ISO 15031-2 Terminology List

EAS000QE

All emission related terms used in this publication in accordance with ISO 15031-2 are listed. Accordingly, new terms, new acronyms/abbreviations and old terms are listed in the following chart.

NEW TERM	NEW ACRONYM / ABBREVIATION	OLD TERM
Air cleaner	ACL	Air cleaner
Barometric pressure	BARO	***
Barometric pressure sensor-BCDD	BAROS-BCDD	BCDD
Camshaft position	CMP	***
Camshaft position sensor	CMPS	Crank angle sensor
Canister	***	Canister
Carburetor	CARB	Carburetor
Charge air cooler	CAC	Intercooler
Closed loop	CL	Closed loop
Closed throttle position switch	CTP switch	Idle switch
Clutch pedal position switch	CPP switch	Clutch switch
Continuous fuel injection system	CFI system	***
Continuous trap oxidizer system	CTOX system	***
Crankshaft position	CKP	***
Crankshaft position sensor	CKPS	***
Data link connector	DLC	***
Data link connector for CONSULT-II	DLC for CONSULT-II	Diagnostic connector for CONSULT-II
Diagnostic test mode	DTM	Diagnostic mode
Diagnostic test mode selector	DTM selector	Diagnostic mode selector
Diagnostic test mode I	DTM I	Mode I
Diagnostic test mode II	DTM II	Mode II
Diagnostic trouble code	DTC	Malfunction code
Direct fuel injection system	DFI system	***
Distributor ignition system	DI system	Ignition timing control
Early fuel evaporation-mixture heater	EFE-mixture heater	Mixture heater
Early fuel evaporation system	EFE system	Mixture heater control
Electrically erasable programmable read only memory	EEPROM	***
Electronic ignition system	EI system	Ignition timing control
Engine control	EC	***
Engine control module	ECM	ECCS control unit
Engine coolant temperature	ECT	Engine temperature
Engine coolant temperature sensor	ECTS	Engine temperature sensor
Engine modification	EM	***
Engine speed	RPM	Engine speed
Erasable programmable read only memory	EPROM	***
Evaporative emission canister	EVAP canister	Canister
Evaporative emission system	EVAP system	Canister control solenoid valve
Exhaust gas recirculation valve	EGR valve	EGR valve

NEW TERM	NEW ACRONYM / ABBREVIATION	OLD TERM
Exhaust gas recirculation control-BPT valve	EGRC-BPT valve	BPT valve
Exhaust gas recirculation control-solenoid valve	EGRC-solenoid valve	EGR control solenoid valve
Exhaust gas recirculation temperature sensor	EGRT sensor	Exhaust gas temperature sensor
EGR temperature sensor		
Flash electrically erasable programmable read only memory	FEEPROM	***
Flash erasable programmable read only memory	FEPROM	***
Flexible fuel sensor	FFS	***
Flexible fuel system	FF system	***
Fuel pressure regulator	***	Pressure regulator
Fuel pressure regulator control solenoid valve	***	PRVR control solenoid valve
Fuel trim	FT	***
Heated Oxygen sensor	HO2S	Exhaust gas sensor
Idle air control system	IAC system	Idle speed control
Idle air control valve-air regulator	IACV-air regulator	Air regulator
Idle air control valve-auxiliary air control valve	IACV-AAC valve	Auxiliary air control (AAC) valve
Idle air control valve-FICD solenoid valve	IACV-FICD solenoid valve	FICD solenoid valve
Idle air control valve-idle up control solenoid valve	IACV-idle up control solenoid valve	Idle up control solenoid valve
Idle speed control-FI pot	ISC-FI pot	FI pot
Idle speed control system	ISC system	***
Ignition control	IC	***
Ignition control module	ICM	***
Indirect fuel injection system	IFI system	***
Intake air	IA	Air
Intake air temperature sensor	IAT sensor	Air temperature sensor
Knock	***	Detonation
Knock sensor	KS	Detonation sensor
Malfunction indicator lamp	MIL	Check engine light
Manifold absolute pressure	MAP	***
Manifold absolute pressure sensor	MAPS	***
Manifold differential pressure	MDP	***
Manifold differential pressure sensor	MDPS	***
Manifold surface temperature	MST	***
Manifold surface temperature sensor	MSTS	***
Manifold vacuum zone	MVZ	***
Manifold vacuum zone sensor	MVZS	***
Mass air flow sensor	MAFS	Air flow meter
Mixture control solenoid valve	MC solenoid valve	Air-fuel ratio control solenoid valve
Multiport fuel injection System	MFI system	Fuel injection control

NEW TERM	NEW ACRONYM / ABBREVIATION	OLD TERM
Nonvolatile random access memory	NVRAM	***
On board diagnostic system	OBD system	Self-diagnosis
Open loop	OL	Open loop
Oxidation catalyst	OC	Catalyst
Oxidation catalytic converter system	OC system	***
Oxygen sensor	O2S	Exhaust gas sensor
Park position switch	***	Park switch
Park/neutral position switch	PNP switch	Park/neutral switch Inhibitor switch Neutral position switch
Periodic trap oxidizer system	PTOX system	***
Positive crankcase ventilation	PCV	Positive crankcase ventilation
Positive crankcase ventilation valve	PCV valve	PCV valve
Powertrain control module	PCM	***
Programmable read only memory	PROM	***
Pulsed secondary air injection control solenoid valve	PAIRC solenoid valve	AIV control solenoid valve
Pulsed secondary air injection system	PAIR system	Air induction valve (AIV) control
Pulsed secondary air injection valve	PAIR valve	Air induction valve
Random access memory	RAM	***
Read only memory	ROM	***
Scan tool	ST	***
Secondary air injection pump	AIR pump	***
Secondary air injection system	AIR system	***
Sequential multiport fuel injection system	SFI system	Sequential fuel injection
Service reminder indicator	SRI	***
Simultaneous multiport fuel injection system	***	Simultaneous fuel injection
Smoke puff limiter system	SPL system	***
Supercharger	SC	***
Supercharger bypass	SCB	***
System readiness test	SRT	***
Thermal vacuum valve	TVV	Thermal vacuum valve
Three way catalyst	TWC	Catalyst
Three way catalytic converter system	TWC system	***
Three way + oxidation catalyst	TWC + OC	Catalyst
Three way + oxidation catalytic converter system	TWC + OC system	***
Throttle body	TB	Throttle chamber SPI body
Throttle body fuel injection system	TBI system	Fuel injection control
Throttle position	TP	Throttle position
Throttle position sensor	TPS	Throttle sensor
Throttle position switch	TP switch	Throttle switch
Torque converter clutch solenoid valve	TCC solenoid valve	Lock-up cancel solenoid Lock-up solenoid

NEW TERM	NEW ACRONYM / ABBREVIATION	OLD TERM
Transmission control module	TCM	A/T control unit
Turbocharger	TC	Turbocharger
Vehicle speed sensor	VSS	Vehicle speed sensor
Volume air flow sensor	VAFS	Air flow meter
Warm up oxidation catalyst	WU-OC	Catalyst
Warm up oxidation catalytic converter system	WU-OC system	***
Warm up three way catalyst	WU-TWC	Catalyst
Warm up three way catalytic converter system	WU-TWC system	***
Wide open throttle position switch	WOTP switch	Full switch

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS004PK

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions

EIS004PL

- When removing or disassembling any part, be careful not to damage or deform it. Protect parts, which may get in the way with cloth.
- When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
- Keep removed parts protected with cloth.
- If a clip is deformed or damaged, replace it.
- If an unreusable part is removed, replace it with a new one.
- Tighten bolts and nuts firmly to the specified torque.
- After re-assembly has been completed, make sure each part functions correctly.
- Remove stains in the following way.

Water-soluble stains:
Dip a soft cloth in warm water, and then squeeze it tightly. After wiping the stain, wipe with a soft dry cloth.
Oil stain:
Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water and squeeze it tightly. Then clean off the detergent completely. Then wipe the area with a soft dry cloth.

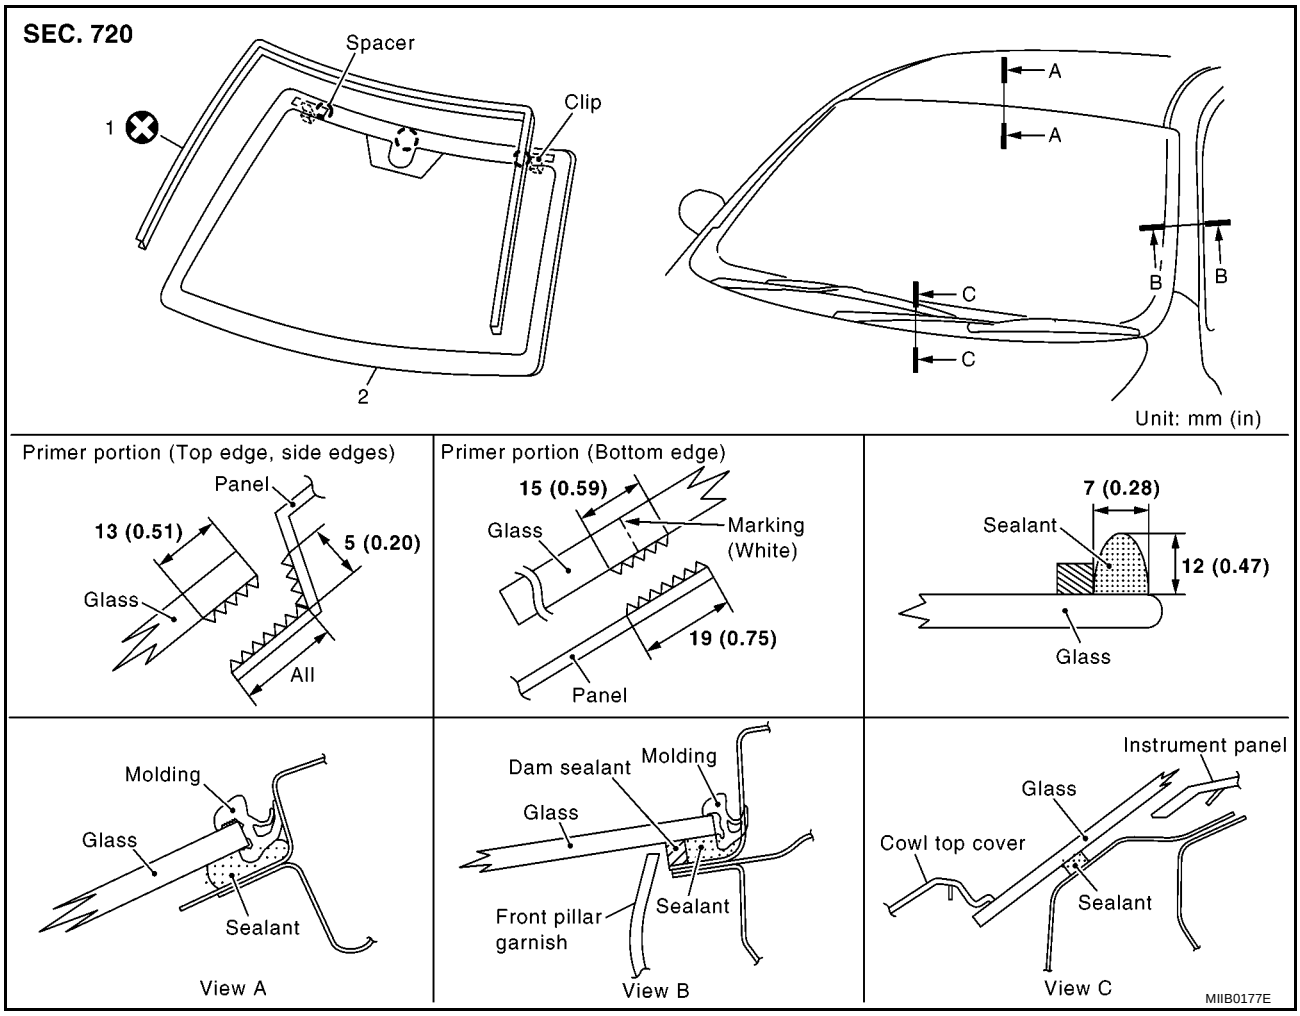
- Do not use any organic solvent, such as thinner or benzine.

WINDSHIELD GLASS

PFP:72712

Removal and Installation

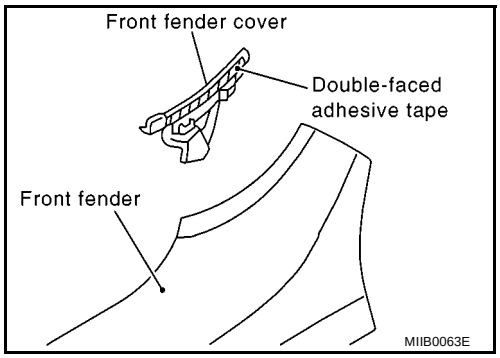
EIS004K7



1. Windshield molding
2. Windshield glass

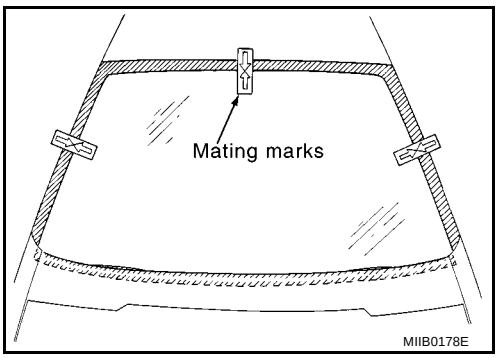
REMOVAL

1. Remove headliner. Refer to EI-24, "HEADLINER" .
2. Remove cowl top cover. Refer to EI-10, "COWL TOP" .
3. Peel off double-sided tape and remove front fender covers (LH/RH) from front fenders (LH/RH).



4. Apply protective tape around windshield glass to protect the painted surface from damage.
5. Guiding a cutter knife along glass, cut the surface of moldings.
6. With pliers, draw out all the remaining molding left in flanged area of body to remove it completely from adhering surface on glass.

- When re-using the windshield glass, put match marks on body and glass.



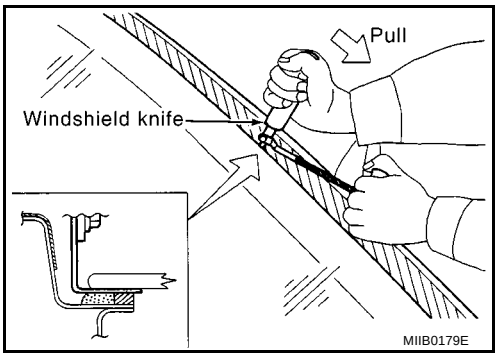
7. Cut adhesive.
   - Depending on the tool in use, follow the procedures below:

   CAUTION:
   If windshield glass is reused, do not use a windshield knife. (It may scratch glass surface.)

a. With a windshield knife (when replacing glass).

i. To smoothly cut with windshield knife, apply soapy water onto the adhesive on the body side surrounding the windshield.

ii. Insert windshield knife into the bonded area. Cut adhesive by pulling the knife, keeping the tip parallel to glass edge.



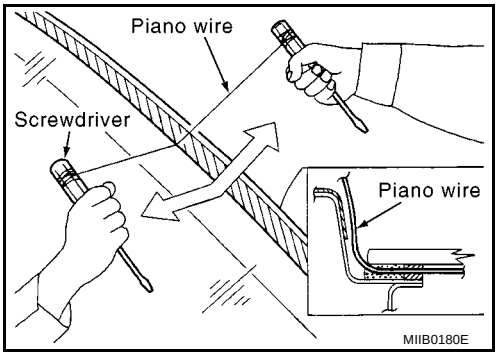
b. With a piano wire (when reusing glass)

i. Working from inside cabin, drill a through hole in the adhesive with a drill or pick.

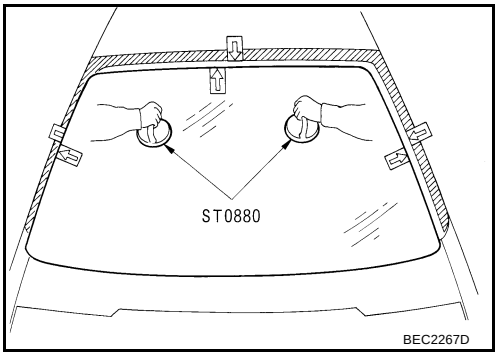
ii. From inside the passenger room, pass a piano wire through the hole and tie both ends to screwdrivers or similar tools.

iii. With two persons, one holding one end of the piano wire outside the vehicle while the other holding the other end inside the vehicle, pulling the wire alternately to cut off the adhesive.

CAUTION:
- **Do not press piano wire excessively against glass edge.**
- **Put a copper plate to keep the piano wire clear of plastic parts such as the instrument panel.**



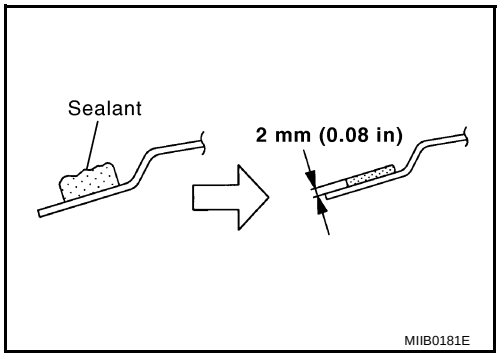
8. Use rubber suction cups (SST) to remove glass from the vehicle.



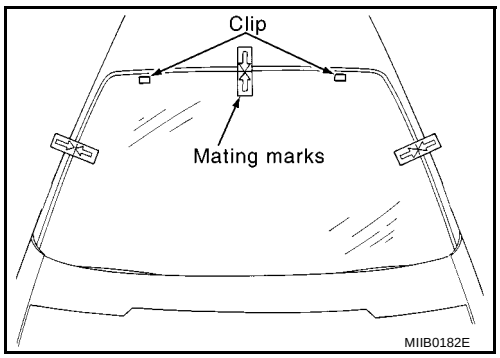
INSTALLATION

1. Using a knife or spatula, trim the adhesive (sealant) remaining on body down to approximately 2 mm thick so that the contour becomes smooth.

   CAUTION:
   If bonded area on body is scratched, be sure to repair it with a 2-component urethane. Do not use lacquer.



2. Put the clip in the panel hole.
3. When installing new glass, mount glass onto the vehicle and paint mating marks on body and glass, then remove glass again.
4. When reusing glass, use a knife or spatula to remove the remaining adhesive (sealant) and smooth out the surface.
5. Clean bonded area on glass with white gasoline.



6. Apply primer G along the entire circumference of glass.

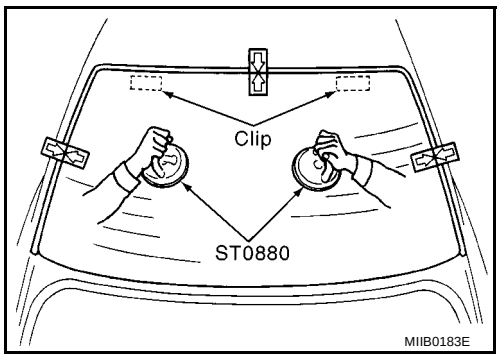
   CAUTION:
   There are 2 types of primer. Never confuse the application methods.
   Primer M: for painted surfaces
   Primer G: for glass

   NOTE:
   The essential function of primers is to strengthen adhesion between glass and painted surface.

7. Apply primer M on areas where adhesive contacts on the side of vehicle body.

   CAUTION:
   - **If primer M adheres to a painted surface other than bonding area, or if it overflows, quickly remove it with white gasoline.**
   - **Place a copper plate to keep primer M clear of the instrument panel.**

8. After applying primers, apply the adhesive along the entire circumference of the glass as shown in the figure, and within the time specified in the instructions for the adhesive.
   - Open adhesive by cutting off the nozzle tip and set it in a sealant gun.
9. After setting rubber suction cups (SST) to glass, align mating marks on body and glass. Install glass to the body.
10. Press entire surface of glass lightly to fit it completely.
11. Remove protective tape.
12. Using a spatula, repair any adhesive overflow or shortage to make the surface smooth.

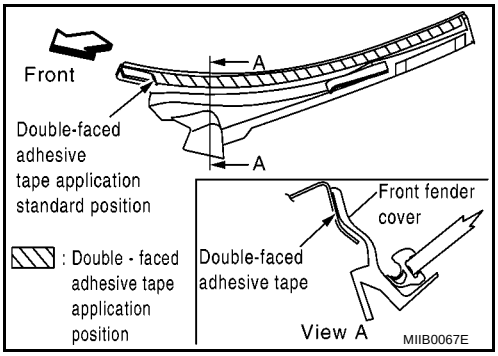


13. Position windshield moldings and allow their adhesion. Refer to EI-13, "WINDSHIELD MOLDING" .

    CAUTION:
    - **Be sure to install windshield molding before adhesive hardens.**
    - **After installing glass, keep door windows open and avoid driving vehicle until adhesive has completely cured.**

14. Check for water leaks.
15. Remove double-sided tape from front fender cover and apply primer (Sumitomo 3M K520) to double-sided tape application position shown in the figure. Then apply new double-sided tape and install front fender.

Double-sided adhesive tape **: Part equivalent to Sumitomo 3M-5571 (t: 0.8)**



16. Install cowl top cover. Refer to EI-10, "COWL TOP" .
17. Install headliner. Refer to EI-24, "HEADLINER" .

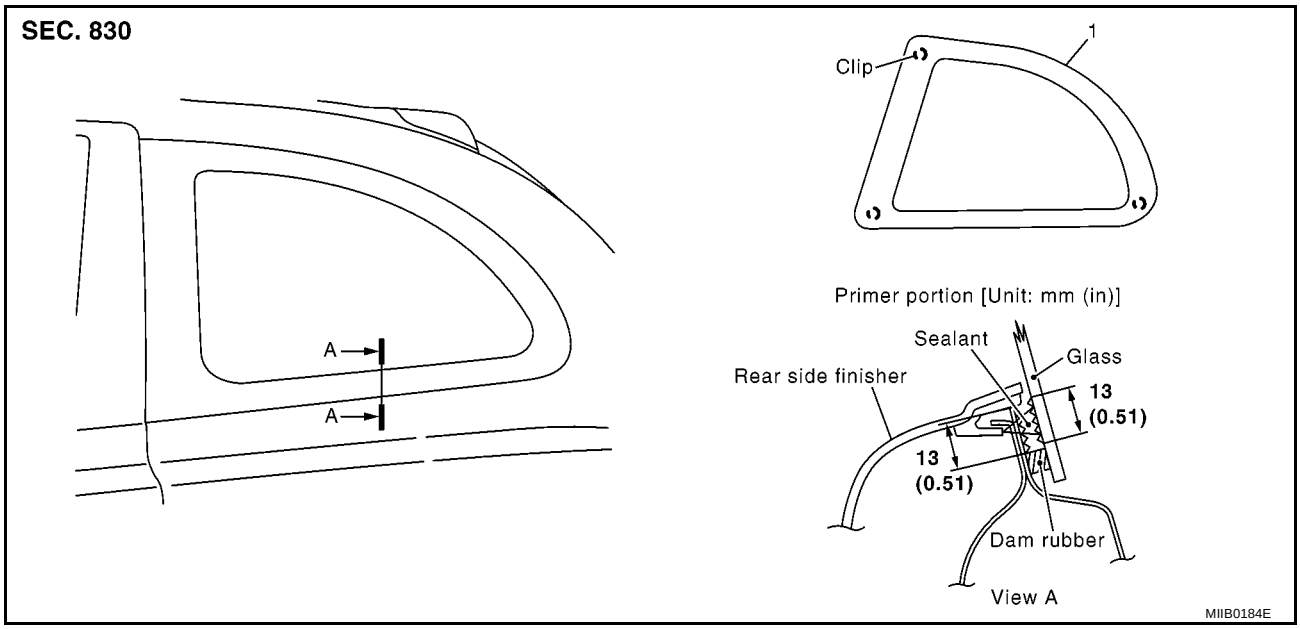
SIDE WINDOW GLASS

PFP:83300

Removal and Installation

SMA for VIN >SJN**AK12U1174013

EIS004K8

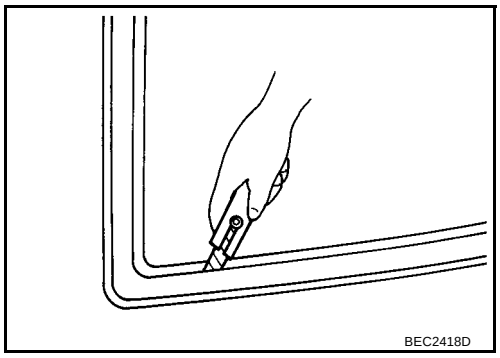


1. Side window glass

REMOVAL

1. Remove rear side finisher and lock pillar upper garnish. Refer to EI-20, "Removal and Installation (3-Door)" .
2. Apply protective tape on body panel along the circumference side window glass to protect coated surfaces from damage.
3. For the side window glass vehicle front side, open front door, and from outside of vehicle insert cutter knife between side window glass and lock pillar panel and cut adhesive parallel to glass.
4. For side window glass adhesion areas other than the above, working from inside vehicle, insert cutter knife between side door window glass and body panel. Guide cutter edge along glass to cut off adhesive.

   CAUTION:
   Cut carefully so that the tip end of cutter knife does not contact painted surface.
5. Remove glass out of vehicle, unclipping.

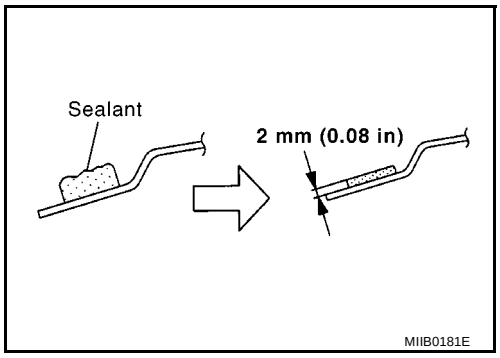


INSTALLATION

1. With a knife, scrape off adhesive remaining on the vehicle body to as thin and flat as 2 mm.

CAUTION:
If scratches are made on vehicle-side bonding surface, be sure to repair it. Always use 2-component type urethane paint. Do not use lacquer type paint.

2. Using a knife or spatula to remove the remaining adhesive and smooth out the surface. (When glass is reused)
3. Clean bonded area on glass with white gasoline.
4. Apply primer G along the entire circumference of glass.



CAUTION:
As 2 primers will be used, they must be used exactly as specified.
Primer M: for painted surfaces

Primer G: for glass

NOTE:

The essential function of primers is to strengthen adhesion between the glass and painted surface primer.

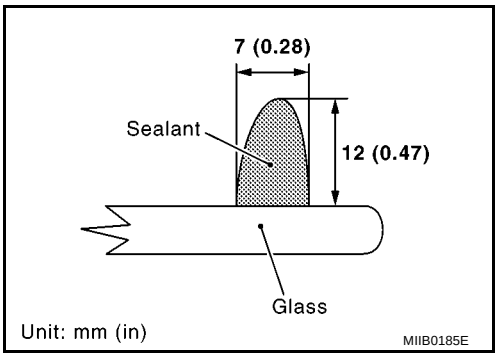
5. Apply primer M on areas where adhesive contacts on the side of vehicle body.

CAUTION:

If primer M adheres to a painted surface other than bonding area, or if it overflows, quickly remove it with white gasoline.

6. After applying primers, apply the adhesive along the entire circumference of the glass as shown in the figure, and within the time specified in the instructions for the adhesive.

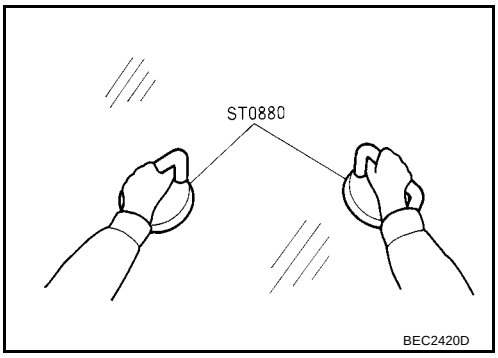
- Open adhesive by cutting off the nozzle tip and set it in a sealant gun.



7. After setting rubber suction cups (SST) to glass, align mating marks on body and glass. Install glass to the body.
8. Press entire surface of glass lightly to fit it completely.
9. Remove protective tape.
10. Using a spatula, go over areas with excessive or insufficient adhesive and neatly smooth the surface.

    CAUTION:

    After installing glass, keep door windows open and avoid driving vehicle until adhesive has completely cured.
11. Check for water leaks.
12. Install rear side finisher and lock pillar upper garnish. Refer to EI-16, "DOOR FINISHER" .

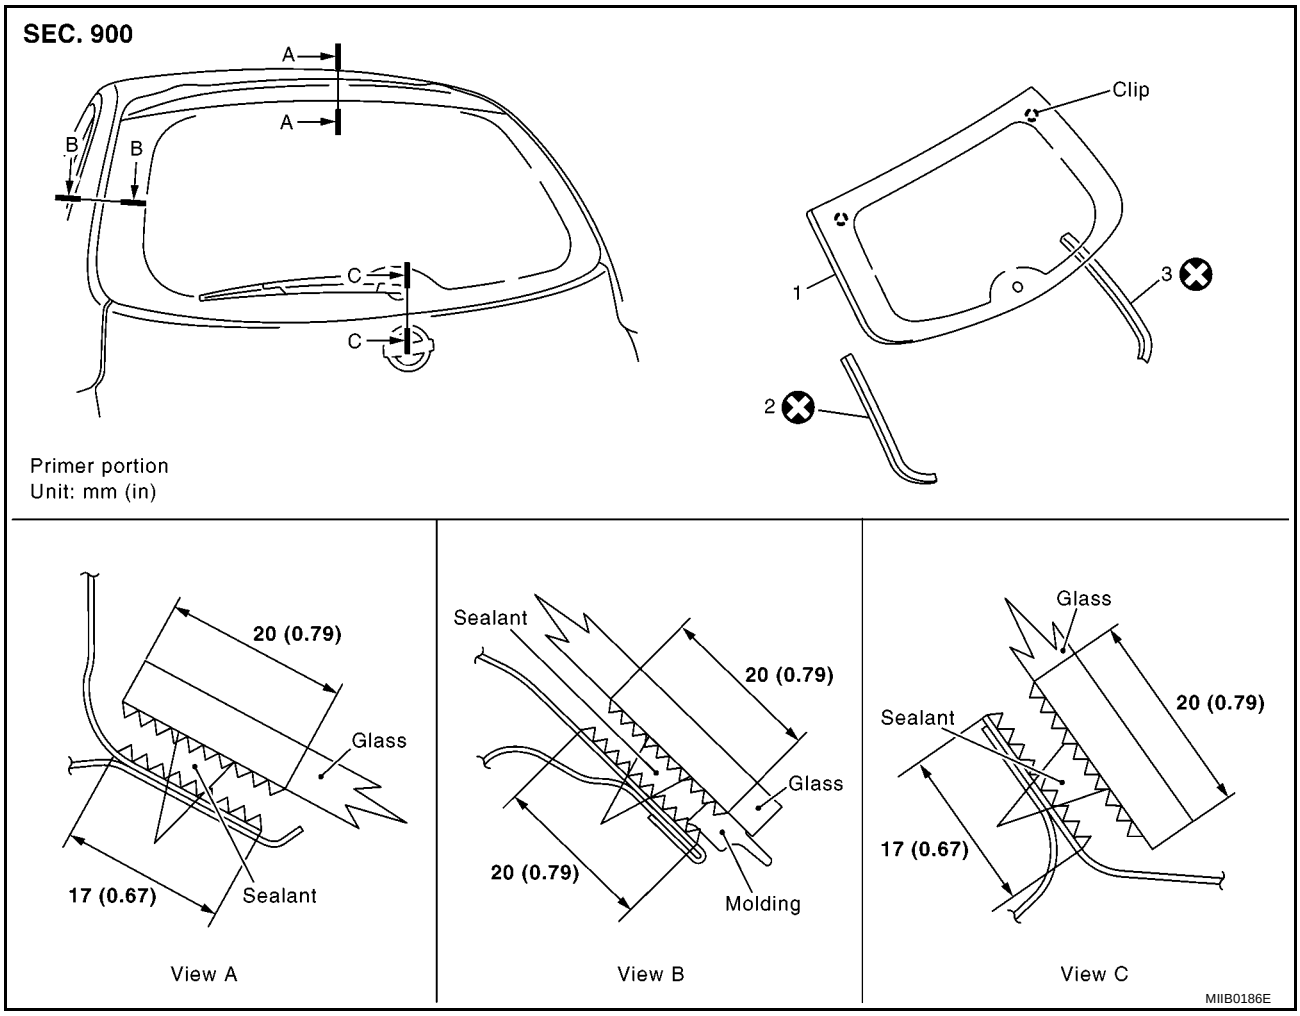


BACK DOOR WINDOW GLASS

PFP:90300

Removal and Installation

EIS004K9



1. Back door window glass
2. Back door window molding (LH side)
3. Back door window molding (RH side)

REMOVAL

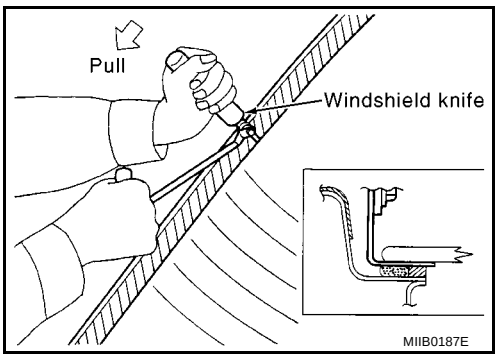
1. Remove back door finisher. Refer to EI-18, "BACK DOOR TRIM" .
2. Remove high mounted stop lamp. Refer to LT-182, "Bulb Replacement" .
3. Remove rear wiper arm and rear wiper motor. Refer to WW-106, "Removal and Installation of Rear Wiper Arm" and WW-107, "Removal and Installation of Rear Wiper Motor" .
4. Disconnect rear window defogger connector.
5. Apply protective tape around windshield glass to protect the painted surface from damage.
6. Cut adhesive.
   - Depending on the tool in use, follow the procedures below:

   CAUTION:
   When reusing the glass, do not use the windshield knife. (Because it will damage the glass)

a. With a windshield knife (when replacing glass).

i. For smooth movement of windshield knife, apply soapy water around bonded area on glass hatch panel.

ii. Insert windshield knife into the bonded area from passenger room side. Cut adhesive by pulling the knife, keeping the tip parallel to glass edge.



b. With a piano wire (when reusing glass)

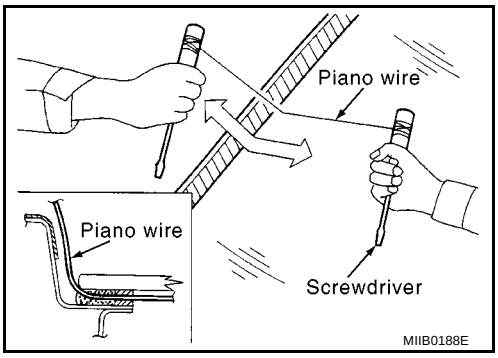
i. Working from inside the passenger room, make a hole in the adhesive with the cutter.

ii. From inside the passenger room, pass a piano wire through the hole and tie both ends to screwdrivers or similar tools.

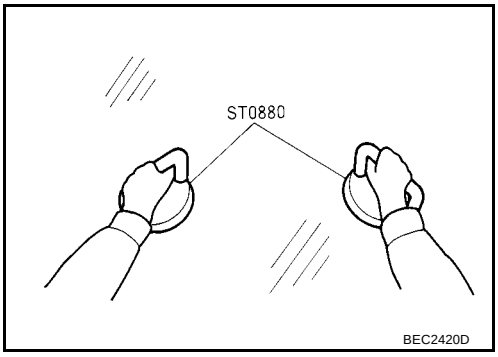
iii. With two persons, one holding one end of the piano wire outside the vehicle while the other holding the other end inside the vehicle, pulling the wire alternately to cut off the adhesive.

CAUTION:

- **Do not press piano wire excessively against glass edge.**



7. Unclip and remove glass from the vehicle with rubber suction cups (SST).



INSTALLATION

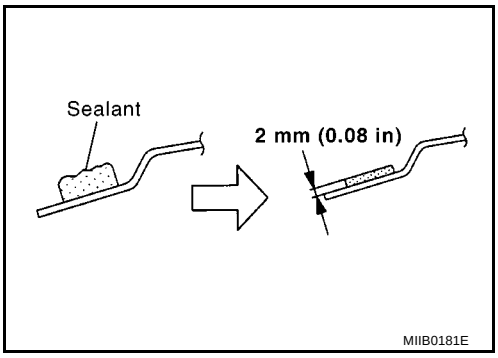
1. Using a knife or spatula, trim the bond remaining on body down to approximately 2 mm thick so that the contour becomes smooth.

   CAUTION:

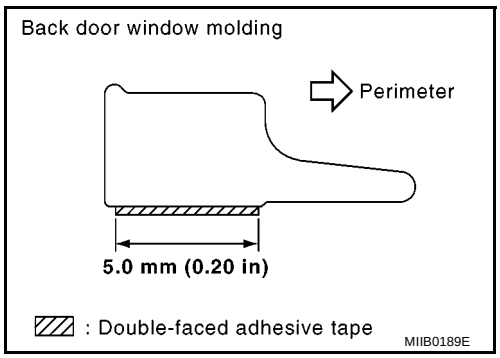
   If scratches or flaws are made on the body surface in the width of adhesion, be sure to repair them with 2-liquid type urethane paint. Do not use lacquer type paint.

2. When reusing glass, use a knife or spatula to remove the remaining adhesive and smooth out the surface.

3. With white gasoline, clean the glass surface where adhesive is applied and the surrounding areas.



4. Bond the back door window molding to the perimeter of the glass using double-sided tape. (Bond aligning double-sided tape bonded area to glass edge.)



5. Apply primer G along the entire circumference of glass.

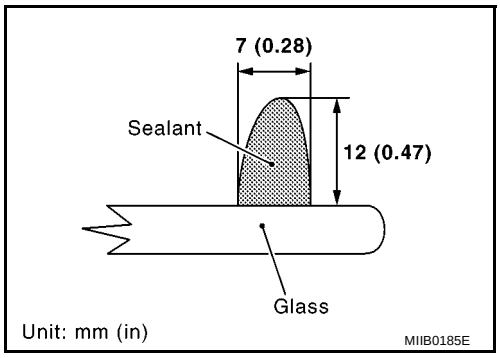
CAUTION:
As 2 primers will be used, they must be used exactly as specified.
Primer M: for painted surfaces
Primer G: for glass

NOTE:
The essential function of primers is to strengthen adhesion between the glass and painted surface primer.

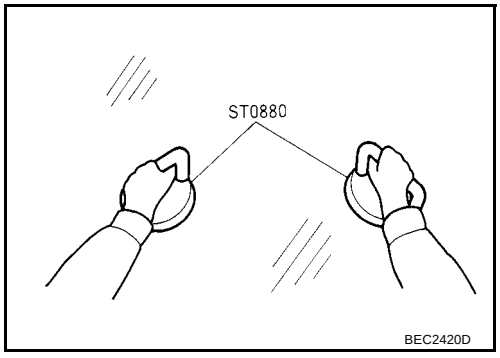
6. Apply primer M on areas where adhesive contacts on the side of vehicle body.

CAUTION:
If primer M adheres to a painted surface other than bonding area, or if it overflows, quickly remove it with white gasoline.

7. After applying primers, apply the adhesive along the entire circumference of the glass as shown in the figure, and within the time specified in the instructions for the adhesive.
   - Open adhesive by cutting off the nozzle tip and set it in a sealant gun.



8. After setting rubber suction cups (SST) to glass, align the clips with the holes on the body panel and install.



9. Press entire surface of glass lightly to fit it completely.
10. Remove protective tape.
11. Using a spatula, repair any adhesive overflow or shortage and make the surface smooth.

CAUTION:
After installing glass, keep door windows open and avoid driving vehicle until adhesive has completely cured.

12. Check for water leaks.
13. Connect rear window defogger connector.

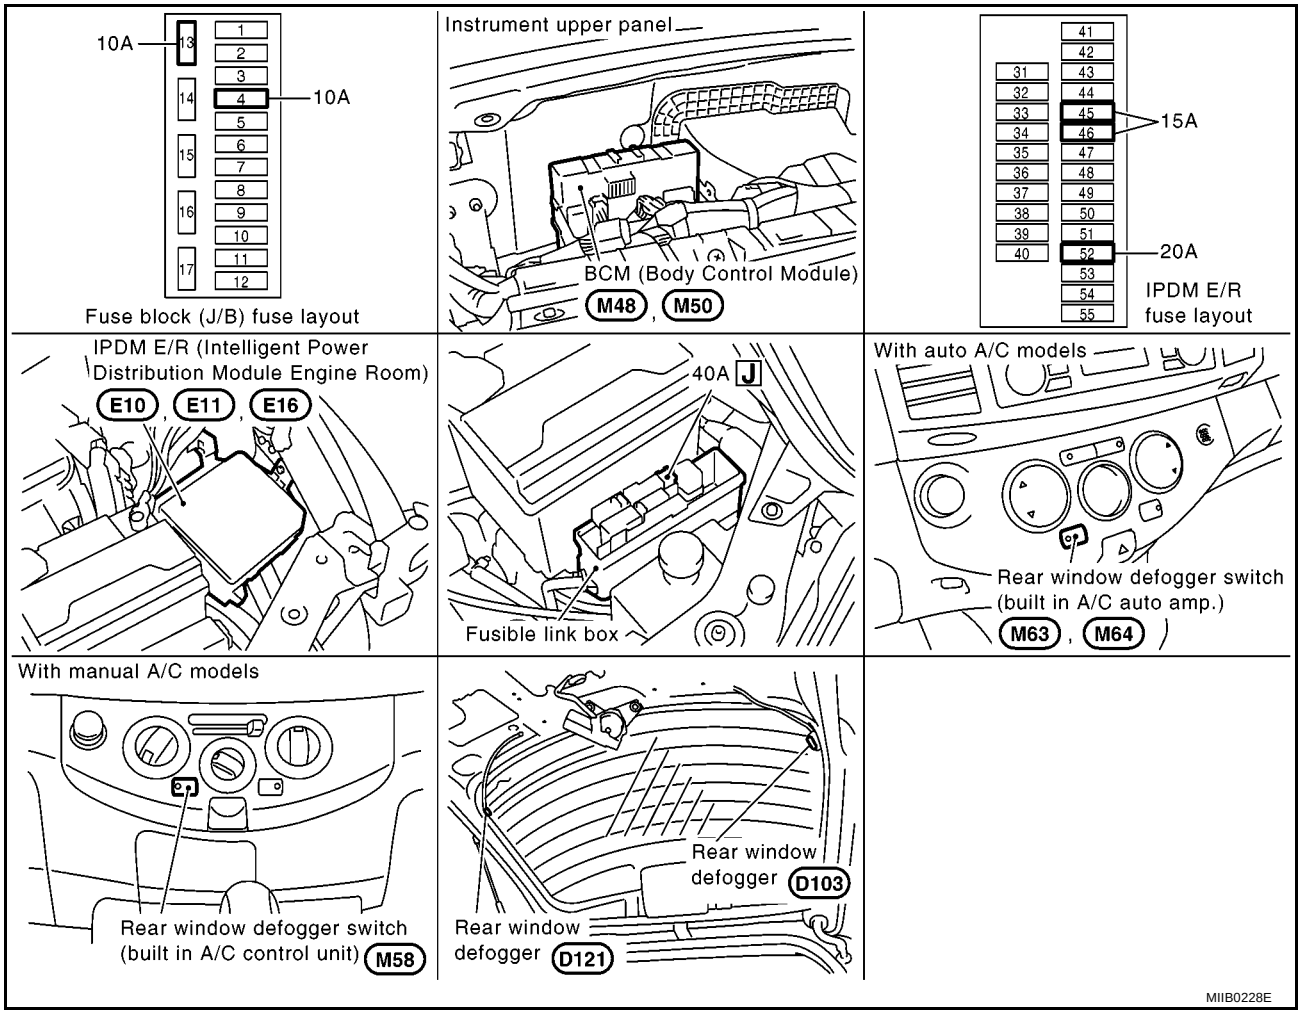
14. Install rear wiper arm and rear wiper motor. Refer to WW-106, "Removal and Installation of Rear Wiper Arm" and WW-107, "Removal and Installation of Rear Wiper Motor" .
15. Install high-mounted stop lamp. Refer to LT-182, "Bulb Replacement" .
16. Install back door finisher. Refer to EI-18, "BACK DOOR TRIM" .

REAR WINDOW DEFOGGER

PFP:25350

Component Parts and Harness Connector Location

EIS004KA



System Description

EIS004KB

The rear window defogger system is controlled by BCM (Body Control Module) and IPDM E/R (Intelligent Power Distribution Module Engine Room).
The rear window defogger operates only for approximately 15 minutes.
Power is at all times supplied

- through 15A fuse [No. 45, and 46, located in the IPDM E/R]
- to rear window defogger relay
- through 20A fuse [No. 52, located in the fuse block (J/B)]
- to IPDM E/R
- through 40A fusible link [letter **J** , located in the fuse block (J/B)]
- to BCM terminal 74 and 79.

With the ignition switch turned to ON or START position,
Power is supplied

- through 10A fuse [No. 4, located in the fuse block (J/B)]
- to BCM terminal 24, and
- to A/C auto amp terminal 2 (with auto A/C) or
- to heater control panel terminal 4 (without auto A/C).

Ground is supplied

- to BCM terminal 2 and 70
- through body grounds M19, and M20.

- to A/C auto amp terminal 14 (with auto A/C) or
- to heater control panel terminal 10 (without auto A/C)
- through body grounds M19 and M20.
- to internal CPU of IPDM E/R terminal 3 and 54
- through body grounds E25, E26 and E40.

When rear window defogger switch is turned to ON,
Ground is supplied

- to BCM terminal 4
- through A/C auto amp terminal 17 (with auto A/C) or
- through heater control panel terminal 9 (without auto A/C)
- through A/C auto amp terminal 14 (with auto A/C) or
- through heater control panel terminal 10 (without auto A/C)
- through body grounds M19 and M20.

Then rear window defogger switch is illuminated.
Then BCM recognizes that rear window defogger switch is turned to ON.
Then it sends rear window defogger switch signals to IPDM E/R via DATA LINE (CAN-H, CAN-L).
When IPDM receives rear window defogger switch signals,
Ground is supplied

- to rear window defogger relay terminal
- through internal CPU of IPDM E/R terminal
- through internal CPU of IPDM E/R and IPDM E/R terminal 54
- through body grounds E25, E26 and E40.

and then rear window defogger relay is energized.
When rear window defogger relay is turned ON,
Power is supplied,

- through rear window defogger relay terminals
- through IPDM E/R terminal 8
- to rear window defogger terminal 1.

Rear window defogger terminal 2, is grounded through body ground D202.
With power and ground supplied, rear window defogger filaments heat and defog the rear window.
When rear window defogger relay is turned to ON,
Power is supplied (with mirror defogger)

- through rear window defogger relay terminal
- through IPDM E/R terminal 8
- through 10A fuse [No. 13, located in the fuse block (J/B)]
- to door mirror defogger (Driver side and passenger side) terminal 6.

Door mirror defogger (Driver side and passenger side) terminal 5 is grounded through body grounds M19 and M20.
With power and ground supplied, door mirror defogger filaments heat and defog the mirror.

CAN Communication

EIS00AOW

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EIS00AOX

Terminal and Reference Value for BCM

EIS004KF

Terminal	Wire color	Item	Condition	Voltage (V) (Approx.)
2	B	Ground	—	0
4	W	Rear window defogger switch signal	When rear window defogger switch is pressed.	0
			When rear window defogger switch is OFF.	5
19	R	CAN- H	—	—
24	OR	Ignition switch ON or START	Ignition switch (ON or START position)	Battery voltage
39	W	CAN- L	—	—
70	B	Ground	—	0
79	Y	BAT power supply	—	Battery voltage

Terminal and Reference Value for IPDM E/R

EIS004KG

Terminal	Wire color	Item	Condition	Voltage (V) (Approx.)
3	B	Ground (Power)	—	0
8	R	Rear window defogger relay output signal	When rear window defogger switch is ON.	Battery voltage
			When rear window defogger switch is OFF.	0
52	R	CAN- H	—	—
54	B	Ground (Signal)	—	0
58	W	CAN- L	—	—

Work Flow

EIS004KH

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to GW-14, "System Description" .
3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to GW-40, "Trouble Diagnoses Symptom Chart" .
4. Does rear window defogger operate normally? YES: GO TO 5, NO: GO TO 3.
5. INSPECTION END.

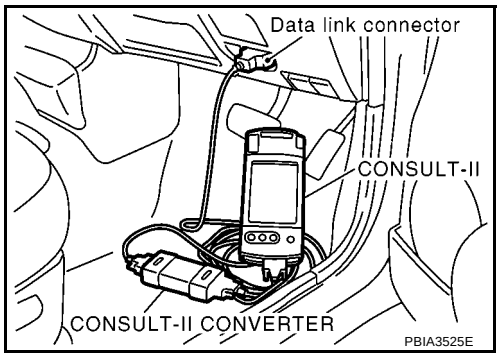
CONSULT-II Inspection Procedure

EIS004KI

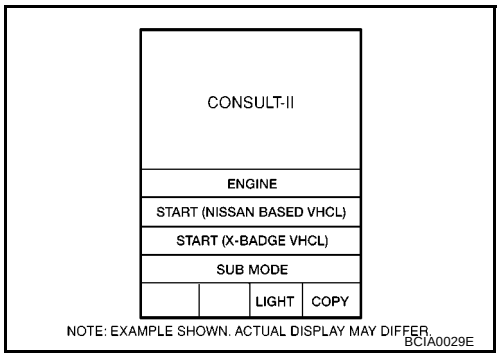
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunction might be detected in self-diagnosis depending on control unit which carry out CAN communication.

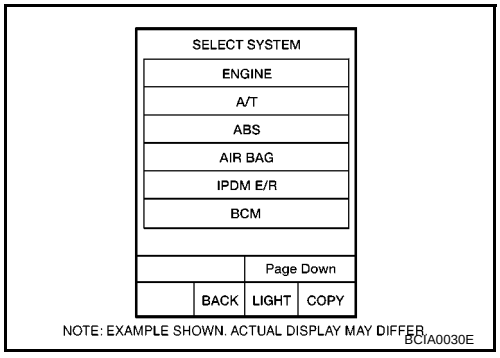
1. Turn ignition switch “OFF”.
2. Connect “CONSULT-II” and CONSULT-II CONVERTER to data link connector.



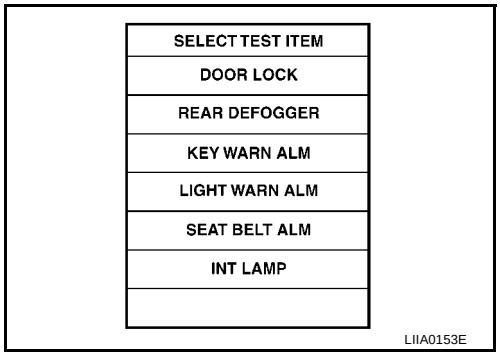
3. Turn ignition switch “ON”.
4. Touch “START (NISSAN BASED VHCL)”.



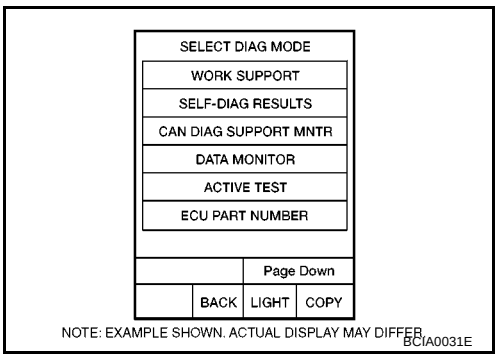
5. Touch “BCM”.
   If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “REAR DEFOGGER”.



7. Select diagnosis mode,“DATA MONITOR” and “ACTIVE TEST”.



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER.
BCIA0031E

DATA MONITOR
Display Item List

Monitor item “Operation”		Content
REAR DEF SW	“ON / OFF”	Displays “Press (ON) / others (OFF)” status determined with the rear window defogger switch.
IGN ON SW	“ON / OFF”	Displays “IGN SW ON (ON) / OFF (OFF)” status determined with the ignition switch signal.
ENGINE STATUS	“STOP / STALL / RUN / CRA ”	Displays “Engine stop (STOP) / engine stall (STALL) / engine running (RUN) / engine cranking (CRA) ” as judged from engine status.

ACTIVE TEST
Display Item List

Test item	Content
REAR DEFOGGER	Gives a drive signal to the rear window defogger to activate it.

Trouble Diagnoses Symptom Chart

EIS004KJ

- Check that other systems using the signal of the following systems operate normally.

Symptom	Diagnoses / service procedure	Refer to page
Rear window defogger and door mirror defogger do not operate. (With door mirror defogger)	1. BCM power supply and ground circuit check.	GW-40
	2. IPDM E/R auto active test check.	PG-42
	3. Rear window defogger switch circuit check (with auto A/C).	GW-42
	3. Rear window defogger switch circuit check (without auto A/C).	GW-43
	4. Rear window defogger power supply circuit check.	GW-45
	5. Replace IPDM E/ R.	PG-52
Rear window defogger does not operated. (without door mirror defogger)	1. BCM power supply and ground circuit check.	GW-40
	2. IPDM E/R auto active test check.	PG-42
	3. Rear window defogger switch circuit check (with auto A/C).	GW-42
	3. Rear window defogger switch circuit check (without auto A/C).	GW-43
	4. Rear window defogger power supply circuit check.	GW-45
	5. Rear window defogger circuit check.	GW-46
	6. Filament check.	GW-50
	7. Replace IPDM E/ R.	PG-52
Rear window defogger does not operate but both of door mirror defoggers operate.(With door mirror defogger)	1. Rear window defogger circuit check.	GW-46
	2. Filament check.	GW-50
Both of door mirror defoggers do not operated but rear window defogger operate. (With door mirror defogger)	1. Door mirror defogger power supply circuit check.	GW-47
Driver side door mirror defogger does not operated. (With door mirror defogger)	1. Driver side door mirror defogger circuit check.	GW-48
Passenger side door mirror defogger does not operated. (With door mirror defogger)	1. Passenger side door mirror defogger circuit check.	GW-49

BCM Power Supply and Ground Circuit Check

EIS004KK

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-II, then perform the each trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”, Refer to BCS-22, "CONSULT-II Function (BCM)" .

1. FUSE INSPECTION

- Check 10A fuse [No.4, located in fuse block (J/B)]
- Check 40A fusible link (letter **J** located in the fuse and fusible link box).

NOTE:
Refer to GW-14, "Component Parts and Harness Connector Location" .

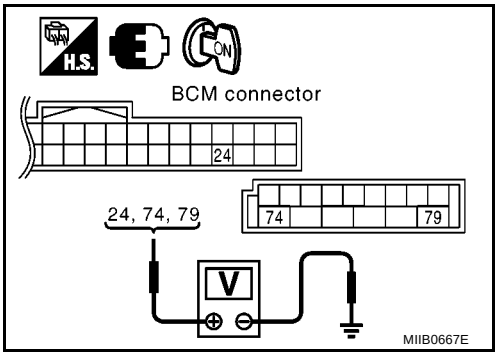
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between BCM connector M48, M50 terminal 24, 74, 79 and ground.

24 (OR) – Ground :Battery voltage.
74 (W) – Ground :Battery voltage.
79 (Y) – Ground :Battery voltage.



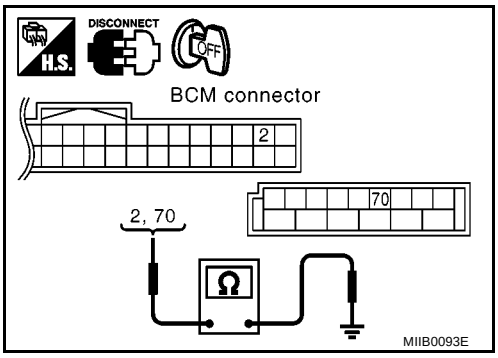
OK or NG

OK >> GO TO 3.
NG >> Check BCM power supply circuit for open or short.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector M48, M50 terminal 2, 70 and ground.

2 (B) – Ground :Continuity should exist.
70 (B) – Ground :Continuity should exist.



OK or NG

OK >> Power supply and ground circuit is OK.
NG >> Check BCM ground circuit for open or short.

Rear Window Defogger Switch Circuit Check / With Auto A/C

EIS004KL

1. CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

With CONSULT-II

Check (“REAR DEF SW”, “IGN ON SW”) in DATA MONITOR mode with CONSULT-II. Refer to GW-39 .

When engine is running

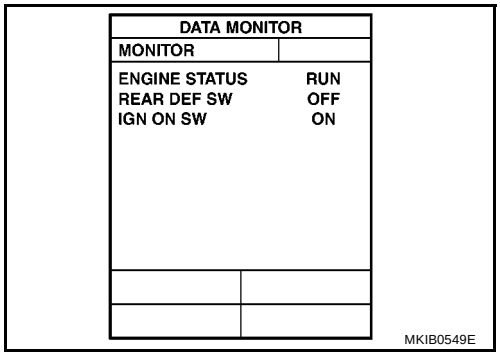
ENGINE STATUS :RUN

When rear defogger switch is turned to ON

REAR DEF SW :ON

When ignition switch is turned to ON

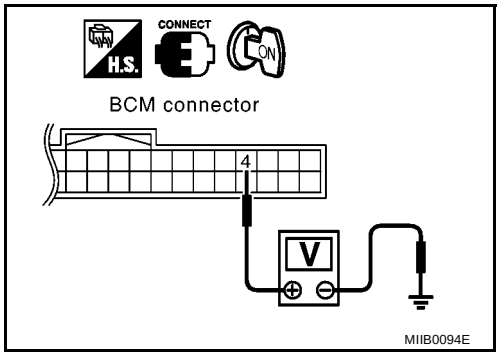
IGN ON SW :ON



Without CONSULT-II

1. Turn ignition switch ON.
2. Check voltage between BCM connector ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M48	4 (W)	Ground	Rear window defogger switch is pressed.	0
			Rear window defogger switch is OFF.	5



OK or NG

OK >> Rear window defogger switch check is OK.

NG >> GO TO 2.

2. CHECK REAR WINDOW DEFOGGER SWITCH CIRCUIT HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and A/C auto amp connector.
3. Check continuity between BCM connector M48 terminal 4 and A/C auto amp connector M63 terminal 17.

4 (W) – 17 (W) :Continuity should exist

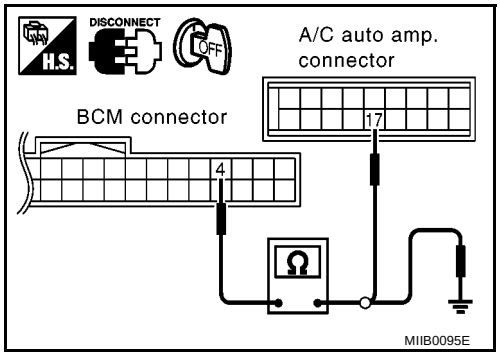
4. Check continuity between BCM connector M48 terminal 4 and ground

4 (W) – Ground :Continuity should not exist

OK or NG

OK >> GO TO 3.

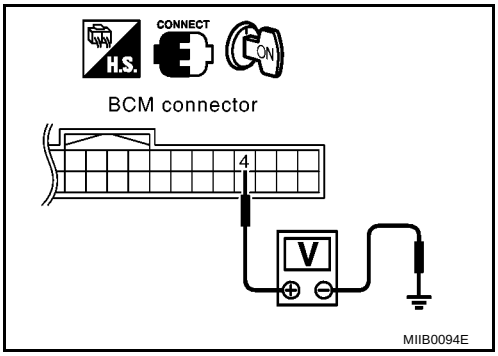
NG >> Repair or replace harness between BCM and A/C auto amp.



3. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector M48 terminal 4 and ground.

4 (W) – Ground :Approx. 5



OK or NG

OK >> Replace rear window defogger switch. Refer to ATC-63, "Removal and Installation"

NG >> Replace BCM.

Rear Window Defogger Switch Circuit Check / Without Auto A/C

EIS004OV

1. CHECK REAR WINDOW DEFOGGER SWITCH OPERATION

With CONSULT-II

Check (“REAR DEF SW”, “IGN ON SW”) in DATA MONITOR mode with CONSULT-II. Refer to GW-39 .

When engine is running

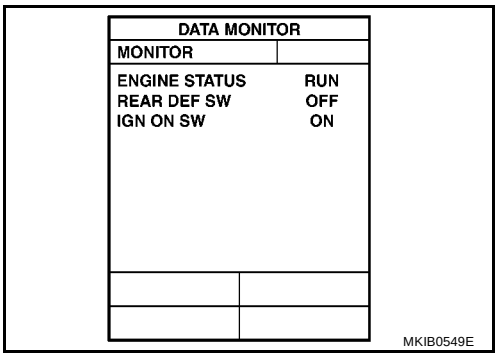
ENGINE STATUS :RUN

When rear defogger switch is turned to ON

REAR DEF SW :ON

When ignition switch is turned to ON

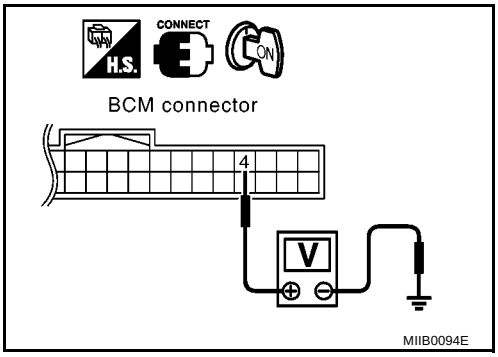
IGN ON SW :ON



Without CONSULT-II

1. Turn ignition switch ON.
2. Check voltage between BCM connector ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
M48	4 (W)	Ground	Rear window defogger switch is pressed.	0
			Rear window defogger switch is OFF.	5



OK or NG

OK >> Rear window defogger switch check is OK.

NG >> GO TO 2.

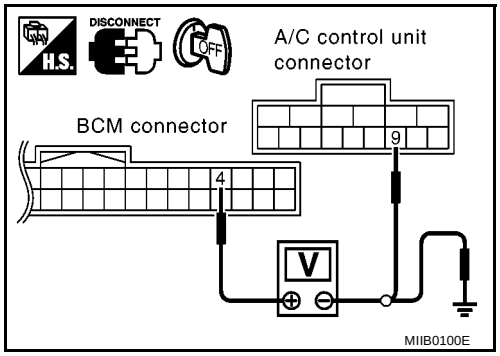
2. CHECK REAR WINDOW DEFOGGER SWITCH CIRCUIT HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and heater control panel connector.
3. Check continuity between BCM connector M48 terminal 4 and heater control panel connector M58 terminal 9.

4 (W) – 9 (W) :Continuity should exist

4. Check continuity between BCM connector M48 terminal 4 and ground

4 (W) – Ground :Continuity should not exist



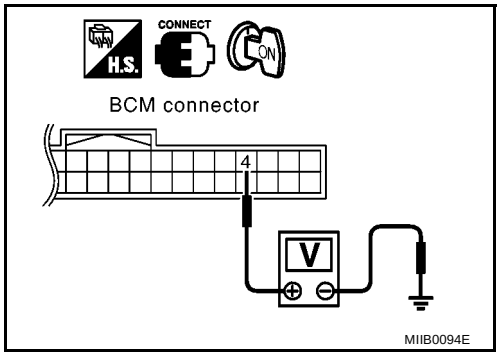
OK or NG

OK >> GO TO 3.
NG >> Repair or replace harness between BCM and heater control panel.

3. CHECK BCM OUTPUT SIGNAL

1. Connect BCM connector.
2. Turn ignition switch ON.
3. Check voltage between BCM connector M48 terminal 4 and ground.

4 (W) – Ground :Approx. 5



OK or NG

OK >> Replace heater control panel. Refer to MTC-43, "Removal and Installation"
NG >> Replace BCM.

Rear Window Defogger Power Supply Circuit Check

EIS004KM

1. CHECK FUSE

Check if any of the following fuses for IPDM E/R are blown.

COMPONENT PARTS	TERMINAL NO. (SIGNAL)	AMPERE	FUSE NO.
IPDM E/R	3 (BAT power supply)	15A	#45
		15A	#46

NOTE:

Refer to GW-14, "Component Parts and Harness Connector Location" .

OK or NG

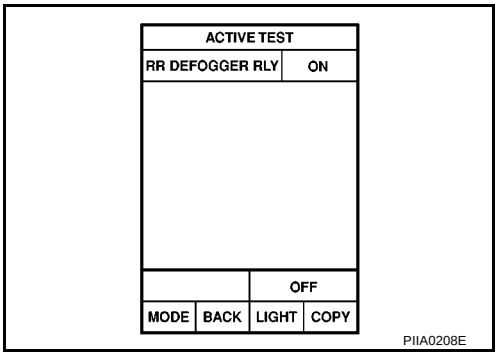
OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse, refer to GW-14, "Component Parts and Harness Connector Location" .

2. CHECK REAR WINDOW DEFOGGER RELAY

Check rear window defogger relay in “ACTIVE TEST” mode with CONSULT-II. Refer to

Do you hear of the operation sound of rear window defogger relay.



OK or NG

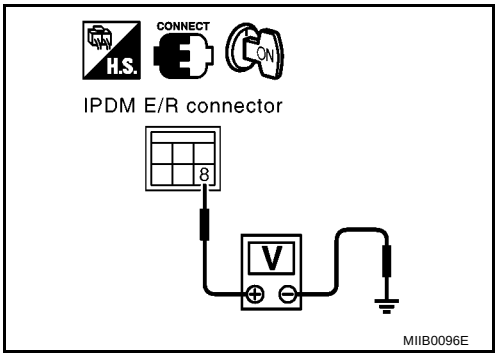
OK >> GO TO 3.

NG >> Replace IPDM E/R.

3. CHECK REAR WINDOW DEFOGGER RELAY OUTPUT SIGNAL

1. Turn rear window defogger switch ON.
2. Check voltage between IPDM E/R connector E11 terminal 8 and ground.

8 (R) – Ground : Battery voltage



OK or NG

OK >> Rear window defogger power supply circuit check is OK.

NG >> Check connector for damage and loose connection.

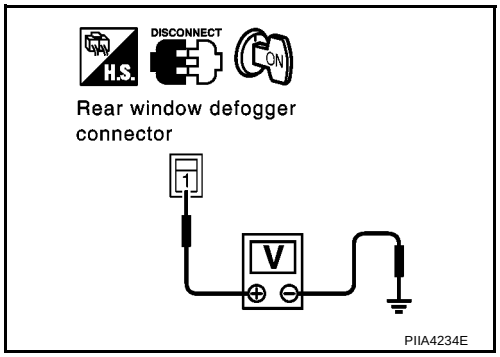
Rear Window Defogger Circuit Check

EIS004KN

1. CHECK REAR WINDOW DEFOGGER POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect rear window defogger connector.
3. Turn ignition switch ON.
4. Check voltage between rear window defogger connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
B50	1 (B)	Ground	Rear window defogger switch ON.	Battery voltage
			Rear window defogger switch OFF.	0



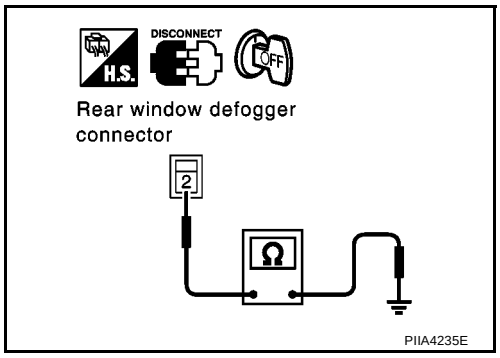
OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. CHECK REAR WINDOW DEFOGGER GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between rear window defogger connector B201 terminal 2 and ground.

2(B) – Ground :Continuity should exist



OK or NG

OK >> Check filament, Refer to GW-50, "Filament Check"
- If filament is OK.
  Check the condition of the harness and the connector.
- If filament is NG.
  Repair filament.

NG >> Repair or replace harness between rear window defogger and ground.

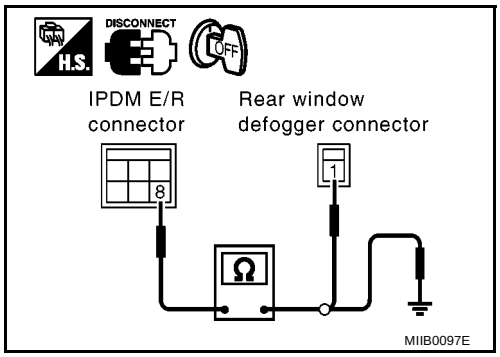
3. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between IPDM E/R connector E11 terminal 8 and rear window defogger connector B50 terminal 1.

8 (R) – 1 (B) :Continuity should exist.

4. Check continuity between IPDM E/R connector E11 terminal 8 and ground.

8 (R) – Ground :Continuity should not exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

Door Mirror Defogger Power Supply Circuit Check

EIS004KO

1. CHECK FUSE

Check if any of the following fuse for Fuse block (J/B) are blown.

COMPONENT PARTS	AMPERE	FUSE NO.
Fuse block (J/B)	10A	#13

NOTE:

Refer to GW-14, "Component Parts and Harness Connector Location" .

OK or NG

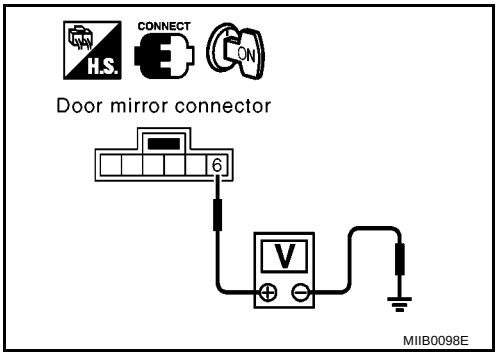
OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse, refer to GW-14, "Component Parts and Harness Connector Location" .

2. CHECK DOOR MIRROR DEFOGGER POWER SUPPLY CIRCUIT 1

1. Turn ignition switch ON.
2. Check voltage between door mirror connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
D3 (driver side)	6 (G)	Ground	Rear window defogger switch ON	Battery voltage
D33 (passenger side)	6 (W)		Rear window defogger switch OFF	0



OK or NG

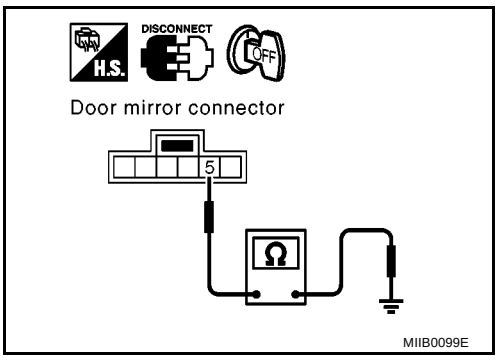
OK >> GO TO 3.

NG >> Check harness between IPDM E/R and door mirror.

3. CHECK DOOR MIRROR DEFOGGER GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door mirror connector.
3. Check continuity between door mirror connector D3 (driver side), D33 (passenger side) terminal 5 and ground.

5 (B) – Ground :Continuity should exist.



OK or NG

OK >> INSPECTION END.

NG >> Repair or replace harness.

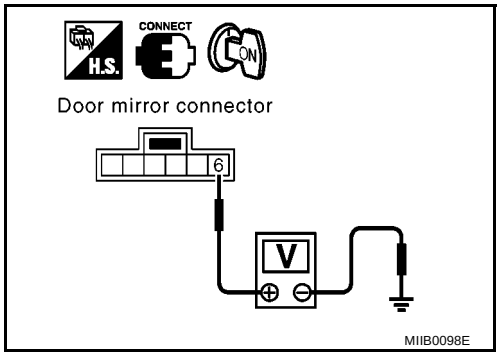
Driver Side Door Mirror Defogger Circuit Check

EIS004KP

1. CHECK DOOR MIRROR DEFOGGER POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between door mirror (driver side) connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
D3	6 (G)	Ground	Rear window defogger switch ON	Battery voltage
			Rear window defogger switch OFF.	0



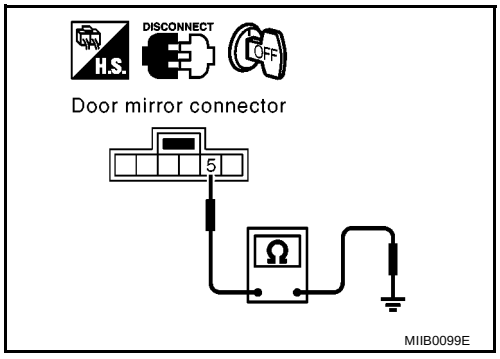
OK or NG

OK >> GO TO 2.
NG >> Repair or replace harness between fuse block (J/B) and door mirror (driver side).

2. CHECK DOOR MIRROR DEFOGGER GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door mirror (driver side) connector.
3. Check continuity between door mirror (driver side) connector D3 terminal 5 and ground.

5 (B) – Ground : Continuity should exist.



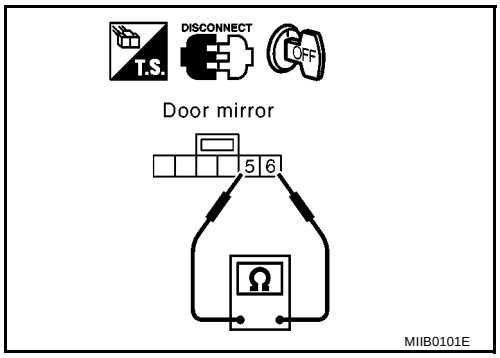
OK or NG

OK >> GO TO 3
NG >> Repair or replace harness between door mirror (driver side) and ground.

3. CHECK DOOR MIRROR DEFOGGER

Check continuity between each door mirror connector D3 (driver side) terminal 5 and 6.

5 – 6 :Continuity should exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace door mirror (driver side).

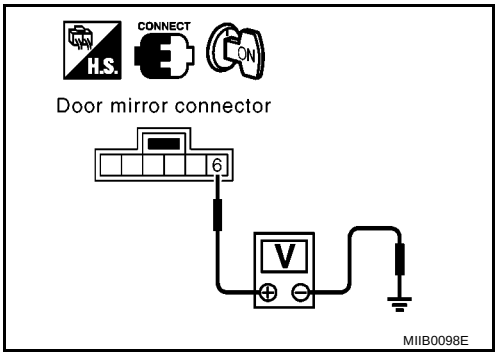
Passenger Side Door Mirror Defogger Circuit Check

EIS004KQ

1. CHECK DOOR MIRROR DEFOGGER POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between door mirror (passenger side) connector and ground.

Connector	Terminal (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(–)		
D33	6 (W)	Ground	Rear window defogger switch ON	Battery voltage
			Rear window defogger switch OFF	0



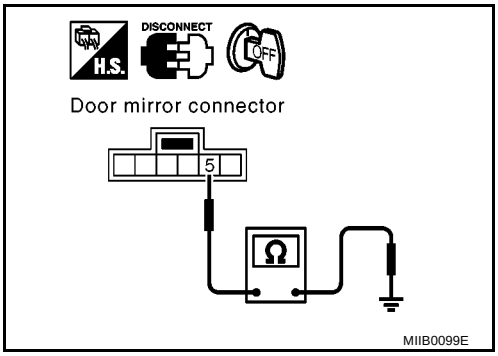
OK or NG

OK >> GO TO 2.
NG >> Repair or replace harness between fuse block (J/B) and door mirror (passenger side).

2. CHECK DOOR MIRROR DEFOGGER GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect door mirror (passenger side) connector.
3. Check continuity between door mirror (passenger side) connector D33 terminal 5 and ground.

5 (B) – Ground : Continuity should exist.



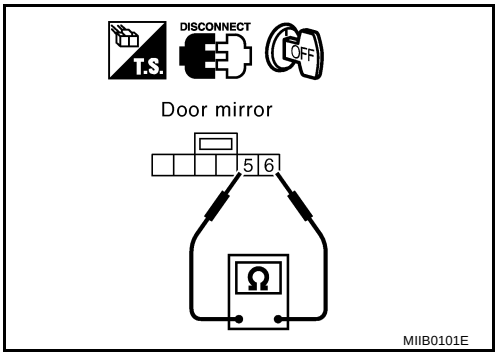
OK or NG

OK >> GO TO 3
NG >> Repair or replace harness between door mirror (passenger side) and ground.

3. CHECK DOOR MIRROR DEFOGGER

Check continuity between each door mirror connector D33 (passenger side) terminal 5 and 6.

5 – 6 :Continuity should exist.



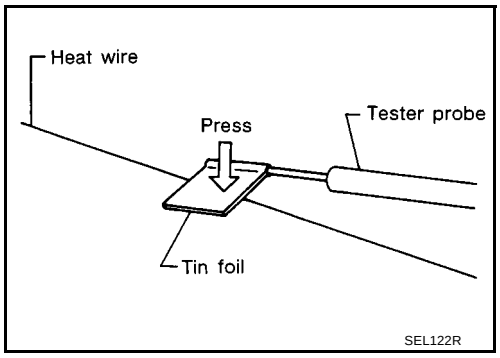
OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace door mirror (passenger side).

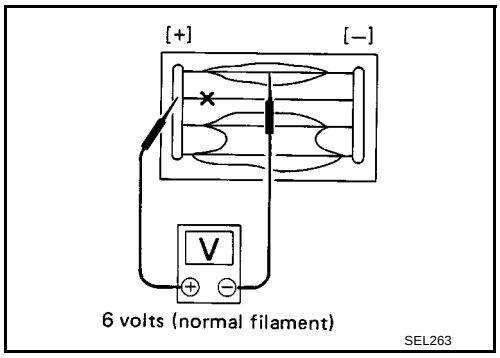
Filament Check

EIS004KR

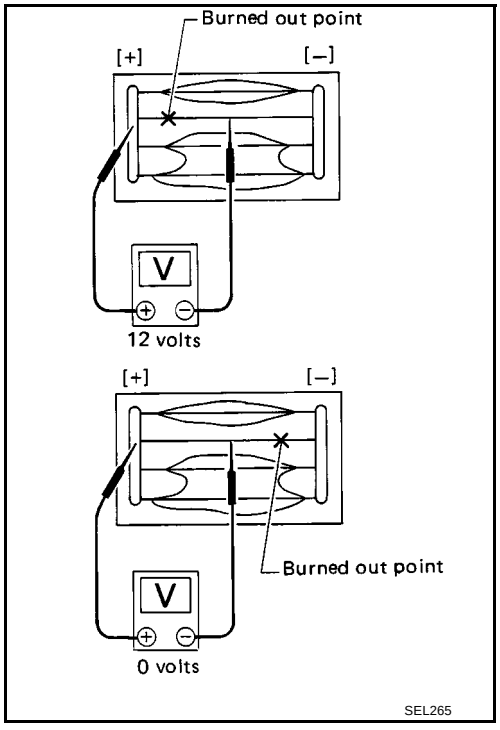
1. When measuring voltage, wrap tin foil around the top of the negative probe. Then press the foil against the wire with your finger.



2. Attach probe circuit tester (in Volt range) to middle portion of each filament.



3. If a filament is burned out, circuit tester registers 0 or battery voltage.
4. To locate burned out point, move probe to left and right along filament. Test needle will swing abruptly when probe passes the point.



Filament Repair

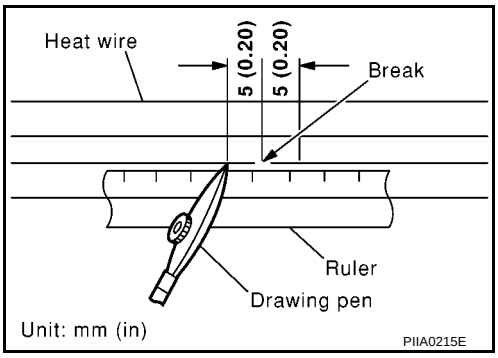
EIS004KS

REPAIR EQUIPMENT

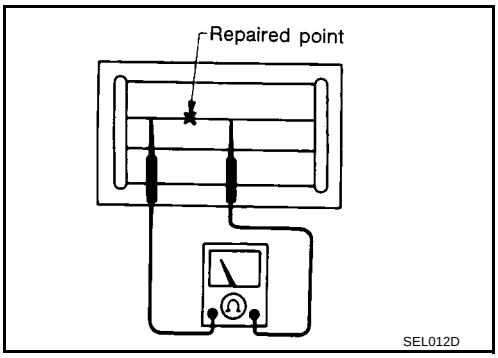
- Conductive silver composition (Dopant No. 4817 or equivalent)
- Ruler 30 cm (11.8 in) long
- Drawing pen
- Heat gun
- Alcohol
- Cloth

REPAIRING PROCEDURE

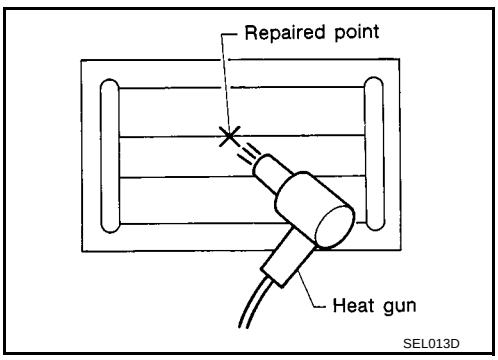
1. Wipe broken heat wire and its surrounding area clean with a cloth dampened in alcohol.
2. Apply a small amount of conductive silver composition to tip of drawing pen.
   Shake silver composition container before use.
3. Place ruler on glass along broken line. Deposit conductive silver composition on break with drawing pen. Slightly overlap existing heat wire on both sides [preferably 5 mm (0.20 in)] of the break.



4. After repair has been completed, check repaired wire for continuity. This check should be conducted 10 minutes after silver composition is deposited.
   Do not touch repaired area while test is being conducted.



5. Apply a constant stream of hot air directly to the repaired area for approximately 20 minutes with a heat gun. A minimum distance of 3 cm (1.2 in) should be kept between repaired area and hot air outlet.
   If a heat gun is not available, let the repaired area dry for 24 hours.

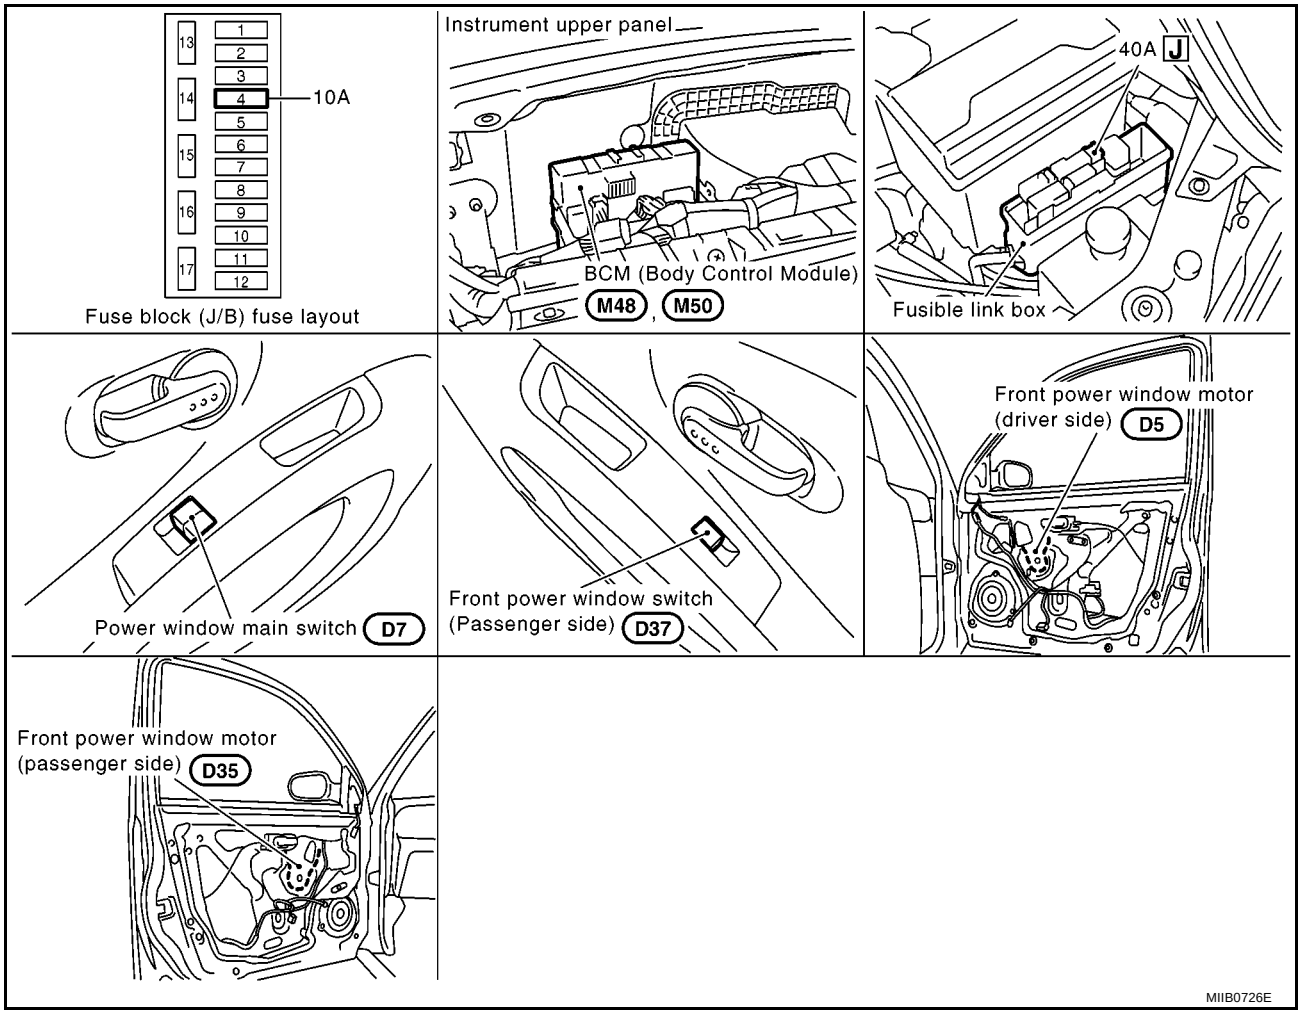


POWER WINDOW SYSTEM

PFP:25401

Component Parts and Harness Connector Location

EIS004PM



System Description

EIS004PN

Power is supplied at all time

- from 40A fusible link (letter **J** , located in the fuse and fusible link box)
- to BCM terminal 74 and 79.

With ignition switch in ON or START position,
Power is supplied

- through 10A fuse [No.4,located in the fuse block (J/B)]
- to BCM terminal 24.
- through BCM terminal 78
- to power window main switch terminal 5
- to front power window switch (passenger side) terminal 1.

Ground supplied

- to BCM terminal 2 and 70
- through body grounds M19 and M20.

FRONT DRIVER SIDE DOOR

Ground is supplied

- to power window main switch terminal 7
- through body grounds M19 and 20.

Window Up

When the driver side switch in the power window main switch is pressed in the up position,
Power is supplied

- through power window main switch terminal 2 (LHD), 6 (RHD)
- to front power window motor (driver side) terminal 2.

Ground is supplied

- to front power window motor (driver side) terminal 1
- through power window main switch terminal 3 (LHD), 4 (RHD).

Then, the motor raises the window until the switch is released.

Window Down

When the driver side switch in the power window main switch is pressed in the down position
Power is supplied

- through power window main switch terminal 3 (LHD), 4 (RHD)
- to front power window motor (driver side) terminal 1.

Ground is supplied

- to front power window motor (driver side) terminal 2
- through power window main switch terminal 2 (LHD), 6 (RHD).

Then, the motor lowers the window until the switch is released.

FRONT PASSENGER SIDE DOOR

Ground is supplied

- to power window main switch terminal 7
- through body grounds M19 and M20.

Power Window Main Switch Operation

WINDOW UP

When the passenger side switch in power window main switch is pressed in the up position
Power is supplied

- through power window main switch terminal 6 (LHD), 2 (RHD)
- through front power window switch (passenger side) terminal 2
- through front power window switch (passenger side) terminal 5
- to front power window motor (passenger side) terminal 2.

Ground is supplied

- to front power window motor (passenger side) terminal 1
- through front power window switch (passenger side) terminal 4
- through front power window switch (passenger side) terminal 3
- through power window main switch terminal 4 (LHD), 3 (RHD)

Then, the motor raises the window until the switch is released.

WINDOW DOWN

When the passenger side switch in power window main switch is pressed in the down position
Power is supplied

- through power window main switch terminal 4 (LHD), 3 (RHD)
- through front power window switch (passenger side) terminal 3
- through front power window switch (passenger side) terminal 4
- to front power window motor (passenger side) terminal 1.

Ground is supplied

- to front power window motor (passenger side) terminal 2

- through front power window switch (passenger side) terminal 5
- through front power window switch (passenger side) terminal 2
- through power window main switch terminal 6 (LHD), 2(RHD).

Then, the motor lowers the window until the switch is released.

Front Power Window Switch (Passenger Side) Operation

WINDOW UP

When the passenger side switch is pressed in the up position
Power is supplied

- through front power window switch (passenger side) terminal 5
- to front power window motor (passenger side) terminal 2.

Ground is supplied

- to front power window motor terminal 1
- through front power window switch (passenger side) terminal 4
- through front power window switch (passenger side) terminal 3
- through power window main switch terminal 4 (LHD), 3 (RHD).

Then, the motor raises the window until the switch is released.

WINDOW DOWN

When the passenger side switch is pressed in the down position
Power is supplied

- through front power window switch (passenger side) terminal 4
- to front power window motor (passenger side) terminal 1.

Ground is supplied

- to front power window motor terminal 2
- through front power window switch (passenger side) terminal 5
- through front power window switch (passenger side) terminal 2
- through power window main switch terminal 6 (LHD), 2 (RHD).

Then, the motor lowers the window until the switch is released.

Terminal and Reference Value for BCM

EIS004PS

Terminal	Wire color	Item	Condition	Voltage (V) (Approx.)
2	B	Ground	—	0
24	OR	Ignition switch (ON or START)	Ignition switch (ON or START position)	Battery voltage
70	B	Ground (power)	—	0
74	W	Battery power supply (BCM)	—	Battery voltage
78	R	Power window power supply	Ignition switch (ON or START position)	Battery voltage
			Other than above	0
79	Y	Battery power supply (power window)	—	Battery voltage

Work Flow

EIS004PT

1. Check the symptom and customer's requests.
2. Understand the outline of system. Refer to GW-52, "System Description"
3. According to the trouble diagnosis chart, repair or replace the cause of the malfunction. Refer to GW-59, "Trouble Diagnosis Symptom Chart"
4. Does power window system operate normally? Yes, GO TO 5, If No, GO TO 3.
5. INSPECTION END

Trouble Diagnosis Symptom Chart

EIS004PV

Symptom	Repair order	Refer to page
None of the power windows can be operated using any switch.	1. BCM power supply and ground circuit check	GW-60
	2. Power window switch power supply and ground circuit check	GW-61
	3. Power window main switch check	GW-62
Driver side power window alone does not operate.	1. Power window motor (driver side) check (LHD models)	GW-63
	1. Power window motor (driver side) check (RHD models)	GW-63
	2. Replace power window main switch	EI-16
Passenger side power window alone does not operate.	1. Front power window motor (passenger side) check	GW-64
	2. Front power window switch (passenger side) check	GW-65
	3. Front power window switch (passenger side) circuit check (LHD models)	GW-66
	3. Front power window switch (passenger side) circuit check (RHD models)	GW-67
	4. Replace power window main switch	EI-16
Passenger side power window does not operate using front power window switch (passenger side), but power window main switch can be operate.	1. Front power window switch (passenger side) power supply check	GW-68
	2. Front power window switch (passenger side) check	GW-65

BCM Power Supply and Ground Circuit Check

EIS004QL

First perform the “SELF-DIAG RESULTS” in “BCM” with CONSULT-II, then perform the each trouble diagnosis of malfunction system indicated “SELF-DIAG RESULTS” of “BCM”, Refer to BCS-22, "CONSULT-II Function (BCM)" .

1. FUSE INSPECTION

- Check 10A fuse [No.4, located in fuse block (J/B)]
- Check 40A fusible link (letter **J** located in the fuse and fusible link box).

NOTE:
Refer to GW-52, "Component Parts and Harness Connector Location" .

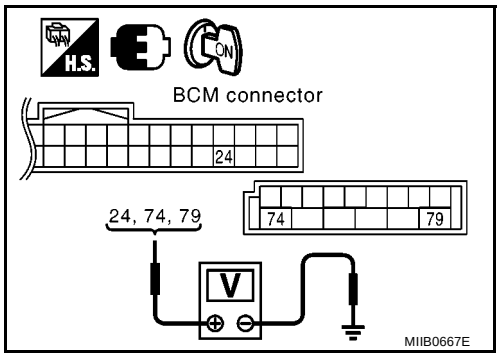
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown out, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between BCM connector M48, M50 terminal 24, 74, 79 and ground.

24 (OR) – Ground :Battery voltage.
74 (W) – Ground :Battery voltage.
79 (Y) – Ground :Battery voltage.



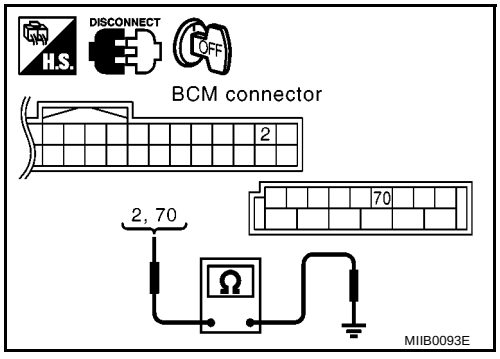
OK or NG

OK >> GO TO 3.
NG >> Check BCM power supply circuit for open or short.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check continuity between BCM connector M48, M50 terminal 2, 70 and ground.

2 (B) – Ground :Continuity should exist.
70 (B) – Ground :Continuity should exist.



OK or NG

OK >> Power supply and ground circuit is OK.
NG >> Check BCM ground circuit for open or short.

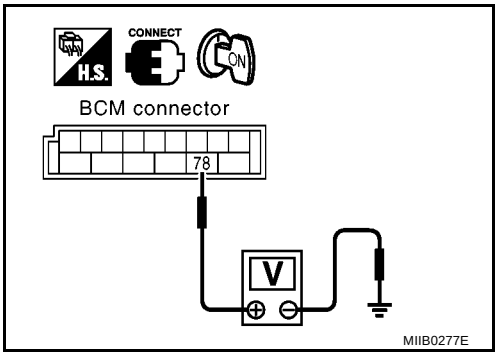
Power Window Switch Power Supply and Ground Circuit Check

EIS004PX

1. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between BCM connector M50 terminals 78 and ground.

78 (R) – Ground : Battery voltage



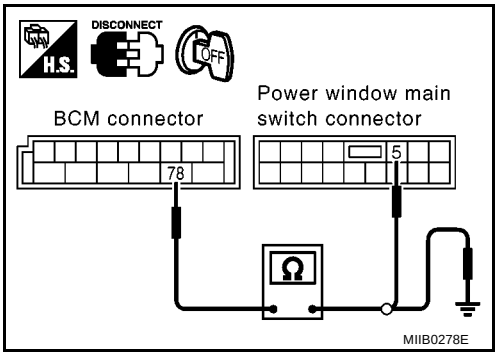
OK or NG

OK >> GO TO 2.
NG >> Replace BCM.

2. CHECK GROUND CIRCUIT

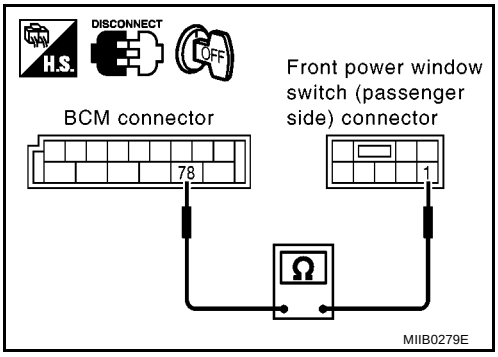
1. Turn ignition switch OFF.
2. Disconnect BCM, power window main switch and front power window switch (passenger side) connector.
3. Check continuity between BCM connector M50 terminal 78 and power window main switch connector D7 terminal 5, and ground.

78 (R) – 5 (R) : Continuity should exist.
78 (R) – Ground : Continuity should not exist.



4. Check continuity between BCM connector M50 terminal 78 and front power window switch (passenger side) connector D37 terminal 1.

78 (R) – 1 (R) : Continuity should exist.



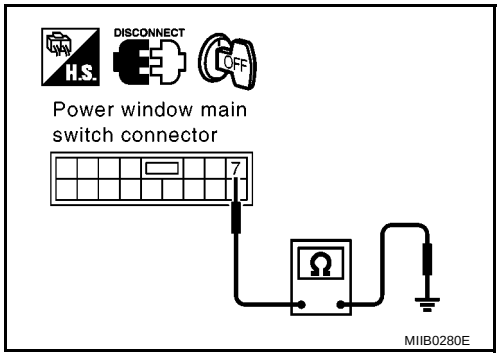
OK or NG

OK >> GO TO 3
NG >> Repair or replace harness.

3. CHECK GROUND CIRCUIT

Check continuity between power window main switch connector D7 terminal 7 and ground.

7 (B) – Ground : Continuity should exist.



OK or NG

OK >> Power window switch power supply and ground circuit is OK.

NG >> Repair or replace harness.

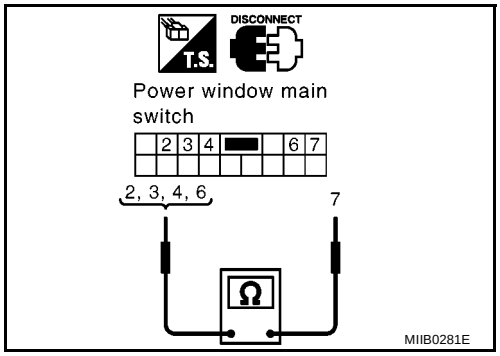
Power Window Main Switch Check

EIS004QM

1. CHECK POWER WINDOW MAIN SWITCH

1. Turn ignition switch OFF.
2. Disconnect power window main switch connector.
3. Check continuity between power window main switch 2, 3, 4, 6 and 7.

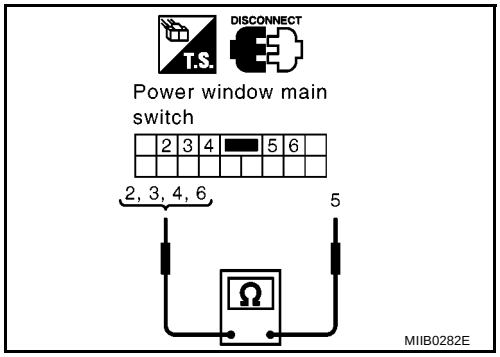
2 – 7 : Continuity should exist.
3 – 7 : Continuity should exist.
4 – 7 : Continuity should exist.
6 – 7 : Continuity should exist.



4. Power window main switch operate, check continuity between power window main switch 2, 3, 4, 6 and 5.

Terminals		Condition	Continuity
2, (6)	5	Driver side UP	Yes
3, (4)		Driver side DOWN	
4, (3)		Passenger side DOWN	
6, (2)		Passenger side UP	

( ) : RHD models



OK or NG

OK >> Power window main switch is OK. Check the condition of the harness and the connector.

NG >> Replace power window main switch.

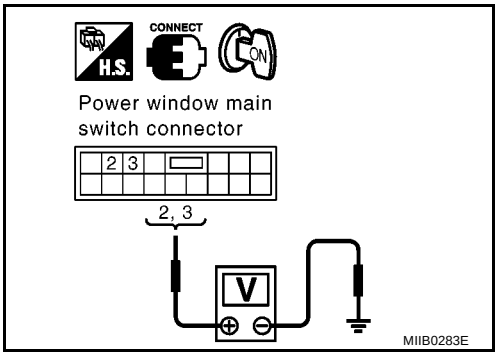
Front Power Window Motor (Driver Side) Check (LHD models)

EIS004QN

1. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between power window main switch connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D7	2 (Y)	Ground	Driver side UP	Battery voltage
	3 (L)		Driver side DOWN	



OK or NG

OK >> GO TO 2.
NG >> Replace power window main switch.

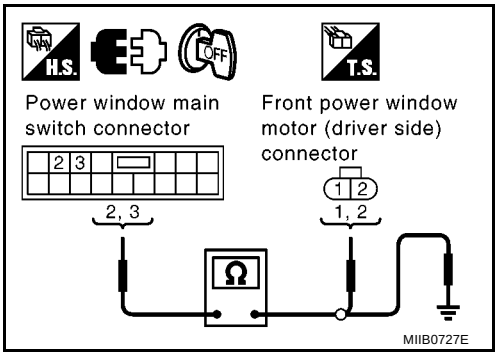
2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect power window main switch and front power window motor (driver side) connector.
3. Check continuity between power window main switch connector D7 terminal 2, 3 and front power window motor (driver side) connector D5 terminal 1, 2.

2 (Y) – 2 (Y) : Continuity should exist.
3 (L) – 1 (L) : Continuity should exist.

4. Check continuity between power window main switch connector D7 terminal 2, 3 and ground.

2 (Y) – Ground : Continuity should not exist.
3 (L) – Ground : Continuity should not exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

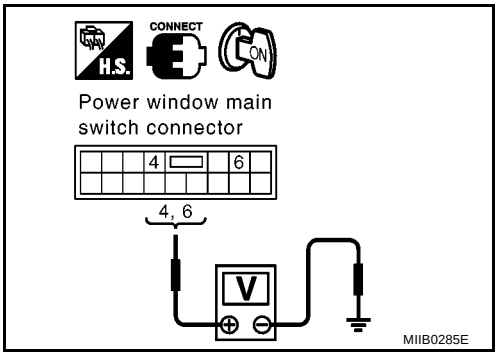
Front Power Window Motor (Driver Side) Check (RHD models)

EIS004QO

1. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Check voltage between power window main switch connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D7	4 (L)	Ground	Driver side DOWN	Battery voltage
	6 (Y)		Driver side UP	



OK or NG

OK >> GO TO 2.
NG >> Replace power window main switch.

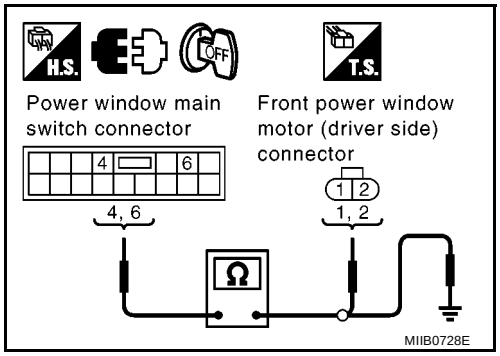
2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect power window main switch and front power window motor (driver side) connector.
3. Check continuity between power window main switch connector D7 terminal 4, 6 and front power window motor (driver side) connector D5 terminal 1, 2.

4 (L) – 1 (L) : Continuity should exist.
6 (Y) – 2 (Y) : Continuity should exist.

4. Check continuity between power window main switch connector D7 terminal 4, 6 and ground.

4 (L) – Ground : Continuity should not exist.
6 (Y) – Ground : Continuity should not exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

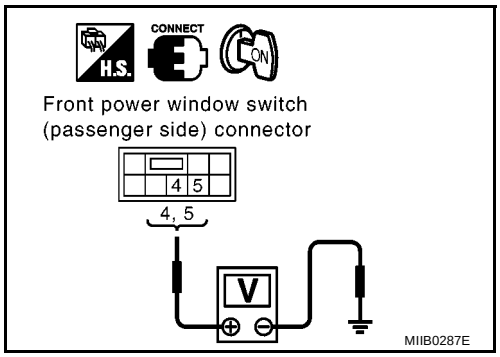
Front Power Window Motor (Passenger Side) Check

EIS004QP

1. CHECK FRONT POWER WINDOW SWITCH (PASSENGER SIDE) OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Power window main switch operate, check voltage between front power window switch (passenger side) connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D37	4 (L)	Ground	Passenger side DOWN	Battery voltage
	5 (Y)		Passenger side UP	



OK or NG

OK >> GO TO 2.
NG >> Further inspection is necessary, Refer to symptom chart.

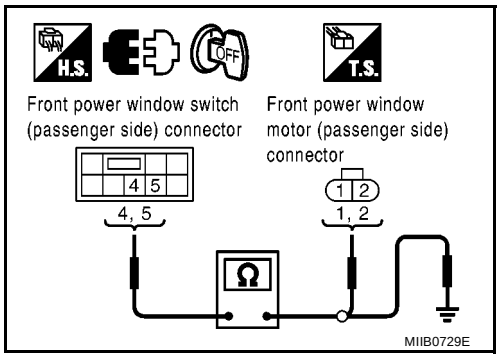
2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect front power window switch (passenger side) and front power window motor (passenger side) connector.
3. Check continuity between front power window switch (passenger side) connector D37 terminal 4, 5 and front power window motor (passenger side) connector D35 terminal 1, 2.

4 (L) – 2 (L) : Continuity should exist.
5 (Y) – 1 (Y) : Continuity should exist.

4. Check continuity between front power window switch (passenger side) connector D37 terminal 4, 5 and ground.

4 (L) – Ground : Continuity should not exist.
5 (Y) – Ground : Continuity should not exist.



OK or NG

OK >> Replace front power window motor (passenger side).
NG >> Repair or replace harness.

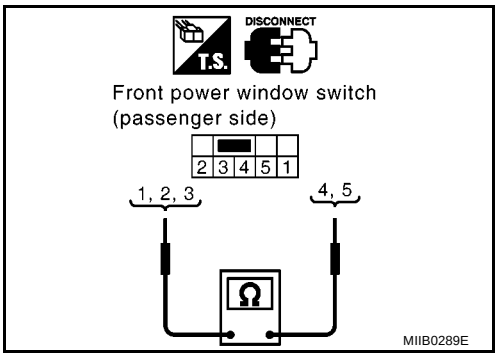
Front Power Window Switch (Passenger Side) Check

EIS004QQ

1. CHECK FRONT POWER WINDOW SWITCH (PASSENGER SIDE)

1. Turn ignition switch OFF.
2. Disconnect front power window switch (passenger side) connector, check continuity between front power window switch (passenger side) terminals.

Terminals		Condition	Continuity
1	5	UP	Yes
1	4	DOWN	
2	5	No operation	
3	4	No operation	



OK or NG

OK >> GO TO 2.
NG >> Replace front power window switch (passenger side).

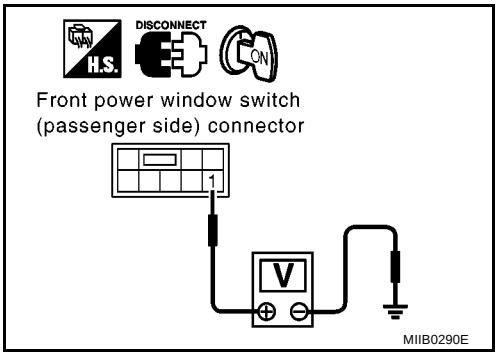
2. CHECK POWER SUPPLY

1. Turn ignition switch ON.
2. Check voltage between front power window switch (passenger side) connector D37 terminal 1 and ground.

1 (R) – Ground : Battery voltage

OK or NG

OK >> Further inspection is necessary, Refer to symptom chart.
NG >> GO TO 3.



3. CHECK HARNESS CONTINUITY

1. Disconnect BCM connector.
2. Check continuity between BCM connector M50 terminal 78 and front power window switch (passenger side) connector D37 terminal 1.

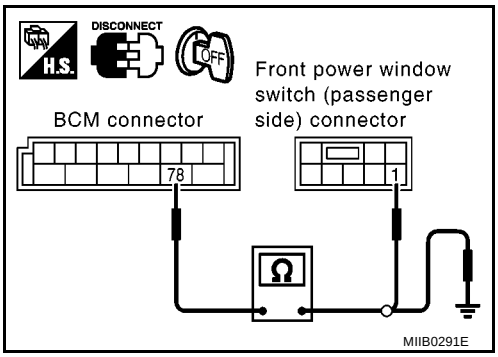
78 (R) – 1 (R) : Continuity should exist.

3. Check continuity between BCM connector M50 terminal 78 and ground.

78 (R) – Ground : Continuity should not exist.

OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.



Front Power Window Switch (Passenger Side) Circuit Check (LHD models)

EIS004QR

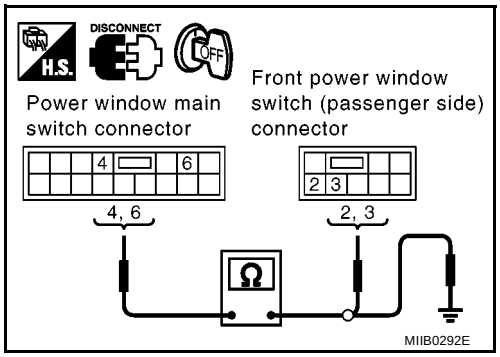
1. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect power window main switch and front power window switch (passenger side) connector.
3. Check continuity between power window main switch connector D7 terminal 4, 6 and front power window switch (passenger side) connector D37 terminal 2, 3.

4 (G) – 3 (G) : Continuity should exist.
6 (PU) – 2 (PU) : Continuity should exist.

4. Check continuity between power window main switch connector D7 terminal 4, 6 and ground.

4 (G) – Ground : Continuity should not exist.
6 (PU) – Ground : Continuity should not exist.



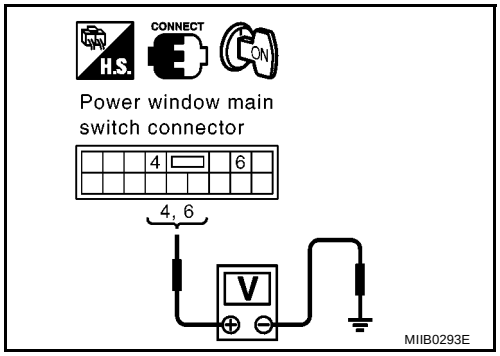
OK or NG

OK >> GO TO 2.
NG >> Repair or replace harness.

2. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Connect power window main switch connector.
2. Turn ignition switch ON.
3. Power window main switch operate, check voltage between power window main switch connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D7	4 (G)	Ground	Passenger side DOWN	Battery voltage
	6 (PU)		Passenger side UP	



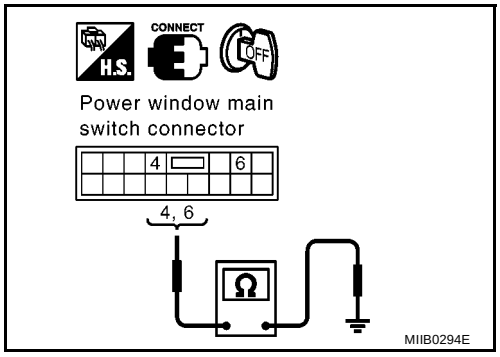
OK or NG

OK >> GO TO 3.
NG >> Replace power window main switch.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between power window main switch connector D7 terminal 4, 6 and ground.

4 (G) – Ground : Continuity should exist.
6 (PU) – Ground : Continuity should exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace power window main switch.

Front Power Window Switch (Passenger Side) Circuit Check (RHD models)

EIS004QS

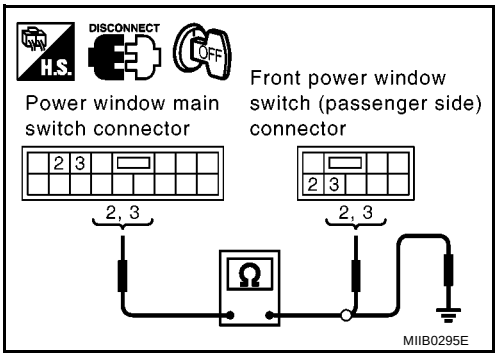
1. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect power window main switch and front power window switch (passenger side) connector.
3. Check continuity between power window main switch connector D7 terminal 2, 3 and front power window switch (passenger side) connector D37 terminal 2, 3.

2 (PU) – 2 (PU) : Continuity should exist.
3 (G) – 3 (G) : Continuity should exist.

4. Check continuity between power window main switch connector D7 terminal 2, 3 and ground.

2 (PU) – Ground : Continuity should not exist.
3 (G) – Ground : Continuity should not exist.



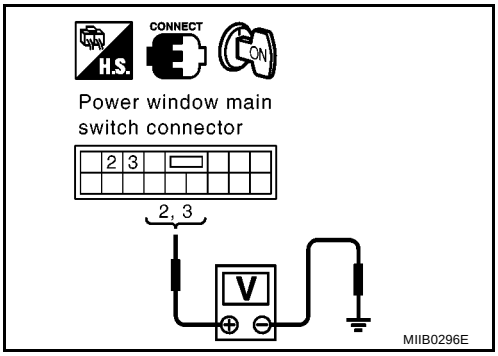
OK or NG

OK >> GO TO 2.
NG >> Repair or replace harness.

2. CHECK POWER WINDOW MAIN SWITCH OUTPUT SIGNAL

1. Connect power window main switch connector.
2. Turn ignition switch ON.
3. Power window main switch operate, check voltage between power window main switch connector and ground.

Connector	Terminals (Wire color)		Condition	Voltage (V) (Approx.)
	(+)	(-)		
D7	2 (PU)	Ground	Passenger side UP	Battery voltage
	3 (G)		Passenger side DOWN	



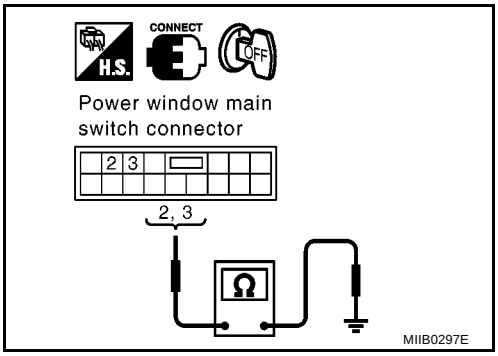
OK or NG

OK >> GO TO 3.
NG >> Replace power window main switch.

3. CHECK GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Check continuity between power window main switch connector D7 terminal 2, 3 and ground.

2 (PU) – Ground : Continuity should exist.
3 (G) – Ground : Continuity should exist.



OK or NG

OK >> Check the condition of the harness and the connector.
NG >> Replace power window main switch.

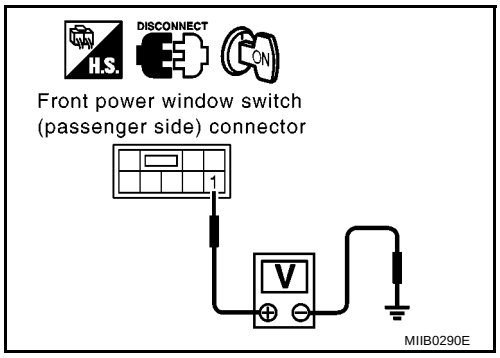
Front Power Window Switch (Passenger Side) Power Supply Check

EIS004QT

1. CHECK POWER SUPPLY

1. Turn ignition switch ON.
2. Check voltage between front power window switch (passenger side) connector D37 terminal 1 and ground.

1 (R) – Ground : Battery voltage



OK or NG

OK >> Front power window switch (passenger side) power supply is OK.
NG >> GO TO 2.

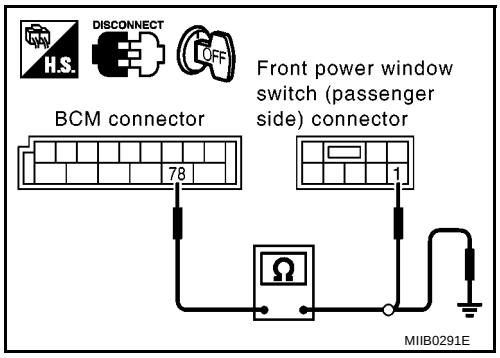
2. CHECK HARNESS CONTINUITY

1. Turn ignition switch OFF.
2. Disconnect BCM and front power window switch connector.
3. Check continuity between BCM connector M50 terminal 78 and front power window switch (passenger side) connector D37 terminal 1.

78 (R) – 1 (R) : Continuity should exist.

4. Check continuity between BCM connector M50 terminal 78 and ground.

78 (R) – Ground : Continuity should not exist.



OK or NG

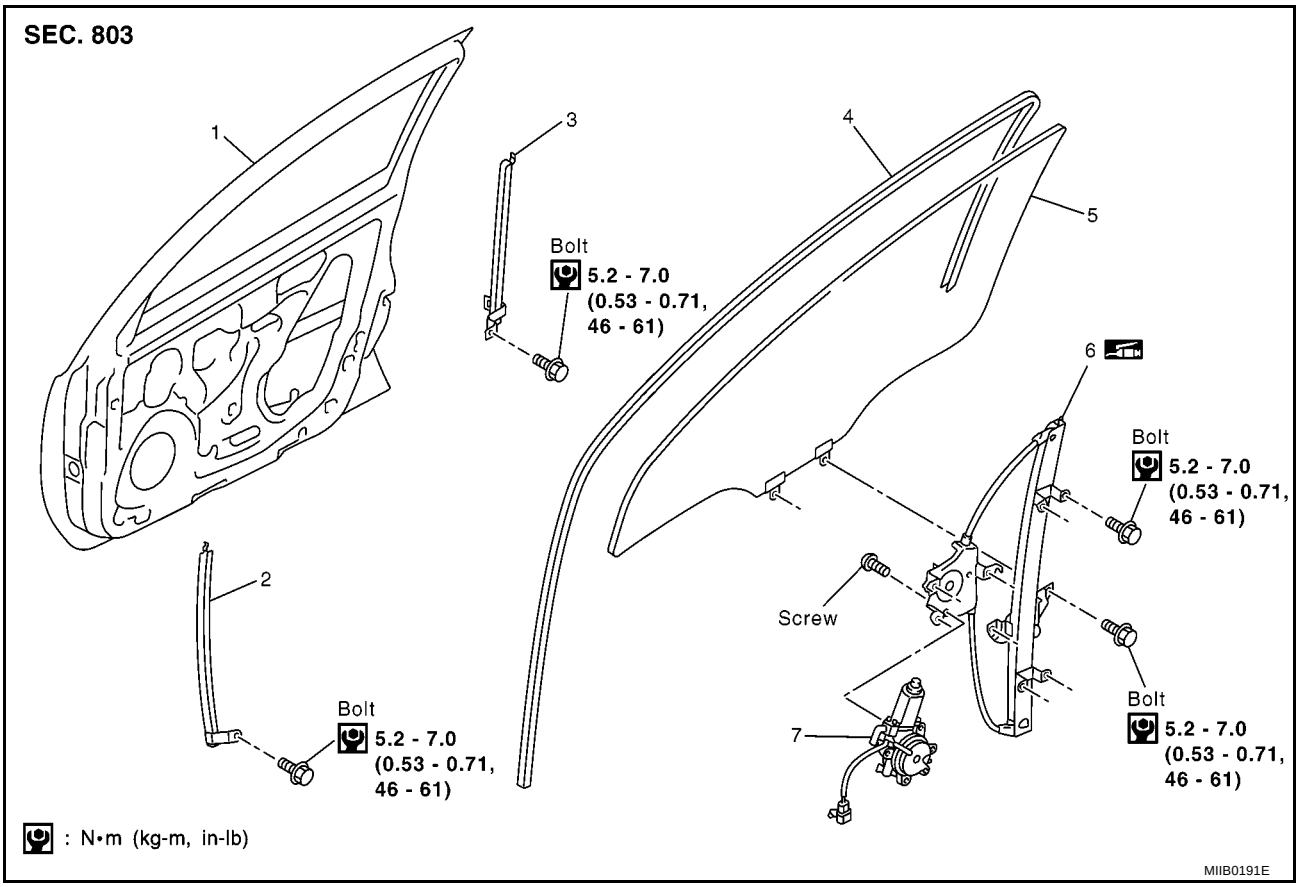
OK >> Check the condition of the harness and the connector.
NG >> Repair or replace harness.

FRONT DOOR GLASS AND REGULATOR

PFP:80300

Removal and Installation

EIS004L8

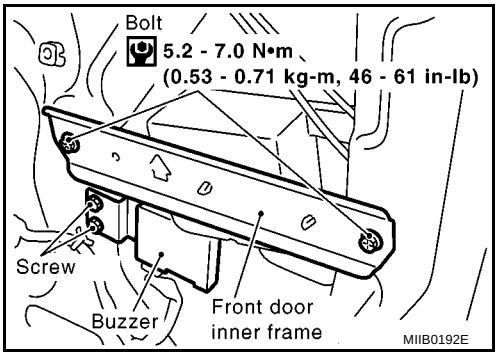


1. Door panel
2. Lower sash (front)
3. Lower sash (rear)
4. Door glass run
5. Door glass
6. Regulator
7. Power window motor

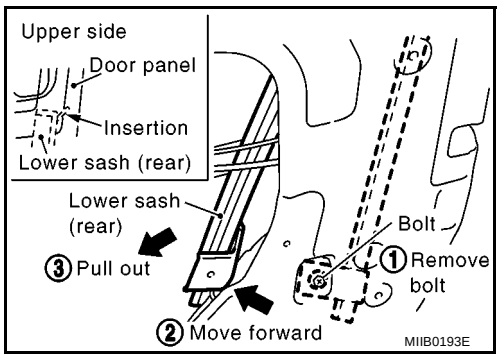
REMOVAL

1. Remove front door finisher. Refer to EI-16, "DOOR FINISHER" .
2. Fully close door glass.
3. Disconnect front speaker harness connector, and then remove sealing screen.

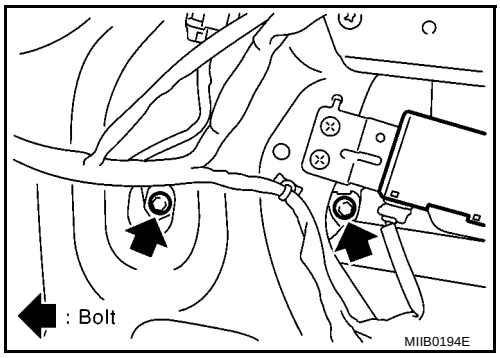
   NOTE:
   If sealing screen is reused, cut butyl tape in a way that leaves it on sealing screen.
4. Remove front door inner frame. (5-door vehicles only)
5. Remove buzzer. (Vehicle with intelligent key system only)



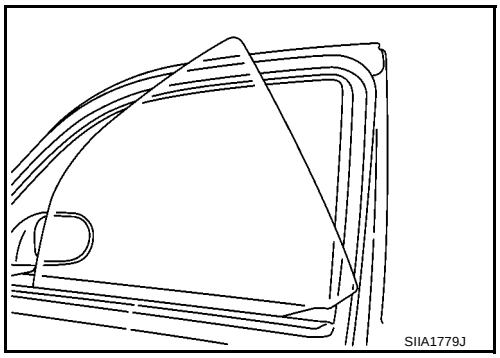
6. Remove lower sash (rear) bolts, move bottom toward front of door panel, pull out top inserted part from door panel, and remove lower sash (rear).



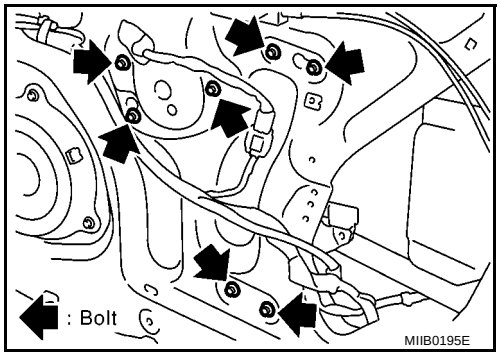
7. While supporting door glass, operate power window switch to raise/lower door glass until glass bolts can be seen.
8. Remove door glass bolts.



9. While holding door glass, raise glass up from rear edge while pulling glass out of sash toward the inside of the door.



10. Remove the power window motor harness connector and bolts, and remove regulator assembly from door panel.



11. Remove lower sash (front) bolts, move bottom toward back of door panel, pull out top insertion part from door panel, and remove lower sash (front).
12. Remove corner cover. Refer to EI-16, "Removal and Installation" .
13. Pull out and remove door glass run from door panel.

INSTALLATION

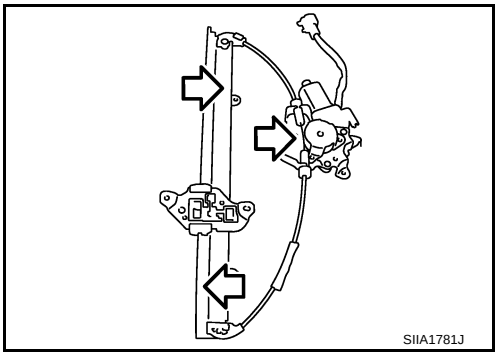
Install in the reverse order of removal.

INSPECTION AFTER REMOVAL

Check the regulator assembly for the following. If a failure is detected, replace or grease it.

- Wire wear
- Regulator assembly deformation
- Grease condition on each sliding part

Apply grease (Nissan MP Special Grease No. 2) to the areas indicted by the arrows in the figure.



SETTING AFTER INSTALLATION (DRIVER'S SIDE ONLY)

Setting Limit Switch

After performing the following work, reset the limit switch (with motor).

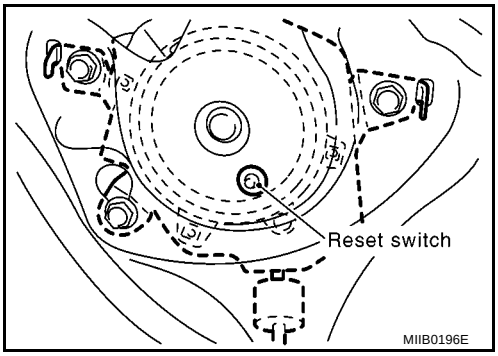
- Removal and Installation of regulator assembly
- Removal and Installation of motor from regulator assembly
- Operation of regulator assembly as an independent unit
- Removal and Installation of glass
- Removal and Installation of door glass run

Reset Operation

After installing each component, follow the steps below:

1. Raise glass to the bottom position.
2. Press and hold the reset switch to lower the window to the bottom dead end.
3. Release the reset switch, check the reset switch returns to the original position, and then raise the window to the top dead end.

   CAUTION:
   Do not raise the window automatically to the top dead end.



FITTING INSPECTION

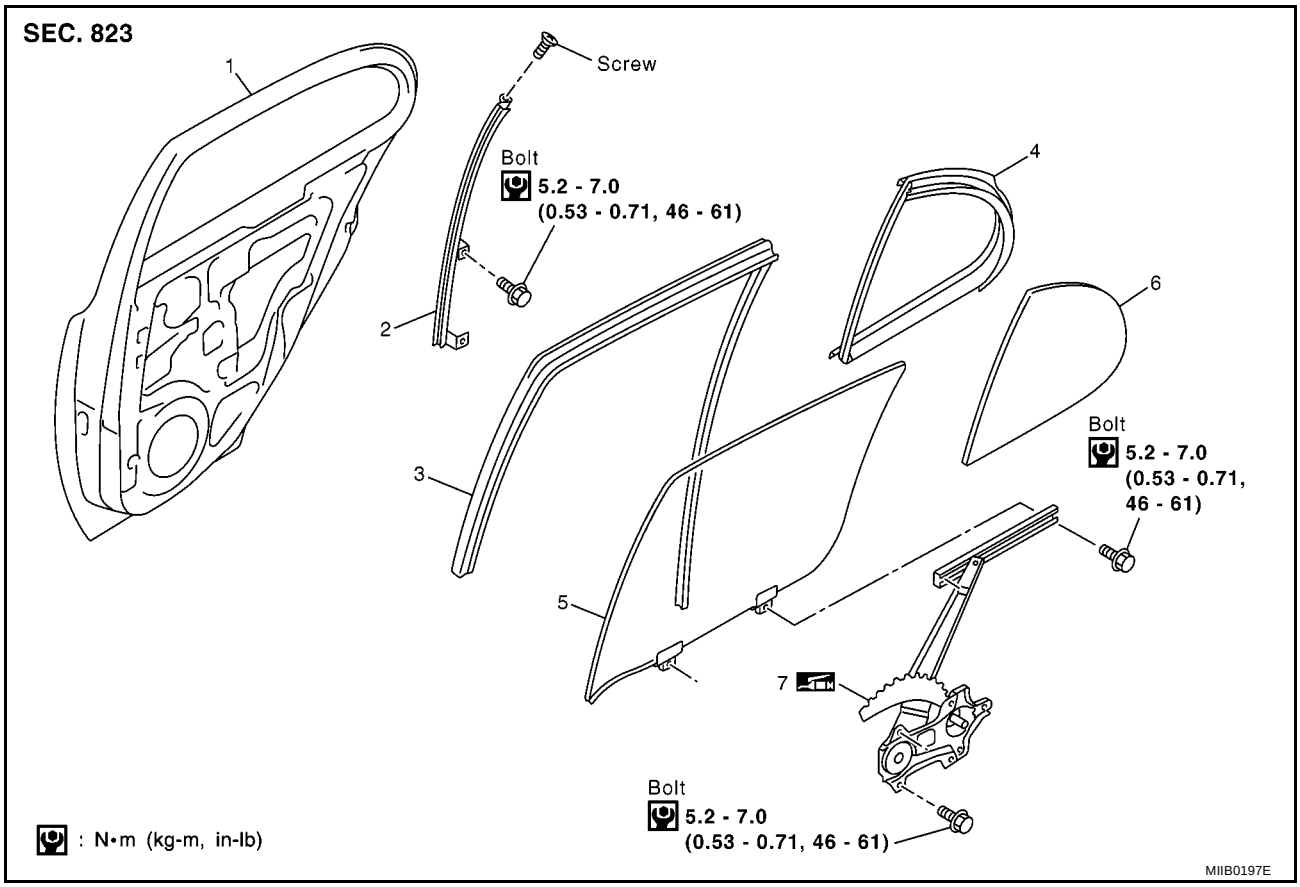
- Make sure glass is securely fit into door glass run groove.
- Lower glass slightly (approximately 10 to 20 mm), and confirm clearance to the sash is parallel. If clearance between glass and sash is not parallel, loosen bolts for regulator assembly, glass, and carrier plate, and then correct glass position.

REAR DOOR GLASS AND REGULATOR

PFP:82300

Removal and Installation

EIS004L9

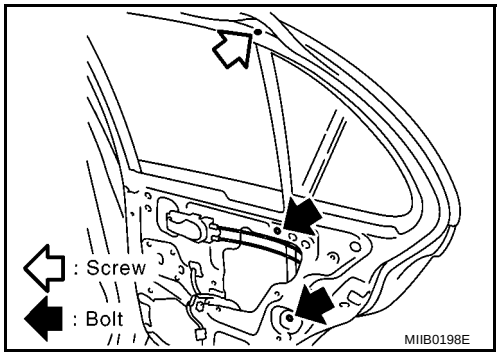


1. Door panel
2. Partition sash
3. Door glass run
4. Partition weather strip
5. Door glass
6. Partition glass
7. Regulator

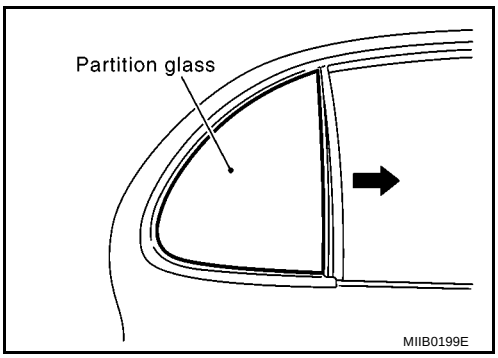
REMOVAL

1. Remove rear door finisher. Refer to EI-16, "DOOR FINISHER" .
2. Remove rear speaker harness connector.
3. Remove sealing screen.

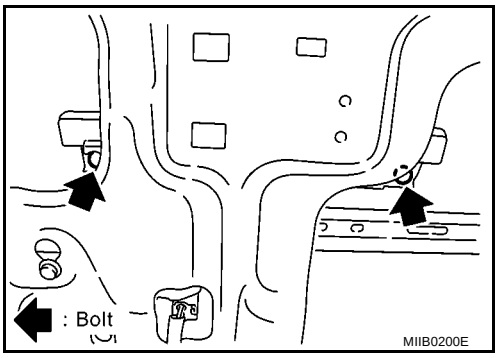
   NOTE:
   If sealing screen is reused, cut butyl tape in a way that leaves it on sealing screen.
4. After removing partition sash bolts screws, pull partition sash straight down, tilt the top forward, and pull up.



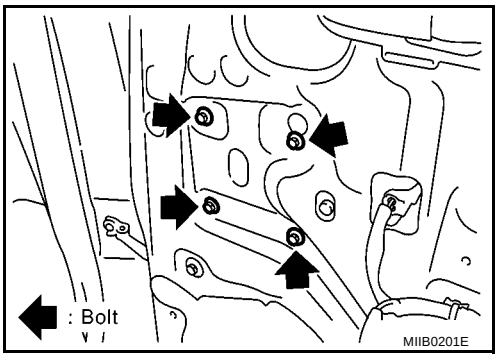
5. Pull out partition glass in the direction shown by the arrows in the figure.



6. While supporting door glass, operate power window switch to raise/lower door glass until glass bolts can be seen.
7. Remove door glass bolts.
8. Pull door glass up to remove it.



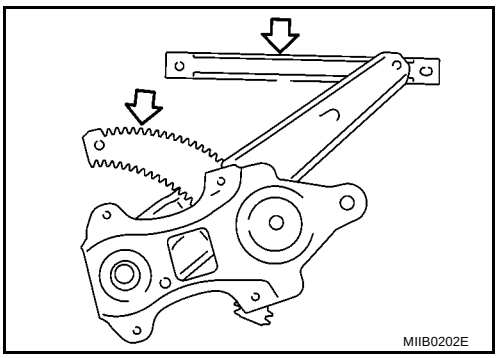
9. Remove regulator assembly bolts to remove assembly out of door panel.



10. Pull out and remove door glass run from door panel.

INSPECTION AFTER REMOVAL

- Check the regulator assembly for the following. If a failure is detected, replace or grease it.
  Gear wear
  Regulator assembly deformation
  Grease condition on each sliding part
- Apply grease (Nissan MP Special Grease No. 2) to the areas indicted by the arrows in the figure.



INSTALLATION

Install in the reverse order of removal.

FITTING INSPECTION

- Make sure the window is seated in the groove of the glass run.
- Lower glass slightly (approximately 10 to 20 mm), and confirm clearance to the sash is parallel. If clearance between glass and sash is not parallel, loosen bolts for regulator assembly, glass, and main channel, and then correct glass position.

DOOR MIRROR

PFP:96301

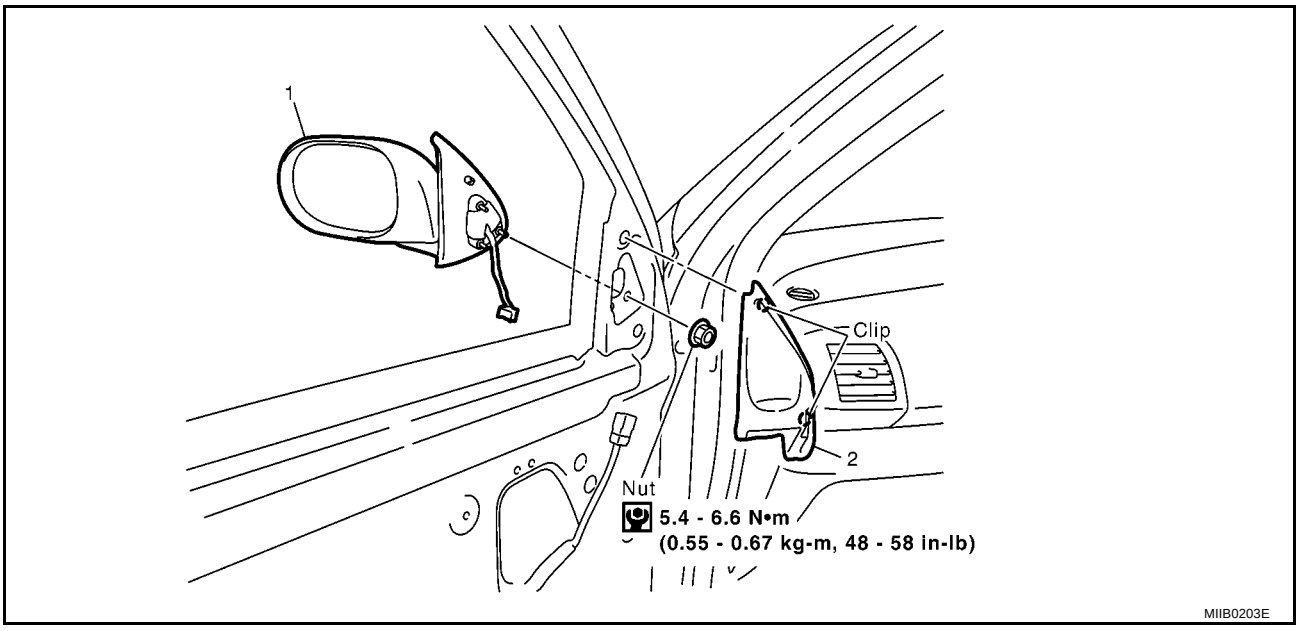
Removal and Installation

EIS004LC



1. Door mirror
2. Corner cover

REMOVAL

CAUTION:

Be careful not to damage mirror body.

1. Remove front door finisher. Refer to EI-16, "DOOR FINISHER" .
2. Remove corner cover.
3. Disconnect door mirror harness connector. (Electric door mirrors only)
4. Remove door mirror nuts and door mirror assembly.

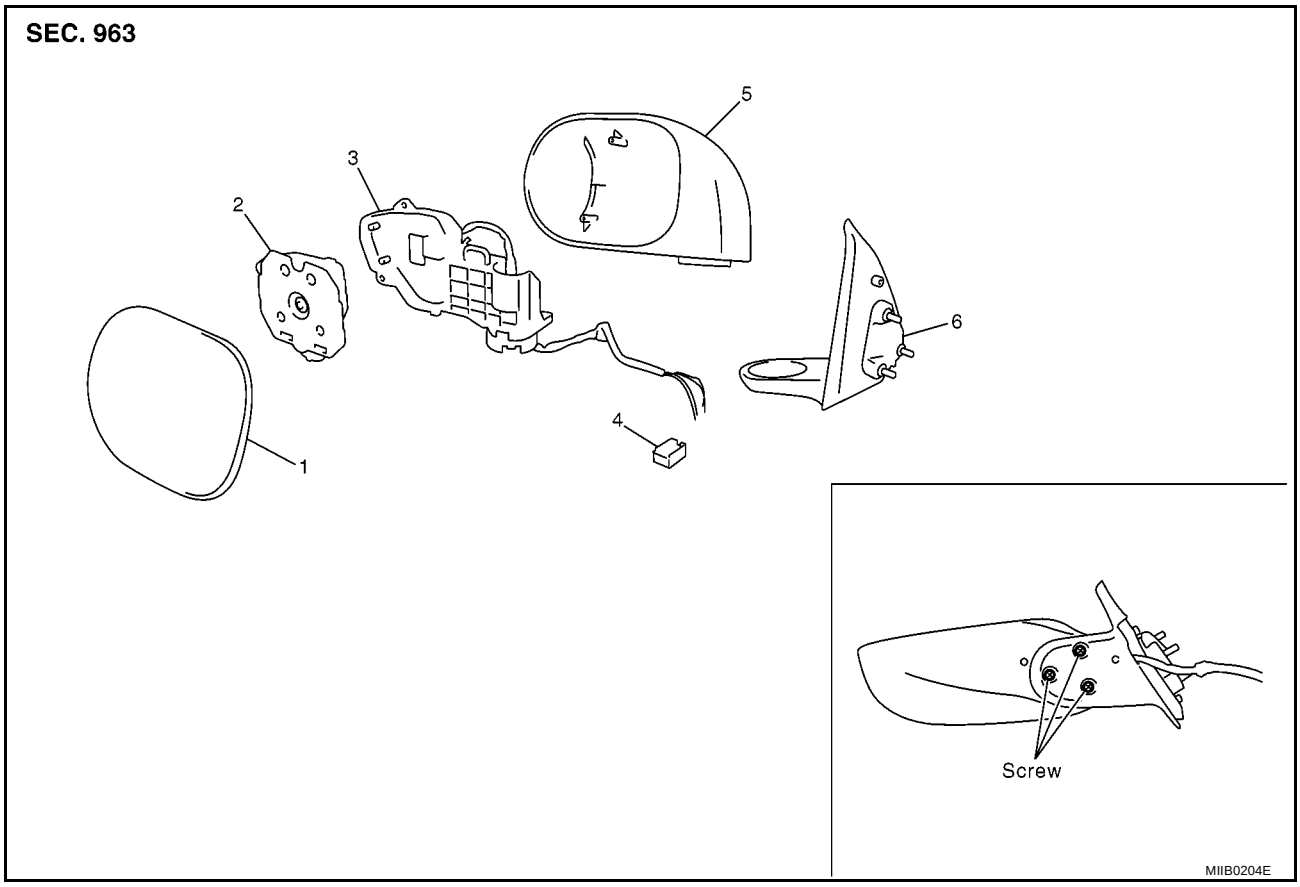
INSTALLATION

Install in the reverse order of removal.

Disassembly and Assembly

EIS004LD

SEC. 963



1. Mirror body (integrated with holder)
2. Power unit
3. Electric unit
4. Connector (electric)
5. Housing
6. Base

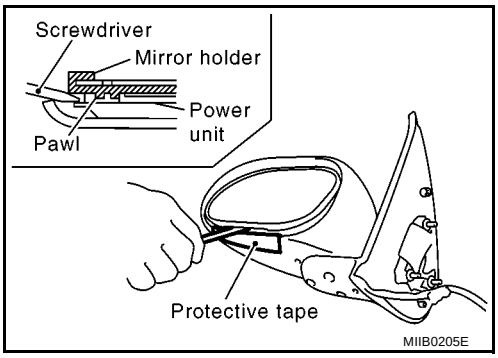
DISASSEMBLY

1. Remove all terminals from the harness connector.

   CAUTION:
   Before pulling out terminal, note connector terminal layout.

2. Turn mirror glass surface upward.
3. Apply protective tape to the housing.
4. As shown in the figure, insert a thin, screwdriver in the concave gap between mirror glass (mirror holder) and power unit to push up tabs (2 locations) on mirror holder to disengage lower part of mirror holder, and remove mirror body.

   CAUTION:
   When pushing up the tabs, do not forcibly push up only 1 concave but try to push up using 2 concave positions.

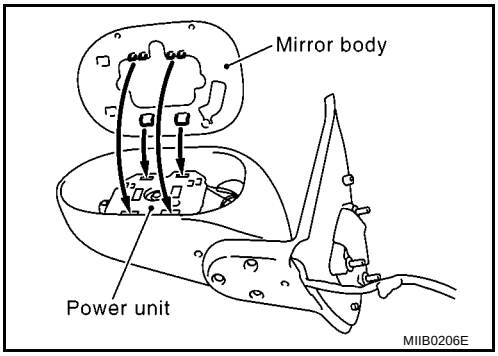


5. Remove base.
6. Remove electric unit.
7. Remove power unit, and disconnect connector.
8. Separate the power unit from the Electric retracting unit.

ASSEMBLY

1. Install power unit to the electric unit.
2. Connect connector to power unit.
3. Install electric unit and base to the housing.
4. Place power unit and mirror body in a horizontal position.
5. Engage upper tabs of mirror glass (mirror holder) with power unit. Then, press lower part of mirror glass down until lower part snaps into place and engages lower tabs.

   CAUTION:
   After finishing work, visually confirm that lower tabs (2) at the bottom of mirror face are securely engaged.



6. Insert harness terminal into connector.

   CAUTION:
   Make sure to insert harness terminal into the correct connector. Do not confuse the locations.

INSIDE MIRROR

PFP:96321

Removal and Installation

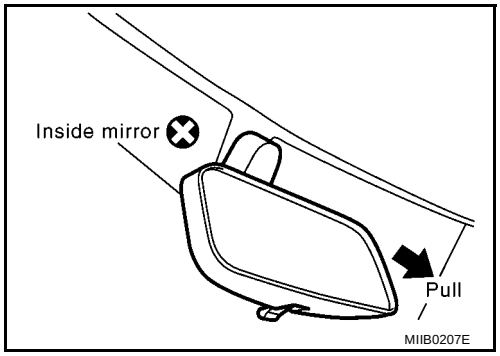
EIS004LE

REMOVAL

Pull the inside mirror forward to remove it.

CAUTION:

Do not twist the stay to remove it as this could damage the stay.



INSTALLATION

Rotate the stay 90°C to install it.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS004OW

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions

EIS004OX

- Disconnect both battery cables in advance.
- Disconnect air bag system line in advance.
- Never tamper with or force air bag lid open, as this may adversely affect air bag performance.
- Be careful not to scratch pad and other parts.
- When removing or disassembling any part, be careful not to damage or deform it. Protect parts, which may get in the way with cloth.
- When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
- Keep removed parts protected with cloth.
- If a clip is deformed or damaged, replace it.
- If an unreusable part is removed, replace it with a new one.
- Tighten bolts and nuts firmly to the specified torque.
- After re-assembly has been completed, make sure each part functions correctly.
- Remove stains in the following way.

Water-soluble stains:
Dip a soft cloth in warm water, and then squeeze it tightly. After wiping the stain, wipe with a soft dry cloth.
Oil stain:
Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water and squeeze it tightly. Then clean off the detergent completely. Then wipe the area with a soft dry cloth.

- Do not use any organic solvent, such as thinner or benzine.

[ ]: The number shows the removal order.

CAUTION:

- **Only applies to combinations of Car-Wings unit and MD/CD integrated AM/FM electronic tuner radio, and of pocket deck and MD/CD integrated AM/FM electronic tuner radio. Other companies can only be removed using procedures [3] and [4].**

REMOVAL

A. Front Pillar Garnish

Refer to EI-19, "BODY SIDE TRIM" in EI section.

B. Upper Instrument Panel

1. Insert a screwdriver wrapped with cloth into the instrument mask back notch to remove the instrument mask. When vehicle has sunload sensor, disconnect the sensor harness. Refer to ATC-67, "SUNLOAD SENSOR" in ATC section.
2. Insert a screwdriver, etc., wrapped with cloth into the upper instrument panel passenger side back edge and disengage metal clips and lift up panel.
3. Hold the lifted up part by hand, remove metal clips engaged in instrument pad, and remove upper instrument panel.

C. Steering Lock Escutcheon

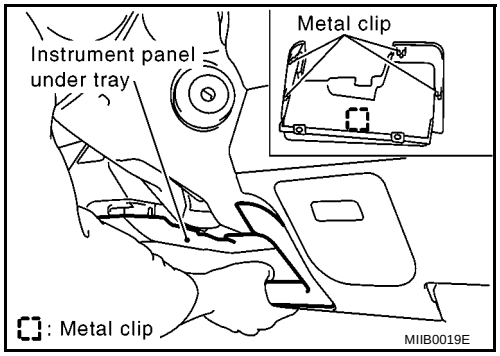
Pull toward vehicle and remove.

CAUTION:

To install, align key cylinder end bottom protrusion with escutcheon inside notch and install.

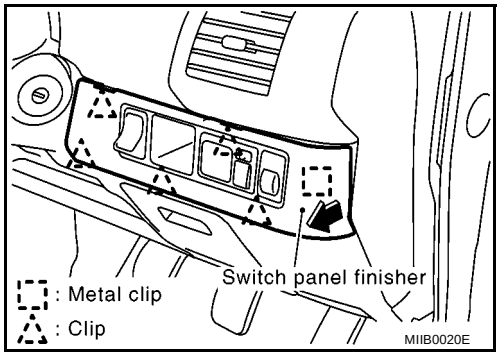
D. Instrument Panel Under Tray

1. Disengage upper metal clips, hold bottom lid by hand, pull panel forward, and disengage metal clips.
2. Remove being careful of interference from surrounding metal objects.



E. Switch Panel Finisher

Hold lid side (arrow area) by hand, disengage metal clips, and then pull forward and disengage plastic clips to remove.



F. Steering Column Cover

Upper

1. To make it easier to remove lower side, face steering pad top downward. (Tilt right side at about 160°)
2. Tilt down steering column and remove screw (1) facing front of vehicle.
3. Disengage hooks and remove.

Lower

- Remove screws (3).

CAUTION:

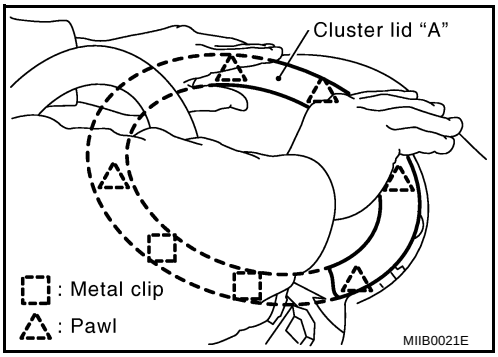
Pull out being careful of interference with surrounding objects.

G. Combination Switch

Refer to LT-187, "LIGHTING AND TURN SIGNAL SWITCH" in LT section and WW-46, "Removal and Installation of Front Wiper and Washer Switch" (models without rain sensor) or WW-80, "Removal and Installation of Front Wiper and Washer Switch" (models with rain sensor) and WW-109, "Removal and Installation of Rear Wiper and Washer Switch" in WW section.

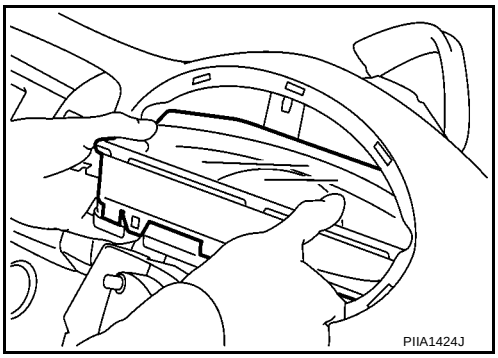
H. Cluster lid “A”

1. Tilt down steering column.
2. Pull cluster lid A forward and remove hooks and mounting clips.
3. While being careful of surrounding interference, remove from steering right side.



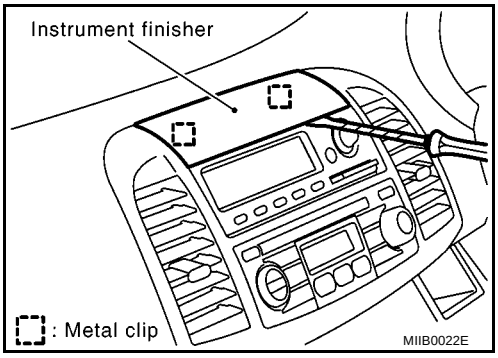
I. Combination Meter

After removing screws, remove harness connector, and then place combination meter top to the rear and remove.



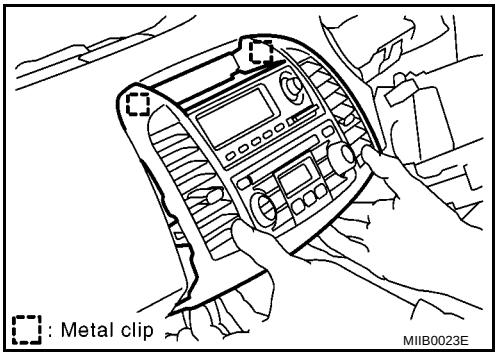
J. Instrument Finisher

- Insert a screwdriver wrapped with tape into the bottom of instrument finisher, and pull up and remove finisher.
- (Vehicles with pocket decks) Open pocket, insert a screwdriver wrapped with tape into the bottom of the instrument finisher at the top, and remove the finisher.



K. Cluster Lid C

1. Remove screws and metal clips, hold lid bottom by hand, and pull straight out.
2. Separate and remove audio harness connector.
3. After removal, separate the center ventilator grille and audio equipment. Refer to ATC-80, "DUCTS AND GRILLES" in ATC section, MTC-57, "DUCTS AND GRILLES" in MTC section, DI-64, "Removal and Installation of Drive Computer" in DI section and AV-12, "Removal and Installation of Audio Unit" in AV section.

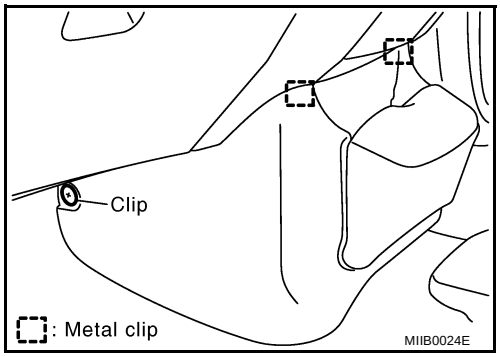


L. Air Conditioner Finisher

Refer to ATC-63, "Removal and Installation" in ATC section and MTC-43, "Removal and Installation" in MTC section.

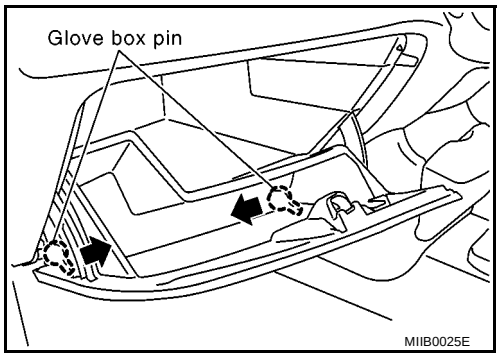
M. Instrument Panel Stay Cover

1. Remove at LH/RH mounting clips.
2. Pull instrument stay cover toward rear of vehicle, disengage metal clips, orient straight above cup holder, and remove.



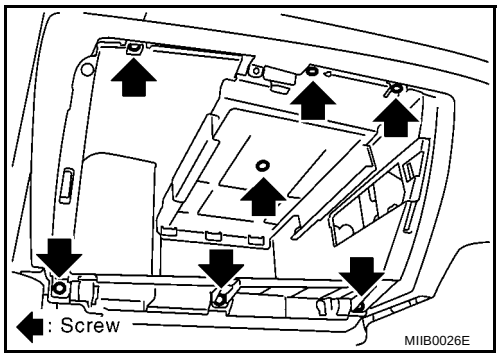
N. Glove Box Lid

1. Remove glove box pin and then remove glove box lid.



O. Glove Box Cover Assembly

1. Pull out tray (only vehicles equipped with tray).
2. Remove screws shown in figure, and then remove glove box cover assembly.
3. After removal, separate parts. Refer to IP-11, "GLOVE BOX COVER ASSEMBLY" in “Disassembly and Assembly”.

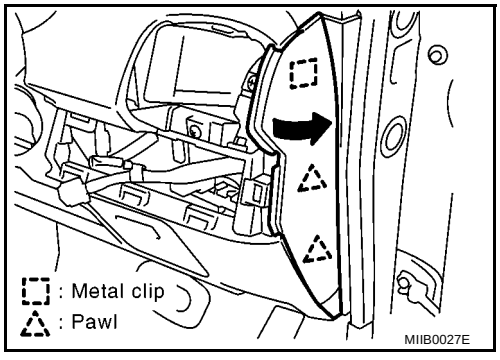


P. Side Ventilator Grille

Refer to ATC-80, "DUCTS AND GRILLES" in ATC section and MTC-57, "DUCTS AND GRILLES" in MTC section.

Q. Instrument Side Mask

1. Rotate instrument side mask to center of vehicle forward insertion area, disengage metal clips and plastic hooks, and remove.
2. Pull out inserted area and remove from vehicle.



R. Passenger Seat Air Bag Module

Refer to SRS-40, "FRONT PASSENGER AIR BAG MODULE" in SRS section.

S. Steering Wheel

Refer to SRS-36, "DRIVER AIR BAG MODULE" and SRS-38, "SPIRAL CABLE" in SRS section.

T. Instrument Panel & Pad

1. Tilt down steering column.
2. Remove screws, and remove instrument panel and pad from passenger door opening.
3. After removal, separate parts. Refer to IP-11, "INSTRUMENT PANEL PAD" in “Disassembly and Assembly”.

U. Instrument Pad

1. Remove instrument pad screws (6).
2. Remove metal clips (4) engaged in instrument panel, and remove instrument pad.

REMOVAL AND INSTALLATION OF INSTRUMENT PAD

Removal

1. Remove front pillar garnish. Refer to IP-5, "A. Front Pillar Garnish" .
2. Remove upper instrument panel. Refer to IP-6, "B. Upper Instrument Panel" .
3. Remove steering lock escutcheon. Refer to IP-6, "C. Steering Lock Escutcheon" .
4. Remove switch panel finisher. Refer to IP-6, "E. Switch Panel Finisher" .
5. Remove steering column cover. Refer to IP-6, "F. Steering Column Cover" .
6. Remove combination switch. Refer to IP-6, "G. Combination Switch" .
7. Remove cluster lid “A”. Refer to IP-7, "H. Cluster lid “A”" .
8. Remove combination meter. Refer to IP-7, "I. Combination Meter" .
9. Remove instrument panel finisher. Refer to IP-7, "J. Instrument Finisher" .
10. Remove cluster lid “C”. Refer to IP-7, "K. Cluster Lid C" .
11. Remove mask. Refer to IP-7, "L. Air Conditioner Finisher" .
12. Remove glove box lid. Refer to IP-8, "N. Glove Box Lid" .
13. Remove glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
14. Remove side ventilator grille (LH/RH). Refer to IP-8, "P. Side Ventilator Grille" .
15. Remove passenger air bag module. Refer to IP-8, "R. Passenger Seat Air Bag Module" .

Installation

Install in the reverse order of removal.

REMOVAL AND INSTALLATION OF CONSOLE BOX.

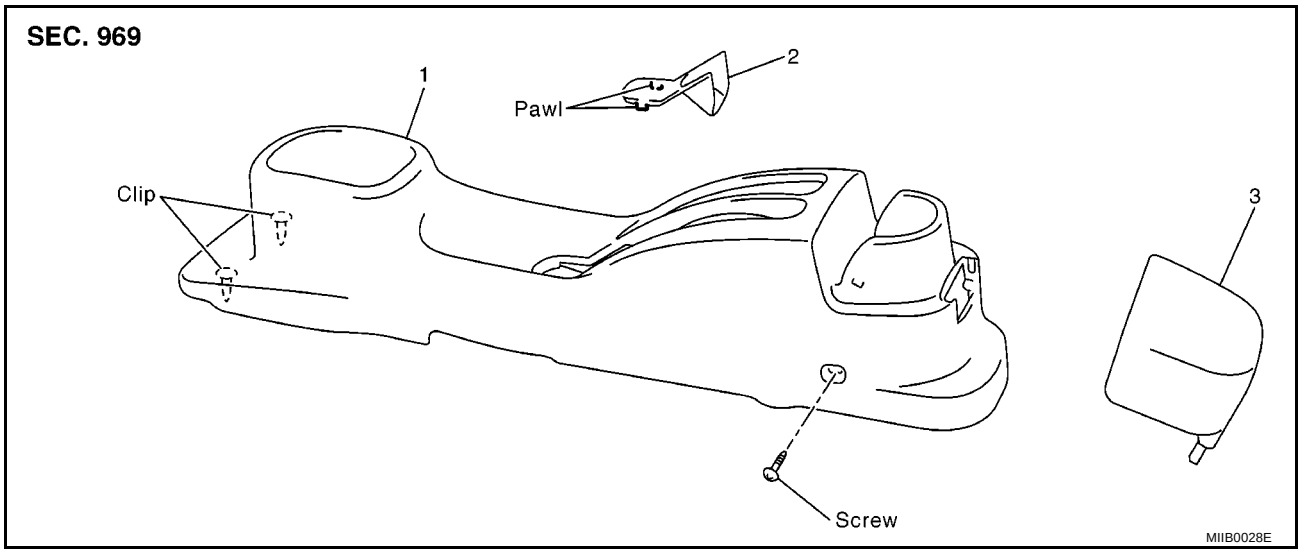
Removal

1. For manual transmission vehicles, remove shift knob from shift lever.
2. Pull up parking brake
3. Remove inside key antenna (center console) (vehicles with key system only) connector from console box.
4. Remove console mask.
5. Move the seat and remove the screws.
6. Lift up the console box and remove the front side clips.

Installation

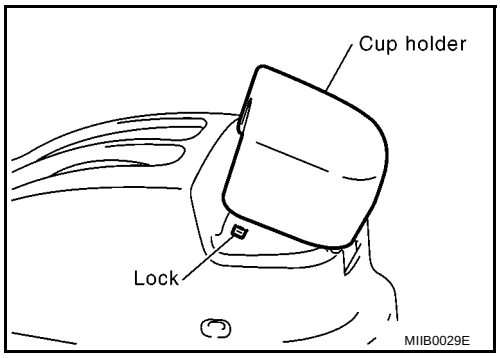
Install in the reverse order of removal.

CONSOLE BOX



1. Console box
2. Console mask
3. Cup holder

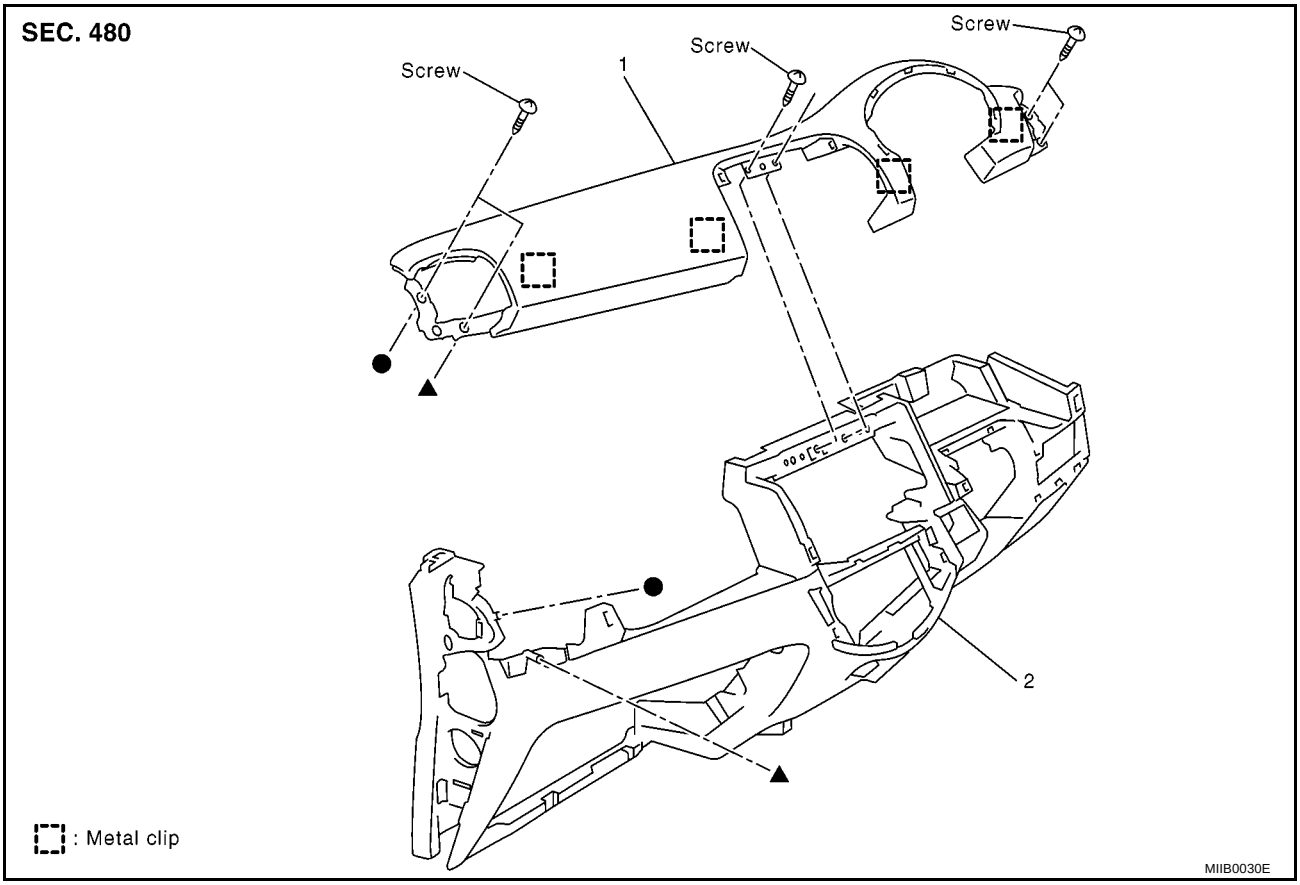
1. Remove console mask. (hooks: 2 locations)
2. Open and secure the cup holder at the position where the lock opens, and then in this state pull it straight up to remove it.



Disassembly and Assembly

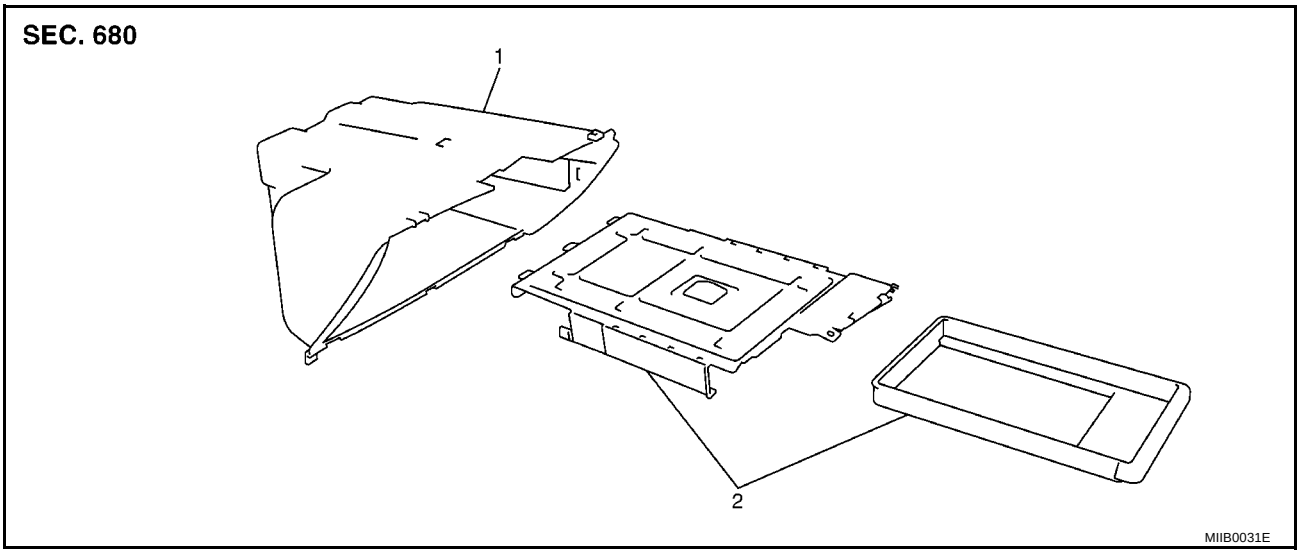
EIS004OK

INSTRUMENT PANEL PAD



1. Instrument pad
2. Instrument panel .

GLOVE BOX COVER ASSEMBLY



1. Glove box cover
2. Tray bracket assembly

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS0089Q

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

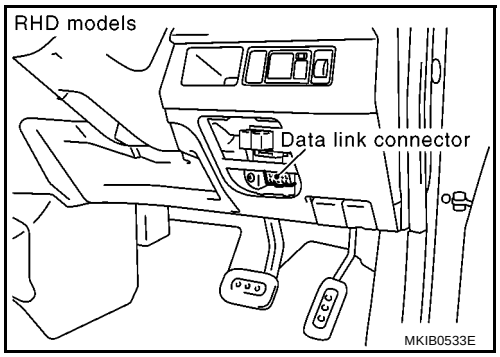
Precautions When Using CONSULT-II

EKS0073H

When connecting CONSULT-II to data link connector, connect them through CONSULT-II CONVERTER.

CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.



CHECK POINTS FOR USING CONSULT-II

1. Has CONSULT-II been used without connecting CONSULT-II CONVERTER on this vehicle?
   - If YES, GO TO 2.
   - If NO, GO TO 5.
2. Is there any indication other than indications relating to CAN communication system in the self-diagnosis results?
   - If YES, GO TO 3.
   - If NO, GO TO 4.
3. Based on self-diagnosis results unrelated to CAN communication, carry out the inspection.
4. Malfunctions may be detected in self-diagnosis depending on control units carrying out CAN communication. Therefore, erase the self-diagnosis results.
5. Diagnose CAN communication system. Refer to LAN-6, "CAN Communication Unit" .

Precautions For Trouble Diagnosis

EKS0073I

CAN SYSTEM

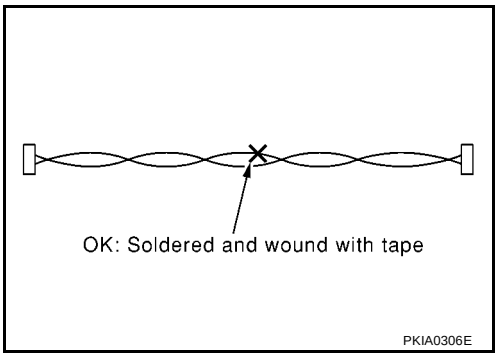
- Do not apply voltage of 7.0V or higher to the measurement terminals.
- Use the tester with its open terminal voltage being 7.0V or less.
- Be sure to turn ignition switch off and disconnect negative battery terminal before checking the circuit.

Precautions For Harness Repair

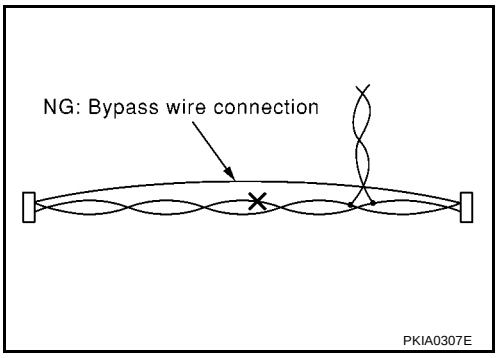
EKS0073J

CAN SYSTEM

- Solder the repaired parts, and wrap with tape. [Frays of twisted line must be within 110 mm (4.33 in)]



- Do not perform bypass wire connections for the repair parts. (The spliced wire will become separated and the characteristics of twisted line will be lost.)



Maintenance Information

EKS008WQ

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

CAN COMMUNICATION

PFP:23710

System Description

EKS007UG

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS007UH

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door																			
Axle	2WD																			
Engine	CR10DE/CR12DE/CR14DE								CR12DE/CR14DE								K9K			
Handle	LHD/RHD																			
Brake control	ABS system								ESP system								ABS

CAN SYSTEM (TYPE 1)

PFP:23710

System Description

EKS0073M

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Component Parts and Harness Connector Location

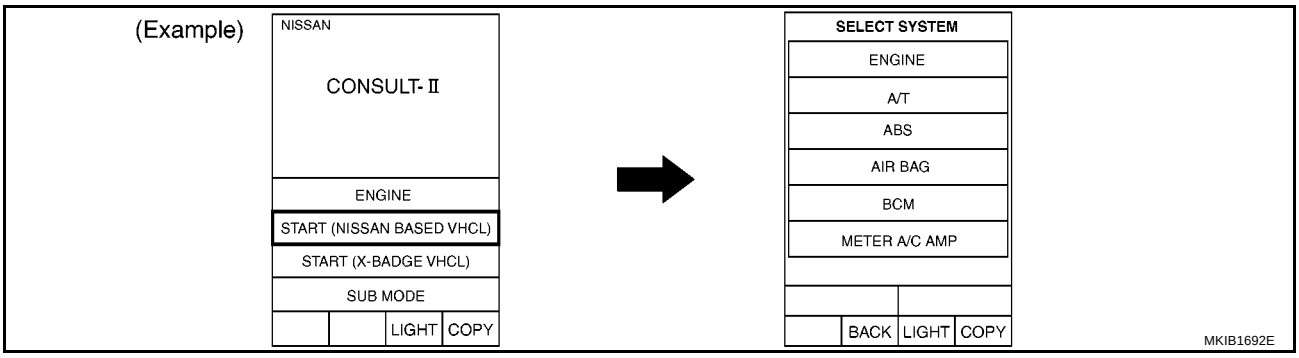
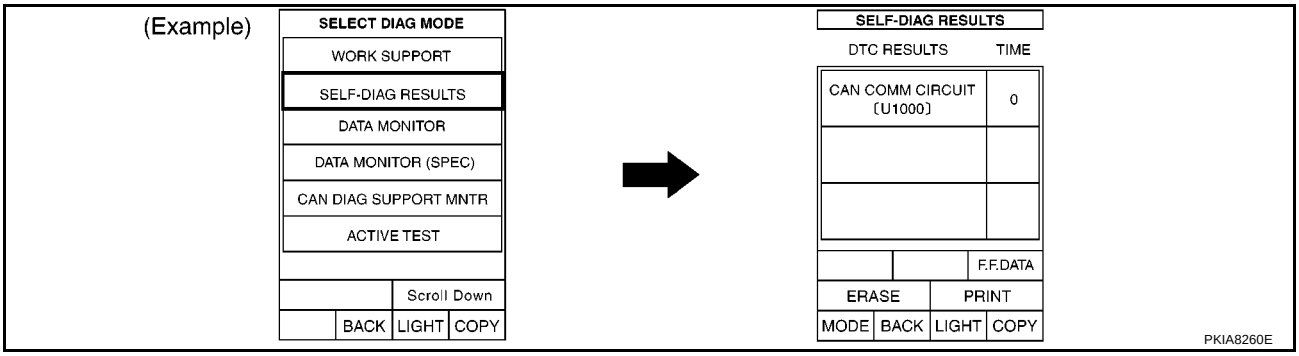
Work Flow

EKS0073P

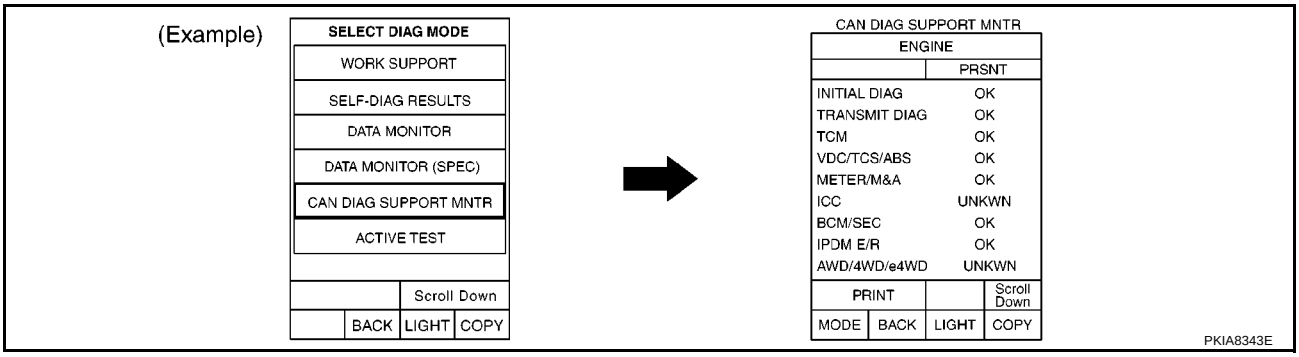
1. When there are no indications of “INTELLIGENT KEY”, “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.

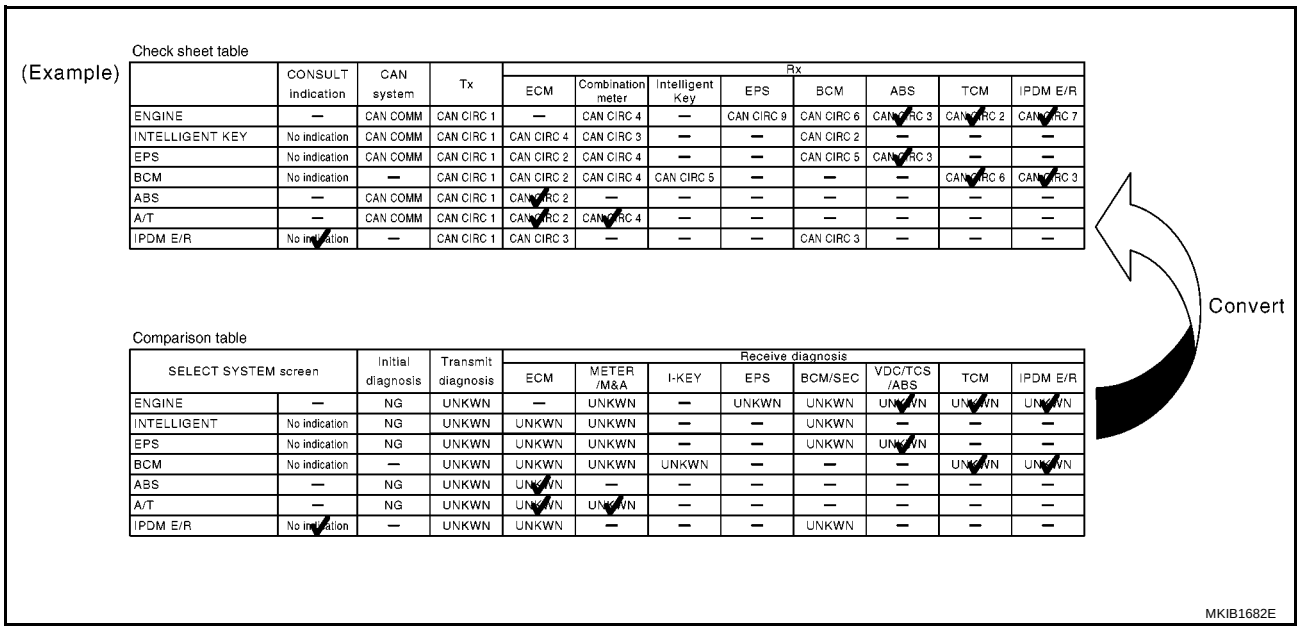


4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-25, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-25, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.



7. According to the check sheet results (example), start inspection. Refer to LAN-27, "CHECK SHEET RESULTS (EXAMPLE)" .

MKIB1622E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS0073Q

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

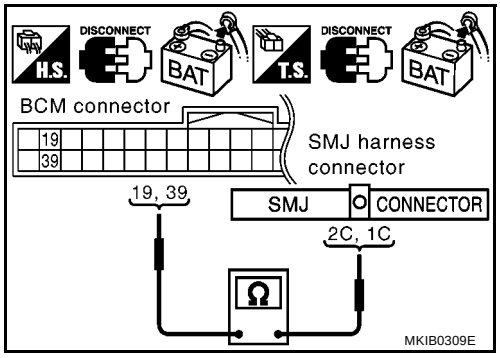
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



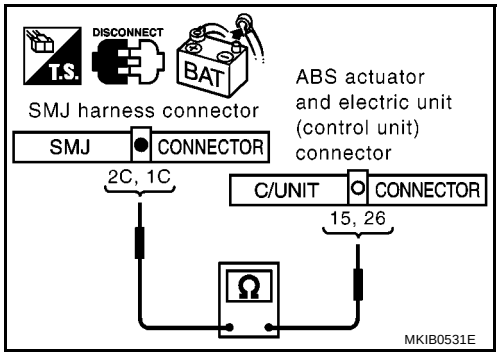
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W).

2C (R) – 26 (R) : Continuity should exist.
1C (W) – 15 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-23, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS0073U

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

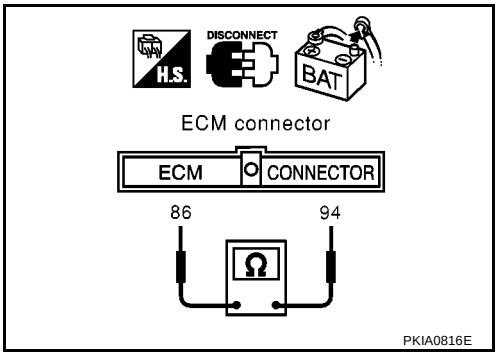
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS0073W

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check date link connector and terminals for damage, bend and loose connection (connector side and harness side).

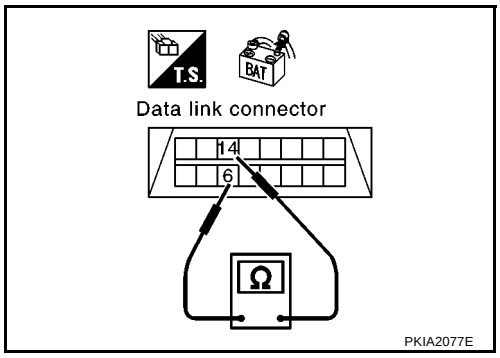
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-23, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS0073X

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

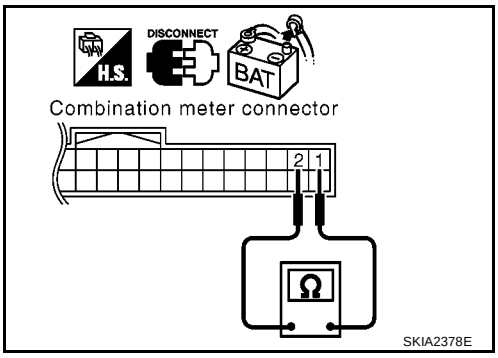
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

Intelligent Key Unit Circuit Check

EKS007XM

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of Intelligent Key unit for damage, bend and loose connection (control unit side and harness side).

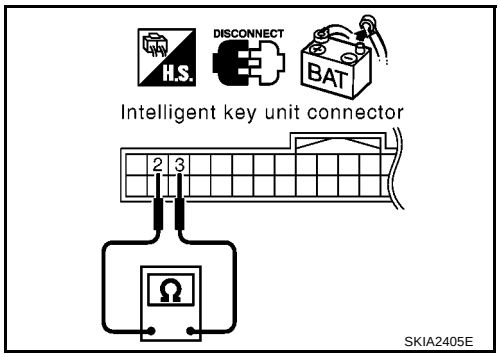
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Check resistance between Intelligent Key unit harness connector M51 terminals 2 (R) and 3 (W).

2 (R) – 3 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair harness between Intelligent Key unit and data link connector.

EPS Control Unit Circuit Check

EKS007XN

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

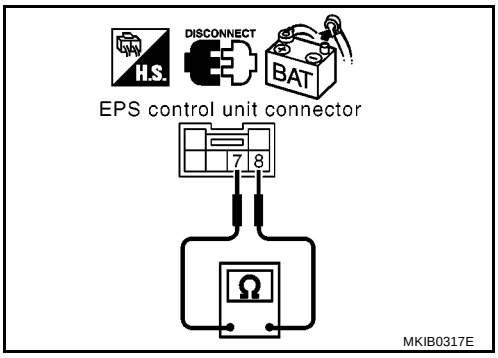
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS0073Y

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

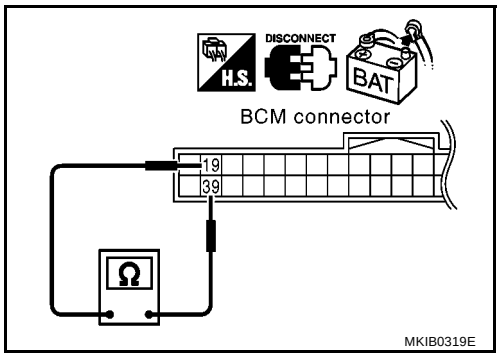
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS0073Z

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

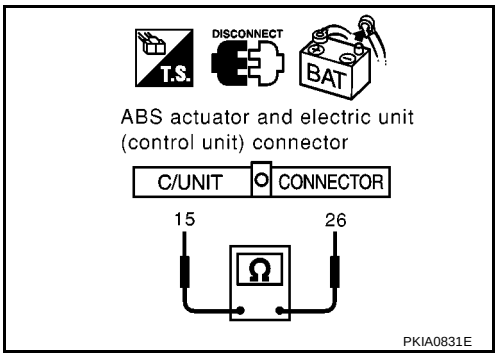
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and TCM.

TCM Circuit Check

EKS0073V

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of TCM for damage, bend and loose connection (control module side and harness side).

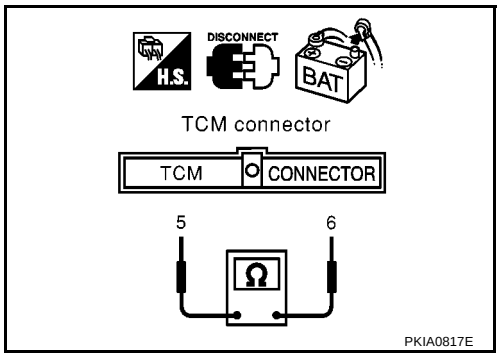
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect TCM connector.
2. Check resistance between TCM harness connector E105 terminals 5 (R) and 6 (W).

5 (R) – 6 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace TCM.
NG >> Repair harness between TCM and IPDM E/R.

IPDM E/R Circuit Check

EKS00740

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

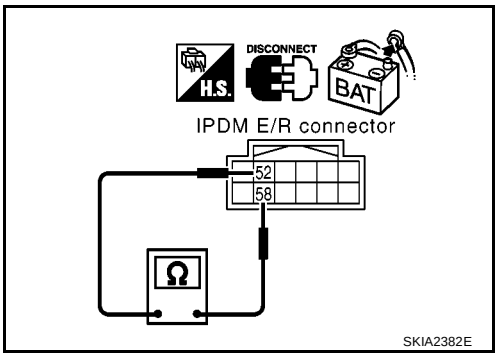
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and TCM.

CAN Communication Circuit Check

EKS00741

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Intelligent Key unit
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- TCM
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

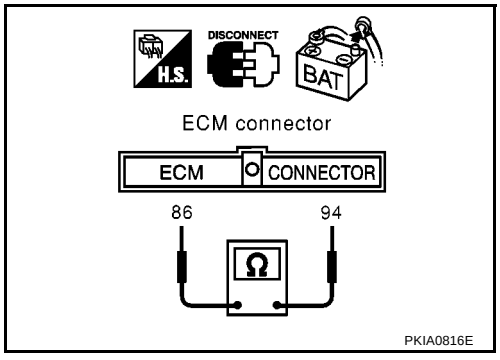
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



3. CHECK HARNESS FOR SHORT CIRCUIT

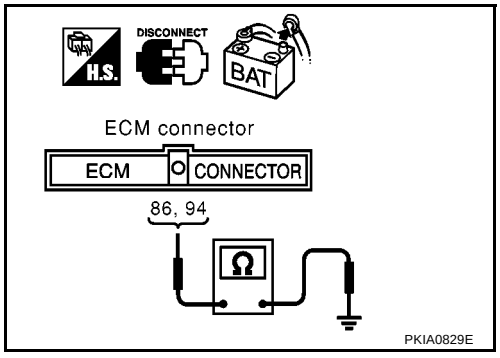
Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.

86 (W) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.

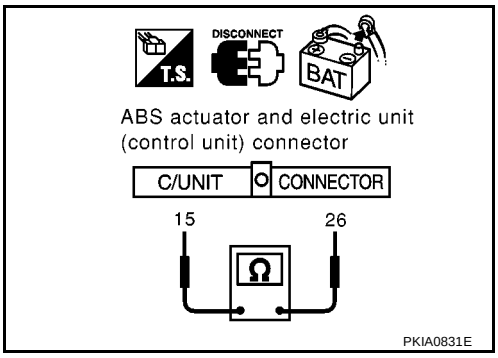


4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- TCM connector
- IPDM E/R connector

2. Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 5.

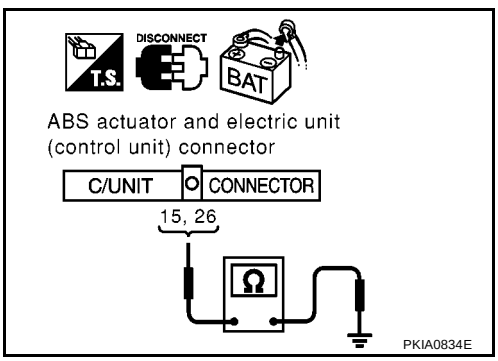
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W) and ground.

26 (R) – Ground : Continuity should not exist.

15 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.

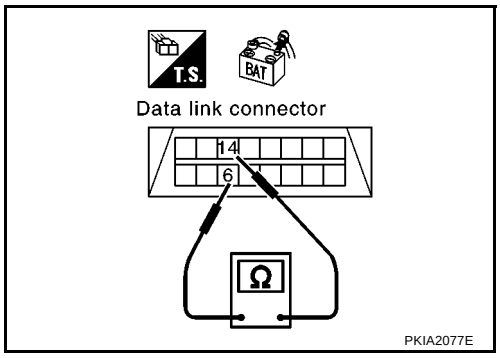
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



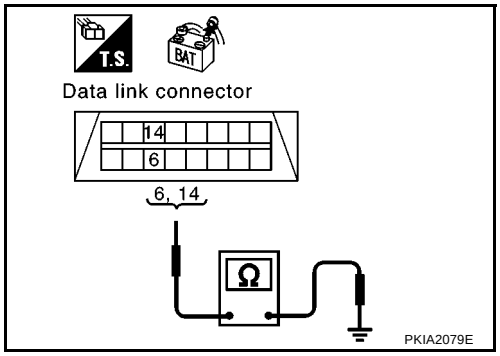
OK or NG

OK >> GO TO 7.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-51, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-23, "Work Flow" .
NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00742

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

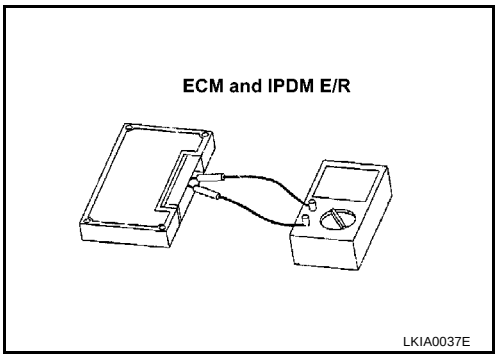
Component Inspection

EKS00743

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 2)

PFP:23710

System Description

EKS00744

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Component Parts and Harness Connector Location

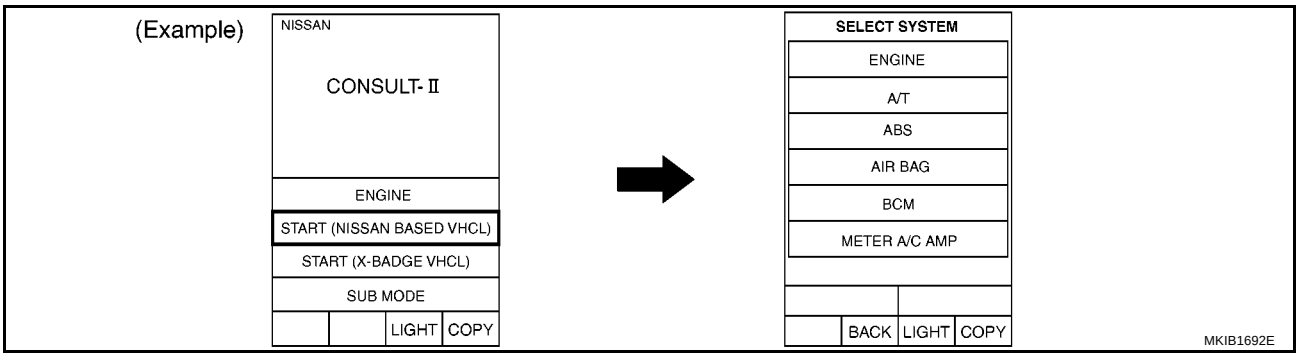
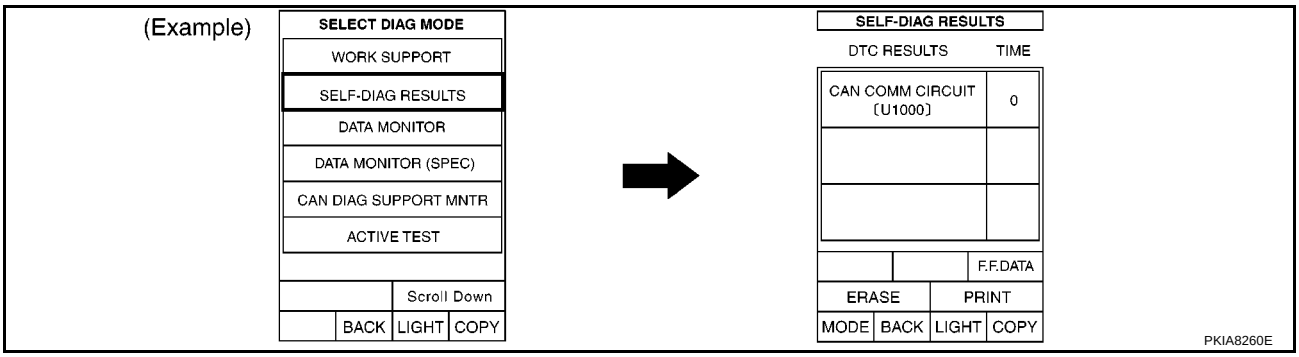
Work Flow

EKS00810

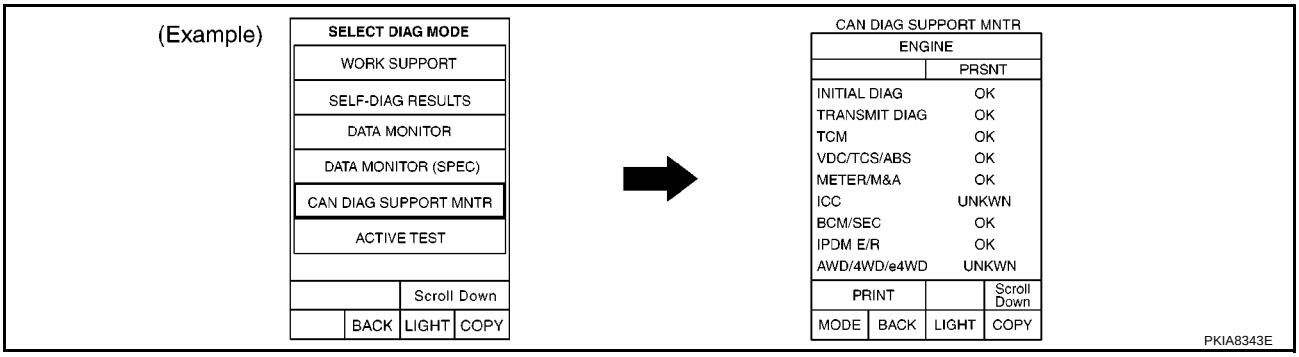
1. When there are no indications of “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-57, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-57, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.

(Example)

Check sheet table

CHECK SHEET RESULTS (EXAMPLE)

NOTE:

If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.

Case 1

Check harness between BCM and ABS actuator and electric unit (control unit). Refer to LAN-69, "Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)" .

	CONSULT indication	CAN system	Tx	Rx						
				ECM	Combination meter	EPS	BCM	ABS	TCM	IPDM E/R
ENGINE	—	CAN COMM	CAN CIRC 1	—	CAN CIRC 4	CAN CIRC 9	CAN CIRC 6	CAN CIRC 3 ✓	CAN CIRC 2 ✓	CAN CIRC 7 ✓
EPS	No indication	CAN COMM	CAN CIRC 1	CAN CIRC 2	CAN CIRC 4	—	CAN CIRC 5	CAN CIRC 3 ✓	—	—

MKIB1634E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00811

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

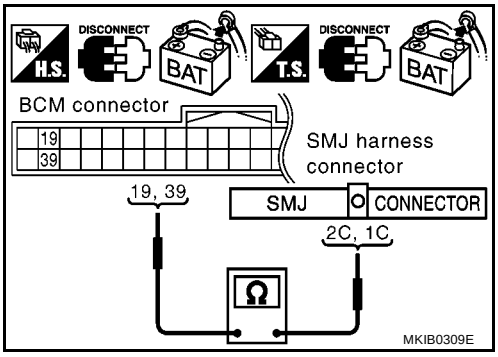
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



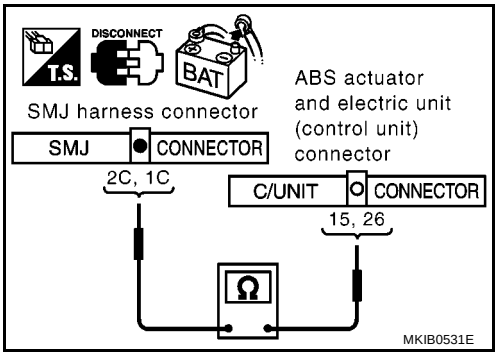
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W).

2C (R) – 26 (R) : Continuity should exist.
1C (W) – 15 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-55, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00812

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

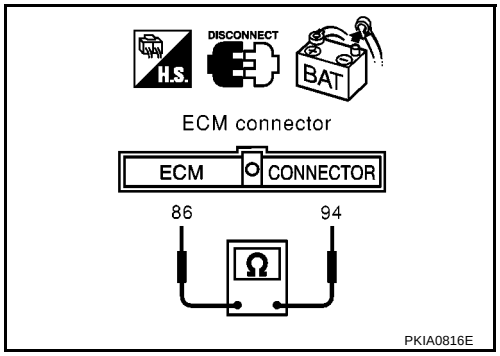
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00813

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check data link connector and terminals for damage, bend and loose connection (connector side and harness side).

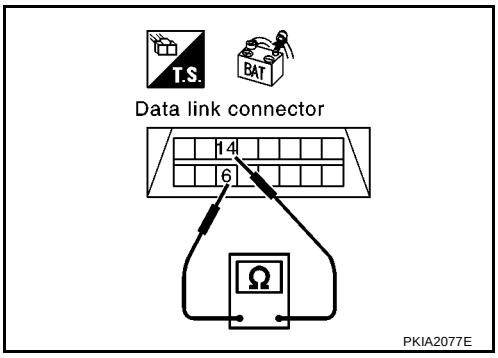
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-55, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00814

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

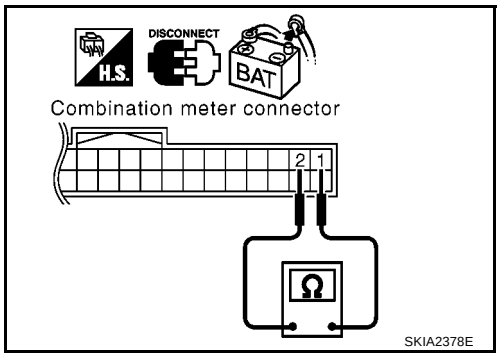
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

EPS Control Unit Circuit Check

EKS00815

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

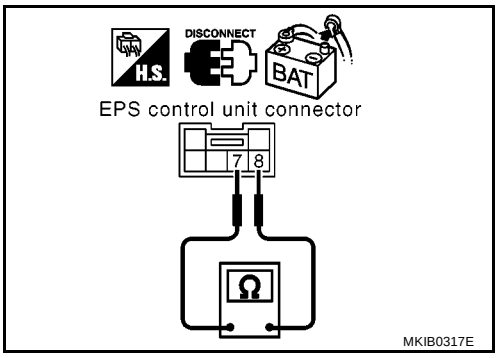
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00816

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

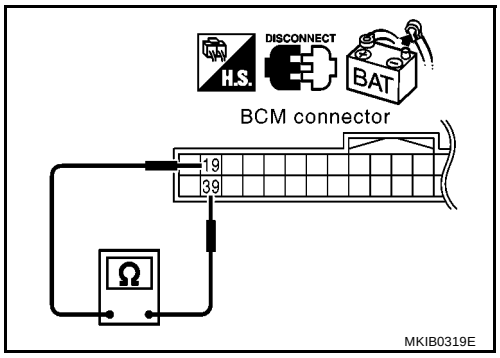
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00817

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

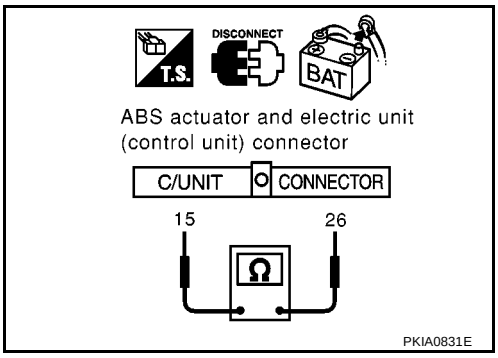
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Approx. 54 – 66Ω

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and TCM.



TCM Circuit Check

EKS00818

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of TCM for damage, bend and loose connection (control module side and harness side).

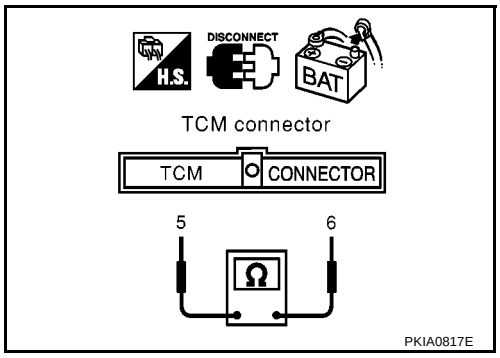
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect TCM connector.
2. Check resistance between TCM harness connector E105 terminals 5 (R) and 6 (W).

5 (R) – 6 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace TCM.
NG >> Repair harness between TCM and IPDM E/R.

IPDM E/R Circuit Check

EKS00819

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

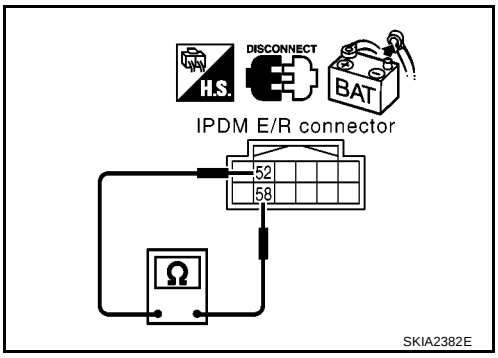
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and TCM.

CAN Communication Circuit Check

EKS0081A

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- TCM
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

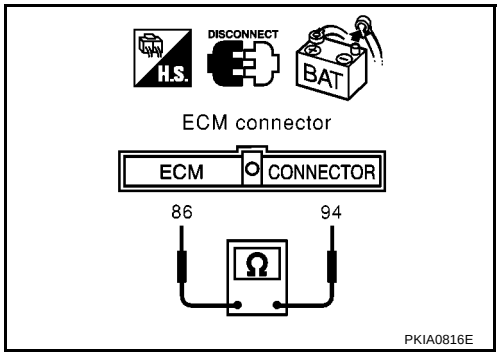
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



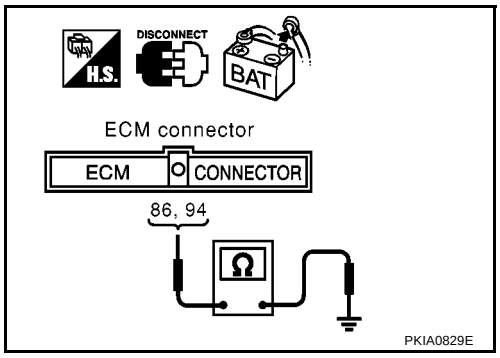
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.
86 (W) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.

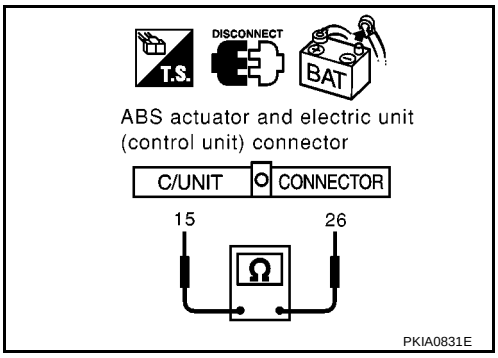


4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- TCM connector
- IPDM E/R connector

2. Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 5.

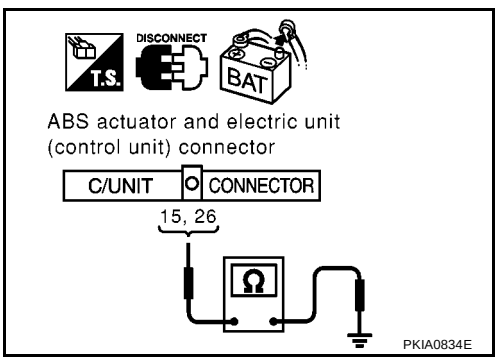
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W) and ground.

26 (R) – Ground : Continuity should not exist.

15 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.

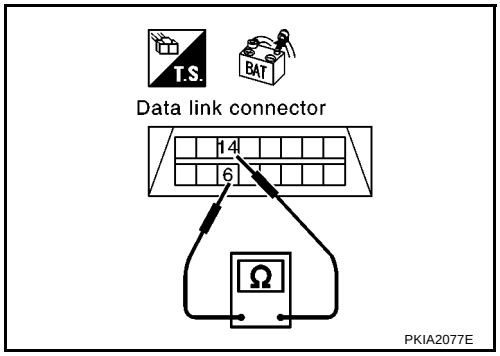
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 7.

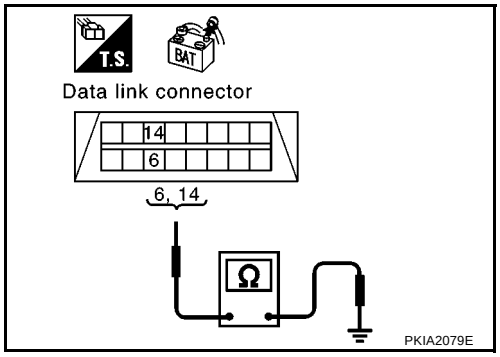
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM.

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – ground : Continuity should not exist.

14 (W) – ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.

NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM.

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-81, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-55, "Work Flow" .

NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS0081B

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

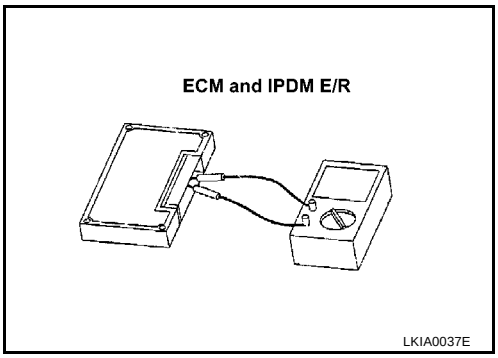
Component Inspection

EKS0081C

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 3)

PFP:23710

System Description

EKS0074L

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Component Parts and Harness Connector Location

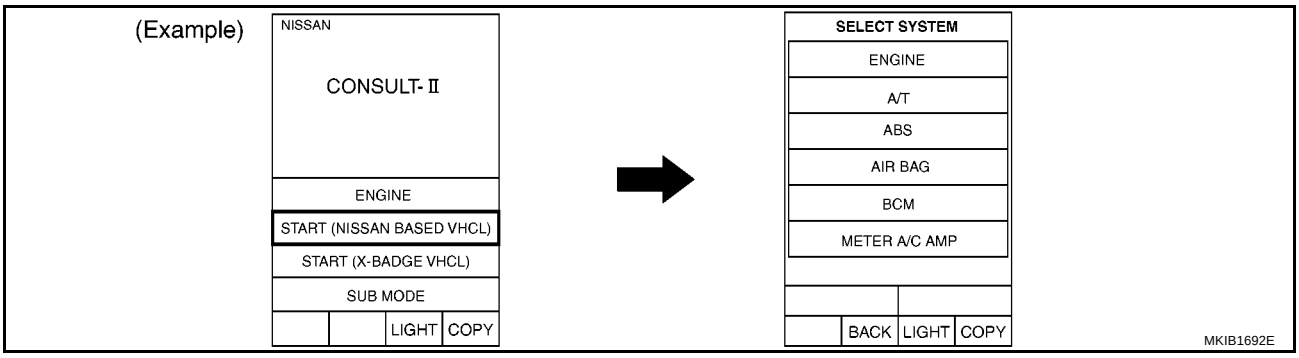
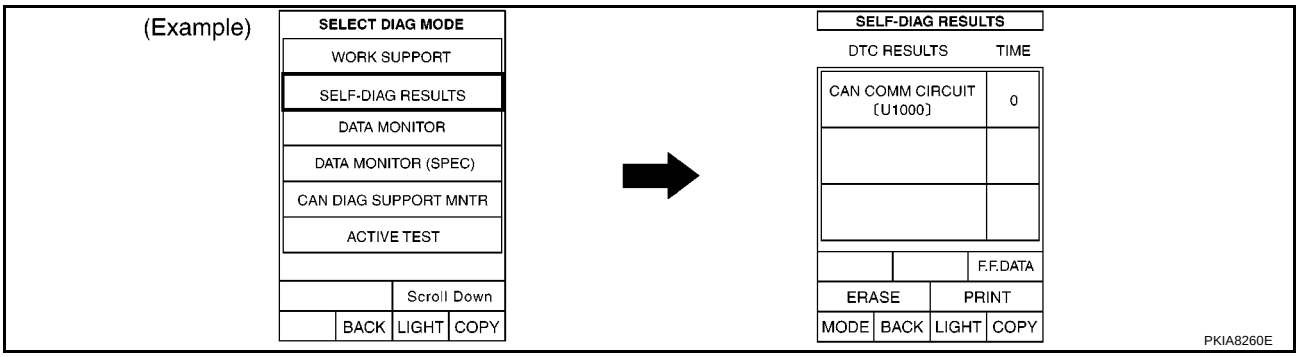
Work Flow

EKS0081D

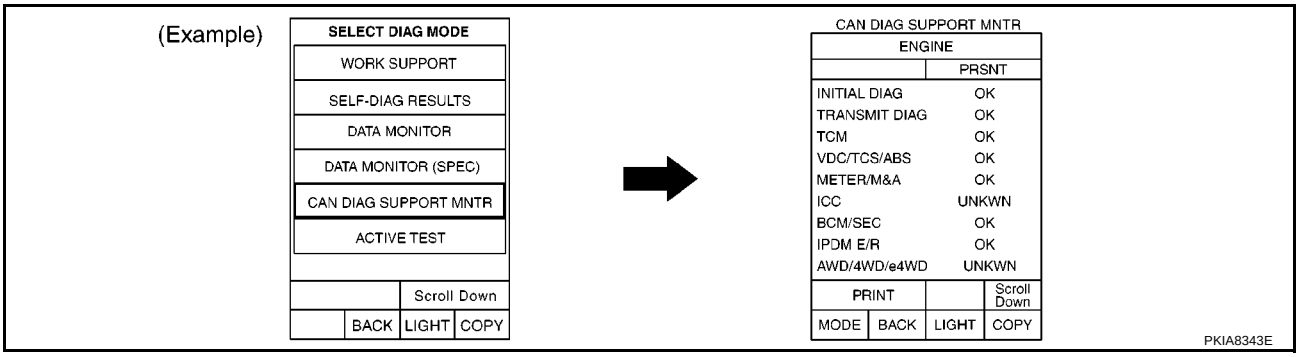
1. When there are no indications of “INTELLIGENT KEY”, “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.

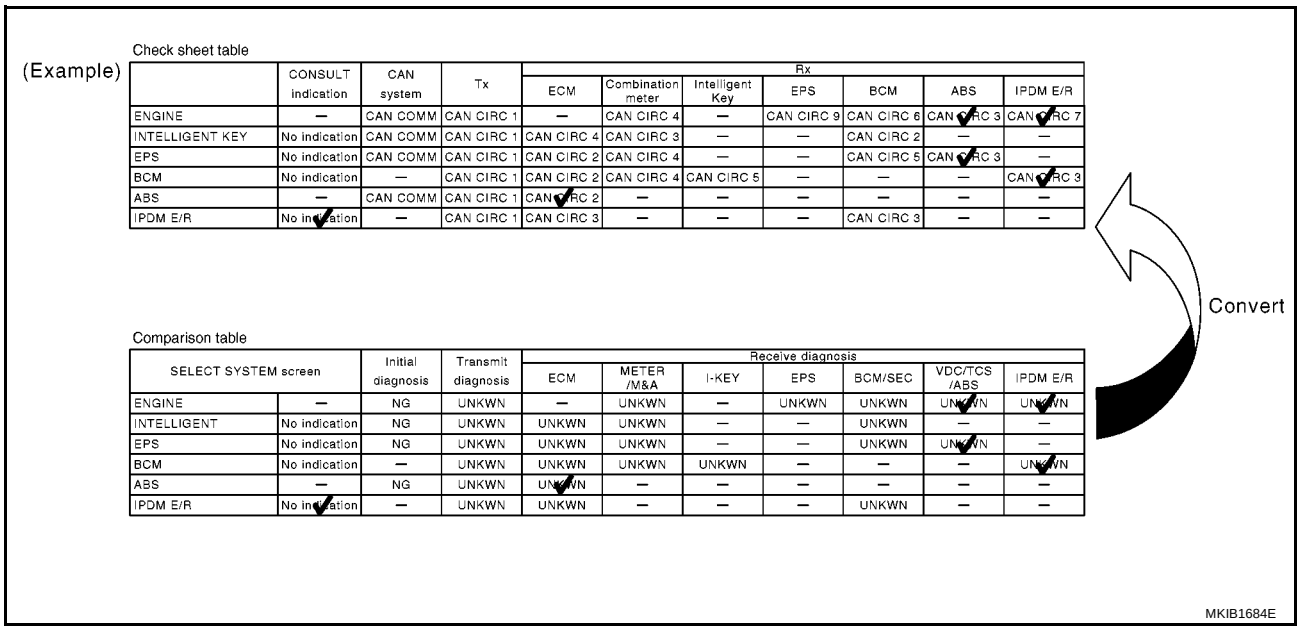


4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-87, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-87, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.



Check sheet table

CHECK SHEET RESULTS (EXAMPLE)

NOTE:
If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.

Case 1

Check harness between BCM and ABS actuator and electric unit (control unit). Refer to LAN-99, "Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)" .

	CONSULT indication	CAN system	Tx	Rx						
				ECM	Combination meter	Intelligent Key	EPS	BCM	ABS	IPDM E/R

MKIB1646E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS0081E

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

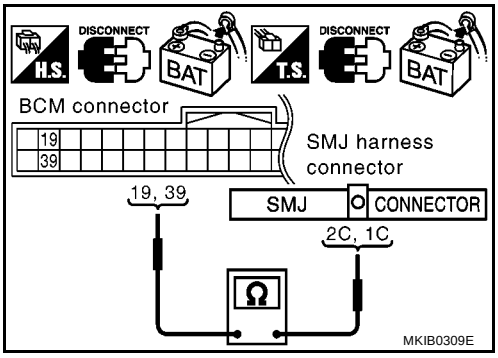
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



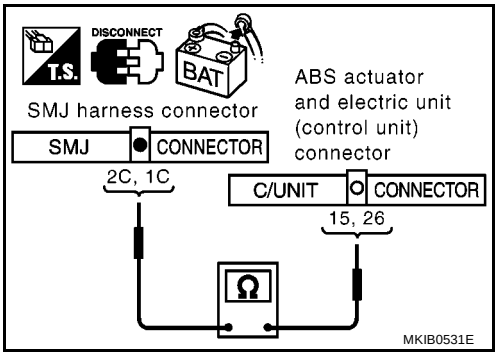
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W).

2C (R) – 26 (R) : Continuity should exist.
1C (W) – 15 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-85, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS0081F

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

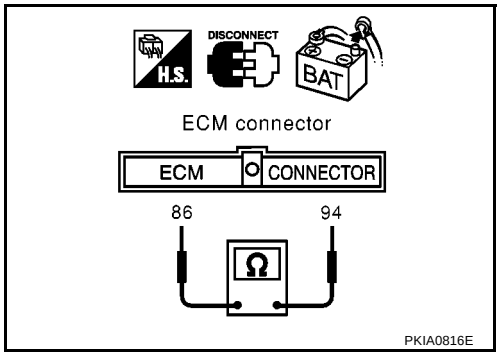
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS0081G

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check the data link connector and terminals for damage, bend and loose connection (connector side and harness side).

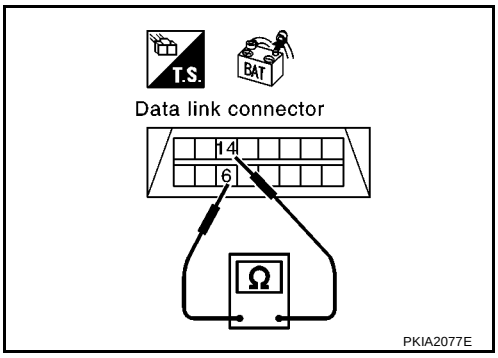
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-85, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS0081H

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

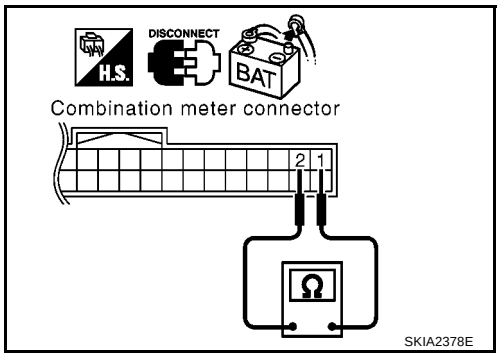
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter.
NG >> Repair harness between combination meter and data link connector.

Intelligent Key Unit Circuit Check

EKS0081I

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of Intelligent Key unit for damage, bend and loose connection (control unit side and harness side).

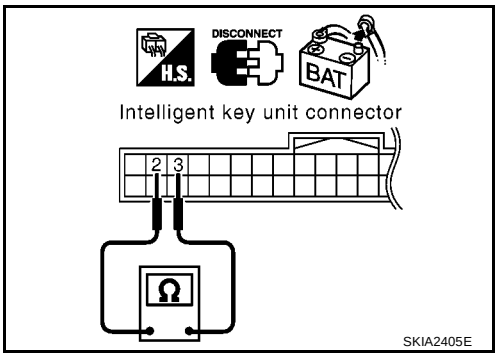
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Check resistance between Intelligent Key unit harness connector M51 terminals 2 (R) and 3 (W).

2 (R) – 3 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair harness between Intelligent Key unit and data link connector.

EPS Control Unit Circuit Check

EKS0081J

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

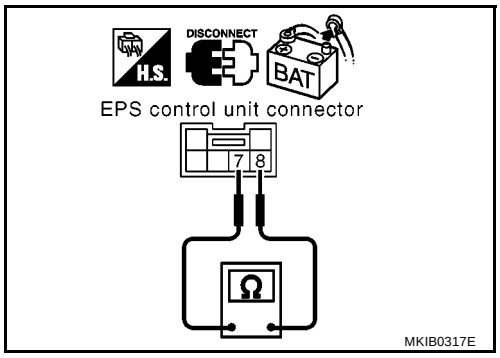
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS0081K

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

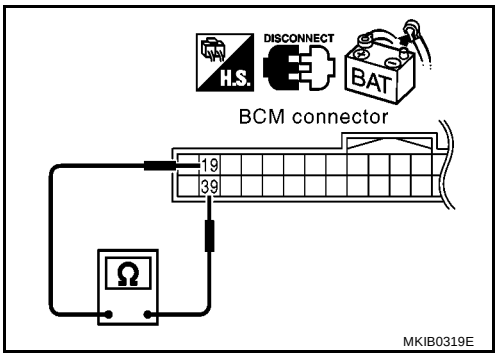
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS0081L

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

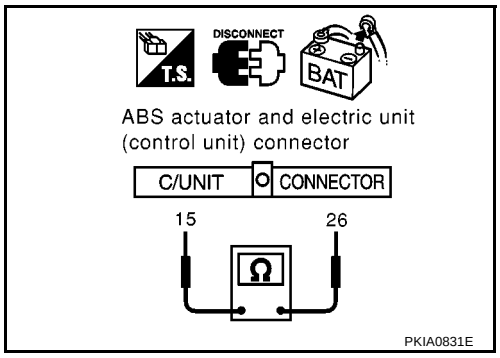
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and IPDM E/R.

IPDM E/R Circuit Check

EKS0081M

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

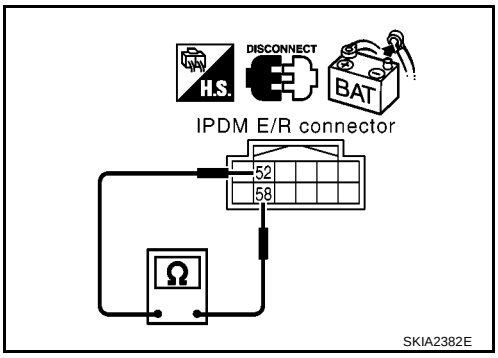
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and ABS actuator and electric unit (control unit).

CAN Communication Circuit Check

EKS0081N

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Intelligent Key unit
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

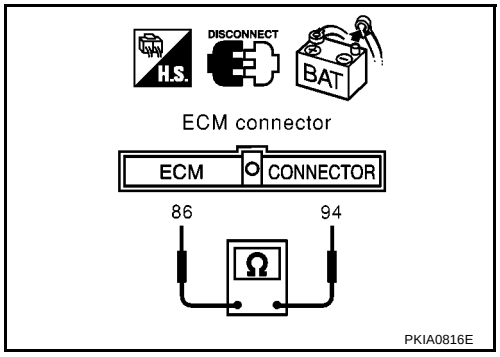
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



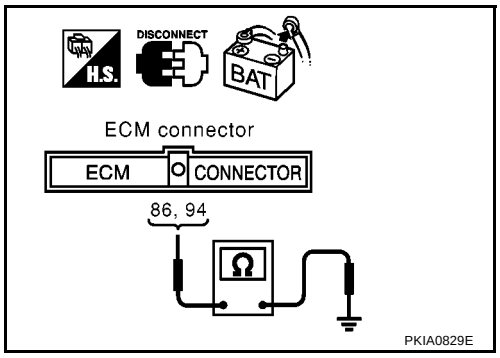
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.
86 (W) – Ground : Continuity should not exist.

OK or NG

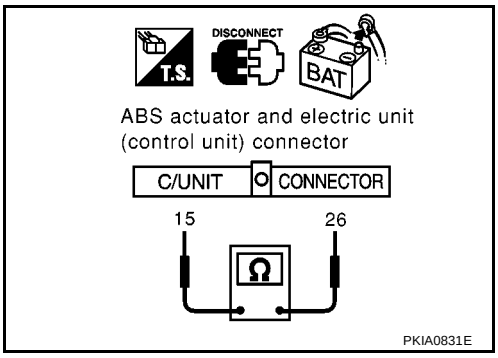
OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.



4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- IPDM E/R connector
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Continuity should not exist.



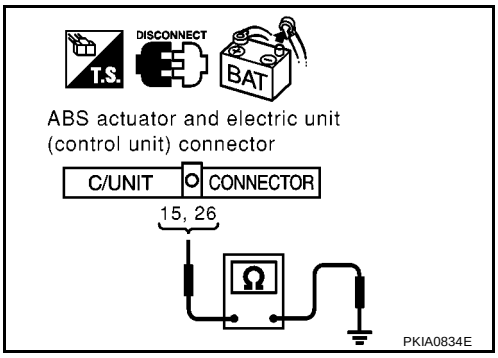
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E45 terminals 26 (R), 15 (W) and ground.

26 (R) – Ground : Continuity should not exist.
15 (W) – Ground : Continuity should not exist.



OK or NG

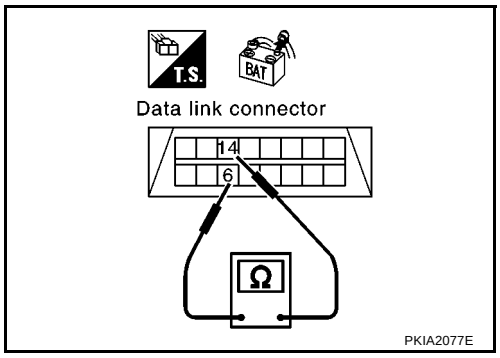
OK >> GO TO 6.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



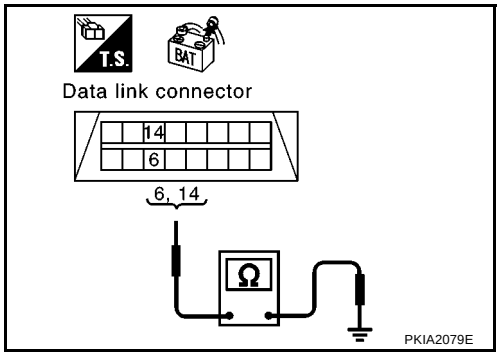
OK or NG

OK >> GO TO 7.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer

- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-111, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-85, "Work Flow" .
NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS0081O

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

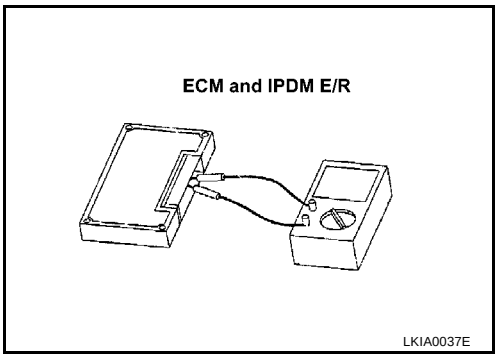
Component Inspection

EKS0081P

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 4)

PFP:23710

System Description

EKS00754

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

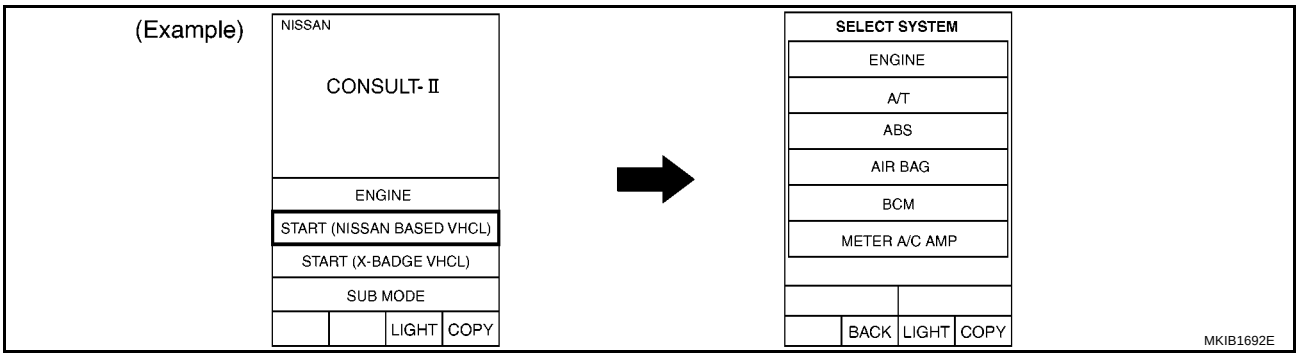
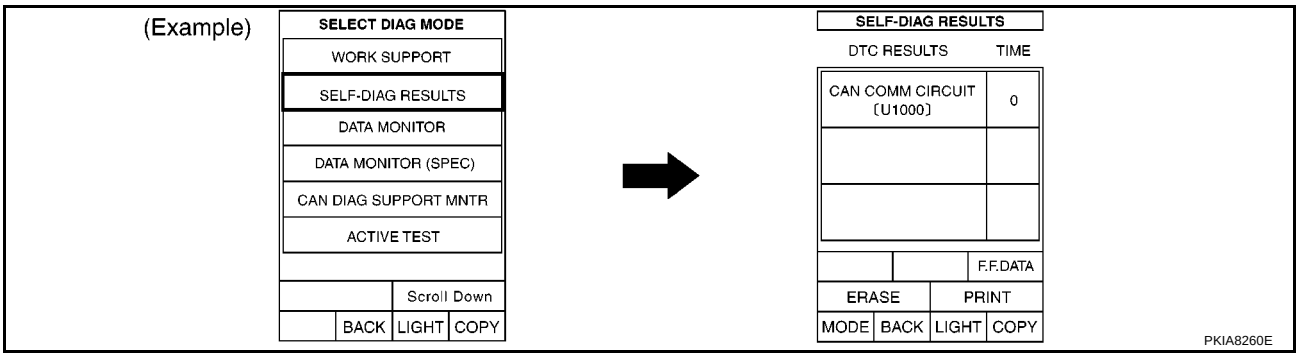
Work Flow

EKS0081Q

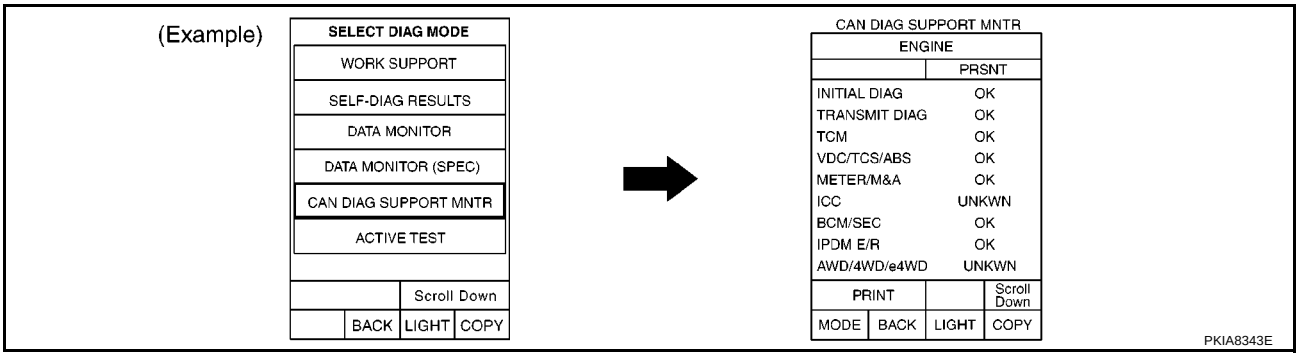
1. When there are no indications of “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.

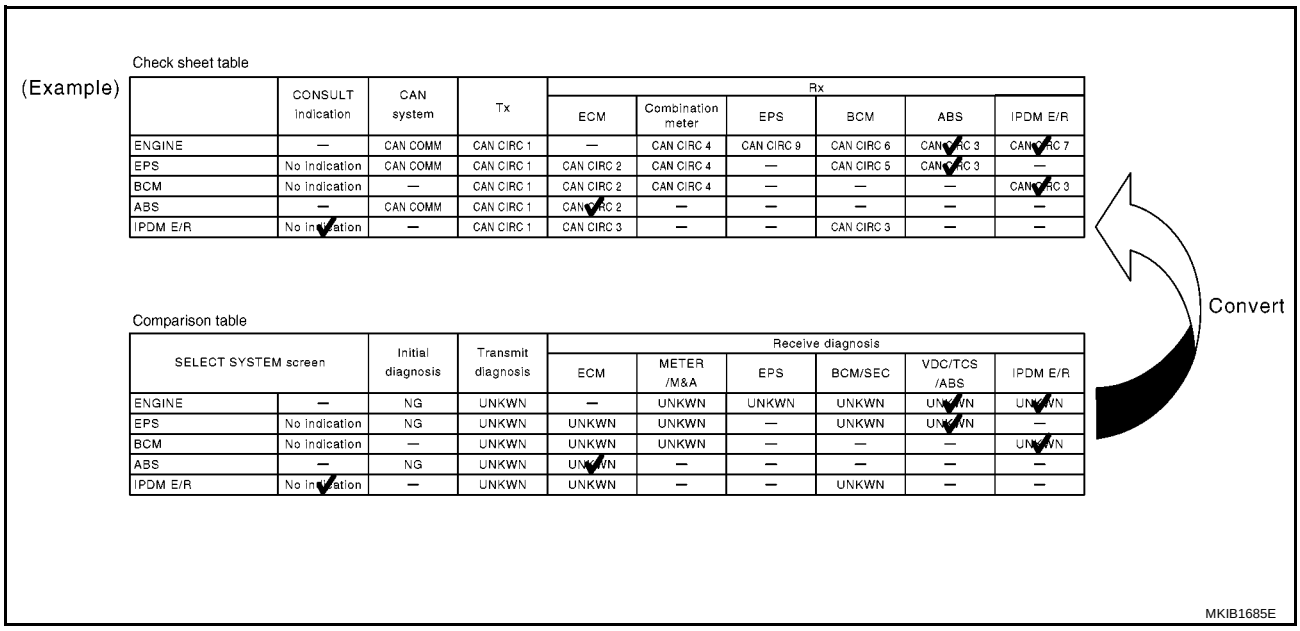


4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-117, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-117, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.



7. According to the check sheet results (example), start inspection. Refer to LAN-119, "CHECK SHEET RESULTS (EXAMPLE)" .

CHECK SHEET

MKIB1657E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS0081R

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

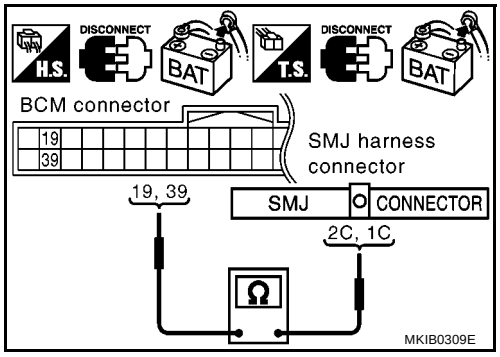
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



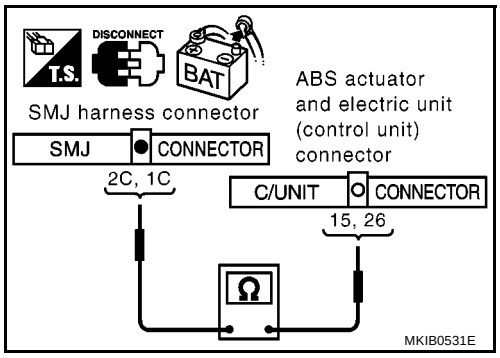
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W).

2C (R) – 26 (R) : Continuity should exist.
1C (W) – 15 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-115, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS0081S

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

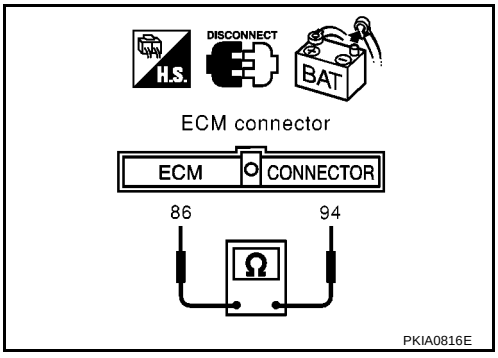
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS0081T

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check data link connector and terminals for damage, bend and loose connection (connector side and harness side).

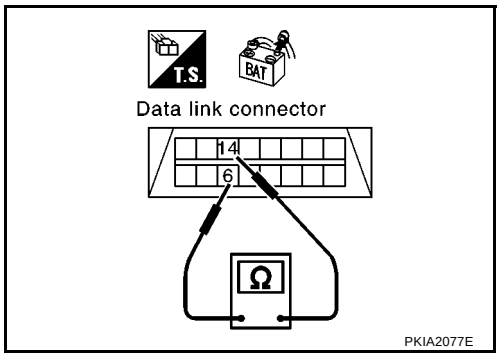
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-115, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS0081U

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

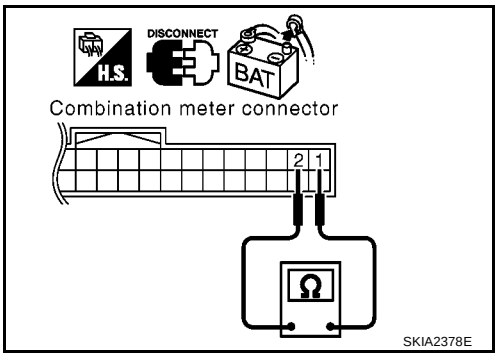
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

EPS Control Unit Circuit Check

EKS0081V

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

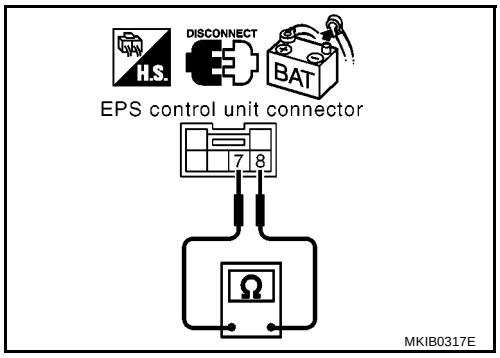
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS0081W

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

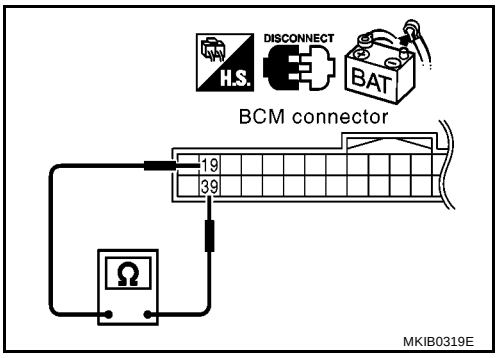
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS0081X

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

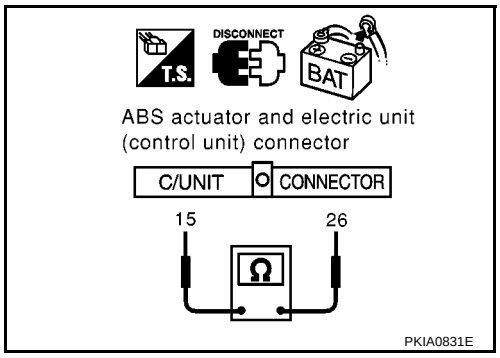
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Approx. 54 – 66Ω

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and IPDM E/R.



IPDM E/R Circuit Check

EKS0081Y

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

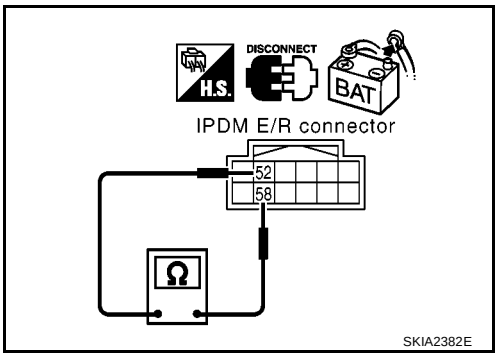
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and ABS actuator and electric unit (control unit).

CAN Communication Circuit Check

EKS0081Z

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

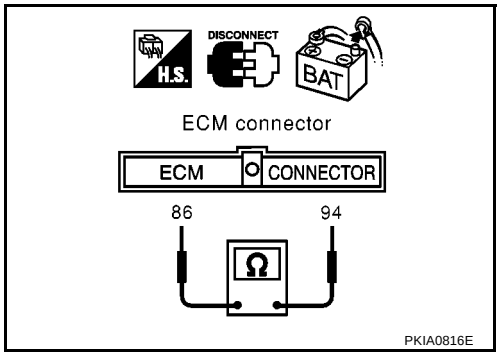
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



3. CHECK HARNESS FOR SHORT CIRCUIT

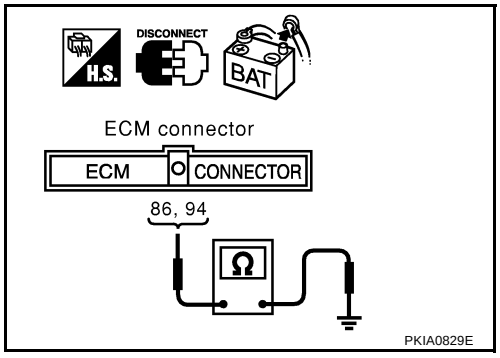
Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.

86 (W) – Ground : Continuity should not exist.

OK or NG

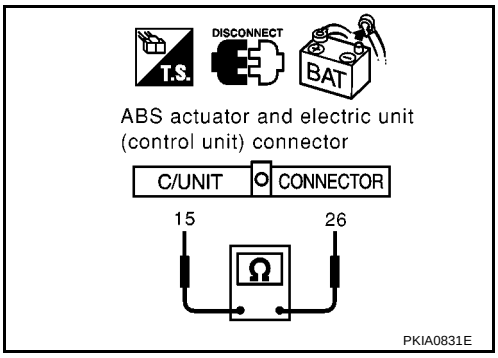
OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.



4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- IPDM E/R connector
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Continuity should not exist.



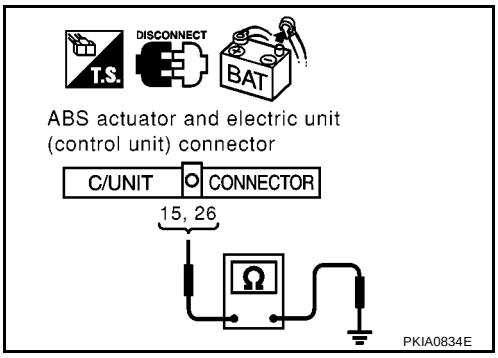
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E45 terminals 26 (R), 15 (W) and ground.

26 (R) – Ground : Continuity should not exist.
15 (W) – Ground : Continuity should not exist.



OK or NG

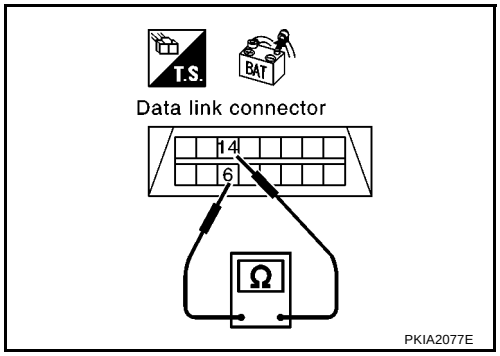
OK >> GO TO 4.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



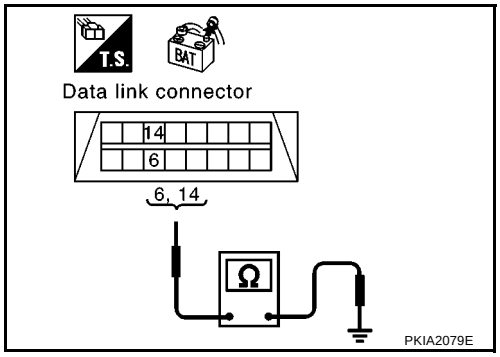
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-139, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-115, "Work Flow" .
NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00820

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

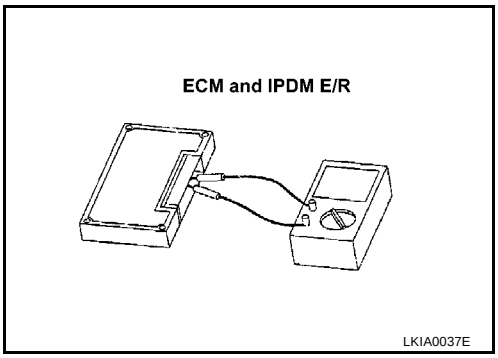
Component Inspection

EKS00821

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 5)

PFP:23710

System Description

EKS00JO5

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

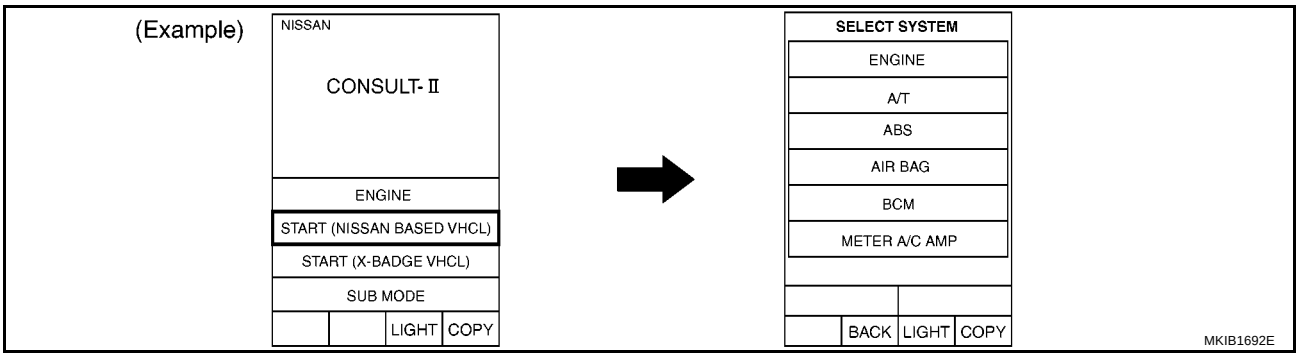
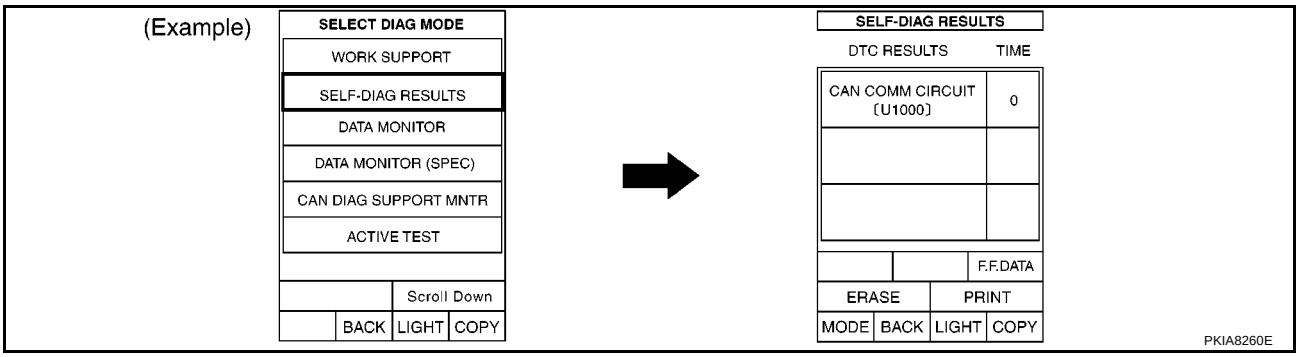
Work Flow

EKS00JO8

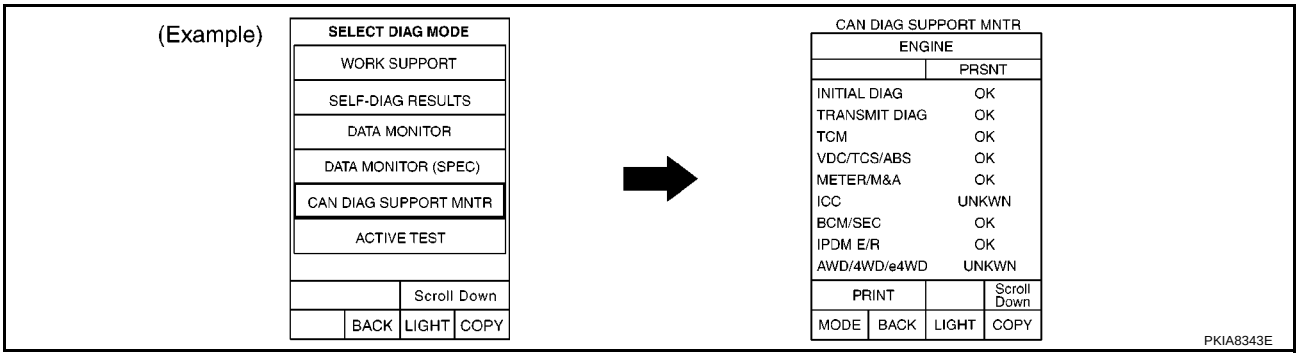
1. When there are no indications of “INTELLIGENT KEY”, “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-145, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-145, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.

(Example) Check sheet table

	CONSULT indication	CAN system	Tx	Rx							
				ECM	Combination meter	Intelligent Key	EPS	BCM	ABS	TCM	IPDM E/R
ENGINE	–	CAN COMM	CAN CIRC 1	–	CAN CIRC 4	–	CAN CIRC 9	CAN CIRC 6	CAN CIRC 3	CAN CIRC 2	CAN CIRC 7

MKIB0789E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00JO9

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

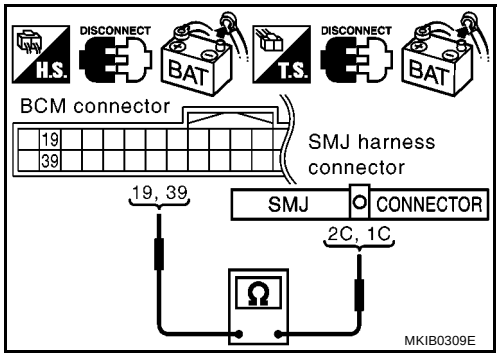
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



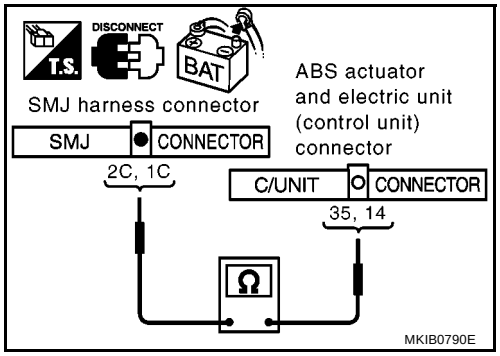
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R), 14 (W).

2C (R) – 35 (R) : Continuity should exist.
1C (W) – 14 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-143, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00JOA

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

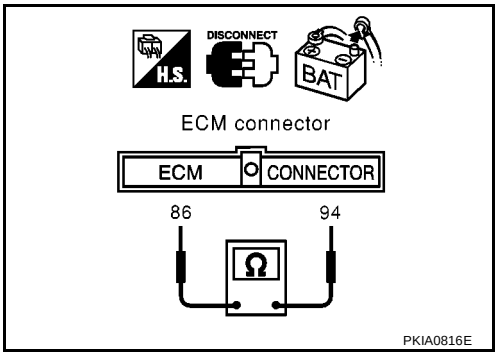
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00JOB

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check date link connector and terminals for damage, bend and loose connection (connector side and harness side).

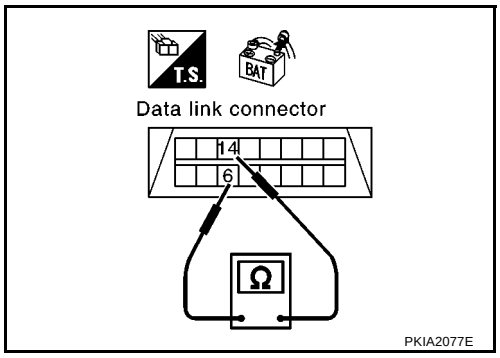
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-143, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00JOC

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

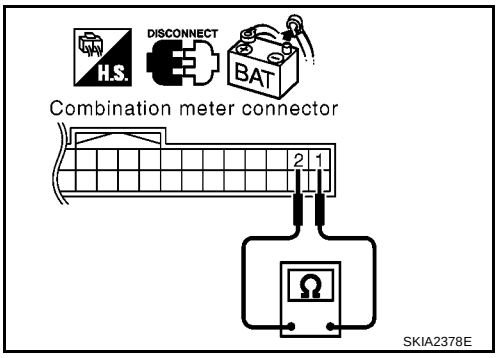
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

Intelligent Key Unit Circuit Check

EKS00JOD

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of Intelligent Key unit for damage, bend and loose connection (control unit side and harness side).

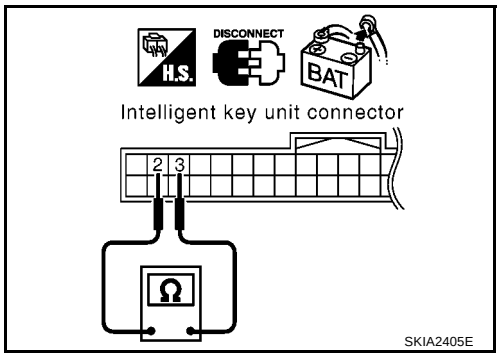
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Check resistance between Intelligent Key unit harness connector M51 terminals 2 (R) and 3 (W).

2 (R) – 3 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair harness between Intelligent Key unit and data link connector.

EPS Control Unit Circuit Check

EKS00JOE

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

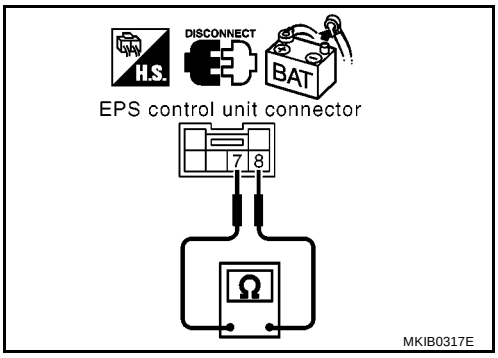
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00JOF

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

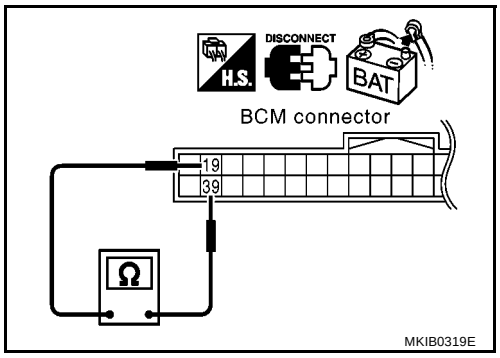
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00JOG

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

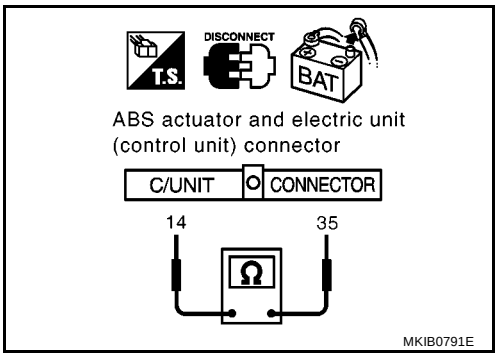
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Approx. 54 – 66Ω

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and TCM.



TCM Circuit Check

EKS00JOH

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of TCM for damage, bend and loose connection (control module side and harness side).

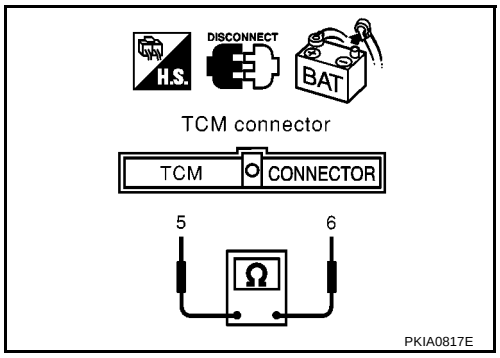
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect TCM connector.
2. Check resistance between TCM harness connector E105 terminals 5 (R) and 6 (W).

5 (R) – 6 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace TCM.
NG >> Repair harness between TCM and IPDM E/R.

IPDM E/R Circuit Check

EKS00JOI

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

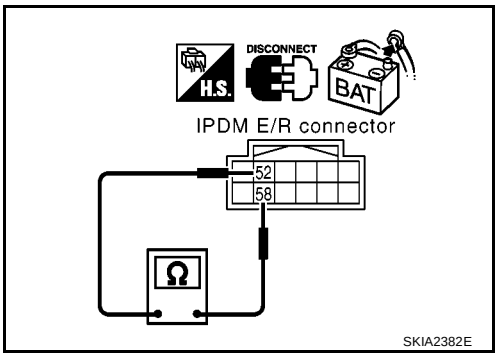
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and TCM.

CAN Communication Circuit Check

EKS00JOJ

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Intelligent Key unit
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- TCM
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

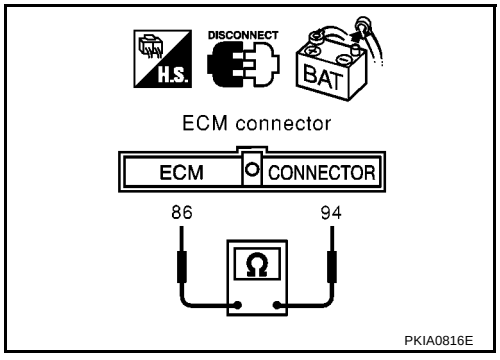
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



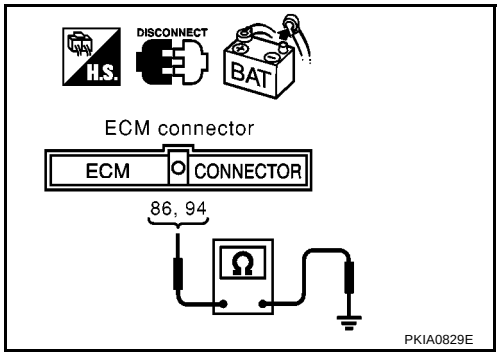
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.
86 (W) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.

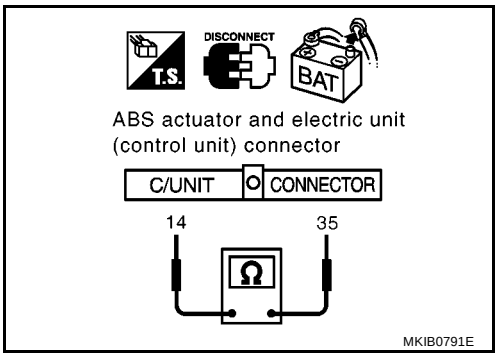


4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- TCM connector
- IPDM E/R connector

2. Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 5.

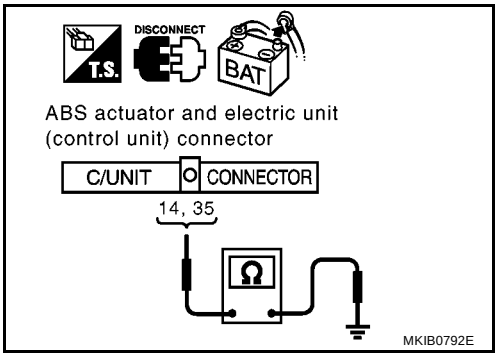
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R), 14 (W) and ground.

35 (R) – Ground : Continuity should not exist.

14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.

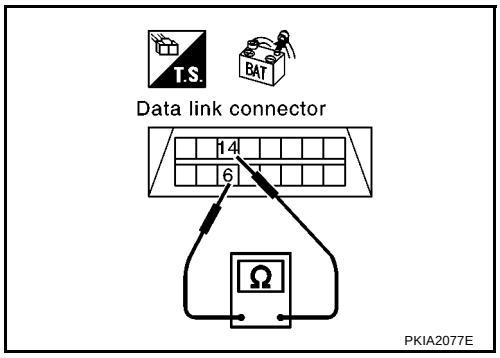
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



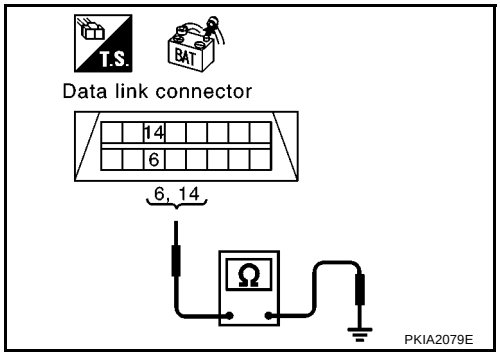
OK or NG

OK >> GO TO 7.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-171, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-143, "Work Flow" .
NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00JOK

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

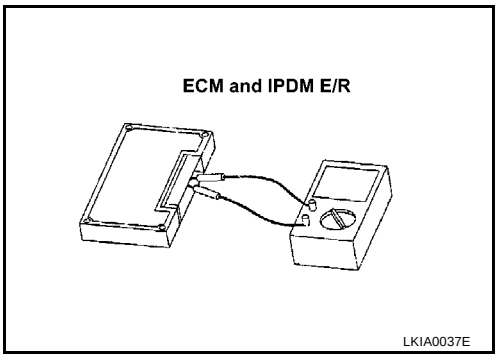
Component Inspection

EKS00JOL

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 6)

PFP:23710

System Description

EKS00JOM

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Component Parts and Harness Connector Location

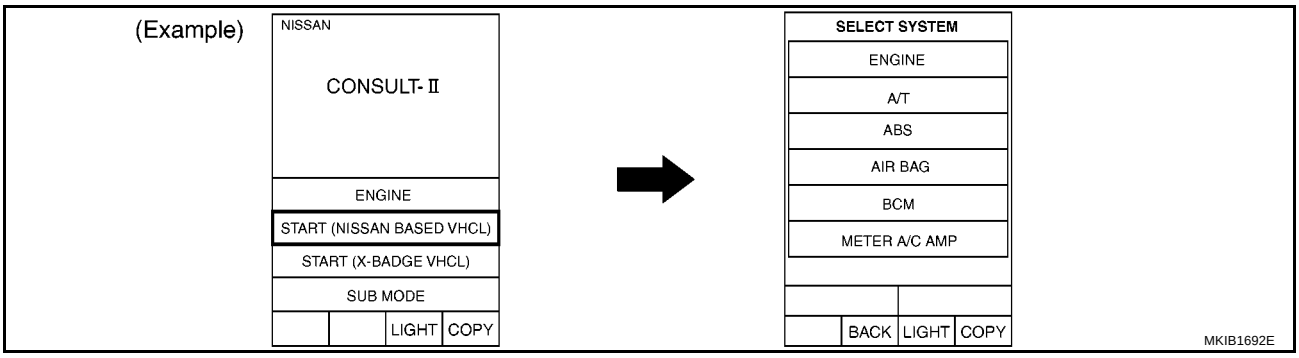
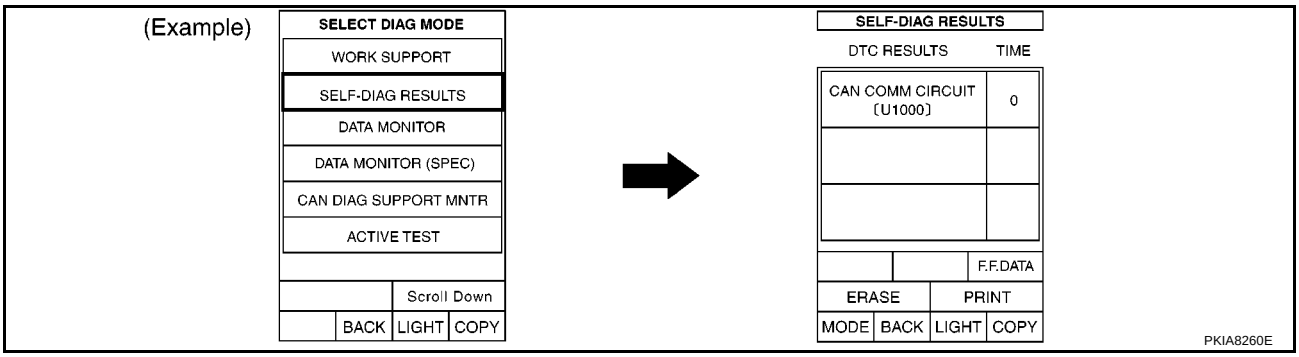
Work Flow

EKS00JOP

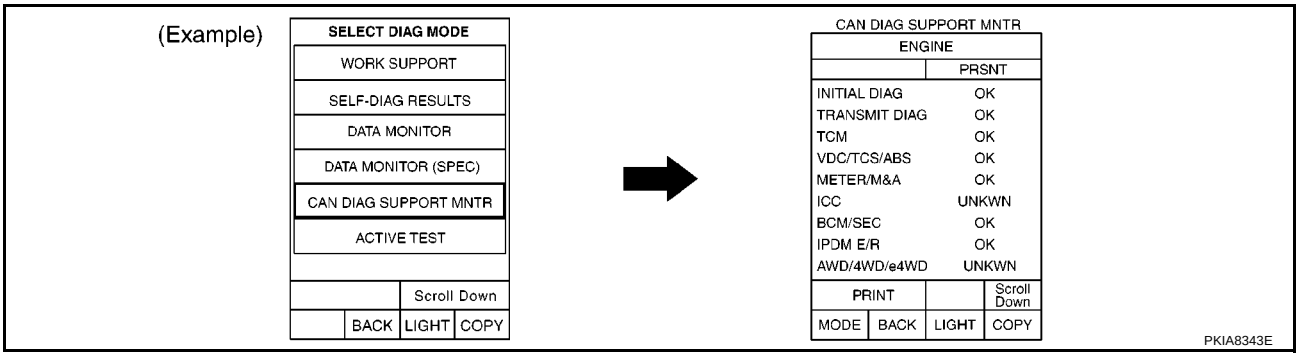
1. When there are no indications of “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “EPS”, “BCM”, “ABS”, “A/T” and “IPDM E/R” displayed on CONSULT-II.



4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-177, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-177, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.

(Example)

Check sheet table

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00JOQ

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

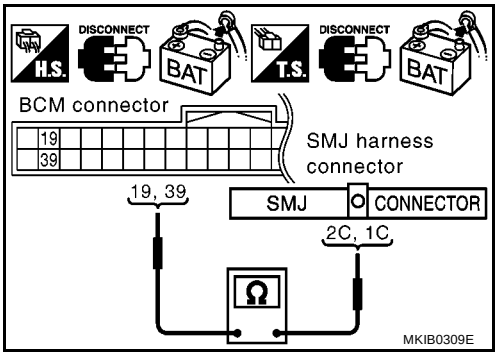
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.
- Harness connector M1
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector
2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



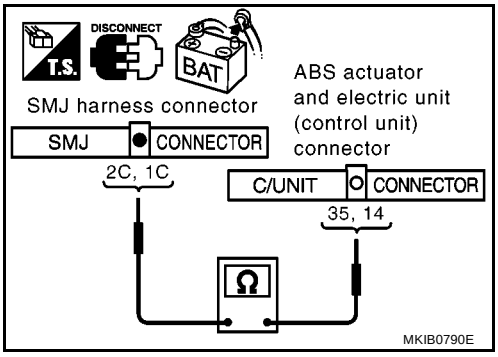
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R), 14 (W).

2C (R) – 35 (R) : Continuity should exist.
1C (W) – 14 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-175, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00JOR

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

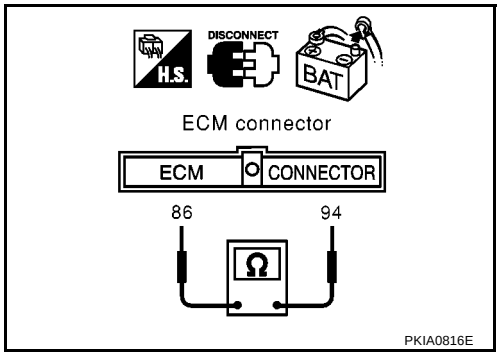
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00JOS

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check data link connector and terminals for damage, bend and loose connection (connector side and harness side).

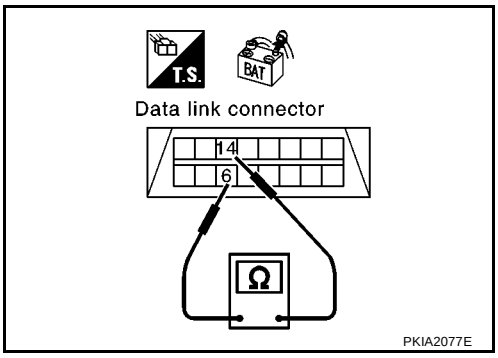
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-175, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00JOT

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

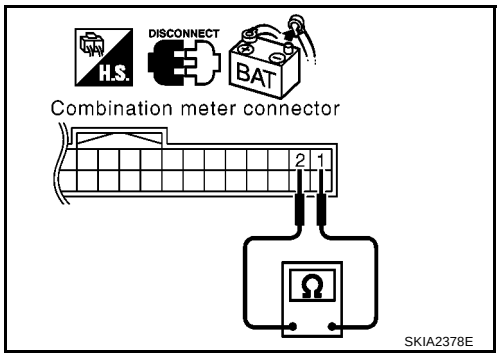
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

EPS Control Unit Circuit Check

EKS00JOU

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

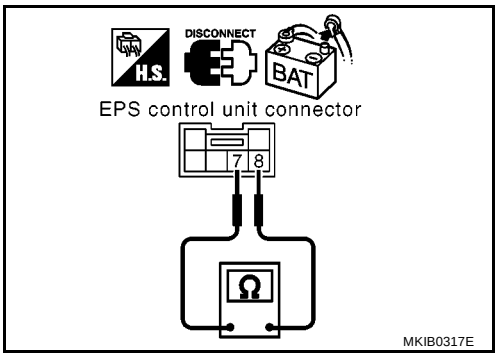
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00JOV

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

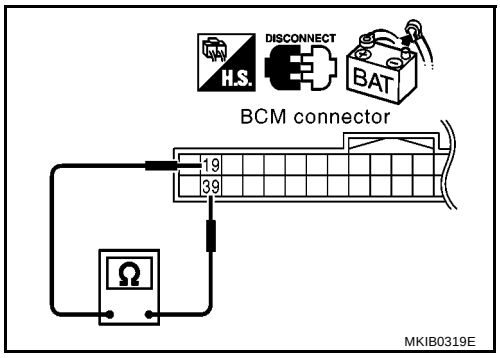
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00JOW

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

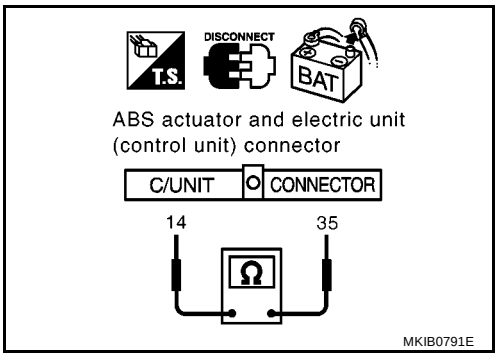
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and TCM.

TCM Circuit Check

EKS00JOX

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of TCM for damage, bend and loose connection (control module side and harness side).

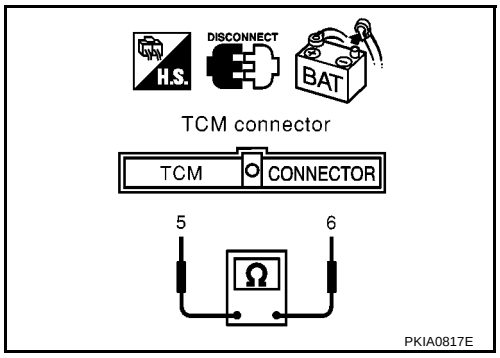
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect TCM connector.
2. Check resistance between TCM harness connector E105 terminals 5 (R) and 6 (W).

5 (R) – 6 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace TCM.
NG >> Repair harness between TCM and IPDM E/R.

IPDM E/R Circuit Check

EKS00JOY

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

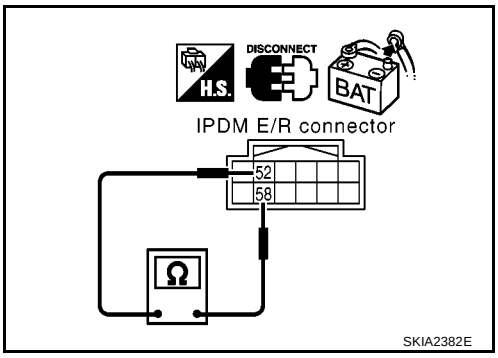
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and TCM.

CAN Communication Circuit Check

EKS00JOZ

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- TCM
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

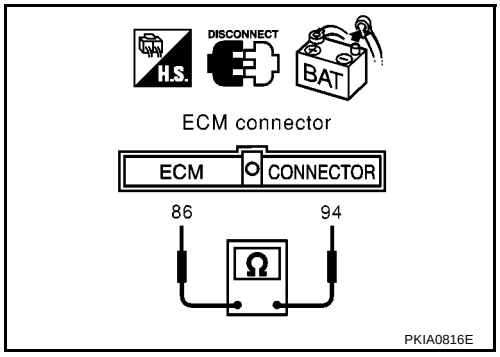
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



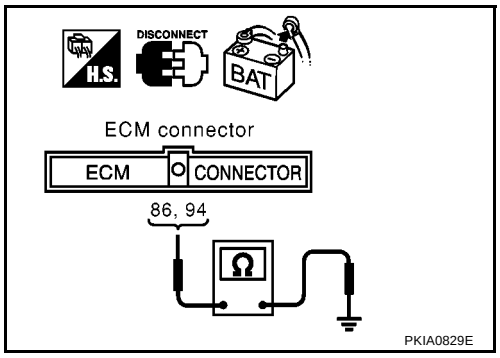
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.
86 (W) – Ground : Continuity should not exist.

OK or NG

OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.

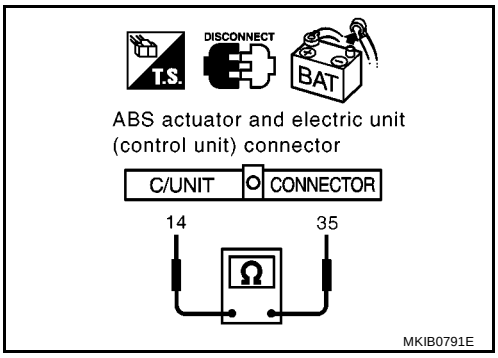


4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- TCM connector
- IPDM E/R connector

2. Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 5.

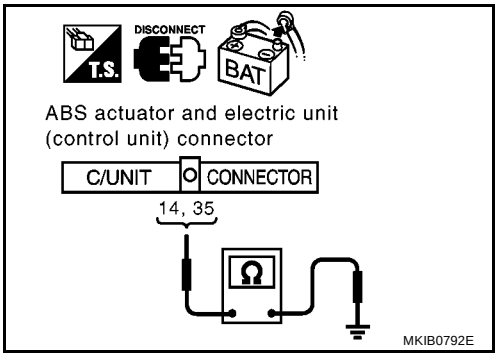
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R), 14 (W) and ground.

35 (R) – Ground : Continuity should not exist.

14 (W) – Ground : Continuity should not exist.



OK or NG

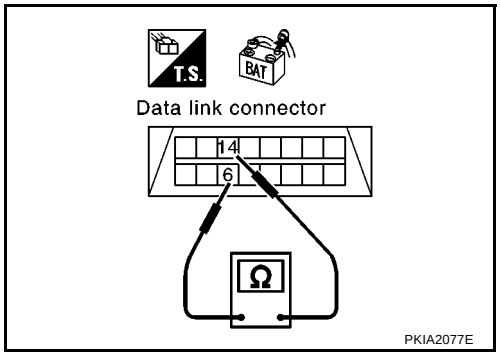
OK >> GO TO 6.

NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and TCM
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector
2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 7.

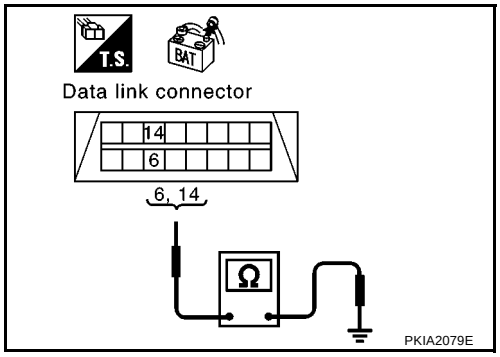
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM.

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – ground : Continuity should not exist.

14 (W) – ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.

NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM.

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-201, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-175, "Work Flow" .

NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00JP0

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

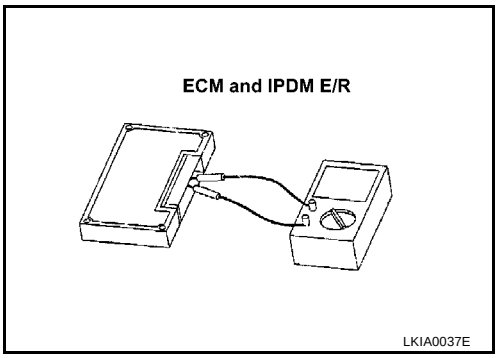
Component Inspection

EKS00JP1

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 7)

PFP:23710

System Description

EKS00JP2

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Component Parts and Harness Connector Location

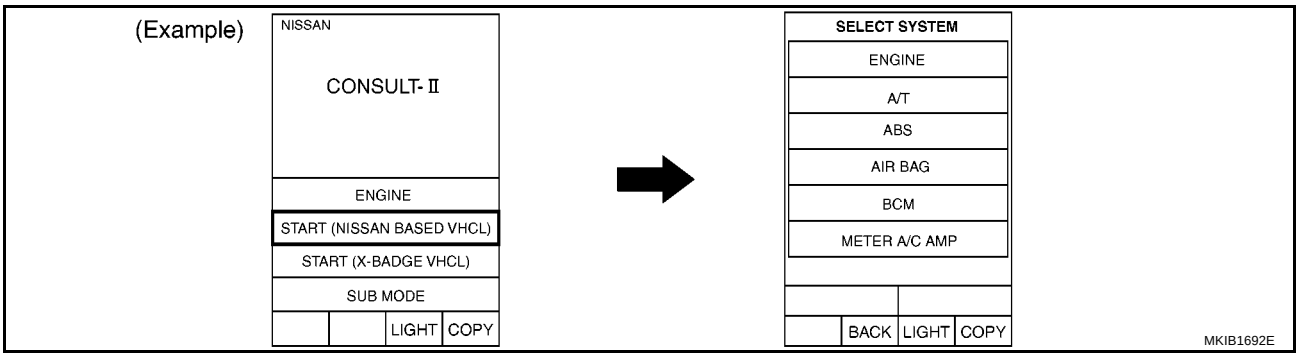
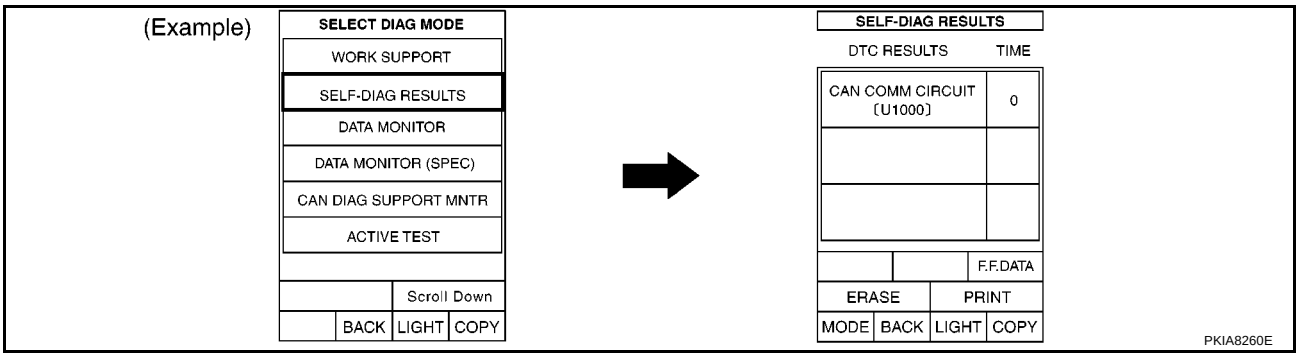
Work Flow

EKS00JP5

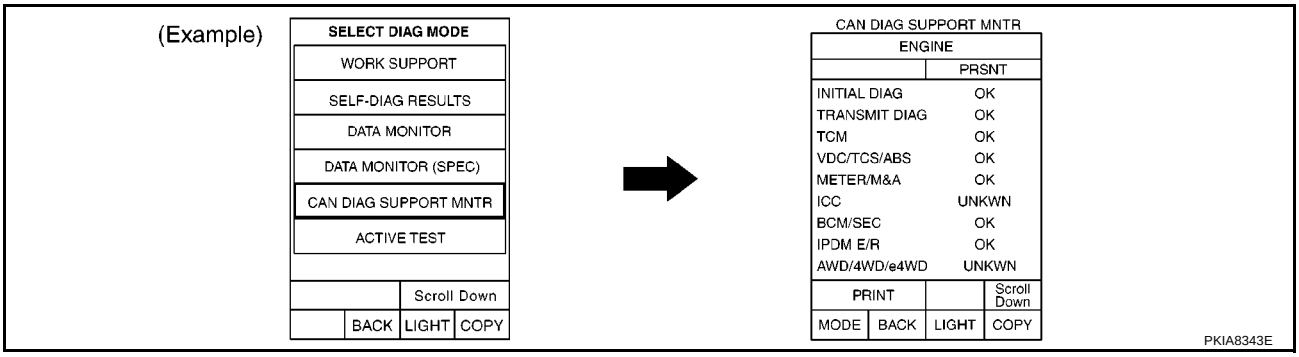
1. When there are no indications of “INTELLIGENT KEY”, “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-207, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-207, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.

(Example)

Check sheet table

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00JP6

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

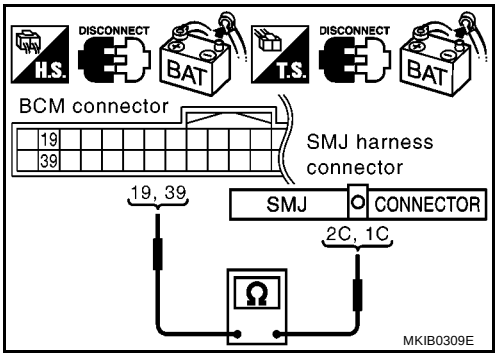
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



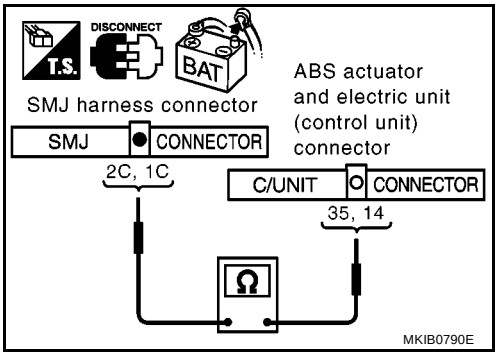
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R), 14 (W).

2C (R) – 35 (R) : Continuity should exist.
1C (W) – 14 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-205, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00JP7

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

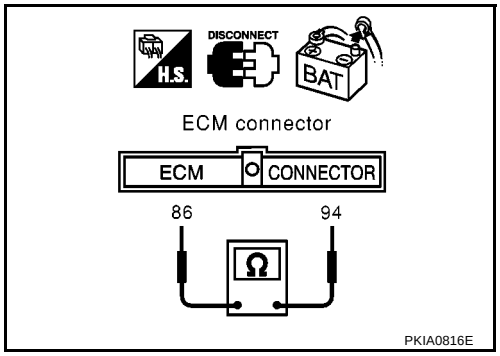
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00JP8

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check the data link connector and terminals for damage, bend and loose connection (connector side and harness side).

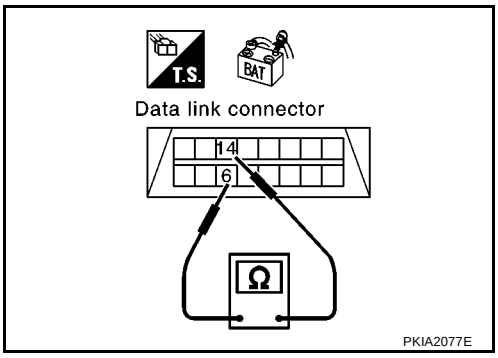
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-205, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00JP9

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

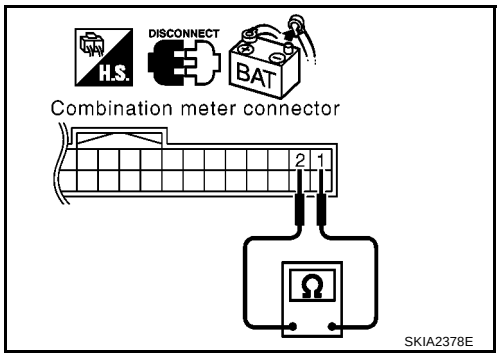
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter.
NG >> Repair harness between combination meter and data link connector.

Intelligent Key Unit Circuit Check

EKS00JPA

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of Intelligent Key unit for damage, bend and loose connection (control unit side and harness side).

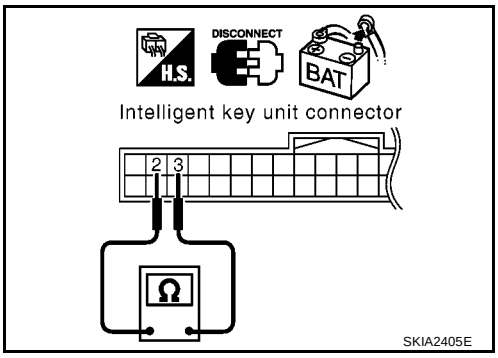
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Check resistance between Intelligent Key unit harness connector M51 terminals 2 (R) and 3 (W).

2 (R) – 3 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair harness between Intelligent Key unit and data link connector.

EPS Control Unit Circuit Check

EKS00JPB

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

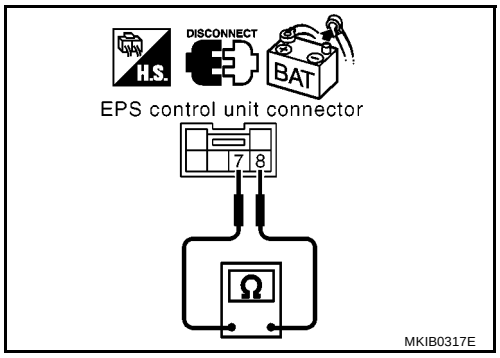
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00JPC

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

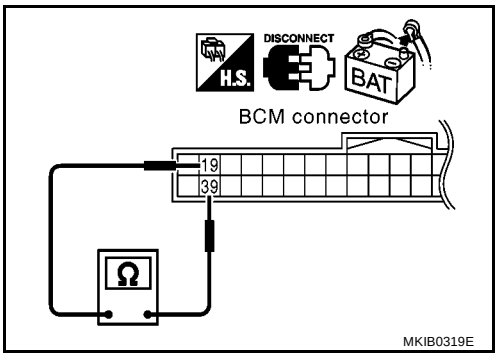
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00JPD

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

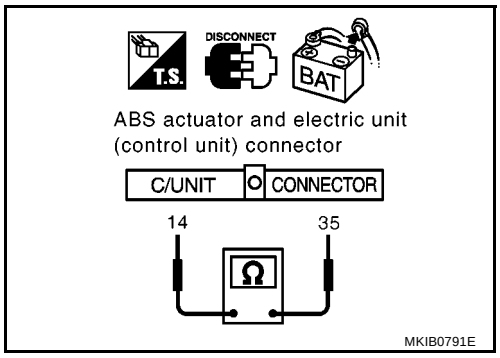
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Approx. 54 – 66Ω

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and IPDM E/R.



IPDM E/R Circuit Check

EKS00JPE

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

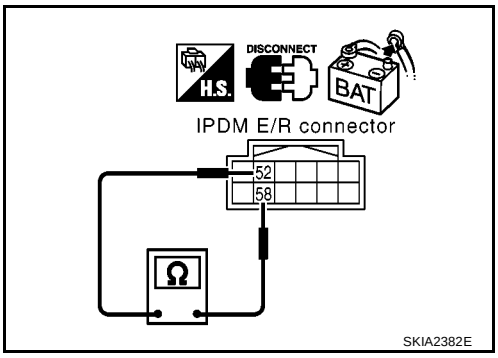
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and ABS actuator and electric unit (control unit).

CAN Communication Circuit Check

EKS00JPF

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Intelligent Key unit
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

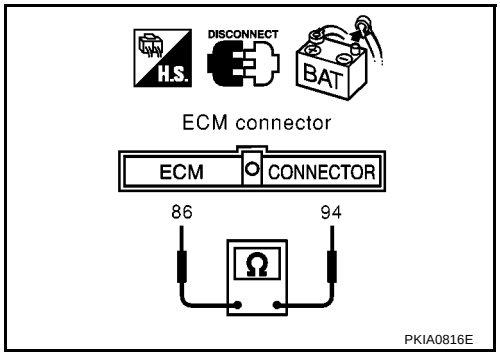
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



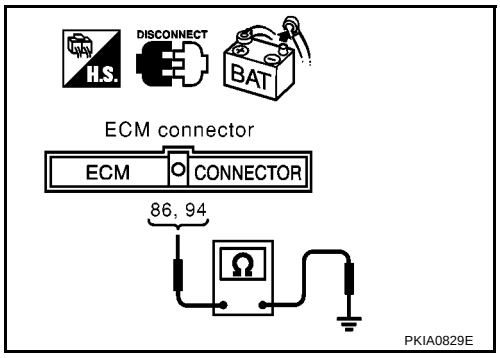
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.
86 (W) – Ground : Continuity should not exist.

OK or NG

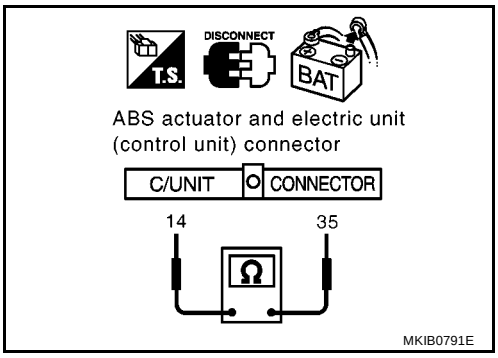
OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.



4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- IPDM E/R connector
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Continuity should not exist.



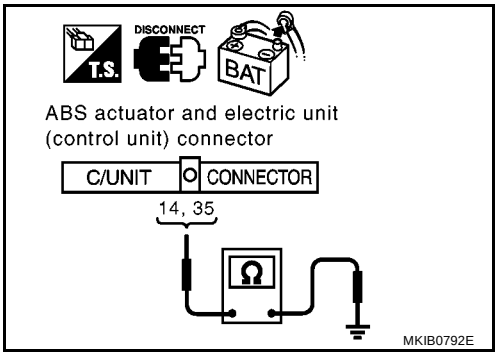
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E47 terminals 35 (R), 14 (W) and ground.

35 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

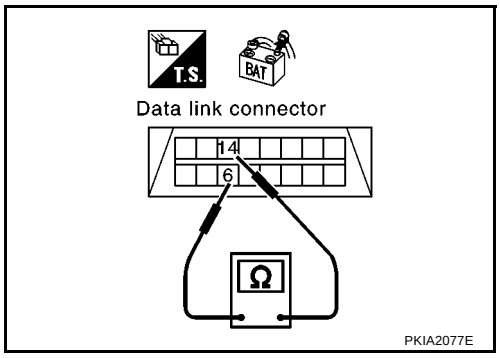
OK >> GO TO 6.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



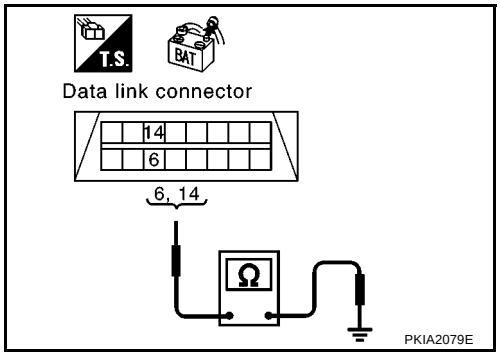
OK or NG

OK >> GO TO 7.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-231, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-205, "Work Flow" .
NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00JPG

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

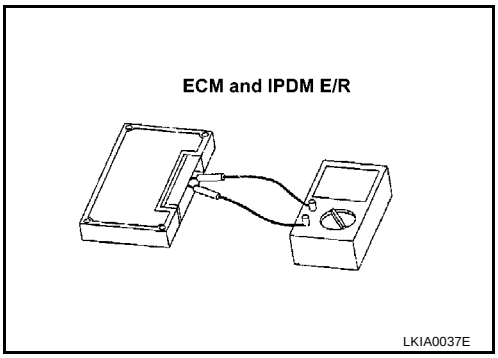
Component Inspection

EKS00JPH

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 8)

PFP:23710

System Description

EKS00JPI

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

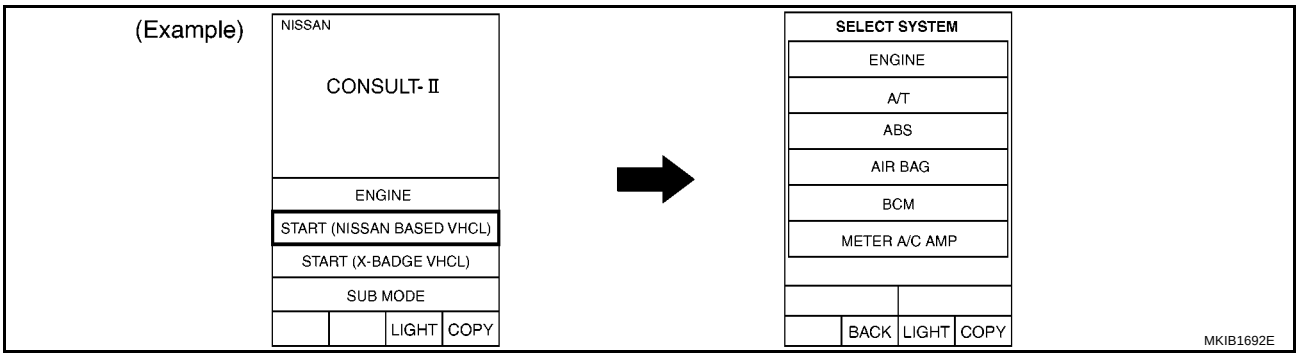
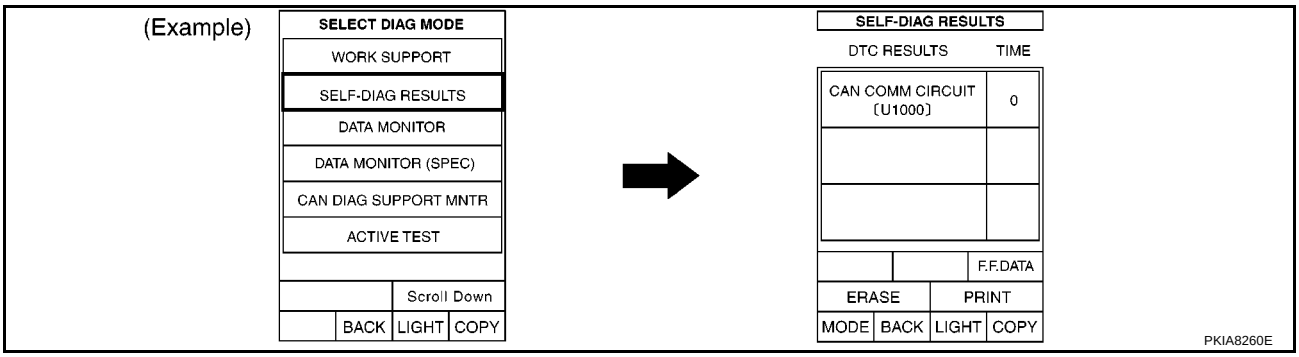
Work Flow

EKS00JPL

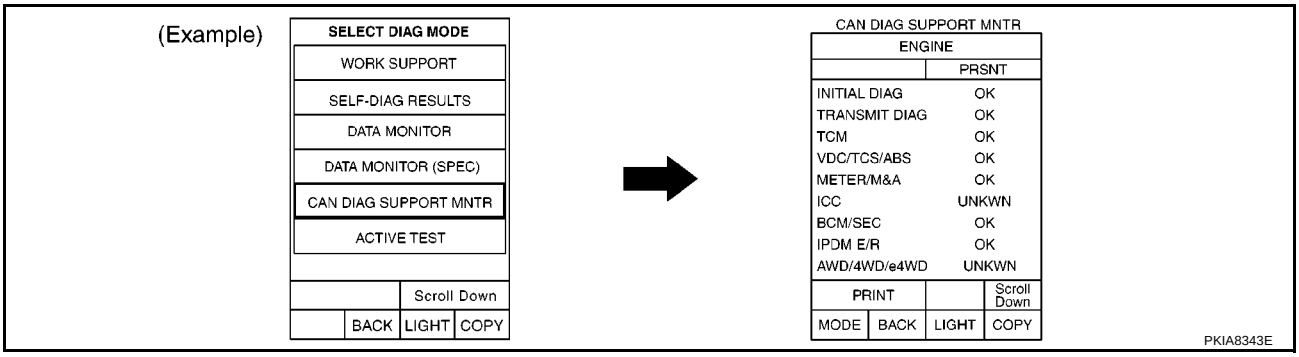
1. When there are no indications of “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.

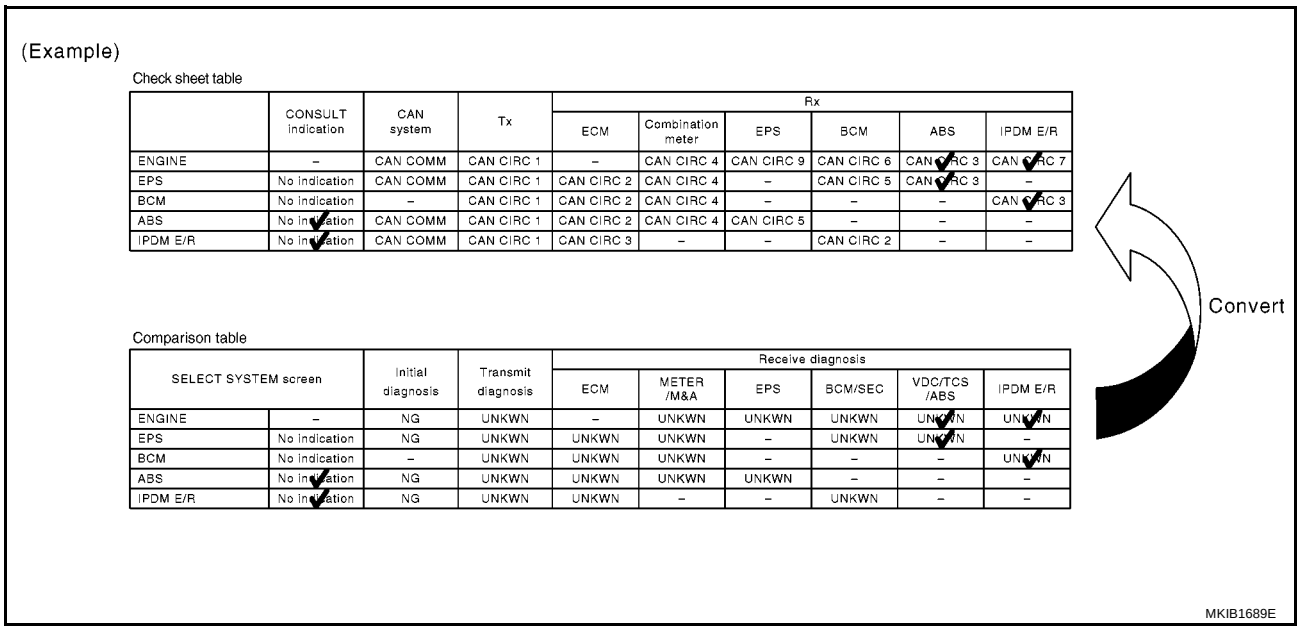


4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-237, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-237, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.



Check sheet table

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00JPM

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

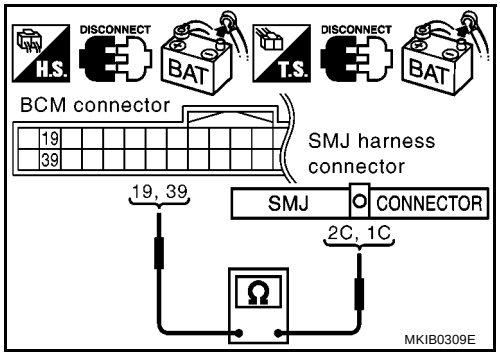
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



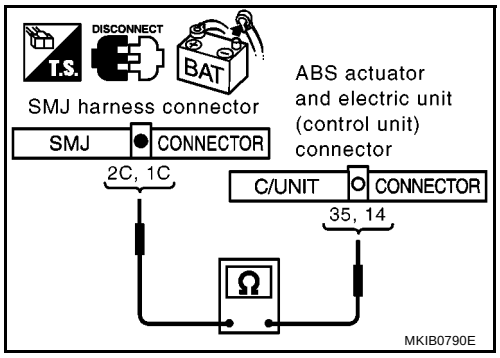
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R), 14 (W).

2C (R) – 35 (R) : Continuity should exist.
1C (W) – 14 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-235, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00JPN

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

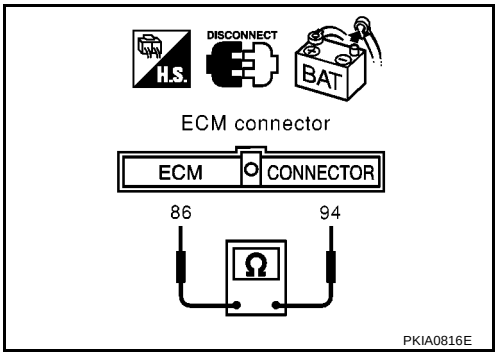
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00JPO

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check data link connector and terminals for damage, bend and loose connection (connector side and harness side).

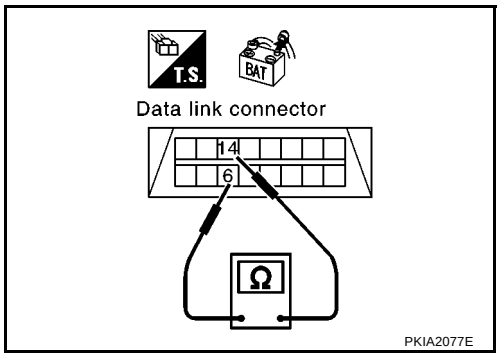
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-235, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00JPP

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

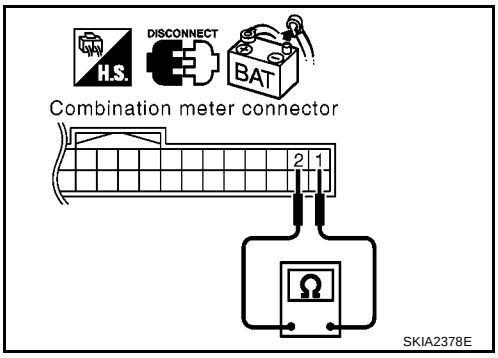
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

EPS Control Unit Circuit Check

EKS00JPQ

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

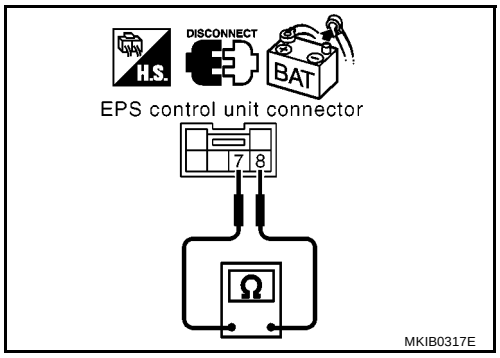
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00JPR

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

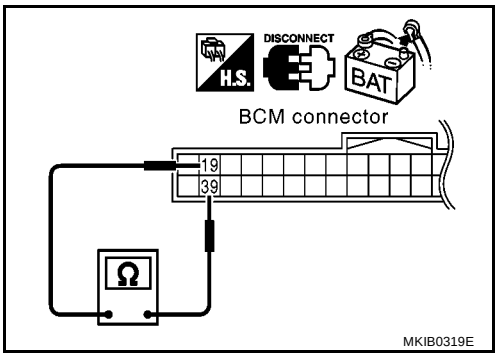
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00JPS

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

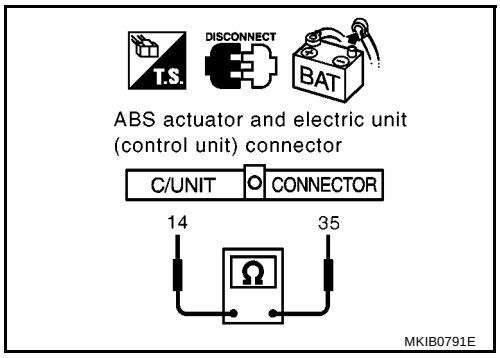
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Approx. 54 – 66Ω

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and IPDM E/R.



IPDM E/R Circuit Check

EKS00JPT

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

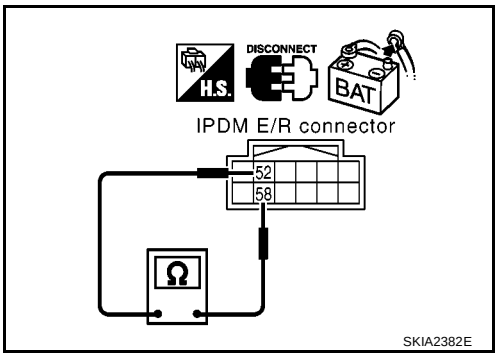
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and ABS actuator and electric unit (control unit).

CAN Communication Circuit Check

EKS00JPU

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

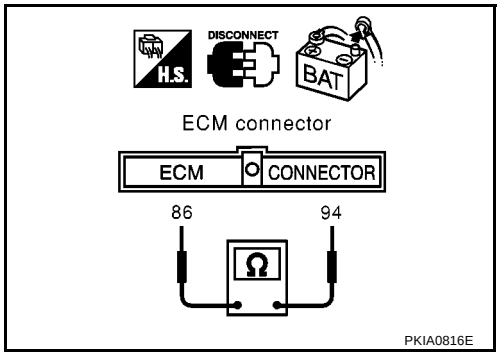
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E49 terminals 94 (R) and 86 (W).

94 (R) – 86 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



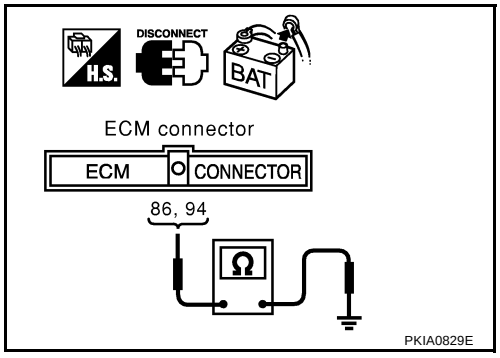
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E49 terminals 94 (R), 86 (W) and ground.

94 (R) – Ground : Continuity should not exist.
86 (W) – Ground : Continuity should not exist.

OK or NG

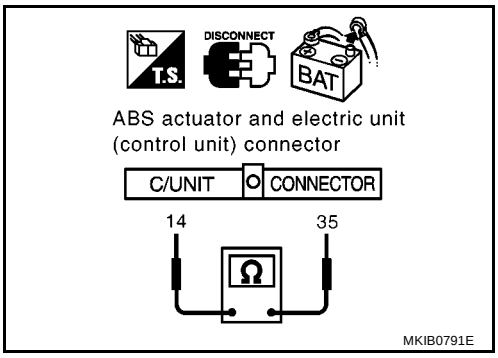
OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.



4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- IPDM E/R connector
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E47 terminals 35 (R) and 14 (W).

35 (R) – 14 (W) : Continuity should not exist.



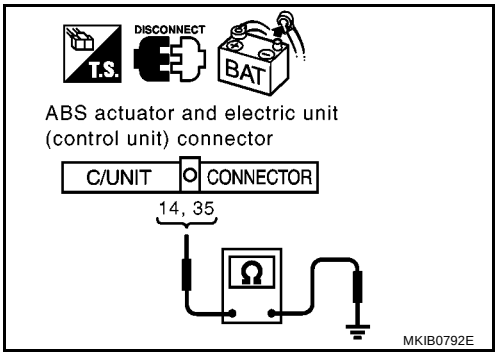
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E47 terminals 35 (R), 14 (W) and ground.

35 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

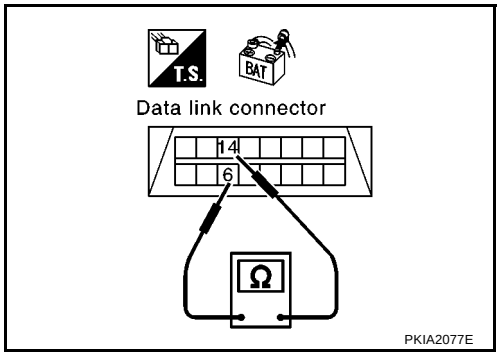
OK >> GO TO 6.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 7.

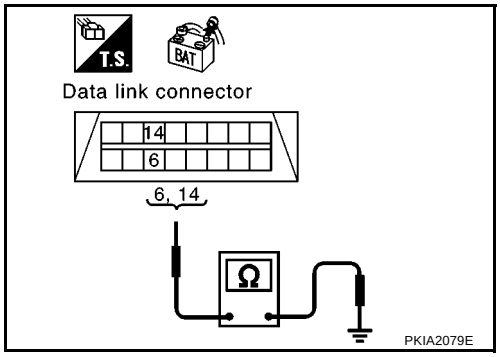
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.

14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.

NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-259, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-235, "Work Flow" .

NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00JPV

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

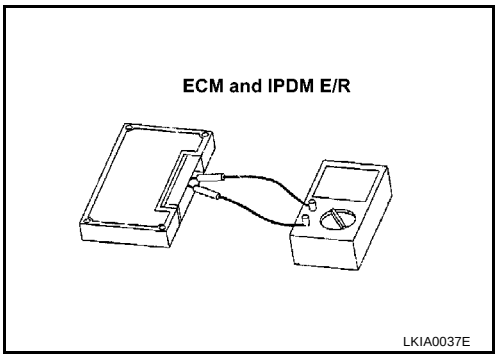
Component Inspection

EKS00JPW

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 94 and 86.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	94 – 86	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 9)

PFP:23710

System Description

EKS00JPX

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

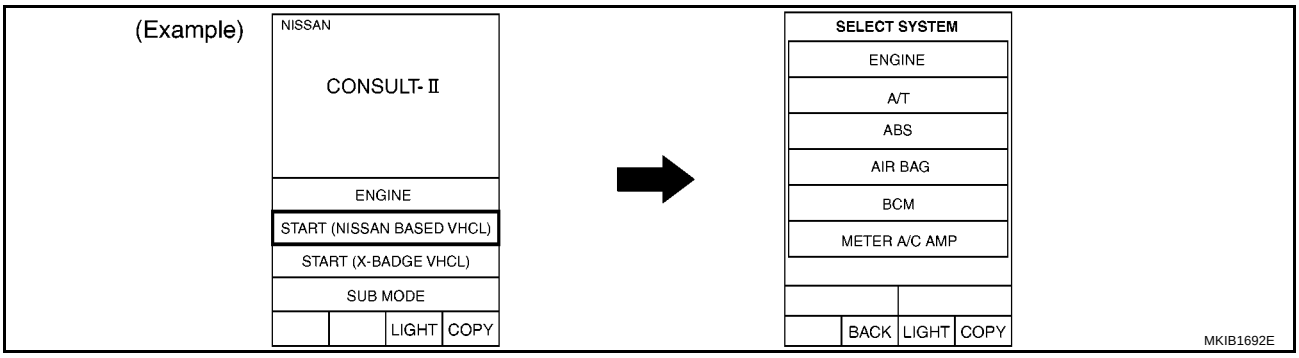
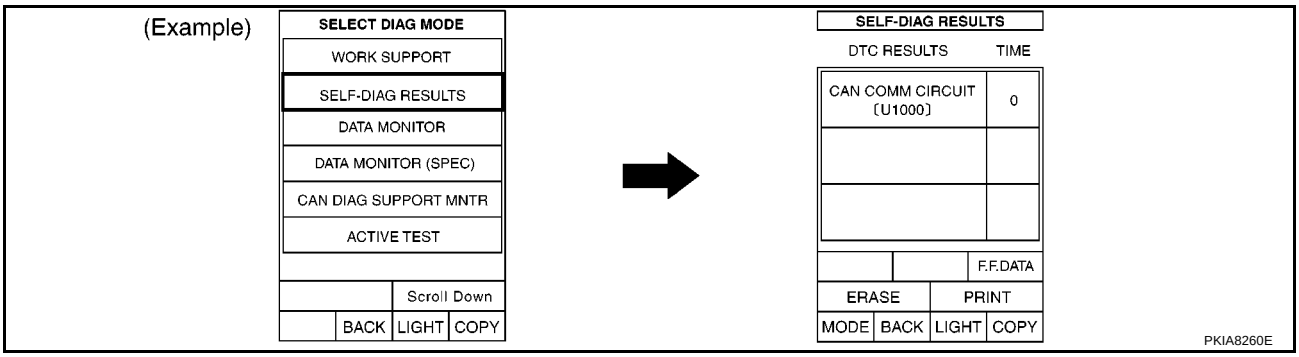
Work Flow

EKS00JQ0

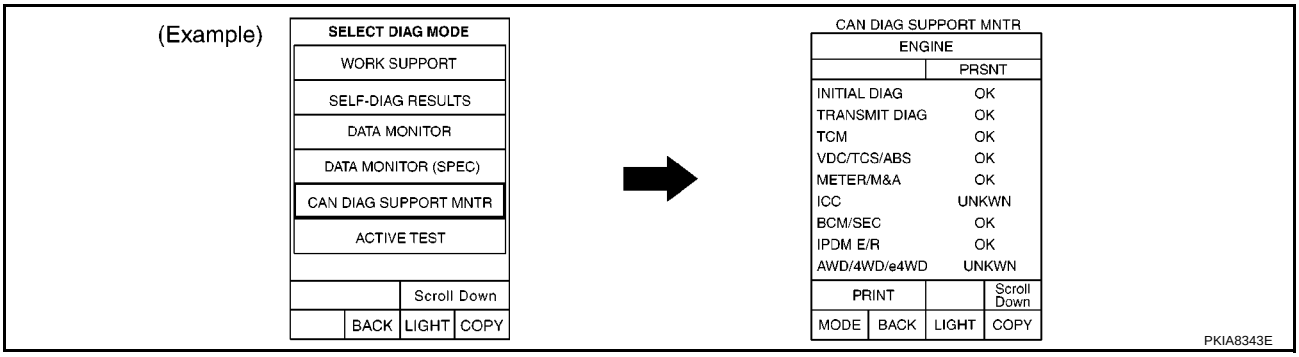
1. When there are no indications of “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “INTELLIGENT KEY”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.

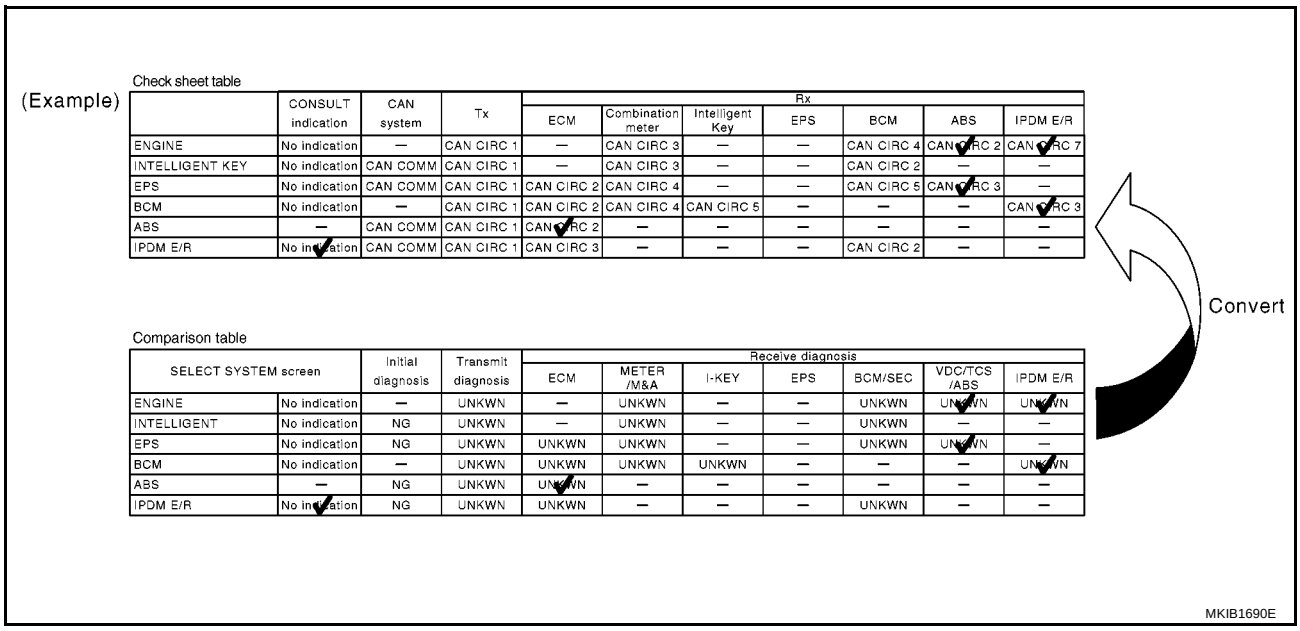


4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-265, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-265, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.



7. According to the check sheet results (example), start inspection. Refer to LAN-267, "CHECK SHEET RESULTS (EXAMPLE)" .

MKIB1669E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00JQ1

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

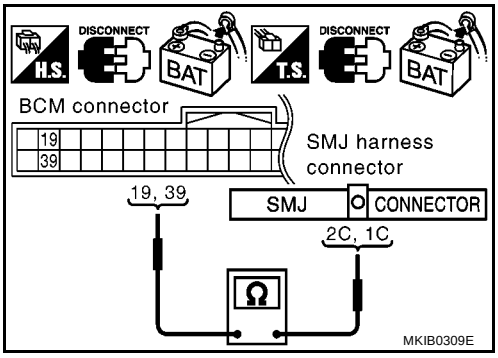
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



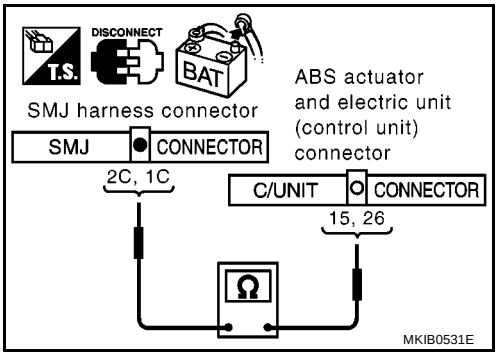
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W).

2C (R) – 26 (R) : Continuity should exist.
1C (W) – 15 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-263, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00JQ2

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

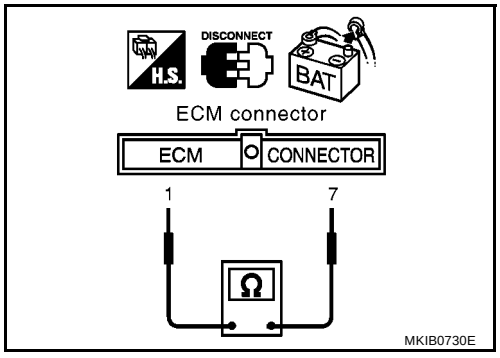
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E61 terminals 1 (R) and 7 (W).

1 (R) – 7 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00JQ3

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check the data link connector and terminals for damage, bend and loose connection (connector side and harness side).

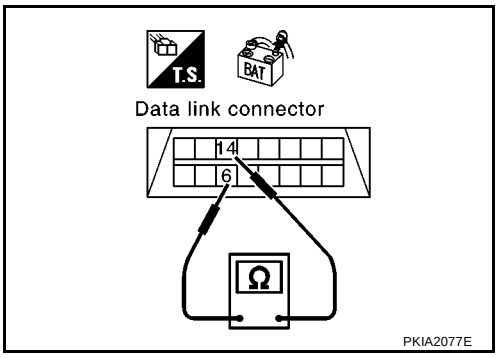
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-263, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00JQ4

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

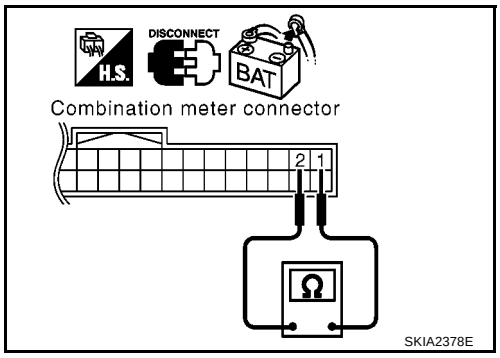
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter.
NG >> Repair harness between combination meter and data link connector.

Intelligent Key Unit Circuit Check

EKS00JQ5

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of Intelligent Key unit for damage, bend and loose connection (control unit side and harness side).

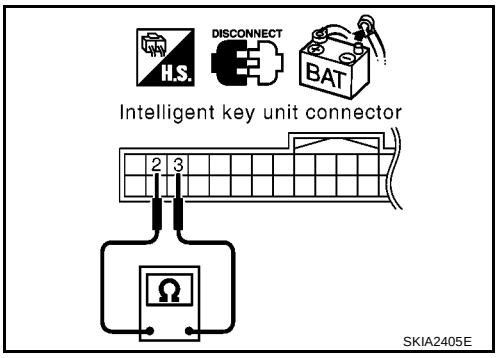
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect Intelligent Key unit connector.
2. Check resistance between Intelligent Key unit harness connector M51 terminals 2 (R) and 3 (W).

2 (R) – 3 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace Intelligent Key unit.
NG >> Repair harness between Intelligent Key unit and data link connector.

EPS Control Unit Circuit Check

EKS00JQ6

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

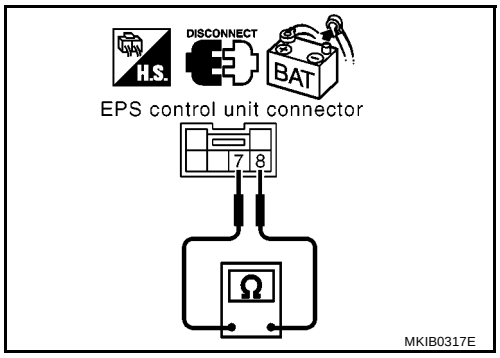
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00JQ7

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

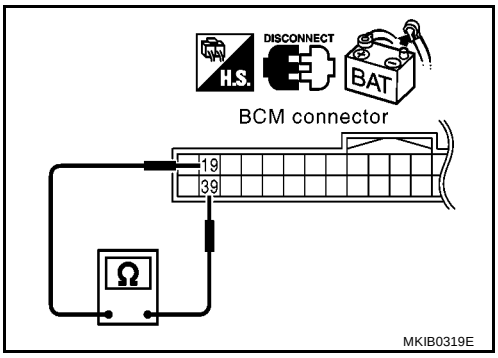
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00JQ8

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

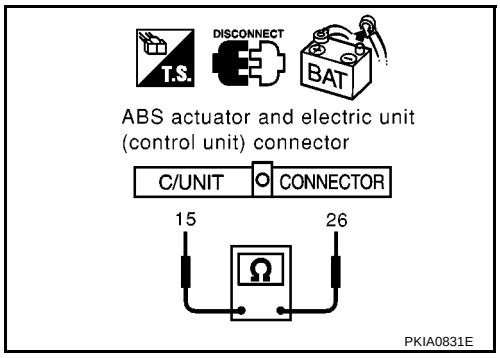
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and IPDM E/R.

IPDM E/R Circuit Check

EKS00JQ9

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

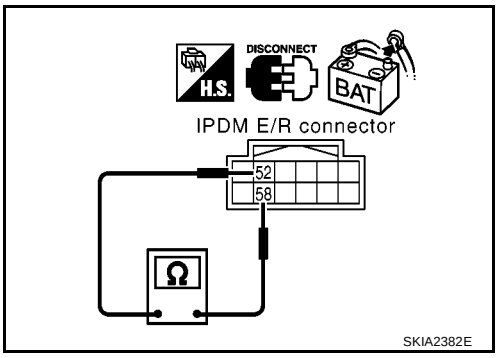
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and ABS actuator and electric unit (control unit).

CAN Communication Circuit Check

EKS00JQA

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Intelligent Key unit
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

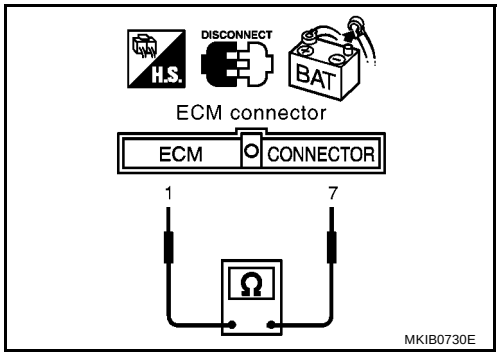
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E61 terminals 1 (R) and 7 (W).

1 (R) – 7 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



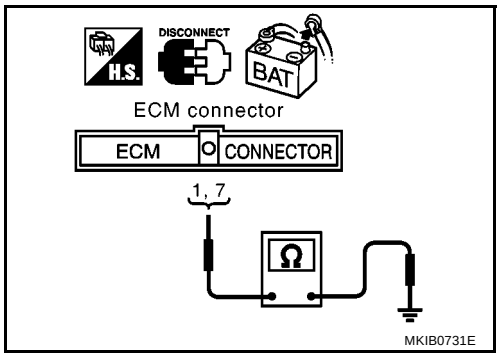
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E61 terminals 1 (R), 7 (W) and ground.

1 (R) – Ground : Continuity should not exist.
7 (W) – Ground : Continuity should not exist.

OK or NG

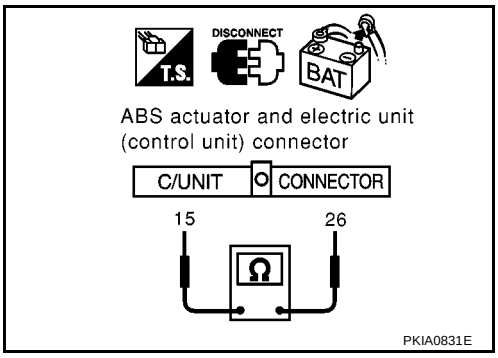
OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.



4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- IPDM E/R connector
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Continuity should not exist.



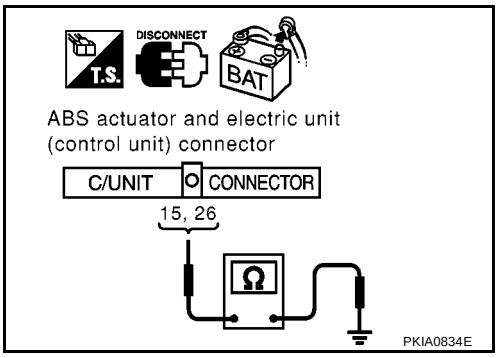
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E45 terminals 26 (R), 15 (W) and ground.

26 (R) – Ground : Continuity should not exist.
15 (W) – Ground : Continuity should not exist.



OK or NG

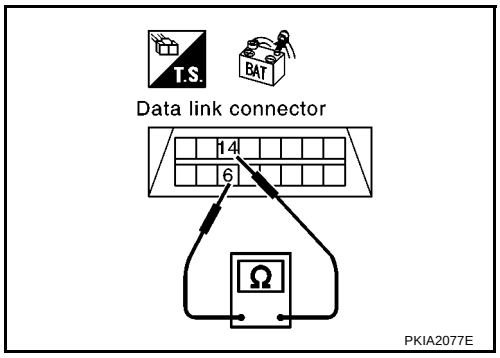
OK >> GO TO 6.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Intelligent Key unit connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



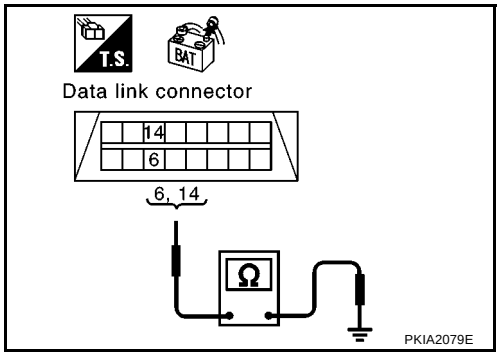
OK or NG

OK >> GO TO 7.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.
14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 8.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and Intelligent Key unit
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-289, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-263, "Work Flow" .
NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00JQB

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer toPG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

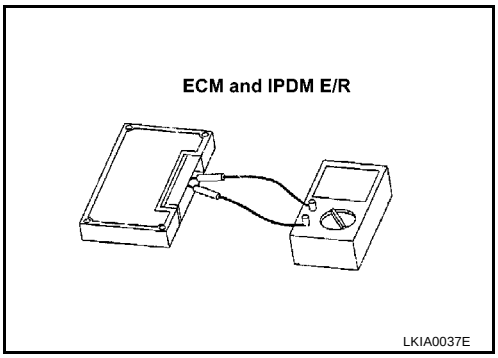
Component Inspection

EKS00JQC

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 1 and 7.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	1 – 7	108 - 132
IPDM E/R	52 – 58	



CAN SYSTEM (TYPE 10)

PFP:23710

System Description

EKS00JQD

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

Component Parts and Harness Connector Location

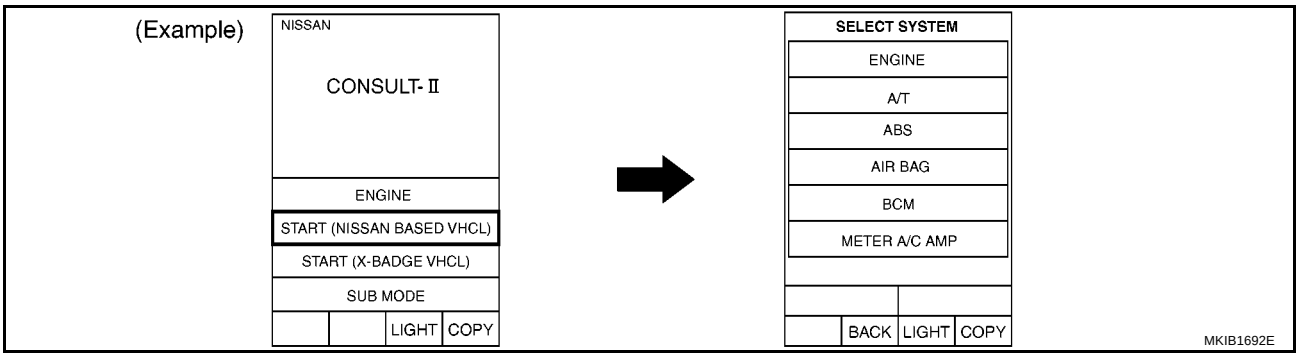
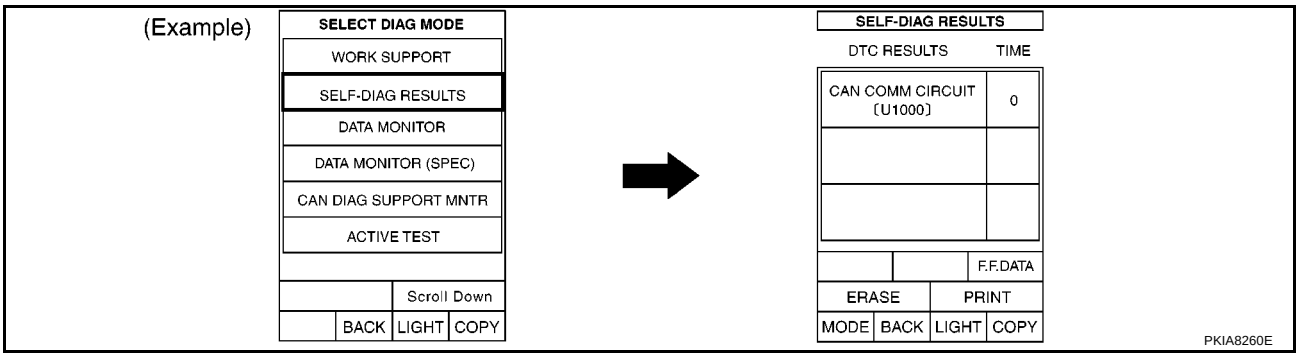
Work Flow

EKS00JQG

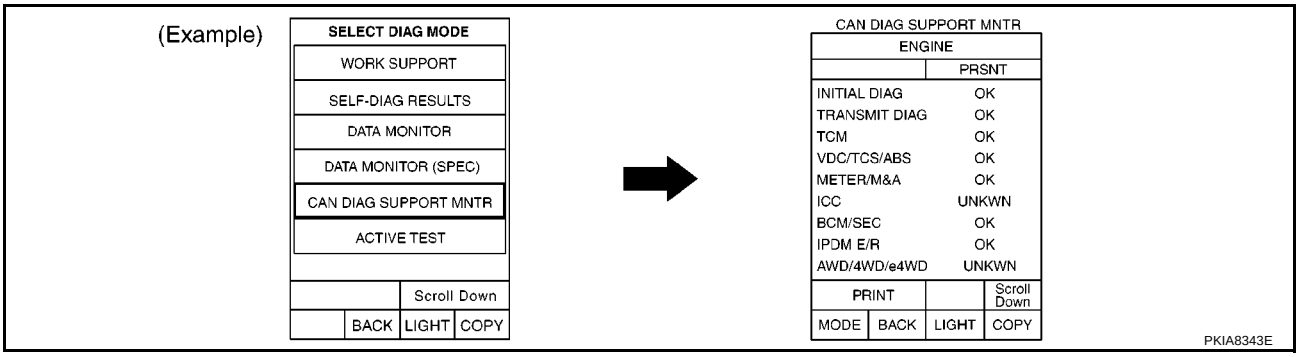
1. When there are no indications of “ENGINE”, “EPS”, “BCM” or “IPDM E/R” on “SELECT SYSTEM” display of CONSULT-II, print the “SELECT SYSTEM”.



2. Print all the data of “SELF-DIAG RESULTS” for “ENGINE”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.



3. Print all the data of “CAN DIAG SUPPORT MNTR” for “ENGINE”, “EPS”, “BCM”, “ABS” and “IPDM E/R” displayed on CONSULT-II.

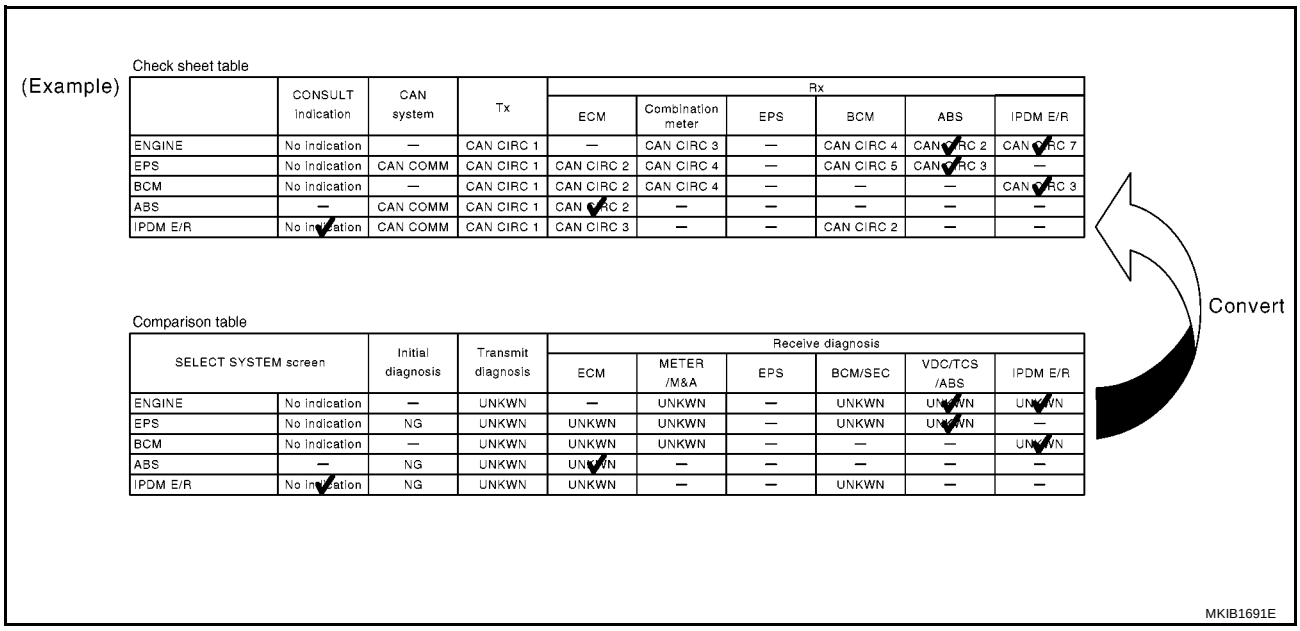


4. Attach the printed sheet of “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “CAN DIAG SUPPORT MNTR” onto the check sheet. Refer to LAN-295, "CHECK SHEET" .
5. Based on the indications of “SELECT SYSTEM” and the results of “CAN DIAG SUPPORT MNTR”, put marks “v” onto the items with “No indication”, “NG”, or “UNKWN” in the check sheet table. Refer to LAN-295, "CHECK SHEET" .

NOTE:

- If “NG” is displayed on “INITIAL DIAG (Initial diagnosis)” as “CAN DIAG SUPPORT MNTR” for the diagnosed control unit, replace the control unit.
- The “CAN DIAG SUPPORT MNTR” items, which are not in check sheet table, are not related to diagnostic procedure on service manual.
  So it is not necessary to check the status of “CAN DIAG SUPPORT MNTR” items which are not indicated in check sheet table.

6. Convert “v” mark on comparison table to check sheet table.



7. According to the check sheet results (example), start inspection. Refer to LAN-297, "CHECK SHEET RESULTS (EXAMPLE)" .

CHECK SHEET

MKIB1680E

Circuit Check Between BCM and ABS Actuator and Electric Unit (Control Unit)

EKS00JQH

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (connector side and harness side).

- Harness connector M1
- Harness connector E101

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

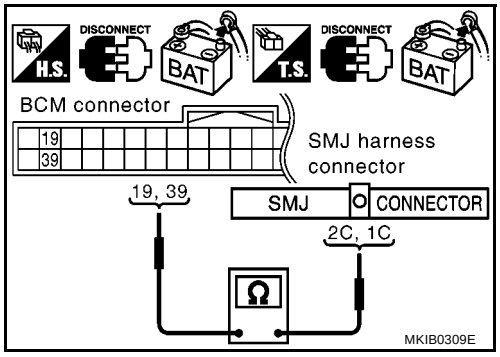
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect following connector.

- Harness connector M1
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between BCM harness connector M48 terminals 19 (R), 39 (W) and harness connector M1 terminals 2C (R), 1C (W).

19 (R) – 2C (R) : Continuity should exist.
39 (W) –1C (W) : Continuity should exist.



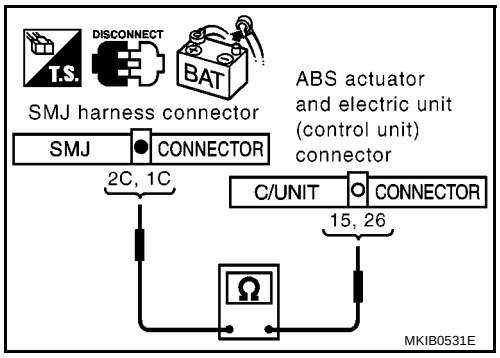
OK or NG

OK >> GO TO 3.
NG >> Repair harness.

3. CHECK HARNESS FOR OPEN CIRCUIT

Check continuity between harness connector E101 terminals 2C (R), 1C (W) and ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R), 15 (W).

2C (R) – 26 (R) : Continuity should exist.
1C (W) – 15 (W) : Continuity should exist.



OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-293, "Work Flow" .
NG >> Repair harness.

ECM Circuit Check

EKS00JQI

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side and harness side).

- ECM connector
- Harness connector M1
- Harness connector E101

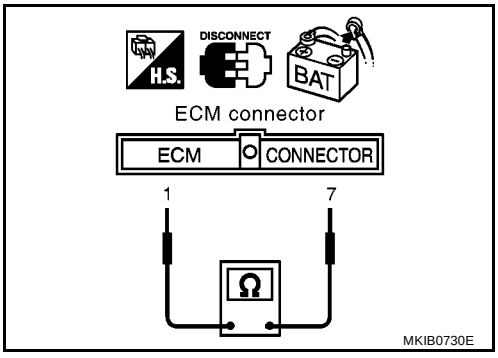
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ECM connector.
2. Check resistance between ECM harness connector E61 terminals 1 (R) and 7 (W).

1 (R) – 7 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace ECM.
NG >> Repair harness between ECM and data link connector.

Data Link Connector Circuit Check

EKS00JQJ

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check data link connector and terminals for damage, bend and loose connection (connector side and harness side).

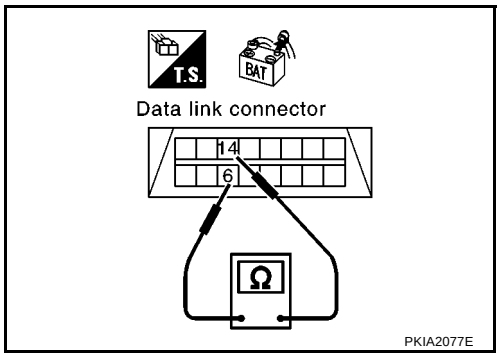
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

Check resistance between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-293, "Work Flow" .
NG >> Repair harness between data link connector and combination meter

Combination Meter Circuit Check

EKS00JQK

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of combination meter for damage, bend and loose connection (meter side and harness side).

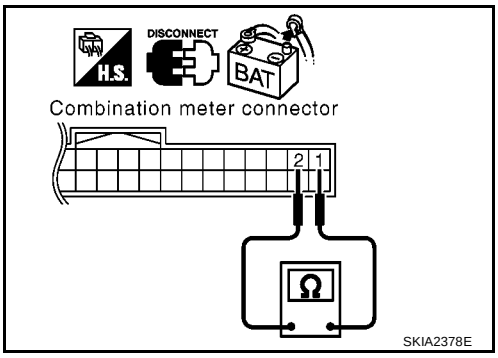
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect combination meter connector.
2. Check resistance between combination meter harness connector M22 terminals 1 (R) and 2 (W).

1 (R) – 2 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace combination meter
NG >> Repair harness between combination meter and data link connector.

EPS Control Unit Circuit Check

EKS00JQL

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of EPS control unit for damage, bend and loose connection (control unit side and harness side).

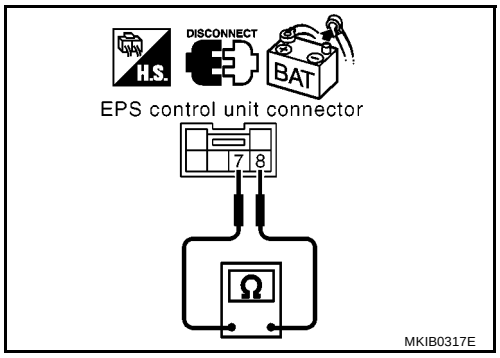
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect EPS control unit connector.
2. Check resistance between EPS control unit harness connector M23 terminals 8 (R) and 7 (W).

8 (R) – 7 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace EPS control unit.
NG >> Repair harness between EPS control unit and data link connector.

BCM Circuit Check

EKS00JQM

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of BCM for damage, bend and loose connection (control module side and harness side).

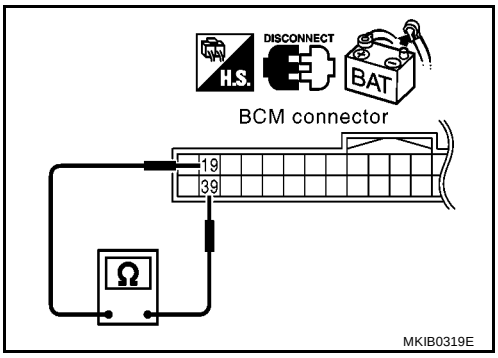
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect BCM connector.
2. Check resistance between BCM harness connector M48 terminals 19 (R) and 39 (W).

19 (R) – 39 (W) : Approx. 54 – 66Ω



OK or NG

OK >> Replace BCM. Refer to BCS-31, "Removal and Installation of BCM" .
NG >> Repair harness between BCM and data link connector.

ABS Actuator and Electric Unit (Control Unit) Circuit Check

EKS00JQN

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of ABS actuator and electric unit (control unit) for damage, bend and loose connection (control unit side and harness side).

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

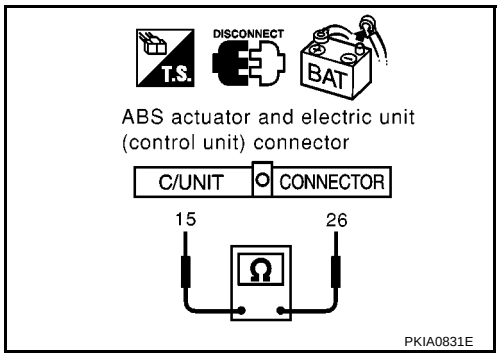
2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect ABS actuator and electric unit (control unit) connector.
2. Check resistance between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Approx. 54 – 66Ω

OK or NG

OK >> Replace ABS actuator and electric unit (control unit).
NG >> Repair harness between ABS actuator and electric unit (control unit) and IPDM E/R.



IPDM E/R Circuit Check

EKS00JQO

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check terminals and connector of IPDM E/R for damage, bend and loose connection (control module side and harness side).

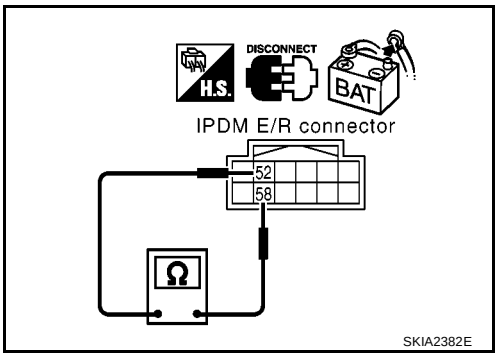
OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

2. CHECK HARNESS FOR OPEN CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check resistance between IPDM E/R harness connector E16 terminals 52 (R) and 58 (W).

52 (R) – 58 (W) : Approx. 108 – 132Ω



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness between IPDM E/R and ABS actuator and electric unit (control unit).

CAN Communication Circuit Check

EKS00JQP

1. CHECK CONNECTOR

1. Turn ignition switch OFF.
2. Disconnect the negative battery terminal.
3. Check following terminals and connectors for damage, bend and loose connection (control module side, meter side, control unit side and harness side).

- ECM
- Combination meter
- Drive computer
- EPS control unit
- BCM
- ABS actuator and electric unit (control unit)
- IPDM E/R
- Between ECM and IPDM E/R

OK or NG

OK >> GO TO 2.
NG >> Repair terminal or connector.

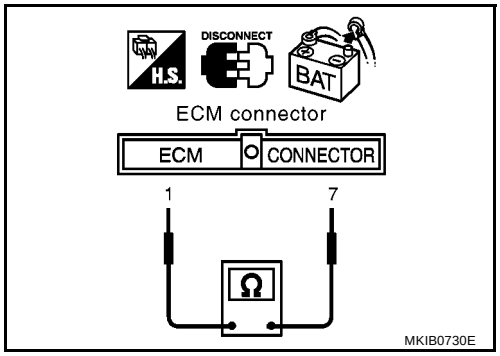
2. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect ECM connector and harness connector E101.
2. Check continuity between ECM harness connector E61 terminals 1 (R) and 7 (W).

1 (R) – 7 (W) : Continuity should not exist.

OK or NG

OK >> GO TO 3.
NG >> Repair harness between ECM and harness connector E101.



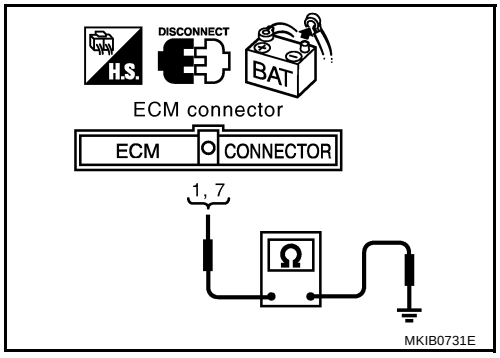
3. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E61 terminals 1 (R), 7 (W) and ground.

1 (R) – Ground : Continuity should not exist.
7 (W) – Ground : Continuity should not exist.

OK or NG

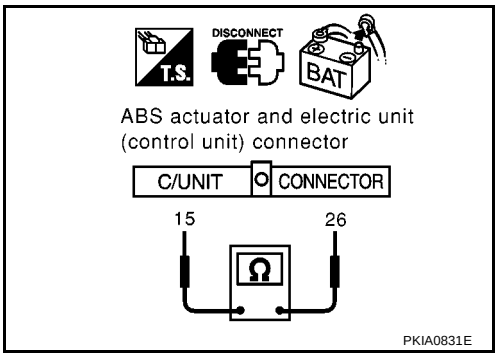
OK >> GO TO 4.
NG >> Repair harness between ECM and harness connector E101.



4. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- ABS actuator and electric unit (control unit) connector
- IPDM E/R connector
2. Check continuity between ABS actuator and electric unit (control unit) harness connector E45 terminals 26 (R) and 15 (W).

26 (R) – 15 (W) : Continuity should not exist.



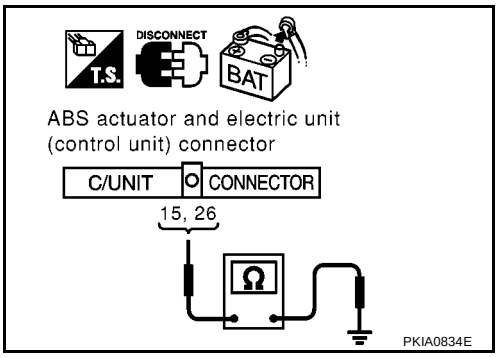
OK or NG

OK >> GO TO 5.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

5. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between ECM harness connector E45 terminals 26 (R), 15 (W) and ground.

26 (R) – Ground : Continuity should not exist.
15 (W) – Ground : Continuity should not exist.



OK or NG

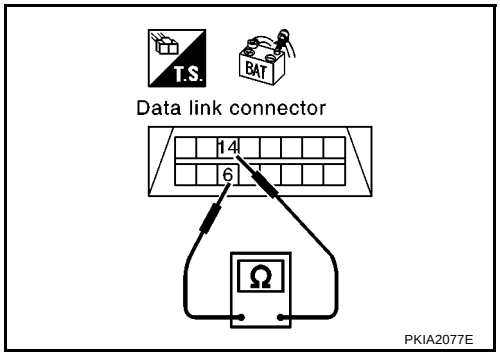
OK >> GO TO 4.
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between ABS actuator and electric unit (control unit) and harness connector E101
- Harness between ABS actuator and electric unit (control unit) and IPDM E/R

6. CHECK HARNESS FOR SHORT CIRCUIT

1. Disconnect following connectors.
- Combination meter connector
- Drive computer connector
- EPS control unit connector
- BCM connector

2. Check continuity between data link connector M17 terminals 6 (R) and 14 (W).

6 (R) – 14 (W) : Continuity should not exist.



OK or NG

OK >> GO TO 5.

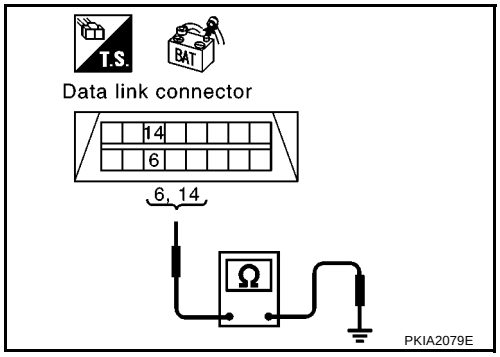
NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

7. CHECK HARNESS FOR SHORT CIRCUIT

Check continuity between data link connector M17 terminals 6 (R), 14 (W) and ground.

6 (R) – Ground : Continuity should not exist.

14 (W) – Ground : Continuity should not exist.



OK or NG

OK >> GO TO 6.

NG >> Check the following harnesses. If any harness is damaged, repair the harness.
- Harness between data link connector and harness connector M1
- Harness between data link connector and combination meter
- Harness between data link connector and drive computer
- Harness between data link connector and EPS control unit
- Harness between data link connector and BCM

8. ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

Check components inspection. Refer to LAN-317, "ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION" .

OK or NG

OK >> Reconnect all connectors to perform “SELECT SYSTEM”, “SELF-DIAG RESULTS” and “DATA MONITOR (CAN DIAG SUPPORT MNTR)” displayed on CONSULT-II. Refer to LAN-293, "Work Flow" .

NG >> Replace ECM and/or IPDM E/R.

IPDM E/R Ignition Relay Circuit Check

EKS00JQQ

Perform the self-diagnosis for IPDM E/R. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" . If the result is OK, carry out following inspections.

- IPDM E/R power supply circuit. Refer to PG-49, "IPDM E/R Power Supply and Ground Circuit Check" .
- Ignition power supply circuit. Refer to PG-12, "IGNITION POWER SUPPLY — IGNITION SW. IN “ON” AND/OR “START”" .

Component Inspection

EKS00JQR

ECM/IPDM E/R INTERNAL CIRCUIT INSPECTION

- Remove ECM and IPDM E/R from vehicle.
- Check resistance between ECM terminals 1 and 7.
- Check resistance between IPDM E/R terminals 52 and 58.

Unit	Terminal	Resistance value (Ω) (Approx.)
ECM	1 – 7	108 - 132
IPDM E/R	52 – 58

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS0085Y

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

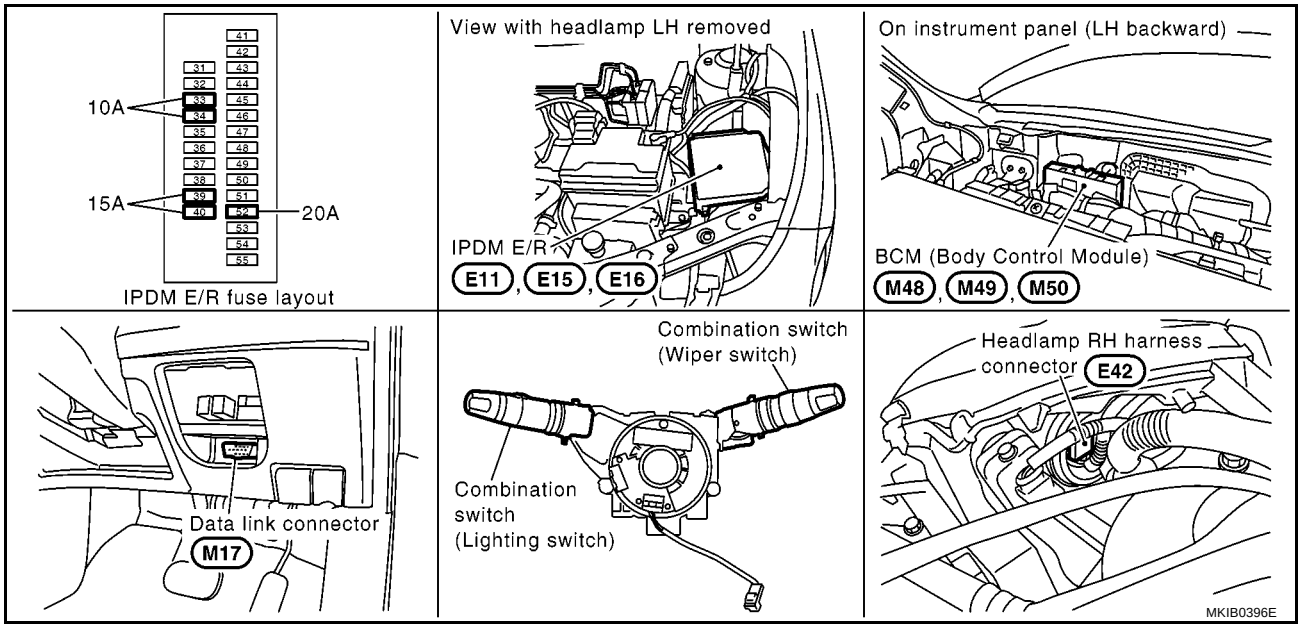
- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

HEADLAMP -CONVENTIONAL TYPE-

PFP:26010

Component Parts and Harness Connector Location

EKS00EKT



System Description

EKS00EKU

The headlamp operation is controlled by the lighting switch which built into the combination switch, BCM and IPDM E/R (intelligent power distribution module engine room).Headlamp low relay, headlamp LH and RH relays are built into IPDM E/R.BCM read combination switch condition.refer to LT-189, "System Description" .

OUTLINE

Power is supplied at all times

- to headlamp high LH relay, located in the IPDM E/R, and
- to headlamp high RH relay, located in the IPDM E/R, and
- to headlamp low relay, located in the IPDM E/R, and
- to BCM (body control module) terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fuse and fusible link box),
- to IPDM E/R
- through 20A fusible link (No.52, located in the IPDM E/R),
- to combination meter terminal 27
- through 10A fuse [No. 8, located in the fuse block (J/B)].

With the ignition switch in the ON or START position, power is supplied

- to BCM (body control module) terminal 24
- through 10A fuse [No. 4, located in the fuse block (J/B)],
- to combination meter terminal 28
- through 10A fuse [No. 2, located in the fuse block (J/B)],
- to IPDM E/R.

Ground is supplied

- to BCM (body control module) terminal 2 and 70
- to combination meter terminals 21, 22 and 23
- through body grounds M19 and M20, and
- to IPDM E/R terminals 3 and 54
- through body grounds E25(Gasoline engine models), E26 and E40.

Low Beam Operation

When the lighting switch is turned to 2ND position and placed in LOW position, BCM reads combination switch condition (refer to LT-189, "System Description"). And BCM sends low beam request signal to IPDM E/R with

CAN communication line. Then IPDM E/R turns on headlamp low relay. With headlamp low relay is energized, power is supplied.

- through 15A fuse (No. 39, located in the IPDM E/R)
- through terminal 50 of the IPDM E/R
- to terminal 1 of headlamp LH, and
- through 15A fuse (No. 40, located in the IPDM E/R)
- through terminal 48 of the IPDM E/R
- to terminal 1 of headlamp RH.

Ground is supplied

- to terminal 3 of each headlamp
- through body grounds E25(Gasoline engine models), E26 and E40.

With power and ground supplied, low beam headlamps will illuminate.

High Beam Operation/Flash-to-Pass Operation

With the lighting switch is turned to 2ND position and placed in HIGH or PASS position, BCM reads combination switch condition (refer to LT-189, "System Description"). And BCM sends high beam request signal to IPDM E/R and combination meter with CAN communication line. Then IPDM E/R turns on headlamp high relay LH and RH. With headlamp high relays are energized, power is supplied.

- through 10A fuse (No. 34, located in the IPDM E/R)
- through terminal 47 of the IPDM E/R
- to terminal 2 of headlamp LH, and
- through 10A fuse (No. 33, located in the IPDM E/R)
- through terminal 46 of the IPDM E/R
- to terminal 2 of headlamp RH.

Ground is supplied

- to terminal 3 of each headlamp
- through body grounds E25(Gasoline engine models), E26 and E40.

With power and ground supplied, the high beam headlamps will illuminate.
When combination meter receives high beam request signal from BCM across the CAN communication lines, combination meter will illuminate high beam indicator.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description" .

FRIENDLY LIGHTING FUNCTION

Low beam headlamps will illuminate for 30 seconds when,

- ignition switch is in OFF position,
- lighting switch is placed in OFF position, and
- lighting switch is placed in PASS position.

BCM re-starts to count for 30 seconds, when all doors are locked with remote controller or Intelligent Key during friendly lighting function is activating.
Friendry lighting function time can be changed using “WORK SUPPORT” mode in “HEADLAMP”.

FAIL-SAFE FUNCTION

When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. If the fail-safe system is operating, headlamps illuminate with low beam when the ignition switch is turned from OFF to ON and headlamps are turned off when the ignition switch is turn from ON to OFF. If the fail-safe system is operating, headlamps does not operate when the combination switch is in any position. After CAN communication recovers normally, it also returns to normal control.(Refer to PG-19, "FAIL-SAFE FUNCTION")

CAN Communication

EKS00ERC

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LT7

Go to CAN system, when selecting your car model from the following table.

How to Proceed With Trouble Diagnosis

EKS00EKZ

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to Headlamp LT-6, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-26, "Preliminary Check" .
4. Confirm headlamp does not operate by fail-safe control of IPDM E/R. Refer to PG-19, "FAIL-SAFE FUNCTION" .
5. Check symptom and repair or replace the cause of malfunction.
6. Dose the headlamp operate normally? Yes: GO TO 7. No: GO TO 5.
7. INSPECTION END.

Preliminary Check

EKS00EL0

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch ON or START position	4

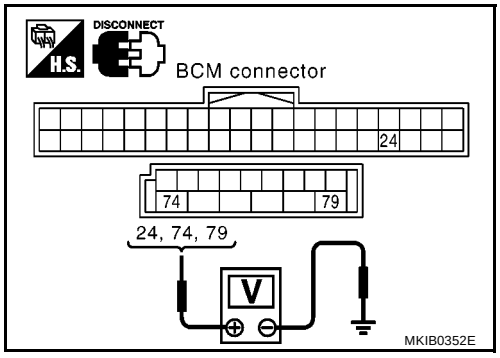
Refer to LT-22, "Wiring Diagram — H/LAMP—" .

OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

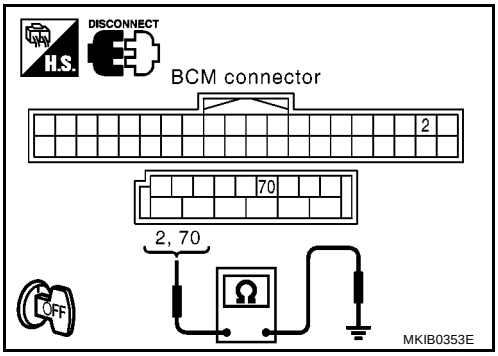
OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse. If NG, repair or replace the harness or fuse.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.

Terminals			Continuity
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)	Ground	Yes



OK or NG

OK >> INSPECTION END.
NG >> Repair or replace the harness.

CONSULT-II Functions (BCM)

EKS00EL1

CONSULT-II can display each diagnosis itemusing the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

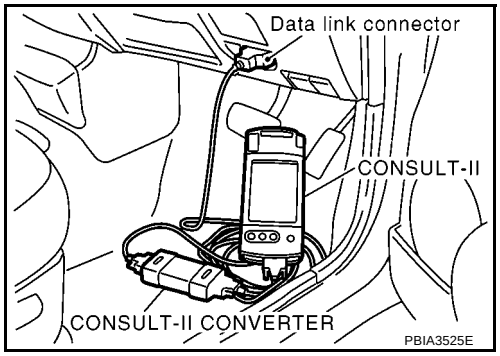
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Headlamp	Work support	Changes the setting for each function.
	Data monitor	Displays BCM input data in real time.
	Active test	Sends a drive signal to electronic components to check their operation.
BCM C/U	Self-diagnosis	BCM performs self-diagnosis of CAN communication and combination switch

CONSULT-II BASIC OPERATION

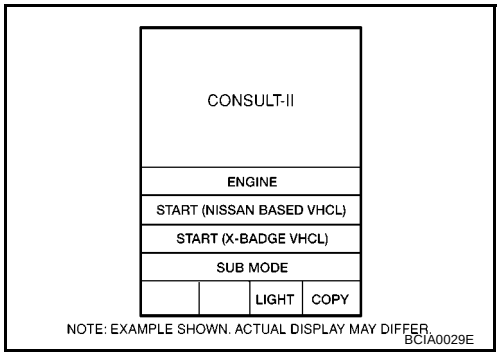
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

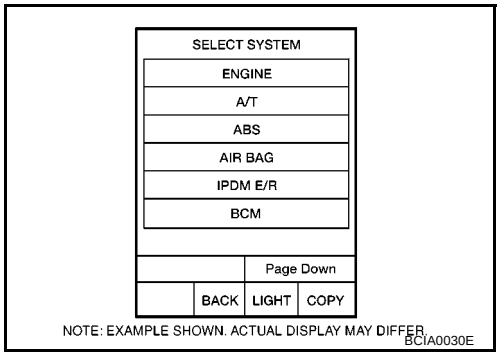
1. Turn ignition switch OFF.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to data link connector.



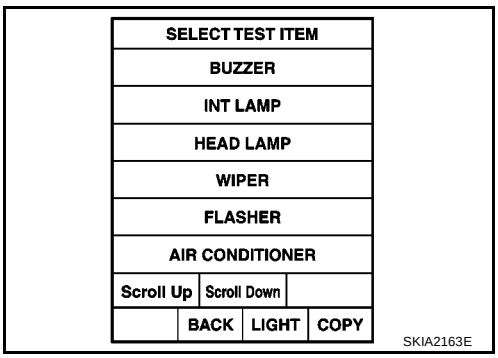
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



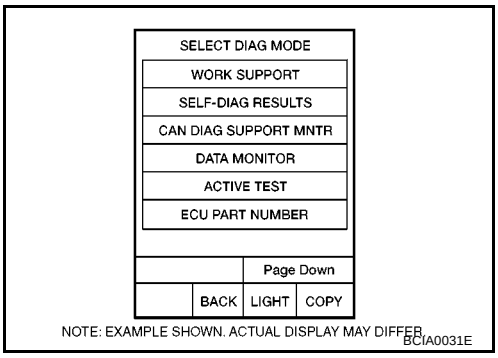
5. Touch “BCM” on the “SELECT SYSTEM” screen.
   If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “HEAD LAMP” on “SELECT TEST ITEM” screen.



7. Touch “WORK SUPPORT”, “DATA MONITOR”, or “ACTIVE TEST” on the “SELECT DIAG MODE” screen.



WORK SUPPORT

Operation Procedure

1. Touch “HEAD LAMP” on “SELECT TEST ITEM” screen.
2. Touch “WORK SUPPORT” on “SELECT DIAG MODE” screen.
3. Touch “BATTERY SAVER” on “SELECT WORK ITEM” screen.
4. Touch “START”.
5. Touch “CHANGE SET”.
6. The setting will be changed and “CUSTOMIZING COMPLETED” will be displayed.
7. Touch “END”.

Display Item List

Item	Description	CONSULT-II	Factory setting
BATTERY SAVER	Battery saver can be selected.	ON	—
		OFF	❍

DATA MONITOR

Operation Procedure

1. Touch “HEAD LAMP” on “SELECT TEST ITEM” screen.
2. Touch “DATA MONITOR” on the “SELECT DIAG MODE” screen.
3. Touch “ALL SIGNALS” or “SELETION FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
SELECTION FROM MENU	Selects and monitors individual items.

4. Touch “START”.
5. When “SELECTION FROM MENU” is selected, touch items to be monitored. When “ALL SIGNALS” is selected, all the items will be monitored.
6. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

Display Item List

Monitor item UNIT.		Display content
IGN ON SW	[ON/OFF]	Displays status (Ignition switch ON: ON/Others OFF, ACC: OFF) as judged from the ignition switch signal.
HI BEAM SW	[ON/OFF]	Displays status (High beam switch: ON/Others: OFF) as judged from lighting switch signal.
HEADLAMP SW	[ON/OFF]	Displays status (Headlamp switch: ON/Others: OFF) as judged from lighting switch signal.
LIGHT SW 1ST	[ON/OFF]	Displays status (Lighting switch 1st position: ON/Others: OFF) as judged from lighting switch signal.
PASSING SW	[ON/OFF]	Displays status (Flash-to-pass switch: ON/Others: OFF) as judged from lighting switch signal.
FR FOG SW	[ON/OFF]	Displays status (Front fog lamp switch: ON/Others: OFF) as judged from lighting switch signal.
RR FOG SW	[ON/OFF]	Displays status (Rear fog lamp switch: ON/Others: OFF) as judged from lighting switch signal.
DOOR SW DR	[ON/OFF]	Displays status (Door open: ON/door closed: OFF) as judged from the door switch DR signal.
H/L WASH SW	[ON/OFF]	Displays status (Headlamp washer switch: ON/Others: OFF) as judged from headlamp washer switch signal.
ENGINE STATUS	[STOP/ STALL/ RUN/ CRA]	Displays status (Engine stop: STOP/engine stall: STALL/engine running: RUN/engine cranking: CRA) as judged from the engine status.

ACTIVE TEST

Operation Procedure

1. Touch “HEAD LAMP” on “SELECT TEST ITEM” screen.
2. Touch “ACTIVE TEST” on the “SELECT DIAG MODE” screen.
3. Touch item to be tested and check operation of the selected item.
4. During operation check, touching “STOP” deactivates operation.

Display Item List

Test item	CONSULT-II screen display	Description
Tail lamp relay output	TAIL LAMP	Tail lamp relay can be operated by any ON–OFF operation.
Headlamp relay output	HEADLAMP	Headlamp relay can be operated by any ON–OFF operation.
Front fog lamp relay output	FR FOG LAMP	Front fog lamp relay can be operated by any ON–OFF operation.
Rear fog lamp relay output	RR FOG LAMP	Rear fog lamp relay can be operated by any ON–OFF operation.

SELF-DIAGNOSTIC RESULTS

Operation Procedure

1. Touch “BCM C/U” on “SELECT TEST ITEM” screen.
2. Touch “SELF-DIAGNOSTIC RESULTS” on “SELECT DIAG MODE” screen.
3. Self-diagnostic results are displayed.

Display Item List

Item to be displayed	CONSULT-II display	Description
CAN communication	CAN COMMUNICATION [U1000]	Malfunction is detected in CAN communication.
CAN communication system	CAN COMMUNICATION SYSTEM TO 6 [U1000]	Malfunction is detected in CAN system.
Combination switch	Diagnosis 1-5 systems open circuit	Malfunction is detected in combination switch system.

CONSULT-II Functions (IPDM E/R)

EKS00EL2

CONSULT-II can display each diagnosis itemusing the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

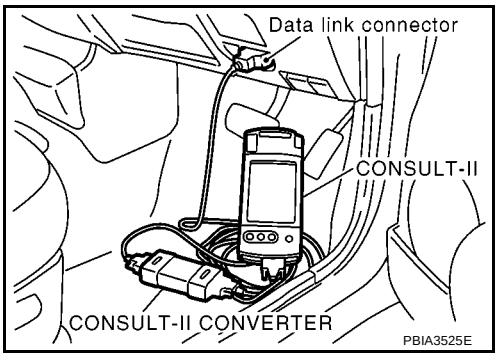
Inspection Item, Diagnosis Mode	Description
Self-diagnostic results	Refer to PG-34, "SELF-DIAG RESULTS" .
Data monitor	Displays the real-time input/output data from IPDM E/R I/O data.
Active test	IPDM E/R can Sends a drive signal to electronic components to check their operation.

CONSULT-II BASIC OPERATION

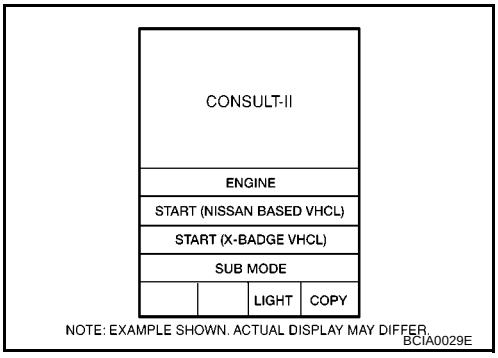
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

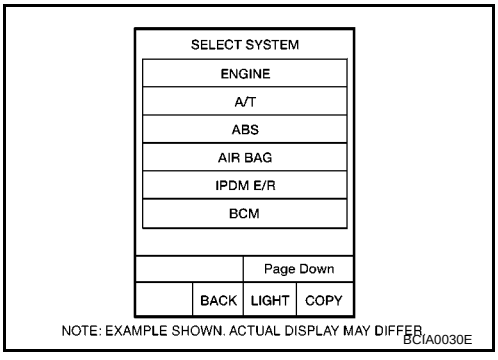
1. Turn ignition switch OFF.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to data link connector.



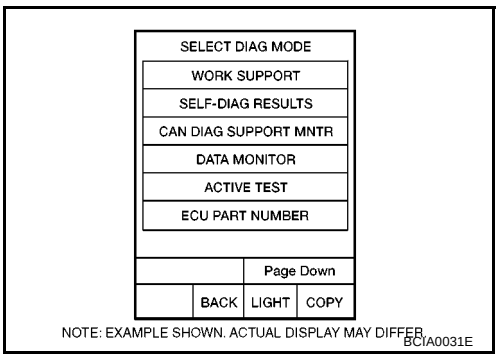
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



5. Touch “IPDM E/R” on the “SELECT SYSTEM” screen.
   If “IPDM E/R” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “SELF-DIAG RESULTS”, “DATA MONITOR”, “ACTIVE TEST” on the “SELECT DIAG MODE” screen.



SELF-DIAG RESULTS

IPDM E/R perform self-diagnosis of CAN communication. Refer to PG-34, "SELF-DIAG RESULTS" .

DATA MONITOR

Operation Procedure

1. Touch “DATA MONITOR” on the “SELECT DIAG MODE” screen.
2. Touch “ALL SIGNALS”,“MAIN SIGNALS” or “SELETION FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
MAIN SIGNALS	Monitors previously selected items.
SELECTION FROM MENU	Items are freely selected and monitored.

3. Touch “START”.
4. For “SELECTION FROM MENU”, touch the required monitor items. For “ALL SIGNALS”, all items are monitored. For “MAIN SIGNALS”, the previously selected items are monitored.
5. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

All Signals, Main Signals, Selection From Menu

Monitor item name	Display and unit	Monitor item selection			Display content
		All signals	Main signals	selection from menu	
TAIL & CLR REQ	ON/OFF	×	×	×	Signal status input from BCM
HL LO REQ	ON/OFF	×	×	×	Signal status input from BCM
HL HI REQ	ON/OFF	×	×	×	Signal status input from BCM
FR FOG REQ	ON/OFF	×	×	×	Signal status input from BCM
IGN RLY	ON/OFF	×	×	×	Status of ignition relay being monitored by IPDM E/R
BAT VOLT	V	×		×	Value measured at IPDM E/R

NOTE:

- IPDM E/R data monitoring is performed with ignition switch ON. When monitored at ACC position, the display might not be normal.

ACTIVE TEST

Operation Procedure

1. Touch “ACTIVE TEST” on the “SELECT DIAG MODE” screen.
2. Touch item to be tested and check operation of the selected item.
3. Touch “START”.
4. Touch “STOP” while testing to stop the operation.

Test item	CONSULT-II screen display	Description
Headlamp relay (HI, LO) output	HEADLAMP	Headlamp relay (LO, HI) can be operated using random operation (OFF, HI ON, LO ON).
Front fog lamp relay output	FRONT FOGLAMP	Fog lamp relay can be operated by any ON–OFF operation.
Tail lamp relay output	TAIL LAMP	Tail lamp relay can be operated by any ON–OFF operation.

Headlamp High Beam Does Not Illuminate (Both Sides)

EKS00EL3

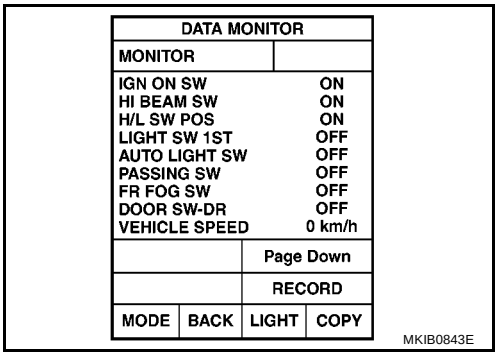
1. CHECK BETWEEN COMBINATION SWITCH AND BCM

With CONSULT-II

Select BCM on CONSULT-II.Check lighting switch (“HI BEAM SW”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 2nd position and placed in HIGH or PASS position : HI BEAM SW ON

When lighting switch is in OFF position : HI BEAM SW OFF



Without CONSULT-II

Refer to LT-196, "Check Combination Switch" .

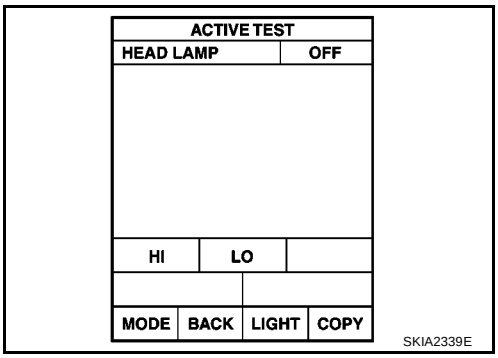
OK or NG

OK >> GO TO 2.
NG >> Refer to LT-196, "Check Combination Switch" .

2. CHECK BETWEEN IPDM E/R TO HEADLAMP

With CONSULT-II

1. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “HEADLAMP” on “ACTIVE TEST” screen.
3. Make sure that headlamp (high beam) operate normally.



Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that headlamp (high beam) operate normally.

OK or NG

OK >> GO TO 3.
NG >> Check the following:

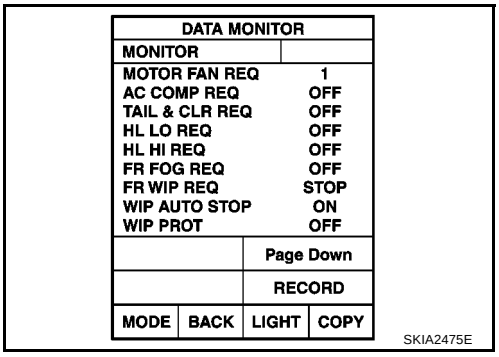
- Headlamp LH/RH bulb
- Headlamp ground circuit harness
- Open or short for the harness between headlamp LH/RH and IPDM E/R. If there are no malfunctions, replace IPDM E/R.

3. CHECK BETWEEN IPDM E/R AND BCM

Select IPDM E/R on CONSULT-II. Check lighting switch (“HL HI REQ”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 2nd position and placed in HIGH or PASS position : HL HI REQ ON

When lighting switch is in OFF position : HL HI REQ OFF



OK or NG

OK >> Replace IPDM E/R.
NG >> Replace BCM.

Headlamp High Beam Does Not Illuminate (One Side)

EKS00EL4

1. CHECK BULB

Check headlamp bulb which does not illuminate.

OK or NG

OK >> GO TO 2.
NG >> Replace headlamp bulb.

2. CHECK FUSE

Check the following

- 10A fuse (No. 33, located in the IPDM E/R).
- 10A fuse (No. 34, located in the IPDM E/R).

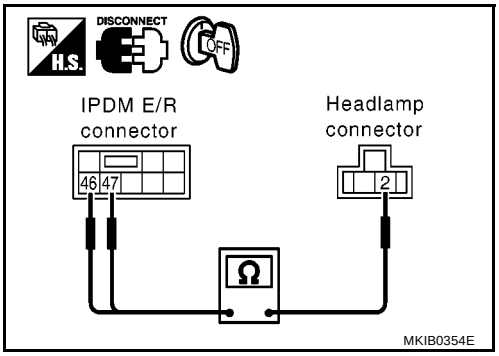
OK or NG

OK >> GO TO 3.
NG >> If fuse is blown be sure to eliminate cause of malfunction before installing new fuse.

3. CHECK BETWEEN IPDM E/R AND HEADLAMP

1. Disconnect IPDM E/R connector and headlamp connector.
2. Check continuity between harness connector terminals of IPDM E/R and harness connector terminal of headlamp.

Terminals					Continuity
Headlamp			IPDM E/R		
Connector		Terminal (Wire color)	Connector	Terminal (Wire color)	
RH	E42	2 (Y)	E15	46 (Y)	Yes
LH	E21	2 (G)		47 (G)	



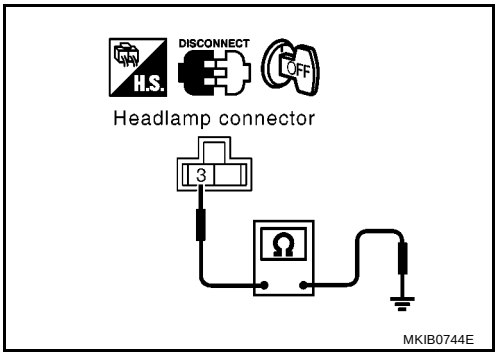
OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

4. CHECK BETWEEN HEADLAMP AND GROUND

Check continuity between harness connector of headlamp and ground.

Headlamp			Continuity
Connector		Terminal (Wire color)	
RH	E42	3 (B)	Yes
LH	E21	3 (B)	



OK or NG

OK >> Replace IPDM E/R.
NO >> Repair harness or connector.

High-Beam Indicator Does Not Illuminate

EKS00EL5

1. CHECK BULB

Check high-beam indicator bulb.

OK or NG

OK >> Replace combination meter.
NG >> Replace indicator bulb.

Headlamp Low Beam Does Not Illuminate (Both Sides)

EKS00EL6

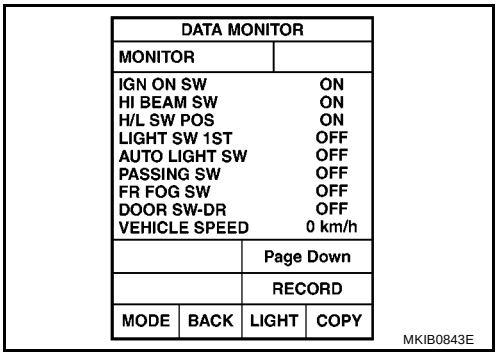
1. CHECK BETWEEN COMBINATION SWITCH AND BCM

With CONSULT-II

Select BCM on CONSULT-II.Check lighting switch (“H/L SW POS”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 2nd position : H/L SW POS ON

When lighting switch is in OFF position : H/L SW POS OFF



Without CONSULT-II

Refer to LT-196, "Check Combination Switch" .

OK or NG

OK >> GO TO 2.
NG >> Refer to LT-196, "Check Combination Switch" .

2. CHECK BETWEEN IPDM E/R AND HEADLAMP

With CONSULT-II

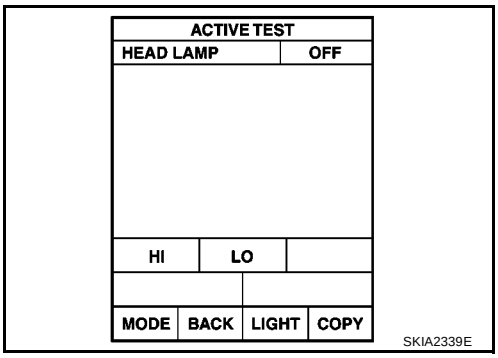
1. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “HEADLAMP” on “ACTIVE TEST” screen.
3. Make sure that headlamp (low beam) operate normally.

Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that headlamp (low beam) operate normally.

OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

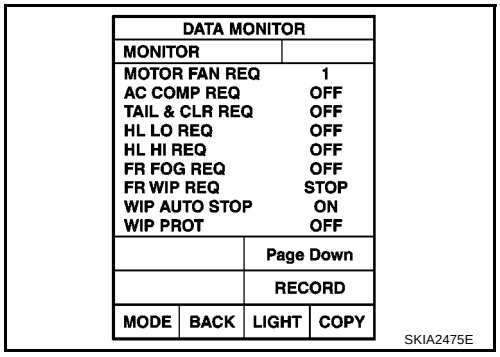


3. CHECK BETWEEN IPDM E/R AND BCM

Select IPDM E/R on CONSULT-II.Check lighting switch (“HL LO REQ”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 2nd position : HL LO REQ ON

When lighting switch is in OFF position : HL LO REQ OFF



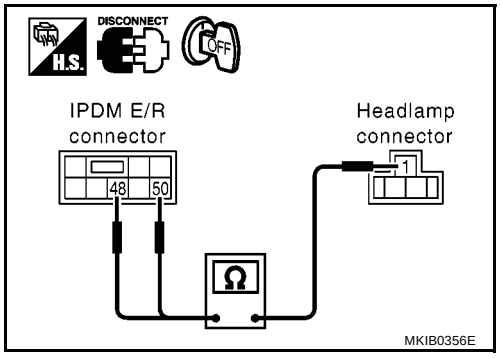
OK or NG

OK >> Replace IPDM E/R.
NG >> Replace BCM.

4. CHECK BETWEEN IPDM E/R AND HEADLAMPS

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and LH/RH headlamp connector.
3. Check continuity between harness connector of IPDM E/R and harness connector of LH/RH headlamp.

Terminals					Continuity
Headlamp			IPDM E/R		
Connector		Terminal (Wire color)	Connector	Terminal (Wire color)	
RH	E42	1 (PU)	E15	48 (PU)	Yes
LH	E21	1 (L)		50 (L)	



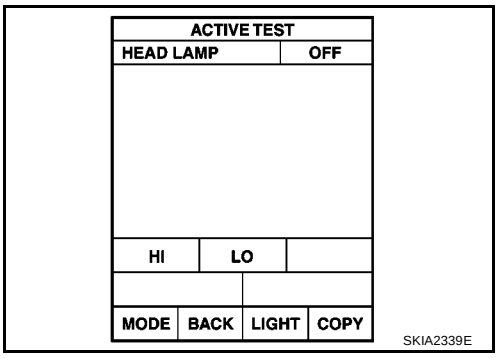
OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connector.

5. CHECK IPDM E/R

With CONSULT-II

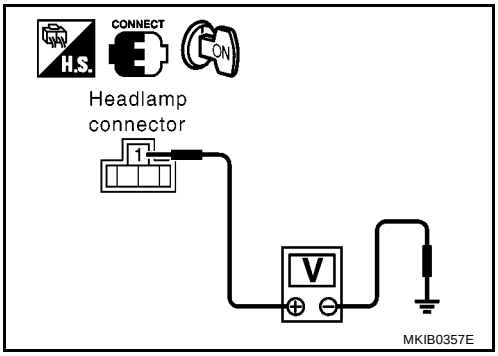
1. Connect IPDM E/R connector and headlamp LH/RH connector.
2. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
3. Select “HEADLAMP” on “ACTIVE TEST” screen.
4. Check voltage between headlamp LH/RH connector terminals and ground.



Terminals				Voltage [V]
(+)			(-)	
Connector		Terminal (Wire color)		
RH	E42	1 (PU)	Ground	Battery voltage
LH	E21	1 (L)		

Without CONSULT-II

1. Connect IPDM E/R connector and headlamp LH/RH connector.
2. Start auto active test. Refer to PG-42, "Auto Active Test" , check voltage between headlamp LH/RH connector terminals and ground.



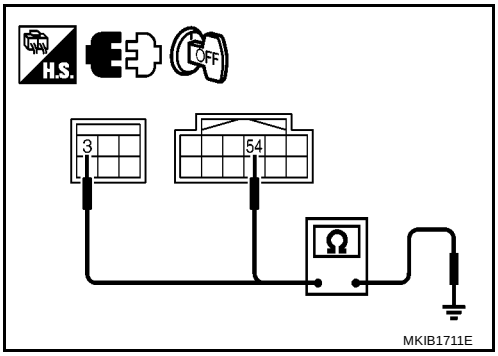
Terminals				Voltage [V]
(+)			(-)	
Connector		Terminal (Wire color)		
RH	E42	1 (PU)	Ground	Battery voltage
LH	E21	1 (L)		

OK or NG

OK >> GO TO 6.
NG >> Replace IPDM E/R.

6. CHECK IPDM E/R AND GROUND

1. Disconnect IPDM E/R connector.
2. Check continuity between IPDM E/R connector terminals and ground.



Terminals			Continuity
Connector	Terminal (Wire color)		
E11	3 (B)	Ground	Yes
E16	54 (B)		

OK or NG

OK >> Check the condition of the harness and connectors.
NG >> Repair or replace the harness.

Headlamp Low Beam Does Not Illuminate (One Side)

EKS00EL7

1. CHECK BULB

Check headlamp bulb.

OK or NG

OK >> GO TO 2.
NG >> Replace headlamp bulb.

2. FUSE CHECK

Check the following
15A fuse (No. 39, located in the IPDM E/R).
15A fuse (No. 40, located in the IPDM E/R).

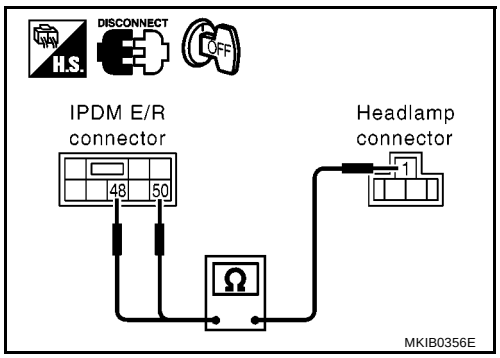
OK or NG

OK >> GO TO 3.
NG >> If fuse is blown, be sure to elimate cause of malfunction before installing new fuse.

3. CHECK BETWEEN IPDM E/R AND HEADLAMPS

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and headlamp connector.
3. Check continuity between harness connector of IPDM E/R and harness connector terminal of headlamp.

Terminals					Continuity
Headlamp			Terminals		
Connector		Terminal (Wire color)	Connector	Terminal (Wire color)	
RH	E42	1 (PU)	E15	48 (PU)	Yes
LH	E21	1 (L)		50 (L)	



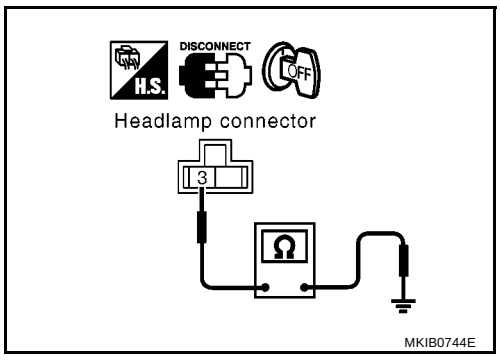
OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

4. CHECK BETWEEN HEADLAMP AND GROUND

Check continuity between harness connector of headlamp and ground.

Headlamp			Continuity
Connector		Terminal (Wire color)	
RH	E42	3 (B)	Yes
LH	E21	3 (B)	



OK or NG

OK >> Replace IPDM E/R.
NO >> Repair or replace harness or connector.

Headlamp Low Beam And High Beam Does Not Illuminate (One Side)

EKS00EL8

1. CHECK BULB

Check headlamp bulb.

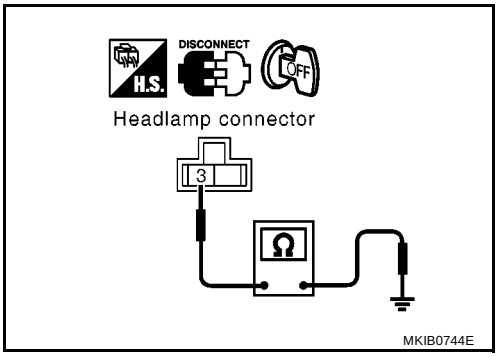
OK or NG

OK >> GO TO 2.
NG >> Replace headlamp bulb.

2. CHECK BETWEEN HEADLAMP AND GROUND

1. Disconnect headlamp connector.
2. Check continuity between harness connector of headlamp and ground.

Headlamp			Continuity
Connector		Terminal (Wire color)	
RH	E42	3 (B)	Yes
LH	E21	3 (B)	



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair or replace harness or connector.

Headlamps Do Not Turn OFF

EKS00EL9

1. CHECK IPDM E/R

- Check whether symptom is caused by IPDM E/R fail-safe operation or by factors other than fail-safe operation.Refer to PG-19, "FAIL-SAFE FUNCTION" and check CAN system.

OK or NG

Fail-safe operation>>Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" .
Other than fail-safe operation>>Refer to PG-51, "Diagnosis of IPDM E/R Integrated Relay" .

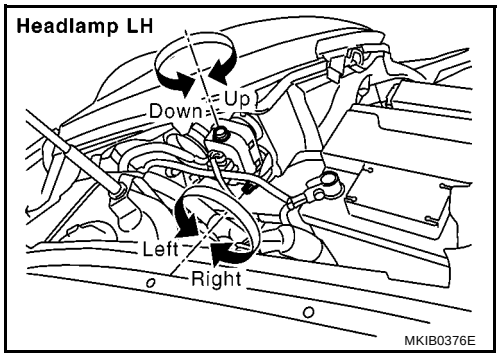
Aiming Adjustment

EKS00ELA

- Turn the aiming adjusting screw to adjust.
- For positions of the adjustment screws, refer to the figures.

CAUTION:

Adjustment with the aiming adjusting screw must be done in the tightening direction. (When adjusting in the loosening direction, first loosen the screw, then tighten again.)



PREPARATION BEFORE ADJUSTING

For details, refer to the regulations in your own country.

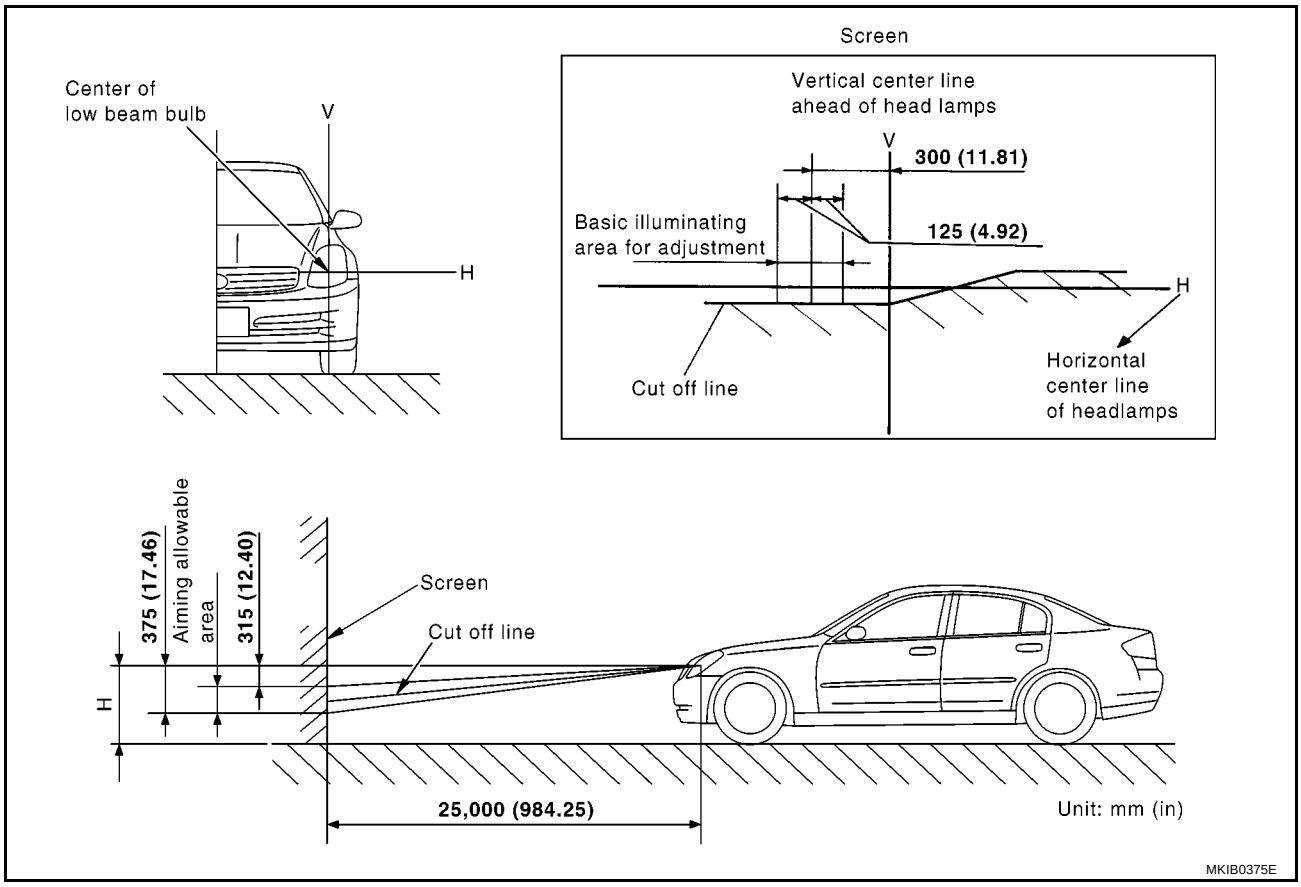
Before performing aiming adjustment, check the following.

1. Keep all tyres inflated to correct pressures.
2. Place vehicle on flat surface.
3. Set that there is no-load in vehicle other than the driver (or equivalent weight placed in driver's position). Coolant, engine oil filled up to correct level and full fuel tank.

LOW BEAM AND HIGH BEAM

1. Turn headlamp low beam on.
2. Use adjusting screws to perform aiming adjustment.

ADJUSTMENT USING AN ADJUSTMENT SCREEN (LIGHT/DARK BORDERLINE)



If the vehicle front body has been repaired and/or the headlamp assembly has been replaced, check aiming. Use the aiming chart shown in the figure.

- Basic illumination area for adjustment should be within the range shown on the aiming chart.

Adjust headlamp accordingly.

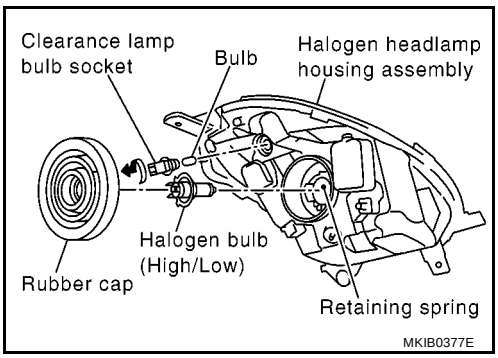
Bulb Replacement

EKS00ELB

HEADLAMP

1. Turn ignition switch OFF.
2. Disconnect headlamp connector.
3. Remove rubber cover.
4. Remove the retaining spring lock, then remove the bulb.
5. Install in reverse order of remove.

Headlamps (High beam, Low beam) : 12V 60/55W (H4)



CLEARANCE LAMPS (PARKING LAMPS)

1. Turn ignition switch OFF.
2. Turn bulb socket counterclockwise and unlock it.
3. Remove bulb.
4. Install in reverse order of remove.

Parking lamps : 12V 5W

CAUTION:

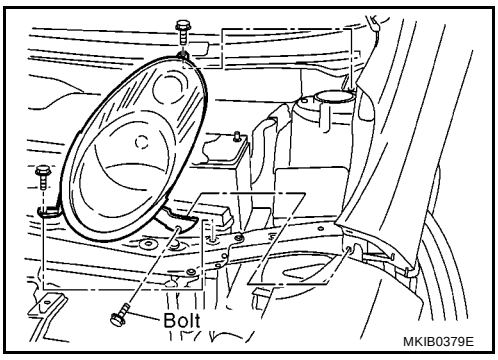
After the bulb is installed, the rubber cover must be attached securely to insure the assembly is water-tight.

Removal and Installation

EKS00ELC

REMOVAL

1. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
2. Remove bolt of front fender front end and bolt of front bumper fascia. Remove front bumper fascia. Refer to EI-4, "FRONT BUMPER" .
3. Disconnect the headlamp, clearance lamp and headlamp aiming connector.
4. Remove headlamp bolts.
5. Pull the entire headlamp forward while raising top mounting bracket.



INSTALLATION

Install in the reverse order of removal, paying attention to the following.

Headlamp bolt

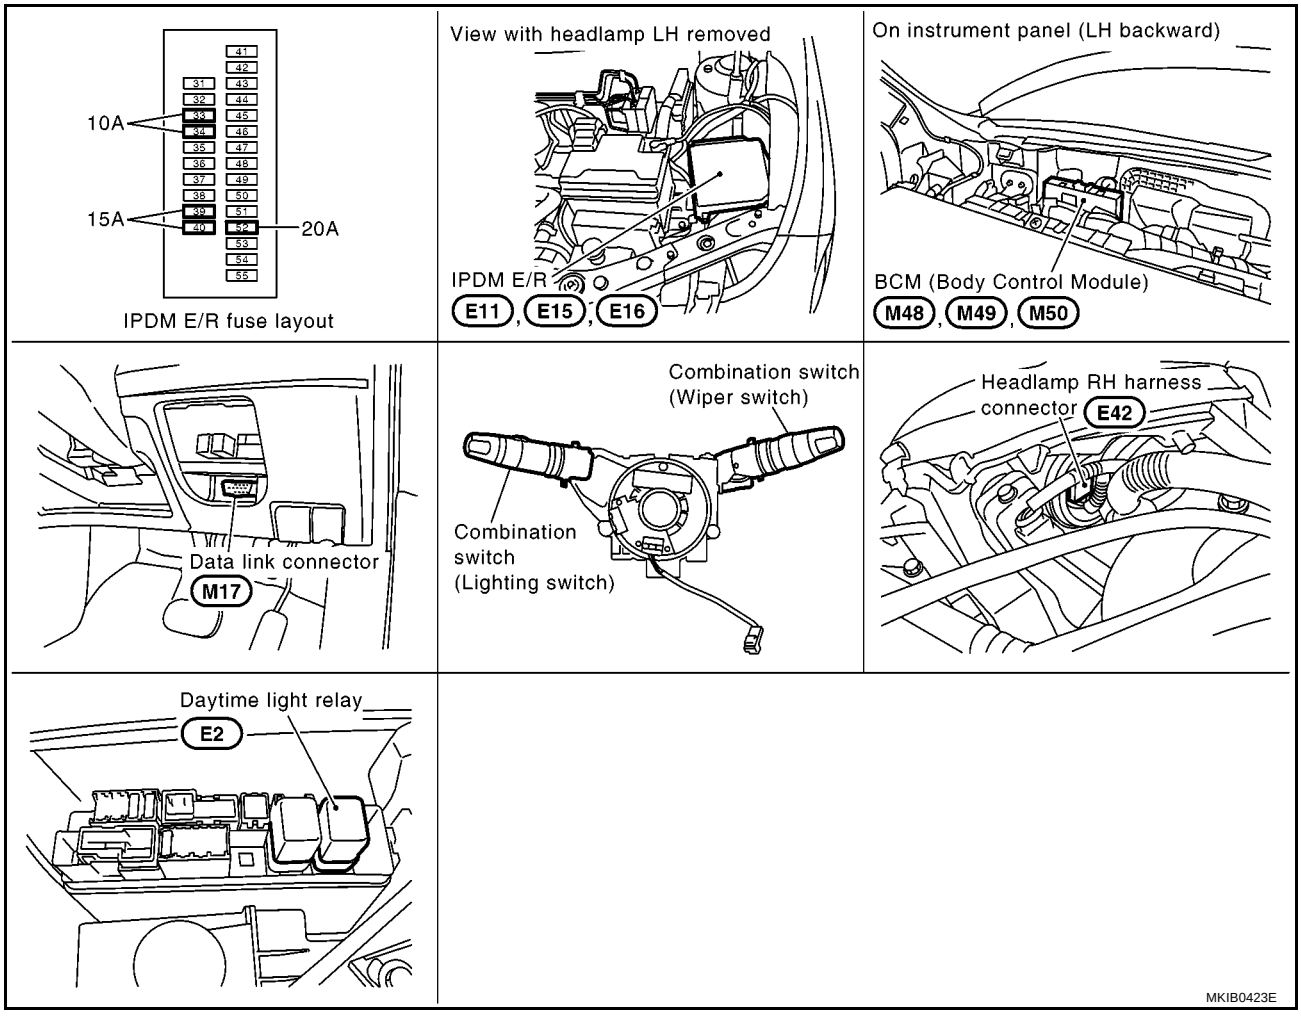
Tightening torque : 4.4 - 6.5 N·m (0.45 - 0.66 kg-m, 39 - 58 in-lb)

HEADLAMP - DAYTIME LIGHT SYSTEM -

PFP:26010

Component Parts and Harness Connector Location

EKS00ELD



System Description

EKS00ELE

The headlamp system for Northern Europe vehicles is equipped with a daytime light system that activates the low beam headlamps at approximately half illumination whenever the engine is running.
Power is supplied at all times

- to headlamp high LH and RH relay located in the IPDM E/R (intelligent power distribution module engine room).
- to headlamp low relay located in the IPDM E/R.

Power is also supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fuse and fusible link box),
- to IPDM E/R
- through 20A fuse (No.52, located in the IPDM E/R),
- to daytime light relay terminals 1 and 5
- through 10A fuse (No.27, located in the fuse and fusible link box) and
- to combination meter terminal 27
- through 10A fuse [No. 8, located in the fuse block (J/B)].

With the ignition switch in the ON or START position, power is supplied

- to BCM terminal 24
- through 10A fuse [No. 4, located in the fuse block (J/B)],
- to combination meter terminal 28

- through 10A fuse [No. 2, located in the fuse block (J/B)]
- to IPDM E/R.

With the ignition switch in the START position, power is supplied

- to BCM terminal 3
- through 10A fuse [No. 14, located in the fuse block (J/B)].

Ground is supplied

- to BCM terminals 2 and 70, and
- to combination meter terminals 21, 22 and 23
- through body grounds M19 and M20,
- to IPDM E/R terminals 3 and 54
- through body grounds E25(Gasoline engine models), E26 and E40.

HEADLAMP OPERATION

Low Beam Operation

When the lighting switch is turned to 2ND position and placed in LOW position, BCM read combination switch condition (refer to LT-189, "System Description"). And BCM send low beam request signal to IPDM E/R with CAN communication line. Then IPDM E/R is turned on headlamp low relay. Headlamp low relay is energized and then power is supplied

- through 15A fuse (No. 39, located in the IPDM E/R)
- through terminal 50 of the IPDM E/R
- to terminal 1 of headlamp LH, and
- through 15A fuse (No. 40, located in the IPDM E/R)
- through terminal 48 of the IPDM E/R
- to terminal 1 of headlamp RH.

Ground is supplied at all times

- to terminal 3 of headlamp LH
- through body grounds E25(Gasoline engine models), E26 and E40, and
- to terminal 3 of headlamp RH
- through daytime light relay 3 and 4
- through body grounds E25(Gasoline engine models), E26, E40.

With power and ground supplied, low beam headlamps will illuminate.

High Beam Operation (When engine stopped)/Flash-to-Pass Operation

With the lighting switch in 2ND position and placed in HIGH or PASS position, BCM read combination switch condition (refer to LT-189, "System Description"). And BCM send high beam request signal to IPDM E/R and combination meter with CAN communication line. Then IPDM E/R is turned on headlamp high LH and RH relay. Headlamp high relays are energized and then power is supplied

- through 10A fuse (No. 34, located in the IPDM E/R)
- through terminal 47 of the IPDM E/R
- to terminal 2 of the headlamp LH and
- through 10A fuse (No. 33, located in the IPDM E/R)
- through terminal 46 of the IPDM E/R
- to terminal 2 of the headlamp RH.

Ground is supplied

- to terminal 3 of headlamp LH
- through body grounds E25(Gasoline engine models), E26 and E40
- to terminal 3 of headlamp RH
- through daytime light relay 3 and 4
- through body grounds E25, E26 and E40

When power and ground supplied, the high beam headlamps will illuminate.
When combination meter received high beam request signal, combination meter will illuminate high beam indicator.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description"

DAYTIME LIGHT OPERATION

With the engine running and the lighting switch in the OFF position. BCM sends daytime light request signal to IPDM E/R with CAN communication line. Ground is supplied

- through terminal 65 of IPDM E/R
- to terminal 2 of daytime light relay.

Daytime light relay is energized, power is supplied.

- through daytime light relay terminals 3 and 5
- to terminal 3 of headlamp RH
- through terminal 1 of headlamp RH
- to IPDM E/R terminal 48
- through IPDM E/R terminal 50
- to terminal 1 of headlamp LH.

Ground is supplied

- to terminal 3 of headlamp LH and
- to IPDM E/R terminals 3 and 54
- through body grounds E25(Gasoline engine models), E26 and E40.

Because the low beam headlamps are now wired in series, they operate at half illumination.
If the lighting switch is in the 1st and 2nd position, daytime light operation is canceled.

FRIENDLY LIGHTING FUNCTION

High beam headlamps will illuminate for 30 seconds when,

- ignition switch is in OFF position,
- lighting switch is placed in OFF position, and
- lighting switch is placed in PASS position.

BCM re-starts to count for 30 seconds, when all doors are locked with remote controller or Intelligent Key during Friendly lighting function is activating.
Friendry lighting function time can be changed using “WORK SUPPORT” mode in “HEADLAMP”.

FAIL-SAFE FUNCTION

When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. If the fail-safe system is operating, headlamps illuminate when the ignition switch is turned from OFF to ON or ACC and headlamps are turned off when the ignition switch is turn from ON or ACC to OFF. If the fail-safe system is operating, headlamps does not operate when the combination switch is in any position. After CAN communication recovers normally, it also returns to normal control. (Refer to PG-19, "FAIL-SAFE FUNCTION")

CAN Communication

EKS00ERE

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LT8

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

How to Proceed With Trouble Diagnosis

EKS00ELK

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to Headlamp LT-42, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-64, "Preliminary Check"
4. Confirm headlamp does not operate by fail-safe control of IPDM E/R. Refer to PG-19, "FAIL-SAFE FUNCTION"
5. Check symptom and repair or replace the cause of malfunction.
6. Dose the headlamp operate normally? Yes: GO TO 7. No: GO TO 5.
7. INSPECTION END.

Preliminary Check

EKS00ELL

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch (ON)	4
	Ignition switch (START)	14

Refer to LT-59, "Wiring Diagram — DTRL —" .

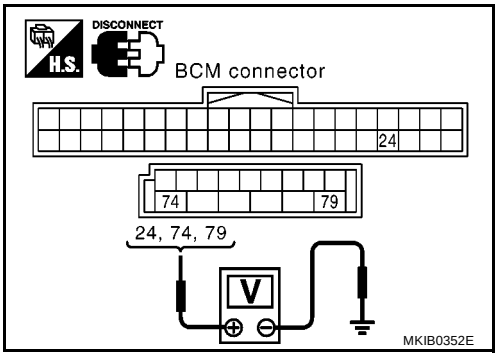
OK or NG

OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.



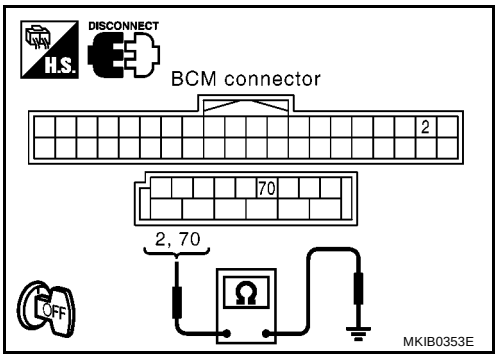
Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.



Terminals			Continuity
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)		

OK or NG

OK >> INSPECTION END
NG >> Repair or replace the harness.

CONSULT-II Function (BCM)

EKS00ELM

Refer to LT-28, "CONSULT-II Functions (BCM)" .

CONSULT-II Function (IPDM E/R)

EKS00ELN

Refer to LT-31, "CONSULT-II Functions (IPDM E/R)" .

Daytime Light Control Does Not Operate Properly

EKS00ELO

1. CHECK HEADLAMP OPERATION

Lighting switch is turned to 2nd position.

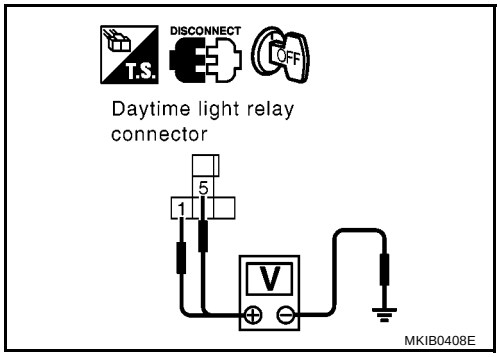
Does headlamp operate normally?

Yes >> GO TO 2.
No >> Check the following.

- Headlamp does not illuminate (both sides). GO TO LT-35, "Headlamp Low Beam Does Not Illuminate (Both Sides)" .
- Headlamp does not illuminate (one side). GO TO LT-38, "Headlamp Low Beam Does Not Illuminate (One Side)" .

2. CHECK DAYTIME LIGHT RELAY

1. Turn ignition switch OFF.
2. Disconnect daytime light relay connector.
3. Check voltage between daytime light relay harness connector and ground.



Terminals			Voltage [V]
(+)		(–)	
Connector	Terminal (Wire color)		
E2	1 (Y)	Ground	Battery voltage
	5 (Y)		

OK or NG

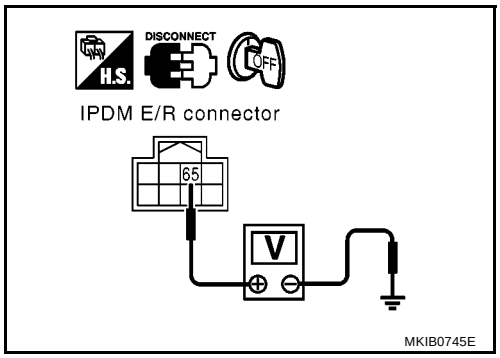
OK >> GO TO 3.
NG >> Check the following.

- 10A fuse (No. 27, located in fuse and fusible link box).
- Harness for open or short between daytime relay and fuse.

3. CHECK IPDM E/R OUTPUT SIGNAL

1. Disconnect IPDM E/R connector and connector daytime light relay.
2. Check voltage between IPDM E/R harness connector E17 terminal 65(L) and ground.

Battery voltage should exist.

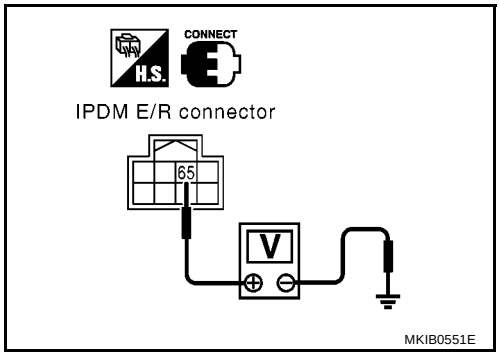


OK or NG

OK >> GO TO 4.
NG >> GO TO 5.

4. CHECK IPDM E/R OUTPUT SIGNAL

1. Connect IPDM E/R connector.
2. Check voltage between IPDM and ground.



Connector	Terminal (Wire color)	Condition	Voltage [V]
E17	65 (L)	Engine stop	Approx. 12
		Engine running	Approx. 0

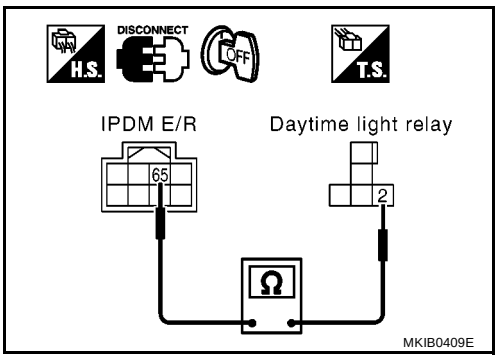
OK or NG

OK >> Replace daytime relay.
NG >> Replace IPDM E/R.

5. CHECK IPDM E/R OUTPUT SIGNAL CIRCUIT

1. Disconnect daytime light relay connector.
2. Check continuity between harness connector E2 terminal 2 (L) of daytime light relay and harness connector E17 terminal 65 (L) of IPDM E/R.

Continuity should exist.



OK or NG

OK >> Replace daytime light relay.
NG >> Repair or replace harness or connector.

Headlamp High Beam Does Not Illuminate (Both Sides)

EKS00ELP

Refer to LT-33, "Headlamp High Beam Does Not Illuminate (Both Sides)" .

RH High beam Does Not Illuminate

EKS00ELQ

1. CHECK BULB

Check bulb of headlamp RH.

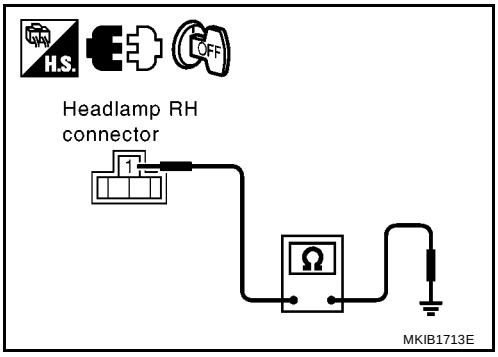
OK or NG

OK >> GO TO 2.
NG >> Replace bulb of headlamp.

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect headlamp RH connector.
3. Check voltage between headlamp RH harness connector E41 termional 2 (Y) and ground.

Terminals			Condition	Voltage [V]
(+)		(–)		
Connector	Terminal (Wire color)			
E41	2 (Y)	Ground	Lighting switch high beam ON	Battery voltage



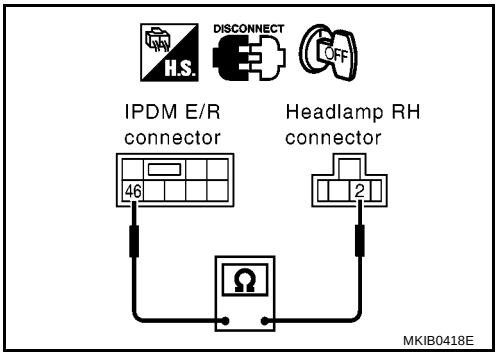
OK or NG

OK >> GO TO 5.
NG >> GO TO 3.

3. CHECK IPDM E/R CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check continuity between harness connector E15 terminal 46 (Y) of IPDM E/R and harness connector E41 terminal 2 (Y) of headlamp RH.

Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

4. CHECK FUSE

Check 10A fuse [No. 33, located in IPDM E/R].

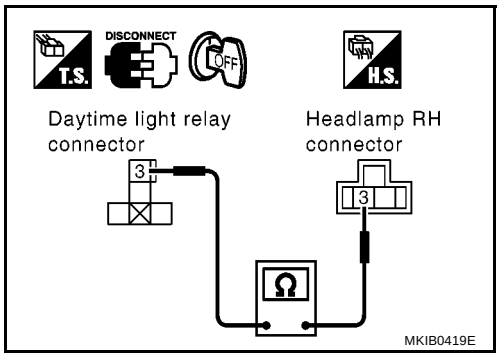
OK or NG

OK >> Replace IPDM E/R.
NG >> Replace fuse. If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse.

5. CHECK HEADLAMP RH GROUND CIRCUIT

Check continuity between harness connector E2 terminal 3 (R) of daytime light relay and harness connector E41 terminal 3 (R) of headlamp RH.

Continuity should exist.



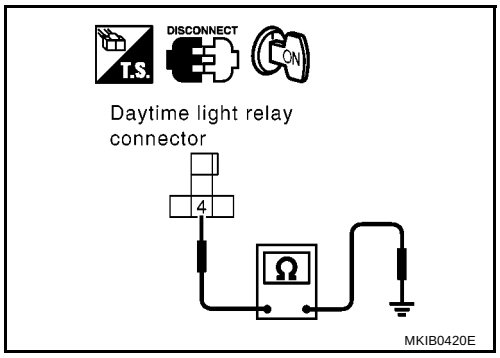
OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness or connector.

6. CHECK DAYTIME LIGHT GROUND CIRCUIT

Check continuity daytime light relay harness connector E2 terminal 4 (B) and ground.

Continuity should exist.



OK or NG

OK >> Replace daytime light relay.
NG >> Repair or replace harness or connector.

Headlamp LH High Beam Does Not Illuminate

EKS00ELR

Refer to LT-34, "Headlamp High Beam Does Not Illuminate (One Side)" .

Headlamp Low Beam Does Not Illuminate (Both Sides)

EKS00ELS

Refer to LT-35, "Headlamp Low Beam Does Not Illuminate (Both Sides)" .

RH Low Beam Does Not Illuminate

EKS00ELT

1. CHECK BULB

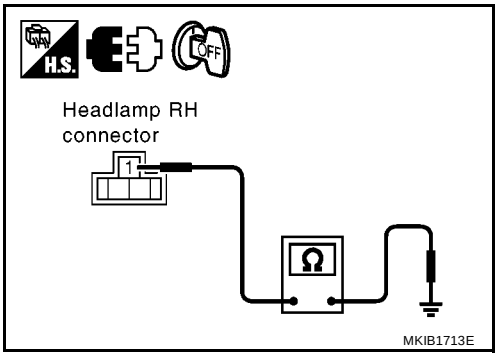
Check bulb of headlamp RH.

OK or NG

OK >> GO TO 2.
NG >> Replace bulb of lamp.

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect headlamp RH connector.
3. Check voltage between headlamp RH harness connector E41 termional 1 (PU) and ground.



Terminals			Condition	Voltage [V]
(+)		(–)		
Connector	Terminal (Wire color)			
E41	1 (PU)	Ground	Lighting switch low beam ON	Battery voltage

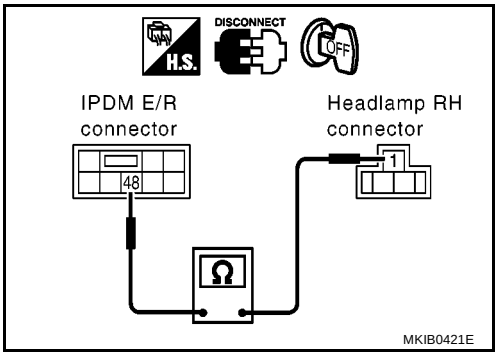
OK or NG

OK >> GO TO 5.
NG >> GO TO 3.

3. CHECK IPDM E/R CIRCUIT

1. Disconnect IPDM E/R connector.
2. Check continuity between harness connector E15 terminal 48 (PU) of IPDM E/R and harness connector E41 terminal 1 (PU) of headlamp RH.

Continuity should exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

4. CHECK FUSE

Check 15A fuse (No. 40 located in IPDM E/R). Refer to PG-49, "IPDM E/R Terminal Inspection" .

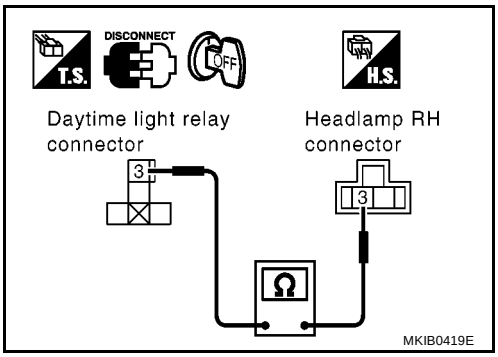
OK or NG

OK >> Replace IPDM E/R.
NG >> Replace fuse. If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse.

5. CHECK HEADLAMP RH GROUND CIRCUIT

Check continuity between harness connector E2 terminal 3 (R) of daytime light relay and harness connector E41 terminal 3 (R) of headlamp RH.

Continuity should exist.



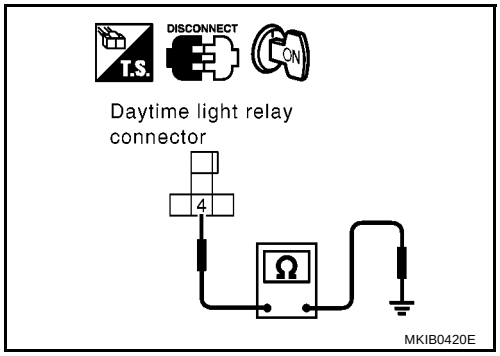
OK or NG

OK >> GO TO 6.
NG >> Repair or replace harness or connector.

6. CHECK DAYTIME LIGHT GROUND CIRCUIT

Check continuity daytime light relay harness connector E2 terminal 4 (B) and ground.

Continuity should exist.



OK or NG

OK >> Replace daytime light relay.
NG >> Repair or replace harness connector.

Headlamp LH Low Beam Does Not Illuminate

EKS00ELU

Refer to LT-38, "Headlamp Low Beam Does Not Illuminate (One Side)" .

High-Beam Indicator Lamp Does Not Illuminate

EKS00ELV

Refer to LT-35, "High-Beam Indicator Does Not Illuminate" .

Headlamps Do Not Turn OFF

EKS00ELW

Refer to LT-39, "Headlamps Do Not Turn OFF" .

Aiming Adjustment

EKS00ELX

Refer to LT-40, "Aiming Adjustment" .

Bulb Replacement

EKS00ELY

Refer to LT-41, "Bulb Replacement" .

Removal and Installation

EKS00ELZ

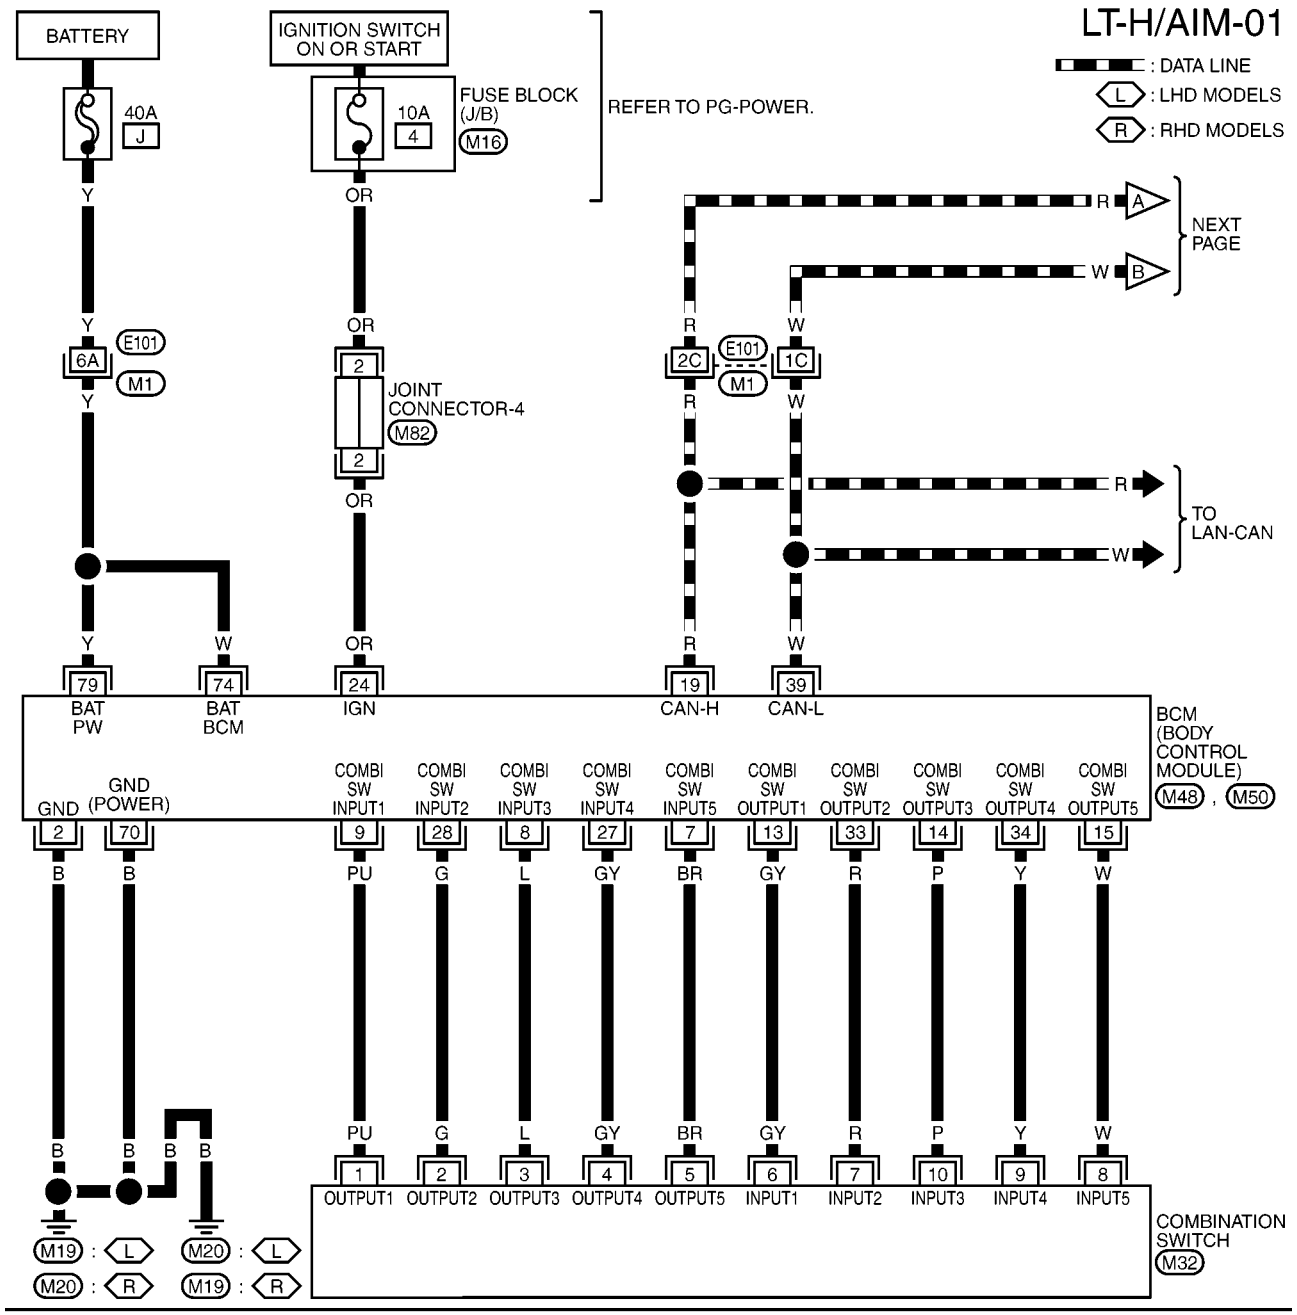
Refer to LT-41, "Removal and Installation" .

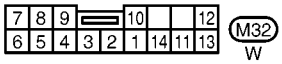
HEADLAMP AIMING CONTROL

PFP:26010

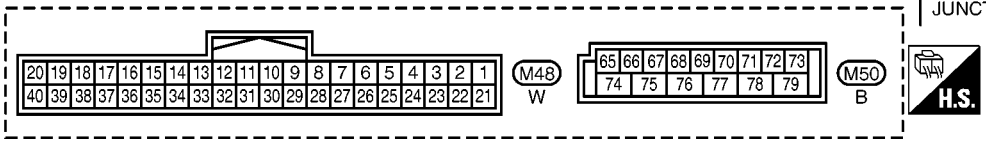
Wiring Diagram— H/AIM —

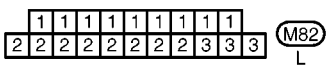
EKS00EM0



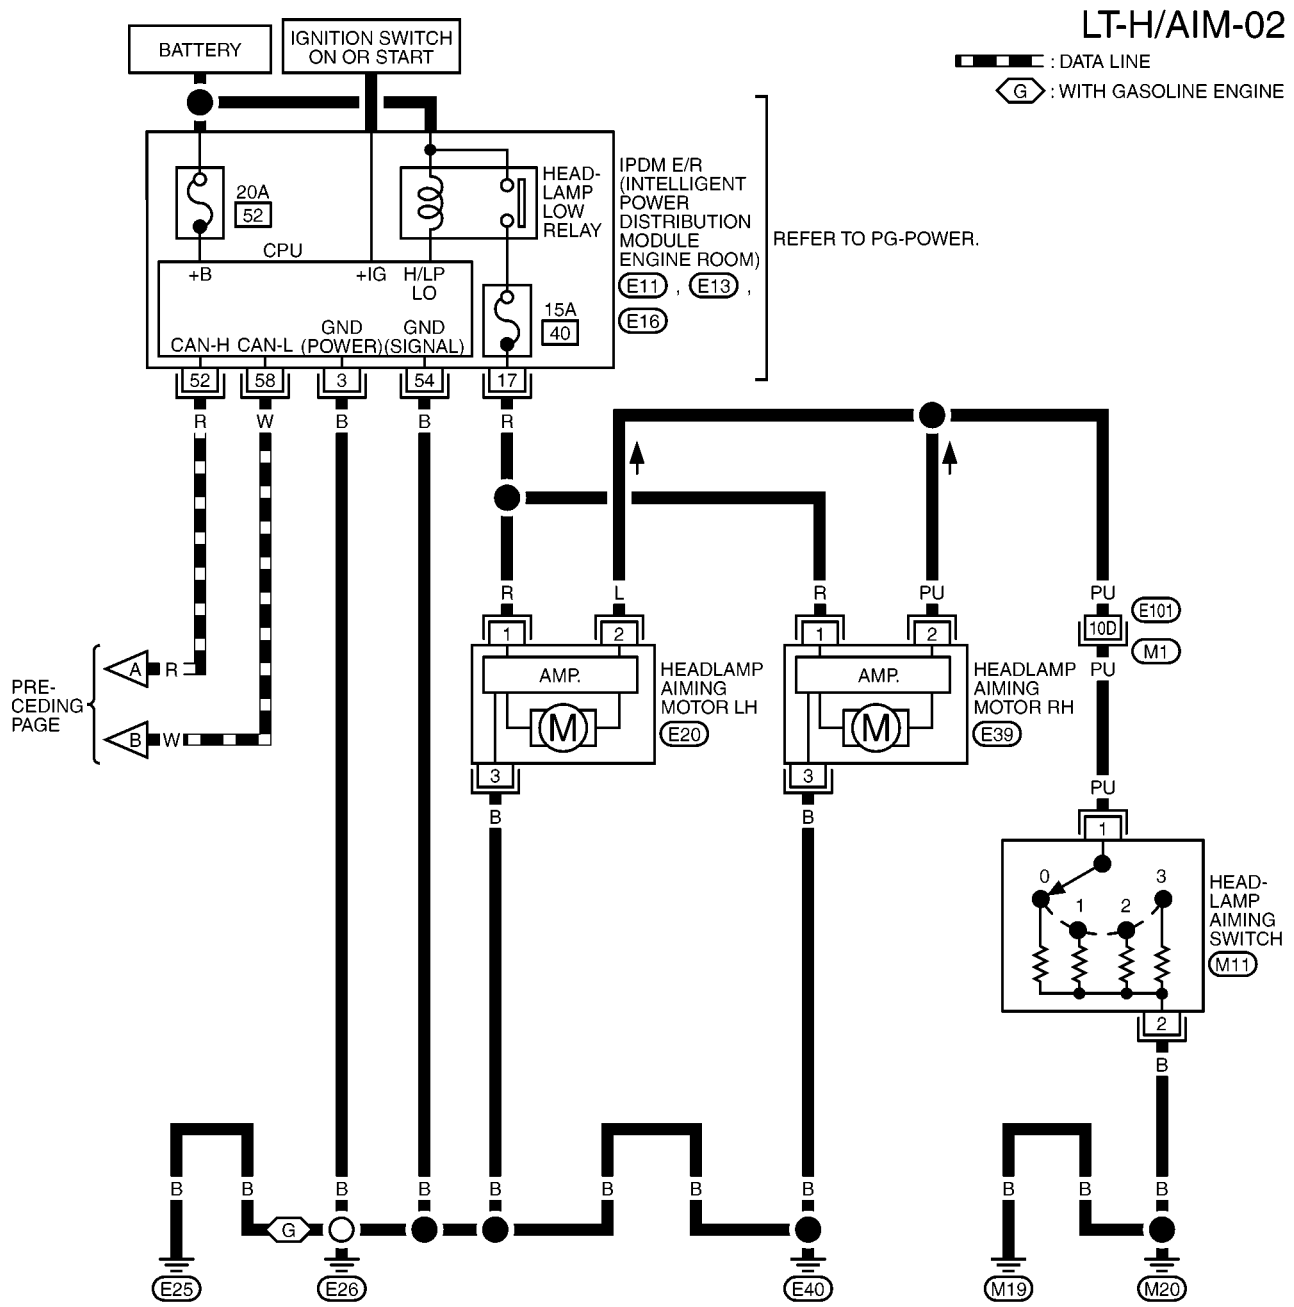


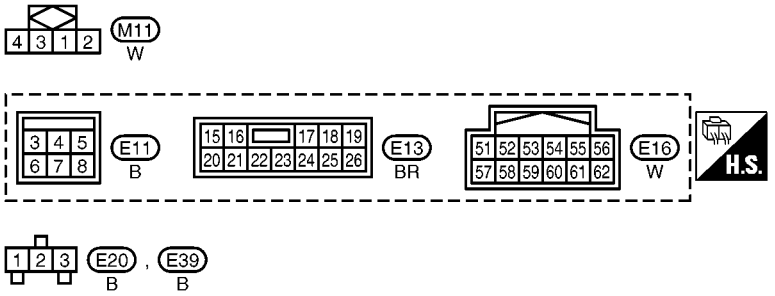
REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)





MKWA1524E





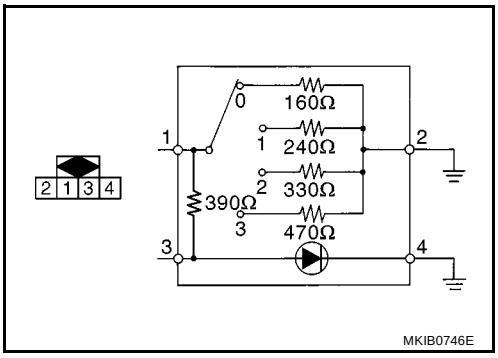
REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)

MKWA1439E

Switch Circuit Inspection

EKS00EM1

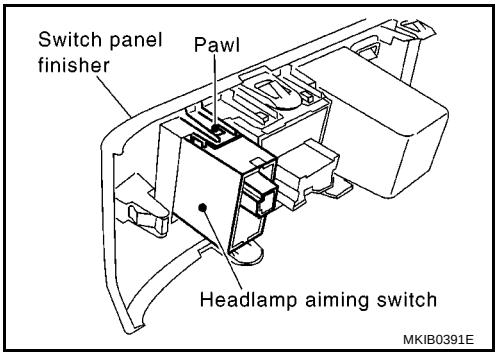
Using a circuit tester, check continuity between the headlamp aiming switch connector terminals in each operation status of the aiming switch.



Removal and Installation

EKS00EM2

1. Remove switch panel finisher. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Pull forward while expands switch panel finisher hooks, and remove from switch panel finisher.



FRONT FOG LAMP

PFP:26150

System Description

EKS00EM3

The front fog lamp operation is controlled by the lighting switch which built into the combination switch, BCM (body control module) and IPDM E/R (intelligent power distribution module engine/room).Front fog lamp relay is built into IPDM E/R.BCM read combination switch condition.Refer toLT-189, "System Description"

OUTLINE

Power is supplied at all times

- to front fog lamp relay, located in the IPDM E/R
- to IPDM E/R
- through 20A fusible link (No.52, located in the IPDM E/R).

Power is also supplied at all times

- to terminals 74 and 79 of the BCM
- through 40A fusible link (letter **J** , fuse and fusible link box).

When the ignition switch is ON or START position, power is supplied

- to terminal 24 of the BCM
- through 10A fuse [No. 4, located in fuse block (J/B)],
- to IPDM E/R

Ground is supplied

- to BCM terminals 2 and 70
- through body grounds M19, and M20,
- to IPDM E/R terminals 3 and 54
- through body grounds E25(Gasoline engine models), E26 and E40.

FOG LAMP OPERATION

The fog lamp switch is built into the combination switch. The lighting switch must be in the 1ST position and the fog lamp switch must be ON for fog lamp operation.
When the lighting switch is turned to 1ST position and front fog lamp switch in ON position, BCM reads combination switch condition (refer to LT-189, "System Description"). And BCM sends low beam request signal to IPDM E/R with CAN communication line. Then IPDM E/R is turned on front fog lamp relay. Front fog lamp relay is energized and then power is supplied.

- to front fog lamp LH terminal 1
- through IPDM E/R terminal 44, and
- to front fog lamp RH terminal 1
- through IPDM E/R terminal 43.

Ground is supplied

- to front fog lamp LH terminal 2
- through body grounds E25(Gasoline engine models), E26, E40, and
- to front fog lamp RH terminal 2
- through body grounds E25(Gasoline engine models), E26 and E40.

With power and grounds supplied, the front fog lamps illuminate.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description"

FAIL-SAFE FUNCTION

When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. If the fail-safe system is operating, front fog lamps does not operate when the combination switch is in any position. After CAN communication recovers normally, it also returns to normal control.

CAN Communication

EKS00ERG

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LT9

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

52	R	CAN H	—	—		—
54	B	Ground	ON	—		Approx. 0
58	W	CAN L	—	—		—

How to Proceed With Trouble Diagnosis

EKS00EM9

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to Front fog lamp LT-74, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-94, "Preliminary Check"
4. Confirm headlamp does not operate by fail-safe control of IPDM E/R. Refer to PG-19, "FAIL-SAFE FUNCTION" .
5. Check symptom and repair or replace the cause of malfunction.
6. Dose the front fog lamp operate normally? Yes: GO TO 7. No: GO TO 5.
7. INSPECTION END.

Preliminary Check

EKS00EMA

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch ON or START position	4

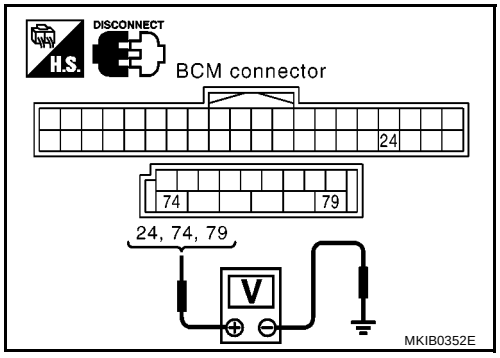
Refer to LT-89, "Wiring Diagram — F/FOG —" .

OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. POWER SUPPLY CIRCUIT CHECK

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM connector and ground.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

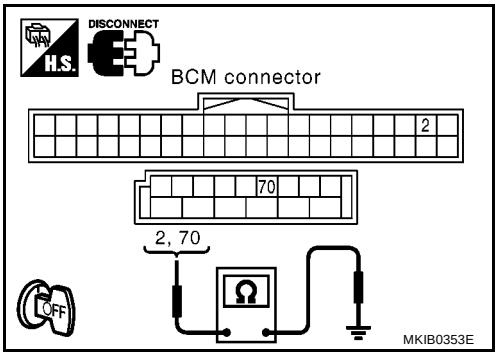
OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse. If NG, repair or replace the harness or fuse.

3. CHECK GROUND CIRCUIT

Check continuity between BCM and ground.

Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)		



OK or NG

OK >> INSPECTION END.
NG >> Repair or replace the harness.

CONSULT-II Function (BCM)

EKS00EMB

Refer to LT-28, "CONSULT-II Functions (BCM)" .

CONSULT-II Function (IPDM)

EKS00EMC

Refer to LT-31, "CONSULT-II Functions (IPDM E/R)" .

Front fog lamps Does Not Illuminate (Both Sides)

EKS00EMD

1. CHECK FUSE

Check the following
20A fuse (No. 55, located in the IPDM E/R).

OK or NG

OK >> GO TO 2.
NG >> Replace front fog lamp fuses, if fuses are blown, it verified that harness are malfunctions for short between IPDM E/R and front fog lamps.

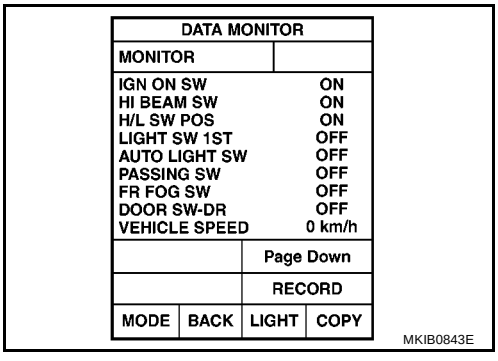
2. CHECK BETWEEN COMBINATION SWITCH AND BCM

With CONSULT-II

Select BCM on CONSULT-II.Check lighting switch (“FR FOG SW”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 1st position and fog lamp switch in ON position : FR FOG SW ON

When lighting switch is in OFF position : FR FOG SW OFF



Without CONSULT-II

Refer to LT-196, "Check Combination Switch" .

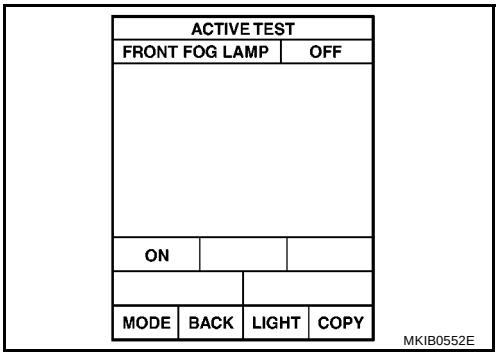
OK or NG

OK >> GO TO 3.
NG >> Refer to LT-196, "Check Combination Switch" .

3. CHECK BETWEEN IPDM E/R AND FRONT FOG LAMP

With CONSULT-II

1. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “FRONT FOG” on “SELECT TEST ITEM” screen.
3. Make sure that front fog lamp operate normally.



Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that front fog lamp operate normally.

OK or NG

OK >> GO TO 4.
NG >> Check the following:

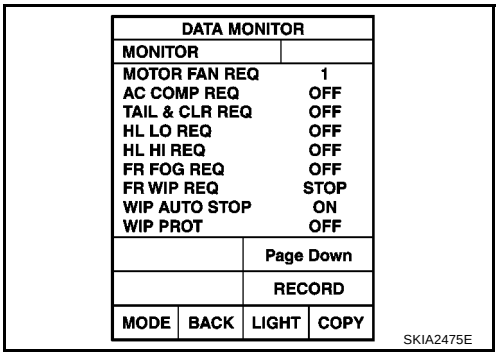
- Fog lamp bulbs
- Fog lamp ground circuit harness
- Harness between fog lamps and IPDM E/R

4. CHECK BETWEEN IPDM E/R AND BCM

Select IPDM E/R on CONSULT-II. Check lighting switch (“FR FOG REQ”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 1st position and fog lamp switch in ON position : FR FOG REQ ON

When lighting switch is in OFF position : FR FOG REQ OFF



OK or NG

OK >> Replace IPDM E/R.
NG >> Replace BCM.

Front Fog Lamp Does Not Illuminate (One Side)

EKS00EME

1. CHECK BULB

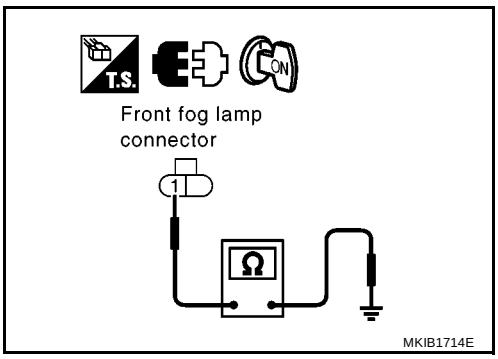
Check front fog bulb.

OK or NG

OK >> GO TO 2.
NG >> Replace front fog lamp bulb.

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect front fog lamp connector.
3. Turn ignition switch ON.
4. Check voltage between front fog lamp harness connector terminal and ground.



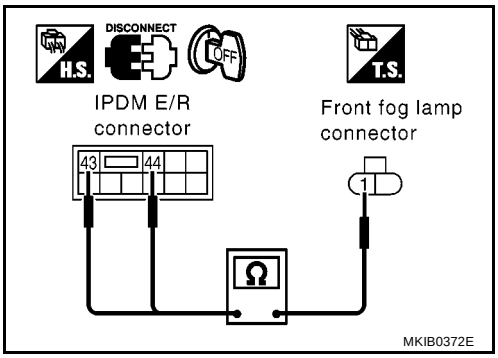
Terminals			Condition	Voltage [V]
(+)		(–)		
Connector	Terminal (Wire color)			
E7	1 (PU)	Ground	Lighting switch high beam ON	Battery voltage
E37	1 (W)			

OK or NG

OK >> GO TO 3.
NG >> GO TO 4.

3. CHECK BETWEEN IPDM E/R AND FRONT FOG LAMPS

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector.
3. Check continuity between harness connector terminals of IPDM E/R and harness connector terminal of front fog lamps.



Terminals					Continuity
IPDM E/R		Front fog lamp			
Connector	Terminal (Wire color)	Connector		Terminal (Wire color)	
E15	43 (W)	RH	E34	1 (W)	Yes
	44 (PU)	LH	E7	1 (PU)	

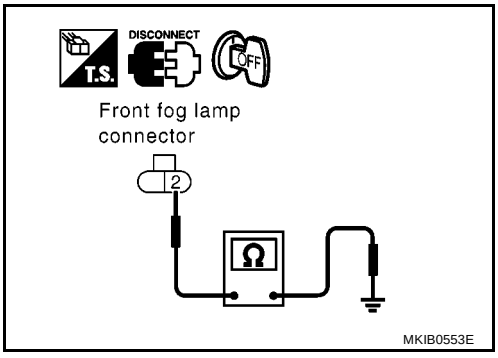
OK or NG

OK >> Replace IPDM E/R.
NG >> Repair or replace harness or connector.

4. CHECK FRONT FOG LAMP AND GROUND CIRCUIT

Check continuity between front fog lamp harness connector E7 (LH) or E34 (RH) terminal 2 (B) and ground.

Continuity should exist.



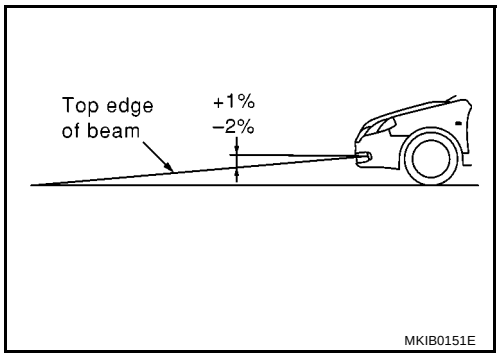
OK or NG

OK >> Check the condition of harness and the connector.
NG >> Repair or replace harness or connector.

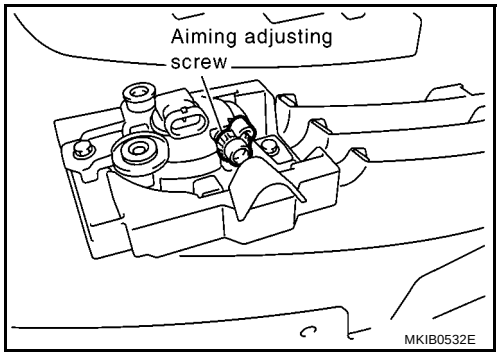
Aiming Adjustment

EKS00EMF

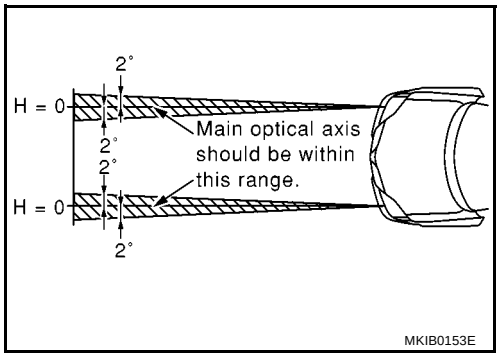
1. Set the top edge of the fog lamp lens as shown in the figure.



2. Turn front fog lamps ON.



3. Adjust front fog lamps as shown in the figure.
   - When performing adjustment, if necessary, cover the headlamps and opposite fog lamp.



Bulb Replacement

EKS00EMG

1. Turn ignition switch OFF
2. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
3. Remove front bumper. Refer to EI-4, "FRONT BUMPER" .
4. Turn bulb socket counterclockwise and unlock it.
5. Remove bulb from socket.

Front fog lamp: 12V-55W (H11)

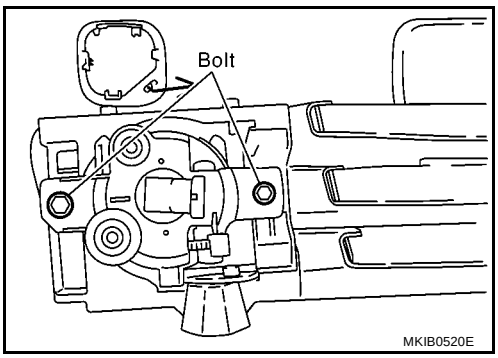
Removal and Installation

EKS00EMH

REMOVAL

1. Turn ignition switch OFF
2. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
3. Remove front bumper. Refer to EI-4, "FRONT BUMPER" .

4. Remove front fog lamp mounting bolt.



INSTALLTION

Install in the reverse order of removal.

REAR FOG LAMP

PFP:26550

System Description

EKS00EMI

The rear fog lamp operation is controlled by the lighting switch which built into the combination switch and BCM (body control module).BCM read combination switch condition.Refer toLT-189, "System Description"

OUTLINE

Power is supplied at all times

- through 40A fusible link (letter **J** , located in fuse and fusible link box)
- to terminals 74 and 79 of the BCM.

When the ignition switch is in ON or START position, power is supplied

- through 10A fuse [No. 4, located in fuse block (J/B)]
- to terminal 24 of the BCM.

Ground is supplied

- to BCM terminals 2 and 70
- through body grounds M19 and M20.

REAR FOG LAMP OPERATION

When the lighting switch is turned to 2ND position or front fog lamp switch ON position and rear fog lamp switch in ON position, BCM read combination switch condition (refer to LT-189, "System Description"). Rear fog lamp is energized and then power is supplied.
With the rear fog lamp switch in the ON position, BCM supplies the power supply to rear fog lamp.

- to rear combination lamp LH/RH terminal 6
- through BCM terminal 69

Ground is supplied

- to rear combination lamp LH/RH terminal 4
- through body grounds B17, B23, B44 and B51

With power and grounds supplied, the rear fog lamps illuminate.
Rear fog indicator illuminate when combination meter receives input requesting rear fog indicator illuminate. This is communicated to BCM across the CAN communication lines.
When combination meter received rear fog lamp request signal, combination meter will illuminate rear fog indicator.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description"

CAN Communication

EKS00ERI

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LTA

Go to CAN system, when selecting your car model from the following table.

19	R	CAN H	—	—	—
24	OR	Ignition power supply	ON	—	Approx. 12
39	W	CAN L	—	—	—
69	R	Rear fog lamp signal	ON	Rear fog lamp switch: ON	Approx. 12
				Rear fog lamp switch: OFF	Approx. 0
70	B	Ground	ON	—	Approx. 0
74	W	BAttery power supply	—	—	Approx. 12
79	Y	Battery power supply	—	—	Approx. 12

How to Proceed With Trouble Diagnosis

EKS00EMM

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to rear fog lamp LT-100, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-118, "Preliminary Check"
4. Check symptom and repair or replace the cause of malfunction.
5. Does the rear fog lamp operate normally? Yes: GO TO 6. No: GO TO 4.
6. INSPECTOPN END.

Preliminary Check

EKS00EMN

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch (ON)	4

Refer to LT-115, "Wiring Diagram — R/FOG —" .

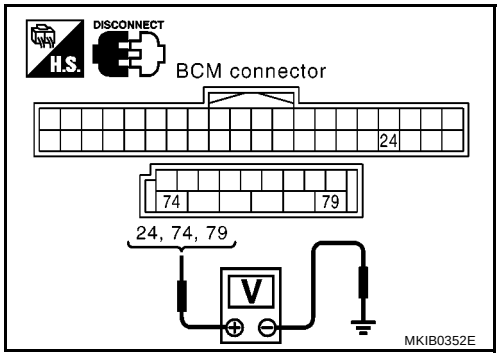
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	79 (Y)	Ground	Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage
M50	74 (W)		Battery voltage	Battery voltage	Battery voltage



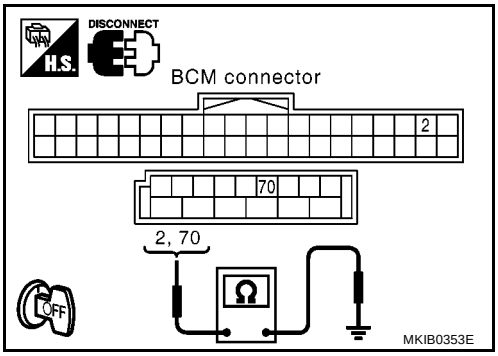
OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse. If NG, repair or replace the harness or fuse.

3. CHECK GROUND CIRCUIT

Check continuity between BCM and ground.

Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)		



OK or NG

OK >> INSPECTION END.
NG >> Repair or replace the harness.

CONSULT-II Function (BCM)

EKS00EMO

Refer to LT-28, "CONSULT-II Functions (BCM)" .

Rear Fog Lamp Does Not Illuminate

EKS00EMP

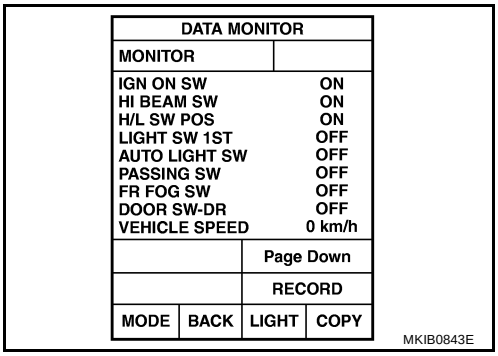
1. AHECK BETWEEN COMBINATION SWITCH AND BCM

With CONSULT-II

Select BCM on CONSULT-II. Check lighting switch (“RR FOG SW”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 2nd position, fog lamp switch in ON position and rear fog lamp switch in ON position : RR FOG SW ON

When rear fog lamp switch is in OFF position : RR FOG SW OFF



Without CONSULT-II

Refer to LT-189, "COMBINATION SWITCH" .

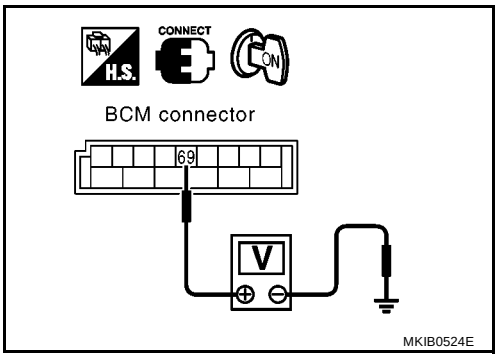
OK or NG

OK >> GO TO 2.
NG >> Refer to LT-189, "COMBINATION SWITCH" .

2. CHECK BCM OUTPUT SIGNAL

Check voltage between BCM terminal 69 (R) and ground.

Connector	Terminal (Wire color)	(–)	Condition	Voltage
M50	69 (R)	Ground	Rear fog switch ON	Battery voltage
			Rear fog switch OFF	Approx. 0



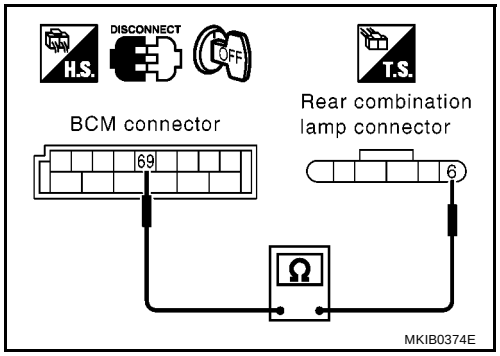
OK or NG

OK >> GO TO 3.
NG >> Replace BCM.

3. CHECK BETWEEN BCM AND REAR FOG LAMPS

1. Turn ignition switch OFF.
2. Disconnect BCM connector and rear combination lamp connector.
3. Check continuity between BCM and rear combination lamps.

Terminals					Continuity
Rear fog lamp (Rear combination lamp)			BCM		
Connector		Terminal (Wire color)	Connector	Terminal (Wire color)	
RHD models	B36	6 (R)	M50	69 (R)	Yes
LHD models	B37	6 (R)			



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

4. CHECK BULB

Check rear fog lamp bulb.

OK or NG

OK >> GO TO 5.
NG >> Replace rear fog lamp bulb.

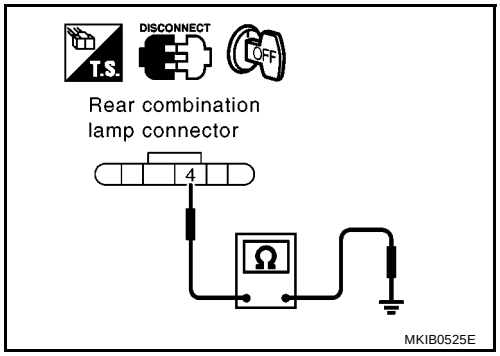
5. CHECK REAR FOG LAMP GROUND CIRCUIT

Check continuity between rear fog lamp harness connector B36 (RHD) or B37 (LHD) terminal 4(B) and ground.

Continuity should exist.

OK or NG

OK >> Replace rear fog lamp.
NG >> Repair or replace harness or connector.



Bulb Replacement

EKS00EMQ

Refer to LT-186, "Bulb Replacement" .

Removal and Installation

EKS00EMR

Refer to LT-186, "Removal and Installation" .

TURN SIGNAL AND HAZARD WARNING LAMPS

PFP:26120

System Description

EKS00EMS

TURN SIGNAL OPERATION

When the ignition switch is in the ON or START position, power is supplied

- through 10A fuse [No. 4, located in the fuse block (J/B)]
- to BCM (body control module) terminal 24, and
- through 10A fuse [No. 2, located in the fuse block (J/B)]
- to combination meter terminal 28.

Ground is supplied

- to BCM terminals 2 and 70, and
- to combination meter terminals 21, 22 and 23
- through body grounds M19 and M20.

LH Turn

When the turn signal switch (combination switch) is moved to the LH position, the BCM read combination switch condition (Refer to LT-189, "System Description")power is supplied.

- through BCM terminal 65
- to front turn signal lamp LH terminal 1,
- to side turn signal lamp LH terminal 1 and
- to rear combination lamp LH (turn signal) terminal 5.

Ground is supplied to the front turn signal lamp LH terminal 2 and side turn signal lamp LH terminal 2 through body grounds E25(Gasoline engine models), E26 and E40.
Ground is also supplied to rear combination lamp LH (turn signal) terminal 4 through body grounds B17, B23, B44, and B51.
BCM send turn indicator signal to combination meter with CAN communication line.Combination meter is flashed turn LH indicator lamp.
With power and ground supplied, the BCM controls the flashing of the LH turn signal lamps.

RH Turn

When the turn signal switch (combination switch) is moved to the RH position, the BCM read combination meter condition (Refer to LT-189, "System Description").Power is supplied.

- through BCM terminal 66
- to front turn signal lamp RH terminal 1,
- to side turn signal lamp RH terminal 1 and
- to rear combination lamp RH (turn signal) terminal 5.

Ground is supplied to the front turn signal lamp RH terminal 2 and side turn signal lamp RH terminal 2 through body grounds E25(Gasoline engine models), E26 and E40.
Ground is supplied to rear combination lamp RH (turn signal) terminal 4 through body ground B17, B23, B44 and B51.
BCM send turn indicator signal to combination meter via CAN communication line.Combination meter is flashed turn RH indicator lamp.
With power and ground supplied, the BCM controls the flashing of the RH turn signal lamps.

HAZARD LAMP OPERATION

Power is supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fuse and fusible link box), and
- to combination meter terminal 27
- through 10A fuse [No. 8, located in the fuse block (J/B)].

Ground is supplied

- to hazard switch terminal 1,
- to BCM terminals 2 and 70 and
- to combination meter terminals 21, 22 and 23
- through body grounds M19 and M20.

When the hazard switch is ON position, ground is supplied

- to BCM terminal 26
- through hazard switch terminal 2.

Power is supplied

- through BCM terminal 65
- to front turn signal lamp LH terminal 1
- to side turn signal lamp LH terminal 1
- to rear combination lamp LH (turn signal) terminal 5
- through BCM terminal 66
- to front turn signal lamp RH terminal 1
- to side turn signal lamp RH terminal 1
- to rear combination lamp RH (turn signal) terminal 5.

Ground is supplied

- to the front turn signal lamp LH terminal 2 and side turn signal lamp LH terminal 2 through body grounds E25(Gasoline engine models), E26 and E40
- to the front turn signal lamp RH terminal 2 and side turn signal lamp RH terminal 2 through body grounds E25(Gasoline engine models), E26 and E40
- to rear combination lamp LH (turn signal) terminal 4 through body grounds B17, B23, B44 and B51
- to rear combination lamp RH (turn signal) terminal 4 through body grounds B17, B23, B44 and B51.

BCM send turn indicator signal to combination meter with CAN communication line.Combination meter is flashed turn LH and RH indicator lamps.
With power and ground supplied, the BCM controls the flashing of the hazard warning lamps.

MULTI-REMOTE CONTROL SYSTEM OPERATION

Power is supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fuse and fusible link box), and
- to combination meter terminal 27
- through 10A fuse [No. 8, located in the fuse block (J/B)].

Ground is supplied

- to BCM terminals 2 and 70
- through body grounds M19, M20, and
- to combination meter terminals 21, 22 and 23
- through body grounds M19 and M20.

When BCM receives LOCK or UNLOCK signal from remote controller, power is supplied.

- through BCM terminal 65
- to front turn signal lamp LH terminal 1
- to side turn signal lamp LH terminal 1
- to rear combination lamp LH (turn signal) terminal 5
- through BCM terminal 66
- to front turn signal lamp RH terminal 1
- to side turn signal lamp RH terminal 1
- to rear combination lamp RH (turn signal) terminal 5.

Ground is supplied

- to the front turn signal lamp LH terminal 2 and side turn signal lamp LH terminal 2 through body grounds E25(Gasoline engine models), E26 and E40.
- to the front turn signal lamp RH terminal 2 and side turn signal lamp RH terminal 2 through body grounds E25(Gasoline engine models), E26 and E40.
- to rear combination lamp LH (turn signal) terminal 4 through body grounds B17, B23, B44 and B51.
- to rear combination lamp RH (turn signal) terminal 4 through body grounds B17, B23, B44 and B51.

BCM send turn indicator signal to combination meter via CAN communication line.Combination meter is flashed turn LH and RH indicator lamps.
With power and ground supplied, the BCM controls the flashing of the hazard warning lamps.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description"

CAN Communication

EKS00ERK

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LTB

Go to CAN system, when selecting your car model from the following table.

Body type	3door/5door

How to Proceed With Trouble Diagnosis

EKS00EMW

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to Turn signal and hazard warning lamps LT-121, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-142, "Preliminary Check"
4. Check symptom and repair or replace the cause of malfunction.
5. Dose the turn signal and hazard warning lamps operate normally? Yes: GO TO 6. No: GO TO 4.
6. INSPECTION end.

Preliminary Check

EKS00EMX

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch ON or START position	4

Refer to LT-138, "Wiring Diagram — TURN —" .

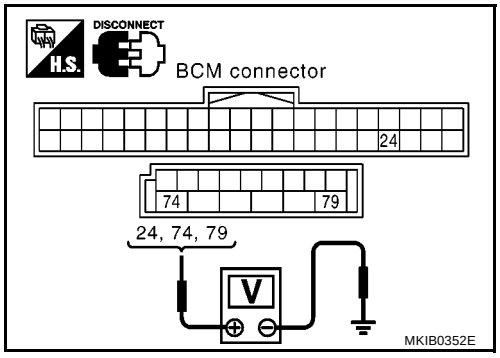
OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. POWER SUPPLY CIRCUIT CHECK

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM connector and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage



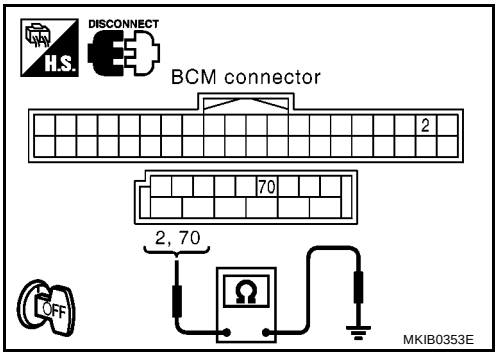
OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse. If NG, repair or replace the harness or fuse.

3. CHECK GROUND CIRCUIT

Check continuity between BCM and ground.

Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)		



OK or NG

OK >> INSPECTION END
NG >> Repair or replace the harness (ground circuit).

CONSULT-II Functions (BCM)

EKS00EMY

CONSULT-II can display each diagnosis itemusing the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

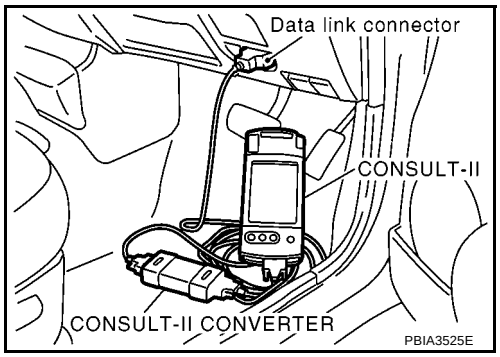
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Flasher	Work Support	Changes the setting for each function.
	Data monitor	Displays BCM input data in real time.
	Active Test	Sends a drive signal to electronic components to check their operation.

CONSULT-II BASIC OPERATION

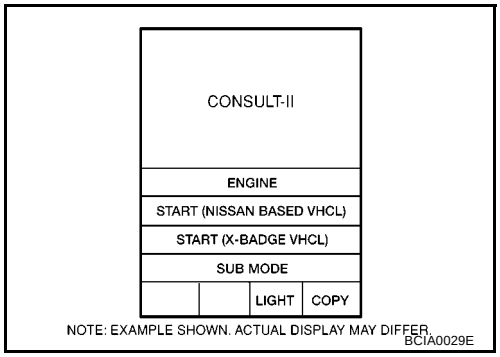
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

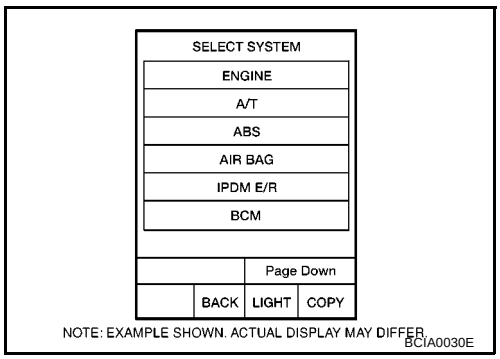
1. Turn ignition switch OFF.
2. Connect CONSULT-II and “CONSULT-II CONVERTER” to data link connector.



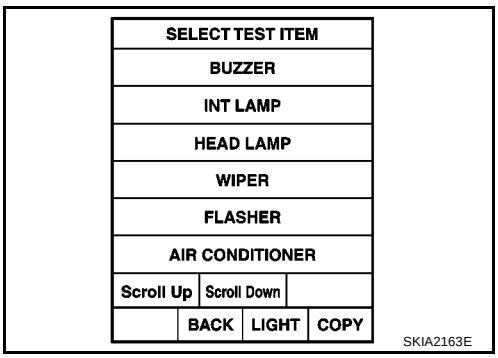
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



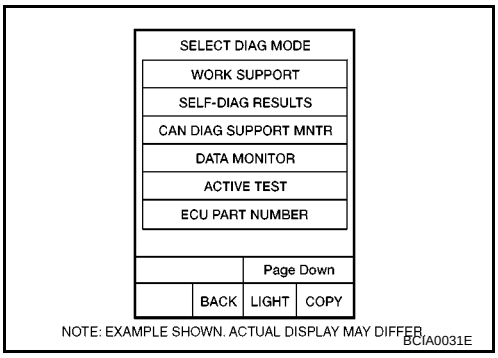
5. Touch “BCM” on “SELECT SYSTEM” screen.
   If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “FLASHER” on “SELECT TEST ITEM” screen.



7. Touch "WORK SUPPORT", “DATA MONITOR” or "ACTIVE TEST" on “SELECT DIAG MODE” screen.



WORK SUPPORT

Supported Item	All items will be monitored.
HAZARD LAMP SET	hazard reminder function mode can be changed in this mode.

Hazard Lamp Set

	MODE1		MODE2		MODE3		MODE4	
Remote controller operation	Lock	Unlock	Lock	Unlock	Lock	Unlock	Lock	Unlock
Hazard warning lamp flash	-	-	-	Twice	Once	-	Once	Twice

DATA MONITOR

Operation Procedure

1. Touch “FLASHER” on “SELECT TEST ITEM” screen.
2. Touch “DATA MONITOR” on the “SELECT DIAG MODE” screen.
3. Touch “ALL SIGNALS” or “SELETION FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
SELECTION FROM MENU	Selects and monitors individual items.

4. Touch “START”.
5. When “SELECTION FROM MENU” is selected, touch items to be monitored. When “ALL SIGNALS” is selected, all the items will be monitored.
6. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

Display Item List

Monitor item “UNIT”		Display content
IGN ON SW	[ON/OFF]	Displays status (Ignition switch ON: ON/Others OFF, ACC: OFF) as judged from the ignition switch signal.
HAZARD SW	[ON/OFF]	Displays status (Hazard ON: ON/Hazard OFF: OFF) as judged from hazard switch signal.
TURN SIGNAL R	[ON/OFF]	Displays status (Turn right: ON/Others: OFF) as judged from lighting switch signal.

Monitor item “UNIT”		Display content
TURN SIGNAL L	[ON/OFF]	Displays status (Turn left: ON/Others: OFF) as judged from lighting switch signal.
TURN/L MNTR	[ON/OFF]	Displays status (One bulb blown: ON/Others: OFF) as judged from bulb signal.

ACTIVE TEST

Test Item	Description
FLASHER	This test is able to check left or right turn signal lamp operation. The turn signal lamp turned ON when "LH" or "RH" on CONSULT-II screen is touched.

Turn Signal Lamp Does Not Operate

EKS00EMZ

1. CHECK BULB

Check turn signal lamp bulb.

OK or NG

OK >> GO TO 2.
NG >> Replace turn signal lamp bulb.

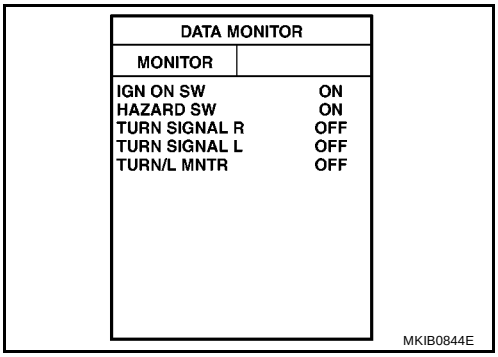
2. CHECK BCM INPUT SIGNAL

With CONSULT-II

Select BCM on CONSULT-II.Check turn signal (“TURN SIGNAL”) in “DATA MONITOR” mode with CONSULT-II.

When combination switch LH position : TURN SIGNAL L ON

When combination switch RH position : TURN SIGNAL R ON



Without CONSULT-II

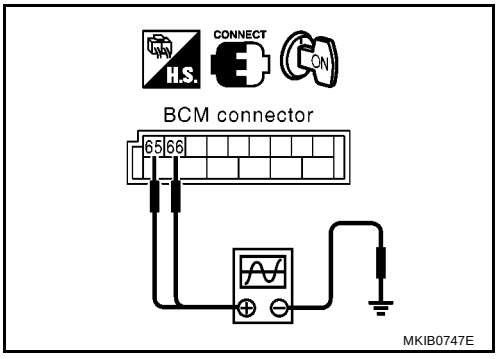
Refer to LT-196, "Check Combination Switch" .

OK or NG

OK >> GO TO 3.
NG >> Refer to LT-196, "Check Combination Switch" .

3. CHECK BCM

1. Connect BCM connector and all turn signal lamp connectors.
2. Check voltage between BCM connector M50 terminals 65, 66 and ground.



Terminals				Condition		Voltage
(+)			(-)			
Connector		Terminal (Wire color)				
RH	M50	66 (R)	Ground	Combination switch	Turn right ON	LH		65 (P)			Turn left ON	

OK or NG

OK >> Check harness for open between BCM and turn signal lamps, turn signal lamp ground circuit.
NG >>
- Replace BCM
- Check harness for short between BCM and turn signal lamps. If NG, repair or replace the harness.

Hazard Lamp Does Not Operate

EKS00EN0

1. CHECK BULB

Check turn signal lamp bulb.

OK or NG

OK >> GO TO 2.
NG >> Replace turn signal lamp bulb.

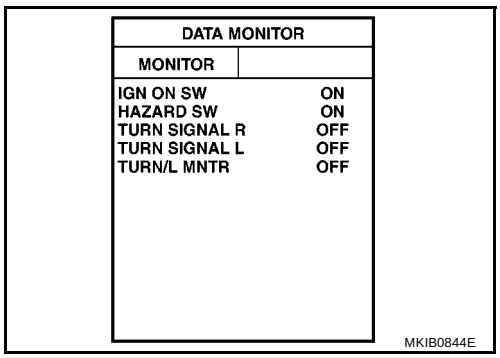
2. CHECK BCM INPUT SIGNAL

With CONSULT-II

Select BCM on CONSULT-II.Check turn signal (“HAZARD SW”) in “DATA MONITOR” mode with CONSULT-II.

When hazard switch ON : HAZARD SW ON

When hazard switch OFF : HAZARD SW OFF



Without CONSULT-II

Refer to LT-196, "Check Combination Switch" .

OK or NG

OK >> GO TO 3.
NG >> Refer to LT-196, "Check Combination Switch" .

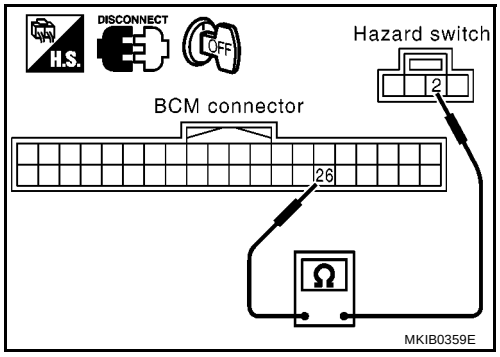
3. CHECK HAZARD SWITCH AND BCM

1. Turn ignition switch OFF.
2. Disconnect BCM connector and hazard switch connector.
3. Check continuity between harness connector M48 terminal 26 (L) of BCM and hazard switch harness connector M61 terminal 2 (L).

Continuity should exist.

4. Check continuity between harness connector M48 terminal 26 (L) of BCM and body ground.

Continuity should not exist.

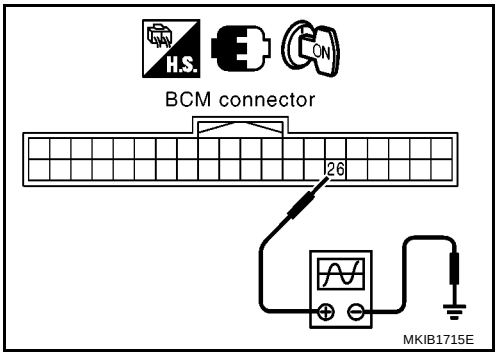


OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

4. CHECK BCM AND GROUND

1. Connect BCM connector.
2. Check voltage between harness connector M48 terminal 26 (L) of BCM and ground with hazard switch in OFF position.



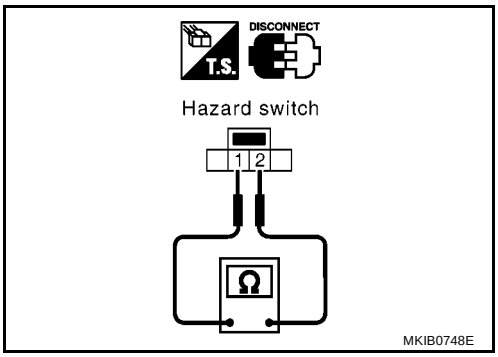
Terminal No.	Wire color	Signal designation	Measuring condition			Reference value (V)
			IGN switch	Condition		
26	L	Hazard	OFF	Hazard switch	ON	Approx. 0
					OFF	
OK or NG

OK >> GO TO 5.
NG >> Replace BCM.

5. CHECK HAZARD SWITCH

Check continuity hazard switch connector M61.

Terminal		Condition	Continuity
2	1	Hazard switch is ON	Yes
		Hazard switch is OFF	No



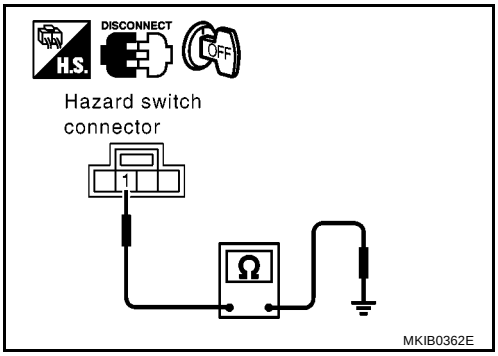
OK or NG

OK >> GO TO 6.
NG >> Replace hazard switch.

6. CHECK HAZARD SWITCH AND GROUND

Check continuity between harness connector M61 terminal 1 (B) of hazard switch and ground.

Continuity should exist.



OK or NG

OK >> INSPECTION END.
NG >> Repair or replace harness or connector.

Turn Signal Indicator Lamp Does Not Operate

EKS00EN1

1. CHECK BULB

Check indicator bulb.

OK or NG

OK >> Replace combination meter.
NG >> Replace indicator bulb.

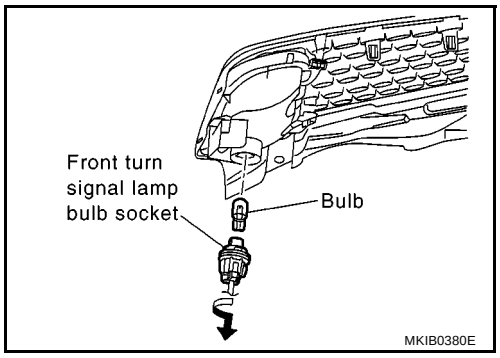
Bulb Replacement

EKS00EN2

FRONT TURN SIGNAL LAMP

1. Remove front grille. Refer to EI-8, "FRONT GRILLE" .
2. Turn bulb socket left to release lock and remove it.
3. Remove bulb.

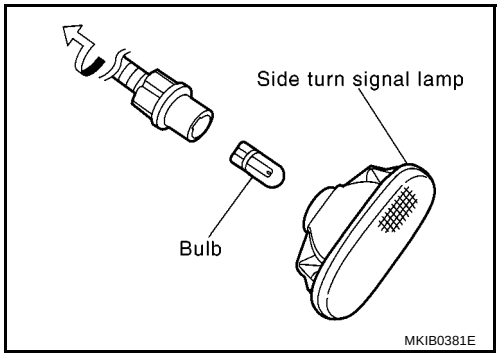
Front turn signal lamp : 12V-21W



SIDE TURN SIGNAL LAMP

1. Remove side turn signal lamp. Refer to LT-151, "SIDE TURN SIGNAL LAMP" .
2. Turn bulb socket left to release lock and remove it.
3. Remove bulb.

Side turn signal lamp : 12V-5W



REAR TURN SIGNAL LAMP

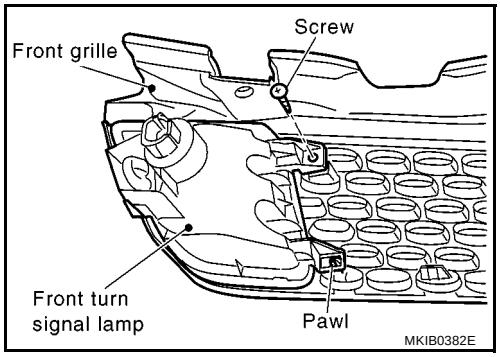
Refer to LT-186, "REAR COMBINATION LAMP" .

Removal and Installation

EKS00EN3

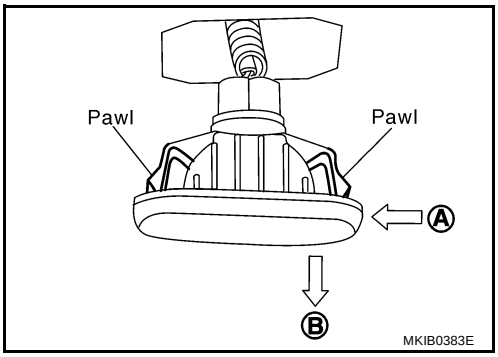
FRONT TURN SIGNAL LAMP

1. Remove front grille. Refer to EI-8, "FRONT GRILLE" .
2. Remove screw and tabs, and then remove front turn signal lamp from front grille.



SIDE TURN SIGNAL LAMP

1. Pull the side turn signal lamp in direction B while pushing it in direction A as shown by the arrow in the figure and remove from the vehicle.
2. Disconnect side turn signal lamp connector.
   When installing, face surface with rib upwards.



REAR TURN SIGNAL LAMP

Refer to LT-186, "REAR COMBINATION LAMP" .

PARKING, LICENSE PLATE AND TAIL LAMPS

PFP:26550

System Description

EKS00EN4

The parking, license plate and tail lamps operation is controlled by the lighting switch which built into the combination switch, BCM (body control module) and IPDM E/R (intelligent power distribution module engine room).Tail lamp relay is built into IPDM E/R.BCM read combination switch condition.Refer toLT-189, "System Description"

Power is supplied at all times

- to tail lamp relay, located in the IPDM E/R, and
- to IPDM E/R
- through 20A fusible link (No.52, located in the IPDM E/R).

Power is also supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fuse and fusible link box).

With the ignition switch in the ON or START position, power is supplied

- to BCM terminal 24
- through 10A fuse [No. 4, located in the fuse block (J/B)].

Ground is supplied

- to BCM terminals 2 and 70
- through body grounds M19 and M20.
- to IPDM E/R terminals 3 and 54
- through body grounds E25(Gasoline engine models), E26 and E40.

OPERATION BY LIGHTING SWITCH

When the lighting switch is turned to 1ST position, BCM read combination switch condition (refer to LT-189, "System Description"). And BCM send parking, license plate and tail lamps request signal to IPDM E/R with CAN communication line. Then IPDM E/R is turned on tail lamp relay. Tail lamp relay is energized and then power is supplied.

- through terminal 49 of the IPDM E/R
- to parking lamp LH terminal 1
- through terminal 15 of the IPDM E/R
- to rear combination lamp LH terminal 3
- through terminal 45 of the IPDM E/R
- to parking lamp RH terminal 1
- through terminal 16 of the IPDM E/R
- to rear combination lamp RH terminal 3
- to license plate lamp terminal 2.

Ground is supplied at all times

- to each parking lamps terminal 2
- through body grounds E25(Gasoline engine models), E26 and E40
- to each rear combination lamps terminal 4
- to license plate lamp terminal 1
- through body grounds B17, B23, B44 and B51.

With power and ground supplied, the parking, license plate and tail lamps illuminate.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description"

FAIL-SAFE FUNCTION

When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. If the fail-safe system is operating, parking, license plate and tail lamps illuminate when the ignition switch is turned from OFF to ON or ACC and parking, license plate and tail lamps are turned off when the ignition switch is turn from ON or ACC to OFF. If the fail-safe system is operating, parking, license plate and tail lamps does not operate when the combination switch is in any position. After CAN communication recovers normally, it also returns to normal control. (Refer to PG-19, "FAIL-SAFE FUNCTION")

CAN Communication

EKS00ERM

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LTC

Go to CAN system, when selecting your car model from the following table.

58	W	CAN L	—	—		—

How to Proceed With Trouble Diagnosis

EKS00ENA

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to Parking, license plate and tail lamps LT-152, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-173, "Preliminary Check" .
4. Confirm parking, license plate and tail lamps does not operate by fail-safe control of IPDM E/R. Refer to PG-19, "FAIL-SAFE FUNCTION" .
5. Check symptom and repair or replace the cause of malfunction.
6. Dose the parking, license plate and tail lamps operate normally? Yes: GO TO 7. No: GO TO 5.
7. INSPECTION END.

Preliminary Check

EKS00ENB

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch ON or START position	4

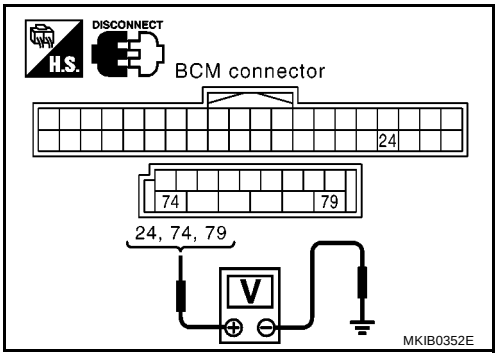
Refer to LT-169, "Wiring Diagram — TAIL/L —" .

OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. POWER SUPPLY CIRCUIT CHECK

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM connector and ground.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

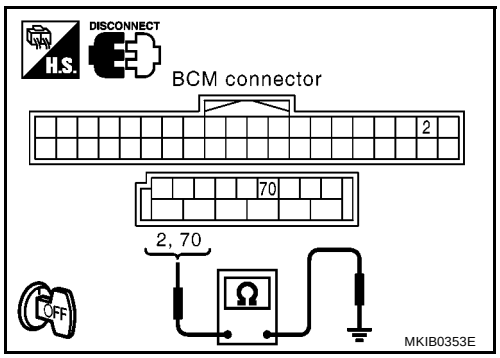
OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse. If NG, repair or replace the harness.

3. GROUND CIRCUIT CHECK

Check continuity between BCM and ground.

Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)		



OK or NG

OK >> INSPECTION END.
NG >> Repair or replace the harness.

CONSULT-II Function (BCM)

EKS00ENC

Refer to LT-28, "CONSULT-II Functions (BCM)" .

CONSULT-II Function (IPDM E/R)

EKS00END

Refer to LT-31, "CONSULT-II Functions (IPDM E/R)" .

Parking, License Plate And Tail Lamps Does Not Illuminate

EKS00ENE

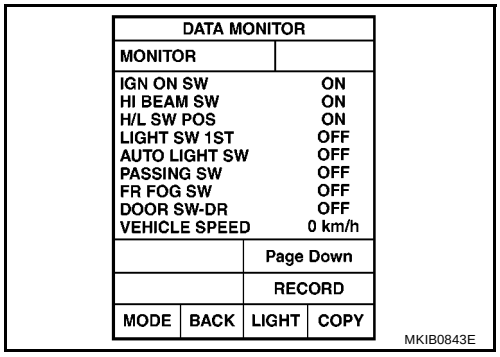
1. CHECK BETWEEN COMBINATION SWITCH AND BCM

With CONSULT-II

Select BCM on CONSULT-II.Check lighting switch (“LIGHT SW 1ST”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 1ST position : LIGHT SW 1ST ON

When lighting switch is in OFF position : LIGHT SW 1ST OFF



Without CONSULT-II

Refer to LT-196, "Check Combination Switch" .

OK or NG

OK >> GO TO 2.
NG >> Refer to LT-196, "Check Combination Switch" .

2. CHECK BETWEEN IPDM E/R TO PARKING LAMP

With CONSULT-II

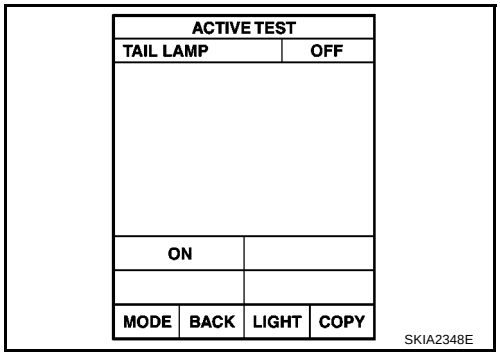
1. Select “IPDM E/R” by CONSULT-II, and select “Active test” on “Diagnosis System selection” screen.
2. Select “TAIL LAMP” on “Select Test Item” screen.
3. Make sure that parking lamps operate normally.

Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that parking lamps operate normally.

OK or NG

OK >> GO TO 3.
NG >> Replace IPDM E/R.

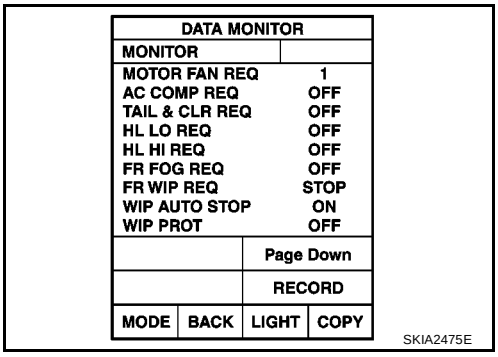


3. CHECK BETWEEN IPDM E/R AND BCM

Select IPDM E/R on CONSULT-II.Check lighting switch (“TAIL & CLR REQ”) in “DATA MONITOR” mode with CONSULT-II.

When lighting switch is in 1ST position : TAIL & CLR REQ ON

When lighting switch is in OFF position : TAIL & CLR REQ OFF



OK or NG

OK >> INSPECTION END
NG >> Replace BCM.

Parking Lamp Does Not Illuminate (One Side)

EKS00ENF

1. CHECK BULB

Check bulb of lamp which does not illuminate.

OK or NG

OK >> GO TO 2.
NG >> Replace parking lamp bulb.

2. CHECK FUSE

Check the following

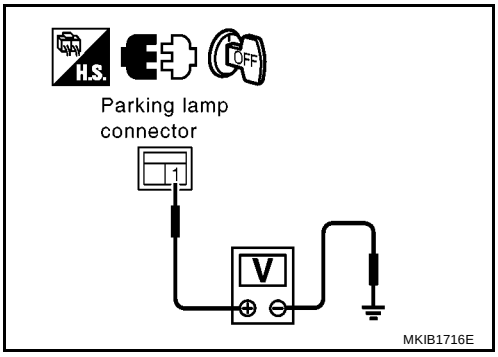
- 10A fuse (No. 35, located in the IPDM E/R).
- 10A fuse (No. 36, located in the IPDM E/R).

OK or NG

OK >> GO TO 3.
NG >> Replace fuse.

3. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect parking lamp connector.
3. Check voltage between parking lamp harness connector terminal 1 and ground.



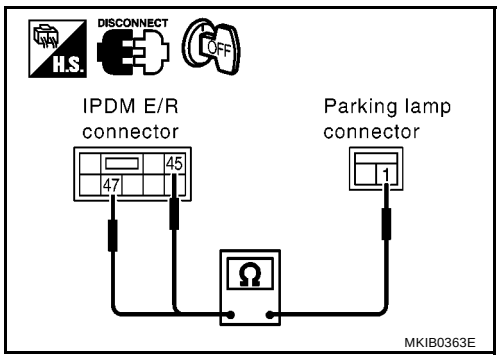
Terminals				Condition	Voltage [V]
(+)			(–)		
Connector		Terminal (Wire color)			
RH	E37	1 (R)	Ground	Lighting switch 1st position	Battery voltage
LH	E22	1 (GY)			

OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. CHECK BETWEEN IPDM E/R AND PARKING LAMP

1. Disconnect IPDM E/R connector.
2. Check harness continuity between IPDM E/R connector and parking lamp connector.



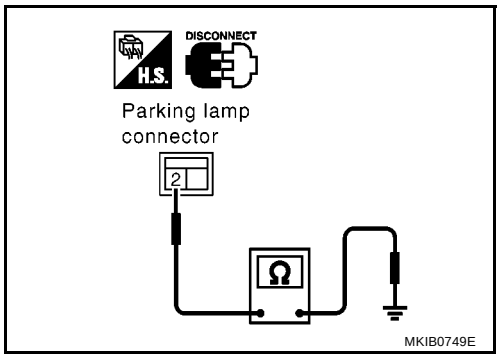
Terminals					Continuity
IPDM E/R		Parking lamp			
Connector	Terminal (Wire color)	Connector		Terminal (Wire color)	
E15	45 (R)	RH	E37	1 (R)	Yes
	49 (GY)	LH	E22	1 (GY)	

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair or replace harness or connector.

5. CHECK GROUND CIRCUIT

Check continuity between parking lamp harness connector and ground.



Terminals				Continuity
Connector		Terminal (Wire color)		
RH	E37	2 (B)	Ground	Yes
LH	E22	2 (B)		

OK or NG

OK >> Check condition of harness and connector.
NG >> Repair or replace harness.

Rear Combination Lamp (Tail lamp) Does Not Illuminate (One Side)

EKS00ENG

1. CHECK BULB

Check rear combination lamp (tail lamp) bulb.

OK or NG

OK >> GO TO 2.
NG >> Replace rear combination lamp (tail lamp) bulb.

2. CHECK FUSE

Check the following

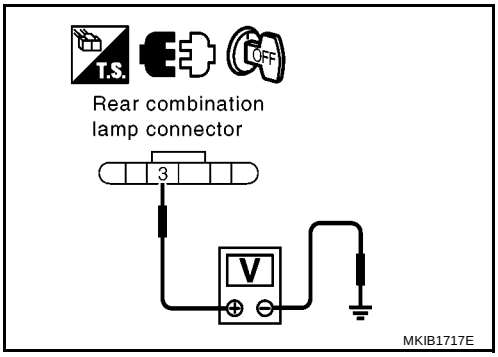
- 10A fuse (No. 35, located in the IPDM E/R).
- 10A fuse (No. 36, located in the IPDM E/R).

OK or NG

OK >> GO TO 3.
NG >> Replace fuse.

3. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect rear combination lamp (tail lamp) connector.
3. Check voltage between rear combination lamp (tail lamp) connector and ground.



Terminals				Condition	Voltage [V]
(+)			(–)		
Connector		Terminal (Wire color)			
RH	B36	3 (PU)	Ground	Lighting switch 1st position	Battery voltage
LH	B37	3 (PU)			

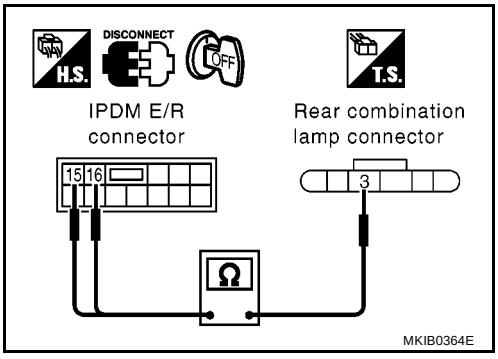
OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. CHECK BETWEEN IPDM E/R AND REAR COMBINATION LAMP (TAIL LAMP)

1. Disconnect IPDM E/R connector.
2. Check harness continuity between IPDM E/R connector and rear combination lamp (tail lamp) connector.

Terminals					Continuity
IPDM E/R		Rear combination lamp			
Connector	Terminal (Wire color)	Connector		Terminal (Wire color)	
E13	16 (PU)	RH	B36	3 (PU)	Yes
	15 (GY)	LH	B37	3 (GY)	



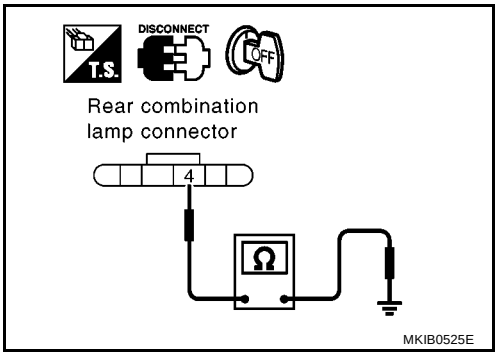
OK or NG

OK >> Replace IPDM E/R.
NG >> Repair or replace harness or connector.

5. CHECK GROUND CIRCUIT

Check continuity between tail lamp and ground.

Terminals				Continuity
(+)			(–)	
Connector		Terminal (Wire color)		
RH	B36	4 (B)	Ground	Yes
LH	B37	4 (B)		



OK or NG

OK >> Check condition of harness and connector.
NG >> Repair or replace harness.

License plate Lamp Does Not Illuminate

EKS00ENH

1. CHECK BULB

Check bulb of lamp which does not illuminate.

OK or NG

OK >> GO TO 2.
NG >> Replace license plate lamp bulb.

2. CHECK FUSE

Check the following

- 10A fuse (No. 35, located in the IPDM E/R).

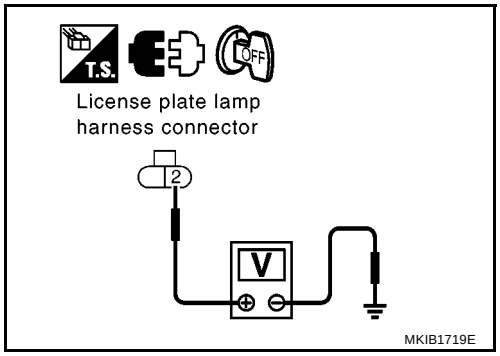
OK or NG

OK >> GO TO 3.
NG >> Replace fuse.

3. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect license plate lamp connector.
3. Check voltage between license plate lamp connector B38 terminal 2 (L) and ground.

Battery voltage.



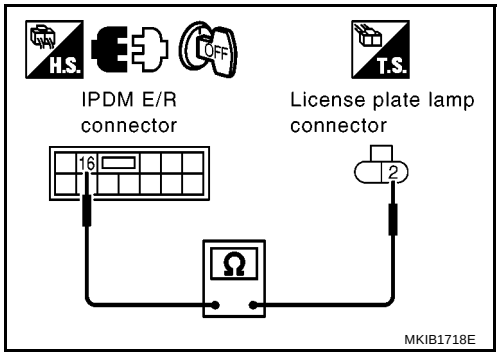
OK or NG

OK >> GO TO 5.
NG >> GO TO 4.

4. CHECK BETWEEN IPDM E/R AND LICENSE PLATE LAMP

1. Disconnect IPDM E/R connector.
2. Check continuity between license plate lamp connector B38 terminal 2 (L) and IPDM E/R connector E13 terminal 16 (PU).

Continuity should exist.



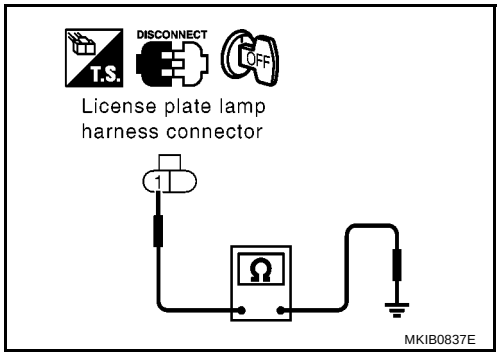
OK or NG

OK >> Replace IPDM E/R.
NG >> Repair or replace harness or connector.

5. CHECK GROUND CIRCUIT

Check continuity between license plate lamp connector B38 terminal 1 (B) and ground.

Continuity should exist.



OK or NG

OK >> Check condition of harness and connector.
NG >> Repair or replace harness.

Parking, License Plate and Tail Lamps Do Not Turn OFF (After Approx. 10 Minutes)

EKS00ENI

1. CHECK IPDM E/R

- Check whether symptom is caused by IPDM E/R fail-safe operation or by factors other than fail-safe operation.Refer to PG-19, "FAIL-SAFE FUNCTION" .

OK or NG

Fail-safe operation>>Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)" .
Other than fail-safe operation>>Refer to PG-51, "Diagnosis of IPDM E/R Integrated Relay"

Bulb Replacement

EKS00ENJ

PARKING LAMP

Refer to LT-41, "Bulb Replacement" .

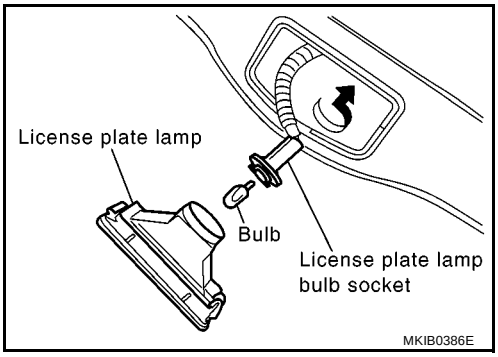
TAIL LAMP

Refer to LT-186, "REAR COMBINATION LAMP" .

LICENSE PLATE LAMP

1. Remove license plate lamp. Refer to LT-180, "LICENSE PLATE LAMP" .
2. Rotate license plate lamp bulb socket counterclockwise to release lock, then remove socket.
3. Remove bulb from license plate lamp bulb socket.

License plate lamp : 12V-10W



Removal and Installation of Parking Lamp, Tail Lamp and License Plate Lamp

EKS00ENK

PARKING LAMP

Refer to LT-41, "Removal and Installation" .

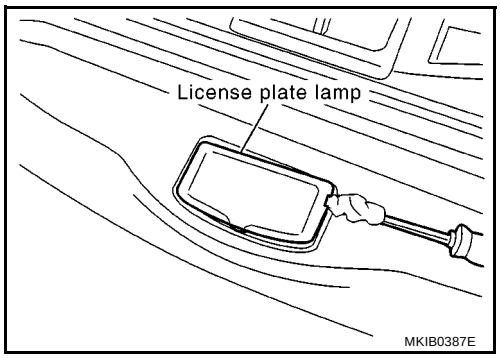
TAIL LAMP

Refer to LT-186, "REAR COMBINATION LAMP" .

LICENSE PLATE LAMP

Removal

1. Insert a screwdriver or the like wrapped in a cloth into the lens notch and remove license plate lamp from rear bumper.



Installation

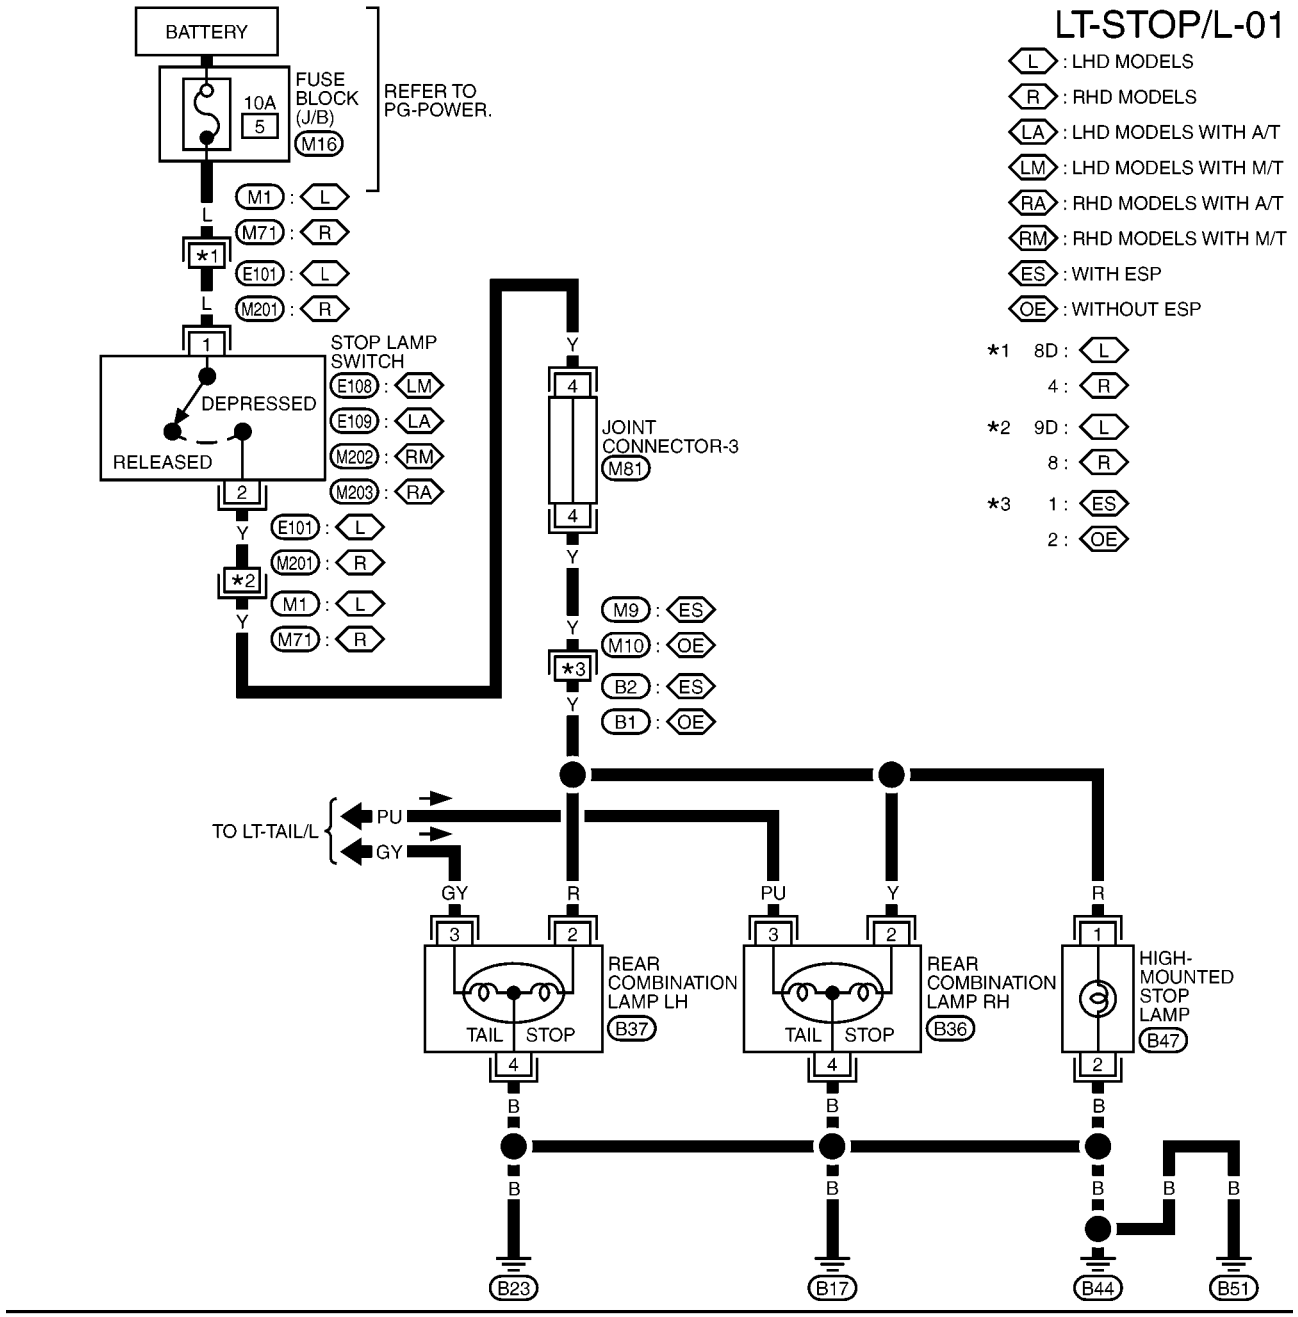
Install in the reverse order of removal.

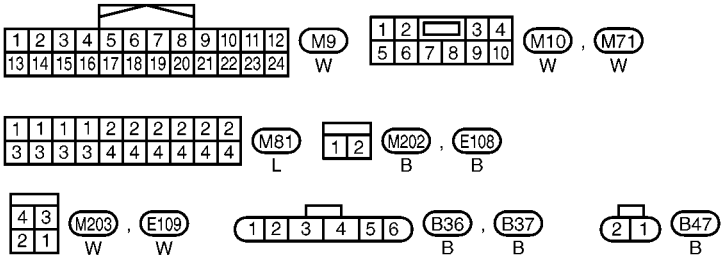
STOP LAMP

PFP:26554

Wiring Diagram— STOP/L —

SMA for VIN >SJN**AK12U1309269 EKS00ENL





REFER TO THE FOLLOWING.
M1 -SUPER MULTIPLE JUNCTION (SMJ)
M16 -FUSE BLOCK-JUNCTION BOX (J/B)

MKWA1754E

Bulb Replacement

EKS00ENM

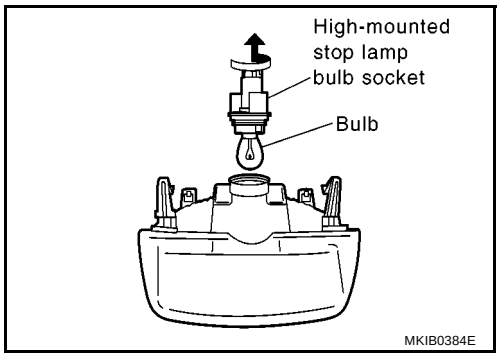
STOP LAMP

Refer to LT-186, "REAR COMBINATION LAMP" .

HIGH-MOUNTED STOP LAMP

1. Remove high-mounted stop lamp. Refer to LT-182, "HIGH-MOUNTED STOP LAMP" .
2. Turn bulb socket left to release lock and remove it.
3. Remove bulb.

High-mounted stop lamp : 12V-21W



Removal and Installation

EKS00ENN

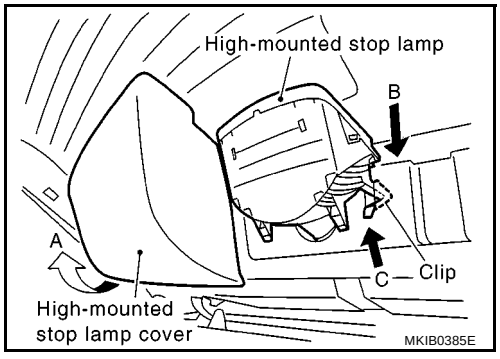
STOP LAMP

Refer to LT-186, "REAR COMBINATION LAMP" .

HIGH-MOUNTED STOP LAMP

Removal

1. Open back door and with both hands pull high-mounted stop lamp cover roof side horizontal edge in direction A to remove it.
2. Push high-mounted stop lamp clip shown in figure in direction B, release top hooks, then push in direction C to release it, then remove it from back door.



Installation

Install in the reverse order of removal.

BACK-UP LAMP

PFP:26550

Wiring Diagram — BACK/L —

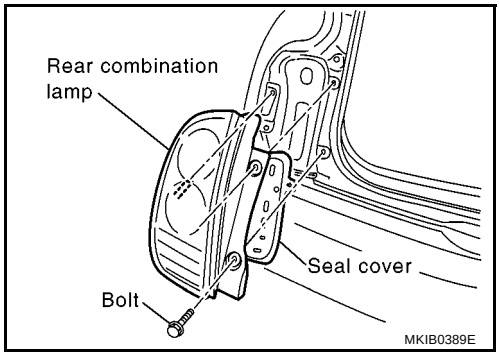
EKS00ENS

REMOVAL

1. Open the back door, and remove rear combination lamp bolts.
2. Pull the rear combination lamp toward rear of the vehicle and remove from the vehicle.
3. Disconnect rear combination lamp connector.



INSTALLATION

Install in the reverse order of removal, paying attention to the following.

Rear combination lamp bolts

Tightening torque	**: 3.24 - 7.75 N·m (0.33 - 0.79 kg-m, 29 - 69 in-lb)**

LIGHTING AND TURN SIGNAL SWITCH

PFP:25540

Removal and Installation

EKS00ENT

Refer to LT-199, "Removal and Installation" .

HAZARD SWITCH

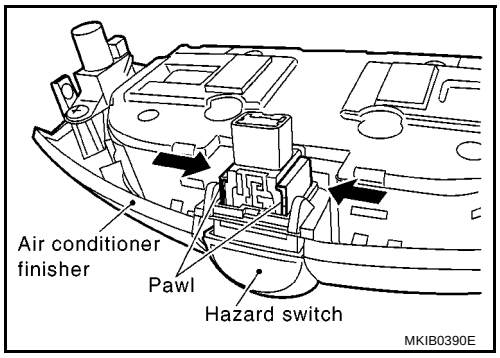
PFP:25290

Removal and Installation

EKS00ENU

REMOVAL

1. Remove air conditioner finisher. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove connector.
3. Press tab on reverse side and pull hazard switch towards you to remove.



INSTALLATION

Install in the reverse order of removal.

COMBINATION SWITCH

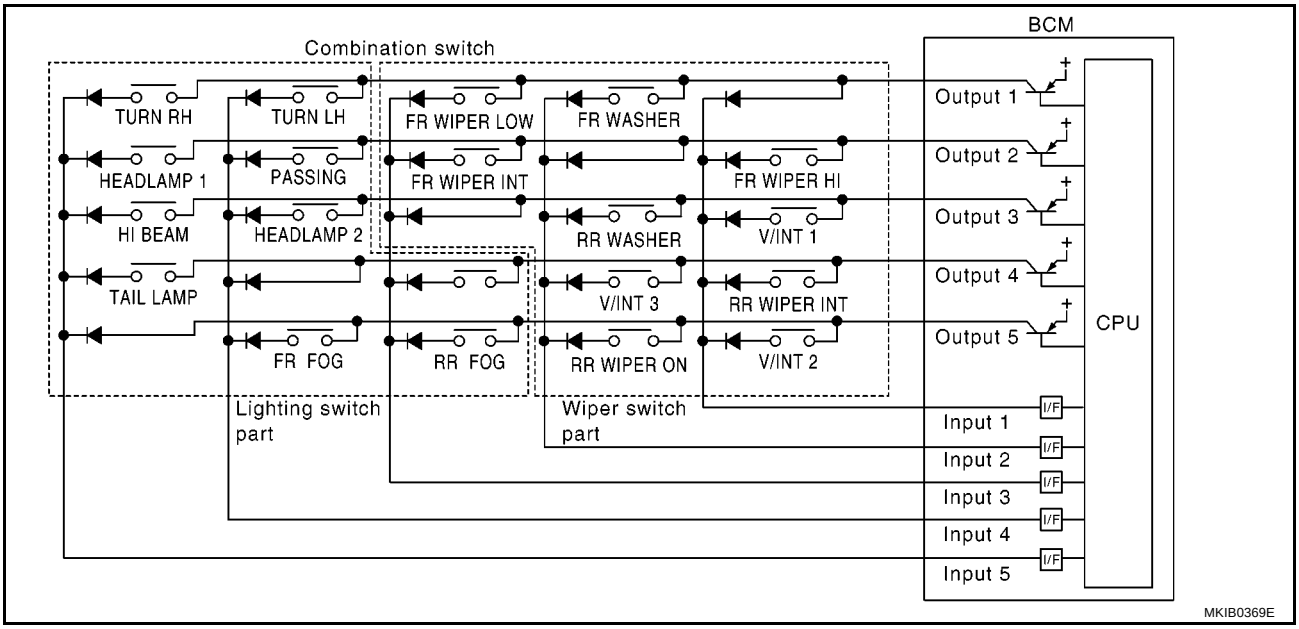
PFP:25567

System Description

EKS00ENV

COMBINATION SWITCH READING FUNCTION

1. Description
   - BCM reads combination switch (headlamp, wiper washer, turn signal) status, and controls various electrical components according to the results.
   - BCM reads information of 20 switches results by combining five output terminals (output 1 - 5) and five input terminals (input 1 - 5).
2. Operation description
   - BCM makes current flow through transistors in output terminals (output 1 - 5) at regular intervals in order.
   - When any of switches is turned ON, a circuit is established between output terminals (output 1 - 5) and input terminals (input 1 - 5).
   - At this time, transistors in output terminals (output 1 - 5) operate, and current flows, and then voltage of input terminals (input 1 - 5) corresponding to switch varies. Interface inside BCM detects status, and judges that the switch is ON.



3. BCM - Operation table of combination switches

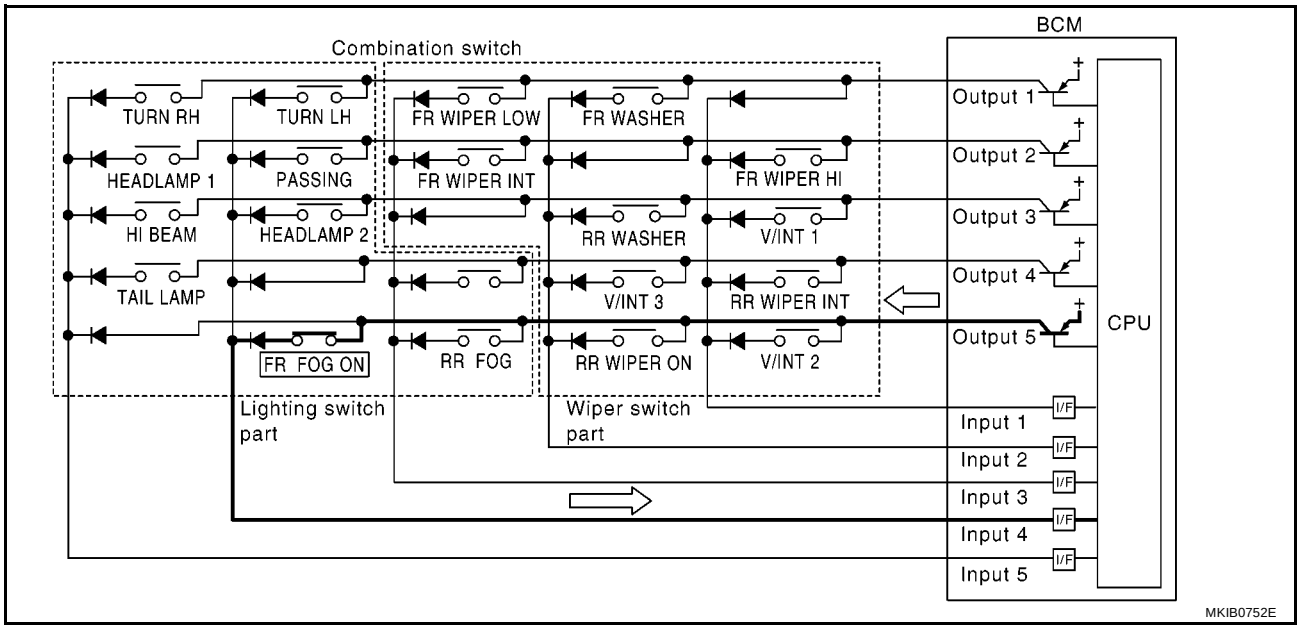
- BCM reads operation status of combination switches by the combination shown in the table.

	Combination SW INPUT 1		Combination SW INPUT 2		Combination SW INPUT 3		Combination SW INPUT 4		Combination SW INPUT 5	
	ON	OFF	ON	OFF	ON	OFF	ON	OFF	ON	OFF
Combination SW OUTPUT 1	—	—	FR WIPER HI ON	FR WIPER HI OFF	V/INT 1 ON	V/INT 1 OFF	RR WIPER INT ON	RR WIPER INT OFF	V/INT 2 ON	V/INT 2 OFF
Combination SW OUTPUT 2	FR WASHER ON	FR WASHER OFF	—	—	RR WASHER ON	RR WASHER OFF	V/INT 3 ON	V/INT 3 OFF	RR WIPER ON	RR WIPER OFF
Combination SW OUTPUT 3	FR WIPER LOW ON	FR WIPER LOW OFF	FR WIPER INT ON	FR WIPER INT OFF	—	—	—	—	RR FOG ON	RR FOG OFF
Combination SW OUTPUT 4	TURN LH ON	TURN LH OFF	PASSING ON	PASSING OFF	HEADLAMP 2 ON	HEADLAMP 2 OFF	—	—	FR FOG ON	FR FOG OFF
Combination SW OUTPUT 5	TURN RH ON	TURN RH OFF	HEADLAMP 1 ON	HEADLAMP 1 OFF	HI BEAM ON	HI BEAM OFF	TAIL LAMP ON	TAIL LAMP OFF	—	—

MKIB0370E

NOTE:
Dual switches are set for headlamps.

4. Example (When front fog lamp switch is turned ON)
   1. When front fog lamp switch is turned ON position, FR FOG ON contact inside combination switch becomes ON.
   2. Transistor in output 5 operates, and BCM detects that voltage at input 4 varies.
   3. When BCM detects voltage change at input 4 while transistor in output 5 is in ON status, BCM determines that front fog lamp switch is set to ON, and sends a front fog lamp request signal to IPDM E/R via CAN communication line.
   4. When BCM detects voltage change at input 4 when transistor in output 5 is operated again, it determines that front fog lamp ON operation continues.



MKIB0752E

NOTE:
Each output terminal transistor is activated at 20 ms intervals. Therefore, after a switch is turned ON, the electrical loads are activated with a time delay, but this time delay is too short to be noticed.

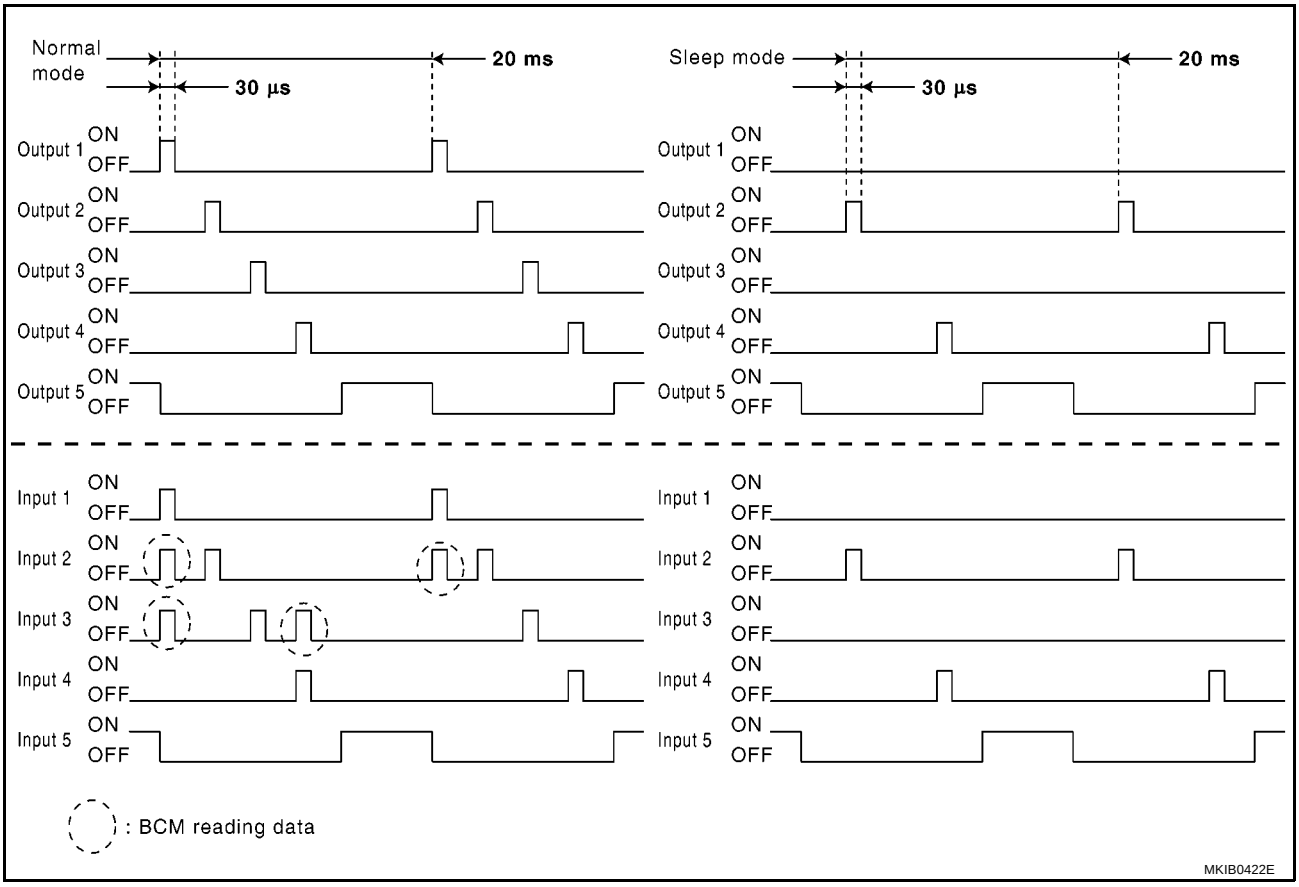
5. Operation mode
   - Combination switch reading function has operation modes shown below.

a. Normal mode

- When BCM is not in sleep mode, each output (1 - 5) terminal turns ON-OFF at 20 ms intervals.

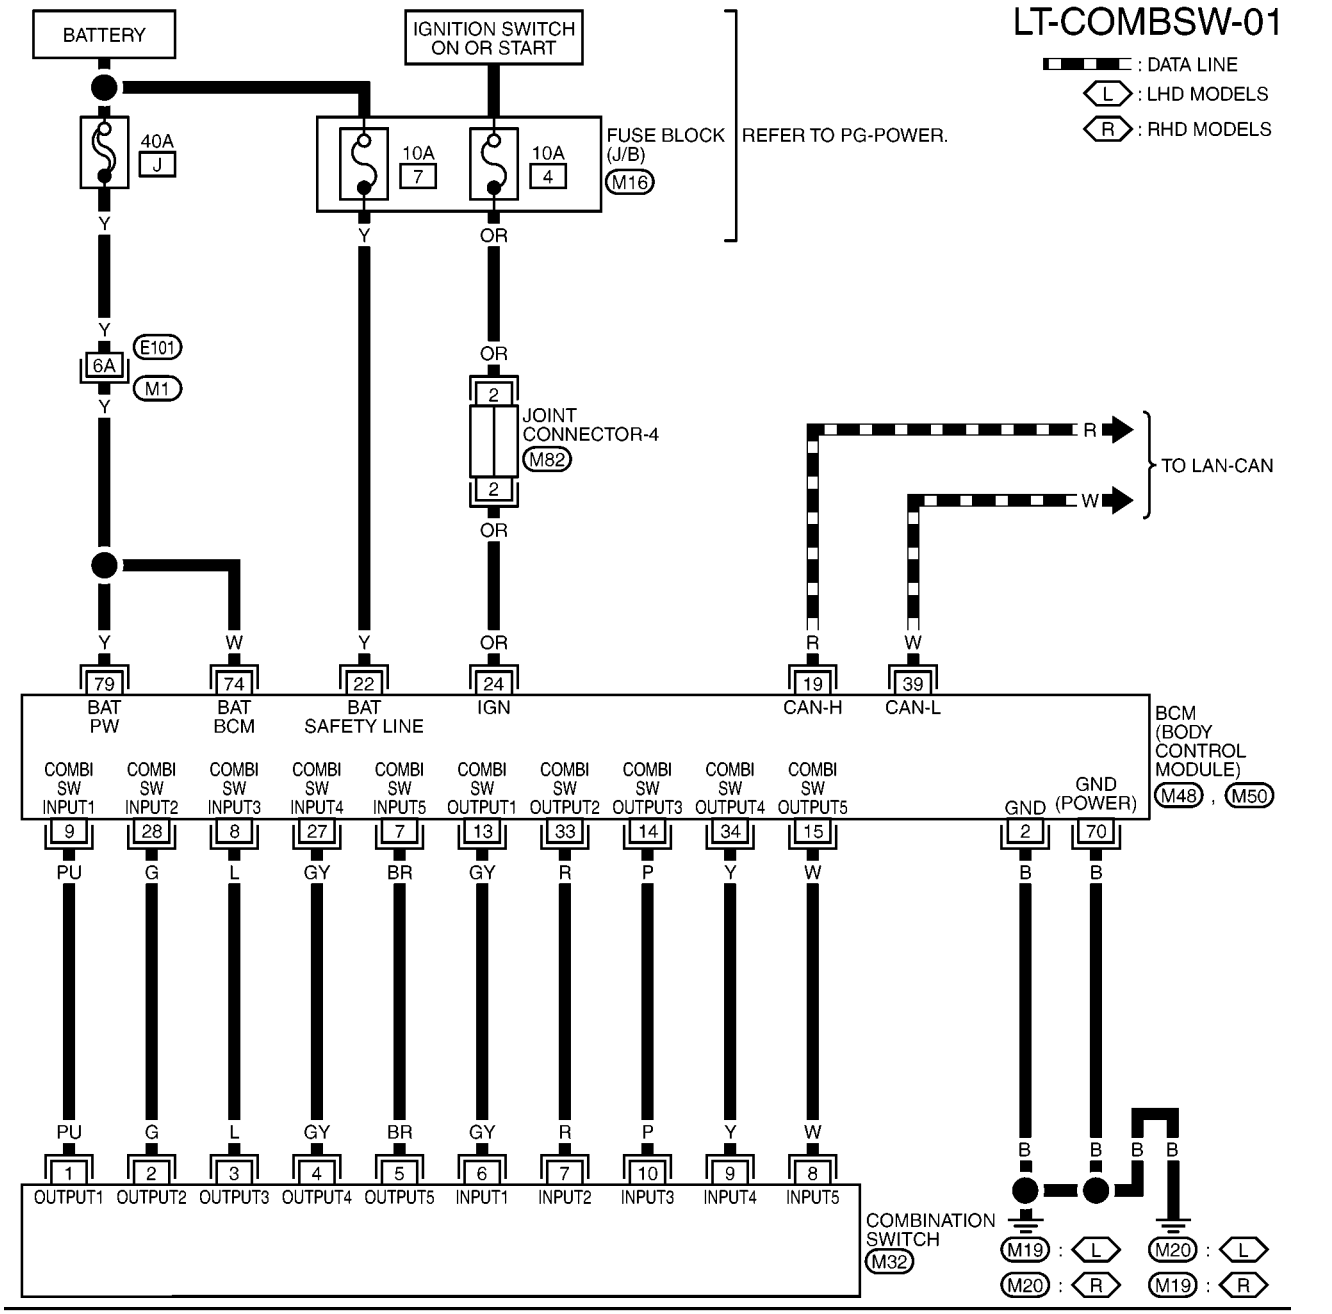
b. Sleep mode

- While BCM is in sleep status, transistors in output 1 and 3 stop their input, with BCM entering a power-saving mode. Input 2, 4 and 5 turn ON-OFF every 20 ms, and accept only output from lighting switch system.



Wiring Diagram — COMBSW —

EKS00ENW



MKWA1535E

CONSULT-II Functions (BCM)

EKS00ENX

CONSULT-II can display each diagnosis itemusing the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

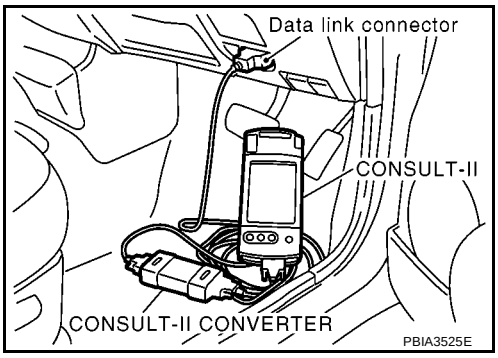
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Combination switch	Data monitor	Displays BCM input data in real time.

CONSULT-II BASIC OPERATION

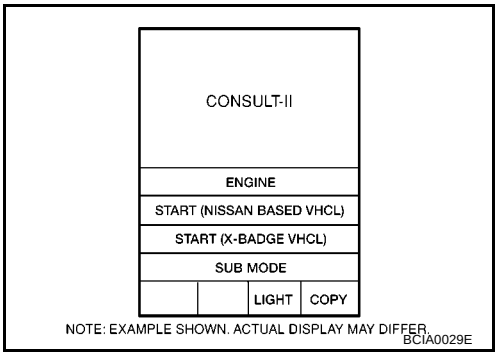
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

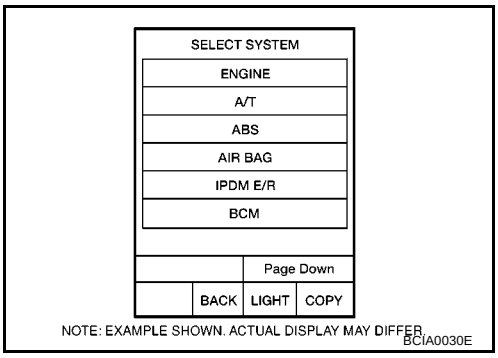
1. Turn ignition switch OFF.
2. Connect CONSULT-II and “CONSULT-II CONVERTER” to data link connector.



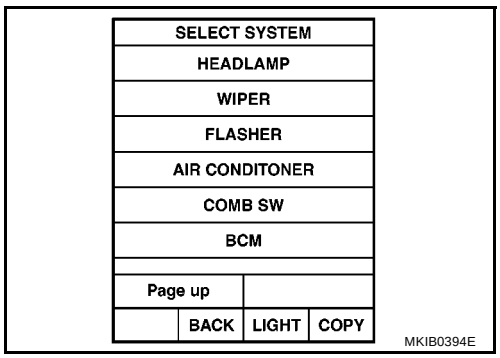
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



5. Touch “BCM CAN” on the “SELECT SYSTEM” screen.
   If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “COMBINATION SWITCH” on “SELECT TEST ITEM” screen.
7. Touch “DATA MONITOR” on the “SELECT DIAG MODE” screen.



DATA MONITOR

Operation Procedure

1. Touch “COMBINATION SWITCH” on “SELECT TEST ITEM” screen.
2. Touch “DATA MONITOR” on the “SELECT DIAG MODE” screen.
3. Touch “ALL SIGNALS” or “SELETION FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
SELECTION FROM MENU	Selects and monitors individual items.

4. Touch “START”.
5. When “SELECTION FROM MENU” is selected, touch items to be monitored. When “ALL SIGNALS” is selected, all the items will be monitored.
6. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

Display Item List

Monitor item “UNIT”		Display content
TURN SIGNAL R	[ON/OFF]	Displays status (Turn right: ON/Others: OFF) as judged from lighting switch signal.
TURN SIGNAL L	[ON/OFF]	Displays status (Turn left: ON/Others: OFF) as judged from lighting switch signal.
HI BEAM SW	[ON/OFF]	Displays status (High beam switch: ON/Others: OFF) as judged from lighting switch signal.
H/L SW POS	[ON/OFF]	Displays status (Headlamp switch 1: ON/Others: OFF) as judged from lighting switch signal.
LIGHT SW 1ST	[ON/OFF]	Displays status (Lighting switch 1st position: ON/Others: OFF) as judged from lighting switch signal.
PASSING SW	[ON/OFF]	Displays status (Flash-to-pass switch: ON/Others: OFF) as judged from lighting switch signal.
FR FOG SW	[ON/OFF]	Displays status (Front fog lamp switch: ON/Others: OFF) as judged from lighting switch signal. (ON is also displayed when rear fog lamp switch is on.)
RR FOG SW	[ON/OFF]	Displays status (Rear fog lamp switch: ON/Others: OFF) as judged from lighting switch signal.
FR WIPER HI	[ON/OFF]	Displays status (Front Wiper HI: ON/Others: OFF) as judged from wiper switch signal.
FR WIPER LOW	[ON/OFF]	Displays status (Front Wiper LOW: ON/Others: OFF) as judged from wiper switch signal.
FR WIPER INT	[ON/OFF]	Displays status (Front Wiper INT: ON/Others: OFF) as judged from wiper switch signal.
FR WASHER SW	[ON/OFF]	Displays status (Front Washer Switch: ON/Others: OFF) as judged from wiper switch signal.
INT VOLUME	[1 - 7]	Displays intermittent operation dial position setting (1 - 7) as judged from wiper switch signal.
RR WIPER ON	[ON/OFF]	Displays status (Rear Wiper ON: ON/Others: OFF) as judged from wiper switch signal.
RR WIPER INT	[ON/OFF]	Displays status (Rear Wiper INT: ON/Others: OFF) as judged from wiper switch signal.
RR WASHER SW	[ON/OFF]	Displays status (Rear Washer Switch: ON/Others: OFF) as judged from wiper switch signal.

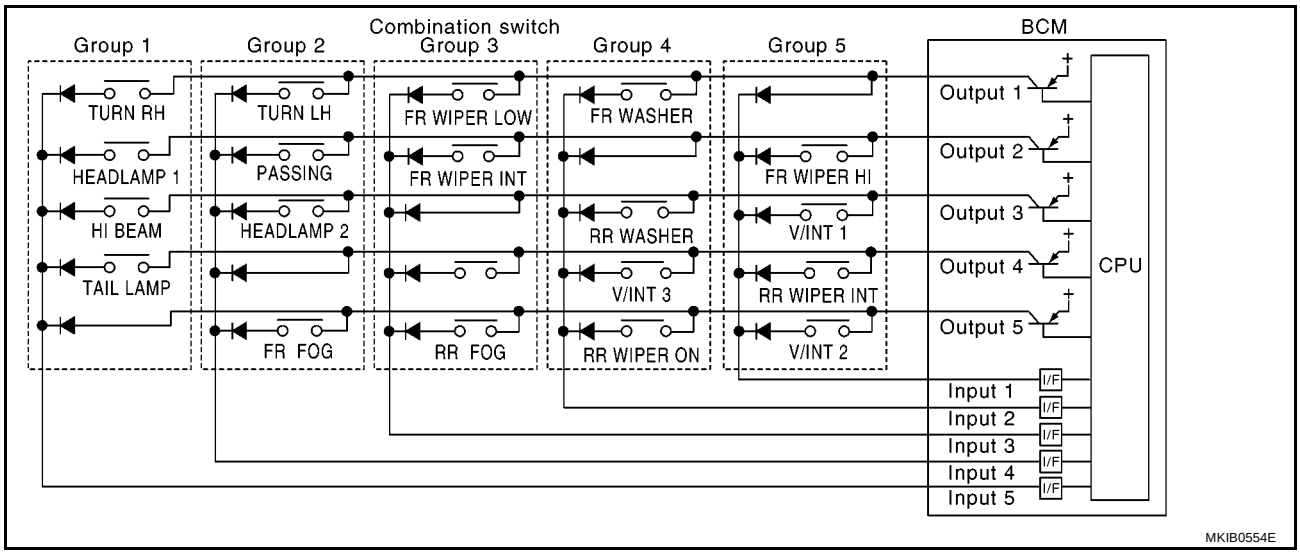
Check Combination Switch

EKS00ENY

1. CHECK COMBINATION SWITCH OPERATION

1. Check the malfunctioning operation which is controlled by combination switch, and check the group which including the malfunctioning operation.

Group 5	Group 4	Group 3	Group 2	Group 1
—	FR WASHER	FR WIPER LO	TURN LH	TURN RH
FR WIPER HI	—	FR WIPER INT	PASSING	HEAD LAMP1
V/INT 1	RR WASHER	—	HEAD LAMP2	HI BEAM
RR WIPER INT	V/INT 3	—	—	TAIL LAMP
V/INT 2	RR WIPER ON	RR FOG	FR FOG	—

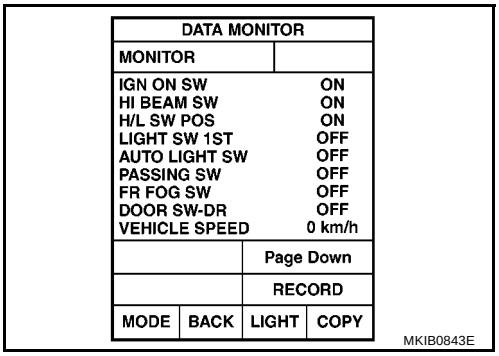


>> Confirm the group where malfunctioning operation is in and GO TO 2.

2. CHECK SYSTEM

With CONSULT-II

1. Select BCM on CONSULT-II.Check combination switch (“COMB SW”) in “DATA MONITOR” mode with CONSULT-II.
2. Select “START” and confirm all switch except the malfunctioning switch are operating normally.(Refer to LT-195, "Display Item List")
   Example: When there is RR fog lamp switch malfunction, confirm that “FR WIPER LOW” and “FR WIPER INT”, which are in the same group 3, turn ON/OFF normally.



Without CONSULT-II

Operate combination switch to Make sure other switches in the system with an error operate normally.
Example: When there is an error with RR fog lamp switch, make sure front wiper low operation and front wiper intermittent operation in the same group 3 operate normally.

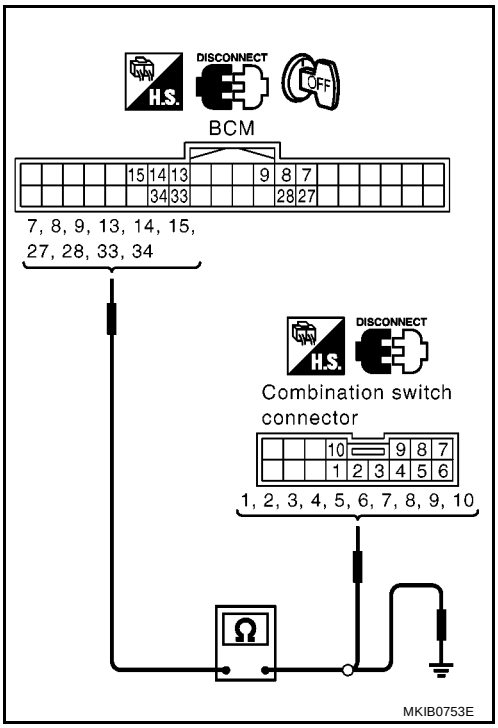
What is the inspection results?

Other switches in the group with an error operate normally.>>Replace combination switch.
Other switches in the group with an error do not operate normally.>>GO TO 3.

3. CHECK HARNESS

1. Turn ignition switch OFF.
2. Disconnect BCM and combination switch connectors.
3. Check continuity between BCM harness connector of the inoperative system and the corresponding combination switch connector terminals.
4. Check continuity between BCM harness connector of the suspect system and ground.

Group	Connector terminal			Continuity
	BCM		Combination switch	
1	output 1	13 (GY)	6 (GY)	Yes
	input 1	9 (PU)	1 (PU)	
2	output 2	33 (R)	7 (R)	
	input 2	28 (G)	2 (G)	
3	output 3	14 (P)	10 (P)	
	input 3	8 (L)	3 (L)	
4	output 4	34 (Y)	9 (Y)	
	input 4	27 (GY)	4 (GY)	
5	output 5	15 (W)	8 (W)	
	input 5	7 (BR)	5 (BR)	



Group	Connector terminal			Continuity
	BCM		—	
1	output 1	13 (GY)	Ground	No
	input 1	9 (PU)		
2	output 2	33 (R)		
	input 2	28 (G)		
3	output 3	14 (P)		
	input 3	8 (L)		
4	output 4	34 (Y)		
	input 4	27 (GY)		
5	output 5	15 (W)		
	input 5	7 (BR)		

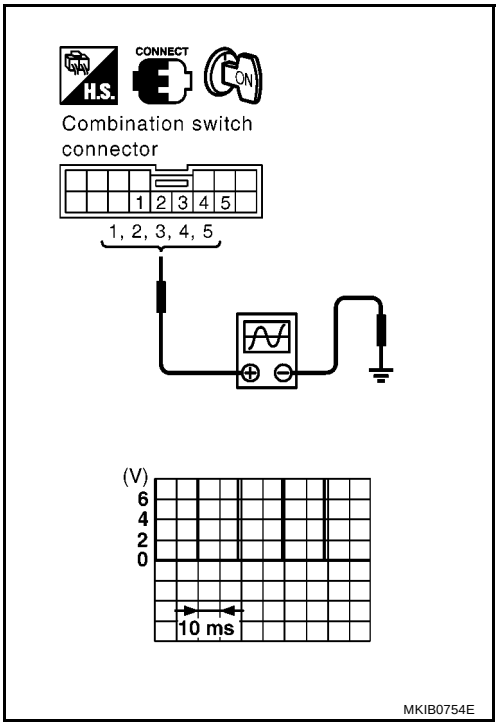
OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness connector.

4. CHECK BCM OUTPUT SIGNAL

Connect BCM and combination switch connector, and check voltage waveform of malfunctioning system.

Group	Connector	terminal (wire color)	
		(+)	(-)
1	M32	1 (PU)	Ground
2		2 (G)	
3		3 (L)	
4		4 (GY)	
5		5 (BR)	



OK or NG

OK >> Repair combination switch.
NG >> Replace BCM.

Removal and Installation

EKS00ENZ

REMOVAL

1. Remove steering column cover. Refer to PS-7, "STEERING COLUMN" .
2. Remove driver air bag module. Refer to SRS-36, "DRIVER AIR BAG MODULE" .
3. Remove spiral cable. Refer to SRS-38, "SPIRAL CABLE" .
4. Remove screw and remove combination switch.

INSTALLATION

Install in the reverse order of removal, for details.

INTERIOR ROOM LAMP

PFP:26410

System Description

EKS00EO0

POWER SUPPLY AND GROUND

Power is supplied at all times:

- through 40A fusible link (letter **J** , located in the fuse and fusible link box)
- to BCM terminals 74 and 79.
- through 10A fuse [No. 6, located in the fuse block (J/B)]
- to luggage room lamp terminal 1
- to BCM terminal 72
- to key switch terminal 1 (without Intelligent Key system) or
- to key switch and ignition knob switch terminal 3 (Gasoline engine with Intelligent Key system)
- through 10A fuse [No. 17, located in the fuse block (J/B)]
- to key switch and ignition knob switch terminals 1 (Diesel engine models with Intelligent Key system)

When the key is removed from ignition key cylinder, power is interrupted:

- through key switch terminal 2 (without Intelligent Key system) or
- through key switch and ignition knob switch terminal 4 (Gasoline engine models with Intelligent Key system) or
- through key switch and ignition knob switch terminal 2 (Diesel engine models with Intelligent Key system)
- to BCM terminal 48.

When Intelligent Key unit receives unlock signal from Intelligent Key controller. BCM receives door lock/unlock signal from Intelligent Key unit via CAN communication line.
With the ignition key switch in the ON or START position, power is supplied:

- through 10A fuse [No. 4, located in the fuse block (J/B)]
- to BCM terminal 24.

Ground is supplied:

- through body grounds M19 and M20
- to BCM terminals 2 and 70.

When any door is opened, ground is supplied:

- through case ground of front door switch (driver side)
- to front door switch (driver side) terminal 1
- to BCM terminal 29.
- through case ground of front door switch (passenger side)
- to front door switch (passenger side) terminal 1
- to BCM terminal 30.
- through case ground of rear door switch LH
- to rear door switch LH terminal 1
- to BCM terminal 59.
- through case ground of rear door switch RH
- to rear door switch RH terminal 1
- to BCM terminal 60.
- through body grounds B17, B23, B44 and B51
- to back door switch terminal 2
- to back door switch terminal 1
- to BCM terminal 10.

When a signal, or combination of signal is received by the BCM ground is supplied:

- through BCM terminal 21
- to interior room lamp terminal 1

With power and ground are supplied, the interior room lamp illuminates.

SWITCH OPERATION

Ground is supplied:

- through body grounds M19 and M20
- to interior room lamp terminal 3,

When interior room lamp switch is ON, power is supplied:

- to interior room lamp terminal 2
- through BCM terminal 73.

With power and ground are supplied, the interior room lamp illuminates.
When back door is opened, ground supplied:

- to luggage room lamp terminal 2
- through back door release actuator (back door switch) terminal 2 and 1
- through body grounds B17,B23,B44 and B51.

With power and ground are supplied, the luggage room lamp illuminates.

INTERIOR ROOM LAMP TIMER OPERATION

When interior room lamp switch is in the “DOOR” position, the BCM keeps the interior room lamp illuminated for about 30 seconds when:

- unlock signal is received from Intelligent Key controller, while all doors are closed and key is out of the ignition key cylinder (with Intelligent Key system).
- unlock signal is received from remote controller while all doors are closed and key is out of the ignition key cylinder (without Intelligent Key system).
- key is removed from ignition key cylinder while all doors are closed (without Intelligent Key system)
- any door is opened and then closed while key is out of the ignition key cylinder.

The timer is canceled when:

- ignition switch is turned ON.
- lock signal is received from Intelligent Key controller, while all doors are closed and key is out of the ignition key cylinder (with Intelligent Key system).
- lock signal is received from remote controller while all doors are closed and key is out of the ignition key cylinder (without Intelligent Key system).

ON-OFF CONTROL

When the driver side door, front passenger door, rear LH or RH door is opened, the interior room lamp turns on while the interior room lamp switch is in the “DOOR” position.

CAN Communication

EKS00ERO

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00LTD

How to Proceed With Trouble Diagnosis

EKS00EO5

1. Confirm the symptom or customer complaints.
2. Understand operation description and function description.
   Refer to Interior room lamp LT-200, "System Description" .
3. Carry out the Preliminary Check. Refer to LT-221, "Preliminary Check"
4. Check symptom and repair or replace the cause of malfunction.
5. Dose the interior room lamp operate normally? Yes: GO TO 6. No: GO TO 4.
6. INSPECTION END.

Preliminary Check

EKS00EO6

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

Check BCM fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch ON or START position	4

Refer to LT-217, "Wiring Diagram — INT/L —" .

OK or NG

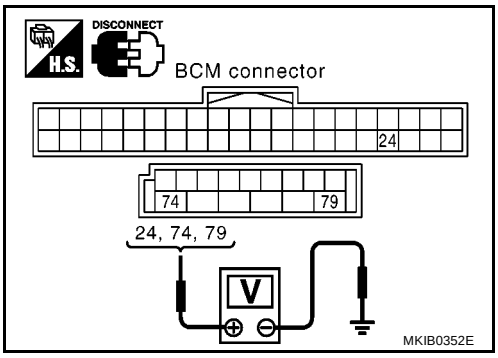
OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.

Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage



OK or NG

OK >> GO TO 3.

NG >> Repair harness for open or short between BCM and fuse. If NG, repair and replace the harness or fuse.

3. CHECK GROUND CIRCUIT

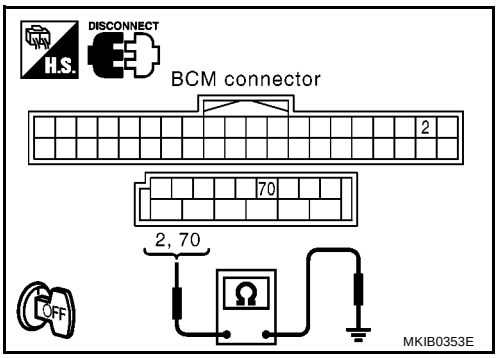
Check continuity between BCM harness connector and ground.

Terminals			Continuity
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70 (B)		

OK or NG

OK >> INSPECTION END

NG >> Repair or replace the harness.



CONSULT-II Functions (BCM)

EKS00EO7

CONSULT-II can display each diagnosis itemusing the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

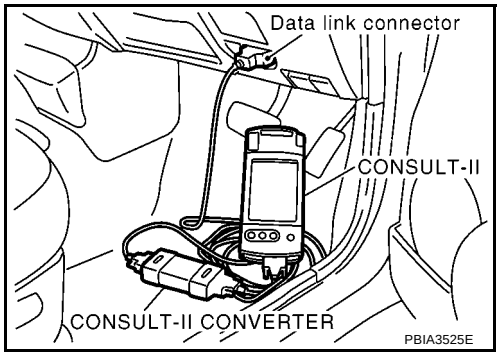
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Room lamp	Data monitor	Displays BCM input data in real time.
	Active test	BCM can sends a drive signal to electrical components to their opration.

CONSULT-II BASIC OPERATION

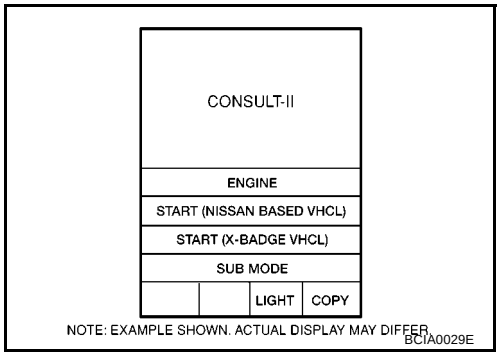
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

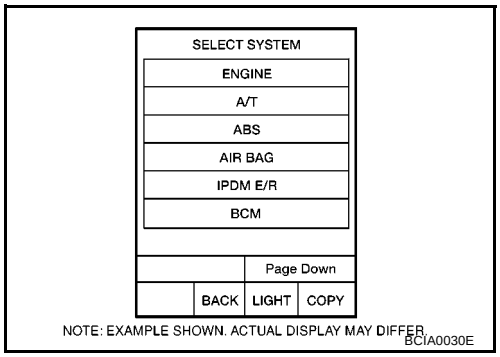
1. Turn ignition switch OFF.
2. Connect CONSULT-II and “CONSULT-II CONVERTER” to data link connector.



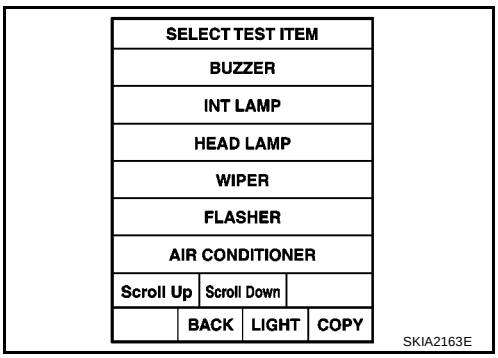
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



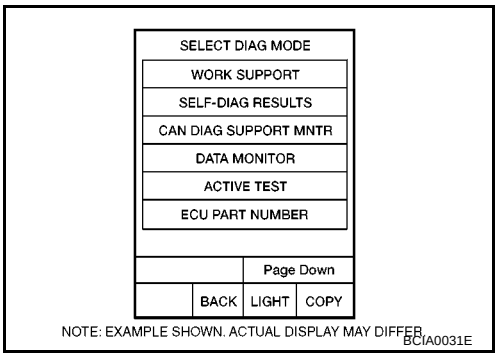
5. Touch “BCM” on the “SELECT SYSTEM” screen.
   If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “INT LAMP” on “SELECT TEST ITEM” screen.



7. Touch “DATA MONITOR”, or “ACTIVE TEST” on the “SELECT DIAG MODE” screen.



DATA MONITOR

Operation Procedure

1. Touch “INT LAMP” on “SELECT TEST ITEM” screen.
2. Touch “DATA MONITOR” on the “SELECT DIAG MODE” screen.
3. Touch “ALL SIGNALS” or “SELETION FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
SELECTION FROM MENU	Selects and monitors individual items.

4. Touch “START”.
5. When “SELECTION FROM MENU” is selected, touch items to be monitored. When “ALL SIGNALS” is selected, all the items will be monitored.
6. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

Display Item List

Monitor item “UNIT”		Display content
IGN ON SW	[ON/OFF]	Displays status (Ignition switch ON: ON/Others OFF, ACC: OFF) as judged from the ignition switch signal.
PUSH SW (*1)	[ON/OFF]	Displays status (Ignition knob is pushed: ON/ released: OFF) as judged from the ignition knob switch signal.
KEY IN SW (*2)	[ON/OFF]	Displays status (Key inserted: ON/Key removed: OFF) as judged from the key switch signal.
DOOR SW-DR	[ON/OFF]	Displays status (Door open: ON/door closed: OFF) as judged from the front door switch RH signal.
DOOR SW-AS	[ON/OFF]	Displays status (Door open: ON/Door closed: OFF) as judged from the front door switch LH signal.
DOOR SW-RR	[ON/OFF]	Displays status (Door open: ON/door closed: OFF) as judged from the rear door switch RH signal.
DOOR SW-RL	[ON/OFF]	Displays status (Door open: ON/Door closed: OFF) as judged from the rear door switch LH signal.

Monitor item “UNIT”		Display content
BACK DOOR SW	[ON/OFF]	Displays status (Door open: ON/Door closed: OFF) as judged from the back door switch signal.
CDL LOCK SW	[ON/OFF]	Displays status (Locked: ON/Others: OFF) as judged from lock signal.
CDL UNLOCK SW	[ON/OFF]	Displays status (Unlocked: ON/Others: OFF) as judged from unlock signal.
KEYLESS LOCK (*2)	[ON/OFF]	Displays status (Locked: ON/Others: OFF) as judged from lock signal. (Locked by Multi-Remote control system)
KEYLESS UNLOCK(*2)	[ON/OFF]	Displays status (Unlocked: ON/Others: OFF) as judged from unlock signal. (Unlocked by Multi-Remote control system)
I-KEY LOCK (*1)	[ON/OFF]	Displays status (Locked: ON/Others: OFF) as judged from lock signal. (Locked by Intelligent Key system)
I-KEY UNLOCK (*1)	[ON/OFF]	Displays status (Unlocked: ON/Others: OFF) as judged from unlock signal. (Unlocked by Intelligent Key system)
I-KEY ALL UNL (*1)	[ON/OFF]	Displays status (Unlocked: ON/Others: OFF) as judged from unlock signal. (Unlocked by Intelligent Key system)

*1: Displayed for models with Intelligent Key system.
*2: Displayed for models without Intelligent Key system.

ACTIVE TEST

Test Item	Description
INT LAMP	This test is able to check interior lamp operation. The interior lamp turned ON when "ON" on CONSULT-II display is touched.

Room Lamp Does Not Operate

EKS00EO8

1. CHECK SWITCH SIGNAL

SMA for VIN >SJN**AK12U1149635

Select BCM on CONSULT-II.Check following item in “DATA MONITOR” mode with CONSULT-II.

Monitor item	Condition	
IGN ON SW	Ignition switch is in ON position	ON
	Ignition switch is in other position	OFF
PUSH SW	Ignition knob is pushed	ON
	Ignition knob is released	OFF
KEY IN SW	Key is inserted	ON
	Key is removed	OFF
DOOR SW-DR	Front RH door is opened	ON
	Front RH door is closed	OFF
DOOR SW-AS	Front LH door is opened	ON
	Front LH door is closed	OFF
DOOR SW-RR	Rear RH door is opened	ON
	Rear RH door is closed	OFF
DOOR SW-RL	Rear LH door is opened	ON
	Rear LH door is closed	OFF
BACK DOOR SW	Back door is opened	ON
	Back door is closed	OFF
CDL LOCK SW	Lock/unlock switch lock position	ON
	Lock/unlock switch unlock position	OFF
CDL UNLOCK SW	Lock/unlock switch unlock position	ON
	Lock/unlock switch lock position	OFF
KEYLESS LOCK (*2)	Keyless lock/unlock switch lock position	ON
	Keyless lock/unlock switch unlock position	OFF
KEYLESS UNLOCK (*2)	Keyless lock/unlock switch unlock position	ON
	Keyless lock/unlock switch lock position	OFF
I-KEY LOCK (*1)	Intelligent Key lock/unlock switch lock position	ON
	Intelligent Key lock/unlock switch unlock position	OFF
I-KET UNLOCK (*1)	Intelligent Key lock/unlock switch unlock position	ON
	Intelligent Key lock/unlock switch lock position	OFF
I-KEY ALL UNL (*1)	Intelligent Key all door unlock switch unlock position	ON
	Intelligent Key all door unlock switch lock position	OFF

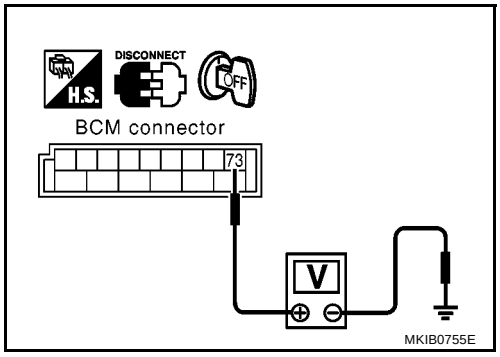
- I-KEY ALL UNL: Refer to BL-194, "Check Door Request Switch"

2. CHECK BCM OUTPUT SIGNAL

1. Interior room lamp switch is in DOOR position.
2. Check voltage between BCM and ground.



Terminal			Condition				Voltage (V)
(+)		(-)					
Con-nector	Termi-nal (Wire color)						
M50	73 (PU)	Ground	Ignition switch OFF	Key is inserted	Any door switch	ON (open)	Approx. 0
						OFF (closed)	Approx. 12
			—	Close all doors.	Key is removed after being fully inserted.		Approx. 0
					Turn ignition switch ON.		Approx. 12

OK or NG

OK >> GO TO 3.
NG >> Replace BCM.

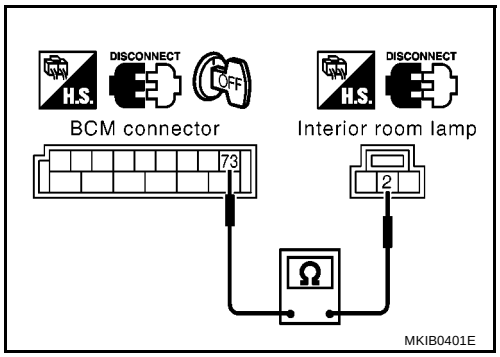
3. CHECK INTERIOR ROOM LAMP INPUT SIGNAL CIRCUIT

1. Turn igntion switch OFF.
2. Disconnect BCM connector and room lamp connector.
3. Check continuity between BCM harness connector M50 terminal 73(PU) and interior room lamp harness connector R2 terminal 2(PU).

Continuity should exist.

4. Check continuity between BCM connector M50 terminal 73 (PU) and ground.

Continuity should not exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness or connector.

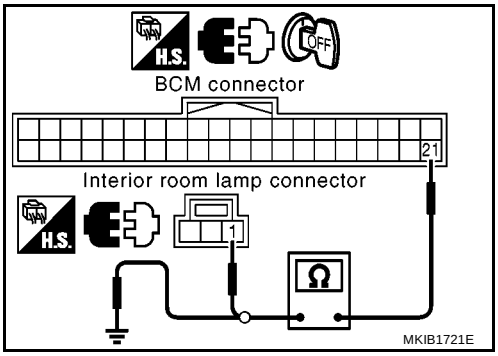
4. CHECK INTERIOR ROOM LAMP GROUND CIRCUIT

1. Check continuity between BCM connector M48 terminal 21(Y) and interior room lamp connector R2 terminal 1 (Y).

   Continuity should exist.

2. Check continuity between BCM connector M48 terminal 21 (Y) and ground.

   Continuity should not exist.

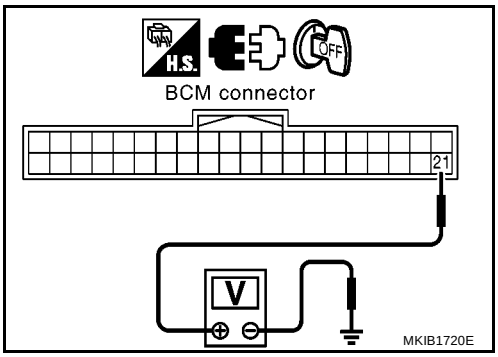


OK or NG

OK >> GO TO 5.
NG >> Repair or replace harness or connector.

5. CHECK BCM OUTPUT SIGNAL

1. Interior room lamp switch is in DOOR position.
2. Connect BCM connector
3. Check voltage between BCM connector terminal and ground.



Terminal No.	Wire color	Signal designation	Measuring condition					Reference value (V)
			Ignition switch	Operation or condition				
21	Y	Logical lighting control	OFF	Room lamp switch: DOOR position	Key is inserted	Any door switch	ON (Open)	Approx. 0
							OFF (Close)	Approx. 12
					Close all doors	Key is removed from key cylincer		Approx. 0
						Turn igntion switch ON		Approx. 12
					Key is removed			Approx. 0
					Interior room lamp timer		OFF	Approx. 12
							ON	Approx. 0

OK or NG

OK >> Check condition of the harness and connector.
NG >> Replace BCM.

Luggage Room Lamp Does Not Illuminate

EKS00EO9

1. CHECK BULB

Check luggage room lamp bulb.

OK or NG

OK >> GO TO 2.
NG >> Replace luggage room lamp bulb.

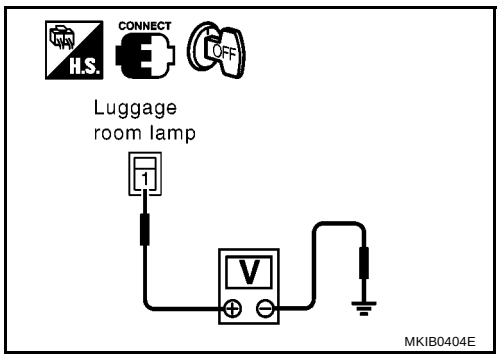
2. CHECK LUGGAGE ROOM LAMP INPUT SIGNAL

Check voltage between luggage room lamp harness connector B40 terminal 1(Y) and ground.

Battery voltage should exist.

OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between luggage room lamp and fuse. If NG, repair or replace the harness or fuse.



3. CHECK BACK DOOR SWITCH CIRCUIT

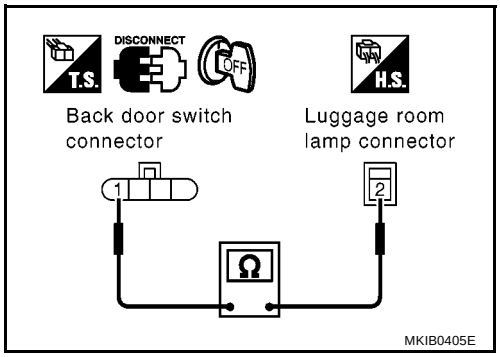
1. Turn ignition switch OFF.
2. Disconnect back door release actuator connector and luggage room lamp connector.
3. Check continuity between back door release actuator harness connector B55 terminal 1(OR) and luggage room lamp harness connector B41 terminal 2(L).

Continuity should exist.

4. Check continuity between

OK or NG

OK >> GO TO 4.
NG >> Repair or replace the harness.



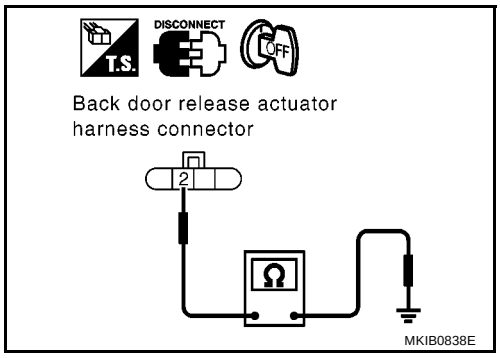
4. CHECK BACK DOOR SWITCH GROUND CIRCUIT

Check continuity between back door release actuator harness connector B55 terminal 2(B) and ground.

Continuity should exist.

OK or NG

OK >> GO TO 5.
NG >> Repair or harness connector.



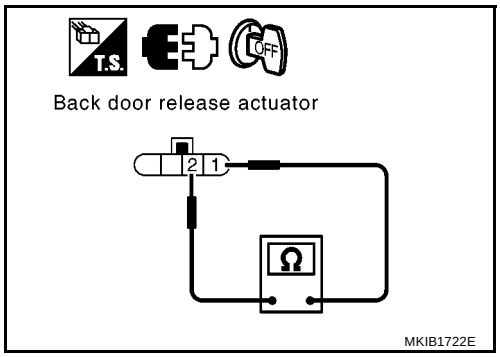
5. CHECK BACK DOOR SWITCH

Check continuity back door switch terminals.

Terminals		Condition	Continuity
1	2	Back door : OPEN	Yes
		Back door : CLOSED	No

OK or NG

OK >> Check condition of the harness and connector.
NG >> Replace theback door release actuator.



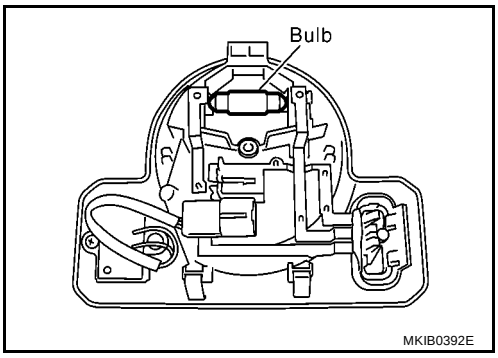
Bulb Replacement

SMA for VIN >SJN**AK12U1149635

EKS00EOA

1. Remove interior room lamp. Refer to LT-229, "Removal and Installation" .
2. Remove bulb.

Interior room lamp : 12V - 10W

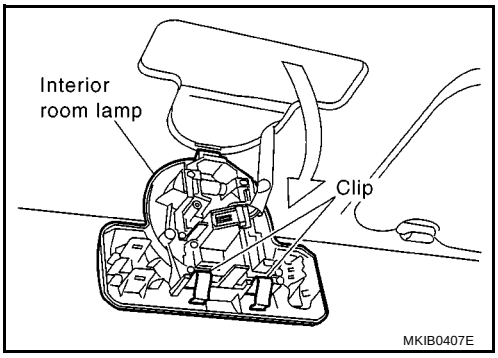


Removal and Installation

EKS00EOB

REMOVAL

1. Without damaging the headliner, insert a clip driver in the interior room lamp back edge to disengage metal clips.
2. Disconnect connector and remove interior room lamp.



INSTALLATION

Install in the reverse order of removal.

ILLUMINATION

PFP:27545

System Description

SMA for VIN >SJN**AK12U1309269 EKS00EOC

The illumination lamps operation is controlled by the lighting switch which built into the combination switch, BCM and IPDM E/R.Tail lamp relay is built into IPDM E/R.BCM read combination switch condition.Refer toLT-189, "System Description"

Power is supplied at all times

- to tail lamp relay (located in the IPDM E/R).

Power is also supplied at all times

- to BCM terminals 74 and 79
- through 40A fusible link (letter **J** , located in the fuse and fusible link box).

With the ignition switch in the ON or START position, power is supplied

- to BCM terminal 24
- through 10A fuse [No. 4, located in the fuse block (J/B)].
- to power window main switch terminal 5
- to front power window switch (passenger side) terminal 1
- through BCM terminal 78

Ground is supplied

- to BCM terminals 2 and 70
- through grounds M19, and M20.

ILLUMINATION OPERATION BY LIGHTING SWITCH

When the lighting switch is turned to 1ST position, BCM read combination switch condition (refer to LT-189, "System Description"). And BCM send illumination lamp request signal to IPDM E/R via CAN communication line. Then IPDM E/R is turned on tail lamp relay. Tail lamp relay is energized and then power is supplied:

- through terminal 15 of the IPDM E/R
- to heated seat switch driver side (illumination) terminal 5
- to heated seat switch passenger side (illumination) terminal 5
- to door lock/unlock switch terminal 2
- through terminal 16 of the IPDM E/R
- to audio unit terminal 36
- to audio and navi control unit terminal 36
- to heater control panel terminal 15
- to A/C auto amplifier terminal 11
- to headlamp aiming switch terminal 3
- to headlamp washer switch terminal 3
- to hazard switch terminal 3
- to ashtray illumination terminal 1 and
- to A/T device terminal 5
- to ESP OFF switch terminal 3

Ground is supplied at all times

- to door lock/unlock switch terminal 4
- to heated seat switch driver side terminal 6
- to heated seat switch passenger side terminal 6
- through body grounds B17, B23, B44 and B51
- to heater control panel terminal 7
- to A/C auto amplifier terminal 12
- to headlamp aiming switch terminal 4
- to headlamp washer switch terminal 4
- to hazard switch terminal 4
- to ashtray illumination terminal 2

- to A/T device terminal 4
- to power window main switch terminal 7
- to front power window switch (passenger side) terminal 7
- to ESP OFF switch terminal 4
- through body grounds M19 and M20
- to audio unit terminal 36
- to audio and navi control unit terminal 36
- through body ground M60

With power and ground supplied, illumination lamps illuminate.

COMBINATION SWITCH READING FUNCTION

Refer to LT-189, "System Description"

CAN Communication

EKS00ERQ

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

Special Service Tools

EBS00OIH

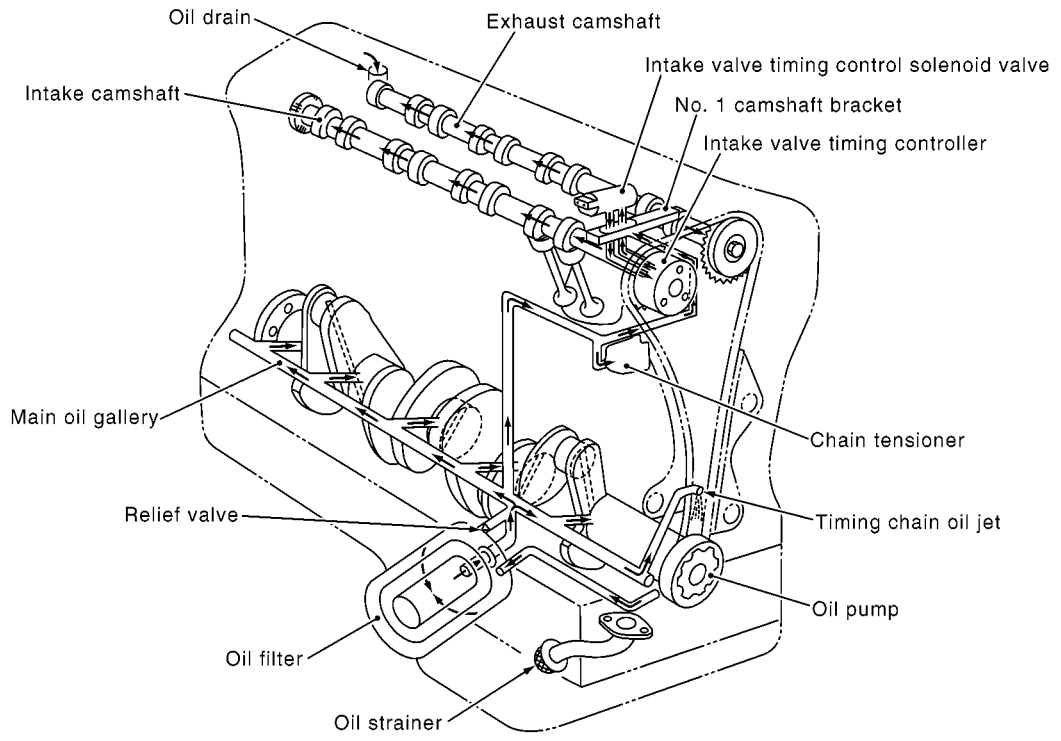
Tool number Tool name	Description
ST25051001 Oil pressure gauge  S-NT050	Measuring oil pressure **Maximum measuring range:** **2,452 kPa (24.5 bar, 25 kg/cm^2 , 356 psi)**
ST25052000 Hose  S-NT559	Adapting oil pressure gauge to cylinder block
KV10115801 Oil filter wrench  S-NT772	Removing oil filter

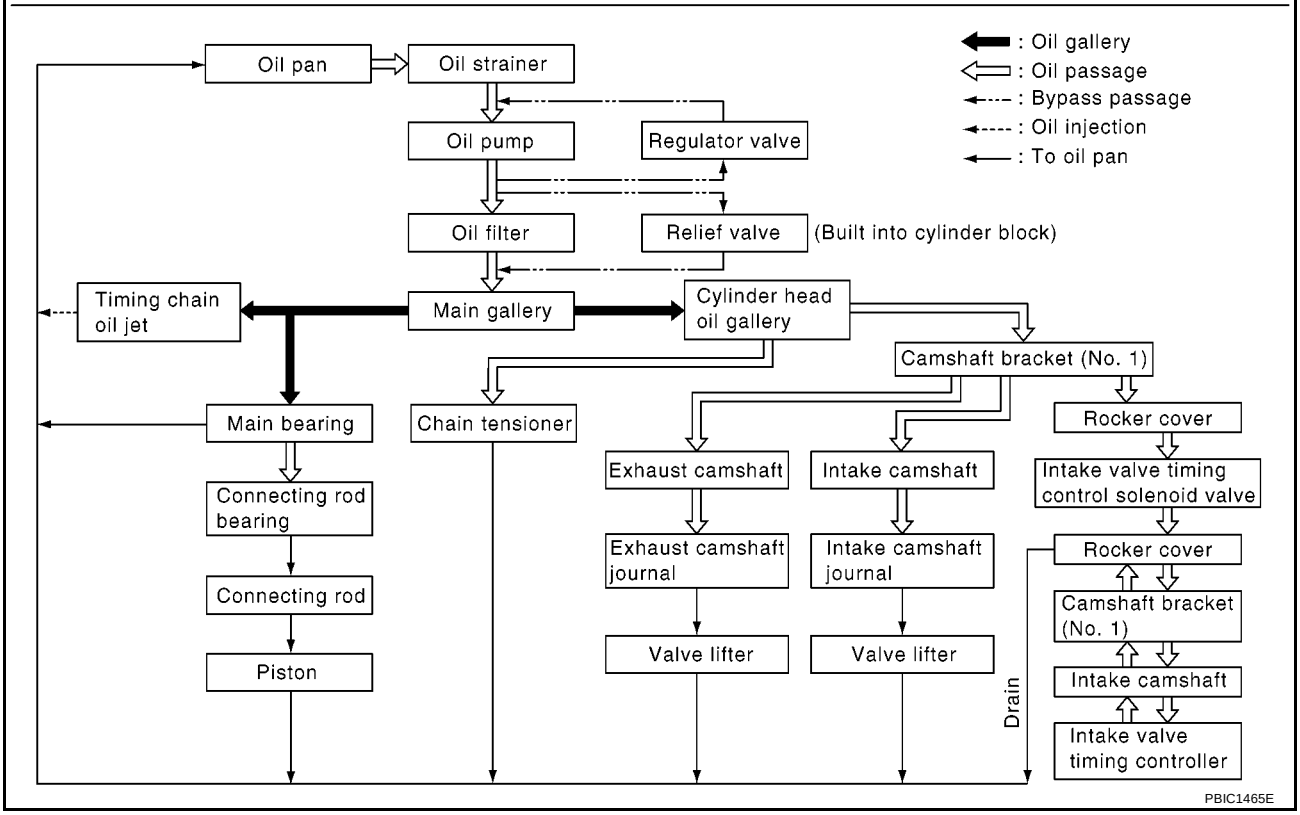
LUBRICATION SYSTEM

PFP:15010

Lubrication Circuit

EBS00OII





ENGINE OIL

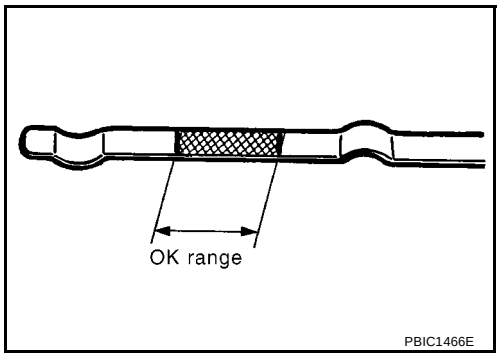
PFP:KLA92

Inspection

EBS00OIJ

OIL LEVEL AND CONTAMINATION

- Before starting the engine, put vehicle horizontally and check the oil level. If the engine is already started, stop it and allow 10 minutes before checking.
- Check that the oil level is within the range shown in the figure.
- If oil level is outside the range, adjust level.
- Check the oil for white turbidity or remarkable contamination.
- If the oil becomes turbid and white, it is highly probable that it is contaminated with coolant. Find the cause and repair.
- When oil level gauge is inserted in guide, apply engine oil to rubber seal of grip.



OIL LEAK

Check the following parts for engine oil leaks.

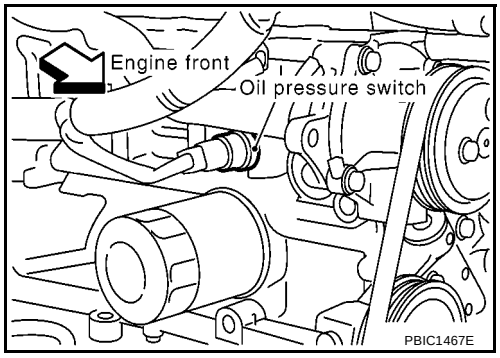
- Oil pan
- Oil pan drain plug
- Oil pressure switch
- Oil filter
- Front cover
- Cylinder head front cover
- Mating surfaces of cylinder block and cylinder head
- Mating surfaces of cylinder head and rocker cover

OIL PRESSURE CHECK

WARNING:

- **Be careful not to burn yourself, as the engine oil is hot.**
- **Oil pressure check should be done in “Parking” or “Neutral” position.**

1. Check the engine oil level.
2. Remove oil filter. Refer to LU-6, "OIL FILTER" .
3. Remove oil pressure switch and connect an oil pressure gauge.



4. Install oil filter. Refer to LU-6, "OIL FILTER" .
5. After warming up the engine, check that oil pressure corresponding to the engine speed is produced.

   NOTE:
   Low oil temperature creates high pressure.

Engine oil pressure [When oil temperature is 80 °C (176 °F)]

Engine speed (rpm)	Idle speed	2,000	6,000
Engine oil pressure kPa (bar, kg/cm^2 , psi)	Approx. 44.1 (0.441, 0.45, 6.4) or more	Approx. 265 (2.65, 2.7, 38) or more	Approx. 373 (3.73, 3.8, 54) or more

6. After checking the oil pressure, install oil pressure switch as follows:

a. Remove old sealant on the switch and engine.

b. Apply thread sealant and tighten.
Use Genuine Liquid Gasket or equivalent.

: 18.7 - 20.5 N·m (1.9 - 2.0 kg-m, 14 - 15 ft-lb)

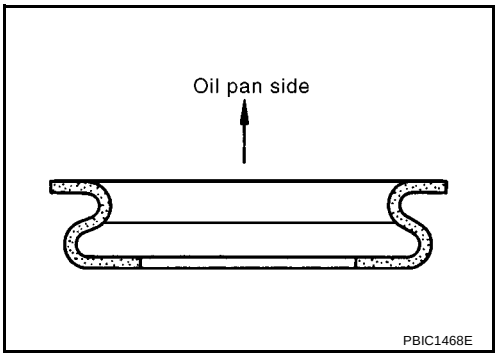
CAUTION:
Be careful not to get burned when engine or engine oil is heated.

Changing Engine Oil

EBS00OIK

WARNING:
- **Be careful not to burn yourself, as the engine oil is hot.**
- **Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.**

1. Warm up engine, and check for oil leakage from engine components.
2. Stop engine and wait for 10 minutes.
3. Remove oil filler cap, and remove drain plug.
4. Drain engine oil.
5. Install drain plug. Refill with new engine oil.
   - Install drain plug washer in the direction shown in figure.
   - **Oil specification and viscosity:**
     Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS".



Oil capacity (Approximate):

Unit: ℓ (Imp qt)

Drain and refill	With oil filter change	3.0 (2-5/8)
	Without oil filter change	2.8 (2-1/2)
Dry engine (engine overhaul)		3.5 (3-1/8)

CAUTION:
- **Be sure to clean drain plug and install with new washer.**

Oil pan drain plug:

: 29.4 - 39.2 N·m (3.0 - 3.9 kg-m, 22 - 28 ft-lb)

- **The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.**
  Always use the dipstick to determine when the proper amount of oil is in the engine.

6. Warm up engine and check area around drain plug and oil filter for oil leakage.
7. Stop engine and wait for 10 minutes.
8. Check oil level. Refer to LU-4, "Inspection" .

OIL FILTER

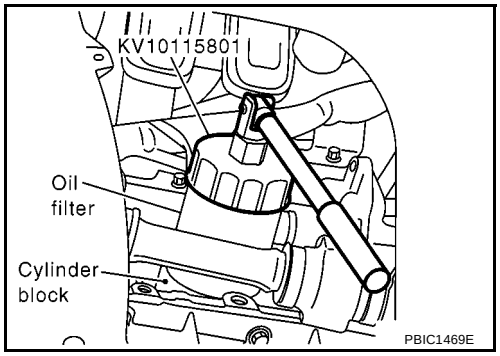
PFP:15208

Removal and Installation

EBS00OIL

REMOVAL

- Using an oil filter wrench (special service tool), remove oil filter.

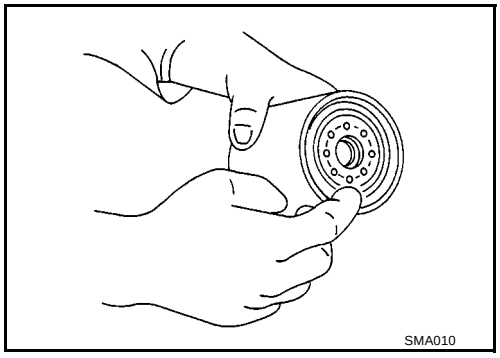


CAUTION:

- **Be careful not to get burned when the engine and engine oil are hot.**
- **When removing, prepare a shop cloth to absorb any oil leakage or spillage.**
- **Do not allow engine oil to adhere to the drive belts.**
- **Completely wipe off any oil that adheres to the engine and the vehicle.**

INSTALLATION

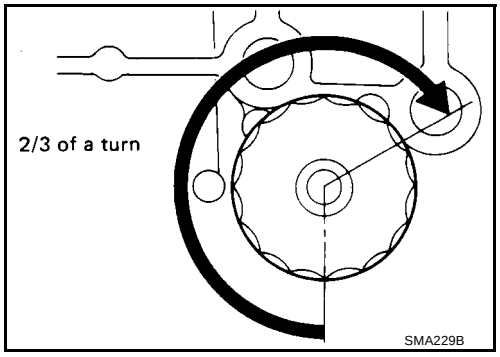
1. Remove foreign materials adhering to the oil filter installation surface.
2. Apply engine oil to the oil seal circumference of the new oil filter.



CAUTION:

- **Use genuine NISSAN oil filter or the equivalent.**

3. Screw the oil filter manually until it touches the installation surface, then tighten it by 2/3 turn.



Oil filter:

:11 - 14 N·m (1.2 - 1.4 kg-m, 9 - 10 ft-lb)

INSPECTION AFTER INSTALLATION

1. Check oil level and add engine oil. Refer to LU-4, "ENGINE OIL" .
2. After warming up the engine, check for engine oil leakage.

OIL PUMP

PFP:15010

Removal and Installation

EBS00OIM

REMOVAL

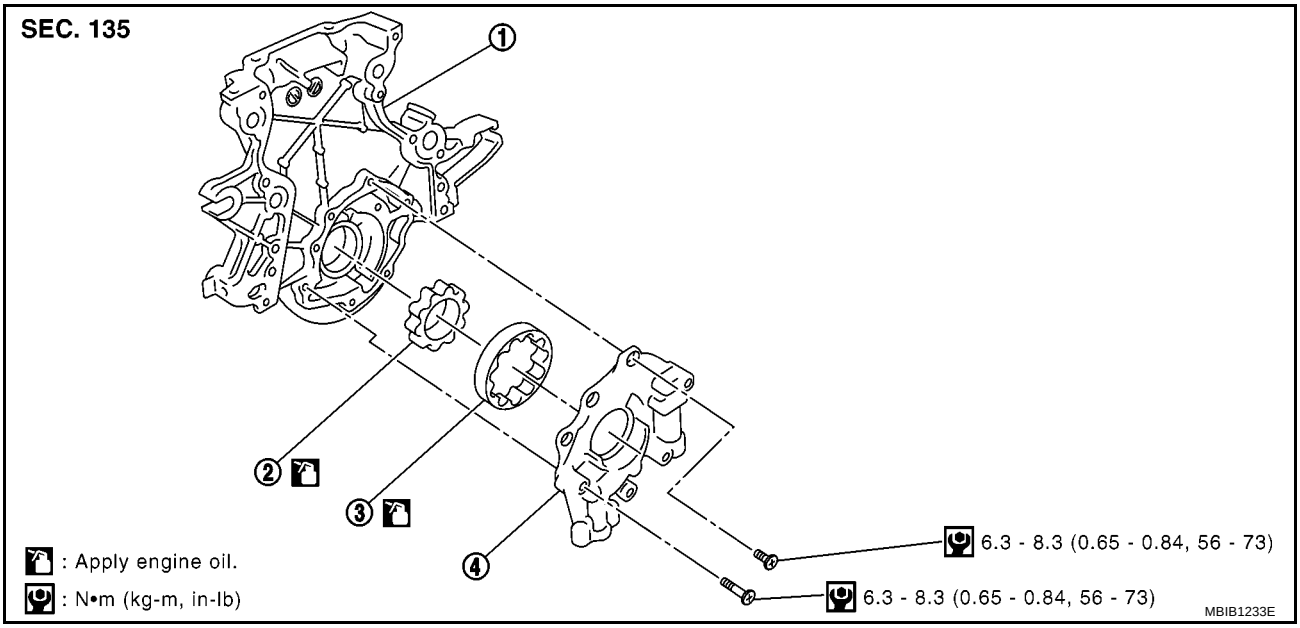
- Remove front cover. Refer to EM-48, "TIMING CHAIN" .

INSTALLATION

- Install in the reverse order of removal.

Disassembly and Assembly

EBS00OIN



1. Front cover
2. Inner rotor
3. Outer rotor
4. Oil pump cover

CAUTION:

Prior to installation, apply new engine oil to the parts marked in figure.

DISASSEMBLY

1. Remove oil pump cover.
2. Remove outer rotor and inner rotor from front cover.

INSPECTION AFTER DISASSEMBLY

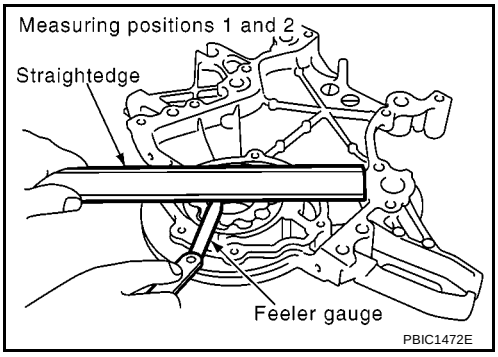
Clearances of Oil Pump Parts

- Measure clearance with feeler gauge and straightedge.
  Side clearance between inner rotor and front cover (position 1).

  Standard : 0.025 - 0.075 mm (0.0010 - 0.0030 in)

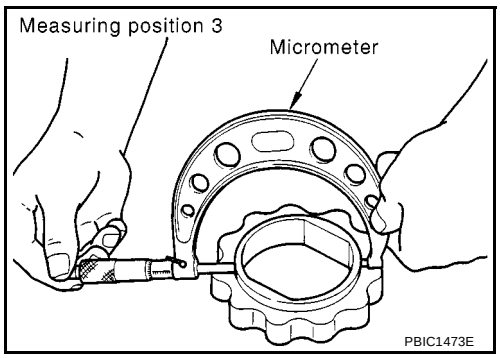
  Side clearance between outer rotor and front cover (position 2).

  Standard : 0.025 - 0.075 mm (0.0010 - 0.0030 in)



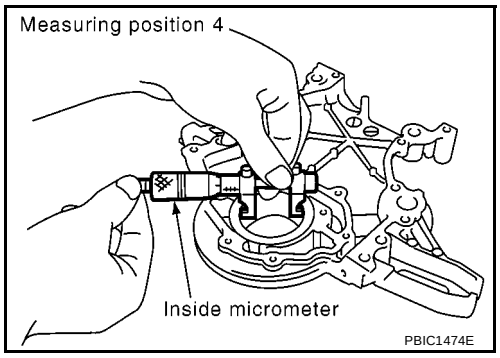
- Calculate the clearance from inner rotor to front cover socket with the following procedures.

1. Using a micrometer, measure the outer diameter of inner rotor protrusion (Position 3).



2. Using an inside micrometer, measure the inner diameter of front cover. (Position 4)
(Clearance) = (Inner diameter of front cover) - (outer diameter of inner rotor protrusion)

Standard : 0.045 - 0.095 mm (0.0011 - 0.0037 in)



ASSEMBLY

Install in the reverse order of disassembly.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

EBS00OIO

OIL PRESSURE

Engine speed rpm	Approximate discharge pressure kPa (bar, kg/cm^2 , psi)
Idle speed	Approx. 44.1 (0.441, 0.45, 6.4) or more
2,000	Approx. 265 (2.65, 2.7, 38) or more
6,000	Approx. 373 (3.73, 3.8, 54) or more

OIL PUMP

Unit: mm (in)

Body to inner rotor axial clearance	0.025 - 0.075 (0.0010 - 0.0030)
Body to outer rotor axial clearance	0.025 - 0.075 (0.0010 - 0.0030)
Inner rotor to brazed portion of housing clearance	0.045 - 0.095 (0.0018 - 0.0037)

OIL CAPACITY

Unit: ℓ (Imp qt)

With oil filter change	Approximately 3.0 (2-5/8)
Without oil filter change	Approximately 2.8 (2-1/2)
Dry engine (engine overhaul)	Approximately 3.5 (3-1/8)

TIGHTENING TORQUE

Unit: N·m (kg-m, ft-lb)
Unit: N·m (kg-m, in-lb)*

Oil pressure switch	18.7 - 20.5 (1.9 - 2.0, 14 - 15)
Oil pan drain plug	29.4 - 39.2 (3.0 - 3.9, 22 - 28)
Oil filter	11 - 14 (1.2 - 1.4, 9 - 10)
Oil pump cover	6.3 - 8.3 (0.65 - 0.84, 56 - 73)*

PRECAUTIONS

PFP:00001

Precautions For Liquid Gasket

EBS01C7G

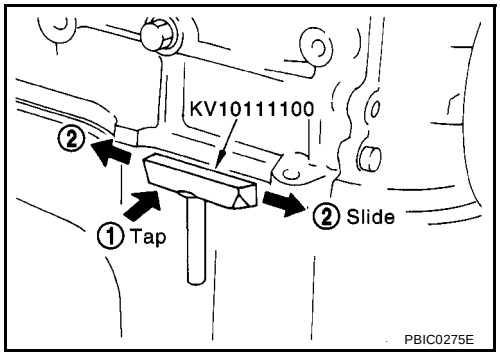
REMOVAL OF LIQUID GASKET

- After removing the mounting bolts and nuts, separate the mating surface using a seal cutter and remove the liquid gasket.

  CAUTION:
  Be careful not to damage the mating surfaces.

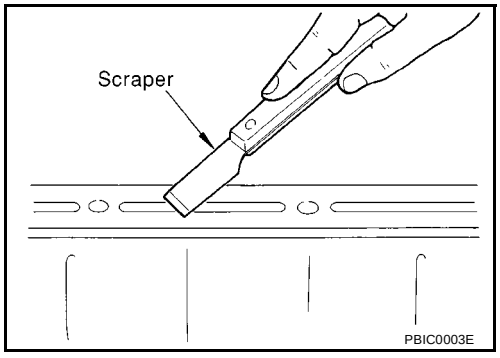
- In areas where the cutter is difficult to use, use a plastic hammer to lightly tap the gasket applied area.

  CAUTION:
  If for some unavoidable reason a tool such as a flat-bladed screwdriver is used, be careful not to damage the mating surfaces.



LIQUID GASKET APPLICATION PROCEDURE

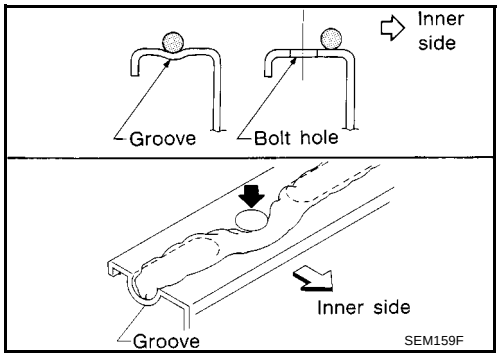
1. Using a scraper, remove the old liquid gasket adhering to the gasket application surface and the mating surface.
   - Remove the liquid gasket completely from the groove of the gasket application surface, mounting bolts and bolt holes.
2. Wipe the gasket application surface and the mating surface with white gasoline (lighting and heating use) to remove adhering moisture, grease and foreign materials.
3. Attach the liquid gasket to the tube presser.
   Use Genuine Liquid Gasket or equivalent.



4. Apply the gasket without breaks to the specified location with the specified dimensions.
   - If there is a groove for the liquid gasket application, apply the gasket to the groove.

   - As for the bolt holes, normally apply the gasket inside the holes. If specified, it should be applied outside the holes. Make sure to read the instruction in this manual.
   - Within five minutes of gasket application, install the mating component.
   - If the liquid gasket protrudes, wipe it off immediately.
   - Do not retighten after the installation.
   - After 30 minutes or more have passed from the installation, fill the engine oil and coolant.

   CAUTION:
   If there are instructions in this manual, observe them.



PREPARATION

PFP:00002

ENGINE OIL

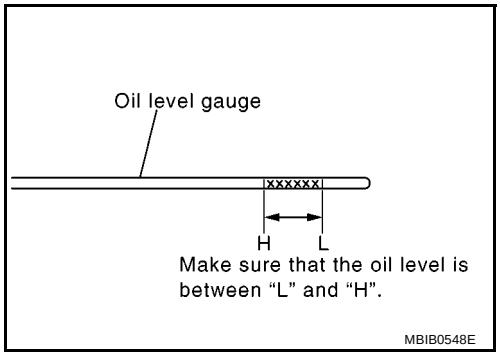
PFP:KLA92

Inspection

EBS01C7I

OIL LEVEL AND MUDDINESS

- Before starting the engine, check the oil level placing vehicle horizontally. If the engine is already started, stop it and allow 10 minutes before checking.
- Make sure the oil level is within the range shown in the figure.
- If it is out of range, adjust it.
- Check the oil for white turbidity or remarkable contamination.
- If the oil becomes turbid and white, it is highly probable that it is contaminated with coolant. Find the cause and repair.



OIL LEAKAGE

Check for oil leakage around the following area.

- Oil pan
- Oil pan drain plug
- Oil pressure switch
- Oil filter bracket
- Vacuum pump
- Oil pump housing
- Mating surface between cylinder block and cylinder head
- Mating surface between cylinder head and rocker cover
- Oil cooler
- Crankshaft oil seals

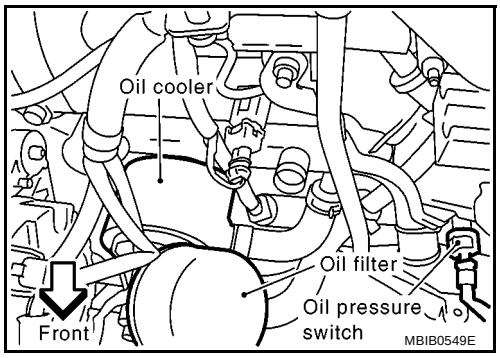
OIL PRESSURE CHECK

WARNING:

- **Be careful not to burn yourself, as the engine oil is hot.**
- **Oil pressure check should be done in Neutral “N” position.**

1. Check the oil level. Refer to LU-12, "OIL LEVEL AND MUDDINESS" .
2. Remove engine undercover.
3. Remove the oil pressure switch to connect the oil pressure gauge (special service tool).
4. After warming up the engine, make sure oil pressure corresponding to the engine speed is produced.

Idle speed	**: Approx. 120 kPa (1.2 bar, 1.22 kg/cm^2 , 17.4 psi)**
3000 rpm	**: Approx. 350 kPa (3.5 bar, 3.57 kg/cm^2 , 50.8 psi)**



5. After checking, install the oil pressure switch as follows.

a. Remove old sealant adhering to the switch and engine.

b. Apply thread sealant.
Use Genuine Liquid Gasket or equivalent.

Oil pressure switch:

: 25 N·m (2.55 kg-m, 18.4 ft-lb)

6. Start engine and check for oil leakage.

Changing Engine Oil

EBS01C7J

WARNING:

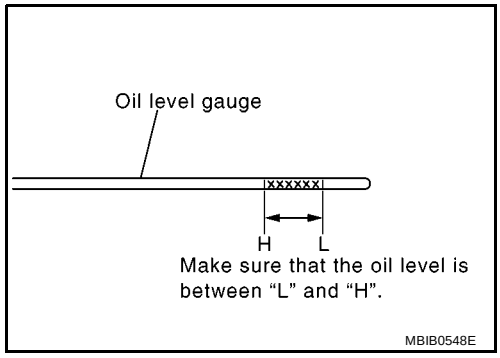
- **Be careful not to burn yourself, as the engine oil is hot.**
- **Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.**

1. Put vehicle horizontally.
2. Warm up engine, and check for oil leakage from engine components.
3. Stop engine and wait for 10 minutes.
4. Remove drain plug and oil filler cap.
5. Drain oil and refill with new engine oil.

- Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS" .

Oil capacity (Approximate):

Drain and refill	With oil filter change	4.55 ℓ (4 Imp qt)
	Without oil filter change	4.39 ℓ (3-7/8 Imp qt)
Dry engine (overhaul)		4.71 ℓ (4-1/8 Imp qt)



- The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.
  Always use the dipstick to the determine when the proper amount of oil is in the engine.

CAUTION:

- **Be sure to clean drain plug and install with new washer.**
- **The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.**
  Always use the dipstick to the determine when the proper amount of oil is in the engine.

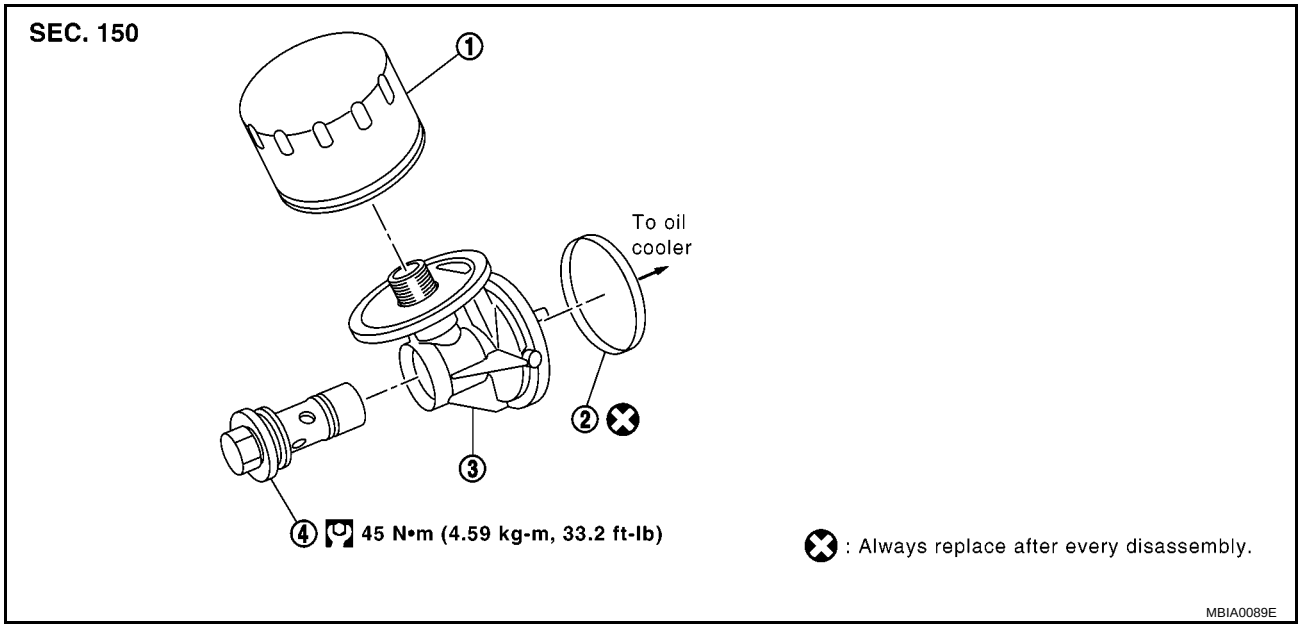
6. Warm up engine and check area around drain plug and oil filter for oil leakage.
7. Stop engine and wait for 10 minutes.
8. Check oil level.

OIL FILTER

PFP:15208

Removal and Installation

EBS01C7K



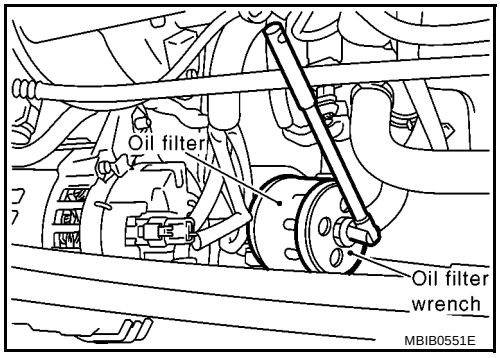
1. Oil filter
2. O-ring
3. Oil filter bracket
4. Connecting bolt

REMOVAL

1. Using an oil filter wrench (special service tool), remove oil filter.

CAUTION:

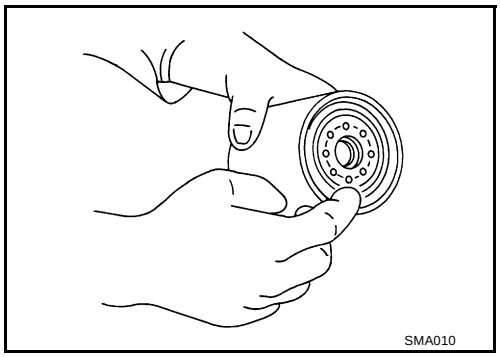
- **Be careful not to get burned when the engine and engine oil are hot.**
- **When removing, prepare a shop cloth to absorb any oil leakage or spillage.**
- **Do not allow engine oil to adhere to the drive belts.**
- **Completely wipe off any oil that adhere to the engine and the vehicle.**



INSTALLATION

1. Remove foreign materials adhering to the oil filter installation surface.
2. Install oil filter bracket to oil cooler.

   CAUTION:
   Install oil filter bracket, positioning lug in the hole of oil cooler.
3. Apply engine oil to the oil seal contact surface of the new oil filter.
4. Install the oil filter until it comes into contact with the oil seal on the engine bracket.
5. Tighten the oil filter three-quarters of a turn by hand.
6. After warming up the engine, check for engine oil leakage.
7. Check oil level and add engine oil. Refer to LU-12, "ENGINE OIL" .

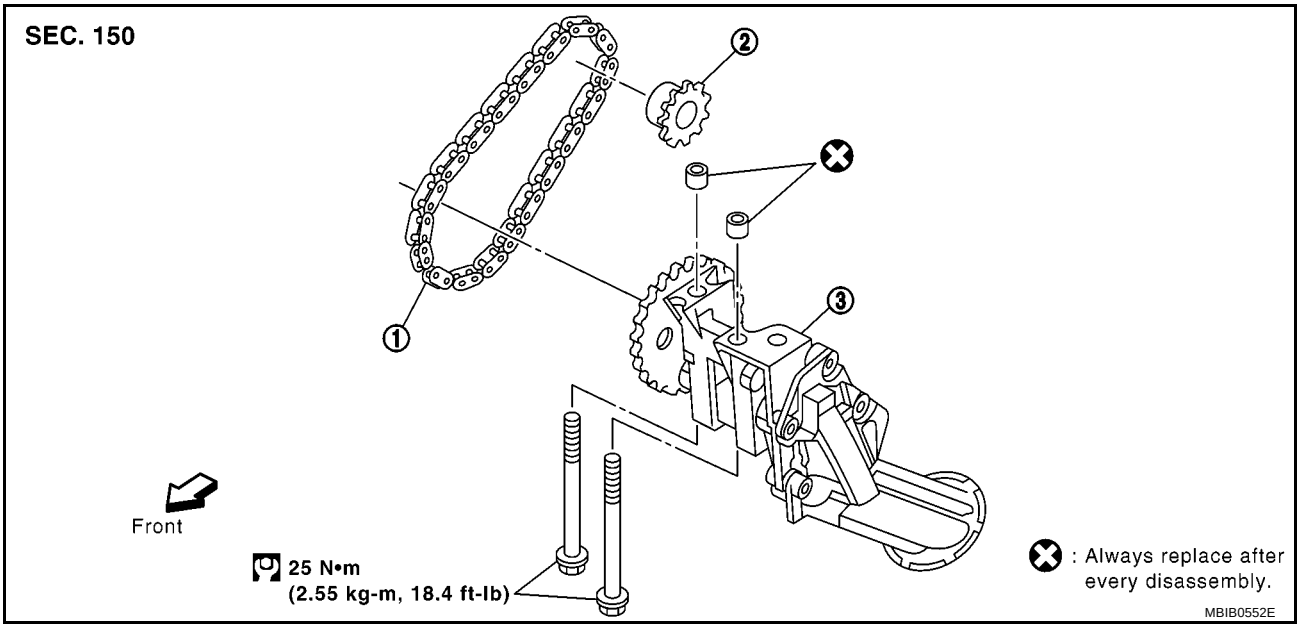


OIL PUMP

PFP:15010

Removal and Installation

EBS01C7L



1. Oil pump drive chain
2. Crankshaft sprocket
3. Oil pump assembly

REMOVAL

1. Remove the following parts.
   - Battery ground cable
   - Undercover
   - RH front wheel
2. Remove right side splash cover.
3. Remove drive belt. Refer to EM-121, "DRIVE BELTS" .
4. Remove oil pan. Refer to EM-133, "OIL PAN" .
5. Remove rear oil seal retainer. Refer to EM-140, "TIMING BELT" .
6. Remove oil pump drive chain. Refer to EM-167, "Disassembly of The Bottom Engine" .
7. Remove oil pump assembly.

INSTALLATION

Install in the reverse order of removal paying attention to the following.

Rear Oil Seal Retainer and Oil Pump

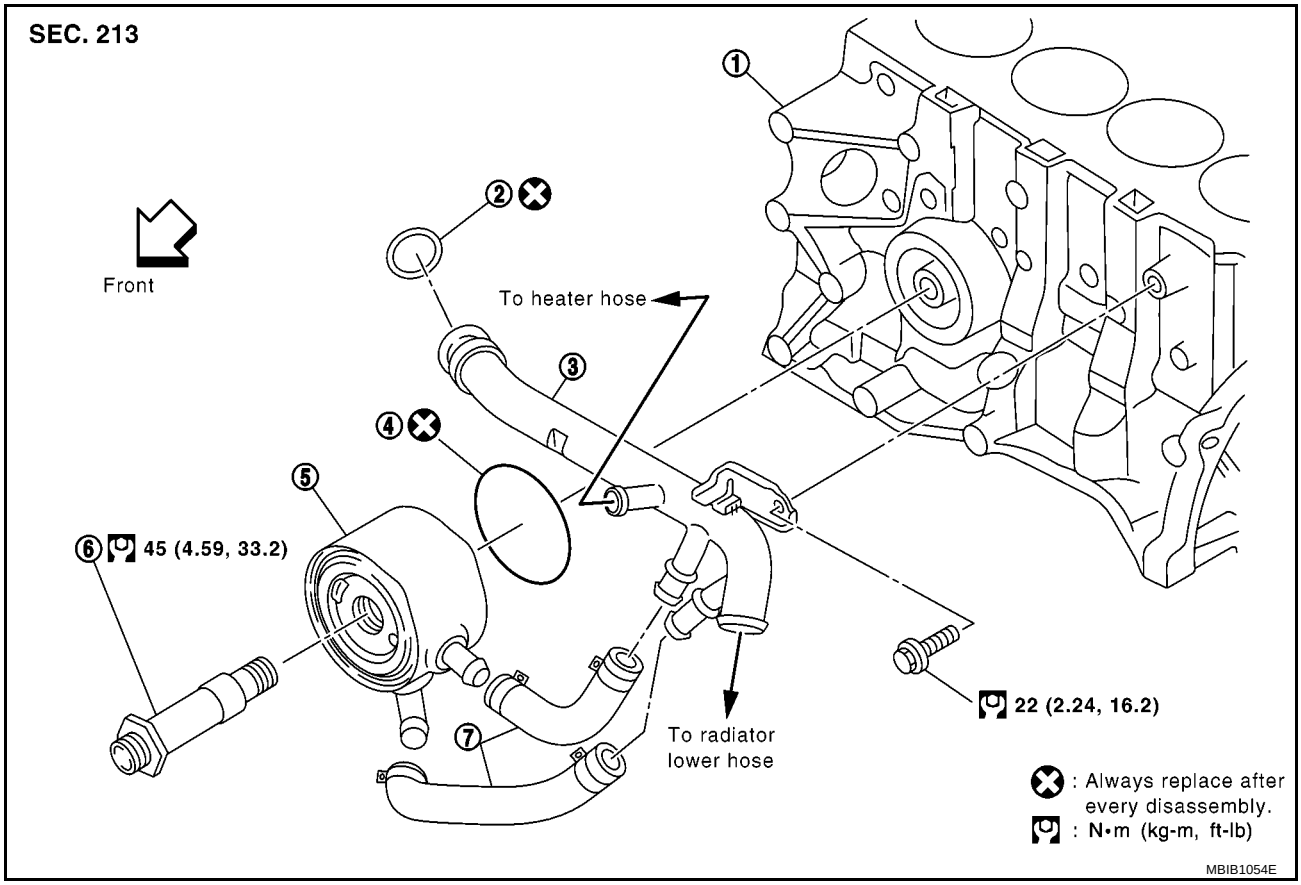
- Refer to EM-179, "INSTALLATION OF REAR OIL SEAL RETAINER AND OIL PUMP" .

OIL COOLER

PFP:21305

Removal and Installation

EBS01C7M



1. Cylinder block
2. O-ring
3. Water pipe
4. O-ring
5. Oil cooler
6. Connecting bolt
7. Water hose

CAUTION:

- **Be careful not to get burned when the engine and engine oil are hot.**
- **When removing, prepare a shop cloth to absorb any oil leakage or spillage.**
- **Completely wipe off any oil that abhere to the engine and the vehicle.**

REMOVAL

1. Drain engine coolant. Refer to CO-32, "DRAINING ENGINE COOLANT" .

   CAUTION:
   Perform when engine is cold.
2. Remove oil filter and oil filter bracket. Refer to LU-14, "OIL FILTER" .
3. Remove water hoses from oil cooler.
4. Remove oil cooler.

INSPECTION

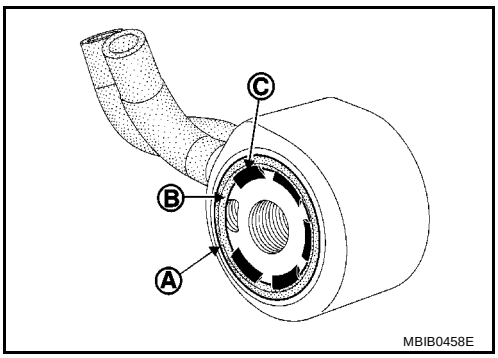
Oil Cooler

Check oil cooler for cracks and clogging by blowing through coolant inlet. If necessary, replace oil cooler assembly.

INSTALLATION

Installation is in reverse order of removal.

- Replace the O-ring (A) of the oil cooler, positioning the lip (B) of the seal behind the lug (C) of the oil cooler.



- Confirm that no foreign objects are adhering to the installation planes of the oil cooler and block.

DESCRIPTION

PFP:00000

Pre-delivery Inspection Items

ELS000L6

Shown below are Pre-delivery Inspection Items required for the new vehicle. It is recommended that necessary items other than those listed here be added, paying due regard to the conditions in each country.

Perform applicable items on each model. Consult text of this section for specifications.

☐ Install vehicle protection kit

☐ Fit all accessories ordered (if applicable) (e.g. towbar, audio, navigation, air conditioner, styling kit)

UNDER HOOD — engine off

☐ Check coolant level and cooling system for leaks

☐ Charge battery and check terminals for condition

☐ Check drive belts tension

☐ Check fuel filter for water or dust (diesel only) and fuel system for leaks

☐ Check engine oil level and for oil leaks

☐ Check brake and clutch fluid levels and fluid lines for leaks

☐ Check and top up washer reservoirs

☐ Check power steering fluid level and fluid lines for leaks (if applicable)

☐ Check air conditioning system for gas leaks (if applicable)

ON INSIDE AND OUTSIDE

☐ Install transit fuse if removed for vehicle storage

☐ Check instruments, gauges, lamps, horn and accessories for operation

☐ Check wipers and washers for operation and adjustment

☐ Check interior and door mirrors and sun visors for operation

☐ Set radio code and set clock

☐ Check parking brake adjustment

☐ Check clutch pedal adjustment

☐ Check steering lock operation

☐ Check seat adjusters and seat belts for operation

☐ Check all windows for operation and alignment

☐ Check mouldings, trim and fittings for fit and alignment

☐ Check weatherstrips for fit and adhesion

☐ Check hood, trunk lid, door panels and fuel lid for fit and alignment

☐ Check latches, keys, remote key, door locks and remote trunk lid and fuel lid release for operation

☐ Check wheel nut torques

☐ Check tyre pressure (incl. spare tyre)

☐ Check tool kit and jack for operation

☐ Check automatic transmission/transaxle starter inhibitor (if applicable)

☐ Check sunroof for operation and alignment (if applicable)

UNDER BODY

☐ Check manual transmission/transaxle, differential and transfer box for oil level and oil leaks

☐ Tighten bolts and nuts steering linkage and gear box, axle/suspension parts, propeller and exhaust system

☐ Check brake and clutch lines, and oil/fluid reservoirs for leaks

☐ Remove front suspension spacer blocks (if applicable)

☐ Check body mounting torque (if applicable)

ROAD TEST

- ☐ Check clutch operation
- ☐ Check foot brake operation
- ☐ Check parking brake operation
- ☐ Check steering operation, self-centering and steering wheel alignment
- ☐ Check engine performance
- ☐ Check for squeeks, rattles and noise from interior, suspension and brakes
- ☐ Check heating, ventilation and air conditioning operation
- ☐ Check radio, cassette and CD player operation
- ☐ Check odometer and trip meter operation and cancelling
- ☐ Check instruments for operation
- ☐ Check automatic transmission/transaxle shift pattern and kickdown operation (if applicable)
- ☐ Check cruise control and navigation system operation (if applicable)

ENGINE OPERATING AND HOT

- ☐ Check idle speed
- ☐ Check automatic transmission/transaxle oil level (if applicable)

FINAL INSPECTION

- ☐ Remove vehicle protection kit
- ☐ Fit interior mats and wheel covers
- ☐ Check for interior and exterior metal and paint damage
- ☐ Wash, clean interior and exterior

GENERAL MAINTENANCE

PFP:00000

General Maintenance

ELS000L7

General maintenance includes those items which should be checked during the normal day-to-day operation of the vehicle. They are essential if the vehicle is to continue operating properly. The owners can perform the checks and inspections themselves or they can have their NISSAN dealers do them for a nominal charge.

OUTSIDE THE VEHICLE

The maintenance items listed here should be performed from time to time, unless otherwise specified.

Item		Reference page
Tires	Check the pressure with a gauge periodically when at a service station, including the spare, and adjust to the specified pressure if necessary. Check carefully for damage, cuts or excessive wear.	—
Windshield wiper blades	Check for cracks or wear if not functioning correctly.	—
Doors and engine hood	Check that all doors and the engine hood operate smoothly as well as the back door and glass hatch. Also ensure that all latches lock securely. Lubricate if necessary. Make sure that the secondary latch keeps the hood from opening when the primary latch is released. When driving in areas using road salt or other corrosive materials, check for lubrication frequently.	BL-7, BL-204
Tire rotation	Tires should be rotated every 10,000 km (6,000 miles).	MA-38

INSIDE THE VEHICLE

The maintenance items listed here should be checked on a regular basis, such as when performing periodic maintenance, cleaning the vehicle, etc.

Item		Reference page
Lamps	Make sure that the headlamps, stop lamps, tail lamps, turn signal lamps, and other lamps are all operating properly and installed securely. Also check headlamp aim.	—
Warning lamps and chimes	Make sure that all warning lamps and buzzers/chimes are operating properly.	—
Steering wheel	Check that it has the specified play. Check for changes in the steering conditions, such as excessive free play, hard steering or strange noises. **Free play: Less than 35 mm (1.38 in)**	—
Seat belts	Check that all parts of the seat belt system (e.g. buckles, anchors, adjusters and retractors) operate properly and smoothly, and are installed securely. Check the belt webbing for cuts, fraying, wear or damage.	SB-3

UNDER THE HOOD AND VEHICLE

The maintenance items listed here should be checked periodically. e.g. each time you check the engine oil or refuel.

Item		Reference page
Windshield washer fluid	Check that there is adequate fluid in the tank.	—
Engine coolant level	Check the coolant level when the engine is cold.	CO-8
Engine oil level	Check the level after parking the vehicle (on level ground) and turning off the engine.	LU-4
Brake and clutch fluid levels	Make sure that the brake and clutch fluid levels are between the “MAX” and “MIN” lines on the reservoir.	MA-38, MA-36
Battery	Check the fluid level in each cell. It should be between the “MAX” and “MIN” lines.	—

PERIODIC MAINTENANCE

PFP:00026

Periodic Maintenance

ELS000L8

The following tables show the normal maintenance schedule. Depending upon weather and atmospheric conditions, varying road surfaces, individual driving habits and vehicle usage, additional or more frequent maintenance may be required.

Periodic maintenance beyond the last period shown on the tables requires similar maintenance.

ENGINE AND EMISSION CONTROL MAINTENANCE (CR PETROL ENGINE FOR EUROPE)

(Annual Mileage <30,000 Km/year)

Abbreviations: I = Inspect and correct or replace as necessary, R = Replace,.

MAINTENANCE OPERATION		MAINTENANCE INTERVAL								Reference page
Perform on a kilometer basis, but on an annual basis when driving less than 15,000 km (9,000 miles) per year	km x 1,000 (Miles x 1,000) Months	15 (9) 12	30 (18) 24	45 (27) 36	60 (36) 48	75 (45) 60	90 (54) 72	105 (63) 84	120 (72) 96	
Engine compartment and under vehicle										
Intake and exhaust valve clearance	See NOTE (1)									EM-45
Drive belts	See NOTE (2)									EM-12
Engine oil (Use recommended oil.)★		R	R	R	R	R	R	R	R	LU-4
Engine oil filter (Use NISSAN genuine part or equivalent)★		R	R	R	R	R	R	R	R	LU-6
Engine anti-freeze coolant (Use genuine NISSAN Anti-Freeze Coolant (L250) or equivalent.)	See NOTE (3)			I			R		I	CO-8
Cooling system		I	I	I	I	I	I	I	I	CO-8
Fuel lines			I		I		I		I	FL-3
Air cleaner filter★					R				R	EM-16
Fuel filter (In-tank type)	See NOTE (4)									FL-4
Spark plugs [Platinum-Tipped Type]					R				R	MA-28
EVAP vapor lines (With carbon canister)			I		I		I		I	EC-464 or EC-840
Heated oxygen sensor 1	See NOTE (5)									EC-173 or EC-595

NOTE:

- **★ Maintenance items with "★" should be performed more frequently according to "Maintenance Under Severe Driving Conditions".**
- **(1) Periodic maintenance is not required. However, if valve noise increases, check valve clearance.**
- **(2) Replace the drive belts if found damaged or if the auto belt tensioner reading reaches the maximum limit.**
- **(3) First replace at 90,000 Km (54,000 miles)/60 months, then every 60,000 km (36,000 miles)/48 months. Perform "I" (Checking the mixture ratio and correcting the mixture ratio if necessary) at the middle of replacement interval.**
- **(4) Fuel filter is maintenance-free. For service procedures, refer to FL-4 .**
- **(5) Perform only according to "Maintenance Under Severe Driving conditions" for models without Euro-OBD system. For models with Euro-OBD system, periodic maintenance is not required.**

CHASSIS AND BODY MAINTENANCE (CR PETROL ENGINE FOR EUROPE)

(Annual Mileage <30,000 Km/year)

Abbreviations: I = Inspect and correct or replace as necessary, R = Replace.

MAINTENANCE OPERATION		MAINTENANCE INTERVAL								Reference page
Perform either at number of kilometers (miles) or months, whichever comes first.	km x 1,000 (Miles x 1,000) Months	15 (9) 12	30 (18) 24	45 (27) 36	60 (36) 48	75 (45) 60	90 (54) 72	105 (63) 84	120 (72) 96

MAINTENANCE UNDER SEVERE DRIVING CONDITIONS (FOR EUROPE)

(Annual Mileage <30,000 Km/year)

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

Severe driving conditions

A — Driving in dusty conditions
B — Repeatedly driving short distances
C — Towing a trailer or caravan
D — Extensive idling
E — Driving in extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high
F — Driving in high humidity or mountainous areas
G — Driving in areas using salt or other corrosive materials
H — Driving on rough and/or muddy roads or in the desert
I — Driving with frequent use of braking or in mountainous areas
J — Frequent off road use or driving in water
K —Sustained high speed driving
L — For models without Euro-OBD system (For CR petrol engine models)
L — Repeated short journeys, cold engine at low temperature (For K9K diesel engine models)

Maintenance operation: Check = Check and correct or replace as necessary.

MAINTENANCE UNDER SEVERE DRIVING CONDITIONS (FOR EUROPE)

(Annual Mileage >30,000 Km/year)

The maintenance intervals shown on the preceding pages are for normal operating conditions. If the vehicle is mainly operated under severe driving conditions as shown below, more frequent maintenance must be performed on the following items as shown in the table.

Severe driving conditions

A — Driving in dusty conditions
B — Repeatedly driving short distances
C — Towing a trailer or caravan
D — Extensive idling
E — Driving in extremely adverse weather conditions or in areas where ambient temperatures are either extremely low or extremely high
F — Driving in high humidity or mountainous areas
G — Driving in areas using salt or other corrosive materials
H — Driving on rough and/or muddy roads or in the desert
I — Driving with frequent use of braking or in mountainous areas
J — Frequent off road use or driving in water
K —Sustained high speed driving
L — For models without Euro-OBD system (For CR petrol engine models)
L — Repeated short journeys, cold engine at low temperature (For K9K diesel engine models)

Maintenance operation: Check = Check and correct or replace as necessary.

RECOMMENDED FLUIDS AND LUBRICANTS

PFP:00000

Fluids and Lubricants

ELS000L9

			Capacity (Approximate)		Recommended Fluids/Lubricants
			Liter	Imp measure	
Engine oil Drain and refill	With oil filter change	CR engine	3.0	2-5/8 qt	● Gasoline engine API SG, SH or SJ*1 ILSAC grade GF-I or GF-II*1 ACEA A2 ● Diesel engine ACEA B3, B4*1
		K9K engine	4.55	4 qt	
	Without oil filter change	CR engine	2.8	2-1/2 qt	
		K9K engine	4.39	3-7/8 qt	
Dry engine (engine overhaul)		CR engine	3.5	3-1/8 qt	
		K9K engine	4.71	4-1/8 qt	
Cooling system (with reservoir)	CR engine	M/T models with A/C	5.3	4-5/8 qt	● Genuine Nissan Anti-freeze Coolant (L250) or equivalent in its quality*3
		Except M/T models with A/C	4.9	4-3/8 qt	
	K9K engine		6.5	5-3/4 qt	
Reservoir tank	CR engine	M/T models with A/C	1.2	1-1/8 qt	
		Except M/T models with A/C	0.7	5/8 qt	
	K9K engine		1.2	1-1/8 qt	
Manual transaxle gear oil		JH3	2.6	4-5/8 pt	● Genuine Nissan gear oil or API GL-4, Viscosity SAE 75W-80, 75W-85
		JR5	2.5	4-3/8 pt	
Automatic transaxle fluid			7.7	6-3/4 qt	Genuine Nissan ATF or equivalent*4
Brake and clutch fluid			—	—	● DOT 3 or DOT 4 (US FMVSS No. 116)*5
Multi-purpose grease			—	—	NLGI No. 2 (Lithium soap base)

*1: For further details, see “SAE Viscosity Number”.

*2: Never use API CG-4.

*3: Use Genuine Nissan Anti-freeze Coolant (L250)] or equivalent in its quality, in order to avoid possible aluminum corrosion within the engine cooling system caused by the use of non-genuine engine coolant.

Note that any repairs for the incidents within the engine cooling system while using non-genuine engine coolant may not be covered by the warranty even if such incidents occurred during the warranty period.

*4: Contact a Nissan dealership for more information regarding suitable fluids, including recommended brand(s) of Dexron™ III/Mercon™ Automatic Transmission Fluid.

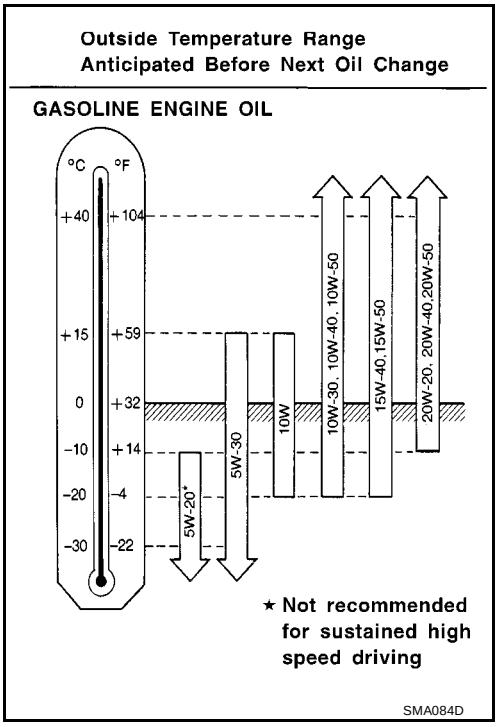
*5: Never mix different types of fluids (DOT 3 and DOT 4).

SAE Viscosity Number

ELS000LA

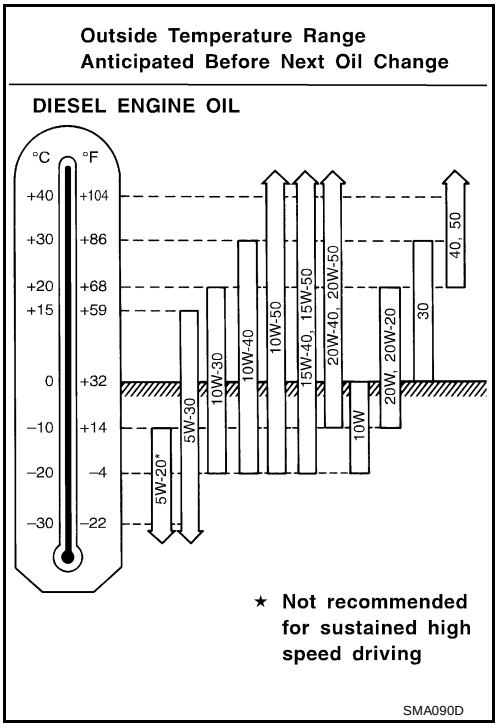
GASOLINE ENGINE

- For warm and cold areas: 10W-30 is preferable for ambient temperature above –20°C (–4°F).
- 5W-30 will positively improve fuel economy.
- For hot areas: 20W-40 and 20W-50 are suitable.



DIESEL ENGINE

- For cold and warm areas: 5W-40, 10W-40 and 15W-40 are suitable.
- 5W-40 and 10W-40 are preferable for ambient temperature below –15°C (5°F).
- 15W-40 is preferable for ambient temperature above –10°C (4°F).



Engine Coolant Mixture Ratio

ELS000LB

The engine cooling system is filled at the factory with a high-quality, year-round and extended life engine coolant. The high quality engine coolant contains the specific solutions effective for the anti-corrosion and the anti-freeze function. Therefore, additional cooling system additives are not necessary.

Outside temperature down to		Composition	
°C	°F	Engine coolant (Concentrated)	Demineralized water or distilled water
–15	5	30%	70%
–35	–30	50%	50%

SMA089D

CAUTION:

- **When adding or replacing coolant, be sure to use only Genuine NISSAN Anti-freeze Coolant (L250) or equivalent. Because L250 is premixed type coolant.**

The use of other types of engine coolant may damage your cooling system.

- When checking the engine coolant mixture ratio by the coolant hydrometer, use the chart below to correct your hydrometer reading (specific gravity) according to coolant temperature.

Mixed coolant specific gravity

Unit: specific gravity

Engine coolant mixture ratio	Coolant temperature °C (°F)			
	15 (59)	25 (77)	35 (95)	45 (113)
30%	1.046 - 1.050	1.042 - 1.046	1.038 - 1.042	1.033 - 1.038
50%	1.076 - 1.080	1.070 - 1.076	1.065 - 1.071	1.059 - 1.065

WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could be caused by high pressure fluid escaping from the radiator. Wait until the engine and radiator cool down.

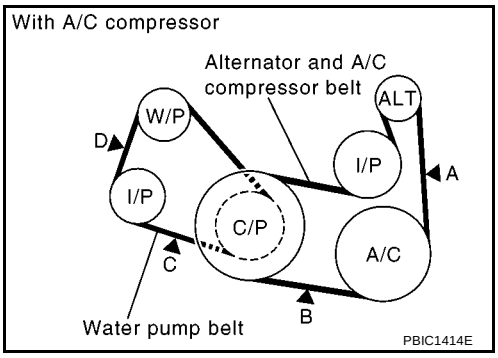
ENGINE MAINTENANCE (CR)

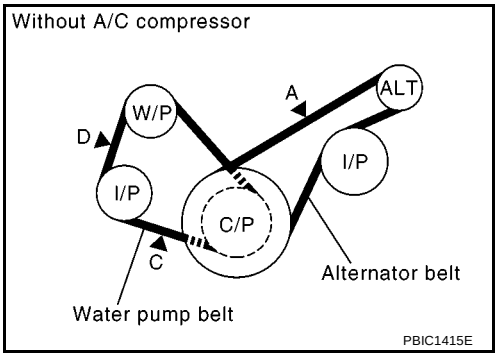
PFP:00000

Checking drive Belts

ELS000MI

- Inspection should be done only when engine is cold or over 30 minutes after the engine is stopped.
- Turn the clamp pulleys two times clockwise, and make sure tension on all pulleys is equal before doing the test.
- Visually check the belts for wear, damage, and cracks on inside and edges.
- When measuring deflection, apply 98,1 N (10 kg, 22lb) at the ▼ marked point.





CAUTION:

When measuring belt tension immediately after the belt is installed, first set the tension to the standard, rotate the crankshaft for more than two turns in order to eliminate variance in the tension between pulleys, then measure and adjust tension to the standard again.

Location	Tension [N (kg, lb)]			Deflection [mm (in)] [When pressed by force of 98.1N (10 kg, 22lb)]			
	New	At adjustment	Limit	Measuring point	New belt	At adjustment	Limit
Alternator and A/C compressor belt	603 - 691 (61.5 - 70.5, 135.6 - 155.3)	495 - 583 (50.5 - 59.5, 111.3 - 131.1)	196 (20, 44.1)	A	6.6 - 7.8 (0.260 - 0.307)	7.3 - 8.5 (0.287 - 0.335)	13.8 (0.543)
				B	5.6 - 6.6 (0.220 - 0.260)	7.1 - 8.3 (0.280 - 0.327)	11.9 (0.469)
Alternator belt	603 - 691 (61.5 - 70.5, 135.6 - 155.3)	495 - 583 (50.5 - 59.5, 111.3 - 131.1)	196 (20, 44.1)	A	3.1 - 4.1 (0.122 - 0.161)	9.8 - 10.6 (0.386 - 0.417)	13.8 (0.543)
Water pump belt	446 - 534 (45.5 - 54.5, 100.3 - 120.0)	348 - 436 (35.5 - 44.5, 78.2 - 98.0)	137 (14, 30.9)	C	6.7 - 7.3 (0.264 - 0.287)	7.6 - 8.6 (0.299 - 0.339)	12.4 (0.448)
				D	4.7 - 5.6 (0.185 - 0.220)	7.0 - 7.7 (0.276 - 0.303)	8.6 (0.339)

Tension Adjustment

ELS000MJ

Location	Location of adjuster and tightening method
Alternator and A/C compressor drive belt	Adjusting bolt on idler pulley
Water pump belt	Adjusting bolt on idler pulley

CAUTION:

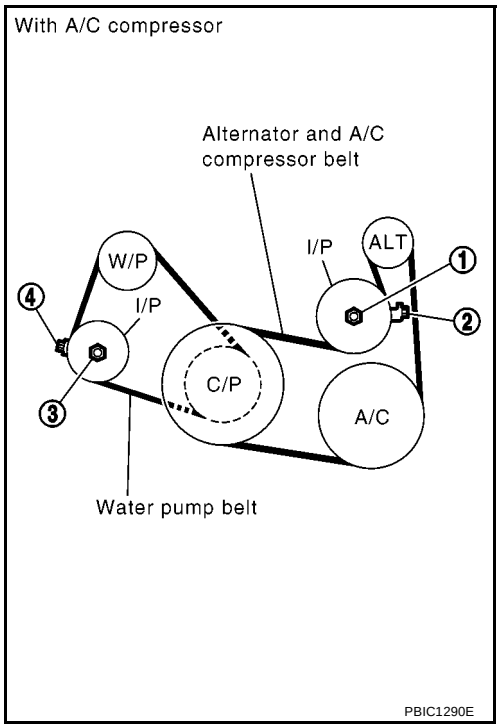
- **When the belt is replaced with new one, adjust the belt tension to the value for “New belt”, because new belt will not fully seat in the pulley groove.**
- **When tension of the belt being used exceeds “Limit”, adjust it to the value for “At adjustment”.**
- **When installing a belt, make sure that it is correctly engaged with the pulley groove.**
- **Do not allow oil or engine coolant to get on the belt.**
- **Do not twist or bend the belt strongly.**

ALTERNATOR AND A/C COMPRESSOR BELT (WITH A/C MODELS)

1. Remove RH front fender protector.
2. Loosen lock nut (1).
3. Tighten lock nut (1) with fingers.
4. Loosen lock nut (1) half a turn counter-clockwise.
5. Adjust the belt tension by turning the adjuster bolt (2).
   For the specified belt tension, refer to MA-21, "Checking drive Belts" .
6. Tighten lock nut (1).

   Nut (1) :

   : 24.5 - 31.4 N·m (2.5 - 3.2 kg-m, 18 - 23 ft-lb)
7. Turn the crankshaft pulley two times clockwise.
8. Check that the belt tension is within the standard. Refer to MA-21, "Checking drive Belts" .

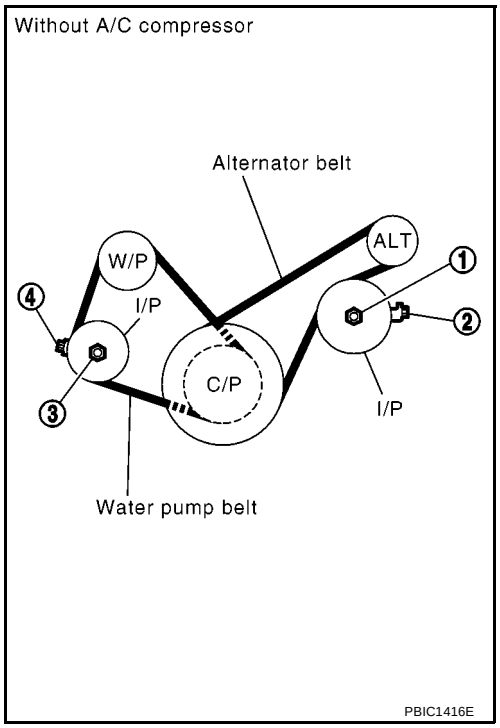


ALTERNATOR BELT (WITHOUT A/C MODELS)

1. Remove RH front fender protector.
2. Loosen lock nut (1).
3. Tighten lock nut (1) with fingers.
4. Loosen lock nut (1) half a turn counter-clockwise.
5. Adjust the belt tension by turning the adjuster bolt (2).
   For the specified belt tension, refer to MA-21, "Checking drive Belts" .
6. Tighten lock nut (1).

   Nut (1) :

   : 24.5 - 31.4 N·m (2.5 - 3.2 kg-m, 18 - 23 ft-lb)
7. Turn the crankshaft pulley two times clockwise.
8. Check that the belt tension is within the standard. Refer to MA-21, "Checking drive Belts" .



WATER PUMP BELT

1. Remove RH front fender protector.
2. Loosen lock nut (3).
3. Tighten lock nut (3) with fingers.
4. Adjust the belt tension by turning the adjuster bolt (4).
   For the specified belt tension, refer to MA-21, "Checking drive Belts" .
5. Tighten lock nut (3).

Nut (3) :

: 24.5 - 31.4 N·m (2.5 - 3.2 kg-m, 18 - 23 ft-lb)

6. Turn the crankshaft pulley two times clockwise.
7. Check that the belt tension is within the standard. Refer to MA-21, "Checking drive Belts" .

Changing Engine coolant

ELS000MK

WARNING:

- **To avoid being scalded, never change the coolant when the engine is hot.**
- **Wrap a thick cloth around cap and carefully remove the cap. First, turn the cap a quarter of a turn to release built-up pressure. Then turn the cap all the way.**

DRAINING ENGINE COOLANT

1. Disconnect radiator lower hose and radiator cap.

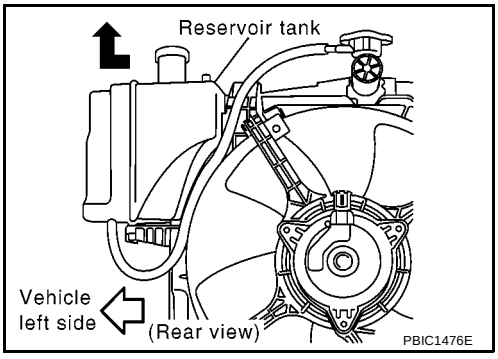
   CAUTION:
   - **Make sure to drain when the engine coolant temperature is cold.**
   - **Be careful not to allow coolant to contact drive belts.**

2. Remove reservoir tank and drain the engine coolant in the following procedures.

a. Move relay case.

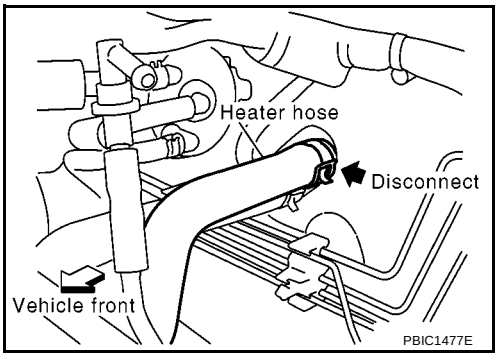
b. Disconnect the reservoir tank from fan shroud to remove. With force applied in the left direction of vehicle, pull up reservoir tank.

3. Check drain coolant for contaminants such as rust, corrosion or discoloration.
   If contaminated, flush engine cooling system. Refer to MA-24, "FLUSHING COOLING SYSTEM" .

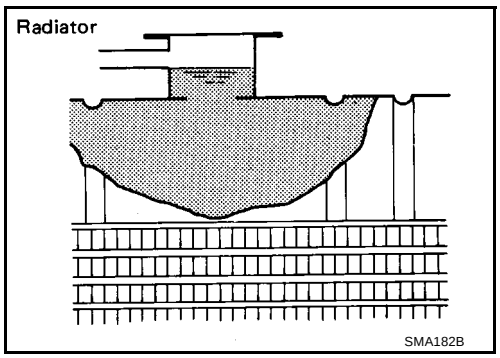


REFILLING ENGINE COOLANT

1. Install reservoir tank.
2. Connect radiator lower hose.
3. Disconnect heater hose (at heater hose outlet side: upper side) as shown in figure. Keep hose end at the same height as that of before removal.



4. Fill radiator and reservoir tank to specified level.
   - **Pour coolant slowly of less than 2 ℓ (1-3/4 Imp qt) a minute to allow air in system to escape.**
   - **When coolant from heater hose starts to drain, connect heater hose and continue to fill.**
   - **Use Genuine Nissan Anti-freeze Coolant or equivalent mixed with water (distilled or demineralized).**
     Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS".



Engine coolant capacity (With reservoir tank):

M/T models with A/C

: Approx. 5.3 ℓ (4-5/8 Imp qt)

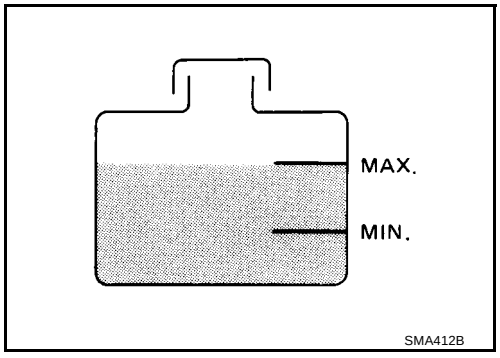
Except M/T models with A/C

: Approx. 4.9 ℓ (4-3/8 Imp qt)

Reservoir tank:

M/T models with A/C : 1.2 ℓ (1-1/8 Imp qt)

Except M/T models with A/C : 0.7 ℓ (5/8 Imp qt)



5. Warm up engine to normal operating temperature with radiator cap installed.
6. Warm up until thermostat opens. Keep warming at 3,000 rpm for approximately 10 minutes as guide.
   - For thermostat opening, touch radiator upper hose by hand to insure that water flow is hot.

   CAUTION:
   Be careful not to overheat.
7. Stop the engine.
8. After cooling engine [approximately 50°C (122 °F) or lower], remove radiator cap and check coolant level. If the level is low, fill up to the radiator neck again and repeat from step 5.
9. When the coolant level stabilizes, fill reservoir tank up to the “MAX” line.
10. Check cooling system for leaks with engine running.
11. Allow the engine to cool [approximately 50°C (122°F) or lower].
12. Start the engine. Perform the following cycle 3 times. Keep an engine speed of 1,000 rpm for approximately 30 seconds. Then increase it gradually to 3,000 rpm.
13. During the above step 12, make sure water flow sound is not heard from heater core.

- Sound may be noticeable at heater unit.

14. If water flow sound is heard, repeat from step 4 to 13.

- **Clean excess coolant from engine.**

FLUSHING COOLING SYSTEM

1. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
2. Run engine and warm it up to normal operating temperature.
3. Rev engine two or three times under no-load.
4. Stop engine and wait until it cools down.
5. Drain water.
6. Repeat steps 1 through 5 until clear water begins to drain from radiator.

Checking Cooling System

ELS000ML

WARNING:

Never remove the radiator cap when the engine is hot; serious burns could be caused by high pressure fluid escaping from the radiator.
Wrap a thick cloth around the cap and carefully remove it by turning it a quarter turn to allow built-up pressure to escape and then turn the cap all the way off.

CHECKING COOLING SYSTEM HOSES

Check hoses for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.

CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows.

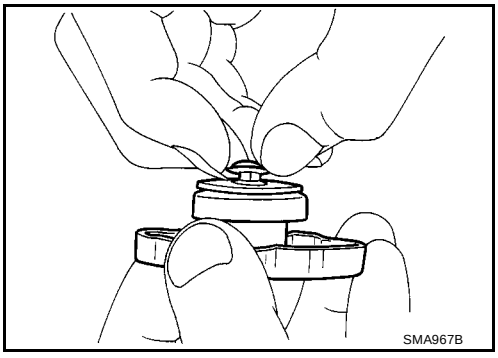
- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

1. Apply water by hose to the back side of the radiator core vertically downward.
2. Apply water again to all radiator core surfaces once per minute.
3. Stop washing if any stains no longer flow out from the radiator.
4. Blow air into the back side of radiator core vertically downward.
   - Use compressed air lower than 490 kPa (4.9 bar, 5 kg/cm^2 , 71 psi) and keep distance more than 30 cm (11.8 in).
5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.

CHECKING RADIATOR CAP

1. Pull the negative-pressure valve to open it and check that it close completely when released.

- Check that there is no dirt or damage on the valve seat of the radiator cap negative-pressure valve.
- Check that there are no unusual conditions in the opening and closing conditions of the negative-pressure valve.



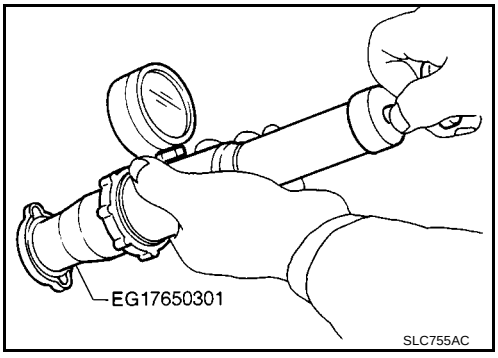
2. Check radiator cap relief pressure.

   Standard:

   78 - 98 kPa (0.78 - 0.98 bar, 0.8 - 1.0 kg/cm^2 , 11 - 14 psi)

   Limit:

   59 kPa (0.59 bar, 0.6 kg/cm^2 , 9 psi)



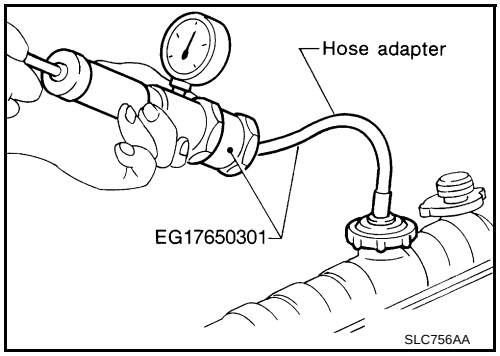
- When connecting the radiator cap to the tester, apply engine coolant to the cap seal part.
- Replace the radiator cap if there is an unusual conditions in the negative-pressure valve, or if the open-valve pressure is outside of the standard values.

CHECKING COOLING SYSTEM FOR LEAKS

- To check for leakage, apply pressure to the cooling system with a tester.

Testing pressure:

157 kPa (1.57 bar, 1.6 kg/cm^2 , 23 psi)



WARNING:

Never remove the radiator cap when the engine is hot. Serious burns could occur from high pressure coolant escaping from the radiator.

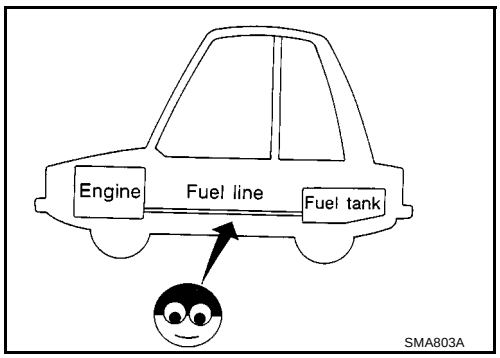
CAUTION:

Higher pressure than specified may cause radiator damage.

Checking Fuel Lines

ELS000MM

Inspect fuel lines, filler cap and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration. If necessary, repair or replace malfunctioning parts.



CAUTION:

Tighten high-pressure rubber hose clamp so that clamp end is 3 mm (0.12 in) from hose end.
Tightening torque specifications are the same for all rubber hose clamps.
Ensure that screw does not contact adjacent parts.

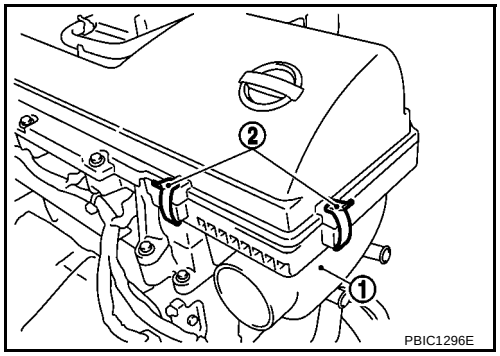
Changing Air Cleaner Filter

ELS000MN

REMOVAL

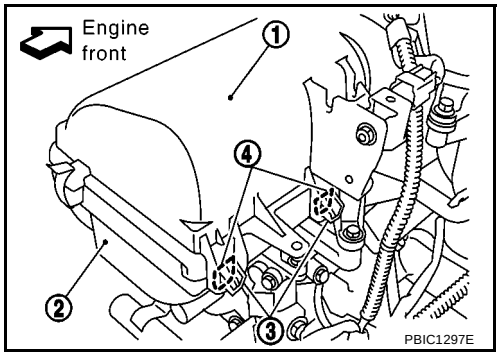
1. Remove air duct. Refer to EM-16, "REMOVAL" .
2. Remove clips (2) of air cleaner body (1).
3. After moving the air cleaner body downward, remove it by pulling it forward.
   - While pressing down the radiator upper hose, remove air cleaner body.
4. Remove air cleaner filter from the air cleaner body.

   NOTE:
   In some cases the air cleaner filter might remain in the air cleaner case (upper).



INSTALLATION

1. Set the air cleaner filter on the air cleaner case (upper) (1).
2. Insert the two projections (3) on the air cleaner body (2) into the two notch holes (4) on the rear of the air cleaner case (upper) (1), then lift up and fasten with the clip.
3. Attach air duct.



Changing Engine Oil

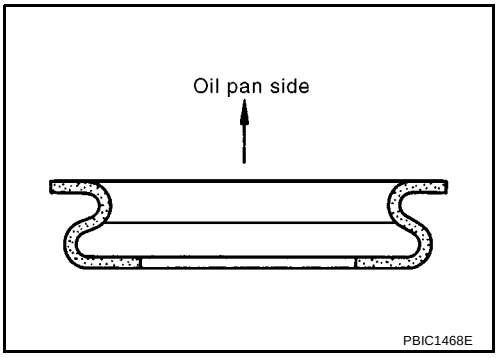
ELS000MO

WARNING:

- **Be careful not to burn yourself, as the engine oil is hot.**
- **Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.**

1. Warm up engine put vehicle horizontally, and check for oil leakage from engine components.
2. Stop engine and wait for 10 minutes.
3. Remove oil filler cap, and remove drain plug.
4. Drain engine oil.
5. Install drain plug. Refill with new engine oil.
   - Install drain plug washer in the direction shown in figure.

   Oil specification and viscosity:
   Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS".



Oil capacity (Approximate):

Unit: ℓ (Imp qt)

Drain and refill	With oil filter change	3.0 (2-5/8)
	Without oil filter change	2.8 (2-1/2)
Dry engine (engine overhaul)		3.5 (3-1/8)

CAUTION:

- **Be sure to clean drain plug and install with new washer.**

  Oil pan drain plug:

  : 29.4 - 39.2 N·m (3.0 - 3.9 kg-m, 22 - 28 ft-lb)

- **The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.**
  Always use the dipstick to determine when the proper amount of oil is in the engine.

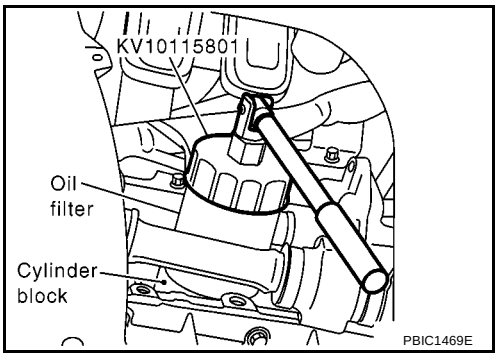
6. Warm up engine and check area around drain plug and oil filter for oil leakage.
7. Check oil level. Refer to LU-4, "Inspection" .
8. Stop engine and wait for 10 minutes.

Changing Oil Filter

ELS000MP

1. Using an oil filter wrench (special service tool), remove oil filter.

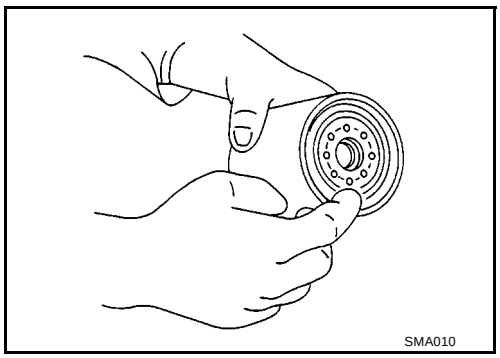
   CAUTION:
   - **Be careful not to get burned when the engine and engine oil are hot.**
   - **When removing, prepare a shop cloth to absorb any oil leakage or spillage.**
   - **Do not allow engine oil to adhere to the drive belts.**
   - **Completely wipe off any oil that adheres to the engine and the vehicle.**
2. Remove foreign materials adhering to the oil filter installation surface.



3. Apply engine oil to the oil seal circumference of the new oil filter.

CAUTION:

- **Use genuine NISSAN oil filter or the equivalent.**

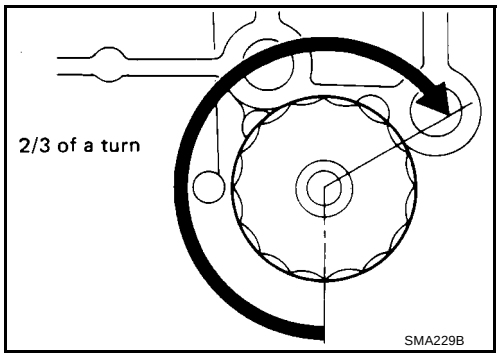


4. Screw the oil filter manually until it touches the installation surface, then tighten it by 2/3 turn.

Oil filter:

:14.7 - 20.5 N·m (1.5 - 2.1 kg-m, 11 - 15 ft-lb)

5. After warming up the engine, check for engine oil leakage.
6. Check oil level and add engine oil. Refer to LU-4, "ENGINE OIL" .



Changing Spark Plugs

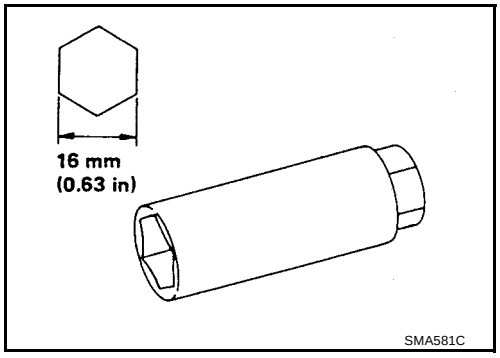
ELS000MQ

REMOVAL

1. Remove ignition coil. Refer to EM-27, "IGNITION COIL" .
2. Remove spark plugs with a spark plug wrench.

CAUTION:

Handle spark plug with care. Avoid impacts.



INSPECTION AFTER REMOVAL

- Use standard type spark plug for normal condition.
- The hot type spark plug is suitable when fouling occurs with the standard type spark plug under conditions such as:
  - Frequent engine starts
  - Low ambient temperatures
- The cold type spark plug is suitable when spark plug knock occurs with the standard type spark plug under conditions such as:
  - Extended highway driving
  - Frequent high engine revolution

Make	NGK	Champion
Standard type	LFR5AP-11	REC10PYC4
Hot type	LFR4AP-11	—
Cold type	LFR6AP-11	—

Gap (Nominal) : 1.1 mm (0.043 in)

CAUTION:

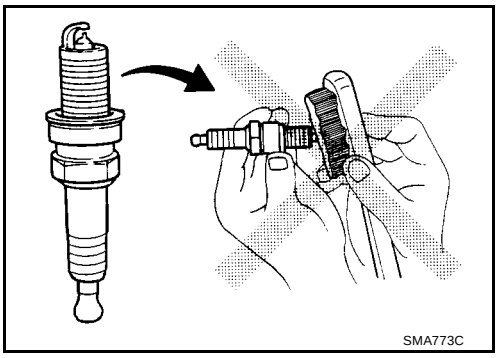
- **Do not use a wire brush for cleaning.**
- **If plug tip is covered with carbon, spark plug cleaner may be used.**

Cleaner air pressure:

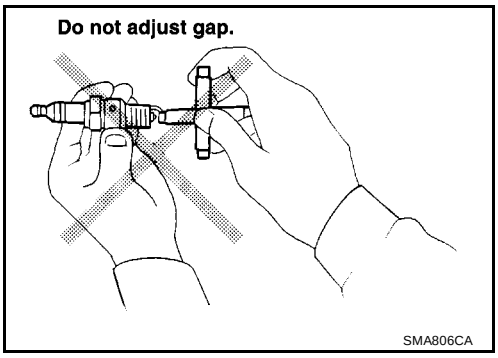
Less than 588 kPa (6 kg/cm^2 , 85 psi)

Cleaning time:

Less than 20 seconds



- **Checking and adjusting plug gap is not required between change intervals.**



INSTALLATION

Install in the reverse order of removal.

Spark plug

: 19.6 - 29.4 N·m (2.0 - 3.0 kg-m, 15 - 21 ft-lb)

Checking EVAP Vapor Lines

ELS000MR

1. Visually inspect EVAP vapor lines for improper attachment and for cracks, damage, loose connections, chafing and deterioration.
2. Inspect fuel tank filler cap vacuum relief valve for clogging, sticking, etc.

Refer to EC-464, "EVAPORATIVE EMISSION SYSTEM" (CR engine models with E-OBD), EC-840, "EVAPORATIVE EMISSION SYSTEM" (CR engine models without E-OBD).

ENGINE MAINTENANCE (K9K)

PFP:00000

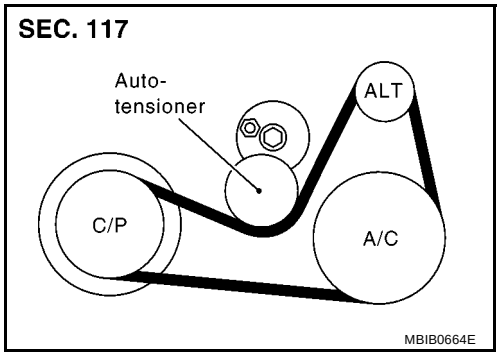
Checking Drive Belts

ELS0016D

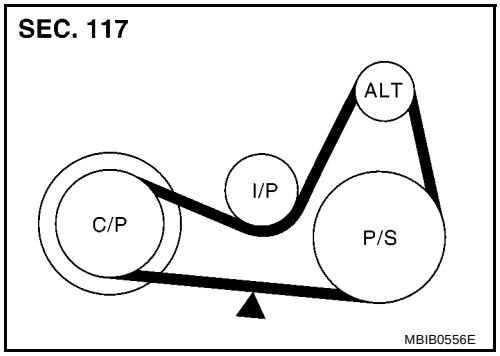
WARNING:

Be sure to perform when the engine is stopped.

1. Inspect belts for cracks, fraying, wear and oil. If necessary, replace.
2. Tighten auto-tensioner lock nut (models with A/C compressor) or idler pulley lock nut (models without A/C compressor) by hand and measure deflection or tension without looseness.



3. When measuring deflection, apply 98 N (10 kg, 22 lb) at the ▼ marked point as shown (models without A/C compressor).



TENTION ADJUSTMENT

Models With A/C Compressor

Belt tensioning is not necessary, as it is automatically adjusted by auto-tensioner.

Models Without A/C Compressor

Belt tightening method for adjustment	Adjusting bolt on idler pulley

- The tension value is 234±10 Hz.

NOTE:

The engine must be turned through two revolutions in order to position the belt correctly.

CAUTION:

- **When checking belt tension immediately after installation, first adjust it to the specified value. Then, after turning the crankshaft two turns or more, re-adjust to the specified value to avoid variation in deflection between pulleys.**
- **When installing belt, make sure that it is correctly engaged with pulley groove.**
- **Keep oil and water away from belt.**
- **Do not twist or bend belt excessively.**

Changing Engine coolant

ELS0016E

WARNING:

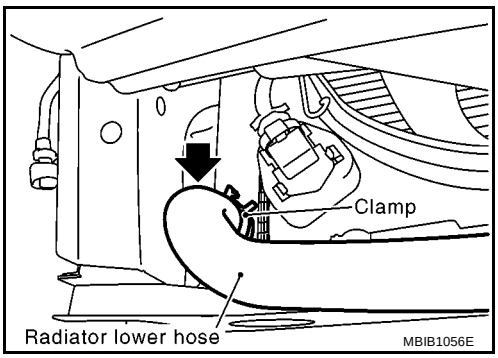
- **To avoid being scalded, never change the coolant when the engine is hot.**
- **Wrap a thick cloth around cap and carefully remove the cap. First, turn the cap a quarter of a turn to release built-up pressure. Then turn the cap all the way.**

DRAINING ENGINE COOLANT

1. Remove engine undercover.

2. Disconnect lower radiator hose, and remove radiator cap.
3. Remove reservoir tank, drain coolant, then clean reservoir tank.
4. Check drained coolant for contaminants such as rust, corrosion or discoloration.

If contaminated, flush engine cooling system. Refer to CO-33, "FLUSHING COOLING SYSTEM" .



REFILLING ENGINE COOLANT

1. Install reservoir tank, radiator lower hose and air relief plug.
2. Fill reservoir tank slowly with coolant until coolant spills from radiator cap holes.

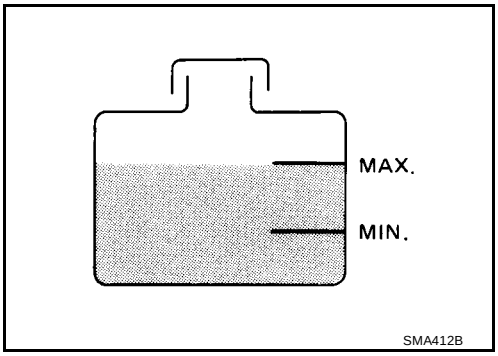
CAUTION:
If the filling rate is too fast, this could lead to air being mixed in the coolant. Be sure to fill the coolant slowly according to the rate indicated above.

- **Use genuine Nissan anti-freeze coolant or equivalent mixed with water (distilled or demineralized). Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS".**

Engine coolant capacity (With reservoir tank):

6.5 ℓ (5-3/4 Imp qt)

Reservoir tank : 1.2 ℓ (1-1/8 Imp qt)



- **Pour coolant through coolant filler neck slowly of less than 2 ℓ (1-3/4 Imp qt) a minute to allow air in system to escape.**
3. Fill reservoir tank to specified level.
4. Warm up engine to normal operating temperature without radiator cap installed.
- **If coolant overflows radiator filler hole, install filler cap.**
5. Run engine at 3,000 rpm for 10 seconds and return to idle speed with radiator cap installed.
- Repeat two or three times.

Watch coolant temperature gauge so as not to overheat the engine.

6. Stop engine and cool down to less than approximately 50°C (122°F).
- Cool down using a fan to reduce the time.
- If necessary, refill radiator up to filler neck with coolant.
7. Refill reservoir tank to MAX level line with coolant.
8. Repeat steps 5 through 7 two or more times with radiator cap installed until coolant level no longer drops.
9. Check cooling system for leaks with engine running.
10. Warm up engine, and check for sound of coolant flow while running engine from idle up to 3,000 rpm with heater temperature controller set at several position between COOL and WARM.
- Sound may be noticeable at heater unit.
11. If sound is heard, bleed air from cooling system by repeating steps 5 through 7 until coolant level no longer drops.
- **Clean excess coolant from engine.**

FLUSHING COOLING SYSTEM

1. Fill radiator with water until water spills from the air relief hole, then close air relief plug. Fill radiator and reservoir tank with water and reinstall radiator cap.
2. Run engine and warm it up to normal operating temperature.
3. Rev engine two or three times under no-load.
4. Stop engine and wait until it cools down.
5. Drain water.

6. Repeat steps 1 through 5 until clear water begins to drain from radiator.
7. Blow compressed air into cooling circuit through the reservoir tank valve hole to drain all the water.

Checking Cooling System

ELS0016F

WARNING:
Never remove the radiator cap when the engine is hot; serious burns could be caused by high pressure fluid escaping from the radiator.
Wrap a thick cloth around the cap and carefully remove it by turning it a quarter turn to allow built-up pressure to escape and then turn the cap all the way off.

CHECKING COOLING SYSTEM HOSES

Check hoses for improper attachment, leaks, cracks, damage, loose connections, chafing and deterioration.

CHECKING RADIATOR

Check radiator for mud or clogging. If necessary, clean radiator as follows.

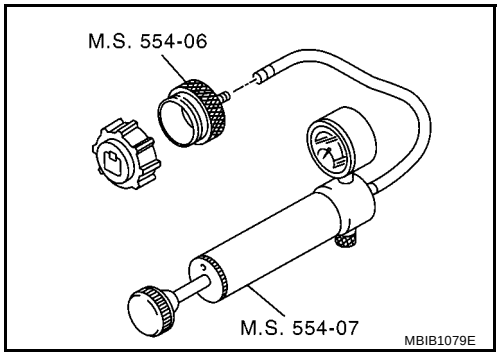
- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as cooling fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

1. Apply water by hose to the back side of the radiator core vertically downward.
2. Apply water again to all radiator core surfaces once per minute.
3. Stop washing if any stains no longer flow out from the radiator.
4. Blow air into the back side of radiator core vertically downward.
   - Use compressed air lower than 490 kPa (4.9 bar, 5 kg/cm^2 , 71 psi) and keep distance more than 30 cm (11.8 in).
5. Blow air again into all the radiator core surfaces once per minute until no water sprays out.

Checking Reservoir Tank Cap

ELS0016G

- Fit the adapter to the tester as shown.
- When connecting the reservoir tank cap to the tester, apply water or LLC to the cap seal part.
- Check reservoir tank cap relief operation.
- Replace the reservoir tank cap if the engine coolant passes through it, or if any fur signs is detected.



Checking Radiator

ELS0016H

Check radiator for mud or clogging. If necessary, clean radiator as follows.

- Be careful not to bend or damage the radiator fins.
- When radiator is cleaned without removal, remove all surrounding parts such as radiator fan, radiator shroud and horns. Then tape the harness and connectors to prevent water from entering.

1. Apply water by hose to the back side of the radiator core vertically downwards.
2. Apply water again to all radiator core surface once per minute.
3. Stop washing if any stains no longer flow out from the radiator.
4. Blow air into the back side of radiator core vertically downwards.

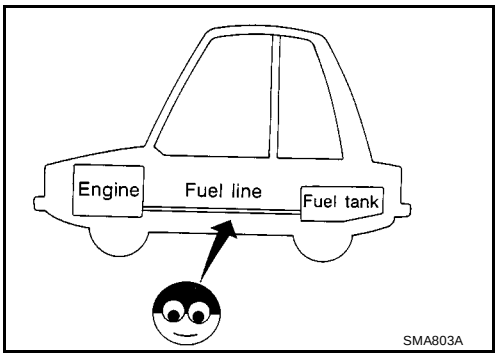
- Use compressed air lower than 490 kPa (4.9 bar 5 kg/cm^2 , 71psi) and keep distance more than 30 cm (11.8 in).

5. Blow air again into all the radiator core surface once per minute until no water sprays out.

Checking Fuel Lines

ELS0016I

Inspect fuel lines, filler cap and tank for improper attachment, leaks, cracks, damage, loose connections, chafing or deterioration. If necessary, repair or replace malfunctioning parts.



CAUTION:

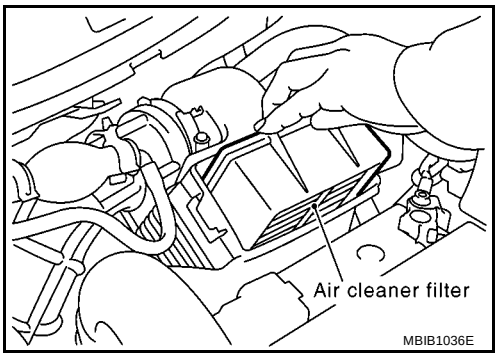
Tighten high-pressure rubber hose clamp so that clamp end is 3 mm (0.12 in) from hose end.
Tightening torque specifications are the same for all rubber hose clamps.
Ensure that screw does not contact adjacent parts.

Changing Air Cleaner Filter

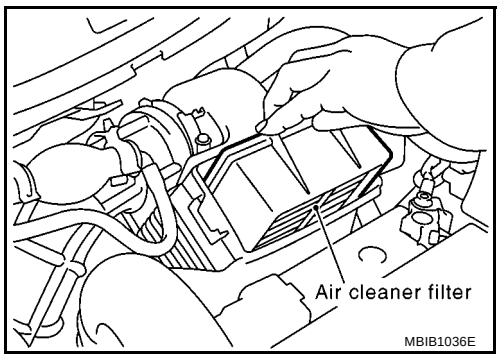
ELS0016J

REMOVAL

1. Open air cleaner case.



2. Remove air cleaner filter.



INSTALLATION

Install in the reverse order of removal.

Changing Engine Oil

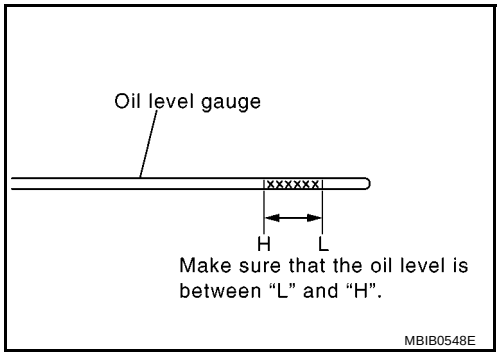
ELS0016K

WARNING:

- **Be careful not to burn yourself, as the engine oil is hot.**
- **Prolonged and repeated contact with used engine oil may cause skin cancer: try to avoid direct skin contact with used oil. If skin contact is made, wash thoroughly with soap or hand cleaner as soon as possible.**

1. Put vehicle horizontally.
2. Warm up engine, and check for oil leakage from engine components.
3. Stop engine and wait for 10 minutes.
4. Remove drain plug and oil filler cap.
5. Drain oil and refill with new engine oil.

- Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS" .



Oil capacity (Approximate):

Drain and refill	With oil filter change	4.55 ℓ (4 Imp qt)
	Without oil filter change	4.39 ℓ (3-7/8 Imp qt)
Dry engine (overhaul)		4.71 ℓ (4-1/8 Imp qt)

- The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.
  Always use the dipstick to the determine when the proper amount of oil is in the engine.

CAUTION:

- **Be sure to clean drain plug and install with new washer.**
- **The refill capacity depends on the oil temperature and drain time. Use these specifications for reference only.**
  Always use the dipstick to the determine when the proper amount of oil is in the engine.

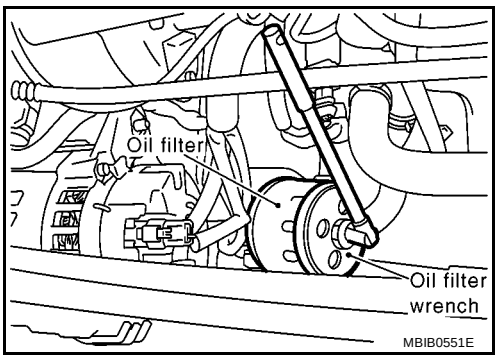
6. Warm up engine and check area around drain plug and oil filter for oil leakage.
7. Stop engine and wait for 10 minutes.
8. Check oil level.

Changing Oil Filter

ELS0016L

REMOVAL

1. Using an oil filter wrench (special service too), remove oil filter.



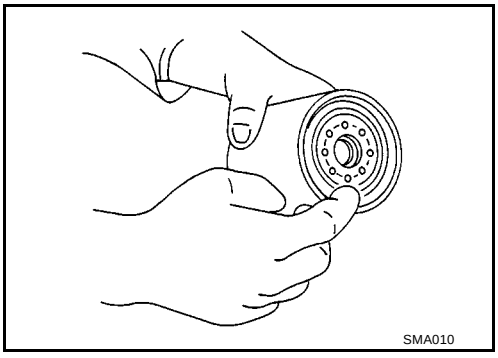
CAUTION:

- **Be careful not to get burned when the engine and engine oil are hot.**
- **When removing, prepare a shop cloth to absorb any oil leakage or spillage.**
- **Do not allow engine oil to adhere to the drive belts.**
- **Completely wipe off any oil that adhere to the engine and the vehicle.**

INSTALLATION

1. Remove foreign materials adhering to the oil filter installation surface.
2. Install oil filter bracket to oil cooler.

   CAUTION:
   Install oil filter bracket, positioning lug in the hole of oil cooler.
3. Apply engine oil to the oil seal contact surface of the new oil filter.



4. Install the oil filter to oil filter bracket.
5. After warming up the engine, check for engine oil leakage.
6. Check oil level and add engine oil. Refer to LU-12, "ENGINE OIL" .

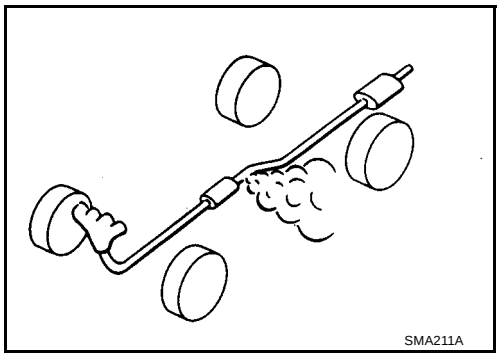
CHASSIS AND BODY MAINTENANCE

PFP:00100

Checking Exhaust System

ELS000LV

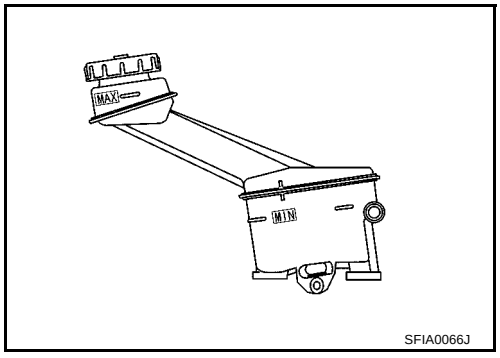
Check exhaust pipes, muffler and mounting for improper attachment, leaks, cracks, damage, chafing or deterioration.



Checking Clutch Fluid Level and Leaks

ELS000LW

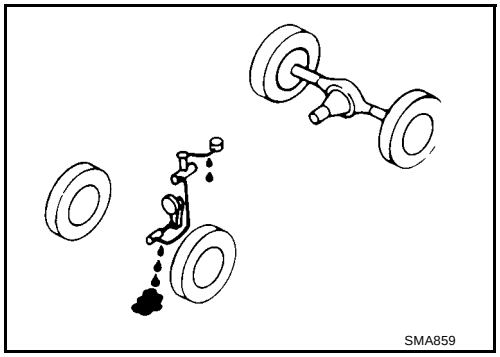
If fluid level is extremely low, check clutch system for leaks.



Checking Clutch System

ELS000LX

Check fluid lines and operating cylinder for improper attachment, cracks, damage, loose connections, chafing and deterioration.



Checking M/T Oil

ELS000LY

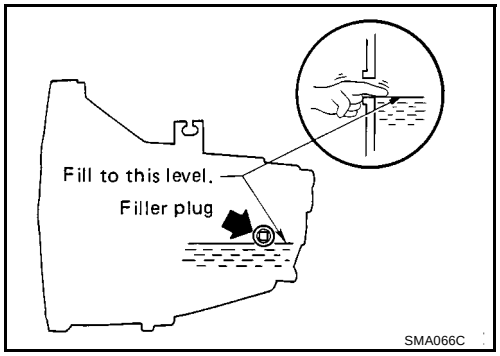
- Check that oil is not leaking from transaxle or around it.
- Check oil level from filler plug mounting hole as shown in the figure.

  CAUTION:
  Never start engine while checking oil level.
- Set a new gasket on the filler plug and install it on the transaxle.

  Filler plug:

  : 2 N·m (0.2 kg-m, 1.8 in-lb)

  CAUTION:
  Do not reuse gasket.



Changing M/T Oil

ELS000LZ

1. Drain oil from drain plug and refill with new gear oil.
2. Check oil level.

Oil grade and viscosity:

Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS"

Oil capacity (Reference):

JH3: Approx. 2.6 ℓ (4-5/8 Imp pt)

JR5: Approx. 2.5 ℓ (4-3/8 Imp pt)

Drain plug:

: 22 N·m (2.2 kg-m, 1.5 - 1.7 ft-lb)

CAUTION:

Do not reuse gasket.

Checking A/T Fluid

ELS000M0

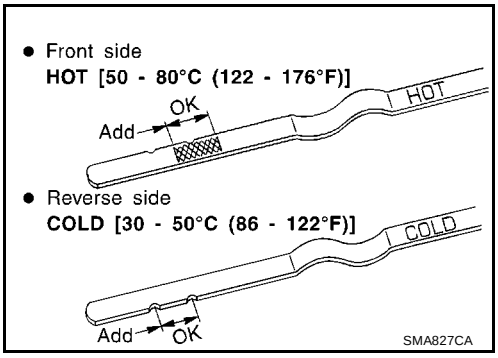
1. Warm up engine.
2. Check for fluid leakage.
3. Before driving, fluid level can be checked at fluid temperatures of 30 to 50°C (86 to 122°F) using “COLD” range on dipstick.

a. Park vehicle on level surface and set parking brake.

b. Start engine and move selector lever through each gear position. Leave selector lever in “P” position.

c. Check fluid level with engine idling.

d. Remove dipstick and note reading. If level is at low side of either range, and fluid to the charging pipe.

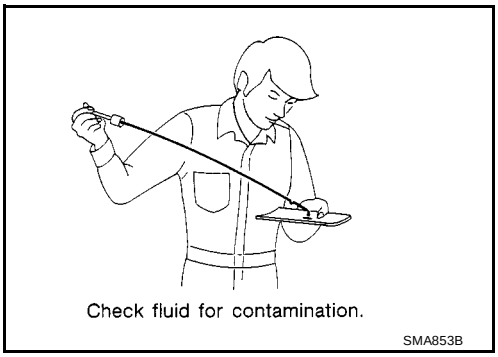


e. Re-insert dipstick into charging pipe as far as it will go.

f. Remove dipstick and note reading. If reading is at low side of range, add fluid to the charging pipe.

Do not overfill.

4. Drive vehicle for approximately 5 minutes in urban areas.
5. Re-check fluid level at fluid temperatures of 50 to 80°C (122 to 176°F) using “HOT” range on dipstick.
6. Check fluid condition.
   - If fluid is very dark or smells burned, refer to AT section for checking operation of A/T. Flush cooling system after repair of A/T.
   - If A/T fluid contains frictional material (clutches, bands, etc.), replace radiator and flush cooler line using cleaning solvent and compressed air after repair of A/T. Refer to CO-11, "RADIATOR" , CO-17, "RADIATOR (ALUMINUM TYPE)" .



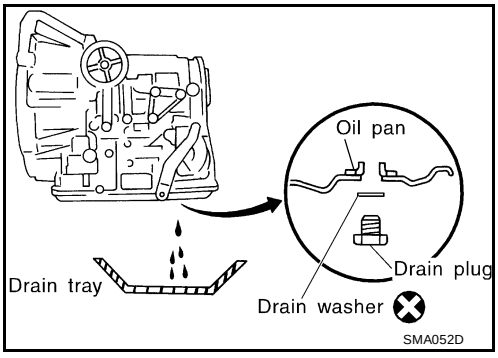
Changing A/T Fluid

ELS000M1

1. Warm up A/T fluid.
2. Stop engine.
3. Drain A/T fluid from drain plug and refill with new A/T fluid. Always refill same volume with drained fluid.

Fluid grade:

Genuine Nissan ATF or equivalent. Refer to MA-18, "RECOMMENDED FLUIDS AND LUBRICANTS" .



Fluid capacity (With torque converter):

Approx. 7.7 ℓ (6-3/4 lmp qt)

Drain plug:

: 29 - 39 N·m (3.0 - 3.9 kg-m, 22 - 28 ft-lb)

4. Run engine at idle speed for five minutes.
5. Check fluid level and condition. Refer to “Checking A/T Fluid”. If fluid is still dirty, repeat steps 2 through 5.

Rotation

ELS000M5

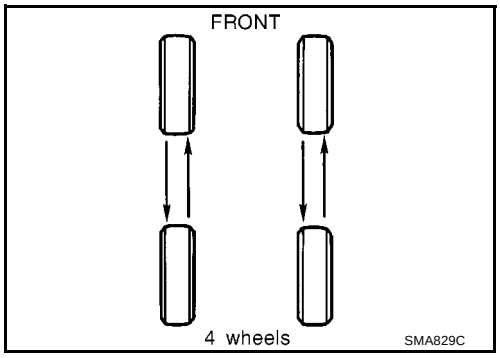
- After rotating the tires, adjust the tire pressure.
- Retighten the wheel nuts when the vehicle has been driven for 1,000 km (600 miles) (also in cases of a flat tire, etc.).

CAUTION:

When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.

Tightening torque of wheel nut:

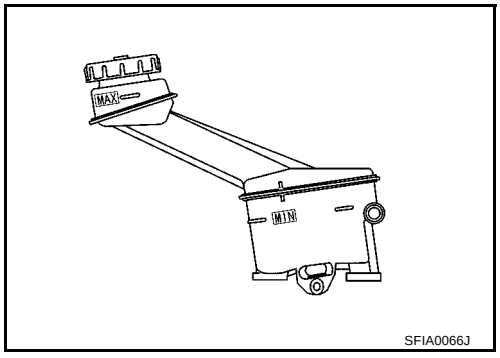
98 - 118N·m (10 - 12 kg·m, 72 - 87 ft·lb)



Checking Brake Fluid Level and Leaks

ELS000M6

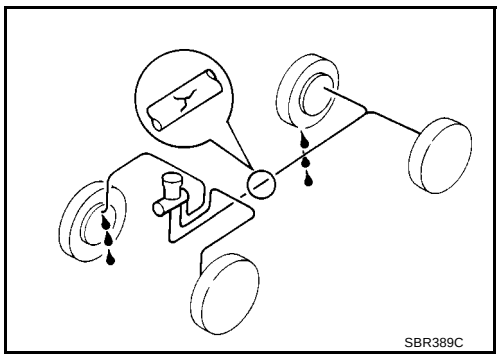
- If fluid level is extremely low, check brake system for leaks.



Checking Brake Lines and Cables

ELS000M7

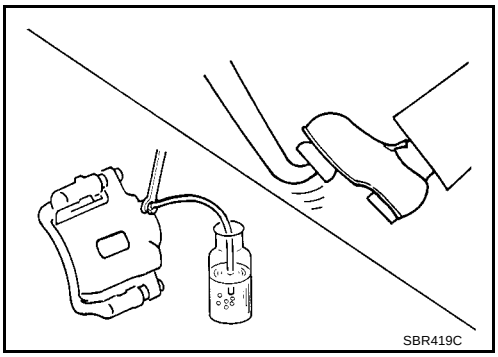
- Check brake fluid lines and parking brake cables for improper attachment, leaks, chafing, abrasions, deterioration, etc.



Changing Brake Fluid

ELS000M8

1. Drain brake fluid from each air bleeder valve.
2. Refill until new brake fluid comes out from each air bleeder valve.
   Use same procedure as in bleeding hydraulic system to refill brake fluid.
   Refer to BR-9, "BRAKE FLUID" .
   - Refill with recommended Genuine Brake Fluid or equivalent “DOT 3” or “DOT 4”.
     Refer toMA-18, "RECOMMENDED FLUIDS AND LUBRICANTS" .
   - Never reuse drained brake fluid.
   - Be careful not to splash brake fluid on painted areas.



SBR419C

Checking Disc Brake

ELS000M9

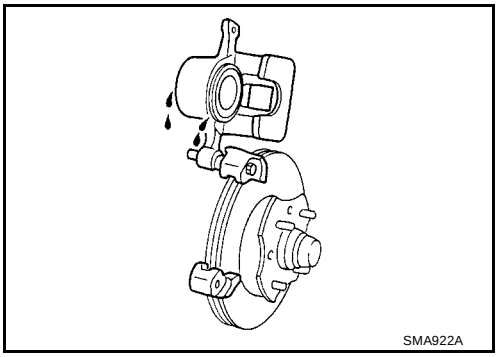
ROTOR

Check condition, wear, and damage.

Applied	Front
Brake model	CL22
Standard thickness	22.0 mm (0.87 in)
Maximum runout	0.058 mm (0.0023 in)
Minimum thickness (Wear limit)	20 mm (0.79 in)

CALIPER

- Check for leakage.

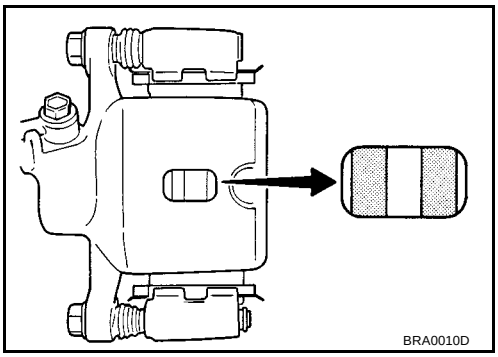


SMA922A

PAD

Check for wear or damage.

Applied	Front
Brake model	CL22
Standard thickness	12.4 mm (0.488 in)
Minimum thickness (Wear Limit)	2.0 mm (0.079 in)



BRA0010D

Checking Drum Brake

ELS000O1

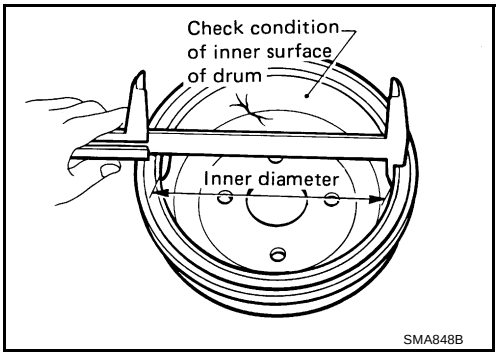
WHEEL CYLINDER

Check for leakage.

DRUM

Check condition and inner surface.

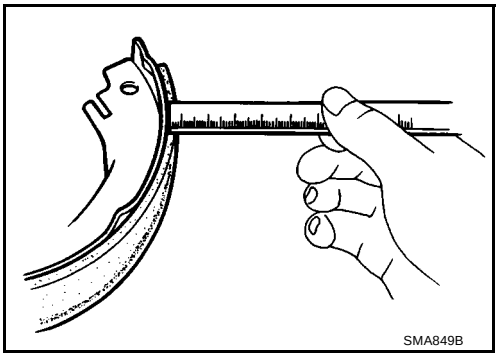
Standard inner diameter	202 mm (7.95 in)
Drum repair limit (Maximum inner diameter)	203.2 mm (8.0 in)



LINING

Check wear or damage.

Standard thickness	4.5 mm (0.177 in)
Lining Wear Limit (Minimum thickness)	1.5 mm (0.059 in)

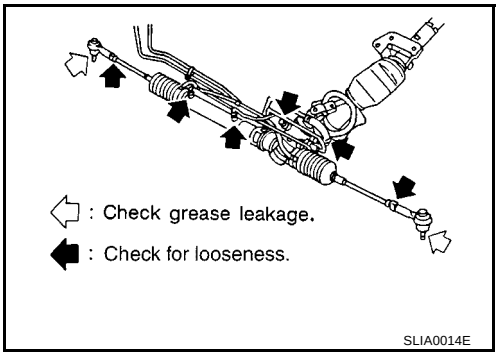


Checking Steering Gear and Linkage

ELS000MA

STEERING GEAR

- Check gear housing and boots for looseness, damage and grease leakage.
- Check connection with steering column for looseness.



STEERING LINKAGE

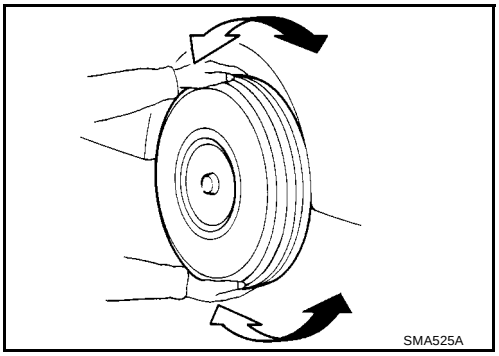
Check ball joint, dust cover and other component parts for looseness, wear, damage and grease leakage.

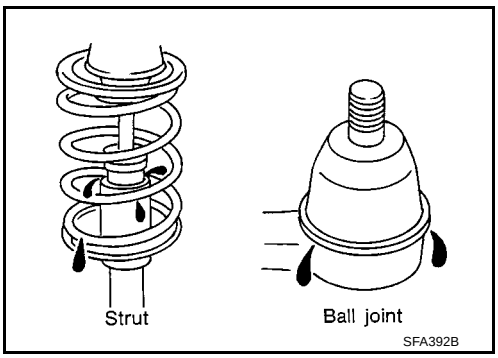
Axle and Suspension Parts

ELS000MC

Check front and rear axle and suspension parts for excessive play, cracks, wear or other damage.

- Shake each wheel to check for excessive play.
- Check wheel bearings for smooth operation.
- Check axle and suspension nuts and bolts for looseness.
- Check strut (shock absorber) for oil leakage or other damage.
- Check suspension ball joint for grease leakage and ball joint dust cover for cracks or other damage.

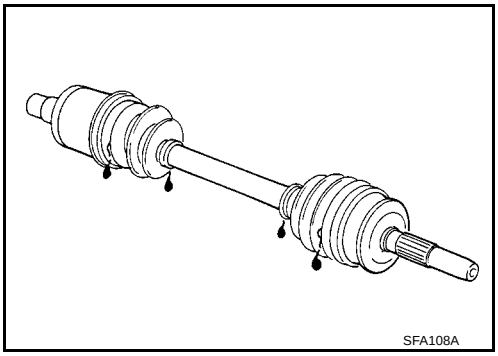




Drive Shaft

ELS000MD

- Check boot and drive shaft for cracks, wear, damage and grease leakage.



Lubricating Locks, Hinges and Hood Latches

ELS000ME

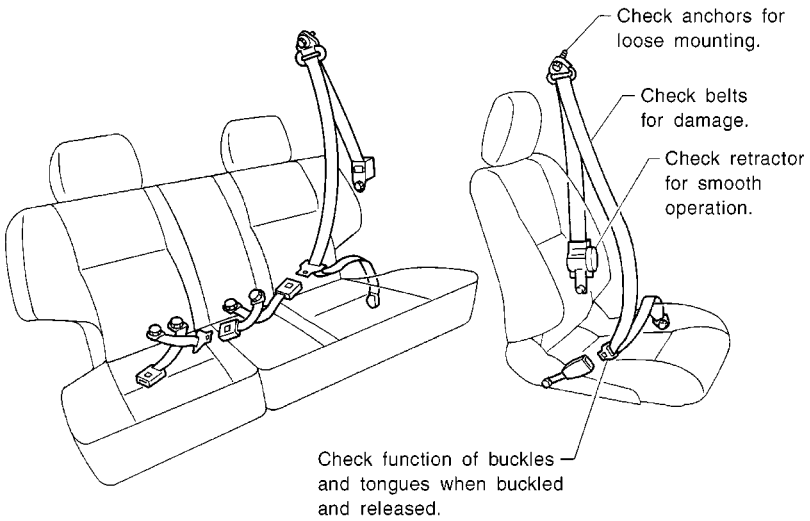
Front door	Refer to BL-204, "DOOR" .
Back door	Refer to BL-216, "BACK DOOR" .

Checking Seat Belts, Buckles, Retractors, Anchors and Adjusters

ELS000MF

CAUTION:

- **After any collision, inspect all seat belt assemblies, including retractors and other attached hardwares (i.e. guide rail set). Nissan recommends to replace all seat belt assemblies in use during a collision, unless not damaged and properly operating after minor collision.**
  Also inspect seat belt assemblies not in use during a collision, and replace if damaged or improperly operating.
- **If any component of seat belt assembly is questionable, do not repair. Replace as seat belt assembly.**
- **If webbing is cut, frayed, or damaged, replace belt assembly.**
- **Never oil tongue and buckle.**
- **Use a genuine seat belt assembly.**



Anchor bolt
43 - 55 N·m (4.4 - 5.6 kg-m, 32 - 41 ft-lb)

Checking Body Corrosion

ELS000MG

Visually check body panels for collision damage (scratches, chipping, rubbing, etc.) or damage to the anti-corrosion materials. In particular, check the following locations.

HEMMED PANELS

Hood front end, door lower end, trunk lid rear end, etc.

PANEL JOINT

Side sill of rear fender and center pillar, rear wheel housing of rear fender, around strut tower in engine compartment, etc.

PANEL EDGE

Trunk lid opening, sunroof opening, fender wheel-arch flange, fuel filler lid flange, around holes in panel, etc.

PARTS CONTACT

Waist moulding, windshield moulding, bumper, etc.

PROTECTORS

Damage or condition of mudguard, fender protector, chipping protector, etc.

ANTI-CORROSION MATERIALS

Damage or separation of anti-corrosion materials under the body.

DRAIN HOLES

Condition of drain holes at door and side sill. When repairing corroded areas, refer to the Corrosion Repair Manual.

SERVICE DATA AND SPECIFICATIONS (SDS)

PFP:00030

Standard and Limit

ELS000MH

BELT DEFLECTION AND TENSION

CR Engine

Location	Tension [N (kg, lb)]			Deflection [mm (in)] [When pressed by force of 98.1N (10 kg, 22lb)]			
	New	At adjustment	Limit	Measuring point	New belt	At adjustment	Limit

PRECAUTIONS

PFP:00001

Cautions

ECS00FE3

- Do not reuse transaxle oil, once it has been drained.
- Check oil level or replace oil with vehicle on level ground.
- During removal or installation, keep inside of transaxle clear of dust or dirt.
- Check for the correct installation status prior to removal or disassembly. If mating marks are required, be certain they do not interfere with the function of the parts they are applied to.
- In principle, tighten nuts and bolts gradually in several steps working diagonally from inside to outside. If tightening sequence is specified, observe it.
- Be careful not to damage sliding surfaces and mating surfaces.

PREPARATION

REMOVAL AND INSTALLATION

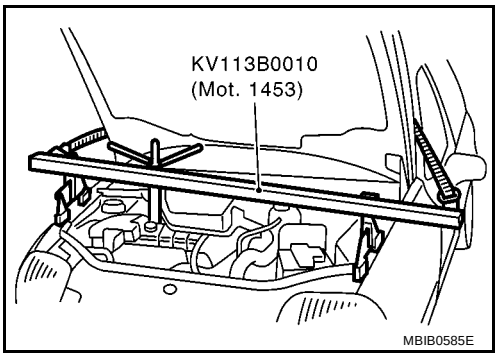
PFP:00000

Removal

ECS00FE4

CAUTION:
Remove the crankshaft position sensor (POS) from transaxle assembly before separating transaxle from engine. Be careful not to damage sensor edge.

1. Remove battery.
2. Remove the air cleaner. Refer to EM-16, "AIR CLEANER AND AIR DUCT" (CR engine) or EM-123, "AIR CLEANER AND AIR DUCT" (K9K engine).
3. Disconnect the cable end ball of the select cable, and the cable end of the shift cable. Refer to MT-12, "CONTROL LINKAGE" .
4. Disconnect the clutch tube.
5. Remove the engine harness clamp.
6. Remove the starter. Refer to SC-45, "Removal and Installation (CR Engine Models)" , “STARTING SYSTEM”.
7. Remove the engine mounting LH side installation bolt. Refer to EM-69, "ENGINE ASSEMBLY" (CR engine) or EM-147, "ENGINE ASSEMBLY" (K9K engine).
8. Set the engine hanger.



9. Lift up the vehicle and remove the front fender protectors (RH & LH).
10. Remove the undercover.
11. Remove the front exhaust pipe. Refer to EX-3, "Removal and Installation" , “EXHAUST SYSTEM”.
12. Remove the turbocharger outlet tube bracket from the transaxle.
13. Remove the RH and LH drive shafts. Refer to FAX-13, "Removal and Installation" , “FRONT DRIVE SHAFT”.
14. Disconnect the ground cable from the transaxle.
15. Set the transmission jack.
16. Remove the rear engine mounting bracket. Then, remove the rear torque link from the transaxle. Refer to EM-69, "ENGINE ASSEMBLY" (CR engine) or EM-147, "ENGINE ASSEMBLY" (K9K engine).

    CAUTION:
    Do not remove the rear torque link from the suspension member.
17. Remove the engine mounting bracket LH.
18. Disconnect the position switch connector.
19. Remove the transaxle mounting nuts and bolts, and remove the transaxle.

Installation

ECS00FE5

Install in the reverse order of removal.

TIGHTENING TORQUES

PFP:32010

Description

ECS00FE6

Tightening portion	N·m (kg-m, ft-lb)
Gearbox casing bolt	**25 (2.6, 18)**
Mainshaft bolt	**70 (7.1, 52)**
Input shaft nut	**190 (19, 140)**
Rear cover bolt	**25 (2.6, 18)**
Back-up lamp switch	**25 (2.6, 18)**
Concentric slave cylinder	**21 (2.1, 15)**
Selector shaft bolt	**20 (2.0, 15)**
Gear shift catch bolt	**10 (1.0, 7)**
Reverse gear fork support bolt	**25 (2.6, 18)**
Drain bolt	**25 (2.6, 18)**
Selector shaft balls	**23 (2.3, 17)**

COMPONENTS

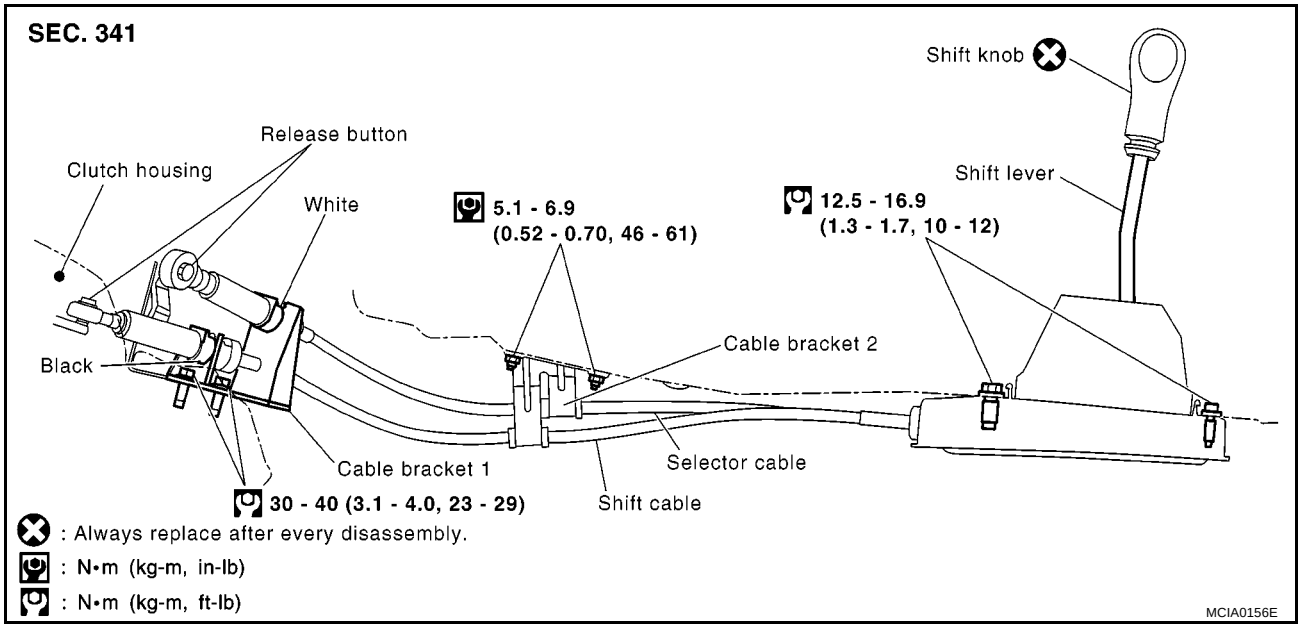
CONTROL LINKAGE

PFP:34103

Removal and Installation of Control Device and Cable

ECS00FEC



REMOVAL

1. Remove center console and shift boot. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove control device mounting bolts.
3. Pressing release bottom of cable end, remove cable from either manual transmission shift lever.
4. Lift up cable and remove it from cable bracket 1.
5. Remove center muffler and heat plate. Refer to EX-3, "Removal and Installation" , “EXHAUST SYSTEM”.
6. Separate cable bracket 2 from the vehicle.
7. Remove front and rear claws of control device. Remove control device and cable from the vehicle.

NOTE:
If shift knob needs to be removed, pull it up to remove.

INSTALLATION

Note the following, and install in the reverse order of removal.

- When installing, make sure to insert cable end into either manual transmission shift lever.
- After assembly, make sure selector lever automatically returns to Neutral when it is moved to 1st, 2nd, or Reverse.
- After installation, make sure that the shift to each position works well.
- When installing shift knob, press it onto selector lever.

  CAUTION:
  Do not reuse shift knob.

LOCTITE 518	24 ml syringe	77 01 421 162	Back-up lamp switch threading

CAPACITIES - LUBRICANTS

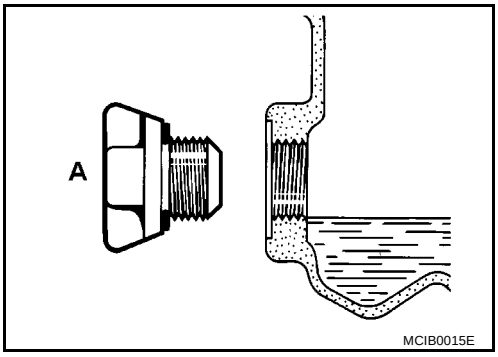
PFP:32010

Description

ECS00FEF

Capacity	Grade
2.6 ℓ (4-5/8 Imp pt)	SAE 75W-80, 75W-85

Fill to the level of the oil filler cap hole.



TROUBLE DIAGNOSIS

PFP:00004

Symptom Chart

ECS00FEG

Symptoms (after checking the clutch)	Possible causes

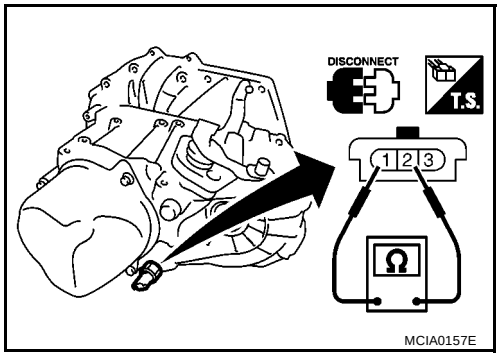
Symptoms	Oil level or grade	External control	Synchro-nizer	Gearing	Sliding gear hub	Fork and balls	Bearings	Engine mounting - housing
Gear grinding	1	2	3		4			
One or more gears cannot be selected	1	2	3			4		
Gear disengagement		2	4		4	3		1
One or more gears locked		1		4		2		3
Noisy	1			3			2	

NOTE:
The numbers indicate the order of priority for diagnostics.

Back-up Lamp Switch

ECS00FEH

Gear position	Continuity
Reverse	Yes
Except reverse	No



MCIA0157E

PRECAUTIONS

PFP:00001

Precautions

ECS00FEI

Removing and handling the parts must be carried out on a workbench with a knockproof cover. (rubber or thick plastic)
Cover all turning and synchronizer points in oil.
Observe the tightening torques.
Carefully carry out the specific settings and adjustments.
Be sure to properly refit parts in the same order and position after removal.
Marking the position of the sliding rods in relation to the hubs before removal is recommended.
During refitting, make sure the inside of the box remains free of dust or impurities.

PARTS TO BE REPLACED SYSTEMATICALLY

PFP:32010

Description

ECS00FEJ

If they have been removed:

- the lip seals,
- the O-rings,
- the gear supporting rings,
- the roll pins,
- the input shaft and mainshaft bearing circlips,
- the sliding gear hub springs.

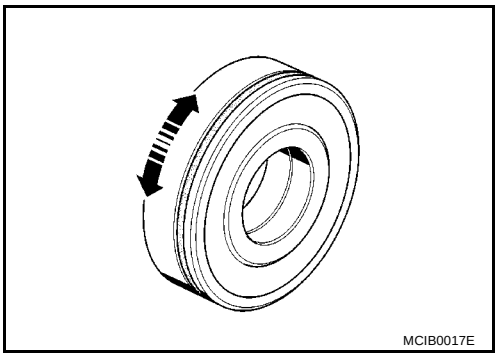
CHECKING

PFP:32010

Bearings

ECS00FEK

Check that the bearings show no signs of damage and that they turn evenly. Replace them if necessary.



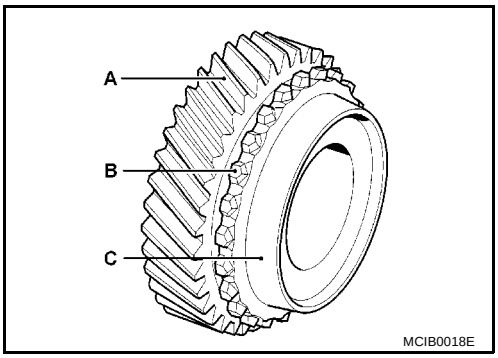
MCIB0017E

Gearing

ECS00FEL

NOTE:
The inspection focuses mainly on the appearance of the teeth, especially in terms of claw chamfers.

1. Check that the teeth (A) are not broken or chipped.
2. Check that the claws (B) are not broken, chipped or worn.
3. Check that the friction cone (C) shows no scratches or blueness.



MCIB0018E

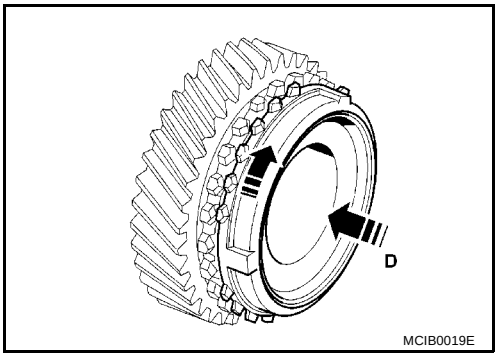
Synchronizer Ring

ECS00FEM

Check that the grooves and ridges on the ring are not worn or damaged.

1. Check that put the ring onto the gear cone.
2. Check that rotate the ring while applying force in the direction of the cone (D).
3. Check that the ring should lock against the cone.

Otherwise, replace the synchronizer ring.

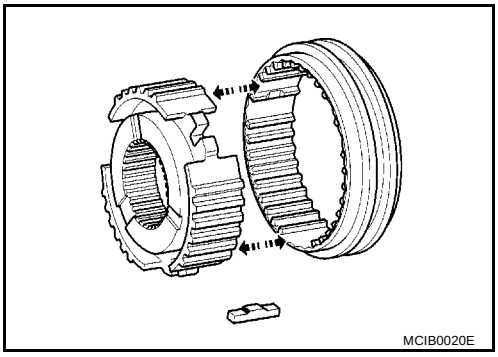


MCIB0019E

Sliding Gear Hub

ECS00FEN

Make sure the sliding gear turns smoothly in the hub.
Check that the rollers or keys are in good condition.



MCIB0020E

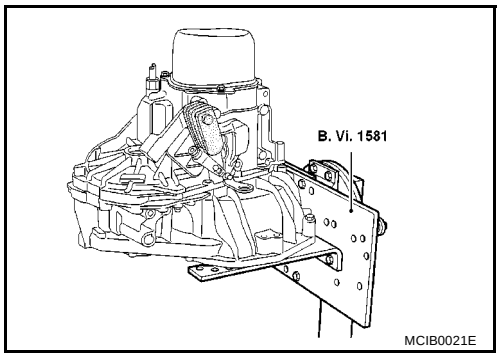
SEPARATING THE HOUSINGS

PFP:32010

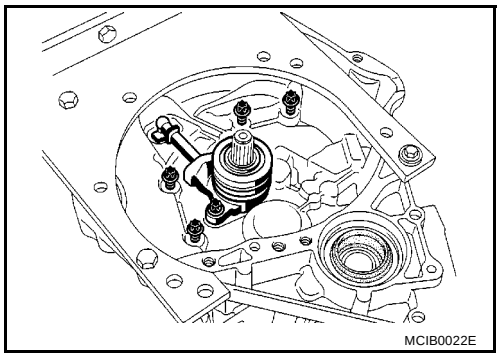
Removal

ECS00FEO

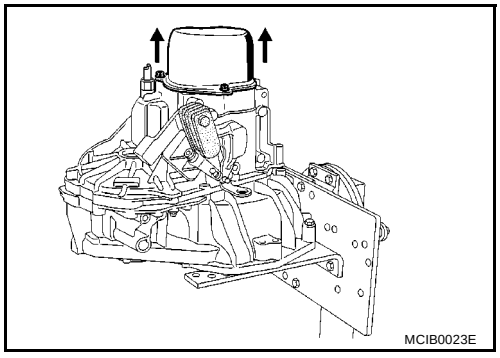
Fit the B. Vi. 1581 support plate on a Desvil stand.
Fit the gearbox on the B. Vi. 1581 support.



1. Remove the concentric slave cylinder.
2. Remove the bolts located inside the housing.

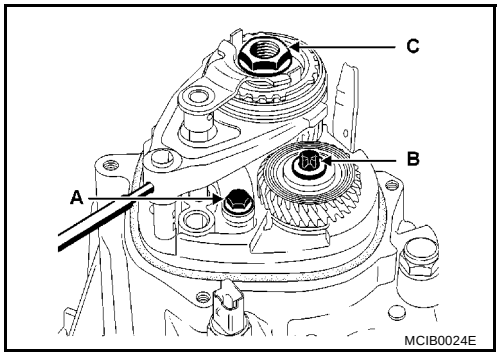


3. Remove the rear housing. This must be removed along the horizontal axis of the gearbox because it has a lubrication spline which is located in the input shaft bore.

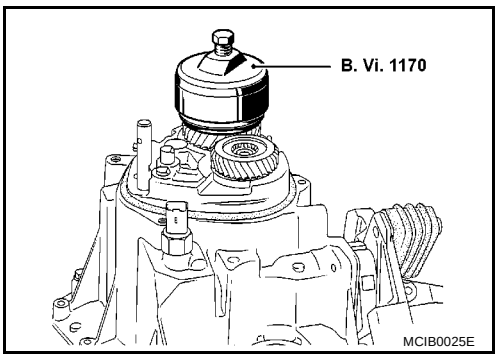


Remove the two reverse gear fork support mounting bolts (A).
Drive in the 5th gear fork using B. Vi. 31-01.
Shift the 3rd gear on the gear selector lever and the 5th gear by sliding the 5th gear fork on its shaft.

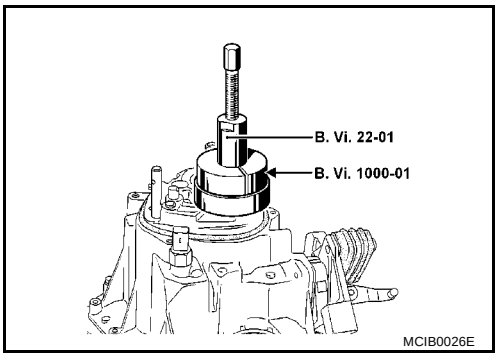
4. Remove the mainshaft bolt (B).
5. Remove the input shaft nut (C).
6. Remove the reverse gear synchronizer.
7. Remove the 5th gear fork and sliding gear.



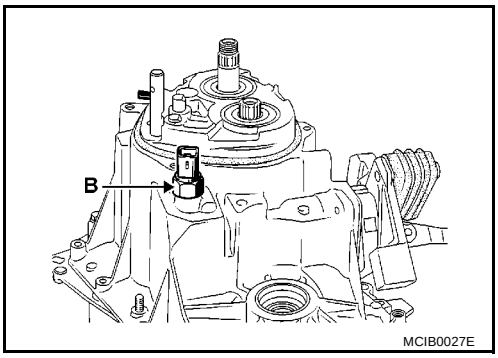
Remove the 5th gear hub using B. Vi. 1170.
To do this, fit the sliding gear B. Vi. 1170 and rotate it so that the splines are opposite those of the input shaft hub.



Remove the fixed 5th gear using B. Vi. 22-01 and B. Vi. 1000-01.
Remove the gearbox edge bolts.



Remove the back-up lamp switch (B).
Engage 3rd gear.
Lift and remove the mechanism housing.



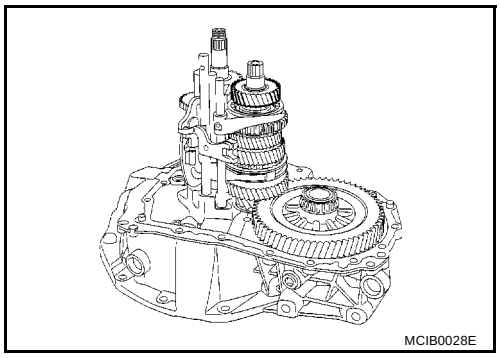
REPAIRING THE GEARBOX

PFP:32010

Removal

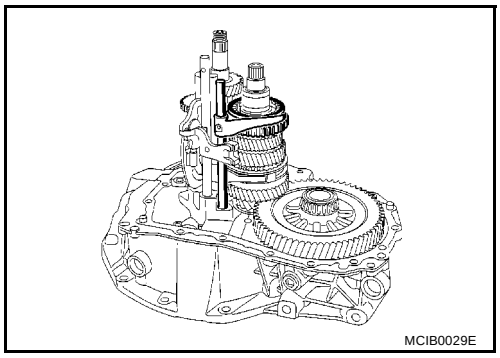
ECS00FEP

1. Remove the 4th-gear pinion.



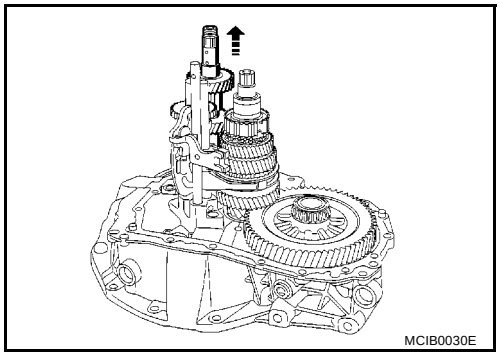
MCIB0028E

2. Remove the 3rd/4th gear shaft/fork and sliding gear assembly while gently lifting the mainshaft assembly.



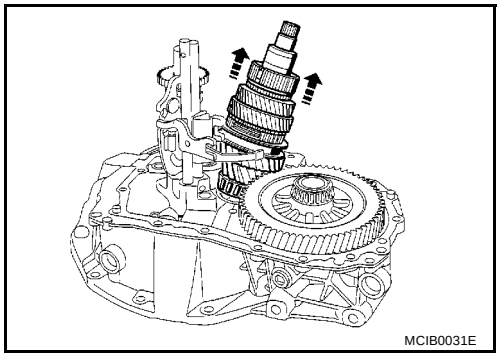
MCIB0029E

3. Remove input shaft assembly.



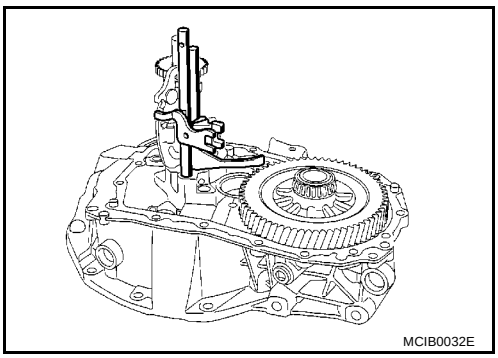
MCIB0030E

4. Remove mainshaft assembly.



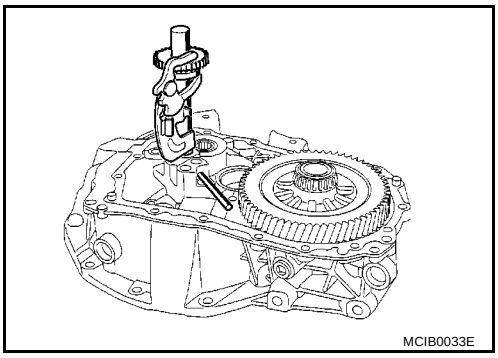
MCIB0031E

5. Remove the 1st/2nd shaft and fork and the 5th gear shaft.



MCIB0032E

6. Remove the pin from the reverse gear and remove the reverse gear.



MCIB0033E

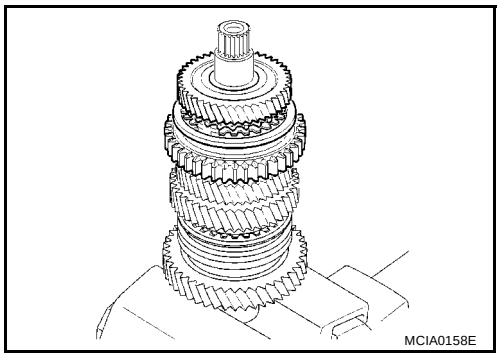
MAINSHAFT

PFP:32241

Removal

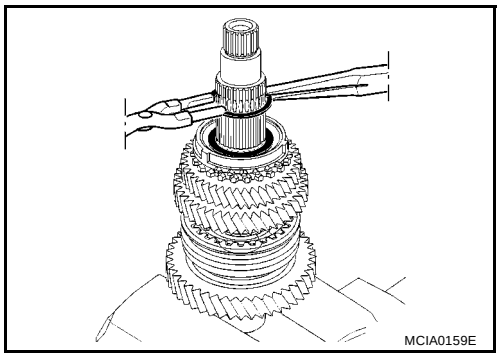
ECS00FEQ

1. Put the mainshaft in a vice with soft jaws.
2. Remove the 4th main gear and the 3rd/4th gear sliding gear hub.



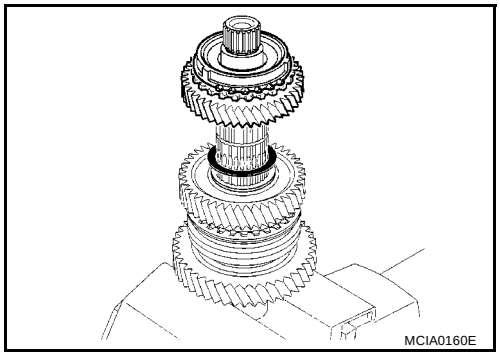
MCIA0158E

3. Remove the stop ring (systematically replace) and the grooved washer.



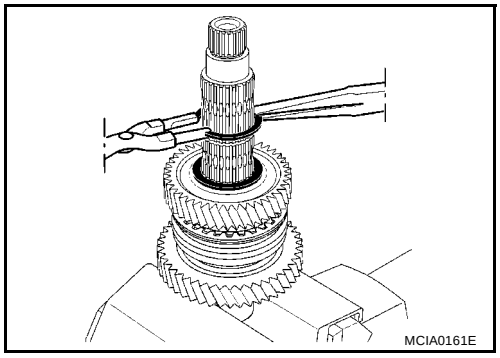
MCIA0159E

4. Remove the 3rd main gear and the grooved washer.



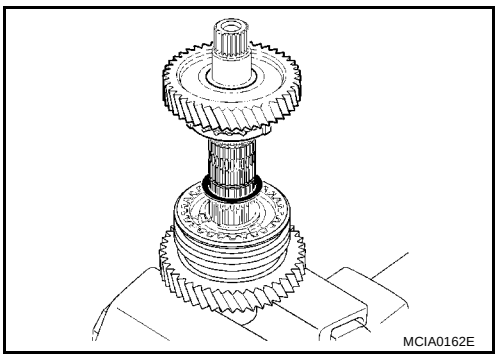
MCIA0160E

5. Remove the stop ring (systematically replace) and the grooved washer.



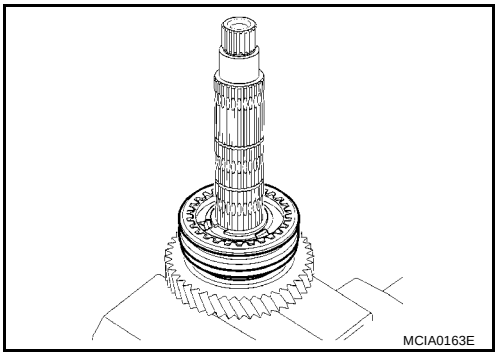
MCIA0161E

6. Remove the 2nd main gear and the grooved washer.



MCIA0162E

7. Remove the stop ring and the 1st/2nd gear sliding gear hub.



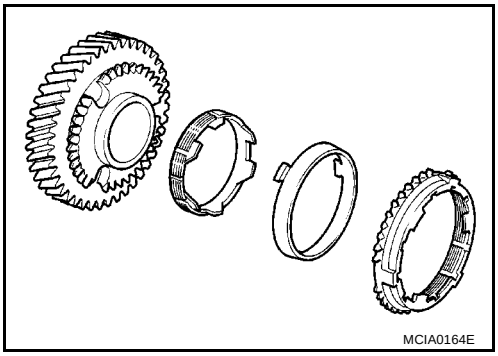
MCIA0163E

Refitting

ECS00FER

Proceed in the reverse order of removal.
The retaining rings must be systematically replaced.
Oil the synchronizer rings.

WARNING:
Make sure that the notches on the synchronizer double cones are correctly positioned.



MCIA0164E

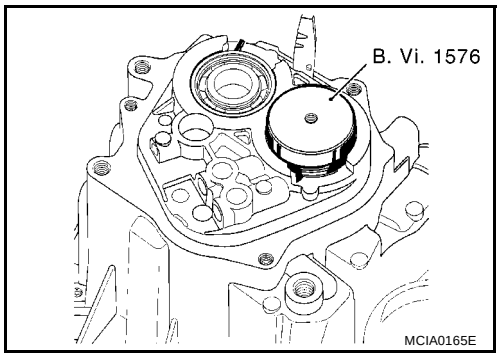
TRANSAXLE CASE BEARING

PFP:32010

Removal

ECS00FES

Remove the circlips with circlip pliers and drive the bearing inside the housing using tool B. Vi. 1576.



Refitting

ECS00FET

Place the new circlips in their respective housings.
Fit the bearings using tool B. Vi. 1576.
Knock the tool with the bearing using a small hammer.

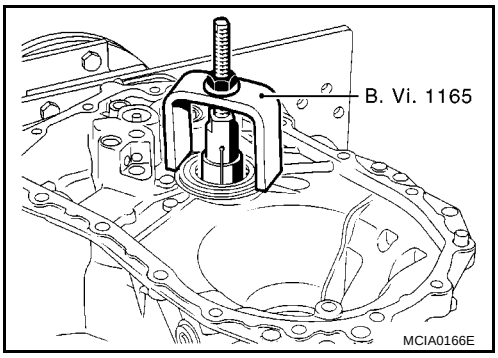
CLUTCH HOUSING BEARING

PFP:32010

Removal

ECS00FEU

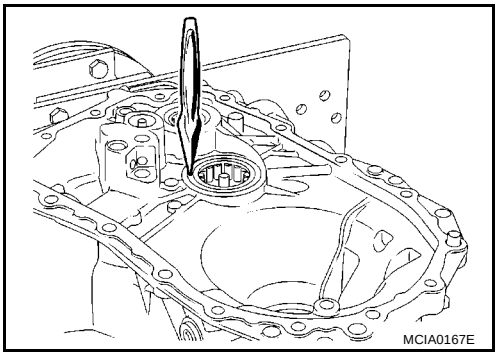
Cut the base of the plastic hollow needle located at the centre of the bearing.
Fit tool B. Vi. 1165 and extract the bearing.



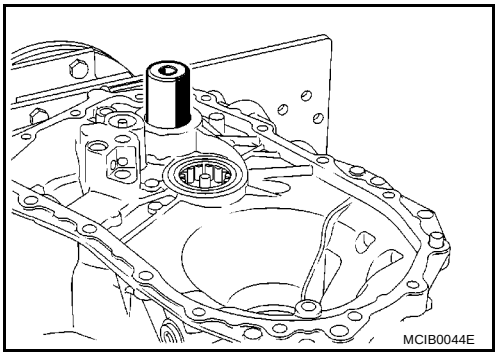
Refitting

ECS00FEV

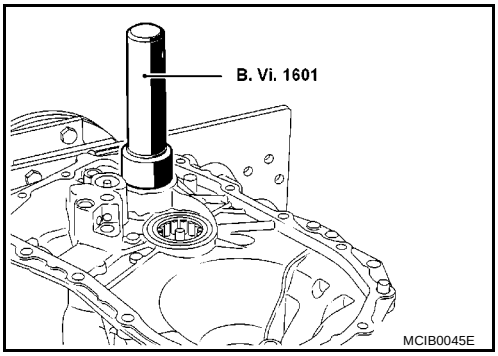
1. Fit a new deflector, then the bearing on the press flush with the inner surface of the housing.
2. Set the bearing with a mortise chisel.



3. Remove the input shaft bearing guide using the press and a 38 mm (1.50 in) diameter tube.



4. Refit the bearing guide using the press and tool B. Vi. 1601.



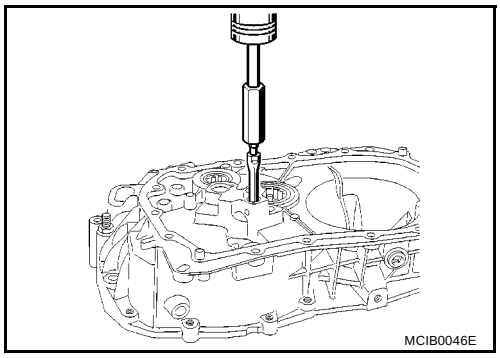
SELECTOR SHAFT RINGS

PFP:32010

Removal

ECS00FEW

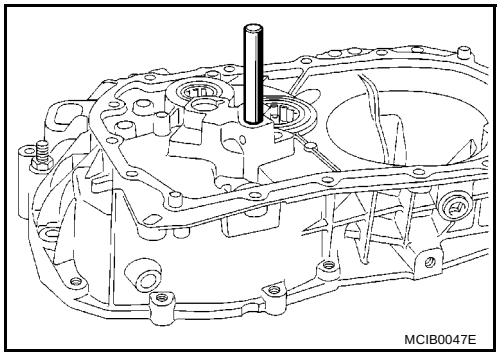
Remove the rings with an inertia puller.



Refitting

ECS00FEX

Refit the rings using a 14.5 mm (0.57 in) tube down to the thrust bearing.



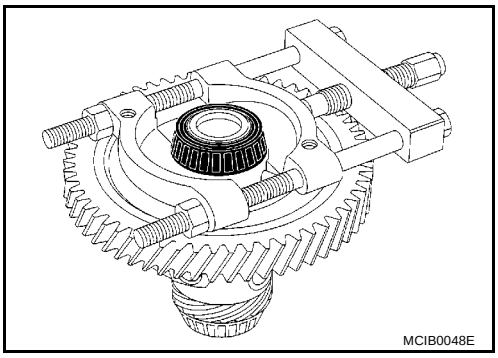
DIFFERENTIAL BEARINGS

PFP:32010

Removal and Installation

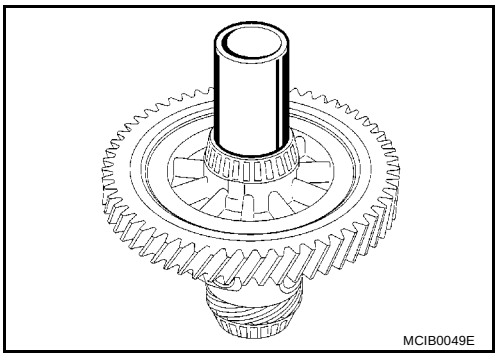
ECS00FEY

1. Remove the bearing using an antisticking pin.



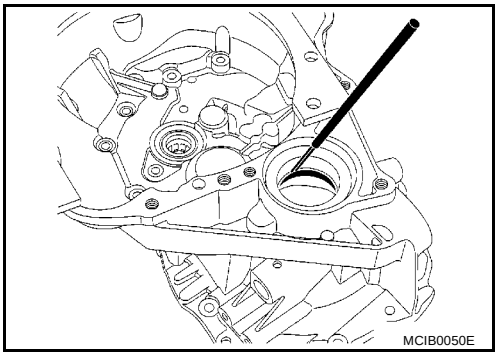
MCIB0048E

2. Refit the bearings using a 40 mm (1.57 in) tube.



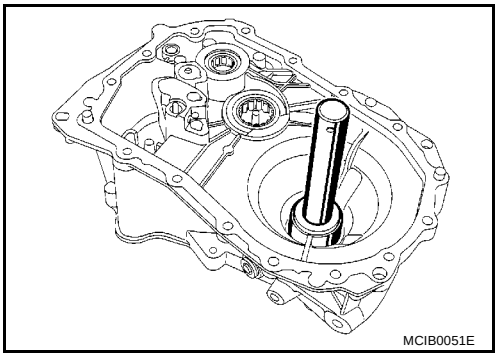
MCIB0049E

3. Remove the bearing races using a roll pin punch.



MCIB0050E

4. Refit the bearing races using tools C-F from the B. Vi. 1554 kit.



MCIB0051E

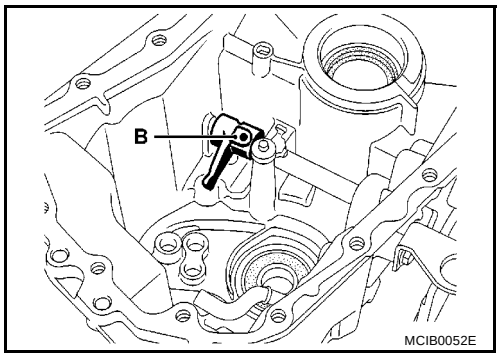
SELECTOR SHAFT

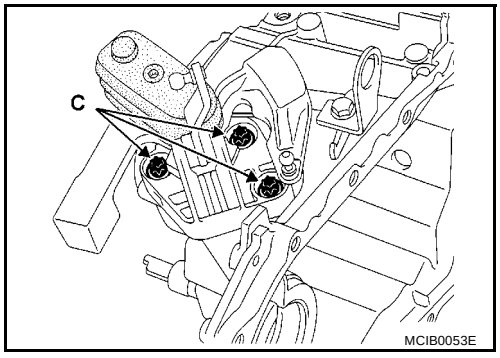
PFP:32010

Removal

ECS00FEZ

After removing the pin from the selector finger (B), remove the mounting bolts (C) and remove the control shaft unit.



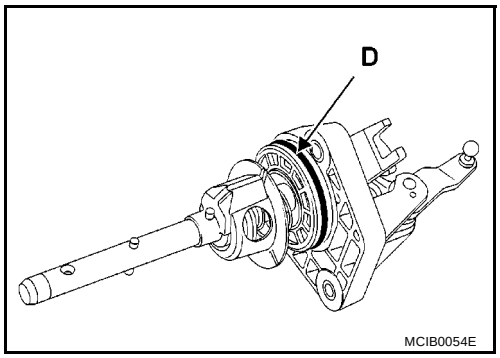


Refitting

ECS00FF0

Proceed in the reverse order to removal.

NOTE:
Replace the O-ring (D).



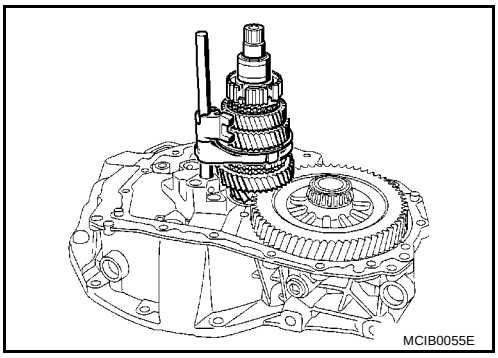
ASSEMBLY

PFP:00000

Refitting

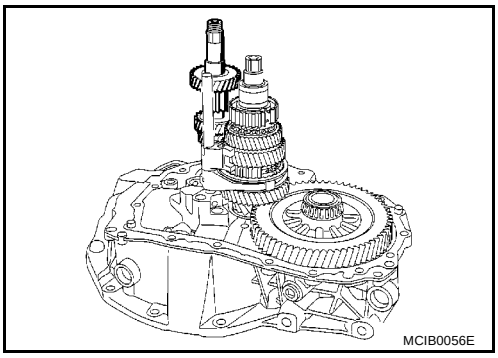
ECS00FF1

1. Fit the mainshaft and 1st/2nd gear fork assembly.



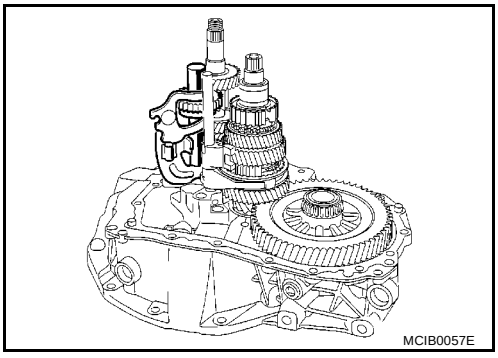
MCIB0055E

2. Fit the input shaft.



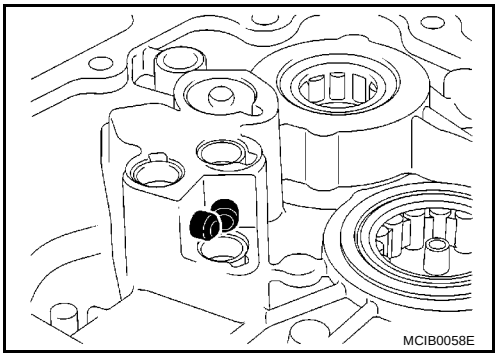
MCIB0056E

3. Fit the reverse gear assembly.



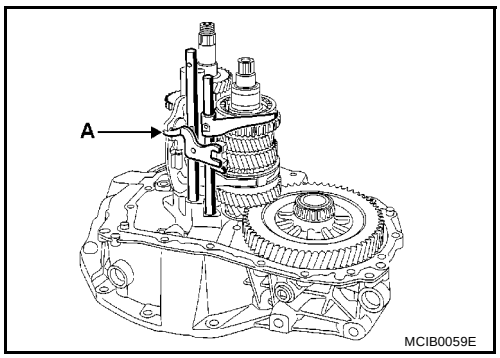
MCIB0057E

4. Fit the two locking shafts.

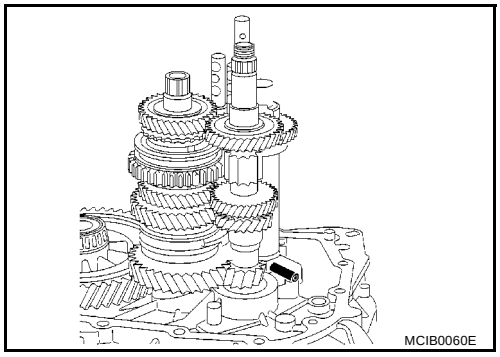


MCIB0058E

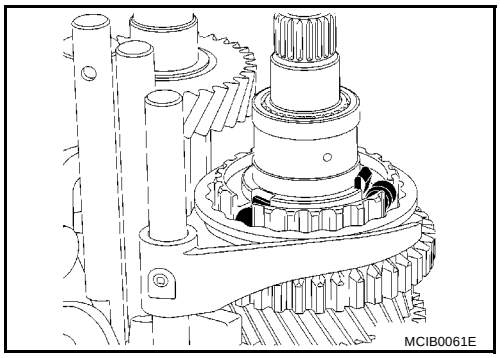
5. Fit the 5th gear shaft and the 3rd/4th gear shaft/fork and sliding gear assembly while gently lifting the input shaft assembly.
Rotate the reverse gear assembly to position the 5th gear fork (A).



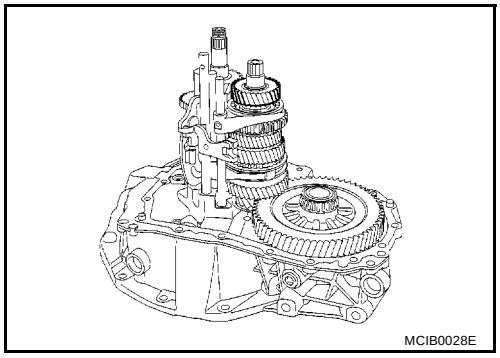
6. Pin the reverse gear assembly.



7. Shift to 3rd gear and insert the rollers and clawing springs.



8. Refit the 4th main gear fitted with its synchronizer ring.



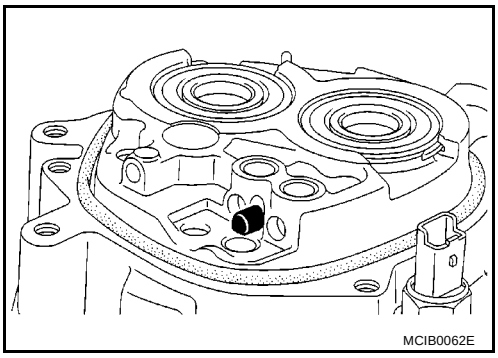
HOUSING ASSEMBLY

PFP:32010

Assembly

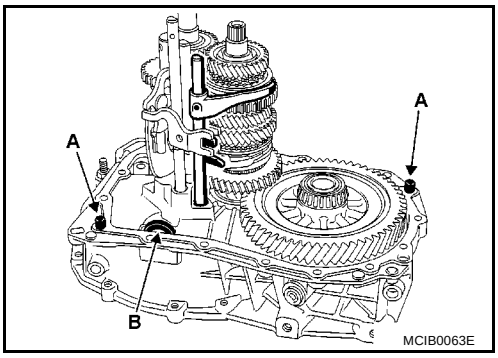
ECS00FF2

1. Fit the 1st/2nd, 3rd/4th, and 5th gear shaft ball cartridges into the housing mechanism.
2. Engage 3rd gear.



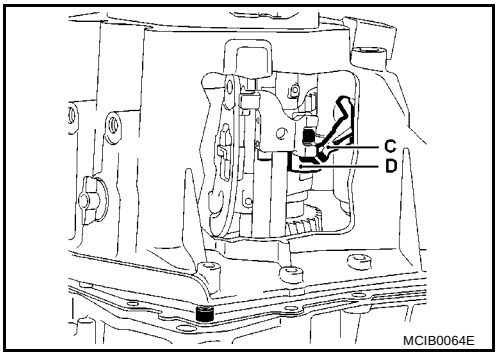
MCIB0062E

3. Check the positioning of the centring dowels (A).
4. Check the positioning of magnet (B).



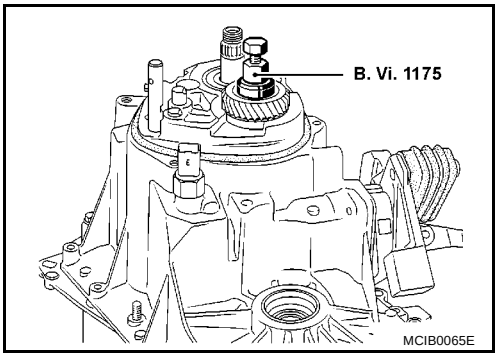
MCIB0063E

5. Apply a line of LOCTITE 518 to the gasket face.
6. Offer up the housing while guiding the selector finger (C) into fork (D) of the 3rd gear.



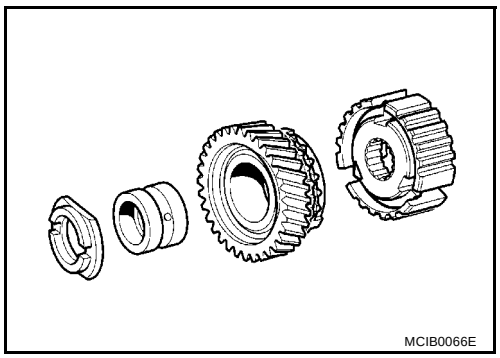
MCIB0064E

7. Pretighten the peripheral bolts and rotate the input shaft to check that they make contact with the bearings.
8. Tighten the bolts to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].
9. Put three drops of LOCTITE Frenbloc on the splines of the fixed 5th gear and fit it using tool B. Vi. 1175.



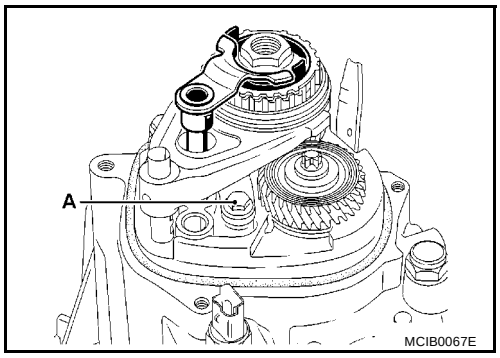
MCIB0065E

10. On the input shaft, fit the support washer (top side gear side).
11. On the input shaft, fit the sprocket bushing.
12. On the input shaft, fit the 5th main gear fitted with its synchronizer ring.
13. On the input shaft, fit the 5th gear hub fitted with its spring.



MCIB0066E

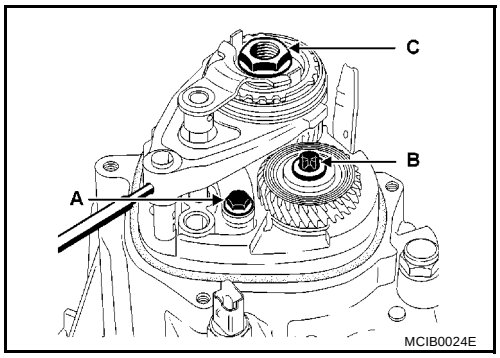
14. Refit the 5th gear fork/sliding gear/reverse gear fork assembly.
15. Fit the reverse gear synchronizer.
16. Screw on the reverse gear fork support and tighten the bolts (A) to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].
17. Slide the 5th gear fork on its shaft to engage 5th gear.



MCIB0067E

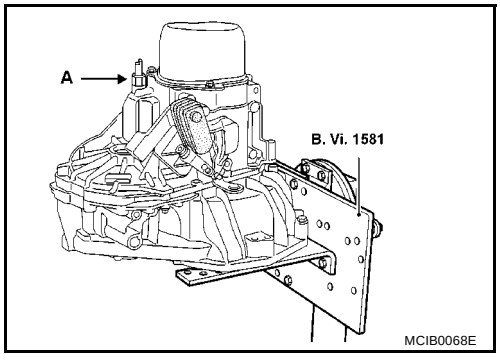
18. Tighten the gear bolt and nut to torque of:

    output shaft bolt (B) : [70 N·m (7.1 kg-m, 52 ft-lb)]
    input shaft nut (C) : [190 N·m (19 kg-m, 140 ft-lb)]
19. Reset to neutral and pin the 5th gear fork.



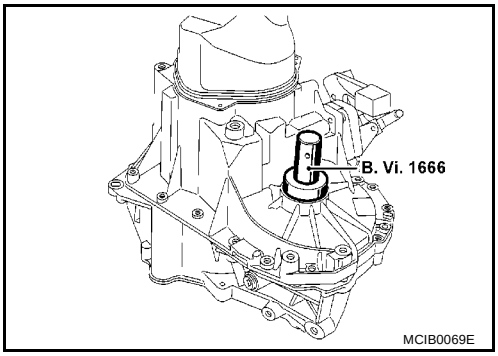
MCIB0024E

20. Fit a new O-ring, position the 5th gear cover and tighten the bolts to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].
21. Fit the back-up lamp switch (A) and tighten to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].



MCIB0068E

22. Refit the new differential output seals using B. Vi. 1666.



23. Refit the concentric slave cylinder and tighten the bolts.

Tightening torque : 21 N·m (2.1 kg-m, 15 ft-lb)

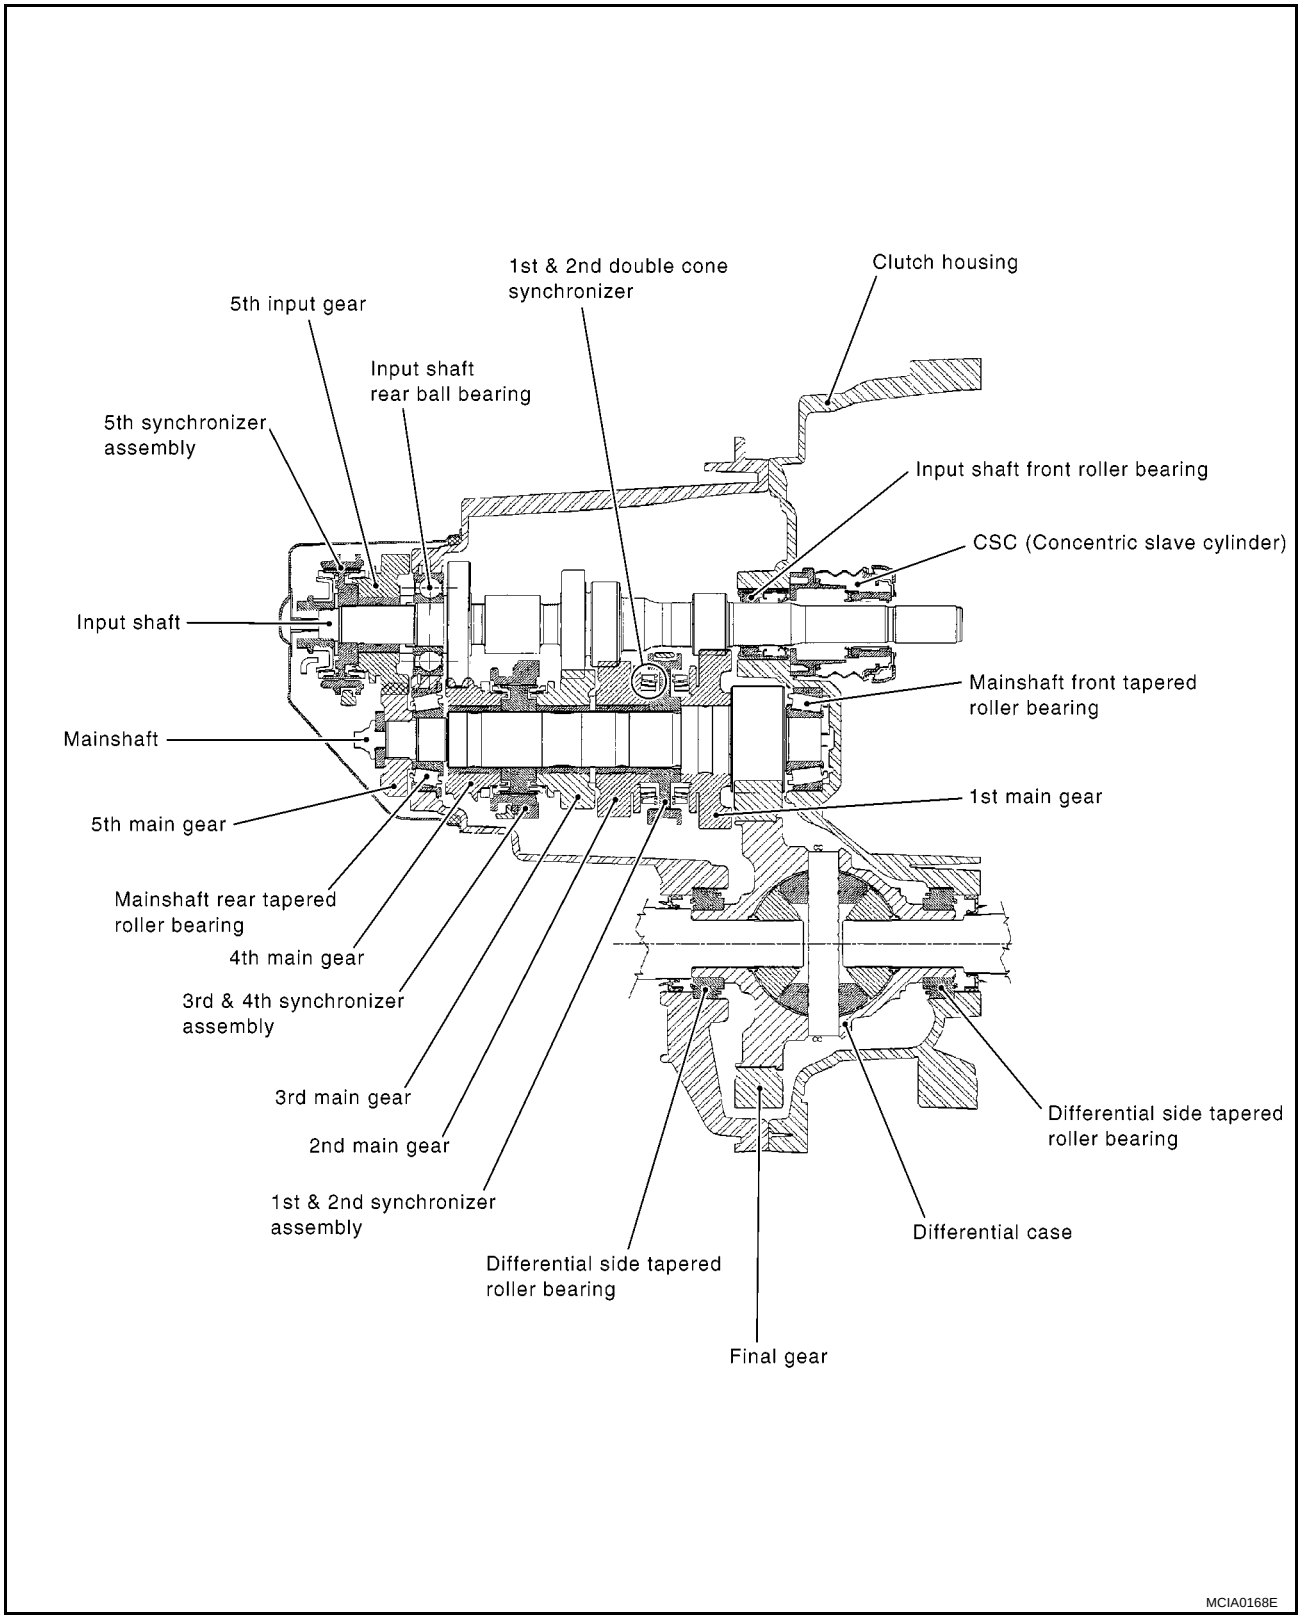
ECS00FD2



REMOVAL AND INSTALLATION

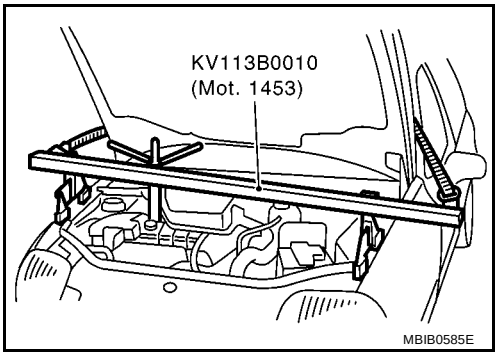
PFP:00000

Removal

ECS00FD3

CAUTION:
Remove the crankshaft position sensor (POS) from transaxle assembly before separating transaxle from engine. Be careful not to damage sensor edge.

1. Remove battery.
2. Remove the air cleaner. Refer to EM-123, "AIR CLEANER AND AIR DUCT" .
3. Disconnect the cable end ball of the select cable, and the cable end of the shift cable. Refer to MT-42, "CONTROL LINKAGE" .
4. Disconnect the clutch tube.
5. Remove the engine harness clamp.
6. Remove the starter. Refer to SC-45, "Removal and Installation (CR Engine Models)" , “STARTING SYSTEM”.
7. Remove the engine mounting LH side installation bolt. Refer to .
8. Set the engine hanger.



9. Lift up the vehicle and remove the front fender protectors (RH & LH).
10. Remove the undercover.
11. Remove the front exhaust pipe. Refer to EX-3, "Removal and Installation" , “EXHAUST SYSTEM”.
12. Remove the turbocharger outlet tube bracket from the transaxle.
13. Remove the RH and LH drive shafts. Refer to FAX-13, "Removal and Installation" , “FRONT DRIVE SHAFT”.
14. Disconnect the ground cable from the transaxle.
15. Set the transmission jack.
16. Remove the rear engine mounting bracket. Then, remove the rear torque link from the transaxle. Refer to EM-147, "ENGINE ASSEMBLY" .

    CAUTION:
    Do not remove the rear torque link from the suspension member.
17. Remove the engine mounting bracket LH.
18. Disconnect the position switch connector.
19. Remove the transaxle mounting nuts and bolts, and remove the transaxle.

Installation

ECS00FD4

Install in the reverse order of removal.

TIGHTENING TORQUES

PFP:32010

Description

ECS00FD5

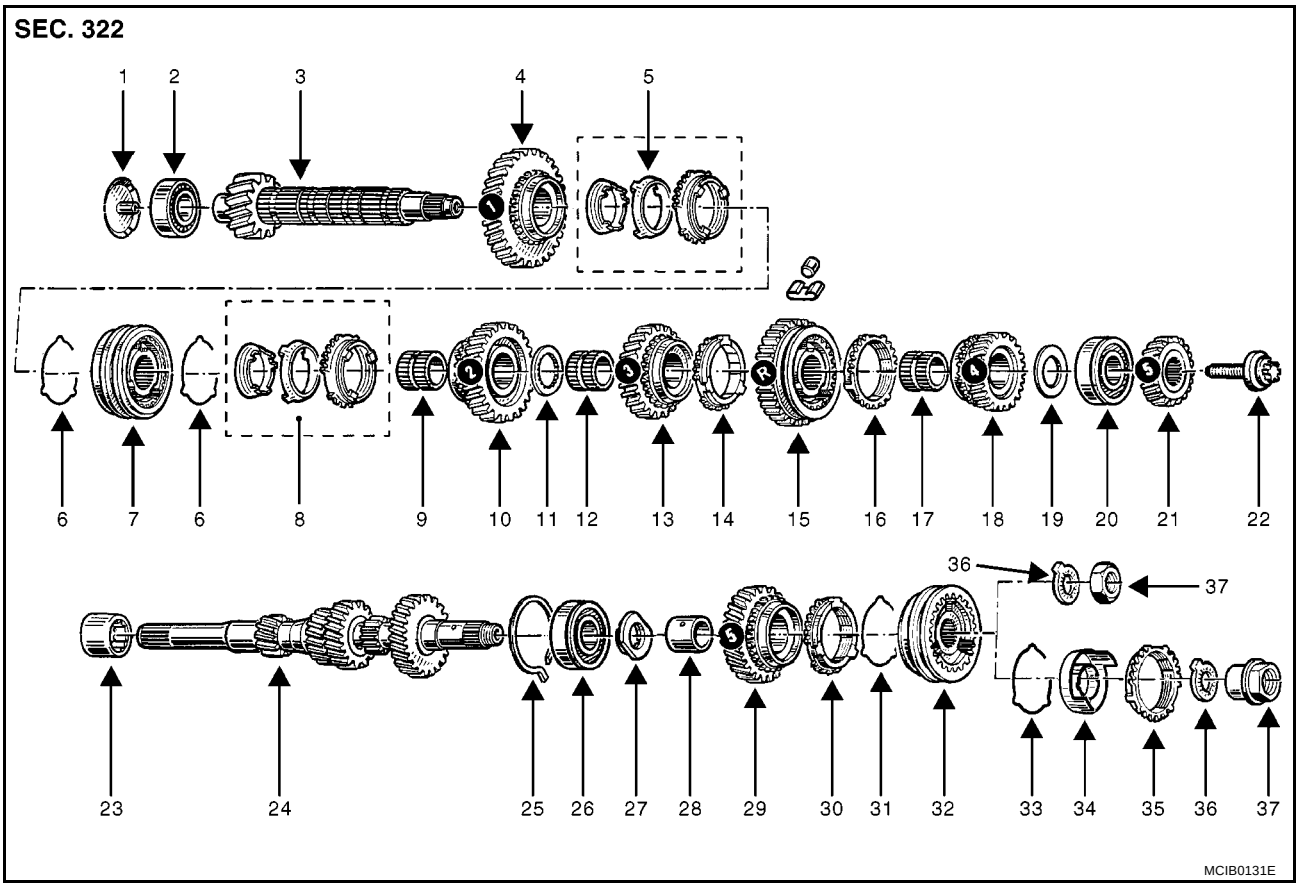
Tightening portion	N·m (kg-m, ft-lb)
Gearbox casing bolt	**25 (2.6, 18)**
Mainshaft bolt	**70 (7.1, 52)**
Input shaft nut	**190 (19, 140)**
Rear cover bolt	**25 (2.6, 18)**
Back-up lamp switch	**25 (2.6, 18)**
Concentric slave cylinder	**21 (2.1, 15)**
Selector shaft bolt	**20 (2.0, 15)**
Gear shift catch bolt	**10 (1.0, 7)**
Reverse gear fork support bolt	**25 (2.6, 18)**
Drain bolt	**25 (2.6, 18)**
Selector shaft balls	**23 (2.3, 17)**

COMPONENTS

PFP:32010

Gear Components

ECS00FD6

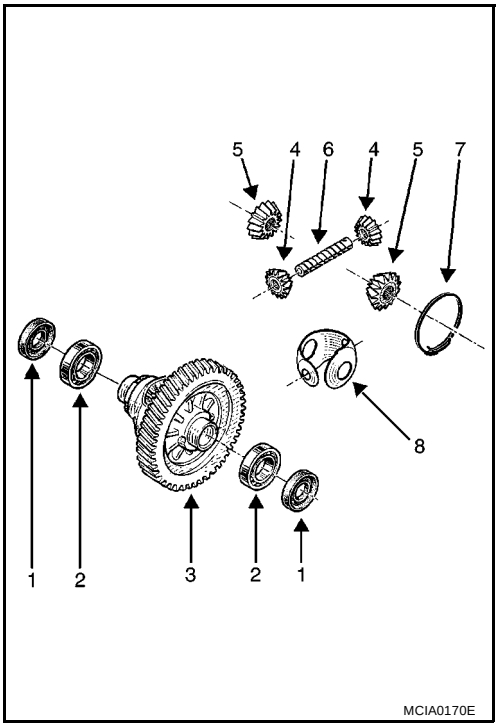


1. Oil channel	2. Mainshaft front bearing	3. Mainshaft
4. 1st main gear	5. Synchronizer ring	6. Spread spring
7. 1st & 2nd synchronizer hub	8. Synchronizer ring	9. Mainshaft bearing
10. 2nd main gear	11. Adapter plate	12. Mainshaft bearing
13. 3rd main gear	14. Baulk ring	15. 3rd & 4th synchronizer hub and reverse gear
16. Baulk ring	17. Mainshaft bearing	18. 4th main gear
19. Adapter plate	20. Mainshaft rear bearing	21. 5th main gear
22. Bolt	23. Bearing guide	24. Input shaft
25. Retaining clip	26. Input shaft rear bearing	27. Adapter plate
28. 2nd & 3rd gear bushing	29. 5th main gear	30. Baulk ring
31. Spread spring	32. 5th synchronizer hub	33. Spread spring
34. Friction cone	35. Baulk ring	36. Washer
37. Nut		

Differential Gear

ECS00FD7

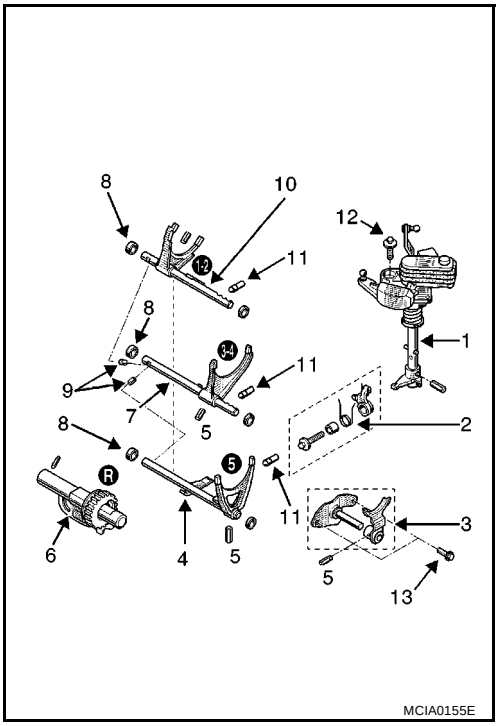
1	Oil seal
2	Differential side bearing
3	Differential case
4	Pinion mate gear
5	Bevel side gear
6	Pinion mate shaft
7	Shaft retaining spring
8	Side gear thrust washer



Shift Control Components

ECS00FD8

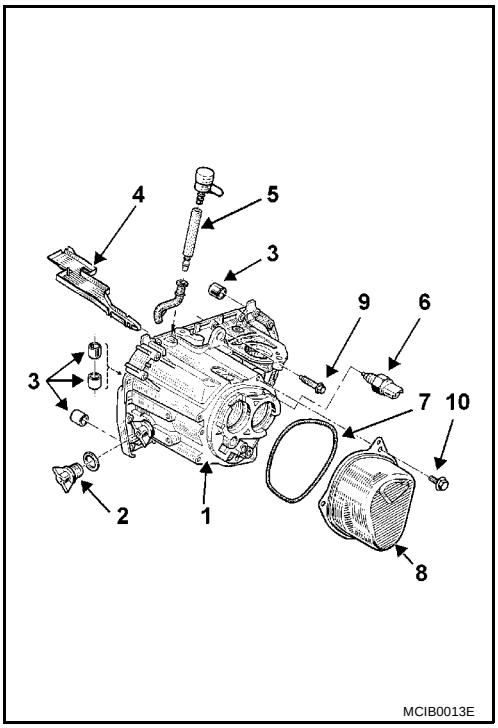
1	Control assembly
2	Gear shift catch
3	Reverse gear brake fork and shaft
4	Fork rod (For 5th)
5	Lock pin
6	Reverse idler gear assembly
7	Fork rod (For 3rd and 4th)
8	Ring
9	Lock pin
10	Fork rod (For 1st and 2nd)
11	Check ball cartridge
12	Selector shaft bolt [20 N·m (2.0 kg-m, 15 ft-lb)]
13	Reverse gear fork shaft bolt [25 N·m (2.6 kg-m, 18 ft-lb)]



Case Components

ECS00FD9

1	Transaxle case
2	Filler plug
3	Dowel pin
4	Oil gutter
5	Breather pipe
6	Back-up lamp switch
7	O-ring
8	Transaxle case cover
9	Gearbox edge bolt [25 N·m (2.6 kg-m, 18 ft-lb)]
10	Fifth gear housing bolt [25 N·m (2.6 kg-m, 18 ft-lb)]

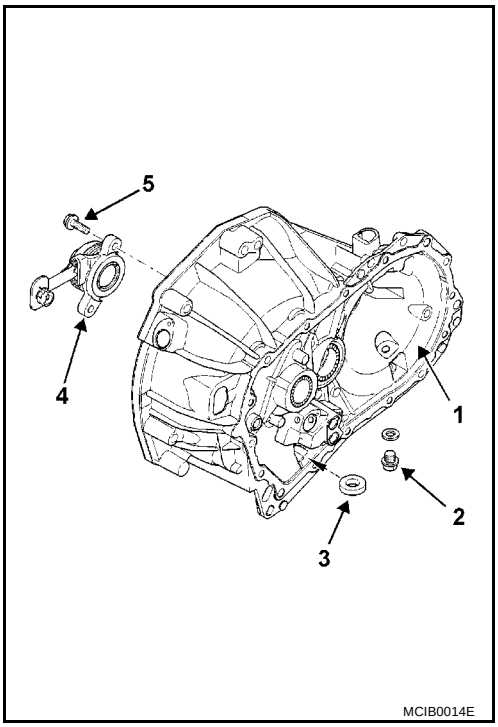


MCIB0013E

Clutch Housing

ECS00FDA

1	Clutch housing
2	Drain bolt [25 N·m (2.6 kg-m, 18 ft-lb)]
3	Magnet
4	Concentric slave cylinder
5	Concentric slave cylinder bolt [21 N·m (2.1 kg-m, 15 ft-lb)]



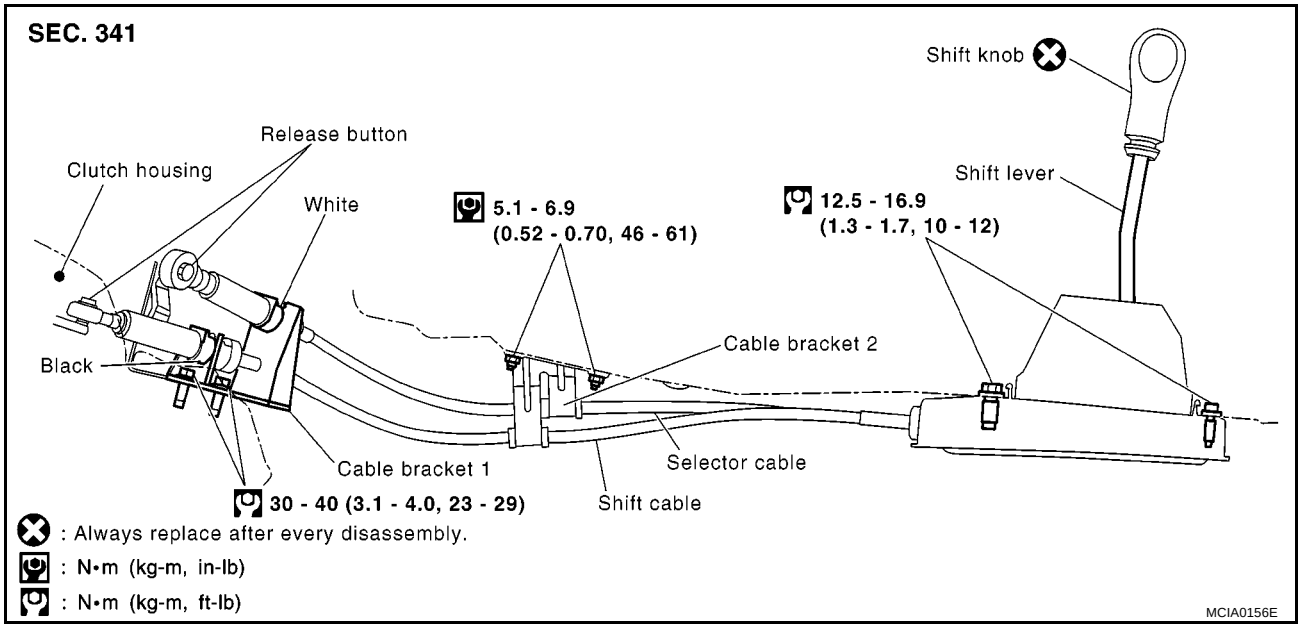
MCIB0014E

CONTROL LINKAGE

PFP:34103

Removal and Installation of Control Device and Cable

ECS00FDB



REMOVAL

1. Remove center console and shift boot. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove control device mounting bolts.
3. Pressing release bottom of cable end, remove cable from either manual transmission shift lever.
4. Lift up cable and remove it from cable bracket 1.
5. Remove center muffler and heat plate. Refer to EX-3, "Removal and Installation" , “EXHAUST SYSTEM”.
6. Separate cable bracket 2 from the vehicle.
7. Remove front and rear claws of control device. Remove control device and cable from the vehicle.

NOTE:
If shift knob needs to be removed, pull it up to remove.

INSTALLATION

Note the following, and install in the reverse order of removal.

- When installing, make sure to insert cable end into either manual transmission shift lever.
- After assembly, make sure selector lever automatically returns to Neutral when it is moved to 1st, 2nd, or Reverse.
- After installation, make sure that the shift to each position works well.
- When installing shift knob, press it onto selector lever.

  CAUTION:
  Do not reuse shift knob.

RATIOS

PFP:32010

NISSAN Gearbox

ECS00FDC

Suffix	First	Second	Third	Fourth	Fifth	Reverse gear	Final drive
JR5-106	11:41	21:43	28:37	35:34	42:31	11:39	15:56
JR5-114	11:41	21:43	28:37	35:34	42:31	11:39	15:56

CONSUMABLES

PFP:32010

Description

ECS00FDD

Types	Packaging	Parts Department No.	Component
Gearbox oil			Cover all parts
RHODORSEAL	100 g tubes	77 01 404 452	Housing assembly
LOCTITE 518	24 ml syringe	77 01 421 162	Back-up lamp switch threading

CAPACITIES - LUBRICANTS

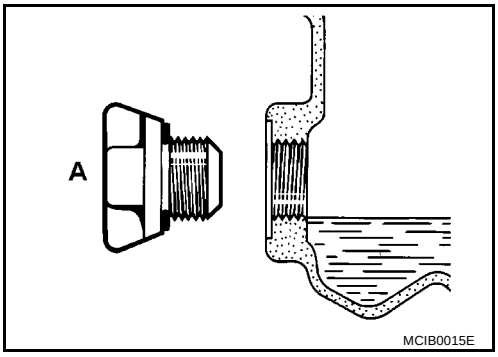
PFP:32010

Description

ECS00FDE

Capacity	Grade
2.5 ℓ (4-3/8 Imp pt)	SAE 75W-80, 75W-85

Fill to the level of the oil filler cap hole.



TROUBLE DIAGNOSIS

PFP:00004

Symptom Chart

ECS00FDF

Symptoms (after checking the clutch)	Possible causes

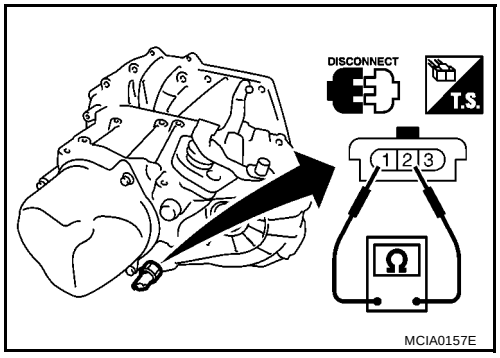
Symptoms	Oil level or grade	External control	Synchro-nizer	Gearing	Sliding gear hub	Fork and balls	Bearings	Engine mounting - housing
Gear grinding	1	2	3		4			
One or more gears cannot be selected	1	2	3			4		
Gear disengagement		2	4		4	3		1
One or more gears locked		1		4		2		3
Noisy	1			3			2	

NOTE:
The numbers indicate the order of priority for diagnostics.

Back-up Lamp Switch

ECS00FDG

Gear position	Continuity
Reverse	Yes
Except reverse	No



PRECAUTIONS

PFP:00001

Precautions

ECS00FDH

Removing and handling the parts must be carried out on a workbench with a knockproof cover. (rubber or thick plastic)
Cover all turning and synchronizer points in oil.
Observe the tightening torques.
Carefully carry out the specific settings and adjustments.
Be sure to properly refit parts in the same order and position after removal.
Marking the position of the sliding rods in relation to the hubs before removal is recommended.
During refitting, make sure the inside of the box remains free of dust or impurities.

PARTS TO BE REPLACED SYSTEMATICALLY

PFP:32010

Description

ECS00FDI

If they have been removed:

- the lip seals,
- the O-rings,
- the gear supporting rings,
- the roll pins,
- the input shaft and mainshaft bearing circlips,
- the sliding gear hub springs.

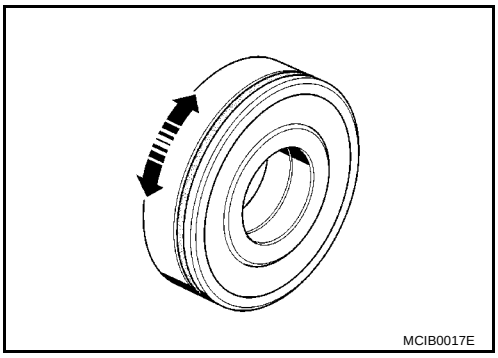
CHECKING

PFP:32010

Bearings

ECS00FDJ

Check that the bearings show no signs of damage and that they turn evenly. Replace them if necessary.



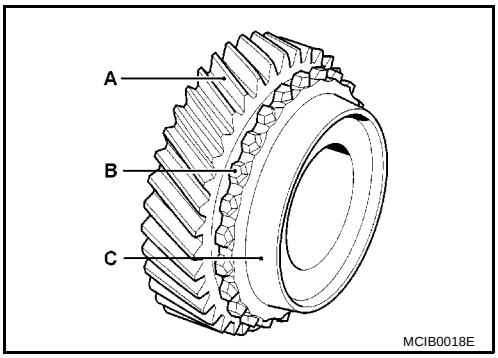
MCIB0017E

Gearing

ECS00FDK

NOTE:
The inspection focuses mainly on the appearance of the teeth, especially in terms of claw chamfers.

1. Check that the teeth (A) are not broken or chipped.
2. Check that the claws (B) are not broken, chipped or worn.
3. Check that the friction cone (C) shows no scratches or blueness.



MCIB0018E

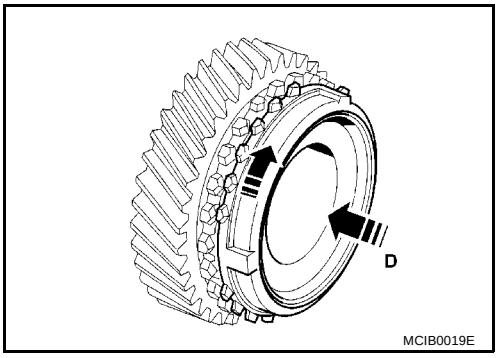
Synchronizer Ring

ECS00FDL

Check that the grooves and ridges on the ring are not worn or damaged.

1. Check that put the ring onto the gear cone.
2. Check that rotate the ring while applying force in the direction of the cone (D).
3. Check that the ring should lock against the cone.

Otherwise, replace the synchronizer ring.

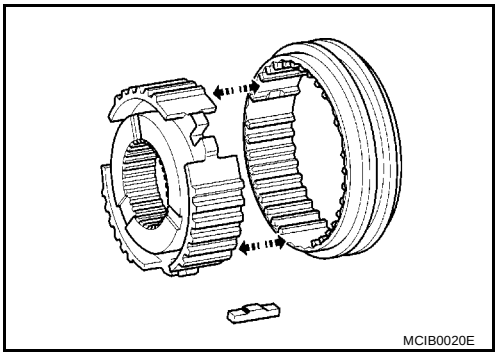


MCIB0019E

Sliding Gear Hub

ECS00FDM

Make sure the sliding gear turns smoothly in the hub.
Check that the rollers or keys are in good condition.



MCIB0020E

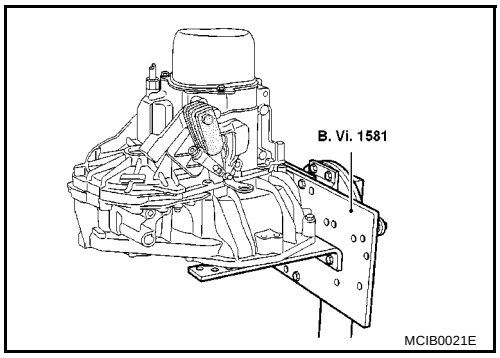
SEPARATING THE HOUSINGS

PFP:32010

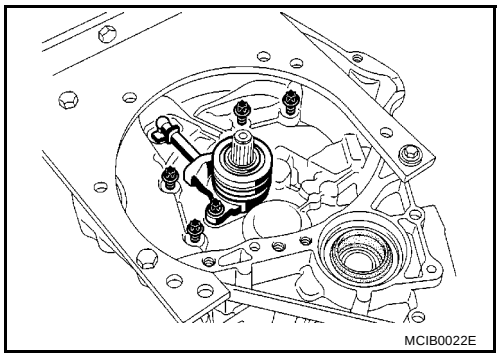
Removal

ECS00FDN

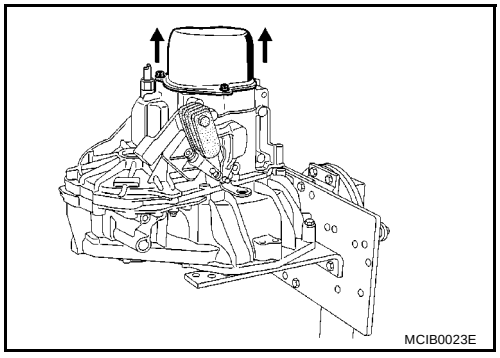
Fit the B. Vi. 1581 support plate on a Desvil stand.
Fit the gearbox on the B. Vi. 1581 support.



1. Remove the concentric slave cylinder.
2. Remove the bolts located inside the housing.

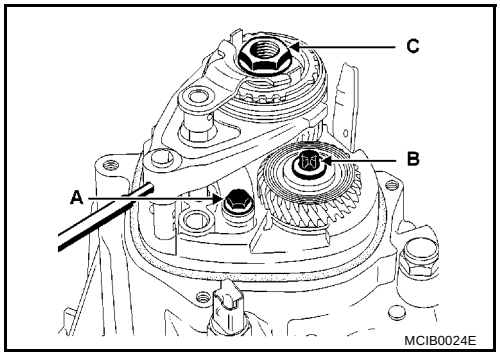


3. Remove the rear housing. This must be removed along the horizontal axis of the gearbox because it has a lubrication spline which is located in the input shaft bore.

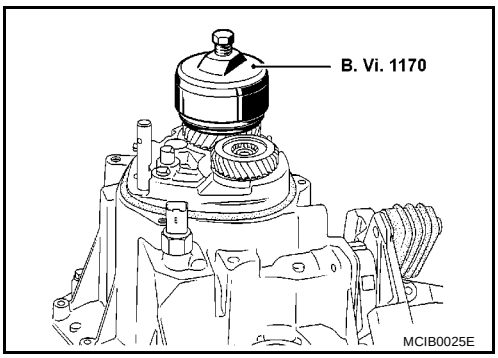


Remove the two reverse gear fork support mounting bolts (A).
Drive in the 5th gear fork using B. Vi. 31-01.
Shift the 3rd gear on the gear selector lever and the 5th gear by sliding the 5th gear fork on its shaft.

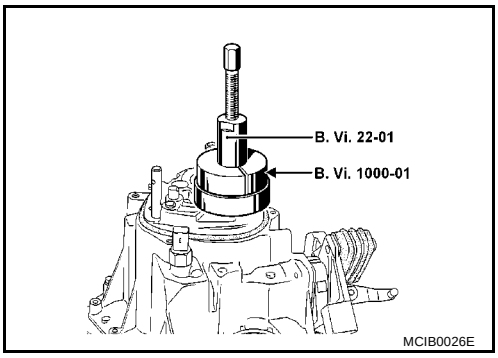
4. Remove the mainshaft bolt (B).
5. Remove the input shaft nut (C).
6. Remove the reverse gear synchronizer.
7. Remove the 5th gear fork and sliding gear.



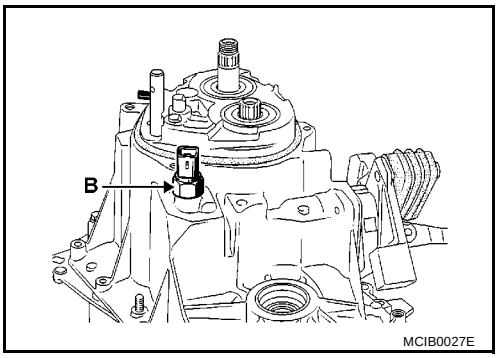
Remove the 5th gear hub using B. Vi. 1170.
To do this, fit the sliding gear B. Vi. 1170 and rotate it so that the splines are opposite those of the input shaft hub.



Remove the fixed 5th gear using B. Vi. 22-01 and B. Vi. 1000-01.
Remove the gearbox edge bolts.



Remove the back-up lamp switch (B).
Engage 3rd gear.
Lift and remove the mechanism housing.



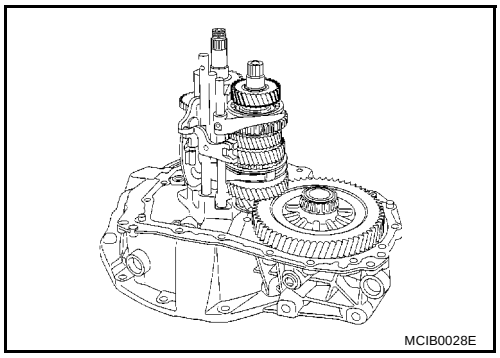
REPAIRING THE GEARBOX

PFP:32010

Removal

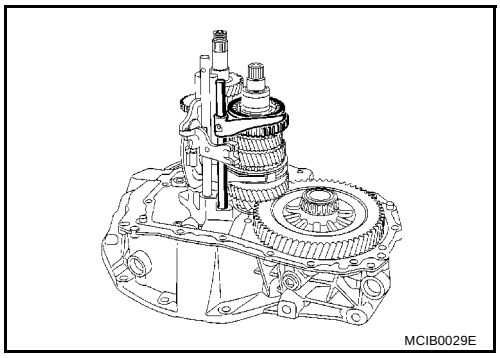
ECS00FDO

1. Remove the 4th-gear pinion.



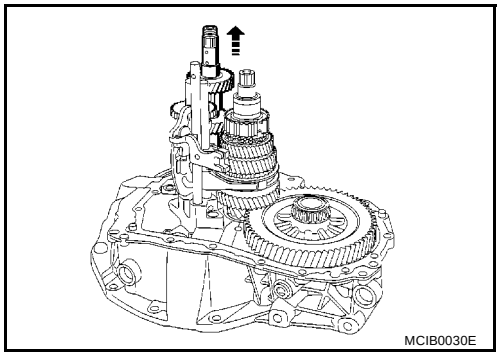
MCIB0028E

2. Remove the 3rd/4th gear shaft/fork and sliding gear assembly while gently lifting the mainshaft assembly.



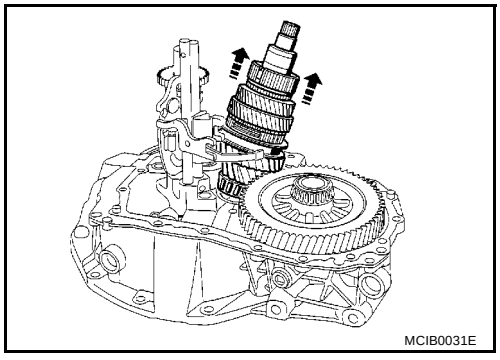
MCIB0029E

3. Remove input shaft assembly.



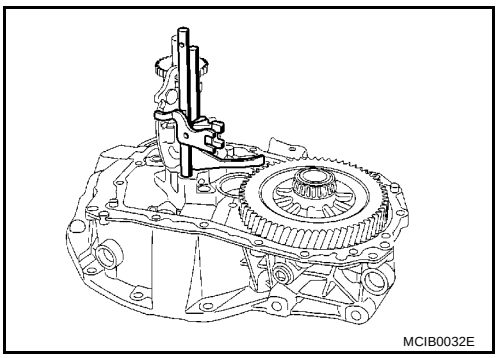
MCIB0030E

4. Remove mainshaft assembly.



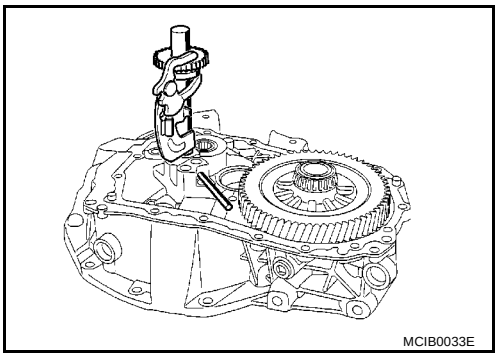
MCIB0031E

5. Remove the 1st/2nd shaft and fork and the 5th gear shaft.



MCIB0032E

6. Remove the pin from the reverse gear and remove the reverse gear.



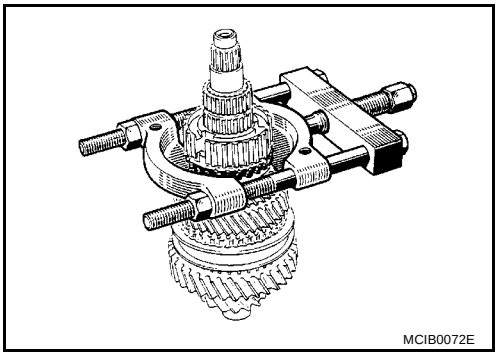
MCIB0033E

Removing the Gearing

ECS00FDP

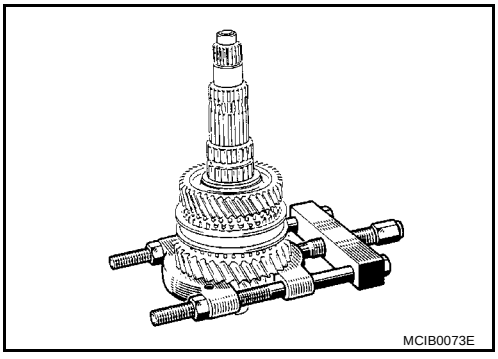
NOTE:
The rings underneath the 2nd, 3rd and 4th gears are fitted tightened. They will be systematically replaced during refitting.

1. Remove the ring/hub/3rd gear assembly with the press, resting underneath the 3rd gear claw teeth.



MCIB0072E

2. Remove the rings/1st and 2nd gears/hub/sliding gear assembly with the press, resting underneath the 1st gear.



MCIB0073E

Checking Parts

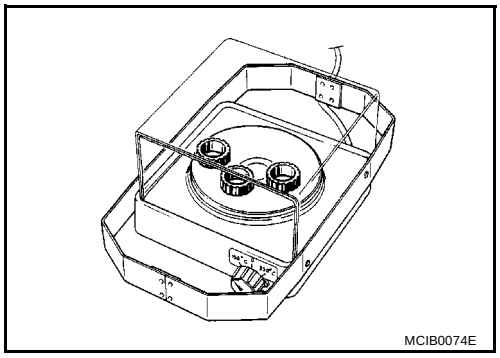
ECS00FDQ

The sprocket teeth and the claws should not be chipped or excessively worn.
Also ensure that there are no signs of grating or abnormal wear on the surfaces of the shafts or the inner walls of the sprockets.
It is advisable to mark the position of the sliding shafts in relation to the hub.

Refitting the Gearing

ECS00FDR

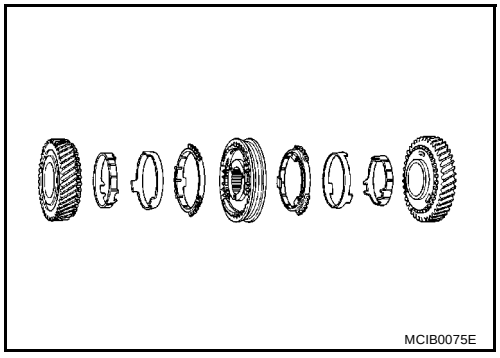
A hot plate with a setting of 150°C (302°F) should be used for refitting.
Place the new rings on the cold hot plate. Heat them for 15 minutes with a thermostat setting of 150°C (302°F).



MCIB0074E

Proceed in the reverse order to removal.
Refit the rings:
Remove a ring from the heating plate, using pliers, and use a tube with an internal diameter of 33 mm (1.30 in) to fit it on the shaft until it is resting on the hub.

NOTE:
The 1st/2nd gear has double-cone synchronizer, bring the notches of the synchro rings together with those on the hubs and gears.



MCIB0075E

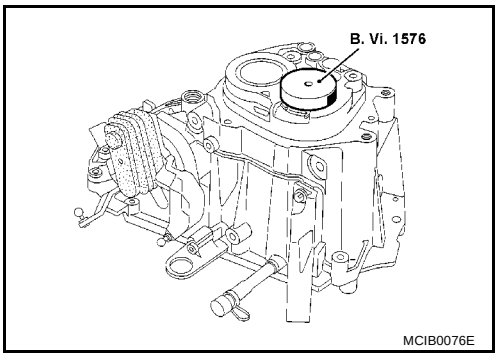
TRANSAXLE CASE BEARING

PFP:32010

Removing the Bearing, Input Shaft Side

ECS00FDS

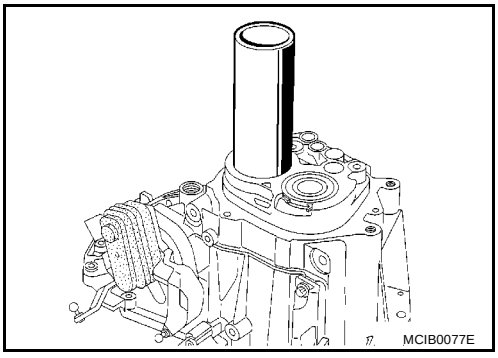
Remove the circlips and drive the bearing inside the housing using tool B. Vi. 1576.



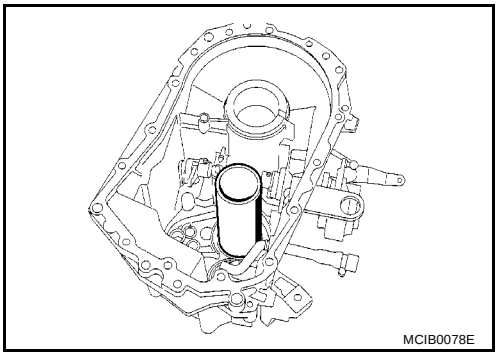
Refitting

ECS00FDT

1. Fit a new circlip.
2. Fit the bearing using tool B. Vi. 1576.
3. Remove the bearing race, output shaft side using a tube with a diameter of 55 mm (2.17 in).



4. Refit the race using a 60 mm (2.36 in) diameter tube.



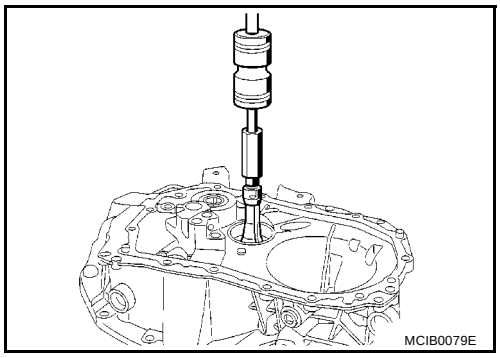
CLUTCH HOUSING BEARING

PFP:32010

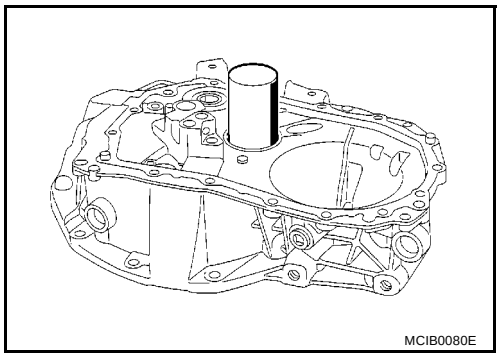
Removal and Installation

ECS00FDU

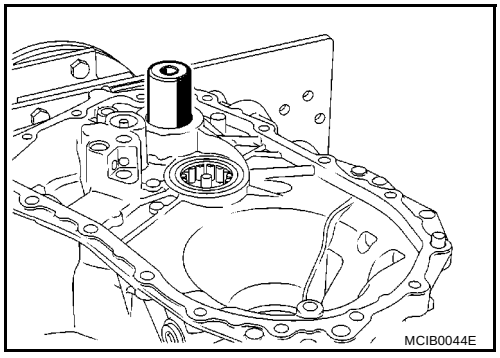
1. Cut the base of the deflector plastic hollow needle located at the centre of the bearing.
   Drive out the cup using a puller.



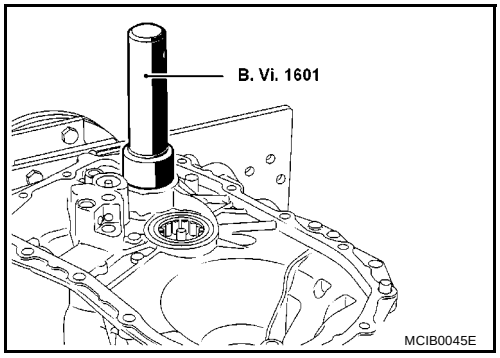
2. Fit a new deflector, then the bearing race using a 55 mm (2.17 in) diameter tube.



3. Remove the input shaft bearing guide using the press and a 38 mm (1.50 in) diameter tube.



4. Refit the bearing guide using the press and tool B. Vi. 1601.



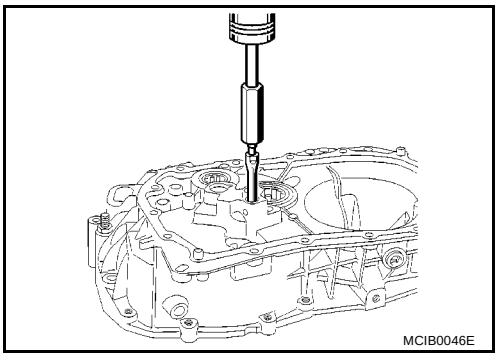
SELECTOR SHAFT RINGS

PFP:32010

Removal

ECS00FDV

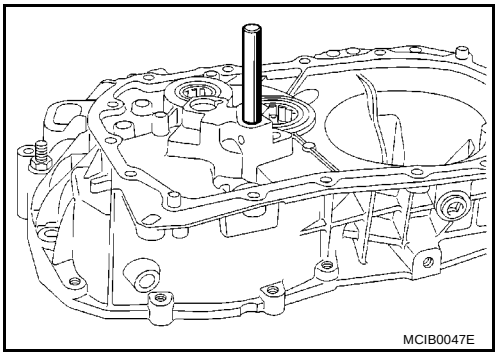
Remove the rings with an inertia puller.



Refitting

ECS00FDW

Refit the rings using a 14.5 mm (0.57 in) tube down to the thrust bearing.



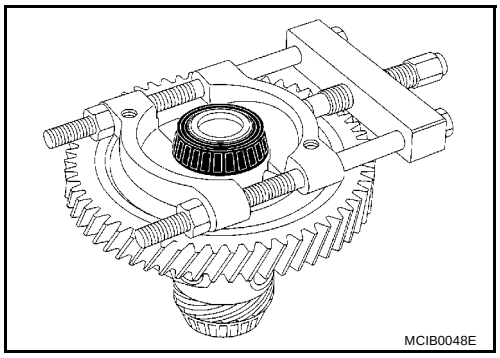
DIFFERENTIAL BEARINGS

PFP:32010

Removal and Installation

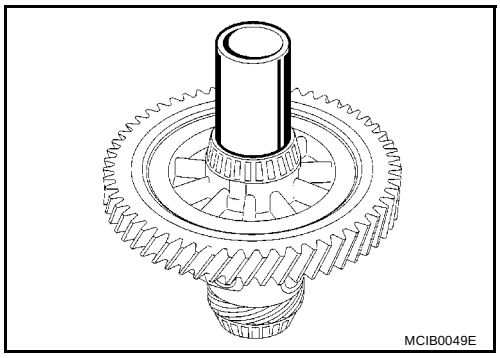
ECS00FDX

1. Remove the bearing using an antisticking pin.



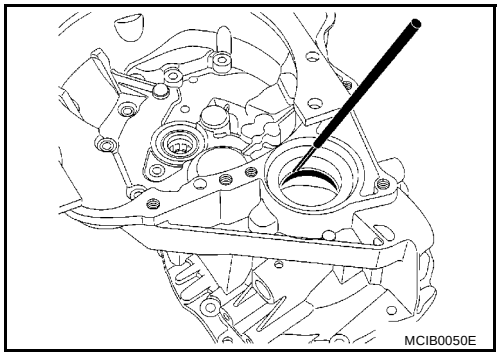
MCIB0048E

2. Refit the bearings using a 40 mm (1.57 in) tube.



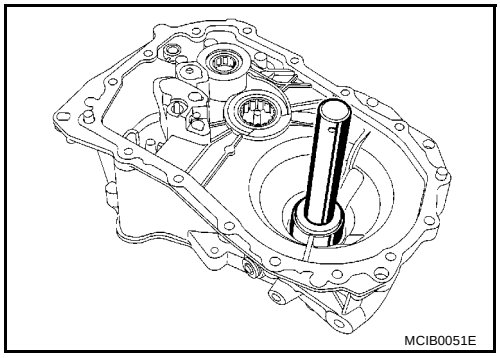
MCIB0049E

3. Remove the bearing races using a roll pin punch.



MCIB0050E

4. Refit the bearing races using tools C-F from the B. Vi. 1554 kit.



MCIB0051E

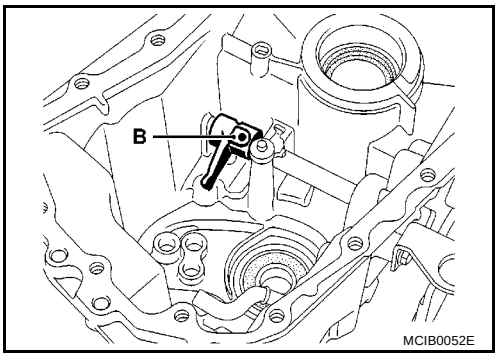
SELECTOR SHAFT

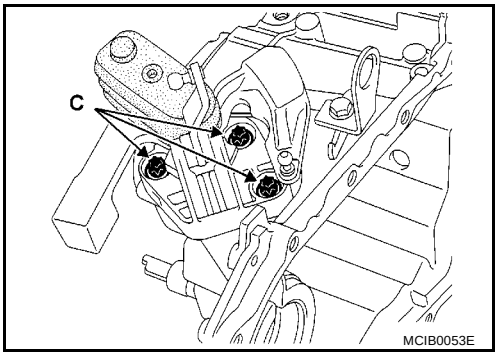
PFP:32010

Removal

ECS00FDY

After removing the pin from the selector finger (B), remove the mounting bolts (C) and remove the control shaft unit.



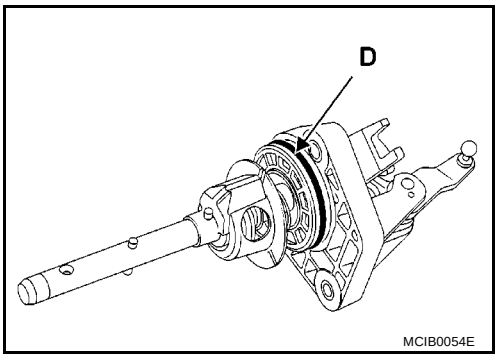


Refitting

ECS00FDZ

Proceed in the reverse order to removal.

NOTE:
Replace the O-ring (D).



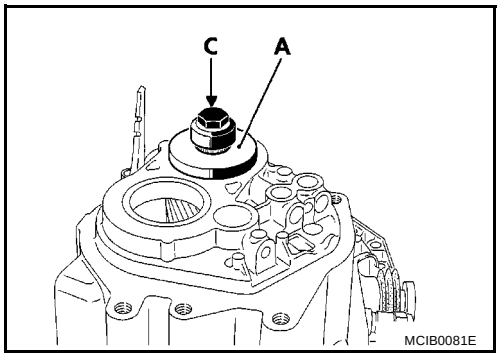
REPAIRING THE GEARBOX

PFP:32010

Setting the Pre-tensioning of the Output Shaft Bearings

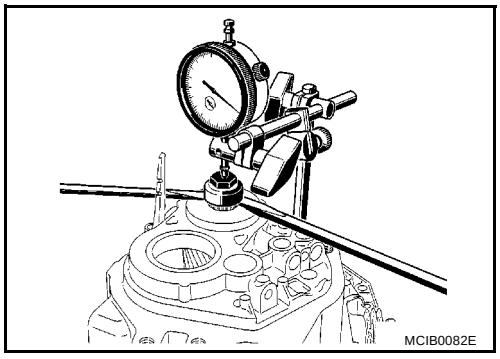
ECS00FE0

NOTE:
This operation is carried out in the event of replacing the bearings, housings or mainshaft.
Clutch housing without differential and without input shaft.
Fit the mainshaft in the clutch housing with the bearings and the pre-setting washer B. Vi. 1161, or equivalent, of 1.60 mm (0.06 in) (large outer ý).
Fit the transaxle case assembly.
Fit and tighten to torque the box belt bolts.
Fit the dial gauge support plate B. Vi. 1161, or equivalent, on the tripod basin mountings.



1. Fit the B. Vi. 1527 special spacer (A).
2. Fit the bolt (C).
3. Fit the dial gauge with its magnetic holder.

1	Rotate the mainshaft several times to fit the bearings.
2	Set the dial gauge to zero.
3	Pull the mainshaft upwards by making a lever out of two screwdrivers.
4	Take a reading from the dial gauge.



Repeat the operations several times (1 to 4).
Calculate the average of the readings.
Calculation of the value of the pre-load washer.
Prescribed value + value of the pre-setting washer + average of the readings on the dial gauge = value of the pre-tensioning dial gauge washer.
Example: [Value in mm (in)]

0.26	**+**	**0.49**	**+**	**1.60**	**=**	**2.35**
↓		↓		↓		↓
Prescribed value		Average reading		Pre-setting washer value		Pre-load washer value

NOTE:
A set of pre-load washers of 2.15 mm (0.08 in) to 2.43 mm (0.10 in) from 0.04 mm (0.002 in) to 0.04 mm (0.002 in) thickness is supplied as replacement parts.

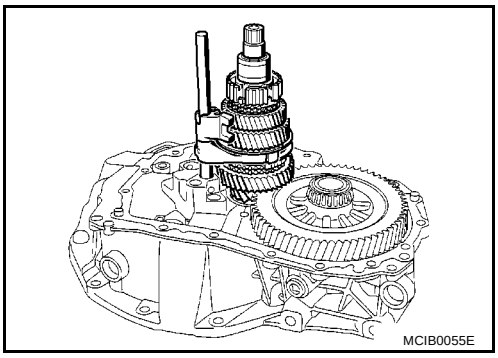
ASSEMBLY

PFP:00000

Refitting

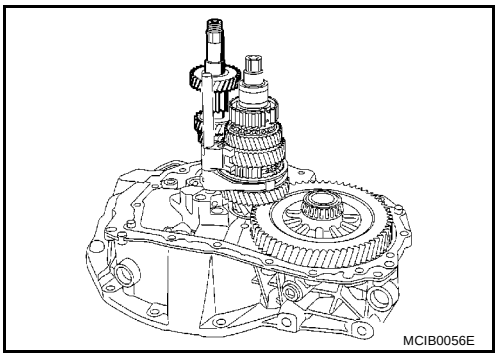
ECS00FE1

1. Fit the mainshaft and 1st/2nd gear fork assembly.



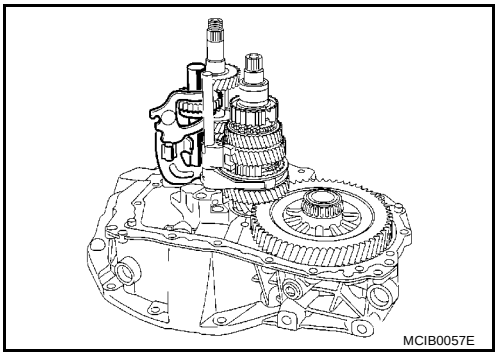
MCIB0055E

2. Fit the input shaft.



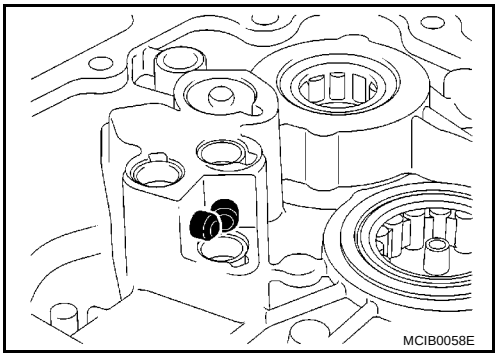
MCIB0056E

3. Fit the reverse gear assembly.



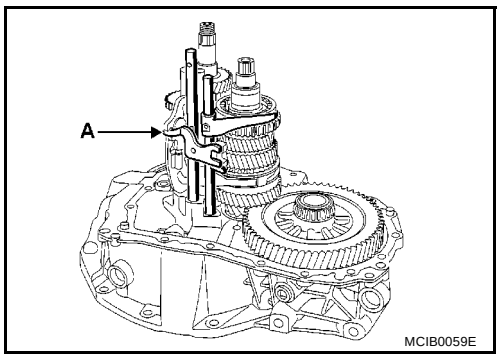
MCIB0057E

4. Fit the two locking shafts.

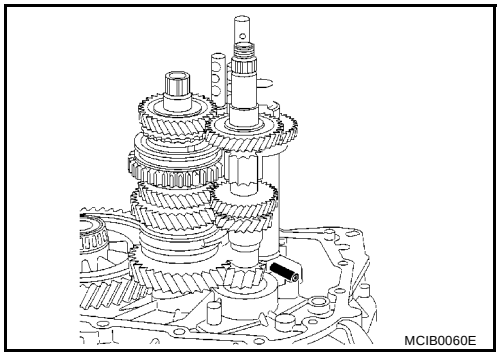


MCIB0058E

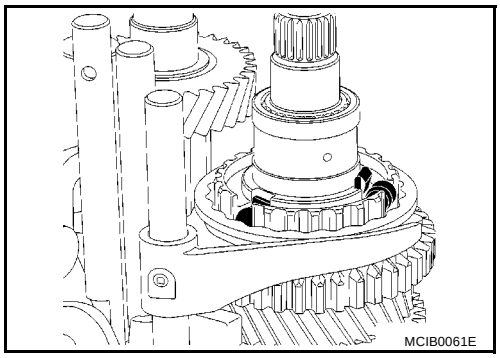
5. Fit the 5th gear shaft and the 3rd/4th gear shaft/fork and sliding gear assembly while gently lifting the input shaft assembly.
Rotate the reverse gear assembly to position the 5th gear fork (A).



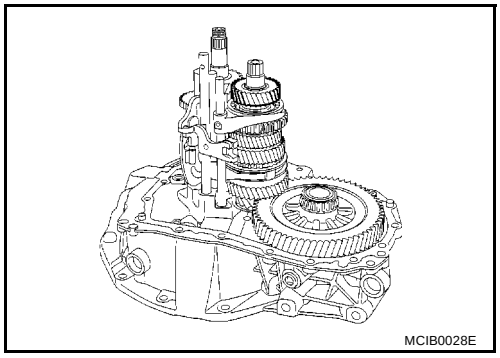
6. Pin the reverse gear assembly.



7. Shift to 3rd gear and insert the rollers and clawing springs.



8. Refit the 4th main gear fitted with its synchronizer ring.



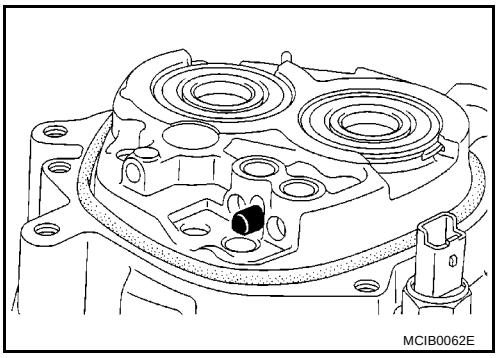
HOUSING ASSEMBLY

PFP:32010

Assembly

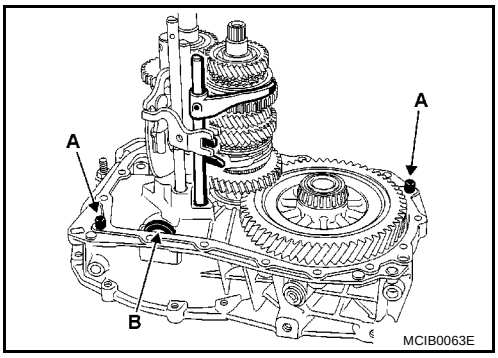
ECS00FE2

1. Fit the 1st/2nd, 3rd/4th, and 5th gear locking balls into the transaxle case.
2. Engage 3rd gear.



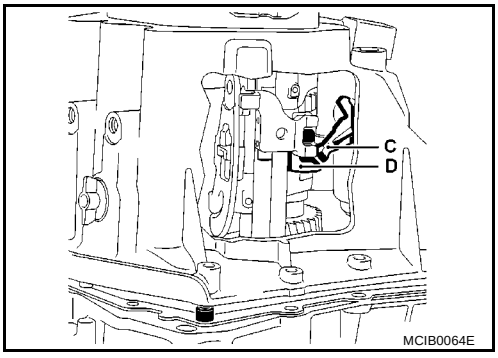
MCIB0062E

3. Check the positioning of the centring dowels (A).
4. Check the positioning of magnet (B).



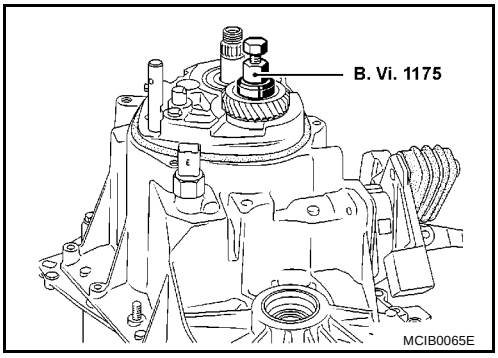
MCIB0063E

5. Apply a line of LOCTITE 518 to the gasket face.
6. Offer up the housing while guiding the selector finger (C) into fork (D) of the 3rd gear.



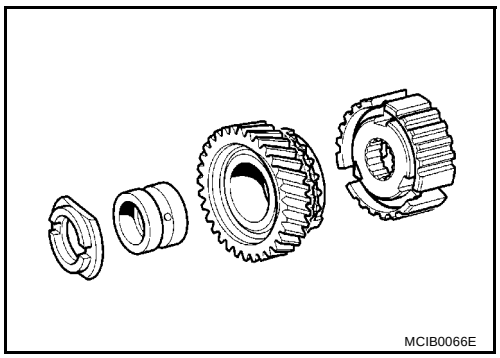
MCIB0064E

7. Pretighten the peripheral bolts and rotate the input shaft to check that they make contact with the bearings.
8. Tighten the bolts to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].
9. Put three drops of LOCTITE Frenbloc on the splines of the fixed 5th gear and fit it using tool B. Vi. 1175.



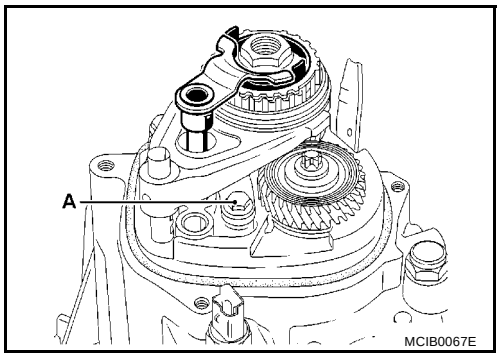
MCIB0065E

10. On the input shaft, fit the support washer (top side gear side).
11. On the input shaft, fit the sprocket bushing.
12. On the input shaft, fit the 5th main gear fitted with its synchronizer ring.
13. On the input shaft, fit the 5th gear hub fitted with its spring.



MCIB0066E

14. Refit the 5th gear fork/sliding gear/reverse gear fork assembly.
15. Fit the reverse gear synchronizer.
16. Screw on the reverse gear fork support and tighten the bolts (A) to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].
17. Slide the 5th gear fork on its shaft to engage 5th gear.

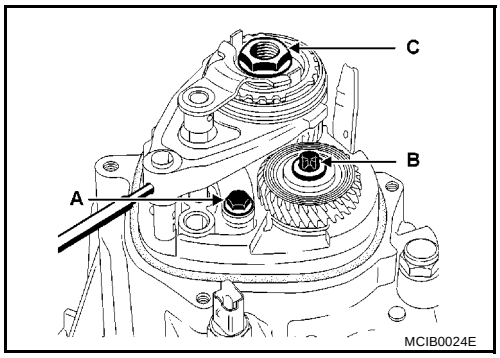


MCIB0067E

18. Tighten the gear bolt and nut to torque of:

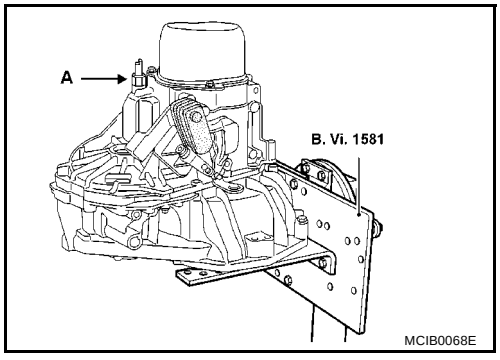
    output shaft bolt (B) : [70 N·m (7.1 kg-m, 52 ft-lb)]
    input shaft nut (C) : [190 N·m (19 kg-m, 140 ft-lb)]

19. Reset to neutral and pin the 5th gear fork.



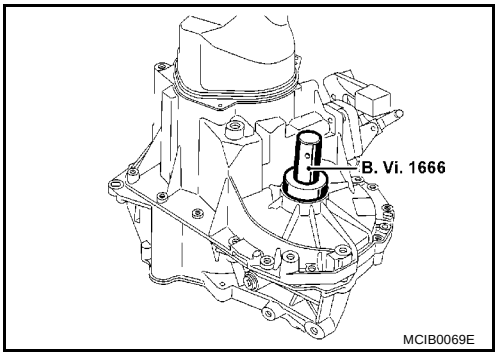
MCIB0024E

20. Fit a new O-ring, position the 5th gear cover and tighten the bolts to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].
21. Fit the back-up lamp switch (A) and tighten to a torque of [25 N·m (2.6 kg-m, 18 ft-lb)].



MCIB0068E

22. Refit the new differential output seals using B. Vi. 1666.



23. Refit the concentric slave cylinder and tighten the bolts.

Tightening torque : 21 N·m (2.1 kg-m, 15 ft-lb)

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EJS004G7

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for Working with HFC-134a (R-134a)

EJS002FU

WARNING:

- **Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor failure is likely to occur.**
- **The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:**
- **When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.**
- **When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.**
- **Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.**
- **Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system, using certified service equipment meeting requirements of SAE J2210 HFC-134a (R-134a) recycling equipment, or J2209 HFC-134a (R-134a) recovery equipment). If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.**
- **Do not allow lubricant (Nissan A/C System Oil Type S or R) to come in contact with styrofoam parts. Damage may result.**

General Refrigerant Precautions

EJS002FV

WARNING:

- **Do not release refrigerant into the air. Use approved recovery/recycling equipment to capture the refrigerant every time an air conditioning system is discharged.**
- **Always wear eye and hand protection (goggles and gloves) when working with any refrigerant or air conditioning system.**
- **Do not store or heat refrigerant containers above 52°C (125°F).**
- **Do not heat a refrigerant container with an open flame; if container warming is required, place the bottom of the container in a warm pail of water.**
- **Do not intentionally drop, puncture, or incinerate refrigerant containers.**
- **Keep refrigerant away from open flames: poisonous gas will be produced if refrigerant burns.**
- **Refrigerant will displace oxygen, therefore be certain to work in well ventilated areas to prevent suffocation.**
- **Do not pressure test or leak test HFC-134a (R-134a) service equipment and/or vehicle air conditioning systems with compressed air during repair. Some mixtures of air and HFC-134a (R-134a)**

have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.

Lubricant Precautions

EJS002FW

- Use only specified lubricant for the HFC-134a (R-134a) A/C system and HFC-134a (R-134a) components. If lubricant other than that specified is used, compressor malfunction is likely to occur.
- The specified HFC-134a (R-134a) lubricant rapidly absorbs moisture from the atmosphere. The following handling precautions must be observed:
- When removing refrigerant components from a vehicle, immediately cap (seal) the component to minimize the entry of moisture from the atmosphere.
- When installing refrigerant components to a vehicle, do not remove the caps (unseal) until just before connecting the components. Connect all refrigerant loop components as quickly as possible to minimize the entry of moisture into system.
- Only use the specified lubricant from a sealed container. Immediately reseal containers of lubricant. Without proper sealing, lubricant will become moisture saturated and should not be used.
- Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Remove HFC-134a (R-134a) from the A/C system, using certified service equipment meeting requirements of SAE J2210 HFC-134a (R-134a) recycling equipment, or J2209 HFC-134a (R-134a) recovery equipment. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.
- Do not allow lubricant (Nissan A/C System Oil Type R) to come in contact with styrofoam parts. Damage may result.

Precautions for Refrigerant Connection

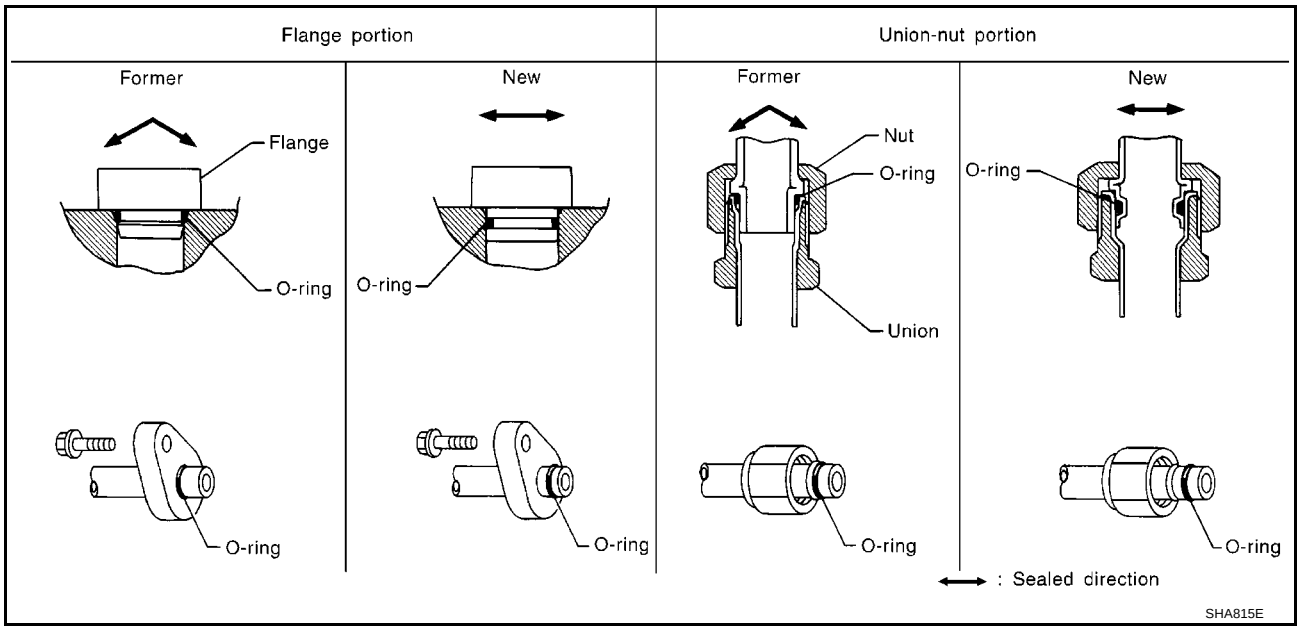
EJS002FX

A new type refrigerant connection has been introduced to all refrigerant lines except the following location.

- Expansion valve to cooling unit
- Refrigerant pressure sensor to liquid tank

FEATURES OF NEW TYPE REFRIGERANT CONNECTION

- The O-ring has been relocated. It has also been provided with a groove for proper installation. This eliminates the chance of the O-ring being caught in, or damaged by, the mating part. The sealing direction of the O-ring is now set vertically in relation to the contacting surface of the mating part to improve sealing characteristics.
- The reaction force of the O-ring will not occur in the direction that causes the joint to pull out, thereby facilitating piping connections.

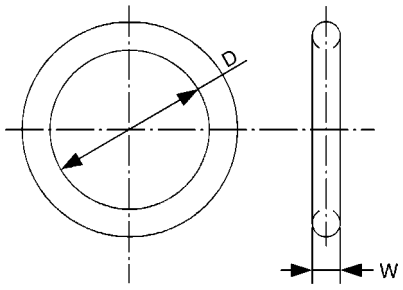


O-RING AND REFRIGERANT CONNECTION

CAUTION:

The new and former refrigerant connections use different O-ring configurations. Do not confuse O-rings since they are not interchangeable. If a wrong O-ring is installed, refrigerant will leak at, or around, the connection.

O-Ring Part Numbers and Specifications (CR Engine Models)



Connection type	O-ring size	Part number	D mm (in)	W mm (in)
New	8	92471 N8210	6.8 (0.268)	1.85 (0.0728)
Former		92470 N8200	6.07 (0.2390)	1.78 (0.0701)
Former	10	J2476 89956	9.25 (0.3642)	1.78 (0.0701)
New	12	92472 N8210	10.9 (0.429)	2.43 (0.0957)
Former		92475 71L00	11.0 (0.433)	2.4 (0.094)
New	16	92473 N8210	13.6 (0.535)	2.43 (0.0957)
Former		92475 72L00	14.3 (0.563)	2.3 (0.091)
New	19	92474 N8210	16.5 (0.650)	2.43 (0.0957)
Former		92477 N8200	17.12 (0.6740)	1.78 (0.0701)

O-Ring Part Numbers and Specifications (K9K Engine Models)

Connection type	Piping connection point		Part number	Qty.	Remarks
New	Low-pressure flexible hose to heater & cooling unit		77030 65314	2	Renault part
	High-pressure pipe to heater & cooling unit		77030 65318	2	Renault part
	Condenser to high-pressure flexible hose		77030 65316	2	Renault part
	Condenser to high-pressure pipe		77030 65318	2	Renault part
	Compressor to low-pressure flexible hose		77030 65315	2	Renault part
	Compressor to high-pressure flexible hose		77030 65316	2	Renault part
	Liquid tank to condenser pipe		—	—	—
Former	Refrigerant pressure sensor		—	—	—
	Expansion valve to evaporator	Inlet	—	—	—
		Outlet	—	—	—

WARNING:

Make sure all refrigerant is discharged into the recycling equipment and the pressure in the system is less than atmospheric pressure. Then gradually loosen the discharge side hose fitting and remove it.

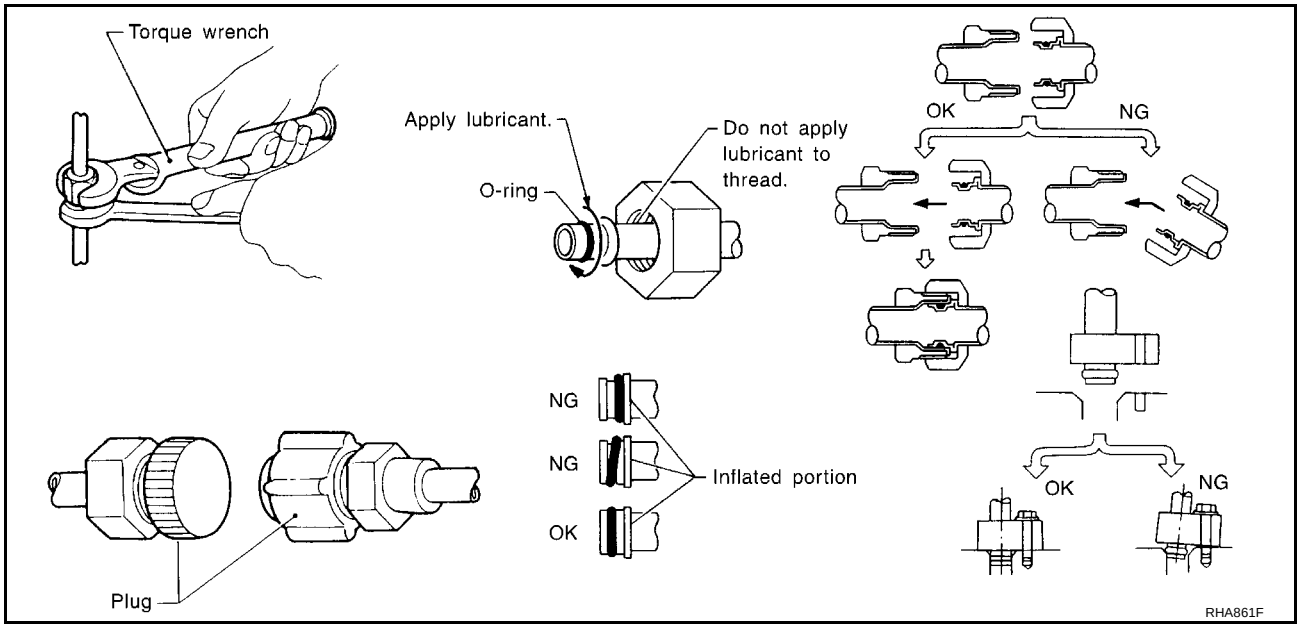
CAUTION:

When replacing or cleaning refrigerant cycle components, observe the following.

- **When the compressor is removed, store it in the same position as it is when mounted on the car. Malfunction to do so will cause lubricant to enter the low pressure chamber.**
- **When connecting tubes, always use a torque wrench and a back-up wrench.**
- **After disconnecting tubes, immediately plug all openings to prevent entry of dirt and moisture.**
- **When installing an air conditioner in the vehicle, connect the pipes as the final stage of the operation. Do not remove the seal caps of pipes and other components until just before required for connection.**
- **Allow components stored in cool areas to warm to working area temperature before removing seal caps. This prevents condensation from forming inside A/C components.**
- **Thoroughly remove moisture from the refrigeration system before charging the refrigerant.**
- **Always replace used O-rings.**
- **When connecting tube, apply lubricant to circle of the O-rings shown in illustration. Be careful not to apply lubricant to threaded portion.**

	KC59G Compressor
Lubricant name:	**Nissan A/C System Oil Type R**
Part number:	**KLH00-PAGR0**

- **O-ring must be closely attached to dented portion of tube.**
- **When replacing the O-ring, be careful not to damage O-ring and tube.**
- **Connect tube until you hear it click, then tighten the nut or bolt by hand until snug. Make sure that the O-ring is installed to tube correctly.**
- **After connecting line, conduct leak test and make sure that there is no leakage from connections. When the gas leaking point is found, disconnect that line and replace the O-ring. Then tighten connections of seal seat to the specified torque.**



Precautions for Servicing Compressor

EJS002FY

- **Plug all openings to prevent moisture and foreign matter from entering.**
- **When the compressor is removed, store it in the same position as it is when mounted on the car.**
- **When replacing or repairing compressor, follow “Maintenance of Lubricant Quantity in Compressor” exactly. Refer to MTC-15, "Adjustment of Compressor Lubricant Amount" .**
- **Keep friction surfaces between clutch and pulley clean. If the surface is contaminated, with lubricant, wipe it off by using a clean waste cloth moistened with thinner.**
- **After compressor service operation, turn the compressor shaft by hand more than five turns in both directions. This will equally distribute lubricant inside the compressor. After the compressor is installed, let the engine idle and operate the compressor for one hour.**
- **After replacing the compressor magnet clutch, apply voltage to the new one and check for normal operation.**

Precautions for Service Equipment

EJS002FZ

RECOVERY/RECYCLING EQUIPMENT

Be certain to follow the manufacturers instructions for machine operation and machine maintenance. Never introduce any refrigerant other than that specified into the machine.

ELECTRONIC LEAK DETECTOR

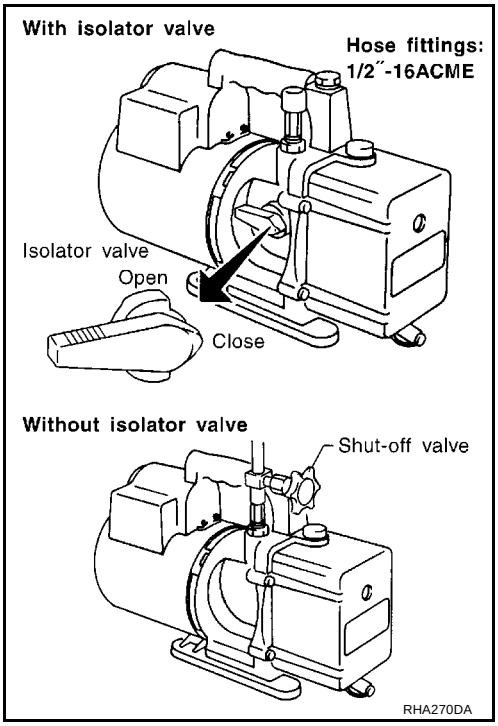
Be certain to follow the manufacturer's instructions for tester operation and tester maintenance.

VACUUM PUMP

The lubricant contained inside the vacuum pump is not compatible with the specified lubricant for HFC-134a (R-134a) A/C systems. The vent side of the vacuum pump is exposed to atmospheric pressure. So the vacuum pump lubricant may migrate out of the pump into the service hose. This is possible when the pump is switched off after evacuation (vacuuming) and hose is connected to it.
To prevent this migration, use a manual valve placed near the hose-to-pump connection, as follows.

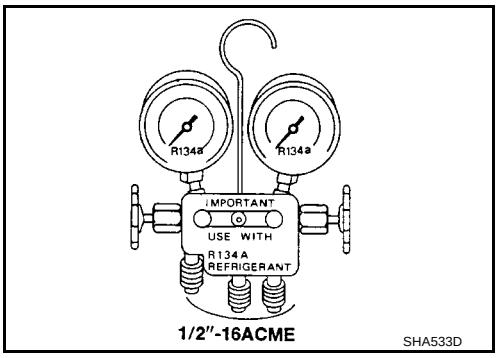
- Usually vacuum pumps have a manual isolator valve as part of the pump. Close this valve to isolate the service hose from the pump.
- For pumps without an isolator, use a hose equipped with a manual shut-off valve near the pump end. Close the valve to isolate the hose from the pump.
- If the hose has an automatic shut off valve, disconnect the hose from the pump. As long as the hose is connected, the valve is open and lubricating oil may migrate.

Some one-way valves open when vacuum is applied and close under a no vacuum condition. Such valves may restrict the pump's ability to pull a deep vacuum and are not recommended.



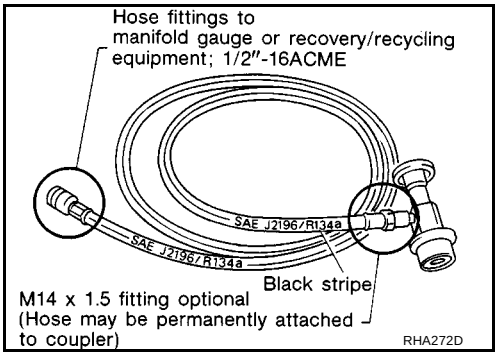
MANIFOLD GAUGE SET

Be certain that the gauge face indicates HFC-134a (R-134a) or 134a. Be sure the gauge set has 1/2″-16 ACME threaded connections for service hoses. Confirm the set has been used only with refrigerant HFC-134a (R-134a) and specified lubricants.



SERVICE HOSES

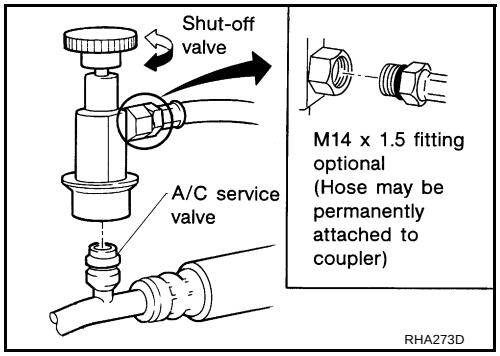
Be certain that the service hoses display the markings described (colored hose with black stripe). All hoses must include positive shut off devices (either manual or automatic) near the end of the hoses opposite the manifold gauge.



SERVICE COUPLERS

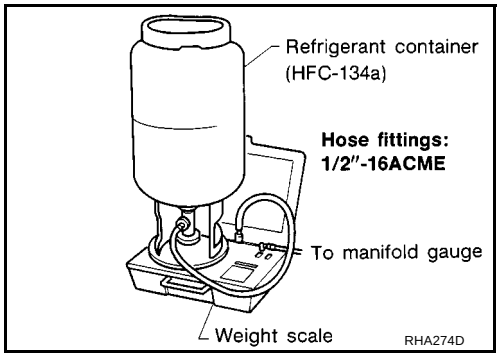
Never attempt to connect HFC-134a (R-134a) service couplers to an CFC-12 (R-12) A/C system. The HFC-134a (R-134a) couplers will not properly connect to the CFC-12 (R-12) system. However, if an improper connection is attempted, discharging and contamination may occur.

Shut-off valve rotation	A/C service valve
Clockwise	Open
Counterclockwise	Close



REFRIGERANT WEIGHT SCALE

Verify that no refrigerant other than HFC-134a (R-134a) and specified lubricants have been used with the scale. If the scale controls refrigerant flow electronically, the hose fitting must be 1/2″-16 ACME.



CALIBRATING ACR4 WEIGHT SCALE

Calibrate the scale every three months.
To calibrate the weight scale on the ACR4:

1. Press **Shift/Reset** and **Enter** at the same time.
2. Press **8787** . "**A1** " will be displayed.
3. Remove all weight from the scale.
4. Press **0** , then press **Enter** . "**0.00** " will be displayed and change to "**A2** ".
5. Place a known weight (dumbbell or similar weight), between 4.5 and 8.6 kg (10 and 19 lb) on the center of the weight scale.
6. Enter the known weight using four digits. (Example 10 lb = 10.00, 10.5 lb = 10.50)
7. Press **Enter** — the display returns to the vacuum mode.
8. Press **Shift/Reset** and **Enter** at the same time.
9. Press **6** — the known weight on the scale is displayed.
10. Remove the known weight from the scale. "**0.00** " will be displayed.
11. Press **Shift/Reset** to return the ACR4 to the program mode.

CHARGING CYLINDER

Using a charging cylinder is not recommended. Refrigerant may be vented into air from cylinder's top valve when filling the cylinder with refrigerant. Also, the accuracy of the cylinder is generally less than that of an electronic scale or of quality recycle/recharge equipment.

Precautions for Leak Detection Dye

EJS002G0

- The A/C system contains a fluorescent leak detection dye used for locating refrigerant leaks. An ultraviolet (UV) lamp is required to illuminate the dye when inspecting for leaks.
- Always wear fluorescence enhancing UV safety goggles to protect your eyes and enhance the visibility of the fluorescent dye.
- The fluorescent dye leak detector is not a replacement for an electronic refrigerant leak detector. The fluorescent dye leak detector should be used in conjunction with an electronic refrigerant leak detector to (J-41995) pin-point refrigerant leaks.
- For your safety and your Customer's satisfaction, read and follow all manufacture's operating instructions and precautions prior to performing the work.
- A compressor shaft seal should not be repaired because of dye seepage. The compressor shaft seal should only be repaired after confirming the leak with an electronic refrigerant leak detector (J-41995).
- Always remove any remaining dye from the leak area after repairs are complete to avoid a misdiagnosis during a future service.
- Do not allow dye to come into contact with painted body panels or interior components. If dye is spilled, clean immediately with the approved dye cleaner. Fluorescent dye left on a surface for an extended period of time cannot be removed.
- Do not spray the fluorescent dye cleaning agent on hot surfaces (engine exhaust manifold, etc.).
- Do not use more than one refrigerant dye bottle (1/4 ounce / 7.4 CC) per A/C system.
- Leak detection dyes for HFC-134a (R-134a) and CFC-12 (R-12) A/C systems are different. Do not use HFC-134a (R-134a) leak detection dye in CFC-12 (R-12) A/C system or CFC-12 (R-12) leak detector dye in HFC-134a (R-134a) A/C systems or A/C system damage may result.
- The fluorescent properties of the dye will remain for over three (3) years unless a compressor malfunction occurs.

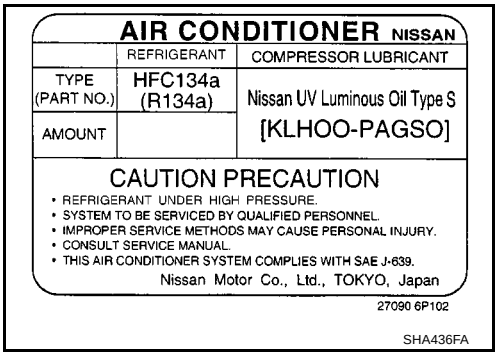
IDENTIFICATION

NOTE:

Vehicles with factory installed fluorescent dye have a green label.
Vehicles without factory installed fluorescent dye have a blue label.

IDENTIFICATION LABEL FOR VEHICLE

Vehicles with factory installed fluorescent dye have this identification label on the front side of hood.



Wiring Diagram and Trouble Diagnosis

EJS002G1

When you read wiring diagrams, refer to the followings:

- GI-14, "How to Read Wiring Diagrams".
- PG-4, "POWER SUPPLY ROUTING".

When you perform trouble diagnosis, refer to the followings:

- GI-10, "How to Follow Trouble Diagnoses".
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident".

PREPARATION

PFP:00002

Special Service Tools

EJS002G9

Tool number Tool name	Description	
KV99231260 Clutch disc wrench	 RJIA0475E	Removing shaft nut and clutch disc
KV992T0001 Clutch disc puller	 RJIA0476E	Removing clutch disc

KV99233130 Pulley puller	 RJIA0478E	Removing pulley

HFC-134a (R-134a) Service Tools and Equipment

EJS002GA

Never mix HFC-134a (R-134a) refrigerant and/or its specified lubricant with CFC-12 (R-12) refrigerant and/or its lubricant.

Separate and non-interchangeable service equipment must be used for handling each type of refrigerant/lubricant.

Refrigerant container fittings, service hose fittings and service equipment fittings (equipment which handles refrigerant and/or lubricant) are different between CFC-12 (R-12) and HFC-134a (R-134a). This is to avoid mixed use of the refrigerants/lubricant.

Adapters that convert one size fitting to another must never be used: refrigerant/lubricant contamination will occur and compressor malfunction will result.

Tool number Tool name	Description	
HFC-134a (R-134a) refrigerant	 S-NT196	Container color: Light blue Container marking: HFC-134a (R-134a) Fitting size: Thread size ● large container 1/2″ -16 ACME
KLH00-PAGR0 Nissan A/C System Oil Type R	 S-NT197	Type: Poly alkaline glycol oil (PAG), type R Application: HFC-134a (R-134a) vane rotary compressors (Nissan only) Lubricity: 40 m ℓ (1.4 Imp fl oz.)
Recovery/Recycling Recharging equipment (ACR4)	 RJIA0195E	Function: Refrigerant Recovery and Recycling and Recharging
Electrical leak detector	 A/C leak detector SHA705EB	Power supply: ● DC 12V (Power socket)
(J-43926) Refrigerant dye leak detection kit Kit includes: (J-42220) UV lamp and UV safety goggles (J-41459) HFC-134a (R-134a) Dye injector Use with J-41447, 1/4 ounce bottle (J-41447) HFC-134a (R-134a) Fluorescent leak detection dye (Box of 24, 1/4 ounce bottles) (J-43872) Refrigerant dye cleaner	 ZHA200H	Power supply: DC 12V (Battery terminal)

Tool number Tool name	Description	
(J-42220) UV lamp and UV safety goggles	 SHA438F	Power supply: DC 12V (Battery terminal) For checking refrigerant leak when fluorescent dye is installed in A/C system. Includes: UV lamp and UV safety goggles
(J-41447) HFC-134a (R-134a) Fluorescent leak detection dye (Box of 24, 1/4 ounce bottles)	 Refrigerant dye (24 bottles) SHA439F	Application: For HFC-134a (R-134a) PAG oil Container: 1/4 ounce (7.4cc) bottle (Includes self-adhesive dye identification labels for affixing to vehicle after charging system with dye.)
(J-41459) HFC-134a (R-134a) Dye injector Use with J-41447, 1/4 ounce bottle	 SHA440F	For injecting 1/4 ounce of fluorescent leak detection dye into A/C system.
(J-43872) Refrigerant dye cleaner	 SHA441F	For cleaning dye spills.
Manifold gauge set (with hoses and couplers)	 RJIA0196E	Identification: ● The gauge face indicates HFC-134a (R-134a). Fitting size: Thread size ● 1/2″ -16 ACME
Service hoses ● High side hose ● Low side hose ● Utility hose	 S-NT201	Hose color: ● Low hose: Blue with black stripe ● High hose: Red with black stripe ● Utility hose: Yellow with black stripe or green with black stripe Hose fitting to gauge: ● 1/2″ -16 ACME

Tool number Tool name	Description	
Service couplers ● High side coupler ● Low side coupler	 S-NT202	Hose fitting to service hose: ● M14 x 1.5 fitting is optional or permanently attached.
Refrigerant weight scale	 S-NT200	For measuring of refrigerant Fitting size: Thread size ● 1/2″ -16 ACME
Vacuum pump (Including the isolator valve)	 S-NT203	Capacity: ● Air displacement:4 CFM ● Micron rating:20 microns ● Oil capacity:482 g (17 oz.) Fitting size: Thread size ● 1/2″ -16 ACME

REFRIGERATION SYSTEM

PFP:KA990

Refrigerant Cycle

EJS002GB

REFRIGERANT FLOW

Refrigerant basically circulates through compressor, condenser, liquid tank and evaporator and returns to compressor. Vaporization of refrigerant is controlled by expansion valve.

Refrigerant System Protection

EJS002GC

REFRIGERANT PRESSURE SENSOR

- Refrigerant system is protected from significant high-pressure or low-pressure by refrigerant pressure sensor attached to condenser.
- If unexpected pressures are detected in the cooler system (approx. 2.74 MPa (approx. 27.9 kg/cm^2) or more or 0.14 MPa (approx. 1.4 kg/cm^2) or less, the compressor is stopped by the refrigerant pressure sensor.)

Note: Values in the ( ) indicate gauge pressure.

LUBRICANT

PFP:KLG00

Adjustment of Compressor Lubricant Amount

EJS002GD

Compressor lubricant circulates through the system with refrigerant. When cooler system component is replaced or after the large refrigerant leak, lubricant needs to be added to compressor. Also it is important to maintain lubricant level properly. If lubricant level is not proper, following might happen.

- Insufficient lubricant: Compressor adherence
- Lubricant overfill: Insufficient cooling (insufficient heat exchange)

LUBRICANT

	KC59G Compressor
Lubricant name:	**Nissan A/C System Oil Type R**
Part number:	**KLH00-PAGR0**

PROCEDURES FOR LUBRICANT RETURN OPERATION

Follow the steps bellow to adjust the lubricant level.

1. CHECK A/C SYSTEM

1. Make sure A/C system operates normally.
2. Make sure a large amount of refrigerant or lubricant does not leak.

OK or NG

OK >> GO TO 2.
NG >> GO TO 3.

2. LUBRICANT RETURN OPERATION

1. Start the engine. Put it in the following state.
- Engine speed: Idling - 1,200 rpm
- A/C switch: ON
- Fan speed: HI
- Air intake: Recirculation
- Set temperature: FULL HOT
2. Keep running for approximately 10 minutes.
3. Stop the engine.

CAUTION:
When a large leak of refrigerant or lubricant is found, do not perform lubricant return operation.

>> GO TO 3.

3. CHECK COMPRESSOR

Is compressor replaced?

YES >> GO TO MTC-16, "LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPRESSOR" .
NO >> GO TO 4.

4. CHECK OTHER COMPONENTS

Is any other component to be replaced? (evaporator, condenser, liquid tank, large refrigerant or lubricant)

YES >> GO TO MTC-16, "LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPONENTS OTHER THAN COMPRESSOR" .
NO >> GO TO MTC-37, "CHECK FUNCTION (FOR CR ENGINE)" .

LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPONENTS OTHER THAN COMPRESSOR

Add compressor lubricant from the high-pressure port of the compressor according to the table below. α indicates lubricant amount that spouts with refrigerant when refrigerant is discharged.

Components to be replaced	Lubricant amount to be added
Evaporator	35+α cm^3
Condenser	15+α cm^3
Liquid tank	5+α cm^3

CAUTION:

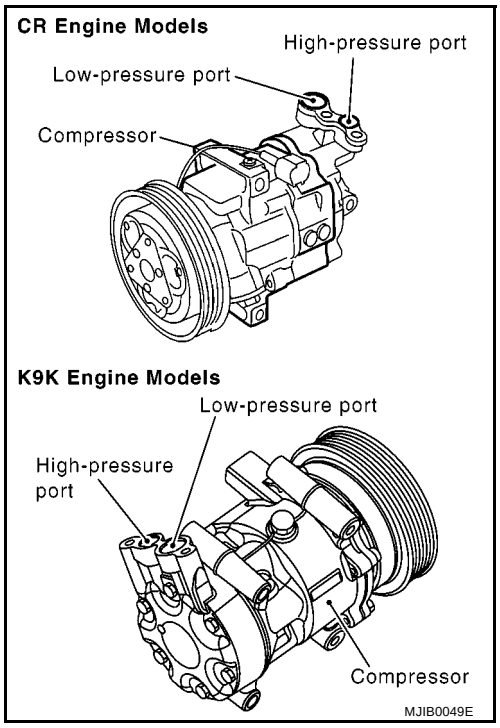
When replacing 2 or more parts, do not sum up α.

Ex. Lublicant amount to be added to evaporator and liquid tank (cm^3) = 35 + 5 + α

LUBRICANT LEVEL ADJUSTMENT WHEN REPLACING COMPRESSOR

1. Drain the compressor lubricant from the removed compressor's high and low-pressure ports and measure the amount of lubricant.
2. Drain the compressor lubricant from a new compressor according to the formula below. α indicates lubricant amount that spouts with refrigerant when refrigerant is discharged.

   Lubricant amount drained from new compressor^3)
   = Lubricant amount contained in the new compressor (80) - Lubricant amount discharged from the removed compressor - Lubricant amount that adheres to inside of compressor (20) - α
   = 60 - Lubricant amount discharged from the removed compressor - α
3. When adding lubricant, add the appropriate amount of compressor lubricant from the compressor's high-pressure port.



TROUBLE DIAGNOSIS

PFP:00004

CONSULT-II Functions

EJS002FE

CONSULT-II has display functions for work support, self-diagnosis, data monitor, and active tests for each part by combining data reception and command transmission via communication lines from the BCM.

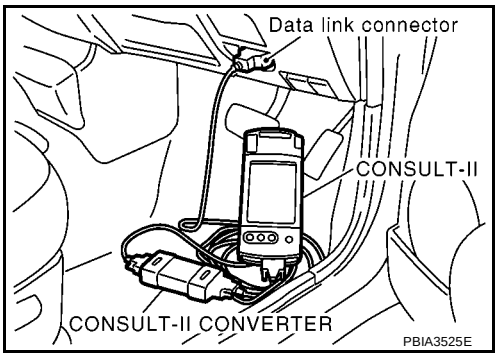
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Air conditioner	Data monitor	Displays BCM input data in real time.

CONSULT-II BASIC OPERATION

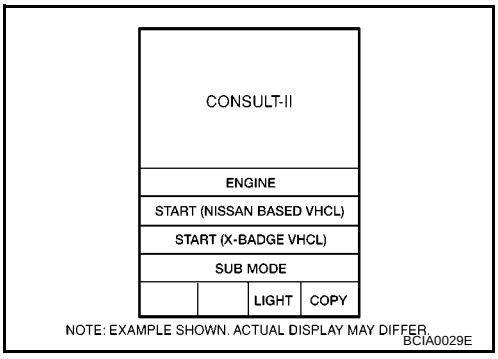
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

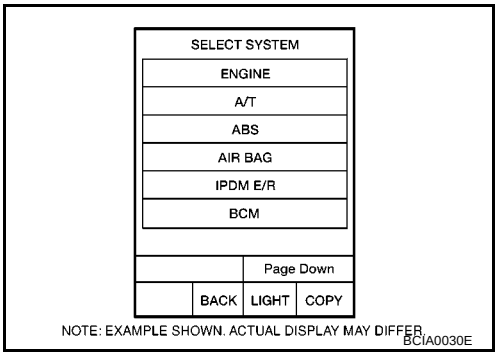
1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.
3. Turn ignition switch ON.



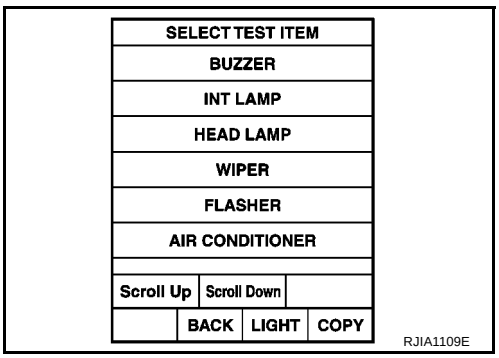
4. Touch “START (NISSAN BASED VHCL)”.



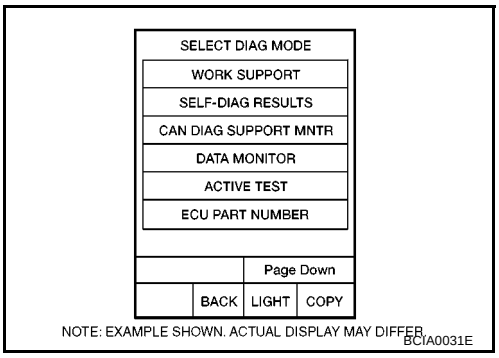
5. Touch “BCM” on the “SELECT SYSTEM” screen.
   - If “BCM” is not displayed, print the “SELECT SYSTEM” screen, and then refer to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “AIR CONDITIONER” on the “SELECT TEST ITEM” screen.



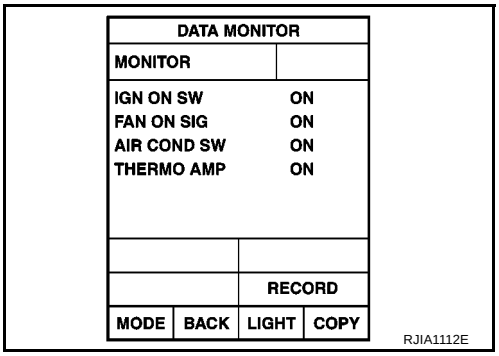
7. Touch “DATA MONITOR” on the “SELET DIAG MODE” screen. For details, refer to separate volume “CONSULT-II Operation Manual”.



DATA MONITOR

Operation Procedure

1. Touch “AIR CONDITIONER” on the “SELECT TEST ITEM” screen.
2. Touch “DATA MONITOR” on the “SELET DIAG MODE” screen. For details, refer to separate volume “CONSULT-II Operation Manual”.
3. Touch “All SIGNALS” on the “DATA MONITOR” screen.
4. Touch “START”.
5. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.



Monitored Item

Monitor item “UNIT”		Contents
FAN ON SIG	[ON/OFF]	Displays status “Blower fan on (ON)/blower fan off (OFF)” as judged by the BCM from the input from fan switch.
AIR COND SW	[ON/OFF]	Displays status “Compressor on (ON)/compressor off (OFF)” as judged by the BCM from the input from the controller.
THERMO AMP	[ON/OFF]	Displays status “Thermal control amplifier on (ON)/thermal amplifier off (OFF)” judged by the BCM from the input from thermal control amplifier.
IGN ON SW	[ON/OFF]	Displays status “IGN position (ON)/OFF, ACC position (OFF)” as judged from the key switch signal.

Diagnosis Procedure

EJS002FF

DIAGNOSIS CHART BY SYMPTOM

Symptom		Operation inspection	Suspect systems	Possible causes
No air comes out. Airflow volume does not change.		Check blower fan motor operation.	Blower fan motor harness	Refer to MTC-29, "Blower Fan Motor System" .
Inaccurate temperature control	Common items (Check these items for either of two malfunctions listed below.)	Operate temperature control dial. Confirm that air mix door moves through full stroke.	Air mix door harness	● Improper air mix door lever installation ● Air mix door system malfunction (damage, locking, etc.) ● Air mix door cable inoperative ● Refer to MTC-55, "Air Mix Door Cable Adjustment" .
	No cold air comes out. (Normal airflow amount)	With the fan setting dial and A/C switch ON, check operation of the magnetic clutch.	Magnetic clutch harness	Refer to MTC-31, "Magnetic Clutch System" .
		● Check refrigerant level. ● Performance check	Cooler system	● Refer to MTC-37, "CHECK FUNCTION (FOR CR ENGINE)" in “Cooling malfunction”. ● Refer to MTC-39, "DIAGNOSIS BY PRESSURE GAUGE" in “Cooling malfunction”.
	No warm air comes out. (Airflow volume is normal.)	After warming up engine, heater core inlet and outlet sides of the heater hose do not become warm.	Coolant route	● Poor engine coolant ● Blockage of heater hose or heater core
Unable to switch air outlets to others.		Operate the mode dial to confirm that the mode door moves through the full stroke.	Mode door harness	● Improper installation of mode door lever ● Mode door system malfunction (damage, locking, etc.) ● Mode door cable inoperative ● Refer to MTC-54, "Mode Door Cable Adjustment" .
Unable to switch intake inlets to others.		Operate the intake switch lever and make sure the intake door moves through a full stroke.	Intake door harness	● Improper installation of intake door lever ● Intake door system malfunction (damage, locking, etc.) ● Intake door cable inoperative ● Refer to MTC-53, "Intake Door Cable Adjustment" .

Function Inspection

EJS0057G

1. CHECK FAN SPEED

Operate the fan setting dial to make sure the fan speed changes. Confirm operation for all fan speeds.

OK or NG

OK >> Switch fan speed to “4” and GO TO 2.
NG >> Refer to MTC-29, "Blower Fan Motor System" , MTC-31, "Magnetic Clutch System" .

2. CHECK A/C SWITCH

1. Push A/C switch.
2. Check visually that indicator lamp turns on. Check by sound that compressor is operating.

OK or NG

OK >> GO TO 3.
NG >> Magnetic clutch system malfunction: Refer to MTC-31, "Magnetic Clutch System" .

3. CHECK AIR OUTLET

Operate the mode dial to make sure the air outlet changes.

OK or NG

OK >> GO TO 4.
NG >> Mode door system malfunction: Refer to MTC-54, "Mode Door Cable Adjustment" .

4. CHECK AIR INLET

Operate intake air control lever and listen to intake sound to confirm that inlet switches.

OK or NG

OK >> GO TO 5.
NG >> Intake door system malfunction: Refer to MTC-53, "Intake Door Cable Adjustment" .

5. CHECK WITH TEMPERATURE SETTING LOWERED

1. Turn compressor ON.
2. Set temperature control dial to “FULL COLD”.
3. Confirm cool air blows from outlets.

OK or NG

OK >> GO TO 6.
NG >> Air mix door system malfunction: Refer to MTC-55, "Air Mix Door Cable Adjustment" .

6. CHECK WITH TEMPERATURE SETTING RAISED

1. Warm up the engine.
2. Set temperature control dial to “FULL HOT”.
3. Confirm warm air blows from outlets.

OK or NG

OK >> If all function checks are normal (no phenomena reoccurrence), refer to MTC-19, "DIAGNOSIS CHART BY SYMPTOM" and perform appropriate diagnosis.
NG >> Air mix door system malfunction: Refer to MTC-55, "Air Mix Door Cable Adjustment" .

Blower Fan Motor System
INSPECTION PROCEDURE

SMA for VIN >SJN**AK12U1309269

EJS0057H

Symptom: Blower fan motor does not operate.

1. START INSPECTION

Check blower fan motor operation at each fan speed.

1 : Blower fan motor does not operate at all.

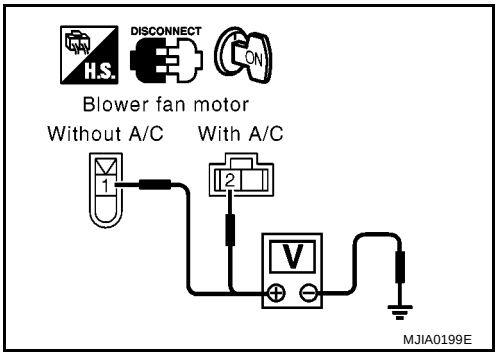
2 : Blower fan motor does not operate at one of speeds 1 - 4.

Do inspection results indicate 1 or 2 above?

1 >> GO TO 2.
2 >> GO TO 6.

2. CHECK POWER SUPPLY CIRCUIT

Disconnect blower fan motor connector, turn ignition switch ON, and check voltage between blower fan motor connector terminal and ground.



Connector terminal		Voltage
Blower fan motor	Ground	Battery voltage
1 (Without air conditioner)		
2 (With air conditioner)		

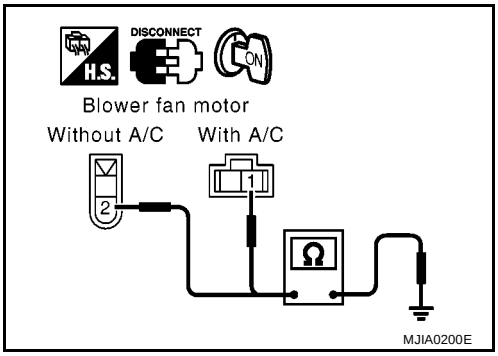
OK or NG

OK >> GO TO 3.
NG >> Check power supply circuit and 15A fuses [Nos. 9 and 10, located in the fuse block (J/B)]. Refer to PG-4, "POWER SUPPLY ROUTING" .

- If OK, check for open circuit in wiring harness. Repair or replace as necessary.
- If NG, replace fuse and check wiring harness for short circuit. Repair or replace as necessary.

3. CHECK CIRCUIT CONTINUITY

1. Turn the fan setting dial (fan switch) to any position except OFF.
2. Check continuity between blower fan motor connector terminal and ground.



Connector terminal		Continuity
Blower fan motor	Ground	Yes
2 (Without air conditioner)		
1 (With air conditioner)		

Does continuity exist?

YES >> GO TO 4.
NO >> GO TO 5.

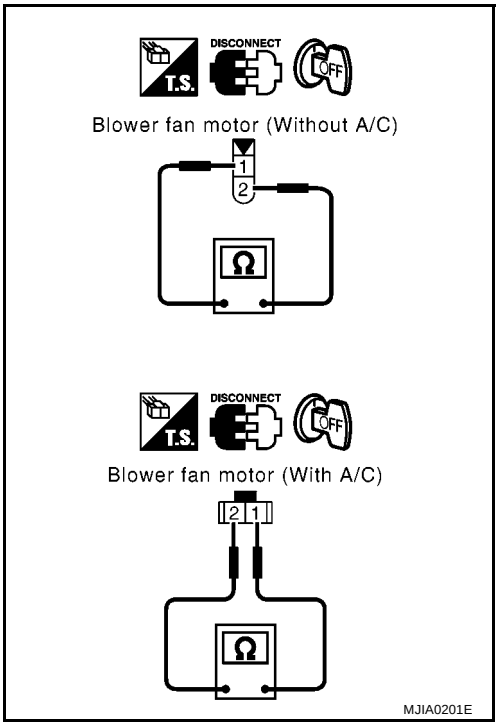
4. CHECK BLOWER FAN MOTOR

Disconnect the blower fan motor connector, and check continuity between blower fan motor terminals 1 and 2.

Connector terminal		Continuity
Blower fan motor		
1	2	Yes

Does continuity exist?

YES >> End of trouble diagnosis
NO >> Replace the blower fan motor.



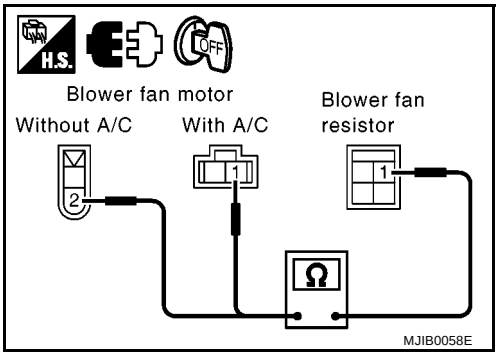
5. CHECK CIRCUIT CONTINUITY

Check continuity between blower fan motor connector terminal and blower fan resistor terminal 1.

Connector terminal		Continuity
Blower fan motor	Blower fan Resistor	
2 (Without air conditioner)	1	Yes
1 (With air conditioner)		

Does continuity exist?

YES >> GO TO 6.
NO >> Repair harness or connector.



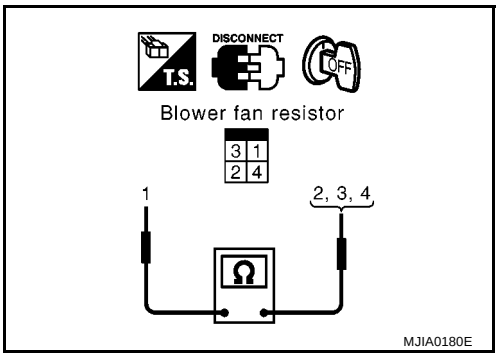
6. CHECK BLOWER FAN RESISTOR

Disconnect blower fan resistor connector, and check continuity between blower fan resistor terminals 1 and 2, 3, 4.

Connector terminal		Continuity
Blower fan resistor		
1	2	Approx. 0.32Ω
	3	Approx. 1.4Ω
	4	Approx. 2.7Ω

Does continuity exist?

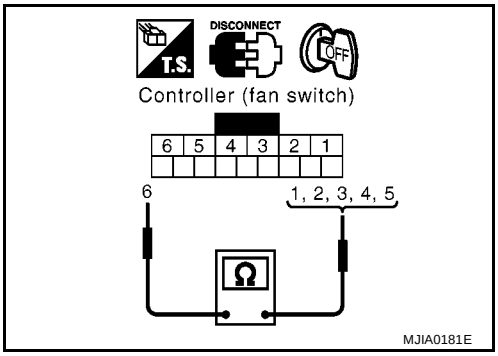
YES >> GO TO 7.
NO >> Replace blower fan resistor.



7. CHECK FAN SWITCH

Disconnect controller connector, and check continuity between controller terminals 1 and 2, 3, 4, 5, 6.

Connector terminal		Condition	Continuity
Controller			
6	1	Fan: OFF	Yes
	5	Fan: Speed 4	
	4	Fan: Speed 3	
	3	Fan: Speed 2	
	2	Fan: Speed 1	



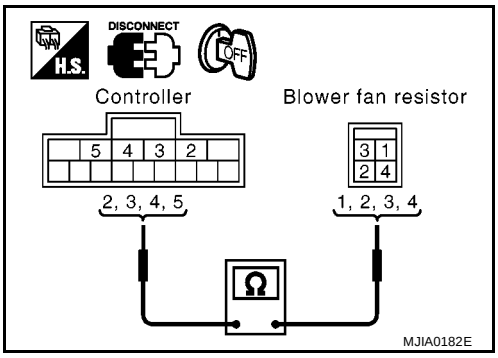
OK or NG

OK >> GO TO 8.
NG >> Replace controller.

8. CHECK CIRCUIT CONTINUITY

Check continuity between the controller and the blower fan resistor terminals.

Connector terminal		Continuity
Controller	Blower fan Resistor	
5	1	Yes
4	2	
3	3	
2	4	



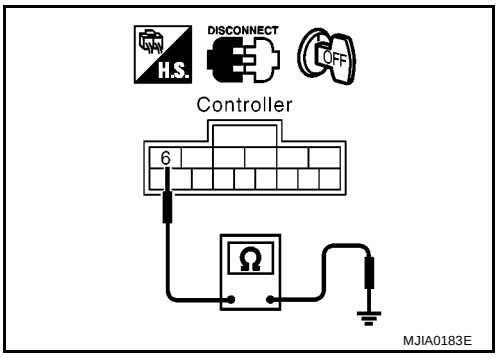
Does continuity exist?

YES >> GO TO 9.
NO >> Repair harness or connector.

9. CHECK FAN SWITCH GROUND CIRCUIT

Check continuity between controller terminal 6 and ground.

Connector terminal		Continuity
Controller	Ground	Yes
6		



Does continuity exist?

YES >> End of trouble diagnosis
NO >> Repair harness or connector.

Magnetic Clutch System

EJS0057I

INSPECTION PROCEDURE

Symptom: When A/C switch and fan switch are turned ON, magnetic clutch does not operate.

1. CHECK WITH AUTO ACTIVE TEST MODE

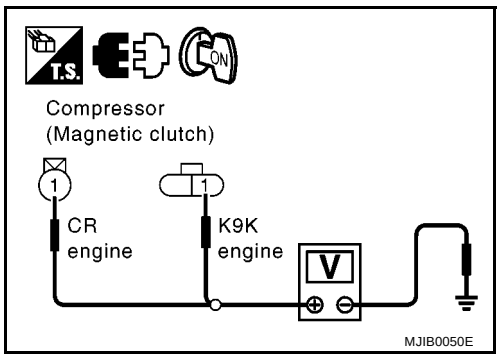
Perform auto active test to make sure magnetic clutch operates. Refer to PG-42, "Auto Active Test" .

OK or NG

OK >> GO TO 7.
NG >> GO TO 2.

2. CHECK MAGNETIC CLUTCH VOLTAGE

Disconnect compressor connector, turn ignition switch ON, and check voltage between compressor terminal 1 and ground.



Connector terminal		Voltage
Compressor	Ground	Battery voltage
1		

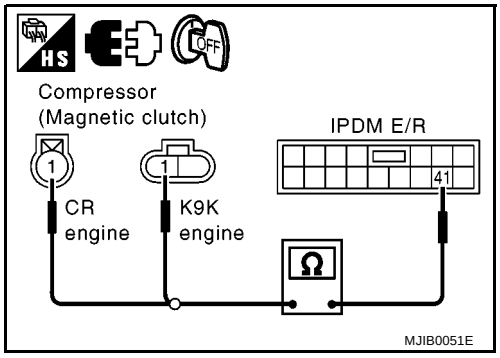
OK or NG

OK >> ● GO TO 4. (CR engine models)
● GO TO 5. (K9K engine models)

NG >> After Checking the Fuse (#41), GO TO 3. For the Fuse Block Layout, Refer to PG-4, "POWER SUPPLY ROUTING" .
● If fuse is OK, check for open circuit in harness.
● If a fuse is NG, determine the possible cause, repair circuit and replace blown fuse.

3. CHECK CIRCUIT CONTINUITY

Disconnect the IPDM E/R connector, and check continuity between compressor terminal 1 and IPDM E/R terminal 41.



Connector terminal		Continuity
Compressor	IPDM E/R	Yes
1	41	

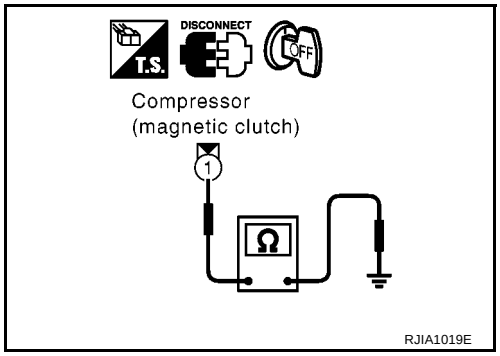
Does continuity exist?

YES >> ● GO TO 4. (CR engine models)
● GO TO 6. (K9K engine models)

NO >> Repair harness or connector.

4. CHECK MAGNETIC CLUTCH

Check continuity between compressor terminal 1 and ground.



Connector terminal		Continuity
Compressor	Ground	Yes
1		

Does continuity exist?

YES >> Apply battery voltage to magnetic clutch directly and check operation sound.
1. If inspection results are NG, replace magnetic clutch.
2. If magnetic clutch is normal, replace IPDM E/R.

NO >> Replace magnetic clutch.

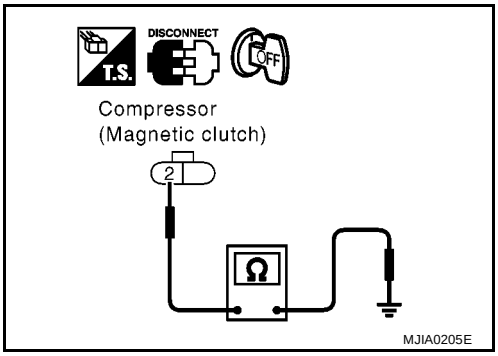
5. CHECK GROUND CIRCUIT

Check continuity between compressor terminal 2 and ground.

Connector terminal		Continuity
Compressor	Ground	Yes
2		

Does continuity exist?

YES >> GO TO 6.
NO >> Repair harness or connector.



6. CHECK MAGNETIC CLUTCH

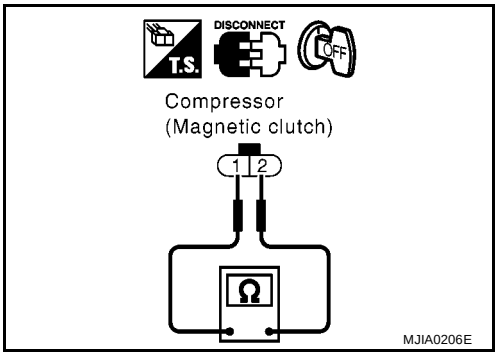
Check continuity between compressor terminals 1 and 2.

Connector terminal		Continuity
Compressor		Yes
1	2	

Does continuity exist?

YES >> Apply battery voltage to magnetic clutch directly and check operation sound.
1. If inspection results are NG, replace magnetic clutch.
2. If magnetic clutch is normal, replace IPDM E/R.

NO >> Replace magnetic clutch.



7. CHECK REFRIGERANT PRESSURE SENSOR

Check refrigerant pressure sensor. Refer to MTC-14, "REFRIGERANT PRESSURE SENSOR" .

OK or NG

OK >> Connect compressor and IPDM E/R connectors, then GO TO 8.
NG >> Repair or replace parts according to the inspection results.

8. CHECK BCM INPUT SIGNAL

With CONSULT-II

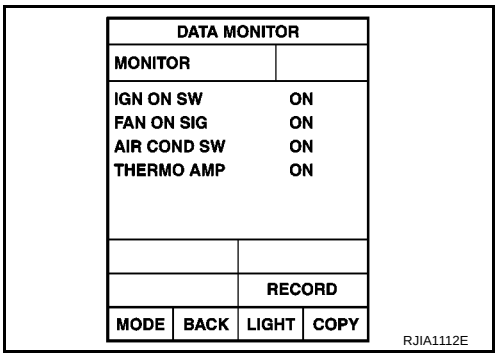
- Check if the compressor ON-OFF, fan ON-OFF and thermal amplifier ON-OFF using the BCM can “air conditioner” data monitor Refer to MTC-17, "CONSULT-II Functions" .

Without CONSULT-II

- GO TO 9.

OK or NG

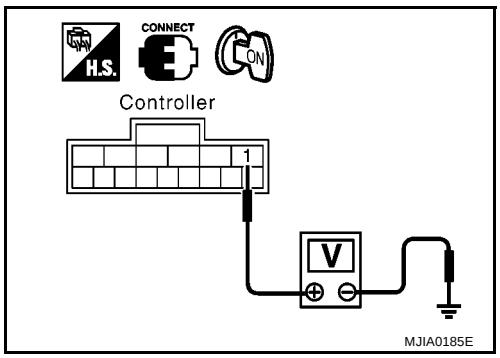
OK >> GO TO 21.
NG >>
- Blower fan switch malfunction: GO TO 9.
- A/C switch malfunction: GO TO 13.
- Thermal amplifier malfunction: GO TO 17.



9. CHECK FAN ON SIGNAL

Check voltage between controller terminal 1 and ground.

Connector terminal		Condition	Voltage
Controller	Ground	Fan: ON	Approx. 12V
1		Fan: OFF	Approx. 1V



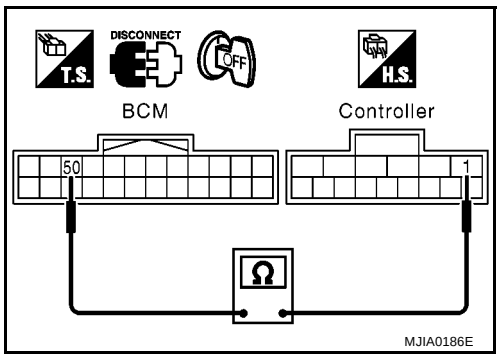
OK or NG

OK >> GO TO 13.
NG >> GO TO 10.

10. CHECK CIRCUIT CONTINUITY

Disconnect controller and BCM connectors, and check continuity between BCM terminal 50 and controller terminal 1.

Connector terminal		Continuity
BCM	Controller	
50	1	Yes



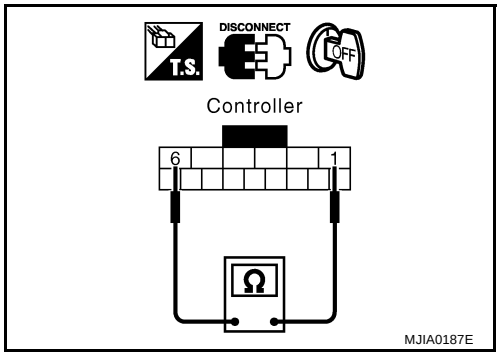
Does continuity exist?

YES >> GO TO 11.
NO >> Repair harness or connector.

11. CHECK FAN SWITCH

Check continuity between controller terminals 1 and 6.

Connector terminal		Condition	Continuity
Controller			
1	6	Fan: OFF	Yes



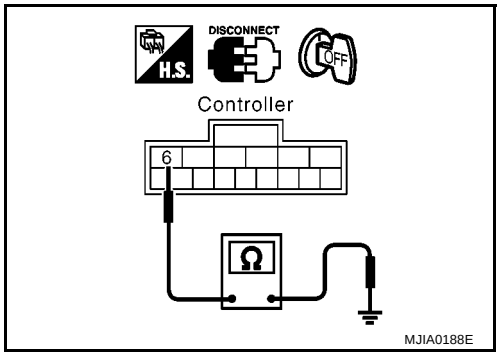
Does continuity exist?

YES >> GO TO 12.
NO >> Replace controller.

12. CHECK GROUND CIRCUIT

Check continuity between controller terminal 6 and ground.

Connector terminal		Continuity
Controller	Ground	Yes
6		



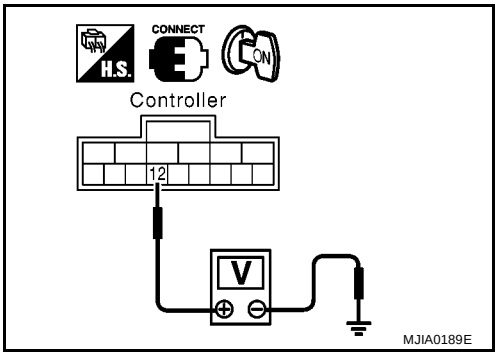
Does continuity exist?

YES >> Connect controller connector, and GO TO 13.
NO >> Repair harness or connector.

13. CHECK AIR CONDITIONER SIGNAL

Check voltage between controller terminal 12 and ground.

Connector terminal		Voltage
Controller	Ground	Battery voltage
12		



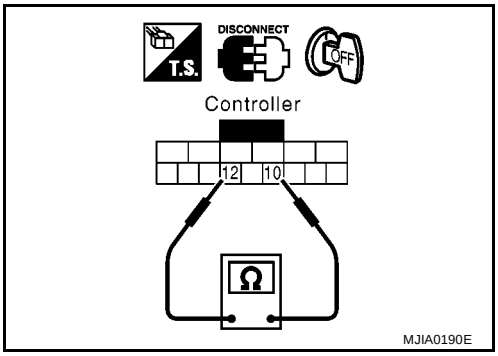
OK or NG

OK >> GO TO 14.
NG >> GO TO 16.

14. CHECK A/C SWITCH

Check continuity between controller terminals 10 and 12.

Connector terminal		Condition	Continuity
Controller			
10	12	A/C switch: Only during operation	Yes



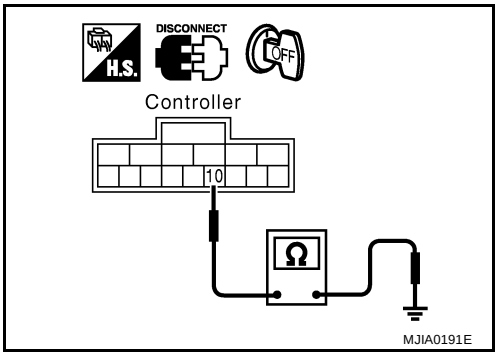
OK or NG

OK >> GO TO 15.
NG >> Replace controller.

15. CHECK GROUND CIRCUIT

Check continuity between controller terminal 10 and ground.

Connector terminal		Continuity
Controller	Ground	Yes
10		



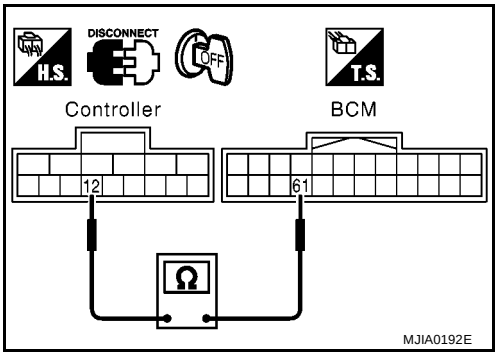
Does continuity exist?

YES >> GO TO 17.
NO >> Repair harness or connector.

16. CHECK CIRCUIT CONTINUITY

Disconnect BCM connector and check continuity between controller terminal 12 and BCM terminal 61.

Connector terminal		Continuity
Controller	BCM	Yes
12	61	

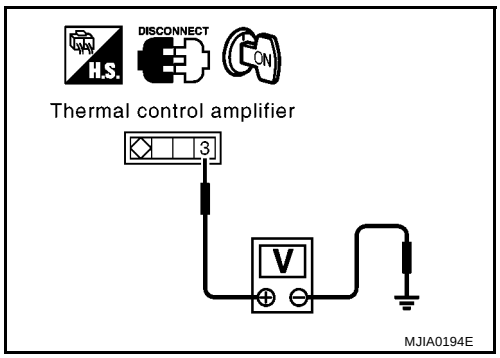


Does continuity exist?

YES >> Replace BCM.
NO >> Repair harness or connector.

17. CHECK 1: THERMAL CONTROL AMPLIFIER POWER SUPPLY CIRCUIT

Disconnect thermal control amplifier connector, turn ignition switch ON, and check voltage between thermal control amplifier terminal 3 and ground.



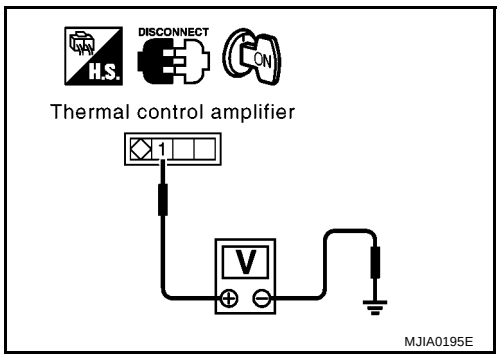
Connector terminal		Voltage
Thermal control amplifier	Ground	Approx. 12V
3		

OK or NG

OK >> GO TO 18.
NG >> GO TO 20.

18. CHECK 2: THERMAL CONTROL AMPLIFIER POWER SUPPLY CIRCUIT

Check voltage between thermal control amplifier terminal 1 and ground.



Connector terminal		Voltage
Thermal control amplifier	Ground	Battery voltage
1		

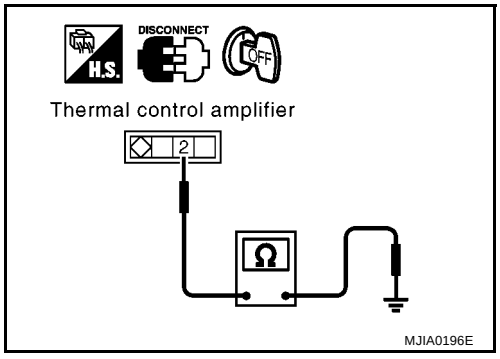
OK or NG

OK >> GO TO 19.
NG >> Check fuse (#16). For the Fuse Block Layout, Refer to PG-4, "POWER SUPPLY ROUTING" .

- If fuse is OK, check for open circuit in harness.
- If a fuse is NG, determine the possible cause, repair circuit and replace blown fuse.

19. CHECK GROUND CIRCUIT

Check continuity between thermal control amplifier terminal 2 and ground.



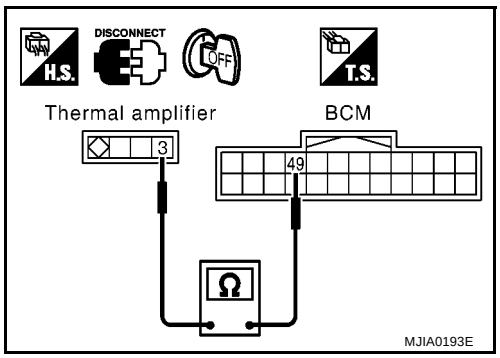
Connector terminal		Continuity
Thermal control amplifier	Ground	Yes
2		

Does continuity exist?

YES >> Replace thermal control amplifier.
NO >> Repair harness or connector.

20. CHECK CIRCUIT CONTINUITY

Disconnect BCM connector, and check continuity between thermal control amplifier terminal 3 and BCM terminal 49.



Connector terminal		Continuity
Thermal control amplifier	BCM	
3	49	Yes

Does continuity exist?

YES >> Replace BCM.
NO >> Repair harness or connector.

21. CHECK CAN COMMUNICATION CIRCUIT

Check the CAN communication between the BCM and ECM control unit, and the ECM control unit and IPDM E/R. Refer to BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" and LAN-6, "CAN Communication Unit" .

OK or NG

OK >> End of trouble diagnosis
NG >> Repair or replace parts based on the diagnosis results.

Insufficient Cooling

EJS0057J

CHECK FUNCTION (FOR CR ENGINE)

Inspection Procedure

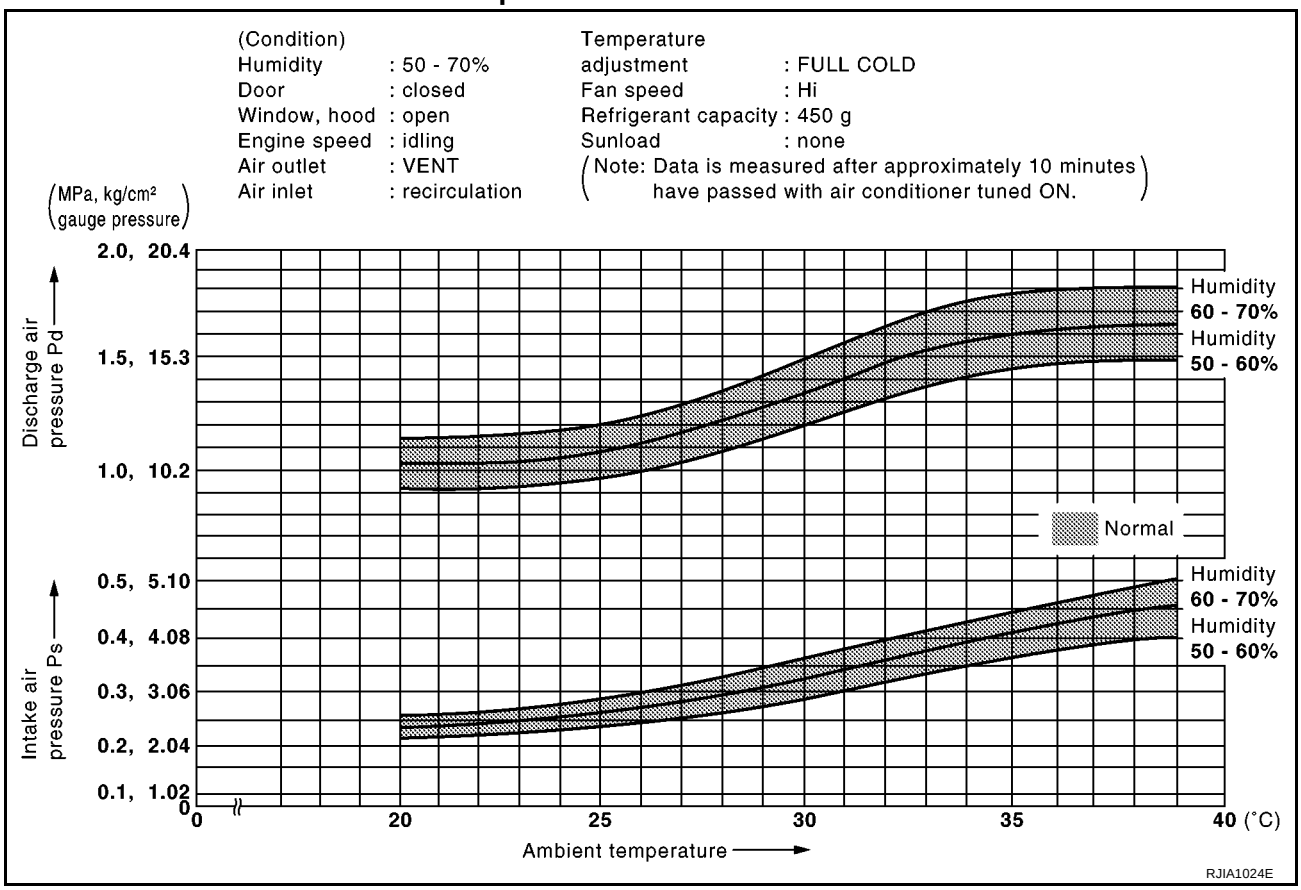
1. Connect manifold gauge to vehicle cooler system (service valve).
2. Attach a psychrometer to blower unit air inlet (under glove box). Attach a dry-bulb thermometer to right-center of ventilator grille.
3. Start and warm up the engine.
4. After warming-up engine, make sure engine speed is the specified idle speed.
5. Operate compressor. Adjust controller to match conditions below.

Fan speed	**: HI**
Inlet	**: Recirculation (REC)**
Outlet	**: Ventilation (VENT)**
Predetermined temperature	**: FULL COLD**

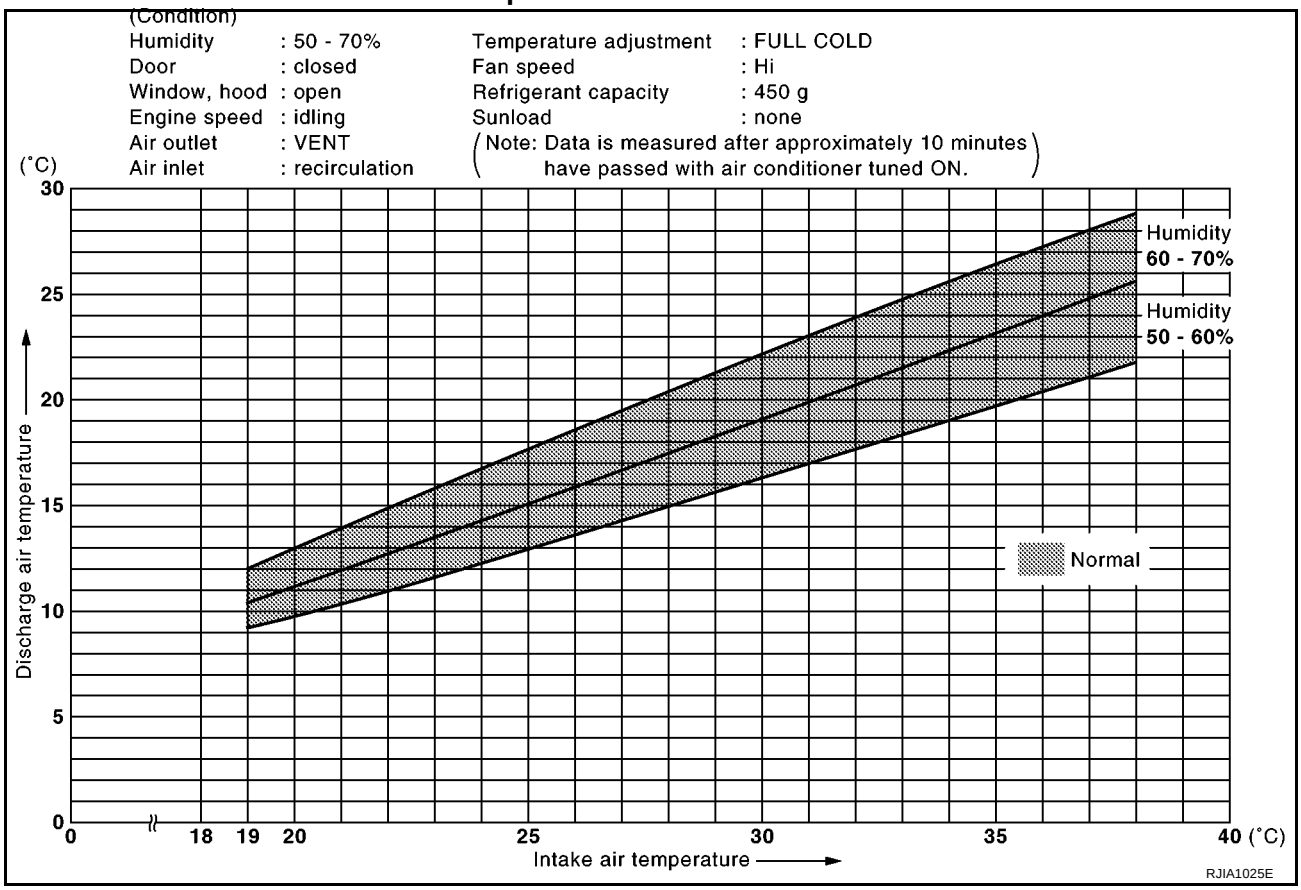
6. Fully open the hood and door windows, and close all the doors.
7. Keep this state until the cooler system becomes stable (after approximately 10 minutes).
8. Keep the engine speed at idle.
9. Measure the temperature and humidity at the air inlets, temperature at the air outlets, and the high-pressure and low-pressure of the cooler cycle, and compare them to “Ambient temperature - pressure characteristic”, “Intake air temperature - outlet air temperature characteristic” for estimating.

Performance Curve

Ambient Temperature - Pressure Characteristics



Intake Air Temperature - Pressure Characteristics



DIAGNOSIS BY PRESSURE GAUGE

Connect a manifold gauge to the cooler cycle (service valve), and determine faulty parts and possible causes by pressure in the cooler cycle, then troubleshoot.

Symptom	Cycle status	Possible causes	Action
High-pressure and low-pressure are both high.	They return to normal when condenser is cooled with water.	Insufficient cooling of condenser ● Operation malfunction of radiator and condenser fan ● Improper installation of air guide ● Clogged condenser or dirty fins	● Repair or replace as necessary ● Clean and repair condenser fins.
		Excessively charged refrigerant	Discharge refrigerant completely, evacuate again, and recharge with proper amount of refrigerant.
	When the compressor has been stopped, pressure drops quickly by approximately 2 kg/cm^2 , and then decreases gradually.	Mixed air in the cooler system	Discharge refrigerant completely, evacuate again, and recharge with proper amount of refrigerant.
	Temperature at low-pressure pipe is lower than that at evaporator outlet, or low-pressure pipe becomes frosted.	Expansion valve opened too far (excessive refrigerant flow).	Replace expansion valve.
High-pressure is extremely high.	Temperature differences occur at points where high-pressure pipe is crushed or clogged.	Crushed points or clogs in high-pressure pipe between compressor and condenser	Repair or replace as necessary
High-pressure and low-pressure are both low (low-pressure occasionally becomes minus).	Evaporator outlet is not cold. Frost forms on evaporator inlet.	Expansion valve is blocked. ● Gas leakage around sensor unit. ● Clogged by foreign material	Remove foreign materials from expansion valve or replace expansion valve.
	Temperature differences occur at the outlet and inlet pipe of the liquid tank or the liquid tank becomes frosted.	Liquid tank malfunction (strainer clogged)	Replace liquid tank
	Evaporator becomes frosted.	Evaporator fins are clogged or crushed.	Repair or replace.
		Insufficient airflow	Refer to MTC-29, "Blower Fan Motor System" .
	Some temperature difference occurs between high-pressure and low-pressure pipes of the compressor.	Insufficient refrigerant amount	● Check for refrigerant leaks. ● Discharge refrigerant completely, evacuate again, and recharge with proper amount of refrigerant.

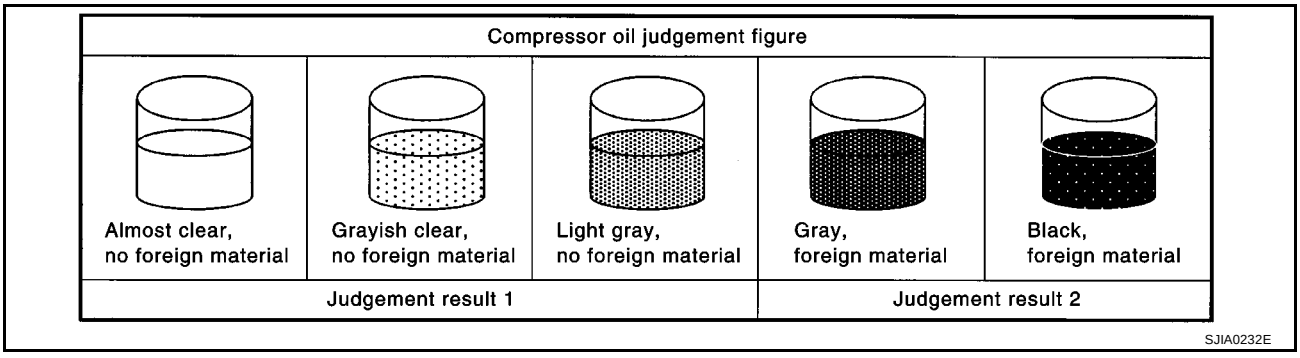
Symptom	Cycle status	Possible causes	Action
Occasionally high-pressure becomes low, and low-pressure becomes minus.	Sometimes evaporator outlet is not cold and sometimes frost forms on evaporator inlet.	Water mixed in cooler system. (Blockage caused by moisture freezing at the expansion valve.)	Discharge refrigerant completely, evacuate again to remove all moisture, and recharge with proper amount of refrigerant. Be certain to replace liquid tank.
High-pressure is low, and low-pressure is high.	When compressor is stopped, pressure equalizes quickly and there is no temperature difference between compressor high-pressure pipes and low-pressure pipes.	Compressor malfunction (improper compression) ● Damage or breakage of valve ● Gasket worn or damaged	Replace compressor.

DIAGNOSIS OF COMPRESSOR

If there is a compressor unit malfunction (internal noise, insufficient cooling), follow table below and perform trouble diagnosis.

Symptom	Checklist	Inspection Method	Result	Action
Noise (rattling or rolling sound) from compressor unit when A/C is ON.	Cooler system internal pressure	Check with a manifold gauge.	Both high- and low-pressure sides are high. (Note 2)	Recharge with proper amount of refrigerant.
			High/low-pressures hunt. (Note 2)	Replace compressor only.
	Check compressor oil condition.	Sample compressor oil and judge.	Refer to the criteria shown in compressor lubricant.	Diagnostic Result 1: Replace compressor only. Diagnostic result 2: Replace compressor and liquid tank.
Insufficient cooling (Note 1)	Compressor body	Check rotation of compressor. If seized or stuck, sample compressor oil and judge.		
	Cooler system internal pressure	Check with a manifold gauge. If the difference between high-pressure and low-pressure is small or almost the same, sample compressor oil and judge.		
Outlet air temperature rises temporarily while driving. (Note 2)	—	—	—	Replace compressor only.

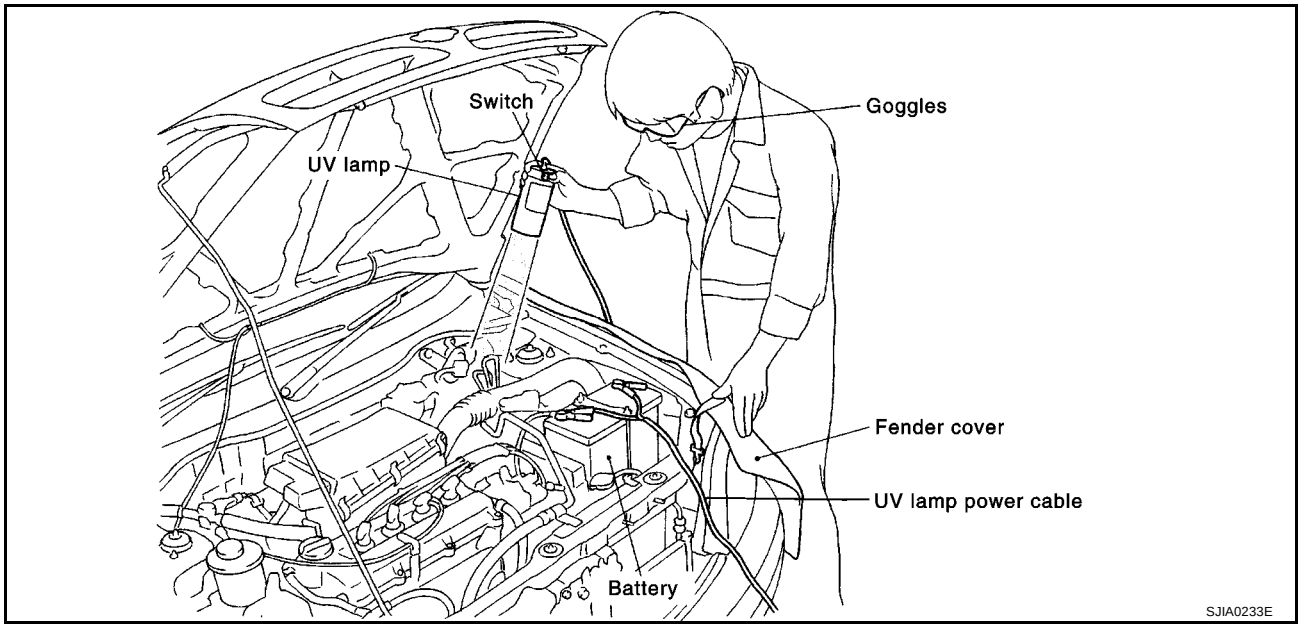
Note 1: First conduct inspection according to trouble diagnosis for each malfunction.
Note 2: Applicable only to variable-capacity compressor



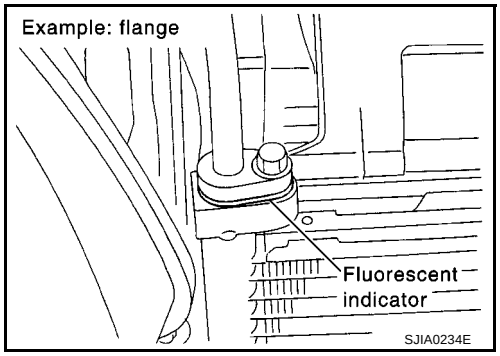
Detecting Leaks With Fluorescent Indicator

EJS0057K

METHOD FOR DETECTING REFRIGERANT LEAKAGE.



1. Wear goggles provided with the fluorescent detector.
2. Connect the UV lamp power cable to the negative battery terminal.
3. Press UV lamp switch. Check for cooler system leaks. (Light green fluorescent will appear at the leak.)
4. Repair or replace parts with refrigerant leaks and wipe off the fluorescent indicator.



CAUTION:

Completely wipe off all fluorescent indicators. Use a cotton swab or something similar to remove indicator from gaps between parts, screw threads, and similar places.

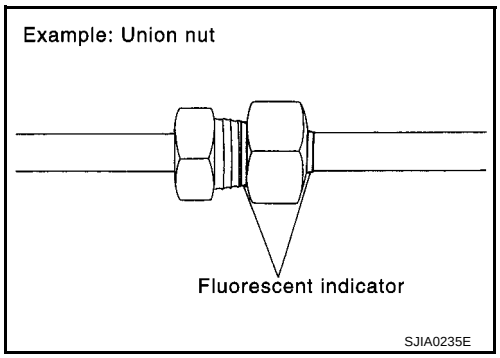
5. After finishing work, use a UV lamp to make sure no fluorescent indicator remains.

CAUTION:

- **Do not look directly into the UV lamp light source.**
- **For continuous operating time of UV lamp and other details, follow the Owner's Manual when performing the operation.**
- **Dust, dirt, and adhesive of packing materials used in condenser, evaporator, and other locations may fluoresce. Be careful to avoid misidentifying leaks.**

Inspection Procedure

- Shine UV lamp on pipe joints from different angles to make sure there are no leaks.
- Use a cotton swab or something similar to wipe water off of drain hoses. By shining UV lamp, a check can also be made to detect leaks from evaporator.
- Use a mirror to check for refrigerant leaks in difficult to see areas.



CONTROL UNIT

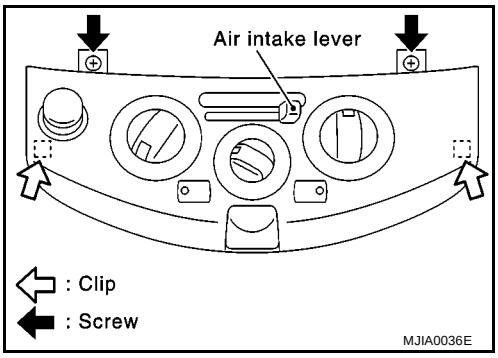
PFP:27500

Removal and Installation

EJS002GE

REMOVAL

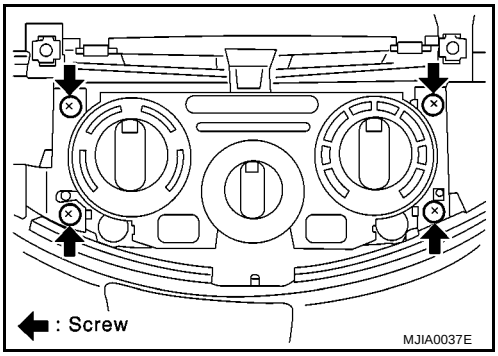
1. Remove cluster lid “C”. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the air intake lever.
3. Remove the screws and clips, and then remove the air conditioner finisher.



4. Remove the air mix door cable, mode door cable, and intake door cable from the air conditioner unit.
5. Remove screws, and pull out controller.
6. Disconnect connector and remove controller.

CAUTION:

Adjust the door cables during installation. Refer to MTC-53, "Intake Door Cable Adjustment" , MTC-54, "Mode Door Cable Adjustment" and MTC-55, "Air Mix Door Cable Adjustment" .

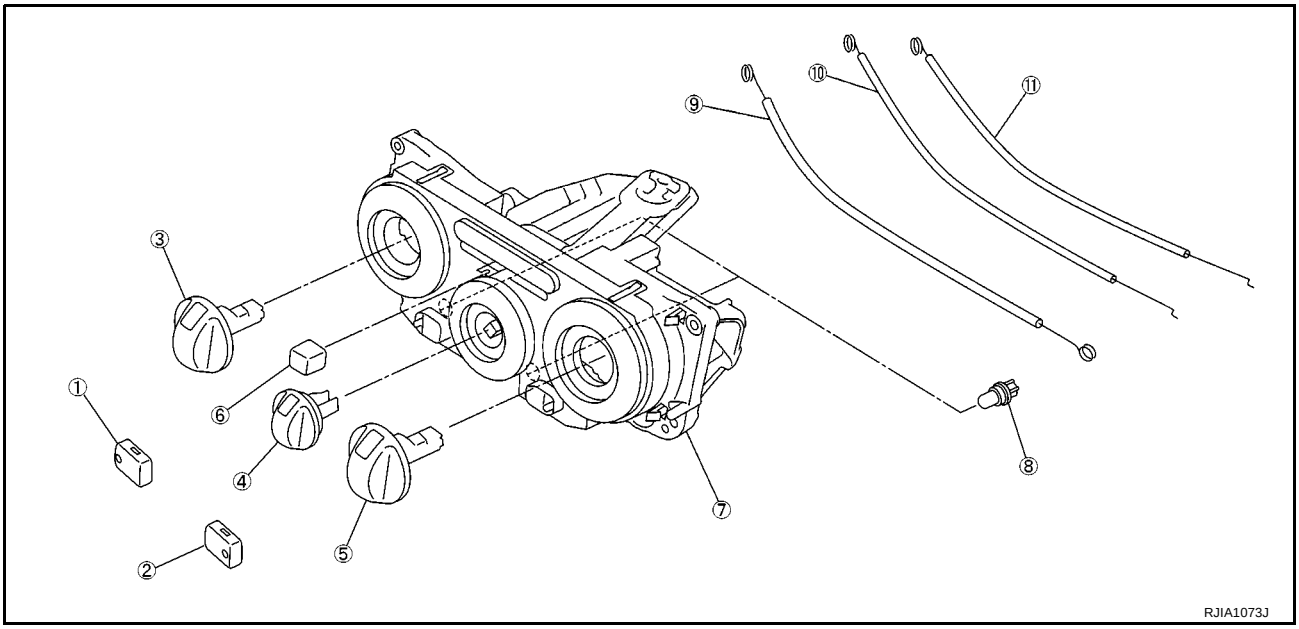


INSTALLATION

Install in the reverse order of removal.

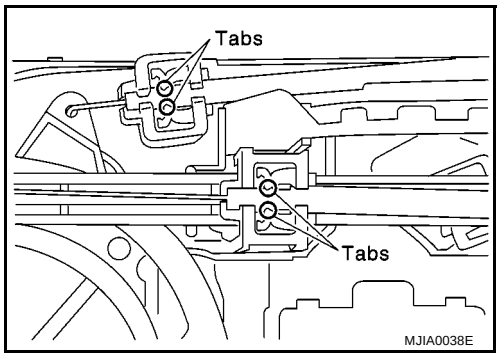
Disassembly and Assembly

EJS002GF



1. Rear window defogger switch
2. Air conditioner switch
3. Mode dial
4. Fan control dial
5. Temperature control dial
6. Air intake lever
7. Controller
8. Illumination bulb
9. Mode door cable
10. Intake door cable
11. Air mix door cable

NOTE:
Install the inner cable of each door cable to the corresponding lever, as shown in the figure. Press the outer cable until it hooks on the tabs and becomes fixed.



A/C UNIT ASSEMBLY

PFP:27210

Removal and Installation

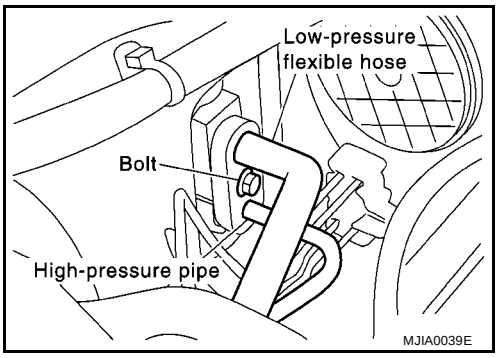
EJS002GG

REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Drain engine coolant.
3. Disconnect the low-pressure flexible hose and high-pressure pipe from the evaporator.

CAUTION:

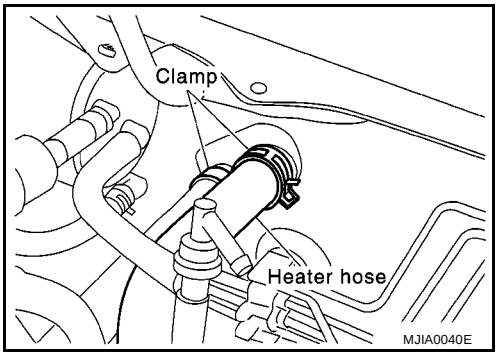
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



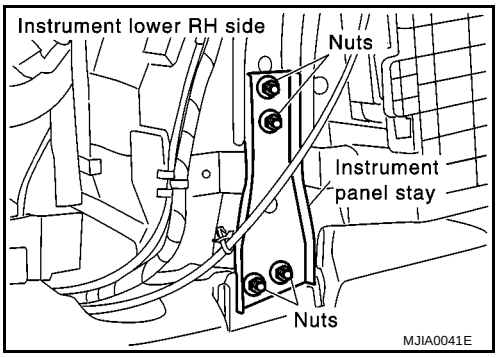
4. Pull out the heater hoses from the heater core.

CAUTION:

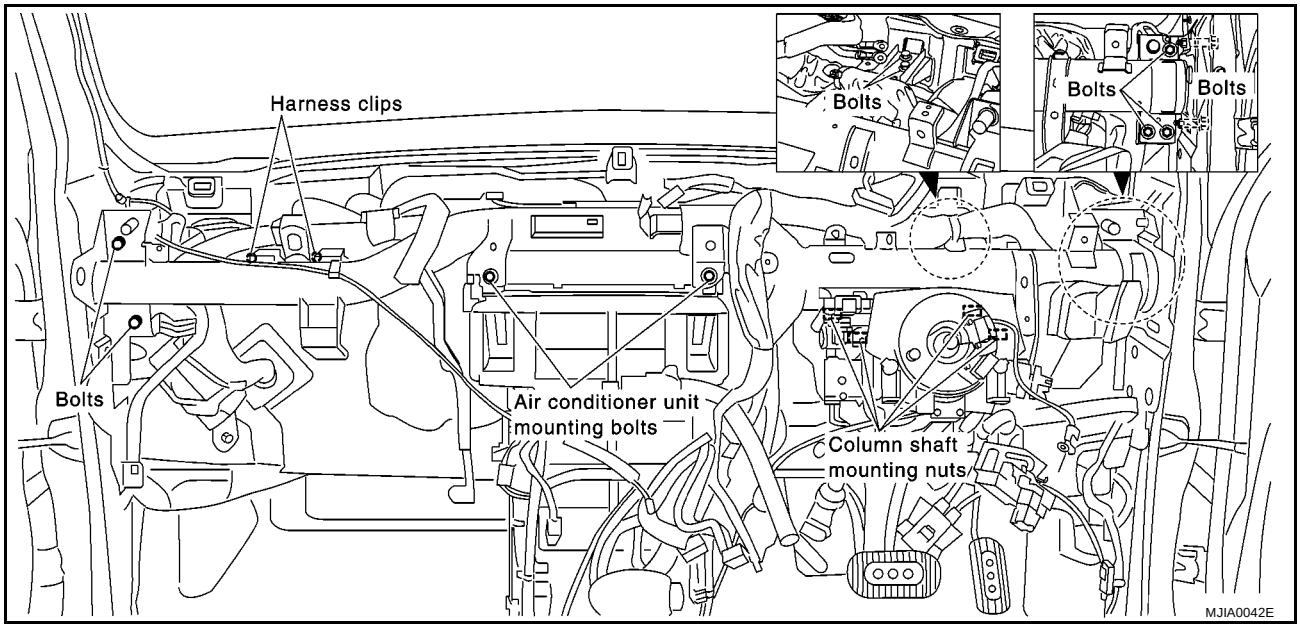
- **Some coolant may spill when heater hoses are disconnected.**
- **Close off the coolant inlet and outlet on the heater core (2 locations) with waste.**



5. Remove instrument panel. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
6. Remove the vehicle harness clips and then remove the instrument panel stay.



NOTE:
This illustration is for RHD model. The layout for LHD model is symmetrically opposite.



7. Remove the ventilator duct mounting screws and clips.
8. Remove the air conditioner mounting bolts, steering member mounting bolts, column shaft mounting bolts, and the harness clips.
9. Remove the BCM. Refer to BCS-31, "Removal and Installation of BCM" .
10. Remove the steering member, and then remove the air conditioner unit.

INSTALLATION

CAUTION:

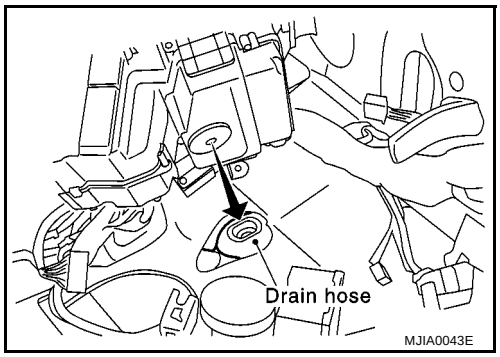
- **Replace all O-rings on the pipes with new ones. Apply a coat of compressor lubricant prior to installation.**
- **After charging with refrigerant, check for refrigerant leaks.**

1. Install the air conditioner unit.

   CAUTION:
   Confirm that the air conditioner drain and drain hose positions match up.

   Air conditioner unit mounting bolt.

   Tightening torque : 5.98 - 7.65 N·m (0.61 - 0.78 kg-m, 53 - 67 in-lb)



2. Perform removal steps 3-10 in reverse order.

   Steering member mounting nut and bolt

   Tightening torque :11 - 13 N·m (1.1 - 1.4 kg-m, 8.2 - 9.5 ft-lb)

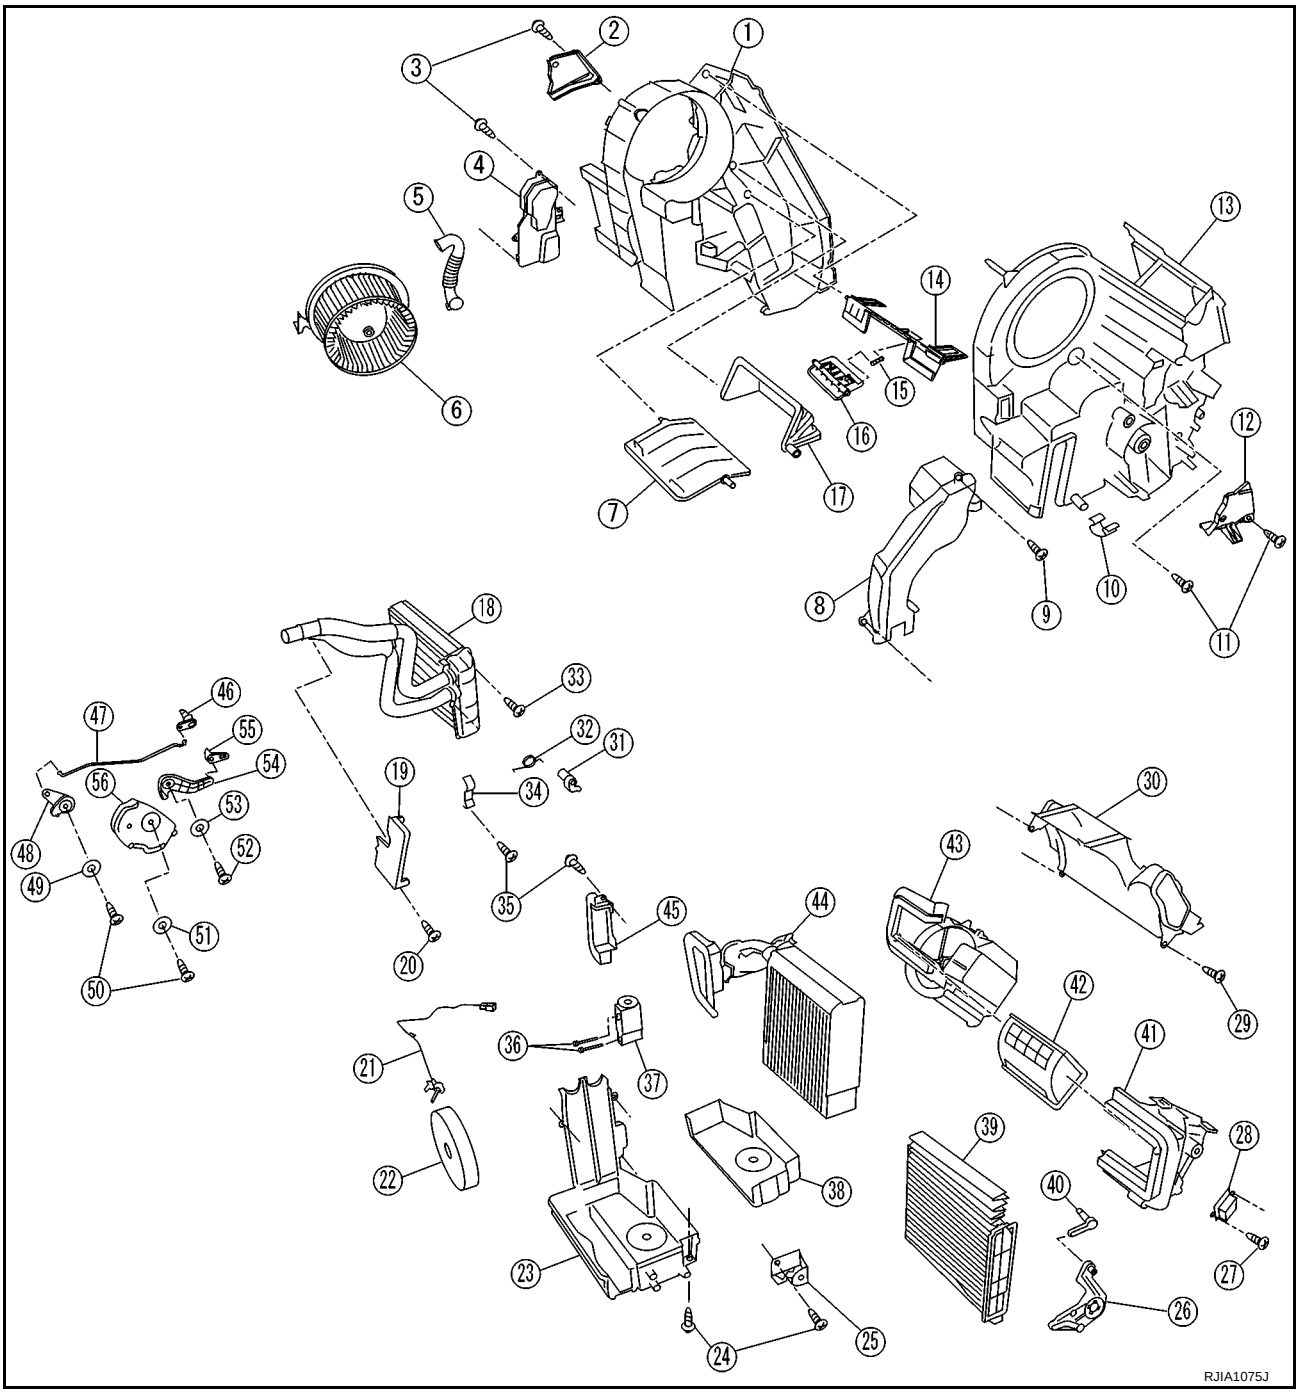
   Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.

   Tightening torque :2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)

3. Fill engine coolant.
4. Charge refrigerant using refrigerant recovery unit [for HFC-134a(R-134a)].

Disassembly and Assembly

EJS002GH



1. Blower fan motor case (RH)	2. Cover (RH)	3. Screw
4. Foot duct (RH)	5. Cooling hose	6. Blower fan motor
7. Air mix door	8. Foot duct (LH)	9. Screw

13. Blower fan motor case (LH)	14. Ventilation door	15. Defroster rod
16. Deflator door	17. Foot door	18. Heater core
19. Heater pipe cover	20. Screw	21. Thermal control amplifier
22. Heater pipe packing	23. Lower blower fan motor case	24. Screw
25. Bracket	26. Intake door link	27. Screw
28. Blower fan resistor	29. Screw	30. Attachment case
31. Air mix door lever	32. Spring	33. Screw
34. Heater pipe clip	35. Screw	36. Bolt

37. Expansion valve
38. Insulator
39. Air conditioner filter
40. Intake lever
41. Intake case (LH)
42. Intake door
43. Intake case (RH)
44. Evaporator
45. Expansion valve cover
46. Ventilation/ Deflator lever
47. Ventilation/ Deflator rod
48. Ventilation/ Deflator link
49. Washer
50. Screw
51. Washer
52. Screw
53. Washer
54. Foot link
55. Foot lever
56. Main link

HEATER CORE

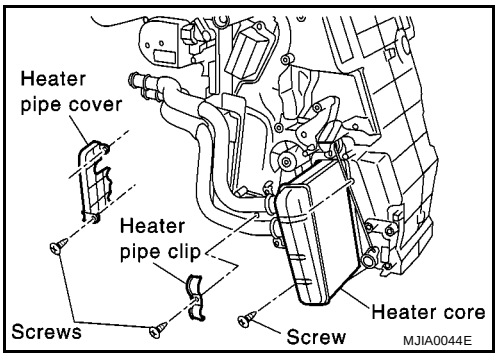
PFP:27140

Removal and Installation

EJS002GI

REMOVAL

1. Remove the air conditioner unit. Refer to MTC-45, "A/C UNIT ASSEMBLY" .
2. Remove the foot duct (LH), screws, and heater pipe cover.
3. Remove the main link and ventilation/defroster link.
4. Remove the heater pipe clip, and then pull out the heater core from air conditioner unit.



INSTALLATION

Install in the reverse order of removal.

BLOWER MOTOR

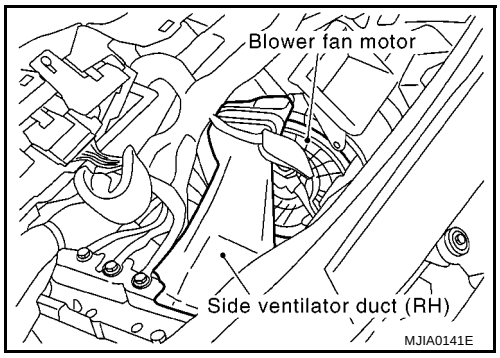
PFP:27226

Removal and Installation

EJS002GJ

REMOVAL

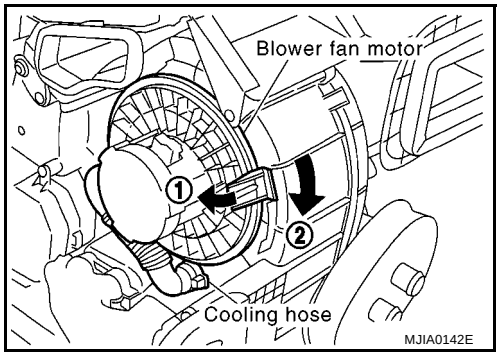
1. Remove instrument panel assembly. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the side ventilator duct (RH). Refer to MTC-59, "SIDE VENTILATOR DUCT" .



3. Disconnect the cooling hose, and remove the blower fan motor.

CAUTION:

When the blower fan and blower fan motor are assembled, the balance is adjusted, so do not replace the individual parts.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

Firmly fasten the blower fan motor assembly flange fastening hooks in the air conditioner unit.

BLOWER FAN RESISTOR

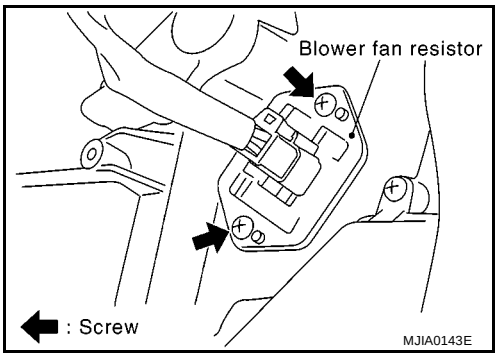
PFP:27150

Removal and Installation

EJS002GL

REMOVAL

1. Remove the glove box cover assembly. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Remove the blower fan resistor.



INSTALLATION

Install in the reverse order of removal.

AIR CONDITIONER FILTER

PFP:27277

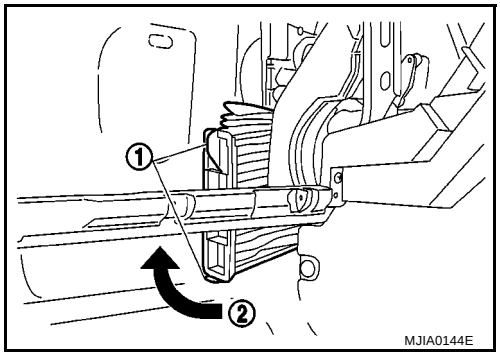
Removal, Replacement and Installation

EJS002JJ

REMOVAL

Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the glove box cover assembly. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Compress the air conditoner filter downward while sliding it to the left side of the vehicle as shown in the figure 1.
3. Turn the bottom of the air conditoner filter upward, and then remove it as shown in the figure 2.

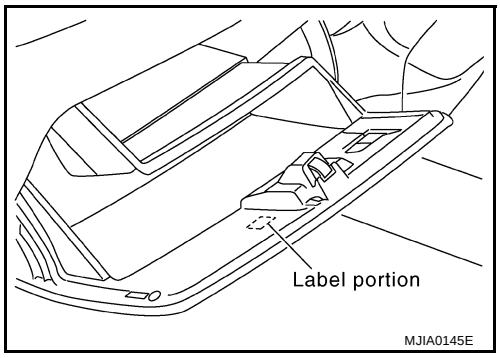


REPLACEMENT

Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

Air conditoner filter Replacement interval : Once a year or every 12,000 km (7,500 miles)

Fill in the necessary information on the label, and stick it on the inside of the glove box as shown in the figure.



INSTALLATION

Install in the reverse order of removal.

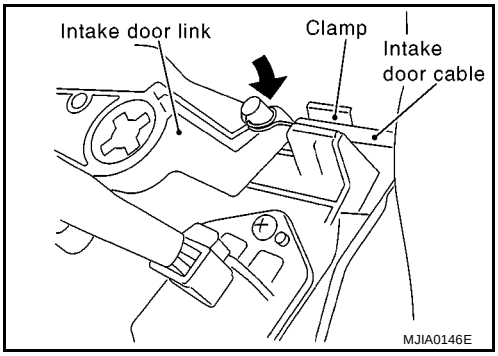
INTAKE DOOR

PFP:27245

Intake Door Cable Adjustment

EJS002GO

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the outer cable of intake door cable from the clamp.
3. Set the intake air control lever to “RECIRCULATION”.
4. Push the intake door link in the direction shown by the arrow while carefully pulling the outer cable to the controller side and attaching the clamp.
5. Operate the intake air control lever and check if the intake door cable moves smoothly.



CAUTION:

When clamping the outer cable, do not move the inner cable.

MODE DOOR

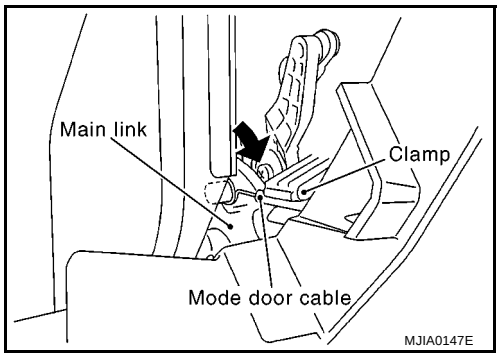
PFP:27181

Mode Door Cable Adjustment

EJS002HO

1. Remove the instrument panel stay cover. Refer to IP-8, "M. Instrument Panel Stay Cover" .
2. Remove the outer cable of mode door cable from the clamp.
3. Set mode dial to “ventilation” position.
4. Push the main link in the direction shown by the arrow, then carefully pull outer cable to the controller side, and install the clamp.
5. Operate the mode dial to insure that the inner cable moves smoothly.

CAUTION:
When clamping the outer cable, do not move the inner cable.



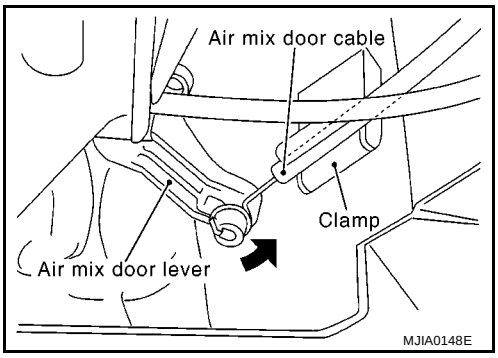
AIR MIX DOOR

PFP:27180

Air Mix Door Cable Adjustment

EJS002HP

1. Remove the instrument panel stay cover. Refer to IP-8, "M. Instrument Panel Stay Cover" .
2. Remove the outer cable of air mix door cable from the clamp.
3. Set temperature control dial to “full cold” position.
4. Push the air mix door lever in the direction shown by arrow and then carefully pull the outer cable toward controller side, and install the clamp.
5. Operate the temperature control dial to insure that the inner cable moves smoothly.



CAUTION:
When clamping the outer cable, do not move the inner cable.

THERMO CONTROL AMPLIFIER

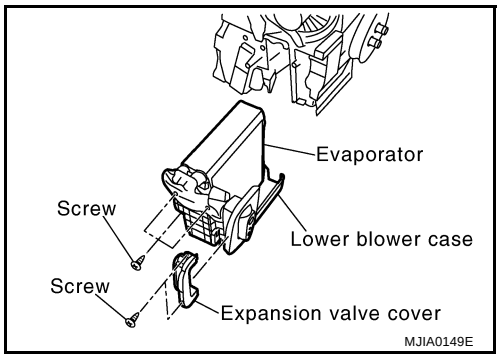
PFP:27675

Removal and Installation

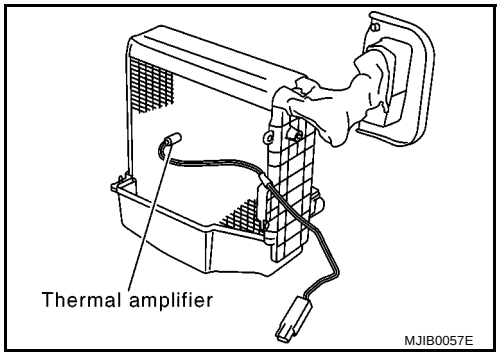
EJS002GR

REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a(R134a)] to discharge refrigerant.
2. Remove the air conditioner unit. Refer to MTC-45, "A/C UNIT ASSEMBLY" .
3. Remove the air conditoner filter and foot duct (RH). Refer to MTC-52, "AIR CONDITIONER FILTER" and MTC-57, "DUCTS AND GRILLES" .
4. Remove the lower blower fun motor case and expansion valve cover.



5. Slide the evaporator and door blower case downward, and remove the thermal amplifier.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace the low-pressure and high-pressure flexible hoses and high-pressure pipe O-rings with new ones. Apply compressor lubricant to them during installation.**
- **When replacing the thermal amplifier, install the thermal amplifier thermistor in the same position as the removed thermal amplifier.**
- **When removing and installing the thermal amplifier, do not rotate the thermistor's insertion part.**
- **After charging with refrigerant, check for refrigerant leaks.**

High-pressure flexible hose and high-pressure pipe mounting bolts

Tightening torque : 2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)

DUCTS AND GRILLES

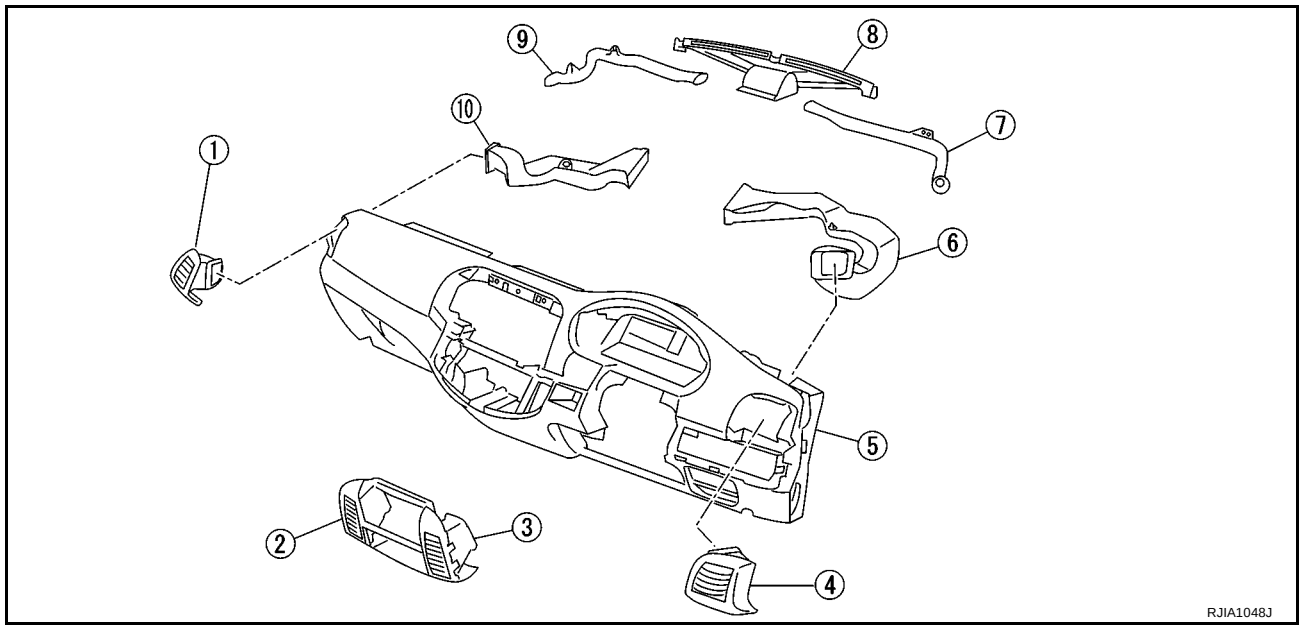
PFP:27860

Removal and Installation

EJS002GT

COMPONENT PARTS LOCATION

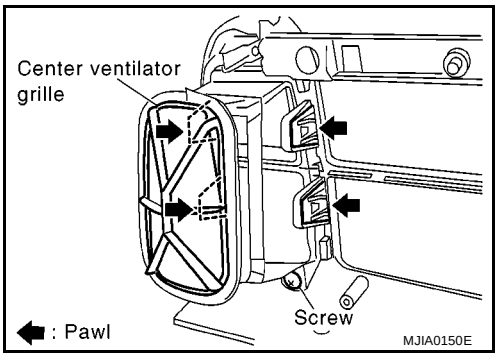
NOTE:
Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.



1. Side ventilator grille (LH)
2. Central ventilator grille (LH)
3. Central ventilator grille (RH)
4. Side ventilator grille (RH)
5. Instrument panel assembly
6. Side ventilator duct (RH)
7. Side defroster duct (RH)
8. Defroster nozzle
9. Side defroster duct (LH)
10. Side ventilator duct (LH)

CENTRAL VENTILATOR GRILLE

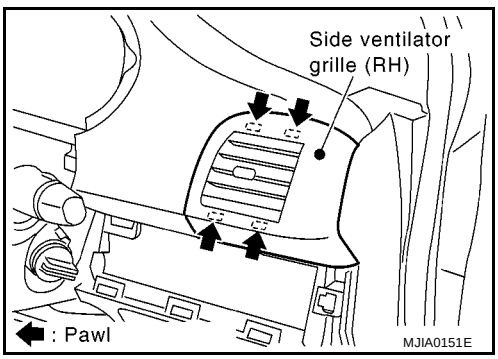
1. Remove cluster lid “C”. Refer to IP-7, "K. Cluster Lid C" .
2. Remove the audio. Refer to AV-12, "Removal and Installation of Audio Unit" .
3. Remove the center ventilator grille (LH/RH).



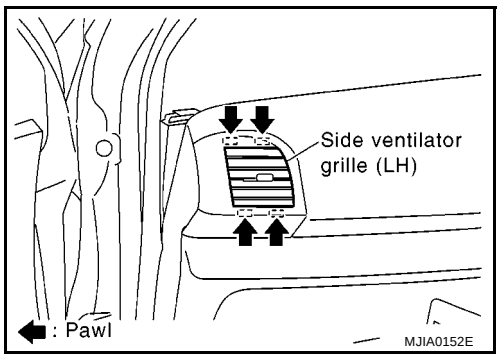
SIDE VENTILATOR GRILLE

NOTE:
Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the upper instrument panel. Refer to IP-6, "B. Upper Instrument Panel" .
2. Remove the switch panel finisher. Refer to IP-6, "E. Switch Panel Finisher" .
3. Remove the side ventilator grille (RH) hooks from the back side of the instrument panel, and then remove the side ventilator grille (RH).
4. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .



5. Remove the side ventilator grille (LH) hooks from the back side of the instrument panel, and then remove the side ventilator grille (LH).

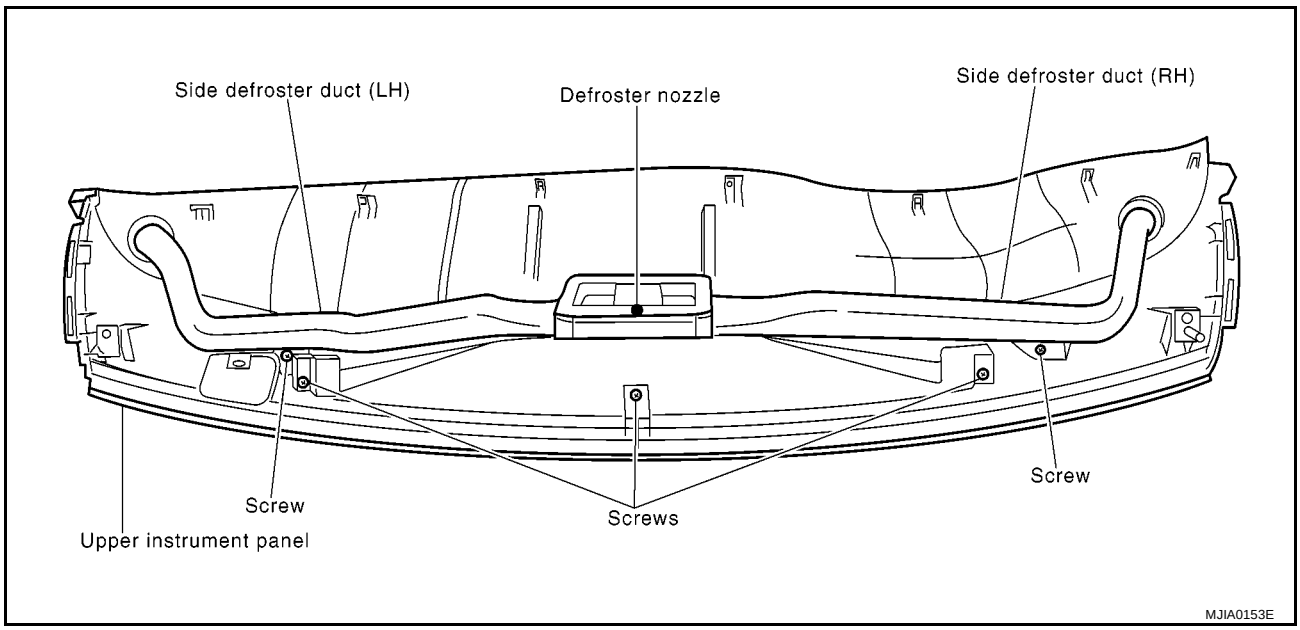


DEFROSTER NOZZLE AND DUCT

NOTE:

Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the upper instrument panel. Refer to IP-6, "B. Upper Instrument Panel" .



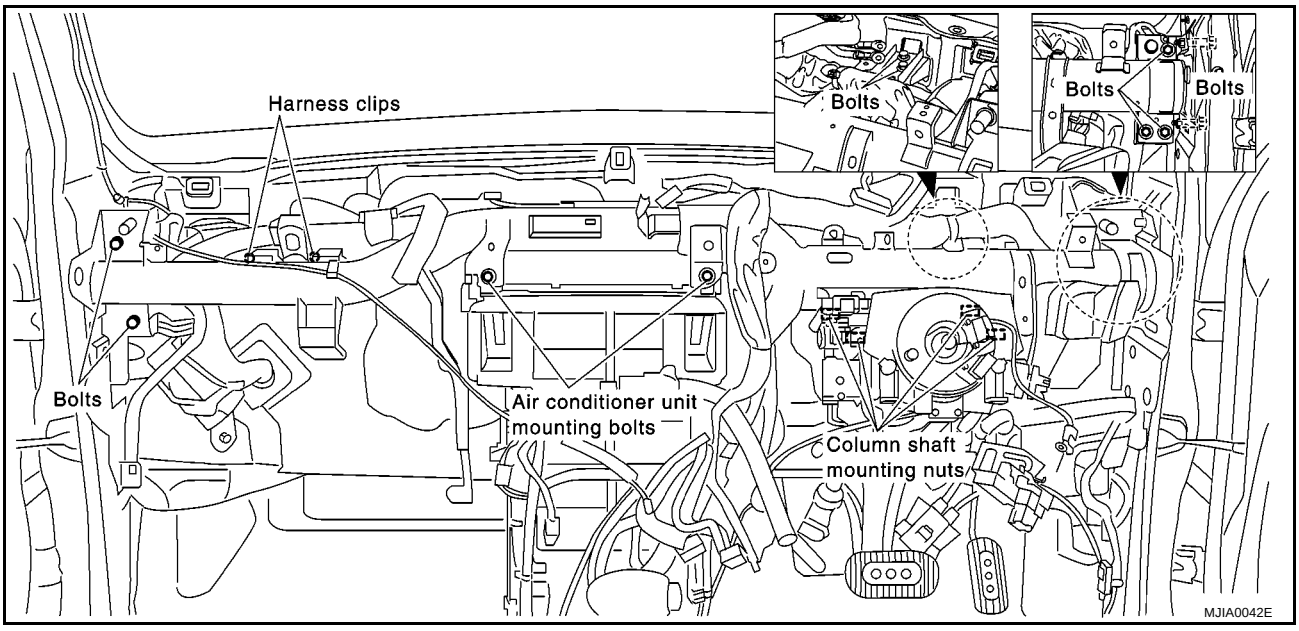
2. Remove the side defroster ducts (LH/RH) and defroster nozzles from the upper instrument panel.

SIDE VENTILATOR DUCT

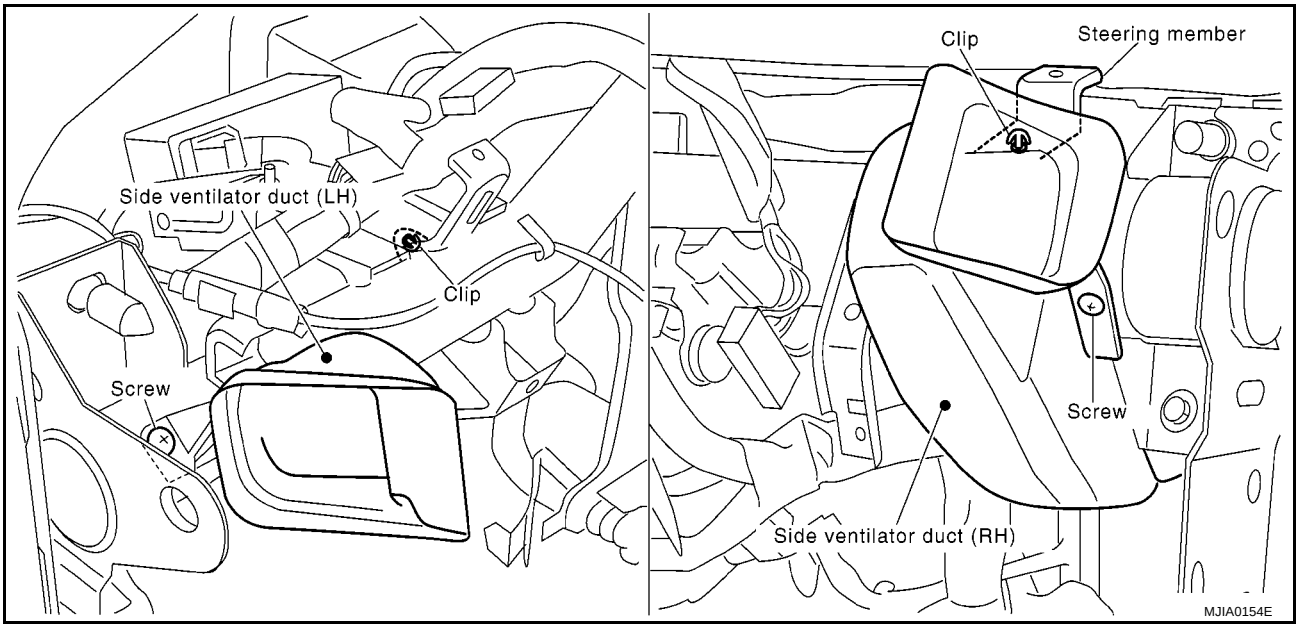
NOTE:

Following illustration is for RHD model. The layout for LHD model is symmetrically opposite.

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the side ventilator duct (LH).
3. Remove instrument panel. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
4. Remove the BCM. Refer to BCS-31, "Removal and Installation of BCM" .
5. Remove the air conditioner mounting bolts, steering member mounting bolts, column shaft mounting bolts, and the harness clips.



6. Remove the steering member, and then remove the side ventilator duct (RH).

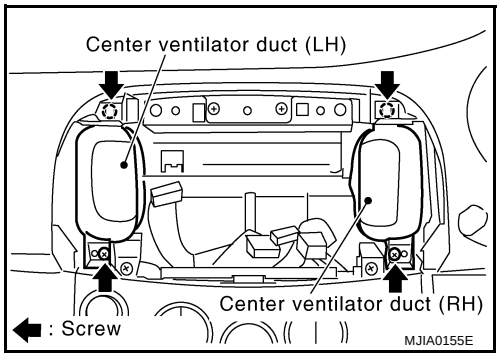


Steering member mounting nut and bolt

Tightening torque :11 - 13 N·m (1.1 - 1.4 kg-m, 8.2 - 9.5 ft-lb)

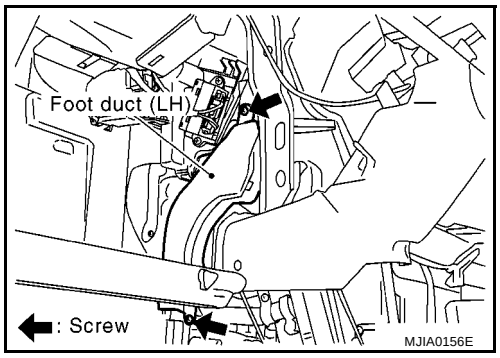
CENTER VENTILATOR DUCT

1. Remove cluster lid “C”. Refer to IP-7, "K. Cluster Lid C" .
2. Remove the screws and then remove the center ventilator ducts (LH/RH).

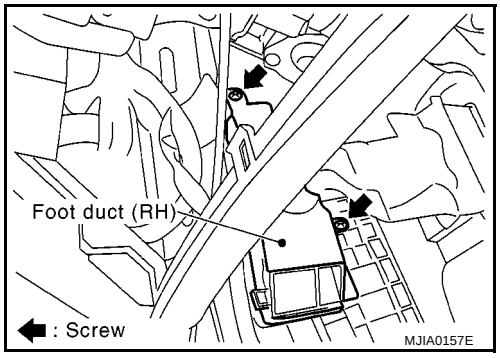


FOOT DUCT

1. Remove the glove box cover assembly. Refer to IP-8, "O. Glove Box Cover Assembly" .
2. Remove the screws and then remove the food duct (LH).



3. Remove the instrument panel under tray. Refer to IP-6, "D. Instrument Panel Under Tray" .
4. Remove the screws and thermal control amplifier connector, and then remove the foot duct (RH).



REFRIGERANT LINES

HFC-134a (R-134a) Service Procedure

EJS002HN

SETTING OF SERVICE TOOLS AND EQUIPMENT

Discharging Refrigerant

WARNING:

Avoid breathing A/C refrigerant and lubricant vapor or mist. Exposure may irritate eyes, nose and throat. Use only approved recovery/recycling equipment to discharge HFC-134a (R-134a) refrigerant. If accidental system discharge occurs, ventilate work area before resuming service. Additional health and safety information may be obtained from refrigerant and lubricant manufacturers.

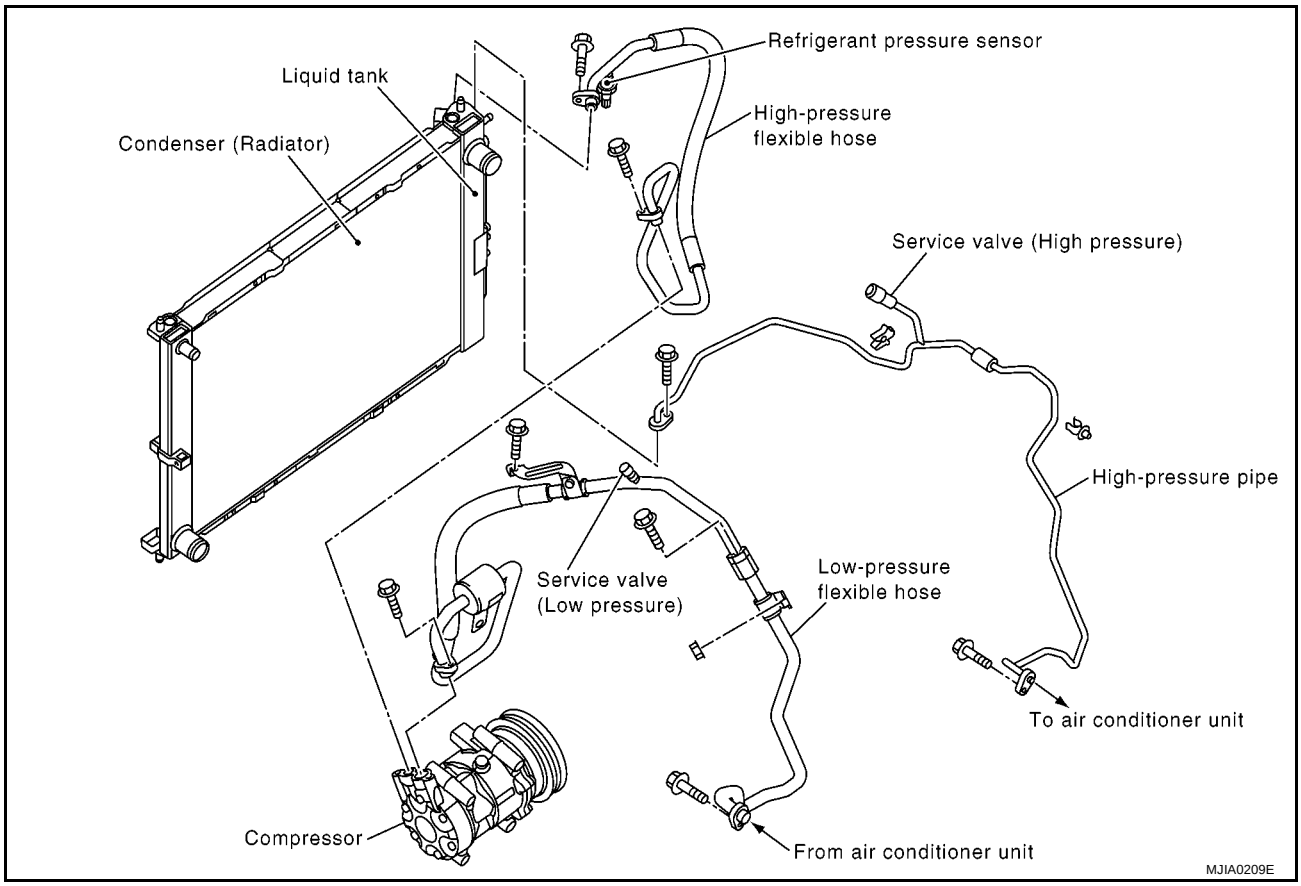
K9K ENGINE MODELS

SMA for VIN >SJN**AK12U1309269



Removal and Installation for Compressor

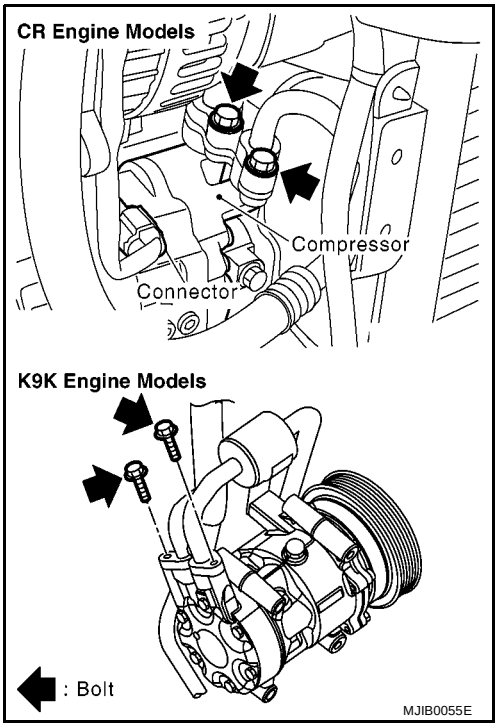
EJS002GV

REMOVAL

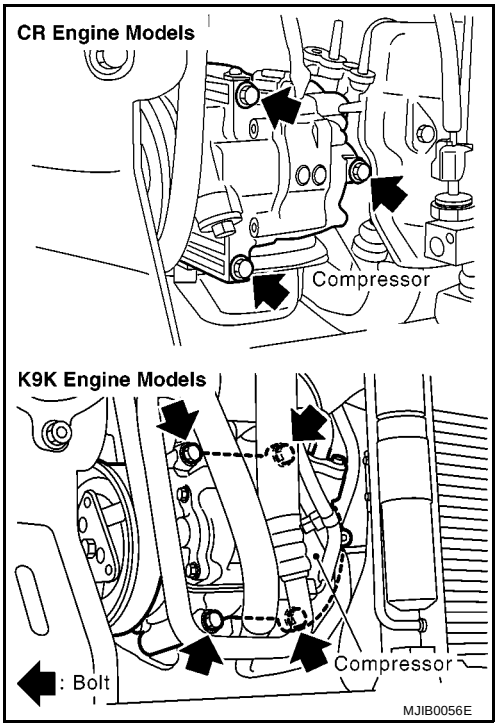
1. Use recovery/recycling recharging equipment [for HFC-134a (R134a)] to discharge refrigerant.
2. Remove air duct (fresh air intake side). Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Disconnect compressor connector.
4. Remove the high-pressure and low-pressure flexible hose mounting nuts (CR engine models) or bolts (K9K engine models), and disconnect the compressor.

CAUTION:

- **Cover the compressor high and low-pressure ports with caps to keep the lubricant from spilling.**
- **Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.**



5. Remove the air conditioner compressor belt and alternator belt. Refer to EM-12, "DRIVE BELTS" .
6. Remove compressor mounting bolts.
7. Remove the compressor from under the vehicle.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace O-rings on high-pressure and low-pressure flexible hoses with new ones. Apply compressor oil when installing new O-rings.**
- **After installing the air conditioner compressor alternator belt, adjust the belt tension. Refer to EM-12, "DRIVE BELTS" .**
- **When charging refrigerant, check for refrigerant leaks.**

Compressor mounting bolt

Tightening torque : 16.6 - 23.5 N·m (1.7 - 2.3 kg-m, 13 - 17 ft-lb)

High-pressure flexible hose mounting nuts

Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 6 - 14 ft-lb)

Low-pressure flexible hose mounting nuts

Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 6 - 14ft-lb)

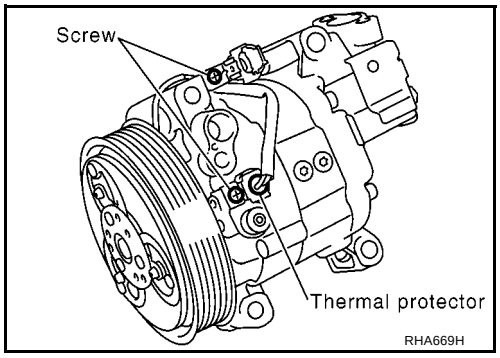
Removal and Installation for Compressor Clutch (CR Engine Models)

EJS002HA

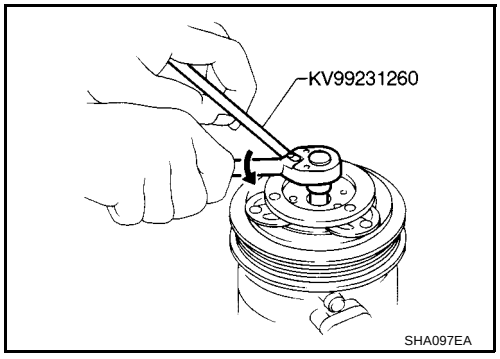
REMOVAL

Overhaul (KC59G Compressor)

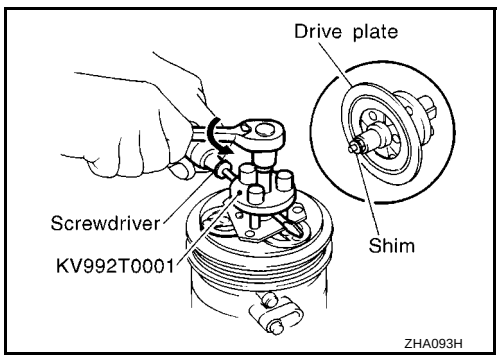
1. Remove the two screws holding the connector bracket, thermal protector to the compressor.



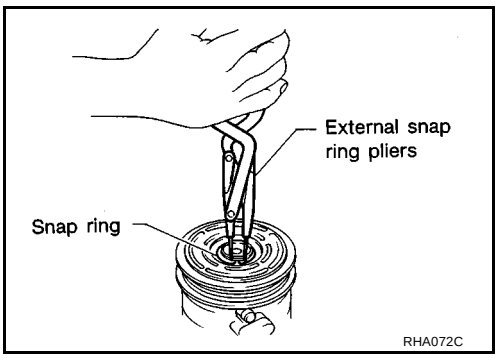
2. When removing center bolt, hold clutch disc with clutch disc wrench.



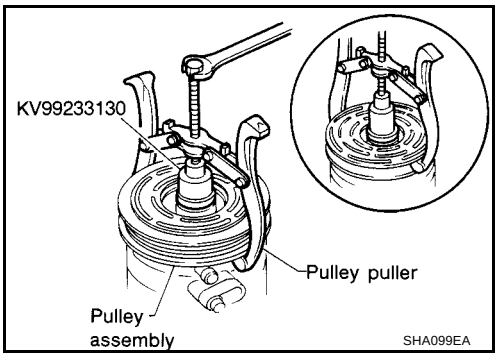
3. Remove the drive plate using the clutch disc puller.
4. Insert holder's three pins into the drive plate. Rotate the holder clockwise to hook it onto the plate.
5. Tighten the center bolt to remove the drive plate.
6. While tightening the center bolt, insert a screwdriver between two of the pins (as shown in the figure) to prevent rotation.
7. After removing the drive plate, remove the shims from either the drive shaft or the drive plate.



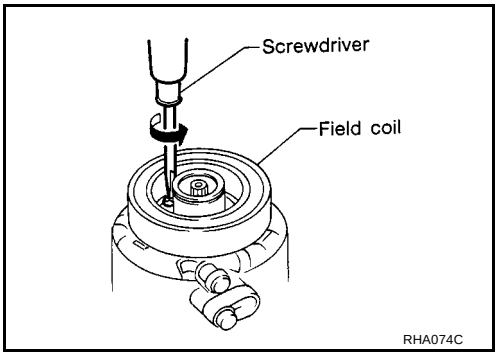
8. Remove the snap ring using external snap ring pliers.



9. Remove the pulley assembly with the puller using a commercially available pulley puller. (Position the center of the puller on the end of the drive shaft)
   For pressed pulleys:
   To prevent deformation of the pulley groove, the puller claws should be hooked under (not into) the pulley groove.
   For machine lathed pulleys:
   Align the pulley puller groove with the pulley groove, and then remove the pulley assembly.

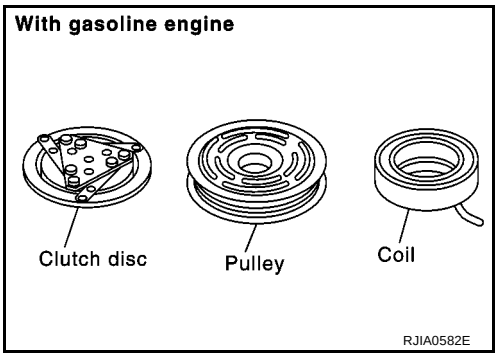


10. Remove the field coil harness clip using a screwdriver.
11. Then remove the three field coil fixing screws and remove the field coil.

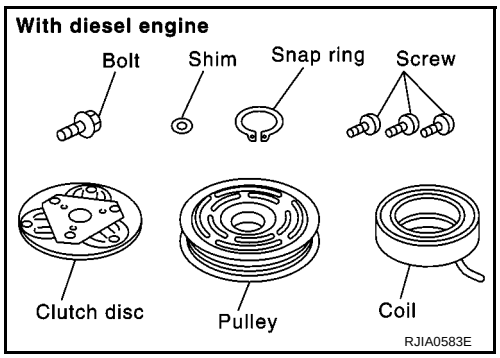


Inspection

Clutch disc
If the contact surface shows signs of damage due to excessive heat, replace clutch disc and pulley.



Pulley
Check the appearance of the pulley assembly. If the contact surface of pulley sows signs of excessive grooving, replace clutch disc and pulley. The contact surfaces of the pulley assembly should be cleaned with a suitable solvent before reinstallation.



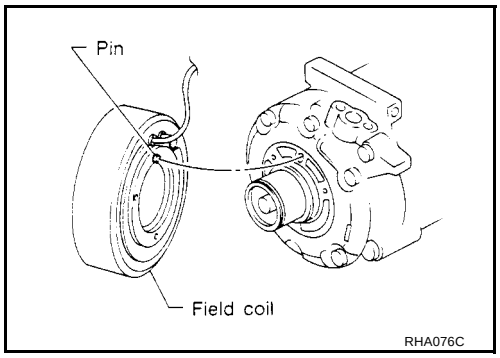
Coil

Check coil for loose connection or cracked insulation.

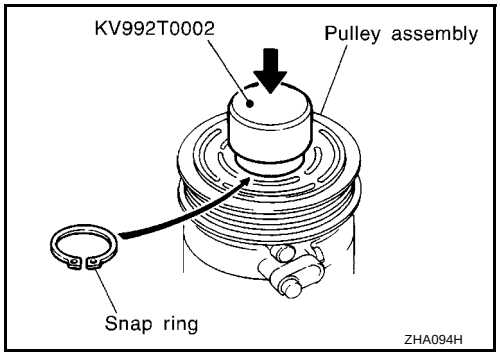
INSTALLATION

KC59G Compressor

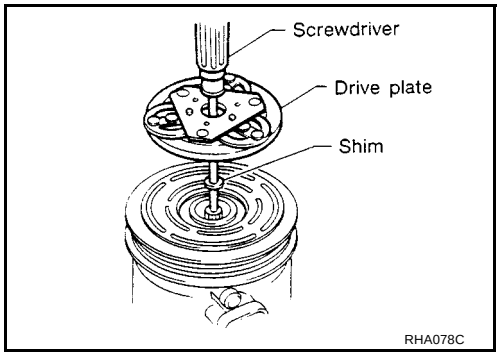
1. Install the field coil.
   Be sure to align the coil's pin with the hole in the compressor's front head.
2. Install the field coil harness clip using a screwdriver.



3. Install the pulley assembly using the installer and a hand press, and then install the snap ring using snap ring pliers.



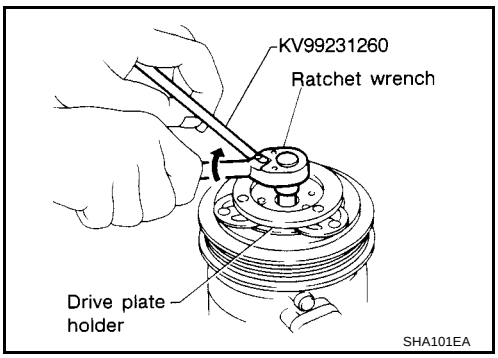
4. Install the drive plate on the drive shaft, together with the original shim(s). Press the clutch disc down by hand.



5. Using the holder to prevent clutch disc rotation.

   Tightening torque : 12 - 15 N-m (1.2 - 1.5 kg-m, 9 - 10 ft-lb)

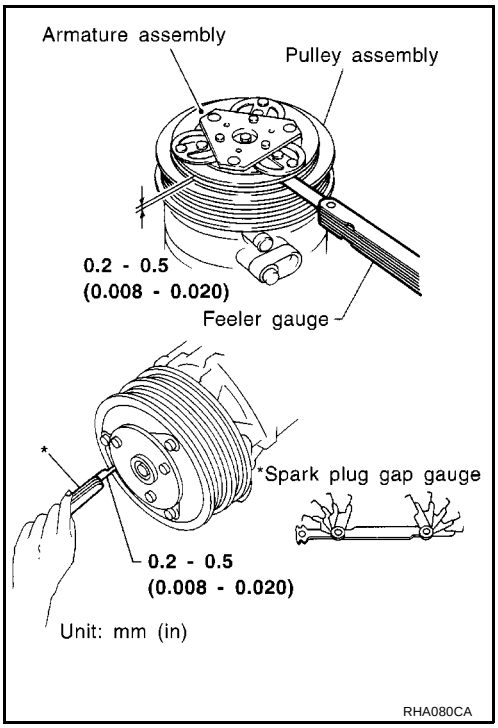
   After tightening the bolt, check that the pulley rotates smoothly.



6. Check clearance around the entire periphery of clutch disc.

   Disc to pulley clearance : 0.2 - 0.5 mm (0.008 - 0.020 in)

   If the specified clearance is not obtained, replace adjusting spacer and readjust.



Break-In Operation

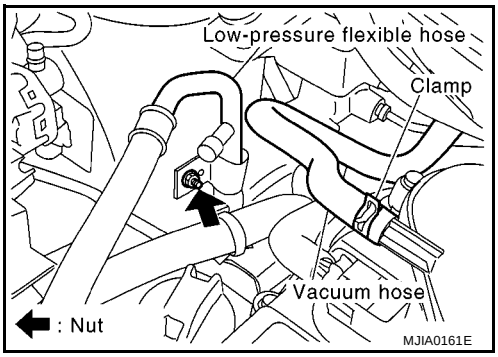
When replacing compressor clutch assembly, always carry out the break-in operation. This is done by engaging and disengaging the clutch about thirty times. Break-in operation raises the level of transmitted torque.

Removal and Installation for Low-Pressure Flexible Hose (CR Engine Models)

EJS002GW

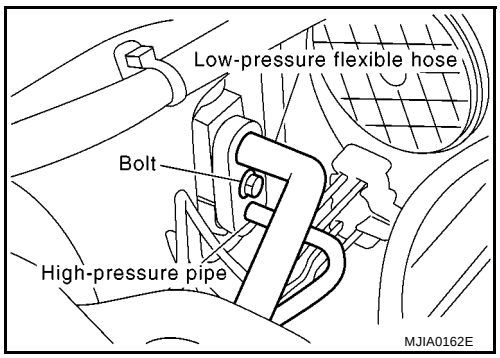
REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove air duct (fresh air intake side). Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Remove the low-pressure flexible hose bracket mounting nuts.
4. Remove the brake vacuum hose from the air cleaner case.



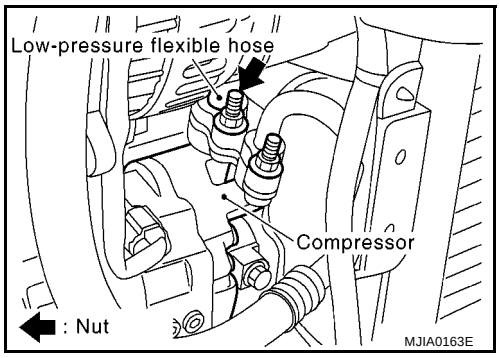
5. Remove the low-pressure flexible hose mounting bolts (air conditioner unit side).

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



6. Remove the low-pressure flexible hose mounting bolts (compressor side) and then remove the low-pressure flexible hose.

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace the low-pressure flexible hose O-ring with a new one. Apply a coat of compressor lubricant to the O-ring prior to installation.**
- **When charging refrigerant, check for refrigerant leaks.**

Low-pressure flexible hose mounting nuts (compressor side)
Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 6 - 14 ft-lb)
Low-pressure flexible hose mounting bolts (evaporator side)
Tightening torque : 2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)
Low-pressure flexible hose bracket mounting nuts
Tightening torque : 3.82 - 4.51 N·m (0.39 - 0.46 kg-m, 43 - 39 in-lb)

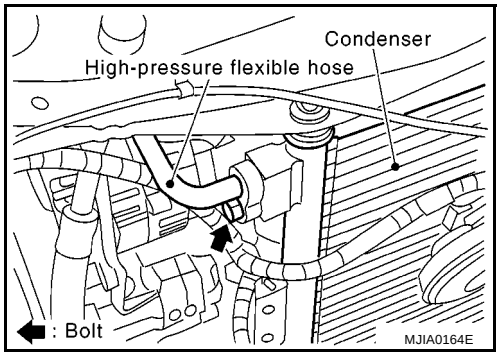
Removal and Installation for High-Pressure Flexible Hose (CR Engine Models)

EJS002GX

REMOVAL

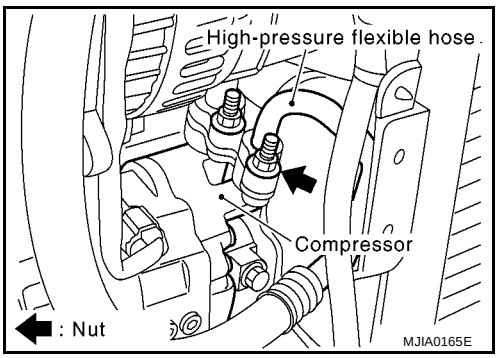
1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove air duct (fresh air intake side). Refer to EM-16, "AIR CLEANER AND AIR DUCT" .
3. Remove the front grille (RH). Refer to EI-8, "FRONT GRILLE" .
4. Remove the high-pressure flexible hose mounting bolts (condenser side).

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



5. Remove the high-pressure flexible hose mounting bolts (compressor side), and then remove the high-pressure flexible hose.

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace O-ring on high-pressure flexible hose with a new one. Apply compressor oil when installing new O-rings.**
- **When charging refrigerant, check for refrigerant leaks.**

High-pressure flexible hose mounting bolts and nuts

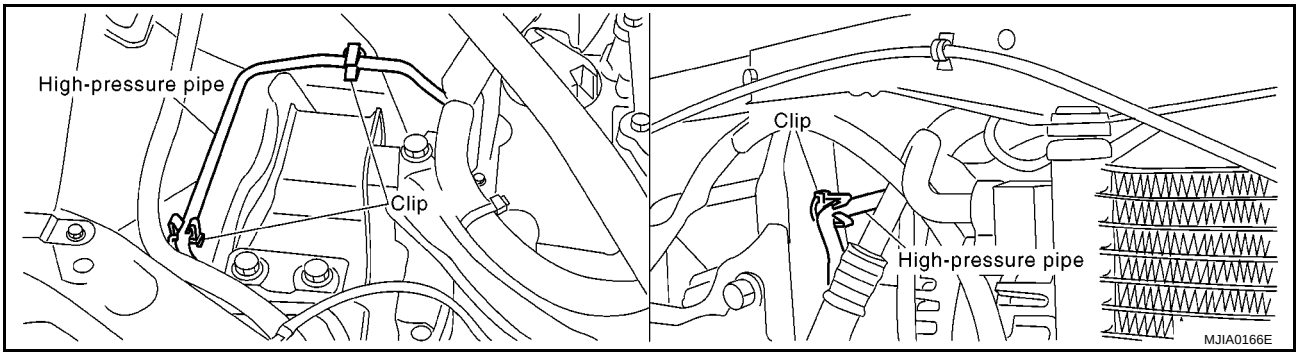
Tightening torque : 7.8 - 19.6 N·m (0.8 - 1.9 kg-m, 6 - 14 ft-lb)

Removal and Installation for High-Pressure Pipe (CR Engine Models)

EJS002GY

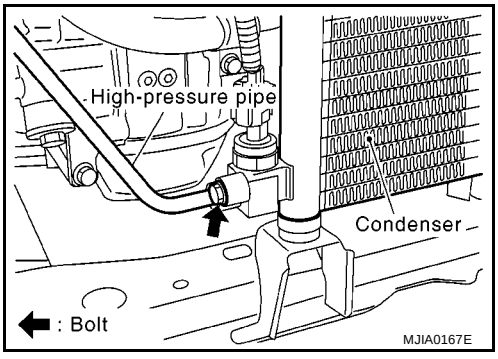
REMOVAL

1. Remove the cowl top and headlamp (RH). Refer to EI-10, "COWL TOP" and halogen headlamp model LT-41, "Removal and Installation" .
2. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
3. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
4. Remove the low-pressure flexible hose. Refer to MTC-67, "Removal and Installation for Low-Pressure Flexible Hose (CR Engine Models)" .
5. Remove the high-pressure pipe clips.



6. Remove the high-pressure pipe mounting bolts, and then remove the high-pressure pipe.

CAUTION:
Seal the pipe connection openings with caps, plastic tape, or something similar to prevent them from being exposed to the atmosphere.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace the O-ring on the high-pressure pipe with new one, and apply compressor lubricant to it before installing.**
- **When charging refrigerant, check for refrigerant leaks.**

High-pressure pipe mounting bolt

Tightening torque : 2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)

|Low-pressure flexible hose and high-pressure pipe mounting bolts (evaporator side)

Tightening torque : 2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)

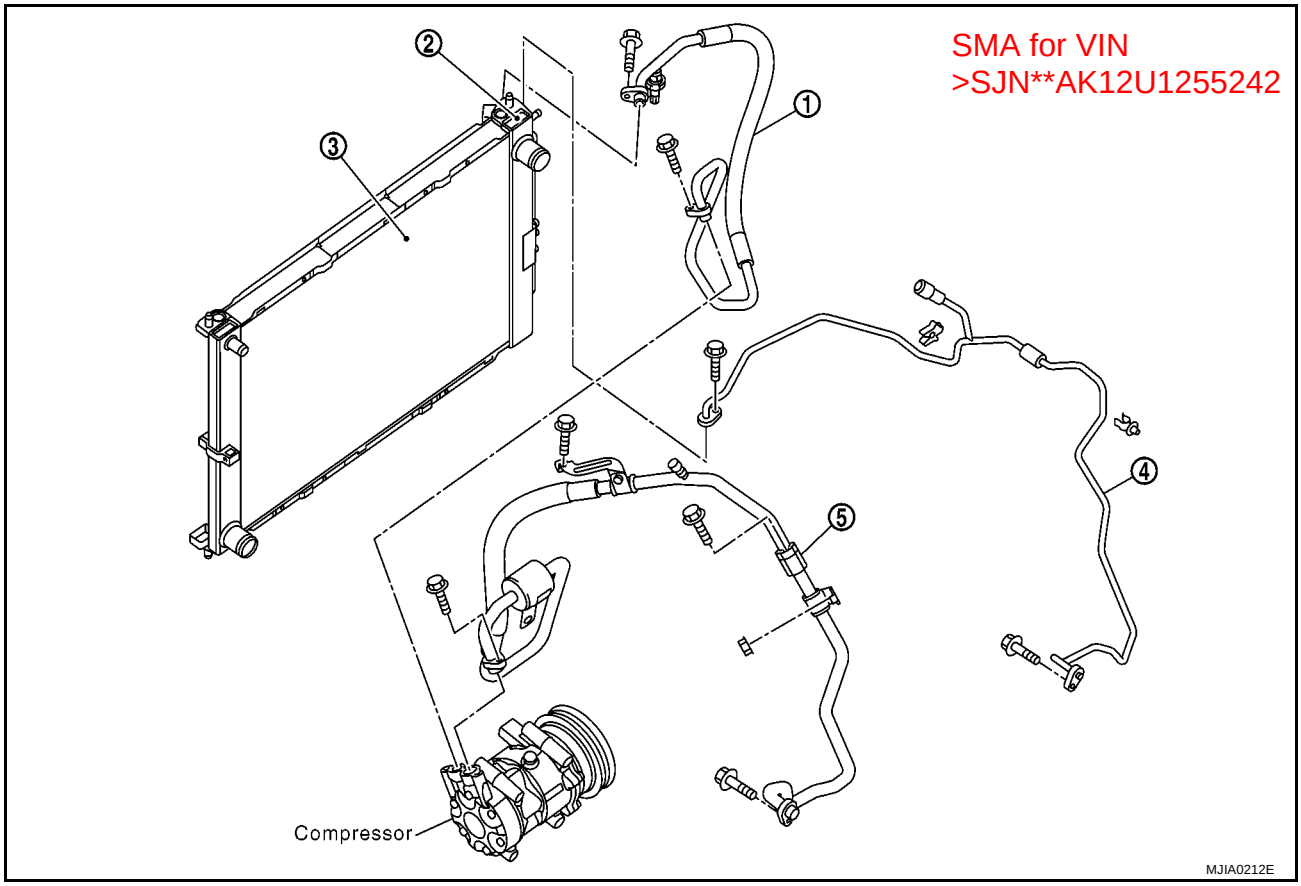
Low-pressure flexible hose mounting nuts (compressor side)

Tightening torque : 7.8 - 19.6 N·m (0.80 - 1.9 kg-m, 6 - 14 ft-lb)

Removal and Installation for Pipe and Hose (K9K Engine Models)

EJS0057L

COMPONENTS



1. High-pressure flexible hose
2. Liquid tank
3. Condenser and radiator assembly
4. High-pressure pipe
5. Low-pressure flexible hose

REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove the low-pressure flexible hose bracket mounting bolt and nut.
3. Remove the high-pressure pipe and low-pressure flexible hose mounting bolts (air conditioner unit side).

   CAUTION:

   Seal the connecting points of the pipe and hose with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.
4. Remove the low-pressure flexible hose mounting bolt (compressor side) and then remove the low-pressure flexible hose.

CAUTION:
Seal the connecting points of the hose with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

5. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
6. Remove the high-pressure pipe mounting bolt (liquid tank side) and then remove the high-pressure pipe.

CAUTION:
Seal the connecting points of the pipe with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

7. Remove the high-pressure flexible hose mounting bolts and then remove the high-pressure flexible hose.

CAUTION:
Seal the connecting points of the hoses with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

INSTALLATION

Install in the reverse order of removal.

CAUTION:

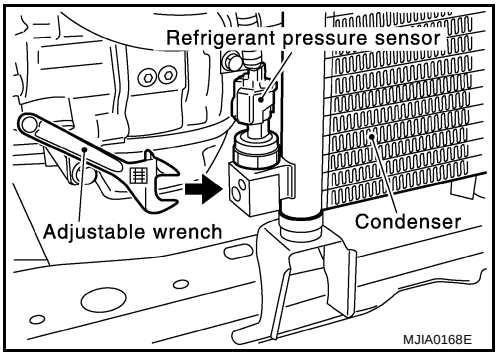
- **Replace the O-rings on the high-pressure pipe, low-pressure flexible hose, and high-pressure flexible hose with new ones, and apply compressor lubricant to O-rings before installing.**
- **When charging refrigerant, check for refrigerant leaks.**

Removal and Installation for Refrigerant Pressure Sensor

EJS002GZ

REMOVAL AND INSTALLATION

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
3. Use a adjustable wrench or other tool to hold the refrigerant pressure sensor mounting block, and then remove the refrigerant pressure sensor from the condenser (CR engine models) or high-pressure flexible hose (K9K engine models).



CAUTION:

- **Be careful when working so as not to damage the condenser core.**
- **When installing refrigerant pressure sensor, apply compressor lubricant to the O-rings.**

Refrigerant-pressure sensor

Tightening torque : 9.8 - 11.7 N·m (1.0 - 1.2 kg-m, 87 - 103 in-lb)

Removal and Installation for Condenser (CR Engine Models)

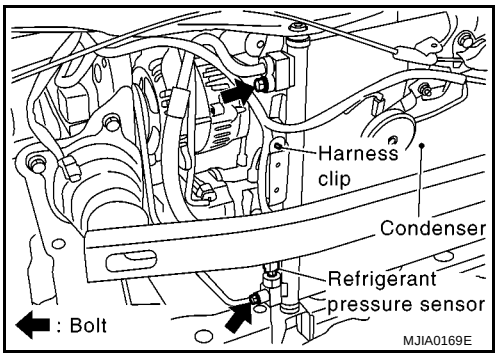
EJS002H0

REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
3. Disconnect the high-pressure flexible hose and high-pressure pipe from the condenser.

CAUTION:
Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

4. Disconnect the refrigerant pressure sensor connector, and then remove the harness clip.

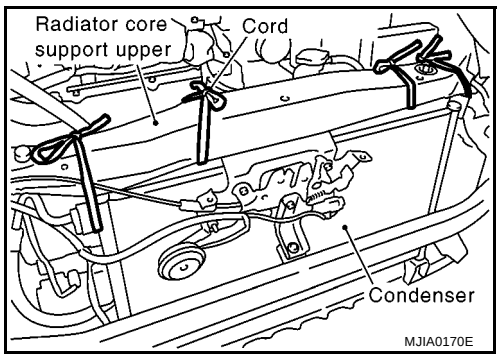


5. Use cord, etc., to hold the condenser and radiator to each radiator core support upper.

   NOTE:
   To prevent the compressor and radiator from being dropped when the radiator core lower support is removed.

6. Remove the mounting bolts, and then remove the radiator core lower support.
7. Remove the condenser from underneath the vehicle.

   CAUTION:
   Do not damage the condenser core.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace O-rings on the high-pressure pipe and high-pressure flexible hose with new ones. Apply compressor lubricant to O-rings when installing them.**
- **When charging refrigerant, check for refrigerant leaks.**

High-pressure flexible hose bolt

Tightening torque : 7.8 - 19.6 N·m (0.80 - 1.9 kg-m, 69 - 173 in -lb)

High-pressure pipe mounting bolt

Tightening torque : 2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)

Radiator core lower support mounting bolts.

Tightening torque : 43.4 - 58.7 N·m (4.5 -5.9 kg-m, 32 - 43 ft-lb)

Removal and Installation for Condenser (K9K Engine Models)

EJS0057M

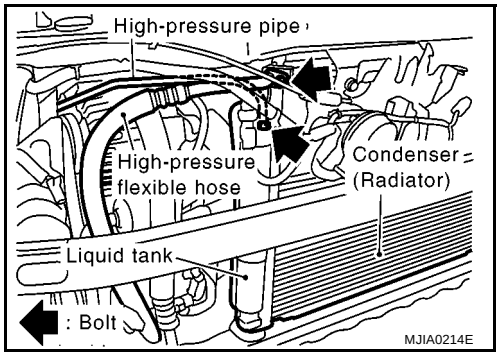
REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove the front bumper and air guide (RH). Refer to EI-4, "FRONT BUMPER" .
3. Disconnect the high-pressure flexible hose from the condenser. Disconnect the high-pressure pipe from the liquid tank.

   CAUTION:
   Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

4. Remove the radiator assembly. Refer to CO-34, "RADIATOR" .

   CAUTION:
   Do not damage the radiator and condenser core.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

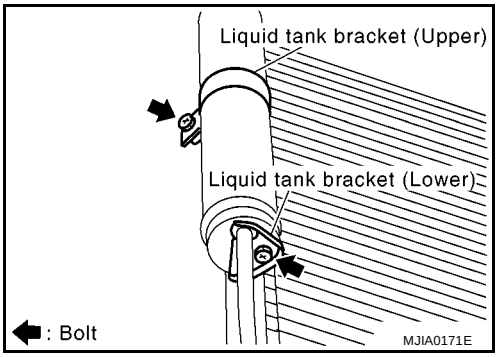
- **Replace O-rings on the high-pressure pipe and high-pressure flexible hose with new ones. Apply compressor lubricant to O-rings when installing them.**
- **When charging refrigerant, check for refrigerant leaks.**

Removal and Installation for Liquid Tank (CR Engine Models)

EJS002H1

REMOVAL

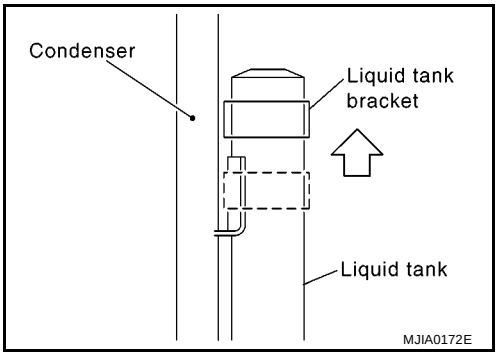
1. Use recovery/recycling recharging equipment [for HFC-134a (R143a)] to discharge refrigerant.
2. Remove condenser. Refer to MTC-71, "Removal and Installation for Condenser (CR Engine Models)" .
3. Clean around the liquid tank to remove foreign material and corrosion.
4. Remove the liquid tank mounting bolts.



5. Lift up the liquid tank bracket, and remove it from the condenser protruding area.
6. Lift up the liquid tank and remove it.

CAUTION:

Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

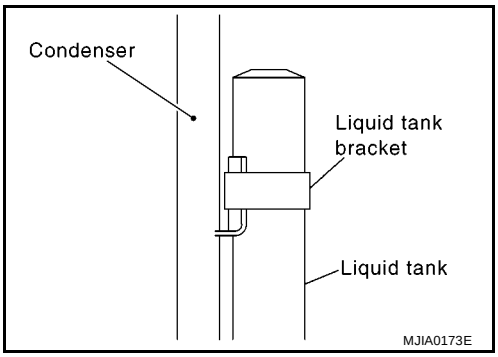


INSTALLATION

Install the liquid tank and liquid tank bracket in the condenser.

CAUTION:

- **Make sure the liquid tank bracket is correctly inserted into the condenser's protruding area (the liquid tank bracket does not move below the center of the liquid tank).**
- **Replace the condenser pipe O-rings with new ones. Apply a coat of compressor lubricant to the O-rings prior to installation.**



Liquid tank bracket (upper) mounting bolts

Tightening torque : 2.94 - 3.82 N·m (0.30 - 0.38 kg-m, 26 - 33 in-lb)

Liquid tank bracket (lower) mounting bolts

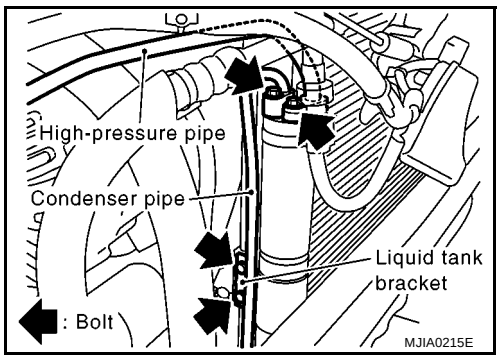
Tightening torque : 5.0 - 6.47 N·m (0.51 - 0.65 kg-m, 45 - 57 in-lb)

Removal and Installation for Liquid Tank (K9K Engine Models)

EJS0057N

REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R143a)] to discharge refrigerant.
2. Clean around the liquid tank to remove foreign material and corrosion.
3. Remove the high-pressure pipe from the liquid tank.
4. Remove the condenser pipe mounting bolt from the liquid tank, and remove pipe from the condenser protruding area.
5. Remove the liquid tank bracket bolts and then remove the liquid tank.



CAUTION:

Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

INSTALLATION

Install the liquid tank and liquid tank bracket in the condenser.

CAUTION:

Replace the condenser pipe O-rings with new ones. Apply a coat of compressor lubricant to the O-rings prior to installation.

Removal and Installation for Evaporator

EJS002H2

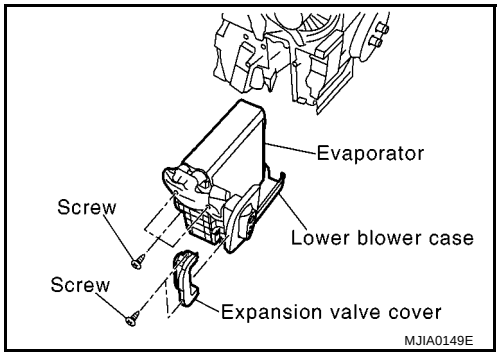
REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Remove the air conditioner unit. Refer to MTC-45, "A/C UNIT ASSEMBLY" .

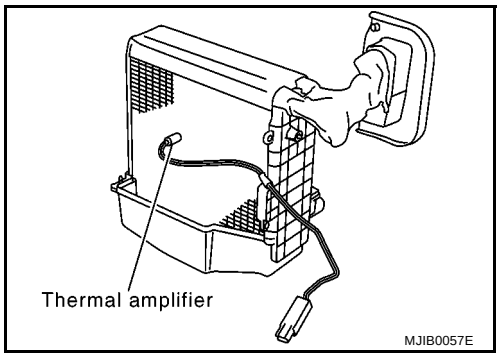
CAUTION:

Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

3. Remove the air conditoner filter and foot duct (RH). Refer to MTC-52, "AIR CONDITIONER FILTER" and MTC-60, "FOOT DUCT" .
4. Remove the lower blower case and expansion valve cover.



5. Slide the evaporator and door blower case downward, and remove the thermal amplifier.
6. Remove the evaporator from the lower blower case.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Replace low-pressure flexible hose and high-pressure pipe O-rings with new ones. Apply a coat of compressor lubricant prior to installation.**
- **When installing a new evaporator, install the thermal amplifier thermistor in the same position as the removed thermal amplifier.**
- **When removing and installing the thermal amplifier, do not rotate the thermistor's insertion part.**

Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.

Tightening torque : 2.9 - 5.9 N·m (0.3 - 0.6 kg-m)

Removal and Installation for Expansion Valve

EJS002H3

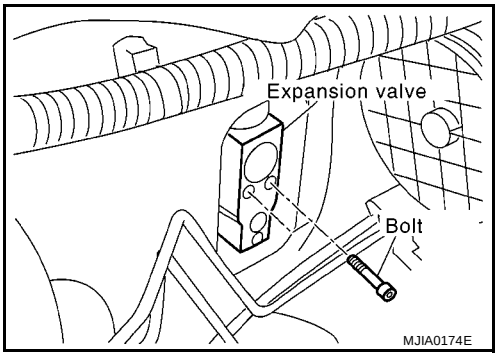
REMOVAL

1. Use recovery/recycling recharging equipment [for HFC-134a (R-134a)] to discharge refrigerant.
2. Disconnect the low-pressure flexible hose and high-pressure pipe from the evaporator.

CAUTION:

Seal the connecting points of the pipes with caps and vinyl tape, etc. to prevent them from being exposed to the atmosphere.

3. Remove the bolts from the expansion valve, and then remove the expansion valve.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

Replace the removed O-rings with new ones. Apply a coat of compressor lubricant to the O-rings prior to installation.

Expansion valve mounting bolts

Tightening torque : 2.9 - 5.0 N·m (0.30 - 0.51 kg-m, 26 - 44 in-lb)

Mounting bolts for the low-pressure flexible hoses and high-pressure pipes.

Tightening torque : 2.9 - 5.9 N·m (0.30 - 0.60 kg-m, 26 - 52 in-lb)

Checking for Refrigerant Leaks

EJS002HJ

Perform a visual inspection of all refrigeration parts, fittings, hoses and components for signs of A/C lubricant leakage, damage and corrosion. A/C lubricant leakage may indicate an area of refrigerant leakage. Allow extra inspection time in these areas when using either an electronic refrigerant leak detector or fluorescent dye leak detector.

If dye is observed, confirm the leak with an electronic refrigerant leak detector. It is possible a prior leak was repaired and not properly cleaned.

When searching for leaks, do not stop when one leak is found but continue to check for additional leaks at all system components and connections.

When searching for refrigerant leaks using an electronic leak detector, move the probe along the suspected leak area at 1 to 2 inches per second and no further than 1/4 inch from the component.

CAUTION:

Moving the electronic leak detector probe slower and closer to the suspected leak area will improve the chances of finding a leak.

Checking System for Leaks Using the Fluorescent Leak Detector

EJS002HK

1. Check A/C system for leaks using the UV lamp and safety goggles (J-42220) in a low sunlight area (area without windows preferable). Illuminate all components, fittings and lines. The dye will appear as a bright green/yellow area at the point of leakage. Fluorescent dye observed at the evaporator drain opening indicates an evaporator core assembly (tubes, core or expansion valve) leak.
2. If the suspected area is difficult to see, use an adjustable mirror or wipe the area with a clean shop rag or cloth, with the UV lamp for dye residue.
3. After the leak is repaired, remove any residual dye using dye cleaner (J-43872) to prevent future misdiagnosis.
4. Perform a system performance check and verify the leak repair with an approved electronic refrigerant leak detector.

NOTE:
Other gases in the work area or substances on the A/C components, for example, anti-freeze, windshield washer fluid, solvents and lubricants, may falsely trigger the leak detector. Make sure the surfaces to be checked are clean.
Clean with a dry cloth or blow off with shop air.
Do not allow the sensor tip of the detector to contact with any substance. This can also cause false readings and may damage the detector.

Dye Injection

EJS002HL

(This procedure is only necessary when recharging the system or when the compressor has seized and was replaced.)

1. Check A/C system static (at rest) pressure. Pressure must be at least 345 kPa (50 psi).
2. Pour one bottle (1/4 ounce / 7.4 cc) of the A/C refrigerant dye into the injector tool (J-41459).
3. Connect the injector tool to the A/C LOW PRESSURE side service fitting.
4. Start engine and switch A/C ON.
5. When the A/C operating (compressor running), inject one bottle (1/4 ounce / 7.4 cc) of fluorescent dye through the low-pressure service valve using dye injector tool J-41459 (refer to the manufacture's operating instructions).
6. With the engine still running, disconnect the injector tool from the service fitting.

CAUTION:
Be careful the A/C system or replacing a component, pour the dye directly into the open system connection and proceed with the service procedures.

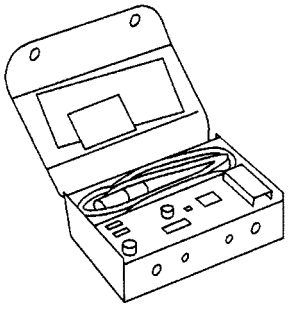
7. Operate the A/C system for a minimum of 20 minutes to mix the dye with the system oil. Depending on the leak size, operating conditions and location of the leak, it may take from minutes to days for the dye to penetrate a leak and become visible.

Electronic Refrigerant Leak Detector

EJS002HM

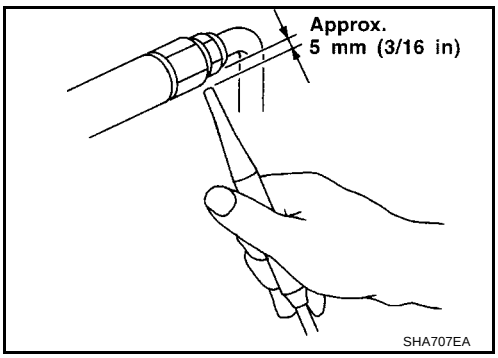
PRECAUTIONS FOR HANDLING LEAK DETECTOR

When performing a refrigerant leak check, use an A/C leak detector or equivalent. Ensure that the instrument is calibrated and set properly per the operating instructions.
The leak detector is a delicate device. In order to use the leak detector properly, read the operating instructions and perform any specified maintenance.

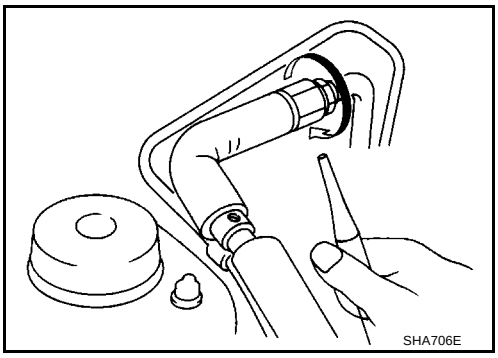


A/C leak detector SHA705EB

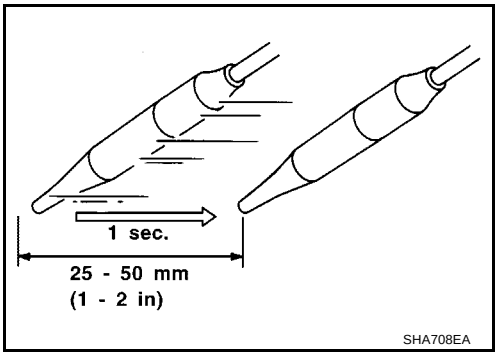
1. Position probe approximately 5 mm (3/16 in) away from point to be checked.



2. When testing, circle each fitting completely with probe.



3. Move probe along component approximately 25 to 50 mm (1 to 2 in)/sec.



CHECKING PROCEDURE

To prevent inaccurate or false readings, make sure there is no refrigerant vapor, shop chemicals, or cigarette smoke in the vicinity of the vehicle. Perform the leak test in calm area (low air/wind movement) so that the leaking refrigerant is not dispersed.

1. Turn engine OFF.
2. Connect a suitable A/C manifold gauge set to the A/C service ports.
3. Check if the A/C refrigerant pressure is at least 345 kPa (3.52 kg/cm^2 , 50 psi) above 16°C (61°F). If less than specification, recover/evacuate and recharge the system with the specified amount of refrigerant.

NOTE:
At temperatures below 16°C (61°F), leaks may not be detected since the system may not reach 345 kPa (3.54 kg/cm^2 , 50 psi).

4. Conduct the leak test from the high side (compressor discharge a to evaporator inlet g) to the low side (evaporator drain hose h to shaft seal k). Refer to MTC-20, "Component Parts Location" \. Perform a leak check for the following areas carefully. Clean the component to be checked and move the leak detected probe completely around the connection/component.
   Compressor
   Check the fitting of high and low pressure hoses, relief valve and shaft seal.
   Liquid tank
   Check the refrigerant pressure sensor or dual pressure switch.
   Service valves
   Check all around the service valves. Ensure service valve caps are secured on the service valves (to prevent leaks).

NOTE:
After removing A/C manifold gauge set from service valves, wipe any residue from valves to prevent any false readings by leak detector.

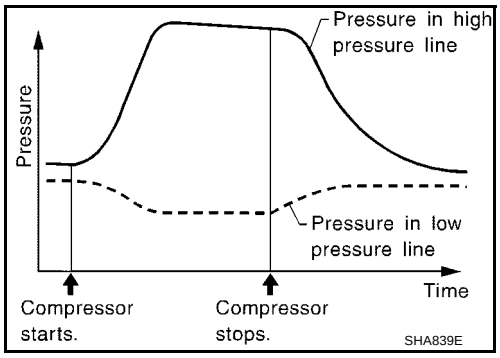
Cooling unit (Evaporator)
With engine OFF, turn blower fan on "High" for at least 15 seconds to dissipate any refrigerant trace in the cooling unit. Wait a minimum of 10 minutes accumulation time (refer to the manufacturer's recommended procedure for actual wait time) before inserting the leak detector probe into the drain hose.
Keep the probe inserted for at least 10 seconds. Use caution not to contaminate the probe tip with water or dirt that may be in the drain hose.

5. If a leak detector detects a leak, verify at least once by blowing compressed air into area of suspected leak, then repeat check as outlined above.
6. Do not stop when one leak is found. Continue to check for additional leaks at all system components.
   If no leaks are found, perform steps 7 - 10.
7. Start engine.
8. Set the heater A/C control as follows;

a. A/C switch: ON
b. Face mode
c. Intake position: Recirculation
d. Max cold temperature
e. Fan speed: High

9. Run engine at 1,500 rpm for at least 2 minutes.
10. Turn engine off and perform leak check again following steps 4 through 6 above.

Refrigerant leaks should be checked immediately after stopping the engine. Begin with the leak detector at the compressor. The pressure on the high pressure side will gradually drop after refrigerant circulation stops and pressure on the low pressure side will gradually rise, as shown in the graph. Some leaks are more easily detected when pressure is high.



11. Before connecting ACR4 to vehicle, check ACR4 gauges. No refrigerant pressure should be displayed. If pressure is displayed, recover refrigerant from equipment lines and then check refrigerant purity.
12. Discharge A/C system using approved refrigerant recovery equipment. Repair the leaking fitting or component as necessary.
13. Evacuate and recharge A/C system and perform the leak test to confirm no refrigerant leaks.
14. Conduct A/C performance test to ensure system works properly.

PARKING BRAKE SYSTEM

PFP:36010

On Board Inspection and Service

EFS002FO

LEVER STROKE

- Operate parking brake lever with a force of 196 N (20 kg, 44.1 lb). Check if stroke is within specified number of notches. (Check it by hearing clicks of ratchet.)

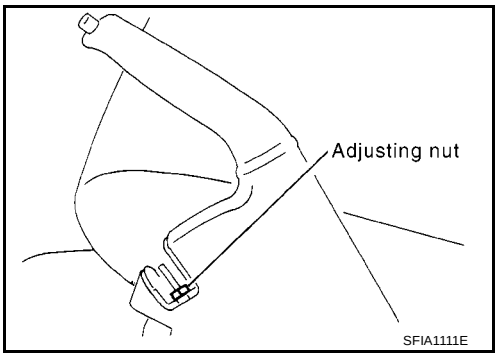
Lever stroke :11-12 notches

Adjustment

EFS002FP

1. Insert a socket wrench into opening of parking brake lever. Rotate adjusting nut to fully loosen cable, then return parking brake lever.
2. Depress the foot brake several times (about 2 or 3 times) and adjust the rear shoe clearance.

   NOTE:
   Be sure to securely depress the foot brake.

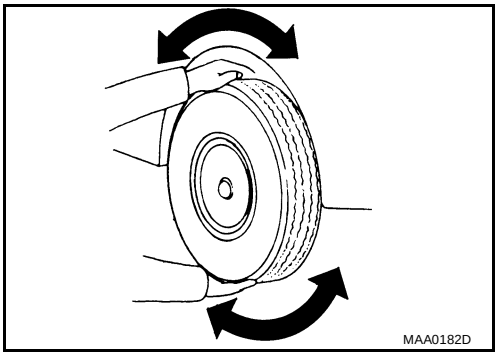


3. Rotate the road wheels to make sure that there is no drag.
4. Use the following procedure to adjust the cable.

a. Pull the lever up to the position where a socket wrench can be inserted.

b. Insert a socket wrench into the opening of the lever, and rotate the adjusting nut to adjust lever stroke.

   NOTE:
   Do not reuse adjusting nut after removing it.

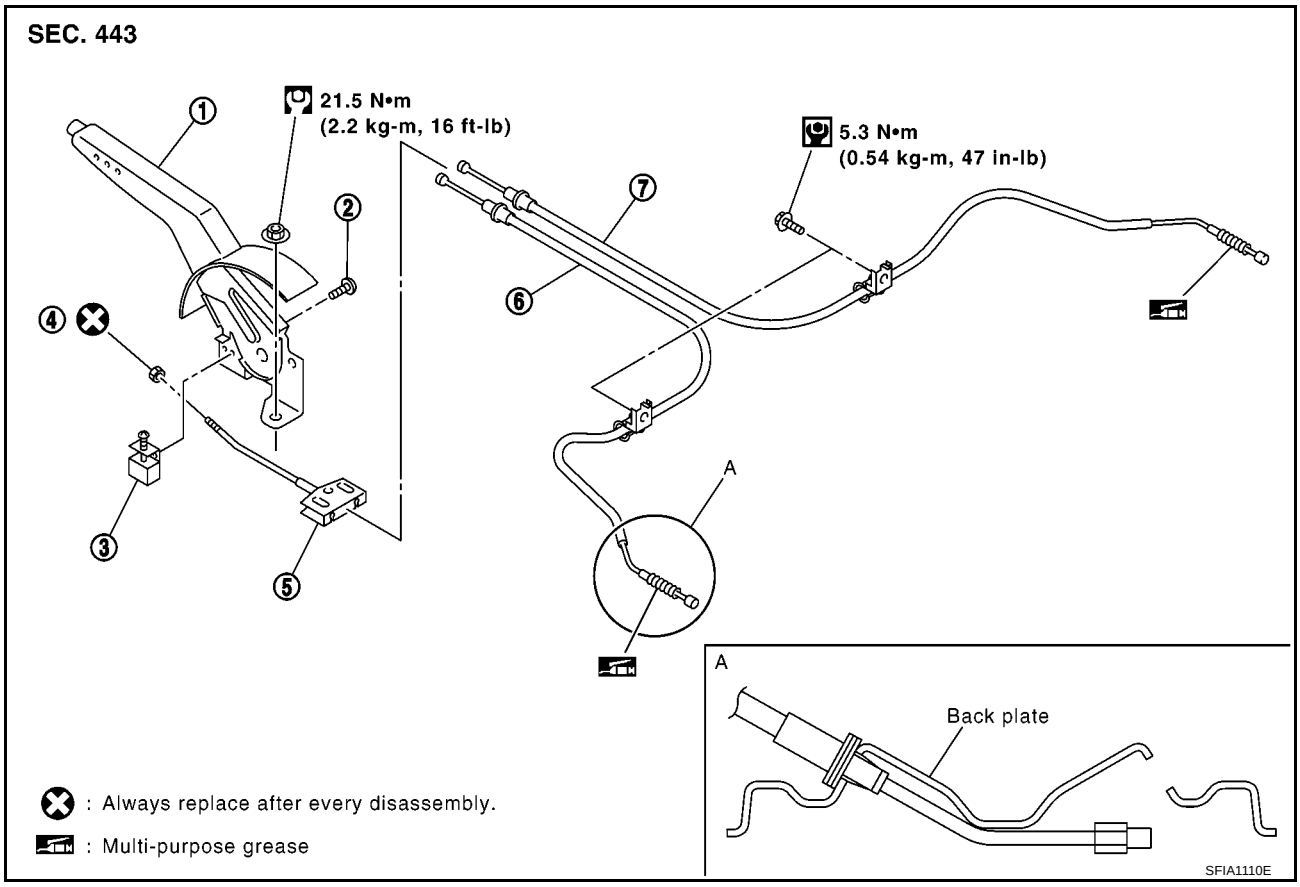


c. After operating the lever 3 to 4 times with a force of 196 N (20 kg, 44.1 lb), make sure that the lever stroke is within the specified number of notches.

d. With the lever completely returned, make sure that there is no drag on the rear brake.

Components

EFS002FQ



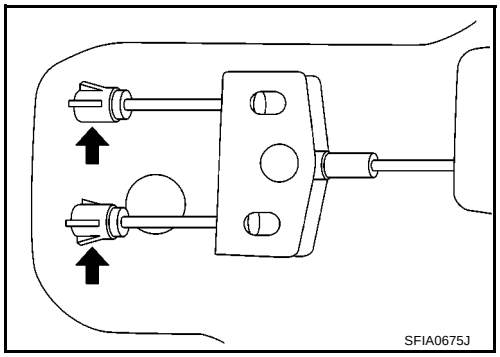
1. Device assembly
2. Screw
3. Warning lamp switch
4. Adjusting nut
5. Front cable
6. Rear left cable
7. Rear right cable

Removal and Installation

EFS002FR

REMOVAL

1. Remove the console box. Refer to IP-9, "REMOVAL AND INSTALLATION OF CONSOLE BOX." .
2. Disconnect warning lamp switch connector.
3. Loosen adjusting nut and separate the rear left and rear right cable.
4. Remove device assembly tightening nuts, and remove device assembly from vehicle.



5. Remove tire from vehicle.
6. Remove rear brake shoe and remove cable from the operating lever. Refer to BR-27, "Components" .
7. Remove the exhaust center tube and heat plate. Refer to EX-3, "EXHAUST SYSTEM" .
8. Disconnect the rear cable mount and remove it from the vehicle.

INSTALLATION

1. Install in the reverse order of removal. Tighten nuts and bolts to the specified torque.
2. Adjust the parking brake. Refer to PB-3, "Adjustment" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS008IN

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EKS008IP

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

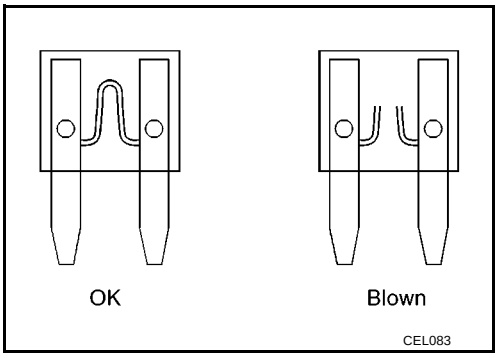
Fuse

EKS00797

- If fuse is blown, be sure to eliminate cause of incident before installing new fuse.
- Use fuse of specified rating. Never use fuse of more than specified rating.
- Do not partially install fuse; always insert it into fuse holder properly.
- Remove fuse for “ELECTRICAL PARTS (BAT)” if vehicle is not used for a long period of time.



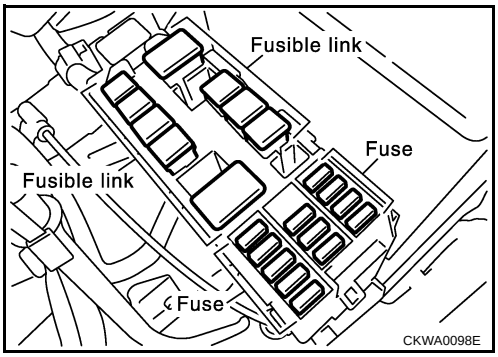
Fusible Link

EKS00798

A melted fusible link can be detected either by visual inspection or by feeling with finger tip. If its condition is questionable, use circuit tester or test lamp.

CAUTION:

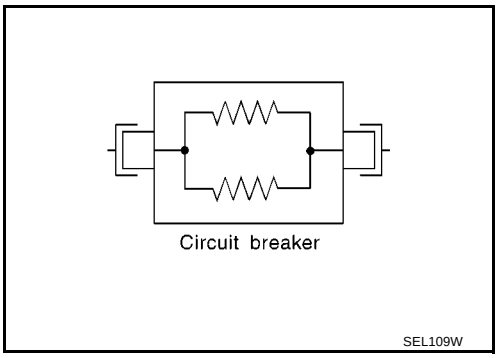
- **If fusible link should melt, it is possible that critical circuit (power supply or large current carrying circuit) is shorted. In such a case, carefully check and eliminate cause of incident.**
- **Never wrap outside of fusible link with vinyl tape. Important: Never let fusible link touch any other wiring harness, vinyl or rubber parts.**



Circuit Breaker

EKS00799

The PTC thermistor generates heat in response to current flow. The temperature (and resistance) of the thermistor element varies with current flow. Excessive current flow will cause the element's temperature to rise. When the temperature reaches a specified level, the electrical resistance will rise sharply to control the circuit current. Reduced current flow will cause the element to cool. Resistance falls accordingly and normal circuit current flow is allowed to resume.



IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM)

PFP:284B7

System Description

EKS0080P

- IPDM E/R (INTELLIGENT POWER DISTRIBUTION MODULE ENGINE ROOM) integrates the relay box and the fuse box which has been conventionally placed in the engine room. It controls the built-in relay with the control circuit in IPDM E/R.
- IPDM E/R integrated control circuit performs ON-OFF control of the relay and transmission of various signals (oil pressure switch, park/neutral position switch, reverse switch) through CAN communication with BCM and ECM.

NOTE:
All IPDM E/R integrated relays can never be removed.

SYSTEMS CONTROLLED BY IPDM E/R

1. Lamp control
   Using the CAN communication line, it receives signals from BCM and controls following lamps:
   - Headlamps (Hi, Lo)
   - Parking lamps, tail lamps and license plate lamp
   - Front fog lamps
2. Front wiper control
   Using the CAN communication line, it receives signals from BCM and controls front wiper.
3. Headlamp washer control
   Using the CAN communication line, it receives signals from BCM and controls headlamp washer.
4. Rear window defogger control
   Using the CAN communication line, it receives signals from BCM and controls rear window defogger.
5. A/C compressor control
   Using the CAN communication line, it receives signals from ECM and controls A/C compressor.
6. Cooling fan control
   Using the CAN communication line, it receives signals from ECM and controls cooling fan.

FAIL-SAFE FUNCTION

- When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. After CAN communication recovers normally, it also returns to normal control.
- Operation of control parts by IPDM E/R during fail-safe mode is as follows:

Controlled parts	Fail-safe mode
Headlamp	With the ignition switch ON, the headlamp (low) is ON. With the ignition switch OFF, the headlamp (low) is OFF.
Parking lamp/ license plate lamp/ tail lamp	With the ignition switch ON, the tail lamp is ON. With the ignition switch OFF, the tail lamp is OFF.
Cooling fan	With the ignition switch ON, the cooling fan HI operates. With the ignition switch OFF, the cooling fan stops.
Front wiper	Until the ignition switch is turned off, the front wiper LO and HI remains in the same status it was in just before fail-safe control was initiated.
Rear window defogger	Rear window defogger is OFF
Front fog lamp	Front fog lamp is OFF
Headlamp washer	Headlamp washer is OFF
A/C compressor	A/C compressor is OFF

IPDM E/R STATUS CONTROL

In order to save power, the IPDM E/R switches status by itself based on each operating condition.

1. CAN communication status
   - CAN communication is normally performed with other control units.
   - Individual unit control by the IPDM E/R is normally performed.
   - When the IPDM E/R is not controlling any load, a sleep request signal is received from the BCM and the mode is switched to sleep waiting status.
2. Sleep waiting status
   - Process to stop CAN communication is activated.
   - All systems controlled by IPDM E/R are stopped. When 1 second has elapsed after CAN communication with other control units is stopped, mode switches to sleep status.
3. Sleep status
   - The IPDM E/R operates in low current consumption mode.
   - CAN communication is not active.
   - When a change in the CAN communication line or ignition switch ON is detected, the mode switches to CAN communication status.

FUNCTION OF IPDM E/R

- Park/neutral position switch signal output function
  The signal (ON/OFF) input from the Park/neutral position is output to ECM.
- Oil pressure switch output function
  The signal (ON/OFF) input from the oil pressure switch is output to the combination meter using the CAN communication line.
- Reverse switch signal output function
  The signal (ON/OFF) input from the reverse switch is output to BCM using the CAN communication line.

CAN Communication

EKS00KKK

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

Function of Detecting Ignition Relay Malfunction

EKS0080R

- When a contact point of the integrated ignition relay is stuck and cannot be turned OFF, the IPDM E/R turns ON tail lamp relay for 10 minutes to indicate IPDM E/R malfunction.

NOTE:
When the ignition switch is turned ON, the tail lamp is off.

CONSULT-II Function (IPDM E/R)

EKS0080S

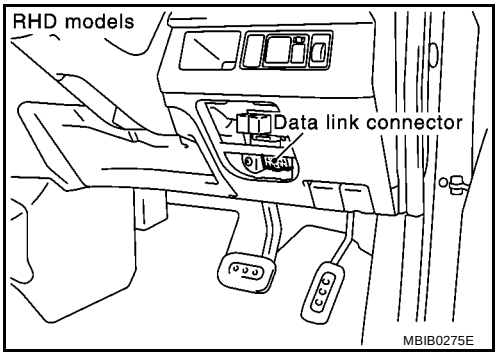
CONSULT-II can display each diagnostic item using the diagnostic modes shown following. Data is recieved and transmitted via the control module communication line.

Inspection Item, Diagnosis Mode	Description
SELF-DIAG RESULTS	The IPDM E/R performs diagnosis of the CAN communication and self-diagnosis.
DATA MONITOR	The input/output data of the IPDM E/R is displayed in real time.
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.
ACTIVE TEST	The IPDM E/R sends a drive signal to electronic components to check their operation.

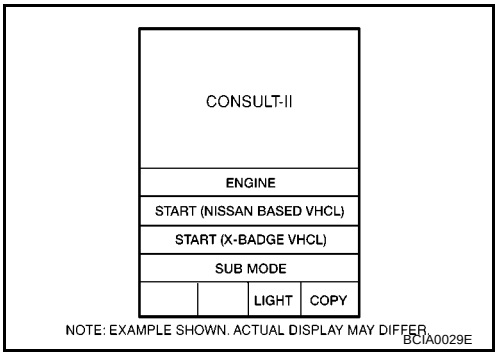
CONSULT-II BASIC OPERATION

1. Turn ignition switch OFF.
2. Connect CONSULT-II CONVERTER and CONSULT-II to data link connector.

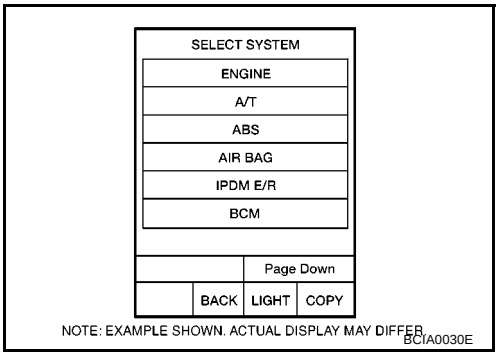
   CAUTION:
   If CONSULT-II is used without connecting CONSULT-II CONVERTER, malfunction may be detected in some control unit performing CAN communication by self-diagnosis.
3. Turn ignition switch ON.



4. Touch “START (NISSAN BASED VHCL)”.

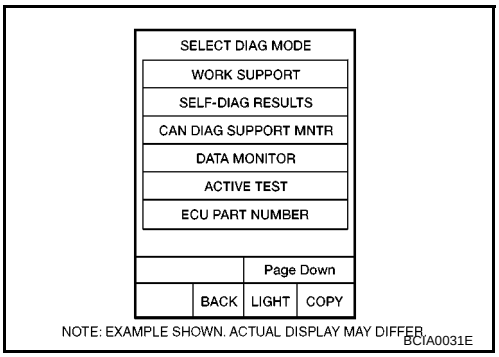


5. Touch “IPDM E/R” on “SELECT SYSTEM” screen.
   - If “IPDM E/R” is not displayed, print “SELECT SYSTEM” screen, then refer to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER
BCIA0030E

6. Select part to be diagnosed on “SELECT DIAG MODE” screen.



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER
BCIA0031E

SELF-DIAG RESULTS

Operation Procedure

1. Touch “SELF-DIAG RESULTS” on “SELECT DIAG MODE” screen.
2. Check display content in self-diagnostic results.

Display Item List

Display Items	Malfunction Return Condition	TIME		Possible causes
		CRNT	PAST	
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.	—	—	—	—
CAN COMM CIRCUIT	● If CAN communication reception/transmission data has an malfunction, or if any of the control units malfunction, data reception/transmission cannot be confirmed. ● When the data in CAN communication is not received before the specified time	×	×	Any of or several items below have malfunctions. ● CAN CIRC 1 ● CAN CIRC 2 ● CAN CIRC 3 ● CAN1 STAT ● CAN2 STAT ● CAN3 STAT
IGN RELAY ON	When the ignition switch is not ON position, the ignition relay in the IPDM E/R is ON.	×	×	Ignition relay (integrated in IPDM E/R)
IGN RELAY OFF	When the ignition switch is ON position, the ignition relay in the IPDM E/R is OFF.	×	×	Ignition relay (integrated in IPDM E/R)
EEPROM	Malfunction is detected with the integrated EEPROM memory diagnosis.	×	×	IPDM E/R

×:Applicable

NOTE:
The details for display of the period are as follows:

- CRNT: Malfunction currently detected with IPDM E/R.
- PAST: Malfunction detected in the past and memorized with IPDM E/R.

DATA MONITOR

Operation Procedure

1. Touch “DATA MONITOR” on “SELECT MONITOR ITEM ” screen.
2. Touch “ALL SIGNALS”, “MAIN SIGNALS” or “SELECT FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
MAIN SIGNALS	Monitor the predetermined item.
SELECT FROM MENU	Select any item for monitoring.

3. Touch “START”.
4. Touch the required monitoring item on “SELECT ITEM MENU”. In “ALL SIGNALS”, all items are monitored. In “MAIN SIGNALS”, predetermined items are monitored.
5. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

All Items, Main Items, Select Item Menu

Item name	Display or unit	Monitor item selection			Description
		ALL SIGNALS	MAIN SIGNALS	SELECT FROM MENU	
MOTOR FAN REQ	1/2/3/4	×	×	×	Signal status input from ECM
A/C COMP REQ	ON/OFF	×	×	×	Signal status input from ECM
TAIL & CLR REQ	ON/OFF	×	×	×	Signal status input from BCM
HL LO REQ	ON/OFF	×	×	×	Signal status input from BCM
HL HI REQ	ON/OFF	×	×	×	Signal status input from BCM
FR FOG REQ	ON/OFF	×	×	×	Signal status input from BCM
HL WASHER REQ	ON/OFF	×		×	This item cannot be monitored. (No change of display)
FR WIP REQ	OFF/1LO/LO/HI	×	×	×	Signal status input from BCM
WIP AUTO STOP	ON/OFF	×	×	×	Output status of IPDM E/R
WIP PROTECTION	OFF/LS/HS/Block	×		×	Control status of IPDM E/R
ST RLY REQ	ON/OFF	×		×	Status of input signal CAUTION
IGN RLY STATUS	ON/OFF	×	×	×	Ignition relay status monitored with IPDM E/R
RR DEF REQ	ON/OFF	×	×	×	Signal status input from BCM
RR DEF STOP REQ	ON/OFF	×		×	Input signal status
ALT LOAD	%	×		×	This item cannot be monitored. (No change of display)
ALT CRNT	A	×		×	
ALT NO	##	×		×	
BAT VOLT	V	×		×	Value measured with IPDM E/R
ENG COOL TEMP	°C	×		×	Signal status input from ECM
OIL P SW	OPEN/CLOSE	×		×	Signal status input in IPDM E/R
REV SW	OPEN/CLOSE	×		×	Signal status input in IPDM E/R

×:applicable

NOTE:

- Perform monitoring of IPDM E/R data with the ignition switch ON. When the ignition switch is at ACC, the display may not be correct.
- The vehicle without the intelligent key system displays only ON without change.

ACTIVE TEST

Operation Procedure

1. Touch “ACTIVE TEST” on “SELECT DIAG–MODE” screen.
2. Touch item to be tested, and check operation.
3. Touch “START”.
4. Touch “STOP” while testing to stop the operation.

Test item	CONSULT-II screen display	Description
Headlamp (HI, LO) output	HEADLAMP	With a certain operation (OFF, HI ON, LO ON), the headlamp relay (Lo, Hi) can be operated.
Front fog lamp output	FRONT FOG LAMP	With a certain ON-OFF operation, the fog lamp relay can be operated.
Tail lamp output	TAIL LAMP	With a certain ON-OFF operation, the tail lamp relay can be operated.
Rear window defogger output	REAR DEFOGGER	With a certain ON-OFF operation, the rear window defogger relay can be operated.
Front wiper (HI, LO) output	FRONT WIPER	With a certain operation (OFF, HI ON, LO ON), the front wiper relay (Lo, Hi) can be operated.
Cooling fan output	MOTOR FAN	With a certain operation (OFF, Status 1, Status 2, Status 3), the cooling fan can be operated.
Headlamp washer output	HEADLAMP WASHER	With a certain ON-OFF operation, the headlamp washer can be operated.

Configuration

EKS00EJ9

DESCRIPTION

There are two CONFIGURATION functions, as follows.
READ CONFIGURATION is a function for confirming the vehicle configuration written on IPDM E/R.
WRITE CONFIGURATION is a function for writing a vehicle configuration to IPDM E/R.

CAUTION:

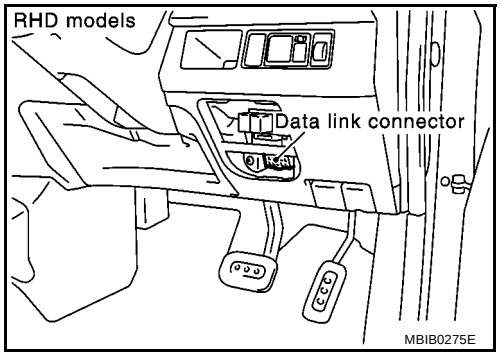
- **When replacing IPDM E/R, completely perform WRITE CONFIGURATION with CONSULT-II.**
- **Orderly complete the procedure of WRITE CONFIGURATION.**
- **If you set incorrect WRITE CONFIGURATION, vehicle operation will not be correct.**
- **Configuration is different by each vehicle model, confirm configuration in each case.**

READ CONFIGURATION PROCEDURE

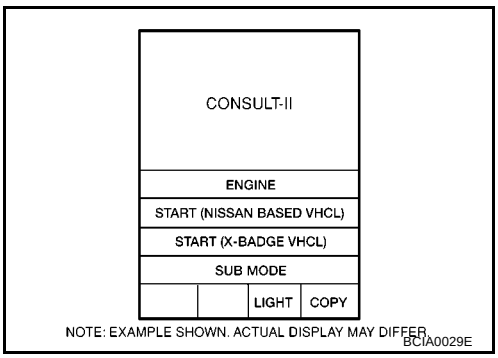
CAUTION:

If CONSULT-II is used with no connection of CONSULT CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

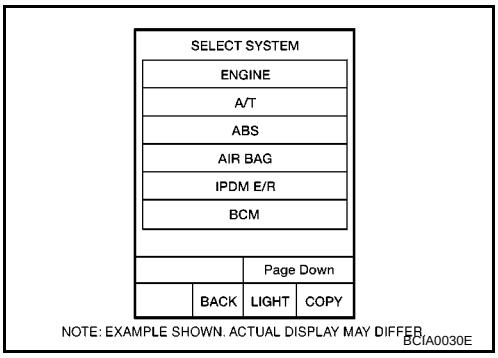
1. With the ignition switch OFF, connect CONSULT-II and CONSULT-II CONVERTER to the data link connector, then turn the ignition switch ON.



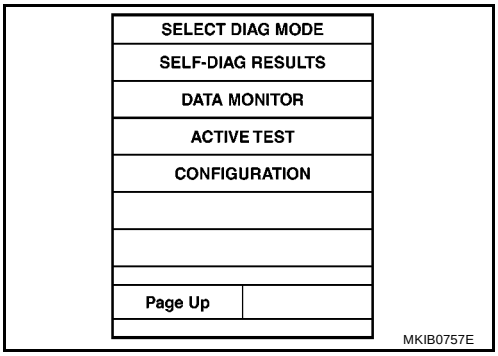
2. Touch “START(NISSAN BASED VHCL)”.



3. Touch “IPDM E/R” on “SELECT SYSTEM” screen.
If “IPDM E/R” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .

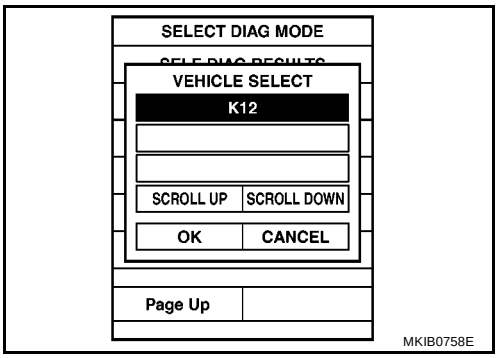


4. Touch “CONFIGURATION” on “SELECT DIAG MODE” screen.

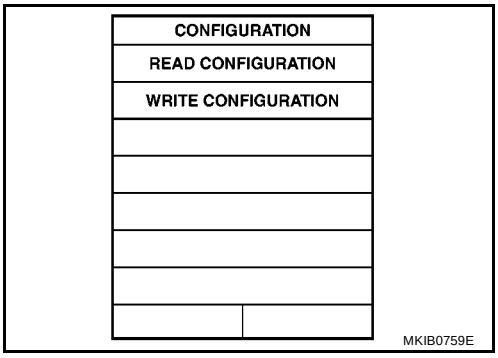


5. Touch “K12”, and “OK” on “VEHICLE SELECT” screen.
For canceling, touch “CANCEL” on “VEHICLE SELECT” screen.

NOTE:
Confirm vehicle model on IDENTICATION PLATE, refer to GI section.



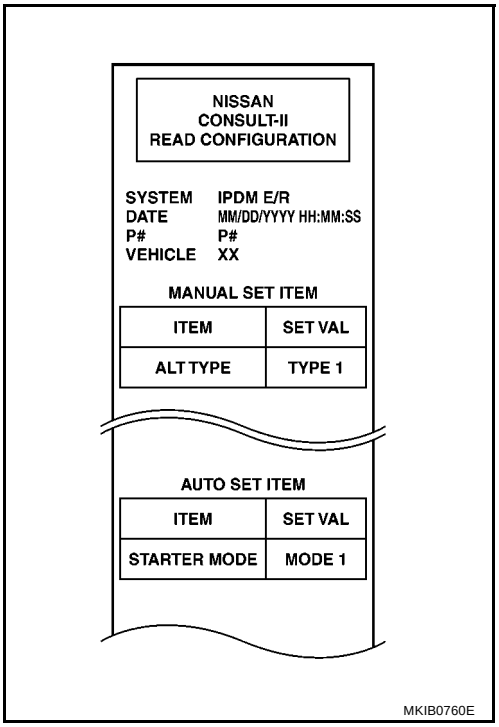
6. Touch “READ CONFIGURATION” on “CONFIGURATION” screen.



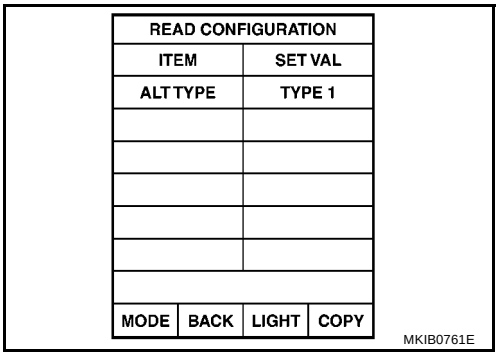
7. Configuration of current IPDM E/R are printed out automatically. Configuration of brand-new IPDM E/R before executing “WRITE CONFIGURATION” is as follows.

MANUAL SET ITEM	
ITEM	SET VAL
ALT TYPE	TYPE 1

AUTO SET ITEM	
STARTER MODE	MODE 1



8. Touch “BACK” on “ READ CONFIGURATION“screen.

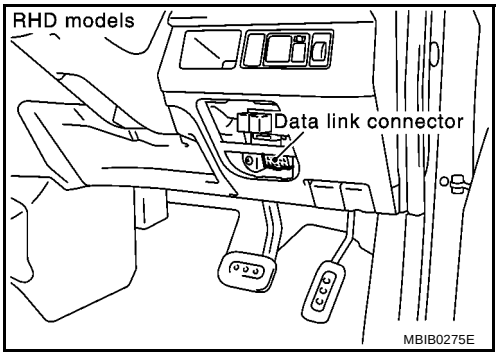


WRITE CONFIGURATION PROCEDURE

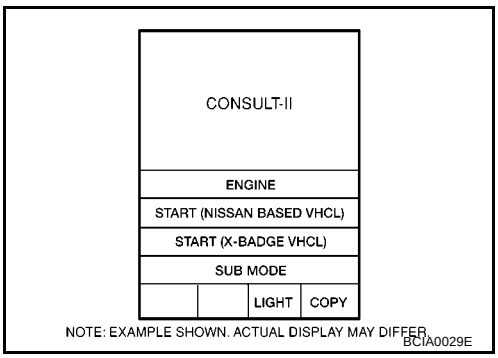
CAUTION:

If CONSULT-II is used with no connection of CONSULT CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

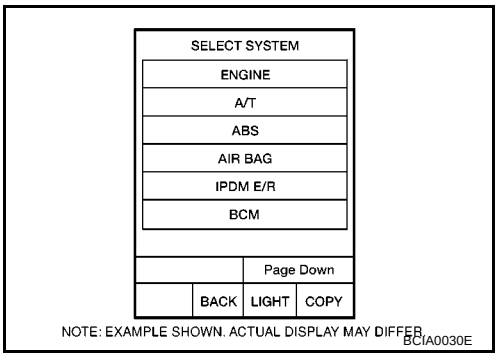
1. With the ignition switch OFF, connect CONSULT-II and CONSULT-II CONVERTER to the data link connector, then turn the ignition switch ON.



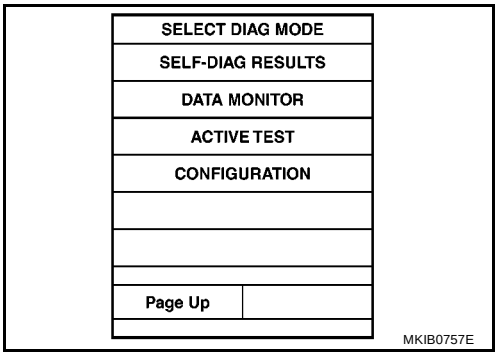
2. Touch “START(NISSAN BASED VHCL)”.



3. Touch “IPDM E/R” on “SELECT SYSTEM” screen.
If “IPDM E/R” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .

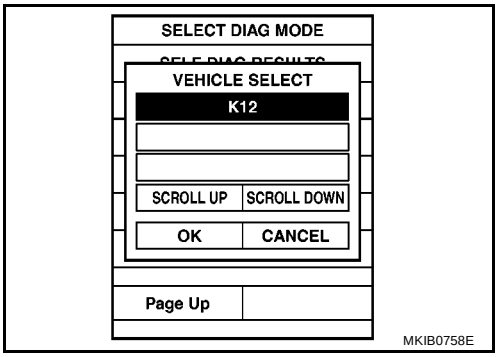


4. Touch “CONFIGURATION” on “SELECT DIAG MODE” screen.

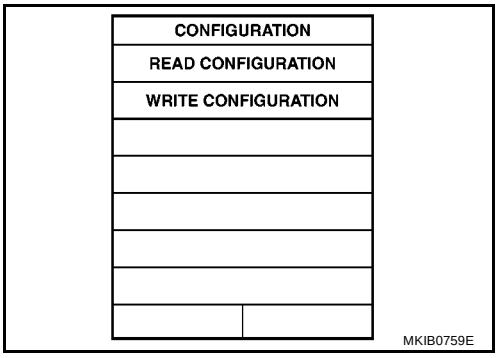


5. Touch “K12”, and “OK” on “VEHICLE SELECT” screen.
For canceling, touch “CANCEL” on “VEHICLE SELECT” screen.

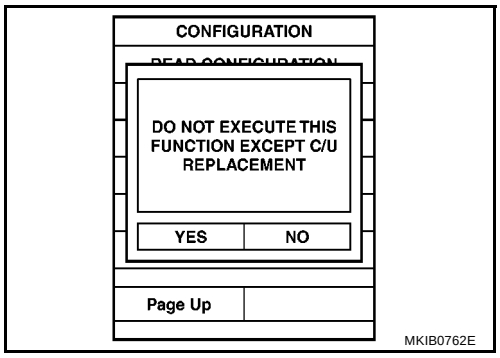
NOTE:
Confirm vehicle model on IDENTICATION PLATE, refer to GI section.



6. Touch “WRITE CONFIGURATION” on “CONFIGURATION“screen.



7. Touch “YES”.
   For canceling, touch “NO”.



8. Touch “TYPE 1”, “TYPE 2” or “TYPE 3” on “WRITE CONFIGURATION”screen based on the following ITEM LIST.
   < ITEM LIST>

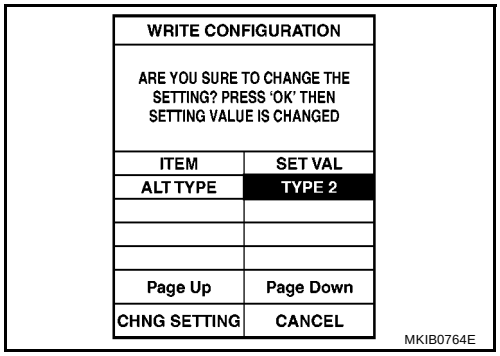
ITEM	SET VAL	NOTE
Alternator type	TYPE 1	Gasoline engine models
	TYPE 2	PTC heater is not equipped, if 14 digits of the applied model code is marked without “H” or “J”. i.e.:EDHARAFK12EEA “E” …
	TYPR 3	PTC heater is equipped, if 14 digits of the applied model code is marked with “H” or “J”. i.e.:EDHARAFK12EEA “H” …

   For canceling, touch “CANCEL”.

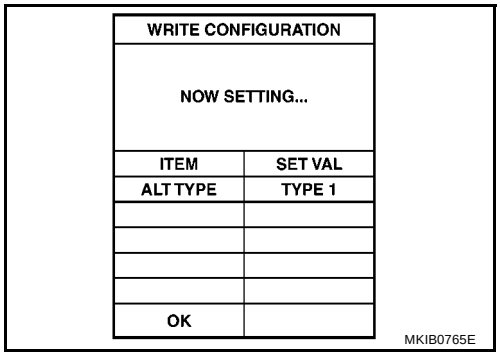
9. Touch “CHNG SETTING” on “WRITE CONFIGURATION“screen.

CAUTION:
Make sure to touch “CHNG SETTING even if the indicated configuration of brand new IPDM E/R is same as the desirable configuration.
If not, configuration which is set automatically by selecting vehicle model can not be memorized.

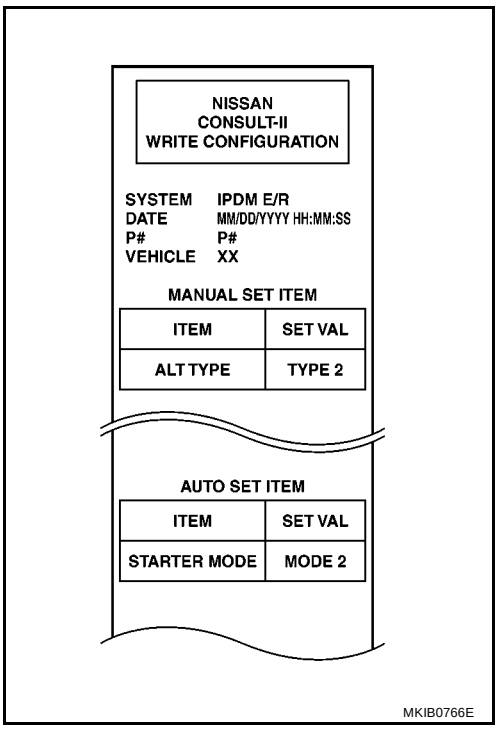
10. Touch “OK” on “WRITE CONFIGURATION”screen.
    When touched “CANCEL”, go to previous screen.



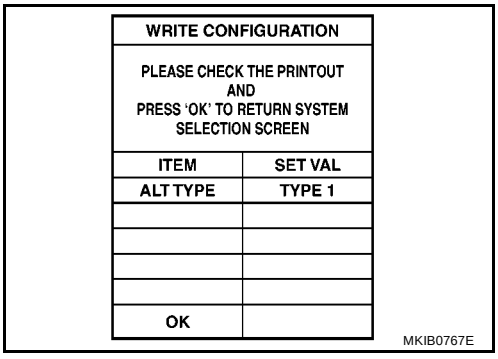
11. Wait until the next screen during setting.



12. WRITE CONFIGURATION results are printed out automatically. Check “WRITE CONFIGURATION” is correctly executed by comparing sheet automatically printed out with desirable configuration.



13. Touch “OK” on “WRITE CONFIGURATION“screen. WRITE CONFIGURATION is completed.



Auto Active Test

EKS0080T

DESCRIPTION

- In the auto active test, the IPDM E/R sends a drive signal to the following systems to check operation.
  - Rear window defogger
  - Front wiper (Low, High)
  - Parking lamps, license lamps, tail lamps
  - Front fog lamp
  - Headlamp (Low, High)
  - Headlamp washer
  - A/C compressor (magnetic clutch)
  - Cooling fan

OPERATION PROCEDURE

1. Close hood, and keep wiper arms off the windshield (to prevent glass damage by wiper operation).

   NOTE:
   When auto active test is performed with hood opened, sprinkle water on windshield beforehand.
2. Turn ignition switch OFF.
3. Turn ignition switch ON, and within 20 seconds, press the driver side door switch 10 times. Then turn ignition switch OFF.

   CAUTION:
   Keep passenger side door closed.
4. Turn ignition switch ON within 10 seconds.
5. When auto active test mode is actuated, oil pressure warning lamp starts blinking.
6. After a series of operations is repeated 3 times, auto active test is completed.

   NOTE:
   When the auto active test mode has to be cancelled halfway, turn ignition switch OFF.

CAUTION:
When the auto active test cannot be started, check the oil pressure switch system **DI-77, "Oil Pressure Warning Lamp Stays Off (Ignition Switch ON)"** **and the** **BL-58, "Check Door Switch"** **.**

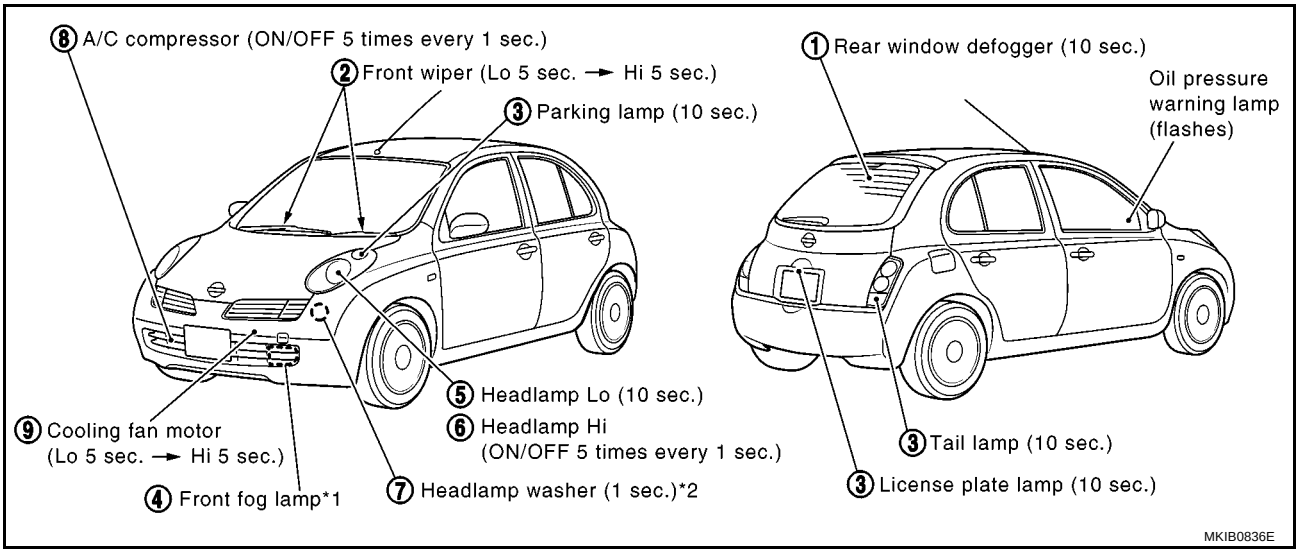
INSPECTION IN AUTO ACTIVE TEST MODE

When the auto active test is started, repeat steps 1 to 9 as below three times.

- Step 1: Rear window defogger is operated for 10 seconds.
- Step 2: Front wiper is operated with low speed for 5 seconds and high speed for 5 seconds.
- Step 3: Parking, license plate, tail lamp are turned on for 10 seconds.
- Step 4: Front fog lamp is turned on for 10 seconds.

  NOTE:
  If the fog lamp is not equipped, this step will be skipped. (In this case, next step will be start after 10 seconds.)
- Step 5: Headlamp (low) is turned on for 10 seconds.
- Step 6: Headlamp (high) is blinked ON and OFF for 5 times.
- Step 7: Headlamp washer is operated for 1 second and it is stopped for 9 seconds.

  NOTE:
  If the headlamp washer is not equipped, this step will be skipped. (In this case, next step will be start after 10 seconds.)
- Step 8: A/C compressor ON and OFF operation is repeated for 5 times.
- Step 9: Cooling fan motor is operated with low speed for 5 seconds and high speed for 5 seconds.



*1: Step 4 will be skipped, if the front fog lamp is not equipped. (In the case, next step will be start after 10 seconds.)
*2: Step 7 will be skipped, if the headlamp washer is not equipped. (In the case, next step will be start after 10 seconds.)

CONCEPT OF AUTO ACTIVE TEST

- IPDM E/R actuates auto active test mode when it receives door switch signal from BCM via CAN communication line. Therefore, when auto active test mode is activated successfully, CAN communication between IPDM E/R and BCM is normal.
- If any systems controlled by IPDM E/R cannot be operated, possible cause can be easily diagnosed using auto active test.

Diagnosis Chart in Auto Active Test Mode

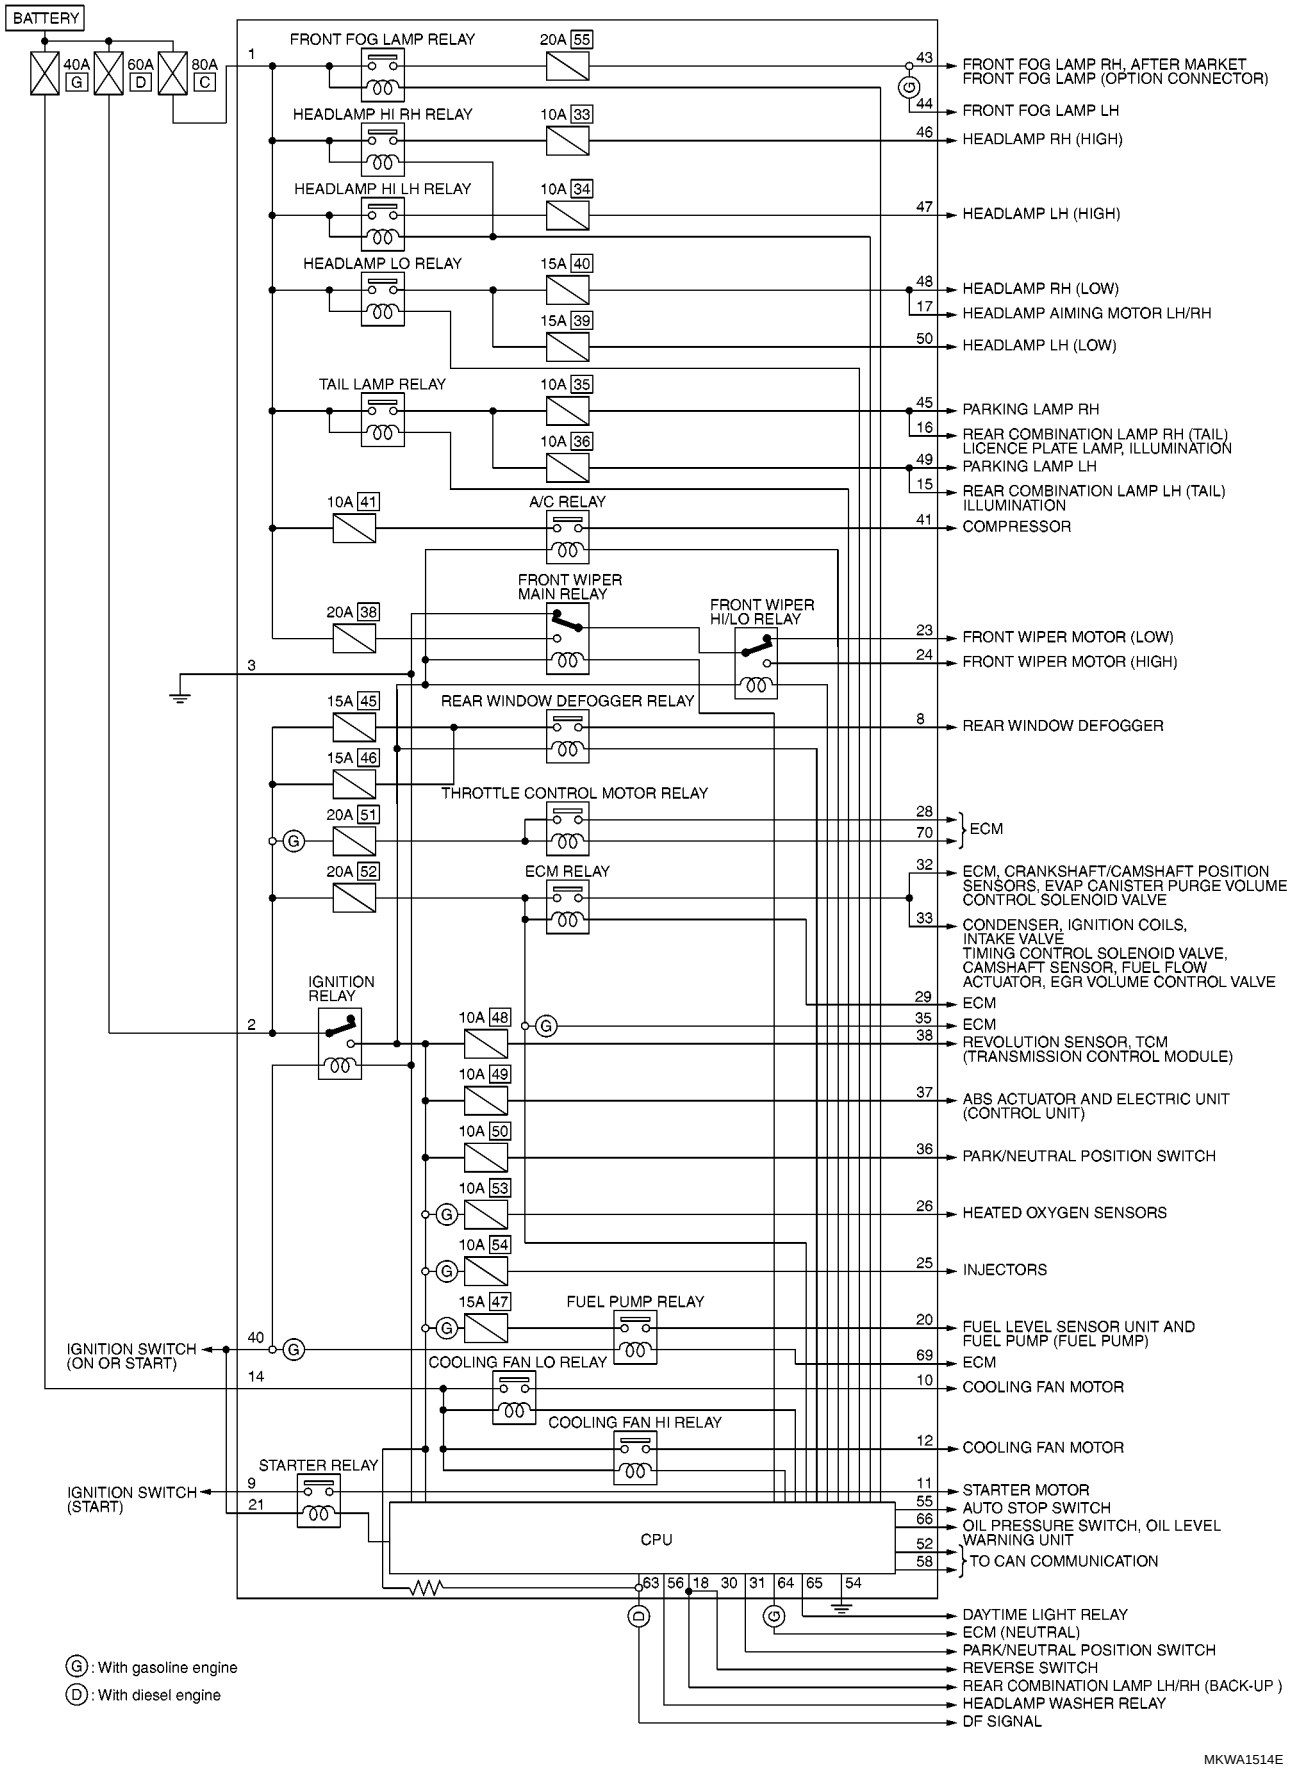
Symptom	Inspection Contents		Possible causes	Reference page
Rear window defogger does not operate.	Perform auto active test. Does rear window defogger operate?	YES	● BCM signal input system	GW-14
		NO	● Harness for open or short between the IPDM E/R and the rear window defogger ● Open circuit of rear window defogger ● IPDM E/R (integrated relay) malfunction (Rear window defogger relay)	
Front wiper does not illuminate.	Perform auto active test. Does the front wiper operate?	YES	● BCM signal input system	WW-5 (without rain sensor) or WW-48 (with rain sensor)
		NO	● Wiper motor malfunction ● Front wiper motor ground.	
Either of parking lamp, license plate lamp and tail lamp does not illuminate.	Perform auto active test. Does parking lamp, license plate lamp and tail lamp illuminate?	YES	● BCM signal input system	LT-152
		NO	● Bulb ● Harness for open or short between IPDM E/R and parking, license plate or tail lamp. ● IPDM E/R (integrated relay) malfunction	
Front fog lamp does not illuminate.	Perform auto active test. Does the front fog lamp illuminate?	YES	● BCM signal input system	LT-74
		NO	● Bulb ● Harness for open or short between IPDM E/R and front fog lamp. ● IPDM E/R (integrated relay) malfunction	
Headlamp (Hi, Lo) does not illuminate.	Perform auto active test. Does headlamp?	YES	● BCM signal input system	LT-6, "HEADLAMP - CONVENTIONAL TYPE-" or LT-42, "HEADLAMP - DAYTIME LIGHT SYSTEM -"
		NO	● Bulb ● Headlamp ground system malfunction ● Open or short in harness or headlamp between IPDM E/R and headlamps ● IPDM E/R (integrated relay) malfunction (headlamp relay)	
Headlamp washer does not operate.	Perform auto active test. Does the Headlamp washer operate?	YES	● BCM signal input system	WW-110
		NO	● Harness for open or short between IPDM E/R and headlamp washer. ● Headlamp washer relay is malfunction.	
The cooling fan is inoperative.	Perform auto active test. Does the cooling fan operate?	YES	● Signal input system of ECM ● CAN communication signal between ECM and IPDM E/R*	EC-352 (with EURO-OBD) or EC-689 (without EURO-OBD)
		NO	● Malfunction of cooling fan ● Harness open or short between the IPDM E/R and the cooling fan. ● IPDM E/R (integrated relay) malfunction	

Symptom	Inspection Contents		Possible causes	Reference page
The A/C compressor is inoperative.	Perform auto active test. Does magnetic clutch operate?	YES	● CAN communication signal between BCM and ECM*. ● CAN communication signal between ECM and IPDM E/R*. ● BCM signal input system ● Signal input system of ECM.	ATC-54
		NO	● Magnetic clutch inoperative. ● Harness for open or short between IPDM E/R and magnetic clutch. ● IPDM E/R (integrated relay) malfunction	
Oil pressure warning lamp does not operate.	Perform auto active test. Does oil pressure warning lamp blink?	YES	● Harness for open or short between IPDM E/R and oil pressure switch. ● Oil pressure switch malfunction	DI-65
		NO	● CAN communication signal between IPDM E/R and combination meter*. ● Combination meter	

*: Perform IPDM E/R self-diagnosis with CONSULT-II. Refer to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)"

Schematic

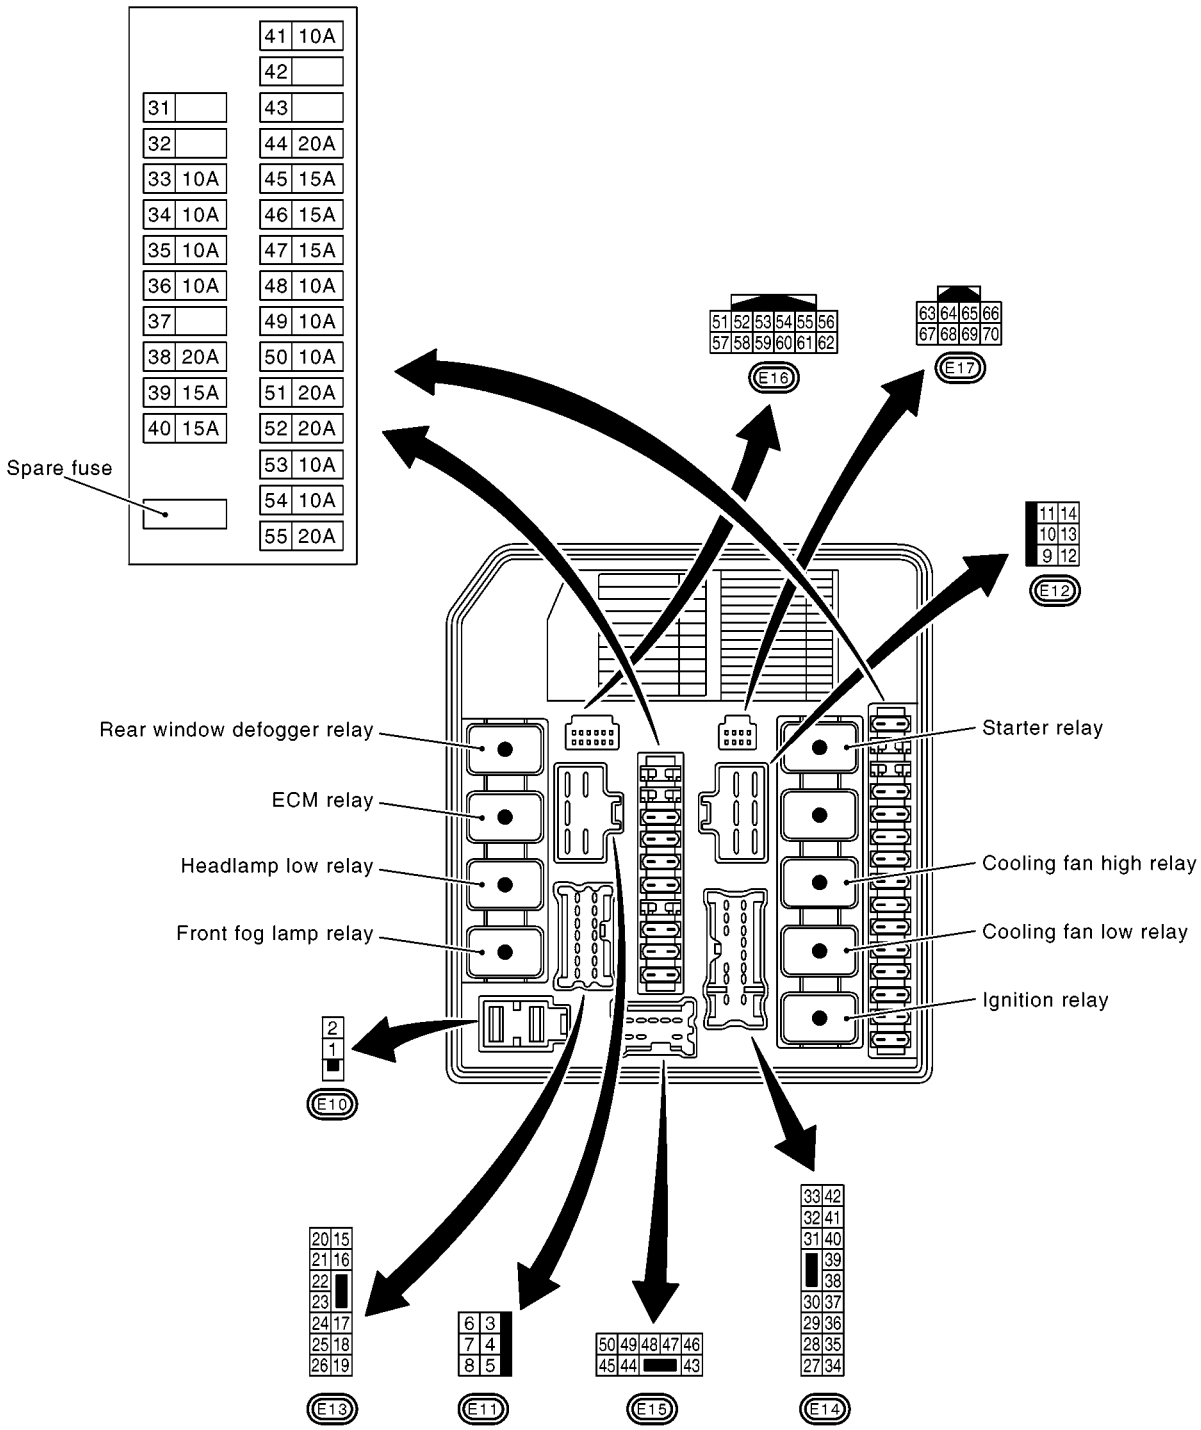
EKS0080U



NOTE:
Refer to each control system for details of connecting parts.

IPDM E/R Terminal Arrangement

EKS0080V



MKWA1370E

Inspection With CONSULT-II (Self-Diagnosis)

EKS0080W

1. CHECK SELF-DIAGNOSTIC RESULT

1. Connect CONSULT-II and select “IPDM E/R” on the Diagnosis System Selection screen.
2. Select “SELF-DIAG RESULTS” on the diagnosis mode selection screen.
3. Check display content in self-diagnostic results.

CONSULT-II display	CONSULT-II display code	TIME		Details of diagnosis result
		CRNT	PAST	
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.	—	—	—	—
IGN RELAY ON	B2098	×	×	Ignition relay malfunction (integrated in IPDM E/R)
IGN RELAY OFF	B2099	×	×	Ignition relay malfunction (integrated in IPDM E/R)
EEPROM	B2100	×	×	IPDM E/R malfunction
CAN COMM CIRCUIT	U1000	×	×	Any of or several items below have malfunction. ● TRANSMIT DIAG ● ECM ● BCM/SEC

×: Applicable

CAUTION:

If errors of the CAN communication system and the ignition relay ON or OFF are displayed at the same time after the self-diagnostic result, replace the IPDM E/R and perform the self-diagnosis again.

NOTE:

The details for display of the period are as follows:

- CRNT: Malfunction currently detected with IPDM E/R.
- PAST: Malfunction detected in the past and memorized with IPDM E/R.

Contents displayed

NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED.>>INSPECTION END.
CAN COMM CIRCUIT>>LAN-4, "Precautions When Using CONSULT-II".
IGN RELAY ON>>Replace IPDM E/R.
IGN RELAY OFF>>Replace IPDM E/R.
EEPROM>>Replace IPDM E/R.

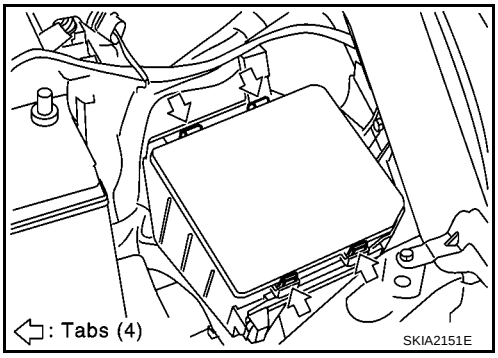
IPDM E/R Terminal Inspection

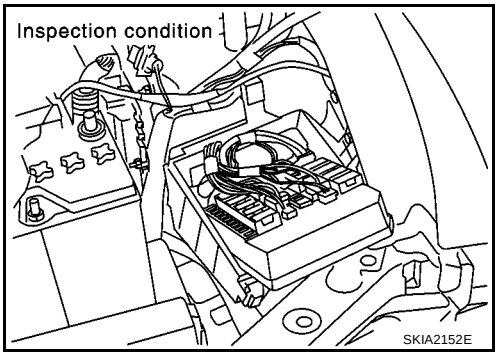
EKS0080X

CAUTION:

This is performed when the IPDM E/R is checked without removing the battery.

1. Remove the headlamp (LH).
2. Remove tabs of the IPDM E/R and place the IPDM E/R with its connector facing upward. Check each terminal.





IPDM E/R Power Supply and Ground Circuit Check

EKS0089R

1. CHECK FUSE AND FUSIBLE LINK

Make sure that the following fusible links or IPDM E/R fuses are not blown.

Terminal No.	Power source	Fuse, fusible link No.
1	Battery	Letter C
2	Battery	Letter D
40	Ignition switch (ON)	80

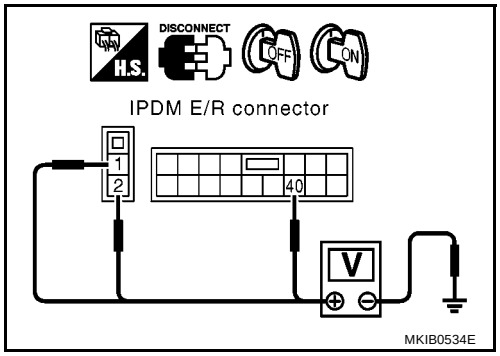
OK or NG

OK >> GO TO 2.
NG >> Replace fuse or fusible link.

2. CHECK POWER SUPPLY CIRCUIT

1. Disconnect IPDM E/R harness connector.
2. Check voltage between IPDM E/R and ground.

Terminals			Ignition switch position		
(+)		(-)	OFF	ACC	ON
Connector	Terminal (Wire color)				
E10	1 (R)	Ground	Battery voltage	Battery voltage	Battery voltage
	2 (G)		Battery voltage	Battery voltage	Battery voltage
E14	40 (PU)		0V	Battery voltage	Battery voltage



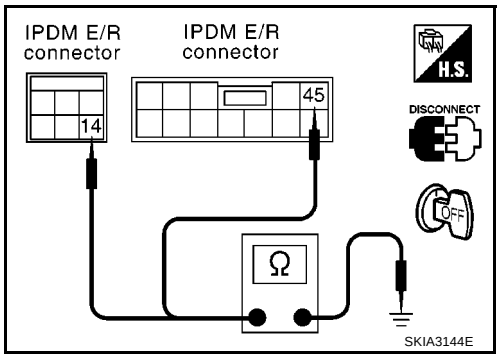
OK or NG

OK >> GO TO 3.
NG >> Check harness between fuse, fusible link and IPDM E/R.

3. CHECK GROUND CIRCUIT

1. Disconnect IPDM E/R harness connectors.
2. Check continuity between IPDM E/R harness connectors E12 terminal 14 (B), E16 terminal 54 (B) and ground.

Continuity should exist.



OK or NG

OK >> INSPECTION END.
NG >> Repair harness for ground circuit.

Diagnosis of IPDM E/R Integrated Relay

EKS0080Z

1. CHECK SYMPTOM

Check the symptom of the malfunction relay.

What is the symptom?

No operation>>GO TO 2.
No stop>> GO TO 4.

2. CHECK RELAY TYPE

Which is the relay with error?

Front fog lamp relay, headlamp relay (Hi, Lo), tail lamp relay, front wiper relay (main, Hi/Lo), rear window defogger relay, A/C relay, starter motor relay, cooling fan relay (1, 2, 3)>>GO TO 5.
Ignition relay>> Go to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)"
ECM relay>>Go to EC-125, "POWER SUPPLY CIRCUIT FOR ECM" (CR engine models with EURO-OBD), EC-567, "POWER SUPPLY CIRCUIT FOR ECM" (CR engine models without EURO-OBD) or EC-K9K-237, “Wiring diagram — Main power supply and ground circuit”, “DIESEL INJECTION” (K9K engine models).
Throttle motor relay>>Go to EC-305, "DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY" (CR engine models with EURO-OBD) or EC-673, "DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY" (CR engine models without EURO-OBD).
Fuel pump relay>>Go to EC-450, "FUEL PUMP CIRCUIT" (CR engine models with EURO-OBD) or EC-826, "FUEL PUMP CIRCUIT" (CR engine models without EURO-OBD).

3. CHECK RELAY

Send an operation signal to the relay using a diagnosis tool. Check the voltage at the input and output terminals of inoperative relays according to the table below or check for continuity between input and output terminals. Refer to PG-36, "ACTIVE TEST" or PG-42, "Auto Active Test" .

Relay name	IPDM E/R terminal number		Voltage [V]	Diagnosis tool	
	Input side	Output side		CONSULT-II ACTIVE TEST	Auto ACTIVE TEST
Front fog lamp relay	1	43, 44	Battery voltage	×	×
Headlamp Hi relay		46, 47		×	×
Headlamp Lo relay		48, 50		×	×
Tail lamp relay		15, 16, 45, 49		×	×
Front wiper main relay		23		×	×
Front wiper HI/LO relay		24		×	×
A/C relay		41			×
Rear windows defogger relay	2	8		×	×
Cooling fan Lo relay 1	14	10		×	×
Cooling fan Hi relay 2		12		×	×

×: Applicable

OK or NG

OK >> Check the control unit that controls the inoperative relay. (system)
NG >> Replace the IPDM E/R. (malfunction of relay)

4. CHECK RELAY TYPE

Which is the relay with error?

Front fog lamp relay, headlamp relay (Hi, Lo), tail lamp relay, front wiper relay (main, Hi/Lo), rear window defogger relay, A/C relay, starter motor relay, cooling fan relay (1, 2, 3)>>GO TO 5.
Ignition relay>> Go to PG-48, "Inspection With CONSULT-II (Self-Diagnosis)"
ECM relay>>Go to EC-125, "POWER SUPPLY CIRCUIT FOR ECM" (CR engine models with EURO-OBD), EC-567, "POWER SUPPLY CIRCUIT FOR ECM" (CR engine models without EURO-OBD) or EC-K9K-237, “Wiring diagram — Main power supply and ground circuit”, “DIESEL INJECTION” (K9K engine models).
Throttle motor relay>>Go to EC-305, "DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY" (CR engine models with EURO-OBD) or EC-673, "DTC P1124, P1126 THROTTLE CONTROL MOTOR RELAY" (CR engine models without EURO-OBD).
Fuel pump relay>>Go to EC-450, "FUEL PUMP CIRCUIT" (CR engine models with EURO-OBD) or EC-826, "FUEL PUMP CIRCUIT" (CR engine models without EURO-OBD).

5. CHECK INPUT SIGNAL

Check the control signal status of the relay on the IPDM E/R that receives from each control unit with the data monitor of CONSULT-II. Refer to PG-35, "DATA MONITOR" .

What is the data monitor result?

Other than OFF>>Check the control unit that controls the relay (system) not deactivated.
OFF >> Replace the IPDM E/R. (error of relay ON)

Removal and Installation of IPDM E/R

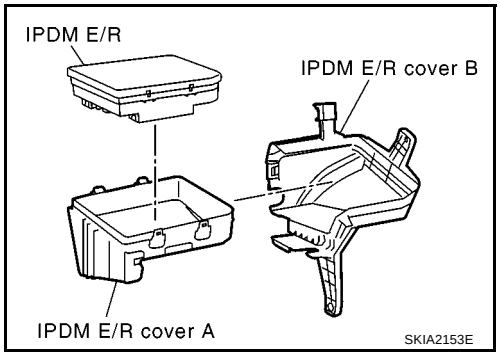
EKS0087Q

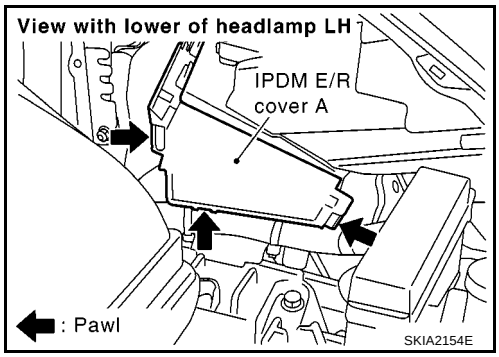
CAUTION:
Always replace with new* IPDM E/R when the IPDM E/R replacement is required.
***: New one means virgin control unit that has never been energized on-board.**

REMOVAL

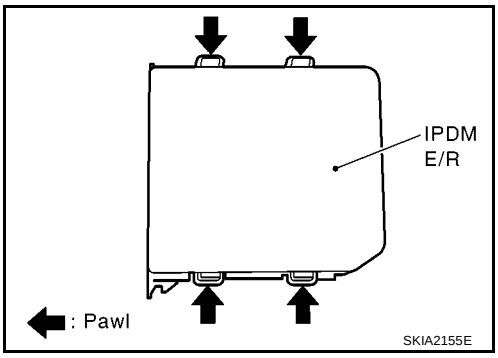
NOTE:
If possible, before removing IPDM E/R, retrieve current IPDM E/R configuration to use for reference when configuring brand-new IPDM E/R after installation. Refer to PG-36, "Configuration" .

1. Remove battery. Refer to SC-14, "Removal and Installation" in SC section.
2. Pull out IPDM E/R cover A from IPDM cover B.





3. Disconnect harness connector from IPDM E/R.
4. Remove IPDM E/R from IPDM E/R cover A.



INSTALLATION

- Install in the reverse order of removal.

NOTE:
When replacing IPDM E/R, it must be configured. Refer to PG-36, "Configuration" .

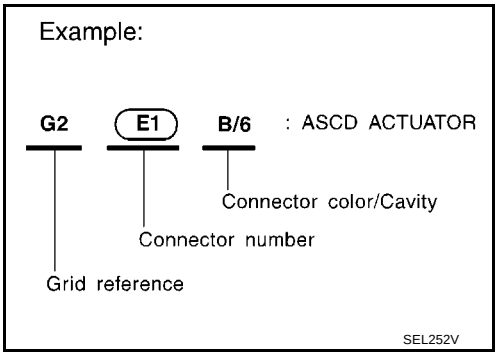
Harness Layout

EKS0079B

HOW TO READ HARNESS LAYOUTS

The following Harness Layouts use a map style grid to help locate connectors on the drawings:

- Main Harness
- Engine Room Harness (Engine Compartment)
- Body Harness
- Body No.2 Harness



To use the grid reference

1. Find the desired connector number on the connector list.
2. Find the grid reference.
3. On the drawing, find the crossing of the grid reference letter column and number row.
4. Find the connector number in the crossing zone.
5. Follow the line (if used) to the connector.

SMA for VIN >SJN**AK12U1337130

CONNECTOR SYMBOL

Main symbols of connector (in Harness Layout) are indicated in the below.

Connector type	Water proof type		Standard type	
	Male	Female	Male	Female
• Cavity: Less than 4 • Relay connector				
• Cavity: From 5 to 8				
• Cavity: More than 9	—	—		
• Ground terminal etc.	—

HARNESS CONNECTOR

PFP:00011

Description

EKS0079E

HARNESS CONNECTOR (TAB-LOCKING TYPE)

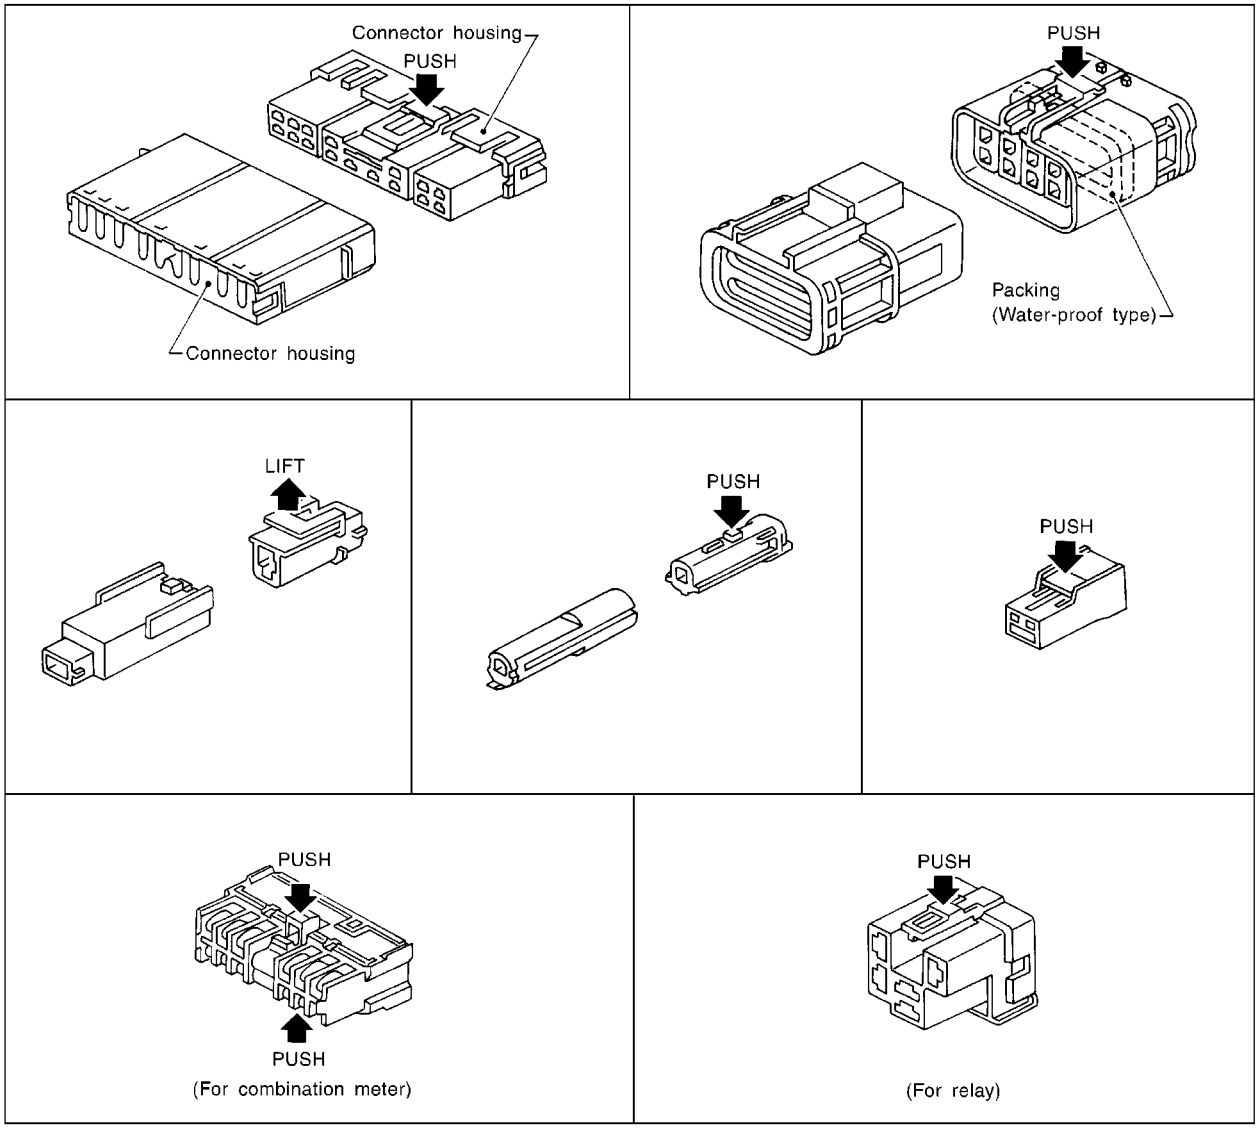
- The tab-locking type connectors help prevent accidental looseness or disconnection.
- The tab-locking type connectors are disconnected by pushing or lifting the locking tab(s). Refer to the illustration below.

Refer to the next page for description of the slide-locking type connector.

CAUTION:

Do not pull the harness or wires when disconnecting the connector.

[Example]



SEL769DA

HARNESS CONNECTOR (SLIDE-LOCKING TYPE)

- A new style slide-locking type connector is used on certain systems and components, especially those related to OBD.
- The slide-locking type connectors help prevent incomplete locking and accidental looseness or disconnection.
- The slide-locking type connectors are disconnected by pushing or pulling the slider. Refer to the illustration below.

CAUTION:

- **Do not pull the harness or wires when disconnecting the connector.**
- **Be careful not to damage the connector support bracket when disconnecting the connector.**

[Example]

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EGS001B3

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Caution:

EGS000J1

- Always follow the warnings and the cautions below in disassembly procedures:
  - Work in a clean, dust-free place. No dustproof device is necessary.
  - Clean the outside of the unit before disassembly.
  - Clean the parts to be disassembled. Care must be taken not to allow any dirt or other foreign materials to enter or come in contact with the parts.
  - Assemble the disassembled parts properly, following the order shown in the manual. If work has been suspended in the middle of assembly, place a clean cover over the parts to prevent them from being contaminated.
  - Use paper towels when removing dirt and other foreign materials. Cloth shop towels can leave lint on the cleaned parts that might affect the operation of the parts.
  - Clean disassembled parts with kerosene (except rubber parts), and then dry them thoroughly with an air blower or paper towels.

PREPARATION

		Judder							×			×	×	×	×		×

×: Applicable

STEERING WHEEL

PFP:48430

On Board Inspection and Service

EGS000J4

PLAY INSPECTION

1. Turn steering wheel to the straight-ahead position. Start engine and lightly turn steering wheel clockwise and counterclockwise until the front wheels start moving. Measure the travel to the starting point on the circumference of steering wheel. If play is outside the specified range, check steering gear assembly, front suspension, axles, and steering column for proper installation.

   Steering wheel play inspection standard : 0 - 35 mm (0 - 1.38 in)

2. Check steering wheel for vertical, horizontal, or axial play.

   Steering wheel axial end play : 0 mm (0 in)

- Lift vehicle and check steering gear nuts and bolts for looseness.

  Tightening torque : 85 - 103 N·m (8.7 - 10.5 kg-m, 63 - 75 ft-lb)

NEUTRAL POSITION INSPECTION

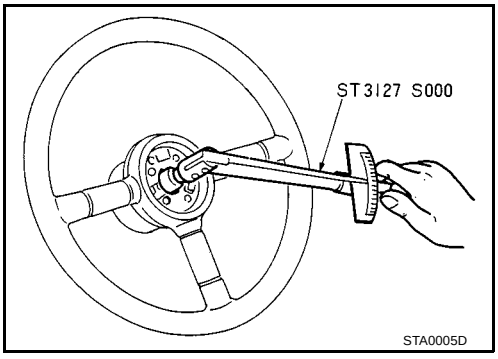
- After wheel alignment inspection, perform neutral position inspection. Refer to FSU-6, "Wheel Alignment" .
- Set vehicle to the straight-ahead position and confirm steering wheel is in the neutral position.
- If it is not in the neutral position, loosen lock nut on tie-rod. Then adjust until the amount of left and right becomes equal.

STEERING TORQUE INSPECTION

1. Stop vehicle on a dry flat paved road and apply parking brake.
2. Remove air bag module. Refer to SRS-36, "DRIVER AIR BAG MODULE" .
3. Start engine and use a preload gauge (SST) to check steering wheel torque.

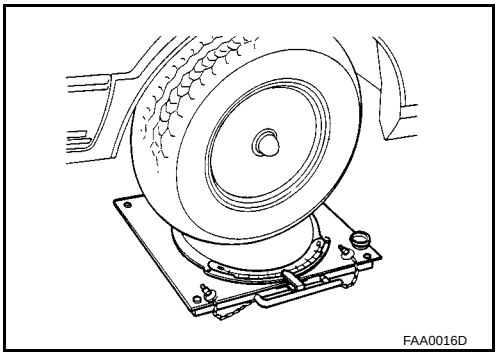
   Steering torque : 1.8 - 5.6 N·m (0.18 - 0.57 kg-m, 16 - 49 in-lb) or less

4. When torque is outside the standard, check steering column and steering gear. If any non-standard condition is detected, replace if necessary.



STEERING ANGLE INSPECTION

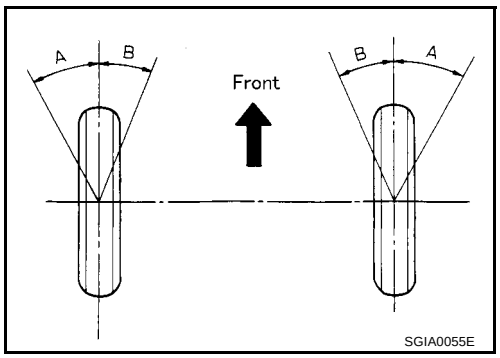
- After toe-in inspection, check the steering angle. Place the front wheels on turning radius gauges and the rear wheels on stands so that the vehicle can be level. Check the maximum inner and outer wheel steering angles for LH and RH road wheels.



- With the engine at idle, turn steering wheel from stop to stop and measure the steering angles.

  Inner wheel : 44° +1° -3°

  Outer wheel : 36° +1° -3°



- Steering angles are not adjustable. If any of the steering angles is different from the specified value, check steering gear, column and front suspension components for wear or damage. If any non-standard condition exists, replace if necessary.

Removal and Installation

EGS000J5

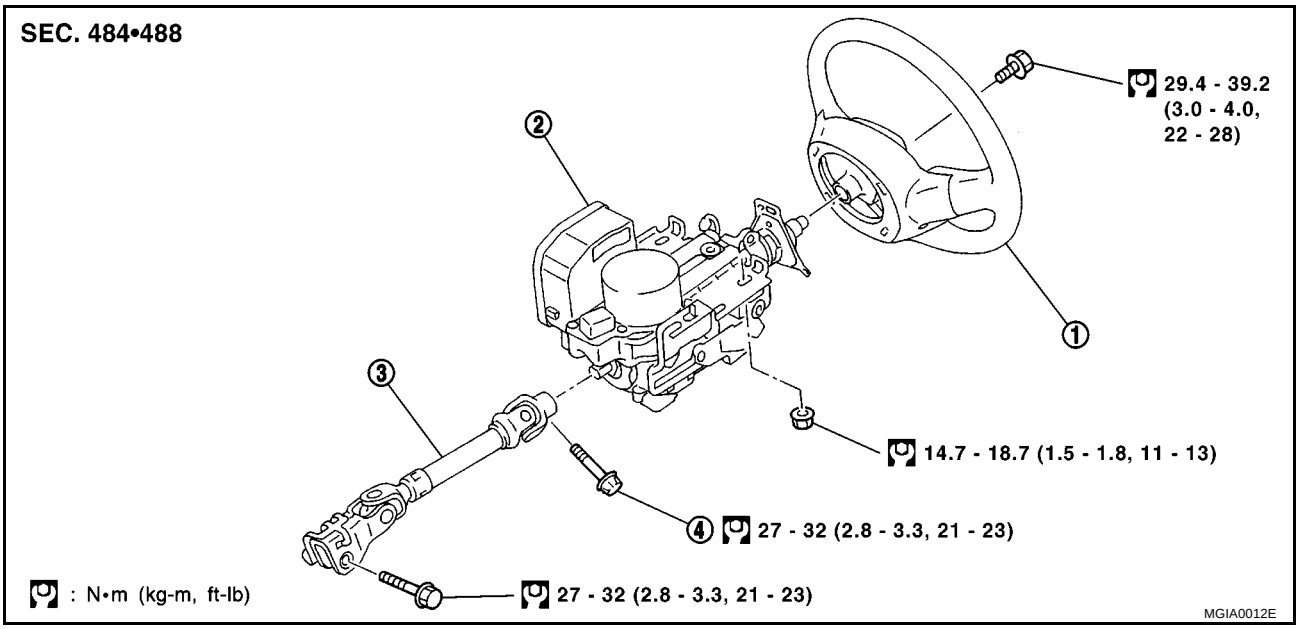
Refer to SRS-36, "DRIVER AIR BAG MODULE" and SRS-38, "SPIRAL CABLE" .

STEERING COLUMN

PFP:48810

Removal and Installation

EGS000J6



1. Steering wheel
2. Steering column assembly (with EPS control unit, motor, reduction gear, sensor)
3. Intermediate shaft
4. Torx bolt (E10)

CAUTION:

- **Care must be taken not to give axial impact to the steering column assembly during removal and installation.**
- **When steering wheel is turned repeatedly with the vehicle stopped, care must be taken because motor and control unit may get too hot.**
- **Steering column assembly is heavy (approximately 10 kg). Care must be taken when removing column from vehicle.**
- **Steering column assembly cannot be disassembled. If any non-standard condition exists, replace column assembly as a unit.**

REMOVAL OF STEERING COLUMN ASSEMBLY

1. Remove driver air bag module. Refer to SRS-36, "DRIVER AIR BAG MODULE" .
2. Remove steering wheel and spiral cable. Refer to SRS-38, "SPIRAL CABLE" .
3. Remove column cover and instrument panel & pad. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
4. Remove front wiper and washer switch and light and turn signal lamp switch. Refer to SRS-38, "Removal and Installation" in “Light and Turn Signal Switch”, and SRS-38, "Removal and Installation" .
5. Disconnect all the clamps and harness connectors from steering column assembly.
6. Remove intermediate shaft mounting bolt on steering gear, and disconnect the shaft from steering gear.
7. Remove nut on steering column assembly, and make sure steering column moves freely.
8. Remove harness connector of electric power steering.
9. Remove steering column assembly from vehicle.
10. Remove intermediate shaft mounting bolt (torx bolt E10), and disconnect the shaft from steering column.

CAUTION:

Be sure not to rotate column shaft by 360° or more. (Doing this causes error in steering angle value memorized in electric power steering.)

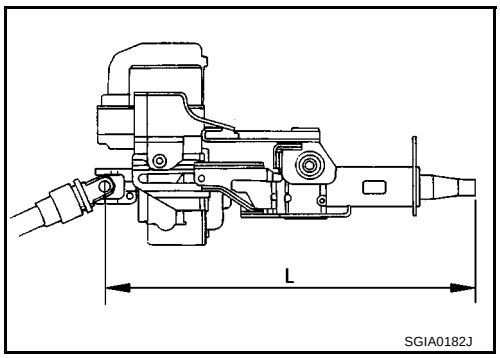
INSPECTION AFTER REMOVAL OF STEERING COLUMN ASSEMBLY

- Check each part of column assembly and intermediate shaft for damage or other malfunctions. If any non-standard condition exists, replace if necessary.
- If vehicle has been involved in a minor collision, measure length L as shown. If outside the standard, replace steering column assembly.

  Length L : 429±2 mm (16.9±0.1 in)

- Using preload gauge, measure steering column rotating torque. If outside the standard, replace steering column assembly.

  Rotating torque : 0 - 2.1 N·m (0 - 0.21 kg-m, 0 - 18 in-lb)

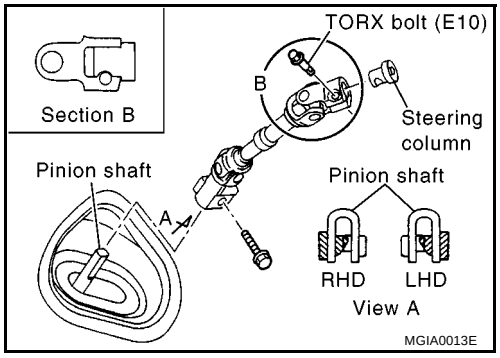


INSTALLATION OF STEERING COLUMN ASSEMBLY

Note the following, and install in the reverse order of removal. Tighten bolts and nuts to the specified torque.

- Connect intermediate shaft to steering column, and tighten torx bolt (E10) to the specified torque. Connect pinion shaft to yoke of intermediate shaft, and tighten bolt to the specified torque.

  CAUTION:
  - **When tightening bolts, tighten them by hand first, and make sure there is no feeling of sticking or galling before final tightening.**
  - **Insert bolts in the proper direction. (Do not insert them from the other side.)**
  - **When connecting intermediate shaft and steering column, make sure the bolt is securely fit into the groove of steering column before final tightening.**
  - **Tighten bolts at connecting pinion shaft and intermediate shaft side. Make sure there is no space between pinion shaft and yoke, and between pinion shaft and cam nut.**



CHECK AFTER STEERING COLUMN ASSEMBLY INSTALLATION

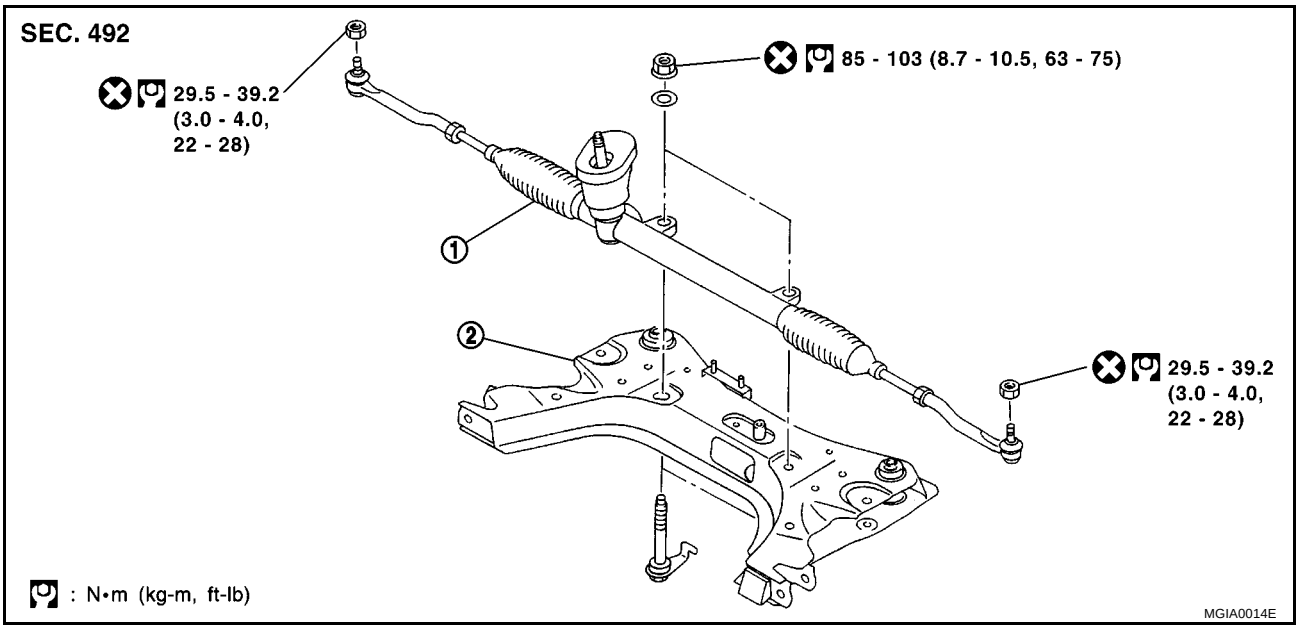
- Using CONSULT-II, check steering angle. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .
- Rotating steering wheel, check for decentered condition, binding, noise or excessive steering effort.

POWER STEERING GEAR AND LINKAGE

PFP:49001

Removal and Installation

EGS000J7

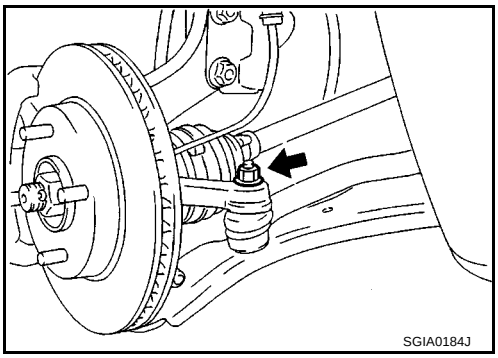


1. Steering gear assembly
2. Suspension member

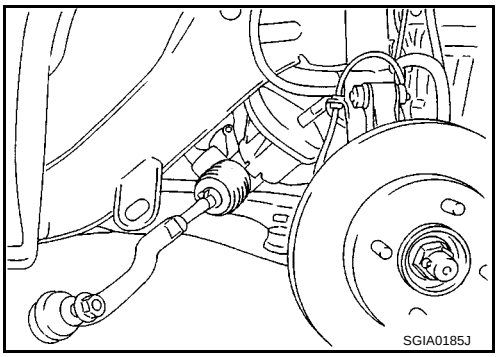
REMOVAL

1. Lift vehicle and remove tires.
2. Activate key lock of steering column.
3. Remove intermediate shaft mounting bolt on steering gear, and disconnect the shaft.
4. Remove tie-rod from steering knuckle. If tie-rod could not be removed easily, use ball joint remover (commercial service tool).

   CAUTION:
   To avoid damage to threads and sudden disconnection of ball joint remover (commercial service tool), temporarily tighten lock nut.
5. Remove the exhaust front tube (CR engine models). Refer to EX-3, "EXHAUST SYSTEM" .



6. Remove steering gear mounting nuts and bolts, and remove the steering gear through the right side of vehicle.
   (Remove from left side for LHD models and right side for RHD models.)



INSTALLATION

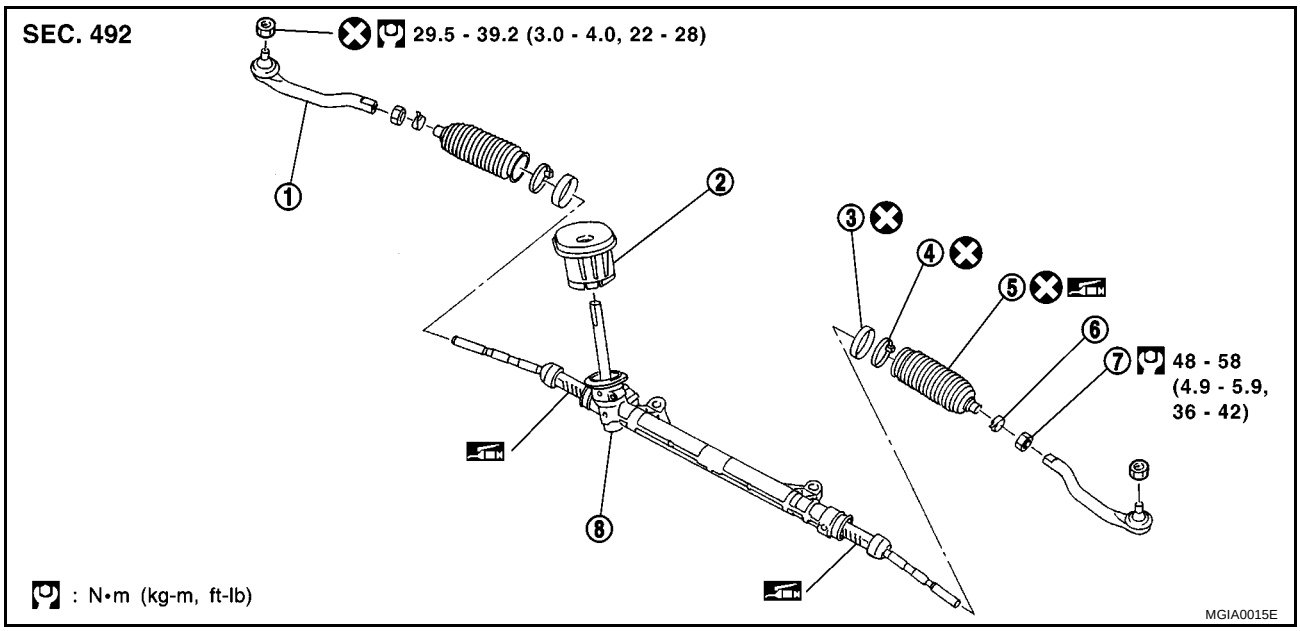
Note the following, and install in the reverse order of removal. Tighten bolts and nuts to the specified torque.

- Refer to PS-7, "Removal and Installation" .

Disassembly and Assembly

EGS000J8

COMPONENT PARTS LOCATION (R24T TYPE)



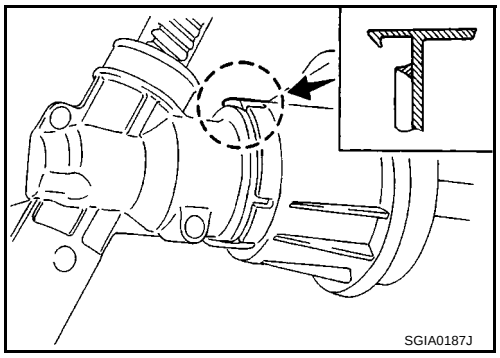
1. Outer socket
2. Bulkhead sealing
3. Seal ring
4. Strap
5. Dust boot
6. Spring clip
7. Lock nut
8. Steering gear assembly

DISASSEMBLY

1. Disengage the tab of bulkhead seal, and remove it from steering gear.
2. Loosen lock nut of tie-rod outer socket, and remove it from steering gear.
3. Remove spring clip and strap (cutting off), and remove dust boot and seal ring.

CAUTION:

When removing dust boot, be careful not to damage inner socket and gear housing assembly.



INSPECTION AFTER DISASSEMBLY

Rack

Check rack gear, and, if any damage or wear, replace steering gear assembly.

Bulkhead Sealing

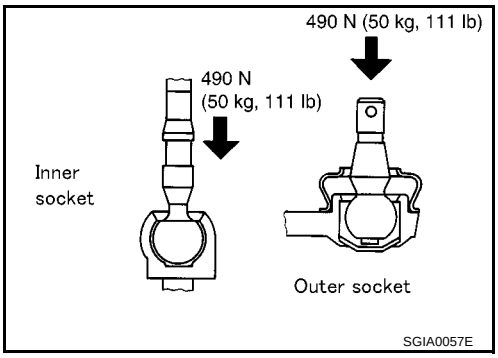
In case of broken tab, or torn sealing in bulkhead seal, replace the damaged part.

Tie-Rod Ball Joint

1. Tensile force
   - Hook a spring balance onto the point shown in the figure and pull the balance. Make sure the balance reads the specified value when ball stud and the inner socket start to move. If it is outside the standard, replace both outer socket and steering gear assembly.

	Outer socket	Inner socket
Measuring point of spring balance	Edge of stud bolt	Measuring point
Tensile force N·m (kg-m, in-lb)	0.3 - 2.9 (0.03 - 0.29, 3 - 25)	0.5 - 5.0 (0.05 - 0.51, 5 - 44)
Spring balance measurement N (kg, lb)	5 - 54 (0.51 - 5.5, 1.1 - 12.1)	4 - 43 (0.41 - 4.4, 0.9 - 9.7)

2. Axial end play
   - Apply 490 N (50 kg, 110 lb) of load to the ball stud axially and use a dial gauge to measure the amount of movement the stud makes. Make sure the reading is within the range specified. If outside the standard, replace outer socket and steering assembly.

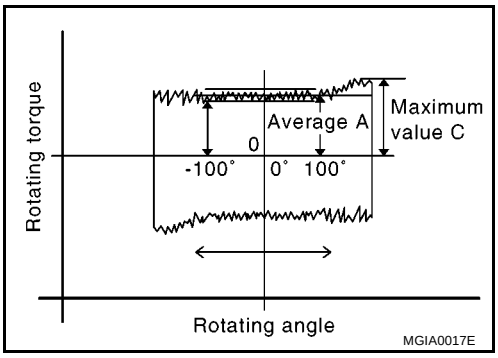


Outer socket	No Free Play
Inner socket	No Free Play

3. Using preload gauge (SST), measure rotating torque of pinion gear. If the measurement is outside of the specified range, replace steering gear.

Rotating torque of pinion gear

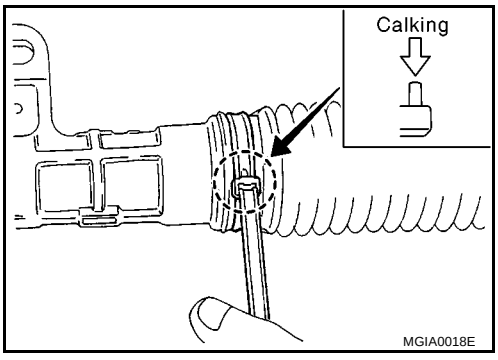
Around neutral position (Within ±100°) Average A	: 1.3 N·m (0.13 kg-m, 11 in-lb)
Other than the above: Maximum value C	: 1.6 N·m (0.16 kg-m, 14 in-lb)



ASSEMBLY

Note the following, and assemble in the reverse order of disassembly

- Apply multi-purpose grease to the sliding part of rack.
- Securely fix dust boot and seal ring with strap. Caulk the strap, and cut the excess of strap off.
- Engage the tab of bulkhead seal to steering gear.



- Install lock nut and the outer socket to the inner socket and tighten lock nut until the length of the tie-rod is within the standard (length before toe-in adjustment.)

  Length of tie-rod (L) : 62.6 mm (2.46 in)

  CAUTION:
  Perform toe-in adjustment after this procedure. Length achieved after toe-in adjustment is not necessarily the value given here.

PRECAUTIONS

PFP:00001

Caution

EDS00128

Observe the following precautions when disassembling and servicing drive shaft.

- Perform work in a location which is as dust-free and dirt-free as possible.
- Before disassembling and servicing, clean the outside of parts.
- The disassembly and service location must be clean. Care must be taken to prevent parts from becoming dirty and to prevent the entry of foreign objects.
- Disassembled parts must be carefully reassembled in the correct order. If work is interrupted, a clean cover must be placed over parts.
- Paper shop cloths must be used. Fabric shop cloths must not be used because of the danger of lint adhering to parts.
- Disassembled parts (except for rubber parts) should be cleaned with kerosene which shall be removed by blowing with air or wiping with paper shop cloths.

Precautions for Brake System

EDS00129

- When installing rubber parts, final tightening must be carried out under unladen condition* with tires on ground.
  *: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Use flare nut wrench when removing or installing brake tubes.
- After installing removed suspension parts, check wheel alignment and adjust if necessary.
- Always torque brake lines when installing.

×: Applicable

WHEEL HUB

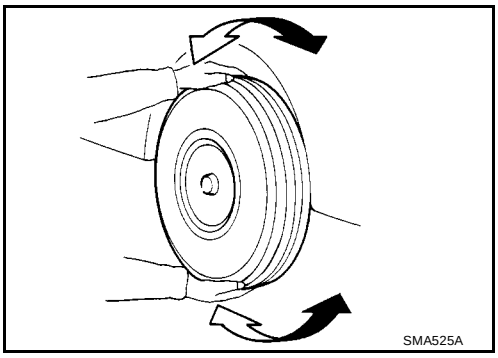
PFP:43202

On-Vehicle Inspection

EDS0012C

Check rear axle for unusual play, cracking, excessive wear, or other damage.

- Turn rear wheels (left/right) and check the play.



REAR WHEEL BEARING

With the vehicle raised, inspect the following:

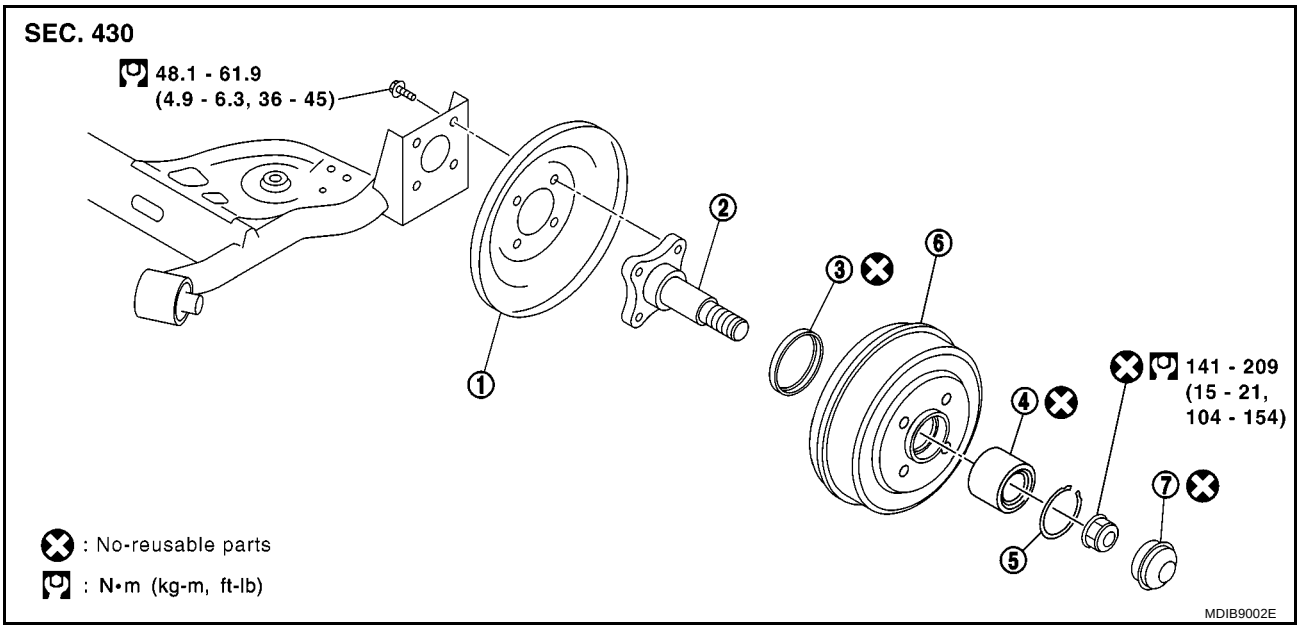
- Manually move the wheel hub in axial direction to check wheel bearing for excessive play.

Axial end play : 0.05 mm (0.0020 in)

- Check for unusual noise by rotating wheel. If there are any non-standard conditions, replace the wheel bearing.
- If outside the standard or any other non-standard condition is found, replace wheel bearing assembly.

Removal and Installation

EDS0012D



1. Back plate
2. Spindle
3. ABS sensor rotor
4. Wheel bearing
5. Snap rings
6. Brake drum
7. Hub cap

REMOVAL

1. Lift up the vehicle and remove tire from the vehicle. Release parking brake.
2. With hub cap pliers (commercial service tool), remove hub cap from brake drum (wheel hub)
3. Remove lock nut and separate brake drum from spindle.
4. Remove ABS sensor rotor from back plate part. Refer to BRC-44, "WHEEL SENSORS" .
5. Loosen self-locking nut and separate parking brake rear cable from rear brake. Refer to PB-3, "PARKING BRAKE SYSTEM" .

6. Separate brake tube from wheel cylinder. Refer to BR-11, "Removal and Installation of Front Brake Piping and Brake Hose" .

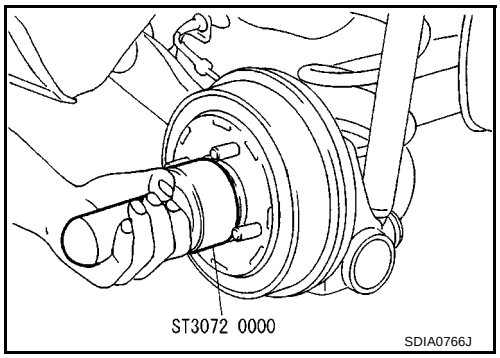
   CAUTION:
   - **Avoid smearing brake fluid on coated surfaces while removing brake tube.**
   - **Never depress brake pedal while removing brake tube and brake drum.**

7. Remove spindle mounting bolt. Separate back plate assembly and spindle from rear suspension trailing arm.

INSTALLATION

- For each tightening torque, refer to RAX-5, "REAR WHEEL BEARING" and tighten in the reverse order of removal.
- For mounting of brake tube and tightening torque, refer to BR-11, "Removal and Installation of Front Brake Piping and Brake Hose" .
- For mounting parking brake and tightening torque, refer to PB-3, "PARKING BRAKE SYSTEM" .
- For mounting ABS wheel sensor and tightening torque, refer to BRC-44, "WHEEL SENSORS" .
- Using a drift (SST), mount hub cap on brake drum (wheel hub).

  CAUTION:
  Do not reuse hub cap.
- Refill with new brake fluid and bleed air. Refer to BR-9, "BRAKE FLUID" .

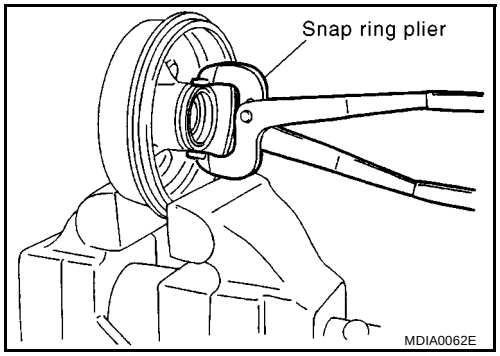


Disassembly and Assembly

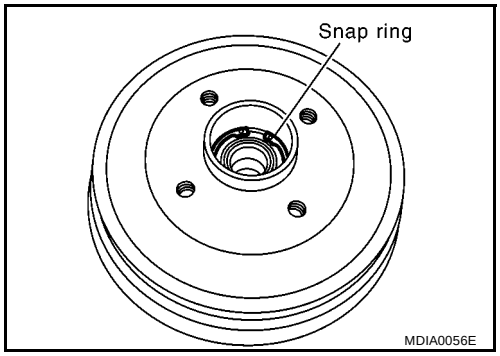
EDS0012E

DISASSEMBLY

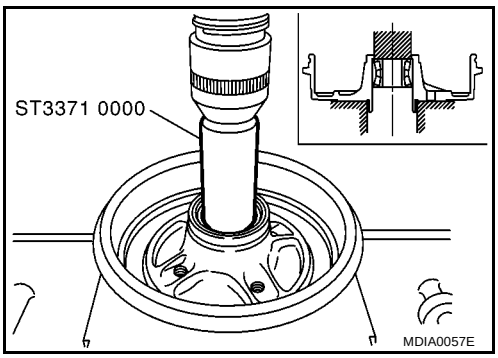
1. Using snap ring pliers (commercial service tool), remove sensor rotor



2. Remove snap ring.



3. Press the wheel bearing out with a drift (SST) to remove.

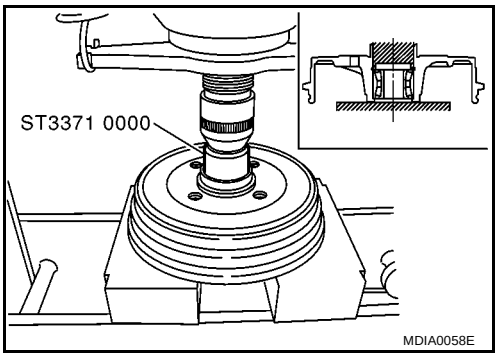


INSPECTION AFTER DISASSEMBLY

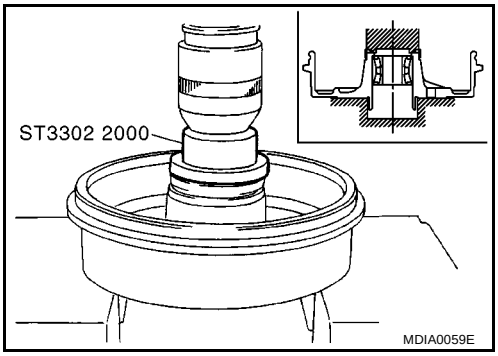
- Check trailing arm for deformed parts, cracks, or any other damage. Replace if necessary.
- Check snap ring for wear or cracks. Replace if necessary.

ASSEMBLY

1. Press-fit the wheel hub with a drift (SST).
   NOTE:
   Final press-loading guideline [50,000 N (5,100 kg, 11,240 lb)]
2. Install snap ring.



3. Press-fit the sensor rotor on the brake drum with a drift (SST).



INSPECTION AFTER ASSEMBLY

1. After installing brake drum on spindle, tighten lock nut to the standard torque.

   Tightening torque : 141 - 209 N·m (15 - 21 kg-m, 104 - 154 ft-lb)

2. Rotate the wheel hub in both directions ten times each to check for smooth movement.
3. At a rotating speed of 10 ± 2 rpm, place a spring balance on hub bolt to measure torque.

   Rotating torque : 0.20 - 0.95 N·m (0.02 - 0.09 kg-m)

   Spring balance measurement : 4 - 19 N (0.41 - 1.94 kg)

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS004QU

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions

EIS004NM

- If sunroof motor operation sound is noted but sunroof does not operate, replace motor assembly with glass lid fully closed.
- If sunroof (glass lid and motor) does not operate when using sunroof switch then remove the front cover of the luggage compartment, and rotate motor gear box drive shaft with the emergency handle (in the tool box).

System Description

EIS004NN

- Operating sunroof switch allows glass lid open/close, and tilt UP and DOWN.
- When sunroof switch is pressed firmly toward the OPEN side, glass lid automatically opens and automatic operation is stopped at a point 135 mm (5.31 in) to the fully closed position.

  NOTE:
  After the emergency handle is used to rotate the motor drive shaft, sunroof switch operation may not correspond to actual glass lid movement. When this happens, conduct resuming operation to restore normal operation.

RESUMING OPERATION

- If actual glass lid operation does not correspond to expected operation, operate sunroof switch to slide glass lid toward area A in the figure. This should result in resumption of normal operation.

  CAUTION:
  Before normal operation is resumed, expected sunroof switch operation and actual glass lid movement may not correspond. Make sure that neither head nor hands protrude from sunroof and conduct resuming operation.

2	B	IGN power supply	—	Battery voltage
3	L	Sunroof tilt UP or OPEN signal	Sunroof switch tilt UP or OPEN operation	Approx. 0 → Approx. 12

Sunroof Lid Weatherstrip Inspection

EIS004NR

If there is water leakage around glass lid, close glass lid and flush with water to determine whether it is from damaged parts or a gap.

1. Remove glass lid assembly.
2. Visually check weatherstrip for damage, deterioration, or deformation. If excess wear or damage is detected, replace glass lid assembly.

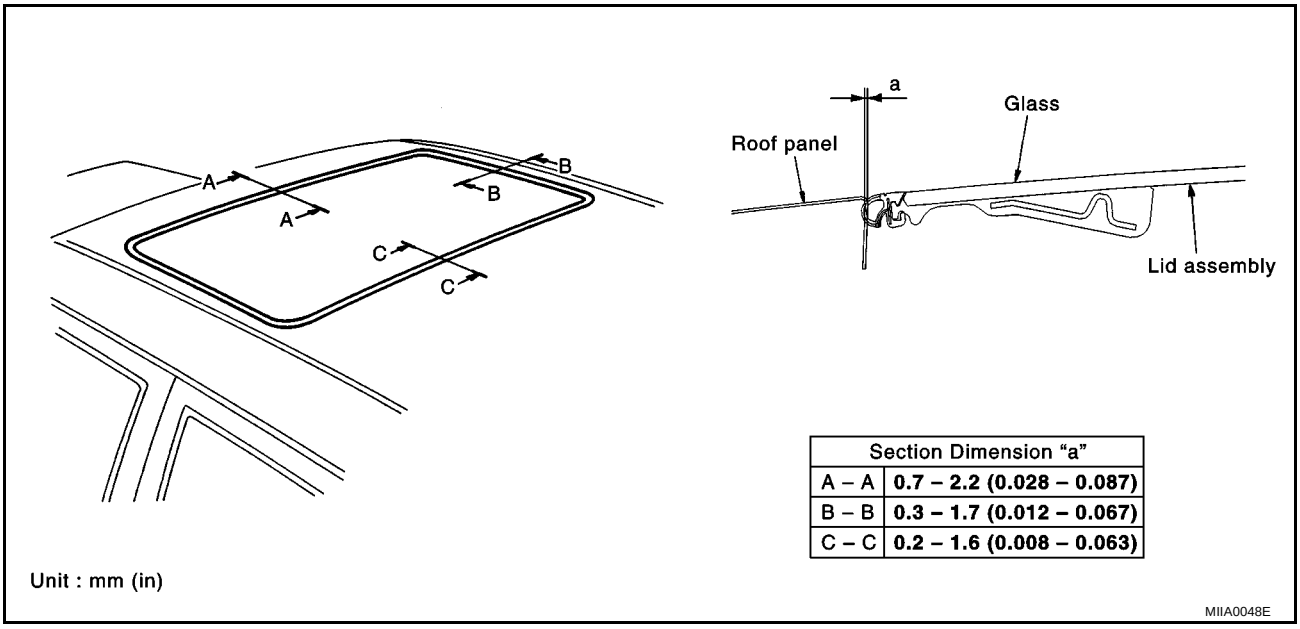
Link and Wire Assembly Inspection

EIS004NS

1. If the link coating peels off to show the base material and an abnormal noise is heard, replace it.
2. Visually confirm the wire and rail groove are properly greased. If necessary, apply body grease.

Fitting Adjustment

EIS004NT



Section Dimension "a"	
A – A	0.7 – 2.2 (0.028 – 0.087)

C – C	0.2 – 1.6 (0.008 – 0.063)

Unit : mm (in)

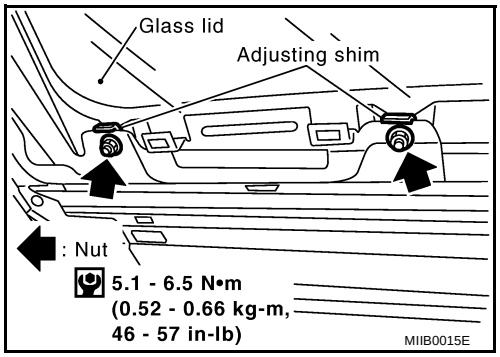
MIIA0048E

LONGITUDINAL/LATERAL CLEARANCE ADJUSTMENT

1. Tilt up glass lid to remove side trim upper and lower.
2. After loosening glass lid mounting bolts (Torx bolt: T25, 3 each on left/right), tilt down glass lid.
3. Adjust glass lid according to sections A–A, B–B, C–C as shown in the figure.
4. After adjusting glass lid, tighten nuts to the specified torque.
5. Tilt glass lid 4 to 5 times to check that it smoothly goes up and down.

SURFACE MISMATCH ADJUSTMENT

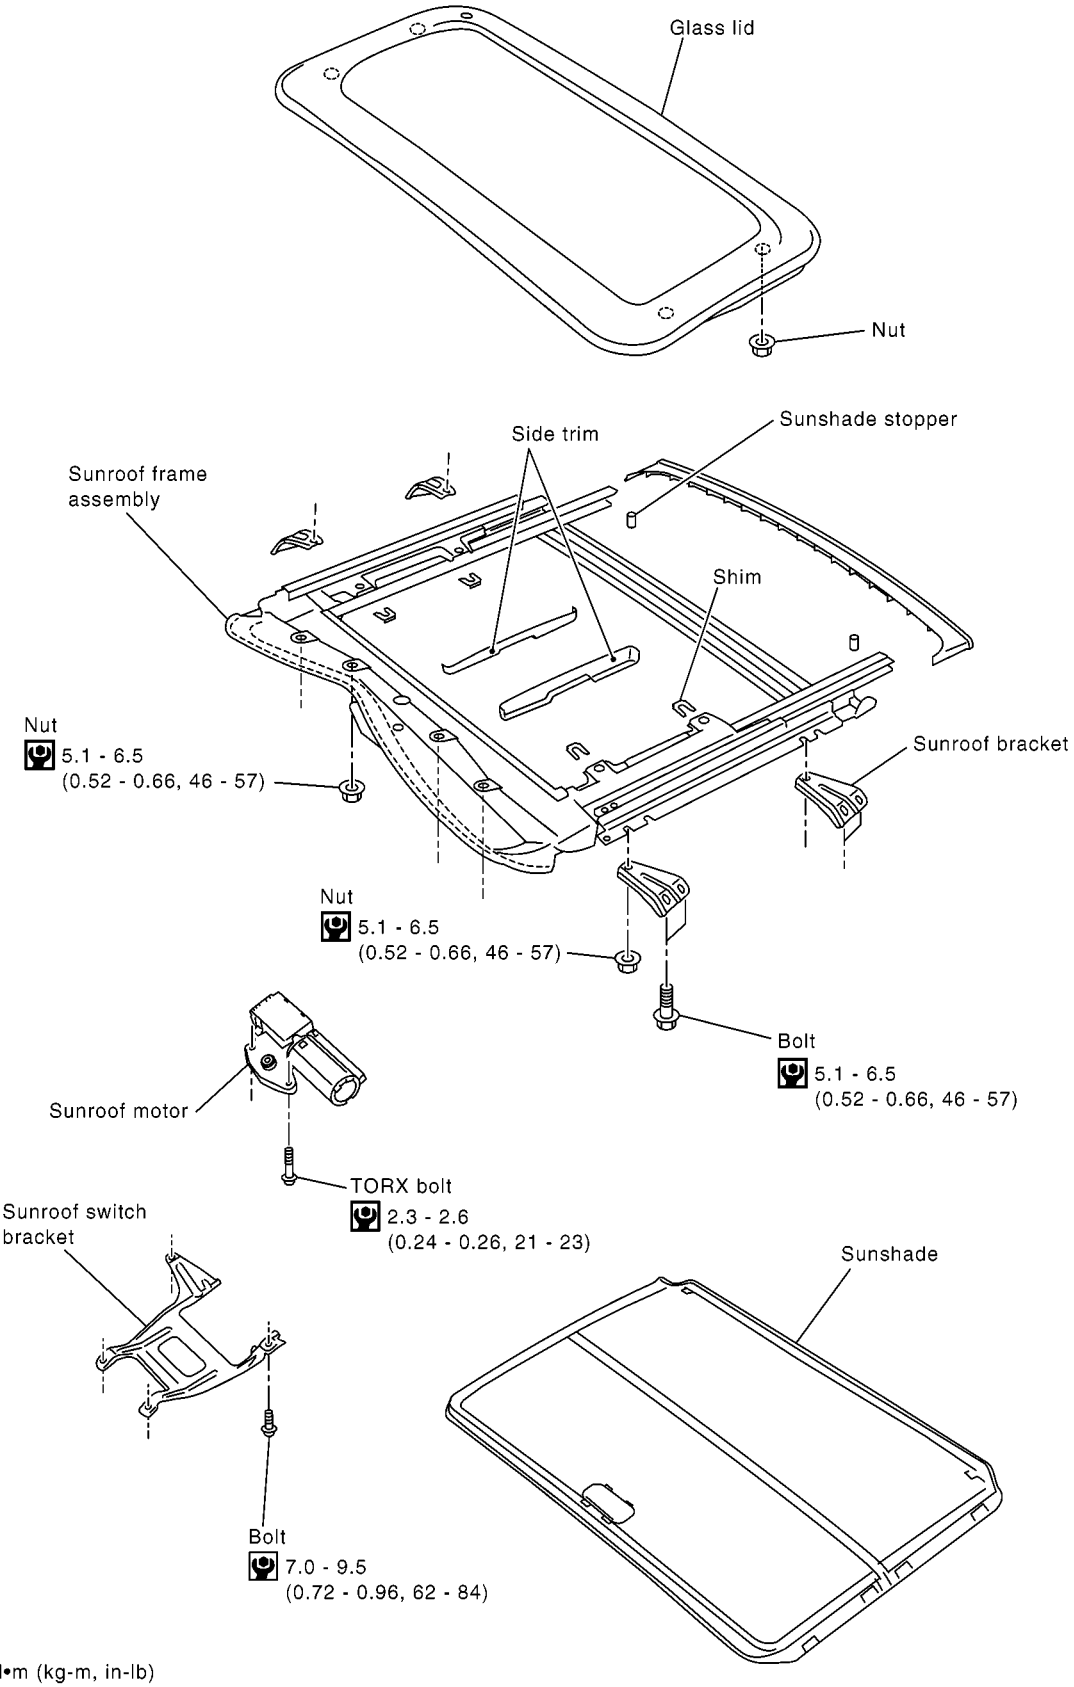
1. Adjust surface height of glass lid and roof panel to 0±1.5 mm (0±0.059 in) by altering the number of shims between glass lid and link assembly. (Standard: 2, max: 4)
2. After fitting adjustment, use a hose to flush the entire surface of the roof with water to check for leaks.



Removal and Installation

EIS004NU

SEC. 736



: N•m (kg-m, in-lb)

MIIB0665E

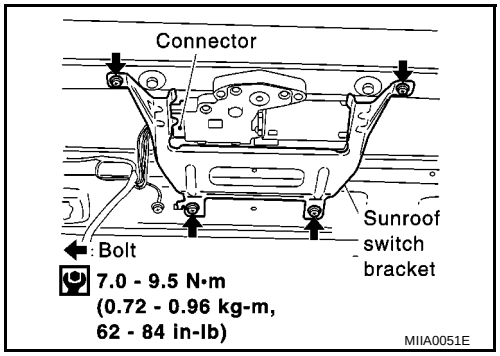
SUNROOF UNIT

Removal

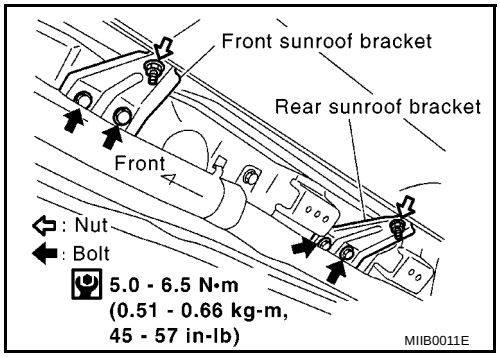
CAUTION:

- **Removal and installation of sunroof unit must be performed by 2 persons.**
- **When taking sunroof unit out, use shop cloths to protect seats and trim from damage.**
- **After installing sunroof unit and glass lid, be sure to carry out the leak test to confirm there is no more leakage.**

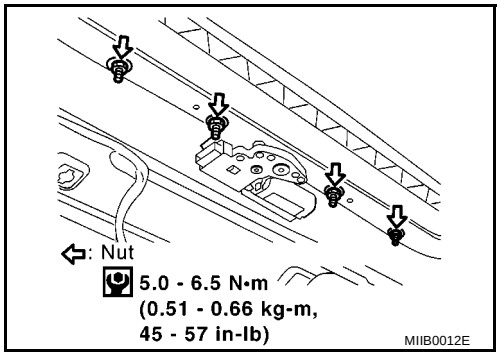
1. Remove headlining. Refer to EI-24, "HEADLINER" .
2. Disconnect drain hoses (4).
3. Disconnect interior lamp harness.
4. Remove sunroof switch bracket mounting bolt.
5. Remove sunroof motor assembly.



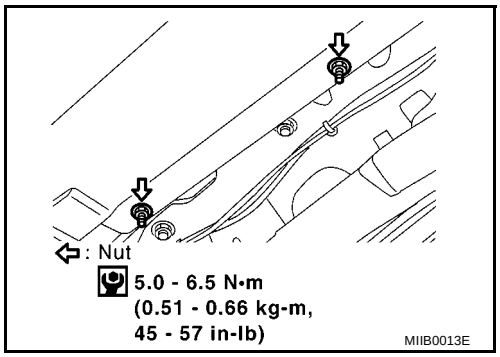
6. Remove both unit-side and body-side front sunroof bracket mounting bolts and nuts.
7. Remove both unit-side and body-side rear sunroof bracket mounting bolts.



8. Remove mounting nuts on the front end.

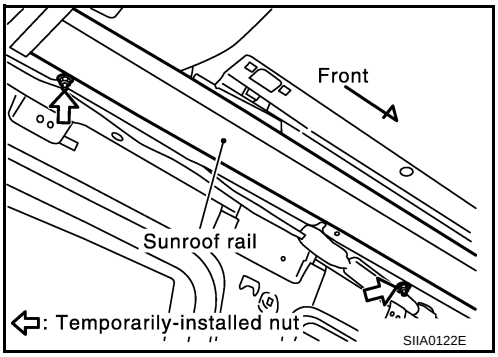


9. Remove mounting nuts on the side rails, and remove sunroof unit from the roof panel.
10. Remove the sunroof unit out of the passenger compartment while being careful not to damage the seats and trim.



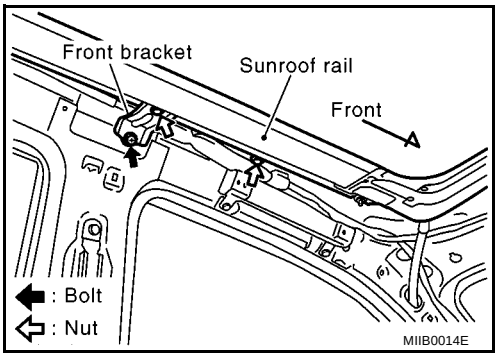
Installation

1. After bringing sunroof unit into the passenger compartment, tighten mounting nuts on the side rails (2 each on left/right). Start from the one at the front reference point.
2. Tighten mounting nuts (4) on the front end.



3. Align the front sunroof bracket to lower face of the rail and roof side mounting face, and tighten bolts. Then tighten bolts on the roof side.
4. Align the center and rear sunroof brackets to lower face of the rail and roof side mounting face, and tighten bolts. Then tighten bolts on the roof side.

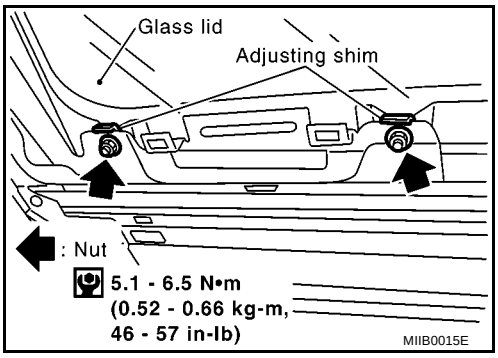
   NOTE:
   Install the sunroof bracket evenly so that the roof surface has no distortion.
5. Tighten bolts on motor bracket.
6. Connect the interior lamp harness.



GLASS LID

Removal

1. Tilt up glass lid.
2. Remove side trim.
3. Remove installation from glass lid.
4. Remove glass lid.



Installation

1. Tighten nuts on glass lid diagonally.
2. After installation, adjust the fit. Refer to RF-5, "Fitting Adjustment" .

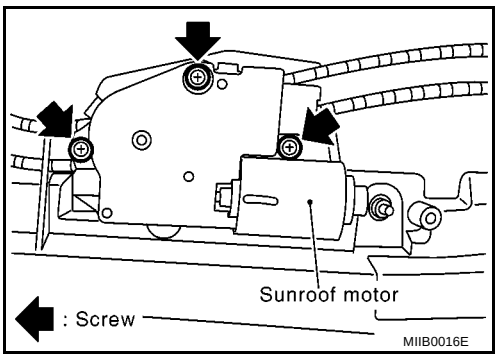
SUNROOF MOTOR

Removal

1. Remove motor mounting bolts (Torx bolt: T25).
2. Remove the harness connector, and remove the sunroof motor.

NOTE:

- Remove the sunroof motor when the sunroof is in the fully-closed position.
- Never rotate the removed motor as a single unit.



Installation

1. Move motor laterally little by little until the gear is completely engaged onto the wire on sunroof unit and the mounting surface becomes parallel. Then secure motor with screws and nuts.
2. Connect harness connector to motor, and perform initial operation for initialization.
   - To initialize, hold Tilt UP switch for approximately 10 seconds with sunroof tilted up. If this is not properly done, Tilt DOWN operation will not be performed normally.
3. After installation, check that sunroof operates normally.

   NOTE:
   Before installing motor, be sure to place the link and wire assembly in the symmetrical and fully closed position.

PRECAUTIONS

PFP:00001

Cautions

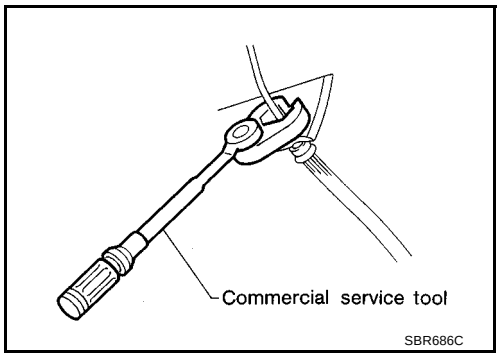
EES000ZL

- Final tightening of bushings must be carried out under unladen condition with tires on the ground. Oil will shorten life of bushings. Be sure to wipe off any spilled oil.
- “Unladen condition” means that fuel, coolant and lubricant are full and ready for drive. However, spare tire, jack, and hand tools should be unloaded.
- After installing the removed suspension parts, always check wheel alignment and adjust if necessary.
- Replace the caulking nut with a new one. Install a new nut without wiping the oil off before tightening.

Precautions for Brake System

EES000ZM

- When installing rubber parts, final tightening must be carried out under unladen condition* with tires on ground.
  *: Fuel, radiator coolant and engine oil full. Spare tire, jack, hand tools and mats in designated positions.
- Use flare nut wrench when removing or installing brake tubes.
- After installing removed suspension parts, check wheel alignment and adjust if necessary.
- Always torque brake lines when installing.



NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

On-Vehicle Inspection and Service

EES000ZP

Check axle and suspension parts for excessive play, wear, and damage.

- Move rear wheels (RH/LH) to check for unusual free play.
- Retighten all nuts and bolts to the specified torque.
- Check shock absorber for oil leakage and damage.

Wheel Alignment

EES000ZQ

DESCRIPTION

- Measure wheel alignment under unladen conditions. “Unladen conditions” means that fuel, coolant, and lubricant are full. However, spare tire, jack, and hand tools should be unloaded.

PRELIMINARY INSPECTION

1. Check the tires for improper air pressure and wear.
2. Check road wheels for runout.
3. Check wheel bearing axial end play.
4. Check shock absorber operation.
5. Check each mounting point of axle and suspension for looseness and deformation.
6. Check each link and arm for cracks, deformation, and other damage.
7. Check the vehicle posture.

CAMBER

Camber is preset at factory and cannot be adjusted.

Camber : -1°56′- -0°26′ (-1.94°- -0.44°)

- If the camber is not within specification, inspect and replace any damaged or worn rear suspension parts.

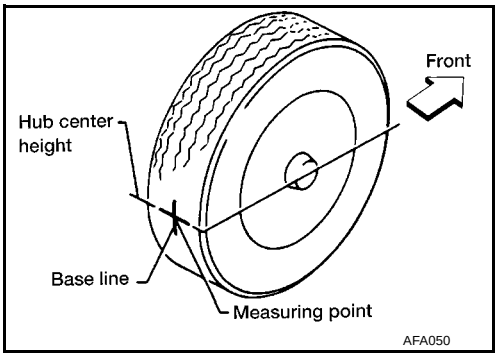
TOE-IN

Toe-in is preset at factory and cannot be adjusted. Measure toe-in using following procedure. If out of specification, inspect and replace any damaged or worn rear suspension parts.

WARNING:

- **Always perform following procedure on a flat surface.**
- **Make sure that no person is in front of the vehicle before pushing it.**

1. Bounce rear of vehicle up and down to stabilize the posture.
2. Push the vehicle straight ahead about 5 m (16 ft.).
3. Put a mark on base line of tread (rear side) of both tires at the same height as hub center. This mark is a measuring points.

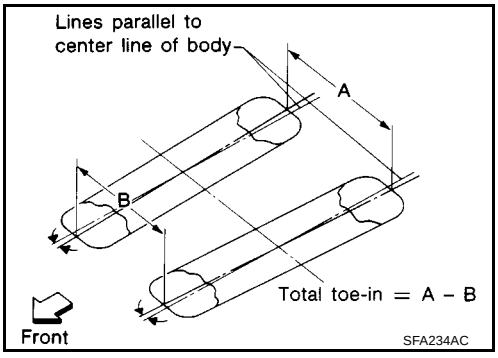


4. Measure distance “A” (rear side).
5. Push the vehicle slowly ahead to rotate the wheels 180 degrees (1/2 turn).

If the wheels have rotated more than 180 degrees (1/2 turn), try the above procedure again from the beginning. Never push vehicle backward.

6. Measure distance “B” (front tires).

Total toe-in: In 0- 8 mm (0 - 0.31 in)



SHOCK ABSORBER

PFP:56210

Removal and Installation

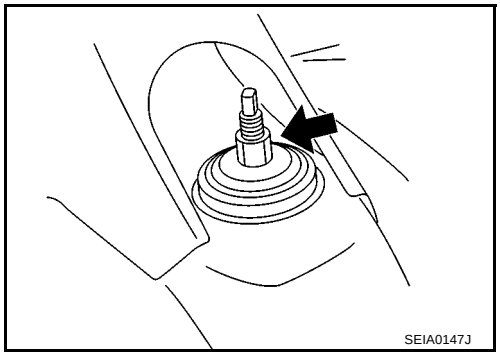
EES000ZR

REMOVAL

1. Raise vehicle and remove tire.
2. Using a screwdriver, remove luggage side lower finisher.

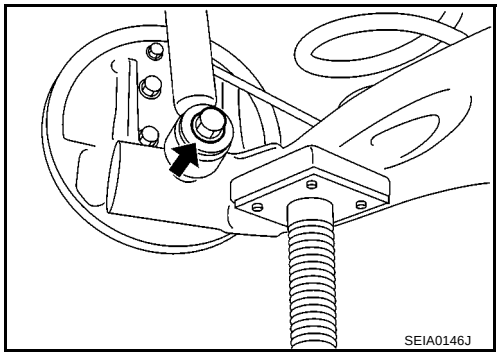
   CAUTION:
   Wrap the tip of a screwdriver with cloth to avoid damaging components.

3. Remove upper nuts of the shock absorber and remove washer, bushing on the upper side of shock absorber.



SEIA0147J

4. Set a jack under trailing arm of rear suspension beam and support it. Remove lower bolts of the shock absorber.
5. Remove shock absorber from the vehicle.



SEIA0146J

INSPECTION AFTER REMOVAL

Shock Absorber

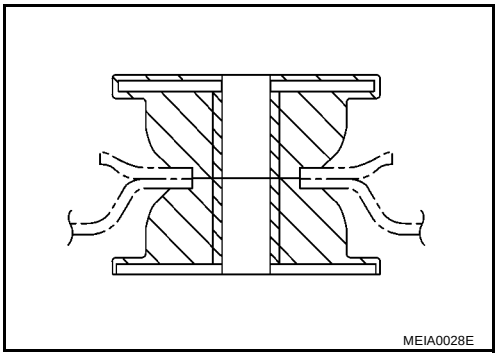
- Check shock absorber for deformation, cracks, and other damage. Replace if any non-standard conditions are found.
- Check piston rod for damage, uneven wear, and distortion, and replace shock absorber if necessary.
- Check welded and sealed areas for oil leakage, and replace if necessary.

Bound Bumper and Bushing

- Check bound bumper and bushing for cracks and damage. Replace if necessary.

INSTALLATION

- Refer to RSU-4, "Components" for tightening torque. Install in the reverse order of removal.
- When installing body side bushing, install the projection to the vehicle side hole securely.



COIL SPRING

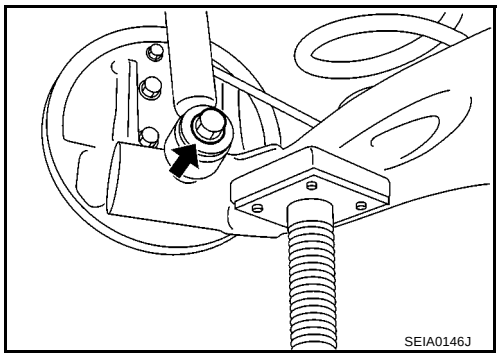
PFP:55020

Removal and Installation

EES000ZS

REMOVAL

1. Raise vehicle and remove tire.
2. Set a jack under trailing arm of rear suspension beam and support it. Remove lower side of the shock absorber. (left/right)
3. Remove jack. Remove coil spring and spring rubber seat.

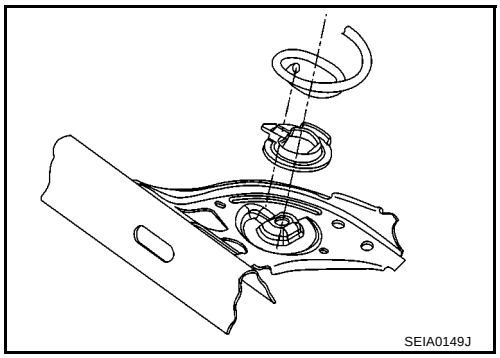


INSPECTION AFTER REMOVAL

- Check coil spring and spring rubber seat for deformation, cracks, and damage, and replace if necessary.

INSTALLATION

- Refer to RSU-4, "Components" for tightening torque. Tighten in the reverse order of removal.
- When installing spring, be sure to securely install the spring end position aligned to flush of spring rubber seat as shown in the figure.



REAR SUSPENSION BEAM

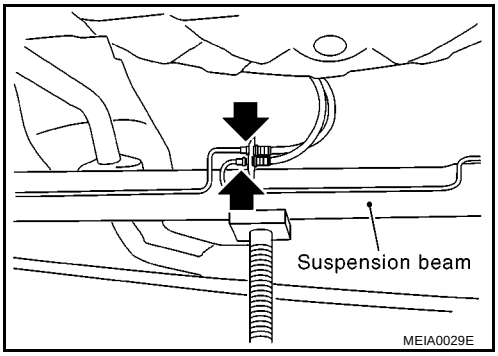
PFP:55501

Removal and Installation

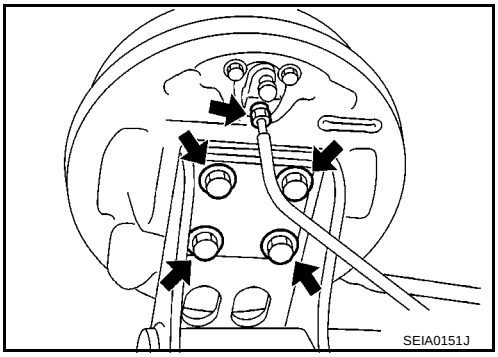
EES000ZT

REMOVAL

1. Raise vehicle, remove tire and replace parking lever.
2. Drain brake fluid. Refer to BR-9, "BRAKE FLUID" .
3. Loosen self-locking nut, and separate parking brake rear cable from rear brake and rear suspension beam. Refer to PB-3, "PARKING BRAKE SYSTEM" .
4. Remove ABS wheel sensor. Refer to BRC-44, "WHEEL SENSORS" .
5. Separate rear brake hose from brake piping. Refer to BR-11, "BRAKE PIPING AND HOSE" .
6. Remove shock absorber lower side (left/right), coil spring (left/right). Refer to RSU-6, "SHOCK ABSORBER" , RSU-8, "COIL SPRING"
7. Set a jack under suspension beam, and remove mounting bolts of suspension arm bracket and rear suspension beam.
8. Remove suspension beam.
9. Remove brake piping from rear suspension member beam. Refer to BR-11, "BRAKE PIPING AND HOSE" .



10. Remove spindle bolts and rear axle assembly.
11. Remove rear suspension arm bracket nuts and bolts. Remove rear suspension arm bracket from vehicle.



INSPECTION AFTER REMOVAL

- Check suspension beam and bushing for deformation, cracks, and damage. Replace if necessary.

INSTALLATION

- Refer to RSU-4, "Components" for tightening torque. Tighten in the reverse order of removal.
- Refer to BR-11, "BRAKE PIPING AND HOSE" for installation of brake piping and brake hose and for tightening torque.
- Refer to PB-3, "PARKING BRAKE SYSTEM" for installation of parking brake and for tightening torque.
- Tighten rear suspension arm bracket under unladen condition.
- Refer to BRC-44, "WHEEL SENSORS" for installation of ABS wheel sensor and for tightening torque.
- Refill with new brake fluid and bleed air. Refer to BR-9, "BRAKE FLUID" .

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EHS000QJ

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precaution for Seat Belt Service

EHS000QK

CAUTION:

- **Before removing the seat belt pre-tensioner assembly, turn the ignition switch off, disconnect the battery ground cable and wait at least 3 minutes.**
- **Do not use electrical test equipment for seat belt pre-tensioner connector.**
- **After replacing or reinstalling seat belt pre-tensioner assembly, or reconnecting seat belt pre-tensioner connector, check the system function. Refer to SRS-17, "SRS Operation Check" .**
- **Do not use disassemble buckle or seat belt assembly.**
- **Replace anchor bolts if they are deformed or worn out.**
- **Never oil tongue and buckle.**
- **If any component of seat belt assembly is questionable, do not repair. Replace the whole seat belt assembly.**
- **If webbing is cut, frayed, or damaged, replace seat belt assembly.**
- **When replacing seat belt assembly, use a genuine seat belt assembly.**

AFTER A COLLISION

WARNING:

Inspect all seat belt assemblies including retractors and attaching hardware after any collision. NISSAN recommends that all seat belt assemblies in use during a collision be replaced unless the collision was minor and the belts show no damage and continue to operate properly. Failure to do so could result in serious personal injury in an accident. Seat belt assemblies not in use during a collision should also be replaced if either damage or improper operation is noted. Seat belt pre-tensioner should be replaced even if the seat belts are not in use during a frontal collision in which the air bags are deployed.

Replace any seat belt assembly (including anchor bolts) if:

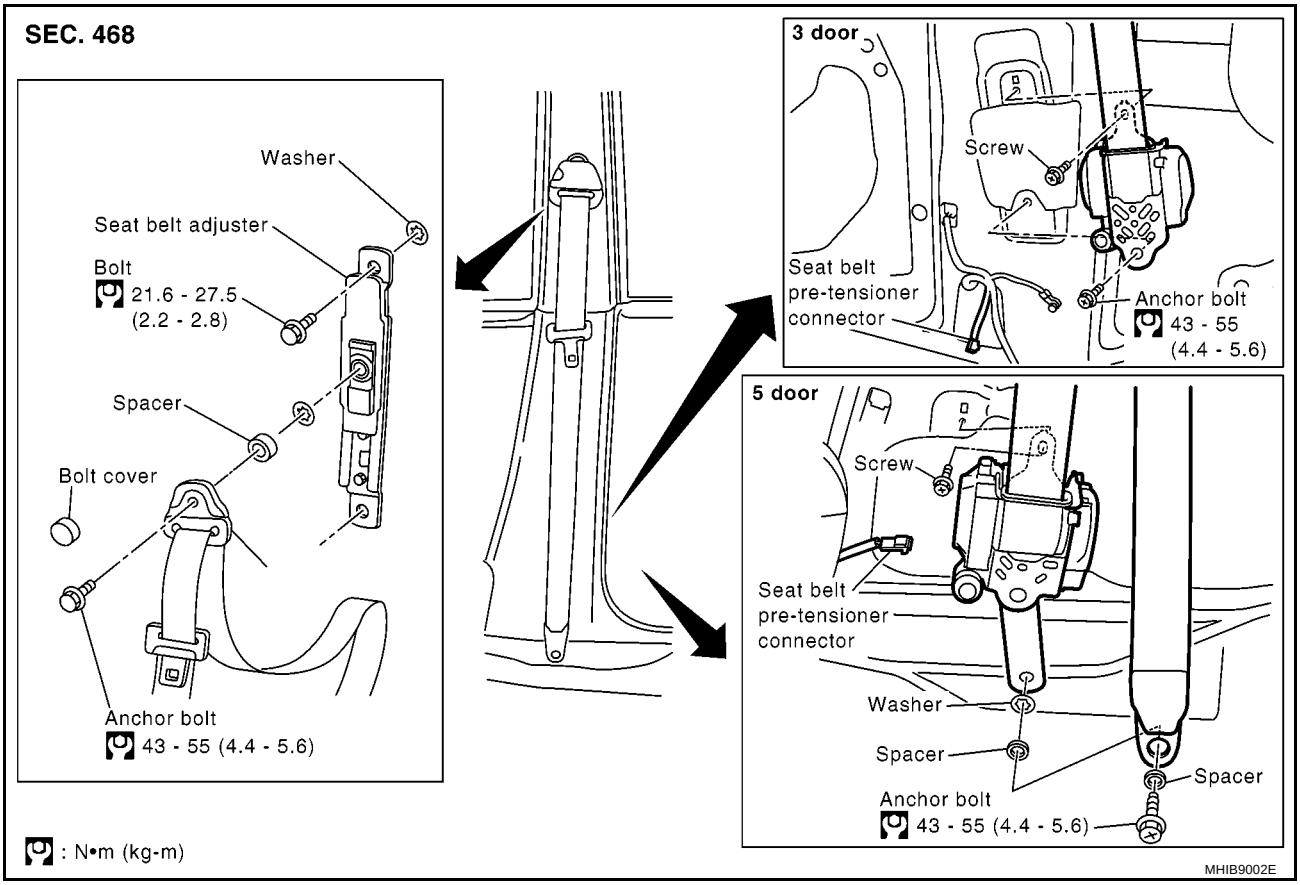
- The seat belt was in use at the time of a collision (except for minor collisions and the belts, retractors and buckles show no damage and continue to operate properly).
- The seat belt was damaged in an accident. (i.e. torn webbing, bent retractor or guide, etc.)
- The seat belt attaching point was damaged in an accident. Inspect the seat belt attaching area for damage or distortion and repair as necessary before installing a new seat belt assembly.
- Anchor bolts are deformed or worn out.
- The seat belt pre-tensioner should be replaced even if the seat belts are not in use during the collision in which the air bags are deployed.

SEAT BELTS

PFP:86884

Removal and Installation of Front Seat Belt

EHS000QL



CAUTION:

Before servicing SRS, turn ignition switch off, disconnect the battery ground cable and wait at least 3 minutes.

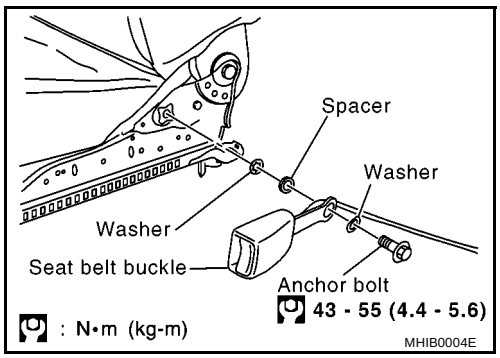
REMOVAL

Retractor

1. Remove bolt cover.
2. Remove shoulder anchor bolts.
3. For 5 door vehicle, remove the center pillar lower garnish. Remove rear side finisher for 3 door vehicle. Refer to EI-19, "Removal and Installation (5-Door)" , EI-20, "Removal and Installation (3-Door)" of “Body Side Trim” in EI section.
4. Remove seat belt pre-tensioner connector.
5. Remove pre-tensioner seat belt retractor mounting screw and floor anchor bolt. Then, remove seat belt assembly.

Buckle

1. Remove front seat from vehicle body. Refer to SE-7, "FRONT SEAT" in SE section.
2. Separate clip of buckle switch harness connector from the bottom of seat cushion.
3. Remove seat cushion inner finisher. Refer to SE-9, "Disassembly and Assembly of Seat Cushion" in SE section.
4. Remove anchor bolt (1) and buckle.

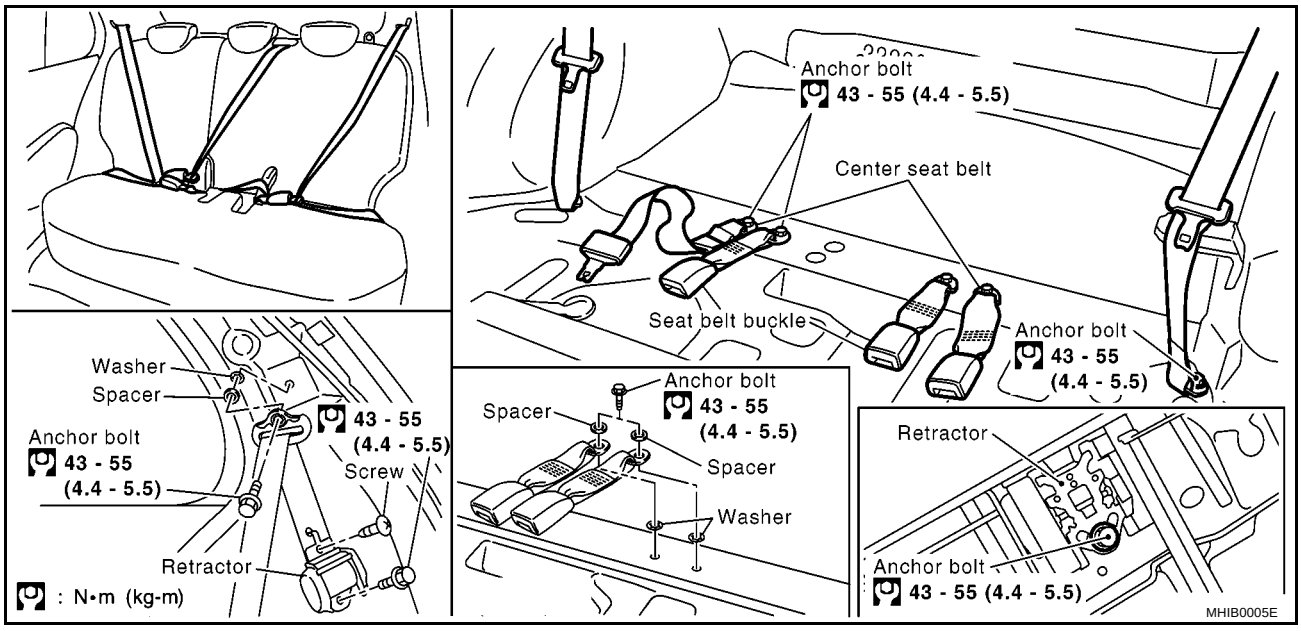


INSTALLATION

Install in the reverse order of removal.

Removal and Installation of Rear Seat Belt

EHS000QM



REMOVAL

1. Remove rear seat cushion. Refer to SE-11, "REAR SEAT" in SE section.
2. Remove luggage side upper finisher, luggage rear kickplate and luggage rear plate. Refer to SE-13, "Removal and Installation" in EI section.
3. Remove shoulder anchor bolt and floor anchor bolt.
4. Remove mounting clip of luggage side lower finisher, and move the luggage side lower finisher.
5. Remove seat belt retractor screw and anchor bolt. Remove seat belt assembly.
6. Remove floor anchor bolt. Remove tongue and buckle.

INSTALLATION

Install in the reverse order of removal.

Inspection

EHS000QN

POST-ACCIDENT INSPECTION

After a collision, inspect for damage or distortion of retractor, seat belt anchor, floor anchor, or shoulder anchor. Nissan recommends replacement of all seat belt assemblies in the following cases because these impairments may lead to personal injury.

- After a collision
- When installation point of seat belt assembly on vehicle is damaged.
- When it does not operate normally.

INSPECTION FOR SEAT BELT RETRACTOR

1. Using seat belt warning lamp, make sure it works normally.
   - When ignition is turned ON and driver seat belt is not in use, seat belt warning lamp is turned on. It is turned off when driver's seat belt is in use.
2. Check whether anchor bolts on seat belt retractor and buckle are securely tightened.
3. Confirm if the seat belt through anchor axis freely rotates, seat belt adjuster properly operates, or completely engages.
4. Retractor operation inspection

a. Pull out all webbing and check for twisting, cut, or other damage.

b. Retract webbing. Check if the webbing is retracted smoothly and completely into the retractor. When webbing is not retracted smoothly due to the dust or other reasons, carry out the following procedure with “SEAT BELT, TAPE SET”.

Inspection for Front Seat Belt Shoulder Anchor.

1. Pull webbing out 50 cm or more.
2. Fix webbing near the belt exit with a clip.
3. Pass the thin wire into the through part of shoulder anchor and webbing. Remove the sticking materials from the webbing by sliding the wire vertically along the surface of the webbing through part while pulling both sides of wire tightly.
4. Clean the remaining dirt by cleaning the webbing through part with a clean cloth.
5. Apply tape to the shoulder anchor belt through part where webbing touches.

   NOTE:
   Be careful to apply tape with no wrinkling or looseness.
6. Remove the seat belt fixing, and confirm webbing smoothly retracts.

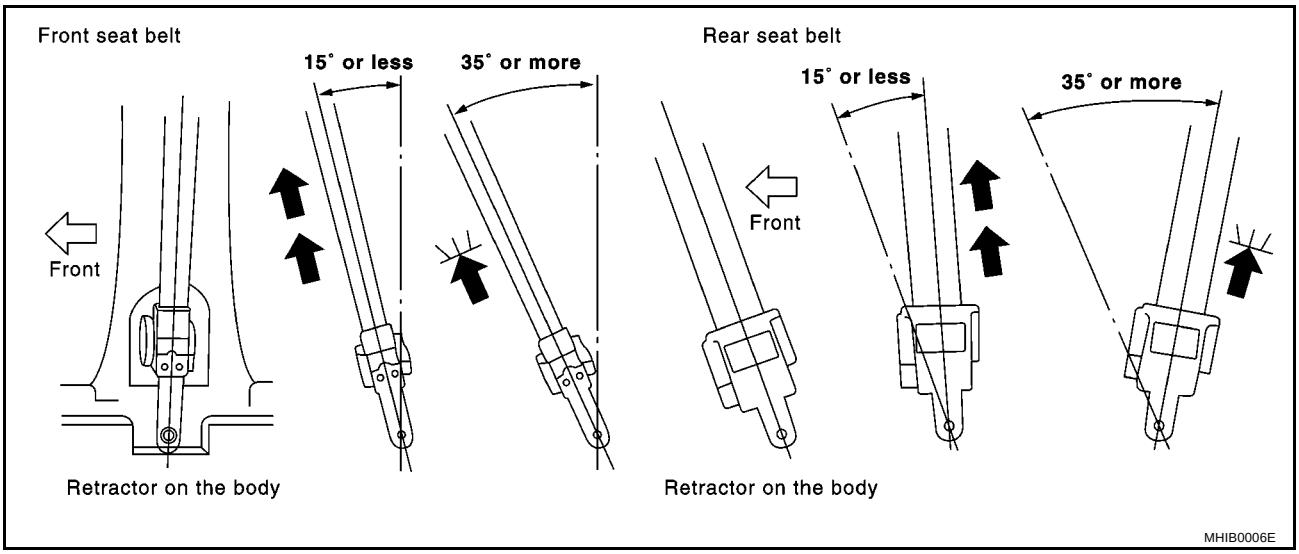
c. Insert the seat belt into the buckle and confirm seat belt is firmly secured.

d. Remove the seat belt from buckle. Release the seat belt and confirm webbing and tongue are placed correctly.

5. Seat belt retractor unit inspection

a. Remove seat belt retractor.

b. As shown in the figure, without twisting retractor, recline the seat belt retractor at the position retractor is mounted on the vehicle body. Slowly pull out the webbing.
   - Webbing is able to pull out when reclining 15 degrees or less.
   - Webbing is not able to pull out when reclining 35 degrees or more.



If it does not operate normally, replace seat belt assembly.

INSPECTION OF ELR AND SEAT BELT WITH CHILD SAFETY SEAT ANCHOR SYSTEM

ELR and Seat Belt With Child Safety Seat Anchor System

- ELR is a system which locks retractor in emergency cases such as sudden braking so that the webbing is not pulled out any further.
- Child safety seat anchor system is applied at the 3-point seat belt (outside seat) of back seat. Child safety seat anchor system functions when webbing is completely pulled out. Webbing is locked at certain point when retracting webbing little by little.
- There are 2 inspections: static and dynamic. Use the following procedures to check retractor for normal operation.

ELR Static Inspection

Does retractor lock and webbing stop immediately when quickly pulling webbing forward?

Inspection for Child Safety Seat Anchor System

1. Fully pull out webbing until “clicking” is heard.
2. Is “clicking” operating sound heard when retracting webbing little by little?
3. Is webbing locked and no longer pulled out when under tension?
4. Is child safety seat anchor system released when webbing is completely retracted?

ELR Dynamic Inspection

WARNING:

- **The following tests should be carried out in a safe, open place free of traffic and obstacles.**
- **The tests should be carried out on a dry paved road. Never attempt the tests on wet or unpaved road, open road, or highway. (This may cause an accident or personal injury.)**
- **Driver and passenger assume retractor will not lock and prepare themselves accordingly.**

1. Tighten driver and passenger seat belts.
2. Drive at approximately 16 km/h (MPH).
3. Notify passenger of a sudden stop. Driver and passenger prepare themselves for the possibility of retractor not locking. Then, driver fully depresses the brake pedal to stop suddenly.
4. While car stops, confirm if retractor is locked and webbing is not pulled out any more. Check for only retractor part if it is not locked.

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS007Z9

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Wiring Diagrams and Trouble Diagnosis

EKS007ZA

When you read wiring diagrams, refer to the followings:

- GI-14, "How to Read Wiring Diagrams" in GI section
- PG-4, "POWER SUPPLY ROUTING" for power distribution circuit in PG section

When you perform trouble diagnosis, refer to the followings:

- GI-10, "How to Follow Trouble Diagnoses" in GI section
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" in GI section

BATTERY

PFP:00011

How to Handle Battery

EKS007ZB

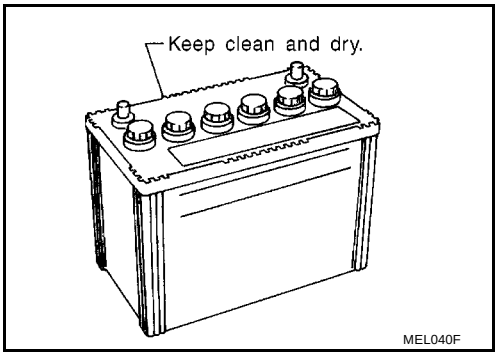
CAUTION:

- **If it becomes necessary to start the engine with a booster battery and jumper cables, use a 12-volt booster battery.**
- **After connecting battery cables, ensure that they are tightly clamped to battery terminals for good contact.**
- **Never add distilled water through the hole used to check specific gravity.**

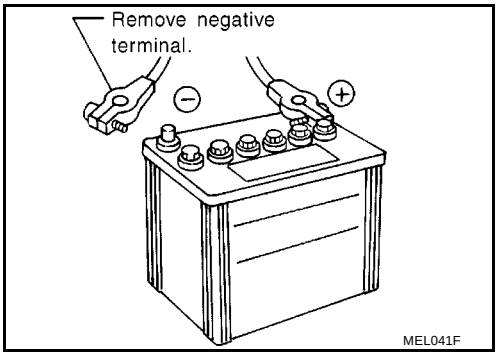
METHODS OF PREVENTING OVER-DISCHARGE

The following precautions must be taken to prevent over-discharging a battery.

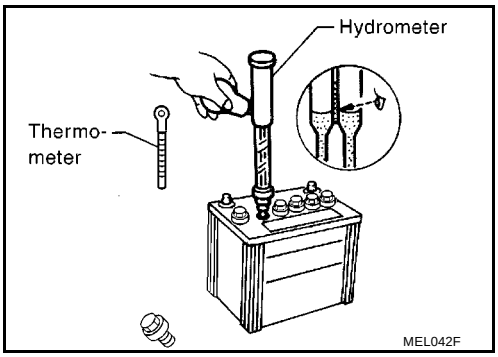
- The battery surface (particularly its top) should always be kept clean and dry.
- The terminal connections should be clean and tight.
- At every routine maintenance, check the electrolyte level.
  This also applies to batteries designated as “low maintenance” and “maintenance-free”.



- When the vehicle is not going to be used over a long period of time, disconnect the negative battery terminal. (If the vehicle has an extended storage switch, turn it off.)



- Check the charge condition of the battery.
  Periodically check the specific gravity of the electrolyte. Keep a close check on charge condition to prevent over-discharge.

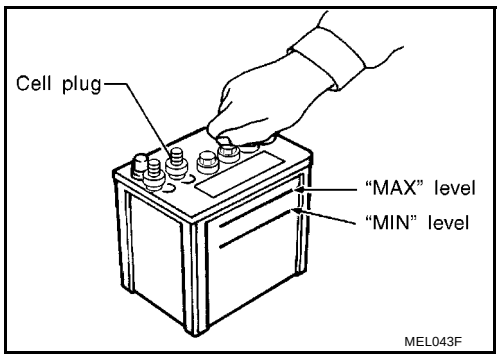


CHECKING ELECTROLYTE LEVEL

WARNING:

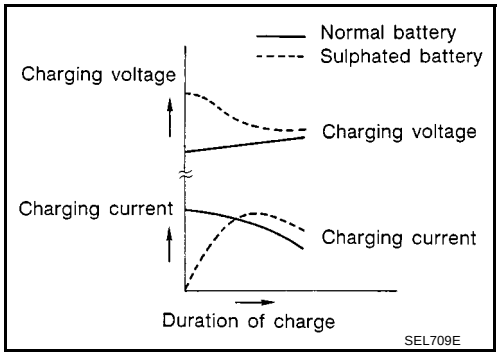
Do not allow battery fluid to come in contact with skin, eyes, fabrics, or painted surfaces. After touching a battery, do not touch or rub your eyes until you have thoroughly washed your hands. If acid contacts eyes, skin or clothing, immediately flush with water for 15 minutes and seek medical attention.

- Remove the cell plug using a suitable tool.
- Add distilled water up to the MAX level.



Sulphation

A battery will be completely discharged if it is left unattended for a long time and the specific gravity will become less than 1.100. This may result in sulphation on the cell plates.
To determine if a battery has been "sulphated", note its voltage and current when charging it. As shown in the figure, less current and higher voltage are observed in the initial stage of charging sulphated batteries.
A sulphated battery may sometimes be brought back into service by means of a long, slow charge, 12 hours or more, followed by a battery capacity test.



SPECIFIC GRAVITY CHECK

1. Read hydrometer and thermometer indications at eye level.
2. Convert into specific gravity at 20°C (68°F).

Example:

- When electrolyte temperature is 35°C (95°F) and specific gravity of electrolyte is 1.230, converted specific gravity at 20°C (68°F) is 1.240.
- When electrolyte temperature is 0°C (32°F) and specific gravity of electrolyte is 1.210, converted specific gravity at 20°C (68°F) is 1.196.

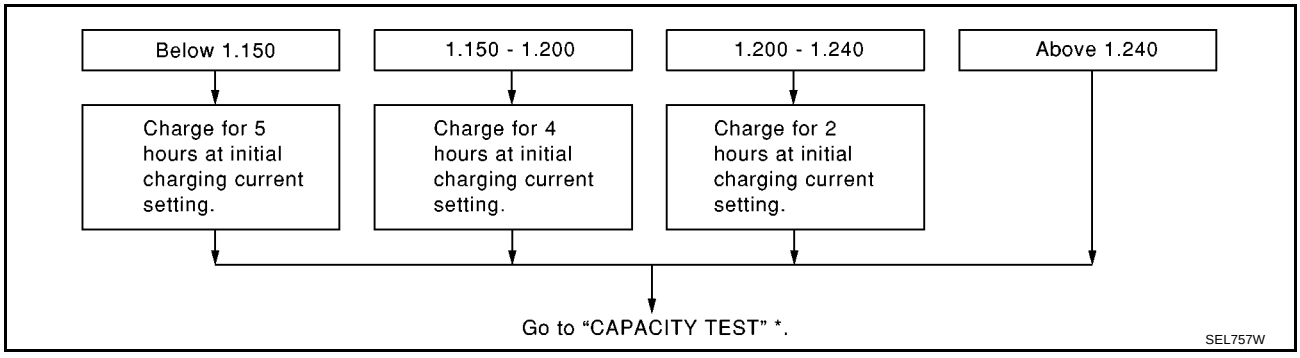
- Check battery type and determine the specified current using the table shown above.
- After starting charging, adjustment of charging current is not necessary.

Fig. 3 Additional Charge (Slow Charge)



*. SC-8, "CHART II"

CAUTION:

- **Set charging current to value specified in Fig. 2. If charger is not capable of producing specified current value, set its charging current as close to that value as possible.**
- **Keep battery away from open flame while it is being charged.**
- **When connecting charger, connect leads first, then turn on charger. Do not turn on charger first, as this may cause a spark.**
- **If battery temperature rises above 60°C (140°F), stop charging. Always charge battery when its temperature is below 60°C (140°F).**

010S [YUASA type code]			
75D31R(L)			
95D31R(L)			
115D31R(L)			
110D26R(L)			
95E41R(L)			
130E41R(L)	40 (A)		

- Check battery type and determine the specified current using the table shown above.
- After starting charging, adjustment of charging current is not necessary.

CAUTION:

- **Do not use quick charge method on a battery whose specific gravity is less than 1.100.**
- **Set initial charging current to value specified in Fig. 6. If charger is not capable of producing specified current value, set its charging current as close to that value as possible.**
- **Keep battery away from open flame while it is being charged.**
- **When connecting charger, connect leads first, then turn on charger. Do not turn on charger first, as this may cause a spark.**
- **Be careful of a rise in battery temperature because a large current flow is required during quick-charge operation.**
  If battery temperature rises above 60°C (140°F), stop charging. Always charge battery when its temperature is below 60°C (140°F).

- **Do not exceed the charging time specified in Fig. 6, because charging battery over the charging time can cause deterioration of the battery.**

Removal and Installation

EKS007ZD

Observe the following to ensure proper servicing.

CAUTION:

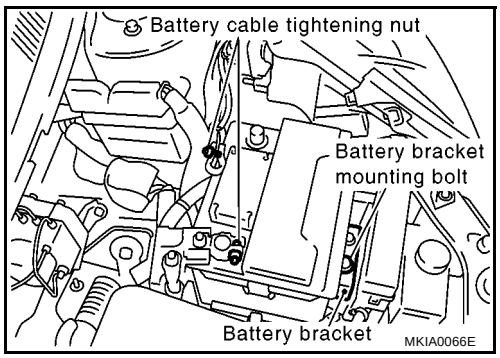
- **When removing, remove negative terminal first. But for installation, install positive terminal first.**
- **Tighten parts to the specified torque shown below.**

Battery bracket mounting bolt:

: 12.7 - 15.7 N·m (1.3 - 1.6 kg-m, 10 - 11 ft-lb)

Battery cable tightening nut:

: 3.0 - 5.0 N·m (0.31 - 0.51 kg-m, 27 - 44 in-lb)



CHARGING SYSTEM

PFP:00011

System Description (CR Engine Models)

EKS007ZE

The alternator provides DC voltage to operate the vehicle's electrical system and to keep the battery charged. The voltage output is controlled by the IC regulator.
Power is supplied at all times to alternator terminal 4 (S) through:

- 10A fuse [No. 26, located in the fuse block (J/B)].

Terminal B supplies power to charge the battery and operate the vehicle's electrical system. Output voltage is controlled by the IC regulator at terminal 4 (S) detecting the input voltage. The charging circuit is protected by the 100A link.
The alternator is grounded to the body.
With the ignition switch in the ON or START position, power is supplied

- 10A fuse [No. 2, located in the fuse block (J/B)]
- to combination meter terminal 28 for the charge warning lamp.

Ground is supplied

- to terminal 38 of the combination meter
- through terminal 3 (L) of the alternator.

The charge warning lamp will illuminate. When the alternator is providing sufficient voltage with the engine running, the ground is opened and the charge warning lamp will go off.
If the charge warning lamp illuminates with the engine running, a fault is indicated.

System Description (K9K Engine Models)

EKS00K2U

The alternator provides DC voltage to operate the vehicle's electrical system and to keep the battery charged. The voltage output is controlled by the IC regulator.
With the ignition switch in the ON or START position, power is supplied to alternator terminal 4 (S) through:

- IPDM E/R (Intelligent Power Distribution Module Engine Room)

Terminal B supplies power to charge the battery and operate the vehicle's electrical system. Output voltage is controlled by the IC regulator at terminal 4 (S) detecting the input voltage. The charging circuit is protected by the 100A link.
The alternator is grounded to the body.
With the ignition switch in the ON or START position, power is supplied

- 10A fuse [No. 2, located in the fuse block (J/B)]
- to combination meter terminal 28 for the charge warning lamp.

Ground is supplied

- to terminal 38 of the combination meter
- through terminal 3 (L) of the alternator.

The charge warning lamp will illuminate. When the alternator is providing sufficient voltage with the engine running, the ground is opened and the charge warning lamp will go off.
If the charge warning lamp illuminates with the engine running, a fault is indicated.

Trouble Diagnoses (CR Engine Models)

EKS007ZG

DIAGNOSIS PROCEDURE

1. Check malfunction symptoms or customer's remarks.
2. Perform pre-diagnosis inspection. Refer to SC-19, "PRE-DIAGNOSIS INSPECTION" .
3. Perform trouble diagnosis for each trouble symptom. Refer to SC-19, "DIAGNOSIS CHART BY SYMPTOM"
4. Repair or replace parts indicated inspection flow based on the charge warning lamp. Refer to SC-19, "INSPECTION FLOW BY CHARGE WARNING LAMP" .
5. End

PRE-DIAGNOSIS INSPECTION

1. Perform alternator belt inspection. Refer to EM-12, "DRIVE BELTS" in EM section.
2. Inspect battery.
3. Check alternator terminal B for loose or improper connection.
4. Check alternator connector and terminals for loose connection, disconnection and bend.
5. Check connecting condition of harness for charging system harness (fusible link terminal and battery terminal).
6. After performing 1 to 5 above, go to trouble diagnosis for symptoms. Refer to SC-19, "DIAGNOSIS CHART BY SYMPTOM" .

DIAGNOSIS CHART BY SYMPTOM

Symptom	Reference page
Battery discharge	Refer toSC-19, "INSPECTION FLOW BY CHARGE WARNING LAMP" .
Charge warning lamp illuminates.	Refer to SC-19, "INSPECTION FLOW BY CHARGE WARNING LAMP" .
Other than the above symptoms (splashing out of battery fluid, nasty smell and others)	SC-23, "INSPECTION OF EXCESSIVE ALTERNATOR POWER GENERATION".

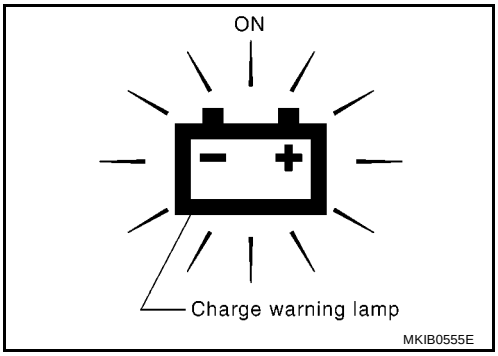
INSPECTION FLOW BY CHARGE WARNING LAMP

1. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch ON.
2. Check if charge warning lamp illuminates.

Does charge warning lamp illuminate?

YES >> GO TO 2.
NO >> Go to SC-20, "CHARGE WARNING LAMP LINE INSPECTION" .

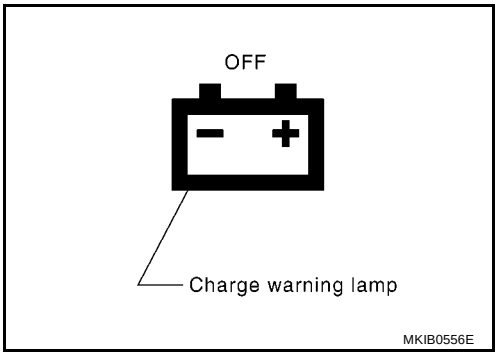


2. CHARGE WARNING LAMP INSPECTION

1. Start engine.
2. Check if charge warning lamp goes off.

Does charge warning lamp goes off?

YES >> GO TO 3.
NO >> Go to SC-21, "VOLTAGE DETECTION LINE AND CHARGE WARNING LAMP INSPECTION" .

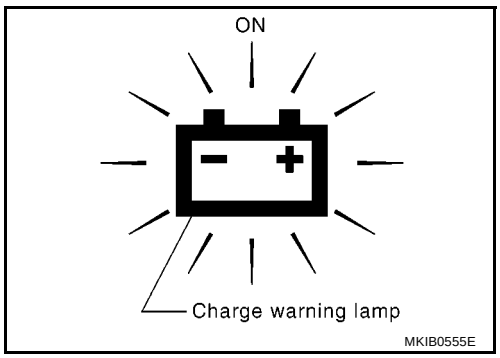


3. CHARGE WARNING LAMP INSPECTION

1. Set engine speed at 2,500 rpm.
2. Check if charge warning lamp illuminates.

Does charge warning lamp illuminate?

YES >> Go to SC-23, "INSPECTION OF EXCESSIVE ALTERNATOR POWER GENERATION" .
NO >> Go to SC-23, "INSPECTION OF INSUFFICIENT ALTERNATOR POWER GENERATION" .



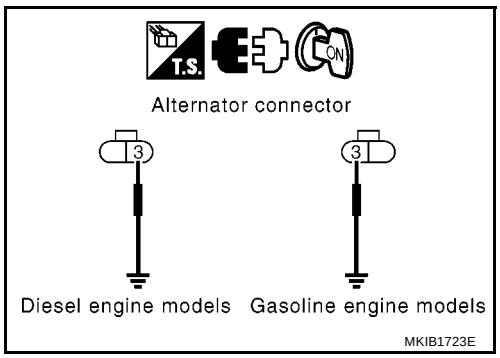
CHARGE WARNING LAMP LINE INSPECTION

CAUTION:
If open circuit is detected in L terminal, alternator cannot start generating.

INSPECTION PROCEDURE

1. CHARGE WARNING LAMP INSPECTION

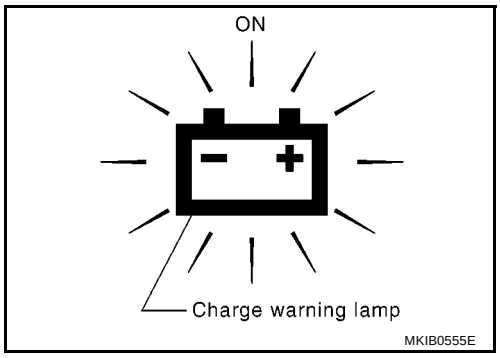
1. Turn ignition switch OFF.
2. Disconnect alternator connector
3. Connect alternator connector terminal 3 to ground.



4. Turn ignition switch ON.

Does charge warning lamp illuminate?

YES >> GO TO 4.
NO >> GO TO 2.



2. CONNECTOR INSPECTION

1. Turn ignition switch OFF.
2. Check meter and terminals (meter side, and harness side) for damage, deformation or improper connection.

OK or NG

OK >> GO TO 3.
NG >> Repair terminals and connectors.

3. CONTINUITY INSPECTION

1. Disconnect combination meter connector.
2. Check continuity between combination meter connector terminal 38 and alternator connector terminal 3.

38 - 3 : Continuity should exist.

OK or NG

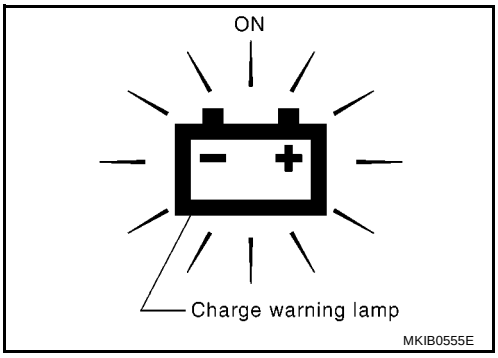
OK >> Replace combination meter. (Do not replace alternator, since it is normal.)
NG >> Repair the harnesses or connectors. (Do not replace alternator, since it is normal.)

4. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch OFF.
2. Connect alternator connector.
3. Turn ignition switch ON.

Does charge warning lamp illuminate?

YES >> Repair alternator connector. (Poor connection and intermittent problem) (Do not replace alternator, since it is normal.)
NO >> Replace alternator. (circuit malfunction in alternator)



VOLTAGE DETECTION LINE AND CHARGE WARNING LAMP INSPECTION

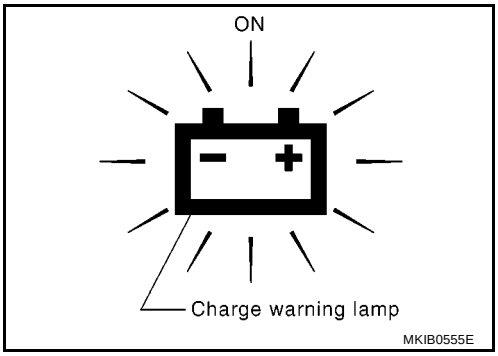
INSPECTION PROCEDURE

1. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch OFF.
2. Disconnect alternator connector.
3. Turn ignition switch ON.

Does charge warning lamp stay ON?

YES >> GO TO 5.
NO >> GO TO 2.



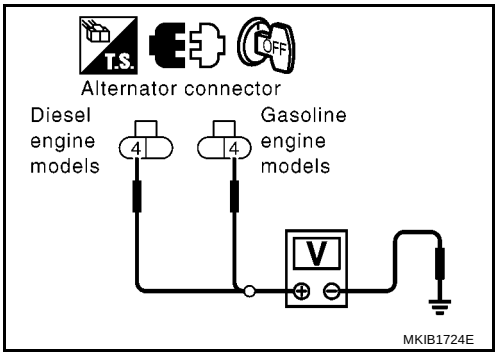
2. VOLTAGE INSPECTION

Check voltage between alternator connector terminal 4 and ground.

4 - Ground : 12V or more

Is the inspection result 12V or more?

YES >> Replace alternator.
NO >> GO TO 3.



3. CONNECTOR INSPECTION

1. Turn ignition switch OFF.
2. Check alternator connector and terminal 4 (alternator side, and harness side) for damage, deformation or improper connection.

OK or NG

OK >> GO TO 4.
NG >> Repair terminals and connectors.

4. CHECK FUSES.

Check if alternator S terminal fuse #26 (10A) is blown.

OK or NG

OK >> Repair harness between fuse #26 (10A) and alternator connector terminal 4. (Do not replace alternator, since it is normal.)
NG >> Replace fuse. (Do not replace alternator, since it is normal.)

5. CONTINUITY INSPECTION

1. Turn ignition switch OFF.
2. Disconnect combination meter connector.
3. Check continuity between combination meter connector terminal 38 and ground, and combination meter connector terminal 38 and alternator terminal 3.

38 - Ground : Continuity should not exist.
38 - 3 : Continuity should exist.

OK or NG

OK >> Replace combination meter. (Do not replace alternator, since it is normal.)
NG >> Repair the harnesses or connectors. (Do not replace alternator, since it is normal.)

INSPECTION OF INSUFFICIENT ALTERNATOR POWER GENERATION

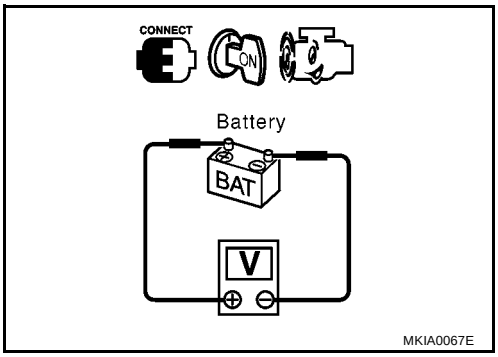
CAUTION:
Check them using charged battery performed battery inspection.

1. VOLTAGE INSPECTION

1. Increase engine speed to 2,500 rpm.
2. Turn electrical load to ON. (Headlamp LO turns on, blower fan motor maximum airflow amount)
3. Check battery voltage.

Is the inspection result 12.8V to 15.1V?

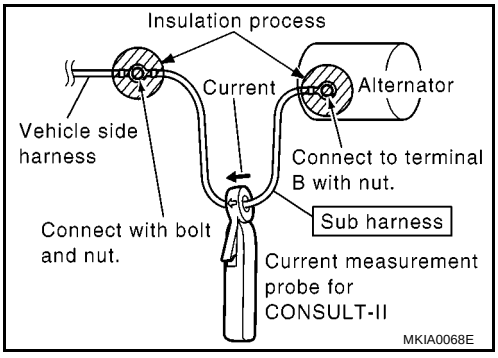
YES >> GO TO 2.
NO >> Replace alternator. (Alternator power generation error.)



2. CURRENT INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect the battery ground cable.
3. Attach current measurement probe for CONSULT-II to the harness for alternator terminal B. (If the probe can not be attached properly, then connect the sub-harness between alternator terminal B and the vehicle side harness as shown in figure, and attach the probe to sub-harness.)
4. Connect battery ground cable.
5. Increase engine speed to 2,500 rpm.
6. Turn electrical load to ON. (Headlamp LO turns on, blower fan motor maximum airflow amount, rear window defogger)
7. Check alternator terminal B current.

   CAUTION:
   Be careful of rotating parts because the engine is running.



Is the inspection result 30A or more?

YES >> GO TO dark current inspection. Refer to SC-24, "DARK CURRENT INSPECTION" . (Alternator is normal. Do not replace.)
NO >> Replace alternator. (Alternator power generation error.)

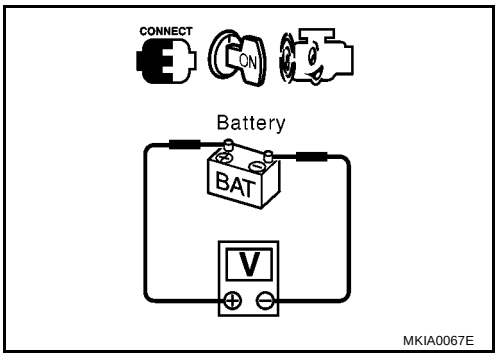
INSPECTION OF EXCESSIVE ALTERNATOR POWER GENERATION

1. ALTERNATOR VOLTAGE INSPECTION

1. Increase engine speed to 2,500 rpm.
2. Check battery voltage.

Is the inspection result 16V or less?

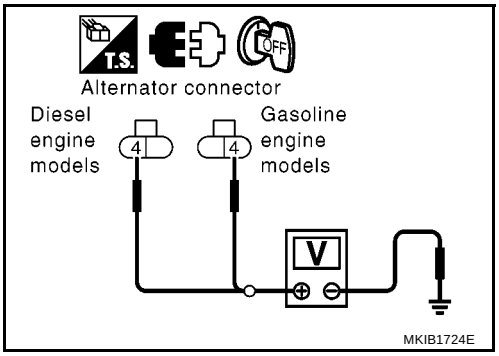
YES >> GO TO 2.
NO >> Replace alternator. (Excessive alternator power generation.)



2. BATTERY VOLTAGE INSPECTION

1. Turn the ignition switch OFF.
2. Disconnect alternator connector.
3. Check voltage between alternator connector terminal 4 and ground.

4 - Ground : 12V or more



Is the inspection result 12V or more?

YES >> Replace alternator. (Alternator power generation error)
NO >> GO TO 3.

3. FUSE CHECK

Check if fuse #26 (10A) is blown.

OK or NG

OK >> Repair harness between fuse #26 (10A) and alternator harness connector terminal 4. (Alternator is normal. Do not replace.)
NG >> Replace fuse. (Alternator is normal. Do not replace.)

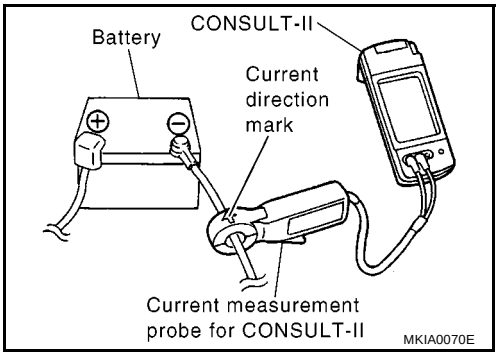
DARK CURRENT INSPECTION

Dark Current : Small current while ignition switch “OFF”.

NOTE:

- If battery ground cable is disconnected from battery terminal, a large dark current may not be reproduced. When battery discharge occurs, never disconnect battery terminal while using ammeter.
- Do not connect CONSULT-II CONVERTER to data link connector when measuring dark current. CONSULT-II power should be supplied using AC adapter or internal battery.

1. Attach current measurement probe for CONSULT-II to battery ground cable. Refer to SC-25, "OPERATION PROCEDURE OF CURRENT MEASUREMENT PROBE FOR CONSULT-II" .
2. Check that all electrical equipment is turned OFF.
3. Remove key. Close and lock doors. Check that room lamp turns off.
4. Measure dark current. Is it 50mA or less? Refer to SC-25, "OPERATION PROCEDURE OF CURRENT MEASUREMENT PROBE FOR CONSULT-II" .



NOTE:
Dark current stable time is different due to equipment and use of the vehicle. If it is not 50mA or less after leaving for 1 minute, measure dark current again after leaving for 30 minutes or more.
If YES, GO TO 7. If NO, GO TO 5.

5. Remove and install fuses one by one. Search for the fuse that greatly changes dark current.

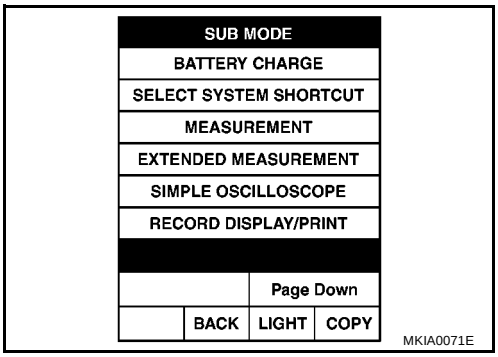
NOTE:
If dark current is greatly reduced when removing the fuse, and even if dark current is not greatly increased when installing it again, the fuse circuit may be the cause.

6. Check that dark current changes when moving the suspect circuit harness. If dark current changes, check harness for short. If dark current does not change, electronic unit in the circuit may not be entering the energy-saving mode when it turns OFF. If it does not enter the energy-saving mode, replace electronic unit.
7. No malfunction for alternator and electrical equipment. Electric load may be larger than alternator generating ability. Check the customer's usage.

OPERATION PROCEDURE OF CURRENT MEASUREMENT PROBE FOR CONSULT-II

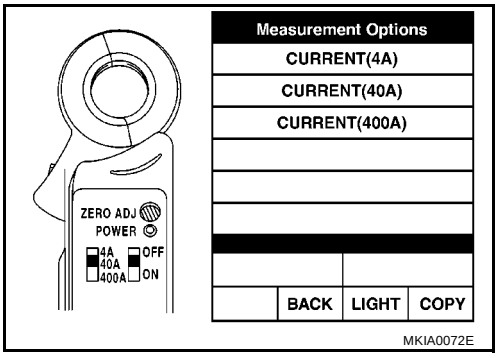
For details, refer to the supplied “CONSULT-II Current Probe Operation Manual”.

1. Turn current probe power supply OFF and connect to CONSULT-II. (Red: CH1, Black: Ground)
2. Touch “SUB MODE”.
3. Touch “Extending Measurement Mode” on “SUB MODE” screen.
4. CAUTION is displayed, touch “OK”.



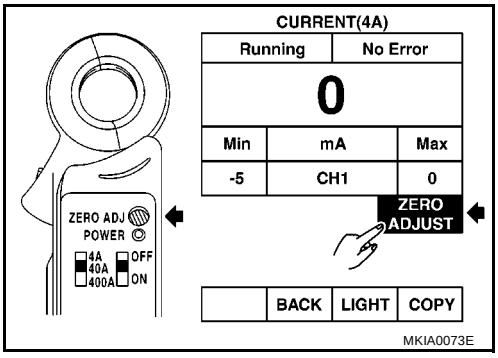
5. Set current probe range switch at the range to measure, turn current probe power supply ON. When measuring dark current, set 4A range. (Check that POWER indicator turns on. Refer to CONSULT-II Current Probe Operation Manual.)
6. Touch the same measuring range at CONSULT-II.

   NOTE:
   If current probe measuring range is different from CONSULT-II measuring range, incorrect value is displayed.



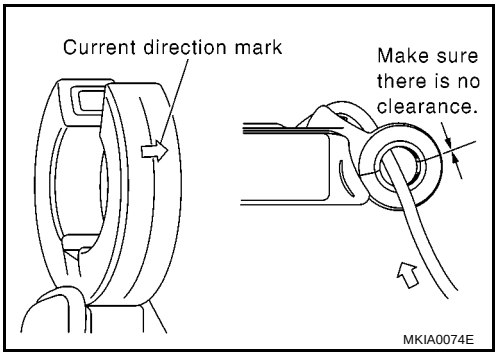
7. Adjust 0 point of current probe or CONSULT-II. (Do not clamp anything to probe.)

   NOTE:
   If 0 point is dislocated greatly, adjust at current probe side generally.



8. Align current direction mark, clamp harness, and measure current. If current direction is incorrect, it is displayed negative value.

   NOTE:
   - When current is measured, close probe joint securely.
   - If multiple harnesses are clamped, measurement cannot be performed. Always clamp only one.



Trouble Diagnoses (K9K Engine Models)

EKS00K2W

DIAGNOSIS PROCEDURE

1. Check malfunction symptoms or customer's remarks.
2. Perform pre-diagnosis inspection. Refer to SC-26, "PRE-DIAGNOSIS INSPECTION" .
3. Perform trouble diagnosis for each trouble symptom. Refer to SC-26, "DIAGNOSIS CHART BY SYMPTOM"
4. Repair or replace parts indicated inspection flow based on the charge warning lamp. Refer to SC-26, "INSPECTION FLOW BY CHARGE WARNING LAMP" .
5. End

PRE-DIAGNOSIS INSPECTION

1. Perform alternator belt inspection. Refer to EM-121, "DRIVE BELTS" .
2. Inspect battery.
3. Check alternator terminal B for loose or improper connection.
4. Check alternator connector and terminals for loose connection, disconnection and bend.
5. Check connecting condition of harness for charging system harness (fusible link terminal and battery terminal).
6. After performing 1 to 5 above, go to trouble diagnosis for symptoms. Refer to SC-26, "DIAGNOSIS CHART BY SYMPTOM" .

DIAGNOSIS CHART BY SYMPTOM

Symptom	Reference page
Battery discharge	Refer toSC-26, "INSPECTION FLOW BY CHARGE WARNING LAMP" .
Charge warning lamp illuminates.	Refer to SC-26, "INSPECTION FLOW BY CHARGE WARNING LAMP" .
Other than the above symptoms (splashing out of battery fluid, nasty smell and others)	SC-30, "INSPECTION OF EXCESSIVE ALTERNATOR POWER GENERATION".

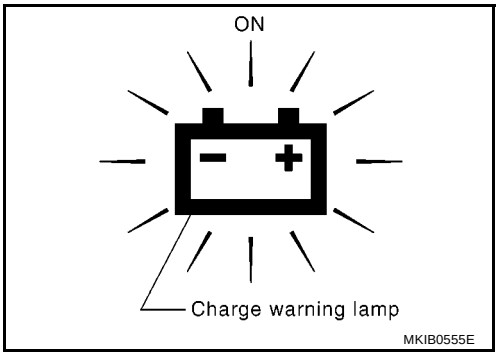
INSPECTION FLOW BY CHARGE WARNING LAMP

1. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch ON.
2. Check if charge warning lamp illuminates.

Does charge warning lamp illuminate?

YES >> GO TO 2.
NO >> Go to SC-27, "CHARGE WARNING LAMP LINE INSPECTION" .

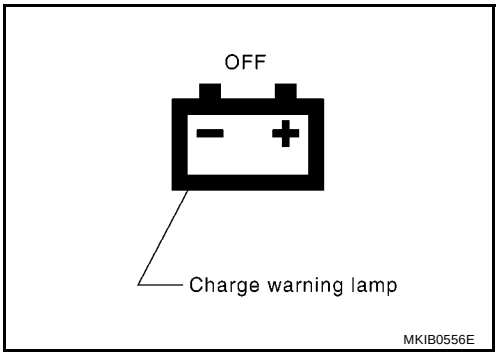


2. CHARGE WARNING LAMP INSPECTION

1. Start engine.
2. Check if charge warning lamp goes off.

Does charge warning lamp goes off?

YES >> GO TO 3.
NO >> Go to SC-28, "VOLTAGE DETECTION LINE AND CHARGE WARNING LAMP INSPECTION" .



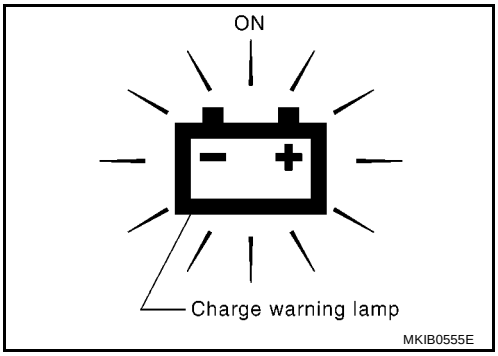
3. CHARGE WARNING LAMP INSPECTION

1. Set engine speed at 2,500 rpm.
2. Check if charge warning lamp illuminates.

Does charge warning lamp illuminate?

YES >> Go to SC-30, "INSPECTION OF EXCESSIVE ALTERNATOR POWER GENERATION" .

NO >> Go to SC-30, "INSPECTION OF INSUFFICIENT ALTERNATOR POWER GENERATION" .



CHARGE WARNING LAMP LINE INSPECTION

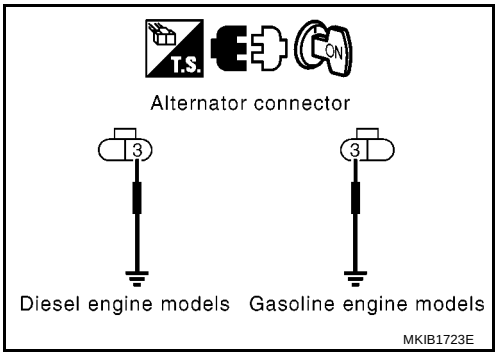
CAUTION:

If open circuit is detected in L terminal, alternator cannot start generating.

INSPECTION PROCEDURE

1. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch OFF.
2. Remove alternator connector.
3. Connect alternator connector terminal 3 to ground.

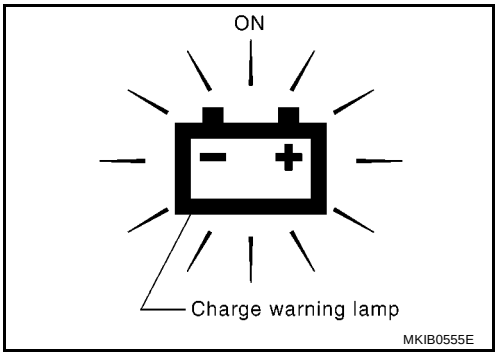


4. Turn ignition switch ON.

Does charge warning lamp illuminate?

YES >> GO TO 4.

NO >> GO TO 2.



2. CONNECTOR INSPECTION

1. Turn ignition switch OFF.
2. Check combination meter and terminals (meter side, and harness side) for damage, deformation or improper connection.

OK or NG

OK >> GO TO 3.

NG >> Repair terminals and connectors.

3. CONTINUITY INSPECTION

1. Disconnect combination meter connector.
2. Check continuity between combination meter connector terminal 38 and alternator connector terminal 3.

38 - 3 : Continuity should exist.

OK or NG

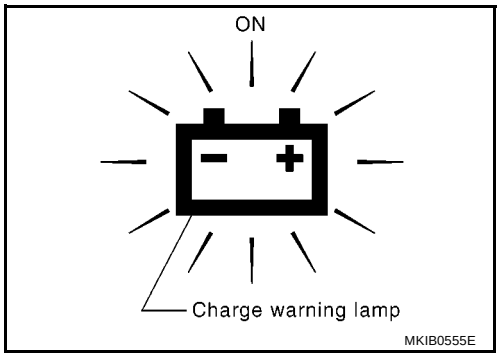
OK >> Replace combination meter. (Do not replace alternator, since it is normal.)
NG >> Repair the harnesses or connectors. (Do not replace alternator, since it is normal.)

4. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch OFF.
2. Connect alternator connectors.
3. Turn ignition switch ON.

Does charge warning lamp illuminate?

YES >> Repair alternator connector. (Poor connection and intermittent problem) (Do not replace alternator, since it is normal.)
NO >> Replace alternator. (circuit malfunction in alternator)



VOLTAGE DETECTION LINE AND CHARGE WARNING LAMP INSPECTION

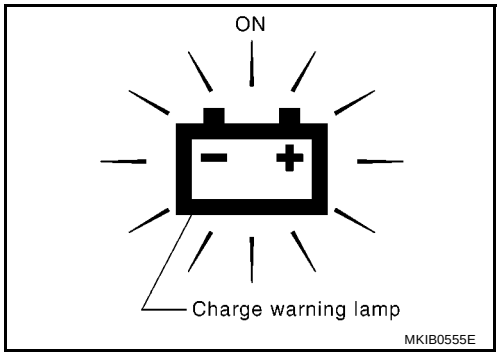
INSPECTION PROCEDURE

1. CHARGE WARNING LAMP INSPECTION

1. Turn ignition switch OFF.
2. Disconnect alternator connector.
3. Turn ignition switch ON.

Does charge warning lamp stay ON?

YES >> GO TO 6.
NO >> GO TO 2.



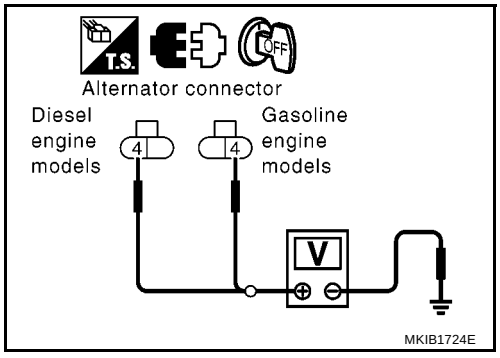
2. VOLTAGE INSPECTION

Check voltage between alternator connector terminal 4 and ground.

4 - Ground : 12V or more

Is the inspection result 12V or more?

YES >> Replace alternator.
NO >> GO TO 3.



3. CONNECTOR INSPECTION

1. Turn ignition switch OFF.
2. Check alternator connector and terminal 4 (alternator side, and harness side) for damage, deformation or improper connection.

OK or NG

OK >> GO TO 4.
NG >> Repair terminals and connectors.

4. CONNECTOR INSPECTION

Check IPDM E/R and terminals (IPDM E/R side, and harness side) for damage, deformation or improper connection.

OK or NG

OK >> GO TO 5.
NG >> Repair terminals and connectors.

5. CONTINUITY INSPECTION

1. Disconnect IPDM E/R connector.
2. Check continuity between IPDM E/R connector terminal 63 and alternator connector terminal 4.

63 - 4 : Continuity should exist.

OK or NG

OK >> Replace IPDM E/R. (Do not replace alternator, since it is normal.)
NG >> Repair the harnesses or connectors. (Do not replace alternator, since it is normal.)

6. CONTINUITY INSPECTION

1. Turn ignition switch OFF.
2. Disconnect combination meter connector.
3. Check continuity between combination meter connector terminal 38 and ground, and combination meter connector terminal 38 and alternator terminal 3.

38 - Ground : Continuity should not exist.
38 - 3 : Continuity should exist.

OK or NG

OK >> Replace combination meter. (Do not replace alternator, since it is normal.)
NG >> Repair the harnesses or connectors. (Do not replace alternator, since it is normal.)

INSPECTION OF INSUFFICIENT ALTERNATOR POWER GENERATION

CAUTION:

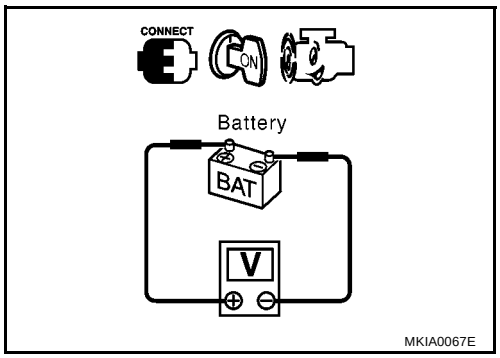
Check them using charged battery performed battery inspection.

1. VOLTAGE INSPECTION

1. Increase engine speed to 2,500 rpm.
2. Turn electrical load to ON. (Headlamp LO turns on, blower fan motor maximum airflow amount)
3. Check battery voltage.

Is the inspection result 12.8V to 15.1V?

YES >> GO TO 2.
NO >> Replace alternator. (Alternator power generation error.)

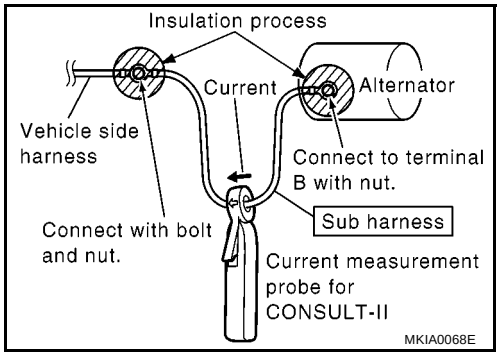


2. CURRENT INSPECTION

1. Turn ignition switch OFF.
2. Disconnect the battery ground cable.
3. Attach current measurement probe for CONSULT-II to the harness for alternator terminal B. (If the probe can not be attached properly, then connect the sub-harness between alternator terminal B and the vehicle side harness as shown in figure, and attach the probe to sub-harness.)
4. Connect battery ground cable.
5. Increase engine speed to 2,500 rpm.
6. Turn electrical load to ON. (Headlamp LO turns on, blower fan motor maximum airflow amount, rear window defogger)
7. Check alternator terminal B current.

   CAUTION:

   Be careful of rotating parts because the engine is running.



Is the inspection result 30A or more?

YES >> GO TO dark current inspection. Refer to SC-31, "DARK CURRENT INSPECTION" . (Alternator is normal. Do not replace.)
NO >> Replace alternator. (Alternator power generation error.)

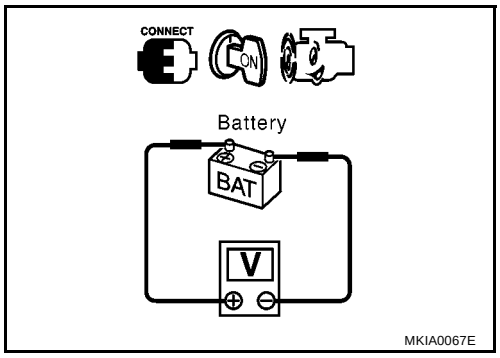
INSPECTION OF EXCESSIVE ALTERNATOR POWER GENERATION

1. ALTERNATOR VOLTAGE INSPECTION

1. Increase engine speed to 2,500 rpm.
2. Check battery voltage.

Is the inspection result 16V or less?

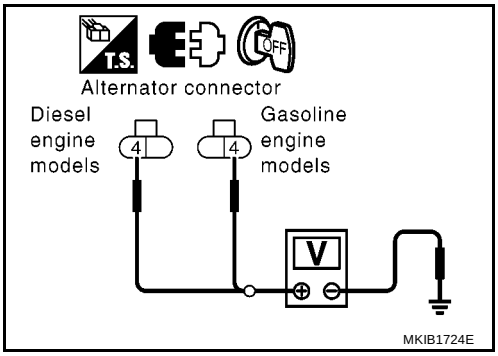
YES >> GO TO 2.
NO >> Replace alternator. (Excessive alternator power generation.)



2. BATTERY VOLTAGE INSPECTION

1. Turn ignition switch OFF.
2. Disconnect alternator connector.
3. Turn ignition switch ON.
4. Check voltage between alternator connector terminal 4 and ground.

4 - Ground : 12V or more



Is the inspection result 12V or more?

YES >> Replace alternator. (Alternator power generation error)
NO >> GO TO 3.

3. CONNECTOR INSPECTION

1. Turn ignition switch OFF.
2. Check IPDM E/R and terminals (IPDM E/R side, and harness side) for damage, deformation or improper connection.

OK or NG

OK >> GO TO 4.
NG >> Repair terminals and connectors.

4. CONTINUITY INSPECTION

1. Disconnect IPDM E/R connector.
2. Check continuity between IPDM E/R connector terminal 63 and alternator connector terminal 4.

63 - 4 : Continuity should exist.

OK or NG

OK >> Replace IPDM E/R. (Do not replace alternator, since it is normal.)
NG >> Repair the harnesses or connectors. (Do not replace alternator, since it is normal.)

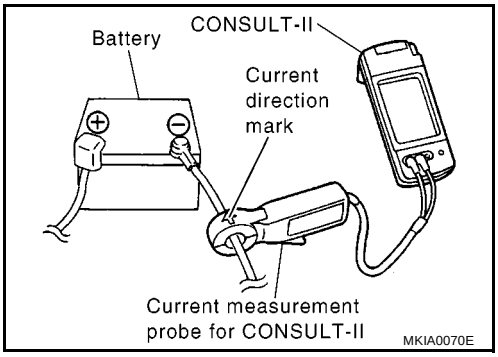
DARK CURRENT INSPECTION

Dark Current: Small current while ignition switch is “OFF”.

NOTE:

- If battery ground cable is disconnected from battery terminal, a large dark current may not be reproduced. When battery discharge occurs, never disconnect battery terminal while using ammeter.
- Do not connect CONSULT-II CONVERTER to data link connector when measuring dark current. CONSULT-II power should be supplied using AC adapter or internal battery.

1. Attach current measurement probe for CONSULT-II to battery ground cable. Refer to SC-33, "OPERATION PROCEDURE OF CURRENT MEASUREMENT PROBE FOR CONSULT-II" .
2. Check that all electrical equipment is turned OFF.
3. Remove key. Close and lock doors. Check that room lamp turns off.
4. Measure dark current. Is it 50mA or less? Refer to SC-33, "OPERATION PROCEDURE OF CURRENT MEASUREMENT PROBE FOR CONSULT-II" .



NOTE:
Dark current stable time is different due to equipment and use of the vehicle. If it is not 50mA or less after leaving for 1 minute, measure dark current again after leaving for 30 minutes or more.
If YES, GO TO 7. If NO, GO TO 5.

5. Remove and install fuses one by one. Search for the fuse that greatly changes dark current.

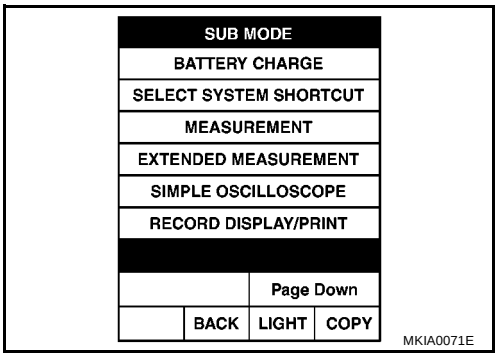
NOTE:
If dark current is greatly reduced when removing the fuse, and even if dark current is not greatly increased when installing it again, the fuse circuit may be the cause.

6. Check that dark current changes when moving the suspect circuit harness. If dark current changes, check harness for short. If dark current does not change, electronic unit in the circuit may not be entering the energy-saving mode when it turns OFF. If it does not enter the energy-saving mode, replace electronic unit.
7. No malfunction for alternator and electrical equipment. Electric load may be larger than alternator generating ability. Check the customer's usage.

OPERATION PROCEDURE OF CURRENT MEASUREMENT PROBE FOR CONSULT-II

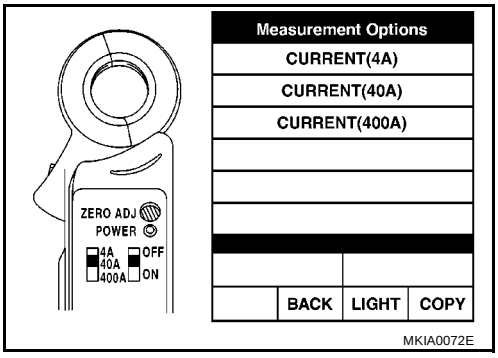
For details, refer to the supplied “CONSULT-II Current Probe Operation Manual”.

1. Turn current probe power supply OFF and connect to CONSULT-II. (Red: CH1, Black: Ground)
2. Touch “SUB MODE”.
3. Touch “Extending Measurement Mode” on “SUB MODE” screen.
4. CAUTION is displayed, touch “OK”.



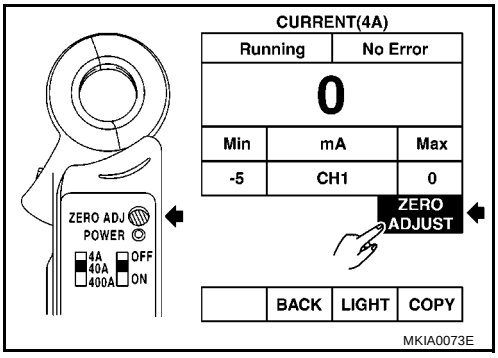
5. Set current probe range switch at the range to measure, turn current probe power supply ON. When measuring dark current, set 4A range. (Check that POWER indicator turns on. Refer to CONSULT-II Current Probe Operation Manual.)
6. Touch the same measuring range at CONSULT-II.

   NOTE:
   If current probe measuring range is different from CONSULT-II measuring range, incorrect value is displayed.



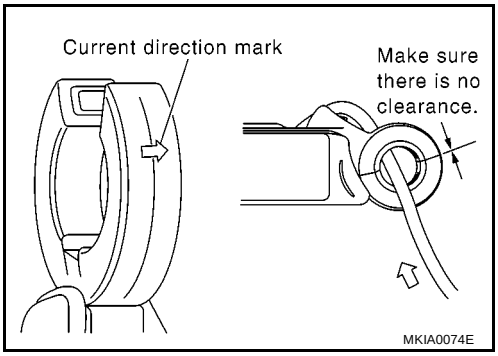
7. Adjust 0 point of current probe or CONSULT-II. (Do not clamp anything to probe.)

   NOTE:
   If 0 point is dislocated greatly, adjust at current probe side generally.



8. Align current direction mark, clamp harness, and measure current. If current direction is incorrect, it is displayed negative value.

   NOTE:
   - When current is measured, close probe joint securely.
   - If multiple harnesses are clamped, measurement cannot be performed. Always clamp only one.

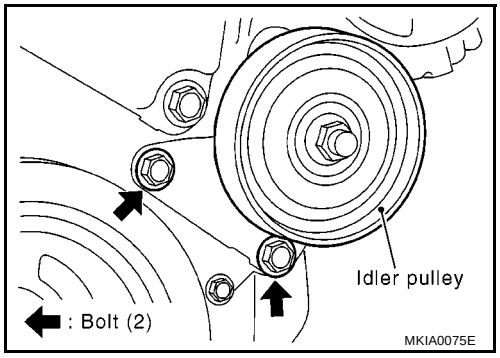


Removal and Installation (CR Engine Models)

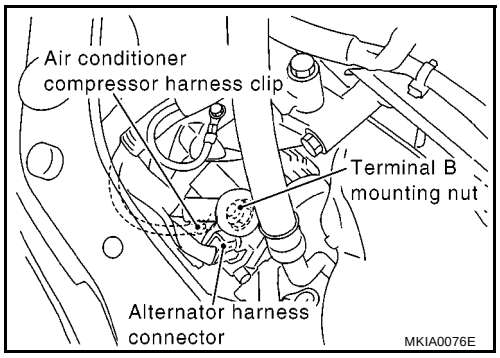
EKS007ZH

REMOVAL

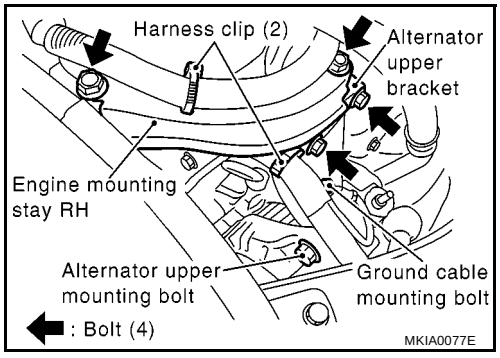
1. Disconnect battery ground cable.
2. Remove fender protector from RH side.
3. Remove alternator drive belt. Refer to EM-14, "Removal and Installation" .
4. Remove idler pulley bracket mounting bolt, and remove idler pulley assembly.



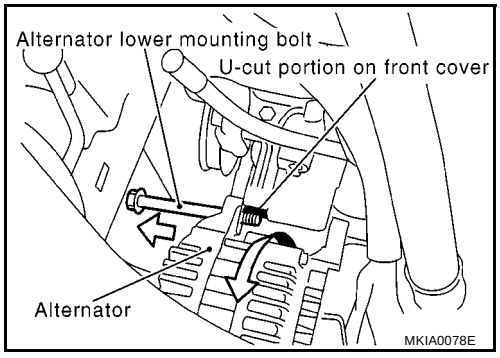
5. Disconnect alternator harness connector.
   B terminal mounting nut, ground wire mounting nut, and remove harness clips.



6. Remove engine mounting stay from RH side.
7. Remove alternator upper bracket mounting bolt, and alternator mounting bolt from upper side.



8. Loosen lower side alternator mounting bolt, and pull out from U-cut portion on front cover.
9. Remove alternator assembly from engine.



INSTALLATION

Install in the reverse order of removal, taking care of the following point.

- Install alternator, and check tension of belt. Refer to EM-12, "Tension Adjustment" in “ENGINE MECHANICAL (EM)” section.

CAUTION:

Be sure to tighten B terminal mounting nut carefully.

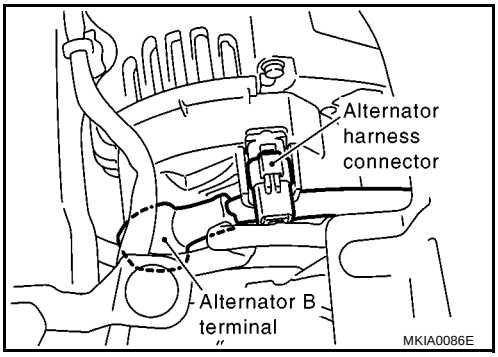
B terminal nut:	**: 9.32 - 10.8 N·m (0.95 - 1.1 kg-m, 82 - 95 in-lb)**
Ground bolt:	**: 2.94 - 4.9 N·m (0.30 - 0.49 kg-m, 26 - 43 in-lb)**
Alternator mounting bolt:	**: 33.3 - 46.1 N·m (3.4 - 4.7 kg-m, 24 - 34 ft-lb)**
Alternator upper bracket bolt:	**: 33.3 - 46.1 N·m (3.4 - 4.7 kg-m, 24 - 34 ft-lb)**
Engine mounting stay bolt:	**: 40.0 - 50.0 N·m (4.1 - 5.1 kg-m, 30 - 37 ft-lb)**
Idler pulley bracket bolt:	**: 16.6 - 23.5 N·m (1.7 - 2.4 kg-m, 12 - 17 ft-lb)**
Idler pulley nut:	**: 25.5 - 33.3 N·m (2.6 - 3.3 kg-m, 19 - 24 ft-lb)**

Removal and Installation (K9K Engine Models)

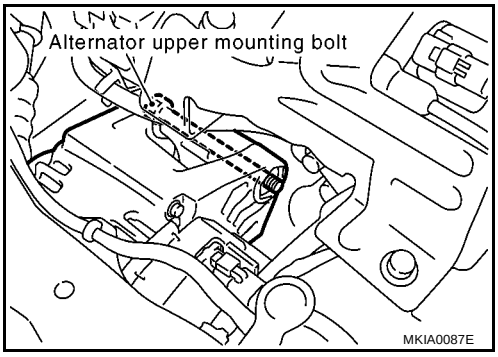
EKS00K2X

REMOVAL

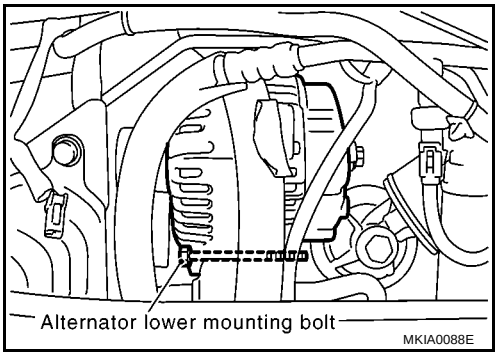
1. Disconnect battery ground cable.
2. Remove under cover and RH fender protector.
3. Remove front bumper. Refer to EI-4, "FRONT BUMPER" .
4. Remove alternator drive belt. Refer to EM-121, "DRIVE BELTS" .
5. Disconnect alternator harness connector and B terminal nut.



6. Remove alternator mounting bolt from upper side.



7. Remove alternator mounting bolt from lower side.
8. Remove alternator assembly from engine.



INSTALLATION

Install in the reverse order of removal, taking care of the following point.

- Install alternator, and check tension of belt. Refer to EM-121, "DRIVE BELTS" .

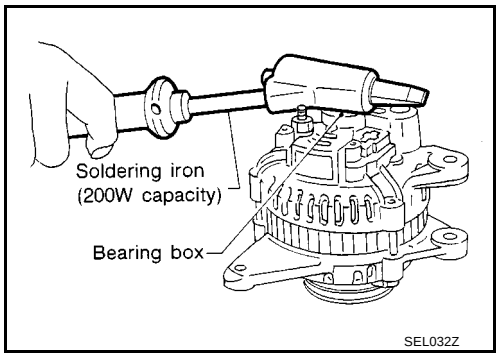
CAUTION:

Be sure to tighten B terminal mounting nut carefully.

Disassembly

EKS007ZJ

REAR COVER



CAUTION:

Rear cover may be hard to remove because a ring is used to lock outer race of rear bearing. To facilitate removal of rear cover, heat just bearing box section with a 200W soldering iron.
Do not use a heat gun, as it can damage diode assembly.

REAR BEARING

CAUTION:

- **Do not reuse rear bearing after removal. Replace with a new one.**
- **Do not lubricate rear bearing outer race.**

Inspection

EKS007ZK

ROTOR CHECK

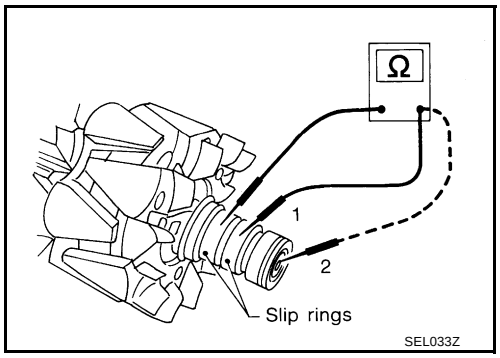
1. Resistance test

Resistance	**: Refer to SDS. SC-54, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

   - Not within the specified values... Replace rotor.
2. Insulator test
   - Continuity exists... Replace rotor.
3. Check slip ring for wear.

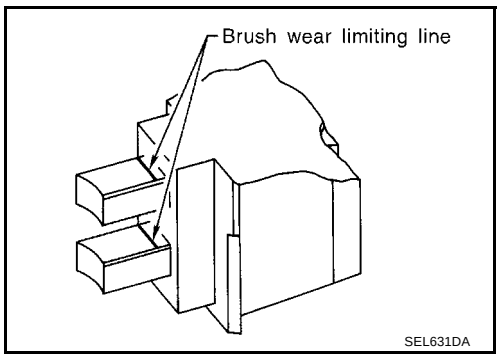
Slip ring minimum outer diameter	**: Refer to SDS. SC-54, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

   - Not within the specified values... Replace rotor.



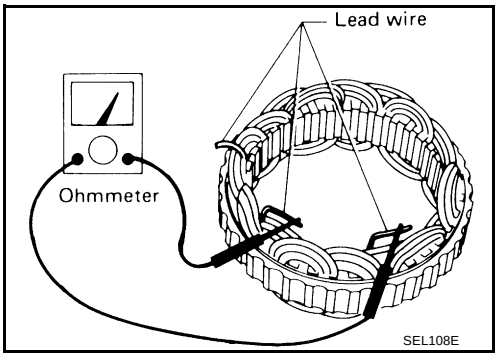
BRUSH CHECK

1. Check smooth movement of brush.
   - Not smooth... Check brush holder and clean.
2. Check brush for wear.
   - Replace brush if it is worn down to the limit line.

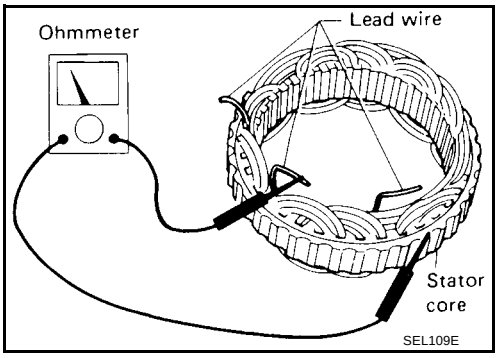


STATOR CHECK

1. Continuity test
   - No continuity... Replace stator.



2. Ground test
   - Continuity exists... Replace stator.



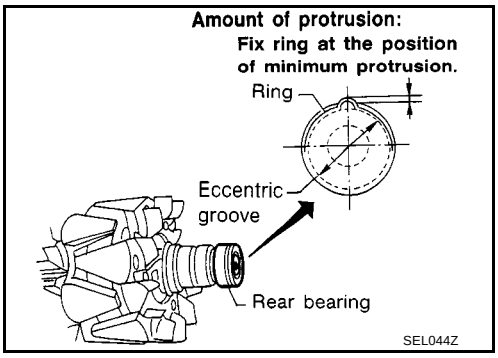
EKS007ZL

Assembly

RING FITTING IN REAR BEARING

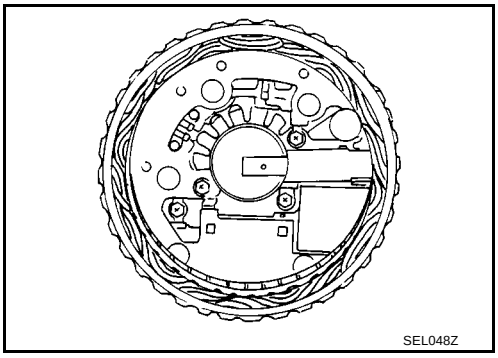
- Fix ring into groove in rear bearing so that it is as close to the adjacent area as possible.

CAUTION:
Do not reuse rear bearing after removal.

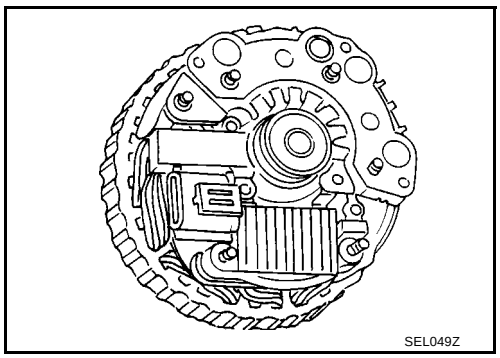


REAR COVER INSTALLATION

1. Fit brush assembly, diode assembly, regulator assembly and stator.



2. Push brushes up with fingers and install them to rotor.
Take care not to damage slip ring sliding surface.



SEL049Z

STARTING SYSTEM

PFP:00011

System Description

EKS007ZM

M/T MODELS

Power is supplied at all times

- through 40A fusible link (letter H, located in the fuse and fusible link box)
- to ignition switch terminal 1.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No.50 located in IPDM E/R]
- to park/neutral position switch terminal 2
- through 10A fuse [No.4, located in fuse block(J/B)]
- through IPDM E/R terminal 21
- to starter relay.

With the shift lever in the N position (under the ignition switch ON or START position)
Power is supplied

- through park/neutral position switch terminal 2 and 3
- to IPDM E/R terminal 31

and then starter relay is energized.
When ignition switch turn to START position, power is supplied

- through ignition switch terminal 1 and 5
- through IPDM E/R terminal 1
- to starter motor terminal 1.

The starter motor plunger closes and provides a closed circuit between the battery and starter motor. The starter motor is grounded to the engine block. With power and ground supplied, cranking occurs and the engine starts.

A/T MODELS

Power is supplied at all times

- through 40A fusible link (letter H, located in the fuse and fusible link box)
- to ignition switch terminal 1.

With the ignition switch in the ON or START position, power is supplied

- through 10A fuse [No. 50 located in the intelligent power distribution module]
- to park/neutral position switch terminal 1.

With the selector lever in the P or N position (under the ignition switch ON or START position)
Power is supplied

- through park/neutral position switch terminal 1 and 2
- through IPDM E/R terminal 21
- to starter relay.
- through park/neutral position switch terminal 1 and 2
- to IPDM E/R terminal 31.

and then starter relay is energized.
When ignition switch turn to START position, power is supplied

- through ignition switch terminal 1 and 5
- through IPDM E/R terminal 9 and 11
- to starter motor terminal 1

The starter motor plunger closes and provides a closed circuit between the battery and starter motor. The starter motor is grounded to the engine block. With power and ground supplied, cranking occurs and the engine starts.

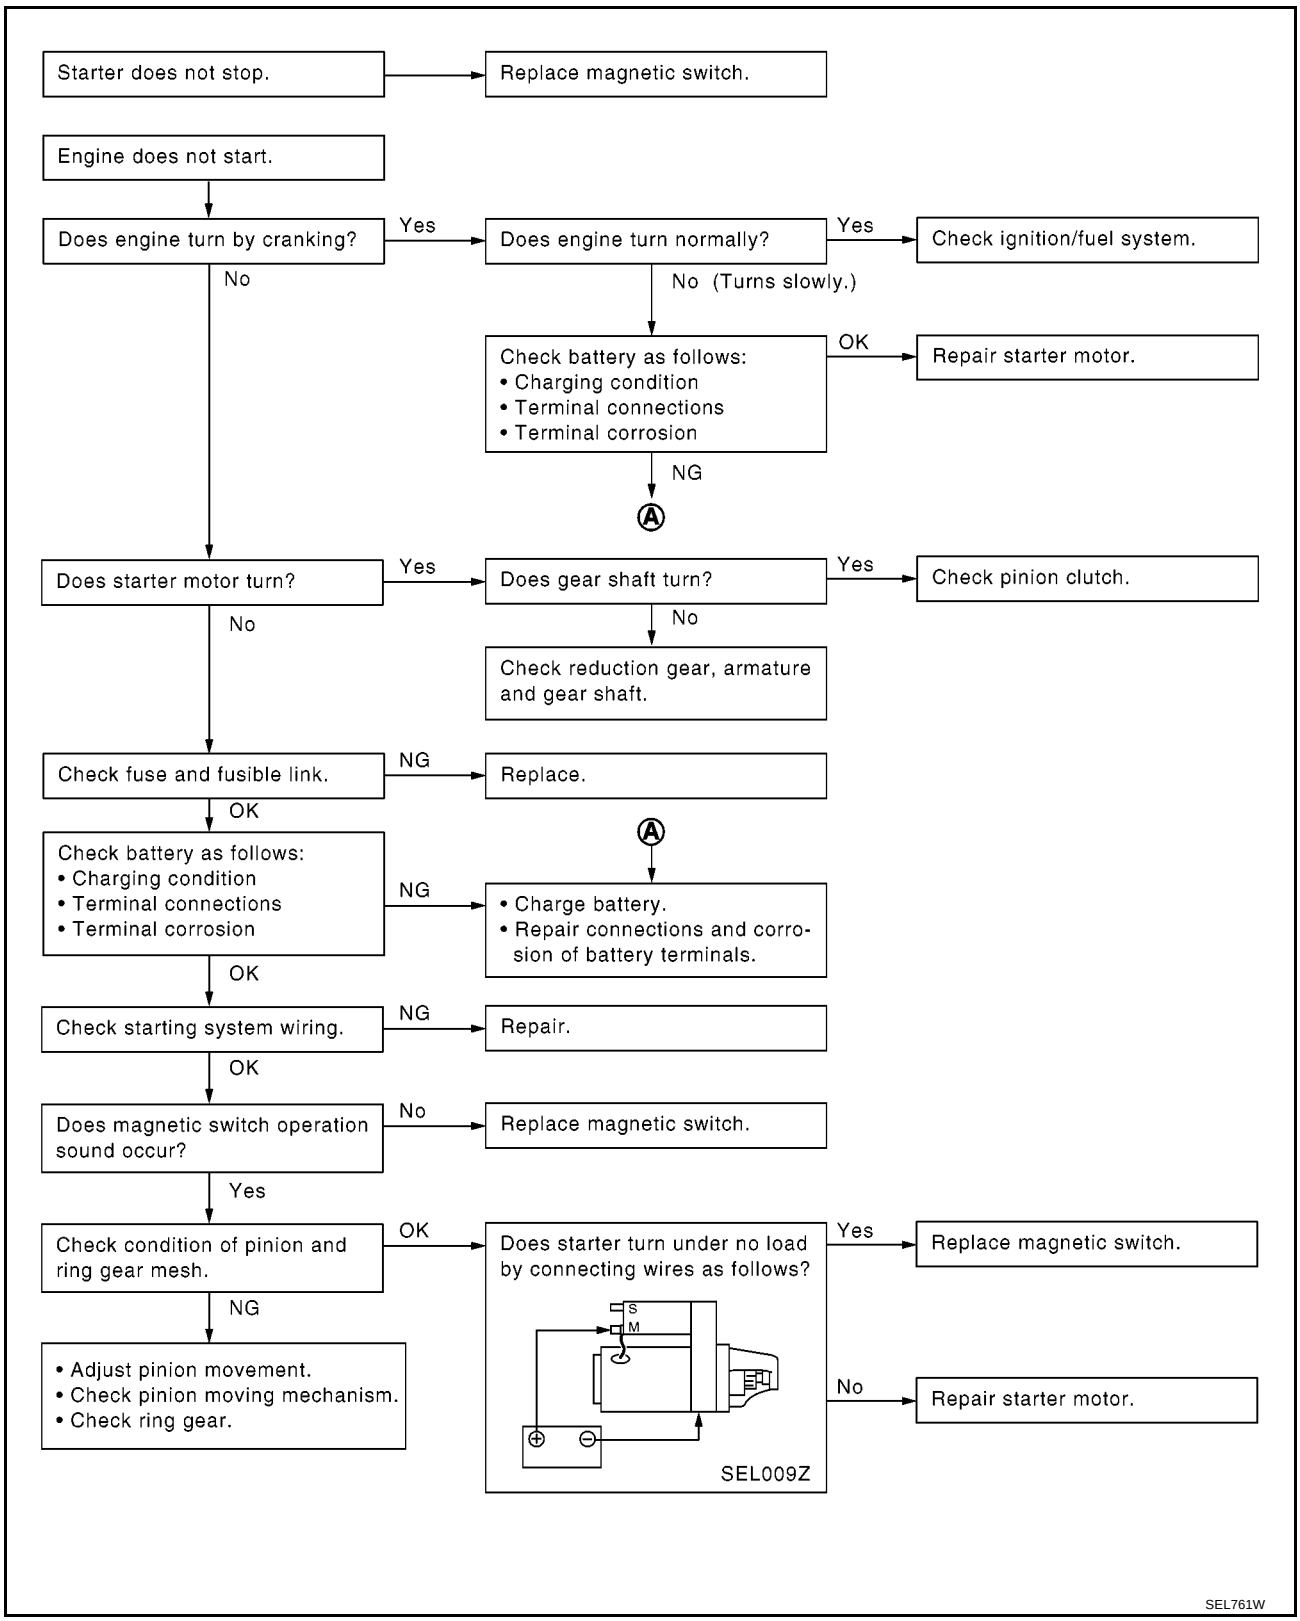
Trouble Diagnoses

EKS007ZQ

If any abnormality is found, immediately disconnect battery negative terminal.

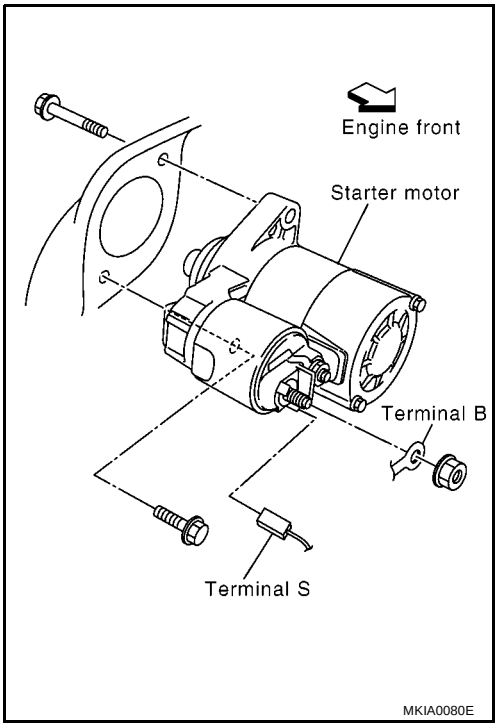


Removal and Installation (CR Engine Models)

EKS007ZR

REMOVAL

1. Disconnect negative battery cable.
2. Remove starter motor mounting bolt from upper side.
3. Disconnect S terminal and B terminal from starter motor.
4. Remove starter motor mounting bolt from lower side.
5. Remove starter motor from lower side the vehicle.



INSTALLATION

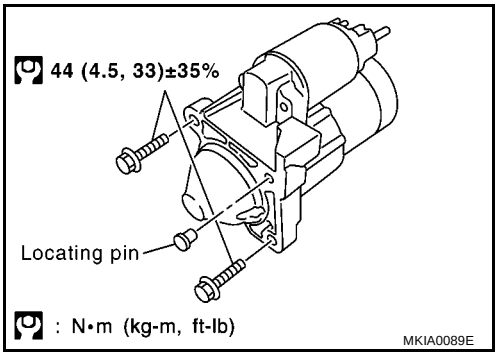
Install in the reverse order of removal.

Removal and Installation (K9K Engine Models)

EKS00K30

REMOVAL

1. Disconnect negative battery cable.
2. Remove starter motor mounting bolt from upper side.
3. Disconnect S terminal and B terminal from starter motor.
4. Remove starter motor mounting bolt from lower side.
5. Remove starter motor from lower side the vehicle.



INSTALLATION

Install in the reverse order of removal.

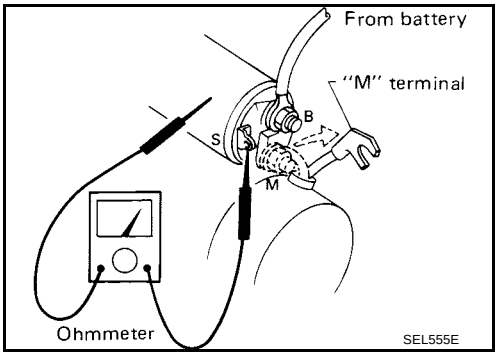
Inspection

EKS007ZT

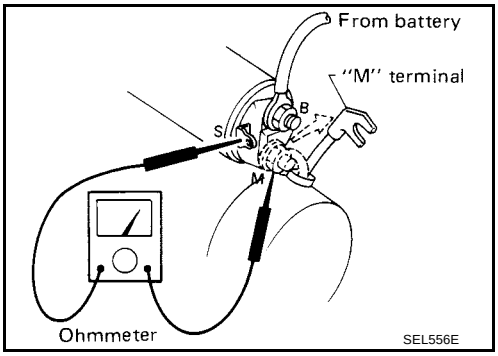
MAGNETIC SWITCH CHECK

- Before starting to check, disconnect battery ground cable.
- Disconnect “M” terminal of starter motor.

1. Continuity test (between “S” terminal and switch body).
   - No continuity ... Replace.

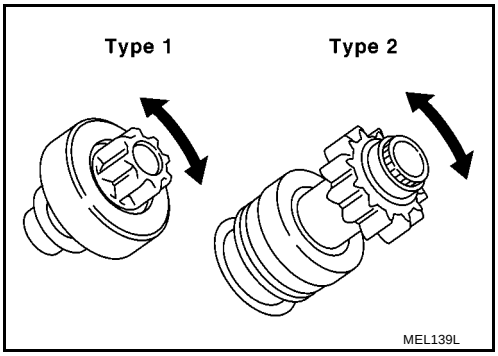


2. Continuity test (between “S” terminal and “M” terminal).
   - No continuity ... Replace.



PINION/CLUTCH CHECK

1. Inspect pinion teeth.
   - Replace pinion if teeth are worn or damaged. (Also check condition of ring gear teeth.)
2. Inspect reduction gear teeth (If equipped).
   - Replace reduction gear if teeth are worn or damaged. (Also check condition of armature shaft gear teeth.)
3. Check to see if pinion locks in one direction and rotates smoothly in the opposite direction.
   - If it locks or rotates in both directions, or unusual resistance is evident. ... Replace.



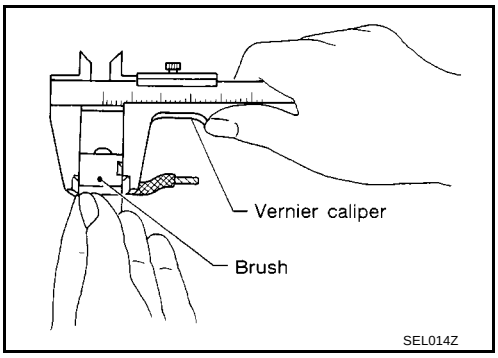
BRUSH CHECK

Brush

Check wear of brush.

Wear limit length **: Refer to SDS. SC-54, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

- Excessive wear ... Replace.

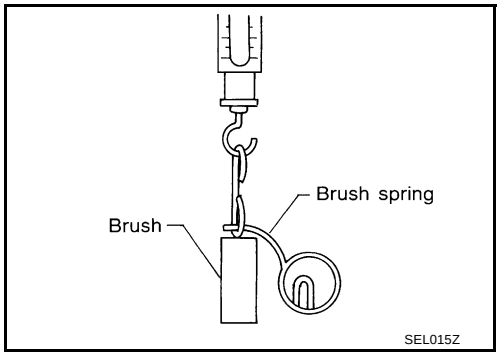


Brush Spring Check

Check brush spring pressure with brush spring detached from brush.

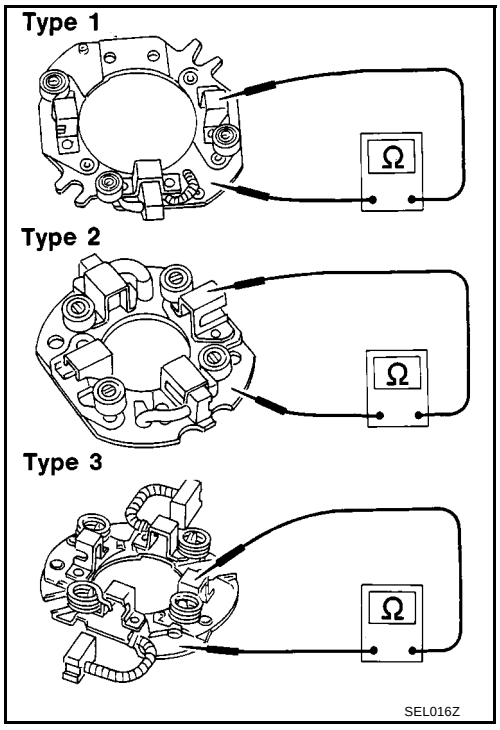
Spring pressure (with new brush)	**: Refer to SDS. SC-54, "SERVICE DATA AND SPECIFICATIONS (SDS)" .**

- Not within the specified values ... Replace.



Brush Holder

1. Perform insulation test between brush holder (positive side) and its base (negative side).
   - Continuity exists. ... Replace.
2. Check brush to see if it moves smoothly.
   - If brush holder is bent, replace it; if sliding surface is dirty, clean.

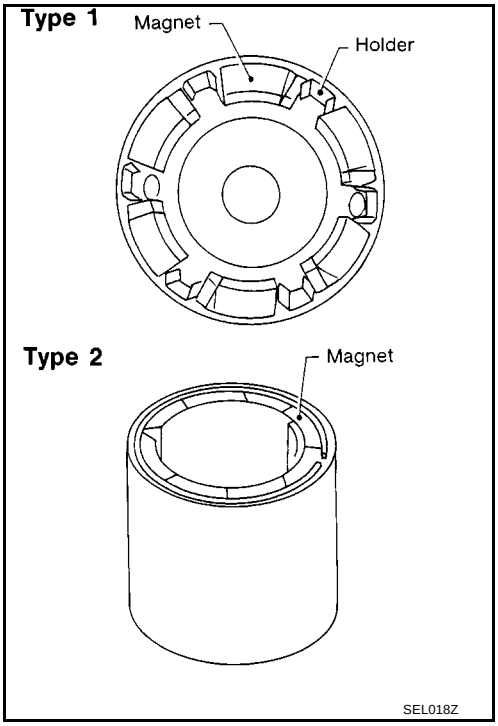


YOKE CHECK

Magnet is secured to yoke by bonding agent. Check magnet to see that it is secured to yoke and for any cracks. Replace malfunctioning parts as an assembly.

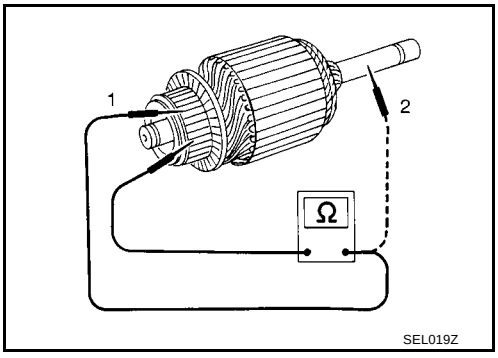
CAUTION:

Do not clamp yoke in a vice or strike it with a hammer.

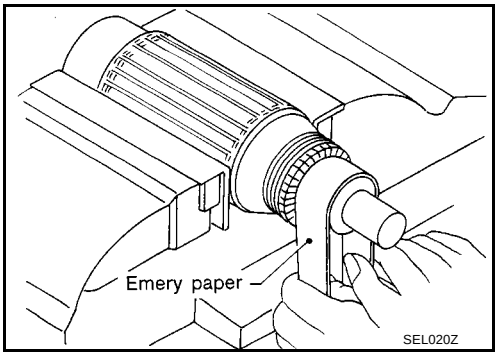


ARMATURE CHECK

1. Continuity test (between two segments side by side).
   - No continuity ... Replace.
2. Insulation test (between each commutator bar and shaft).
   - Continuity exists. ... Replace.

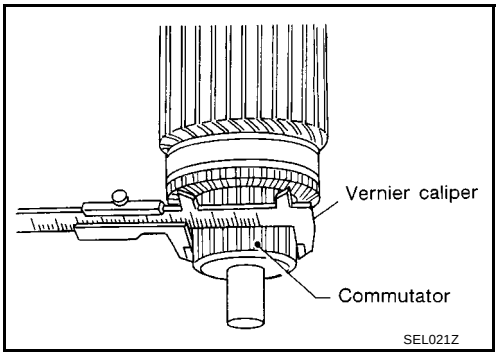


3. Check commutator surface.
   - Rough ... Sand lightly with No. 500 - 600 emery paper.



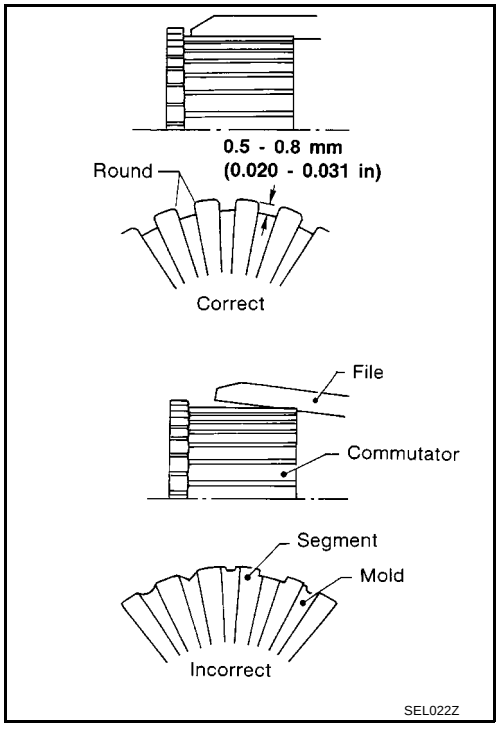
4. Check diameter of commutator.

Commutator minimum diameter : **Refer to SDS.** SC-54, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



- Less than specified value ... Replace.

5. Check depth of insulating mold from commutator surface.



- Less than 0.2 mm (0.008 in) ... Undercut to 0.5 to 0.8 mm (0.020 to 0.031 in)

Assembly

EKS007ZU

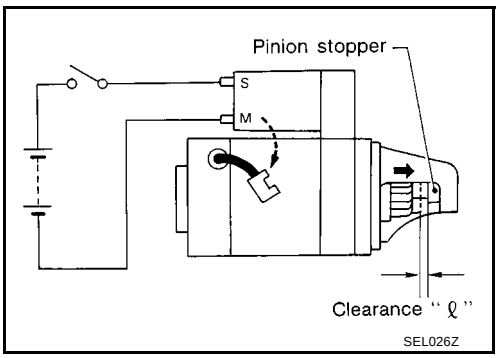
Apply high-temperature grease to lubricate the bearing, gears and frictional surface when assembling the starter.
Carefully observe the following instructions.

PINION PROTRUSION LENGTH ADJUSTMENT

Clearance

With pinion driven out by magnetic switch, push pinion back to remove slack and measure clearance "ℓ" between the front edge of the pinion and the pinion stopper.

Clearance "ℓ" : **Refer to SDS.** SC-54, "SERVICE DATA AND SPECIFICATIONS (SDS)" .



- Not in the specified value ... Adjust by adjusting plate.

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EIS004P3

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions

EIS004P4

- When removing or disassembling any part, be careful not to damage or deform it. Protect parts, which may get in the way with cloth.
- When removing parts with a screwdriver or other tool, protect parts by wrapping them with vinyl or tape.
- Keep removed parts protected with cloth.
- If a clip is deformed or damaged, replace it.
- If an unreusable part is removed, replace it with a new one.
- Tighten bolts and nuts firmly to the specified torque.
- After re-assembly has been completed, make sure each part functions correctly.
- Remove stains in the following way.

Water-soluble stains:
Dip a soft cloth in warm water, and then squeeze it tightly. After wiping the stain, wipe with a soft dry cloth.
Oil stain:
Dissolve a synthetic detergent in warm water (density of 2 to 3% or less), dip the cloth, then clean off the stain with the cloth. Next, dip the cloth in fresh water and squeeze it tightly. Then clean off the detergent completely. Then wipe the area with a soft dry cloth.

- Do not use any organic solvent, such as thinner or benzine.

Removal and Installation

EIS004OQ

REMOVAL

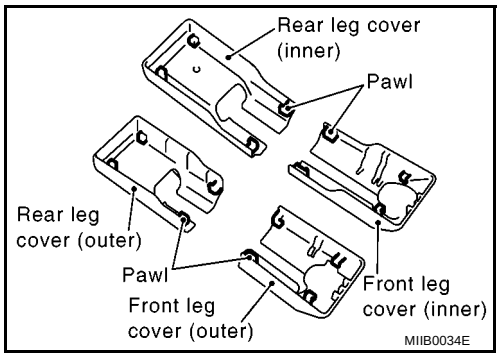
CAUTION:

For vehicles equipped with side air bags, disconnect the battery negative terminal, and wait at least 3 minutes before beginning work.

1. Remove side air bag module connector (vehicles with side air bags) and seatbelt buckle switch harness connector.
2. Remove front and rear leg covers.
3. Remove bolts (4), and remove seat from vehicle.

   CAUTION:

   When removing and installing, use shop cloths to protect parts from damage and interference.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

When removing and installing, use shop cloths to protect parts from damage and interference.

Disassembly and Assembly of Seatback

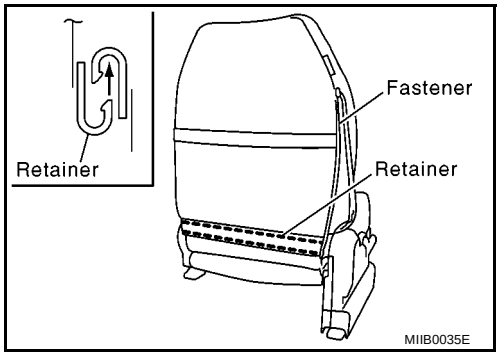
EIS004OR

SEATBACK TRIM PAD

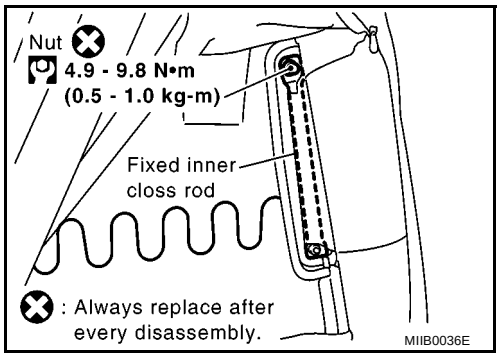
SMA for VIN >SJN**AK12U1277776

Disassembly

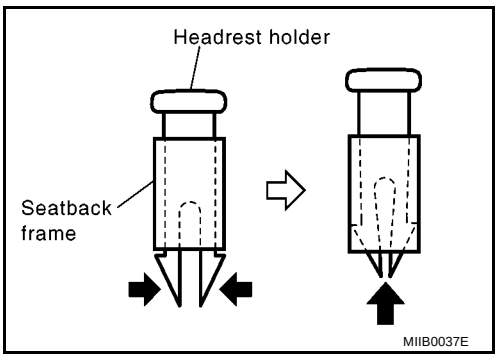
1. Unfasten seatback fastener. (Vehicles with side air bags)
2. Remove retainer.



3. Turn over seatback trim, remove nuts (2), and remove fixed inner cross rod. (Vehicles with side air bags)



4. Use pincers, etc., to push up hooks shown by the arrows in the figure, and remove headrest holder from seatback.
5. Remove seatback trim and pad from seatback frame.



Assembly

Install in the reverse order of removal.

CAUTION:
Before installing headrest holder, check its orientation (front/rear and right/left).

SEATBACK FRAME

Disassembly

1. Remove seatback trim&pad.
2. Pull out side air bag connector from back of seat cushion.
3. Remove lumber support lever knob, seat lifter lever, reclining dial, seat slide out finisher, slide inner cover, and seat slide inner finisher.
4. Remove seatback frame bolts and remove seatback frame from seat slide assembly.

Assembly

Install in the reverse order of removal.

CAUTION:
After assembling seatback frame, make sure reclining device operates.

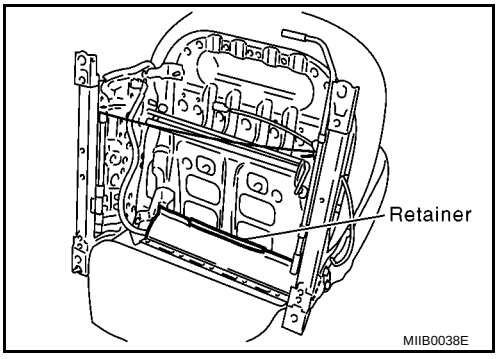
Disassembly and Assembly of Seat Cushion

EIS004OS

SEAT CUSHION TRIM PAD

Disassembly

1. Remove seat lifter cover, seat lifter lever, reclining lever, seat slide out finisher, slide inner cover, and seat slide inner finisher.
2. Remove seatback frame bolts, and the remove seat cushion assembly from seatback frame
3. Remove retainer from the back of cushion.
4. Remove seat cushion trim&pad from seat cushion frame.



Assembly

Install in the reverse order of removal.

CAUTION:
When assembling seat cushion assembly in seatback assembly, make sure the reclining device operates.

SEAT CUSHION FRAME

Disassembly

1. Remove short cushion trim&pad.
2. Remove bolts (4), and then remove seat cushion frame from seat slide assembly.

Assembly

Install in the reverse order of removal.

REAR SEAT

PFP:88300

Component Parts Location

EIS004OT

BENCH SEAT

SMA for VIN >SJN**AK12U1133256

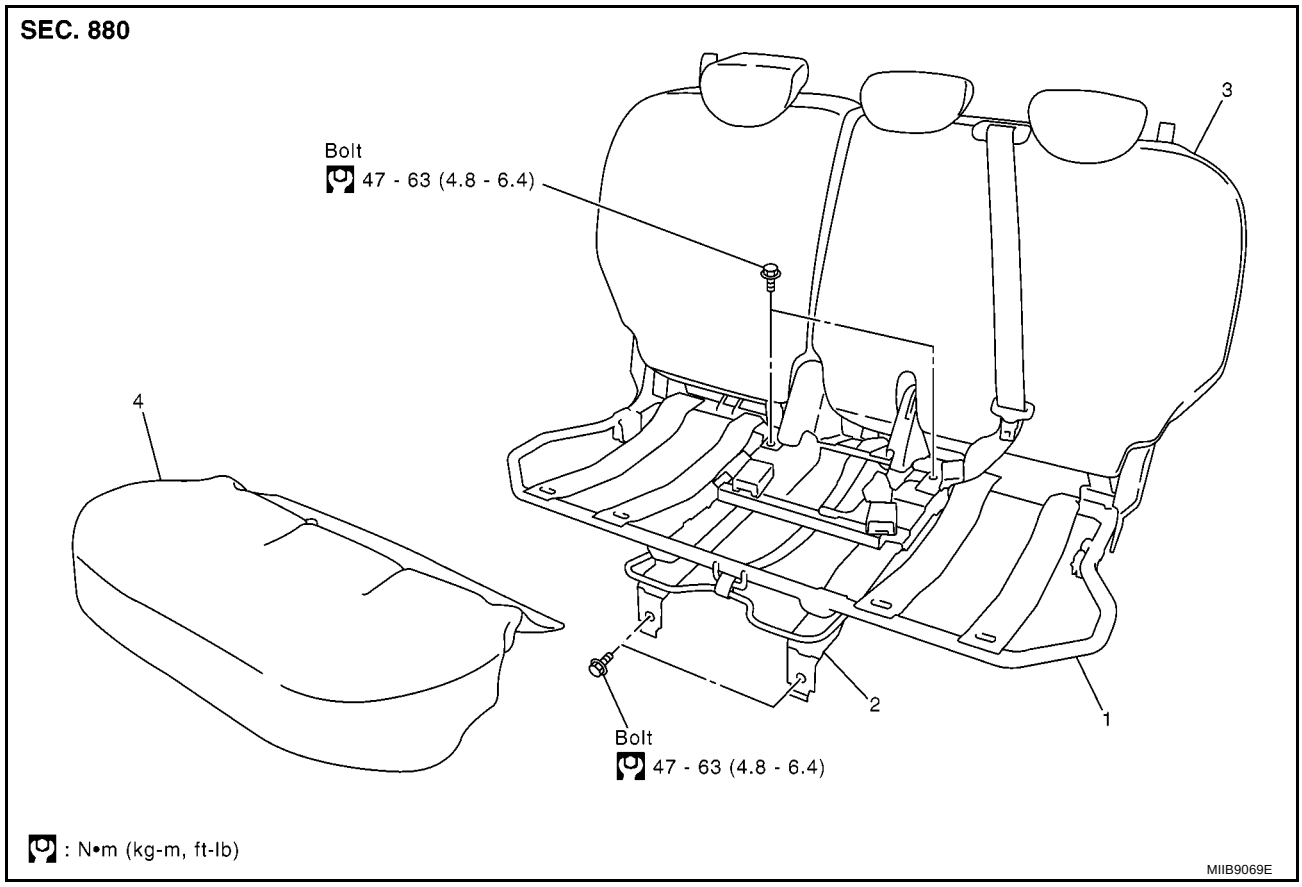
3. Headrest holder (free)
4. Headrest holder (locked)
5. Rear seatback trim and pad (LH)
6. Seatback lock knob
7. Rear seat lock (RH)
8. Rear seatback frame (RH)
9. Rear seatback frame (LH)
10. Rear set cushion assembly
11. Rear seat lock (LH)
12. Rear seat side bracket (LH)
13. Rear center bracket (RH)
14. Rear seat side bracket (RH)

SLIDE SEAT



1. Seat slide assembly
2. Slide rail
3. Rear seatback trim and pad
4. Seat cushion trim and pad

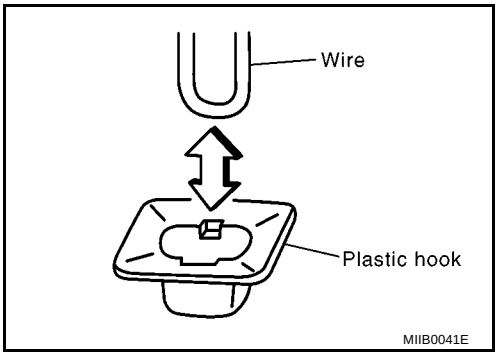
Removal and Installation

EIS004OU

REMOVAL

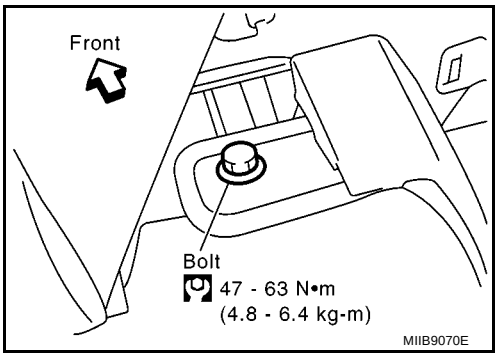
Seat Cushion

- Lift up seat cushion bottom, remove wire from plastic hooks (2 locations), and pull forward to remove.



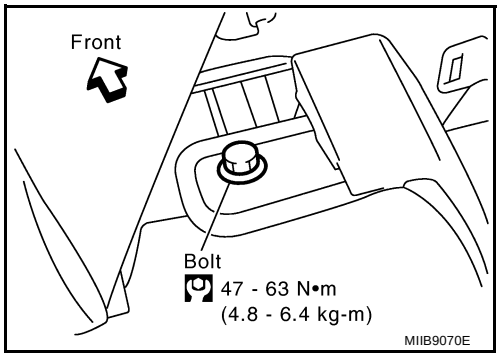
Seatback (Bench Seat)

- Turn over rear seatback carpet, remove rear seat side bracket bolts (2), and remove seatback from vehicle.

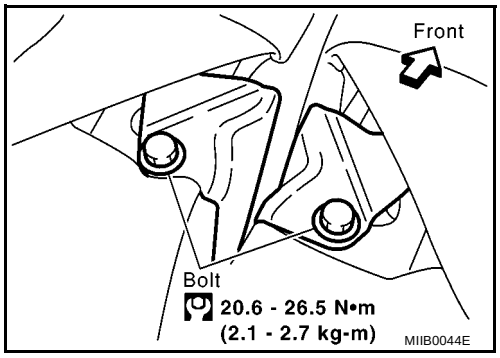


seatback (Split Seat)

1. Turn over rear seatback carpet, remove side bracket bolts (2), and remove seatback from vehicle.

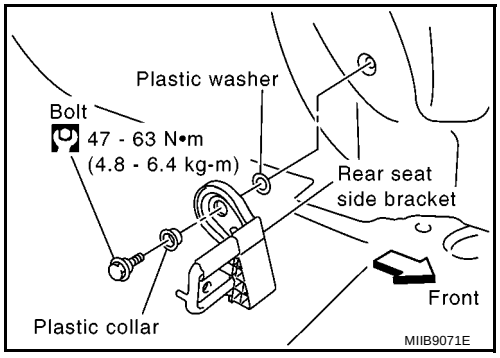


2. Turn over rear seatback carpet, remove center bracket seatback bolts (2), and remove.



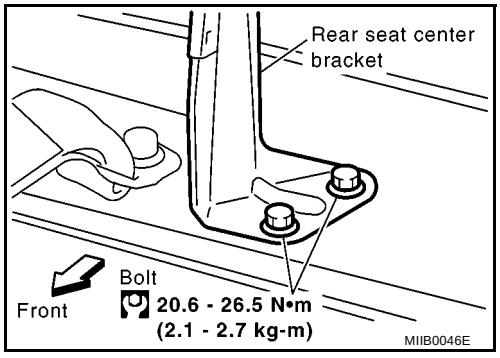
Rear Seat Side Bracket

1. Remove seat cushion and rear seatback.
2. Remove bolts (1 at LH/RH each), and remove rear seat side brackets (LH/RH) from vehicle.



Rear Seat Center Bracket

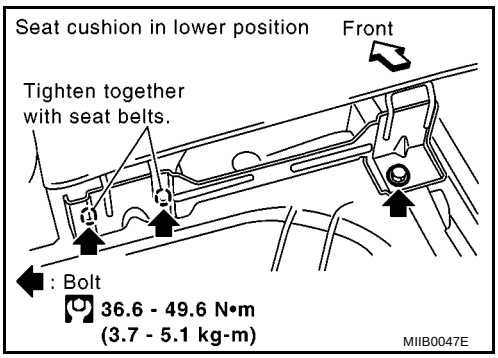
1. Remove rear seat cushion and rear seatback.
2. Remove bolts (two), and them remove rear seat center bracket from vehicle.



Child Car Seat Anchor That Complies With ISO FIX

1. Remove seat cushion.

2. Remove bolts (1 at LH/RH each), and them remove child car seat anchors that complies with ISO FIX (LH/RH) from vehicle.



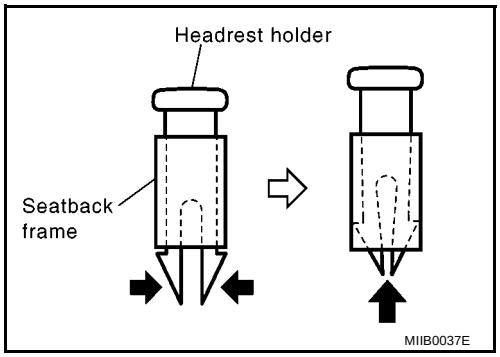
INSTALLATION

Install in the reverse order of removal.

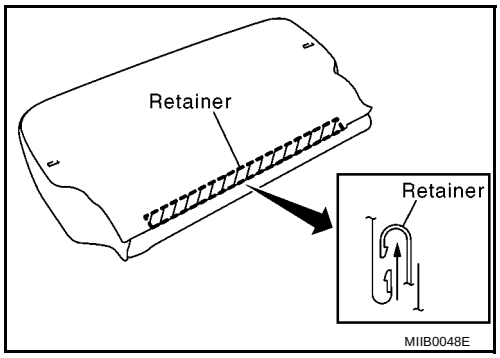
REAR SEATBACK DISASSEMBLY AND ASSEMBLY

Disassembly

1. Use pincers, etc., to push up hooks shown by the arrows in the figure, and remove headrest holder from seatback.



2. Remove retainer, and separate seatback trim&pad, and seatback frame.



Assembly

Install in the reverse order of removal.

CAUTION:

Before installing headrest holder, check its orientation (front/rear and right/left).

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EHS000RR

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Precautions for SRS “AIR BAG” and “SEAT BELT PRE-TENSIONER” Service

EHS000RS

- Do not use electrical test equipment to check SRS circuits unless instructed to in this Service Manual.
- Before servicing the SRS, turn ignition switch “OFF”, disconnect battery ground cable and wait at least 3 minutes.
  For approximately 3 minutes after the cables is removed, it is still possible for the air bag and seat belt pre-tensioner to deploy. Therefore, do not work on any SRS connectors or wires until at least 3 minutes have passed.
- Diagnosis sensor unit must always be installed with their arrow marks “⇐” pointing towards the front of the vehicle for proper operation. Also check diagnosis sensor unit for cracks, deformities or rust before installation and replace as required.
- The spiral cable must be aligned with the neutral position since its rotations are limited. Do not attempt to turn steering wheel or column after removal of steering gear.
- Handle air bag module carefully. Always place driver and front passenger air bag modules with the pad side facing upward and place front side air bag module standing with stud bolt side setting bottom.
- Conduct self-diagnosis to check entire SRS for proper function after replacing any components.
- After air bag inflates, the front instrument panel assembly should be replaced if damaged.

Wiring Diagram and Trouble Diagnosis

EHS001N8

When you read wiring diagrams, refer to the followings:

- GI-14, "How to Read Wiring Diagrams" in GI section
- PG-4, "POWER SUPPLY ROUTING" in PG section

When you perform trouble diagnosis, refer to the followings:

- GI-11, "HOW TO FOLLOW TEST GROUPS IN TROUBLE DIAGNOSES" in GI section
- GI-24, "How to Perform Efficient Diagnosis for an Electrical Incident" in GI section

Check for any service bulletins before servicing the vehicle.

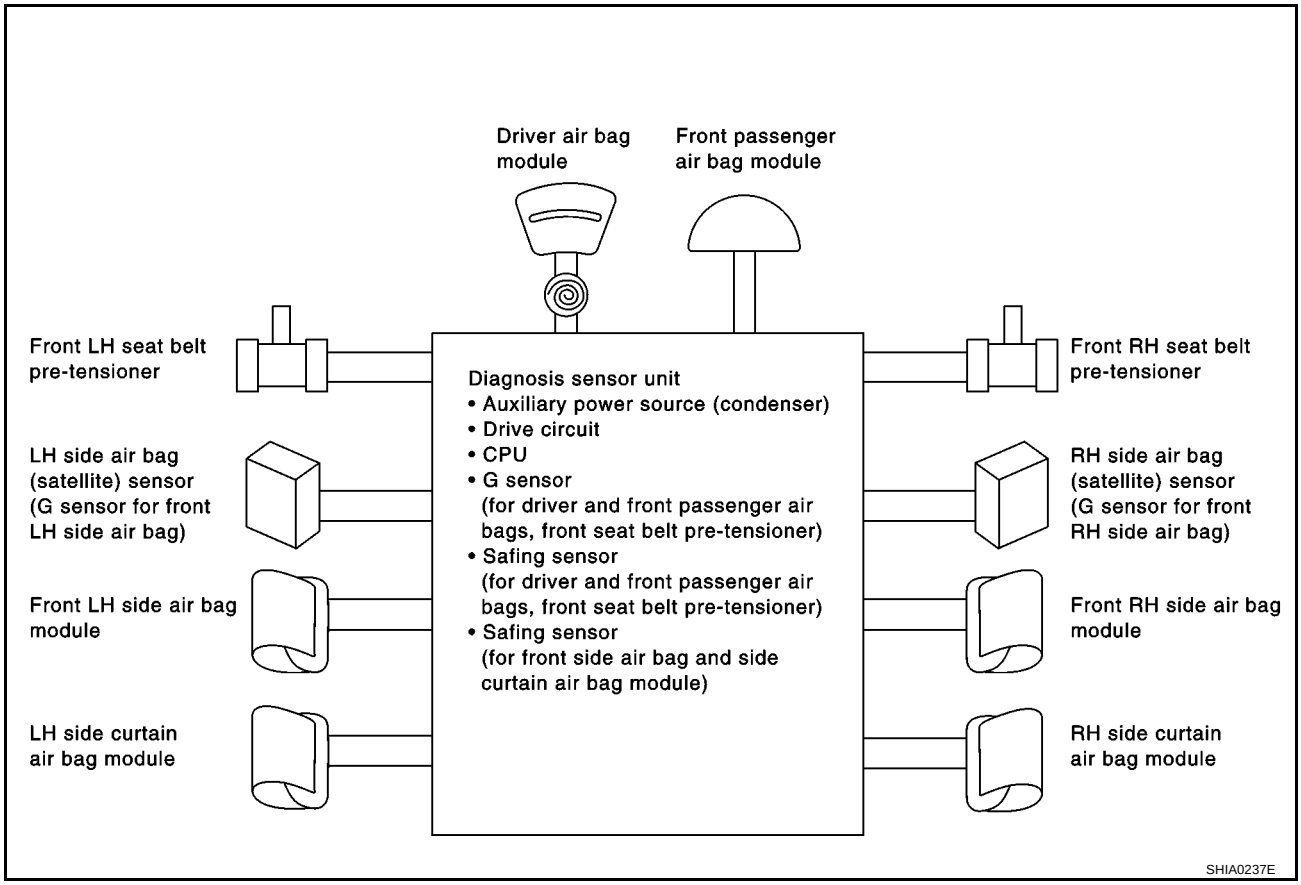
Tool name		Application
Tamper resistant TORX bit	 S-NT757	Size: T30

SUPPLEMENTAL RESTRAINT SYSTEM (SRS)

PFP:28556

SRS Configuration

EHS000RW



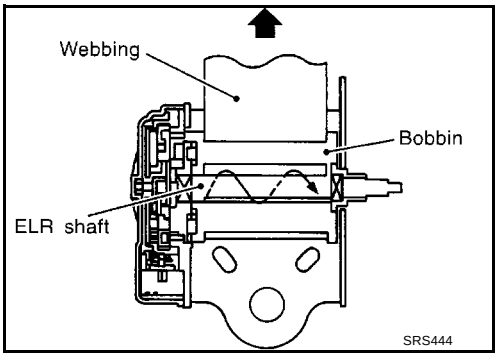
The air bag deploys if the diagnosis sensor unit activates while the ignition switch is in the ON or START position.
The collision modes for which supplemental restraint systems are activated are different among the SRS systems. For example, the driver air bag module and front passenger air bag module are activated in a frontal collision but not in a side collision.
SRS configurations which are activated for some collision modes are as follows;

SRS configuration	Frontal collision	Left side collision	Right side collision
Driver air bag module	×	—	—
Front passenger air bag module	×	—	—
Front LH seat belt pre-tensioner	×	—	—
Front RH seat belt pre-tensioner	×	—	—
Front LH side air bag module	—	×	—
Front RH side air bag module	—	—	×
LH side curtain air bag module	—	×	—
RH side curtain air bag module	—	—	×

Front Seat Belt Pre-tensioner with Load Limiter

EHS000RX

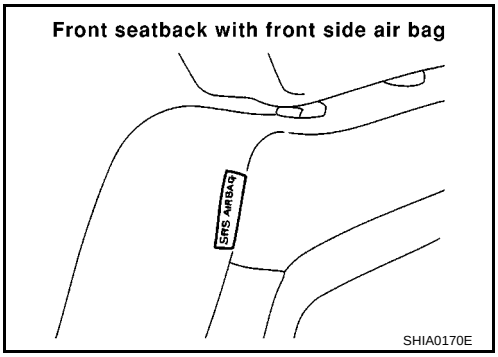
The seat belt pre-tensioner system with load limiter is installed for both the driver's seat and the front passenger's seat. It operates simultaneously with the SRS air bag system in the event of a frontal collision with an impact exceeding a specified level.
When the frontal collision with an impact exceeding a specified level occurs, seat belt slack resulting from clothing or other factors is immediately taken up by the pre-tensioner. Vehicle passengers are securely restrained.
When passengers in a vehicle are thrown forward in a collision and the restraining force of the seat belt exceeds a specified level, the load limiter permits the specified extension of the seat belt by the twisting of the ELR shaft, and a relaxation of the chest-area seat belt web tension while maintaining force.



Front Side Air Bag

EHS000RY

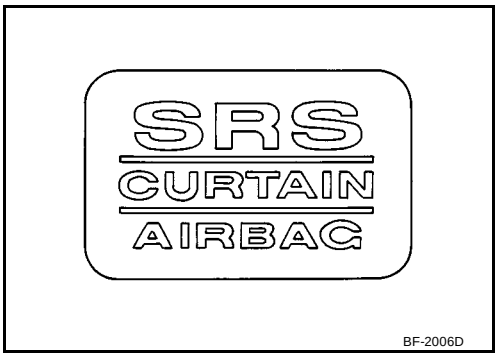
Front side air bag is built-in type.
The front seatbacks with built-in type side air bag have the labels as shown.



Side Curtain Air Bag

EHS000RZ

The side curtain air bags have the labels as shown.



TROUBLE DIAGNOSIS

PFP:00004

Trouble Diagnosis Introduction

EHS000S0

CAUTION:

- **Do not use electrical test equipment on any circuit related to the SRS unless instructed in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**
- **Do not attempt to repair, splice or modify the SRS wiring harness. If the harness is damaged, replace it with a new one.**
- **Keep ground portion clean.**

DIAGNOSIS FUNCTION

The SRS self-diagnosis results can be read by using “AIR BAG” warning lamp and/or CONSULT-II.
The User mode is exclusively prepared for the customer (driver). This mode warns the driver of a system malfunction through the operation of the “AIR BAG” warning lamp.
The Diagnosis mode allows the technician to locate and inspect the malfunctioning part.
The mode applications for the “AIR BAG” warning lamp and CONSULT-II are as follows:

	User mode	Diagnosis mode	Display type
“AIR BAG” warning lamp	X	X	ON-OFF operation
CONSULT-II	—	X	Monitoring

HOW TO PERFORM TROUBLE DIAGNOSES FOR QUICK AND ACCURATE REPAIR

A good understanding of the malfunction conditions can make troubleshooting faster and more accurate.
In general, each customer feels differently about a malfunction. It is important to fully understand the symptoms or conditions for a customer complaint.

Information from Customer

WHAT..... Vehicle model
WHEN..... Date, Frequencies
WHERE..... Road conditions
HOW..... Operating conditions, Symptoms

Preliminary Check

Check that the following parts are in good order.

- Battery (Refer to SC-5, "How to Handle Battery" .)
- Fuse (Refer to SRS-12, "Wiring Diagram — SRS—" .)
- System component-to-harness connections

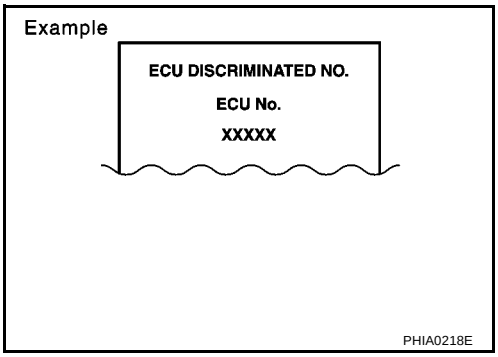
CONSULT-II Function

EHS000S4

DIAGNOSIS MODE FOR CONSULT-II

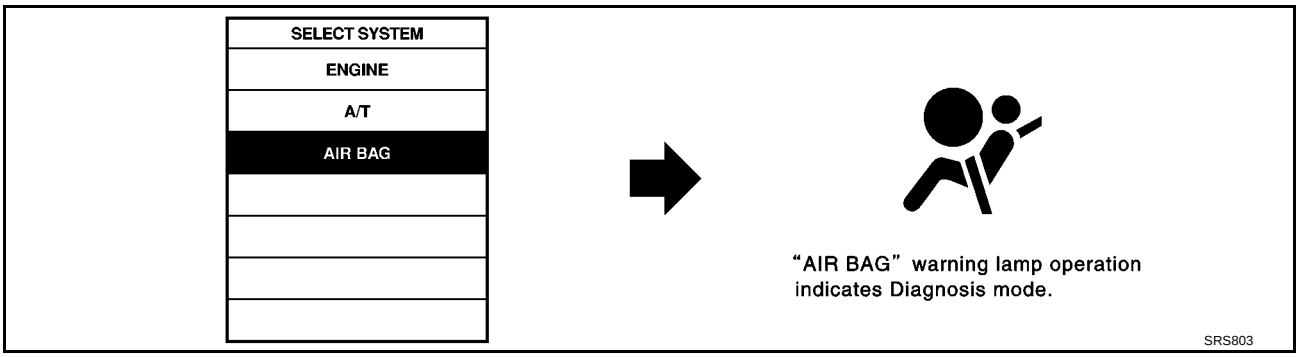
- “SELF-DIAG [CURRENT]”
  A current Self-diagnosis result (also indicated by the number of warning lamp flashes in the Diagnosis mode) is displayed on the CONSULT-II screen in real time. This refers to a malfunctioning part requiring repairs.
- “SELF-DIAG [PAST]”
  Diagnosis results previously stored in the memory are displayed on the CONSULT-II screen. The stored results are not erased until memory erasing is executed.
- “TROUBLE DIAG RECORD”
  With TROUBLE DIAG RECORD, diagnosis results previously erased by a reset operation can be displayed on the CONSULT-II screen.
- “ECU DISCRIMINATED NO.”
  The diagnosis sensor unit for each vehicle model is assigned with its own, individual classification number. This number will be displayed on the CONSULT-II screen, as shown. When replacing the diagnosis sensor unit, refer to the part number for the compatibility. After installation, replacement with a correct unit can be checked by confirming this classification number on the CONSULT-II screen.
  After repair, make sure the discriminated number of diagnosis sensor unit installed to vehicle are same. Refer to SRS-48, "ECU DISCRIMINATED NO." .



HOW TO CHANGE SELF-DIAGNOSIS MODE WITH CONSULT-II

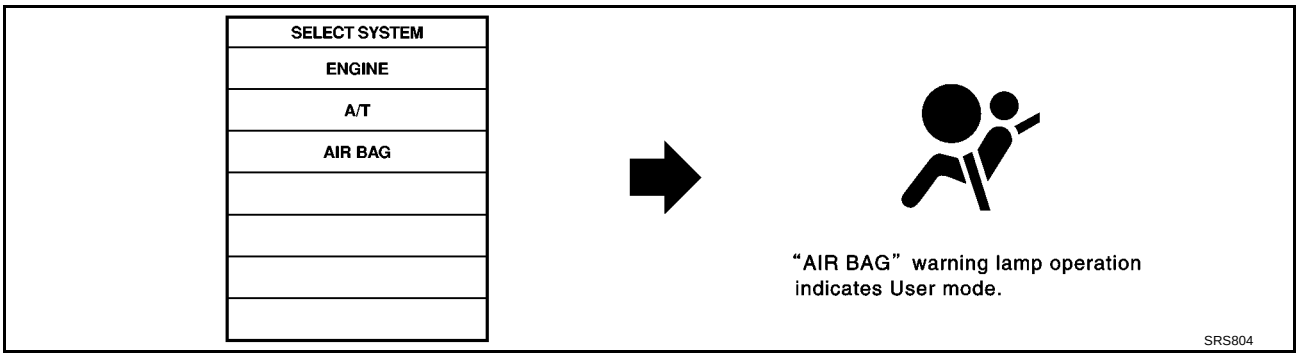
From User Mode to Diagnosis Mode

After selecting “AIR BAG” on the “SELECT SYSTEM” screen, User mode automatically changes to Diagnosis mode.



From Diagnosis Mode to User Mode

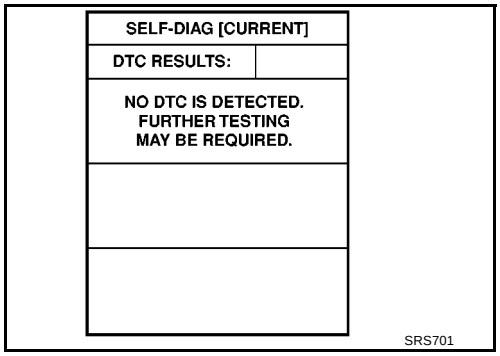
To return to User mode from Diagnosis mode, touch “BACK” key of CONSULT-II until “SELECT SYSTEM” appears, Diagnosis mode automatically changes to User mode.



HOW TO ERASE SELF-DIAGNOSIS RESULTS

- “SELF-DIAG [CURRENT]”
  A current Self-diagnosis result is displayed on the CONSULT-II screen in real time.
  After the malfunction is repaired completely, no malfunction is detected on “SELF-DIAG [CURRENT]”.
- “SELF-DIAG [PAST]”
  Return to the “SELF-DIAG [CURRENT]” CONSULT-II screen by touching “BACK” key of CONSULT-II and select “SELF-DIAG [CURRENT]” in SELECT DIAG MODE. Touch “ERASE” in “SELF-DIAG [CURRENT]” mode.

  NOTE:
  If the memory of the malfunction in “SELF-DIAG [PAST]” is not erased, the User mode shows the system malfunction by the operation of the warning lamp even if the malfunction is repaired completely.
- “TROUBLE DIAG RECORD”
  The memory of “TROUBLE DIAG RECORD” cannot be erased.

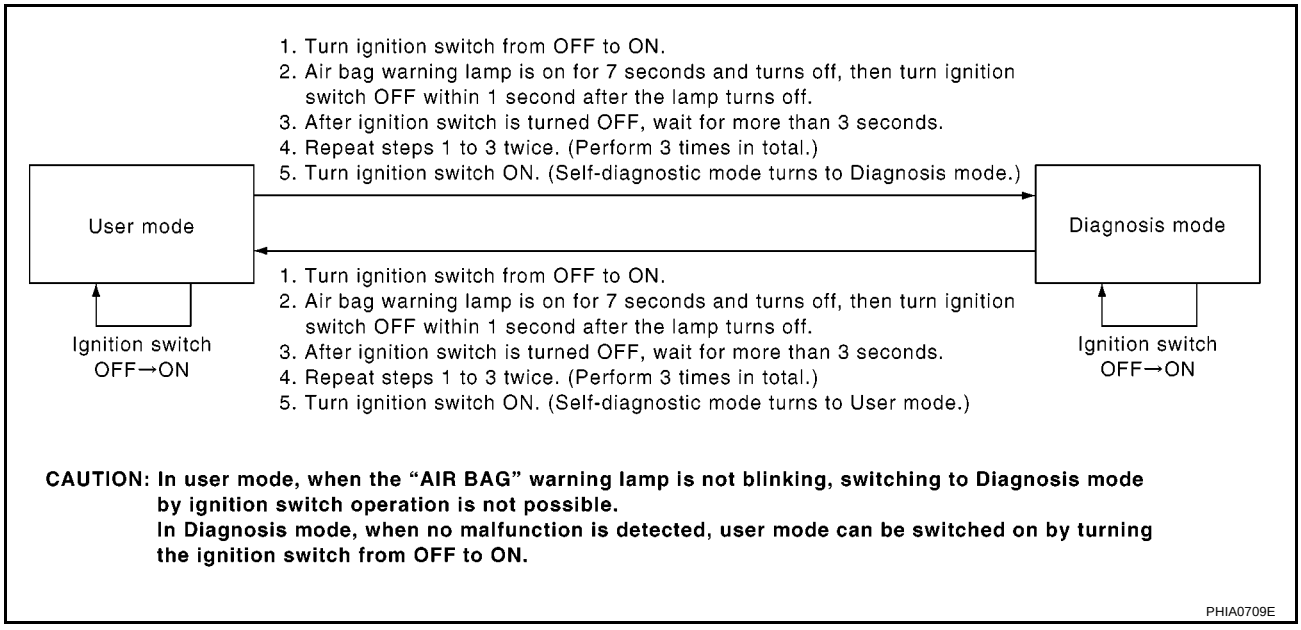


Self-Diagnosis Function (Without CONSULT-II)

EHS001N9

- The reading of these results is accomplished “User mode” and “Diagnosis mode”.
- After a malfunction is repaired, turn ignition switch ON. Diagnosis mode returns to the User mode. At that time, the self-diagnostic result is cleared.

HOW TO CHANGE SELF-DIAGNOSIS MODE WITHOUT CONSULT-II



HOW TO ERASE SELF-DIAGNOSIS RESULTS

After a malfunction is repaired, turn the ignition switch OFF for at least one second, then back ON. Diagnosis mode returns to the User mode. At that time, the self-diagnostic result is cleared.

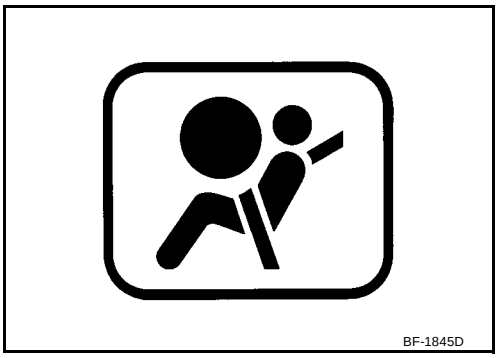
SRS Operation Check

EHS001NA

DIAGNOSTIC PROCEDURE 1

Checking Air Bag Operation by Using “AIR BAG” Warning Lamp — User Mode

1. Turn the ignition switch from OFF to ON, and check that the air bag warning lamp blinks.
2. Compare the SRS air bag warning lamp blinking pattern with the examples.



Warning lamp examples

“AIR BAG” warning lamp operation-User mode-	SRS condition	Reference item
 SHIA0011E	● No malfunction is detected. ● No further action is necessary.	—
 SHIA0012E	● The system is malfunctioning and need to be repaired as indicated.	Go to SRS-19, "DIAGNOSTIC PROCEDURE 2" or SRS-29, "DIAGNOSTIC PROCEDURE 6" .
 SHIA0013E	● Air bag is deployed. ● Seat belt pre-tensioner is deployed.	Go to SRS-56, "COLLISION DIAGNOSIS" .
	● Diagnosis sensor unit is malfunctioning. ● Air bag power supply circuit is malfunctioning. ● SRS air bag warning lamp circuit is malfunctioning.	Go to SRS-34, "Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn Off" .
SHIA0014E	● Diagnosis sensor unit is malfunctioning. ● Air bag warning lamp circuit is malfunctioning.	Go to SRS-35, "Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn On" .

Trouble Diagnosis with CONSULT-II

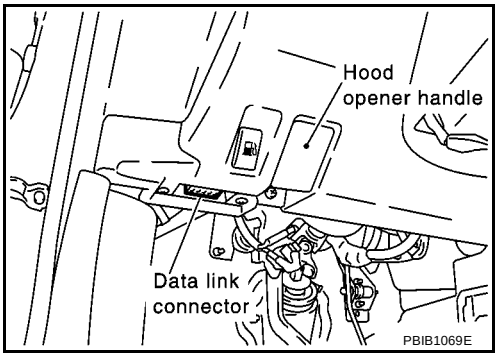
EHS001NB

DIAGNOSTIC PROCEDURE 2

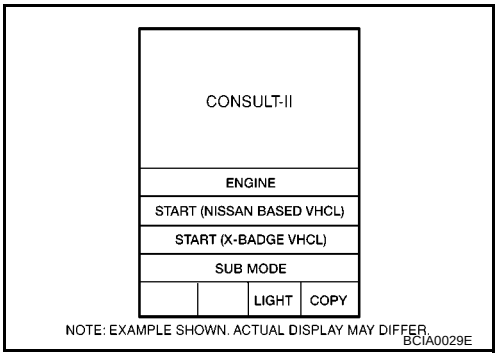
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

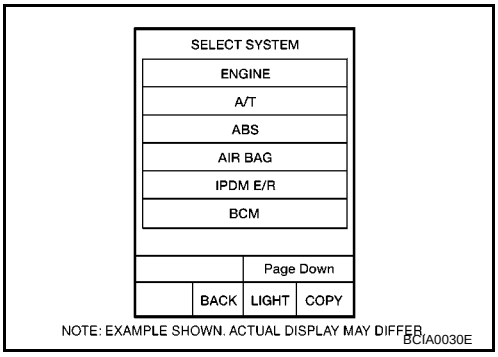
1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER to the data link connector.
3. Turn ignition switch ON.



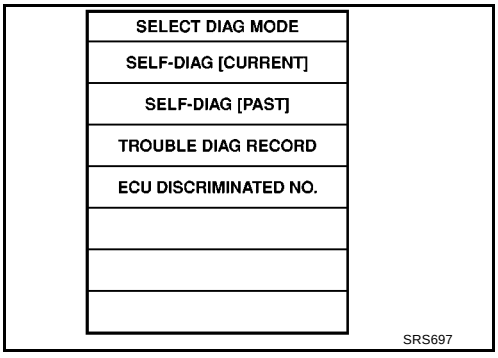
4. Touch “START(NISSAN BASED VHCL)”.



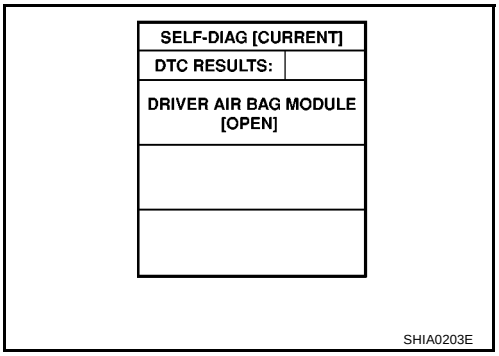
5. Touch “AIR BAG”.
   If “AIR BAG” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “SELF-DIAG [CURRENT]”.

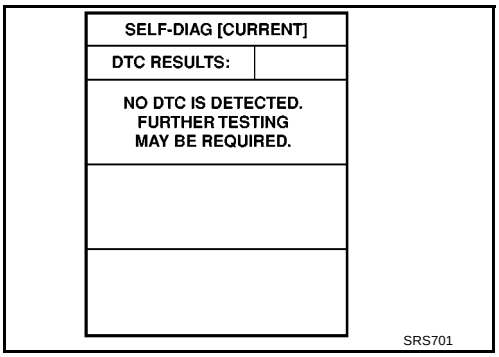


7. Diagnostic code is displayed on “SELF-DIAG [CURRENT]”.



If no malfunction is detected on “SELF-DIAG [CURRENT]” even though malfunction is detected in “SRS Operation Check”, check the battery voltage. If the battery voltage is less than 9 V, charge or replace the battery. SRS-23, "DIAGNOSTIC PROCEDURE 3" . If the battery voltage is OK, go to SRS-25, "DIAGNOSTIC PROCEDURE 4 (CONTINUED FROM DIAGNOSTIC PROCEDURE 2)" diagnose the following cases:

- Self-diagnostic result “SELF-DIAG [PAST]” (previously stored in the memory) might not be erased after repair.
- The SRS system malfunctions intermittently.



CONSULT-II DIAGNOSTIC CODE CHART (“SELF-DIAG [CURRENT]”)

Diagnostic item	Explanation		Repair order “Recheck SRS at each replacement”
NO DTC IS DETECTED.	When malfunction is indicated by the “AIR BAG” warning lamp in User mode.	● Low battery voltage (Less than 9V)	● Go to SRS-23, "DIAGNOSTIC PROCEDURE 3" after charging the battery.
		● Self-diagnostic result “SELF-DIAG [PAST]” (previously stored in the memory) might not be erased after repair. ● Intermittent malfunction has been detected in the past.	● Go to SRS-25, "DIAGNOSTIC PROCEDURE 4 (CONTINUED FROM DIAGNOSTIC PROCEDURE 2)" . ● Go to SRS-25, "DIAGNOSTIC PROCEDURE 5" .
	● No malfunction is detected.		—
DRIVER AIRBAG MODULE [OPEN]	● Driver air bag module circuit is open (including the spiral cable).		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace driver air bag module. (Before disposal, it must be deployed.) 4. Replace the spiral cable. 5. Replace the diagnosis sensor unit. 6. Replace the related harness.
DRIVER AIRBAG MODULE [VB-SHORT]	● Driver air bag module circuit is shorted to a power supply circuit (including the spiral cable).		
DRIVER AIRBAG MODULE [GND-SHORT]	● Driver air bag module circuit is shorted to ground (including the spiral cable).		
DRIVER AIRBAG MODULE [SHORT]	● Driver air bag module circuit is shorted between lines.		
ASSIST A/B MODULE [OPEN]	● Front passenger air bag module circuit is open.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
ASSIST A/B MODULE [VB-SHORT]	● Front passenger air bag module circuit is shorted to a power supply circuit.		
ASSIST A/B MODULE [GND-SHORT]	● Front passenger air bag module circuit is shorted to ground.		
ASSIST A/B MODULE [SHORT]	● Front passenger air bag module circuit is shorted between lines.		

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
CRASH ZONE SEN [UNIT FAIL] CRASH ZONE SEN [COMM FAIL] CRASH ZONE SEN [UNMATCH]	● Crash zone sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the crash zone sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
SIDE MODULE LH [OPEN]	● Front LH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front LH setback assembly (front LH side air bag module). (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
SIDE MODULE LH [VB-SHORT]	● Front LH side air bag module circuit is shorted to a power supply circuit.	
SIDE MODULE LH [GND-SHORT]	● Front LH side air bag module circuit is shorted to ground.	
SIDE MODULE LH [SHORT]	● Front LH side air bag module circuit is shorted between lines.	
SIDE MODULE RH [OPEN]	● Front RH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front RH setback assembly (front RH side air bag module). (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
SIDE MODULE RH [VB-SHORT]	● Front RH side air bag module circuit is shorted to some power supply circuit.	
SIDE MODULE RH [GND-SHORT]	● Front RH side air bag module circuit is shorted to ground.	
SIDE MODULE RH [SHORT]	● Front RH side air bag module circuit is shorted between lines.	
SATELLITE SENS LH [UNIT FAIL] SATELLITE SENS LH [COMM FAIL]	● LH side air bag (Satellite) sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the LH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
SATELLITE SENS RH [UNIT FAIL] SATELLITE SENS RH [COMM FAIL]	● RH side air bag (Satellite) sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the RH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
PRE-TEN FRONT LH [OPEN]	● Front LH pre-tensioner circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front LH seat belt. (Before disposal, it must be activated.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
PRE-TEN FRONT LH [VB-SHORT]	● Front LH pre-tensioner circuit is shorted to a power supply circuit.	
PRE-TEN FRONT LH [GND-SHORT]	● Front LH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT LH [SHORT]	● Front LH pre-tensioner circuit is shorted between lines.	

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
PRE-TEN FRONT RH [OPEN]	● Front RH pre-tensioner circuit is shorted to a power supply circuit.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front RH seat belt. (Before disposal, it must be activated.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
PRE-TEN FRONT RH [VB-SHORT]	● Front RH pre-tensioner circuit is shorted to a power supply circuit.	
PRE-TEN FRONT RH [GND-SHORT]	● Front RH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT RH [SHORT]	● Front RH pre-tensioner circuit is shorted between lines.	
CURTAIN MODULE LH [OPEN]	● LH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace LH side curtain air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
CURTAIN MODULE LH [VB-SHORT]	● LH side curtain air bag module circuit is shorted to some power supply circuits.	
CURTAIN MODULE LH [GND-SHORT]	● LH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE LH [SHORT]	● LH side curtain air bag module circuit is shorted between lines.	
CURTAIN MODULE RH [OPEN]	● RH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace RH side curtain air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.
CURTAIN MODULE RH [VB-SHORT]	● RH side curtain air bag module circuit is shorted to a power supply circuit.	
CURTAIN MODULE RH [GND-SHORT]	● RH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE RH [SHORT]	● RH side curtain air bag module circuit is shorted between lines.	
CONTROL UNIT	● Diagnosis sensor unit is malfunctioning.	1. Visually check the wiring harness connection. 2. Replace the diagnosis sensor unit.

NOTE:

- Follow the procedures in numerical order when repairing malfunctioning parts. Confirm whether malfunction is eliminated using air bag warning lamp or CONSULT-II each time repair is finished. If malfunction is still observed, proceed to the next step. When malfunction is eliminated, further repair work is not required.

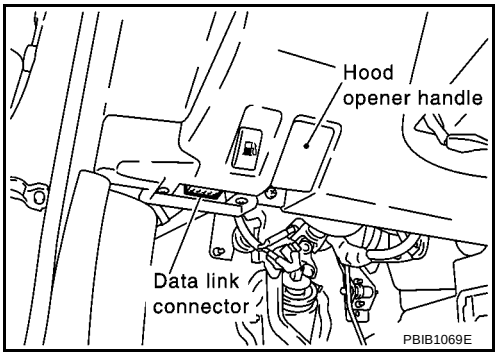
DIAGNOSTIC PROCEDURE 3

Final checking after repairing SRS by using CONSULT-II — Diagnosis mode

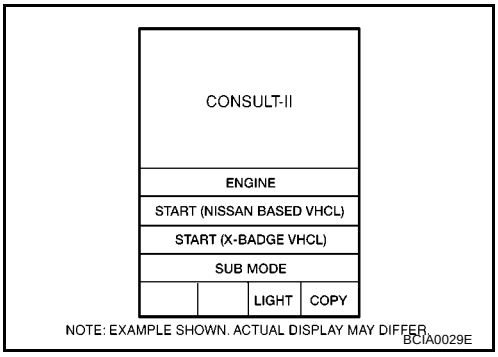
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunctions might be detected in self-diagnosis depending on control unit which carry out CAN communication.

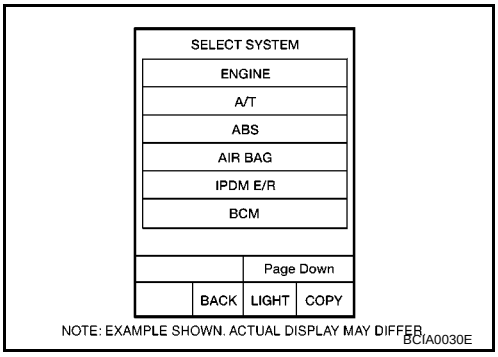
1. After repairing SRS, connect both battery cables.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.
3. Turn ignition switch “ON”.



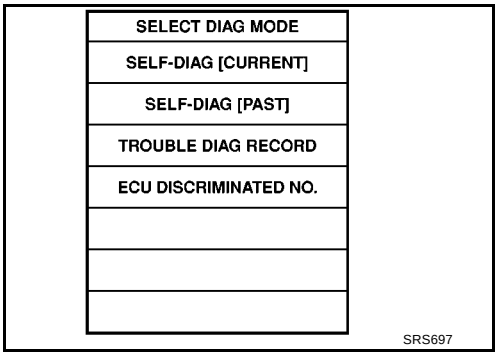
4. Touch “START(NISSAN BASED VHCL)”.



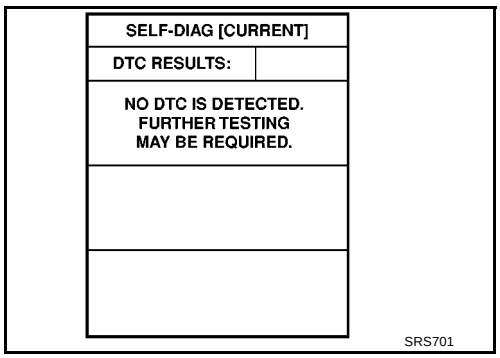
5. Touch “AIR BAG”.
   If “AIR BAG” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



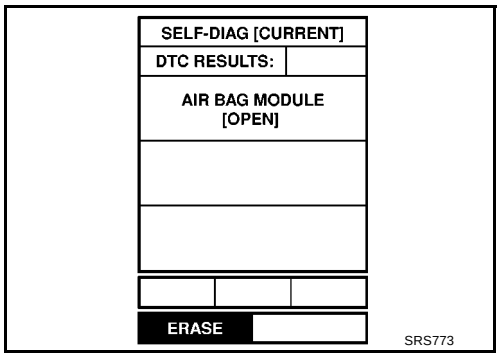
6. Touch “SELF-DIAG [CURRENT]”.



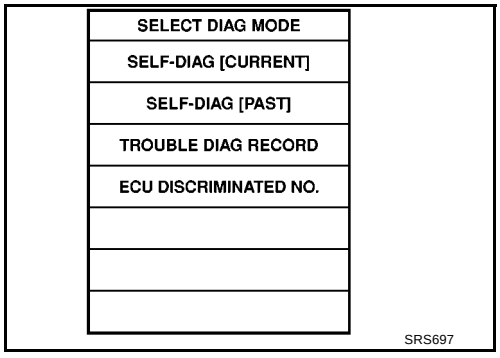
7. If no malfunction is detected on “SELF-DIAG [CURRENT]”, repair of SRS is completed. Go to step 8.
   If any malfunction is detected on “SELF-DIAG [CURRENT]”, the malfunctioning part is not repaired completely or another malfunctioning part is detected. Go to SRS-19, "DIAGNOSTIC PROCEDURE 2" , and repair malfunctioning part completely.



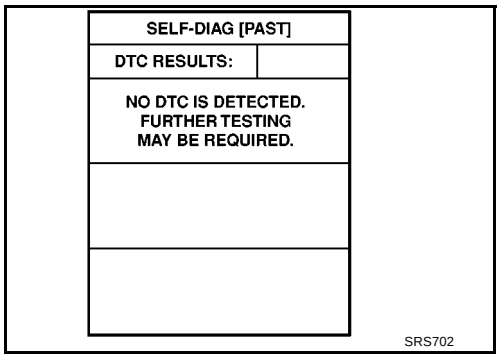
8. Touch “ERASE”.
   NOTE:
   Touch “ERASE” to clear the memory of the malfunction (“SELF-DIAG [PAST]”).
   If the memory of the malfunction in “SELF-DIAG [PAST]” is not erased, the User mode shows the system malfunction by the operation of the warning lamp even if the malfunction is repaired completely.



9. Touch “BACK” key of CONSULT-II to “SELECT DIAG MODE” screen. Touch “SELF-DIAG [PAST]”.



10. Check that no malfunction is detected on “SELF-DIAG [PAST]”.
11. Touch “BACK” key of CONSULT-II until “SELECT SYSTEM” appears in order to return to User mode from Diagnosis mode.
12. Turn ignition switch OFF then turn off and disconnect CONSULT-II.
13. Go to SRS-17, "Checking Air Bag Operation by Using “AIR BAG” Warning Lamp — User Mode" .



DIAGNOSTIC PROCEDURE 4 (CONTINUED FROM DIAGNOSTIC PROCEDURE 2)

Inspecting SRS malfunctioning record

1. CONSIDER POSSIBILITY OF NOT ERASING SELF-DIAGNOSTIC RESULT AFTER REPAIRING

Is it the first time for maintenance of SRS?

YES or NO

YES >> Go to SRS-19, "DIAGNOSTIC PROCEDURE 2" .

NO >> Self-diagnostic result “SELF-DIAG [PAST]” (previously stored in the memory) might not be erased after repair. Go to SRS-23, "DIAGNOSTIC PROCEDURE 3" .

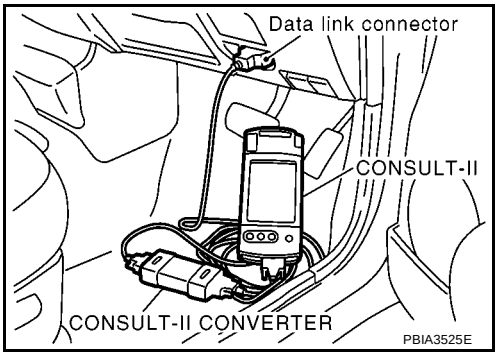
DIAGNOSTIC PROCEDURE 5

Inspecting SRS intermittent malfunction by using CONSULT-II — Diagnosis mode

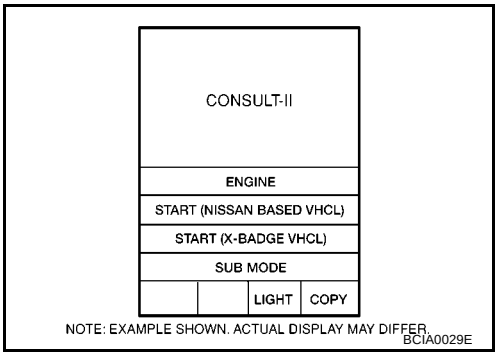
CAUTION:

If CONSULT-II is used with no connection of CONSULT-II CONVERTER, malfunction might be detected in self-diagnosis depending on control unit which carry out CAN communication.

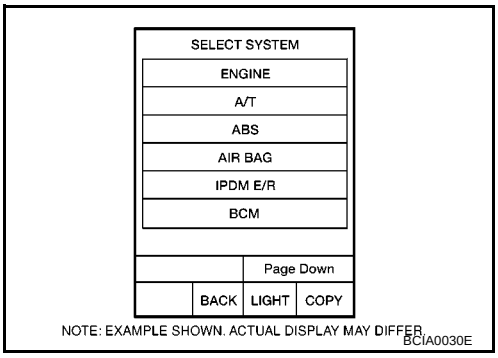
1. Turn ignition switch OFF.
2. Connect CONSULT-II and CONSULT-II CONVERTER to data link connector.



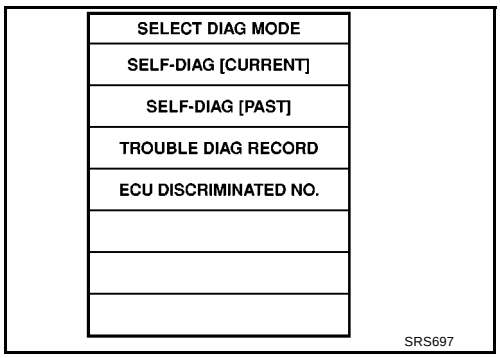
3. Turn ignition switch ON.
4. Touch “START (NISSAN BASED VHCL)”.



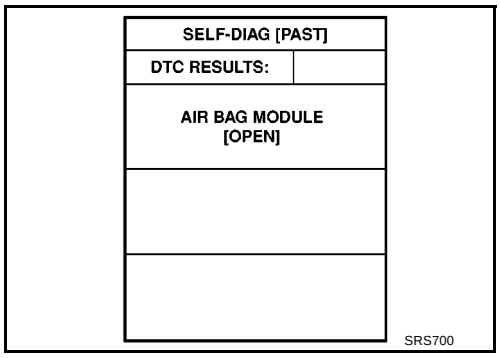
5. Touch “AIR BAG”.
   If “AIR BAG” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



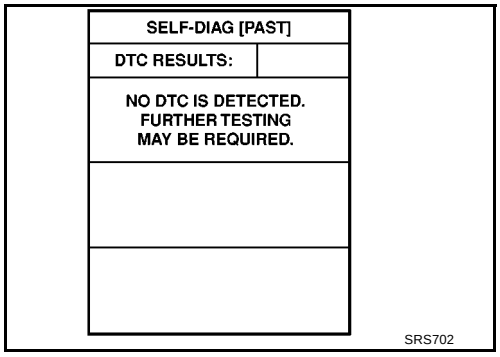
6. Touch “SELF-DIAG [PAST]”.



7. If diagnostic codes are displayed on “SELF-DIAG [PAST]”, go to step 10.

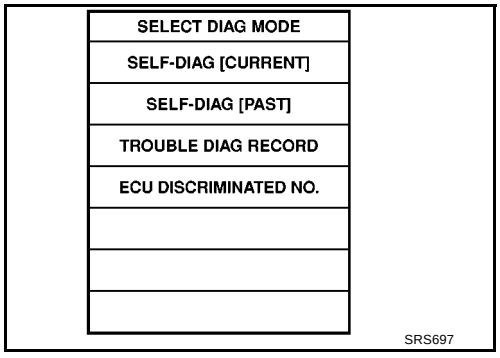


If no malfunction is detected on “SELF-DIAG [PAST]”, touch “BACK” and go back to “SELECT DIAG MODE”.

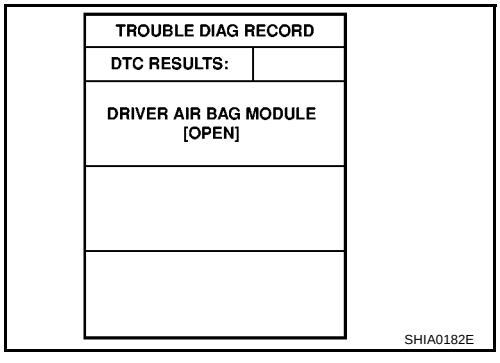


8. Touch “TROUBLE DIAG RECORD”.

NOTE:
With “TROUBLE DIAG RECORD”, diagnosis results previously erased by a reset operation can be displayed.



9. Diagnostic code is displayed on “TROUBLE DIAG RECORD”.
10. Touch “PRINT”.
11. Compare diagnostic codes to SRS-27, "CONSULT-II Diagnostic Code Chart (“SELF-DIAG [PAST]” or “TROUBLE DIAG RECORD”)" .
12. Touch “BACK” key of CONSULT-II until “SELECT SYSTEM” appears.
13. Turn ignition switch OFF, then turn off and disconnect CONSULT-II, and both battery cables.



14. Repair the system as outlined by the “Repair order” in “Intermittent Malfunction Diagnostic Code Chart”, that corresponds to the self-diagnostic result. For replacement procedure of component parts, refer to the Removal and Installation procedure for the appropriate component.
15. Go to SRS-23, "DIAGNOSTIC PROCEDURE 3" , for final checking.

CONSULT-II Diagnostic Code Chart (“SELF-DIAG [PAST]” or “TROUBLE DIAG RECORD”)

Diagnostic item	Explanation		Repair order “Recheck SRS at each replacement”
NO DTC IS DETECTED.	When malfunction is indicated by the “AIR BAG” warning lamp in User mode.	● Low battery voltage (Less than 9V)	● Go to SRS-23, "DIAGNOSTIC PROCEDURE 3" .
	● No malfunction is detected.		● Go to SRS-23, "DIAGNOSTIC PROCEDURE 3" .
DRIVER AIRBAG MODULE [OPEN]	● Driver air bag module circuit is open (including the spiral cable).		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace driver air bag module (Before disposal, it must be deployed.), diagnosis sensor unit and spiral cable.
DRIVER AIRBAG MODULE [VB-SHORT]	● Driver air bag module circuit is shorted to a power supply circuit (including the spiral cable).		
DRIVER AIRBAG MODULE [GND-SHORT]	● Driver air bag module circuit is shorted to ground (including the spiral cable).		
DRIVER AIRBAG MODULE [SHORT]	● Driver air bag module circuit is shorted between lines.		
ASSIST A/B MODULE [OPEN]	● Front passenger air bag module circuit is open.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and front passenger air bag module (Before disposal, it must be deployed.).
ASSIST A/B MODULE [VB-SHORT]	● Front passenger air bag module circuit is shorted to a power supply circuit.		
ASSIST A/B MODULE [GND-SHORT]	● Front passenger air bag module circuit is shorted to ground.		
ASSIST A/B MODULE [SHORT]	● Front passenger air bag module circuit is shorted between lines.		
CRASH ZONE SEN [UNIT FAIL] CRASH ZONE SEN [COMM FAIL]	● Crash zone sensor		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace crash zone sensor and diagnosis sensor unit.
SIDE MODULE LH [OPEN]	● Front LH side air bag module circuit is open.		1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and LH side air bag module. (Before disposal, it must be deployed.).
SIDE MODULE LH [VB-SHORT]	● Front LH side air bag module circuit is shorted to a power supply circuit.		
SIDE MODULE LH [GND-SHORT]	● Front LH side air bag module circuit is shorted to ground.		
SIDE MODULE LH [SHORT]	● Front LH side air bag module circuit is shorted between lines.		

Diagnostic item	Explanation	Repair order "Recheck SRS at each replacement"
SIDE MODULE RH [OPEN]	● Front RH side air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and RH side air bag module (Before disposal, it must be deployed.)
SIDE MODULE RH [VB-SHORT]	● Front RH side air bag module circuit is shorted to a power supply circuit.	
SIDE MODULE RH [GND-SHORT]	● Front RH side air bag module circuit is shorted to ground.	
SIDE MODULE RH [SHORT]	● Front RH side air bag module circuit is shorted between lines.	
SATELLITE SENS LH [UNIT FAIL] SATELLITE SENS LH [COMM FAIL]	● LH side air bag (Satellite) sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and LH side air bag (Satellite) sensor.
SATELLITE SENS RH [UNIT FAIL] SATELLITE SENS RH [COMM FAIL]	● RH side air bag (Satellite) sensor	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and RH side air bag (Satellite) sensor.
PRE-TEN FRONT LH [OPEN]	● Front LH pre-tensioner circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and front LH seat belt (Before disposal, it must be activated.)
PRE-TEN FRONT LH [VB-SHORT]	● Front LH pre-tensioner circuit is shorted to a power supply circuit.	
PRE-TEN FRONT LH [GND-SHORT]	● Front LH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT LH [SHORT]	● Front LH pre-tensioner circuit is shorted between lines.	
PRE-TEN FRONT RH [OPEN]	● Front RH pre-tensioner circuit is open.	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and front RH seat belt (Before disposal, it must be activated.)
PRE-TEN FRONT RH [VB-SHORT]	● Front RH pre-tensioner circuit is shorted to a power supply circuit.	
PRE-TEN FRONT RH [GND-SHORT]	● Front RH pre-tensioner circuit is shorted to ground.	
PRE-TEN FRONT RH [SHORT]	● Front RH pre-tensioner circuit is shorted between lines.	
CURTAIN MODULE LH [OPEN]	● LH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and LH side curtain air bag module. (Before disposal, it must be deployed.)
CURTAIN MODULE LH [VB-SHORT]	● LH side curtain air bag module circuit is shorted to a power supply circuits.	
CURTAIN MODULE LH [GND-SHORT]	● LH side curtain air bag module circuit is shorted to ground.	

Diagnostic item	Explanation	Repair order “Recheck SRS at each replacement”
CURTAIN MODULE RH [OPEN]	● RH side curtain air bag module circuit is open.	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. If the harness check result is OK, replace the diagnosis sensor unit and RH side curtain air bag module. (Before disposal, it must be deployed.)
CURTAIN MODULE RH [VB-SHORT]	● RH side curtain air bag module circuit is shorted to a power supply circuit.	
CURTAIN MODULE RH [GND-SHORT]	● RH side curtain air bag module circuit is shorted to ground.	
CURTAIN MODULE RH [SHORT]	● RH side curtain air bag module circuit is shorted between lines.	
CONTROL UNIT	● Diagnosis sensor unit is malfunctioning.	1. Visually check the wiring harness connection. 2. Replace the diagnosis sensor unit.

Trouble Diagnosis without CONSULT-II

EHS001NC

DIAGNOSTIC PROCEDURE 6

Inspecting SRS Malfunctioning Parts by Using “AIR BAG” Warning Lamp—Diagnosis Mode

NOTE:

SRS will not enter Diagnosis mode if no malfunction is detected in User mode.

1. Turn ignition switch ON.
2. After “AIR BAG” warning lamp lights for 7 seconds, turn ignition switch OFF within 1 second.
3. Wait more than 3 seconds.
4. Repeat the steps 1 to 3 two times.
5. Turn ignition switch ON.

SRS is now in Diagnosis mode.
“AIR BAG” warning lamp operates in Diagnosis mode as follows:

WARNING LAMP FLASH CODE CHART

<Diagnosis results (previously stored in the memory) might not be erased after repair or intermittent malfunctions have been detected in the past.>

Flash pattern	Repair order
a through b are repeated.  	1. Go to DIAGNOSTIC PROCEDURES 2 and 3.

SHIA0026E

<Driver air bag module>

Flash pattern	Repair order
a through d are repeated. d: Two flashes indicates malfunctioning driver air bag module circuit.  	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the spiral cable. 4. Replace driver air bag module. (Before disposal, it must be deployed.) 5. Replace the diagnosis sensor unit. 6. Replace the related harness.

PHIA0185E

<Diagnosis sensor unit>

Flash pattern	Repair order
a through d are repeated. d: Seven flashes indicate malfunctioning diagnosis sensor unit circuit.  	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace the diagnosis sensor unit. 4. Replace the related harness.

SHIA0028E

<Front passenger air bag module>

Flash pattern	Repair order
a through d are repeated. d: Eight flashes indicate malfunctioning front passenger air bag module circuit.  	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front passenger air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0029E

<Crash zone sensor>

Flash pattern	Repair order
a through d are repeated. d: Six flashes indicate malfunctioning crash zone sensor circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the crash zone sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0083E

<Front RH seat belt pre-tensioner>

Flash pattern	Repair order
a through d are repeated. d: One flash indicates malfunctioning front RH seat belt pre-tensioner circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front RH seat belt pre-tensioner. (Before disposal, it must be activated.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0030E

<Front LH seat belt pre-tensioner>

Flash pattern	Repair order
a through d are repeated. d: Three flashes indicate malfunctioning front LH seat belt pre-tensioner circuit. 	1. Visually check the wiring harness connections. 2. Replace the harness if it has visible damage. 3. Replace front LH seat belt pre-tensioner. (Before disposal, it must be activated.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0031E

<RH side air bag (Satellite) sensor>

Flash pattern	Repair order
a through f are repeated. f: Three flashes indicate malfunctioning RH side air bag (Satellite) sensor circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the RH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0032E

<LH side air bag (Satellite) sensor>

Flash pattern	Repair order
a through f are repeated. f: Four flashes indicate malfunctioning LH side air bag (Satellite) sensor. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace the LH side air bag (Satellite) sensor. 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0033E

<Front RH side air bag module>

Flash pattern	Repair order
a through f are repeated. f: One flash indicate malfunctioning front RH side air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front RH side air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0034E

<Front LH side air bag module>

Flash pattern	Repair order
a through f are repeated. f: Two flashes indicate malfunctioning front LH side air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace front LH side air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0035E

<RH side curtain air bag module>

Flash pattern	Repair order
a through f are repeated. f: Five flashes indicate malfunctioning RH side curtain air bag module circuit. 	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace RH side curtain air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

SHIA0084E

<LH side curtain air bag module>	
Flash pattern	Repair order
a through f are repeated. f: Six flashes indicate malfunctioning LH side curtain air bag module circuit.  SHIA0086E	1. Visually check the wiring harness connection. 2. Replace the harness if it has visible damage. 3. Replace LH side curtain air bag module. (Before disposal, it must be deployed.) 4. Replace the diagnosis sensor unit. 5. Replace the related harness.

Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn Off

EHS001ND

DIAGNOSTIC PROCEDURE 7

1. CHECK THE DEPLOYMENT OF AIR BAG MODULE

Is air bag module deployed?

YES or NO

YES >> Refer to SRS-56, "COLLISION DIAGNOSIS" .
NO >> GO TO 2.

2. CHECK THE AIR BAG FUSE

Check 10A fuse [No.3, located in fuse block (J/B)].
Refer to PG-4, "POWER SUPPLY ROUTING" .

OK or NG

OK >> GO TO 4.
NG >> GO TO 3

3. CHECK AIR BAG FUSE AGAIN

Replace “AIR BAG” fuse and turn ignition switch ON.

Does the “AIR BAG” fuse blow again?

YES >> Repair main harness.
NO >> **INSPECTION END**

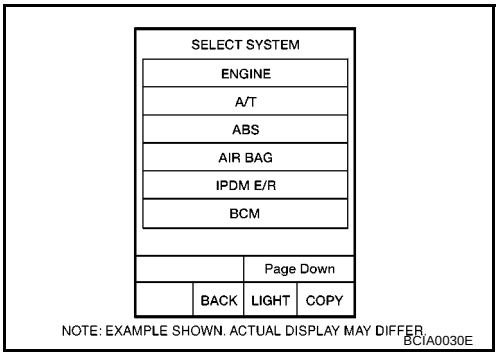
4. CHECK DIAGNOSIS SENSOR UNIT

Connect CONSULT-II and touch “START”.

- Is “AIR BAG” displayed on CONSULT-II?

YES or NO

YES >> GO TO 5.
NO >> Visually check the wiring harness connection of diagnosis sensor unit. If the harness connection check result is OK, replace diagnosis sensor unit.



5. CHECK HARNESS CONNECTION

Is harness connection between warning lamp and diagnosis sensor unit OK?

OK or NG

OK >> Replace diagnosis sensor unit.
NG >> Connect “AIR BAG” warning lamp and diagnosis sensor unit connector properly. If “AIR BAG” warning lamp still does not go off, replace harness.

Trouble Diagnosis: “AIR BAG” Warning Lamp Does Not Turn On

EHS001NE

DIAGNOSTIC PROCEDURE 8

1. CHECK “METER” FUSE

Check 10A fuse [No.2, located in fuse block (J/B)].
Refer to PG-4, "POWER SUPPLY ROUTING" .

OK or NG

OK >> GO TO 3.
NG >> GO TO 2.

2. CHECK “METER” FUSE AGAIN

Replace 10A fuse [No.2, located in fuse block (J/B)] and turn ignition switch ON.

Does the meter fuse blow again?

YES >> Repair the related harness.
NO >> **INSPECTION END**

3. CHECK HARNESS CONNECTION BETWEEN DIAGNOSIS SENSOR UNIT AND COMBINATION METER

Disconnect diagnosis sensor unit connector and turn ignition switch ON.

- Does “AIR BAG” warning lamp turn on?

YES or NO

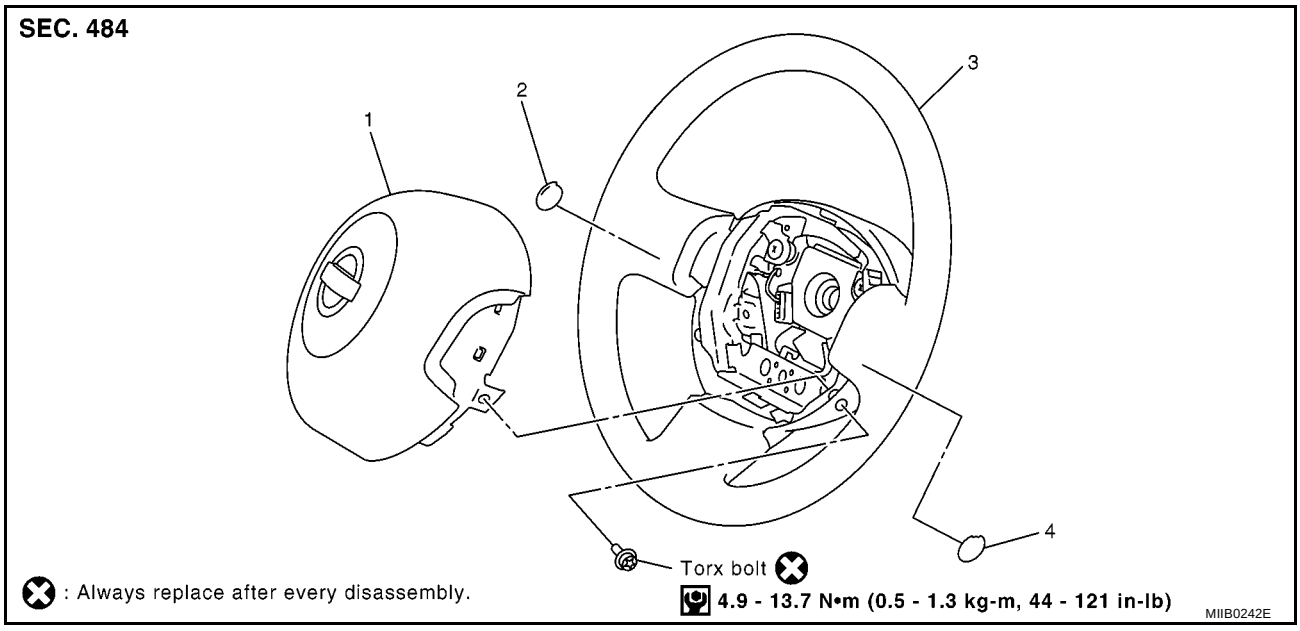
YES >> Replace diagnosis sensor unit.
NO >> Replace combination meter assembly.

DRIVER AIR BAG MODULE

PFP:K8510

Removal and Installation

EHS000QZ



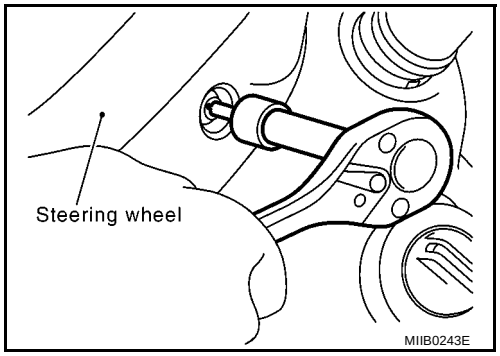
1. Driver air bag module
2. Side lid (LH)
3. Steering wheel
4. Side lid (RH)

REMOVAL

CAUTION:

- **Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.**
- **Always work from the side of driver air bag module.**

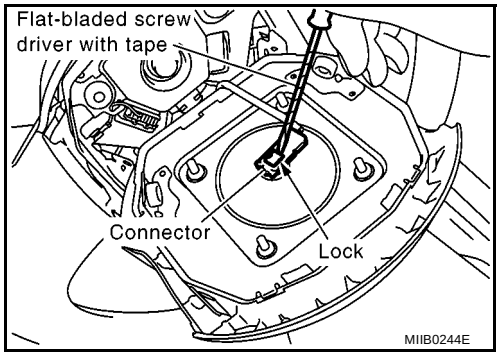
1. Remove the side lids.
2. Remove the right and left side special bolts.



3. Disconnect the steering wheel switch sub-harness connector.
4. Disconnect the air bag harness connector, and remove the driver air bag module.

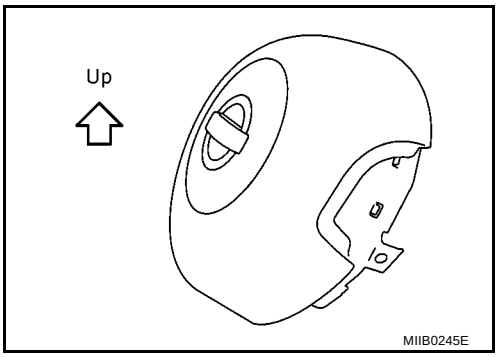
CAUTION:

- **For removing and installing air bag harness connector, insert a flat-bladed screwdriver wrapped with a tape into lock, and raise lock to remove connector.**
- **Install connector with lock raised, and push lock into connector.**
- **Confirm the lock is fully pushed in after mounting connector.**

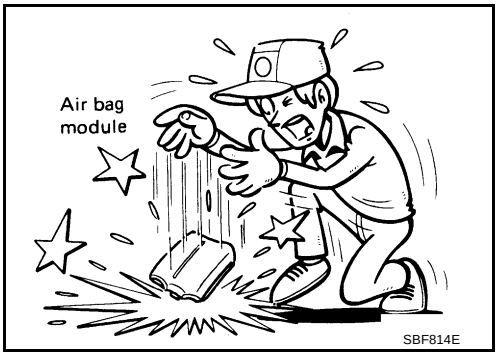


CAUTION:

- **Always work from the side of driver air bag module.**
- **Always place driver air bag module with pad side facing upward.**
- **Do not insert any foreign objects (screwdriver, etc.) into driver air bag module.**
- **Do not attempt to disassemble driver air bag module.**
- **Do not use old bolts after removal; replace with new bolts.**
- **Do not expose the driver air bag module to temperatures exceeding 90°C (194°F).**



- **Replace driver air bag module if it has been dropped or sustained an impact.**
- **Do not allow oil, grease or water to come in contact with the front passenger air bag module.**



INSTALLATION

Install in the reverse order of removal.

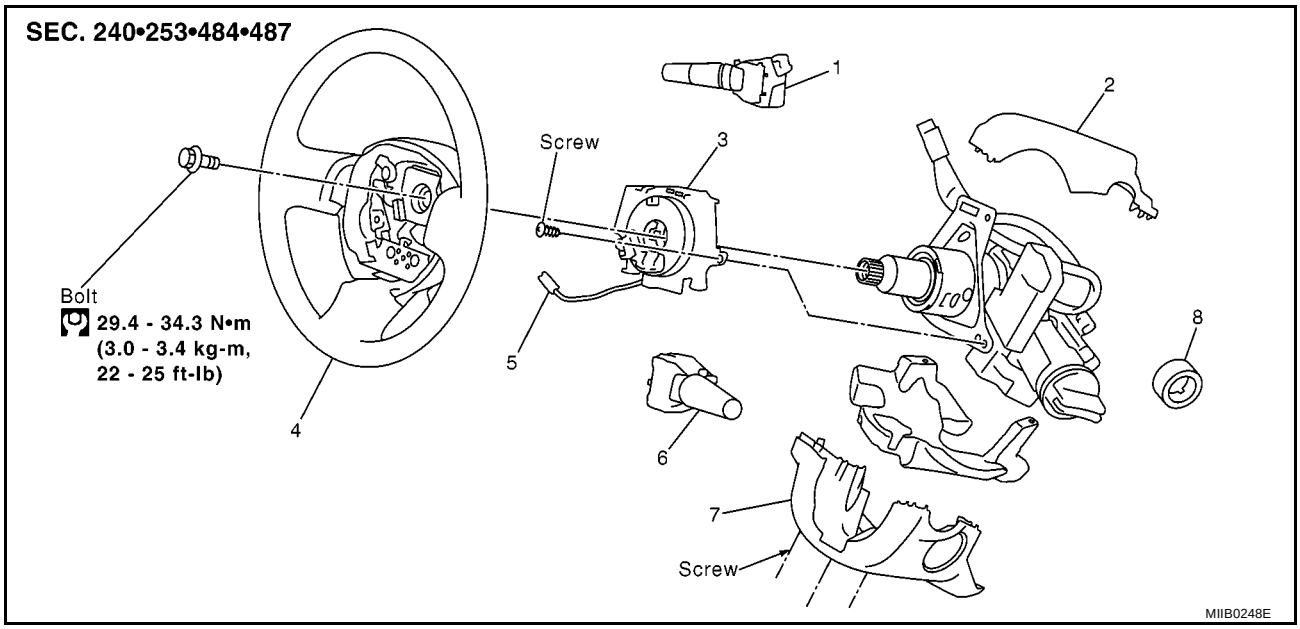
- For installing the air bag module, tighten the special bolts.
- After the work is completed, perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .

SPIRAL CABLE

PFP:25554

Removal and Installation

EHS000R0



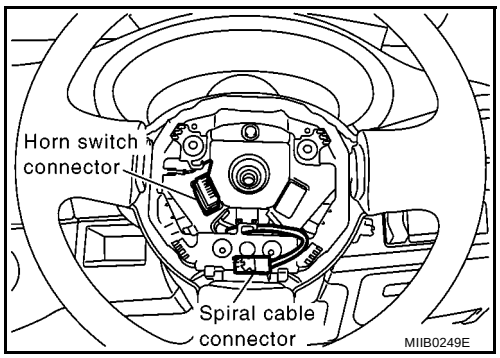
1. Wiper and washer switch
2. Steering column cover (upper)
3. Spiral cable
4. Steering wheel
5. Air bag module connector
6. Light and turn signal switch
7. Steering column cover (Lower)
8. Key cylinder escutcheon

REMOVAL

CAUTION:

Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

1. Remove driver air bag module. Refer to SRS-36, "DRIVER AIR BAG MODULE" .
2. Set the steering wheel in the neutral position.
3. Remove horn switch connector.

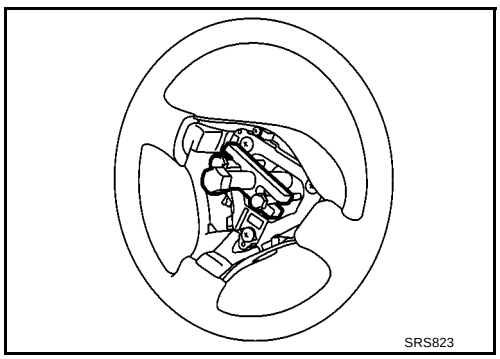


4. Remove steering wheel nut.
5. Remove steering wheel.

CAUTION:

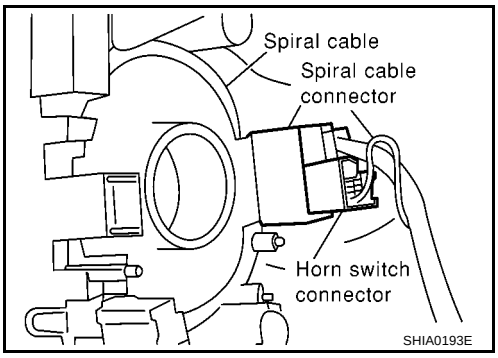
Do not tap or bump the steering wheel.

- **Do not attempt to disassemble spiral cable.**
- **Do not apply lubricant to the spiral cable.**



6. Remove steering column cover. Refer to IP-6, "F. Steering Column Cover" .
7. Remove wiper and washer switch, lighting and turn signal switch.
8. Loosen screws. While pushing upper plastic tab, remove spiral cable.
9. Remove horn switch connector, and then spiral cable connector.

CAUTION:
Also, with the steering linkage disconnected the cable may snap by turning the steering wheel beyond the limited number of turns. The spiral cable can be turned counterclockwise about 2.5 turns from the right end position.



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **The spiral cable may snap due to steering operation if the cable is installed in an improper position.**
- **Also, with the steering linkage disconnected the cable may snap by turning the steering wheel beyond the limited number of turns. The spiral cable can be turned counterclockwise about 2.5 turns from the right end position.**
- **After the work is completed, perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

FRONT PASSENGER AIR BAG MODULE

PFP:K8515

Removal and Installation

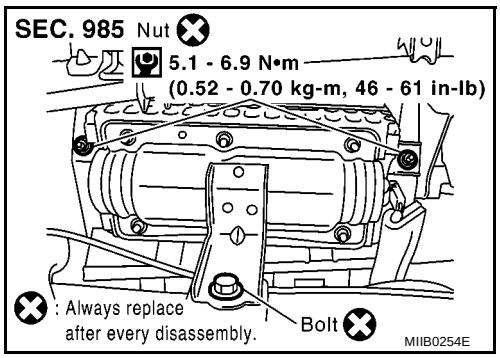
EHS000R2

REMOVAL

CAUTION:

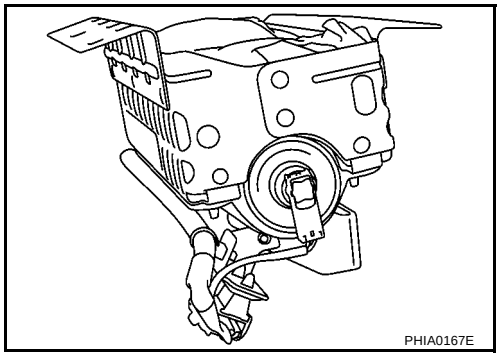
- **Before servicing SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.**
- **Always work from the side of or under front passenger air bag module.**

1. Remove glove box lid and glove box cover assembly. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
2. Disconnect the air bag harness connector from the passenger air bag module.
3. Remove mounting bolt and nut.
4. Pull out and remove passenger air bag module from the lower side of instrument panel to bottom so that no impact is given on passenger air bag module.

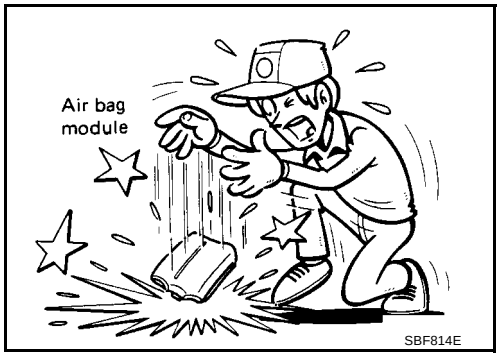


CAUTION:

- **Always place front passenger air bag module with warning label side facing upward.**
- **Do not insert any foreign objects (screwdriver, etc.) into front passenger air bag module.**
- **Do not attempt to disassemble front passenger air bag module.**
- **Do not use old bolts after removal; replace with new bolts.**



- **Replace front passenger air bag module if it has been dropped or sustained an impact.**
- **Do not expose the front passenger air bag module to temperature exceeding 90°C (194°F).**
- **Do not allow oil, grease or water to come in contact with the front passenger air bag module.**
- **After front passenger air bag module inflates, the instrument panel assembly should be replaced.**



INSTALLATION

Install in the reverse order of removal.

Mounting bolt (special bolt):

: 14.7 - 24.5 N·m (1.5 - 2.4 kg-m, 11 - 18 ft-lb)

CAUTION:

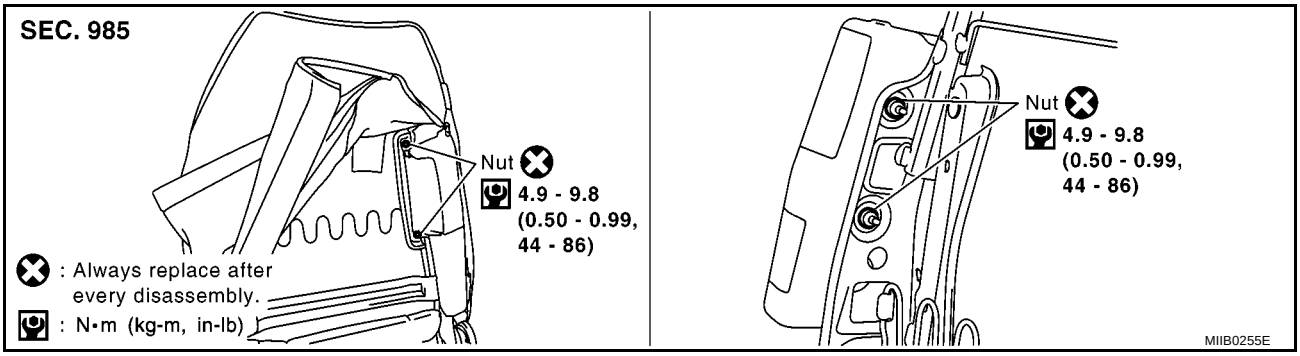
- **Always work from the side of or under front passenger air bag module.**
- **After the work is completed, perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

FRONT SIDE AIR BAG MODULE

PFP:K8EH0

Removal and Installation

EHS000R3



REMOVAL

CAUTION:

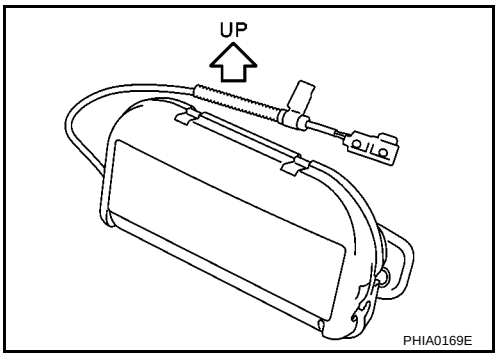
Removal of front side air bag module should only be done to allow deployment of front side air bag module prior to disposal of seatback assembly.
Only complete seatback assemblies can be replaced. Refer to SE-7, "FRONT SEAT" .

- **Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.**
- **Always work from the rear of the front side air bag module.**

1. Remove the driver and/or passenger seat. Refer to SE-9, "Disassembly and Assembly of Seat Cushion" .
2. Remove the seatback trim and pad. Refer to SE-8, "Disassembly and Assembly of Seatback" .
3. Remove the air bag module harness clips.
4. Remove the special nuts coated with bonding agent from the front side air bag module, and remove the front side air bag module.

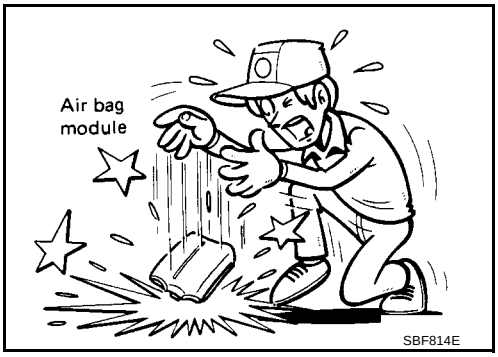
CAUTION:

- **Always place the front side air bag module standing with the stud bolts side facing down.**
- **Do not insert any foreign objects (screwdriver, etc.) into front side air bag module.**
- **Do not attempt to disassemble front side air bag module.**



CAUTION:

- **Replace front seatback assembly (side air bag module) if it has been dropped or sustained an impact.**
- **Do not expose front seatback assembly (side air bag module) to temperature exceeding 90°C (194°F).**
- **Do not allow oil, grease or water to come in contact with the front side air bag module.**
- **After front side air bag module inflates, front seatback assembly must be replaced.**



INSTALLATION

Install in the reverse order of removal.

CAUTION:

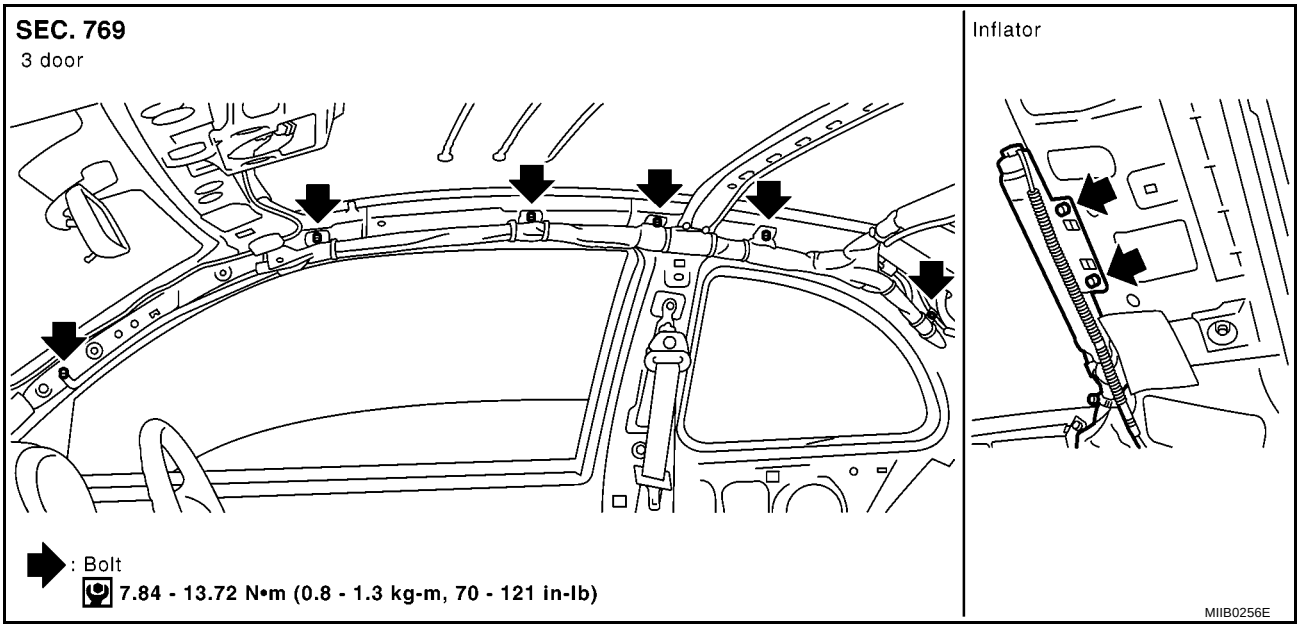
- **Always work from the side of or under front side air bag module.**
- **After the work is completed, perform self-diagnosis to make sure that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

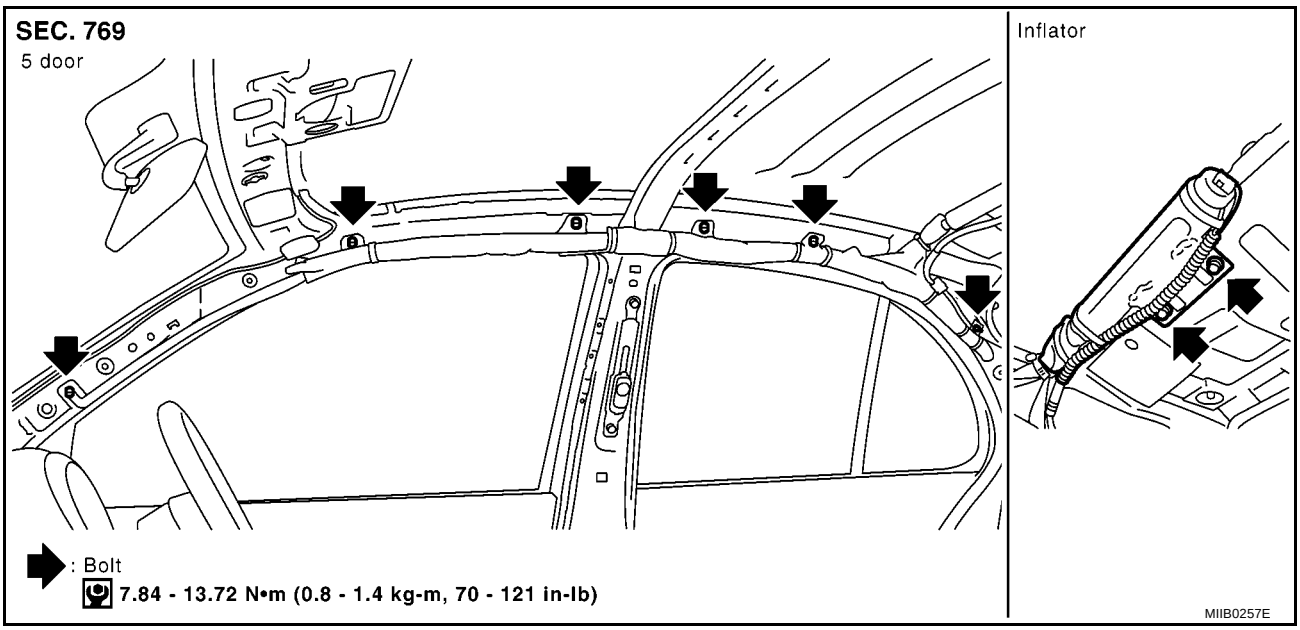
SIDE CURTAIN AIR BAG MODULE

PFP:985P0

Removal and Installation

EHS000R4





REMOVAL

CAUTION:

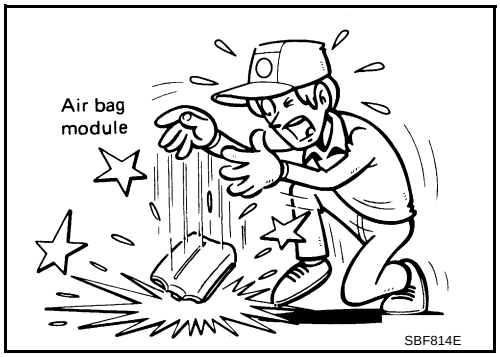
- **Before servicing SRS, turn the ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.**
- **Always work from the side of the side curtain air bag module.**

1. Remove headliner. Refer to EI-24, "HEADLINER" .
2. Disconnect curtain air bag module connector.
3. Remove the side curtain air bag module fixing bolts and clips.
4. Remove the side curtain air bag module.

CAUTION:

- **Always place the side curtain air bag module with the warning label facing upward.**
- **Do not attempt to disassemble side curtain air bag module.**
- **Do not insert any foreign objects (screw driver, etc.) into air bag module connector.**

- **Replace side curtain air bag module if it has been dropped or sustained an impact.**
- **Do not expose the air bag module to temperatures exceeding 90°C (194°F).**
- **Do not allow oil, grease or water to come in contact with the side curtain air bag module.**



INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Always work from the side of the side curtain air bag module.**
- **After replacement of side curtain air bag module perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

CRASH ZONE SENSOR

PFP:98582

Removal and Installation

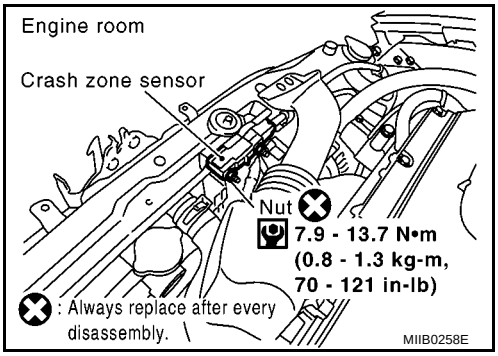
EHS000R5

REMOVAL

CAUTION:

Before servicing SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

1. Remove front grill. (Only for the right side of vehicle) Refer to EI-8, "Removal and Installation" .
2. Disconnect crash zone sensor connector.
3. Remove mounting bolts, and then crush zone sensor.



CAUTION:

- **Replace crash zone sensor if it has been dropped or sustained an impact.**
- **Do not attempt to disassemble crash zone sensor.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Check crash zone sensor for proper installation.**
- **After the work is complete perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

SIDE AIR BAG (SATELLITE) SENSOR

PFP:98830

Removal and Installation

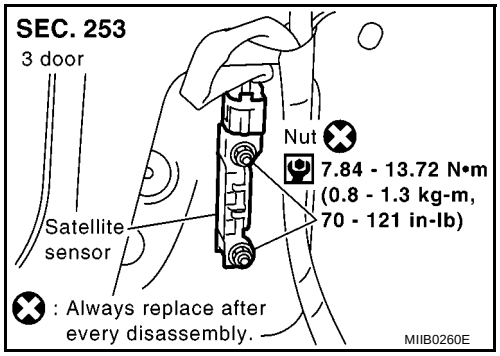
EHS000R7

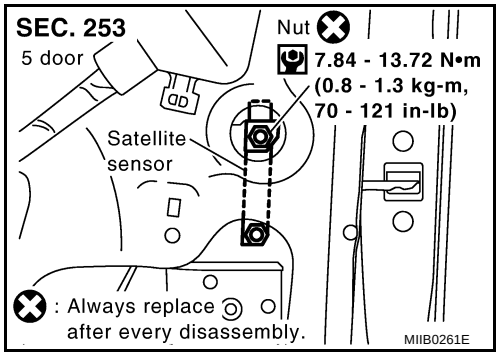
REMOVAL

CAUTION:

Before servicing SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

1. Remove front seat belt. Refer to SB-3, "Removal and Installation of Front Seat Belt" .
2. Remove side air bag (Satellite) sensor connector.
3. Remove mounting nut, and then remove side air bag (Satellite) sensor.





CAUTION:

- **Do not use old nuts; replace with new ones.**
- **Check side air bag (Satellite) sensor to ensure it is free of deformities, dents, cracks or rust. If it shows any visible signs of damage, replace it with new one.**
- **Do not attempt to disassemble side air bag (Satellite) sensor if it has been dropped or sustained an impact.**

INSTALLATION

Install in the reverse order of removal.

CAUTION:

- **Check side air bag (Satellite) sensor for proper installation.**
- **After replacement of side air bag (Satellite) sensor, perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

SEAT BELT PRE-TENSIONER

PFP:86884

Removal and Installation

EHS000R8

For removal and installation procedures, refer to SB-3, "Removal and Installation of Front Seat Belt" .

DIAGNOSIS SENSOR UNIT

PFP:28556

Removal and Installation

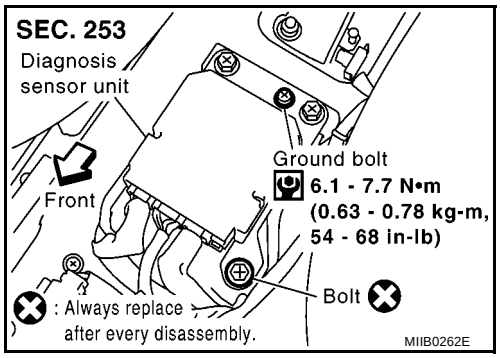
EHS000R9

REMOVAL

CAUTION:

Before servicing SRS, turn ignition switch OFF, disconnect both battery cables and wait at least 3 minutes.

1. Disconnect each harness connector for air bag module and seat belt pre-tensioner.
2. Remove console box. Refer to IP-4, "INSTRUMENT PANEL ASSEMBLY" .
3. Remove the diagnosis sensor unit connector.
4. Remove mounting bolts and grounding bolt, and then remove diagnosis sensor unit.



INSTALLATION

Install in the reverse order of removal.

Hexagon bolt:

: 19.6 - 29.4 N·m (2.0 - 3.0 kg-m, 15 - 22 ft-lb)

TORX bolt:

: 14.7 - 24.5 N·m (1.5 - 2.4 kg-m, 11 - 18 ft-lb)

CAUTION:

- **Check the diagnosis sensor unit for proper installation.**
- **After replacement of diagnosis sensor unit, perform self-diagnosis to check that no malfunction is detected. Refer to SRS-17, "SRS Operation Check" .**

ECU DISCRIMINATED NO.

After replacing the diagnosis sensor unit, make sure that the diagnosis unit identification is correct for the vehicle as equipped.

Specification	Discriminated No.
Driver air bag module and passenger air bag module, seat belt pre-tensioner and side air bag module	A925
Driver air bag module and passenger air bag module, seat belt pre-tensioner, side air bag module and side curtain air bag module	A926

DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

PFP:00014

Caution for Air Bag Module and Seat Belt Pre-tensioner

EHS000SB

- Before disposing of air bag module and seat belt pre-tensioner, or vehicles equipped with such systems, deploy the systems. If such systems have already been deployed due to an accident, dispose of them as indicated inSRS-49, "DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER" .
- When deploying the air bag module and seat belt pre-tensioner, always use the Special Service Tool; Deployment tool (KV99106400).
- When deploying the air bag module and seat belt pre-tensioner, stand at least 5 m (16 ft) away from the deployment component.
- When deploying air bag module and seat belt pre-tensioner, a fairly loud noise is made, followed by smoke being released. The smoke is not poisonous, however, be careful not to inhale smoke since it irritates the throat and can cause choking.
- Always activate one air bag module at a time.
- Due to heat, leave air bag module unattended for more than 30 minutes after deployment. Also leave seat belt pre-tensioner unattended for more than 10 minutes after deployment.
- Be sure to wear gloves when handling a deployed air bag module and seat belt pre-tensioner.
- Never apply water to the deployed air bag module and seat belt pre-tensioner.
- Wash your hands clean after finishing work.
- Place the vehicle outdoors with an open space of at least 6 m (20 ft) on all sides when deploying air bag module and seat belt pre-tensioner while mounted in vehicle.
- Use a voltmeter to make sure the vehicle battery is fully charged.
- Do not dispose of the air bag module and seat belt pre-tensioner un-deployed.

CHECKING DEPLOYMENT TOOL

Connecting to Battery

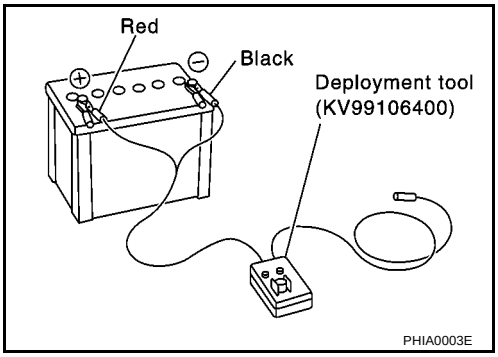
CAUTION:

The battery must show voltage of 9.6 V or more.

Remove the battery from the vehicle and place it on dry wood blocks approximately 5 m (16 ft) away from the vehicle.

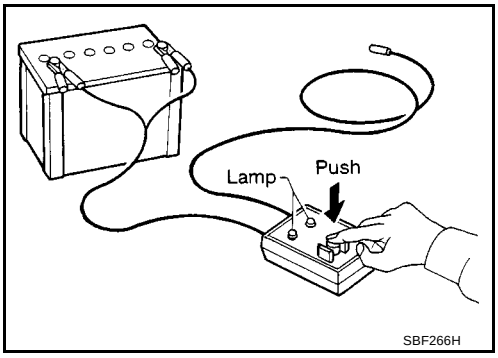
- Wait 3 minutes after the vehicle battery is disconnected before proceeding.
- Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.

Make sure the polarity is correct. The right side lamp in the tool, marked “deployment tool power”, should glow with a green light. If the right side lamp glows red, reverse the connections to the battery.



Deployment Tool Check

Press the deployment tool switch to the ON position. The left side lamp in the tool, marked “air bag connector voltage” should illuminate. If it does not illuminate, replace the tool.



Air Bag Deployment Tool Lamp Illumination Chart (Battery Connected)

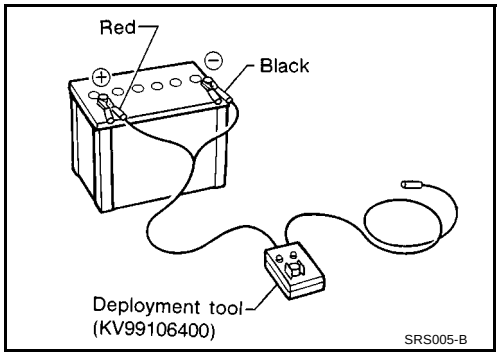
Switch operation	Left side lamp, green* “AIR BAG CONNECTOR VOLTAGE”	Right side lamp, green* “DEPLOYMENT TOOL POWER”
OFF	OFF	ON
ON	ON	ON

*: If this lamp glows red, the tool is connected to the battery incorrectly. Reverse the connections and make sure the lamp glows green.

DEPLOYMENT PROCEDURES FOR AIR BAG MODULE (OUTSIDE OF VEHICLE)

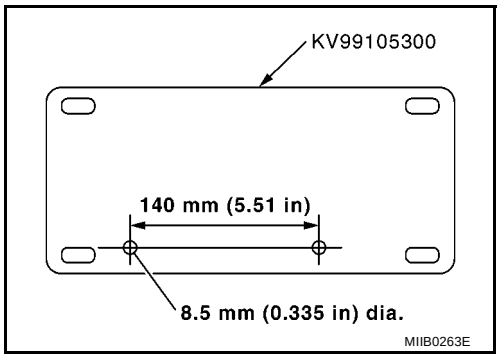
Unless the vehicle is being scrapped, deploying the air bag in the vehicle is not recommended. This may cause damage to the vehicle interior.

Anchor air bag module bracket (SST: KV99105300) in a vise secured to a firm foundation during deployment.



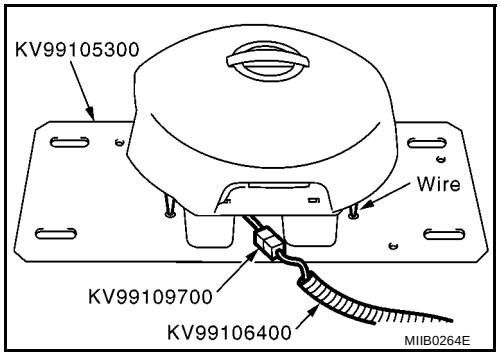
Deployment of Driver Air Bag Module (Outside of Vehicle)

1. Make an 8.5 mm (0.335 in) diameter hole in air bag module bracket (SST: KV99105300) at the position shown in figure at right.

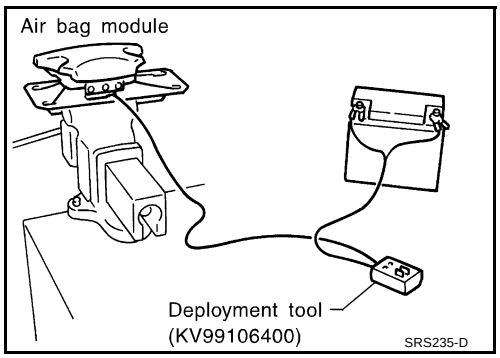


2. Using wire, secure air bag module to air bag module bracket at two places.

   CAUTION:
   Use wire of at least 1 mm (0.041 in) diameter.



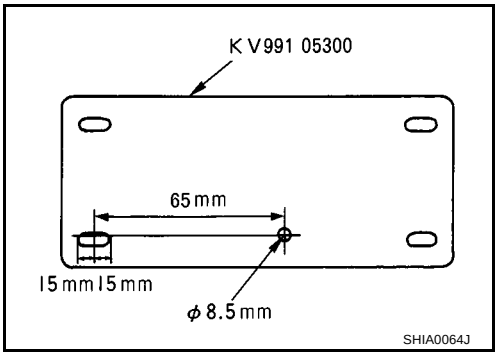
3. Firmly secure air bag module bracket with air bag module attached in a vise.
4. Connect deployment tool adapter (SST: KV99109700) to deployment tool (SST: KV99106400) to air bag module connector.
5. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
7. Press the button on the deployment tool. The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module will deploy.



CAUTION:
When deploying the driver air bag module, stand at least 5 m (16 ft) away from the air bag module.

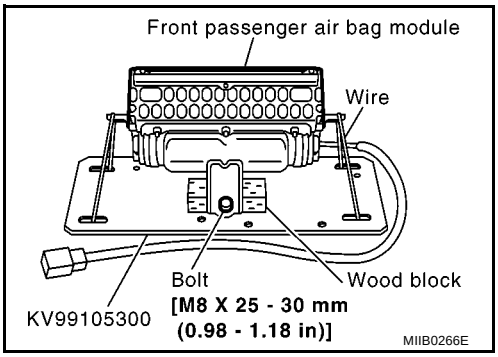
Deployment of Front Passenger Air Bag Module (Outside of Vehicle)

1. Make an 8.5 mm (0.335 in) diameter hole in air bag module bracket (SST: KV99105300) at the position shown in figure at right.
2. Firmly secure air bag module bracket (SST: KV99105300) in a vise.

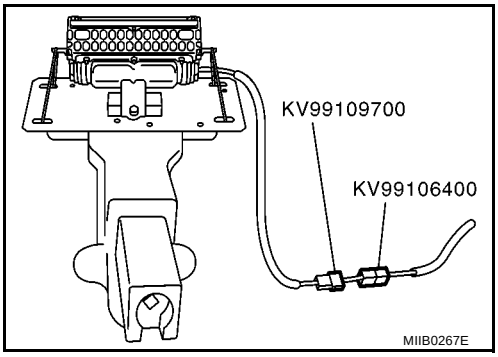


3. Match a hole in air bag module bracket (held in vise) and front passenger air bag module and fix them with a bolt [M8 × 25 - 30 mm (0.98 - 1.18 in)] and wire.

CAUTION:
If a gap exists between front passenger air bag module and air bag module bracket, use a piece of wood inserted in the gap to stabilize the air bag module.

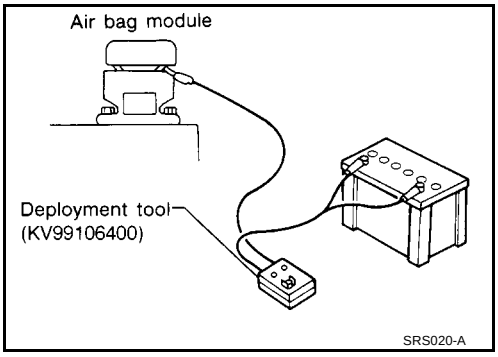


4. Connect deployment tool adapter (SST: KV99109700) to deployment tool (SST: KV99106400) connector and front passenger air bag module connector.
5. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.



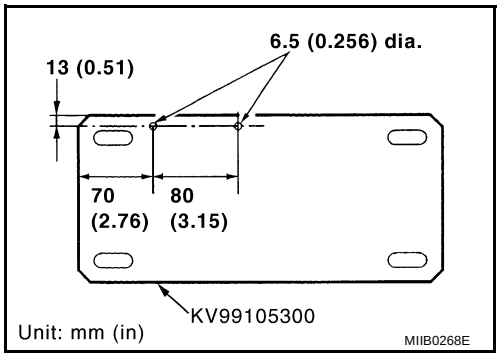
7. Press the button on the deployment tool. The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module will deploy.

CAUTION:
- **When deploying the front passenger air bag module, do not stand on the deploying side.**
- **Stand at least 5 m (16 ft) away from the air bag module.**



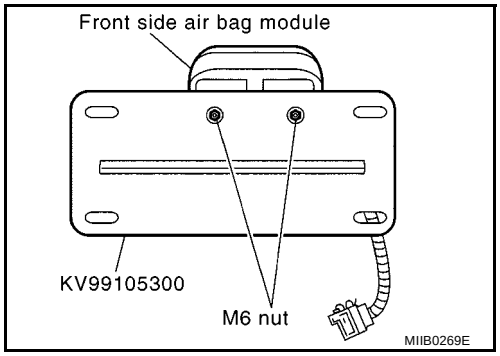
Deployment of Front Side Air Bag Module (Outside of Vehicle)

1. Make 6.5 mm (0.256 in) diameter holes in air bag module bracket (SST: KV99105300) at the position shown in figure at right.

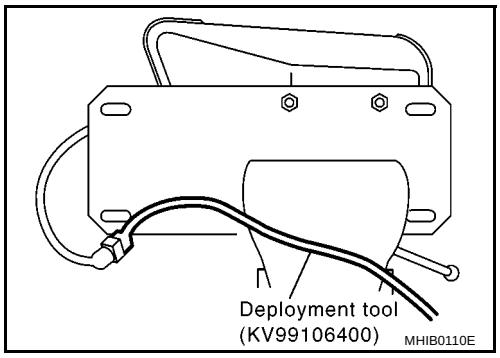


2. Firmly secure air bag module bracket (SST: KV99105300) in a vise.
3. Insert the stud bolts of side air bag module into the two holes in air bag module bracket (held in vise) and fix them with two M6 nuts.

CAUTION:
Side air bag module should be secured to air bag module bracket (SST: KV99105300) in a vise with stud bolt side setting bottom.

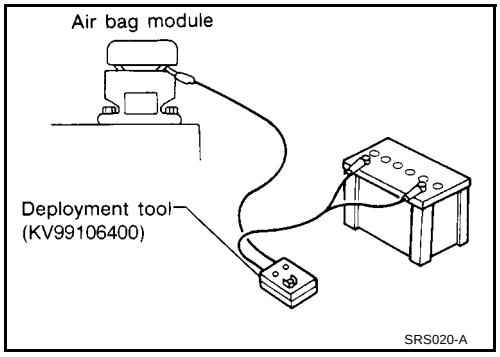


4. Connect deployment tool (SST: KV99106400) connector to connector on air bag module.



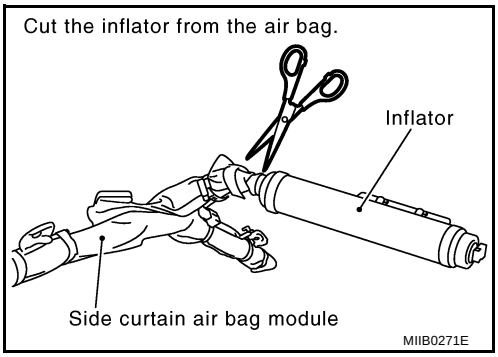
5. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
7. Press the button on the deployment tool. The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module will deploy.

CAUTION:
When deploying the front side air bag module, stand at least 5 m (16 ft) away from the air bag module.

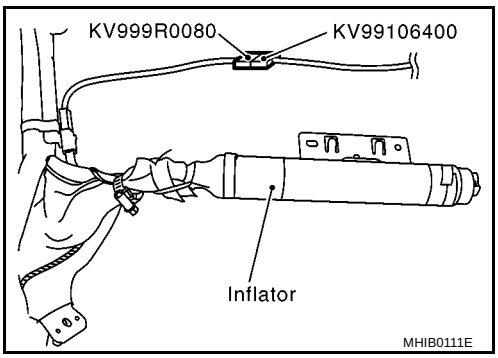


Deployment of Side Curtain Air Bag Module (Outside of Vehicle)

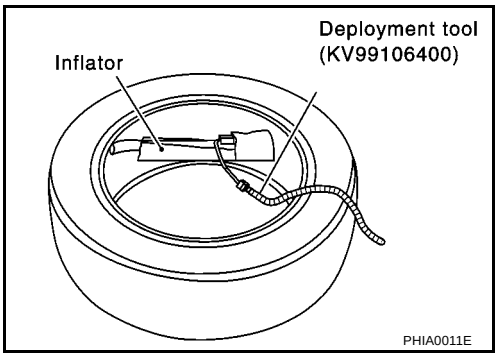
1. Cut the inflator from side curtain air bag module.



2. Connect deployment tool (SST: KV99106400) connector to deployment tool adapter (SST: KV999R0080) the inflator.



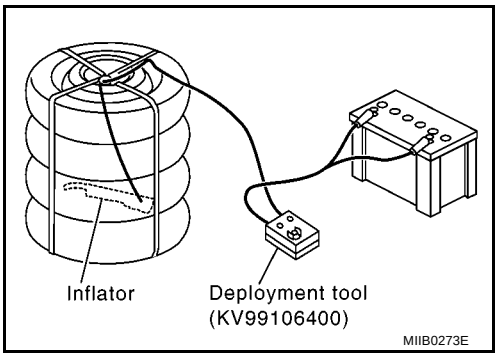
3. Put the inflator connected with the deployment tool adaptor (SST: KV999R0080) into a tire without wheel.



4. Put the tyre with the inflator onto another tyre without wheel. Add an additional tyre without wheel and then a tyre mounted on a wheel on top.

   CAUTION:
   Tie all tyres together with a strap in order keep them standing.

5. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
6. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.

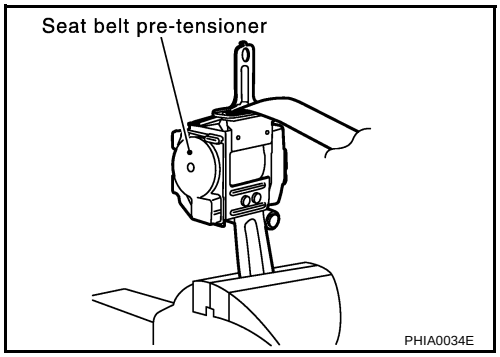


7. Press the button on the deployment tool. The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module will deploy.

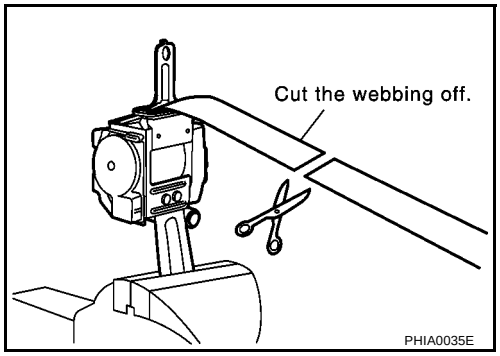
   CAUTION:
   When deploying the side curtain air bag module, stand at least 5 m (16 ft) away from the side curtain air bag module.

DEPLOYMENT PROCEDURES FOR SEAT BELT PRE-TENSIONER (OUTSIDE OF VEHICLE)

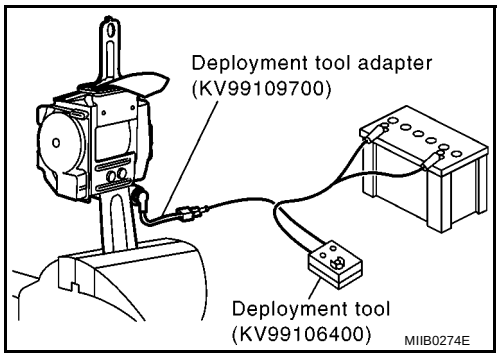
1. Firmly grip pre-tensioner in a vise.



2. Cut the webbing off.



3. Connect deployment tool adapter (SST: KV99109700) to deployment tool (SST: KV99106400) connector and front seat belt pre-tensioner connector.
4. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
5. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
6. Press the button on the deployment tool. The left side lamp on the tool, marked “seat belt pre-tensioner connector voltage”, will illuminate and the seat belt pre-tensioner will deploy.



CAUTION:

When deploying the front seat belt pre-tensioner, stand at least 5 m (16 ft) away from the seat belt pre-tensioner.

DISPOSAL OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

DEPLOYMENT OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER WHILE MOUNTED IN VEHICLE

When disposing of a vehicle, deploy air bag module and seat belt pre-tensioners while they are mounted in vehicle.

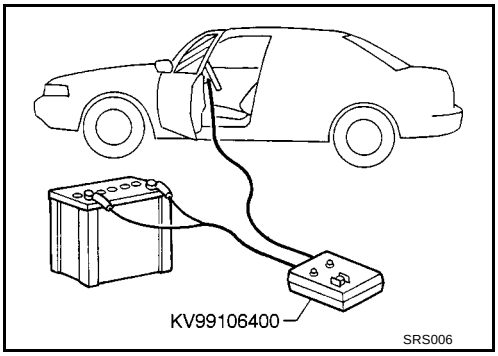
CAUTION:

When deploying air bag module or seat belt pre-tensioner, ensure vehicle is empty.

1. Disconnect both the vehicle battery cables and wait 3 minutes.
2. Disconnect air bag module and seat belt pre-tensioner connector.
3. Connect deployment tool (SST: KV99106400) to air bag module or seat belt pre-tensioner.
   For driver air bag module, attach deployment tool adapter (SST: KV99109700) to the tool connector.
   For front passenger air bag module, attach deployment tool adapter (SST: KV99109700) to the tool connector.
   For side air bag module, direct connect deployment tool (SST: KV99106400).
   For seat belt pre-tensioner, attach deployment tool adapter [SST: KV99109700 (for 3 door models) or KV99109800 (for 5 door models)] to the tool connector.
   For side curtain air bag module, attach deployment tool adapter (SST: KV999R0080) to the tool connector.
4. Connect red clip of deployment tool to battery positive terminal and black clip to negative terminal.
5. The lamp on the right side of the tool, marked “deployment tool power”, should glow green, not red.
6. Press the button on the deployment tool. The left side lamp on the tool, marked “air bag connector voltage”, will illuminate and the air bag module or seat belt pre-tensioner will deploy.

   CAUTION:

   Activate only one air bag module or seat belt pre-tensioner at a time.

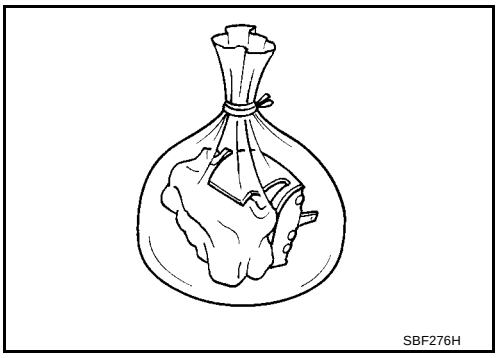


DISPOSING OF AIR BAG MODULE AND SEAT BELT PRE-TENSIONER

Deployed air bag module and seat belt pre-tensioner are very hot. Before disposing of air bag module, and seat belt pre-tensioner wait at least 30 minutes, and 10 minutes, respectively. Seal them in a plastic bag before disposal.

CAUTION:

- **Never apply water to a deployed air bag module and seat belt pre-tensioner.**
- **Be sure to wear gloves when handling a deployed air bag module and seat belt pre-tensioner.**
- **No poisonous gas is produced upon air bag module deployment. However, be careful not to inhale gas since it irritates throat and can cause choking.**
- **Do not attempt to disassemble air bag module and seat belt pre-tensioner.**
- **Air bag module and seat belt pre-tensioner cannot be reused.**
- **Wash your hands clean after finishing work.**



COLLISION DIAGNOSIS

PFP:00015

For Frontal Collision

EHS000SC

To repair the SRS, perform the following steps.

When SRS (except the front side air bag and side curtain air bag modules) is activated in a collision:

1. Replace the diagnosis sensor unit.
2. Remove the air bag modules (except the front side air bag modules and side curtain air bag modules), crash zone sensor assembly, bracket and seat belt pre-tensioner assemblies.
3. Check the SRS components using the table below:

– Replace any SRS components showing visible signs of damage (dents, cracks and deformation).

4. Install new air bag modules (except the front side air bag modules and side curtain air bag modules) crash zone sensor assembly, bracket and seat belt pre-tensioner assemblies.
5. Conduct self-diagnosis using CONSULT-II or “AIR BAG” warning lamp. Refer to SRS-17, "SRS Operation Check" for details. Ensure entire SRS operates properly.

When SRS is not activated in a collision:

1. Check the SRS components using the table below:

– Replace any SRS components showing visible signs of damage (dents, cracks and deformation).

2. Conduct self-diagnosis using CONSULT-II or “AIR BAG” warning lamp. Refer to SRS-17, "SRS Operation Check" for details. Ensure entire SRS operates properly.

SRS INSPECTION (FOR FRONTAL COLLISION)

Part	SRS is activated	SRS is NOT activated
Air bag module (driver and front passenger air bag module)	REPLACE Install with new bolts.	1. Remove air bag module. Check harness cover and connectors for damage, terminals for deformities, and harness for binding. 2. – Install driver air bag module into the steering wheel to check fit and alignment with the wheel. – Install passenger air bag module into the instrument panel to check fit with the instrument panel. 3. No damage found, reinstall with new bolts. 4. If damaged—REPLACE air bag modules with new special bolts. Air bag must be deployed before disposal.
Crash zone sensor	REPLACE the crash zone sensor and bracket with new nuts.	1. Remove the crash zone sensor. Check harness connectors for damage, terminals for deformities, and harness for binding. 2. Check for visible signs of damage (dents, cracks, deformation) of the crash zone sensor and bracket. 3. Install the crash zone sensor to check fit. 4. No damage found, reinstall with new bolts. 5. If damaged—REPLACE the crash zone sensor and bracket with new nuts.
Seat belt pre-tensioner assemblies	REPLACE Install seat belt pre-tensioner with new bolts.	1. Remove seat belt pre-tensioners. Check harness cover and connectors for damage, terminals for deformities, and harness for binding. 2. Check belts for damage and anchors for loose mounting. 3. Check retractor for smooth operation. 4. Check seat belt adjuster for damage. 5. If no damage is found, reinstall seat belt pre-tensioner assembly with new bolts. 6. If damaged—REPLACE seat belt pre-tensioners with new bolts. Seat belt pre-tensioners must be deployed before disposal.
Diagnosis sensor unit	REPLACE Install with new bolts.	1. Check case for dents, cracks or deformities. 2. Check connectors for damage, and terminals for deformities. 3. If no damage is found, reinstall with new bolts and ground bolt. 4. If damaged—REPLACE diagnosis sensor unit with new bolts and ground bolt.

Part	SRS is activated	SRS is NOT activated
Steering wheel	1. Visually check steering wheel for deformities. 2. Check harness (built into steering wheel) and connectors for damage, and terminals for deformities. 3. Install air bag module to check fit or alignment with steering wheel. 4. Check steering wheel for excessive free play. 5. If no damage is found, reinstall with nut. 6. If damaged—REPLACE.	
Spiral cable	1. Visually check spiral cable and combination switch for damage. 2. Check connectors and protective tape for damage. 3. Check steering wheel for noise, binding or heavy operation. 4. If no damage is found, reinstall with screws. 5. If damaged—REPLACE.	
Harness and connectors	1. Check connectors for poor connection, damage, and terminals for deformities. 2. Check harness for binding, chafing, cuts, or deformities. 3. If no damage is found, reinstall the harness and connectors. 4. If damaged—REPLACE damaged section of harness. Do not attempt to repair, splice or modify any SRS harness.	
Instrument panel	1. Visually check instrument panel for damage. 2. If no damage is found, reinstall the instrument panel. 3. If damaged—REPLACE the instrument panel with bolts.	

For Side Collision

EHS000SD

WHEN THE SIDE AIR BAG IS ACTIVATED IN THE SIDE COLLISION:

1. Replace the following components:
- All parts of front seatback (including front seatback frame) with front side air bag module (on the side on which front side air bag is activated)
- Curtain air bag module (on the side on which side curtain air bag is activated)
- Diagnosis sensor unit
- Satellite sensor (on the side on which side air bag and side curtain air bag is activated)
2. Check the SRS components and the related parts using the following table.
- Replace any SRS components and the related parts showing visible signs of damage (dents, cracks, deformation).
3. Conduct self-diagnosis using CONSULT-II or “AIR BAG” warning lamp. Refer to SRS-17, "SRS Operation Check" . Ensure entire SRS operates properly.

WHEN SRS IS NOT ACTIVATED IN THE SIDE COLLISION:

1. Check the SRS components and the related parts using the following table.

– Replace any SRS components and the related parts showing visible signs of damage (dents, cracks, deformation).

2. Conduct self-diagnosis using CONSULT-II or “AIR BAG” warning lamp. Refer to SRS-17, "SRS Operation Check" . Ensure entire SRS operates properly.

SRS INSPECTION (FOR SIDE COLLISION)

Part	Front side air bag and side curtain air bag is activated	Front side air bag and side curtain air bag is NOT activated
(LH or RH) side curtain air bag module	Replace the side curtain air bag module. (Repair the center pillar inner, etc. before installing new one if damaged.)	1. Check for visible signs of damage (dents, tears, deformation) of the center pillar on the collision side. 2. If damaged— Remove the side curtain air bag module. 3. Check for visible signs of damaged (tears etc.) of the side curtain air bag module. 4. Check harness and connectors for damage, and terminals for deformities. 5. If no damage is found, reinstall the side curtain air bag module with new bolts. 6. If damaged—REPLACE the side curtain air bag module with new bolts. Air bag must be deployed before disposal.
Front (LH or RH) side air bag module	REPLACE all parts of seatback with deployed front side air bag module.	1. Check for visible signs of damage (dents, tears, deformation) of the seatback on the collision side. 2. Check harness and connectors for damage, and terminals for deformities. 3. If damaged—REPLACE the front seatback assembly. Air bag must be deployed before disposal.
(LH or RH) side air bag (Satellite) sensor	REPLACE the side air bag (Satellite) sensor on the collision side with new nuts. (Repair the center pillar inner, etc. before installing new one if damaged.)	1. Remove the side air bag (Satellite) sensor on the collision side. Check harness connectors for damage, terminals for deformities, and harness for binding. 2. Check for visible signs of damage (dents, cracks, deformation) of the side air bag (Satellite) sensor. 3. Install the side air bag (Satellite) sensor to check fit. 4. If no damage is found, reinstall the side sir bag (Satellite) sensor with new nuts. 5. If damaged—REPLACE the side air bag (Satellite) sensor with new nuts.
Diagnosis sensor unit	REPLACE the diagnosis sensor unit with the new bolts.	1. Check case and bracket for dents, cracks or deformities. 2. Check connectors for damage, and terminals for deformities. 3. If no damage is found, reinstall the diagnosis sensor unit with new bolts and ground bolt. 4. If damaged—REPLACE the diagnosis sensor unit with new bolts and ground bolt.
Seat belt pre-tensioner assembly	1. Check if the seat belt can be extended smoothly. If the seat belt cannot be extended smoothly, – Check for deformities of the center pillar inner. – If the center pillar inner has no damage, REPLACE the seat belt pre-tensioner assembly. 2. Remove the seat belt pre-tensioner assembly on the collision side. Check harness cover and connectors for damage, terminals for deformities, and harness for binding. 3. Check for visible signs of damage (dents, cracks, deformation) of the seat belt pre-tensioner assembly. 4. Check seat belt adjuster for damage. 5. If no damage is found, reinstall the seat belt pre-tensioner assembly. 6. If damaged—REPLACE the seat belt pre-tensioner assembly with new bolts. The seat belt pre-tensioner assembly must be deployed before disposal.	

Part	Front side air bag and side curtain air bag is activated	Front side air bag and side curtain air bag is NOT activated
Seat with front side air bag	REPLACE all parts of front seatback (including front seatback frame)	1. Visually check the seat on the collision side. 2. Remove the seat on the collision side and check the following for damage and deformities. – Harness, connectors and terminals – Frame and recliner (for front and rear seat), and also adjuster and slides (for front seat) 3. If no damage is found, reinstall the seat. 4. If damaged—REPLACE the damaged seat parts using new bolts.
Center inner pillar	1. Check the center inner pillar on the collision side for damage (dents, cracks, deformation). 2. If damaged—REPAIR the center inner pillar.	
Trim/headlining	1. Check for visible signs of damage (dents, cracks, deformation) of the interior trim on the collision side. 2. If damaged—REPLACE the damaged trim parts.

PRECAUTIONS

PFP:00001

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EGS000LM

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Maintenance Information

EGS000LN

If any of following part is replaced, always replace with new* one.
If it's not (or fail to do so), the electrical system may not be operated properly.
*: New one means a virgin control unit that has never been energized on-board.

Steering Angle Adjustment (WORK SUPPORT)

EGS000JG

- If steering column or steering gear is installed or removed, make sure to adjust steering angle.

  CAUTION:
  Use CONSULT-II to adjust steering angle. (Adjustment cannot be achieved without using CONSULT-II.)

OPERATION PROCEDURE

1. Connect CONSULT-II and CONVERTER to data link connector. Refer to STC-11, "CONSULT-II BASIC OPERATION" .
2. Touch “EPS”, “WORK SUPPORT”, and “EPS CALIBRATION”.
3. Start engine.
4. Set steering wheel to straight-ahead position.
5. Turn steering wheel to right until it stops.
6. Return steering wheel to straight-ahead position.

   CAUTION:
   Error should be within ±10°.
7. Touch “START”.
8. Turn steering wheel to right or left until it stops. When “END” is displayed on screen of CONSULT-II, turn ignition switch OFF and let it remain OFF for 15 seconds or longer.

   CAUTION:
   If ignition switch is turned ON within 15 seconds, steering angle adjustment is not performed, and steering wheel angle cannot be adjusted.
9. Monitor “ANGLE ST” on data monitor for at least 15 seconds. Make sure steering wheel is in straight-ahead position and error is within 0°±10°. Now steering angle adjustment is completed.

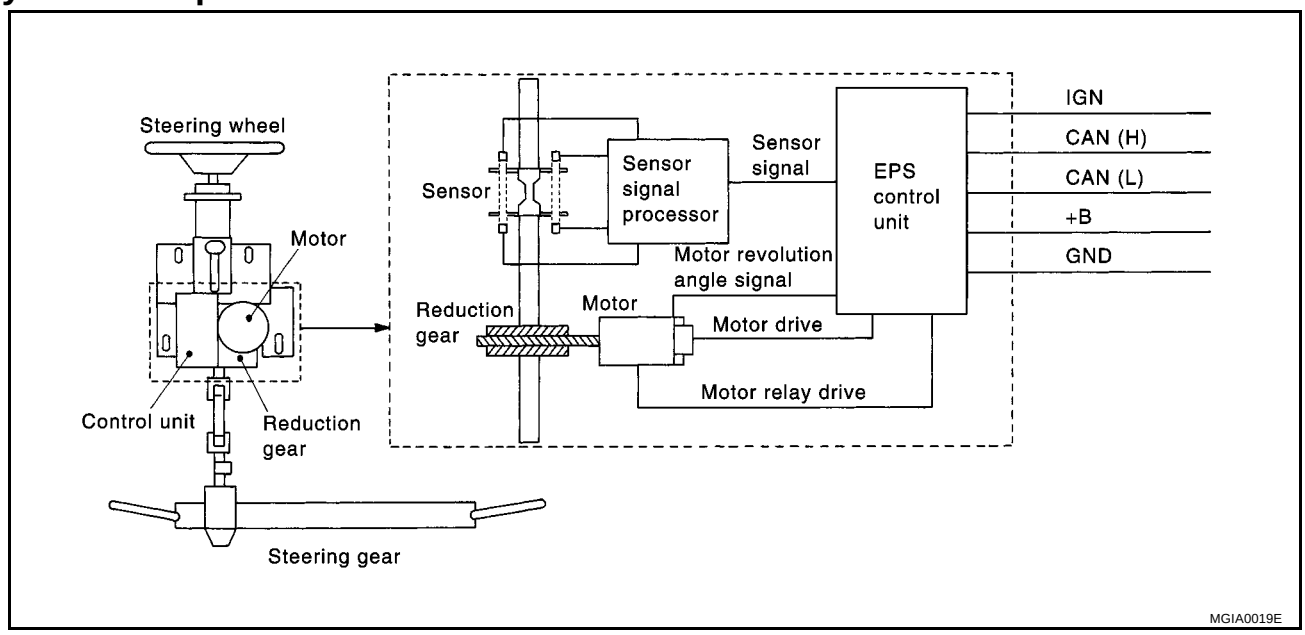
   CAUTION:
   Once “EPAS CALBRATION” is started, make sure to continue it until the end. If it is interrupted in the middle, steering angle signal will not be sent normally, so steering wheel cannot return properly after turning steering wheel.

SYSTEM DESCRIPTION

PFP:00000

System Component Parts Location

EGS000JH



Electric Power Steering Function

EGS000JI

Part name	Function
Electric power steering (EPS) control unit	● Using steering torque, steering angle signal, and vehicle speed signal from sensor, outputs optimum assistance torque signal to motor.
	● If power steering is continuously operated for a long time, reduces output signal to motor to protect motor and control unit.
	● If malfunction occurs in electric system, fail-safe function starts operating and stops output signal to motor. Steering function switches to manual operation. At that time, it illuminates warning lamp to inform that system is malfunctioning.
	● Diagnosis with CONSULT-II allows determination of the malfunctioning part.
	● Controls communication with other control units with CAN communication.
Motor	● Generates assistance torque with control signal from control unit.
Sensor	● Detects steering torque, and outputs signal to control unit.
Reduction gear	● Amplifies assistance torque generated by motor with worm gear, and sends to column shaft.
Warning lamp	● Turns ON when fail-safe function is operated to inform that system is malfunctioning and steering wheel becomes manual operation.
	● Turns ON when ignition switch is turned ON for purpose of bulb check. Then turns OFF approximately 1 second later.

Fail-Safe Function

EGS000JJ

If malfunction occurs in system, normal control stops and the system switches to fail-safe status. At the same time, electric power steering warning lamp turns on and steering wheel switches to manual steering status. (Steering wheel operating force becomes heavy.)

TROUBLE DIAGNOSIS

PFP:00004

Diagnosis Procedure

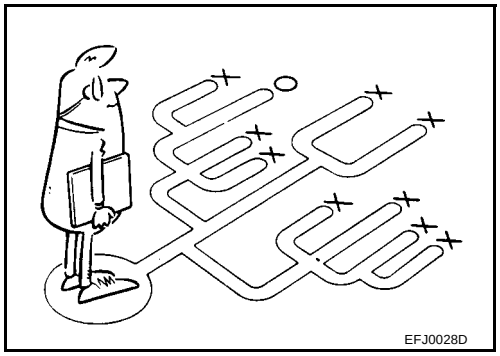
EGS000JK

BASIC CONCEPT

- The most important point in performing error trouble diagnosis is to thoroughly understand the vehicle systems (both control and mechanical).

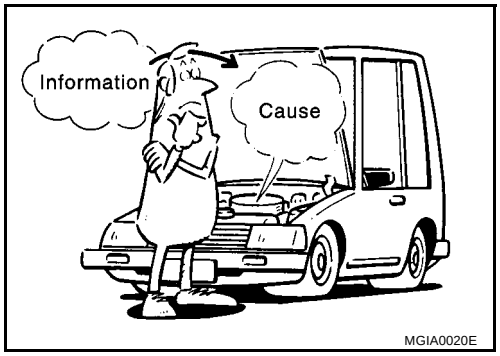
- It is also important to clarify customer concerns before starting the inspection.
  First of all, reproduce the symptom, and understand it fully.
  Ask the customer about his/her complaints carefully. In some cases, it will be necessary to check the symptoms by driving the vehicle with the customer.

  CAUTION:
  Customers are not professional. It is dangerous to make an easy guess like “maybe the customer means that ... ,” or “maybe the customer mentions this symptom”.



EFJ0028D

- It is essential to check symptoms right from the beginning in order to repair a failure completely.
  For an intermittent failure, it is important to reproduce the symptom based on an interview with the customer and past examples. Do not perform an inspection on an ad hoc basis. Most intermittent failures are caused by poor contacts. In this case, it will be effective to shake the suspected harness or connector by hand. When repairs are performed without any symptom diagnosis, no one can judge if the failure has actually been eliminated.
- After completing trouble diagnosis, be sure to perform “erase memory”. Refer to STC-12, "SELF-DIAG RESULTS" .



MGIA0020E

- For an intermittent error, move the harness or harness connector by hand to check for poor contact or false open circuit.
- Always read GI section to confirm the general precautions. Refer to GI-3, "PRECAUTIONS" .

Control Unit Input/Output Signal Standard

EGS000JN

STANDARD WHEN USING CIRCUIT TESTER

Connector terminal		Measuring point	Measuring condition	Reference values for normal operation (Note 1)
+	—			
1	Ground	Battery power	Ignition switch ON, OFF	Battery voltage (approx. 12V)
2	Ground	Ground	With control unit connector removed	: Continuity should exist.
6	Ground	Ignition power supply	Ignition switch ON	: Battery voltage (approx. 12V)
			Ignition switch OFF	: 0V
7	—	CAN- (L)	—	—
8	—	CAN+ (H)	—	—

Note 1: If circuit tester for measuring voltage is used for check, be careful not to forcibly extend any connector terminals.

STANDARD VALUES WITH CONSULT-II

CAUTION:

Output signal indicates data calculated by control unit. Even if output circuit (harness) is open, it may indicate normal value.

Monitor item	Data monitor		Error inspection checklist
	Condition	Reference values for normal operation	
VOLTAGE ST (V)	Ignition switch ON or engine is running	Battery voltage (approx. 12V)	Battery voltage [malfunction] STC-27, "Inspection 1: Battery Voltage Is Incorrect"
TORQUE ST (Nm)	Turn steering wheel to right and left while ignition switch is ON or engine is running.	At neutral (steering effort is zero): Approx. 0 Nm Right or left turn will change value.	Torque sensor [malfunction] STC-28, "Inspection 4: Torque Sensor Malfunction"
ANGLE ST (°)	Turn steering wheel to right and left while ignition switch is ON or engine is running.	At neutral (straight-ahead position): Approx. 0° Right or left turn will change value.	Steering angle sensor has not been adjusted.STC-28, "Inspection 3: Steering Angle Has Not Been Adjusted." Steering angle sensor [malfunction] STC-29, "Inspection 5: Steering Angle Sensor Malfunction"
VELOCITY ST (d/s)	Turn steering wheel to right and left while ignition switch is ON or engine is running.	When steering wheel stops: Approx. 0 d/s Right or left turn will change value.	
POWER ST (A)	Turn steering wheel to right and left while ignition switch is ON or engine is running.	At neutral (steering effort is zero and steering is in straight-ahead position.): Approx. 0A Right or left turn will change value.	Torque sensor [malfunction] STC-28, "Inspection 4: Torque Sensor Malfunction" Motor [malfunction] STC-29, "Inspection 6: Motor Malfunction" EEPROM [malfunction] STC-29, "Inspection 7: EEPROM Malfunction" Control unit [malfunction] STC-29, "Inspection 8: Control Unit Malfunction"
CONSIGNED POWER ST (A)	Turn steering wheel to right and left while ignition switch is ON or engine is running.	At neutral (steering effort is zero and steering is in straight-ahead position.): Approx. 0A Right or left turn will change value.	
CONSIGNED TORQUE ST (Nm)	Turn steering wheel to right and left while ignition switch is ON or engine is running.	At neutral (steering effort is zero and steering is in straight-ahead position.): Approx. 0 Nm Right or left turn will change value.	

Monitor item	Data monitor		Error inspection checklist
	Condition	Reference values for normal operation	
EPAS TEMPERATURE (°C)	Ignition switch ON or engine is running	Control unit temperature is displayed.	Motor [malfunction] STC-29, "Inspection 6: Motor Malfunction"
DERATING LEVEL (%)	Ignition switch ON or engine is running	It is normally 100%. If stationary steering is performed excessively, percentage decreases gradually. After leaving it for a while it will return to 100%.	This is normal.
VEHICLE SPEED (km/h)	Ignition switch ON or engine is running	Almost in accordance with speedometer display It may not synchronize immediately after ignition switch turns ON. This is not a malfunction.	CAN communication system STC-29, "Inspection 9: CAN Communication System"
FAULT INDICATOR ST (ON-OFF)	Ignition switch ON or engine is running	Electric power steering warning lamp is ON: ON Electric power steering warning lamp is OFF: OFF	Check malfunctioning parts with self-diagnosis and data monitor.
ENGINE STATUS (stop, stall, run, crank)	Ignition switch ON or engine is running	Status of engine is displayed.	CAN communication system STC-29, "Inspection 9: CAN Communication System"
R RANGE (ON, OFF, invalid)	Ignition switch ON or engine is running	Status of R position is displayed.	

CONSULT-II Function (EPS)

EGS000JO

DESCRIPTION

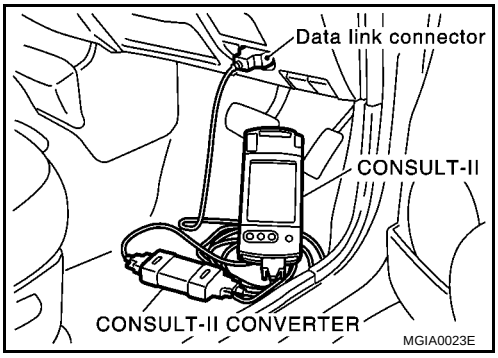
CONSULT-II can display each diagnostic item using the diagnostic test modes shown following. Data is received and transmitted via the control module communication line.

Mode	Description	Shifting mode	Display
WORK SUPPORT	● Steering angle adjustment Sets initial setting and performs modification of steering wheel angle signal.	Easy to shift by touching keys on CONSULT-II.	Easy to display on the CONSULT-II screen.
SELF-DIAG RESULTS	● Displays self-diagnostic results.		
DATA MONITOR	● Can be used in locating major cause on the basis of self-diagnostic results. ● Can monitor (observation and recording) and print out input/output of EPS control unit.		
CAN DIAG SUPPORT MNTR	The results of transmit/receive diagnosis of CAN communication can be read.		
ECU PART NUMBER	Displays control unit (EPS column assembly) part number.		

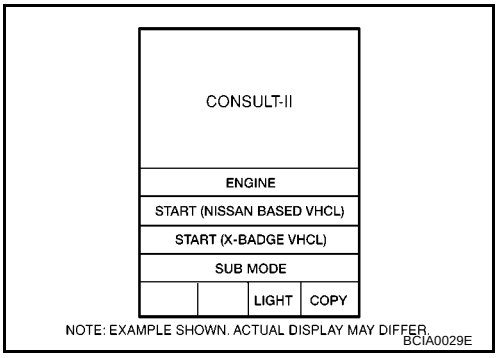
CONSULT-II BASIC OPERATION

1. Connect CONSULT-II and CONVERTER to data link connector, and turn ignition switch ON or start engine.
   For details, refer to separately supplied “CONSULT-II Operation Manual (Supplement-III)” and “CONSULT-II CONVERTER Operation Manual”.

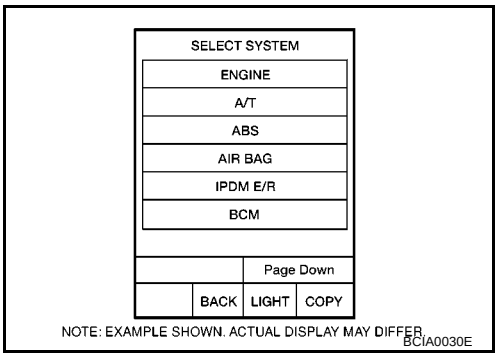
   CAUTION:
   If CONSULT-II is used without connecting CONSULT-II CONVERTER, malfunction might be detected by self-diagnosis according to control unit which performs CAN communication.



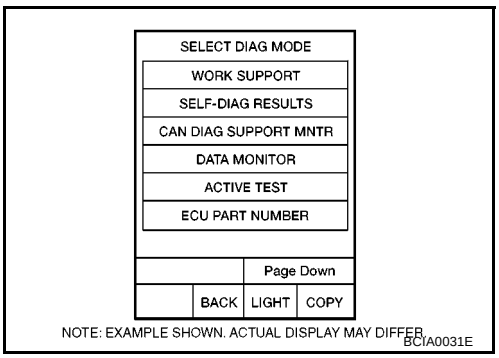
2. Touch “START (NISSAN BASED VHCL)”.



3. Touch “EPS” on “SELECT SYSTEM” screen.
   - If “EPS” is not displayed, print out “SELECT SYSTEM” screen. Then refer to LAN-4, "Precautions When Using CONSULT-II" .



4. Select desired part to be diagnosed on “SELECT DIAG MODE” screen.
   For details, refer to separately supplied “CONSULT-II Operation Manual (Common) (Supplement-I) (Supplement-II) (Supplement-III)”.



NOTE: EXAMPLE SHOWN. ACTUAL DISPLAY MAY DIFFER.
BCIA0031E

SELF-DIAG RESULTS

Operation Procedure

1. Connect CONSULT-II and CONVERTER to data link connector, and turn ignition switch ON.
2. Touch “START (NISSAN BASED VHCL)”, “EPS”, “SELF-DIAG RESULTS” in this order.
3. self-diagnostic results is displayed. (If necessary, touch “PRINT” to print out self-diagnostic results.) If “System Normal” is displayed, check EPS warning lamp system. Refer to STC-26, "Basic Inspection" .
4. Perform inspection by following to “Display Item List”. Repair or replace parts as necessary.
5. After repairing or replacing malfunctioning parts, perform “erase memory” to erase malfunction record in memory.
   - Turn ignition switch OFF, and turn ignition switch ON again. Then touch “START (NISSAN BASED VHCL)”, “EPS”, “SELF-DIAG RESULTS”, “ERASE” in this order to erase malfunction memory.
6. Perform self-diagnosis again to make sure malfunctioning memory is erased.

   CAUTION:
   If memory is not erased, repeat the procedure from step 3.

Display Item List

Suspect systems	Error return condition	Inspection system
Battery voltage is incorrect.	Power supply supplied to EPS is incorrect.	[Inspection 1] STC-27
No setting	Initial EPS setting has not been set.	[Inspection 2] STC-28
Steering angle has not been adjusted.	Steering angle signal has not been adjusted.	[Inspection 3] STC-28
Torque sensor malfunction	Torque sensor incorporated in column assembly is malfunctioning.	[Inspection 4] STC-28
Steering angle sensor malfunction	Steering angle sensor incorporated in column assembly is malfunctioning.	[Inspection 5] STC-29
Motor malfunction	Motor or motor driver in control unit is malfunctioning.	[Inspection 6] STC-29
EEPROM malfunction	EEPROM in control unit is malfunctioning.	[Inspection 7] STC-29
Control unit malfunction	Control unit is malfunctioning.	[Inspection 8] STC-29
CAN communication system	CAN communication system is malfunctioning.	[Inspection 9] STC-29
Vehicle speed signal error	Vehicle speed signal received with CAN communication has error.	
Engine signal error	Engine signal received with CAN communication has error.	
R position error	R position signal received with CAN communication has error.	

DATA MONITOR

Operation Procedure

1. Connect CONSULT-II and CONVERTER to data link connector, and start engine.
2. Touch “START (NISSAN BASED VHCL)”, “EPS”, “DATA MONITOR” in this order.
3. Return to monitor item selection screen, and touch any of “ALL SIGNALS”, “CAN DIAG SUPPORT MNTR”, or “SELECTION FROM MENU”.
4. Touch “START”.
5. Screen of data monitor is displayed.

Display Item List

×: Applicable —: Not applicable

Item name (display or unit)	Select Item Menu		Remarks
	ALL SIG-NALS	SELCTION FROM MENU	
VOLTAGE ST (V)	×	×	Displays power supply voltage supplied to control unit.
TORQUE ST (Nm)	×	×	Displays steering torque detected by torque sensor.
ANGLE ST (°)	×	×	Displays steering wheel angle detected by steering angle sensor.
VELOCITY ST (°/S)	×	×	Displays steering wheel angle speed detected by steering angle sensor.
POWER ST (A)	×	×	Displayed current command value to be applied to motor.
CONSIGNED POWER ST (A)	×	×	Displays current value flowing in motor. **NOTE:** If steering wheel is turned quickly, the value may not match the command value. This is not malfunction.
CONSIGNED TORQUE (Nm)	×	×	Displays assistance torque generated by electric power steering.
EPAS TEMPERATURE (°C)	×	×	Displays temperature in control unit.
DERATING LEVEL (%)	×	×	It is normally 100%. If stationary steering is performed excessively, percentage decreases gradually. After leaving it for a while, it will return to 100%.
VEHICLE SPEED (km/h)	×	×	Almost in accordance with speedometer display. It may not accord immediately after ignition switch turns ON. This is not a malfunction.
FAULT INDICATOR ST (ON - OFF)	×	×	When fail-safe is in operation or electric power steering warning lamp is ON: ON When fail-safe is not in operation or electric power steering warning lamp is OFF: OFF
ENGINE STATUS (stop, stall, run, crank)	×	×	Status of engine is displayed.
R RANGE (ON, OFF, invalid)	×	×	Status of R position is displayed.

CONTROL UNIT PART NUMBER

1. Connect CONSULT-II and CONVERTER to data link connector, and turn ignition switch ON.
2. Touch “START (NISSAN BASED VHCL)”, “EPS”, “ECU PART NUMBER”.

- Part No. on control unit (EPS column assembly) label is displayed on CONSULT-II.

CAN Communication

EGS0013F

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Modern vehicles are equipped with many electronic control units and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

Correct and Quick Diagnosis

EGS000JQ

CHECK THE FOLLOWING ITEMS WITH THE VEHICLE STOPPED.

- Are tire pressure and size proper? Is authorized steering wheel used? Is control unit genuine part?
- Is installation status of steering column and steering gear normal? (mounting bolt looseness, damaged rods, dust boot, and bulkhead seal, grease leakage)
- Is the wheel alignment adjusted properly?
- Has the vehicle suspension been modified? Has any modification that leads to increased vehicle weight been made?
- Is installation status of suspension links and axle normal?
- Is battery voltage proper?
- Is connection of each connector normal?

CHECK THE FOLLOWING ITEMS WITH THE VEHICLE RUNNING.

- Check conditions of failure (5W1H).
- Is the engine normal?

Basic Inspection

EGS000JR

BASIC INSPECTION 1 INSPECTION OF POWER SUPPLY SYSTEM TERMINAL LOOSENESS AND BATTERY

Check the battery for looseness on the battery positive/negative terminals and ground connection.
Check battery for low voltage.

BASIC INSPECTION 2 INSPECTION OF ELECTRIC POWER STEERING WARNING LAMP

1. Turn ignition switch ON, and make sure electric power steering warning lamp illuminates for approximately 1 second. If not, check CAN communication system. Refer to STC-29, "Inspection 9: CAN Communication System" .
   When no malfunction is found in CAN communication system, replace combination meter. Refer to DI-34, "Removal and Installation for Combination Meter" .
2. Make sure ABS warning lamp turns off after approximately a 1 second delay when ignition switch is turned ON. If it does not turn off, perform self-diagnosis.

3. After completing self-diagnosis, always erase the Self-Diagnostic Results [MEMORY]. Refer to STC-12, "SELF-DIAG RESULTS" .

Inspection 1: Battery Voltage Is Incorrect

EGS000JS

CAUTION:
Before checking the following items, make sure battery voltage is normal.

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

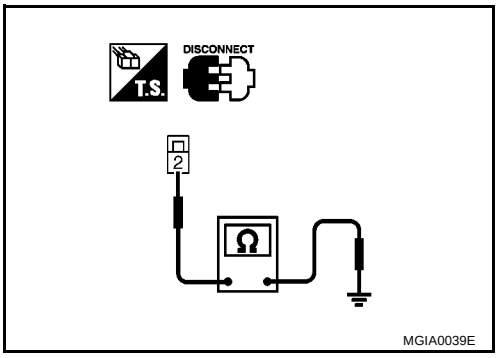
Is “Incorrect battery voltage ” displayed in self-diagnosis display?

YES >> GO TO 2.
NO >> Poor connection of connector terminal

2. INSPECTION OF CONTROL UNIT GROUND CIRCUIT

Turn ignition switch OFF, and disconnect control unit connectors. Measure continuity between control unit terminal 2 and ground.

2 (B) - Ground : Continuity should exist.



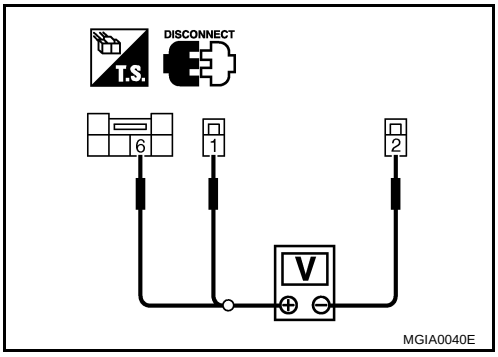
OK or NG

OK >> GO TO 3.
NG >> Ground circuit is poor. Repair or replace ground circuit.

3. INSPECTION OF CONTROL UNIT POWER SUPPLY CIRCUIT

1. Start engine.
2. Measure voltage between control unit harness terminals 1, 6 and terminal 2.

1 (R) - 2 (B) : Battery voltage should exist
6 (LG) - 2 (B) : Battery voltage should exist



OK or NG

OK >> GO TO 4.
NG >> Power supply circuit of applicable part is poor. Repair or replace the harness.

4. INSPECTION OF CONTROL UNIT

1. Turn ignition switch OFF. Connect control unit connectors, and start engine.
2. Check VOLTAGE ST on CONSULT-II DATA MONITOR.

Voltage : 10 - 16V

OK or NG

OK >> GO TO 5.
NG >> Control unit malfunction (Replace column assembly.)

5. CHECK POWER SUPPLY CIRCUIT

Turn OFF headlamp, air conditioning, blower fan, and rear window defogger. Check battery voltage on CONSULT-II data monitor while turning steering wheel until it stops.

Voltage : 10 - 16V

OK or NG

OK >> INSPECTION END
NG >> Power supply circuit is poor. Repair or replace the harness.

Inspection 2: No Setting

EGS000JT

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “No setting” displayed in self-diagnosis display?

YES >> Replace column assembly. (Initial setting of EPS has not been set.)
NO >> Poor connection of connector terminal

Inspection 3: Steering Angle Has Not Been Adjusted.

EGS000JU

Inspection Procedure

1. CHECK STEERING ANGLE SIGNAL

Monitor and check steering angle on data monitor.

Does steering angle display vary while turning steering wheel? Is steering angle 0±10° in straight-ahead position?

YES >> GO TO 2.
NO >> Adjust steering angle. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .

2. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “Steering angle has not been adjusted.” displayed in self-diagnosis display?

YES >> Replace column assembly.
NO >> Poor connection of connector terminal

Inspection 4: Torque Sensor Malfunction

EGS000JV

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “Torque sensor malfunction” displayed in self-diagnosis display?

YES >> Replace column assembly.
NO >> Poor connection of connector terminal

Inspection 5: Steering Angle Sensor Malfunction

EGS000JW

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “Steering angle sensor malfunction” displayed in self-diagnosis display?

YES >> Replace column assembly.
NO >> Poor connection of connector terminal

Inspection 6: Motor Malfunction

EGS000JX

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “Motor malfunction” displayed in self-diagnosis display?

YES >> Replace column assembly.
NO >> Poor connection of connector terminal

Inspection 7: EEPROM Malfunction

EGS000JY

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “EEPROM malfunction” displayed in self-diagnosis display?

YES >> Replace column assembly.
NO >> Poor connection of connector terminal

Inspection 8: Control Unit Malfunction

EGS000JZ

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “Control unit malfunction” displayed in self-diagnosis display?

YES >> Replace column assembly.
NO >> Poor connection of connector terminal

Inspection 9: CAN Communication System

EGS000K0

Inspection Procedure

1. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

Is “CAN communication system” indicated in self-diagnosis display?

YES >> Go to LAN-4, "Precautions When Using CONSULT-II" .
NO >> Poor connection of connector terminal

Symptom 1: Steering Wheel Operation Is Heavy or Light

EGS000K1

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Is malfunctioning system displayed in self-diagnosis display?

YES >> GO TO 2.
NO >> GO TO 4.

2. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

OK or NG

OK >> GO TO 3.
NG >> Repair malfunctioning system, and GO TO 3.

3. SYMPTOM CHECK

Make sure that steering wheel operation is not heavy or light.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. RECHECK CAN COMMUNICATION SYSTEMS

Check CAN communication systems (CAN communication system, vehicle speed signal error, engine signal error, R-range error) Refer to STC-29, "Inspection 9: CAN Communication System" .

OK or NG

OK >> GO TO 5.
NG >> Repair malfunctioning system.

5. INSPECTION OF CONTROL UNIT POWER SUPPLY SYSTEM

Check control unit power supply system. Refer to STC-27, "Inspection 1: Battery Voltage Is Incorrect" .

OK or NG

OK >> Check steering wheel. Refer to PS-5, "On Board Inspection and Service" in “Steering wheel”.
NG >> Repair power supply system.

Symptom 2: Steering Force and Steering Wheel Return Force Are Different in Right and Left. Steering Wheel Is Pulled to One Side

EGS000K2

1. STEERING SYSTEM STEERING ANGLE CHECK

Check steering angle on data monitor. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .

Is check result normal?

OK >> GO TO 2.
NG >> Adjust steering angle. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .

2. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Is malfunctioning system displayed in self-diagnosis display?

YES >> GO TO 3.
NO >> GO TO 5.

3. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

OK or NG

OK >> GO TO 4.
NG >> Repair malfunctioning system, and GO TO 4.

4. SYMPTOM CHECK

Check symptom.

OK or NG

OK >> INSPECTION END
NG >> GO TO 5.

5. CHECK WHEEL ALIGNMENT

Check wheel alignment. Refer to FSU-6, "Wheel Alignment" in “Front Suspension Assembly”.

OK or NG

OK >> Check steering wheel. Refer to PS-5, "On Board Inspection and Service" in “Steering wheel”.
NG >> Adjust wheel alignment. Refer to FSU-6, "Wheel Alignment" in “Front Suspension Assembly”.

Symptom 3: Steering Wheel Does Not Return Properly

EGS000K3

1. STEERING SYSTEM STEERING ANGLE CHECK

Check steering angle on data monitor. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .

OK or NG

OK >> GO TO 2 “self-diagnostic results” in STC-30, "Symptom 2: Steering Force and Steering Wheel Return Force Are Different in Right and Left. Steering Wheel Is Pulled to One Side" .
NG >> Adjust steering angle. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .

Symptom 4: Steering Effort Is Uneven (Torque Variation)

EGS000K4

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Is malfunctioning system displayed in self-diagnosis display?

YES >> GO TO 2.
NO >> GO TO 4.

2. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connectors. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connectors securely, and perform self-diagnosis.

OK or NG

OK >> GO TO 3.
NG >> Repair malfunction, and GO TO 3.

3. SYMPTOM CHECK

Check symptom.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. INSPECTION OF CONTROL UNIT POWER SUPPLY SYSTEM

Check power supply system in control unit. Refer to STC-27, "Inspection 1: Battery Voltage Is Incorrect" .

OK or NG

OK >> GO TO 5.
NG >> Repair malfunction.

5. INSPECTION OF STEERING INTERMEDIATE SHAFT

1. Make sure steering intermediate shaft and steering gear, and intermediate shaft and column are securely installed. Refer to PS-7, "STEERING COLUMN" .
2. Adjust steering angle. Refer to STC-4, "Steering Angle Adjustment (WORK SUPPORT)" .
3. Check steering effort for unevenness (torque variation).

OK or NG

OK >> INSPECTION END
NG >> Check steering wheel. Refer to PS-5, "On Board Inspection and Service" in “Steering wheel”.

Symptom 5: EPS Warning Lamp Keeps Illuminating

EGS000K5

1. CHECK SELF-DIAGNOSTIC RESULTS

Check the self-diagnostic results.

Is malfunctioning system displayed in self-diagnosis display?

YES >> GO TO 2.
NO >> GO TO 4.

2. INSPECTION OF CONTROL UNIT CONNECTOR

1. Turn ignition switch OFF and disconnect control unit connector. Check terminals for deformation, disconnection, and looseness. If there is any non-standard condition, repair or replace it.
2. Reconnect connector securely, and perform self-diagnosis.

OK or NG

OK >> GO TO 3.
NG >> Repair malfunctioning system, and GO TO 3.

3. SYMPTOM CHECK

Check symptom.

OK or NG

OK >> INSPECTION END
NG >> GO TO 4.

4. INSPECTION OF CONTROL UNIT POWER SUPPLY SYSTEM

Check control unit power supply system. Refer to STC-27, "Inspection 1: Battery Voltage Is Incorrect" .

OK or NG

OK >> GO TO 5.
NG >> Repair malfunctioning part.

5. INSPECTION OF STEERING EFFORT

Check there is assistance power by electric power steering while steering wheel is turned. Refer to PS-5, "On Board Inspection and Service" in “Steering wheel”.

OK or NG

OK >> Check CAN communication systems. Refer to STC-29, "Inspection 9: CAN Communication System" .
NG >> Replace steering column assembly.

PRECAUTIONS

PFP:00011

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EES000ZD

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

NOISE, VIBRATION AND HARSHNESS (NVH) TROUBLESHOOTING

PFP:00003

NVH Troubleshooting Chart

EES000ZE

Use the chart below to help you find the cause of the symptom. If necessary, repair or replace these parts.

Reference page			Refer to WT-4, "ROAD WHEEL"							NVH in MT, AT and CVT section.	NVH in FAX and FSU sections.	NVH in RAX and RSU sections.	Refer to TYRES in this chart.	Refer to ROAD WHEEL in this chart.	NVH in FAX section.	NVH in BR section.	NVH in PS section.
Possible cause and SUSPECTED PARTS			Out-of-round	Imbalance	Incorrect tyre pressure	Uneven tyre wear	Deformation or damage	Non-uniformity	Incorrect tyre size	DIFFERENTIAL	FRONT AXLE AND FRONT SUSPENSION	REAR AXLE AND REAR SUSPENSION	TYRES	ROAD WHEEL	DRIVE SHAFT	BRAKE	STEERING

×: Applicable

ROAD WHEEL

PFP:40300

Inspection

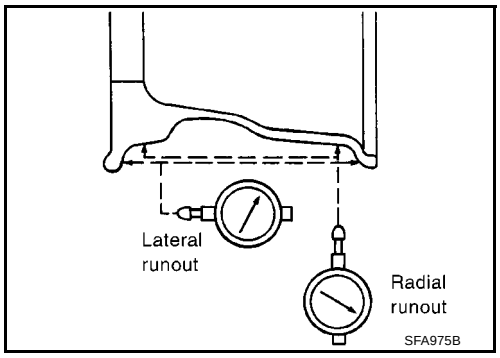
EES000ZF

ALUMINUM WHEEL

1. Check tyres for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.

a. Remove tyre from aluminum wheel and mount on a tyre balance machine.

b. Set dial indicator as shown in the illustration.



Wheel runout (Dial indicator value):

Refer to WT-8, "SERVICE DATA"

STEEL WHEEL

1. Check tyres for wear and improper inflation.
2. Check wheels for deformation, cracks and other damage. If deformed, remove wheel and check wheel runout.

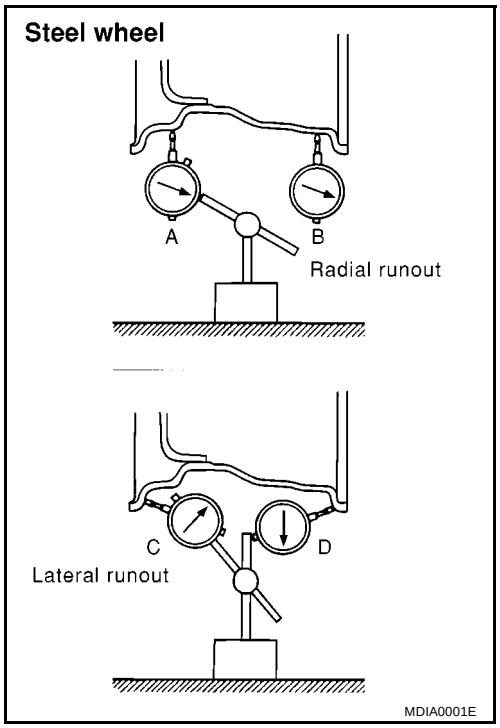
a. Remove tyre from steel wheel and mount wheel on a tyre balance machine.

b. Set two dial indicators as shown in the illustration.

c. Set each dial indicator to 0.

d. Rotate wheel and check dial indicators at several points around the circumference of the wheel.

e. Calculate runout at each point as shown below.



Radial runout = (A + B)/2 : 0.5 mm (0.020 in)

Lateral runout = (C + D)/2 : 0.8 mm (0.031 in)

f. Select maximum positive runout value and the maximum negative value.
Add the two values to determine total runout.
In case a positive or negative value is not available, use the maximum value (negative or positive) for total runout.
If the total runout value exceeds the limit, replace steel wheel.

Wheel runout:

Refer to WT-8, "SERVICE DATA"

ROAD WHEEL AND TYRE ASSEMBLY

PFP:40312

Balancing Wheels (Bonding Weight Type)

EES000ZG

REMOVAL

1. Remove inner and outer balance weights from the road wheel.

CAUTION:

Be careful not to scratch the road wheel during removal procedures.

2. Using releasing agent, remove double-faced adhesive tape from the road wheel.

CAUTION:

Be careful not to scratch the road wheel during removal.

- After removing double-faced adhesive tape, wipe clean traces of releasing agent from the road wheel.

WHEEL BALANCE ADJUSTMENT

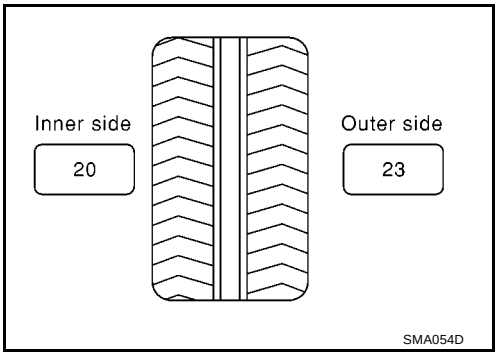
- If a tyre balance machine has adhesion balance weight mode settings and drive-in weight mode setting, select and adjust a drive-in weight mode suitable for road wheels.

1. Set road wheel on wheel balancer using the center hole as a guide. Start the tyre balance machine.
2. When inner and outer unbalance values are shown on the wheel balancer indicator, multiply outer unbalance value by 5/3 to determine balance weight that should be used. Select the outer balance weight with a value closest to the calculated value above and install it to the designated outer position of, or at the designated angle in relation to the road wheel.

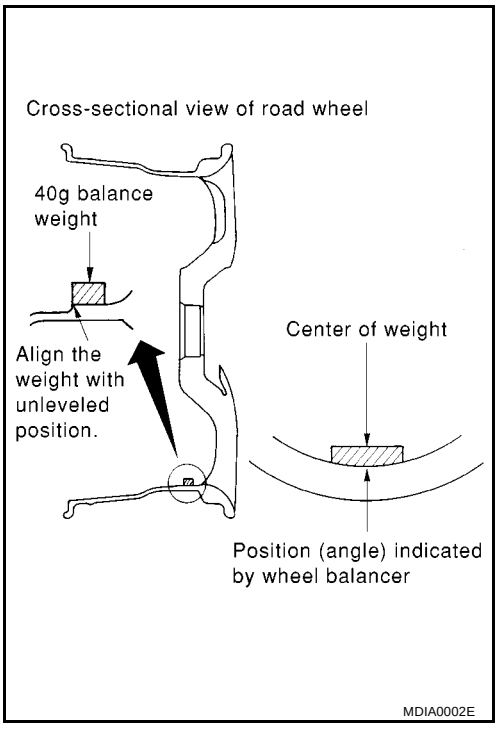
CAUTION:

- **Do not install the inner balance weight before installing the outer balance weight.**
- **Before installing the balance weight, be sure to clean the mating surface of the road wheel.**

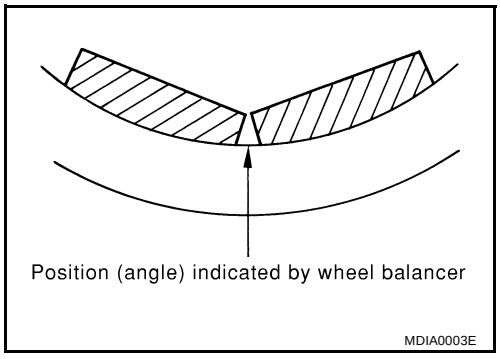
Indicated unbalance value × 5/3 = balance weight to be installed
Calculation example:
23 g (0.81 oz) × 5/3 = 38.33 g (1.35 oz) = 40 g (1.41 oz) balance weight (closer to calculated balance weight value)
Note that balance weight value must be closer to the calculated balance weight value.
Example:
37.4 = 35 g (1.23 oz)
37.5 = 40 g (1.41 oz)



- Attach weight as shown in figure.
- When attaching weight to road wheel, align it with step on rear surface of wheel, as shown in figure. Attach so that center of weight and position (angle) of wheel balancer indicator are aligned.
- Do not attach more than 2 adhesive weights.



- If calculated value exceeds 50 g (1.76 oz), attach two weights side by side, as shown in figure.



CAUTION:
When attaching two weights, do not attach them one on top of the other.

3. Start the wheel balancer again.
4. As before, attach drive-in weight to inner side of road wheel, according to amount and position (angle) of imbalance indicated by wheel balancer.
5. Start wheel balancer. Check that residual imbalance amount is 10 g (0.35 oz) or less for both outer and inner sides.

- If residual imbalance exceeds 10 g (0.35 oz), then repeat procedure from start.

Permissible amount of residual imbalance

Dynamic (at lug)	**: 10 g (0.35 oz) or less (one side)**
Static (at lug)	**: 20 g (0.71 oz) or less**
Maximum balance weight correction	**: 100 g (3.53 oz)**

Balancing Wheels (Drive-in Weight Type)

EES000ZH

WHEEL BALANCE ADJUSTMENT

1. Remove wheel from vehicle.
2. Set road wheel on wheel balancer and start balancer machine.

- Set with top/bottom reversed from vehicle installation position. After setting wheel on wheel balancer, make mark on top surface of wheel.
- Adjust wheel balance using a wheel balancer with straight cone attachment. Be sure cone contacts reverse side of wheel.
- If a general-purpose taper cone must be used to adjust wheel balance, place cone against reverse side of wheel and support it.
- Resin hammer must be used to drive in balance weights.

CAUTION:
Do not reuse balance weights after they are removed. Be sure to use new Nissan genuine weights designed for use with steel wheels.

Permissible amount of residual imbalance

Dynamic (at lug)	**: 10 g (0.35 oz) or less (one side)**
Static (at lug)	**: 20 g (0.71 oz) or less**
Maximum balance weight correction	**: 60 g (2.12 oz)**

3. Remove wheel from wheel balancer.
4. Install wheel to vehicle, with mark on lower side.

- Minimize imbalance by keeping same relative positions between hub-wheel contact points when installing to vehicle as when adjusting wheel balance.

CAUTION:
So as not to deform wheel, install by tightening at opposite angles, in 2 - 3 steps.

Tightening torque of wheel nut : 90 - 120 N·m (9.2 - 12.2 kg-m, 67 - 88 ft-lb)

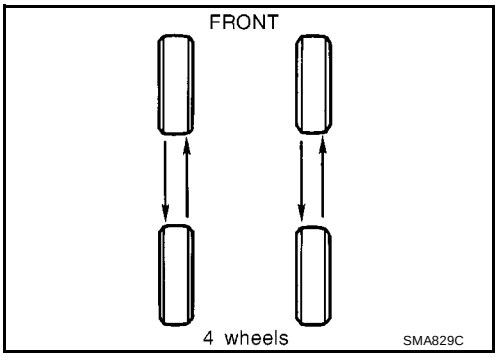
Rotation

EES000ZI

- After rotating the tyres, adjust the tyre pressure.
- Retighten the wheel nuts when the vehicle has been driven for 1,000 km (600 miles) (also in cases of a flat tyre, etc).
- Do not include the T-type spare tyre when rotating the tyres.

CAUTION:
When installing wheels, tighten them diagonally by dividing the work two to three times in order to prevent the wheels from developing any distortion.

Tightening torque of wheel nut : 90 - 120 N·m (9.2 - 12.2 kg-m, 67 - 88 ft-lb)



SERVICE DATA

PFP:00030

Road Wheel

EES000ZJ

Kind of wheel		Aluminum	Steel
Deflection limit	Lateral deflection	Less than 0.3 mm (0.012 in)	Less than 0.5 mm (0.020 in)
	Vertical deflection	Less than 0.3 mm (0.012 in)	Less than 0.8 mm (0.031 in)
Allowable quantity of residual unbalance	Dynamic (On the ear part)	Less than 10 g (0.35 oz) (per side)	
	Static (On the ear part)	Less than 20 g (0.70 oz)	

Tyre

Precautions for Supplemental Restraint System (SRS) “AIR BAG” and “SEAT BELT PRE-TENSIONER”

EKS00860

The Supplemental Restraint System such as “AIR BAG” and “SEAT BELT PRE-TENSIONER”, used along with a front seat belt, helps to reduce the risk or severity of injury to the driver and front passenger for certain types of collision. Information necessary to service the system safely is included in the SRS and SB section of this Service Manual.

WARNING:

- **To avoid rendering the SRS inoperative, which could increase the risk of personal injury or death in the event of a collision which would result in air bag inflation, all maintenance must be performed by an authorized NISSAN/INFINITI dealer.**
- **Improper maintenance, including incorrect removal and installation of the SRS, can lead to personal injury caused by unintentional activation of the system. For removal of Spiral Cable and Air Bag Module, see the SRS section.**
- **Do not use electrical test equipment on any circuit related to the SRS unless instructed to in this Service Manual. SRS wiring harnesses can be identified by yellow and/or orange harnesses or harness connectors.**

Wiper and Washer System

EKS007AW

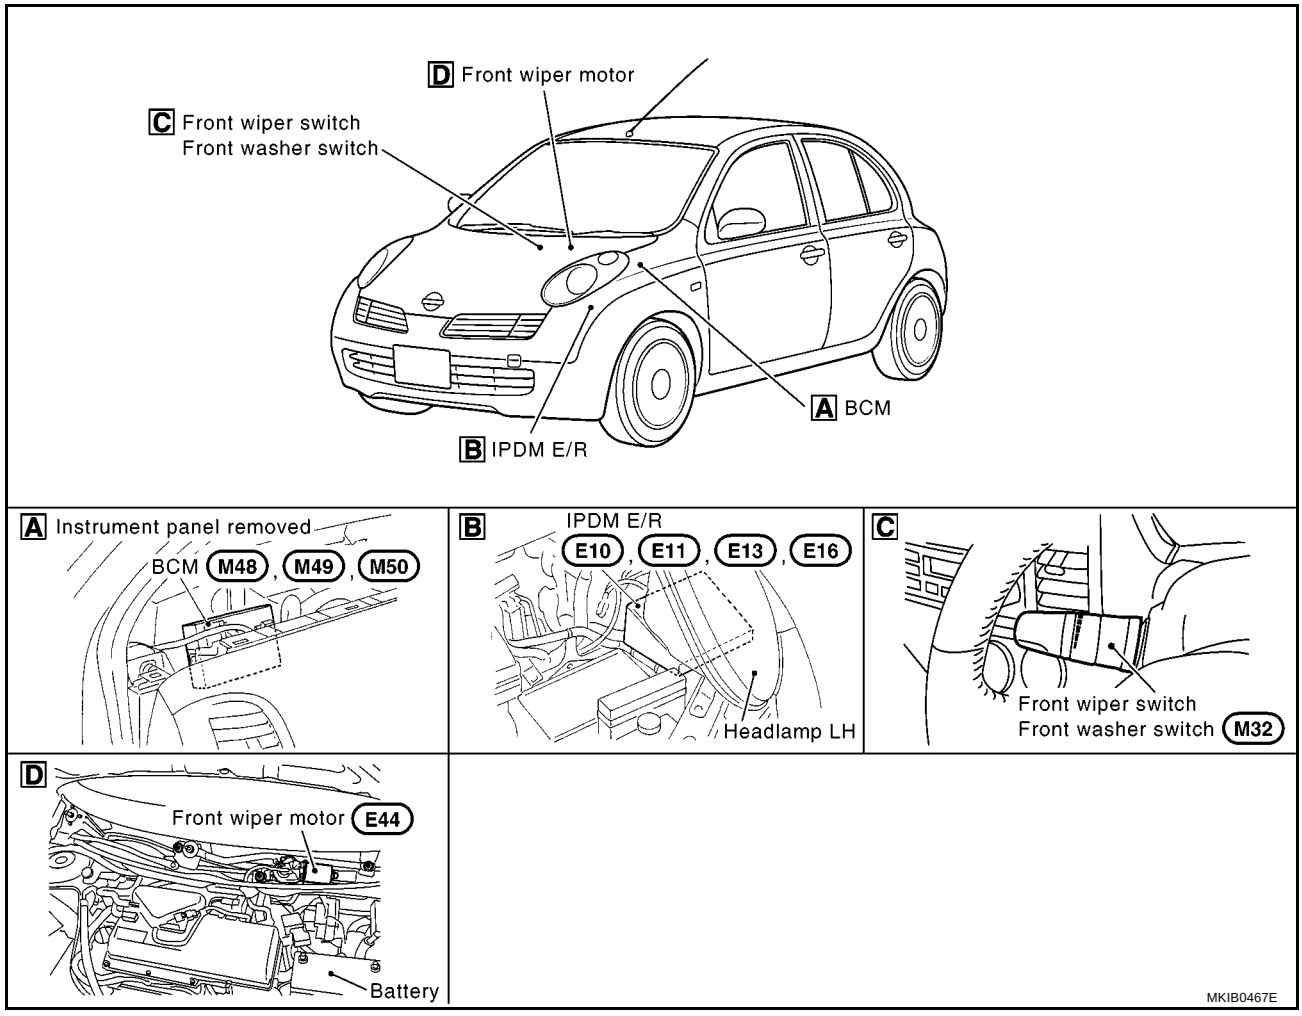
- If snow or other obstacle stops wipers from moving while front wipers are operating, wipers will stop moving to protect motor. In this case, turn the switch OFF and remove obstacle. Wait at least 20 seconds before turning the switch ON again to start front wipers.
- If rear wiper operation is stopped 5 seconds or more due to snow or other reason, the BCM stops rear wiper operation to protect motor. At this time, after removing cause of stoppage, turn rear wiper switch to OFF, wait at least 1 min, then turn wiper switch to ON or INT to restart wiper.
- The hood may be scratched if opened while front wipers are locked back.
- If there is unevenness or peeling of windshield glass wax, other oil films, or glass coating, wipers may not wipe correctly (juddering or other non-standard conditions may occur).
- Washer pump may malfunction if operated continuously for 1 minute or longer.

FRONT WIPER AND WASHER SYSTEM

PFP:28810

Components Parts and Harness Connector Location

EKS00861



System Description

EKS00862

- Front wiper HI/LO relay and front wiper main relay are built into IPDM E/R.
- Wiper switch (combination switch) is composed of a combination of 5 output terminals and 5 input terminals. Terminal combination status is read by BCM when switch is turned ON.
- BCM controls front wiper LO, HI, and INT (intermittent) operation.
- IPDM E/R operates wiper motor according to CAN communication signals from BCM.

Power is supplied at all times

- through 20A fuse (NO.38, located in the IPDM E/R)
- to front wiper main relay.
- through 20A fuse (NO.52, located in the IPDM E/R)
- to IPDM E/R (CPU).
- through 40A fusible link (letter J, located in fuse and fusible link box)
- to BCM terminals 74 and 79.

When ignition switch ON or START position, power is supplied

- through 10A fuse [NO.4, located in fuse block (J/B)]
- to BCM terminal 24,
- through 15A fuse [NO.1, located in fuse block (J/B)]
- to combination switch terminal 11, and
- to front wiper HI/LO relay, front wiper main relay and IPDM E/R (CPU)

Ground is supplied

- through body grounds E25 (CR engine models), E26 and E40
- to front wiper motor terminal 1 and,
- to IPDM E/R terminals 3 and 54, and
- through body grounds M19 and M20
- to combination switch terminal 12 and
- to BCM terminals 2 and 70

WIPER OPERATION

Low Speed Wiper Operation

When front wiper switch is placed in LO position, BCM read combination switch condition (Refer to WW-8, "BCM WIPER SWITCH READING FUNCTION"). And BCM sent front wiper request signal (LO) to IPDM E/R with CAN communication line. When IPDM E/R receives front wiper request signal (LO), it turns ON front wiper main relay (built into IPDM E/R).
Power is supplied

- to front wiper motor terminal 3,
- through front wiper main relay and front wiper HI/LO relay and
- through IPDM E/R terminal 23.

Ground is supplied

- to front wiper motor terminal 1,
- through body grounds E25 (CR engine models), E26 and E40.

With power and ground are supplied, the front wiper motor operates at low speed.

High Speed Wiper Operation

When front wiper switch is placed in HI position, BCM read combination switch condition (Refer toWW-8, "BCM WIPER SWITCH READING FUNCTION").And BCM sent front wiper request signal (HI) to IPDM E/R with CAN communication line.When IPDM E/R receives front wiper request signal (HI), it turns ON front wiper HI/LO relay and front wiper main relay (built into IPDM E/R).
Power is supplied

- to front wiper motor terminal 2,
- through front wiper main relay and front wiper HI/LO relay and,
- through IPDM E/R terminal 24.

Ground is supplied

- to front wiper motor terminal 1
- through body grounds E25, E26 and E40.

With power and ground are supplied, the front wiper motor operates at high speed.

Intermittent Operation

When front wiper switch is placed in INT position, BCM read combination switch condition (refer to WW-8, "BCM WIPER SWITCH READING FUNCTION") and it operates as follows.

- BCM reads combination switch condition of V/INT 1, 2 and 3, it determines INT volume.(Refer to WW-8, "BCM WIPER SWITCH READING FUNCTION")
- BCM receives vehicle speed signal from combination meter with CAN communication line.
- BCM calculates intermittent interval from INT volume and vehicle speed signal.
- BCM sends front wiper request signal to IPDM E/R for every intermittent interval via CAN communication line.

Power is supplied

- to front wiper motor terminal 3,
- through front wiper main relay and front wiper HI/LO relay and
- through IPDM E/R terminal 23.

Ground is supplied

- to front wiper motor terminal 1,
- through body grounds E25 (CR engine models), E26 and E40.

With power and ground are supplied, the front wiper motor operates.

Auto Stop Operation

With wiper switch turned OFF, wiper motor will continue to operate until wiper arms reach stop position.
When wiper arms are not located at stop position with wiper switch OFF, power is supplied

- from terminal 23 of the IPDM E/R
- to front wiper motor terminal 3, in order to continue wiper motor operation at low speed.

Ground is supplied

- to front wiper motor terminal 1
- through body grounds E25 (CR engine models), E26 and E40.

When wiper arms reach stop position, front wiper motor terminals 1 and 4 are connected.
Then the IPDM E/R sends auto stop operation signal to BCM with CAN communication line.
When BCM receives auto-stop operation signal, BCM sends wiper stop signal to IPDM E/R with CAN communication line.
IPDM E/R stops wiper motor. Wiper motor will then stop wiper arms at the STOP position.

Mist Operation

When the wiper switch is placed in the mist position, wiper operate ones. The wiper operation is the same as the front wiper low speed operation. If the switch is held in the mist position, front wiper low speed operation continues.

WASHER OPERATION

When front wiper switch is pulled to washer position, power is supplied

- through combination switch terminal 13
- to washer motor terminal 1.

Ground is supplied

- to washer motor terminal 2
- through combination switch terminals 12 and 14, and
- through body grounds M19 and M20.

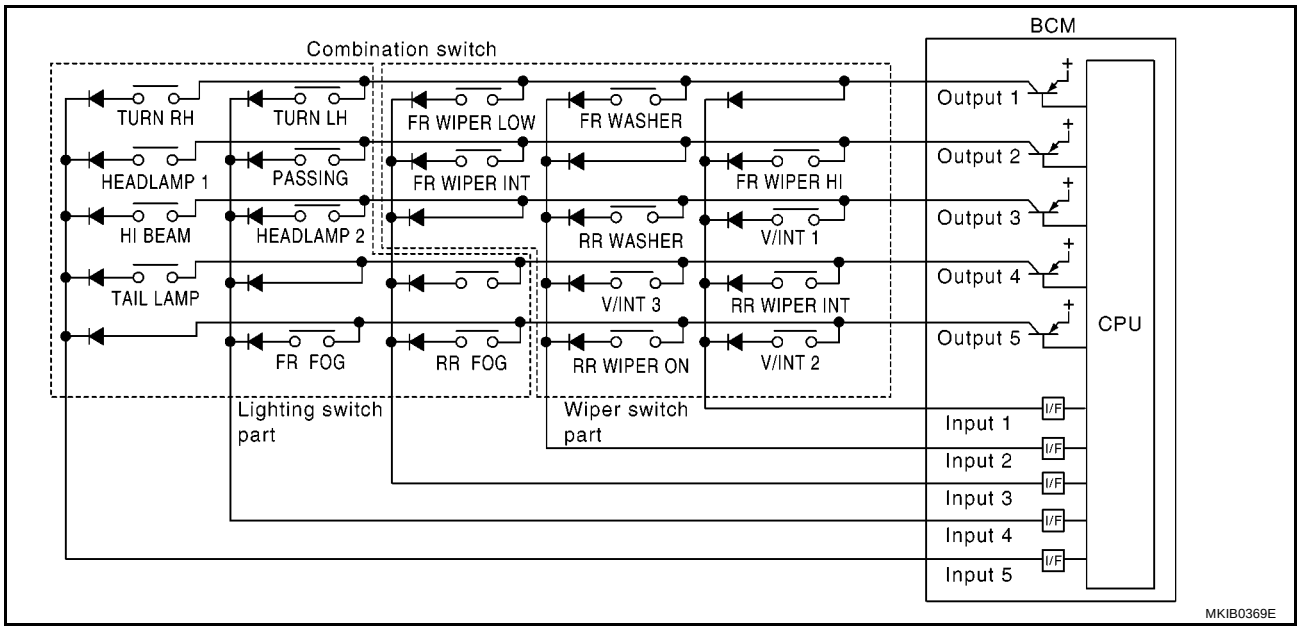
With power and ground supplied, the washer motor operates, and at the same time,
When the wiper switch is pulled to the WASH position for 1 second or more. BCM sends front wiper request signal (low) to IPDM E/R with CAN communication line. And the front wiper motor operates at low speed for approximately 3 times to clean wind shield

FAIL-SAFE FUNCTION

When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. If the fail-safe system is operating, front wiper low speed operates when the ignition switch is turned from OFF to ON or ACC and front wiper are stopped when the ignition switch is turn from ON or ACC to OFF. If the fail-safe system is operating, front wiper does not operate when the combination switch is in any position. After CAN communication recovers normally, it also returns to normal control. (Refer to PG-19, "FAIL-SAFE FUNCTION"
)

BCM WIPER SWITCH READING FUNCTION

BCM reads combination switch (wiper switch) status, and controls front wipers based on the results.
BCM is a combination of 5 output terminals (output 1 - 5) and 5 input terminals (input 1 - 5). It reads 20 types of switch data and 5 types of diagnosis data.



Operation Description

- BCM operates output terminal (output 1 to 5) transistor at a set period and turns ON the current in order.
- When any (or multiple) switches are turned ON, a circuit is formed between the output terminals (output 1 to 5) and input terminals (input 1 to 5).
- At this time, when output terminals (output 1 to 5) operate transistors and carry current. If voltage of corresponding input terminal (input 1 to 5) changes, interface in BCM detects this state and judges that switch is ON.

Table Of BCM - Combination Switch Operations

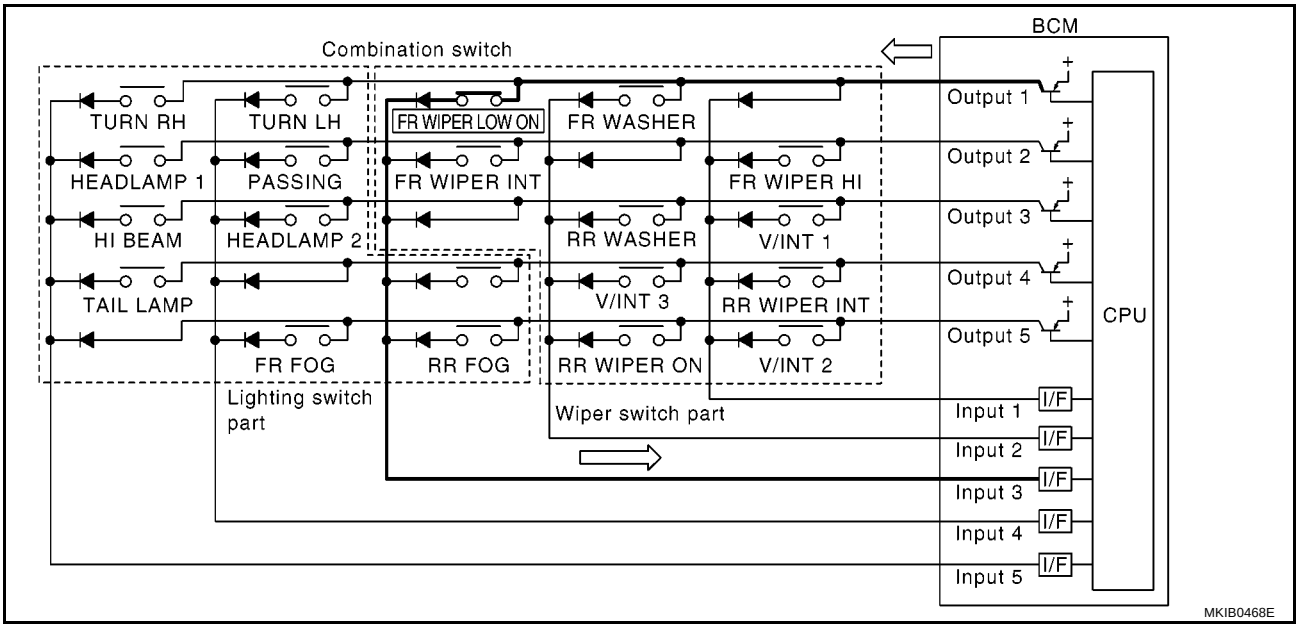
BCM reads operation status of combination switch using combinations shown in table below.

	Combination SW INPUT 1		Combination SW INPUT 2		Combination SW INPUT 3		Combination SW INPUT 4		Combination SW INPUT 5	
	ON	OFF	ON	OFF	ON	OFF	ON	OFF	ON	OFF
Combination SW OUTPUT 1	—	—	FR WIPER HI ON	FR WIPER HI OFF	V/INT 1 ON	V/INT 1 OFF	RR WIPER INT ON	RR WIPER INT OFF	V/INT 2 ON	V/INT 2 OFF
Combination SW OUTPUT 2	FR WASHER ON	FR WASHER OFF	—	—	RR WASHER ON	RR WASHER OFF	V/INT 3 ON	V/INT 3 OFF	RR WIPER ON	RR WIPER OFF
Combination SW OUTPUT 3	FR WIPER LOW ON	FR WIPER LOW OFF	FR WIPER INT ON	FR WIPER INT OFF	—	—	—	—	RR FOG ON	RR FOG OFF
Combination SW OUTPUT 4	TURN LH ON	TURN LH OFF	PASSING ON	PASSING OFF	HEADLAMP 2 ON	HEADLAMP 2 OFF	—	—	FR FOG ON	FR FOG OFF
Combination SW OUTPUT 5	TURN RH ON	TURN RH OFF	HEADLAMP 1 ON	HEADLAMP 1 OFF	HI BEAM ON	HI BEAM OFF	TAIL LAMP ON	TAIL LAMP OFF	—	—

MKIB0370E

Example: (Wiper Switch Placed In LO Position)

- If front wiper switch is placed in LO position, the contact of front wiper LO in combination switch is turned ON. At this time, when output 1 transistor operates, driver control unit detects that voltage has been changed at input 3.
- When output 1 transistor is ON and BCM detects current changes at input 3, BCM determines that wiper switch is at LO. BCM uses CAN communication and sends front wiper signals to IPDM E/R.
- When output 1 transistor operates again and BCM detects voltage change at input 3, BCM recognizes that front wiper LO operation is continuing.



NOTE:
Each output terminal transistor operates at 20 ms intervals. Therefore, after a switch is turned ON, the electrical loads are activate with a time delay, However, this delay is too small to be detected.

Intermittent Operation

Wiper intermittent operation delay interval is determined from a combination of 3 switches (V/INT 1, V/INT 2, and V/INT 3) and vehicle speed signal.
During each intermittent operation delay interval, BCM sends front wiper request signal to IPDM E/R.

Wiper Volume Position Setting

Wiper dial position	Intermittent interval	Combination switch		
		V/INT 1	V/INT 2	V/INT 3
Wiper volume position 1	Small	ON	ON	ON
Wiper volume position 2		ON	ON	OFF
Wiper volume position 3		ON	OFF	OFF
Wiper volume position 4	↓	OFF	OFF	OFF
Wiper volume position 5		OFF	OFF	ON
Wiper volume position 6		OFF	ON	ON
Wiper volume position 7	Large	OFF	ON	OFF

Example: For wiper volume position 1...
Using combination switch reading function, BCM reads ON/OFF status of V/INT 1, 2, and 3.
When combination switch status is as listed below, BCM determines that it is wiper volume position 1.

- V/INT 1: ON (input 1 and output 3 are performing.)
- V/INT 2: ON (input 1 and output 5 are performing.)
- V/INT 3: ON (input 2 and output 4 are performing.)

BCM determines front wiper intermittent interval from wiper volume 1 and vehicle speed, and sends wiper request signal (INT) to IPDM E/R for every intermittent interval via CAN communication line.

CAN Communication

EKS00K7O

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00K7P

How to Proceed With Trouble Diagnosis

EKS00867

1. Confirm the symptoms and customer complaint.
2. Understand operation description and function description. Refer to WW-5, "System Description" .
3. Carry out the Preliminary check. Refer to WW-29, "Preliminary Inspection" .
4. Confirm front wiper does not operate by fail-safe control of IPDM E/R. Refer to PG-19, "FAIL-SAFE FUNCTION" .
5. Check symptom and repair or replace the cause of malfunction.
6. Does the front wiper operate normally? Yes: GO TO 7. No: GO TO 5.
7. Inspection end.

Preliminary Inspection

EKS00868

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSE

- Check fuse and fusible link for blown-out.

Unit	Power source	Fuse No.
Front washer motor	Ignition ON or START	1
Front wiper main relay	Battery	38
BCM	Battery	J
	Ignition switch ON or START position	4

Refer to WW-25, "Wiring Diagram — WIPER —"

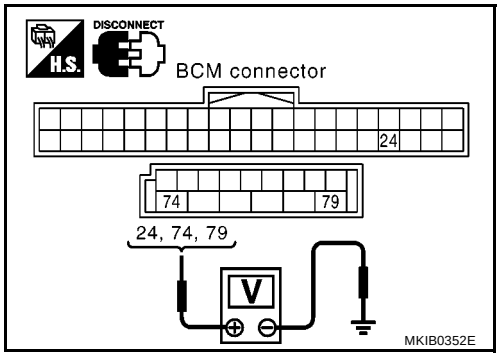
OK or NG

OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of problem before installing new fuse, Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.



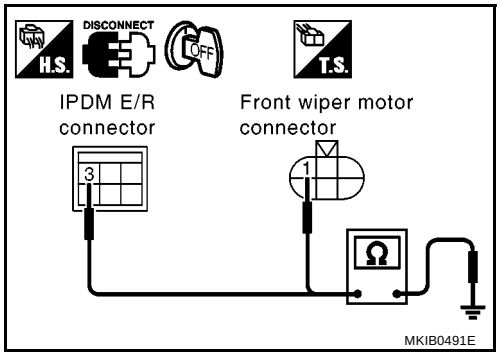
Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse.

3. CHECK GROUND CIRCUIT

1. Disconnect IPDN E/R harness connector and front wiper motor harness connector.
2. Check continuity between IPDM E/R harness connector, front wiper motor harness connector and ground.



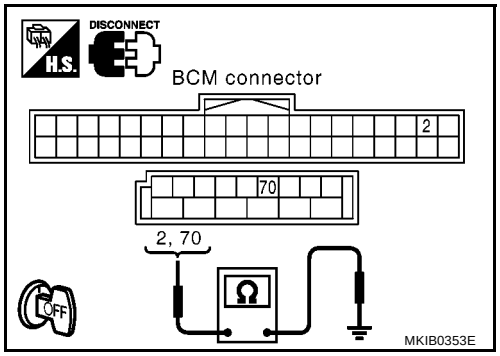
Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
E11	3 (B)	Ground	Yes
E44	1 (B)		

OK or NG

OK >> GO TO 4.
NG >> Harness for open ground circuit.

4. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.



Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70(B)	Ground	Yes

OK or NG

OK >> INSPECTION END.
NG >> Check harness ground circuit.

CONSULT-II Function (BCM)

EKS007B0

CONSULT-II can display each diagnostic item using the diagnostic modes shown following. Data is recieved and transmitted via the control module communication line.

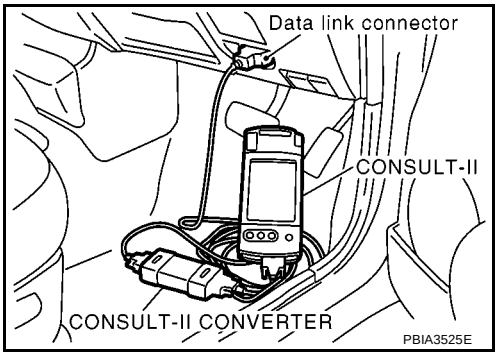
BCM trouble diagnosis item	Inspection Item, Diagnosis Mode	Description
Wiper	Data monitor	Displays BCM input data in real time.
	Active test	Device operation can be checked by applying a drive signal to device.

CONSULT-II BASIC OPERATION

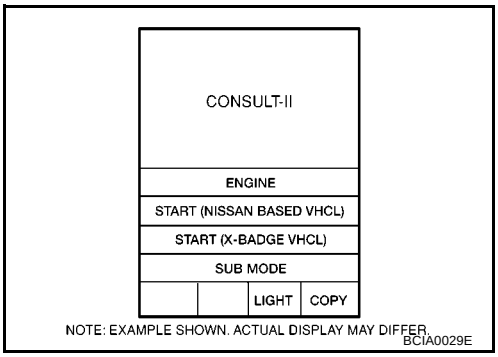
CAUTION:

If CONSULT-II is used without CONSULT-II CONVERTER connected, malfunction may be detected by self-diagnosis in control units that use CAN Communication.

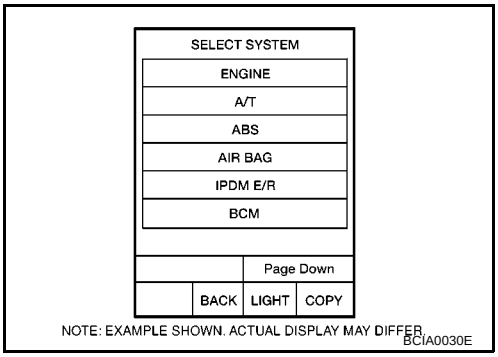
1. Turn ignition switch OFF.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to data link connector.
3. Turn ignition switch ON.



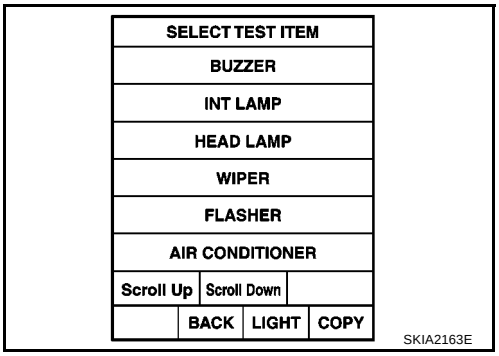
4. Touch “START (NISSAN BASED VHCL)”.



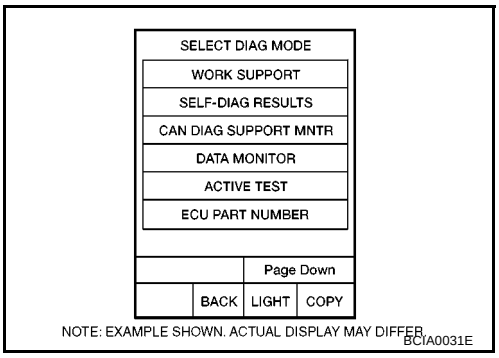
5. Touch “BCM” on the “SELECT SYSTEM” screen.
   If “BCM” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Touch “WIPER” on the “SELECT TEST ITEM” screen.



7. Touch “WORK SUPPORT”, “DATA MONITOR”, or “ACTIVE TEST” on “SELECT DIAG MODE”.



WORK SUPPORT

Supported item	Description
RR WIP RVRS	Rear wiper reverse range operation setting can be changed.

DATA MONITOR

Operation Procedure

1. Touch “WIPER” on the “SELECT TEST ITEM” screen.
2. Touch “DATA MONITOR” on “SELECT DIAG MODE” screen.
3. Touch either “ALL SIGNALS” or “SELET FROM MENU” on the “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
SELECT FROM MENU	Selects and monitors individual items.

4. Touch “START”.
5. When “SELECT FROM MENU” is selected, touched items to be monitored. If “ALL SIGNALS” is selected, all items will be monitored.
6. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

Display Item List

Monitor item “UNIT”		Contents
IGN ON SW	[ON/OFF]	Displays “ignition switch ON (ON)/Other OFF or ACC (OFF)” status as judged from ignition switch signal.
FR WIPER HI	[ON/OFF]	Displays “Front Wiper HI (ON)/Others (OFF)” status as judged from wiper switch signal.
FR WIPER LOW	[ON/OFF]	Displays “Front Wiper LOW (ON)/Others (OFF)” status as judged from wiper switch signal.
FR WIPER INT	[ON/OFF]	Displays “Front Wiper INT (ON)/Others (OFF)” status as judged from wiper switch signal.
FR WASHER SW	[ON/OFF]	Displays “Front Washer Switch (ON)/Others (OFF)” status as judged from wiper switch signal.
INT VOLUME	[1 - 7]	Displays intermittent operation dial position setting (1 - 7) as judged from wiper switch signal.
FR WIPER STOP	[ON/OFF]	Displays “Stopped (ON)/Operating (OFF)” status as judged from the auto-stop signal.

Monitor item “UNIT”		Contents
VEHICLE SPEED	[km/h]	Displays vehicle speed status as judged from vehicle speed signal.
H/L WASHER SW	[ON/OFF]	Displays (Headlamp washer switch: ON/Others: OFF) as judged from headlamp washer switch signal
H/L SW POS	[ON/OFF]	Displays (Headlamp switch: ON/Others: OFF) as judged from lighting switch signal
RR WIPER ON	[ON/OFF]	Displays “Rear Wiper ON (ON)/Others (OFF)” status as judged from wiper switch signal.
RR WIPER INT	[ON/OFF]	Displays “Rear Wiper INT (ON)/Others (OFF)” status as judged from wiper switch signal.
RR WASHER SW	[ON/OFF]	Displays “Rear Washer Switch (ON)/Others (OFF)” status as judged from wiper switch signal.
RR WIPER STOP	[ON/OFF]	Displays “Rear Wiper Stop (ON)/Others (OFF)” status as judged from wiper switch signal.
REVERSE SW CAN	[ON/OFF]	Displays “Reverse position (ON)/Others (OFF)” status as judged from reverse signal.
R/WIP MTR SIG	[ON/OFF]	Displays “Rear wiper motor signal (ON)/Others (OFF)” status as judged to rear wiper motor output signal.

ACTIVE TEST

Operation Procedure

1. Touch “WIPER” on the “SELECT TEST ITEM” screen.
2. Touch “ACTIVE TEST” on the “SELECT DIAG MODE” screen.
3. Touch item to be tested, and check operation.
4. During operation check, touching “BACK” deactivates operation.

Display Item List

Test item	Indication CONSULT-II display	Description
Front wiper output	FR WIPER	Front wiper can be operated by any ON–OFF operation.
Rear wiper output	RR WIPER	Rear wiper can be operated by any ON-OFF operation.
Head lamp washer output	HEAD LAMP WASHER	Head lamp washer can be operated by any ON-OFF operation.

CONSULT-II Function (IPDM E/R)

EKS007B1

CONSULT-II can display each diagnostic item using the diagnostic modes shown following. Data is recieved and transmitted via the control module communication line.

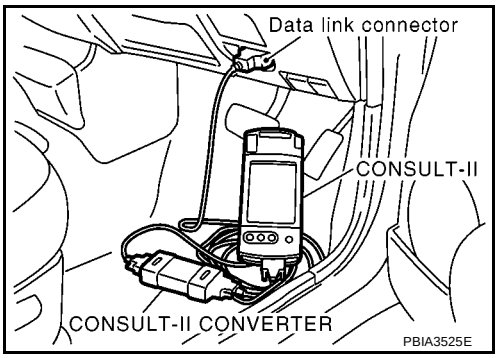
Inspection Item, Diagnosis Mode	Description
SELF-DIAG RESULTS	Refer to PG-34, "SELF-DIAG RESULTS" .
DATA MONITOR	Displays input/output data of IPDM E/R in real time.
ACTIVE TEST	IPDM E/R sends a drive signal to components for electric load operation check.

CONSULT-II BASIC OPERATION

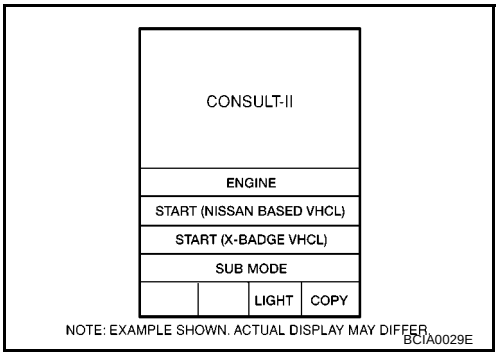
CAUTION:

If CONSULT-II is used without CONSULT-II CONVERTER connected, malfunction may be detected by self-diagnosis in control units that use CAN Communications.

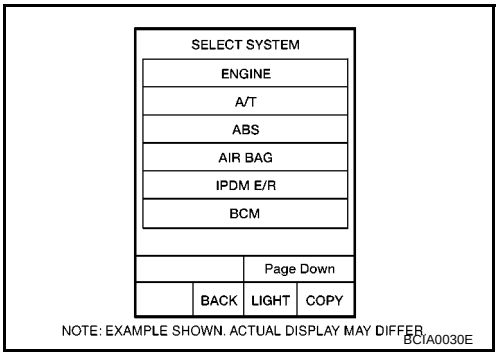
1. Turn ignition switch OFF.
2. Connect “CONSULT-II” and “CONSULT-II CONVERTER” to data link connector.
3. Turn ignition switch ON.



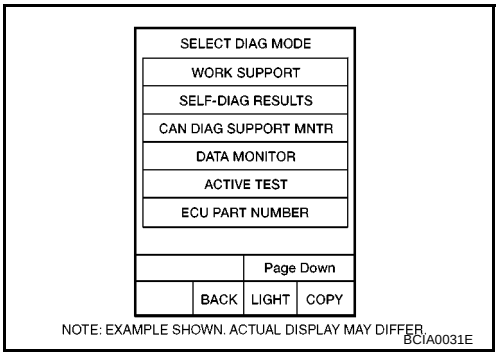
4. Touch “START (NISSAN BASED VHCL)”.



5. Touch “IPDM E/R” on “SELECT SYSTEM” screen.
If “IPDM E/R” is not indicated, go to GI-36, "CONSULT-II Data Link Connector (DLC) Circuit" .



6. Select required diagnosis mode on “SELECT DIAG MODE”.



DATA MONITOR

Operation Procedure

1. Touch “DATA MONITOR” on “SELECT DIAG MODE” screen.
2. Touch either of “ALL SIGNALS”, “MAIN SIGNALS”, or “SELECT FROM MENU” on “DATA MONITOR” screen.

ALL SIGNALS	All items will be monitored.
MAIN SIGNALS	Monitors preselected items.
CAN DIAG SUPPORT MNTR	Monitors CAN communication status.
SELECT FROM MENU	Monitors items optionally selected.

3. Touch “START”.
4. When “SELECT FROM MENU” is selected, touch items to be monitored. When “ALL SIGNALS” is selected, all items are monitored. When “MAIN SIGNALS” is selected, only preselected items are monitored.
5. Touch “RECORD” while monitoring to record the status of the item being monitored. To stop recording, touch “STOP”.

All Signals, Main Signals, Select From Menu

Item name	Display or unit	Monitor item selection			Description
		All signals	Main signal	Select from menu	
HEADLAMP WASHER REQUEST	ON/OFF	×		×	Signal status input from BCM
FR WIPER REQUEST	OFF/LO/HI	×	×	×	Signal status input from BCM
WIPER AUTO STOP	ON/OFF	×	×	×	IPDM E/R output status
WIPER PROTECTION	OFF/LS/HS/Block	×		×	IPDM E/R control status (LS: low speed operation/ HS: high speed operation/ BLOCK: wiper arm is locked)

CAUTION:

- **Perform IPDM E/R data monitor with ignition switch ON. Monitoring with ignition switch in ACC position may cause an improper display.**

ACTIVE TEST

Operation Procedure

1. Touch “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Touch item to be tested, and check operation.
3. Touch “START”.
4. Touch “STOP” during a test to stop the operation.

Test item	Indication on CONSULT-II display	Description
front wiper	FRONT WIPER	Front wiper relay (HI/LO, main) can be operated by switching (OFF, High speed ON and Low speed ON) optionally.
Headlamp washer	HEADLAMP WASHER	Headlamp washer relay can be operated by switching (ON and OFF) optionally.

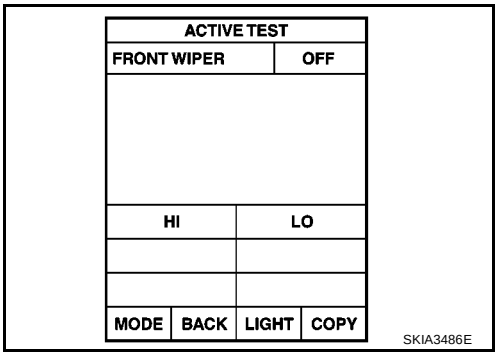
Front Wiper Does Not Operate

EKS00872

1. CHECK FRONT WIPER OPERATION

With CONSULT-II

1. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “FRONT WIPER” on “SELECT TEST ITEM” screen.
3. Make sure that front wipers operate normally.



Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that front wipers operate normally.

OK or NG

OK >> GO TO 5.
NG >> GO TO 2.

2. CHECK FUSE

Check 20A fuse (#38) (No.38, located in IPDM E/R).

OK or NG

OK >> GO TO 3.
NG >> Replace fuse.

3. IPDM E/R INSPECTION

With CONSULT-II

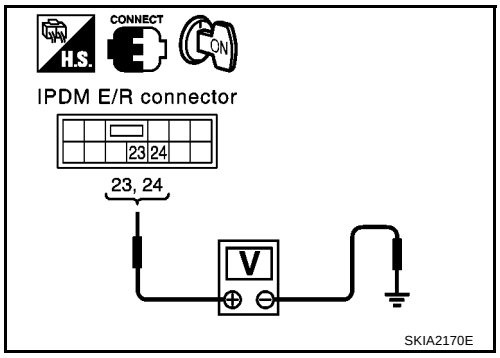
Using active test, check voltage between IPDM E/R connector terminals 23, 24 and ground while front wiper relay (main, HI/LO) is operating.

- For IPDM E/R terminal inspection method, refer to PG-49, "IPDM E/R Terminal Inspection" .

Without CONSULT-II

Start up auto active test, and check voltage between IPDM E/R connector terminals 23, 24 and ground while front wiper relay (main, HI/LO) is operating.

- For IPDM E/R terminal inspection method, refer to PG-49, "IPDM E/R Terminal Inspection" .



Connector terminal			Measuring condition	Voltage
IPDM E/R		(–)		
Connector	Terminal (Wire color)			
E13	23 (Y)	Ground	Stopped	Approx. 0
			LO operation	Battery voltage
	24 (*1)		Stopped	Approx. 0
			HI operation	Battery voltage

*1: CR engine models (LG), K9K engine models (BR)

OK or NG

OK >> GO TO 4.
NG >> Replace IPDM E/R.

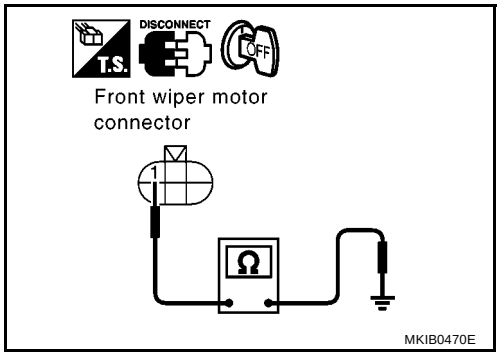
4. FRONT WIPER TO GROUND INSPECTION

1. Turn ignition switch OFF.
2. Disconnect front wiper motor harness connector.
3. Check continuity between front wiper motor harness connector E44 terminal 1(B) and ground.

Continuity should exist.

OK or NG

OK >> Replace wiper motor.
NG >> Repair harness or connector.



5. CHECK CAN COMMUNICATION CIRCUIT

Select “IPDM” by CONSULT-II, and perform self-diagnosis for “IPDM”.

Are self-diagnosis results displayed?

NO DTC>>GO TO 6.
CAN COMM CIRCUIT>>Check CAN communication line. GO TO BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .

SELF-DIAG RESULTS	
DTC RESULTS	TIME
NO DTC IS DETECTED. FURTHER TESTING MAY BE REQUIRED	

LKIA0073E

6. CHECK COMBINATION SWITCH OPERATION

With CONSULT-II

Select “BCM” on CONSULT-II. With “WIPER” data monitor, confirm that “FR WIPER INT”, “FR WIPER LOW”, and “FR WIPER HI” turn ON-OFF according to wiper switch operation.

Without CONSULT-II

Refer to LT-196, "Check Combination Switch" .

OK or NG

OK >> Replace BCM.
NG >> Refer to LT-196, "Check Combination Switch" .

DATA MONITOR	
MONITOR	
IGN ON SW	ON
FR WIPER HI	OFF
FR WIPER LOW	OFF
FR WIPER INT	OFF
FR WASHER SW	OFF
INT VOLUME	1
FR WIPER STOP	ON
RR WIPER ON	OFF
RR WIPER INT	OFF
	Page Down
	RECORD
MODE / BACK / LIGHT / COPY	

SKIA2175E

Front Wiper Does Not Return to Stop Position

EKS00873

1. CHECK AUTO STOP INPUT SIGNAL

With CONSULT-II

Select IPDM on CONSULT-II.Check (“FR WIPER STOP”) in “DATA MONITOR” mode with CONSULT-II.

When front wiper is operating : FR WIPER STOP OFF
When front wiper is stopped : FR WIPER STOP ON

Without CONSULT-II

GO TO 2.

OK or NG

OK >> Replace IPDM E/R.
NG >> GO TO 2.

DATA MONITOR	
MONITOR	
IGN ON SW	ON
FR WIPER HI	OFF
FR WIPER LOW	OFF
FR WIPER INT	OFF
FR WASHER SW	OFF
INT VOLUME	1
FR WIPER STOP	ON
RR WIPER ON	OFF
RR WIPER INT	OFF
	Page Down
	RECORD
MODE / BACK / LIGHT / COPY	

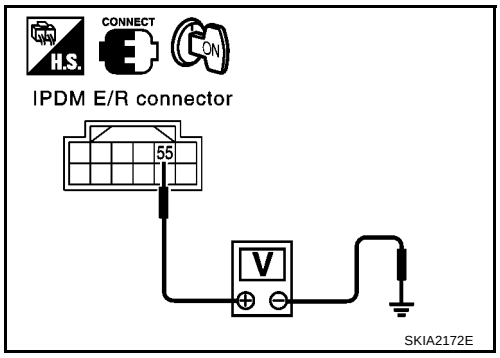
SKIA2175E

2. CHECK IPDM E/R OUTPUT SIGNAL

Check voltage between IPDM E/R harness connector E16 terminal 55(OR) and ground while front wiper motor is stopped and while it is operating.

- For IPDM E/R terminal inspection method, refer to PG-49, "IPDM E/R Terminal Inspection" .

Terminals			Condition	Voltage [V]
(+)		(-)		
Connector	Terminal (Wire color)			
E16	55 (OR)	Ground	Wiper operating	Battery voltage
			Wiper stopped	Approx. 0



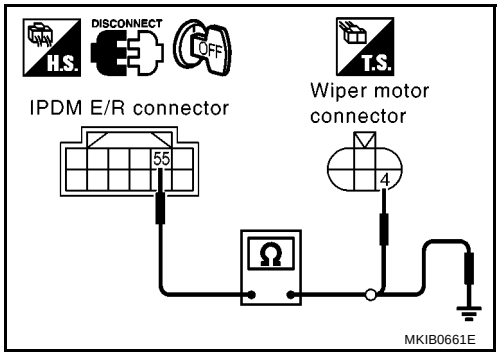
OK or NG

OK >> GO TO 3.
NG >> Replace front wiper motor.

3. CHECK AUTO STOP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector E16 terminal 55(OR) and front wiper motor harness connector E44 terminal 4(OR).
4. Check continuity between IPDM E/R harness connector E16 terminal 55 (OR) and ground

55 (OR) – 4 (OR) :Continuity should exist.
55 (OR) – Ground :Continuity should not exist.



OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

Front Wiper Low Speed Operation Does Not Operate

EKS00874

1. CHECK FRONT WIPER MOTOR LOW SPEED OPERATION

With CONSULT-II

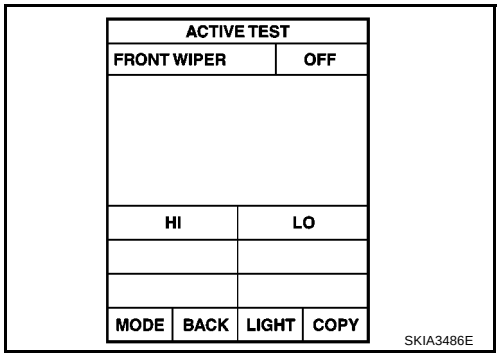
1. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “FRONT WIPER” on “SELECT TEST ITEM” screen.
3. Make sure that front wiper (low speed) operates normally.

Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that front wiper (low speed) operates normally.

OK or NG

OK >> GO TO LT-196, "Check Combination Switch" .
NG >> GO TO 2.

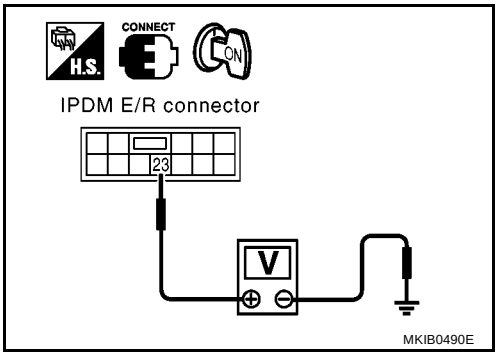


2. CHECK IPDM E/R OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Front wiper switch turn to LO position.
3. Check voltage between IPDM E/R harness connector E13 terminal 23(Y) and ground.

- For IPDM E/R terminal inspection method, refer to PG-49, "IPDM E/R Terminal Inspection" .

Battery voltage should exist



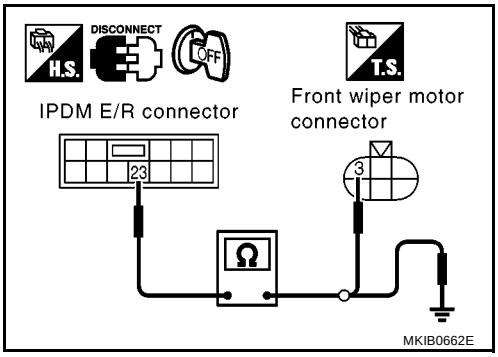
OK or NG

OK >> GO TO 3.
NG >> Replace IPDM E/R.

3. CHECK FRONT WIPER MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector E13 terminal 23(Y) and front wiper motor harness connector E44 terminal 3(Y).
4. Check continuity between IPDM E/R harness connector E13 terminal 23 (Y) and gound.

23 (Y) – 3 (Y) :Continuity should exist.
23 (Y) – Ground :Continuity should not exist.



OK or NG

OK >> Replace front wiper motor.
NG >> Repair harness or connector.

Front Wiper High Speed Operation Does Not Operate

EKS00875

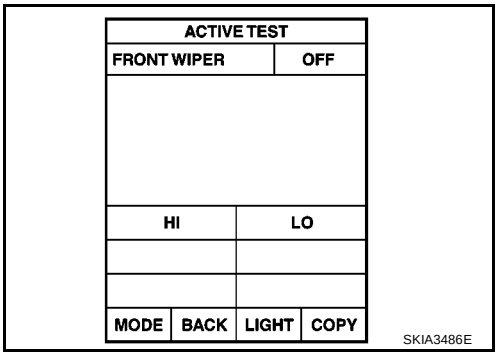
1. CHECK FRONT WIPER MOTOR HIGH SPEED OPERATION

With CONSULT-II

1. Select “IPDM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “FRONT WIPER” on “SELECT TEST ITEM” screen.
3. Make sure that front wiper (high speed) operates normally.

Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that front wiper (high speed) operates normally.



OK or NG

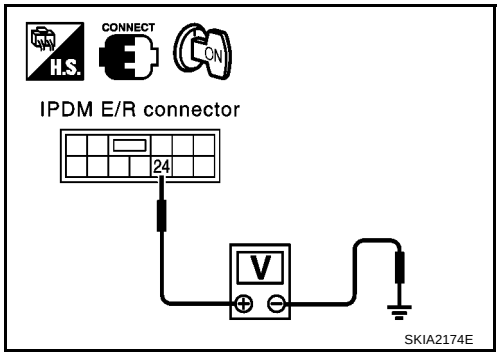
OK >> GO TO LT-196, "Check Combination Switch" .
NG >> GO TO 2.

2. CHECK IPDM E/R OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Front wiper switch turn to HI position.
3. Check voltage between IPDM E/R harness connector E13 terminal 24(LG or BR) and ground.

- For IPDM E/R terminal inspection method, refer to PG-49, "IPDM E/R Terminal Inspection" .

Battery voltage should exist



OK or NG

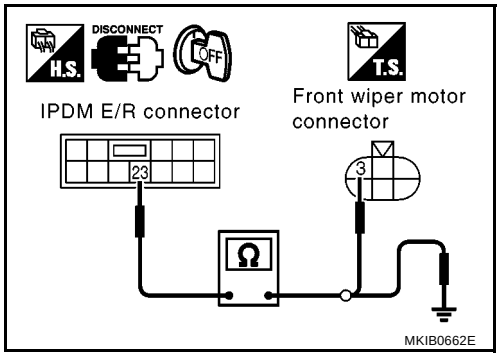
OK >> GO TO 3.
NG >> Replace IPDM E/R.

3. CHECK FRONT WIPER MOTOR CURCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector E13 terminal 24(LG or BR) and front wiper motor harness connector E44 terminal 2(LG or BR).
4. Check continuity between IPDM E/R harness connector E13 terminal 24(LG or BR) and ground.

24 (LG or BR) – 3 (LG or BR) :Continuity should exist.

24 (LG or BR) – Ground :Continuity should not exist.



OK or NG

OK >> Replace front wiper motor.
NG >> Repair harness or connector.

Front Wiper INT Does Not Operate

EKS00876

Refer to LT-196, "Check Combination Switch" .

Front Wiper Interval Time Is Not Controlled by Vehicle Speed

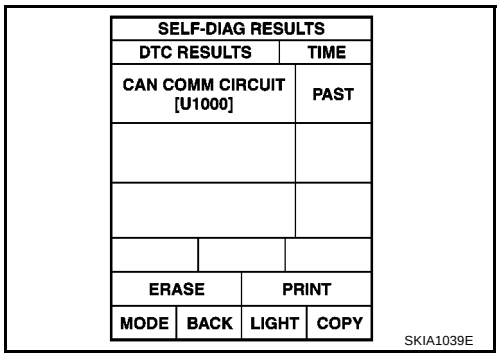
EKS00879

1. CHECK CAN COMMUNICATION LINE

Select “BCM” by CONSULT-II, and perform self-diagnosis for “BCM”.

Are self-diagnosis results displayed?

NO DTC>>GO TO 2
CAN COMM CIRCUIT>>Check CAN communication line of BCM. GO TO BCS-31, "CAN Communication Inspection With CONSULT-II (Self-Diagnosis)" .



2. CHECK COMBINATION METER

Confirm that speedometer operates normally.

OK or NG

OK >> Replace BCM.
NG >> Combination meter vehicle speed system malfunction. GO TO DI-31, "Inspection/Vehicle Speed Signal" .

After Front Wipers Operate for 10 Seconds, They Stop for 20 Seconds

EKS0087A

CAUTION:

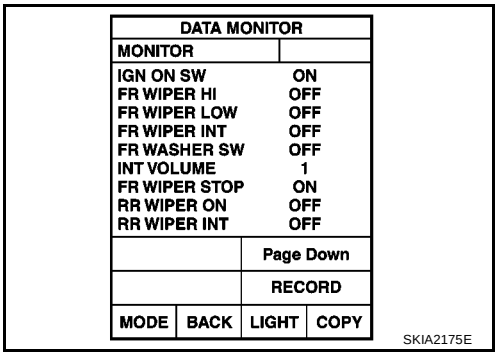
- **When auto-stop signal has not varied for 10 seconds or longer while IPDM E/R is operating front wipers, IPDM E/R considers that front wipers are locked, and stops wiper output. That causes this symptom.**
- **This status can be checked by IPDM E/R DATA MONITOR on which “WIPER PROTECTION” item shows “Block”.**

1. CHECK IPDM E/R INPUT SIGNAL

With CONSULT-II

Select IPDM on CONSULT-II.Check (“FR WIPER STOP”) in “DATA MONITOR” mode with CONSULT-II.

When front wiper is operating : FR WIPER STOP OFF
When front wiper is stopped : FR WIPER STOP ON



Without CONSULT-II

GO TO 2.

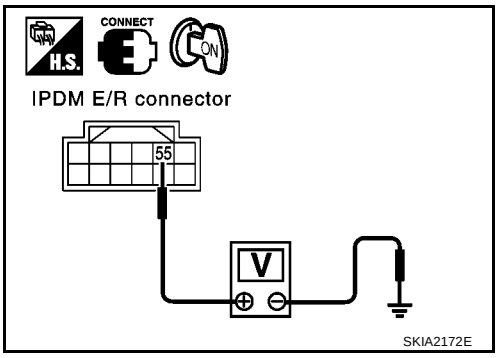
OK or NG

OK >> Replace IPDM E/R.
NG >> GO TO 2.

2. CHECK IPDM E/R OUTPUT SIGNAL

1. Turn ignition switch ON.
2. Front wiper switch turn to INT position.
3. Check voltage between IPDM E/R harness connector E16 terminal 55(OR) and ground.

- For IPDM E/R terminal inspection method, refer to PG-49, "IPDM E/R Terminal Inspection" .



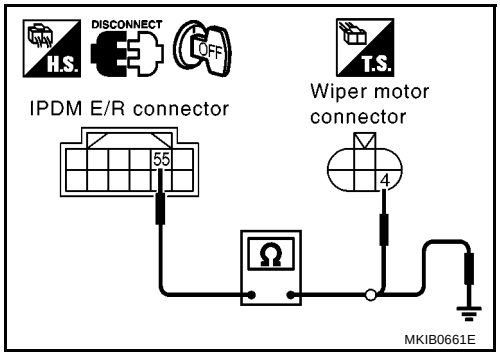
Connector terminal			Condition	Voltage [V]
(+)		(-)		
Connector	Terminal (Wire color)			
E16	55 (OR)	Ground	Wiper operating	Battery voltage
			Wiper stopped	Approx. 0

OK or NG

OK >> GO TO 3.
NG >> Replace front wiper motor.

3. CHECK FRONT WIPER MOTOR CURCUIT

1. Turn ignition switch OFF.
2. Disconnect IPDM E/R connector and front wiper motor connector.
3. Check continuity between IPDM E/R harness connector E16 terminal 55 (OR) and front wiper motor harness connector E44 terminal 4 (OR).
4. Check continuity between IPDM E/R harness connector E16 terminal 55 (OR) and ground.



55 (OR) – 4 (OR) :Continuity should exist.

55 (OR) – Ground :Continuity should not exist.

OK or NG

OK >> Replace IPDM E/R.
NG >> Repair harness or connector.

Front Wipers Do Not Stop

EKS0087B

Refer to PG-51, "Diagnosis of IPDM E/R Integrated Relay" .

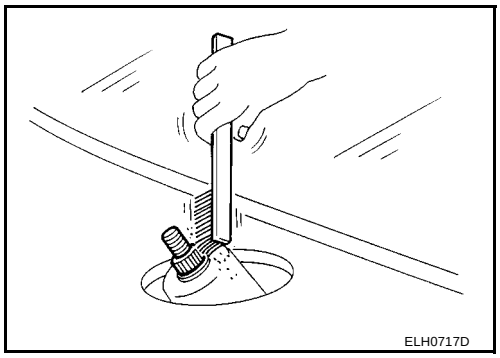
Removal and Installation of Front Wiper Arm

EKS007B3

REMOVAL

1. Turn the wiper switch ON to operate the wiper motor, then turn it OFF (auto stop).
2. Open hood, remove nut cover, and remove wiper arm nut.
3. Lift up driver wiper arm and remove wiper arm from vehicle.
4. Close hood, lift up passenger wiper arm, and remove wiper arm from vehicle.

Before attaching the front wiper arm, clean the arm mount shown in the figure to prevent nuts from being loosened.



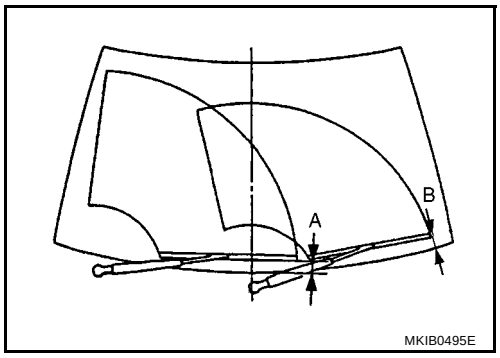
INSTALLATION

1. Lower wiper blade to glass so that center end of blade comes to the position shown in diagram. Align blade end with marking set within blade set position black print.)
2. Tighten wiper arm nuts.

Wiper arm nut:

: 20.6 - 26.5 N·m (2.1 - 2.7 kg-m, 15 - 20 ft-lb)

3. Spray washer fluid. Turn wiper switch ON to operate wiper motor, then turn it OFF (auto stop).
4. Make sure wiper blade stops at the position shown in the figure.



Stop position A : 33.7 - 48.7 mm (1.327 - 1.917 in)

Stop position B : 33.7 - 48.7 mm (1.327 - 1.917 in)

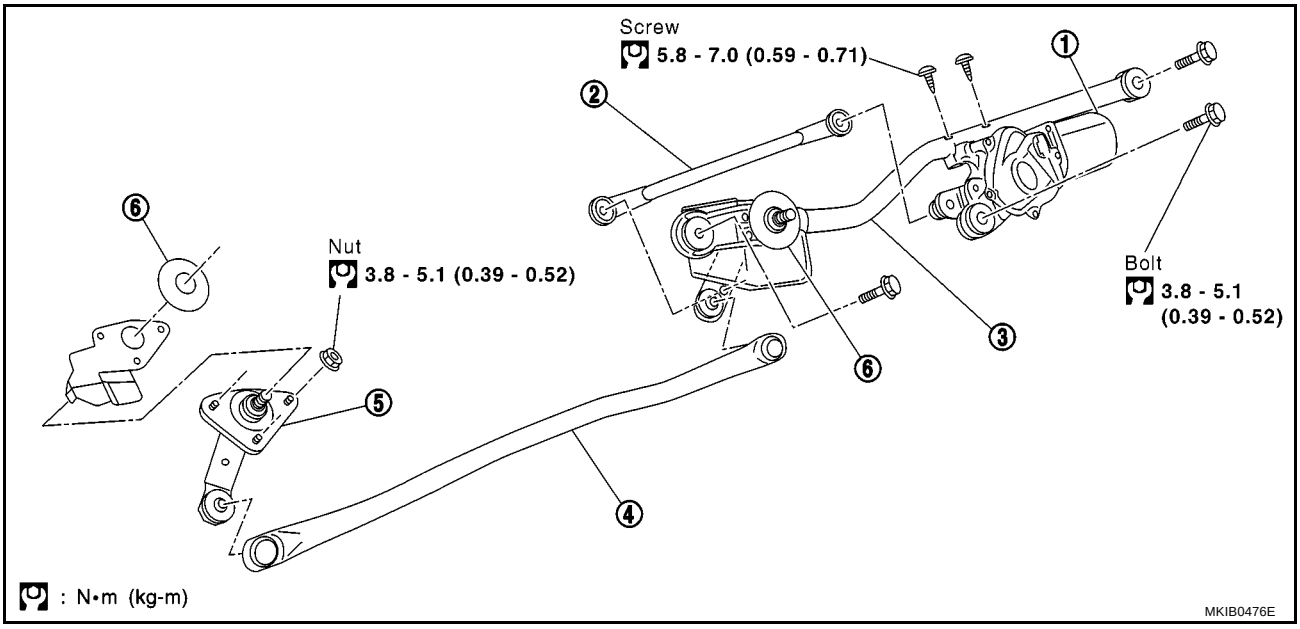
Adjustment of Front Wiper Arm Stop Position

EKS007B4

Refer to WW-42, "Removal and Installation of Front Wiper Arm" .

Removal and Installation of Front Wiper Motor and Link

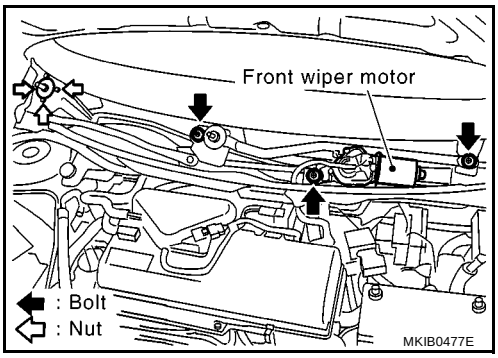
EKS007B5



1. Wiper motor
2. Wiper link
3. Wiper frame
4. Wiper link
5. Pivot
6. Shaft seal

REMOVAL

1. Operate the wiper motor, and stop it at the auto stop position.
2. Remove wiper arm nuts, and remove wiper arm from vehicle.
3. Remove cowl top cover. Refer to EI-10, "COWL TOP" .
4. Remove wiper motor connector.
5. Remove shaft seal
6. Remove wiper motor assembly bolts and driver pivot nuts, and then remove wiper motor assembly from vehicle.
7. Remove the wiper link from the wiper frame and the motor arm.
8. Remove wiper motor screws, and then remove wiper motor from wiper frame.



INSTALLATION

1. Connect the wiper motor to the vehicle-side connector. Turn the wiper switch ON to operate the wiper motor, then turn the wiper switch OFF (auto stop).
2. Disconnect wiper motor connector.
3. Install wiper motor to wiper frame.

Wiper motor screw

: 5.8 - 7.0 N·m (0.59 - 0.71 kg-m, 51 - 62 in-lb)

4. Install wiper link to wiper frame and motor arm.
5. Connect wiper motor assembly to the connector. Turn wiper switch ON to operate wiper motor, then turn wiper switch OFF (auto stop).
6. Install the wiper motor assembly to the vehicle.

Wiper motor assembly bolt

: 3.8 - 5.1 N·m (0.39 - 0.52 kg-m, 34 - 45 in-lb)

Pivot nut

: 3.8 - 5.1 N·m (0.39 - 0.52 kg-m, 34 - 45 in-lb)

7. Install shaft seal
8. Install cowl top cover. Refer to EI-10, "COWL TOP" .
9. Attach wiper arms.

CAUTION:

- **Do not drop the wiper motor or cause it to contact other parts.**
- **Check the grease conditions of the motor arm and wiper link joint (at retainer). Apply grease if necessary.**
  NISSAN MP special grease No. 2 (KRB0012025)

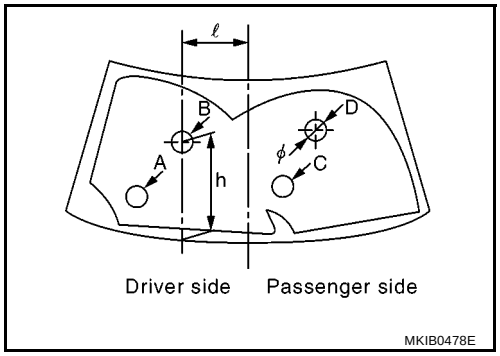
Adjustment of Spray Positions of Front Washer Nozzle

EKS007B6

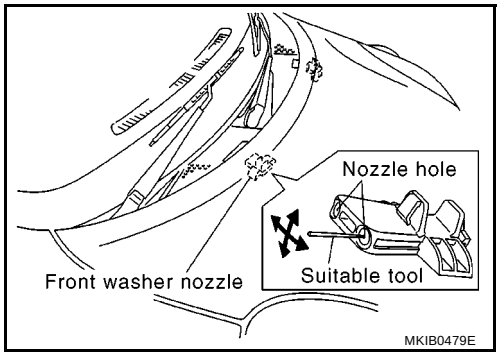
Adjust spray positions to match the positions listed below.

Unit: mm (in)

Spray position	h	l (width)	ϕ (spray point area)
A	165 (6.50)	375 (14.76)	80 (3.15)
B	342 (13.46)	157 (6.18)	80 (3.15)
C	253 (9.96)	109 (4.29)	80 (3.15)
D	347 (13.66)	299 (11.77)	80 (3.15)

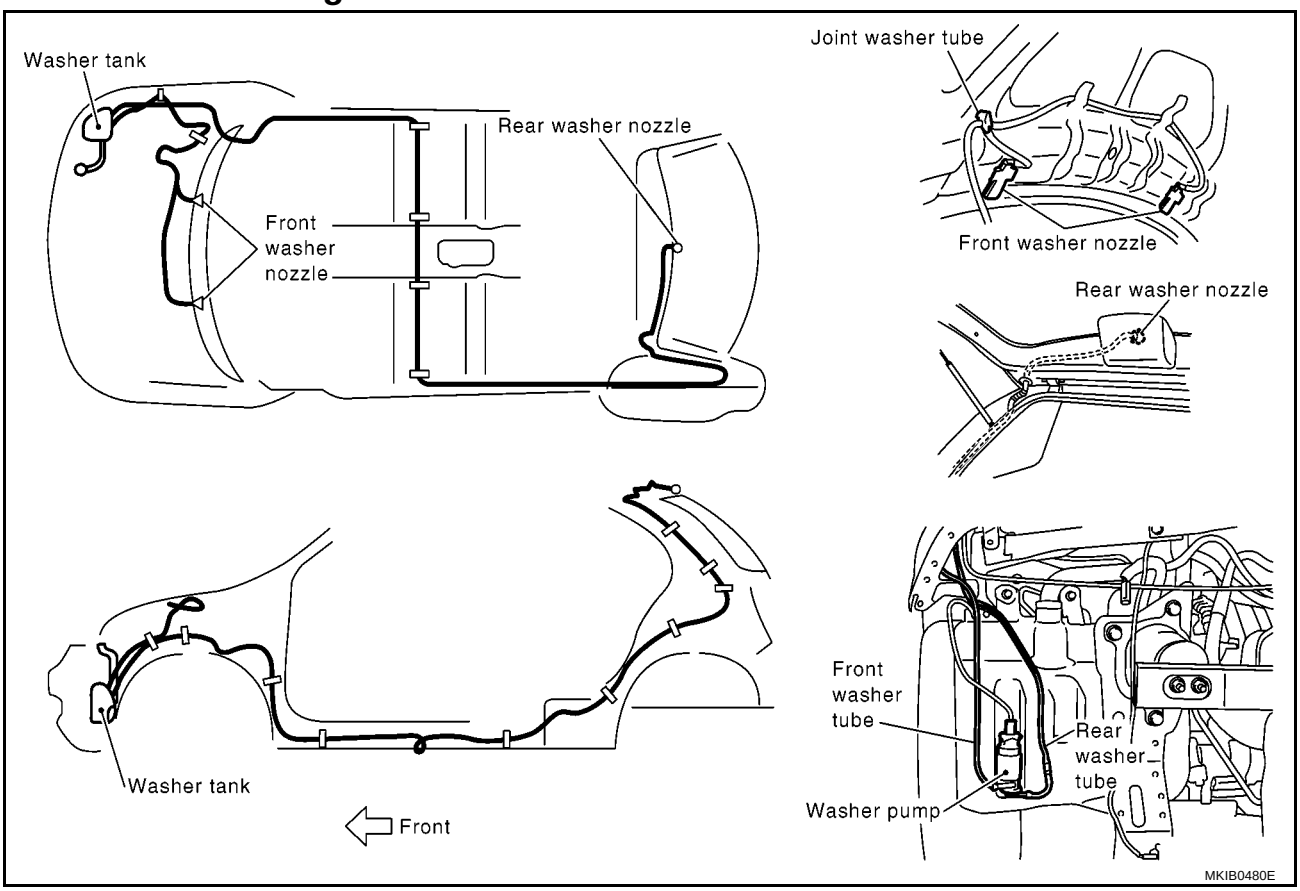


To adjust the spray position, insert a needle or similar object into the spray opening and move up/down and left/right.



Washer Hose Routing

EKS007B7

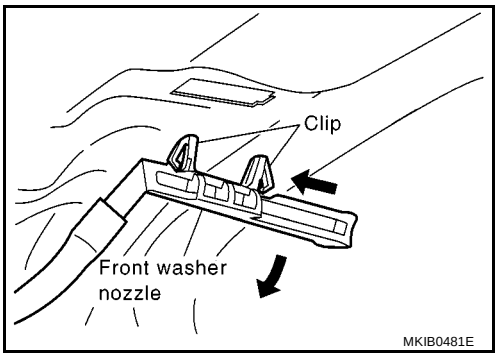


Removal and Installation of Front Washer Nozzle

EKS007B8

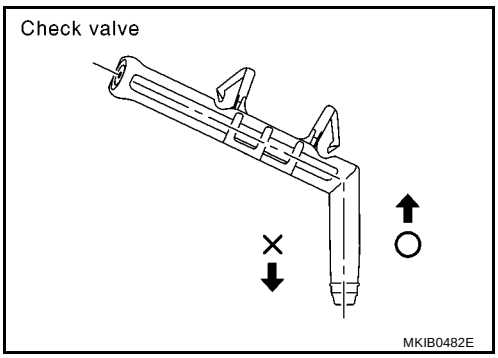
REMOVAL

1. Open hood.
2. While pushing nozzle spray point side along body, use the nozzle stop point as the support point and rotate nozzle to remove it from body.
3. Remove washer tube.



CHECK VALVE INSPECTION

Make sure air can pass through the hose by blowing forward (toward the nozzle) and air cannot pass through by sucking.



INSTALLATION

1. Install washer tube in nozzle.
2. Install nozzle to body.

3. Adjust nozzle spray location.

CAUTION:
The spray points differ, so be sure to install left and right nozzles correctly.

Inspection of Front Wiper and Washer Switch Circuit

EKS007B9

Refer to LT-196, "Check Combination Switch" .

Removal and Installation of Front Wiper and Washer Switch

EKS007BA

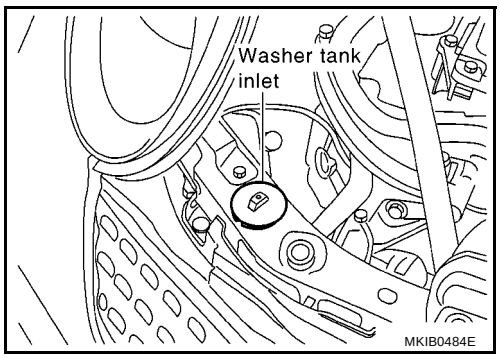
Refer to LT-199, "Removal and Installation" .

Removal and Installation of Front Wiper and Washer Tank

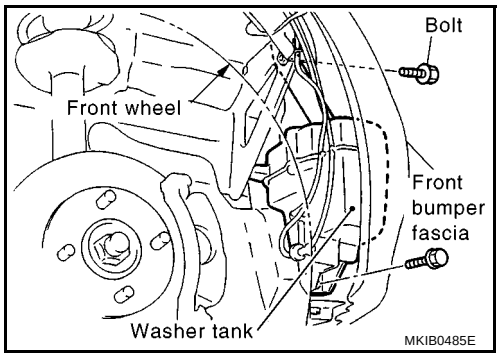
EKS007BB

REMOVAL

1. Remove cap, with pushing down fill opening, remove washer tank inlet from radiator core support upper.



2. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
3. Remove washer pump connector.
4. Remove washer tank bolts.



5. Remove the washer hose, and remove the washer tank from the vehicle.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:
After installing, add water up to the top of the inlet washer tank. Make sure there is no leakage.

Washer tank mounting screw

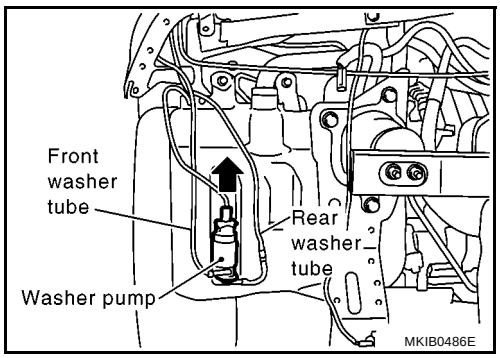
: 3.8 - 5.1 N·m (0.39 - 0.52 kg-m, 34 - 45 in-lb)

Removal and Installation of Front Wiper and Washer Pump

EKS007BC

REMOVAL

1. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
2. Remove washer pump connector and hose.
3. Pull out the washer pump in the direction shown by the arrow, and remove the washer pump from the washer tank.



INSTALLATION

Paying attention to the items listed below, install in the reverse order of removal.

CAUTION:

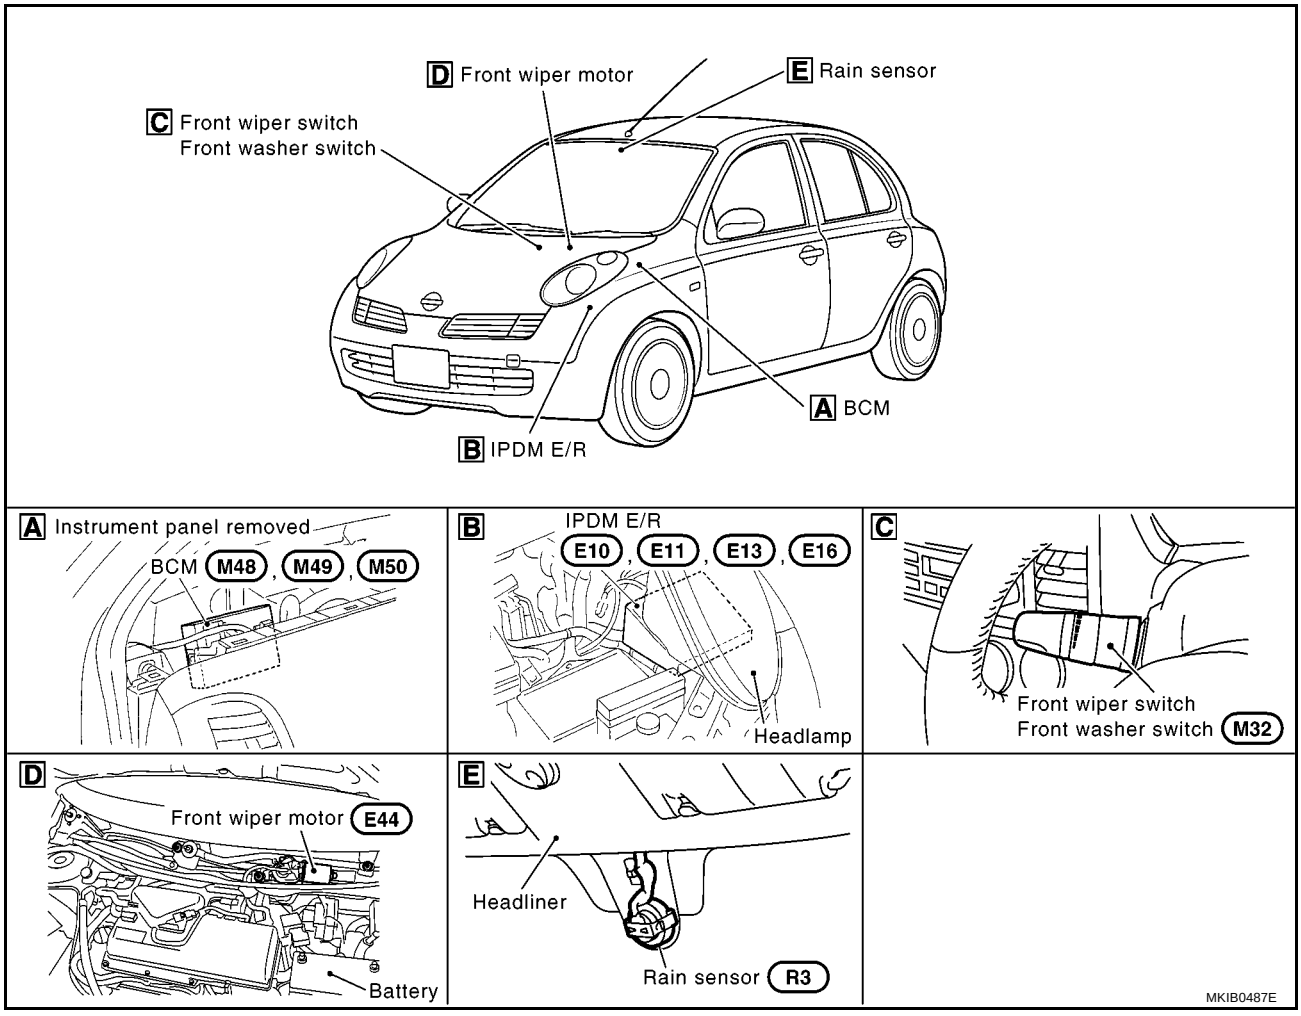
When installing the washer pump, there must be no twisting or other unusual stress on the packing.

FRONT WIPER AND WASHER SYSTEM (WITH RAIN SENSOR)

PFP:28536

Components Parts and Harness Connector Location

EKS0087Y



System Description

EKS008WD

- Front wiper HI/LO relay and front wiper main relay are built into IPDM E/R.
- Wiper switch (combination switch) is composed of a combination of 5 output terminals and 5 input terminals. Terminal combination status is read by BCM when switch is turned ON.
- BCM controls front wiper LO, HI, and INT (intermittent) operation.
- IPDM E/R operates wiper motor according to CAN communication signals from BCM.

Power is supplied at all times

- through 20A fuse (NO.38, located in the IPDM E/R)
- to front wiper main relay.
- through 20A fuse (NO.52, located in the IPDM E/R)
- to IPDM E/R (CPU).
- through 40A fusible link (letter J, located in fuse and fusible link box)
- to BCM terminals 74 and 79.

When ignition switch ON or START position, power is supplied

- through 10A fuse [NO.4, located in fuse block (J/B)]
- to BCM terminal 24, and
- to rain sensor terminal 1.
- through 15A fuse [NO.1, located in fuse block (J/B)]
- to combination switch terminal 11, and
- to front wiper HI/LO relay, front wiper main relay and IPDM E/R (CPU)

Ground is supplied

- through body grounds E25 (CR engine models), E26 and E40
- to front wiper motor terminal 1 and,
- to IPDM E/R terminals 3 and 54, and
- through body grounds M19 and M20
- to combination switch terminal 12
- to rain sensor terminal 3, and
- to BCM terminals 2 and 70

WIPER OPERATION

Low Speed Wiper Operation

When front wiper switch is placed in LO position, BCM read combination switch condition (Refer toWW-51, "BCM WIPER SWITCH READING FUNCTION"). And BCM sent front wiper request signal (LO) to IPDM E/R with CAN communication line. When IPDM E/R receives front wiper request signal (LO), it turns ON front wiper main relay (built into IPDM E/R).
Power is supplied

- to front wiper motor terminal 3,
- through front wiper main relay and front wiper HI/LO relay and
- through IPDM E/R terminal 23.

Ground is supplied

- to front wiper motor terminal 1,
- through body grounds E25 (CR engine models), E26 and E40.

With power and ground are supplied, the front wiper motor operates at low speed.

High Speed Wiper Operation

When front wiper switch is placed in HI position, BCM read combination switch condition (Refer toWW-51, "BCM WIPER SWITCH READING FUNCTION"). And BCM sent front wiper request signal (HI) to IPDM E/R with CAN communication line. When IPDM E/R receives front wiper request signal (HI), it turns ON front wiper HI/LO relay and front wiper main relay (built into IPDM E/R).
Power is supplied

- to front wiper motor terminal 2,
- through front wiper main relay and front wiper HI/LO relay and,
- through IPDM E/R terminal 24.

Ground is supplied

- to front wiper motor terminal 1
- through body grounds E25 (CR engine models), E26 and E40.

With power and ground are supplied, the front wiper motor operates at high speed.

Auto Wiper Operation

When the wiper switch is placed in the INT position, the wiper does not operate until rain sensor perceives rain.
When rain sensor detection of rain drop, rain sensor send rain signal to BCM

- from rain sensor terminal 2
- to BCM terminal 63.

BCM send wiper request signal to IPDM E/R with CAN communication line. IPDM E/R operate front wiper. Change the wiper speed by rainfall.
The rain sensor sensitivity is controlled by the wiper volume switch combined with front wiper and washer switch and BCM.

Auto Stop Operation

With wiper switch turned OFF, wiper motor will continue to operate until wiper arms reach stop position.
When wiper arms are not located at stop position with wiper switch OFF, power is supplied

- from terminal 23 of the IPDM E/R
- to front wiper motor terminal 3, in order to continue wiper motor operation at low speed.

Ground is supplied

- to front wiper motor terminal 1
- through body grounds E25 (CR engine models), E26 and E40.

When wiper arms reach stop position, front wiper motor terminals 1 and 4 are disconnected.
Then the IPDM E/R sends auto stop operation signal to BCM with CAN communication line.
When BCM receives auto-stop operation signal, BCM sends wiper stop signal to IPDM E/R with CAN communication line.
IPDM E/R stops wiper motor. Wiper motor will then stop wiper arms at the STOP position.

Mist Operation

When the wiper switch is placed in the mist position, wiper operate ones.The wiper operation is the same as the front wiper low speed operation.If the switch is held in the mist position, front wiper low speed operation continues.

WASHER OPERATION

When front wiper switch is pulled to washer position, power is supplied

- through combination switch terminal 13
- to washer motor terminal 1.

Ground is supplied

- to washer motor terminal 2
- through combination switch terminals 12 and 14, and
- through body times M19 and M20.

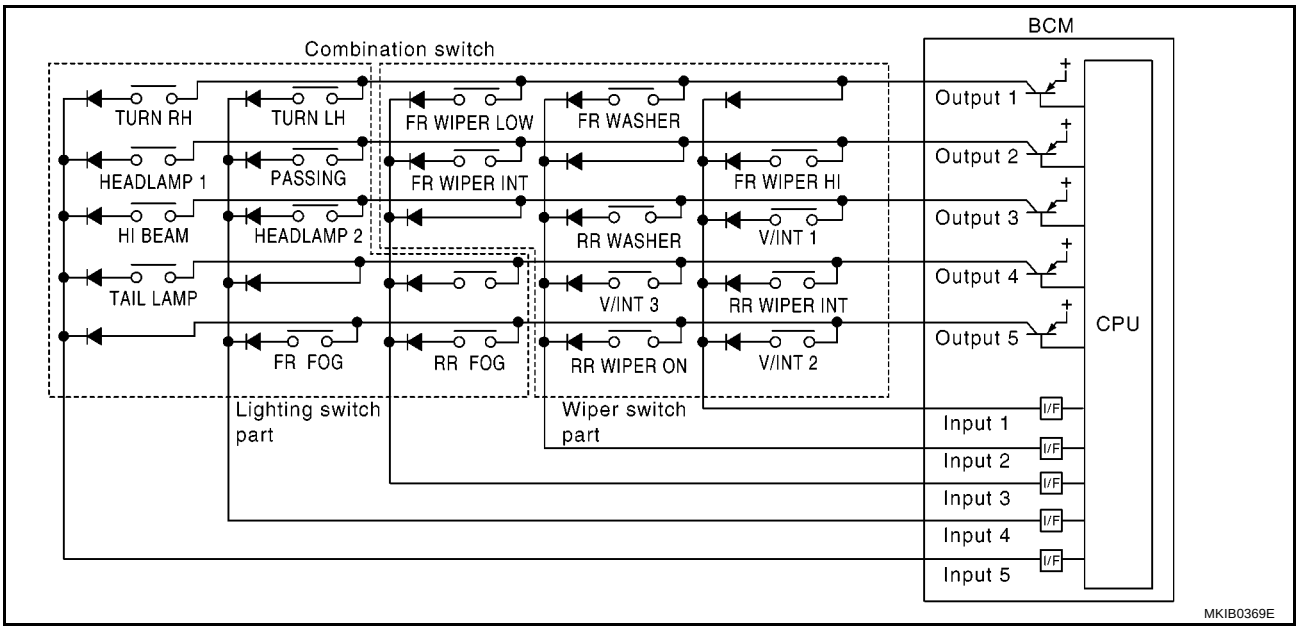
With power and ground supplied, the washer motor operates, and at the same time,
When the wiper switch is pulled to the WASH position for 1 second or more. BCM sends front wiper request signal (low) to IPDM E/R with CAN communication line. And the front wiper motor operates at low speed for approximately 3 times to clean wind shield

FAIL-SAFE FUNCTION

When CAN communication with other control units is impossible, IPDM E/R performs fail-safe control. If the fail-safe system is operating, front wiper low speed operates when the ignition switch is turned from OFF to ON or ACC and front wiper are stopped when the ignition switch is turn from ON or ACC to OFF. If the fail-safe system is operating, front wiper does not operate when the combination switch is in any position. After CAN communication recovers normally, it also returns to normal control.(Refer to PG-19, "FAIL-SAFE FUNCTION")

BCM WIPER SWITCH READING FUNCTION

BCM reads combination switch (wiper switch) status, and controls front wipers based on the results.
BCM is a combination of 5 output terminals (output 1 - 5) and 5 input terminals (input 1 - 5). It reads 20 types of switch data and 5 types of diagnosis data.



Operation Description

- BCM operates output terminal (output 1 to 5) transistor at a set period and turns ON the current in order.
- When any (or multiple) switches are turned ON, a circuit is formed between the output terminals (output 1 to 5) and input terminals (input 1 to 5).
- At this time, when output terminals (output 1 to 5) operate transistors and carry current. If voltage of corresponding input terminal (input 1 to 5) changes, interface in BCM detects this state and judges that switch is ON.

Table Of BCM - Combination Switch Operations

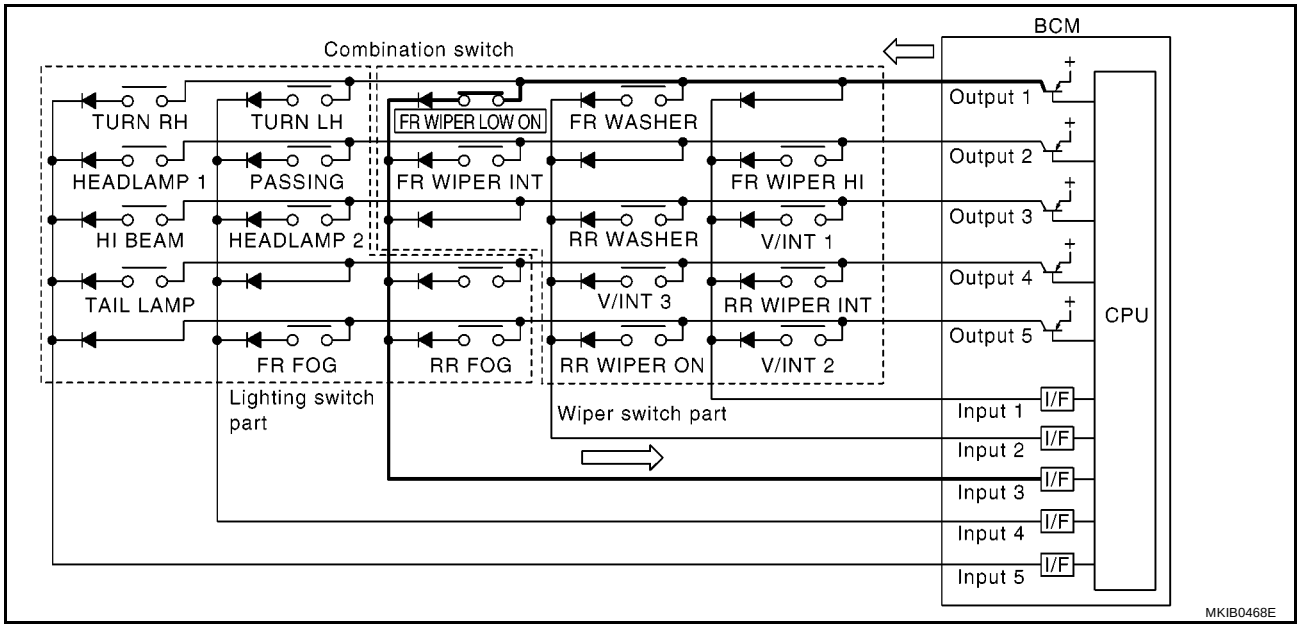
BCM reads operation status of combination switch using combinations shown in table below.

	Combination SW INPUT 1		Combination SW INPUT 2		Combination SW INPUT 3		Combination SW INPUT 4		Combination SW INPUT 5	
	ON	OFF	ON	OFF	ON	OFF	ON	OFF	ON	OFF
Combination SW OUTPUT 1	—	—	FR WIPER HI ON	FR WIPER HI OFF	V/INT 1 ON	V/INT 1 OFF	RR WIPER INT ON	RR WIPER INT OFF	V/INT 2 ON	V/INT 2 OFF
Combination SW OUTPUT 2	FR WASHER ON	FR WASHER OFF	—	—	RR WASHER ON	RR WASHER OFF	V/INT 3 ON	V/INT 3 OFF	RR WIPER ON	RR WIPER OFF
Combination SW OUTPUT 3	FR WIPER LOW ON	FR WIPER LOW OFF	FR WIPER INT ON	FR WIPER INT OFF	—	—	—	—	RR FOG ON	RR FOG OFF
Combination SW OUTPUT 4	TURN LH ON	TURN LH OFF	PASSING ON	PASSING OFF	HEADLAMP 2 ON	HEADLAMP 2 OFF	—	—	FR FOG ON	FR FOG OFF
Combination SW OUTPUT 5	TURN RH ON	TURN RH OFF	HEADLAMP 1 ON	HEADLAMP 1 OFF	HI BEAM ON	HI BEAM OFF	TAIL LAMP ON	TAIL LAMP OFF	—	—

MKIB0370E

Example: (Wiper Switch Placed In LO Position)

- If front wiper switch is placed in LO position, the contact of front wiper LO in combination switch is turned ON. At this time, when output 1 transistor operates, driver control unit detects that voltage has been changed at input 3.
- When output 1 transistor is ON and BCM detects current changes at input 3, BCM determines that wiper switch is at LO. BCM uses CAN communication and sends front wiper signals to IPDM E/R.
- When output 1 transistor operates again and BCM detects voltage change at input 3, BCM recognizes that front wiper LO operation is continuing.



NOTE:
Each output terminal transistor operates at 20 ms intervals. Therefore, a delay occurs between the switch becoming ON and operation of the electric load. However, this delay is too small to be detected.

Intermittent Operation

Wiper intermittent operation delay interval is determined from a combination of 3 switches (V/INT 1, V/INT 2, and V/INT 3) and vehicle speed signal.
During each intermittent operation delay interval, BCM sends front wiper request signal to IPDM E/R.

Wiper Volume Position Setting

Wiper dial position	Intermittent interval	Combination switch		
		V/INT 1	V/INT 2	V/INT 3
Wiper volume position 1	Small	ON	ON	ON
Wiper volume position 2		ON	ON	OFF
Wiper volume position 3		ON	OFF	OFF
Wiper volume position 4	↓	OFF	OFF	OFF
Wiper volume position 5		OFF	OFF	ON
Wiper volume position 6		OFF	ON	ON
Wiper volume position 7	Large	OFF	ON	OFF

Example: For wiper volume position 1.
Using combination switch reading function, BCM reads ON/OFF status of V/INT 1, 2, and 3.
When combination switch status is as listed below, BCM determines that it is wiper volume position 1.

- V/INT 1: ON (input 1 and output 3 are conducting.)
- V/INT 2: ON (input 1 and output 5 are conducting.)
- V/INT 3: ON (input 2 and output 4 are conducting.)

BCM determines front wiper intermittent interval from wiper volume 1 and vehicle speed, and sends wiper request signal (INT) to IPDM E/R for every intermittent interval via CAN communication line.

CAN Communication

EKS00K7Q

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00K7R

How to Proceed With Trouble Diagnosis

EKS00884

1. Confirm the symptoms and customer complaint.
2. Understand operation description and function description. Refer toWW-48, "System Description" .
3. Carry out the Preliminary check. Refer to WW-72, "Preliminary Inspection" .
4. Confirm front wiper does not operate by fail-safe control of IPDM E/R. Refer to PG-19, "FAIL-SAFE FUNCTION" .
5. Check symptom and repair or replace the cause of malfunction.
6. Does the front wiper operate normally? Yes: GO TO 7. No: GO TO 5.
7. INSPECTION END.

Preliminary Inspection

EKS008WE

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSE

- Check fuse and fusible link for blown-out.

Unit	Power source	Fuse No.
Front washer motor	Ignition ON or START	1
Front wiper main relay	Battery	38
BCM	Battery	J
	Ignition switch ON or START position	4

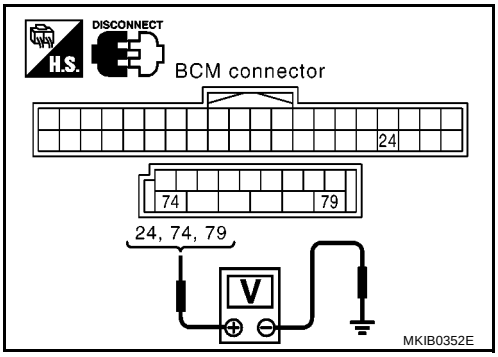
Refer to WW-68, "Wiring Diagram — A/WIP —"

OK or NG

OK >> GO TO 2.
NG >> If fuse is blown, be sure to eliminate cause of problem before installing new fuse, Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.



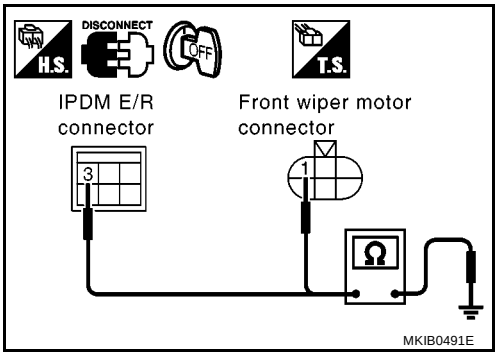
Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

OK or NG

OK >> GO TO 3.
NG >> Check harness for open or short between BCM and fuse.

3. CHECK GROUND CIRCUIT

1. Disconnect IPDM E/R harness connector and front wiper motor harness connector.
2. Check continuity between IPDM E/R harness connector, front wiper motor harness connector and ground.



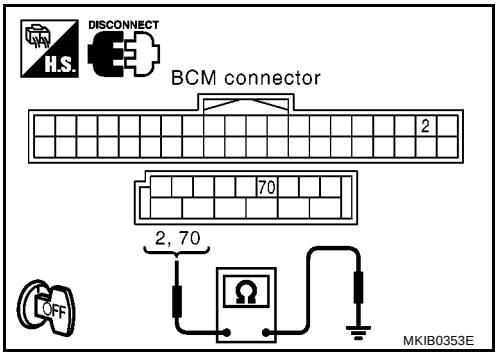
Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
E11	3 (B)	Ground	Yes
E44	1 (B)		

OK or NG

OK >> GO TO 4.
NG >> Harness for open ground circuit.

4. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.



Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70(B)	Ground	Yes

OK or NG

OK >> INSPECTION END.
NG >> Check harness ground circuit.

CONSULT-II Function (BCM)

EKS00886

Refer to WW-31, "CONSULT-II Function (BCM)" .

CONSULT-II Function (IPDM E/R)

EKS008W1

Refer to WW-33, "CONSULT-II Function (IPDM E/R)" .

Front Wiper Does Not Operate

EKS00889

Refer to WW-35, "Front Wiper Does Not Operate"

Front Wiper Does Not Return to Stop Position

EKS0088A

Refer to WW-37, "Front Wiper Does Not Return to Stop Position"

Front Wiper Low Speed Operation Does Not Operate.

EKS0088B

Refer to WW-38, "Front Wiper Low Speed Operation Does Not Operate"

Front Wiper High Speed Operation Does Not Operate

EKS0088C

Refer to WW-39, "Front Wiper High Speed Operation Does Not Operate"

Front Wiper INT Does Not Operate

EKS0088D

Refer to LT-196, "Check Combination Switch" .

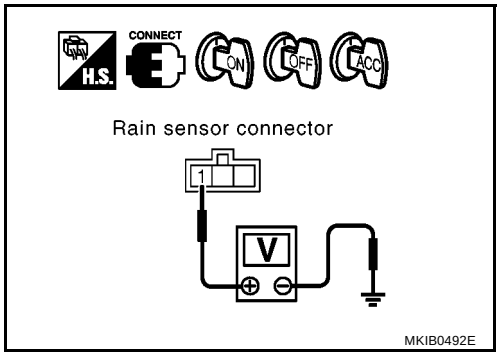
Auto Wiper Does Not Operate Properly

EKS0088T

1. CHECK RAIN SENSOR POWER SUPPLY CIRCUIT

1. Turn ignition switch ON.
2. Check voltage between rain sensor and ground.

Connector	Terminal (wire color)		Ignition switch position		
	(+)	(-)	OFF	ACC	ON
R3	1 (W)	Ground	0	0	Battery voltage



OK or NG

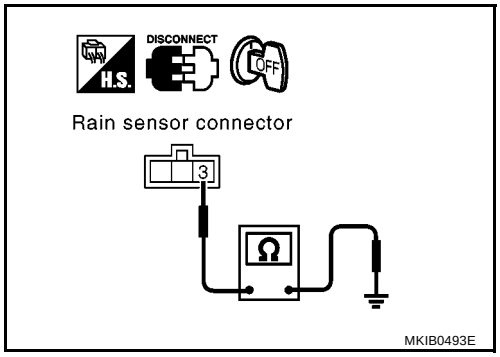
OK >> GO TO 2.
NG >> Check the following.

- 10A fuse [No.4, located in fuse block (J/B)].
- Harness for open or short between rain sensor and fuse.

2. CHECK RAIN SENSOR GROUND CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect rain sensor connector.
3. Check continuity between rain sensor harness connector R3 terminal 3 (B) and ground.

Continuity should exist.



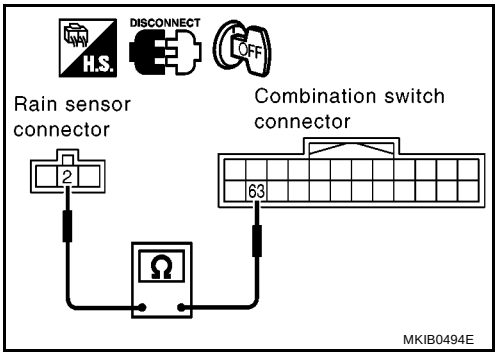
OK or NG

OK >> GO TO 3.
NG >> Repair harness ground circuit.

3. CHECK RAIN SENSOR INPUT SIGNAL CIRCUIT

1. Disconnect BCM connector.
2. Check continuity between BCM harness connector M49 terminal 63 (BR) and rain sensor harness connector R3 terminal 2 (BR).

Continuity should exist.



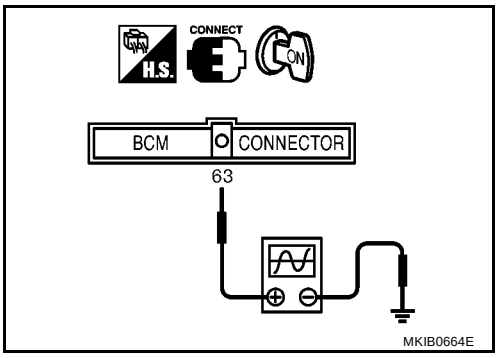
OK or NG

OK >> GO TO 4.
NG >> Repair harness or connector.

4. CHECK RAIN SENSOR INPUT SIGNAL

1. Connect BCM connector and rain sensor connector.
2. Turn ignition switch ON
3. Check voltage signal between BCM harness connector M49 terminal 63 (BR) and ground.

Wiper is stopped	Wiper is operate (Apply a few drops of water to detection attachment)
 MKIB0173E	 MKIB0174E



OK or NG

OK >> Replace BCM.
NG >> Replace rain sensor.

After Front Wipers Operate for 10 Seconds, They Stop for 20 Seconds

EKS0088F

Refer to WW-41, "After Front Wipers Operate for 10 Seconds, They Stop for 20 Seconds"

Front Wipers Do Not Stop

EKS0088G

Refer to PG-49, "IPDM E/R Terminal Inspection" .

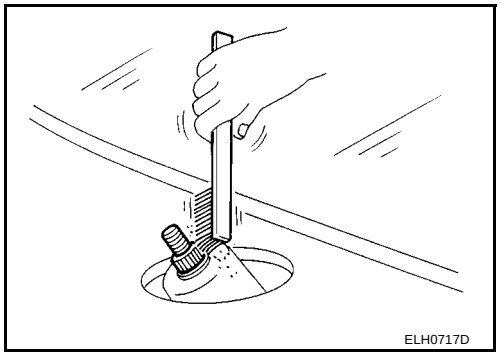
Removal and Installation of Front Wiper Arm

EKS008WF

REMOVAL

1. Turn the wiper switch ON to operate the wiper motor, then turn it OFF (auto stop).
2. Open hood, remove nut cover, and remove wiper arm nut.
3. Lift up driver wiper arm and remove wiper arm from vehicle.
4. Close hood, lift up passenger wiper arm, and remove wiper arm from vehicle.

Before attaching the front wiper arm, clean the arm mount shown in the figure to prevent nuts from being loosened.



ELH0717D

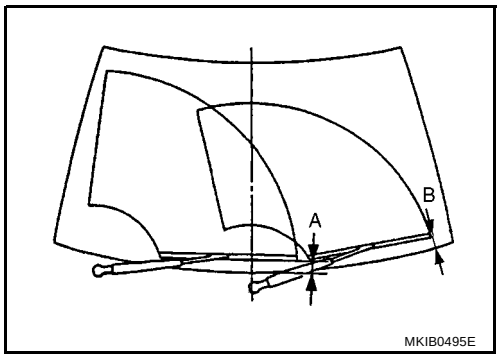
INSTALLATION

1. Lower wiper blade to glass so that center end of blade comes to the position shown in diagram. Align blade end with marking set within blade set position black print.)
2. Tighten wiper arm nuts.

Wiper arm nut:

: 20.6 - 26.5 N·m (2.1 - 2.7 kg-m, 15- 20 ft-lb)

3. Spray washer fluid. Turn wiper switch ON to operate wiper motor, then turn it OFF (auto stop).
4. Make sure wiper blade stops at the position shown in the figure.



MKIB0495E

Stop position A : 33.7 - 48.7 mm (1.327 - 1.917 in)

Stop position B : 33.7 - 48.7 mm (1.327 - 1.917 in)

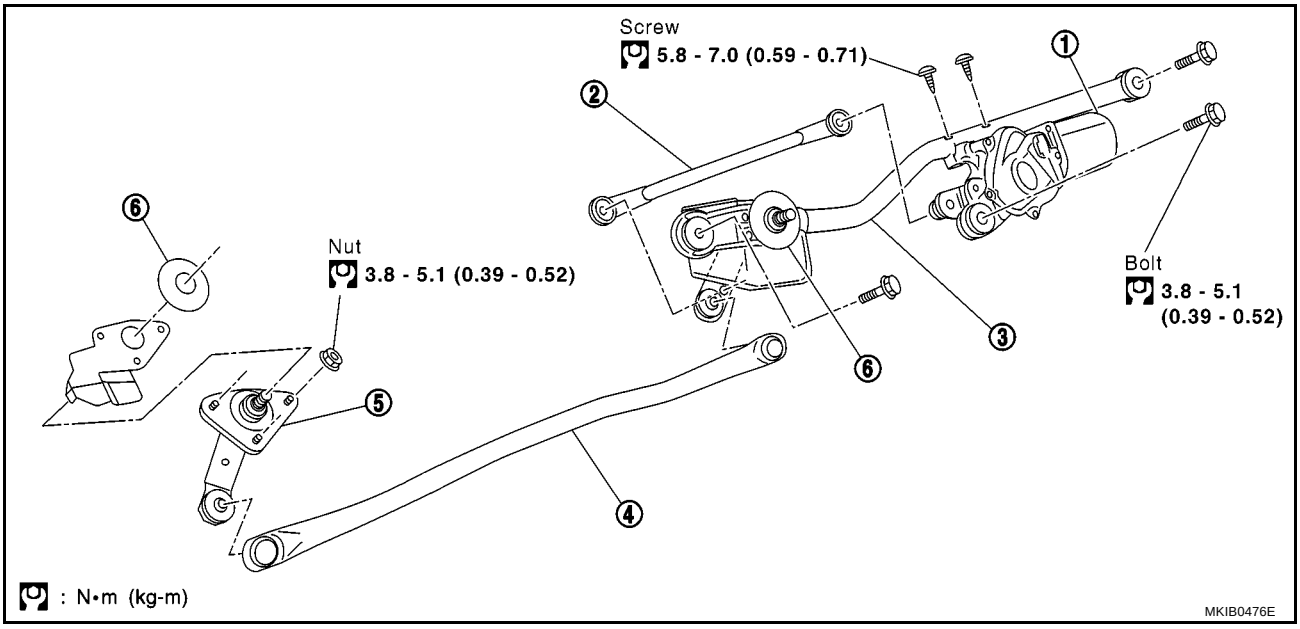
Adjustment of Front Wiper Arm Stop Position

EKS0088I

Refer to WW-76, "Removal and Installation of Front Wiper Arm" .

Removal and Installation of Front Wiper Motor and Link

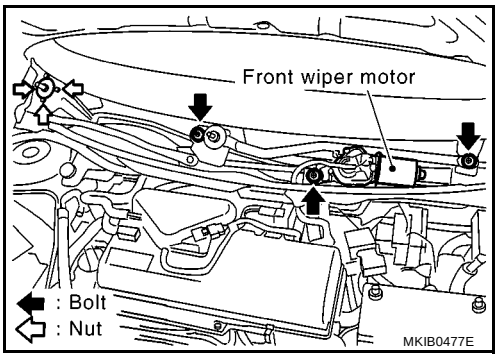
EKS0088J



1. Wiper motor
2. Wiper link
3. Wiper frame
4. Wiper link
5. Pivot
6. Shaft seal

REMOVAL

1. Operate the wiper motor, and stop it at the auto stop position.
2. Remove wiper arm nuts, and remove wiper arm from vehicle.
3. Remove cowl top cover. Refer to EI-10, "COWL TOP" .
4. Remove wiper motor connector.
5. Remove shaft seal
6. Remove wiper motor assembly bolts and driver pivot nuts, and then remove wiper motor assembly from vehicle.
7. Remove the wiper link from the wiper frame and the motor arm.
8. Remove wiper motor screws, and then remove wiper motor from wiper frame.



INSTALLATION

1. Connect the wiper motor to the vehicle-side connector. Turn the wiper switch ON to operate the wiper motor, then turn the wiper switch OFF (auto stop).
2. Disconnect wiper motor connector.
3. Install wiper motor to wiper frame.

Wiper motor screw

: 5.8 - 7.0 N·m (0.59 - 0.71 kg-m, 51 - 62 in-lb)

4. Install wiper link to wiper frame and motor arm.
5. Connect wiper motor assembly to the connector. Turn wiper switch ON to operate wiper motor, then turn wiper switch OFF (auto stop).
6. Install the wiper motor assembly to the vehicle.

Wiper motor assembly bolt

: 3.8 - 5.1 N·m (0.39 - 0.52 kg-m, 34 - 45 in-lb)

Pivot nut

: 3.8 - 5.1 N·m (0.39 - 0.52 kg-m, 34 - 45 in-lb)

7. Install shaft seal
8. Install cowl top cover. Refer to EI-10, "COWL TOP" .
9. Attach wiper arms.

CAUTION:

- **Do not drop the wiper motor or cause it to contact other parts.**
- **Check the grease conditions of the motor arm and wiper link joint (at retainer). Apply grease if necessary.**
  NISSAN MP special grease No. 2 (KRB0012025)

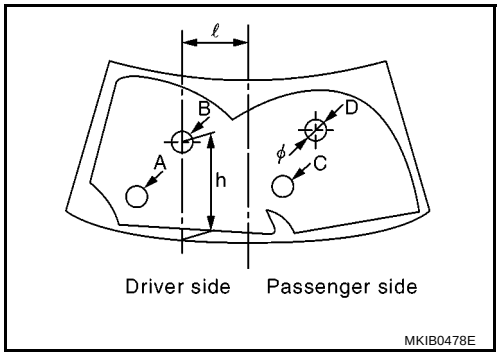
Adjustment of Spray Positions of Front Washer Nozzle

EKS0088K

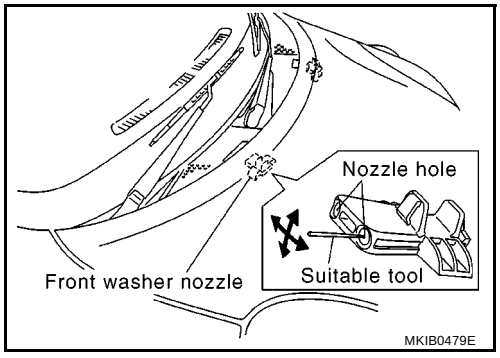
Adjust spray positions to match the positions listed below.

Unit: mm (in)

Spray position	h	l (width)	ϕ (spray point area)
A	165 (6.50)	375 (14.76)	80 (3.15)
B	342 (13.46)	157 (6.18)	80 (3.15)
C	253 (9.96)	109 (4.29)	80 (3.15)
D	347 (13.66)	299 (11.77)	80 (3.15)

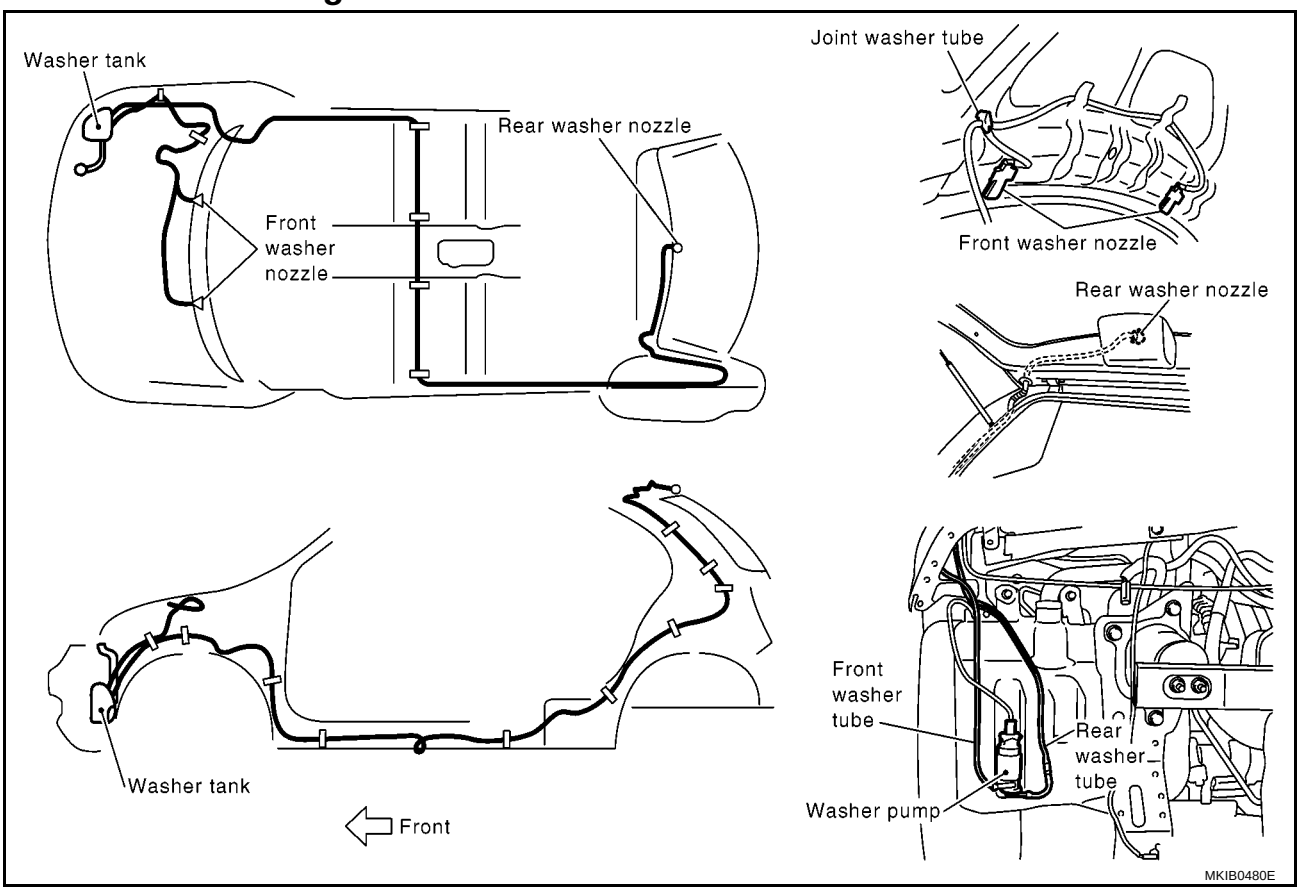


To adjust the spray position, insert a needle or similar object into the spray opening and move up/down and left/right.



Washer Hose Routing

EKS0088L

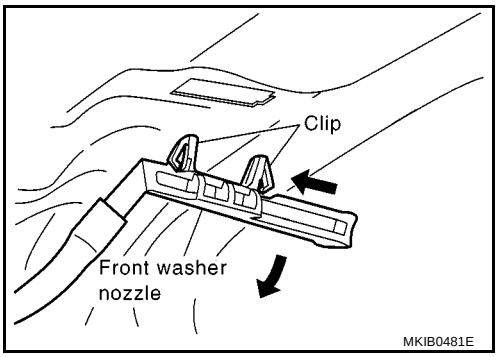


Removal and Installation of Front Washer Nozzle

EKS0088M

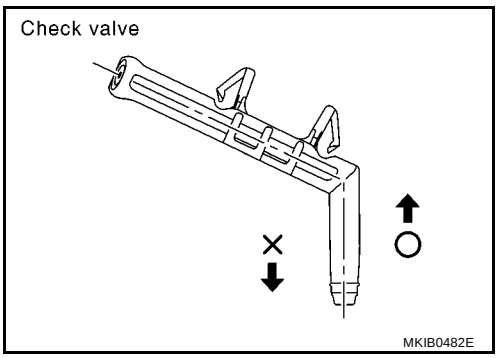
REMOVAL

1. Open hood.
2. While pushing nozzle spray point side along body, use the nozzle stop point as the support point and rotate nozzle to remove it from body.
3. Remove washer tube.



CHECK VALVE INSPECTION

Make sure air can pass through the hose by blowing forward (toward the nozzle) and air cannot pass through by sucking.



INSTALLATION

1. Install washer tube in nozzle.
2. Install nozzle to body.

3. Adjust nozzle spray location.

CAUTION:
The spray points differ, so be sure to install left and right nozzles correctly.

Inspection of Front Wiper and Washer Switch Circuit

EKS0088N

Refer to LT-196, "Check Combination Switch" .

Removal and Installation of Front Wiper and Washer Switch

EKS0088O

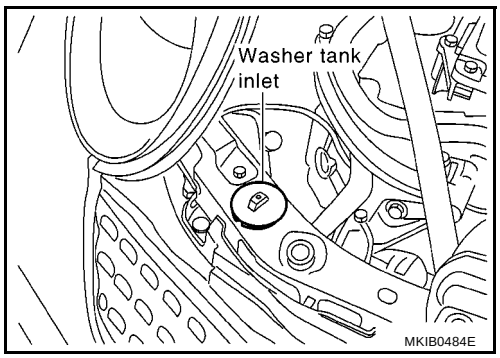
Refer to LT-199, "Removal and Installation" .

Removal and Installation of Front Wiper and Washer Tank

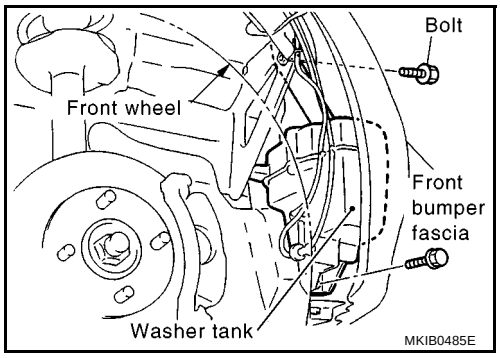
EKS0088P

REMOVAL

1. Remove cap, and while pushing down fill opening, remove washer tank inlet from radiator core support upper.



2. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
3. Remove washer pump connector.
4. Remove washer tank bolts.



5. Remove the washer hose, and remove the washer tank from the vehicle.

INSTALLATION

Note the following, and install in the reverse order of removal.

CAUTION:
After installing, add water up to the top of the inlet washer tank. Make sure there is no leakage.

Washer tank mounting screw

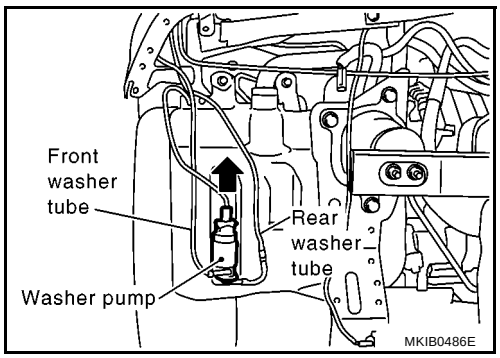
: 3.8 - 5.1 N·m (0.39 - 0.52 kg-m, 34 - 45 in-lb)

Removal and Installation of Front Wiper and Washer Pump

EKS0088Q

REMOVAL

1. Remove fender protector. Refer to EI-11, "FENDER PROTECTOR" .
2. Remove washer pump connector and hose.
3. Pull out the washer pump in the direction shown by the arrow, and remove the washer pump from the washer tank.



INSTALLATION

Paying attention to the items listed below, install in the reverse order of removal.

CAUTION:

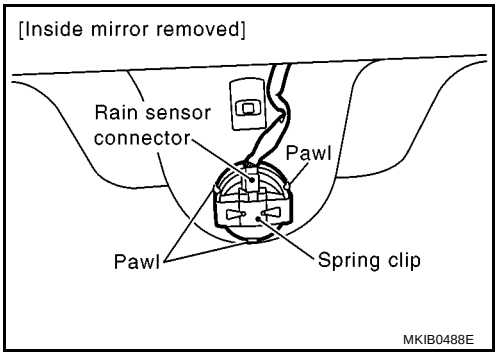
When installing the washer pump, there must be no twisting or other unusual stress on the packing.

Removal and Installation of Rain Sensor

EKS0088V

REMOVAL

1. Remove inside mirror. Refer to GW-80, "INSIDE MIRROR" .
2. Remove clip and pawl.
3. Pull out the rain sensor.
4. Remove rain sensor harness connector.



SMA for VIN >SJNxxAK12U1000000

INSTALLATION

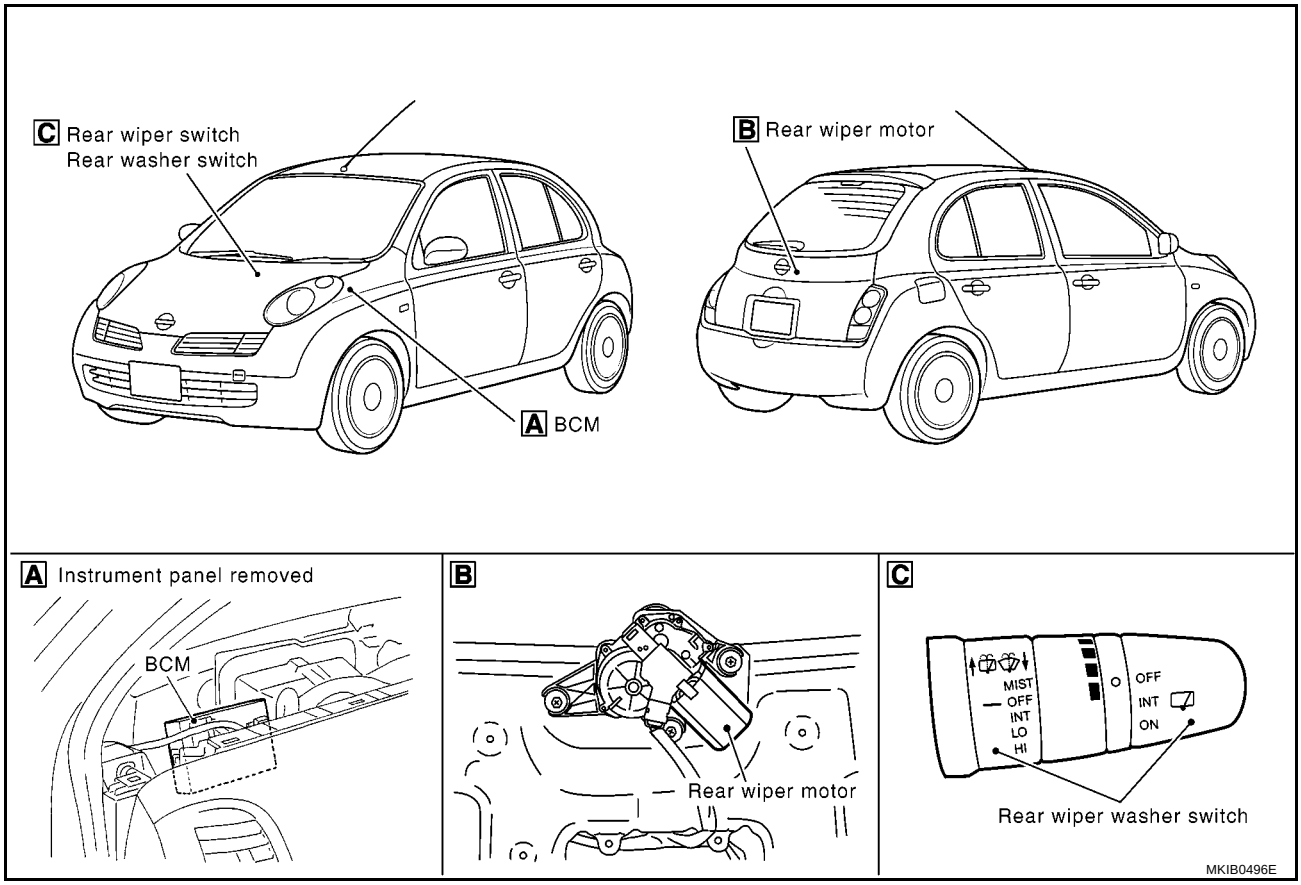
Install in the reverse order of removal.

REAR WIPER AND WASHER SYSTEM

PFP:28710

Components Parts and Harness Connector Location

EKS0087E



System Description

EKS0087F

- Wiper switch (combination switch) is composed of a combination of 5 output terminals and 5 input terminals. Terminal combination status is read by BCM when switch is turned ON.
- BCM controls rear wiper and INT (intermittent) operation.

Power is supplied at all times

- through 40A fusible link (letter J, located in fuse and fusible link box)
- to BCM terminals 74 and 79.

When ignition switch turned ON or START position, power is supplied

- through 10A fuse [No. 4 located in the fuse block (J/B)]
- to BCM terminal 24.
- through 15A fuse [No. 1 located in the fuse block (J/B)]
- to combination switch terminal 11.

Ground is supplied

- through body grounds M19 and M20
- to BCM terminals 2 and 70, and
- to combination switch terminal 12.
- through body ground B17, B23, B44 and B51
- to rear wiper motor terminal 3.

WIPER OPERATION

BCM read combination switch condition (Refer to WW-83, "BCM WIPER SWITCH READING FUNCTION"), Power is supplied

- through BCM terminal 71
- to rear wiper motor terminal 1.

Ground is supplied

- to rear wiper motor terminal 3
- through body grounds B17, B23, B44 and B51.

With power and ground supplied, the rear wiper motor operates.

INTERMITTENT OPERATION

The rear wiper motor operates the wiper arms at low speed of approximately every 7 seconds. This feature is controlled by the BCM.
When rear wiper switch is placed in INT position, BCM read combination switch condition (Refer to WW-83, "BCM WIPER SWITCH READING FUNCTION"), power is supplied.

- through BCM terminal 71.
- to rear wiper motor terminal 1

Ground is supplied.

- to rear wiper motor terminal 3
- through body ground B17, B23, B44 and B51.

The wiper motor operates at intermittent.

WASHER OPERATION

When rear wiper switch is pushed to WASH position,
Power is supplied.

- through combination switch terminal 14
- to washer motor terminal 2.

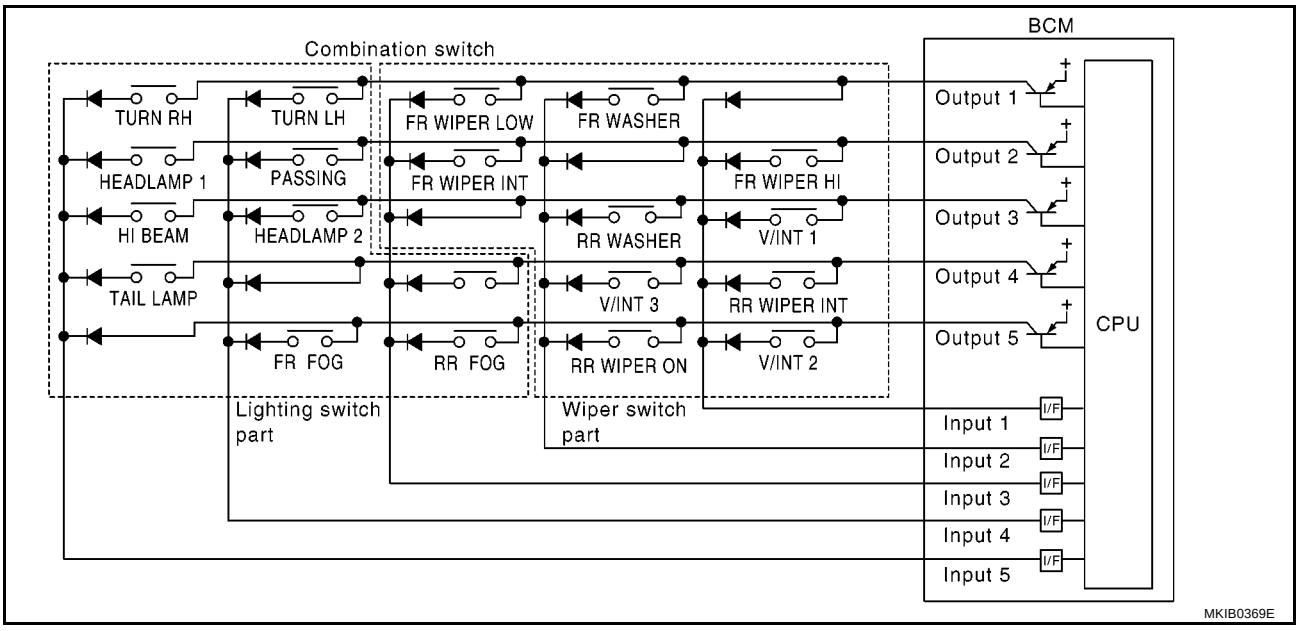
Ground is supplied

- to washer motor terminal 1
- to combination switch terminals 12 and 13, and
- through grounds M19 and M20.

With power and ground supplied, the rear washer motor is operated, and at the same time,
When the wiper switch is pushed to the WASH position for 1 second or more, BCM reads combination switch condition (Refer to WW-83, "BCM WIPER SWITCH READING FUNCTION"), rear wiper motor is operated by BCM, and the rear wiper motor operates approximately 3 times after wiper switch is released.

BCM WIPER SWITCH READING FUNCTION

BCM reads combination switch (wiper switch) status, and controls rear wipers based on the results.
BCM is a combination of 5 output terminals (output 1 - 5) and 5 input terminals (input 1 - 5). It reads 20 types of switch data and 5 types of diagnosis data.



Operation Description

- BCM operates output terminal (output 1 to 5) transistor at a set period and turns ON the current in order.
- When any (or multiple) switches are turned ON, a circuit is formed between the output terminals (output 1 to 5) and input terminals (input 1 to 5).
- At this time, when output terminals (output 1 to 5) operate transistors and carry current. If voltage of corresponding input terminal (input 1 to 5) changes, interface in BCM detects this state and judges that switch is ON.

Table of BCM - Combination Switch Operations

BCM reads operation status of combination switch using combinations shown in table below.

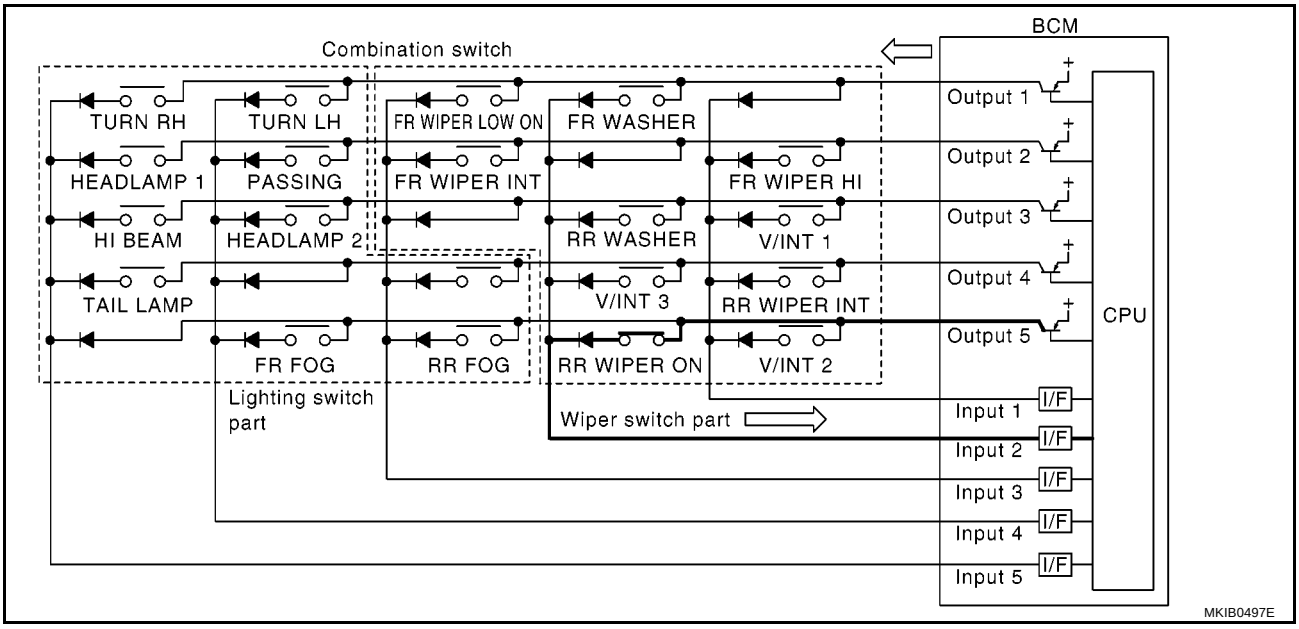
	Combination SW INPUT 1		Combination SW INPUT 2		Combination SW INPUT 3		Combination SW INPUT 4		Combination SW INPUT 5	
	ON	OFF	ON	OFF	ON	OFF	ON	OFF	ON	OFF
Combination SW OUTPUT 1	—	—	FR WIPER HI ON	FR WIPER HI OFF	V/INT 1 ON	V/INT 1 OFF	RR WIPER INT ON	RR WIPER INT OFF	V/INT 2 ON	V/INT 2 OFF
Combination SW OUTPUT 2	FR WASHER ON	FR WASHER OFF	—	—	RR WASHER ON	RR WASHER OFF	V/INT 3 ON	V/INT 3 OFF	RR WIPER ON	RR WIPER OFF
Combination SW OUTPUT 3	FR WIPER LOW ON	FR WIPER LOW OFF	FR WIPER INT ON	FR WIPER INT OFF	—	—	—	—	RR FOG ON	RR FOG OFF
Combination SW OUTPUT 4	TURN LH ON	TURN LH OFF	PASSING ON	PASSING OFF	HEADLAMP 2 ON	HEADLAMP 2 OFF	—	—	FR FOG ON	FR FOG OFF
Combination SW OUTPUT 5	TURN RH ON	TURN RH OFF	HEADLAMP 1 ON	HEADLAMP 1 OFF	HI BEAM ON	HI BEAM OFF	TAIL LAMP ON	TAIL LAMP OFF	—	—

MKIB0370E

Sample Operation: (Rear Wiper Switch Placed In LO Position)

- If rear wiper switch is turned to ON position, the contact of rear wiper ON in combination switch is turned ON. At this time, when output 5 transistor operates, driver control unit detects that voltage has been changed at input 2.
- When output 5 transistor is ON and BCM detects current changes at input 2, BCM determines that wiper switch is at ON.

- When output 5 transistor operates again and BCM detects voltage change at input 2, BCM recognizes that rear wiper ON operation is continuing.



NOTE:
Each OUTPUT terminal transistor is activate at 20 ms intervals. Therefore, after a switch is turned ON, electrical loads are activated with a time delay, However, this delay is so small it is undetectable.

CAN Communication

EKS00K7S

SYSTEM DESCRIPTION

CAN (Controller Area Network) is a serial communication line for real time application. It is an on-vehicle multiplex communication line with high data communication speed and excellent error detection ability. Many electronic control units are equipped onto a vehicle, and each control unit shares information and links with other control units during operation (not independent). In CAN communication, control units are connected with 2 communication lines (CAN H line, CAN L line) allowing a high rate of information transmission with less wiring. Each control unit transmits/receives data but selectively reads required data only.

CAN Communication Unit

EKS00K7T

Go to CAN system, when selecting your car model from the following table.

Terminals and Reference Values for BCM

EKS0087G

Terminal No.	Wire color	Signal designation	Measuring condition		Reference value (V)
			Ignition switch	Operation or condition	
2	B	Ground	ON	—	Approx. 0
7	BR	Combination switch input 5	ON	Headlamps, turn signal, wipers OFF	 SKIA2167J
8	L	Combination switch input 3			
9	PU	Combination switch input 1			
27	GY	Combination switch input 4			
28	G	Combination switch input 2			
13	GY	Combination switch output 1	ON	Headlamps, turn signal, wipers OFF (wiper volume is 1 or 7)	 SKIA2166J
14	P	Combination switch output 3			
15	W	Combination switch output 5			
33	R	Combination switch output 2		Headlamps, turn signal, wipers OFF (wiper volume is other than 1 or 7)	 SKIA2167J
34	Y	Combination switch output 4			
23	P	Rear wiper position detection signal	ON	Rear wiper operating	Approx. 0
				Rear wiper not operating	Approx. 12
24	OR	Ignition power supply	ON	—	Approx. 12
70	B	Ground	ON	—	Approx. 0
71	BR	Rear wiper operation signal	ON	Rear wiper operating	Approx. 12
				Rear wiper not operating	Approx. 0
74	W	Battery power supply	OFF	—	Approx. 12
79	Y	Battery power supply	OFF	—	Approx. 12

How to Proceed With Trouble Diagnosis

EKS0087I

1. Confirm the symptoms and customer complaint.
2. Understand operation description and function description. Refer toWW-82, "System Description" .
3. Carry out the Preliminary check. Refer to WW-103, "Preliminary Check" .
4. Check symptom and repair or replace the cause of malfunction.
5. Does the rear wiper operate normally? Yes: GO TO 6. No: GO TO 4.
6. INSPECTION END.

Preliminary Check

EKS008WI

CHECK POWER SUPPLY AND GROUND CIRCUIT

1. CHECK FUSES

- Check fuse and fusible link for blown-out.

UNIT	POWER SOURCE	FUSE No.
BCM	Battery	J
	Ignition switch ON or START position	4
Combination switch	Ignition switch (ON)	1

Refer to WW-100, "Wiring Diagram — WIP/R —" .

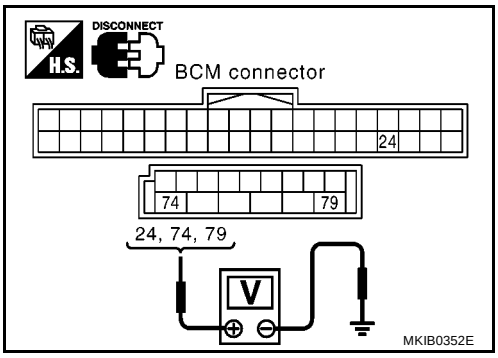
OK or NG

OK >> GO TO 2.

NG >> If fuse is blown, be sure to eliminate cause of malfunction before installing new fuse. Refer to PG-4, "POWER SUPPLY ROUTING" .

2. CHECK POWER SUPPLY CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM connector.
3. Check voltage between BCM harness connector and ground.



Terminals			Ignition switch position		
(+)		(–)	OFF	ACC	ON
Connector	Terminal (Wire color)				
M50	74 (W)	Ground	Battery voltage	Battery voltage	Battery voltage
M50	79 (Y)		Battery voltage	Battery voltage	Battery voltage
M48	24 (OR)		0V	0V	Battery voltage

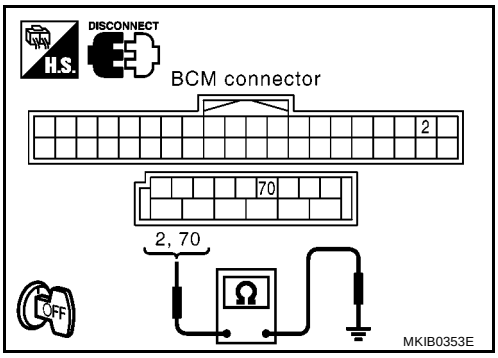
OK or NG

OK >> GO TO 3.

NG >> Check harness for open or short between BCM and fuse.

3. CHECK GROUND CIRCUIT

Check continuity between BCM harness connector and ground.



Terminals			Continuity
(+)		(–)	
Connector	Terminal (Wire color)		
M48	2 (B)	Ground	Yes
M50	70(B)	Ground	Yes

OK or NG

OK >> INSPECTION END.

NG >> Check harness ground circuit.

CONSULT-II Function (BCM)

EKS007BF

Refer to WW-31, "CONSULT-II Function (BCM)" .

Rear Wiper Does Not Operate

EKS0087K

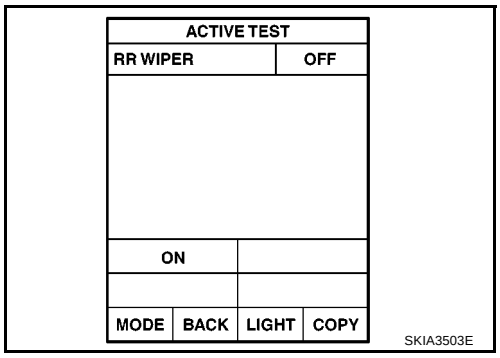
1. CHECK REAR WIPER OPREATION

With CONSULT-II

1. Select “BCM” by CONSULT-II, and select “ACTIVE TEST” on “SELECT DIAG MODE” screen.
2. Select “REAR WIPER” on “SELECT TEST ITEM” screen.
3. Make sure that rear wipers operate normally.

Without CONSULT-II

1. Start up auto active test. Refer to PG-42, "Auto Active Test" .
2. Make sure that rear wipers operate normally.



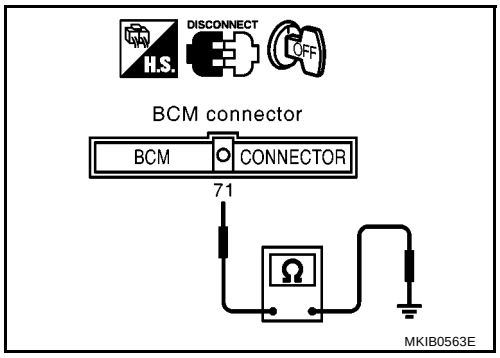
OK or NG

OK >> GO TO LT-196, "Check Combination Switch" .
NG >> GO TO 2.

2. CHECK BCM OUTPUT SIGNAL

1. Turn ignition switch to ON.
2. Rear wiper switch is in placed in ON position.
3. Check voltage between BCM harness connector M50 terminal 71(BR) and ground.

Connector terminal			Measuring condition	Voltage [V]
(+)		(-)		
Connector	Terminal (wire color)			
B53	71 (BR)	Ground	Rear wiper stopped	Approx 0
			Rear wiper operating	Battery voltage



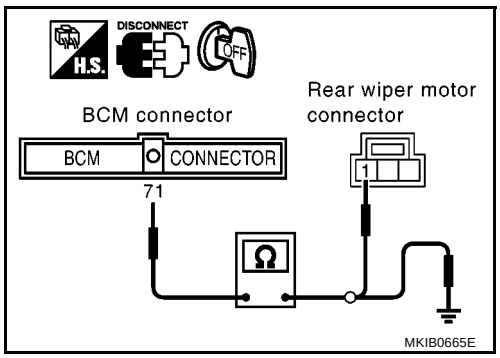
OK or NG

OK >> GO TO 3.
NG >> Replace BCM.

3. CHECK REAR WIPER MOTOR CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect BCM and rear wiper connector.
3. Check continuity between BCM harness connector M50 terminal 71(BR) and rear wiper motor harness connector B53 terminal 1(BR).
4. Check continuity between BCM harness connector M50 terminal 71(BR) and ground.

71 (BR) – 1 (BR) :Continuity should exist.
71 (BR) – Ground :Continuity should not exist.



OK or NG

OK >> GO TO 4.
NG >> Repair or replace harness.

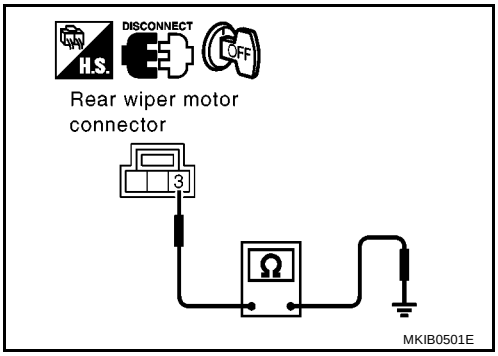
4. CHECK REAR WIPER MOTOR GROUND

Check continuity between rear wiper motor harness connector B53 terminal 3(B) and ground.

Continuity should exist.

OK or NG

OK >> Replace rear wiper motor.
NG >> Repair harness or connector.



Rear Wiper Stop Position Is Not Restored

EKS0087L

1. CHECK AUTO STOP INPUT SIGNAL

With CONSULT-II

Select BCM on CONSULT-II.Check (“RR WIPER STOP”) in “DATA MONITOR” mode with CONSULT-II.

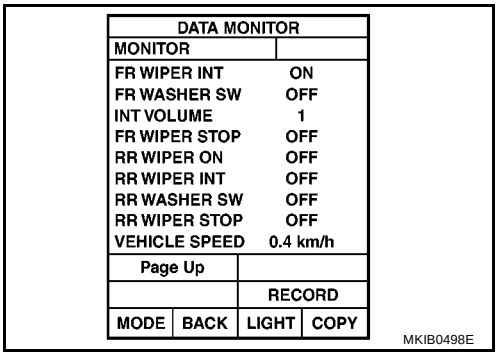
When rear wiper is operating : RR WIPER STOP OFF
When rear wiper is stopped : RR WIPER STOP ON

Without CONSULT-II

GO TO 2.

OK or NG

OK >> Replace BCM.
NG >> GO TO 2.



2. CHECK BCM OUTPUT SIGNAL

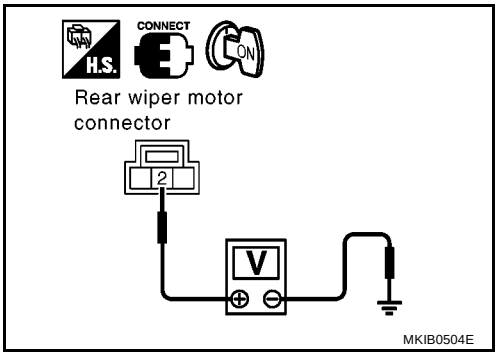
While rear wiper motor is stopped and while operating, measure voltage between rear wiper motor connector terminal 2 and ground.

1. Turn ignition switch is ON.
2. Rear wiper switch is placed in INT position.
3. Check voltage between BCM and rear wiper motor.

(+)		(-)	Condition	Voltage [V]
Connector	Terminal (wire color)			
B53	2 (P)	Ground	Wiper operating	Approx. 0
			Wiper stopped	Battery voltage

OK or NG

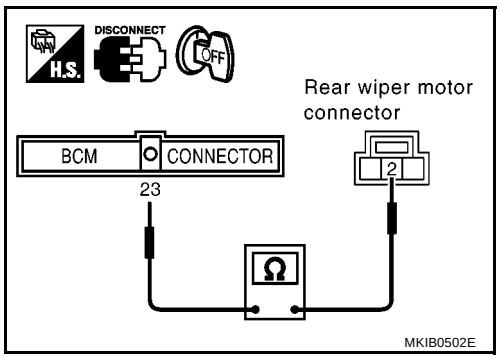
OK >> GO TO 3.
NG >> Replace BCM.



3. CHECK AUTO STOP CIRCUIT

1. Turn ignition switch OFF.
2. Disconnect the BCM connector and rear wiper motor connector.
3. Check continuity between BCM harness connector M48 terminal 23(P) and front wiper motor harness connector B53 terminal 2(P).

Continuity should exist.

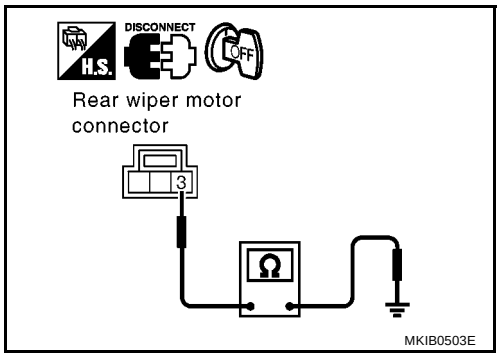


4. Check continuity between rear wiper motor harness connector B53 terminal 3(B) and ground.

Continuity should exist.

OK or NG

OK >> Replace rear wiper motor.
NG >> Repair harness or connector.



Only Rear Wiper INT Does Not Operate

EKS0087M

Refer to LT-196, "Check Combination Switch" , and check it.

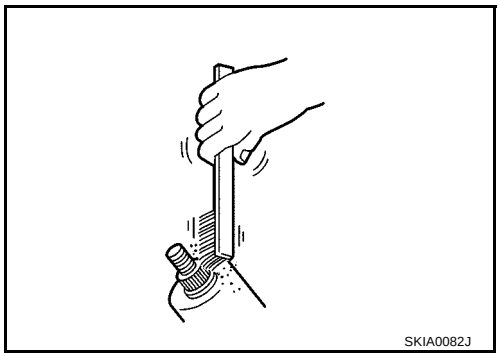
Removal and Installation of Rear Wiper Arm

EKS007BH

REMOVAL

1. Turn the wiper switch ON to operate the wiper motor, then turn it OFF (auto stop).
2. Lift up nut cover and remove nut.
3. Raise wiper arm, and remove wiper arm from the vehicle.

When attaching rear wiper arm, clean wiper installation location as shown in figure to prevent loosening of nut.



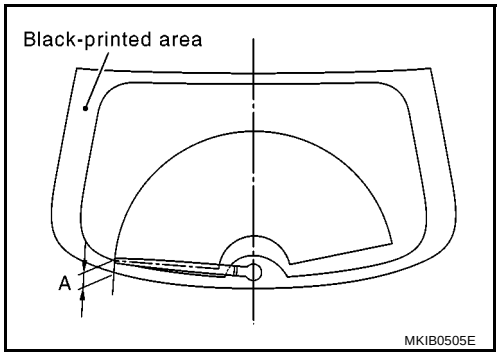
INSTALLATION

1. Lower wiper blade to glass so that center end of blade comes to the position shown in diagram.
2. Tighten the wiper arm with nuts and install the nut cover.

Wiper arm nut:

: 10.8 - 13.2 N·m (1.1 - 1.3 kg-m, 8- 10 ft-lb)

3. Spray washer fluid. Turn wiper switch ON to operate wiper, then turn it OFF (auto-stop).
4. Make sure wiper blade stops at the position shown in the figure.



Stop position A : 25.5 - 40.5 mm (1.004 - 1.594 in)

NOTE:
Installation is made easier by aligning wiper blade end to line under black printing.

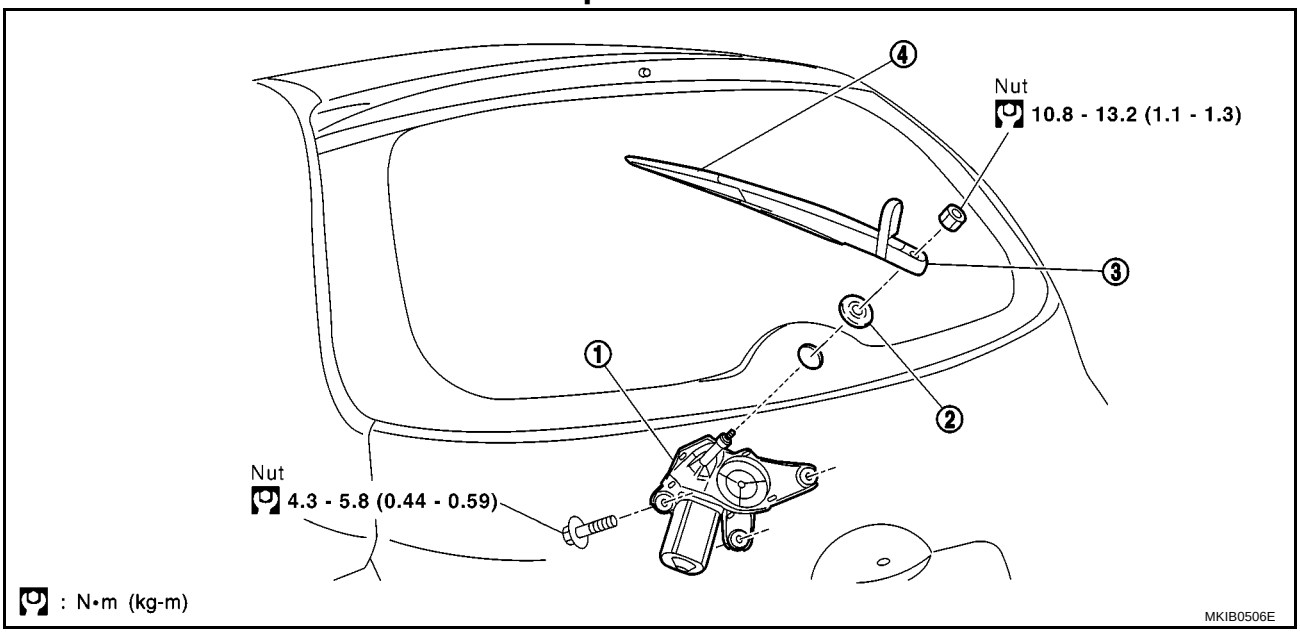
Adjusting Rear Wiper Arm Stop Position

EKS007BI

Refer to WW-106, "Removal and Installation of Rear Wiper Arm" .

Removal and Installation of Rear Wiper Motor

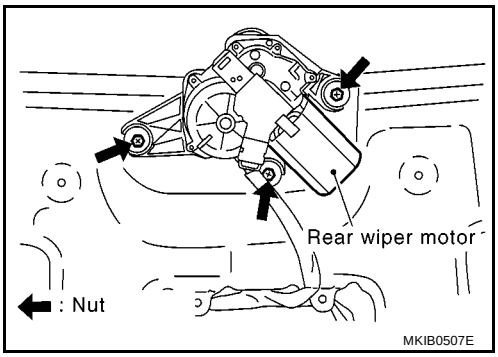
EKS007BJ



1. Rear wiper motor
2. Seal rubber
3. Rear wiper arm
4. Wiper blade

REMOVAL

1. Remove back door finisher. Refer to EI-18, "BACK DOOR TRIM" .
2. Turn wiper switch ON to operate wiper, then turn it OFF (auto-stop).
3. Disconnect wiper motor connector.
4. Lift up nut cover, remove wiper arm nut, and lift up wiper arm to remove it from vehicle.
5. Remove wiper motor screws. Remove wiper motor from vehicle.
6. Remove seal rubber from vehicle.



CAUTION:
Do not drop the wiper motor or cause it to contact other parts.

INSTALLATION

1. Remove seal rubber from vehicle.
2. Attach wiper motor to vehicle.

Wiper motor screw

: 4.3 - 5.8 N·m (0.44 - 0.59 kg-m, 38 - 51 in-lb)

3. Connect the wiper motor to the vehicle-side connector. Turn the wiper switch ON to operate the wiper motor, then turn the wiper switch OFF (auto stop).
4. Attach wiper arm to vehicle.

Wiper arm nut:

: 10.8 - 13.2 N·m (1.1 - 1.3 kg-m, 8 - 10 ft-lb)

5. Adjust wiper arm stop position.
6. Put down nut cover.
7. Install back door finisher. Refer to EI-18, "BACK DOOR TRIM" .

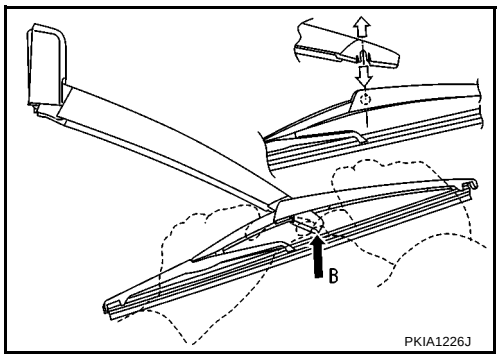
Rear Wiper Blade

EKS007BK

REMOVAL AND INSTALLATION

1. Hold the wiper blade with both hands, push arm end in arrow B direction, remove lock, and remove blade.

   CAUTION:
   To replace blade, replace blade assembly.

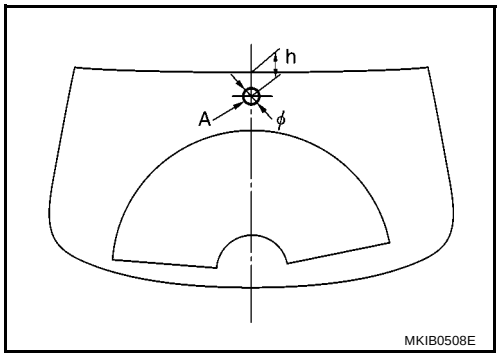


Adjusting Rear Washer Nozzle Spray Position

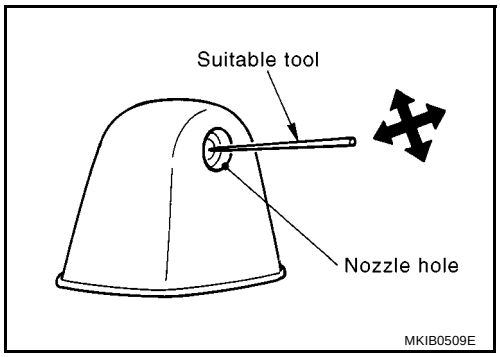
EKS007BL

Adjust spray positions to match the positions listed below.

Spray position	H (height)	ϕ (spray point area)
A	20	30



To adjust the spray position, insert a needle or similar object into the spray opening and move up/down and left/right.



Rear Washer Hose Circuit

EKS007BM

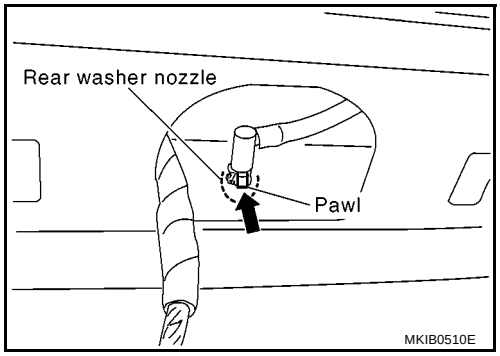
Refer to WW-45, "Washer Hose Routing" .

Removal and Installation of Rear Washer Nozzle

EKS007BN

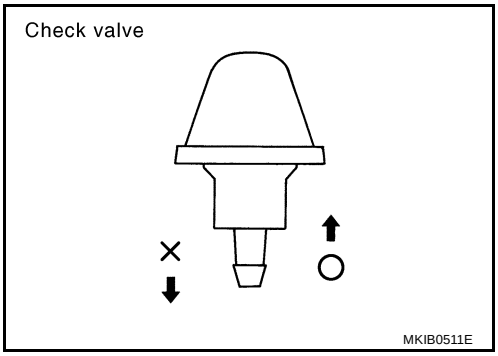
REMOVAL

1. Remove high-mount stop lamp. Refer to LT-182, "HIGH-MOUNTED STOP LAMP" .
2. Remove washer nozzle from washer hose.
3. Push outward while pushing hooks on back of nozzle.



CHECK VALVE INSPECTION

Make sure air can pass through the hose by blowing forward (toward the nozzle) and air cannot pass through by sucking.



INSTALLATION

1. Install in the reverse order of removal.
2. Nozzle spray position must be adjusted.

Rear Wiper and Washer Switch Circuit Inspection

EKS007BO

Refer to LT-196, "Check Combination Switch" .

Removal and Installation of Rear Wiper and Washer Switch

EKS007BP

Refer to LT-199, "Removal and Installation" .

Removal and Installation of Rear Wiper and Washer Tank

EKS007BQ

Refer to WW-46, "Removal and Installation of Front Wiper and Washer Tank" .

Removal and Installation of Rear Wiper and Washer Pump

EKS007BR

Refer to WW-46, "Removal and Installation of Front Wiper and Washer Pump" .

HEADLAMP WASHER

PFP:28620

System Description

EKS0087R

- Wiper switch (combination switch) is composed of a combination of 5 output terminals and 5 input terminals. Terminal combination status is read by BCM when switch is turned ON.
- BCM controls headlamp washer operation.
- IPDM E/R operates headlamp washer motor according to CAN communication signals from BCM.

Power is supplied at all times

- through 30 A fusible link (letter L, located in fuse and fusible link box).
- to headlamp washer relay terminals 1 and 3.
- through 40 A fusible link (letter J, located in fuse and fusible link box).
- to BCM terminals 74 and 79.
- through 20 A fuse (NO.52, located in IPDM E/R).
- to IPDM E/R (CPU).

When ignition switch ON or START position, power is supplied

- to IPDM E/R (CPU), and
- through 10 A fuse [NO.4, located in fuse block (J/B)]
- to BCM terminal 24.

Ground is supplied

- to IPDM E/R terminals 3 and 54, and
- to head lamp washer motor terminal 1,
- through body grounds E25 (CR engine models), E26 and E40.
- to BCM terminals 2 and 70, and
- to head lamp washer switch terminal 2,
- through body grounds M19 and M20.

HEADLAMP WASHER OPERATION

When lighting switch is placed in 1st position, BCM read combination switch condition (Refer to WW-83, "BCM WIPER SWITCH READING FUNCTION").
And headlamp washer switch ON, ground is supplied.

- to BCM terminal 62, and
- through headlamp washer switch terminal 1 and 2.
- through body grounds M19 and M20.

BCM sends headlamp washer request signal to IPDM E/R with CAN communication line.
And IPDM E/R is grounded to headlamp washer relay terminal 2 through IPDM E/R terminal 56.
Then headlamp washer relay is energized, power is supplied.

- through headlamp washer relay terminal 5
- to headlamp washer motor terminal 2.

Ground is supplied.

- to terminal 1 of headlamp washer motor
- through body grounds E25 (CR engine models), E26 and E40.

With power and ground supplied, the headlamp washer operates.

CONSULT-II Function (BCM)

EKS008WJ

Refer to WW-31, "CONSULT-II Function (BCM)" .

CONSULT-II Function (IPDM E/R)

EKS008WK

Refer to WW-33, "CONSULT-II Function (IPDM E/R)" .

Removal and Installation for Washer Nozzle

EKS0087T

REMOVAL

1. Remove front bumper. Refer to EI-4, "FRONT BUMPER"
2. Remove washer tube.
3. Remove washer nozzle from front bumper.

INSTALLATION

Install in the reverse order of removal.

Removal and Installation for Washer Tank

EKS0087V

Refer to WW-46, "Removal and Installation of Front Wiper and Washer Tank" ,

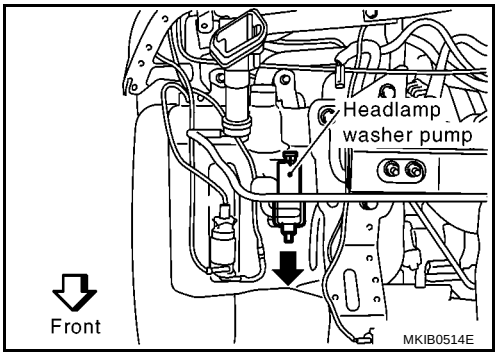
Removal and Installation for Washer Pump

EKS0087W

1. Remove front bumper. Refer to EI-4, "FRONT BUMPER"
2. Remove washer pump connector and hose.
3. Pull out washer pump in the direction of the arrow in the figure, and remove the washer pump from the washer tank.

CAUTION:

When installing washer pump, there should be no packing twist, etc.



Washer Tube Layout

Removal and Installation

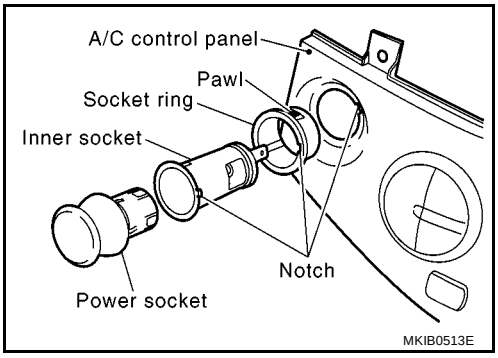
EKS007CH

REMOVAL

1. Remove air conditioner panel. Refer to IP-7, "L. Air Conditioner Finisher" .
2. Disconnect the power socket connector.
3. Remove inner socket while spreading tabs on the socket ring (2 locations).



INSTALLATION

Note the following, and install in the reverse order of the removal.

CAUTION:

Align inner socket protruding area with socket ring and install.
