Rotate the oil pump drive to align with the flats on the crankshaft before installation.

Install the oil pump.

- Clean the component mating faces.
- Install a new gasket.
- Lightly tighten the bolts in the positions shown.

**3. CAUTION:** Make sure the base of the oil pump is aligned within 0.2 mm of the base of the engine block. Failure to follow this instruction may result in damage to the vehicle.

- **NOTE:** Vehicles fitted with oil pumps without dowels.

Check the oil pump to engine block alignment.

## 4. NOTE: All vehicles.

Secure the oil pump.

- Tighten the 10 bolts to 10 Nm in the sequence shown.

5. Install the timing belt cover sealing strips.

6. Install the timing belt idler pulley.

- Tighten the bolt to 45 Nm.

**7. NOTE:** The generator mounting bracket upper rear bolt must be installed to the generator mounting bracket before the generator bracket is installed to the engine.

Install the generator mounting bracket.

- Loosely install the 4 bolts.
- Tighten the 4 bolts in the sequence shown to 23 Nm.

E125155

**8.** Install the generator.

- Tighten the 3 bolts to 47 Nm.

**9.** Connect the generator electrical connections.

- Attach the battery positive cable and tighten the nut to 12 Nm.
- Reposition the battery positive cable connector cover.
- Connect the electrical connection.

**10.** Install the RH turbocharger outlet pipe.

- Secure the 2 clips.

**11.** Install the accessory drive belt tensioner.

- Tighten the bolt to 47 Nm.

**12.** Install the oil pan extension. For additional information, refer to: [Oil Pan Extension](#) (303-01C Engine - 2.7L V6 - TdV6, In-vehicle Repair).

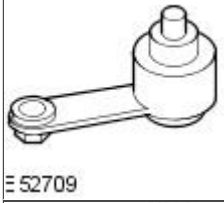

**13.** Install the crankshaft front oil seal. For additional information, refer to: [Crankshaft Front Seal](#) (303-01C Engine - 2.7L V6 - TdV6, In-vehicle Repair).

**14.** Connect the battery ground cable. For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

 E52708	Timing pin flywheel manual 303-1116

## Removal

All vehicles

1. Disconnect the battery.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).
2. Remove the timing belt cover.  
For additional information, refer to: [Engine Front Cover - VIN Range: N52048->N99999](#) (303-01B Engine - V8 4.2L Petrol/V8 S/C 4.2L Petrol, In-vehicle Repair).
3. Remove the starter motor retaining bracket.

4. Detach the starter motor solenoid harness.

5. Detach the starter motor cable.

6. Detach the starter motor solenoid harness.

7. Detach the starter motor.

8. NOTE: Remove the locking pin access grommet.

Align the timing pin hole.

- Rotate the crankshaft clockwise.

Vehicles with automatic transmission

9. Using the special tool, lock the flexplate.

E52975

Vehicles with manual transmission

10. Using the special tool, lock the flywheel.

E50887

All vehicles

11. Lower the vehicle.

12.  **CAUTION:** If the camshafts are not aligned to the correct position, remove the special tool and rotate the crankshaft 180 degrees.

Check that the left-hand camshaft alignment hole is at the 7 0` clock position and that the right-hand camshaft alignment hole is at the 5 0` clock position.

13. Remove the auxillary drive belt pulley.

E50888

14. Remove the auxillary drive belt pulley bracket.

E50889

15. Using the special tools, lock the camshaft pulleys.

E50891

E50890

16.  **CAUTION:** The camshaft pulley hub must be counter held while undoing the camshaft pulley hub retaining bolts. Failure to follow this instruction may result in damage to the special tools and the engine.

Undo but do not remove the camshaft pulley securing bolts.

1. Counter hold the camshaft pulley hub.
2. Undo but do not remove the camshaft pulley securing bolts.

E50892

17. Remove and discard the timing belt tensioner.

- Release the timing belt tensioner.

E50893

18. Remove and discard the timing belt.

## Installation

All vehicles

1. Rotate both camshaft pulleys fully clockwise.

2. Install a new timing belt tensioner.

- Do not fully tighten the retaining bolt.

3.  **CAUTION:** Make sure that the timing belt slack is at the timing belt tensioner. Failure to follow this instruction may result in damage to the engine.

Install the timing belt in the sequence shown.

1. Install the timing belt to the crankshaft pulley.
2. Attach the timing belt to the idler pulley.
3. Attach the timing belt to the left-hand camshaft pulley.
4. Attach the timing belt to the idler pulley.
5. Attach the timing belt to the right-hand camshaft pulley.
6. Attach the timing belt to the timing belt tensioner.

4.  **CAUTION:** Make sure the timing belt tensioner window is correctly aligned. Failure to follow this instruction may result in damage to the engine.

Tension the timing belt.

1. Rotate the tensioner.
2. Make sure the tensioner window is aligned.
3. Tighten to 24 Nm.

5.  **CAUTION:** The camshaft pulley hub must be counter held while undoing the camshaft pulley hub retaining bolts. Failure to follow this instruction may result in damage to the special tools and the engine.

Fully tighten the camshaft pulley retaining bolts.

1. Counter hold the camshaft pulley hub.
2. Tighten to 23 Nm.

6. Raise the vehicle.

Vehicles with automatic transmission

7. Remove the special tool.

E52975

Vehicles with manual transmission

8. Remove the special tool.

E50887

All vehicles

9. Lower the vehicle.

10. Remove the special tools.

E50891

11.  **CAUTION:** Do not rotate the crankshaft counter clockwise.

Rotate the crankshaft clockwise two complete turns.

12. Raise the vehicle.

Vehicles with automatic transmission

13. Using the special tool, lock the flexplate.

E52975

14. Using the special tool, lock the flywheel.

E50887

All vehicles

15. Lower the vehicle.

16.  **CAUTION:** If the camshafts are misaligned repeat the timing belt installation procedure.

Using the special tools, make sure the camshafts are aligned.

E53053

17. Remove the special tools.

E53053

18. Install the auxillary drive belt pulley bracket.

E50889

19. Install the auxillary drive belt pulley.

E50888

20. Raise the vehicle.

Vehicles with automatic transmission

21. Remove the special tool.

- Install the grommet.

E52975

Vehicles with manual transmission

22. Remove the special tool.

- Install the grommet.

E50887

All vehicles

23. Attach the starter motor.

- Tighten to 48 Nm.

E51242

24. Attach the starter motor solenoid harness.

- Tighten to 8 Nm.

25. Attach the starter motor cable.

- Tighten to 7 Nm.

26. Install the starter motor retaining bracket.

- Tighten to 23 Nm.

27. Install the timing belt cover.

For additional information, refer to: [Engine Front Cover - VIN Range: N52048->N99999](#) (303-01B Engine - V8 4.2L Petrol/V8 S/C 4.2L Petrol, In-vehicle Repair).

28. Connect the battery.

For additional information, refer to: [Battery Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

## Removal

1. Remove the air cleaner.  
For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).
2. Remove the oil filler cap.

3. Remove the engine cover.

4. Remove the air deflector.  
For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).

5. Detach the accessory drive belt.

1. Using the special tool, rotate the accessory drive belt tensioner counter clockwise.
2. Remove the accessory drive belt.

6. Lower the vehicle.

7. Detach the coolant hose.

8. Disconnect the coolant temperature sensor.

9. Detach the coolant temperature sensor wiring harness.

10. Detach the exhaust gas recirculation (EGR) valve tube.

- Remove the retaining bolt.

11. Detach the oil level indicator tube.

- Remove the retaining bolt.

- 12.** Remove the left-hand timing cover.
- Remove and discard the gaskets.

- 13.** Detach the coolant hose.

- 14.** Remove the retaining bolt.

- 15.** Disconnect the electrical connector.

- 16.** Remove the intake air shutoff throttle elbow.
- Release the retaining clip.

17. Remove the charge air cooler hose.

18. Detach the coolant hose.

19. Detach the port deactivation valve retaining bracket.

20. Detach the air temperature sensor wiring harness.

21. Detach the EGR valve tube.

- Remove the retaining bolt.

22. Remove the RH timing cover.

- Remove and discard the gaskets.

23. Remove the crankshaft vibration damper.

For additional information, refer to: [Crankshaft Vibration Damper](#) (303-01C Engine - 2.7L V6 - TdV6, In-vehicle Repair).

24. Detach the charge air cooler hose.

1. Remove the hose clamp.
2. Remove the retaining bolt.

25. Lower the vehicle.

26. Remove the charge air cooler hose.

27. Detach the turbocharger inlet hose.

- Remove the retaining nut.

28. **NOTE:** Lock the water pump pulley with suitable 6 mm bar.

Remove the water pump pulley.

- Remove the retaining bolts.

52801

29. Remove the lower timing cover.

- Remove and discard the gaskets.

## Installation

1. **NOTE: Install a new gasket.**

Install the lower timing cover.

- Tighten to 10 Nm.

52801

2. Install the water pump pulley.

- Tighten to 24 Nm.

52800

3. Attach the turbo charger inlet hose.

52799

4. Attach the charge air cooler hose.

5. Raise the vehicle.

6. Attach the charge air cooler hose.

1. Tighten to 4 Nm.

2. Tighten to 8 Nm.

7. Install the crankshaft vibration damper.

For additional information, refer to: [Crankshaft Vibration Damper](#) (303-01C Engine - 2.7L V6 - TdV6, In-vehicle Repair).

8. **NOTE:** Install a new gasket.

Install the RH timing cover.

- Tighten to 10 Nm.

9. Attach the EGR valve tube.

- Tighten to 4 Nm.

10. Attach the air temperature sensor wiring harness.

**11.** Attach the port deactivation valve retaining bracket.

- Tighten to 8 Nm.

**12.** Attach the coolant hose.

**13.** Install the charge air cooler hose.

- Tighten to 8 Nm.

**14.** Install the intake air shutoff throttle elbow.

- Release the retaining clip.

**15.** Connect the electrical connector.

16. Install the retaining bolt.

17. Attach the coolant hose.

18. NOTE: Install a new gasket.

Install the LH timing cover.

- Tighten to 10 Nm.

19. Attach the oil level indicator tube.

- Tighten to 3 Nm.

20. Attach the EGR valve tube.

- Tighten to 3 Nm.

21. Attach the coolant temperature sensor wiring harness.

22. Connect the coolant temperature sensor.

23. Attach the coolant hose.

24. Install the engine cover.

25. Install the oil filler cap.

**26.** Install the air deflector.

For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).

**27.** Attach the accessory drive belt.

1. Using the special tool, rotate the accessory drive belt tensioner counter clockwise.
2. Install the accessory drive belt.

**28.** Lower the vehicle.

**29.** Install the air cleaner.

For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).

### 1. WARNINGS:

Wait at least 30 seconds after the engine stops before commencing any repair to the high pressure fuel injection system. Failure to follow this instruction may result in personal injury.

Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

Do not carry out any repairs to the fuel injection system with the engine running. The fuel pressure within the system can be as high as 1650 bar. Failure to follow this instruction may result in personal injury.

### • CAUTIONS:

Make sure the workshop area in which the vehicle is being worked on is as clean and as dust free as possible. Foreign matter from work on clutches, brakes or from machining or welding operations can contaminate the fuel system and may result in later malfunction.

Always carry out the cleaning process before carrying out any repairs to the fuel injection system components. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

Remove the intake air shut off throttle.

For additional information, refer to: [Intake Air Shutoff Throttle](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).

### 2. Remove the air cleaner.

For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).

### 3. Remove the air deflector.

For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).

Valve Cover LH

4. Detach the accessory drive belt.

1. Using the special tool, rotate the accessory drive belt tensioner counter clockwise.

2. Detach the accessory drive belt.

5. Lower the vehicle.

6. Detach the engine coolant hose.

7. Disconnect the electrical connector.

8. Detach the engine harness.

Valve Cover LH and RH

9. Remove the exhaust gas recirculation outlet tube retaining bolt.

#### Valve Cover LH

10. Remove the oil level indicator retaining bolt.

11. Remove the timing belt cover.

#### Valve Cover LH and RH

12. Remove the fuel injectors.  
For additional information, refer to: [Fuel Injector](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).
13. Remove the intake air shut off throttle.  
For additional information, refer to: [Intake Air Shutoff Throttle](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).
14. Detach the electrical connector from the valve cover.

**15.** Disconnect the electrical connector.

Valve Cover RH

**16.** Detach the timing cover retaining bolt.

Valve Cover LH

**17.** Disconnect the electrical connector.

Valve Cover LH and RH

**18.** Detach the engine harness.

19. Remove the engine harness retaining bolts.

20. Detach the engine breather pipe.

21. Disconnect the vacuum pipe.

22. Remove the fuel injection pump supply line retaining bolt.

23. Clean the fuel pump, high pressure fuel supply line and surrounding areas.  
For additional information, refer to: [Fuel Injection Component Cleaning](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, General Procedures).

#### 24. CAUTIONS:

Make sure that the high pressure fuel supply line remains in contact with both the fuel pump and the fuel injection supply manifold until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

While maintaining the pressure on the high pressure fuel supply line, clean and vacuum foreign material from the line and unions.

Remove the high pressure fuel supply line.

E52057

25. Remove the fuel injection supply manifold.

E52058

26. Remove the fuel injection supply manifold securing bracket .

E52059

#### Valve Cover LH

27. Remove the engine cover and wiring harness retainers.

E52060

#### Valve Cover RH

28. Remove the engine cover retainer.

#### Valve Cover LH and RH

29. Remove the valve cover.

- Remove and discard the valve cover gasket.

### Installation

#### Valve Cover LH and RH

##### 1. WARNINGS:

### Vehicles with automatic transmission

3. Remove the transmission assembly.  
For additional information, refer to: [Transmission - 2.7L V6 - TdV6](#) (307-01 Automatic Transmission/Transaxle, Removal).

### Vehicles with manual transmission

4. Remove the transmission assembly.  
For additional information, refer to: [Transmission](#) (308-03B Manual Transmission/Transaxle - Vehicles With: S6-53 6-Speed Manual Transmission, Removal).

### All vehicles

5. Recover the air conditioning refrigerant.  
For additional information, refer to: [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) (412-00 Climate Control System - General Information, General Procedures).
6. Detach the radiator top hose.

### Vehicles with automatic transmission

7. Detach the radiator hose.

All vehicles

8. Detach the brake booster vacuum pipe.

9. Disconnect the glow plug harness electrical connectors.

10. Remove the air intake hose.

11. Remove the cabin air filter.

For additional information, refer to: [Cabin Air Filter](#) (412-01 Air Distribution and Filtering, Removal and Installation).

12. Remove the cabin air filter housing retaining nut.

E30421

13. Remove the cabin air filter housing.

E30422

14. Remove the engine compartment panel.

E30423

15. Remove the left hand engine compartment trim panel.

E50709

16. Disconnect the engine wiring harness electrical connector.

E50710

17. Disconnect the engine control module (ECM) electrical connectors.

18. NOTE: Cap the exposed ports.

Disconnect the fuel filter feed hose.

19. NOTE: Cap the exposed ports.

Disconnect the fuel filter return hose.

20. NOTE: Cap the exposed ports.

Disconnect the fuel filter return hose.

21. Remove the power steering fluid reservoir.  
For additional information, refer to: [Power Steering Fluid Reservoir](#) (211-02 Power Steering, Removal and Installation).

22. Disconnect the coolant hose.

23. Disconnect the charge air cooler hose.

24. Detach the thermostat housing.

25. NOTE: Right-hand shown, left-hand similar.

Support the radiator.

26. Raise the vehicle.

27. Detach the starter motor wiring harness.

**28.** Detach the starter motor wiring harness.

**29.** Detach the power steering hose.

**30.** Detach the earth cable.

**31.** Make sure the alignment mark on the steering gear pinion seal protection cover is central to the steering gear pinion casting.

32. Loosen the lower steering column pinch bolt.

33. Disconnect the power steering control valve actuator electrical connector.

34. Detach the lower steering column.

- Remove the steering gear shaft pinch bolt.

35. CAUTIONS:

 Cap the power steering lines to prevent loss of fluid and dirt ingress.

 If power steering fluid comes into contact with the paintwork, the affected area must be immediately washed down with cold water.

- NOTE: Drain the fluid into a suitable container.

Disconnect the power steering supply and return lines.

- Remove and discard the O-ring seals.

36. NOTE: Right-hand shown, left-hand similar.

Remove the front fog lamp covers.

37. Detach the coolant hose.

E50724

38. Detach the speed control module retaining bracket.

- Tie the speed control module retaining bracket aside.

E50725

39. Disconnect the air conditioning pressure switch electrical connector.

E50726

40.  CAUTION: Cap the air conditioning line and the condenser to prevent dirt ingress.

Detach the air conditioning line.

- Remove and discard the O-ring seal.

E50727

41.  CAUTION: Cap the air conditioning line and the condenser to prevent dirt ingress.

Detach the air conditioning line.

- Remove and discard the O-ring seal.

E50731

42. Remove the fender splash shield.

For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).

43. Detach the air conditioning line.

44.  **CAUTION:** Cap the air conditioning line to prevent dirt ingress.

Detach the air conditioning line.

- Remove and discard the O-ring seal.

45. **NOTE:** Left-hand shown, right-hand similar.

Detach the front wheel speed sensors.

1. Remove the front wheel speed sensor retaining clip.
2. Detach the front wheel speed sensors.

46.  **CAUTION:** The brake caliper must be supported at all times.

• **NOTE:** Left-hand shown, right-hand similar.

Detach the brake caliper and brake caliper anchor plate and secure to one side.

- Remove and discard the brake caliper retaining bolts.

47. NOTE: Left-hand shown, right-hand similar.

Detach the shock absorber.

48.  CAUTION: Make sure the wheel knuckle is supported. Failure to follow these instructions may result in damage to the vehicle.

• NOTE: Left-hand shown, right-hand similar.

Detach the upper arm.

49. Disconnect the headlamp leveling sensor electrical connector.

50. Lower the vehicle.

51. Detach the engine brace bar.

52. Raise the vehicle.

53. Install the special tool.

E31749

54. NOTE: Left-hand shown, right-hand similar.

Remove the front subframe front retaining bolts.

E31751

55. NOTE: Left-hand shown, right-hand similar.

Remove the front subframe rear retaining bolts.

E31750

56. Using the special tool, remove the engine and front subframe assembly.

E31749

Vehicles with automatic transmission

**57.** Detach the fluid cooler lines.

- Remove and discard the fluid cooler O-ring seals.

E51686

**58.** Detach the fluid cooler.

- Remove the retaining bolt.

E51687

**59.** Remove the fluid cooler.

1. Detach the coolant hoses.
2. Remove the fluid cooler.

E51688

All vehicles

**60.** Install the special tool.

E51689

**61.** Install the special tool.

**62.** Detach the port deactivation valve retaining bracket.

**63.** Disconnect the air intake sensor electrical connector.

**64.** Detach the intake air elbow.

**65.** Disconnect the throttle motor electrical connector.

**66. NOTE:** Right-hand shown, left-hand similar.

Remove and discard the exhaust gas recirculation (EGR) valve pipe retaining clip.

**67.** Disconnect the air intake sensor electrical connector.

**68.** Detach the electrical connector.

**69.** Reposition the intake air shutoff throttle.

**70.** Remove the intake air shutoff throttle.

- Remove and discard the O-ring seals.

71. Install the special tool.

72. NOTE: Left-hand shown, right-hand similar.

Remove the engine mount retaining nut.

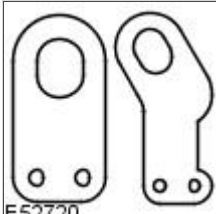

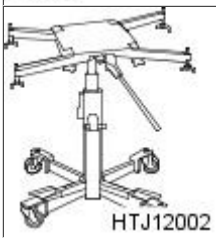

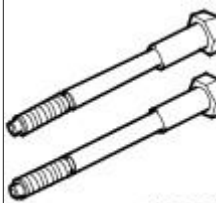

73. Remove the engine using a suitable hydraulic lift.

 502-005	Alignment Bolts 502-005

## Installation

All vehicles

1. Install the engine using a suitable hydraulic lift.

2. NOTE: Left-hand shown, right-hand similar.

Install the engine mount retaining nut.

- Tighten to 63 Nm.

3. Remove the special tool.

4. Install the intake air shutoff throttle.

- Install new O-ring seals.

5. Reposition the intake air shutoff throttle.

6. Attach the electrical connector.

7. Connect the air intake sensor electrical connector.

**8. NOTE:** Right-hand shown, left-hand similar.

Install new exhaust gas recirculation (EGR) valve pipe retaining clip.

**9.** Connect the throttle motor electrical connector.

**10.** Attach the intake air elbow.

**11.** Connect the air intake sensor electrical connector.

**12.** Attach the port deactivation valve retaining bracket.

- Tighten to 8 Nm.

13. Remove the special tool.

14. Remove the special tool.

#### Vehicles with automatic transmission

15. Install the fluid cooler.

1. Install the fluid cooler.
2. Attach the coolant hoses.

16. Attach the fluid cooler.

- Install the retaining bolt.

17. Attach the fluid cooler lines.

- Install new fluid cooler O-ring seals.

All vehicles

18. Using the special tool, install the engine and front subframe assembly.

19. NOTE: Left-hand shown, right-hand similar.

Install the special tool.

20. NOTE: Left-hand shown, right-hand similar.

Install the front subframe rear retaining bolts.

- Tighten to 80 Nm + 300°.

21. NOTE: Left-hand shown, right-hand similar.

Remove the special tool.

22. NOTE: Left-hand shown, right-hand similar.

Install the front subframe front retaining bolt.

- Tighten to 180 Nm + 300°.

23. Remove the special tool.

24. Lower the vehicle.

25. Attach the engine brace bar.

26. Raise the vehicle.

27. Connect the headlamp leveling sensor electrical connector.

28.  CAUTION: Make sure the wheel knuckle is supported. Failure to follow these instructions may result in damage to the vehicle.

• NOTE: Left-hand shown, right-hand similar.

Attach the upper arm.

- Tighten to 90 Nm.

29. NOTE: Left-hand shown, right-hand similar.

Attach the shock absorber.

- Tighten to 175 Nm.

30.  CAUTION: The brake caliper must be supported at all times.

• NOTE: Left-hand shown, right-hand similar.

Attach the brake caliper and brake caliper anchor plate.

- Install new brake caliper retaining bolts.
- Tighten to 103 Nm.

31. NOTE: Left-hand shown, right-hand similar.

Attach the front wheel speed sensors.

1. Attach the front wheel speed sensors.
2. Install the front wheel speed sensor retaining clip.

32.  **CAUTION: Un-cap the ports.**

Attach the air conditioning line.

- Install a new O-ring seal.

33. Attach the air conditioning line.

34. Install the fender splash shield.

For additional information, refer to: [Fender Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).

35.  **CAUTION: Un-cap the exposed ports.**

Attach the air conditioning line.

- Install the O-ring seal.

36.  **CAUTION: Un-cap the exposed ports.**

Attach the air conditioning line.

- Install the O-ring seal.

37. Connect the air conditioning pressure switch electrical connector.

38. Attach the speed control module retaining bracket.

39. Attach the coolant hose.

40. NOTE: Right-hand shown, left-hand similar.

Install the front fog lamp covers.

41. CAUTIONS:

Un-cap the exposed ports.

If power steering fluid comes into contact with the paintwork, the affected area must be immediately washed down with cold water.

Connect the power steering supply and return lines.

- Install new O-ring seals.
- Tighten to 15 Nm.

**42.** Attach the lower steering column.

- Install a new steering gear shaft pinch bolt.
- Tighten to 35 Nm.

**43.** Connect the power steering control valve actuator electrical connector.

**44.** Tighten to 35 Nm.

**45.** Attach the earth cable.

**46.** Attach the power steering hose.

47. Attach the starter motor wiring harness.

- Tighten to 10 Nm.

48. Detach the starter motor wiring harness.

- Tighten to 6 Nm.

49. Lower the vehicle.

50. **NOTE:** Right-hand shown, left-hand similar.

Remove the radiator support.

51. Attach the thermostat housing.

52. Connect the charge air cooler hose.

- Tighten to 4 Nm.

53. Connect the coolant hose.

54. Install the power steering fluid reservoir.

For additional information, refer to: [Power Steering Fluid Reservoir](#) (211-02 Power Steering, Removal and Installation).

55. NOTE: Un-cap the exposed ports.

Connect the fuel filter return hose.

56. NOTE: Un-cap the exposed ports.

Connect the fuel filter return hose.

57. NOTE: Un-cap the exposed ports.

Connect the fuel filter feed hose.

58. Connect the engine control module (ECM) electrical connectors.

59. Connect the engine wiring harness electrical connector.

60. Install the left hand engine compartment trim panel.

61. Install the engine compartment panel.

62. Install the cabin air filter housing.

**63.** Remove the cabin air filter housing retaining nut.

E30421

**64.** Install the cabin air filter.

For additional information, refer to: [Cabin Air Filter](#) (412-01 Air Distribution and Filtering, Removal and Installation).

**65.** Install the air intake hose.

E51070

**66.** Connect the glow plug harness electrical connectors.

E 50703

**67.** Attach the brake booster vacuum pipe.

E 50702

Vehicles with manual transmission

**68.** Attach the radiator hose.

All vehicles

**69.** Attach the radiator top hose.

**70.** Recharge the air conditioning system.

For additional information, refer to: [Air Conditioning \(A/C\) System Recovery, Evacuation and Charging](#) (412-00 Climate Control System - General Information, General Procedures).

Vehicles with manual transmission

**71.** Install the transmission.

For additional information, refer to: [Transmission](#) (308-03B Manual Transmission/Transaxle - Vehicles With: S6-53 6-Speed Manual Transmission, Installation).

Vehicles with automatic transmission

**72.** Install the transmission assembly.

For additional information, refer to: [Transmission - 2.7L V6 - TdV6](#) (307-01 Automatic Transmission/Transaxle, Installation).

All Vehicles

**73.** Install the cooling fan motor and shroud.

For additional information, refer to: [Cooling Fan Motor and Shroud](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, Removal and Installation).

**74.** Fill and bleed the cooling system.

For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).

Description and Operation

Vehicles with 2.5L or 3.0L engine

E30952

Item	Part Number	Description
1	—	Bleed screw
2	—	Coolant expansion tank
3	—	Radiator
4	—	Radiator shroud
5	—	Cooling fan motor
6	—	Water pump
7	—	Thermostat housing
8	—	Engine coolant inlet
9	—	Engine coolant outlet
10	—	Vent hose

Item	Part Number	Description
1	-	Engine oil cooler
2	—	Retaining bolt
3	—	Engine oil cooler inlet and outlet tubes

### Vehicles with 4.2L engine

Vehicles with 4.2L engine without supercharger

E30956

Item	Part Number	Description
1	—	Engine coolant outlet
2	—	Vent hose
3	—	Thermostat housing
4	—	Bleed screw
5	—	Heater hose connections
6	—	Auxillary coolant flow pump
7	—	Dual coolant flow valve
8	—	Cooling fan motor
9	—	Radiator
10	—	Engine oil cooler connections
11	—	Engine coolant inlet

Vehicles with 4.2L engine with supercharger

E30954

Item	Part Number	Description
1	-	Vent hose (SC radiator)
2	—	Coolant expansion tank
3	—	Vent hose
4	—	Radiator
5	—	Auxillary coolant flow pump
6	—	Cooling fan motor
7	—	Engine coolant inlet
8	—	Engine coolant outlet
9	—	Thermostat housing

• WARNINGS:

 Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in personal injury.

To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

 To avoid the possibility of personal injury, do not operate the engine with the hood open until the fan blades have been examined for cracks and separation. Failure to follow this instruction may result in personal injury.

 Remove fuse 38 from the engine compartment fuse box prior to performing any under hood service in the area of the cooling fan when the engine is hot, since the cooling fan motor could operate if the engine has been switched OFF. Failure to follow this instruction may result in personal injury.

• CAUTIONS:

 The engine cooling system must be maintained with the correct concentration and type of anti-freeze solution to prevent corrosion and frost damage.

Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in damage to the engine.

The cooling system consists of the following:

- Radiator
- Coolant pressure cap
- Thermostat
- Water pump
- Electric cooling fan
- Coolant expansion tank
- Engine oil cooler

### Water Pump

The water pump is of a conventional design and is driven by the crankshaft pulley through the accessory drive belt. The water pump belt tension is maintained by an automatic drive belt tensioner.  
For additional information, refer to Section [303-05 Accessory Drive](#).

### Thermostat

The thermostat is located in the thermostat housing and allows rapid engine warm-up by restricting coolant flow through the radiator below 82°C (180°F). The thermostat also assists in keeping the engine operating temperature within predetermined limits. On the 4.2L supercharged engine the thermostat begins to open at 84°C (183°F) and is fully open at 98°C (208°F), on the 4.2L and 2.5 or 3.0L engine the thermostat begins to open at 88°C - 92°C (190°F - 198°F) and is fully open at 102°C (216°F).

When the engine is cold and the thermostat is closed, coolant flows from the water pump through the engine. It then returns to the water pump through the upper coolant hose.

When the engine is warm and the thermostat is open, coolant flows into the radiator through the upper coolant hose. It then returns to the water pump from the radiator through the lower coolant hose and engine oil cooler.

The heater core is on a parallel circuit and is unaffected by the position of the thermostat.

### Radiator

The radiator is of aluminium construction with plastic end tanks. Foam seals are fitted to the radiator to prevent the cooling air from by passing the radiator core. A coolant drain plug is provided in the lower coolant end tank of the radiator for the draining of the coolant. The Cooling fan shroud is attached to the radiator.

### Cooling Fan

A single, variable speed cooling fan motor is attached to a fan shroud located behind the radiator. The speed is determined by the Engine Coolant Temperature (ECT) and the air conditioning pressure and transmission oil temperature.

Under hot operating conditions, the fan may continue to operate for four minutes after the engine has been switched off.

### Engine Block Heater

For vehicle markets subject to very cold climate conditions, an engine block heater for connection to an external mains power supply, is fitted in place of the engine block drain plug.

### Coolant Recovery System

A pressurized coolant expansion tank system is used which continuously separates the air from the cooling system and replenishes the system through the coolant expansion tank outlet hose, attached to the heater return hose.

A continuous vent from the engine and radiator to the coolant expansion tank prevents air locks from forming in the cooling system.

Manual bleed points are provided on the coolant reservoir.

The coolant expansion tank serves as the location for:

- Service fill.
- Coolant expansion during warm-up.
- Air separation during operation.
- System pressurization by the coolant pressure cap.
- The coolant expansion tank is designed to have approximately 0.5 to 1 liter of air when cold to allow for coolant expansion.

### Engine Oil Cooler

The engine oil cooler is a Modine oil to water type. The oil cooler on the 2.5 or 3.0L engine is located on the left-hand side of the engine and is fitted to the oil filter housing. The oil cooler on the 4.2L engine is located at the front of the engine and is fitted between the oil filter housing and the oil filter.

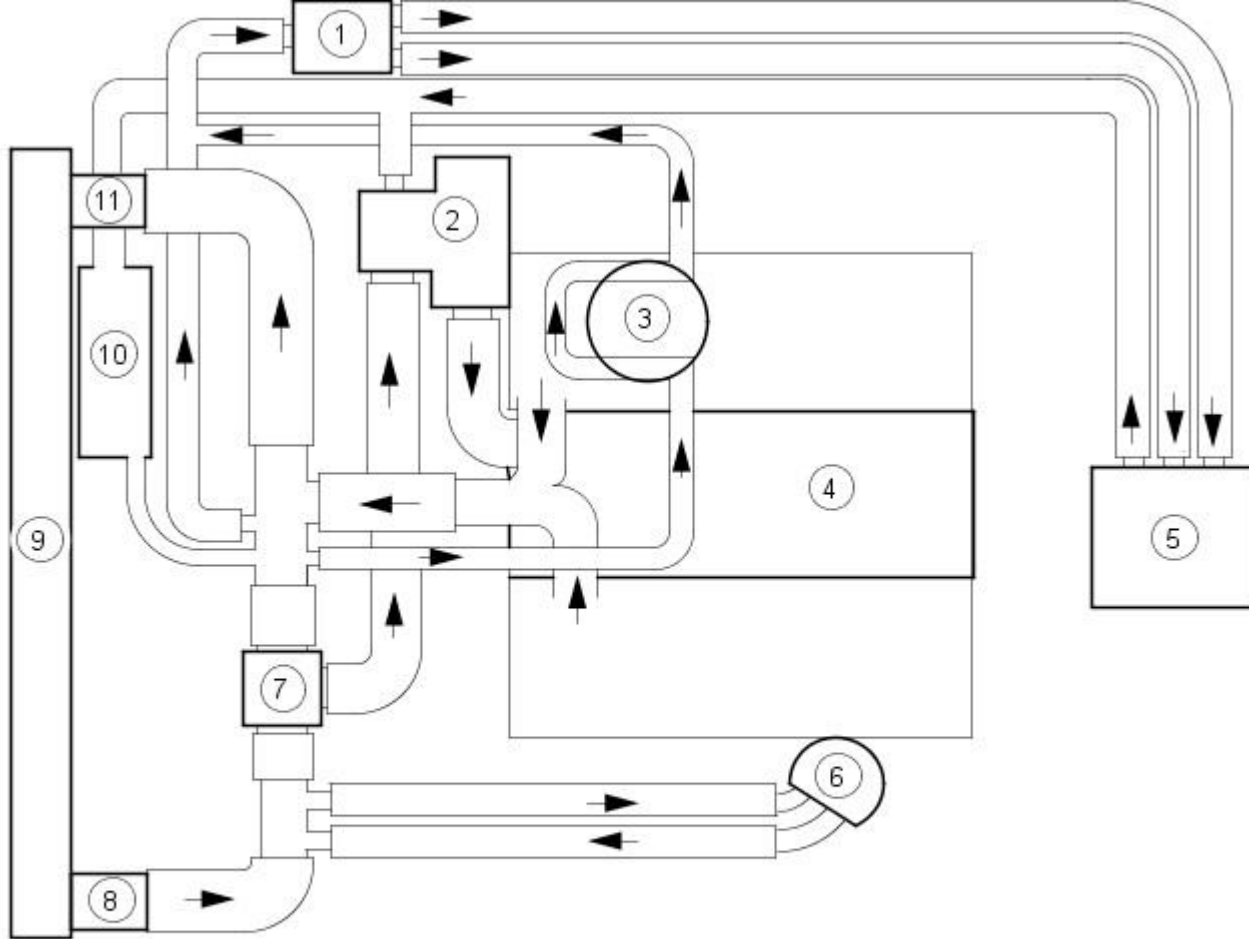

The coolant supply for the engine oil cooler is through the radiator bottom hose.

### Engine Coolant

The long life engine coolant is formulated to last for five years or 240,000 km (150,000 miles). The coolant is silicate free and orange in color. The long life engine coolant must not be mixed with conventional engine coolant.

### Vehicles with 2.5L or 3.0L engine

## Diagnosis and Testing

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

### Visual Inspection Chart

Mechanical	Electrical
Leaks	Fuse
Coolant expansion tank	Wiring harness
Electric fan	Loose or corroded connector(s)
Radiator	Engine cooling temperature (ECT) sensor or Engine cylinder head temperature (CHT) sensor

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, verify the symptom and refer to symptom chart.

### Symptom Chart

DTC	Condition	Possible Source	Action
P0116	Concern with engine coolant temperature (range/performance)	<ul style="list-style-type: none"> <li>ECT sensor.</li> <li>ECT sensor circuit(s)</li> <li>Low/contaminated coolant</li> <li>Thermostat failure</li> <li>Overheating</li> </ul>	REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . ### PINPOINT TEST A : LOSS OF COOLANT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: VISUAL INSPECTION</b>	
<b>1</b>	Visually inspect for loss of coolant
<b>2</b>	Carry out a system pressure test. See component tests in this section.
	Is the engine cooling system leaking?
<b>Yes</b>	Rectify the leak as indicated by the test result. REFER to <a href="#">Engine Cooling</a> / <a href="#">Cooling System Draining, Filling and Bleeding</a> in this section. TEST the system for normal operation.
<b>No</b>	Verify the customer complaint.

### PINPOINT TEST B : THE ENGINE OVERHEATS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK COOLANT</b>	
 <b>WARNING:</b> The cooling system is pressurised! Make sure the reservoir cap is never released until the system has cooled. Failure to follow these instructions may result in personal injury.	
	<b>1</b> Check the coolant level and condition.
	Does the system contain sufficient coolant of the correct specification? <b>Yes</b> <a href="#">GO to B2.</a> <b>No</b> Top-up the system. REFER to <a href="#">Cooling System Draining, Filling and Bleeding</a> in this section. Check for coolant loss. GO to Pinpoint Test <a href="#">A</a> .
<b>B2: CHECK THERMOSTAT</b>	
	<b>1</b> Check the thermostat. REFER to <a href="#">Thermostat-2.5L/3.0L</a> / <a href="#">Thermostat-4.2L, Vehicles With: Supercharger</a> / <a href="#">Thermostat-4.2L, Vehicles Without: Supercharger</a> in this section. See component tests in this section.
	Is the thermostat OK? <b>Yes</b> REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Cooling fans, modules, circuits, sensors, etc are tested in this section. <b>No</b> INSTALL a new thermostat. REFER to <a href="#">Thermostat-2.5L/3.0L</a> / <a href="#">Thermostat-4.2L, Vehicles With: Supercharger</a> / <a href="#">Thermostat-4.2L, Vehicles Without: Supercharger</a> / <a href="#">Cooling System Draining, Filling and Bleeding</a> in this section. TEST the system for normal operation.

<b>PINPOINT TEST C : THE ENGINE DOES NOT REACH NORMAL OPERATING TEMPERATURE</b>	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK THERMOSTAT</b>	
	<b>1</b> Check the thermostat. REFER to <a href="#">Thermostat-2.5L/3.0L</a> / <a href="#">Thermostat-4.2L, Vehicles With: Supercharger</a> / <a href="#">Thermostat-4.2L, Vehicles Without: Supercharger</a> in this section. See component tests in this section.
	Is the thermostat OK? <b>Yes</b> REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Cooling fans, modules, circuits, sensors, etc are tested in this section. <b>No</b> INSTALL a new thermostat. REFER to <a href="#">Thermostat-2.5L/3.0L</a> / <a href="#">Thermostat-4.2L, Vehicles With: Supercharger</a> / <a href="#">Thermostat-4.2L, Vehicles Without: Supercharger</a> / <a href="#">Cooling System Draining, Filling and Bleeding</a> in this section. TEST the system for normal operation.

## Component Tests

### Pressure Test

**WARNING:** Never remove the coolant expansion tank cap under any circumstances while the engine is operating. Failure to follow these instructions may result in damage to the cooling system or engine and/or personal injury. To avoid having scalding hot water or steam blow out of the cooling system, use extreme care when removing the coolant expansion tank cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant expansion tank cap and turn it slowly until the pressure begins to release, step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant expansion tank cap. Failure to follow these instructions may result in personal injury.

1. Switch the engine off.
2. Open the hood and install protective fender covers.
3. Carefully remove the coolant expansion tank cap from the coolant expansion tank to relieve pressure in the cooling system. Add coolant to coolant expansion tank as necessary.
4. Install the adapter fitting from Pressure Tester tightly between overflow/air purge nipple and overflow/air purge hose at the coolant expansion tank. Reinstall the coolant expansion tank cap.
5. Attach the pressure pump and gauge to the adapter fitting and pressurize the cooling system to the coolant expansion tank cap lower limit. Refer to Specification.
6. Pressurize the cooling system. Observe the gauge reading for approximately two minutes. Pressure should not drop during this time.
  - If system holds pressure, proceed to step 8.
  - If the pressure drops, check for leaks at the engine to heater core hoses, engine to radiator hoses, bypass hose, water valve hose (if applicable), thermostat housing gasket, radiator and heater core, etc. Also refer to engine system checks if a leak cannot be located in the cooling system. Correct any leaks found and recheck the system.
7. Release the system pressure by loosening the coolant expansion tank cap. Check the coolant level. Replenish as necessary with the correct coolant solution.
8. Check the radiator overflow hose for any obstructions which may block the flow of coolant either to or from the coolant expansion tank.

9. 9. Conduct the expansion tank cap Pressure Test in this section.

## Coolant Expansion Tank Pressure Cap Pressure Test

 **WARNING:** Never remove the coolant expansion tank cap under any circumstances while the engine is operating. Failure to follow these instructions may result in damage to the cooling system or engine and/or personal injury. To avoid having scalding hot water or steam blow out of the cooling system, use extreme care when removing the coolant expansion tank cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant expansion tank cap and turn it slowly until the pressure begins to release, step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant expansion tank cap. Failure to follow these instructions may result in personal injury.

1. 1. Remove the expansion tank cap from the radiator coolant expansion tank.
2. 2. Use water to clean in area of rubber seal and vacuum relief valve. Immerse expansion tank cap in water and install expansion tank cap pressure test adapter from Pressure Tester on the expansion tank cap.
3. • NOTE: If the plunger of the pump is depressed too quickly, an erroneous pressure reading will result.
3. Slowly depress the plunger of the pressure test pump until the pressure gauge reading stops increasing, and note highest pressure reading obtained.
4. 4. Release pressure by turning the pressure relief screw counterclockwise. Then tighten the pressure relief screw and repeat Step 5 at least twice to make sure the pressure test reading is repeatable and within acceptable gauge reading limits of the expansion tank cap.
5. 5. If the pressure test gauge readings are not within acceptable gauge reading limits, install a new expansion tank cap.

## Thermostat Test, Mechanical

Remove and inspect the thermostat, note its opening temperature and immerse it in water. Heat the water until this temperature is reached. The thermostat should begin to open. If it does not begin to open, install a new thermostat. Continue to heat the water until the thermostat fully opens, 5.8 mm (0.2in) or more off the valve seat. If it does not fully open, install a new thermostat.

## Radiator Leak Test, Removed From the Vehicle

 **CAUTION:** Do not leak test an aluminium radiator in the same water that is used to leak test copper/brass radiators. Flux and caustic cleaners may be present in the test water which will corrode aluminium.

Clean the radiator before leak testing to prevent contamination of the test tank. Leak test the radiator in clean water with 138 kPa (20 psi) air pressure.

A separate clean test tank is recommended for aluminium radiators. If a separate tank is not available for aluminium radiator testing, rinse the test tank each time before testing an aluminium radiator.

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Cooling System Backflushing

General Procedures

## • CAUTIONS:

The heater core must be backflushed separately from the engine cooling system to prevent the engine cooling system particles from clogging the heater core tubes and reducing (or eliminating) coolant flow through the heater core.

All engine cooling system flushing and backflushing procedures must include a separate backflushing of the heater core after the flushing or backflushing of the engine cooling system.

Heater core internal pressure must not exceed 100 kPa (14.5 psi). Failure to follow this instruction may cause damage to the heater core.

• NOTE: Cooling system backflushing should be carried out before the cooling system components are installed after the cooling system flushing procedure.

1. Disconnect the heater outlet coolant hose from the engine and connect the heater hose to a suitable hose pipe.
2. Disconnect the heater inlet coolant hose from the engine and allow the coolant to drain into a suitable container.
3. Turn the water supply valve to the hose ON and allow water pressure to flow through the heater core.
4. Allow water pressure to flow through the heater core for approximately five minutes.
5. Turn the water supply valve to the hose OFF and disconnect the hose pipe from the heater hose.
6. Connect the heater inlet coolant hose to the engine.
7. Connect the heater outlet coolant hose to the engine.
8. Fill the cooling system as described using a 50% mixture of Jaguar Premium Cooling System Fluid, or equivalent meeting Jaguar specification WSS M97B44-D and 50% distilled water.
9. Test the system for correct heater performance with the specified engine cooling system conditions.

## Radiator Backflushing

1. Remove the radiator.  
For additional information, refer to [Radiator](#) in this section.
2. Invert the radiator.
3. Connect a suitable hose pipe to the lower coolant hose connection of the radiator.
4. Turn the water supply valve to the hose ON and allow water pressure to flow through the radiator.
5. Allow water pressure to flow through the radiator for approximately five minutes.
6. Turn the water supply valve to the hose OFF and disconnect the hose pipe from the radiator.
7. Allow the coolant to drain from the radiator.
8. Install the radiator.  
For additional information, refer to [Radiator](#) in this section.

## Engine Backflushing

1. Remove the thermostat before backflushing the engine.  
For additional information, refer to [Thermostat](#) in this section.
2. Position the high-pressure water hose into the engine through the engine return and backflush the engine.
3. Connect a suitable hose pipe to the upper coolant hose connection of the engine.
4. Turn the water supply valve to the hose ON and allow water pressure to flow through the engine.
5. Allow water pressure to flow through the engine for approximately five minutes.
6. Turn the water supply valve to the hose OFF and disconnect the hose pipe from the upper coolant hose connection of the engine.
7. Connect the upper coolant hose to the engine.
8. Fill the cooling system as described using a 50% mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and 50% distilled water.

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Cooling System Draining, Filling and Bleeding

General Procedures

All Vehicles

## 1. WARNINGS:

Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in personal injury.

To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

To avoid the possibility of personal injury, do not operate the engine with the hood open until the fan blades have been examined for cracks and separation. Failure to follow this instruction may result in personal injury.

Remove fuse 38 from the engine compartment fuse box prior to performing any under hood service in the area of the cooling fan when the engine is hot, since the cooling fan motor could operate if the engine has been switched OFF. Failure to follow this instruction may result in personal injury.

## • CAUTIONS:

The engine cooling system must be maintained with the correct concentration and type of anti-freeze solution to prevent corrosion and frost damage.

Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in damage to the engine.

Relieve the cooling system pressure.

- Unscrew the coolant expansion tank cap slowly.

2. Remove the coolant expansion tank cap.

3. Remove the radiator splash shield.

For additional information, refer to Section [501-02 Front End Body Panels](#).

4. Remove the radiator lower cowl.

5. Remove the coolant drain plug.

- Drain the coolant into a suitable container.

6.  **CAUTION:** Do not over tighten the drain plug. Failure to follow this instruction may cause damage to the vehicle.

Install the drain plug when all coolant has drained.

- Tighten to 1 Nm.
- Remove the drain tray.

7. Install the radiator lower cowl.

8. Install the radiator splash shield.

For additional information, refer to Section [501-02 Front End Body Panels](#).

Vehicles without supercharger

9. Remove the coolant expansion tank bleed screw.

10. Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

**11.**  **CAUTION:** Do not over tighten the coolant expansion tank bleed screw. Failure to follow this instruction may cause damage to the vehicle

Install the coolant expansion tank bleed screw.

- Tighten to 1 Nm.

**12.** Install the coolant expansion tank pressure cap.

**13.**  **CAUTION:** Do not RUN the engine with the coolant expansion tank pressure cap removed. Failure to follow this instruction may cause damage to the vehicle

START and RUN the engine.

**14.** SET the heating system to MAX heat, the blower motor to MAX speed and the air distribution to instrument panel registers.

**15.**  **CAUTION:** Observe the engine temperature gauge. If the engine starts to over-heat switch off immediately and allow to cool. Failure to follow this instruction may cause damage to the vehicle.

Allow the engine to RUN until hot air is emitted from the instrument panel registers, while observing the engine temperature gauge.

**16.** Switch off the engine.

**17.** Allow the engine to cool.

**18.** Release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

**19.** Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

**20.** Install the coolant expansion tank pressure cap.

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Cooling System Draining and Vacuum Filling

General Procedures

All vehicles

- NOTE: Vehicles fitted with supercharged engines shown, V8 NA and V6 engines similar.

**1. ⚠ WARNING:** To avoid having scalding hot coolant or steam blowing out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

• CAUTIONS:

**⚠** The engine cooling system must be maintained with the correct concentration and type of anti-freeze solution to prevent corrosion and frost damage. Failure to follow this instruction may result in damage to the vehicle.

**⚠** Engine coolant will damage the paint finished surfaces. If spilt, immediately remove the coolant and clean the area with water.

Set the heater controls to maximum HOT.

**2. ⚠ WARNING:** Relieve the cooling system pressure by unscrewing the coolant pressure cap. Failure to follow this instruction may result in personal injury.

Remove the coolant expansion tank pressure cap.

E94474

**3.** Remove the radiator splash shield.  
For additional information, refer to: [Radiator Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).

**4. NOTE:** Remove and discard the radiator drain plug O-ring seal.

Remove the coolant drain plug.

- Drain the coolant into a suitable container.

E36709

5.  **CAUTION:** Do not over tighten the drain plug. Failure to follow this instruction may result in damage to the vehicle.

• **NOTE:** Install a new O-ring seal.

Install the coolant drain plug.

#### Vehicles with supercharger

6. Disconnect the supercharger radiator bottom hose.

- Release the clip.
- Allow the coolant to drain.

7. Connect the supercharger bottom hose.

- Secure the clip.

#### All vehicles

8. Remove the suitable container.

9. Lower the vehicle.

10. Install the cooling system vacuum refill adaptor to the expansion tank.

**11.** Install the vacuum filler gauge to the cooling system vacuum refill adaptor.

**12.** Install the venturi tube assembly to the vacuum filler gauge.

**13. NOTE:** Make sure that both valves are in the closed position on the vacuum filler gauge assembly.

• NOTE: The coolant vacuum fill tool needs an air pressure of 6 to 8 bar (87 to 116 psi) to operate correctly.

• NOTE: Small diameter or long airlines may restrict airflow to the coolant vacuum fill tool.

Connect a regulated compressed air supply to the venturi tube assembly.

**14. NOTE:** Make sure air cannot enter the hose.

Position the coolant pick-up pipe into a container of clean coolant.

**15.** Position the evacuated air hose into a container.

**16.** Open the air supply valve.

**17. NOTE:** Make sure the coolant supply hose is positioned into a container of fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water. Make sure no air can enter the coolant supply hose.

Open the coolant supply valve for 2 seconds to prime the coolant supply hose.

E94482

**18.** Apply air pressure progressively until the arrow on the vacuum filler gauge reaches the green segment.

E94480

**19.** Close the air supply valve.

E94480

**20.** Allow one minute to check the vacuum is held.

- Disconnect the air supply.

E94477

**21. NOTE:** Close the coolant supply valve when the coolant expansion tank MAX mark is reached or coolant movement has ceased.

Open the coolant supply valve and allow the coolant to be drawn into the system.

**22.** Remove the vacuum filler gauge and cooling system vacuum refill adaptor assembly.

**23.** Check and top up the cooling system if required.

**24.** Install the coolant expansion tank filler cap.

#### Vehicles with supercharger

**25.** Remove the engine cover.

**26.** Remove the supercharger coolant filler plug.

- Remove and discard the sealing washer.

**27. NOTE:** Place a suitable cloth around supercharger fill port.

Top up the coolant through the supercharger fill port.

**28.**  **CAUTION:** Coolant may spill from supercharger fill port when ignition switched on.

Switch ignition on.

**29.**  **CAUTION:** Do not allow the supercharger water pump to run dry for more than one minute. Failure to follow this instruction may result in damage to the vehicle.

Allow the supercharger pump to run and top up the coolant through supercharger fill port.

**30.** Switch the ignition off.

**31.** Install the supercharger coolant fill plug.

- Install a new sealing washer.
- Tighten to 45 Nm.
- Clean off any spillages.

**32.** Install the engine cover.

All vehicles

**33.**  **CAUTION:** Do not RUN the engine with the coolant expansion tank pressure cap removed. Failure to follow this instruction may cause damage to the vehicle.

START and RUN the engine.

**34.** SET the heating system to MAX heat, the blower motor to MAX speed and the air distribution to instrument panel registers.

**35.**  **CAUTION:** Observe the engine temperature gauge. If the engine starts to over-heat switch off immediately and allow to cool. Failure to follow this instruction may cause damage to the vehicle.

Allow the engine to RUN until hot air is emitted from the instrument panel registers, while observing the engine temperature gauge.

**36.** Switch off the engine.

**37.** Allow the engine to cool.

**38.** Check and top up the cooling system if required.

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Cooling System Flushing

## General Procedures

Vehicles with 2.5L or 3.0L engine

1. Remove the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

Vehicles with 4.2L engine

2. Remove the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

All vehicles

3. Remove the thermostat.  
For additional information, refer to [Thermostat](#) in this section.
4. Detach the lower coolant hose from the radiator and position to one side.

5. Detach the upper coolant hose from the radiator.

• NOTE: To remove rust, sludge and other foreign material from the cooling system, use Premium Cooling System flush, meeting Jaguar specification EGR-M14P7-A, which is safe for use with aluminium cooling systems. This cleaning restores cooling system efficiency and helps prevent overheating.

• NOTE: In severe cases where cleaning solvents will not properly clean the cooling system, it will be necessary to use the pressure flushing method using Cooling System Flusher, 164-R3670 to restore efficient operation.

• NOTE: A pulsating or reversed direction of flushing water will loosen sediment more quickly than a steady flow in the normal coolant flow direction.

• NOTE: Dispose of old coolant and flushing water contaminated with coolant and cleaning chemicals in accordance with local, state and federal laws.

6. Connect a hose pipe to the radiator upper coolant hose connection using a suitable connector.

**7.  CAUTION:** Radiator internal pressure must not exceed 100 kPa (14.5 psi). Failure to follow this instruction may cause damage to the radiator.

Flush the radiator using the hose pipe until the coolant flowing from the radiator lower coolant hose connection is clear.

8. Remove the hose pipe from the radiator upper coolant hose connection.
9. Connect a hose pipe to the upper coolant hose using a suitable connector.
10. Flush the engine using the hose pipe until the coolant flowing from the radiator lower coolant hose is clear.
11. Remove the hose pipe from the upper coolant hose connection.
12. Connect the upper coolant hose to the radiator.

- 13.** Connect the lower coolant hose to the radiator.
- 14.** Install the thermostat.  
For additional information, refer to [Thermostat](#) in this section.
- 15.** Fill the cooling system.  
For additional information, refer to [Cooling System Draining, Filling and Bleeding](#) in this section.

Vehicles with 2.5L or 3.0L engine

- 16.** Install the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

Vehicles with 4.2L engine

- 17.** Install the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Coolant Expansion Tank

## Removal and Installation

### Removal

Vehicles without supercharger

**1. NOTE:** Cap the vent hose to minimize coolant loss.

Detach the coolant expansion tank.

- Detach the vent hose.
- Remove the coolant expansion tank retaining bolt.

Vehicles with supercharger

**2. NOTE:** Cap the vent hoses to minimize coolant loss.

Detach the coolant expansion tank.

- Detach the vent hoses.
- Remove the coolant expansion tank retaining bolt.

All vehicles

**3.** Detach the coolant expansion tank.

**4.** Disconnect the coolant expansion tank low level sensor.

5. NOTE: Make sure the retaining clip is not removed.

- NOTE: Cap the coolant expansion tank lower hose to minimize coolant loss.

Detach the coolant expansion tank lower hose.

- Remove the coolant expansion tank.

## Installation

1. To install, reverse the removal procedure.

- Tighten to 3 Nm.

2. Check and top up the cooling system as required.

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Cooling Fan Motor and Shroud

## Removal and Installation

### Removal

#### All Vehicles

1. Remove fuse 38 from the engine compartment fuse box prior to performing any under hood service in the area of the cooling fan.
2. Drain the cooling system.  
For additional information, refer to [Cooling System Draining, Filling and Bleeding](#) in this section.
3. Lower the vehicle.
4. Remove the coolant expansion tank.  
For additional information, refer to [Coolant Expansion Tank](#) in this section.

#### Vehicles with 2.5L or 3.0L engine

5. Remove the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

#### Vehicles with 4.2L engine

6. Remove the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

#### All Vehicles

7. Remove the radiator mounting brackets.

8. Detach the upper coolant hose.

9. Disconnect the cooling module electrical connectors.

- 10.** Detach the thermostat housing hose.

- 11.** Disconnect the auxiliary water pump electrical connector.

- 12.** Detach the auxiliary water pump.

All Vehicles

- 13.** Disconnect the dual coolant flow valve electrical connector.

14. Detach the dual coolant flow valve.

Vehicles with supercharger

15. Disconnect the water pump electrical connector.

All vehicles

16. NOTE: Right-hand shown left-hand similar.

Remove the cooling fan motor and shroud retaining bolt.

17.  CAUTION: Make sure that the retaining lugs of the radiator are not damaged when detaching the cooling fan motor and shroud.

• NOTE: Left-hand shown right-hand similar.

Detach the cooling fan motor and shroud from the retaining lugs of the radiator.

18.  CAUTION: Make sure that the radiator is not damaged when removing the cooling fan motor and shroud.

Remove the cooling fan motor and shroud.

## Installation

### 1. CAUTIONS:

 Make sure that the radiator is not damaged when installing the cooling fan motor and shroud.

 Make sure that the retaining lugs of the radiator are not damaged when installing the cooling fan motor and shroud.

To install, reverse the removal procedure.

2. Tighten to 10 Nm.

3. Tighten to 10 Nm.

4. Tighten to 10 Nm.

5. Tighten to 6 Nm.

6. Fill the cooling system.  
For additional information, refer to [Cooling System Draining, Filling and Bleeding](#) in this section.

5. Remove the air cleaner. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

#### All Vehicles

6. Remove the radiator mounting brackets.

7. Detach the upper coolant hose.

8. Detach the expansion tank vent hose.

9. NOTE: Make sure the retaining clip is not removed.

Detach the coolant expansion tank lower hose.

10. Disconnect the cooling module electrical connectors.

11. Disconnect the front crash sensor.

12. Detach the wiring harness.

Vehicles with 4.2L engine

**13.** Disconnect the auxiliary water pump electrical connector.

**14.** Detach the auxiliary water pump.

All vehicles

**15.** Disconnect the dual coolant flow valve electrical connector.

**16.** Detach the dual coolant flow valve.

Vehicles with 2.5L or 3.0L engine

**17.** Disconnect the throttle potentiometer (TP) electrical connector.

**18.** Detach the brake tube securing brackets.

#### Vehicles with automatic transmission

**19.** Detach the transmission oil cooler inlet and return pipes.

- Remove and discard the O-ring seals.
- Cap the oil cooler inlet and return pipes and the oil cooler.

**20.** Detach the lower coolant hose.

#### Vehicles with manual transmission

21. Detach the lower coolant hose.

All Vehicles

22. Detach the radiator seal.

- Left-hand shown, right-hand similar.
- Remove the double-sided adhesive tape.

23. Raise the vehicle.

24. Remove the radiator lower cowl.

25. NOTE: Left-hand shown, right-hand similar.

Detach the power steering oil cooler.

26. Disconnect the condenser core supply and return lines.

- Remove and discard the O-ring seals.
- Cap the exposed ports.

27. Lower the vehicle.

28.  **CAUTION:** Make sure that the radiator and the air conditioning condenser are not damaged during the removal of the cooling module.

Remove the cooling module.

## Installation

All vehicles

1.  **CAUTION:** Make sure that the radiator and the air conditioning condenser are not damaged during the installation of the cooling module.

• **NOTE:** Install new O-ring seals to the condenser core supply and return lines and lubricate them with A/C refrigerant oil.

To install, reverse the removal procedure.

2. Tighten to 8 Nm.

3. Tighten to 7 Nm.

4. NOTE: Install new O-ring seals.

Tighten to 20 Nm.

All vehicles

5. Tighten to 10 Nm.

Vehicles with 4.2L engine

6. Tighten to 10 Nm.

All vehicles

7. Tighten to 7 Nm.

8. Carry out the air conditioning (A/C) system evacuation and charging procedure.

For additional information, refer to Section [412-00 Climate Control System - General Information](#).

9. Fill the cooling system.

For additional information, refer to [Cooling System Draining, Filling and Bleeding](#) in this section.

Vehicles with automatic transaxle

10. Carry out transmission fluid level check.

For additional information, refer to Section [307-01 Automatic Transmission/Transaxle](#).

Removal and Installation

## Removal

### • WARNINGS:

Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in personal injury.

To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

Remove fuse 38 from the engine compartment fuse box prior to performing any under hood service in the area of the cooling fan when the engine is hot, since the cooling fan motor could operate if the engine has been switched OFF. Failure to follow this instruction may result in personal injury.

### • CAUTIONS:

The engine cooling system must be maintained with the correct concentration and type of anti-freeze solution to prevent corrosion and frost damage.

Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in damage to the engine.

#### 1. Remove the air cleaner outlet pipe.

For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

#### 2. Detach the thermostat housing hose.

- Clamp the bottom hose, to minimise coolant loss.
- Position an absorbant cloth to collect fluid spillage.

#### 3. Remove the thermostat.

- Position an absorbant cloth to collect fluid spillage.

## Installation

E30931

1. To install, reverse the removal procedure.

- Tighten to 9 Nm.

2. Install the air cleaner outlet pipe.

For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

3. Remove the coolant expansion tank bleed screw.

E30878

4. Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

5.  **CAUTION:** Do not over tighten the coolant expansion tank bleed screw. Failure to follow this instruction may cause damage to the vehicle

Install the coolant expansion tank bleed screw.

- Tighten to 1 Nm.

E30878

6. Install the coolant expansion tank pressure cap.

7.  **CAUTION:** Do not RUN the engine with the coolant expansion tank pressure cap removed. Failure to follow this instruction may cause damage to the vehicle

START and RUN the engine.

8. SET the heating system to MAX heat, the blower motor to MAX speed and the air distribution to instrument panel registers.

9.  **CAUTION:** Observe the engine temperature gauge. If the engine starts to over-heat switch off immediately and allow to cool. Failure to follow this instruction may cause damage to the vehicle.

Allow the engine to RUN until hot air is emitted from the instrument panel registers, while observing the engine temperature gauge.

10. Switch off the engine.

11. Allow the engine to cool.

12. Release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

GETtheMANUALS.org

13. Top up the cooling system.

- Fill the cooling system up to the MAX mark on the coolant

expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

- 14.** Install the coolant expansion tank pressure cap.

When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

 Remove fuse 38 from the engine compartment fuse box prior to performing any under hood service in the area of the cooling fan when the engine is hot, since the cooling fan motor could operate if the engine has been switched OFF. Failure to follow this instruction may result in personal injury.

### • CAUTIONS:

 The engine cooling system must be maintained with the correct concentration and type of anti-freeze solution to prevent corrosion and frost damage.

 Never remove the coolant pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in damage to the engine.

1. Remove the air cleaner outlet tube.  
For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

2. Detach the thermostat housing hose.

- Position an absorbant cloth to collect fluid spillage.
- Clamp the hose, to minimise coolant loss.

3. Detach the thermostat housing hose.

- Clamp the bottom hose, to minimise coolant loss.
- Position an absorbant cloth to collect fluid spillage.

4. Remove the thermostat.

- Position an absorbant cloth to collect fluid spillage.

## Installation

1. To install, reverse the removal procedure.
2. Tighten to 9 Nm.

3. Install the air cleaner outlet tube.  
For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
4. Remove the coolant expansion tank bleed screw.

5. Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

6.  **CAUTION:** Do not over tighten the coolant expansion tank bleed screw. Failure to follow this instruction may cause damage to the vehicle

Install the coolant expansion tank bleed screw.

- Tighten to 1 Nm.

7. Install the coolant expansion tank pressure cap.

8.  **CAUTION:** Do not RUN the engine with the coolant expansion tank pressure cap removed. Failure to follow this instruction may cause damage to the vehicle

START and RUN the engine.

9. SET the heating system to MAX heat, the blower motor to MAX speed and the air distribution to instrument panel registers.

10.  **CAUTION:** Observe the engine temperature gauge. If the engine starts to over-heat switch off immediately and allow to cool. Failure to follow this instruction may cause damage to the vehicle.

Allow the engine to RUN until hot air is emitted from the instrument panel registers, while observing the engine temperature gauge.

11. Switch off the engine.
12. Allow the engine to cool.
13. Release the cooling system pressure.
  - Remove the coolant expansion tank pressure cap.
14. Top up the cooling system.
  - Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.
15. Install the coolant expansion tank pressure cap.

# Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Water Pump 4.2L, Vehicles With: Supercharger

Removal and Installation

## Removal

1. Remove fuse 38 from the engine compartment fuse box prior to performing any under hood service in the area of the cooling fan.
2. Drain the cooling system.  
For additional information, refer to [Cooling System Draining, Filling and Bleeding](#) in this section.
3. Lower the vehicle.
4. Remove the air cleaner outlet tube. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).
5. Detach the supercharger belt.
  - Use a 1/2 inch square drive bar to rotate the supercharger belt tensioner.
    1. Detach the supercharger belt.

6. Loosen the water pump pulley retaining bolts.

7. Detach the accessory drive belt.

1. Rotate the accessory drive belt tensioner counter-clockwise.
  1. Use a 3/8 inch square drive bar to rotate the accessory drive belt tensioner.
2. Detach the accessory drive belt.

8. Remove the water pump pulley.

- Discard the water pump pulley retaining bolts.

9. Remove the water pump.

## Installation

1. To install, reverse the removal procedure.

- Install a new water pump gasket and O-ring seal.

2. Tighten to 8 Nm + 90°.

3. Tighten to 10 Nm + 45°.

- Install new retaining bolts.

4. Fill the cooling system.

For additional information, refer to [Cooling System Draining, Filling and Bleeding](#) in this section.

9	—	Cooling system water pump.
10	—	Charge air cooler.
11	—	Thermostat.
12	—	Auxiliary coolant flow pump.
13	—	Charge air cooler radiator.

The supercharger cooling system is integrated with in the engine cooling system but uses a separate radiator and electrical water pump.

#### Radiator

The supercharger radiator is of aluminium construction. The radiator is mounted to the cooling module between the oil cooler and the air conditioning condenser. A coolant drain plug is located at the left-hand bottom of the radiator.

#### Water pump

The charge air cooler water pump is electrically driven, continuously while the ignition is on. The charge air cooler water pump provides an efficient coolant flow to the charge air coolers.

# Supercharger Cooling - Supercharger Cooling System Draining, Filling and Bleeding

General Procedures

## 1. WARNINGS:

Never remove the coolant expansion tank pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in personal injury.

To avoid hot coolant or steam blowing out of the cooling system, use extreme care when removing the coolant expansion tank pressure cap. Wait until the engine has cooled down, then insulate the coolant pressure cap with a suitable cloth and slowly loosen the coolant expansion tank pressure cap until the cooling system pressure is released. Do not remove the coolant expansion tank pressure cap. Step back while the pressure is released from the system. When all of the pressure has been released slowly remove the coolant expansion tank pressure cap (still with the suitable cloth in position) from the coolant expansion tank. Failure to follow this instruction may result in personal injury.

Prior to performing any under hood servicing in the area of the cooling fans when the engine is hot, disconnect the electrical supply to the cooling fans as the cooling fans may operate if the ignition is switched off. Failure to follow this instruction may result in personal injury.

Release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

## 2. Remove the radiator splash shield.

For additional information, refer to Section [501-02 Front End Body Panels](#).

## 3. Remove the radiator lower cowl.

## 4. Remove the radiator drain plug.

- Drain the coolant into a suitable container.

5.  **CAUTION:** Do not over tighten the radiator drain plug. Failure to follow this instruction may cause damage to the vehicle.

Install the radiator drain plug when all coolant has drained.

- Tighten to 1 Nm.
- Remove the container.
- Clean off any spillages.

6. Install the radiator lower cowl.

7. Install the radiator splash shield.

For additional information, refer to Section [501-02 Front End Body Panels](#).

8. Remove the coolant expansion tank bleed screw.

9.  **CAUTION:** The supercharger cooling system must be maintained with the correct concentration and type of coolant solution to prevent corrosion and frost damage.

Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

10.  **CAUTION:** Do not over tighten the coolant expansion tank bleed screw. Failure to follow this instruction may cause damage to the vehicle

Install the coolant expansion tank bleed screw.

- Tighten to 1 Nm.

11. Install the coolant expansion tank pressure cap.

12. Remove the engine cover.

13. Remove the supercharger coolant filler plug.

- Remove and discard the sealing washer.

14. **NOTE:** Place a suitable cloth around supercharger fill port.

Top up the coolant through the supercharger fill port.

15.  **CAUTION:** Coolant may spill from supercharger fill port when ignition switched on.

Switch ignition on.

16.  **CAUTION:** Do not allow the supercharger water pump to run dry for more than one minute. Failure to follow this instruction may result in damage to the vehicle.

Allow the supercharger pump to run and top up the coolant through supercharger fill port.

17. Switch the ignition off.

18. Install the supercharger coolant fill plug.

- Install a new sealing washer.
- Tighten to 45 Nm.
- Clean off any spillages.

19. Install the engine cover.

20.  **CAUTION:** Do not RUN the engine with the coolant expansion tank pressure cap removed. Failure to follow this instruction may cause damage to the vehicle

START and RUN the engine.

21. SET the heating system to MAX heat, the blower motor to MAX speed and the air distribution to instrument panel registers.

22.  **CAUTION:** Observe the engine temperature gauge. If the engine starts to over-heat switch off immediately and allow to cool. Failure to follow this instruction may cause damage to the vehicle.

Allow the engine to RUN until hot air is emitted from the instrument panel registers, while observing the engine temperature gauge.

23. Switch off the engine.

24. Allow the engine to cool.

25. Release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

26. Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

27. Install the coolant expansion tank pressure cap.

# Supercharger Cooling - Radiator

## Removal and Installation

### Removal

1. Remove the water pump.  
For additional information, refer to [Water Pump](#) in this section.
2. Remove the oil cooler. For additional information, refer to Section [303-01A Engine](#) / [303-01B Engine](#) / [303-01C Engine](#).
3. Lower the vehicle.
4. Disconnect the radiator coolant vent hose.

5. Raise the vehicle.
6. Disconnect the left-hand radiator hose.

7. Disconnect the right-hand radiator hose.

8. Remove the water pump retaining bracket.
  1. Remove the retaining bolt.
  2. Remove the water pump retaining bracket.

9. Remove the cooling module retaining bolt.

10. Remove the cooling module retaining bolt.

11. Remove the radiator.

## Installation

1. To install, reverse the removal procedure.

- Tighten to 7 Nm.

2. Tighten to 7 Nm.

3. Tighten to 7 Nm.

Engine Cooling System Components

E52700

Item	Part Number	Description
1	—	Engine coolant outlet assembly
2	—	Engine coolant inlet assembly
3	—	Water pump

Water Pump

The water pump is of a conventional design and is driven by the crankshaft pulley through the accessory drive belt. The water pump belt tension is maintained by an automatic drive belt tensioner.  
For additional information, refer to: [Accessory Drive](#) (303-05 Accessory Drive, Description and Operation).

Thermostat

The thermostat is located in the thermostat housing and allows rapid engine warm-up by restricting coolant flow through the radiator below approximately 92°C (198°F). The thermostat also assists in keeping the engine operating temperature within predetermined limits.

When the engine is cold and the thermostat is closed, coolant flows from the water pump through the engine. It then returns to the water pump through the upper coolant hose.

When the engine is warm and the thermostat is open, coolant flows into the radiator through the upper coolant hose. It then returns to the water pump from the radiator through the lower coolant hose and engine oil cooler.

The heater core is on a parallel circuit and is unaffected by the position of the thermostat.

Radiator

The radiator is of aluminium construction with plastic end tanks. Foam seals are fitted to the radiator to prevent the cooling air from by passing the radiator core. A coolant drain plug is provided in the lower coolant end tank of the radiator for the draining of the coolant. The cooling fan shroud is attached to the radiator.

Cooling Fan

A single, variable speed cooling fan motor is attached to a fan shroud located behind the radiator. The speed is determined by the Engine Coolant Temperature (ECT) and the air conditioning pressure and transmission oil temperature.

Under hot operating conditions, the fan may continue to operate for four minutes after the engine has been switched off.

Coolant Recovery System

A pressurized coolant expansion tank system is used which continuously separates the air from the cooling system and replenishes the system through the coolant expansion tank outlet hose, attached to the heater return hose.

A continuous vent from the engine and radiator to the coolant expansion tank prevents air locks from forming in the cooling system.

A manual bleed point is provided on the coolant reservoir.

The coolant expansion tank serves as the location for:

- Service fill.
- Coolant expansion during warm-up.
- Air separation during operation.
- System pressurization by the coolant pressure cap.
- The coolant expansion tank is designed to have approximately 0.5 to 1 liter of air when cold to allow for coolant expansion.

Engine Coolant

The long life engine coolant is formulated to last for five years or 240,000 km (150,000 miles). The coolant is silicate free and orange in color. The long life engine coolant must not be mixed with conventional engine coolant.

#### PINPOINT TEST A : LOSS OF COOLANT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: VISUAL INSPECTION</b>	
	<ol style="list-style-type: none"> <li>Visually inspect for loss of coolant</li> <li>Following the instructions for your workshop's pressure tester, carry out a system pressure test.</li> </ol>
	<p>Is the engine cooling system leaking?</p> <p><b>Yes</b></p> <p>Rectify the source of the leak as indicated by the test. REFER to: <a href="#">Engine Cooling</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing) / <a href="#">Cooling System Draining, Filling and Bleeding</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures). TEST the system for normal operation.</p> <p><b>No</b></p> <p>Verify the customer complaint.</p>

#### PINPOINT TEST B : THE ENGINE OVERHEATS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE COOLANT LEVEL AND CONDITION</b>	
 <b>WARNING:</b> Make sure the reservoir cap is never released until the system has cooled. Failure to follow this instruction may result in personal injury.	
• NOTE: To check the coolant condition, use the mandatory coolant concentration tester.	
	<ol style="list-style-type: none"> <li>Check the coolant level and condition.</li> </ol>
	<p>Does the system contain sufficient coolant of the correct specification?</p> <p><b>Yes</b></p> <p><a href="#">GO to B2.</a></p> <p><b>No</b></p> <p>Top-up the system, REFER to: <a href="#">Cooling System Draining, Filling and Bleeding</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures). Check for coolant loss. GO to Pinpoint Test <a href="#">A</a>.</p>
<b>B2: CHECK THE OPERATION OF THE COOLING SYSTEM PRESSURE CAP</b>	
	<ol style="list-style-type: none"> <li>Check the opening pressure of the cooling system pressure cap.</li> <li>Following the instructions for your workshop pressure tester, test the pressure cap to the pressure indicated.</li> </ol> <p>• NOTE: Make sure the pressure is built up steadily when testing the pressure cap. Rapid increases in pressure may indicate a failure in a correctly operating pressure cap.</p>
	<ol style="list-style-type: none"> <li>Check that the pressure cap holds to the pressure indicated, and releases once that pressure is reached.</li> </ol>
	<p>Does the pressure cap operate correctly?</p> <p><b>Yes</b></p> <p><a href="#">GO to B3.</a></p> <p><b>No</b></p> <p>INSTALL a new pressure cap. TEST the system for normal operation.</p>
<b>B3: CHECK THE OPERATION OF THE WATER PUMP</b>	
	<ol style="list-style-type: none"> <li>Remove the cooling system pressure cap and make sure there is sufficient coolant in the system.</li> <li>Make sure the parking brake is applied and <b>Park</b> or <b>Neutral</b> is selected.</li> <li>Start the engine and hold the engine speed at 1,500 to 2,000 rpm for one minute while observing the coolant through the expansion tank filler neck.</li> <li>Allow the engine to idle and switch off.</li> </ol>

	Is there coolant movement in the expansion tank while the engine is running?
<b>Yes</b>	<a href="#">GO to B4.</a>
<b>No</b>	Check the accessory drive belt condition and tension, REFER to: (303-05 Accessory Drive) <a href="#">Accessory Drive - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27</a> (Diagnosis and Testing), <a href="#">Accessory Drive - 2.7L V6 - TdV6</a> (Diagnosis and Testing).

#### **B4: CHECK THAT THE THERMOSTAT OPENS**

<b>1</b>	Remove and inspect the thermostat.
<b>2</b>	Note the opening temperature and immerse the thermostat in water.
<b>3</b>	Heat the water until this temperature is reached. The thermostat should begin to open.

Does the thermostat open?

**Yes**

Check the cooling fans, modules, circuits, sensors, etc, REFER to:

[Electronic Engine Controls - VIN Range: M45255->N52047](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing),

TEST the system for normal operation.

#### **PINPOINT TEST C : THE ENGINE DOES NOT REACH NORMAL OPERATING TEMPERATURE**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK THAT THE THERMOSTAT CLOSES</b>	
	<b>1</b> Remove and inspect the thermostat.
	<b>2</b> Allow the thermostat to cool.
	Does the thermostat fully close?
<b>Yes</b>	Check the cooling fans, modules, circuits, sensors, etc, REFER to: <a href="#">Electronic Engine Controls - VIN Range: M45255-&gt;N52047</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing), <a href="#">Electronic Engine Controls - VIN Range: N80181-&gt;R99999</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing), <a href="#">Electronic Engine Controls - VIN Range: M45255-&gt;N52047</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing), <a href="#">Electronic Engine Controls - VIN Range: N80181-&gt;R99999</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing), <a href="#">Electronic Engine Controls</a> (303-14C Electronic Engine Controls - 2.7L V6 - TdV6, Diagnosis and Testing).
<b>No</b>	INSTALL a new thermostat, REFER to: <a href="#">Thermostat - 2.5L/3.0L</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation), <a href="#">Thermostat - 4.2L, Vehicles With: Supercharger</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation), <a href="#">Thermostat - 4.2L, Vehicles Without: Supercharger</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation), <a href="#">Thermostat</a> (303-03C Engine Cooling - 2.7L V6 - TdV6, Removal and Installation).  REFER to: <a href="#">Cooling System Draining, Filling and Bleeding</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures). TEST the system for normal operation.

# Engine Cooling - 2.7L V6 - TdV6 - Cooling System Draining, Filling and Bleeding

General Procedures

## 1. WARNINGS:

 To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

 Relieve the cooling system pressure by unscrewing the coolant pressure cap. Failure to follow these instructions may result in personal injury.

 **CAUTION:** The engine cooling system must be maintained with the correct concentration and type of anti-freeze solution to prevent corrosion and frost damage. Failure to follow this instruction may result in damage to the vehicle.

Remove the coolant expansion tank pressure cap.

## 2. Remove the radiator splash shield.

For additional information, refer to: [Radiator Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).

## 3. NOTE: Remove and discard the radiator drain plug O-ring seal.

Remove the coolant drain plug.

- Drain the coolant into a suitable container.

E36709

## 4. Allow the coolant to drain.

## 5. NOTE: Install a new O-ring seal.

- NOTE: Do not over tighten the drain plug. Failure to follow this instruction may result in damage to the vehicle.

Install the coolant drain plug.

- Remove the drain tray.

E36709

## 6. Lower the vehicle.

## 7. Remove the coolant expansion tank bleed screw.

8. Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

9.  **CAUTION:** Do not over tighten the coolant expansion tank bleed screw. Failure to follow this instruction may result in damage to the vehicle.

Install the coolant expansion tank bleed screw.

- Tighten to 3 Nm.

10. Set the heating system to the COLD position.

11. Using an assistant, turn the ignition key to the ON position.

12. **NOTE:** Do not allow the expansion tank to empty when the electric coolant pump starts.

Fill the cooling system up to the MAX mark on the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

13. After 3 minutes, set the heating system to the HOT position.

14. Maintain the coolant level in the coolant expansion tank at the MAX mark using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

15. After four minutes, refit the coolant expansion tank pressure cap.

16. Start the engine and allow to idle for five minutes.

17. Raise the engine to 2500 RPM for 30 seconds.

18. Turn the ignition key to the OFF position.

19. Allow the engine to cool.

20.  **WARNING:** To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

After two minutes, release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

21. **NOTE:** Make sure the heating system is set to the HOT position.

Turn the ignition key to the ON position.

22. Maintain the coolant level in the coolant expansion tank using a fifty percent mixture of Jaguar Premium Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

23. After three minutes, refit the coolant expansion tank pressure cap.

24. Drive the vehicle on the road at varying speeds until the engine reaches normal operating temperature.

25. Allow the engine to cool.

26.  **WARNING:** To avoid having scalding hot coolant or steam blow out of the cooling system, use extreme care when removing the coolant pressure cap from a hot cooling system. Wait until the engine has cooled, then wrap a thick cloth around the coolant pressure cap and turn it slowly until the pressure begins to release. Step back while the pressure is released from the system. When certain all the pressure has been released (still with a cloth) turn and remove the coolant pressure cap from the coolant expansion tank. Failure to follow these instructions may result in personal injury.

Release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

27. Fill the cooling system up to the MAX mark on the coolant at the MAX mark expansion tank using a fifty percent mixture of Jaguar Premium

Cooling System Fluid or equivalent, meeting Jaguar specification WSS M97B44-D and fifty percent water.

**28.** Raise the vehicle.

**29.** Check for water leaks.

**30.** Install the radiator splash shield.

For additional information, refer to: [Radiator Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).

# Engine Cooling - 2.7L V6 - TdV6 - Coolant Expansion Tank

Removal and Installation

## Removal

Vehicles without supercharger

**1. NOTE:** Cap the vent hose to minimize coolant loss.

Detach the coolant expansion tank.

- Detach the vent hose.
- Remove the coolant expansion tank retaining bolt.

Vehicles with supercharger

**2. NOTE:** Cap the vent hoses to minimize coolant loss.

Detach the coolant expansion tank.

- Detach the vent hoses.
- Remove the coolant expansion tank retaining bolt.

All vehicles

**3.** Detach the coolant expansion tank.

**4.** Disconnect the coolant expansion tank low level sensor.

5. NOTE: Make sure the retaining clip is not removed.

- NOTE: Cap the coolant expansion tank lower hose to minimize coolant loss.

Detach the coolant expansion tank lower hose.

- Remove the coolant expansion tank.

## Installation

1. To install, reverse the removal procedure.

- Tighten to 3 Nm.

2. Check and top up the cooling system as required.

# Engine Cooling - 2.7L V6 - TdV6 - Cooling Fan Motor and Shroud

Removal and Installation

## Removal

1. Remove fuse 38 from the front power distribution box prior to performing any under hood service in the area of the cooling fan.
2. Remove the radiator splash shield.  
For additional information, refer to: [Radiator Splash Shield](#) (501-02 Front End Body Panels, Removal and Installation).
3. Disconnect the cooling fan motor and shroud electrical connectors.

4. Detach the heater return pipe.

5. Detach the air conditioning return pipe.

6. Disconnect the auxillary coolant flow pump electrical connector.

7. Lower the vehicle.

8. Remove the air cleaner.

For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air

Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).

**9. Remove the coolant expansion tank.**

For additional information, refer to: Coolant Expansion Tank (303-03C Engine Cooling - 2.7L Diesel, Removal and Installation).

**10. Detach the auxillary coolant flow pump.**

**11. Remove the cooling fan motor and shroud retaining bracket.**

**12. Remove the cooling fan motor and shroud retaining bolt.**

**13. Remove the cooling fan motor and shroud.**

- Reposition the cooling fan motor and shroud wiring harness.

## Installation

1. To install, reverse the removal procedure.

# Engine Cooling - 2.7L V6 - TdV6 - Radiator

## Removal and Installation

### Removal

1. Drain the cooling system.  
For additional information, refer to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 2.7L Diesel, General Procedures).
2. Remove the air deflector.  
For additional information, refer to: Air Deflector (501-02 Front End Body Panels, Removal and Installation).
3. Remove the cooling fan motor and shroud.  
For additional information, refer to: Cooling Fan Motor and Shroud (303-03C Engine Cooling - 2.7L Diesel, Removal and Installation).
4. Disconnect the radiator top hose.

E51069

5. Remove the air intake elbow pipe.

E51070

6. Detach the power steering cooler hose.

E72145

7. Detach the charge air cooler intake elbow.

E72146

8. Detach the thermostat.

- Release the retaining clip.

E51071

9. Using suitable tie straps, support the air conditioning (A/C) condensor.

E72147

10. Remove the radiator mounting brackets.

E51072

11. Raise the vehicle.

For additional information, refer to: Lifting (100-02, Description and Operation).

12. Detach the coolant pipe.

E50724

13. Remove the radiator lower cowl.

14. NOTE: Support the speed control module using tie straps.

Detach the speed control module.

- Remove the retaining nuts.

15. Remove the right-hand power steering cooler retaining nut.

16. NOTE: Support the power steering cooler using tie straps.

Detach the power steering cooler.

- Remove the retaining nut.

17. Remove the right-hand A/C condensor retaining bolt.

18. Remove the left-hand A/C condensor retaining stud.

19. Lower the vehicle.

20. Reposition the radiator rearwards.

21. Reposition the radiator to the left.

22. Remove the radiator assembly.

23. Detach the foam insulation pads.

24. Remove the charge air cooler from the radiator.

1. Remove the charge air cooler retaining bolts.
2. Remove the charge air cooler from the radiator.

E63709

## Installation

1. Install the radiator assembly.

1. Install the charge air cooler to the radiator.
2. Install the charge air cooler retaining bolts.

- Tighten to 7 Nm.

E63764

2. Fit the foam insulation pads.

E63708

3. Install the radiator assembly.

E72151

4. Raise the vehicle.

For additional information, refer to: Lifting (100-02, Description and Operation).

5. Install the left-hand A/C condensor retaining stud.

- Tighten to 7 Nm.

E72148

6. Install the right-hand A/C condensor retaining bolt.

- Tighten to 7 Nm.

E51062

7. Attach the power steering cooler.

- Install the retaining nut.
- Tighten to 7 Nm.

E52127

8. Install the power steering cooler retaining nut.

- Tighten to 7 Nm.

E52126

9. Attach the speed control module.

- Install the retaining nuts.
- Tighten to 7 Nm.

E44645

10. Install the radiator lower cowl.

11. Attach the coolant pipe.

12. Lower the vehicle.

13. Install the radiator mounting brackets.

- Tighten to 7 Nm.

14. Remove the tie straps supporting the A/C condensor.

15. NOTE: Make sure the retaining clip is fully installed.

Attach the thermostat.

**16.** Attach the charge air cooler intake elbow.

- Tighten to 7 Nm.

**17.** Attach the power steering cooler hose.

**18.** Install the air intake elbow pipe.

**19.** Connect the radiator top hose.

**20.** Install the cooling fan motor and shroud.

For additional information, refer to: Cooling Fan Motor and Shroud (303-03C Engine Cooling - 2.7L Diesel, Removal and Installation).

**21.** Install the air deflector.

For additional information, refer to: Air Deflector (501-02 Front End Body Panels, Removal and Installation).

**22.** Fill and bleed cooling system.

For additional information, refer to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 2.7L Diesel, General Procedures).

# Engine Cooling - 2.7L V6 - TdV6 - Thermostat

Removal and Installation

 <p>303-703</p>	<p>Accessory belt detensioner.</p> <p>303-703</p>

## Removal

1. Remove fuse 38 from the front power distribution box prior to performing any under hood service in the area of the cooling fan.
2. Remove the air cleaner.  
For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).
3. Drain the cooling system.  
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).
4. Remove the air deflector.  
For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).
5. Detach the accessory drive belt.
  1. Using the special tool, rotate the belt tensioner counter clockwise.
  2. Detach the accessory drive belt.

6. Remove the water pump pulley.
  - Using a suitable 6mm bar , retain the water pump pulley.
  - Discard the water pump pulley retaining bolts.

7.  **CAUTION:** Reposition the accessory drive belt to prevent contamination from the coolant.

Reposition the accessory drive belt.

8. NOTE: Discard the water pump O-ring seal.

Remove the water pump.

## Installation

1. NOTE: Install a new O-ring seal.

Install the water pump.

- Tighten to 10Nm.

2. Align the accessory drive belt.

3. Install the water pump pulley.

- Using a suitable 6mm bar , retain the water pump pulley.
- Tighten to 24 Nm.
- Align the accessory drive belt.

4. Attach the accessory drive belt.

1. Using the special tool, rotate the belt tensioner counter clockwise.
2. Attach the accessory drive belt.

5. Fill the cooling system.

For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).

6. Install the air deflector.

For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).

7. Install the air cleaner.

For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).

8. Install fuse 38 to the front power distribution box.

## Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 -

### Torque Specifications

Description	Nm	lb-ft	lb-in
Lower intake manifold retaining bolts	10	-	89
Fuel injection supply manifold retaining bolts	10	-	89
Fuel pressure regulator	10	-	89
Throttle body	10	-	89

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Charging and Controls

Description and Operation

E31242

Item	Part Number	Description
1	—	Fuel charging wiring harness
2	—	Fuel injector
3	—	Fuel pressure regulator
4	—	Fuel injection supply manifold
5	—	Throttle body

The electronic returnless fuel system has the advantages of reduced fuel temperature and fuel tank vapor caused by constant fuel recirculation. The system delivers the correct amount of fuel to the engine under all conditions and at a constant pressure differential with respect to manifold absolute pressure.

Fuel is supplied at high pressure to the fuel injectors via a fuel injection supply manifold which incorporates fuel injectors, a fuel pressure regulator and a fuel temperature sensor. The engine control module (ECM) increases the fuel pressure to minimise fuel vapor formation to maintain fuel flow across the injectors.

The throttle body assembly is calibrated during assembly, no adjustments are required or permitted. The throttle motor is a 12 volt DC motor which via movement of the throttle blade controls the amount of air flowing into the engine.

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Charging and Controls

## VIN Range: M45255->N52047

### Diagnosis and Testing

### Inspection and Verification

1. Verify the customer concern.
2. Confirm which, if any, warning lights and/or messages were displayed on the instrument cluster.

• **NOTE:** If any warning lights and/or messages were displayed when the fault occurred, refer to the Driver Information table for DTCs associated with the display, then to the DTC index table for possible sources and actions. Some warnings will appear to clear when the ignition is cycled. This is often because the warning has flagged as a result of one of the vehicle's on-board diagnostic routines having run to detect the fault. If the same routine is not run when the ignition is switched **ON**, the warning will not reflag until the routine does run. See the DTC summaries for drive cycle routines.

3. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Engine oil level</li> <li>Cooling system coolant level</li> <li>Fuel level</li> <li>Fuel contamination/grade/quality</li> <li>Throttle body</li> <li>Poly-vee belt</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Wiring harness</li> <li>Electrical connector(s)</li> <li>Sensor(s)</li> <li>Engine control module (ECM)</li> <li>Transmission control module</li> </ul>

4. Verify the following systems are working correctly:

- Air intake system
- Cooling system
- Charging system
- Ignition system

5. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
6. Where the Jaguar approved diagnostic system is available, complete the S93 report before clearing any or all fault codes from the vehicle.

• **NOTE:** If a DTC cannot be cleared, then there is a permanent fault present that flags again as soon as it is cleared. (The exception to this is P1260, which will only clear following an ignition **OFF/ON** cycle after rectification).

7. If the cause is not visually evident and the Jaguar approved diagnostic system is not available, use a fault code reader to retrieve the fault codes before proceeding to the Diagnostic Trouble Code (DTC) Index Chart, or the Symptom Chart if no DTCs are set.
8. Using the Jaguar approved diagnostic system where available, and a scan tool where not, check the freeze frame data for information on the conditions applicable when the fault was flagged. The format of this will vary, depending on the tool used, but can provide information useful to the technician in diagnosing the fault.

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

#### Symptom Chart

Symptom	Possible source	Action
Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>Engine breather system disconnected/restricted</li> <li>Ignition system</li> <li>Fuel system</li> <li>Harness</li> <li>CKP sensor</li> <li>ECM fault</li> </ul>	Check engine breather system, REFER to Section <a href="#">303-08A Engine Emission Control</a> / <a href="#">303-08B Engine Emission Control</a> . Default mode Definitions

LIMP-HOME MODE

- Throttle motor off
- Throttle motor relay off
- Throttle motor circuit off
- Fuel intervention
- Cruise control inhibited

LIMP-HOME UNAVAILABLE

- Power limitation
- Vehicle speed limited to 120 kph
- Reverse throttle progression enabled
- Cruise control Inhibited

REVERSE THROTTLE PROGRESSION

- Throttle opening limited to maximum 30%

• NOTE: The throttle operation uses the same map as for reverse gear.

ENGINE SPEED LIMITED

- Engine runs normally, up to 3000 rpm
- Engine speed restricted to 3000 rpm maximum, by fuel cut-off

## HIGH IDLE

- Throttle valve kept in fixed position by motor
- Cruise control Inhibited

## SAFETY REDUNDANCY

- Power limitation
- Vehicle speed limited to 120 kph
- Reverse throttle progression enabled
- Cruise Control Inhibited

## Diagnostic Trouble Code (DTC) index

DTC	Condition	Possible Causes	Action
P0171	Right-hand cylinders combustion too lean	<ul style="list-style-type: none"> <li>● Air intake leak between mass air flow (MAF) sensor and cylinder head</li> <li>● Fuel filter/system restriction</li> <li>● Fuel injector restriction</li> <li>● Fuel rail pressure (FRP) sensor fault (low fuel pressure)</li> <li>● Low fuel pump output</li> <li>● HO2S/catalyst monitor sensor harness wiring condition fault</li> <li>● EFT sensor fault (low fuel temperature)</li> <li>● Mass air flow (MAF) sensor fault (low intake air flow)</li> <li>● Exhaust leak (before catalyst)</li> <li>● ECM receiving incorrect signal from one or more of the following sensors; ECT, MAF*, IAT, fuel rail temperature</li> </ul>	<p>For intake system, REFER to Section <a href="#">303-12A Intake Air Distribution and Filtering</a> / <a href="#">303-12B Intake Air Distribution and Filtering</a> / <a href="#">303-12C Intake Air Distribution and Filtering</a>. ## Pinpoint Tests

PINPOINT TEST A : DTC P0201, P0202, P0203, P0204, P0205, P0206; FUEL INJECTORS	
<p>• NOTE: The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.</p>	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE INJECTOR COIL RESISTANCE</b>	
	<ol style="list-style-type: none"> <li>Turn the ignition switch to the <b>OFF</b> position.</li> <li>Disconnect the battery negative terminal.</li> <li>Disconnect the relevant injector electrical connector (IL03 to IL08).</li> <li>Measure the resistance between the injector pins.</li> </ol>
	Is the resistance between 12 and 16 ohms?
Yes	<a href="#">GO to A2.</a>
No	INSTALL a new injector.

REFER to [Fuel Injectors -](#) in this section.  
CLEAR the DTC. TEST the system for normal operation.

#### A2: CHECK THE INJECTOR COIL INSULATION

- 1 Measure the resistance between the injector pin 01 and the injector body.
- 2 Measure the resistance between the injector pin 02 and the injector body.

Is either resistance less than 10,000 ohms?

**Yes**

INSTALL a new injector.  
REFER to [Fuel Injectors -](#) in this section.  
CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to A3.](#)

#### A3: CHECK THE INJECTOR SUPPLY VOLTAGE

- 1 Reconnect the battery negative terminal.
- 2 Turn the ignition switch to the **ON** position.
- 3 Disconnect the relevant injector harness electrical connector (IL03 to IL08).
- 4 Measure the voltage between the relevant injector harness electrical connector (IL03 to IL08) pin 02 and GROUND.

Is the voltage less than 10 Volts?

**Yes**

REPAIR the circuit between the relevant injector harness electrical connector (IL03 to IL08) pin 02 and battery. This circuit includes the front power distribution box, fuse 13, and the EMS relay. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to A4.](#)

#### A4: CHECK THE INJECTOR GROUND CIRCUIT

- 1 Turn the ignition switch to the **OFF** position.
- 2 Disconnect the battery negative terminal.
- 3 Disconnect the ECM electrical connector PI01.
- 4 Measure the resistance between the relevant injector harness electrical connector (IL03 to IL08) pin 01 and PI01 pins as follows:
  - Injector Cyl 1 pin 01 (BG) and PI01, pin 115 (BG).
  - Injector Cyl 2 pin 01 (BR) and PI01, pin 120 (BR).
  - Injector Cyl 3 pin 01 (BK) and PI01, pin 114 (BK).
  - Injector Cyl 4 pin 01 (BO) and PI01, pin 119 (BO).
  - Injector Cyl 5 pin 01 (BG) and PI01, pin 113 (BG).
  - Injector Cyl 6 pin 01 (U) and PI01, pin 118 (U).

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to A5.](#)

#### A5: CHECK THE INJECTOR GROUND CIRCUIT FOR SHORT CIRCUIT TO BATTERY

- 1 Reconnect the battery negative terminal.
- 2 Turn the ignition switch to the **ON** position.
- 3 Measure the voltage between the relevant injector harness electrical connector (IL03 to IL08) pin 01 and GROUND.

Is the voltage greater than 3 volts?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to A6.](#)

#### A6: CHECK THE INJECTOR GROUND CIRCUIT FOR SHORT CIRCUIT TO GROUND

- 1 Measure the resistance between the relevant injector harness electrical connector (IL03 to IL08) pin 01 and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

Contact dealer technical support for advice on possible ECM failure.

#### PINPOINT TEST B : DTC P0190, P0192, P0193; FUEL RAIL PRESSURE (FRP) SENSOR

• NOTE: For sensor supply tests, REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#).

• NOTE: For sensor ground tests, REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR HIGH RESISTANCE</b>	
	<ol style="list-style-type: none"><li>1 Turn the ignition switch to the <b>OFF</b> position.</li><li>2 Disconnect the battery negative terminal.</li><li>3 Disconnect the FRP sensor electrical connector, IL12.</li><li>4 Measure the resistance between IL12 pin 03 (U) and PI01 pin 73 (U).</li></ol>
	Is the resistance greater than 5 ohms?
	<b>Yes</b>
	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b>
	<a href="#">GO to B2.</a>
<b>B2: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR SHORT TO HIGH VOLTAGE</b>	
	<ol style="list-style-type: none"><li>1 Reconnect the battery negative terminal.</li><li>2 Turn the ignition switch to the <b>ON</b> position.</li><li>3 Measure the voltage between IL12 pin 03 (U) and GROUND.</li></ol>

	<p>Is the voltage greater than 3 volts?</p> <p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to B3.</a></p>
<b>B3: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND</b>	
	<p><b>1</b> Turn the ignition switch to the <b>OFF</b> position.</p> <p><b>2</b> Measure the resistance between the FRP sensor electrical connector IL12 pin 03 (U) and GROUND.</p>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>Recheck the DTCs. Check the sensor supply and ground circuits. # Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Charging and Controls

## VIN Range: N52048->N99999

### Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit.

Refer to the DTC index in this section for guidance on how to use these codes with the Jaguar approved diagnostic system or a scan tool.

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual inspection

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Fuel leaks</li> <li>Damaged fuel lines</li> <li>Damaged push connect fittings</li> <li>Fuel level</li> <li>Fuel contamination/grade/quality</li> <li>Throttle body</li> <li>Damaged fuel tank filler pipe cap</li> <li>Damaged fuel tank filler pipe</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Inertia switch</li> <li>Loose or corroded electrical connectors</li> <li>Harnesses</li> <li>Sensor(s)</li> <li>Engine control module (ECM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the diagnostic trouble code (DTC) index.

### Symptom Chart

Symptom	Possible source	Action
Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>Engine breather system disconnected/restricted</li> <li>Ignition system</li> <li>Fuel system</li> <li>Harness</li> <li>Crankshaft position (CKP) sensor</li> <li>ECM fault</li> </ul>	<p>Check the engine breather system, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>Check the fuel pressure, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For CKP tests, REFER to: <a href="#">Electronic Engine Controls - VIN Range: N80181-&gt;R99999</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>Refer to the warranty policy and procedures manual if an ECM is suspect.</p>
Engine cranks and fires, but will not start	<ul style="list-style-type: none"> <li>Evaporative emissions purge valve</li> <li>Fuel pump</li> <li>Spark plugs</li> <li>HT short circuit to ground (tracking) check rubber boots for cracks/damage</li> <li>Ignition coil failure(s)</li> <li>Harness</li> </ul>	<p>For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing).</p> <p>Check the fuel pressure, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p>

## Pinpoint Tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

### PINPOINT TEST A : FUEL INJECTORS

• **NOTE:** The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE INJECTOR COIL RESISTANCE</b>	
	<b>1</b> Disconnect the relevant injector electrical connector:
	<b>Injector connector</b>
	Cylinder 1, IL03
	Cylinder 2, IL06
	Cylinder 3, IL04
	Cylinder 4, IL07
	Cylinder 5, IL05
	Cylinder 6, IL08
	<b>2</b> Measure the resistance between the injector pins.
	Is the resistance between 12 and 16 ohms?
	<b>Yes</b> <a href="#">GO to A2.</a>
	<b>No</b> INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.
<b>A2: CHECK THE INJECTOR COIL INSULATION</b>	
	<b>1</b> Measure the resistance between:
	<b>Injector, component side</b>
	<b>Injector body</b>
	Pin 01
	Pin 02

Is either resistance less than 10,000 ohms?

**Yes**

INSTALL a new injector.

REFER to: [Fuel Injectors](#) (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

**No**

[GO to A3.](#)

### A3: CHECK THE INJECTOR SUPPLY VOLTAGE

**1** Key on, engine off.

**2** Make sure the EMS relay is energized.

**3** Measure the voltage between:

Injector connector, harness side	Battery
Pin 02	Negative terminal

Is the voltage less than 10 Volts?

**Yes**

REPAIR the circuit between the relevant injector harness electrical connector pin 02 and battery. This circuit includes fuse 17 of the front power distribution box and the EMS relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to A4.](#)

### A4: CHECK THE INJECTOR CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

**1** Key off.

**2** Measure the resistance between:

Injector connector, harness side	Battery
Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to A5.](#)

### A5: CHECK THE INJECTOR CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

Injector connector, harness side	Battery
Pin 01	Positive terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to A6.](#)

### A6: CHECK THE INJECTOR CONTROL CIRCUIT FOR HIGH RESISTANCE

• **NOTE:** The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.

**1** Disconnect the ECM electrical connector PI300.

**2** Measure the resistance between:

Cylinder 1 injector connector, harness side	ECM connector PI 300, harness side
IL03, pin 01	Pin 78
Cylinder 2 injector connector, harness side	ECM connector PI 300, harness side
IL06, pin 01	Pin 79
Cylinder 3 injector connector, harness side	ECM connector PI 300, harness side
IL04, pin 01	Pin 80
Cylinder 4 injector connector, harness side	ECM connector PI 300, harness side
IL07, pin 01	Pin 81
Cylinder 5 injector connector, harness side	ECM connector PI 300, harness side
IL05, pin 01	Pin 82
Cylinder 6 injector connector, harness side	ECM connector PI 300, harness side
IL08, pin 01	Pin 83

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new injector.

REFER to: [Fuel Injectors](#) (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST B : THROTTLE BODY

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	
<b>1</b>	Disconnect the throttle body electrical connector, PI26.
<b>2</b>	Measure the resistance between:
Throttle body connector PI26, harness side	Battery
Pin 02	Negative terminal
Is the resistance less than 10,000 ohms?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to B2.</a>
<b>B2: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>	

<b>1</b>	Measure the resistance between:	
	<b>Throttle body connector PI26, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to B3.</a>

**B3: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND**

<b>1</b>	Measure the resistance between:	
	<b>Throttle body connector PI26, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to B4.</a>

**B4: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:	
	<b>Throttle body connector PI26, harness side</b>	<b>Battery</b>
	Pin 01	Positive terminal

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to B5.</a>

**B5: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR HIGH RESISTANCE**

<b>1</b>	Disconnect the ECM electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>Throttle body connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 75

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to B6.</a>

**B6: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR HIGH RESISTANCE**

<b>1</b>	Measure the resistance between:	
	<b>Throttle body connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01	Pin 74

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> INSTALL a new throttle body assembly. REFER to: <a href="#">Throttle Body - VIN Range: N52048-&gt;N99999</a> (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Charging Wiring Harness

## Removal and Installation

### Removal

1. Remove the intake manifold. For additional information, refer to Section [303-01A Engine](#) / [303-01B Engine](#) / [303-01C Engine](#).
2. Disconnect the spring lock coupling. For additional information, refer to Section [310-00 Fuel System - General Information](#).
3. Disconnect the fuel temperature sensor electrical connector.
  - Detach the fuel charging wiring harness.

E31163

4. Disconnect the fuel pressure regulator connector.

E31167

5. Detach the fuel pressure regulator vacuum line.

E31168

6. Disconnect the fuel charging wiring harness.

E31164

7. NOTE: Fuel may still be present in the fuel injection supply manifold.

Remove the fuel injection supply manifold, lower intake manifold and place to one side.

- Remove and discard the lower intake manifold O-ring seals.

8. Remove the lower intake manifolds.

- Remove and discard the fuel injector O-ring seals.

9. Disconnect the electrical connectors.

## Installation

1. NOTE: Install new fuel injector O-ring seals.

• NOTE: Install new lower intake manifold O-ring seals.

To install, reverse the removal procedure.

- Tighten to 10 Nm.

2. Tighten to 10 Nm.

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Injection Supply Manifold

## Removal and Installation

### Removal

1. Remove the fuel injectors.  
For additional information, refer to [Fuel Injectors](#) in this section.
2. Remove the fuel pressure regulator.
  - Remove and discard the O-ring seals.

E31166

### Installation

1. **NOTE:** Install new O-ring seals.

To install, reverse the removal procedure.

- Tighten to 10 Nm.

E31166

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Injectors

Removal and Installation

## Removal

1. Remove the fuel charging wiring harness.  
For additional information, refer to [Fuel Charging Wiring Harness](#) in this section.
2. Remove the fuel injectors.
  - Remove the fuel injector locating clips.

VUJ0003076

3. Remove and discard the O-ring seals.

E31162

## Installation

1. **NOTE:** Install new fuel injector O-ring seals.

To install, reverse the removal procedure.

- Lubricate the fuel injector O-ring seals with clean engine oil.

E31162

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Fuel Pressure Regulator

Removal and Installation

## Removal

1. Depressurize the fuel system.  
For additional information, refer to Section [310-00 Fuel System - General Information](#).
2. Remove the fuel pressure regulator bracket retaining bolt.

3. Remove the fuel pressure regulator bracket.

4. Disconnect the fuel pressure regulator electrical connector and vacuum hose (intake manifold removed for clarity).

5. Remove the fuel pressure regulator (intake manifold removed for clarity).
  - Remove and discard the O-ring seals.

## Installation

**1. NOTE: Install new O-ring seals.**

To install, reverse the removal procedure (intake manifold removed for clarity).

- Tighten to 10 Nm.

**2. Install the fuel pressure regulator bracket.**

- Tighten the lower retaining bolt to 10 Nm.
- Tighten the upper retaining bolt to 6 Nm.

**3. Tighten to 10 Nm.**

**Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Throttle BodyVIN****Range: M45255->N52047**

Removal and Installation

**Removal**

1.  **WARNING:** When relieving cooling system pressure, cover the expansion tank cap with a thick cloth to prevent the possibility of scalding. Failure to follow these instructions may result in personal injury.

Remove the expansion tank cap to relieve the cooling system pressure.

2.  **CAUTION:** Do not attempt to clean the throttle body. The bore and the throttle plate has a special coating applied during manufacture which should not be removed.

Remove the air cleaner outlet tube. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

3. Disconnect the throttle motor electrical connector.

4. Disconnect the throttle position (TP) sensor electrical connector.

5. **NOTE:** Cap the coolant hoses to minimize coolant loss.

Detach the coolant hoses from the throttle body.

6. Remove the throttle body.

7. Remove and discard the O-ring seal.

## Installation

1.  **CAUTION:** Do not attempt to clean the throttle body. The bore and the throttle plate has a special coating applied during manufacture which should not be removed.

To install, reverse the removal procedure.

- Install a new O-ring seal.

2. Tighten to 10 Nm.

3. Check and top up the cooling system as required.

# Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Throttle BodyVIN

Range: N52048->N99999

Removal and Installation

## Removal

1.  **WARNING:** When relieving cooling system pressure, cover the expansion tank cap with a thick cloth to prevent the possibility of scalding. Failure to follow these instructions may result in personal injury.

Remove the expansion tank cap to relieve the cooling system pressure.

2.  **CAUTION:** Do not attempt to clean the throttle body. The bore and the throttle plate has a special coating applied during manufacture which should not be removed.

Remove the air cleaner outlet pipe.

For additional information, refer to: [Air Cleaner Outlet Pipe - VIN Range: N52048->N99999](#) (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

3. Disconnect the throttle body electrical connector.

4. **NOTE:** Clamp the coolant hose to minimize coolant loss.

Disconnect the coolant hose.

5. **NOTE:** Clamp the coolant hose to minimize coolant loss.

Disconnect the coolant hose.

6. Remove the throttle body.

7. Remove and discard the O-ring seal.

## Installation

1.  **CAUTION:** Do not attempt to clean the throttle body. The bore and the throttle plate has a special coating applied during manufacture which should not be removed.

To install, reverse the removal procedure.

- Install a new O-ring seal.

2. Tighten to 10 Nm.

3. Check and top up the cooling system as required.

## Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol -

### Torque Specifications

Description	Nm	lb-ft	lb-in
Fuel injection supply manifold vehicles with supercharger	7	-	62
Fuel injection supply manifold vehicles without supercharger	22	16	-
Fuel pressure regulator	5	-	44
Throttle body	10	-	89

# Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Fuel Charging and Controls

Description and Operation

E31187

Item	Part Number	Description
1	—	Fuel pressure regulator
2	—	Fuel injector
3	—	Fuel injection supply manifold
4	—	Throttle body

E31188

Item	Part Number	Description
1	-	Fuel injection supply manifold
2	-	Throttle body
3	-	Fuel pressure regulator
4	-	Fuel injector

The electronic returnless fuel system has the advantages of reduced fuel temperature and fuel tank vapor caused by constant fuel recirculation. The system delivers the correct amount of fuel to the engine under all conditions and at a constant pressure differential with respect to manifold absolute pressure.

Fuel is supplied at high pressure to the fuel injectors via a fuel injection supply manifold which incorporates fuel injectors, a fuel pressure regulator and a fuel temperature sensor. The engine control module (ECM) increases the fuel pressure to minimise fuel vapor formation to maintain fuel flow across the injectors.

The throttle body assembly is calibrated during assembly, no adjustments are required or permitted. The throttle motor is a 12 volt DC motor which via movement of the throttle blade controls the amount of air flowing into the engine.

# Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Fuel Charging and Controls

## VIN Range: M45255->N52047

### Diagnosis and Testing

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, use a fault code reader to retrieve fault codes before proceeding to the Symptom Chart.

### Symptom Chart

DTC	Condition	Possible Causes	Action

PINPOINT TEST A : FUEL INJECTORS: P0201, P0202, P0203, P0204, P0205, P0206, P0207, P0208	
<ul style="list-style-type: none"> <li>NOTE: The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.</li> </ul>	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE INJECTOR COIL RESISTANCE</b>	
	<ol style="list-style-type: none"> <li>Turn the ignition switch to the OFF position.</li> <li>Disconnect the relevant injector electrical connector. (PI032 to PI039).</li> <li>Measure the resistance between the injector pins.</li> </ol>
	Is the resistance between 12 and 16 ohms? <b>Yes</b> <a href="#">GO to A2.</a> <b>No</b> INSTALL a new injector. REFER to <a href="#">Fuel Injectors</a> in this section. CLEAR the DTC. TEST the system for normal operation.
<b>A2: CHECK THE INJECTOR COIL INSULATION</b>	
	<ol style="list-style-type: none"> <li>Measure the resistance between the injector pin 001 and the injector body.</li> <li>Measure the resistance between the injector pin 002 and the injector body.</li> </ol>

Are both resistances greater than 10,000 ohms?  
**Yes**  
[GO to A3.](#)  
**No**  
INSTALL a new injector.  
REFER to [Fuel Injectors](#) in this section.  
CLEAR the DTC. TEST the system for normal operation.

**A3: CHECK THE INJECTOR SUPPLY VOLTAGE**

- 1 Turn the ignition switch to the ON position.
- 2 Disconnect the relevant injector harness electrical connector, (PI032 to PI039).
- 3 Measure the voltage between the relevant injector harness electrical connector, (PI032 to PI039) pin 002 and GROUND.

Is the voltage greater than 12 Volts?  
**Yes**  
[GO to A4.](#)  
**No**  
REPAIR the circuit between the relevant injector harness electrical connector, (PI032 to PI039) pin 002 and battery. This circuit includes the power distribution fuse box, fuse 41, and the EMS control relay. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**A4: CHECK THE INJECTOR GROUND CIRCUIT**

- 1 Turn the ignition switch to the OFF position.
- 2 Disconnect the ECM electrical connector, PI001.
- 3 Measure the resistance between the relevant injector harness electrical connector, (PI032 to PI039) pin 001 and PI001, pins as follows -
  - Injector Cyl 1 pin 001 (BG) and ECM pin 120.
  - Injector Cyl 2 pin 001 (BR) and ECM pin 115.
  - Injector Cyl 3 pin 001 (BK) and ECM pin 114.
  - Injector Cyl 4 pin 001 (BO) and ECM pin 115.
  - Injector Cyl 5 pin 001 (BG) and ECM pin 113.
  - Injector Cyl 6 pin 001 (U) and ECM pin 118.
  - Injector Cyl 7 pin 001 (BW) and ECM pin 117.
  - Injector Cyl 8 pin 001 (UY) and ECM pin 112.

Is the resistance less than 5 ohms?  
**Yes**  
[GO to A5.](#)  
**No**  
REPAIR the circuit between the relevant injector harness electrical connector pin 001 and the powertrain control module electrical connector. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**A5: CHECK THE INJECTOR GROUND CIRCUIT FOR SHORT CIRCUIT TO BATTERY**

- 1 Measure the voltage between the relevant injector harness electrical connector, (PI032 to PI039) pin 001 and GROUND.
- Is the voltage greater than 1 volt?  
**Yes**  
REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.  
**No**  
[GO to A6.](#)

**A6: CHECK THE INJECTOR GROUND CIRCUIT FOR SHORT CIRCUIT TO GROUND**

- 1 Measure the resistance between the relevant injector harness electrical connector, (PI032 to PI039) pin 001 and GROUND.
- Is the resistance less than 10,000 ohms?  
**Yes**  
REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.  
**No**  
INSTALL a new ECM. REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). Before replacing a ECM, contact Dealer technical support.

**PINPOINT TEST B : FUEL RAIL PRESSURE SENSOR: P0190, P0192, P0193**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE FUEL RAIL PRESSURE SENSOR SUPPLY VOLTAGE</b>	
	<ol style="list-style-type: none"><li>1 Turn the ignition switch to the OFF position.</li><li>2 Disconnect the fuel rail pressure sensor electrical connector, PI028.</li><li>3 Turn the ignition switch to the ON position.</li><li>4 Measure the supply voltage to the fuel rail pressure sensor electrical connector, PI028 pin 001, (OY) and GROUND.</li></ol>
	Is the supply voltage between 4.5 and 5.5 volts? <b>Yes</b> <a href="#">GO to B2.</a> <b>No</b> REPAIR the circuit between PI028, pin 001, (OY) and ECM electrical connector, PI001, pin 012. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (The fault could be in any of the components or sensors in the 5 volt supply circuit, or the ECM)  If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Before replacing a ECM, contact Dealer technical support
<b>B2: CHECK THE FUEL RAIL PRESSURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT</b>	
	<ol style="list-style-type: none"><li>1 Turn the ignition switch to the OFF position.</li><li>2 Measure the resistance between the fuel rail pressure sensor electrical connector PI028, pin 002, (BG) and GROUND.</li></ol>
	Is the resistance greater than 10,000 ohms? <b>Yes</b> REPAIR the circuit between PI028, pin 002, (BG) and ECM electrical connector, PI001, pin 019. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (The fault could be in any of the components or sensors in the 5 volt supply circuit, or the ECM)  If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B</a>

[Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). Before replacing a ECM, contact Dealer technical support

No

[GO to B3.](#)

### B3: CHECK THE FUEL RAIL PRESSURE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT

**1** Disconnect the ECM electrical connector, PI001.

**2** Measure the resistance between the fuel rail pressure sensor electrical connector PI028, pin 003, (U) and PI001, pin 073.

Is the resistance greater than 5 ohms?

Yes

REPAIR the circuit between PI028, pin 003, (U) and PI001, pin, 073 (U). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

No

[GO to B4.](#)

### B4: CHECK THE FUEL RAIL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND

**1** Measure the resistance between the fuel rail pressure sensor electrical connector PI028, pin 003 (U) and GROUND.

Is the resistance less than 10,000 ohms?

Yes

REPAIR the circuit between PI028, pin 003 (U) and PI001 pin 073, (U). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

No

[GO to B5.](#)

### B5: CHECK THE FUEL RAIL PRESSURE SENSOR CIRCUIT RESISTANCE

**1** Disconnect the fuel rail pressure sensor electrical connector PI028.

**2** Measure the resistance between the fuel rail pressure sensor pins 001 and 002.

Is the resistance between 10,000 and 12,000 ohms?

Yes

[GO to B6.](#)

No

Install a new fuel rail pressure sensor.  
REFER to [Fuel Pressure Regulator](#) in this section.  
CLEAR the DTC. TEST the system for normal operation.

### B6: CHECK THE FUEL RAIL PRESSURE SENSOR CIRCUIT RESISTANCE

**1** Measure the resistance between the fuel rail pressure sensor pins 002 and 003.

Is the resistance between 22,000 and 33,000 ohms?

Yes

[GO to B7.](#)

No

Install a new fuel rail pressure sensor.  
REFER to [Fuel Pressure Regulator](#) in this section.  
CLEAR the DTC. TEST the system for normal operation.

### B7: CHECK THE FUEL RAIL PRESSURE SENSOR CIRCUIT RESISTANCE

**1** Measure the resistance between the fuel rail pressure sensor pins 001 and 003.

Is the resistance between 22,000 and 33,000 ohms?

Yes

Install a new ECM.REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). Before replacing a ECM, contact Dealer technical support.

No

Install a new fuel rail pressure sensor.  
REFER to [Fuel Pressure Regulator](#) in this section.  
CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST C : FUEL LEVEL SENSORS: P0460

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK THE FUEL LEVEL SENSOR (1) GROUND CIRCUIT</b>	
	<b>1</b> Disconnect the fuel level sensor electrical connector, FP004.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the resistance between electrical connector FP004, pin 003 (KO) and GROUND.
	Is the resistance less than 5 ohms?
	Yes <a href="#">GO to C2.</a>
	No REPAIR the circuit between electrical connector FP004, pin 003 (KO) and GROUND. For additional information, refer to wiring diagrams.CLEAR the DTC. TEST the system for normal operation.
<b>C2: CHECK THE FUEL LEVEL SENSOR (1) SIGNAL CIRCUIT</b>	
	<b>1</b> Disconnect the REM electrical connector, CA101.
	<b>2</b> Measure the resistance between CA101, pin 015 (WR) and FP004, pin 001 (WR).
	Is the resistance less than 5 ohms?
	Yes <a href="#">GO to C3.</a>
	No REPAIR the circuit between CA101, pin 015 (WR) and FP004, pin 001 (WR). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>C3: CHECK THE FUEL LEVEL SENSOR (1) RHEOSTAT (EMPTY)</b>	
	<b>1</b> Empty the fuel tank.
	<b>2</b> Measure the resistance between pins 001 and 003 of the fuel level sensor.
	Is the resistance 20 ohms?
	Yes <a href="#">GO to C4.</a>
	No INSTALL a new fuel level sensor. REFER to Section <a href="#">310-01 Fuel Tank and Lines</a> . CLEAR the DTC. TEST the system for normal operation.
<b>C4: CHECK THE FUEL LEVEL SENSOR (1) RHEOSTAT, (FULL)</b>	
	<b>1</b> Fill the fuel tank.
	<b>2</b> Measure the resistance between pins 001 and 003 of the fuel level sensor.

Is the resistance 160 ohms?

Yes

[GO to C5.](#)

No

INSTALL a new fuel level sensor.

REFER to Section [310-01 Fuel Tank and Lines](#).

CLEAR the DTC. TEST the system for normal operation.

#### C5: CHECK THE FUEL LEVEL SENSOR (2) GROUND CIRCUIT

**1** Disconnect the fuel level sensor electrical connector, FP003.

**2** Turn the ignition switch to the ON position.

**3** Measure the resistance between electrical connector FP003, pin 003 (KO) and GROUND.

Is the resistance less than 5 ohms?

Yes

[GO to C6.](#)

No

REPAIR the circuit between FP003, pin 003 (KO) and ground. For additional information, refer to wiring diagrams.

CLEAR the DTC. TEST the system for normal operation.

#### C6: CHECK THE FUEL LEVEL SENSOR (2) SIGNAL CIRCUIT

**1** Disconnect the REM electrical connector, CA101.

**2** Measure the resistance between FP003, pin 001 (WU) and CA101, pin 016 (WU).

Is the resistance less than 5 ohms?

Yes

[GO to C7.](#)

No

REPAIR the circuit between FP003, pin 001 (WU) and CA101, pin 016 (WU) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

#### C7: CHECK THE FUEL LEVEL SENSOR (2) RHEOSTAT. (EMPTY)

**1** Empty the fuel tank.

**2** Measure the resistance between pins 001 and 003 of the fuel level sensor.

Is the resistance 20 ohms?

Yes

[GO to C8.](#)

No

INSTALL a new fuel level sensor.

REFER to Section [310-01 Fuel Tank and Lines](#).

CLEAR the DTC. TEST the system for normal operation.

#### C8: CHECK THE FUEL LEVEL SENSOR (2) RHEOSTAT. (FULL)

**1** Fill the fuel tank.

**2** Measure the resistance between pins 001 and 003 of the fuel level sensor.

Is the resistance 160 ohms?

Yes

INSTALL a new REM.

REFER to Section [419-10 Multifunction Electronic Modules](#).

If the DTC is repeated, INSTALL a new instrument cluster.

REFER to Section [413-01 Instrument Cluster](#).

CLEAR the DTC. TEST the system for normal operation.

No

INSTALL a new fuel level sensor.

REFER to Section [310-01 Fuel Tank and Lines](#).

CLEAR the DTC. TEST the system for normal operation.

### PINPOINT TEST D : FUEL PUMP NOT ACTIVATED WHEN REQUESTED BY ECM: P1236

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>D1: CHECK THE POWER SUPPLY TO THE REM</b>	
	<b>1</b> Disconnect the REM electrical connector, CA103.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between CA103, pin 001 (GR) and GROUND.
	Is the voltage greater than 10 volts?
	Yes <a href="#">GO to D2.</a>
	No REPAIR the supply circuit to the REM. This circuit includes the rear power distribution box, fuse 47, the fuel pump relay, and fuse 23. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>D2: CHECK THE REM + OUTPUT TO THE FUEL PUMP</b>	
	<b>1</b> Reconnect CA103.
	<b>2</b> Disconnect the fuel pump electrical connector, FP004.
	<b>3</b> Turn the ignition switch to the CRANK position.
	<b>4</b> Measure the voltage between FP004, pin 002 (R) and GROUND.
	Is the voltage greater than 10 volts?
	Yes <a href="#">GO to D4.</a>
	No <a href="#">GO to D3.</a>
<b>D3: CHECK THE REM - OUTPUT TO THE FUEL PUMP</b>	
	<b>1</b> Turn the ignition switch to the CRANK position.
	<b>2</b> Measure the resistance between FP004, pin 004 (B) and GROUND.
	Is the resistance less than 10 ohms?
	Yes INSTALL a new fuel pump. REFER to Section <a href="#">310-01 Fuel Tank and Lines</a> . CLEAR the DTC. TEST the system for normal operation.
	No <a href="#">GO to D4.</a>
<b>D4: CHECK THE ECM OUTPUT WIRE TO THE REM FOR CONTINUITY</b>	

<b>1</b>	Disconnect the battery negative terminal.
<b>2</b>	Disconnect the REM electrical connector, CA103.
<b>3</b>	Disconnect the ECM electrical connector, PI001.
<b>4</b>	Measure the resistance between PI001, pin 027 (WR) and CA103, pin 019 (WR)
<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p>INSTALL a new REM. REFER to Section <a href="#">419-10 Multifunction Electronic Modules</a>. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a>. Before replacing a ECM, contact Dealer technical support.</p> <p><b>No</b></p> <p>REPAIR the circuit between the ECM and the REM. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p>	

## PINPOINT TEST E : THROTTLE CONTROL POSITION ERROR: P1224

• NOTE: For further diagnosis on this DTC, REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>E1: CHECK THROTTLE CONTROL - CIRCUIT FOR CONTINUITY</b>	
<b>1</b>	Disconnect the throttle motor electrical connector, PI018.
<b>2</b>	Disconnect the ECM electrical connector, PI001.
<b>3</b>	Measure the resistance between PI001, pin 106 (RW) and throttle motor electrical connector PI018, pin 002 (RW)
<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to E2.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between ECM electrical connector PI001, pin 106 (RW) and throttle motor electrical connector PI018, pin 002 (RW) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p>	

## E2: CHECK THROTTLE CONTROL + CIRCUIT FOR CONTINUITY

<b>1</b>	Measure the resistance between ECM electrical connector PI001, pin 080 (GW) and throttle motor electrical connector PI018, pin 001 (GW)
<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p>INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a>. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>REPAIR the circuit between ECM electrical connector PI001, pin 080 (GW) and throttle motor electrical connector PI018, pin 001 (GW) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p>	

## PINPOINT TEST F : CHECK THROTTLE POSITION (TP) SENSOR: P0121, P0122, P0123, P0222, P0223

• NOTE: Check sensor supply and ground circuits before commencing this test. REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>F1: CHECK THROTTLE POSITION SENSOR RESISTANCE. SENSOR 1</b>	
<b>1</b>	Disconnect the throttle position sensor electrical connector, PI026.
<b>2</b>	Measure the resistance between pins 001 and 003 of the TP sensor.
<p>Is the resistance 500 to 900 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to F2.</a></p> <p><b>No</b></p> <p>INSTALL a new throttle body. REFER to <a href="#">Throttle Body</a> in this section. CLEAR the DTC. TEST the system for normal operation.</p>	
<b>F2: CHECK THROTTLE POSITION SENSOR RESISTANCE. SENSOR 2</b>	
<b>1</b>	Measure the resistance between pins 001 and 002 of the TP sensor.
<p>Is the resistance 1200 to 1600 ohms?</p> <p><b>Yes</b></p> <p>GO to Pinpoint Test <a href="#">G</a>.</p> <p><b>No</b></p> <p>INSTALL a new throttle body. REFER to <a href="#">Throttle Body</a> in this section. CLEAR the DTC. TEST the system for normal operation.</p>	

## PINPOINT TEST G : CHECK THROTTLE MOTOR RELAY: P1251, P1631, P1657, P1658

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>G1: CHECK THROTTLE MOTOR RELAY CONSTANT SUPPLY</b>	
<b>1</b>	Remove the throttle motor relay.
<b>2</b>	Measure the voltage between the throttle motor relay base, pin 003 and GROUND.
<p>Is the voltage greater than 10 volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to G2.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the throttle motor relay base, pin 003 and the battery. This circuit includes the power distribution fuse box, fuse 18. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p>	
<b>G2: CHECK THROTTLE MOTOR RELAY EMS SWITCHED SUPPLY</b>	
<b>1</b>	Turn the ignition switch to the ON position.
<b>2</b>	Measure the voltage between the throttle motor relay base, pin 001 and GROUND.

Is the voltage greater than 10 volts?	Yes <a href="#">GO to G3.</a>
No	REPAIR the circuit between the throttle motor relay base, pin 001 and the battery. This circuit includes the power distribution fuse box, fuses 36, 9, and 31, and the EMS control relay. CLEAR the DTC. TEST the system for normal operation.

### G3: CHECK THROTTLE MOTOR RELAY TO ECM CIRCUIT FOR CONTINUITY

1	Remove the throttle motor relay.
2	Disconnect the ECM electrical connector, PI001.
3	Measure the resistance between PI001, pin 052 (GR) and throttle motor relay base, pin 002.
Is the resistance less than 5 ohms?	Yes <a href="#">GO to G4.</a>
No	REPAIR the circuit between PI001, pin 052 (GR) and throttle motor relay base, pin 002. For additional information, refer to wiring digrams. CLEAR the DTC. TEST the system for normal operation.

### G4: CHECK THROTTLE MOTOR RELAY OUTPUT TO ECM

1	INSTALL the throttle motor relay.
2	Turn the ignition switch to the ON position.
3	Measure the voltage between PI001, pin 134, (GU) and GROUND.
Is the voltage greater than 10 volts?	Yes INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Before replacing a ECM, contact Dealer technical support.
No	INSTALL a new throttle motor relay. For additional information, refer to the electrical guide. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST H : CHECK SECONDARY FUEL PUMP DRIVER INPUT CIRCUITS (S/C ONLY): P1233

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>H1: CHECK POWER SUPPLY TO THE SECONDARY FUEL PUMP MODULE</b>	
1	Disconnect the secondary fuel pump module electrical connector, CA283.
2	Turn the ignition switch to the ON position.
3	Measure the voltage between CA283, pin 029 (UY) and GROUND.
Is the voltage greater than 10 volts?	Yes <a href="#">GO to H2.</a>
No	REPAIR the circuit between the fuel pump and the battery. This circuit includes fuse 49, the fuel pump relay, and fuse 23. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>H2: CHECK POWER SUPPLY TO THE SECONDARY FUEL PUMP</b>	
1	Reconnect the secondary fuel pump module electrical connector, CA283.
2	Disconnect the secondary fuel pump electrical connector, FP003.
3	Turn the ignition switch to the ON position.
4	Measure the voltage between FP003, pin 002 (R) and GROUND.
Is the voltage greater than 10 volts?	Yes <a href="#">GO to H4.</a>
No	<a href="#">GO to H3.</a>
<b>H3: CHECK POWER SUPPLY CIRCUIT TO THE SECONDARY FUEL PUMP FOR OPEN CIRCUIT</b>	
1	Disconnect the secondary fuel pump module electrical connector, CA283.
2	Measure the resistance between CA283, pin 010 (R) and FP003, pin 002 (R).
Is the resistance greater than 5 ohms?	Yes REPAIR the circuit between CA283, pin 010 (R) and FP003, pin 002 (R). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	INSTALL a new secondary fuel pump module. CLEAR the DTC. TEST the system for normal operation.
<b>H4: CHECK THE GROUND CIRCUIT TO THE SECONDARY FUEL PUMP MODULE</b>	
1	Measure the resistance between secondary fuel pump module electrical connector, CA283, pin 002 (B) and GROUND.
Is the resistance greater than 5 ohms?	Yes REPAIR the circuit between secondary fuel pump module electrical connector, CA283, pin 002 (B) and GROUND. For additional information, refer to wiring digrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to H5.</a>
<b>H5: CHECK THE SECONDARY FUEL PUMP RESISTANCE</b>	
1	Measure the resistance between pins 002 and 004 of the secondary fuel pump.
Is the resistance less than 2 ohms?	Yes <a href="#">GO to H6.</a>
No	INSTALL a new secondary fuel pump. REFER to Section <a href="#">310-01 Fuel Tank and Lines</a> . CLEAR the DTC. TEST the system for normal operation.
<b>H6: CHECK MONITOR CIRCUITS FOR OPEN CIRCUIT/HIGH RESISTANCE</b>	
1	Disconnect the secondary fuel pump module electrical connnector, CA283
2	Disconnect the ECM electrical connector, PI001.
3	Measure the resistance between PI001, pin 011 (Y) and CA283, pin 007 (Y).
Is the resistance greater than 5 ohms?	Yes REPAIR the circuit between PI001, pin 011 (Y) and CA283, pin 007 (Y). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

No	INSTALL a new secondary fuel pump module. If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Before replacing a ECM, contact Dealer technical support.
----	--

## PINPOINT TEST I : CHECK SECONDARY FUEL PUMP DRIVER OUTPUT CIRCUITS (S/C ONLY): P3705

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>I1: CHECK POWER SUPPLY TO THE SECONDARY FUEL PUMP</b>	
<b>1</b>	Disconnect the secondary fuel pump electrical connector, FP003.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between FP003, pin 002 (R) and GROUND.
	Is the voltage greater than 10 volts?
Yes	<a href="#">GO to I4.</a>
No	<a href="#">GO to I2.</a>
<b>I2: CHECK POWER SUPPLY TO THE SECONDARY FUEL PUMP MODULE</b>	
<b>1</b>	Disconnect the secondary fuel pump module electrical connector, CA283.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between CA283, pin 029 (UY) and GROUND.
	Is the voltage greater than 10 volts?
Yes	<a href="#">GO to I4.</a>
No	REPAIR the circuit between the fuel pump and the battery. This circuit includes fuse 49, the fuel pump relay, and fuse 23. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>I3: CHECK THE SECONDARY FUEL PUMP RESISTANCE</b>	
<b>1</b>	Measure the resistance between pins 002 and 004 of the secondary fuel pump.
	Is the resistance less than 2 ohms?
Yes	<a href="#">GO to I4.</a>
No	INSTALL a new secondary fuel pump. REFER to Section <a href="#">310-01 Fuel Tank and Lines</a> . CLEAR the DTC. TEST the system for normal operation.
<b>I4: CHECK SIGNAL CIRCUIT TO THE SECONDARY FUEL PUMP FOR OPEN CIRCUIT</b>	
<b>1</b>	Measure the resistance between CA283, pin 003 (Y) and FP003, pin 004 (Y).
	Is the resistance greater than 5 ohms?
Yes	REPAIR the circuit between CA283, pin 003 (Y) and FP003, pin 004 (Y). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	INSTALL a new secondary fuel pump module. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST J : CHECK SECONDARY FUEL PUMP DRIVER INPUT CIRCUITS FOR SHORT TO HIGH/LOW (S/C ONLY): P1339

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>J1: CHECK SECONDARY FUEL PUMP DRIVER INPUT CIRCUIT FOR SHORT TO BATTERY</b>	
<b>1</b>	Disconnect the ECM electrical connector, PI001.
<b>2</b>	Measure the voltage between PI001, pin 011 (Y) and GROUND.
	Is the voltage greater than 1 volt?
Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to J2.</a>
<b>J2: CHECK SECONDARY FUEL PUMP DRIVER INPUT CIRCUIT FOR SHORT TO GROUND</b>	
<b>1</b>	Measure the resistance between PI001, pin 011 (Y) and GROUND.
	Is the resistance less than 10,000 ohms?
Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to J3.</a>
<b>J3: CHECK SECONDARY FUEL PUMP DRIVER INPUT CIRCUIT FOR CONTINUITY</b>	
<b>1</b>	Disconnect the secondary fuel pump module electrical connector, CA283.
<b>2</b>	Measure the resistance between CA283, pin 007 (Y) and PI001, pin 011 (Y).
	Is the resistance greater than 5 ohms?
Yes	REPAIR the circuit between CA283, pin 007 (Y) and PI001, pin 011 (Y). For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	INSTALL a new secondary fuel pump module. If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Before replacing a ECM, contact Dealer technical support.

# Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Fuel Injection Supply Manifold

Removal and Installation

## Removal

1.  **CAUTION:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions can result in personal injury.

Remove the fuel injection supply manifold.

For additional information, refer to [Fuel Injectors](#) in this section.

2. Detach the fuel pressure regulator.

- Remove the securing bolts.
- Remove and discard the O-rings.

## Installation

1.  **CAUTION:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions can result in personal injury.

To install, reverse removal procedure.

- Install new fuel pressure regulator O-rings. Lubricate the O-ring seals with clean engine oil to aid installation.
- Tighten to 5 Nm.

# Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Fuel Charging and Controls

## VIN Range: N52048->N99999

Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit.

Refer to the DTC index in this section for guidance on how to use these codes with the Jaguar approved diagnostic system or a scan tool.

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual inspection

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Fuel leaks</li> <li>Damaged fuel lines</li> <li>Damaged push connect fittings</li> <li>Fuel level</li> <li>Fuel contamination/grade/quality</li> <li>Throttle body</li> <li>Damaged fuel tank filler pipe cap</li> <li>Damaged fuel tank filler pipe</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Inertia switch</li> <li>Loose or corroded electrical connectors</li> <li>Harnesses</li> <li>Sensor(s)</li> <li>Engine control module (ECM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the diagnostic trouble code (DTC) Index.

### Symptom Chart

Symptom	Possible source	Action
Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>Engine breather system disconnected/restricted</li> <li>Ignition system</li> <li>Fuel system</li> <li>Harness</li> <li>Crankshaft position (CKP) sensor</li> <li>ECM fault</li> </ul>	<p>Check the engine breather system, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).</p> <p>Check the fuel pressure, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For CKP tests, REFER to: <a href="#">Electronic Engine Controls - VIN Range: N80181-&gt;R99999</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).</p> <p>Refer to the warranty policy and procedures manual if an ECM is suspect.</p>

## DTC index

• NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first 5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic system).

DTC	Description	Possible Causes	Action

## Pinpoint Tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : FUEL INJECTOR CIRCUITS (VEHICLES WITHOUT SUPERCHARGER)

• NOTE: The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE INJECTOR COIL RESISTANCE	

1	Disconnect the relevant injector electrical connector:
	Injector connector
	Cylinder 1, PI32
	Cylinder 2, PI36
	Cylinder 3, PI33
	Cylinder 4, PI37
	Cylinder 5, PI34
	Cylinder 6, PI38
	Cylinder 7, PI35
	Cylinder 8, PI39
2	Measure the resistance between the injector pins.
	Is the resistance between 12 and 16 ohms?
Yes	GO to A2.
No	INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation.

A2: CHECK THE INJECTOR COIL INSULATION

1	Measure the resistance between:
	Injector, component side
	Injector body
	Pin 01
	Pin 02
	Injector body
	Injector body
	Is either resistance less than 10,000 ohms?
Yes	INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation.
No	GO to A3.

A3: CHECK THE INJECTOR SUPPLY VOLTAGE

1	Key on, engine off.
2	Make sure the EMS relay is energized.
3	Measure the voltage between:
	Injector connector, harness side
	Battery
	Pin 02
	Negative terminal
	Is the voltage less than 10 Volts?
Yes	REPAIR the circuit between the relevant injector harness electrical connector pin 02 and battery. This circuit includes fuse 13 of the front power distribution box and the EMS relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to A4.

A4: CHECK THE INJECTOR CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Key off.
2	Measure the resistance between:
	Injector connector, harness side
	Battery
	Pin 01
	Negative terminal
	Is the resistance less than 10,000 ohms?
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to A5.

A5: CHECK THE INJECTOR CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Measure the resistance between:
	Injector connector, harness side
	Battery
	Pin 01
	Positive terminal
	Is the resistance less than 10,000 ohms?
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to A6.

A6: CHECK THE INJECTOR CONTROL CIRCUIT FOR HIGH RESISTANCE

• NOTE: The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.

1	Disconnect the ECM electrical connector PI300.
2	Measure the resistance between:
	Cylinder 1 injector connector, harness side
	ECM connector PI 300, harness side
	PI32, pin 01
	Pin 78
	Cylinder 2 injector connector, harness side
	ECM connector PI 300, harness side
	PI36, pin 01
	Pin 79
	Cylinder 3 injector connector, harness side
	ECM connector PI 300, harness side
	PI33, pin 01
	Pin 80

	<b>Cylinder 4 injector connector, harness side</b>	<b>ECM connector PI300, harness side</b>
PI37, pin 01		Pin 81
	<b>Cylinder 5 injector connector, harness side</b>	<b>ECM connector PI300, harness side</b>
PI34, pin 01		Pin 82
	<b>Cylinder 6 injector connector, harness side</b>	<b>ECM connector PI300, harness side</b>
PI38, pin 01		Pin 83
	<b>Cylinder 7 injector connector, harness side</b>	<b>ECM connector PI300, harness side</b>
PI35, pin 01		Pin 84
	<b>Cylinder 8 injector connector, harness side</b>	<b>ECM connector PI300, harness side</b>
PI39, pin 01		Pin 85

	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation.
--	--

**PINPOINT TEST B : FUEL INJECTOR CIRCUITS (VEHICLES WITH SUPERCHARGER)**  
• NOTE: The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**B1: CHECK THE INJECTOR COIL RESISTANCE**

<b>1</b>	Disconnect the relevant injector electrical connector:
	<b>Injector connector</b>
	Injector Cylinder 1, IS01
	Injector Cylinder 2, IS07
	Injector Cylinder 3, IS02
	Injector Cylinder 4, IS08
	Injector Cylinder 5, IS03
	Injector Cylinder 6, IS09
	Injector Cylinder 7, IS04
	Injector Cylinder 8, IS10

<b>2</b>	Measure the resistance between the injector pins.
	Is the resistance between 12 and 16 ohms? <b>Yes</b> <a href="#">GO to B2.</a> <b>No</b> INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation.

**B2: CHECK THE INJECTOR COIL INSULATION**

<b>1</b>	Measure the resistance between:
	<b>Injector, component side</b>
	<b>Injector body</b>
	Pin 01
	Pin 02
	Injector body

	Is either resistance less than 10,000 ohms? <b>Yes</b> INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to B3.</a>
--	---

**B3: CHECK THE INJECTOR SUPPLY VOLTAGE**

<b>1</b>	Key on, engine off.
<b>2</b>	Make sure the EMS relay is energized.
<b>3</b>	Measure the voltage between:
	<b>Injector connector, harness side</b>
	<b>Battery</b>
	Pin 02
	Negative terminal

	Is the voltage less than 10 Volts? <b>Yes</b> REPAIR the circuit between the relevant injector harness electrical connector pin 02 and battery. This circuit includes fuse 13 of the front power distribution box and the EMS relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to B4.</a>
--	---

**B4: CHECK THE INJECTOR CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND**

<b>1</b>	Key off.
<b>2</b>	Measure the resistance between:
	<b>Injector connector, harness side</b>
	<b>Battery</b>
	Pin 01
	Negative terminal

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to B5.</a>
--	---

**B5: CHECK THE INJECTOR CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER**

	1 Measure the resistance between:	
	Injector connector, harness side	Battery
	Pin 01	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to B6.</a>	

#### B6: CHECK THE INJECTOR CONTROL CIRCUIT FOR HIGH RESISTANCE

• NOTE: The DTC set will indicate which cylinder injector or circuit is faulty. Only in the event of multiple cylinder misfires will it be necessary to check more than one injector or circuit, in which case, multiple DTCs will be set.

	1 Disconnect the ECM electrical connector PI300.	
	2 Measure the resistance between:	
	Cylinder 1 injector connector, harness side	ECM connector PI 300, harness side
	IS01, pin 01	Pin 78
	Cylinder 2 injector connector, harness side	ECM connector PI 300, harness side
	IS07, pin 01	Pin 79
	Cylinder 3 injector connector, harness side	ECM connector PI 300, harness side
	IS02, pin 01	Pin 80
	Cylinder 4 injector connector, harness side	ECM connector PI 300, harness side
	IS08, pin 01	Pin 81
	Cylinder 5 injector connector, harness side	ECM connector PI 300, harness side
	IS03, pin 01	Pin 82
	Cylinder 6 injector connector, harness side	ECM connector PI 300, harness side
	IS09, pin 01	Pin 83
	Cylinder 7 injector connector, harness side	ECM connector PI 300, harness side
	IS04, pin 01	Pin 84
	Cylinder 8 injector connector, harness side	ECM connector PI 300, harness side
	IS10, pin 01	Pin 85

	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No INSTALL a new injector. REFER to: <a href="#">Fuel Injectors</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

#### PINPOINT TEST C : THROTTLE BODY MOTOR CIRCUIT (VEHICLES WITHOUT SUPERCHARGER)

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
C1: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Disconnect the throttle body electrical connector, PI303.	
	2 Measure the resistance between:	
	Throttle body connector PI303, harness side	Battery
	Pin 05	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to C2.	
C2: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	Throttle body connector PI303, harness side	Battery
	Pin 05	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to C3.	
C3: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Measure the resistance between:	
	Throttle body connector PI303, harness side	Battery
	Pin 06	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to C4.	
C4: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	Throttle body connector PI303, harness side	Battery
	Pin 06	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to C5.	

GETtheMANUALS.org

	<b>1</b>	Disconnect the ECM electrical connector, PI300.	
	<b>2</b>	Measure the resistance between:	
	<b>Throttle body connector PI303, harness side</b>		<b>ECM connector PI300, harness side</b>
	Pin 05		Pin 75
	Is the resistance greater than 5 ohms?		
	<b>Yes</b>		
	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	<b>No</b>		
	<a href="#">GO to C6.</a>		

#### C6: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR HIGH RESISTANCE

	<b>1</b>	Measure the resistance between:	
	<b>Throttle body connector PI303, harness side</b>		<b>ECM connector PI300, harness side</b>
	Pin 06		Pin 74
	Is the resistance greater than 5 ohms?		
	<b>Yes</b>		
	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	<b>No</b>		
	INSTALL a new throttle body assembly REFER to: <a href="#">Throttle Body - Vehicles Without: Supercharger, VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC and test the system for normal operation.		

#### PINPOINT TEST D : THROTTLE BODY MOTOR CIRCUIT (VEHICLES WITH SUPERCHARGER)

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS		
D1: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND			
	1	Disconnect the throttle body electrical connector, PI26.	
	2	Measure the resistance between:	
	Throttle body connector PI26, harness side		Battery
	Pin 01	Negative terminal	
	Is the resistance less than 10,000 ohms?		
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to D2.		
D2: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER			
	1	Measure the resistance between:	
	Throttle body connector PI26, harness side		Battery
	Pin 01	Positive terminal	
	Is the resistance less than 10,000 ohms?		
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to D3.		
D3: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND			
	1	Measure the resistance between:	
	Throttle body connector PI26, harness side		Battery
	Pin 02	Negative terminal	
	Is the resistance less than 10,000 ohms?		
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to D4.		
D4: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR SHORT CIRCUIT TO POWER			
	1	Measure the resistance between:	
	Throttle body connector PI26, harness side		Battery
	Pin 02	Positive terminal	
	Is the resistance less than 10,000 ohms?		
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to D5.		
D5: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR SUPPLY CIRCUIT FOR HIGH RESISTANCE			
	1	Disconnect the ECM electrical connector, PI300.	
	2	Measure the resistance between:	
	Throttle body connector PI26, harness side		ECM connector PI300, harness side
	Pin 01	Pin 75	
	Is the resistance greater than 5 ohms?		
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to D6.		
D6: CHECK THE THROTTLE ACTUATOR CONTROL MOTOR NEGATIVE CIRCUIT FOR HIGH RESISTANCE			
	1	Measure the resistance between:	
	Throttle body connector PI26, harness side		ECM connector PI300, harness side
	Pin 02	Pin 74	

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new throttle body assembly

REFER to: [Throttle Body - Vehicles With: Supercharger, VIN Range: N52048->N99999](#) (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

# Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Fuel Injectors

Removal and Installation

## Removal

Vehicles with supercharger

1. Remove the charge air coolers. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).

Vehicles without supercharger

2. Remove the air outlet tube. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).
3. Remove the engine cover bracket.
  - Right hand shown left hand similar.

All vehicles

4. Disconnect the fuel line.  
For additional information, refer to Section [310-00 Fuel System - General Information](#).
5. Disconnect the fuel pressure regulator.
  1. Disconnect the electrical connector.
  2. Detach the vacuum hose.

6. Detach the engine wiring harness.
  - Right hand shown left hand similar.

7. Disconnect the electrical connectors.

- Right hand shown left hand similar.

Vehicles without supercharger

8. Remove the fuel injection supply manifold.

Vehicles with supercharger

9. Remove the fuel injection supply manifold.

- Left hand shown right hand similar.

All vehicles

10. Remove the fuel injectors.

- Release the retaining clip.
- Remove the fuel injector.

11. Remove and discard the O-ring seals.

## Installation

All vehicles

1.  **CAUTION:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions may result in personal injury.

To install, reverse the removal procedure.

- Install new fuel injector O-ring seals. Lubricate the O-ring seals with clean engine oil to aid installation.

Vehicles with supercharger

2. Tighten to 7 Nm.

Vehicles without supercharger

3. Tighten to 22 Nm.

4. Tighten to 6 Nm.

# Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Fuel Pressure Regulator

Removal and Installation

## Removal

1.  **CAUTION:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions can result in personal injury.

Depressurize the fuel system.

For additional information, refer to Section [310-00 Fuel System - General Information](#).

2. Disconnect the fuel pressure regulator.

1. Disconnect the electrical connector.
2. Detach the vacuum hose.

3. Remove the fuel pressure regulator.

4.  **CAUTION:** Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions can result in personal injury.

To install, reverse removal procedure.

- Tighten to 5 Nm.

## Fuel Charging and Controls - 2.7L V6 - TdV6 -

## Description and Operation

### High Pressure Fuel Injection Components

E52629

Item	Part Number	Description
1	—	Fuel rail pressure pressure sensor
2	—	Fuel injection diverter rail
3	—	Fuel injection pump
4	—	High-pressure fuel supply line (fuel injection diverter rail to fuel injection supply manifold)
5	—	Fuel injection supply manifold
6	—	Pressure control valve (PCV)
7	—	Fuel injector
8	—	High-pressure fuel supply line (fuel injection supply manifold to fuel injector)
9	—	Volume control valve (VCV)
10	-	High-pressure fuel supply line (fuel injection pump to fuel injection diverter rail)

#### Fuel Injection Pump

The fuel injection pump is located at the rear of the engine between the cylinder heads and is driven by a toothed drive belt attached to a pulley on the left hand exhaust camshaft. The fuel injection pump is not timed to the engine. The fuel injection pump assembly contains two different types of pump, a transfer pump and a high pressure pump.

Fuel is supplied to the fuel injection pump by an electric fuel pump in the fuel tank via the fuel filter. Fuel then passes through the transfer pump to the high pressure pump. The amount of fuel supplied to the high pressure pump from the transfer pump is determined by the volume control valve (VCV) which is controlled using a pulse width modulated (PWM) signal from the engine control module (ECM). The VCV makes it possible to match the high pressure pump delivery to the requirements of the engine from the low pressure side. This keeps the amount of fuel flowing back to the main supply line to a minimum and reduces the load on the high pressure pump, improving engine efficiency.

The high pressure pump contains three radial pumping elements, capable of generating a fuel pressure of up to 1650 Bar (23,200 lb ft), connected together which leads via a pressure control valve (PCV) to the high pressure outlet of the pump.

The PCV is located between the high pressure and the fuel return line outlet of the pump. The PCV is controlled using a PWM signal from the ECM, and controls the fuel pressure in the fuel diverter rail and fuel injection supply manifolds. Opening of the PCV diverts fuel to the fuel return line and back to the fuel filter. At the same time as the PCV opens to reduce fuel pressure, the ECM closes the VCV to reduce the amount of fuel delivered to the high pressure pump. When the engine is stopped the VCV closes and the PCV opens, this relieves the pressure in the system and returns the fuel to the main fuel supply line.

The PCV and VCV must not be disassembled from fuel injection pump. If either of these components are found to be faulty, the fuel injection pump must be replaced.

#### • CAUTIONS:

 If any of the high pressure fuel pipe retaining nuts are loosened, the high pressure fuel pipe it is installed to must be renewed. Failure to follow this instruction may allow metal fragments to enter the fuel system and result in damage to the fuel system components or engine.

 The high pressure fuel line olive end deforms and work hardens during installation. If any of the high pressure fuel pipe retaining nuts are loosened, the high pressure fuel pipe it is installed to must be renewed. Failure to follow this instruction may allow the high-pressure fuel line to leak.

GETtheMANUALS.org

#### Fuel Injection Supply Manifold

The fuel injection supply manifolds are reservoirs for the pressurized fuel that is produced by the fuel pump. The two fuel injection supply manifolds are connected by high pressure fuel pipes to a fuel injection diverter rail mounted on the fuel injection pump. The fuel injection diverter rail also incorporates a pressure sensor so that the ECM can monitor/adjust the pressure of the fuel to be injected into the each cylinder. The fuel injection diverter rail and the pressure sensor are serviced as an assembly and must not under any circumstances be disassembled.

Fuel Injector

E52630

Item	Part Number	Description
1	—	Electrical connector
2	—	Fuel injector body
3	—	Fuel injector leak-off retaining clip
4	—	Fuel injector nozzle
5	—	Fuel injector sealing washer
6	-	Fuel injector retaining clamp
7	-	High pressure fuel line connection

• CAUTIONS:

 If any of the high pressure fuel pipe retaining nuts are loosened, the high pressure fuel pipe it is installed to must be renewed. Failure to follow this instruction may allow metal fragments to enter the fuel system and result in damage to the fuel system components or engine.

The high pressure fuel line olive end deforms and work hardens during installation. If any of the high pressure fuel pipe retaining nuts are loosened, the high pressure fuel pipe it is installed to must be renewed. Failure to follow this instruction may allow the high-pressure fuel line to leak.

### Fuel Injectors

The fuel injectors are operated electrically by the engine control module (ECM) and inject a precise amount of fuel into the combustion chamber at the required time.

The injectors have been designed to:

- allow pilot and main injections with short intervals between each injection.
- be fully electrically controlled.

### Fuel Filter

The diesel fuel filter is located on the left-hand side of the engine compartment. Incorporated in to the fuel filter housing is a bimetallic valve which will start to close at 30°C (86°F) and will fully close at 50°C (122°F).

When the bimetallic valve is open, **warm** fuel is directed in to the fuel filter to prevent waxing. When the fuel temperature increases, the bimetallic valve closes, diverting fuel through the under-floor fuel cooler which then lowers the fuel temperature before returning the fuel back to the fuel filter. This allows fuel to be supplied to the fuel injection pump at the optimum inlet temperature of between -30°C to 80°C.

# Fuel Charging and Controls - 2.7L V6 - TdV6 - Fuel Charging and Controls

Diagnosis and Testing

## Principle of operation

Common rail diesel

The 2.7L fuel injection system is a common-rail design, running at the high pressures (up to 1,650 bar or 23,930 lb/in<sup>2</sup>) typical of such systems.

The fuel is drawn from the fuel tank by an electric lift pump and delivered to the transfer pump side of a high pressure fuel pump (HPFP) driven by the engine. For additional information on the HPFP, REFER to: [Fuel Charging and Controls](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Description and Operation).

The fuel volume control valve (FVCV) regulates the amount of fuel supplied to the high pressure side of the HPFP, while the fuel pressure control valve (FPCV) regulates the pressure.

The high pressure fuel is delivered to the fuel rail where it is stored, ready for use by the injectors.

The fuel injectors are Piezo type, and are controlled by the engine control module (ECM) from inputs from the engine management sensors.

The injectors operate in stages, giving a pilot injection before the main injection to reduce detonation noise and help improve the efficiency of the engine.

For additional information,

REFER to: [Fuel Charging and Controls](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Description and Operation).

## Inspection and Verification

### • WARNINGS:

 Do **NOT** carry out any work on the fuel system with the engine running. The fuel pressure within the system can be as high as 1650 bar (23,930 lb/in<sup>2</sup>). Failure to follow this instruction may result in personal injury.

 Eye protection must be worn at all times when working on or near any fuel related components. Failure to follow this instruction may result in personal injury.

 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

 After carrying out repairs, the fuel system must be checked visually for leaks. This should be done after the engine has been run, but with the engine switched **OFF**. Failure to follow this instruction may result in personal injury.

 If taken internally, **DO NOT** induce vomiting. Seek immediate medical attention. Failure to follow this instruction may result in personal injury.

 If fuel contacts the eyes, flush the eyes with cold water or eyewash solution and seek medical attention. Failure to follow this instruction may result in personal injury.

 Wash hands thoroughly after handling, as prolonged contact may cause irritation. Should irritation develop, seek medical attention. Failure to follow this instruction may result in personal injury.

### • CAUTIONS:

 Before disconnecting any part of the system, it is imperative that all dust, dirt and debris is removed from around components to prevent ingress of foreign matter into the fuel system. Failure to follow this instruction may result in damage to the vehicle.

 The fuel pipes between the injectors and the rail must be discarded after each use, and new pipes installed. Failure to follow this instruction may result in damage to the vehicle.

 It is essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines. Failure to follow this instruction may result in damage to the vehicle.

 Make sure that the workshop area in which the vehicle is being worked on is as clean and dust-free as possible. Areas in which work on clutches, brakes or where welding or machining are carried out are not suitable in view of the risk of contamination to the fuel system. Failure to follow this instruction may result in damage to the vehicle.

 Make sure that any protective clothing worn is clean and made from lint-free non-flocking material. Failure to follow this instruction may result in damage to the vehicle.

 Make sure that any protective gloves worn are new and are of the non-powdered latex type. Failure to follow this instruction may result in damage to the vehicle.

 Make sure that clean, non-plated tools are used. Clean tools using a new brush that will not lose it's bristles and fresh cleaning fluid prior to starting work on the vehicle. Failure to follow this instruction may result in damage to the vehicle.

Use a steel-topped work bench and cover it with clean, lint-free, non-flocking material. Failure to follow this instruction may result in damage to the vehicle.

When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00. Failure to follow this instruction may result in damage to the vehicle.

• NOTE: This section contains references to Parameter Identifiers (PIDs). Where the Jaguar approved diagnostic system is not available, a scantool may be used to access these PIDs, all of which give information, and some of which can be used to both read information and to activate components. The format of the information may vary, depending on the tool used.

• NOTE: When performing voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• NOTE: If diagnostic trouble codes (DTCs) are recorded and the symptom is not present when performing the pinpoint tests, an intermittent concern may be the cause. Always check for loose connections and corroded terminals.

1. Verify the customer concern.
2. Confirm which, if any, warning lights and/or messages were displayed on the instrument cluster.
3. Visually inspect for obvious signs of mechanical or electrical damage.

Pinpoint test

PINPOINT TEST A : CHECK FOR FUEL SYSTEM LEAKS	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK FOR FUEL SYSTEM LEAKS	
<ul style="list-style-type: none"> <li><b>WARNINGS:</b></li> </ul> <div>            Do not carry out any work on the fuel system with the engine running, as the fuel pressure within the system can be as high as 1,650 bar (23,930 lb/in²). Failure to follow this instruction may result in personal injury.         </div> <div>            Wait at least 30 seconds after the engine stops before commencing any repair to the high pressure fuel injection system. Failure to follow this instruction may result in personal injury.         </div> <ul style="list-style-type: none"> <li><b>NOTE:</b> Remember that the high pressure of the system may mean that leaks will send fuel some distance. Look for a trail to determine the source of the leak.</li> </ul>	
	<div>1</div> Start and run the engine for five minutes.
	<div>2</div> Turn the ignition switch to the <b>OFF</b> position.
	<div>3</div> Inspect the fuel lines, pump, etc, in the engine bay for cracks/damage.
	<div>4</div> Raise the vehicle on a suitable lift.
	<div>5</div> Inspect the fuel lines for cracks/damage.
	<div>6</div> Check the integrity of the joints in the supply and return lines between the fuel tank and the fuel pump.
	<div>7</div> Carefully check around the fuel pipes, injectors and pump for evidence of leakage.
	<div>8</div> If there is evidence of a significant leak, clean the engine and repeat the test.
	Is there any evidence of leakage? <b>Yes</b> RECTIFY the leak as necessary. Reassemble the removed parts and check the vehicle for normal operation. <b>No</b> CHECK for other possible causes for the customer concern.

Inspection and Verification

- WARNINGS:**
- 
 Wait at least 30 seconds after the engine stops before commencing any repair to the high pressure fuel injection system. Failure to follow this instruction may result in personal injury.
- 
 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.
- 
**CAUTION:** It is essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines. Failure to follow this instruction may result in damage to the vehicle.

Preliminary Checks

- Check the condition and fitment of the fuel filler cap
- Check the fuses to the fuel lift pump (fuses 47 and 23 of the rear power distribution box)
- Check the security of the pipe fittings in the low pressure circuit
- Check the pipework for cracks/damage
- Check the fuel filter for cracks/damage

Pinpoint test

PINPOINT TEST B : CHECK THE LIFT PUMP FUNCTION	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
B1: CHECK THE LIFT PUMP FUNCTION	
	<div>1</div> After thoroughly cleaning around the connections, disconnect the inlet pipe from the fuel filter.
	<div>2</div> Position a suitable container beneath the fuel filter inlet pipe to collect fuel.
	<div>3</div> Turn the ignition switch to the <b>ON</b> position (the pump should run for a short period, depending on temperature, etc).
	<div>4</div> Check that fuel is pumped from the fuel filter inlet pipe.

Is fuel pumped from the fuel filter inlet pipe?	Yes CHECK the drive belt to the high pressure fuel pump, REFER to: Accessory Drive (303-05, Diagnosis and Testing). Check for DTCs.
	No CHECK the lift pump and circuit, REFER to: Fuel Tank and Lines (310-01, Diagnosis and Testing).

## Inspection and Verification

### • WARNINGS:

 Wait at least 30 seconds after the engine stops before commencing any repair to the high pressure fuel injection system. Failure to follow this instruction may result in personal injury.

 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

 **CAUTION:** It is essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines. Failure to follow this instruction may result in damage to the vehicle.

### Preliminary Checks

- Check the condition and fitment of the fuel filler cap
- Check the security of the pipe fittings in the low pressure circuit
- Check the pipework for cracks/damage
- Check the fuel filter for cracks/damage

## Pinpoint test

PINPOINT TEST C : CHECK FOR CONTAMINATED FUEL	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK FOR UNUSUAL ODOURS FROM THE FUEL FILLER</b>	
	<b>1</b> Gather as much information as possible from the owner/driver regarding refuelling practices.
	<b>2</b> Remove the fuel filler cap and check for unusual odours.
	Are there any unusual odours from the fuel filler neck? <b>Yes</b> DRAIN the fuel tank and refill with fresh fuel. Install a new fuel filter. REFER to: <a href="#">Fuel Filter - 2.7L V6 - TdV6</a> (310-01 Fuel Tank and Lines, Removal and Installation). Test the vehicle for normal operation. <b>No</b> <a href="#">GO to C2.</a>
<b>C2: CHECK FOR WATER IN THE FUEL</b>	
	<b>1</b> After thoroughly cleaning around the connections, disconnect the inlet pipe from the fuel filter.
	<b>2</b> Position a suitable clear container beneath the fuel filter inlet pipe to collect fuel.
	<b>3</b> Turn the Ignition switch to the <b>ON</b> position (the pump should run for a short period, depending on temperature, etc. It may be necessary to turn the ignition on and off more than once to obtain the desired amount of fuel).
	<b>4</b> Collect approximately one liter of fuel.
	<b>5</b> Allow the fuel to stand for at least one minute.
	<b>6</b> Without disturbing the fuel, check for separation of the fuel into layers (a significant amount of water in the fuel will result in a clear separation between the two fluids, with the water being at the bottom).
	Does the fuel show clear separation? <b>Yes</b> DRAIN the fuel tank and refill with fresh fuel. Install a new fuel filter. REFER to: <a href="#">Fuel Filter - 2.7L V6 - TdV6</a> (310-01 Fuel Tank and Lines, Removal and Installation). Test the vehicle for normal operation. <b>No</b> CHECK for other contaminants in the fuel.

## Inspection and Verification

### • WARNINGS:

 Wait at least 30 seconds after the engine stops before commencing any repair to the high pressure fuel injection system. Failure to follow this instruction may result in personal injury.

 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

 **CAUTION:** It is essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines. Failure to follow this instruction may result in damage to the vehicle.

### Preliminary Checks

Check the pipes and connections to and from the fuel filter for security and condition.

## Pinpoint test

PINPOINT TEST D : CHECK FOR BLOCKED FUEL FILTER	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS

D1: CHECK THE FLOW OF FUEL THROUGH THE FILTER

	<div>1</div> After thoroughly cleaning around the connections, disconnect the fuel filter outlet pipe to the high pressure fuel pump.
	<div><div></div></div> <div>WARNING: During this test, fuel will flow backwards through the fuel filter because of the fuel cooler circuit.</div>
	<div>2</div> Position a suitable container beneath the fuel filter outlet to collect fuel.
	<div>3</div> Turn the ignition switch to the <b>ON</b> position (the pump should run for a short period, depending on temperature, etc).
	Is there an unrestricted flow of fuel through the filter? <b>Yes</b> CHECK for DTCs, check for another cause of customer complaint. <b>No</b> INSTALL a new fuel filter, REFER to: <a href="#">Fuel Filter - 2.7L V6 - TdV6</a> (310-01 Fuel Tank and Lines, Removal and Installation). Test the vehicle for normal operation.

Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

**CAUTION:** The fuel volume control valve (FVCV) must not be separated from the diesel common rail pump. The FVCV, fuel pressure control valve (FPCV), and high pressure pump should be considered a single unit. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the FVCV circuit
- Short circuit to POWER in the FVCV circuit
- Open circuit in the FVCV circuit
- FVCV fault
- ECM fault

Fuel volume control valve (FVCV) connector

Fuel volume control valve - control	02
Fuel volume control valve - power	01

Engine control module (ECM) connector

E54251

Fuel volume control valve - control	B- J4
-------------------------------------	-------

Pinpoint Tests

PINPOINT TEST E : FUEL VOLUME CONTROL VALVE AND CIRCUIT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
E1: CHECK THE POWER TO FVCV	
	<div>1</div> Key off.
	<div>2</div> FVCV solenoid connector disconnected.
	<div>3</div> Key on, engine off.
	<div>4</div> Measure the voltage between:
	Fuel volume control valve - power - Pin 01
	Negative post
	Is the Voltage between 9 volts - 15 volts? <b>Yes</b> <a href="#">GO to E7.</a> <b>No</b>

No supply to the FVCV circuit. Check and repair the circuit as necessary.

## E2: CHECK THE FVCV CONTROL LINE FOR SHORT TO GROUND

**1** Measure the resistance between:

Fuel volume control valve - control - Pin 02

Negative post

Is the resistance greater than 100 Kohms?

**Yes**

[GO to E3.](#)

**No**

[GO to E6.](#)

## E3: CHECK THE FVCV CONTROL LINE FOR SHORT TO POWER

**1** Measure the resistance between:

Fuel volume control valve - control - Pin 02

Positive post

Is the resistance greater than 100 Kohms?

**Yes**

[GO to E4.](#)

**No**

[GO to E7.](#)

## E4: CHECK THE FVCV CONTROL LINE FOR CONTINUITY

**1** Key off.

**2** ECM connector disconnected.

**3** Measure the resistance between:

Fuel volume control valve - control - Pin 02

Fuel volume control valve - control - Pin B- J4

Is the resistance less than 10 ohms?

**Yes**

[GO to E5.](#)

**No**

REPAIR the open circuit. For additional information, refer to the wiring diagrams.

## E5: CHECK THE COMPONENT RESISTANCE

**1** Measure the resistance between:

Fuel volume control valve - control - Pin 02

Fuel volume control valve - power - Pin 01

Is the resistance between 1.5 ohms - 15 ohms?

**Yes**

An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s): - FVCV connector- FVCV- ECM connector- ECM

**No**

INSTALL a new FVCV solenoid.

## E6: CHECK WHETHER THE SHORT TO GROUND IS IN THE FVCV HARNESS OR ECU

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

Fuel volume control valve - control - Pin 02

Negative post

Is the resistance greater than 100 Kohms?

**Yes**

Harness is OK.Suspect:- ECM

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

## E7: CHECK WHETHER THE SHORT TO POWER IS IN THE FVCV HARNESS OR ECU

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

Fuel volume control valve - control - Pin 02

Positive post

Is the resistance greater than 100 Kohms?

**Yes**

Harness is OK.Suspect:- ECM

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

## Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

**CAUTION:** The FRP sensor must not be separated from the diesel fuel rail. The FRP sensor and central fuel rail should be considered a single unit. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the FRP circuit
- Short circuit to POWER in the FRP circuit
- Open circuit in the FRP circuit
- FRP fault
- ECM fault

Fuel rail pressure (FRP) sensor connector

E54255

Fuel rail pressure sensor - signal	01
Fuel rail pressure sensor - power	03
Fuel rail pressure sensor - return	02
Engine control module (ECM) connector	

E54251

Fuel rail pressure sensor - return	B-E2
Fuel rail pressure sensor - power	B-D2
Fuel rail pressure sensor - signal	B-D1

Pinpoint Test

PINPOINT TEST F : FUEL RAIL PRESSURE SENSOR AND CIRCUIT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
F1: CHECK THE FRP SENSOR RETURN LINE	
	1 Key off.
	2 FRP Sensor connector disconnected.
	3 Key on, engine off.
	4 Measure the resistance between:
	Fuel rail pressure sensor - return - Pin 02 Negative post
	Is the resistance less than 10 ohms?
	Yes
	GO to F2.
	No
	GO to F14.
F2: CHECK THE FRP VOLTAGE	
	1 Measure the voltage between:
	Fuel rail pressure sensor - power - Pin 03 Negative post
	Is the Voltage between 4.8 volts - 5.2 volts?
	Yes
	GO to F3.
	No
	GO to F11.
F3: CHECK THE FRP SIGNAL LINE FOR SHORT CIRCUIT TO GROUND	
	1 Measure the resistance between:
	Fuel rail pressure sensor - signal - Pin 01 Negative post
	Is the resistance greater than 100 Kohms?
	Yes
	GO to F4.
	No
	GO to F7.
F4: CHECK THE FRP SIGNAL LINE FOR SHORT CIRCUIT TO POWER	
	1 Measure the resistance between:
	Fuel rail pressure sensor - signal - Pin 01 Positive post
	Is the resistance greater than 100 Kohms?
	Yes
	GO to F5.
	No
	GO to F9.
F5: CHECK THE FRP SIGNAL LINE FOR SHORT CIRCUIT TO SENSOR POWER	
	1 Measure the resistance between:
	Fuel rail pressure sensor - signal - Pin 01 Fuel rail pressure sensor - power - Pin 03

Is the resistance greater than 100 Kohms?

Yes

[GO to F6.](#)

No

[GO to F10.](#)

#### F6: CHECK THE FRP SIGNAL LINE FOR OPEN CIRCUIT

**1** Key off.

**2** ECM connector disconnected.

**3** Measure the resistance between:

Fuel rail pressure sensor - signal - Pin 01

Fuel rail pressure sensor - signal - Pin B-D1

Is the resistance less than 10 ohms?

Yes

An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s): - FRP connector- ECM connector- FRP- ECM

No

REPAIR the open circuit. For additional information, refer to the wiring diagrams.

#### F7: CHECK THE FRP CIRCUIT (S) FOR SIGNAL AND RETURN LINES SHORTED TOGETHER

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

Fuel rail pressure sensor - signal - Pin 01

Fuel rail pressure sensor - return - Pin 02

Is the resistance greater than 100 Kohms?

Yes

[GO to F8.](#)

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

#### F8: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE FRP HARNESS OR ECU

**1** Measure the resistance between:

Fuel rail pressure sensor - signal - Pin 01

Negative post

Is the resistance greater than 100 Kohms?

Yes

Suspect: - ECM

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

#### F9: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE FRP HARNESS OR ECU

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

Fuel rail pressure sensor - signal - Pin 01

Positive post

Is the resistance greater than 100 Kohms?

Yes

Suspect: - ECM

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

#### F10: CHECK WHETHER THE SHORT CIRCUIT IS IN THE FRP HARNESS OR ECU

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

Fuel rail pressure sensor - signal - Pin 01

Fuel rail pressure sensor - power - Pin 03

Is the resistance greater than 100 Kohms?

Yes

Suspect: - ECM

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

#### F11: CHECK THE 5 VOLT SUPPLY LINE FOR SHORT CIRCUIT TO GROUND

**1** Measure the resistance between:

Fuel rail pressure sensor - power - Pin 03

Negative post

Is the resistance greater than 100 Kohms?

Yes

[GO to F12.](#)

No

[GO to F17.](#)

#### F12: CHECK THE 5 VOLT SUPPLY LINE FOR SHORT TO POWER

**1** Measure the resistance between:

Fuel rail pressure sensor - power - Pin 03

Positive post

Is the resistance greater than 100 Kohms?

Yes

[GO to F13.](#)

No

[GO to F19.](#)

#### F13: CHECK THE FRP 5 VOLT SUPPLY LINE FOR OPEN CIRCUIT

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

Fuel rail pressure sensor - power - Pin 03

Fuel rail pressure sensor - power - Pin B-D2

Is the resistance less than 10 ohms?

Yes

Suspect :- ECM connector- ECM

No

REPAIR the open circuit. For additional information, refer to the wiring diagrams.

#### F14: CHECK THE FRP SENSOR RETURN LINE FOR SHORT CIRCUIT TO POWER

	<b>1</b>	Measure the resistance between:	
		Fuel rail pressure sensor - return - Pin 02	Positive post
		Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	<a href="#">GO to F15.</a>	
	<b>No</b>	<a href="#">GO to F20.</a>	

#### F15: CHECK WHETHER THE 5 VOLT SUPPLY AND SIGNAL RETURN LINES ARE SHORTED TOGETHER

	<b>1</b>	Key off.	
	<b>2</b>	ECM connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel rail pressure sensor - power - Pin 03	Fuel rail pressure sensor - return- Pin 02
		Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	<a href="#">GO to F16.</a>	
	<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

#### F16: CHECK THE FRP SENSOR RETURN LINE FOR OPEN CIRCUIT

	<b>1</b>	Measure the resistance between:	
		Fuel rail pressure sensor - return - Pin 02	Fuel rail pressure sensor - return - Pin B-E2
		Is the resistance less than 10 ohms?	
	<b>Yes</b>	Suspect :- ECM connector- ECM	
	<b>No</b>	REPAIR the open circuit. For additional information, refer to the wiring diagrams.	

#### F17: CHECK WHETHER THE 5 VOLT SUPPLY AND SIGNAL RETURN LINES ARE SHORTED TOGETHER

	<b>1</b>	Key off.	
	<b>2</b>	ECM connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel rail pressure sensor - power - Pin 03	Fuel rail pressure sensor - return - Pin 02
		Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	<a href="#">GO to F18.</a>	
	<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

#### F18: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE FRP HARNESS OR ECU

	<b>1</b>	Measure the resistance between:	
		Fuel rail pressure sensor - power - Pin 03	Negative post
		Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	Suspect:- ECM	
	<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

#### F19: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE FRP HARNESS OR ECU

	<b>1</b>	Key off.	
	<b>2</b>	ECM connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel rail pressure sensor - power - Pin 03	Positive post
		Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	Suspect:- ECM	
	<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

#### F20: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE FRP HARNESS OR ECU

	<b>1</b>	Key off.	
	<b>2</b>	ECM connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel rail pressure sensor - return - Pin 02	Positive post
		Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	Suspect:- ECM	
	<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

## Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

**CAUTION:** The fuel pressure control valve (FPCV) must not be separated from the diesel high pressure pump. The FVCV, FPCV, and high pressure pump should be considered a single unit. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the FPCV circuit
- Short circuit to POWER in the FPCV circuit
- Open circuit in the FPCV circuit
- FPCV fault
- ECM fault

	Fuel pressure control valve - control - Pin 02 Positive post
	Is the resistance greater than 100 Kohms?
	<b>Yes</b>
	Harness is OK.Suspect:- ECM
	<b>No</b>
	REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**Inspection and Verification**

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

- **CAUTIONS:**
-  When the engine is running, the electrical connectors from the injectors to the engine control unit must not be disconnected. Failure to follow this instruction may result in damage to the vehicle.
-  The injectors themselves must not be dismantled or loosened in any way. Failure to follow this instruction may result in damage to the vehicle.
-  The hexagonal nut between the injector fuel intake pipe and electrical connector should not be loosened, or used to apply rotational pressure when removing the injector from the engine. Failure to follow this instruction may result in damage to the vehicle.

- Note
- This pinpoint test is intended to diagnose the following:
- Short circuit to GROUND in the INJO circuit
  - Short circuit to POWER in the INJO circuit
  - Open circuit in the INJO circuit
  - INJO fault
  - ECM fault

To aid in the identification of the injector related to this strategy, a diagram has been provided below:

PINPOINT TEST H : FUEL INJECTOR AND CIRCUIT, CYLINDER 1	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
H1: CHECK COMPONENT RESISTANCE	
	1 Key off.
	2 INJ0 Solenoid connector disconnected.
	3 Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin 02Fuel injector, cylinder 1 - ground - Pin 01
	Is the resistance between 180 Kohms - 220 Kohms?
	YesGO to H2.
	NoINSTALL a new INJ0 solenoid. REFER to: Fuel Injector (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).
H2: CHECK THE COMBINED INJ0 SOLENOID AND HARNESS RESISTANCE	
	1 Key off.
	2 INJ0 Solenoid connector connected.
	3 ECM connector disconnected.
	4 Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3Fuel injector, cylinder 1 - ground - Pin C-L3
	Is the resistance between 180 Kohms - 220 Kohms?
	YesGO to H5.
	NoGO to H3.
H3: CHECK FOR A SHORT CIRCUIT BETWEEN THE SIGNAL AND RETURN LINES	
	1 Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3Fuel injector, cylinder 1 - ground - Pin C-L3
	Is the resistance greater than 100 Kohms?
	YesGO to H4.
	NoGO to H9.
H4: CHECK INJ0 CIRCUIT FOR AN OPEN CIRCUIT IN THE HARNESS	
	1 INJ0 Solenoid connector disconnected.
	2 Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin 02Fuel injector, cylinder 1 - control - Pin C-M3
	Fuel injector, cylinder 1 - ground - Pin 01Fuel injector, cylinder 1 - ground - Pin C-L3
	Are the resistances less than 10 ohms?
	YesAn intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ0 connector- ECM connector- INJ0
	NoREPAIR the open circuit. For additional information, refer to the wiring diagrams.
H5: CHECK THE INJ0 CIRCUIT FOR SHORT CIRCUIT TO GROUND	

<b>1</b>	Key on, engine off.
<b>2</b>	Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3
	Negative post
	Fuel injector, cylinder 1 - ground - Pin C-L3
	Negative post

Are the resistances greater than 100 Kohms?

**Yes**

[GO to H7.](#)

**No**

[GO to H6.](#)

#### H6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE HARNESS OR INJ0

<b>1</b>	Key off.
<b>2</b>	INJ0 Solenoid connector disconnected.
<b>3</b>	Key on, engine off.
<b>4</b>	Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3
	Negative post
	Fuel injector, cylinder 1 - ground - Pin C-L3
	Negative post

Are the resistances greater than 100 Kohms?

**Yes**

Harness is OK.Suspect:- INJ0

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

#### H7: CHECK THE INJ0 CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3
	Positive post
	Fuel injector, cylinder 1 - ground - Pin C-L3
	Positive post

Are the resistances greater than 100 Kohms?

**Yes**

An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ0 connector- INJ0- ECM connector- ECM

**No**

[GO to H8.](#)

#### H8: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE HARNESS OR INJ0

<b>1</b>	Key off.
<b>2</b>	INJ0 Solenoid connector disconnected.
<b>3</b>	Key on, engine off.
<b>4</b>	Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3
	Positive post
	Fuel injector, cylinder 1 - ground - Pin C-L3
	Positive post

Are the resistances greater than 100 Kohms?

**Yes**

Harness is OK.Suspect:- INJ0

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

#### H9: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE INJ0 COMPONENT

<b>1</b>	Key off.
<b>2</b>	INJ0 Solenoid connector disconnected.
<b>3</b>	Key on, engine off.
<b>4</b>	Measure the resistance between:
	Fuel injector, cylinder 1 - control - Pin C-M3
	Fuel injector, cylinder 1 - ground - Pin C-L3

Is the resistance greater than 100 Kohms?

**Yes**

Harness is OK.Suspect- INJ0

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

## Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

#### • CAUTIONS:

When the engine is running, the electrical connectors from the injectors to the engine control unit must not be disconnected. Failure to follow this instruction may result in damage to the vehicle.

The injectors themselves must not be dismantled or loosened in any way. Failure to follow this instruction may result in damage to the vehicle.

The hexagonal nut between the injector fuel intake pipe and electrical connector should not be loosened, or used to apply rotational pressure when removing the injector from the engine. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the INJ2 circuit
- Short circuit to POWER in the INJ2 circuit
- Open circuit in the INJ2 circuit
- INJ2 fault
- ECM fault

To aid in the identification of the injector related to this strategy, a diagram has been provided below:

E54253

Injector 2 (INJ2) solenoid connector

E 54250

Fuel injector, cylinder 2 - ground	01
Fuel injector, cylinder 2 - control	02
Engine control module (ECM) connector	

E54251

Fuel injector, cylinder 2 - ground	C-L2
Fuel injector, cylinder 2 - control	C-M2

### Pinpoint test

PINPOINT TEST I : FUEL INJECTOR AND CIRCUIT, CYLINDER 2	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>I1: CHECK THE COMPONENT RESISTANCE</b>	
1	Key off.
2	INJ2 solenoid connector disconnected.
3	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin 02	Fuel injector, cylinder 2 - ground - Pin 01
	Is the resistance between 180 Kohms - 220 Kohms?
Yes	<a href="#">GO to I2.</a>
No	INSTALL a new INJ2 solenoid. REFER to: <a href="#">Fuel Injector</a> (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).
<b>I2: CHECK THE COMBINED INJ2 SOLENOID AND HARNESS RESISTANCE</b>	
1	Key off.
2	INJ2 solenoid connector connected.
3	ECM connector disconnected.
4	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2	Fuel injector, cylinder 2 - ground - Pin C-L2
	Is the resistance between 180 Kohms - 220 Kohms?
Yes	<a href="#">GO to I5.</a>
No	<a href="#">GO to I3.</a>
<b>I3: CHECK FOR A SHORT CIRCUIT BETWEEN THE SIGNAL AND RETURN LINES</b>	
1	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2	Fuel injector, cylinder 2 - ground - Pin C-L2

	Is the resistance greater than 100 Kohms?
Yes	<a href="#">GO to I4.</a>
No	<a href="#">GO to I9.</a>

#### I4: CHECK INJ2 CIRCUIT FOR AN OPEN CIRCUIT IN THE HARNESS

	<b>1</b>	INJ2 solenoid connector disconnected.
	<b>2</b>	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin 02		Fuel injector, cylinder 2 - control - Pin C-M2
Fuel injector, cylinder 2 - ground - Pin 01		Fuel injector, cylinder 2 - ground - Pin C-L2
		Are the resistances less than 10 ohms?
Yes	An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ2 connector- ECM connector- INJ2	
No	REPAIR the open circuit. For additional information, refer to the wiring diagrams.	

#### I5: CHECK THE INJ2 CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b>	Key on, engine off.
	<b>2</b>	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2		Negative post
Fuel injector, cylinder 2 - ground - Pin C-L2		Negative post
		Are the resistances greater than 100 Kohms?
Yes	<a href="#">GO to I7.</a>	
No	<a href="#">GO to I6.</a>	

#### I6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE HARNESS OR INJ2

	<b>1</b>	Key off.
	<b>2</b>	INJ2 solenoid connector disconnected.
	<b>3</b>	Key on, engine off.
	<b>4</b>	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2		Negative post
Fuel injector, cylinder 2 - ground - Pin C-L2		Negative post
		Are the resistances greater than 100 Kohms?
Yes	Harness is OK.Suspect:- INJ2	
No	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

#### I7: CHECK INJ2 CIRCUIT FOR SHORT CIRCUIT TO POWER

	<b>1</b>	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2		Positive post
Fuel injector, cylinder 2 - ground - Pin C-L2		Positive post
		Are the resistances greater than 100 Kohms?
Yes	An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ2 connector- INJ2- ECM connector- ECM	
No	<a href="#">GO to I8.</a>	

#### I8: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE HARNESS OR INJ2

	<b>1</b>	Key off.
	<b>2</b>	INJ2 solenoid connector disconnected.
	<b>3</b>	Key on, engine off.
	<b>4</b>	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2		Positive post
Fuel injector, cylinder 2 - ground - Pin C-L2		Positive post
		Are the resistances greater than 100 Kohms?
Yes	Harness is OK.Suspect:- INJ2	
No	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

#### I9: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE INJ2 COMPONENT

	<b>1</b>	Key off.
	<b>2</b>	INJ2 solenoid connector disconnected.
	<b>3</b>	Key on, engine off.
	<b>4</b>	Measure the resistance between:
Fuel injector, cylinder 2 - control - Pin C-M2		Fuel injector, cylinder 2 - ground - Pin C-L2
		Is the resistance greater than 100 Kohms?
Yes	Harness is OK.Suspect- INJ2	
No	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

### Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

• CAUTIONS:

When the engine is running, the electrical connectors from the injectors to the engine control unit must not be disconnected. Failure to follow this instruction may result in damage to the vehicle.

The injectors themselves must not be dismantled or loosened in any way. Failure to follow this instruction may result in damage to

the vehicle.

 The hexagonal nut between the injector fuel intake pipe and electrical connector should not be loosened, or used to apply rotational pressure when removing the injector from the engine. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the INJ4 circuit
- Short circuit to POWER in the INJ4 circuit
- Open circuit in the INJ4 circuit
- INJ4 fault
- ECM fault

To aid in the identification of the injector related to this strategy, a diagram has been provided below:

E54253

Injector 4 (INJ4) solenoid connector

E54250

Fuel injector, cylinder 3 - ground	01
Fuel injector, cylinder 3 - control	02

Engine control module (ECM) connector

E54251

Fuel injector, cylinder 3 - ground	C-L4
Fuel injector, cylinder 3 - control	C-M4

Pinpoint test

PINPOINT TEST J : FUEL INJECTOR AND CIRCUIT, CYLINDER 3	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
J1: CHECK THE COMPONENT RESISTANCE	
	1 Key off.
	2 INJ4 solenoid connector disconnected.
	3 Measure the resistance between:
	Fuel injector, cylinder 3 - control - Pin 02Fuel injector, cylinder 3 - ground - Pin 01
	Is the resistance between 180 Kohms - 220 Kohms?
	Yes
	GO to J2.
	No
	INSTALL a new INJ4 solenoid.
	REFER to: Fuel Injector (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).

**J2: CHECK THE COMBINED INJ4 SOLENOID AND HARNESS RESISTANCE**

	<b>1</b>	Key off.	
	<b>2</b>	INJ4 solenoid connector connected.	
	<b>3</b>	ECM connector disconnected.	
	<b>4</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Fuel injector, cylinder 3 - ground - Pin C-L4
		Is the resistance between 180 Kohms - 220 Kohms?	
		<b>Yes</b> <a href="#">GO to J5.</a>	
		<b>No</b> <a href="#">GO to J3.</a>	

**J3: CHECK FOR A SHORT CIRCUIT BETWEEN THE SIGNAL AND RETURN LINES**

	<b>1</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Fuel injector, cylinder 3 - ground - Pin C-L4
		Is the resistance greater than 100 Kohms?	
		<b>Yes</b> <a href="#">GO to J4.</a>	
		<b>No</b> <a href="#">GO to J9.</a>	

**J4: CHECK INJ4 CIRCUIT FOR AN OPEN CIRCUIT IN THE HARNESS**

	<b>1</b>	INJ4 solenoid connector disconnected.	
	<b>2</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin O2	Fuel injector, cylinder 3 - control - Pin C-M4
		Fuel injector, cylinder 3 - ground - Pin O1	Fuel injector, cylinder 3 - ground - Pin C-L4
		Are the resistances less than 10 ohms?	
		<b>Yes</b> An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ4 connector- ECM connector- INJ4	
		<b>No</b> REPAIR the open circuit. For additional information, refer to the wiring diagrams.	

**J5: CHECK THE INJ4 CIRCUIT FOR SHORT CIRCUIT TO GROUND**

	<b>1</b>	Key on, engine off.	
	<b>2</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Negative post
		Fuel injector, cylinder 3 - ground - Pin C-L4	Negative post
		Are the resistances greater than 100 Kohms?	
		<b>Yes</b> <a href="#">GO to J7.</a>	
		<b>No</b> <a href="#">GO to J6.</a>	

**J6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE HARNESS OR INJ4**

	<b>1</b>	Key off.	
	<b>2</b>	INJ4 solenoid connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Negative post
		Fuel injector, cylinder 3 - ground - Pin C-L4	Negative post
		Are the resistances greater than 100 Kohms?	
		<b>Yes</b> Harness is OK.Suspect:- INJ4	
		<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

**J7: CHECK INJ4 CIRCUIT FOR SHORT CIRCUIT TO POWER**

	<b>1</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Positive post
		Fuel injector, cylinder 3 - ground - Pin C-L4	Positive post
		Are the resistances greater than 100 Kohms?	
		<b>Yes</b> An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ4 connector- INJ4- ECM connector- ECM	
		<b>No</b> <a href="#">GO to J8.</a>	

**J8: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE HARNESS OR INJ4**

	<b>1</b>	Key off.	
	<b>2</b>	INJ4 solenoid connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Positive post
		Fuel injector, cylinder 3 - ground - Pin C-L4	Positive post
		Are the resistances greater than 100 Kohms?	
		<b>Yes</b> Harness is OK.Suspect:- INJ4	
		<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

**J9: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE INJ4 COMPONENT**

	<b>1</b>	Key off.	
	<b>2</b>	INJ4 solenoid connector disconnected.	
	<b>3</b>	Key on, engine off.	
	<b>4</b>	Measure the resistance between:	
		Fuel injector, cylinder 3 - control - Pin C-M4	Fuel injector, cylinder 3 - ground - Pin C-L4

Is the resistance greater than 100 Kohms?

Yes

Harness is OK.Suspect- INJ4

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

• CAUTIONS:

 When the engine is running, the electrical connectors from the injectors to the engine control unit must not be disconnected. Failure to follow this instruction may result in damage to the vehicle.

 The injectors themselves must not be dismantled or loosened in any way. Failure to follow this instruction may result in damage to the vehicle.

 The hexagonal nut between the injector fuel intake pipe and electrical connector should not be loosened, or used to apply rotational pressure when removing the injector from the engine. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the INJ1 circuit
- Short circuit to POWER in the INJ1 circuit
- Open circuit in the INJ1 circuit
- INJ fault
- ECM fault

To aid in the identification of the injector related to this strategy, a diagram has been provided below:

Injector 1 (INJ1) solenoid connector

Fuel injector, cylinder 4 - ground	01
Fuel injector, cylinder 4 - control	02

Engine control module (ECM) connector

E54251

Fuel injector, cylinder 4 - ground	B-L2
Fuel injector, cylinder 4 - control	B-L1

PINPOINT TEST K : FUEL INJECTOR AND CIRCUIT, CYLINDER 4		
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
K1: CHECK THE COMPONENT RESISTANCE		
	1	Key off.
	2	INJ1 solenoid connector disconnected.
	3	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin 02	Fuel injector, cylinder 4 - ground - Pin 01
	Is the resistance between 180 Kohms - 220 Kohms?	
	Yes GO to K2.	
	No INSTALL a new INJ1 solenoid. REFER to: Fuel Injector (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).	
K2: CHECK THE COMBINED INJ1 SOLENOID AND HARNESS RESISTANCE		
	1	Key off.
	2	INJ1 solenoid connector connected.
	3	ECM connector disconnected.
	4	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin B-L1	Fuel injector, cylinder 4 - ground - Pin B-L2
	Is the resistance between 180 Kohms - 220 Kohms?	
	Yes GO to K5.	
	No GO to K3.	
K3: CHECK FOR A SHORT CIRCUIT BETWEEN THE SIGNAL AND RETURN LINES		
	1	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin B-L1	Fuel injector, cylinder 4 - ground - Pin B-L2
	Is the resistance greater than 100 Kohms?	
	Yes GO to K4.	
	No GO to K9.	
K4: CHECK INJ1 CIRCUIT FOR AN OPEN CIRCUIT IN THE HARNESS		
	1	INJ1 solenoid connector disconnected.
	2	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin 02	Fuel injector, cylinder 4 - control - Pin B-L1
	Fuel injector, cylinder 4 - ground - Pin 01	Fuel injector, cylinder 4 - ground - Pin B-L2
	Are the resistances less than 10 ohm?	
	Yes An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ1 connector- ECM connector- INJ1	
	No REPAIR the open circuit. For additional information, refer to the wiring diagrams.	
K5: CHECK THE INJ1 CIRCUIT FOR A SHORT CIRCUIT TO GROUND		
	1	Key on, engine off.
	2	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin B-L1	Negative post
	Fuel injector, cylinder 4 - ground - Pin B-L2	Negative post
	Are the resistances greater than 100 Kohms?	
	Yes GO to K7.	
	No GO to K6.	
K6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE HARNESS OR INJ1		
	1	Key off.
	2	INJ1 solenoid connector disconnected.
	3	Key on, engine off.
	4	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin B-L1	Negative post
	Fuel injector, cylinder 4 - ground - Pin B-L2	Negative post
	Are the resistances greater than 100 Kohms?	
	Yes Harness is OK.Suspect:- INJ1	
	No REPAIR the short circuit. For additional information, refer to the wiring diagrams.	
K7: CHECK INJ1 CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1	Measure the resistance between:
	Fuel injector, cylinder 4 - control - Pin B-L1	Positive post
	Fuel injector, cylinder 4 - ground - Pin B-L2	Positive post
	Are the resistances greater than 100 Kohms?	
	Yes An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ1 connector- INJ1- ECM connector- ECM	
	No GO to K8.	
K8: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE HARNESS OR INJ1		
	1	Key off.
	2	INJ1 solenoid connector disconnected.
	3	Key on, engine off.

4 Measure the resistance between:	
Fuel injector, cylinder 4 - control - Pin B-L1	Positive post
Fuel injector, cylinder 4 - ground - Pin B-L2	Positive post
Are the resistances greater than 100 Kohms?	
Yes Harness is OK.Suspect:- INJ1	
No REPAIR the short circuit. For additional information, refer to the wiring diagrams.	
K9: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE INJ1 COMPONENT	
1 Key off.	
2 INJ1 solenoid connector disconnected.	
3 Key on, engine off.	
4 Measure the resistance between:	
Fuel injector, cylinder 4 - control - Pin B-L1	Fuel injector, cylinder 4 - ground - Pin B-L2
Is the resistance greater than 100 Kohms?	
Yes Harness is OK.Suspect- INJ1	
No REPAIR the short circuit. For additional information, refer to the witing diagrams.	

Inspection and Verification

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

- **CAUTIONS:**
  -  When the engine is running, the electrical connectors from the injectors to the engine control unit must not be disconnected. Failure to follow this instruction may result in damage to the vehicle.
  -  The injectors themselves must not be dismantled or loosened in any way. Failure to follow this instruction may result in damage to the vehicle.
  -  The hexagonal nut between the injector fuel intake pipe and electrical connector should not be loosened, or used to apply rotational pressure when removing the injector from the engine. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the INJ3 circuit
- Short circuit to POWER in the INJ3 circuit
- Open circuit in the INJ3 circuit
- INJ3 fault
- ECM fault

To aid in the identification of the injector related to this strategy, a diagram has been provided below:

Injector 3 (INJ3) solenoid connector

Fuel injector, cylinder 5 - ground	01
Fuel injector, cylinder 5 - control	02
Engine control module (ECM) connector	

E54251

Fuel injector, cylinder 5 - ground	B-L3
Fuel injector, cylinder 5 - control	B-M1

### Pinpoint test

PINPOINT TEST L : FUEL INJECTOR AND CIRCUIT, CYLINDER 5			
TEST CONDITIONS		DETAILS/RESULTS/ACTIONS	
L1: CHECK THE COMPONENT RESISTANCE			
	1	Key off.	
	2	INJ3 solenoid connector disconnected.	
	3	Measure the resistance between:	
		Fuel injector, cylinder 5 - control - Pin 02	Fuel injector, cylinder 5 - ground - Pin 01
		Is the resistance between 180 Kohms - 220 Kohms?	
	Yes	<a href="#">GO to L2.</a>	
	No	INSTALL a new INJ3 solenoid. REFER to: <a href="#">Fuel Injector</a> (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).	
L2: CHECK THE COMBINED INJ3 SOLENOID AND HARNESS RESISTANCE			
	1	Key off.	
	2	INJ3 solenoid connector connected.	
	3	ECM connector disconnected.	
	4	Measure the resistance between:	
		Fuel injector, cylinder 5 - control - Pin B-M1	Fuel injector, cylinder 5 - ground - Pin B-L3
		Is the resistance between 180 Kohms - 220 Kohms?	
	Yes	<a href="#">GO to L5.</a>	
	No	<a href="#">GO to L3.</a>	
L3: CHECK FOR A SHORT CIRCUIT BETWEEN THE SIGNAL AND RETURN LINES			
	1	Measure the resistance between:	
		Fuel injector, cylinder 5 - control - Pin B-M1	Fuel injector, cylinder 5 - ground - Pin B-L3
		Is the resistance greater than 100 Kohms?	
	Yes	<a href="#">GO to L4.</a>	
	No	<a href="#">GO to L9.</a>	
L4: CHECK THE INJ3 CIRCUIT FOR AN OPEN CIRCUIT IN THE HARNESS			
	1	INJ3 solenoid connector disconnected.	
	2	Measure the resistance between:	
		Fuel injector, cylinder 5 - control - Pin 02	Fuel injector, cylinder 5 - control - Pin B-M1
		Fuel injector, cylinder 5 - ground - Pin 01	Fuel injector, cylinder 5 - ground - Pin B-L3
		Are the resistances less than 10 ohms?	
	Yes	An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ3 connector- ECM connector- INJ3	
	No	REPAIR the open circuit. For additional information, refer to the wiring diagrams.	
L5: CHECK THE INJ3 CIRCUIT FOR A SHORT CIRCUIT TO GROUND			
	1	Key on, engine off.	
	2	Measure the resistance between:	
		Fuel injector, cylinder 5 - control - Pin B-M1	Negative post
		Fuel injector, cylinder 5 - ground - Pin B-L3	Negative post
		Are the resistances greater than 100 Kohms?	
	Yes	<a href="#">GO to L7.</a>	
	No	<a href="#">GO to L6.</a>	
L6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE HARNESS OR INJ3			
	1	Key off.	
	2	INJ3 solenoid connector disconnected.	
	3	Key on, engine off.	
	4	Measure the resistance between:	
		Fuel injector, cylinder 5 - control - Pin B-M1	Negative post
		Fuel injector, cylinder 5 - ground - Pin B-L3	Negative post

	Are the resistances greater than 100 Kohms?
<b>Yes</b>	Harness is OK.Suspect:- INJ3
<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**L7: CHECK THE INJ3 CIRCUIT FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:
Fuel injector, cylinder 5 - control - Pin B-M1	Positive post
Fuel injector, cylinder 5 - ground - Pin B-L3	Positive post
	Are the resistances greater than 100 Kohms?
<b>Yes</b>	An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ3 connector- INJ3- ECM connector- ECM
<b>No</b>	<a href="#">GO to L8.</a>

**L8: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE HARNESS OR INJ3**

<b>1</b>	Key off.
<b>2</b>	INJ3 solenoid connector disconnected.
<b>3</b>	Key on, engine off.
<b>4</b>	Measure the resistance between:
Fuel injector, cylinder 5 - control - Pin B-M1	Positive post
Fuel injector, cylinder 5 - ground - Pin B-L3	Positive post
	Are the resistances greater than 100 Kohms?
<b>Yes</b>	Harness is OK.Suspect:- INJ3
<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**L9: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE INJ3 COMPONENT**

<b>1</b>	Key off.
<b>2</b>	INJ3 solenoid connector disconnected.
<b>3</b>	Key on, engine off.
<b>4</b>	Measure the resistance between:
Fuel injector, cylinder 5 - control - Pin B-M1	Fuel injector, cylinder 5 - ground - Pin B-L3
	Is the resistance greater than 100 Kohms?
<b>Yes</b>	Harness is OK.Suspect- INJ3
<b>No</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**Inspection and Verification**

Please ensure you adhere to the following instructions while diagnosing and repairing this fault:

- **CAUTIONS:**
-  When the engine is running, the electrical connectors from the injectors to the engine control unit must not be disconnected. Failure to follow this instruction may result in damage to the vehicle.
-  The injectors themselves must not be dismantled or loosened in any way. Failure to follow this instruction may result in damage to the vehicle.
-  The hexagonal nut between the injector fuel intake pipe and electrical connector should not be loosened, or used to apply rotational pressure when removing the injector from the engine. Failure to follow this instruction may result in damage to the vehicle.

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the INJ5 circuit
- Short circuit to POWER in the INJ5 circuit
- Open circuit in the INJ5 circuit
- INJ5 fault
- ECM fault

To aid in the identification of the injector related to this strategy, a diagram has been provided below:

Injector 5 (INJ5) solenoid connector

E54250

Fuel injector, cylinder 6 - ground	01
Fuel injector, cylinder 6 - control	02
Engine control module (ECM) connector	

E54251

Fuel injector, cylinder 6 - ground	B-M3
Fuel injector, cylinder 6 - control	B-M2

Pinpoint test

PINPOINT TEST M : FUEL INJECTOR AND CIRCUIT, CYLINDER 6	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
M1: CHECK THE COMPONENT RESISTANCE	
	1 Key off.
	2 INJ5 solenoid connector disconnected.
	3 Measure the resistance between:
	Fuel injector, cylinder 6 - control - Pin 02Fuel injector, cylinder 6 - ground - Pin 01
	Is the resistance between 180 Kohms - 220 Kohms?
	YesGO to M2.
	NoINSTALL a new INJ5 solenoid. REFER to: Fuel Injector (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).
M2: CHECK THE COMBINED INJ5 SOLENOID AND HARNESS RESISTANCE	
	1 Key off.
	2 INJ5 solenoid connector connected.
	3 ECM connector disconnected.
	4 Measure the resistance between:
	Fuel injector, cylinder 6 - control - Pin B-M2Fuel injector, cylinder 6 - ground - Pin B-M3
	Is the resistance between 180 Kohms - 220 Kohms?
	YesGO to M5.
	NoGO to M3.
M3: CHECK FOR A SHORT CIRCUIT BETWEEN THE SIGNAL AND RETURN LINES	
	1 Measure the resistance between:
	Fuel injector, cylinder 6 - control - Pin B-M2Fuel injector, cylinder 6 - ground - Pin B-M3
	Is the resistance greater than 100 Kohms?
	YesGO to M4.
	NoGO to M9.
M4: CHECK INJ5 CIRCUIT FOR AN OPEN CIRCUIT IN THE HARNESS	
	1 INJ5 solenoid connector disconnected.
	2 Measure the resistance between:
	Fuel injector, cylinder 6 - control - Pin 02Fuel injector, cylinder 6 - control - Pin B-M2
	Fuel injector, cylinder 6 - ground - Pin 01Fuel injector, cylinder 6 - ground - Pin B-M3
	Are the resistances less than 10 ohms?
	YesAn intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ5 connector- ECM connector- INJ5
	NoREPAIR the open circuit. For additional information, refer to the wiring diagrams.
M5: CHECK THE INJ5 CIRCUIT FOR A SHORT CIRCUIT TO GROUND	

<b>1</b>	Key on, engine off.	
<b>2</b>	Measure the resistance between:	
	Fuel injector, cylinder 6 - control - Pin B-M2	Negative post
	Fuel injector, cylinder 6 - ground - Pin B-M3	Negative post

Are the resistances greater than 100 Kohms?

**Yes**

[GO to M7.](#)

**No**

[GO to M6.](#)

**M6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE HARNESS OR INJ5**

<b>1</b>	Key off.	
<b>2</b>	INJ5 solenoid connector disconnected.	
<b>3</b>	Key on, engine off.	
<b>4</b>	Measure the resistance between:	
	Fuel injector, cylinder 6 - control - Pin B-M2	Negative post
	Fuel injector, cylinder 6 - ground - Pin B-M3	Negative post

Are the resistances greater than 100 Kohms?

**Yes**

Harness is OK.Suspect:- INJ5

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**M7: CHECK THE INJ5 CIRCUIT FOR A SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:	
	Fuel injector, cylinder 6 - control - Pin B-M2	Positive post
	Fuel injector, cylinder 6 - ground - Pin B-M3	Positive post

Are the resistances greater than 100 Kohms?

**Yes**

An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- INJ5 connector- INJ5- ECM connector- ECM

**No**

[GO to M8.](#)

**M8: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE HARNESS OR INJ5**

<b>1</b>	Key off.	
<b>2</b>	INJ5 solenoid connector disconnected.	
<b>3</b>	Key on, engine off.	
<b>4</b>	Measure the resistance between:	
	Fuel injector, cylinder 6 - control - Pin B-M2	Positive post
	Fuel injector, cylinder 6 - ground - Pin B-M3	Positive post

Are the resistances greater than 100 Kohms?

**Yes**

Harness is OK.Suspect:- INJ5

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**M9: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE INJ5 COMPONENT**

<b>1</b>	Key off.	
<b>2</b>	INJ5 solenoid connector disconnected.	
<b>3</b>	Key on, engine off.	
<b>4</b>	Measure the resistance between:	
	Fuel injector, cylinder 6 - control - Pin B-M2	Fuel injector, cylinder 6 - ground - Pin B-M3

Is the resistance greater than 100 Kohms?

**Yes**

Harness is OK.Suspect- INJ5

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

# Fuel Charging and Controls - 2.7L V6 - TdV6 - Fuel Injection Component Cleaning

## General Procedures

### • WARNINGS:

Do not carry out any repairs to the fuel system with the engine running. The fuel pressure within the system can be as high as 2000 bar. Failure to follow this instruction may result in personal injury.

Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions may result in personal injury.

If fuel contacts the eyes, flush the eyes with cold water or eyewash solution and seek immediate medical attention.

Place the vehicle in a well ventilated, quarantined area and arrange 'No Smoking/Petrol Fumes' signs about the vehicle.

Wait at least 30 seconds after the engine stops before commencing any repair to the high-pressure fuel injection system. Failure to follow this instruction may result in personal injury.

Wash hands thoroughly after fuel handling, as prolonged contact may cause irritation. Should irritation develop, seek medical attention.

Do not carry or operate cellular phones when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions may result in personal injury.

### • CAUTIONS:

Before using the cleaning fluid, protect all electrical components and connectors with lint-free non-flocking material.

Make sure that all parts removed from the vehicle are placed on the lint-free non-flocking material.

Make sure that any protective clothing worn is clean and made from lint-free non-flocking material.

Make sure that clean non-plated tools are used. Clean tools using a new brush that will not lose its bristles and fresh cleaning fluid, prior to starting work on the vehicle.

Use a steel topped workbench and cover it with clean, lint-free non-flocking material.

Make sure the workshop area in which the vehicle is being worked on is as clean and as dust free as possible. Foreign matter from work on clutches, brakes or from machining or welding operations can contaminate the fuel system and may result in later malfunction.

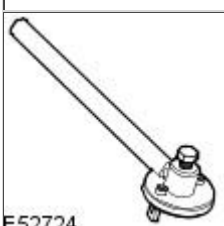

### • NOTE: Pneumatic vacuum gun

1. Using a new brush that will not lose its bristles, brush cleaning fluid onto the components being removed and onto the surrounding area.
2. Using a pneumatic vacuum gun, remove all traces of cleaning fluid and foreign material.
3. Dispose of any used cleaning fluid and the brush after completing the repair.

# Fuel Charging and Controls - 2.7L V6 - TdV6 - Fuel Injection Pump

## Removal and Installation

Special Tool(s)	
 E52724	Reaction Arm - Fuel Pump Pulley 310-138
 E52725	Holder - Fuel Pump Pulley 310-139
 E52715	Holder - Camshaft Pulley Rear 303-1125

## Removal

### • WARNINGS:

 Wait at least 30 seconds after the engine stops before commencing any repair to the high pressure fuel injection system. Failure to follow this instruction may result in personal injury.

 Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow these instructions may result in personal injury.

 Do not carry out any repairs to the fuel system with the engine running. The fuel pressure within the high-pressure system can be as high as 1650 bar. Failure to follow this instruction may result in personal injury.

### • CAUTIONS:

 Make sure the workshop area in which the vehicle is being worked on is as clean and as dust free as possible. Foreign matter from work on clutches, brakes or from machining or welding operations can contaminate the fuel system and may result in later malfunction.

 Always carry out the cleaning process before carrying out any repairs to the fuel injection system components. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

 Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

 Do not disassemble or clean inside the fuel pump, even with an ultrasonic cleaner. Always install a new fuel pump when required.

• NOTE: If the fuel pump has suffered a major mechanical failure, new fuel injectors should also be installed.

## All vehicles

1. Disconnect the battery.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

2. Remove the oil filler cap.

3. Remove the engine cover.

#### Right-hand drive vehicles

4. Remove the cabin air filter.  
For additional information, refer to: [Cabin Air Filter](#) (412-01 Air Distribution and Filtering, Removal and Installation).
5. Remove the engine compartment support.

6. Remove the cabin air filter housing retaining nut.

7. Remove the cabin air filter housing.

E30422

8. Remove the engine compartment panel.

E30423

#### Left-hand drive vehicles

9. Remove the wiper mounting arm and pivot shaft.  
For additional information, refer to: [Wiper Mounting Arm and Pivot Shaft](#) (501-16 Wipers and Washers, Removal and Installation).

#### All vehicles

10. Remove the engine compartment access panel.

E52242

**11.** Remove the engine compartment access panel retaining strip.

E52289

**12.** Remove the engine harness retaining bolts.

E52053

**13.** Remove the fuel injection pump belt cover.

E52290

**14.** NOTE: The fuel injection pump belt is not timed to the engine.  
Remove and discard the fuel injection pump belt tensioner.

E52291

**15. NOTE:** The fuel injection pump rotates in an anti-clockwise direction when view from the rear of the engine.

Note the direction of rotation of the fuel injection pump belt.

E52241

**16.** Remove and discard the fuel injection pump belt.

**17.** Remove the camshaft rear pulley retaining bolt.

- Using the special tool, retain the camshaft rear pulley.
- Remove and discard the retaining bolt.
- Remove the special tool.

**18.** Remove the camshaft rear pulley.

**19.** Remove the injection pump pulley retaining nut.

- Using the special tool, retain the fuel injection pump pulley.
- Remove the special tool.

20. Using the special tool, remove the fuel injection pump pulley.

- Remove the special tool.

21. Detach the exhaust gas recirculation (EGR) coolant outlet tube.

22. Detach the EGR coolant outlet tube.

23. Remove the left-hand catalytic converter.

For additional information, refer to: [Catalytic Converter - 2.7L V6 - TdV6](#) (309-00 Exhaust System, Removal and Installation).

24. Detach the EGR coolant outlet tube.

- Remove the retaining nut.
- Reposition the EGR coolant outlet tube.

25. Remove the turbocharger heat shield.

26. Remove the fuel injection pump belt rear cover.

27. Lower the vehicle.

28. Clean around the low pressure fuel inlet and return lines, high-pressure fuel supply lines and surrounding areas.  
For additional information, refer to: [Fuel Injection Component Cleaning](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, General Procedures).

29. Disconnect the low pressure fuel inlet and return lines.  
For additional information, refer to: [Quick Release Coupling - Push Connect](#) (310-00 Fuel System - General Information, General Procedures).

- Install suitable blanking caps to the fuel lines and unions.

30. NOTE: Left-hand shown, right-hand similar.

Detach the high pressure fuel supply line clamps.

31.  CAUTION: Make sure that the high-pressure fuel supply line remains in contact with the fuel injection supply manifold and fuel injection diverter rail until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

• NOTE: Left-hand shown, right-hand similar.

Loosen the high pressure fuel supply lines.

32.  CAUTION: Make sure that the high-pressure fuel supply line remains in contact with the fuel injection supply manifold and fuel injection diverter rail until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

• NOTE: Left-hand shown, right-hand similar.

Using the pneumatic vacuum gun, vacuum foreign material from the high-pressure fuel supply lines, the fuel injection diverter rail and the fuel injection supply manifolds.

33.  CAUTION: Make sure that the high-pressure fuel supply line remains in contact with the fuel injection supply manifold and fuel injection diverter rail until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

• NOTE: Left-hand shown, right-hand similar.

Remove and discard the high pressure fuel supply lines.

- Install suitable blanking caps to the open threaded ports on the fuel injection diverter rail and fuel injection supply manifold.

34. CAUTIONS:

 Make sure that the high-pressure fuel supply line remains in contact with the fuel injection pump and fuel injection diverter rail until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

 Make sure that the fuel injection pump adaptor union does not move when loosening the high-pressure fuel supply line at the high pressure pump. Failure to follow this instruction may result in damage to the fuel injection pump or the fuel injection pump adaptor union.

Loosen the high pressure fuel supply line.

35.  CAUTION: Make sure that the high-pressure fuel supply line remains in contact with the fuel injection pump and fuel injection diverter rail until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

Using the pneumatic vacuum gun, vacuum foreign material from the high-pressure fuel supply lines, the fuel injection diverter rail and the fuel injection pump.

**36.**  **CAUTION:** Make sure that the high-pressure fuel supply line remains in contact with the fuel injection pump and fuel injection diverter rail until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

Remove and discard the high pressure fuel supply line.

- Install suitable blanking caps to the open threaded ports on the fuel injection diverter rail and fuel injection pump.

**37.** Detach the low pressure fuel line retaining nut.

**38.** Disconnect the electrical connector.

**39.** Disconnect the fuel line.

- Install suitable blanking caps to the fuel line and union.

**40.** Detach the fuel line.

- Install suitable blanking caps to the fuel line and union.

**41. NOTE:** Do not remove the fuel rail pressure sensor from the fuel injection diverter rail.

Remove the fuel injection diverter rail.

**42.** Disconnect the left-hand camshaft cover breather hose.

**43.** Disconnect the right-hand camshaft cover breather hose.

**44.** Disconnect the left-hand inlet port deactivation vacuum pipe.

**45.** Remove the oil separator housing.

- Remove and discard the oil separator housing and engine block seals.

46. Disconnect the fuel injection pump electrical connectors.

47. Detach the glow plug electrical connectors.

48. Remove the fuel injection pump.

## Installation

### • WARNINGS:

 Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow these instructions may result in personal injury.

### • CAUTIONS:

 Make sure the workshop area in which the vehicle is being worked on is as clean and as dust free as possible. Foreign matter from work on clutches, brakes or from machining or welding operations can contaminate the fuel system and may result in later malfunction.

 Always carry out the cleaning process before carrying out any repairs to the fuel injection system components. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

 Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

 Do not disassemble or clean inside the fuel pump, even with an ultrasonic cleaner. Always install a new fuel pump when required.

 Install new high pressure fuel supply lines. Failure to follow this instruction may result in damage to the vehicle.

All vehicles

1. Install the fuel injection pump.

- Tighten to 23 Nm.

2. Attach the glow plug electrical connectors.

3. Connect the fuel pump electrical connectors.

4. Install the oil separator housing.

- Install new oil separator housing and engine block seals.

5. Connect the left-hand inlet port deactivation vacuum pipe.

6. Connect the left-hand camshaft cover breather hose.

7. Connect the right-hand camshaft cover breather hose.

8. Install the fuel injection diverter rail.

- Do not fully tighten the fuel injection diverter rail retaining bolts at this stage.

9. Attach the fuel line.

- Remove and discard the blanking caps.

10. Connect the fuel line.

11. Connect the electrical connector.

12. Attach the fuel line retaining nut.

- Tighten to 7 Nm.

13. Install a new high pressure fuel supply line.

- Remove and discard the blanking caps.
- Install but do not tighten the new high pressure fuel supply line.
- Tighten the fuel injection diverter rail retaining bolts to 23 Nm.
- Tighten the high-pressure fuel supply line in the sequence shown in four stages:
  1. Stage 1: Tighten the high-pressure fuel supply line union 1 to 15 Nm.
  2. Stage 2: Tighten the high-pressure fuel supply line union 2 to 15 Nm.
  3. Stage 3: Tighten the high-pressure fuel supply line union 1 to 30 Nm.
  4. Stage 4: Tighten the high-pressure fuel supply line union 2 to 30 Nm.

14. Connect the low pressure fuel inlet and return lines.

For additional information, refer to: [Quick Release Coupling - Push Connect](#) (310-00 Fuel System - General Information, General Procedures).

- Remove and discard the blanking caps.

**15.** Install a new right-hand high pressure fuel supply line.

- Remove and discard the blanking caps.
- Tighten the high-pressure fuel supply line union to 15 Nm.

**16.** Tighten the high-pressure fuel supply line union to 15 Nm.

**17.** Tighten the high-pressure fuel supply line union to 30 Nm.

**18.** Tighten the high-pressure fuel supply line union to 30 Nm.

**19.** Tighten the clamp to 10 Nm.

**20. NOTE:** The left-hand high-pressure fuel supply line is tightened after the high pressure fuel system has been bled.

Install the left-hand high-pressure fuel supply line but do not tighten the unions at this stage.

- Remove and discard the blanking caps.

E52304

**21.** Install the fuel injection pump belt rear cover.

- Tighten to 7 Nm.

E52300

**22.** Raise the vehicle.

**23.** Install the turbocharger heat shield.

- Tighten to 10 Nm.

E53565

**24.** Tighten to 6 Nm.

E53477

**25.** Attach the EGR coolant outlet tube.

- Tighten to 10 Nm.

E52062

26. Install the left-hand catalytic converter.  
For additional information, refer to: [Catalytic Converter - 2.7L V6 - TdV6](#)  
(309-00 Exhaust System, Removal and Installation).

27. Attach the EGR coolant outlet tube.

- Tighten to 10 Nm.

28. Attach the EGR coolant outlet tube.

29. Install the fuel injection pump pulley.

30. Install the retaining nut.

- Using the special tool, retain the fuel injection pump pulley.
- Tighten to 50 Nm.

31. Install the camshaft rear pulley.

32. Install the camshaft rear pulley retaining bolt.

- Using the special tool, retain the camshaft rear pulley.
- Tighten the camshaft rear pulley retaining bolt in two stages:
  1. Tighten to 80 Nm.
  2. Tighten a further 90°
- Remove the special tool.

33. NOTE: The fuel injection pump rotates in an anti-clockwise direction when view from the rear of the engine.

Note the direction of rotation of the fuel injection pump belt.

34.  CAUTION: Do not install the new fuel injection pump belt to the pulleys with the fuel injection pump belt tensioner installed. Failure to follow this instruction may result in damage to the fuel injection pump drive belt.

• NOTE: Make sure the new fuel injection pump belt is correctly seated on to the fuel injection pump drive pulleys.

Install a new fuel injection pump belt.

35.  CAUTION: Make sure the fuel injection pump belt tensioner tang is correctly located to the fuel injection pump cover backplate. Failure to follow this instruction may result in damage to the components.

Install the new fuel injection pump belt tensioner.

- Locate the tang on the new fuel injection pump belt tensioner into the fuel injection pump cover backplate.

**36. NOTE:** Do not remove the fuel injection pump belt tensioner locking pin before installing the new tensioner.

Install the new fuel injection pump belt tensioner retaining bolt.

- Tighten to 25 Nm.

**37.** Remove and discard the fuel injection pump belt tensioner locking pin.

**38.** Install the fuel injection pump belt cover.

**39.** Install the engine compartment access panel retaining strip.

40. Install the engine harness retaining bolts.

41. Install the engine compartment access panel.

Left-hand drive vehicles

42. Install the wiper mounting arm and pivot shaft.  
For additional information, refer to: [Wiper Mounting Arm and Pivot Shaft](#) (501-16 Wipers and Washers, Removal and Installation).

Right-hand drive vehicles

43. Install the engine compartment panel.

44. Install the cabin air filter housing.

45. Install the cabin air filter housing retaining nut.

46. Install the engine compartment support.

- Tighten to 25 Nm.

47. Install the cabin air filter.

For additional information, refer to: [Cabin Air Filter](#) (412-01 Air Distribution and Filtering, Removal and Installation).

All vehicles

48. Connect the battery.

For additional information, refer to: [Battery Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

49. Bleed the high-pressure fuel system.

For additional information, refer to: [High-Pressure Fuel System Bleeding](#) (310-00 Fuel System - General Information, General Procedures).

50. Install the engine cover.

51. Install the oil filler cap.

## Removal

### 1. WARNINGS:

Wait at least 30 seconds after the engine stops before commencing any repair to the high-pressure fuel injection system. Failure to follow this instruction may result in personal injury.

Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow these instructions may result in personal injury.

Do not carry out any repairs to the fuel system with the engine running. The fuel pressure within the high-pressure fuel system can be as high as 1650 bar. Failure to follow this instruction may result in personal injury.

### • CAUTIONS:

Do not disconnect the fuel injector electrical connectors with the engine running. Failure to follow this instruction may result in serious damage to the engine.

Make sure the workshop area in which the vehicle is being worked on is as clean and as dust free as possible. Foreign matter from work on clutches, brakes or from machining or welding operations can contaminate the fuel system and may result in later malfunction.

Always carry out the cleaning process before carrying out any repairs to the fuel injection system components. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

Do not disassemble the fuel injectors or clean the nozzles, even with an ultrasonic cleaner. Always install new fuel injectors when required.

Disconnect the battery ground cable.

For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

2. Remove the exhaust gas recirculation (EGR) valve outlet tube.

For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve Outlet Tube](#) (303-08B Engine Emission Control - 2.7L V6 - TdV6, Removal and Installation).

3. Remove the injector sound proofing.

CAUTION: Protect the fuel injector electrical connectors with lint-free material to prevent contamination from the cleaning fluid.

Clean the fuel injector, high-pressure fuel supply line and surrounding areas.

For additional information, refer to: [Fuel Injection Component Cleaning](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, General Procedures).

5. NOTE: Right-hand shown, left-hand similar.

Disconnect the fuel injector electrical connectors.

6. NOTE: Right-hand shown, left-hand similar.

Detach the fuel injection wiring harness.

7. NOTE: Right-hand shown, left-hand similar.

Detach the fuel injection wiring harness.

8. Clean around the fuel injector, high-pressure fuel supply line and surrounding areas.

For additional information, refer to: [Fuel Injection Component Cleaning](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, General Procedures).

#### 9. CAUTIONS:

 Make sure that the high-pressure fuel supply line remains in contact with both the fuel injector and the fuel injection supply manifold until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

 Make sure that the fuel injector adaptor union does not move when loosening the high-pressure fuel supply lines. Failure to follow this instruction may result in damage to the fuel injector or the fuel injector adaptor union.

• NOTE: Right-hand shown, left-hand similar.

Loosen the high-pressure fuel supply line from the fuel injector and fuel injection supply manifold.

10.  CAUTION: Make sure that the high-pressure fuel supply line remains in contact with both the fuel injector and the fuel injection supply manifold until both unions have been detached and cleaned. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.

Using the pneumatic vacuum gun, vacuum foreign material from the high-pressure fuel supply line, the fuel injector and the fuel injection supply manifold.

For additional information, refer to: [Fuel Injection Component Cleaning](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, General Procedures).

**11. NOTE:** Right-hand shown, left-hand similar.

Remove and discard the high-pressure fuel supply line.

- Install suitable blanking caps to the open threaded ports on the fuel injector and the fuel injection supply manifold.

**12.** Using the pneumatic vacuum gun, vacuum foreign material from the fuel injector and the fuel injection supply manifold.  
For additional information, refer to: [Fuel Injection Component Cleaning](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, General Procedures).

**13. NOTE:** Right-hand shown, left-hand similar.

Disconnect the fuel return line from the fuel injector.

- Remove and discard the fuel return line retaining clip from the fuel injector.
- Disconnect the fuel return line from the fuel injector.

**14. NOTE:** Right-hand shown, left-hand similar.

Remove the fuel injector retaining bolts.

**15. NOTE:** Right-hand shown, left-hand similar.

Remove the fuel injector retaining clamp spacer.

16. NOTE: Right-hand shown, left-hand similar.

Install the special tool studs.

17.  CAUTION: Make sure the fuel injector remover legs are correctly engaged to the fuel injector. Failure to follow this instruction may result in damage to the component.

• NOTE: Right-hand shown, left-hand similar.

Install the special tool puller legs to the studs.

18. NOTE: Right-hand shown, left-hand similar.

Install the special tool locking plate to the puller legs.

19.  CAUTION: Make sure the special tool puller bolts are rotated evenly. Failure to follow this instruction may result in damage to the special tool or fuel injector.

• NOTE: Right-hand shown, left-hand similar.

Using the special tool, remove the fuel injector.

1. Rotate the bolts evenly, in a clockwise direction.

2. Remove the fuel injector.

- Remove the special tool.
- Remove and discard the fuel injector retaining clamp.
- Remove and discard the fuel injector sealing washer.

## Installation

### • WARNINGS:

 Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

 This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow these instructions may result in personal injury.

### • CAUTIONS:

 Make sure the workshop area in which the vehicle is being worked on is as clean and as dust free as possible. Foreign matter from work on clutches, brakes or from machining or welding operations can contaminate the fuel system and may result in later malfunction.

-  Always carry out the cleaning process before carrying out any repairs to the fuel injection system components. Failure to follow this instruction may result in foreign matter ingress to the fuel injection system.
-  Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.
-  Do not disassemble the fuel injectors or clean the nozzles, even with an ultrasonic cleaner. Always install new fuel injectors when required.

E52071

E52086

E51786

E51784

1.  CAUTION: Do not use tools to install the new fuel return line retaining clip. Failure to follow this instruction will result in damage to the retaining clip.

- NOTE: Install a new fuel return line retaining clip.
  - NOTE: Install a new high-pressure fuel supply line.
  - NOTE: Install a new fuel injector sealing washer.
  - NOTE: Note the orientation of the fuel injector retaining clamp.
- Install a new fuel injector retaining clamp.

2. NOTE: Right-hand shown, left-hand similar.

Install the fuel injector.

3. NOTE: Right-hand shown, left-hand similar.

Install the fuel injector retaining clamp spacer.

4. NOTE: Tighten the retaining bolts evenly to prevent the fuel injector retaining clamp tilting.

- NOTE: Right-hand shown, left-hand similar.

Tighten to 10 Nm.

5. CAUTION: Make sure the fuel return line retaining clip is correctly installed to the fuel injector before installing the fuel return line.

• NOTE: Right-hand shown, left-hand similar.

Connect the fuel return line to the fuel injector.

- Visually inspect the fuel return line O-ring for damage.
- Apply a light coating of petroleum jelly to the fuel line return line O-ring.
- Connect the fuel return line to the fuel injector.

6. CAUTION: Do not allow the unions to hit the olive ends of the high-pressure fuel supply line as this may damage the ends of the line and allow foreign matter enter the fuel injection system.

Position the high-pressure fuel supply line as near to the final installation position as possible and then remove and discard the blanking plugs from the high-pressure fuel supply line.

7. CAUTION: Maintain pressure on the high-pressure fuel supply line to keep the olives in contact with the fuel injectors and the fuel injection supply manifold cones while installing the unions.

• NOTE: Install the high-pressure fuel supply lines to the fuel injection supply manifold end first followed by the fuel injector end.

• NOTE: Right-hand shown, left-hand similar.

Install the new high-pressure fuel supply line.

- Tighten the high-pressure fuel supply line in the sequence shown in four stages:
  1. Stage 1: Tighten the high-pressure fuel supply line union 1 to 15 Nm.
  2. Stage 2: Tighten the high-pressure fuel supply line union 2 to 15 Nm.
  3. Stage 3: Tighten the high-pressure fuel supply line union 1 to 30 Nm.
  4. Stage 4: Tighten the high-pressure fuel supply line union 2 to 30 Nm.

8. NOTE: Right-hand shown, left-hand similar.

Attach the fuel injection wiring harness.

9. NOTE: Right-hand shown, left-hand similar.

Attach the fuel injection wiring harness.

**10.** NOTE: Right-hand shown, left-hand similar.

Connect the fuel injector electrical connectors.

**11.** Install the injector sound proofing.

**12.** Install the exhaust gas recirculation (EGR) valve outlet tube.

For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve Outlet Tube](#) (303-08B Engine Emission Control - 2.7L V6 - TdV6, Removal and Installation).

**13.** Connect the battery ground cable.

For additional information, refer to: [Battery Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

**14.**  **WARNING:** Do not carry out any repairs to the fuel system with the engine running. The fuel pressure within the high-pressure system can be as high as 1650 bar. Failure to follow this instruction may result in personal injury.

• NOTE: The fuel return line must be renewed if any leaks are found from the fuel return line O-rings.

Start the engine and check visually for fuel leaks.

# Fuel Charging and Controls - 2.7L V6 - TdV6 - Intake Air Shutoff Throttle

Removal and Installation

## Removal

1. Remove the filler cap.

2. Remove the engine cover.

3. Detach the coolant hose.

4. Remove the retaining bolt.

5. Disconnect the electrical connector.

E51274

6. Detach the intake air shutoff throttle elbow.

- Release the retaining clip.

E51275

7. Disconnect the electrical connector.

E51276

8. Remove both exhaust gas recirculation (EGR) valve outlet tubes.  
For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve Outlet Tube](#) (303-08B Engine Emission Control - 2.7L V6 - TdV6, Removal and Installation).

9. Detach the vacuum hose.

E51279

10. Remove the retaining bolt.

11. Disconnect the electrical connector.

12. Detach the fuel return line valve from the intake air shutoff throttle.

13.  CAUTION: Make sure the fuel return line valve retaining clip is not damaged. Failure to follow this instruction may result in damage to the vehicle.

Reposition the intake air shutoff throttle.

14.  CAUTION: Make sure the fuel return line valve retaining clip is not damaged. Failure to follow this instruction may result in damage to the vehicle.

Remove the intake air shutoff throttle.

15. Remove and discard the intake air shutoff throttle seals.

51285

## Installation

1. To install, reverse the removal procedure.

- Tighten to 10 Nm.

51280

2. Tighten to 10 Nm.

51273

# Fuel Charging and Controls - 2.7L V6 - TdV6 - Swirl Plate Actuator Diaphragm

Removal and Installation

## Removal

- NOTE: Removal steps in this procedure may contain installation details.

1. Remove the oil filler cap.

2. Remove the engine cover.

3. Remove the cowl vent screen.

For additional information, refer to: [Cowl Panel Grille](#) (501-02 Front End Body Panels, Removal and Installation).

4. Remove the engine compartment support.

- Remove the 4 bolts.
- Release the 3 scrivers.

5. Remove the engine compartment access panel.

- Remove the 2 scrivers.

6. Remove the wiring harness cover.

- Release the 7 clips.

7. Remove the wiring harness carrier.

- Remove the 4 bolts.

8. Remove the RH injector sound proofing.

- Release the 2 clips.

9. Check the port deactivation hoses are a secure fit onto the stub pipe and for signs of being trapped or chaffing.

- If the valve does not hold vacuum continue with the replacement of the diaphragm.
- If the valve holds vacuum check the valve on the other side of the engine.
- If one side is found not to hold vacuum then both diaphragms are to be changed.

10. Disconnect the port deactivation valve vacuum hoses.

**11. NOTE:** Check the vacuum gauge and any hoses to be used for leaks prior to using on the vehicle.

- NOTE: Make sure the vacuum gauge hose is a secure fit to the port deactivation diaphragm caps.

Using a vacuum gauge, check the port deactivation valve diaphragms.

E115074

**12. NOTE:** Some variation in the illustrations may occur, but the essential information is always correct.

Remove the engine bay brace.

E95277

**13.** Release the port deactivation valve connecting rod.

E115076

**14. NOTE:** Cut the retaining clips off the old port deactivation diaphragm caps to aid removal.

• **NOTE:** Make sure the valve cover is not damaged during removal of the port deactivation diaphragm cap.

Remove the port deactivation valve cap.

- Release the 6 clips.
- Check the diaphragm for splits or damage.

**15.** Remove the port deactivation valve spring.

**16.** Remove the port deactivation valve connecting rod and diaphragm.

## Installation

1. NOTE: Apply a small amount water to the diaphragm to aid installation.

- NOTE: Make sure the diaphragm is fully seated on the connecting rod.

Install the new port deactivation diaphragm to the new connecting rod.

E115143

## 2. CAUTIONS:

Make sure that the mating faces are clean and free of foreign material.

Make sure the port deactivation rod is correctly aligned to the port deactivation valve arm.

- NOTE: Make sure the new port deactivation diaphragm and rod are installed in the correct orientation to the port deactivation linkage.

Install the port deactivation valve connecting rod and diaphragm.

E115144

## 3. Install the port deactivation valve spring.

E115145

E115146

E115147

#### 4. CAUTIONS:

Using a mirror check all clips are fully latched.

Make sure the port deactivation rod is not rotated once the cap has been installed, if rotation occurs the diaphragm will be damaged.

- NOTE: An audible click is heard when the clips are fully latched.

Install the port deactivation valve cap.

- Make sure the cap is correctly aligned within the timing marks.
- Secure the clips in the sequence shown.

#### 5. Attach the port deactivation valve connecting rod.

#### 6. Repeat the above procedure on the opposite side.

**7. NOTE:** Check the vacuum gauge and any hoses to be used for leaks prior to using on the vehicle.

Check the port deactivation valve diaphragms using a vacuum gauge.

E115074

**8. NOTE:** When the LH hose is re-connected to the valve the right angle bend must be turned downwards, make sure the hose lies correctly in the gap between the engine cover support and the valve cover.

Connect the port deactivation valve vacuum hoses.

E115148

**9.** Position the port deactivation hose as shown in illustration.

10. Install the RH injector sound proofing.

- Secure with the clips.

11. Install the wiring harness cover.

- Secure in the clips.

12. Install the wiring harness carrier.

- Install the bolts. TORQUE: 10 Nm

13. Install the engine compartment access panel.

- Secure with the scrivenets.

14. Install the engine compartment support.

- Install the scrivenets.
- Tighten the bolts to 25 Nm.

15. Install the cowl vent screen.

For additional information, refer to: [Cowl Panel Grille](#) (501-02 Front End Body Panels, Removal and Installation).

16.  **CAUTION:** Correct installation of the oil filler cap can be obtained by tightening the cap until an audible click is heard.

Install the engine cover.

## Description and Operation

E52144

Item	Part Number	Description
1	—	Exhaust manifold
2	—	Exhaust manifold studs
3	—	Turbocharger mounting flange
4	—	Turbocharger
5	-	Turbocharger retaining nuts
6	-	Exhaust manifold stud (note orientation of stud)

## Variable Vane Turbocharger

The engine is fitted with twin variable vane Turbochargers, electronically controlled, one to each bank. The turbochargers are fixed to the exhaust manifold by a three hole flange. The turbocharger consists of two elements, a turbine and a compressor both installed on a single shaft.

The turbocharger bearings are supplied with oil from the engine.

The turbine uses the flow of the exhaust gas to drive the compressor. The compressor draws air through the air cleaner and forces it into the intake manifold.

## Principles of Operation - Variable vane turbocharger

The turbocharger is designed to improve engine induction and engine performance. The list below details the concerns relating to

turbocharger performance.

- High engine speed produces excessive turbine speed and therefore creates excessive turbocharger boost pressure.
- Low engine speed does not produce sufficient turbine speed and therefore not enough turbocharger boost pressure is achieved.

The turbocharger does not have a wastegate control valve. Instead, it has variable turbocharger vanes which are located in the turbocharger turbine housing and these direct the air flow into the turbocharger turbine. The turbocharger vanes act as the control for the turbocharger boost pressure.

The turbocharger produces its full turbocharger boost pressure over the entire engine speed range, not just at high engine speed. This is achieved through the adjustment of the vanes and the resulting change in the flow of the exhaust gas.

The speed of the exhaust gas flow within the turbocharger is increased independent of engine speed by varying the intake cross section in front of the turbocharger turbine. This is achieved by adjusting the angle of the vanes controlling the air flow into the turbocharger turbine and this then drives the turbocharger turbine faster. The higher turbocharger speed produces a high turbocharger boost pressure at all engine speeds.

The engine control module (ECM) controls the turbocharger vanes by means of an electronic vane adjustment solenoid attached to the turbocharger.

#### Regulation at Low Engine Speed

At low engine speeds the ECM operates the vane adjustment solenoid. The vane adjustment solenoid moves the adjusting ring so that the vanes are set at a shallow angle. The shallow intake cross section this creates for the stream of exhaust gas allows the turbocharger boost pressure to build up rapidly and easily at low engine speeds.

#### Regulation at Moderate Engine Speed

As the engine speed increases and the quantity of exhaust gas increases, the vane adjustment solenoid moves the adjusting ring so that the vanes are set at a steeper angle. The steeper angle opens the intake cross section effectively reducing the gas flow, and turbine speed, while maintaining constant turbocharger boost pressure.

#### Regulation at Maximum Engine Speed

As the engine speed increases the intake cross section in front of the turbocharger turbine is continuously enlarged. The turbine speed and hence the quantity of the air supplied to the engine, is adjusted to suit the engine speed. This means that the turbocharger boost pressure remains optimized over all engine speeds.

The maximum position of the turbocharger vanes (maximum opening cross section) is also an emergency position, in the event of an electrical concern. This lowers the chance of engine damage due to excessive boost in the event of a turbocharger control concern.

# Fuel Charging and Controls - Turbocharger - 2.7L V6 - TdV6 - Turbocharger

Diagnosis and Testing

## Principle of operation

The turbochargers used on the 2.7L diesel engine are **variable geometry** units, which means that the amount of boost generated can be varied according to the engine load, not just the engine speed.

The vane angles are varied by solenoids mounted on the turbochargers.

The solenoid operation is governed by the engine control module in response to engine load and conditions, ensuring the correct boost pressure for the prevailing conditions.

## Inspection and Verification

### • WARNINGS:

The following tests may involve working in close proximity to hot components. Make sure adequate protection is used. Failure to follow this instruction may result in personal injury.

The turbochargers can continue to rotate after the engine has stopped. Do not attempt to check the turbochargers until one minute has elapsed since the engine was switched off. Failure to follow this instruction may result in personal injury.

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00. Failure to follow this instruction may result in damage to the vehicle.

• **NOTE:** When performing voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• **NOTE:** If diagnostic trouble codes (DTCs) are recorded and the symptom is not present when performing the pinpoint tests, an intermittent concern may be the cause. Always check for loose connections and corroded terminals.

• **NOTE:** This section contains references to Parameter Identifiers (PIDs). Where the Jaguar approved diagnostic system is not available, a scantool may be used to access these PIDs, all of which give information, and some of which can be used to both read information and to activate components. The format of the information may vary, depending on the tool used.

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

## Pinpoint Tests

PINPOINT TEST B : CHECK THE TURBOCHARGER ACTUATOR CIRCUIT A	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE VGTA1 GROUND CIRCUIT FOR CONTINUITY</b>	
1	Key off.
2	VGTA1 connector disconnected.
3	Key on, engine off.
4	Measure the resistance between: Variable geometry turbo actuator 1 - ground - Pin 02
	Negative post
	Is the resistance less than 10 ohms? Yes GO to B2. No REPAIR the open circuit. For additional information, refer to the wiring diagrams.
<b>B2: CHECK THE POWER SUPPLY TO THE VGTA1</b>	
1	Measure the voltage between: Variable geometry turbo actuator 1 - power - Pin 01
	Negative post
	Is the voltage between 9 volts - 15 volts? Yes GO to B3. No No supply to the VGTA1 circuit. Check and repair the circuit as necessary.
<b>B3: CHECK THE VGTA1 SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	
1	Measure the resistance between: Variable geometry turbo actuator 1 - signal - Pin 04
	Negative post
	Is the resistance greater than 100 Kohms? Yes GO to B4. No GO to B6.
<b>B4: CHECK THE VGTA1 SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER</b>	
1	Measure the resistance between: Variable geometry turbo actuator 1 - signal - Pin 04
	Positive post
	Is the resistance greater than 100 Kohms? Yes GO to B5. No GO to B7.
<b>B5: CHECK THE VGTA1 SIGNAL CIRCUIT FOR OPEN CIRCUIT</b>	
1	Key off.
2	ECM connector disconnected.
3	Measure the resistance between: Variable geometry turbo actuator 1 - signal - Pin 04
	Variable geometry turbo actuator 1 - signal - Pin B-H3
	Is the resistance less than 10 ohms? Yes An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s): - VGTA1 connector- ECM connector- VGTA1- ECM No REPAIR the open circuit. For additional information, refer to the wiring diagrams.
<b>B6: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE VGTA1 HARNESS OR ECU</b>	
1	Key off.
2	ECM connector disconnected.
3	Key on, engine off.
4	Measure the resistance between: Variable geometry turbo actuator 1 - signal - Pin 04
	Negative post
	Is the resistance greater than 100 Kohms? Yes Harness is OK.Suspect: - ECM No REPAIR the short circuit. For additional information, refer to the wiring diagrams.
<b>B7: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE VGTA1 HARNESS OR ECU</b>	
1	Key off.
2	ECM connector disconnected.
3	Key on, engine off.

	<b>4</b> Measure the resistance between:	
	Variable geometry turbo actuator 1 - signal - Pin 04	Positive post
	Is the resistance greater than 100 Kohms?	
	<b>Yes</b>	
	Harness is OK.Suspect: - ECM	
	<b>No</b>	
	REPAIR the short circuit. For additional information, refer to the wiring diagrams.	

Inspection and Verification

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the variable geometry turbo actuator B (VGTA2) circuit
- Short circuit to POWER in the VGTA2 circuit
- Open circuit in the VGTA2 circuit
- VGTA2 fault
- ECM fault

VGTA2 connector

Removal and Installation

## Removal

1. Remove the oil filler cap.

2. Remove the engine cover.

3. Remove the fuel injector soundproofing.
4. Remove the cowl panel grille.  
For additional information, refer to: [Cowl Panel Grille](#) (501-02 Front End Body Panels, Removal and Installation).
5. Remove the air cleaner.  
For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).
6. Remove the power steering reservoir.  
For additional information, refer to: [Power Steering Fluid Reservoir](#) (211-02 Power Steering, Removal and Installation).
7. Remove the air deflector.  
For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).
8. Drain the cooling system.  
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).
9. Remove the left-hand engine compartment cover.

**10.** Detach the fuel filter from the mounting bracket.

1. Press the retaining tang.
2. Detach the fuel filter from the mounting bracket.

**11.** Remove the fuel filter mounting bracket.

**12.** Disconnect the exhaust gas recirculation (EGR) coolant inlet hose.

**13.** Detach the EGR cooler inlet tube.

- Disconnect the inlet hose.
- Detach the EGR cooler inlet tube retaining clip.

**14.** Detach the EGR cooler inlet tube from the EGR mounting bracket.

**15.** Remove the left-hand catalytic converter.  
For additional information, refer to: [Catalytic Converter - 2.7L V6 - TdV6](#) (309-00 Exhaust System, Removal and Installation).

**16.** Remove the EGR coolant inlet tube.

1. Remove the retaining nut.
  2. Disconnect the coolant hose.
- Remove the EGR coolant inlet tube.

**17.** Remove the turbocharger heatshield.

**18.** Remove the turbocharger support bracket.

**19.** Disconnect the turbocharger outlet hose from the turbocharger.

20. Disconnect the oil return tube from the turbocharger.

- Remove and discard the gasket.

21. Remove the oil return tube.

1. Remove and discard the O-ring seal.

22. Detach the air cleaner lower outlet tube.

23. Disconnect the turbocharger solenoid electrical connector.

24. Lower the vehicle.

25. Disconnect the turbocharger oil supply tube.

- Remove and discard the sealing washers.

26. Raise the vehicle.

27. Remove the turbocharger.

- Discard the turbocharger retaining nuts.
- Remove and discard the turbocharger to exhaust manifold retaining studs.

## Installation

1. Install the turbocharger.

- Install new turbocharger to exhaust manifold retaining studs.
- Install new turbocharger retaining nuts.
- Tighten to 23 Nm.

2. Lower the vehicle.

3. Connect the turbocharger oil supply tube.

- Install new sealing washers.
- Tighten to 30 Nm.

4. Raise the vehicle.

5. Connect the turbocharger solenoid electrical connector.

6. Attach the air cleaner lower outlet tube.

7. Install the oil return tube.

- Install a new O-ring seal.
- Tighten to 10 Nm.

8. Connect the oil return tube to the turbocharger.

- Install a new gasket.
- Tighten to 10 Nm.

9. Connect the turbocharger outlet hose to the turbocharger.

10. Install the turbocharger support bracket.

- Tighten to 23 Nm.

**11.** Install the turbocharger heatshield.

- Tighten to 6 Nm.

**12.** Tighten to 10 Nm.

**13.** Install the EGR coolant inlet tube.

1. Connect the coolant hose.
2. Install the retaining nut.
  1. Tighten to 10 Nm.

**14.** Install the left-hand catalytic converter.

For additional information, refer to: [Catalytic Converter - 2.7L V6 - TdV6](#) (309-00 Exhaust System, Removal and Installation).

**15.** Install the air deflector.

For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).

**16.** Attach the EGR cooler inlet tube to the EGR mounting bracket.

- Tighten to 10 Nm.

17. Attach the EGR cooler inlet tube to the power steering tube.

18. Connect the EGR cooler inlet hose.

19. Install the fuel filter mounting bracket.

- Tighten to 25 Nm.

20. Attach the fuel filter to the mounting bracket.

21. Install the left-hand engine compartment cover.

**22.** Install the power steering reservoir.

For additional information, refer to: [Power Steering Fluid Reservoir](#) (211-02 Power Steering, Removal and Installation).

**23.** Install the air cleaner.

For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).

**24.** Install the cowl panel grille.

For additional information, refer to: [Cowl Panel Grille](#) (501-02 Front End Body Panels, Removal and Installation).

**25.** Fill and bleed the cooling system.

For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).

**26.** Install the fuel injector soundproofing.

**27.** Install the engine cover.

E51271

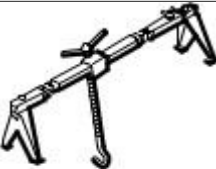

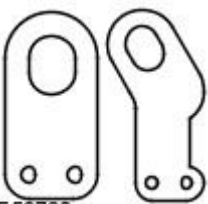

E51270

**28.** Install the oil filler cap.

2	—	Supercharger belt idler pulley
3	—	Crankshaft pulley

## Crankshaft Pulley

The combined crankshaft pulley and torsional vibration damper drives a single, six ribbed vee belt. The belt drives all of the engine-mounted accessories such as the generator, the power assisted steering pump, the air-conditioning compressor and the coolant water pump.

## Air Conditioning Compressor Drive

This is positioned at the lowest point of the front-end accessory drive on the left hand side accessory mounting.

## Power Assisted Steering Pump Drive

The power assisted steering pump pulley is located on the left-hand side, above the air conditioning compressor.

## Generator Drive

The generator is fitted on the right hand accessory mounting.

## Supercharger Drive

The supercharger is located between the left-hand and right-hand cylinders and retained at three mounting points.

## Accessory drive belt tensioner and supercharger belt tensioner

The accessory drive belt tensioner and supercharger belt tensioner is calibrated to provide the correct amount of tension to the belt for a given drive system. Unless a spring within the tensioner assembly breaks, or some other mechanical part of the tensioner fails, there is no need to check the tensioner for correct tension.

## Accessory drive belt and supercharger belt

VJ0000908

Item	Description
1	Acceptable drive belt cracking
2	Unacceptable drive belt damage

The accessory drive belt and the supercharger belt should be inspected at every routine service for excessive wear and damage. A drive belt which displays symptoms of cracking may be perfectly fit for further service.

Should cracking be detected, serviceability may be assessed using the following guidelines:

- Fifteen cracks per rib over a 100 mm length of drive belt is acceptable.
- Section(s) of belt missing from any rib is not acceptable and the drive belt must be renewed.

## Accessory drive belt tensioner

E30135

The accessory drive belt tensioner consists of an idler pulley which is free to rotate on a bearing, located at the end of a spring-loaded pivot arm.

The pivot arm can be turned counter-clockwise (viewed from the front of the engine) for accessory drive belt removal and installation.

The accessory drive belt wear indicators are incorporated on the bottom of the accessory drive belt tensioner. When the indicators are aligned the accessory drive belt requires replacing.

Supercharger belt noise or squeal	<ul style="list-style-type: none"> <li>* Supercharger belt pulley.</li> <li>* Lubricant or other contamination.</li> <li>* Supercharger belt.</li> </ul>	<ul style="list-style-type: none"> <li>* DETERMINE where the noise is coming from. CHECK pulley alignment, freedom of rotation or damage. REPAIR or INSTALL new parts as necessary.</li> <li>* CHECK supercharger belt for contamination. If contaminated, INSTALL a new supercharger belt.</li> <li>* CHECK supercharger belt for correct application.</li> </ul>
Supercharger belt does not hold tension.	<ul style="list-style-type: none"> <li>* Supercharger belt cracking or damaged.</li> <li>* Tensioner worn or damaged.</li> </ul>	<ul style="list-style-type: none"> <li>* INSPECT supercharger belt for cracking or damage. INSTALL a new supercharger belt if required.</li> <li>* CHECK supercharger belt tensioner for damage and correct operation. INSTALL a new supercharger belt tensioner if required.</li> </ul>

### Component Tests

#### Accessory drive belt tensioner or supercharger belt tensioner-mechanical

The only mechanical check that needs to be made is a check for the accessory drive belt tensioner or supercharger belt tensioner "stick, grab or bind".

1. Remove the drive belt in the area of the drive belt tensioner .
2. Using the correct tool, rotate the drive belt tensioner from its relaxed position through its full stroke and back to the relaxed position to make sure there is no "stick, grab or bind", and to make sure that there is tension on the drive belt tensioner spring.
3. If the drive belt tensioner meets the above criteria, proceed to test the drive belt tensioner dynamically. If the drive belt tensioner does not meet the above criteria install a new drive belt tensioner.  
REFER to [Accessory Drive belt tensioner 2.5L/3.0L](#) / [Accessory Drive belt tensioner 4.2L](#) / [Supercharger belt tensioner](#) in this section.

#### Accessory drive belt tensioner or supercharger belt tensioner-dynamic

The accessory drive belt tensioner or supercharger belt can be checked dynamically as follows:

1. With the engine running, observe drive belt tensioner movement, the accessory drive belt tensioner should move (respond) when the air conditioning clutch cycles (if equipped), both the accessory drive belt tensioner and supercharger belt tensioner should move (respond) when the engine is accelerated rapidly. If the drive belt tensioner movement is erratic without air conditioning clutch cycling or engine acceleration, a pulley or shaft is probably bent, or a pulley is distorted. Excessive drive belt rideout (uneven depth of grooves in the drive belt) can cause excessive drive belt tensioner movement. Check condition by installing a new accessory drive belt.  
REFER to [Accessory Drive Belt-2.5L/3.0L](#) / [Accessory Drive Belt-4.2L](#) / [Supercharger belt](#) in this section.
2. With the engine off, check routing of the accessory drive belt.  
REFER to [Description and Operation](#) in this section.
3. Inspect the drive belt tensioner wear indicator to confirm the accessory drive belt is within operating range. Install a new accessory drive belt or supercharger belt if necessary.  
REFER to [Accessory Drive Belt-2.5L/3.0L](#) / [Accessory Drive Belt-4.2L](#) /

[Supercharger belt](#) in this section.

4. 4. Rotate the accessory drive belt tensioner and check for a binding or seized condition. Install a new accessory drive belt tensioner or supercharger belt tensioner if necessary.  
REFER to [Accessory Drive belt tensioner 2.5L/3.0L](#) / [Accessory Drive belt tensioner 4.2L](#) / [Supercharger belt tensioner](#) in this section.

# Accessory Drive - Accessory Drive 2.7L V6 - TdV6

Diagnosis and Testing

## Principles of Operation

The 2.7L diesel engine uses two accessory drive systems, the front end accessory drive (FEAD), and the fuel injection pump drive.

### FEAD

The FEAD drives: the coolant pump, the generator, the power assisted steering pump, and the air conditioning compressor, driven from the crankshaft pulley via a single six-ribbed belt.

### Fuel injection pump drive

The high-pressure fuel pump (HPFP) is driven from the exhaust camshaft of the left-hand cylinder bank, by a single, toothed belt.

The HPFP is **NOT** timed to the engine.

## Inspection and Verification

1. Verify the customer concern.

### Visual inspection chart

FEAD	Fuel injection pump belt
<ul style="list-style-type: none"> <li>● Belt condition (cracking/damage/contamination)</li> <li>● Belt tension</li> <li>● Function of driven components (siezed, etc)</li> <li>● Pulley alignment</li> </ul>	<ul style="list-style-type: none"> <li>● Security/correct fitment of cover</li> <li>● Check for debris inside the cover</li> <li>● Belt condition (cracking/damage/contamination)</li> <li>● Belt tension</li> </ul>

## Noise definitions

Description of noise	Definition/Possible cause
Squeal	Continuous shriek, most noticeable when the engine is accelerated (usually associated with lack of belt tension, contamination or wet slip)
Chirp	Twittering noise that usually stops at engine speeds above idle. Usually associated with misaligned pulleys
Whine	Continuous noise, changing frequency with engine speed, generally associated with rotating components (generator, idler, etc)
Rattle	Metallic knocking, often a loose component or tensioner fault
Rumble	Bearing noise

## Symptoms (FEAD)

Symptom	Possible cause	Action
Noise (see definitions above)	<ul style="list-style-type: none"> <li>● Belt condition</li> <li>● Belt tension</li> <li>● Pulleys misaligned</li> <li>● Driven components</li> </ul>	Check the belt condition (see visual inspection). Check the tensioner function. GO to Pinpoint Test <a href="#">A</a> . Check the pulley alignment. Check the driven components for excessive resistance to rotation. Rectify as necessary.
Drive belt does not hold tension	<ul style="list-style-type: none"> <li>● Belt condition</li> <li>● Tensioner fault</li> </ul>	Check the belt condition (see visual inspection). Check the tensioner function. Rectify as necessary.

## Symptoms (Fuel injection pump belt)

Symptom	Possible cause	Action
Noise (see definitions above)	<ul style="list-style-type: none"> <li>● Belt condition</li> <li>● Belt fouling cover</li> <li>● Tensioner bearing failure</li> <li>● HPFP failure</li> </ul>	Check the belt condition (see visual inspection). Check the belt cover for indications of fouling (this may indicate a pump misalignment, REFER to: <a href="#">Fuel Injection Pump</a> (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation). The belt tensioner must be renewed if the belt is removed, making a check of the bearing impractical. Remove the belt, check the HPFP pulley for security. Check the HPFP for excessive resistance to rotation (excessive resistance in the pump will cause the pulley securing nut to loosen as a design feature). Check for DTCs indicating a pump malfunction, REFER to: <a href="#">Fuel Charging and Controls</a> (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Diagnosis and Testing).
Loss of drive (with no drive to the HPFP, the engine will not run)	<ul style="list-style-type: none"> <li>● Belt broken/stripped teeth</li> <li>● Drive pulleys loose</li> </ul>	Investigate the cause of the belt breakage/damage (a belt broken at a 45 degree angle normally indicates a shear, a break straight across the belt normally indicates that the belt has been crimped). Check the HPFP for excessive resistance to rotation (excessive resistance in the pump will cause the pulley securing nut to loosen as a design feature). Check for DTCs indicating a pump malfunction, REFER to: <a href="#">Fuel Charging and Controls</a> (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Diagnosis and Testing).

## Pinpoint tests

### PINPOINT TEST A : ELIMINATE THE FEAD AS THE SOURCE OF NOISE

 **CAUTION:** The engine should not be run for long periods of time with the FEAD belt removed. Failure to follow this instruction may result in damage to the vehicle.

#### TEST CONDITIONS

#### A1: CHECK FOR THE PRESENCE OF NOISE WITH THE FEAD BELT DISCONNECTED

- 1 Remove the ignition key.

	<b>2</b> Disconnect the FEAD belt, REFER to: <a href="#">Accessory Drive Belt - 2.7L V6 - TdV6</a> (303-05 Accessory Drive, Removal and Installation).
	<b>3</b> Start the engine and allow to idle.
	<b>4</b> Check for the presence of the noise.
	Is the noise still apparent? <b>Yes</b> The FEAD is not the cause of the noise. Confirm the symptoms, check for alternative causes. <b>No</b> Inspect the FEAD belt and driven components. Check the driven components for excessive resistance to rotation.

14. Cut off and discard the fuel injection pump belt.

15. Remove and discard the fuel injection pump belt tensioner.

## Installation

All vehicles

### 1. CAUTIONS:

 Make sure the fuel injection pump belt tensioner is correctly located in to the fuel injection pump cover backplate. Failure to follow this instruction may result in damage to the components.

 Make sure that the fuel injection pump belt tensioner tang is correctly located to the fuel injection pump belt rear cover. Failure to follow this instruction may result in damage to the engine.

• NOTE: Do not remove the fuel injection pump belt tensioner locking pin before installing the tensioner.

Install the fuel injection pump belt tensioner retaining bolt.

- Locate the tang on the new fuel injection pump belt tensioner in to the fuel injection pump cover backplate.
- Tighten to 25 Nm.

2. NOTE: Make sure the fuel injection pump belt is correctly seated on to the fuel injection pump drive pulleys.

Install a new fuel injection pump belt.

3. Remove and discard the fuel injection pump belt tensioner locking pin.

4. Install the fuel injection pump belt cover.

5. Install the engine harness retaining bolts.

6. Install the engine compartment access panel retaining strip.

Left-hand drive vehicles

7. Install the engine compartment access panel.

8. Install the wiper mounting arm and pivot shaft.  
For additional information, refer to: [Wiper Mounting Arm and Pivot Shaft](#) (501-16 Wipers and Washers, Removal and Installation).

Right-hand drive vehicles

9. Install the engine compartment panel.

10. Install the cabin air filter housing.

11. Install the cabin air filter housing retaining nut.

12. Install the engine compartment access panel.

13. Install the engine compartment support.

14. Install the cabin air filter.

For additional information, refer to: [Cabin Air Filter](#) (412-01 Air Distribution and Filtering, Removal and Installation).

15. Install the engine cover.

16. Install the oil filler cap.

Solenoid terminal integral connector nut	7	-	62

# Starting System - Starting System

## Description and Operation

The function of the starting system is to crank the engine fast enough to allow the engine to start. Heavy cables, connectors and switches are used in the system because of the large currents required.

The starting system consists of a pre-engaged type starter motor, battery, remote control switch (ignition switch) and relay. When the starter is operated from the ignition switch, the engagement lever moves the pinion into mesh with the engine ring gear teeth, the electrical contacts within the solenoid complete the high power circuit and the starter motor operates to turn the engine.

Vehicles equipped with automatic transmission have a transmission range sensor attached to the circuit which prevents operation of the starter motor unless NEUTRAL or PARK are selected.

The sequence of operation is as follows:

- Ignition switch in the start position III.
- Starter relay activated.
- Voltage provided to the starter motor solenoid.
- Starter solenoid engages the drive pinion to the flywheel or flexiplate.
- Starter solenoid switches the battery current to the starter motor.
- System remains engaged until the ignition switch is returned to the run position.

# Starting System - Starting System

## Diagnosis and Testing

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Starter Motor.</li> <li>● Battery.</li> </ul>	<ul style="list-style-type: none"> <li>● Fuse 27 (30A) Front power distribution box</li> <li>● Fuse 1 (5A) Primary junction box</li> <li>● Starter relay.</li> <li>● Fuse 15 (5A) Primary junction box</li> <li>● Transmission control module (TCM)</li> <li>● Engine control module (ECM)</li> <li>● Wiring harness(es).</li> <li>● Damaged, loose or corroded connectors</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, verify the symptom and refer to the Symptom Chart.

### Symptom Chart

Symptom	Possible Sources	Action
The engine does not crank	<ul style="list-style-type: none"> <li>* Battery</li> <li>* Starter motor</li> <li>* Starter relay</li> <li>* Ignition switch</li> <li>* Transmission control module (TCM)</li> <li>* ECM</li> </ul>	* GO to Pinpoint Test A
Engine cranks slowly	<ul style="list-style-type: none"> <li>* Battery</li> <li>* Circuitry</li> <li>* Starter motor</li> </ul>	* GO to Pinpoint Test B
Unusual starter motor noise	<ul style="list-style-type: none"> <li>* Starter motor</li> <li>* Flywheel ring gear</li> </ul>	<ul style="list-style-type: none"> <li>* CHECK flywheel or flexplate. For additional information, refer to Section <a href="#">303-00 Engine System - General Information</a></li> <li>- INSPECT starter motor for alignment, cracked case. Make sure the mounting bolts are tightened. If necessary, INSTALL a new starter motor.</li> </ul>
The starter spins but the engine does not crank	<ul style="list-style-type: none"> <li>* Starter motor</li> </ul>	* INSPECT the flywheel or flexplate for missing teeth. CHECK starter motor for correct mounting. If concern persists, INSTALL a new starter motor.

### PINPOINT TEST A : THE ENGINE DOES NOT CRANK

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE BATTERY</b>	
	<b>1</b> Check the battery. For additional information, refer to Section <a href="#">414-00 Battery and Charging System - General Information</a>
	Is the battery OK? <b>Yes</b> <a href="#">GO to A2.</a> <b>No</b> INSTALL a new battery. TEST the system for normal operation.
<b>A2: CHECK THE STARTER RELAY</b>	
	<b>1</b> Turn the ignition switch to the RUN position.
	Does the starter relay make an audible click? <b>Yes</b> <a href="#">GO to A3.</a> <b>No</b> <a href="#">GO to A7.</a>
<b>A3: CHECK THE STARTER FOR BATTERY VOLTAGE</b>	
	<b>1</b> Measure the voltage between the starter connector ST8 (R) and ground.
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to A4.</a> <b>No</b> Repair the starter motor permanent live supply circuit. TEST the system for normal operation.
<b>A4: CHECK THE STARTER GROUND</b>	
	<b>1</b> Measure the resistance between starter outer casing and ground.
	Is the resistance less than 2 Ohm? <b>Yes</b> <a href="#">GO to A5.</a> <b>No</b> REPAIR starter ground cable or connections. TEST the system for normal operation
<b>A5: CHECK THE STARTER SWITCH LIVE</b>	
	<b>1</b> While ignition switch is in the RUN position measure the voltage between starter connector ST5 and ground.
	Is the voltage greater than 10 volts? <b>Yes</b> INSTALL a new starter motor. TEST the system for normal operation. <b>No</b> <a href="#">GO to A6.</a>
<b>A6: CHECK THE PERMANENT LIVE VOLTAGE TO STARTER RELAY</b>	
	<b>1</b> Remove the starter relay. Measure the voltage between connector 30 and ground.

	Is the voltage greater than 10 volts? <b>Yes</b> REPAIR starter switch live circuit from the starter relay to the starter. TEST the system for normal operation. <b>No</b> CHECK fuse 27 (30A) in the front PDB. If fuse OK REPAIR starter relay permanent live supply circuit. TEST the system for normal operation.
--	---

#### A7: CHECK FOR IGNITION VOLTAGE TO STARTER RELAY

	<b>1</b> Remove the starter relay. Measure the voltage between connector 86 and ground.
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to A8.</a> <b>No</b> <a href="#">GO to A10.</a>

#### A8: CHECK GROUND SUPPLY TO STARTER RELAY

	<b>1</b> Measure the resistance between starter relay connector 85 and ground.
	Is the resistance less than 5 ohms? <b>Yes</b> INSTALL a new starter relay. <b>No</b> <a href="#">GO to A9.</a>

#### A9: CHECK GROUND SUPPLY CIRCUIT

	<b>1</b> Measure the resistance between starter relay connector 85 and ECM electrical connector PI1 pin 41 (GO)
	Is the resistance less than 5 ohms? <b>Yes</b> DIAGNOSE the anti-theft system. For additional information, refer to Section <a href="#">419-01A Anti-Theft - Active</a> Section <a href="#">419-01B Anti-Theft - Passive</a> <b>No</b> REPAIR the ground circuit between starter relay and ECM.

#### A10: CHECK FUSE 1 IN THE PRIMARY JUNCTION BOX

	<b>1</b> Check the fuse.
	Is the fuse OK? <b>Yes</b> For vehicles with manual transmission REPAIR the circuit between primary junction box and starter relay. For vehicles with automatic transmission <a href="#">GO to A12.</a> <b>No</b> <a href="#">GO to A11.</a>

#### A11: CHECK FOR SHORT TO GROUND

	<b>1</b> Measure the resistance between starter relay connector 86 and ground.
	Is the resistance greater than 10,000 ohms? <b>Yes</b> INSTALL a new fuse. <b>No</b> REPAIR short to ground between primary junction box and starter relay. TEST system for normal operation.

#### A12: CHECK FOR CONTINUITY BETWEEN PRIMARY JUNCTION FUSE BOX AND ECM

	<b>1</b> Disconnect primary junction fuse box electrical connector FH53 and power train control module electrical connector PI1
	<b>2</b> Check the resistance between FH53 pin 3 (Y) and PI1 pin 6 (Y).
	Is the resistance less the 5 ohms? <b>Yes</b> <a href="#">GO to A13.</a> <b>No</b> REPAIR the circuit between the primary junction fuse box and the power train control module. TEST system for normal operation.

#### A13: CHECK FUSE 15 IN THE PRIMARY JUNCTION FUSE BOX

	<b>1</b> Check the fuse
	Is the fuse OK? <b>Yes</b> <a href="#">GO to A15.</a> <b>No</b> <a href="#">GO to A14.</a>

#### A14: CHECK FOR SHORT TO GROUND

 **CAUTION:** Many components on the vehicle are sensitive to electrostatic discharge. Use of an anti-static strap and mat is recommended.

	<b>1</b> Disconnect the primary junction fuse box electrical connector CA2 and transmission control module (TCM) GB2.
	<b>2</b> Measure the resistance primary junction fuse box electrical connector CA2 pin 1 (GO) and ground.
	Is the resistance greater than 10,000 ohms? <b>Yes</b> INSTALL a new fuse. <b>No</b> REPAIR short to ground between primary junction fuse box and TCM. INSTALL a new fuse. TEST system for normal operation.

#### A15: CHECK FOR IGNITION VOLTAGE AT TCM

	<b>1</b> Connect the primary junction fuse box electrical connector CA2
	<b>2</b> Turn the ignition switch to the RUN position.
	<b>3</b> Measure the voltage between TCM electrical connector GB2 pin 9 (GO) and ground
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to A16.</a> <b>No</b> REPAIR the circuit between TCM and primary junction fuse box. TEST system for normal operation.

#### A16: CHECK FOR CONTINUITY BETWEEN TCM ELECTRICAL CONNECTOR GB2 AND ECM ELECTRICAL CONNECTOR PI1

	<b>1</b> Check the resistance between GB2 pin 10 (GR) and PI1 pin 31 (GR).
	Is the resistance less the 5 ohms? <b>Yes</b> INSTALL a new ECM. For additional information refer to Dealer Technical Support. TEST the system for normal operation. If fault is repeated INSTALL a new TCM.

No	REPAIR the circuit between TCM and primary junction fuse box. TEST system for normal operation.
----	---

# PINPOINT TEST B : THE ENGINE CRANKS SLOWLY

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK FOR VOLTAGE DROP</b>	
	<div>1</div> Measure the voltage between the starter motor permanent voltage supply terminal and the positive battery terminal with the ignition key in the START position.
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to B2.</a> <b>No</b> CLEAN and TIGHTEN all positive battery cable connections. TEST the system for normal operation. If the concern persists, INSTALL a new positive battery cable.
<b>B2: CHECK FOR GROUND CONNECTION</b>	
	<div>1</div> Measure the voltage between the starter motor case and battery negative terminal with the ignition key in the START position.
	Is the voltage less than 0.5 volts? <b>Yes</b> DIAGNOSE the battery and charging system. For additional information, refer to Section <a href="#">414-00 Battery and Charging System - General Information</a> <b>No</b> CLEAN and TIGHTEN all negative battery cable connections, starter motor mounting and body to engine ground strap. TEST the system for normal operation. If the concern persists, INSTALL a new negative battery cable.

# Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Ignition

## Description and Operation

## Component Locations

E31029

Item	Part Number	Description
1	-	Ignition coil-on-plug
2	-	Ignition coil-on-plug retaining bolt
3	-	Spark plug

The right-hand cylinders are numbered 5,3,1 and the left-hand cylinders are numbered 6,4,2 when viewed from the rear of the engine.

The ignition system consists of an ignition coil located on each individual cylinder and each individual spark plug. The ignition timing can now be adjusted more rapidly and independently.

The crankshaft position sensor signal is the basis for ignition timing calculations. The alternating voltage signal from the crankshaft position sensor is converted by the engine control module (ECM). This digital signal is then used to position the closing time of the primary circuit of the ignition coil. The effective range for ignition timing control is increased to the fact that there are no rotating parts.

On the basis of engine speed and load inputs, the powertrain control module determines the ignition timing. This function also takes other inputs into consideration such as engine temperature, throttle position, knock control, cam position, traction control and electronic transmission control inputs.

This ignition system enables the customer to drive the vehicle home if a coil or coil wiring failure occurs. In the event of a wiring failure between the powertrain control module and the coil, the coil will fail instead of the coil fuse blowing, which will allow the remaining coils to continue to function and the engine to limp home.

# Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine IgnitionVIN Range: M45255->N52047

## Diagnosis and Testing

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, refer to the Symptom Chart.

### Related Faults/Codes

Symptom	Possible Sources	Action
DTC P0300 Random multiple cylinder misfire detected. DTC P0301 to P0306: Misfire at cylinders 1 to 6	<ul style="list-style-type: none"> <li>* Poor cylinder compression.</li> <li>* Damaged or worn piston rings.</li> <li>* Inlet/exhaust valve stuck open/closed.</li> <li>* Worn camshaft.</li> <li>* Damaged cylinder head gasket.</li> <li>* Spark plug fouled/incorrect gap.</li> </ul>	* Refer to REFER to Section <a href="#">303-01A Engine</a> / <a href="#">303-01B Engine</a> / <a href="#">303-01C Engine</a> .
	<ul style="list-style-type: none"> <li>* Fuel delivery pressure high/low.</li> <li>* Faulty injector (inoperative/leaking).</li> <li>* Fuel injector continuously open.</li> <li>* Fuel contamination.</li> <li>* Fuel injector circuit fault.</li> </ul>	* Refer to REFER to Section <a href="#">303-04A Fuel Charging and Controls</a> / <a href="#">303-04B Fuel Charging and Controls</a> / <a href="#">303-04C Fuel Charging and Controls</a> / <a href="#">303-04D Fuel Charging and Controls - Turbocharger</a> .
	<ul style="list-style-type: none"> <li>* Damaged ignition coil.</li> <li>* Damaged electrical harness/connection.</li> <li>* Damaged spark plug.</li> </ul>	* Refer to the Symptom Chart.

**PINPOINT TEST A : IGNITION COILS — P0351, P0352, P0353, P0354, P0355, P0356, P1367, P1368**

• **NOTE:** Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**A1: CHECK COIL FUNCTION BY SUBSTITUTION**

	<ol style="list-style-type: none"> <li>Replace the suspected faulty coil with a good one.</li> <li>CLEAR the DTC. TEST the system for normal operation.</li> </ol>
	<p>Does the same DTC reoccur? The DTC will indicate if the same cylinder is misfiring.</p> <p><b>Yes</b>  <a href="#">GO to A2.</a></p> <p><b>No</b>            CLEAR the DTC. TEST the system for normal operation.</p>

**A2: CHECK THE IGNITION COIL SUPPLY VOLTAGE CIRCUIT**

	<ol style="list-style-type: none"> <li>Disconnect the relevant right-hand bank ignition coil electrical connector(s).</li> <li>Turn the ignition switch to the ON position.</li> <li>Measure the voltage between:               <ul style="list-style-type: none"> <li>● Cyl 1A. PI002 pin 1, (RW) and GROUND.</li> <li>● Cyl 2A. PI003 pin 1, (RW) and GROUND.</li> <li>● Cyl 3A. PI004 pin 1, (RW) and GROUND.</li> </ul> </li> <li>Disconnect the relevant left-hand bank ignition coil electrical connector(s).</li> <li>Measure the voltage between:               <ul style="list-style-type: none"> <li>● Cyl 1B. PI006 pin 1, (RW) and GROUND.</li> <li>● Cyl 2B. PI007 pin 1, (RW) and GROUND.</li> <li>● Cyl 3B. PI008 pin 1, (RW) and GROUND.</li> </ul> </li> </ol>
	<p>Is the voltage greater than 10.5 Volts?</p> <p><b>Yes</b>  <a href="#">GO to A3.</a></p> <p><b>No</b>            REPAIR the relevant ignition coil supply voltage circuit. For additional information, refer to wiring digrams. CLEAR the DTCs. TEST the system for normal operation.</p>

**A3: CHECK THE IGNITION COIL GROUND CIRCUIT**

	<ol style="list-style-type: none"> <li>Switch the ignition to the OFF position.</li> <li>Disconnect the relevant right-hand bank ignition coil electrical connector(s).</li> <li>Measure the resistance between:               <ul style="list-style-type: none"> <li>● Cyl 1A. PI002 pin 3, (B) and GROUND.</li> <li>● Cyl 2A. PI003 pin 3, (B) and GROUND.</li> <li>● Cyl 3A. PI004 pin 3, (B) and GROUND.</li> </ul> </li> <li>Disconnect the relevant left-hand bank ignition coil electrical connector(s).</li> <li>Measure the resistance between:               <ul style="list-style-type: none"> <li>● Cyl 1B. PI006 pin 3, (B) and GROUND.</li> <li>● Cyl 2B. PI007 pin 3, (B) and GROUND.</li> <li>● Cyl 3B. PI008 pin 3, (B) and GROUND.</li> </ul> </li> </ol>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b>  <a href="#">GO to A4.</a></p> <p><b>No</b>            REPAIR the relevant ignition coil ground circuit. For additional information, refer to wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>

**A4: CHECK THE CONTINUITY OF THE IGNITION COIL TRIGGER SUPPLY CIRCUIT**

	<ol style="list-style-type: none"> <li>Disconnect the ECM electrical connector PI001.</li> <li>Check the continuity of the ignition coil trigger supply circuit between the relevant ignition coil electrical connector(s) and the ECM electrical connector:               <ul style="list-style-type: none"> <li>● Cyl 1A. PI002 pin 4, (GU) and PI001 pin 87, (GU)</li> <li>● Cyl 2A. PI003 pin 4, (Y) and PI001 pin 88, (Y)</li> <li>● Cyl 3A. PI004 pin 4, (YR) and PI001 pin 89, (YR)</li> <li>● Cyl 1B. PI006 pin 4, (GW) and PI001 pin 61, (GW)</li> </ul> </li> </ol>
--	---

- Cyl 2B. PI007 pin 4, (GW) and PI001 pin 62, (GW)
- Cyl 3B. PI008 pin 4, (GR) and PI001 pin 63, (GR)

Is the resistance less than 5 ohms?

**Yes**

[GO to A5.](#)

**No**

REPAIR the ignition coil trigger supply circuit between the relevant ignition coil electrical connector(s) and the ECM electrical connector. CLEAR the DTCs. TEST the system for normal operation.

#### **A5: CHECK THE CONTINUITY BETWEEN THE IGNITION COIL AND THE ECM**

**1** Check the continuity of the ignition coil diagnostic signal circuit, between the ignition coil electrical connector(s) and the ECM electrical connector:

- Cyl 1A. PI002 pin 2, (GB) and PI001 pin 131, (GB)
- Cyl 2A. PI003 pin 2, (GB) and PI001 pin 131, (GB)
- Cyl 3A. PI004 pin 2, (GB) and PI001 pin 131, (GB)
- Cyl 1B. PI006 pin 2, (YB) and PI001 pin 132, (YB)
- Cyl 2B. PI007 pin 2, (YB) and PI001 pin 132, (YB)
- Cyl 3B. PI008 pin 2, (YB) and PI001 pin 132, (YB)

Is the resistance less than 5 Ohms?

**Yes**

INSTALL a new ECM. For additional information refer to REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). Before replacing a ECM, contact Dealer technical support. CLEAR the DTCs. TEST the system for normal operation.

**No**

REPAIR the circuit between the ignition coil electrical connector(s) and the ECM electrical connector. CLEAR the DTCs. TEST the system for normal operation.

# Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Ignition VIN Range: N52048->N99999

Diagnosis and Testing

## Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit.

Refer to the DTC index in this section for guidance on how to use these codes with the Jaguar approved diagnostic system or a scan tool.

## Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

### Visual inspection

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Engine oil level</li> <li>Cooling system coolant level</li> <li>Fuel level</li> <li>Fuel contamination/grade/quality</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Wiring harness</li> <li>Loose or corroded electrical connectors</li> <li>Ignition coils</li> <li>Sensor(s)</li> <li>Engine control module (ECM)</li> <li>Transmission control module (TCM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the DTC Index.

## DTC Index

GETtheMANUALS.org

• NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first

5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic system).

DTC	Description	Possible causes	Action
P035100	Cylinder 1 ignition coil primary/secondary circuit	<ul style="list-style-type: none"> <li>ECM to ignition module/coil drive circuit: short circuit to ground, high resistance</li> <li>Ignition module/coil ground circuit: high resistance</li> <li>Ignition module/coil supply circuit: open circuit (including relay)</li> </ul>	For ignition coil tests, GO to Pinpoint Test <a href="#">A</a> .

### Pinpoint Tests

 **CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

- NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.
- NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : IGNITION COIL CIRCUITS	
NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS

**A1: CHECK THE IGNITION COIL SUPPLY VOLTAGE CIRCUIT**

	<b>1</b> Disconnect the relevant ignition coil electrical connector:	
	<b>Ignition coil connector</b>	
	Cylinder 1, PI02	
	Cylinder 2, PI06	
	Cylinder 3, PI03	
	Cylinder 4, PI07	
	Cylinder 5, PI04	
	Cylinder 6, PI08	
	<b>2</b> Key on, engine off.	
	<b>3</b> Make sure the ignition relay is energized.	
	<b>4</b> Measure the voltage between:	
	<b>Ignition coil connector, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
	Is the voltage less than 10.5 Volts?	
	<b>Yes</b> REPAIR the relevant ignition coil supply circuit. This circuit includes fuse 15 of the front power distribution box and the ignition relay. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.	
	<b>No</b> <a href="#">GO to A2.</a>	

**A2: CHECK THE IGNITION COIL SWITCHING CIRCUITS FOR SHORT CIRCUIT TO GROUND**

	<b>1</b> Key off.	
	<b>2</b> Measure the resistance between:	
	<b>Ignition coil connector, harness side</b>	<b>Battery</b>
	Pin 04	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.	
	<b>No</b> <a href="#">GO to A3.</a>	

**A3: CHECK THE IGNITION COIL SWITCHING CIRCUITS FOR SHORT CIRCUIT TO POWER**

	<b>1</b> Measure the resistance between:	
	<b>Ignition coil connector, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.	
	<b>No</b> <a href="#">GO to A4.</a>	

**A4: CHECK THE IGNITION COIL MONITOR CIRCUITS FOR SHORT CIRCUIT TO GROUND**

	<b>1</b> Measure the resistance between:	
	<b>Ignition coil connector, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.	
	<b>No</b> <a href="#">GO to A5.</a>	

**A5: CHECK THE IGNITION COIL MONITOR CIRCUITS FOR SHORT CIRCUIT TO POWER**

	<b>1</b> Measure the resistance between:	
	<b>Ignition coil connector, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.	
	<b>No</b> <a href="#">GO to A6.</a>	

**A6: CHECK THE IGNITION COIL GROUND CIRCUIT FOR HIGH RESISTANCE**

• NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

	<b>1</b> Measure the resistance between:	
	<b>Cylinder 1 ignition coil connector, harness side</b>	<b>Battery</b>
	PI02, pin 03	Negative terminal
	<b>Cylinder 2 ignition coil connector, harness side</b>	<b>Battery</b>
	PI06, pin 03	Negative terminal
	<b>Cylinder 3 ignition coil connector, harness side</b>	<b>Battery</b>
	PI03, pin 03	Negative terminal
	<b>Cylinder 4 ignition coil connector, harness side</b>	<b>Battery</b>
	PI07, pin 03	Negative terminal
	<b>Cylinder 5 ignition coil connector, harness side</b>	<b>Battery</b>
	PI04, pin 03	Negative terminal
	<b>Cylinder 6 ignition coil connector, harness side</b>	<b>Battery</b>
	PI08, pin 03	Negative terminal
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.	
	<b>No</b> <a href="#">GO to A7.</a>	

**A7: CHECK THE IGNITION COIL SWITCHING CIRCUITS FOR HIGH RESISTANCE**

• NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

	<b>1</b>	Disconnect the ECM electrical connector, PI300.	
	<b>2</b>	Measure the resistance between:	
		<b>Cylinder 1 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI02, pin 04		Pin 61
		<b>Cylinder 2 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI06, pin 04		Pin 60
		<b>Cylinder 3 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI03, pin 04		Pin 59
		<b>Cylinder 4 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI07, pin 04		Pin 58
		<b>Cylinder 5 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI04, pin 04		Pin 57
		<b>Cylinder 6 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI08, pin 04		Pin 56
Is the resistance greater than 5 ohms?			
<b>Yes</b>			
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.			
<b>No</b>			
<a href="#">GO to A8.</a>			

**A8: CHECK THE IGNITION COIL MONITOR CIRCUITS FOR HIGH RESISTANCE**

• NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

	<b>1</b>	Measure the resistance between:	
		<b>Cylinder 1 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI02, pin 02		Pin 62
		<b>Cylinder 2 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI06, pin 02		Pin 64
		<b>Cylinder 3 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI03, pin 02		Pin 62
		<b>Cylinder 4 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI07, pin 02		Pin 64
		<b>Cylinder 5 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI04, pin 02		Pin 62
		<b>Cylinder 6 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
	PI08, pin 02		Pin 64
Is the resistance greater than 5 ohms?			
<b>Yes</b>			
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.			
<b>No</b>			
INSTALL a new ignition coil to the relevant cylinder.			
REFER to: <a href="#">Ignition Coil-On-Plug LH</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).			
or			
REFER to: <a href="#">Ignition Coil-On-Plug RH</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).			
Clear the DTC and test the system for normal operation. Refer to the warranty policy and procedures manual if an ECM is suspect.			

**PINPOINT TEST B : CHECK SPARK PLUG**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK SPARK PLUG</b>	
• NOTE: Some spark plug types cannot be regapped and must be replaced.	
	<b>1</b> Remove the suspect spark plug(s). REFER to: <a href="#">Ignition Coil-On-Plug LH</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation) / <a href="#">Ignition Coil-On-Plug RH</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
	<b>2</b> Visually inspect the spark plug for cracks, damage, carbon buildup or wet fouling, check the condition of the ground electrode, the center electrode tip and the spark plug HT contact and confirm that the spark plug gap is correctly set using a wire gauge taking care not to cause damage to the center or ground electrode tips. REFER to: <a href="#">Specifications</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Specifications).
Is the spark plug condition good, and the spark plug gap is correct ?	
<b>Yes</b>	
Check ignition coil and circuits. See possible sources list for misfire.	
<b>No</b>	
Install a new spark plug(s) as required.	
REFER to: <a href="#">Specifications</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Specifications) / <a href="#">Ignition Coil-On-Plug LH</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation) / <a href="#">Ignition Coil-On-Plug RH</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).	
. CLEAR the DTC. TEST the system for normal operation.	

# Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Ignition Coil-On-Plug LH

## Removal and Installation

### Removal

1. Remove the ignition coil-on-plug cover.

2. Disconnect the ignition coil-on-plug electrical connector.

3. Remove the ignition coil-on-plug.

### Installation

1. To install, reverse the removal procedure.
  - Tighten to 6 Nm.

# Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Ignition Coil-On-Plug RH

Removal and Installation

## Removal

1. Remove the intake manifold. For additional information, refer to Section [303-01A Engine](#) / [303-01B Engine](#) / [303-01C Engine](#).
2. Disconnect the ignition coil-on-plug electrical connector.

E31063

3. Remove the ignition coil-on-plug.

E31064

## Installation

1. To install, reverse the removal procedure.
  - Tighten to 6 Nm.

E31064

# Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Engine Ignition

## Description and Operation

### Component Locations

E31029

Item	Part Number	Description
1	-	Ignition coil-on-plug
2	-	Ignition coil-on-plug retaining bolt
3	-	Spark plug

The right-hand cylinders are numbered 7, 5, 3, 1 and the left-hand cylinders are numbered 8, 6, 4, 2 when viewed from the rear of the engine.

An ignition coil is located on each individual spark plug allowing the ignition timing to be adjusted independently.

The crankshaft position (CKP) sensor signal is the basis for ignition timing calculations. The alternating voltage signal from the CKP sensor is converted to a digital signal by the engine control module (ECM). This digital signal is then used to position the closing time of the primary circuit of the ignition coil. The effective range for ignition timing control is increased to the fact that there are no rotating parts.

On the basis of engine speed and load inputs, the ECM determines the ignition timing. This function also takes other inputs into consideration such as engine temperature, throttle position, knock control, camshaft position, traction control and electronic transmission control inputs.

This ignition system enables the customer to drive the vehicle home if an ignition coil or ignition coil wiring failure occurs. In the event of a wiring failure between the ECM and the ignition coil, the ignition coil will fail instead of the ignition coil fuse blowing, which will allow the remaining ignition coils to continue to function and the engine to limp home.

**Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Engine IgnitionVIN Range:****M45255->N52047****Diagnosis and Testing**

1. **1.** Verify the customer concern by operating the system.
2. **2.** Visually inspect for obvious signs of mechanical or electrical damage.
3. **3.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **4.** If the concern is not visually evident, refer to the Symptom Chart.

**Related Faults/Codes**

Symptom	Possible Sources	Action
DTC P0300 Random multiple cylinder misfire detected. DTC P0301 to P0308: Misfire at cylinders 1 to 8	<ul style="list-style-type: none"> <li>* Poor cylinder compression.</li> <li>* Damaged or worn piston rings.</li> <li>* Inlet/exhaust valve stuck open/closed.</li> <li>* Worn camshaft.</li> <li>* Damaged cylinder head gasket.</li> <li>* Spark plug fouled/incorrect gap.</li> </ul>	* Refer to REFER to Section <a href="#">303-01A Engine</a> / <a href="#">303-01B Engine</a> / <a href="#">303-01C Engine</a> .

**PINPOINT TEST A : IGNITION COILS — P0351, P0352, P0353, P0354, P0355, P0356, P0357, P0358, P1367, P1368**

• NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**A1: CHECK COIL FUNCTION BY SUBSTITUTION**

	<ol style="list-style-type: none"> <li>Replace the suspected faulty coil with a good one.</li> <li>CLEAR the DTC. TEST the system for normal operation.</li> </ol>
	<p>Does the same DTC reoccur? The DTC will indicate if the same cylinder is misfiring.</p> <p><b>Yes</b></p> <p><a href="#">GO to A2.</a></p> <p><b>No</b></p> <p>CLEAR the DTC. TEST the system for normal operation.</p>

**A2: CHECK THE IGNITION COIL SUPPLY VOLTAGE CIRCUIT**

	<ol style="list-style-type: none"> <li>Disconnect the relevant right-hand bank ignition coil electrical connector(s).</li> <li>Turn the ignition switch to the ON position.</li> <li>Measure the voltage between: <ul style="list-style-type: none"> <li>• Cyl 1A. PI002 pin 1, (RW) and GROUND.</li> <li>• Cyl 2A. PI003 pin 1, (RW) and GROUND.</li> <li>• Cyl 3A. PI004 pin 1, (RW) and GROUND.</li> <li>• Cyl 4A. PI005 pin 1, (RW) and GROUND.</li> </ul> </li> <li>Disconnect the relevant left-hand bank ignition coil electrical connector(s).</li> <li>Measure the voltage between: <ul style="list-style-type: none"> <li>• Cyl 1B. PI006 pin 1, (RW) and GROUND.</li> <li>• Cyl 2B. PI007 pin 1, (RW) and GROUND.</li> <li>• Cyl 3B. PI008 pin 1, (RW) and GROUND.</li> <li>• Cyl 4B. PI009 pin 1, (RW) and GROUND.</li> </ul> </li> </ol>
	<p>Is the voltage greater than 10.5 Volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to A3.</a></p> <p><b>No</b></p> <p>REPAIR the relevant ignition coil supply voltage circuit. For additional information, refer to wiring digrams. CLEAR the DTCs. TEST the system for normal operation.</p>

**A3: CHECK THE IGNITION COIL GROUND CIRCUIT**

	<ol style="list-style-type: none"> <li>Switch the ignition to the OFF position.</li> <li>Disconnect the relevant right-hand bank ignition coil electrical connector(s).</li> <li>Measure the resistance between: <ul style="list-style-type: none"> <li>• Cyl 1A. PI002 pin 3, (B) and GROUND.</li> <li>• Cyl 2A. PI003 pin 3, (B) and GROUND.</li> <li>• Cyl 3A. PI004 pin 3, (B) and GROUND.</li> <li>• Cyl 4A. PI005 pin 3, (B) and GROUND.</li> </ul> </li> <li>Disconnect the relevant left-hand bank ignition coil electrical connector(s).</li> <li>Measure the resistance between: <ul style="list-style-type: none"> <li>• Cyl 1B. PI006 pin 3, (B) and GROUND.</li> <li>• Cyl 2B. PI007 pin 3, (B) and GROUND.</li> <li>• Cyl 3B. PI008 pin 3, (B) and GROUND.</li> <li>• Cyl 4B. PI009 pin 3, (B) and GROUND.</li> </ul> </li> </ol>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to A4.</a></p> <p><b>No</b></p> <p>REPAIR the relevant ignition coil ground circuit. For additional information, refer to wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>

**A4: CHECK THE CONTINUITY OF THE IGNITION COIL TRIGGER SUPPLY CIRCUIT**

	<ol style="list-style-type: none"> <li>Disconnect the ECM electrical connector PI001</li> </ol>
--	---

<b>2</b>	<p>Check the continuity of the ignition coil trigger supply circuit between the relevant ignition coil electrical connector(s) and the ECM electrical connector:</p> <ul style="list-style-type: none"> <li>● Cyl 1A. PI002 pin 4, (GU) and PI001 pin 87, (GU)</li> <li>● Cyl 2A. PI003 pin 4, (Y) and PI001 pin 88, (Y)</li> <li>● Cyl 3A. PI004 pin 4, (YR) and PI001 pin 89, (YR)</li> <li>● Cyl 4A. PI005 pin 4, (GR) and PI001 pin 90, (GR)</li> <li>● Cyl 1B. PI006 pin 4, (GW) and PI001 pin 61, (GW)</li> <li>● Cyl 2B. PI007 pin 4, (GW) and PI001 pin 62, (GW)</li> <li>● Cyl 3B. PI008 pin 4, (GR) and PI001 pin 63, (GR)</li> <li>● Cyl 4B. PI009 pin 4, (YR) and PI001 pin 64, (YR)</li> </ul>
----------	---

	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b> <a href="#">GO to A5.</a></p> <p><b>No</b> REPAIR the ignition coil trigger supply circuit between the relevant ignition coil electrical connector(s) and the ECM electrical connector. CLEAR the DTCs. TEST the system for normal operation.</p>
--	--

**A5: CHECK THE CONTINUITY BETWEEN THE IGNITION COIL AND THE ECM**

<b>1</b>	<p>Check the continuity of the ignition coil diagnostic signal circuit, between the ignition coil electrical connector(s) and the ECM electrical connector:</p> <ul style="list-style-type: none"> <li>● Cyl 1A. PI002 pin 2, (GB) and PI001 pin 131, (GB)</li> <li>● Cyl 2A. PI003 pin 2, (YB) and PI001 pin 132, (YB)</li> <li>● Cyl 3A. PI004 pin 2, (YB) and PI001 pin 132, (YB)</li> <li>● Cyl 4A. PI005 pin 2, (GB) and PI001 pin 131, (GB)</li> <li>● Cyl 1B. PI006 pin 2, (YB) and PI001 pin 132, (YB)</li> <li>● Cyl 2B. PI007 pin 2, (GB) and PI001 pin 131, (GB)</li> <li>● Cyl 3B. PI008 pin 2, (GB) and PI001 pin 131, (GB)</li> <li>● Cyl 4B. PI009 pin 2, (YB) and PI001 pin 132, (YB)</li> </ul>
----------	--

	<p>Is the resistance less than 5 Ohms?</p> <p><b>Yes</b> INSTALL a new ECM. For additional information refer to REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a>. Before replacing a ECM, contact Dealer technical support. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b> REPAIR the circuit between the ignition coil electrical connector(s) and the ECM electrical connector. CLEAR the DTCs. TEST the system for normal operation.</p>

# Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Engine IgnitionVIN Range:

## N52048->N99999

Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit.

Refer to the DTC index in this section for guidance on how to use these codes with the Jaguar approved diagnostic system or a scan tool.

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual inspection

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Engine oil level</li> <li>Cooling system coolant level</li> <li>Fuel level</li> <li>Fuel contamination/grade/quality</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Wiring harness</li> <li>Loose or corroded electrical connectors</li> <li>Ignition coils</li> <li>Sensor(s)</li> <li>Engine control module (ECM)</li> <li>Transmission control module (TCM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the diagnostic trouble code (DTC) Index.

### Symptom Chart

Symptom	Possible source	Action
Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>Engine breather system disconnected/restricted</li> <li>Ignition system</li> <li>Fuel system</li> <li>Harness</li> <li>Crankshaft position (CKP) sensor</li> <li>ECM fault</li> </ul>	<p>Check the engine breather system, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>For ignition system tests, GO to Pinpoint Test <a href="#">A</a>. Check the fuel pressure, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For CKP tests, REFER to: <a href="#">Electronic Engine Controls - VIN Range: N80181-&gt;R99999</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).</p> <p>Refer to the warranty policy and procedures manual if an ECM is suspect.</p>
Engine cranks and fires, but will not start	<ul style="list-style-type: none"> <li>Evaporative emissions purge valve</li> <li>Fuel pump</li> <li>Spark plugs</li> <li>HT short to ground (tracking) check rubber boots for cracks/damage</li> <li>Ignition coil failure(s)</li> <li>Harness</li> </ul>	<p>For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing).</p> <p>Check the fuel pressure, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For spark plug tests, GO to Pinpoint Test <a href="#">B</a>. # Pinpoint Tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

- **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.
- **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : IGNITION COIL CIRCUITS		
• NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.		
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
A1: CHECK THE IGNITION COIL SUPPLY VOLTAGE CIRCUIT		
	1 Disconnect the relevant ignition coil electrical connector:	
	Ignition coil connector	
	Cylinder 1, PI02	
	Cylinder 2, PI06	
	Cylinder 3, PI03	
	Cylinder 4, PI07	
	Cylinder 5, PI04	
	Cylinder 6, PI08	
	Cylinder 7, PI05	
	Cylinder 8, PI09	
	2 Key on, engine off.	
	3 Make sure the ignition relay is energized.	
	4 Measure the voltage between:	
	Ignition coil connector, harness side	Battery
	Pin 01	Negative terminal
Is the voltage less than 10.5 Volts?		
Yes REPAIR the relevant ignition coil supply circuit. This circuit includes fuse 30 of the front power distribution box and the ignition relay. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.		
No GO to A2.		
A2: CHECK THE IGNITION COIL SWITCHING CIRCUITS FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	Ignition coil connector, harness side	Battery
	Pin 04	Negative terminal
Is the resistance less than 10,000 ohms?		
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.		
No GO to A3.		
A3: CHECK THE IGNITION COIL SWITCHING CIRCUITS FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	Ignition coil connector, harness side	Battery
	Pin 04	Positive terminal
Is the resistance less than 10,000 ohms?		
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.		
No GO to A4.		
A4: CHECK THE IGNITION COIL MONITOR CIRCUITS FOR SHORT CIRCUIT TO GROUND		
	1 Measure the resistance between:	
	Ignition coil connector, harness side	Battery
	Pin 02	Negative terminal
Is the resistance less than 10,000 ohms?		
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.		
No GO to A5.		
A5: CHECK THE IGNITION COIL MONITOR CIRCUITS FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	Ignition coil connector, harness side	Battery
	Pin 02	Positive terminal
Is the resistance less than 10,000 ohms?		
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.		
No GO to A6.		
A6: CHECK THE IGNITION COIL GROUND CIRCUIT FOR HIGH RESISTANCE		
• NOTE: Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.		

<b>1</b>	Measure the resistance between:	
	<b>Cylinder 1 ignition coil connector, harness side</b>	<b>Battery</b>
PI02, pin 03		Negative terminal
	<b>Cylinder 2 ignition coil connector, harness side</b>	<b>Battery</b>
PI06, pin 03		Negative terminal
	<b>Cylinder 3 ignition coil connector, harness side</b>	<b>Battery</b>
PI03, pin 03		Negative terminal
	<b>Cylinder 4 ignition coil connector, harness side</b>	<b>Battery</b>
PI07, pin 03		Negative terminal
	<b>Cylinder 5 ignition coil connector, harness side</b>	<b>Battery</b>
PI04, pin 03		Negative terminal
	<b>Cylinder 6 ignition coil connector, harness side</b>	<b>Battery</b>
PI08, pin 03		Negative terminal
	<b>Cylinder 7 ignition coil connector, harness side</b>	<b>Battery</b>
PI05, pin 03		Negative terminal
	<b>Cylinder 8 ignition coil connector, harness side</b>	<b>Battery</b>
PI09, pin 03		Negative terminal

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.

**No**

[GO to A7.](#)

#### **A7: CHECK THE IGNITION COIL SWITCHING CIRCUITS FOR HIGH RESISTANCE**

• **NOTE:** Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

1	Disconnect the ECM electrical connector, PI300.	
2	Measure the resistance between:	
	Cylinder 1 ignition coil connector, harness side	ECM connector PI 300, harness side
PI02, pin 04		Pin 61
	Cylinder 2 ignition coil connector, harness side	ECM connector PI 300, harness side
PI06, pin 04		Pin 60
	Cylinder 3 ignition coil connector, harness side	ECM connector PI 300, harness side
PI03, pin 04		Pin 59
	Cylinder 4 ignition coil connector, harness side	ECM connector PI 300, harness side
PI07, pin 04		Pin 58
	Cylinder 5 ignition coil connector, harness side	ECM connector PI 300, harness side
PI04, pin 04		Pin 57
	Cylinder 6 ignition coil connector, harness side	ECM connector PI 300, harness side
PI08, pin 04		Pin 56
	Cylinder 7 ignition coil connector, harness side	ECM connector PI 300, harness side
PI05, pin 04		Pin 55
	Cylinder 8 ignition coil connector, harness side	ECM connector PI 300, harness side
PI09, pin 04		Pin 54

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.

**No**

[GO to A8.](#)

#### **A8: CHECK THE IGNITION COIL MONITOR CIRCUITS FOR HIGH RESISTANCE**

• **NOTE:** Unless multiple cylinder misfires are apparent, only one circuit will normally need to be tested. The DTC set will indicate which cylinder is misfiring.

<b>1</b>	Measure the resistance between:	
	<b>Cylinder 1 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI02, pin 02		Pin 62
	<b>Cylinder 2 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI06, pin 02		Pin 64
	<b>Cylinder 3 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI03, pin 02		Pin 64
	<b>Cylinder 4 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI07, pin 02		Pin 62
	<b>Cylinder 5 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI04, pin 02		Pin 64
	<b>Cylinder 6 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI08, pin 02		Pin 62
	<b>Cylinder 7 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI05, pin 02		Pin 62
	<b>Cylinder 8 ignition coil connector, harness side</b>	<b>ECM connector PI 300, harness side</b>
PI09, pin 02		Pin 64

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.

**No**

INSTALL a new ignition coil to the relevant cylinder.

REFER to: [Ignition Coil-On-Plug](#) (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

Clear the DTC and test the system for normal operation. Refer to the warranty policy and procedures manual if an ECM is suspect.

#### **PINPOINT TEST B : CHECK SPARK PLUG**

• **NOTE:** Only resisted spark plugs must be used.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK SPARK PLUG</b>	
• NOTE: Some spark plug types cannot be regapped and must be replaced.	
	<div>1</div> Remove the suspect spark plug(s). REFER to: <a href="#">Ignition Coil-On-Plug</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
	<div>2</div> Visually inspect the spark plug for cracks, damage, carbon buildup or wet fouling, check the condition of the ground electrode, the center electrode tip and the spark plug HT contact and confirm that the spark plug gap is correctly set using a wire gauge taking care not to cause damage to the center or ground electrode tips. REFER to: <a href="#">Specifications</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Specifications).
	Is the spark plug condition good, and the spark plug gap correct ? <b>Yes</b> Check ignition coil and circuits. See possible sources list for misfire. <b>No</b> Install a new spark plug(s) as required. REFER to: <a href="#">Specifications</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Specifications) / <a href="#">Ignition Coil-On-Plug</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). . CLEAR the DTC. TEST the system for normal operation.

# Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Ignition Coil-On-Plug

Removal and Installation

## Removal

1. Remove the oil level indicator.

2. NOTE: Left-hand shown, right-hand similar.

Remove the ignition coil-on-plug cover.

3. Disconnect the ignition coil-on-plug electrical connector.

4. Disconnect the brake servo pressure sensor electrical connector.

5. Remove the ignition coil-on-plug.

- Remove the retaining bolt.

### Installation

1. To install, reverse the removal procedure.
2. Tighten to 5 Nm.

## Glow Plug System -

Description	Nm	lb-ft	lb-in
Glow plug	10	-	89

# Glow Plug System - Glow Plug System

## Description and Operation

E52651

Item	Part Number	Description
1	-	Glow plug module
2	-	Pre heat warning light
3	-	Glow plug
4	-	Glow plug wire
5	-	Glow plug fuse
6	-	Glow plug relay

The fundamental purpose of the glow plugs is to improve the cold start capability, cold start emissions and customer perception of the vehicle, such as short glow plug times and minimum cranking times, as well as low combustion noise at low ambient temperatures.

The maximum current when switched on will be approximately 18 Amps per plug at 40° C (104° F) with a 12 Volt supply.

The Glow Plug Control Module (GPCM) is located in the engine bay on the right hand side. It acts as a switch for the current to the glow plugs and is controlled via the engine control module (ECM). Above a given coolant temperature, glow plugs will not be switched on before, during or after starting. Within a certain coolant temperature range, the glow plugs will be active before cranking to increase combustion chamber temperature, during cranking to assist engine starting, and after the engine has started in order to reduce the emissions of white and possibility black smoke from the tail pipe immediately following a cold start.

The ECM is connected to the GPCM via a reference control line and a diagnostic line. The former will be pulled down by the ECM causing the GPCM to switch on and to remain switched on while the reference voltage is low. The ECM will store the error information generated by the GPCM in the case of glow plug failure.

# Glow Plug System - Glow Plug System

Diagnosis and Testing

## Principle of operation

For information on the system operation.

REFER to: [Glow Plug System](#) (303-07C Glow Plug System, Description and Operation).

## Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

### Visual inspection table

Electrical
<ul style="list-style-type: none"> <li>• Fuses (100 Amp midfuse and fuse 38 of the front power distribution box)</li> <li>• Glow plug control module (GPCM)</li> <li>• Engine management control relay</li> <li>• Wiring harness(es)</li> <li>• Electrical connector(s)</li> <li>• Glow plug(s)</li> <li>• Engine control module (ECM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) and test the system for normal operation before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve any fault codes before proceeding to the diagnostic trouble code (DTC) index.

## Symptom chart

Symptom	Possible cause	Action
Poor starting (extreme weather conditions)	<ul style="list-style-type: none"> <li>• Glow plugs inoperative/inefficient</li> <li>• Fuel temperature too low</li> </ul>	Check the glow plug harnesses at the glow plugs and at the connection to the main harness. For additional information, refer to the wiring diagrams. Check for DTCs indicating a control module or circuit fault. The fuel system recycles fuel until operating temperature is reached to reduce this possibility.
High cold-engine emissions	<ul style="list-style-type: none"> <li>• After-glow phase inoperative</li> </ul>	Check the glow plug harnesses at the glow plugs and at the connection to the main harness. For additional information, refer to the wiring diagrams. Check for DTCs indicating a control module or circuit fault. After-glow is designed to function at engine temperatures below 50° C (122° F), and below 2500 rpm.
High cold-engine noise, vibration or harshness	<ul style="list-style-type: none"> <li>• After-glow phase inoperative</li> </ul>	Check the glow plug harnesses at the glow plugs and at the connection to the main harness. For additional information, refer to the wiring diagrams. Check for DTCs indicating a control module or circuit fault. After-glow is designed to function at engine temperatures below 50° C (122° F), and below 2500 rpm.

## DTC index

DTC	Description	Possible source	Action
P0380	Glow plug control module (GPCM)	<ul style="list-style-type: none"> <li>• The GPCM is driven, but the glow plugs are not powered</li> </ul>	For GPCM circuit tests, GO to Pinpoint Test <a href="#">B</a> .
P0382	Glow plug control module (GPCM)	<ul style="list-style-type: none"> <li>• The GPCM is not driven, but the glow plugs are powered</li> </ul>	For GPCM circuit tests, GO to Pinpoint Test <a href="#">B</a> .
P0383	Glow plug control module (GPCM) circuit low	<ul style="list-style-type: none"> <li>• GPCM control circuit: short circuit to ground</li> </ul>	For GPCM control circuit tests, GO to Pinpoint Test <a href="#">A</a> .
P0384	Glow plug control module (GPCM) circuit high	<ul style="list-style-type: none"> <li>• GPCM control circuit: short circuit to power</li> </ul>	For GPCM control circuit tests, GO to Pinpoint Test <a href="#">A</a> .
P0670	Glow plug control module (GPCM) circuit open	<ul style="list-style-type: none"> <li>• GPCM control circuit: high resistance</li> </ul>	For GPCM control circuit tests, GO to Pinpoint Test <a href="#">A</a> .

## Pinpoint Tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00. Failure to follow this instruction may result in damage to the vehicle.

• NOTE: When performing voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• NOTE: If DTCs are recorded and a fault is not present when performing the pinpoint tests, an intermittent concern may be the cause. Always check for loose connections and corroded terminals.

PINPOINT TEST A : GLOW PLUG CONTROL MODULE (GPCM) CONTROL CIRCUIT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE GPCM CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	

E66299

**Glow plug control module (GPCM) connector, FH20**

Circuit	Pin
Ground	01
Control from ECM	02
Power supply from FPDB	03
Logic monitor	05

E54251

**Engine control module (ECM) connector, C98**

Circuit	Pin
Glowplug control module signal	G3
Logic monitor	E3

- 1 Key off.
- 2 Disconnect the GPCM electrical connector, FH20.
- 3 Measure the resistance between:

FH20, harness side	Battery
Pin 02	Negative terminal

Is the resistance greater than 10 Kohms?

**Yes**

[GO to A3.](#)

**No**

[GO to A2.](#)

**A2: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE ECM**

- 1 Disconnect the ECM connector, C98.
- 2 Measure the resistance between:

FH20, harness side	Battery
Pin 02	Negative terminal

Is the resistance greater than 10 Kohms?

**Yes**

An intermittent fault may be present in the wiring harness. Visually check for chafed wires or other physical damage to the harness.

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.

**A3: CHECK THE GPCM CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER**

- 1 Key off.
- 2 Measure the resistance between:

FH20, harness side	Battery
Pin 02	Positive terminal

Is the resistance greater than 10 Kohms?

**Yes**

[GO to A5.](#)

**No**

[GO to A4.](#)

**A4: CHECK WHETHER THE SHORT CIRCUIT IS IN THE HARNESS OR THE ECM**

- 1 Disconnect the ECM connector, C98.
- 2 Measure the resistance between:

FH20, harness side	Battery
Pin 02	Positive terminal

Is the resistance greater than 10 Kohms?

**Yes**

An intermittent fault may be present in the wiring harness. Visually check for chafed wires or other physical damage to the harness.

**No**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.

**A5: CHECK THE GPCM CONTROL CIRCUIT FOR HIGH RESISTANCE**

- 1 Disconnect the ECM connector, C98.
- 2 Measure the resistance between:

FH20, harness side	C98, harness side
Pin 02	Pin G3

Is the resistance less than 10 ohms?

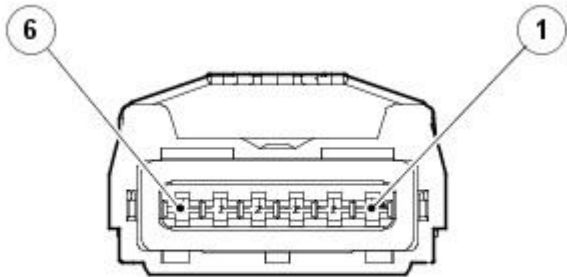

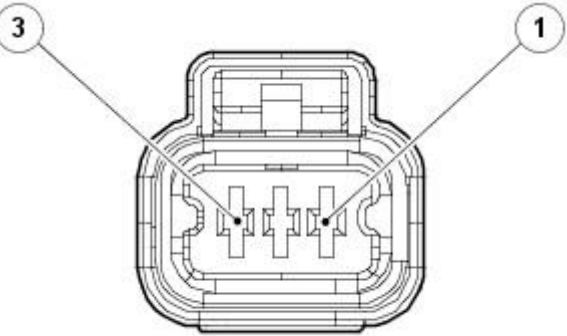

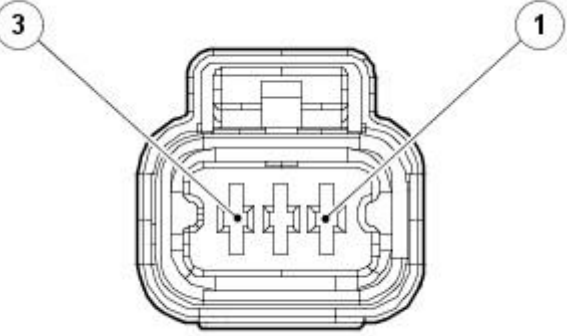

**Yes**

An intermittent fault may be present in the wiring harness. Visually check for chafed wires or other physical damage to the harness. Refer to the warranty policy and procedures manual if a module is suspect.

**No**

REPAIR the high resistance circuit. This circuit includes connector, PI41. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.

## PINPOINT TEST B : GLOW PLUG CONTROL MODULE (GPCM) OUTPUT

TEST CONDITIONS		DETAILS/RESULTS/ACTIONS					
B1: CHECK THE PERMANENT POWER SUPPLY TO THE GPCM							
	Glow plug control module (GPCM) connector, GP04						
	Circuit	Pin					
E66300	Cylinder 1 output	Pin 01					
	Cylinder 2 output	Pin 02					
	Cylinder 3 output	Pin 03					
	Cylinder 4 output	Pin 04					
	Cylinder 5 output	Pin 05					
	Cylinder 6 output	Pin 06					
	Right hand glow plug connector, GP01						
	Circuit	Pin					
E66319	Cylinder 1	01

# Glow Plug System - Glow Plugs

## Removal and Installation

### Removal

1. Remove the intake air shutoff throttle.  
For additional information, refer to: [Intake Air Shutoff Throttle](#) (303-04C Fuel Charging and Controls - 2.7L V6 - TdV6, Removal and Installation).
2. Detach the glow plug rail.

3. Remove the glow plugs.

### Installation

1. NOTE: Make sure glow plug rail is correctly fitted to all glow plugs on the engine bank.

To install, reverse the removal procedure.

- Tighten to 10 Nm.

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 -

Description and Operation

## Positive Crankcase Ventilation System

Vehicles fitted with 4.2L engine

On vehicles fitted with a 4.2L engine the positive crankcase ventilation (PCV) system consists of a PCV valve, and two PCV hoses. The PCV valve is mounted on the right-hand valve cover and a hose is connected between PCV valve and the throttle body elbow. The PCV valve regulates the amount of ventilation air and crankcase gas supplied to the intake manifold and also prevents backfiring into the crankcase. The left-hand valve cover PCV hose is connected to the air cleaner outlet pipe.

Vehicles fitted with 2.5L and 3.0L engine

On vehicles fitted with 2.5L and 3.0L engine the PCV system consists of two hoses, connected between the right-hand valve cover and the intake manifold and the left-hand valve cover and the air cleaner outlet pipe. .

The PCV system recycles crankcase gases back through the engine where they mix with incoming air/fuel charge.

The positive crankcase ventilation system helps to reduce hydrocarbon emissions from the engine.

## Exhaust Gas Recirculation System

Exhaust Gas Recirculation (EGR) Valve

E30253

Exhaust Manifold to Exhaust Gas Recirculation (EGR) Valve Tube

E30254

The exhaust gas recirculation (EGR) system is fitted on all vehicles fitted with a 4.2L engine. It comprises of an EGR valve and exhaust manifold to EGR valve tube. The EGR system allows a measured quantity of exhaust gas to be directed back to the intake manifold. The exhaust gas is introduced to the incoming charge in the intake manifold, where it mixes with the air/fuel mixture and lowers the peak gas temperature, reducing nitrogen oxide (NOX) exhaust emissions. The gas is drawn through the exhaust manifold to EGR valve tube from the exhaust to the inlet manifold via the EGR valve. The EGR valve is electrically operated and is controlled via an input from the engine control module (ECM).

On vehicles without super charger the EGR valve is mounted on the intake manifold. On vehicles with supercharger the EGR valve is mounted on the throttle body elbow.

The ECM can monitor the operation of the EGR system by receiving inputs from the manifold absolute pressure (MAP) sensor. The MAP sensor monitors the EGR flow by the change in intake manifold pressure when the EGR valve is operated. If at any time the input signal to the ECM exceeds pre-defined thresholds due to low pressure reading for a calibrated period of time, a diagnostic trouble code (DTC) is recorded.

On vehicles without super charger the MAP sensor is mounted on the rear of intake manifold. On vehicles with supercharger the MAP sensor is mounted on the rear of the throttle body elbow. For additional information, refer to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#).

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Emission ControlVIN Range: N52048->N99999

Description and Operation

## Positive Crankcase Ventilation (PCV) System

The PCV system recycles crankcase gases back through the engine where they mix with incoming air/fuel charge and help to reduce hydrocarbon emissions.

Vehicles with 3.0L engine

The PCV system consists of two hoses, connected between the left-hand valve cover and the intake manifold and the right-hand valve cover and the air cleaner outlet pipe.

Vehicles with 4.2L engine

The PCV system consists of a valve, and two hoses. The PCV valve is mounted on the right-hand valve cover and a hose is connected between PCV valve and the throttle body elbow. The left-hand valve cover PCV hose is connected to the air cleaner outlet pipe.

The PCV valve regulates the amount of ventilation air and crankcase gas supplied to the intake manifold and also prevents backfiring into the crankcase.

## Exhaust Gas Recirculation (EGR) System - Vehicles with 4.2L engine

EGR Valve

E30253

EGR Valve Tube

E30254

The EGR system comprises of an EGR valve and exhaust manifold to EGR valve tube. The EGR system allows a measured quantity of exhaust gas to be directed back to the intake manifold. The exhaust gas is introduced to the incoming charge air in the intake manifold, where it mixes with the air/fuel mixture and lowers the peak gas temperature, reducing nitrogen oxide (NOx) exhaust emissions. The gas is drawn through the exhaust manifold to EGR valve tube from the exhaust to the inlet manifold through the EGR valve. The EGR valve is electrically operated and is controlled through an input from the engine control module (ECM).

On vehicles without a supercharger the EGR valve is mounted on the intake manifold. On vehicles with a supercharger the EGR valve is mounted on the throttle body elbow.

The ECM monitors the operation of the EGR system from inputs from the manifold absolute pressure (MAP) sensor and can detect high or low flow through the valve as a result of changes to the pressure readings.

High or low flow outside the expected range results in the setting of a diagnostic trouble code (DTC).

On vehicles without a supercharger the MAP sensor is mounted on the rear of intake manifold. On vehicles with a supercharger the MAP sensor is mounted on the rear of the throttle body elbow.

For additional information, refer to: [Electronic Engine Controls](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Description and Operation).

## Secondary Air Injection (AIR) System

To assist in the reduction of exhaust emissions to meet European Union (EU) Stage 4 and Federal Petrol Emission standards, AIR is fitted to the vehicle.

E62215

Item	Part Number	Description
1	-	AIR vacuum reservoir
2	-	AIR switching valve
3	-	Exhaust manifolds
4	-	AIR pump
5	-	AIR control valve

The AIR pump is used to provide a supply of air into the exhaust manifolds during the cold start period of the engine. The AIR cycle lasts for up to 65 seconds. The hot unburnt fuel particles leaving the combustion chamber mix with the air injected into the exhaust manifolds and immediately combust.

This subsequent combustion of the unburnt and partially burnt carbon monoxide (CO) and hydrocarbon (HC) particles help to reduce the emission of these pollutants from the exhaust system. The additional heat generated in the exhaust manifold also provides rapid heating of the exhaust system catalytic converters. The additional oxygen which is delivered to the catalytic converters also generates an exothermic reaction which causes the catalytic converters to reach their optimum operating temperature and 'light off' quickly.

The catalytic converters only start to provide effective treatment of emission pollutants when they reach an operating temperature of approximately 250°C (482°F) and need to be between temperatures of 400°C (752°F) and 800°C (1472°F) for optimum efficiency. Consequently, the heat produced by the AIR 'afterburning' reduces the time delay before the catalysts reach an efficient operating temperature.

The AIR system comprises the following components:

- AIR pump
- AIR switching valve
- AIR control valve
- AIR vacuum reservoir
- AIR pump relay
- AIR pressure sensor (North American specification vehicles only)

## AIR Pump

E62274

The AIR pump is located behind the left-hand side of the front bumper cover. The pump is fitted on rubber mountings to help prevent noise which is generated by AIR pump operation. The AIR pump is powered from the vehicle battery by a dedicated relay and supplies approximately 10 to 15 kg/hr (22 to 33 lb/hr) of air when the engine is at idle speed and the ambient temperature is below 20°C (68°F).

Air is drawn into the AIR pump through vents in its front cover and is then passed through a foam filter. The air is delivered to the exhaust manifold on each side of the engine through a combination of plastic pipes and stainless steel tubes.

One second after the AIR pump is energised, the ECM switches on the AIR switching valve, which opens to allow vacuum from the AIR vacuum reservoir to be applied to the vacuum operated AIR control valve. When the vacuum is applied to the AIR control valve, it opens to allow the air from the AIR pump through to the exhaust manifolds.

When the ECM switches off the AIR switching valve, the vacuum supply to the AIR control valve is cut-off and the valve closes to prevent further air being injected into the exhaust manifolds. With an approximate five second delay after as the AIR switching valve is closed, the ECM removes power from the AIR pump relay, and this in turn stops the AIR pump from operating.

### AIR Switching Valve

E62276

The ECM switches on the AIR switching valve with a one second delay after initiating AIR pump operation. When the AIR switching valve is open, a steady vacuum supply is allowed through to open the vacuum operated AIR control valve. When the ECM switches off the AIR switching valve, the valve closes and immediately shuts off the vacuum supply to the AIR control valve. The pump continues to operate for a further five seconds for system diagnostic purposes.

When the AIR switching valve is switched off, the vacuum supply line opens to atmosphere, and this causes the AIR switching valve to close automatically to prevent any further injection of air.

### AIR Control Valve

E62275

The injected air from the AIR pump is controlled by the AIR control valve. This allows the correct amount of air to be injected directly into the exhaust manifolds. The AIR control valve prevents exhaust gasses from blowing back into the AIR pump.

The AIR control valve is assisted in operation by a vacuum source from the AIR vacuum reservoir located in the right-hand side of the engine bay. This assistance allows the actuation of the AIR control valve independently from the intake manifold vacuum levels available.

When the pressure in the exhaust system is higher than in the AIR system, the AIR control valve closes the circuit, and this protects the AIR system from exhaust gasses blowing back into the AIR system.

Vacuum to the AIR switching valve is provided from the intake manifold vacuum by the AIR vacuum reservoir. A small bore vacuum hose provides the vacuum route between the AIR vacuum reservoir and AIR switching valve. A further small bore vacuum hose is used to connect the AIR switching valve to the AIR control valve.

**AIR Vacuum Reservoir**

E62277

The AIR vacuum reservoir is located on the right-hand side of the engine bay.

The AIR vacuum reservoir is included in the vacuum supply line between the intake manifold and the AIR switching valve.

The AIR vacuum reservoir contains a one-way valve to stop vacuum leaking back towards the intake manifold side. The AIR vacuum reservoir holds a constant vacuum so that the AIR control valve opens as soon as the AIR switching valve is switched on.

**AIR Pump Relay**

The AIR pump relay is located in the engine compartment fusebox. The ECM is used to control the operation of the AIR pump by the AIR pump relay.

The AIR system receives its voltage supply through the AIR pump relay. The ECM monitors the state of the relay for correct operation as part of its system diagnostic.

**AIR Pressure Sensor - North American specification vehicles only**

The AIR system is monitored by measuring the system pressure by using the AIR pressure sensor at several instances during its cycle of operation.

The AIR system pressure is measured before operation of the AIR pump. The AIR pump is then switched on and with a one second delay, the AIR switching valve is opened. After a stabilizing period, the system pressure is measured again, this time by taking the average of a

one second duration of readings, and normalising for variations in battery voltage and atmospheric pressure. If the system pressure measured at this time has not risen enough with respect to the initial AIR pressure reading then a failure will be flagged.

A second pressure measurement is made after the requirement for AIR into the exhaust system has expired, but continuing on from the same period of AIR pump operation, i.e. the pump is left running, against a closed AIR switching valve. Again this pressure measurement is the average of a one second duration of readings normalised for variations in battery voltage and atmospheric pressure. If the system pressure measured at this time has not risen enough or has risen too much with respect to the system pressure during normal operation of AIR then a failure will be flagged.

A final pressure reading is taken after the AIR system has been switched off to ensure the system shuts down.

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Emission Control VIN Range: M45255->N52047

## Diagnosis and Testing

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, refer to the Symptom Chart.

### Symptom Chart

Symptom	Possible Sources	Action
Diagnostic Trouble Code (DTC) P0400 indicates exhaust gas recirculation (EGR) system flow malfunction.	<ul style="list-style-type: none"> <li>* Exhaust manifold to EGR valve pipe tube blocked.</li> <li>* Exhaust manifold to EGR valve pipe tube cracked.</li> <li>* EGR valve stuck closed.</li> <li>* EGR valve stuck open.</li> <li>* EGR valve loose.</li> <li>* Fuse 37 in the front power distribution box (FPDB).</li> <li>* Relay 5 in the FPDB</li> <li>* Electrical harness.</li> <li>* Electrical connector(s)</li> </ul>	* GO to Pinpoint Test A.

Diagnostic Trouble Code (DTC) P0406 indicates exhaust gas recirculation (EGR) valve malfunction, short to ground/open circuit.	<ul style="list-style-type: none"> <li>* Electrical harness.</li> <li>* Electrical connector(s).</li> <li>* ECM.</li> <li>* EGR valve.</li> </ul>	* GO to Pinpoint Test C.

### PINPOINT TEST A : DIAGNOSTIC TROUBLE CODE (DTC) P0400 INDICATES EXHAUST GAS RECIRCULATION (EGR) SYSTEM FLOW MALFUNCTION.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK EGR VALVE FOR CORRECT FITMENT TO INTAKE MANIFOLD</b>	
	<ol style="list-style-type: none"> <li>1 Check the EGR valve retaining bolts for correct torque. REFER to <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> in this section.</li> </ol>
Was the EGR valve fitted correctly?	
Yes	<a href="#">GO to A3.</a>
No	<a href="#">GO to A2.</a>
<b>A2: CHECK EXHAUST GAS RECIRCULATION (EGR) VALVE TO MANIFOLD/INTAKE ELBOW GASKET FOR CORRECT SEAL</b>	
	<ol style="list-style-type: none"> <li>1 Visually inspect the gasket for external damage.</li> </ol>
Is the gasket damaged?	
Yes	INSTALL a new gasket, make sure valve is seated correctly and retaining bolts installed to the correct torque. REFER to <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> in this section. CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
No	<a href="#">GO to A3.</a>
<b>A3: CHECK FOR EXHAUST MANIFOLD TO EGR VALVE TUBE FOR DAMAGE OR BLOCKAGES</b>	
	<ol style="list-style-type: none"> <li>1 Visually inspect the exhaust manifold to EGR valve tube.</li> </ol>
Is the tube damaged or blocked?	
Yes	If the tube is damaged INSTALL a new tube. REFER to <a href="#">Exhaust Manifold to Exhaust Gas Recirculation (EGR) Valve Tube</a> in this section. CLEAR the DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes. If the tube is blocked, unblock the tube. CLEAR DTC. TEST the system for normal operation.
No	<a href="#">GO to A4.</a>
<b>A4: CHECK FOR POWER SUPPLY TO EGR VALVE</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect EGR valve electrical connector PI 15</li> <li>2 TURN ignition switch to the ON position</li> <li>3 MEASURE the voltage at PI 15 pin 2 (GU)</li> </ol>
Is the voltage less than 10 volts	
Yes	<a href="#">GO to A5.</a>
No	<a href="#">GO to A5.</a>
<b>A5: CHECK FUSE 37 IN THE FRONT POWER DISTRIBUTION BOX (FPDB)</b>	
	<ol style="list-style-type: none"> <li>1 Check the fuse.</li> </ol>
Is the fuse ok?	
Yes	<a href="#">GO to A7.</a>
No	<a href="#">GO to A8.</a>
<b>A6: CHECK HARNESS BETWEEN FPDB AND EGR FOR SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the EGR valve electrical connector PI 15.</li> </ol>

	<b>2</b> CHECK the resistance between PI 15 pin 2 (GU) and ground.
	Is the resistance less than 10,000 Ohms?
	<b>Yes</b> REPAIR the circuit between the EGR valve and FPDB. INSTALL a new fuse. CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> INSTALL a new fuse. CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.

#### A7: CHECK FOR BATTERY VOLTAGE AT FPDB

	<b>1</b> CHECK for voltage at FPDB electrical connector FH 32 pin 43 (GU).
	Is the voltage less than 10 volts?
	<b>Yes</b> REPAIR the circuit between FPDB electrical connector FH 32 pin 43 (GU) and FPDB relay 5.
	<b>No</b> REPAIR the circuit between FPDB electrical connector FH 32 pin 43 (GU) and EGR valve electrical connector PI 15 pin 2 (GU). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.

#### A8: CHECK FOR POWER SUPPLY TO EGR VALVE

	<b>1</b> Disconnect EGR valve electrical connector PI 15
	<b>2</b> MEASURE the voltage at PI 15 pin 5 (GU)
	Is the voltage less than 10 volts?
	<b>Yes</b> REPAIR the circuit between PI 15 pin 5 (GU) and splice PIS 15. CLEAR DTC. TEST the system for normal operation.
	<b>No</b> INSTALL a new EGR valve. CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.

### PINPOINT TEST B : DIAGNOSTIC TROUBLE CODE (DTC) P0405 INDICATES EXHAUST GAS RECIRCULATION (EGR) VALVE MALFUNCTION, SHORT TO BATTERY/12VOLTS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK FOR A SHORT TO BATTERY VOLTAGE</b>	
	<b>1</b> Disconnect the EGR valve electrical connectror PI 15.
	<b>2</b> TURN ignition switch to the ON position.
	<b>3</b> Measure the voltage at PI 15 pin 4 (YU).
	Is the voltage more than 1 volt?
	<b>Yes</b> <a href="#">GO to B2.</a>
	<b>No</b> <a href="#">GO to B3.</a>
<b>B2: CHECK FOR A SHORT TO BATTERY VOLTAGE IN ECM</b>	
	<b>1</b> Disconnect ECM electrical connector PI 1.
	<b>2</b> Measure the voltage at PI 15 pin 4 (YU).
	Is the voltage more than 1 volt?
	<b>Yes</b> REPAIR circuit between the PI 1 pin 57 (YU) and the EGR valve electrical connector PI 15 pin 4 (YU). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
<b>B3: CHECK FOR A SHORT TO BATTERY VOLTAGE</b>	
	<b>1</b> Measure the voltage at PI 15 pin 1 (YG).
	Is the voltage more than 1 volt?

<b>B6: CHECK FOR A SHORT TO BATTERY VOLTAGE IN ECM</b>	
	<b>1</b> Disconnect ECM electrical connector PI 1.
	<b>2</b> Measure the voltage at PI 15 pin 6 (YR).
	Is the voltage more than 1 volt?
	<b>Yes</b> REPAIR circuit between the PI 1 pin 59 (YR) and the EGR valve electrical connector PI 15 pin 6 (YR). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.

**B7: CHECK FOR A SHORT TO BATTERY VOLTAGE**

	<b>1</b> Measure the voltage at PI 15 pin 3 (YU).
	Is the voltage more than 1 Volt?
	<b>Yes</b> <a href="#">GO to B8.</a>
	<b>No</b> INSTALL a new EGR valve. CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.

**B8: CHECK FOR A SHORT TO BATTERY VOLTAGE IN ECM**

	<b>1</b> Disconnect ECM electrical connector PI 1.
	<b>2</b> Measure the voltage at PI 15 pin 3 (YU).
	Is the voltage more than 1 volt?
	<b>Yes</b> REPAIR circuit between the PI 1 pin 60 (YU) and the EGR valve electrical connector PI 15 pin 3 (YU). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.

**PINPOINT TEST C : DIAGNOSTIC TROUBLE CODE (DTC) P0406 INDICATES EXHAUST GAS RECIRCULATION (EGR) VALVE MALFUNCTION, SHORT TO GROUND/OPEN CIRCUIT.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**C1: CHECK FOR A SHORT TO GROUND**

	<b>1</b> Disconnect the EGR valve electrical connector PI 15.
	<b>2</b> Disconnect the engine control module (ECM) electrical connector PI 1.
	<b>3</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 4 (YU) and GROUND.
	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 4 (YU) and ECM electrical connector PI 1 pin 57 (YU). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> <a href="#">GO to C2.</a>

**C2: CHECK FOR AN OPEN CIRCUIT**

	<b>1</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 4 (YU) and ECM electrical connector PI 1 pin 57 (YU).
	Is the resistance more than 5.0 ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 4 (YU) and ECM electrical connector PI 1 pin 57 (YU). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> <a href="#">GO to C3.</a>

**C3: CHECK FOR A SHORT TO GROUND**

	<b>1</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 1 (YG) and GROUND.
	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 1 (YG) and ECM electrical connector PI 1 pin 58 (YG). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> <a href="#">GO to C4.</a>

**C4: CHECK FOR AN OPEN CIRCUIT**

	<b>1</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 1 (YG) and ECM electrical connector PI 1 pin 58 (YG).
	Is the resistance more than 5.0 Ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 1 (YG) and ECM electrical connector PI 1 pin 58 (YG). CLEAR DTC. To validate fix drive vehicle between 30 mph (48 kph) and 40 mph (64 kph). Allow vehicle to idle for 2 minutes.
	<b>No</b> <a href="#">GO to C5.</a>

**C5: CHECK FOR A SHORT TO GROUND**

	<b>1</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 6 (YR) and GROUND.
	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 6 (YR) and ECM electrical connector PI 1 pin 59 (YR). CLEAR DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to C6.</a>

**C6: CHECK FOR AN OPEN CIRCUIT**

	<b>1</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 6 (YR) and ECM electrical connector PI 1 pin 59 (YR).
	Is the resistance more than 5.0 Ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 6 (YR) and ECM electrical connector PI 1 pin 59 (YR). CLEAR DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to C7.</a>

**C7: CHECK FOR A SHORT TO GROUND**

	<b>1</b> Measure the resistance between the EGR valve electrical connector PI 15 pin 3 (YU) and GROUND.
	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 3 (YU) and ECM electrical connector PI 1 pin 60 (YU). CLEAR DTC. TEST the system for normal operation.
	<b>No</b>

[GO to C8.](#)

**C8: CHECK FOR AN OPEN CIRCUIT**

<b>1</b>	Measure the resistance between the EGR valve electrical connector PI 15 pin 3 (Yu) and ECM electrical connector PI 1 pin 60 (YU).
	Is the resistance more than 5.0 Ohms? <b>Yes</b> REPAIR the circuit between EGR valve electrical connector PI 15 pin 3 (YU) and ECM electrical connector PI 1 pin 60 (YU). CLEAR DTC. TEST the system for normal operation. <b>No</b> INSTALL a new EGR valve. CLEAR DTC. TEST the system for normal operation. If DTC is repeated INSTALL a new ECM. CLEAR DTC. TEST the system for normal operation.

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Emission Control VIN Range: N52048->N80180

Diagnosis and Testing

## Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, and the introduction of secondary air injection.

For additional information on the operation of the emission control systems.

REFER to: [Engine Emission Control - VIN Range: N52048->N99999](#) (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Description and Operation).

## Inspection and verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Engine breather hoses</li> <li>Cyclone separator</li> <li>Exhaust gas recirculation (EGR) pipes (check for cracks)</li> <li>EGR valve</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Wiring harness</li> <li>Loose or corroded electrical connectors</li> <li>Sensor(s)</li> <li>Stepper motor(s)</li> <li>Secondary air injection pump</li> <li>Secondary air injection control valve</li> <li>Engine control module (ECM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the diagnostic trouble code (DTC) Index.

### Symptom Chart

Symptom (general)	Symptom (specific)	Possible source	Action
Non-Start	Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>Engine breather system disconnected/restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.
Difficult to start	Difficult to start cold	<ul style="list-style-type: none"> <li>Exhaust gas recirculation (EGR) valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Check the pipework.
Engine stalls	Engine stalls soon after start	<ul style="list-style-type: none"> <li>Breather system disconnected/restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.
	Engine stops/stalls	<ul style="list-style-type: none"> <li>EGR valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
Rough running	Poor idle quality	<ul style="list-style-type: none"> <li>EGR valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
Poor driveability	Engine hesitates/poor acceleration	<ul style="list-style-type: none"> <li>EGR valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
	Poor throttle response	<ul style="list-style-type: none"> <li>Breather system disconnected/restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.
Excessive:	<ul style="list-style-type: none"> <li>Fuel consumption</li> <li>Black smoke</li> <li>Emissions</li> </ul>	<ul style="list-style-type: none"> <li>EGR valve stuck open</li> <li>EGR system not operating</li> <li>Crankcase ventilation system restricted</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). For EGR valve circuit tests. GO to Pinpoint Test <a href="#">A</a> . Check the engine breather system hoses, separator, etc. Rectify as necessary.
Noisy	Loud 'ticking' noise with engine running	<ul style="list-style-type: none"> <li>EGR pipes cracked</li> </ul>	Inspect the EGR pipes, paying particular attention to the ribbed sections. Replace as necessary.
Oil leakage	Engine oil leaks	<ul style="list-style-type: none"> <li>Crankcase ventilation system restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.

## DTC index

• NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first 5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic

system).

• NOTE: For a full list of DTCs.

REFER to: [Electronic Engine Controls - VIN Range: N52048->N80180](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).

or

REFER to: [Electronic Engine Controls - VIN Range: N52048->N80180](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).

DTC	Description	Possible causes	Action
P040100	EGR flow insufficient	<ul style="list-style-type: none"><li>● EGR valve incorrectly fitted or loose</li><li>● EGR valve stuck closed, blocked</li><li>● EGR pipe blocked</li><li>● EGR valve mechanical failure</li></ul>	Check the installation of the EGR valve. P244500	Secondary air injection pump stuck OFF	<ul style="list-style-type: none"><li>● Secondary air injection pump control circuit: short circuit to power</li></ul>	For Secondary air injection pump circuit tests, GO to Pinpoint Test <a href="#">B</a> .

## Pinpoint tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

### PINPOINT TEST A : CHECK THE EGR STEPPER SUPPLY AND CONTROL CIRCUITS

• NOTE: Check for DTCs indicating an air filter solenoid, purge valve or mass air flow meter fault before carrying out EGR stepper supply voltage pinpoint tests.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
A1: CHECK THE EGR STEPPER SUPPLY VOLTAGE CIRCUITS		
	1 Key off.	
	2 Disconnect the EGR stepper electrical connector, PI15.	
	3 Key on, ignition off. <ul style="list-style-type: none"><li>● Make sure the EMS relay is energized.</li></ul>	
	4 Measure the voltage between:	
	EGR stepper connector PI 15, harness side	
	Battery	
	Pin 02	Negative terminal
	Pin 05	

	Is either voltage less than 10 volts?
	<b>Yes</b> REPAIR the relevant EGR stepper supply voltage circuit. This circuit includes the front power distribution box (fuse 37) and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.
	<b>No</b> <a href="#">GO to A2.</a>

## A2: CHECK THE EGR STEPPER CONTROL CIRCUITS FOR SHORT CIRCUIT TO GROUND

1		Key off.	
2		Measure the resistance between:	
		EGR stepper connector PI15, harness side	Battery
Pin 04			Negative terminal
Pin 01			
Pin 06			
Pin 03			

	Are any of the resistances less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.
	<b>No</b> <a href="#">GO to A3.</a>

## A3: CHECK THE EGR STEPPER CONTROL CIRCUITS FOR SHORT CIRCUIT TO POWER

1 Measure the resistance between:	
EGR stepper connector PI15, harness side	Battery
Pin 04	Positive terminal
Pin 01	
Pin 06	
Pin 03	

	Are any of the resistances less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.
	<b>No</b> <a href="#">GO to A4.</a>

## A4: CHECK THE EGR STEPPER CONTROL CIRCUITS FOR HIGH RESISTANCE

1	Key off.	
2	Disconnect the ECM electrical connector, PI300.	
3	Measure the resistance between:	
	EGR stepper connector PI15, harness side	ECM connector PI300, harness side
	Pin 04	Pin 53
	Pin 01	Pin 52
	Pin 06	Pin 51
	Pin 03	Pin 50

	Are any of the resistances less than 10,000 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> CHECK for DTCs. Refer to the DTC index.

## PINPOINT TEST B : CHECK THE SECONDARY AIR INJECTION PUMP CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### B1: CHECK THE SECONDARY AIR INJECTION PUMP RELAY SUPPLY VOLTAGES

1	Key off.	
2	Remove the secondary air injection pump relay.	
3	Measure the voltage between:	
	Secondary air injection relay base	Battery
	Pin 01	Negative terminal
	Pin 05	

	Is either voltage less than 10 volts?
	<b>Yes</b> REPAIR the circuit between the secondary air injection relay base and battery. This circuit includes fuse 31 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to B2.</a>

### B2: CHECK THE SECONDARY AIR INJECTION RELAY TO AIR PUMP SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Disconnect the secondary air injection pump electrical connector, FH310.	
2	Measure the resistance between:	
	Secondary air injection relay base	Battery
Pin 03		Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to B3.</a>

### B3: CHECK THE SECONDARY AIR INJECTION RELAY TO AIR PUMP SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER

1 Measure the resistance between:	
Secondary air injection relay base	Battery
Pin 03	Positive terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B4.</a>

#### B4: CHECK THE SECONDARY AIR INJECTION PUMP SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:
Pin 02	Secondary air injection relay base
	Battery
	Negative terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B5.</a>

#### B5: CHECK THE SECONDARY AIR INJECTION PUMP SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:
Pin 02	Secondary air injection relay base
	Battery
	Positive terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B6.</a>

#### B6: CHECK THE SECONDARY AIR INJECTION RELAY TO AIR PUMP SUPPLY CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:
Pin 03	Secondary air injection relay base
Pin 02	Secondary air injection pump connector FH310, harness side

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B7.</a>

#### B7: CHECK THE SECONDARY AIR INJECTION PUMP GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:
Pin 01	Secondary air injection pump connector FH310, harness side
	Battery
	Negative terminal

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B8.</a>

#### B8: CHECK THE SECONDARY AIR INJECTION PUMP SIGNAL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, FH300.
<b>2</b>	Measure the resistance between:
Pin 02	Secondary air injection relay base
Pin 52	ECM connector FH300, harness side

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new secondary air injection pump relay. CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST C : (N/A FEDERAL SPECIFICATION ONLY) CHECK THE SECONDARY AIR INJECTION MAP SENSOR CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	
<b>1</b>	Key off.
<b>2</b>	Disconnect the secondary air injection MAP sensor electrical connector, FH312.
<b>3</b>	Measure the resistance between:
Pin 01	Secondary air injection MAP sensor connector FH312, harness side
	Battery
	Negative terminal
Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to C2.</a>
<b>C2: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>	
<b>1</b>	Measure the resistance between:
Pin 01	Secondary air injection MAP sensor connector FH312, harness side
	Battery
	Positive terminal
Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to C3.</a>
<b>C3: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	Battery	Pin 02	Negative terminal
Secondary air injection MAP sensor connector FH312, harness side	Battery

Secondary air injection MAP sensor connector FH312, harness side	Battery				
Pin 02	Positive terminal				

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to C5.](#)

#### C5: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SUPPLY CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 19</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side	Pin 01	Pin 19
Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side				
Pin 01	Pin 19				

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to C6.](#)

#### C6: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SIGNAL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 13</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side	Pin 02	Pin 13
Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side				
Pin 02	Pin 13				

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to C7.](#)

#### C7: CHECK THE SECONDARY AIR INJECTION MAP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 07</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side	Pin 03	Pin 07
Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side				
Pin 03	Pin 07				

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new secondary air injection MAP sensor. CLEAR the DTC and test the system for normal operation.

### PINPOINT TEST D : CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### D1: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE SUPPLY VOLTAGE

<b>1</b>	Key off.				
<b>2</b>	Disconnect the secondary air injection control valve electrical connector, PI302.				
<b>3</b>	Key on, engine off.				
<b>4</b>	Measure the voltage between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	Battery	Pin 01	Negative terminal
Secondary air injection control valve connector PI302, harness side	Battery				
Pin 01	Negative terminal				

Is the voltage less than 10 volts?  
**Yes**  
 REPAIR the supply circuit between the secondary air injection control valve and battery. This circuit includes fuse 2 of the front power distribution. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to D2.](#)

#### D2: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	Battery	Pin 02	Negative terminal
Secondary air injection control valve connector PI302, harness side	Battery				
Pin 02	Negative terminal				

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to D3.](#)

#### D3: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	Battery	Pin 02	Positive terminal
Secondary air injection control valve connector PI302, harness side	Battery				
Pin 02	Positive terminal				

	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to D4.</a>

<b>D4: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CONTROL CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 55</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	ECM connector FH300, harness side	Pin 02	Pin 55
Secondary air injection control valve connector PI302, harness side	ECM connector FH300, harness side				
Pin 02	Pin 55				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
<b>No</b>	INSTALL a new secondary air injection control valve. REFER to: <a href="#">Secondary Air Injection (AIR) Control Valve - 3.0L</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation) / <a href="#">Secondary Air Injection (AIR) Control Valve - 4.2L, Vehicles Without: Supercharger</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation) / <a href="#">Secondary Air Injection (AIR) Control Valve - 4.2L, Vehicles With: Supercharger</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.				

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Emission Control VIN Range: N80181->R99999

## Diagnosis and Testing

### Inspection and verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Engine breather hoses</li> <li>● Cyclone separator</li> <li>● Exhaust gas recirculation (EGR) pipes (check for cracks)</li> <li>● EGR valve</li> </ul>	<ul style="list-style-type: none"> <li>● Fuses</li> <li>● Wiring harness</li> <li>● Loose or corroded electrical connectors</li> <li>● Sensor(s)</li> <li>● Stepper motor(s)</li> <li>● Secondary air injection pump</li> <li>● Secondary air injection control valve</li> <li>● Engine control module (ECM)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the diagnostic trouble code (DTC) Index.

#### Symptom Chart

Symptom (general)	Symptom (specific)	Possible source	Action
Non-Start	Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>● Engine breather system disconnected/restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.
Difficult to start	Difficult to start cold	<ul style="list-style-type: none"> <li>● Exhaust gas recirculation (EGR) valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Check the pipework.
Engine stalls	Engine stalls soon after start	<ul style="list-style-type: none"> <li>● Breather system disconnected/restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.
	Engine stops/stalls	<ul style="list-style-type: none"> <li>● EGR valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
Rough running	Poor idle quality	<ul style="list-style-type: none"> <li>● EGR valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
Poor driveability	Engine hesitates/poor acceleration	<ul style="list-style-type: none"> <li>● EGR valve stuck open</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
	Poor throttle response	<ul style="list-style-type: none"> <li>● Breather system disconnected/restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.
Excessive:	<ul style="list-style-type: none"> <li>● Fuel consumption</li> <li>● Black smoke</li> <li>● Emissions</li> </ul>	<ul style="list-style-type: none"> <li>● EGR valve stuck open</li> <li>● EGR system not operating</li> <li>● Crankcase ventilation system restricted</li> </ul>	Check the EGR valve. REFER to: <a href="#">Exhaust Gas Recirculation (EGR) Valve</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). For EGR valve circuit tests. GO to Pinpoint Test <a href="#">A</a> . Check the engine breather system hoses, separator, etc. Rectify as necessary.
Noisy	Loud 'ticking' noise with engine running	<ul style="list-style-type: none"> <li>● EGR pipes cracked</li> </ul>	Inspect the EGR pipes, paying particular attention to the ribbed sections. Replace as necessary.
Oil leakage	Engine oil leaks	<ul style="list-style-type: none"> <li>● Crankcase ventilation system restricted</li> </ul>	Check the engine breather system hoses, separator, etc. Rectify as necessary.

### DTC index

• NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first 5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic system).

• NOTE: For a full list of DTCs.

Pinpoint tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : CHECK THE EGR STEPPER SUPPLY AND CONTROL CIRCUITS

• NOTE: Check for DTCs indicating an air filter solenoid, purge valve or mass air flow meter fault before carrying out EGR stepper supply voltage pinpoint tests.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
A1: CHECK THE EGR STEPPER SUPPLY VOLTAGE CIRCUITS		
	1 Key off.	
	2 Disconnect the EGR stepper electrical connector, PI15.	
	3 Key on, ignition off. <ul style="list-style-type: none"><li>Make sure the EMS relay is energized.</li></ul>	
	4 Measure the voltage between:	
	EGR stepper connector PI15, harness side	
	Battery	
	Pin 02	Negative terminal
Pin 05		

	Is either voltage less than 10 volts?
	<b>Yes</b> REPAIR the relevant EGR stepper supply voltage circuit. This circuit includes the front power distribution box (fuse 37) and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.
	<b>No</b> <a href="#">GO to A2.</a>

## A2: CHECK THE EGR STEPPER CONTROL CIRCUITS FOR SHORT CIRCUIT TO GROUND

1	Key off.	
2	Measure the resistance between:	
	EGR stepper connector PI15, harness side	Battery
	Pin 04	Negative terminal
	Pin 01	
	Pin 06	
	Pin 03	

	Are any of the resistances less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.
	<b>No</b> <a href="#">GO to A3.</a>

## A3: CHECK THE EGR STEPPER CONTROL CIRCUITS FOR SHORT CIRCUIT TO POWER

1 Measure the resistance between:	
EGR stepper connector PI15, harness side	Battery
Pin 04	Positive terminal
Pin 01	
Pin 06	
Pin 03	

	Are any of the resistances less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs and test the system for normal operation.
	<b>No</b> <a href="#">GO to A4.</a>

## A4: CHECK THE EGR STEPPER CONTROL CIRCUITS FOR HIGH RESISTANCE

1	Key off.	
2	Disconnect the ECM electrical connector, PI300.	
3	Measure the resistance between:	
	EGR stepper connector PI15, harness side	ECM connector PI300, harness side
	Pin 04	Pin 53
	Pin 01	Pin 52
	Pin 06	Pin 51
	Pin 03	Pin 50

	Are any of the resistances less than 10,000 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> CHECK for DTCs. Refer to the DTC index.

## PINPOINT TEST B : CHECK THE SECONDARY AIR INJECTION PUMP CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### B1: CHECK THE SECONDARY AIR INJECTION PUMP RELAY SUPPLY VOLTAGES

<b>1</b>	Key off.
<b>2</b>	Remove the secondary air injection pump relay.
<b>3</b>	Measure the voltage between:
<b>Secondary air injection relay base</b>	<b>Battery</b>
Pin 01	Negative terminal
Pin 05	

	Is either voltage less than 10 volts?
	<b>Yes</b> REPAIR the circuit between the secondary air injection relay base and battery. This circuit includes fuse 31 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to B2.</a>

### B2: CHECK THE SECONDARY AIR INJECTION RELAY TO AIR PUMP SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Disconnect the secondary air injection pump electrical connector, FH310.	
2	Measure the resistance between:	
	Secondary air injection relay base	Battery
Pin 03		Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to B3.</a>

### B3: CHECK THE SECONDARY AIR INJECTION RELAY TO AIR PUMP SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER

1 Measure the resistance between:	
Secondary air injection relay base	Battery
Pin 03	Positive terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B4.</a>

#### B4: CHECK THE SECONDARY AIR INJECTION PUMP SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection relay base</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Secondary air injection relay base	Battery	Pin 02	Negative terminal
Secondary air injection relay base	Battery				
Pin 02	Negative terminal				

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B5.</a>

#### B5: CHECK THE SECONDARY AIR INJECTION PUMP SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection relay base</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	Secondary air injection relay base	Battery	Pin 02	Positive terminal
Secondary air injection relay base	Battery				
Pin 02	Positive terminal				

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B6.</a>

#### B6: CHECK THE SECONDARY AIR INJECTION RELAY TO AIR PUMP SUPPLY CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection relay base</th><th>Secondary air injection pump connector FH310, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 02</td></tr> </table>	Secondary air injection relay base	Secondary air injection pump connector FH310, harness side	Pin 03	Pin 02
Secondary air injection relay base	Secondary air injection pump connector FH310, harness side				
Pin 03	Pin 02				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B7.</a>

#### B7: CHECK THE SECONDARY AIR INJECTION PUMP GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection pump connector FH310, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Secondary air injection pump connector FH310, harness side	Battery	Pin 01	Negative terminal
Secondary air injection pump connector FH310, harness side	Battery				
Pin 01	Negative terminal				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to B8.</a>

#### B8: CHECK THE SECONDARY AIR INJECTION PUMP SIGNAL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection relay base</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 52</td></tr> </table>	Secondary air injection relay base	ECM connector FH300, harness side	Pin 02	Pin 52
Secondary air injection relay base	ECM connector FH300, harness side				
Pin 02	Pin 52				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new secondary air injection pump relay. CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST C : (N/A FEDERAL SPECIFICATION ONLY) CHECK THE SECONDARY AIR INJECTION MAP SENSOR CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>C1: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
<b>1</b>	Key off.				
<b>2</b>	Disconnect the secondary air injection MAP sensor electrical connector, FH312.				
<b>3</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	Battery	Pin 01	Negative terminal
Secondary air injection MAP sensor connector FH312, harness side	Battery				
Pin 01	Negative terminal				
Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to C2.</a>				
<b>C2: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Positive terminal</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	Battery	Pin 01	Positive terminal
Secondary air injection MAP sensor connector FH312, harness side	Battery				
Pin 01	Positive terminal				
Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to C3.</a>				
<b>C3: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	Battery	Pin 02	Negative terminal
Secondary air injection MAP sensor connector FH312, harness side	Battery				
Pin 02	Negative terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to C4.</a>

#### C4: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	Battery	Pin 02	Positive terminal
Secondary air injection MAP sensor connector FH312, harness side	Battery				
Pin 02	Positive terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to C5.</a>

#### C5: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SUPPLY CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 19</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side	Pin 01	Pin 19
Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side				
Pin 01	Pin 19				

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to C6.</a>

#### C6: CHECK THE SECONDARY AIR INJECTION MAP SENSOR SIGNAL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 13</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side	Pin 02	Pin 13
Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side				
Pin 02	Pin 13				

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to C7.</a>

#### C7: CHECK THE SECONDARY AIR INJECTION MAP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection MAP sensor connector FH312, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 07</td></tr> </table>	Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side	Pin 03	Pin 07
Secondary air injection MAP sensor connector FH312, harness side	ECM connector FH300, harness side				
Pin 03	Pin 07				

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> INSTALL a new secondary air injection MAP sensor. CLEAR the DTC and test the system for normal operation.

### PINPOINT TEST D : CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### D1: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE SUPPLY VOLTAGE

<b>1</b>	Key off.				
<b>2</b>	Disconnect the secondary air injection control valve electrical connector, PI302.				
<b>3</b>	Key on, engine off.				
<b>4</b>	Measure the voltage between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	Battery	Pin 01	Negative terminal
Secondary air injection control valve connector PI302, harness side	Battery				
Pin 01	Negative terminal				

Is the voltage less than 10 volts?
<b>Yes</b> REPAIR the supply circuit between the secondary air injection control valve and battery. This circuit includes fuse 2 of the front power distribution. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to D2.</a>

#### D2: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	Battery	Pin 02	Negative terminal
Secondary air injection control valve connector PI302, harness side	Battery				
Pin 02	Negative terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to D3.</a>

#### D3: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	Battery	Pin 02	Positive terminal
Secondary air injection control valve connector PI302, harness side	Battery				
Pin 02	Positive terminal				

	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to D4.</a>

D4: CHECK THE SECONDARY AIR INJECTION CONTROL VALVE CONTROL CIRCUIT FOR HIGH RESISTANCE					
<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Secondary air injection control valve connector PI302, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 55</td></tr> </table>	Secondary air injection control valve connector PI302, harness side	ECM connector FH300, harness side	Pin 02	Pin 55
Secondary air injection control valve connector PI302, harness side	ECM connector FH300, harness side				
Pin 02	Pin 55				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
<b>No</b>	<p>INSTALL a new secondary air injection control valve.</p> <p>REFER to: <a href="#">Secondary Air Injection (AIR) Control Valve - 3.0L</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation) / <a href="#">Secondary Air Injection (AIR) Control Valve - 4.2L, Vehicles Without: Supercharger</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation) / <a href="#">Secondary Air Injection (AIR) Control Valve - 4.2L, Vehicles With: Supercharger</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).</p> <p>CLEAR the DTC and test the system for normal operation.</p>

## Removal and Installation

### Removal

Left-hand drive vehicles with Supercharger

1. Remove the cabin air filter.  
For additional information, refer to: Cabin Air Filter (412-01 Air Distribution and Filtering, Removal and Installation).
2. Remove the cabin air filter housing retaining nut.

3. Remove the cabin air filter housing.

4. Remove the engine compartment panel.

Vehicles with supercharger

5. Remove the throttle body. For additional information, refer to: (303-04 Fuel Charging and Controls - 3.5L/4.2L)

Throttle Body - Vehicles With: Supercharger, VIN Range: G00442->G45703 (Removal and Installation),  
Throttle Body - Vehicles With: Supercharger, VIN Range: G45704->G99999 (Removal and Installation).

6. Disconnect the exhaust gas recirculation (EGR) valve electrical connector.

7. **NOTE:** Cap the exposed ports.

Disconnect the coolant hoses.

8. Remove the exhaust manifold to EGR valve tube retaining nuts.

9. Remove the EGR valve and the exhaust manifold to EGR valve tube.

- Remove the retaining bolts.
- Remove and discard the exhaust manifold to EGR valve tube gasket.
- Remove and discard the EGR valve to air intake elbow gasket.

10. Remove the EGR valve.

- Remove and discard the EGR valve to exhaust manifold to EGR valve tube gasket.

**11. NOTE: Cap the exposed ports.**

Disconnect the EGR valve coolant hoses.

1. Disconnect the EGR valve electrical connector.
2. Disconnect the EGR valve coolant hoses.

**12. Remove the retaining bolts.**

**13. Remove the EGR valve.**

- Remove and discard the EGR valve to exhaust manifold to EGR valve tube gasket.
- Remove and discard the EGR valve to intake manifold gasket.

## Installation

Vehicles with supercharger

**1. Install the EGR valve.**

- Install a new EGR valve to exhaust manifold to EGR valve tube gasket.
- Tighten to 21 Nm.

E30261

2. Install the EGR valve and the exhaust manifold to EGR valve tube.

- Install a new exhaust manifold to EGR valve tube gasket.
- Install a new EGR valve to air intake elbow gasket.
- Tighten to 10 Nm.

3. Tighten to 21 Nm.

4. NOTE: Un-cap the exposed ports.

Connect the coolant hoses.

5. Connect the EGR valve electrical connector.

6. Install the throttle body. For additional information, refer to: (303-04 Fuel Charging and Controls - 3.5L/4.2L)

Throttle Body - Vehicles With: Supercharger, VIN Range: G00442->G45703 (Removal and Installation),  
Throttle Body - Vehicles With: Supercharger, VIN Range: G45704->G99999 (Removal and Installation).

Vehicles without supercharger

7. Install the EGR valve.

- Install a new EGR valve to exhaust manifold to EGR valve tube gasket.
- Install a new EGR valve to intake manifold gasket.
- Tighten to 10 Nm.

8. Tighten to 21 Nm.

9. NOTE: Un-cap the exposed ports.

Connect the EGR valve electrical connector.

1. Connect the EGR valve coolant hoses.
2. Connect the EGR valve electrical connector.

Left-hand drive vehicles with Supercharger

10. Install the engine compartment panel.

**11.** Install the cabin air filter housing.

**12.** Install the cabin air filter housing retaining nut.

**13.** Install the cabin air filter.

For additional information, refer to: Cabin Air Filter (412-01 Air Distribution and Filtering, Removal and Installation).

All vehicles

**14.** Check and top up the coolant expansion tank.

**15. NOTE:** For NAS vehicles only.

If required, carry out a long drive cycle.

For additional information, refer to: [Powertrain Control Module \(PCM\) Long Drive Cycle Self-Test](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures).

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Exhaust Manifold to Exhaust Gas Recirculation (EGR) Valve Tube

## Removal and Installation

### Removal

Vehicles with supercharger

1. Remove the exhaust gas recirculation (EGR) valve.  
For additional information, refer to: [Exhaust Manifold to Exhaust Gas Recirculation \(EGR\) Valve Tube](#) (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

Vehicles without supercharger

2. Remove the intake manifold. For additional information, refer to: (303-01B)

Intake Manifold - VIN Range: G00442->G45170 (In-vehicle Repair),  
Intake Manifold - VIN Range: G45171->G99999 (In-vehicle Repair).

3. Remove the exhaust manifold to exhaust gas recirculation (EGR) valve tube.

- Remove and discard the gasket.

### Installation

Vehicles with supercharger

1. Install the EGR valve.  
For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve](#) (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

Vehicles without supercharger

2. Install the exhaust manifold to exhaust gas recirculation (EGR) valve tube.

- Install a new gasket.
- Tighten to 21 Nm.

3. Install the intake manifold. For additional information, refer to: (303-01B)

Intake Manifold - VIN Range: G00442->G45170 (In-vehicle Repair),  
Intake Manifold - VIN Range: G45171->G99999 (In-vehicle Repair).

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Secondary Air Injection (AIR) Control Valve3.0L

Removal and Installation

## Removal

1.  **WARNING:** Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.

Raise and support the vehicle.

2. Drain the cooling system. For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures).
3. Remove the air cleaner. For additional information, refer to: [Air Cleaner](#) (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
4. Release the coolant pipes.
  - Release the 2 clips.

E119624

5. Disconnect the secondary air injection (AIR) control valve to exhaust manifold right-hand tube.

E120448

6. Disconnect the AIR switching valve electrical connector.

E63556

7. Disconnect the AIR switching valve vacuum hoses.

E63557

8. Detach the AIR wiring harness.

E63558

9. Disconnect the AIR control valve vacuum hose.

E63559

10. NOTE: Note the position of the timing marks on the AIR control valve and the AIR supply hose.

Disconnect the AIR supply hose.

E63560

11. Remove the AIR control valve and bracket assembly.

## Installation

1. To install, reverse the removal procedure.

- Tighten to 8 Nm.

2. Tighten to 35 Nm.

3. NOTE: For NAS vehicles only.

If required, carry out a short drive cycle.

For additional information, refer to: [Powertrain Control Module \(PCM\) Short Drive Cycle Self-Test](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures).

# Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Secondary Air Injection (AIR) Control Valve 4.2L, Vehicles Without: Supercharger

Removal and Installation

## Removal

1. Disconnect the battery ground cable.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).
2. Remove the air cleaner.  
For additional information, refer to: [Air Cleaner](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
3. Disconnect the secondary air injection (AIR) control valve vacuum hose.

4. Disconnect the AIR control valve to exhaust manifold tube.

5. Reposition the AIR control valve downwards.
  - Remove the AIR control valve retaining bolts.

6. Remove the air deflector.  
For additional information, refer to: [Air Deflector](#) (501-02 Front End Body Panels, Removal and Installation).

7. Remove the AIR control valve.

- Disconnect the AIR control valve supply hose.

## Installation

1. To install, reverse the removal procedure.

1. Tighten to 25 Nm.

2. Tighten to 35 Nm.

3. NOTE: For NAS vehicles only.

If required, carry out a short drive cycle.

For additional information, refer to: [Powertrain Control Module \(PCM\) Short Drive Cycle Self-Test](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures).

Removal and Installation

## Removal

1. Disconnect the battery ground cable.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).
2. Remove the radiator grille opening panel.  
For additional information, refer to: [Radiator Grille Opening Panel](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the air cleaner outlet pipe.  
For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
4. Remove the air cleaner intake duct.

5. Disconnect the secondary air injection (AIR) control valve to exhaust manifold tube.

6. Disconnect the AIR control valve vacuum hose.

7. Release the hose from the cooling fan motor and shroud.

8. Disconnect the AIR control valve air supply hose.

1. Release the hose from the cooling fan motor and shroud.
2. Disconnect the AIR control valve air supply hose.

9. Remove the AIR control valve.

## Installation

1. Install the AIR control valve.

- Tighten to 25 Nm.

2. Connect the AIR control valve air supply hose.

1. Connect the AIR control valve air supply hose.
2. Secure the hose to the cooling fan motor and shroud.

3. Secure the hose to the cooling fan motor and shroud.

4. Connect the AIR control valve vacuum hose.

5. Connect the AIR control valve to exhaust manifold tube.

- Tighten to 35 Nm.

6. Install the air cleaner intake duct.

7. Install the air cleaner outlet pipe.  
For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

# Engine Emission Control - 2.7L V6 - TdV6 - Engine Emission Control

## Description and Operation

### Crankcase Ventilation

The crankcase ventilation system on the 2.7L Diesel ensures that all gases emitted from the crankcase during engine running are separated from any oil particles.

E66813

Item	Part Number	Description
1	-	Left-hand breather tube
2	-	Crankcase vent oil seperator
3	-	Right-hand breather tube
4	-	Crankcase oil return tube
5	-	Crankcase oil return valve
6	-	Oil return tube

Crankcase ventilation is by a cyclone seperator. The oil seperator is constructed from a plastic composite material. The oil seperator is located between the 'V' at the back of the engine block by means of three seals. The oil seperator contains a diaphragm and spring which opens under intake vacuum.

The ventilation systems first chamber is a horizontal void cavity fed by eight points. Once primary separation is complete, the partially cleaned vapor is sucked through a cyclone where the process further reduces the oil content. Prior to the vapor entering the air supply at the compressor, a diaphragm pressure balance valve operates to minimize the crankcase pressure variations caused by engine air demand and service condition.

Due to the shape and design of the cyclone unit, the oil and vapor are seperated more effectively. Vapor is directed into the inlet system and the heavier oil drains back into the engine.

### Exhaust Emission Control

The exhaust of a diesel engine contains the following pollutants:

- Carbon Monoxide (CO)
- Hydrocarbons (HC)

- Particulates
- Oxides of Nitrogen (NOx)

These pollutants are primarily produced as a result of incomplete combustion of the fuel.

The particulates in the exhaust gases consist of pure carbon and various compounds such as metal oxide and sulphur.

### Exhaust Gas Re-Circulation

E52628

Item	Part Number	Description
1	-	Exhaust gas recirculation (EGR) valve
2	-	EGR cooler
3	-	Gasket

The exhaust gas re-circulation (EGR) system is fitted to the engine in order to reduce the amount of nitrogen oxide (NOx). This is done by reducing the temperature of the combustion process by introducing some waste exhaust gases into the inlet manifold. The effect of this is that there is a depletion of oxygen which reduces the temperature of the combustion process and in turn reduces the amount of NOx produced.

The engine control module (ECM) will determine the amount of EGR operation depending on the engine rpm, intake air temperature, coolant temperature and fuel flow rate. The amount of exhaust gas being recirculated is measured by a combination of position sensing of the valves and a mass air flow (MAF) sensor.

The EGR valves are operated through their full range at each engine start-up. This is to clear any carbon deposits that may have built up whilst the engine was running.

The EGR system is continually monitored for faults. Depending on how the system fails, the ECM will dictate whether the malfunction indication light (MIL) is on or off. In the event of a failure of the EGR system, the ECM will use substitute values and the EGR function will become inoperative.

The EGR cooler is connected to the vehicle cooling system via hoses and is there to cool the exhaust gases being recirculated.

The EGR valve and cooler are supplied as separate components. The EGR valve itself should not be disassembled.

# Engine Emission Control - 2.7L V6 - TdV6 - Engine Emission Control

## Diagnosis and Testing

### Principle of operation

#### Exhaust gas recirculation (EGR)

The EGR system recycles exhaust gases back through the combustion process to reduce NOx emissions.

By introducing this gas into the air intake, oxygen content and combustion temperatures are reduced, which reduces the NOx emissions.

High EGR flow is necessary during cruising and mid-range acceleration, when combustion temperatures are typically very high, while lower EGR flow is needed during low speed and light load conditions.

No EGR flow should occur during conditions when it could adversely affect engine operating efficiency or vehicle driveability, such as engine warm-up, idle, etc.

The EGR function of the 2.7 L engine is managed by the engine control module (ECM), which controls the operation of stepper motors, allowing precise control of the EGR valve actuators.

The ECM determines the optimum EGR flow using inputs from sensors in the engine management system, including the mass air flow meters, coolant temperature sensor, and intake air temperature sensor.

#### Positive crankcase ventilation

The crankcase ventilation system uses the depression created in the air intake to draw vapors from the crankcase through the engine where they are burnt with the fuel/air charge.

By doing this, any build-up of pressure inside the crankcase is avoided, reducing blow-by and potential oil leakage problems, while still reducing emissions into the atmosphere.

The 2.7 L engine crankcase ventilation is through a cyclone separator mounted in the engine 'V'.

The separator consists of a diaphragm and spring inside the casing which respond to crankcase pressure variations and separate the oil from the vapor, allowing the oil back into the engine while the vapor is directed to the intake system.

### Inspection and verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual inspection chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Engine breather hoses</li> <li>Cyclone separator</li> <li>EGR Pipes (check for cracks)</li> </ul>	<ul style="list-style-type: none"> <li>Electrical connections to the stepper motor(s)</li> <li>Stepper motor(s)</li> <li>Harnesses</li> </ul>

### Symptom chart

Symptom	Possible source	Action
Difficult to start	EGR valve stuck open	Inspect the system (see visual inspection). Check for DTCs.
Poor idle quality	EGR valve stuck open	Inspect the system (see visual inspection). Check for DTCs.
Lack of power when accelerating	EGR valve stuck open	Inspect the system (see visual inspection). Check for DTCs.
Engine stops/stalls	EGR valve stuck open	Inspect the system (see visual inspection). Check for DTCs.
Excessive fuel consumption	EGR valve stuck open	Inspect the system (see visual inspection). Check for DTCs.
Excessive black smoke	EGR valve stuck open	Inspect the system (see visual inspection). Check for DTCs.
Excessive emissions	EGR system not operating	Inspect the system (see visual inspection). Check for DTCs.
Loud 'ticking' noise with engine running	EGR pipes cracked	Closely inspect the pipes for cracks (particularly at the corrugated sections).
Excessive blow-by	Crankcase ventilation system restricted	Inspect the hoses. Check each hose for restriction/blockage by gently blowing through. Check for blockage of the separator.
Engine oil leaks	Crankcase ventilation system restricted	Inspect the hoses. Check each hose for restriction/blockage by gently blowing through. Check for blockage of the separator.

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00. Failure to follow this instruction may result in damage to the vehicle.

• NOTE: When performing voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• NOTE: If diagnostic trouble codes (DTCs) are recorded and the symptom is not present when performing the pinpoint tests, an intermittent concern may be the cause. Always check for loose connections and corroded terminals.

• NOTE: For a full list of DTCs,

REFER to: [Electronic Engine Controls](#) (303-14C Electronic Engine Controls - 2.7L V6 - TdV6, Diagnosis and Testing).

#### Diagnostic Trouble Code (DTC) index

DTC	Condition	Possible source	Action
P0401	Insufficient EGR flow detected	<ul style="list-style-type: none"> <li>EGR valve(s) stuck closed</li> <li>Stepper motor(s) fault</li> <li>Harness fault</li> <li>Restriction/blockage in EGR pipework</li> </ul>	Check pipework for restriction.

DTC	Condition	Possible source	Action

## Pinpoint Tests

PINPOINT TEST A : EGR THROTTLE ACTUATOR AND CIRCUIT (1)	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE ETA SENSOR RETURN LINE</b>	
<b>1</b>	Key off.
<b>2</b>	ETA connector disconnected.
<b>3</b>	Key on, engine off.
<b>4</b>	Measure the resistance between:
	EGR throttle sensor - ground - Pin 01 Negative post
	Is the resistance less than 10 ohms?
Yes	<a href="#">GO to A2.</a>
No	<a href="#">GO to A14.</a>
<b>A2: CHECK THE ETA VOLTAGE</b>	
<b>1</b>	Measure the voltage between:
	EGR throttle sensor - supply - Pin 06 Negative post
	Is the voltage between 4.8 volts - 5.2 volts?
Yes	<a href="#">GO to A3.</a>
No	<a href="#">GO to A11.</a>
<b>A3: CHECK THE ETA SIGNAL LINE FOR SHORT CIRCUIT TO GROUND</b>	
<b>1</b>	Measure the resistance between:
	EGR throttle sensor - signal - Pin 02 Negative post
	Is the resistance greater than 100 Kohms?
Yes	<a href="#">GO to A4.</a>
No	<a href="#">GO to A7.</a>
<b>A4: CHECK THE ETA SIGNAL LINE FOR SHORT CIRCUIT TO POWER</b>	
<b>1</b>	Measure the resistance between:
	EGR throttle sensor - signal - Pin 02 Positive post
	Is the resistance greater than 100 Kohms?
Yes	<a href="#">GO to A5.</a>
No	<a href="#">GO to A9.</a>
<b>A5: CHECK THE ETA SIGNAL LINE FOR SHORT CIRCUIT TO SENSOR POWER</b>	
<b>1</b>	Measure the resistance between:
	EGR throttle sensor - signal - Pin 02 EGR throttle sensor - supply - Pin 06
	Is the resistance greater than 100 Kohms?
Yes	<a href="#">GO to A6.</a>
No	<a href="#">GO to A10.</a>
<b>A6: CHECK THE ETA SIGNAL LINE FOR OPEN CIRCUIT</b>	
<b>1</b>	Key off.
<b>2</b>	ECM connector disconnected.
<b>3</b>	Measure the resistance between:
	EGR throttle sensor - signal - Pin 02 EGR throttle sensor - signal - Pin B-E1
	Is the resistance less than 10 ohms?
Yes	An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s): - ETA connector- ECM connector- ETA-ECM
No	REPAIR the open circuit. For additional information, refer to the wiring diagrams.
<b>A7: CHECK THE ETA CIRCUIT (S) FOR SIGNAL AND RETURN LINES SHORTED TOGETHER</b>	
<b>1</b>	Key off.
<b>2</b>	ECM connector disconnected.
<b>3</b>	Key on, engine off.

<b>4</b>	Measure the resistance between:	EGR throttle sensor - signal - Pin 02	EGR throttle sensor - ground - Pin 01
----------	---------------------------------	---------------------------------------	---------------------------------------

Is the resistance greater than 100 Kohms?
<b>Yes</b> <a href="#">GO to A8.</a>
<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**A8: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE ETA HARNESS OR ECU**

<b>1</b>	Measure the resistance between:	EGR throttle sensor - signal - Pin 02	Negative post
----------	---------------------------------	---------------------------------------	---------------

Is the resistance greater than 100 Kohms?
<b>Yes</b> Suspect:- ECM
<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**A9: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE ETA HARNESS OR ECU**

1	Key off.
2	ECM connector disconnected.
3	Key on, engine off.
4	Measure the resistance between:
EGR throttle sensor - signal - Pin 02	
Positive post	

Is the resistance greater than 100 Kohms?
<b>Yes</b> Suspect:- ECM
<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**A10: CHECK WHETHER THE SHORT CIRCUIT IS IN THE ETA HARNESS OR CONTROL UNIT**

1	Key off.		
2	ECM connector disconnected.		
3	Key on, engine off.		
4	Measure the resistance between:		
	EGR throttle sensor - signal - Pin 02	EGR throttle sensor - supply - Pin 06	

Is the resistance greater than 100 Kohms?
<b>Yes</b> Suspect:- ECM
<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.

**A11: CHECK THE 5 VOLT SUPPLY LINE FOR SHORT CIRCUIT TO GROUND**

<b>1</b>	Measure the resistance between:	EGR throttle sensor - supply - Pin 06	Negative post
----------	---------------------------------	---------------------------------------	---------------

Is the resistance greater than 100 Kohms?
<b>Yes</b> <a href="#">GO to A12.</a>
<b>No</b> <a href="#">GO to A17.</a>

**A12: CHECK THE 5 VOLT SUPPLY LINE FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:	EGR throttle sensor - supply - Pin 06	Positive post
----------	---------------------------------	---------------------------------------	---------------

Is the resistance greater than 100 Kohms?
<b>Yes</b> <a href="#">GO to A13.</a>
<b>No</b> <a href="#">GO to A19.</a>

**A13: CHECK THE ETA 5 VOLT SUPPLY LINE FOR OPEN CIRCUIT**

1	Key off.		
2	ECM connector disconnected.		
3	Measure the resistance between:		
	EGR throttle sensor - supply - Pin 06	EGR throttle sensor - supply - Pin B-F1	

Is the resistance less than 10 ohms?
<b>Yes</b> Suspect :- ECM connector- ECM
<b>No</b> REPAIR the open circuit. For additional information, refer to the wiring diagrams.

**A14: CHECK THE ETA SENSOR RETURN LINE FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:	EGR throttle sensor - ground - Pin 01	Positive post
----------	---------------------------------	---------------------------------------	---------------

Is the resistance greater than 100 Kohms?
<b>Yes</b> <a href="#">GO to A15.</a>
<b>No</b> <a href="#">GO to A20.</a>

**A15: CHECK WHETHER THE 5 VOLT SUPPLY AND SIGNAL RETURN LINES ARE SHORTED TOGETHER**

1	Key off.		
2	ECM connector disconnected.		
3	Key on, engine off.		
4	Measure the resistance between:		
	EGR throttle sensor - supply - Pin 06	EGR throttle sensor - ground - Pin 01	

Is the resistance greater than 100 Kohms?
<b>Yes</b> <a href="#">GO to A16.</a>
<b>No</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams.

	Are the resistances greater than 100 Kohms?		
	Yes		
	GO to B3.		
	No		
	GO to B5.		
B3: CHECK THE ETV SIGNAL CIRCUIT FOR CONTINUITY			
	1	Key off.	
	2	ECM connector disconnected.	
	3	Measure the resistance between:	
	EGR throttle valve - control 1 - Pin 03	EGR throttle valve - control 1 - Pin C-J4	
	EGR throttle valve - control 2 - Pin 04	EGR throttle valve - control 2 - Pin C-K4	
	Are the resistances less than 10 ohms?		
	Yes		
	An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- ETV connector- ECM connector- ETV- ECM		
	No		
	REPAIR the open circuit. For additional information, refer to the wiring diagrams.		
B4: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE ETV HARNESS OR ECU			
	1	Key off.	
	2	ECM connector disconnected.	
	3	Key on, engine off.	
	4	Measure the resistance between:	
	EGR throttle valve - control 1 - Pin 03	Negative post	
	EGR throttle valve - control 2 - Pin 04	Negative post	
	Are the resistances greater than 100 Kohms?		
	Yes		
	Harness is OK.Suspect :- ECM		
	No		
	REPAIR the short circuit. For additional information, refer to the wiring diagrams.		
B5: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE ETV HARNESS OR ECU			
	1	Key off.	
	2	ECM connector disconnected.	
	3	Key on, engine off.	
	4	Measure the resistance between:	
	EGR throttle valve - control 1 - Pin 03	Positive post	
	EGR throttle valve - control 2 - Pin 04	Positive post	
	Are the resistances greater than 100 Kohms?		
	Yes		
	Harness is OK.Suspect :- ECM		
	No		
	REPAIR the short circuit. For additional information, refer to the wiring diagrams.		

Inspection and Verification

This pinpoint test is intended to diagnose the following:

- Short circuit to GROUND in the EGR throttle actuator (ETA) circuit
- Short circuit to POWER in the EGR throttle actuator (ETA) circuit
- Open circuit in the EGR throttle actuator (ETA) circuit
- EGR throttle actuator
- ECM

No

[GO to C18.](#)

### C13: CHECK THE 5 VOLT SUPPLY LINE FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

EGR throttle sensor - supply - Pin 06

Positive post

Is the resistance greater than 100 Kohms?

Yes

[GO to C14.](#)

No

[GO to C20.](#)

### C14: CHECK THE ETA 5 VOLT SUPPLY LINE FOR OPEN CIRCUIT

**1** Key off.

**2** ECM connector disconnected.

**3** Measure the resistance between:

EGR throttle sensor - supply - Pin 06

EGR throttle sensor - supply - Pin B-F1

Is the resistance less than 10 ohms?

Yes

Suspect :- ECM connector- ECM

No

REPAIR the open circuit. For additional information, refer to the wiring diagrams.

### C15: CHECK THE ETA SENSOR RETURN LINE FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

EGR throttle sensor - ground - Pin 01

Positive post

Is the resistance greater than 100 Kohms?

Yes

[GO to C16.](#)

No

[GO to C21.](#)

### C16: CHECK WHETHER THE 5 VOLT SUPPLY AND SIGNAL RETURN LINES ARE SHORTED TOGETHER

**1** Key off.

**2** ECM connector disconnected.

**3** Measure the resistance between:

EGR throttle sensor - supply - Pin 06

EGR throttle sensor - ground - Pin 01

Is the resistance greater than 100 Kohms?

Yes

[GO to C17.](#)

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

### C17: CHECK THE ETA SENSOR RETURN LINE FOR OPEN CIRCUIT

**1** Measure the resistance between:

EGR throttle sensor - ground - Pin 01

EGR throttle sensor - ground - Pin B-F2

Is the resistance less than 10 ohms?

Yes

Suspect :- ECM connector- ECM

No

REPAIR the open circuit. For additional information, refer to the wiring diagrams.

### C18: CHECK WHETHER THE 5 VOLT SUPPLY AND SIGNAL RETURN LINES ARE SHORTED TOGETHER

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

EGR throttle sensor - supply - Pin 06

EGR throttle sensor - ground - Pin 01

Is the resistance greater than 100 Kohms?

Yes

[GO to C19.](#)

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

### C19: CHECK WHETHER THE SHORT CIRCUIT TO GROUND IS IN THE ETA HARNESS OR ECU

**1** Measure the resistance between:

EGR throttle sensor - supply - Pin 06

Negative post

Is the resistance greater than 100 Kohms?

Yes

Suspect:- ECM

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

### C20: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE ETA HARNESS OR ECU

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

**4** Measure the resistance between:

EGR throttle sensor - ground - Pin 01

Positive post

Is the resistance greater than 100 Kohm?

Yes

Suspect:- ECM

No

REPAIR the short circuit. For additional information, refer to the wiring diagrams.

### C21: CHECK WHETHER THE SHORT CIRCUIT TO POWER IS IN THE ETA HARNESS OR ECU

**1** Key off.

**2** ECM connector disconnected.

**3** Key on, engine off.

4 Measure the resistance between:		
EGR throttle sensor - ground - Pin 01		Positive post
Is the resistance greater than 100 Kohms?		
Yes		
Suspect:- ECM		
No		
REPAIR the short circuit. For additional information, refer to the wiring diagrams.		
E ETV SIGNAL LINE FOR SHORT CIRCUIT TO GROUND		
1 Measure the resistance between:		
EGR throttle valve - control 1 - Pin 03		Negative post
EGR throttle valve - control 2 - Pin 04		Negative post
Are the resistances greater than 100 Kohms?		
Yes		
GO to C23.		
No		
REPAIR the short circuit. For additional information, refer to the wiring diagrams.		
E ETV SIGNAL LINE FOR SHORT CIRCUIT TO POWER		
1 Measure the resistance between:		
EGR throttle valve - control 1 - Pin 03		Positive post
EGR throttle valve - control 2 - Pin 04		Positive post
Are the resistances greater than 100 Kohms?		
Yes		
GO to C24.		
No		
REPAIR the short circuit. For additional information, refer to the wiring diagrams.		
E ETV SIGNAL CIRCUIT FOR CONTINUITY		
1 Measure the resistance between:		
EGR throttle valve - control 1 - Pin 03		EGR throttle valve - control 1 - Pin C-J4
EGR throttle valve - control 2 - Pin 04		EGR throttle valve - control 2 - Pin C-K4
Are the resistances less than 10 ohms?		
Yes		
An intermittent fault may be present in the wiring harness. Visually check for chaffed wires or other physical damage to the harness. If no fault is found in the circuit, suspect the following component(s):- ETA connector- ECM connector- ETA- ECM		
No		
REPAIR the open circuit. For additional information, refer to the wiring diagrams.		

# Engine Emission Control - 2.7L V6 - TdV6 - Exhaust Gas Recirculation (EGR) Valve LH

Removal and Installation

## Removal

1. Remove the exhaust gas recirculation (EGR) valve outlet tube.  
For additional information, refer to: Exhaust Gas Recirculation (EGR) Valve Outlet Tube (303-08B Engine Emission Control - 2.7L Diesel, Removal and Installation).
2. Remove the fuel injector soundproofing.
3. Drain the cooling system.  
For additional information, refer to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 2.7L Diesel, General Procedures).
4. Remove the air cleaner.  
For additional information, refer to: Air Cleaner (303-12C Intake Air Distribution and Filtering - 2.7L Diesel, Removal and Installation).
5. Remove the power steering reservoir.  
For additional information, refer to: Power Steering Fluid Reservoir (211-02 Power Steering, Removal and Installation).
6. Remove the left-hand engine compartment cover.

7. Detach the fuel filter from the mounting bracket.

1. Press the retaining tang.
2. Detach the fuel filter from the mounting bracket.

8. Remove the fuel filter retaining bracket.

9. Disconnect the EGR valve electrical connector.

10. Disconnect the EGR valve coolant outlet hose.

11. Detach the EGR valve cooler outlet tube.

- Disconnect the outlet hose.
- Detach the EGR valve cooler outlet tube retaining clip.

12. Detach the EGR valve cooler outlet tube from the EGR mounting bracket.

13. Remove the left-hand catalytic converter.  
For additional information, refer to: Catalytic Converter - 2.7L Diesel (309-00 Exhaust System, Removal and Installation).

**14.** Detach the EGR valve coolant outlet tube.

- Reposition the tube.

**15.** Lower the vehicle.

**16.** Disconnect the EGR valve coolant inlet hose.

**17.** Detach the EGR valve inlet tube.

- Discard the gasket.

**18.** Remove the EGR valve inlet tube.

- Detach and discard the retaining clip.

**19.** Remove the EGR valve.

## Installation

1. Loosely install the EGR valve.

2. Install the EGR valve inlet tube.

- Install a new retaining clip.
- Do not fully close the retaining clip at this stage.

3. Raise the vehicle.

4. Install the EGR valve inlet tube retaining bolts.

- Install a new gasket
- Do not fully tighten the retaining bolts at this stage.

5. Lower the vehicle.

6. Fully close the EGR valve inlet tube retaining clip.

7. Tighten to 10 Nm.

8. Tighten to 10 Nm.

9. Connect the EGR valve coolant inlet hose.

10. Raise the vehicle.

11. Attach the EGR valve coolant outlet tube.

12. Install the left-hand catalytic converter.

For additional information, refer to: Catalytic Converter - 2.7L Diesel (309-00 Exhaust System, Removal and Installation).

13. Lower the vehicle.

14. Attach the EGR valve cooler outlet tube to the EGR mounting bracket.

15. Attach the EGR valve cooler outlet tube.

- Connect the outlet hose.
- Attach the EGR valve cooler outlet tube retaining clip.

16. Connect the EGR valve coolant outlet hose.

17. Connect the EGR valve electrical connector.

18. Install the fuel injector soundproofing.

19. Tighten to 27 Nm.

**20. Attach the fuel filter.**

**21. Install the left-hand engine compartment cover.**

**22. Install the power steering reservoir.**

For additional information, refer to: Power Steering Fluid Reservoir (211-02 Power Steering, Removal and Installation).

**23. Fill and bleed the cooling system.**

For additional information, refer to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 2.7L Diesel, General Procedures).

**24. Install the air cleaner.**

For additional information, refer to: Air Cleaner (303-12C Intake Air Distribution and Filtering - 2.7L Diesel, Removal and Installation).

**25. Install the fuel injector soundproofing.**

**26. Install the exhaust gas recirculation (EGR) valve outlet tube.**

For additional information, refer to: Exhaust Gas Recirculation (EGR) Valve Outlet Tube (303-08B Engine Emission Control - 2.7L Diesel, Removal and Installation).

# Engine Emission Control - 2.7L V6 - TdV6 - Exhaust Gas Recirculation (EGR) Valve Outlet Tube

## Removal and Installation

### Removal

1. Remove the oil filler cap.

2. Remove the engine cover.

3. NOTE: Right-hand shown, left-hand similar.

Detach the exhaust gas recirculation (EGR) valve outlet tube.

4. NOTE: Right-hand shown, left-hand similar.

Detach the EGR valve outlet tube.

5. NOTE: Right-hand shown, left-hand similar.

Remove the EGR valve outlet tube.

- Discard the gasket.

## Installation

1. NOTE: Right-hand shown, left-hand similar.

Loosley install the EGR valve outlet tube.

- Install a new retaining clip.
- Do not fully close the retaining clip at this stage.

2. NOTE: Right-hand shown, left-hand similar.

Install the EGR valve outlet tube retaining bolts.

- Install a new gasket
- Do not fully tighten the retaining bolts at this stage.

3. NOTE: Right-hand shown, left-hand similar.

Attach the EGR valve outlet tube.

- Do not fully tighten the retaining bolt at this stage.

4. NOTE: Right-hand shown, left-hand similar.

Fully close the EGR valve outlet tube retaining clip.

5. NOTE: Right-hand shown, left-hand similar.

Tighten to 10 Nm.

6. NOTE: Right-hand shown, left-hand similar.

Tighten to 5 Nm.

7. Install the engine cover.

8. Install the oil filler cap.

# Engine Emission Control - 2.7L V6 - TdV6 - Exhaust Gas Recirculation (EGR) Valve RH

## Removal and Installation

### Removal

1. Remove the exhaust gas recirculation (EGR) valve outlet tube.  
For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve Outlet Tube](#) (303-08B Engine Emission Control - 2.7L V6 - TdV6, Removal and Installation).
2. Remove the injector soundproofing.
3. Drain the cooling system.  
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).
4. Disconnect the EGR valve electrical connector.

5. Disconnect the EGR valve coolant outlet hose.

6. Disconnect the EGR valve coolant inlet hose.

7. **NOTE:** Catalytic converter shown removed for clarity.

Detach the EGR valve inlet tube retaining bolts.

- Discard the gasket.

8. Remove the EGR valve inlet tube.

- Detach and discard the retaining clip.

9. Remove the EGR valve.

## Installation

1. Loosely install the EGR valve.

2. Install the EGR valve inlet tube.

- Install a new retaining clip.
- Do not fully close the retaining clip at this stage.

3. NOTE: Catalytic converter shown removed for clarity.

Install the EGR valve inlet tube retaining bolts.

- Install a new gasket
- Do not fully tighten the retaining bolts at this stage.

4. Fully close the EGR valve inlet tube retaining clip.

5. NOTE: Catalytic converter shown removed for clarity.

Tighten to 10 Nm.

6. Tighten to 10 Nm.

7. Connect the EGR valve coolant inlet hose.

8. Connect the EGR valve coolant outlet hose.

9. Connect the EGR valve electrical connector.

10. Install the fuel injector soundproofing.
11. Install the EGR valve outlet tube.  
For additional information, refer to: [Exhaust Gas Recirculation \(EGR\) Valve Outlet Tube](#) (303-08B Engine Emission Control - 2.7L V6 - TdV6, Removal and Installation).
12. Fill and bleed the cooling system.  
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, General Procedures).

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 -

## Torque Specifications

Description	Nm	lb-ft	lb-in

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Intake Air Distribution and Filtering

Description and Operation

VJJ0005392

Item	Part Number	Description
1	—	Air cleaner outlet pipe
2	—	Mass air flow (MAF) sensor
3	—	Air cleaner cover
4	—	Air cleaner element
5	—	Air cleaner
6	—	Air cleaner intake pipe

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Intake Air Distribution and Filtering

## VIN Range: M45255->N13088

Diagnosis and Testing

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

#### Visual Inspection Chart

Mechanical
Air cleaner intake pipe
Air cleaner outlet pipe
Air cleaner element

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Jaguar Approved Diagnostic System.

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Intake Air Distribution and Filtering

## VIN Range: N13089->N52047

### Diagnosis and Testing

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of damage.

Replace the air cleaner element as necessary, REFER to: <a href="#">Air Cleaner Element</a> (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
Excessive intake noise	<ul style="list-style-type: none"> <li>Intake pipe disconnected/damaged after the air cleaner</li> <li>Air cleaner assembly incorrectly assembled/damaged</li> </ul>	Check the intake system and hoses for correct installation/damage, REFER to: <a href="#">Air Cleaner</a> (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Intake Air Distribution and Filtering

## VIN Range: N52048->N99999

Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, plus the addition of secondary air injection and changes to evaporative emissions and exhaust gas recirculation to comply with stage four emissions requirements.

For more information on these systems,

REFER to: [Engine Emission Control - VIN Range: N52048->N99999](#) (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Description and Operation) /

[Evaporative Emissions - VIN Range: N52048->N99999](#) (303-13 Evaporative Emissions, Description and Operation).

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of damage.

#### Visual inspection chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Hoses and ducts (damage/connections)</li> <li>Air cleaner element (contaminated/blocked)</li> <li>Restricted air intake</li> <li>Seals and gaskets</li> </ul>	<ul style="list-style-type: none"> <li>Mass air flow (MAF) sensor</li> <li>Manifold absolute pressure (MAP) sensor</li> <li>Throttle body</li> <li>Harness (security/damage)</li> <li>Connections (security/damage)</li> <li>Intake manifold tuning (IMT) valves</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the DTC Index.

### Symptom chart

Symptom	Possible cause	Action
Vehicle does not start/hard starting/poor performance	<ul style="list-style-type: none"> <li>Restricted/blocked air intake</li> <li>Restricted/blocked air cleaner element</li> </ul>	Clear the restriction, REFER to: <a href="#">Air Cleaner</a> (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Replace the air cleaner element as necessary, REFER to: <a href="#">Air Cleaner Element</a> (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
Excessive intake noise	<ul style="list-style-type: none"> <li>Intake pipe disconnected/damaged after the air cleaner</li> <li>Air cleaner assembly incorrectly assembled/damaged</li> </ul>	Check the intake system and hoses for correct installation/damage, REFER to: <a href="#">Air Cleaner</a> (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

### DTC index

• NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first 5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic system).

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Air Cleaner

Removal and Installation

## Removal

1. Remove the air cleaner outlet pipe.  
For additional information, refer to [Air Cleaner Outlet Pipe](#) in this section.
2. Disconnect the mass air flow (MAF) sensor electrical connector.

3. Remove the radiator grill opening panel.  
For additional information, refer to Section [501-02 Front End Body Panels](#).
4. Remove the air cleaner.

## Installation

1. **NOTE:** When installing the air cleaner, make sure the locating pegs fit securely in the grommets located in the inner wing.

To install, reverse the removal procedure.

- Tighten to 8Nm.

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Air Cleaner Element

## Removal and Installation

### Removal

1. Remove the air cleaner outlet pipe.  
For additional information, refer to [Air Cleaner Outlet Pipe](#) in this section.
2. Disconnect the mass air flow sensor (MAF) electrical connector.

3. Remove the air cleaner cover.
  1. Release the retaining clips.
  2. Remove the air cleaner cover.

4. Remove the air cleaner element.

### Installation

1. To install, reverse the removal procedure.

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Air Cleaner Outlet Pipe

## VIN Range: M45255->N52047

Removal and Installation

### Removal

1. Disconnect the engine breather hose.

2. Remove the air cleaner outlet pipe.

1. Loosen the retaining clips.
2. Remove the air cleaner outlet pipe.

### Installation

1. To install, reverse the removal procedure.

# Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Air Cleaner Outlet Pipe

## Cleaner Outlet PipeVIN Range: N52048->N99999

Removal and Installation

### Removal

1. Detach the air cleaner outlet pipe.

- Loosen the retaining clips.

2. Remove the air cleaner outlet pipe.

- Disconnect the engine breather hose.

### Installation

1. To install, reverse the removal procedure.

Description and Operation

E30232

Item	Part Number	Description
1	—	Air cleaner outlet pipe
2	—	Mass air flow (MAF) sensor
3	—	Air cleaner cover
4	—	Air cleaner element
5	—	Air cleaner
6	—	Air cleaner intake pipe

Vehicles with supercharger

E30249

Item	Part Number	Description
1	—	Throttle body intake pipe
2	—	Additional air inlet actuator

E30233

Item	Part Number	Description
1	—	Charge air cooler
2	—	Supercharger outlet pipe
3	—	Throttle body elbow
4	—	Charge air cooler
5	—	Supercharger

Intake air distribution and filtering for vehicles with supercharger

Air is supplied to the supercharger via the air cleaner, air cleaner outlet pipe, throttle body intake pipe, throttle body and throttle body elbow. The supercharger delivers pressurized air to two separate charge air cooler units, each unit being mounted on the cylinder bank it supplies. Pressurized cooled air is fed from the charge air coolers directly into each inlet port. The air cleaner outlet pipe differs from the normally aspirated by having tuned resonators to reduce inlet noise levels. An intake air temperature sensor is fitted at the outlet of the bank 1 charge air cooler. The sensor provides an input to the engine control module (ECM). For additional information, refer to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). The intake elbow directs the metered airflow from the throttle body outlet (underside of the throttle body) into the intake of the supercharger. The supercharger by-pass valve assembly is part of the intake elbow. The butterfly valve inside the assembly is opened by a diaphragm actuator operated by vacuum feed from the elbow. At closed or partially open throttle positions, the butterfly valve opens, allowing the airflow from the two charge air cooler inlets to be directed back to the supercharger inlet. This action inhibits the supercharging effect and reduces engine torque. Progressive opening of the throttle causes the by-pass valve to gradually close.

Supercharger

The supercharger is attached to the three mounting bosses between the two cylinder heads. The supercharger has a filled for life internal lubrication system. The supercharger is positively aligned with the drive belt by a doweled mounting bracket

Charge Air Cooler

Each cylinder bank is fitted with a charge air cooler which supplies pressurized air to the four cylinders. The inlet ports to the two charge air coolers are connected to the supercharger via the supercharger outlet pipe consisting of adjustable metal ducts with bonded rubber seals. The charge air coolers are water cooled via a radiator and water pump. For additional information, refer to Section [303-03A Engine Cooling](#) / [303-03B Supercharger Cooling](#) / [303-03C Engine Cooling](#).

Diagnosis and Testing

### Inspection and Verification

1. **1.** Verify the customer concern by operating the system.
2. **2.** Visually inspect for a obvious signs of mechanical damage.
3. **3.** Verify the customer concern.
4. **4.** Visually inspect for obvious signs of mechanical damage.

#### Visual Inspection Chart

Mechanical
<ul style="list-style-type: none"> <li>● Air cleaner intake pipe</li> <li>● Air cleaner outlet pipe</li> <li>● Air cleaner element</li> <li>● Throttle body intake pipe</li> <li>● Throttle body gasket</li> <li>● Throttle body</li> <li>● Supercharger outlet pipe to charge air cooler duct(s)</li> <li>● Supercharger outlet pipe gasket</li> <li>● Supercharger outlet pipe</li> <li>● Air intake elbow</li> <li>● Air intake elbow gasket</li> <li>● Air intake elbow retaining bolt seal(s)</li> <li>● Supercharger</li> <li>● Charge air cooler gasket(s)</li> <li>● Charge air cooler(s)</li> </ul>

5. **5.** If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
6. **6.** If the cause is not visually evident, verify the symptom and refer to the Jaguar Approved Diagnostic System.

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Intake Air Distribution and Filtering

## VIN Range: N13089->N52047

Diagnosis and Testing

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of damage.

• **NOTE:** If any warning lights and/or messages were displayed when the fault occurred, refer to the driver information table for Diagnostic Trouble Codes (DTCs) associated with the display, then to the DTC index table for possible sources and actions. Some warnings will appear to clear when the ignition is cycled. This is often because the warning has flagged as a result of one of the vehicle's on-board diagnostic routines having run to detect the fault. If the same routine is not run when the ignition is switched **ON**, the warning will not reflag until the routine does run. See the DTC summaries for drive cycle routines.

## Pinpoint tests

CAUTION: When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00. Failure to follow this instruction may result in damage to the vehicle.

- NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.
- NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : CHECK THE SUPERCHARGER AIR INTAKE ELBOW	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE AIR INTAKE ELBOW VACUUM LINE	
	<div><div>1</div>Check the vacuum connection to the supercharger air intake elbow at both ends.</div> <div><div>2</div>Check the vacuum line to the supercharger air intake elbow along its length.</div>
	Is the vacuum line connected and in good condition? <b>Yes</b> <a href="#">GO to A2.</a> <b>No</b> Reconnect or replace the vacuum line as necessary. Test the system for normal operation.
A2: CHECK THE OPERATION OF THE AIR INTAKE ELBOW ACTUATOR LINKAGE	
	<div><div>1</div>Disconnect the vacuum line from the actuator diaphragm.</div> <div><div>2</div>Connect a suitable hand vacuum pump to the actuator diaphragm.</div> <div><div>3</div>Apply a vacuum to the actuator diaphragm.</div> <div><div>4</div>Observe the actuator linkage operation.</div>
	Does the actuator linkage operate? <b>Yes</b> <a href="#">GO to A3.</a> <b>No</b> Install a new supercharger air intake elbow. Test the system for normal operation.
A3: CHECK THE OPERATION OF THE AIR INTAKE ELBOW BUTTERFLY	
	<div><div>1</div>Remove the air cleaner outlet pipe, REFER to: <a href="#">Air Cleaner Outlet Pipe</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).</div> <div><div>2</div>Remove the supercharger outlet pipe, REFER to: <a href="#">Supercharger Outlet Pipe</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).</div> <div><div>3</div>Apply a vacuum to the actuator diaphragm.</div> <div><div>4</div>Observe the butterfly operation.</div>
	Does the butterfly operate? <b>Yes</b> Check for another cause of the malfunction. <b>No</b> Install a new supercharger air intake elbow. Test the system for normal operation.

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Intake Air Distribution and Filtering

## VIN Range: N52048->N99999

Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, plus the addition of secondary air injection and changes to evaporative emissions and exhaust gas recirculation to comply with stage four emissions requirements.

For more information on these systems,

REFER to: [Engine Emission Control - VIN Range: N52048->N99999](#) (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Description and Operation) /

[Evaporative Emissions - VIN Range: N52048->N99999](#) (303-13 Evaporative Emissions, Description and Operation).

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of damage.

#### Visual inspection chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Hoses and ducts (damage/connections)</li> <li>● Air cleaner element (contaminated/blocked)</li> <li>● Restricted air intake</li> <li>● Supercharger</li> <li>● Supercharger drive belt</li> <li>● Charge air coolers (damage/connection)</li> <li>● Supercharger outlet pipes and gaskets</li> <li>● Supercharger air intake elbow/hoses</li> <li>● Seals and gaskets</li> </ul>	<ul style="list-style-type: none"> <li>● Mass air flow (MAF) sensor</li> <li>● Manifold absolute pressure (MAP) sensor</li> <li>● Throttle body</li> <li>● Harness (security/damage)</li> <li>● Connections (security/damage)</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the diagnostic trouble code (DTC) index.

### Symptom chart (vehicles without supercharger)

Symptom	Possible cause	Action
Vehicle does not start/hard starting/poor performance	<ul style="list-style-type: none"> <li>● Restricted/blocked air intake</li> <li>● Restricted/blocked air cleaner element</li> </ul>	Clear the restriction, REFER to: <a href="#">Air Cleaner</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). ## Pinpoint tests

- NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : CHECK THE SUPERCHARGER AIR INTAKE ELBOW	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE AIR INTAKE ELBOW VACUUM LINE</b>	
	<ol style="list-style-type: none"> <li>Check the vacuum connection to the supercharger air intake elbow at both ends.</li> <li>Check the vacuum line to the supercharger air intake elbow along its length.</li> </ol>
	<p>Is the vacuum line connected and in good condition?</p> <p><b>Yes</b> <a href="#">GO to A2.</a></p> <p><b>No</b> CONNECT or replace the vacuum line as necessary. Test the system for normal operation.</p>
<b>A2: CHECK THE OPERATION OF THE AIR INTAKE ELBOW ACTUATOR LINKAGE</b>	
	<ol style="list-style-type: none"> <li>Disconnect the vacuum line from the actuator diaphragm.</li> <li>Connect a suitable hand vacuum pump to the actuator diaphragm.</li> <li>Apply a vacuum to the actuator diaphragm.</li> <li>Observe the actuator linkage operation.</li> </ol>
	<p>Does the actuator linkage operate?</p> <p><b>Yes</b> <a href="#">GO to A3.</a></p> <p><b>No</b> INSTALL a new supercharger air intake elbow. Test the system for normal operation.</p>
<b>A3: CHECK THE OPERATION OF THE AIR INTAKE ELBOW BUTTERFLY</b>	
	<ol style="list-style-type: none"> <li>Remove the air cleaner outlet pipe, REFER to: <a href="#">Air Cleaner Outlet Pipe</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).</li> <li>Remove the supercharger outlet pipe, REFER to: <a href="#">Supercharger Outlet Pipe</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).</li> <li>Apply a vacuum to the actuator diaphragm.</li> <li>Observe the butterfly operation.</li> </ol>
	<p>Does the butterfly operate?</p> <p><b>Yes</b> Check for another cause of the malfunction.</p> <p><b>No</b> INSTALL a new supercharger air intake elbow. Test the system for normal operation.</p>

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Air Cleaner

## Removal and Installation

### Removal

1. Remove the air cleaner outlet pipe.  
For additional information, refer to [Air Cleaner Outlet Pipe](#) in this section.
2. Disconnect the mass air flow (MAF) sensor electrical connector.

3. Remove the radiator grill opening panel.  
For additional information, refer to Section [501-02 Front End Body Panels](#).
4. Remove the air cleaner.

1. Remove the air cleaner retaining bolt.
2. Disconnect the extra air flap actuator electrical connector.
3. Remove the air cleaner.

### Installation

1. **NOTE:** When installing the air cleaner, make sure the locating pegs fit securely in the grommets located in the inner wing.

To install, reverse the removal procedure.

- Tighten to 8Nm.

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Air Cleaner Element

Removal and Installation

## Removal

1. Remove the air cleaner outlet pipe.  
For additional information, refer to [Air Cleaner Outlet Pipe](#) in this section.
2. Disconnect the mass air flow sensor (MAF) electrical connector.

3. Remove the air cleaner cover.
  1. Release the retaining clips.
  2. Remove the air cleaner cover.

4. Remove the air cleaner element.

## Installation

1. To install, reverse the removal procedure.

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Air Cleaner Outlet Pipe

Removal and Installation

## Removal

1. Remove the engine cover.

2. Install the oil filler cap.

3. Disconnect the engine breather hose.

4. Remove the air cleaner outlet pipe.

## Installation

1. To install, reverse the removal procedure.

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Charge Air Cooler

Removal and Installation

## Removal

1. Remove the supercharger.

For additional information, refer to: [Supercharger - VIN Range: M45255->N52047](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

2.  **CAUTION:** Make sure no foreign matter enters the cylinder head ports.

Remove the charge air cooler.

- Remove and discard the charge air cooler gasket.

## Installation

1. Install the charge air cooler.

- Install a new charge air cooler gasket.
- Tighten to 13 Nm.

2. Install the supercharger.

For additional information, refer to: [Supercharger - VIN Range: M45255->N52047](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Supercharger VIN Range: M45255->N52047

Removal and Installation

## Removal

1. Disconnect the battery ground cable.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).
2. Carry out the supercharging cooling system draining procedure.  
For additional information, refer to: [Supercharger Cooling System Draining, Filling and Bleeding](#) (303-03B Supercharger Cooling, General Procedures).

3. Detach the supercharger belt.

- Use a 1/2 inch square drive bar to rotate the supercharger belt tensioner.
- Detach the supercharger belt.

4. Remove the throttle body.  
For additional information, refer to: [Throttle Body - Vehicles With: Supercharger, VIN Range: M45255->N52047](#) (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

5. Detach the hoses.

- Reposition the hose retaining clip.

6. Detach the supercharger outlet pipe coolant hose.

- Cap the coolant ports.

7.  **CAUTION:** Make sure no foreign matter enters the supercharger.

Remove the supercharger outlet pipe

8. Remove and discard the supercharger outlet pipe gasket.

9. Remove and discard the supercharger outlet pipe retaining bolt seals.

10. Remove and discard the supercharger outlet pipe to charge air coolers ducts.

11. Disconnect the thermostat housing hoses

12. Disconnect the coolant temperature sensor electrical connector.

**13.** Reposition the thermostat housing hose retaining clip.

E30414

**14.** Disconnect the hose.

E30411

**15.** Disconnect the hose.

E30415

**16.** Disconnect the hose.

E30416

**17.** Disconnect the hose.

E30417

18. Remove the thermostat housing retaining bolts.

19. Remove the thermostat housing.

- Remove and discard thermostat housing O-ring seals.

20. Disconnect the charge air cooler coolant pipes.

21. Disconnect the intake air temperature (IAT) sensor electrical connector.

22. Remove the throttle body.

For additional information, refer to: [Throttle Body - Vehicles With: Supercharger, VIN Range: M45255->N52047](#) (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

**23.** Disconnect the exhaust gas recirculation (EGR) valve electrical connector.

E30257

**24. NOTE:** Cap the exposed ports.

Disconnect the coolant hoses.

E31339

**25.** Remove the exhaust manifold to EGR valve tube retaining nuts.

E30635

**26.** Remove the EGR valve and the exhaust manifold to EGR valve tube.

- Remove the retaining bolts.
- Remove and discard the exhaust manifold to EGR valve tube gasket.
- Remove and discard the EGR valve to air intake elbow gasket.

E30634

**27.** Disconnect the air intake elbow pipes.

E30243

**28. NOTE:** Make sure correct location of the ground strap is noted.

Remove the air intake elbow retaining bracket lower retaining bolts.

**29.** Detach the air intake elbow.

- Remove and discard the gasket.
- Remove and discard the retaining bolt seals.

**30.** Remove the air intake elbow.

- Disconnect the manifold absolute pressure (MAP) sensor

**31.** Remove the supercharger.

## Installation

1. Install the supercharger.

- Tighten to 24 Nm.

2. Connect the manifold absolute pressure (MAP) sensor.

3. Install the air intake elbow.

- Install a new gasket.
- Install new retaining bolt seals.
- Tighten to 24 Nm.

4. NOTE: Make sure ground strap is correctly installed to the location noted.

Install the air intake elbow retaining bracket lower retaining bolts.

- Tighten to 20 Nm.

5. Connect the air intake elbow pipes.

6. Install the EGR valve and the exhaust manifold to EGR valve tube.

- Install a new exhaust manifold to EGR valve tube gasket.
- Install a new EGR valve to air intake elbow gasket.
- Tighten to 10 Nm.

7. Tighten to 21 Nm.

8. NOTE: Un-cap the exposed ports.

Connect the coolant hoses.

9. Connect the exhaust gas recirculation (EGR) valve electrical connector.

10. Connect the IAT sensor electrical connector.

**11.** Connect the charge air cooler coolant pipes.

E30241

**12.** Install new O-ring seals to the thermostat housing.

**13.** Install thermostat housing.

**14.** Tighten to 10 Nm.

E30419

**15.** Tighten to 10 Nm.

E30418

**16.** Connect the hose.

E30417

**17.** Connect the hose.

**18.** Connect the hose.

**19.** Connect the hose.

**20.** Reposition the thermostat housing hose retaining clip.

**21.** Connect the coolant temperature sensor electrical connector.

22. Connect the thermostat housing hoses

23. Install new supercharger outlet pipe to charge air coolers ducts.

- Tighten to 8 Nm.

24. Install a new supercharger outlet pipe gasket.

25. Install new seals to the supercharger outlet pipe retaining bolts

26.  **CAUTION:** Make sure no foreign matter enters the supercharger.

Install the supercharger outlet pipe

27. **NOTE:** Un-cap the coolant ports.

Attach the supercharger outlet pipe coolant hose.

E30236

**28.** Attach the hoses.

- Reposition the hose retaining clip.

**29.** Install the throttle body.

For additional information, refer to: [Throttle Body - Vehicles With: Supercharger, VIN Range: M45255->N52047](#) (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

**30.** Attach the supercharger belt.

- Use a 1/2 inch square drive bar to rotate the supercharger belt tensioner.
- Attach the supercharger belt.

**31.** Connect the battery ground cable.

For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

**32.** Carry out the supercharging cooling system filling and bleeding procedure.

For additional information, refer to: [Supercharger Cooling System Draining, Filling and Bleeding](#) (303-03B Supercharger Cooling, General Procedures).

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Supercharger VIN Range: N52048->N99999

Removal and Installation

## Removal

1. Disconnect the battery ground cable.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).
2. Carry out the cooling system draining procedure.  
For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures).
3. Remove the coolant expansion tank.  
For additional information, refer to: [Coolant Expansion Tank](#) (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
4. Remove the air cleaner outlet pipe.  
For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
5. Detach the supercharger belt.
  - Use a 1/2 inch square drive bar to rotate the supercharger belt tensioner.

E63246

E30236

6. Detach the hoses.
  - Reposition the hose retaining clip.

E30237

7. Remove the throttle body.  
For additional information, refer to: [Throttle Body - Vehicles With: Supercharger, VIN Range: N52048->N99999](#) (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
8. Detach the supercharger outlet pipe coolant hose.
  - Cap the coolant ports.

9.  **CAUTION:** Make sure no foreign matter enters the supercharger.  
Remove the supercharger outlet pipe.

10. Remove and discard the supercharger outlet pipe gasket.  
11. Remove and discard the supercharger outlet pipe retaining bolt seals.  
12. Remove and discard the supercharger outlet pipe to charge air coolers ducts.

13. Disconnect the coolant hose.

14. Disconnect the coolant hose.

**15.** Disconnect the coolant hose.

E61852

**16.** Disconnect the engine coolant temperature (ECT) sensor electrical connector.

E61853

**17.** Disconnect the coolant hose.

E61854

**18.** Disconnect the coolant hose.

E61855

19. Detach the coolant assembly.

20. Remove the coolant assembly.

- Disconnect the coolant hose.
- Remove and discard the O-ring seals.

21. Disconnect the charge air cooler coolant hoses.

22. Disconnect the intake air temperature (IAT) sensor electrical connector.

**23.** Disconnect the exhaust gas recirculation (EGR) valve electrical connector.

**24. NOTE:** Cap the exposed ports.

Disconnect the coolant hoses.

**25.** Remove the exhaust manifold to EGR valve tube retaining nuts.

**26.** Remove the EGR valve and the exhaust manifold to EGR valve tube.

- Remove the retaining bolts.
- Remove and discard the exhaust manifold to EGR valve tube gasket.
- Remove and discard the EGR valve to air intake elbow gasket.

**27.** Disconnect the air intake elbow pipes.

28. Remove the air intake elbow retaining bracket lower retaining bolts.

29. Detach the air intake elbow.

- Remove and discard the gasket.
- Remove and discard the retaining bolt seals.

30. Remove the air intake elbow.

- Disconnect the manifold absolute pressure (MAP) sensor.

31. Remove the supercharger.

## Installation

1. Install the supercharger.

- Tighten to 21 Nm.

2. Connect the MAP sensor.

3. Install the air intake elbow.

- Install a new gasket.
- Install new retaining bolt seals.
- Tighten to 21 Nm.

4. Install the air intake elbow retaining bracket lower retaining bolts.

- Tighten to 18 Nm.

5. Connect the air intake elbow pipes.

6. Install the EGR valve and the exhaust manifold to EGR valve tube.

- Install a new exhaust manifold to EGR valve tube gasket.
- Install a new EGR valve to air intake elbow gasket.
- Tighten to 10 Nm.

7. Install the exhaust manifold to EGR valve tube retaining nuts.

- Tighten to 21 Nm.

8. NOTE: Remove the blanking caps from the coolant ports.

Connect the coolant hoses.

9. Connect the EGR valve electrical connector.

10. Connect the IAT sensor electrical connector.

11. Connect the charge air cooler coolant hoses.

12. Install the coolant assembly.

- Install new O-ring seals.
- Connect the coolant hose.

13. Attach the coolant assembly.

- Tighten to 10 Nm.

14. Connect the coolant hose.

**15.** Connect the coolant hose.

**16.** Connect the ECT sensor electrical connector.

**17.** Connect the coolant hose.

**18.** Connect the coolant hose.

E61850

19. Connect the coolant hose.

E30239

20. Install new supercharger outlet pipe to charge air coolers ducts.

- Tighten to 8 Nm.

E64021

21. Install a new supercharger outlet pipe gasket.

22. Install new seals to the supercharger outlet pipe retaining bolts.

23.  **CAUTION:** Make sure no foreign matter enters the supercharger.

Install the supercharger outlet pipe.

1. Tighten the supercharger outlet pipe retaining bolts to 10 Nm.
2. Tighten the charge air cooler ducts retaining bolts to 9 Nm.

E30237

24. **NOTE:** Remove the blanking caps.

Attach the supercharger outlet pipe coolant hose.

25. Install the throttle body.

For additional information, refer to: [Throttle Body - Vehicles With: Supercharger, VIN Range: N52048->N99999](#) (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

E30236

E63246

26. Attach the hoses.

- Reposition the hose retaining clip.

27. Attach the supercharger belt.

- Use a 1/2 inch square drive bar to rotate the supercharger belt tensioner.

28. Install the air cleaner outlet pipe.

For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

29. Install the coolant expansion tank.

For additional information, refer to: [Coolant Expansion Tank](#) (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

30. Connect the battery ground cable.

For additional information, refer to: [Battery Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

31. Carry out the cooling system filling and bleeding procedure.

For additional information, refer to: [Cooling System Draining, Filling and Bleeding](#) (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, General Procedures).

# Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Supercharger Outlet Pipe

Removal and Installation

## Removal

1. Disconnect the battery ground cable.  
For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).
2. Remove the cowl vent screen.  
For additional information, refer to: [Cowl Panel Grille](#) (501-02 Front End Body Panels, Removal and Installation).
3. Remove the air cleaner outlet pipe.  
For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
4. Remove the throttle body intake pipe.

5. Detach the hoses.
  - Reposition the hose retaining clip.

6.  **WARNING:** Make sure the cooling system is not pressurized.

Detach the supercharger outlet pipe coolant hose.

- Cap the coolant ports.

7.  **CAUTION:** Make sure no foreign matter enters the supercharger.

Remove the supercharger outlet pipe

8. Remove and discard the supercharger outlet pipe gasket.

9. Remove and discard the supercharger outlet pipe retaining bolt seals.

10. Remove and discard both supercharger outlet pipe to charge air cooler ducts.

## Installation

1. Install new supercharger outlet pipe to charge air cooler ducts.

- Tighten to 8 Nm.

2. Install a new supercharger outlet pipe gasket.

3. Install new seals to the supercharger outlet pipe retaining bolts

4. Install the supercharger outlet pipe

- Tighten to 9 Nm.

**5. NOTE: Un-cap the coolant ports.**

Attach the supercharger outlet pipe coolant hose.

**6. Attach the hoses.**

- Reposition the hose retaining clip.

**7. Install the throttle body intake pipe.**

- Tighten to 5 Nm.

**8. Install the air cleaner outlet pipe.**

For additional information, refer to: [Air Cleaner Outlet Pipe](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

**9. Install the cowl vent screen.**

For additional information, refer to: [Cowl Panel Grille](#) (501-02 Front End Body Panels, Removal and Installation).

**10. Connect the battery ground cable.**

For additional information, refer to: [Battery Disconnect and Connect](#) (414-01 Battery, Mounting and Cables, General Procedures).

**11. Check and top up the coolant expansion tank.**

# Intake Air Distribution and Filtering - 2.7L V6 - TdV6 -

## Torque Specifications

Description	Nm	lb-ft	lb-in
Air cleaner retaining bolt	8	-	71

# Intake Air Distribution and Filtering - 2.7L V6 - TdV6 - Intake Air Distribution and Filtering

Description and Operation

E66075

Item	Part Number	Description
1	—	Air cleaner outlet pipe
2	—	Air cleaner cover
3	—	Air cleaner element
4	—	Air cleaner base
5	—	Air cleaner intake pipe

• NOTE: The air cleaner outlet pipe and air cleaner cover are only supplied as an assembly and must not be disassembled.

The primary functional requirements of the air induction system is to:

- deliver clean filtered air to the engine with minimum pressure loss.
- to reduce the engine intake and structure related noises to within legal & vehicle requirements.
- manage the induction of water, sand or snow to prevent adverse effect on vehicle operation.
- minimize air temperature rise over ambient air temperature at the throttle body/turbo in high ambient conditions.
- purge the hot air from the intake system quickly whilst the engine is hot, and after a period of rest. This is to maximize engine drive away performance.

# Intake Air Distribution and Filtering - 2.7L V6 - TdV6 - Intake Air Distribution and Filtering

Diagnosis and Testing

## Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of damage.

### Visual inspection chart

### Pinpoint tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00. Failure to follow this instruction may result in damage to the vehicle.

• NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : CHECK THE OPERATION OF THE CAMSHAFT COVER CONTROL VALVE (S)	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
A1: CHECK THE VACUUM LINES TO THE CAMSHAFT COVER CONTROL VALVES	
	<div>1</div> Check the vacuum lines for connection, security and condition.
	Are the vacuum lines connected, secure and in good condition? <b>Yes</b> <a href="#">GO to A2.</a> <b>No</b> RECTIFY or replace as necessary. Test the system for normal operation.
A2: CHECK THE FUNCTION OF THE CAMSHAFT COVER CONTROL VALVES	
	<div>1</div> Disconnect the vacuum line to the suspect camshaft control valve actuator.
	<div>2</div> Connect a suitable hand vacuum pump to the control valve actuator.
	<div>3</div> Apply a vacuum to the actuator.
	<div>4</div> Observe the actuator linkage operation.
	Does the actuator linkage operate? <b>Yes</b> CHECK for DTCs indicating an intake air throttle fault. <b>No</b> INSTALL a new camshaft cover. Test the system for normal operation.

# Intake Air Distribution and Filtering - 2.7L V6 - TdV6 - Air Cleaner

## Removal and Installation

### Special Tool(s)

Remover/Install, Cooling Hose Clamp

303-397

## Removal

1. Remove the radiator grille opening panel.  
For additional information, refer to: [Radiator Grille Opening Panel](#) (501-02 Front End Body Panels, Removal and Installation).
2. Detach the mass air flow (MAF) wiring harness.

3. Disconnect the MAF sensor electrical connectors.

4. Using special tool 303-397, detach the MAF sensor outlet pipes.

1. Detach the upper MAF sensor outlet pipe.
2. Detach the lower MAF sensor outlet pipe.

5. Disconnect the port deactivation vacuum hose.

6. Remove the air cleaner retaining scrivet.

7. Remove the air cleaner.

- Remove the air cleaner retaining bolt.

## Installation

1. To install, reverse the removal procedure.

- Tighten to 8 Nm.

# Intake Air Distribution and Filtering - 2.7L V6 - TdV6 - Air Cleaner Element

Removal and Installation

## Removal

1. Remove the air cleaner.  
For additional information, refer to: [Air Cleaner](#) (303-12C Intake Air Distribution and Filtering - 2.7L V6 - TdV6, Removal and Installation).
2. Remove the air cleaner intake assembly from air cleaner base.

E50535

3. Remove the air cleaner cover.

E50536

4. Remove the air cleaner element.

E50537

## Installation

1. To install, reverse the removal procedure.

# Intake Air Distribution and Filtering - 2.7L V6 - TdV6 - Charge Air Cooler

## Removal and Installation

1. The charge air cooler is removed as part of the radiator assembly and can be serviced separately.  
For additional information, refer to: [Radiator](#) (303-03C Engine Cooling - 2.7L V6 - TdV6, Removal and Installation).

## Evaporative Emissions -

### Torque Specifications

Description	Nm	lb-ft	lb-in
Evaporative emission canister carrier bolts	10	7	-

# Evaporative Emissions - Evaporative EmissionsVIN Range: M45255->N52047

## Description and Operation

E 49901

Item	Part Number	Description
1	—	Evaporative emission canister vent solenoid
2	—	Fuel tank pressure sensor (vehicles built up to 01/2004)
3	—	Evaporative emission canister (vehicles built up to 01/2004)
4	-	Evaporative emission canister (vehicles built 02/2004 onwards)
5	—	Evaporative emission canister purge valve
6	-	Evaporative emission canister purge valve resonator.

The evaporative emission fuel vapor management system consists of an evaporative emission canister, evaporative emission canister purge valve and an evaporative emission canister purge valve resonator. A combination of plastic pipes and rubber hoses connect the evaporative emission canister to the fuel tank and the evaporative emission canister purge valve to the intake manifold.

VJJ0005375

Onboard refuel vapor recovery (ORVR).

The vehicle is fitted with an onboard vapor recovery (ORVR) type fuel tank. During refuelling all vapor is collected in the evaporative emission canister as well as in normal vehicle operations.

Vehicles built up to 01/2004

On Federal (USA) specification vehicles the fuel vapor management system uses a canister vent solenoid and a fuel tank pressure sensor which are used during the engine management system on board diagnostic routines.

When the evaporative emission canister purge valve is closed, the fuel tank is vented into the evaporative emission canister through the fuel tank roll-over valve. The evaporative emission canister absorbs the fuel vapor and prevents the release of hydrocarbons into the atmosphere. When the vapor evaporative emission canister purge valve is opened, the canister is exposed to the intake manifold vacuum and the fuel vapor deposits are drawn into the manifold where they mix with the incoming air/fuel charge.

The evaporative emission fuel vapor management system is controlled by the engine control module (ECM) according to calibrated data tables.

# Evaporative Emissions - Evaporative EmissionsVIN Range: N52048->N99999

Description and Operation

E63945

Item	Part Number	Description
1	—	Evaporative emission canister purge valve
2	—	Evaporative emission canister

The evaporative emission fuel vapor management system consists of an evaporative emission canister and an evaporative emission canister purge valve. A combination of plastic pipes and rubber hoses connect the evaporative emission canister to the fuel tank and the evaporative emission canister purge valve to the intake manifold.

VUJ0005375

Onboard refuel vapor recovery (ORVR).

The vehicle is fitted with an onboard refuel vapor recovery (ORVR) type fuel tank. During refuelling all vapor is collected in the evaporative emission canister as well as in normal vehicle operations.

When the evaporative emission canister purge valve is closed, the fuel tank is vented into the evaporative emission canister through the fuel tank roll-over valve. The evaporative emission canister absorbs the fuel vapor and prevents the release of hydrocarbons into the atmosphere. When the vapor evaporative emission canister purge valve is opened, the canister is exposed to the intake manifold vacuum and the fuel vapor deposits are drawn into the manifold where they mix with the incoming air/fuel charge.

The evaporative emission fuel vapor management system is controlled by the engine control module (ECM) according to calibrated data tables.

# Evaporative Emissions - Evaporative EmissionsVIN Range: M45255->N52047

Diagnosis and Testing

## Preliminary Inspection

1. Visually inspect for obvious signs of mechanical or electrical damage, blown fuses, etc.
2. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
3. If the concern is not visually evident, verify the symptom and proceed with diagnosis, using the Jaguar approved diagnostic system, where available.
4. Where K-Line equipment is available, it should be used as an aid to diagnosis.

## Diagnostic Drive Cycles

Following the setting of a DTC, the appropriate repairs must be carried out, and the normal operation of the system checked. This will be done by performing a series of drive cycles which will enable the vehicle to operate the Evaporative Emissions system as a function check. The following drive cycles cover the use of the Jaguar approved diagnostic system, GDS510 instrument, and a test with no additional equipment, where possible.

### Flow check monitor drive cycle conditions (non-Fed)

- **NOTE: These conditions must be satisfied before the test is commenced.**

This drive cycle should be performed following rectification work on the system.

- Make sure the fuel tank is between one quarter and three quarters full. (adding fuel will increase vapor generation; the diagnostic will not run if the vapor concentration is too great)
- Make sure the ambient air temperature is above -5°C. (23°F)

### Flow check monitor drive cycle (non-Fed)

- Drive the vehicle for a minimum of 15 minutes, avoiding severe or excessive fuel movement.
- Avoiding excessive fuel movement, gently bring the vehicle to rest. (coast to a stop)
- Allow the vehicle to idle for two minutes.

### Full Evaporative system monitor drive cycle conditions

- **NOTE: These conditions must be satisfied before the test is commenced.**

- Make sure the fuel filler cap is correctly fitted. (minimum three clicks)
- Clear the DTCs. (perform a code clear, even if no codes are present. This will reset TIDs)
- Make sure the fuel tank is between one quarter and three quarters full. (adding fuel will increase vapor generation; the diagnostic will not run if the vapor concentration is too great)
- Drive the vehicle for a minimum of two minutes, and until fully warm. (temperature gauge just below mid-point)
- Make sure that the purge valve is operating, either by touch, sound, or using datalogger. (purge vapor management valve-duty cycle)
  - If the purge is not active, perform the "Drive cycle for green engine control module (ECM)" in this section.

### Full Evaporative system monitor drive cycle

- Drive the vehicle to a suitable road where the test can be carried out, switch off the ignition.
- Leave the ignition switched off for 30 seconds.
- Restart the engine, accelerate briskly to 50 miles per hour (80 Kilometres per hour) making sure that the engine speed reaches at least 3500 RPM for a minimum of five seconds.

### 40 thou test, using the Jaguar approved diagnostic system

- Avoiding high engine loads, drive the vehicle steadily between 40 and 60 miles per hour. (64 and 97 Kilometres per hour) Using the Jaguar approved diagnostic system, monitor the Evap valve duty cycle (Purge vapor management valve-duty cycle) CCV status (Canister close valve-vapor recovery system) and the FTPS (Fuel tank pressure-vapor recovery system) The Jaguar approved diagnostic system will give an indication when the test is active. Dependant on the level of vapor concentration, it may take up to 30 minutes for the test to initialise. (vapor concentration cannot be measured using the Jaguar approved diagnostic equipment) When the test has initialised, (CCV closed) it will take up to 90 seconds to complete. Avoid excessive fuel movement while the test is active.

### 20 thou test, using the Jaguar approved diagnostic system

- Continue driving the vehicle steadily between 40 and 60 miles per hour. (64 and 97 Kilometres per hour) avoiding high engine loads for a further 10 minutes.
- Avoiding excessive fuel movement, gently bring the vehicle to rest (coast to a stop)
- Allow the vehicle to idle for 2 minutes.
- Use the Jaguar approved diagnostic system to monitor the Evap valve duty cycle (Purge vapor management valve-duty cycle) CCV status (Canister close valve-vapor recovery system) and the FTPS (Fuel tank pressure-vapor recovery system) The Jaguar approved diagnostic system will give an indication when the test is active. When the test has initialised, (CCV closed) it will take up to 90 seconds to complete.

If the 20 thou test has not run, it is likely that the vapor concentration in the purge system is too great. In this case, carry out the following -

- Drive the vehicle steadily for a further 30 minutes, avoiding excessive fuel movement.
- Avoiding excessive fuel movement, gently bring the vehicle to rest (coast to a stop)
- Allow the vehicle to idle for 2 minutes.
- Use the Jaguar approved diagnostic system to monitor the Evap valve duty cycle (Purge vapor management valve-duty cycle) CCV status (Canister close valve-vapor recovery system) and the FTPS (Fuel tank pressure-vapor recovery system) The Jaguar approved diagnostic system will give an indication when the test is active. When the test has initialised, (CCV closed) it will take up to 90 seconds to complete.

If the 20 thou test fails to run a second time, repeat the entire test.

- Check for DTCs. Rectify as indicated.

#### 40 thou test, using GDS510

- Avoiding high engine loads, drive the vehicle steadily between 40 and 60 miles per hour. (64 and 97 Kilometres per hour)
- When the test has initialised, using the GDS510, monitor the Evap valve duty cycle, CCV status, and the FTPS (the GDS510 will give an indication when the test is active)
- When the test has initialised, (CCV closed) it will take up to 90 seconds to complete.
- To make sure that the test has completed, TID 08 in mode 6 must be checked. (if the test has not completed, this TID will display 0. Any other value indicates test completion)
- If the test did not complete, repeat the test.

#### 20 thou test, using GDS510

- Continue driving the vehicle steadily between 40 and 60 miles per hour. (64 and 97 Kilometres per hour) avoiding high engine loads for a further 10 minutes.
- Avoiding excessive fuel movement, gently bring the vehicle to rest (coast to a stop)
- Allow the vehicle to idle for 2 minutes.
- When the test has initialised, using the GDS510, monitor the Evap valve duty cycle, CCV status, and the FTPS (the GDS510 will give an indication when the test is active)
- When the test has initialised, (CCV closed) it will take up to 90 seconds to complete.
- To make sure that the test has completed, TID 06 in mode 6 must be checked. (if the test has not completed, this TID will display 0. Any other value indicates test completion)
- If the test did not complete, repeat the test.
- If the 20 thou test has not run, it is likely that the vapor concentration in the purge system is too great. In this case, drive the vehicle steadily for a further 30 minutes, avoiding excessive fuel movement, then repeat the test.
- Check for DTCs. Rectify as indicated.

#### 40 thou and 20 thou tests using no additional equipment

The test procedure and conditions are as for the Jaguar approved diagnostic system or GDS510, but no confirmation of the test having run is possible without the use of one of these instruments. The DTC will be set if the fault still exists, but the possibility exists that the conditions for the test to run may not have been met, in which case, the DTC may not be set until the owner reproduces the conditions in which the fault originally occurred.

#### Drive cycle for "green" ECM

- To enable the ECM to re-learn fuelling adaptations.

• **NOTE:** This procedure should be performed whenever the vehicle battery has been disconnected.

Due to component tolerance and wear during the normal running of a vehicle, fuelling and air requirements for an engine will vary over time. The ECM has the ability to adjust for this variation by "learning" the level of compensation that is required. (These compensation values are referred to as adaptations)

If the vehicle battery is disconnected, all adaptations held within the ECM will be lost (ie, set to Zero) The ECM is then referred to as "green". To enable the vehicle to function correctly, the ECM must "relearn" these adaptations.

There are four areas or sites that need to be relearned.

- Allow the vehicle to idle until fully warm. (temperature gauge just below mid-point)
- Allow to idle for a further three minutes, minimum.
- Drive the vehicle with the air conditioning OFF on a level road using a constant throttle, or speed control if fitted, for at least one minute in the following gears, at the stated engine speeds for each of the sites below.

The vehicle speed is for guidance only. DO NOT use the vehicle speed as the target to set adaptations.

#### "Green" ECM drive cycle chart. Site 1

Engine/transmission software level	3.0L Man Z65 on	3.0L Auto Z65 on	2.5L Man Z65 on	2.5L Auto Z65 on
GEAR	4th	4th	4th	4th
ENGINE SPEED	2750RPM	2500RPM	2750RPM	2500RPM
VEHICLE SPEED (GUIDE ONLY)	52MPH (84KPH)	50MPH (80KPH)	54MPH (87KPH)	54MPH (87KPH)

Bring the vehicle to rest, allow to idle for one minute.

 **WARNING:** The following tests may involve parts which are hot.

If sufficient adaption have occurred, the Evap valve should be operating. This can be verified manually by either touching or listening to the valve. By touching the Evap valve, it should be possible to feel the valve switching. Listening to the Evap valve is best done using a workshop stethoscope, through which it should be possible to hear the valve operating.

Pinpoint Tests

PINPOINT TEST A : P0441. EVAP/PURGE VALVE FLOW CHECK. VALVE STUCK CLOSED.	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK EVAP/PURGE VALVE IS OPERATING.</b>	
	<div>1 Disconnect the Vapor pipe from the Inlet port of the EVAP/purge valve. (ie, from fuel tank)</div> <div>2 Run the engine for 2 minutes, ensuring that the engine reaches normal operating temperature.</div> <div>3 Check that the EVAP/purge valve is operating, by touch or by sound. (Using a stethoscope, it will be possible to hear the valve operating.)</div>
	Is the valve operating? <b>Yes</b> GO to <a href="#">A2.</a> <b>No</b> CHECK for DTC P0444, P0445. Conduct green ECM drive cycle. For additional information, see "diagnostic drive cycles" above.
<b>A2: CHECK FOR VACUUM AT EVAP/PURGE VALVE.</b>	
	<div>1 Check for vacuum at the valve.</div>
	Is a vacuum present? <b>Yes</b> Possible intermittent fault. Clear the DTC. Carry out a flow check monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above. <b>No</b> GO to <a href="#">A3.</a>
<b>A3: CHECK FOR BLOCKAGE IN THE SYSTEM.</b>	
	<div>1 Check for blockages in the intake manifold drilling, and the pipe from the intake manifold to the EVAP/purge valve.</div>
	Was a blockage found? <b>Yes</b> Rectify the blockage. CLEAR the DTC. Carry out a flow check monitor drive cycle. For additional information, see "diagnostic drive cycles" above. <b>No</b> INSTALL a new EVAP/purge valve. REFER to <a href="#">Evaporative Emission Canister Purge Valve</a> in this section. CLEAR the DTC. Carry out a flow check monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.

PINPOINT TEST B : P0442. LEAK DETECTED. 40 THOU.	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS

**B1: CHECK FUEL FILLER CAP FITMENT AND CONDITION OF PIPES AND CONNECTORS.**

	<b>1</b>	Ensure that the fuel filler cap is correctly installed and tightened. (minimum 3 clicks)
	<b>2</b>	Check the condition of all accessible pipes and connectors in the vapor line.
	Are all pipes and connectors in good condition? <b>Yes</b> Suspect concern with fuel tank assembly or carbon canister assembly. <b>No</b> REPAIR as necessary. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.	

**PINPOINT TEST C : P0443. EVAP/PURGE VALVE LEAKING.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK EVAP/PURGE VALVE INTEGRITY.</b>	
	<b>1</b> Disconnect the outlet pipe from the EVAP/purge valve. (From valve to manifold).
	<b>2</b> Apply a vacuum to the valve outlet pipe.
	Does the valve hold vacuum? <b>Yes</b> Possible intermittent fault. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, <b>No</b> INSTALL a new EVAP/purge valve. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.

**PINPOINT TEST D : P0444. EVAP/PURGE VALVE CIRCUIT OPEN CIRCUIT.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>D1: CHECK SUPPLY VOLTAGE TO EVAP/PURGE VALVE.</b>	
	<b>1</b> Disconnect EVAP/purge valve electrical connector, FH111.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage at FH111, pin 1 (GU).
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to D2.</a> <b>No</b> REPAIR the circuit between EVAP/purge valve electrical connector, FH111, pin 1 (GU) and the EMS control relay. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.
<b>D2: CHECK THE EVAP/PURGE VALVE SIGNAL WIRE FOR CONTINUITY.</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI01, pin 66 (UY) and FH111, pin 2 (UY).
	Is the resistance less than 5 Ohms? <b>Yes</b> <a href="#">GO to D3.</a> <b>No</b> REPAIR the circuit between PI01, pin 66 (UY) and FH111, pin 2 (UY). CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.
<b>D3: CHECK THE EVAP/PURGE VALVE SIGNAL WIRE FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between FH111, pin 2 (UY) and GROUND.
	Is the resistance less than 10,000 Ohms? <b>Yes</b> REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above. <b>No</b> <a href="#">GO to D4.</a>
<b>D4: CHECK THE EVAP/PURGE VALVE SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector, PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Check for a voltage at FH111, pin 2 (UY).
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above. <b>No</b> <a href="#">GO to D5.</a>
<b>D5: CHECK THE EVAP/PURGE VALVE RESISTANCE.</b>	
	<b>1</b> Check the resistance between pins 1 and 2 of the EVAP/purge valve.
	Is the resistance 30 to 34 Ohms at 68°F (20°C)? <b>Yes</b> INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Before replacing a ECM, contact Dealer technical support. <b>No</b> INSTALL a new EVAP/purge valve. REFER to <a href="#">Evaporative Emission Canister Purge Valve</a> in this section. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.

**PINPOINT TEST E : P0445. EVAP/PURGE VALVE CIRCUIT SHORTED.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>E1: CHECK EVAP/PURGE VALVE SIGNAL WIRE FOR SHORT TO GROUND.</b>	
	<b>1</b> Disconnect EVAP/purge valve electrical connector FH111.
	<b>2</b> Disconnect ECM electrical connector, PI01.

	<b>3</b> Measure the resistance between FH111, pin 2 (UY) and ground. Is the resistance less than 10,000 Ohms? <b>Yes</b> REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above. <b>No</b> NO short found. A short in the EVAP/purge valve supply circuit may result in a blown fuse 36, PDFB. See initial checks. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.
--	--

#### PINPOINT TEST F : P0446. CANISTER CLOSE VALVE STUCK CLOSED.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>F1: CHECK FOR FLOW THROUGH SYSTEM.</b>	
• <b>NOTE:</b> Depending on the severity of the blockage, it is possible that some difficulty has been experienced during refuelling.	
	<b>1</b> Disconnect the vapor line from EVAP/purge valve inlet port and apply low pressure. <b>2</b> Check for free flow of air through the following, paying attention to kinked or flattened pipes. <ul style="list-style-type: none"> <li>• Filter.</li> <li>• Interconnecting pipe. (filter to CCV)</li> <li>• CCV.</li> <li>• Interconnecting pipe. CCV to carbon canister.</li> <li>• Carbon canister.</li> <li>• Interconnecting pipe, carbon canister to fuel tank.</li> <li>• Fuel tank vapor port.</li> </ul>
	Is there a restriction? <b>Yes</b> RECTIFY as necessary. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above. <b>No</b> CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.

#### PINPOINT TEST G : P0447. CANISTER CLOSE VALVE CIRCUIT OPEN CIRCUIT.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>G1: CHECK SUPPLY VOLTAGE TO CCV.</b>	
	<b>1</b> Disconnect canister close valve electrical connector, CA270. <b>2</b> Turn the ignition switch to the ON position. <b>3</b> Measure the voltage at CA270, pin 1 (GU)
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to G2.</a> <b>No</b> REPAIR the circuit between CA270, pin 1 (GU) and the EMS control relay. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.
<b>G2: CHECK THE CCV SIGNAL WIRE FOR CONTINUITY.</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01. <b>2</b> Measure the resistance between PI01, pin 67 (O) and CA270, pin 2 (O)
	Is the resistance less than 5 Ohms? <b>Yes</b> <a href="#">GO to G4.</a> <b>No</b> REPAIR the circuit between PI01, pin 67 (O) and CA270, pin 2 (O) For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.
<b>G3: CHECK THE CCV SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<b>1</b> Turn the ignition switch to the ON position. <b>2</b> Check for a voltage at CA270, pin 2 (O)
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above. <b>No</b> <a href="#">GO to G4.</a>
<b>G4: CHECK THE CCV RESISTANCE</b>	
	<b>1</b> Check the resistance between pins 1 and 2 of the CCV.
	Is the resistance 25 to 30 Ohms at 68°F (20°C) ? <b>Yes</b> INSTALL a new ECM. Before replacing a ECM, contact Dealer Technical Support. <b>No</b> INSTALL a new CCV. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.

#### PINPOINT TEST H : P0448. CCV CIRCUIT SHORTED.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>H1: CHECK CCV SIGNAL WIRE FOR SHORT TO GROUND.</b>	
	<b>1</b> Disconnect CCV electrical connector, CA270. <b>2</b> Disconnect ECM electrical connector, PI01. <b>3</b> Measure the resistance between CA270, pin 2 (O) and ground.

Is the resistance less than 10,000 Ohms?	<p><b>Yes</b></p> <p>REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.</p> <p><b>No</b></p> <p>NO short found. A short in the CCV supply circuit may result in a blown fuse 36, PDFB. See initial checks.</p>
--	--

## PINPOINT TEST I : P0450. FUEL TANK PRESSURE SENSOR MALFUNCTION.

• NOTE: Prior to commencing this test, REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). Electronic Engine Controls, Diagnosis and Testing, sensor supply and ground circuits.

• NOTE: Access to the FTP sensor involves the removal of the fuel tank. To reduce the amount of work necessary, a slave harness and sensor could be used. This can be connected at the access port beneath the rear seat. Tests can then be carried out via the slave harness and sensor. If system operation is normal with the slave harness and sensor, the fault lies in the vehicle's harness or sensor.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### I1: FUEL TANK PRESSURE SENSOR IS OPERATING.

	<p><b>1</b> Disconnect electrical connector FP002. (beneath rear seat)</p> <p><b>2</b> Turn the ignition switch to the ON position.</p> <p><b>3</b> Measure the voltage between pins 2 and 3 of FP002.</p>
	Is the voltage 2.9 - 3.7 volts?
<b>Yes</b>	<a href="#">GO to I2</a> . Reconnect FP002.
<b>No</b>	<p>INSTALL a new FTPS.</p> <p>REFER to Section <a href="#">310-01 Fuel Tank and Lines</a>.</p> <p>Reconnect FP002. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.</p>

### I2: CHECK SIGNAL VOLTAGE AT FTPS.

	<p><b>1</b> Run the engine for two minutes, and until fully warm.</p> <p><b>2</b> Make sure EVAP/purge valve is operating.</p> <p><b>3</b> Steadily increase engine speed to 3000 RPM.</p> <p><b>4</b> Measure the voltage between pins 2 and 3 of FP002.</p>
	Does the voltage reduce?
<b>Yes</b>	Possible intermittent fault. Recheck DTCs, For additional information, see "diagnostic drive cycles" above. Contact Dealer technical support.
<b>No</b>	<p>INSTALL a new FTPS.</p> <p>REFER to Section <a href="#">310-01 Fuel Tank and Lines</a>.</p> <p>CLEAR the DTC. Carry out a full EVAP system monitor drive cycle. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.</p>

## PINPOINT TEST J : P0452, O0453. FUEL TANK PRESSURE SENSOR LOW/HIGH INPUT.

• NOTE: Prior to commencing this test, REFER to Section [303-14A Electronic Engine Controls](#) / [303-14B Electronic Engine Controls](#) / [303-14C Electronic Engine Controls](#). Electronic Engine Controls, Diagnosis and Testing, sensor supply and ground circuits.

• NOTE: Access to the FTP sensor involves the removal of the fuel tank. To reduce the amount of work necessary, a slave harness and sensor could be used. This can be connected at the access port beneath the rear seat. Tests can then be carried out via the slave harness and sensor. Tests can then be carried out via the slave harness and sensor. If system operation is normal with the slave harness and sensor, the fault lies in the vehicle's harness or sensor.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### J1: CHECK FTPS SIGNAL WIRE FOR CONTINUITY UP TO CONNECTOR CA5.

	<p><b>1</b> Disconnect ECM electrical connector, PI01.</p> <p><b>2</b> Disconnect FTPS electrical connector, FP002.</p> <p><b>3</b> Check for continuity between PI01, pin 104 (RG) and FP002, pin 3 (RG)</p> <p>● This test will not check the continuity of the harness from FP002 to FP001. If the circuit is continuous to FP002, the fuel tank must be removed and the harness and sensor continuity checked.</p>
	Is the circuit continuous?
<b>Yes</b>	<p>INSTALL a new FTPS, (and/or harness, FP002 to FP001) CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above. If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a>. Before replacing a ECM, contact Dealer technical support.</p>
<b>No</b>	<p>REPAIR the circuit between PI01, pin 104 (RG) and FP002, pin 3 (RG) CLEAR the DTC. Carry out a full Evap system monitor drive cycle. For additional information, see "diagnostic drive cycles" above. Recheck DTCs.</p>

### J2: CHECK FTPS SUPPLY WIRE FOR SHORT TO GROUND UP TO CONNECTOR FP002

	<b>1</b> Measure the resistance between FP002, pin 6 (OY) and ground.
	Is the resistance less than 10,000 Ohms?
<b>Yes</b>	<p>REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.</p>
<b>No</b>	<a href="#">GO to J3</a> .

### J3: CHECK FTPS SIGNAL WIRE FOR SHORT TO GROUND, UP TO CONNECTOR FP002.

	<p><b>1</b> Connect ECM electrical connector, PI01.</p> <p><b>2</b> Measure the resistance between FP002, pin 3 (RG) and ground.</p>
	Is the resistance less than 10,000 Ohms?
<b>Yes</b>	<p>REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.</p>
<b>No</b>	<a href="#">GO to J4</a> .

**J4: CHECK FTPS SIGNAL WIRE FOR SHORT TO BATTERY, UP TO CONNECTOR FP002**

	<b>1</b>	Turn the ignition switch to the ON position.
	<b>2</b>	Check for a voltage at FP002, pin 3 (RG)
	Is the voltage greater than 1 volt?	
	<b>Yes</b> REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. Turn the ignition switch to the ON position. Leave switched on for minimum 30 seconds. Recheck DTCs. For additional information, see "diagnostic drive cycles" above.	
	<b>No</b> <a href="#">GO to J5.</a>	

**J5: CHECK FTPS GROUND WIRE FOR SHORT TO BATTERY, UP TO CONNECTOR FP002**

	<b>1</b>	Turn the ignition switch to the ON position.
	<b>2</b>	Check for a voltage at FP002, pin 2 (BG)
	Is the voltage greater than 1 volt?	
	<b>Yes</b> REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.	
	<b>No</b> <a href="#">GO to J2.</a>	

**J6: CHECK FTPS SUPPLY WIRE FOR SHORT TO BATTERY UP TO CONNECTOR FP002**

	<b>1</b>	Connect ECM electrical connector, PI01.
	<b>2</b>	Turn the ignition switch to the ON position.
	<b>3</b>	Check for a voltage at FP002, pin 6 (OY)  ● This test will not check the integrity of the harness from FP002 to FT1. If the circuit is sound to FP002, the fuel tank must be removed and the harness and sensor continuity checked.
	Is the voltage greater than 5 volts?	
	<b>Yes</b> REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.	
	<b>No</b> INSTALL a new FTPS, (and/or harness, FP002 to FT1) CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above. If the DTC is repeated, INSTALL a new ECM. REFER to Section <a href="#">303-14A Electronic Engine Controls</a> / <a href="#">303-14B Electronic Engine Controls</a> / <a href="#">303-14C Electronic Engine Controls</a> . Before replacing a ECM, contact Dealer technical support.	

**PINPOINT TEST K : P0455. GROSS LEAK DETECTED.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>K1: CHECK FUEL FILLER CAP FITMENT AND CONDITION OF PIPES AND CONNECTORS.</b>	
	<b>1</b> Ensure that the fuel filler cap is correctly installed and tightened. (minimum 3 clicks)
	<b>2</b> Check the condition of all accessible pipes and connectors in the vapor line.
	Are all pipes and connectors in good condition?
	<b>Yes</b> Suspect concern with - 1. Blockage in vapor line. (engine to fuel tank)2. EVAP/purge valve stuck closed.3. Fuel tank assembly.4. carbon canister assembly.
	<b>No</b> REPAIR as necessary. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.

**PINPOINT TEST L : P0456. LEAK DETECTED. 20 THOU.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>L1: CHECK FUEL FILLER CAP FITMENT AND CONDITION OF PIPES AND CONNECTORS.</b>	
	<b>1</b> Ensure that the fuel filler cap is correctly installed and tightened. (minimum 3 clicks)
	<b>2</b> Check the condition of all accessible pipes and connectors in the vapor line.
	Are all pipes and connectors in good condition?
	<b>Yes</b> Suspect concern with fuel tank assembly or carbon canister assembly.
	<b>No</b> REPAIR as necessary. CLEAR the DTC. Carry out a full Evap system monitor drive cycle, recheck DTCs. For additional information, see "diagnostic drive cycles" above.

# Evaporative Emissions - Evaporative EmissionsVIN Range: N52048->N99999

Diagnosis and Testing

## Overview

2006my changes

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, plus the addition of secondary air injection and changes to Federal evaporative emissions (Europe is unchanged) and all market exhaust gas recirculation to comply with stage four emissions requirements.

The hardware changes to the Federal evaporative emissions system are the deletion of the canister close valve and the fuel tank pressure sensor, which have been replaced with a combined unit incorporating a DMTL (diagnostic monitoring of tank leakage) pump and a COV (change-over valve) into one module.

The software changes will have more effect on the technician, as there is no longer the need to carry out extensive drive cycles to confirm the success of a repair.

## DMTL conditions

The DMTL test is performed after the engine has stopped following a 10 minute run, providing that the vehicle fuel tank is between 15 and 85 percent full and that the ambient temperature is above 0°C (32°F) and less than 40°C (104°F).

The DMTL pump is driven to pressurize the fuel tank and the current is measured with the change-over valve in different states.

A comparison of the current draw in each state indicates the degree of any leak, and the ECM then sets the appropriate DTC.

## Inspection and verification

1. Visually inspect for obvious signs of mechanical or electrical damage.
2. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

### Visual inspection chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>Fuel filler cap and seal</li> <li>Fuel filler neck</li> <li>DMTL fresh air filter (restriction, etc)</li> <li>Fuel tank (leaks, damage, etc)</li> <li>Fuel lines and joints, etc</li> <li>Carbon canister</li> <li>Purge valve</li> <li>DMTL pump module</li> </ul>	<ul style="list-style-type: none"> <li>Fuses</li> <li>Connectors</li> <li>Harness(es)</li> <li>Purge valve</li> <li>DMTL pump</li> </ul>

3. If the cause is not visually evident use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the DTC Index.
- **NOTE: On all vehicles equipped with Diagnostic Monitor Tank Leakage (DMTL), there is a requirement to blank off the ventilation port (large diameter stub pipe) of the DMTL module, to prevent mis-diagnosis when carrying out a smoke test.**
4. Where K-Line, Vacutec or other proprietary smoke test equipment is available, it should be utilised to assist with Evaporative Emissions System leak diagnosis.

## Symptom Chart

Symptom	Possible Source	Action
Difficulty in filling	<ul style="list-style-type: none"> <li>Restriction in the vapor line between the fuel tank and the carbon canister outlet/atmospheric port</li> </ul>	Check for restrictions/damage, etc (see visual inspection).
Fuel smell	<ul style="list-style-type: none"> <li>System leak</li> <li>Purge valve inoperative</li> </ul>	Check for leaks, check the purge valve operation. GO to Pinpoint Test <a href="#">A</a> .
Message center display (refer to the owners handbook)	<ul style="list-style-type: none"> <li>Fuel filler cap missing/not tightened after refuelling</li> </ul>	Check the fuel filler cap and seal (see visual inspection).

### DTC index

• **NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first 5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic system).**

Diagnostic Trouble Code	Description	Possible Source	Action
P044100	Incorrect purge flow	<ul style="list-style-type: none"> <li>Evaporative canister purge pipe restricted, leaking, disconnected</li> <li>Evaporative canister vent restricted</li> <li>Evaporative canister purge valve to engine pipe(s) restricted, leaking, disconnected</li> <li>Evaporative canister purge valve failure</li> </ul>	For basic checks. GO to Pinpoint Test <a href="#">A</a> . Check for DTCs indicating a purge valve fault.
P044700	Change-over valve (COV) control circuit	<ul style="list-style-type: none"> <li>DMTL COV circuit short circuit to ground</li> </ul>	For COV circuit tests, GO to Pinpoint Test <a href="#">B</a> .
P044800	COV control circuit	<ul style="list-style-type: none"> <li>DMTL COV circuit short circuit to power</li> </ul>	For COV circuit tests, GO to Pinpoint Test <a href="#">B</a> .

Diagnostic Trouble Code	Description	Possible Source	Action
P045600	Leak detected (very small leak)	<ul style="list-style-type: none"> <li>DMTL has detected a leak in the fuel system</li> </ul>	Check the fuel system integrity (see visual inspection). Carry out K line or Vacutec tests to identify the leak.
P045800	Purge valve control circuit	<ul style="list-style-type: none"> <li>Purge valve control circuit: short circuit to ground</li> <li>Purge valve control circuit: high resistance</li> </ul>	For purge valve circuit tests. GO to Pinpoint Test <a href="#">C</a> .
P045900	Purge valve control circuit	<ul style="list-style-type: none"> <li>Purge valve control circuit: short circuit to power</li> </ul>	For purge valve circuit tests. GO to Pinpoint Test <a href="#">C</a> .
P240100	DMTL pump control circuit	<ul style="list-style-type: none"> <li>DMTL pump control circuit: short circuit to ground</li> </ul>	For DMTL pump circuit tests. GO to Pinpoint Test <a href="#">D</a> .
P240200	DMTL pump control circuit	<ul style="list-style-type: none"> <li>DMTL pump control circuit: short circuit to power</li> </ul>	For DMTL pump circuit tests. GO to Pinpoint Test <a href="#">D</a> .
P240429	DMTL pump sense circuit range/performance - signal invalid	<ul style="list-style-type: none"> <li>DMTL reference leak</li> <li>DMTL pump circuit: short circuit, high resistance</li> <li>DMTL pipework blocked/leaking</li> </ul>	Check the DMTL pipework. For DMTL pump circuit tests, GO to Pinpoint Test <a href="#">D</a> .
P24042F	DMTL pump sense circuit range/performance - signal erratic	<ul style="list-style-type: none"> <li>DMTL reference leak</li> <li>DMTL pump circuit: short circuit, high resistance</li> <li>DMTL pipework blocked/leaking</li> </ul>	Check the DMTL pipework. For DMTL pump circuit tests, GO to Pinpoint Test <a href="#">D</a> .
P240500	DMTL pump sense circuit low	<ul style="list-style-type: none"> <li>DMTL pump circuit: short circuit, high resistance</li> </ul>	For DMTL pump circuit tests, GO to Pinpoint Test <a href="#">D</a> .
P240600	DMTL pump sense circuit high	<ul style="list-style-type: none"> <li>DMTL pump circuit: short circuit, high resistance</li> </ul>	For DMTL pump circuit tests, GO to Pinpoint Test <a href="#">D</a> .
P240B00	DMTL pump heater circuit low	<ul style="list-style-type: none"> <li>DMTL heater control circuit: short circuit to ground</li> <li>DMTL heater control circuit: high resistance</li> </ul>	For DMTL heater circuit tests. GO to Pinpoint Test <a href="#">E</a> .
P240C00	DMTL pump heater circuit high	<ul style="list-style-type: none"> <li>DMTL heater control circuit: short circuit to power</li> </ul>	For DMTL heater circuit tests. GO to Pinpoint Test <a href="#">E</a> .
P245000	COV performance/stuck open	<ul style="list-style-type: none"> <li>DMTL pump circuit: short circuit, high resistance</li> <li>DMTL COV stuck open</li> </ul>	For DMTL pump tests, GO to Pinpoint Test <a href="#">D</a> . For DMTL COV tests, GO to Pinpoint Test <a href="#">B</a> . If the circuits are good, replace the DMTL assembly.
P245100	COV performance/stuck closed	<ul style="list-style-type: none"> <li>DMTL pump circuit: short circuit, high resistance</li> <li>DMTL COV stuck closed</li> </ul>	For DMTL pump tests, GO to Pinpoint Test <a href="#">D</a> . For DMTL COV tests, GO to Pinpoint Test <a href="#">B</a> . If the circuits are good, replace the DMTL pump module.

## Pinpoint Tests

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

PINPOINT TEST A : EVAPORATIVE SYSTEM INCORRECT PURGE FLOW	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK FUEL FILLER CAP FITMENT AND CONDITION OF CANISTER, PIPES AND CONNECTORS</b>	
	<ol style="list-style-type: none"> <li>Make sure that the fuel filler cap is correctly installed and tightened.</li> <li>Check the condition of the carbon canister.</li> <li>Check the condition of all accessible pipes and connectors in the vapor line.</li> </ol>
	Are the canister and all pipes and connectors in good condition?
	<b>Yes</b> <a href="#">GO to A2</a> .
	<b>No</b> REPAIR as necessary. CLEAR the DTC, test the system for normal operation.
<b>A2: CHECK THAT THE PURGE VALVE IS OPERATING</b>	
	<ol style="list-style-type: none"> <li>Disconnect the vapor pipe from the inlet port of the evaporative purge valve.</li> <li><b>RUN</b> the engine for 2 minutes, making sure that the engine reaches normal operating temperature.</li> <li>Check that the evaporative purge valve is operating, by touch or by sound (using a stethoscope, it will be possible to hear the valve operating).</li> </ol>
	Is the valve operating?
	<b>Yes</b> CHECK for related DTCs. Refer to the index above.
	<b>No</b> CHECK the purge valve circuits. GO to Pinpoint Test <a href="#">C</a> .

PINPOINT TEST B : CHANGE-OVER VALVE (COV) CONTROL CIRCUIT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE COV CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	

<b>1</b>	Key off.				
<b>2</b>	Disconnect the DMTL electrical connector, CA401.				
<b>3</b>	Measure the resistance between:				
	<table> <tr> <th>DMTL connector CA401, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	DMTL connector CA401, harness side	Battery	Pin 03	Negative terminal
DMTL connector CA401, harness side	Battery				
Pin 03	Negative terminal				
	Is the resistance less than 10,000 ohms?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	<a href="#">GO to B2.</a>				

**B2: CHECK THE COV CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>DMTL connector CA401, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Positive terminal</td></tr> </table>	DMTL connector CA401, harness side	Battery	Pin 03	Positive terminal
DMTL connector CA401, harness side	Battery				
Pin 03	Positive terminal				
	Is the resistance less than 10,000 ohms?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	<a href="#">GO to B3.</a>				

**B3: CHECK THE COV CONTROL CIRCUIT FOR HIGH RESISTANCE**

<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>DMTL connector CA401, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 48</td></tr> </table>	DMTL connector CA401, harness side	ECM connector FH300, harness side	Pin 03	Pin 48
DMTL connector CA401, harness side	ECM connector FH300, harness side				
Pin 03	Pin 48				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	INSTALL a new DMTL assembly. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.				

**PINPOINT TEST C : PURGE VALVE CONTROL CIRCUIT**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**C1: CHECK THE POWER SUPPLY TO THE PURGE VALVE**

<b>1</b>	Disconnect the purge valve connector, PI304.				
<b>2</b>	Key on, engine off.				
<b>3</b>	Measure the voltage between:				
	<table> <tr> <th>Purge valve connector PI304, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Purge valve connector PI304, harness side	Battery	Pin 01	Negative terminal
Purge valve connector PI304, harness side	Battery				
Pin 01	Negative terminal				
	Is the voltage less than 10 volts?				
<b>Yes</b>	REPAIR the circuit between the purge valve and battery. This circuit includes harness splices and fuse 37 of the front power distribution box. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	<a href="#">GO to C2.</a>				

**C2: CHECK THE PURGE VALVE CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND**

<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Purge valve connector PI304, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Purge valve connector PI304, harness side	Battery	Pin 02	Negative terminal
Purge valve connector PI304, harness side	Battery				
Pin 02	Negative terminal				
	Is the resistance less than 10,000 ohms?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	<a href="#">GO to C3.</a>				

**C3: CHECK THE PURGE VALVE CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Purge valve connector PI304, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	Purge valve connector PI304, harness side	Battery	Pin 02	Positive terminal
Purge valve connector PI304, harness side	Battery				
Pin 02	Positive terminal				
	Is the resistance less than 10,000 ohms?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	<a href="#">GO to C4.</a>				

**C4: CHECK THE PURGE VALVE CONTROL CIRCUIT FOR HIGH RESISTANCE**

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Purge valve connector PI304, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 92</td></tr> </table>	Purge valve connector PI304, harness side	ECM connector PI300, harness side	Pin 02	Pin 92
Purge valve connector PI304, harness side	ECM connector PI300, harness side				
Pin 02	Pin 92				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.				
<b>No</b>	INSTALL a new purge valve. REFER to: (303-13 Evaporative Emissions) <a href="#">Evaporative Emission Canister Purge Valve - 3.0L, VIN Range: N52048-&gt;N99999</a> (Removal and Installation), <a href="#">Evaporative Emission Canister Purge Valve - 4.2L, Vehicles With: Supercharger, VIN Range: N52048-&gt;N99999</a> (Removal and Installation), <a href="#">Evaporative Emission Canister Purge Valve - 4.2L, Vehicles Without: Supercharger, VIN Range: N52048-&gt;N99999</a> (Removal and Installation).				

(Removal and Installation).

Clear the DTC, test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

## PINPOINT TEST D : DIAGNOSTIC MONITORING OF FUEL TANK LEAKAGE (DMTL) PUMP CONTROL CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS					
D1: CHECK THE POWER SUPPLY TO THE DMTL PUMP						
	1	Key off.				
	2	Disconnect the DMTL pump electrical connector, CA401.				
	3	Key on, engine off.				
	4	Measure the voltage between:				
	<table><tr><th>DMTL pump connector CA401, harness side</th><th>Battery</th></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table>		DMTL pump connector CA401, harness side	Battery	Pin 04	Negative terminal
DMTL pump connector CA401, harness side	Battery					
Pin 04	Negative terminal					
Is the voltage less than 10 volts? <b>Yes</b> REPAIR the circuit between the DMTL pump and battery. This circuit includes harness splice FHS04 and fuse 49 of the front power distribution box. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation. <b>No</b> <a href="#">GO to D2.</a>						
D2: CHECK THE DMTL PUMP CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND						
	1	Key off.				
	2	Measure the resistance between:				
	<table><tr><th>DMTL pump connector CA401, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		DMTL pump connector CA401, harness side	Battery	Pin 01	Negative terminal
DMTL pump connector CA401, harness side	Battery					
Pin 01	Negative terminal					
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation. <b>No</b> <a href="#">GO to D3.</a>						
D3: CHECK THE DMTL PUMP CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER						
	1	Measure the resistance between:				
	<table><tr><th>DMTL pump connector CA401, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Positive terminal</td></tr></table>		DMTL pump connector CA401, harness side	Battery	Pin 01	Positive terminal
	DMTL pump connector CA401, harness side	Battery				
Pin 01	Positive terminal					
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation. <b>No</b> <a href="#">GO to D4.</a>						
D4: CHECK THE DMTL PUMP CONTROL CIRCUIT FOR HIGH RESISTANCE						
	1	Disconnect the ECM electrical connector, FH300.				
	2	Measure the resistance between:				
	<table><tr><th>DMTL pump connector CA401, harness side</th><th>ECM connector FH300, harness side</th></tr><tr><td>Pin 01</td><td>Pin 33</td></tr></table>		DMTL pump connector CA401, harness side	ECM connector FH300, harness side	Pin 01	Pin 33
	DMTL pump connector CA401, harness side	ECM connector FH300, harness side				
Pin 01	Pin 33					
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation. <b>No</b> INSTALL a new DMTL pump. Clear the DTC, test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.						

## PINPOINT TEST E : DIAGNOSTIC MONITORING OF FUEL TANK LEAKAGE (DMTL) HEATER CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS					
E1: CHECK THE POWER SUPPLY TO THE DMTL PUMP						
	1	Key off.				
	2	Disconnect the DMTL pump electrical connector, CA401.				
	3	Key on, engine off.				
	4	Measure the voltage between:				
		<table><tr><th>DMTL pump connector CA401, harness side</th><th>Battery</th></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table>	DMTL pump connector CA401, harness side	Battery	Pin 04	Negative terminal
DMTL pump connector CA401, harness side	Battery					
Pin 04	Negative terminal					
Is the voltage less than 10 volts?						
Yes						
REPAIR the circuit between the DMTL pump and battery. This circuit includes harness splice FHS04 and fuse 49 of the front power distribution box. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.						
No						
GO to E2.						
E2: CHECK THE DMTL HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND						
	1	Key off.				
	2	Measure the resistance between:				
		<table><tr><th>DMTL pump connector CA401, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Negative terminal</td></tr></table>	DMTL pump connector CA401, harness side	Battery	Pin 02	Negative terminal
	DMTL pump connector CA401, harness side	Battery				
Pin 02	Negative terminal					
Is the resistance less than 10,000 ohms?						
Yes						
REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.						
No						
GO to E3.						
E3: CHECK THE DMTL HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER						

1	Measure the resistance between:	
	DMTL pump connector CA401, harness side	Battery
Pin 02		Positive terminal
Is the resistance less than 10,000 ohms?		
Yes		
REPAIR the short circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.		
No		
GO to E4.		
DMTL HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE		
1	Disconnect the ECM electrical connector, FH300.	
2	Measure the resistance between:	
	DMTL pump connector CA401, harness side	ECM connector FH300, harness side
Pin 02		Pin 23
Is the resistance greater than 5 ohms?		
Yes		
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. Clear the DTC, test the system for normal operation.		
No		
INSTALL a new DMTL pump. Clear the DTC, test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.		

# Evaporative Emissions - Evaporative Emission CanisterVIN Range: M45255->N52047

Removal and Installation

## Special Tool(s)

Powertrain assembly jack

HTJ1200-2

HTJ1200-2

## Removal

All vehicles

1. Raise and support the vehicle.  
For additional information, refer to: [Lifting](#) (100-02 Jacking and Lifting, Description and Operation).
2. Remove the support bracket.

VUJ0004974

3. NOTE: Right-hand shown, Left-hand similar.

Detach the rear muffler and tailpipe exhaust hanger insulator.

VUJ0000571

4.  CAUTION: Using a suitable transmission jack, support the intermediate muffler.

Detach the front muffler exhaust hanger insulators.

VUJ0004975

5. NOTE: Left-hand shown, right-hand similar.

Loosen both catalytic converter retaining clamps.

6. Remove the front muffler and tail pipes.

7.  CAUTION: Under no circumstances must the flexible coupling (or its fixings) be loosened or removed from the driveshaft

Detach the driveshaft from the rear drive axle flange.

- Mark the position of the driveshaft in relation to the rear drive axle flange.
- Mark the position of the balance nut in relation to the rear drive axle flange (if fitted).
- Mark the position of each nut and bolt in relation to the rear drive axle flexible joint.

8. Remove both rear wheels and tires.

For additional information, refer to: [Wheel and Tire](#) (204-04 Wheels and Tires, Removal and Installation).

Vehicles without Brembo brakes

9. NOTE: Left-hand shown, right-hand similar.

Detach the brake caliper.

1. Remove and discard the brake caliper retaining bolts.

- Detach the brake caliper.

E46511

E44194

10.  CAUTION: The brake caliper must be supported at all times.

• NOTE: Left-hand shown, right-hand similar.

Using a suitable tie strap, secure the caliper to one side.

#### Vehicles with Brembo brakes

11.  CAUTION: The brake caliper must be supported at all times.

• NOTE: Left-hand shown, right-hand similar.

Detach the brake caliper and secure to one side.

- Remove and discard the brake caliper retaining bolts.
- Using a suitable tie strap, secure the caliper to one side.

E30447

#### All vehicles

12. NOTE: Left-hand shown, right-hand similar.

Detach the wiring harness.

E49921

13. Remove the left-hand shock absorber and spring assembly.  
For additional information, refer to: [Shock Absorber and Spring Assembly](#) (204-02 Rear Suspension, Removal and Installation).

14. Detach the right-hand shock absorber.

E31128

15. NOTE: Left-hand shown, right-hand similar.

Remove the rear subframe reinforcement plate retaining bolts.

E31121

16. Install the special tool to support the rear subframe.

E31122

17. NOTE: Left-hand shown, right-hand similar.

Remove the rear subframe rear retaining bolt.

E31123

18. NOTE: Left-hand shown, right-hand similar.

Remove the rear subframe front retaining bolt.

E31124

19.  CAUTION: Make sure the rear subframe does not come into contact with the fuel tank filler pipe.

Lower the rear subframe to a suitable height.

Vehicles built up to 01/2004

20. NOTE: Rear subframe shown removed for clarity.

Detach the wiring harness from the evaporative emission canister.

21. Disconnect the emission hose.

22. Detach the evaporative emission canister.

Vehicles built 02/2004 onwards

**23. NOTE:** Rear subframe shown removed for clarity.

Disconnect the emission hose.

**24.** Detach the evaporative emission canister.

All vehicles

**25.** Remove the evaporative emission canister.

## Installation

All vehicles

**1.** Install the evaporative emission canister.

Vehicles built up to 01/2004

2. To install, reverse the removal procedure.

1. Tighten to 10 Nm.

Vehicles built 02/2004 onwards

3. To install, reverse the removal procedure.

1. Tighten to 10 Nm.

All vehicles

4. NOTE: Left-hand shown, right-hand similar.

Loosely install the rear subframe front bolt.

5. Loosely install the rear subframe reinforcement plate bolts

6. Tighten to 125 Nm.

7. NOTE: Left-hand shown, right-hand similar.

Install the rear subframe rear retaining bolt.

- Tighten to 125 Nm.

8. Remove the special tool.

9. NOTE: Left-hand shown, right-hand similar.

Install the rear subframe reinforcement plate retaining bolts.

- Tighten to 47 Nm.

10. Attach the right-hand shock absorber.

1. Tighten to 133 Nm.

11. Install the left-hand shock absorber and spring assembly.

For additional information, refer to: [Shock Absorber and Spring Assembly](#) (204-02 Rear Suspension, Removal and Installation).

12. NOTE: Left-hand shown, right-hand similar.

Attach the wiring harness.

#### Vehicles with Brembo brakes

13.  CAUTION: The brake caliper must be supported at all times.

• NOTE: Left-hand shown, right-hand similar.

Attach the brake caliper.

- Remove the tie strap.
- Install new brake caliper retaining bolts.
- Tighten to 70 Nm.

#### Vehicles without Brembo brakes

14.  CAUTION: The brake caliper must be supported at all times.

• NOTE: Left-hand shown, right-hand similar.

Remove the tie strap.

15. NOTE: Left-hand shown, right-hand similar.

Attach the caliper.

- Install new brake caliper retaining bolts.
- Tighten to 34Nm.

#### All vehicles

16. Install both rear wheels and tires.

For additional information, refer to: [Wheel and Tire](#) (204-04 Wheels and Tires, Removal and Installation).

17. Attach the driveshaft to the rear drive axle flange.

- Tighten to 88 Nm.

18. Install the front muffler and tail pipes.

19. NOTE: Left-hand shown, right-hand similar.

Tighten both catalytic converter retaining clamps.

20.  CAUTION: Using a suitable transmission jack, support the intermediate muffler.

Attach the front muffler exhaust hanger insulators.

21. NOTE: Right-hand shown, Left-hand similar.

Attach the rear muffler and tailpipe exhaust hanger insulator.

22. Install the support bracket.

- Tighten to 6 Nm.

# Evaporative Emissions - Evaporative Emission CanisterVIN Range: N52048->N99999

Removal and Installation

## Special Tool(s)

Powertrain assembly jack

HTJ1200-2

## Removal

All vehicles

1. Remove the left-hand rear shock absorber.  
For additional information, refer to: [Shock Absorber and Spring Assembly](#) (204-02 Rear Suspension, Removal and Installation).

2.  **CAUTION:** The brake caliper must be supported at all times. Failure to follow this instruction may result in damage to the vehicle.

Detach the left-hand rear brake caliper and anchor plate.

- Remove and discard the brake caliper anchor plate retaining bolts.

3.  **CAUTION:** The brake caliper must be supported at all times. Failure to follow this instruction may result in damage to the vehicle.

- **NOTE:** Mark the brake disc position in relation to the hub.

Remove the left-hand brake disc.

4.  **CAUTION:** The brake caliper must be supported at all times. Failure to follow this instruction may result in damage to the vehicle.

Using a suitable tie strap, secure the left-hand brake caliper to the upper arm.

5. Disconnect the left-hand rear wheel speed sensor electrical connector.

6. Detach the left-hand rear wheel speed sensor wiring harness.

- Reposition the left-hand rear wheel speed sensor wiring harness.

7. Remove both of the mufflers and tail pipes.

For additional information, refer to: [Muffler and Tailpipe](#) (309-00 Exhaust System, Removal and Installation).

8. Remove the front muffler.

For additional information, refer to: [Front Muffler](#) (309-00 Exhaust System, Removal and Installation).

9.  **WARNING:** Rotate the special tool height adjustment valve slowly. Failure to follow this instruction may result in personal injury.

Install the special tool to support the left-hand side of the rear subframe.

10. Remove the rear subframe left-hand reinforcement plate retaining bolts.

11. Remove and discard the rear subframe left-hand rear retaining bolt.

12. Remove the rear subframe left-hand reinforcement plate.

- Remove and discard the rear subframe left-hand front retaining bolt.

13.  **WARNING:** Rotate the special tool height adjustment valve slowly. Failure to follow this instruction may result in personal injury.

• **CAUTIONS:**

 Make sure the rear subframe weight is evenly supported on the special tool. Failure to follow this instruction may result in damage to the vehicle.

 Make sure when lowering the rear subframe damage does not occur to the surrounding components. Failure to follow this instruction may result in damage to the vehicle.

Using the special tool, lower the left-hand side of the rear subframe to a maximum of 152mm (6 inch)

Vehicles with supercharger

14. **NOTE:** Rear subframe shown removed for clarity.

Disconnect the fuel pump driver module electrical connector.

**15. NOTE:** Rear subframe shown removed for clarity.

Remove the fuel pump driver module.

- Remove the retaining clip.

All vehicles

**16. NOTE:** Rear subframe shown removed for clarity.

Disconnect the evaporative emission canister vent solenoid vent hose.

**17. NOTE:** Rear subframe shown removed for clarity.

Disconnect the evaporative emission canister vent solenoid electrical connector.

**18. NOTE:** Rear subframe shown removed for clarity.

Disconnect the evaporative emission canister vapor pipes.  
For additional information, refer to: [Quick Release Coupling](#) (310-00 Fuel System - General Information, General Procedures).

19. NOTE: Rear subframe shown removed for clarity.

Detach the evaporative emission canister.

20. Remove the evaporative emission canister.

## Installation

All vehicles

1. Install the evaporative emission canister.

2. NOTE: Rear subframe shown removed for clarity.

Attach the evaporative emission canister.

- Tighten to 7 Nm.

3. NOTE: Rear subframe shown removed for clarity.

Connect the evaporative emission canister vapor pipes.  
For additional information, refer to: [Quick Release Coupling](#) (310-00 Fuel System - General Information, General Procedures).

4. NOTE: Rear subframe shown removed for clarity.

Connect the evaporative emission canister vent solenoid electrical connector.

5. NOTE: Rear subframe shown removed for clarity.

Connect the evaporative emission canister vent solenoid vent hose.

#### Vehicles with supercharger

6. NOTE: Rear subframe shown removed for clarity.

Install the fuel pump driver module.

- Install the retaining clip.

**7. NOTE:** Rear subframe shown removed for clarity.

Connect the fuel pump driver module electrical connector.

All vehicles

**8. CAUTIONS:**

Make sure the rear subframe weight is evenly supported on the special tool. Failure to follow this instruction may result in damage to the vehicle.

Make sure when raising the rear subframe damage does not occur to the surrounding components. Failure to follow this instruction may result in damage to the vehicle.

Using the special tool, raise the left-hand side of the rear subframe to the vehicle body.

**9. NOTE:** Install new rear subframe retaining bolts.

Loosely install the rear subframe left-hand front retaining bolt.

- Install the rear subframe left-hand reinforcement plate.

**10. NOTE:** Install new rear subframe retaining bolts.

Install the rear subframe left-hand rear retaining bolt.

- Tighten to 125 Nm.

**11. Install the rear subframe left-hand reinforcement plate retaining bolts.**

- Tighten to 47 Nm.

12. Tighten the rear subframe left-hand rear retaining bolt.

- Tighten to 125 Nm.

13.  **WARNING:** Rotate the special tool height adjustment valve slowly. Failure to follow this instruction may result in personal injury.

Remove the special tool from the rear subframe.

14. Attach the front muffler.

For additional information, refer to: [Front Muffler](#) (309-00 Exhaust System, Removal and Installation).

15. Attach both of the mufflers and tail pipes.

For additional information, refer to: [Muffler and Tailpipe](#) (309-00 Exhaust System, Removal and Installation).

16. Connect the left-hand rear wheel speed sensor electrical connector.

17. Attach the left-hand rear wheel speed sensor wiring harness.

E61360

18. Install the left-hand brake disc.

- Install the brake disc to the original position in relation to the hub.

E62537

19.  CAUTION: The brake caliper must be supported at all times. Failure to follow this instruction may result in damage to the vehicle.

- NOTE: Remove and discard the securing tie strap.
- NOTE: Install new brake caliper anchor plate retaining bolts.

Install the left-hand brake caliper and anchor plate.

- Tighten to 103 Nm.

20. Install the left-hand rear shock absorber.

For additional information, refer to: [Shock Absorber and Spring Assembly](#) (204-02 Rear Suspension, Removal and Installation).

21. Lower the vehicle.

# Evaporative Emissions - Evaporative Emission Canister Purge Valve VIN Range:

**M45255->N52047**

Removal and Installation

## Removal

1. Disconnect the evaporative emission canister purge valve electrical connector.

2. Disconnect the evaporative emission canister purge valve outlet hose.

3. Disconnect the evaporative emission canister purge valve inlet hose.

4. Remove the evaporative emission canister purge valve.

## Installation

1. To install, reverse the removal procedure.

# Evaporative Emissions - Evaporative Emission Canister Vent Solenoid

## Removal and Installation

### Removal

#### • WARNINGS:

 Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable vapors are always present and may ignite. Failure to follow these instructions may result in personal injury.

 Do not carry or operate cellular phones when working on or near any fuel related components. Highly flammable vapours are always present and may ignite. Failure to follow these instructions may result in personal injury.

1. Raise and support the vehicle.  
For additional information, refer to: Lifting (100-02, Description and Operation).
2. Disconnect the evaporative emission canister vent solenoid vapor hose.

3. Disconnect the evaporative emission canister vent solenoid electrical connector.

4. Remove the evaporative emission canister vent solenoid.
  - Remove and discard the evaporative emission canister vent solenoid O-ring seal.

### Installation

**1.** NOTE: Install a new evaporative emission canister vent solenoid O-ring seal.

To install, reverse the removal procedure.

- Tighten to 6 Nm.

E62527

# Evaporative Emissions - Fuel Tank Pressure Sensor Vehicles Built Up To: 01/2004

Removal and Installation

## Removal

1. Remove the fuel tank. For additional information, refer to [Section 310-01 Fuel Tank and Lines](#).
2. Disconnect the fuel pressure sensor electrical connector.

3. Remove the fuel pressure sensor.

## Installation

1. To install, reverse the removal procedure.

## Description and Operation

E30343

Item	Part Number	Description
1	—	Throttle position (TP) sensor
2	—	Engine coolant temperature (ECT) sensor
3	—	Knock sensor - LH
4	—	Oil pressure sensor
5	—	Oil temperature sensor
6	—	Fuel pressure sensor
7	—	Crankshaft position (CKP) sensor
8	—	Camshaft position (CMP) sensor
9	—	Variable camshaft timing oil control solenoid

E 30345

Item	Part Number	Description
1	-	Manifold absolute pressure (MAP) sensor
2	-	Intake manifold tuning (IMT) valve
3	-	Intake manifold tuning (IMT) valve
4	-	Knock sensor - RH

E30344

Item	Part Number	Description
1	-	Mass air flow (MAF) sensor

E30438

Item	Part Number	Description
1	-	Heated oxygen sensor - RH
2	-	Catalyst monitor sensor - RH
3	-	Catalyst monitor sensor - LH
4	-	Heated oxygen sensor (HO2S) - LH

### Engine Control Module (ECM)

The electronic engine control system consists of an engine control module (ECM), located behind the glove compartment, and a number of sensing and actuating devices. The sensors supply the ECM with input signals which relate to the engine operating conditions and driver requirements. The sensor information is evaluated by the ECM using the results to activate the appropriate response from the actuating devices. The system provides the necessary engine control accuracy and adaptability to:

- Minimize exhaust emissions and fuel consumption.
- Provide optimum driver control under all conditions.
- Minimize evaporative emissions.
- Provide system diagnostics.

In addition to these functions the ECM also interfaces with other vehicle systems through the controller area network (CAN).

### Camshaft Position (CMP) Sensor

The camshaft position (CMP) sensors monitor the position of both camshafts to allow the ECM to control the phase of the inlet camshafts relative to the position of the crankshaft.

### Variable Camshaft Timing Oil Control Solenoid

The variable camshaft timing oil control solenoid is a hydraulic actuator, which advances and retards the inlet camshaft timing, thereby altering the camshaft to crankshaft phasing for optimum engine performance.

### Intake Manifold Tuning (IMT) Valve

There are two intake manifold tuning (IMT) valves, an upper and a lower, sometimes referred to as number one and two respectively. They are a two position (open and close) device used to create a variable air intake system. The IMT valve positions are switched by signals from the ECM to optimize torque across the engine's speed and load range. On vehicles fitted with a 2.5L engine the upper IMT valve opens between 4,500 and 6,400 rpm while the lower IMT valve opens between 3,700 and 6,400 rpm. On vehicles fitted with a 3.0L engine the upper IMT valve opens between 4,100 and 6,150 rpm while the lower IMT valve opens between 3,900 and 6,150 rpm.

### Knock Sensors (KS)

The knock sensors (KS) detect combustion knock within the engine cylinders and sends a signal to the ECM. The ECM uses this information to gradually adjust the ignition timing until the combustion knock is eliminated.

### Mass Air flow (MAF) Sensor

The mass air flow (MAF) sensor informs the ECM of the rate of air flow entering the engine by producing a voltage which is proportional to the rate of air flow into the engine. The voltage produced by the MAF sensor increases as the rate of air flow increases. The ECM also takes into account the density of the air entering the air intake system so that it is possible to maintain the required air to fuel ratio, and to compensate for variations in atmospheric pressure.

Integral to the MAF sensor is the intake air temperature sensor (IAT) which measures the temperature of the air entering the air intake system. The ECM uses this information to compensate for higher than normal air intake temperatures.

### Throttle Position (TP) Sensor

The ECM monitors the angle of the throttle blade within the throttle housing through the throttle position (TP) sensor. The TP sends a voltage to the ECM which is proportional to the angle of the throttle plate. The voltage from the TP increases with the angle of the throttle plate. There are two sensor tracks within the TP sensor.

### Crankshaft Position (CKP) Sensor

The crankshaft position (CKP) sensor is an inductive pulse generator, which scans protrusions on a pulse ring fitted to the front of the crankshaft to inform the ECM of the crankshaft's position and speed. The CKP sensor produces an alternating voltage. The frequency of this voltage increases proportional to engine speed.

### Engine Coolant Temperature (ECT) Sensor

The engine coolant temperature (ECT) sensor is a thermistor type sensor that provides an input signal to the ECM which is proportional to the engine coolant temperature. The ECT sensor is a negative temperature coefficient (NTC) sensor and its resistance decreases with a proportional increase in engine coolant temperature.

### Oil Temperature Sensor

The oil temperature sensor is a thermistor type sensor that provides an input signal to the ECM which is proportional to the engine oil temperature.

### Oil Pressure Switch

The oil pressure switch is connected to the instrument cluster and is not directly part of the electronic engine control system.

### Heated Oxygen Sensor (HO2S)

The heated oxygen sensor (HO2S) is a linear characteristic type sensor, fitted forward of the exhaust system's catalytic converter. The ECM uses this as it's primary sensor to measure the oxygen content of the exhaust gasses within the exhaust system to provide closed-loop fuelling control.

### Catalyst Monitor Sensor

The catalyst monitor sensor is a non-linear characteristic type sensor fitted to the exhaust system's catalytic converter. The ECM uses this as it's secondary sensor to measure the oxygen content of the exhaust gasses within the exhaust after they have passed through the catalytic converter. As well as providing additional closed-loop fuelling control the ECM uses this information to determine the efficiency of the catalytic converter.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Electronic Engine Controls

## VIN Range: M45255->N52047

### Diagnosis and Testing

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Engine oil level</li> <li>● Cooling system coolant level</li> <li>● Fuel Contamination</li> <li>● Throttle body</li> </ul>	<ul style="list-style-type: none"> <li>● Fuses. (9, 31, 32, 37)</li> <li>● Wiring harness</li> <li>● Electrical connector(s)</li> <li>● Sensor(s)</li> <li>● Engine control module (ECM)</li> </ul>

3. Verify the following systems are working correctly:
  - Air intake system
  - Cooling system
  - Charging system
  - Fuel charging system
4. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
5. If the concern is not visually evident and the approved Jaguar diagnostic system is not available, use a fault code reader to retrieve the fault codes before proceeding to the Diagnostic Trouble Code (DTC)s Index Chart.
6. Make sure that a power supply is present to the ECM from fuse 32 of the engine compartment fuse box before carrying out diagnostic work on the electronic engine control system.

### Diagnostic Trouble Code (DTC) Index

**PINPOINT TEST A : DTC P0116, P0117, P0118, P0125. ECT SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE ECT SENSOR RESISTANCE</b>	
	<b>1</b> Measure the resistance between pins 1 and 2 of the Engine Coolant Temperature sensor.
	Is the resistance 2437 to 2464 ohms at 20°C?
	<b>Yes</b> <a href="#">GO to A2.</a>
	<b>No</b> INSTALL a new ECT sensor. CLEAR the DTCs. TEST the system for normal operation.
<b>A2: CHECK THE ENGINE COOLANT TEMPERATURE (ECT) SENSOR SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the ECT sensor electrical connector EN18.
	<b>3</b> Disconnect the ECM electrical connector, EN16.
	<b>4</b> Measure the resistance between the ECT sensor electrical connector EN18, pin 2 (UY) and the ECM electrical connector EN16, pin 70 (UY).
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to A3.</a>
	<b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>A3: CHECK THE ECT SENSOR SIGNAL WIRE FOR A SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between the ECT sensor electrical connector EN18, pin 2 (UY) and EN16, pin 19.
	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to A4.</a>
<b>A4: CHECK THE ECT SENSOR GROUND CIRCUIT</b>	
	<b>1</b> Measure the resistance between the ECT sensor electrical connector EN18, pin 1 (BG) and GROUND.
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to A5.</a>
	<b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>A5: CHECK THE ECT SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between the ECT electrical connector EN18, pin 1 (BG) and GROUND.
	Is a voltage present?
	<b>Yes</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to A6.</a>
<b>A6: CHECK THE ECT SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
	<b>1</b> Connect the ECM electrical connector EN16.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between the ECT sensor electrical connector EN18, pin 2 (UY) and GROUND.
	Is the voltage greater than 5 volts?
	<b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
	<b>No</b> INSTALL a new ECT sensor. CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer Technical Support.

**PINPOINT TEST B : DTC P0335, P0336, P1245, P1246. CRANKSHAFT POSITION (CKP) SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>B1: CHECK THE CKP SENSOR FOR CORRECT INSTALLATION</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Check the CKP sensor for correct installation.
	Is the CKP sensor correctly installed?
	<b>Yes</b> <a href="#">GO to B7.</a>
	<b>No</b> INSTALL the CKP sensor correctly. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.
<b>B2: CHECK THE CKP SENSOR FOR DEBRIS</b>	
	<b>1</b> Remove the CKP sensor and inspect for debris.
	Is the CKP sensor and flywheel teeth free of debris?
	<b>Yes</b> <a href="#">GO to B3.</a>
	<b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.
<b>B3: CHECK THE CKP SENSOR RESISTANCE</b>	

	<b>1</b> Measure the resistance between pins 1 and 2 of the CKP sensor. Is the resistance 250 to 450 ohms? <b>Yes</b> <a href="#">GO to B4.</a> <b>No</b> INSTALL a new CKP sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.
--	---

#### **B4: CHECK THE CKP SENSOR GROUND WIRE FOR OPEN CIRCUIT**

	<b>1</b> Disconnect the ECM electrical connector PI01. <b>2</b> Disconnect the CKP sensor electrical connector PI21. <b>3</b> Measure the resistance between the CKP sensor electrical connector PI21, pin 1 (B) and the ECM electrical connector PI01, pin 37 (B).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to B5.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

#### **B5: CHECK THE CKP SENSOR SIGNAL WIRE FOR OPEN CIRCUIT**

	<b>1</b> Measure the resistance between the CKP sensor electrical connector PI21, pin 2 (O) and the ECM electrical connector PI01, pin 36 (O).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to B6.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

#### **B6: CHECK THE CKP SENSOR GROUND WIRE FOR A SHORT TO GROUND**

	<b>1</b> Measure the resistance between the CKP sensor electrical connector PI21 pin 1 (B) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to B7.</a>

#### **B7: CHECK THE CKP SENSOR SIGNAL WIRE FOR A SHORT TO GROUND**

	<b>1</b> Measure the resistance between the CKP sensor electrical connector PI21 pin 2 (O) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to B8.</a>

#### **B8: CHECK THE CKP SENSOR GROUND WIRE FOR A SHORT TO BATTERY POSITIVE**

	<b>1</b> Turn the ignition switch to the ON position. <b>2</b> Measure the voltage between the CKP sensor electrical connector PI21 pin 1 (B) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to B9.</a>

#### **B9: CHECK THE CKP SENSOR SIGNAL WIRE FOR A SHORT TO BATTERY POSITIVE**

	<b>1</b> Turn the ignition switch to the ON position. <b>2</b> Measure the voltage between the CKP sensor electrical connector PI21 pin 2 (O) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new CKP sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation. If the concern persists INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

### **PINPOINT TEST C : DTC P0340, P0341: RH CAMSHAFT POSITION (CMP) SENSOR**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK THE RH CMP SENSOR FOR CORRECT INSTALLATION</b>	
	<b>1</b> Turn the ignition switch to the OFF position. <b>2</b> Check the CMP sensor for correct installation.
	Is the CMP sensor correctly installed? <b>Yes</b> <a href="#">GO to C2.</a> <b>No</b> INSTALL the CMP sensor correctly. REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). . CLEAR the DTCs. TEST the system for normal operation.
<b>C2: CHECK THE RH CMP SENSOR FOR FOREIGN DEBRIS</b>	
	<b>1</b> Remove the CMP sensor and inspect for foreign debris.

	Is the CMP sensor free of foreign debris? <b>Yes</b> <a href="#">GO to C3.</a> <b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
--	--

### C3: CHECK THE RH CMP SENSOR RESISTANCE

	<b>1</b> Measure the resistance between pins 1 and 2 of the RH Camshaft position sensor.
	Is the resistance 450 to 650 ohms? <b>Yes</b> <a href="#">GO to C4.</a> <b>No</b> INSTALL a new CMP sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.

### C4: CHECK THE RH CMP SENSOR SIGNAL WIRE FOR OPEN CIRCUIT

	<b>1</b> Disconnect the ECM electrical connector PI01.
	<b>2</b> Disconnect the CMP sensor electrical connector PI23.
	<b>3</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 1 (Y) and the ECM electrical connector PI01, pin 94 (Y).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to C5.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

### C5: CHECK THE RH CMP GROUND WIRE FOR OPEN CIRCUIT

	<b>1</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 2 (R) and the ECM electrical connector PI01, pin 95 (R).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to C6.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

### C6: CHECK THE RH CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

	<b>1</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 1 (Y) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to C7.</a>

### C7: CHECK THE RH CMP SENSOR GROUND CIRCUIT FOR A SHORT TO GROUND

	<b>1</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 2 (R) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to C8.</a>

### C8: CHECK THE RH CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO BATTERY POSITIVE

	<b>1</b> Measure the voltage between the CMP sensor electrical connector PI23, pin 1 (Y) and GROUND.
	Is the voltage greater than 5 volt? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to C9.</a>

### C9: CHECK THE RH CMP SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY POSITIVE

	<b>1</b> Turn the ignition switch to the RUN position.
	<b>2</b> Measure the voltage between the CMP sensor electrical connector PI23, pin 2 (R) and GROUND.
	Is the voltage greater than 5 volt? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new CMP sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

## PINPOINT TEST D : DTC P0345, P0346, P1340, P1341: LH CAMSHAFT POSITION (CMP) SENSOR

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>D1: CHECK THE LH CMP SENSOR FOR CORRECT INSTALLATION</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Check the CMP sensor for correct installation.
	Is the CMP sensor correctly installed? <b>Yes</b> <a href="#">GO to D2.</a> <b>No</b>

INSTALL the CMP sensor correctly. CLEAR the DTCs. TEST the system for REFER to: [Camshaft Position \(CMP\) Sensor LH](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). normal operation.

#### D2: CHECK THE LH CMP SENSOR FOR FOREIGN DEBRIS

**1** Remove the CMP sensor and inspect for foreign debris.

Is the CMP sensor free of foreign debris?

**Yes**  
[GO to D3.](#)

**No**  
CLEAN the sensor and wheel. INSTALL the sensor.  
REFER to: [Camshaft Position \(CMP\) Sensor LH](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation.

#### D3: CHECK THE LH CMP SENSOR RESISTANCE

**1** Measure the resistance between pins 1 and 2 of the LH Camshaft position sensor.

Is the resistance 450 to 650 ohms?

**Yes**  
[GO to D4.](#)

**No**  
INSTALL a new CMP sensor.  
REFER to: [Camshaft Position \(CMP\) Sensor LH](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation.

#### D4: CHECK THE LH CMP SENSOR SIGNAL WIRE FOR OPEN CIRCUIT

**1** Disconnect the ECM electrical connector PI01.

**2** Disconnect the CMP sensor electrical connector PI22.

**3** Measure the resistance between the CMP sensor electrical connector PI22, pin 1 (N) and the ECM electrical connector PI01, pin 68 (N).

Is the resistance less than 5 ohms?

**Yes**  
[GO to D5.](#)

**No**  
REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

#### D5: CHECK THE LH CMP GROUND WIRE FOR OPEN CIRCUIT

**1** Measure the resistance between the CMP sensor electrical connector PI22, pin 2 (G) and the ECM electrical connector PI01, pin 69 (G).

Is the resistance less than 5 ohms?

**Yes**  
[GO to D6.](#)

**No**  
REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

#### D6: CHECK THE LH CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

**1** Measure the resistance between the CMP sensor electrical connector PI22, pin 1 (N) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**  
REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**  
[GO to D7.](#)

#### D7: CHECK THE LH CMP SENSOR GROUND CIRCUIT FOR A SHORT TO GROUND

**1** Disconnect the ECM electrical connector, PI01.

**2** Measure the resistance between the CMP sensor electrical connector PI22, pin 2 (G) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**  
REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**  
[GO to D8.](#)

#### D8: CHECK THE LH CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO BATTERY POSITIVE

**1** Turn the ignition switch to the ON position.

**2** Measure the voltage between the CMP sensor electrical connector PI22, pin 1 (N) and GROUND.

Is the voltage greater than 5 volts?

**Yes**  
REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**  
[GO to D9.](#)

#### D9: CHECK THE LH CMP SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY POSITIVE

**1** Turn the ignition switch to the ON position.

**2** Measure the voltage between the CMP sensor electrical connector PI22, pin 2 (G) and GROUND.

Is the voltage greater than 5 volts?

**Yes**  
REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**  
INSTALL a new CMP sensor.  
REFER to: [Camshaft Position \(CMP\) Sensor LH](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  
REFER to: [Engine Control Module \(ECM\)](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
Before replacing a ECM, contact dealer technical support.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>E1: CHECK THE POWER SUPPLY CIRCUIT TO THE RH HO2S HEATER</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect HO2S sensor electrical connector, PI10.</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Measure the voltage between the RH HO2S electrical connector PI10, pin 1 (WG) and GROUND.</li> </ol>
	<p>Is the voltage less than 10 volts?</p> <p><b>Yes</b> <a href="#">GO to E6.</a></p> <p><b>No</b> <a href="#">GO to E2.</a></p>
<b>E2: CHECK THE GROUND CIRCUIT TO THE RH HO2S HEATER FOR OPEN CIRCUIT</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the OFF position.</li> <li>2 Disconnect the ECM electrical connector PI01.</li> <li>3 Measure the resistance between the RH HO2S electrical connector PI10, pin 2 (RU) and the ECM electrical connector PI01, pin 1 and pin 2 (RU).</li> </ol>
	<p>Is the resistance of each wire less than 5 ohms?</p> <p><b>Yes</b> <a href="#">GO to E3.</a></p> <p><b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>E3: CHECK THE RH HO2S HEATER RESISTANCE</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between pins 1 and 2 of the RH HO2S.</li> </ol>
	<p>Is the resistance 3.3 ohms?</p> <p><b>Yes</b> <a href="#">GO to E4.</a></p> <p><b>No</b> INSTALL a new RH HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.</p>
<b>E4: CHECK THE RH HO2S GROUND CIRCUIT FOR SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between the RH HO2S electrical connector PI10, pin 2 (RU) and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b> <a href="#">GO to E5.</a></p>
<b>E5: CHECK THE RH HO2S GROUND CIRCUIT FOR SHORT TO BATTERY</b>	
	<ol style="list-style-type: none"> <li>1 Check for a voltage between the RH HO2S electrical connector PI10, pin 2 (RU) and GROUND.</li> </ol>
	<p>Is the voltage greater than 5 volts?</p> <p><b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b> INSTALL a new RH HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.</p>
<b>E6: CHECK FUSE 20 OF THE FRONT POWER DISTRIBUTION BOX</b>	
	<ol style="list-style-type: none"> <li>1 Check the fuse.</li> </ol>
	<p>Is the fuse OK?</p> <p><b>Yes</b> <a href="#">GO to E8.</a></p> <p><b>No</b> <a href="#">GO to E7.</a></p>
<b>E7: CHECK FUSE 20 OF THE FRONT POWER DISTRIBUTION BOX FOR A SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between electrical connector FH32 pin 26 of the engine compartment fuse box and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b> REPAIR short to ground between the engine compartment fuse box and the RH bank HO2S. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.</p>
<b>E8: CHECK THE POWER SUPPLY TO FUSE 20 OF THE FRONT POWER DISTRIBUTION BOX</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the ON position.</li> <li>2 Measure the voltage between fuse 20 electrical connector FH32 pin 26 and GROUND.</li> </ol>
	<p>Is the voltage less than 10 volts?</p> <p><b>Yes</b> Repair the circuit from the ECM control relay to the engine compartment fuse box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> Repair the circuit between the battery and the EMS relay. Test the relay, renew as necessary. CLEAR the DTC. TEST the system for normal operation.</p>

PINPOINT TEST F : DTC P0181, P0182, P0183. FUEL TEMPERATURE SENSOR.	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>F1: CHECK THE FUEL TEMPERATURE SENSOR RESISTANCE</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the fuel temperature sensor electrical connector, IL09.</li> <li>2 Measure the resistance between pins 1 and 2 of the fuel temperature sensor.</li> </ol>

	Is the resistance 37.35 ohms at 20°C? <b>Yes</b> <a href="#">GO to F2.</a> <b>No</b> INSTALL a new Fuel Temperature Sensor REFER to: <a href="#">Fuel Temperature Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
--	--

## F2: CHECK CONTINUITY OF THE FUEL TEMPERATURE SENSOR POWER SUPPLY CIRCUIT

	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the fuel temperature sensor electrical connector IL09.
	<b>3</b> Disconnect the ECM electrical connector PI01.
	<b>4</b> Measure the resistance between the fuel temperature sensor electrical connector IL09, pin 2 (WU) and the ECM electrical connector PI01, pin 50 (WU).

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to F3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	--

## F3: CHECK THE FUEL TEMPERATURE SENSOR GROUND CIRCUIT

	<b>1</b> Measure the resistance between the fuel temperature sensor electrical connector IL09 pin 1 (BG) and GROUND.
--	--

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to F4.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	--

## F4: CHECK THE FUEL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO GROUND

	<b>1</b> Measure the resistance between the fuel temperature sensor electrical connector IL09 pin 2 (WU) and GROUND.
--	--

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to F5.</a>
--	---

## F5: CHECK THE FUEL TEMPERATURE SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY

	<b>1</b> Disconnect the fuel temperature sensor electrical connector, IL09.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Check for a voltage between IL09, pin 1 (BG) and GROUND.

	Is a voltage present? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to F6.</a>
--	---

## F6: CHECK THE FUEL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE

	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between the fuel temperature sensor electrical connector IL09, pin 2 (WU) and GROUND.

	Is the voltage greater than 10 volts? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new fuel temperature sensor REFER to: <a href="#">Fuel Temperature Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.
--	---

## PINPOINT TEST G : DTC P0327, P0328, P1648. KNOCK SENSOR (KS) RIGHT-HAND

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>G1: CHECK THE KS RESISTANCE</b>	
	<b>1</b> Disconnect the KS electrical connector, PI20.
	<b>2</b> Measure the resistance between pins 1 and 2 of the KS.
	Is the resistance 180 - 220 Kohms? <b>Yes</b> <a href="#">GO to G2.</a> <b>No</b> INSTALL a new Knock Sensor REFER to: <a href="#">Knock Sensor (KS) RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
<b>G2: CHECK THE KS SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the KS sensor electrical connector PI20.
	<b>3</b> Disconnect the ECM electrical connector PI01.
	<b>4</b> Measure the resistance between PI20, pin 1 (N) and PI01, pin 98 (N).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to G3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

<b>G3: CHECK THE KS SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<div>1</div> <div>2</div> <div>3</div> <div>4</div>
	<p>Is a voltage present?</p> <p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to G4.</a></p>
<b>G4: CHECK THE KS SIGNAL WIRE FOR A SHORT TO GROUND</b>	
	<div>1</div>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to G5.</a></p>
<b>G5: CHECK THE KS GROUND LEAD FOR OPEN CIRCUIT</b>	
	<div>1</div> <div>2</div> <div>3</div>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to G6.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between PI20, pin2 (B) and PI01, pin 100 (BG) For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>G6: CHECK THE KS GROUND LEAD FOR SHORT TO BATTERY</b>	
	<div>1</div> <div>2</div> <div>3</div> <div>4</div>
	<p>Is a voltage present?</p> <p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new KS  REFER to: <a href="#">Knock Sensor (KS) RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  Before replacing a ECM, contact dealer technical support.</p>
<b>PINPOINT TEST H : DTC P0332, P0333, P1648. KNOCK SENSOR (KS) LEFT-HAND</b>	
<b>TEST CONDITIONS</b>	<b>DETAILS/RESULTS/ACTIONS</b>
<b>H1: CHECK THE KS RESISTANCE</b>	
	<div>1</div> <div>2</div>
	<p>Is the resistance 180 - 220 Kohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to H2.</a></p> <p><b>No</b></p> <p>INSTALL a new Knock Sensor  REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).</p>
<b>H2: CHECK THE KS SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<div>1</div> <div>2</div> <div>3</div> <div>4</div>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to H3.</a></p> <p><b>No</b></p> <p>REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>H3: CHECK THE KS SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<div>1</div> <div>2</div> <div>3</div> <div>4</div>
	<p>Is a voltage present?</p> <p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to H4.</a></p>
<b>H4: CHECK THE KS SIGNAL WIRE FOR A SHORT TO GROUND</b>	
	<div>1</div>

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to H5.</a>
--	---

#### H5: CHECK THE KS GROUND LEAD FOR OPEN CIRCUIT

<b>1</b>	Disconnect the KS electrical connector, PI19.
<b>2</b>	Disconnect the ECM electrical connector, PI01.
<b>3</b>	Measure the resistance between PI19, pin2 (B) and PI01, pin 100 (BG)

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to H6.</a> <b>No</b> REPAIR the circuit between PI19, pin2 (B) and PI01, pin 100 (BG) For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	---

#### H6: CHECK THE KS GROUND LEAD FOR SHORT TO BATTERY

<b>1</b>	Connect the KS sensor electrical connector PI19.
<b>2</b>	Connect the ECM electrical connector PI01.
<b>3</b>	Turn the ignition switch to the ON position.
<b>4</b>	Check for a voltage between PI19, pin 1 (N) and GROUND.

	Is a voltage present? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new KS REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

#### PINPOINT TEST I : DTC P0196, P0197, P0198. OIL TEMPERATURE SENSOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### I1: CHECK THE OIL TEMPERATURE SENSOR SIGNAL WIRE FOR OPEN CIRCUIT

<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the oil temperature sensor electrical connector PI24.
<b>3</b>	Disconnect the ECM electrical connector PI01.
<b>4</b>	Measure the resistance between the oil temperature sensor electrical connector PI24, pin 1 (Y) and the ECM electrical connector PI01, pin 78 (Y).

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to I2.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	--

#### I2: CHECK THE OIL TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT

<b>1</b>	Measure the resistance between the oil temperature sensor electrical connector PI24, pin 2 (BG) and GROUND.
----------	---

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to I3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	--

#### I3: CHECK THE OIL TEMPERATURE SENSOR GROUND CIRCUIT FOR SHORT TO BATTERY

<b>1</b>	Connect ECM electrical connector, PI01
<b>2</b>	Turn the ignition switch to the RUN position.
<b>3</b>	Measure the voltage between the oil temperature sensor electrical connector PI24, pin 2 (BG) and GROUND.

	Is a voltage present? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to I4.</a>
--	--

#### I4: CHECK THE OIL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO GROUND

<b>1</b>	Measure the resistance between the oil temperature sensor electrical connector PI24, pin 1 (Y) and GROUND.
----------	--

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to I5.</a>
--	---

#### I5: CHECK THE OIL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE

<b>1</b>	Connect ECM electrical connector, PI01
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between the oil temperature sensor electrical connector PI24, pin 1 (Y) and GROUND.

	Is the voltage greater than 10 volts? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new oil temperature sensor REFER to: <a href="#">Oil Temperature Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).
--	---

CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  
REFER to: [Engine Control Module \(ECM\)](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
Before replacing a ECM, contact dealer technical support.

## PINPOINT TEST J : DTC P0131, P0132, P0133, P1646. RH HO2S.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>J1: CHECK THE CONSTANT CIRCUIT OF THE RH HO2S FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the RH HO2S electrical connector PI10.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI01, pin 84 (Y) and PI10, pin 4 (Y)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to J2.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>J2: CHECK THE CONSTANT CIRCUIT OF THE RH HO2S FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI10, pin 4 (Y) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to J3.</a>
<b>J3: CHECK THE CONSTANT CIRCUIT OF THE RH HO2S FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between PI10, pin 4 (Y) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to J4.</a>
<b>J4: CHECK THE VARIABLE CIRCUIT OF THE RH HO2S FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the RH HO2S electrical connector PI10.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI01, pin 83 (R) and PI10, pin 3 (R)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to J5.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>J5: CHECK THE VARIABLE CIRCUIT OF THE RH HO2S FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI01, pin 83 (R) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to J6.</a>
<b>J6: CHECK THE VARIABLE CIRCUIT OF THE RH HO2S FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between PI10, pin 3 (R) and GROUND.
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new RH HO2S REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

## PINPOINT TEST K : DTC P0037, P0038, P0137, P0138, P0140. RH CATALYST MONITOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>K1: CHECK THE POWER SUPPLY CIRCUIT TO THE RH CATALYST MONITOR HEATER</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the RH catalyst monitor sensor electrical connector PI11.
	<b>3</b> Turn the ignition switch to the ON position.
	<b>4</b> Measure the voltage between PI11, pin 1 (WG) and GROUND.
	Is the voltage less than 10 volts? <b>Yes</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. (This circuit includes the power distribution fuse box and EMS control relay.) <b>No</b> <a href="#">GO to K2.</a>

<b>K2: CHECK THE GROUND SUPPLY CIRCUIT TO THE RH CATALYST MONITOR HEATER FOR CONTINUITY</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the OFF position.</li> <li>2 Disconnect the ECM electrical connector PI01.</li> <li>3 Measure the resistance between PI11, pin 2 (UY) and PI01, pin 92 (UY)</li> </ol>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b>  <a href="#">GO to K3.</a></p> <p><b>No</b>  REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>K3: CHECK THE RH CATALYST MONITOR HEATER RESISTANCE</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between pins 1 and 2 of the RH Catalyst Monitor heater.</li> </ol>
	<p>Is the resistance 5.0 ohms?</p> <p><b>Yes</b>  <a href="#">GO to K4.</a></p> <p><b>No</b>  INSTALL a new RH Catalyst Monitor Sensor  REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  CLEAR the DTCs. TEST the system for normal operation.</p>
<b>K4: CHECK THE GROUND SUPPLY CIRCUIT TO THE RH CATALYST MONITOR HEATER FOR SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between PI11, pin 2 (UY) and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b>  REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b>  <a href="#">GO to K5.</a></p>
<b>K5: CHECK THE GROUND SUPPLY CIRCUIT TO THE RH CATALYST MONITOR HEATER FOR SHORT TO BATTERY</b>	
	<ol style="list-style-type: none"> <li>1 Connect the ECM electrical connector, PI01.</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Check for a voltage at PI11, pin 2 (UY)</li> </ol>
	<p>Is the voltage greater than 5 volts?</p> <p><b>Yes</b>  REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b>  <a href="#">GO to K6.</a></p>
<b>K6: CHECK THE CONSTANT CIRCUIT OF THE RH CATALYST MONITOR SENSOR FOR OPEN CIRCUIT</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the RH catalyst monitor sensor electrical connector, PI11.</li> <li>2 Disconnect the ECM electrical connector, PI01.</li> <li>3 Measure the resistance between PI11, pin 3 (B) and PI01, pin 130 (BW)</li> </ol>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b>  <a href="#">GO to K7.</a></p> <p><b>No</b>  REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>K7: CHECK THE CONSTANT CIRCUIT OF THE RH CATALYST MONITOR SENSOR FOR SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between PI01, pin 130 (BW) and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b>  REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b>  <a href="#">GO to K8.</a></p>
<b>K8: CHECK THE CONSTANT CIRCUIT OF THE RH CATALYST MONITOR SENSOR FOR SHORT TO BATTERY</b>	
	<ol style="list-style-type: none"> <li>1 Connect the ECM electrical connector, PI01.</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Measure the voltage between PI11, pin 3 (B) and GROUND.</li> </ol>
	<p>Is the voltage greater than 5 volts?</p> <p><b>Yes</b>  REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b>  <a href="#">GO to K9.</a></p>
<b>K9: CHECK THE VARIABLE CIRCUIT OF THE RH CATALYST MONITOR SENSOR FOR OPEN CIRCUIT</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the RH catalyst monitor sensor electrical connector PI11.</li> <li>2 Disconnect the ECM electrical connector, PI01.</li> <li>3 Measure the resistance between PI01, pin 128 (N) and PI11, pin 4 (N)</li> </ol>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b>  <a href="#">GO to K10.</a></p> <p><b>No</b>  REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>K10: CHECK THE VARIABLE CIRCUIT OF THE RH CATALYST MONITOR SENSOR FOR SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between PI11, pin 4 (N) and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b>  REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b>  <a href="#">GO to K11.</a></p>
<b>K11: CHECK THE VARIABLE CIRCUIT OF THE RH CATALYST MONITOR SENSOR FOR SHORT TO BATTERY</b>	
	<ol style="list-style-type: none"> <li>1 Connect the ECM electrical connector PI01.</li> </ol>

	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between PI11, pin 4 (N) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new RH Catalyst monitor sensor REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

#### PINPOINT TEST L : DTC P0051, P0052, P0151, P0152, P0153, P1647. LH HO2S.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>L1: CHECK THE CONSTANT CIRCUIT OF THE LH HO2S FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the LH HO2S electrical connector PI12.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI01, pin 108 (N) and PI12, pin 4 (N)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to L2.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>L2: CHECK THE CONSTANT CIRCUIT OF THE LH HO2S FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI01, pin 108 (N) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to L3.</a>
<b>L3: CHECK THE CONSTANT CIRCUIT OF THE LH HO2S FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between PI12, pin 4 (N) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to L4.</a>
<b>L4: CHECK THE VARIABLE CIRCUIT OF THE LH HO2S FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the LH HO2S electrical connector, PI12.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI01, pin 107 (G) and PI12, pin 3 (G)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to L5.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>L5: CHECK THE VARIABLE CIRCUIT OF THE LH HO2S FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI01, pin 107 (G) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to L6.</a>
<b>L6: CHECK THE VARIABLE CIRCUIT OF THE LH HO2S FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between PI12, pin 3 (G) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new LH HO2S REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

#### PINPOINT TEST M : DTC P0057, P0058, P0157, P0158, P0160. LH CATALYST MONITOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>M1: CHECK THE POWER SUPPLY CIRCUIT TO THE LH CATALYST MONITOR HEATER</b>	
	<b>1</b> Turn the ignition switch to the OFF position.

**2** Disconnect the LH catalyst monitor sensor electrical connector PI13.

**3** Turn the ignition switch to the ON position.

**4** Measure the voltage between PI13, pin 1 (WR) and GROUND.

Is the voltage less than 10 volts?

**Yes**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M2.](#)

## **M2: CHECK THE GROUND SUPPLY CIRCUIT TO THE LH CATALYST MONITOR HEATER FOR CONTINUITY**

**1** Turn the ignition switch to the OFF position.

**2** Disconnect the ECM electrical connector PI01.

**3** Measure the resistance between PI13, pin 2 (RW) and PI01, pin 93 (RW)

Is the resistance less than 5 ohms?

**Yes**

[GO to M4.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

## **M3: CHECK THE LH CATALYST MONITOR HEATER RESISTANCE**

**1** Measure the resistance between pins 1 and 2 of the LH Catalyst Monitor heater.

Is the resistance 5.0 ohms?

**Yes**

[GO to P4.](#)

**No**

INSTALL a new LH Catalyst Monitor Sensor  
REFER to: [Catalyst Monitor Sensor](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation.

## **M4: CHECK THE GROUND SUPPLY CIRCUIT TO THE LH CATALYST MONITOR HEATER FOR SHORT TO GROUND**

**1** Measure the resistance between PI13, pin 2 (RW) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M5.](#)

## **M5: CHECK THE GROUND SUPPLY CIRCUIT TO THE LH CATALYST MONITOR HEATER FOR SHORT TO BATTERY**

**1** Connect the ECM electrical connector, PI01.

**2** Turn the ignition switch to the ON position.

**3** Check for a voltage at PI13, pin2 (RW)

Is the voltage greater than 5 volts?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M6.](#)

## **M6: CHECK THE CONSTANT CIRCUIT OF THE LH CATALYST MONITOR SENSOR FOR OPEN CIRCUIT**

**1** Disconnect the LH catalyst monitor sensor electrical connector, PI13.

**2** Disconnect the ECM electrical connector, PI01.

**3** Measure the resistance between PI13, pin 3 (B) and PI01, pin 130 (BW)

Is the resistance less than 5 ohms?

**Yes**

[GO to M7.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

## **M7: CHECK THE CONSTANT CIRCUIT OF THE LH CATALYST MONITOR SENSOR FOR SHORT TO GROUND**

**1** Measure the resistance between PI01, pin 130 (BW) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M8.](#)

## **M8: CHECK THE CONSTANT CIRCUIT OF THE LH CATALYST MONITOR SENSOR FOR SHORT TO BATTERY**

**1** Connect the ECM electrical connector, PI01.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between PI13, pin 3 (B) and GROUND.

Is the voltage greater than 5 volts?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M9.](#)

## **M9: CHECK THE VARIABLE CIRCUIT OF THE LH CATALYST MONITOR SENSOR FOR OPEN CIRCUIT**

**1** Disconnect the LH catalyst monitor sensor electrical connector PI13.

**2** Disconnect the ECM electrical connector, PI01.

**3** Measure the resistance between PI01, pin 129 (N) and PI13, pin 4 (N)

Is the resistance less than 5 ohms?

**Yes**

[GO to M10.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

## **M10: CHECK THE VARIABLE CIRCUIT OF THE LH CATALYST MONITOR SENSOR FOR SHORT TO GROUND**

	<b>1</b> Measure the resistance between PI13, pin 4 (N) and GROUND. Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to M11.</a>
--	---

# **M11: CHECK THE VARIABLE CIRCUIT OF THE LH CATALYST MONITOR SENSOR FOR SHORT TO BATTERY**

	<b>1</b> Connect the ECM electrical connector PI01. <b>2</b> Turn the ignition switch to the ON position. <b>3</b> Measure the voltage between PI13, pin 4 (N) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new LH Catalyst monitor sensor REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. Before replacing a ECM, contact dealer technical support.

# **PINPOINT TEST N : DTC P0101, P0102, P0103, P1104. MAF SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>N1: CHECK THE MASS AIR FLOW (MAF) SENSOR POWER SUPPLY</b>	
	<b>1</b> Turn the ignition switch to the OFF position. <b>2</b> Disconnect the MAF sensor electrical connector PI14. <b>3</b> Turn the ignition switch to the ON position. <b>4</b> Measure the voltage between PI14, pin 1 (GU) and GROUND.
	Is the voltage less than 10 volts? <b>Yes</b> REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the power distribution fuse box and the EMS relay.) <b>No</b> <a href="#">GO to N2.</a>
<b>N2: CHECK THE MAF SENSOR GROUND CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the ON position. <b>2</b> Measure the resistance between PI14 pin 2 (BK) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to N3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. (This circuit includes the ECM. For additional information, refer to Dealer Technical Support.)
<b>N3: CHECK THE MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01. <b>2</b> Measure the resistance between PI01, pin 44 (GW) and PI14, pin 3, (GW)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to N4.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>N4: CHECK THE MAF SENSOR CIRCUIT FOR SHORT TO GROUND</b>	
	<b>1</b> Connect the ECM electrical connector, PI01. <b>2</b> Measure the resistance between PI14 pin 3 (GW) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new MAF sensor REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

# **PINPOINT TEST O : P0111, P0112, P0113. IAT SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>O1: CHECK THE INTAKE AIR TEMPERATURE (IAT) SENSOR RESISTANCE</b>	
	<b>1</b> Turn the ignition switch to the OFF position. <b>2</b> Disconnect the MAF sensor electrical connector PI14. <b>3</b> Measure the resistance between pins 4 and 5 of the MAF sensor.
	Is the resistance 2450 ohms at 20°C? <b>Yes</b> <a href="#">GO to O2.</a> <b>No</b> INSTALL a new MAF sensor REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

CLEAR the DTC. TEST the system for normal operation.

## O2: CHECK CONTINUITY OF THE INTAKE AIR TEMPERATURE (IAT) SENSOR POWER SUPPLY CIRCUIT

<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the MAF sensor electrical connector PI14.
<b>3</b>	Disconnect the ECM electrical connector PI01.
<b>4</b>	Measure the resistance between the MAF sensor electrical connector PI14, pin 4 (U) and the ECM electrical connector PI01, pin 71 (U).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to O3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

## O3: CHECK CONTINUITY OF THE IAT SENSOR CIRCUIT

<b>1</b>	Measure the resistance between the MAF sensor electrical connector PI14, pin 5 (BG) and the ECM electrical connector PI01, pin 19 (BG).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to O4.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

## O4: CHECK THE IAT SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND

<b>1</b>	Measure the resistance between the MAF sensor electrical connector PI14, pin 4 (U) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to O5.</a>

## O5: CHECK THE IAT SENSOR GROUND CIRCUIT FOR SHORT TO BATTERY

<b>1</b>	Connect the ECM electrical connector, PI01.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Check for voltage at PI14, pin 5 (BG)
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new MAF sensor REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

## PINPOINT TEST P : DTC P0051, P0052. LH HO2S HEATER.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>P1: CHECK THE POWER SUPPLY CIRCUIT TO THE LH HO2S HEATER</b>	
<b>1</b>	Disconnect the HO2S electrical connector, PI12.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between PI12, pin 1 (WR) and GROUND.
	Is the voltage less than 10 volts? <b>Yes</b> <a href="#">GO to P6.</a> (This circuit includes the power distribution fuse box and the EMS relay.) <b>No</b> <a href="#">GO to P2.</a>
<b>P2: CHECK THE LH HO2S HEATER GROUND CIRCUIT FOR OPEN CIRCUIT</b>	
<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the ECM electrical connector PI01.
<b>3</b>	Measure the resistance between the LH bank HO2S electrical connector PI12, pin 2 (RW) and the ECM electrical connector PI01, pins 55 and pin 56 (RW).
	Is the resistance of each wire less than 5 ohms? <b>Yes</b> <a href="#">GO to P3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>P3: CHECK THE LH HO2S HEATER RESISTANCE</b>	
<b>1</b>	Measure the resistance between pins 1 and 2 of the LH HO2S.
	Is the resistance 3.3 ohms? <b>Yes</b> <a href="#">GO to P4.</a> <b>No</b> INSTALL a new LH HO2S REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>P4: CHECK THE LH HO2S HEATER CIRCUIT FOR SHORT TO GROUND</b>	
<b>1</b>	Measure the resistance between the LH bank HO2S electrical connector PI12, pin 2 (RW) and GROUND.

Is the resistance less than 10,000 ohms?	Yes REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	<a href="#">GO to P5.</a>

#### P5: CHECK THE LH HO2S HEATER CIRCUIT FOR SHORT TO BATTERY

- 1 Connect the ECM electrical connector, PI01.
- 2 Turn the ignition switch to the OFF position.
- 3 Check for a voltage at PI12, pin 2 (RW)

Is the voltage greater than 5 volts?	Yes REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	<a href="#">GO to P6.</a>

#### P6: CHECK FUSE 35 OF THE FRONT POWER DISTRIBUTION BOX

- 1 Check the fuse.

Is the fuse OK?	Yes <a href="#">GO to P8.</a>
No	<a href="#">GO to P7.</a>

#### P7: CHECK FUSE 35 OF THE FRONT POWER DISTRIBUTION BOX FOR A SHORT TO GROUND

- 1 Measure the resistance between electrical connector FH32, pin 41 of the front power distribution box and GROUND.

Is the resistance less than 10,000 ohms?	Yes REPAIR short to ground between the engine compartment fuse box and the LH bank HO2S. CLEAR the DTC. TEST the system for normal operation.
No	INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.

#### P8: CHECK THE POWER SUPPLY TO FUSE 35 OF THE FRONT POWER DISTRIBUTION BOX FOR A SHORT TO GROUND

- 1 Measure the voltage between fuse 42 electrical connector FH32, pin 47 and GROUND.

Is the voltage less than 10 volts?	Yes Repair the circuit from the ECM control relay to the engine compartment fuse box. CLEAR the DTC. TEST the system for normal operation.
No	Repair the circuit from the compartment fuse box and the HO2S. CLEAR the DTC. TEST the system for normal operation.

#### PINPOINT TEST Q : DTC P1606. ECM RELAY.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Q1: CHECK THE ECM CONTROL RELAY</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the ON position.</li> </ol>
	Does the ECM relay make an audible click?
Yes	<a href="#">GO to Q2.</a>
No	<a href="#">GO to Q3.</a>
<b>Q2: CHECK FOR POWER SUPPLY FROM THE ECM CONTROL RELAY</b>	
	<ol style="list-style-type: none"> <li>1 Measure the voltage between the ECM control relay FH32, pin E05 and GROUND.</li> </ol>
	Is the voltage less than 10 volts?
Yes	<a href="#">GO to Q3.</a>
No	REPAIR the circuit from the ECM control relay to the ECM. CLEAR the DTC. TEST the system for normal operation.
<b>Q3: CHECK FUSE 9 IN THE ENGINE COMPARTMENT FUSE BOX</b>	
	<ol style="list-style-type: none"> <li>1 Check the fuse.</li> </ol>
	Is the fuse OK?
Yes	<a href="#">GO to Q4.</a>
No	<a href="#">GO to Q8.</a>
<b>Q4: CHECK THE POWER SUPPLY TO FUSE 9 IN THE ENGINE COMPARTMENT FUSE BOX</b>	
	<ol style="list-style-type: none"> <li>1 Measure the voltage between fuse 9 electrical connector FH32, pin 75 and GROUND.</li> </ol>
	Is the voltage less than 10 volts?
Yes	Repair the circuit from the battery positive to the engine compartment fuse box. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to Q5.</a>
<b>Q5: CHECK THE POWER SUPPLY FROM FUSE 9 IN THE ENGINE COMPARTMENT FUSE BOX TO THE ECM CONTROL RELAY</b>	
	<ol style="list-style-type: none"> <li>1 Measure the voltage between the ECM control relay electrical connector FH32, pin 9 and GROUND.</li> </ol>
	Is a the voltage less than 10 volts?
Yes	Repair the circuit from the engine compartment fuse box to the ECM control relay. CLEAR the DTC. TEST the system for normal operation.
No	INSTALL a new ECM control relay. CLEAR the DTC. TEST the system for normal operation.
<b>Q6: CHECK CONTINUITY OF THE ECM CONTROL RELAY GROUND CIRCUIT</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the ECM electrical connector EN16.</li> <li>2 Remove the ECM control relay from the engine compartment fuse box.</li> <li>3 Measure the resistance between the ECM electrical connector PI01, pin 40 and FH02, pin E02 of the engine compartment fuse box.</li> </ol>

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to Q7.</a> <b>No</b> REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the power distribution fuse box and the EMS relay and diode.)
--	---

<b>Q7: CHECK CONTINUITY OF THE ECM CONTROL RELAY WINDING</b>	
	<b>1</b> Measure the resistance of the ECM control relay winding between pins 1 and 2 of the ECM control relay.
	Is the resistance less than 60 ohms? <b>Yes</b> INSTALL a new ECM control relay. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to Q9.</a>

<b>Q8: CHECK FUSE 9 OF THE ENGINE COMPARTMENT FUSE BOX FOR A SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between electrical connector FH32 pin 9 of the engine compartment fuse box and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR short to ground between the engine compartment fuse box and the ECM control relay. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.

<b>Q9: CHECK THE ECM CONTROL RELAY DIODE</b>	
	<b>1</b> Remove the ECM control relay diode from the engine compartment fuse box.
	<b>2</b> Measure the continuity of ECM control relay diode.
	Is the resistance less than 5 ohms? <b>Yes</b> Possible intermittent fault. Recheck DTCs. <b>No</b> INSTALL a new ECM control relay diode. Make sure that the ECM control relay diode is installed correctly. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. If DTC is repeated INSTALL a new ECM.

<b>PINPOINT TEST R : P0105,P1107, P1108. MAP SENSOR.</b>	
<b>TEST CONDITIONS</b>	<b>DETAILS/RESULTS/ACTIONS</b>
<b>R1: CHECK THE GROUND CIRCUIT TO THE MAP SENSOR.</b>	
	<b>1</b> Measure the resistance between the MAP sensor electrical conector PI29, pin 4 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to R2.</a> <b>No</b> REPAIR the circuit between the MAP sensor and GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>R2: CHECK THE POWER SUPPLY CIRCUIT TO THE MAP SENSOR.</b>	
	<b>1</b> Turn the ignition switch to the RUN position.
	<b>2</b> Measure the voltage between the MAP sensor electrical connector PI29, pin 2 (OY) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> <a href="#">GO to R3.</a> <b>No</b> REPAIR the circuit between the MAP sensor electrical connector PI29 pin 2 (OY) and the the EMS 5v supply from the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>R3: CHECK CONTINUITY OF THE MAP SENSOR SIGNAL WIRE.</b>	
	<b>1</b> Measure the resistance of the circuit between MAP sensor electrical connector PI29, pin 1 (BK) and ECM electrical connector PI01, pin 127 (BK)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to R4.</a> <b>No</b> REPAIR the circuit between the MAP sensor electrical connector PI01, pin 1 (BK) and ECM electrical connector PI01, pin 127 (BK) For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>R4: CHECK THE MAP SENSOR SIGNAL WIRE FOR SHORT TO GROUND</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Disconnect the MAP sensor electrical connector, PI29.
	<b>3</b> Measure the resistance between PI01, pin 1 (BK) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to R5.</a>
<b>R5: CHECK THE MAP SENSOR SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector, PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Check for a voltage at PI01, pin 1 (BK)
	Is the voltage greater than 5 volts? <b>Yes</b> Repair the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new MAP sensor. CLEAR the DTC. TEST the system for normal operation.

<b>PINPOINT TEST S : P0010, P1384. VVT RH.</b>	
<b>TEST CONDITIONS</b>	<b>DETAILS/RESULTS/ACTIONS</b>

<b>S1: CHECK THE RH VVT SOLENOID RESISTANCE</b>	
	<b>1</b> Disconnect the RH VVT solenoid electrical connector, PI16.
	<b>2</b> Measure the resistance between pins 1 and 2 of the RH VVT solenoid.
	Is the resistance 8 ohms? <b>Yes</b> <a href="#">GO to S2.</a> <b>No</b> INSTALL a new RH VVT solenoid REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.
<b>S2: CHECK THE GROUND CIRCUIT TO THE RH VVT SOLENOID.</b>	
	<b>1</b> Disconnect the RH VVT solenoid electrical connector, PI16.
	<b>2</b> Measure the resistance between the RH VVT solenoid electrical connector PI16, pin 2 (B) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to S3.</a> <b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI16, pin 2 (B) and GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>S3: CHECK CONTINUITY OF THE VVT SOLENOID SIGNAL WIRE.</b>	
	<b>1</b> Measure the resistance between VVT solenoid electrical connector PI16 pin 1 (Y) and ECM electrical connector PI01 pin 109 (Y)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to S4.</a> <b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI16, pin 1 (Y) and ECM electrical connector PI01 pin 109 (Y) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>S4: CHECK FOR SHORT TO GROUND AT THE VVT SOLENOID SIGNAL WIRE</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI16, pin 1 (Y) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to S5.</a>
<b>S5: CHECK FOR SHORT TO BATTERY AT THE VVT SOLENOID SIGNAL WIRE</b>	
	<b>1</b> TURN the ignition switch to the ON position.
	<b>2</b> Check for a voltage at PI16, pin 1 (Y)
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to S6.</a>
<b>S6: CHECK RESISTANCE OF THE VVT SOLENOID.</b>	
	<b>1</b> Check the resistance between pins 1 and 2 of the RH VVT solenoid.
	Is the resistance 8.0 ohms? <b>Yes</b> INSTALL a new ECM REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new RH VVT solenoid REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

<b>PINPOINT TEST T : P0020, P1396. VVT LH.</b>	
<b>TEST CONDITIONS</b>	<b>DETAILS/RESULTS/ACTIONS</b>
<b>T1: CHECK THE LH VVT SOLENOID RESISTANCE</b>	
	<b>1</b> Disconnect the LH VVT solenoid electrical connector, PI17.
	<b>2</b> Measure the resistance between pins 1 and 2 of the LH VVT solenoid.
	Is the resistance 8 ohms? <b>Yes</b> <a href="#">GO to T2.</a> <b>No</b> INSTALL a new LH VVT solenoid REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.
<b>T2: CHECK GROUND CIRCUIT TO THE LH VVT SOLENOID.</b>	
	<b>1</b> Disconnect the LH VVT solenoid electrical connector, PI17.
	<b>2</b> Measure the resistance between the LH VVT solenoid electrical connector PI17, pin 2 (B) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to T3.</a> <b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI17, pin 2 (B) and GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>T3: CHECK CONTINUITY OF THE LH VVT SOLENOID SIGNAL WIRE</b>	
	<b>1</b> Measure the resistance between VVT solenoid electrical connector PI17, pin 1 (YU) and ECM electrical connector PI01, pin 110 (YU)

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to T4.</a> <b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI17 pin 1 (YU) and ECM electrical connector PI01 pin 110 (YU) For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
--	---

**T4: CHECK FOR SHORT TO GROUND AT THE LH VVT SOLENOID SIGNAL WIRE**

	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI17, pin 1 (YU) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to T5.</a>

**T5: CHECK FOR SHORT TO BATTERY AT THE LH VVT SOLENOID SIGNAL WIRE**

	<b>1</b> TURN the ignition switch to the ON position.
	<b>2</b> Check for a voltage at PI17, pin 1 (YU)
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to T6.</a>

**T6: CHECK RESISTANCE OF THE LH VVT SOLENOID.**

	<b>1</b> Check the resistance between pins 1 and 2 of the LH VVT solenoid.
	Is the resistance 8.0 ohms? <b>Yes</b> INSTALL a new ECM REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support. <b>No</b> INSTALL a new LH VVT solenoid REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

**PINPOINT TEST U : P1549. IMT VALVE 1.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>U1: CHECK THE RH IMT VALVE RESISTANCE</b>	
	<b>1</b> Disconnect the IMT valve electrical connector,PI30.
	<b>2</b> Measure the resistance between pins 1 and 2 of the IMT valve.
	Is the resistance 30 ohms? <b>Yes</b> <a href="#">GO to U2.</a> <b>No</b> INSTALL a new IMT valve. CLEAR the DTC. TEST the system for normal operation.
<b>U2: CHECK THE POWER SUPPLY CIRCUIT TO THE IMT VALVE 1.</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between IMT valve 1 electrical connector PI30, pin 1 (NG) and GROUND.
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to U3.</a> <b>No</b> REPAIR the circuit between the IMT valve 1 electrical connector PI30, pin 1 (NG) and the Battery power bus 2. (This circuit includes the power distribution fuse box and the EMS control relay. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
<b>U3: CHECK CONTINUITY OF THE IMT VALVE 1 SIGNAL WIRE.</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between the IMT valve 1 electrical connector PI30, pin 2 (OY) and the ECM electrical connector PI01, pin 38 (OY)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to U4.</a> <b>No</b> REPAIR the circuit between the IMT valve 1 electrical connector PI30, pin 2 (OY)and the ECM electrical connector PI01, pin 38 (OY) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>U4: CHECK IMT VALVE SIGNAL WIRE FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI30, pin 2 (OY) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to wiring digrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to U5.</a>
<b>U5: CHECK IMT VALVE SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector, PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Check for a voltage at PI30, pin 2 (OY)

Is the voltage greater than 5 volts?	<p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to wiring digrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new IMT valve. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.</p> <p>REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).</p> <p>Before replacing a ECM, contact dealer technical support. CLEAR the DTC. TEST the system for normal operation.</p>
--------------------------------------	---

### PINPOINT TEST V : P1532. IMT VALVE 2.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>V1: CHECK THE LH IMT VALVE RESISTANCE</b>	
	<p><b>1</b> Disconnect the IMT valve electrical connector, PI31.</p> <p><b>2</b> Measure the resistance between pins 1 and 2 of the IMT valve.</p>
	<p>Is the resistance 30 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to V2.</a></p> <p><b>No</b></p> <p>INSTALL a new IMT valve. CLEAR the DTC. TEST the system for normal operation.</p>
<b>V2: CHECK THE POWER SUPPLY CIRCUIT TO THE IMT VALVE 2.</b>	
	<p><b>1</b> Turn the ignition switch to the ON position.</p> <p><b>2</b> Measure the voltage between IMT valve 2 electrical connector PI31, pin 1 (NG) and GROUND.</p>
	<p>Is the voltage greater than 10 volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to V3.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the IMT valve 2 electrical connector PI31, pin 1 (NG) and the Battery power bus 2. (This circuit includes the power distribution fuse box and the EMS control relay. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>V3: CHECK CONTINUITY OF THE IMT VALVE 2 SIGNAL WIRE.</b>	
	<p><b>1</b> Disconnect the ECM electrical connector, PI01.</p> <p><b>2</b> Measure the resistance between the IMT valve 2 electrical connector PI31, pin 2 (OG) and the ECM electrical connector PI01, pin 39 (OG)</p>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to V4.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the IMT valve 2 electrical connector PI31, pin 2 (OG) and the ECM electrical connector PI01, pin 39 (OG) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p>
<b>V4: CHECK IMT VALVE SIGNAL WIRE FOR SHORT TO GROUND</b>	
	<p><b>1</b> Measure the resistance between PI31, pin 2 (OG) and GROUND.</p>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short to GROUND. For additional information, refer to wiring digrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to V5.</a></p>
<b>V5: CHECK IMT VALVE SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<p><b>1</b> Connect the ECM electrical connector, PI01.</p> <p><b>2</b> Turn the ignition switch to the ON position.</p> <p><b>3</b> Check for a voltage at PI31, pin 2 (OG)</p>
	<p>Is the voltage greater than 1 volt?</p> <p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to wiring digrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new IMT valve. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.</p> <p>REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).</p> <p>Before replacing a ECM, contact Dealer Technical Support</p>

### PINPOINT TEST W : P0532, AIR CONDITIONING REFRIGERANT PRESSURE SENSOR CIRCUIT LOW INPUT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>W1: CHECK THE REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND</b>	
	<p><b>1</b> Disconnect the refrigerant pressure sensor electrical connector, FH110.</p> <p><b>2</b> Measure the resistance between FH110, pin 003 (WU) and GROUND.</p>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to W2.</a></p>
<b>W2: CHECK THE REFRIGERANT PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT</b>	
	<p><b>1</b> Disconnect the ECM electrical connector, PI001.</p> <p><b>2</b> Measure the resistance between PI001, pin 121 (G) and the refrigerant pressure sensor electrical connector, FH110, pin 003 (G).</p>

**PINPOINT TEST X : P0533, AIR CONDITIONING REFRIGERANT PRESSURE SENSOR CIRCUIT HIGH INPUT**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>X1: CHECK THE REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO BATTERY</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the OFF position.</li> <li>2 Disconnect the refrigerant pressure sensor electrical connector, FH110.</li> <li>3 Check for a voltage between FH110, pin 003 (WU) and GROUND.</li> </ol>
	<p>Is the voltage greater than 1 volt?</p> <p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>GO to Pinpoint Test <a href="#">Z</a>.</p>

**PINPOINT TEST Y : P1582. FLIGHT RECORDER DATA STORED.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Y1: EXTRACT THE FLIGHT RECORDER DATA.</b>	
	<p>• NOTE: Flight recorder data can only be extracted using the Jaguar approved diagnostic system, where available.</p> <ol style="list-style-type: none"> <li>1 Connect the Jaguar approved diagnostic system, or code reader.</li> </ol>
	<p>Is DTC P1582 stored?</p> <p><b>Yes</b></p> <p>Refer to dealer technical support for information on extracting data.</p> <p><b>No</b></p> <p>Test not applicable.</p>

**PINPOINT TEST Z : P1240, P1241, P1242. SENSOR POWER SUPPLY.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Z1: CHECK THE POWER SUPPLY CIRCUIT TO THE FUEL INJECTION SENSOR.</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the fuel injection sensor electrical connector, IJ7.</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Measure the voltage between fuel injection Sensor electrical connector IL12, pin 1 (OY) and GROUND.</li> </ol>
	<p>Is the voltage greater than 4 volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to Z2.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the fuel injection Sensor electrical connector IL12, pin 1 (OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Z2: CHECK THE POWER SUPPLY CIRCUIT TO THE FUEL INJECTION SENSOR FOR SHORT TO BATTERY.</b>	
	<ol style="list-style-type: none"> <li>1 Measure the voltage between fuel injection sensor electrical connector IL12, pin 1 (OY) and GROUND.</li> </ol>
	<p>Is the voltage greater than 6 volts?</p> <p><b>Yes</b></p> <p>REPAIR the circuit between the fuel injection sensor electrical connector IL12, pin 1 (OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to Z3.</a></p>
<b>Z3: CHECK THE POWER SUPPLY CIRCUIT TO THE MAP SENSOR.</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the MAP sensor electrical connector, PI29.</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Measure the voltage between MAP Sensor electrical connector PI29, pin 2 (OY) and GROUND.</li> </ol>
	<p>Is the voltage greater than 4 volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to Z4.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the MAP Sensor electrical connector PI29, pin 2(OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Z4: CHECK THE POWER SUPPLY CIRCUIT TO THE MAP SENSOR FOR SHORT TO BATTERY.</b>	
	<ol style="list-style-type: none"> <li>1 Measure the voltage between MAP Sensor electrical connector PI29, pin 2 (OY) and GROUND.</li> </ol>
	<p>Is the voltage greater than 6 volts?</p> <p><b>Yes</b></p> <p>REPAIR the circuit between the MAP Sensor electrical connector PI29, pin 2(OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to Z5.</a></p>
<b>Z5: CHECK THE POWER SUPPLY CIRCUIT TO THE FUEL TANK PRESSURE SENSOR.</b>	
<p>• NOTE: Access to the fuel tank pressure sensor involves the removal of the fuel tank. To reduce the amount of work necessary, a slave harness could be used. This can be connected at the access port beneath the rear seat. Tests can then be carried out via the slave harness and sensor. If system operation is normal with the slave harness and sensor, the fault lies in the vehicle's harness or sensor.</p>	
	<ol style="list-style-type: none"> <li>1 Disconnect the fuel tank pressure sensor electrical connector, FP1. (see note above)</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Measure the voltage between fuel tank pressure sensor electrical connector FP1, pin 3 (OY) and GROUND.</li> </ol>

Is the voltage greater than 4 volts?

**Yes**

[GO to Z6.](#)

**No**

REPAIR the circuit between the fuel tank pressure sensor electrical connector FP1, pin 3 (OY) and the sensor 5 volt supply bus.  
(The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**Z6: CHECK THE POWER SUPPLY CIRCUIT TO THE FUEL TANK PRESSURE SENSOR FOR SHORT TO BATTERY.**

**1** Measure the voltage between fuel tank pressure sensor electrical connector FP1, pin 3 (OY) and GROUND.

Is the voltage greater than 6 volts?

**Yes**

REPAIR the circuit between the fuel tank pressure sensor electrical connector FP1, pin 3 (OY) and the sensor 5 volt supply bus.  
(The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to Z7.](#)

**Z7: CHECK THE POWER SUPPLY CIRCUIT TO THE ACCELERATOR PEDAL POSITION SENSOR.**

**1** Disconnect the accelerator pedal position sensor electrical connector.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between accelerator pedal position sensor electrical connector CA88, pin 2 (OY) and GROUND.

Is the voltage greater than 4 volts?

**Yes**

[GO to Z8.](#)

**No**

REPAIR the circuit between the accelerator pedal position sensor electrical connector CA88, pin 2 (OY) and the sensor 5 volt supply bus.  
(The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**Z8: CHECK THE POWER SUPPLY CIRCUIT TO THE ACCELERATOR PEDAL POSITION SENSOR FOR SHORT TO BATTERY.**

**1** Measure the voltage between accelerator pedal position sensor electrical connector CA88, pin 2 (OY) and GROUND.

Is the voltage greater than 6 volts?

**Yes**

REPAIR the circuit between the accelerator pedal position sensor electrical connector CA88, pin 2 (OY) and the sensor 5 volt supply bus.  
(The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to Z9.](#)

**Z9: CHECK THE POWER SUPPLY CIRCUIT TO THE THROTTLE POSITION SENSOR.**

**1** Turn the ignition switch to the ON position.

**2** Measure the voltage between throttle position sensor electrical connector PI26, pin 2 (OY) and GROUND.

Is the voltage greater than 4 volts?

**Yes**

[GO to Z10.](#)

**No**

REPAIR the circuit between the throttle position sensor electrical connector PI26, pin 2 (OY) and the sensor 5 volt supply bus.  
(The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**Z10: CHECK THE POWER SUPPLY CIRCUIT TO THE THROTTLE POSITION SENSOR FOR SHORT TO BATTERY.**

**1** Measure the voltage between throttle position sensor electrical connector PI26, pin 2 (OY) and GROUND.

Is the voltage greater than 6 volts?

**Yes**

REPAIR the circuit between the throttle position sensor electrical connector PI26, pin 2 (OY) and the sensor 5 volt supply bus.  
(The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to Z11.](#)

**Z11: CHECK THE POWER SUPPLY CIRCUIT TO THE AIR CONDITIONING PRESSURE SENSOR.**

**1** Turn the ignition switch to the ON position.

**2** Measure the voltage between ACP sensor electrical connector, FH110, pin 2 (OY) and GROUND.

Is the voltage greater than 4 volts?

**Yes**

[GO to Z12.](#)

**No**

REPAIR the circuit between the ACP sensor electrical connector, FH110, pin 2 (OY) and the sensor 5 volt supply bus.  
(The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**Z12: CHECK THE POWER SUPPLY CIRCUIT TO THE AIR CONDITIONING PRESSURE SENSOR FOR SHORT TO BATTERY.**

**1** Measure the voltage between ACP sensor electrical connector, FH110, pin 2 (OY) and GROUND.

Is the voltage greater than 6 volts?

**Yes**

REPAIR the circuit between the ACP sensor electrical connector, FH110, pin 2 (OY) and the sensor 5 volt supply bus.  
(The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

	diagrams.)
<b>No</b>	CLEAR the DTC. TEST the system for normal operation.  No electrical fault in power supply circuit. Recheck DTCs, using the Jaguar approved diagnostic system, or code reader. (This fault could also be a PSV failure within the ECM.)

## PINPOINT TEST AA : P1243. SENSOR GROUND CIRCUITS.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AA1: CHECK THE GROUND CIRCUIT TO THE ENGINE COOLANT TEMPERATURE SENSOR.</b>	
	<b>1</b> Measure the resistance between engine coolant temperature sensor electrical connector PI25, pin 1 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA2.</a> <b>No</b> REPAIR the circuit between the engine coolant temperature sensor electrical connector PI25, pin 1 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA2: CHECK THE GROUND CIRCUIT TO THE ENGINE OIL TEMPERATURE SENSOR.</b>	
	<b>1</b> Measure the resistance between engine oil temperature sensor electrical connector PI24, pin 2 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA3.</a> <b>No</b> REPAIR the circuit between the engine oil temperature sensor electrical connector PI24, pin 2 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA3: CHECK THE GROUND CIRCUIT TO THE FUEL INJECTION PRESSURE SENSOR.</b>	
	<b>1</b> Measure the resistance between fuel injection pressure sensor electrical connector IL12, pin 2 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA4.</a> <b>No</b> REPAIR the circuit between the fuel injection pressure sensor electrical connector IL12, pin 2 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA4: CHECK THE GROUND CIRCUIT TO THE EFT SENSOR.</b>	
	<b>1</b> Measure the resistance between EFT Sensor electrical connector IL09, pin 1 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA5.</a> <b>No</b> REPAIR the circuit between the EFT Sensor electrical connector IL09, pin 1 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA5: CHECK THE GROUND CIRCUIT TO THE MAP SENSOR.</b>	
	<b>1</b> Measure the resistance between MAP Sensor electrical connector PI29, pin 4 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA6.</a> <b>No</b> REPAIR the circuit between the MAP Sensor electrical connector PI29, pin 4 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA6: CHECK THE GROUND CIRCUIT TO THE FUEL TANK PRESSURE SENSOR.</b>	
• NOTE: Access to the FTP sensor involves the removal of the fuel tank. To reduce the amount of work necessary, a slave harness could be used. This can be connected at the access port beneath the rear seat. Tests can then be carried out via the slave harness and sensor. If system operation is normal with the slave harness and sensor, the fault lies in the vehicle's harness or sensor.	
	<b>1</b> Measure the resistance between FTP Sensor electrical connector FP01, pin 2 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA7.</a> <b>No</b> REPAIR the circuit between the FTP Sensor electrical connector FP01, pin 2 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA7: CHECK THE GROUND CIRCUIT TO THE APP SENSOR. (TRACK 1)</b>	
	<b>1</b> Measure the resistance between APP Sensor electrical connector CA88, pin 6 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to AA8.</a> <b>No</b> REPAIR the circuit between the APP Sensor electrical connector CA88, pin 6 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.
<b>AA8: CHECK THE GROUND CIRCUIT TO THE TP SENSOR.</b>	
	<b>1</b> Measure the resistance between TP Sensor electrical connector PI26, pin 1 (BG) and GROUND.

Is the resistance less than 5 ohms?

**Yes**

[GO to AA9.](#)

**No**

REPAIR the circuit between the TP Sensor electrical connector PI26, pin 1 (BG) and GROUND.  
(This circuit includes the ECM. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**AA9: CHECK THE GROUND CIRCUIT TO THE APP SENSOR. (TRACK 3)**

**1** Measure the resistance between APP Sensor electrical connector CA88, pin 3 (BG) and GROUND.

Is the resistance less than 5 ohms?

**Yes**

[GO to AA10.](#)

**No**

REPAIR the circuit between the APP Sensor electrical connector CA88, pin 3 (BG) and GROUND.  
(This circuit includes the ECM. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**AA10: CHECK THE GROUND CIRCUIT TO THE AIR CONDITIONING PRESSURE SENSOR.**

**1** Measure the resistance between ACP sensor electrical connector, FH110, pin 1 (BG) and GROUND.

Is the resistance less than 5 ohms?

**Yes**

No electrical fault in ground circuit. Recheck DTCs.

**No**

REPAIR the circuit between the ACP sensor electrical connector, FH110, pin 1 (BG) and GROUND.  
(This circuit includes the ECM. For additional information, refer to wiring diagrams.)

CLEAR the DTC. TEST the system for normal operation.

**PINPOINT TEST AB : P0480. RADIATOR COOLING FAN MODULE DRIVE.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AB1: CHECK THE PULSE WIDTH MODULATED SIGNAL TO THE COOLING FAN MODULE.</b>	
	<b>1</b> Disconnect the radiator cooling fan module electrical connector, FH108.
	<b>2</b> Run the engine to a temperature at which the cooling fans would operate.
	<b>3</b> Using a suitable meter, test for a pulse width modulated signal at FH108, pin 1 (WU)
	Is a PWM signal present?
<b>Yes</b>	INSTALL a new Cooling Fan Module REFER to: <a href="#">Cooling Module - Vehicles Without: Supercharger</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to AB2.</a>

**AB2: CHECK CONTINUITY OF THE RADIATOR COOLING FAN MODULE SIGNAL WIRE.**

	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between the Radiator Cooling Fan Module electrical connector FH108, pin 1 (WU) and the ECM electrical connector PI01, pin 1 (WU)
	Is the resistance less than 5 ohms?
<b>Yes</b>	INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.
<b>No</b>	REPAIR the circuit between the Radiator Cooling Fan Module electrical connector FH108, pin 3 (WU) and the ECM electrical connector PI01, pin 51 (WU) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**PINPOINT TEST AC : P0646, P0647. AIR CONDITIONING CLUTCH RELAY DRIVE.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AC1: CHECK THE GROUND SUPPLY TO THE AIR CONDITIONING CLUTCH.</b>	
 <b>WARNING:</b> This test involves working in proximity to rotating parts. Make sure due care is exercised.	
	<b>1</b> Turn the ignition switch to the ON position,
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Disconnect the air conditioning clutch electrical connector, PI49.
	<b>4</b> Measure the resistance between PI49, pin 2, (B) and GROUND.
	Is the resistance less than 5 ohms?
<b>Yes</b>	REPAIR the circuit between PI49, pin 2, (B) and GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to AC2.</a>
<b>AC2: CHECK THE CIRCUIT INTEGRITY BETWEEN THE ECM AND THE AIR CONDITIONING CLUTCH.</b>	
	<b>1</b> Apply a GROUND to the disconnected ECM electrical connector, PI01, pin 34 (BG)
	<b>2</b> Measure the voltage at air conditioning clutch electrical connector, PI49, pin 1 (RG)
	Is the voltage greater than 10 volts?
<b>Yes</b>	<a href="#">GO to AC3.</a>
<b>No</b>	<a href="#">GO to AC4.</a>
<b>AC3: CHECK THE AIR CONDITIONING CLUTCH RELAY TO ECM CIRCUIT FOR SHORT TO GROUND.</b>	
	<b>1</b> Measure the resistance between PI01, pin 34 (BG) and GROUND.

	Is the resistance less than 10,000 ohms?
Yes	<a href="#">GO to AC4.</a>
No	INSTALL a new air conditioning compressor clutch relay. For additional information, refer to the electrical guide. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.

#### AC4: CHECK THE CIRCUIT BETWEEN THE AIR CONDITIONING COMPRESSOR CLUTCH AND THE RELAY FOR SHORT TO BATTERY.

<b>1</b>	Measure the voltage between PI49, pin 1 (RG) and GROUND.
----------	--

Is the voltage greater than 5 volts?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AC5.</a>

#### AC5: CHECK THE CIRCUIT BETWEEN THE AIR CONDITIONING COMPRESSOR CLUTCH AND THE ACCC RELAY FOR SHORT TO GROUND.

<b>1</b>	Measure the resistance between PI49, pin 1 (RG) and GROUND.
----------	---

Is the resistance less than 10,000 ohms?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AC6.</a>

#### AC6: CHECK THE CIRCUIT BETWEEN FUSE 32 OF THE FRONT POWER DISTRIBUTION FUSE BOX AND THE ACCC RELAY FOR SHORT TO GROUND.

<b>1</b>	Remove fuse 32.
----------	-----------------

<b>2</b>	Measure the resistance between fuse box electrical connector, FH32, pin 38 and GROUND.
----------	--

Is the resistance less than 10,000 ohms?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AC7.</a>

#### AC7: CHECK THE ACCC RELAY BASE FOR BATTERY VOLTAGE AT PIN 3.

<b>1</b>	Refit fuse 32.
----------	----------------

<b>2</b>	Measure the voltage between the ACCC relay base, pin 3 and GROUND.
----------	--

Is the voltage greater than 10 volts?

Yes	<a href="#">GO to AC8.</a>
No	Check/replace fuses. REPAIR the circuit between the relay base and the battery power bus 1. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

#### AC8: CHECK THE CIRCUIT BETWEEN PIN 1 OF THE ACCC RELAY BASE AND THE POWER DISTRIBUTION FUSE BOX FOR SHORT TO GROUND.

<b>1</b>	Remove fuse 38.
----------	-----------------

<b>2</b>	Measure the resistance between the ACCC relay base, pin 1 and GROUND.
----------	---

Is the resistance less than 10,000 ohms?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AC9.</a>

#### AC9: CHECK THE ACCC RELAY BASE FOR BATTERY VOLTAGE AT PIN 1

<b>1</b>	Refit fuse 38.
----------	----------------

<b>2</b>	Turn the ignition switch to the ON position.
----------	--

<b>3</b>	Measure the voltage between ACCC relay base, pin 1, and GROUND.
----------	---

Is the voltage greater than 10 volts?

Yes	<a href="#">GO to AC10.</a>
No	Check/replace fuses. REPAIR the circuit between the relay base and the battery power bus 2. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the EMS relay, and fuses 9.)

#### AC10: CHECK THE CIRCUIT BETWEEN THE ECM AND THE ACCC RELAY BASE FOR CONTINUITY.

<b>1</b>	Remove the ACCC relay.
----------	------------------------

<b>2</b>	Measure the resistance between the ECM electrical connector, PI01, pin 34 (BG) and ACCC relay base, pin 2.
----------	--

Is the resistance less than 5 ohms?

Yes	<a href="#">GO to AC11.</a>
No	REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

#### AC11: CHECK THE CIRCUIT BETWEEN THE ECM AND THE ACCC RELAY BASE FOR SHORT TO BATTERY.

<b>1</b>	Check for a voltage between the ECM electrical connector, PI01, pin 34 (BG) and GROUND.
----------	---

Is the voltage greater than 5 volts?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AC12.</a>

#### AC12: CHECK THE CIRCUIT BETWEEN THE ECM AND THE ACCC RELAY BASE FOR SHORT TO GROUND.

<b>1</b>	Measure the resistance between the ECM electrical connector, PI01, pin 34 (BG) and GROUND.
----------	--

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

INSTALL a new ACCC relay. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST AD : P1516, P1517. P/N SWITCH STARTING/DRIVING MALFUNCTIONS.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AD1: CHECK THE P/N INPUT TO THE ECM.</b>	
	<b>1</b> Select PARK.
	<b>2</b> Set the ignition switch to the ON position.
	<b>3</b> Measure the voltage at the ECM electrical connector PI01, pin 31 (B)
	Is the voltage greater than 10 volts?
	<b>Yes</b> INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing a ECM, contact dealer technical support.
	<b>No</b> REPAIR the circuit between the ECM electrical connector PI01, pin 31 (B) and the ignition switch. (On automatic transmission vehicles, this circuit includes the TR sensor, Central Junction Fuse Box, Ignition relay, and Inertia switch. On NAS manual transmission vehicles, this circuit also includes the Clutch Safety Switch.) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST AE : P1245; P1246. IGNITION SWITCH CRANK SIGNAL

 **WARNING:** Make sure the starter motor does not engage in the course of these tests, as injury may result.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AE1: CHECK THE START INPUT TO THE ECM</b>	
	<b>1</b> Move the gear selector to the N position.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Remove the starter relay from the power distribution fuse box.
	<b>4</b> Turn the ignition switch to the CRANK position.
	<b>5</b> Measure the voltage between PI01, pin 6, (Y) and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AE2.</a>
	<b>No</b> REPAIR the circuit between the ECM and the battery. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the ignition switch and the power distribution fuse box. (Fuse 28).)
<b>AE2: CHECK THE START INPUT TO THE STARTER RELAY</b>	
	<b>1</b> Turn the ignition switch to the START position and hold.
	<b>2</b> Measure the voltage between the starter relay base, (R20) pin 1, and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AE3.</a>
	<b>No</b> REPAIR the circuit between the Starter relay base and the battery. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the ignition switch and the power distribution fuse box.)
<b>AE3: CHECK THE START INPUT WIRE FOR SHORT TO BATTERY AT ECM</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between PI01, pin 6, (Y) and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to AE4.</a>
<b>AE4: CHECK THE START INPUT WIRE FOR SHORT TO BATTERY AT RELAY</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between the starter relay base, pin 1, and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to AE5.</a>
<b>AE5: CHECK THE STARTER RELAY INPUT FROM THE ECM FOR CONTINUITY.</b>	
	<b>1</b> Measure the resistance between PI01, pin 41 (GO) and relay base, pin 2.
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to AE6.</a>
	<b>No</b> REPAIR the open circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>AE6: CHECK THE STARTER RELAY INPUT FROM THE ECM FOR SHORT TO GROUND.</b>	
	<b>1</b> Disconnect ignition switch electrical connector, FC18.
	<b>2</b> Measure the resistance between PI01, pin 41 (GO) and GROUND.

	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to AE7.</a></p>
--	--

**AE7: CHECK THE STARTER RELAY INPUT FROM THE ECM FOR SHORT TO BATTERY.**

	<p><b>1</b> Measure the voltage between the starter relay base, pin 2, and GROUND.</p>
	<p>Is the voltage greater than 5 volts?</p> <p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new starter relay. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.</p> <p>REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).</p> <p>Before replacing a ECM, contact dealer technical support.</p>

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Electronic Engine ControlsVIN Range: N52048->N80180

## Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, plus the addition of secondary air injection and changes to evaporative emissions to comply with stage four emissions requirements.

For more information on these systems,  
REFER to: Engine Emission Control - VIN Range: N52207->N99999 (303-08A Engine Emission Control - 2.5L/3.0L/4.2L, Description and Operation) /  
Evaporative Emissions - VIN Range: N52207->N99999 (303-13 Evaporative Emissions, Description and Operation).

## Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Engine oil level and condition</li> <li>● Cooling system coolant level</li> <li>● Fuel level</li> <li>● Fuel contamination/grade/quality</li> <li>● Throttle body</li> <li>● Poly-vee belt</li> <li>● Air cleaner condition</li> </ul>	<ul style="list-style-type: none"> <li>● Fuses</li> <li>● Wiring harness</li> <li>● Electrical connector(s)</li> <li>● Sensor(s)</li> <li>● Engine control module (ECM)</li> <li>● Transmission control module (TCM)</li> </ul>

3. Verify the following systems are working correctly:
  - Air intake system
  - Cooling system
  - Charging system
  - Fuel charging system
  - Ignition system
4. If an obvious cause for an observed or reported symptom is found, correct the cause (if possible) before proceeding to the next step.
5. If the cause is not visually evident, use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the DTC Index, or the symptom chart if no DTCs are set.

## Symptom Chart

Symptom (general)	Symptom (specific)	Possible source	Action
Non-Start	Engine does not crank	<ul style="list-style-type: none"> <li>● Security system /Immobiliser engaged</li> <li>● Engine in shut-down mode</li> <li>● ECM relay</li> <li>● Battery</li> <li>● Park/Neutral switch</li> <li>● Starting system</li> <li>● Harness</li> <li>● Engine seized</li> </ul>	Check that the security system is disarmed. Check for DTCs. For ECM relay tests, GO to Pinpoint Test <a href="#">AC</a> . For battery information, REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing). For Park/Neutral tests, REFER to: External Controls (307-05 Automatic Transmission/Transaxle External Controls, Diagnosis and Testing). For starting system, REFER to: Starting System (303-06 Starting System, Diagnosis and Testing). For engine information, REFER to: Engine (303-01A Engine - 2.5L/3.0L, Diagnosis and Testing).
	Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>● Engine breather system disconnected/restricted</li> <li>● Ignition system</li> <li>● Fuel system</li> <li>● Harness</li> <li>● Crankshaft position (CKP) sensor</li> <li>● ECM fault</li> </ul>	Check the engine breather system, REFER to: Engine Emission Control - VIN Range: N52207->N99999 (303-08A Engine Emission Control - 2.5L/3.0L/4.2L, Diagnosis and Testing). For ignition system tests, REFER to: Engine Ignition - VIN Range: N52207->N99999 (303-07A Engine Ignition - 2.5L/3.0L, Diagnosis and Testing). For fuel system, REFER to: Fuel Charging and Controls - VIN Range: N52207->N99999 (303-04A Fuel Charging and Controls - 2.5L/3.0L, Diagnosis and Testing). For CKP tests, GO to Pinpoint Test <a href="#">Q</a> . Refer to the warranty policy and procedures manual if an ECM is suspect.
	Engine cranks and fires, but will not start	<ul style="list-style-type: none"> <li>● Evaporative emissions purge valve</li> <li>● Fuel pump</li> <li>● Engine coolant temperature (ECT) sensor</li> <li>● Spark plugs</li> <li>● Check for water ingress into spark plug wells</li> <li>● HT short to ground (tracking) check rubber boots for</li> </ul>	For purge valve tests, REFER to: Evaporative Emissions - VIN Range: N52207->N99999 (303-13 Evaporative Emissions, Diagnosis and Testing). For fuel pump circuit tests, REFER to: Fuel Tank and Lines - 2.5L/3.0L/4.2L, VIN Range: N52207->N99999 (310-01 Fuel Tank and Lines, Diagnosis and Testing). For ECT sensor tests, GO to Pinpoint Test <a href="#">C</a> . For ignition system,

Symptom (general)	Symptom (specific)	Possible source	Action
		<ul style="list-style-type: none"> <li>cracks/damage</li> <li>Ignition coil failure(s)</li> <li>Harness</li> </ul>	REFER to: Engine Ignition - VIN Range: N52207->N99999 (303-07A Engine Ignition - 2.5L/3.0L, Diagnosis and Testing).
Difficult to start	Difficult to start cold	<ul style="list-style-type: none"> <li>Coolant anti-freeze content</li> <li>Battery</li> <li>CKP sensor</li> <li>Fuel pump</li> <li>ECT sensor</li> <li>Purge valve</li> </ul>	Check the coolant anti-freeze content. For battery information, REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing). For CKP sensor tests, GO to Pinpoint Test <a href="#">Q</a> . Check the fuel pressure, REFER to: Fuel Tank and Lines - 2.5L/3.0L/4.2L, VIN Range: N52207->N99999 (310-01 Fuel Tank and Lines, Diagnosis and Testing). For ECT sensor tests, GO to Pinpoint Test <a href="#">C</a> . For purge valve tests, REFER to: Evaporative Emissions - VIN Range: N52207->N99999 (303-13 Evaporative Emissions, Diagnosis and Testing).
	Difficult to start hot	<ul style="list-style-type: none"> <li>Injector leak</li> <li>Engine fuel temperature (EFT) sensor</li> </ul>	For injector information, REFER to: Fuel Injectors (303-04A Fuel Charging and Controls - 2.5L/3.0L, Removal and Installation). For EFT sensor tests, GO to Pinpoint Test <a href="#">AE</a> . For IAT sensor tests, GO to Pinpoint Test <a href="#">B</a> . For MAF sensor tests, GO to Pinpoint Test <a href="#">A</a> . For purge valve tests, REFER to: Evaporative Emissions - VIN Range: N52207->N99999 (303-13 Evaporative Emissions, Diagnosis and Testing). For ECT sensor tests, GO to Pinpoint Test <a href="#">C</a> .
	Difficult to start after hot soak (vehicle standing after engine has reached operating temperature)	<ul style="list-style-type: none"> <li>Intake air temperature (IAT) sensor</li> <li>Mass air flow (MAF) sensor</li> <li>Purge valve</li> <li>Fuel pump</li> <li>Ignition system</li> <li>ECT sensor</li> </ul>	For EFT sensor tests, GO to Pinpoint Test <a href="#">AE</a> . For IAT sensor tests, GO to Pinpoint Test <a href="#">B</a> . For MAF sensor tests, GO to Pinpoint Test <a href="#">A</a> . For purge valve tests, REFER to: Evaporative Emissions - VIN Range: N52207->N99999 (303-13 Evaporative Emissions, Diagnosis and Testing). For ECT sensor tests, GO to Pinpoint Test <a href="#">C</a> .
	Engine cranks too fast/slow	<ul style="list-style-type: none"> <li>Compressions high/low</li> <li>Battery</li> <li>Starting system</li> </ul>	Check compressions, REFER to: Engine (303-01A Engine - 2.5L/3.0L, Diagnosis and Testing). For battery information, REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing). For starting system, REFER to: Starting System (303-06 Starting System, Diagnosis and Testing).
Engine stalls	Engine stalls soon after start	<ul style="list-style-type: none"> <li>Breather system disconnected/restricted</li> <li>ECM relay</li> <li>Harness</li> <li>MAF sensor</li> <li>ECT sensor</li> <li>Ignition system</li> <li>Fuel lines</li> <li>Fuel rail pressure (FRP) sensor</li> <li>Air filter restricted</li> <li>Air leakage</li> </ul>	Check the engine breather system, REFER to: Engine Emission Control - VIN Range: N52207->N99999 (303-08A Engine Emission Control - 2.5L/3.0L/4.2L, Diagnosis and Testing). For ECM relay tests, GO to Pinpoint Test <a href="#">AC</a> . For MAF sensor tests, GO to Pinpoint Test <a href="#">A</a> . For ECT sensor tests, GO to Pinpoint Test <a href="#">C</a> . For ignition system tests, REFER to: Engine Ignition - VIN Range: N52207->N99999 (303-07A Engine Ignition - 2.5L/3.0L, Diagnosis and Testing). Check the fuel lines, REFER to: Fuel Tank and Lines - 2.5L/3.0L/4.2L, VIN Range: N52207->N99999 (310-01 Fuel Tank and Lines, Diagnosis and Testing). For FRP sensor tests, GO to Pinpoint Test <a href="#">Y</a> . For air filter and intake system information, REFER to: Intake Air Distribution and Filtering - VIN Range: N52207->N99999 (303-12A Intake Air Distribution and Filtering - 2.5L/3.0L, Diagnosis and Testing).
	Engine stalls on overrun	<ul style="list-style-type: none"> <li>ECM relay</li> <li>Throttle position (TP) sensors</li> </ul>	For ECM relay tests, GO to Pinpoint Test <a href="#">AC</a> . For TP sensor tests, GO to Pinpoint Test <a href="#">D</a> and GO to Pinpoint Test <a href="#">E</a> .
	Engine stalls at steady speed	<ul style="list-style-type: none"> <li>ECM relay</li> <li>CKP sensor</li> <li>TP sensors</li> <li>Harness</li> </ul>	For ECM relay tests, GO to Pinpoint Test <a href="#">AC</a> . ## Pinpoint Tests

### PINPOINT TEST A : MASS AIR FLOW (MAF) SENSOR CIRCUIT

	<b>CAUTION:</b> When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.
<ul style="list-style-type: none"> <li>NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.</li> <li>NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.</li> <li>NOTE: Before commencing this test, check the air filter for blockage, the engine air intake and breather systems for leaks, and the TP sensor for additional DTCs.</li> </ul>	

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>A1: CHECK THE MAF SENSOR SUPPLY CIRCUIT VOLTAGE</b>		
• NOTE: Check for DTCs indicating IMT valve and purge valve faults before carrying out the MAF supply voltage pinpoint test.		
	<b>1</b> Disconnect the MAF sensor electrical connector, PI14.	
	<b>2</b> Key on, engine off.	
	<b>3</b> Measure the voltage between:	
	<b>MAF sensor connector PI14, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to A2.</a> <b>No</b> REPAIR the circuit between the MAF sensor electrical connector and the battery. This circuit includes the EMS control relay and fuse 37 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
<b>A2: CHECK THE MAF SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>		
• NOTE: The short to GROUND may be intermittent. Move the wiring to attempt to reproduce the conditions under which the DTC was logged, and visually inspect the harness for any signs of chafing, see "visual inspection chart".		
	<b>1</b> Key off.	
	<b>2</b> Measure the resistance between:	
	<b>MAF sensor connector PI14, harness side</b>	<b>Battery</b>
	Pin 03	Negative terminal

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A3.</a>
--	---

### A3: CHECK THE MAF SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Positive terminal</td></tr> </table>	MAF sensor connector PI14, harness side	Battery	Pin 03	Positive terminal
MAF sensor connector PI14, harness side	Battery				
Pin 03	Positive terminal				

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A4.</a>
--	---

### A4: CHECK THE MAF SENSOR GROUND CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	MAF sensor connector PI14, harness side	Battery	Pin 02	Positive terminal
MAF sensor connector PI14, harness side	Battery				
Pin 02	Positive terminal				

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A5.</a>
--	---

### A5: CHECK THE MAF SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 70</td></tr> </table>	MAF sensor connector PI14, harness side	ECM connector PI300, harness side	Pin 03	Pin 70
MAF sensor connector PI14, harness side	ECM connector PI300, harness side				
Pin 03	Pin 70				

	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A6.</a>
--	---

### A6: CHECK THE MAF SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 18</td></tr> </table>	MAF sensor connector PI14, harness side	ECM connector PI300, harness side	Pin 02	Pin 18
MAF sensor connector PI14, harness side	ECM connector PI300, harness side				
Pin 02	Pin 18				

	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new MAF sensor. REFER to: Mass Air Flow (MAF) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.
--	--

## PINPOINT TEST B : INTAKE AIR TEMPERATURE (IAT) SENSOR CIRCUIT

- NOTE: The IAT sensor is integral with the Mass Air Flow sensor.
  - NOTE: Before commencing this test, check the air filter for blockage and the engine air intake and breather systems for leaks.
- REFER to: Intake Air Distribution and Filtering - VIN Range: N52207->N99999 (303-12A, Diagnosis and Testing).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### B1: CHECK THE IAT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Disconnect the MAF sensor electrical connector, PI14.				
<b>2</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	MAF sensor connector PI14, harness side	Battery	Pin 04	Negative terminal
MAF sensor connector PI14, harness side	Battery				
Pin 04	Negative terminal				

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to B2.</a>
--	---

### B2: CHECK THE IAT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Positive terminal</td></tr> </table>	MAF sensor connector PI14, harness side	Battery	Pin 04	Positive terminal
MAF sensor connector PI14, harness side	Battery				
Pin 04	Positive terminal				

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to B3.</a>
--	---

### B3: CHECK THE IAT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table border="1"> <tr> <th>MAF sensor connector PI14, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 04</td><td>Pin 66</td></tr> </table>	MAF sensor connector PI14, harness side	ECM connector PI300, harness side	Pin 04	Pin 66
MAF sensor connector PI14, harness side	ECM connector PI300, harness side				
Pin 04	Pin 66				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to B4.

#### B4: CHECK THE IAT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

1	Measure the resistance between:
MAF sensor connector PI14, harness side	ECM connector PI300, harness side
Pin 05	Pin 12
Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new MAF sensor. REFER to: Mass Air Flow (MAF) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST C : ENGINE COOLANT TEMPERATURE (ECT) SENSOR CIRCUIT

• NOTE: Before commencing this test, check the coolant level and condition, check the operation of the thermostat, rectify as necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
C1: CHECK THE ECT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND	
1	Disconnect the ECT sensor electrical connector, PI25.
2	Measure the resistance between:
ECT sensor connector PI25, harness side	Battery
Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to C2.

#### C2: CHECK THE ECT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Measure the resistance between:
ECT sensor connector PI25, harness side	Battery
Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to C3.

#### C3: CHECK THE ECT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

1	Disconnect the ECM electrical connector, PI300.
2	Measure the resistance between:
ECT sensor connector PI25, harness side	ECM connector PI300, harness side
Pin 02	Pin 68

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to C4.

#### C4: CHECK THE ECT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

1	Measure the resistance between:
ECT sensor connector PI25, harness side	ECM connector PI300, harness side
Pin 01	Pin 12

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new ECT sensor. REFER to: Engine Coolant Temperature (ECT) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

#### PINPOINT TEST D : THROTTLE POSITION (TP) SENSOR 1 CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
D1: CHECK THE TP SENSOR SUPPLY CIRCUIT VOLTAGE	
1	Disconnect the TP sensor electrical connector, PI26.
2	Key on, engine off.
3	Measure the voltage between:
TP sensor connector PI26, harness side	Battery
Pin 05	Negative terminal

Is the voltage less than 4 volts?	Yes REPAIR the 5 volt supply circuit between the TP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	GO to D2.

#### D2: CHECK THE TP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Key off.
---	----------

	[2] Measure the resistance between:	
	TP sensor connector PI26, harness side	Battery
	Pin 05	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to D3.](#)

#### D3: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR SHORT CIRCUIT TO GROUND

	[1] Measure the resistance between:	
	TP sensor connector PI26, harness side	Battery
	Pin 06	Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to D4.](#)

#### D4: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR SHORT CIRCUIT TO POWER

	[1] Measure the resistance between:	
	TP sensor connector PI26, harness side	Battery
	Pin 06	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to D5.](#)

#### D5: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR HIGH RESISTANCE

	[1] Disconnect the ECM electrical connector, PI300.	
	[2] Measure the resistance between:	
	TP sensor connector PI26, harness side	ECM connector PI300, harness side
	Pin 06	Pin 65

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to D6.](#)

#### D6: CHECK THE TP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	[1] Measure the resistance between:	
	TP sensor connector PI26, harness side	ECM connector PI300, harness side
	Pin 03	Pin 11

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new TP sensor.  
 REFER to: Throttle Body - VIN Range: N52207->N99999 (303-04A Fuel Charging and Controls - 2.5L/3.0L, Removal and Installation).  
 CLEAR the DTC and test the system for normal operation.

### PINPOINT TEST E : THROTTLE POSITION (TP) SENSOR 2 CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### E1: CHECK THE TP SENSOR SUPPLY CIRCUIT VOLTAGE

	[1] Disconnect the TP sensor electrical connector, PI26.	
	[2] Key on, engine off.	
	[3] Measure the voltage between:	
	TP sensor connector PI26, harness side	Battery
	Pin 05	Negative terminal

Is the voltage less than 4 volts?  
**Yes**  
 REPAIR the 5 volt supply circuit between the TP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to E2.](#)

#### E2: CHECK THE TP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER

	[1] Key off.	
	[2] Measure the resistance between:	
	TP sensor connector PI26, harness side	Battery
	Pin 05	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to E3.](#)

#### E3: CHECK THE TP SENSOR SENSING CIRCUIT TP2 FOR SHORT CIRCUIT TO GROUND

	[1] Measure the resistance between:	
	TP sensor connector PI26, harness side	Battery
	Pin 04	Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to E4.</a>

#### E4: CHECK THE TP SENSOR SENSING CIRCUIT TP2 FOR SHORT CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to E5.</a>

#### E5: CHECK THE TP SENSOR SENSING CIRCUIT TP2 FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 04	Pin 67

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to E6.</a>

#### E6: CHECK THE TP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 03	Pin 11

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new TP sensor. REFER to: Throttle Body - VIN Range: N52207->N99999 (303-04A Fuel Charging and Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST F : RIGHT-HAND H02S VARIABLE AND CONSTANT CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Before commencing this test, check the sensor connections and harness, check for exhaust leaks, (a very small exhaust leak can cause this DTC to flag). See "visual inspection chart" and "possible causes".

#### TEST CONDITIONS

#### F1: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Disconnect the H02S electrical connector, PI10.	
	<b>2</b> Measure the resistance between:	
	<b>H02S connector PI10, harness side</b>	<b>Battery</b>
	Pin 04	Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to F2.</a>

#### F2: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:	
	<b>H02S connector PI10, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to F3.</a>

#### F3: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Measure the resistance between:	
	<b>H02S connector PI10, harness side</b>	<b>Battery</b>
	Pin 03	Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to F4.</a>

#### F4: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:	
	<b>H02S connector PI10, harness side</b>	<b>Battery</b>
	Pin 03	Positive terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

No

[GO to F5.](#)

#### F5: CHECK THE H02S VARIABLE CIRCUIT FOR HIGH RESISTANCE

**1** Disconnect the ECM electrical connector, PI300.

**2** Measure the resistance between:

**H02S connector PI 10, harness side**

**ECM connector PI 300, harness side**

Pin 04

Pin 28

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to F6.](#)

#### F6: CHECK THE H02S CONSTANT CIRCUIT FOR HIGH RESISTANCE

**1** Measure the resistance between:

**H02S connector PI 10, harness side**

**ECM connector PI 300, harness side**

Pin 03

Pin 29

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new H02S.

REFER to: Heated Oxygen Sensor (HO2S) (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST G : RIGHT-HAND H02S HEATER SUPPLY AND CONTROL CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• **NOTE:** Carry out a visual inspection of the H02S connectors (integrity of connections may be affected by heat from catalytic converters).

**TEST  
CONDITIONS**

**DETAILS/RESULTS/ACTIONS**

#### G1: CHECK H02S HEATER POWER SUPPLY CIRCUIT

**1** Disconnect the H02S electrical connector, PI10.

**2** Key on, engine off.

**3** Make sure the O2S heater relay is energized.

**4** Measure the voltage between:

**H02S connector PI 10, harness side**

**Battery**

Pin 01

Negative terminal

Is the voltage greater than 10 volts?

**Yes**

[GO to G2.](#)

**No**

REPAIR the power supply circuit to the H02S heater. This circuit includes the O2S heater relay and fuse 20 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

#### G2: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO GROUND

**1** Key off.

**2** Measure the resistance between:

**H02S connector PI 10, harness side**

**Battery**

Pin 02

Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to G3.](#)

#### G3: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

**H02S connector PI 10, harness side**

**Battery**

Pin 02

Positive terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to G4.](#)

#### G4: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR HIGH RESISTANCE

**1** Disconnect the ECM electrical connector, PI300.

**2** Measure the resistance between:

**H02S connector PI 10, harness side**

**ECM connector PI 300, harness side**

Pin 02

Pin 76

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new H02S.

REFER to: Heated Oxygen Sensor (HO2S) (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST H : RIGHT-HAND CATALYST MONITOR SENSOR SENSING AND GROUND CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
H1: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1	Disconnect the catalyst monitor electrical connector, PI11.
	2	Measure the resistance between:
	Catalyst monitor connector PI11, harness side	Battery
	Pin 04	Negative terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> GO to H2.		
H2: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1	Measure the resistance between:
	Catalyst monitor connector PI11, harness side	Battery
	Pin 04	Positive terminal
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> GO to H3.	
H3: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE		
	1	Disconnect the ECM electrical connector, PI300.
	2	Measure the resistance between:
	Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side
	Pin 04	Pin 40
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> GO to H4.		
H4: CHECK THE CATALYST MONITOR SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE		
	1	Measure the resistance between:
	Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side
	Pin 03	Pin 22
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new catalyst monitor sensor. REFER to: Catalyst Monitor Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

**PINPOINT TEST I : RIGHT-HAND CATALYST MONITOR SENSOR SUPPLY AND HEATER CONTROL CIRCUITS**

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• **NOTE:** Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
I1: CHECK THE CATALYST MONITOR HEATER POWER SUPPLY CIRCUIT					
	1	Disconnect the catalyst monitor sensor electrical connector, PI11.			
	2	Key on, engine off.			
	3	Make sure the O2S heater relay is energized.			
	4	Measure the voltage between:			
	<table><tr><th>Catalyst monitor connector PI11, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		Catalyst monitor connector PI11, harness side	Battery	Pin 01
Catalyst monitor connector PI11, harness side	Battery				
Pin 01	Negative terminal				
Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to I2.</a> <b>No</b> REPAIR the power supply circuit to the catalyst monitor heater. This circuit includes the O2S heater relay and fuse 20 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.					
I2: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND					
	1	Key off.			
	2	Measure the resistance between:			
	<table><tr><th>Catalyst monitor connector PI11, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Negative terminal</td></tr></table>		Catalyst monitor connector PI11, harness side	Battery	Pin 02
Catalyst monitor connector PI11, harness side	Battery				
Pin 02	Negative terminal				
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to I3.</a>					
I3: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER					
	1	Measure the resistance between:			
	<table><tr><th>Catalyst monitor connector PI11, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Positive terminal</td></tr></table>		Catalyst monitor connector PI11, harness side	Battery	Pin 02
Catalyst monitor connector PI11, harness side	Battery				
Pin 02	Positive terminal				

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to I4.</a>

#### I4: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, PI300.			
	<b>2</b> Measure the resistance between:			
	<table> <tr> <th>Catalyst monitor connector PI 11, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 88</td></tr> </table>	Catalyst monitor connector PI 11, harness side	ECM connector PI 300, harness side	Pin 02
Catalyst monitor connector PI 11, harness side	ECM connector PI 300, harness side			
Pin 02	Pin 88			

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> INSTALL a new catalyst monitor sensor. REFER to: Catalyst Monitor Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

#### PINPOINT TEST J : LEFT-HAND H02S VARIABLE AND CONSTANT CIRCUITS

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Before commencing this test, check the sensor connections and harness, check for exhaust leaks, (a very small exhaust leak can cause this DTC to flag). See "visual inspection chart" and "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### J1: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Disconnect the H02S electrical connector, PI12.			
	<b>2</b> Measure the resistance between:			
	<table> <tr> <th>H02S connector PI 12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	H02S connector PI 12, harness side	Battery	Pin 04
H02S connector PI 12, harness side	Battery			
Pin 04	Negative terminal			

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to J2.</a>

#### J2: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT TO CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:			
	<table> <tr> <th>H02S connector PI 12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Positive terminal</td></tr> </table>	H02S connector PI 12, harness side	Battery	Pin 04
H02S connector PI 12, harness side	Battery			
Pin 04	Positive terminal			

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to J3.</a>

#### J3: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Measure the resistance between:			
	<table> <tr> <th>H02S connector PI 12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	H02S connector PI 12, harness side	Battery	Pin 03
H02S connector PI 12, harness side	Battery			
Pin 03	Negative terminal			

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to J4.</a>

#### J4: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT TO CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:			
	<table> <tr> <th>H02S connector PI 12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Positive terminal</td></tr> </table>	H02S connector PI 12, harness side	Battery	Pin 03
H02S connector PI 12, harness side	Battery			
Pin 03	Positive terminal			

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to J5.</a>

#### J5: CHECK THE H02S VARIABLE CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, PI300.			
	<b>2</b> Measure the resistance between:			
	<table> <tr> <th>H02S connector PI 12, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 04</td><td>Pin 26</td></tr> </table>	H02S connector PI 12, harness side	ECM connector PI 300, harness side	Pin 04
H02S connector PI 12, harness side	ECM connector PI 300, harness side			
Pin 04	Pin 26			

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to J6.</a>

#### J6: CHECK THE H02S CONSTANT CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:			
	<table> <tr> <th>H02S connector PI 12, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 27</td></tr> </table>	H02S connector PI 12, harness side	ECM connector PI 300, harness side	Pin 03
H02S connector PI 12, harness side	ECM connector PI 300, harness side			
Pin 03	Pin 27			

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new H02S.

REFER to: Heated Oxygen Sensor (HO2S) (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

## PINPOINT TEST K : LEFT-HAND H02S HEATER SUPPLY AND CONTROL CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• **NOTE:** Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>K1: CHECK H02S HEATER POWER SUPPLY CIRCUIT</b>					
	<b>1</b> Disconnect the H02S electrical connector, PI12.				
	<b>2</b> Key on, engine off.				
	<b>3</b> Make sure the O2S heater relay is energized.				
	<b>4</b> Measure the voltage between:				
	<table><tr><th>H02S connector PI 12, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>	H02S connector PI 12, harness side	Battery	Pin 01	Negative terminal
H02S connector PI 12, harness side	Battery				
Pin 01	Negative terminal				
	Is the voltage greater than 10 volts?				
<b>Yes</b>	<a href="#">GO to K2.</a>				
<b>No</b>	REPAIR the power supply circuit to the H02S heater. This circuit includes the O2S heater relay and fuse 35 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
<b>K2: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO GROUND</b>					
	<b>1</b> Key off.

	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
<b>No</b>	INSTALL a new H02S. REFER to: Heated Oxygen Sensor (HO2S) (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.				

## PINPOINT TEST L : LEFT-HAND CATALYST MONITOR SENSOR SENSING AND GROUND CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>L1: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
	<b>1</b> Disconnect the catalyst monitor electrical connector, PI13.				
	<b>2</b> Measure the resistance between:				
	<table><tr><th>Catalyst monitor connector PI13, harness side</th><th>Battery</th></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table>	Catalyst monitor connector PI13, harness side	Battery	Pin 04	Negative terminal
Catalyst monitor connector PI13, harness side	Battery				
Pin 04	Negative terminal				
	Is the resistance less than 10,000 ohms?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
<b>No</b>	<a href="#">GO to L2.</a>				
<b>L2: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					

<b>1</b>	Measure the resistance between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to L3.](#)

### L3: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 04	Pin 41

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to L4.](#)

### L4: CHECK THE CATALYST MONITOR SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 03	Pin 45

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new catalyst monitor sensor.  
 REFER to: Catalyst Monitor Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).  
 CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST M : LEFT-HAND CATALYST MONITOR SENSOR SUPPLY AND HEATER CONTROL CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.  
 • **NOTE:** Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters)

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### M1: CHECK THE CATALYST MONITOR HEATER POWER SUPPLY CIRCUIT

<b>1</b>	Disconnect the catalyst monitor sensor electrical connector, PI13.	
<b>2</b>	Key on, engine off.	
<b>3</b>	Make sure the O2S heater relay is energized.	
<b>4</b>	Measure the voltage between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

Is the voltage greater than 10 volts?  
**Yes**  
[GO to M2.](#)  
**No**  
 REPAIR the power supply circuit to the catalyst monitor heater. This circuit includes the O2S heater relay and fuse 35 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

### M2: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.	
<b>2</b>	Measure the resistance between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to M3.](#)

### M3: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to M4.](#)

### M4: CHECK THE CATALYST MONITOR SENSOR HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>Catalyst monitor connector PI13, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 89

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new catalyst monitor sensor.

REFER to: Catalyst Monitor Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).  
CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST N : ENGINE OIL TEMPERATURE (EOT) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>N1: CHECK THE EOT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b> Disconnect the EOT sensor electrical connector, PI24.	
	<b>2</b> Measure the resistance between:	
	<b>EOT sensor connector PI24, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to N2.</a>	
<b>N2: CHECK THE EOT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>EOT sensor connector PI24, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to N3.</a>	
<b>N3: CHECK THE EOT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>EOT sensor connector PI24, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 23
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to N4.</a>	
<b>N4: CHECK THE EOT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Measure the resistance between:	
	<b>EOT sensor connector PI24, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01	Pin 10
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. This circuit includes harness splice, PIS49. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new EOT sensor. REFER to: Oil Temperature Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.	

## PINPOINT TEST O : RIGHT-HAND KNOCK SENSOR (KS) CIRCUIT

• **NOTE:** Before commencing this test, make sure that the sensor is making a good electrical contact with the cylinder block. See "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
O1: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Disconnect the KS electrical connector, PI43.	
	2 Measure the resistance between:	
	KS connector PI43, harness side	Battery
	Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to O2.</a>	
O2: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	KS connector PI43, harness side	Battery
	Pin 01	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to O3.</a>	
O3: CHECK KS SENSING CIRCUIT FOR HIGH RESISTANCE		
	1 Disconnect the ECM electrical connector, PI300.	
	2 Measure the resistance between:	
	KS connector PI43, harness side	ECM connector PI300, harness side
	Pin 01	Pin 42

	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to O4.</a>
--	---

#### O4: CHECK KS GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:
<b>KS connector PI43, harness side</b>	<b>ECM connector PI300, harness side</b>
Pin 02	Pin 19
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new KS. REFER to: Knock Sensor (KS) RH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST P : LEFT-HAND KNOCK SENSOR (KS) CIRCUIT

• NOTE: Before commencing this test, make sure that the sensor is making a good electrical contact with the cylinder block. See "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>P1: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>	
<b>1</b>	Disconnect the KS electrical connector, PI44.
<b>2</b>	Measure the resistance between:
<b>KS connector PI44, harness side</b>	<b>Battery</b>
Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to P2.</a>

#### P2: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:
<b>KS connector PI44, harness side</b>	<b>Battery</b>
Pin 01	Positive terminal
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to P3.</a>

#### P3: CHECK KS SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.
<b>2</b>	Measure the resistance between:
<b>KS connector PI44, harness side</b>	<b>ECM connector PI300, harness side</b>
Pin 01	Pin 43
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to P4.</a>

#### P4: CHECK KS GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:
<b>KS connector PI44, harness side</b>	<b>ECM connector PI300, harness side</b>
Pin 02	Pin 20
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new KS. REFER to: Knock Sensor (KS) LH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST Q : CRANKSHAFT POSITION (CKP) SENSOR CIRCUIT

• NOTE: The clearance between the CKP sensor and the reluctor ring should be checked at 90° intervals. The air gap between the two should be no greater than 4.5 mm at any point.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Q1: CHECK THE CKP SENSOR FOR CORRECT INSTALLATION</b>	
<b>1</b>	Check the CKP sensor for correct installation.
	Is the CKP sensor correctly installed? <b>Yes</b> <a href="#">GO to Q2.</a> <b>No</b> INSTALL the CKP sensor correctly. REFER to: Crankshaft Position (CKP) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). Reconnect the sensor. CLEAR the DTCs and test the system for normal operation.

#### Q2: CHECK THE CKP SENSOR FOR DEBRIS

<b>1</b>	Remove the CKP sensor and inspect for debris.
----------	---

Is the CKP sensor free of debris?

**Yes**

[GO to Q3.](#)

**No**

CLEAN the sensor and wheel. INSTALL the sensor.

REFER to: Crankshaft Position (CKP) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

Reconnect the sensor. CLEAR the DTCs and test the system for normal operation.

### Q3: CHECK THE CKP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

**1** Disconnect the CKP sensor electrical connector, PI21.

**2** Measure the resistance between:

CKP sensor connector PI21, harness side	Battery
Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to Q4.](#)

### Q4: CHECK THE CKP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

CKP sensor connector PI21, harness side	Battery
Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to Q5.](#)

### Q5: CHECK THE CKP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

**1** Disconnect the ECM electrical connector, PI300.

**2** Measure the resistance between:

CKP sensor connector PI21, harness side	ECM connector PI 300, harness side
Pin 02	Pin 30

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to Q6.](#)

### Q6: CHECK THE CKP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

**1** Measure the resistance between:

CKP sensor connector PI21, harness side	ECM connector PI 300, harness side
Pin 01	Pin 06

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new CKP sensor.

REFER to: Crankshaft Position (CKP) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST R : RIGHT-HAND CAMSHAFT POSITION (CMP) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### R1: CHECK THE CMP SENSOR FOR CORRECT INSTALLATION

**1** Check the CMP sensor for correct installation.

Is the CMP sensor correctly installed?

**Yes**

[GO to R2.](#)

**No**

INSTALL the CMP sensor correctly.

REFER to: Camshaft Position (CMP) Sensor RH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

CLEAR the DTCs and test the system for normal operation.

### R2: CHECK THE CMP SENSOR FOR FOREIGN DEBRIS

**1** Remove the CMP sensor and inspect for foreign debris.

Is the CMP sensor free of foreign debris?

**Yes**

[GO to R3.](#)

**No**

CLEAN the sensor and wheel. INSTALL the sensor.

REFER to: Camshaft Position (CMP) Sensor RH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).

CLEAR the DTCs and test the system for normal operation.

### R3: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

**1** Disconnect the CMP sensor electrical connector, PI23.

**2** Measure the resistance between:

CMP sensor connector PI23, harness side	Battery
Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to R4.](#)

**R4: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER**

	<b>1</b>	Measure the resistance between:	
		<b>CMP sensor connector PI23, harness side</b>	<b>Battery</b>
	Pin 01		Positive terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to R5.</a>			

**R5: CHECK THE CMP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE**

	<b>1</b>	Disconnect the ECM electrical connector, PI300.	
	<b>2</b>	Measure the resistance between:	
		<b>CMP sensor connector PI23, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01		Pin 34
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to R6.</a>			

**R6: CHECK THE CMP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE**

	<b>1</b>	Measure the resistance between:	
		<b>CMP sensor connector PI23, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02		Pin 07
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new CMP sensor. REFER to: Camshaft Position (CMP) Sensor RH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.			

**PINPOINT TEST S : LEFT-HAND CAMSHAFT POSITION (CMP) SENSOR CIRCUIT**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS					
<b>S1: CHECK THE CMP SENSOR FOR CORRECT INSTALLATION</b>						
	<b>1</b>	Check the CMP sensor for correct installation.				
		Is the CMP sensor correctly installed?				
	<b>Yes</b> <a href="#">GO to S2.</a> <b>No</b> INSTALL the CMP sensor correctly. REFER to: Camshaft Position (CMP) Sensor LH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTCs and test the system for normal operation.					
<b>S2: CHECK THE CMP SENSOR FOR FOREIGN DEBRIS</b>						
	<b>1</b>	Remove the CMP sensor and inspect for foreign debris.				
		Is the CMP sensor free of foreign debris?				
	<b>Yes</b> <a href="#">GO to S3.</a> <b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: Camshaft Position (CMP) Sensor LH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTCs and test the system for normal operation.					
<b>S3: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>						
	<b>1</b>	Disconnect the CMP sensor electrical connector, PI22.				
	<b>2</b>	Measure the resistance between:				
		<table><tr><th>CMP sensor connector PI22, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>	CMP sensor connector PI22, harness side	Battery	Pin 01	Negative terminal
CMP sensor connector PI22, harness side	Battery					
Pin 01	Negative terminal					
		Is the resistance less than 10,000 ohms?				
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to S4.</a>					
<b>S4: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>						
	<b>1</b>	Measure the resistance between:				
		<table><tr><th>CMP sensor connector PI22, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Positive terminal</td></tr></table>	CMP sensor connector PI22, harness side	Battery	Pin 01	Positive terminal
	CMP sensor connector PI22, harness side	Battery				
Pin 01	Positive terminal					
		Is the resistance less than 10,000 ohms?				
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to S5.</a>					
<b>S5: CHECK THE CMP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>						
	<b>1</b>	Disconnect the ECM electrical connector, PI300.				
	<b>2</b>	Measure the resistance between:				
		<table><tr><th>CMP sensor connector PI22, harness side</th><th>ECM connector PI 300, harness side</th></tr><tr><td>Pin 01</td><td>Pin 33</td></tr></table>	CMP sensor connector PI22, harness side	ECM connector PI 300, harness side	Pin 01	Pin 33
CMP sensor connector PI22, harness side	ECM connector PI 300, harness side					
Pin 01	Pin 33					

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to S6.</a>

#### S6: CHECK THE CMP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:			
	<table> <tr> <th>CMP sensor connector PI22, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 08</td></tr> </table>	CMP sensor connector PI22, harness side	ECM connector PI300, harness side	Pin 02
CMP sensor connector PI22, harness side	ECM connector PI300, harness side			
Pin 02	Pin 08			
	Is the resistance greater than 5 ohms?			
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.			
	<b>No</b> INSTALL a new CMP sensor. REFER to: Camshaft Position (CMP) Sensor LH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.			

#### PINPOINT TEST T : RADIATOR COOLING FAN MODULE DRIVE CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>T1: CHECK THE RADIATOR FAN MODULE PERMANENT SUPPLY</b>					
	<b>1</b> Disconnect the fan module electrical connector, FH109.				
	<b>2</b> Measure the voltage between:				
	<table> <tr> <th>Fan module connector FH109, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Fan module connector FH109, harness side	Battery	Pin 01	Negative terminal
Fan module connector FH109, harness side	Battery				
Pin 01	Negative terminal				
	Is the voltage less than 10 volts?				
	<b>Yes</b> REPAIR the circuit between the cooling fan module and battery. This circuit includes fuse 13 of the front power distribution box and the mega fuses. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	<b>No</b> <a href="#">GO to T2.</a>				
<b>T2: CHECK THE RADIATOR FAN MODULE EMS SWITCHED SUPPLY</b>					
	<b>1</b> Disconnect the fan module electrical connector, FH108.				
	<b>2</b> Key on, engine off.				
	<b>3</b> Make sure the EMS relay is energized.				
	<b>4</b> Measure the voltage between:				
	<table> <tr> <th>Fan module connector FH108, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Fan module connector FH108, harness side	Battery	Pin 02	Negative terminal
Fan module connector FH108, harness side	Battery				
Pin 02	Negative terminal				
	Is the voltage less than 10 volts?				
	<b>Yes</b> REPAIR the circuit between the cooling fan module and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	<b>No</b> <a href="#">GO to T3.</a>				
<b>T3: CHECK THE RADIATOR FAN MODULE CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
	<b>1</b> Key off.				
	<b>2</b> Measure the resistance between:				
	<table> <tr> <th>Fan module connector FH108, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Fan module connector FH108, harness side	Battery	Pin 01	Negative terminal
Fan module connector FH108, harness side	Battery				
Pin 01	Negative terminal				
	Is the resistance less than 10,000 ohms?				
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	<b>No</b> <a href="#">GO to T4.</a>				
<b>T4: CHECK THE RADIATOR FAN MODULE CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	<b>1</b> Measure the resistance between:				
	<table> <tr> <th>Fan module connector FH108, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Positive terminal</td></tr> </table>	Fan module connector FH108, harness side	Battery	Pin 01	Positive terminal
Fan module connector FH108, harness side	Battery				
Pin 01	Positive terminal				
	Is the resistance less than 10,000 ohms?				
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	<b>No</b> <a href="#">GO to T5.</a>				
<b>T5: CHECK THE RADIATOR FAN MODULE CONTROL CIRCUIT FOR HIGH RESISTANCE</b>					
	<b>1</b> Disconnect the ECM electrical connector, FH300.				
	<b>2</b> Measure the resistance between:				
	<table> <tr> <th>Fan module connector FH108, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 49</td></tr> </table>	Fan module connector FH108, harness side	ECM connector FH300, harness side	Pin 01	Pin 49
Fan module connector FH108, harness side	ECM connector FH300, harness side				
Pin 01	Pin 49				
	Is the resistance greater than 5 ohms?				
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	<b>No</b> <a href="#">GO to T6.</a>				
<b>T6: CHECK THE RADIATOR FAN MODULE GROUND FOR HIGH RESISTANCE</b>					
	<b>1</b> Measure the resistance between:				
	<table> <tr> <th>Fan module connector FH109, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Fan module connector FH109, harness side	Battery	Pin 02	Negative terminal
Fan module connector FH109, harness side	Battery				
Pin 02	Negative terminal				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new radiator cooling fan module. CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST U : BATTERY POWER SUPPLY VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>U1: CHECK THE BATTERY POWER SUPPLY TO THE ECM</b>					
<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the voltage between:				
	<table> <tr> <th>ECM connector FH300, harness side</th><th>Battery</th></tr> <tr> <td>Pin 54</td><td>Negative terminal</td></tr> </table>	ECM connector FH300, harness side	Battery	Pin 54	Negative terminal
ECM connector FH300, harness side	Battery				
Pin 54	Negative terminal				
	Is the voltage greater than 10 volts?				
Yes	Recheck the DTCs.				
No	REPAIR the battery power supply circuit. This circuit includes fuse 33 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				

## PINPOINT TEST V : ACCELERATOR PEDAL POSITION (APP) SENSOR CIRCUIT 1

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>V1: CHECK THE APP SENSOR SUPPLY VOLTAGE AT THE SENSOR</b>					
<b>1</b>	Disconnect the APP sensor electrical connector, CA88.				
<b>2</b>	Key on, engine off.				
<b>3</b>	Measure the voltage between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 05</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 05	Negative terminal
APP sensor connector CA88, harness side	Battery				
Pin 05	Negative terminal				
	Is the voltage less than 4 volts?				
Yes	REPAIR the 5 volt supply circuit between the APP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to V2.</a>				
<b>V2: CHECK THE APP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 05</td><td>Positive terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 05	Positive terminal
APP sensor connector CA88, harness side	Battery				
Pin 05	Positive terminal				
	Is the resistance less than 10,000 ohms?				
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to V3.</a>				
<b>V3: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR SHORT CIRCUIT TO GROUND</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 04	Negative terminal
APP sensor connector CA88, harness side	Battery				
Pin 04	Negative terminal				
	Is the resistance less than 10,000 ohms?				
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to V4.</a>				
<b>V4: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Positive terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 04	Positive terminal
APP sensor connector CA88, harness side	Battery				
Pin 04	Positive terminal				
	Is the resistance less than 10,000 ohms?				
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to V5.</a>				
<b>V5: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR HIGH RESISTANCE</b>					
<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 04</td><td>Pin 24</td></tr> </table>	APP sensor connector CA88, harness side	ECM connector FH300, harness side	Pin 04	Pin 24
APP sensor connector CA88, harness side	ECM connector FH300, harness side				
Pin 04	Pin 24				
	Is the resistance greater than 5 ohms?				
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to V6.</a>				
<b>V6: CHECK THE APP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 06</td><td>Pin 08</td></tr> </table>	APP sensor connector CA88, harness side	ECM connector FH300, harness side	Pin 06	Pin 08
APP sensor connector CA88, harness side	ECM connector FH300, harness side				
Pin 06	Pin 08				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	No INSTALL a new APP sensor. REFER to: Accelerator Pedal - 2.5L/3.0L/4.2L (310-02 Acceleration Control, Removal and Installation). CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST W : ACCELERATOR PEDAL POSITION (APP) SENSOR CIRCUIT 2

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>W1: CHECK THE APP SENSOR SUPPLY VOLTAGE AT THE SENSOR</b>					
<b>1</b>	Disconnect the APP sensor electrical connector, CA88.				
<b>2</b>	Key on, engine off.				
<b>3</b>	Measure the voltage between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 02	Negative terminal
APP sensor connector CA88, harness side	Battery				
Pin 02	Negative terminal				
	Is the voltage less than 4 volts?				
	Yes REPAIR the 5 volt supply circuit between the APP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	No <a href="#">GO to W2.</a>				
<b>W2: CHECK THE APP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 02	Positive terminal
APP sensor connector CA88, harness side	Battery				
Pin 02	Positive terminal				
	Is the resistance less than 10,000 ohms?				
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	No <a href="#">GO to W3.</a>				
<b>W3: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR SHORT CIRCUIT TO GROUND</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 01	Negative terminal
APP sensor connector CA88, harness side	Battery				
Pin 01	Negative terminal				
	Is the resistance less than 10,000 ohms?				
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	No <a href="#">GO to W4.</a>				
<b>W4: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Positive terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 01	Positive terminal
APP sensor connector CA88, harness side	Battery				
Pin 01	Positive terminal				
	Is the resistance less than 10,000 ohms?				
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	No <a href="#">GO to W5.</a>				
<b>W5: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR HIGH RESISTANCE</b>					
<b>1</b>	Disconnect the ECM electrical connector, FH300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 38</td></tr> </table>	APP sensor connector CA88, harness side	ECM connector FH300, harness side	Pin 01	Pin 38
APP sensor connector CA88, harness side	ECM connector FH300, harness side				
Pin 01	Pin 38				
	Is the resistance greater than 5 ohms?				
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	No <a href="#">GO to W6.</a>				
<b>W6: CHECK THE APP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 03</td><td>Pin 07</td></tr> </table>	APP sensor connector CA88, harness side	ECM connector FH300, harness side	Pin 03	Pin 07
APP sensor connector CA88, harness side	ECM connector FH300, harness side				
Pin 03	Pin 07				
	Is the resistance greater than 5 ohms?				
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
	No INSTALL a new APP sensor. REFER to: Accelerator Pedal - 2.5L/3.0L/4.2L (310-02 Acceleration Control, Removal and Installation). CLEAR the DTC and test the system for normal operation.				

## PINPOINT TEST X : THROTTLE MOTOR CONTROL CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>X1: CHECK THE THROTTLE MOTOR TO ECM NEGATIVE CIRCUIT FOR HIGH RESISTANCE</b>	
<b>1</b>	Disconnect the throttle motor electrical connector, PI26.
<b>2</b>	Disconnect the ECM electrical connector, PI300.

	<b>3</b> Measure the resistance between:	
	<b>Throttle motor connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01	Pin 74
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to X2.</a>	

## X2: CHECK THE THROTTLE MOTOR TO ECM POSITIVE CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:	
	<b>Throttle motor connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 75
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new throttle body. REFER to: Throttle Body - VIN Range: N52207->N99999 (303-04A Fuel Charging and Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

## PINPOINT TEST Y : FUEL RAIL PRESSURE (FRP) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
Y1: CHECK THE FRP SENSOR SUPPLY CIRCUIT VOLTAGE		
	1 Disconnect the FRP sensor electrical connector, IL12.	
	2 Key on, engine off.	
	3 Measure the voltage between:	
	FRP sensor connector IL12, harness side	Battery
	Pin 01	Negative terminal
	Is the voltage less than 4 volts?	
	Yes REPAIR the 5 volt supply circuit between the FRP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to Y2.	
Y2: CHECK THE FRP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Key off.	
	2 Measure the resistance between:	
	FRP sensor connector IL12, harness side	Battery
	Pin 01	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to Y3.	
Y3: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Measure the resistance between:	
	FRP sensor connector IL12, harness side	Battery
	Pin 03	Negative terminal
		Is the resistance less than 10,000 ohms?
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
No GO to Y4.		
Y4: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	FRP sensor connector IL12, harness side	Battery
	Pin 03	Positive terminal
		Is the resistance less than 10,000 ohms?
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
No GO to Y5.		
Y5: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR HIGH RESISTANCE		
	1 Disconnect the ECM sensor electrical connector, PI300.	
	2 Measure the resistance between:	
	FRP sensor connector IL12, harness side	ECM connector PI300, harness side
	Pin 03	Pin 71
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to Y6.	
Y6: CHECK THE FRP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE		
	1 Measure the resistance between:	
	FRP sensor connector IL12, harness side	ECM connector PI300, harness side
	Pin 02	Pin 10

Is the resistance greater than 5 ohms?	Yes
	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	No
	INSTALL a new FRP sensor. CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST Z : STARTER RELAY SIGNAL

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>Z1: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
	<ol style="list-style-type: none"> <li>Key off.</li> <li>Remove the starter relay.</li> <li>Measure the resistance between: <table border="1"> <tr> <th>Starter relay base</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table> </li> </ol>	Starter relay base	Battery	Pin 02	Negative terminal
Starter relay base	Battery				
Pin 02	Negative terminal				
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to Z2.</a></p>				
<b>Z2: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	<ol style="list-style-type: none"> <li>Measure the resistance between: <table border="1"> <tr> <th>Starter relay base</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table> </li> </ol>	Starter relay base	Battery	Pin 02	Positive terminal
Starter relay base	Battery				
Pin 02	Positive terminal				
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to Z3.</a></p>				
<b>Z3: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR HIGH RESISTANCE</b>					
	<ol style="list-style-type: none"> <li>Disconnect the ECM electrical connector, EC300.</li> <li>Measure the resistance between: <table border="1"> <tr> <th>Starter relay base</th><th>ECM connector EC300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 51</td></tr> </table> </li> </ol>	Starter relay base	ECM connector EC300, harness side	Pin 02	Pin 51
Starter relay base	ECM connector EC300, harness side				
Pin 02	Pin 51				
	<p>Is the resistance greater than 5 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new starter relay. Clear the DTC and test the system for normal operation. If the DTC resets, refer to the warranty policy and procedures manual if an ECM is suspect.</p>				

## PINPOINT TEST AA : RIGHT-HAND VARIABLE CAMSHAFT TIMING (VCT) OIL CONTROL SOLENOID CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>AA1: CHECK ECM TO VCT SOLENOID SUPPLY CIRCUIT VOLTAGE</b>					
	<ol style="list-style-type: none"> <li>Disconnect the VCT solenoid electrical connector, PI16.</li> <li>Key on, engine off.</li> <li>Measure the voltage between: <table border="1"> <tr> <th>VCT solenoid connector PI16, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table> </li> </ol>	VCT solenoid connector PI16, harness side	Battery	Pin 02	Negative terminal
VCT solenoid connector PI16, harness side	Battery				
Pin 02	Negative terminal				
	<p>Is the voltage greater than 10 volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to AA2.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the VCT solenoid electrical connector and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p>				
<b>AA2: CHECK VCT SOLENOID CONTROL CIRCUIT FOR HIGH RESISTANCE</b>					
	<ol style="list-style-type: none"> <li>Key off.</li> <li>Disconnect the ECM electrical connector, PI300.</li> <li>Measure the resistance between: <table border="1"> <tr> <th>VCT solenoid connector PI16, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 86</td></tr> </table> </li> </ol>	VCT solenoid connector PI16, harness side	ECM connector PI300, harness side	Pin 01	Pin 86
VCT solenoid connector PI16, harness side	ECM connector PI300, harness side				
Pin 01	Pin 86				
	<p>Is the resistance greater than 5 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new VCT oil control solenoid.</p> <p>REFER to: Variable Camshaft Timing (VCT) Oil Control Solenoid (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation).</p> <p>CLEAR the DTC and test the system for normal operation.</p>				

## PINPOINT TEST AB : LEFT-HAND VARIABLE CAMSHAFT TIMING (VCT) OIL CONTROL SOLENOID CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AB1: CHECK ECM TO VCT SOLENOID SUPPLY CIRCUIT VOLTAGE</b>	
	<ol style="list-style-type: none"> <li>Disconnect the VCT solenoid electrical connector, PI17.</li> <li>Key on, engine off.</li> </ol>

	3 Measure the voltage between:	
	VCT solenoid connector PI17, harness side	Battery
	Pin 02	Negative terminal
	Is the voltage greater than 10 volts?	
	Yes <a href="#">GO to AB2.</a>	
	No REPAIR the circuit between the VCT solenoid electrical connector and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	

#### AB2: CHECK VCT SOLENOID CONTROL CIRCUIT FOR HIGH RESISTANCE

	1 Key off.	
	2 Disconnect the ECM electrical connector, PI300.	
	3 Measure the resistance between:	
	VCT solenoid connector PI17, harness side	ECM connector PI300, harness side
	Pin 01	Pin 87
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No INSTALL a new VCT oil control solenoid. REFER to: Variable Camshaft Timing (VCT) Oil Control Solenoid (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

#### PINPOINT TEST AC : EMS CONTROL RELAY CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### AC1: CHECK THE EMS RELAY PERMANENT SUPPLY VOLTAGES

	1 Remove the EMS relay.	
	2 Measure the voltage between:	
	EMS relay base, harness side	Battery
	Pin 01	Negative terminal
	Pin 03	Negative terminal

	Are both voltages greater than 10 volts?	
	Yes <a href="#">GO to AC2.</a>	
	No REPAIR the circuit between the relay base and battery. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	

#### AC2: CHECK THE ECM TO EMS RELAY CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

	1 Measure the resistance between:	
	EMS relay base, harness side	Battery
	Pin 02	Negative terminal

	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AC3.</a>	

#### AC3: CHECK THE ECM TO EMS RELAY CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

	1 Measure the resistance between:	
	EMS relay base, harness side	Battery
	Pin 02	Positive terminal

	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AC4.</a>	

#### AC4: CHECK THE ECM TO EMS RELAY CONTROL CIRCUIT FOR HIGH RESISTANCE

	1 Disconnect the ECM electrical connector, FH300.	
	2 Measure the resistance between:	
	EMS relay base, harness side	ECM connector FH300, harness side
	Pin 02	Pin 16

	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AC5.</a>	

#### AC5: CHECK THE EMS RELAY TO ECM IGNITION CIRCUITS FOR HIGH RESISTANCE

	1 Measure the resistance between:	
	EMS relay base, harness side	ECM connector FH300, harness side
	Pin 05	Pin 04
	Pin 05	Pin 06

	Is either resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. These circuits include fuses 18 and 38 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No INSTALL a new EMS control relay. CLEAR the DTC and test the system for normal operation.	

#### PINPOINT TEST AD : MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS		
AD1: CHECK THE MAP SENSOR SUPPLY CIRCUIT VOLTAGE			
	1 Disconnect the MAP sensor electrical connector, PI29.		
	2 Key on, engine off.		
	3 Measure the voltage between:		
	MAP sensor connector PI29, harness side Pin 02	Battery Negative terminal	
	Is the voltage less than 4 volts?		
	Yes REPAIR the 5 volt supply circuit between the MAP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to AD2.		
AD2: CHECK THE MAP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER			
	1 Key off.		
	2 Measure the resistance between:		
	MAP sensor connector PI29, harness side Pin 02	Battery Positive terminal	
	Is the resistance less than 10,000 ohms?		
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to AD3.		
	AD3: CHECK THE MAP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Measure the resistance between:		
	MAP sensor connector PI29, harness side Pin 01	Battery Negative terminal	
	Is the resistance less than 10,000 ohms?		
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to AD4.		
	AD4: CHECK THE MAP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		
		1 Measure the resistance between:	
MAP sensor connector PI29, harness side Pin 01		Battery Positive terminal	
Is the resistance less than 10,000 ohms?			
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.			
	No GO to AD5.		
	AD5: CHECK THE MAP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE		
		1 Disconnect the ECM electrical connector, PI300.	
2 Measure the resistance between:			
MAP sensor connector PI29, harness side Pin 01		ECM connector PI300, harness side Pin 69	
Is the resistance greater than 5 ohms?			
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No GO to AD6.		
	AD6: CHECK THE MAP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE		
	1 Measure the resistance between:		
	MAP sensor connector PI29, harness side Pin 04	ECM connector PI300, harness side Pin 10	
	Is the resistance greater than 5 ohms?		
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
	No INSTALL a new MAP sensor. REFER to: Manifold Absolute Pressure (MAP) Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.		

## PINPOINT TEST AE : ENGINE FUEL TEMPERATURE (EFT) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
AE1: CHECK THE EFT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Disconnect the EFT sensor electrical connector, IL09.	
	2 Measure the resistance between:	
	EFT sensor connector IL09, harness side	Battery
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes	
	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No	
	GO to AE2.	
AE2: CHECK THE EFT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		

	1 Measure the resistance between:	
	EFT sensor connector IL09, harness side	Battery
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AE3.</a>	

#### AE3: CHECK THE EFT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

	1 Disconnect the ECM electrical connector, PI300.	
	2 Measure the resistance between:	
	EFT sensor connector IL09, harness side	ECM connector PI 300, harness side
	Pin 02	Pin 46
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AE4.</a>	

#### AE4: CHECK THE EFT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	1 Measure the resistance between:	
	EFT sensor connector IL09, harness side	ECM connector PI 300, harness side
	Pin 01	Pin 15
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No INSTALL a new EFT sensor. REFER to: Fuel Temperature Sensor (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

#### PINPOINT TEST AF : AIR CONDITIONING (A/C) PRESSURE SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
AF1: CHECK THE A/C PRESSURE SENSOR POWER SUPPLY CIRCUIT VOLTAGE	1 Disconnect the A/C pressure sensor electrical connector, FH110.	
	2 Key on, engine off.	
	3 Measure the voltage between:	
	A/C pressure sensor connector FH110, harness side	Battery
	Pin 02	Negative terminal
	Is the voltage less than 4 volts?	
	Yes REPAIR the 5 volt supply circuit between the A/C pressure sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AF2.</a>	
AF2: CHECK THE A/C PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER	1 Key off.	
	2 Measure the resistance between:	
	A/C pressure sensor connector FH110, harness side	Battery
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AF3.</a>	
AF3: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND	1 Measure the resistance between:	
	A/C pressure sensor connector FH110, harness side	Battery
	Pin 03	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AF4.</a>	
AF4: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER	1 Measure the resistance between:	
	A/C pressure sensor connector FH110, harness side	Battery
	Pin 03	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AF5.</a>	
AF5: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE	1 Disconnect the ECM electrical connector, FH300.	
	2 Measure the resistance between:	
	A/C pressure sensor connector FH110, harness side	ECM connector FH300, harness side
	Pin 03	Pin 12

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to AF6.</a>

#### AF6: CHECK THE A/C PRESSURE SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>A/C pressure sensor connector FH110, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 08</td></tr> </table>	A/C pressure sensor connector FH110, harness side	ECM connector FH300, harness side	Pin 01	Pin 08
A/C pressure sensor connector FH110, harness side	ECM connector FH300, harness side				
Pin 01	Pin 08				
Is the resistance greater than 5 ohms?					
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	INSTALL a new A/C pressure sensor. REFER to: Pressure Cutoff Switch - 2.5L/3.0L/4.2L (412-03 Air Conditioning, Removal and Installation). CLEAR the DTC and test the system for normal operation.				

#### PINPOINT TEST AG : INTAKE MANIFOLD TUNING (IMT) VALVE 1 (TOP) CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>AG1: CHECK THE IMT VALVE POWER SUPPLY CIRCUIT VOLTAGE</b>					
<b>1</b>	Disconnect the IMT valve electrical connector, PI30.				
<b>2</b>	Key on, engine off.				
<b>3</b>	Measure the voltage between:				
	<table> <tr> <th>IMT valve connector PI30, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	IMT valve connector PI30, harness side	Battery	Pin 01	Negative terminal
IMT valve connector PI30, harness side	Battery				
Pin 01	Negative terminal				
Is the voltage greater than 10 volts?					
Yes	<a href="#">GO to AG2.</a>				
No	REPAIR the circuit between the IMT valve electrical connector and battery. This circuit includes fuse 37 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
<b>AG2: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>IMT valve connector PI30, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	IMT valve connector PI30, harness side	Battery	Pin 02	Negative terminal
IMT valve connector PI30, harness side	Battery				
Pin 02	Negative terminal				
Is the resistance less than 10,000 ohms?					
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to AG3.</a>				
<b>AG3: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>IMT valve connector PI30, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	IMT valve connector PI30, harness side	Battery	Pin 02	Positive terminal
IMT valve connector PI30, harness side	Battery				
Pin 02	Positive terminal				
Is the resistance less than 10,000 ohms?					
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	<a href="#">GO to AG4.</a>				
<b>AG4: CHECK THE IMT VALVE DRIVE CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>IMT valve connector PI30, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 84</td></tr> </table>	IMT valve connector PI30, harness side	ECM connector PI300, harness side	Pin 02	Pin 84
IMT valve connector PI30, harness side	ECM connector PI300, harness side				
Pin 02	Pin 84				
Is the resistance greater than 5 ohms?					
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.				
No	INSTALL a new IMT valve, REFER to: Intake Manifold Tuning (IMT) Valve LH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.				

#### PINPOINT TEST AH : INTAKE MANIFOLD TUNING (IMT) VALVE 2 (BOTTOM) CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>AH1: CHECK THE IMT VALVE POWER SUPPLY CIRCUIT VOLTAGE</b>					
<b>1</b>	Disconnect the IMT valve electrical connector, PI31.				
<b>2</b>	Key on, engine off.				
<b>3</b>	Measure the voltage between:				
	<table> <tr> <th>IMT valve connector PI31, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	IMT valve connector PI31, harness side	Battery	Pin 01	Negative terminal
IMT valve connector PI31, harness side	Battery				
Pin 01	Negative terminal				
Is the voltage greater than 10 volts?					
Yes	<a href="#">GO to AH2.</a>				
No	REPAIR the circuit between the IMT valve electrical connector and battery. This circuit includes fuse 37 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the				

DTC and test the system for normal operation.

**AH2: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND**

	<b>1</b>	Key off.	
	<b>2</b>	Measure the resistance between:	
		<b>IMT valve connector PI31, harness side</b>	<b>Battery</b>
	Pin 02		Negative terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to AH3.</a>			

**AH3: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO POWER**

	<b>1</b>	Measure the resistance between:	
		<b>IMT valve connector PI31, harness side</b>	<b>Battery</b>
	Pin 02		Positive terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to AH4.</a>			

**AH4: CHECK THE IMT VALVE DRIVE CIRCUIT FOR HIGH RESISTANCE**

	<b>1</b>	Disconnect the ECM electrical connector, PI300.	
	<b>2</b>	Measure the resistance between:	
		<b>IMT valve connector PI31, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02		Pin 90
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new IMT valve, REFER to: Intake Manifold Tuning (IMT) Valve LH (303-14A Electronic Engine Controls - 2.5L/3.0L, Removal and Installation). CLEAR the DTC and test the system for normal operation.			

**PINPOINT TEST AI : BRAKE SWITCH**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**AI1: CHECK THE OPERATION OF THE BRAKE SWITCH (PEDAL RELEASED)**

	<b>1</b>	Key off.	
	<b>2</b>	Disconnect the brake switch electrical connector, CA37.	
	<b>3</b>	Make sure the brake pedal is not pressed.	
	<b>4</b>	Measure the resistance between:	
		<b>Brake switch connector CA37, component side</b>	<b>Brake switch connector CA37, component side</b>
	Pin 01		Pin 02
Is the resistance greater than 5 ohms? <b>Yes</b> <a href="#">GO to AI2.</a> <b>No</b> INSTALL a new brake switch. CLEAR the DTC and test the system for normal operation.			

**AI2: CHECK THE OPERATION OF THE BRAKE SWITCH (PEDAL PRESSED)**

	<b>1</b>	Press the brake pedal.	
	<b>2</b>	Measure the resistance between:	
		<b>Brake switch connector CA37, component side</b>	<b>Brake switch connector CA37, component side</b>
	Pin 01		Pin 02
Is the resistance greater than 5 ohms? <b>Yes</b> INSTALL a new brake switch. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to AI3.</a>			

**AI3: CHECK THE POWER SUPPLY TO THE BRAKE PEDAL SWITCH**

	<b>1</b>	Key on, engine off.	
	<b>2</b>	Measure the voltage between:	
		<b>Brake switch connector CA37, harness side</b>	<b>Battery</b>
	Pin 01		Negative terminal
Is the voltage less than 10 volts? <b>Yes</b> REPAIR the circuit between the brake switch and battery. This circuit includes fuse 35 of the primary junction box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to AI4.</a>			

**AI4: CHECK THE BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT CIRCUIT TO GROUND**

	<b>1</b>	Key off.	
	<b>2</b>	Measure the resistance between:	
		<b>Brake switch connector CA37, harness side</b>	<b>Battery</b>
	Pin 02		Negative terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to AI5.</a>			

**AI5: CHECK THE BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:	
	<b>Brake switch connector CA37, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AI6.](#)

#### **AI6: CHECK THE BRAKE SWITCH SIGNAL CIRCUIT FOR HIGH RESISTANCE**

<b>1</b>	Disconnect the ECM electrical connector, FH300.	
<b>2</b>	Measure the resistance between:	
	<b>Brake switch connector CA37, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 02	Pin 41

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 REFER to the warranty policy and procedures manual if an ECM is suspect.

#### **PINPOINT TEST AJ : AIR CONDITIONING (A/C) COMPRESSOR CLUTCH CONTROL CIRCUIT**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### **AJ1: CHECK THE A/C CLUTCH RELAY CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND**

<b>1</b>	Remove the A/C clutch relay.	
<b>2</b>	Key on, engine off.	
<b>3</b>	Measure the resistance between:	
	<b>A/C clutch relay base</b>	<b>Battery</b>
	Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AJ2.](#)

##### **AJ2: CHECK THE A/C CLUTCH RELAY CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER**

<b>1</b>	Measure the resistance between:	
	<b>A/C clutch relay base</b>	<b>Battery</b>
	Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AJ3.](#)

##### **AJ3: CHECK THE A/C CLUTCH RELAY CONTROL CIRCUIT FOR HIGH RESISTANCE**

<b>1</b>	Disconnect the ECM electrical connector, FH300.	
<b>2</b>	Measure the resistance between:	
	<b>A/C clutch relay base</b>	<b>ECM connector FH300, harness side</b>
	Pin 02	Pin 53

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new A/C clutch relay. CLEAR the DTC and test the system for normal operation. If the DTC is reset, refer to the warranty policy and procedures manual if an ECM is suspect.

#### **PINPOINT TEST AK : CLUTCH PEDAL SWITCH**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### **AK1: CHECK THE OPERATION OF THE CLUTCH PEDAL SWITCH (PEDAL RELEASED)**

<b>1</b>	Key off.	
<b>2</b>	Disconnect the clutch pedal electrical connector, (right hand drive vehicles) CA285 or (left hand drive vehicles) CA291.	
<b>3</b>	Make sure the clutch pedal is not pressed.	
<b>4</b>	Measure the resistance between:	
<b>Right hand drive vehicles</b>		
	<b>Clutch pedal switch connector CA285, component side</b>	<b>Clutch pedal switch connector CA285, component side</b>
	Pin 01	Pin 02
<b>Left hand drive vehicles</b>		
	<b>Clutch pedal switch connector CA291, component side</b>	<b>Clutch pedal switch connector CA291, component side</b>
	Pin 01	Pin 02

Is the resistance greater than 5 ohms?  
**Yes**  
[GO to AK2.](#)  
**No**  
 INSTALL a new clutch pedal switch. CLEAR the DTC and test the system for normal operation.

##### **AK2: CHECK THE OPERATION OF THE CLUTCH PEDAL SWITCH (PEDAL PRESSED)**

<b>1</b>	Press the clutch pedal.	
----------	-------------------------	--

**2** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, component side	Clutch pedal switch connector CA285, component side
Pin 01	Pin 02

**Left hand drive vehicles**

Clutch pedal switch connector CA291, component side	Clutch pedal switch connector CA291, component side
Pin 01	Pin 02

Is the resistance greater than 5 ohms?

**Yes**

INSTALL a new clutch pedal switch. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK3.](#)

**AK3: CHECK THE CLUTCH PEDAL SWITCH TO ECM INPUT CIRCUIT FOR SHORT CIRCUIT TO GROUND**

**1** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	Battery
Pin 01	Negative terminal

**Left hand drive vehicles**

Clutch pedal switch connector CA291, harness side	Battery
Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK4.](#)

**AK4: CHECK THE CLUTCH PEDAL SWITCH TO ECM INPUT CIRCUIT FOR SHORT CIRCUIT TO POWER**

**1** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	Battery
Pin 01	Positive terminal

**Left hand drive vehicles**

Clutch pedal switch connector CA291, harness side	Battery
Pin 01	Positive terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK5.](#)

**AK5: CHECK THE CLUTCH PEDAL SWITCH TO ECM INPUT CIRCUIT FOR HIGH RESISTANCE**

**1** Disconnect ECM electrical connector FH300

**2** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	ECM connector FH300, harness side
Pin 01	Pin 43

**Left hand drive vehicles**

Clutch pedal switch connector CA291, harness side	ECM connector FH300, harness side
Pin 01	Pin 43

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK6.](#)

**AK6: CHECK THE CLUTCH PEDAL SWITCH GROUND CIRCUIT FOR HIGH RESISTANCE**

**1** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	Battery
Pin 02	Negative terminal

**Left hand drive vehicles**

Clutch pedal switch connector CA291, harness side	Battery
Pin 02	Negative terminal

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

Refer to the warranty policy and procedures manual if an ECM is suspect.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Electronic Engine Controls

## VIN Range: N80181->R99999

### Diagnosis and Testing

#### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, plus the addition of secondary air injection and changes to evaporative emissions to comply with stage four emissions requirements.

For more information on these systems,

REFER to: [Evaporative Emissions - VIN Range: N52048->N99999](#) (303-13 Evaporative Emissions, Description and Operation).

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Engine oil level and condition</li> <li>● Cooling system coolant level</li> <li>● Fuel level</li> <li>● Fuel contamination/grade/quality</li> <li>● Throttle body</li> <li>● Poly-vee belt</li> <li>● Air cleaner condition</li> </ul>	<ul style="list-style-type: none"> <li>● Fuses</li> <li>● Wiring harness</li> <li>● Electrical connector(s)</li> <li>● Sensor(s)</li> <li>● Engine control module (ECM)</li> <li>● Transmission control module (TCM)</li> </ul>

3. Verify the following systems are working correctly:

- Air intake system
- Cooling system
- Charging system
- Fuel charging system
- Ignition system

4. If an obvious cause for an observed or reported symptom is found, correct the cause (if possible) before proceeding to the next step.
5. If the cause is not visually evident, use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the DTC Index, or the symptom chart if no DTCs are set.

### Symptom Chart

Symptom (general)	Symptom (specific)	Possible source	Action
Non-Start	Engine does not crank	<ul style="list-style-type: none"> <li>● Security system /Immobiliser engaged</li> <li>● Engine in shut-down mode</li> <li>● ECM relay</li> <li>● Battery</li> <li>● Park/Neutral switch</li> <li>● Starting system</li> <li>● Harness</li> <li>● Engine seized</li> </ul>	<p>Check that the security system is disarmed. Check for DTCs. For ECM relay tests, GO to Pinpoint Test <a href="#">AC</a>. For battery information, REFER to: <a href="#">Battery</a> (414-01 Battery, Mounting and Cables, Diagnosis and Testing).</p> <p>For Park/Neutral tests, REFER to: <a href="#">External Controls</a> (307-05 Automatic Transmission/Transaxle External Controls, Diagnosis and Testing).</p> <p>For starting system, REFER to: <a href="#">Starting System</a> (303-06 Starting System, Diagnosis and Testing).</p> <p>For engine information, REFER to: <a href="#">Engine</a> (303-01A Engine - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p>
	Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>● Engine breather system disconnected/restricted</li> <li>● Ignition system</li> <li>● Fuel system</li> <li>● Harness</li> <li>● Crankshaft position (CKP) sensor</li> <li>● ECM fault</li> </ul>	<p>Check the engine breather system, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>For fuel system, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>For CKP tests, GO to Pinpoint Test <a href="#">Q</a>. Refer to the warranty policy and procedures manual if an ECM is suspect.</p>
	Engine cranks and fires, but will not start	<ul style="list-style-type: none"> <li>● Evaporative emissions purge valve</li> <li>● Fuel pump</li> <li>● Engine coolant temperature (ECT) sensor</li> <li>● Spark plugs</li> <li>● Check for water ingress into spark-plug wells</li> <li>● HT short to ground (tracking) check rubber boots for</li> </ul>	<p>For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing).</p> <p>For fuel pump circuit tests, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For ECT sensor tests, GO to Pinpoint Test <a href="#">C</a>. For ignition</p>

Symptom (general)	Symptom (specific)	Possible source	Action
		<ul style="list-style-type: none"> <li>cracks/damage</li> <li>Ignition coil failure(s)</li> <li>Harness</li> </ul>	system, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07A Engine Ignition - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).
Difficult to start	Difficult to start cold	<ul style="list-style-type: none"> <li>Coolant anti-freeze content</li> <li>Battery</li> <li>CKP sensor</li> <li>Fuel pump</li> <li>ECT sensor</li> <li>Purge valve</li> </ul>	Check the coolant anti-freeze content. ## DTC index

• NOTE: Generic scan tools may not read the codes listed, or may read only 5-digit codes. Match the 5 digits from the scan tool to the first 5 digits of the 7-digit code listed to identify the fault (the last 2 digits give extra information read by the manufacturer-approved diagnostic system).

DTC	Description	Possible causes	Action
C003100	Left front wheel speed sensor	<ul style="list-style-type: none"> <li>● Invalid data received from ABS: left front wheel speed signal</li> </ul>	REFER to: <a href="#">Anti-Lock Control - Stability Assist - VIN Range: N52207-&gt;N99999</a> (206-09 Anti-Lock Control - Stability Assist, Diagnosis and Testing).

<b>PINPOINT TEST A : MASS AIR FLOW (MAF) SENSOR CIRCUIT</b>			

**CAUTION:** When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.

• **NOTE:** When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• **NOTE:** Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• **NOTE:** Before commencing this test, check the air filter for blockage, the engine air intake and breather systems for leaks, and the TP sensor for additional DTCs.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>A1: CHECK THE MAF SENSOR SUPPLY CIRCUIT VOLTAGE</b>					
• NOTE: Check for DTCs indicating IMT valve and purge valve faults before carrying out the MAF supply voltage pinpoint test.					
	1	Disconnect the MAF sensor electrical connector, PI14.			
	2	Key on, engine off.			
	3	Measure the voltage between:			
	<table><tr><th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		MAF sensor connector PI14, harness side	Battery	Pin 01
MAF sensor connector PI14, harness side	Battery				
Pin 01	Negative terminal				
Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to A2.</a> <b>No</b> REPAIR the circuit between the MAF sensor electrical connector and the battery. This circuit includes the EMS control relay and fuse 37 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.					
<b>A2: CHECK THE MAF SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
• NOTE: The short to GROUND may be intermittent. Move the wiring to attempt to reproduce the conditions under which the DTC was logged, and visually inspect the harness for any signs of chafing, see "visual inspection chart".					
	1	Key off.			
	2	Measure the resistance between:			
	<table><tr><th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr><tr><td>Pin 03</td><td>Negative terminal</td></tr></table>		MAF sensor connector PI14, harness side	Battery	Pin 03
MAF sensor connector PI14, harness side	Battery				
Pin 03	Negative terminal				
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A3.</a>					
<b>A3: CHECK THE MAF SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	1	Measure the resistance between:			
	<table><tr><th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr><tr><td>Pin 03</td><td>Positive terminal</td></tr></table>		MAF sensor connector PI14, harness side	Battery	Pin 03
MAF sensor connector PI14, harness side	Battery				
Pin 03	Positive terminal				
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A4.</a>					
<b>A4: CHECK THE MAF SENSOR GROUND CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	1	Measure the resistance between:			
	<table><tr><th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Positive terminal</td></tr></table>		MAF sensor connector PI14, harness side	Battery	Pin 02
MAF sensor connector PI14, harness side	Battery				
Pin 02	Positive terminal				
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A5.</a>					
<b>A5: CHECK THE MAF SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
	1	Disconnect the ECM electrical connector, PI300.			
	2	Measure the resistance between:			
	<table><tr><th>MAF sensor connector PI14, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 03</td><td>Pin 70</td></tr></table>		MAF sensor connector PI14, harness side	ECM connector PI300, harness side	Pin 03
MAF sensor connector PI14, harness side	ECM connector PI300, harness side				
Pin 03	Pin 70				
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to A6.</a>					
<b>A6: CHECK THE MAF SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>					
	1	Measure the resistance between:			
	<table><tr><th>MAF sensor connector PI14, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 02</td><td>Pin 18</td></tr></table>		MAF sensor connector PI14, harness side	ECM connector PI300, harness side	Pin 02
MAF sensor connector PI14, harness side	ECM connector PI300, harness side				
Pin 02	Pin 18				
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.					

#### PINPOINT TEST B : INTAKE AIR TEMPERATURE (IAT) SENSOR CIRCUIT

• **NOTE:** The IAT sensor is integral with the Mass Air Flow sensor.

• NOTE: Before commencing this test, check the air filter for blockage and the engine air intake and breather systems for leaks.  
REFER to: [Intake Air Distribution and Filtering - VIN Range: N52048->N99999](#) (303-12A Intake Air Distribution and Filtering - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>B1: CHECK THE IAT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b> Disconnect the MAF sensor electrical connector, PI14.	
	<b>2</b> Measure the resistance between:	
	<b>MAF sensor connector PI 14, harness side</b>	<b>Battery</b>
	Pin 04	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to B2.</a>	
<b>B2: CHECK THE IAT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>MAF sensor connector PI 14, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to B3.</a>	
<b>B3: CHECK THE IAT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>MAF sensor connector PI 14, harness side</b>	<b>ECM connector PI 300, harness side</b>
	Pin 04	Pin 66
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to B4.</a>	
<b>B4: CHECK THE IAT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Measure the resistance between:	
	<b>MAF sensor connector PI 14, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 05	Pin 12
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

**PINPOINT TEST C : ENGINE COOLANT TEMPERATURE (ECT) SENSOR CIRCUIT**

• NOTE: Before commencing this test, check the coolant level and condition, check the operation of the thermostat, rectify as necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>C1: CHECK THE ECT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b>	Disconnect the ECT sensor electrical connector, PI25.
	<b>2</b>	Measure the resistance between:
	<b>ECT sensor connector PI25, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to C2.</a>	
<b>C2: CHECK THE ECT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b>	Measure the resistance between:
	<b>ECT sensor connector PI25, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to C3.</a>	
	<b>C3: CHECK THE ECT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>	
	<b>1</b>	Disconnect the ECM electrical connector, PI300.
	<b>2</b>	Measure the resistance between:
	<b>ECT sensor connector PI25, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 68
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b>	

[GO to C4.](#)

**C4: CHECK THE ECT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE**

	<b>1</b> Measure the resistance between:	
	<b>ECT sensor connector PI25, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01	Pin 12
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new ECT sensor. REFER to: <a href="#">Engine Coolant Temperature (ECT) Sensor - VIN Range: M45255-&gt;N52047</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.	

**PINPOINT TEST D : THROTTLE POSITION (TP) SENSOR 1 CIRCUIT**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>D1: CHECK THE TP SENSOR SUPPLY CIRCUIT VOLTAGE</b>		
	<b>1</b> Disconnect the TP sensor electrical connector, PI26.	
	<b>2</b> Key on, engine off.	
	<b>3</b> Measure the voltage between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 05	Negative terminal
	Is the voltage less than 4 volts?	
	<b>Yes</b> REPAIR the 5 volt supply circuit between the TP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to D2.</a>	
<b>D2: CHECK THE TP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Key off.	
	<b>2</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 05	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to D3.</a>	
<b>D3: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 06	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to D4.</a>	
<b>D4: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 06	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to D5.</a>	
<b>D5: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 06	Pin 65
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to D6.</a>	
<b>D6: CHECK THE TP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 03	Pin 11
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new TP sensor. REFER to: <a href="#">Throttle Body - VIN Range: N52048-&gt;N99999</a> (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

PINPOINT TEST E : THROTTLE POSITION (TP) SENSOR 2 CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>E1: CHECK THE TP SENSOR SUPPLY CIRCUIT VOLTAGE</b>		
	<b>1</b> Disconnect the TP sensor electrical connector, PI26.	
	<b>2</b> Key on, engine off.	
	<b>3</b> Measure the voltage between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 05	Negative terminal
	Is the voltage less than 4 volts?	
	<b>Yes</b> REPAIR the 5 volt supply circuit between the TP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to E2.</a>	
<b>E2: CHECK THE TP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Key off.	
	<b>2</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 05	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to E3.</a>	
<b>E3: CHECK THE TP SENSOR SENSING CIRCUIT TP2 FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 04	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to E4.</a>	
<b>E4: CHECK THE TP SENSOR SENSING CIRCUIT TP2 FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to E5.</a>	
<b>E5: CHECK THE TP SENSOR SENSING CIRCUIT TP2 FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>ECM connector PI 300, harness side</b>
	Pin 04	Pin 67
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to E6.</a>	
<b>E6: CHECK THE TP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Measure the resistance between:	
	<b>TP sensor connector PI26, harness side</b>	<b>ECM connector PI 300, harness side</b>
	Pin 03	Pin 11
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new TP sensor.	
	REFER to: <a href="#">Throttle Body - VIN Range: N52048-&gt;N99999</a> (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).	
	CLEAR the DTC and test the system for normal operation.	

PINPOINT TEST F : RIGHT-HAND H02S VARIABLE AND CONSTANT CIRCUITS

 <b>CAUTION:</b> Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.					
• <b>NOTE:</b> Before commencing this test, check the sensor connections and harness, check for exhaust leaks, (a very small exhaust leak can cause this DTC to flag). See "visual inspection chart" and "possible causes".					
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>F1: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
<b>1</b>	Disconnect the H02S electrical connector, PI10.				
<b>2</b>	Measure the resistance between:				
	<table><tr><th>H02S connector PI10, harness side</th><th>Battery</th></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table>	H02S connector PI10, harness side	Battery	Pin 04	Negative terminal
H02S connector PI10, harness side	Battery				
Pin 04	Negative terminal				

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to F2.</a>

F2: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Measure the resistance between:	
	H02S connector PI10, harness side	Battery
Pin 04		Positive terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to F3.</a>

F3: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Measure the resistance between:	
	H02S connector PI10, harness side	Battery
Pin 03		Negative terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to F4.</a>

F4: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Measure the resistance between:	
	H02S connector PI10, harness side	Battery
Pin 03		Positive terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to F5.</a>

F5: CHECK THE H02S VARIABLE CIRCUIT FOR HIGH RESISTANCE

1	Disconnect the ECM electrical connector, PI300.		
2	Measure the resistance between:		
	H02S connector PI10, harness side		ECM connector PI300, harness side
	Pin 04		Pin 28

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to F6.</a>

F6: CHECK THE H02S CONSTANT CIRCUIT FOR HIGH RESISTANCE

1	Measure the resistance between:	
	H02S connector PI10, harness side	ECM connector PI300, harness side
Pin 03		Pin 29

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new H02S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

PINPOINT TEST G : RIGHT-HAND H02S HEATER SUPPLY AND CONTROL CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

G1: CHECK H02S HEATER POWER SUPPLY CIRCUIT

1	Disconnect the H02S electrical connector, PI10.	
2	Key on, engine off.	
3	Make sure the O2S heater relay is energized.	
4	Measure the voltage between:	
	<b>H02S connector PI 10, harness side</b>	<b>Battery</b>
Pin 01		Negative terminal

Is the voltage greater than 10 volts?	Yes <a href="#">GO to G2.</a>
No	REPAIR the power supply circuit to the H02S heater. This circuit includes the O2S heater relay and fuse 20 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

G2: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO GROUND

1	Key off.	
2	Measure the resistance between	
	H02S connector PI10, harness side	Battery
Pin 02		Negative terminal

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to G3.</a>

### G3: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
Pin 02	<table border="1"> <tr> <th>H02S connector PI 10, harness side</th><th>Battery</th></tr> <tr> <td></td><td>Positive terminal</td></tr> </table>	H02S connector PI 10, harness side	Battery		Positive terminal
H02S connector PI 10, harness side	Battery				
	Positive terminal				

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to G4.</a>

### G4: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
Pin 02	<table border="1"> <tr> <th>H02S connector PI 10, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td></td><td>Pin 76</td></tr> </table>	H02S connector PI 10, harness side	ECM connector PI 300, harness side		Pin 76
H02S connector PI 10, harness side	ECM connector PI 300, harness side				
	Pin 76				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new H02S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST H : RIGHT-HAND CATALYST MONITOR SENSOR SENSING AND GROUND CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### H1: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Disconnect the catalyst monitor electrical connector, PI11.				
<b>2</b>	Measure the resistance between:				
Pin 04	<table border="1"> <tr> <th>Catalyst monitor connector PI11, harness side</th><th>Battery</th></tr> <tr> <td></td><td>Negative terminal</td></tr> </table>	Catalyst monitor connector PI11, harness side	Battery		Negative terminal
Catalyst monitor connector PI11, harness side	Battery				
	Negative terminal				

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to H2.</a>

### H2: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
Pin 04	<table border="1"> <tr> <th>Catalyst monitor connector PI11, harness side</th><th>Battery</th></tr> <tr> <td></td><td>Positive terminal</td></tr> </table>	Catalyst monitor connector PI11, harness side	Battery		Positive terminal
Catalyst monitor connector PI11, harness side	Battery				
	Positive terminal				

Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to H3.</a>

### H3: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
Pin 04	<table border="1"> <tr> <th>Catalyst monitor connector PI11, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td></td><td>Pin 40</td></tr> </table>	Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side		Pin 40
Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side				
	Pin 40				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	<a href="#">GO to H4.</a>

### H4: CHECK THE CATALYST MONITOR SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
Pin 03	<table border="1"> <tr> <th>Catalyst monitor connector PI11, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td></td><td>Pin 22</td></tr> </table>	Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side		Pin 22
Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side				
	Pin 22				

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
No	INSTALL a new catalyst monitor sensor. REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST I : RIGHT-HAND CATALYST MONITOR SENSOR SUPPLY AND HEATER CONTROL CIRCUITS

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
I1: CHECK THE CATALYST MONITOR HEATER POWER SUPPLY CIRCUIT		
	1 Disconnect the catalyst monitor sensor electrical connector, PI11.	
	2 Key on, engine off.	
	3 Make sure the O2S heater relay is energized.	
	4 Measure the voltage between:	
	Catalyst monitor connector PI11, harness side	Battery
	Pin 01	Negative terminal
	Is the voltage greater than 10 volts?	
	Yes GO to I2.	
	No REPAIR the power supply circuit to the catalyst monitor heater. This circuit includes the O2S heater relay and fuse 20 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
I2: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	Catalyst monitor connector PI11, harness side	Battery
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to I3.	
I3: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	Catalyst monitor connector PI11, harness side	Battery
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to I4.	
I4: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE		
	1 Disconnect the ECM electrical connector, PI300.	
	2 Measure the resistance between:	
	Catalyst monitor connector PI11, harness side	ECM connector PI300, harness side
	Pin 02	Pin 88
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No INSTALL a new catalyst monitor sensor. REFER to: Catalyst Monitor Sensor (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.	

#### PINPOINT TEST J : LEFT-HAND H02S VARIABLE AND CONSTANT CIRCUITS

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• **NOTE:** Before commencing this test, check the sensor connections and harness, check for exhaust leaks, (a very small exhaust leak can cause this DTC to flag). See "visual inspection chart" and "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS					
J1: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO GROUND						
	1	Disconnect the H02S electrical connector, PI12.				
	2	Measure the resistance between:				
	<table><tr><th>H02S connector PI12, harness side</th><th>Battery</th></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table>		H02S connector PI12, harness side	Battery	Pin 04	Negative terminal
H02S connector PI12, harness side	Battery					
Pin 04	Negative terminal					
	Is the resistance less than 10,000 ohms?					
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.					
	No <a href="#">GO to J2.</a>					
J2: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT TO CIRCUIT TO POWER						
	1	Measure the resistance between:				
	<table><tr><th>H02S connector PI12, harness side</th><th>Battery</th></tr><tr><td>Pin 04</td><td>Positive terminal</td></tr></table>		H02S connector PI12, harness side	Battery	Pin 04	Positive terminal
	H02S connector PI12, harness side	Battery				
Pin 04	Positive terminal					
	Is the resistance less than 10,000 ohms?					
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.					
	No <a href="#">GO to J3.</a>					
J3: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO GROUND						
	1	Measure the resistance between:				
	<table><tr><th>H02S connector PI12, harness side</th><th>Battery</th></tr><tr><td>Pin 03</td><td>Negative terminal</td></tr></table>		H02S connector PI12, harness side	Battery	Pin 03	Negative terminal
	H02S connector PI12, harness side	Battery				
Pin 03	Negative terminal					

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to J4.</a>
--	---

J4: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT TO CIRCUIT TO POWER		
	1 Measure the resistance between:	
	H02S connector PI 12, harness side	Battery
	Pin 03	Positive terminal

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to J5.</a>
--	---

J5: CHECK THE H02S VARIABLE CIRCUIT FOR HIGH RESISTANCE		
	1 Disconnect the ECM electrical connector, PI300.	
	2 Measure the resistance between:	
	H02S connector PI 12, harness side	ECM connector PI 300, harness side
	Pin 04	Pin 26

	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to J6.</a>
--	---

J6: CHECK THE H02S CONSTANT CIRCUIT FOR HIGH RESISTANCE		
	1 Measure the resistance between:	
	H02S connector PI 12, harness side	ECM connector PI 300, harness side
	Pin 03	Pin 27

	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new H02S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.
--	--

PINPOINT TEST K : LEFT-HAND H02S HEATER SUPPLY AND CONTROL CIRCUITS	
	<b>CAUTION:</b> Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.
	• <b>NOTE:</b> Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

K1: CHECK H02S HEATER POWER SUPPLY CIRCUIT	
	1 Disconnect the H02S electrical connector, PI12.
	2 Key on, engine off.
	3 Make sure the O2S heater relay is energized.
	4 Measure the voltage between:
	H02S connector PI 12, harness side      Battery
	Pin 01      Negative terminal

	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to K2.</a> <b>No</b> REPAIR the power supply circuit to the H02S heater. This circuit includes the O2S heater relay and fuse 35 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
--	--

K2: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO GROUND	
	1 Key off.
	2 Measure the resistance between:
	H02S connector PI 12, harness side      Battery
	Pin 02      Negative terminal

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to K3.</a>
--	---

K3: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO POWER	
	1 Measure the resistance between:
	H02S connector PI 12, harness side      Battery
	Pin 02      Positive terminal

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to K4.</a>
--	---

K4: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR HIGH RESISTANCE	
	1 Disconnect the ECM electrical connector, PI300.

	2 Measure the resistance between:	
	H02S connector PI12, harness side	ECM connector PI300, harness side
	Pin 02	Pin 77
<p>Is the resistance greater than 5 ohms?</p> <p><b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> INSTALL a new H02S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.</p>		

### PINPOINT TEST L : LEFT-HAND CATALYST MONITOR SENSOR SENSING AND GROUND CIRCUITS

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### L1: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	1	Disconnect the catalyst monitor electrical connector, PI13.	
	2	Measure the resistance between:	
		Catalyst monitor connector PI13, harness side	Battery
	Pin 04		Negative terminal

<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to L2.</a></p>			
--	--	--	--

#### L2: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

	1	Measure the resistance between:	
		Catalyst monitor connector PI13, harness side	Battery
	Pin 04		Positive terminal

<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to L3.</a></p>			
--	--	--	--

#### L3: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

	1	Disconnect the ECM electrical connector, PI300.	
	2	Measure the resistance between:	
		Catalyst monitor connector PI13, harness side	ECM connector PI300, harness side
	Pin 04		Pin 41

<p>Is the resistance greater than 5 ohms?</p> <p><b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to L4.</a></p>			
--	--	--	--

#### L4: CHECK THE CATALYST MONITOR SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	1	Measure the resistance between:	
		Catalyst monitor connector PI13, harness side	ECM connector PI300, harness side
	Pin 03		Pin 45

<p>Is the resistance greater than 5 ohms?</p> <p><b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> INSTALL a new catalyst monitor sensor. REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.</p>			
---	--	--	--

### PINPOINT TEST M : LEFT-HAND CATALYST MONITOR SENSOR SUPPLY AND HEATER CONTROL CIRCUITS

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• **NOTE:** Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters)

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### M1: CHECK THE CATALYST MONITOR HEATER POWER SUPPLY CIRCUIT

	1	Disconnect the catalyst monitor sensor electrical connector, PI13.	
	2	Key on, engine off.	
	3	Make sure the O2S heater relay is energized.	
	4	Measure the voltage between:	
		Catalyst monitor connector PI13, harness side	Battery
	Pin 01		Negative terminal

<p>Is the voltage greater than 10 volts?</p> <p><b>Yes</b> <a href="#">GO to M2.</a></p> <p><b>No</b> REPAIR the power supply circuit to the catalyst monitor heater. This circuit includes the O2S heater relay and fuse 35 of the front power distribution box. For additional information refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p>			
--	--	--	--

#### M2: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Catalyst monitor connector PI13, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Catalyst monitor connector PI13, harness side	Battery	Pin 02	Negative terminal
Catalyst monitor connector PI13, harness side	Battery				
Pin 02	Negative terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to M3.</a>

### M3: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>Catalyst monitor connector PI13, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	Catalyst monitor connector PI13, harness side	Battery	Pin 02	Positive terminal
Catalyst monitor connector PI13, harness side	Battery				
Pin 02	Positive terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to M4.</a>

### M4: CHECK THE CATALYST MONITOR SENSOR HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>Catalyst monitor connector PI13, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 89</td></tr> </table>	Catalyst monitor connector PI13, harness side	ECM connector PI300, harness side	Pin 02	Pin 89
Catalyst monitor connector PI13, harness side	ECM connector PI300, harness side				
Pin 02	Pin 89				

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> INSTALL a new catalyst monitor sensor. REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

## PINPOINT TEST N : ENGINE OIL TEMPERATURE (EOT) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### N1: CHECK THE EOT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Disconnect the EOT sensor electrical connector, PI24.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	EOT sensor connector PI24, harness side	Battery	Pin 02	Negative terminal
EOT sensor connector PI24, harness side	Battery				
Pin 02	Negative terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to N2.</a>

### N2: CHECK THE EOT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Positive terminal</td></tr> </table>	EOT sensor connector PI24, harness side	Battery	Pin 02	Positive terminal
EOT sensor connector PI24, harness side	Battery				
Pin 02	Positive terminal				

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to N3.</a>

### N3: CHECK THE EOT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 23</td></tr> </table>	EOT sensor connector PI24, harness side	ECM connector PI300, harness side	Pin 02	Pin 23
EOT sensor connector PI24, harness side	ECM connector PI300, harness side				
Pin 02	Pin 23				

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> <a href="#">GO to N4.</a>

### N4: CHECK THE EOT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 10</td></tr> </table>	EOT sensor connector PI24, harness side	ECM connector PI300, harness side	Pin 01	Pin 10
EOT sensor connector PI24, harness side	ECM connector PI300, harness side				
Pin 01	Pin 10				

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. This circuit includes harness splice, PIS49. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b> INSTALL a new EOT sensor. REFER to: <a href="#">Oil Temperature Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

## PINPOINT TEST O : RIGHT-HAND KNOCK SENSOR (KS) CIRCUIT

• NOTE: Before commencing this test, make sure that the sensor is making a good electrical contact with the cylinder block. See "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>O1: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b> Disconnect the KS electrical connector, PI43.	
	<b>2</b> Measure the resistance between:	
	<b>KS connector PI43, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to O2.</a>	
<b>O2: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>KS connector PI43, harness side</b>	<b>Battery</b>
	Pin 01	Positive terminal
		Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
<b>No</b> <a href="#">GO to O3.</a>		
<b>O3: CHECK KS SENSING CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>KS connector PI43, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01	Pin 42
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to O4.</a>	
<b>O4: CHECK KS GROUND CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Measure the resistance between:	
	<b>KS connector PI43, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 19
		Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
<b>No</b> INSTALL a new KS. REFER to: <a href="#">Knock Sensor (KS) RH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.		

**PINPOINT TEST P : LEFT-HAND KNOCK SENSOR (KS) CIRCUIT**

• NOTE: Before commencing this test, make sure that the sensor is making a good electrical contact with the cylinder block. See "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
<b>P1: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>		
	<b>1</b> Disconnect the KS electrical connector, PI44.	
	<b>2</b> Measure the resistance between:	
	<b>KS connector PI44, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to P2.</a>	
<b>P2: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>KS connector PI44, harness side</b>	<b>Battery</b>
	Pin 01	Positive terminal
		Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
<b>No</b> <a href="#">GO to P3.</a>		
<b>P3: CHECK KS SENSING CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, PI300.	
	<b>2</b> Measure the resistance between:	
	<b>KS connector PI44, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 01	Pin 43
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b>	

[GO to P4.](#)

#### P4: CHECK KS GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:			
	<table><tr><th>KS connector PI44, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 02</td><td>Pin 20</td></tr></table>	KS connector PI44, harness side	ECM connector PI300, harness side	Pin 02
KS connector PI44, harness side	ECM connector PI300, harness side			
Pin 02	Pin 20			
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new KS. REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.			

#### PINPOINT TEST Q : CRANKSHAFT POSITION (CKP) SENSOR CIRCUIT

• NOTE: The clearance between the CKP sensor and the reluctor ring should be checked at 90° intervals. The air gap between the two should be no greater than 4.5 mm at any point.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### Q1: CHECK THE CKP SENSOR FOR CORRECT INSTALLATION

	<b>1</b> Check the CKP sensor for correct installation.
	Is the CKP sensor correctly installed? <b>Yes</b> <a href="#">GO to Q2.</a> <b>No</b> INSTALL the CKP sensor correctly. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Reconnect the sensor. CLEAR the DTCs and test the system for normal operation.

##### Q2: CHECK THE CKP SENSOR FOR DEBRIS

	<b>1</b> Remove the CKP sensor and inspect for debris.
	Is the CKP sensor free of debris? <b>Yes</b> <a href="#">GO to Q3.</a> <b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Reconnect the sensor. CLEAR the DTCs and test the system for normal operation.

##### Q3: CHECK THE CKP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Disconnect the CKP sensor electrical connector, PI21.				
	<b>2</b> Measure the resistance between:				
	<table><tr><th>CKP sensor connector PI21, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Negative terminal</td></tr></table>	CKP sensor connector PI21, harness side	Battery	Pin 02	Negative terminal
CKP sensor connector PI21, harness side	Battery				
Pin 02	Negative terminal				
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to Q4.</a>				

##### Q4: CHECK THE CKP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:				
	<table><tr><th>CKP sensor connector PI21, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Positive terminal</td></tr></table>	CKP sensor connector PI21, harness side	Battery	Pin 02	Positive terminal
CKP sensor connector PI21, harness side	Battery				
Pin 02	Positive terminal				
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to Q5.</a>				

##### Q5: CHECK THE CKP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, PI300.				
	<b>2</b> Measure the resistance between:				
	<table><tr><th>CKP sensor connector PI21, harness side</th><th>ECM connector PI 300, harness side</th></tr><tr><td>Pin 02</td><td>Pin 30</td></tr></table>	CKP sensor connector PI21, harness side	ECM connector PI 300, harness side	Pin 02	Pin 30
CKP sensor connector PI21, harness side	ECM connector PI 300, harness side				
Pin 02	Pin 30				
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to Q6.</a>				

##### Q6: CHECK THE CKP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:				
	<table><tr><th>CKP sensor connector PI21, harness side</th><th>ECM connector PI 300, harness side</th></tr><tr><td>Pin 01</td><td>Pin 06</td></tr></table>	CKP sensor connector PI21, harness side	ECM connector PI 300, harness side	Pin 01	Pin 06
CKP sensor connector PI21, harness side	ECM connector PI 300, harness side				
Pin 01	Pin 06				
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new CKP sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.				

GETTHEMANUALS.org

#### PINPOINT TEST R : RIGHT-HAND CAMSHAFT POSITION (CMP) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
R1: CHECK THE CMP SENSOR FOR CORRECT INSTALLATION		
	1 Check the CMP sensor for correct installation.	
	Is the CMP sensor correctly installed?	
	Yes GO to R2.	
	No INSTALL the CMP sensor correctly. REFER to: Camshaft Position (CMP) Sensor RH (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs and test the system for normal operation.	
R2: CHECK THE CMP SENSOR FOR FOREIGN DEBRIS		
	1 Remove the CMP sensor and inspect for foreign debris.	
	Is the CMP sensor free of foreign debris?	
	Yes GO to R3.	
	No CLEAN the sensor and wheel. INSTALL the sensor. REFER to: Camshaft Position (CMP) Sensor RH (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs and test the system for normal operation.	
R3: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Disconnect the CMP sensor electrical connector, PI23.	
	2 Measure the resistance between:	
	CMP sensor connector PI23, harness side	Battery
	Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to R4.	
R4: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	CMP sensor connector PI23, harness side	Battery
	Pin 01	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to R5.	
R5: CHECK THE CMP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE		
	1 Disconnect the ECM electrical connector, PI300.	
	2 Measure the resistance between:	
	CMP sensor connector PI23, harness side	ECM connector PI300, harness side
	Pin 01	Pin 34
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to R6.	
R6: CHECK THE CMP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE		
	1 Measure the resistance between:	
	CMP sensor connector PI23, harness side	ECM connector PI300, harness side
	Pin 02	Pin 07
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No INSTALL a new CMP sensor. REFER to: Camshaft Position (CMP) Sensor RH (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

PINPOINT TEST S : LEFT-HAND CAMSHAFT POSITION (CMP) SENSOR CIRCUIT	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
S1: CHECK THE CMP SENSOR FOR CORRECT INSTALLATION	
	<div>1</div> Check the CMP sensor for correct installation.
	Is the CMP sensor correctly installed?
	Yes
	<a href="#">GO to S2.</a>
	No
	INSTALL the CMP sensor correctly. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs and test the system for normal operation.
S2: CHECK THE CMP SENSOR FOR FOREIGN DEBRIS	
	<div>1</div> Remove the CMP sensor and inspect for foreign debris.

Is the CMP sensor free of foreign debris?	<p><b>Yes</b> <a href="#">GO to S3.</a></p> <p><b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTCs and test the system for normal operation.</p>
---	---

### S3: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Disconnect the CMP sensor electrical connector, PI22.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>CMP sensor connector PI22, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	CMP sensor connector PI22, harness side	Battery	Pin 01	Negative terminal
CMP sensor connector PI22, harness side	Battery				
Pin 01	Negative terminal				

Is the resistance less than 10,000 ohms?	<p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to S4.</a></p>
--	--

### S4: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>CMP sensor connector PI22, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Positive terminal</td></tr> </table>	CMP sensor connector PI22, harness side	Battery	Pin 01	Positive terminal
CMP sensor connector PI22, harness side	Battery				
Pin 01	Positive terminal				

Is the resistance less than 10,000 ohms?	<p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to S5.</a></p>
--	--

### S5: CHECK THE CMP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>CMP sensor connector PI22, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 33</td></tr> </table>	CMP sensor connector PI22, harness side	ECM connector PI 300, harness side	Pin 01	Pin 33
CMP sensor connector PI22, harness side	ECM connector PI 300, harness side				
Pin 01	Pin 33				

Is the resistance greater than 5 ohms?	<p><b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to S6.</a></p>
--	--

### S6: CHECK THE CMP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>CMP sensor connector PI22, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 08</td></tr> </table>	CMP sensor connector PI22, harness side	ECM connector PI 300, harness side	Pin 02	Pin 08
CMP sensor connector PI22, harness side	ECM connector PI 300, harness side				
Pin 02	Pin 08				

Is the resistance greater than 5 ohms?	<p><b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> INSTALL a new CMP sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.</p>
--	--

## PINPOINT TEST T : RADIATOR COOLING FAN MODULE DRIVE CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>T1: CHECK THE RADIATOR FAN MODULE PERMANENT SUPPLY</b>					
	<p><b>1</b> Disconnect the fan module electrical connector, FH109.</p> <p><b>2</b> Measure the voltage between:</p> <table> <tr> <th>Fan module connector FH109, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	Fan module connector FH109, harness side	Battery	Pin 01	Negative terminal
Fan module connector FH109, harness side	Battery				
Pin 01	Negative terminal				
Is the voltage less than 10 volts?	<p><b>Yes</b> REPAIR the circuit between the cooling fan module and battery. This circuit includes fuse 13 of the front power distribution box and the mega fuses. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to T2.</a></p>				
<b>T2: CHECK THE RADIATOR FAN MODULE EMS SWITCHED SUPPLY</b>					
	<p><b>1</b> Disconnect the fan module electrical connector, FH108.</p> <p><b>2</b> Key on, engine off.</p> <p><b>3</b> Make sure the EMS relay is energized.</p> <p><b>4</b> Measure the voltage between:</p> <table> <tr> <th>Fan module connector FH108, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	Fan module connector FH108, harness side	Battery	Pin 02	Negative terminal
Fan module connector FH108, harness side	Battery				
Pin 02	Negative terminal				
Is the voltage less than 10 volts?	<p><b>Yes</b> REPAIR the circuit between the cooling fan module and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.</p> <p><b>No</b> <a href="#">GO to T3.</a></p>				
<b>T3: CHECK THE RADIATOR FAN MODULE CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
	<p><b>1</b> Key off.</p>				

	[2] Measure the resistance between:	
	<b>Fan module connector FH108, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to T4.</a>		

#### T4: CHECK THE RADIATOR FAN MODULE CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

	[1] Measure the resistance between:	
	<b>Fan module connector FH108, harness side</b>	<b>Battery</b>
	Pin 01	Positive terminal
Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to T5.</a>		

#### T5: CHECK THE RADIATOR FAN MODULE CONTROL CIRCUIT FOR HIGH RESISTANCE

	[1] Disconnect the ECM electrical connector, FH300.	
	[2] Measure the resistance between:	
	<b>Fan module connector FH108, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 01	Pin 49
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> <a href="#">GO to T6.</a>	

#### T6: CHECK THE RADIATOR FAN MODULE GROUND FOR HIGH RESISTANCE

	[1] Measure the resistance between:	
	<b>Fan module connector FH109, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal
Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. <b>No</b> INSTALL a new radiator cooling fan module. CLEAR the DTC and test the system for normal operation.		

#### PINPOINT TEST U : BATTERY POWER SUPPLY VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
U1: CHECK THE BATTERY POWER SUPPLY TO THE ECM		
	1 Disconnect the ECM electrical connector, FH300.	
	2 Measure the voltage between:	
	ECM connector FH300, harness side	Battery
	Pin 54	Negative terminal
	Is the voltage greater than 10 volts? <b>Yes</b> Recheck the DTCs. <b>No</b> REPAIR the battery power supply circuit. This circuit includes fuse 33 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	

#### PINPOINT TEST V : ACCELERATOR PEDAL POSITION (APP) SENSOR CIRCUIT 1

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
V1: CHECK THE APP SENSOR SUPPLY VOLTAGE AT THE SENSOR		
	1 Disconnect the APP sensor electrical connector, CA88.	
	2 Key on, engine off.	
	3 Measure the voltage between:	
	APP sensor connector CA88, harness side	Battery
	Pin 05	Negative terminal
Is the voltage less than 4 volts? Yes REPAIR the 5 volt supply circuit between the APP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. No GO to V2.		
V2: CHECK THE APP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Key off.	
	2 Measure the resistance between:	
	APP sensor connector CA88, harness side	Battery
	Pin 05	Positive terminal
	Is the resistance less than 10,000 ohms? Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation. No GO to V3.	

#### V3: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Measure the resistance between:	
	<b>APP sensor connector CA88, harness side</b>	<b>Battery</b>
	Pin 04	Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to V4.](#)

#### V4: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR SHORT CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:	
	<b>APP sensor connector CA88, harness side</b>	<b>Battery</b>
	Pin 04	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to V5.](#)

#### V5: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, FH300.	
	<b>2</b> Measure the resistance between:	
	<b>APP sensor connector CA88, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 04	Pin 24

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to V6.](#)

#### V6: CHECK THE APP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:	
	<b>APP sensor connector CA88, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 06	Pin 08

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new APP sensor.  
 REFER to: [Accelerator Pedal](#) (310-02 Acceleration Control, Removal and Installation).  
 CLEAR the DTC and test the system for normal operation.

### PINPOINT TEST W : ACCELERATOR PEDAL POSITION (APP) SENSOR CIRCUIT 2

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
W1: CHECK THE APP SENSOR SUPPLY VOLTAGE AT THE SENSOR		
	1 Disconnect the APP sensor electrical connector, CA88.	
	2 Key on, engine off.	
	3 Measure the voltage between:	
	APP sensor connector CA88, harness side	Battery
	Pin 02	Negative terminal
	Is the voltage less than 4 volts?	
	Yes REPAIR the 5 volt supply circuit between the APP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to W2.	
W2: CHECK THE APP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Key off.	
	2 Measure the resistance between:	
	APP sensor connector CA88, harness side	Battery
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No GO to W3.	
W3: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR SHORT CIRCUIT TO GROUND		
	1 Measure the resistance between:	
	APP sensor connector CA88, harness side	Battery
	Pin 01	Negative terminal
		Is the resistance less than 10,000 ohms?
Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
No GO to W4.		
W4: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	APP sensor connector CA88, harness side	Battery
	Pin 01	Positive terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to W5.</a>

#### W5: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, FH300.			
	<b>2</b> Measure the resistance between:			
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 38</td></tr> </table>	APP sensor connector CA88, harness side	ECM connector FH300, harness side	Pin 01
APP sensor connector CA88, harness side	ECM connector FH300, harness side			
Pin 01	Pin 38			
	Is the resistance greater than 5 ohms?			
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.			
	<b>No</b> <a href="#">GO to W6.</a>			

#### W6: CHECK THE APP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

1	Measure the resistance between:	
	APP sensor connector CA88, harness side	ECM connector FH300, harness side
	Pin 03	Pin 07
Is the resistance greater than 5 ohms?		
Yes		
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
No		
INSTALL a new APP sensor.		
REFER to: <a href="#">Accelerator Pedal</a> (310-02 Acceleration Control, Removal and Installation).		
CLEAR the DTC and test the system for normal operation.		

#### PINPOINT TEST X : THROTTLE MOTOR CONTROL CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
X1: CHECK THE THROTTLE MOTOR TO ECM NEGATIVE CIRCUIT FOR HIGH RESISTANCE		
	1 Disconnect the throttle motor electrical connector, PI26.	
	2 Disconnect the ECM electrical connector, PI300.	
	3 Measure the resistance between:	
	Throttle motor connector PI26, harness side	ECM connector PI300, harness side
	Pin 01	Pin 74
	Is the resistance greater than 5 ohms?	
	Yes	
	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No	
	GO to X2.	

#### X2: CHECK THE THROTTLE MOTOR TO ECM POSITIVE CIRCUIT FOR HIGH RESISTANCE

1	Measure the resistance between:	
	Throttle motor connector PI26, harness side	ECM connector PI300, harness side
Pin 02	Pin 75	
Is the resistance greater than 5 ohms?		
Yes		
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.		
No		
INSTALL a new throttle body.		
REFER to: <a href="#">Throttle Body - VIN Range: N52048-&gt;N99999</a> (303-04A Fuel Charging and Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).		
CLEAR the DTC and test the system for normal operation.		

#### PINPOINT TEST Y : FUEL RAIL PRESSURE (FRP) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS					
Y1: CHECK THE FRP SENSOR SUPPLY CIRCUIT VOLTAGE						
	1	Disconnect the FRP sensor electrical connector, IL12.				
	2	Key on, engine off.				
	3	Measure the voltage between:				
	<table><tr><th>FRP sensor connector IL12, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		FRP sensor connector IL12, harness side	Battery	Pin 01	Negative terminal
FRP sensor connector IL12, harness side	Battery					
Pin 01	Negative terminal					
	Is the voltage less than 4 volts?					
	Yes REPAIR the 5 volt supply circuit between the FRP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.					
	No GO to Y2.					
Y2: CHECK THE FRP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER						
	1	Key off.				
	2	Measure the resistance between:				
	<table><tr><th>FRP sensor connector IL12, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Positive terminal</td></tr></table>		FRP sensor connector IL12, harness side	Battery	Pin 01	Positive terminal
	FRP sensor connector IL12, harness side	Battery				
Pin 01	Positive terminal					
	Is the resistance less than 10,000 ohms?					
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.					
	No GO to Y3.					
GETtheMANUALS.org						

<b>1</b>	Measure the resistance between:	
	<b>FRP sensor connector IL12, harness side</b>	<b>Battery</b>
	Pin 03	Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to Y4.](#)

#### Y4: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:	
	<b>FRP sensor connector IL12, harness side</b>	<b>Battery</b>
	Pin 03	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to Y5.](#)

#### Y5: CHECK THE FRP SENSOR SIGNAL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM sensor electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>FRP sensor connector IL12, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 03	Pin 71

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to Y6.](#)

#### Y6: CHECK THE FRP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:	
	<b>FRP sensor connector IL12, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 10

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new FRP sensor. CLEAR the DTC and test the system for normal operation.

### PINPOINT TEST Z : STARTER RELAY SIGNAL

TEST CONDITIONS		DETAILS/RESULTS/ACTIONS	
Z1: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR SHORT CIRCUIT TO GROUND			
	1	Key off.	
	2	Remove the starter relay.	
	3	Measure the resistance between:	
		Starter relay base	Battery
		Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to Z2.](#)

#### Z2: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:	
	<b>Starter relay base</b>	<b>Battery</b>
	Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to Z3.](#)

#### Z3: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, EC300.	
<b>2</b>	Measure the resistance between:	
	<b>Starter relay base</b>	<b>ECM connector EC300, harness side</b>
	Pin 02	Pin 51

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new starter relay. Clear the DTC and test the system for normal operation. If the DTC resets, refer to the warranty policy and procedures manual if an ECM is suspect.

### PINPOINT TEST AA : RIGHT-HAND VARIABLE CAMSHAFT TIMING (VCT) OIL CONTROL SOLENOID CIRCUIT

TEST CONDITIONS		DETAILS/RESULTS/ACTIONS	
AA1: CHECK ECM TO VCT SOLENOID SUPPLY CIRCUIT VOLTAGE			
1	Disconnect the VCT solenoid electrical connector, PI16.	eetools.com/TOOLS.org	
2	Key on, engine off.		

	<b>3</b> Measure the voltage between:
	<b>VCT solenoid connector PI16, harness side</b>
	<b>Battery</b>
	Pin 02
	Negative terminal
	Is the voltage greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AA2.</a>
	<b>No</b> REPAIR the circuit between the VCT solenoid electrical connector and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

#### AA2: CHECK VCT SOLENOID CONTROL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Key off.
	<b>2</b> Disconnect the ECM electrical connector, PI300.
	<b>3</b> Measure the resistance between:
	<b>VCT solenoid connector PI16, harness side</b>
	<b>ECM connector PI300, harness side</b>
	Pin 01
	Pin 86
	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> INSTALL a new VCT oil control solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST AB : LEFT-HAND VARIABLE CAMSHAFT TIMING (VCT) OIL CONTROL SOLENOID CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### AB1: CHECK ECM TO VCT SOLENOID SUPPLY CIRCUIT VOLTAGE

<b>1</b>	Disconnect the VCT solenoid electrical connector, PI17.
	<b>2</b> Key on, engine off.
	<b>3</b> Measure the voltage between:
	<b>VCT solenoid connector PI17, harness side</b>
	<b>Battery</b>
	Pin 02
	Negative terminal

	Is the voltage greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AB2.</a>
	<b>No</b> REPAIR the circuit between the VCT solenoid electrical connector and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

##### AB2: CHECK VCT SOLENOID CONTROL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Key off.
	<b>2</b> Disconnect the ECM electrical connector, PI300.
	<b>3</b> Measure the resistance between:
	<b>VCT solenoid connector PI17, harness side</b>
	<b>ECM connector PI300, harness side</b>
	Pin 01
	Pin 87

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> INSTALL a new VCT oil control solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST AC : EMS CONTROL RELAY CIRCUITS

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### AC1: CHECK THE EMS RELAY PERMANENT SUPPLY VOLTAGES

<b>1</b>	Remove the EMS relay.
	<b>2</b> Measure the voltage between:
	<b>EMS relay base, harness side</b>
	<b>Battery</b>
	Pin 01
	Negative terminal
	Pin 03
	Negative terminal

	Are both voltages greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AC2.</a>
	<b>No</b> REPAIR the circuit between the relay base and battery. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

##### AC2: CHECK THE ECM TO EMS RELAY CONTROL CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:
	<b>EMS relay base, harness side</b>
	<b>Battery</b>
	Pin 02
	Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
	<b>No</b> <a href="#">GO to AC3.</a>

##### AC3: CHECK THE ECM TO EMS RELAY CONTROL CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:
<b>EMS relay base, harness side</b>	
<b>Battery</b>	
Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AC4.](#)

#### AC4: CHECK THE ECM TO EMS RELAY CONTROL CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, FH300.	
<b>2</b>	Measure the resistance between:	
	<b>EMS relay base, harness side</b>	<b>ECM connector FH300, harness side</b>
Pin 02		Pin 16

Is the resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AC5.](#)

#### AC5: CHECK THE EMS RELAY TO ECM IGNITION CIRCUITS FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:	
	<b>EMS relay base, harness side</b>	<b>ECM connector FH300, harness side</b>
Pin 05		Pin 04
Pin 05		Pin 06

Is either resistance greater than 5 ohms?  
**Yes**  
 REPAIR the high resistance circuit. These circuits include fuses 18 and 38 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
 INSTALL a new EMS control relay. CLEAR the DTC and test the system for normal operation.

### PINPOINT TEST AD : MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### AD1: CHECK THE MAP SENSOR SUPPLY CIRCUIT VOLTAGE

<b>1</b>	Disconnect the MAP sensor electrical connector, PI29.	
<b>2</b>	Key on, engine off.	
<b>3</b>	Measure the voltage between:	
	<b>MAP sensor connector PI29, harness side</b>	<b>Battery</b>
Pin 02		Negative terminal

Is the voltage less than 4 volts?  
**Yes**  
 REPAIR the 5 volt supply circuit between the MAP sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AD2.](#)

#### AD2: CHECK THE MAP SENSOR SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Key off.	
<b>2</b>	Measure the resistance between:	
	<b>MAP sensor connector PI29, harness side</b>	<b>Battery</b>
Pin 02		Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AD3.](#)

#### AD3: CHECK THE MAP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:	
	<b>MAP sensor connector PI29, harness side</b>	<b>Battery</b>
Pin 01		Negative terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AD4.](#)

#### AD4: CHECK THE MAP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:	
	<b>MAP sensor connector PI29, harness side</b>	<b>Battery</b>
Pin 01		Positive terminal

Is the resistance less than 10,000 ohms?  
**Yes**  
 REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.  
**No**  
[GO to AD5.](#)

#### AD5: CHECK THE MAP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>MAP sensor connector PI29, harness side</b>	<b>ECM connector PI300, harness side</b>
Pin 01		Pin 69

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AD6.](#)

#### AD6: CHECK THE MAP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

**1** Measure the resistance between:

MAP sensor connector PI29, harness side	ECM connector PI300, harness side
Pin 04	Pin 10

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new MAP sensor.

REFER to: [Manifold Absolute Pressure \(MAP\) Sensor](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST AE : ENGINE FUEL TEMPERATURE (EFT) SENSOR CIRCUIT

**TEST  
CONDITIONS**

**DETAILS/RESULTS/ACTIONS**

##### AE1: CHECK THE EFT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

**1** Disconnect the EFT sensor electrical connector, IL09.

**2** Measure the resistance between:

EFT sensor connector IL09, harness side	Battery
Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AE2.](#)

##### AE2: CHECK THE EFT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

EFT sensor connector IL09, harness side	Battery
Pin 02	Positive terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AE3.](#)

##### AE3: CHECK THE EFT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

**1** Disconnect the ECM electrical connector, PI300.

**2** Measure the resistance between:

EFT sensor connector IL09, harness side	ECM connector PI300, harness side
Pin 02	Pin 46

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AE4.](#)

##### AE4: CHECK THE EFT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

**1** Measure the resistance between:

EFT sensor connector IL09, harness side	ECM connector PI300, harness side
Pin 01	Pin 15

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new EFT sensor.

REFER to: [Fuel Temperature Sensor](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST AF : AIR CONDITIONING (A/C) PRESSURE SENSOR CIRCUIT

**TEST  
CONDITIONS**

**DETAILS/RESULTS/ACTIONS**

##### AF1: CHECK THE A/C PRESSURE SENSOR POWER SUPPLY CIRCUIT VOLTAGE

**1** Disconnect the A/C pressure sensor electrical connector, FH110.

**2** Key on, engine off.

**3** Measure the voltage between:

A/C pressure sensor connector FH110, harness side	Battery
Pin 02	Negative terminal

Is the voltage less than 4 volts?

**Yes**

REPAIR the 5 volt supply circuit between the A/C pressure sensor and the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AF2.](#)

##### AF2: CHECK THE A/C PRESSURE SENSOR POWER SUPPLY CIRCUIT FOR SHORT CIRCUIT TO POWER

**1** Key off.

	<b>2</b> Measure the resistance between:	
	<b>A/C pressure sensor connector FH110, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to AF3.</a>	

AF3: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Measure the resistance between:	
	<b>A/C pressure sensor connector FH110, harness side</b>	<b>Battery</b>
	Pin 03	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to AF4.</a>	

AF4: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

	<b>1</b> Measure the resistance between:	
	<b>A/C pressure sensor connector FH110, harness side</b>	<b>Battery</b>
	Pin 03	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to AF5.</a>	

AF5: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Disconnect the ECM electrical connector, FH300.	
	<b>2</b> Measure the resistance between:	
	<b>A/C pressure sensor connector FH110, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 03	Pin 12
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to AF6.</a>	

AF6: CHECK THE A/C PRESSURE SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b> Measure the resistance between:	
	<b>A/C pressure sensor connector FH110, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 01	Pin 08
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new A/C pressure sensor. REFER to: <a href="#">Pressure Cutoff Switch - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27</a> (412-03 Air Conditioning, Removal and Installation). CLEAR the DTC and test the system for normal operation.	

PINPOINT TEST AG : INTAKE MANIFOLD TUNING (IMT) VALVE 1 (TOP) CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
AG1: CHECK THE IMT VALVE POWER SUPPLY CIRCUIT VOLTAGE		
	1 Disconnect the IMT valve electrical connector, PI30.	
	2 Key on, engine off.	
	3 Measure the voltage between:	
	IMT valve connector PI30, harness side	Battery
	Pin 01	Negative terminal
	Is the voltage greater than 10 volts?	
	Yes <a href="#">GO to AG2.</a>	
	No REPAIR the circuit between the IMT valve electrical connector and battery. This circuit includes fuse 37 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
AG2: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	IMT valve connector PI30, harness side	Battery
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	No <a href="#">GO to AG3.</a>	
AG3: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Measure the resistance between:	
	IMT valve connector PI30, harness side	Battery
	Pin 02	Positive terminal

	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to AG4.</a>

#### AG4: CHECK THE IMT VALVE DRIVE CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>IMT valve connector PI30, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 84

	Is the resistance greater than 5 ohms?
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	INSTALL a new IMT valve, REFER to: <a href="#">Intake Manifold Tuning (IMT) Valve LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST AH : INTAKE MANIFOLD TUNING (IMT) VALVE 2 (BOTTOM) CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### AH1: CHECK THE IMT VALVE POWER SUPPLY CIRCUIT VOLTAGE

<b>1</b>	Disconnect the IMT valve electrical connector, PI31.	
<b>2</b>	Key on, engine off.	
<b>3</b>	Measure the voltage between:	
	<b>IMT valve connector PI31, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

	Is the voltage greater than 10 volts?
<b>Yes</b>	<a href="#">GO to AH2.</a>
<b>No</b>	REPAIR the circuit between the IMT valve electrical connector and battery. This circuit includes fuse 37 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

##### AH2: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.	
<b>2</b>	Measure the resistance between:	
	<b>IMT valve connector PI31, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal

	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to AH3.</a>

##### AH3: CHECK THE IMT VALVE DRIVE CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the resistance between:	
	<b>IMT valve connector PI31, harness side</b>	<b>Battery</b>
	Pin 02	Positive terminal

	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to AH4.</a>

##### AH4: CHECK THE IMT VALVE DRIVE CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Disconnect the ECM electrical connector, PI300.	
<b>2</b>	Measure the resistance between:	
	<b>IMT valve connector PI31, harness side</b>	<b>ECM connector PI300, harness side</b>
	Pin 02	Pin 90

	Is the resistance greater than 5 ohms?
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	INSTALL a new IMT valve, REFER to: <a href="#">Intake Manifold Tuning (IMT) Valve LH</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC and test the system for normal operation.

#### PINPOINT TEST AI : BRAKE SWITCH

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### AI1: CHECK THE OPERATION OF THE BRAKE SWITCH (PEDAL RELEASED)

<b>1</b>	Key off.	
<b>2</b>	Disconnect the brake switch electrical connector, CA37.	
<b>3</b>	Make sure the brake pedal is not pressed.	
<b>4</b>	Measure the resistance between:	
	<b>Brake switch connector CA37, component side</b>	<b>Brake switch connector CA37, component side</b>
	Pin 01	Pin 02

**1** Disconnect the ECM electrical connector, FH300.

**2** Measure the resistance between:

A/C clutch relay base	ECM connector FH300, harness side
Pin 02	Pin 53

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

INSTALL a new A/C clutch relay. CLEAR the DTC and test the system for normal operation. If the DTC is reset, refer to the warranty policy and procedures manual if an ECM is suspect.

## PINPOINT TEST AK : CLUTCH PEDAL SWITCH

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### AK1: CHECK THE OPERATION OF THE CLUTCH PEDAL SWITCH (PEDAL RELEASED)

**1** Key off.

**2** Disconnect the clutch pedal electrical connector, (right hand drive vehicles) CA285 or (left hand drive vehicles) CA291.

**3** Make sure the clutch pedal is not pressed.

**4** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, component side	Clutch pedal switch connector CA285, component side
Pin 01	Pin 02

**Left hand drive vehicles**

Clutch pedal switch connector CA291, component side	Clutch pedal switch connector CA291, component side
Pin 01	Pin 02

Is the resistance greater than 5 ohms?

**Yes**

[GO to AK2.](#)

**No**

INSTALL a new clutch pedal switch. CLEAR the DTC and test the system for normal operation.

### AK2: CHECK THE OPERATION OF THE CLUTCH PEDAL SWITCH (PEDAL PRESSED)

**1** Press the clutch pedal.

**2** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, component side	Clutch pedal switch connector CA285, component side
Pin 01	Pin 02

**Left hand drive vehicles**

Clutch pedal switch connector CA291, component side	Clutch pedal switch connector CA291, component side
Pin 01	Pin 02

Is the resistance greater than 5 ohms?

**Yes**

INSTALL a new clutch pedal switch. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK3.](#)

### AK3: CHECK THE CLUTCH PEDAL SWITCH TO ECM INPUT CIRCUIT FOR SHORT CIRCUIT TO GROUND

**1** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	Battery
Pin 01	Negative terminal

**Left hand drive vehicles**

Clutch pedal switch connector CA291, harness side	Battery
Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK4.](#)

### AK4: CHECK THE CLUTCH PEDAL SWITCH TO ECM INPUT CIRCUIT FOR SHORT CIRCUIT TO POWER

**1** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	Battery
Pin 01	Positive terminal

**Left hand drive vehicles**

Clutch pedal switch connector CA291, harness side	Battery
Pin 01	Positive terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.

**No**

[GO to AK5.](#)

### AK5: CHECK THE CLUTCH PEDAL SWITCH TO ECM INPUT CIRCUIT FOR HIGH RESISTANCE

**1** Disconnect ECM electrical connector FH300

**2** Measure the resistance between:

**Right hand drive vehicles**

Clutch pedal switch connector CA285, harness side	ECM connector FH300, harness side
Pin 01	Pin 43

Left hand drive vehicles	
Clutch pedal switch connector CA291, harness side	ECM connector FH300, harness side
Pin 01	Pin 43
Is the resistance greater than 5 ohms?	
Yes	
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
No	
GO to AK6.	
CLUTCH PEDAL SWITCH GROUND CIRCUIT FOR HIGH RESISTANCE	
1 Measure the resistance between:	
Right hand drive vehicles	
Clutch pedal switch connector CA285, harness side	Battery
Pin 02	Negative terminal
Left hand drive vehicles	
Clutch pedal switch connector CA291, harness side	Battery
Pin 02	Negative terminal
Is the resistance greater than 5 ohms?	
Yes	
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
No	
Refer to the warranty policy and procedures manual if an ECM is suspect.	

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Powertrain Control Module (PCM) Long Drive Cycle Self-Test

## General Procedures

**WARNING:** Where possible, all road tests should be on well surfaced and dry roads. Always comply with speed limits and local traffic regulations.

• **NOTE:** This procedure is an overcheck only. If fault codes are found, interrogation of the relevant system must be carried out and claimed against.

• **NOTE:** The vehicle must exceed 50mph (80 km/h) during the road test.

1. Connect the diagnostic equipment to the vehicle.
2. Follow on screen prompts and check for engine management fault codes.
3. Clear the fault codes following the on screen procedure.
4. Disconnect the diagnostic equipment from the vehicle.
5. **NOTE:** Make sure cruise control is not engaged.

Make sure the engine temperature is above 60 °C (140 °F).

Carry out a road test and perform the following operations.

1. Accelerate to 55 mph (88 km/h) in 5th gear and cruise for 2 minutes with the engine speed at or above 1800rpm.
2. Lift off the throttle and allow the vehicle to decelerate until the engine speed is less than 1000 rpm.
3. Stop the vehicle.
4. Release brake, allow the vehicle to move with no throttle for 1 minute.
5. Road test is now complete.
6. Connect the diagnostic equipment to the vehicle.
7. **NOTE:** If fault codes are found, interrogation of the relevant system must be carried out and claimed against.
- Follow on screen prompts and check for engine management fault codes.
8. Disconnect the diagnostic equipment from the vehicle.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Powertrain Control Module (PCM) Short Drive Cycle Self-Test

## General Procedures

• **NOTE:** This procedure is an overcheck only. If fault codes are found, interrogation of the relevant system must be carried out and claimed against.

1. Connect the diagnostic equipment to the vehicle.
2. Follow on screen prompts and check for engine management fault codes.
3. Clear the fault codes following the on screen procedure.
4. Start the engine.
  - Allow the engine to idle for 30 seconds.
  - Raise the engine speed to 1500 rpm and hold for 3 minutes until a temperature of 70°C (158 °F) is achieved.
  - Allow the engine to idle for 30 seconds.
  - Switch off the engine.

**5. NOTE:** If fault codes are found, interrogation of the relevant system must be carried out and claimed against.

Follow on screen prompts and check for engine management fault codes.

6. Disconnect the diagnostic equipment from the vehicle.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Brake Pedal

## Position (BPP) Switch

### Removal and Installation

#### Removal

1. Switch the ignition on.
2. Position the front seat fully rearwards.
3. Switch the ignition off.
4. Remove the driver's side footwell trim panel.
  - Release the 3 clips.

E102662

5. Release the brake pedal position (BPP) switch.
  - Rotate the BPP switch 45 degrees counter-clockwise.

E102663

6. Remove the BPP switch.
  - Disconnect the electrical connector.

E102664

Make sure that the brake pedal remains in the rest position during this procedure.

The bracket is keyed to avoid incorrect orientation. Failure to correctly align the switch may result in damage to the vehicle.

Make sure that the pedal box, booster-to-brake pedal assembly and switch bracket are all installed correctly before installing the switch.

Install the BPP switch.

- Locate the BPP switch in the bracket.
- Rotate the BPP switch 45 degrees clockwise.

2. Connect the electrical connector.

3. Install the driver's side footwell trim panel.

- Align the trim panel with the guide.
- Install the 3 clips.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Camshaft Position (CMP) Sensor LH

## Removal and Installation

### Removal

1. Disconnect the battery ground cable.  
For additional information, refer to Section [414-01 Battery, Mounting and Cables](#).
2. Remove the air cleaner outlet pipe. For additional information, refer to Section [303-12A Intake Air Distribution and Filtering](#) / [303-12B Intake Air Distribution and Filtering](#) / [303-12C Intake Air Distribution and Filtering](#).
3. Remove the CMP sensor.
  1. Disconnect the CMP sensor electrical connector
  2. Remove the CMP sensor.
    - Remove and discard the CMP sensor O-ring seal.

### Installation

1. To install, reverse the removal procedure.
  - Install a new CMP sensor O-ring seal.
  - Tighten the CMP sensor retaining bolt to 7 Nm.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Camshaft Position (CMP) Sensor RH

## Removal and Installation

1. Remove the throttle body. For additional information, refer to Section [303-04A Fuel Charging and Controls](#) / [303-04B Fuel Charging and Controls](#) / [303-04C Fuel Charging and Controls](#) / [303-04D Fuel Charging and Controls - Turbocharger](#).
2. Remove the CMP sensor.
  1. Disconnect the CMP sensor electrical connector
  2. Remove the CMP sensor.
    - Remove and discard the CMP sensor O-ring seal.

## Installation

1. To install, reverse the removal procedure.
  - Install a new CMP sensor O-ring seal.
  - Tighten the CMP sensor retaining bolt to 7 Nm.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Catalyst Monitor Sensor

## Removal and Installation

### General Equipment

Snap-on tool S6176

### Removal

1. Raise and support the vehicle.  
For additional information, refer to Section [100-02 Jacking and Lifting](#).
2. Disconnect the catalyst monitor sensor.

3.  **CAUTION:** Make sure the wiring harness is not twisted or damaged on removal. Failure to follow this instruction may result in damage to the vehicle.

Using the Snap-on tool S6176, remove the catalyst monitor sensor.

### Installation

1.  **CAUTION:** Make sure the wiring harness is not twisted or damaged on installation. Failure to follow this instruction may result in damage to the vehicle.

To install, reverse the removal procedure.

- Tighten to 45 Nm.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Crankshaft Position (CKP) Sensor

## Removal and Installation

### Removal

1. Disconnect the battery ground cable.  
For additional information, refer to Section [414-01 Battery, Mounting and Cables](#).
2. Remove the air deflector  
For additional information, refer to Section [501-02 Front End Body Panels](#).
3. Disconnect the crankshaft position (CKP) sensor electrical connector.

4. Remove the CKP sensor.
  - Remove and discard the CKP sensor O-ring seal.

### Installation

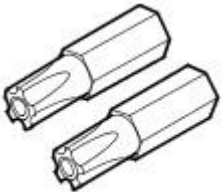

1. To install, reverse the removal procedure.
  - Install a new CKP sensor O-ring seal.
  - Tighten to 7 Nm.

### Removal

1. Disconnect the battery ground cable.  
For additional information, refer to Section [414-01 Battery, Mounting and Cables](#).
2. Remove the cabin air filter.  
For additional information, refer to Section [412-01 Air Distribution and Filtering](#).
3. Remove the engine compartment support.

4. Remove the cabin air filter housing retaining nut.

5. Remove the cabin air filter housing.

6. Remove the engine compartment panel.

7. NOTE: The engine control module (ECM) electrical connector retaining bolt remains captive in the electrical connector

Using the special tool, disconnect the ECM electrical connector.

8. Remove the passenger side instrument panel lower trim panel.

9. Remove the ECM.

- Remove the ECM retaining bracket.
- Release the ECM retaining tangs.
- Remove the ECM.

## Installation

1.  CAUTION: Make sure the electrical connector locate correctly in the engine control module. Do not force or overtighten the electrical connector. Failure to follow these instructions may cause damage to the electrical connector.

To install, reverse the removal procedure.

2. Tighten to 6 Nm.

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Coolant Temperature (ECT) Sensor VIN Range: M45255->N52047

Removal and Installation

## Removal

### 1. WARNINGS:

Never remove the coolant expansion tank pressure cap under any circumstances while the engine is operating. Failure to follow this instruction may result in personal injury.

To avoid hot coolant or steam blowing out of the cooling system, use extreme care when removing the coolant expansion tank pressure cap. Wait until the engine has cooled down, then insulate the coolant pressure cap with a suitable cloth and slowly loosen the coolant expansion tank pressure cap until the cooling system pressure is released. Do not remove the coolant expansion tank pressure cap. Step back while the pressure is released from the system. When all of the pressure has been released slowly remove the coolant expansion tank pressure cap (still with the suitable cloth in position) from the coolant expansion tank. Failure to follow this instruction may result in personal injury.

Release the cooling system pressure.

- Remove the coolant expansion tank pressure cap.

### 2. Remove the engine coolant temperature (ECT) sensor.

1. Disconnect the ECT electrical connector.
2. Remove the ECT sensor.

- Remove and discard the ECT sensor sealing washer.

E30429

## Installation

### 1. To install, reverse the removal procedure.

- Install a new ECT sensor sealing washer.
- Tighten the ECT sensor to 17 Nm.
- Fill the cooling system up to the MAX mark on the coolant expansion tank.

E31016

# Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27 - Engine Coolant Temperature (ECT) Sensor VIN Range: N52048->N99999

## Engine Control Module (ECM)

The electronic engine control system consists of a engine control module (ECM), located behind the glove compartment, and a number of sensing and actuating devices. The sensors supply the ECM with input signals which relate to the engine operating conditions and driver requirements. The sensor information is evaluated by the ECM using the results to activate the appropriate response from the actuating devices. The system provides the necessary engine control accuracy and adaptability to:

- Minimize exhaust emissions and fuel consumption.
- Provide optimum driver control under all conditions.
- Minimize evaporative emissions.
- Provide system diagnostics.

In addition to these functions the ECM also interfaces with other vehicle systems through the controller area network (CAN).

### Camshaft Position (CMP) Sensor

The camshaft position (CMP) sensors monitor the position of both camshafts to allow the ECM to control the phase of the inlet camshafts relative to the position of the crankshaft.

### Variable Camshaft Timing Oil Control Solenoid

The variable camshaft timing oil control solenoid is a hydraulic actuator, which advances and retards the inlet camshaft timing, thereby altering the camshaft to crankshaft phasing for optimum engine performance.

### Knock Sensors (KS)

The knock sensors (KS) detect combustion knock within the engine cylinders and sends a signal to the ECM. The ECM uses this information to gradually adjust the ignition timing until the combustion knock is eliminated.

### Mass Air flow (MAF) Sensor

The mass air flow (MAF) sensor informs the ECM of the rate of air flow entering the engine by producing a voltage which is proportional to the rate of air flow into the engine. The voltage produced by the MAF sensor increases as the rate of air flow increases. The ECM takes into account the density of the air entering the air intake system so that it is possible to maintain the required air to fuel ratio, and to compensate for variations in atmospheric pressure.

Integral to the MAF sensor is the intake air temperature sensor (IAT) which measures the temperature of the air entering the air intake system. The ECM uses this information to compensate for higher than normal air intake temperatures.

### Throttle Position (TP) Sensor

The ECM monitors the angle of the throttle blade within the throttle housing through the throttle position (TP) sensor. The TP sends a voltage to the ECM which is proportional to the angle of the throttle plate. The voltage from the TP increases with the angle of the throttle plate. There are two sensor tracks within the TP sensor.

### Crankshaft Position (CKP) Sensor

The crankshaft position (CKP) sensor is an inductive pulse generator, which scans protrusions on a pulse ring fitted to the flywheel to inform the ECM of the crankshaft's position and speed. The CKP sensor produces an alternating voltage. The frequency of this voltage increases proportional to engine speed.

### Engine Coolant Temperature (ECT) Sensor

The engine coolant temperature (ECT) sensor is a thermistor type sensor that provides an input signal to the ECM which is proportional to the engine coolant temperature. The ECT sensor is a negative temperature coefficient (NTC) sensor and its resistance decreases with a proportional increase in engine coolant temperature.

### Oil Temperature Sensor

The oil temperature sensor is a thermistor type sensor that provides an input signal to the ECM which is proportional to the engine oil temperature.

### Oil Pressure Switch

The oil pressure switch is connected to the instrument cluster and is not directly part of the electronic engine control system.

### Heated Oxygen Sensor (HO2S)

The heated oxygen sensor (HO2S) is a linear characteristic type sensor, fitted forward of the exhaust system's catalytic converter. The ECM uses this as it's primary sensor to measure the oxygen content of the exhaust gasses within the exhaust system to provide closed-loop fuelling control.

### Catalyst Monitor Sensor

The catalyst monitor sensor is a non-linear characteristic type sensor fitted to the exhaust system's catalytic converter. The ECM uses this as it's secondary sensor to measure the oxygen content of the exhaust gasses within the exhaust after they have passed through the catalytic converter. As well as providing additional closed-loop fuelling control the ECM uses this information to determine the efficiency of the catalytic converter.

### Intake Air Temperature (IAT) Sensor. Vehicles with supercharger.

Vehicles with supercharger have an additional intake air temperature sensor located on the right-hand charge air cooler. The IAT measures the temperature of the air entering the charge air cooler. The ECM uses this information to compensate for higher than normal air intake temperatures.

# Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Electronic Engine Controls

## VIN Range: M45255->N52047

### Diagnosis and Testing

1. Verify the customer concern by operating the system.
2. Visually inspect for obvious signs of mechanical and electrical damage.

### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Engine oil level</li> <li>● Cooling system coolant level</li> <li>● Fuel Contamination</li> <li>● Throttle body</li> </ul>	<ul style="list-style-type: none"> <li>● Fuses. (9, 31, 32, 37)</li> <li>● Wiring harness</li> <li>● Electrical connector(s)</li> <li>● Sensor(s)</li> <li>● Engine control module (ECM)</li> </ul>

3. Verify the following systems are working correctly:
  - Air intake system
  - Cooling system
  - Charging system
  - Fuel charging system
4. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
5. If the concern is not visually evident and the approved Jaguar diagnostic system is not available, use a fault code reader to retrieve the fault codes before proceeding to the Diagnostic Trouble Code (DTC)s Index Chart.
6. Make sure that a power supply is present to the ECM from fuse 32 of the engine compartment fuse box before carrying out diagnostic work on the electronic engine control system.

## PINPOINT TEST A : DTC P0116, P0117, P0118, P0125. ECT SENSOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>A1: CHECK THE ECT SENSOR RESISTANCE</b>	
	<b>1</b> Measure the resistance between pins 1 and 2 of the Engine Coolant Temperature sensor.
	Is the resistance 2437 to 2464 ohms at 20°C?
	<b>Yes</b> <a href="#">GO to A2.</a>
	<b>No</b> INSTALL a new ECT sensor. CLEAR the DTCs. TEST the system for normal operation.
<b>A2: CHECK THE ENGINE COOLANT TEMPERATURE (ECT) SENSOR SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the ECT sensor electrical connector PI25.
	<b>3</b> Disconnect the ECM electrical connector, PI01.
	<b>4</b> Measure the resistance between the ECT sensor electrical connector PI25, pin 2 (UY) and the ECM electrical connector PI01, pin 70 (UY).
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to A3.</a>
	<b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>A3: CHECK THE ECT SENSOR SIGNAL WIRE FOR A SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between the ECT sensor electrical connector PI25, pin 2 (UY) and PI01, pin 19.
	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to A4.</a>
<b>A4: CHECK THE ECT SENSOR GROUND CIRCUIT</b>	
	<b>1</b> Measure the resistance between the ECT sensor electrical connector PI25, pin 1 (BG) and GROUND.
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to A5.</a>
	<b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>A5: CHECK THE ECT SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between the ECT electrical connector PI25, pin 1 (BG) and GROUND.
	Is a voltage present?
	<b>Yes</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to A6.</a>
<b>A6: CHECK THE ECT SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between the ECT sensor electrical connector PI25, pin 2 (UY) and GROUND.
	Is the voltage greater than 5 volts?
	<b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
	<b>No</b>

INSTALL a new ECT sensor. CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  
REFER to: [Engine Control Module \(ECM\)](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
Before replacing an ECM, contact dealer technical support.

## **PINPOINT TEST B : DTC P0335, P0336, P1245, P1246. CRANKSHAFT POSITION (CKP) SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### **B1: CHECK THE CKP SENSOR FOR CORRECT INSTALLATION**

- 1 Turn the ignition switch to the OFF position.
- 2 Check the CKP sensor for correct installation.

Is the CKP sensor correctly installed?

**Yes**

[GO to B2.](#)

**No**

INSTALL the CKP sensor correctly.

REFER to: [Crankshaft Position \(CKP\) Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.

### **B2: CHECK THE CKP SENSOR FOR DEBRIS**

- 1 Remove the CKP sensor and inspect for debris.

Is the CKP sensor and flywheel teeth free of debris?

**Yes**

[GO to B3.](#)

**No**

CLEAN the sensor and wheel. INSTALL the sensor

REFER to: [Crankshaft Position \(CKP\) Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.

### **B3: CHECK THE CKP SENSOR RESISTANCE**

- 1 Measure the resistance between pins 1 and 2 of the CKP sensor.

Is the resistance 250 to 450 ohms?

**Yes**

[GO to B4.](#)

**No**

INSTALL a new CKP sensor

REFER to: [Crankshaft Position \(CKP\) Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.

### **B4: CHECK THE CKP SENSOR GROUND WIRE FOR OPEN CIRCUIT**

- 1 Disconnect the ECM electrical connector PI01.
- 2 Disconnect the CKP sensor electrical connector PI21.
- 3 Measure the resistance between the CKP sensor electrical connector PI21, pin 1 (B) and the ECM electrical connector PI01, pin 37 (B).

Is the resistance less than 5 ohms?

**Yes**

[GO to B5.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

### **B5: CHECK THE CKP SENSOR SIGNAL WIRE FOR OPEN CIRCUIT**

- 1 Measure the resistance between the CKP sensor electrical connector PI21, pin 2 (O) and the ECM electrical connector PI01, pin 36 (O).

Is the resistance less than 5 ohms?

**Yes**

[GO to B6.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

### **B6: CHECK THE CKP SENSOR GROUND WIRE FOR A SHORT TO GROUND**

- 1 Measure the resistance between the CKP sensor electrical connector PI21 pin 1 (B) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to B7.](#)

### **B7: CHECK THE CKP SENSOR SIGNAL WIRE FOR A SHORT TO GROUND**

- 1 Measure the resistance between the CKP sensor electrical connector PI21 pin 2 (O) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to B8.](#)

### **B8: CHECK THE CKP SENSOR GROUND WIRE FOR A SHORT TO BATTERY POSITIVE**

- 1 Turn the ignition switch to the ON position.
- 2 Measure the voltage between the CKP sensor electrical connector PI21 pin 1 (B) and GROUND.

Is the voltage greater than 5 volts?

**Yes**

REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to B9.](#)

### **B9: CHECK THE CKP SENSOR SIGNAL WIRE FOR A SHORT TO BATTERY POSITIVE**

- 1 Turn the ignition switch to the ON position.
- 2 Measure the voltage between the CKP sensor electrical connector PI21 pin 2 (O) and GROUND.

Is the voltage greater than 5 volts?	<p><b>Yes</b></p> <p>REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation.</p>
	<p><b>No</b></p> <p>INSTALL a new CKP sensor.  REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  Reconnect all connectors. CLEAR the DTCs. TEST the system for normal operation. If the concern persists INSTALL a new ECM.  REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  Before replacing an ECM, contact dealer technical support.</p>

## PINPOINT TEST C : DTC P0340, P0341: BANK 1 CAMSHAFT POSITION (CMP) SENSOR

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>C1: CHECK THE BANK 1 CMP SENSOR FOR CORRECT INSTALLATION</b>	
	<p><b>1</b> Turn the ignition switch to the OFF position.</p> <p><b>2</b> Check the CMP sensor for correct installation.</p>
	<p>Is the CMP sensor correctly installed?</p> <p><b>Yes</b></p> <p><a href="#">GO to C2.</a></p> <p><b>No</b></p> <p>INSTALL the CMP sensor correctly.  REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  CLEAR the DTCs. TEST the system for normal operation.</p>
<b>C2: CHECK THE BANK 1 CMP SENSOR FOR FOREIGN DEBRIS</b>	
	<p><b>1</b> Remove the CMP sensor and inspect for foreign debris.</p>
	<p>Is the CMP sensor free of foreign debris?</p> <p><b>Yes</b></p> <p><a href="#">GO to C3.</a></p> <p><b>No</b></p> <p>CLEAN the sensor and wheel. INSTALL the sensor.  REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  CLEAR the DTCs. TEST the system for normal operation.</p>
<b>C3: CHECK THE BANK 1 CMP SENSOR RESISTANCE</b>	
	<p><b>1</b> Measure the resistance between pins 1 and 2 of the bank 1 Camshaft position sensor.</p>
	<p>Is the resistance 450 to 650 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to C4.</a></p> <p><b>No</b></p> <p>INSTALL a new CMP sensor,  REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  CLEAR the DTCs. TEST the system for normal operation.</p>
<b>C4: CHECK THE BANK 1 CMP SENSOR SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<p><b>1</b> Disconnect the ECM electrical connector PI01.</p> <p><b>2</b> Disconnect the CMP sensor electrical connector PI23.</p> <p><b>3</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 1 (Y) and the ECM electrical connector PI01, pin 94 (Y).</p>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to C5.</a></p> <p><b>No</b></p> <p>REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>C5: CHECK THE BANK 1 CMP GROUND WIRE FOR OPEN CIRCUIT</b>	
	<p><b>1</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 2 (R) and the ECM electrical connector PI01, pin 95 (R).</p>
	<p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to C6.</a></p> <p><b>No</b></p> <p>REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>C6: CHECK THE BANK 1 CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND</b>	
	<p><b>1</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 1 (Y) and GROUND.</p>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to C7.</a></p>
<b>C7: CHECK THE BANK 1 CMP SENSOR GROUND CIRCUIT FOR A SHORT TO GROUND</b>	
	<p><b>1</b> Measure the resistance between the CMP sensor electrical connector PI23, pin 2 (R) and GROUND.</p>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to C8.</a></p>
<b>C8: CHECK THE BANK 1 CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
	<p><b>1</b> Measure the voltage between the CMP sensor electrical connector PI23, pin 1 (Y) and GROUND.</p>

	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to C9.</a>
--	--

**C9: CHECK THE BANK 1 CMP SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY POSITIVE**

	<b>1</b> Turn the ignition switch to the RUN position.
	<b>2</b> Measure the voltage between the CMP sensor electrical connector PI23, pin 2 (R) and GROUND.
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new CMP sensor, REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

**PINPOINT TEST D : DTC DTC P0345, P0346, P1340, P1341: BANK 2 CAMSHAFT POSITION (CMP) SENSOR**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>D1: CHECK THE BANK 2 CMP SENSOR FOR CORRECT INSTALLATION</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Check the CMP sensor for correct installation.
	Is the CMP sensor correctly installed? <b>Yes</b> <a href="#">GO to D2.</a> <b>No</b> INSTALL the CMP sensor correctly. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>D2: CHECK THE BANK 2 CMP SENSOR FOR FOREIGN DEBRIS</b>	
	<b>1</b> Remove the CMP sensor and inspect for foreign debris.
	Is the CMP sensor free of foreign debris? <b>Yes</b> <a href="#">GO to D3.</a> <b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>D3: CHECK THE BANK 2 CMP SENSOR RESISTANCE</b>	
	<b>1</b> Measure the resistance between pins 1 and 2 of the bank 2 Camshaft position sensor.
	Is the resistance 450 to 650 ohms? <b>Yes</b> <a href="#">GO to D4.</a> <b>No</b> INSTALL a new CMP sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>D4: CHECK THE BANK 2 CMP SENSOR SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the ECM electrical connector PI01.
	<b>2</b> Disconnect the CMP sensor electrical connector PI22.
	<b>3</b> Measure the resistance between the CMP sensor electrical connector PI22, pin 1 (N) and the ECM electrical connector PI01, pin 68 (N).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to D5.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>D5: CHECK THE BANK 2 CMP GROUND WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Measure the resistance between the CMP sensor electrical connector PI22, pin 2 (G) and the ECM electrical connector PI01, pin 69 (G).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to D6.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>D6: CHECK THE BANK 2 CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between the CMP sensor electrical connector PI22, pin 1 (N) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to D7.</a>
<b>D7: CHECK THE BANK 2 CMP SENSOR GROUND CIRCUIT FOR A SHORT TO GROUND</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between the CMP sensor electrical connector PI22, pin 2 (G) and GROUND.

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to D8.</a>
--	---

#### D8: CHECK THE BANK 2 CMP SENSOR SIGNAL CIRCUIT FOR A SHORT TO BATTERY POSITIVE

	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between the CMP sensor electrical connector PI22, pin 1 (N) and GROUND.
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to D9.</a>

#### D9: CHECK THE BANK 2 CMP SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY POSITIVE

	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between the CMP sensor electrical connector PI22, pin 2 (G) and GROUND.
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new CMP sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### PINPOINT TEST E : DTC P0031, P0032. BANK 1 HO2S HEATER.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>E1: CHECK THE POWER SUPPLY CIRCUIT TO THE BANK 1 HO2S HEATER</b>	
	<b>1</b> Disconnect HO2S sensor electrical connector, PI10.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between the bank 1 HO2S electrical connector PI10, pin 1 (WG) and GROUND.
	Is the voltage less than 10 volts? <b>Yes</b> <a href="#">GO to E6.</a> <b>No</b> <a href="#">GO to E2.</a>
<b>E2: CHECK THE GROUND CIRCUIT TO THE BANK 1 HO2S HEATER FOR OPEN CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the ECM electrical connector PI01.
	<b>3</b> Measure the resistance between the bank 1 HO2S electrical connector PI10, pin 2 (RU) and the ECM electrical connector PI01, pin 1 and pin 2 (RU).
	Is the resistance of each wire less than 5 ohms? <b>Yes</b> <a href="#">GO to E3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>E3: CHECK THE BANK 1 HO2S HEATER RESISTANCE</b>	
	<b>1</b> Measure the resistance between pins 1 and 2 of the bank 1 HO2S.
	Is the resistance 3.3 ohms? <b>Yes</b> <a href="#">GO to E4.</a> <b>No</b> INSTALL a new bank 1 HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>E4: CHECK THE BANK 1 HO2S GROUND CIRCUIT FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between the bank 1 HO2S electrical connector PI10, pin 2 (RU) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to E5.</a>
<b>E5: CHECK THE BANK 1 HO2S GROUND CIRCUIT FOR SHORT TO BATTERY</b>	
	<b>1</b> Check for a voltage between the bank 1 HO2S electrical connector PI10, pin 2 (RU) and GROUND.
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new bank 1 HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.
<b>E6: CHECK FUSE 20 OF THE FRONT POWER DISTRIBUTION BOX</b>	
	<b>1</b> Check the fuse.

Is the fuse OK?

Yes

[GO to E8.](#)

No

[GO to E7.](#)

**E7: CHECK FUSE 20 OF THE FRONT POWER DISTRIBUTION BOX FOR A SHORT TO GROUND**

**1** Measure the resistance between electrical connector FH32 pin 26 of the engine compartment fuse box and GROUND.

Is the resistance less than 10,000 ohms?

Yes

REPAIR short to ground between the engine compartment fuse box and the RH bank HO2S. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

No

INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.

**E8: CHECK THE POWER SUPPLY TO FUSE 20 OF THE FRONT POWER DISTRIBUTION BOX**

**1** Turn the ignition switch to the ON position.

**2** Measure the voltage between fuse 20 electrical connector FH32 pin 26 and GROUND.

Is the voltage less than 10 volts?

Yes

Repair the circuit from the ECM control relay to the engine compartment fuse box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

No

Repair the circuit between the battery and the EMS relay. Test the relay, renew as necessary. CLEAR the DTC. TEST the system for normal operation.

**PINPOINT TEST F : DTC P0181, P0182, P0183. FUEL TEMPERATURE SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**F1: CHECK THE FUEL TEMPERATURE SENSOR RESISTANCE**

**1** Disconnect the FT sensor electrical connector, PI27.

**2** Measure the resistance between pins 1 and 2 of the FT sensor.

Is the resistance 37.35 ohms at 20°C?

Yes

[GO to F2.](#)

No

INSTALL a new Fuel Temperature Sensor.  
REFER to: [Fuel Temperature Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation.

**F2: CHECK CONTINUITY OF THE FUEL TEMPERATURE SENSOR POWER SUPPLY CIRCUIT**

**1** Turn the ignition switch to the OFF position.

**2** Disconnect the fuel temperature sensor electrical connector PI27.

**3** Disconnect the ECM electrical connector PI01.

**4** Measure the resistance between the fuel temperature sensor electrical connector PI27, pin 2 (YR) and the ECM electrical connector PI01, pin 50 (YR).

Is the resistance less than 5 ohms?

Yes

[GO to F3.](#)

No

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**F3: CHECK THE FUEL TEMPERATURE SENSOR GROUND CIRCUIT**

**1** Measure the resistance between the fuel temperature sensor electrical connector PI27 pin 1 (BG) and GROUND.

Is the resistance less than 5 ohms?

Yes

[GO to F4.](#)

No

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**F4: CHECK THE FUEL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO GROUND**

**1** Measure the resistance between the fuel temperature sensor electrical connector PI27 pin 2 (YR) and GROUND.

Is the resistance less than 10,000 ohms?

Yes

REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

No

[GO to F5.](#)

**F5: CHECK THE FUEL TEMPERATURE SENSOR GROUND CIRCUIT FOR A SHORT TO BATTERY**

**1** Disconnect the FT sensor electrical connector, PI27.

**2** Turn the ignition switch to the ON position.

**3** Check for a voltage between PI27, pin 1 (BG) and GROUND.

Is a voltage present?

Yes

REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

No

[GO to F6.](#)

**F6: CHECK THE FUEL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE**

**1** Connect the ECM electrical connector PI01.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between the fuel temperature sensor electrical connector PI27, pin 2 (YR) and GROUND.

Is the voltage greater than 10 volts?

Yes

REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

No

INSTALL a new fuel temperature sensor.  
REFER to: [Fuel Temperature Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol,

Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  
REFER to: [Engine Control Module \(ECM\)](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
Before replacing an ECM, contact dealer technical support.

## PINPOINT TEST G : DTC P0327, P0328, P1648. KNOCK SENSOR (KS) RIGHT-HAND

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>G1: CHECK THE KS RESISTANCE</b>	
	<b>1</b> Disconnect the KS electrical connector, PI20.
	<b>2</b> Measure the resistance between pins 1 and 2 of the KS.
	Is the resistance 180 - 220 Kohms? <b>Yes</b> <a href="#">GO to G2.</a> <b>No</b> INSTALL a new Knock Sensor, REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
<b>G2: CHECK THE KS SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the KS sensor electrical connector PI20.
	<b>3</b> Disconnect the ECM electrical connector PI01.
	<b>4</b> Measure the resistance between PI20, pin 1 (N) and PI01, pin 98 (N).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to G3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>G3: CHECK THE KS SIGNAL WIRE FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the KS sensor electrical connector PI20.
	<b>2</b> Connect the ECM electrical connector PI01.
	<b>3</b> Turn the ignition switch to the ON position.
	<b>4</b> Check for a voltage between PI20, pin 1 (N) and GROUND.
	Is a voltage present? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to G4.</a>
<b>G4: CHECK THE KS SIGNAL WIRE FOR A SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between the KS sensor electrical connector PI20, pin 1 (N) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to G5.</a>
<b>G5: CHECK THE KS GROUND LEAD FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the KS electrical connector, PI20.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI20, pin2 (B) and PI01, pin 100 (BG)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to G6.</a> <b>No</b> REPAIR the circuit between PI20, pin2 (B) and PI01, pin 100 (BG) For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>G6: CHECK THE KS GROUND LEAD FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the KS sensor electrical connector PI20.
	<b>2</b> Connect the ECM electrical connector PI01.
	<b>3</b> Turn the ignition switch to the ON position.
	<b>4</b> Check for a voltage between PI20, pin 1 (N) and GROUND.
	Is a voltage present? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new KS, REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

## PINPOINT TEST H : DTC P0332, P0333, P1648. KNOCK SENSOR (KS) LEFT-HAND

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>H1: CHECK THE KS RESISTANCE</b>	
	<b>1</b> Disconnect the KS electrical connector, PI19.
	<b>2</b> Measure the resistance between pins 1 and 2 of the KS.

	Is the resistance 180 - 220 Kohms? <b>Yes</b> <a href="#">GO to H2.</a> <b>No</b> INSTALL a new Knock Sensor, REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
--	---

## H2: CHECK THE KS SIGNAL WIRE FOR OPEN CIRCUIT

<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the KS sensor electrical connector PI19.
<b>3</b>	Disconnect the ECM electrical connector PI01.
<b>4</b>	Measure the resistance between PI19, pin 1 (N) and PI01, pin 99 (N).

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to H3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	--

## H3: CHECK THE KS SIGNAL WIRE FOR SHORT TO BATTERY

<b>1</b>	Connect the KS sensor electrical connector PI19.
<b>2</b>	Connect the ECM electrical connector PI01.
<b>3</b>	Turn the ignition switch to the ON position.
<b>4</b>	Check for a voltage between PI19, pin 1 (N) and GROUND.

	Is a voltage present? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to H4.</a>
--	---

## H4: CHECK THE KS SIGNAL WIRE FOR A SHORT TO GROUND

<b>1</b>	Measure the resistance between the KS sensor electrical connector PI19, pin 1 (N) and GROUND.
----------	---

	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to H5.</a>
--	---

## H5: CHECK THE KS GROUND LEAD FOR OPEN CIRCUIT

<b>1</b>	Disconnect the KS electrical connector, PI19.
<b>2</b>	Disconnect the ECM electrical connector, PI01.
<b>3</b>	Measure the resistance between PI19, pin2 (B) and PI01, pin 100 (BG)

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to H6.</a> <b>No</b> REPAIR the circuit between PI19, pin2 (B) and PI01, pin 100 (BG) For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
--	---

## H6: CHECK THE KS GROUND LEAD FOR SHORT TO BATTERY

<b>1</b>	Connect the KS sensor electrical connector PI19.
<b>2</b>	Connect the ECM electrical connector PI01.
<b>3</b>	Turn the ignition switch to the ON position.
<b>4</b>	Check for a voltage between PI19, pin 1 (N) and GROUND.

	Is a voltage present? <b>Yes</b> REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new KS, REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.
--	--

## PINPOINT TEST I : DTC P0196, P0197, P0198. OIL TEMPERATURE SENSOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>I1: CHECK THE OIL TEMPERATURE SENSOR SIGNAL WIRE FOR OPEN CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the oil temperature sensor electrical connector PI24.
	<b>3</b> Disconnect the ECM electrical connector PI01.
	<b>4</b> Measure the resistance between the oil temperature sensor electrical connector PI24, pin 1 (Y) and the ECM electrical connector PI01, pin 78 (Y).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to I2.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>I2: CHECK THE OIL TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT</b>	
	<b>1</b> Measure the resistance between the oil temperature sensor electrical connector PI24, pin 2 (BG) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to I3.</a> <b>No</b>

	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>I3: CHECK THE OIL TEMPERATURE SENSOR GROUND CIRCUIT FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect ECM electrical connector, PI01
	<b>2</b> Turn the ignition switch to the RUN position.
	<b>3</b> Measure the voltage between the oil temperature sensor electrical connector PI24, pin 2 (BG) and GROUND.
	Is a voltage present? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to I4.</a>
<b>I4: CHECK THE OIL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between the oil temperature sensor electrical connector PI24, pin 1 (Y) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to I5.</a>
<b>I5: CHECK THE OIL TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
	<b>1</b> Connect ECM electrical connector, PI01
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between the oil temperature sensor electrical connector PI24, pin 1 (Y) and GROUND.
	Is the voltage greater than 10 volts? <b>Yes</b> REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new oil temperature sensor, REFER to: <a href="#">Oil Temperature Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

<b>PINPOINT TEST J : DTC P0131, P0132, P0133, P1646. BANK 1 HO2S.</b>	
<b>TEST CONDITIONS</b>	<b>DETAILS/RESULTS/ACTIONS</b>
<b>J1: CHECK THE CONSTANT CIRCUIT OF THE BANK 1 HO2S FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the bank 1 HO2S electrical connector PI10.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI01, pin 84 (Y) and PI10, pin 4 (Y)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to J2.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>J2: CHECK THE CONSTANT CIRCUIT OF THE BANK 1 HO2S FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI10, pin 4 (Y) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to J3.</a>
<b>J3: CHECK THE CONSTANT CIRCUIT OF THE BANK 1 HO2S FOR SHORT TO BATTERY</b>	
	<b>1</b> Connect the ECM electrical connector PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between PI10, pin 4 (Y) and GROUND.
	Is the voltage greater than 5 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to J4.</a>
<b>J4: CHECK THE VARIABLE CIRCUIT OF THE BANK 1 HO2S FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the bank 1 HO2S electrical connector PI10.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Measure the resistance between PI01, pin 83 (R) and PI10, pin 3 (R)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to J5.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>J5: CHECK THE VARIABLE CIRCUIT OF THE BANK 1 HO2S FOR SHORT TO GROUND</b>	
	<b>1</b> Measure the resistance between PI01, pin 83 (R) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to J6.</a>

<b>J6: CHECK THE VARIABLE CIRCUIT OF THE BANK 1 HO2S FOR SHORT TO BATTERY</b>	
	1 Connect the ECM electrical connector PI01.
	2 Turn the ignition switch to the ON position.
	3 Measure the voltage between PI10, pin 3 (R) and GROUND.
	Is the voltage greater than 1 volt?
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	INSTALL a new bank 1 HO2S, REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

PINPOINT TEST K : DTC P0037, P0038, P0137, P0138, P0140. BANK 1 CATALYST MONITOR.	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>K1: CHECK THE POWER SUPPLY CIRCUIT TO THE BANK 1 CATALYST MONITOR HEATER</b>	
	1 Turn the ignition switch to the OFF position.
	2 Disconnect the bank 1 catalyst monitor sensor electrical connector PI11.
	3 Turn the ignition switch to the ON position.
	4 Measure the voltage between PI11, pin 1 (WG) and GROUND.
	Is the voltage less than 10 volts?
Yes	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. (This circuit includes the power distribution fuse box and EMS control relay.)
No	<a href="#">GO to K2.</a>
<b>K2: CHECK THE GROUND SUPPLY CIRCUIT TO THE BANK 1 CATALYST MONITOR HEATER FOR CONTINUITY</b>	
	1 Turn the ignition switch to the OFF position.
	2 Disconnect the ECM electrical connector PI01.
	3 Measure the resistance between PI11, pin 2 (UY) and PI01, pin 92 (UY)
	Is the resistance less than 5 ohms?
Yes	<a href="#">GO to K3.</a>
No	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>K3: CHECK THE BANK 1 CATALYST MONITOR HEATER RESISTANCE</b>	
	1 Measure the resistance between pins 1 and 2 of the bank 1 Catalyst Monitor heater.
	Is the resistance 5.0 ohms?
Yes	<a href="#">GO to K4.</a>
No	INSTALL a new bank 1 Catalyst Monitor, REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>K4: CHECK THE GROUND SUPPLY CIRCUIT TO THE BANK 1 CATALYST MONITOR HEATER FOR SHORT TO GROUND</b>	
	1 Measure the resistance between PI11, pin 2 (UY) and GROUND.
	Is the resistance less than 10,000 ohms?
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	<a href="#">GO to K5.</a>
<b>K5: CHECK THE GROUND SUPPLY CIRCUIT TO THE BANK 1 CATALYST MONITOR HEATER FOR SHORT TO BATTERY</b>	
	1 Connect the ECM electrical connector, PI01.
	2 Turn the ignition switch to the ON position.
	3 Check for a voltage at PI11, pin 2 (UY)
	Is the voltage greater than 1 volt?
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	<a href="#">GO to K6.</a>
<b>K6: CHECK THE CONSTANT CIRCUIT OF THE BANK 1 CATALYST MONITOR SENSOR FOR OPEN CIRCUIT</b>	
	1 Disconnect the bank 1 catalyst monitor sensor electrical connector, PI11.
	2 Disconnect the ECM electrical connector, PI01.
	3 Measure the resistance between PI11, pin 3 (B) and PI01, pin 130 (BW)
	Is the resistance less than 5 ohms?
Yes	<a href="#">GO to K7.</a>
No	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>K7: CHECK THE CONSTANT CIRCUIT OF THE BANK 1 CATALYST MONITOR SENSOR FOR SHORT TO GROUND</b>	
	1 Measure the resistance between PI01, pin 130 (BW) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to K8.](#)

#### **K8: CHECK THE CONSTANT CIRCUIT OF THE BANK 1 CATALYST MONITOR SENSOR FOR SHORT TO BATTERY**

**1** Connect the ECM electrical connector, PI01.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between PI11, pin 3 (B) and GROUND.

Is the voltage greater than 5 volts?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to K9.](#)

#### **K9: CHECK THE VARIABLE CIRCUIT OF THE BANK 1 CATALYST MONITOR SENSOR FOR OPEN CIRCUIT**

**1** Disconnect the bank 1 HO2S electrical connector PI11.

**2** Disconnect the ECM electrical connector, PI01.

**3** Measure the resistance between PI01, pin 128 (N) and PI11, pin 4 (N)

Is the resistance less than 5 ohms?

**Yes**

[GO to K10.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

#### **K10: CHECK THE VARIABLE CIRCUIT OF THE BANK 1 CATALYST MONITOR SENSOR FOR SHORT TO GROUND**

**1** Measure the resistance between PI11, pin 4 (N) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to K11.](#)

#### **K11: CHECK THE VARIABLE CIRCUIT OF THE BANK 1 CATALYST MONITOR SENSOR FOR SHORT TO BATTERY**

**1** Connect the ECM electrical connector PI01.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between PI11, pin 4 (N) and GROUND.

Is the voltage greater than 1 volt?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

INSTALL a new bank 1 Catalyst monitor sensor,  
REFER to: [Catalyst Monitor Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  
REFER to: [Engine Control Module \(ECM\)](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
Before replacing an ECM, contact dealer technical support.

#### **PINPOINT TEST L : DTC P0051, P0052, P0151, P0152, P0153, P1647. BANK 2 HO2S.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>L1: CHECK THE CONSTANT CIRCUIT OF THE BANK 2 HO2S FOR OPEN CIRCUIT</b>	
<b>1</b>	Disconnect the bank 2 HO2S electrical connector PI12.
<b>2</b>	Disconnect the ECM electrical connector, PI01.
<b>3</b>	Measure the resistance between PI01, pin 108 (N) and PI12, pin 4 (N)
Is the resistance less than 5 ohms?	
<b>Yes</b>	<a href="#">GO to L2.</a>
<b>No</b>	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>L2: CHECK THE CONSTANT CIRCUIT OF THE BANK 2 HO2S FOR SHORT TO GROUND</b>	
<b>1</b>	Measure the resistance between PI01, pin 108 (N) and GROUND.
Is the resistance less than 10,000 ohms?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to L3.</a>
<b>L3: CHECK THE CONSTANT CIRCUIT OF THE BANK 2 HO2S FOR SHORT TO BATTERY</b>	
<b>1</b>	Connect the ECM electrical connector PI01.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between PI12, pin 4 (N) and GROUND.
Is the voltage greater than 5 volts?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to L4.</a>
<b>L4: CHECK THE VARIABLE CIRCUIT OF THE BANK 2 HO2S FOR OPEN CIRCUIT</b>	
<b>1</b>	Disconnect the bank 1 HO2S electrical connector, PI12.
<b>2</b>	Disconnect the ECM electrical connector, PI01.
<b>3</b>	Measure the resistance between PI01, pin 107 (G) and PI12, pin 3 (G)

	Is the resistance less than 5 ohms?
<b>Yes</b>	<a href="#">GO to L5.</a>
<b>No</b>	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

#### L5: CHECK THE VARIABLE CIRCUIT OF THE BANK 2 HO2S FOR SHORT TO GROUND

<b>1</b>	Measure the resistance between PI01, pin 107 (G) and GROUND.
	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to L6.</a>

#### L6: CHECK THE VARIABLE CIRCUIT OF THE BANK 2 HO2S FOR SHORT TO BATTERY

<b>1</b>	Connect the ECM electrical connector PI01.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between PI12, pin 3 (G) and GROUND.
	Is the voltage greater than 1 volt?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	INSTALL a new bank 2 HO2S, REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### PINPOINT TEST M : DTC P0057, P0058, P0157, P0158, P0160. BANK 2 CATALYST MONITOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>M1: CHECK THE POWER SUPPLY CIRCUIT TO THE BANK 2 CATALYST MONITOR HEATER</b>	
<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the bank 2 catalyst monitor sensor electrical connector PI13.
<b>3</b>	Turn the ignition switch to the ON position.
<b>4</b>	Measure the voltage between PI13, pin 1 (WR) and GROUND.
	Is the voltage less than 10 volts?
<b>Yes</b>	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to M2.</a>
<b>M2: CHECK THE GROUND SUPPLY CIRCUIT TO THE BANK 2 CATALYST MONITOR HEATER FOR CONTINUITY</b>	
<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the ECM electrical connector PI01.
<b>3</b>	Measure the resistance between PI13, pin 2 (RW) and PI01, pin 93 (RW)
	Is the resistance less than 5 ohms?
<b>Yes</b>	<a href="#">GO to M3.</a>
<b>No</b>	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>M3: CHECK THE BANK 2 CATALYST MONITOR HEATER RESISTANCE</b>	
<b>1</b>	Measure the resistance between pins 1 and 2 of the bank 2 Catalyst Monitor heater.
	Is the resistance 5.0 ohms?
<b>Yes</b>	<a href="#">GO to M4.</a>
<b>No</b>	INSTALL a new bank 2 Catalyst Monitor, REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.
<b>M4: CHECK THE GROUND SUPPLY CIRCUIT TO THE BANK 2 CATALYST MONITOR HEATER FOR SHORT TO GROUND</b>	
<b>1</b>	Measure the resistance between PI13, pin 2 (RW) and GROUND.
	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to M5.</a>
<b>M5: CHECK THE GROUND SUPPLY CIRCUIT TO THE BANK 2 CATALYST MONITOR HEATER FOR SHORT TO BATTERY</b>	
<b>1</b>	Connect the ECM electrical connector, PI01.
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Check for a voltage at PI13, pin2 (RW)
	Is the voltage greater than 1 volt?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to M6.</a>
<b>M6: CHECK THE CONSTANT CIRCUIT OF THE BANK 2 CATALYST MONITOR SENSOR FOR OPEN CIRCUIT</b>	
<b>1</b>	Disconnect the bank 2 catalyst monitor sensor electrical connector, PI13.
<b>2</b>	Disconnect the ECM electrical connector, PI01.

**3** Measure the resistance between PI13, pin 3 (B) and PI01, pin 130 (BW)

Is the resistance less than 5 ohms?

**Yes**

[GO to M7.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**M7: CHECK THE CONSTANT CIRCUIT OF THE BANK 2 CATALYST MONITOR SENSOR FOR SHORT TO GROUND**

**1** Measure the resistance between PI01, pin 130 (BW) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M8.](#)

**M8: CHECK THE CONSTANT CIRCUIT OF THE BANK 2 CATALYST MONITOR SENSOR FOR SHORT TO BATTERY**

**1** Connect the ECM electrical connector, PI01.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between PI13, pin 3 (B) and GROUND.

Is the voltage greater than 5 volts?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M9.](#)

**M9: CHECK THE VARIABLE CIRCUIT OF THE BANK 2 CATALYST MONITOR SENSOR FOR OPEN CIRCUIT**

**1** Disconnect the bank 2 HO2S electrical connector PI13.

**2** Disconnect the ECM electrical connector, PI01.

**3** Measure the resistance between PI01, pin 129 (N) and PI13, pin 4 (N)

Is the resistance less than 5 ohms?

**Yes**

[GO to M10.](#)

**No**

REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**M10: CHECK THE VARIABLE CIRCUIT OF THE BANK 2 CATALYST MONITOR SENSOR FOR SHORT TO GROUND**

**1** Measure the resistance between PI13, pin 4 (N) and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

[GO to M11.](#)

**M11: CHECK THE VARIABLE CIRCUIT OF THE BANK 2 CATALYST MONITOR SENSOR FOR SHORT TO BATTERY**

**1** Connect the ECM electrical connector PI01.

**2** Turn the ignition switch to the ON position.

**3** Measure the voltage between PI13, pin 4 (N) and GROUND.

Is the voltage greater than 1 volt?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

**No**

INSTALL a new bank 2 Catalyst monitor sensor,  
REFER to: [Catalyst Monitor Sensor](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM.  
REFER to: [Engine Control Module \(ECM\)](#) (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).  
Before replacing an ECM, contact dealer technical support.

**PINPOINT TEST N : DTC P0101, P0102, P0103, P1104. MAF SENSOR.**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>N1: CHECK THE MASS AIR FLOW (MAF) SENSOR POWER SUPPLY</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the MAF sensor electrical connector PI14.
	<b>3</b> Turn the ignition switch to the ON position.
	<b>4</b> Measure the voltage between PI14, pin 1 (GU) and GROUND.
	Is the voltage less than 10 volts?
	<b>Yes</b> REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the power distribution fuse box and the EMS relay.)
	<b>No</b> <a href="#">GO to N2.</a>
<b>N2: CHECK THE MAF SENSOR GROUND CIRCUIT</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the resistance between PI14 pin 2 (BK) and GROUND.
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to N3.</a>
	<b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. (This circuit includes the ECM. For additional information, refer to dealer technical support.)
<b>N3: CHECK THE MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT</b>	

	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI01, pin 44 (GW) and PI14, pin 3, (GW)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to N4.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

#### N4: CHECK THE MAF SENSOR CIRCUIT FOR SHORT TO GROUND

	<b>1</b> Connect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI14 pin 3 (GW) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### PINPOINT TEST O : P0111, P0112, P0113. IAT SENSOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### O1: CHECK THE INTAKE AIR TEMPERATURE (IAT) SENSOR RESISTANCE

	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the MAF sensor electrical connector PI14.
	<b>3</b> Measure the resistance between pins 4 and 5 of the MAF sensor.
	Is the resistance 2450 ohms at 20°C? <b>Yes</b> <a href="#">GO to O2.</a> <b>No</b> INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

##### O2: CHECK CONTINUITY OF THE INTAKE AIR TEMPERATURE (IAT) SENSOR POWER SUPPLY CIRCUIT

	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the MAF sensor electrical connector PI14.
	<b>3</b> Disconnect the ECM electrical connector PI01.
	<b>4</b> Measure the resistance between the MAF sensor electrical connector PI14, pin 4 (U) and the ECM electrical connector PI01, pin 71 (U).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to O3.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

##### O3: CHECK CONTINUITY OF THE IAT SENSOR CIRCUIT

	<b>1</b> Measure the resistance between the MAF sensor electrical connector PI14, pin 5 (BG) and the ECM electrical connector PI01, pin 19 (BG).
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to O4.</a> <b>No</b> REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.

##### O4: CHECK THE IAT SENSOR POWER SUPPLY CIRCUIT FOR SHORT TO GROUND

	<b>1</b> Measure the resistance between the MAF sensor electrical connector PI14, pin 4 (U) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> <a href="#">GO to O5.</a>

##### O5: CHECK THE IAT SENSOR GROUND CIRCUIT FOR SHORT TO BATTERY

	<b>1</b> Connect the ECM electrical connector, PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Check for voltage at PI14, pin 5 (BG)
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation. <b>No</b> INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### PINPOINT TEST P : DTC P0051, P0052. BANK 2 HO2S HEATER.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>P1: CHECK THE POWER SUPPLY CIRCUIT TO THE BANK 2 HO2S HEATER</b>	
	<ol style="list-style-type: none"> <li>1 Disconnect the HO2S electrical connector, PI12.</li> <li>2 Turn the ignition switch to the ON position.</li> <li>3 Measure the voltage between PI12, pin 1 (WR) and GROUND.</li> </ol>
	<p>Is the voltage less than 10 volts?</p> <p><b>Yes</b></p> <p><a href="#">GO to P6.</a> (This circuit includes the power distribution fuse box and the EMS relay.)</p> <p><b>No</b></p> <p><a href="#">GO to P2.</a></p>
<b>P2: CHECK THE BANK 2 HO2S HEATER GROUND CIRCUIT FOR OPEN CIRCUIT</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the OFF position.</li> <li>2 Disconnect the ECM electrical connector PI01.</li> <li>3 Measure the resistance between the LH bank HO2S electrical connector PI12, pin 2 (RW) and the ECM electrical connector PI01, pins 55 and pin 56 (RW).</li> </ol>
	<p>Is the resistance of each wire less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to P3.</a></p> <p><b>No</b></p> <p>REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p>
<b>P3: CHECK THE BANK 2 HO2S HEATER RESISTANCE</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between pins 1 and 2 of the bank 2 HO2S.</li> </ol>
	<p>Is the resistance 3.3 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to P4.</a></p> <p><b>No</b></p> <p>INSTALL a new bank 2 HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTCs. TEST the system for normal operation.</p>
<b>P4: CHECK THE BANK 2 HO2S HEATER CIRCUIT FOR SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between the LH bank HO2S electrical connector PI12, pin 2 (RW) and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to P5.</a></p>
<b>P5: CHECK THE BANK 2 HO2S HEATER CIRCUIT FOR SHORT TO BATTERY</b>	
	<ol style="list-style-type: none"> <li>1 Connect the ECM electrical connector, PI01.</li> <li>2 Turn the ignition switch to the OFF position.</li> <li>3 Check for a voltage at PI12, pin 2 (RW)</li> </ol>
	<p>Is the voltage greater than 1 volt?</p> <p><b>Yes</b></p> <p>REPAIR the short to battery. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to P6.</a></p>
<b>P6: CHECK FUSE 35 OF THE FRONT POWER DISTRIBUTION BOX</b>	
	<ol style="list-style-type: none"> <li>1 Check the fuse.</li> </ol>
	<p>Is the fuse OK?</p> <p><b>Yes</b></p> <p><a href="#">GO to P8.</a></p> <p><b>No</b></p> <p><a href="#">GO to P7.</a></p>
<b>P7: CHECK FUSE 35 OF THE FRONT POWER DISTRIBUTION BOX FOR A SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the resistance between electrical connector FH32, pin 41 of the front power distribution box and GROUND.</li> </ol>
	<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b></p> <p>REPAIR short to ground between the engine compartment fuse box and the LH bank HO2S. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.</p>
<b>P8: CHECK THE POWER SUPPLY TO FUSE 35 OF THE FRONT POWER DISTRIBUTION BOX FOR A SHORT TO GROUND</b>	
	<ol style="list-style-type: none"> <li>1 Measure the voltage between fuse 42 electrical connector FH32, pin 47 and GROUND.</li> </ol>
	<p>Is the voltage less than 10 volts?</p> <p><b>Yes</b></p> <p>Repair the circuit from the ECM control relay to the engine compartment fuse box. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>Repair the circuit from the compartment fuse box and the HO2S. CLEAR the DTC. TEST the system for normal operation.</p>

<b>PINPOINT TEST Q : DTC P1606. ECM RELAY.</b>	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Q1: CHECK THE ECM CONTROL RELAY</b>	
	<ol style="list-style-type: none"> <li>1 Turn the ignition switch to the ON position.</li> </ol>
	<p>Does the ECM relay make an audible click?</p> <p><b>Yes</b></p> <p><a href="#">GO to Q2.</a></p> <p><b>No</b></p> <p><a href="#">GO to Q3.</a></p>
<b>Q2: CHECK FOR POWER SUPPLY FROM THE ECM CONTROL RELAY</b>	

**1** Measure the voltage between the ECM control relay FH32, pin E05 and GROUND.

Is the voltage less than 10 volts?

**Yes**

[GO to Q3.](#)

**No**

REPAIR the circuit from the ECM control relay to the ECM. CLEAR the DTC. TEST the system for normal operation.

### Q3: CHECK FUSE 9 IN THE ENGINE COMPARTMENT FUSE BOX

**1** Check the fuse.

Is the fuse OK?

**Yes**

[GO to Q4.](#)

**No**

[GO to Q8.](#)

### Q4: CHECK THE POWER SUPPLY TO FUSE 9 IN THE ENGINE COMPARTMENT FUSE BOX

**1** Measure the voltage between fuse 9 electrical connector FH32, pin 75 and GROUND.

Is the voltage less than 10 volts?

**Yes**

Repair the circuit from the battery positive to the engine compartment fuse box. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to Q5.](#)

### Q5: CHECK THE POWER SUPPLY FROM FUSE 9 IN THE ENGINE COMPARTMENT FUSE BOX TO THE ECM CONTROL RELAY

**1** Measure the voltage between the ECM control relay electrical connector FH32, pin 9 and GROUND.

Is a the voltage less than 10 volts?

**Yes**

Repair the circuit from the engine compartment fuse box to the ECM control relay. CLEAR the DTC. TEST the system for normal operation.

**No**

INSTALL a new ECM control relay. CLEAR the DTC. TEST the system for normal operation.

### Q6: CHECK CONTINUITY OF THE ECM CONTROL RELAY GROUND CIRCUIT

**1** Disconnect the ECM electrical connector PI01.

**2** Remove the ECM control relay from the engine compartment fuse box.

**3** Measure the resistance between the ECM electrical connector PI01, pin 40 and FH02, pin E02 of the engine compartment fuse box.

Is the resistance less than 5 ohms?

**Yes**

[GO to Q7.](#)

**No**

REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.  
(This circuit includes the power distribution fuse box and the EMS relay and diode.)

### Q7: CHECK CONTINUITY OF THE ECM CONTROL RELAY WINDING

**1** Measure the resistance of the ECM control relay winding between pins 1 and 2 of the ECM control relay.

Is the resistance less than 60 ohms?

**Yes**

INSTALL a new ECM control relay. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to Q9.](#)

### Q8: CHECK FUSE 9 OF THE ENGINE COMPARTMENT FUSE BOX FOR A SHORT TO GROUND

**1** Measure the resistance between electrical connector FH32 pin 9 of the engine compartment fuse box and GROUND.

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR short to ground between the engine compartment fuse box and the ECM control relay. CLEAR the DTC. TEST the system for normal operation.

**No**

INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.

### Q9: CHECK THE ECM CONTROL RELAY DIODE

**1** Remove the ECM control relay diode from the engine compartment fuse box.

**2** Measure the continuity of ECM control relay diode.

Is the resistance less than 5 ohms?

**Yes**

Possible intermittent fault. Recheck DTCs.

**No**

INSTALL a new ECM control relay diode. Make sure that the ECM control relay diode is installed correctly. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST R : P0105,P1107, P1108. MAP SENSOR.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>R1: CHECK THE GROUND CIRCUIT TO THE MAP SENSOR.</b>	
<b>1</b>	Measure the resistance between the MAP sensor electrical connector PI29, pin 4 (BG) and GROUND.
Is the resistance less than 5 ohms?	
<b>Yes</b>	<a href="#">GO to R2.</a>
<b>No</b>	REPAIR the circuit between the MAP sensor and GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>R2: CHECK THE POWER SUPPLY CIRCUIT TO THE MAP SENSOR.</b>	
<b>1</b>	Turn the ignition switch to the RUN position.
<b>2</b>	Measure the voltage between the MAP sensor electrical connector PI29, pin 2 (OY) and GROUND.
Is the voltage greater than 5 volts?	
<b>Yes</b>	<a href="#">GO to R3.</a>
<b>No</b>	REPAIR the circuit between the MAP sensor electrical connector PI29 pin 2 (OY) and the the EMS 5v supply from the ECM. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>R3: CHECK CONTINUITY OF THE MAP SENSOR SIGNAL WIRE.</b>	

	<b>1</b> Measure the resistance of the circuit between MAP sensor electrical connector PI29, pin 1 (BK) and ECM electrical connector PI01, pin 127 (BK)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to R4.</a> <b>No</b> REPAIR the circuit between the MAP sensor electrical connector PI29, pin 1 (BK) and ECM electrical connector PI01, pin 127 (BK) For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

#### R4: CHECK THE MAP SENSOR SIGNAL WIRE FOR SHORT TO GROUND

	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Disconnect the MAP sensor electrical connector, PI29.
	<b>3</b> Measure the resistance between PI29, pin 1 (BK) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to R5.</a>

#### R5: CHECK THE MAP SENSOR SIGNAL WIRE FOR SHORT TO BATTERY

	<b>1</b> Connect the ECM electrical connector, PI01.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Check for a voltage at PI29, pin 1 (BK)
	Is the voltage greater than 1 volt? <b>Yes</b> Repair the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new MAP sensor. CLEAR the DTC. TEST the system for normal operation.

#### PINPOINT TEST S : P0010, P1384. VVT BANK 1.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

##### S1: CHECK THE BANK 1 VVT SOLENOID RESISTANCE

	<b>1</b> Disconnect the bank 1 VVT solenoid electrical connector, PI16.
	<b>2</b> Measure the resistance between pins 1 and 2 of the bank 1 VVT solenoid.
	Is the resistance 8 ohms? <b>Yes</b> <a href="#">GO to S2.</a> <b>No</b> INSTALL a new bank 1 VVT solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

##### S2: CHECK THE GROUND CIRCUIT TO THE BANK 1 VVT SOLENOID.

	<b>1</b> Disconnect the bank 1 VVT solenoid electrical connector, PI16.
	<b>2</b> Measure the resistance between the bank 1 VVT solenoid electrical connector PI16, pin 2 (B) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to S3.</a> <b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI16, pin 2 (B) and GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

##### S3: CHECK CONTINUITY OF THE VVT SOLENOID SIGNAL WIRE.

	<b>1</b> Measure the resistance between VVT solenoid electrical connector PI16 pin 1 (Y) and ECM electrical connector PI01 pin 109 (Y)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to S4.</a> <b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI16, pin 1 (Y) and ECM electrical connector PI01 pin 109 (Y) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

##### S4: CHECK FOR SHORT TO GROUND AT THE VVT SOLENOID SIGNAL WIRE

	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI16, pin 1 (Y) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to S5.</a>

##### S5: CHECK FOR SHORT TO BATTERY AT THE VVT SOLENOID SIGNAL WIRE

	<b>1</b> TURN the ignition switch to the ON position.
	<b>2</b> Check for a voltage at PI16, pin 1 (Y)
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to S6.</a>

##### S6: CHECK RESISTANCE OF THE VVT SOLENOID.

	<b>1</b> Check the resistance between pins 1 and 2 of the bank 1 VVT solenoid.
	Is the resistance 6.5 - 8.5 ohms? <b>Yes</b> INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation).

No	Before replacing an ECM, contact dealer technical support. CLEAR the DTC. TEST the system for normal operation.
	INSTALL a new bank 1 VVT solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST T : P0020, P1396. VVT BANK 2.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>T1: CHECK THE BANK 2 VVT SOLENOID RESISTANCE</b>	
	<b>1</b> Disconnect the bank 2 VVT solenoid electrical connector, PI17.
	<b>2</b> Measure the resistance between pins 1 and 2 of the bank 2 VVT solenoid.
	Is the resistance 8 ohms? <b>Yes</b> <a href="#">GO to T2.</a>
	<b>No</b> INSTALL a new bank 2 VVT solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.
<b>T2: CHECK GROUND CIRCUIT TO THE BANK 2 VVT SOLENOID.</b>	
	<b>1</b> Disconnect the bank2 VVT solenoid electrical connector, PI17.
	<b>2</b> Measure the resistance between the bank 1 VVT solenoid electrical connector PI17, pin 2 (B) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to T3.</a>
	<b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI17, pin 2 (B) and GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>T3: CHECK CONTINUITY OF THE BANK 2 VVT SOLENOID SIGNAL WIRE.</b>	
	<b>1</b> Measure the resistance between VVT solenoid electrical connector PI17, pin 1 (YU) and ECM electrical connector PI01, pin 110 (YU)
	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to T4.</a>
	<b>No</b> REPAIR the circuit between VVT solenoid electrical connector PI17 pin 1 (YU) and ECM electrical connector PI01 pin 110 (YU) For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>T4: CHECK FOR SHORT TO GROUND AT THE BANK 2 VVT SOLENOID SIGNAL WIRE</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI01.
	<b>2</b> Measure the resistance between PI17, pin 1 (YU) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to T5.</a>
<b>T5: CHECK FOR SHORT TO BATTERY AT THE BANK 2 VVT SOLENOID SIGNAL WIRE</b>	
	<b>1</b> TURN the ignition switch to the ON position.
	<b>2</b> Check for a voltage at PI17, pin 1 (YU)
	Is the voltage greater than 1 volt? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to T6.</a>
<b>T6: CHECK RESISTANCE OF THE BANK 2 VVT SOLENOID.</b>	
	<b>1</b> Check the resistance between pins 1 and 2 of the bank 2 VVT solenoid.
	Is the resistance 6.5 - 8.5 ohms? <b>Yes</b> INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.
	<b>No</b> INSTALL a new bank 2 VVT solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST U : P0532, AIR CONDITIONING REFRIGERANT PRESSURE SENSOR CIRCUIT LOW INPUT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>U1: CHECK THE REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO GROUND</b>	
	<b>1</b> Disconnect the refrigerant pressure sensor electrical connector, FH110.
	<b>2</b> Measure the resistance between FH110, pin 003 (WU) and GROUND.
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short to ground. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to U2.</a>
<b>U2: CHECK THE REFRIGERANT PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT</b>	
	<b>1</b> Disconnect the ECM electrical connector, PI001.

**2** Measure the resistance between PI001, pin 121 (G) and the refrigerant pressure sensor electrical connector, FH110, pin 003 (G).

Is the resistance less than 5 ohms?

**Yes**

GO to Pinpoint Test [X](#).

**No**

REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation

## PINPOINT TEST V : P0533, AIR CONDITIONING REFRIGERANT PRESSURE SENSOR CIRCUIT HIGH INPUT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>V1: CHECK THE REFRIGERANT PRESSURE SENSOR CIRCUIT FOR SHORT TO BATTERY</b>	
	<b>1</b> Turn the ignition switch to the OFF position.
	<b>2</b> Disconnect the refrigerant pressure sensor electrical connector, FH110.
	<b>3</b> Check for a voltage between FH110, pin 003 (WU) and GROUND.
	Is the voltage greater than 1 volt?
	<b>Yes</b> REPAIR the short to battery. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> GO to Pinpoint Test <a href="#">X</a> .

## PINPOINT TEST W : P1582. FLIGHT RECORDER DATA STORED.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>W1: EXTRACT THE FLIGHT RECORDER DATA.</b>	
	• <b>NOTE:</b> Flight recorder data can only be extracted using the Jaguar approved diagnostic system, where available.
	<b>1</b> Connect the Jaguar approved diagnostic system, or code reader.
	Is DTC P1582 stored?
	<b>Yes</b> Refer to dealer technical support for information on extracting data.
	<b>No</b> Test not applicable.

## PINPOINT TEST X : P1240, P1241, P1242. SENSOR POWER SUPPLY.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>X1: CHECK THE POWER SUPPLY CIRCUIT TO THE FUEL INJECTION PRESSURE SENSOR.</b>	
	<b>1</b> Disconnect the fuel injection pressure sensor electrical connector, PI28.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between fuel injection pressure sensor electrical connector PI28, pin 1 (OY) and GROUND.
	Is the voltage greater than 4 volts?
	<b>Yes</b> <a href="#">GO to X2.</a>
	<b>No</b> REPAIR the circuit between the fuel injection pressure sensor electrical connector PI28, pin 1 (OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
<b>X2: CHECK THE POWER SUPPLY CIRCUIT TO THE FUEL INJECTION PRESSURE SENSOR FOR SHORT TO BATTERY.</b>	
	<b>1</b> Measure the voltage between fuel injection pressure sensor electrical connector PI28, pin 1 (OY) and GROUND.
	Is the voltage greater than 6 volts?
	<b>Yes</b> REPAIR the circuit between the fuel injection pressure sensor electrical connector PI28, pin 1 (OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to X3.</a>
<b>X3: CHECK THE POWER SUPPLY CIRCUIT TO THE MAP SENSOR.</b>	
	<b>1</b> Disconnect the MAP sensor electrical connector, PI29.
	<b>2</b> Turn the ignition switch to the ON position.
	<b>3</b> Measure the voltage between MAP Sensor electrical connector PI29, pin 2 (OY) and GROUND.
	Is the voltage greater than 4 volts?
	<b>Yes</b> <a href="#">GO to X4.</a>
	<b>No</b> REPAIR the circuit between the MAP Sensor electrical connector PI29, pin 2(OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
<b>X4: CHECK THE POWER SUPPLY CIRCUIT TO THE MAP SENSOR FOR SHORT TO BATTERY.</b>	
	<b>1</b> Measure the voltage between MAP Sensor electrical connector PI29, pin 2 (OY) and GROUND.
	Is the voltage greater than 6 volts?
	<b>Yes</b> REPAIR the circuit between the MAP Sensor electrical connector PI29, pin 2(OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to X5.</a>

**X5: CHECK THE POWER SUPPLY CIRCUIT TO THE FTP SENSOR.**

• NOTE: Access to the FTP sensor involves the removal of the fuel tank. To reduce the amount of work necessary, a slave harness could be used. This can be connected at the access port beneath the rear seat. Tests can then be carried out via the slave harness and sensor. If system operation is normal with the slave harness and sensor, the fault lies in the vehicle's harness or sensor.

	<b>1</b>	Disconnect the FTP sensor electrical connector, FP1. (see note above)
	<b>2</b>	Turn the ignition switch to the ON position.
	<b>3</b>	Measure the voltage between FTP Sensor electrical connector FP1, pin 3 (OY) and GROUND.
	Is the voltage greater than 4 volts?	
	<b>Yes</b> <a href="#">GO to X6.</a>	
	<b>No</b> REPAIR the circuit between the FTP Sensor electrical connector FP1, pin 3 (OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	

**X6: CHECK THE POWER SUPPLY CIRCUIT TO THE FTP SENSOR FOR SHORT TO BATTERY.**

	<b>1</b>	Measure the voltage between FTP Sensor electrical connector FP1, pin 3 (OY) and GROUND.
	Is the voltage greater than 6 volts?	
	<b>Yes</b> REPAIR the circuit between the FTP Sensor electrical connector FP1, pin 3 (OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	
	<b>No</b> <a href="#">GO to X7.</a>	

**X7: CHECK THE POWER SUPPLY CIRCUIT TO THE ACCELERATOR PEDAL POSITION SENSOR.**

	<b>1</b>	Disconnect the APP sensor electrical connector.
	<b>2</b>	Turn the ignition switch to the ON position.
	<b>3</b>	Measure the voltage between APP Sensor electrical connector CA88, pin 2 (OY) and GROUND.
	Is the voltage greater than 4 volts?	
	<b>Yes</b> <a href="#">GO to X8.</a>	
	<b>No</b> REPAIR the circuit between the APP Sensor electrical connector CA88, pin 2 (OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	

**X8: CHECK THE POWER SUPPLY CIRCUIT TO THE ACCELERATOR PEDAL POSITION SENSOR FOR SHORT TO BATTERY.**

	<b>1</b>	Measure the voltage between APP Sensor electrical connector CA88, pin 2 (OY) and GROUND.
	Is the voltage greater than 6 volts?	
	<b>Yes</b> REPAIR the circuit between the APP Sensor electrical connector CA88, pin 2 (OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	
	<b>No</b> <a href="#">GO to X9.</a>	

**X9: CHECK THE POWER SUPPLY CIRCUIT TO THE THROTTLE POSITION SENSOR.**

	<b>1</b>	Turn the ignition switch to the ON position.
	<b>2</b>	Measure the voltage between TP Sensor electrical connector PI26 PI26, pin 2 (OY) and GROUND.
	Is the voltage greater than 4 volts?	
	<b>Yes</b> <a href="#">GO to X10.</a>	
	<b>No</b> REPAIR the circuit between the TP Sensor electrical connector PI26, pin 2 (OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	

**X10: CHECK THE POWER SUPPLY CIRCUIT TO THE THROTTLE POSITION SENSOR FOR SHORT TO BATTERY.**

	<b>1</b>	Measure the voltage between TP Sensor electrical connector PI26, pin 2 (OY) and GROUND.
	Is the voltage greater than 6 volts?	
	<b>Yes</b> REPAIR the circuit between the TP Sensor electrical connector PI26, pin 2 (OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	
	<b>No</b> <a href="#">GO to X11.</a>	

**X11: CHECK THE POWER SUPPLY CIRCUIT TO THE AIR CONDITIONING PRESSURE SENSOR.**

	<b>1</b>	Turn the ignition switch to the ON position.
	<b>2</b>	Measure the voltage between ACP sensor electrical connector, FH110, pin 2 (OY) and GROUND.
	Is the voltage greater than 4 volts?	
	<b>Yes</b> <a href="#">GO to X12.</a>	
	<b>No</b> REPAIR the circuit between the ACP sensor electrical connector, FH110, pin 2 (OY) and the sensor 5 volt supply bus. (The fault could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)  CLEAR the DTC. TEST the system for normal operation.	

**X12: CHECK THE POWER SUPPLY CIRCUIT TO THE AIR CONDITIONING PRESSURE SENSOR FOR SHORT TO BATTERY.**

	<p><b>1</b> Measure the voltage between ACP sensor electrical connector, FH110, pin 2 (OY) and GROUND.</p> <p>Is the voltage greater than 6 volts?</p> <p><b>Yes</b></p> <p>REPAIR the circuit between the ACP sensor electrical connector, FH110, pin 2 (OY) and the sensor 5 volt supply bus. (The short could be in any of the other sensors in this circuit, or in any of the spurs in this circuit. For additional information, refer to wiring diagrams.)</p> <p><b>No</b></p> <p>CLEAR the DTC. TEST the system for normal operation.</p> <p>No electrical fault in power supply circuit. Recheck DTCs, using the Jaguar approved diagnostic system, or code reader. (This fault could also be a PSV failure within the ECM.)</p>
--	--

# PINPOINT TEST Y : P1243. SENSOR GROUND CIRCUITS.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Y1: CHECK THE GROUND CIRCUIT TO THE ENGINE COOLANT TEMPERATURE SENSOR.</b>	
	<p><b>1</b> Measure the resistance between ECT Sensor electrical connector PI25, pin 1 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y2.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the ECT Sensor electrical connector PI25, pin 1 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y2: CHECK THE GROUND CIRCUIT TO THE ENGINE OIL TEMPERATURE SENSOR.</b>	
	<p><b>1</b> Measure the resistance between EOT Sensor electrical connector PI24, pin 2 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y3.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the EOT Sensor electrical connector PI24, pin 2 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y3: CHECK THE GROUND CIRCUIT TO THE FUEL INJECTION PRESSURE SENSOR.</b>	
	<p><b>1</b> Measure the resistance between IP Sensor electrical connector PI28, pin 2 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y4.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the IP Sensor electrical connector PI28, pin 2 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y4: CHECK THE GROUND CIRCUIT TO THE ENGINE FUEL TEMPERATURE SENSOR.</b>	
	<p><b>1</b> Measure the resistance between EFT Sensor electrical connector PI27, pin 1 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y5.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the EFT Sensor electrical connector PI27, pin 1 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y5: CHECK THE GROUND CIRCUIT TO THE MAP SENSOR.</b>	
	<p><b>1</b> Measure the resistance between MAP Sensor electrical connector PI29, pin 4 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y6.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the MAP Sensor electrical connector PI29, pin 4 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y6: CHECK THE GROUND CIRCUIT TO THE FTP SENSOR.</b>	
<p>• NOTE: Access to the FTP sensor involves the removal of the fuel tank. To reduce the amount of work necessary, a slave harness could be used. This can be connected at the access port beneath the rear seat. Tests can then be carried out via the slave harness and sensor. If system operation is normal with the slave harness and sensor, the fault lies in the vehicle's harness or sensor.</p>	
	<p><b>1</b> Measure the resistance between FTP Sensor electrical connector FP01, pin 2 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y7.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the FTP Sensor electrical connector FP01, pin 2 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y7: CHECK THE GROUND CIRCUIT TO THE ACCELERATOR PEDAL POSITION SENSOR. (TRACK 1)</b>	
	<p><b>1</b> Measure the resistance between APP Sensor electrical connector CA88, pin 6 (BG) and GROUND.</p> <p>Is the resistance less than 5 ohms?</p> <p><b>Yes</b></p> <p><a href="#">GO to Y8.</a></p> <p><b>No</b></p> <p>REPAIR the circuit between the APP Sensor electrical connector CA88, pin 6 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.)</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
<b>Y8: CHECK THE GROUND CIRCUIT TO THE THROTTLE POSITION SENSOR.</b>	
	<p><b>1</b> Measure the resistance between TP Sensor electrical connector PI26, pin 1 (BG) and GROUND.</p>

	Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to Y9.</a> <b>No</b> REPAIR the circuit between the TP Sensor electrical connector PI26, pin 1 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
<b>Y9: CHECK THE GROUND CIRCUIT TO THE ACCELERATOR PEDAL POSITION SENSOR. (TRACK 3)</b>	
	<b>1</b> Measure the resistance between APP Sensor electrical connector CA88, pin 3 (BG) and GROUND. Is the resistance less than 5 ohms? <b>Yes</b> <a href="#">GO to Y10.</a> <b>No</b> REPAIR the circuit between the APP Sensor electrical connector CA88, pin 3 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.
<b>Y10: CHECK THE GROUND CIRCUIT TO THE AIR CONDITIONING PRESSURE SENSOR.</b>	
	<b>1</b> Measure the resistance between ACP sensor electrical connector, FH110, pin 1 (BG) and GROUND. Is the resistance less than 5 ohms? <b>Yes</b> No electrical fault in ground circuit. Recheck DTCs. <b>No</b> REPAIR the circuit between the ACP sensor electrical connector, FH110, pin 1 (BG) and GROUND. (This circuit includes the ECM. For additional information, refer to wiring diagrams.) CLEAR the DTC. TEST the system for normal operation.

<b>PINPOINT TEST Z : P0480. RADIATOR COOLING FAN MODULE DRIVE.</b>	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>Z1: CHECK THE PULSE WIDTH MODULATED SIGNAL TO THE COOLING FAN MODULE.</b>	
	<b>1</b> Disconnect the radiator cooling fan module electrical connector, FH108. <b>2</b> Run the engine to a temperature at which the cooling fans would operate. <b>3</b> Using a suitable meter, test for a pulse width modulated signal at FH108, pin 1 (WU)
	Is a PWM signal present? <b>Yes</b> INSTALL a new Cooling Fan Module. REFER to: <a href="#">Cooling Module - Vehicles Without: Supercharger</a> (303-03A Engine Cooling - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to Z2.</a>
<b>Z2: CHECK CONTINUITY OF THE RADIATOR COOLING FAN MODULE SIGNAL WIRE.</b>	
	<b>1</b> Turn the ignition switch to the OFF position. <b>2</b> Disconnect the ECM electrical connector, PI01. <b>3</b> Measure the resistance between the Radiator Cooling Fan Module electrical connector FH108, pin 1 (WU) and the ECM electrical connector PI01, pin 1 (WU)
	Is the resistance less than 5 ohms? <b>Yes</b> INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support. <b>No</b> REPAIR the circuit between the Radiator Cooling Fan Module electrical connector FH108, pin 3 (WU) and the ECM electrical connector PI01, pin 51 (WU) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

<b>PINPOINT TEST AA : P0646, P0647. AIR CONDITIONING CLUTCH RELAY DRIVE.</b>	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AA1: CHECK THE GROUND SUPPLY TO THE AIR CONDITIONING CLUTCH.</b>	
 <b>WARNING:</b> This test involves working in proximity to rotating parts. Make sure due care is exercised. Failure to follow this instruction may result in personal injury.	
	<b>1</b> Turn the ignition switch to the ON position, <b>2</b> Disconnect the ECM electrical connector, PI01. <b>3</b> Disconnect the air conditioning clutch electrical connector, PI49. <b>4</b> Measure the resistance between PI49, pin 2, (B) and GROUND.
	Is the resistance less than 5 ohms? <b>Yes</b> REPAIR the circuit between PI49, pin 2, (B) and GROUND. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to AA2.</a>
<b>AA2: CHECK THE CIRCUIT INTEGRITY BETWEEN THE ECM AND THE AIR CONDITIONING CLUTCH.</b>	
	<b>1</b> Apply a GROUND to the disconnected ECM electrical connector, PI01, pin 34 (BG) <b>2</b> Measure the voltage at air conditioning clutch electrical connector, PI49, pin 1 (RG)
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to AA3.</a> <b>No</b> <a href="#">GO to AA4.</a>
<b>AA3: CHECK THE AIR CONDITIONING CLUTCH RELAY TO ECM CIRCUIT FOR SHORT TO GROUND.</b>	
	<b>1</b> Measure the resistance between PI01, pin 34 (BG) and GROUND.

	Is the resistance less than 10,000 ohms?
Yes	<a href="#">GO to AA4.</a>
No	INSTALL a new air conditioning compressor clutch relay. For additional information, refer to the electrical guide. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### AA4: CHECK THE CIRCUIT BETWEEN THE AIR CONDITIONING COMPRESSOR CLUTCH AND THE RELAY FOR SHORT TO BATTERY.

<b>1</b>	Measure the voltage between PI49, pin 1 (RG) and GROUND.
----------	--

Is the voltage greater than 1 volt?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AA5.</a>

#### AA5: CHECK THE CIRCUIT BETWEEN THE AIR CONDITIONING COMPRESSOR CLUTCH AND THE ACCC RELAY FOR SHORT TO GROUND.

<b>1</b>	Measure the resistance between PI49, pin 1 (RG) and GROUND.
----------	---

Is the resistance less than 10,000 ohms?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AA6.</a>

#### AA6: CHECK THE CIRCUIT BETWEEN FUSE 32 OF THE FRONT POWER DISTRIBUTION FUSE BOX AND THE ACCC RELAY FOR SHORT TO GROUND.

<b>1</b>	Remove fuse 32.
----------	-----------------

<b>2</b>	Measure the resistance between fuse box electrical connector, FH32, pin 38 and GROUND.
----------	--

Is the resistance less than 10,000 ohms?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AA7.</a>

#### AA7: CHECK THE ACCC RELAY BASE FOR BATTERY VOLTAGE AT PIN 3.

<b>1</b>	Refit fuse 32.
----------	----------------

<b>2</b>	Measure the voltage between the ACCC relay base, pin 3 and GROUND.
----------	--

Is the voltage greater than 10 volts?

Yes	<a href="#">GO to AA8.</a>
No	Check/replace fuses. REPAIR the circuit between the relay base and the battery power bus 1. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

#### AA8: CHECK THE CIRCUIT BETWEEN PIN 1 OF THE ACCC RELAY BASE AND THE POWER DISTRIBUTION FUSE BOX FOR SHORT TO GROUND.

<b>1</b>	Remove fuse 38.
----------	-----------------

<b>2</b>	Measure the resistance between the ACCC relay base, pin 1 and GROUND.
----------	---

Is the resistance less than 10,000 ohms?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AA9.</a>

#### AA9: CHECK THE ACCC RELAY BASE FOR BATTERY VOLTAGE AT PIN 1

<b>1</b>	Refit fuse 38.
----------	----------------

<b>2</b>	Turn the ignition switch to the ON position.
----------	--

<b>3</b>	Measure the voltage between ACCC relay base, pin 1, and GROUND.
----------	---

Is the voltage greater than 10 volts?

Yes	<a href="#">GO to AA10.</a>
No	Check/replace fuses. REPAIR the circuit between the relay base and the battery power bus 2. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the EMS relay, and fuses 9.)

#### AA10: CHECK THE CIRCUIT BETWEEN THE ECM AND THE ACCC RELAY BASE FOR CONTINUITY.

<b>1</b>	Remove the ACCC relay.
----------	------------------------

<b>2</b>	Measure the resistance between the ECM electrical connector, PI01, pin 34 (BG) and ACCC relay base, pin 2.
----------	--

Is the resistance less than 5 ohms?

Yes	<a href="#">GO to AA11.</a>
No	REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

#### AA11: CHECK THE CIRCUIT BETWEEN THE ECM AND THE ACCC RELAY BASE FOR SHORT TO BATTERY.

<b>1</b>	Check for a voltage between the ECM electrical connector, PI01, pin 34 (BG) and GROUND.
----------	---

Is the voltage greater than 1 volt?

Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AA12.</a>

#### AA12: CHECK THE CIRCUIT BETWEEN THE ECM AND THE ACCC RELAY BASE FOR SHORT TO GROUND.

<b>1</b>	Measure the resistance between the ECM electrical connector, PI01, pin 34 (BG) and GROUND.
----------	--

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

INSTALL a new ACCC relay. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST AB : P1516, P1517. P/N SWITCH STARTING/DRIVING MALFUNCTIONS.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AB1: CHECK THE P/N INPUT TO THE ECM.</b>	
	<b>1</b> Select PARK.
	<b>2</b> Set the ignition switch to the ON position.
	<b>3</b> Measure the voltage at the ECM electrical connector PI01, pin 31 (B)
	Is the voltage greater than 10 volts?
	<b>Yes</b> INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.
	<b>No</b> REPAIR the circuit between the ECM electrical connector PI01, pin 31 (B) and the ignition switch. (On automatic transmission vehicles, this circuit includes the TR sensor, Central Junction Fuse Box, Ignition relay, and Inertia switch. On NAS manual transmission vehicles, this circuit also includes the Clutch Safety Switch.) For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST AC : P1245; P1246. IGNITION SWITCH CRANK SIGNAL

 **WARNING:** Make sure the starter motor does not engage in the course of these tests. Failure to follow this instruction may result in personal injury.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AC1: CHECK THE START INPUT TO THE ECM</b>	
	<b>1</b> Move the gear selector to the N position.
	<b>2</b> Disconnect the ECM electrical connector, PI01.
	<b>3</b> Remove the starter relay from the power distribution fuse box.
	<b>4</b> Turn the ignition switch to the CRANK position.
	<b>5</b> Measure the voltage between PI01, pin 6, (Y) and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AC2.</a>
	<b>No</b> REPAIR the circuit between the ECM and the battery. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the ignition switch and the power distribution fuse box. (Fuse 28).)
<b>AC2: CHECK THE START INPUT TO THE STARTER RELAY</b>	
	<b>1</b> Turn the ignition switch to the START position and hold.
	<b>2</b> Measure the voltage between the starter relay base, (R20) pin 1, and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> <a href="#">GO to AC3.</a>
	<b>No</b> REPAIR the circuit between the Starter relay base and the battery. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the ignition switch and the power distribution fuse box.)
<b>AC3: CHECK THE START INPUT WIRE FOR SHORT TO BATTERY AT ECM</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between PI01, pin 6, (Y) and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to AC4.</a>
<b>AC4: CHECK THE START INPUT WIRE FOR SHORT TO BATTERY AT RELAY</b>	
	<b>1</b> Turn the ignition switch to the ON position.
	<b>2</b> Measure the voltage between the starter relay base, pin 1, and GROUND.
	Is the voltage greater than 10 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to AC5.</a>
<b>AC5: CHECK THE STARTER RELAY INPUT FROM THE ECM FOR CONTINUITY.</b>	
	<b>1</b> Measure the resistance between PI01, pin 41 (GO) and relay base, pin 2.
	Is the resistance less than 5 ohms?
	<b>Yes</b> <a href="#">GO to AC6.</a>
	<b>No</b> REPAIR the open circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>AC6: CHECK THE STARTER RELAY INPUT FROM THE ECM FOR SHORT TO GROUND.</b>	
	<b>1</b> Disconnect ignition switch electrical connector, FC18.
	<b>2</b> Measure the resistance between PI01, pin 41 (GO) and GROUND.

	Is the resistance less than 10,000 ohms?
Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AC7.</a>

#### AC7: CHECK THE STARTER RELAY INPUT FROM THE ECM FOR SHORT TO BATTERY.

<b>1</b>	Measure the voltage between the starter relay base, pin 2, and GROUND.
	Is the voltage greater than 1 volt?
Yes	REPAIR the short circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	INSTALL a new starter relay. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### PINPOINT TEST AD : P0096,P0097, P0098 SUPERCHARGER INTAKE AIR TEMPERATURE SENSOR

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AD1: CHECK THE SUPERCHARGER INTAKE AIR TEMPERATURE SENSOR SIGNAL WIRE FOR OPEN CIRCUIT</b>	
<b>1</b>	Turn the ignition switch to the OFF position.
<b>2</b>	Disconnect the supercharger IAT sensor electrical connector PI43.
<b>3</b>	Disconnect the ECM electrical connector PI01.
<b>4</b>	Measure the resistance between the oil temperature sensor electrical connector PI43, pin 1 (YU) and the ECM electrical connector PI01, pin 72 (YU).
	Is the resistance less than 5 ohms?
Yes	<a href="#">GO to AD2.</a>
No	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>AD2: CHECK THE SUPERCHARGER INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT</b>	
<b>1</b>	Measure the resistance between the oil temperature sensor electrical connector PI43, pin 2 (BG) and GROUND.
	Is the resistance less than 5 ohms?
Yes	<a href="#">GO to AD3.</a>
No	REPAIR the circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
<b>AD3: CHECK THE SUPERCHARGER INTAKE AIR TEMPERATURE SENSOR GROUND CIRCUIT FOR SHORT TO BATTERY</b>	
<b>1</b>	Connect ECM electrical connector, PI01
<b>2</b>	Turn the ignition switch to the RUN position.
<b>3</b>	Measure the voltage between the oil temperature sensor electrical connector PI43, pin 2 (BG) and GROUND.
	Is a voltage present?
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	<a href="#">GO to AD4.</a>
<b>AD4: CHECK THE SUPERCHARGER INTAKE AIR TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO GROUND</b>	
<b>1</b>	Measure the resistance between the oil temperature sensor electrical connector PI43, pin 1 (YU) and GROUND.
	Is the resistance less than 10,000 ohms?
Yes	REPAIR the short to GROUND. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	<a href="#">GO to AD5.</a>
<b>AD5: CHECK THE SUPERCHARGER INTAKE AIR TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO BATTERY POSITIVE</b>	
<b>1</b>	Connect ECM electrical connector, PI01
<b>2</b>	Turn the ignition switch to the ON position.
<b>3</b>	Measure the voltage between the oil temperature sensor electrical connector PI43, pin 1 (YU) and GROUND.
	Is the voltage greater than 10 volts?
Yes	REPAIR the short to battery positive. For additional information, refer to the wiring diagrams. CLEAR the DTCs. TEST the system for normal operation.
No	INSTALL a new oil temperature sensor. REFER to: <a href="#">Intake Air Temperature (IAT) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR DTCs. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

#### PINPOINT TEST AE : P1410 SUPERCHARGER AIR CLEANER ADDITIONAL AIR INLET ACTUATOR

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>AE1: CHECK THE FUSE 37 IN THE FPDB</b>	
<b>1</b>	CHECK fuse 37 in the FPDB.
	Is the fuse OK?
Yes	<a href="#">GO to AE3.</a>
No	<a href="#">GO to AE2.</a>

<b>AE2: CHECK FOR A SHORT TO GROUND BETWEEN THE FPDB AND THE SUPERCHARGER AIR CLEANER ADDITIONAL AIR INLET ACTUATOR</b>	
	<div>1</div> DISCONNECT the supercharger air cleaner additional air inlet actuator electrical connector FH010.
	<div>2</div> MEASURE the resistance between supercharger air cleaner additional air inlet actuator electrical connector FH010 pin 1 (GU) and ground.
	Is the resistance less than 10,000 ohms? <b>Yes</b> Repair the circuit between supercharger air cleaner additional air inlet actuator electrical connector FH010 pin 1 (GU) and the FPDB. INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation <b>No</b> INSTALL a new fuse. CLEAR the DTC. TEST the system for normal operation.
<b>AE3: CHECK FOR BATTERY VOLTAGE AT THE SUPERCHARGER AIR CLEANER ADDITIONAL AIR INLET ACTUATOR</b>	
	<div>1</div> CHECK the voltage at supercharger air cleaner additional air inlet actuator electrical connector FH010 pin 1 (GU).
	Is the voltage less than 10 volts? <b>Yes</b> REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. (This circuit includes the power distribution fuse box and the EMS relay.) <b>No</b> <a href="#">GO to AE4.</a>
<b>AE4: CHECK THE CONTINUITY BETWEEN THE SUPERCHARGER AIR CLEANER ADDITIONAL AIR INLET ACTUATOR AND ECM</b>	
	<div>1</div> DISCONNECT the ECM electrical connector PI01.
	<div>2</div> MEASURE the resistance between the supercharger air cleaner additional air inlet actuator electrical connector FH010 pin 2 (U) and ECM electrical connector PI01 pin 14 (U).
	Is the resistance less than 5 ohms? <b>Yes</b> REPAIR the circuit. For additional information, refer to wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new supercharger air cleaner additional air inlet actuator. CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, INSTALL a new ECM. REFER to: <a href="#">Engine Control Module (ECM)</a> (303-14A Electronic Engine Controls - 2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Removal and Installation). Before replacing an ECM, contact dealer technical support.

# Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol - Electronic Engine Controls

## VIN Range: N52048->N80180

Diagnosis and Testing

### Overview

There are changes to the engine management system (EMS) for 2006 my, the most obvious of which will be the change to 7-digit diagnostic trouble codes (DTCs) from the familiar 5-digit, plus the addition of secondary air injection and changes to evaporative emissions and exhaust gas recirculation to comply with stage four emissions requirements.

For more information on these systems,

REFER to: [Electronic Engine Controls](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Description and Operation) / [Engine Emission Control - VIN Range: N52048->N99999](#) (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Description and Operation) / [Evaporative Emissions - VIN Range: N52048->N99999](#) (303-13 Evaporative Emissions, Description and Operation).

### Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

#### Visual Inspection Chart

Mechanical	Electrical
<ul style="list-style-type: none"> <li>● Engine oil level</li> <li>● Cooling system coolant level</li> <li>● Fuel level</li> <li>● Fuel contamination/grade/quality</li> <li>● Throttle body</li> <li>● Poly-vee belt</li> </ul>	<ul style="list-style-type: none"> <li>● Fuses</li> <li>● Wiring harness</li> <li>● Electrical connector(s)</li> <li>● Sensor(s)</li> <li>● Engine control module (ECM)</li> <li>● Transmission control module</li> </ul>

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, use the Jaguar approved diagnostic system or a scan tool to retrieve the fault codes before proceeding to the DTC Index, or the symptom chart if no DTCs are set.

### Symptom Chart

Symptom (general)	Symptom (specific)	Possible source	Action
Non-Start	Engine does not crank	<ul style="list-style-type: none"> <li>● Security system /Immobilizer engaged</li> <li>● Engine in shut-down mode</li> <li>● ECM relay</li> <li>● Battery</li> <li>● Park/Neutral switch</li> <li>● Starting system</li> <li>● Harness</li> <li>● Engine seized</li> </ul>	Check that the security system is disarmed. Check for DTCs. For starting system, REFER to: <a href="#">Starting System</a> (303-06 Starting System, Diagnosis and Testing). For ECM relay tests, GO to Pinpoint Test <a href="#">AE</a> . For battery information, REFER to: <a href="#">Battery</a> (414-01 Battery, Mounting and Cables, Diagnosis and Testing). For Park/Neutral tests, REFER to: <a href="#">External Controls</a> (307-05 Automatic Transmission/Transaxle External Controls, Diagnosis and Testing).
	Engine cranks, but does not fire	<ul style="list-style-type: none"> <li>● Engine breather system disconnected/restricted</li> <li>● Ignition system</li> <li>● Fuel system</li> <li>● Harness</li> <li>● Crankshaft position (CKP) sensor</li> <li>● ECM fault</li> </ul>	Check the engine breather system, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing). For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For fuel system tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For CKP tests, GO to Pinpoint Test <a href="#">R</a> . Refer to the warranty policy and procedures manual if an ECM is suspect.
	Engine cranks and fires, but will not start	<ul style="list-style-type: none"> <li>● Evaporative emissions purge valve</li> <li>● Fuel pump</li> <li>● Spark plugs</li> <li>● Ignition coil failure(s)</li> <li>● Harness</li> </ul>	For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing). For fuel system tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).
Difficult to start	Difficult to start cold	<ul style="list-style-type: none"> <li>● Check coolant anti-freeze content</li> <li>● Battery</li> <li>● CKP sensor</li> <li>● Exhaust gas recirculation (EGR) valve stuck open</li> <li>● Fuel pump</li> <li>● Evaporative emissions</li> </ul>	For battery information, REFER to: <a href="#">Battery</a> (414-01 Battery, Mounting and Cables, Diagnosis and Testing). For CKP sensor tests, GO to Pinpoint Test <a href="#">R</a> . For EGR system tests, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 -

Symptom (general)	Symptom (specific)	Possible source	Action
		purge valve	AJ27, Diagnosis and Testing). For fuel system tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing).
	Difficult to start hot	<ul style="list-style-type: none"> <li>● Injector leak</li> <li>● Engine fuel temperature (EFT) sensor</li> <li>● Intake air temperature (IAT) sensor</li> <li>● Mass air flow (MAF) sensor</li> <li>● Evaporative emissions purge valve</li> <li>● Fuel pump</li> <li>● Ignition system</li> </ul>	For fuel system tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For EFT sensor tests, GO to Pinpoint Test <a href="#">AG</a> . For IAT sensor tests, GO to Pinpoint Test <a href="#">C</a> . For MAF sensor tests, GO to Pinpoint Test <a href="#">A</a> and GO to Pinpoint Test <a href="#">B</a> . For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing).
	Difficult to start after hot soak (vehicle standing after engine has reached operating temperature)	<ul style="list-style-type: none"> <li>● Injector leak</li> <li>● EFT sensor</li> <li>● IAT sensor</li> <li>● MAF sensor</li> <li>● Evaporative emissions purge valve</li> <li>● Fuel pump</li> <li>● Ignition system</li> </ul>	For fuel system tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For EFT sensor tests, GO to Pinpoint Test <a href="#">AG</a> . For IAT sensor tests, GO to Pinpoint Test <a href="#">C</a> . For MAF sensor tests, GO to Pinpoint Test <a href="#">A</a> and GO to Pinpoint Test <a href="#">B</a> . For purge valve tests, REFER to: <a href="#">Evaporative Emissions - VIN Range: N52048-&gt;N99999</a> (303-13 Evaporative Emissions, Diagnosis and Testing).
	Engine cranks too fast/slow	<ul style="list-style-type: none"> <li>● Compressions high/low</li> <li>● Battery</li> <li>● Starting system</li> </ul>	Check compressions, REFER to: <a href="#">Engine - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27</a> (303-00 Engine System - General Information, Diagnosis and Testing). For battery information, REFER to: <a href="#">Battery</a> (414-01 Battery, Mounting and Cables, Diagnosis and Testing). For starting system tests, REFER to: <a href="#">Starting System</a> (303-06 Starting System, Diagnosis and Testing).
Engine stalls	Engine stalls soon after start	<ul style="list-style-type: none"> <li>● Breather system disconnected/restricted</li> <li>● ECM relay</li> <li>● MAF sensor</li> <li>● Ignition system</li> <li>● Air filter restricted</li> <li>● Fuel lines</li> <li>● Fuel rail pressure (FRP) sensor</li> <li>● Air leakage</li> </ul>	Check the engine breather system, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing). For ECM relay tests, GO to Pinpoint Test <a href="#">AE</a> . For MAF sensor tests, GO to Pinpoint Test <a href="#">A</a> and GO to Pinpoint Test <a href="#">B</a> . For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For air filter information, REFER to: <a href="#">Intake Air Distribution and Filtering - VIN Range: N52048-&gt;N99999</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For fuel system, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For FRP sensor tests, GO to Pinpoint Test <a href="#">AL</a> and GO to Pinpoint Test <a href="#">Z</a> . For intake system information, REFER to: <a href="#">Intake Air Distribution and Filtering - VIN Range: N52048-&gt;N99999</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).
	Engine stalls on overrun	<ul style="list-style-type: none"> <li>● ECM relay</li> <li>● Throttle position (TP) sensors</li> </ul>	For ECM relay tests, GO to Pinpoint Test <a href="#">AE</a> . For TP sensor tests, GO to Pinpoint Test <a href="#">E</a> and GO to Pinpoint Test <a href="#">F</a> . For fuel system tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).
	Engine stalls at steady speed	<ul style="list-style-type: none"> <li>● ECM relay</li> <li>● CKP sensor</li> <li>● TP sensors</li> </ul>	For ECM relay tests, GO to Pinpoint Test <a href="#">AE</a> . For fuel system, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing). For CKP sensor tests, GO to Pinpoint Test <a href="#">R</a> . For TP sensor tests, GO to Pinpoint Test <a href="#">E</a> and GO to Pinpoint Test <a href="#">F</a> .
	Engine stalls with speed control enabled	<ul style="list-style-type: none"> <li>● ECM relay</li> </ul>	For ECM relay tests, GO to Pinpoint Test <a href="#">AE</a> .
	Engine stalls when maneuvering	<ul style="list-style-type: none"> <li>● ECM relay</li> <li>● TP sensors</li> <li>● Additional engine loads (PAS, air conditioning, etc)</li> <li>● Transmission malfunction</li> <li>● CAN malfunction</li> </ul>	For ECM relay tests, GO to Pinpoint Test <a href="#">AE</a> . For TP sensor tests, GO to Pinpoint Test <a href="#">E</a> and GO to Pinpoint Test <a href="#">F</a> . For accessory drive information, REFER to: Accessory Drive Belt - 4.2L (303-05, Removal and Installation). For transmission information, REFER to: <a href="#">Diagnostic Strategy - VIN Range: N52048-&gt;N99999</a> (307-01 Automatic Transmission/Transaxle, Diagnosis and Testing).

Symptom (general)	Symptom (specific)	Possible source	Action
			For CAN network tests, REFER to: <a href="#">Communications Network - VIN Range: N52048-&gt;N99999</a> (418-00 Module Communications Network, Diagnosis and Testing).
Poor driveability	Engine hesitates/poor acceleration	<ul style="list-style-type: none"> <li>Fuel pump</li> <li>Fuel lines</li> <li>Injector leak</li> <li>Fuel pressure</li> <li>Air leakage</li> <li>TP sensors</li> <li>Throttle motor</li> <li>Ignition system</li> <li>EGR valve stuck</li> <li>HO2 sensors</li> <li>Transmission malfunction</li> <li>Restricted pedal travel (carpet, etc)</li> <li>Accelerator pedal position (APP) sensor</li> </ul>	<p>For fuel pump and fuel line tests, REFER to: <a href="#">Fuel Tank and Lines - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, VIN Range: N80181-&gt;R99999</a> (310-01 Fuel Tank and Lines, Diagnosis and Testing).</p> <p>For injector tests, REFER to: <a href="#">Fuel Charging and Controls - VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).</p> <p>For intake system, REFER to: <a href="#">Intake Air Distribution and Filtering - VIN Range: N52048-&gt;N99999</a> (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).</p> <p>For TP sensor tests, GO to Pinpoint Test <a href="#">E</a> and GO to Pinpoint Test <a href="#">F</a>. For throttle motor tests, GO to Pinpoint Test <a href="#">Y</a>. For ignition system tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).</p> <p>For EGR tests, REFER to: <a href="#">Engine Emission Control - VIN Range: N80181-&gt;R99999</a> (303-08A Engine Emission Control - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27, Diagnosis and Testing).</p> <p>Check for DTCs relating to HO2 sensors, refer to the DTC index. For transmission information, REFER to: <a href="#">Diagnostic Strategy - VIN Range: N52048-&gt;N99999</a> (307-01 Automatic Transmission/Transaxle, Diagnosis and Testing).</p> <p>Check the accelerator pedal travel. P035600	Ignition coil 6 primary/secondary circuit	<ul style="list-style-type: none"> <li>● ECM to ignition module/coil drive circuit: short circuit to ground, high resistance</li> <li>● Ignition module/coil ground circuit: high resistance</li> <li>● Ignition module/coil battery supply circuit: high resistance (including relay, if fitted)</li> </ul>	For ignition coil tests, REFER to: <a href="#">Engine Ignition - VIN Range: N52048-&gt;N99999</a> (303-07B Engine Ignition - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).
<b>PINPOINT TEST A : MASS AIR FLOW (MAF) SENSOR CIRCUIT RANGE/PERFORMANCE, HIGH/LOW VOLTAGE</b>			
	CAUTION: When probing connectors to take measurements in the course of the pinpoint tests, use the adaptor kit, part number 3548-1358-00.		

• NOTE: When performing electrical voltage or resistance tests, always use a digital multimeter (DMM) accurate to 3 decimal places, and with an up-to-date calibration certificate. When testing resistance, always take the resistance of the DMM leads into account.

• NOTE: Check and rectify basic faults before beginning diagnostic routines involving pinpoint tests.

• NOTE: Before commencing this test, check the air filter for blockage, the engine air intake and breather systems for leaks, and the TP sensor for additional DTCs.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
A1: CHECK THE MAF SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE		
	1 Key off.	
	2 Disconnect the ECM electrical connector, PI300.	
	3 Disconnect the MAF sensor electrical connector, PI14.	
	4 Measure the resistance between:	
	ECM connector PI 300, harness side	MAF connector PI 14, harness side
	Pin 70	Pin 03
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to A2.	
A2: CHECK THE MAF SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Key on, engine off.	
	2 Measure the voltage between:	
	MAF connector PI 14, harness side	Battery
	Pin 03	Negative terminal
	Is the voltage greater than 3 volts?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to A3.	
A3: CHECK THE MAF SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	MAF connector PI 14, harness side	Battery
	Pin 03	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to A4.	
A4: CHECK THE MAF SENSOR SUPPLY CIRCUIT VOLTAGE		
	1 Reconnect the ECM electrical connector, PI300.	
	2 Key on, engine off.	
	3 Measure the voltage between:	
	MAF connector PI 14, harness side	Battery
	Pin 01	Negative terminal
	Is the voltage greater than 10 volts?	
	Yes INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.	
	No REPAIR the circuit between the MAF sensor electrical connector and BATTERY. This circuit includes the EMS control relay, fuse 37 of the front power distribution box, and the high power protection module. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	

## PINPOINT TEST B : MASS AIR FLOW (MAF) SENSOR GROUND MALFUNCTION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
B1: CHECK THE MAF SENSOR GROUND		
	1 Disconnect the MAF sensor electrical connector, PI14.	
	2 Key on, engine off.	
	3 Measure the resistance between:	
	MAF sensor connector PI14, harness side	Battery
	Pin 02	Negative terminal
	Is the resistance greater than 5 ohms?	
	Yes	
	GO to B2.	
	No	
	INSTALL a new MAF sensor.	
	REFER to: Mass Air Flow (MAF) Sensor (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).	
	CLEAR the DTC. TEST the system for normal operation.	
B2: CHECK THE MAF SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE		
	1 Key off.	
	2 Disconnect the ECM electrical connector, PI300.	
	3 Measure the resistance between:	
	MAF sensor connector PI14, harness side	ECM connector PI300, harness side
	Pin 02	Pin 18

Is the resistance greater than 5 ohms?	<p><b>Yes</b></p> <p>REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to B3.</a></p>
--	---

### B3: CHECK THE MAF SENSOR GROUND CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Key on, engine off.				
<b>2</b>	Measure the voltage between:				
	<table> <tr> <th>MAF sensor connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	MAF sensor connector PI14, harness side	Battery	Pin 02	Negative terminal
MAF sensor connector PI14, harness side	Battery				
Pin 02	Negative terminal				
Is the voltage greater than 3 volts?	<p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>Refer to the warranty policy and procedures manual if an ECM is suspect.</p>				

### PINPOINT TEST C : INTAKE AIR TEMPERATURE (IAT) SENSOR CIRCUIT RANGE/PERFORMANCE, HIGH/LOW VOLTAGE

• NOTE: Before commencing this test, check the air filter for blockage and the engine air intake and breather systems for leaks. REFER to: [Intake Air Distribution and Filtering - VIN Range: N52048->N99999](#) (303-12B Intake Air Distribution and Filtering - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Diagnosis and Testing).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>C1: CHECK THE IAT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Key off.				
<b>2</b>	Disconnect the ECM electrical connector, PI300.				
<b>3</b>	Disconnect the MAF sensor electrical connector, PI14.				
<b>4</b>	Measure the resistance between:				
	<table> <tr> <th>ECM connector PI300, harness side</th><th>MAF connector PI14, harness side</th></tr> <tr> <td>Pin 66</td><td>Pin 04</td></tr> </table>	ECM connector PI300, harness side	MAF connector PI14, harness side	Pin 66	Pin 04
ECM connector PI300, harness side	MAF connector PI14, harness side				
Pin 66	Pin 04				
Is the resistance greater than 5 ohms?	<p><b>Yes</b></p> <p>REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to C2.</a></p>				

### C2: CHECK THE IAT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Key on, engine off.				
<b>2</b>	Measure the voltage between:				
	<table> <tr> <th>MAF connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	MAF connector PI14, harness side	Battery	Pin 04	Negative terminal
MAF connector PI14, harness side	Battery				
Pin 04	Negative terminal				
Is the voltage greater than 3 volts?	<p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to C3.</a></p>				

### C3: CHECK THE IAT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>MAF connector PI14, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	MAF connector PI14, harness side	Battery	Pin 04	Negative terminal
MAF connector PI14, harness side	Battery				
Pin 04	Negative terminal				
Is the resistance less than 10,000 ohms?	<p><b>Yes</b></p> <p>REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new MAF sensor. REFER to: <a href="#">Mass Air Flow (MAF) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.</p>				

### PINPOINT TEST D : ENGINE COOLANT TEMPERATURE (ECT) SENSOR CIRCUIT RANGE/PERFORMANCE, HIGH/LOW VOLTAGE

• NOTE: Before commencing this test, check the coolant level and condition, check the operation of the thermostat, rectify as necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>D1: CHECK THE ECT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Key off.				
<b>2</b>	Disconnect the ECM electrical connector, PI300.				
<b>3</b>	Disconnect the ECT sensor electrical connector, PI25.				
<b>4</b>	Measure the resistance between:				
	<table> <tr> <th>ECM connector PI300, harness side</th><th>ECT sensor connector PI25, harness side</th></tr> <tr> <td>Pin 68</td><td>Pin 02</td></tr> </table>	ECM connector PI300, harness side	ECT sensor connector PI25, harness side	Pin 68	Pin 02
ECM connector PI300, harness side	ECT sensor connector PI25, harness side				
Pin 68	Pin 02				
Is the resistance greater than 5 ohms?	<p><b>Yes</b></p> <p>REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p><a href="#">GO to D2.</a></p>				
<b>D2: CHECK THE ECT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Key on, engine off.				

	2 Measure the voltage between:			
	<table> <tr> <th>ECT sensor connector PI25, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	ECT sensor connector PI25, harness side	Battery	Pin 02
ECT sensor connector PI25, harness side	Battery			
Pin 02	Negative terminal			
<p>Is the voltage greater than 3 volts?</p> <p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> <a href="#">GO to D3.</a></p>				

### D3: CHECK THE ECT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	1 Turn the ignition switch to the OFF position.				
	2 Measure the resistance between:				
	<table> <tr> <th>ECT sensor connector PI25, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	ECT sensor connector PI25, harness side	Battery	Pin 02	Negative terminal
ECT sensor connector PI25, harness side	Battery				
Pin 02	Negative terminal				
<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> INSTALL a new ECT sensor. REFER to: <a href="#">Engine Coolant Temperature (ECT) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.</p>					

### PINPOINT TEST E : THROTTLE POSITION (TP) SENSOR RANGE/PERFORMANCE, HIGH/LOW VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### E1: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR HIGH RESISTANCE

1	Key off.	
2	Disconnect the ECM electrical connector, PI300.	
3	Disconnect the TP sensor electrical connector, (vehicles with supercharger) PI26 or (vehicles without supercharger) PI303.	
4	Measure the resistance between:	
/8 Vehicles with supercharger		
	ECM connector PI300, harness side	TP sensor connector PI26, harness side
Pin 65		Pin 06
/ehicles without supercharger		
	ECM connector PI300, harness side	TP sensor connector PI303, harness side
Pin 65		Pin 01

<p>Is the resistance greater than 5 ohms?</p> <p><b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> <a href="#">GO to E2.</a></p>	
---	--

#### E2: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR SHORT CIRCUIT TO POWER

1 Key on, engine off.	
2 Measure the voltage between:	
Vehicles with supercharger	
TP sensor connector PI26, harness side	Battery
Pin 06	Negative terminal
Vehicles without supercharger	
TP sensor connector PI303, harness side	Battery
Pin 01	Negative terminal

<p>Is the voltage greater than 5 volts?</p> <p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> <a href="#">GO to E3.</a></p>	
---	--

#### E3: CHECK THE TP SENSOR SENSING CIRCUIT TP1 FOR SHORT CIRCUIT TO GROUND

1 Key off.	
2 Measure the resistance between:	
Vehicles with supercharger	
TP sensor connector PI26, harness side	Battery
Pin 06	Negative terminal
Vehicles without supercharger	
TP sensor connector PI303, harness side	Battery
Pin 01	Negative terminal

<p>Is the resistance less than 10,000 ohms?</p> <p><b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b> INSTALL a new TP sensor. REFER to: <a href="#">Throttle Body - Vehicles With: Supercharger, VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation) / <a href="#">Throttle Body - Vehicles Without: Supercharger, VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.</p>	
---	--

### PINPOINT TEST F : THROTTLE POSITION (TP) SENSOR CIRCUIT TP2 HIGH/LOW VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>F1: CHECK TP SENSOR SENSING CIRCUIT TP2 FOR HIGH RESISTANCE</b>	
<b>1</b>	Key off.
<b>2</b>	Disconnect the ECM electrical connector, PI300.
<b>3</b>	Disconnect the TP sensor electrical connector, (vehicles with supercharger) PI26 or (vehicles without supercharger) PI303.
<b>4</b>	Measure the resistance between:
<b>Vehicles with supercharger</b>	
<b>ECM connector PI300, harness side</b>	<b>TP sensor connector PI26, harness side</b>
Pin 67	Pin 04
<b>Vehicles without supercharger</b>	
<b>ECM connector PI300, harness side</b>	<b>TP sensor connector PI303, harness side</b>
Pin 67	Pin 03
Is the resistance greater than 5 ohms?	
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to F2.</a>

<b>F2: CHECK TP SENSOR SENSING CIRCUIT TP2 FOR SHORT CIRCUIT TO POWER</b>	
<b>1</b>	Key on, engine off.
<b>2</b>	Measure the voltage between:
<b>Vehicles with supercharger</b>	
<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
Pin 04	Positive terminal
<b>Vehicles without supercharger</b>	
<b>TP sensor connector PI303, harness side</b>	<b>Battery</b>
Pin 03	Positive terminal
Is the voltage greater than 5 volts?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to F3.</a>

<b>F3: CHECK TP SENSOR SENSING CIRCUIT TP2 FOR SHORT CIRCUIT TO GROUND</b>	
<b>1</b>	Measure the resistance between:
<b>Vehicles with supercharger</b>	
<b>TP sensor connector PI26, harness side</b>	<b>Battery</b>
Pin 04	Negative terminal
<b>Vehicles without supercharger</b>	
<b>TP sensor connector PI303, harness side</b>	<b>Battery</b>
Pin 03	Negative terminal
Is the resistance less than 10,000 ohms?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	INSTALL a new TP sensor. REFER to: <a href="#">Throttle Body - Vehicles With: Supercharger. VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation) / <a href="#">Throttle Body - Vehicles Without: Supercharger. VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST G : RIGHT-HAND H02S SENSING CIRCUIT LOW/HIGH CURRENT, SLOW RESPONSE, ECM CONTROL MALFUNCTION

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Before commencing this test, check the sensor connections and harness, check for exhaust leaks, (a very small exhaust leak can cause this DTC to flag. Check the EGR pipes for cracks/leaks) engine misfire, etc. See "visual inspection chart" and "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>G1: CHECK THE H02S VARIABLE CIRCUIT FOR HIGH RESISTANCE</b>	
<b>1</b>	Key off.
<b>2</b>	Disconnect the H02S electrical connector, PI10.
<b>3</b>	Disconnect the ECM electrical connector, PI300.
<b>4</b>	Measure the resistance between:
<b>ECM connector PI300, harness side</b>	<b>H02S connector PI10, harness side</b>
Pin 28	Pin 04
Is the resistance greater than 5 ohms?	
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to G2.</a>
<b>G2: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO POWER</b>	
<b>1</b>	Key on, engine off.
<b>2</b>	Measure the voltage between:
<b>H02S connector PI10, harness side</b>	<b>Battery</b>
Pin 04	Negative terminal

Is the voltage greater than 3 volts?	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to G3.</a>

G3: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.				
<b>2</b>	Measure the resistance between:				
	<table> <tr> <th>HO2S connector PI 10, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	HO2S connector PI 10, harness side	Battery	Pin 04	Negative terminal
HO2S connector PI 10, harness side	Battery				
Pin 04	Negative terminal				

Is the resistance less than 10,000 ohms?	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to G4.</a>

G4: CHECK THE H02S CONSTANT CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>ECM connector PI 300, harness side</th><th>HO2S connector PI 10, harness side</th></tr> <tr> <td>Pin 29</td><td>Pin 03</td></tr> </table>	ECM connector PI 300, harness side	HO2S connector PI 10, harness side	Pin 29	Pin 03
ECM connector PI 300, harness side	HO2S connector PI 10, harness side				
Pin 29	Pin 03				

Is the resistance greater than 5 ohms?	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to G5.</a>

G5: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Measure the voltage between:				
	<table> <tr> <th>HO2S connector PI 10, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	HO2S connector PI 10, harness side	Battery	Pin 03	Negative terminal
HO2S connector PI 10, harness side	Battery				
Pin 03	Negative terminal				

Is the voltage greater than 3 volts?	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to G6.</a>

G6: CHECK THE H02S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>HO2S connector PI 10, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	HO2S connector PI 10, harness side	Battery	Pin 03	Negative terminal
HO2S connector PI 10, harness side	Battery				
Pin 03	Negative terminal				

Is the resistance less than 10,000 ohms?	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	INSTALL a new H02S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

PINPOINT TEST H : RIGHT-HAND H02S HEATER CONTROL CIRCUIT HIGH/LOW CURRENT

- 
**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.
- **NOTE:** Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>H1: CHECK H02S HEATER POWER SUPPLY CIRCUIT</b>					
	<b>1</b> Key off.				
	<b>2</b> Disconnect the H02S electrical connector, PI10.				
	<b>3</b> Key on, engine off.				
	<b>4</b> Make sure the O2S heater relay is energized.				
	<b>5</b> Measure the voltage between:				
	<table> <tr> <th>HO2S connector PI 10, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	HO2S connector PI 10, harness side	Battery	Pin 01	Negative terminal
HO2S connector PI 10, harness side	Battery				
Pin 01	Negative terminal				
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to H2.</a>				
	<b>No</b> REPAIR the power supply circuit to the H02S heater. This circuit includes the HO2S heater relay, fuse 20 of the front power distribution box, and the high power protection module. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>H2: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR HIGH RESISTANCE</b>					
	<b>1</b> Key off.				
	<b>2</b> Disconnect the ECM electrical connector, PI300.				
	<b>3</b> Measure the resistance between:				
	<table> <tr> <th>HO2S connector PI 10, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 76</td></tr> </table>	HO2S connector PI 10, harness side	ECM connector PI 300, harness side	Pin 02	Pin 76
HO2S connector PI 10, harness side	ECM connector PI 300, harness side				
Pin 02	Pin 76				
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
	<b>No</b> <a href="#">GO to H3.</a>				
<b>H3: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO POWER</b>					

<b>1</b>	Key on, engine off.
<b>2</b>	Measure the voltage between:
	<b>H02S connector PI 10, harness side</b>
	<b>Battery</b>
	Pin 02
	Negative terminal
	Is the voltage greater than 3 volts?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to H4.</a>

#### H4: CHECK H02S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.
<b>2</b>	Measure the resistance between:
	<b>H02S connector PI 10, harness side</b>
	<b>Battery</b>
	Pin 02
	Negative terminal
	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	INSTALL a new H02S. REFER to: <a href="#">Heated Oxygen Sensor (H02S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

### PINPOINT TEST I : RIGHT-HAND CATALYST MONITOR SENSOR SENSING CIRCUIT LOW/HIGH VOLTAGE, NO ACTIVITY

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### I1: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Key off.
<b>2</b>	Disconnect the catalyst monitor sensor electrical connector, PI11.
<b>3</b>	Disconnect the ECM electrical connector, PI300.
<b>4</b>	Measure the resistance between:
	<b>Catalyst monitor sensor connector PI11, harness side</b>
	<b>ECM connector PI300, harness side</b>
	Pin 04
	Pin 40
	Is the resistance greater than 5 ohms?
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to I2.</a>

#### I2: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Key on, engine off.
<b>2</b>	Measure the voltage between:
	<b>Catalyst monitor sensor connector PI11, harness side</b>
	<b>Battery</b>
	Pin 04
	Negative terminal
	Is the voltage greater than 3 volts?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to I3.</a>

#### I3: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.
<b>2</b>	Measure the resistance between:
	<b>Catalyst monitor sensor connector PI11, harness side</b>
	<b>Battery</b>
	Pin 04
	Negative terminal
	Is the resistance less than 10,000 ohms?
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to I4.</a>

#### I4: CHECK THE CATALYST MONITOR SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:
	<b>Catalyst monitor sensor connector PI11, harness side</b>
	<b>ECM connector PI300, harness side</b>
	Pin 03
	Pin 22
	Is the resistance greater than 5 ohms?
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	INSTALL a new catalyst monitor sensor. REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

### PINPOINT TEST J : RIGHT-HAND CATALYST MONITOR SENSOR HEATER CONTROL CIRCUIT LOW/HIGH RESISTANCE

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
J1: CHECK THE POWER SUPPLY TO THE CATALYST MONITOR HEATER		
	1 Key off.	
	2 Disconnect the catalyst monitor sensor electrical connector, PI11.	
	3 Key on, engine off.	
	4 Make sure the O2S heater relay is energized.	
	5 Measure the voltage between:	
	Catalyst monitor sensor connector PI11, harness side	Battery
	Pin 01	Negative terminal
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to J2.</a> <b>No</b> REPAIR the power supply circuit to the catalyst monitor sensor heater. This circuit includes the heater relay and fuse 20 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
J2: CHECK THE CATALYST MONITOR HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE		
	1 Key off.	
	2 Disconnect the ECM electrical connector, PI300.	
	3 Measure the resistance between:	
	Catalyst monitor sensor connector PI11, harness side	ECM connector PI300, harness side
	Pin 02	Pin 88
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new catalyst monitor sensor. REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.	

## PINPOINT TEST K : LEFT-HAND H02S SENSING CIRCUIT LOW/HIGH CURRENT, SLOW RESPONSE, ECM CONTROL MALFUNCTION

 **CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Before commencing this test, check the sensor connections and harness, check for exhaust leaks, engine misfire, etc. See "visual inspection chart" and "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
K1: CHECK THE H02S VARIABLE CIRCUIT FOR HIGH RESISTANCE		
	1 Key off.	
	2 Disconnect the H02S electrical connector, PI12.	
	3 Disconnect the ECM electrical connector, PI300.	
	4 Measure the resistance between:	
	H02S connector PI12, harness side	ECM connector PI300, harness side
	Pin 04	Pin 26
	Is the resistance greater than 5 ohms? Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. No GO to K2.	
K2: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Key on, engine off.	
	2 Measure the voltage between:	
	H02S connector PI 12, harness side	Battery
	Pin 04	Negative terminal
	Is the voltage greater than 3 volts? Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. No GO to K3.	
K3: CHECK THE H02S VARIABLE CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	H02S connector PI 12, harness side	Battery
	Pin 04	Negative terminal
	Is the resistance less than 10,000 ohms? Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. No GO to K4.	
K4: CHECK THE H02S CONSTANT CIRCUIT FOR HIGH RESISTANCE		
	1 Measure the resistance between:	
	H02S connector PI12, harness side	ECM connector PI300, harness side
	Pin 03	Pin 27

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to K5.</a>

K5: CHECK THE HO2S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Key on, engine off.				
2	Measure the voltage between:				
	<table> <tr> <th>HO2S connector PI 12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	HO2S connector PI 12, harness side	Battery	Pin 03	Negative terminal
HO2S connector PI 12, harness side	Battery				
Pin 03	Negative terminal				
Is the voltage greater than 3 volts?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
No	<a href="#">GO to K6.</a>				

K6: CHECK THE HO2S CONSTANT CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Measure the resistance between:				
	<table> <tr> <th>HO2S connector PI 12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	HO2S connector PI 12, harness side	Battery	Pin 03	Negative terminal
HO2S connector PI 12, harness side	Battery				
Pin 03	Negative terminal				
Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
No	INSTALL a new HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.				

PINPOINT TEST L : LEFT-HAND HO2S HEATER CONTROL CIRCUIT HIGH/LOW CURRENT

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

• NOTE: Carry out a visual inspection of the HO2S connectors (integrity of connections may be affected by heat from catalytic converters).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>L1: CHECK HO2S HEATER POWER SUPPLY CIRCUIT</b>					
1	Disconnect the HO2S electrical connector, PI12.				
2	Key on, engine off.				
3	Make sure the O2S heater relay is energized.				
4	Measure the voltage between:				
	<table> <tr> <th>HO2S connector PI12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	HO2S connector PI12, harness side	Battery	Pin 01	Negative terminal
HO2S connector PI12, harness side	Battery				
Pin 01	Negative terminal				
Is the voltage greater than 10 volts?	Yes <a href="#">GO to L2.</a>				
No	REPAIR the power supply circuit to the HO2S heater. This circuit includes the heater relay and fuse 35 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>L2: CHECK HO2S HEATER CONTROL CIRCUIT FROM ECM FOR HIGH RESISTANCE</b>					
1	Key off.				
2	Disconnect the ECM electrical connector, PI300.				
3	Measure the resistance between:				
	<table> <tr> <th>HO2S connector PI12, harness side</th><th>ECM connector PI 300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 77</td></tr> </table>	HO2S connector PI12, harness side	ECM connector PI 300, harness side	Pin 02	Pin 77
HO2S connector PI12, harness side	ECM connector PI 300, harness side				
Pin 02	Pin 77				
Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
No	<a href="#">GO to L3.</a>				
<b>L3: CHECK HO2S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO POWER</b>					
1	Key on, engine off.				
2	Measure the voltage between:				
	<table> <tr> <th>HO2S connector PI12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	HO2S connector PI12, harness side	Battery	Pin 02	Negative terminal
HO2S connector PI12, harness side	Battery				
Pin 02	Negative terminal				
Is the voltage greater than 3 volts?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
No	<a href="#">GO to L4.</a>				
<b>L4: CHECK HO2S HEATER CONTROL CIRCUIT FROM ECM FOR SHORT CIRCUIT TO GROUND</b>					
1	Measure the resistance between:				
	<table> <tr> <th>HO2S connector PI12, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	HO2S connector PI12, harness side	Battery	Pin 02	Negative terminal
HO2S connector PI12, harness side	Battery				
Pin 02	Negative terminal				
Is the resistance less than 10,000 ohms?	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
No	INSTALL a new HO2S. REFER to: <a href="#">Heated Oxygen Sensor (HO2S)</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol,				

Removal and Installation).  
CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.

## PINPOINT TEST M : LEFT-HAND CATALYST MONITOR SENSOR SENSING CIRCUIT LOW/HIGH VOLTAGE, NO ACTIVITY

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>M1: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
	<ol style="list-style-type: none"><li>1 Key off.</li><li>2 Disconnect the catalyst monitor sensor electrical connector, PI13.</li><li>3 Disconnect the ECM electrical connector, PI300.</li><li>4 Measure the resistance between:<table><tr><td><b>Catalyst monitor sensor PI13, harness side</b></td><td><b>ECM connector PI300, harness side</b></td></tr><tr><td>Pin 04</td><td>Pin 41</td></tr></table></li></ol>	<b>Catalyst monitor sensor PI13, harness side</b>	<b>ECM connector PI300, harness side</b>	Pin 04	Pin 41
<b>Catalyst monitor sensor PI13, harness side</b>	<b>ECM connector PI300, harness side</b>				
Pin 04	Pin 41				
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to M2.</a>				
<b>M2: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	<ol style="list-style-type: none"><li>1 Key on, engine off.</li><li>2 Measure the voltage between:<table><tr><td><b>Catalyst monitor sensor PI13, harness side</b></td><td><b>Battery</b></td></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table></li></ol>	<b>Catalyst monitor sensor PI13, harness side</b>	<b>Battery</b>	Pin 04	Negative terminal
<b>Catalyst monitor sensor PI13, harness side</b>	<b>Battery</b>				
Pin 04	Negative terminal				
	Is the voltage greater than 3 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to M3.</a>				
<b>M3: CHECK THE CATALYST MONITOR SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
	<ol style="list-style-type: none"><li>1 Key off.</li><li>2 Measure the resistance between:<table><tr><td><b>Catalyst monitor sensor PI13, harness side</b></td><td><b>Battery</b></td></tr><tr><td>Pin 04</td><td>Negative terminal</td></tr></table></li></ol>	<b>Catalyst monitor sensor PI13, harness side</b>	<b>Battery</b>	Pin 04	Negative terminal
<b>Catalyst monitor sensor PI13, harness side</b>	<b>Battery</b>				
Pin 04	Negative terminal				
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to M4.</a>				
<b>M4: CHECK THE CATALYST MONITOR SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>					
	<ol style="list-style-type: none"><li>1 Measure the resistance between:<table><tr><td><b>Catalyst monitor sensor PI13, harness side</b></td><td><b>ECM connector PI300, harness side</b></td></tr><tr><td>Pin 03</td><td>Pin 45</td></tr></table></li></ol>	<b>Catalyst monitor sensor PI13, harness side</b>	<b>ECM connector PI300, harness side</b>	Pin 03	Pin 45
<b>Catalyst monitor sensor PI13, harness side</b>	<b>ECM connector PI300, harness side</b>				
Pin 03	Pin 45				
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new catalyst monitor sensor. REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.				

## PINPOINT TEST N : LEFT-HAND CATALYST MONITOR SENSOR HEATER CONTROL CIRCUIT LOW/HIGH RESISTANCE

**CAUTION:** Under no circumstances must the sensor wiring be cut to facilitate removal, should this prove necessary.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>N1: CHECK THE POWER SUPPLY TO THE CATALYST MONITOR SENSOR HEATER</b>					
	<ol style="list-style-type: none"><li>1 Disconnect the catalyst monitor sensor electrical connector, PI13.</li><li>2 Key on, engine off.</li><li>3 Make sure the O2S heater relay is energized.</li><li>4 Measure the voltage between:<table><tr><td><b>Catalyst monitor sensor connector PI13, harness side</b></td><td><b>Battery</b></td></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table></li></ol>	<b>Catalyst monitor sensor connector PI13, harness side</b>	<b>Battery</b>	Pin 01	Negative terminal
<b>Catalyst monitor sensor connector PI13, harness side</b>	<b>Battery</b>				
Pin 01	Negative terminal				
	Is the voltage greater than 10 volts? <b>Yes</b> <a href="#">GO to N2.</a> <b>No</b> REPAIR the power supply circuit to the catalyst monitor sensor heater. This circuit includes the heater relay and fuse 35 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>N2: CHECK THE CATALYST MONITOR SENSOR HEATER CONTROL CIRCUIT FOR HIGH RESISTANCE</b>					
	<ol style="list-style-type: none"><li>1 Key off.</li><li>2 Disconnect the ECM electrical connector, PI300.</li><li>3 Measure the resistance between:<table><tr><td><b>Catalyst monitor sensor connector PI13, harness side</b></td><td><b>ECM connector PI300, harness side</b></td></tr><tr><td>Pin 02</td><td>Pin 89</td></tr></table></li></ol>	<b>Catalyst monitor sensor connector PI13, harness side</b>	<b>ECM connector PI300, harness side</b>	Pin 02	Pin 89
<b>Catalyst monitor sensor connector PI13, harness side</b>	<b>ECM connector PI300, harness side</b>				
Pin 02	Pin 89				

Is the resistance greater than 5 ohms?	<p><b>Yes</b></p> <p>REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new catalyst monitor sensor.  REFER to: <a href="#">Catalyst Monitor Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.</p>
--	--

## PINPOINT TEST O : ENGINE OIL TEMPERATURE (EOT) SENSOR RANGE/PERFORMANCE, HIGH/LOW VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>O1: CHECK THE EOT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Key off.				
<b>2</b>	Disconnect the EOT sensor electrical connector, PI24.				
<b>3</b>	Disconnect the ECM electrical connector, PI300.				
<b>4</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 23</td></tr> </table>	EOT sensor connector PI24, harness side	ECM connector PI300, harness side	Pin 02	Pin 23
EOT sensor connector PI24, harness side	ECM connector PI300, harness side				
Pin 02	Pin 23				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>No</b>	<a href="#">GO to O2.</a>				
<b>O2: CHECK THE EOT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Key on, engine off.				
<b>2</b>	Measure the voltage between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	EOT sensor connector PI24, harness side	Battery	Pin 02	Negative terminal
EOT sensor connector PI24, harness side	Battery				
Pin 02	Negative terminal				
	Is the voltage greater than 3 volts?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>No</b>	<a href="#">GO to O3.</a>				
<b>O3: CHECK THE EOT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	EOT sensor connector PI24, harness side	Battery	Pin 02	Negative terminal
EOT sensor connector PI24, harness side	Battery				
Pin 02	Negative terminal				
	Is the resistance less than 10,000 ohms?				
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>No</b>	<a href="#">GO to O4.</a>				
<b>O4: CHECK THE EOT SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Measure the resistance between:				
	<table> <tr> <th>EOT sensor connector PI24, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 10</td></tr> </table>	EOT sensor connector PI24, harness side	ECM connector PI300, harness side	Pin 01	Pin 10
EOT sensor connector PI24, harness side	ECM connector PI300, harness side				
Pin 01	Pin 10				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. This circuit includes harness splice, PIS49. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>No</b>	<p>INSTALL a new EOT sensor.  REFER to: <a href="#">Oil Temperature Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).  CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.</p>				

## PINPOINT TEST P : RIGHT-HAND KNOCK SENSOR (KS) HIGH/LOW VOLTAGE

• **NOTE:** Before commencing this test, make sure that the sensor is making a good electrical contact with the cylinder block. See "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>P1: CHECK KS SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
<b>1</b>	Disconnect the KS electrical connector, PI19.				
<b>2</b>	Disconnect the ECM electrical connector, PI300.				
<b>3</b>	Measure the resistance between:				
	<table> <tr> <th>KS connector PI19, harness side</th><th>ECM connector PI300, harness side</th></tr> <tr> <td>Pin 04</td><td>Pin 42</td></tr> </table>	KS connector PI19, harness side	ECM connector PI300, harness side	Pin 04	Pin 42
KS connector PI19, harness side	ECM connector PI300, harness side				
Pin 04	Pin 42				
	Is the resistance greater than 5 ohms?				
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
<b>No</b>	<a href="#">GO to P2.</a>				
<b>P2: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
<b>1</b>	Key on, engine off.				
<b>2</b>	Measure the voltage between:				
	<table> <tr> <th>KS connector PI19, harness side</th><th>Battery</th></tr> <tr> <td>Pin 04</td><td>Negative terminal</td></tr> </table>	KS connector PI19, harness side	Battery	Pin 04	Negative terminal
KS connector PI19, harness side	Battery				
Pin 04	Negative terminal				

	Is the voltage greater than 3 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to P3.</a>

### P3: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b>	Key off.
	<b>2</b>	Measure the resistance between:
KS connector PI 19, harness side		Battery
Pin 04		Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to P4.</a>

### P4: CHECK KS GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b>	Measure the resistance between:
		KS connector PI 19, harness side
Pin 03		ECM connector PI 300, harness side
Pin 03		Pin 19

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> INSTALL a new KS. REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

### PINPOINT TEST Q : LEFT-HAND KNOCK SENSOR (KS) HIGH/LOW VOLTAGE

• **NOTE:** Before commencing this test, make sure that the sensor is making a good electrical contact with the cylinder block. See "possible causes".

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### Q1: CHECK KS SENSING CIRCUIT FOR HIGH RESISTANCE

	<b>1</b>	Disconnect the KS electrical connector, PI19.
	<b>2</b>	Disconnect the ECM electrical connector, PI300.
	<b>3</b>	Measure the resistance between:
		KS connector PI 19, harness side
Pin 02		ECM connector PI 300, harness side
Pin 02		Pin 43

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to Q2.</a>

#### Q2: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

	<b>1</b>	Key on, engine off.
	<b>2</b>	Measure the voltage between:
KS connector PI 19, harness side		Battery
Pin 02		Negative terminal

	Is the voltage greater than 3 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to Q3.</a>

#### Q3: CHECK KS SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b>	Key off.
	<b>2</b>	Measure the resistance between:
KS connector PI 19, harness side		Battery
Pin 02		Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to Q4.</a>

#### Q4: CHECK KS GROUND CIRCUIT FOR HIGH RESISTANCE

	<b>1</b>	Measure the resistance between:
		KS connector PI 19, harness side
Pin 01		ECM connector PI 300, harness side
Pin 01		Pin 20

	Is the resistance greater than 5 ohms?
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> INSTALL a new KS. REFER to: <a href="#">Knock Sensor (KS) LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

### PINPOINT TEST R : CRANKSHAFT POSITION (CKP) SENSOR CIRCUIT RANGE/PERFORMANCE, CIRCUIT MALFUNCTION

• NOTE: The clearance between the CKP sensor and the reluctor ring should be checked at 90° intervals. The air gap between the two should be no greater than 4.5 mm at any point.

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
R1: CHECK THE CKP SENSOR FOR CORRECT INSTALLATION		
	<div><div>1</div>Key off.</div> <div><div>2</div>Check the CKP sensor for correct installation.</div>	
	Is the CKP sensor correctly installed? <b>Yes</b> <a href="#">GO to R2.</a> <b>No</b> INSTALL the CKP sensor correctly. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.	
R2: CHECK THE CKP SENSOR FOR DEBRIS		
	<div><div>1</div>Remove the CKP sensor and inspect for debris.</div>	
	Is the CKP sensor free of debris? <b>Yes</b> <a href="#">GO to R3.</a> <b>No</b> CLEAN the sensor and wheel. INSTALL the sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). Reconnect the sensor. CLEAR the DTCs. TEST the system for normal operation.	
R3: CHECK THE CKP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE		
	<div><div>1</div>Disconnect the ECM electrical connector, PI300.</div> <div><div>2</div>Disconnect the CKP sensor electrical connector, PI21.</div> <div><div>3</div>Measure the resistance between:</div>	
	CKP sensor connector PI21, harness side	ECM connector PI300, harness side
	Pin 02	Pin 30
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to R4.</a>	
R4: CHECK THE CKP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER		
	<div><div>1</div>Key on, engine off.</div> <div><div>2</div>Measure the voltage between:</div>	
	CKP sensor connector PI21, harness side	Battery
	Pin 02	Negative terminal
	Is the voltage greater than 3 volts? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to R5.</a>	
R5: CHECK THE CKP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	<div><div>1</div>Key off.</div> <div><div>2</div>Measure the resistance between:</div>	
	CKP sensor connector PI21, harness side	Battery
	Pin 02	Negative terminal
	Is the resistance less than 10,000 ohms? <b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to R6.</a>	
R6: CHECK THE CKP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE		
	<div><div>1</div>Measure the resistance between:</div>	
	CKP sensor connector PI21, harness side	ECM connector PI300, harness side
	Pin 01	Pin 06
	Is the resistance greater than 5 ohms? <b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new CKP sensor. REFER to: <a href="#">Crankshaft Position (CKP) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.	

## PINPOINT TEST S : RIGHT-HAND CAMSHAFT POSITION (CMP) SENSOR CIRCUIT RANGE/PERFORMANCE, CIRCUIT MALFUNCTION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>S1: CHECK THE CMP SENSOR FOR CORRECT INSTALLATION</b>	
	<b>1</b> Key off.
	<b>2</b> Check the CMP sensor for correct installation.
	Is the CMP sensor correctly installed? <b>Yes</b> <a href="#">GO to S2.</a> <b>No</b> INSTALL the CMP sensor correctly. REFER to: <a href="#">Camshaft Position (CMP) Sensor RH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L

Petrol, Removal and Installation).  
CLEAR the DTCs. TEST the system for normal operation.

**S2: CHECK THE CMP SENSOR FOR FOREIGN DEBRIS**

- 1** Remove the CMP sensor and inspect for foreign debris.

Is the CMP sensor free of foreign debris?

**Yes**

[GO to S3.](#)

**No**

CLEAN the sensor and wheel. INSTALL the sensor.

REFER to: [Camshaft Position \(CMP\) Sensor RH](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

CLEAR the DTCs. TEST the system for normal operation.

**S3: CHECK THE CMP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE**

- 1** Disconnect the CMP sensor electrical connector, PI23.

- 2** Disconnect the ECM electrical connector, PI300.

- 3** Measure the resistance between:

CMP sensor connector PI23, harness side	ECM connector PI300, harness side
Pin 02	Pin 34

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to S4.](#)

**S4: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER**

- 1** Key on, engine off.

- 2** Measure the voltage between:

CMP sensor connector PI23, harness side	Battery
Pin 02	Negative terminal

Is the voltage greater than 3 volts?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to S5.](#)

**S5: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND**

- 1** Key off.

- 2** Measure the resistance between:

CMP sensor connector PI23, harness side	Battery
Pin 02	Negative terminal

Is the resistance less than 10,000 ohms?

**Yes**

REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

[GO to S6.](#)

**S6: CHECK THE CMP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE**

- 1** Measure the resistance between:

CMP sensor connector PI23, harness side	ECM connector PI300, harness side
Pin 01	Pin 07

Is the resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

**No**

INSTALL a new CMP sensor.

REFER to: [Camshaft Position \(CMP\) Sensor RH](#) (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).

CLEAR the DTC. TEST the system for normal operation.

**PINPOINT TEST T : LEFT-HAND CAMSHAFT POSITION (CMP) SENSOR CIRCUIT MALFUNCTION RANGE/PERFORMANCE**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
<b>T1: CHECK THE CMP SENSOR FOR CORRECT INSTALLATION</b>	
	<b>1</b> Check the CMP sensor for correct installation.
	Is the CMP sensor correctly installed?
	<b>Yes</b>
	<a href="#">GO to T2.</a>
	<b>No</b>
	INSTALL the CMP sensor correctly.
	REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
	CLEAR the DTCs. TEST the system for normal operation.
<b>T2: CHECK THE CMP SENSOR FOR FOREIGN DEBRIS</b>	
	<b>1</b> Remove the CMP sensor and inspect for foreign debris.
	Is the CMP sensor free of foreign debris?
	<b>Yes</b>
	<a href="#">GO to T3.</a>
	<b>No</b>
	CLEAN the sensor and wheel. INSTALL the sensor.
	REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).
	CLEAR the DTCs. TEST the system for normal operation.
<b>T3: CHECK THE CMP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>	
	<b>1</b> Key off.

<b>2</b>	Disconnect the CMP sensor electrical connector, PI22.	
<b>3</b>	Disconnect the ECM electrical connector, PI300.	
<b>4</b>	Measure the resistance between:	
	<b>CMP sensor connector PI22, harness side</b>	<b>ECM connector PI 300, harness side</b>
	Pin 01	Pin 33

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b> <a href="#">GO to T4.</a>

#### T4: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

<b>1</b>	Key on, engine off.	
<b>2</b>	Measure the voltage between:	
	<b>CMP sensor connector PI22, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

Is the voltage greater than 3 volts?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b> <a href="#">GO to T5.</a>

#### T5: CHECK THE CMP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

<b>1</b>	Key off.	
<b>2</b>	Measure the resistance between:	
	<b>CMP sensor connector PI22, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?
<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b> <a href="#">GO to T6.</a>

#### T6: CHECK THE CMP SENSOR GROUND CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:	
	<b>CMP sensor connector PI22, harness side</b>	<b>ECM connector PI 300, harness side</b>
	Pin 02	Pin 08

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b> INSTALL a new CMP sensor. REFER to: <a href="#">Camshaft Position (CMP) Sensor LH</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

### PINPOINT TEST U : RADIATOR COOLING FAN MODULE DRIVE CIRCUIT MALFUNCTION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### U1: CHECK THE RADIATOR FAN MODULE PERMANENT SUPPLY

<b>1</b>	Disconnect the fan module electrical connector, FH109.	
<b>2</b>	Measure the voltage between:	
	<b>Fan module connector FH109, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

Is the voltage less than 10 volts?
<b>Yes</b> REPAIR the circuit between the cooling fan module and battery. This circuit includes fuse 13 of the front power distribution box (80A) and the mega fuses. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b> Reconnect electrical connector, GCU04. <a href="#">GO to U2.</a>

#### U2: CHECK THE RADIATOR FAN MODULE GROUND

<b>1</b>	Measure the resistance between:	
	<b>Fan module connector FH109, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal

Is the resistance greater than 5 ohms?
<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b> <a href="#">GO to U3.</a>

#### U3: CHECK THE RADIATOR FAN MODULE EMS SWITCHED SUPPLY

<b>1</b>	Disconnect the fan module electrical connector, FH108.	
<b>2</b>	Key on, engine off.	
<b>3</b>	Make sure the EMS relay is engaged.	
<b>4</b>	Measure the voltage between:	
	<b>Fan module connector FH108, harness side</b>	<b>Battery</b>
	Pin 02	Negative terminal

Is the voltage less than 10 volts?
<b>Yes</b> REPAIR the circuit between the cooling fan module and battery. This circuit includes fuse 38 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>

[GO to U4.](#)

**U4: CHECK THE ECM TO RADIATOR FAN MODULE CIRCUIT FOR HIGH RESISTANCE**

	<b>1</b> Key off.	
	<b>2</b> Disconnect the ECM electrical connector, FH300.	
	<b>3</b> Measure the resistance between:	
	<b>Fan module connector FH108, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 01	Pin 49
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	<b>No</b> <a href="#">GO to U5.</a>	

**U5: CHECK THE ECM TO RADIATOR FAN MODULE CIRCUIT FOR SHORT CIRCUIT TO POWER**

	<b>1</b> Key on, engine off.	
	<b>2</b> Measure the voltage between:	
	<b>Fan module connector FH108, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
	Is the voltage greater than 3 volts?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	<b>No</b> <a href="#">GO to U6.</a>	

**U6: CHECK THE ECM TO RADIATOR FAN MODULE CIRCUIT FOR SHORT CIRCUIT TO GROUND**

	<b>1</b> Key off.	
	<b>2</b> Measure the resistance between:	
	<b>Fan module connector FH108, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	<b>No</b> INSTALL a new radiator cooling fan module. CLEAR the DTC. TEST the system for normal operation.	

**PINPOINT TEST V : BATTERY POWER SUPPLY VOLTAGE MALFUNCTION**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
V1: CHECK THE BATTERY POWER SUPPLY TO THE ECM		
	1 Disconnect the ECM electrical connector, FH300.	
	2 Measure the voltage between:	
	ECM connector PI300, harness side	Battery
	Pin 54	Negative terminal
	Is the voltage greater than 10 volts?	
	Yes Recheck the DTCs.	
	No REPAIR the battery power supply circuit. This circuit includes fuse 33 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	

**PINPOINT TEST W : ACCELERATOR PEDAL POSITION (APP) SENSOR SENSING CIRCUIT 1 HIGH/LOW VOLTAGE**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
W1: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR HIGH RESISTANCE		
	1 Key off.	
	2 Disconnect the ECM electrical connector, FH300.	
	3 Disconnect the APP sensor electrical connector, CA88.	
	4 Measure the resistance between:	
	ECM connector FH300, harness side	APP sensor connector CA88, harness side
	Pin 24	Pin 04
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to W2.	
W2: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR SHORT CIRCUIT TO POWER		
	1 Key on, engine off.	
	2 Measure the voltage between:	
	APP sensor connector CA88, harness side	Battery
	Pin 04	Negative terminal
	Is the voltage greater than 3 volts?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to W3.	
W3: CHECK THE APP SENSOR SENSING CIRCUIT 1 FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	APP sensor connector CA88, harness side	Battery
	Pin 04	Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to W4.</a>

**W4: CHECK THE APP SENSOR GROUND CIRCUIT 1 FOR HIGH RESISTANCE**

1	Measure the resistance between:	
	APP sensor connector CA88, harness side	ECM connector FH300, harness side
	Pin 06	Pin 08
Is the resistance greater than 5 ohms?		
Yes		
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.		
No		
<a href="#">GO to W5.</a>		

**W5: CHECK THE APP SENSOR SUPPLY VOLTAGE AT THE SENSOR**

<b>1</b>	Reconnect the ECM electrical connector, FH300.	
<b>2</b>	Key on, engine off.	
<b>3</b>	Measure the voltage between:	
	<b>APP sensor connector CA88, harness side</b>	<b>Battery</b>
	Pin 05	Negative terminal
Is the voltage less than 4 volts?		
<b>Yes</b>		
<a href="#">GO to W6.</a>		
<b>No</b>		
INSTALL a new APP sensor.		
REFER to: <a href="#">Accelerator Pedal</a> (310-02 Acceleration Control, Removal and Installation).		
CLEAR the DTC. TEST the system for normal operation.		

**W6: CHECK THE APP SENSOR SUPPLY VOLTAGE CIRCUIT FOR HIGH RESISTANCE**

1	Key off.	
2	Disconnect the ECM electrical connector, FH300.	
3	Measure the resistance between:	
	APP sensor connector CA88, harness side	ECM connector FH300, harness side
	Pin 05	Pin 19
Is the resistance greater than 5 ohms?		
Yes		
REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.		
No		
Check the ECM power supplies (recheck DTCs).		

**PINPOINT TEST X : ACCELERATOR PEDAL POSITION (APP) SENSOR SENSING CIRCUIT 2 HIGH/LOW VOLTAGE**

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

**X1: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR HIGH RESISTANCE**

1	Key off.	
2	Disconnect the APP sensor electrical connector, CA88.	
3	Disconnect the ECM electrical connector, FH300.	
4	Measure the resistance between:	
	APP sensor connector CA88, harness side	ECM connector FH300, harness side
	Pin 01	Pin 38
	Is the resistance greater than 5 ohms?	
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
No	GO to X2.	

**X2: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR SHORT CIRCUIT TO POWER**

	<b>1</b> Key on, engine off.			
	<b>2</b> Measure the voltage between:			
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 01
APP sensor connector CA88, harness side	Battery			
Pin 01	Negative terminal			
	Is the voltage greater than 3 volts?			
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.			
	<b>No</b> <a href="#">GO to X3.</a>			

**X3: CHECK THE APP SENSOR SENSING CIRCUIT 2 FOR SHORT CIRCUIT TO GROUND**

	<b>1</b> Key off.			
	<b>2</b> Measure the resistance between:			
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 01</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 01
APP sensor connector CA88, harness side	Battery			
Pin 01	Negative terminal			
	Is the resistance less than 10,000 ohms?			
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.			
	<b>No</b> <a href="#">GO to X4.</a>			

**X4: CHECK THE APP SENSOR GROUND CIRCUIT 2 FOR HIGH RESISTANCE**

1	Measure the resistance between:	
	APP sensor connector CA88, harness side	ECM connector FH300, harness side
Pin 03		Pin 07

Is the resistance greater than 5 ohms?	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to X5.</a>

#### X5: CHECK THE APP SENSOR SUPPLY VOLTAGE AT THE SENSOR

<b>1</b>	Reconnect the ECM electrical connector, FH300.				
<b>2</b>	Key on, engine off.				
<b>3</b>	Measure the voltage between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	APP sensor connector CA88, harness side	Battery	Pin 02	Negative terminal
APP sensor connector CA88, harness side	Battery				
Pin 02	Negative terminal				

Is the voltage less than 4 volts?
Yes <a href="#">GO to X6.</a>
No INSTALL a new APP sensor. REFER to: <a href="#">Accelerator Pedal</a> (310-02 Acceleration Control, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

#### X6: CHECK THE APP SENSOR SUPPLY VOLTAGE CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Key off.				
<b>2</b>	Disconnect the ECM electrical connector, FH300.				
<b>3</b>	Measure the resistance between:				
	<table> <tr> <th>APP sensor connector CA88, harness side</th><th>ECM connector FH300, harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 32</td></tr> </table>	APP sensor connector CA88, harness side	ECM connector FH300, harness side	Pin 02	Pin 32
APP sensor connector CA88, harness side	ECM connector FH300, harness side				
Pin 02	Pin 32				

Is the resistance greater than 5 ohms?
Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No Check the ECM power supplies (recheck DTCs).

#### PINPOINT TEST Y : THROTTLE MOTOR CONTROL CIRCUIT MALFUNCTION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### Y1: CHECK THE THROTTLE MOTOR NEGATIVE TO ECM CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Key off.				
<b>2</b>	Disconnect the throttle motor electrical connector, (vehicles with supercharger) PI26 or (vehicles without supercharger) PI303.				
<b>3</b>	Disconnect the ECM electrical connector, PI300.				
<b>4</b>	Measure the resistance between:				
<b>Vehicles with supercharger</b>					
	<table> <tr> <th>Throttle motor connector PI26, harness side</th><th>ECM connector PI 300,harness side</th></tr> <tr> <td>Pin 02</td><td>Pin 74</td></tr> </table>	Throttle motor connector PI26, harness side	ECM connector PI 300,harness side	Pin 02	Pin 74
Throttle motor connector PI26, harness side	ECM connector PI 300,harness side				
Pin 02	Pin 74				
<b>Vehicles without supercharger</b>					
	<table> <tr> <th>Throttle motor connector PI303, harness side</th><th>ECM connector PI300,harness side</th></tr> <tr> <td>Pin 06</td><td>Pin 74</td></tr> </table>	Throttle motor connector PI303, harness side	ECM connector PI300,harness side	Pin 06	Pin 74
Throttle motor connector PI303, harness side	ECM connector PI300,harness side				
Pin 06	Pin 74				

Is the resistance greater than 5 ohms?
Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No <a href="#">GO to Y2.</a>

#### Y2: CHECK THE THROTTLE MOTOR POWER SUPPLY CIRCUIT FOR HIGH RESISTANCE

<b>1</b>	Measure the resistance between:				
<b>Vehicles with supercharger</b>					
	<table> <tr> <th>Throttle motor connector PI26, harness side</th><th>ECM connector PI 300,harness side</th></tr> <tr> <td>Pin 01</td><td>Pin 75</td></tr> </table>	Throttle motor connector PI26, harness side	ECM connector PI 300,harness side	Pin 01	Pin 75
Throttle motor connector PI26, harness side	ECM connector PI 300,harness side				
Pin 01	Pin 75				
<b>Vehicles without supercharger</b>					
	<table> <tr> <th>Throttle motor connector PI303, harness side</th><th>ECM connector PI300,harness side</th></tr> <tr> <td>Pin 05</td><td>Pin 75</td></tr> </table>	Throttle motor connector PI303, harness side	ECM connector PI300,harness side	Pin 05	Pin 75
Throttle motor connector PI303, harness side	ECM connector PI300,harness side				
Pin 05	Pin 75				

Is the resistance greater than 5 ohms?
Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No INSTALL a new throttle body. REFER to: <a href="#">Throttle Body - Vehicles With: Supercharger, VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation) / <a href="#">Throttle Body - Vehicles Without: Supercharger, VIN Range: N52048-&gt;N99999</a> (303-04B Fuel Charging and Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.

#### PINPOINT TEST Z : SENSOR SUPPLY VOLTAGE MALFUNCTION, HIGH/LOW VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

#### Z1: CHECK THE SUPPLY VOLTAGE AT THE MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR

<b>1</b>	Disconnect the MAP sensor electrical connector, (vehicles with supercharger) PI301 or (vehicles without supercharger) PI29.		
<b>2</b>	Key on, engine off.		
<b>3</b>	Measure the voltage between:		
<b>Vehicles with supercharger</b>			
	<table> <tr> <th>MAP sensor connector PI301, harness side</th><th>Battery</th></tr> </table>	MAP sensor connector PI301, harness side	Battery
MAP sensor connector PI301, harness side	Battery		

	<b>MAP sensor connector PI301, harness side</b>	<b>Battery</b>
Pin 02		Negative terminal
<b>Vehicles without supercharger</b>		
	<b>MAP sensor connector PI29, harness side</b>	<b>Battery</b>
Pin 02		Negative terminal

Is the voltage less than 5 volts?	
<b>Yes</b>	REPAIR the circuit between the MAP sensor and the ECM. This circuit includes splice PIS84 on V8 vehicles with supercharger only. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to Z2.</a>

## Z2: CHECK THE SUPPLY VOLTAGE AT THE FUEL RAIL PRESSURE (FRP) SENSOR

1	Disconnect the FRP sensor electrical connector, PI28.	
2	Measure the voltage between:	
	FRP sensor connector PI28, harness side	Battery
Pin 01		Negative terminal

Is the voltage less than 5 volts?	
<b>Yes</b>	REPAIR the circuit between the FRP sensor and battery. This circuit includes splice PIS84 on V8 vehicles with supercharger only. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	CHECK for DTCs indicating a sensor fault. Refer to the DTC index.

## PINPOINT TEST AA : SENSOR GROUND CIRCUITS OPEN CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### AA1: CHECK THE SENSOR GROUND AT THE MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR

1

Key off.

2

Disconnect the ECM electrical connector, PI300.

3

Disconnect the MAP sensor electrical connector, (vehicles with supercharger) PI301 or (vehicles without supercharger) PI29.

4

Measure the resistance between:

Vehicles with supercharger

MAP sensor electrical connector PI 301, harness side	ECM connector PI300, harness side
Pin 04	Pin 12

Vehicles without supercharger

MAP sensor electrical connector PI29, harness side	ECM connector PI300, harness side
Pin 04	Pin 10

Is the resistance greater than 5 ohms?	
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to AA2.</a>

### AA2: CHECK THE SENSOR GROUND AT THE ENGINE COOLANT TEMPERATURE (ECT) SENSOR

1	Disconnect the ECT sensor electrical connector, PI25.	
2	Measure the resistance between:	
	ECT sensor electrical connector PI25, harness side	ECM connector PI300, harness side
Pin 01		Pin 12

Is the resistance greater than 5 ohms?	
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to AA3.</a>

### AA3: CHECK THE SENSOR GROUND AT THE MASS AIR FLOW (MAF) SENSOR

<b>1</b>	Disconnect the MAF sensor electrical connector, PI14.	
<b>2</b>	Measure the resistance between:	
	<b>MAF sensor electrical connector PI14, harness side</b>	<b>ECM connector PI300, harness side</b>
Pin 02		Pin 18

Is the resistance greater than 5 ohms?	
<b>Yes</b>	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	CHECK for DTCs indicating a sensor fault. Refer to the warranty policy and procedures manual if an ECM is suspect.

## PINPOINT TEST AB : STARTER RELAY SIGNAL

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
-----------------	-------------------------

### AB1: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Key off.	
2	Remove the starter relay.	
3	Measure the resistance between:	
	<b>Starter relay base</b>	<b>Battery</b>
Pin 02		Negative terminal

Is the resistance less than 10,000 ohms?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.
<b>No</b>	<a href="#">GO to AB2.</a>

<b>AB2: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR SHORT CIRCUIT TO POWER</b>		
	<b>1</b> Measure the resistance between:	
	<b>Starter relay base</b>	<b>Battery</b>
	Pin 02	Positive terminal
	Is the resistance less than 10,000 ohms?	
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> <a href="#">GO to AB3.</a>	
<b>AB3: CHECK THE STARTER RELAY TO ECM CIRCUIT FOR HIGH RESISTANCE</b>		
	<b>1</b> Disconnect the ECM electrical connector, EC300.	
	<b>2</b> Measure the resistance between:	
	<b>Starter relay base</b>	<b>ECM connector EC300, harness side</b>
	Pin 02	Pin 51
	Is the resistance greater than 5 ohms?	
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC and test the system for normal operation.	
	<b>No</b> INSTALL a new starter relay. Clear the DTC and test the system for normal operation. If the DTC resets, refer to the warranty policy and procedures manual if an ECM is suspect.	

PINPOINT TEST AC : RIGHT-HAND VARIABLE CAMSHAFT TIMING (VCT) OIL CONTROL SOLENOID MALFUNCTION, CIRCUIT MALFUNCTION		
• NOTE: Check fuses, etc before beginning pinpoint tests, see visual inspection.		
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
AC1: CHECK ECM TO VCT SOLENOID CIRCUIT FOR HIGH RESISTANCE		
	1 Key off.	
	2 Disconnect the VCT electrical connector, PI16.	
	3 Disconnect the ECM electrical connector, PI300.	
	4 Measure the resistance between:	
	VCT connector PI16, harness side	ECM connector PI300, harness side
	Pin 01	Pin 86
	Is the resistance greater than 5 ohms?	
	Yes REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to AC2.	
AC2: CHECK ECM TO VCT SOLENOID CIRCUIT FOR SHORT CIRCUIT TO POWER		
	1 Key on, engine off.	
	2 Measure the voltage between:	
	VCT connector PI16, harness side	Battery
	Pin 01	Negative terminal
	Is the voltage greater than 3 volts?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to AC3.	
AC3: CHECK ECM TO VCT SOLENOID CIRCUIT FOR SHORT CIRCUIT TO GROUND		
	1 Key off.	
	2 Measure the resistance between:	
	VCT connector PI16, harness side	Battery
	Pin 01	Negative terminal
	Is the resistance less than 10,000 ohms?	
	Yes REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No GO to AC4.	
AC4: CHECK VCT SOLENOID POWER		
	1 Key on, engine off.	
	2 Measure the voltage between:	
	VCT connector PI16, harness side	Battery
	Pin 02	Negative terminal
	Is the voltage less than 10 volts?	
	Yes REPAIR the circuit between the VCT solenoid and battery. This circuit includes fuse 39 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
	No INSTALL a new VCT solenoid. REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.	

PINPOINT TEST AD : LEFT-HAND VARIABLE CAMSHAFT TIMING (VCT) OIL CONTROL SOLENOID MALFUNCTION, CIRCUIT MALFUNCTION	
TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
AD1: CHECK ECM TO VCT SOLENOID CIRCUIT FOR HIGH RESISTANCE	
1	Key off.

Is the resistance greater than 5 ohms?	
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AD2.</a>

1	Key on, engine off.	
2	Measure the voltage between:	
	<b>VCT connector PI17, harness side</b>	<b>Battery</b>
Pin 01		Negative terminal

Is the voltage greater than 3 volts?	
Yes	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AD3.</a>

1	Key on, engine off.	
2	Measure the resistance between:	
	<b>VCT connector PI17, harness side</b>	<b>Battery</b>
	Pin 01	Negative terminal

Is the resistance less than 10,000 ohms?	
<b>Yes</b>	REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
<b>No</b>	<a href="#">GO to AD4.</a>

1	Key on, engine off.	
2	Measure the voltage between:	
	<b>VCT connector PI17, harness side</b>	<b>Battery</b>
Pin 02		Negative terminal

Is the voltage less than 10 volts?	<p><b>Yes</b></p> <p>REPAIR the circuit between the VCT solenoid and battery. This circuit includes fuse 39 of the front power distribution box and the EMS control relay. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.</p> <p><b>No</b></p> <p>INSTALL a new VCT solenoid.</p> <p>REFER to: <a href="#">Variable Camshaft Timing (VCT) Oil Control Solenoid</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation).</p> <p>CLEAR the DTC. TEST the system for normal operation.</p>
------------------------------------	--

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
--------------------	-------------------------

<b>1</b>	Key off.
<b>2</b>	Remove the EMS relay.
<b>3</b>	Measure the voltage between:
<b>Relay base</b>	<b>Battery</b>
Pin 01	Negative terminal
Pin 03	

Are both voltages greater than 10 volts?	
Yes	<a href="#">GO to AE2.</a>
No	REPAIR the circuit between the relay base and battery. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

1	Disconnect the ECM electrical connector, FH300.	
2	Measure the resistance between:	
	<b>Relay base</b>	<b>ECM connector FH300, harness side</b>
	Pin 02	Pin 16

Is the resistance greater than 5 ohms?	
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
No	<a href="#">GO to AE3.</a>

1 Measure the resistance between:	
<b>Relay base</b>	<b>ECM connector FH300, harness side</b>
Pin 05	Pin 04
	Pin 06

Is either resistance greater than 5 ohms?

**Yes**

REPAIR the high resistance circuit. These circuits include fuses 18 and 39 of the front power distribution box. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.

No  
INSTALL a new EMS relay. CLEAR the DTC. TEST the system for normal operation.

## PINPOINT TEST AF : MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR SENSING CIRCUIT MALFUNCTION, HIGH/LOW VOLTAGE

• NOTE: For sensor ground tests, GO to Pinpoint Test [AA](#).

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>AF1: CHECK THE MAP SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
	<b>1</b> Key off.				
	<b>2</b> Disconnect the MAP sensor electrical connector, (vehicles with supercharger) PI301 or (vehicles without supercharger) PI29.				
	<b>3</b> Disconnect the ECM electrical connector, PI300.				
	<b>4</b> Measure the resistance between:				
<b>Vehicles with supercharger</b>					
<table><tr><th>MAP sensor electrical connector PI301, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 01</td><td>Pin 38</td></tr></table>		MAP sensor electrical connector PI301, harness side	ECM connector PI300, harness side	Pin 01	Pin 38
MAP sensor electrical connector PI301, harness side	ECM connector PI300, harness side				
Pin 01	Pin 38				
<b>Vehicles without supercharger</b>					
<table><tr><th>MAP sensor electrical connector PI29, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 01</td><td>Pin 69</td></tr></table>		MAP sensor electrical connector PI29, harness side	ECM connector PI300, harness side	Pin 01	Pin 69
MAP sensor electrical connector PI29, harness side	ECM connector PI300, harness side				
Pin 01	Pin 69				
	Is the resistance greater than 5 ohms?				
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
	<b>No</b> <a href="#">GO to AF2.</a>				
<b>AF2: CHECK THE MAP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	<b>1</b> Key on, engine off.				
	<b>2</b> Measure the voltage between:				
<b>Vehicles with supercharger</b>					
<table><tr><th>MAP sensor electrical connector PI301, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		MAP sensor electrical connector PI301, harness side	Battery	Pin 01	Negative terminal
MAP sensor electrical connector PI301, harness side	Battery				
Pin 01	Negative terminal				
<b>Vehicles without supercharger</b>					
<table><tr><th>MAP sensor electrical connector PI29, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		MAP sensor electrical connector PI29, harness side	Battery	Pin 01	Negative terminal
MAP sensor electrical connector PI29, harness side	Battery				
Pin 01	Negative terminal				
	Is the voltage greater than 3 volts?				
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
	<b>No</b> <a href="#">GO to AF3.</a>				
<b>AF3: CHECK THE MAP SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND</b>					
	<b>1</b> Measure the resistance between:				
<b>Vehicles with supercharger</b>					
<table><tr><th>MAP sensor electrical connector PI301, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		MAP sensor electrical connector PI301, harness side	Battery	Pin 01	Negative terminal
MAP sensor electrical connector PI301, harness side	Battery				
Pin 01	Negative terminal				
<b>Vehicles without supercharger</b>					
<table><tr><th>MAP sensor electrical connector PI29, harness side</th><th>Battery</th></tr><tr><td>Pin 01</td><td>Negative terminal</td></tr></table>		MAP sensor electrical connector PI29, harness side	Battery	Pin 01	Negative terminal
MAP sensor electrical connector PI29, harness side	Battery				
Pin 01	Negative terminal				
	Is the resistance less than 10,000 ohms?				
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
	<b>No</b> INSTALL a new MAP sensor. REFER to: <a href="#">Manifold Absolute Pressure (MAP) Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation. If the DTC is repeated, refer to the warranty policy and procedures manual if an ECM is suspect.				

## PINPOINT TEST AG : ENGINE FUEL TEMPERATURE (EFT) SENSOR RANGE/PERFORMANCE, LOW/HIGH VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
<b>AG1: CHECK THE EFT SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE</b>					
	<b>1</b> Key off.				
	<b>2</b> Disconnect the EFT sensor electrical connector, PI27.				
	<b>3</b> Disconnect the ECM electrical connector, PI300.				
	<b>4</b> Measure the resistance between:				
<table><tr><th>EFT sensor connector PI27, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 02</td><td>Pin 46</td></tr></table>		EFT sensor connector PI27, harness side	ECM connector PI300, harness side	Pin 02	Pin 46
EFT sensor connector PI27, harness side	ECM connector PI300, harness side				
Pin 02	Pin 46				
	Is the resistance greater than 5 ohms?				
	<b>Yes</b> REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
	<b>No</b> <a href="#">GO to AG2.</a>				
<b>AG2: CHECK THE EFT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER</b>					
	<b>1</b> Key on, engine off.				
	<b>2</b> Measure the voltage between:				
<table><tr><th>EFT sensor connector PI27, harness side</th><th>Battery</th></tr><tr><td>Pin 02</td><td>Negative terminal</td></tr></table>		EFT sensor connector PI27, harness side	Battery	Pin 02	Negative terminal
EFT sensor connector PI27, harness side	Battery				
Pin 02	Negative terminal				

	Is the voltage greater than 3 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> <a href="#">GO to AG3.</a>

### AG3: CHECK THE EFT SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Measure the resistance between:			
	<table border="1"> <tr> <th>EFT sensor connector PI27, harness side</th><th>Battery</th></tr> <tr> <td>Pin 02</td><td>Negative terminal</td></tr> </table>	EFT sensor connector PI27, harness side	Battery	Pin 02
EFT sensor connector PI27, harness side	Battery			
Pin 02	Negative terminal			
	Is the resistance less than 10,000 ohms?			
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new EFT sensor. REFER to: <a href="#">Fuel Temperature Sensor</a> (303-14B Electronic Engine Controls - V8 4.2L Petrol/V8 S/C 4.2L Petrol, Removal and Installation). CLEAR the DTC. TEST the system for normal operation.			

### PINPOINT TEST AH : AIR CONDITIONING (A/C) PRESSURE SENSOR CIRCUIT LOW/HIGH VOLTAGE

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS	
AH1: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR HIGH RESISTANCE	<b>1</b> Key off.	
	<b>2</b> Disconnect the A/C pressure sensor electrical connector, FH110.	
	<b>3</b> Disconnect the ECM electrical connector, FH300.	
	<b>4</b> Measure the resistance between:	
	<b>A/C pressure sensor connector FH110, harness side</b>	<b>ECM connector FH300, harness side</b>
	Pin 03	Pin 12
	Is the resistance greater than 5 ohms?	
Yes	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.	
No	GO to AH2.	

### AH2: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER

1	Key on, engine off.	
2	Measure the voltage between:	
	A/C pressure sensor connector FH110, harness side	Battery
Pin 03		Negative terminal
Is the voltage greater than 3 volts?		
Yes		
REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.		
No		
<a href="#">GO to AH3.</a>		

### AH3: CHECK THE A/C PRESSURE SENSOR SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

	<b>1</b> Measure the resistance between:			
	<table border="1"> <tr> <th>A/C pressure sensor connector FH110, harness side</th><th>Battery</th></tr> <tr> <td>Pin 03</td><td>Negative terminal</td></tr> </table>	A/C pressure sensor connector FH110, harness side	Battery	Pin 03
A/C pressure sensor connector FH110, harness side	Battery			
Pin 03	Negative terminal			
	Is the resistance less than 10,000 ohms?			
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation. <b>No</b> INSTALL a new A/C pressure sensor. REFER to: <a href="#">Pressure Cutoff Switch - V8 4.2L Petrol/V8 S/C 4.2L Petrol/2.5L NA V6 - AJV6/3.0L NA V6 - AJ27</a> (412-03 Air Conditioning, Removal and Installation).			

### PINPOINT TEST AI : MANIFOLD ABSOLUTE PRESSURE SENSOR/TEMPERATURE (MAPT) SENSOR, INTAKE AIR TEMPERATURE (IAT2) SENSING CIRCUIT

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS				
AI1: CHECK THE MAPT SENSOR IAT2 SENSING CIRCUIT FOR HIGH RESISTANCE					
	1	key off.			
	2	Disconnect the MAPT sensor electrical connector, PI29.			
	3	Disconnect the ECM electrical connector, PI300.			
	4	Measure the resistance between:			
	<table><tr><th>MAPT sensor connector PI29, harness side</th><th>ECM connector PI300, harness side</th></tr><tr><td>Pin 03</td><td>Pin 39</td></tr></table>	MAPT sensor connector PI29, harness side	ECM connector PI300, harness side	Pin 03	Pin 39
MAPT sensor connector PI29, harness side	ECM connector PI300, harness side				
Pin 03	Pin 39				
	Is the resistance greater than 5 ohms?				
	Yes				
	REPAIR the high resistance circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.				
	No				
	GO to AI2.				
AI2: CHECK THE MAPT SENSOR IAT2 SENSING CIRCUIT FOR SHORT CIRCUIT TO POWER					
	1	Key on, engine off.			
	2	Measure the voltage between:			
	<table><tr><th>MAPT sensor connector PI29, harness side</th><th>Battery</th></tr><tr><td>Pin 03</td><td>Negative terminal</td></tr></table>	MAPT sensor connector PI29, harness side	Battery	Pin 03	Negative terminal
	MAPT sensor connector PI29, harness side	Battery			
Pin 03	Negative terminal				

	Is the voltage greater than 3 volts?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> <a href="#">GO to AI3.</a>

#### AI3: CHECK THE MAPT SENSOR IAT2 SENSING CIRCUIT FOR SHORT CIRCUIT TO GROUND

1	Measure the resistance between:	
	<b>MAPT sensor connector PI29, harness side</b>	<b>Battery</b>
	Pin 03	Negative terminal

	Is the resistance less than 10,000 ohms?
	<b>Yes</b> REPAIR the short circuit. For additional information, refer to the wiring diagrams. CLEAR the DTC. TEST the system for normal operation.
	<b>No</b> INSTALL a new MAPT sensor. CLEAR the DTC. TEST the system for normal operation.

#### PINPOINT TEST AJ : AIR CLEANER SOLENOID VALVE DRIVE CIRCUIT MALFUNCTION

TEST CONDITIONS	DETAILS/RESULTS/ACTIONS
