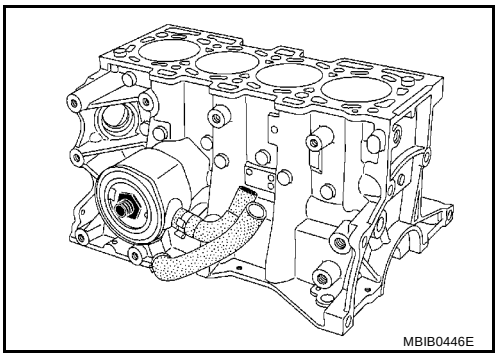


MBIB0341E

15. Remove the oil pressure switch, the knock sensor and oil filter bracket connecting bolt.



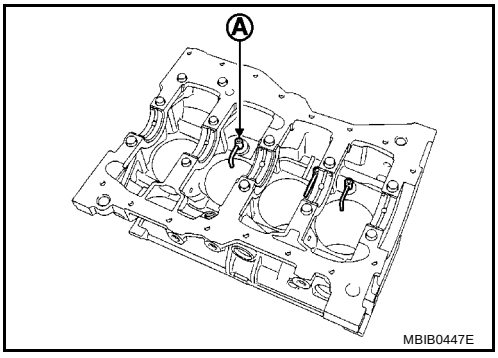
16. Remove the oil cooler connecting bolt.



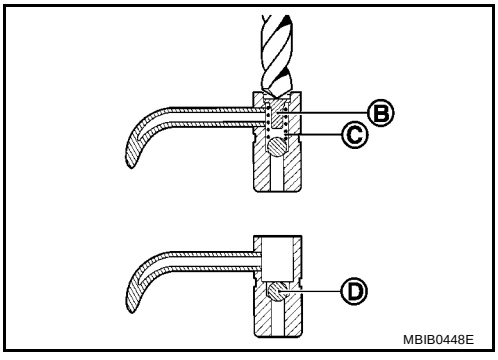
REPLACEMENT OF THE OIL JETS

Removal

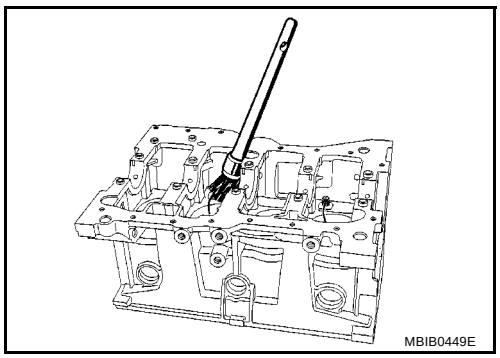
1. To remove the oil jets (A), they must be drilled with a 7 mm (0.28 in) diameter drill. This is necessary in order to remove the spring stop (B) and the spring (C).



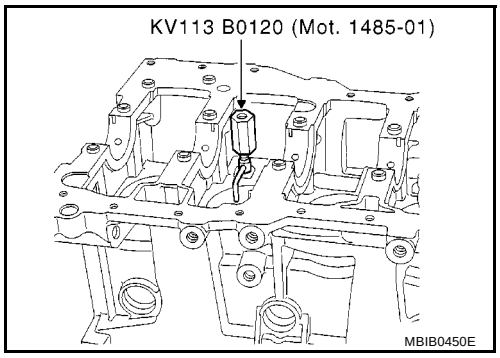
NOTE:
Do not remove the ball (D) to prevent from entering the cooling circuit.



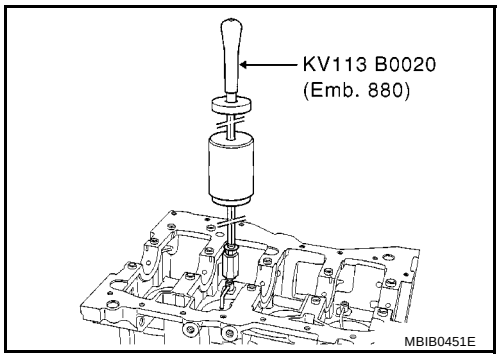
2. Remove the using a suitable brush.



3. Screw Tool KV113B0120 (Mot. 1485-01) in the drilled out jets using a 6 mm (0.24 in) Allen key which must slide into the tool.



4. Screw Tool KV113B0020 (Emb. 880) onto KV113B0120 (Mot. 1485-01) and remove the oil jet.



Assembly

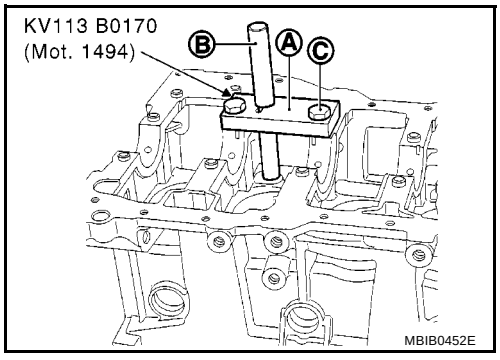
EBS01C75

INSTALLATION OF OIL JETS

- The oil jets must be installed using Tool KV113B0170 (Mot. 1494).

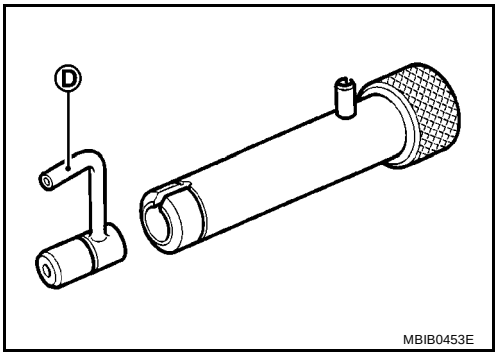
Installation of The Oil Jets For No. 1 and No. 3 Cylinders

1. Install plate (A) of Tool KV113B0170 (Mot. 1494) onto the cylinder block (as shown in the figure) without tightening the two bolts (C).
2. Position the guide rod (B) in the plate (A) and the end of the guide rod in the hole of the oil jet to center the plate (A).
3. Tighten the two bolts (C).
4. Remove the guide rod.

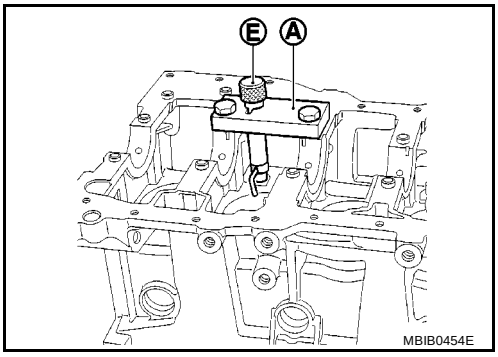


5. Install the push rod instead of the guide rod, then insert the oil jet into the push rod.

   NOTE:
   Check that the oil jet is correctly oriented with the end of the jet (D) directed towards the center of the cylinder.

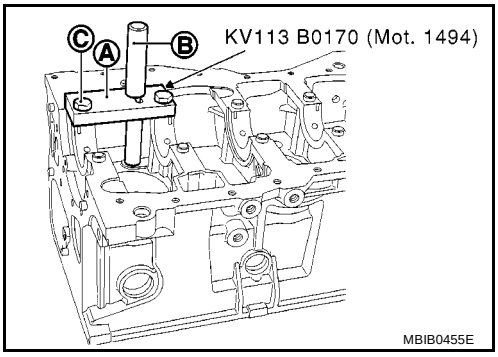


6. With a hammer, tap the push rod until the shoulder (E) of the push rod comes into contact with the plate (A).



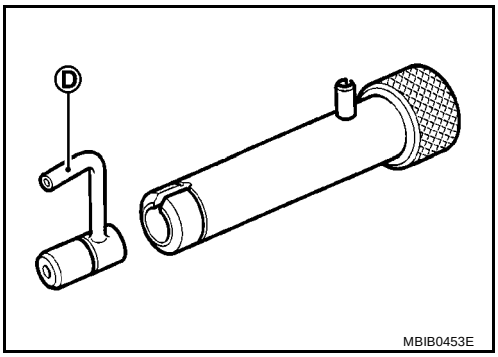
Installation of The Oil Jets For No. 1 and No. 4 Cylinders

1. Fit plate (A) of Tool KV113B0170 (Mot. 1494) onto the cylinder block (as shown in the figure) without tightening the two bolts (C).
2. Position the guide rod (B) in the plate (A) and the end of the guide rod in the hole of the oil jet to center the plate (A).
3. Tighten the two bolts (C).
4. Remove the guide rod.

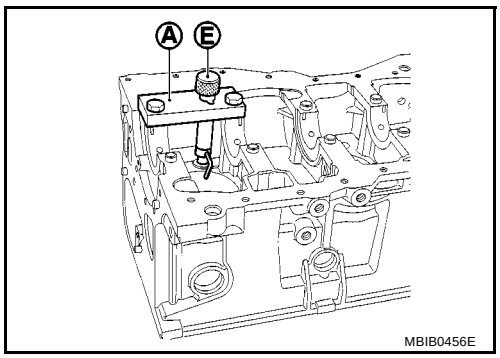


5. Position the push rod instead of the guide rod, then insert the oil jet into the push rod.

   NOTE:
   Check that the oil jet is correctly oriented with the end of the jet (D) directed towards the center of the cylinder.



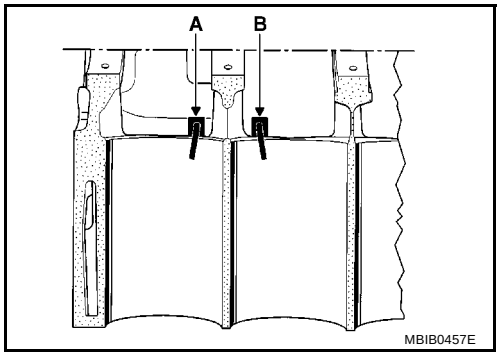
6. With a hammer, tap the push rod until the shoulder (E) of the push rod comes into contact with the plate (A).



Orientation Of The Oil Jets (See Diagram Below)

A	Orientation of the oil jets of No. 2 and No. 4 cylinders
B	Orientation of the oil jets of No. 1 and No. 3 cylinders

1. Clean the cylinder block and crankshaft by passing a wire through the lubrication channels.



METHOD FOR INSTALLING THE OIL COOLER AND OIL FILTER

1. Install oil cooler. Refer to LU-16, "OIL COOLER" .
2. Install oil filter. Refer to LU-14, "OIL FILTER" .

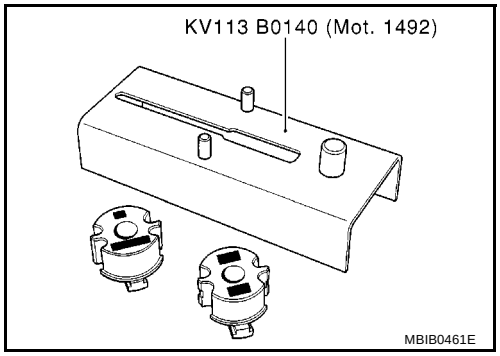
Removing The Piston Pins

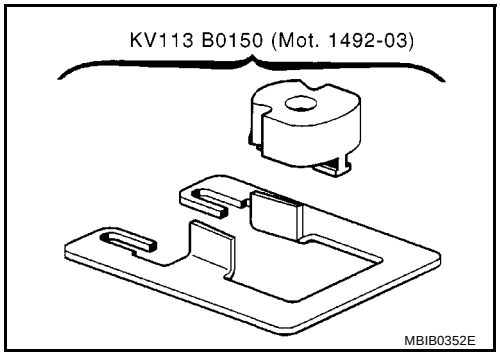
EBS01C76

NOTE:
It is imperative to mark the connecting rod to match it to its piston, because the piston height classes in the same engine may be different (see Technical Specifications section).
To remove the piston pin, remove the snap ring using a screwdriver, then release the pin.

CONNECTING ROD BEARING

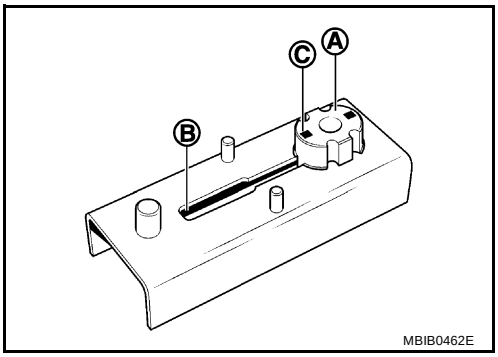
1. The connecting rod bearing are installed using Tool KV113B0140 (Mot. 1492) and Tool KV113B0150 (Mot. 1492-03).





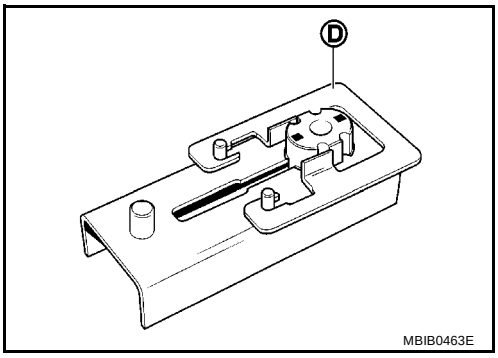
ON THE CONNECTING ROD BODY

1. Slide the connecting rod bearing support (A) of Tool KV113B0150 [Mot. 1492-03 (positioning the engraved mark (B) as shown in the figure)] into the groove (C) of the base of Tool KV113B0140 (Mot. 1492).



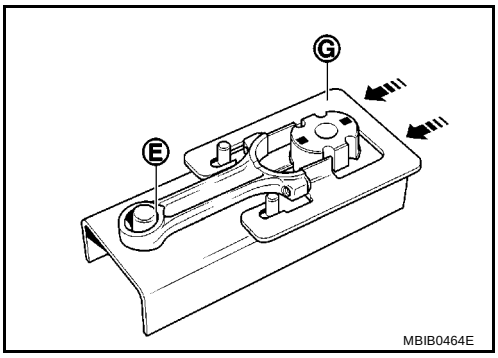
MBIB0462E

2. Install the guide (D) of Tool KV113B0150 (Mot. 1492-03) onto the base (as shown in the figure).



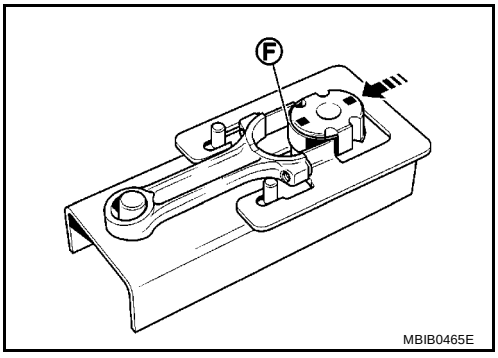
MBIB0463E

3. Lay the body of the connecting rod on the base of the tool (as shown in the diagram). Check that the lower part (E) of the small end is touching the centering pin and push the guide (G) in the direction of the arrow.



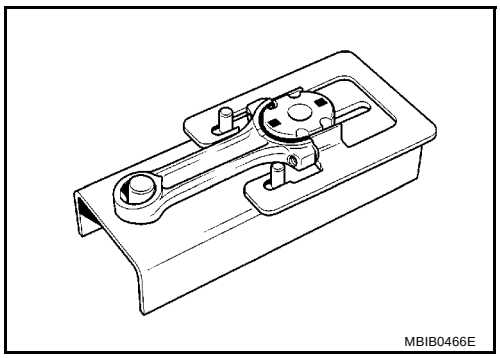
MBIB0464E

4. Lay the connecting rod bearing [with a width of 20.625 mm (0.8120 in)] (F) on the connecting rod bearing support, then push it in the direction of the arrow (as shown in the figure).



MBIB0465E

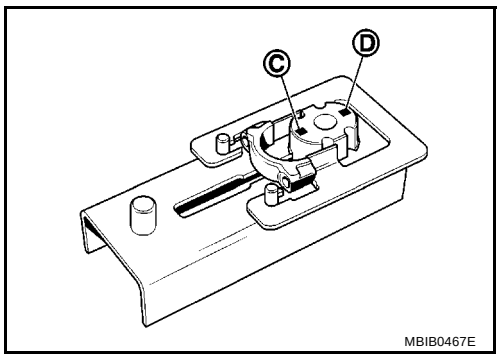
5. Bring the connecting rod support up against the base of the connecting rod body.
6. Remove the connecting rod body support and repeat the operation for the remaining connecting rod bodies.



MBIB0466E

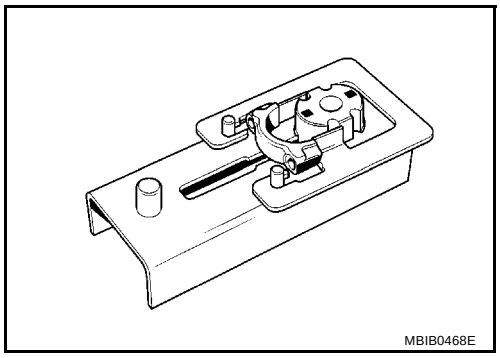
ON THE CONNECTING ROD CAP

1. Position the connecting rod bearing support either on the engraved mark (C) if the width of the connecting rod bearing is equal to 20.625 mm (0.8120 in).
2. Position the connecting rod bearing support either on the engraved mark (D) if the width of the connecting rod bearing is equal to 17.625 mm (0.6939 in).



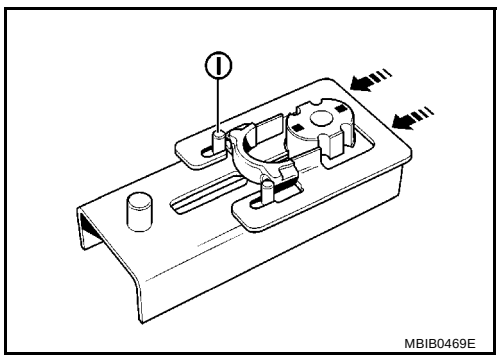
MBIB0467E

3. Install the connecting rod cap as shown in the figure.



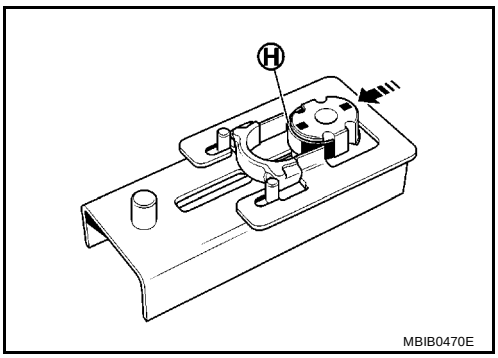
MBIB0468E

4. Push the guide (in the direction of the arrow) until the connecting rod cap is in contact with the pins (I) on the base of the tool.

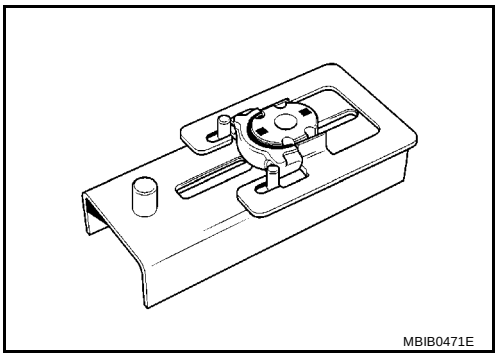


MBIB0469E

5. Install the connecting rod bearing (H) on the bearing support, then push it in the direction of the arrow (as shown in the figure).

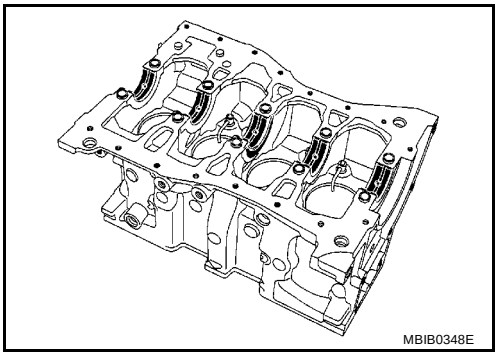


6. Bring the connecting rod bearing support up against the base of the connecting rod cap.
7. Remove the connecting rod bearing support and repeat the operation for the remaining connecting rod caps.

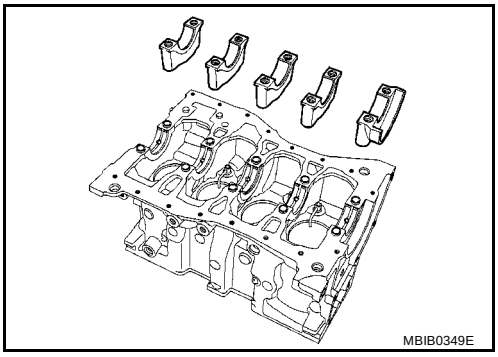


INSTALLATION OF MAIN BEARING

1. Position the grooved main bearing on the cylinder block.

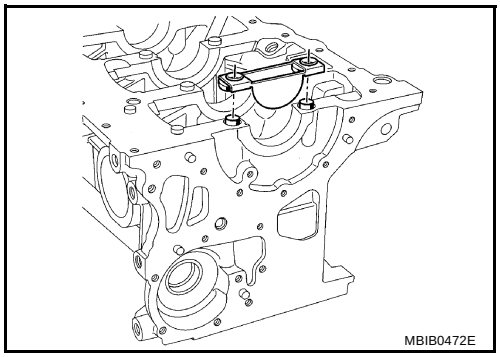


2. Install the smooth bearing cap on the bearings.



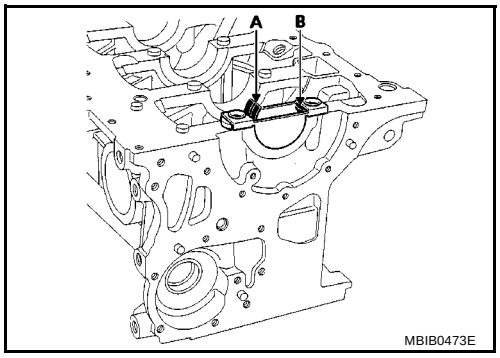
ON THE CYLINDER BLOCK

1. Position tool KV113B0160 (Mot. 1493-01) on the cylinder block.



MBIB0472E

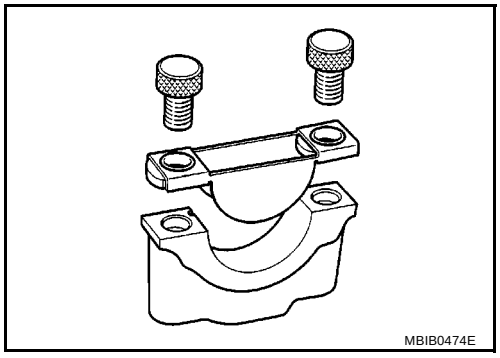
2. Install the bearing cap in Tool KV113B0160 (Mot. 1493-01), then press at (A) until the bearing cap is touching at (B) with KV113B0160 (Mot. 1493-01).



MBIB0473E

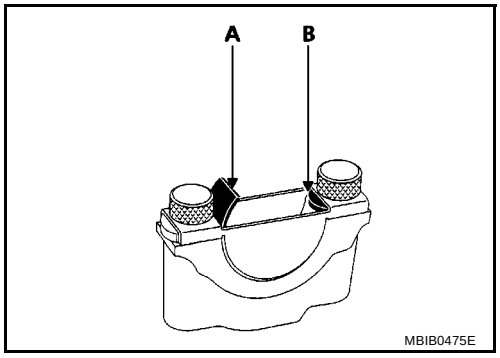
ON THE BEARING CAPS

1. Position Tool KV113B0160 (Mot. 1493-01) on the bearing cap.



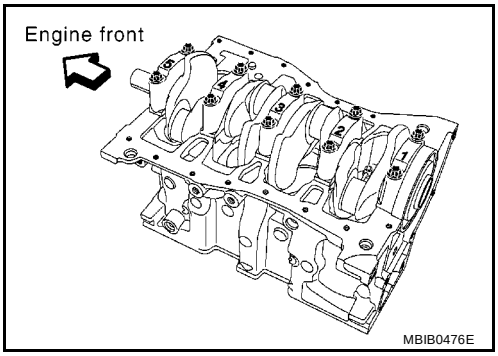
MBIB0474E

2. Install the main bearing in Tool KV113B0160 (Mot. 1493-01), then press at (A) until the main bearing is touching at (B) with Tool KV113B0160 (Mot. 1493-01).

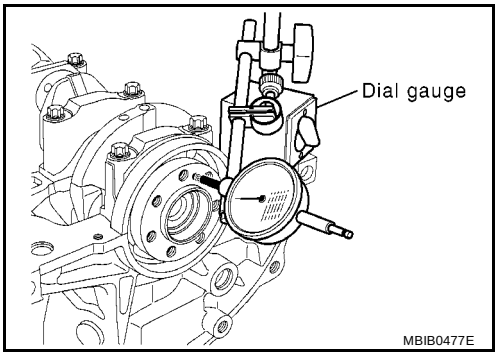


MBIB0475E

3. Oil the main bearing.
4. Install the crankshaft.
5. Install the lateral shims on bearing No. 3, putting the grooves on the crankshaft side.
6. Install the main bearing caps on bearing cap No. 1 (these are numbered from 1 - 5 and these numbers should be positioned opposite the water pump). Then tighten the bolts to a torque of 27 N·m (2.8 kg-m, 20 ft-lb) plus an angle tightening of 47°±5°.

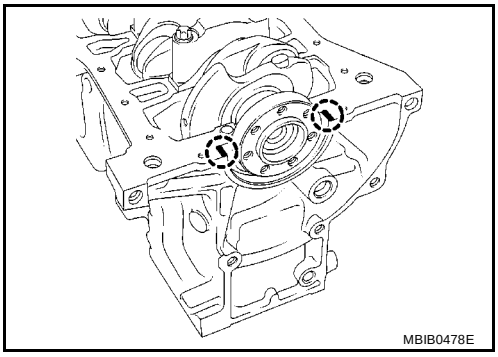


7. Check the lateral clearance of the crankshaft which should be without wear on lateral shims: 0.045 - 0.252 mm (0.0018 - 0.0099 in)
8. Check the lateral clearance of the crankshaft which should be with wear on the lateral shims: 0.045 - 0.852 mm (0.0018 - 0.0335 in)



INSTALLATION OF NO. 1 BEARING

1. **Degrease the gasket faces (of the cylinder block and bearing No. 1). They should be clean, dry and free from grease (in particular, remove finger marks).**
2. Lay two beads of liquid sealant with a width of 1 mm (0.04 in) on bearing No. 1 of the cylinder block.
   Tighten the bolts of bearing cap No. 1 to a torque of 27 N·m (2.8 kg-m, 20 ft-lb) plus an angle tightening of 47°±5°.



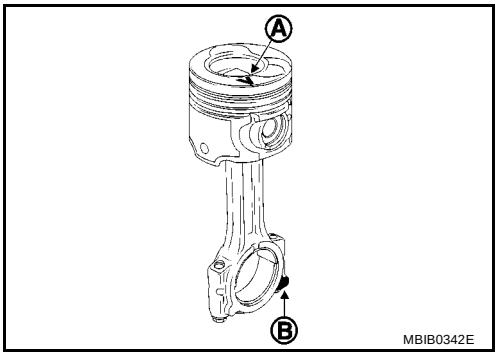
CONNECTING RODS / PISTON ASSEMBLY

- The pistons have a mark engraved on their heads indicating the engine rear side.

1. Oil the piston pin.
2. Check that the piston pins rotate correctly in the new piston and in the matching connecting rod.

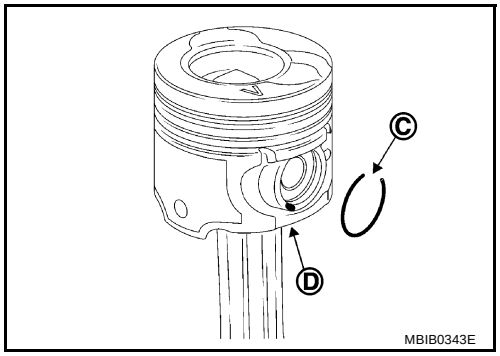
Direction Of Installation Of The Connecting Rod In Relation To The Piston

- Point the mark (A) engraved on the top of the piston upwards and the flat (B) of the big end downwards as shown in the figure.



DIRECTION FOR INSTALLATION THE SNAP RINGS ON THE PISTON

- Position the opening (C) of the snap rings opposite the removal and fitting channel (D).

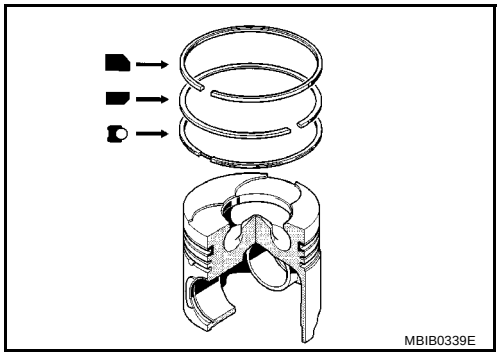


INSTALLATION OF THE SNAP RINGS

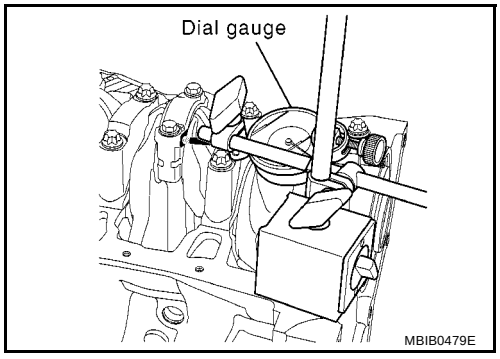
1. Rings set to their original adjustment must be free within their channels.
2. Ensure the snap rings are fitted the correct way, with the word TOP pointing upwards.

Orientation Of The Piston Rings In The Piston

1. Ensure the break in each piston ring is correctly oriented as shown in the figure.



2. Apply new engine oil to the pistons.
3. Install the connecting rod/piston assemblies into the cylinder block using the ring, being careful to fit them the right way round (mark towards the flywheel).
4. Install the connecting rods onto the oiled crankshaft pins of the crankshaft.
5. Install the connecting rod caps, ensuring they are correctly matched.
6. Tighten the big end cap bolts to a torque of 20 N·m (2.0 kg-m, 15 ft-lb), plus an angle tightening of 45°±6°.
7. Inspect that the big ends have the correct lateral clearance of 0.205 to 0.467 mm (0.0081 to 0.0184 in).

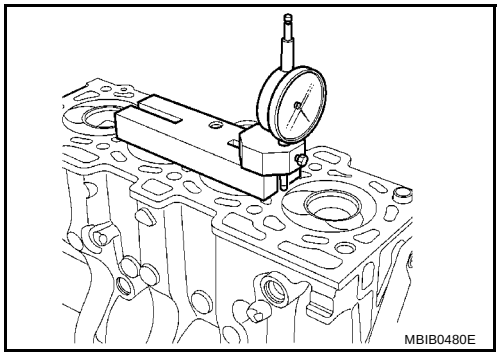


CHECKING PISTON PROTRUSION

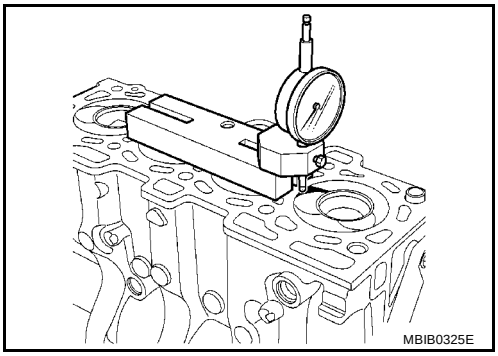
1. Clean the piston head.
2. Turn the crankshaft one turn in its operating direction to bring piston No. 1 close to TDC.
3. Install Tool KV113B0050 (Mot. 252-01) on the piston.
4. Install Tool KV113B0040 (Mot. 251-01) equipped with a gauge on support plate KV113B0050 (Mot. 252-01), and find TDC.

   NOTE:
   All measurements must be carried out along the longitudinal axis of the engine, in order to eliminate any errors due to tilting of the piston.

   WARNING:
   The gauge follower must not be in the valve clearance.



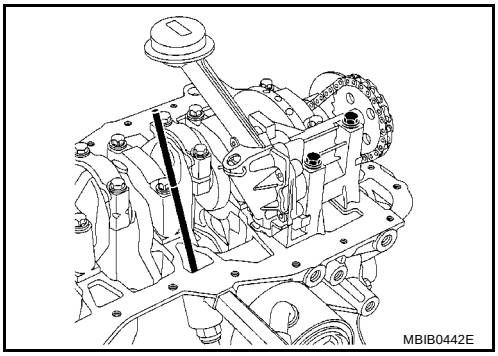
5. Inspect the piston protrusion which must be 0.099 to 0.285 mm (0.0039 to 0.0112 in).



MBIB0325E

INSTALLATION OF REAR OIL SEAL RETAINER AND OIL PUMP

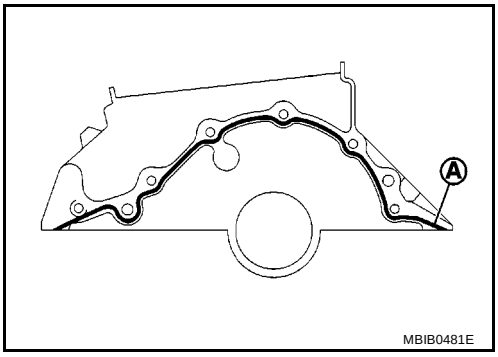
1. Tighten the knock sensor to a torque of 20 N·m (2.0 kg-m, 15 ft-lb).
2. Tighten the oil pressure switch to a torque of 22 N·m (2.2 kg-m, 16 ft-lb).
3. Install the oil pump sprocket and chain to a torque of 25 N·m (2.6 kg-m, 18 ft-lb).



MBIB0442E

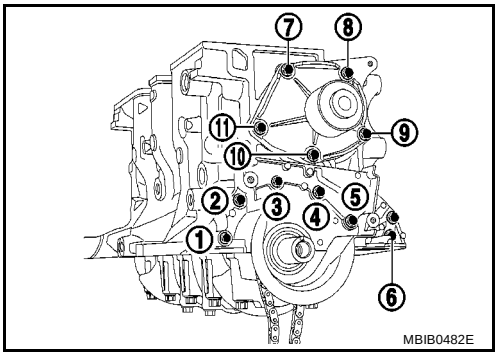
NOTE:
The gasket faces (cylinder block, rear oil seal retainer and water pump) must be clean, dry and free from grease (in particular, remove finger marks).
The rear oil seal retainer should be applied with liquid gasket. The bead (A) must be 1.5 to 2 mm (0.059 to 0.079 in) wide and be applied in accordance with the figure.

- Use Genuine Liquid Gasket or equivalent.



MBIB0481E

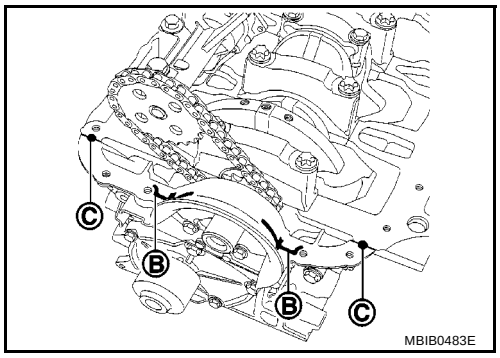
4. Install the rear oil seal retainer.
   - Tighten bolts 1 and 6 to a torque of 8 N·m (0.8 kg-m, 71 in-lb).
   - Tighten bolts 2, 3, 4 and 5 to a torque of 12 N·m (1.2 kg-m, 9 ft-lb).
   - Tighten bolts 1 and 6 to a torque of 12 N·m (1.2 kg-m, 9 ft-lb).
5. Put a new gasket to water pump face and install the water pump. Put a drop of locking sealant on the bolts, then tighten them to a torque of 11 N·m (1.1 kg-m, 8 ft-lb) in the numerical order.
   - Use Genuine thread locking sealant or equivalent.

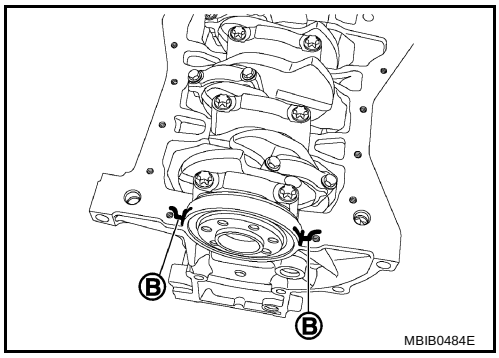


MBIB0482E

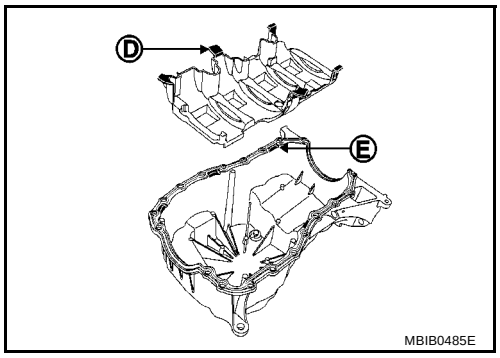
NOTE:
The gasket faces (cylinder block and rear oil seal retainer) must be clean, dry and free from grease (in particular, remove finger marks).

6. Apply four beads (B) of liquid gasket, with a diameter of 5 mm (0.20 in).
7. Apply two drops (C) of liquid gasket, with a diameter of 7 mm (0.28 in) at the intersection of the rear oil seal retainer and the cylinder block.
   - Use Genuine Liquid Gasket or equivalent.

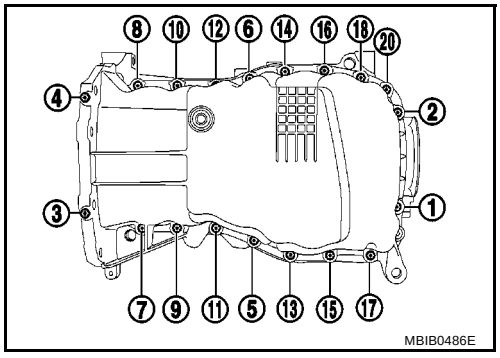




8. When installing the oil pan, ensure that the tabs (D) of the baffle plate are correctly positioned in the slots (E).
9. When installing the oil pan, ensure that the cylinder block and the oil pan are correctly aligned on the flywheel side, to prevent the clutch housing from being damaged when installing the transaxle.
10. Install the baffle plate.

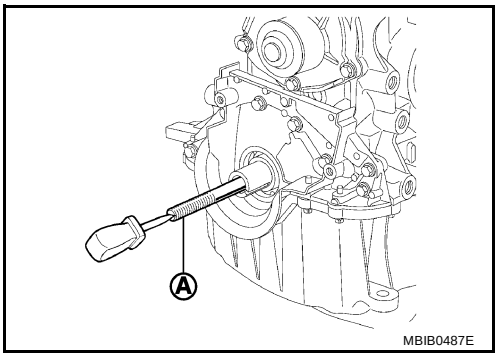


11. Install the oil pan and tighten the bolts as follows:
    - Tighten the bolts in the numerical order shown in the figure to a torque of 8 N·m (0.8 kg-m, 71 in-lb).
    - Tighten the mounting bolts of oil pan on the clutch housing without locking.
    - Tighten the bolts in the numerical order shown in the figure to a torque of 15 N·m (1.5 kg-m, 11 ft-lb).
    - Tighten the mounting bolts of oil pan on the clutch housing to a torque of 44 N·m (4.5 kg-m, 32 ft-lb).

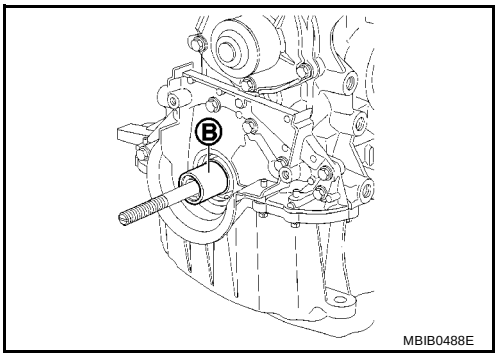


INSTALLATION OF THE CRANKSHAFT SEAL GASKETS

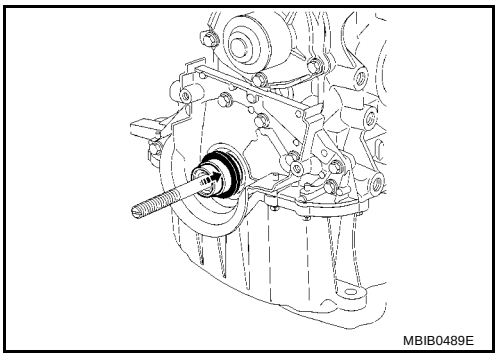
1. Crankshaft elastomer seal, timing side.
2. Screw the threaded rod (A) of Tool KV113B0220 (Mot. 1586) into the crankshaft.



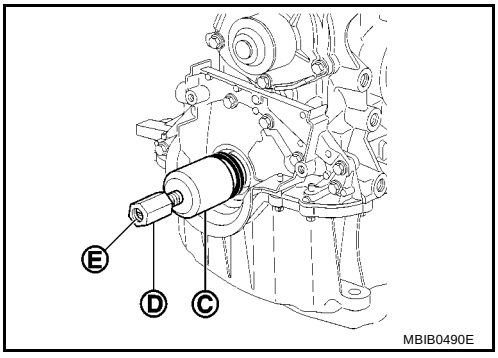
3. Position the spacer (B) of Tool KV113B0220 (Mot. 1586) on the crankshaft.



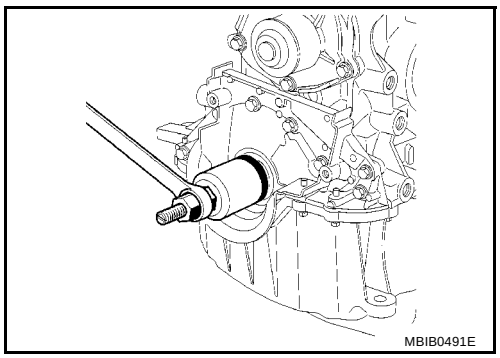
4. Install the protector complete with the seal onto the spacer, taking care not to touch the seal.



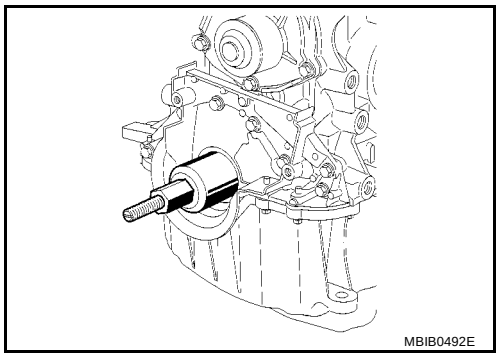
5. Install the cover (A) and the nut (B) (putting the threaded part (C) of the nut on the side away from the engine) of Tool KV113B0220 (Mot. 1586).



6. Tighten the nut until the cover touches the spacer.

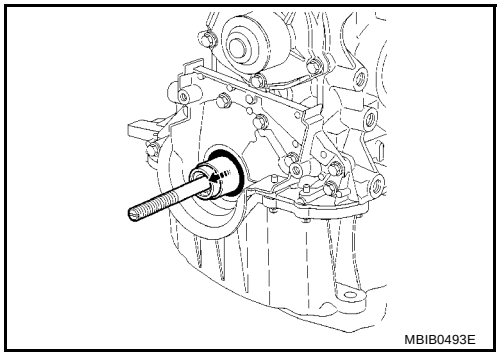


MBIB0491E



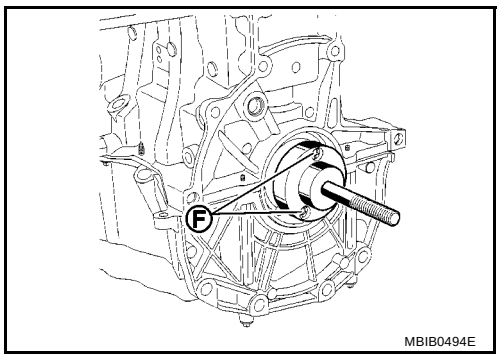
MBIB0492E

7. Remove the nut, the cover, the protector and the threaded rod.



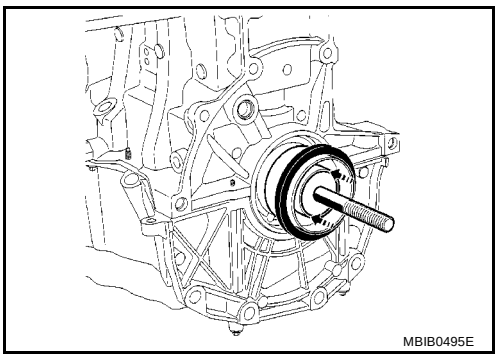
MBIB0493E

8. Crankshaft elastomer seal, flywheel side.
9. Install Tool KV113B0210 (Mot. 1585) on the crankshaft, securing it with bolts (F).



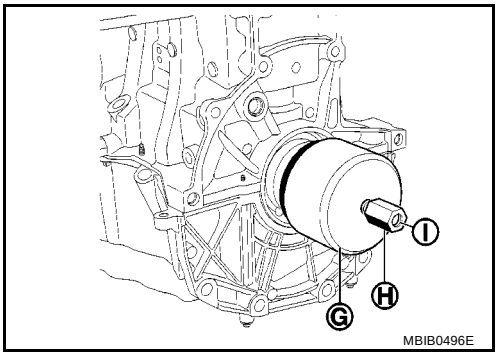
MBIB0494E

10. Put the protector complete with the seal on Tool KV113B0210 (Mot. 1585), being careful not to touch the seal.



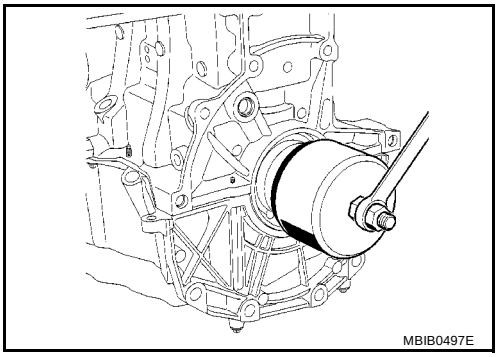
MBIB0495E

11. Install the cover (G) and nut (H) (putting the threaded part (I) of the nut on the side away from the engine) of Tool KV113B0210 (Mot. 1585).

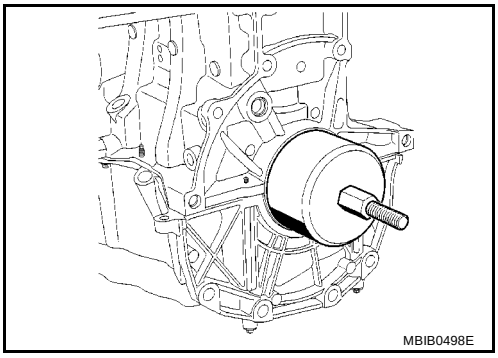


MBIB0496E

12. Tighten the nut until the cover touches the cylinder block.

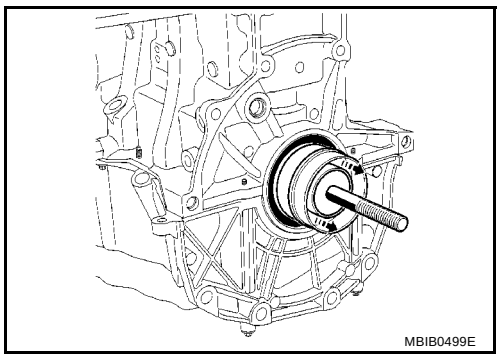


MBIB0497E



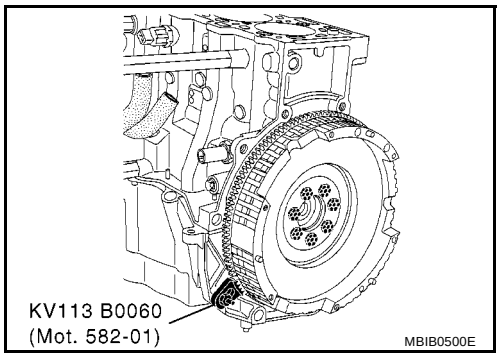
MBIB0498E

13. Remove the nut, the cover, the protector and the threaded rod.



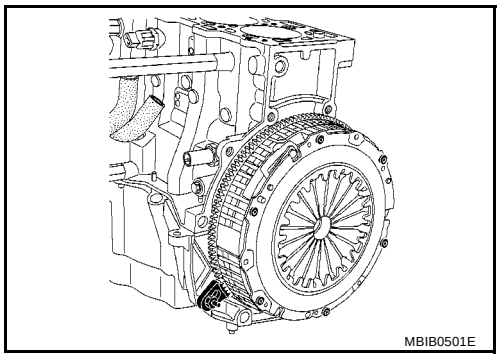
MBIB0499E

14. Install Tool KV113B0060 (Mot. 582-01) and tighten the new bolts to a torque of 50 to 55 N·m (5.1 to 5.6 kg-m, 37 to 40 ft-lb).



MBIB0500E

15. Install the clutch housing, tightening the bolts to a torque of 8 N·m (0.8 kg-m, 71 in-lb).
16. Remove Tool KV113B0060 (Mot. 582-01).

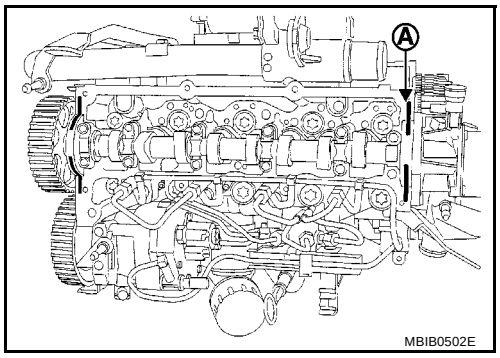


MBIB0501E

INSTALLATION OF THE CYLINDER HEAD

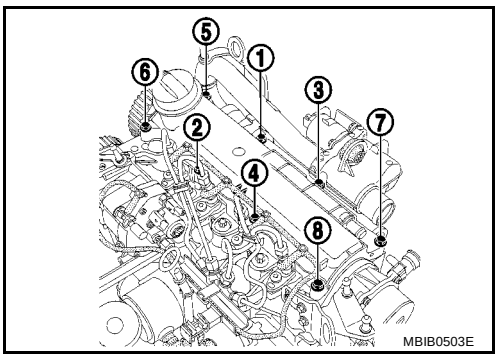
1. Position the pistons at mid-stroke.
2. Install the cylinder head gasket using the centering dowels of the cylinder block.
3. Tighten the cylinder head, Refer to EM-162, "ASSEMBLY OF THE CYLINDER HEAD" .

   NOTE:
   The gasket faces (cylinder head and rocker cover) must be clean, dry and free from grease (in particular, remove finger marks).
4. Lay four beads (A) of liquid gasket, with a diameter of 2 mm (0.08 in).
   - Use Genuine Liquid Gasket or equivalent.



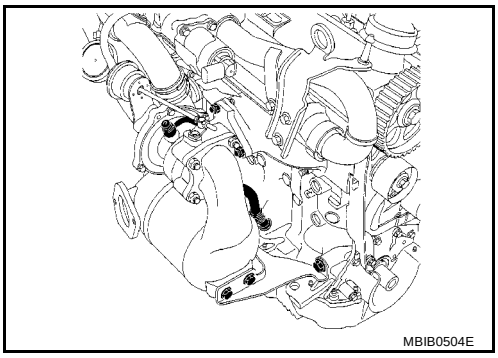
MBIB0502E

5. Install the rocker cover, tightening the bolts to a torque of 10 N·m (1.0 kg-m, 7 ft-lb) in the numerical order as shown.



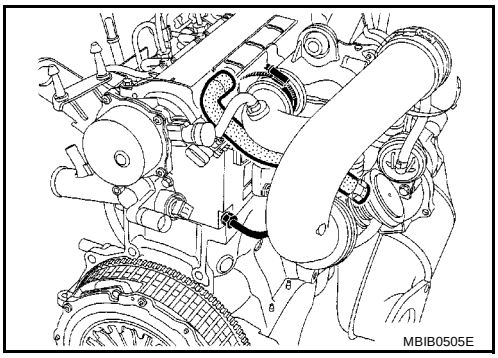
MBIB0503E

6. Put new seals on the pipe ends and install the turbocharger oil return pipe.
7. Install the turbocharger, tightening the nuts and the torx bolt to a torque of 26 N·m (2.7 kg-m, 19 ft-lb).
8. Install the catalytic converter bracket.
9. Install the turbocharger oil supply pipe.



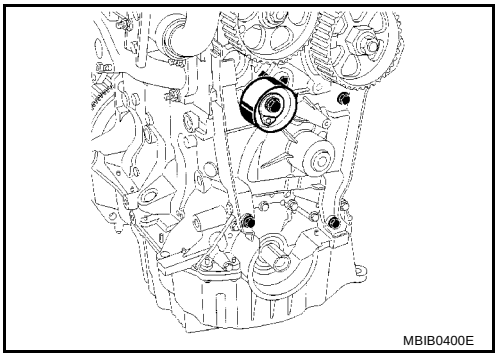
MBIB0504E

10. Tighten the bolts of the turbocharger oil return pipe to a torque of 9 N·m (0.9 kg-m, 80 in-lb).
11. Tighten the nut and the bolt of the turbocharger oil supply pipe to a torque of 23 N·m (2.3 kg-m, 17 ft-lb).
12. Install the oil vapor rebreathing pipe.
13. Install the new turbocharger air ducts.



MBIB0505E

14. Install the inner timing cover.
15. Install the timing tensioner.



MBIB0400E

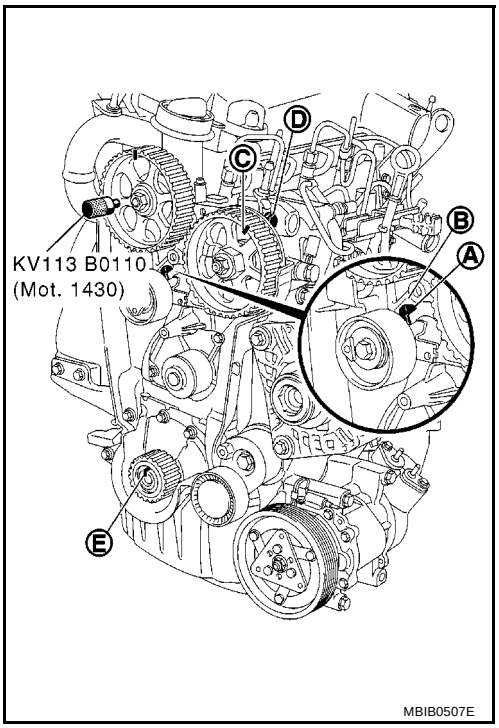
TIMING ADJUSTMENT

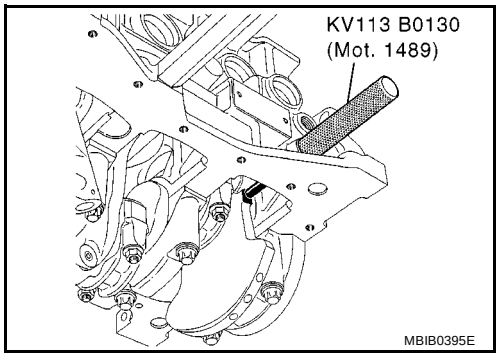
CAUTION:

It is essential to degrease the end of the crankshaft, the bore of the crankshaft sprocket and the bearing faces of the accessories pulley to prevent any slip between the timing and the crankshaft which would risk destroying the engine.

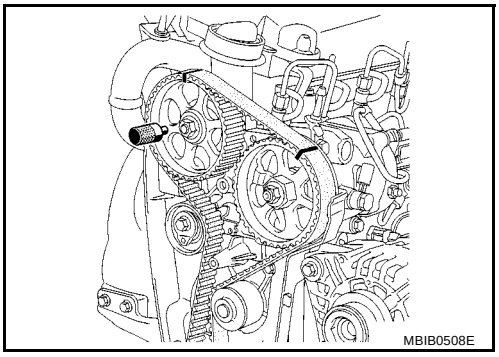
Ensure that the peg (A) of the tension wheel is correctly positioned in the groove (B).

1. Insert Tool KV113B0110 (Mot. 1430) in the camshaft and cylinder head pulley holes.
2. Check that the mark on the high pressure pump pulley (C) is opposite the bolt head (D).
3. Check that the crankshaft is touching Tool KV113B0130 (Mot. 1489) (the crankshaft groove (E) must be facing upwards).

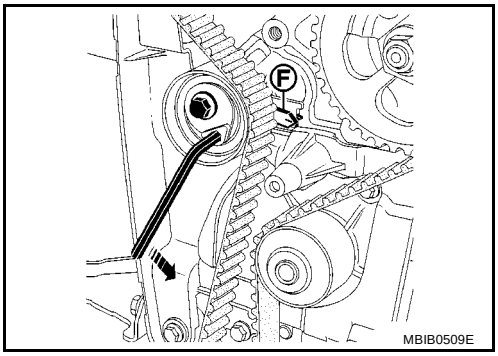




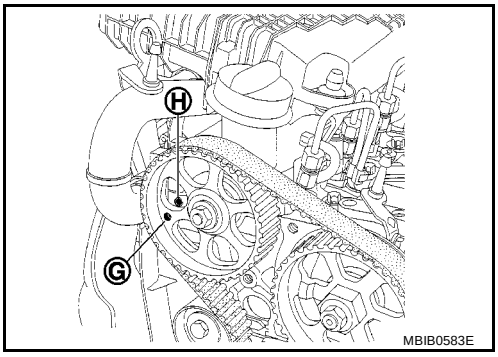
4. Install the timing belt, aligning the marks on the belt with those on the camshaft and fuel injection pump sprockets (19 teeth spaces on the belt between the marks on the camshaft and pump sprockets).



5. Using a 6 mm (0.24 in) Allen key, move the movable index (F) of the tension wheel into the position shown below, by turning the key counterclockwise.

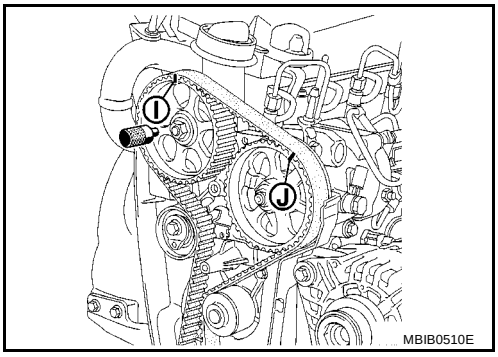


6. Tighten the tension wheel bolts to a torque of 25 N·m (2.6 kg-m, 18 ft-lb).
7. Install the crankshaft pulley, tightening the M12 bolt to a torque of 60 N·m (6.1 kg-m, 44 ft-lb), then angle tighten to 100°±10°, or M14 bolt to a torque of 120 N·m (12 kg-m, 89 ft-lb), then angle tighten to 95°±15°.
8. Remove Tool KV113B0130 (Mot. 1489) and Tool KV113B0110 (Mot. 1430).
9. Turn the crankshaft two full turns in a clockwise direction (timing side). Just before the hole (G) of the camshaft pulley is opposite the cylinder head hole (H), Tool KV113B0130 (Mot. 1489) into the cylinder block.

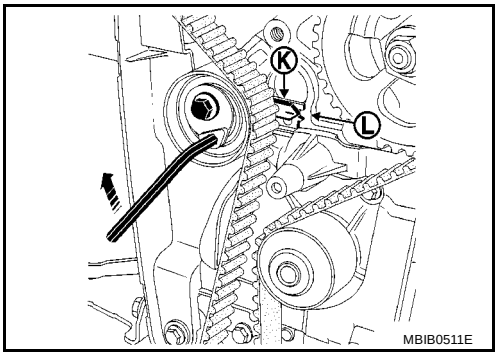


10. Then move the crankshaft slowly and without jolting it until it is resting on the pin.

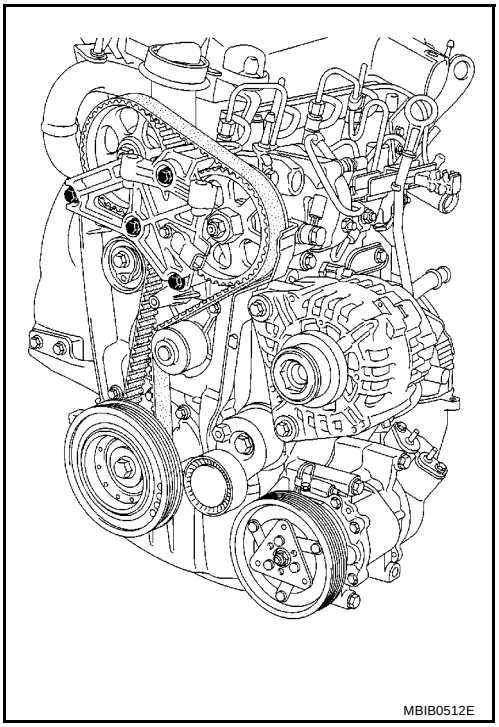
11. Check that Tool KV113B0110 (Mot. 1430) is correctly inserted in the holes of the camshaft and cylinder head pulleys and that there are 19 teeth spaces between the marks on the camshaft (I) and the fuel pump (J) sprockets.
12. Remove Tool KV113B0130 (Mot. 1489) and Tool KV113B0110 (Mot. 1430).



13. Undo the tension wheel bolt by a maximum of one turn while holding it using a 6 mm (0.24 in) Allen key, then gradually bring the movable index (K) (by turning the key clockwise) to the center of the timing window (L) and tighten the nut to a torque of 25 N·m (2.6 kg-m, 18 ft-lb).
14. Install the cap of the TDC pin, apply liquid gasket to the thread and tighten to a torque of 20 N·m (2.0 kg-m, 15 ft-lb).

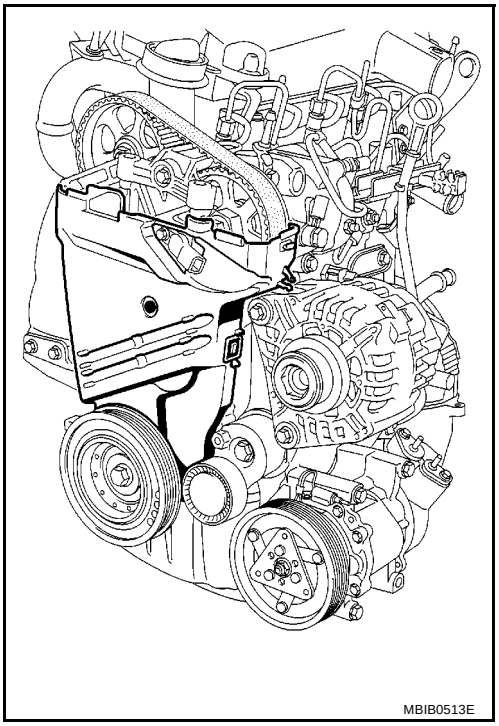


15. Install the cylinder head suspended bracket. Tighten the bolts to a torque of 21 N·m (2.1 kg-m, 15 ft-lb).

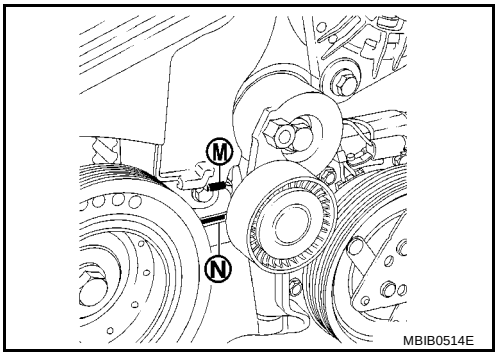


MBIB0512E

16. Install the lower timing cover by positioning the tab (M) into the hole (N) on the inner timing cover.

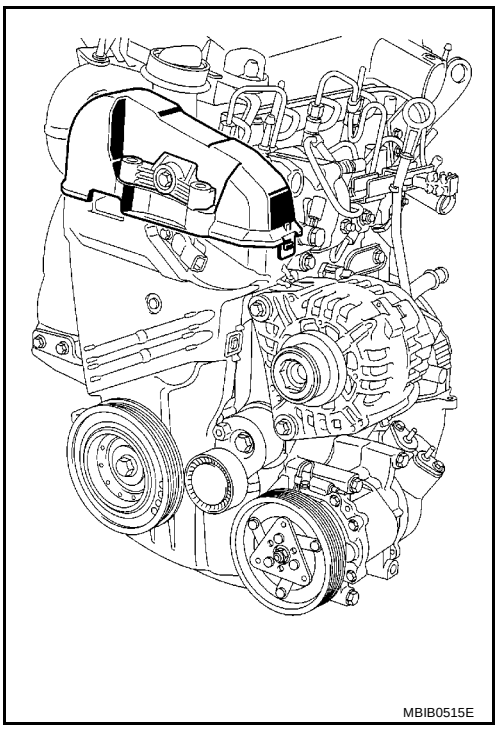


MBIB0513E



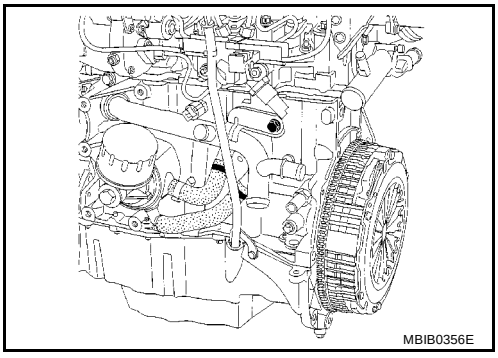
MBIB0514E

17. Install the upper timing cover.
18. Remove the engine from the Tool KV113B0070 (Mot. 792-03).



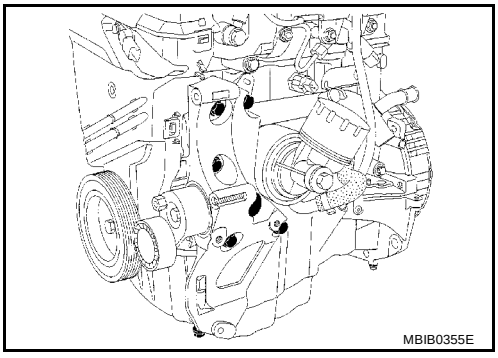
MBIB0515E

19. Install the water pipe. Tighten the bolt to a torque of 22 N·m (2.2 kg-m, 16 ft-lb).
20. Install the two water hoses.



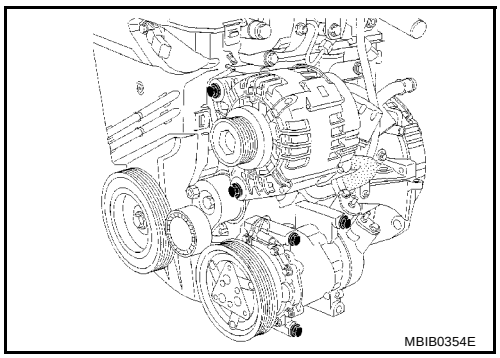
MBIB0356E

21. Install the alternator bracket. Tighten the bolts to a torque of 44 N·m (4.5 kg-m, 32 ft-lb).



MBIB0355E

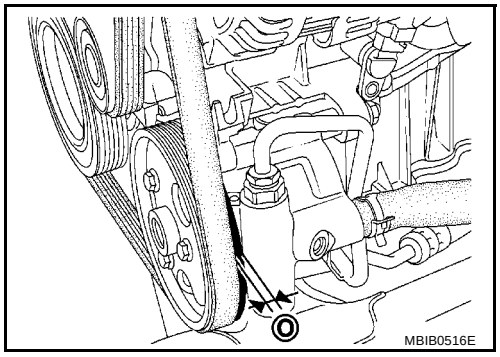
22. Install the alternator. Tighten the bolts to a torque of 21 N·m (2.1 kg-m, 15 ft-lb).
23. Install the A/C compressor. Tighten the bolts to a torque of 21 N·m (2.1 kg-m, 15 ft-lb).
24. Install the power steering pump or the washer which replaces the pulley (if the engine has one). Tighten the bolts to a torque of 21 N·m (2.1 kg-m, 15 ft-lb).



MBIB0354E

25. Install the drive belt.

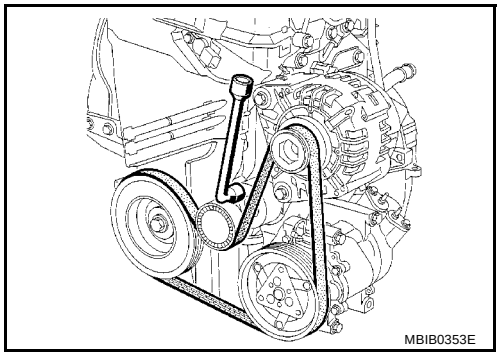
    NOTE:
    The accessories belt has five teeth as opposed to the pulleys which have six. It is therefore essential to ensure that tooth "O" remains free when installing the belt.



MBIB0516E

Models With A/C Compressor

NOTE:
The engine must be turned through two revolutions in order to position the belt correctly.

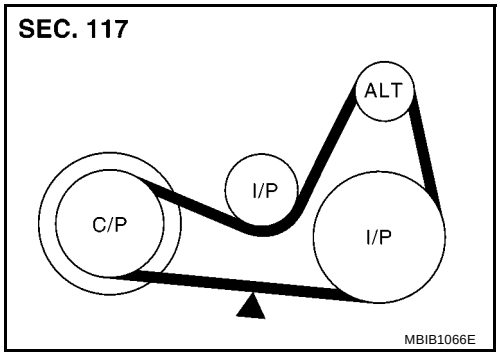


MBIB0353E

Models Without A/C Compressor

1. The belt is tensioned using tool belt tension gauge (commercial service tool) (with the two mounting bolts of the tensioner undone).
2. The tension value is 233±5 Hz.

    NOTE:
    The engine must be turned through two revolutions in order to position the belt correctly.



MBIB1066E

BASIC INSPECTION

PFP:00013

Cylinder Head

EBS01C77

CYLINDER HEAD TIGHTENING PROCEDURE

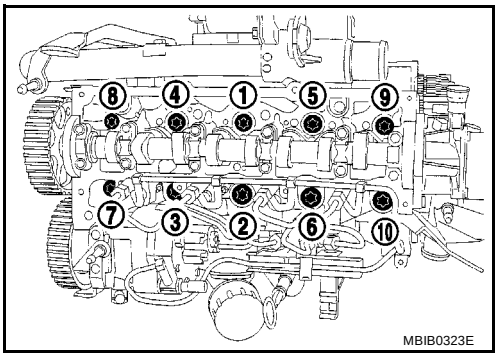
NOTE:
Use a syringe to remove any oil which may have entered the cylinder head mounting bolt holes to achieve correct tightening of the bolts.

1. All bolts must always be changed after removal. Do not oil the new bolts.
2. Tighten all the bolts in the numerical order as shown.

   : 25 N·m (2.6 kg-m, 18 ft-lb)

3. Check that all the bolts are correctly tightened to 25 N·m (2.6 kg-m, 18 ft-lb) then angle tightening of 245 to 265 degrees.

Do not retighten the cylinder head bolts after performing this procedure.

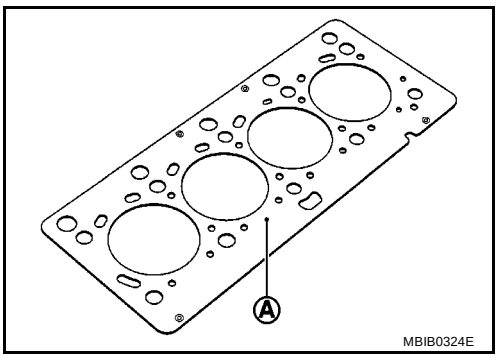


MBIB0323E

THICKNESS OF THE CYLINDER HEAD GASKET

- The thickness of the cylinder head gasket is measured at (A):

  Thickness : 0.75 - 0.81 mm (0.0295 - 0.0319 in)



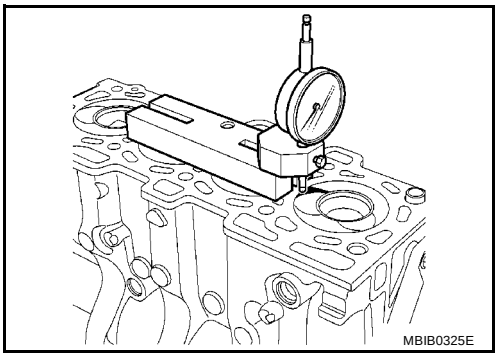
MBIB0324E

INSPECTION OF THE PISTON PROTRUSION

1. Clean the piston heads in order to eliminate any traces of deposits.
2. Turn the crankshaft one turn in its operating direction to bring piston No. 1 close to TDC.
3. Install Tool KV113B0040 (Mot. 251-01) equipped with a gauge on its base plate KV113B0050 (Mot. 252-01), and find TDC of the piston.

NOTE:
All measurements must be carried out along the longitudinal axis of the engine, in order to eliminate any errors due to tilting of the piston.

WARNING:
The gauge follower must not be in the valve clearance.
Measure the piston protrusion.
The protrusion must be: 0.099 - 0.285 mm (0.0039 - 0.0112 in).



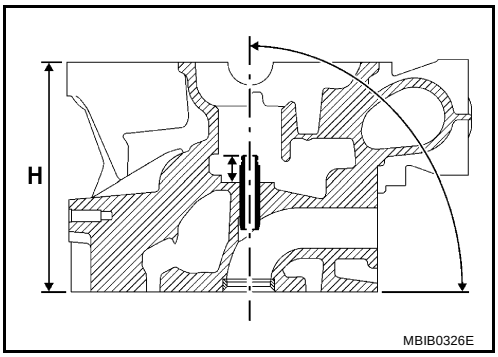
MBIB0325E

Height of the cylinder head:

H = 127 mm (5.00 in)

Gasket face bow:

Cylinder head : 0.05 mm (0.0020 in)
Cylinder block : 0.03 mm (0.0012 in)



MBIB0326E

NO REGRINDING IS AUTHORIZED
Test the cylinder head to detect possible cracks using the cylinder head test container (comprising a tray and a kit suited to the cylinder head, plug, sealing plate and blanking plate).

VALVE

Valve Dimensions

Stem diameter:

Intake	: 5.969 - 5.985 mm (0.2350 - 0.2356 in)
Exhaust	: 5.955 - 5.971 mm (0.2344 - 0.2351 in)

Face angle:

Intake and exhaust	: 90°

Head diameter:

Intake	: 33.38 - 33.62 mm (1.3142 - 1.3236 in)
Exhaust	: 28.88 - 29.12 mm (1.1370 - 1.1465 in)

Valve length:

Intake	: 100.73 - 101.17 mm (3.9657 - 3.9831 in)
Exhaust	: 100.53 - 100.97 mm (3.9579 - 3.9752 in)

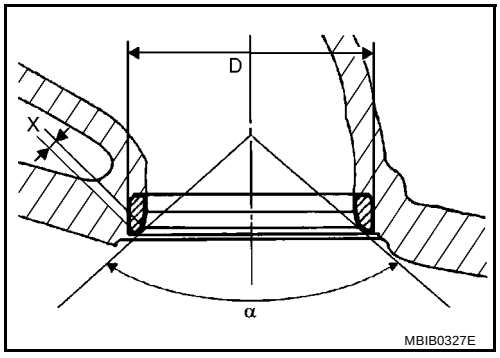
Max. valve lift:

Intake	: 8.015 mm (0.3156 in)
Exhaust	: 8.595 mm (0.3384 in)

Protrusion of valves in relation to the cylinder head gasket face:

Intake and exhaust	: –0.7 to 0.7 mm (–0.028 to 0.028 in)

VALVE SEAT



Seat angle (α):

Intake and exhaust	: 89°30′

Contacting width (X):

Intake and exhaust	: 1.8 mm (0.071 in)

Seat outer diameter (D):

Intake	: 34.444 - 34.460 mm (1.3561 - 1.3567 in)
Exhaust	: 30.034 - 30.050 mm (1.1824 - 1.1831 in)

Diameter of the housing in the cylinder head:

Intake	: 34.444 - 34.474 mm (1.3561 - 1.3572 in)
Exhaust	: 29.955 - 29.985 mm (1.1793 - 1.1805 in)

VALVE GUIDE

Length:

Intake and exhaust	: 40.35 - 40.65 mm (1.5886 - 1.6004 in)

Guide outer diameter:

Standard	: 11.044 - 11.062 mm (0.4348 - 0.4355 in)

Guide inner diameter:

Intake and exhaust

Not machined	: 5.50 - 5.62 mm (0.2165 - 0.2213 in)
Machined*	: 6.000 - 6.018 mm (0.2362 - 0.2369 in)

*** This dimension is measured with the guide fitted in the cylinder head.**

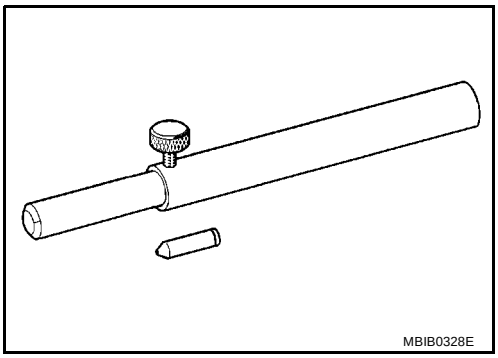
Diameter of the housing in the cylinder head:

Standard : 10.9925 - 11.0075 mm (0.4328 - 0.4334 in)

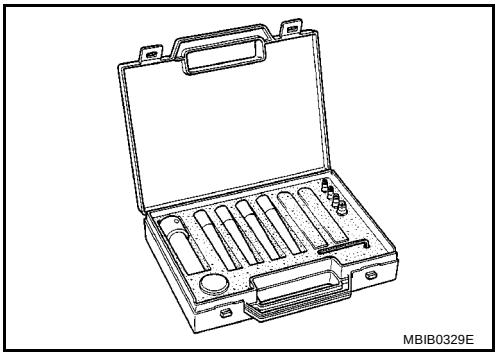
The intake and exhaust guides have valve stem seals which must be changed each time the valves are removed.

It is imperative to fit the valve stem seals using Tool KV113B0180 (Mot. 1511-01) or suitable tool.

NOTE:
Do not lubricate the valve stem seals before fitting them.



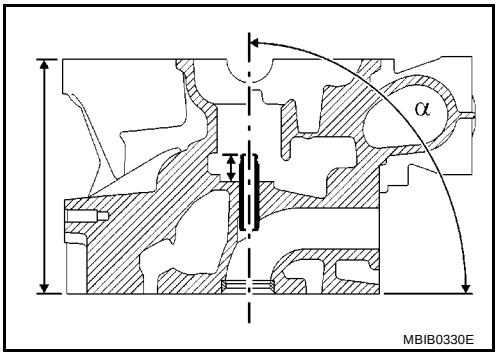
MBIB0328E



MBIB0329E

Angle of the intake and exhaust guides (in degrees)

Intake and exhaust : α = 90

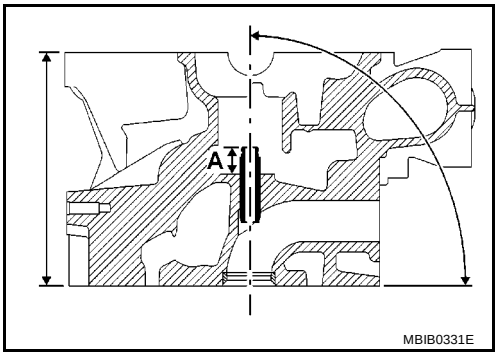


MBIB0330E

Position of the intake and exhaust valve guides

Intake : A = 14 mm (0.55 in)

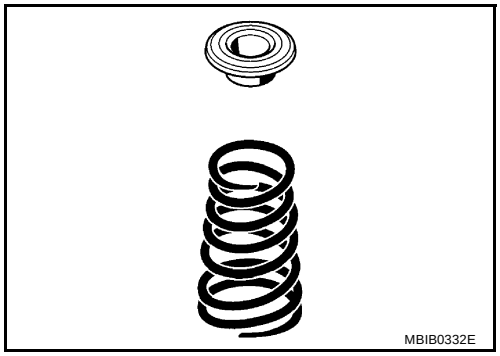
Exhaust : A = 14.2 mm (0.559 in)



MBIB0331E

VALVE SPRING

The valve springs are tapered (ensure the correct direction of fitting).



Free height:	**: 43.31 mm (1.7051 in)**
Length under a load of	
230 N (23.5 kg, 51.7 lb)	**: 33.80 mm (1.3307 in)**
500 N (51.0 kg, 112.4 lb)	**: 24.80 mm (0.9764 in)**
Joined spires:	**: 23.40 mm (0.9213 in)**
Wire diameter:	**: 3.45 mm (0.1358 in)**
Inner diameter:	
Bottom	**: 18.78 - 18.82 mm (0.7394 - 0.7409 in)**
Top	**: 13.90 - 14.30 mm (0.5472 - 0.5630 in)**
Outer diameter:	
Bottom	**: 25.50 - 25.90 mm (1.0039 - 1.0197 in)**
Top	**: 20.8 - 21.2 mm (0.819 - 0.835 in)**

WARNING:
This engine does not have any valve spring lower washers.

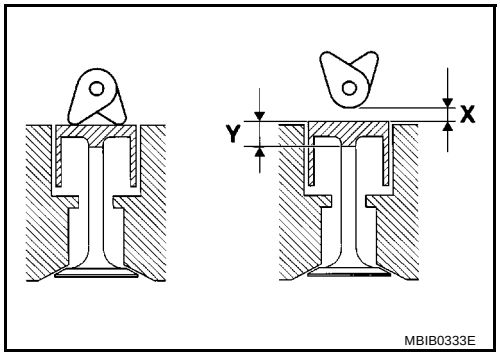
PISTON

Piston outer diameter	**: 34.965 - 34.985 mm (1.3766 - 1.3774 in)**
Diameter of the housing in the cylinder head	**: 35.00 - 35.04 mm (1.3780 - 1.3795 in)**

INSPECTION OF VALVE CLEARANCE

1. Place the valves of the cylinder concerned at the “end of exhaust - beginning of intake” position and inspect the clearance (X).

   NOTE:
   Dimension (Y) corresponds to the tappet thickness sizes (there are 25 sizes at the service parts).



1	4
3	2
4	1
2	3

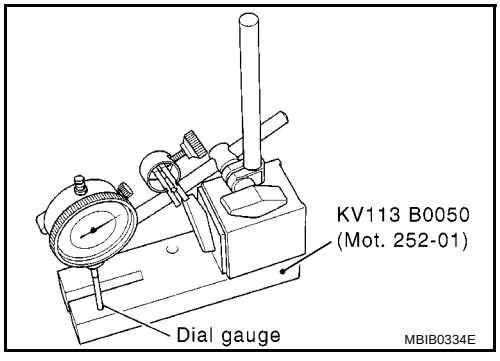
2. Compare the values recorded with the values specified, then replace the tappets which are not within tolerance.

   Clearance, when the engine is cold:

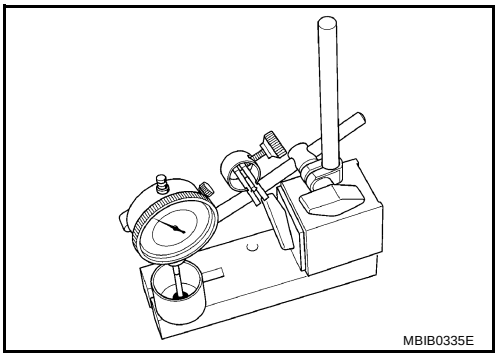
   Intake : 0.125 - 0.25 mm (0.0049 - 0.0098 in)

   Exhaust : 0.325 - 0.45 mm (0.0128 - 0.0177 in)

3. The camshaft must be removed to replace the tappets.
   Determining dimension “Y”.
4. Set up the following assembly using Tool KV113B0050 (Mot. 252-01) and dial gauge, then calibrate the gauge.



5. Raise the gauge extension (without modifying the position of the magnetic support/gauge assembly), then slide in the tappet to be measured.
Note dimension (Y) and repeat the operation for the tappets where the valve clearance is not within tolerance.
Refer to the Replacement Parts Catalogue for the vehicle concerned to select the various thicknesses of the tappet(s). The service parts supplies 25 sizes of single-piece tappets.



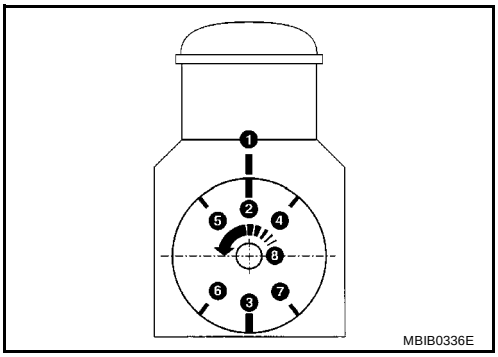
MBIB0335E

CAMSHAFT

End play	**: 0.08 - 0.178 mm (0.0031 - 0.0070 in)**
Number of bearings	**: 6**
Diameter of the camshaft bearings	
On the camshaft:	
Bearings 1, 2, 3, 4, 5	**: 24.979 - 24.999 mm (0.9834 - 0.9842 in)**
Bearing 6	**: 27.979 - 27.999 mm (1.1015 - 1.1023 in)**
On the cylinder head:	
Bearings 1, 2, 3, 4, 5	**: 25.04 - 25.06 mm (0.9858 - 0.9866 in)**
Bearing 6	**: 28.04 - 28.06 mm (1.1039 - 1.1047 in)**
Timing diagram	
Intake opening retard *	**: –9**
Intake closing retard	**: 20**
Exhaust opening advance	**: 27**
Exhaust closing advance **	**: –7**

*** As the intake opening retard is negative, the valve is opened after TDC.**
**** As the exhaust closing advance is negative, the valve is closed before TDC.**

1	Cylinder block TDC fixed mark
2	Flywheel TDC moving mark
3	Flywheel BDC moving mark
4	Intake Opening Retard
5	Exhaust Closing Advance
6	Intake Closing Retard
7	Exhaust Opening Advance
8	Direction of engine rotation (flywheel end).



MBIB0336E

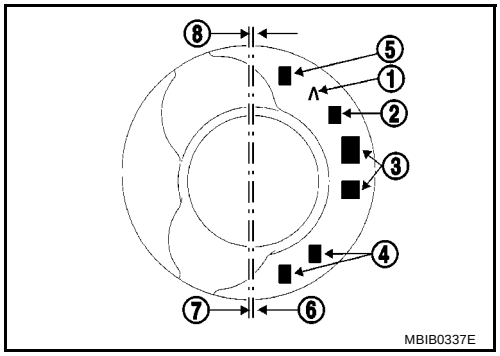
Piston

EBS01C78

- Install the piston pin in the connecting rod and in the piston.
- The piston pin is retained by circlips.

PISTON MARKING

1	Direction of fitting of the piston mark towards the flywheel
2	Height between the piston pin and the top of the piston (see table below).
3	Used by the supplier only
4	Used by the supplier only
5	Used by the supplier only
6	Piston axis of symmetry
7	Piston pin hole axis
8	Offset between the hole axis (7) and the piston's axis of symmetry (6) is 0.3 mm (0.012 in)



MBIB0337E

TABLE OF PISTON PIN HEIGHT

Unit: mm (in)

* Mark on piston	Piston pin height
K	41.667 (1.6404)
L	41.709 (1.6421)
M	41.751 (1.6437)
N	41.793 (1.6454)
P	41.835 (1.6470)

The tolerance on the piston pin heights is ±0.02 mm (±0.0008).
*** The different piston pin heights are exclusively reserved for the engine assembly plant.**
The service parts will only supply piston classes (height) L, M, N.

NOTE:

- **If the engine is installed with a K class piston, an L class piston must be installed as a replacement.**
- **If the engine is installed with a P class piston, an N class piston must be installed as a replacement.**

MEASURING THE PISTON DIAMETER

The piston diameter must be measured at height A = 56 mm (2.20 in).

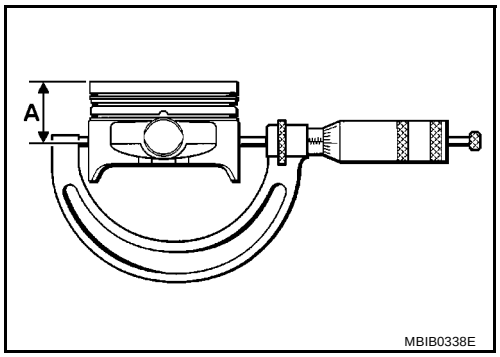
Piston diameter : 75.933 - 75.947 mm (2.9895 - 2.9900 in)

Piston pin:

Length : 59.7 - 60.3 mm (2.350 - 2.374 in)

Outer diameter : 24.8 - 25.2 mm (0.976 - 0.992 in)

Inner diameter : 13.55 - 13.95 mm (0.5335 - 0.5492 in)



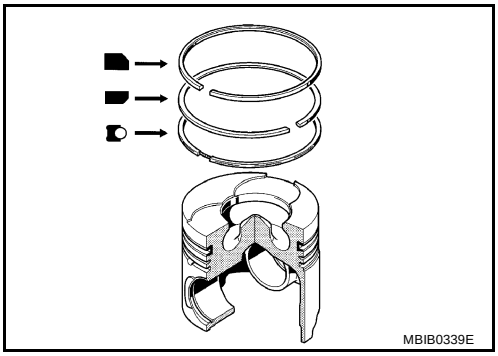
MBIB0338E

PISTON RING

Thickness:

Top ring	**: 1.97 - 1.99 mm (0.0776 - 0.0783 in)**
2nd ring	**: 1.97 - 1.99 mm (0.0776 - 0.0783 in)**
Oil ring	**: 2.47 - 2.49 mm (0.0972 - 0.0980 in)**

The piston rings are supplied ready adjusted.



MBIB0339E

PISTON RING END GAP

Top ring	**: 0.20 - 0.35 mm (0.0079 - 0.0138 in)**
2nd ring	**: 0.70 - 0.90 mm (0.0276 - 0.0354 in)**
Oil ring	**: 0.25 - 0.50 mm (0.0098 - 0.0197 in)**

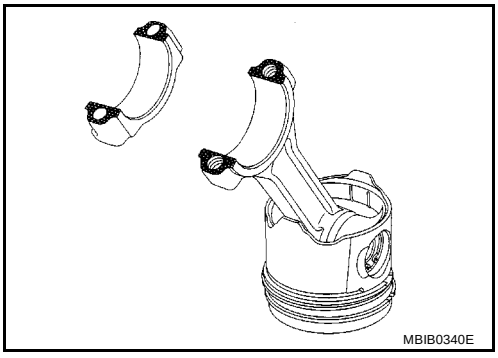
Connecting Rod

EBS01C79

The connecting rod is of the detachable cap type.

WARNING:

- **The bolts must be coated with engine oil under the heads and on the threads when the connecting rods are installed in the engine.**
- **The big end caps are positioned on the connecting rod by irregularities on the parting line.**
- **The occurrence of impacts or a foreign body between the body - cap mating surfaces will lead to rapid rupture of the connecting rod.**



MBIB0340E

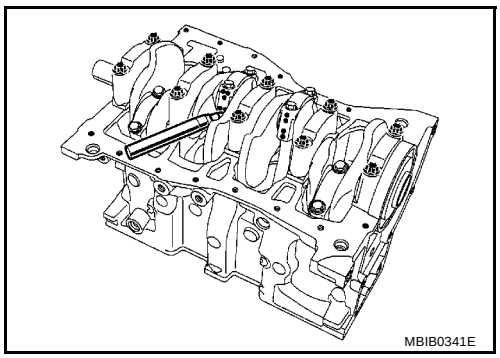
Lateral big end play	**: 0.205 - 0.467 mm (0.0081 - 0.0184 in)**
Diametrical big end play	**: 0.035 - 0.045 mm (0.0014 - 0.0018 in)**
Center distance between the big end and small end	**: 133.75 mm (5.2657 in)**
Diameter of the big end	**: 47.610 - 47.628 mm (1.8744 - 1.8751 in)**
Diameter of the small end	
(without ring)	**: 27.24 - 27.26 mm (1.0724 - 1.0732 in)**
(with ring)	**: 25.013 - 25.025 mm (0.9848 - 0.9852 in)**

NOTE:
The connecting rod small end rings cannot be replaced.

The maximum weight difference for the connecting rod, piston and piston pin assemblies for the same engine must be 0.245 N (25 g, 0.88 oz).

WARNING:

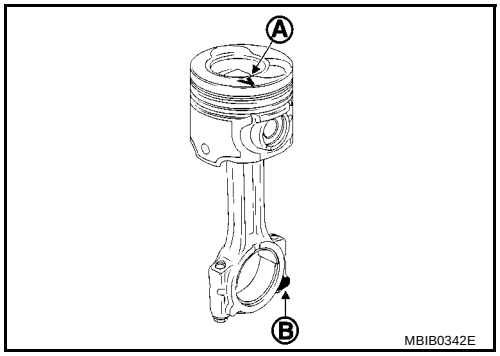
- **To avoid initiating a crack in the connecting rod, do not use a sharp point to mark the big end caps in relation to their connecting rod.**
- **Use a permanent marker pen.**



MBIB0341E

DIRECTION OF INSTALLATION OF THE CONNECTING ROD IN RELATION TO THE PISTON

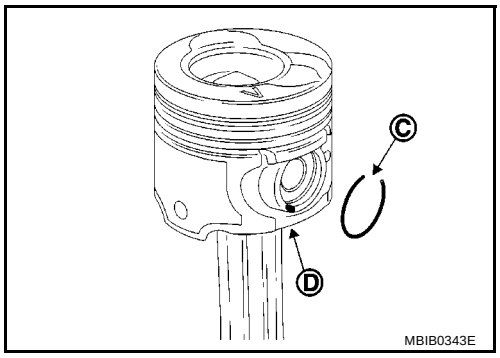
- Point the mark (A) engraved on the top of the piston upwards and the machined flat (B) of the big end downwards as shown in the figure.



MBIB0342E

DIRECTION FOR INSTALLATION THE SNAP RINGS ON THE PISTON

- Position the opening (C) of the snap rings opposite of the removal and installation channel (D).



MBIB0343E

Crankshaft

EBS01C7A

Number of main journals	**: 5**
Crankshaft side clearance:	
Without wear on side shims	**: 0.045 - 0.252 mm (0.0018 - 0.0099 in)**
With wear on side shims	**: 0.045 - 0.852 mm (0.0018 - 0.0335 in)**
Crankshaft diametrical clearance:	
Journals	**: 0.027 - 0.054 mm (0.0011 - 0.0021 in)**
Crankshaft pins	**: 0.035 - 0.045 mm (0.0014 - 0.0018 in)**
Journal diameter:	**: 47.99 - 48.01 mm (1.8894 - 1.8902 in)**
Crankshaft pin diameter:	**: 43.96 - 43.98 mm (1.7307 - 1.7315 in)**

- The lateral shims are located on bearing No. 3.
- No rectifications are allowed.

WORKING OUT THE CLASS OF MAIN BEARING (ORIGINAL FITMENT)

Marking (A) On The Crankshaft

Detail of the marking (A):
Number of journals

1*	2	3	4	5	Classes of journal diameters A = D1 B = D2 C = D3
B	B	C	C	B	

* Flywheel end.

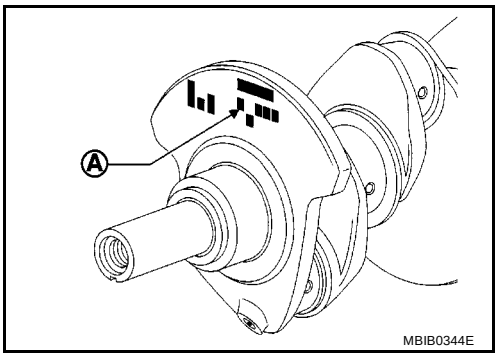


Table Of Journal Diameter Classes

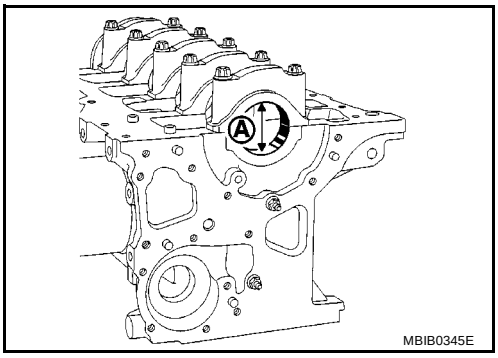
Unit: mm (in)

Journal class mark on the crankshaft	Journal diameter
A = D1	47.990 - 47.996 (1.8894 - 1.8896)
B = D2	47.997 - 48.003 (1.8896 - 1.8899)
C = D3	48.004 - 48.010 (1.8899 - 1.8902)

Cylinder Block

EBS01C7B

The diameters of the bearings (A) of the cylinder block are marked by a hole on the block (B) located above the oil filter.



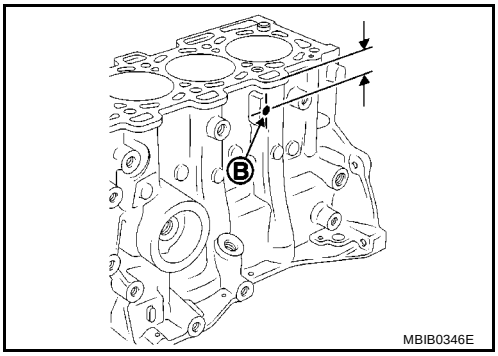


TABLE OF CYLINDER BLOCK MAIN BEARING HOUSING INNER DIAMETERS

Hole position (B)	Class reference	Cylinder block main bearing housing inner diameter
X = 33 mm (1.30 in)	1 or blue	51.936 - 51.942 mm (2.0447 - 2.0450 in)
Y = 43 mm (1.69 in)	2 or red	51.942 - 51.949 mm (2.0450 - 2.0452 in)

NOTE:
The marking zone includes:

- X - Y gives the diameter class of bearings A or B.

MATCHING THE MAIN BEARING

	Journal diameter class		
	D1	D2	D3
1*	C1 1.949 - 1.955 mm (0.0767 - 0.0770 in) yellow	C2 1.946 - 1.952 mm (0.0766 - 0.0769 in) blue	C3 1.943 - 1.949 mm (0.0765 - 0.0767 in) black
2*	C4 1.953 - 1.959 mm (0.0769 - 0.0771 in) red	C1 1.949 - 1.955 mm (0.0767 - 0.0770 in) yellow	C2 1.946 - 1.952 mm (0.0766 - 0.0769 in) blue
	Bearing thickness and class		

* Cylinder block main bearing diameter class.

NOTE:
The service parts will only supply class C2 (blue).

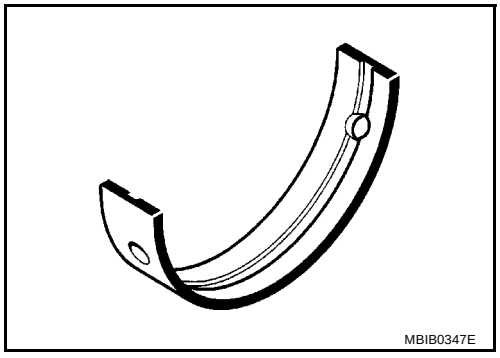
Main Bearing and Cap

EBS01C7C

MAIN BEARING

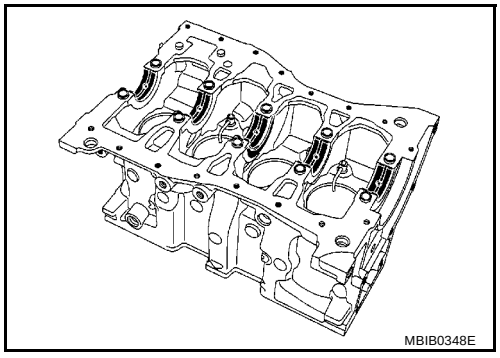
- **The engine is installed with main bearing without a locator notch.**

1. The main bearings are installed on the cylinder block and on the bearings using Tool KV113B0160 (Mot. 1493-01).



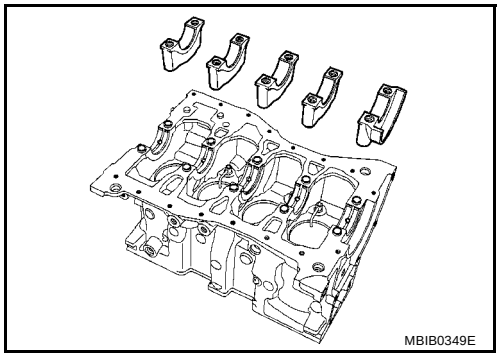
MBIB0347E

2. For direction of installation on the cylinder block, install grooved main bearing on all the bearings.



MBIB0348E

3. For direction of installation on the bearing caps, install non-grooved main bearing.



MBIB0349E

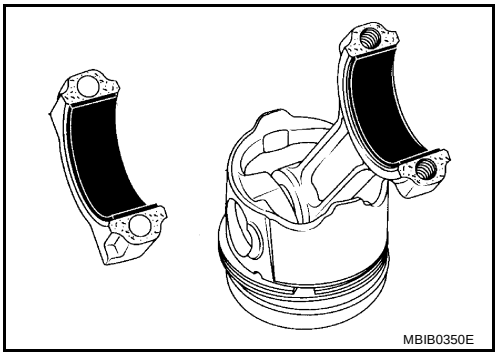
CONNECTING ROD BEARING

- **The engine is installed with connecting rod bearing without a locator notch.**

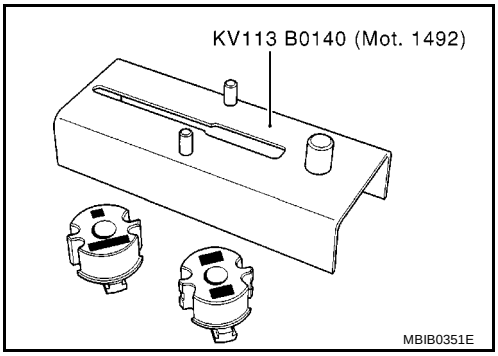
  NOTE:
  The upper and lower connecting rod bearing are not the same width.

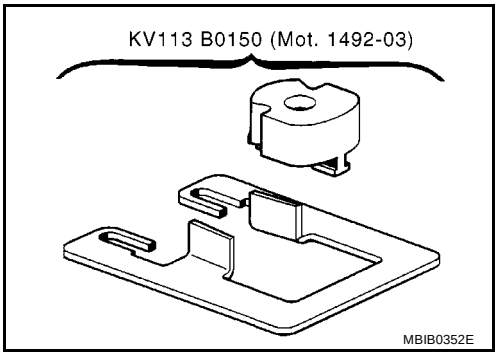
  Connecting rod bearing width:

  Upper bearing : 20.625 mm (0.8120 in)
  Lower bearing : 17.625 mm (0.6939 in)



- The connecting rod bearing are installed using Tool KV113B0140 (Mot. 1492) and Tool KV113B0150 (Mot. 1492-03).



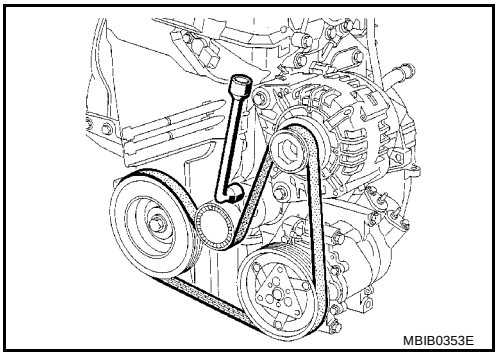


Preparing the engine to be on the stand

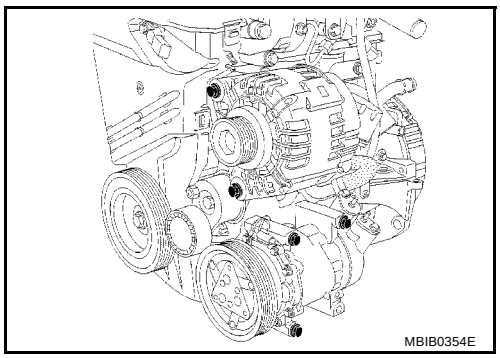
EBS01C7D

Before the engine is mounted on the Tool KV113B0070 (Mot. 792-03), the engine's electrical harness must be removed and the engine oil drained.

1. Remove the drive belt.

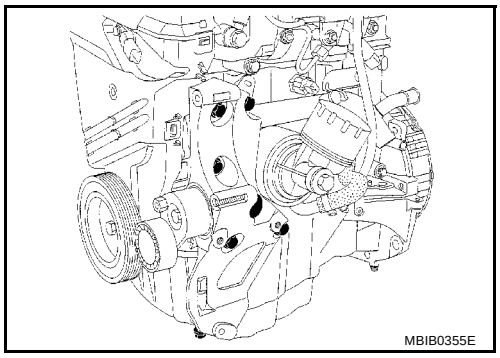


2. Remove the alternator.



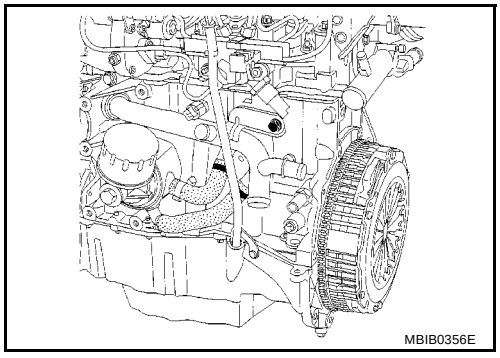
MBIB0354E

3. Remove the air conditioning compressor or idler pulley.
4. Remove the multifunction support.



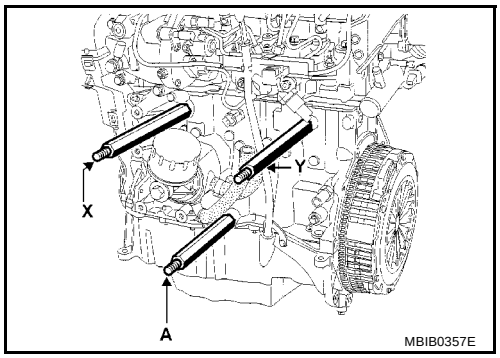
MBIB0355E

5. Remove the coolant inlet pipe on the water pump.



MBIB0356E

6. Place the rods (**A**), (**X**), (**Y**) or Tool KV113B0100 (Mot. 1378) on the cylinder block so that they fit into the holes (**20, 32, 33**) on the plate of Tool KV113B0070 (Mot. 792-03).



MBIB0357E

Parts To Be Replaced After Removal

EBS01C7E

- All gaskets
- Flywheel bolts
- Crankshaft bearing bolts
- Camshaft pulley bolt
- Crankshaft pulley bolts
- Big end cap bolts
- Injector holder copper washers
- Fuel injection tubes

- Pipe plugs
- Belts
- Timing belt tension wheel
- Oil jets
- Turbocharger plastic pipes

Installation of Thread Inserts

EBS01C7F

Threaded holes on all engine component parts can be repaired by using thread inserts.

Tool number Tool name	Description
KV10117200 Heated oxygen sensor wrench  S-NT636	Loosening or tightening heated oxygen sensors **a: 22 mm (0.87 in)**

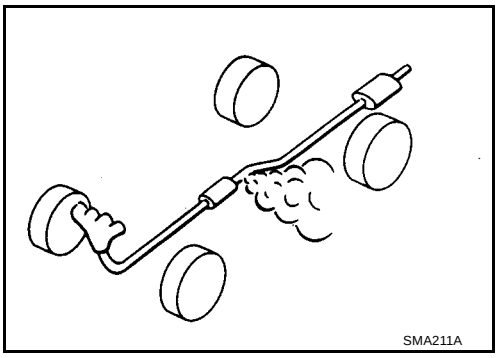
EXHAUST SYSTEM

PFP:20100

Checking Exhaust System

EBS00OJQ

Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage or deterioration.



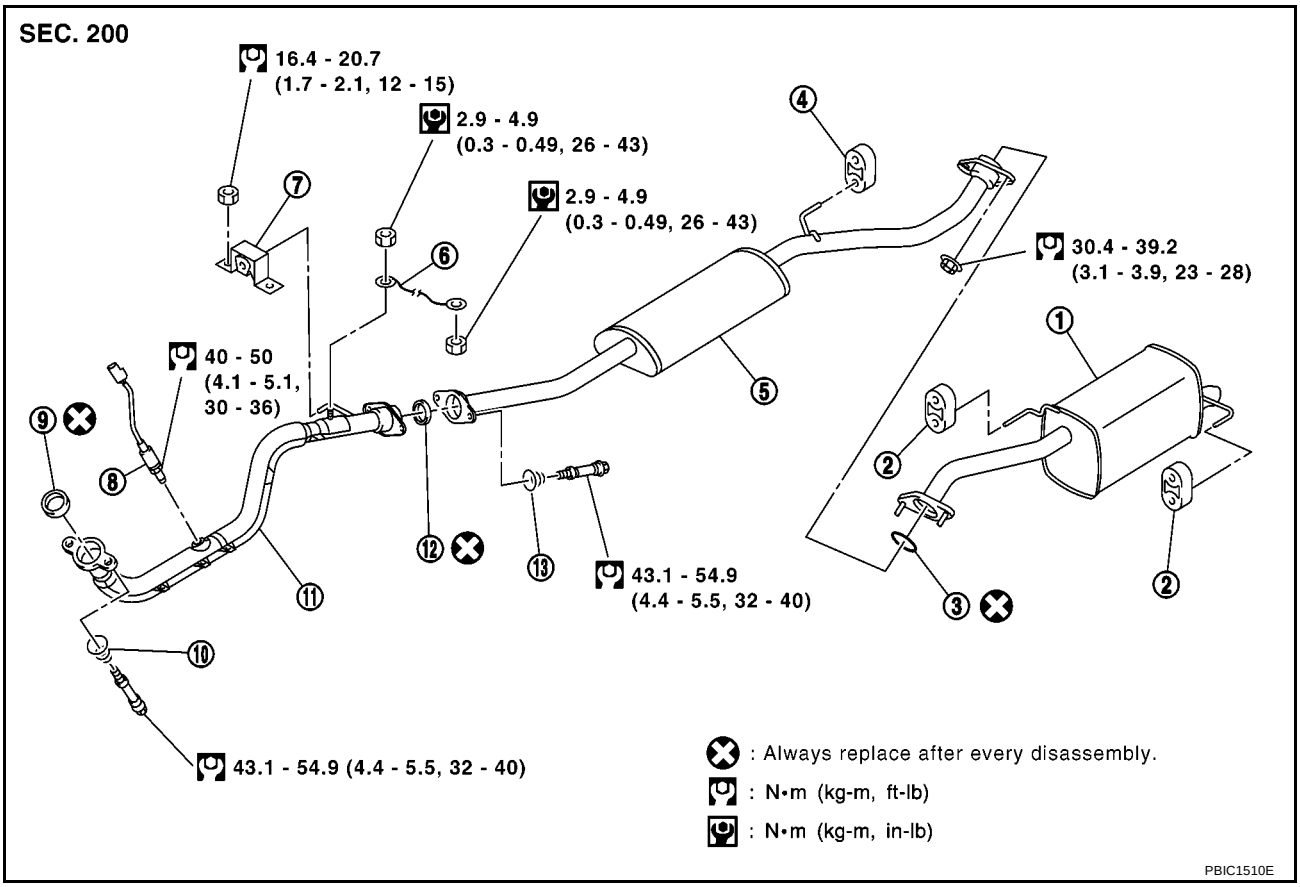
Removal and Installation

EBS00OJD

CAUTION:

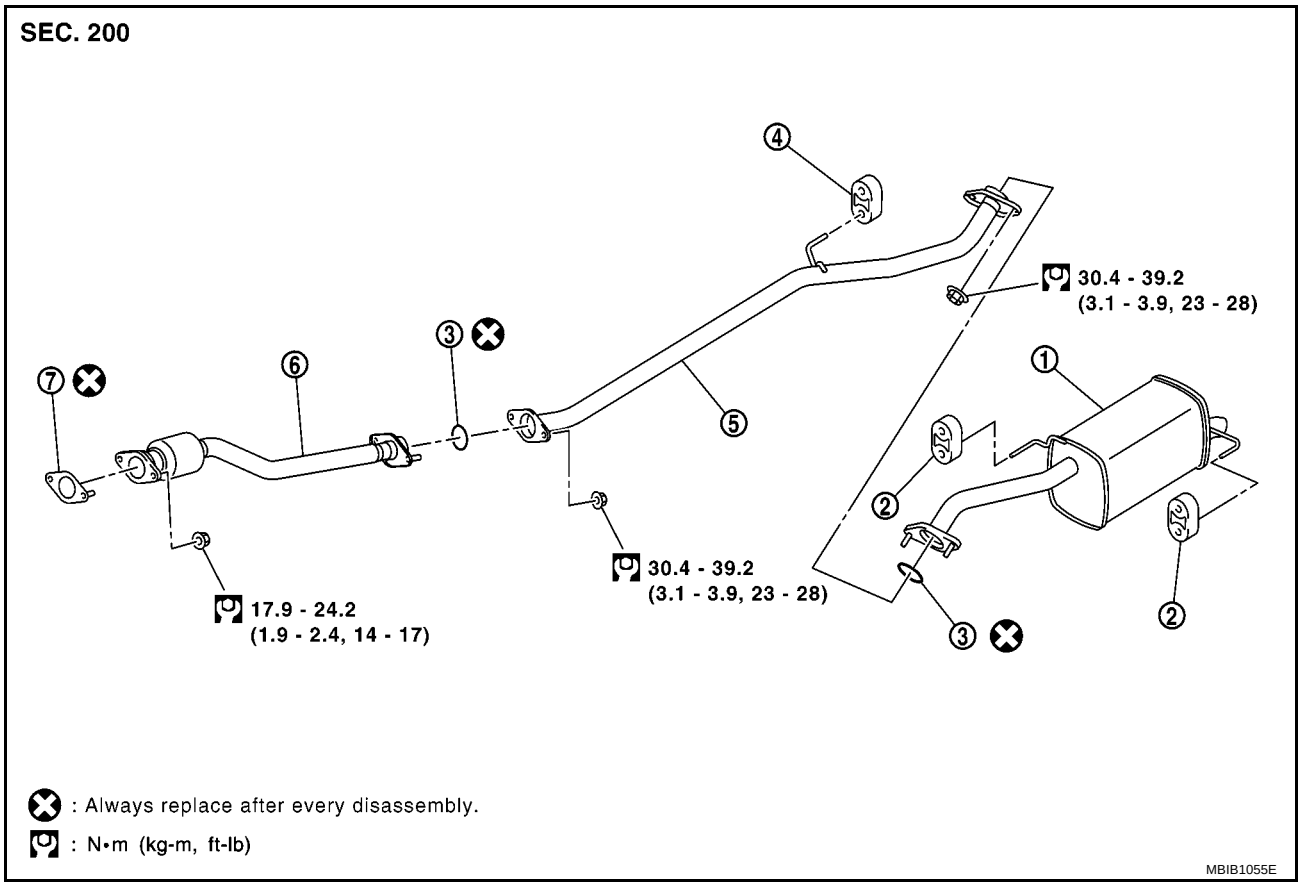
- **Be sure to use genuine exhaust system parts or equivalents which are specially designed for heat resistance, corrosion resistance and shape.**
- **Perform the operation with the exhaust system fully cooled down because the system is still hot just after the engine stops.**
- **Be careful not to cut your hand on the insulator edge.**

CR ENGINE



1. Main muffler
2. Mounting rubber
3. Ring gasket
4. Mounting rubber
5. Center muffler
6. Ground cable
7. Mounting bracket
8. Heated oxygen sensor 2
9. Seal bearing
10. Spring
11. Exhaust front tube
12. Seal bearing
13. Spring

K9K ENGINE



1. Main muffler
2. Mounting rubber
3. Ring gasket
4. Mounting rubber
5. Exhaust center tube
6. Exhaust front tube
7. Gasket

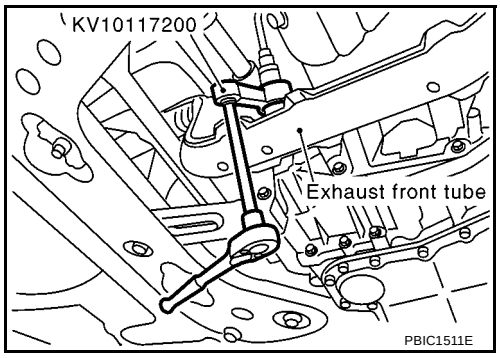
REMOVAL

- Disconnect each joint and mounting.

Heated Oxygen Sensor 2 (CR Engine)

- When removing heated oxygen sensor 2 on vehicle, perform following procedure.

1. Disconnect harness connector.
2. Use a heated oxygen sensor wrench (special service tool) for removal of heated oxygen sensor 2.

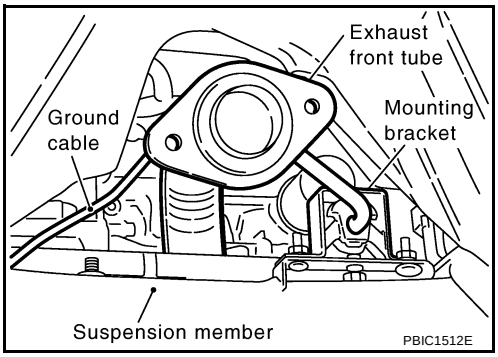


CAUTION:

- **Do not apply impact while handling.**

Exhaust Front Tube (CR Engine)

1. Disconnect center muffler connecting points.
2. Remove the ground cable on vehicle.
3. Remove mount bracket mounting nuts on suspension member.
4. Disconnect three way catalyst connecting points to remove exhaust front tube.



INSTALLATION (CR ENGINE)

Install in the reverse order of removal paying attention to the following.

- Remove all deposits, such as old gasket, from the sealing surfaces of each connection. Connect firmly without any leaks.
- When installing exhaust pipe assembly, temporarily tighten nuts on the exhaust manifold side mounting bolts and vehicle side mounting nuts. After making sure there is no unusual tension on each part, tighten nuts and bolts to the specified torque.
- Be careful not to twist or apply excess tension in any direction when installing mounting rubbers.
- Because thickness is different between center muffler rear side mounting rubber and main muffler side mounting rubbers, install thick mount rubber at main muffler side.
- Install seal bearing unit in the following procedures.
- When installing heated oxygen sensor 2, use heated oxygen sensor wrench (special service tool: KV10117200).

CAUTION:

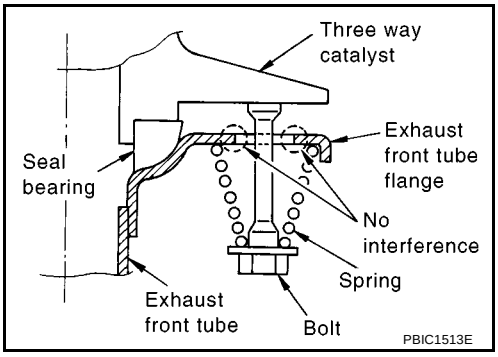
- **Do not apply impact while handing.**
- **Do not use heated oxygen sensor 2 after being dropped on a solid concrete floor, from a height of 0.5 m (1.6 ft) or higher. Replace it with a new one.**
- **Do not tighten heated oxygen sensor 2 to a torque larger than specified. Excess tightening may result in damage of heated oxygen sensor 2, causing MI to turn ON.**
- **when using heated oxygen sensor wrench (special service tool: KV10117200), tighten to the middle of specified torque because length of tool may induce slight indication increase. Do not tighten to the maximum specified torque.**

Three Way Catalyst to Exhaust Front Tube

1. Securely insert seal bearing into three way catalyst side in the direction shown in figure.

   CAUTION:

   Be careful not to damage seal bearing surface when installing.
2. With spring large diameter side facing to exhaust front tube flange, tighten mounting bolt.
   - Be careful that mounting bolt does not interfere with flanged area, and tighten it.



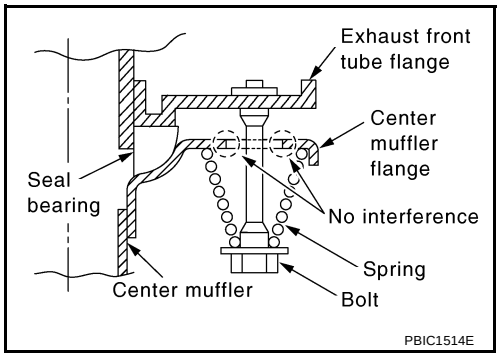
Exhaust Front Tube to Center Muffler

1. Securely insert seal bearing into exhaust front tube side in the direction shown in figure.

   CAUTION:

   Be careful not to damage seal bearing surface when installing.

2. With spring large diameter side facing to center muffler flange, tighten mounting bolt.
   - Be careful that mounting bolt does not interfere with flanged area, and tighten it.



INSTALLATION (K9K ENGINE)

- Install in the reverse order of removal.

CAUTION:

- **Always replace exhaust gaskets with new ones when reassembling.**
- **If the insulator is badly deformed, repair or replace it. If deposits such as mud pile up on the insulator, remove them.**
- **When installing the insulator avoid large gaps or interference between the insulator and each exhaust pipe.**
- **Remove deposits from the sealing surface of each connection. Connect them securely to avoid gas leakage.**
- **Temporarily tighten mounting nuts on the exhaust manifold side and mounting bolts on the vehicle side. Check each part for unusual interference, and then tighten them to the specified torque.**
- **When installing each mounting rubber, avoid twisting or unusual extension in up/down and right/left directions.**

Inspection After Installation

EBS01C86

- With the engine running, check exhaust tube joints for gas leakage and unusual noises.
- Check to ensure that mounting brackets and mounting insulators are installed properly and free from undue stress. Improper installation could result in excessive noise and vibration.

PRECAUTIONS

PFP:00001

Cautions

EDS0012H

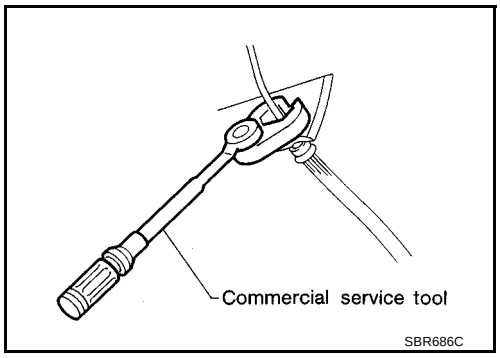
Observe the following precautions when disassembling and servicing drive shaft.

- The joint of drive shaft cannot be disassembled. Do not attempt to disassemble it.
- Perform work in a location which is as dust-free and dirt-free as possible.
- Before disassembling and servicing, clean the outside of parts.
- The disassembly and service location must be clean. Care must be taken to prevent parts from becoming dirty and to prevent the entry of foreign objects.
- Disassembled parts must be carefully reassembled in the correct order. If work is interrupted, a clean cover must be placed over parts.
- Paper shop cloths must be used. Fabric shop cloths must not be used because of the danger of lint adhering to parts.
- Disassembled parts (except for rubber parts) should be cleaned with kerosene which shall be removed by blowing with air or wiping with paper shop cloths.

Precautions for Brake System

EDS0012I

- When installing rubber parts, final tightening must be carried out under unladen condition* with tires on ground.
  *: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Use flare nut wrench when removing or installing brake tubes.
- After installing removed suspension parts, check wheel alignment and adjust if necessary.
- Always torque brake lines when installing.



PREPARATION

PFP:00002

Special Service Tools

EDS0012J

Description	Application
Hub lock nut wrench KV40104000 a: 85 mm (3.35 in) dia. b: 65 mm (2.56 in) dia.  ZZA0802D	● Removing and installing hub lock nuts ● Removing and installing drive shaft

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

EDS0012K

Use the chart below to help you find the cause of the symptom. If necessary, repair or replace these parts.

			Reference page	Improper installation, looseness	Parts interference	Wheel bearing damage	TIRES	ROAD WHEEL	STEERING
			Refer to FAX-6, "FRONT WHEEL HUB AND KNUCKLE"		Refer to FAX-6, "FRONT WHEEL HUB AND KNUCKLE"	NVH in WT section.	NVH in WT section.	NVH in PS section.
Symptom	FRONT AXLE	Noise		×	×		×	×	×
		Shake		×	×		×	×	×
		Vibration		×	×		×		×
		Shimmy		×	×		×	×	×
		Judder		×			×	×	×
		Poor quality ride or handling		×	×	×	×	×	

×: Applicable

FRONT WHEEL HUB AND KNUCKLE

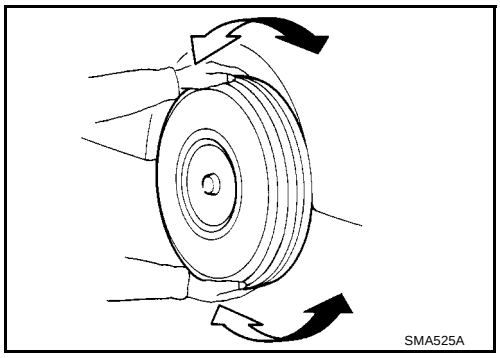
PFP:40202

On-Vehicle Inspection

EDS0012L

Inspect to check that there is no excessive play, cracking, wear, or other damage to front axle.

- Turn front wheels (left/right) and check the play.
- Check that no nails or other foreign objects are embedded.
- Retighten all axle nuts and bolts to the specified torque.



FRONT WHEEL BEARING

With the vehicle raised, inspect the following:

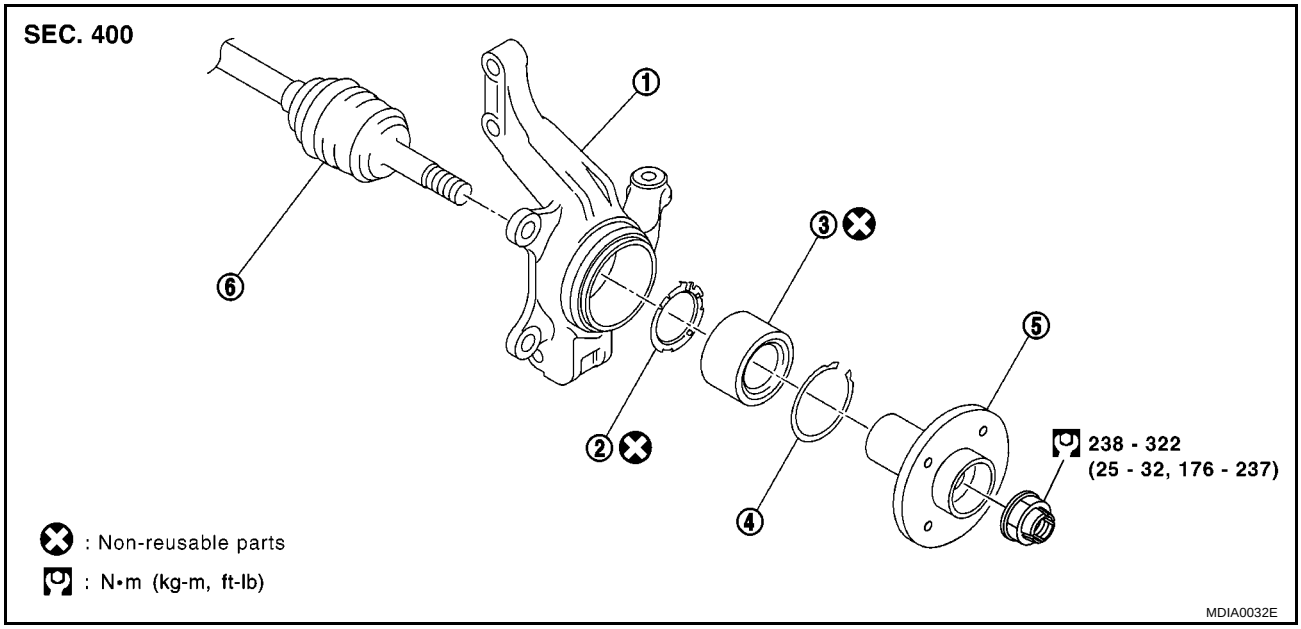
- Move wheel hub in the axial direction by hand. Check if there is no looseness of front wheel bearings.

Axial end play : 0.05 mm (0.0020 in)

- Rotate wheel hub and Make sure there is no unusual noise or other non-standard condition. If there are any non-standard conditions, replace the wheel bearing.

Removal and Installation

EDS0012M



1. Steering knuckle
2. Sensor housing
3. Wheel bearing
4. Snap rings
5. Wheel hub
6. Front drive shaft

REMOVAL

1. Lift up the vehicle and remove tire from the vehicle.
2. Remove lock plate from strut. Disconnect brake hose from strut. Refer to BR-11, "BRAKE PIPING AND HOSE" .
3. Remove brake caliper from steering knuckle. Hang it in a place where it does not interfere with work. Refer to BR-23, "Removal and Installation of Brake Caliper Assembly" .

   CAUTION:
   Avoid depressing the brake pedal with the brake caliper removed.
4. Remove disc rotor from wheel hub.
5. Pull out ABS wheel sensor from steering knuckle. Refer to BRC-44, "WHEEL SENSORS" .

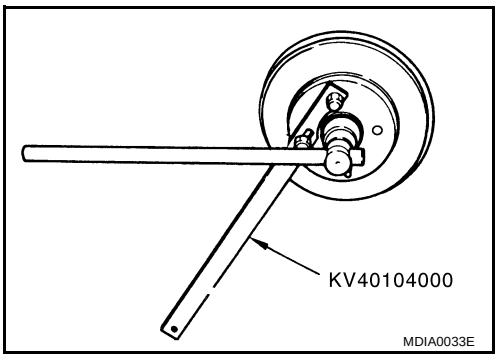
CAUTION:
Do not pull on ABS wheel sensor harness.

6. Use wheel hub lock nut wrench (SST) to remove lock nut from drive shaft.
7. Remove tie-rod from steering knuckle. If tie-rod is not easily removed, use ball joint remover (commercial service tool).

CAUTION:
To prevent damage to threads and to prevent ball joint remover (commercial service tool) from sudden coming off, temporarily tighten lock nuts.

8. Remove steering knuckle from strut.

CAUTION:
Do not place drive shaft joint at an extreme angle (22° or more). Also, hold steering knuckle tightly and do not overextend slide joint.



9. Remove drive shaft from steering knuckle.

CAUTION:
When removing drive shaft, do not place drive shaft joint at an extreme angle (22° or more). Also be careful not to overextend slide joint.

- **Do not lift drive shaft with axle attached by grasping countershaft only.**
- **Do not allow drive shaft, with transaxle inserted, to hang down without support for countershaft, wheel joints, and other parts.**

10. Remove transverse link ball joint mounting bolt and nut. Then, remove transverse link from steering knuckle.

INSTALLATION

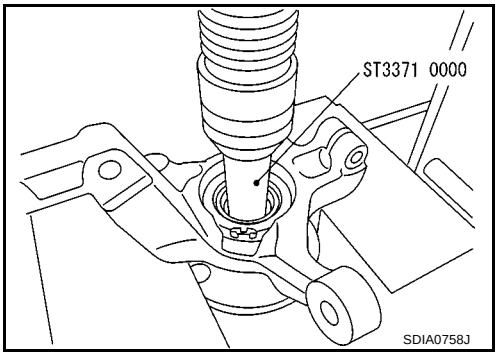
For tightening torque and other details, FAX-6, "FRONT WHEEL BEARING" , BRC-44, "WHEEL SENSORS" , FSU-5, "FRONT SUSPENSION ASSEMBLY" and tighten in the reverse order of removal.

Disassembly and Assembly

EDS0012N

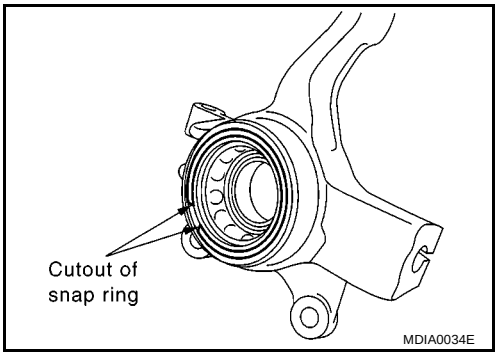
DISASSEMBLY

1. Press the wheel bearing out with a drift (SST) to remove.

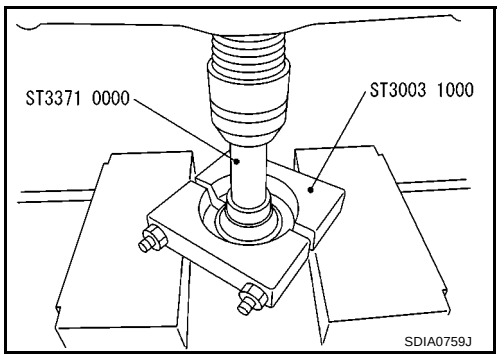


2. Insert a screwdriver into cutout of snap ring and remove it from steering knuckle.

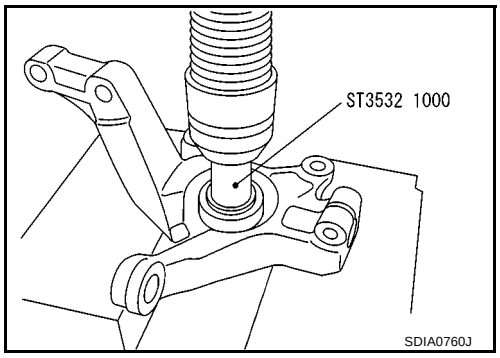
CAUTION:
Be careful not to scratch the steering knuckle.



3. Use a puller (commercial service tool), drift (SST), and bearing replacer (SST) to remove inner race of outer wheel bearing from wheel hub.



4. Press the wheel bearing and sensor housing out of the steering knuckle with a drift (SST).



INSPECTION AFTER DISASSEMBLY

Wheel Hub

- Check wheel hub for cracks (with magnetic exploration or dye testing). Replace if necessary.

Steering Knuckle

- Check steering knuckle for deformation, cracks, and other damage. Replace if any non-standard conditions are found.

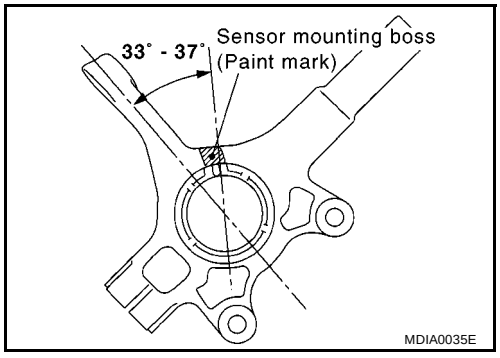
Snap Rings

- Check snap ring for wear or cracks. Replace if necessary.

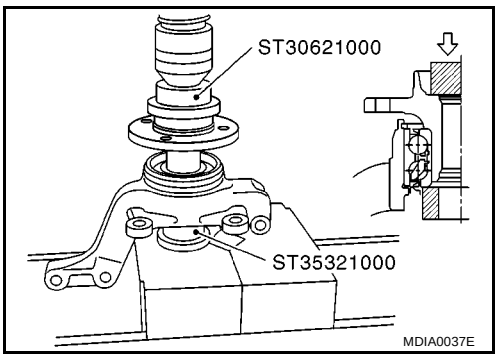
ASSEMBLY

1. Temporarily put sensor housing on steering knuckle.

   CAUTION:
   Protrusion of sensor housing ABS sensor mounting should fit in cutout of steering knuckle (as shown in figure).



2. Press-fit a wheel bearing into the steering knuckle with a drift (SST) from steering knuckle outer side.



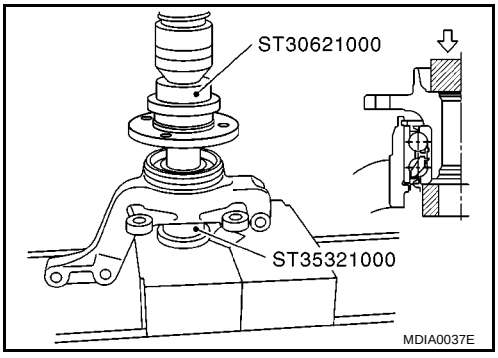
CAUTION:

- **Be sure that wheel bearing is completely press-fit until sensor housing contacts the body tightly.**
- **Be sure that protrusion of ABS sensor mounting does not roll onto steering knuckle.**
- **Be sure to mount so that sensor rotor (rubber side) side comes to steering knuckle inner side.**
- **Do not press and weigh on wheel bearing inner lace and sealing part.**

NOTE:
Final press-loading guideline [49,000 N (5,000 kg, 11,015 lb)]

3. Install snap ring onto steering knuckle.

4. Press-fit a wheel bearing into the steering knuckle with a drift (SST) from steering knuckle outer side.

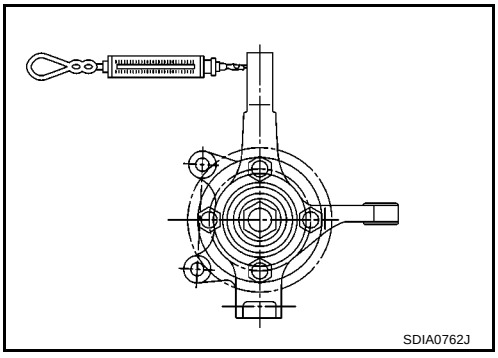


NOTE:
Final press-loading guideline [49,000 N (5,000 kg, 11,015 lb)]

CAUTION:
Drift (special tool) which touches wheel bearing inner lace shall not touch sensor housing.

INSPECTION AFTER ASSEMBLY

1. Apply a load of 34,300 to 49,000 N (3,500 to 5,000 kg, 7,710 - 11,015 lb). In this condition, rotate in forward and reverse directions 10 times each to insure a good fit.
2. Set a spring balance on strut mounting hole (upper). Measure rotating torque at an rpm of 8 - 12 rpm.



Rotating torque : 0.30 - 1.43 N·m (0.03 - 0.14 kg-m)
Spring balance measurement : 6.0 - 28.6 N (0.61 - 2.92 kg)

NOTE:
In case the above loading is not possible

- Assemble drive shaft and tighten wheel hub lock nuts to specified torque. Then rotate in forward and reverse direction 10 times each to insure a good fit.
- At a rotating speed of 8 - 12 rpm, place a spring balance on hub bolt to measure torque.

Rotating torque : 0.23 N·m (0.02 kg-m) or less
Spring balance measurement : 15.9 N (1.62 kg) or less

FRONT DRIVE SHAFT

PFP:39100

On-Vehicle Inspection and Service

EDS0012O

DRIVE SHAFT BOOT

Replacement

CAUTION:

When noise or vibration occur from drive shaft, replace entire drive shaft assembly.

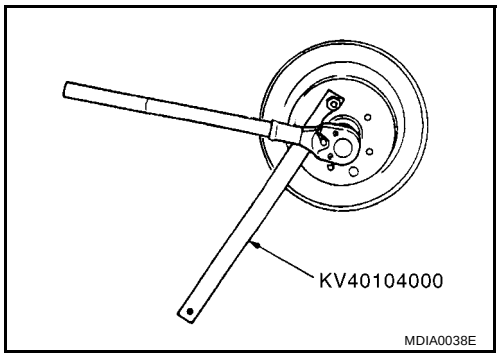
1. Lift up the vehicle and remove tire from the vehicle.
2. Remove lock plate from strut. Disconnect brake hose from strut. Refer to BR-11, "BRAKE PIPING AND HOSE" .
3. Remove the ABS wheel sensor from the steering knuckle. Refer to BRC-44, "WHEEL SENSORS" .

   CAUTION:

   Do not pull on ABS wheel sensor harness.
4. Use a hub lock nut wrench (SST), remove lock nuts.
5. Remove tie-rod from steering knuckle. If tie-rod is not easily removed, use ball joint remover (commercial service tool).

   CAUTION:

   To prevent damage to threads and to prevent ball joint remover (commercial service tool) from sudden coming off, temporarily fix lock nuts.



6. Remove steering knuckle and strut installation bolt.

   CAUTION:

   Do not place drive shaft joint at an extreme angle (22° or more). Also, hold steering knuckle tightly and do not over-extend slide joint.
7. Using a puller (commercial service tool), remove the drive shaft from the steering knuckle.

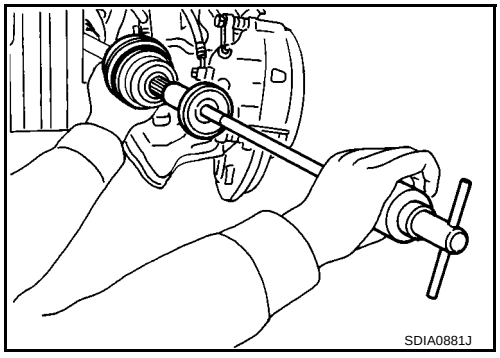
   CAUTION:

   When removing drive shaft, do not place drive shaft joint at an extreme angle (22° or more). Also be careful not to overextend slide joint.

   - **Do not lift drive shaft with axle attached by grasping countershaft only.**
   - **Do not allow drive shaft, with transaxle inserted, to hang down without support for countershaft, wheel joints, and other parts.**
8. Remove boot bands and remove boot from the joint subassembly.
9. Screw drive shaft puller (commercial service tool) into joint subassembly screw part in depth of 30 mm (1.18in) or more. Fix drive shaft by one hand and pull out joint subassembly with sliding hammer (commercial service tool) from shaft.

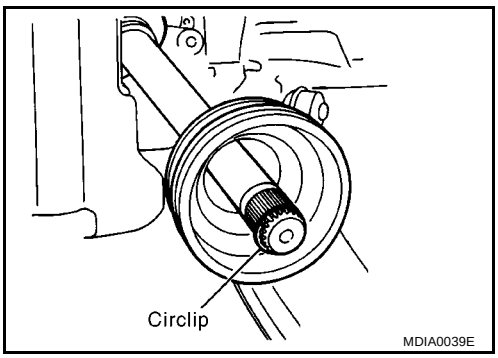
   CAUTION:

   - **For K9K engines: before separating joint subassembly put matching marks on drive shaft and joint subassembly.**
   - **Align sliding hammer and drive shaft and remove them by pulling firmly and uniformly.**
   - **When joint subassembly is not able to be pulled out, try after removing drive shaft from the vehicle.**



10. Remove boot from shaft.

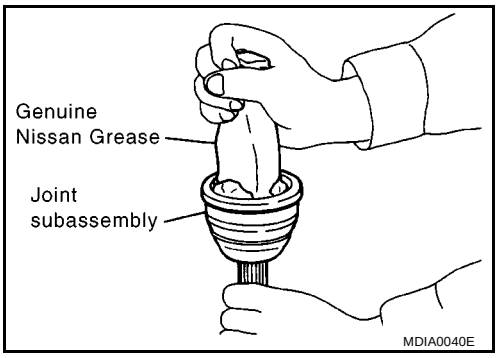
11. Remove circlip from the shaft.



12. While rotating ball cage, remove old grease on joint subassembly with paper towels.

CAUTION:
Visually check joint subassembly for compression scar, cracks, fractures. If any non-standard condition is detected, replace entire joint subassembly.

13. Inject Genuine Nissan Grease (see parts catalog) into the joint subassembly serration hole until the grease begins to ooze from the ball groove and serration hole.
After injecting the grease, wipe off the old grease that has oozed out with towel.

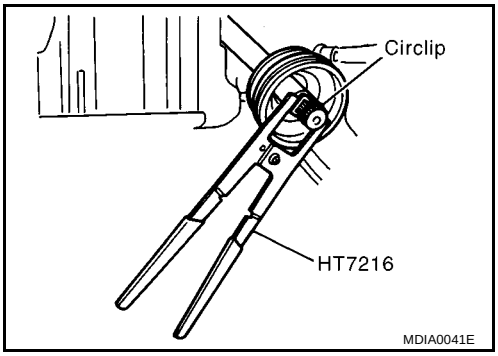


14. Cover drive shaft serration with tape so as not to damage boot during installation. Install new boot and boot bands to the shaft.

CAUTION:
Do not reuse the boot bands and boot.

15. Remove the tape wrapped around the serration on the shaft.
16. Mount circlip on circlip groove at the shaft edge. Align the shaft edge and joint subassembly center axle. Then, assemble on the circlip groove, holding circlip with screwdriver tip. Drive joint inserter (commercial service tool) is recommended as an assisting tool when mounting circlip.
For K9K engines: install joint subassembly securely, ensuring marks which were made during disassembly are properly aligned.

CAUTION:
Do not reuse the circlip.



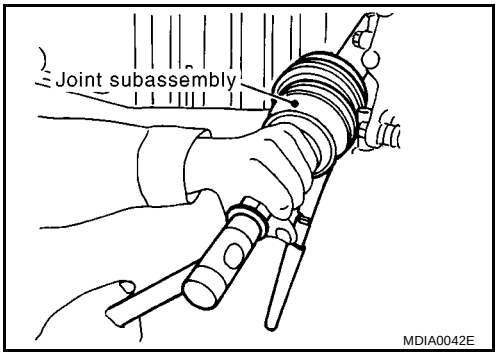
17. Press joint subassembly into shaft with plastic hammer.

CAUTION:
Confirm that joint subassembly is correctly engaged while rotating.

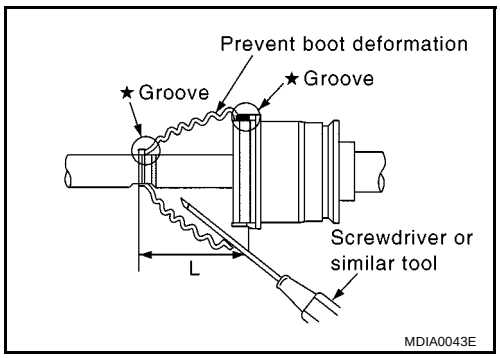
18. Working from the big end of the boot, add enough Genuine Nissan Grease (refer to the part catalog) to the housing to equal the quantity mentioned below.

Grease quantity : For CR engines: 45 - 55 g (1.59 - 1.94 oz)
For K9K engines: 40 - 50 g (1.41 - 1.76 oz)

19. Remove grease on the boot mounting surface.



20. Mount boot firmly on the groove shown in the figure (with * mark) and confirm the length of the boot (L) is same diameter as shown below. Insert a screwdriver or fitting tool from the large-diameter side. Bleed air out of the inside boot (to adjust pressure outside and inside of boot) to prevent deformation of boot.



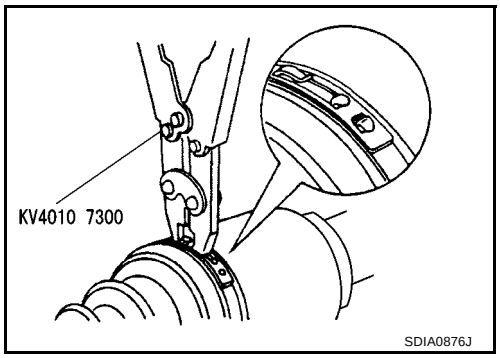
Boot mounting length : **For CR engines: 90.4±1 mm (3.56±0.04 in)**

For K9K engines: 90 mm (3.54 in)

CAUTION:

- **If boot mounting length is outside the standard, it may cause breakage in the boot.**
- **Be careful not to touch inside of the boot with the tip of a screwdriver.**

21. As shown in the figure, secure the big and small ends of the boot with new boot bands.



22. Rotate joint part and confirm that mounting position of boot does not deviate. When it deviates, mount a new boot band again.

CAUTION:

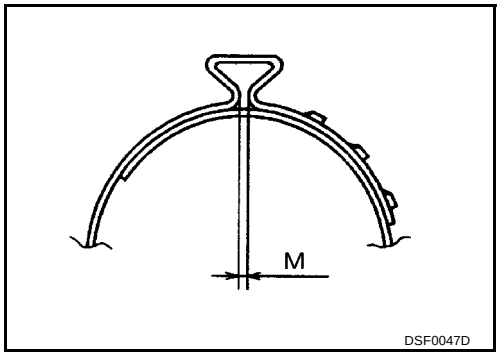
When fixing boot band, fix so that the M diameter on the drawing becomes as follows.

M diameter

For CR engines:

Large-diameter side : **2.5±0.5 mm (0.10±0.02 in)**

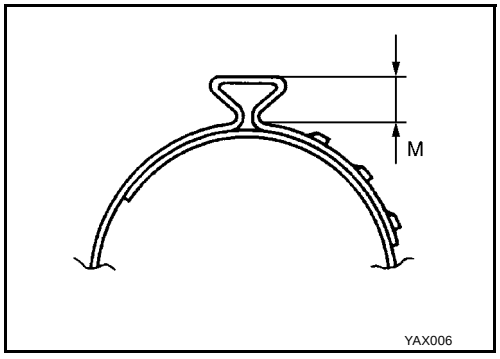
Small-diameter side : **2.5±0.5 mm (0.10±0.02 in)**



For K9K engines:

Large-diameter side : **5 mm (0.20 in)**

Small-diameter side : **5mm (0.20 in)**

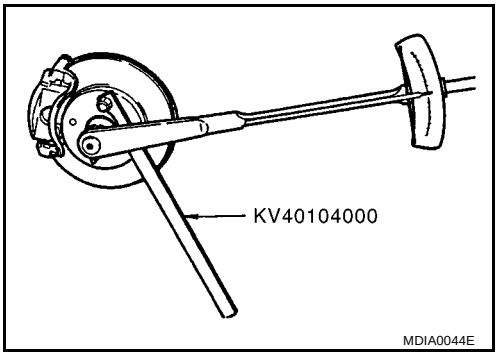


23. Confirm that circlip on the transaxle side is not pulled out.
24. Insert the drive shaft to the steering knuckle, and tighten the lock nut.

25. Install bolts securing steering knuckle to the strut. For tightening torque, refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" .
26. Fix the brake hose onto the strut with the lock plate.
27. Install tie-rod to steering knuckle. For tightening torque, refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" .
28. Install ABS wheel sensor. Refer to BRC-44, "WHEEL SENSORS" .
29. Using a hub lock nut wrench (SST), tighten lock nut to the specified torque.

    Tightening torque : 238 - 322 N·m (25 - 32 kg-m, 176 - 237 ft-lb)

30. Mount tire and lower lift.

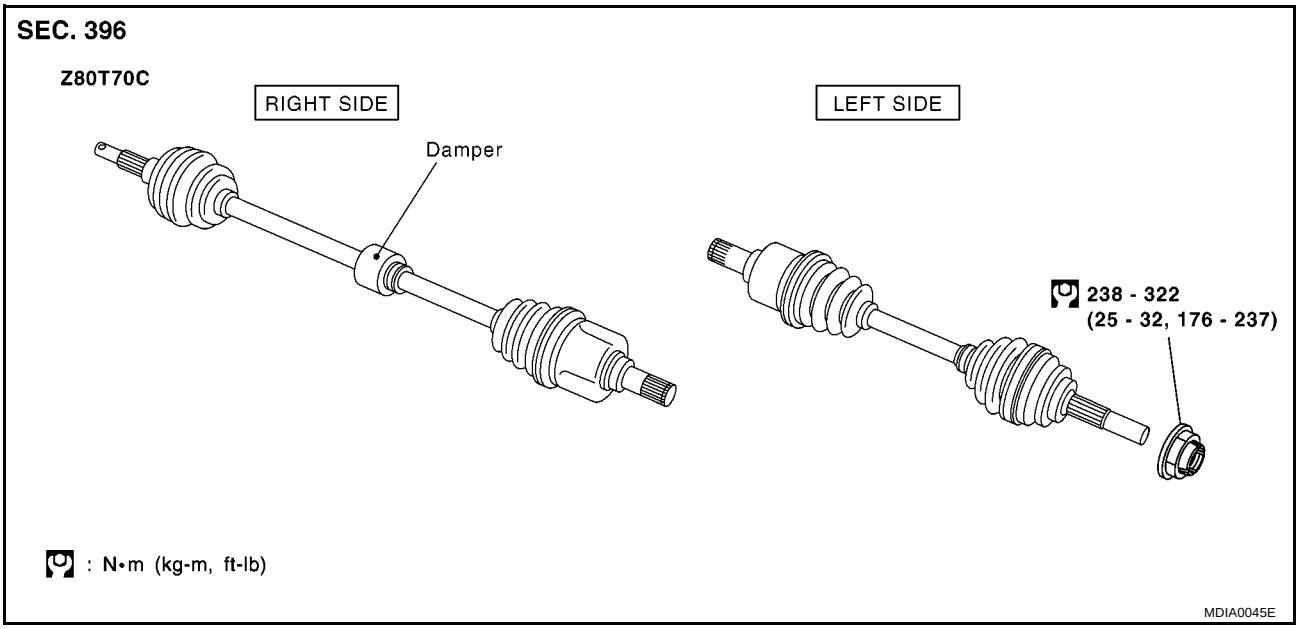


Removal and Installation

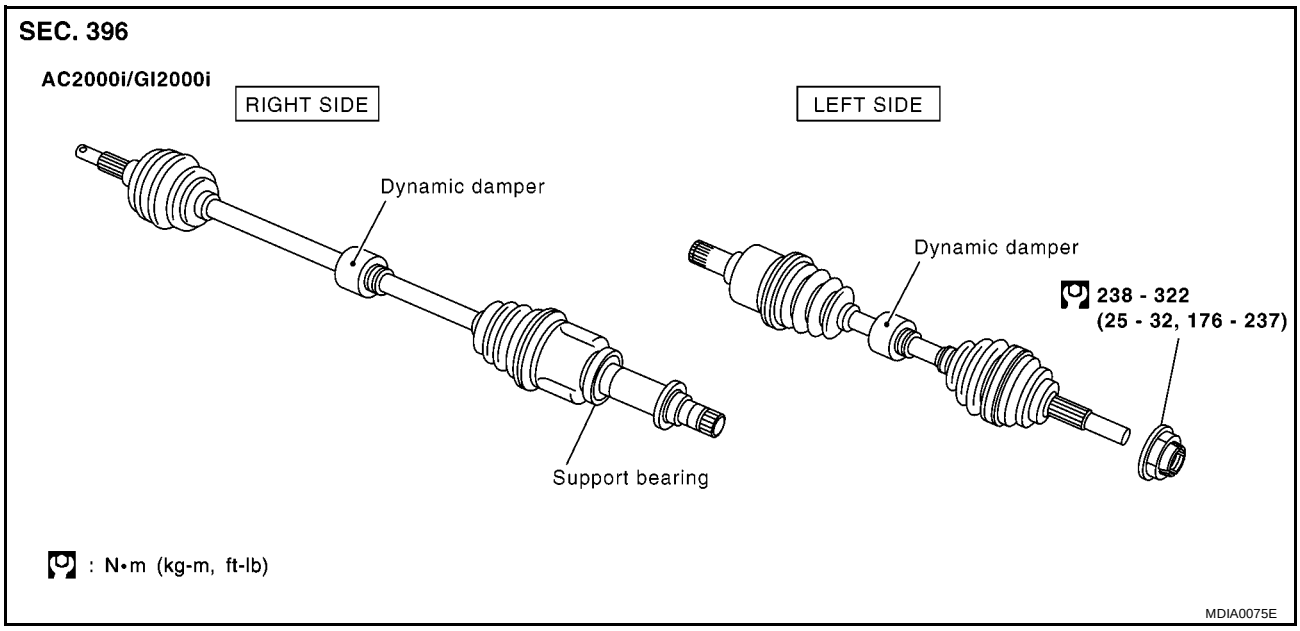
EDS0012P

SMA for VIN >SJNxxAK12U1000000

FOR CR ENGINES:



FOR K9K ENGINES:



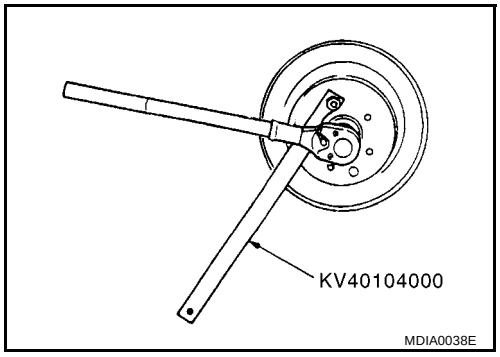
REMOVAL

1. Lift up the vehicle and remove tire from the vehicle.
2. Remove lock plate from strut. Disconnect brake hose from strut. Refer to BR-11, "BRAKE PIPING AND HOSE" .
3. Remove the ABS wheel sensor from the steering knuckle. Refer to BRC-44, "WHEEL SENSORS" .

   CAUTION:
   Do not pull on ABS wheel sensor harness.
4. Use a hub lock nut wrench (SST), remove lock nuts.
5. Remove tie-rod from steering knuckle. If tie-rod is not easily removed, use ball joint remover (commercial service tool).

   CAUTION:
   To prevent damage to threads and to prevent ball joint remover (commercial service tool) from sudden coming off, temporarily fix lock nuts.
6. Remove steering knuckle and strut installation bolt.

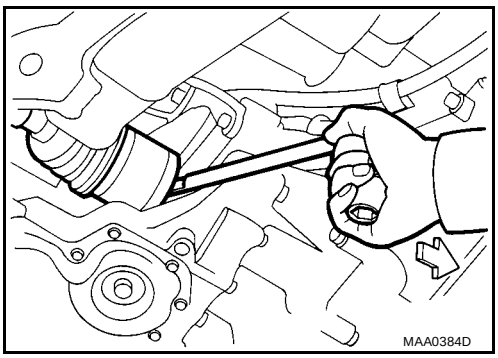
   CAUTION:
   Do not place drive shaft joint at an extreme angle (22° or more). Also, hold steering knuckle tightly and do not over-extend slide joint.



7. Using a puller (commercial service tool), remove the drive shaft from the steering knuckle.

   CAUTION:
   When removing drive shaft, do not place drive shaft joint at an extreme angle (22° or more). Also be careful not to overextend slide joint.
   - **Do not lift drive shaft with axle attached by grasping countershaft only.**
   - **Do not allow drive shaft, with transaxle inserted, to hang down without support for countershaft, wheel joints, and other parts.**

8. Remove driveshaft from transaxle with a wheel wrench or equivalent, as shown in figure.



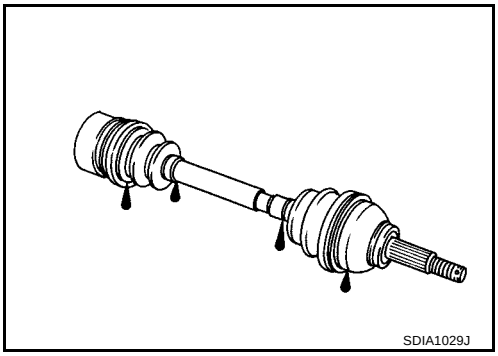
MAA0384D

CAUTION:
When removing drive shaft from vehicle, be careful to avoid interfering with brake hose, ABS wheel sensor harness, and other parts.

- Confirm that circlip is attached on the edge.

INSPECTION AFTER REMOVAL

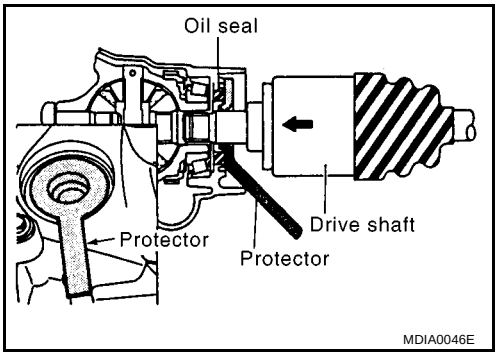
- Move joint in up/down, left/right, and axial directions. Check for motion that is not smooth and for significant looseness.
- Check the boot for cracks, damage, and leakage of grease.



SDIA1029J

INSTALLATION

1. In order to prevent damage to differential side oil seal, first fit a protector (SST) onto oil seal before inserting drive shaft. Slide drive shaft slide joint and tap with a hammer to install securely.

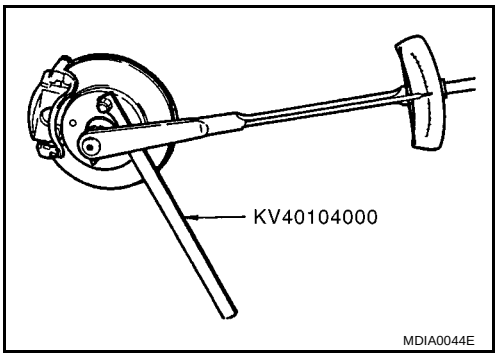


MDIA0046E

CAUTION:
Make sure the circlip is fully engaged.

Protector SST (special service tool) No. : KV38107900

2. Insert the drive shaft to the steering knuckle, and tighten the lock nut.
3. Install bolts securing steering knuckle to the strut. For tightening torque, refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" .
4. Fix the brake hose onto the strut with the lock plate.
5. Install tie-rod to steering knuckle. For tightening torque, refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" .
6. Install ABS wheel sensor. Refer to BRC-44, "WHEEL SENSORS" .
7. Using a hub lock nut wrench (SST), tighten lock nut to the specified torque.



MDIA0044E

Tightening torque : 238 - 322 N·m (25 - 32 kg·m, 176 - 237 ft-lb)

8. Mount tire and lower lift.

Disassembly and Assembly

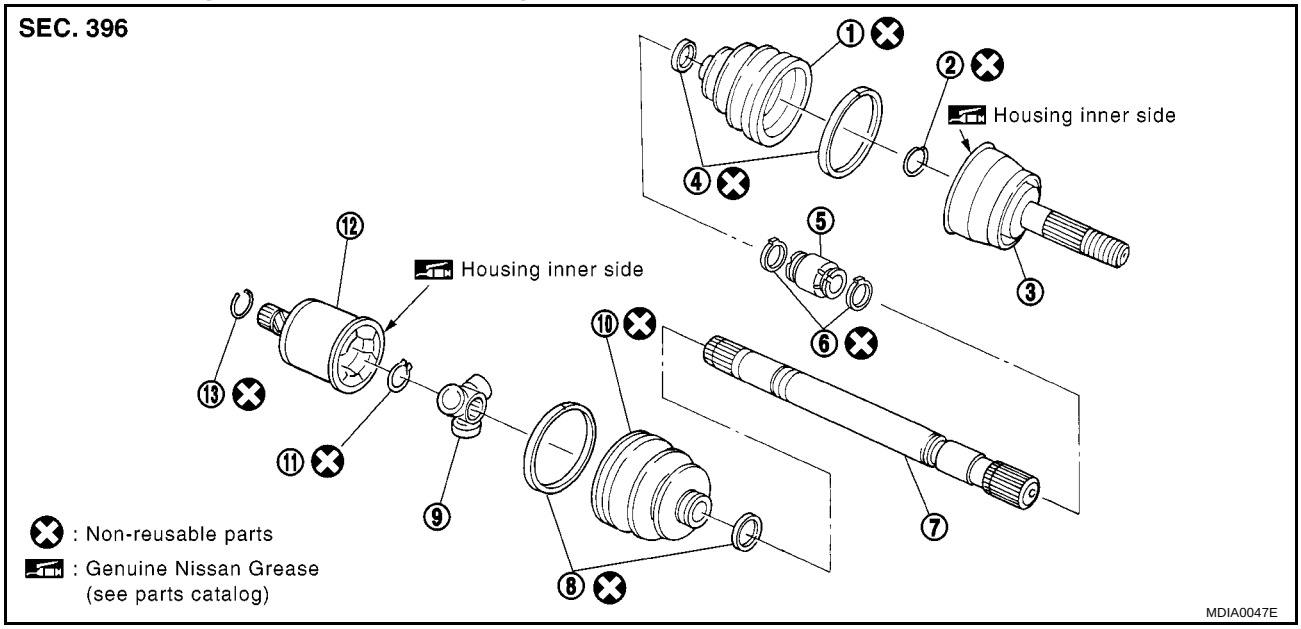
SMA for VIN >SJNxxAK12U1000000

EDS0012Q

INSPECTION BEFORE DISASSEMBLY

- Move joint in up/down, left/right, and axial directions. Check for motion that is not smooth and for significant looseness.
- Check the boot for cracks, damage, and leakage of grease.

DISASSEMBLY (CR ENGINE MODELS)



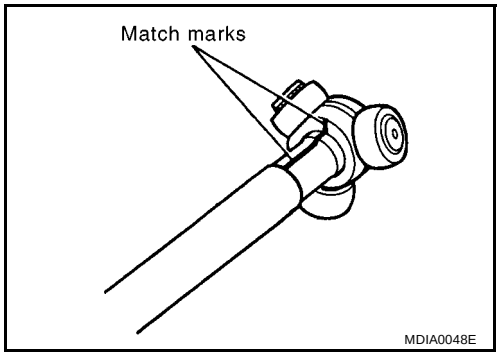
1. Boot
2. Circlip
3. Joint subassembly (fixed joint)
4. Boot band
5. Dynamic damper (right side only)
6. Band
7. Shaft
8. Boot band
9. Spider assembly
10. Boot
11. Snap rings
12. Housing (slide joint)
13. Circlip

Transaxle Side

1. Remove the boot bands.
2. Fix shaft on a vise. Remove stopper ring and housing.

   CAUTION:
   When securing in a vise, use aluminum plates, copper plates or something similar to protect the shaft.
3. Put mating marks onto the shaft and spider assembly.

   CAUTION:
   Use paint or similar substance for alignment marks. Do not scratch the surface.
4. Remove the snap ring, and remove the spider assembly from the shaft.
5. Remove boot from shaft.

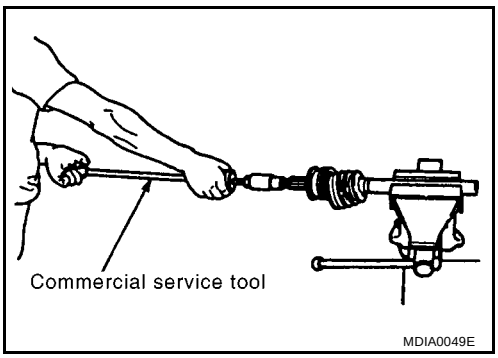


Wheel Side

1. Using a vise, secure the shaft.

   CAUTION:
   When securing in a vise, use aluminum plates, copper plates or something similar to protect the shaft.
2. Remove boot bands and remove boot from the joint subassembly.

3. Screw the drive shaft puller (commercial service tool) 30 mm (1.18 in) or more over the thread on joint subassembly, and pull the joint subassembly out of the shaft.

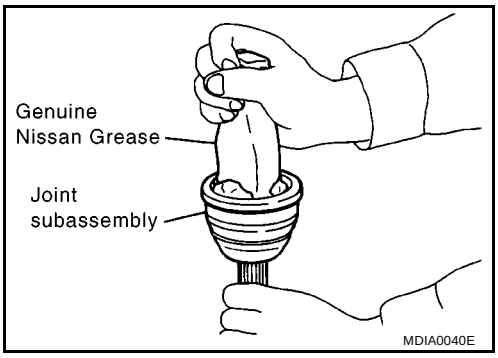


CAUTION:

- **Align sliding hammer and drive shaft and remove them by pulling firmly and uniformly.**
- **If joint subassembly cannot be removed after five or more unsuccessful attempts, replace entire drive shaft assembly.**

4. Remove boot from shaft.
5. Remove circlip from the shaft.

6. While rotating ball cage, remove old grease on joint subassembly with paper towels.



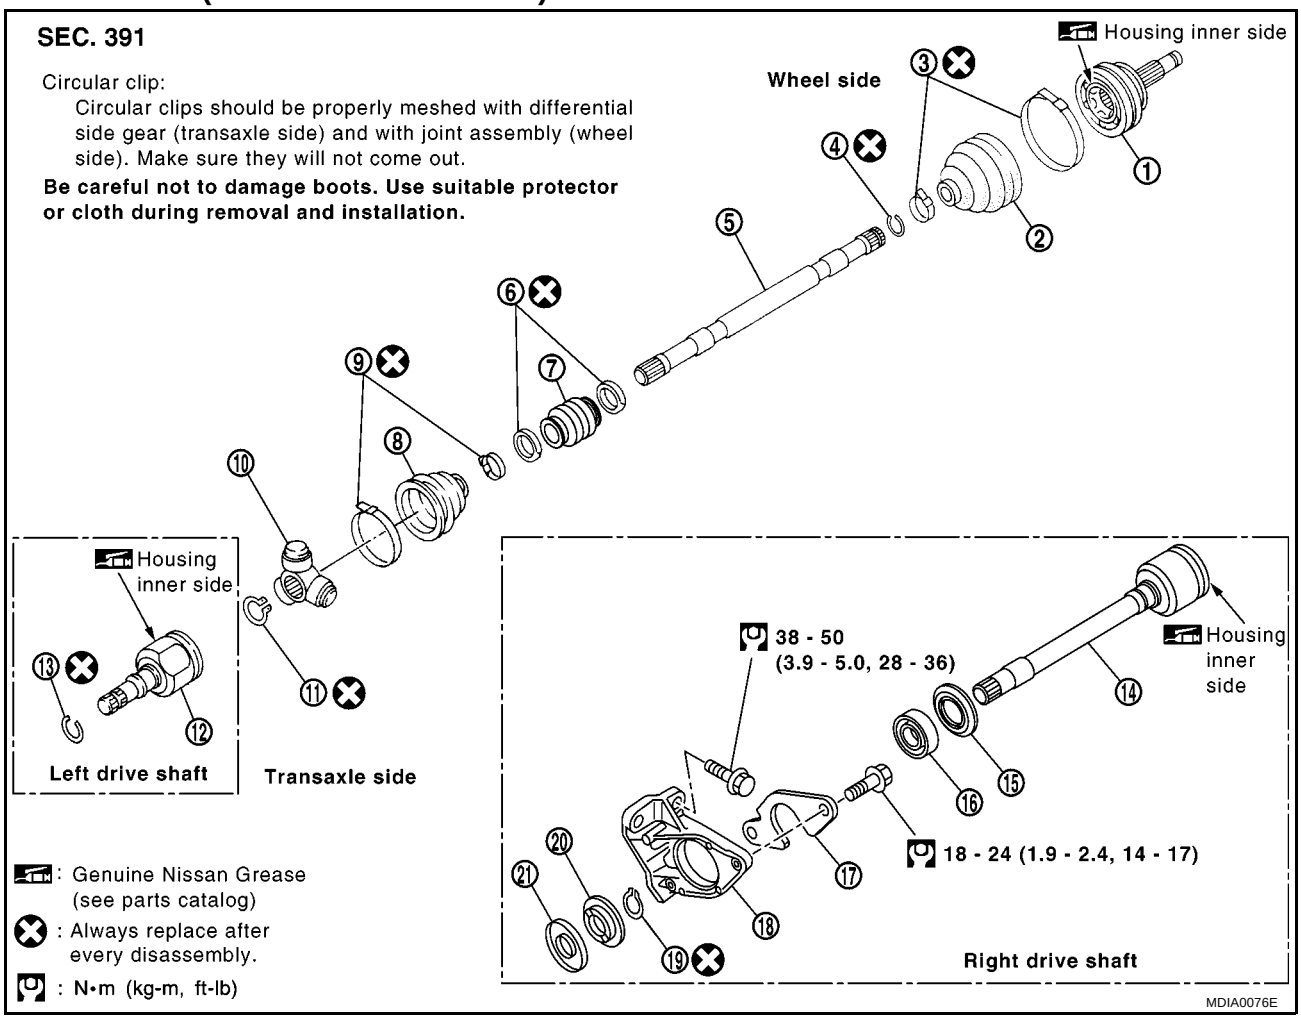
CAUTION:

Visually check joint subassembly for compression scar, cracks, fractures. If any non-standard condition is detected, replace entire joint subassembly.

Dynamic Damper (Right drive shaft)

- Remove band. Then, remove dynamic damper from shaft.

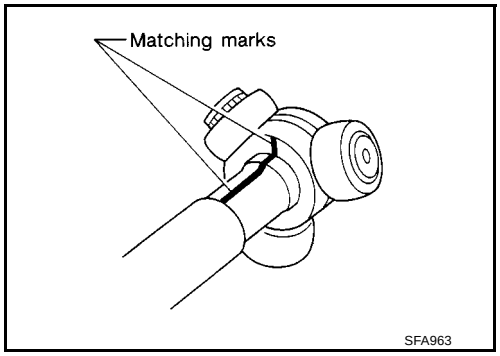
DISASSEMBLY (K9K ENGINE MODELS)



1. Joint assembly
2. Boot
3. Boot band
4. Circular clip
5. Drive shaft
6. Dynamic damper band
7. Dynamic damper
8. Boot
9. Boot band
10. Spider assembly
11. Snap ring
12. Slide joint housing
13. Circular clip
14. Slide joint housing with extension shaft
15. Dust shield
16. Support bearing
17. Support bearing retainer
18. Bracket
19. Snap ring
20. Dust shield
21. Dust shield

Transaxle Side

1. Remove the boot bands.
2. Put matching marks on slide joint housing and drive shaft before separating joint assembly.
3. Put matching marks on spider assembly and drive shaft.
4. Remove slide joint housing.

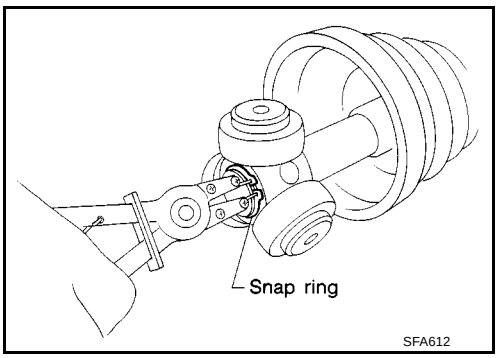


5. Pry off snap ring, then remove spider assembly.

CAUTION:
Do not disassemble spider assembly.

6. Draw out boot.

CAUTION:
Cover drive shaft serration with tape to prevent damage to the boot.



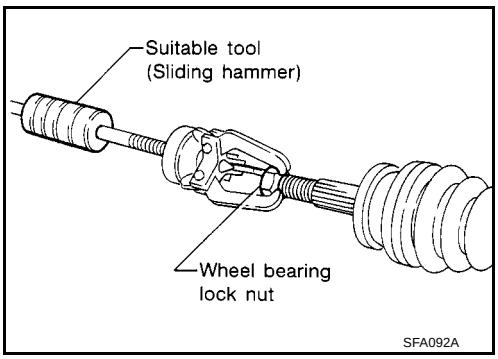
Wheel Side

CAUTION:
The joint on the wheel side cannot be disassembled.

1. Before separating joint assembly, put matching marks on drive shaft and joint assembly.
2. Separate joint assembly with a suitable tool.

CAUTION:
Be careful not to damage threads on drive shaft.

3. Remove boot bands.
4. Draw out boot.

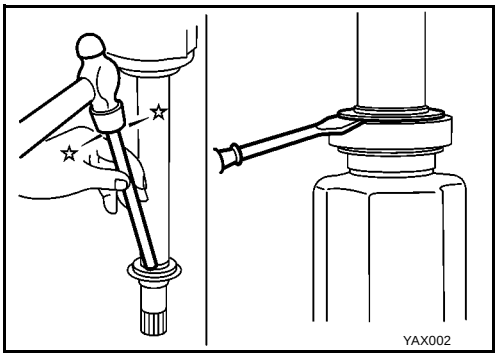


Dynamic Damper

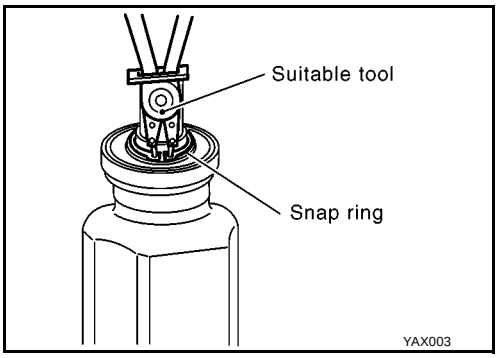
Remove bands. Then, remove dynamic damper from drive shaft.

Support Bearing

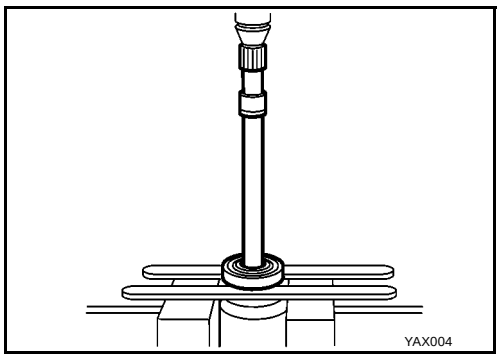
1. Remove dust shield.



2. Remove dust shield. Then, remove snap ring.



3. Press support bearing assembly off of drive shaft.
4. Remove dust shield.



INSPECTION AFTER DISASSEMBLY (CR ENGINE MODELS)

Shaft

- If the shaft has runout, cracks, or damage, replace the shaft.

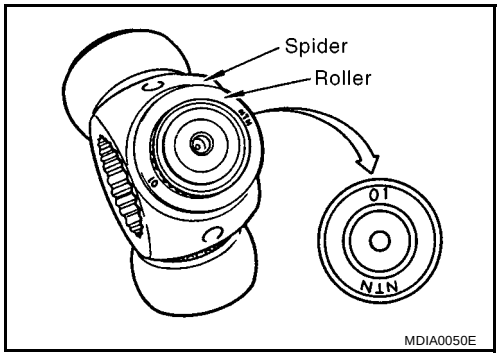
Joint Subassembly (Fixed Joint)

- Check the joint for rough rotation and abnormal axial looseness.
- Check if there is any compression scar, cracks, or fractures.

CAUTION:
If there are any non-standard conditions of joint assembly component parts, replace the joint assembly.

Joint Assembly (Sliding Joint)

- If there is scratching or wear of housing roller contact surface or spider roller contact surface, replace housing and spider assembly.
- If there is circumferential looseness or rough rotation of spider roller, replace spider assembly.
- As shown in the figure, the spider roller has a stamped number which corresponds to a part number. Select a suitable replacement part with the same stamp number from the table below.
- If there are any non-standard conditions of joint assembly component parts, replace the joint assembly.
- For housing replacement, spider assembly and joint assembly are in a set.



Stamped number	Part No.	Type
00	3972051E00	T70C
01	3972051E01	
02	3972051E02	
03	3972051E03	

Housing (Slide Joint)

- Check the ball rolling surface for damage and abnormal wear.
- Check the shaft thread for damage.
- Check the boot mount for deformation.

Dynamic Damper (Right Drive Shaft)

- Check for cracks, wear, and damage. Replace if necessary.

INSPECTION AFTER DISASSEMBLY (K9K ENGINE MODELS)

Thoroughly clean all parts in cleaning solvent, and dry with compressed air. Check parts for evidence of deformation or other damage.

Drive Shaft

Replace drive shaft if it is twisted or cracked.

Boot

Check boot for fatigue, cracks or wear. Replace boot with new boot bands.

Joint Assembly (Transaxle side)

- Check spider assembly for needle bearing and washer damage. Replace if necessary.
- Check roller surfaces for scratches, wear or other damage. Replace if necessary.
- Check serration for deformation. Replace if necessary.
- Check slide joint housing for any damage. Replace if necessary.

Joint Assembly (Wheel side)

Replace joint assembly if it is deformed or damaged.

Support Bearing

Make sure wheel bearing rolls freely and is free from noise, cracks, pitting or wear.

Support Bearing Bracket

Check support bearing bracket for cracks with a magnetic exploration or dyeing test.

Dynamic Damper

Check dynamic damper for cracks, wear, and damage. Replace if necessary.

ASSEMBLY (CR ENGINE MODELS)

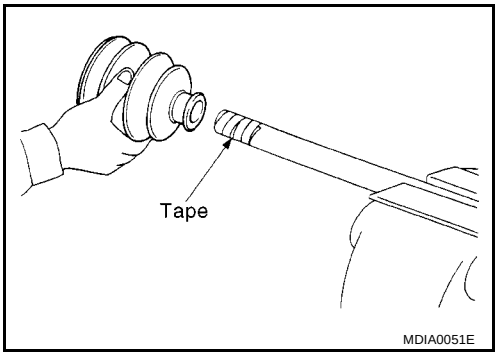
Wheel Side

For mounting, perform steps 13 to 20 of On-Vehicle Inspection and Service,FAX-10, "On-Vehicle Inspection and Service" .

Transaxle Side

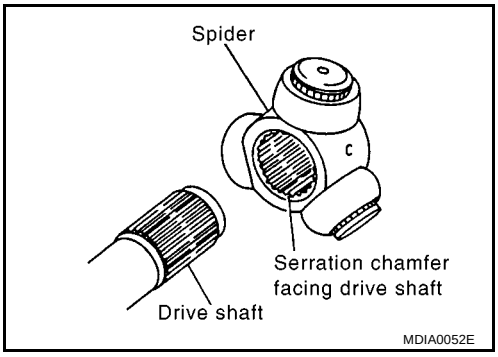
1. Cover drive shaft serration with tape so as not to damage boot during installation. Install new boot and boot bands to the shaft.

   CAUTION:
   Do not reuse the boot bands and boot.



2. Remove the tape wrapped around the serration on the shaft.
3. Align mating marks painted when spider assembly was removed. Install spider assembly with serrated mounting surface facing drive shaft.
4. Secure the spider assembly with a snap ring.

   CAUTION:
   Do not reuse the snap ring.
5. Apply Genuine Nissan Grease (refer to the part catalog) onto the spider assembly and sliding surface.
6. Assemble the sliding joint housing onto spider assembly, and add enough grease to equal the value mentioned below.

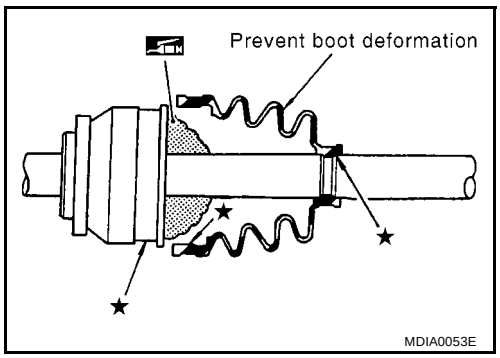


Grease quantity : 115±5 g

7. Install boot securely into grooves (indicated by * marks) shown in figure.

CAUTION:

If grease adheres to the boot mounting surface (with * mark) on the joint, the boot may come off. Remove all grease from the surface.

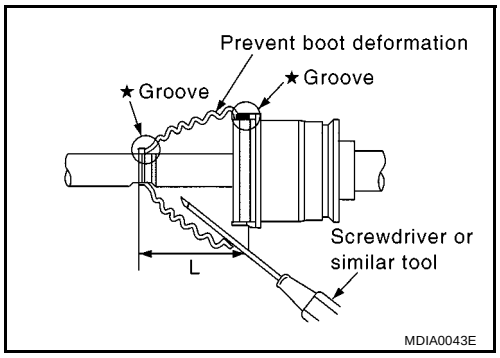


8. Make sure boot installation length “L” is the length indicated below. Insert a screwdriver or similar tool into the large-diameter side. Bleed air out of the inside boot (to adjust pressure outside and inside of boot) to prevent deformation of boot.

Boot mounting length : 96.5±1 mm

CAUTION:

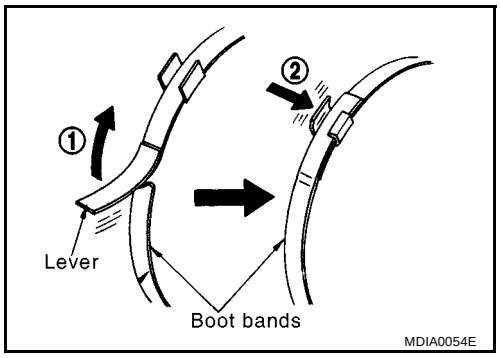
- **If boot mounting length is outside the standard, it may cause breakage in the boot.**
- **Be careful not to touch inside of the boot with the tip of a screwdriver.**



9. Secure big and small ends of boot with new boot bands as shown in figure.

CAUTION:

Rotate housing and check if boot installation position does not change. If position changes, reinstall boot bands.



Dynamic Damper (Right Drive Shaft)

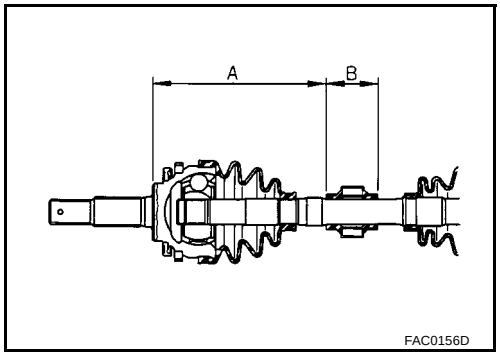
- When dynamic damper has been removed, secure with bands as shown in figure so that measurements from fixed-joint side are as listed below.

CAUTION:

Do not reuse dynamic damper bands.

Dimension A : 434 - 440 mm (17.09 - 17.32 in)

Dimension B : 70 mm (2.76 in)



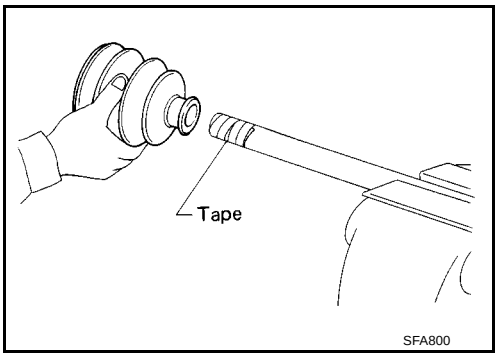
ASSEMBLY (K9K ENGINE MODELS)

- **After drive shaft has been assembled, ensure that it moves smoothly over its entire range without binding.**
- **Use NISSAN GENUINE GREASE or equivalent after every overhaul.**

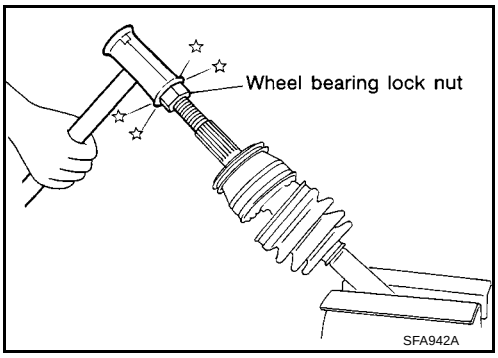
Wheel Side

1. Install boot and new small boot band on drive shaft.

   CAUTION:
   Cover drive shaft serration with tape so as not to damage boot during installation.



2. Set joint assembly onto drive shaft by lightly tapping it. Install joint assembly securely, ensuring marks which were made during disassembly are properly aligned.

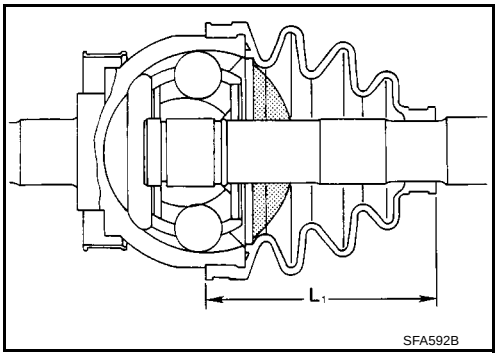


3. Pack drive shaft with specified amount of grease.

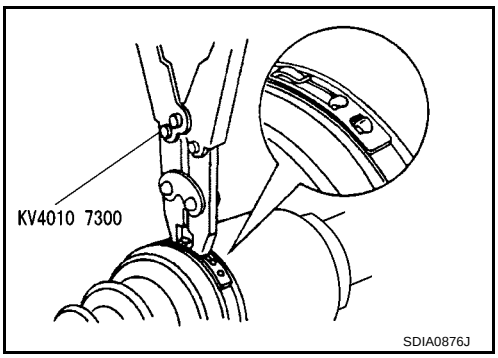
   Specified amount of grease : 40 - 50 g (1.41 - 1.76 oz)

4. Make sure that boot is properly installed on the drive shaft groove.
   Set boot so that it does not swell and deform when its length is "L_1".

   Length "L_1" : 90 mm (3.54 in)



5. Secure the big and small ends of the boot with new boot bands.



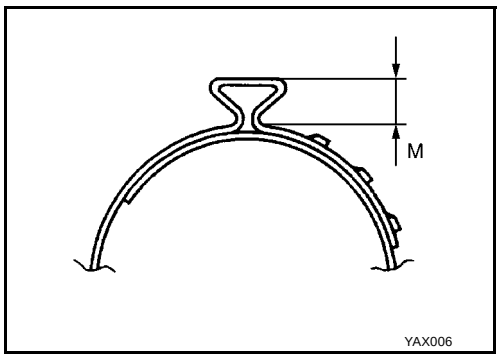
6. Rotate joint part and confirm that mounting position of boot does not deviate. When it deviates, mount a new boot band again.

CAUTION:
When fixing boot band, fix so that the M diameter on the drawing becomes as follows.

M diameter

Large diameter side: 5 mm (0.20 in)

Small diameter side: 5 mm (0.20 in)

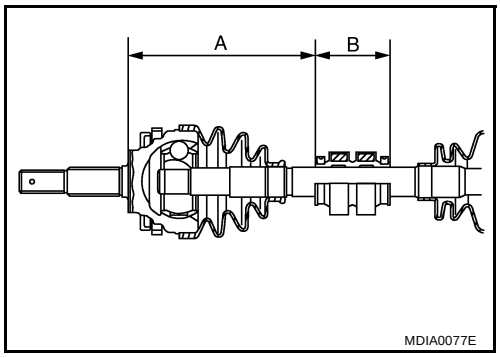


Dynamic Damper

1. Use new damper bands when installing.
2. Install dynamic damper from stationary-joint side while holding it securely.

Dimension A : 207 - 213 mm (8.15 - 8.39 in)

Dimension B : 70 mm (2.76 in)



Transaxle Side

1. Install boot and new small boot band on drive shaft.

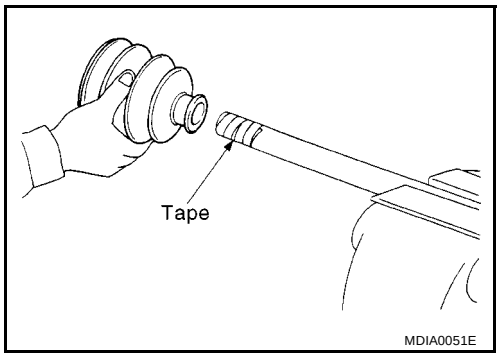
CAUTION:
Cover drive shaft serration with tape so as not to damage boot during installation.

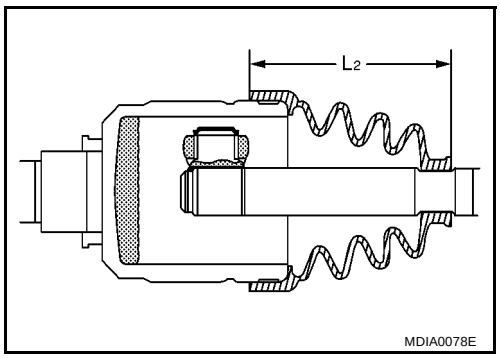
2. Install spider assembly as a unit, making sure the marks which were made during disassembly are properly aligned.
3. Install new snap ring.
4. Pack drive shaft with specified amount of grease.

Specified amount of grease : 113 - 123 g (3.98 - 4.34 oz)

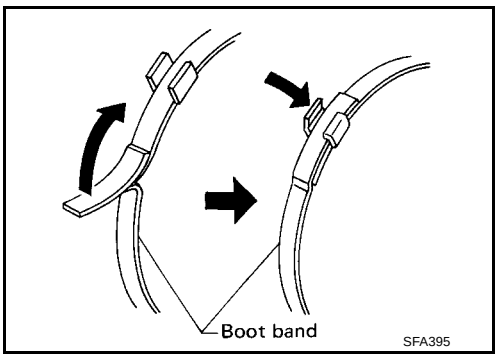
5. Install slide joint housing.
6. Make sure that boot is properly installed on the drive shaft.
Set boot so that it does not swell and deform when its length is "L_2 ".

Length "L_2 " : 90 mm (3.54 in)

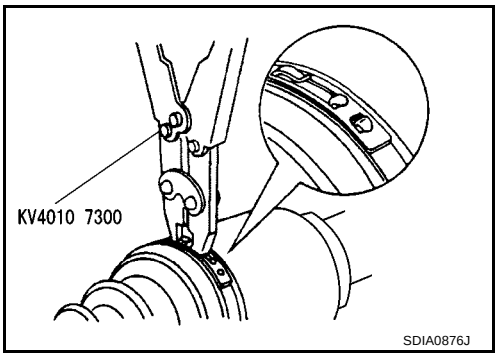




7. Lock new larger boot band securely with a suitable tool.



8. Secure the smaller end of the boot with new boot band.



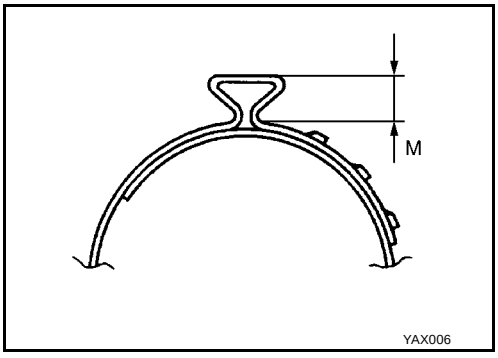
9. Rotate joint part of smaller end boot band and confirm that mounting position of boot does not deviate. When it deviates, mount a new boot band again.

CAUTION:

When fixing boot band, fix so that the M diameter on the drawing becomes as follows.

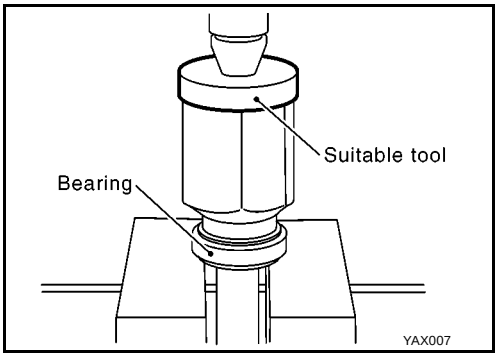
M diameter

Small diameter side: 5 mm (0.20 in)

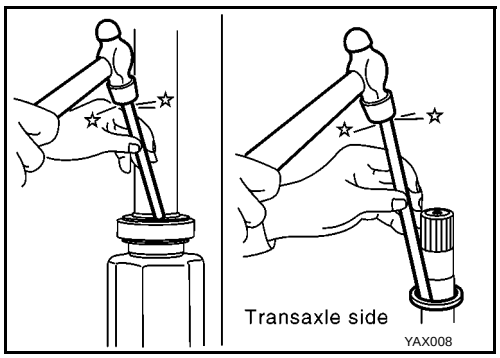


Support Bearing

- Install new dust shield on drive shaft.
- Press drive shaft into bearing.



- Install new snap ring.
- Install new dust shields.



SERVICE DATA AND SPECIFICATIONS (SDS)

FUEL SYSTEM

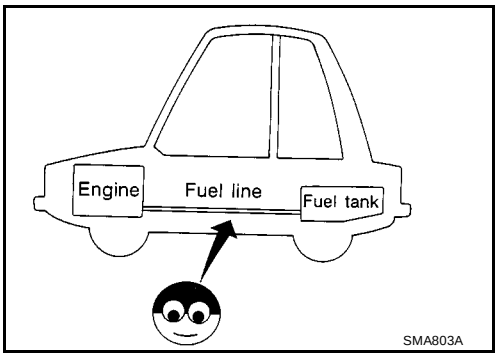
PFP:17503

Checking Fuel Lines

EBS00OJM

Inspect fuel lines, filler cap and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration.
If necessary, repair or replace faulty parts.



General Precautions

EBS00OJN

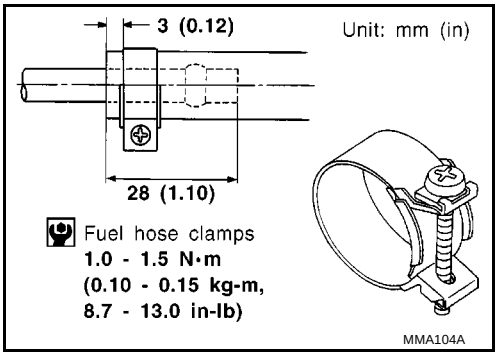
WARNING:

when replacing fuel line parts, be sure to observe the following.

- **Put a “CAUTION: IN FLAMMABLE” sign in workshop.**
- **Be sure to work in a well-ventilated area and furnish workshop with a CO_2 fire extinguisher.**
- **Do not smoke while servicing fuel system, keep open flames and spark away from work area.**

CAUTION:

- **Before removing fuel line parts, carry out the following procedures.**
  - **Put drained fuel in an explosion-proof container and put the lid on securely, keep the container in safe area.**
  - **Release fuel pressure from fuel line. Refer to EC-44, "FUEL PRESSURE RELEASE" (WITH EURO-OBD), refer to EC-505, "FUEL PRESSURE RELEASE" (WITHOUT EURO-OBD).**
  - **Disconnect battery ground cable.**
- **Always replace O-ring and clamps with new ones.**
- **Do not tighten hose clamps excessively to avoid damaging hoses.**
- **Do not kink or twist tubes when they are being installed.**
- **Do not tighten hose clamps excessively to avoid damaging hoses.**
  Tighten high-pressure rubber hose clamp so that clamp end is 3 mm (0.12 in) from hose end.
  Tightening torque specifications are the same for all rubber hose clamps.
  Ensure that screw does not contact adjacent parts.
- **After installing tubes, run engine and check for fuel leaks at connections.**
- **For servicing “Evaporative Emission System” parts, refer to EC-464, "EVAPORATIVE EMISSION SYSTEM" (WITH EURO-OBD), EC-840, "EVAPORATIVE EMISSION SYSTEM" (WITHOUT EURO-OBD).**

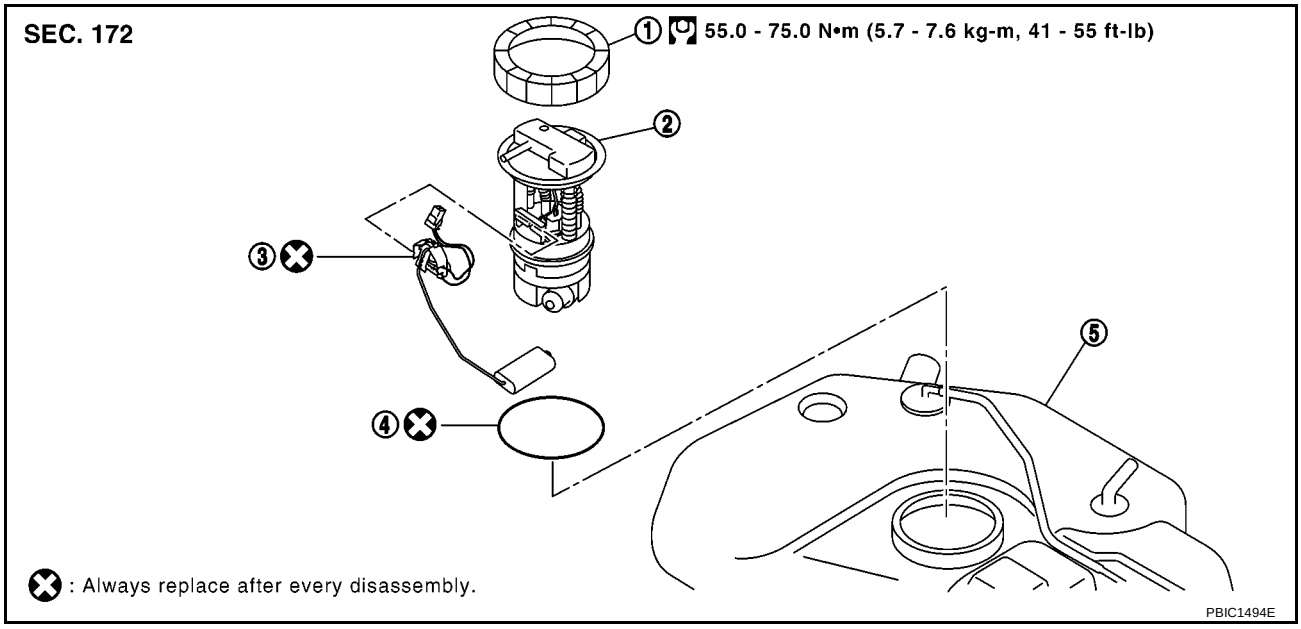


FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY

PFP:17042

Removal and Installation

EBS00OJH



1. Lock ring
2. Fuel filter and fuel pump assembly
3. Fuel level sensor unit
4. O-ring
5. Fuel tank

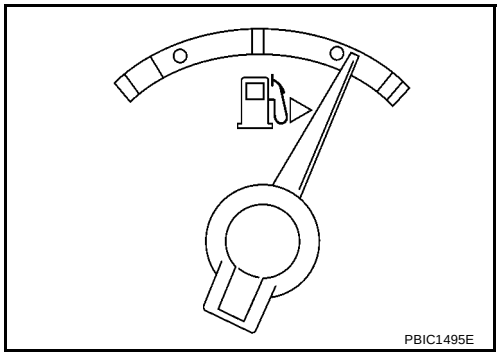
REMOVAL

WARNING:

Read “General Precautions” before working on the fuel system. Refer to FL-3, "General Precautions" .

1. Check fuel level. If gauge indicates more than the level shown in figure (full or almost full), drain fuel from fuel tank until gauge indicates the level in figure or below.
   When fuel pump malfunctions, insert hose with outer diameter of 25 mm (0.98 in) or less from fuel filler port. Drain fuel in fuel filler tube. Disconnect connections of fuel filler tube and fuel filler hose to drain fuel from fuel filler hose.
   - As guide, fuel amount becomes the level shown in figure or below when approximately 7 liter (1-1/2 lmp gal) of fuel are drained from full.

   NOTE:
   Adjusting fuel level is to prevent fuel from spilling, when fuel level sensor unit, fuel filter and fuel pump assembly are removed.



2. Release fuel pressure. Refer to EC-44, "Fuel Pressure Check" (WITH EURO-OBD), EC-505, "Fuel Pressure Check" (WITHOUT EURO-OBD).

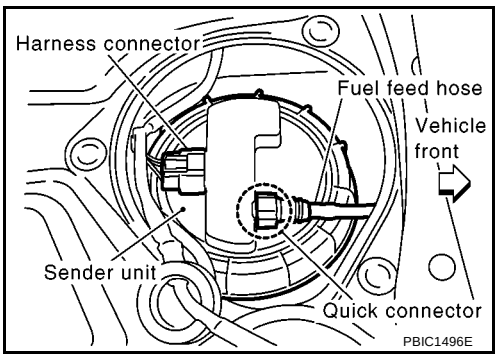
   NOTE:
   If CONSULT-II is not used, release fuel pressure with the following procedures.

a. Refer to steps 5 to 7 on this page. Remove harness connectors from fuel level sensor unit, fuel filter and fuel pump assembly.
b. Start the engine. After stopping the engine, crank it two or three times to consume the fuel in the fuel line.
3. Open fuel filler lid.
4. Open the filler cap and release the pressure inside the fuel tank.
5. Remove rear seat. Refer to SE-11, "REAR SEAT" .
6. Remove inspection hole cover.
   - Using a screwdriver, remove it by turning clips clockwise by 90°.

7. Remove harness connector and fuel feed hose from sender unit.

NOTE:

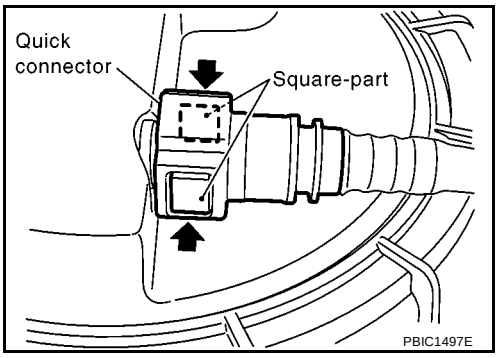
- Connections of harness connector and fuel feed hose are called sender unit.



- Remove quick connector in the following procedures.
  - Pinch quick connector square-parts with your fingers, and pull out the quick connector by hand.
  - If quick connector and tube on sender unit are stuck, push and pull several times until they move, and pull out.

CAUTION:

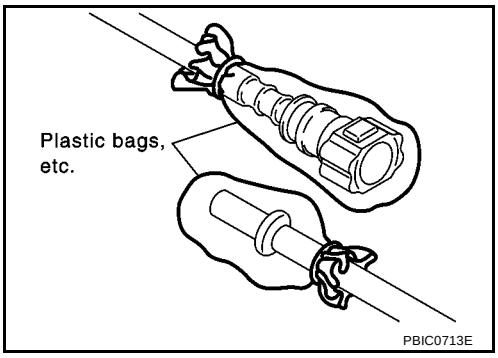
- **The tube can be removed when the tabs are completely depressed. Do not twist it more than necessary.**
- **Do not use any tools to remove the quick connector.**
- **Keep the resin tube away from heat. Be especially careful when welding near the tube.**
- **Prevent acid liquid such as battery electrolyte etc. from getting on the resin tube.**
- **Do not bend or twist the tube during installation and removal.**



- To keep clean the connecting portion and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.

CAUTION:

Do not insert plug, preventing damage on O-ring in quick connector.



8. Using lock ring wrench [SST: KV993G0010], remove lock ring.

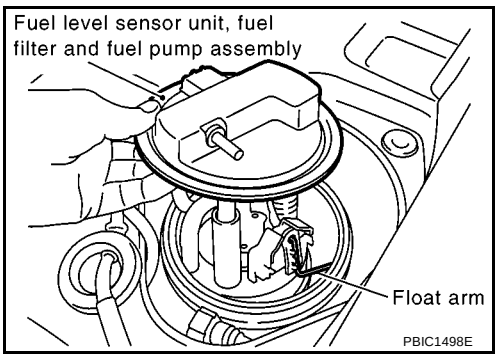
CAUTION:

Rotate SST while pressing fuel level sensor unit, fuel filter and fuel pump assembly as spring reaction force is applied from fuel tank inside to upward.

9. Remove fuel level sensor unit, fuel filter and fuel pump assembly.

CAUTION:

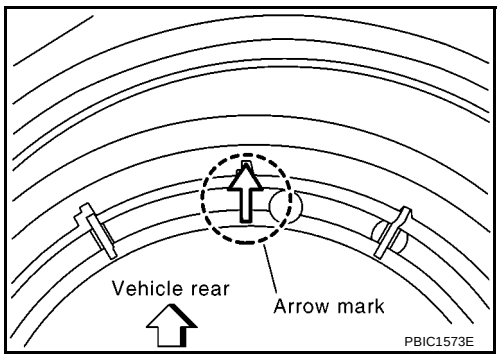
- **Be careful not to bend the float arm when removing.**
- **Handle them carefully without subjecting them to impacts such as dropping.**



10. Install lock ring temporally by hand tightening until it stops with maximum force.
    - Direct arrow mark on lock ring to vehicle rear. Then turn clockwise to tighten lock ring.

    CAUTION:
    Do not remove lock ring until fuel level sensor unit, fuel filter and fuel pump assembly is installed.
11. Remove fuel level sensor unit in the following procedures.

a. Remove harness connector (brown).
   - Hold connector with your fingers, because there is no tab for releasing stopper. Pull it out straight downward.

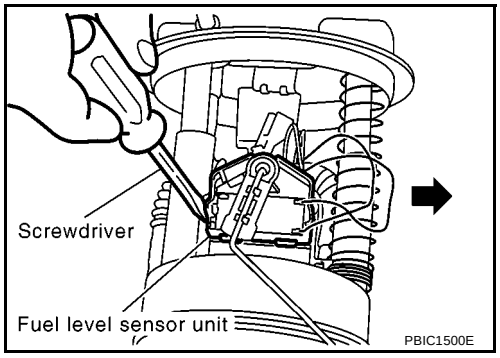


b. Insert a screwdriver into the gap between fuel level sensor unit left side and mounting part. Pry the screwdriver in the direction shown by arrow.

   CAUTION:
   Be careful not to damage anything.

c. When fixing tab comes off, slide fuel level sensor unit in the direction indicated by arrow to remove.

   CAUTION:
   - **Do not reuse removed fuel level sensor unit.**
   - **Do not disassemble fuel filter and fuel tank pump assembly.**



INSTALLATION

Install in the reverse order of removal which being careful of the following.

Installation of Fuel Level Sensor Unit

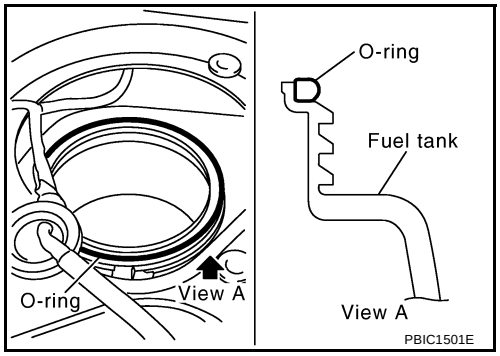
Install it in the following procedures.

1. Check fuel gauge mounting part of fuel filter and fuel pump assembly side for damage.
2. Slide fuel level sensor unit along with mounting groove. Insert new fuel level sensor unit until it contacts the face.
   - After inserting, apply force to the reverse direction (removal direction). Make sure fuel level sensor unit does not come off.
3. Connect harness connector.
   - Insert harness connector securely until it contacts the face.

Installation of Fuel Level Sensor Unit, Fuel Filter and Fuel Pump Assembly

Install it in the following procedures.

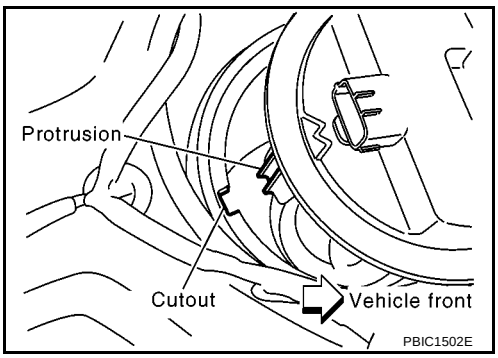
1. Remove lock ring.
2. Install O-ring to fuel tank without any twist.



3. Install fuel level sensor unit, fuel filter and fuel pump assembly, aligning the sender unit rear side protrusion with the fuel tank opening rear side cutout.

CAUTION:

- **Do not allow O-ring to drop.**
- **Maintain closely jointed status by pressing fuel level sensor unit, fuel filter and fuel pump assembly at an opening of the tank until the end of step 5, in order to prevent the fallout of O-ring (To maintain the O-ring installed status of view A in the figure at step 2).**

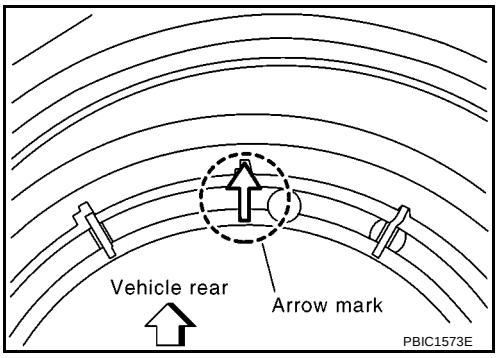


4. Direct arrow mark on lock ring to vehicle rear. Then turn lock ring clockwise by hand until it steps with maximum force.

CAUTION:

Install lock ring horizontally.

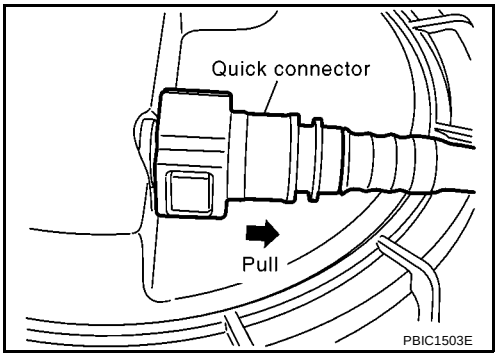
5. Tighten lock ring to the specification with lock ring wrench [SST: KV993G0010].



Fuel Feed Hose Installation

- Connect quick connector in the following procedures.

1. Check connections for damage or foreign material.
2. Align the mating side connection part with the center of shaft on the sender unit, and insert quick connector straight until it clicks.
3. After connecting, pull out quick connector by hand. Make sure connections are secure.



INSPECTION AFTER INSTALLATION

- Check for fuel leak in the following procedures.

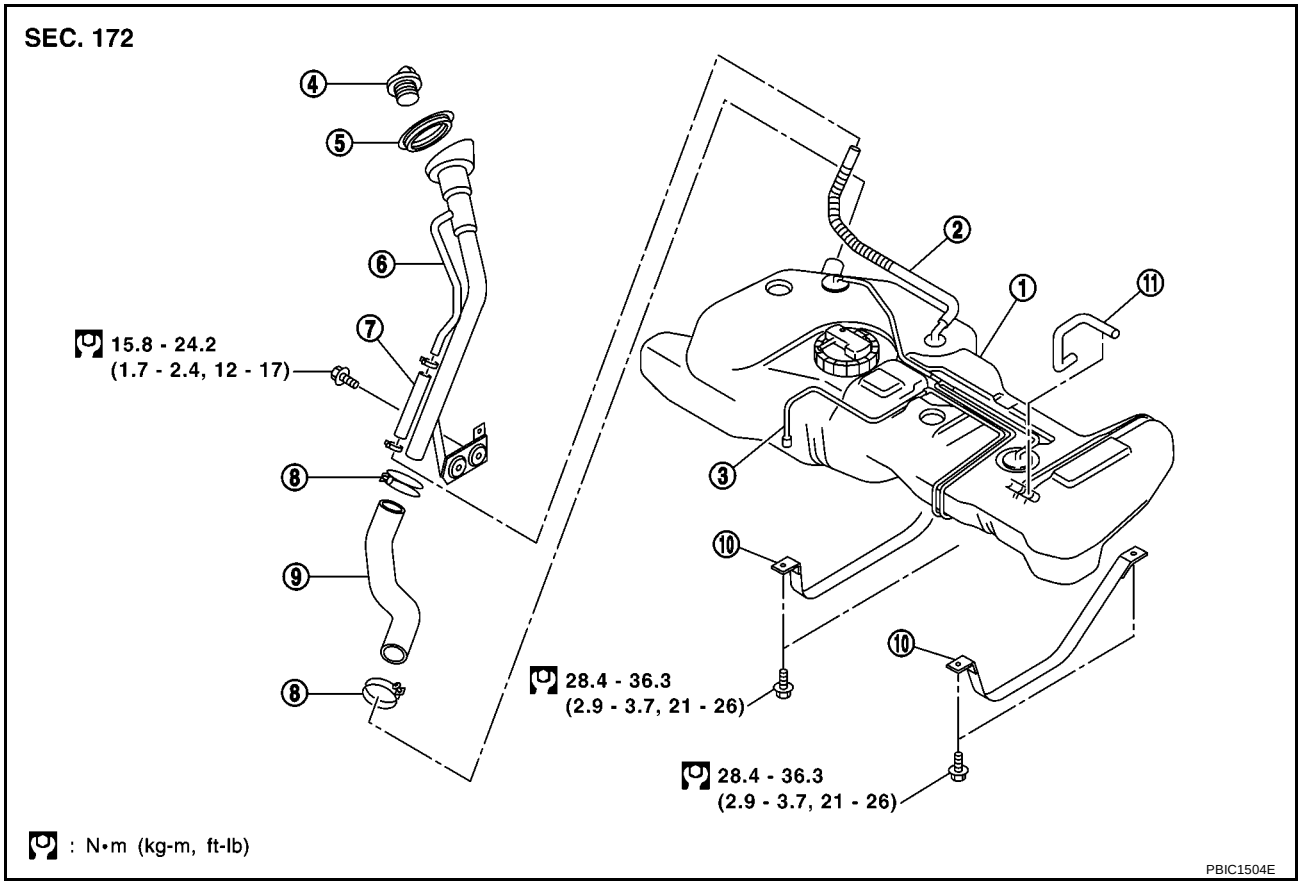
1. Turn the ignition switch to ON (do not start engine), and with fuel pressure applied in the fuel line, check to make sure there are no fuel leaks from the connection.
2. Start the engine, and at increased speed, check again to see if there any fuel leaks from the connection.

FUEL TANK

PFP:17202

Removal and Installation

EBS00OJ9



1. Fuel tank
2. Vent hose
3. EVAP tube
4. Fuel filler cap
5. Grommet
6. Fuel filler tube
7. Vent hose
8. Clamp
9. Fuel filler hose
10. Mounting band
11. EVAP hose

REMOVAL

WARNING:

Be sure to read “General Precautions” when working on fuel system. Refer to FL-3, "General Precautions" .

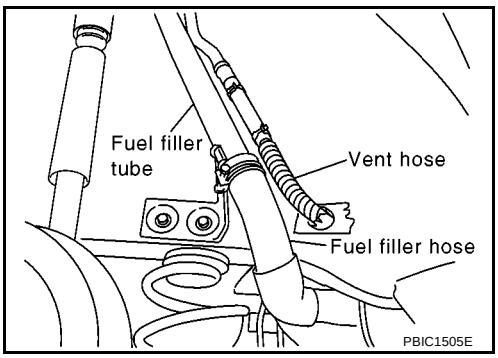
1. Remove RH rear wheel.
2. Perform steps 1 to 7 of FL-4, "REMOVAL" in “FUEL LEVEL SENSOR UNIT, FUEL FILTER AND FUEL PUMP ASSEMBLY”.

   CAUTION:

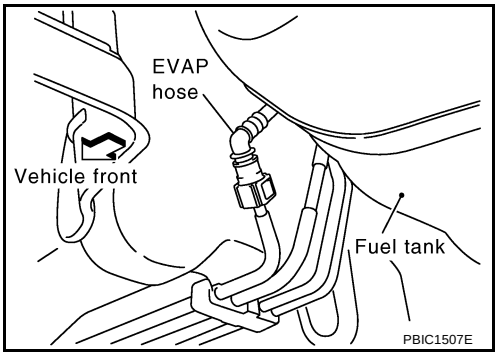
   If fuel tank bottom face is not level, and remaining fuel level is high, tank position becomes unstable, causing a danger. Drain fuel further than that in step 1 of the referenced procedure until tank can be held by hand even if the balance is lost.
3. Remove center muffler and main muffler. Refer to EX-3, "EXHAUST SYSTEM" .
4. Remove vehicle side insulator on upper center muffler and main muffler.
5. Move parking brake cable from the lower face of fuel tank. Then remove clips for parking brake cable.

6. Disconnect fuel filler hose on fuel tank side.

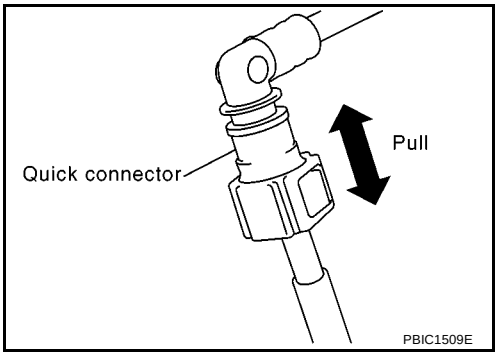
CAUTION:
Do not remove fuel filler hose at fuel filler tube side, preventing to interfere with suspension due to dislocation when installing. When removing at fuel filler tube side necessarily, put mating marks, and remove.



7. Remove vent hose at RH rear wheelwell side.
8. Remove EVAP hose at front side of fuel tank.



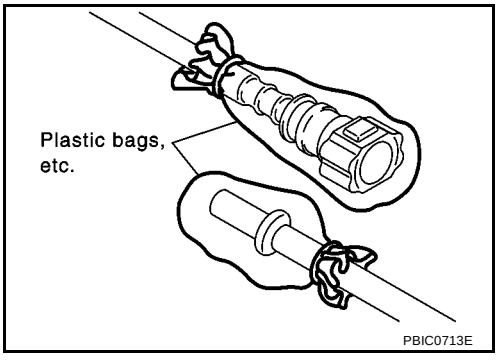
- Remove quick connector in the following procedures.
  - Pinch quick connector square-parts with your fingers, and pull out the quick connector by hand.
  - If quick connector and tube on vehicle are stuck, push and pull several times until they move, and pull out.



CAUTION:
- **The tube can be removed when the tabs are completely depressed. Do not twist it more than necessary.**
- **Do not use any tools to remove the quick connector.**
- **Keep the resin tube away from heat. Be especially careful when welding near the tube.**
- **Prevent acid liquid such as battery electrolyte etc. from getting on the resin tube.**
- **Do not bend or twist the tube during installation and removal.**

- To keep clean the connecting portion and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.

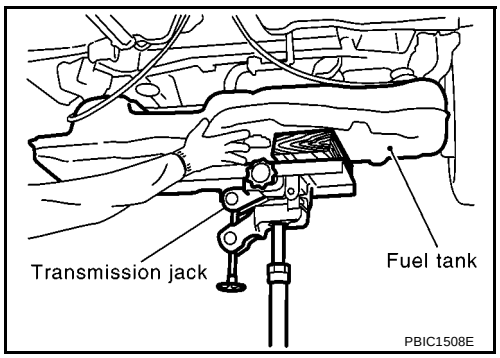
CAUTION:
Do not insert plug, preventing damage on O-ring in quick connector.



9. Support center of fuel tank with suitable transmission jack.

CAUTION:
Securely support the fuel tank with a piece of wood.

10. Remove RH/LH mounting band.
11. Lower suitable transmission jack carefully to remove fuel tank while holding it by hand. Perform the following works at the same time.
    - Pull out vent hose from through hole of vehicle.
    - Avoid interference with tank by pulling parking brake cable by hand.



CAUTION:
Tank may be in an unstable condition because of the shape of fuel tank bottom. Do not rely on jack too much. Be sure to hold tank securely.

INSTALLATION

Install in the reverse order of removal which being careful of the following.

Installation of Fuel Tank Mounting Band

- Install it by referring to the identification stamp mark “R” and “L” on the end.

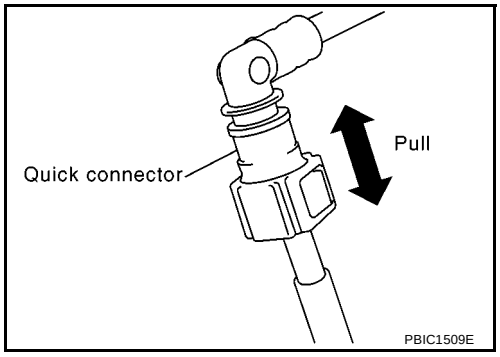
Installation of fuel Filler Hose

- Insert filler hose into mating side part by 35 mm (1.38 in), and secure it with clamp.
- When installing clamp, do not allow clamp to contact the bulge (bump) part of the tube.
- Tighten the clamp of filler hose so that the remaining length becomes 5 - 9 mm (0.20 - 0.35 in) [or tightening torque: 1.3 - 3.7 N·m (0.13 - 0.38 kg-m, 12 - 32 in-lb].

Installation of EVAP Hose

- Connect quick connector in the following procedures.

1. Check connections for damage or foreign material.
2. Align the mating side connection part with the center of shaft, and insert connector straight until it clicks.
3. After connecting, pull out quick connector by hand. Make sure connections are secure.



INSPECTION AFTER INSTALLATION

- Check for fuel leak in the following procedures.

1. Turn the ignition switch to ON (do not start engine), and with fuel pressure applied in the fuel line, check to make sure there are no fuel leaks from the connection.
2. Start the engine, and at increased speed, check again to see if there any fuel leaks from the connection.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

EBS00OJO

Fuel tank capacity	Approx. 46 ℓ (10-1/8 Imp gal)

Tightening Torque

EBS00OJP

Unit: N·m (kg-m, ft-lb)

Fuel tank mounting band	28.4 - 36.3 (2.9 - 3.7, 21 - 26)
Fuel filler tube	15.8 - 24.2 (1.7 - 2.4, 12 - 17)
Lock ring	55.0 - 75.0 (5.7 - 7.6, 41 - 55)

PREPARATION

PFP:00002

Special Service Tool

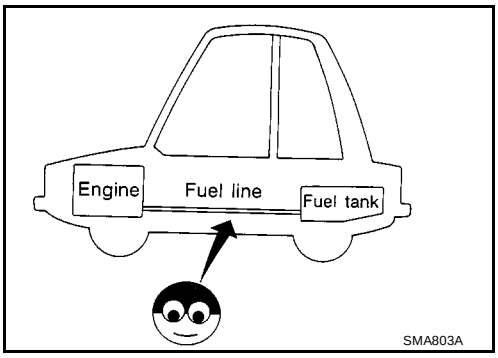
FUEL SYSTEM

PFP:17503

Checking Fuel Lines

EBS01C7Z

Inspect fuel lines and tank for improper attachment, leaks, cracks, damage, chafing and deterioration.If necessary, repair or replace.



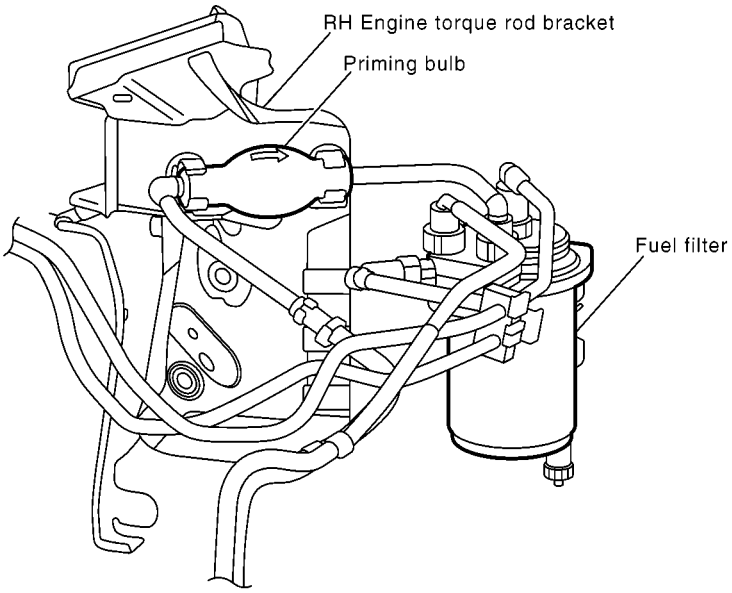
FUEL FILTER

PFP:16400

Removal and Installation

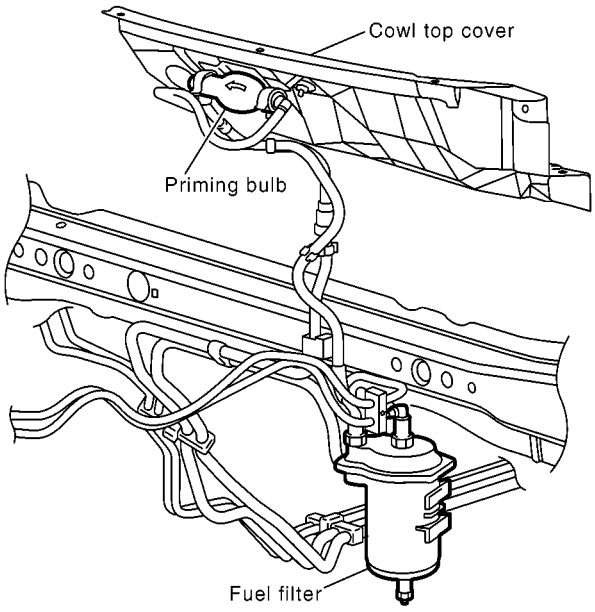
EBS01C80

LHD models



MBIB1064E

RHD models



MBIB1065E

Water Draining from Fuel Filter

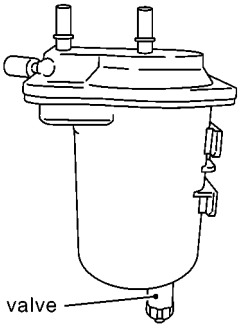
EBS01C81

DRAINING WATER (RHD)

CAUTION:

Before carrying out any work, wait for the fuel temperature is dropped.

Open drain valve at the bottom of fuel filter.



MBIB0530E

DRAINING WATER (LHD)

Refer to EM-105, "PRECAUTIONS" , EC-K9K-2, “DIESEL EQUIPMENT”.

1. Remove right fender protector. Refer to EI-10, "COWL TOP" .
2. Remove foam insulator.
3. Open drain valve at the bottom of fuel filter.

CAUTION:
Put a shop cloth under the drain valve, to avoid the water and fuel spill on ABS actuator.

FUEL FILTER CHECK

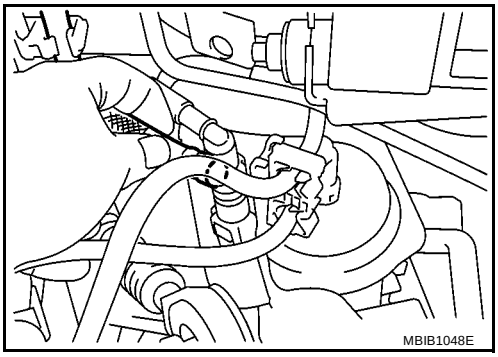
Check fuel filter for fuel leakage, damage and other abnormal signs.

Changing Fuel Filter

EBS01C82

REMOVAL (RHD)

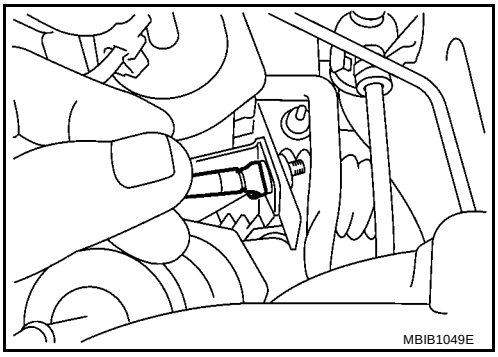
1. Remove quick connectors in the following procedures.
   - Pinch quick connector square-parts with your fingers, and pull out the quick connector by hand.
   - If quick connector and tube on vehicle are stuck, push and pull several times until they move, and pull out.



MBIB1048E

2. Remove fuel filter from fuel filter bracket.

CAUTION:
Do not spill the fuel during removal. If the fuel is spill, immediately wipe it off. Be especially careful to prevent the fuel from adhering to the insulators of the engine mounts.



MBIB1049E

REMOVAL (LHD)

1. Remove Cowl Top. Refer to EI-10, "COWL TOP" .
2. Remove priming bulb from priming bulb bracket.
3. Remove fuel filter from fuel filter bracket.
4. Remove quick connectors as shown.

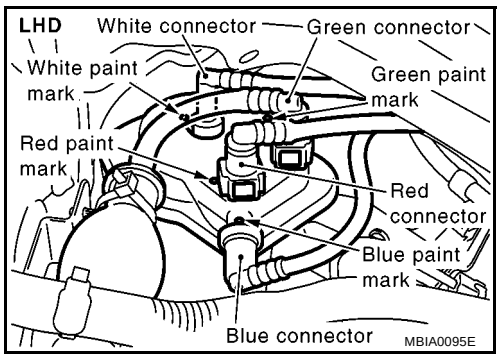
CAUTION:
Put a shop cloth under the drain valve, to avoid the water and fuel spill on ABS actuator. Be especially careful to prevent any damage.

INSTALLATION

- Install in the reverse order of removal.

- To install fuel filter connectors, respect paint marks on fuel filter as shown.
- After installation, operate the priming bulb vertically, if it is possible, to perform air bleeding.
  Refer to FL-16, "Bleeding Fuel Filter" .

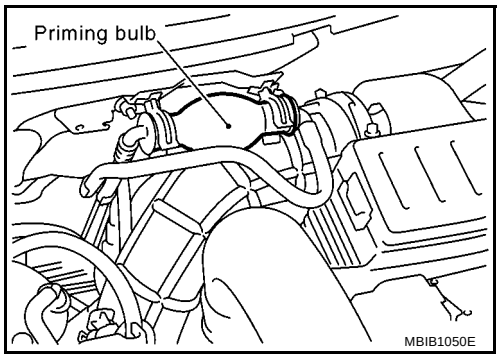
  CAUTION:
  Do not bend or twist the fube during installation and removal.



Bleeding Fuel Filter

EBS01C83

1. Prime the circuit using the priming bulb.
2. Perform engine cranking with repeating several times until engine starting.

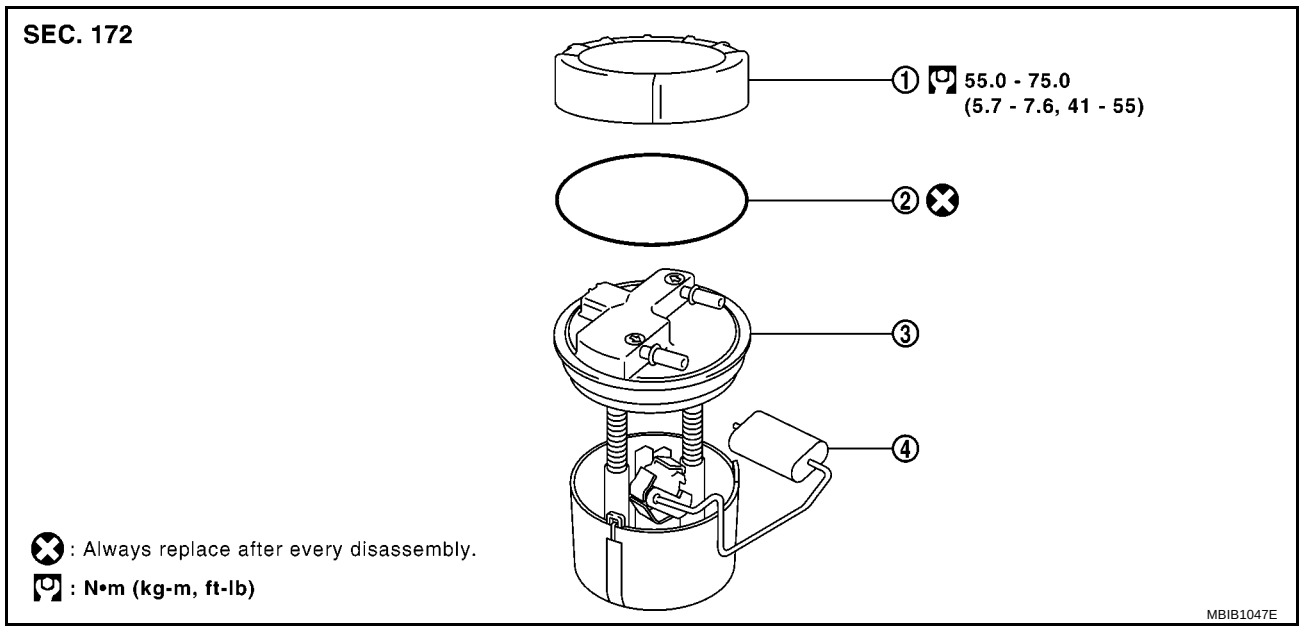


FUEL LEVEL SENSOR UNIT

PFP:17042

Removal and Installation

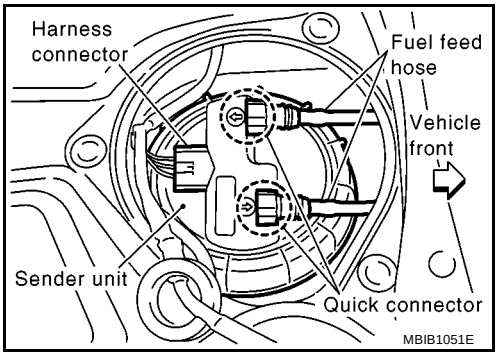
EBS01C84



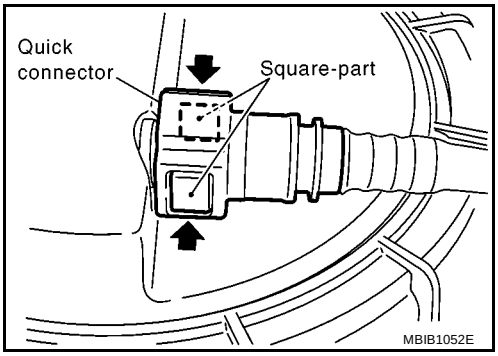
1. Rock ring
2. O-ring
3. Fuel level sensor unit
4. Float arm

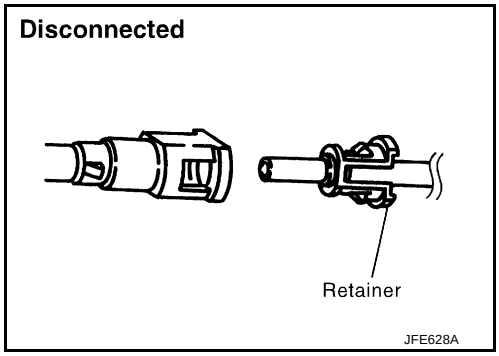
REMOVAL

1. Disconnect battery ground cable.
2. Open fuel filler lid and filler cap to release the pressure inside the fuel tank.
3. Remove rear seat cushion. Refer to SE-11, "REAR SEAT" .
4. Remove inspection hole cover under the rear seat.
5. Disconnect electrical connector.
6. Disconnect the quick connectors.



- Hold the connector while pushing in tabs, and pull out the tube.





CAUTION:

- **The tube can be removed when the tabs are completely depressed. Do not twist it more than necessary.**
- **Do not use any tools to remove the quick connector.**
- **Keep the resin tube away from heat. Be especially careful when welding near the tube.**
- **Prevent acid liquid such as battery electrolyte etc. from getting on the resin tube.**
- **Do not bend or twist the tube during installation and removal.**
- **Only when the tube is replaced, remove the remaining retainer.**
- **When the tube is replaced, also replace the retainer with a new one.**

Retainer color:

Red (Feed hose side)

White (Return hose side)

7. Using lock ring wrench [SST: KV993G0010], remove lock ring.

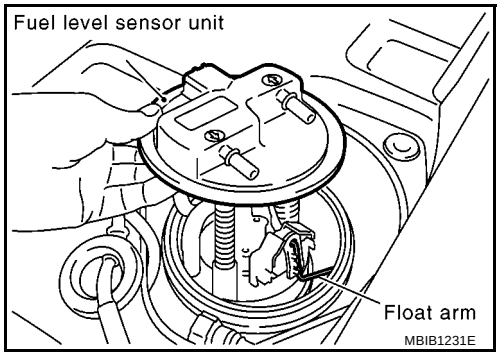
CAUTION:

Rotate SST while pressing fuel level sensor unit as spring reaction force is applied from fuel tank inside to up ward.

8. Remove fuel level sensor unit.

CAUTION:

- **Be careful not to bend the float arm when removing.**
- **Handle them carefully without subjecting them to impacts such as dropping.**



INSTALLATION

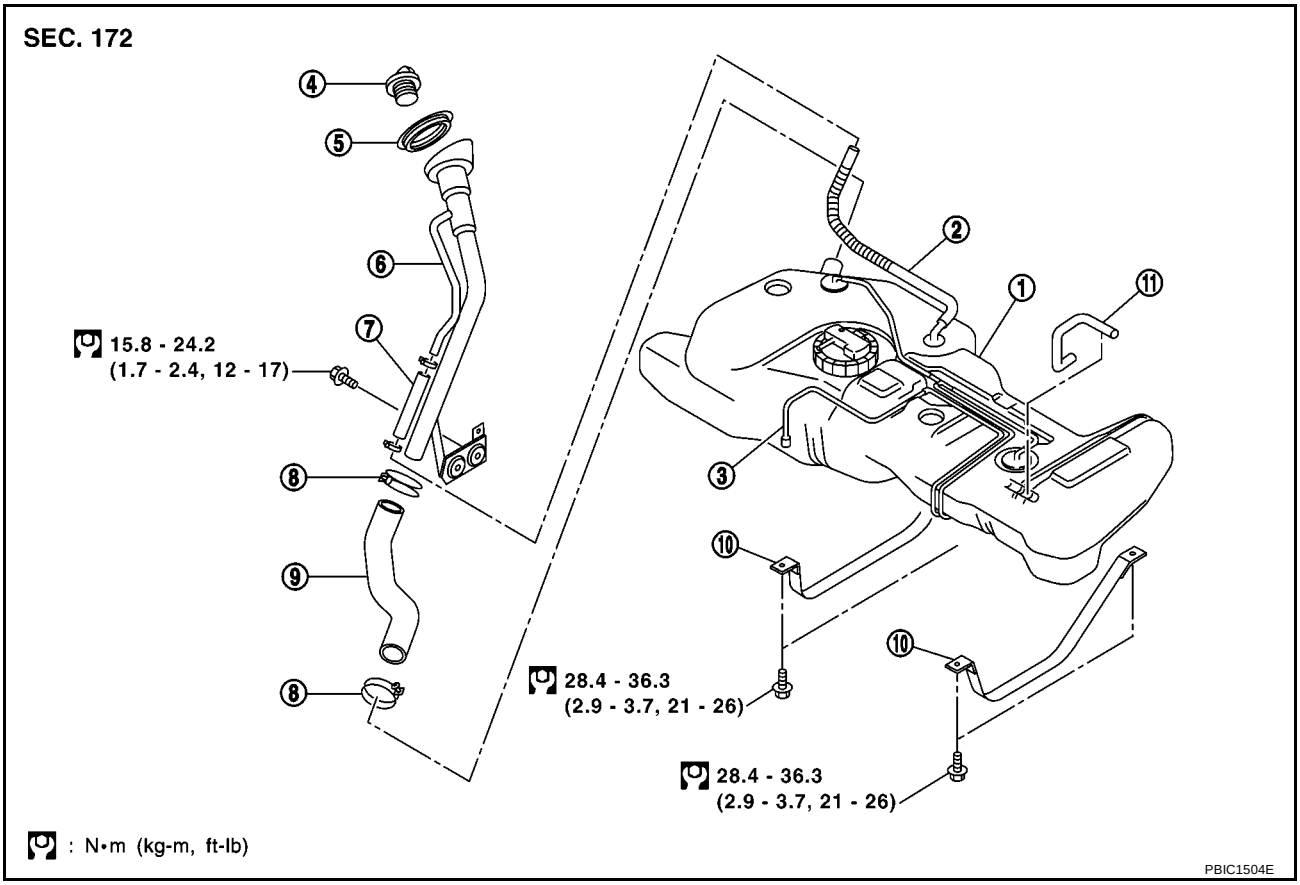
Install in the reverse order of removal.

FUEL TANK

PFP:17202

Removal and Installation

EBS01C85



1. Fuel tank
2. Vent hose
3. EVAP tube
4. Fuel filler cap
5. Grommet
6. Fuel filler tube
7. Vent hose
8. Clamp
9. Fuel filler hose
10. Mounting band
11. EVAP hose

REMOVAL

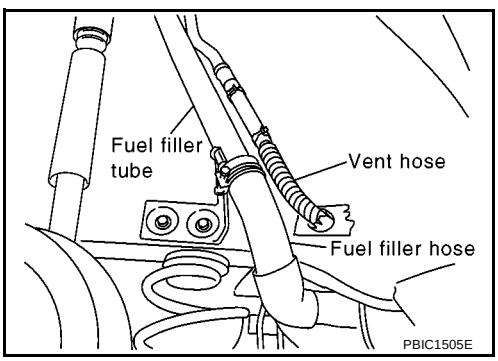
1. Remove RH rear wheel.
2. Perform steps 1 to 7 of FL-17, "REMOVAL" in “FUEL LEVEL SENSOR UNIT”.

   CAUTION:

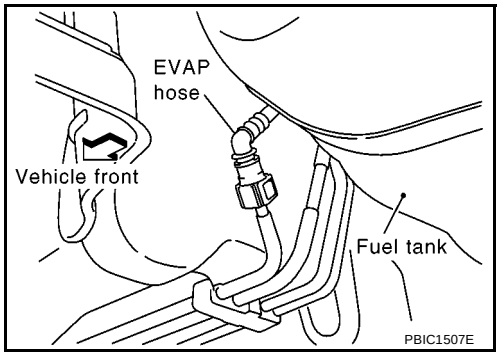
   If fuel tank bottom face is not level, and remaining fuel level is high, tank position becomes unstable, causing a danger. Drain fuel further than that in step 1 of the referenced procedure until tank can be held by hand even if the balance is lost.
3. Remove center muffler and main muffler. Refer to EX-3, "EXHAUST SYSTEM" .
4. Remove vehicle side insulator on upper center muffler and main muffler.
5. Move parking brake cable from the lower face of fuel tank. Then remove clips for parking brake cable.
6. Disconnect fuel filler hose on fuel tank side.

   CAUTION:

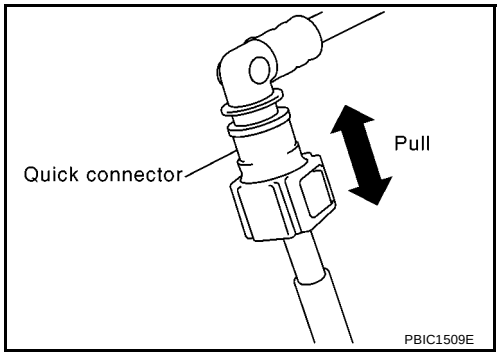
   Do not remove fuel filler hose at fuel filler tube side, preventing to interfere with suspension due to dislocation when installing. When removing at fuel filler tube side necessarily, put mating marks, and remove.



7. Remove vent hose at RH rear wheelwell side.
8. Remove EVAP hose at front side of fuel tank.



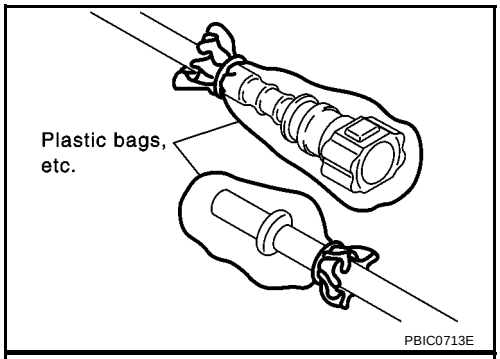
- Remove quick connector in the following procedures.
  - Pinch quick connector square-parts with your fingers, and pull out the quick connector by hand.
  - If quick connector and tube on vehicle are stuck, push and pull several times until they move, and pull out.



CAUTION:

- **The tube can be removed when the tabs are completely depressed. Do not twist it more than necessary.**
- **Do not use any tools to remove the quick connector.**
- **Keep the resin tube away from heat. Be especially careful when welding near the tube.**
- **Prevent acid liquid such as battery electrolyte etc. from getting on the resin tube.**
- **Do not bend or twist the tube during installation and removal.**

- To keep clean the connecting portion and to avoid damage and foreign materials, cover them completely with plastic bags or something similar.



CAUTION:

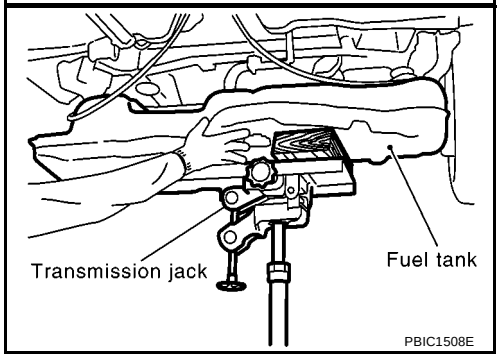
Do not insert plug, preventing damage on O-ring in quick connector.

9. Support center of fuel tank with suitable transmission jack.

CAUTION:

Securely support the fuel tank with a piece of wood.

10. Remove RH/LH mounting band.
11. Lower suitable transmission jack carefully to remove fuel tank while holding it by hand. Perform the following works at the same time.
    - Pull out vent hose from through hole of vehicle.
    - Avoid interference with tank by pulling parking brake cable by hand.



CAUTION:

Tank may be in an unstable condition because of the shape of fuel tank bottom. Do not rely on jack too much. Be sure to hold tank securely.

INSTALLATION

Install in the reverse order of removal which being careful of the following.

Installation of Fuel Tank Mounting Band

- Install it by referring to the identification stamp mark “R” and “L” on the end.

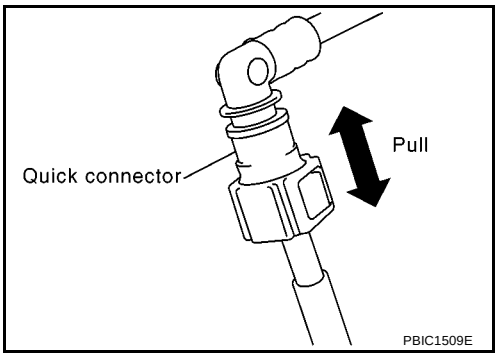
Installation of fuel Filler Hose

- Insert filler hose into mating side part by 35 mm (1.38 in), and secure it with clamp.
- When installing clamp, do not allow clamp to contact the bulge (bump) part of the tube.
- Tighten the clamp of filler hose so that the remaining length becomes 5 - 9 mm (0.20 - 0.35 in) [or tightening torque: 1.3 - 3.7 N·m (0.13 - 0.38 kg-m, 12 - 32 in-lb].

Installation of EVAP Hose

- Connect quick connector in the following procedures.

1. Check connections for damage or foreign material.
2. Align the mating side connection part with the center of shaft, and insert connector straight until it clicks.
3. After connecting, pull out quick connector by hand. Make sure connections are secure.



Installation of Vent Hose

- Push vent hose into through hole of vehicle.
- Insert vent hose into vent rubber hose, and secure it with clamp.

INSPECTION AFTER INSTALLATION

Make sure there is no fuel leakage at connections in the following procedure.

- Start engine, rev it up and make sure there is no fuel leakage at connections.

PRECAUTIONS

PFP:00001

Cautions

EES000ZW

- When installing rubber bushings, final tightening must be carried out under unladen conditions with tires on flat, level ground. Oil will shorten the life of rubber bushings. Be sure to wipe off any spilled oil.
- “Unladen condition” means that fuel, coolant and lubricant are full and ready for drive. However, spare tire, jack, and hand tools should be unloaded.
- After installing the removed suspension parts, always check wheel alignment and adjust if necessary.
- Replace the caulking nut with a new one. Install a new nut without wiping the oil off before tightening.

Precautions for Brake System

EES000ZX

- When installing rubber parts, final tightening must be carried out under unladen condition* with tires on ground.
  *: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Use flare nut wrench when removing or installing brake tubes.
- After installing removed suspension parts, check wheel alignment and adjust if necessary.
- Always torque brake lines when installing.

13. Upper link
14. Suspension member
15. Suspension member stay

On-Vehicle Inspection and Service

EES00101

LOOSENESS, BACKLASH, AND DAMAGE OF MOUNTING PARTS AND CONNECTIONS

Lift the vehicle, and inspect as follows:

- Check mounting point of each component for looseness, backlash, and damage.
- Check end play of the lower ball joint.

1. Attach a dial gauge so that the contact rests on the brake caliper.
2. Set front wheels in a straight-ahead position. Do not depress brake pedal.
3. Measure axial end play by placing an iron pry bar or something similar between transverse link and steering knuckle.

Standard

Axial end play : 0 mm (0 in)

CAUTION:

Be careful not to damage ball joint boot.

4. If axial end play is outside the standard, remove transverse link and check lower ball joint.

Wheel Alignment

EES00102

DESCRIPTION

- Measure wheel alignment under unladen conditions. “Unladen conditions” means that fuel, coolant, and lubricant are full. However, spare tire, jack, and hand tools should be unloaded.

PRELIMINARY INSPECTION

1. Check the tires for improper air pressure and wear.
2. Check road wheels for runout.
3. Check wheel bearing axial end play.
4. Check lower ball joint axial end play.
5. Check strut operation.
6. Check each mounting point of axle and suspension for looseness and deformation.
7. Check each link and arm for cracks, deformation, and other damage.
8. Check the vehicle posture.

INSPECTION OF CAMBER, CASTER, AND KINGPIN INCLINATION ANGLES

- Camber, caster, and kingpin inclination angles cannot be adjusted.
- Before inspection, mount front wheels onto turning radius gauge. Mount rear wheels onto a stand that has same height so the vehicle will remain horizontal.

1. Measure camber, caster and kingpin inclination of both right and left wheels with a suitable alignment gauge.

Camber, caster and kingpin inclination:

For CR engines:

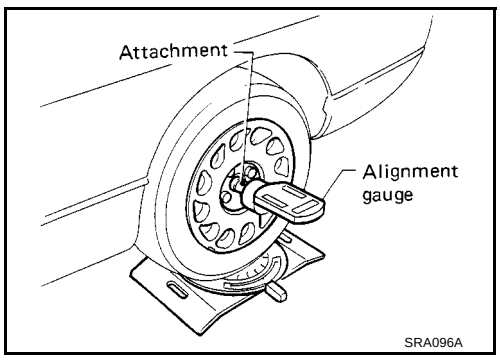
Camber : -0°51′ - 0°39′ (-0.85° - 0.65°)

Caster : 3°42′ - 5°12′ (3.70° - 5.20°)

For K9K engines:

Camber : -0°51′ - 0°39′ (-0.85° - 0.65°)

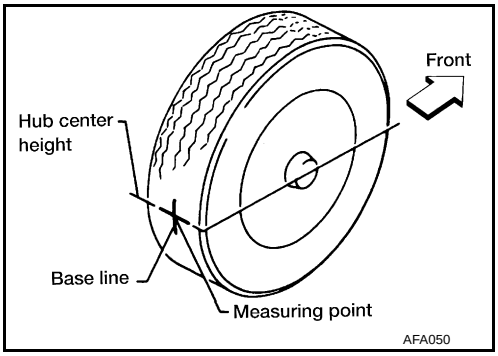
Caster : 3°36′ - 5°06′ (3.60° - 5.10°)



2. If camber, caster or kingpin inclination is not within specification, inspect front suspension parts. Replace dam-aged or worn out parts.

Toe-in

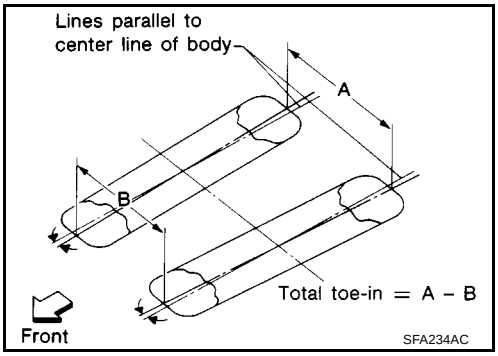
Measure toe-in using the following procedure.



WARNING:

- **Always perform the following procedure on a flat surface.**
- **Make sure that no person is in front of the vehicle before pushing it.**

1. Bounce front of vehicle up and down to stabilize the posture.
2. Push the vehicle straight ahead about 5 m (16 ft).
3. Put a mark on base line of tread (rear side) of both tires at the same height as hub center. These are measuring points.



4. Measure distance “A” (rear side).
5. Push the vehicle slowly ahead to rotate the wheels 180degrees (1/2 turn).

If the wheels have rotated more than 180 degrees (1/2 turn), try the above procedure again from the beginning. Never push vehicle backward.

6. Measure distance “B” (front side).

Total toe-in: In 2 - 0 mm (0.08 - 0 in)

STEERING ANGLE INSPECTION

1. Set wheels in straight-ahead position. Move vehicle to set front wheels on turning radius gauge.
2. Turn steering wheel fully to right and left, and measure steering angle. Refer to PS-13, "SERVICE DATA AND SPECIFICATIONS (SDS)" .

COIL SPRING AND SHOCK ABSORBER

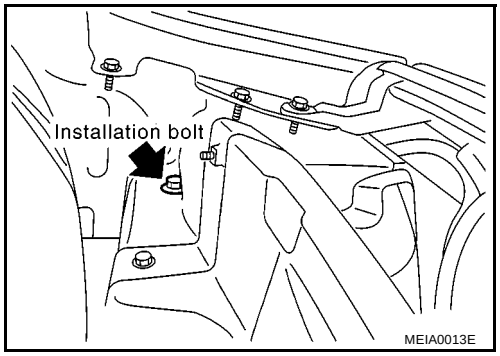
PFP:54302

Removal and Installation

EES00103

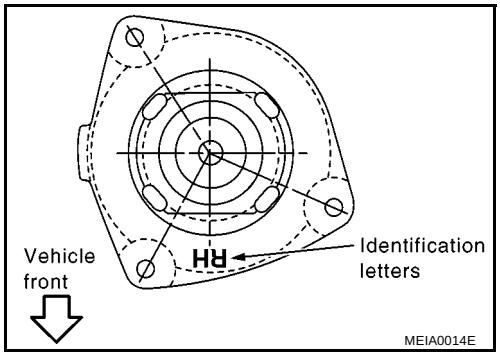
REMOVAL

1. Raise vehicle and remove tire.
2. Remove cowl top cover. Refer to EI-10, "COWL TOP" .
3. Remove electrical wires of ABS wheel sensor from strut. Refer to BRC-44, "WHEEL SENSORS" .
4. Remove brake hose lock plate. Refer to BR-11, "BRAKE PIPING AND HOSE" .
5. Remove stabilizer connecting rod.
6. Remove nuts and bolts securing steering knuckle to strut.
7. Remove upper bolts of the strut and remove strut from the vehicle.



INSTALLATION

- Refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" for tightening torque. Tighten in the reverse order of removal.
- Make sure the identification letters on strut mounting insulator face toward vehicle front. Then install strut.



Disassembly and Assembly

EES00104

DISASSEMBLY

1. Install strut attachment (SST) to strut and fix it in a vise.

   CAUTION:
   When installing strut attachment (SST), wrap a shop cloth around strut to protect it from damage.
2. Slightly loosen piston rod lock nut.

   CAUTION:
   Do not remove piston rod lock nut completely. If it is removed completely, coil spring jumps out and may cause serious damage or injury.
3. Compress coil spring using a spring compressor (commercial service tool).

   CAUTION:
   Start compressing the coil spring after making sure that the spring compressor is completely attached to the coil spring.
4. After making sure coil spring is free between strut mounting bearing and lower seats at the end of Step 3, remove piston rod lock nut.
5. Remove small parts on strut.
   - Remove strut mounting insulator and strut mounting bearing. Remove coil spring from strut.

6. Remove bound bumper.
7. Gradually release spring compressor (commercial service tool), and remove coil spring.

INSPECTION AFTER DISASSEMBLY

Strut Inspection

- Check the strut for deformation, cracks, and damage, and replace if necessary.
- Check piston rod for damage, uneven wear, and distortion, and replace if necessary.
- Check connections and packing for oil leakage, and replace if necessary.

Insulator and Rubber Parts Inspection

Check strut mounting insulator for cracks and rubber parts for wear. Replace them if necessary.

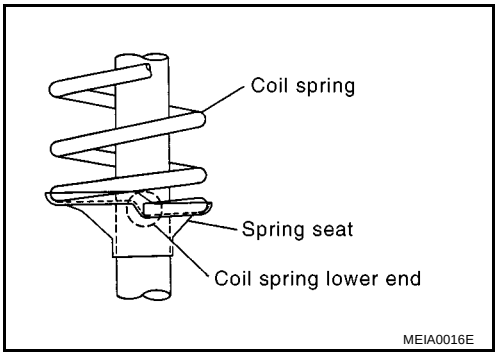
Coil Spring Inspection

Check coil spring for cracks, wear, and damage. Replace if necessary.

ASSEMBLY

1. Compress coil spring using a spring compressor (commercial service tool), and install it onto the strut.

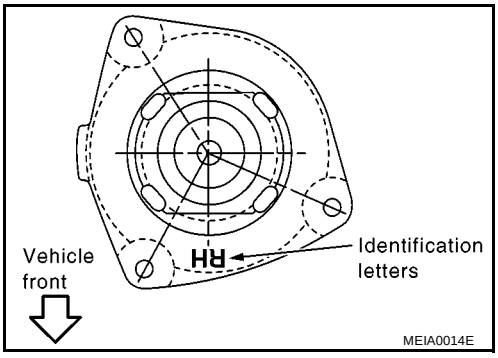
   CAUTION:
   - **Face the small diameter side (there is identification mark in 1.25 rotations) of coil spring downward. Align lower end to spring seat as shown in the figure.**
   - **Start compressing the coil spring after making sure that the spring compressor is completely attached to the coil spring.**



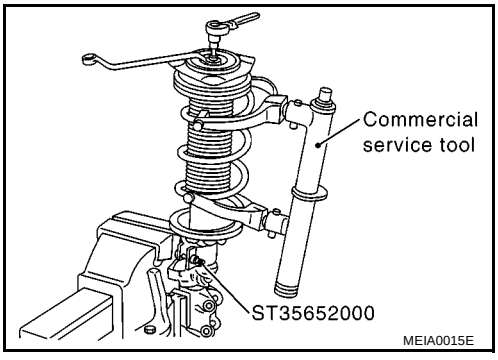
2. Connect bound bumper to strut piston rod.
3. Install small parts to the strut.
   - Attach strut mounting insulator, strut mounting bearing. Position piston rod lock nut.

   CAUTION:
   Do not reuse piston rod lock nut.
4. Be sure the identification letters on strut mounting insulator are positioned as shown.
5. Be sure coil spring is properly set in strut mounting bearing. Gradually release spring compressor (commercial service tool).
6. Tighten piston rod lock nut to the specified torque.

   Tightening torque : 60 - 75 N·m (6.2 - 7.6 kg-m, 45 - 55 ft-lb)



7. Remove strut attachment (SST).



TRANSVERSE LINK

PFP:54500

Removal and Installation

EES00105

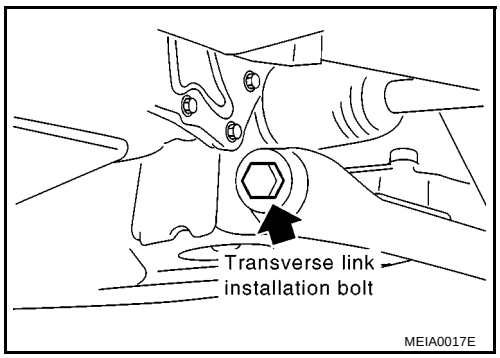
REMOVAL

1. Raise vehicle and remove tire.
2. Remove nuts and bolts of transverse link ball joint, and remove transverse link from steering knuckle.
3. Remove transverse link nuts and bolts, and remove transverse link from suspension member.

   NOTE:
   When removing LH transverse link (A/T models), lower the suspension member in order to remove bolts to avoid contacting and releasing the mounting bolts on vehicle front. Remove suspension member.

a. Set jack under suspension member.

b. Loosen RH upper link mounting bolt, LH upper link mounting bolt (suspension member side), suspension member mounting bolts (left/right). Lower the suspension member in order to remove transverse link mounting bolts.



INSPECTION AFTER REMOVAL

Visual Inspection

Check transverse link and bushing for deformation, cracks, and other damage, and replace entire transverse link assembly if necessary.

Ball Joint Inspection

- Manually move ball stud to confirm it moves smoothly with no binding.

Oscillating Torque Inspection

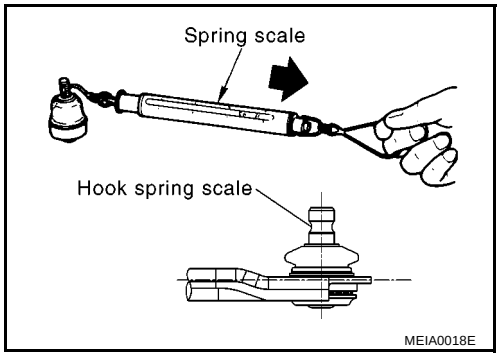
CAUTION:
Before measuring, move the ball joint at least ten times by hand to check for smooth movement.

- Hook the spring scale at the cutout on ball stud, and make sure the spring scale measurement value is within the standard when ball stud begins moving.

  Tensile force : 0.5 - 4.9 N·m (0.05 - 0.5 kg-m, 5 - 43 in-lb)

  Spring balance measurement : 15.4 - 150.8 N (1.6 - 15.4 kg, 3.5 - 33.9 lb)

- If value is outside the standard, replace transverse link.



Axial End Play Inspection

- Move the tip of the ball joint in the axial direction to check for looseness.

  Axial end play : 0 mm (0 in)

- If any looseness is noted, replace transverse link assembly as a single unit.

INSTALLATION

- Refer to FSU-5, "Components" for tightening torque. Tighten in the reverse order of removal.
- Fully tighten transverse link mounting nuts and bolts under unladen condition with tires on level ground.
- After installation, check wheel alignment. Refer to FSU-6, "Wheel Alignment" .

STABILIZER BAR

PFP:54611

Removal and Installation

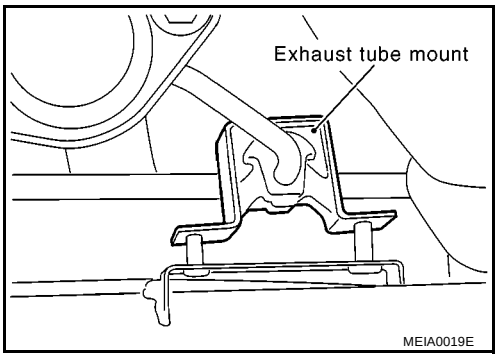
EES00106

REMOVAL

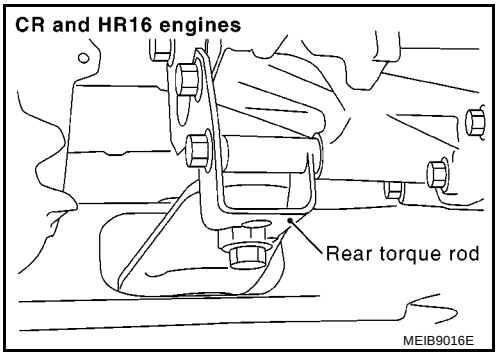
1. Raise vehicle and remove tire.
2. Remove the attachment nut on the stabilizer connecting rod and remove the stabilizer connecting rod.
3. Remove tie-rod from steering knuckle. If it is difficult to remove tie-rod, remove it with a ball joint remover (commercial service tool).

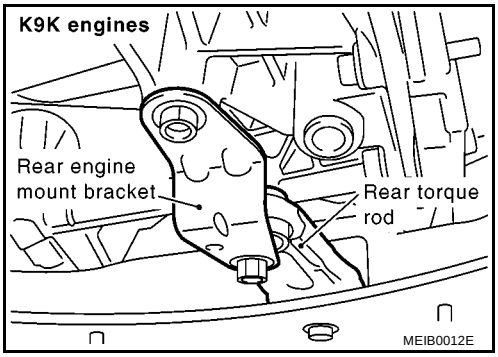
   CAUTION:

   To prevent damage to threads and to prevent ball joint remover (commercial service tool) from coming off, temporarily tighten lock nuts.
4. Remove exhaust tube mount (A/T models). Refer to AT-430, "Removal and Installation"



5. Remove transaxle rear torque rod. Refer to MT-7, "REMOVAL AND INSTALLATION" (with JH3 transaxle) or MT-37, "REMOVAL AND INSTALLATION" (with JR5 transaxle) for M/T models, AT-430, "Removal and Installation" for A/T models.

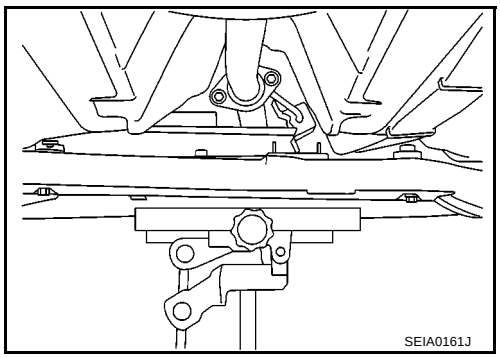




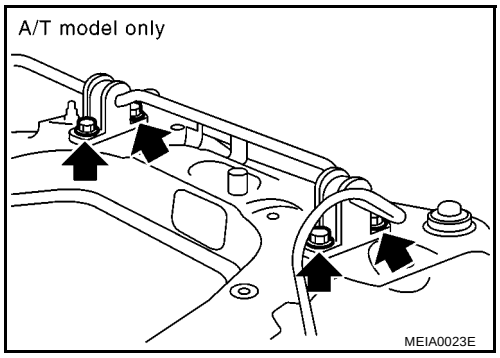
6. Remove rear side bolt of suspension member stay.
7. Set jack under suspension member.
8. Remove bolts of suspension member and suspension member stay.

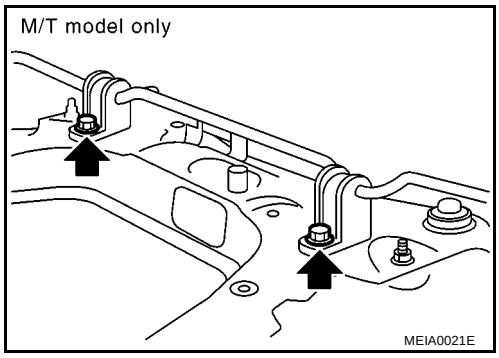
9. Lower suspension member in order to remove stabilizer mounting bolts.

CAUTION:
Be careful not to lower it too far. (Do not overload the links.)



10. Remove stabilizer bolt and remove clamp and bushing.
11. Remove stabilizer from the vehicle.



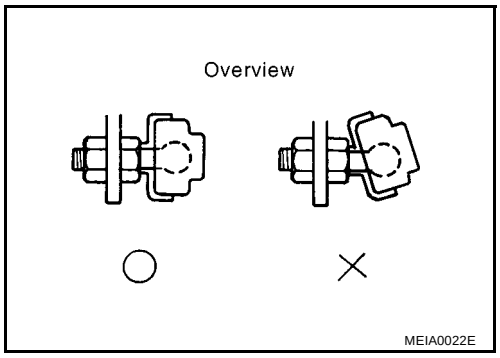


INSPECTION AFTER REMOVAL

Check stabilizer, connecting rod, bushing and clamp for deformation, cracks and damage. Replace if necessary.

INSTALLATION

- Refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" for tightening torque. Tighten in the reverse order of removal.
- Because the stabilizer uses the pillow ball type connecting rod, position the ball joint with the case on the pillow ball head parallel to the stabilizer.



FRONT SUSPENSION MEMBER

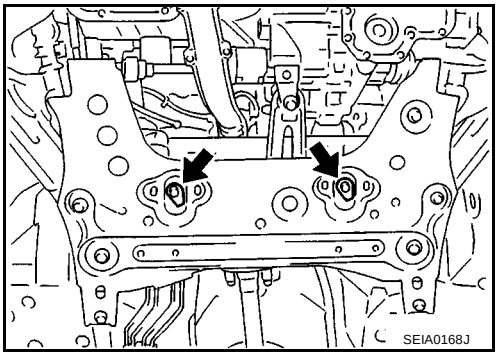
PFP:54401

Removal and Installation

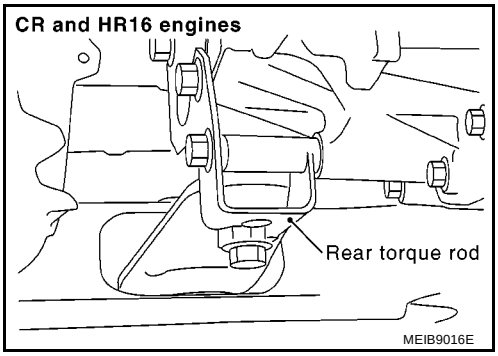
EES00107

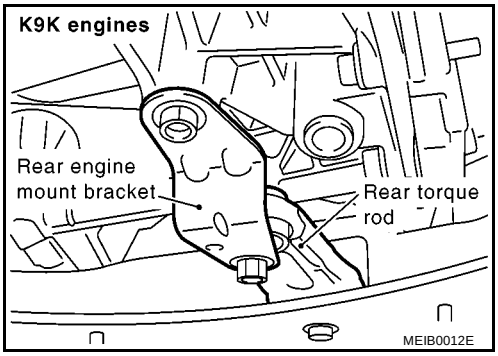
REMOVAL

1. Raise vehicle and remove tire.
2. Remove stabilizer connecting rod.
3. Remove nuts and bolts of transverse link ball joint, and remove transverse link from steering knuckle.
4. Remove steering gear mounting nuts and bolts. Separate steering gear from suspension member.

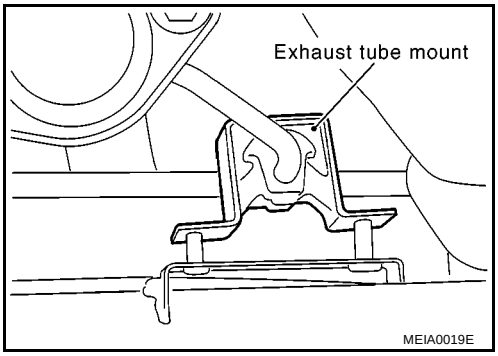


5. Remove transaxle rear torque rod. Refer to MT-7, "REMOVAL AND INSTALLATION" (with JH3 transaxle) or MT-37, "REMOVAL AND INSTALLATION" (with JR5 transaxle) for M/T models, AT-430, "Removal and Installation" for A/T models.





6. Remove exhaust tube mount (A/T models). Refer to EX-4, "REMOVAL" .
7. Remove body side bolt of upper link.
8. Set a jack under suspension member, and remove suspension member mounting bolts. Remove upper link, transverse link and stabilizer as a set.
9. Remove upper link, transverse link and stabilizer from the suspension member.



INSPECTION AFTER REMOVAL

Check suspension member for deformed parts, cracks, or any other damage. Replace if necessary.

INSTALLATION

- Refer to FSU-5, "FRONT SUSPENSION ASSEMBLY" for tightening torque. Tighten in the reverse order of removal.
- After finishing work, perform final tightening of each part under unladen condition with tires on level ground. Check wheel alignment. Refer to FSU-6, "Wheel Alignment" .

PRECAUTIONS

PFP:00001

Description

EAS000PE

Observe the following precautions to ensure safe and proper servicing. These precautions are not described in each individual section.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EAS000PF

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for NATS (NISSAN ANTI-THEFT SYSTEM)

EAS000PG

NATS will immobilize the engine if someone tries to start it without the registered key of NATS.
Both of the originally supplied ignition key IDs have been NATS registered.
The security indicator is located on the instrument panel. The indicator blinks when the immobilizer system is functioning.
Therefore, NATS warns outsiders that the vehicle is equipped with the anti-theft system.

- When NATS detects trouble, the security indicator lamp lights up while ignition switch is in "ON" position. This lighting up indicates that the anti-theft is not functioning, so prompt service is required.
- When servicing NATS (trouble diagnoses, system initialization and additional registration of other NATS ignition key IDs), CONSULT-II hardware and CONSULT-II NATS software is necessary.
  Regarding the procedures of NATS initialization and NATS ignition key ID registration, refer to CONSULT-II operation manual, NATS.

Therefore, CONSULT-II NATS software (program card and operation manual) must be kept strictly confidential to maintain the integrity of the anti-theft function.

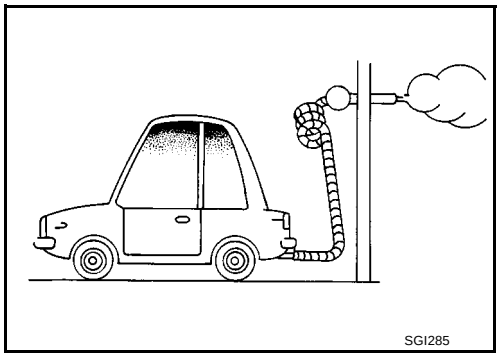
- When servicing NATS (trouble diagnoses, system initialization and additional registration of other NATS ignition key IDs), it may be necessary to re-register original key identification. Therefore, be sure to receive all keys from vehicle owner. A maximum of four or five key IDs can be registered into NATS.
- When failing to start the engine first time using the key of NATS, start as follows.

1. Leave the ignition key in "ON" position for approximately 5 seconds.
2. Turn ignition key to "OFF" or "LOCK" position and wait approximately 5 seconds.
3. Repeat step 1 and 2 again.
4. Restart the engine while keeping the key separate from any others on key-chain.

General Precautions

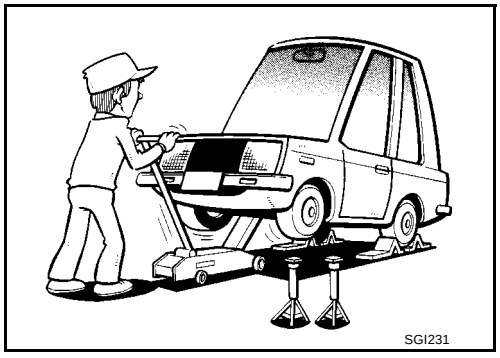
EAS000PH

- Do not operate the engine for an extended period of time without proper exhaust ventilation.
  Keep the work area well ventilated and free of any inflammable materials. Special care should be taken when handling any inflammable or poisonous materials, such as gasoline, refrigerant gas, etc. When working in a pit or other enclosed area, be sure to properly ventilate the area before working with hazardous materials.
  Do not smoke while working on the vehicle.



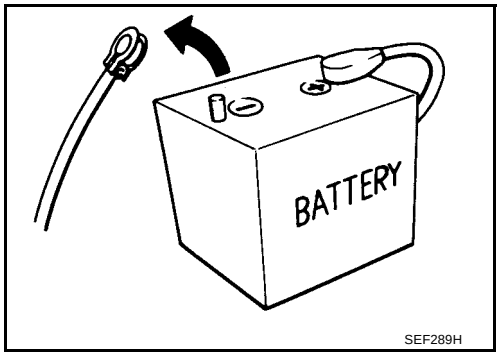
SGI285

- Before jacking up the vehicle, apply wheel chocks or other tire blocks to the wheels to prevent the vehicle from moving. After jacking up the vehicle, support the vehicle weight with safety stands at the points designated for proper lifting before working on the vehicle.
  These operations should be done on a level surface.
- When removing a heavy component such as the engine or transaxle/transmission, be careful not to lose your balance and drop them. Also, do not allow them to strike adjacent parts, especially the brake tubes and master cylinder.



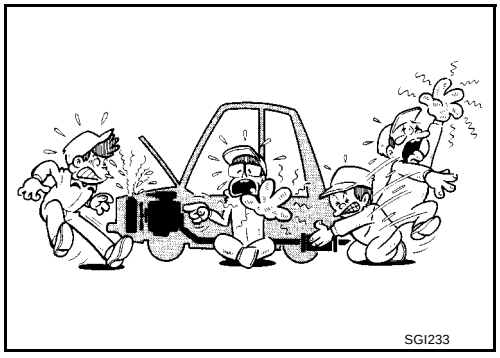
SGI231

- Before starting repairs which do not require battery power:
  Turn off ignition switch.
  Disconnect the negative battery terminal.
- If the battery terminals are disconnected, recorded memory of radio and each control unit is erased.



SEF289H

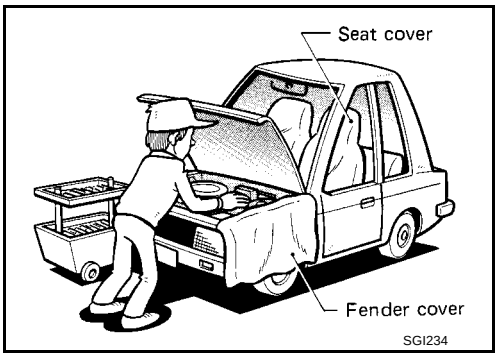
- To prevent serious burns:
  Avoid contact with hot metal parts.
  Do not remove the radiator cap when the engine is hot.
- Dispose of drained oil or the solvent used for cleaning parts in an appropriate manner.
- Do not attempt to top off the fuel tank after the fuel pump nozzle shuts off automatically.
  Continued refueling may cause fuel overflow, resulting in fuel spray and possibly a fire.
- Clean all disassembled parts in the designated liquid or solvent prior to inspection or assembly.



SGI233

- Replace oil seals, gaskets, packings, O-rings, locking washers, cotter pins, self-locking nuts, etc. with new ones.
- Replace inner and outer races of tapered roller bearings and needle bearings as a set.
- Arrange the disassembled parts in accordance with their assembled locations and sequence.
- Do not touch the terminals of electrical components which use microcomputers (such as ECM).
  Static electricity may damage internal electronic components.
- After disconnecting vacuum or air hoses, attach a tag to indicate the proper connection.
- Use only the fluids and lubricants specified in this manual.

- Use approved bonding agent, sealants or their equivalents when required.
- Use tools and recommended special tools where specified for safe and efficient service repairs.
- When repairing the fuel, oil, water, vacuum or exhaust systems, check all affected lines for leaks.
- Before servicing the vehicle:
  Protect fenders, upholstery and carpeting with appropriate covers.
  Take caution that keys, buckles or buttons do not scratch paint.



WARNING:
To prevent ECM from storing the diagnostic trouble codes, do not carelessly disconnect the harness connectors which are related to the engine control system and TCM (transmission control module) system. The connectors should be disconnected only when working according to the WORK FLOW of TROUBLE DIAGNOSES in EC and AT sections.

Precautions for Three Way Catalyst

EAS000PI

If a large amount of unburned fuel flows into the catalyst, the catalyst temperature will be excessively high. To prevent this, follow the instructions.

- Use unleaded gasoline only. Leaded gasoline will seriously damage the three way catalyst.
- When checking for ignition spark or measuring engine compression, make tests quickly and only when necessary.
- Do not run engine when the fuel tank level is low, otherwise the engine may misfire, causing damage to the catalyst.

Do not place the vehicle on flammable material. Keep flammable material off the exhaust pipe and the three way catalyst.

Precautions for Fuel

EAS000PJ

GASOLINE ENGINE (REGULAR GASOLINE)

- Three way catalyst equipped models ... use unleaded gasoline with an octane rating of at least 91 RON (research octane number).

  CAUTION:
  Do not use leaded gasoline. Using leaded gasoline will damage the three way catalyst.
- Except for the above models ... use unleaded or leaded gasoline with an octane rating of at least 88 RON (research octane number).
  Use unleaded gasoline if instructed on the fuel filler lid.

GASOLINE ENGINE (PREMIUM GASOLINE)

Use premium unleaded gasoline with an octane rating of at least 95 RON (research octane number). If premium unleaded gasoline is not available, regular unleaded gasoline with an octane rating of at least 91 RON (research octane number) can be used. However, for maximum vehicle performance, the use of premium unleaded gasoline is recommended.

CAUTION:
Do not use leaded gasoline. Using leaded gasoline will damage the three way catalyst. Using a fuel other than that specified could adversely affect the emission control devices and systems, and could also affect the warranty coverage validity.

DIESEL ENGINE

- For Europe model; use diesel fuel of at least 50 cetane.
- Except for Europe model; use diesel fuel of at least 45 cetane.

If two types of diesel fuel are available, use summer or winter fuel properly according to the following temperature conditions.

- Above -7°C (20°F) ⋯ Summer type diesel fuel.
- Below -7°C (20°F) ⋯ Winter type diesel fuel.

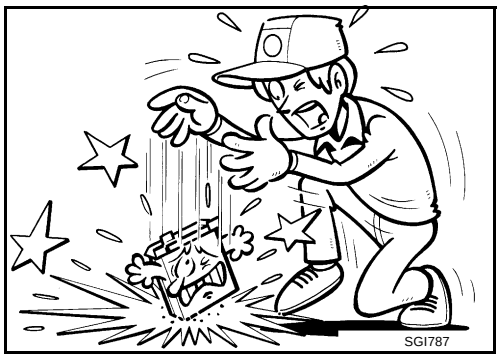
CAUTION:

- **Do not use home heating oil, gasoline or other alternate fuels in your diesel engine. The use of those can cause engine damage.**
- **Do not use summer fuel at temperature below -7°C (20°F). The cold temperature will cause wax to form in the fuel. As a result, it may prevent the engine from running smoothly.**
- **Do not add gasoline or other alternate fuels to diesel fuel.**

Precautions for Multiport Fuel Injection System or Engine Control System

EAS000PK

- Before connecting or disconnecting any harness connector for the multiport fuel injection system or ECM:
  Turn ignition switch to “OFF” position.
  Disconnect negative battery terminal.
  Otherwise, there may be damage to ECM.
- Before disconnecting pressurized fuel line from fuel pump to injectors, be sure to release fuel pressure.
- Be careful not to jar components such as ECM and mass air flow sensor.



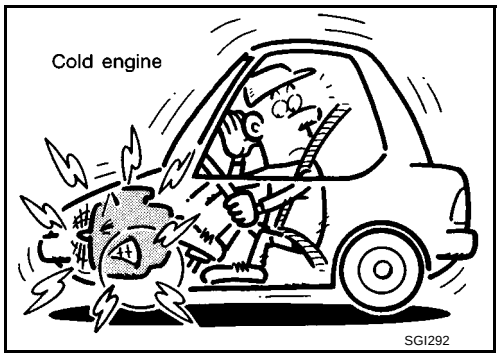
SGI787

Precautions for Turbocharger (If Equipped)

EAS000PL

The turbocharger turbine revolves at extremely high speeds and becomes very hot. Therefore, it is essential to maintain a clean supply of oil flowing through the turbocharger and to follow all required maintenance instructions and operating procedures.

- Always use the recommended oil. Follow the instructions for proper time to change the oil and proper oil level.
- Avoid accelerating engine to a high rpm immediately after starting.
- If engine had been operating at high rpm for an extended period of time, let it idle for a few minutes prior to shutting if off.



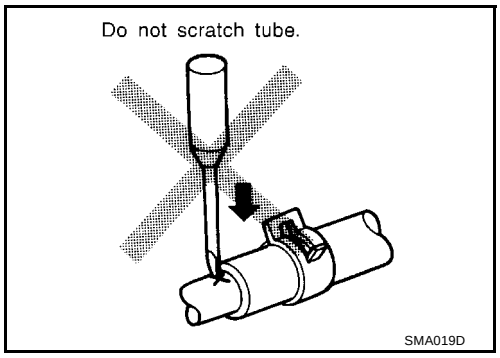
SGI292

Precautions for Hoses

EAS000PM

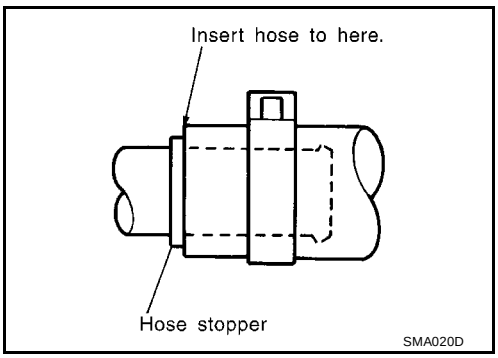
HOSE REMOVAL AND INSTALLATION

- To prevent damage to rubber hose, do not pry off rubber hose with tapered tool or screwdriver.



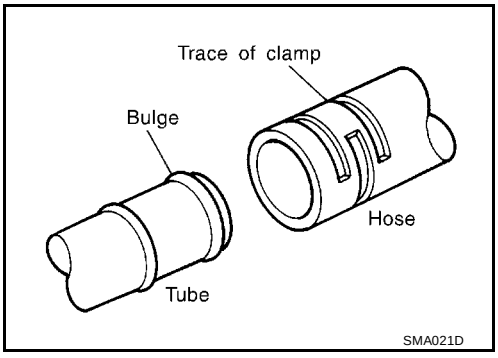
SMA019D

- To reinstall the rubber hose securely, make sure that hose insertion length and orientation is correct. (If tube is equipped with hose stopper, insert rubber hose into tube until it butts up against hose stopper.)

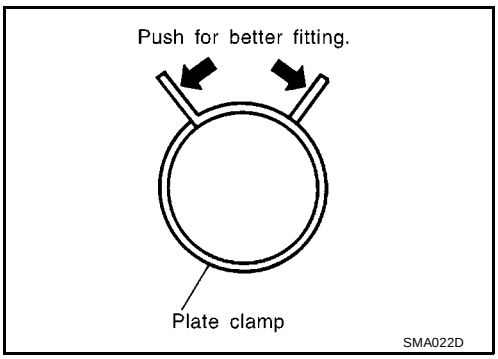


HOSE CLAMPING

- If old rubber hose is re-used, install hose clamp in its original position (at the indentation where the old clamp was). If there is a trace of tube bulging left on the old rubber hose, align rubber hose at that position.
- Discard old clamps; replace with new ones.



- After installing plate clamps, apply force to them in the direction of the arrow, tightening rubber hose equally all around.



Precautions for Engine Oils

EAS000PN

Prolonged and repeated contact with used engine oil may cause skin cancer. Try to avoid direct skin contact with used oil.
If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.

HEALTH PROTECTION PRECAUTIONS

- Avoid prolonged and repeated contact with oils, particularly used engine oils.
- Wear protective clothing, including impervious gloves where practicable.
- Do not put oily rags in pockets.
- Avoid contaminating clothes, particularly underpants, with oil.
- Heavily soiled clothing and oil-impregnated footwear should not be worn. Overalls must be cleaned regularly.
- First aid treatment should be obtained immediately for open cuts and wounds.
- Use barrier creams, applying them before each work period, to help the removal of oil from the skin.
- Wash with soap and water to ensure all oil is removed (skin cleansers and nail brushes will help). Preparations containing lanolin replace the natural skin oils which have been removed.
- Do not use gasoline, kerosene, diesel fuel, gas oil, thinners or solvents for cleaning skin.
- If skin disorders develop, obtain medical advice without delay.
- Where practical, degrease components prior to handling.

- Where there is a risk of eye contact, eye protection should be worn, for example, chemical goggles or face shields; in addition an eye wash facility should be provided.

ENVIRONMENTAL PROTECTION PRECAUTIONS

For the service site in UK, burning used engine oil in small space heaters or boilers can be recommended only for units of approved design. The heating system must meet the requirements of HM Inspectorate of Pollution for small burners of less than 0.4 MW. If in doubt check with the appropriate local authority and/or manufacturer of the approved appliance.
Dispose of used oil and used oil filters through authorized waste disposal contractors to licensed waste disposal sites, or to the waste oil reclamation trade. If in doubt, contact the local authority for advice on disposal facilities.
It is illegal to pour used oil on to the ground, down sewers or drains, or into water sources.
The regulations concerning pollution vary between regions.

Precautions for Air Conditioning

EAS000PO

Use an approved refrigerant recovery unit any time the air conditioning system must be discharged. Refer to ATC/MTC section “HFC-134a (R-134a) Service Procedure”, “REFRIGERANT LINES” for specific instructions.

HOW TO USE THIS MANUAL

PFP:00008

Description

EAS000PP

This volume explains “Removal, Disassembly, Installation, Inspection and Adjustment” and “Trouble Diagnoses”.

Terms

EAS000PQ

- The captions **WARNING** and **CAUTION** warn you of steps that must be followed to prevent personal injury and/or damage to some part of the vehicle.
  WARNING indicates the possibility of personal injury if instructions are not followed.
  CAUTION indicates the possibility of component damage if instructions are not followed.
  BOLD TYPED STATEMENTS except **WARNING** and **CAUTION** give you helpful information.
  Standard value:Tolerance at inspection and adjustment.
  Limit value:The maximum or minimum limit value that should not be exceeded at inspection and adjustment.

Units

EAS000PR

- The **UNITS** given in this manual are primarily expressed as the SI UNIT (International System of Unit), and alternatively expressed in the metric system and in the yard/pound system.
  “Example”

Outer Socket Lock Nut : 59 - 78 N-m (6.0 - 8.0 kg-m, 43 - 58 ft-lb)

Contents

EAS000PS

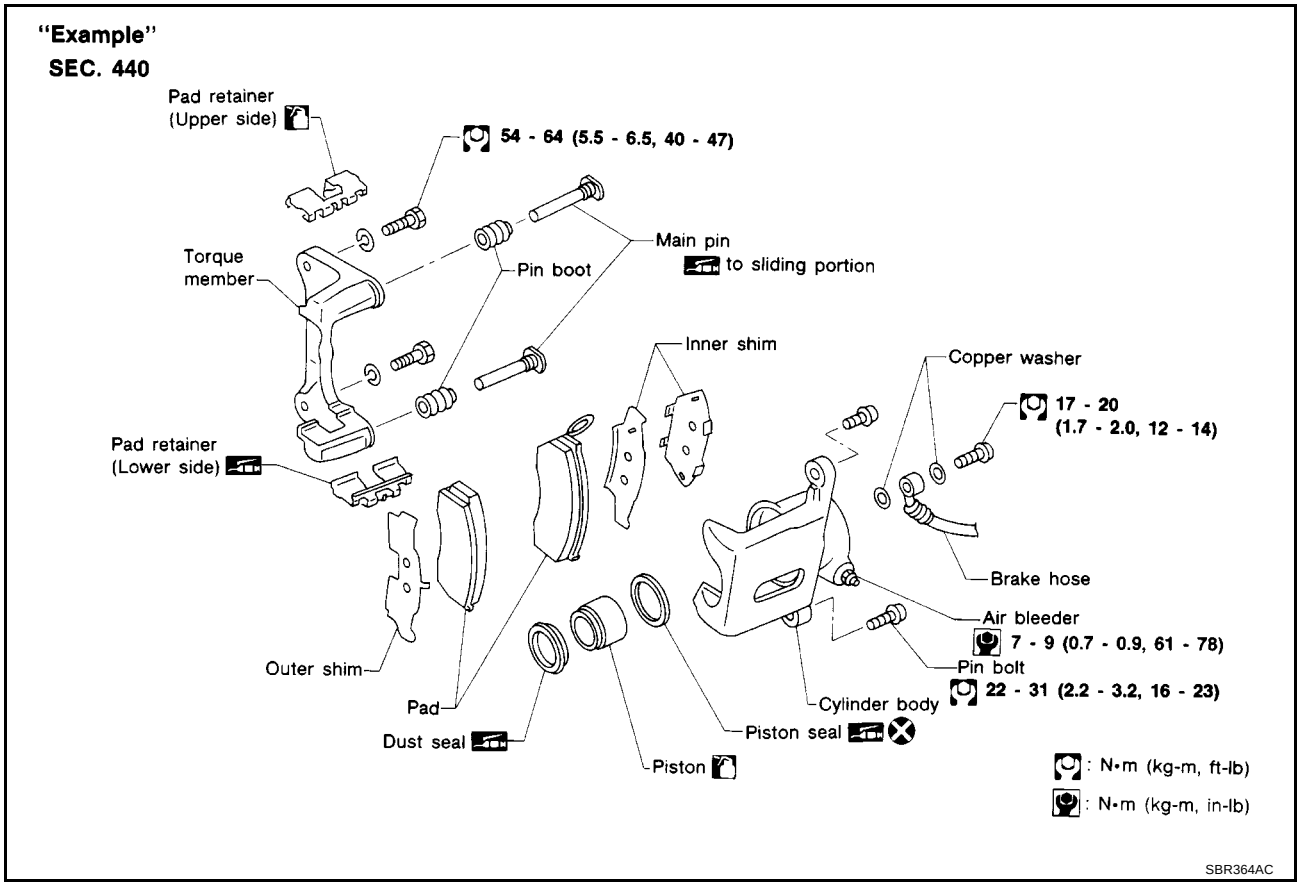
- **ALPHABETICAL INDEX** is provided at the end of this manual so that you can rapidly find the item and page you are searching for.
- **A QUICK REFERENCE INDEX**, a black tab (e.g. BR) is provided on the first page. You can quickly find the first page of each section by matching it to the section's black tab.
- **THE CONTENTS** are listed on the first page of each section.
- **THE TITLE** is indicated on the upper portion of each page and shows the part or system.
- **THE PAGE NUMBER** of each section consists of two or three letters which designate the particular section and a number (e.g. “BR-5”).
- **THE SMALL ILLUSTRATIONS** show the important steps such as inspection, use of special tools, knacks of work and hidden or tricky steps which are not shown in the previous large illustrations.
  Assembly, inspection and adjustment procedures for the complicated units such as the automatic transaxle or transmission, etc. are presented in a step-by-step format where necessary.

Components

EAS000PT

- **THE LARGE ILLUSTRATIONS** are exploded views (See the following) and contain tightening torques, lubrication points, section number of the **PARTS CATALOG** (e.g. SEC. 440) and other information necessary to perform repairs.

The illustrations should be used in reference to service matters only. When ordering parts, refer to the appropriate **PARTS CATALOG** .



SYMBOLS

SYMBOL	DESCRIPTION
	Tightening torque
	Should be lubricated with grease. Unless otherwise indicated, use recommended multi-purpose grease.
	Should be lubricated with oil.
	Sealing point
	Checking point
	Always replace after every disassembly.
P	Apply petroleum jelly.
ATF	Apply ATF.
★	Select with proper thickness.
☆	Adjustment is required.

How to Follow Trouble Diagnoses

EAS000PU

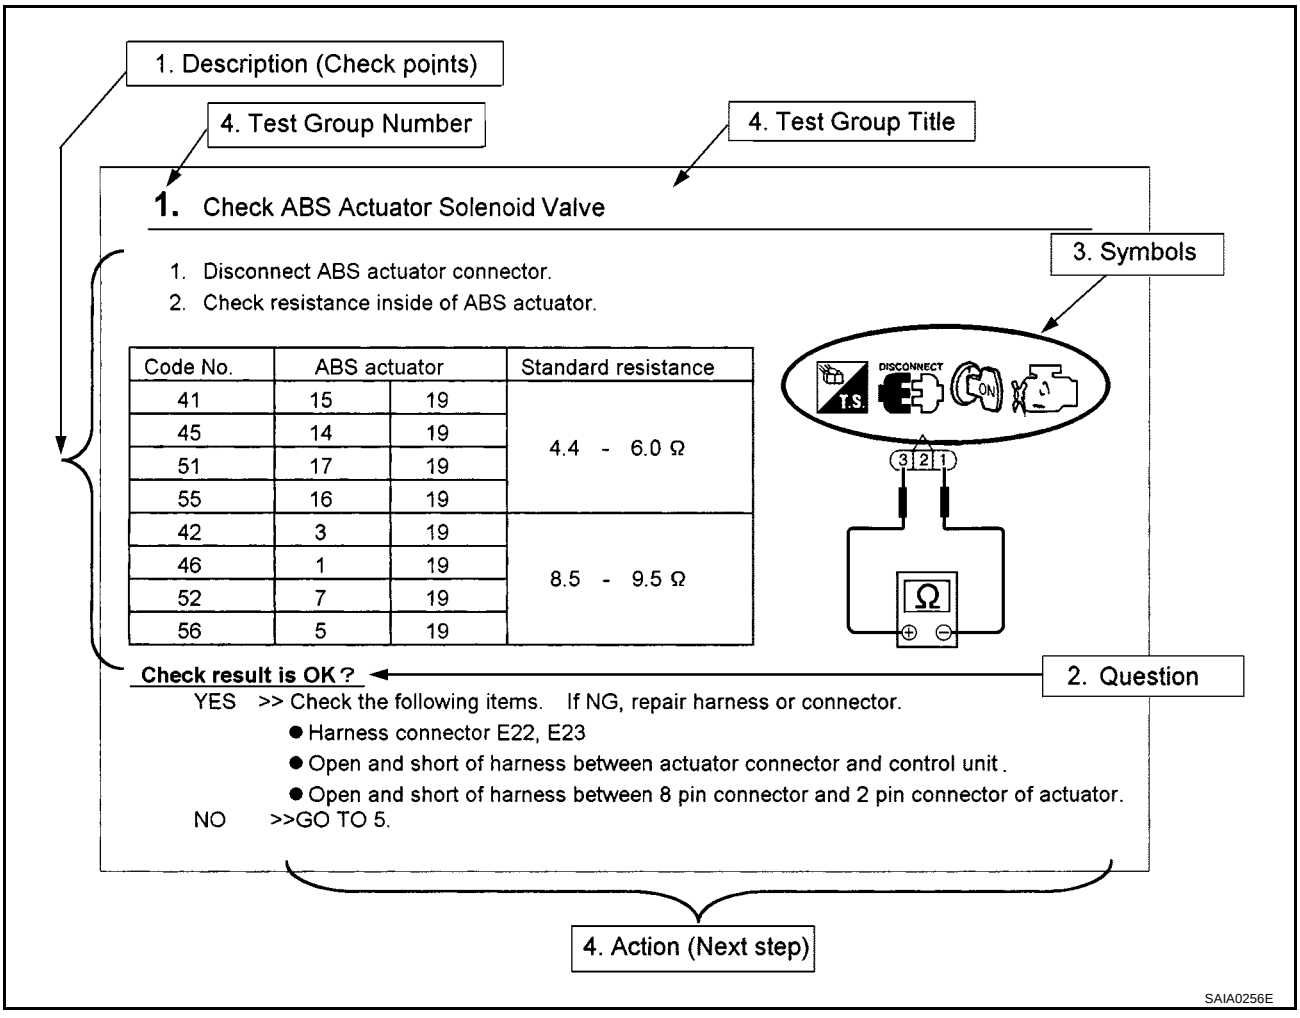
DESCRIPTION

NOTICE:

Trouble diagnoses indicate work procedures required to diagnose problems effectively. Observe the following instructions before diagnosing.

1. **Before performing trouble diagnoses, read the “Preliminary Check”, the “Symptom Chart” or the “Work Flow”.**
2. **After repairs, re-check that the problem has been completely eliminated.**
3. **Refer to Component Parts and Harness Connector Location for the Systems described in each section for identification/location of components and harness connectors.**
4. **Refer to the Circuit Diagram for quick pinpoint check.**
   If you need to check circuit continuity between harness connectors in more detail, such as when a sub-harness is used, refer to Wiring Diagram in each individual section and Harness Layout in PG section for identification of harness connectors.
5. **When checking circuit continuity, ignition switch should be OFF.**
6. **Before checking voltage at connectors, check battery voltage.**
7. **After accomplishing the Diagnostic Procedures and Electrical Components Inspection, make sure that all harness connectors are reconnected as they were.**

HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES



1. **Work and diagnostic procedure**
   Start to diagnose a problem using procedures indicated in enclosed test groups.
2. **Questions and required results**
   Questions and required results are indicated in bold type in test group.
   The meaning of are as follows:

   a. Battery voltage → 11 - 14V or approximately 12V

   b. Voltage : Approximately 0V → Less than 1V

3. **Symbol used in illustration**

Symbols included in illustrations refer to measurements or procedures. Before diagnosing a problem, familiarize yourself with each symbol. Refer to "Connector Symbols" in GI Section and "KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES" below.

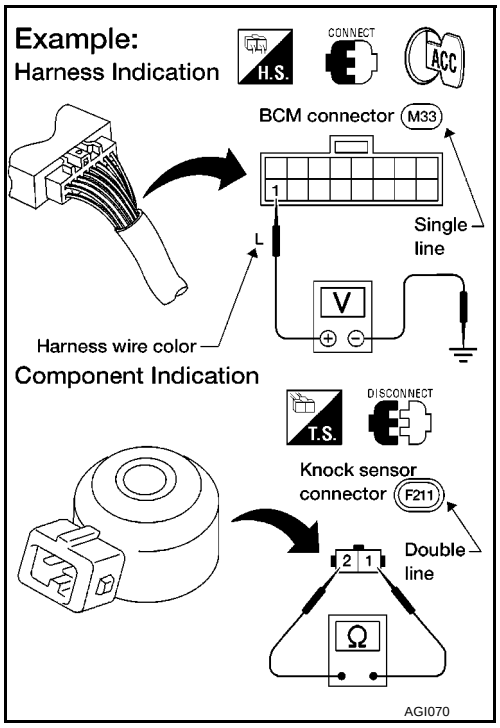
4. **Action items**
   Next action for each test group is indicated based on result of each question. Test group number is shown in the left upper portion of each test group.

HARNESS WIRE COLOR AND CONNECTOR NUMBER INDICATION

There are two types of harness wire color and connector number indication.

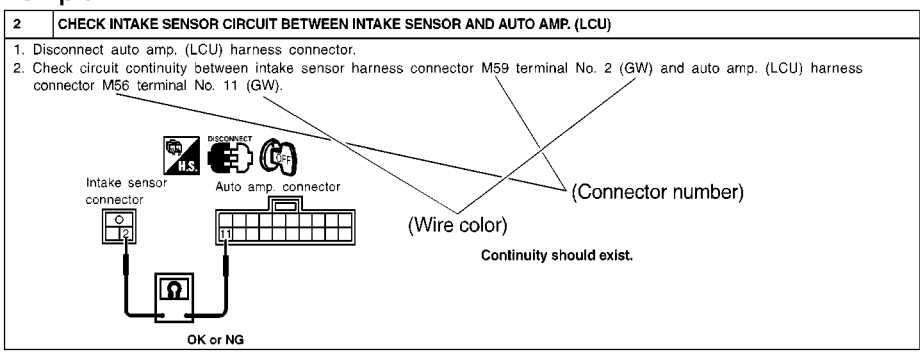
TYPE 1: Harness Wire Color and Connector Number are Shown in Illustration

- Letter designations next to test meter probe indicate harness wire color.
- Connector numbers in a single circle (e.g. M33) indicate harness connectors.
- Connector numbers in a double circle (e.g. F211) indicate component connectors.

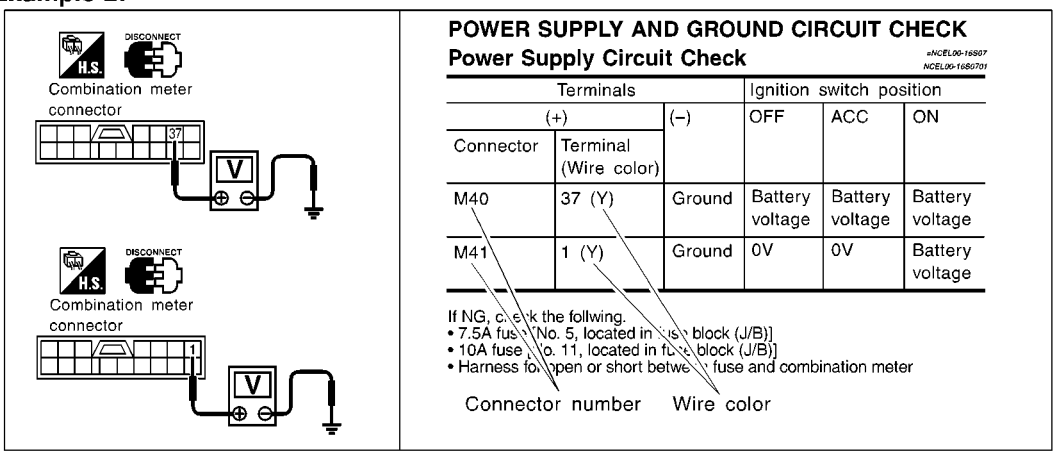


TYPE 2: Harness Wire Color and Connector Number are Shown in Text

Example 1:



Example 2:



SGI144A

KEY TO SYMBOLS SIGNIFYING MEASUREMENTS OR PROCEDURES

Symbol	Symbol explanation	Symbol	Symbol explanation
DISCONNECT	Check after disconnecting the connector to be measured.	GST	Procedure with Generic Scan Tool (GST, OBD-II scan tool)
CONNECT	Check after connecting the connector to be measured.	NO TOOLS	Procedure without CONSULT, CONSULT-II or GST
	Insert key into ignition switch.	A/C	A/C switch is “OFF”.
	Remove key from ignition switch.	A/C	A/C switch is “ON”.
OFF	Turn ignition switch to “OFF” position.		REC switch is “ON”.
ON	Turn ignition switch to “ON” position.		REC switch is “OFF”.
ST	Turn ignition switch to “START” position.		Fan switch is “ON”. (At any position except for “OFF” position)
OFF ACC	Turn ignition switch from “OFF” to “ACC” position.		Fan switch is “OFF”.
ACC OFF	Turn ignition switch from “ACC” to “OFF” position.	FUSE BAT	Apply positive voltage from battery with fuse directly to components.

Symbol	Symbol explanation	Symbol	Symbol explanation
	Turn ignition switch from “OFF” to “ON” position.		Drive vehicle.
	Turn ignition switch from “ON” to “OFF” position.		Disconnect battery negative cable.
	Do not start engine, or check with engine stopped.		Depress brake pedal.
	Start engine, or check with engine running.		Release brake pedal.
	Apply parking brake.		Depress accelerator pedal.
	Release parking brake.		Release accelerator pedal.
	Check after engine is warmed up sufficiently.		Pin terminal check for SMJ type ECM and TCM connectors. **For details regarding the terminal arrangement, refer to the “ELECTRICAL UNITS” electrical reference page at the end of the manual.**
	Voltage should be measured with a voltmeter.		
	Circuit resistance should be measured with an ohmmeter.		
	Current should be measured with an ammeter.		
	Pulse signal should be checked with an oscilloscope.		
	Procedure with CONSULT-II		
	Procedure without CONSULT-II		

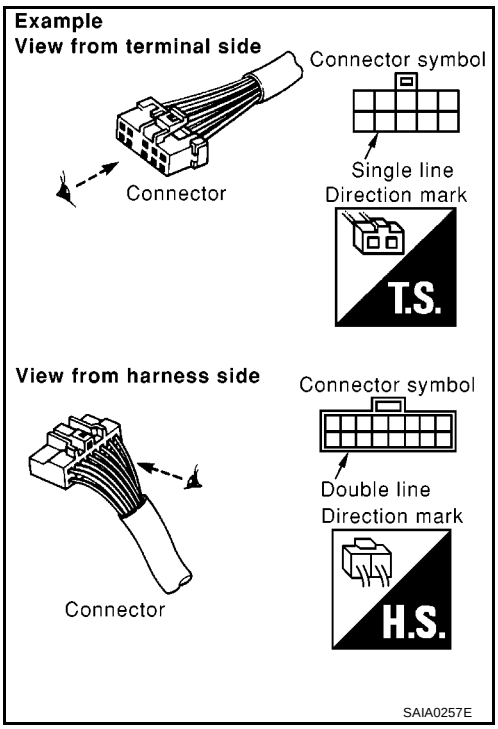
How to Read Wiring Diagrams

EAS000PV

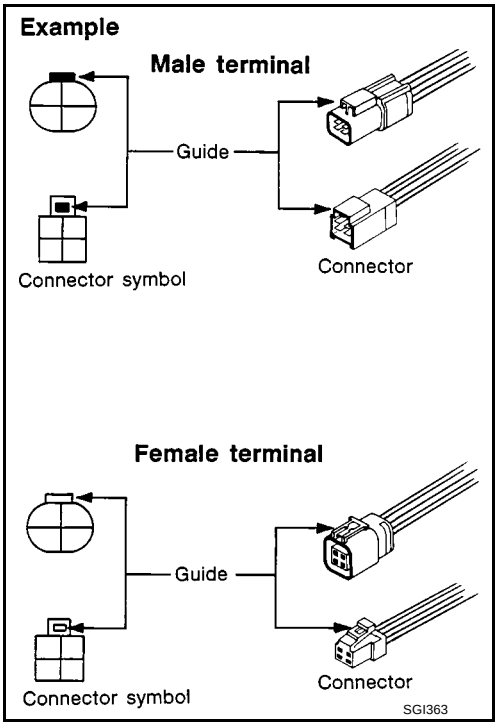
CONNECTOR SYMBOLS

Most of connector symbols in wiring diagrams are shown from the terminal side.

- Connector symbols shown from the terminal side are enclosed by a single line and followed by the direction mark.
- Connector symbols shown from the harness side are enclosed by a double line and followed by the direction mark.
- Certain systems and components, especially those related to OBD, may use a new style slide-locking type harness connector. For description and how to disconnect, refer to PG section, “Description”, “HARNESS CONNECTOR”.

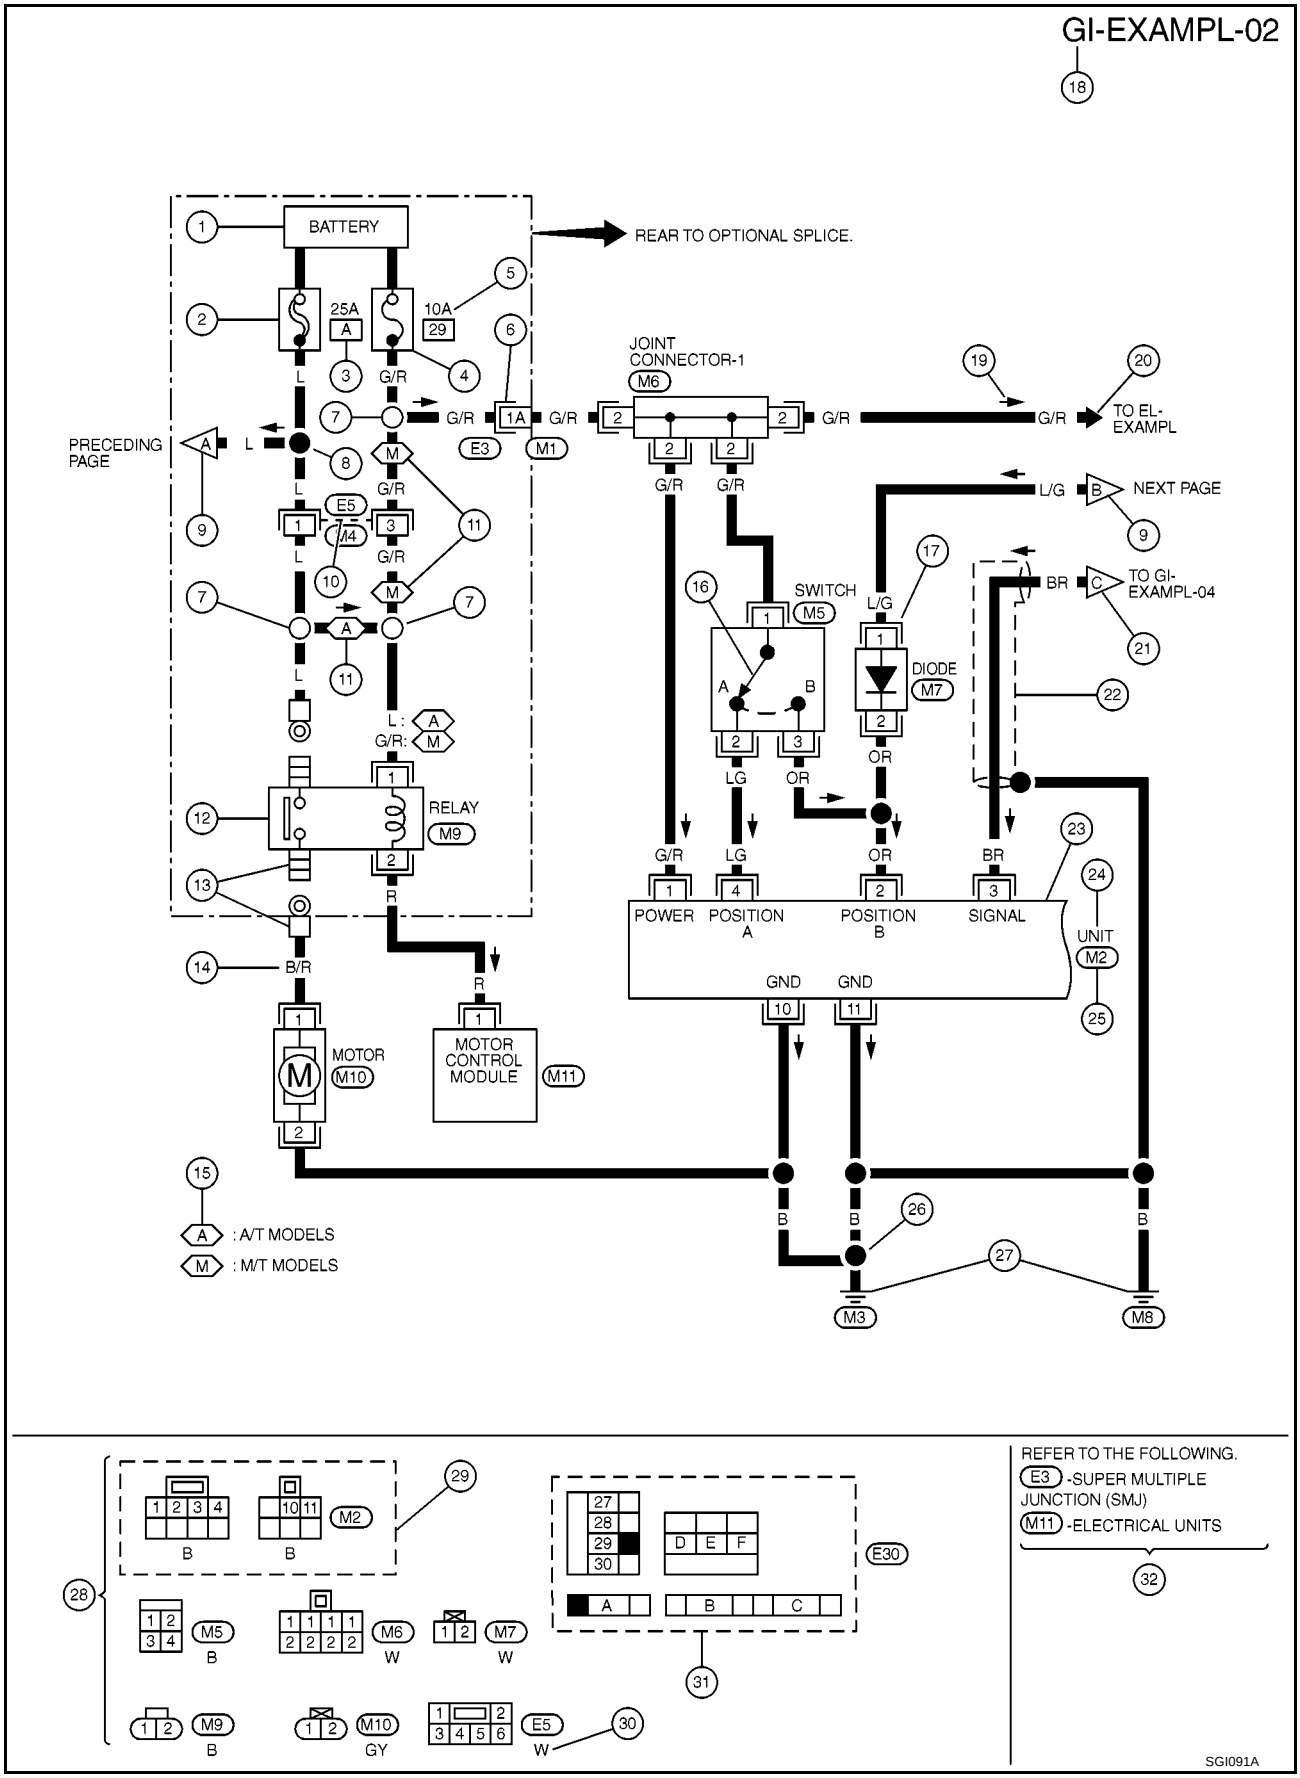


- Male and female terminals
  Connector guides for male terminals are shown in black and female terminals in white in wiring diagrams.

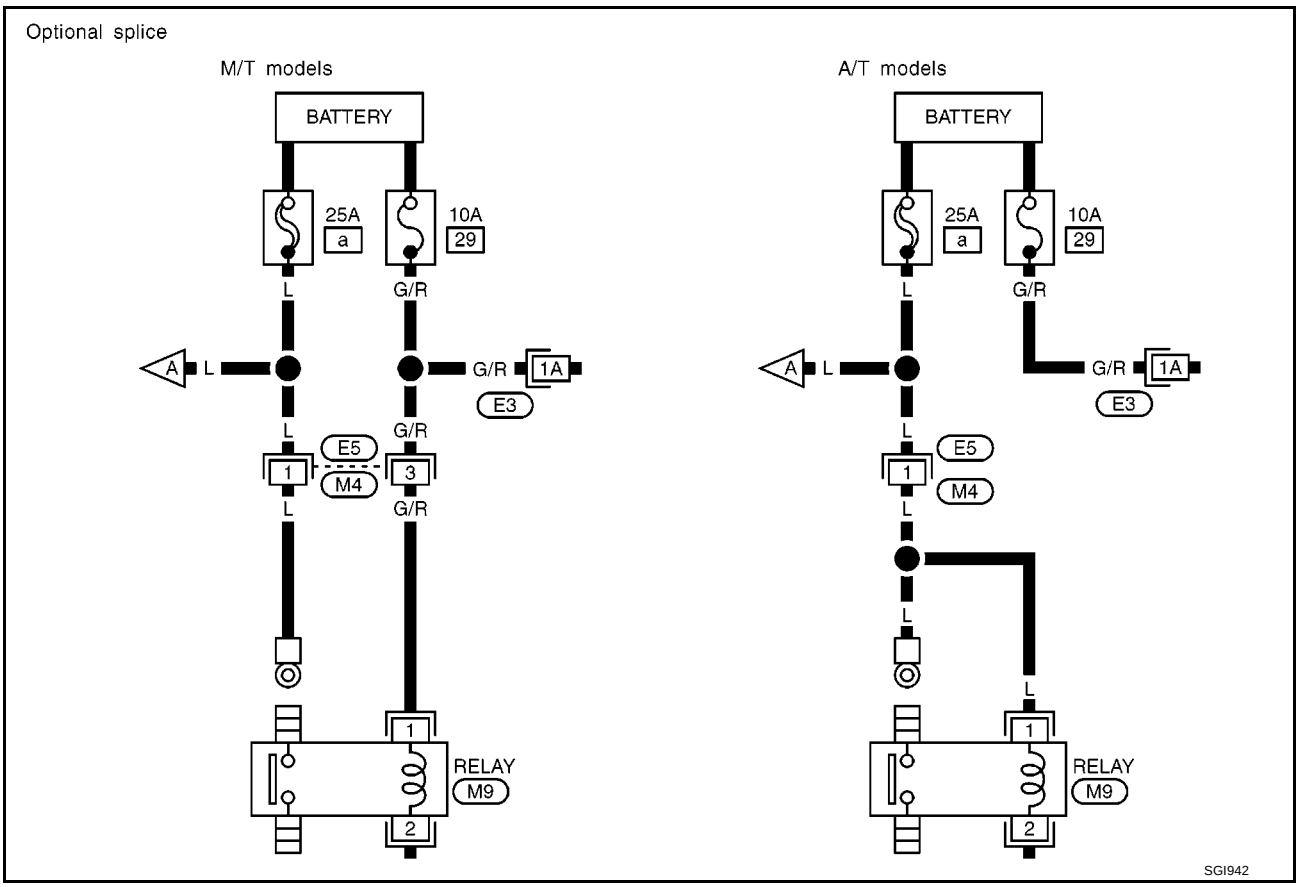


SAMPLE/WIRING DIAGRAM - EXAMPL -

- For detail, refer to following “DESCRIPTION”.



Optional Splice



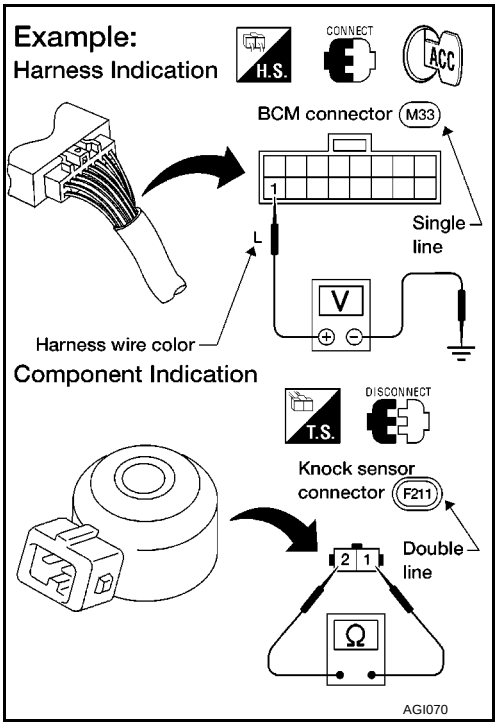
DESCRIPTION

Number	Item	Description
1	Power condition	● This shows the condition when the system receives battery positive voltage (can be operated).
2	Fusible link	● The double line shows that this is a fusible link. ● The open circle shows current flow in, and the shaded circle shows current flow out.
3	Fusible link/fuse location	● This shows the location of the fusible link or fuse in the fusible link or fuse box. For arrangement, refer to PG section, POWER SUPPLY ROUTING.
4	Fuse	● The single line shows that this is a fuse. ● The open circle shows current flow in, and the shaded circle shows current flow out.
5	Current rating	● This shows the current rating of the fusible link or fuse.
6	Connectors	● This shows that connector E3 is female and connector M1 is male. ● The G/R wire is located in the 1A terminal of both connectors. ● Terminal number with an alphabet (1A, 5B, etc.) indicates that the connector is SMJ connector. Refer to PG section, SMJ (SUPER MULTIPLE JUNCTION).
7	Optional splice	● The open circle shows that the splice is optional depending on vehicle application.
8	Splice	● The shaded circle shows that the splice is always on the vehicle.
9	Page crossing	● This arrow shows that the circuit continues to an adjacent page. ● The A will match with the A on the preceding or next page.
10	Common connector	● The dotted lines between terminals show that these terminals are part of the same connector.
11	Option abbreviation	● This shows that the circuit is optional depending on vehicle application.
12	Relay	● This shows an internal representation of the relay. For details, refer to PG section, STANDARDIZED RELAY.
13	Connectors	● This shows that the connector is connected to the body or a terminal with bolt or nut.

Number	Item	Description
14	Wire color	● This shows a code for the color of the wire. B = Black W = White R = Red G = Green L = Blue Y = Yellow LG = Light Green BR = Brown OR or O = Orange P = Pink PU or V (Violet) = Purple GY or GR = Gray SB = Sky Blue CH = Dark Brown DG = Dark Green When the wire color is striped, the base color is given first, followed by the stripe color as shown below: Example: L/W = Blue with White Stripe
15	Option description	● This shows a description of the option abbreviation used on the page.
16	Switch	● This shows that continuity exists between terminals 1 and 2 when the switch is in the A position. Continuity exists between terminals 1 and 3 when the switch is in the B position.
17	Assembly parts	● Connector terminal in component shows that it is a harness incorporated assembly.
18	Cell code	● This identifies each page of the wiring diagram by section, system and wiring diagram page number.
19	Current flow arrow	● Arrow indicates electric current flow, especially where the direction of standard flow (vertically downward or horizontally from left to right) is difficult to follow. ● A double arrow “ ↔ ” shows that current can flow in either direction depending on circuit operation.
20	System branch	● This shows that the system branches to another system identified by cell code (section and system).
21	Page crossing	● This arrow shows that the circuit continues to another page identified by cell code. ● The C will match with the C on another page within the system other than the next or preceding pages.
22	Shielded line	● The line enclosed by broken line circle shows shield wire.
23	Component box in wave line	● This shows that another part of the component is also shown on another page (indicated by wave line) within the system.
24	Component name	● This shows the name of a component.
25	Connector number	● This shows the connector number. ● The letter shows which harness the connector is located in. ● Example: **M** : main harness. For detail and to locate the connector, refer to PG section "Main Harness", “Harness Layout”. A coordinate grid is included for complex harnesses to aid in locating connectors.
26	Ground (GND)	● The line spliced and grounded under wire color shows that ground line is spliced at the grounded connector.
27	Ground (GND)	● This shows the ground connection. For detailed ground distribution information, refer to "Ground Distribution" in PG section.
28	Connector views	● This area shows the connector faces of the components in the wiring diagram on the page.
29	Common component	● Connectors enclosed in broken line show that these connectors belong to the same component.
30	Connector color	● This shows a code for the color of the connector. For code meaning, refer to wire color codes, Number 14 of this chart.
31	Fusible link and fuse box	● This shows the arrangement of fusible link(s) and fuse(s), used for connector views of "POWER SUPPLY ROUTING" in PG section. The open square shows current flow in, and the shaded square shows current flow out.
32	Reference area	● This shows that more information on the Super Multiple Junction (SMJ) and Joint Connectors (J/C) exists on the PG section. Refer to "Reference Area" for details.

Harness Indication

- Letter designations next to test meter probe indicate harness (connector) wire color.
- Connector numbers in a single circle M33 indicate harness connectors.



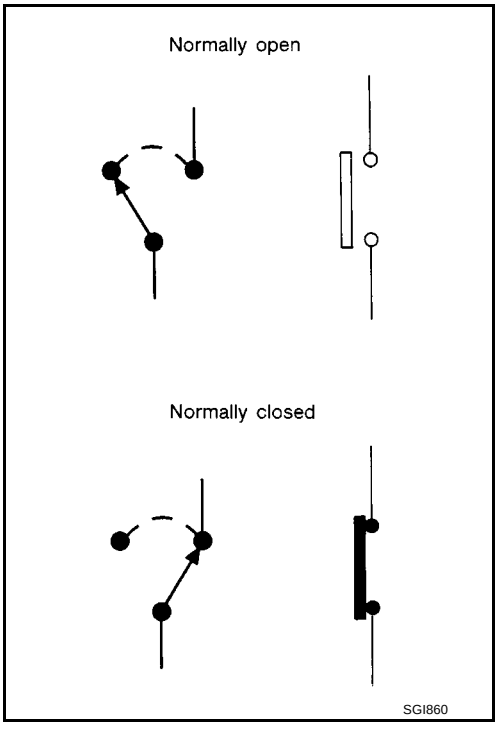
Component Indication

Connector numbers in a double circle F211 indicate component connectors.

Switch Positions

Switches are shown in wiring diagrams as if the vehicle is in the “normal” condition.
A vehicle is in the “normal” condition when:

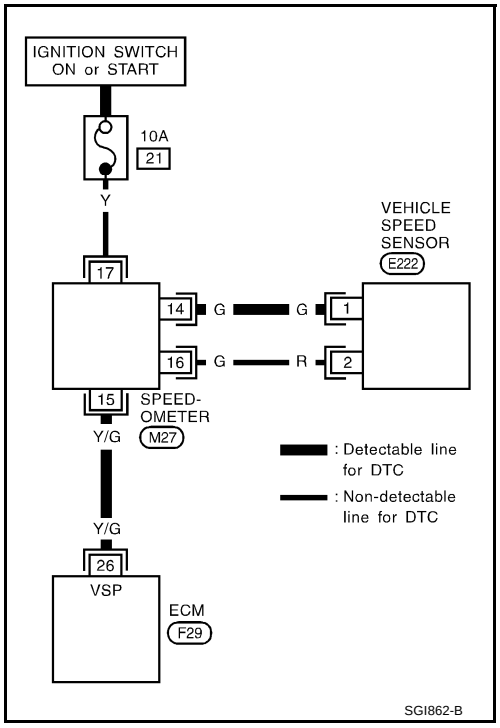
- ignition switch is “OFF”,
- doors, hood and trunk lid/back door are closed,
- pedals are not depressed, and
- parking brake is released.



Detectable Lines and Non-Detectable Lines

In some wiring diagrams, two kinds of lines, representing wires, with different weight are used.

- A line with regular weight (wider line) represents a “detectable line for DTC (Diagnostic Trouble Code)”. A “detectable line for DTC” is a circuit in which ECM can detect its malfunctions with the on board diagnostic system.
- A line with less weight (thinner line) represents a “non-detectable line for DTC”. A “non-detectable line for DTC” is a circuit in which ECM cannot detect its malfunctions with the on board diagnostic system.



Multiple Switch

The continuity of multiple switch is described in two ways as shown below.

- The switch chart is used in schematic diagrams.
- The switch diagram is used in wiring diagrams.

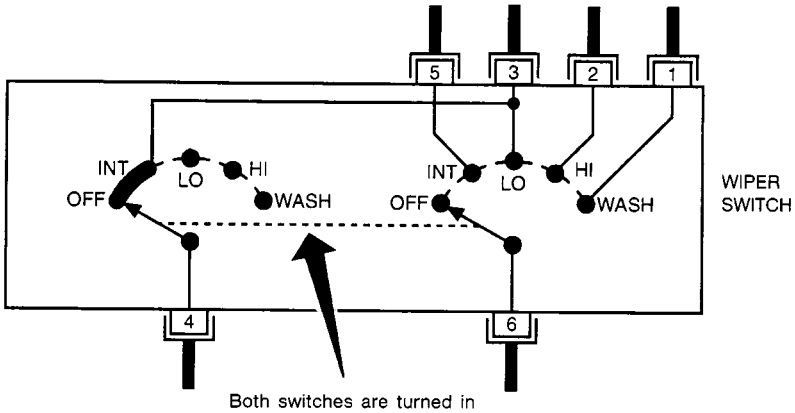
Example

(SWITCH CHART)

WIPER SWITCH

	OFF	INT	LO	HI	WASH
1					○
2				○	
3	○	○	○		
4	○	○			
5		○			
6		○	○	○	○

(SWITCH DIAGRAM)



Continuity circuit of wiper switch

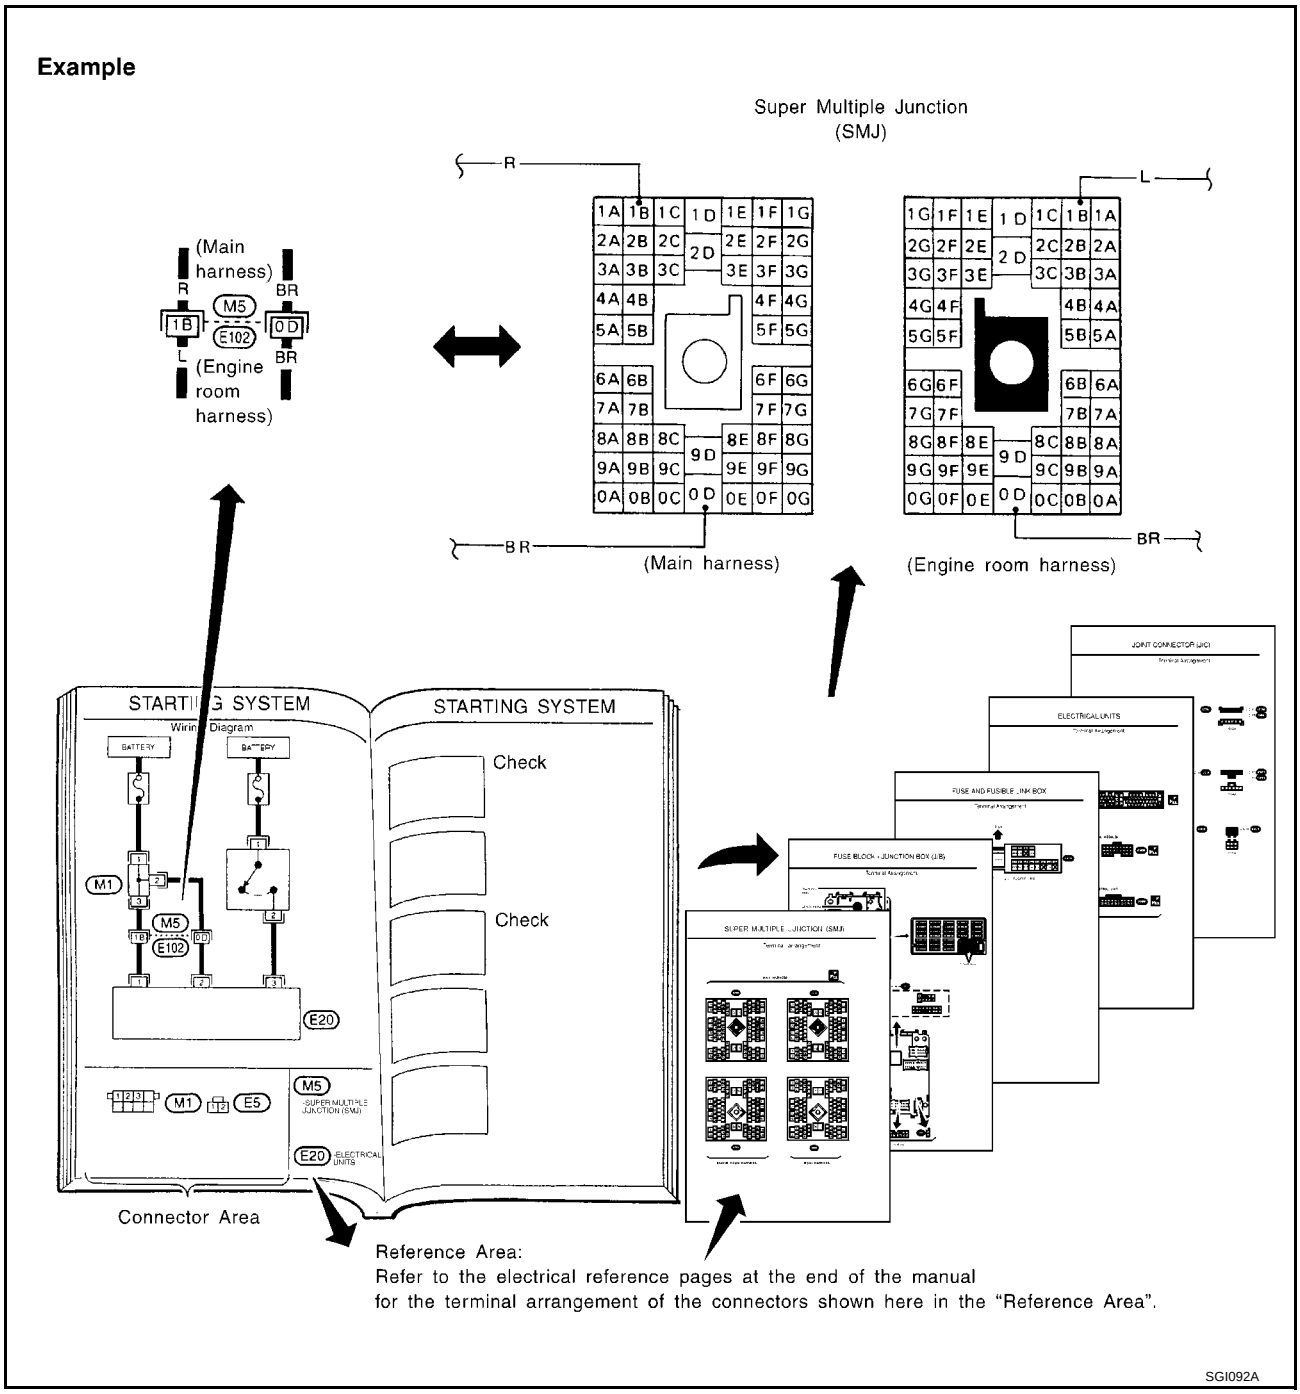
SWITCH POSITION	CONTINUITY CIRCUIT
OFF	3 - 4
INT	3 - 4, 5 - 6
LO	3 - 6
HI	2 - 6
WASH	1 - 6

SGI875

Reference Area

The Reference Area of the wiring diagram contains references to additional electrical reference pages at the end of the manual. If connector numbers and titles are shown in the Reference Area of the wiring diagram, these connector symbols are not shown in the Connector Area.

Example



Abbreviations

EAS000PW

The following **ABBREVIATIONS** are used:

ABBREVIATION	DESCRIPTION
A/C	Air Conditioner
A/T	Automatic Transaxle/Transmission
ATF	Automatic Transmission Fluid
D_1	Drive range 1st gear
D_2	Drive range 2nd gear

ABBREVIATION	DESCRIPTION
D_3	Drive range 3rd gear
D_4	Drive range 4th gear
FR, RR	Front, Rear
LH, RH	Left-Hand, Right-Hand
M/T	Manual Transaxle/Transmission
OD	Overdrive
P/S	Power Steering
SAE	Society of Automotive Engineers, Inc.
SDS	Service Data and Specifications
SST	Special Service Tools
2WD	2-Wheel Drive
2_2	2nd range 2nd gear
2_1	2nd range 1st gear
1_2	1st range 2nd gear
1_1	1st range 1st gear

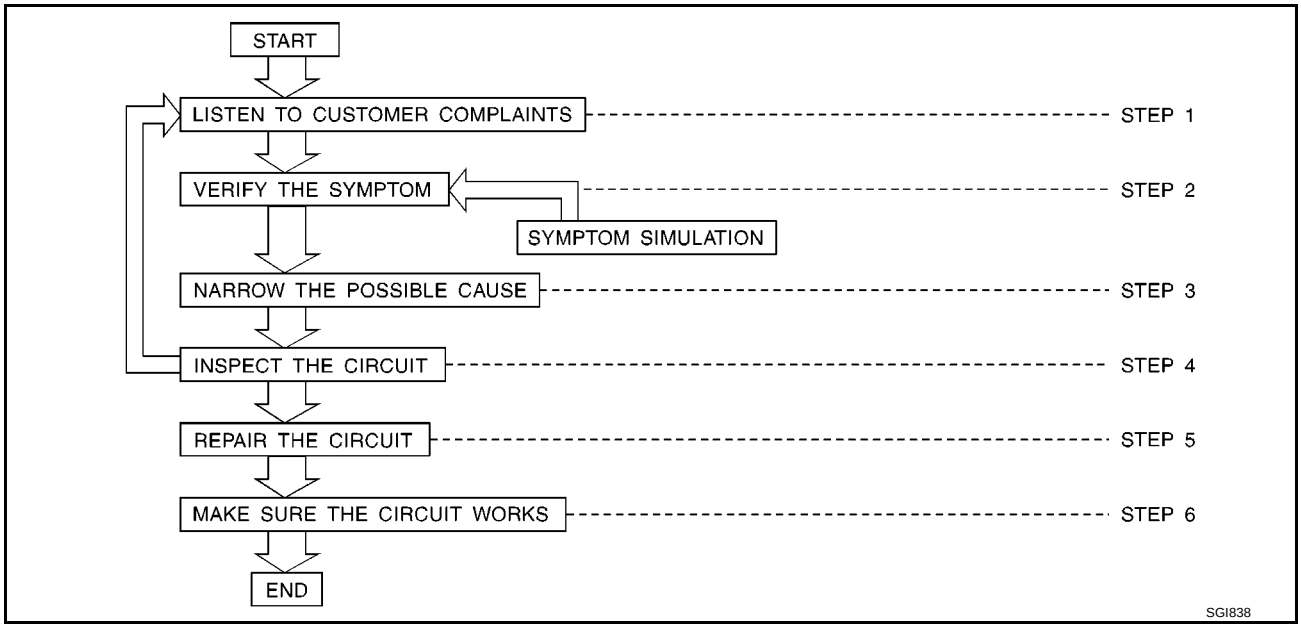
SERVICE INFORMATION FOR ELECTRICAL INCIDENT

PFP:00000

How to Perform Efficient Diagnosis for an Electrical Incident

EAS000PX

WORK FLOW



STEP	DESCRIPTION	
STEP 1	Get detailed information about the conditions and the environment when the incident occurred. The following are key pieces of information required to make a good analysis:	
	WHAT	Vehicle Model, Engine, Transmission/Transaxle and the System (i.e. Radio).
	WHEN	Date, Time of Day, Weather Conditions, Frequency.
	WHERE	Road Conditions, Altitude and Traffic Situation.
	HOW	System Symptoms, Operating Conditions (Other Components Interaction). Service History and if any After Market Accessories have been installed.
STEP 2	Operate the system, road test if necessary. Verify the parameter of the incident. If the problem cannot be duplicated, refer to “Incident Simulation Tests”.	
STEP 3	Get the proper diagnosis materials together including: ● Power Supply Routing ● System Operation Descriptions ● Applicable Service Manual Sections ● Check for any Service Bulletins Identify where to begin diagnosis based upon your knowledge of the system operation and the customer comments.	
STEP 4	Inspect the system for mechanical binding, loose connectors or wiring damage. Determine which circuits and components are involved and diagnose using the Power Supply Routing and Harness Layouts.	
STEP 5	Repair or replace the incident circuit or component.	
STEP 6	Operate the system in all modes. Verify the system works properly under all conditions. Make sure you have not inadvertently created a new incident during your diagnosis or repair steps.	

INCIDENT SIMULATION TESTS

Introduction

Sometimes the symptom is not present when the vehicle is brought in for service. If possible, re-create the conditions present at the time of the incident. Doing so may help avoid a No Trouble Found Diagnosis. The following section illustrates ways to simulate the conditions/environment under which the owner experiences an electrical incident.

The section is broken into the six following topics:

- Vehicle vibration

- Heat sensitive
- Freezing
- Water intrusion
- Electrical load
- Cold or hot start up

Get a thorough description of the incident from the customer. It is important for simulating the conditions of the problem.

Vehicle Vibration

The problem may occur or become worse while driving on a rough road or when engine is vibrating (idle with A/C on). In such a case, you will want to check for a vibration related condition. Refer to the following illustration.

CONNECTORS & HARNESS

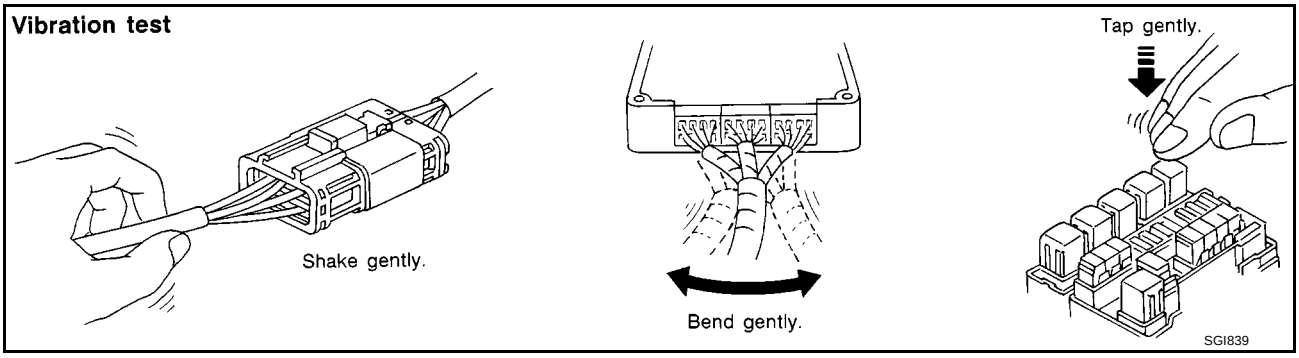
Determine which connectors and wiring harness would affect the electrical system you are inspecting. Gently shake each connector and harness while monitoring the system for the incident you are trying to duplicate. This test may indicate a loose or poor electrical connection.

HINT

Connectors can be exposed to moisture. It is possible to get a thin film of corrosion on the connector terminals. A visual inspection may not reveal this without disconnecting the connector. If the problem occurs intermittently, perhaps the problem is caused by corrosion. It is a good idea to disconnect, inspect and clean the terminals on related connectors in the system.

SENSORS & RELAYS

Gently apply a slight vibration to sensors and relays in the system you are inspecting.
This test may indicate a loose or poorly mounted sensor or relay.



ENGINE COMPARTMENT

There are several reasons a vehicle or engine vibration could cause an electrical complaint. Some of the things to check for are:

- Connectors not fully seated.
- Wiring harness not long enough and is being stressed due to engine vibrations or rocking.
- Wires laying across brackets or moving components.
- Loose, dirty or corroded ground wires.
- Wires routed too close to hot components.

To inspect components under the hood, start by verifying the integrity of ground connections. (Refer to Ground Inspection described later.) First check that the system is properly grounded. Then check for loose connection by gently shaking the wiring or components as previously explained. Using the wiring diagrams inspect the wiring for continuity.

BEHIND THE INSTRUMENT PANEL

An improperly routed or improperly clamped harness can become pinched during accessory installation. Vehicle vibration can aggravate a harness which is routed along a bracket or near a screw.

UNDER SEATING AREAS

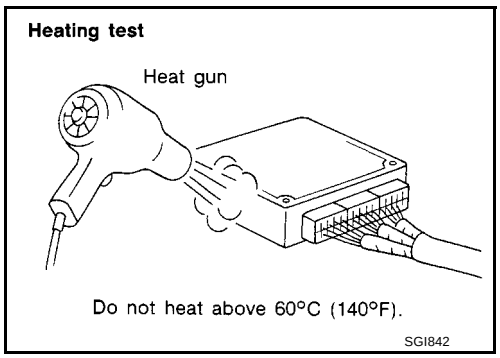
An unclamped or loose harness can cause wiring to be pinched by seat components (such as slide guides) during vehicle vibration. If the wiring runs under seating areas, inspect wire routing for possible damage or pinching.

Heat Sensitive

The customer's concern may occur during hot weather or after car has sat for a short time. In such cases you will want to check for a heat sensitive condition.

To determine if an electrical component is heat sensitive, heat the component with a heat gun or equivalent.

Do not heat components above 60°C (140°F). If incident occurs while heating the unit, either replace or properly insulate the component.

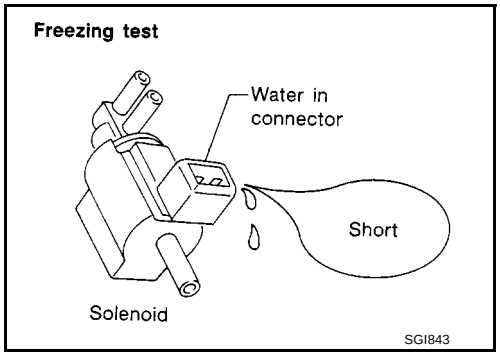


Freezing

The customer may indicate the incident goes away after the car warms up (winter time). The cause could be related to water freezing somewhere in the wiring/electrical system.

There are two methods to check for this. The first is to arrange for the owner to leave his car overnight. Make sure it will get cold enough to demonstrate his complaint. Leave the car parked outside overnight. In the morning, do a quick and thorough diagnosis of those electrical components which could be affected.

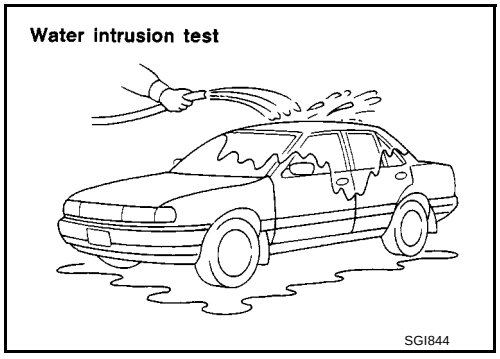
The second method is to put the suspect component into a freezer long enough for any water to freeze. Reinstall the part into the car and check for the reoccurrence of the incident. If it occurs, repair or replace the component.



Water Intrusion

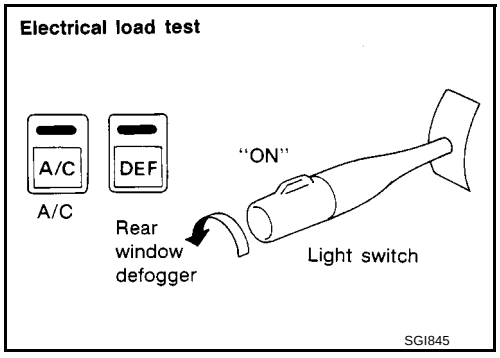
The incident may occur only during high humidity or in rainy/snowy weather. In such cases the incident could be caused by water intrusion on an electrical part. This can be simulated by soaking the car or running it through a car wash.

Do not spray water directly on any electrical components.



Electrical Load

The incident may be electrical load sensitive. Perform diagnosis with all accessories (including A/C, rear window defogger, radio, fog lamps) turned on.



Cold or Hot Start Up

On some occasions an electrical incident may occur only when the car is started cold, or it may occur when the car is restarted hot shortly after being turned off. In these cases you may have to keep the car overnight to make a proper diagnosis.

CIRCUIT INSPECTION

Introduction

In general, testing electrical circuits is an easy task if it is approached in a logical and organized method. Before beginning it is important to have all available information on the system to be tested. Also, get a thorough understanding of system operation. Then you will be able to use the appropriate equipment and follow the correct test procedure.
You may have to simulate vehicle vibrations while testing electrical components. Gently shake the wiring harness or electrical component to do this.

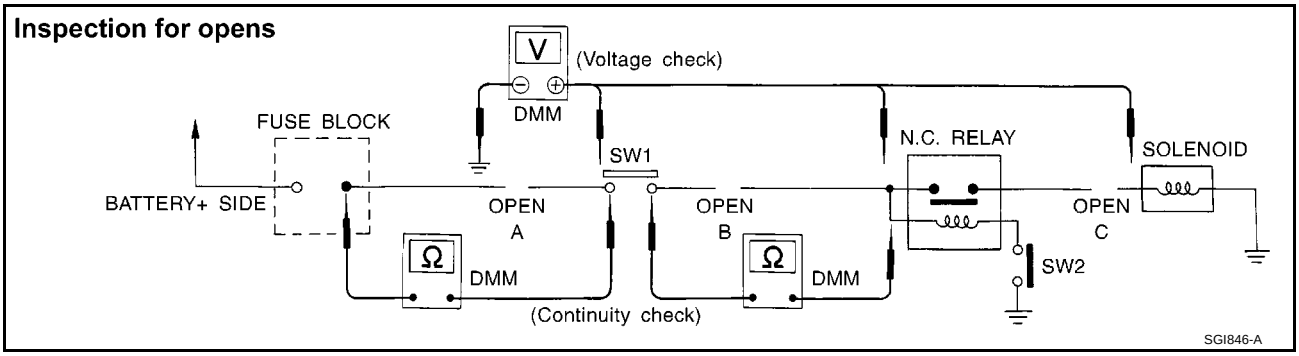
OPEN	A circuit is open when there is no continuity through a section of the circuit.	
SHORT	There are two types of shorts.	
	● SHORT CIRCUIT	When a circuit contacts another circuit and causes the normal resistance to change.
	● SHORT TO GROUND	When a circuit contacts a ground source and grounds the circuit.

NOTE:
Refer to “How to Check Terminal” to probe or check terminal.

Testing for “Opens” in the Circuit

Before you begin to diagnose and test the system, you should rough sketch a schematic of the system. This will help you to logically walk through the diagnosis process. Drawing the sketch will also reinforce your working knowledge of the system.

Inspection for opens



CONTINUITY CHECK METHOD
The continuity check is used to find an open in the circuit. The digital multimeter (DMM) set on the resistance function will indicate an open circuit as over limit (no beep tone or no ohms symbol). Make sure to always start with the DMM at the highest resistance level.
To help in understanding the diagnosis of open circuits, please refer to the previous schematic.

- Disconnect the battery negative cable.
- Start at one end of the circuit and work your way to the other end. (At the fuse block in this example)
- Connect one probe of the DMM to the fuse block terminal on the load side.
- Connect the other probe to the fuse block (power) side of SW1. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point A)
- Connect the probes between SW1 and the relay. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point B)
- Connect the probes between the relay and the solenoid. Little or no resistance will indicate that portion of the circuit has good continuity. If there were an open in the circuit, the DMM would indicate an over limit or infinite resistance condition. (point C)

Any circuit can be diagnosed using the approach in the previous example.

VOLTAGE CHECK METHOD

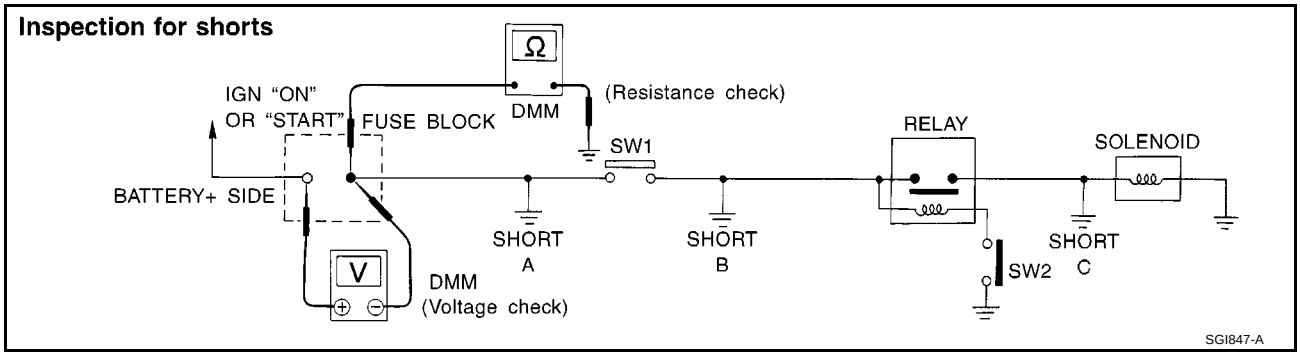
To help in understanding the diagnosis of open circuits please refer to the previous schematic.
In any powered circuit, an open can be found by methodically checking the system for the presence of voltage. This is done by switching the DMM to the voltage function.

- Connect one probe of the DMM to a known good ground.
- Begin probing at one end of the circuit and work your way to the other end.
- With SW1 open, probe at SW1 to check for voltage.
  voltage; open is further down the circuit than SW1.
  no voltage; open is between fuse block and SW1 (point A).
- Close SW1 and probe at relay.
  voltage; open is further down the circuit than the relay.
  no voltage; open is between SW1 and relay (point B).
- Close the relay and probe at the solenoid.
  voltage; open is further down the circuit than the solenoid.
  no voltage; open is between relay and solenoid (point C).

Any powered circuit can be diagnosed using the approach in the previous example.

Testing for "Shorts" in the Circuit

To simplify the discussion of shorts in the system, please refer to the following schematic.



RESISTANCE CHECK METHOD

- Disconnect the battery negative cable and remove the blown fuse.
- Disconnect all loads (SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Connect one probe of the DMM to the load side of the fuse terminal. Connect the other probe to a known good ground.
- With SW1 open, check for continuity.
  continuity; short is between fuse terminal and SW1 (point A).
  no continuity; short is further down the circuit than SW1.
- Close SW1 and disconnect the relay. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.
  continuity; short is between SW1 and the relay (point B).
  no continuity; short is further down the circuit than the relay.
- Close SW1 and jump the relay contacts with jumper wire. Put probes at the load side of fuse terminal and a known good ground. Then, check for continuity.
  continuity; short is between relay and solenoid (point C).
  no continuity; check solenoid, retrace steps.

VOLTAGE CHECK METHOD

- Remove the blown fuse and disconnect all loads (i.e. SW1 open, relay disconnected and solenoid disconnected) powered through the fuse.
- Turn the ignition key to the ON or START position. Verify battery voltage at the battery + side of the fuse terminal (one lead on the battery + terminal side of the fuse block and one lead on a known good ground).
- With SW1 open and the DMM leads across both fuse terminals, check for voltage.
  voltage; short is between fuse block and SW1 (point A).

no voltage; short is further down the circuit than SW1.

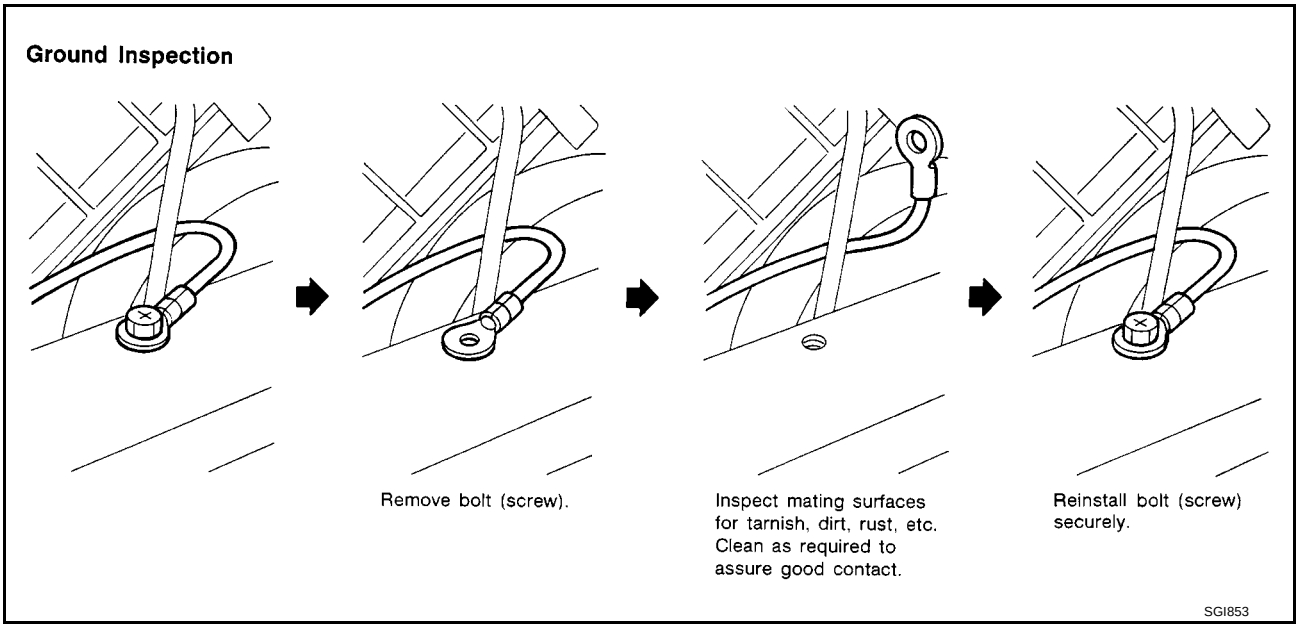
- With SW1 closed, relay and solenoid disconnected and the DMM leads across both fuse terminals, check for voltage.
  voltage; short is between SW1 and the relay (point B).
  no voltage; short is further down the circuit than the relay.
- With SW1 closed, relay contacts jumped with fused jumper wire check for voltage.
  voltage; short is down the circuit of the relay or between the relay and the disconnected solenoid (point C).
  no voltage; retrace steps and check power to fuse block.

Ground Inspection

Ground connections are very important to the proper operation of electrical and electronic circuits. Ground connections are often exposed to moisture, dirt and other corrosive elements. The corrosion (rust) can become an unwanted resistance. This unwanted resistance can change the way a circuit works.
Electronically controlled circuits are very sensitive to proper grounding. A loose or corroded ground can drastically affect an electronically controlled circuit. A poor or corroded ground can easily affect the circuit. Even when the ground connection looks clean, there can be a thin film of rust on the surface.
When inspecting a ground connection follow these rules:

- Remove the ground bolt or screw.
- Inspect all mating surfaces for tarnish, dirt, rust, etc.
- Clean as required to assure good contact.
- Reinstall bolt or screw securely.
- Inspect for “add-on” accessories which may be interfering with the ground circuit.
- If several wires are crimped into one ground eyelet terminal, check for proper crimps. Make sure all of the wires are clean, securely fastened and providing a good ground path. If multiple wires are cased in one eyelet make sure no ground wires have excess wire insulation.

For detailed ground distribution information, refer to “Ground Distribution” in PG section.



Voltage Drop Tests

Voltage drop tests are often used to find components or circuits which have excessive resistance. A voltage drop in a circuit is caused by a resistance when the circuit is in operation.
Check the wire in the illustration. When measuring resistance with DMM, contact by a single strand of wire will give reading of 0 ohms. This would indicate a good circuit. When the circuit operates, this single strand of wire is not able to carry the current. The single strand will have a high resistance to the current. This will be picked up as a slight voltage drop.
Unwanted resistance can be caused by many situations as follows:

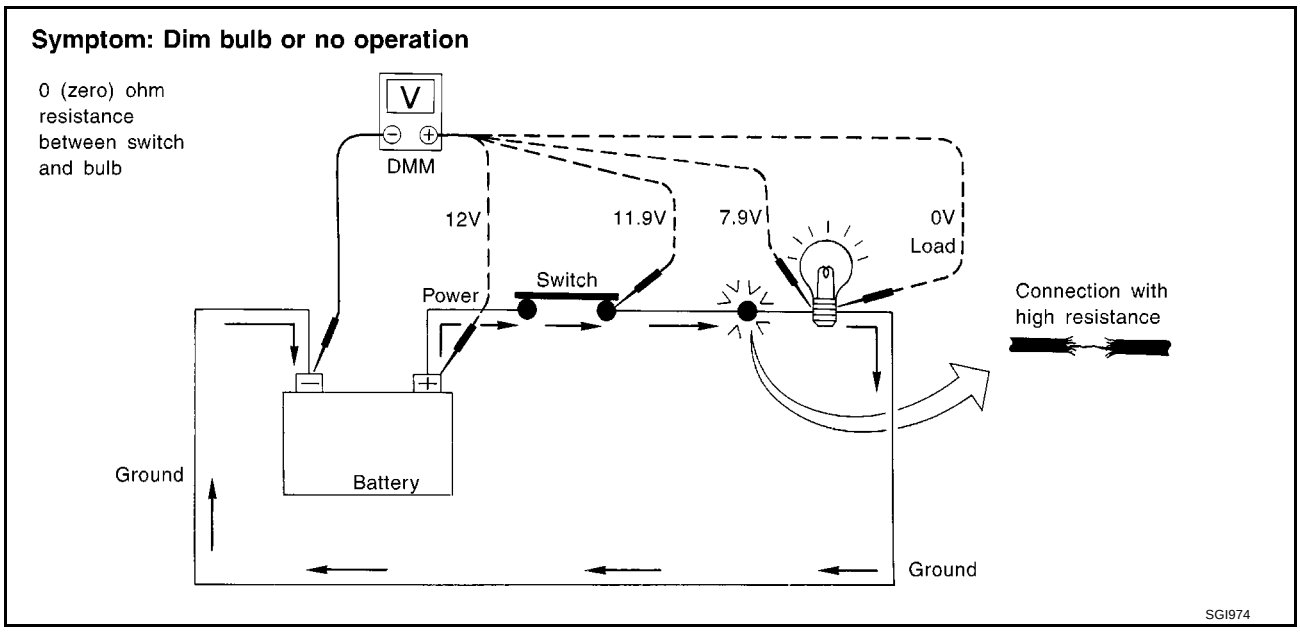
- Undersized wiring (single strand example)
- Corrosion on switch contacts
- Loose wire connections or splices.

If repairs are needed always use wire that is of the same or larger gauge.

MEASURING VOLTAGE DROP — ACCUMULATED METHOD

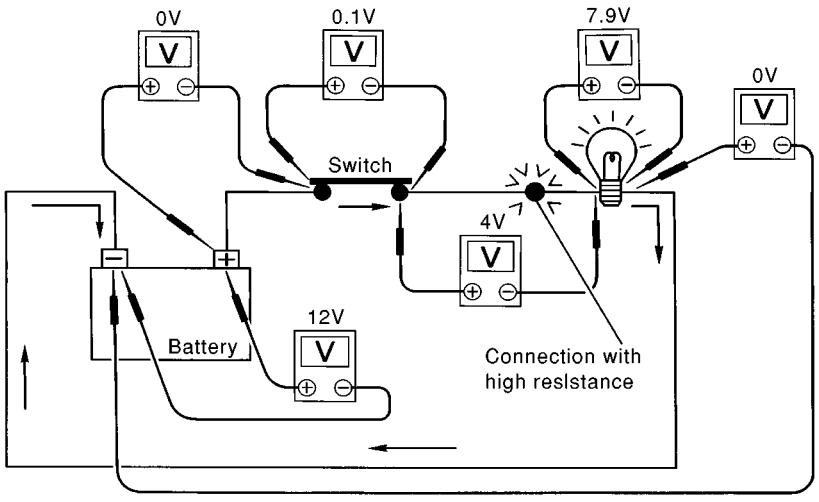
- Connect the DMM across the connector or part of the circuit you want to check. The positive lead of the DMM should be closer to power and the negative lead closer to ground.
- Operate the circuit.
- The DMM will indicate how many volts are being used to “push” current through that part of the circuit.

Note in the illustration that there is an excessive 4.1 volt drop between the battery and the bulb.



MEASURING VOLTAGE DROP — STEP-BY-STEP

The step-by-step method is most useful for isolating excessive drops in low voltage systems (such as those in “Computer Controlled Systems”).
Circuits in the “Computer Controlled System” operate on very low amperage.
The (Computer Controlled) system operations can be adversely affected by any variation in resistance in the system. Such resistance variation may be caused by poor connection, improper installation, improper wire gauge or corrosion.
The step by step voltage drop test can identify a component or wire with too much resistance.



1. Connect the DMM as shown, starting at the battery and working your way around the circuit.
2. An unusually large voltage drop will indicate a component or wire that needs to be repaired, As you can see the illustration above, the poor connection causes a 4 volt drop.

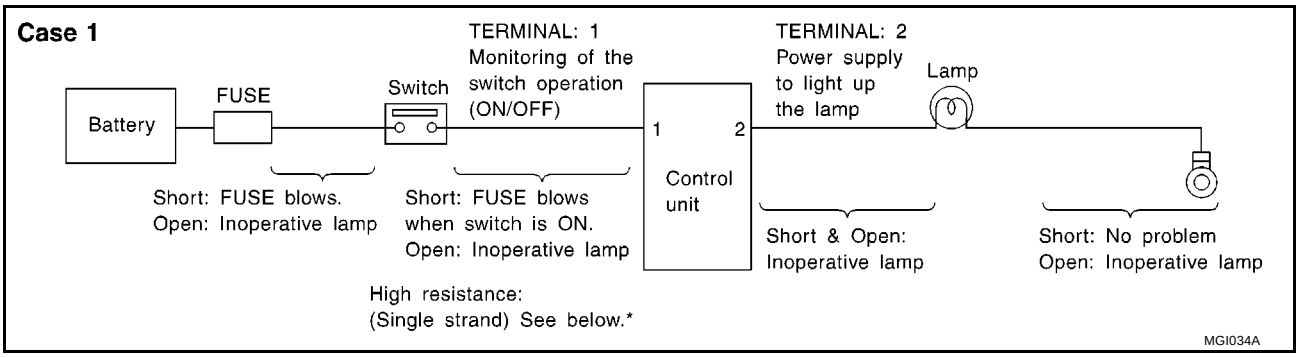
The chart that follows illustrates some maximum allowable voltage drops. These values are given as a guideline, the exact value for each component may vary.

COMPONENT	VOLTAGE DROP
Wire	negligible < .001 volts
Ground Connections	Approx. 0.1 volts
Switch Contacts	Approx. 0.3 volts

SAIA0258E

Control Unit Circuit Test

System Description:When the switch is ON, the control unit lights up the lamp.

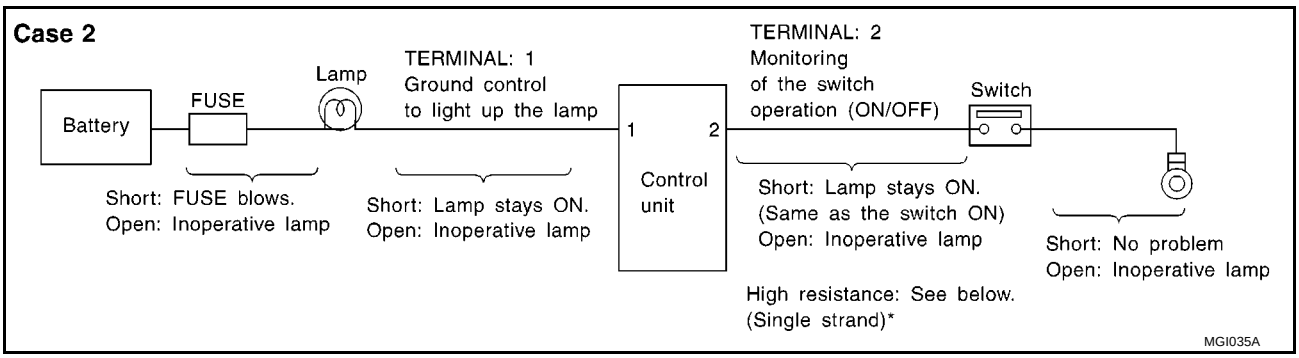


INPUT-OUTPUT VOLTAGE CHART

Pin No.	Item	Condition	Voltage value [V]	In case of high resistance such as single strand [V] *
1	Switch	Switch ON	Battery voltage	Lower than battery voltage Approx. 8 (Example)
		Switch OFF	Approx. 0	Approx. 0
2	Lamp	Switch ON	Battery voltage	Approx. 0 (Inoperative lamp)
		Switch OFF	Approx. 0	Approx. 0

The voltage value is based on the body ground.

*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 1 does not detect battery voltage. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not supply power to light up the lamp.



INPUT-OUTPUT VOLTAGE CHART

Pin No.	Item	Condition	Voltage value [V]	In case of high resistance such as single strand [V] *
1	Lamp	Switch ON	Approx. 0	Battery voltage (Inoperative lamp)
		Switch OFF	Battery voltage	Battery voltage
2	Switch	Switch ON	Approx. 0	Higher than 0 Approx. 4 (Example)
		Switch OFF	Approx. 5	Approx. 5

The voltage value is based on the body ground.

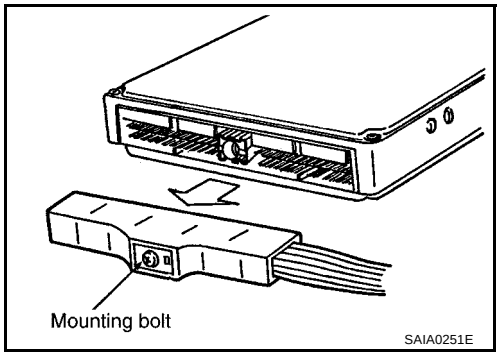
*:If high resistance exists in the switch side circuit (caused by a single strand), terminal 2 does not detect approx. 0V. Control unit does not detect the switch is ON even if the switch does not turn ON. Therefore, the control unit does not control ground to light up the lamp.

Control Units and Electrical Parts

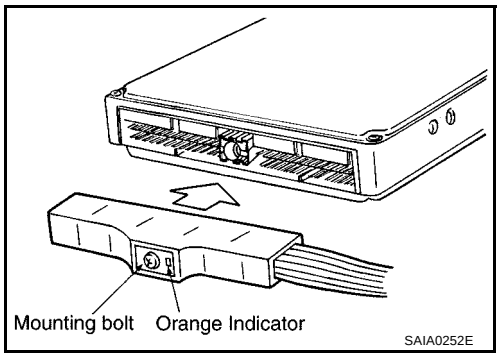
EAS000PY

PRECAUTIONS

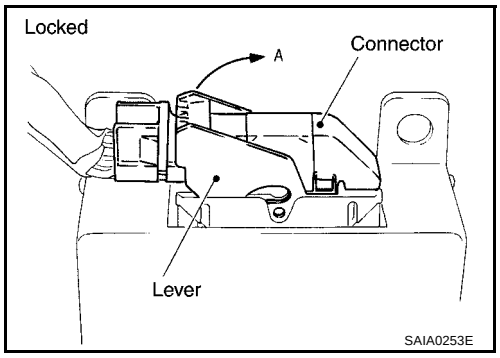
- Never reverse polarity of battery terminals.
- Install only parts specified for a vehicle.
- Before replacing the control unit, check the input and output and functions of the component parts.
- Do not apply excessive force when disconnecting a connector.
- If a connector is installed by tightening bolts, loosen bolt mounting it, then take it out by hand.



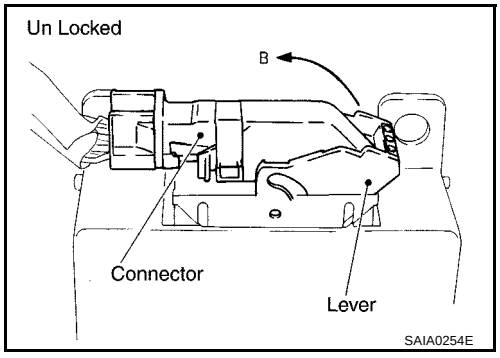
- Before installing a connector, make sure the terminal is not bent or damaged, and then correctly connect it.
  When installing a connector by tightening bolts, fix it by tightening the mounting bolt until the painted projection of the connector becomes even with the surface.



- For removal of the lever type connector, pull the lever up to the direction pointed to by the arrow A in the figure, and then remove the connector.

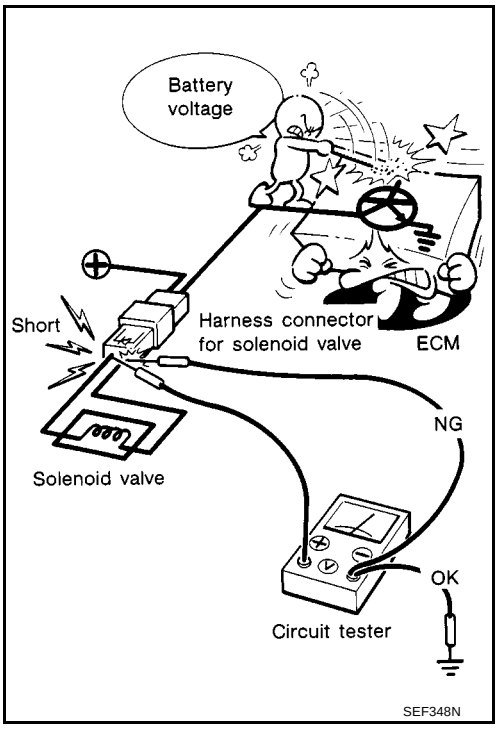


- For installation of the lever type connector, pull down the lever to the direction pointed by the arrow B in the figure, and then push the connector until a clicking noise is heard.



- Do not apply excessive shock to the control unit by dropping or hitting it.
- Be careful to prevent condensation in the control unit due to rapid temperature changes and do not let water or rain get on it. If water is found in the control unit, dry it fully and then install it in the vehicle.
- Be careful not to let oil to get on the control unit connector.
- Avoid cleaning the control unit with volatile oil.
- Do not disassemble the control unit, and do not remove the upper and lower covers.

- When using a DMM, be careful not to let test probes get close to each other to prevent the power transistor in the control unit from damaging battery voltage because of short circuiting.
- When checking input and output signals of the control unit, use the specified check adapter.



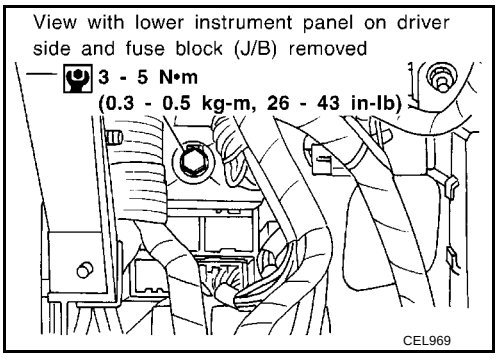
SMJ INSTALLATION

To install SMJ, tighten bolts until orange “fulltight” mark appears and then retighten to specified torque as required.

SMJ :3 - 5 N·m (0.3 - 0.5 kg-m, 26 - 43 in-lb)

CAUTION:

Do not overtighten bolts, otherwise, they may be damaged.



CONSULT-II CHECKING SYSTEM

PFP:00000

Description

EAS000PZ

- CONSULT-II is a hand-held type tester. When it is connected with a diagnostic connector equipped on the vehicle side, it will communicate with the control unit equipped in the vehicle and then enable various kinds of diagnostic tests.
- Refer to “CONSULT-II Software Operation Manual” for more information.

Function and System Application

EAS000Q0

Diagnostic test mode	Function	ENGINE	A/T	AIR BAG	ABS (Including ESP)	EPS	IPDM E/R	BCM	INTELLIGENT KEY	NATS*1
Work support	This mode enables a technician to adjust some devices faster and more accurately by following the indications on CONSULT-II.	x	–	–	–	–	–	x	x	x
Self-diagnostic results	Self-diagnostic results can be read and erased quickly.	x	x	x	x	x	x	x	x	x
Trouble diagnostic record	Current self-diagnostic results and all trouble diagnostic records previously stored can be read.	–	–	x	–	–	–	–	–	–
Data monitor	Input/Output data in the ECU can be read.	x	x	–	x	x	x	–	x	x
CAN diagnosis support monitor	Indicates the communication condition of CAN communication line.	x	x	–	x	x	x	x	x	–
Active test	Diagnostic Test Mode in which CONSULT-II drives some actuators apart from the ECUs and also shifts some parameters in a specified range.	x	–	–	x	x	x	x	x	–
DTC & SRT confirmation	The results of SRT (System Readiness Test) and the self-diagnosis status/result can be confirmed.	x*2	–	–	–	–	–	–	–	–
DTC work support	Select the operating condition to confirm Diagnosis Trouble Codes.	–	x	–	–	–	–	–	–	–
ECU part number	ECU part number can be read.	x	x	–	x	x	–	x	x	–
ECU discriminated No.	Classification number of a replacement ECU can be read to prevent an incorrect ECU from being installed.	–	–	x	–	–	–	–	–	–
Function test	Conducted by CONSULT-II instead of a technician to determine whether each system is “OK” or “NG”.	x*2	x	x	x	–	–	–	–	–
Control unit initialization	All registered ignition key IDs in NATS components can be initialized and new IDs can be registered.	–	–	–	–	–	–	–	–	x
Self-function check	ECU checks its own NATS communication interface.	–	–	–	–	–	–	–	–	x
Configuration	The vehicle configuration can be read and written on brand-new BCM and IPDM E/R	–	–	–	–	–	x	x	–	–

Nickel Metal Hydride Battery Replacement

EAS000Q1

CONSULT-II contains a nickel metal hydride battery. When replacing the battery obey the following:

WARNING:

Replace the nickel metal hydride battery with Genuine CONSULT-II battery only. Use of another battery may present a risk of fire or explosion. The battery may present a fire or chemical burn hazard if mistreated. Do not recharge, disassemble or dispose of in fire.
Keep the battery out of reach of children and discard used battery conforming to the local regulations.

Checking Equipment

EAS000Q2

When ordering the following equipment, contact your NISSAN distributor.

Tool name	Description
NISSAN CONSULT-II 1. CONSULT-II unit (Tester internal soft: Resident version 3.3.0) and accessories 2. Program card AED03B and AEN02C (For NATS) To confirm the best combination of these softwares, refer to CONSULT-II Operation Manual. 3. CONSULT-II CONVERTER 4. “CONSULT-II Pigtail” Cable	 SAIA0363E

NOTE:

- The CONSULT-II must be used in conjunction with a program card. CONSULT-II does not require loading (Initialization) procedure.
- Be sure the CONSULT-II is turned off before installing or removing a program card.

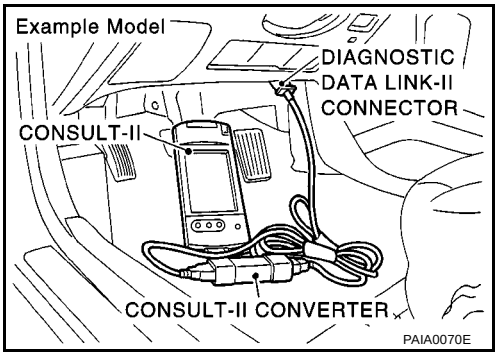
CAUTION:

- **If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carries out CAN communication.**
- **If CONVERTER is not connected with CONSULT-II, vehicle occur the “FAIL-SAFE MODE” which is “LIGHT UP the HEADLIGHT” and/or “Cooling FAN ROTATING” when CONSULT-II is started.**
- **Previous CONSULT-II “I” and “Y” DLC-I and DLC-II cables should NOT be used anymore because their DDL connector pins can be damaged during cable swapping.**

CONSULT-II Start Procedure

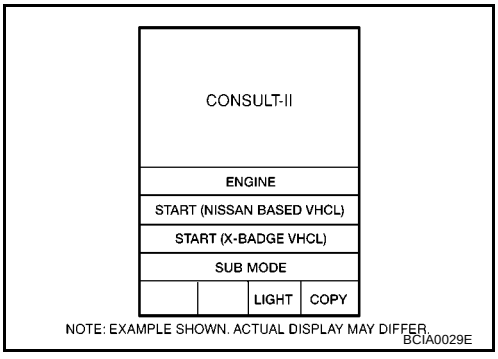
EAS000SG

1. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.



PAIA0070E

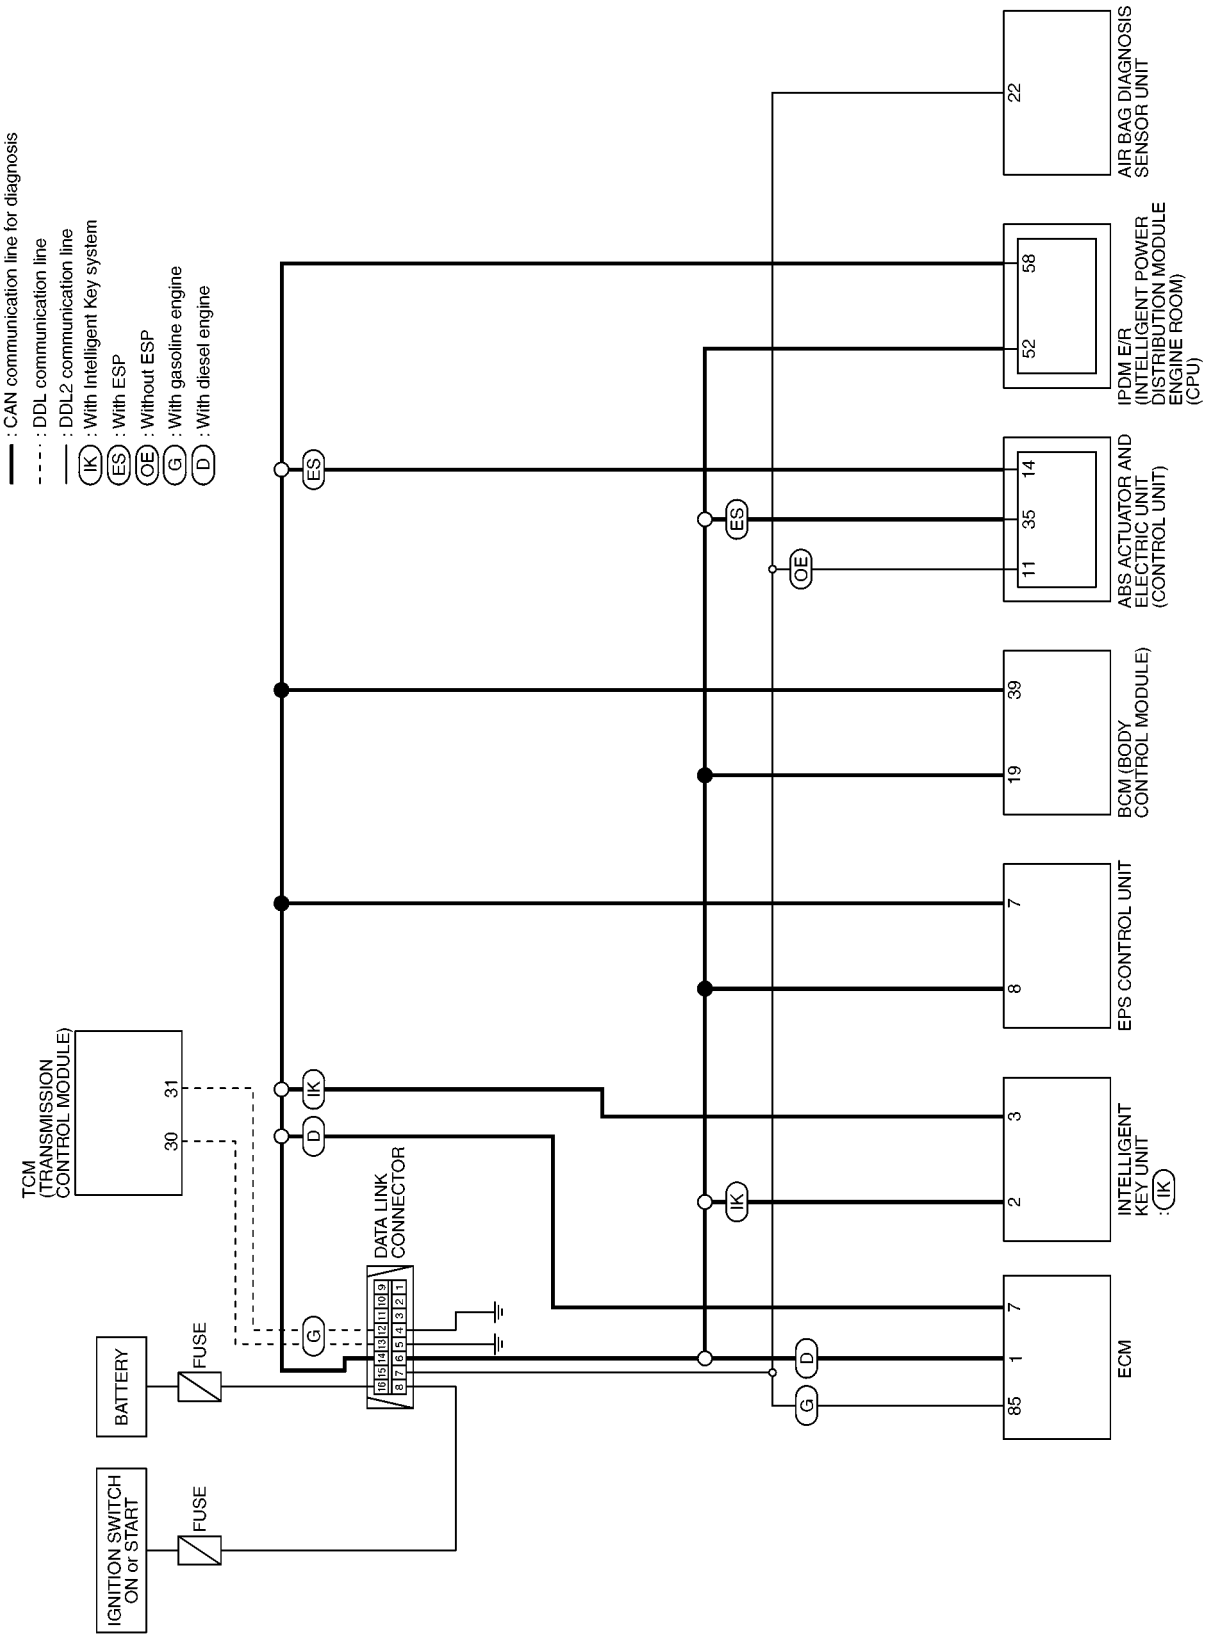
2. When the ignition switch OFF, turn on the ignition switch.
3. Touch “START(NISSAN BASED VECL)” or “System Shortcut” (eg: Engine) on the screen.



BCIA0029E

CONSULT-II Data Link Connector (DLC) Circuit

EAS0014U



MAWA0011E

INSPECTION PROCEDURE

If the CONSULT-II cannot diagnose the system properly, check the following items.

Symptom	Check item
CONSULT-II cannot access any system.	● CONSULT-II DLC power supply circuit (Terminal 8) and ground circuit (Terminal 4) (For detailed circuit, refer to “MIL & Data Link Connectors Wiring Diagram” in EC section.) ● CONSULT-II DLC cable and CONSULT-II CONVERTER
CONSULT-II cannot access individual system. (Other systems can be accessed.)	● CONSULT-II program card (Check the appropriate CONSULT-II program card for the system. Refer to “Checking Equipment”.) ● Power supply and ground circuit for the control unit of the system (For detailed circuit, refer to wiring diagram for each system.) ● Open or short circuit between the system and CONSULT-II DLC (For detailed circuit, refer to wiring diagram for each system.) ● Open or short circuit CAN communication line. Refer to LAN-4, "Precautions When Using CONSULT-II" .

NOTE:

The DDL1 and DDL2 circuits from DLC pins 12, 13, 14 and 15 may be connected to more than one system. A short in a DDL circuit connected to a control unit in one system may affect CONSULT-II access to other systems.

LIFTING POINT

PFP:00000

Special Service Tools

EAS000Q4

Tool number Tool name	Description
LM4086-0200 Board on lift attachment	 S-NT001
LM4519-0000 Safety stand attachment	 S-NT002

CAUTION:

- **Every time the vehicle is lifted up, maintain the complete vehicle curb condition.**
- **Since the vehicle's center of gravity changes when removing main parts on the front side (engine, transmission, suspension etc.), support a jack up point on the rear side garage jack with a mission jack or equivalent.**
- **Since the vehicle's center of gravity changes when removing main parts on the rear side (rear axle, suspension, etc.), support a jack up point on the front side garage jack with a mission jack or equivalent.**
- **Be careful not to smash or do not do anything that would affect piping parts.**

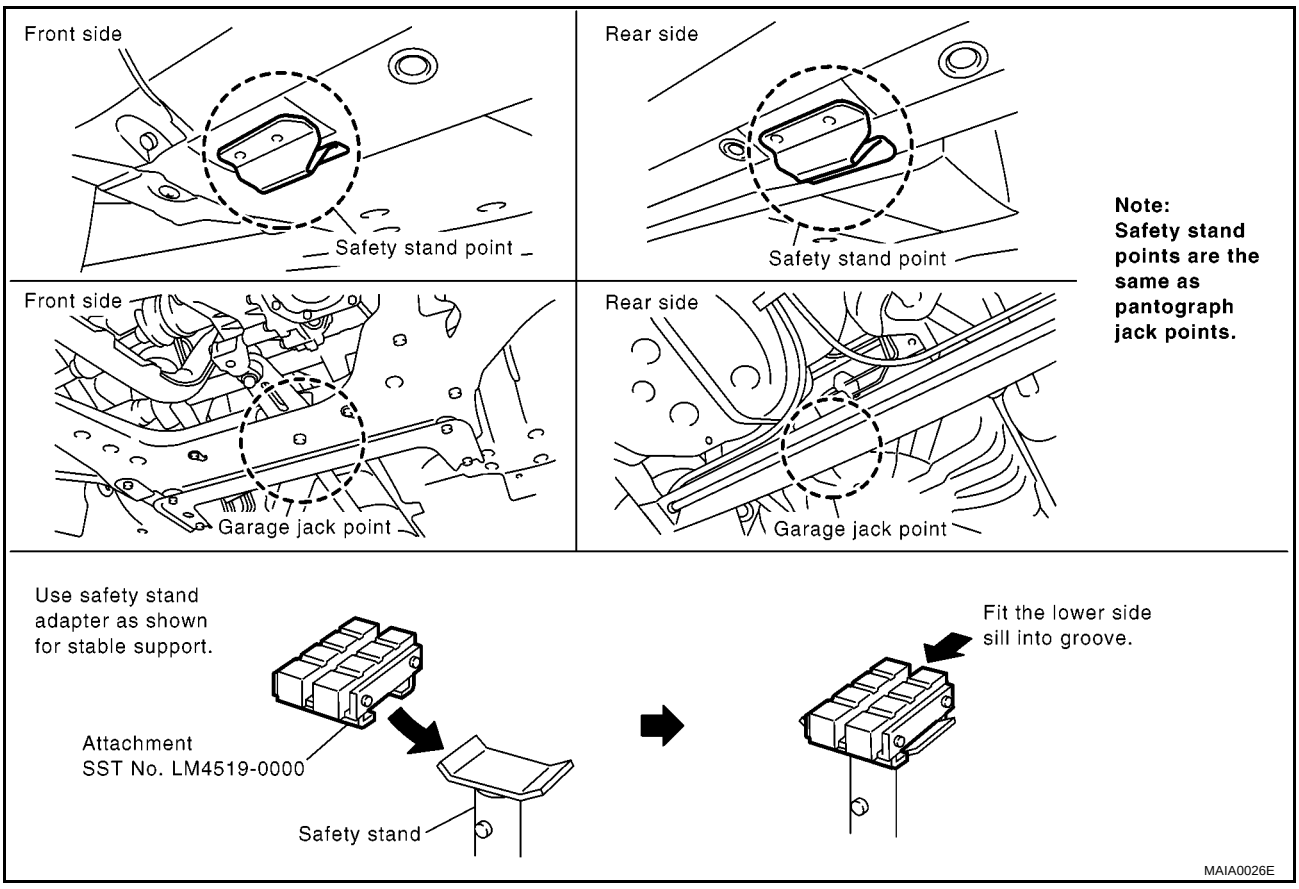
Garage Jack and Safety Stand

EAS000Q5

WARNING:

- **Park the vehicle on a level surface when using the jack. Make sure to avoid damaging pipes, tubes, etc. under the vehicle.**
- **Never get under the vehicle while it is supported only by the jack. Always use safety stands when you have to get under the vehicle.**

- **Place wheel chocks at both front and back of the wheels on the ground.**



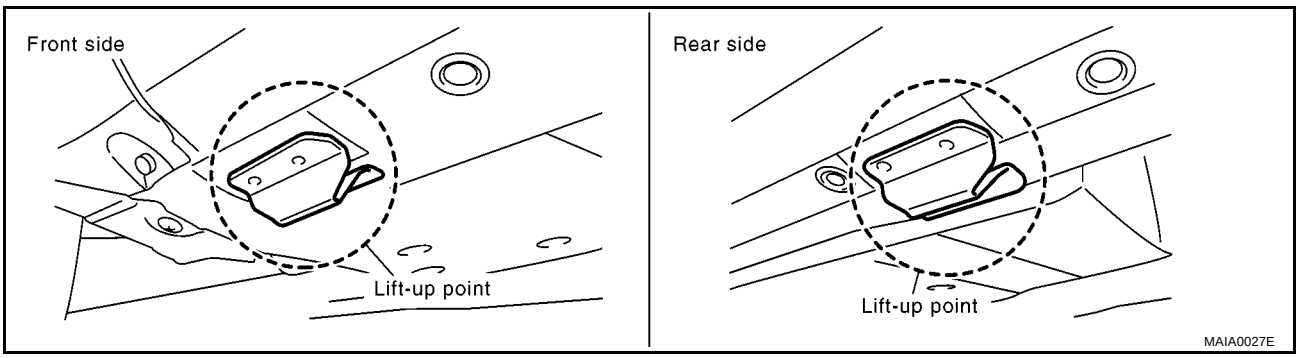
2-pole Lift

EAS000Q6

WARNING:

When lifting the vehicle, open the lift arms as wide as possible and ensure that the front and rear of the vehicle are well balanced.

When setting the lift arm, do not allow the arm to contact the brake tubes, brake cable, fuel lines and sill spoiler.



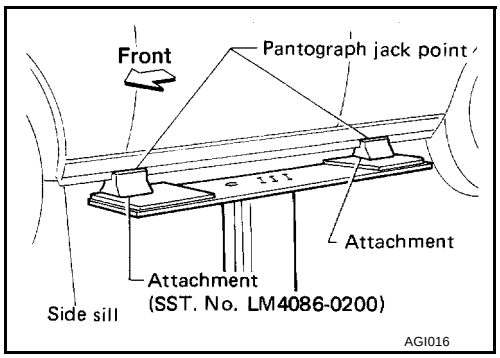
Board-on Lift

EAS000Q7

CAUTION:

Make sure vehicle is empty when lifting.

- **The board-on lift attachment (LM4086-0200) set at front end of vehicle should be set on the front of the sill under the front door opening.**
- **Position attachments at front and rear ends of board-on lift.**



TOW TRUCK TOWING

PFP:00000

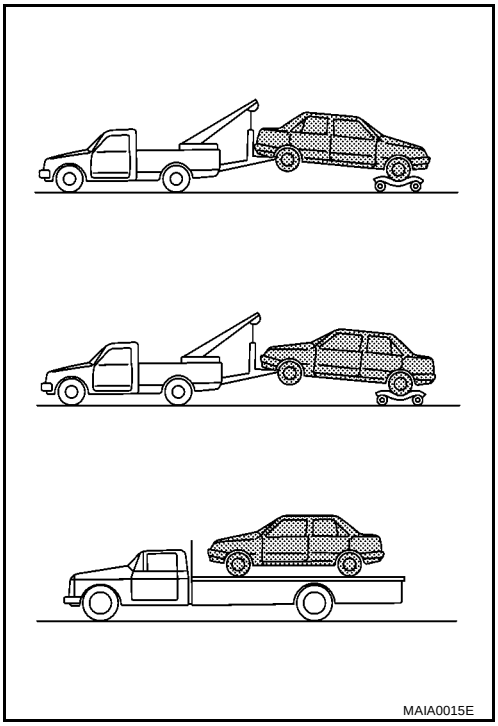
Tow Truck Towing

EAS000Q8

CAUTION:

- **All applicable local laws regarding the towing operation must be obeyed.**
- **It is necessary to use proper towing equipment to avoid possible damage to the vehicle during towing operation. Towing is in accordance with Towing Procedure Manual at dealer.**
- **Always attach safety chains before towing.**
- **When towing, make sure that the transmission, steering system and power train are in good order. If any unit is damaged, dollies must be used.**
- **Never tow an automatic transmission model or H·CVT model from the rear (that is backward) with four wheels on the ground. This may cause serious and expensive damage to the transmission.**

NISSAN recommends that towing dollies be used when towing your vehicle beplaced on a flat bed truck as illustrated.



TOWING AN AUTOMATIC TRANSAXLE MODEL OR H·CVT MODEL WITH FOUR WHEELS ON GROUND

Observe the following restricted towing speeds and distances.

Speed : Below 50 km/h (30 MPH)

Distance : Less than 65 km(40 miles)

CAUTION:

Never tow an automatic transaxle model from the rear (i.e., backward) with four wheels on the ground as this may cause serious and expensive damage to the transaxle.

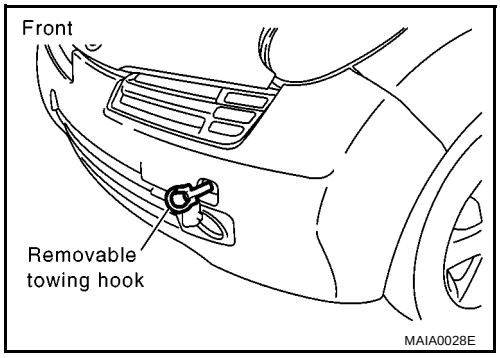
TOWING AN AUTOMATIC TRANSAXLE MODEL OR H·CVT MODELS WITH REAR WHEELS RAISED (WITH FRONT WHEELS ON GROUND)

Never tow an automatic transaxle model with rear wheels raised (with front wheels on ground) as this may cause serious and expensive damage to the transaxle. If it is necessary to tow it with rear wheels raised, always use a towing dolly under the front wheels.

Vehicle Recovery (Freeing a stuck vehicle)

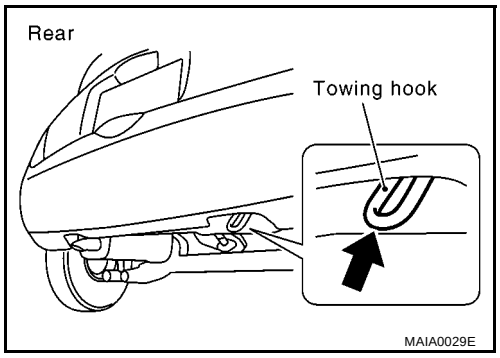
EAS000Q9

- Use the towing hook only, not other parts of the vehicle. Otherwise, the vehicle body will be damaged.
- Use the towing hook only to free a vehicle stuck in sand, snow, mud, etc. Never tow the vehicle for a long distance using only the towing hook.
- The towing hook is under tremendous force when used to free a stuck vehicle. Always pull the cable straight out from the front or rear of the vehicle. Never pull on the hook at an angle.
- Stand clear of a stuck vehicle.



WARNING:

- **Do not spin the tires at high speed. This could cause them to explode and result in serious injury. Parts of the vehicle could also overheat and be damaged.**
- **Install removable towing hook securely using wheel nut wrench.**



TIGHTENING TORQUE OF STANDARD BOLTS
