
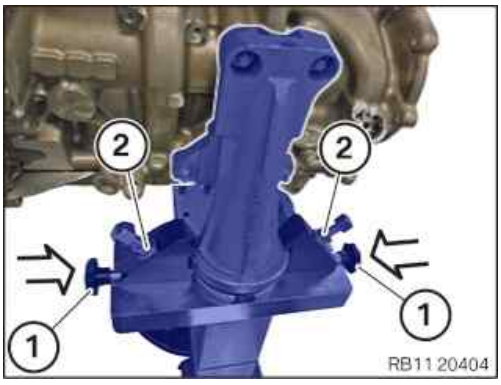
- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .



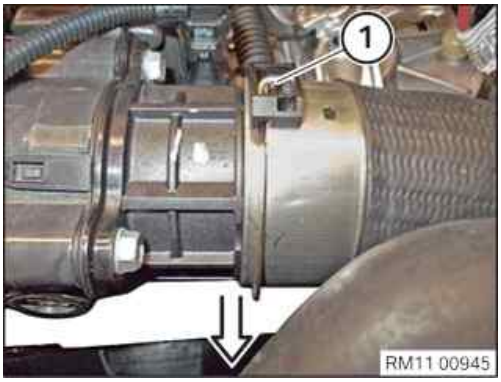
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

TECHNICAL INFORMATION

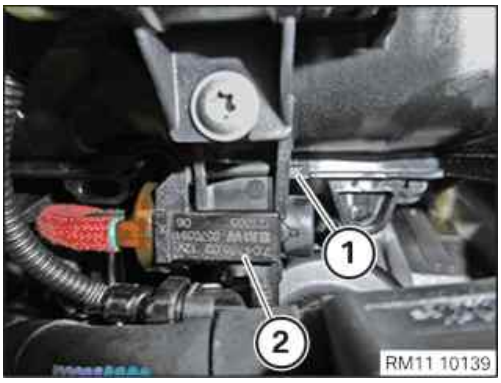
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

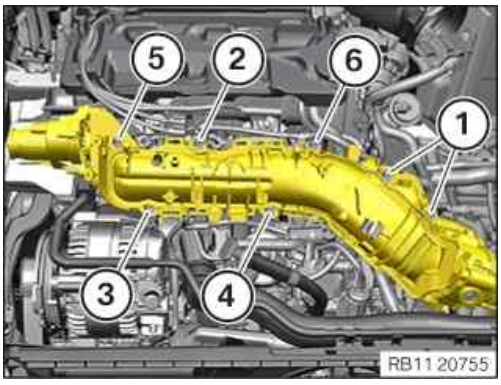


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

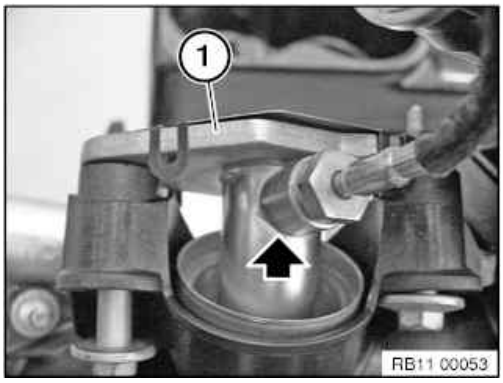
cardiagn.com



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

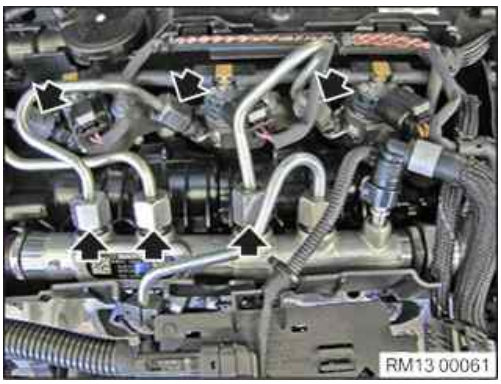
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

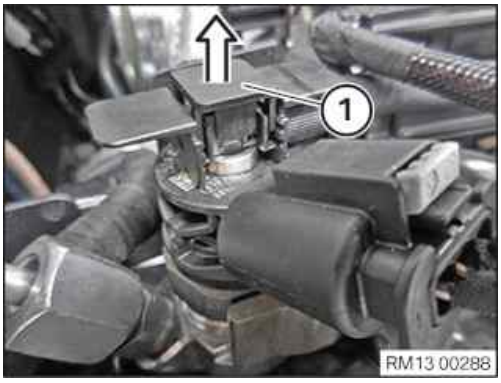
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

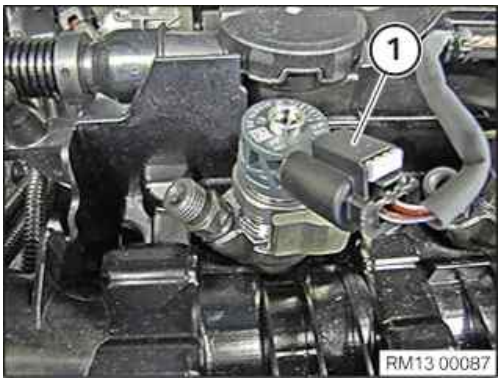
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

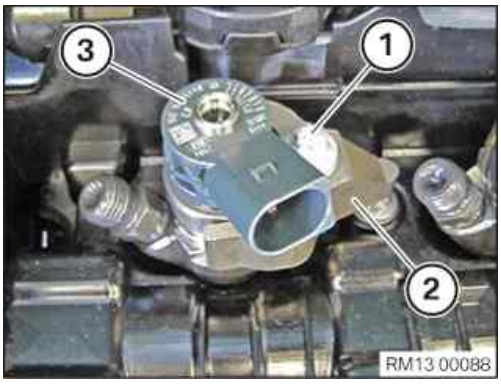
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

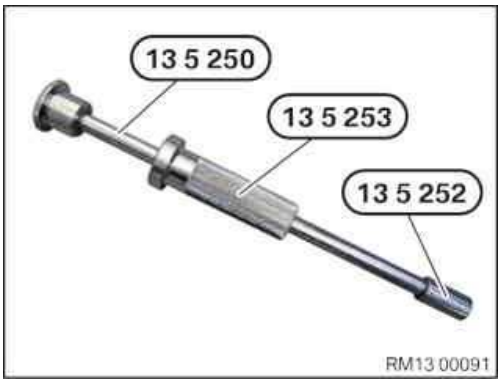
▶ **Loosen stuck injectors**

RISK OF DAMAGE

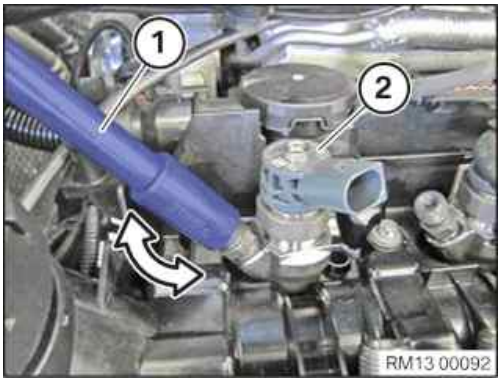
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

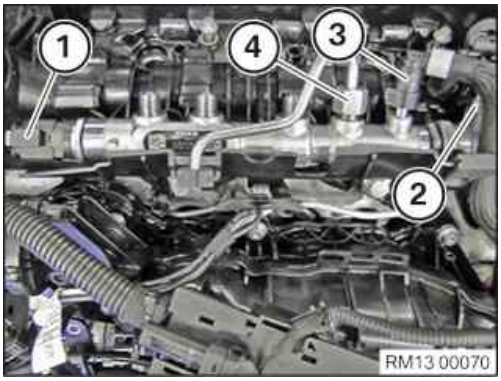
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

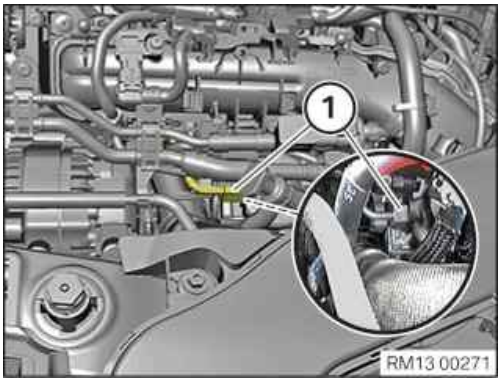
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

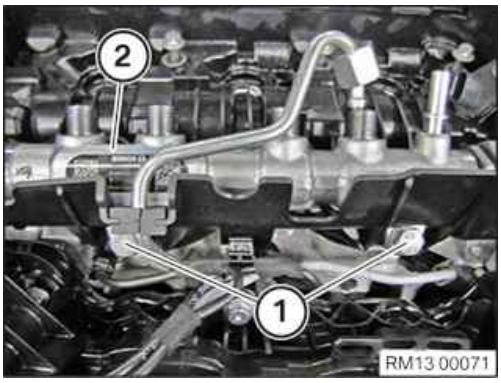


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

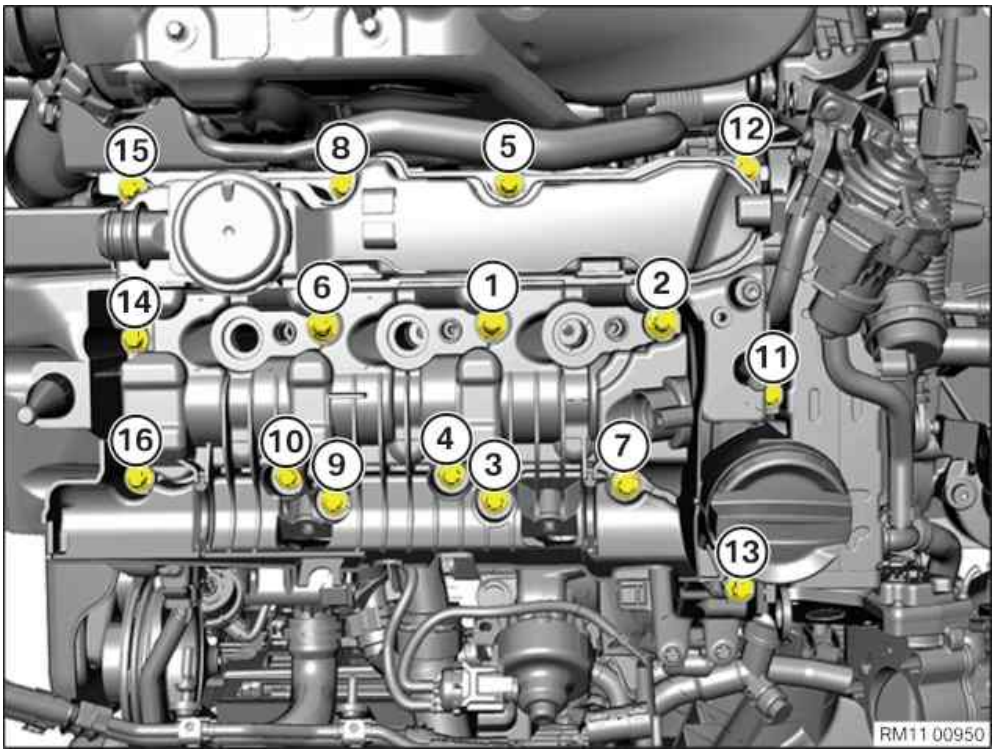
cardiagn.com



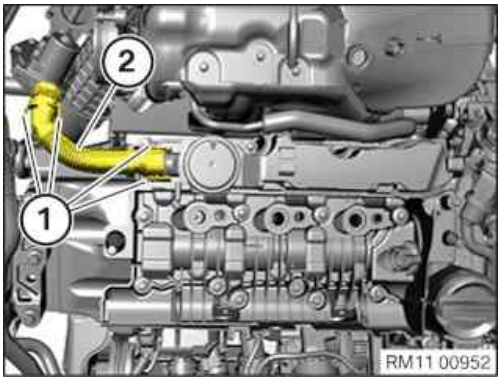
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover

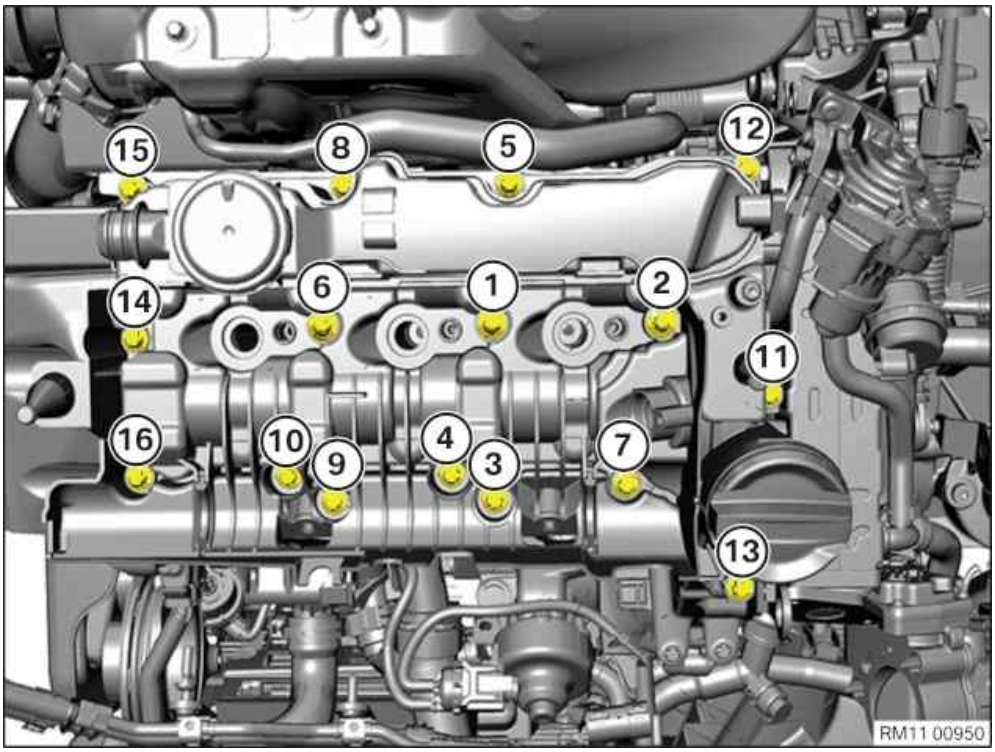


1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

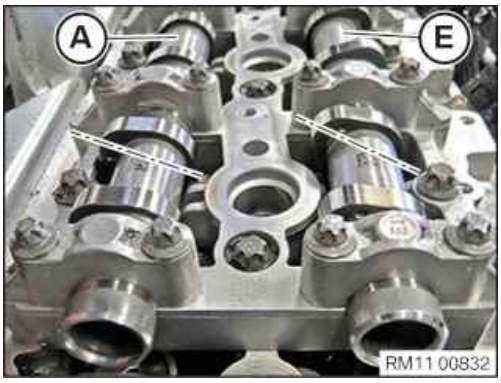
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

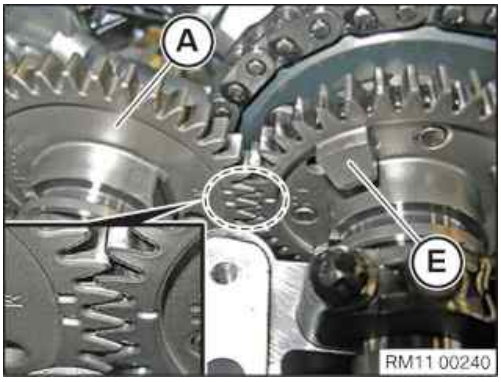
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

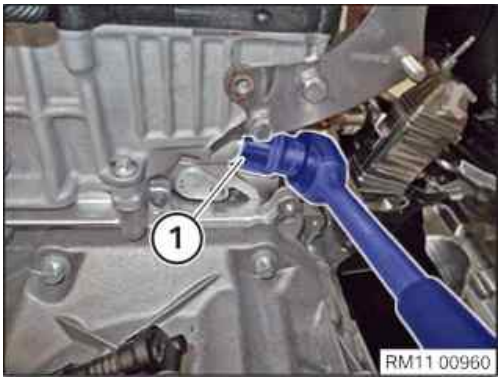
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

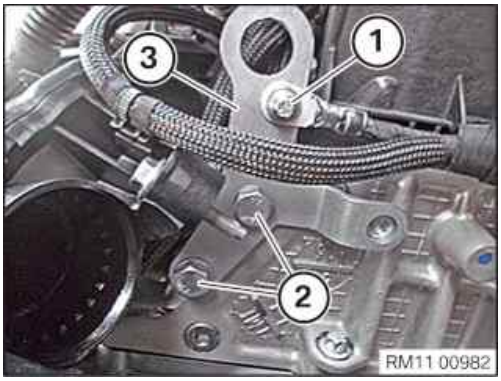


TECHNICAL INFORMATION

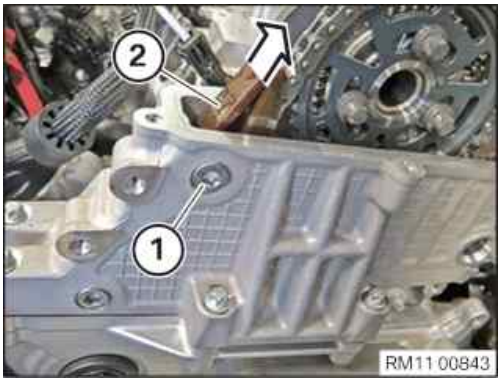
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

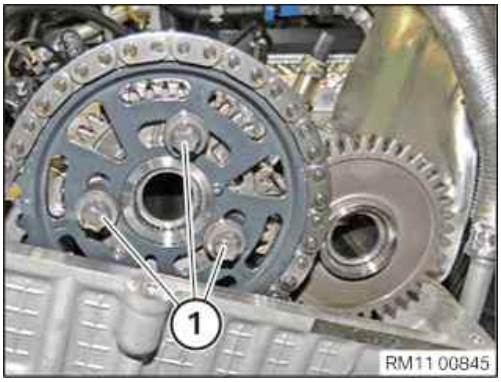


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

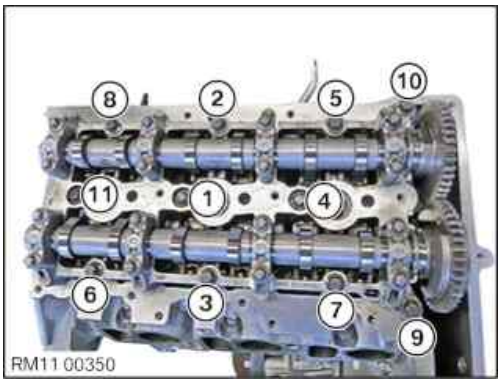
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

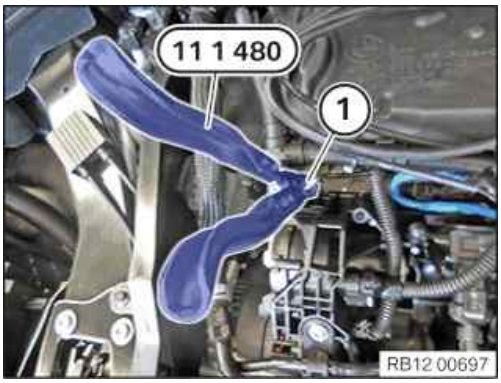
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

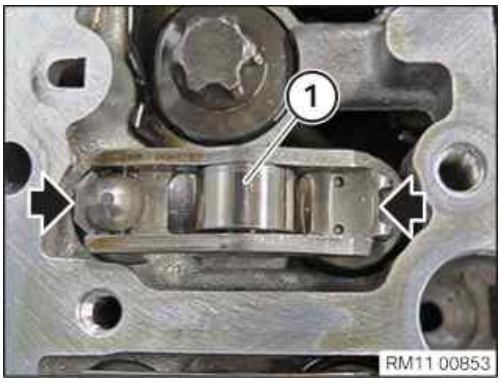


- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com



- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

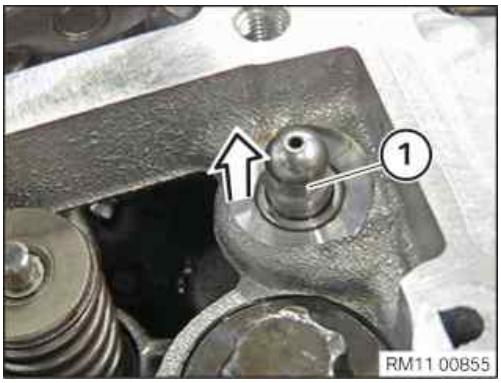
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

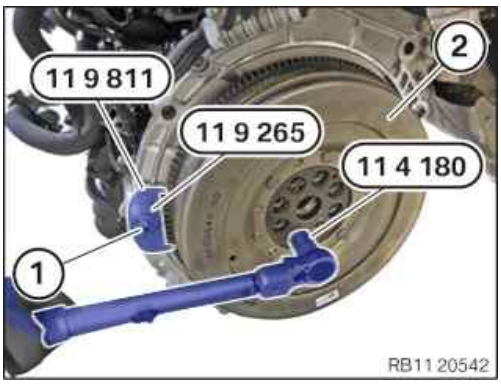
24 – Remove flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

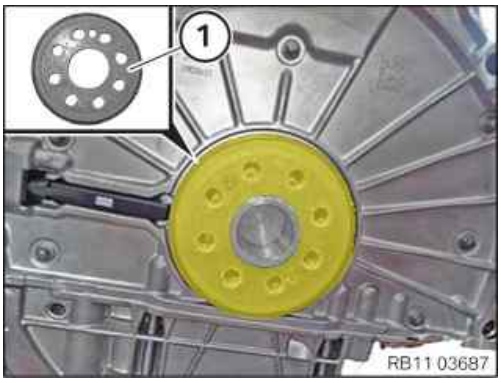
- Remove and install heavy components with the aid of another person/other persons.



- Position special tool **0 496 171 (11 9 811)** with a **standard** 5 mm thick washer between the crankcase and the flywheel.

  The 5 mm thick washer must be mounted between the crankcase and special tool **0 496 171 (11 9 811)** .
- Secure the special tool **0 494 793 (11 9 265)** with the transmission bolt (1).
- Protect the flywheel (2) from falling.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Guide out the flywheel (2) and remove.

cardiagn.com



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

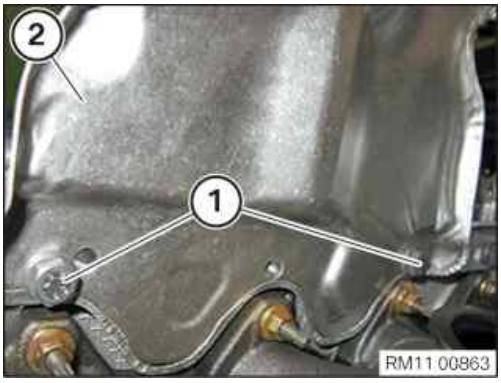
- Remove increment wheel (1) from the crankshaft and set it aside properly.

MAIN WORK

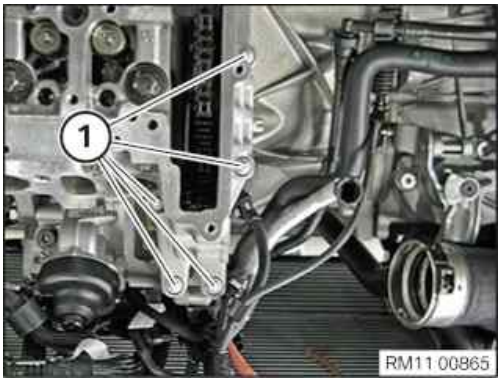
25 – Remove rear timing case cover

Prerequisite

Transmission is removed.



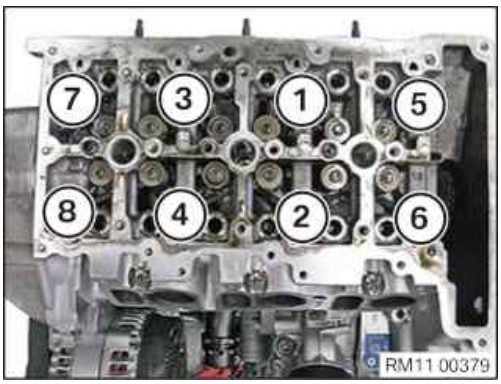
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



TECHNICAL INFORMATION

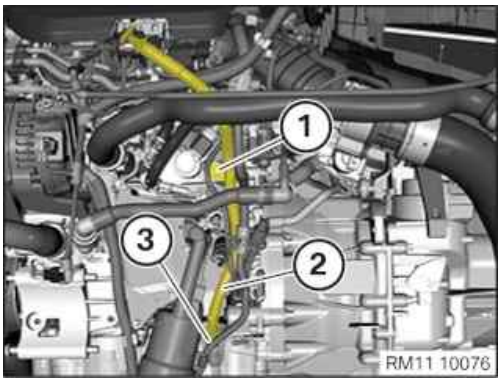
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

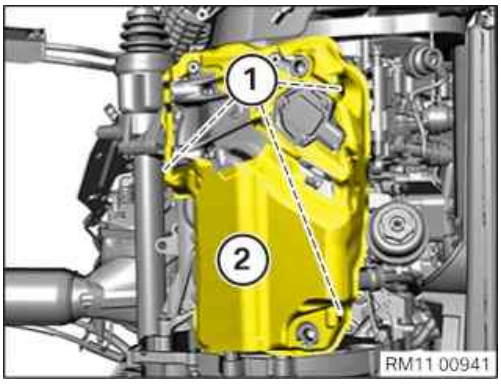


- Loosen the cylinder head bolts in the sequence from (8) to (1).

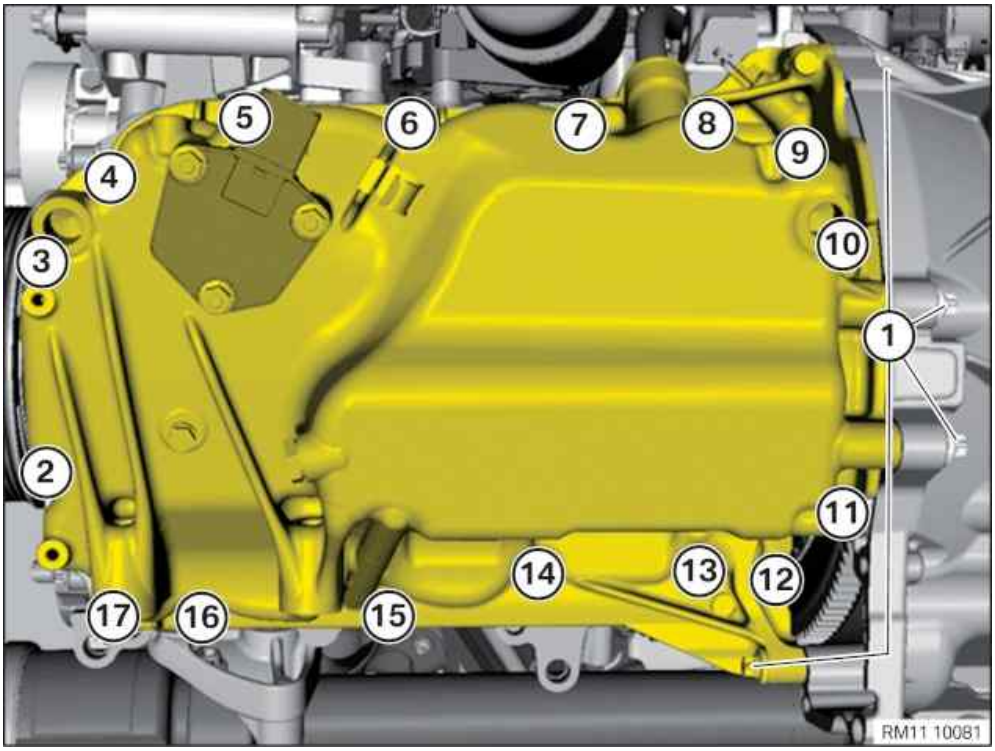
cardiagn.com



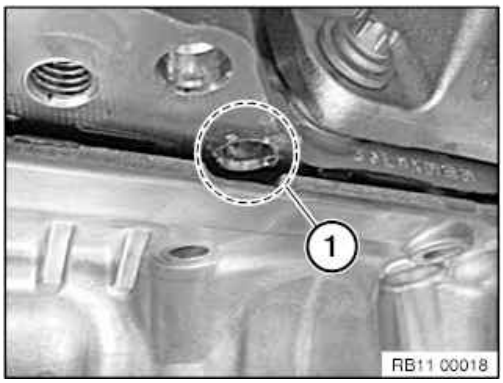
- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- If required, remove sealing ring (3) from oil sump.



- Remove the expanding rivet (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

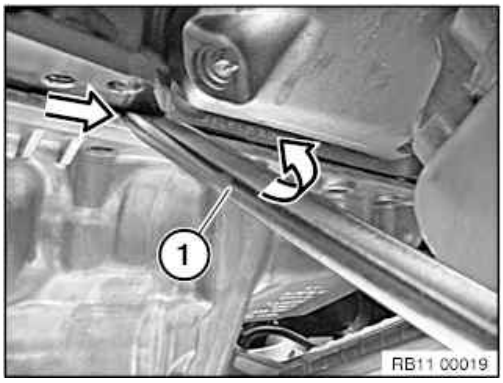


- Tighten the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



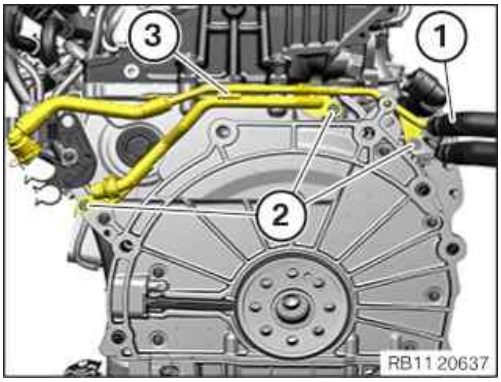
- Release oil sump only in area (1).

cardiagn.com

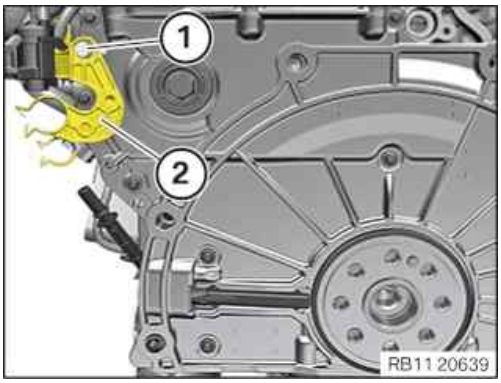


- Release the oil sump using a suitable mounting lever (1) carefully at the position intended for that.
- If required, secure the oil sump against falling.

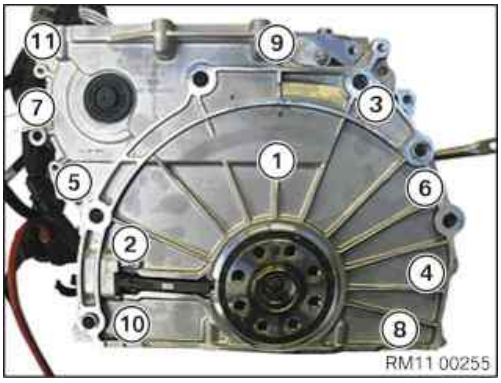
► **If installed: Remove coolant line of the SCR metering module**



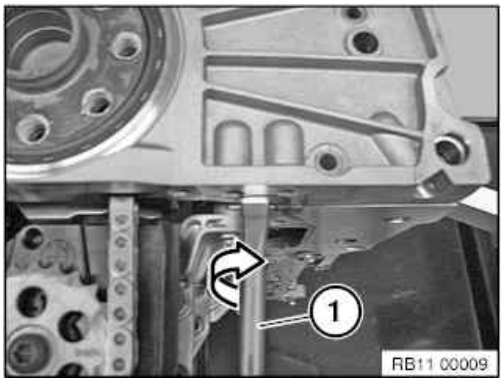
- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



- Loosen screw (1).
- Guide out and remove holder (2).

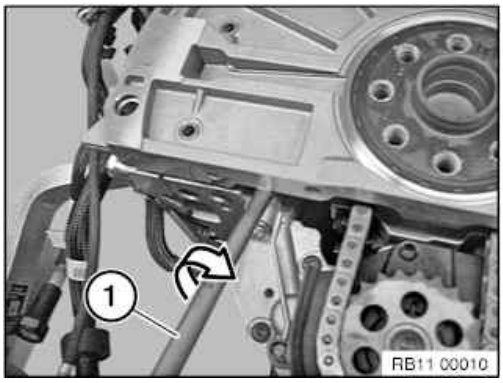


- Loosen screws in the order (11) to (1).



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com

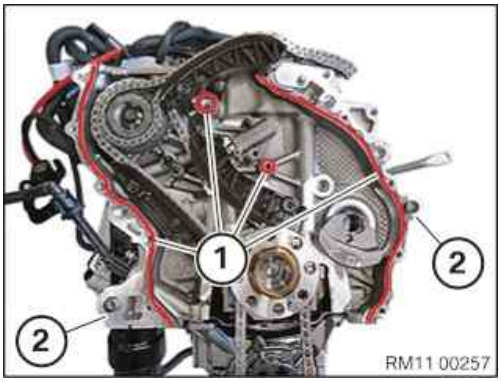


- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

26 – Install the rear timing case cover

Prerequisite

Transmission is removed.



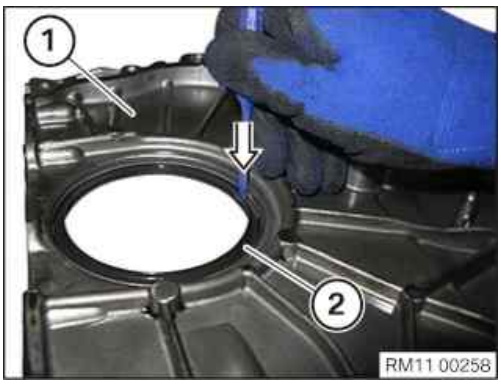
RISK OF DAMAGE

Damage to the surface.

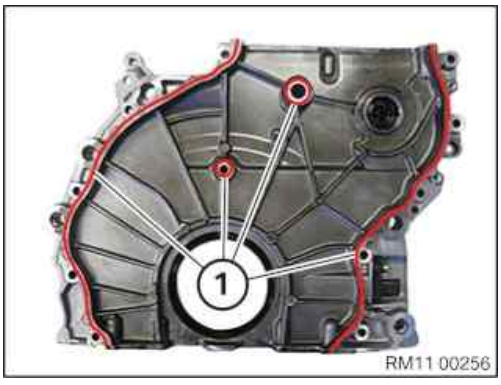
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

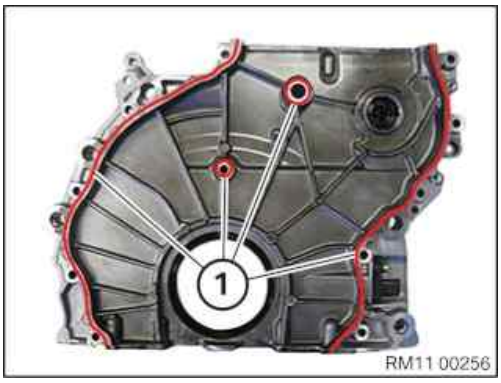


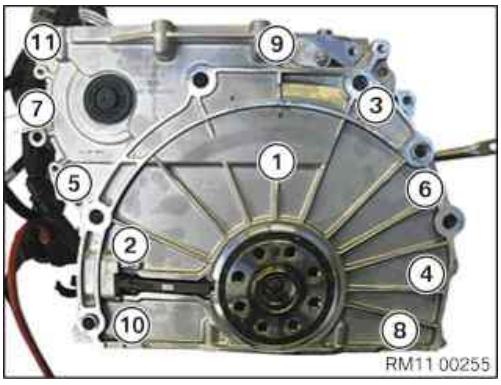
- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

cardiagn.com





TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.

- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

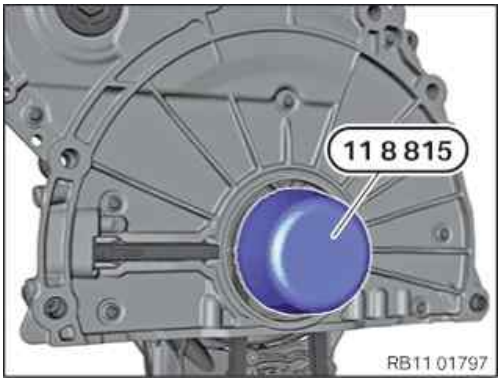
cardiagn.com

RISK OF DAMAGE

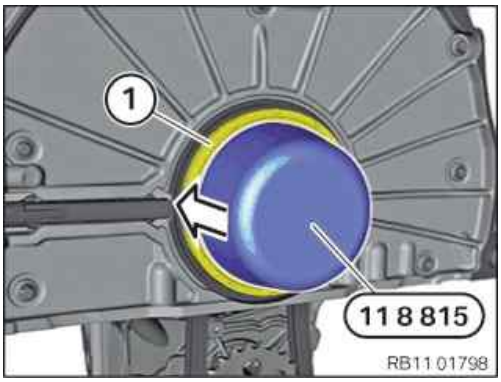
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.



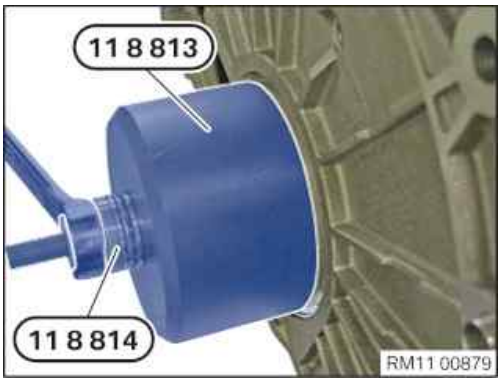
- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

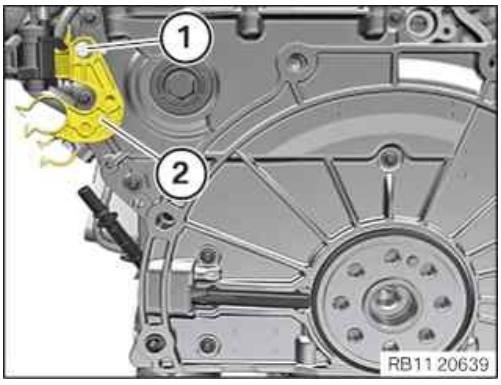
- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.

cardiagn.com

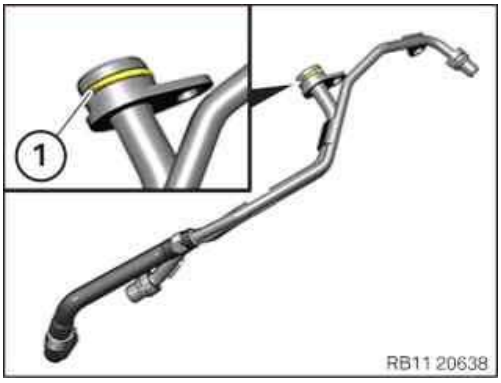


- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



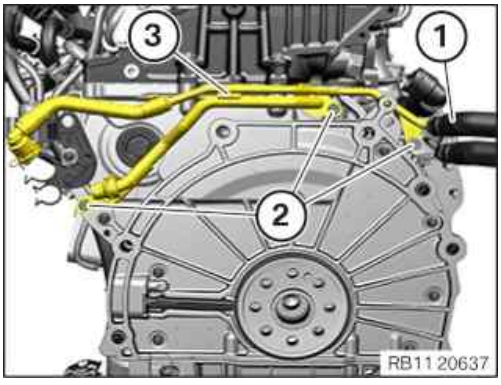
- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**



- Renew the O-ring 1.

  Parts: O-ring



- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**

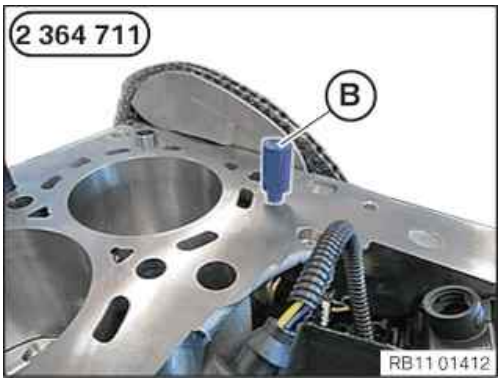
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

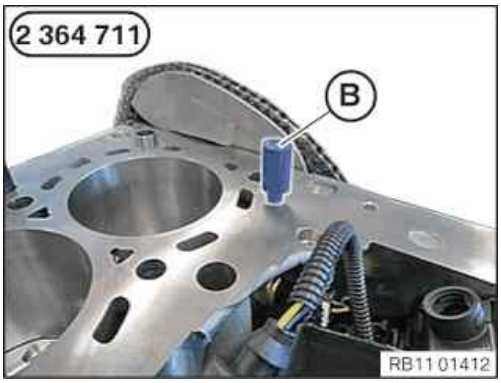
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

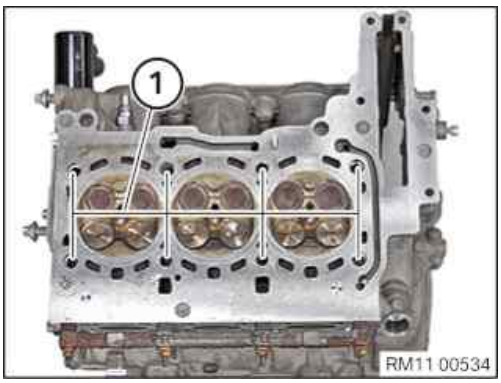
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

▸ Renewing the cylinder head gasket



RISK OF DAMAGE

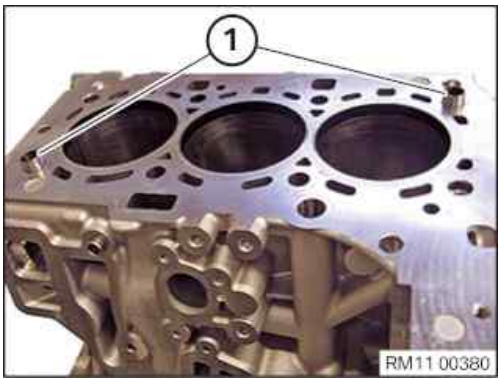
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

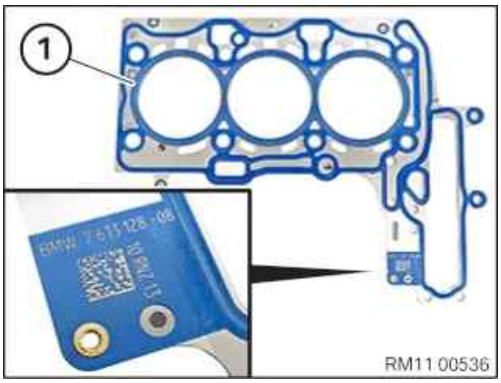
- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

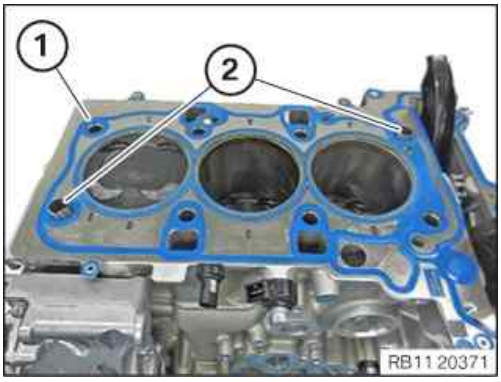
cardiagn.com



- Check the fitting sleeves (1) for secure fit and damage.

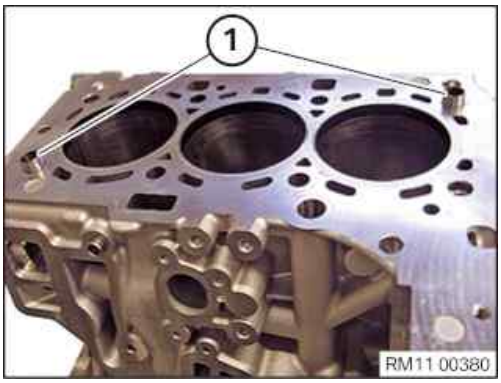


- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

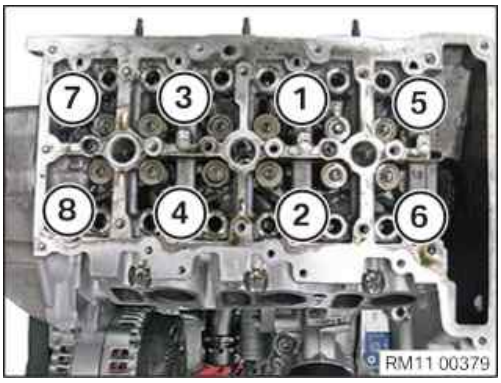
  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.

cardiagn.com



- Fit new cylinder head screws.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

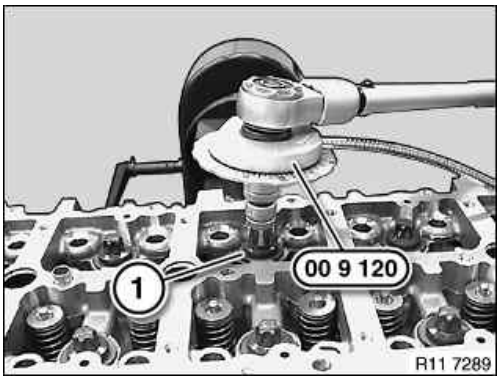
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

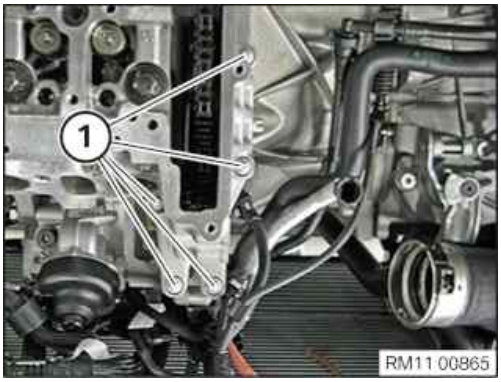
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolts in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

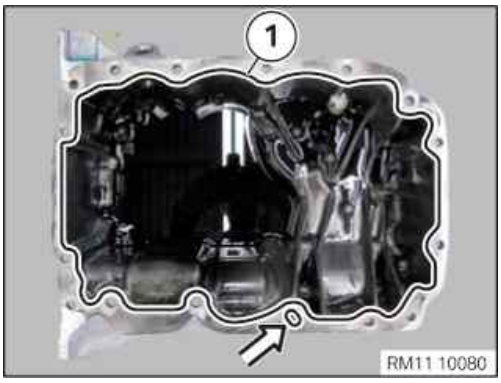
  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com



TECHNICAL INFORMATION

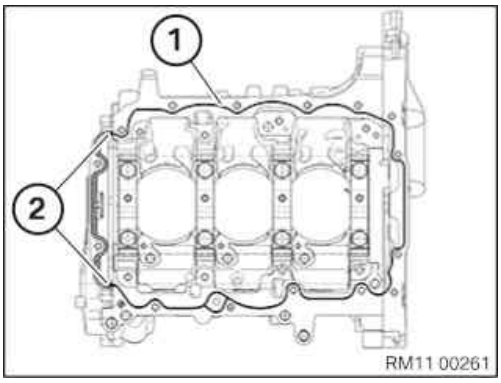
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

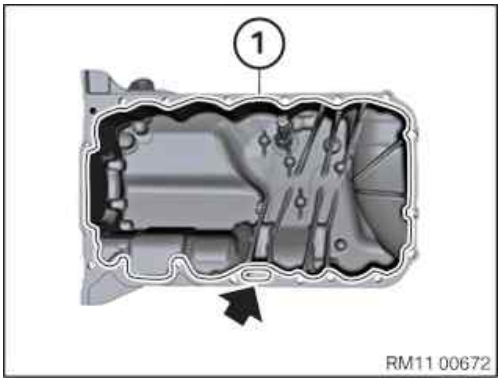
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



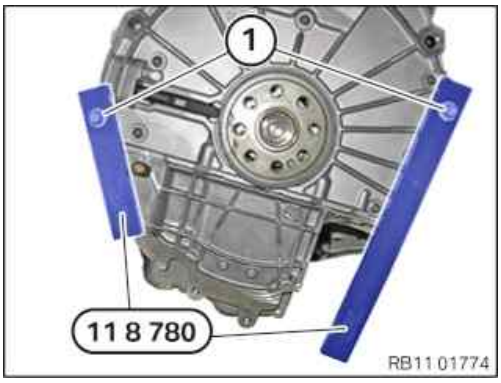
TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

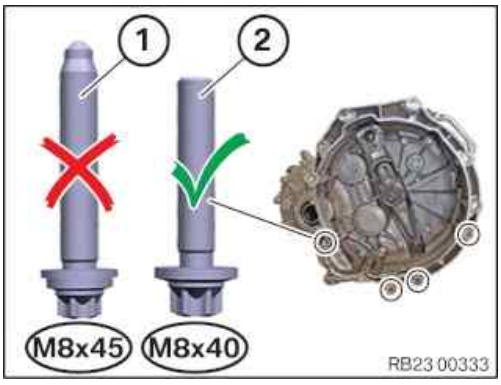
cardiagn.com



TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

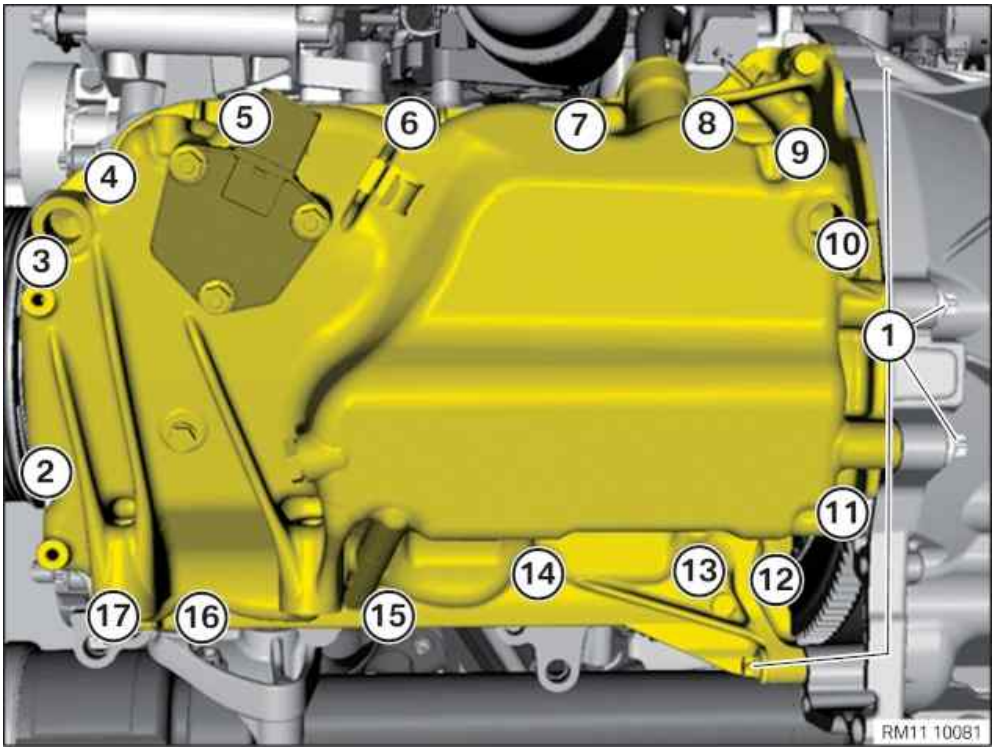
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Hand tighten the screws of oil sump (2) to (17) , but do **not** tighten completely yet.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.

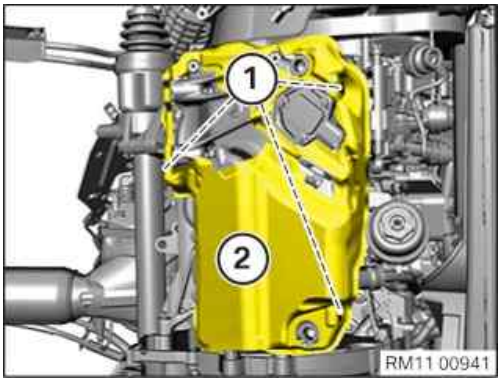
Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

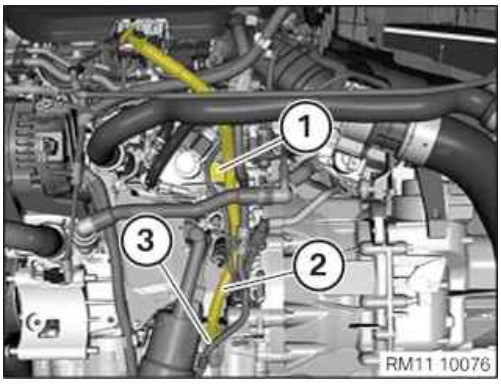


- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

POSTPROCESSES

27 – Installing the flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

TECHNICAL INFORMATION

Clean all threads with a screw tap.

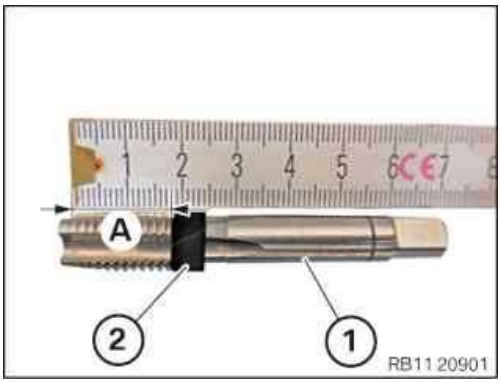
- Clean all the screw threads (1).

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

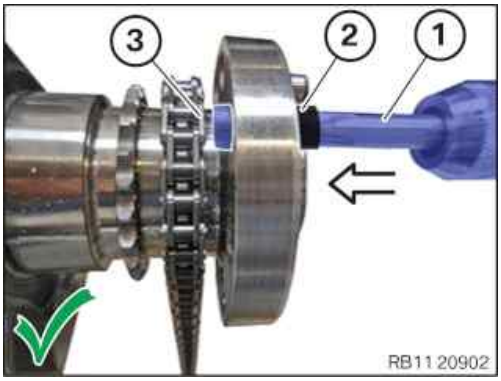
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the depth of insertion (A) on the thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

To provide a better overview: Shown with engine removed.

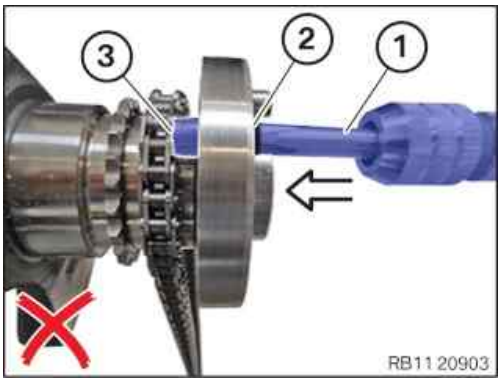
- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).

cardiagn.com

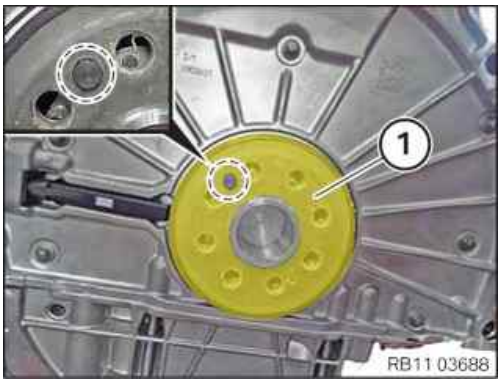


TECHNICAL INFORMATION

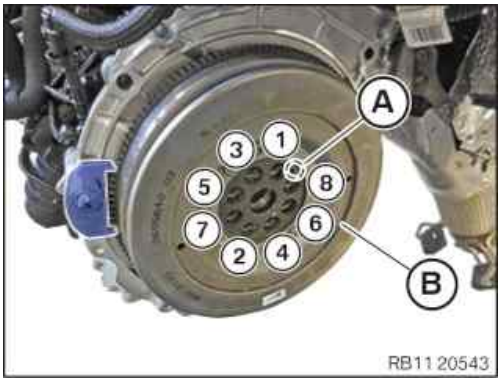
- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

- Make sure that the depth of insertion (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).



- It is essential to observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

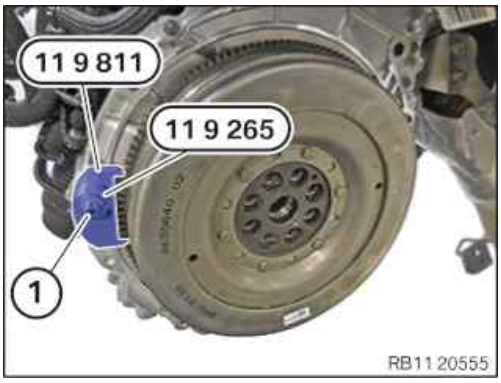


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Thread out special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)** remove.
- Ensure that the washer (5 mm) is removed.

28 – Installing the hydraulic valve clearance compensating element

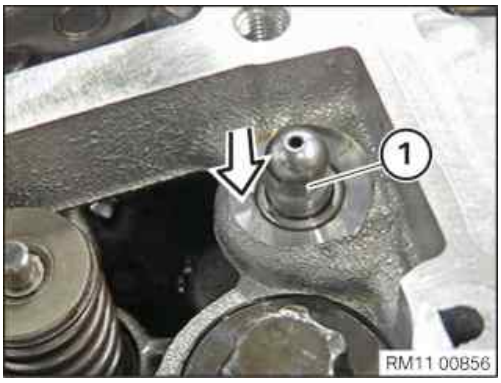
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

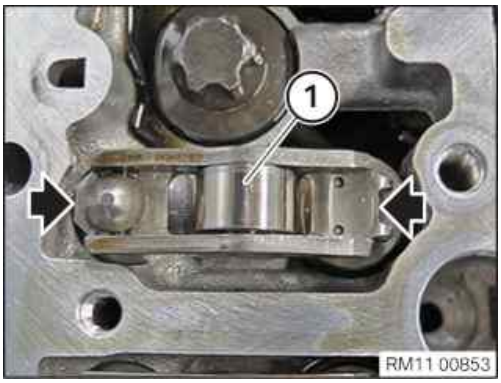


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

29 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

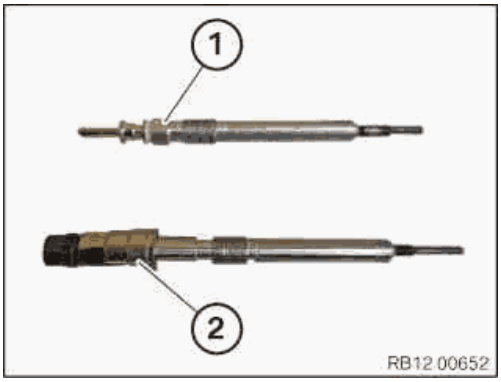


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

30 – Install glow elements



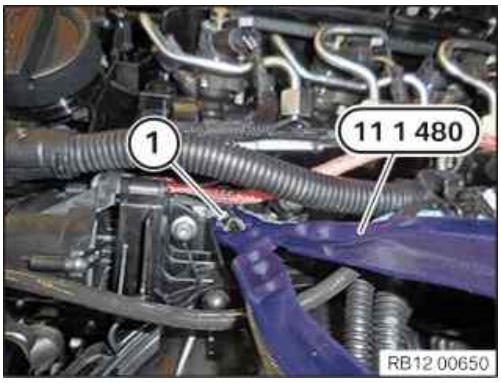
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm

cardiagn.com



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

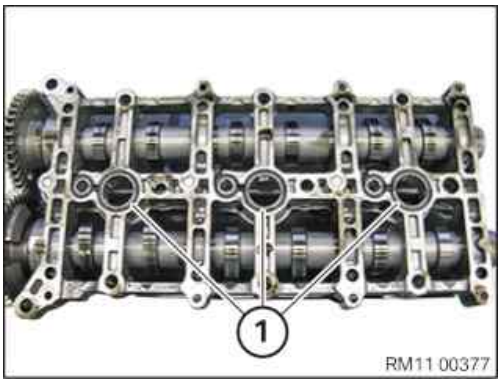
31 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

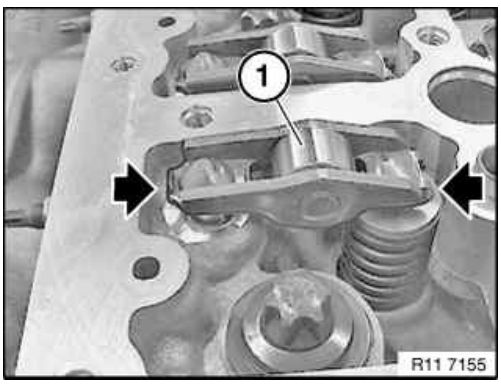
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

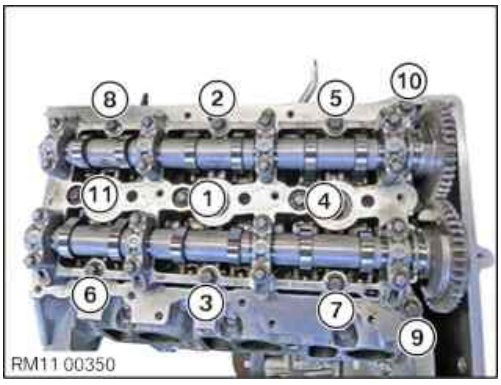


- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

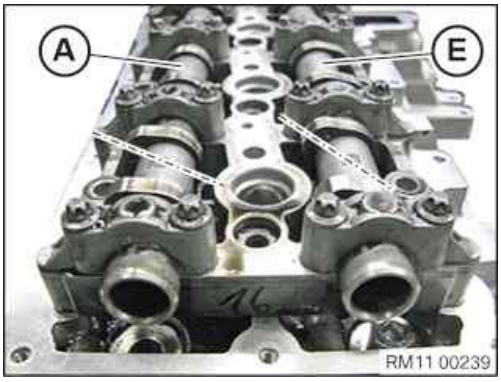
32 – Adjusting the timing of the camshafts

cardiagn.com

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

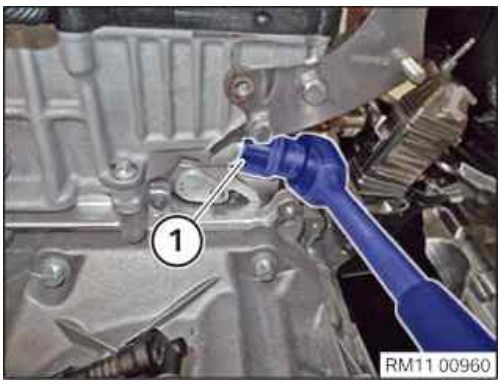
▶ **Remove chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove exhaust camshaft.**

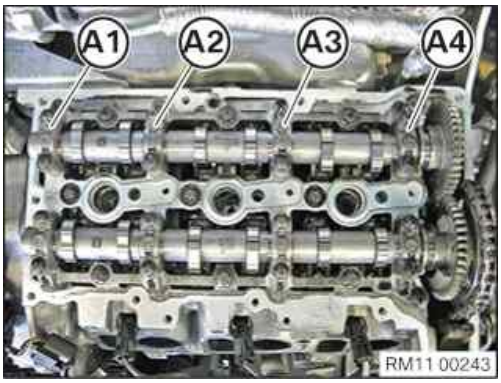
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

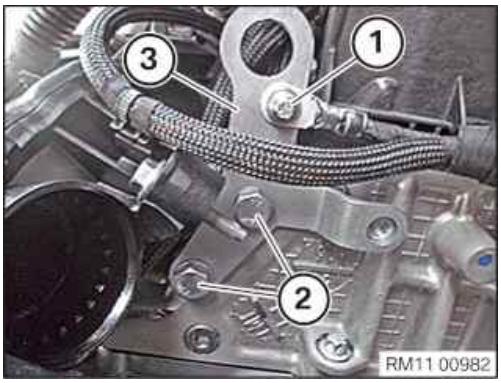


TECHNICAL INFORMATION

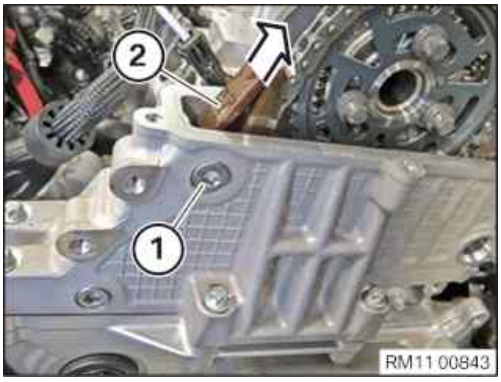
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▶ **Remove the timing chain guide rail**



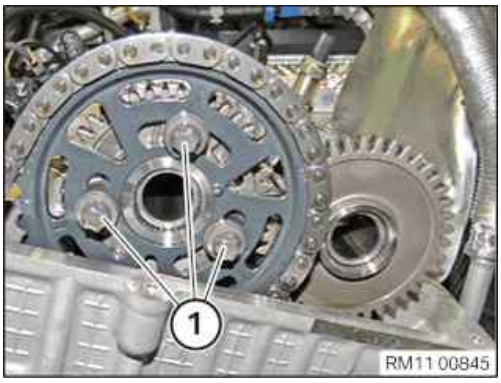
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**

cardiagn.com



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

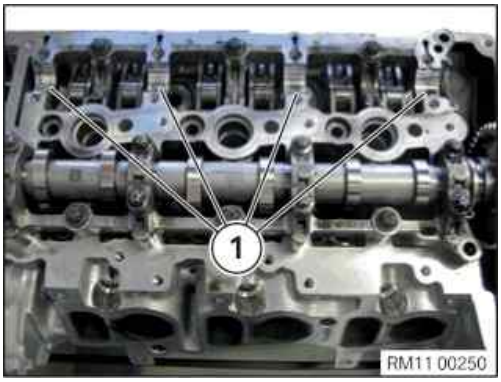
▶ Installing exhaust camshaft

RISK OF DAMAGE

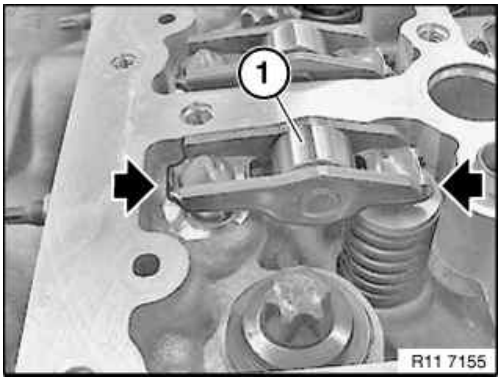
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

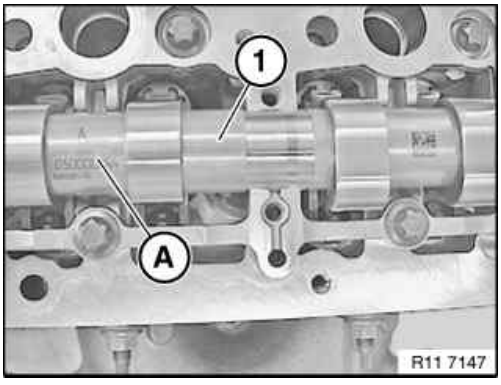
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

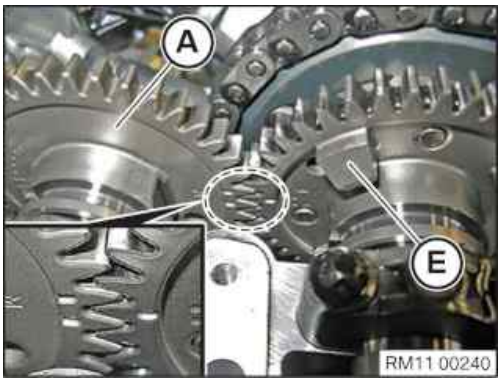


- Make sure the roller cam followers (1) have the correct mounting orientation.

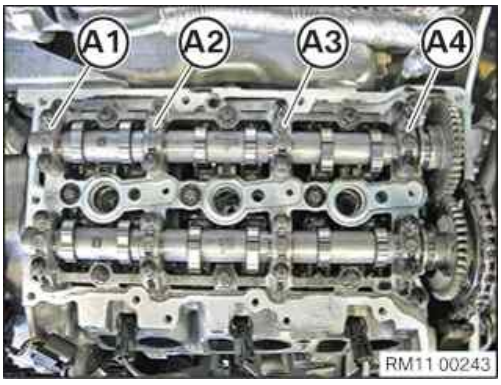


- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

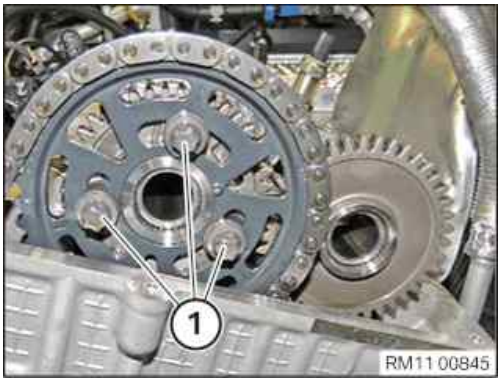
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

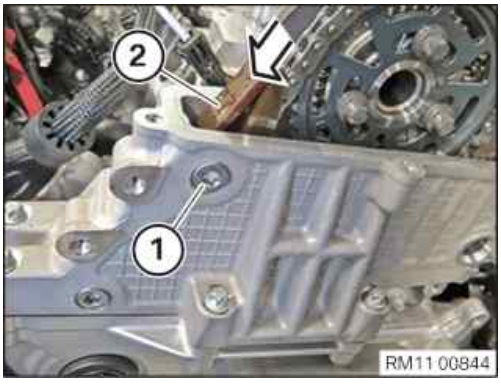
  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



- Position the guide rail (2) in the direction of the arrow.

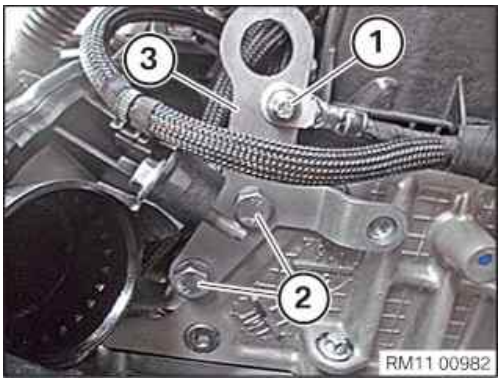
  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

cardiagn.com



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

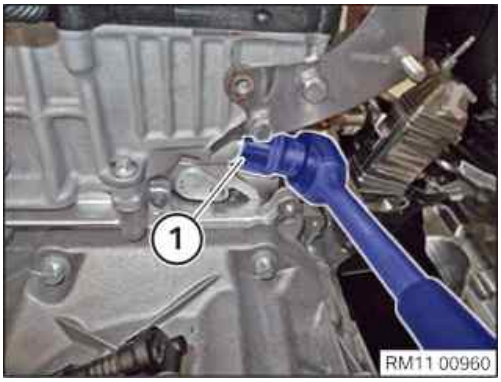
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



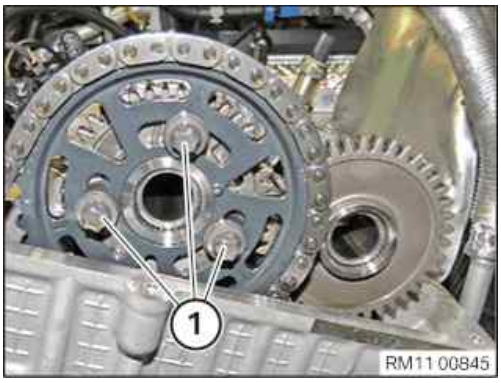
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ Tightening the camshaft sprocket on the intake camshaft

cardiagn.com



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

33 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

34 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

35 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

cardiagn.com

RISK OF DAMAGE

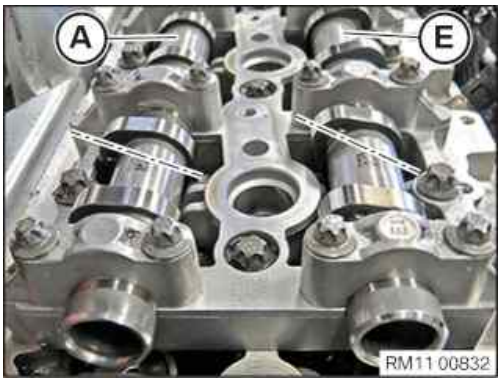
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

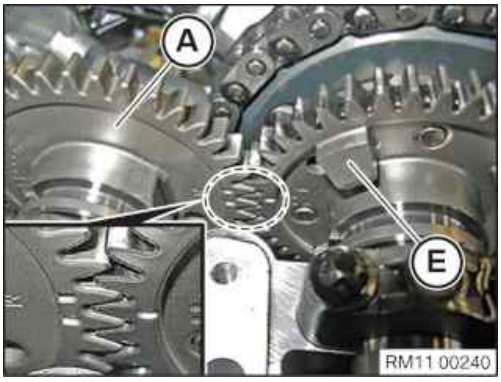
- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

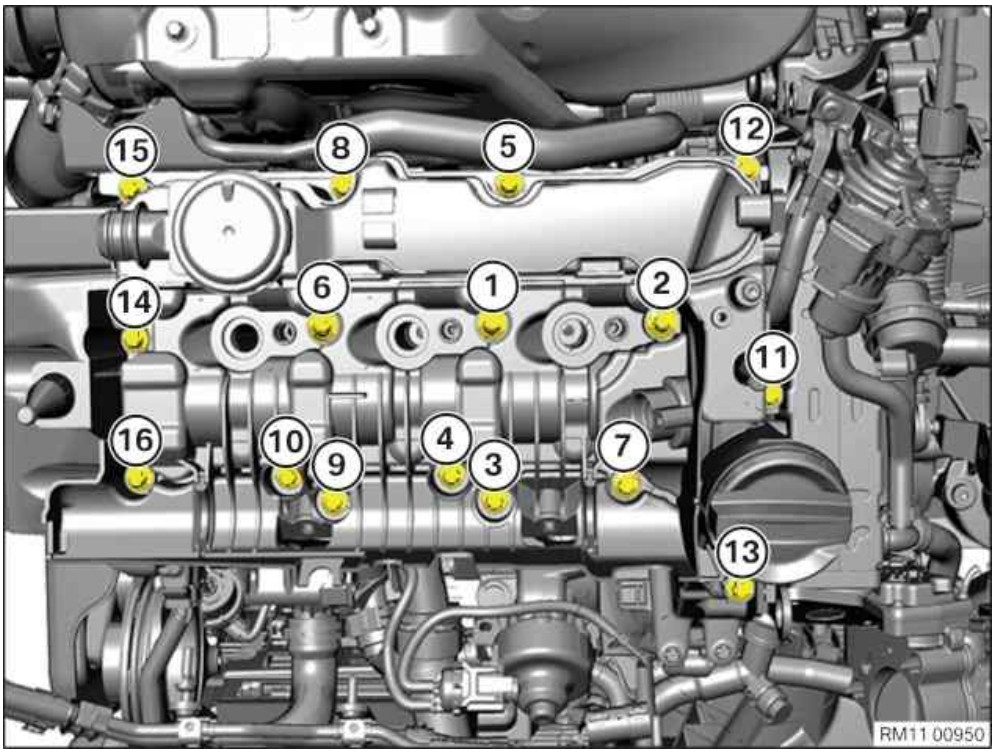
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

cardiagn.com

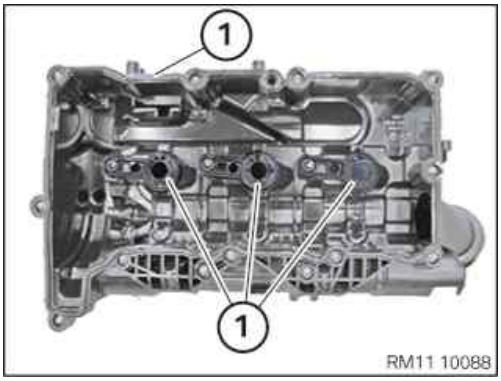
- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

36 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover



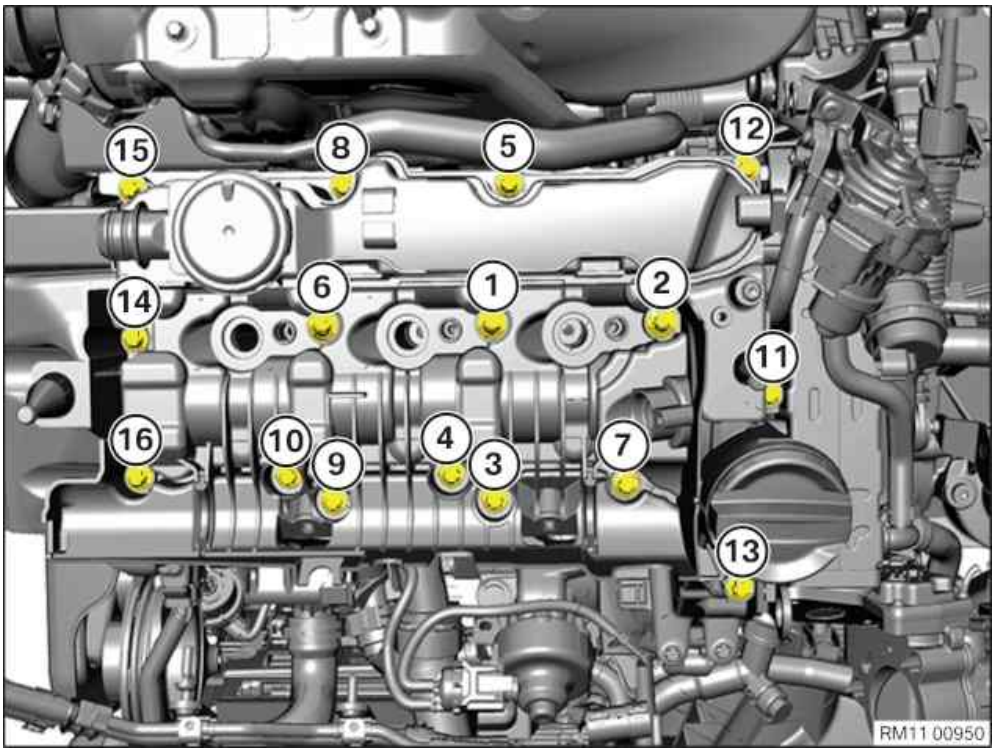
1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

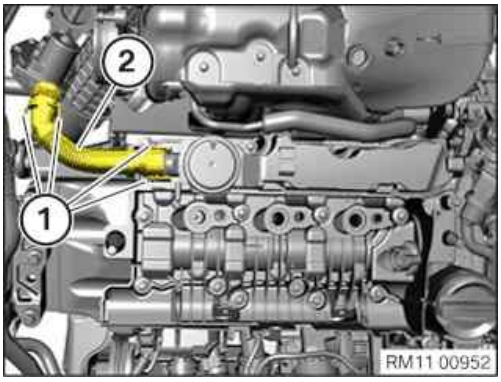
cardiagn.com



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8,5 Nm



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

37 – Installing injectors of injection system

▶ Cleaning the injector shafts

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

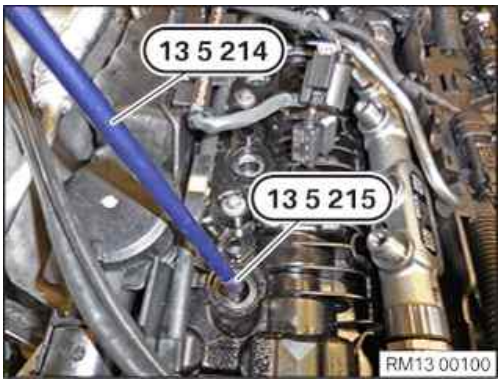
cardiagn.com

RISK OF DAMAGE

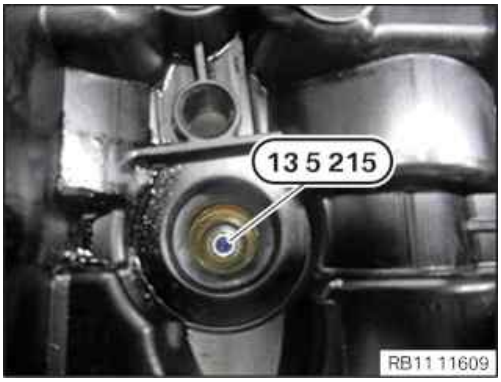
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

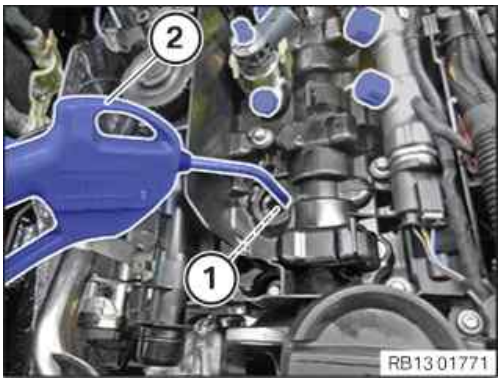


- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

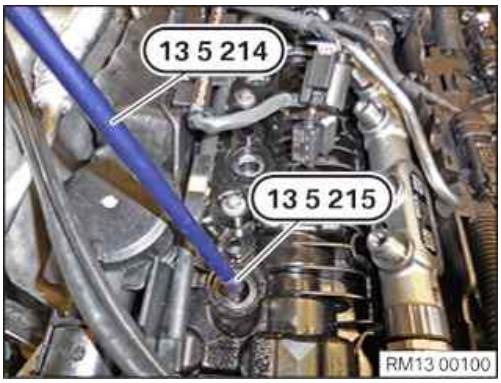
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

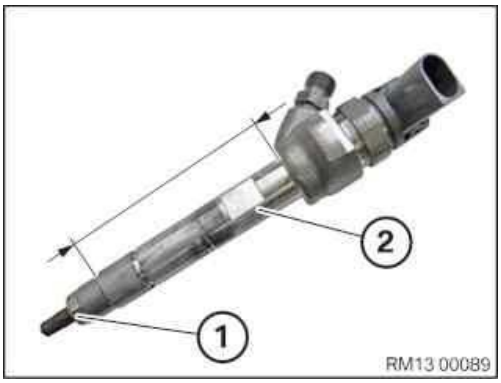
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

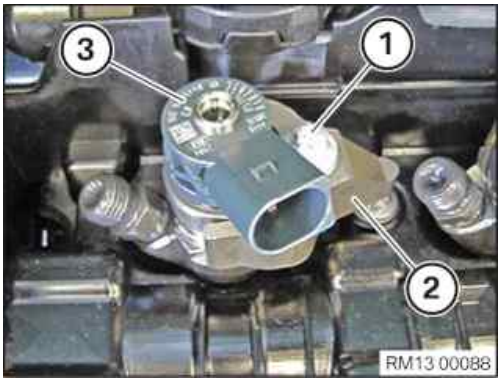


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

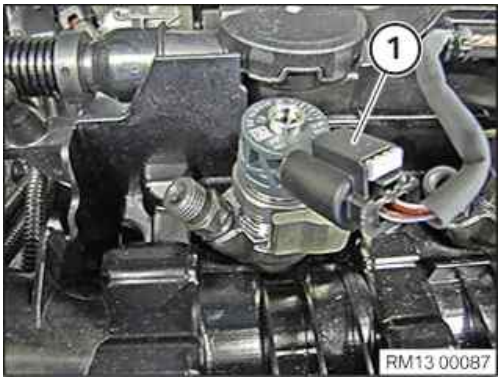
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**

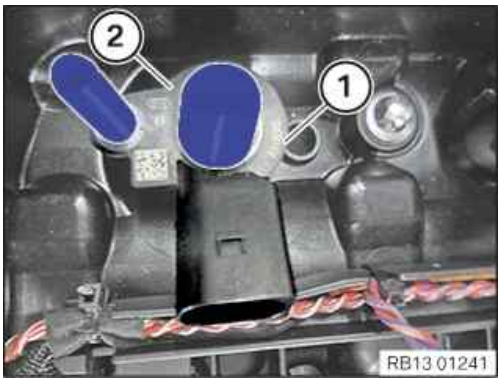
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

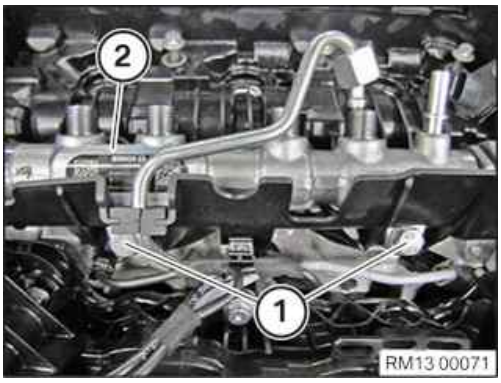
cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

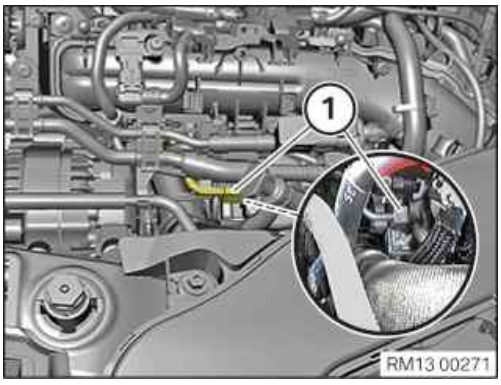
38 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

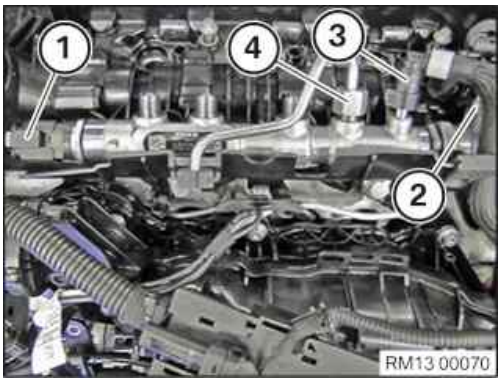
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

39 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

40 – Installing high pressure lines between rail and injectors

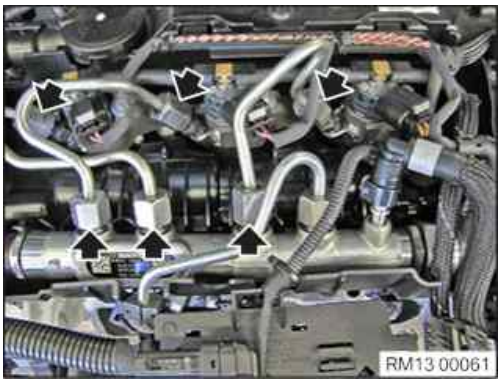
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

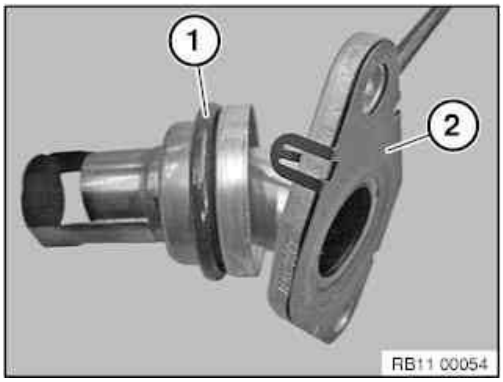
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

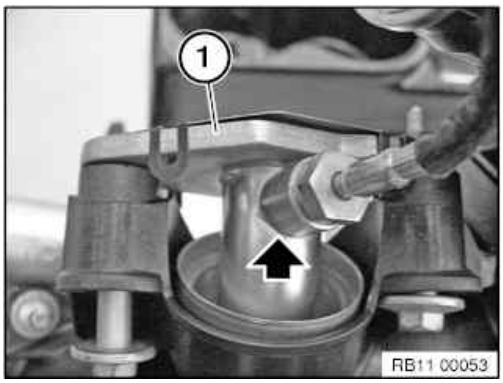
41 – Installing the intake plenum



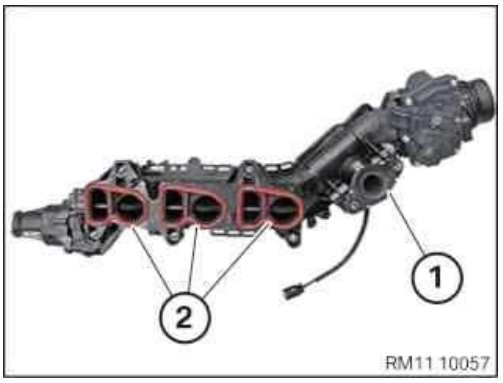
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



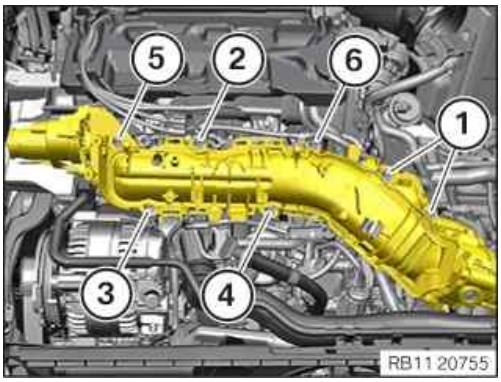
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.

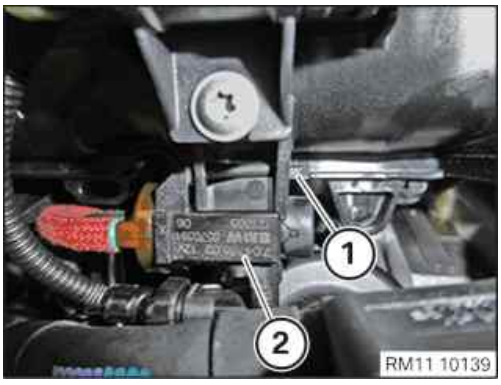
cardiagn.com



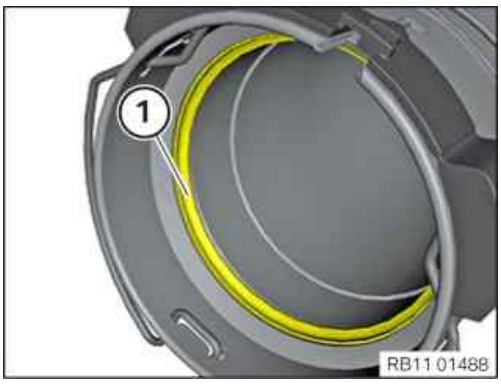
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

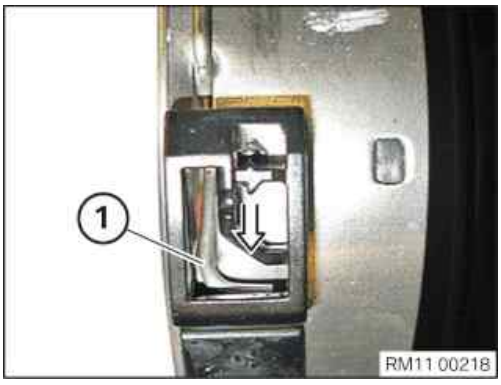


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

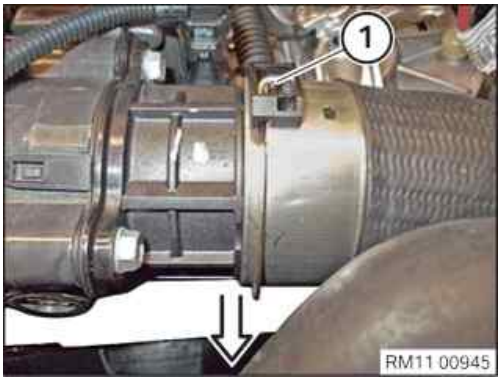


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

42 – Remove the engine from the assembly stand

cardiagn.com

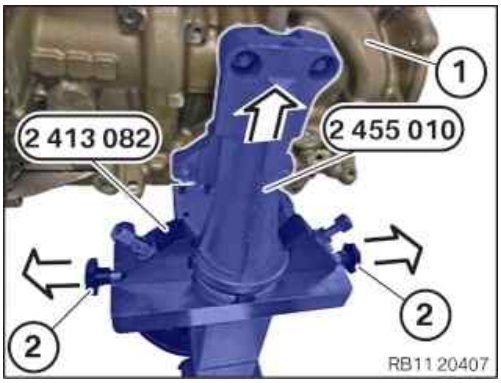
CAUTION

Heavy component.

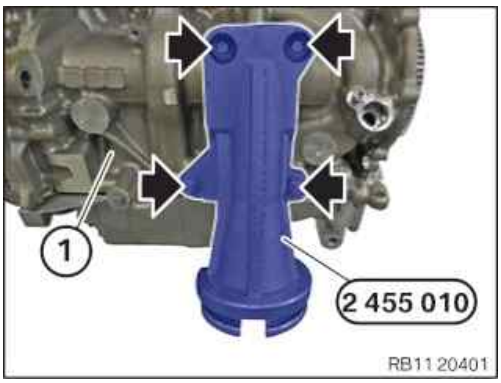
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

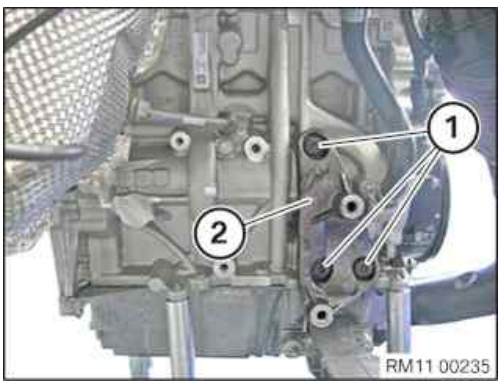
- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase

M10		Tightening torque	38 Nm

43 – Install the engine on the double-clutch transmission (DKG)

cardiagn.com

RISK OF DAMAGE

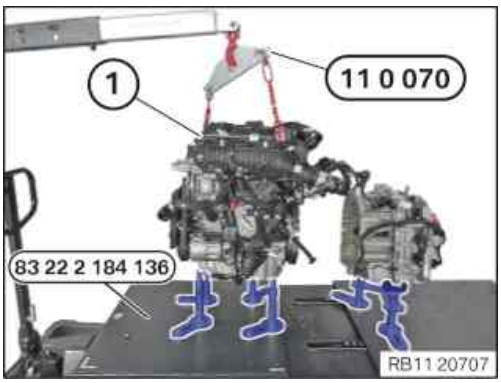
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.

TECHNICAL INFORMATION

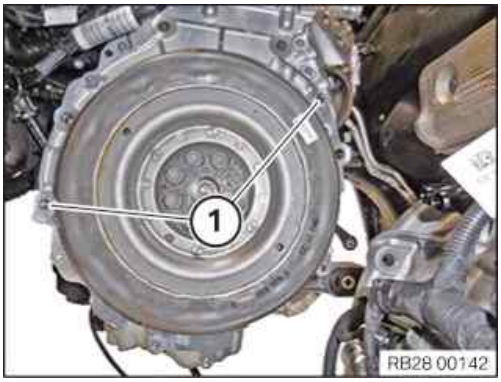
Transmission oil temperature 20 °C up to a maximum 40 °C!
Carry out the "Transmission oil adjustment" service function with the diagnosis system.
The double clutch also needs to be replaced if you exceed the oil change interval by more than 3000 km!
Failure to comply with this instruction will result in serious damage to the twin-clutch gearbox (DKG).



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.

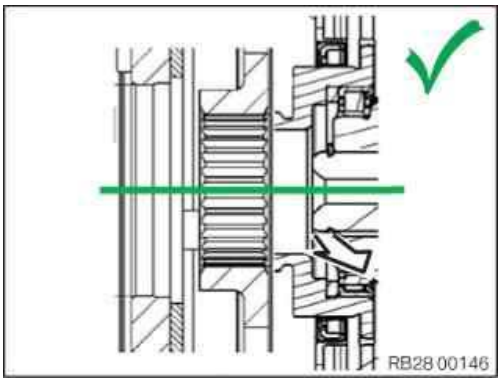


- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

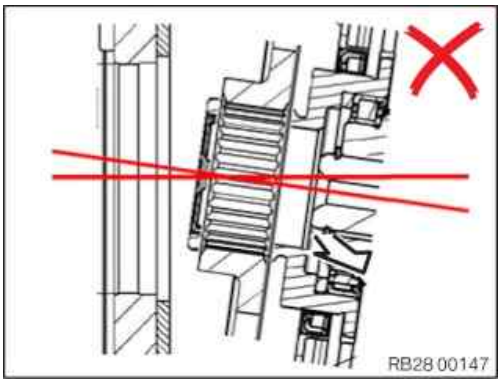
- Clean the gearing (1) of the drive shaft.
- Coat the gearing (1) with MI-Setral-43N grease (BMW part number 83 23 2 152 082).

  Tooth gaps must be filled with grease up to tooth height!

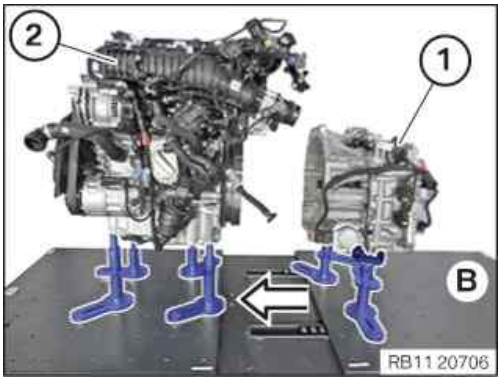
cardiagn.com



- **Correct:** Insert the double-clutch transmission (DKG) horizontally into the flywheel.



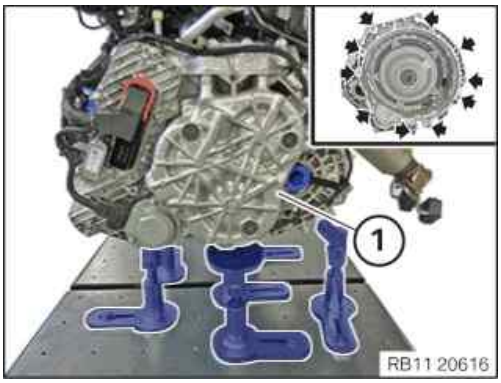
- **Wrong:** Do not tilt the double-clutch transmission (DKG) when inserting it into the flywheel.



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table plate (B) in the direction of the arrow and position double-clutch transmission (DKG) (1) **carefully** on the engine (2).



- Flange-mount the double-clutch transmission (DKG) to the engine so that it is **absolutely** horizontal.
- Tighten screws (arrows).

Transmission to engine

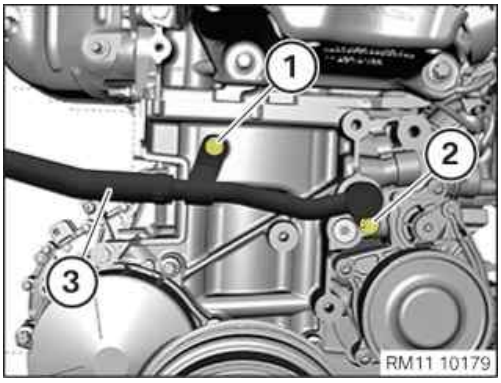
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Connect and lock the coolant lines (1).
- Make sure that you can hear the coolant lines (1) engage.

cardiagn.com

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

44 – Attaching assemblies (on lifting table)

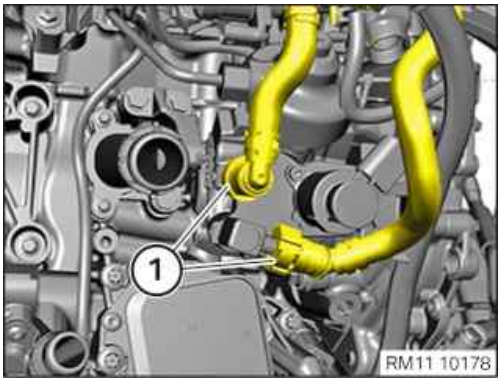


- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm



- Connect and lock fuel lines (1).

  The locks must engage audibly.

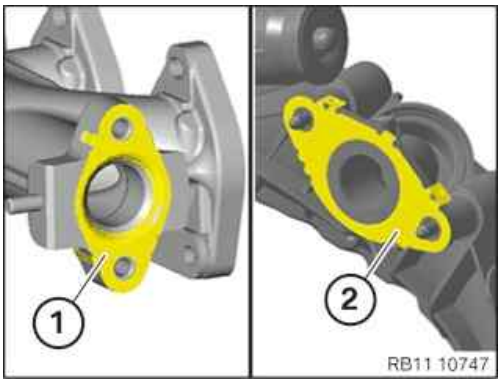
▸ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

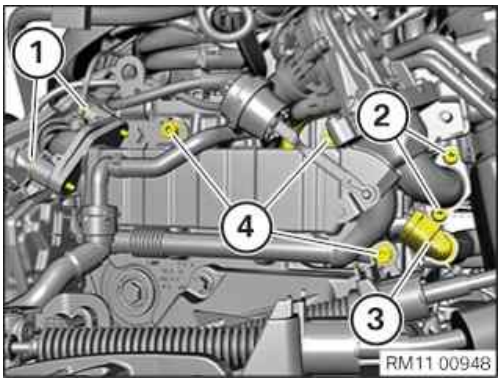


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

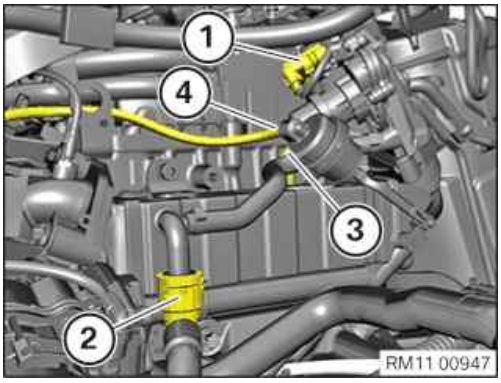
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



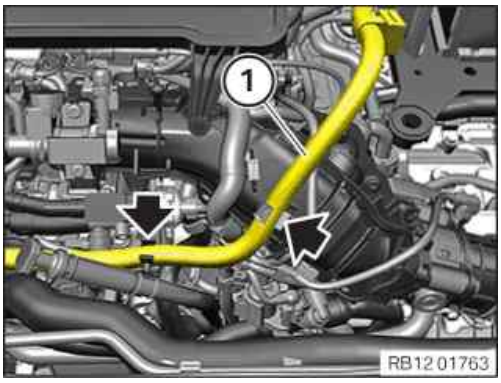
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

cardiagn.com



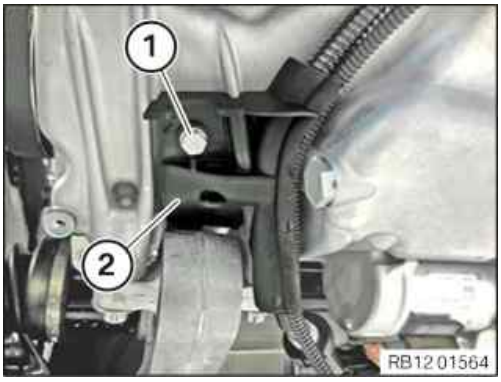
CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

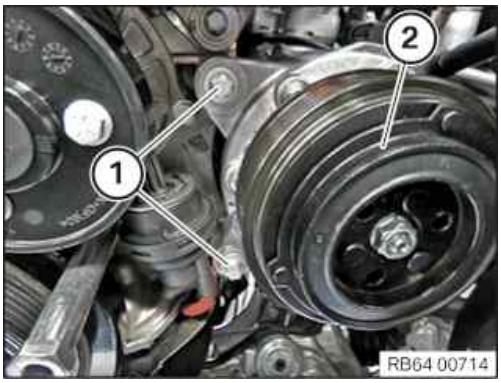
- Insert the positive battery cable (1) into the clamps (arrows).
- Feed in and install positive battery cable at the clamps (1).



- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm



- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

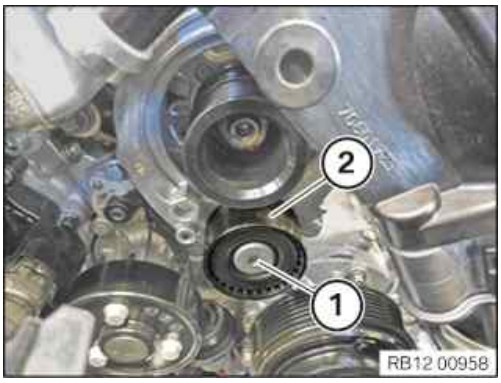
- Tighten the screws (1).

- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

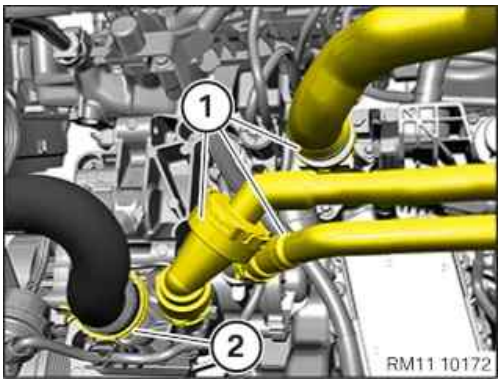
cardiagn.com



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

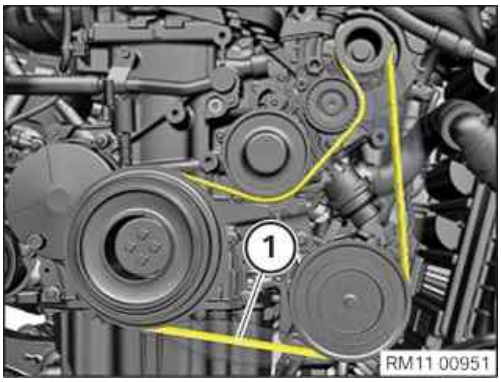
▸ Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

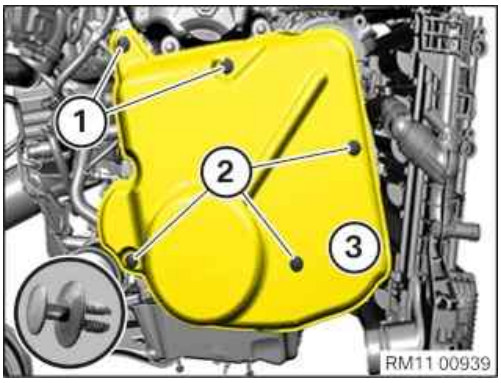


- Feed in the drive belt for the alternator (1) and install it.

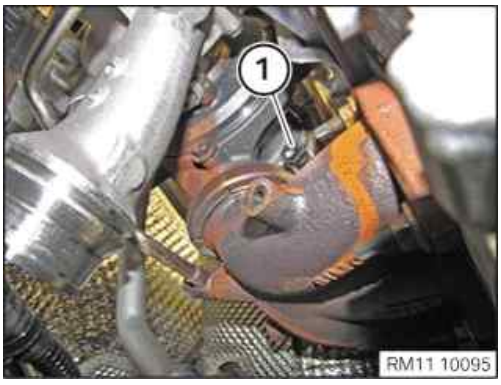
- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

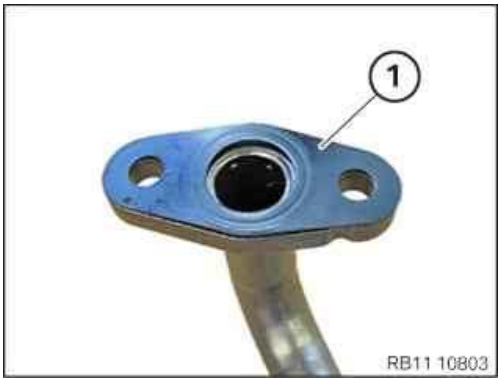
▸ Installing the oil return line for the exhaust turbocharger

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

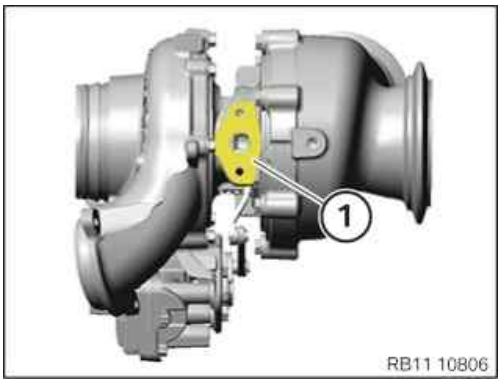


- Renew gasket (1).

  Parts: Gasket

cardiagn.com

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

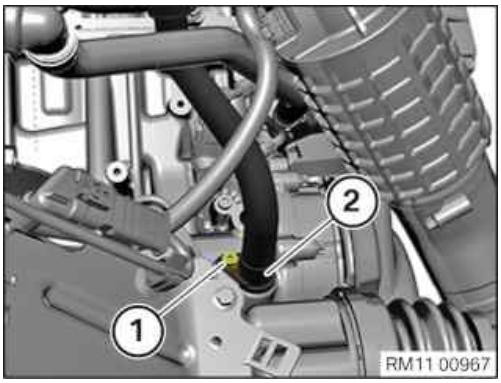
- Do not use any metal-cutting tools.

- Clean sealing surface.

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



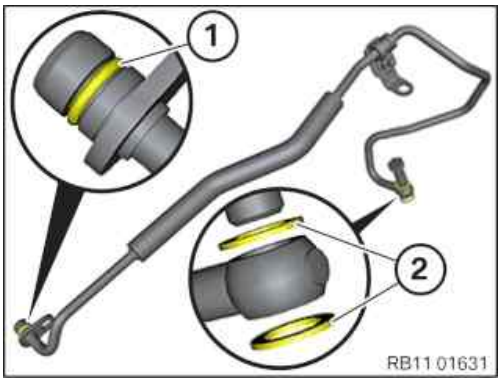
- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

▸ **Install the oil feed line for the exhaust turbocharger**

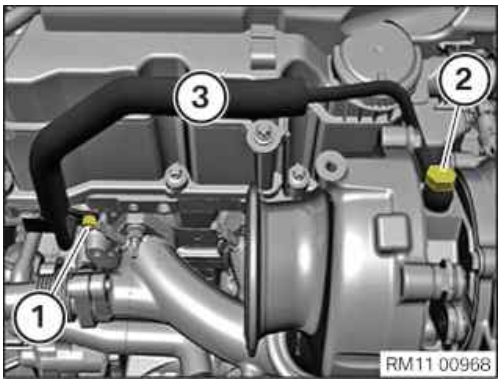
cardiagn.com



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

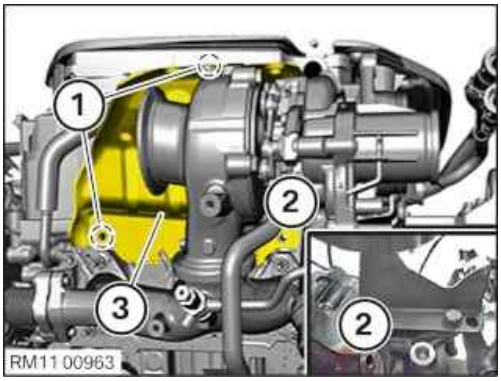
▸ **Installing heat shield on exhaust turbocharger at the rear**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

▸ **Installing heat shield on exhaust turbocharger at bottom**

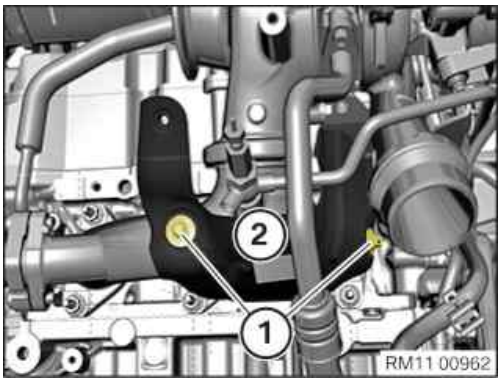
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

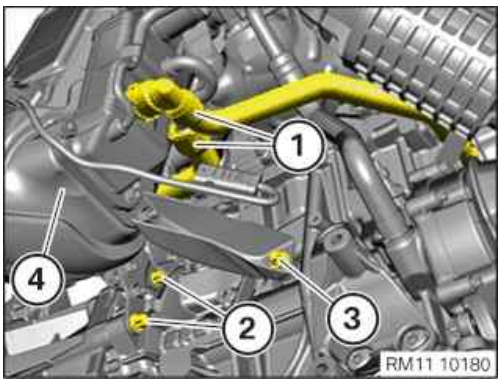
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

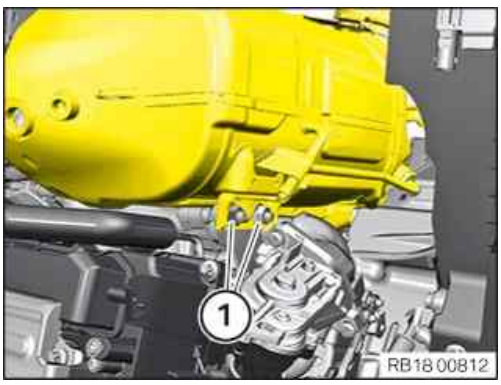
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).



- Tighten nuts (1).

Diesel particle filter to holder

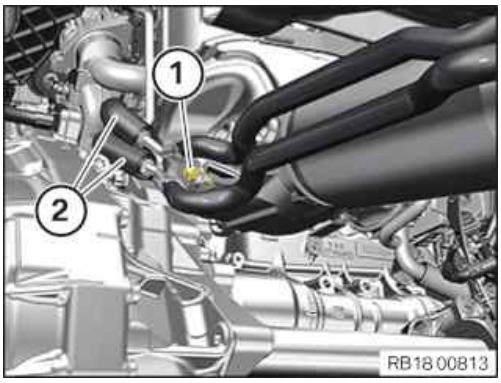
M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

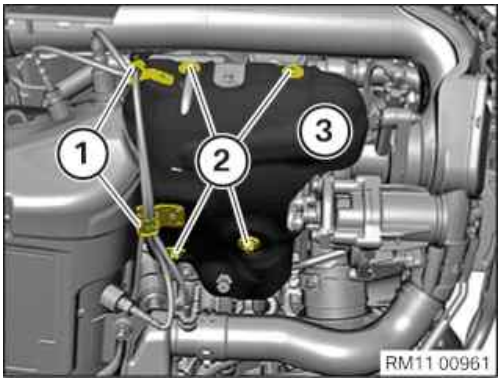
▶ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



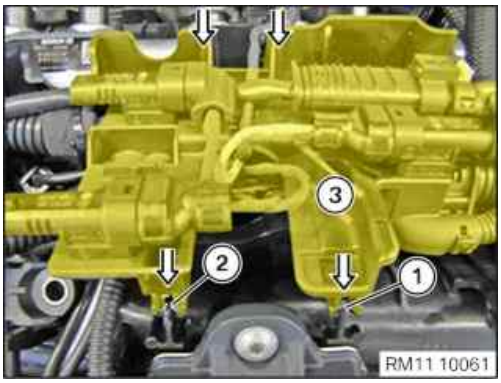
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

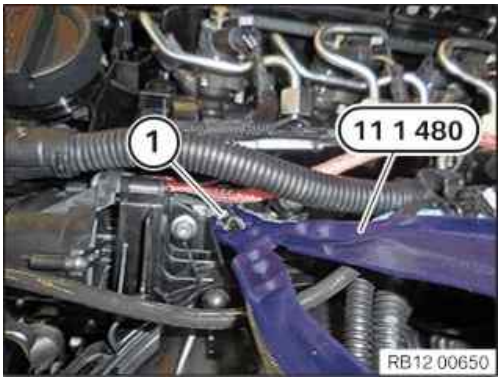
Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

▶ **Installing the cable clip for the intake plenum**



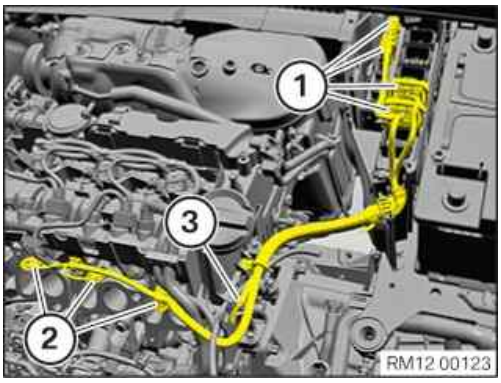
- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

  The connector (1) must engage audibly.

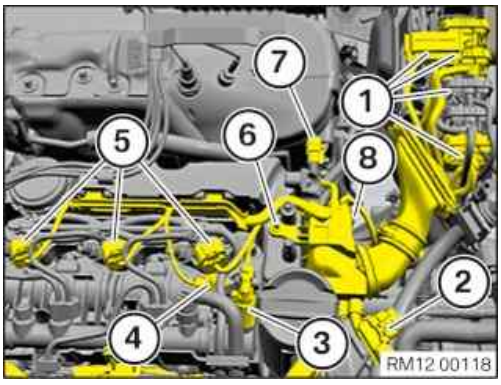
cardiagn.com



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

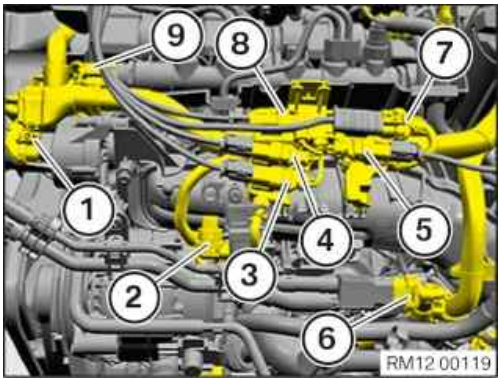


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

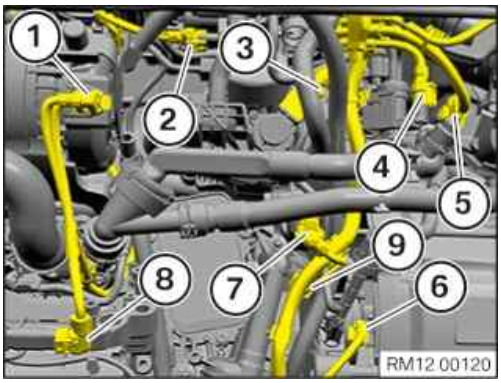
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

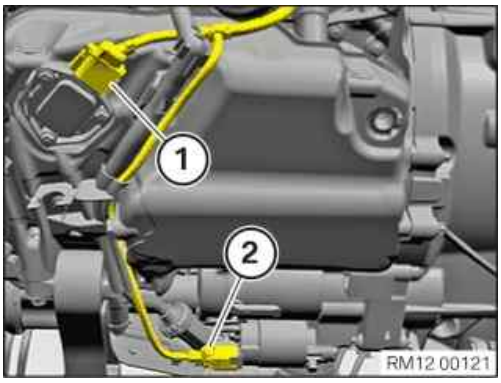


- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.

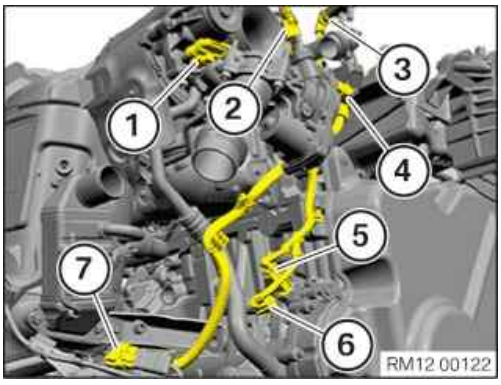


- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.

cardiagn.com

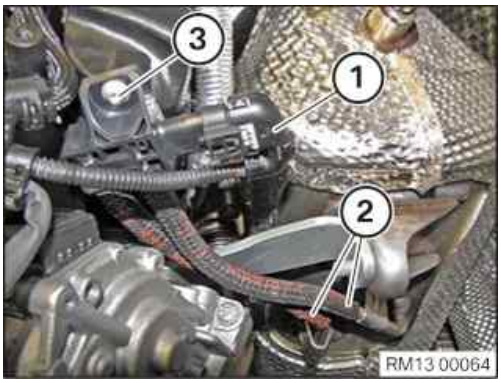


- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

45 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

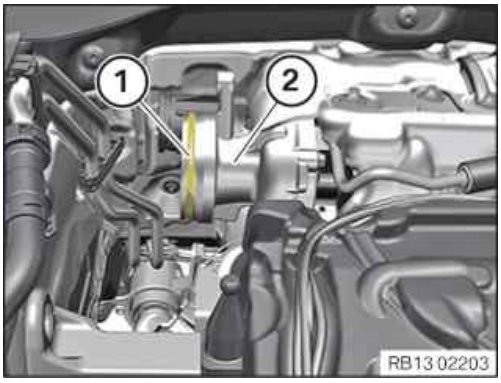
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

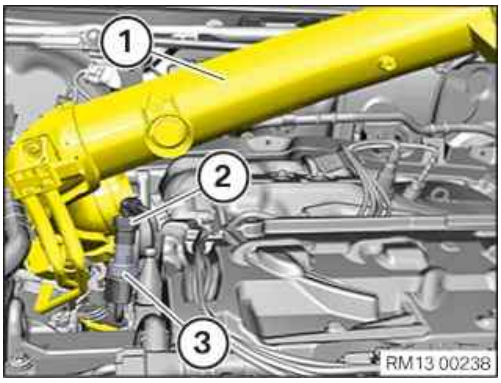
  The connector (1) must engage audibly.

46 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com



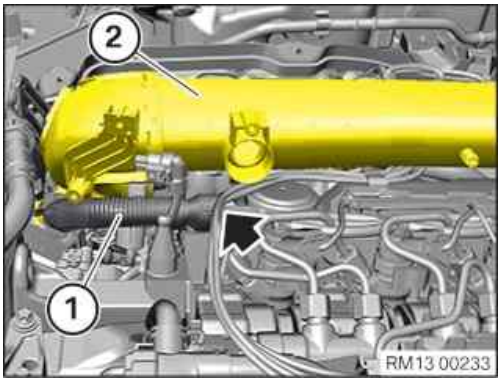
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

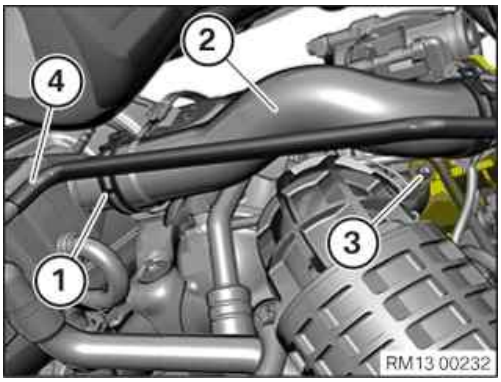
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

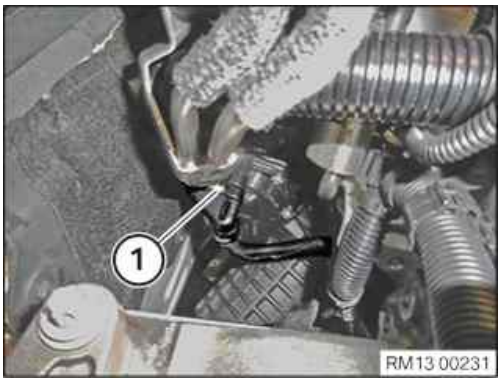
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

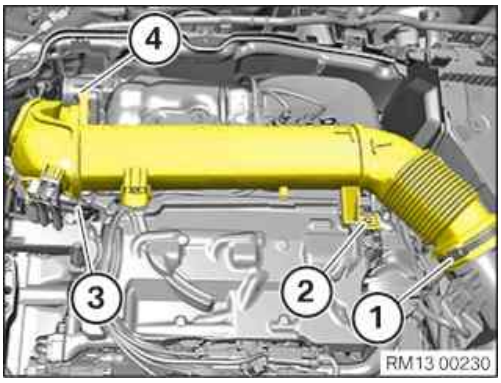
Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.

cardiagn.com



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

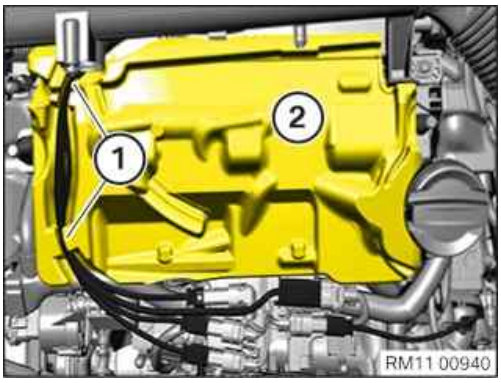
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

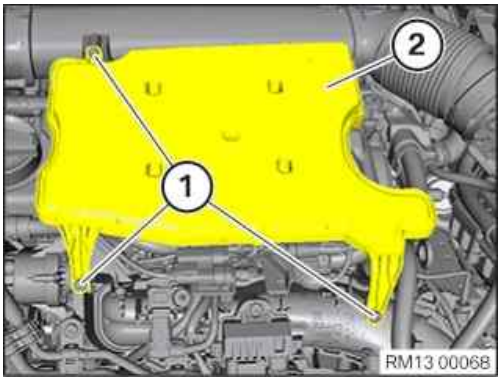
Clamp		Tightening torque	3 Nm

47 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

48 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

49 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

50 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 8

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 9

M10x30		Tightening torque	38 Nm

cardiagn.com

Special tool 11 8 930 to special tool 00 2 320

Used in step 9

M14x35		Tightening torque	160 Nm

Rear timing case cover to crankcase

Used in step 26

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

SCR coolant lines to crankcase end cover

Used in step 26

Hexagon screw M6x16		Tightening torque	8 Nm

Cylinder head to crankcase

Used in step 26

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 26

M8x40		Tightening torque	19 Nm

Oil sump to crankcase

Used in step 26

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

Transmission to oil sump

Used in step 26

M8		Tightening torque	19 Nm

Guide tube for oil dipstick on engine

Used in step 26

M8x16		Tightening torque	19 Nm

Flywheel to crankshaft

Used in step 27

M12x1.5	Renew screws.	Tightening torque	120 Nm

Glow elements to cylinder head

Used in step 30

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 31

M7x35		Tightening torque	13 Nm

Intake and exhaust camshaft in camshaft support

Used in step 32

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head

Used in step 32

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 32

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 32 44

M6			8 Nm

cardagn.com

Chain tensioner piston to cylinder head

Used in step 32

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 32

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 36

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 37

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 37

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 38

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail

Used in step 38

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 40

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 41

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 42 44

M10		Tightening torque	38 Nm

Transmission to engine

Used in step 43 44

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 44

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 44

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 44

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 44

M8x20		Tightening torque	19 Nm

Bracket to oil sump

Used in step 44

M6		Tightening torque	8 Nm

cardiagn.com

Air conditioning compressor in component carrier — Used in step 44

M10		Tightening torque	38 Nm

Alternator to component carrier — Used in step 44

M10x75 / M10x125		Tightening torque	38 Nm

Deflecting element to belt tensioner — Used in step 44

M8		Tightening torque	38 Nm

Exhaust turbocharger to exhaust manifold — Used in step 44

V-band clamp		Tightening torque	19 Nm

Holder to exhaust turbocharger and crankcase — Used in step 44

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger — Used in step 44

M6x12		Tightening torque	8 Nm

Oil return line to crankcase — Used in step 44

M6x12		Tightening torque	8 Nm

Oil feed line on cylinder head — Used in step 44

M6x12		Tightening torque	8 Nm

Oil feed line to exhaust turbocharger — Used in step 44

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Heat shield for exhaust turbocharger — Used in step 44

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head — Used in step 44

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particle filter to holder — Used in step 44

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 44

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Holder for coolant lines to diesel particulate filter — Used in step 44

Torx bolt BM6x16		Tightening torque	8 Nm

Ground cable to cylinder head — Used in step 44

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 44

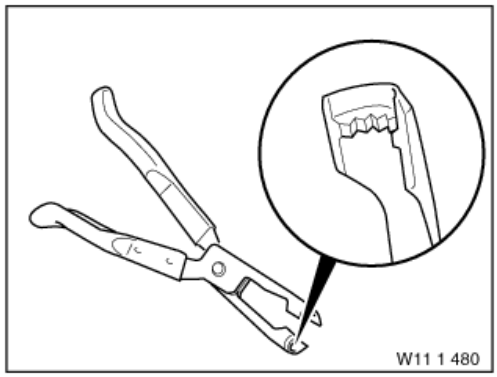
Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

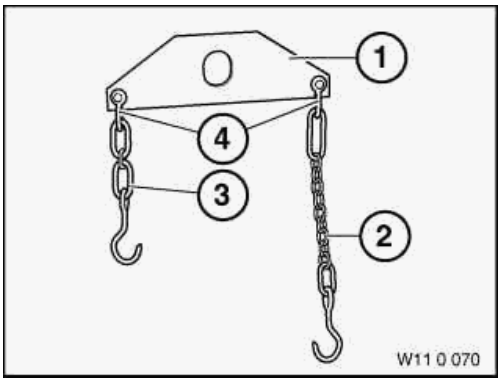
2 459 012 Holder

Common Used in step 8 43

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 579 (11 0 070) Lifting gear



Common

Used in step 8 9 42 43

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

2 455 010 Engine support

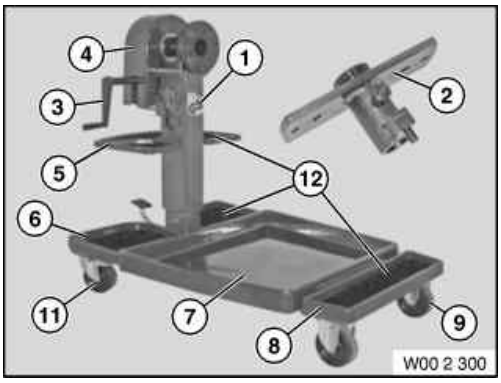
Common Used in step 9 42

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

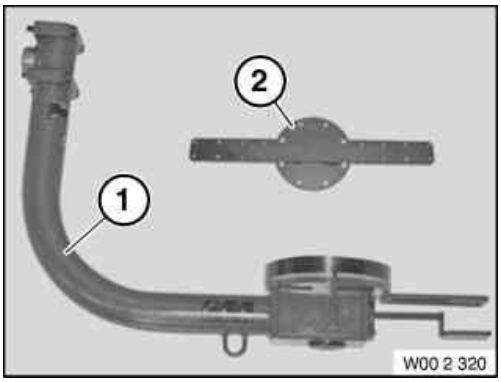
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

0 495 910 (37 1 152) Socket wrench

Common Used in step 11 14 38 40

Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

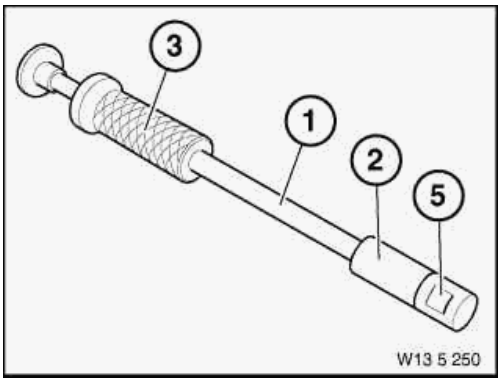
cardiagn.com

2 413 106 Fastener

Common Used in step 11 40

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush

Common Used in step 13

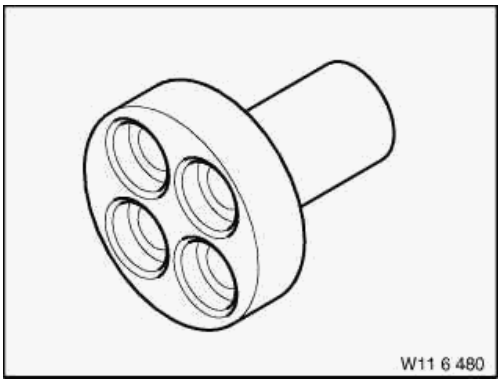
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common Used in step 13

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common Used in step 16 32 35

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 288 380 Locating stud

Common Used in step 16 32 33 35

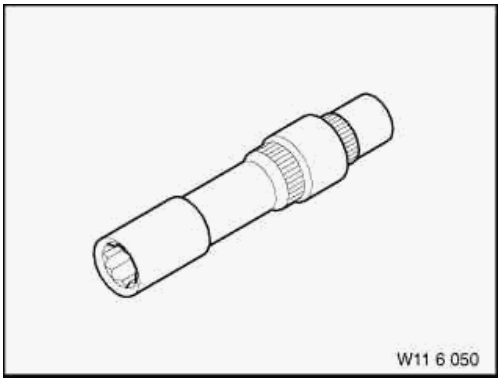
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 16 32 34 35

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common Used in step 21 30

Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

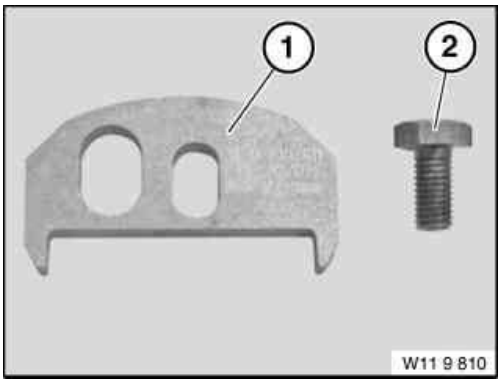
Common Used in step 22 23 32

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 171 (11 9 811) Holder



Common Used in step 24 27

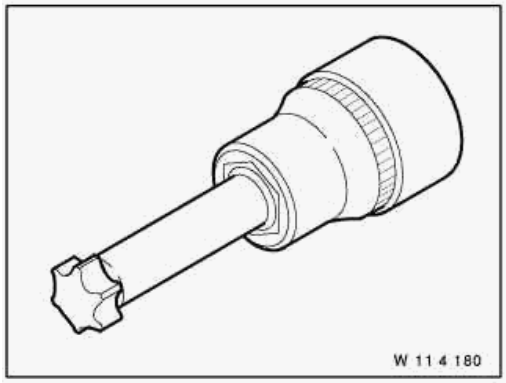
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

cardiagn.com

0 494 793 (11 9 265) Bush

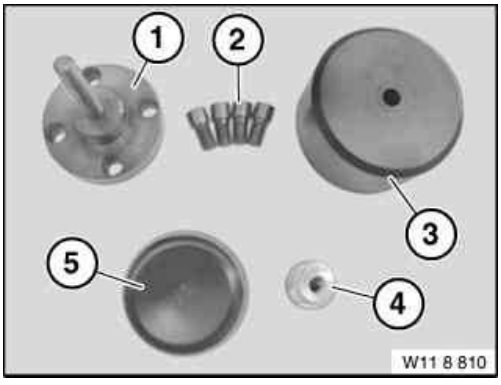
Common	Used in step 24 27
Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

0 491 018 (11 4 180) Socket WAF 46



Common	Used in step 24 27
Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

0 496 137 (11 8 815) Holding sleeve



Common	Used in step 26
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by

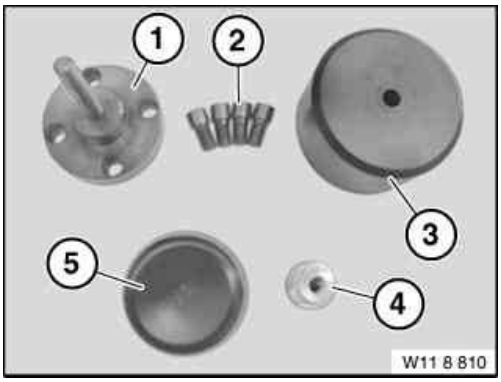
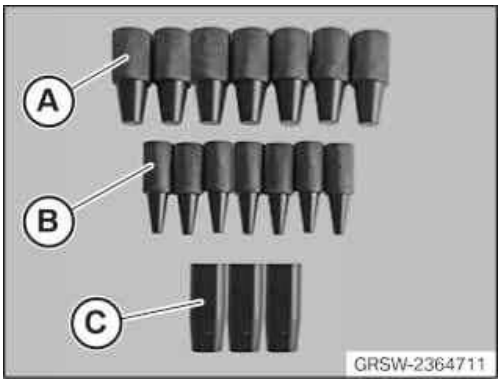
0 496 136 (11 8 814) Nut



Common	Used in step 26
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 364 711 Plug



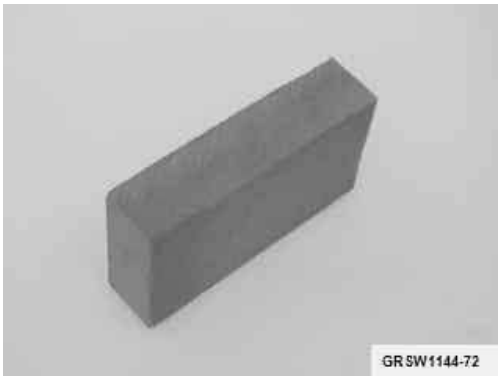
Common	Used in step 26
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 26
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

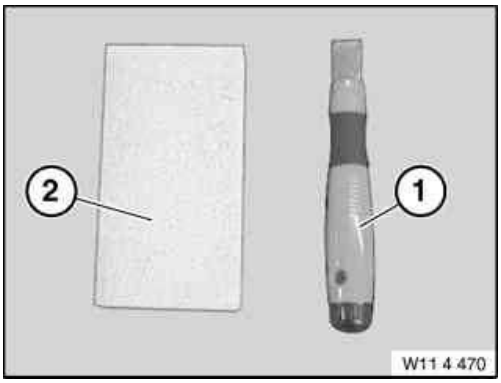
0 495 104 (11 4 472) Extractor



Common Used in step 26

Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

0 495 102 (11 4 470) Tool



Common Used in step 26

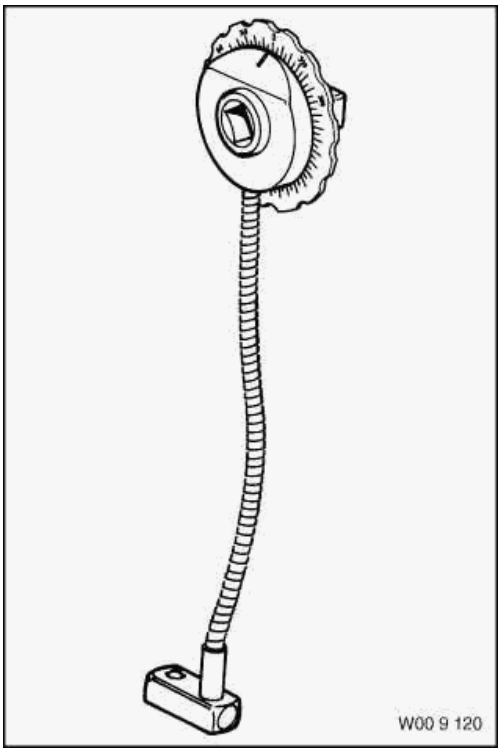
Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



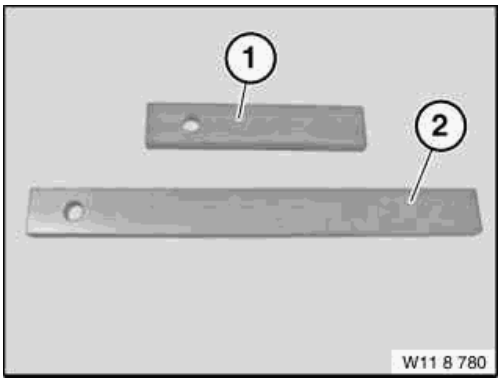
Common

Used in step 26

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 120 (11 8 780) Plate



Common Used in step 26

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

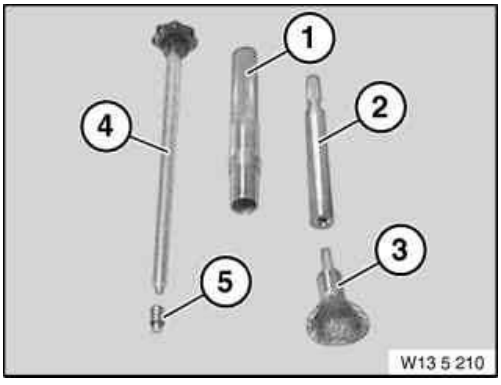
Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

2 285 058 Tool set

Common Used in step 27

Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)

0 493 763 (13 5 215) Plug

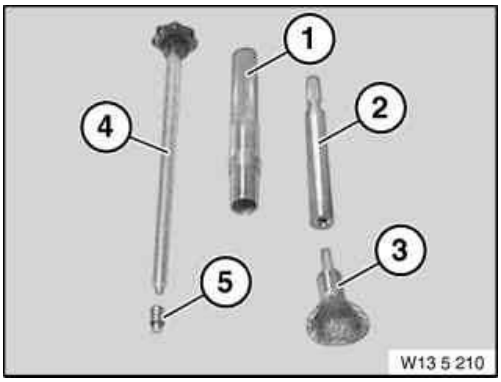


Common Used in step 37

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

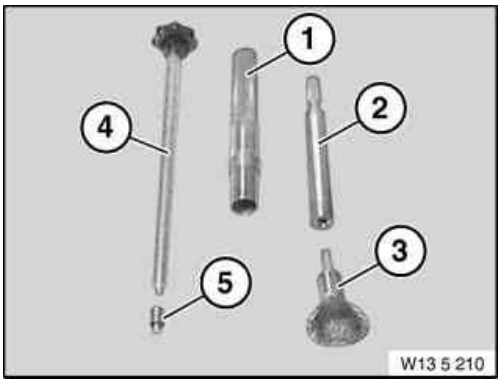
cardiagn.com

0 493 762 (13 5 214) Rod



Common	Used in step 37
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 758 (13 5 210) Tool



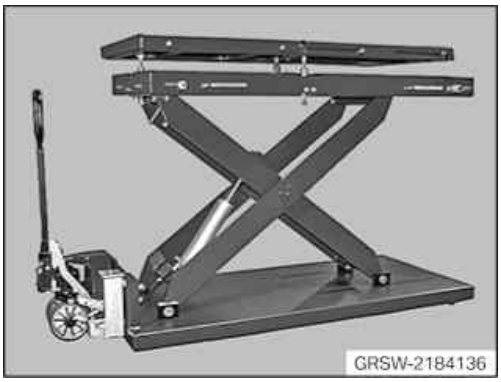
Common	Used in step 37
Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

cardiagn.com

2 184 136 Mobile equipment table lift



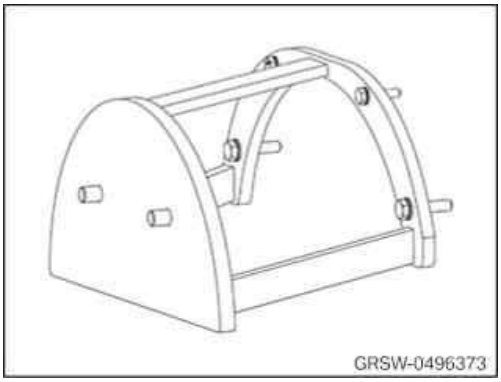
Common	Used in step 43
Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

Replacement tools:

2 299 563 Adapter

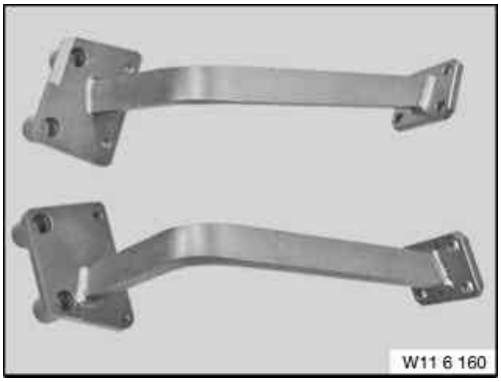
Common	Used in step 9
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate



Common	Used in step 9
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support



Common	Used in step 9
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

Parts

Parts required

Designation	Used in step
Chain tensioner piston seal on cylinder head	32
Exhaust-gas recirculation cooler seal on exhaust manifold	44
Exhaust-gas recirculation cooler seal on intake plenum	44

cardiagn.com

11 14 151 Replacing rear crankshaft seal (B37C)

Special tools required:

- 23 0 490
- 11 8 815
- 11 8 811
- 11 8 812
- 11 8 813
- 11 8 814
- 11 8 810

Necessary preliminary work:

- Remove transmission
- Remove flywheel

Attention!

Before the radial shaft seal is removed, the engine must be moved to the installation position using a suitable tool.

Engine oil may escape.

The radial shaft seal must be installed dry.

Do not use engine oil or lubricant.

Risk of damage to crankshaft sensor.

Read and comply with notes on protection against electrostatic discharge (ESD protection).

Removal:

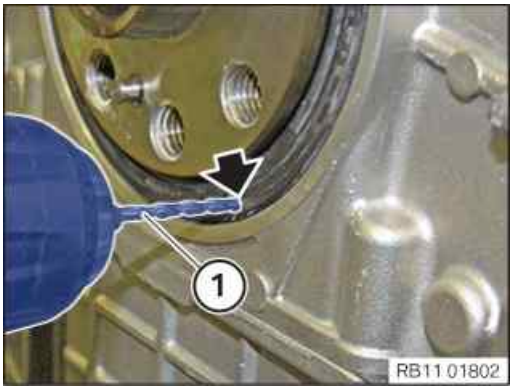
Attention!

Magnet wheel (1) is magnetic.

Keep magnet wheel (1) in a plastic bag away from swarf.

Remove magnet wheel (1) from crankshaft.

cardiagn.com



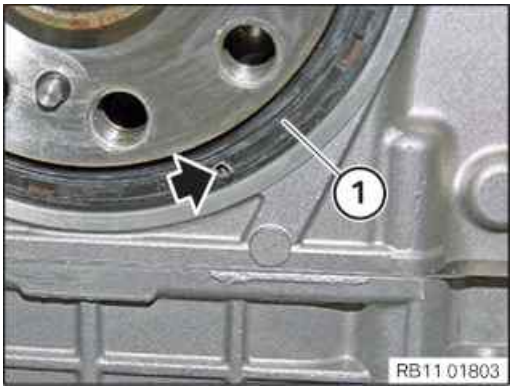
Attention!

Drill size maximum 2,5 mm.

Remove swarf immediately with vacuum cleaner.

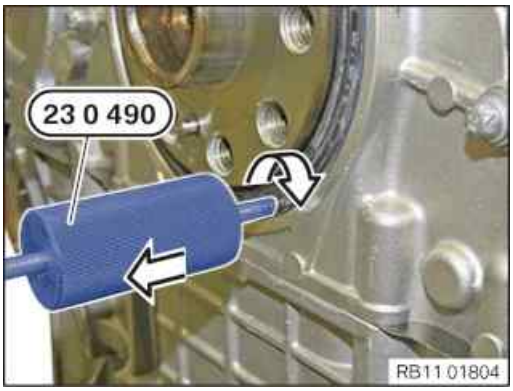
Do not remove swarf with compressed air!

Drill a hole with a drill (1) in the radial shaft seal (see arrow).



Attention!

Remove swarf from the radial shaft seal (1).



Attention!

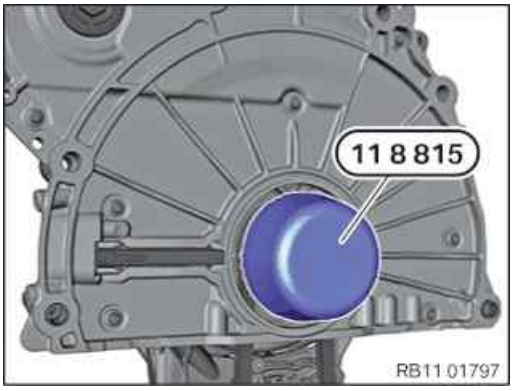
Risk of damage at the crankcase and on the running surface of the crankshaft.

Immediately carefully remove residual swarf.

Screw in special tool23 0 490 in direction of arrow.

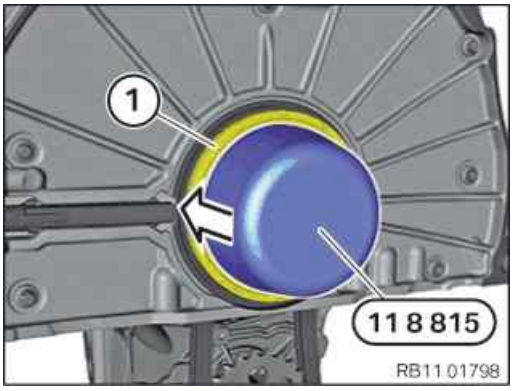
Drive out radial shaft seal with impact weight in direction of arrow.

Installation:



Position special tool11 8 815 on crankshaft.

cardiagn.com



Use special tool 11 8 815 to fit the radial shaft seal (1) in the direction of the arrow just up to radial shaft seal and position.

Remove special tool 11 8 815 .

Fasten special tool 11 8 811 with special tool 11 8 812 on the crankshaft.

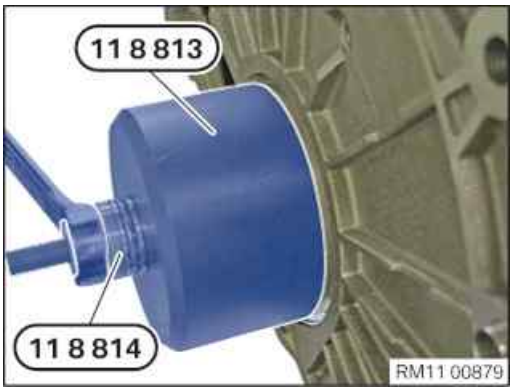
Attention!

Risk of damage to crankshaft sensor.

Check freedom of movement between special tool 11 8 813 and the crankshaft sensor during installation.

Slide on special tool 11 8 813 .

Screw down special tool 11 8 814 .



Press in radial shaft seal with special tool 11 8 813 .

Screw in special tool 11 8 813 up to timing case cover.

cardiagn.com

Note:
Check the fitting sleeve for damage.

Note the installation position of the magnet wheel.

Position magnet wheel (1) on crankshaft.

Remove all special tools 11 8 810 .

Required follow-up work:

- Installing the flywheel
- Install transmission

cardiagn.com

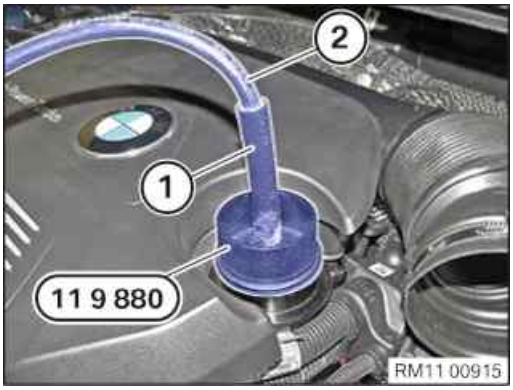
11 15 510 Measuring the internal engine pressure (B37C)

Special tools required:

- 11 9 880
- 81 31 2 357 800

Note:

- Follow the diagnosis instruction for pressure testing.
- Check engine oil level.



Note:
Create hose piece (1), Ø = 8 x 13 mm, length = 70 mm.

Create hose piece of low pressure line (2), length = 300 mm.

Connect hose piece (1) with low pressure line (2).

Connect low pressure line (2) with the diagnosis connection of the Integrated Measurement Interface Speaker (IMIB).

Connect tube (1) to special tool 11 9 880 .

Open oil filler cap .

Insert special tool 11 9 880 **hand-tight** into oil filler neck opening.

Start engine and run at idle speed.

Note:
Order number for low-pressure hose: 81 31 2 357 800 (previously: 81 38 2 201 924)

Different fault patterns as example:

0.97 bar	Ambient pressure.
0.95 bar	Engine internal pressure normal.

If the deviation is significantly greater than -0.04 bar, the engine ventilation system is faulty.

0.80 bar	Pressure control valve faulty.

If the deviation is significantly greater than +0.04 bar, the engine ventilation system is clogged.

1.07 bar	Clogged ventilation system, e.g. iced up, contaminated or kinked vent line.

cardiagn.com

11 16 550 Removing and installing/replacing alternator support (B37C)

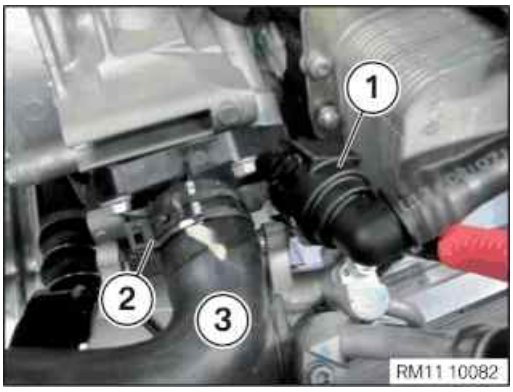
Special tools required:

- 11 4 470

Necessary preliminary tasks:

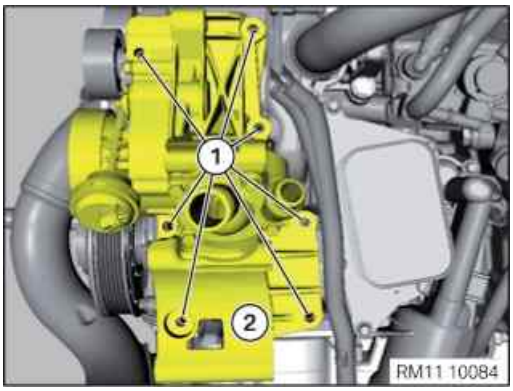
- Remove alternator.
- Remove fan cowl.
- Only release air conditioning compressor for air conditioning and secure to prevent falling down. (Air conditioning does not have to be drawn off.)
- Drain coolant.

Removal:



Unlock and detach coolant hose (1).

Release clamp (2) and pull off coolant hose (3).

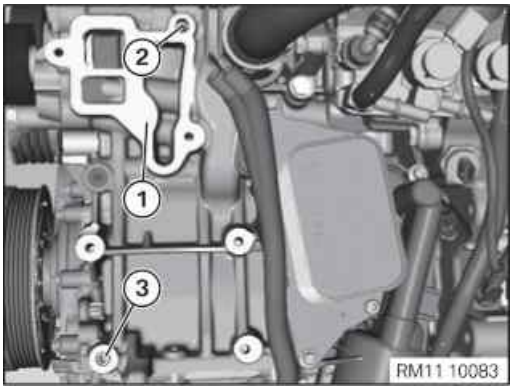


Release screws (1).

Remove alternator support (2).

Installation:

cardiagn.com



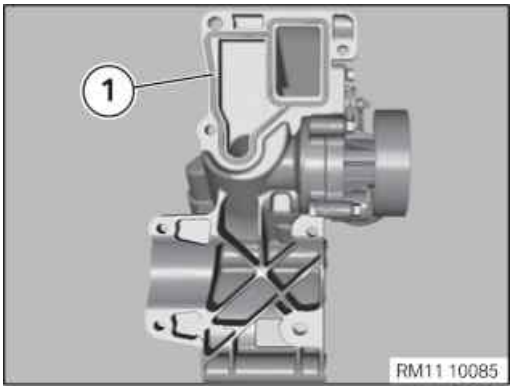
Clean sealing surface (1) with special tool 11 4 470 .

Check centring bushes (2 and 3) for damage, replace if necessary.

Replacement:

Remounting the coolant pump.

Remounting the coolant thermostat.



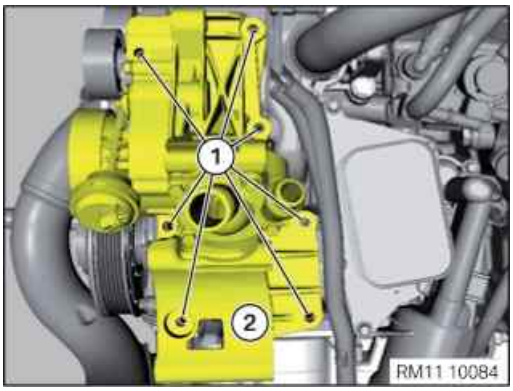
Note:
Sealing bead (1) is bonded to housing of the new alternator support.

Installation note:
If the sealing bead (1) protrudes slightly and if the sealing bead (1) is not damaged, the alternator support can be reinstalled.

If damaged: remove sealing bead (1) using suitable tool.

Replacing the sealing bead (1) sealant 2 2 (Loctite 5970).

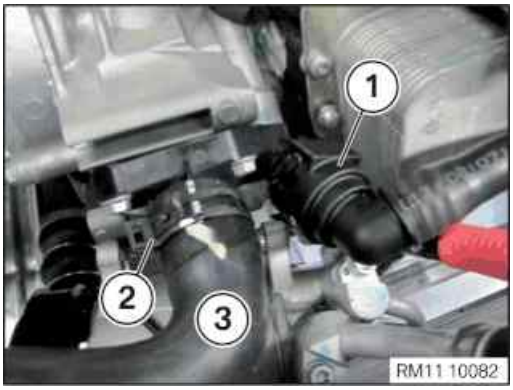
Sealant height approximately 2 to 2.5 mm.



Mount alternator support (2).

Tighten down screws (1).

Tightening torque 11 51 3AZ.



Mount coolant hose (1) (must audibly engage).

Mount coolant hose (3).

cardiagn.com

Required follow-up work:

- Mount air conditioning compressor for air conditioning.
- Install fan cowl.
- Install alternator.
- Top up coolant.

cardiagn.com

11 16 550 Removing and installing/replacing component carrier

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.
For additional information see:
Main group 17
17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.
Non-compliance will result in danger of component damage and/or engine damage.
Filling specification **absolutely must** be adhered to.
The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.
A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

PRELIMINARY WORK

1 – Disconnecting all battery earth leads

cardiagn.com

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

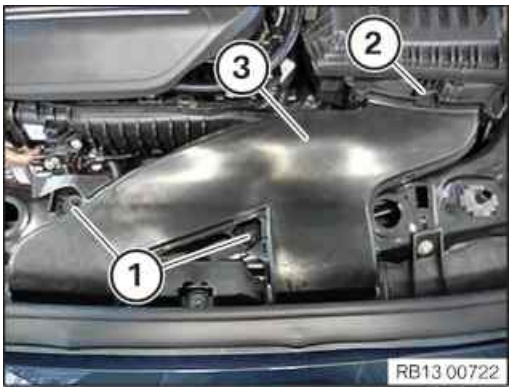
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

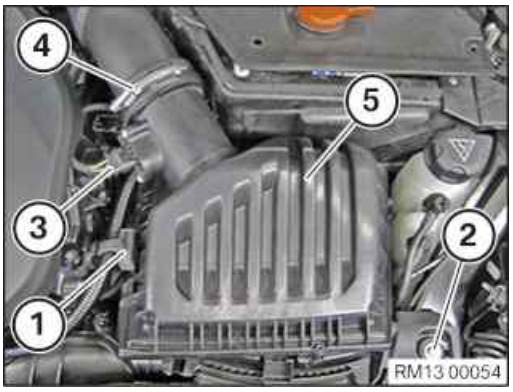
3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

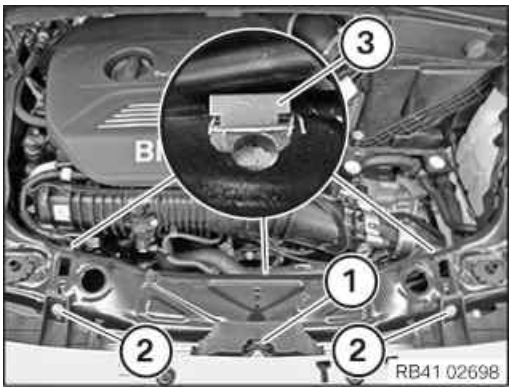
4 – Removing intake silencer housing

cardiagn.com

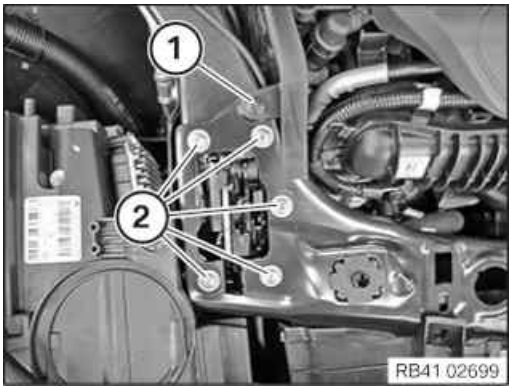


- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

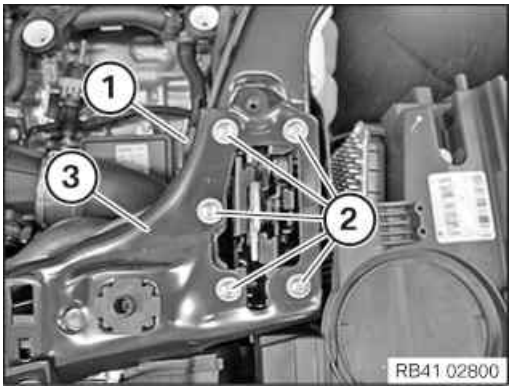
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.

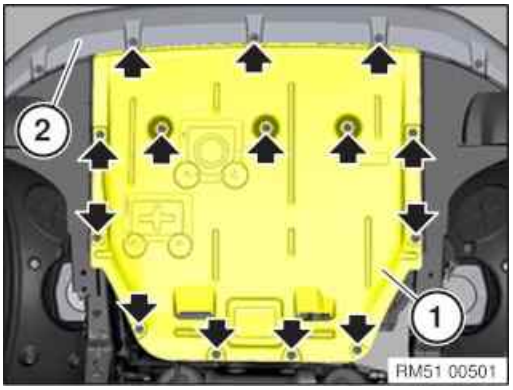


- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

cardiagn.com

7 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

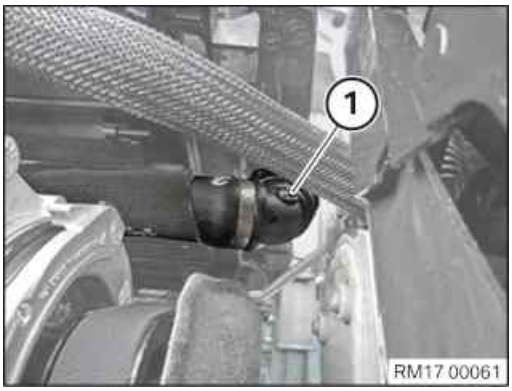
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

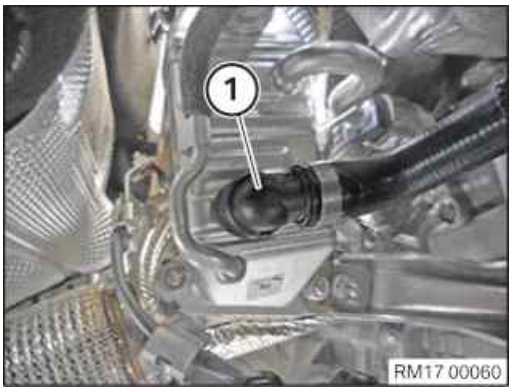
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

cardiagn.com



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

8 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

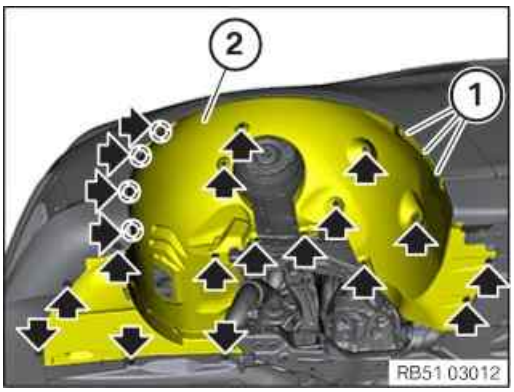
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

9 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

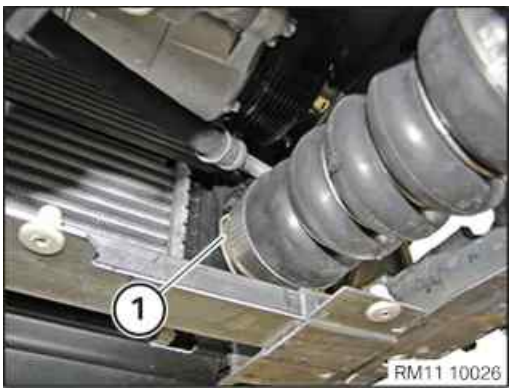
10 – Remove right charge-air line

cardiagn.com

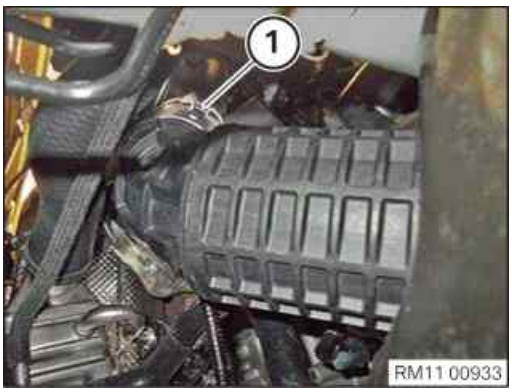
- Release charge air duct screws (1) on oil sump.

- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

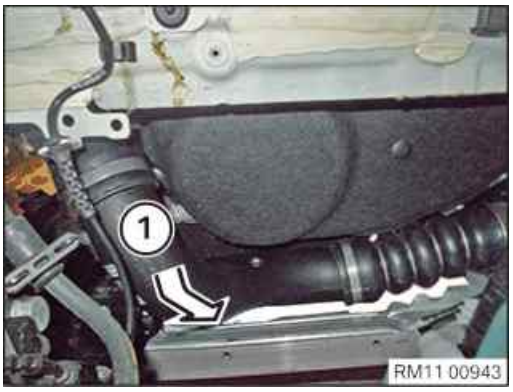


- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



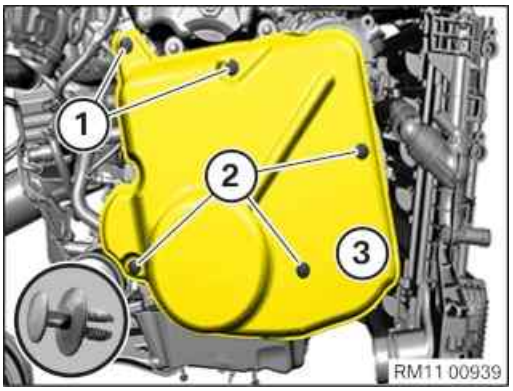
- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

cardiagn.com



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

11 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

12 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

TECHNICAL INFORMATION

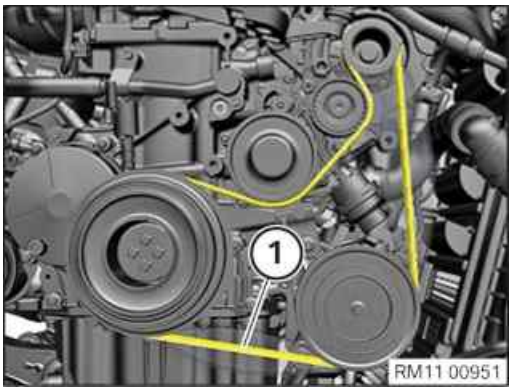
If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

cardiagn.com

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

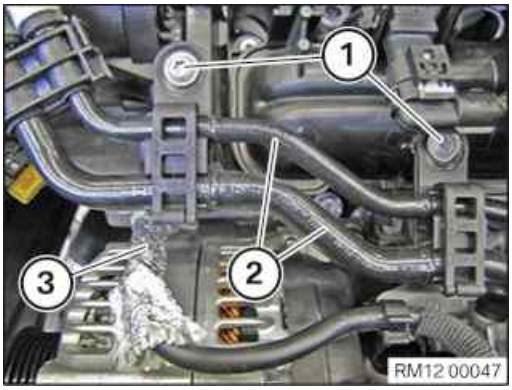


- Guide out the drive belt for the alternator (1) and remove it.

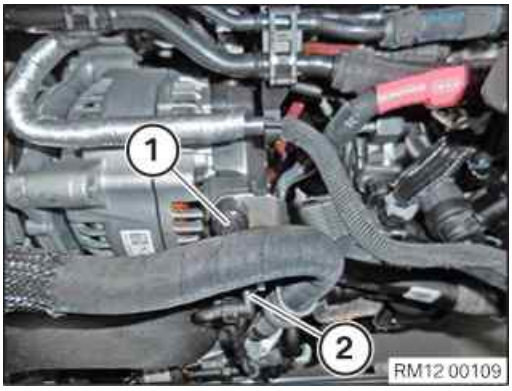
13 – Removing the alternator

Prerequisite

Battery earth lead is disconnected.



- Loosen screws (1).
- Place fuel feed and return line (2) to one side.
- Unlock the coolant ventilation line (3) and pull it off the cylinder head.
- Catch and dispose of escaping coolant.



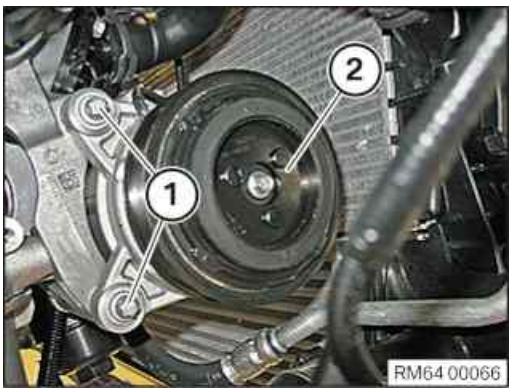
- Remove the cover (1) and loosen the nut below.
- Disconnect positive battery cable from alternator.
- Unlock the plug connection (2) and pull off from the alternator.

cardiagn.com

- Loosen screws (1).

- Feed the alternator (1) out toward the top and remove it.

14 – Releasing air conditioning compressor



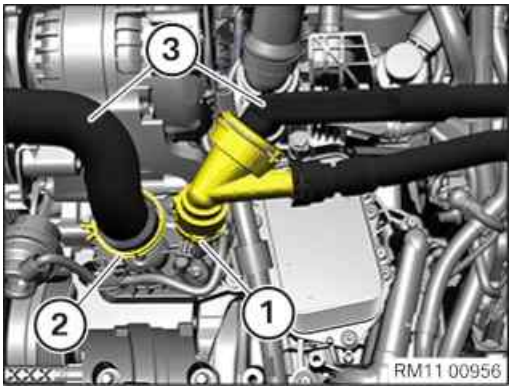
- Protect the air conditioning compressor (2) from falling.
- Loosen screws (1).
- Slide the air conditioning compressor (2) out and set it aside.

MAIN WORK

15 – Removing the component carrier

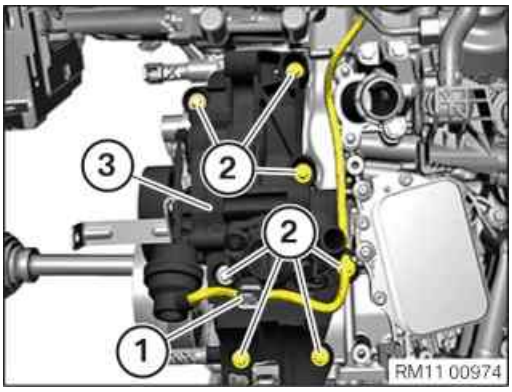
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Unlock the lock (1) on the coolant pipe.
- Loosen hose clamp (2).
- Pull off coolant lines (3) and place to one side.

cardiagn.com



- Disconnect the vacuum line (1) from the vacuum unit and detach it from the clamp on the component carrier.
- Loosen screws (2).
- Lift off and remove the component carrier (3) from the crankcase.

16 – Installing the component carrier

RISK OF DAMAGE

Contaminant or foreign body.

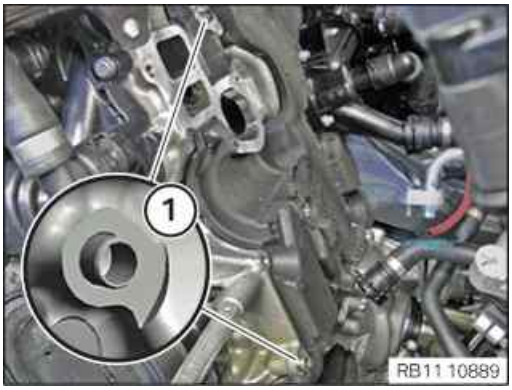
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Clean the sealing surface using special tool **0 495 102 (11 4 470)**.

Check

- Check the fitting sleeves (1) for damage.



desired state

- Fitting sleeves must not be scratched or deformed.

Result

» Fitting sleeves are damaged.

Measure

- Renew fitting sleeves.

Check

- Check the sealing bead (1) for damage.
- Measure the height of the sealing bead in reference to the surface.

Height of the sealing bead

	2,0 mm ... 2,5 mm

cardiagn.com

Result

» The sealing bead is damaged or the measured dimension deviates.

Measure

- Remove sealing bead.
- Reapply sealing bead.

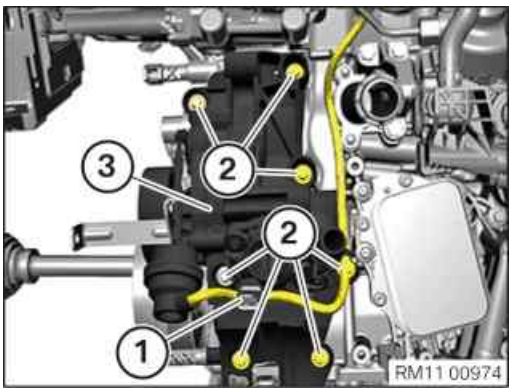
Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

Processing time of liquid sealing compound

< 12 min

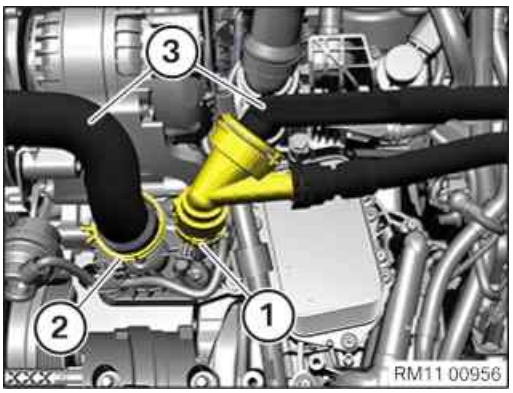


- Position the component carrier (3) on the crankcase.
- Tighten down screws (2).

Component carrier to crankcase

M8x35		Tightening torque	19 Nm

- Connect the vacuum line (1) on the vacuum unit and attach it in the clamp on the component carrier.

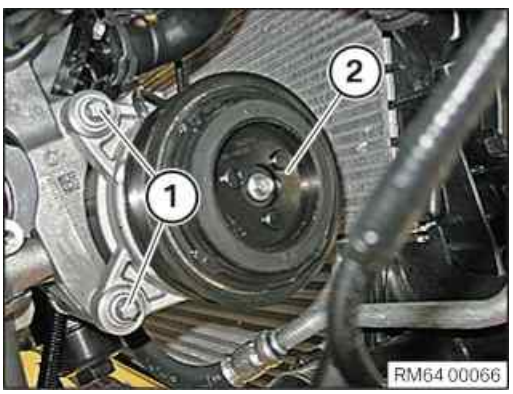


- Connect the coolant lines (3).
- Secure hose clamp (2).
- Lock the lock (1).

  The lock (1) must audibly engage.

POSTPROCESSES

17 – Tighten the air conditioning compressor



- Position the air conditioning compressor (2).
- Tighten the screws (1).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

18 – Installing the alternator

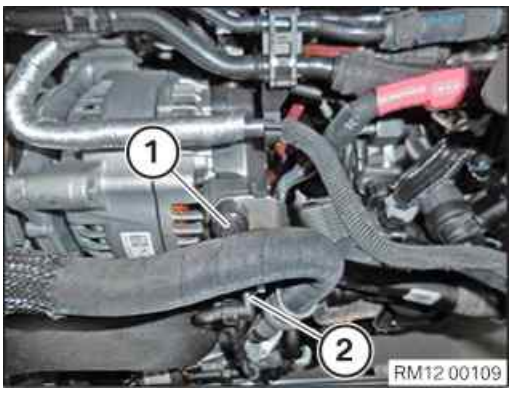
cardiagn.com

- Insert and install the alternator (1).

- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

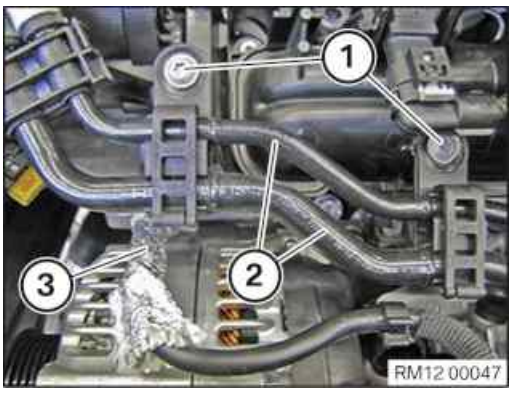


- Mount the positive battery cable to the alternator and secure it with the nut.
- Tighten nut.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

- Mount the cover (1) on the nut.
- Connect the connector (2) to the alternator and lock audibly.



- Mount fuel supply and return line (2).
- Tighten the screws (1).

Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

- Connect the coolant ventilation line (3) to the cylinder head and audibly lock.

19 – Installing the drive belt for alternator

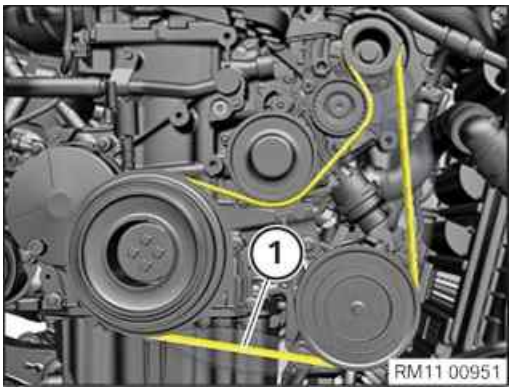
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

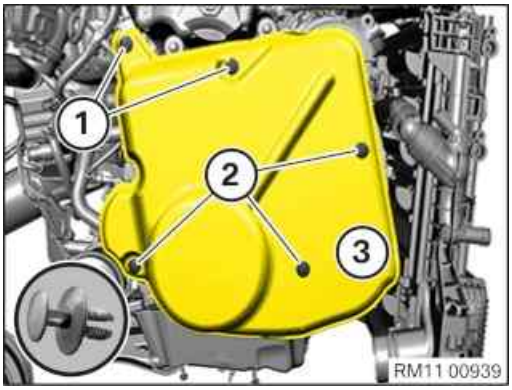
cardiagn.com



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

20 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

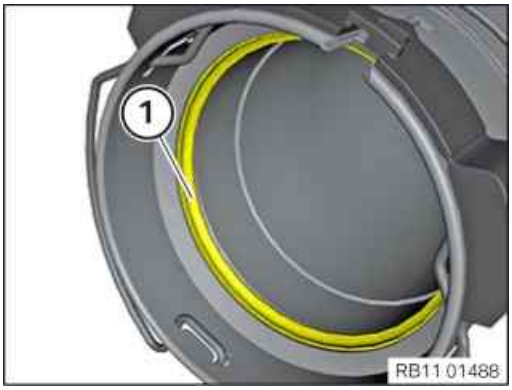
21 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

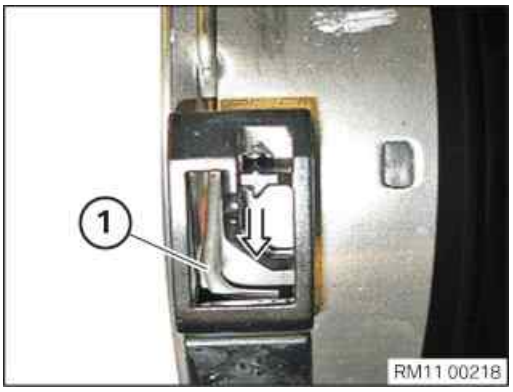
- Replace the gaskets and pressure pipe if necessary.



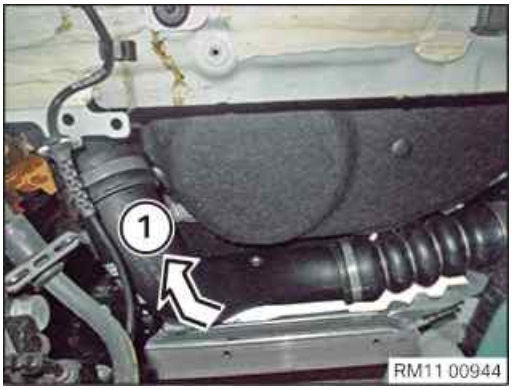
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

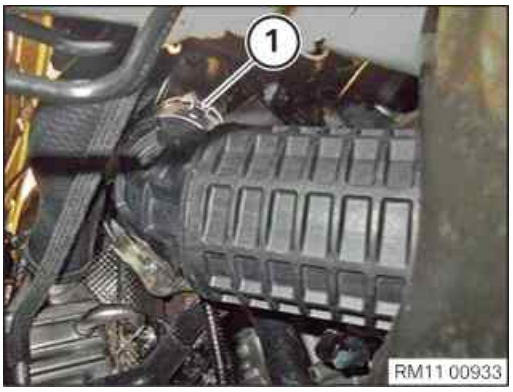
cardiagn.com



- Let the lock (1) engage at the holder (arrow).

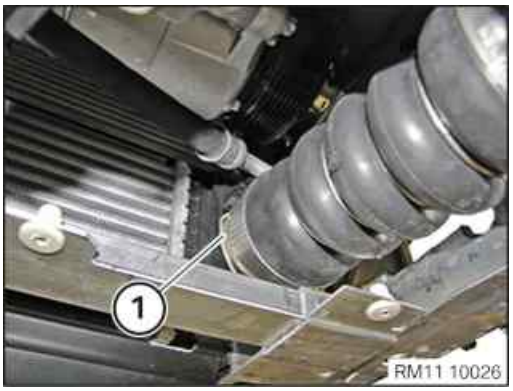


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

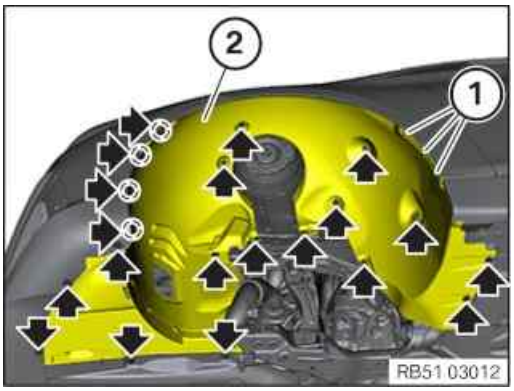
cardiagn.com

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

22 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

23 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

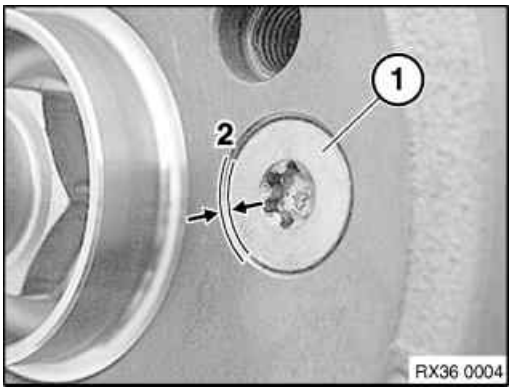
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

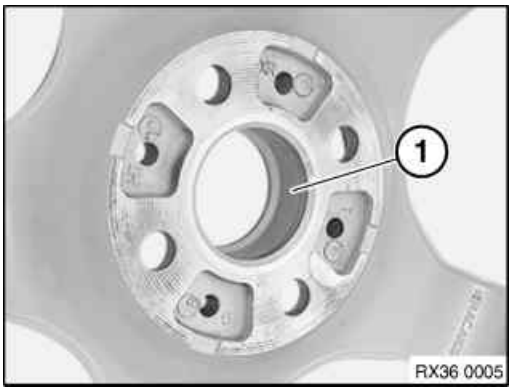


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

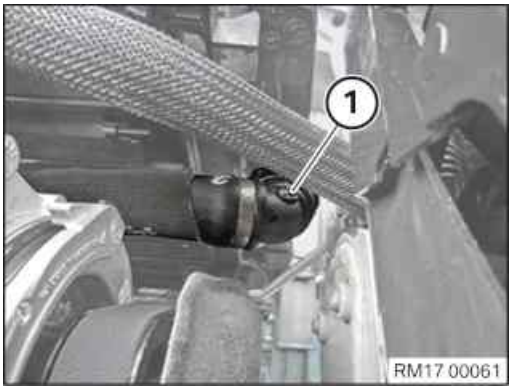
Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

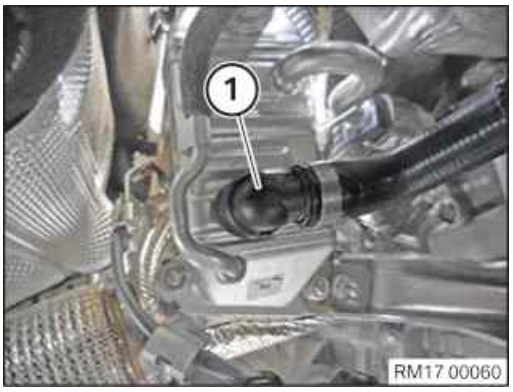
cardiagn.com

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

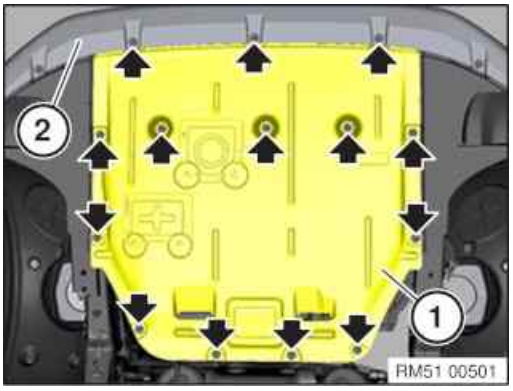


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

25 – Installing the front underbody protection

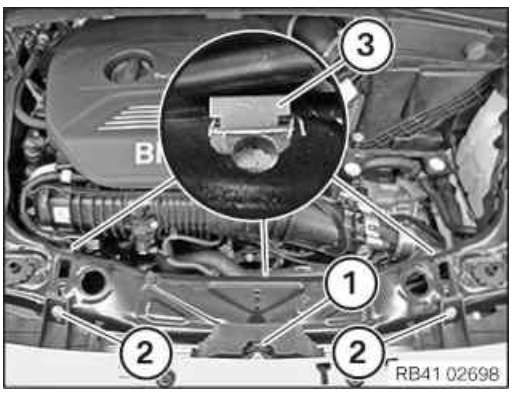


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

26 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

M8		Tightening torque	25 Nm

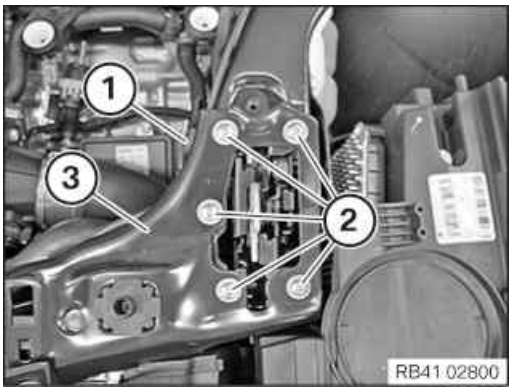
- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

cardiagn.com

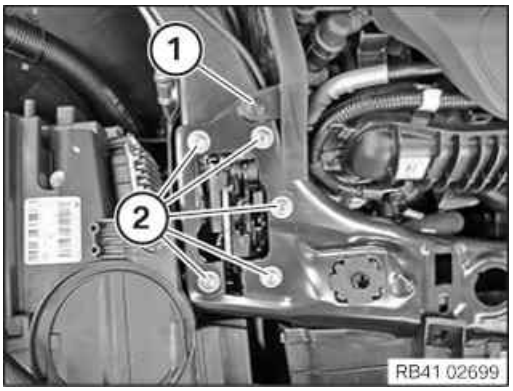


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



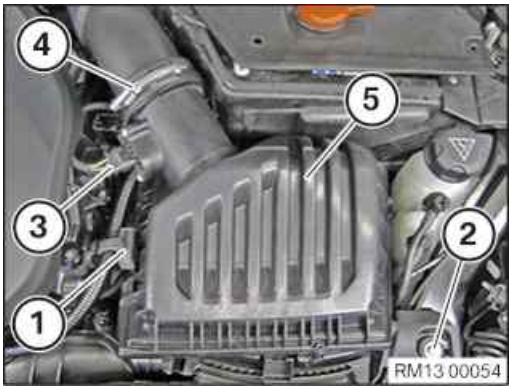
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

27 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

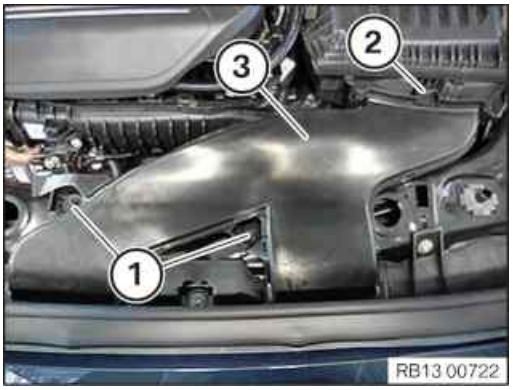
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

28 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

29 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

30 – Disconnecting all battery earth leads

- See additional information.

31 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

11 21 531 Replacing all crankshaft main bearing shells (B37C)

Special tools required:

- 00 2 010

Caution!

Replace main bearing bolts.

There must be no oil in the blind holes **(risk of cracking)**.

Do not wash off bolt coating.

Incorrect assembly of the bearing caps will result in damage to the crankcase.

The code letter **K** on the crankcase stands for ”Kupplungsseite” (German = clutch end).

Installation note:

Bearing classification from **1** to **3** (bearing cap) and **A** to **C** (crankcase) possible.

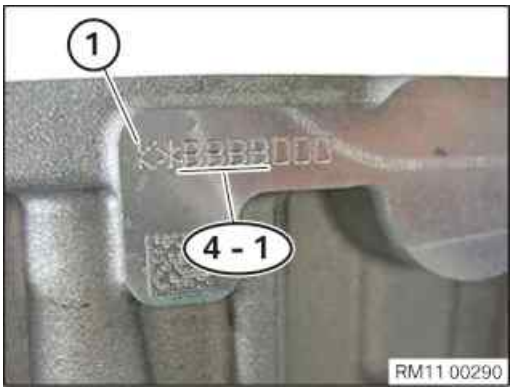
The new main bearing shells and guide bearing shells are indicated in colour or with numbers.

- Bearing colour **blue = 1**
- Bearing colour **green = 2**
- Bearing colour **brown = 3**

Necessary preliminary work:

- Remove crankshaft.

Pay attention to the different bearing classification sequences in the crankcase and the bearing caps!



Bearing classification in crankcase: A / B / C

The code letter (1) **K** on the crankcase stands for "Kupplungsseite" (English = clutch end).

The following code letters (4 - 1) describe the bearing positions **4** to **1** from left to right.

Example (see graphic):

Bearing seat **4**:	Code letter **B**= green bearing shell with lubricating groove.
Bearing seat **3**:	Code letter **B**= green bearing shell with lubricating groove (thrust bearing).
Bearing seat **2**:	Code letter **B**= green bearing shell with lubricating groove.
Bearing seat **1**:	Code letter **B**= green bearing shell with lubricating groove.

cardiagn.com

Bearing classification in bearing cap: 1 / 2 / 3

The coefficients (1- 4) describe the bearing positions **1** to **4** from left to right.

Example (see graphic):

Bearing cap **1**: ID code **2**= green bearing shell without lubricating groove.

Bearing cap **2**: ID code **2**= green bearing shell without lubricating groove.

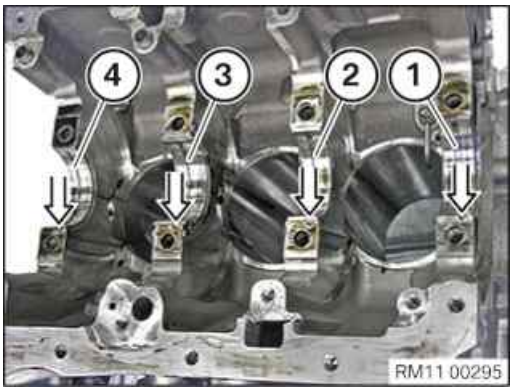
Bearing cap **3**: ID code **2**= green bearing shell without lubricating groove (axial guide bearing).

Bearing cap **4**: ID code **2**= green bearing shell without lubricating groove.

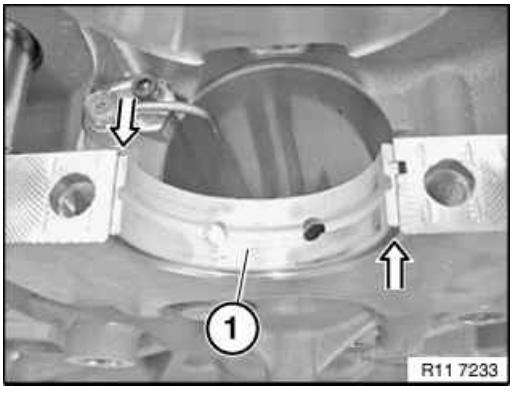
(A/1) Bearing cap / Blue	**(A/2)** Bearing cap / Green	**(A/3)** Bearing cap / Brown
(A/1) Crankcase / Blue	**(A/2)** Crankcase / Blue	**(A/3)** Crankcase / Blue
(B/1) Bearing cap / Blue	**(B/2)** Bearing cap / Green	**(B/3)** Bearing cap / Brown
(B/1) Crankcase / Green	**(B/2)** Crankcase / Green	**(B/3)** Crankcase / Green
(C/1) Bearing cap / Blue	**(C/2)** Bearing cap / Green	**(C/3)** Bearing cap / Brown
(C/1) Crankcase / Brown	**(C/2)** Crankcase / Brown	**(C/3)** Crankcase / Brown

Enter code letters and numbers for crankcase and crankshaft

Code letters/numbers	Bearing seat **1**	Bearing seat **2**	Bearing seat **3**	Bearing seat **4**
Crankcase at top **code letter**				
Crankshaft at bottom **code number**				



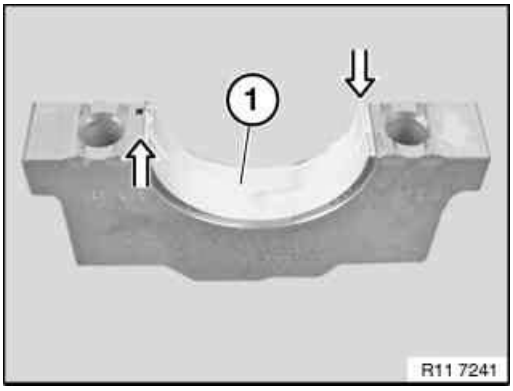
Remove bearing shells 1 to 4.



Place main bearing shell (1) with lubricating groove in crankcase (see arrows).

Observe combination of bearing colours according to the table.

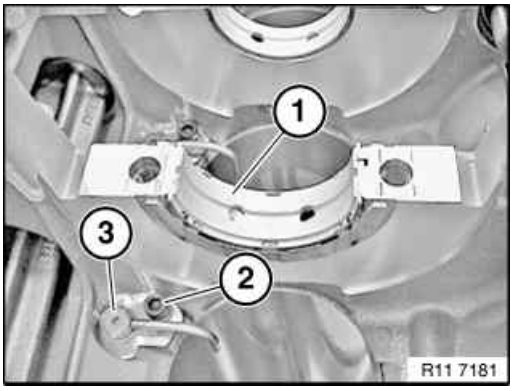
cardiagn.com



Place main bearing shell (1) with no lubricating groove in the bearing cap (see arrows).

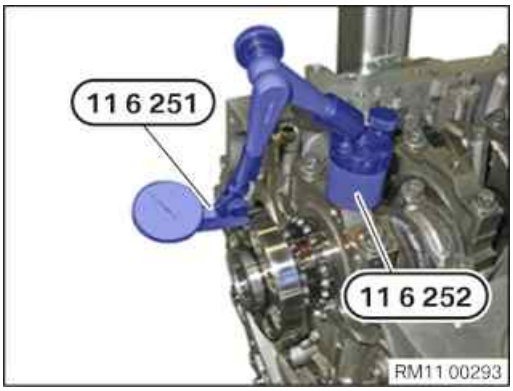
Installation note:
Pay attention to guide lug on main bearing shell (1).

Observe combination of bearing colours according to the table.



Installation note:
Thrust bearing (1) on the crankshaft is installed at bearing position 3.

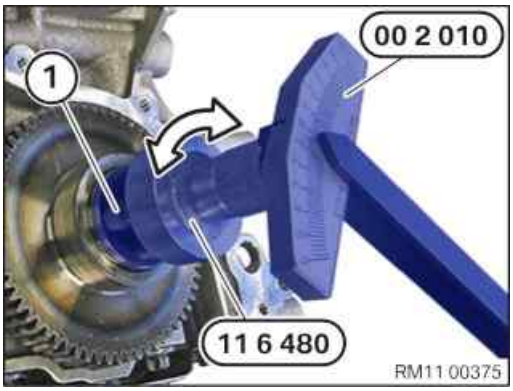
Observe combination of bearing colours according to the table.



Install crankshaft.

Check side clearance.

If necessary, check guide bearing shells, crankshaft and engine block.



Rotate crankshaft (1) with special tool 00 2 010 in direction of arrow.

Check crankshaft coefficient of friction.

Required follow-up work:

Assemble engine.

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 21 001 Replacing crankshaft

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

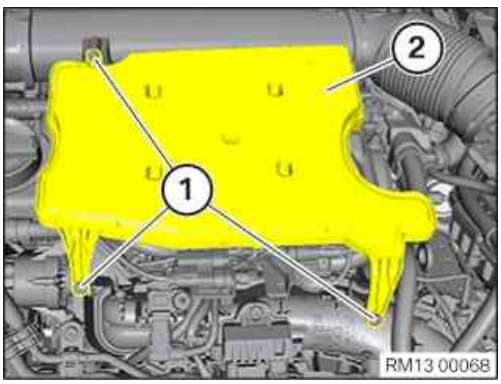
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

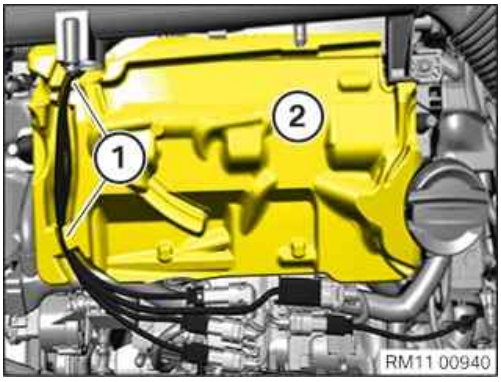
3 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

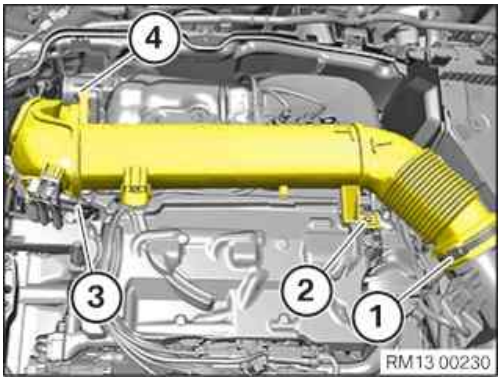
cardiagn.com

4 – Remove the acoustic cover for the injectors

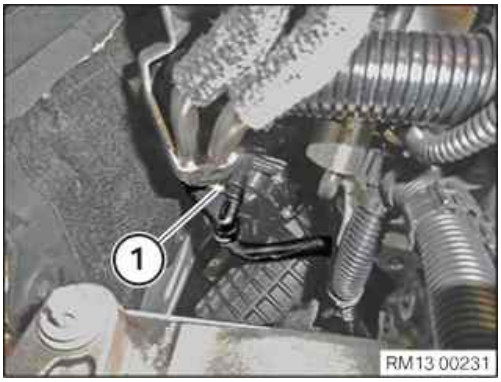


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

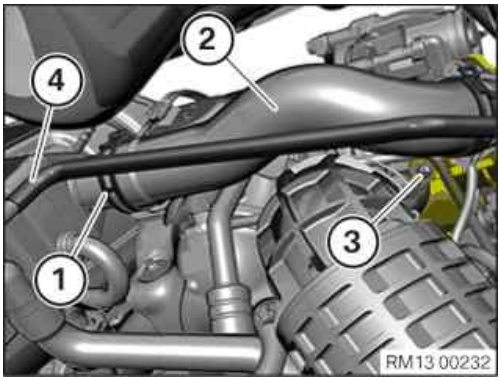
5 – Removing clean air pipe



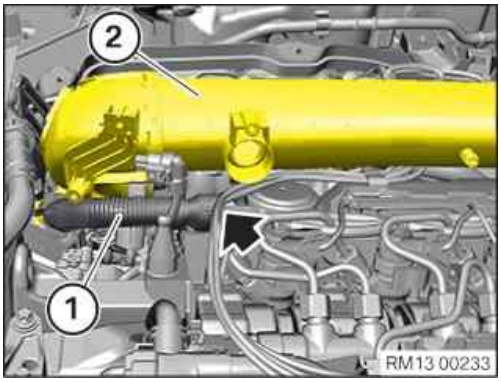
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

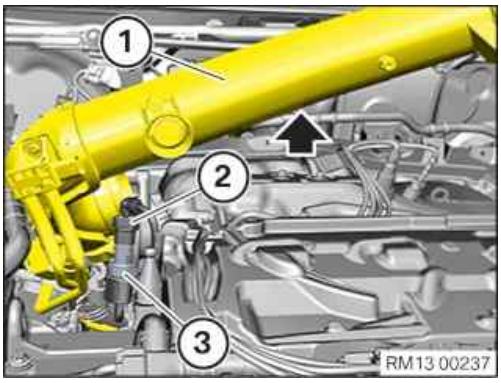


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

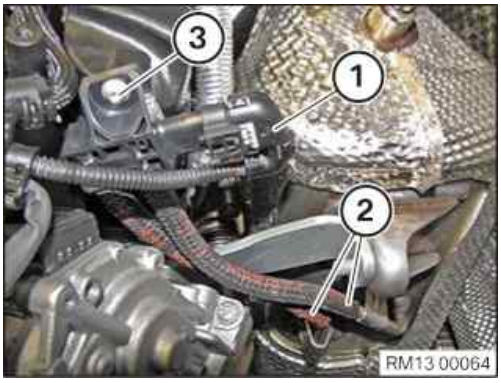
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

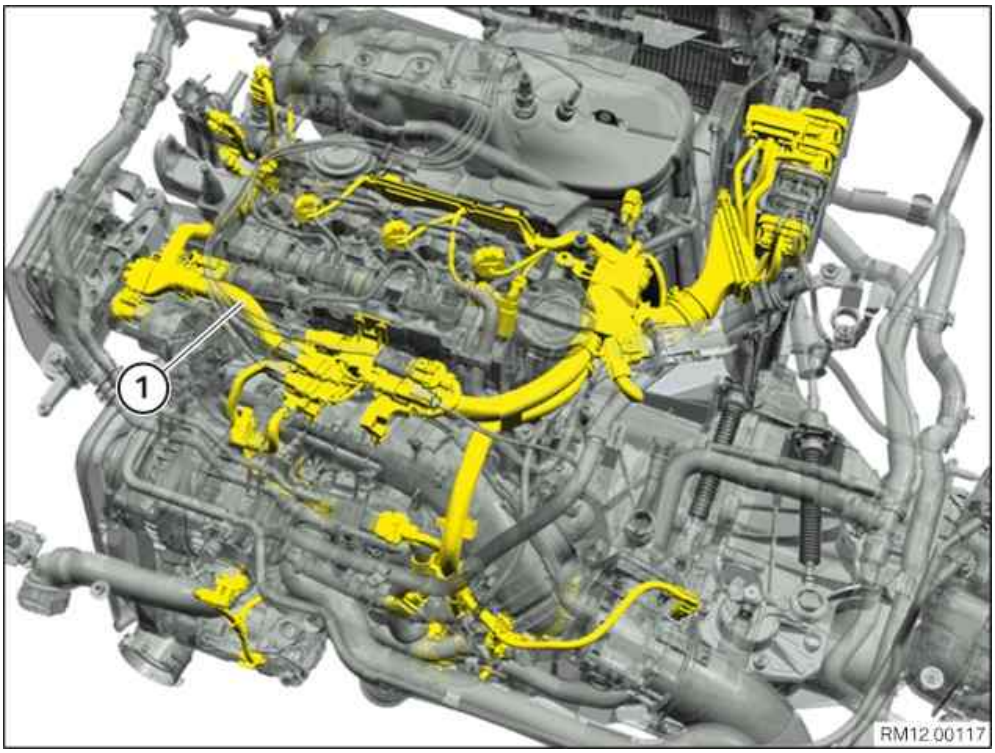


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

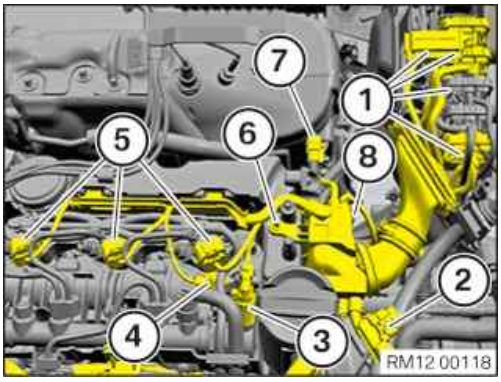
7 – Removing assemblies (on lifting table)

cardiagn.com

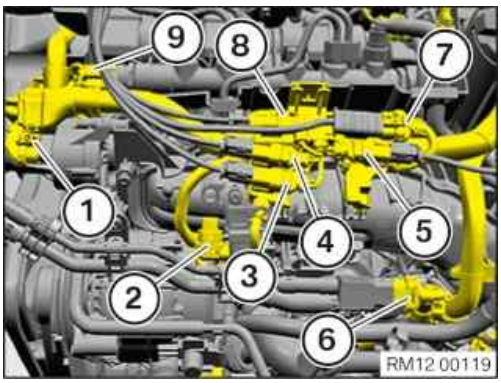
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



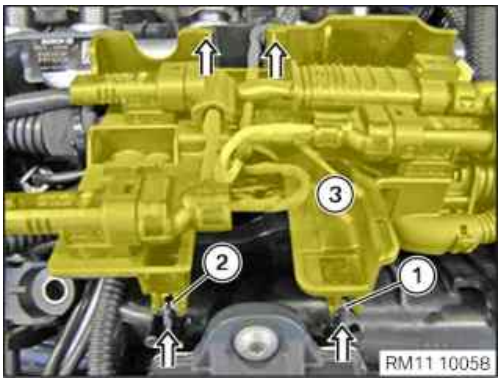
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



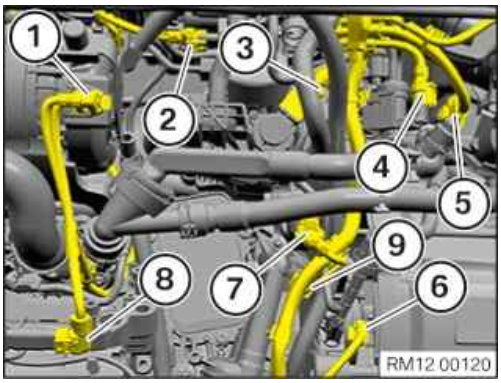
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

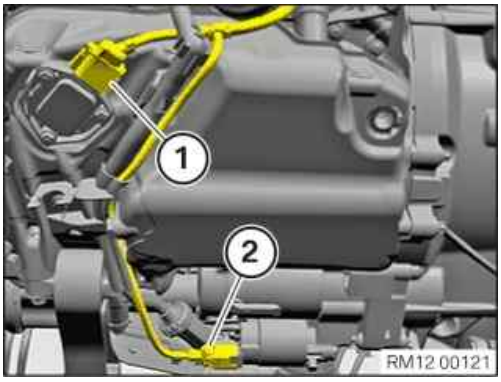
cardiagn.com



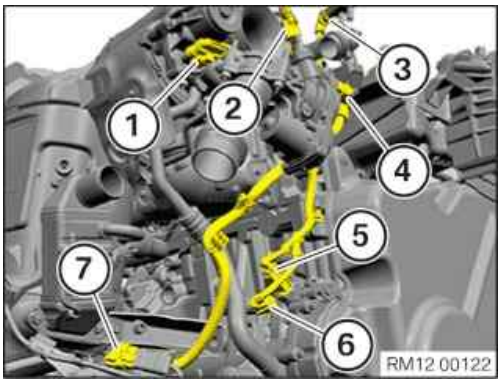
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



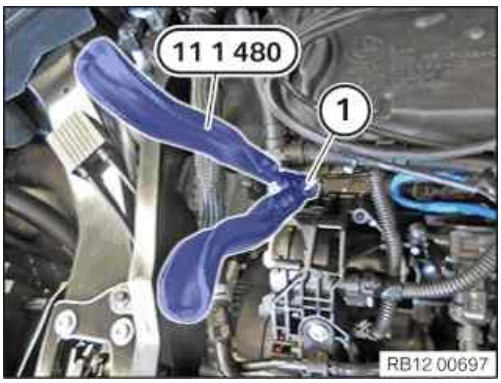
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

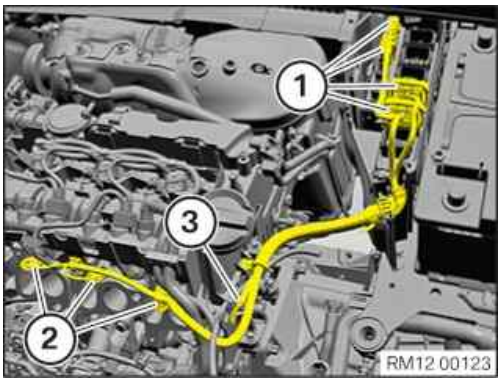


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

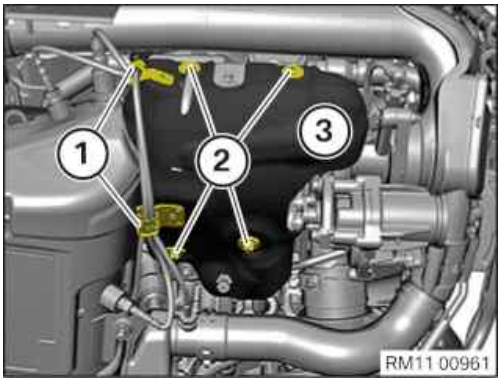
▶ Removing heat shield from top exhaust turbocharger

WARNING

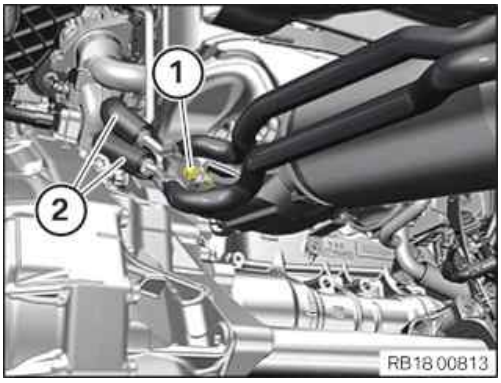
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



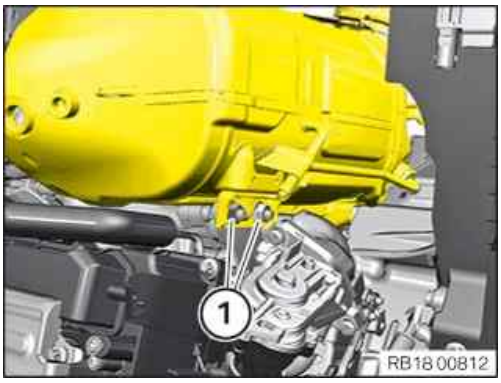
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



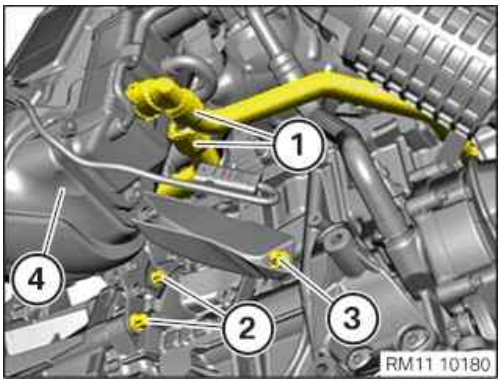
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

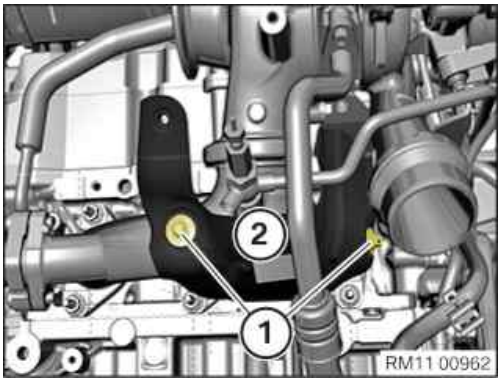
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

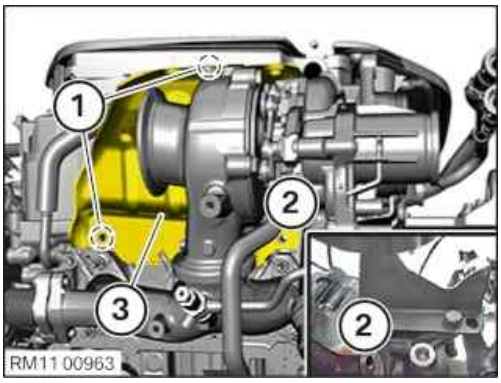
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



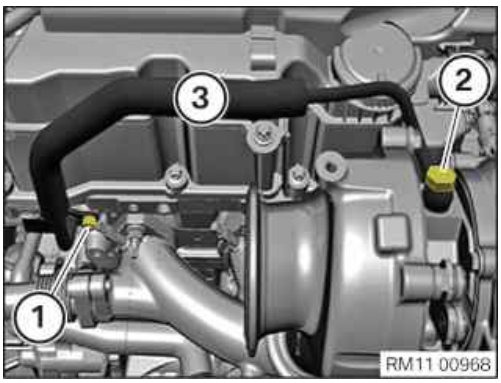
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

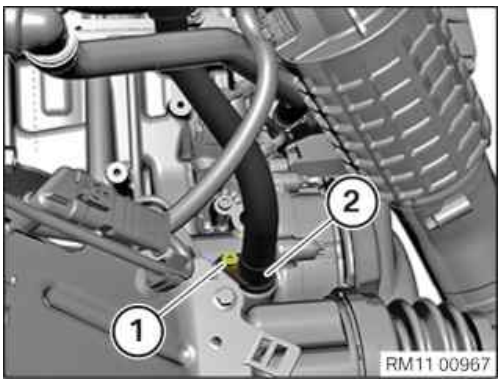
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

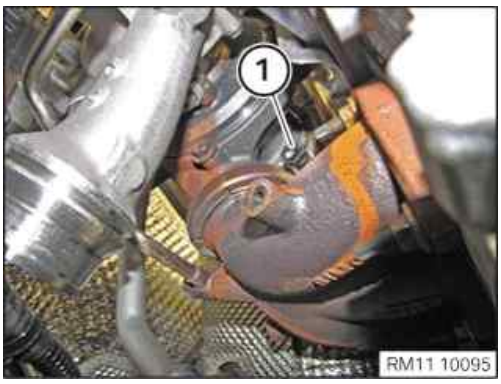
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

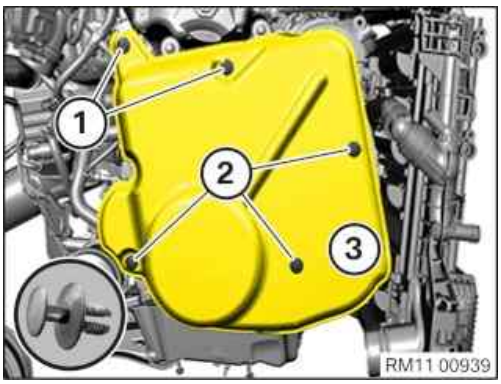
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

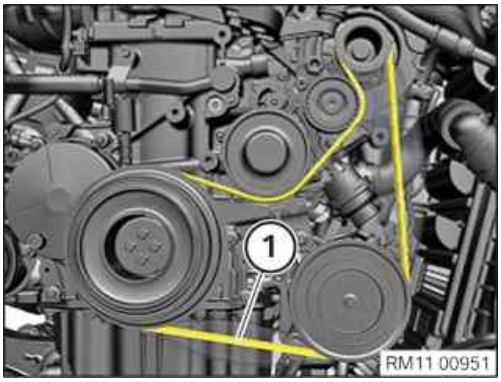
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

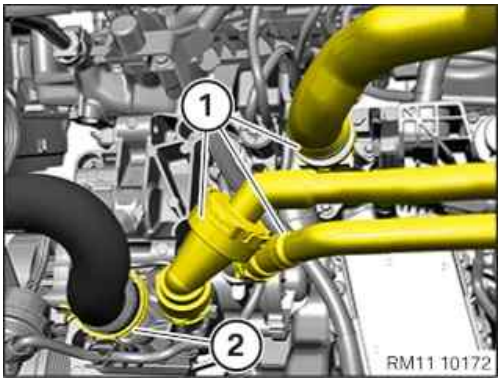
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

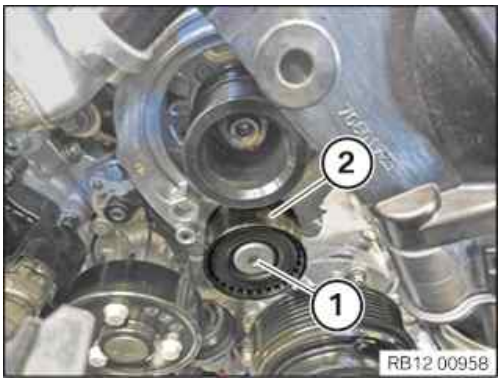


- Guide out the drive belt for the alternator (1) and remove it.

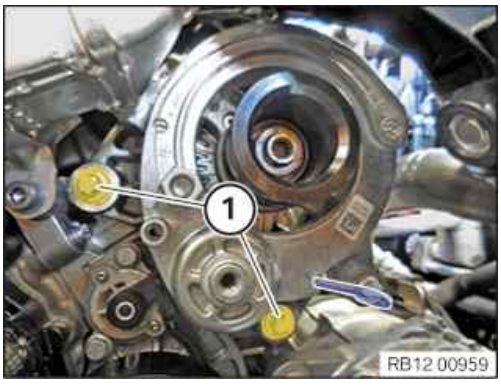


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

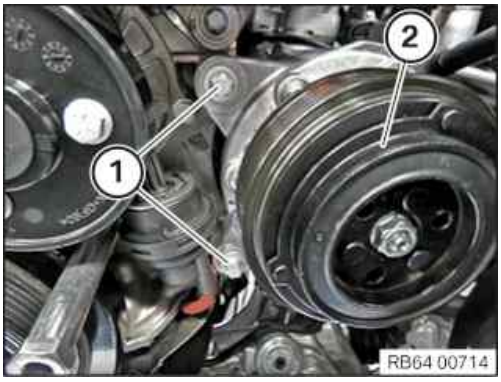
cardiagn.com



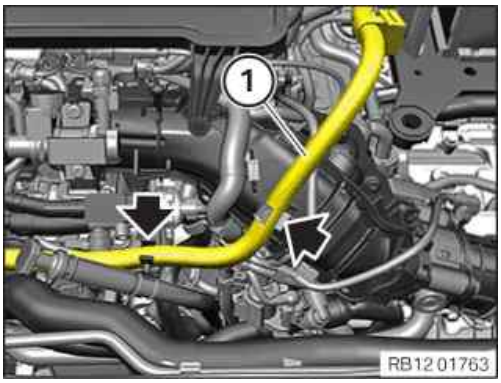
- Loosen screw (1).
- Remove the deflecting element (2).



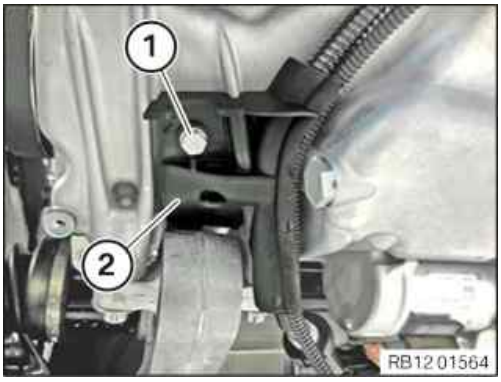
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

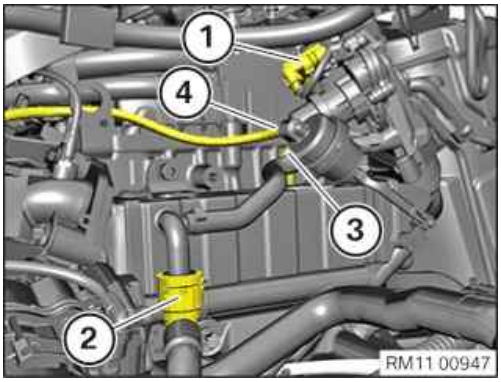
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

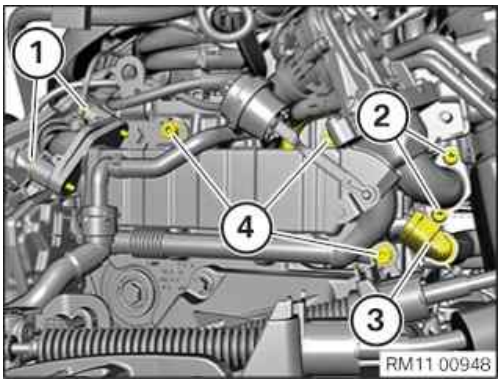
- Perform all work only on components that have cooled down.



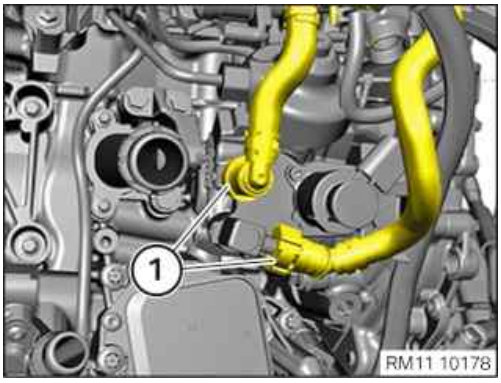
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

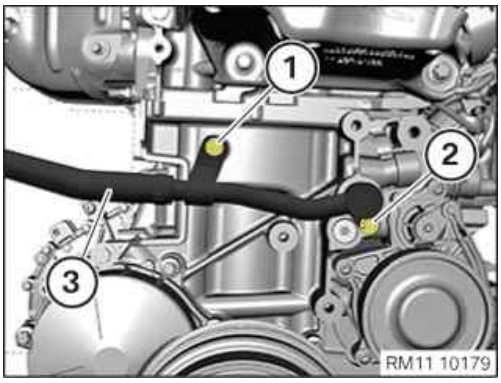


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Detach the engine from the manual gearbox

Prerequisite

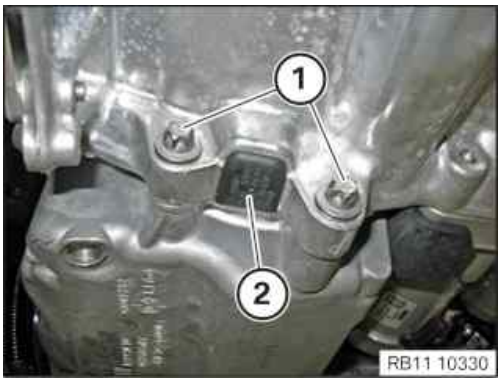
Engine has been removed.

CAUTION

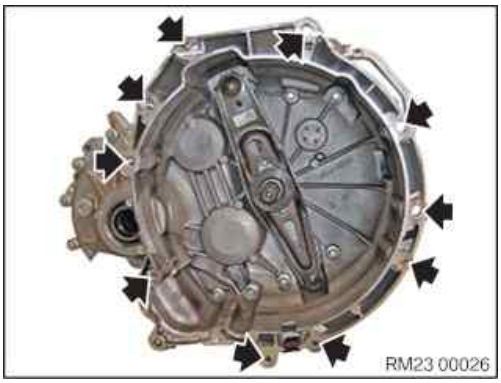
Heavy component.

Heavy components can lead to injury or damage.

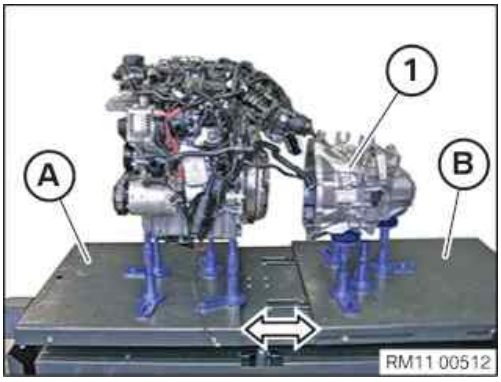
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).



- Remove screws (arrows).



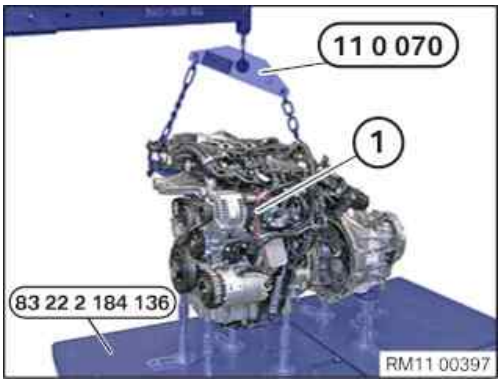
- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Attach engine lifter to special tool **0 490 579 (11 0 070)** and lift engine (1) off lifting table.

9 – Mount engine on assembly stand

CAUTION

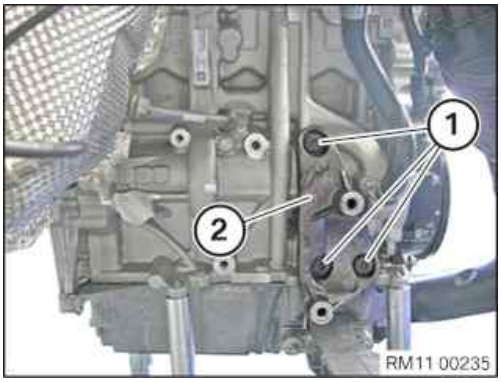
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

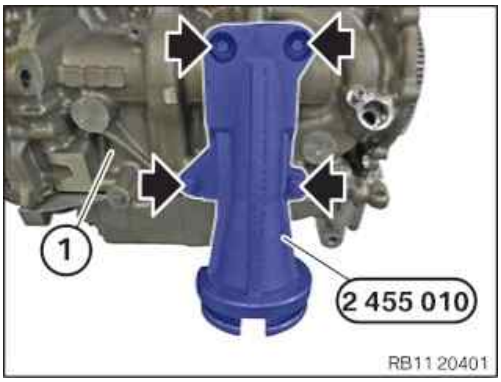
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Loosen screws (1).
- Guide out and remove holder (2).

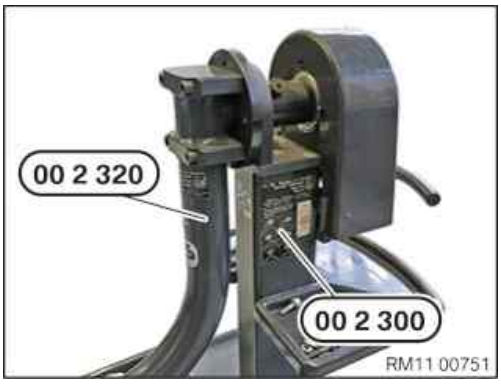
cardiagn.com



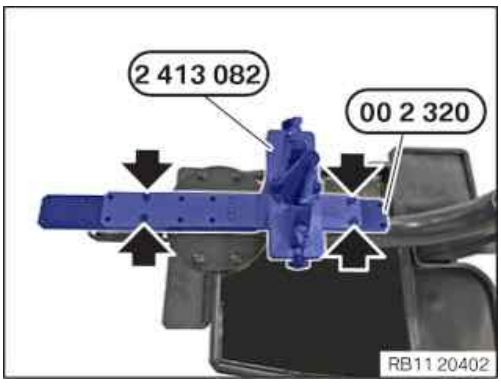
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

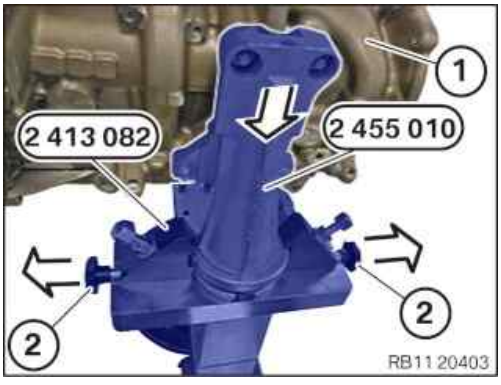


- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

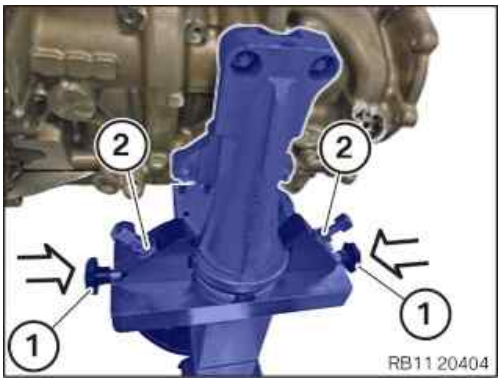
M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.



- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

cardiagn.com



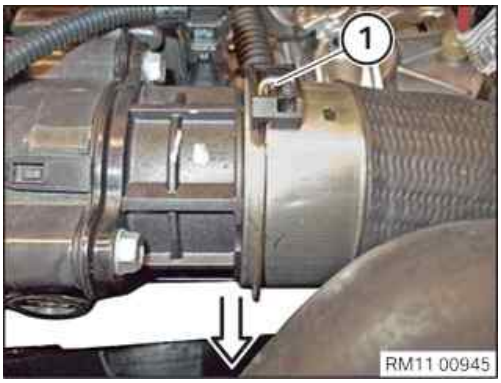
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

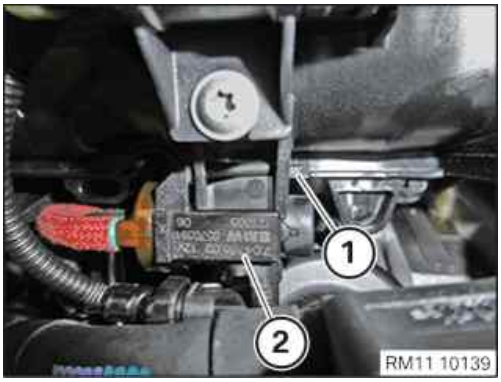
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

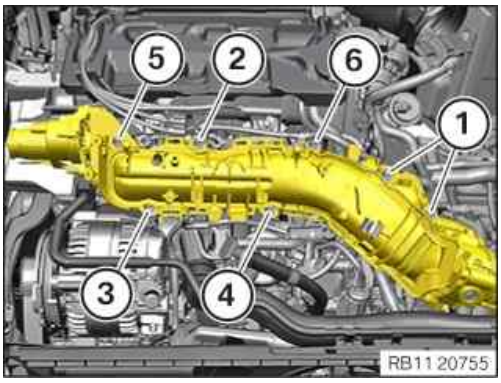


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

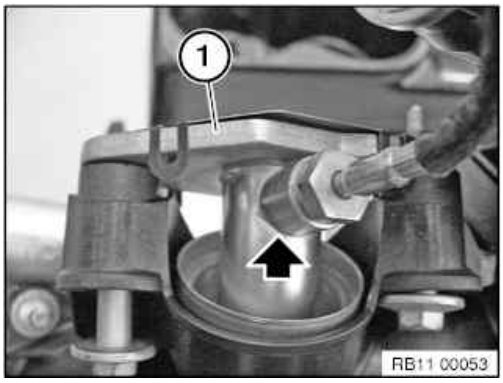


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

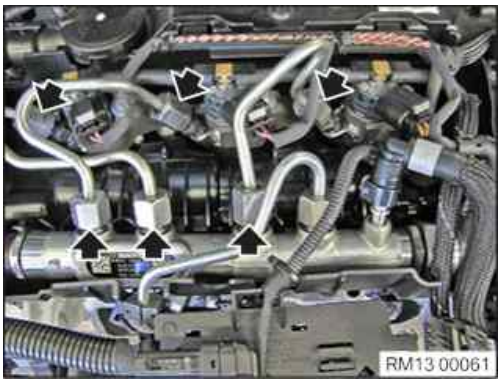
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

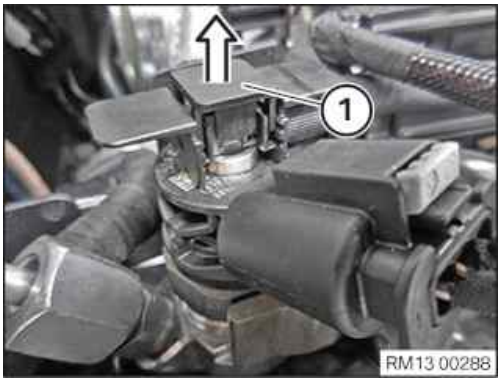
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

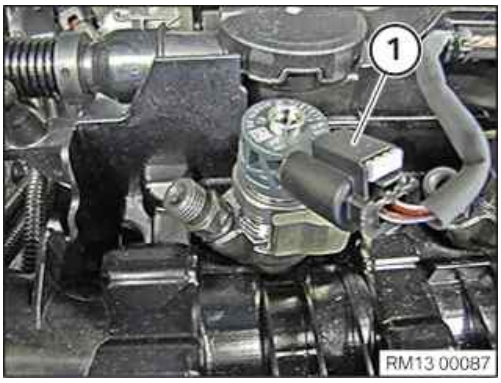
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

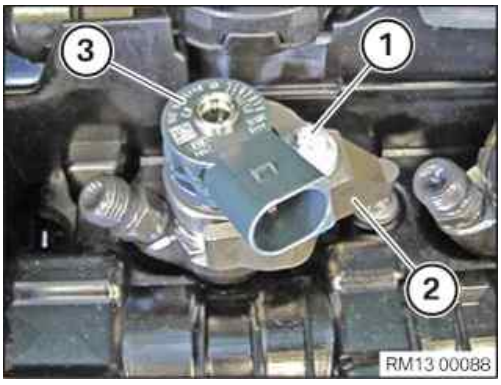
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

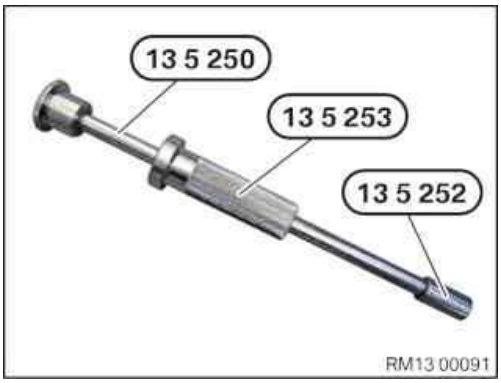
▶ **Loosen stuck injectors**

RISK OF DAMAGE

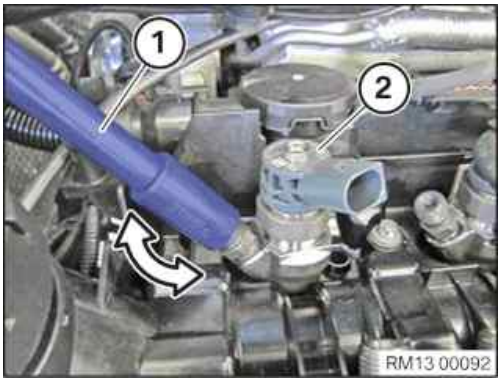
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

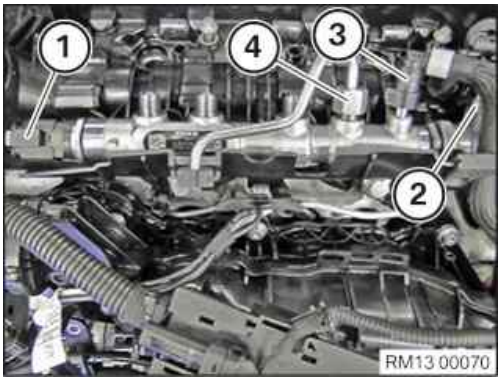
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

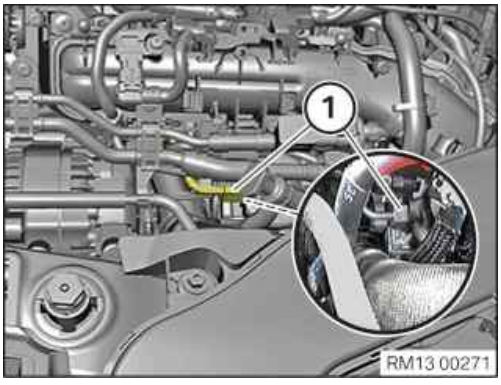
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

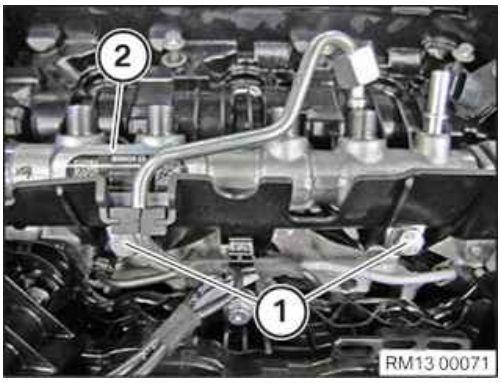


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

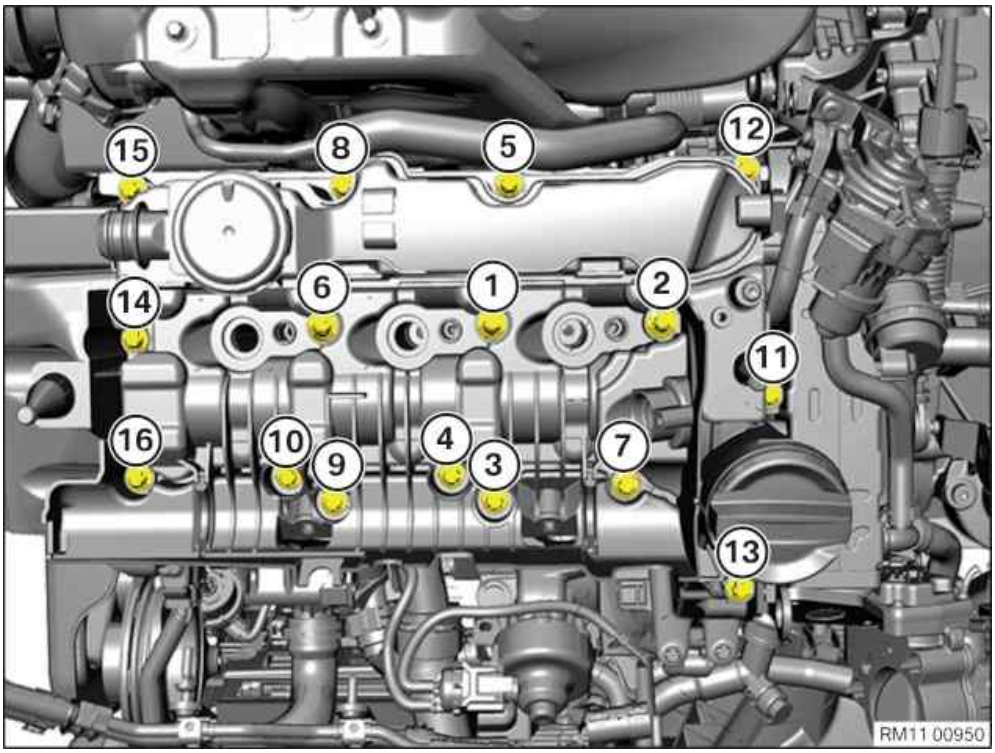
cardiagn.com



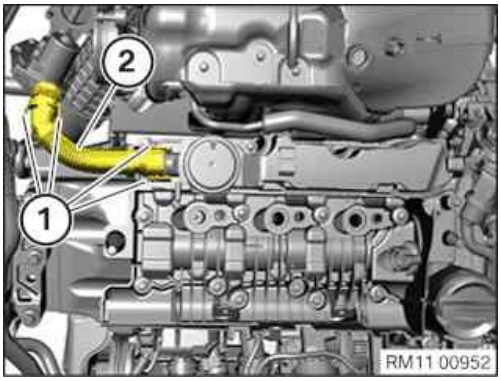
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover

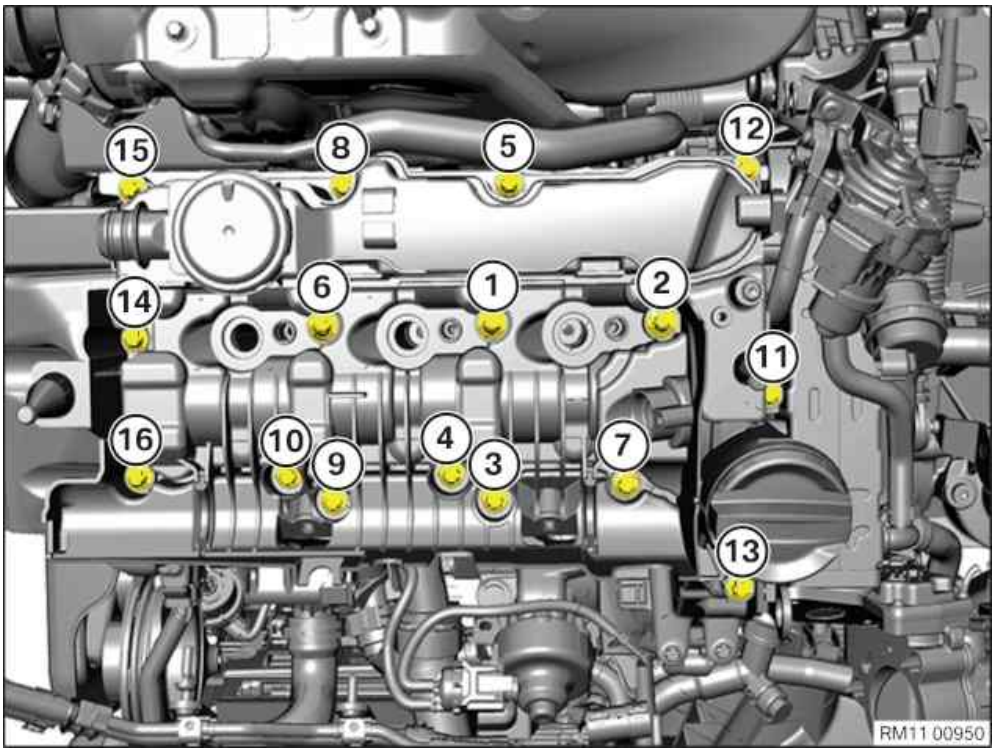


1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

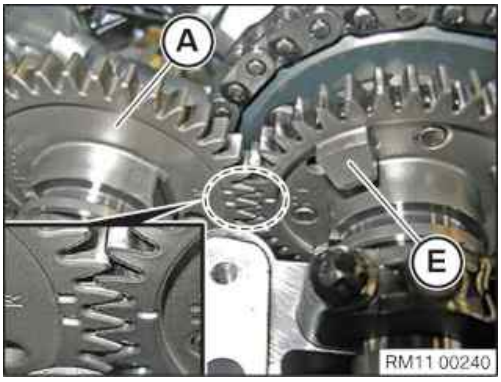
- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

cardiagn.com

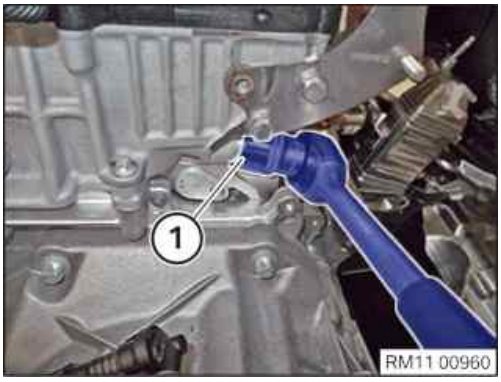
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

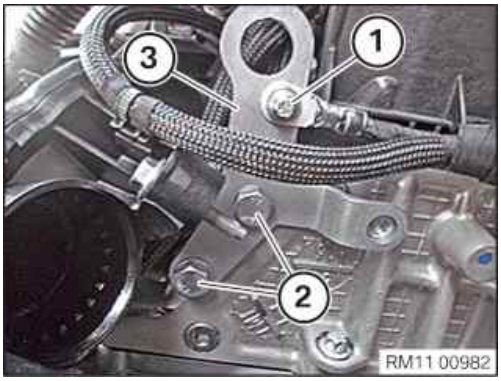


TECHNICAL INFORMATION

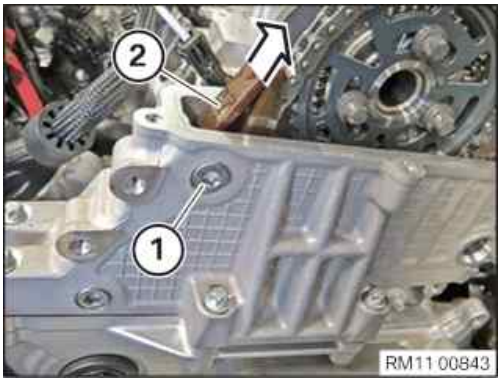
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

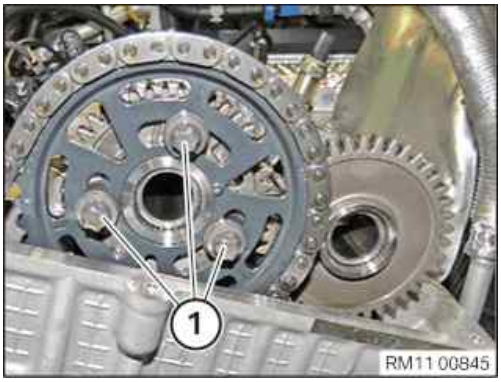


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

cardiagn.com

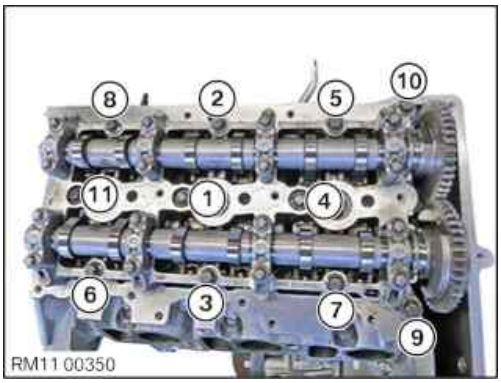
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

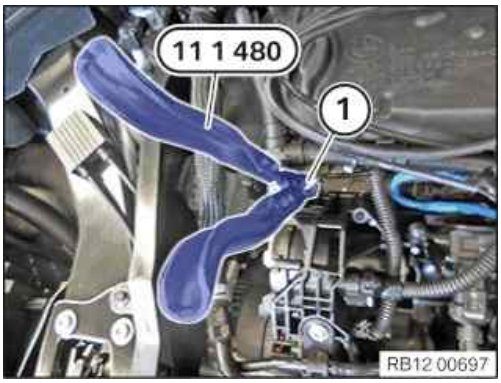
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

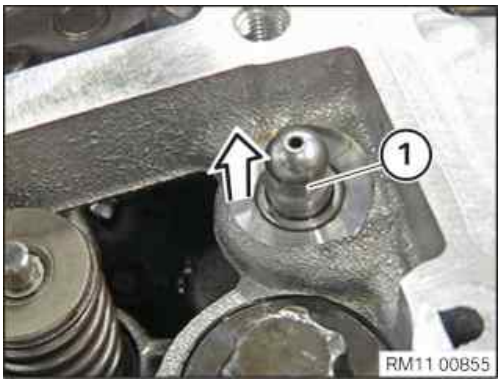
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

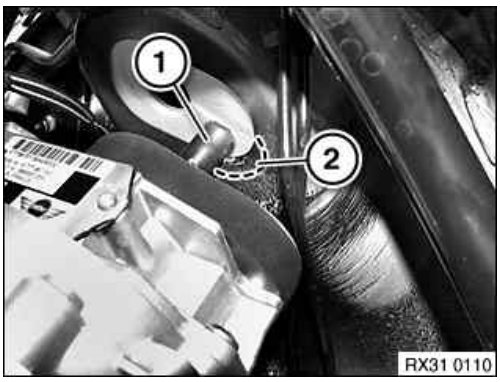
24 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

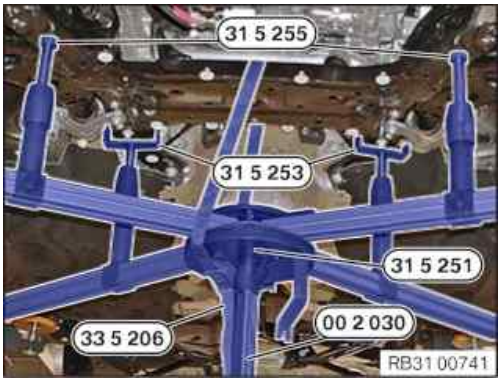
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

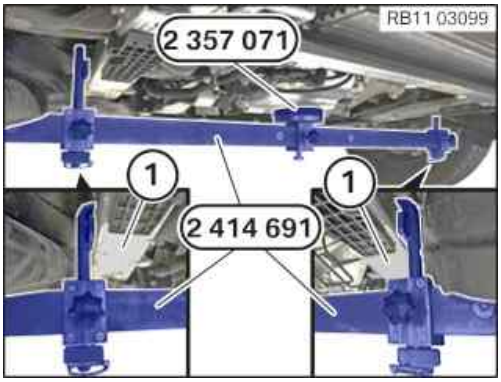
- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and set it aside.



- Prepare special tool **2 414 691** together with the special tool **2 357 071**.
- Attach special tool **2 414 691** to front axle support and correctly align the special tool **2 357 071** under the oil sump and tighten.
- Turn special tool **2 414 691** at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools**2 414 691** and **2 357 071**.

- Remove all glow elements with special tool **0 491 068 (11 6 050)** or a standard tool.

cardiagn.com

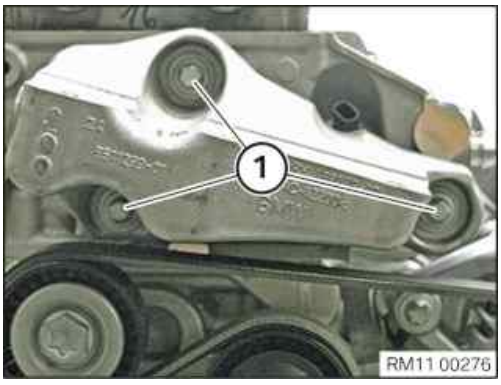
- Loosen screws (1).

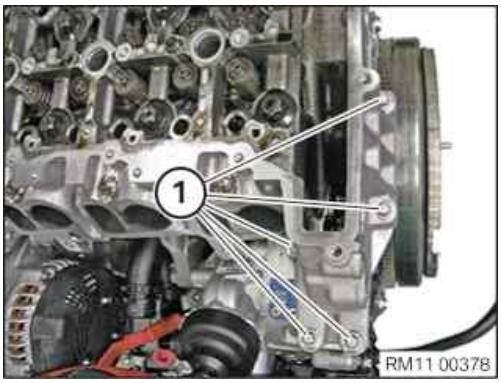


- Loosen screws (1).

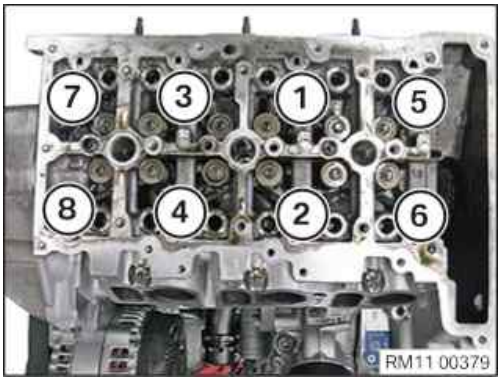
- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (8) to (1).

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

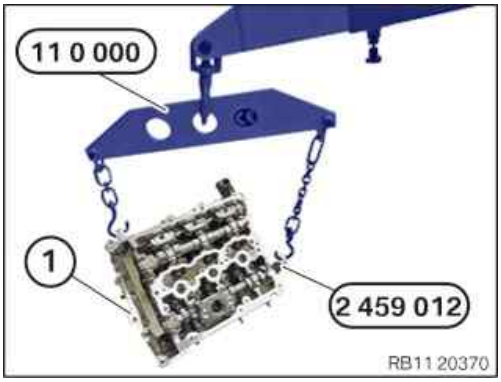
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

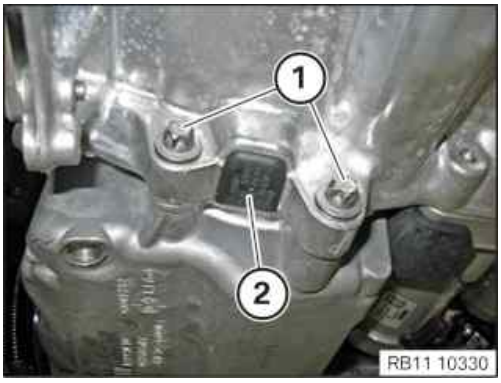
- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

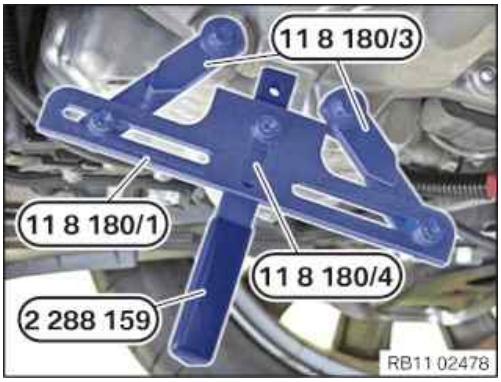


- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

25 – Removing the vibration damper



- Release the transmission bolts (1).
- Remove the protective cap (2).



- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

cardiagn.com

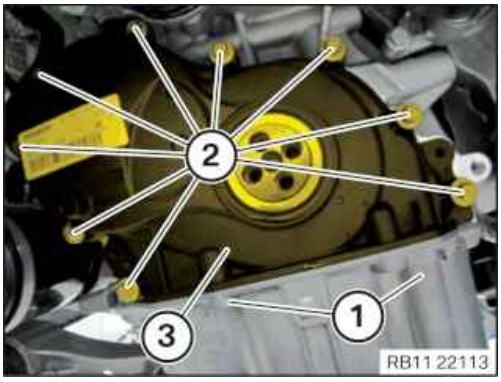
- Loosen screws in the area (1).
- Remove the vibration damper (2).

26 – Remove gear case cover



- Loosen screws (1).
- Loosen screws (2).
- Guide out and remove timing case cover (3).

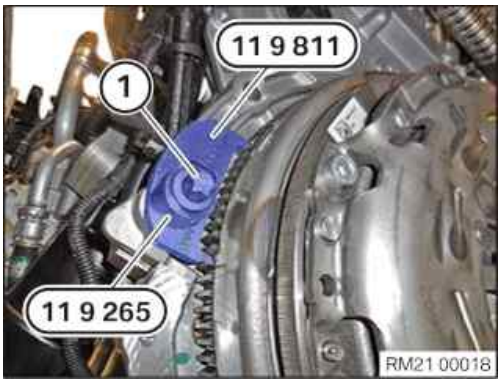
27 – Remove clutch

CAUTION

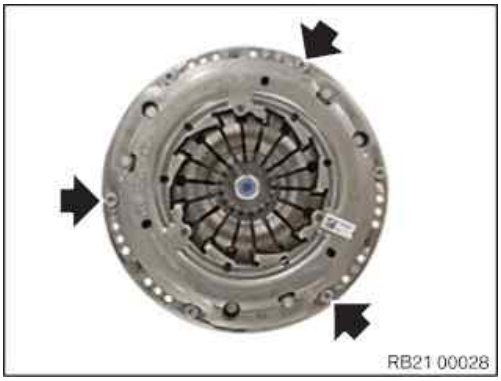
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

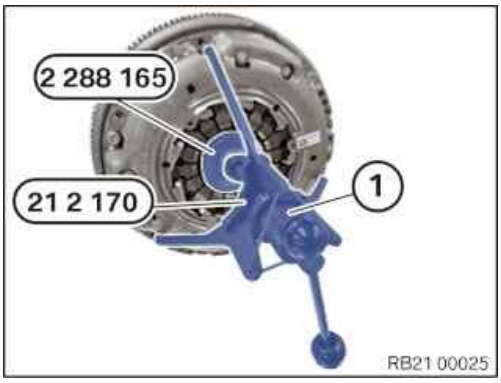


- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.

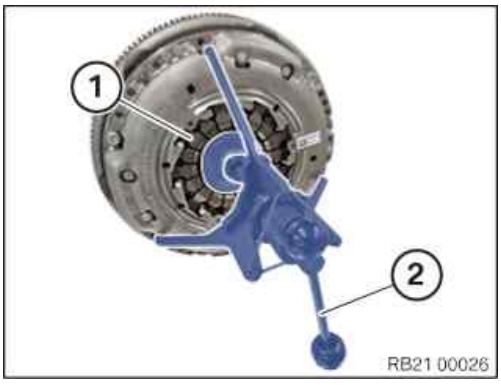


- Detach 3 screws to attach special tool **0 493 839 (21 2 170)** and **2 288 165**.

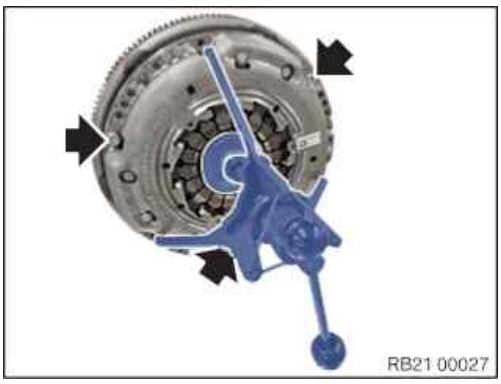
cardiagn.com



- Position special tool **0 493 839 (21 2 170)** and **2 288 165** and tighten on the knurled screw (1).



- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.



- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

28 – Removing flywheel

CAUTION

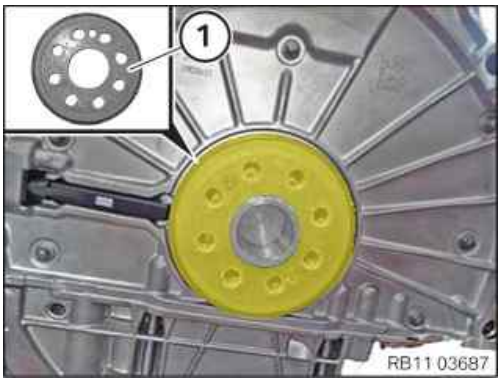
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

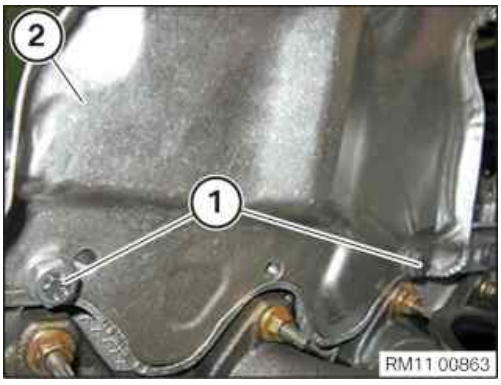
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

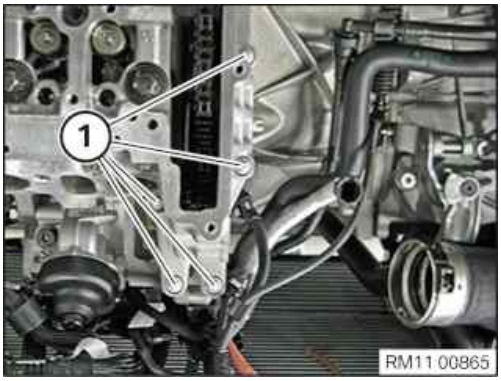
29 – Remove rear timing case cover

Prerequisite

Transmission is removed.



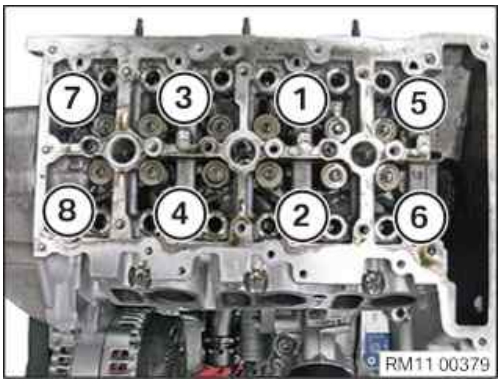
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



TECHNICAL INFORMATION

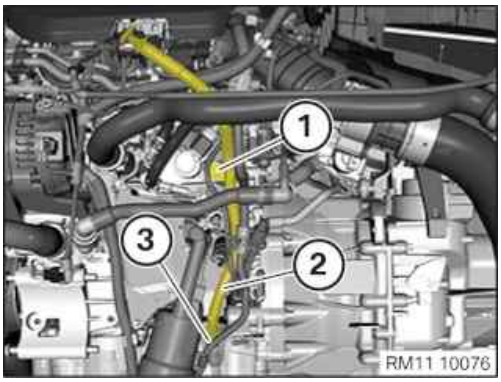
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

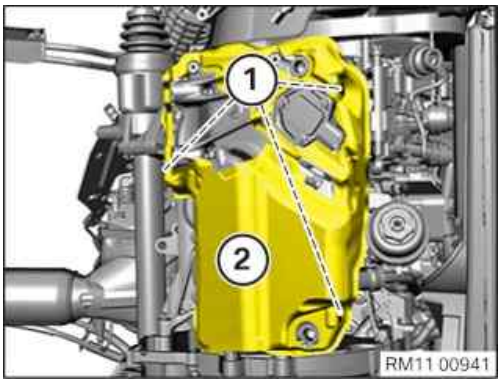


- Loosen the cylinder head bolts in the sequence from (8) to (1).

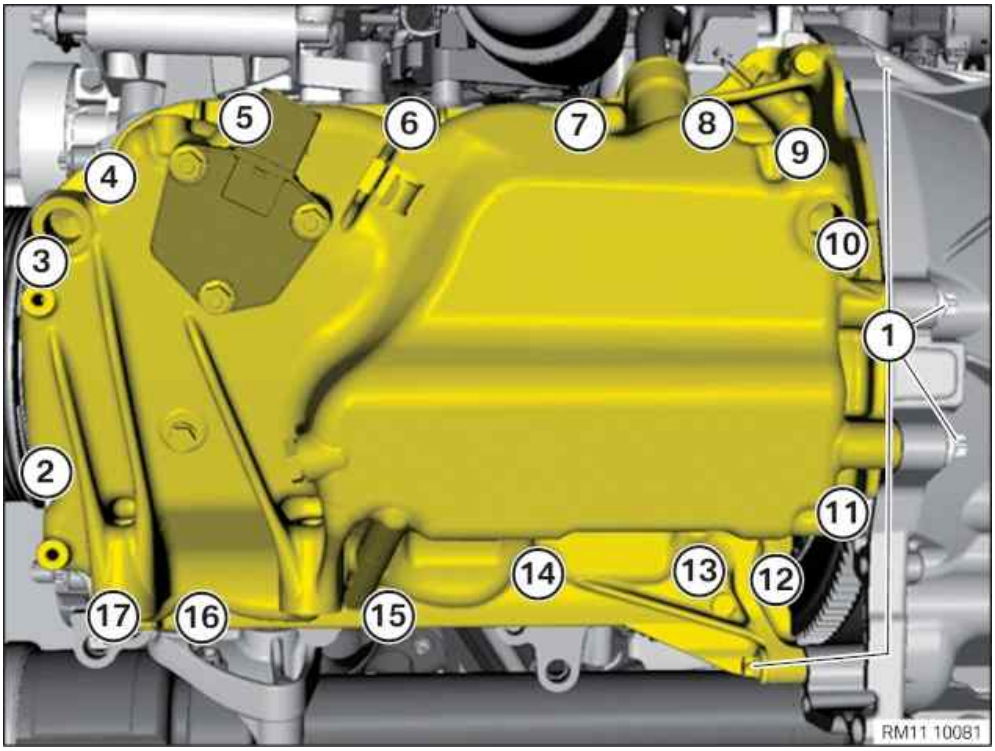
cardiagn.com



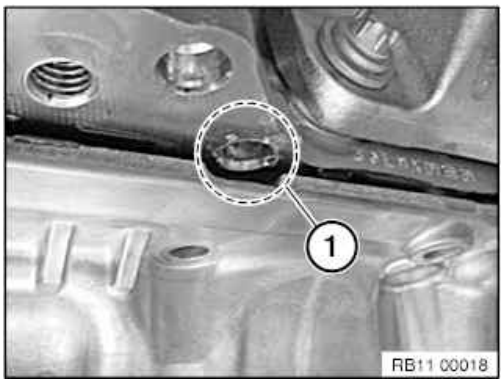
- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- If required, remove sealing ring (3) from oil sump.



- Remove the expanding rivet (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

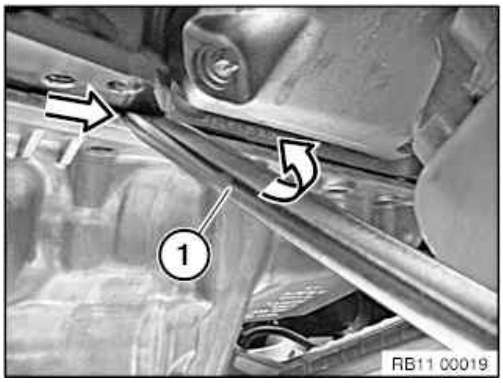


- Tighten the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



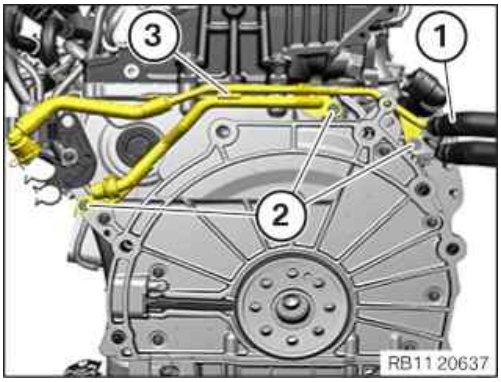
- Release oil sump only in area (1).

cardiagn.com

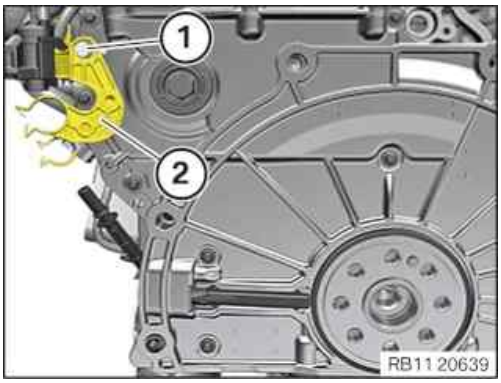


- Release the oil sump using a suitable mounting lever (1) carefully at the position intended for that.
- If required, secure the oil sump against falling.

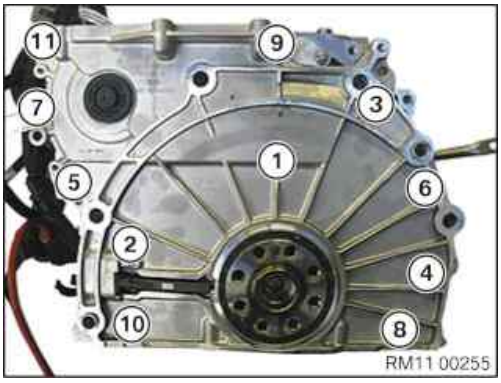
► **If installed: Remove coolant line of the SCR metering module**



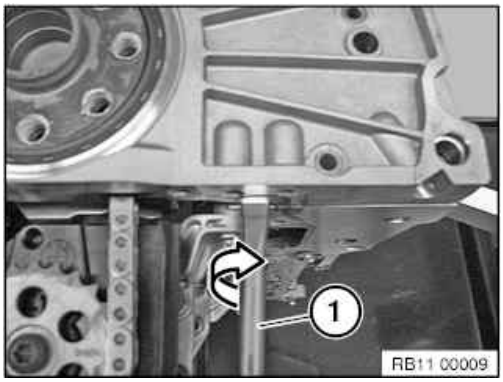
- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



- Loosen screw (1).
- Guide out and remove holder (2).

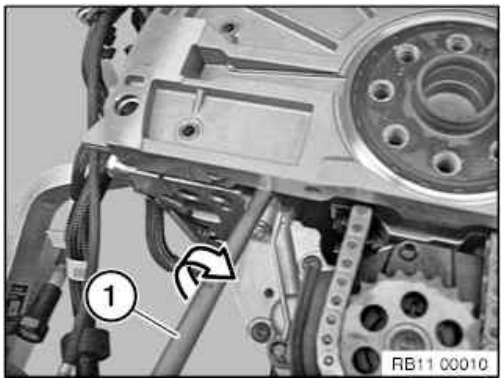


- Loosen screws in the order (11) to (1).



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

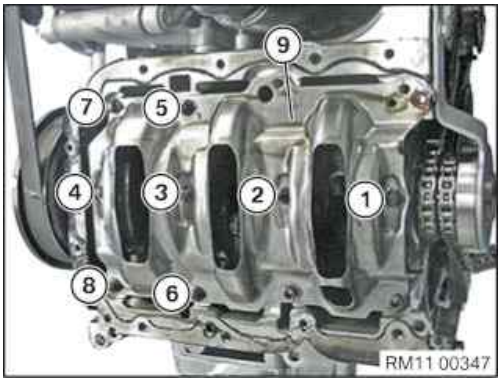
30 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

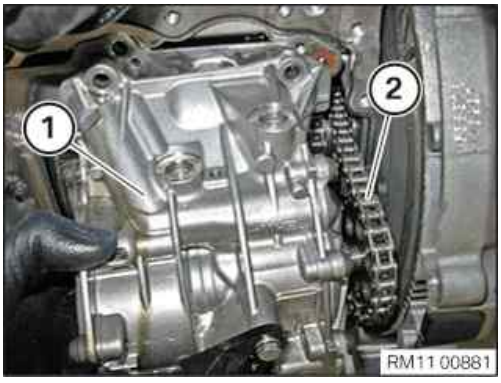
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen screws in the order (8) to (1).
- Guide out and remove the oil deflector (9).

31 – Remove the oil vacuum pump

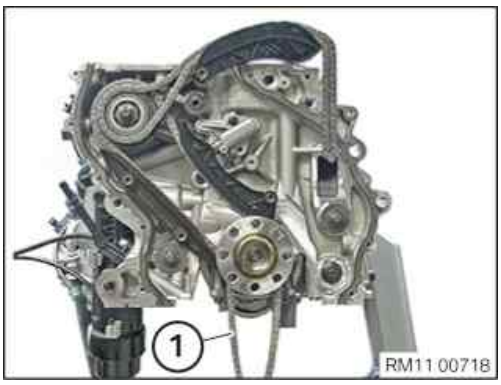
- Loosen screws (1) of the oil vacuum pump (2).



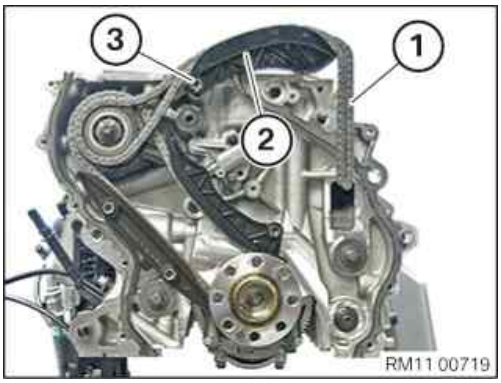
- Remove oil vacuum pump (1) and remove from the drive chain (2).

cardiagn.com

32 – Remove both timing chains

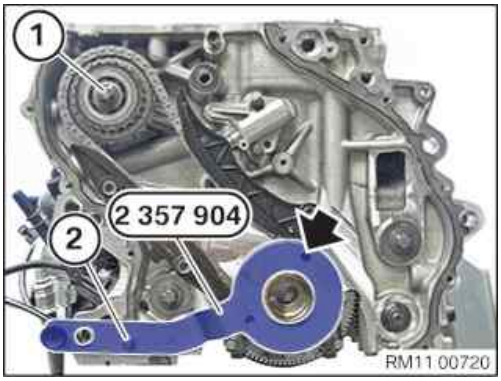


- Remove drive chain (1) for oil pump.

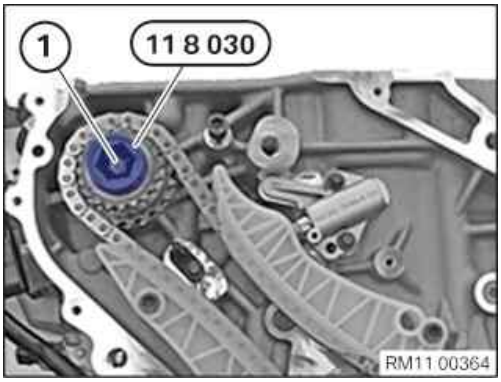


- Remove the timing chain (1) for the camshafts.
- Remove the tensioning rail (2) from the bearing journal (3).

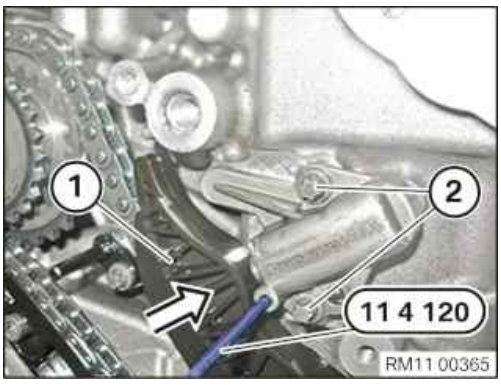
  Bearing journal (3) does not have to be disassembled.



- Secure crankshaft to release central bolt (1) of high pressure pump.
- Position crankshaft with guide pin (arrow).
- Secure special tool **2 357 904** with bolt (2) on crankcase.
- Release central bolt (1) of high pressure pump; do not remove.

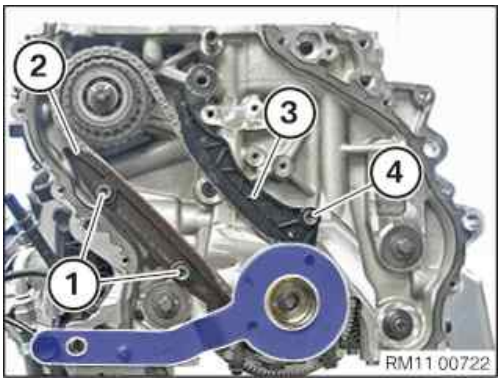


- Screw special tool **0 496 725 (11 8 030)** into sprocket of high pressure pump.
- Unscrew central bolt (1) of high pressure pump until central bolt can be supported on special tool **0 496 725 (11 8 030)**.
- Continue turning central bolt (1) until camshaft sprocket is released from high pressure pump shaft.



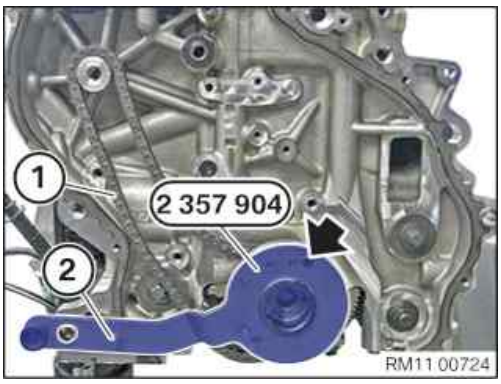
- Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove chain tensioner.

cardiagn.com



- Loosen both bearing journals (1).
- Remove the guide rail (2).
- Loosen the bearing journals (4).
- Remove the tensioning rail (3).

- Remove bolt and camshaft sprocket (1) of high pressure pump.



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

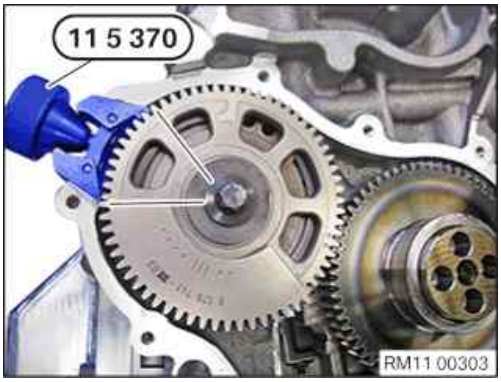
- Unscrew the bolt (2) and remove the special tool **2 357 904**.
- Remove the timing chain (1).

33 – Remove counterbalance shaft

- Fasten counterbalance shaft with special tool in the TDC position of cylinder no. 1.
- Tighten the screws (1).

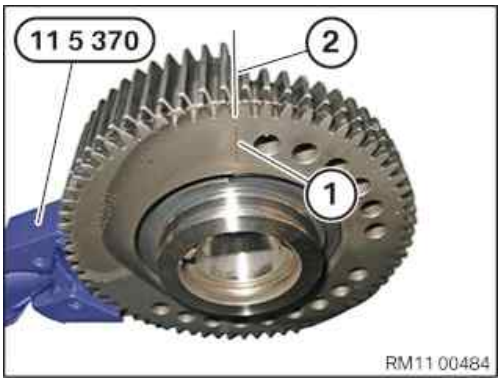
Standard screw connection M6

M6		8 Nm



- Ensure that the gear of the counterbalance shaft is pretensioned and blocked before removal.
- Install the special tool **0 495 131 (11 5 370)** as shown and pre-load the gear.

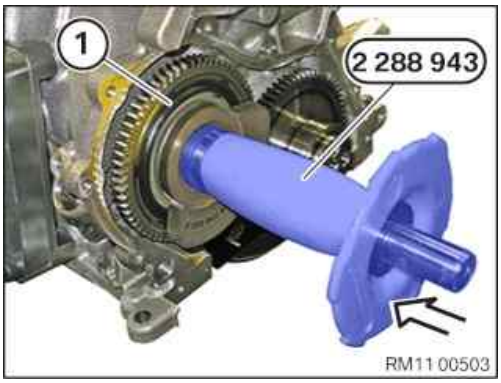
cardiagn.com



- Block gear wheels (1) and (2) until re-installation with the special tool **0 495 131 (11 5 370)**.

- Check whether the marks on the counterbalance shaft gear are aligned with the marks on the crankshaft gear.
- Loosen screw (1).

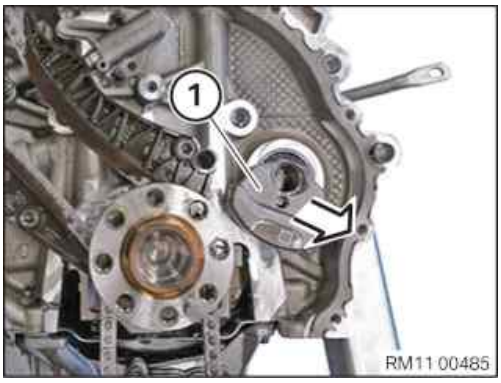
- Loosen screws (1).
- Remove special tool .



- Screw the special tool **2 288 943** far as it will go into the counterbalance shaft.
- Secure counterbalance shaft and gear against falling down!
- By means of targeted hammer blows on the special tool **2 288 943** in the direction of the arrow, loosen the counterbalance shaft from gear (1) .
- Remove special tool **2 288 943**.

- Remove the counterbalance shaft gear in the direction of the arrow.

cardiagn.com



- Remove counterbalance shaft (1) in direction of arrow.

34 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

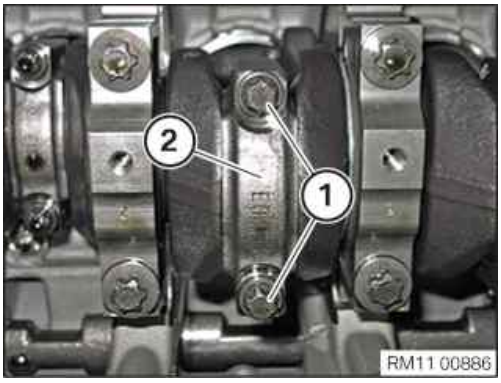
- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.



- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.

35 – Removing the piston with connecting rod

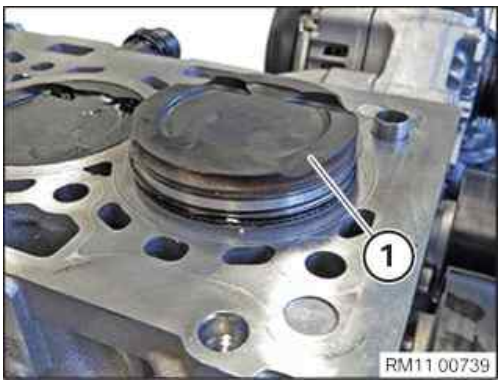
cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.



RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Remove the piston (1) and connecting rod.

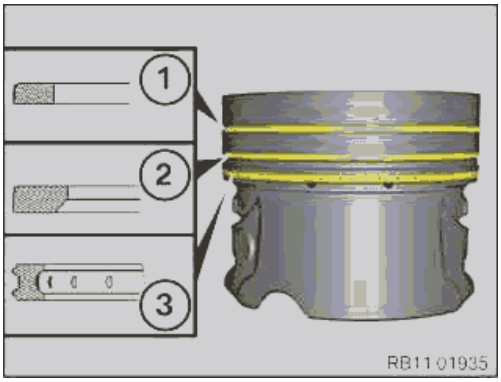
36 – Measure side clearance of piston rings

RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.



TECHNICAL INFORMATION

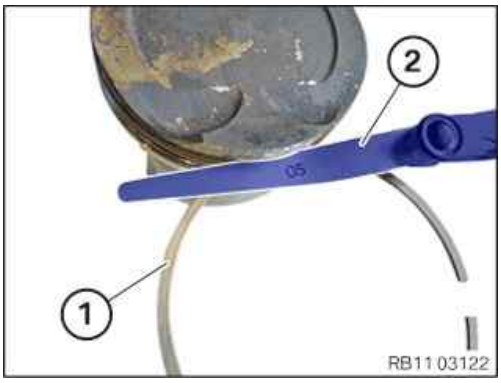
- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)

Check

cardiagn.com



- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

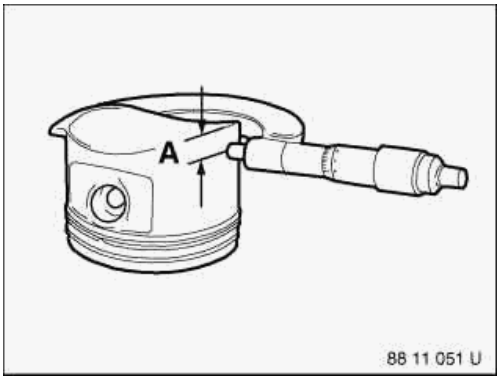
Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

37 – Measure the piston diameter



Check

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Result

» The piston does not correspond to the specifications.

Measure

- Renew the piston.

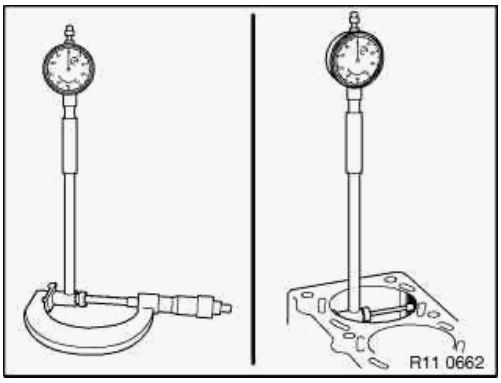
38 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.

Check

cardiagn.com



- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

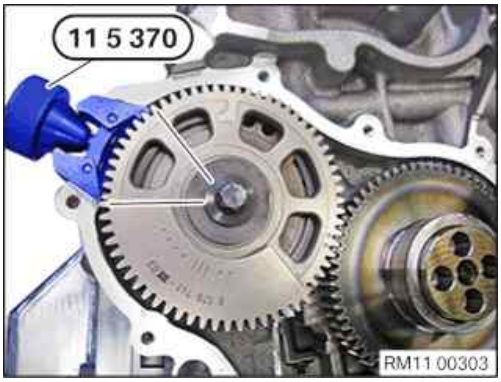
  Parts: Engine

39 – Remove counterbalance shaft

- Fasten counterbalance shaft with special tool in the TDC position of cylinder no. 1.
- Tighten the screws (1).

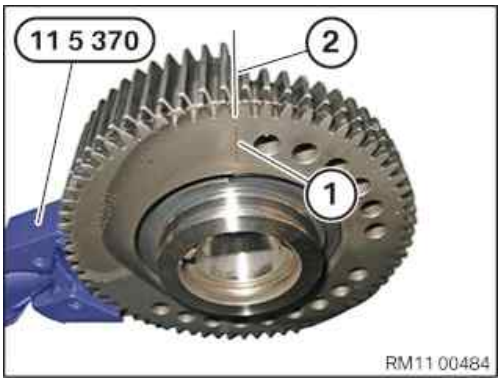
Standard screw connection M6

M6		8 Nm



- Ensure that the gear of the counterbalance shaft is pretensioned and blocked before removal.
- Install the special tool **0 495 131 (11 5 370)** as shown and pre-load the gear.

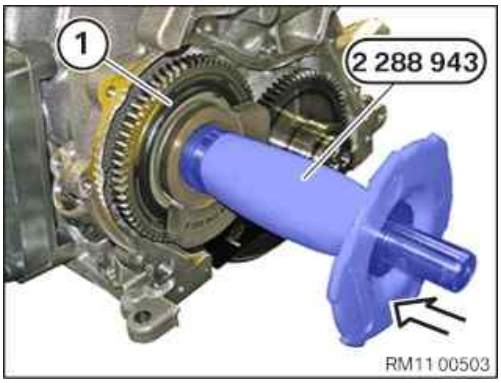
cardiagn.com



- Block gear wheels (1) and (2) until re-installation with the special tool **0 495 131 (11 5 370)**.

- Check whether the marks on the counterbalance shaft gear are aligned with the marks on the crankshaft gear.
- Loosen screw (1).

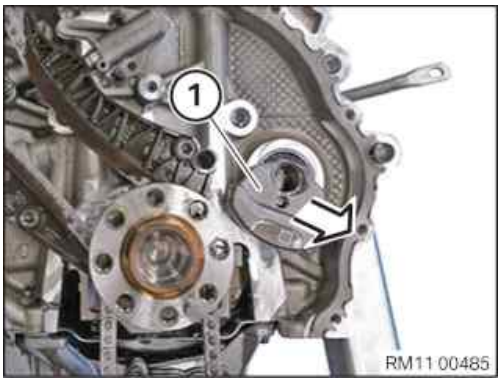
- Loosen screws (1).
- Remove special tool .



- Screw the special tool **2 288 943** far as it will go into the counterbalance shaft.
- Secure counterbalance shaft and gear against falling down!
- By means of targeted hammer blows on the special tool **2 288 943** in the direction of the arrow, loosen the counterbalance shaft from gear (1) .
- Remove special tool **2 288 943**.

- Remove the counterbalance shaft gear in the direction of the arrow.

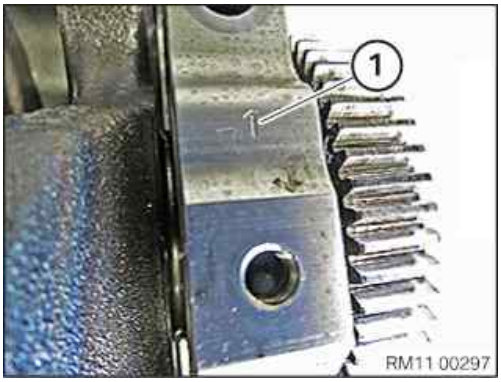
cardiagn.com



- Remove counterbalance shaft (1) in direction of arrow.

MAIN WORK

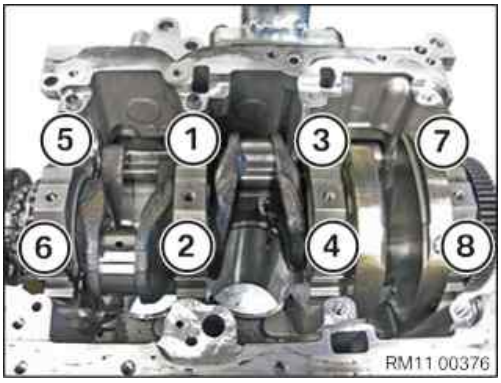
40 – Remove crankshaft



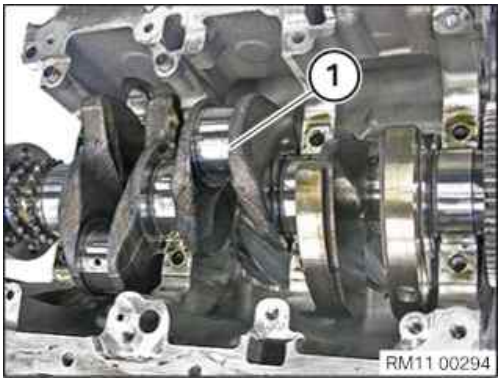
- Observe the marks on the main bearing caps.

  All main bearing caps (1) are numbered according to their installation location (cylinders 1 to 4).

  Main bearing cap number 3 is installed as a thrust bearing.



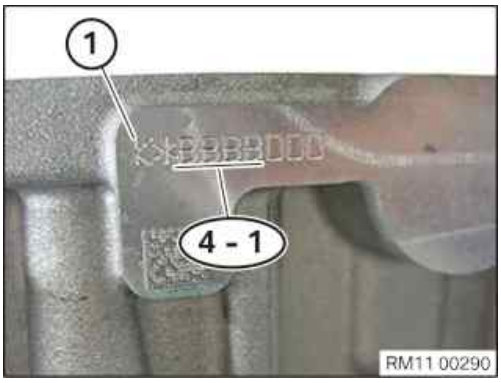
- Loosen screws in the order (8) to (1).
- Remove all main bearing caps and store them properly.



- Remove the crankshaft (1) with a second person and carefully set it aside.

41 – Determine the classification of the main bearing shells and the guide bearing shells

cardiagn.com



- Position (1) K = clutch side
- Item numbers (4) to (1) describe the bearing seats 7 to 1 (key performance indicator on each of the crankshaft bearing caps).
- Enter the code letter on the crankcase in the table.

- K = Clutch side
- Item numbers (1) to (4) describe the bearing seats 1 to 4 (coefficient on each of the crankshaft bearing caps).
- Enter the identification numbers on the crankshaft in the table.

- Enter the code letters and coefficients of the crankcase and the crankshaft.

	Code letter on the crankcase	**Key performance indicator** on the crankshaft
Bearing seat 1		
Bearing seat 2		
Bearing seat 3		
Bearing seat 4		
Bearing seat 5		
Bearing seat 6		
Bearing seat 7		

- The main bearing shells and guide bearing shells are identified by **colour or by number**.
- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankcase**:

	1	2	3
A	Blue = 1	Blue = 1	Blue = 1
B	Green = 2	Green = 2	Green = 2
C	Brown = 3	Brown = 3	Brown = 3

cardiagn.com

- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankshaft bearing caps**:

	1	2	3
A	Blue = 1	Green = 2	Brown = 3
B	Blue = 1	Green = 2	Brown = 3
C	Blue = 1	Green = 2	Brown = 3

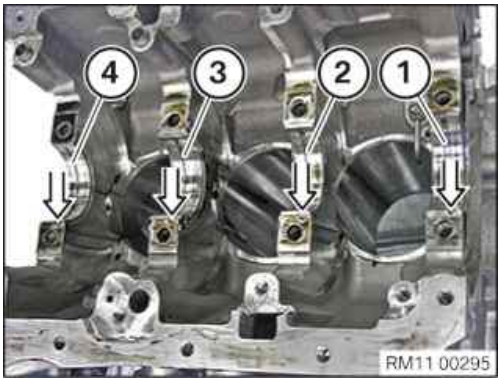
42 – Renewing main bearing shells and guide bearing shells

RISK OF DAMAGE

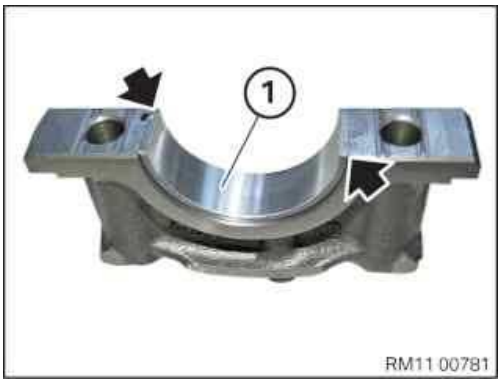
Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

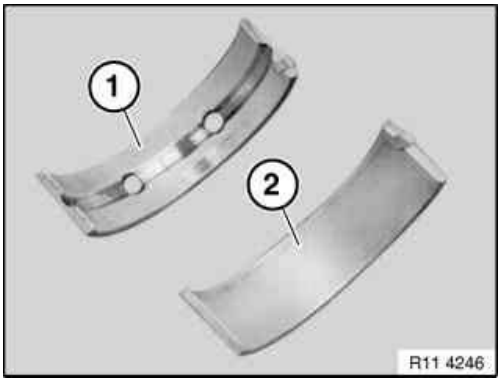
- Always install all bearing shells and bearing supports in the same position from which they were removed.



- Guide the main bearing shells with the lubricating groove (1) and (2) and also (4) out of the crankcase and remove them.
- Feed out and remove the guide bearing shell (3) (with lubricating groove) from the crankcase.



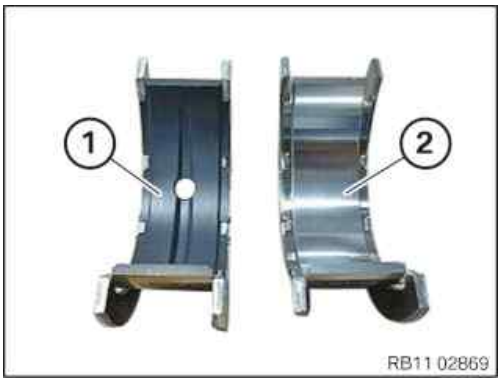
- Feed out and remove the main bearing shells (1) from the crankshaft bearing caps (1), (2) and (4).
- Feed out and remove the guide bearing shell (1) from the crankshaft bearing cap (3).



- Replace main bearing shells with lubricating groove (1) and the main bearing shells (2).

  Parts: Main bearing shells

cardiagn.com



- Replace guide bearing shells with lubricating groove (1) and guide bearing shells (2).

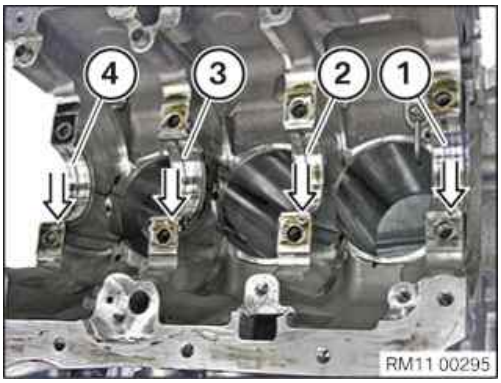
  Parts: Guide bearing shells

- Make sure the guide bearing shells and main bearing shells with lubricating groove (1) are correctly positioned in the crankcase.

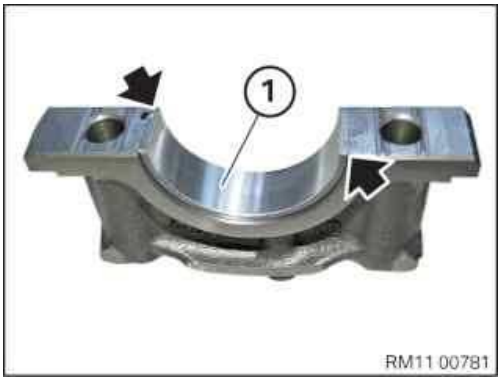
  All guide bearing shells and main bearing shell with lubricating groove (1) in the crankcase are protected against incorrect assembly (mark).

- Make sure the guide bearing shells and main bearing shells (1) are correctly positioned in the crankshaft bearing cap.

  All guide bearing shells and the main bearing shells (1) in the crankshaft bearing caps have protection against incorrect assembly (mark).

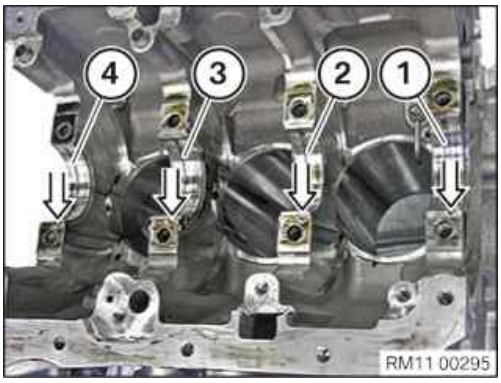


- Guide the main bearing shell with the lubricating groove (1) and (2) and (4) into the crankcase and install it.
- Oil the main bearing shell with the lubricating groove (1) and (2) and (4) .
- Insert and install the guide bearing shell (3) (with lubricating groove) in the crankcase.
- Oil guide bearing shell with lubricating groove (3).

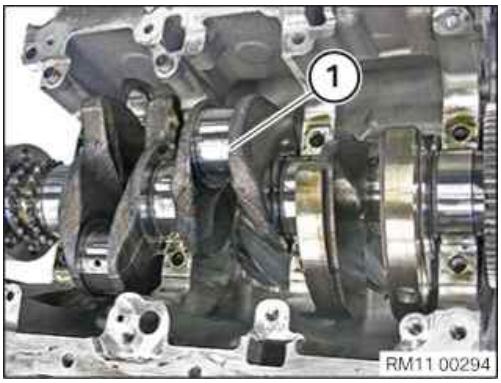


- Guide the main bearing shells (1) into the crankshaft bearing caps (1) and (2) and (4) and install them.
- Oil the main bearing shells (1) and (2) and (4) .
- Insert and install the guide bearing shell (3) in the crankshaft bearing cap.
- Oil the guide bearing shell (3).

cardiagn.com



- Ensure correct installation of the main bearing shells 1 to 4 with the guide lug (arrows).



CAUTION

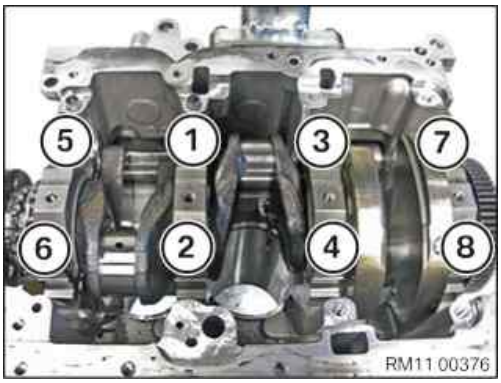
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Install the crankshaft (1).

  Parts: Crankshaft



- Observe the assignment and numbering 1 to 4 of the main bearing caps.

  Assign the main bearing caps according to the order of the cylinders.
- Do not install the main bearing cap in an incorrect position.
- Do not install the main bearing cap in a position twisted by 180 degrees!

  Main bearing caps are coded to prevent incorrect assembly.
- Align main bearing caps exactly.
- Replace main bearing bolts.

  Parts: Bolts
- Tighten the main bearing bolts in the sequence (1) to (8).

Main bearing cap to crankcase

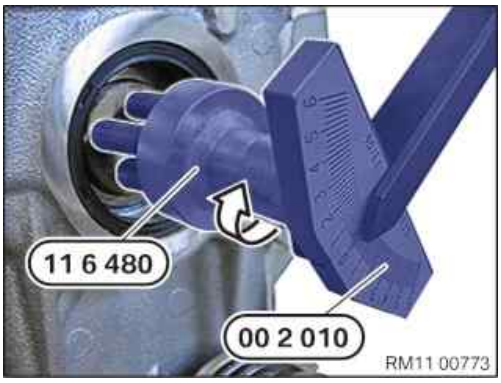
M10x85	Replace screws.	1. tightening torque	25 Nm
		2. tightening torque	50 Nm
		3. Angle of rotation	60 °
		4. Angle of rotation	60 °

POSTPROCESSES

44 – Check the coefficient of friction for the crankshaft

Check

cardiagn.com



- Turn the crankshaft clockwise with the special tool **0 490 130 (00 2 010)** and compare the reading on the scale to the maximum permitted torque.

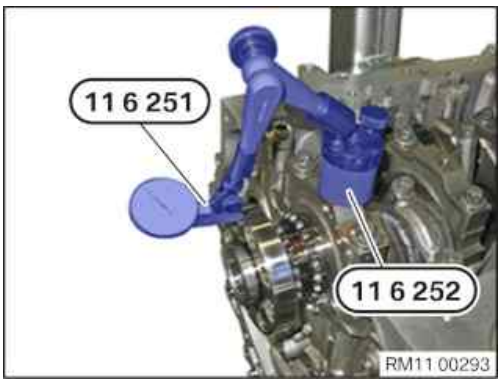
Result

» The maximum permitted torque is exceeded.

Measure

- Correct the radial clearance.

45 – Checking the crankshaft side clearance



Check

- Attach the dial gauge **0 493 144 (11 6 251)** with the tripod **0 493 145 (11 6 252)** to the engine.

Axial play of crankshaft

	min. 0,053 mm
	max. 0,204 mm

Result

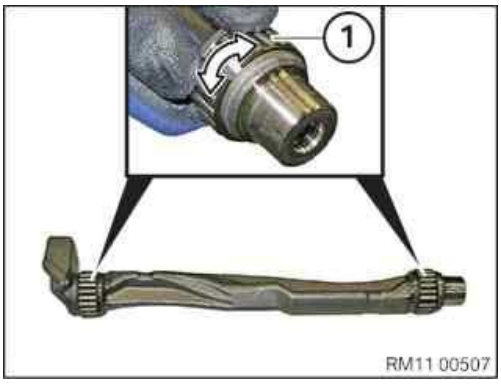
» The side clearance has been exceeded.

Measure

- Renew worn components.

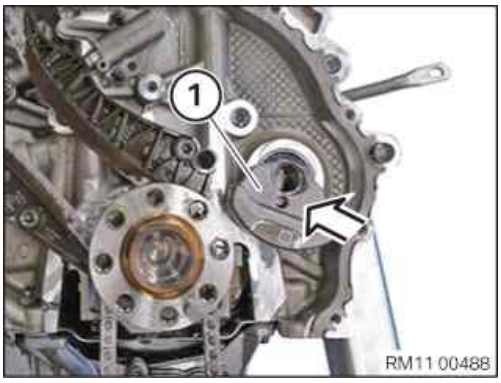
46 – Install counterbalance shaft

- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .



- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.

cardiagn.com

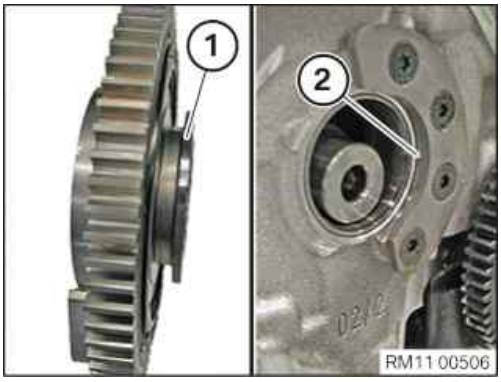


- Install counterbalance shaft (1) in direction of arrow into crankcase.

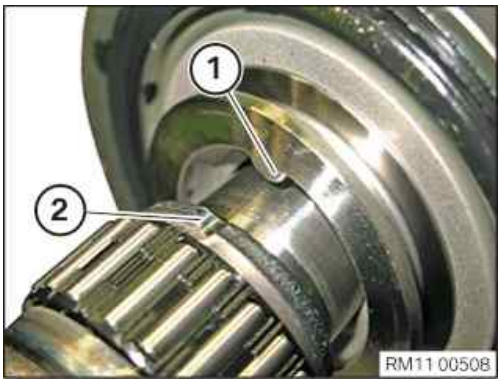
- Fix the counterbalance shaft in the TDC setting of the first cylinder using the special tool .
- Tighten the screws (1).

Standard screw connection M6

M6		8 Nm



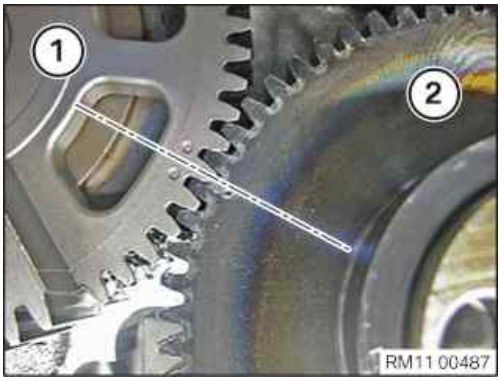
- On installation, make sure that ring (1) of gear is guided in crankcase (2).



NOTICE

For a better overview the removed condition is shown here.

- On installation of counterbalance shaft in gear, make sure that lug (1) on gear is inserted into groove (2) of counterbalance shaft.



- Bring gear (1) of counterbalance shaft into contact in correct installation position (mark) relative to crankshaft (2).

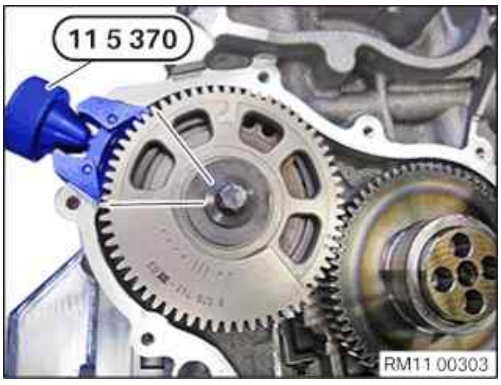
cardiagn.com

- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Gear to counterbalance shaft

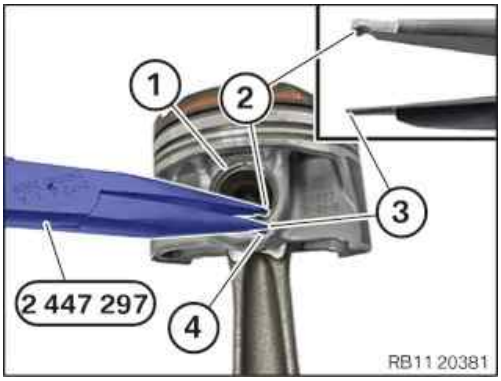
	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °



- Remove special tool **0 495 131 (11 5 370)**.

- Loosen screws (1).
- Remove special tool .

47 – If necessary: Renew the piston



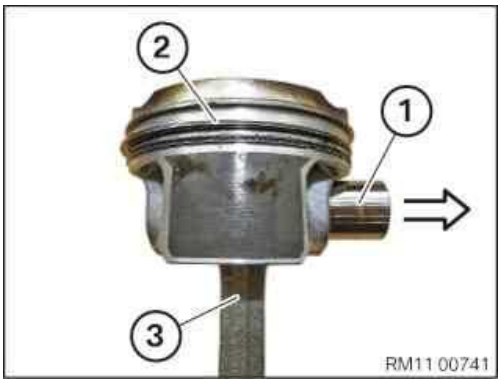
CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).

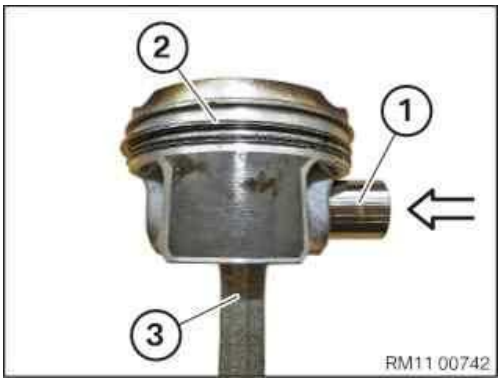


TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

cardiagn.com



- Renew piston with gudgeon pin.

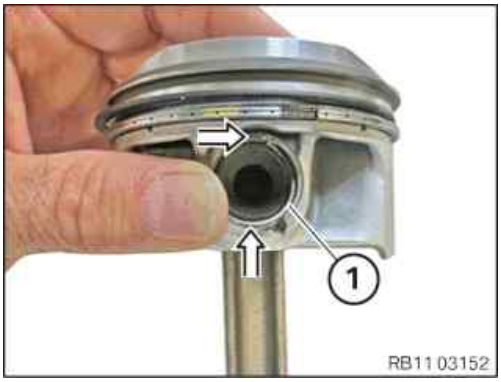
  Parts: Pistons

TECHNICAL INFORMATION

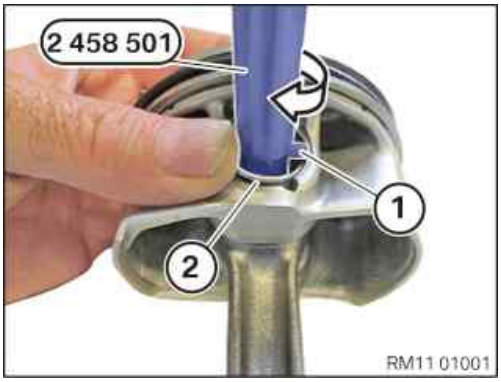
Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.

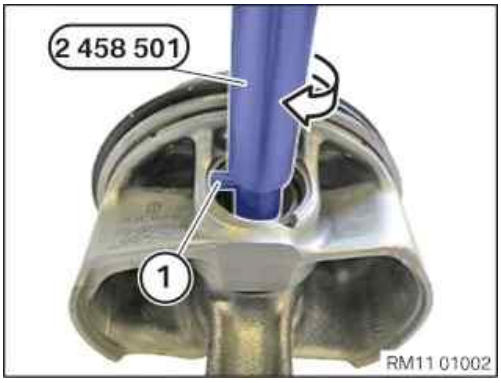
- Prepare special tool on the fitting aid .



- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).

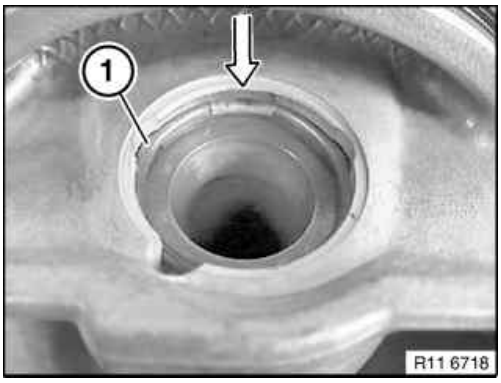


- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.



- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.

cardiagn.com



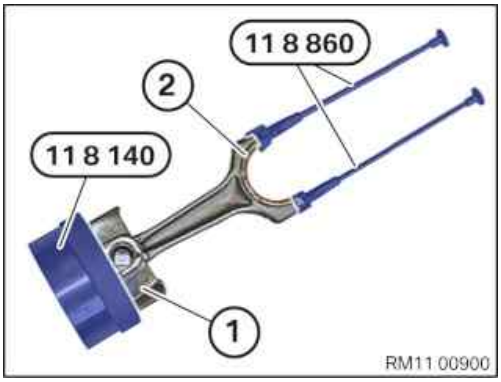
- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

48 – Installing piston with connecting rod

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.



- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.
- Install the piston in the crankcase.
- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

49 – Install the connecting rod bearing cap

cardiagn.com

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

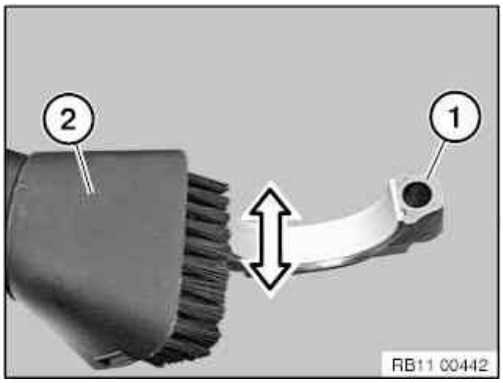
Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

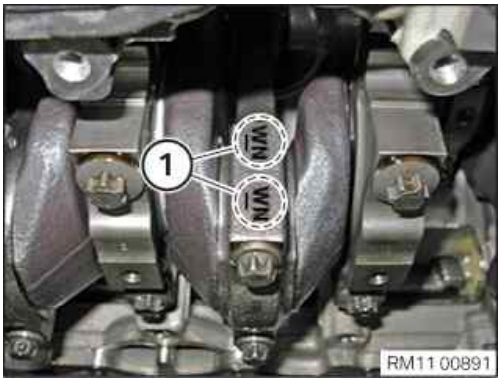
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



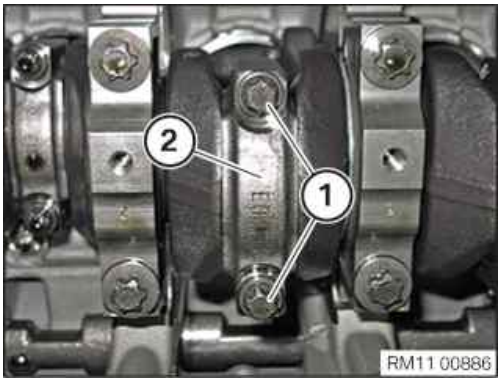
- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.



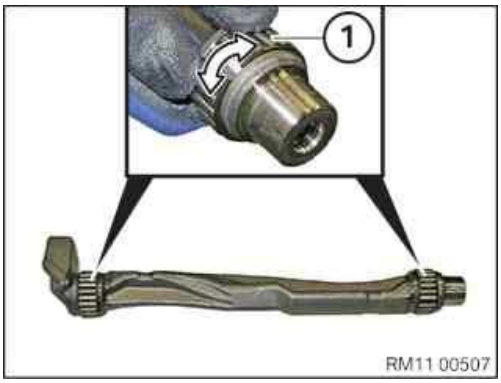
- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

Connecting rod bearing cap to connecting rod

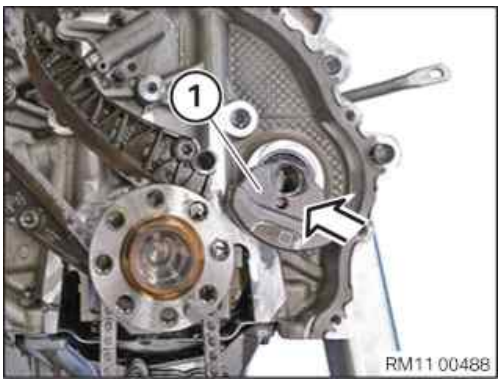
M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

cardiagn.com

- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .



- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.

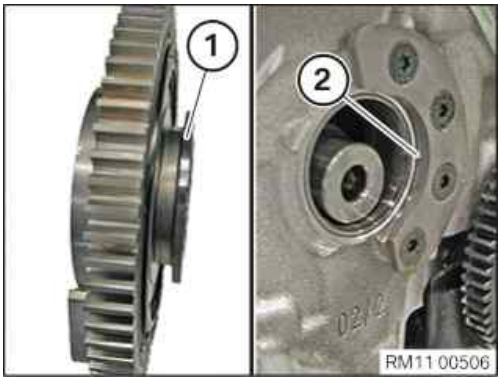


- Install counterbalance shaft (1) in direction of arrow into crankcase.

- Fix the counterbalance shaft in the TDC setting of the first cylinder using the special tool .
- Tighten the screws (1).

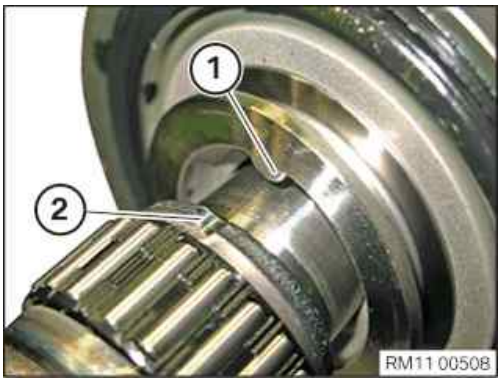
Standard screw connection M6

M6		8 Nm



- On installation, make sure that ring (1) of gear is guided in crankcase (2).

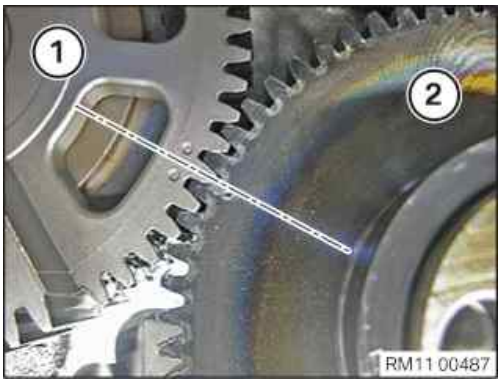
cardiagn.com



NOTICE

For a better overview the removed condition is shown here.

- On installation of counterbalance shaft in gear, make sure that lug (1) on gear is inserted into groove (2) of counterbalance shaft.



- Bring gear (1) of counterbalance shaft into contact in correct installation position (mark) relative to crankshaft (2).

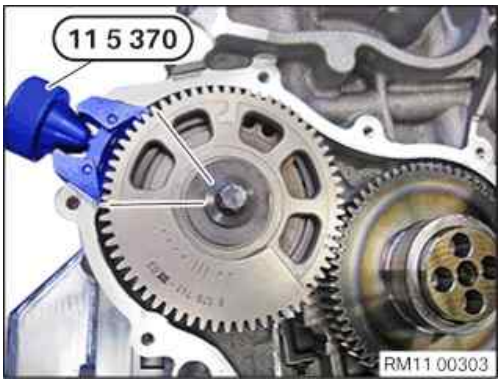
- Renew the screw (1).

  Parts: Screw

- Tighten down screw (1).

Gear to counterbalance shaft

	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °

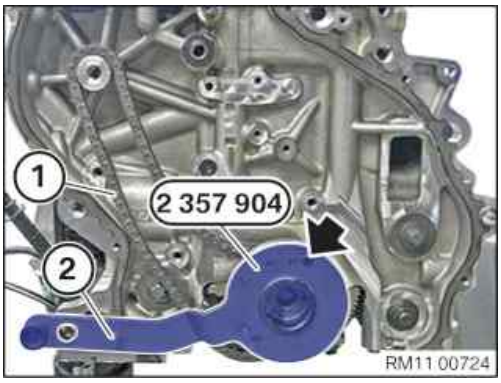


- Remove special tool **0 495 131 (11 5 370)**.

- Loosen screws (1).
- Remove special tool .

51 – Install both timing chains

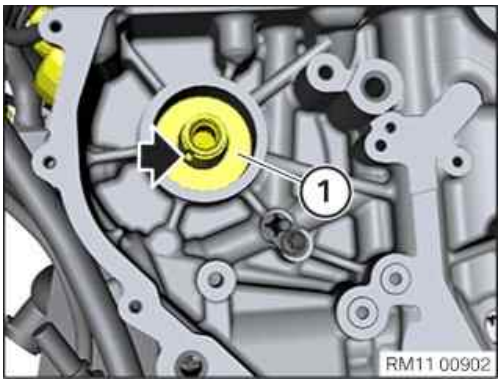
cardiagn.com



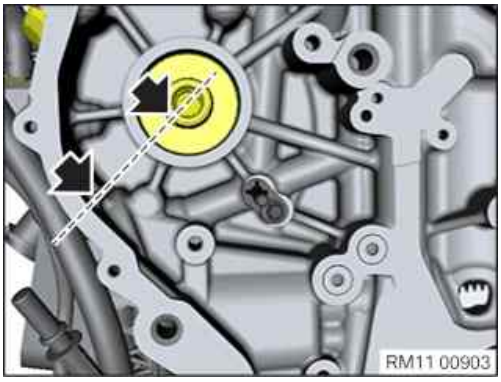
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

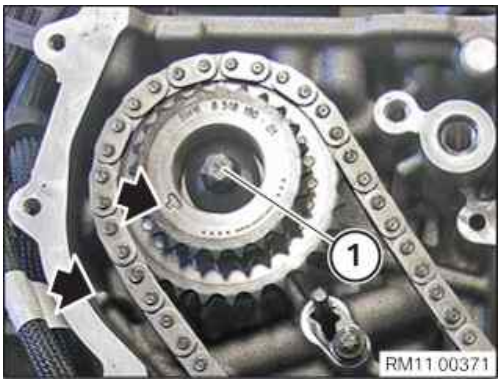
- Position the timing chain (1).
- Secure crankshaft with special tool **2 357 904**.
- Secure special tool **2 357 904** with bolt (2) on crankcase.



- Note spline groove on high pressure pump (1).

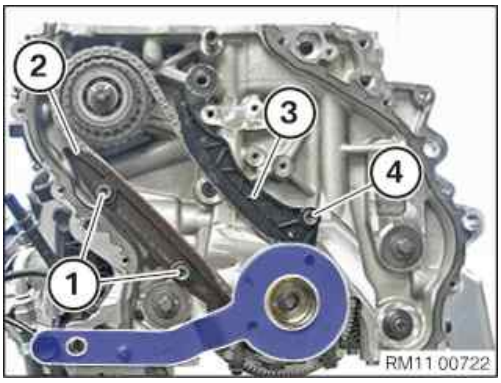


- Mark and groove (arrows) on high pressure pump and crankcase must align.



- Position the impeller with timing chain on the high pressure pump.
- Screw in and fasten central bolt (1) of high pressure pump.
- Mark and cast lug (arrows) must align.

cardiagn.com



- Position tensioning rail (3).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten the bearing journals (4).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

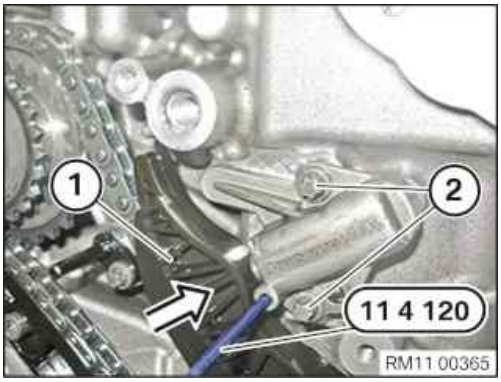
- Position the guide rail (2).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten both bearing journals (1).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

- Clean sealing surfaces (1) with compressed air.

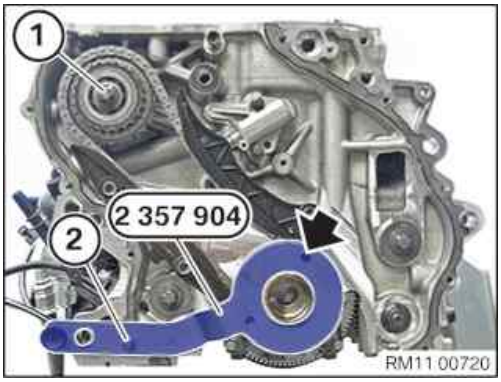


- Position hydraulic chain tensioner.
- Tighten down screws (2).

Chain tensioner to crankcase

M6x22		Tightening torque	10 Nm

- Press chain tensioner in by hand with tensioning rail (1) in direction of arrow until special tool **0 491 012 (11 4 120)** can be removed.



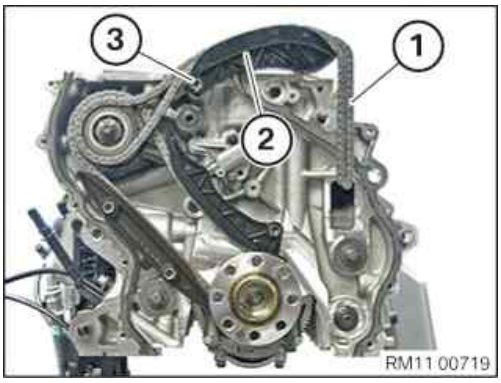
- To fasten central bolt (1) of high pressure pump, crankshaft must remain secured with special tool **2 357 904** and bolt (2).
- Renew central bolt (1).

  Parts: Central bolt
- Tighten central bolt (1).

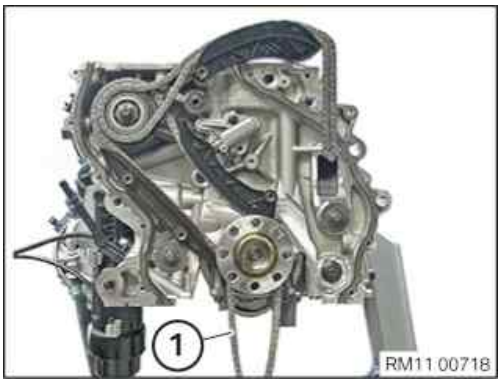
Camshaft sprocket on high pressure pump

M12		Tightening torque	65 Nm

cardiagn.com

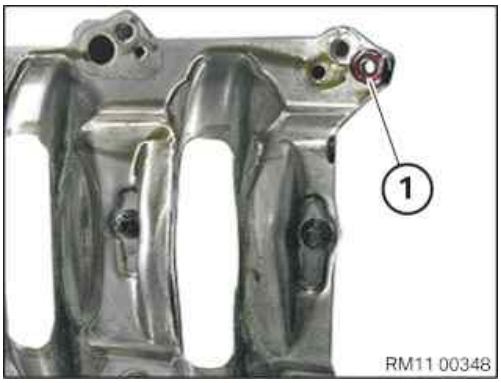


- Position tensioning rail (2) on bearing journal (3).
- Position camshaft timing chain (1).

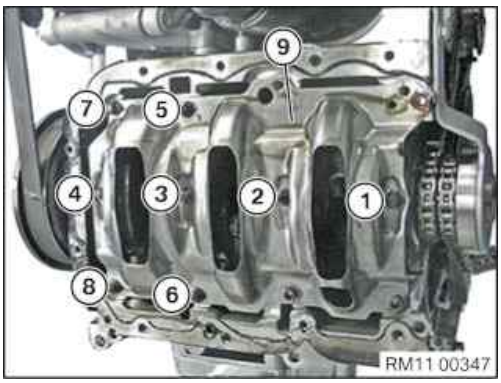


- Mount drive chain (1) for oil pump on crankshaft.

52 – Installing the oil deflector



- Check sealing ring (1) for damage and replace oil deflector if necessary.



- Insert and install the oil deflector (9).
- Renew screws (1) to (4).

  Parts: Bolts
- Hand-tighten the bolts (1) to (4).
-
- Tighten the screws (1) to (8).

Oil deflector to crankshaft bearing cap

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (5) to (8).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

53 – Install the oil vacuum pump

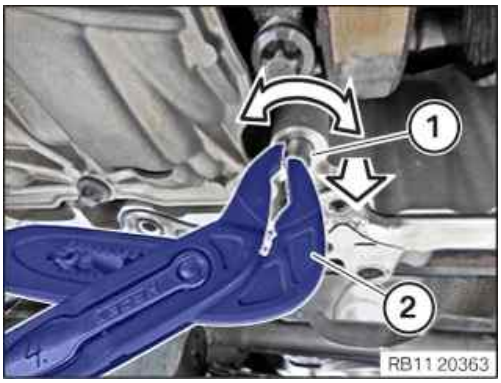
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

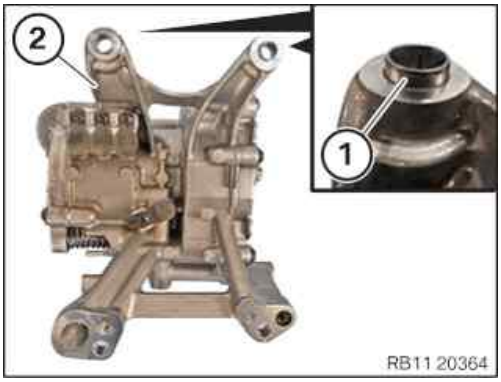
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

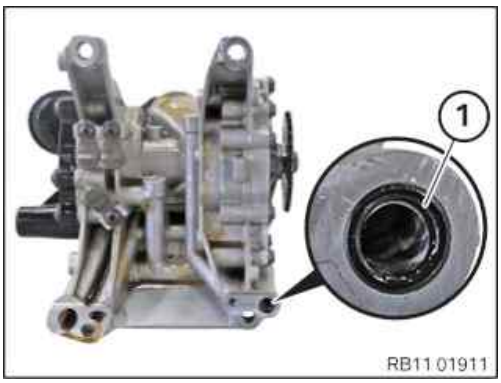


- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

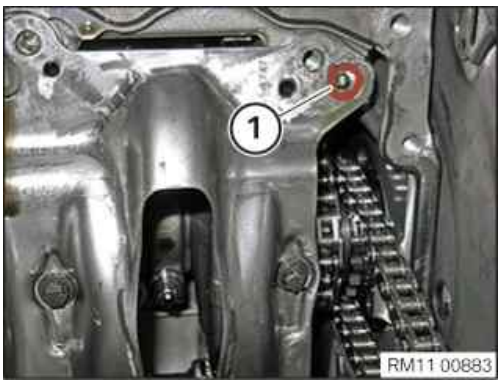
  Parts: Centring sleeves



- Install centering sleeves (1) in the oil vacuum pump (2).



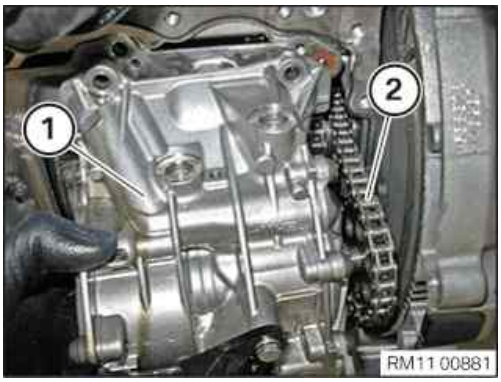
- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.



- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

cardiagn.com



- Insert oil vacuum pump (1) into the drive chain (2).

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

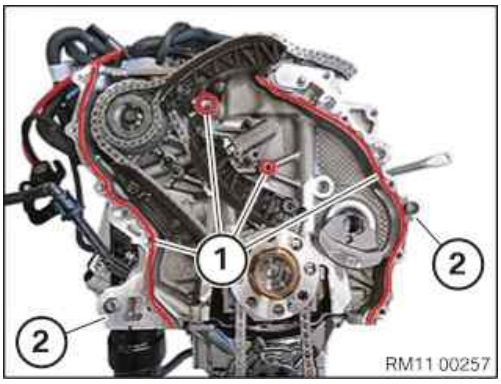
Oil vacuum pump to crankcaseB37

M8x35	*Renew screws.*	Tightening torque	15 Nm
		Angle of rotation	45 °

54 – Install the rear timing case cover

Prerequisite

Transmission is removed.



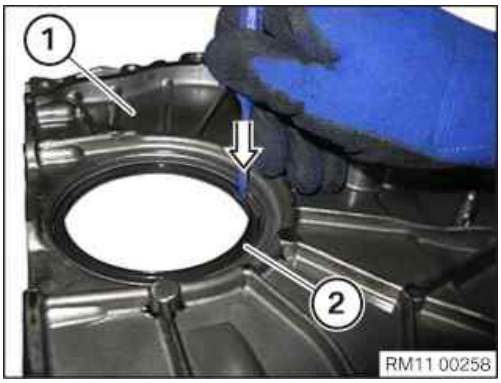
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

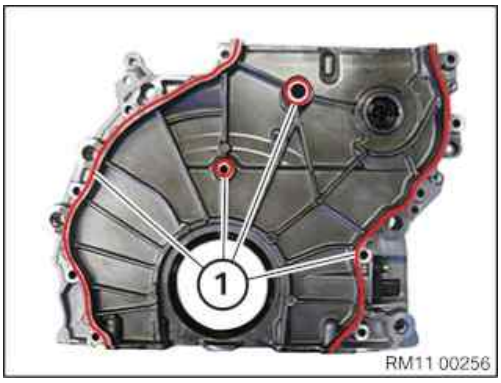
- Do not use any metal-cutting tools.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

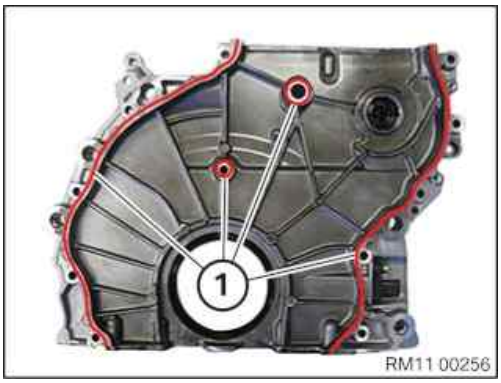


- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

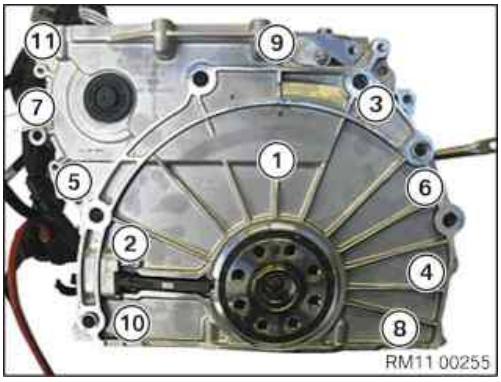


TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.



- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

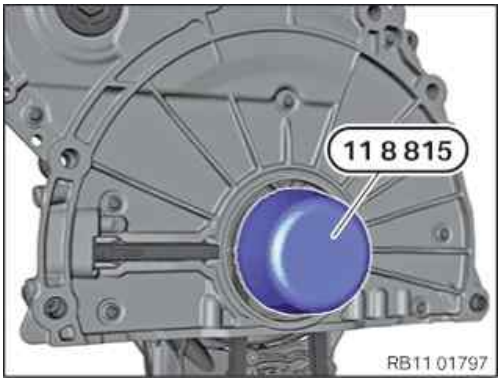
cardiagn.com

RISK OF DAMAGE

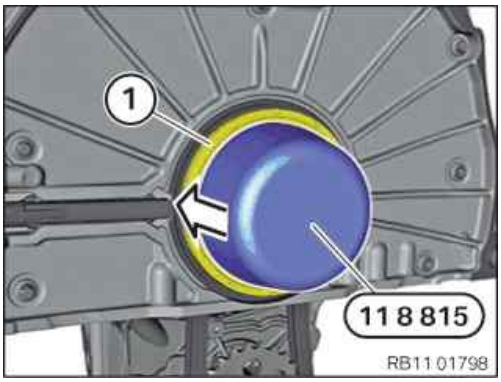
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.



- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.

cardiagn.com

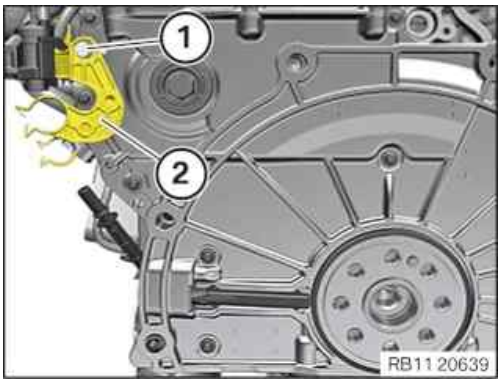
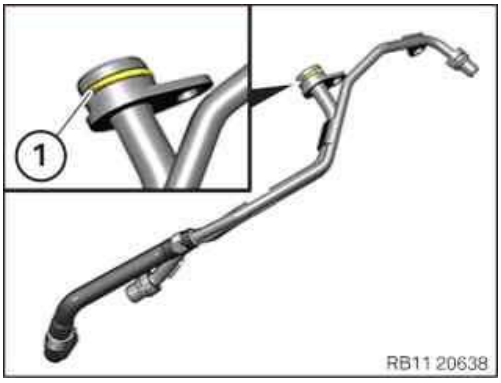
- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



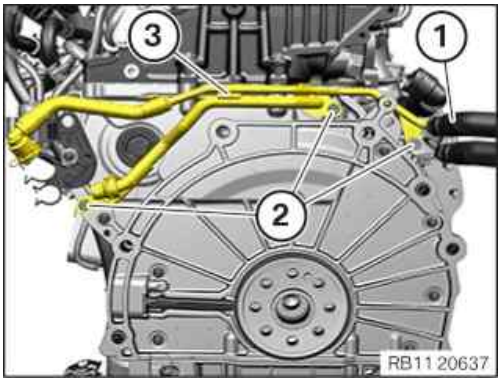
- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**



- Renew the O-ring 1.

  Parts: O-ring



- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

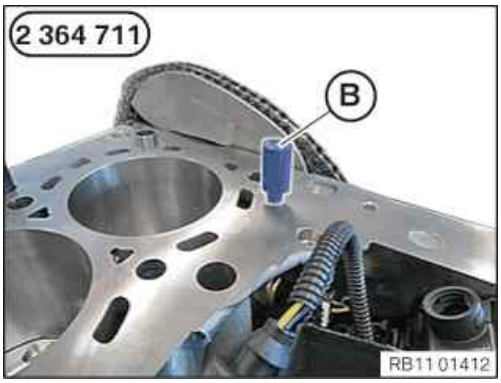
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

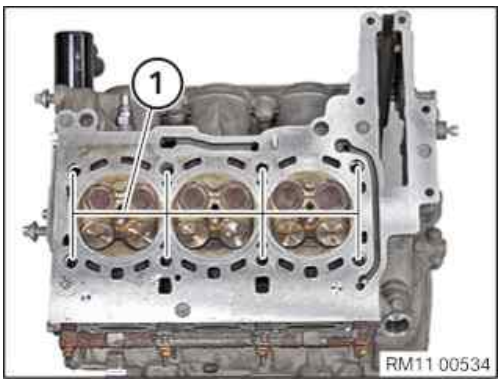
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

▸ Renewing the cylinder head gasket



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com

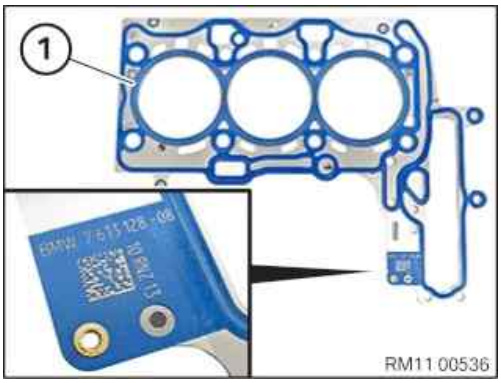
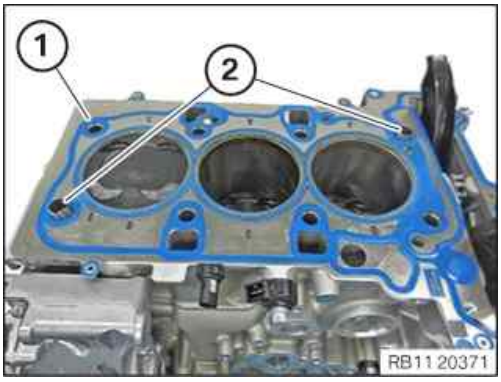
- Check the fitting sleeves (1) for secure fit and damage.

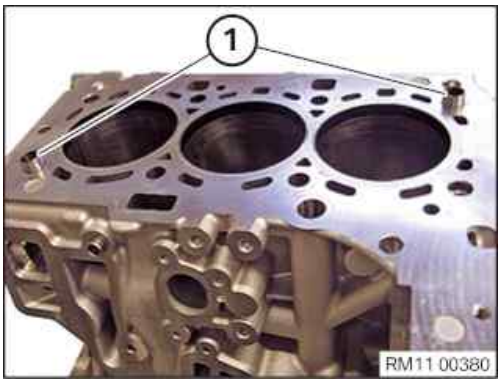


- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.

cardiagn.com

- Fit new cylinder head screws.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

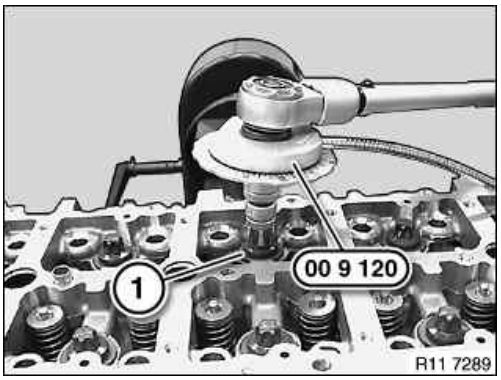
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

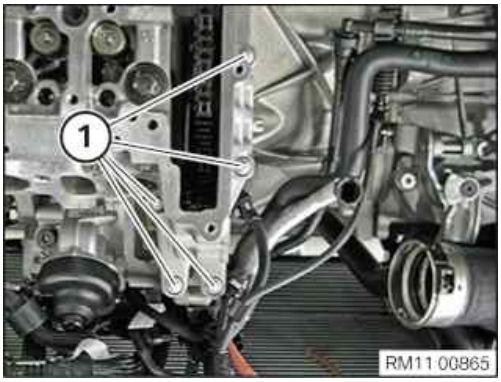
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolts in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com

TECHNICAL INFORMATION

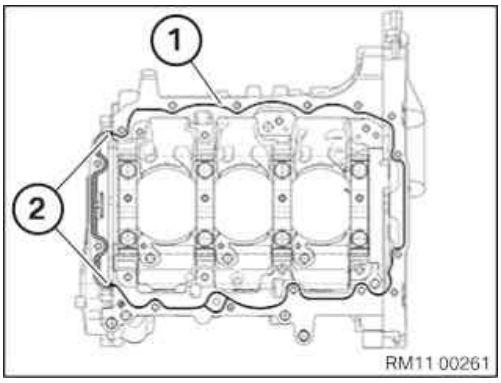
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

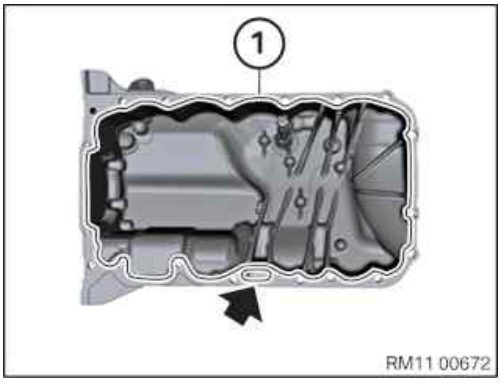
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

cardiagn.com

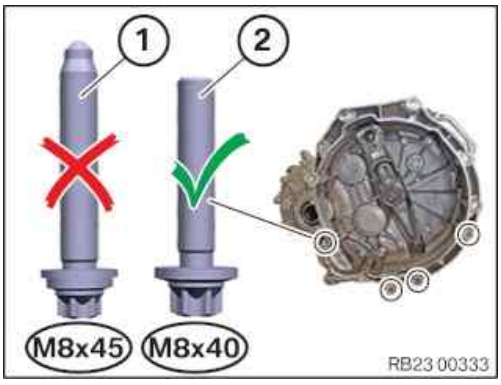
TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

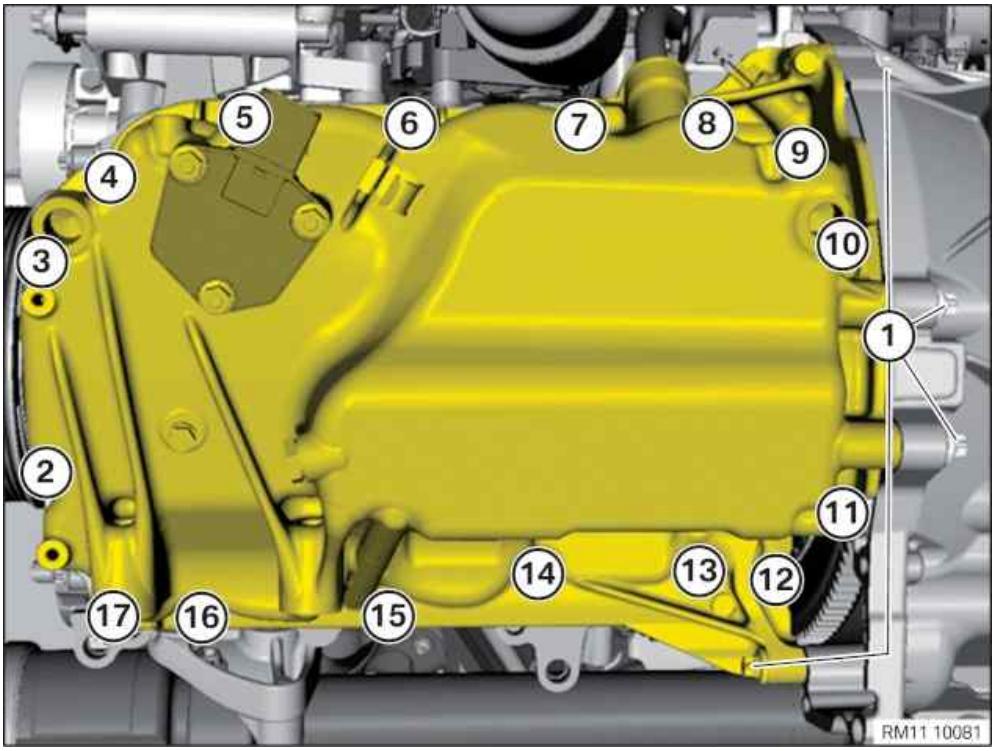
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Hand tighten the screws of oil sump (2) to (17) , but do **not** tighten completely yet.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.

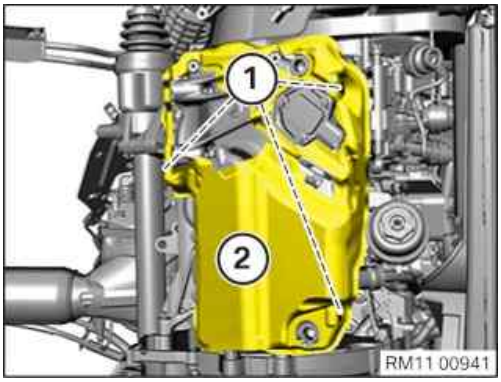
Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com

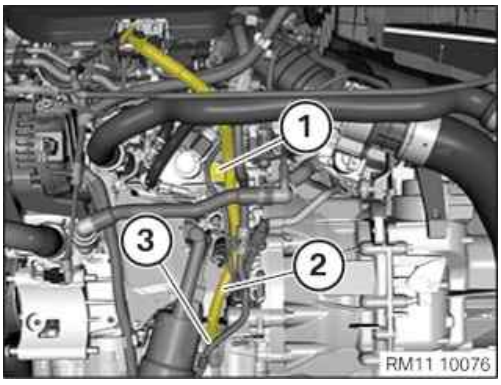
- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

55 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

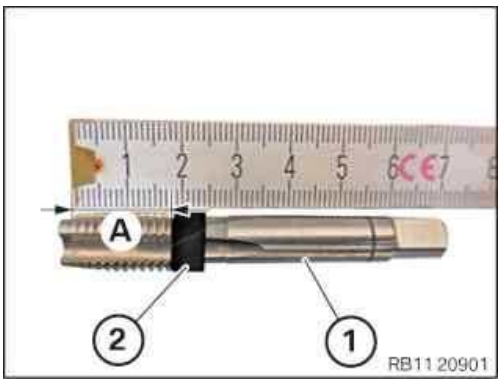
cardiagn.com

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

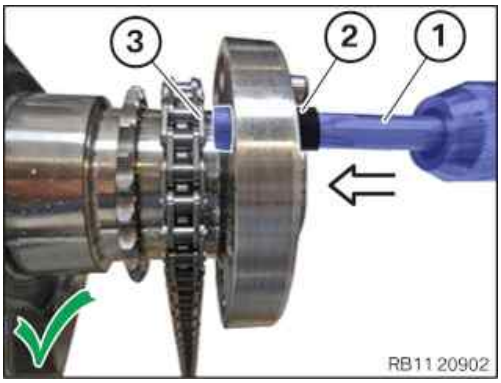
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

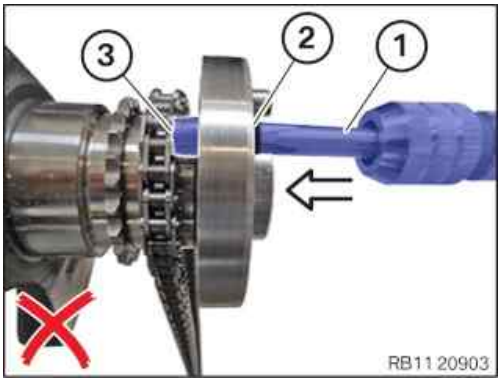
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



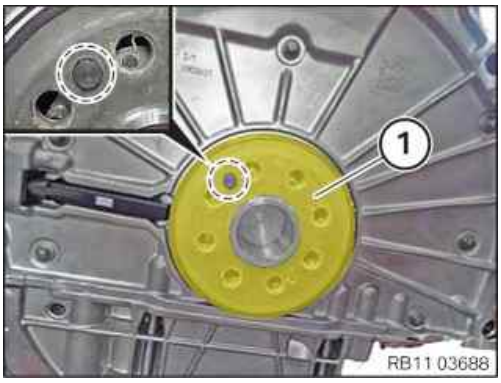
TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

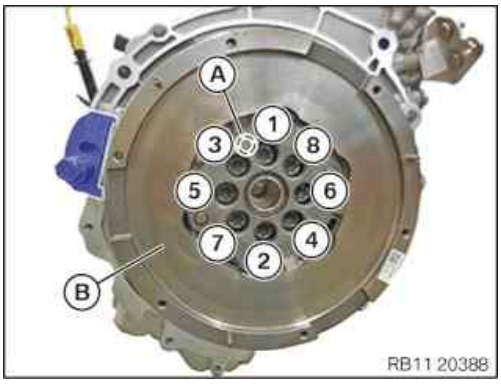
- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com



- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

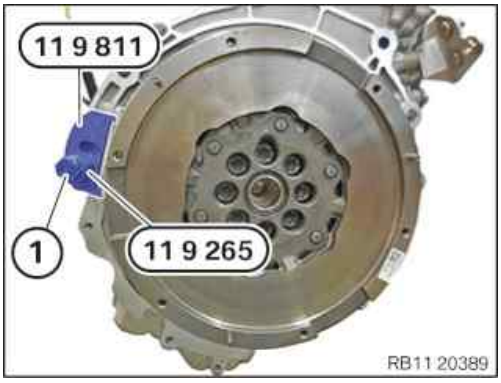


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

56 – Install clutch

CAUTION

Materials harmful to health.

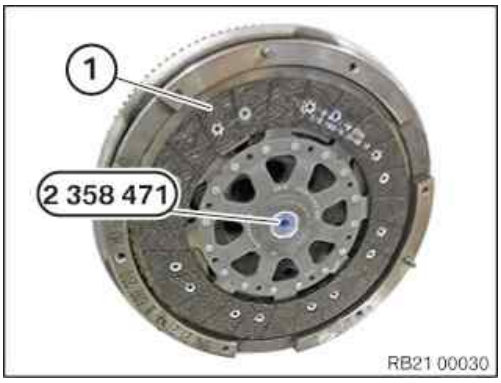
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

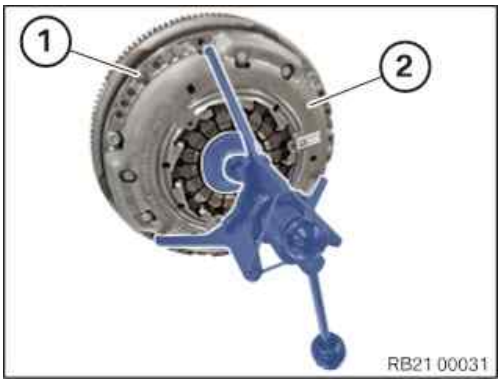
TECHNICAL INFORMATION

Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.

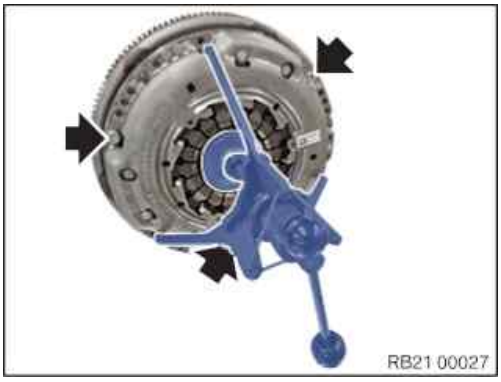
cardiagn.com



- Centre the clutch disc (1) using special tool **2 358 471**.



- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).

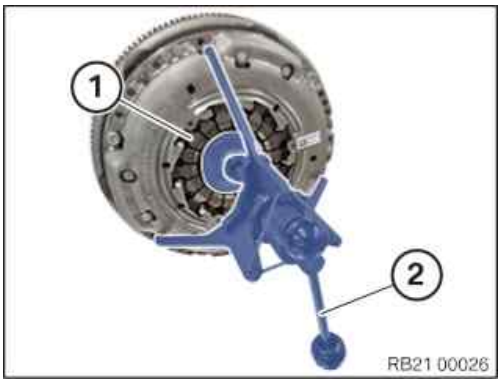


- Renew the bolts (arrows).

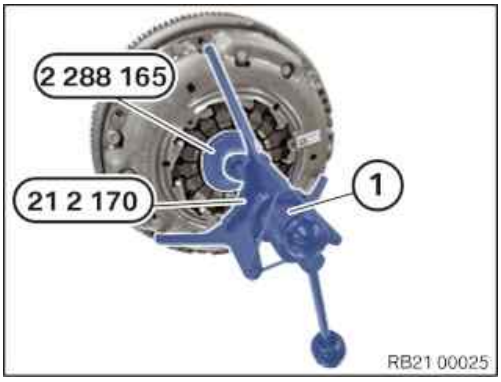
  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

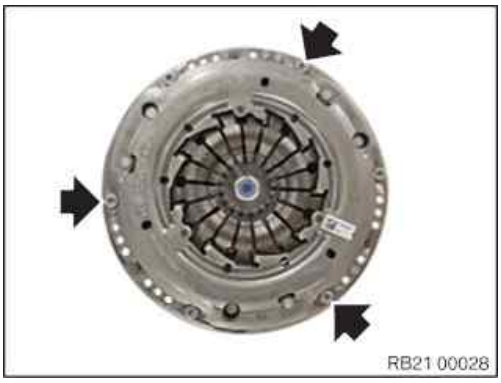


- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.



- Unscrew the knurled screw (1) and remove the special tool **0 493 839 (21 2 170)** with **2 288 165** from the clutch.

cardiagn.com



- Renew the bolts (arrows).

  Parts: Bolts

- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Withdraw special tool **2 358 471** from clutch disc with aid of accompanying screw.

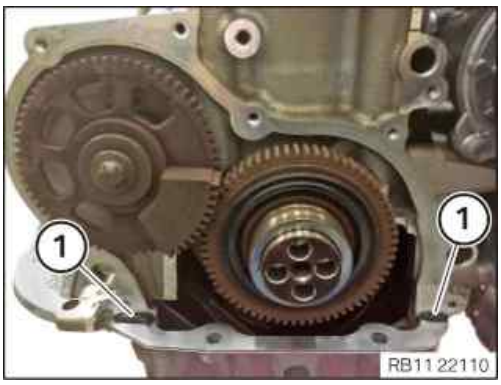
57 – Installing the timing case cover

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

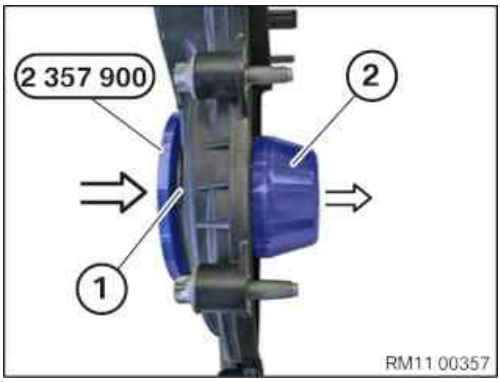
The maximum application time of the liquid sealing compound is 12 minutes.

- Apply sealing compound (1) approx. **5 mm** as shown.

  The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.

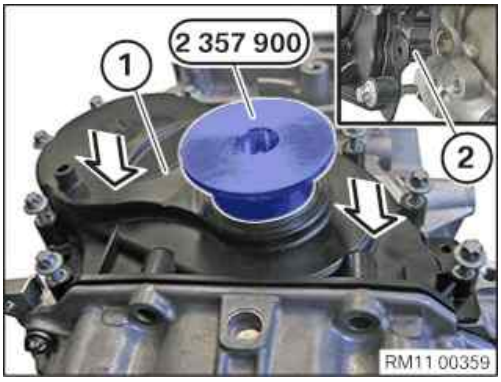
- Assemble special tool **2 357 900** as shown.
- Please note that no greases or lubricants may be used on the special tool **2 357 900**.

cardiagn.com



- Carefully slide the special tool **2 357 900** in the direction of the arrow through the sealing ring into the timing case cover (1).
- Make sure that the special tool **2 357 900** rests flat against the timing case cover (1).
- Remove the fitting aid (2).

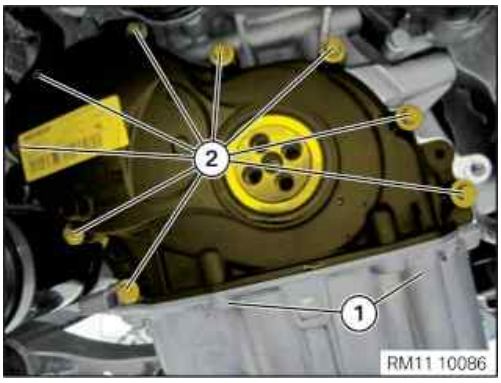
- Connect special tool **2 357 900** to the timing case cover (1) on the hub of the crankshaft (2).



- Feed in and install timing case cover (1) in the direction of the arrow.
- Ensure the guide pins (2) are fitted correctly.
- Tighten screws hand-tight.
- Remove special tool **2 357 900**.

- Make sure that the air guide (1) faces out.

cardiagn.com



- Hand-tighten the bolts (1).
- Tighten the screws (2) in a crosswise sequence with a tightening torque.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

- Tighten the screws (1).

Oil sump to crankcase

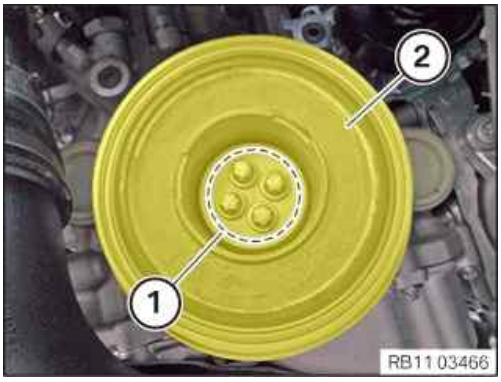
M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

- Tighten the screws (2) in a crosswise sequence with an angle of rotation.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

58 – Installing the vibration damper

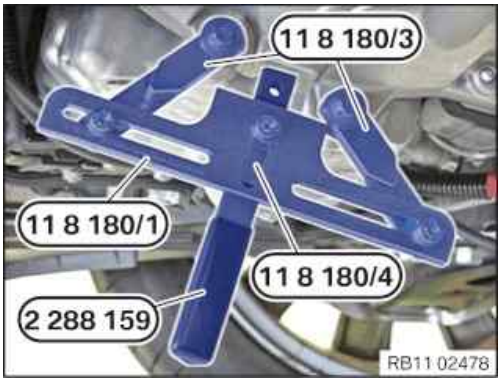


- Position vibration damper (2).
- Renew screws (1).

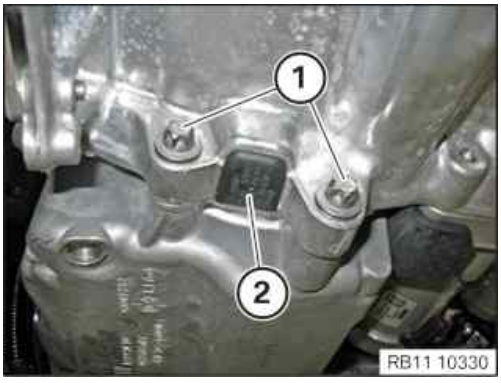
  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	120 °



- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.



- Tighten transmission screws (1).

Transmission to oil sump

M8			19 Nm

- Install protective cap (2).

59 – Cleaning the sealing surface

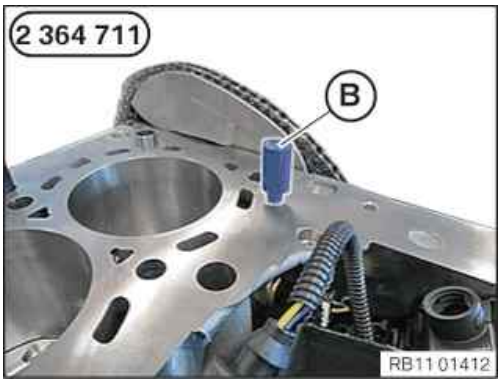
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

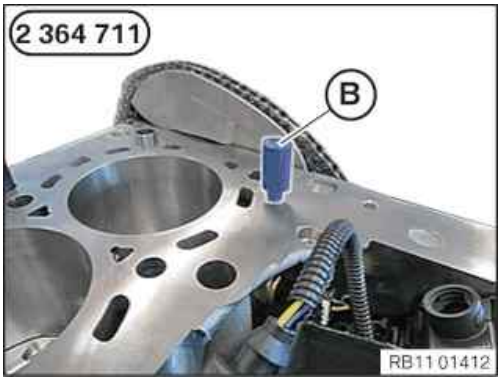
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

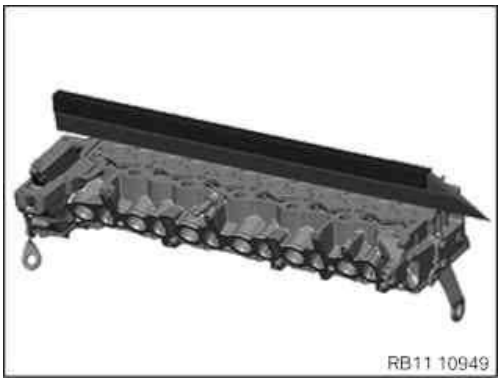
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

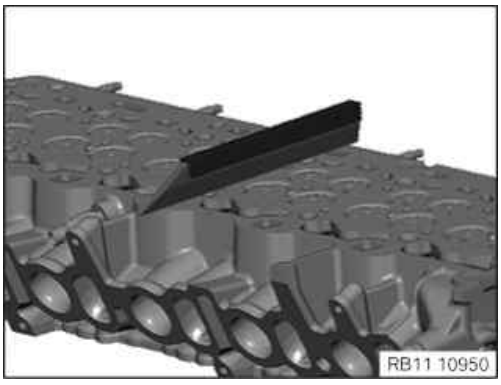
cardiagn.com



- Check the flatness of the cylinder head lengthwise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



- Check the flatness of the cylinder head crosswise using a straightedge.

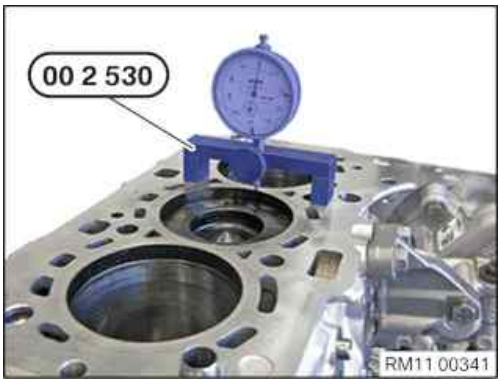
Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

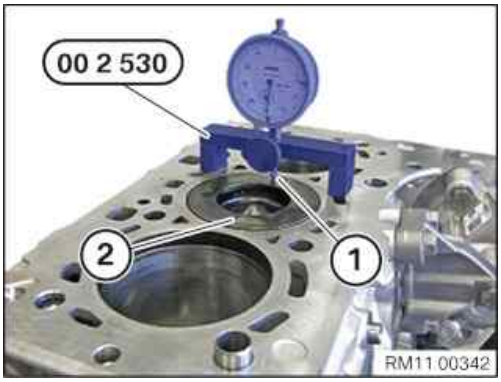
61 – Determining the thickness of the cylinder head gasket

TECHNICAL INFORMATION

The highest piston protrusion on both measuring points of all pistons determines the strength of the cylinder head gasket.

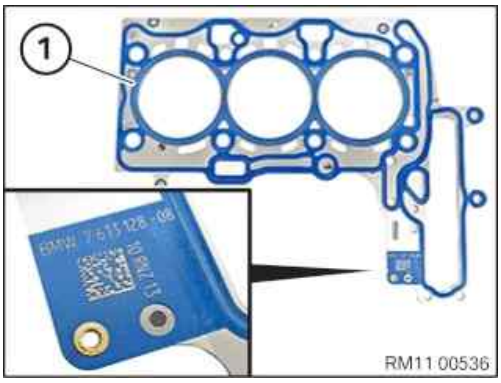


- For measuring the piston protrusion: position special tool **0 490 185 (00 2 530)** including the dial gauge on the cleaned cylinder head lower face.
- Set dial gauge to zero under preload.



- Clean the pistons at the measuring points (1) and (2).
- Place the dial gauge onto the cleaned piston at measuring points (1) and (2).
- Determine highest point by turning crankshaft.
- Measure and record the piston protrusion at measuring points (1) and (2) on all pistons.

cardiagn.com



- Renew cylinder head gasket.

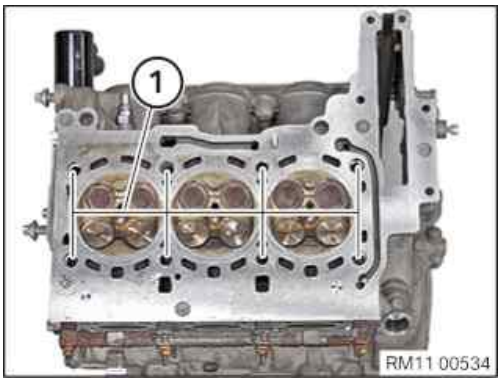
  Parts: Cylinder head gasket

Selecting the cylinder head gasket

A decision is made to determine which cylinder head gasket must be used based on the measuring result of the measurement of the piston protrusion.

Cylinder head gasket with number of holes 1	0 mm ... 0,92 mm
Cylinder head gasket with number of holes 2	0,93 mm ... 1,03 mm
Cylinder head gasket with number of holes 3	1,04 mm ... 1,18 mm

62 – Renewing the cylinder head gasket



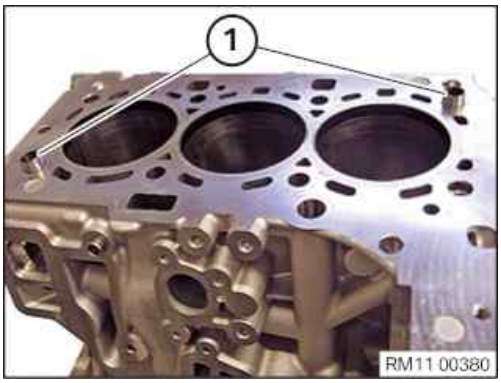
RISK OF DAMAGE

Damage to the surface.

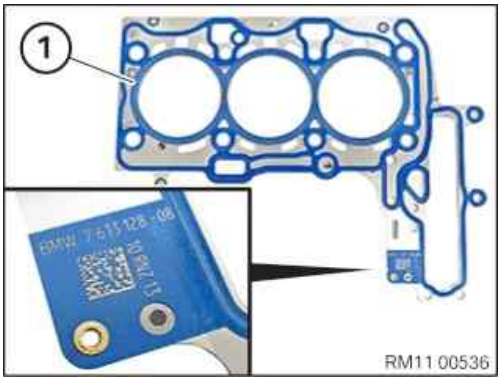
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

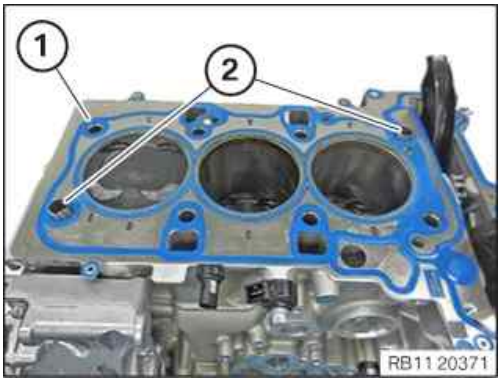
- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

63 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

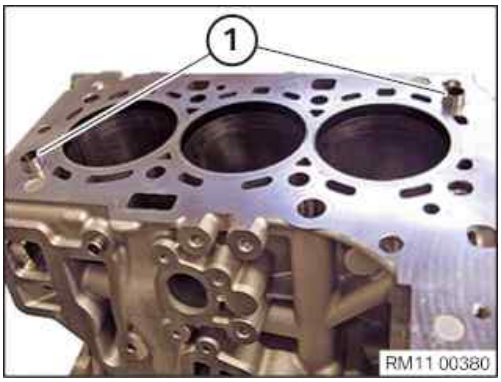
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

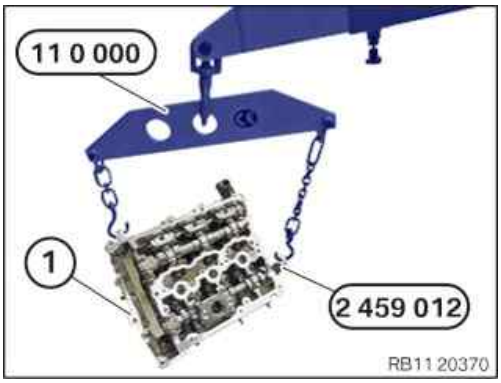
Do not remove bolt coating.



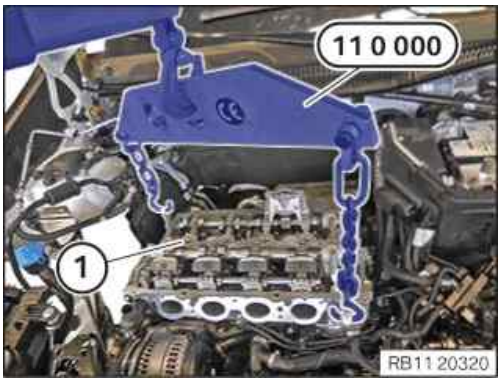
- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.

- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.



RISK OF DAMAGE

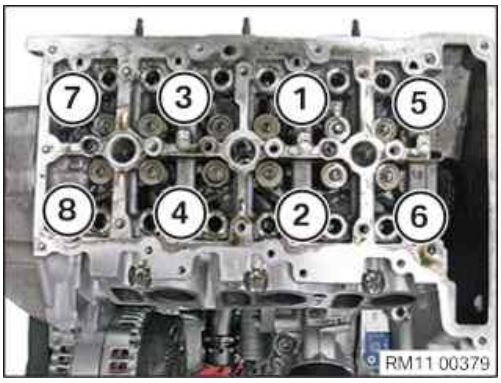
Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

cardiagn.com



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

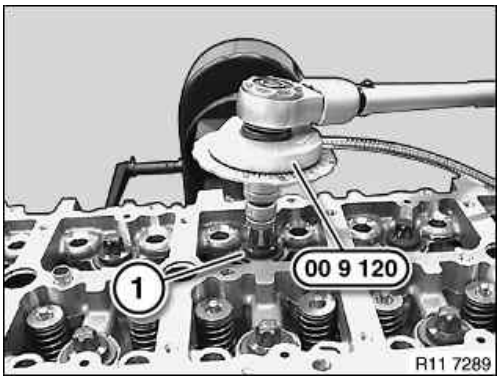
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

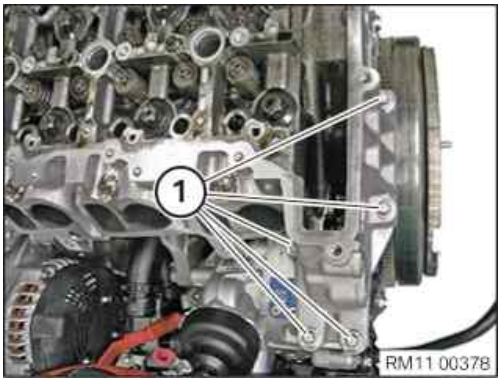
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



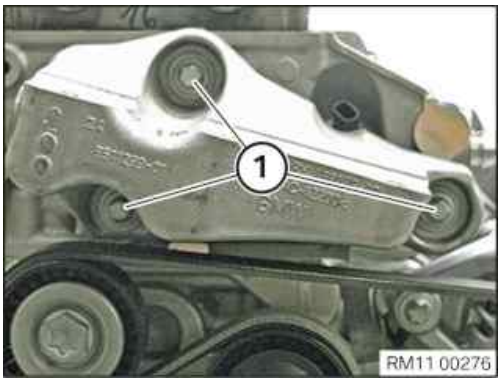
- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

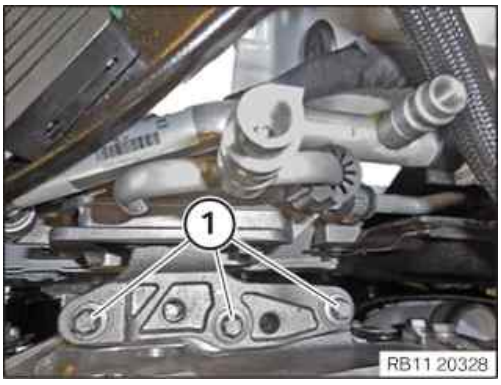
cardiagn.com



- Tighten the screws (1).

Engine support to cylinder head

M10X45		Tightening torque	41 Nm



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

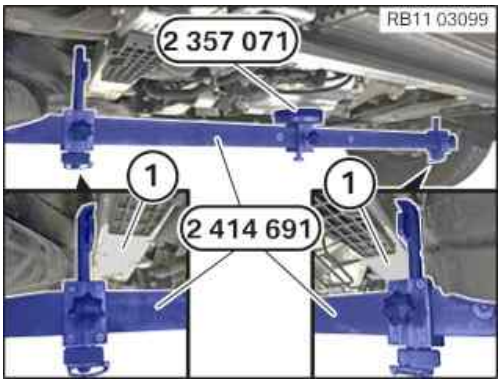
Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

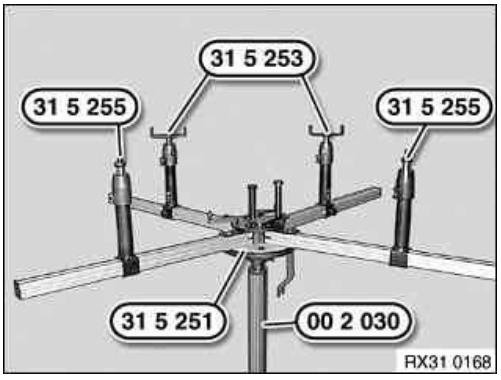
- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



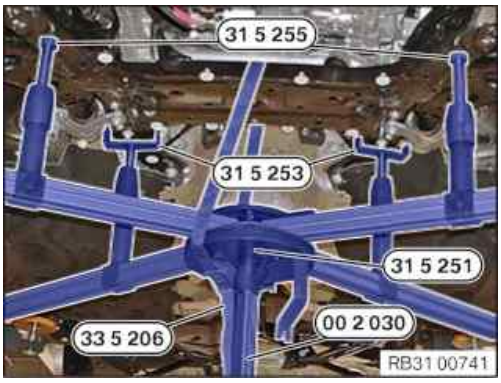
- Disassemble special tool **2 414 691** using special tool **2 357 071**.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

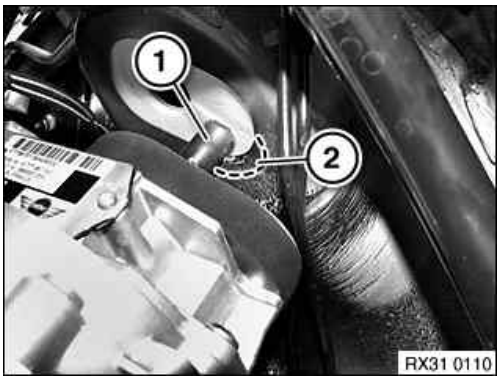
cardiagn.com



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

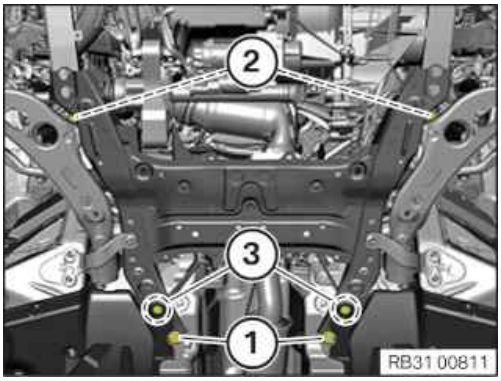


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

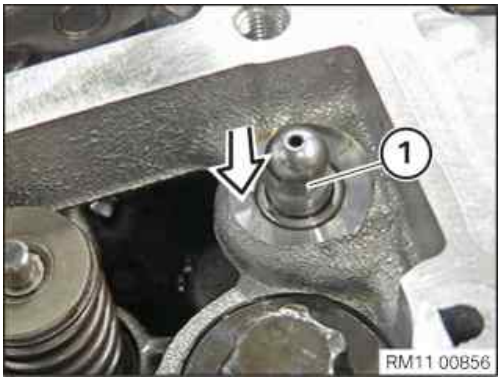
64 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



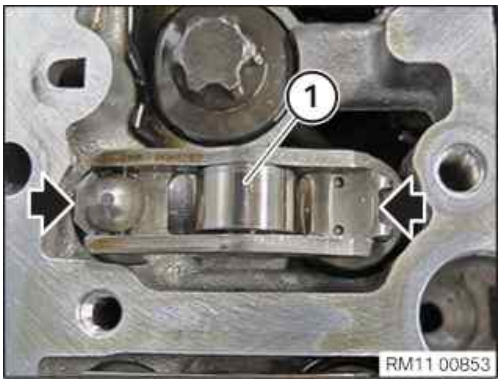
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

cardiagn.com

65 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

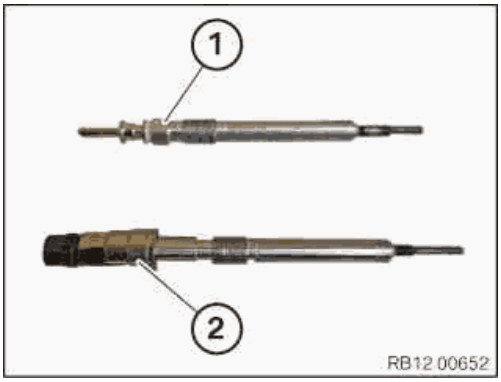


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

66 – Install glow elements

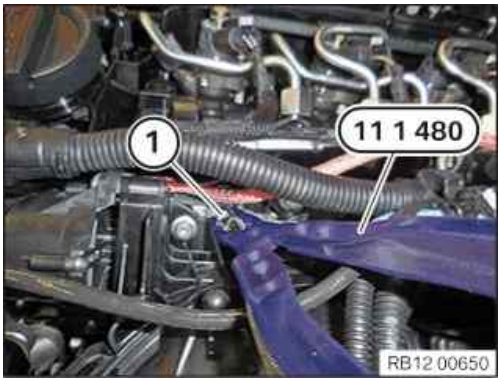


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

67 – Installing the camshaft support

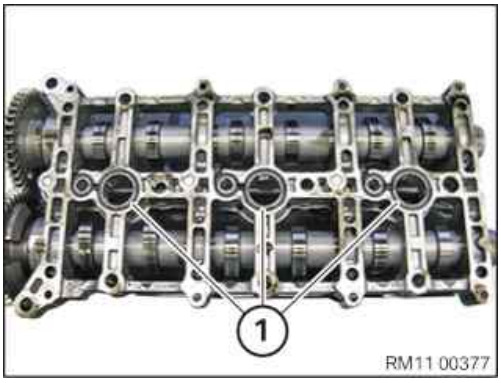
cardiagn.com

RISK OF DAMAGE

Damage of the engine and mounted parts.

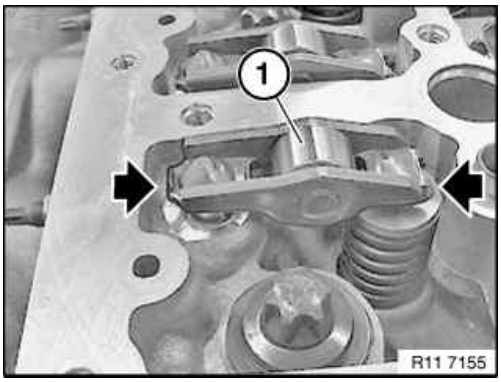
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

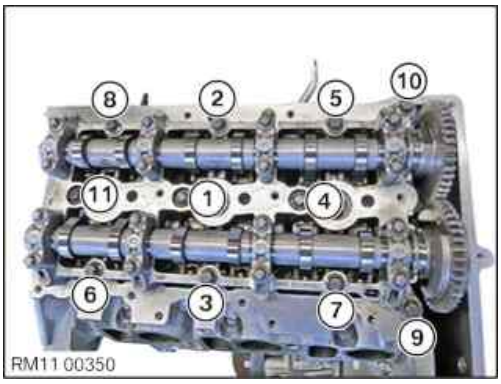


- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

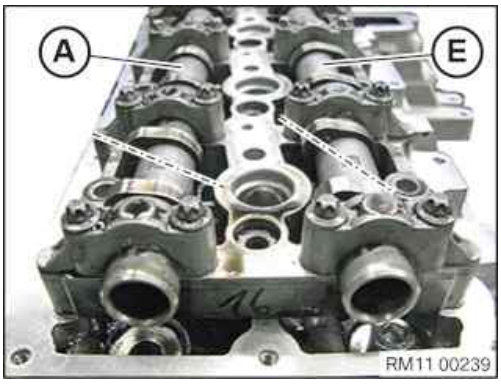
68 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

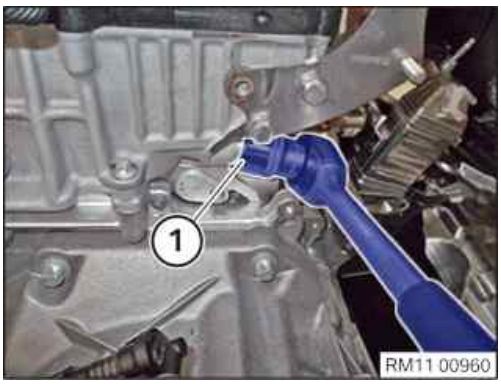
▸ **Remove chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove exhaust camshaft.**

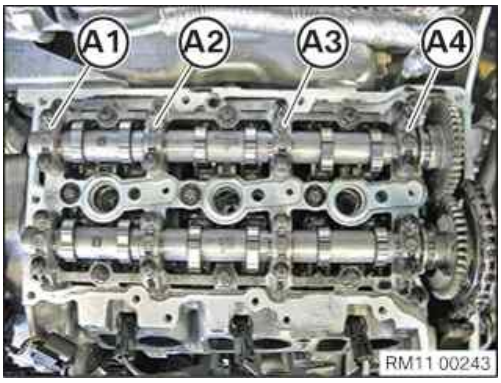
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

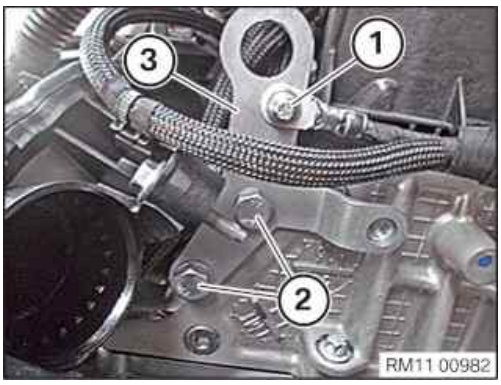


TECHNICAL INFORMATION

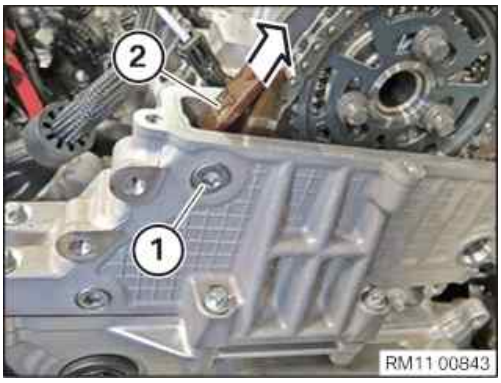
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▸ **Remove the timing chain guide rail**

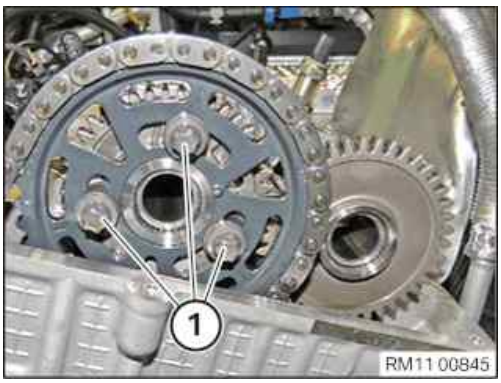


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ **Removing the camshaft sprocket on the intake camshaft**



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▸ **Installing exhaust camshaft**

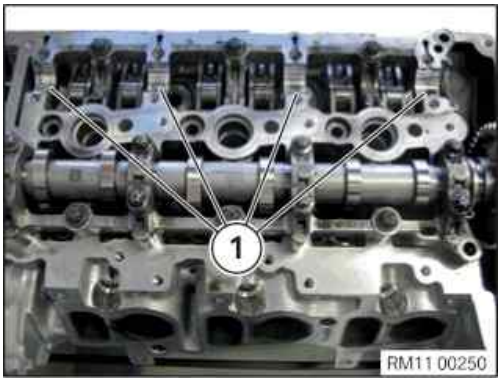
cardiagn.com

RISK OF DAMAGE

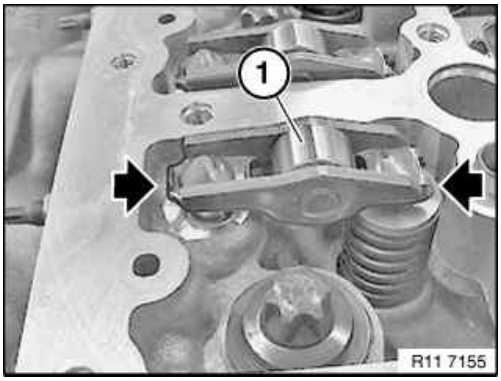
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

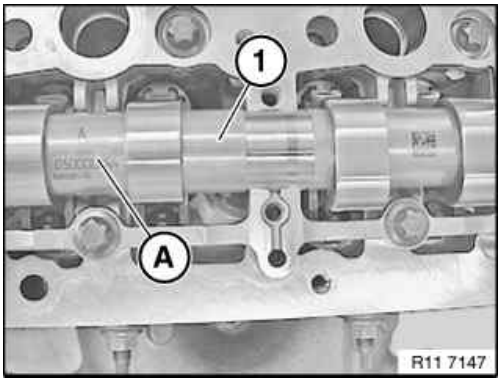
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



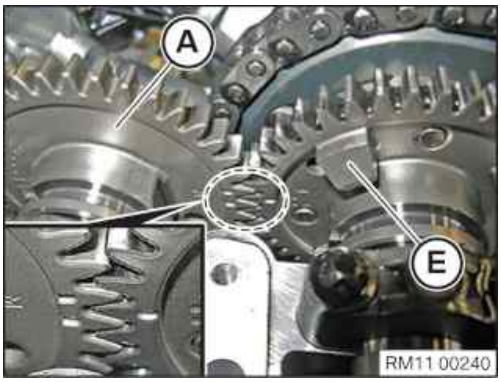
- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.

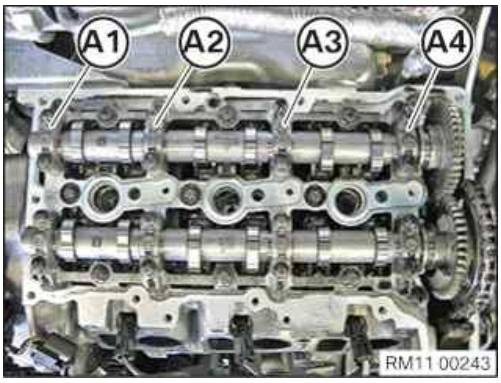


- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

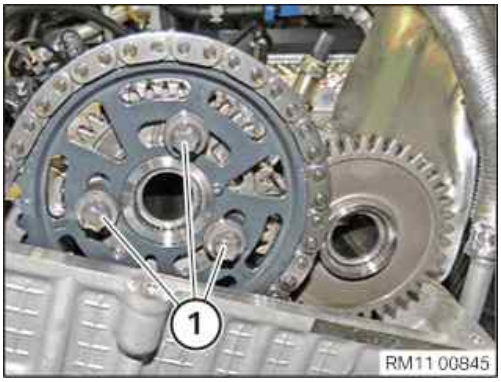
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

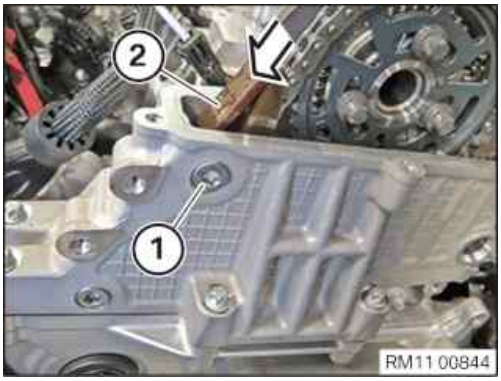
  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



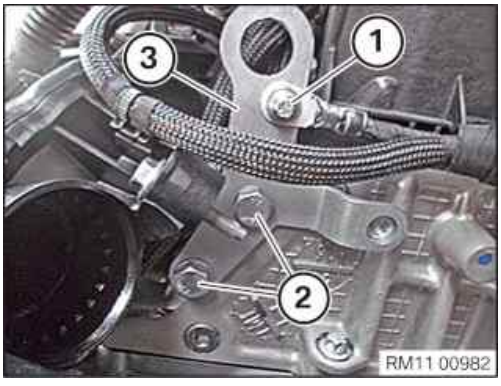
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▸ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

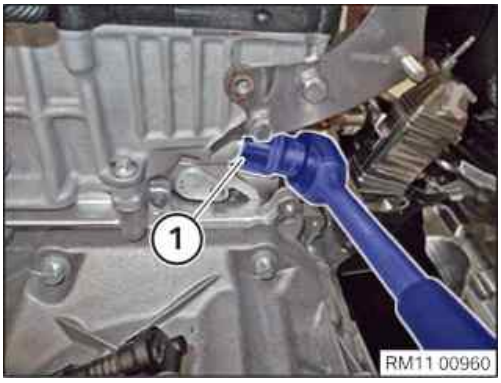
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

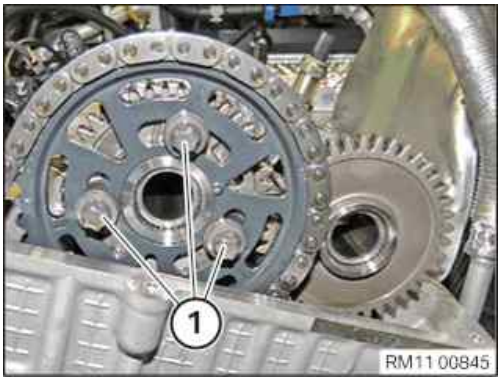


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

69 – Remove special tool to disconnect the crank shaft

cardiagn.com

- Remove special tool **2 288 380**.

70 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

71 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

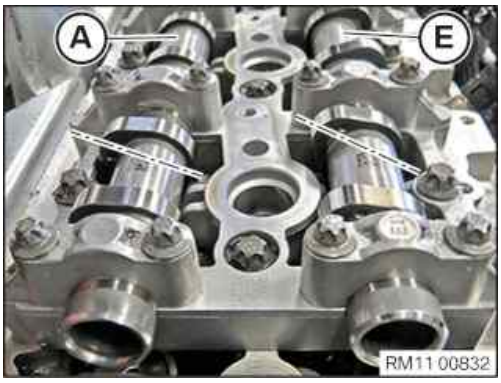
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

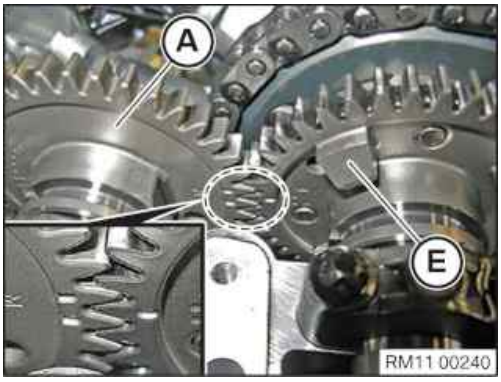
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

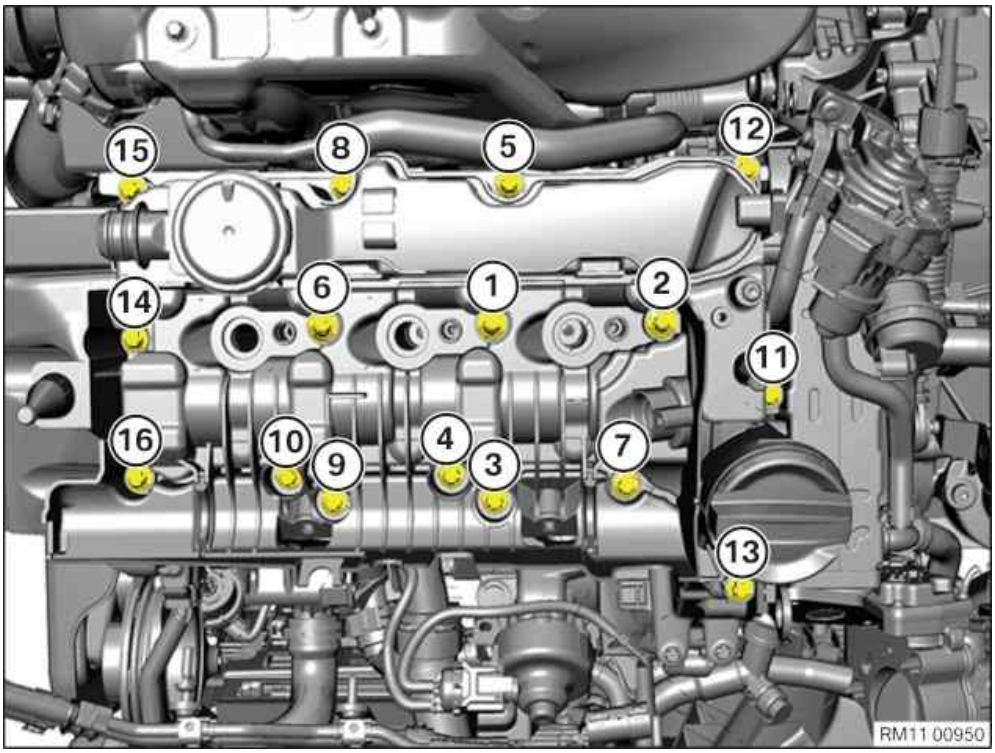
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

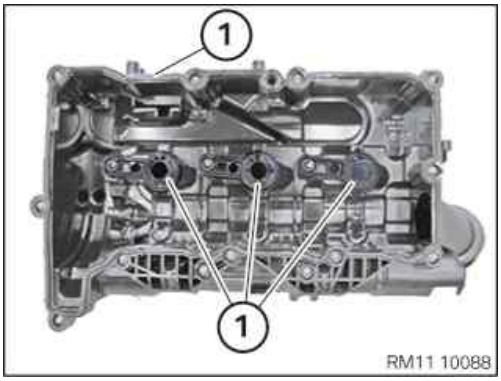
72 – Installing cylinder head cover

cardiagn.com

Overview: Screw connection of the cylinder head cover

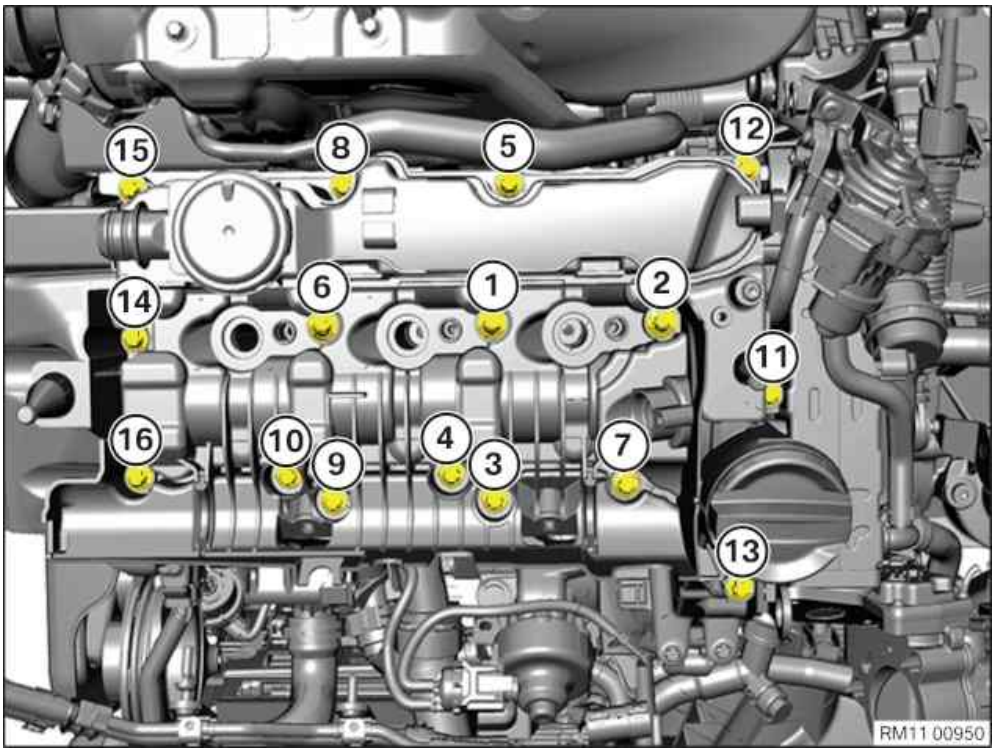


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

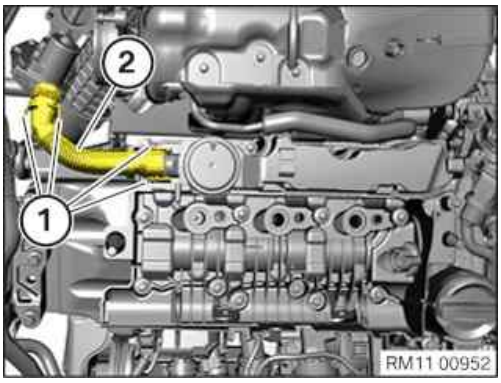


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nm

cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

73 – Installing injectors of injection system

▶ Cleaning the injector shafts

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

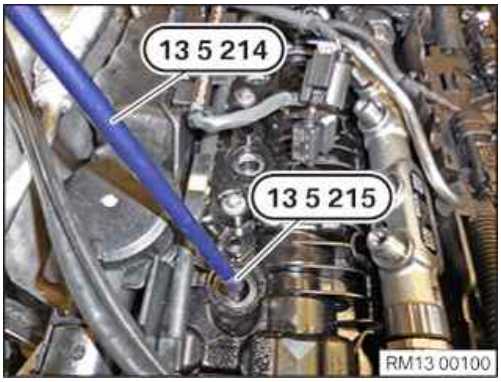
- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

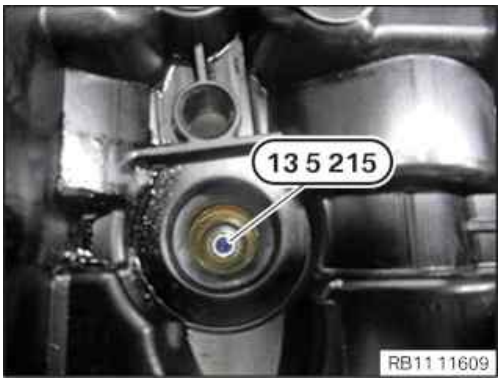
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

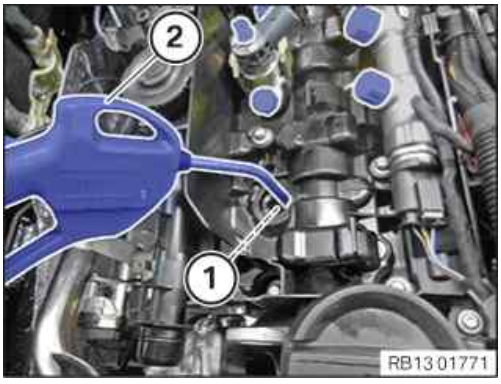
cardiagn.com



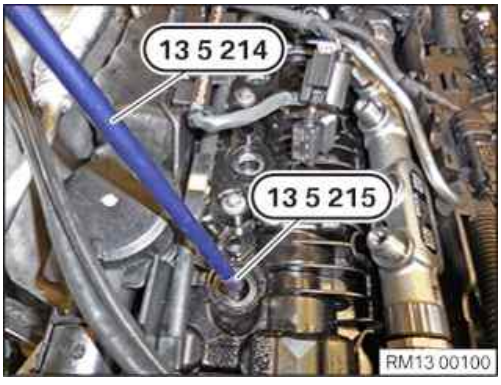
- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

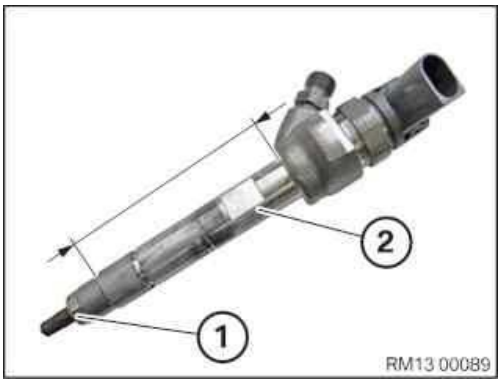
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

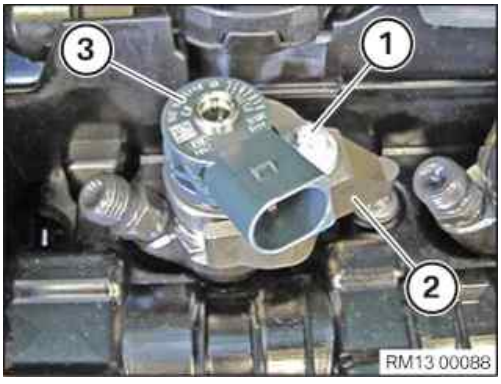


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070

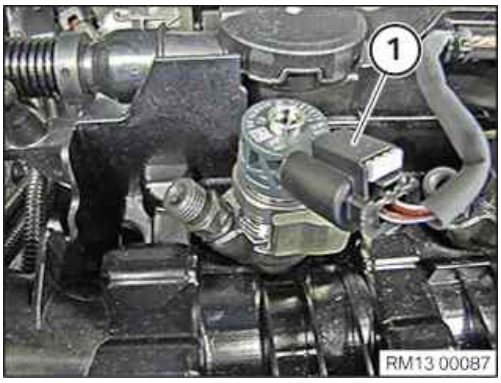


- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

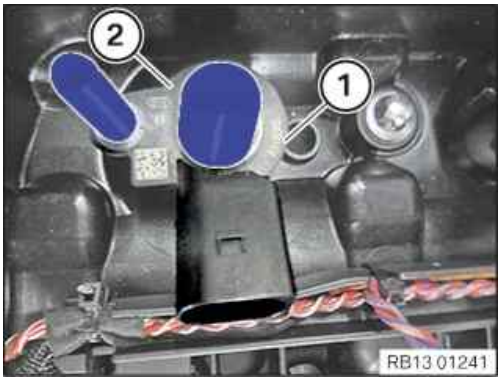
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

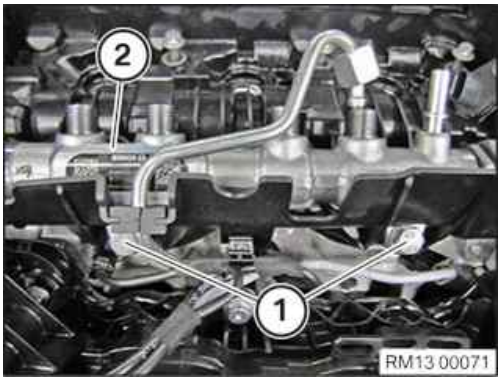
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

74 – Installing the rail

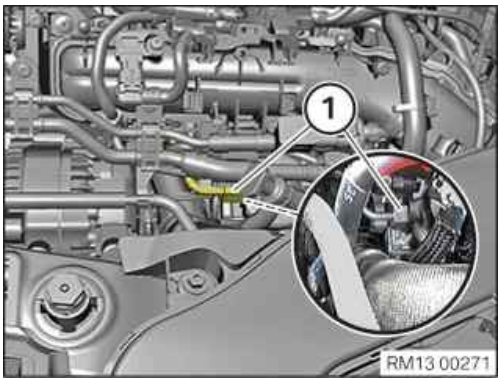


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



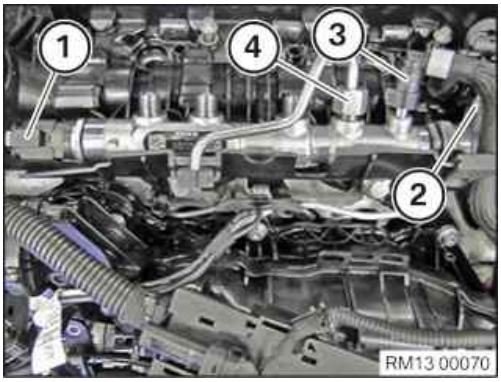
TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

75 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

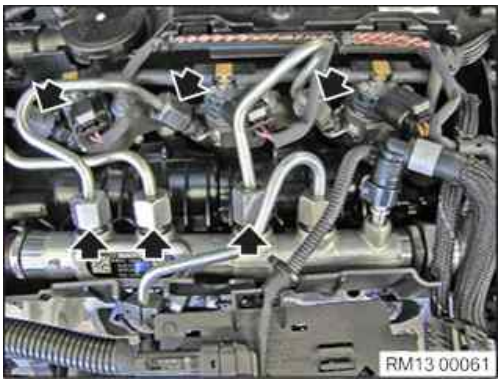
76 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

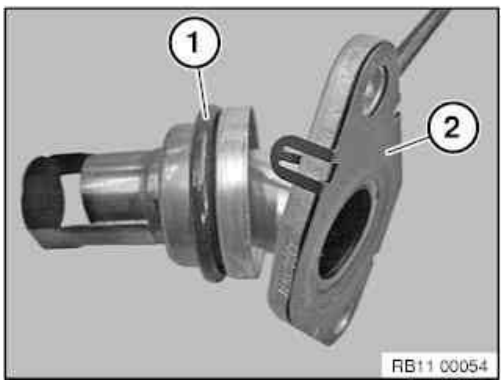
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

77 – Installing the intake plenum

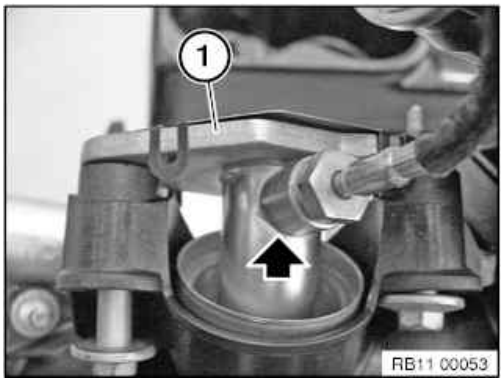


- Renew O-ring (1).

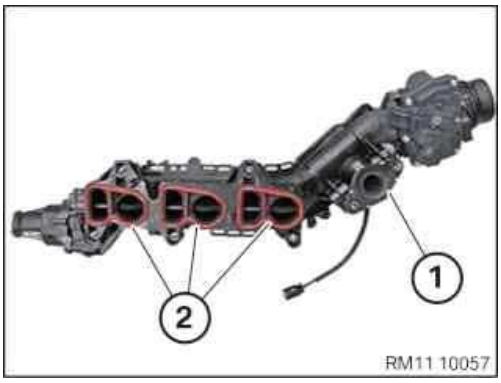
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

cardiagn.com

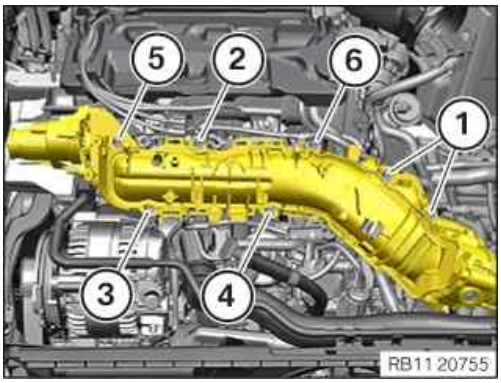


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

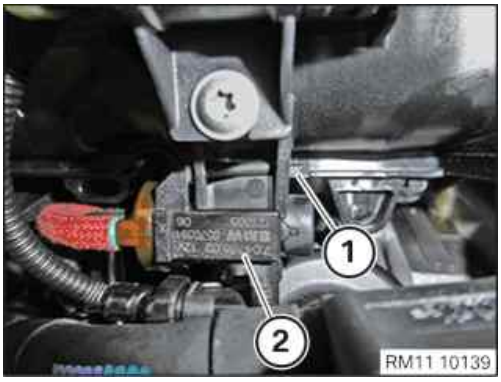
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



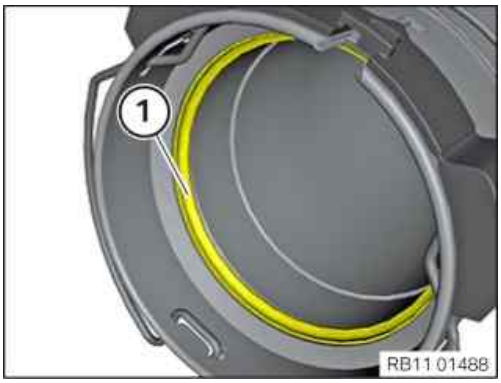
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



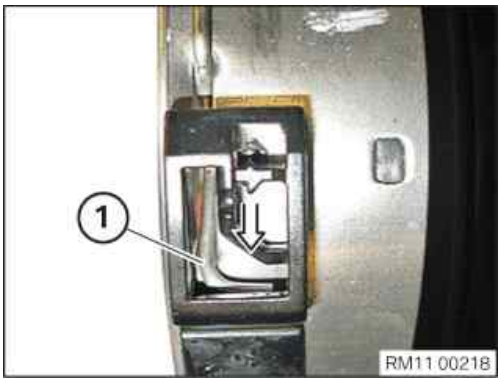
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



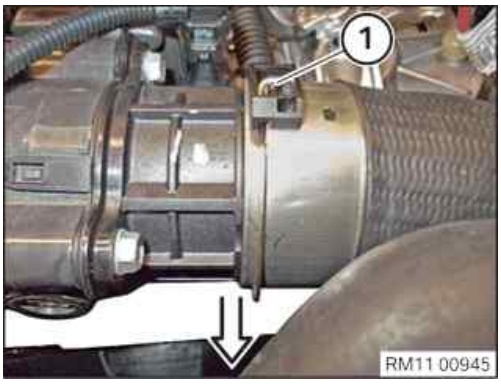
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

78 – Remove the engine from the assembly stand

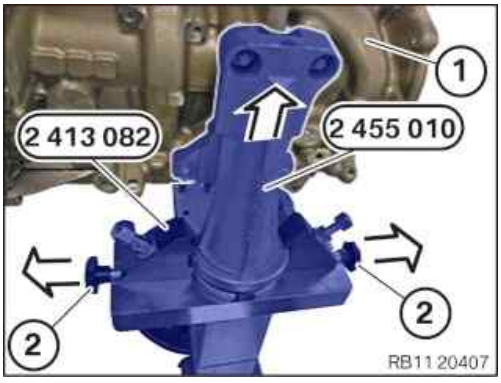
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

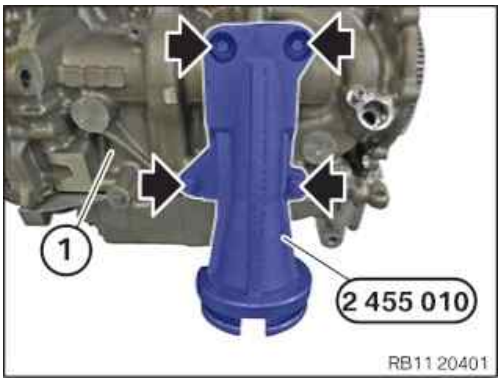
- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).

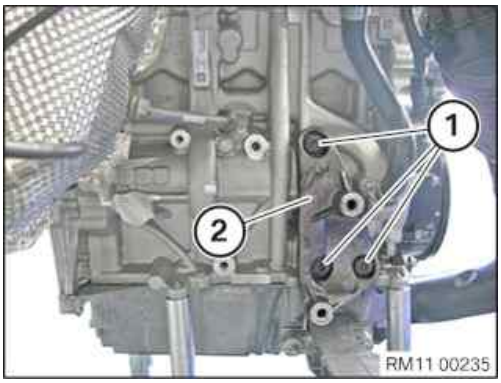


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

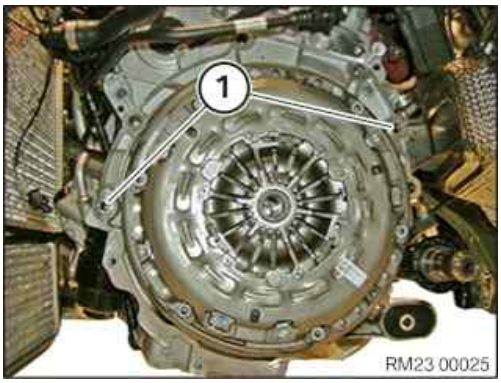
Holder to crankcase

M10		Tightening torque	38 Nm

79 – Mounting engine on manual gearbox

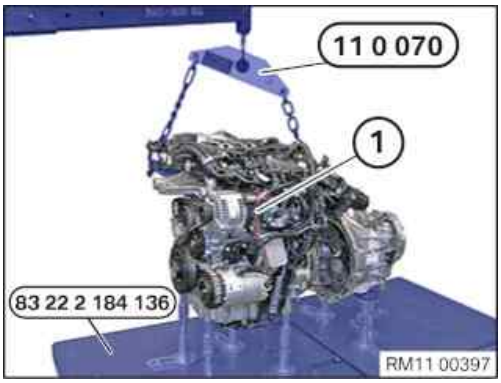
Prerequisite

Engine has been removed.



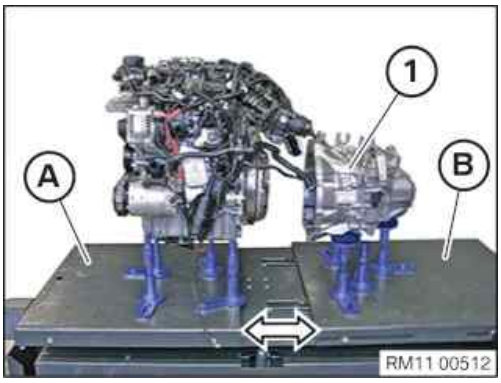
- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.

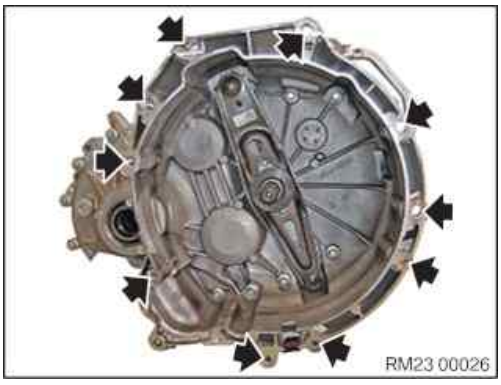


- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.

cardiagn.com



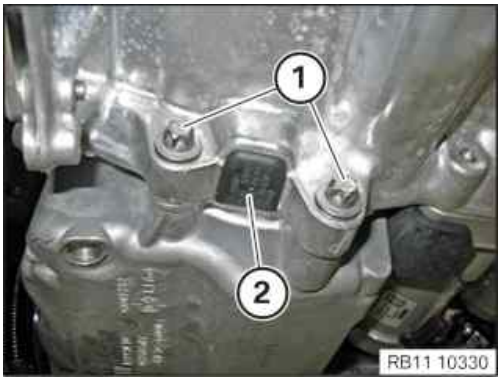
- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.



- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm



- Tighten the screws (1).

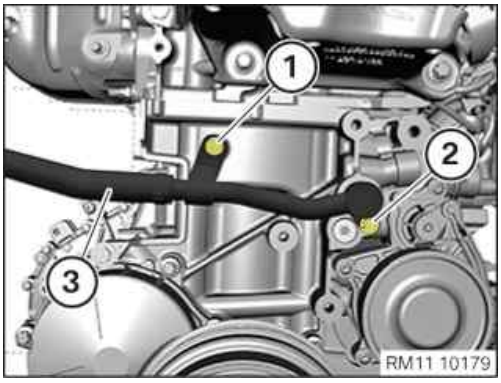
Transmission to oil sump

M8		Tightening torque	19 Nm

- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

80 – Attaching assemblies (on lifting table)



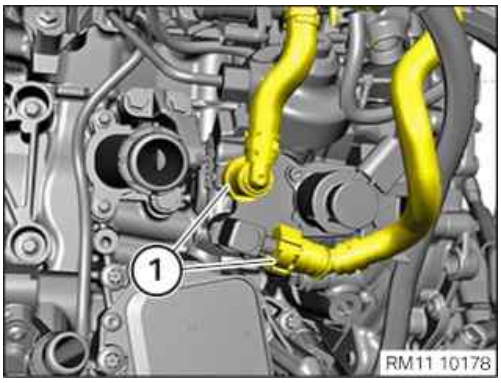
- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm

cardiagn.com



- Connect and lock fuel lines (1).

  The locks must engage audibly.

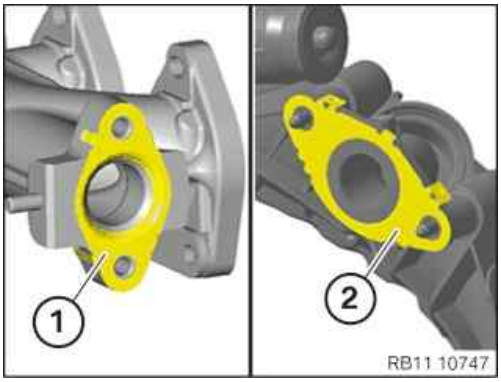
▶ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



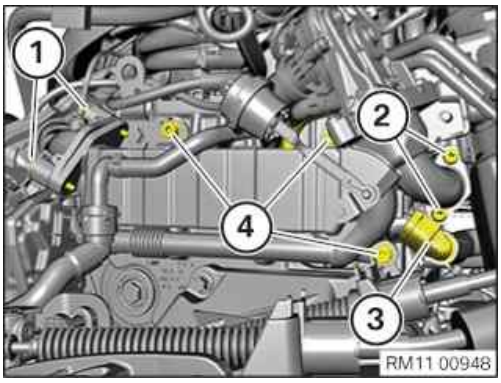
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

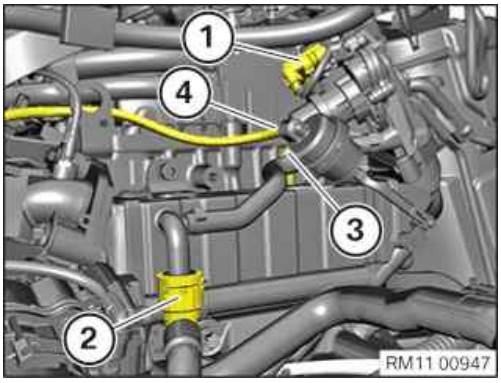
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



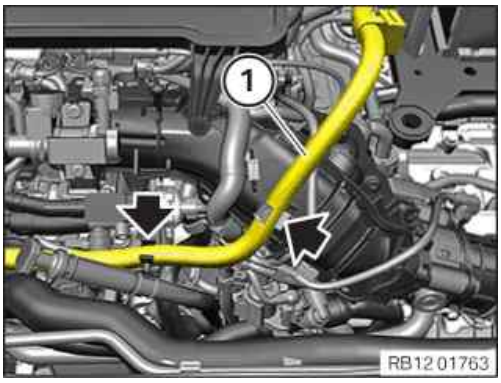
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

cardiagn.com



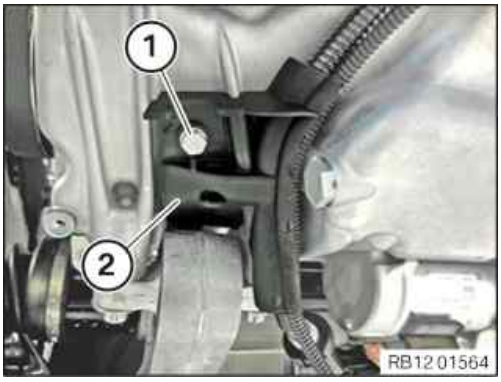
CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

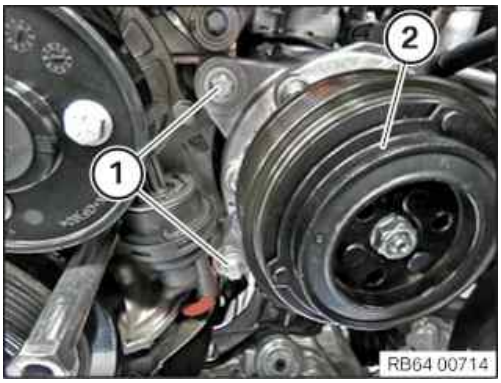
- Insert the positive battery cable (1) into the clamps (arrows).
- Feed in and install positive battery cable at the clamps (1).



- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm



- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

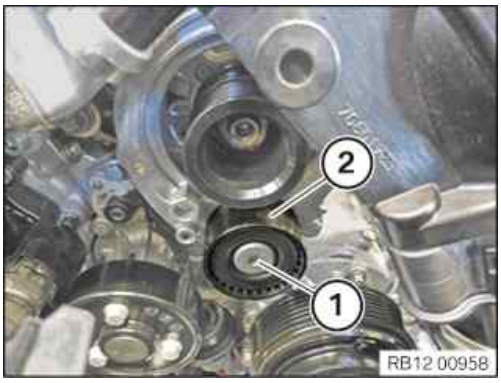
- Tighten the screws (1).

- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

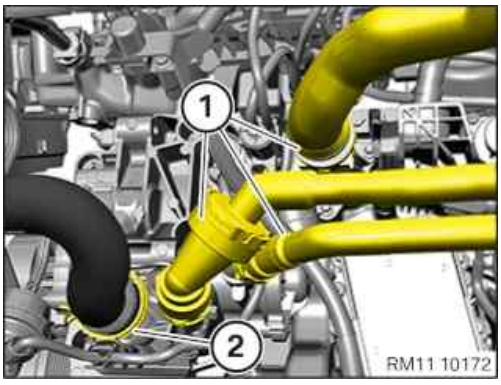
cardiagn.com



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

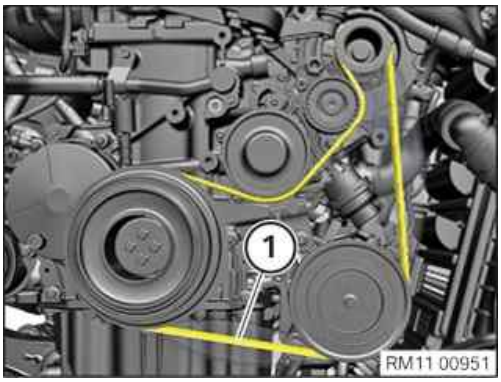
▶ **Installing the drive belt for alternator**

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

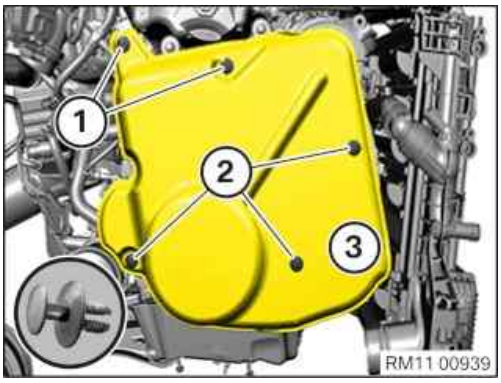


- Feed in the drive belt for the alternator (1) and install it.

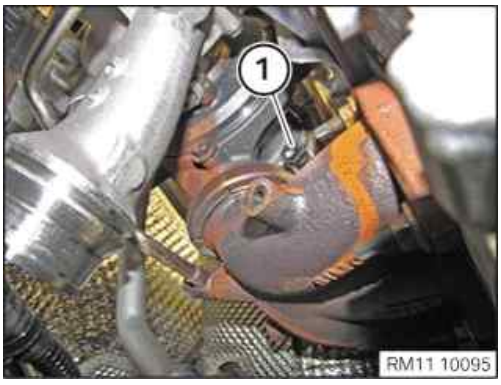
- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▶ **Install the acoustic cover for the engine at the front**

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

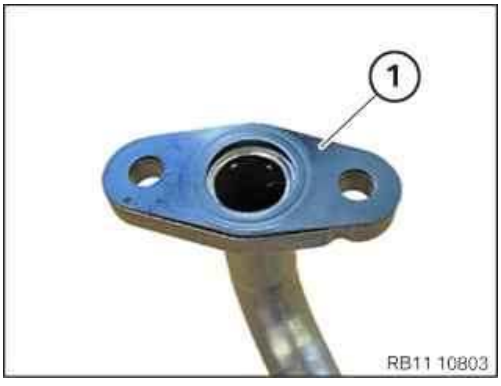
▶ **Installing the oil return line for the exhaust turbocharger**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

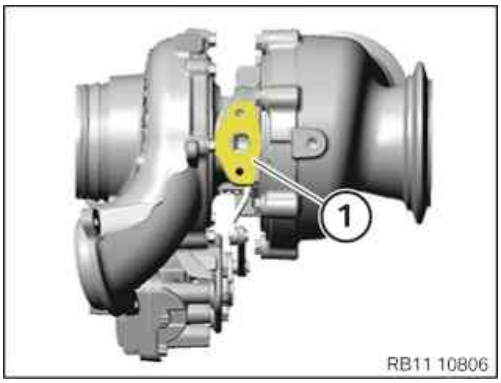


- Renew gasket (1).

  Parts: Gasket

cardiagn.com

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

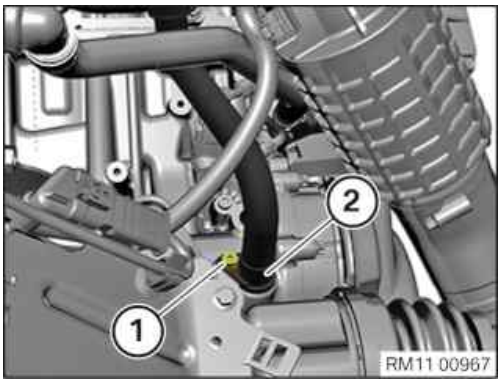
- Do not use any metal-cutting tools.

- Clean sealing surface.

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



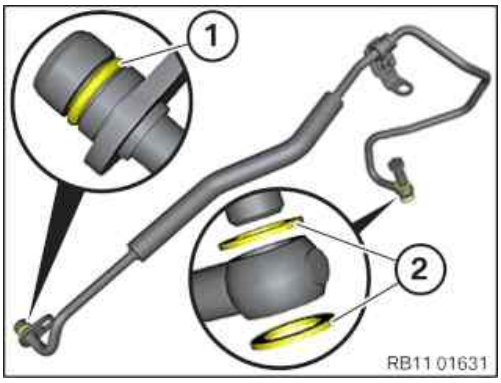
- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

▸ **Install the oil feed line for the exhaust turbocharger**

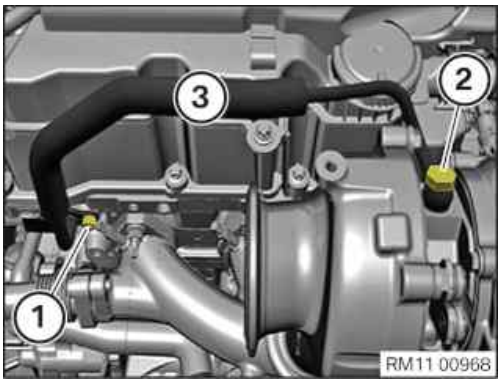
cardiagn.com



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

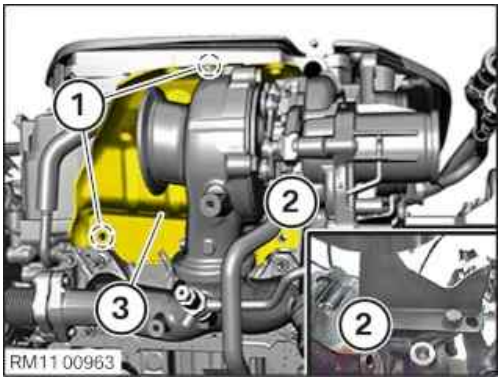
▸ **Installing heat shield on exhaust turbocharger at the rear**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

▸ **Installing heat shield on exhaust turbocharger at bottom**

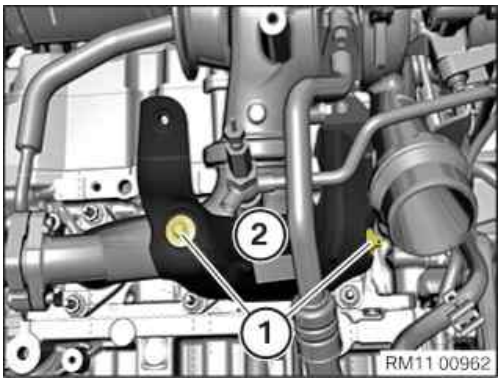
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

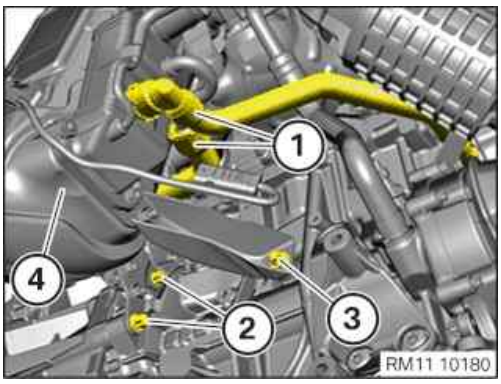
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

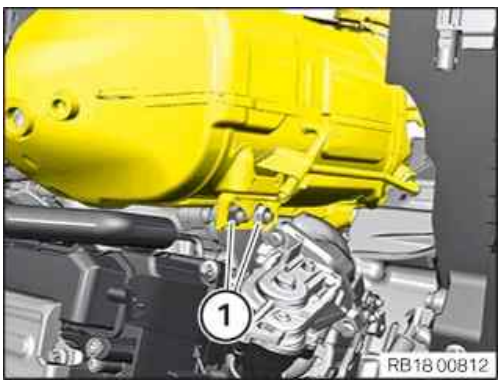
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).



- Tighten nuts (1).

Diesel particle filter to holder

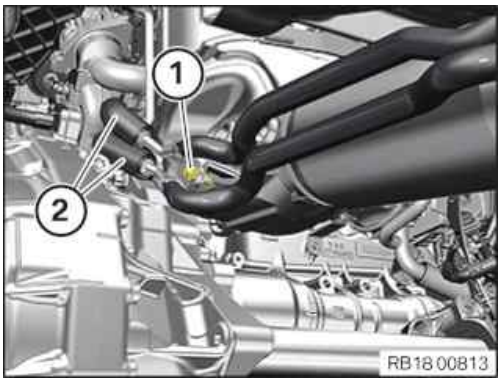
M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

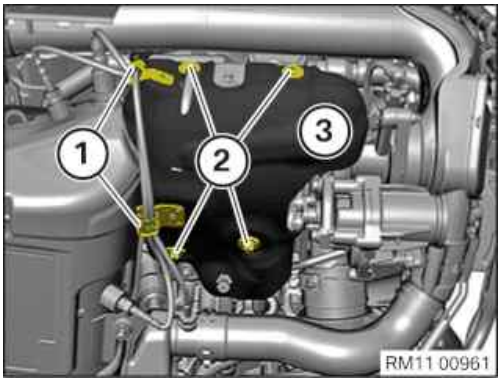
▶ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



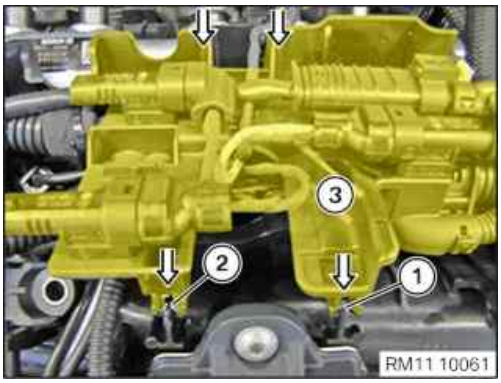
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

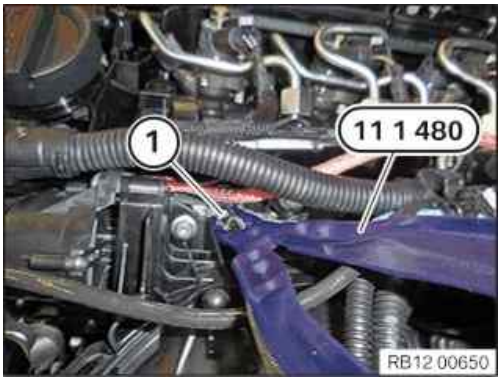
Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

▶ **Installing the cable clip for the intake plenum**



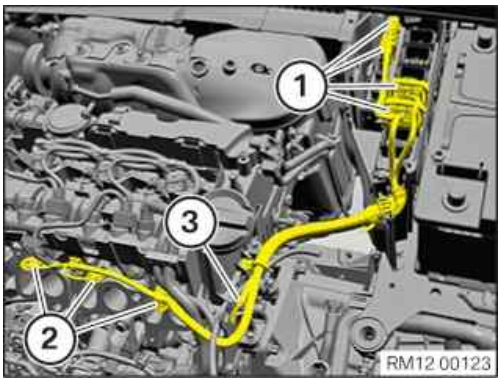
- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

  The connector (1) must engage audibly.

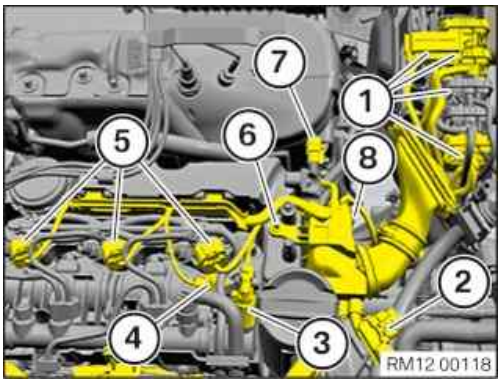
cardiagn.com



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

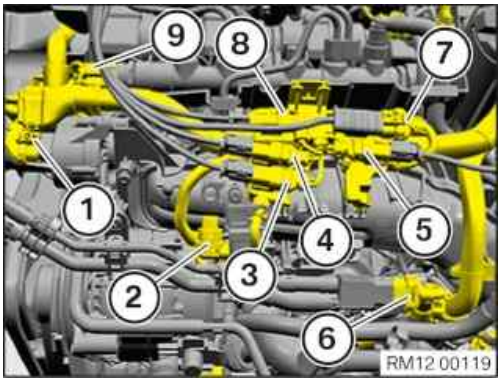


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

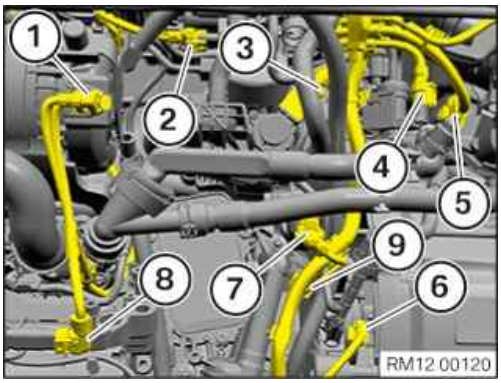
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

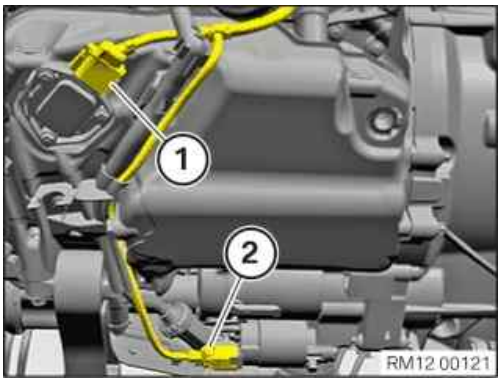


- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.

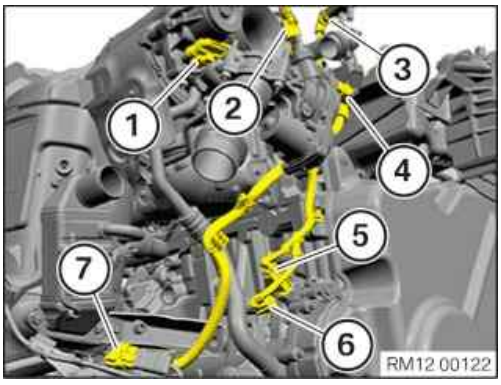


- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.

cardiagn.com

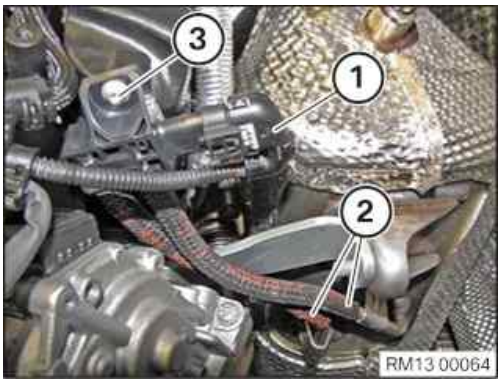


- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

81 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

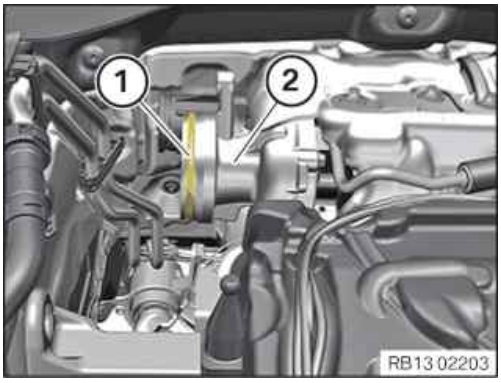
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

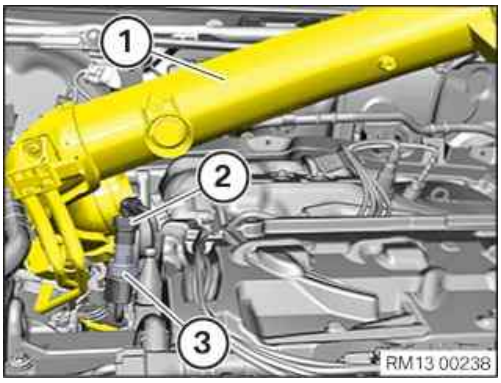
  The connector (1) must engage audibly.

82 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com



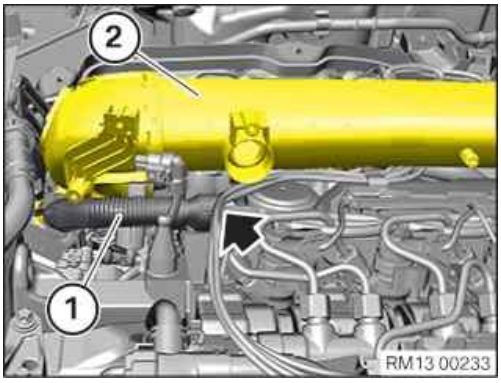
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

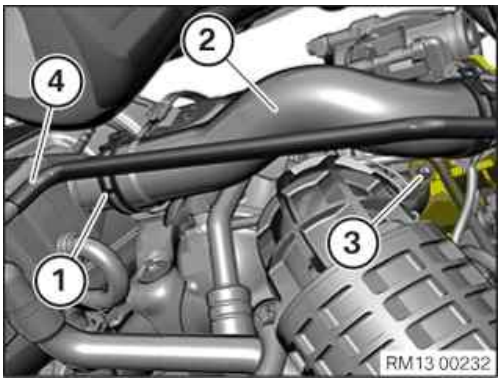
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

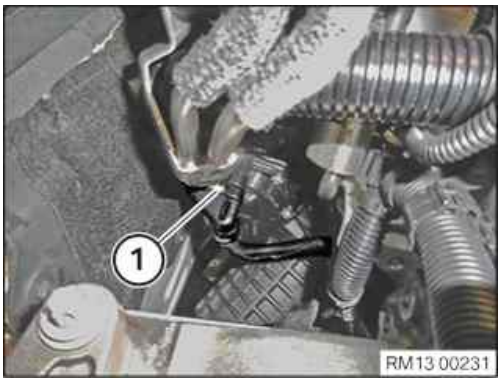
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

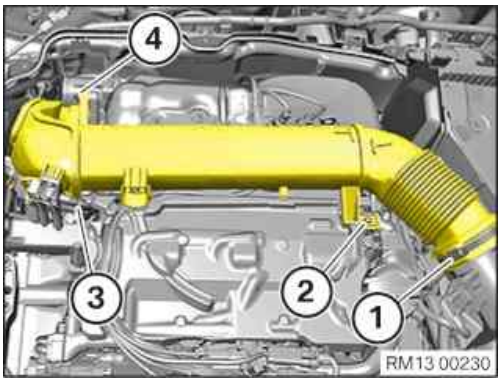
Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.

cardiagn.com



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

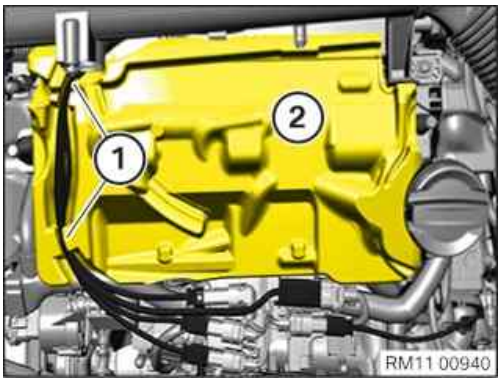
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

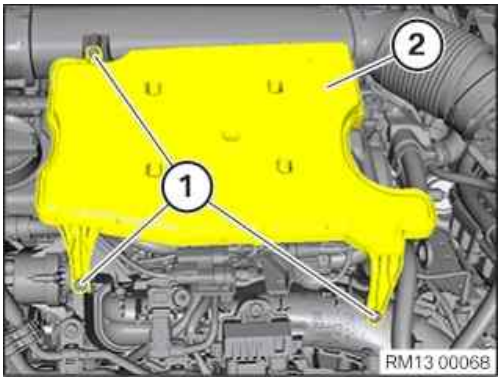
Clamp		Tightening torque	3 Nm

83 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

84 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

85 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

86 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Used in step 79 80

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 80

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler

Used in step 80

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 80

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 80

M8x20		Tightening torque	19 Nm

Bracket to oil sump

Used in step 80

M6		Tightening torque	8 Nm

Air conditioning compressor in component carrier

Used in step 80

M10		Tightening torque	38 Nm

Alternator to component carrier

Used in step 80

M10x75 / M10x125		Tightening torque	38 Nm

Deflecting element to belt tensioner

Used in step 80

M8		Tightening torque	38 Nm

Exhaust turbocharger to exhaust manifold

Used in step 80

V-band clamp		Tightening torque	19 Nm

Holder to exhaust turbocharger and crankcase

Used in step 80

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger

Used in step 80

M6x12		Tightening torque	8 Nm

Oil return line to crankcase

Used in step 80

M6x12		Tightening torque	8 Nm

Oil feed line on cylinder head

Used in step 80

M6x12		Tightening torque	8 Nm

Oil feed line to exhaust turbocharger

Used in step 80

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Heat shield for exhaust turbocharger

Used in step 80

Torx screw BM 6x12		Tightening torque	10 Nm

cardiagn.com

Exhaust turbocharger bracket to cylinder head — Used in step 80

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particle filter to holder — Used in step 80

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 80

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Holder for coolant lines to diesel particulate filter — Used in step 80

Torx bolt BM6x16		Tightening torque	8 Nm

Ground cable to cylinder head — Used in step 80

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 80

TS5x20		Tightening torque	3,5 Nm

Differential pressure sensor to holder — Used in step 81

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 81 82

Clamp 15–19mm		Tightening torque	3 Nm

Exhaust gas pressure sensor — Used in step 82

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

Clean air pipe to exhaust turbocharger — Used in step 82

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 82

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 82

Clamp		Tightening torque	3 Nm

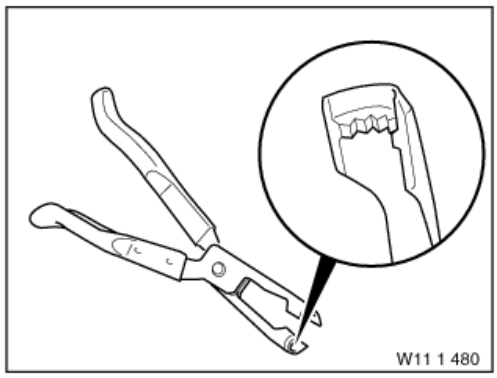
Resonator to manifold and clean air pipe — Used in step 84

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

cardiagn.com

0 490 796 (11 1 480) Pliers



Common Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

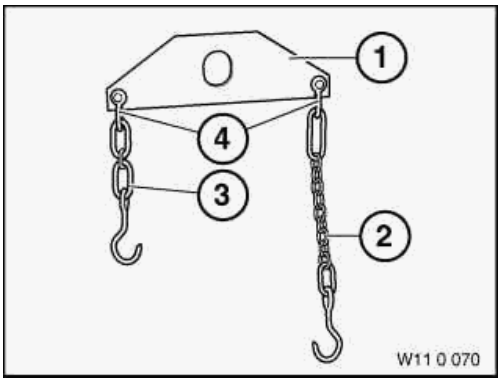
Common Used in step 8 24 63 79

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 490 579 (11 0 070) Lifting gear

Used in step 8 9 78 79

cardiagn.com



Common

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

2 455 010 Engine support

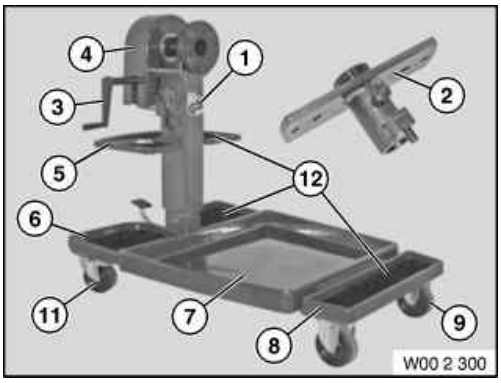
Common Used in step 9 78

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

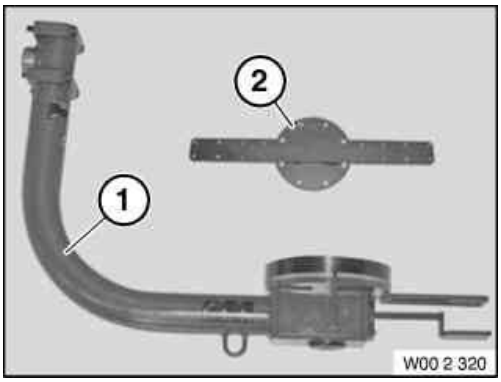
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

0 495 910 (37 1 152) Socket wrench

Common Used in step 11 14 74 76

Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

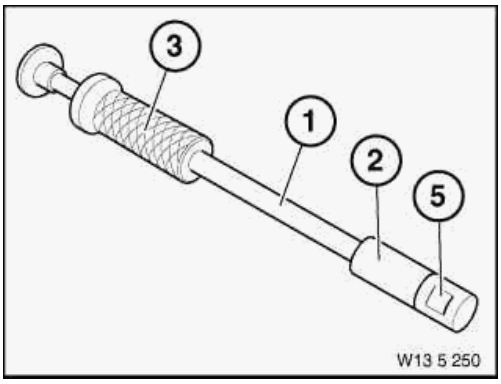
cardiagn.com

2 413 106 Fastener

Common Used in step 11 76

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush

Common Used in step 13

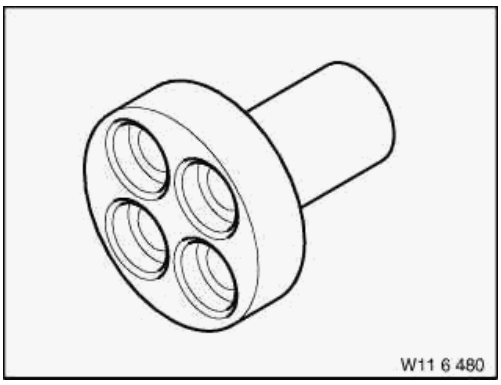
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common Used in step 13

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common Used in step 16 68 71

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 288 380 Locating stud

Common Used in step 16 68 69 71

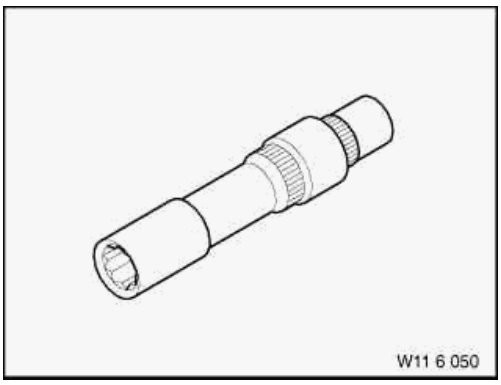
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 16 68 70 71

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common Used in step 21 24 63 66

Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

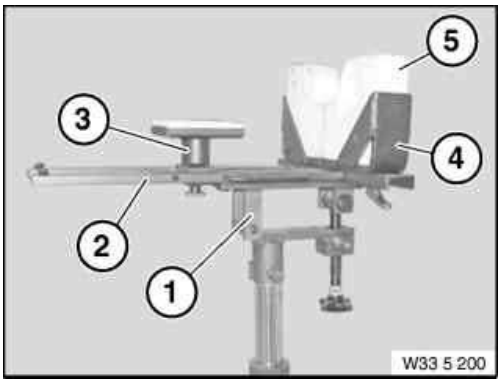
Common Used in step 22 23 68

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

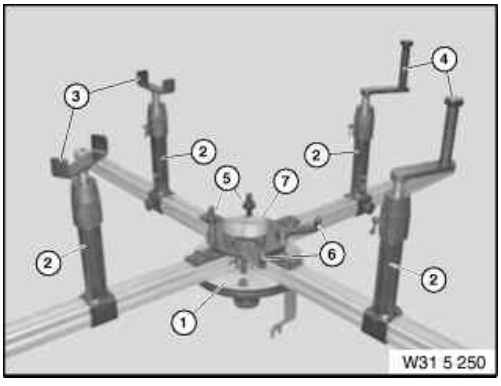
0 496 080 (33 5 206) Belt



Common Used in step 24 63

Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 817 (31 5 251) Basic body

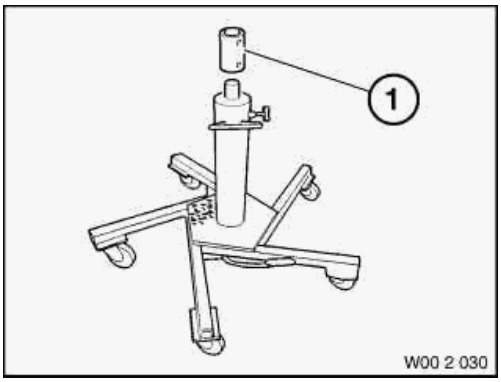


Common Used in step 24 63

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

cardiagn.com

0 490 133 (00 2 030) Device



Common Used in step 24 63

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

2 414 691 Support

Common Used in step 24 63

Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

cardiagn.com

2 357 071 Panel

Common

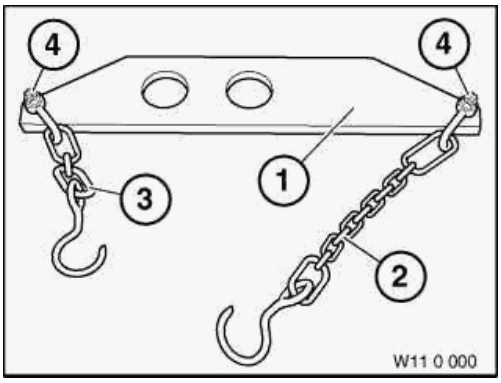
Used in step 24 63

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

0 490 561 (11 0 000) Lifting gear

Used in step 24 63

cardiagn.com



Common

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

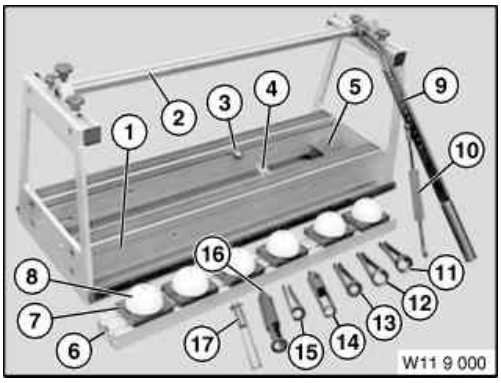
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 24

cardiagn.com



Common

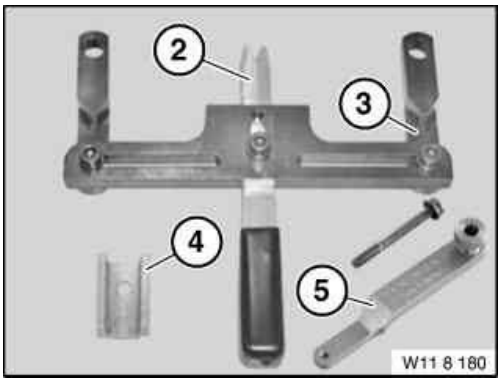
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

0 493 587 (11 8 180) Holder



Common

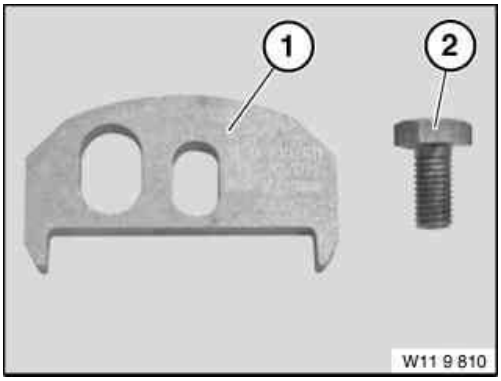
Used in step 25 58

Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

0 496 171 (11 9 811) Holder



Common

Used in step 27 28 55

Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

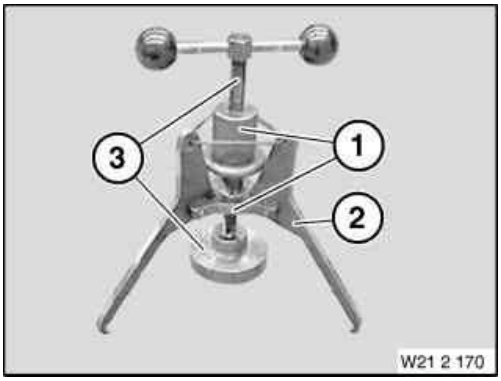
cardiagn.com

0 494 793 (11 9 265) Bush

Common Used in step 27 28 55

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

0 493 839 (21 2 170) Device



Common Used in step 27 56

Usage	(tensioning device) For resetting adjusting ring and installing self-adjusting clutch on flywheel without tension.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 00 (622)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 558 (21 2 171)		**Basic body** (Basic body) Basic body with adjusting spindle Deletion, only available via tool set	
2	0 494 559 (21 2 172)		**Claw** (Clamping claw (1 piece)) Available as part of complete tool set 0493839 only.	
3	0 494 560 (21 2 173)		**Spindle** (Pressure spindle with washer) Available as part of complete tool set 0493839 only.	

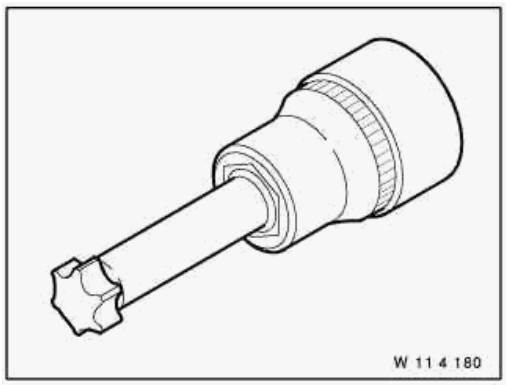
cardiagn.com

2 288 165 Synchronising key

Common Used in step 27 56

Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

0 491 018 (11 4 180) Socket WAF 46



Common Used in step 28 55

Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

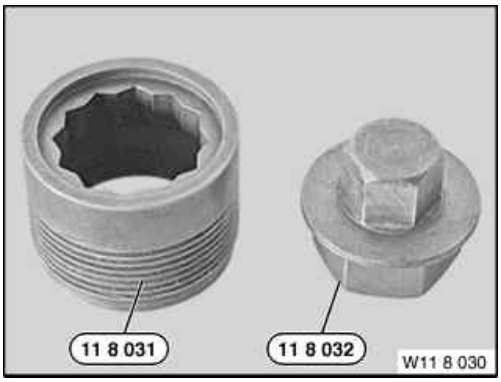
2 357 904 Gauge

Common Used in step 32 51

Usage	For positioning the high pressure pump to the crankshaft . Replaced by gauge 2420824
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 725 (11 8 030) Extractor



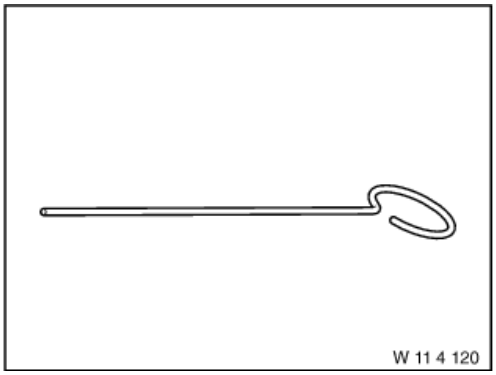
Common Used in step 32

Usage	for the disassembly of the high pressure pump (replaces SWZ 11 8 740 as of 08/2009) 11 8 740 will be replaced by 83 30 2 448 914.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 757 (11 8 031)	**2 448 914**	**Holding sleeve** Replaces SWZ11 8 741 from 08/2009, 09/2011 no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	
2	0 496 758 (11 8 032)	**2 448 914**	**Adapter** Replaces special tool 11 8 742 from 08/2009, 09/2011 remaining inventories will be sold off - no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	

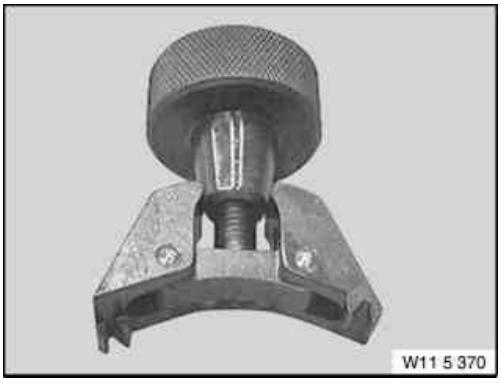
0 491 012 (11 4 120) Pin



Common Used in step 32 51

Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by	
In connection with	
SI-Number	01 12 93 (701)

0 495 131 (11 5 370) Tool



Common Used in step 33 39 46 50

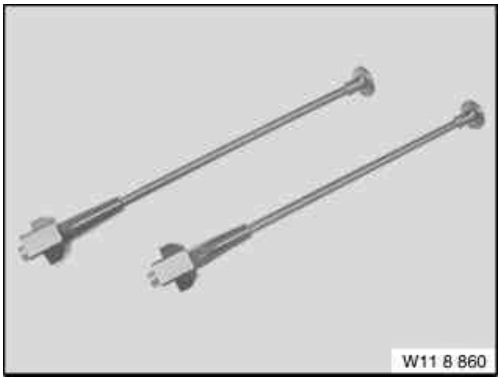
Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

cardiagn.com

2 288 943 Striking tool

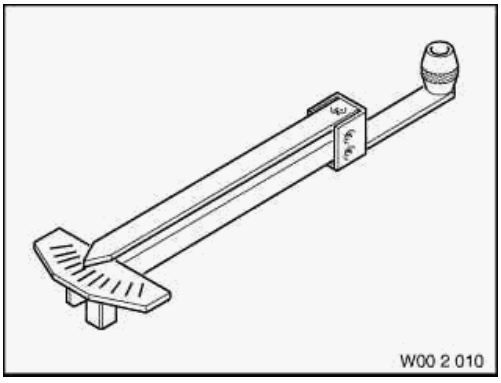
Common	Used in step 33 39
Usage	For dismantling the ring gear of the counterbalance shaft.. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 144 (11 8 860) Assembly tool



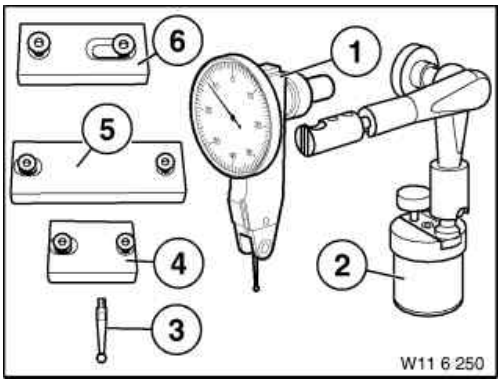
Common	Used in step 35 48
Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 490 130 (00 2 010) Measurement aid



Common	Used in step 44
Usage	(Coefficient of friction meter) For adjusting the steering box (measurement possible in both directions) and for checking and adjusting the bevel pinion and crown wheel bearing in all final drives
Included in the tool or work	
Storage location	X9
Replaced by	
In connection with	
SI-Number	

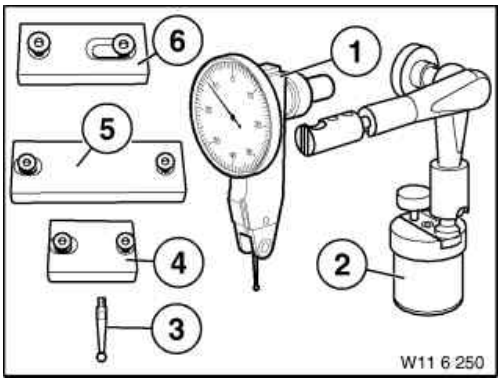
0 493 144 (11 6 251) Dial gauge



Common	Used in step 45
Usage	(Dial gauge) With 0.8 mm measuring range in each direction
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 145 (11 6 252) Tripod



Common Used in step 45

Usage	(Small hydraulic tripod with magnetic base)
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 582 (11 8 140) Bush

Common Used in step 48

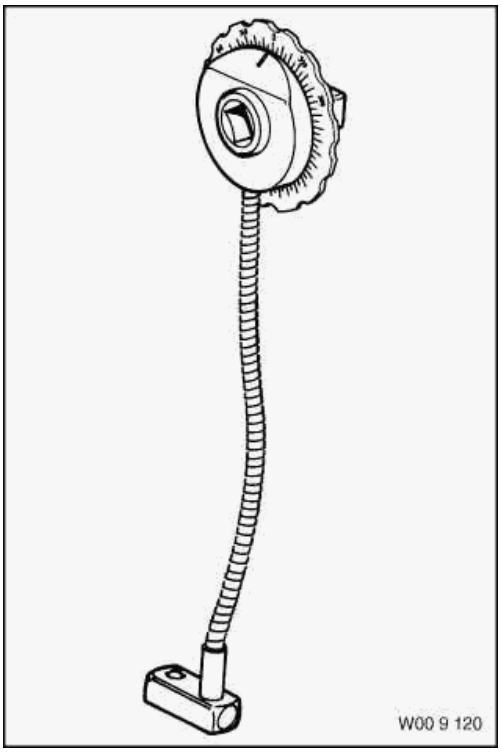
Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 394 (11 8 141)		**Bush** Bush for piston installation 84.00 mm	
2	0 494 395 (11 8 142)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	
3	0 494 396 (11 8 143)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



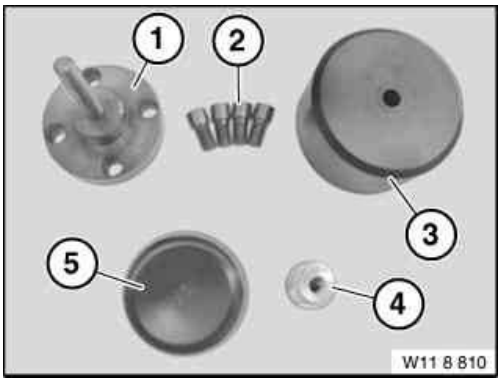
Common

Used in step 49 54 63

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

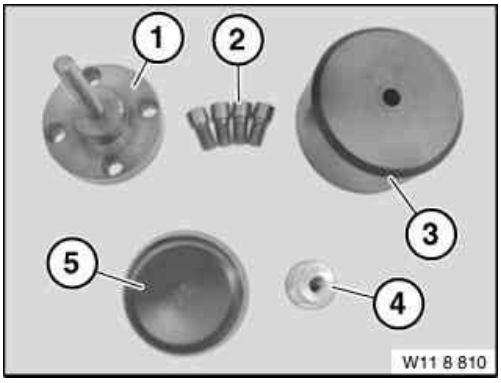
cardiagn.com

0 496 137 (11 8 815) Holding sleeve



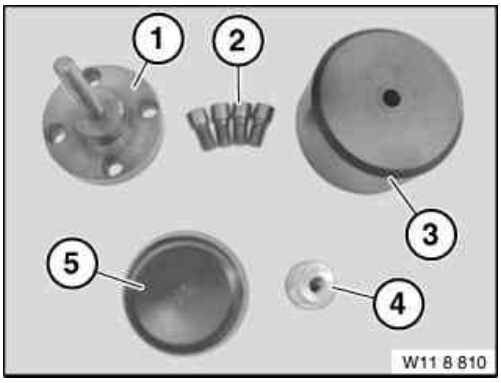
Common	Used in step 54
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 133 (11 8 811) Basic body



Common	Used in step 54
Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 134 (11 8 812) Screw



Common	Used in step 54
Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

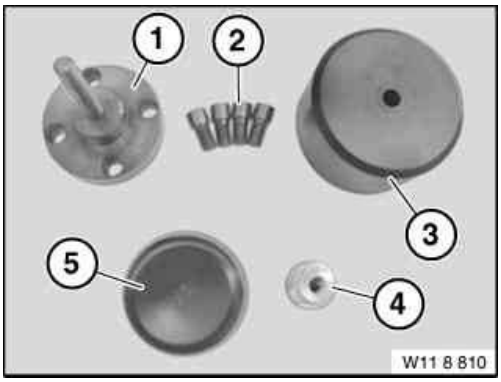
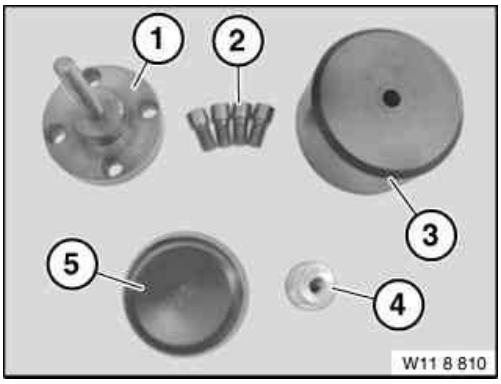
0 496 135 (11 8 813) Holding sleeve



Common	Used in step 54
Usage	(Thrust sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

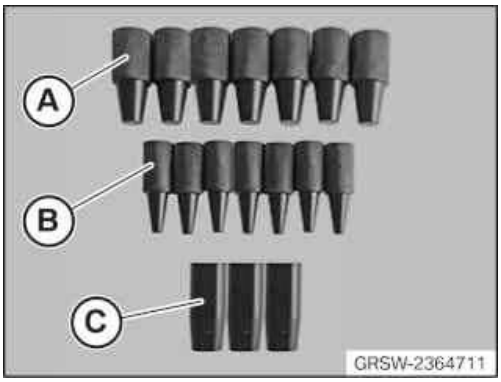
0 496 136 (11 8 814) Nut



Common	Used in step 54
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

2 364 711 Plug

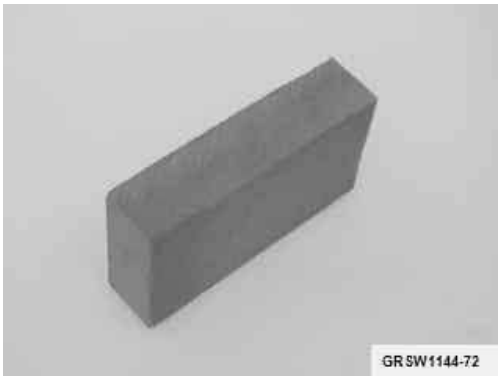


Common	Used in step 54 59
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

0 495 103 (11 4 471) Scraper

Common	Used in step 54 59
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

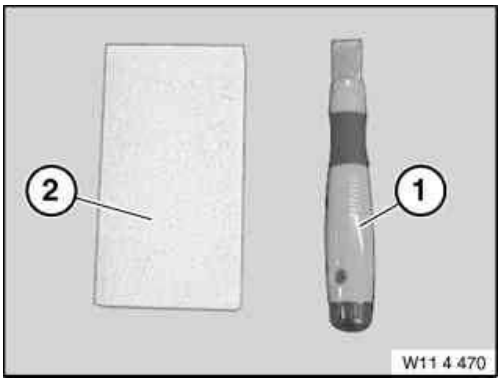
0 495 104 (11 4 472) Extractor



Common	Used in step 54 59
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool



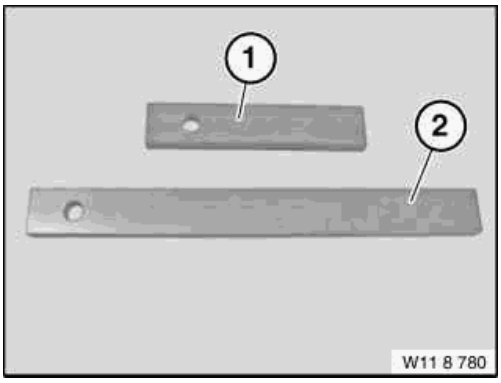
Common Used in step 54

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 496 120 (11 8 780) Plate



Common Used in step 54

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.

2 285 058 Tool set

Common	Used in step 55
Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)

2 358 471 Clutch tool

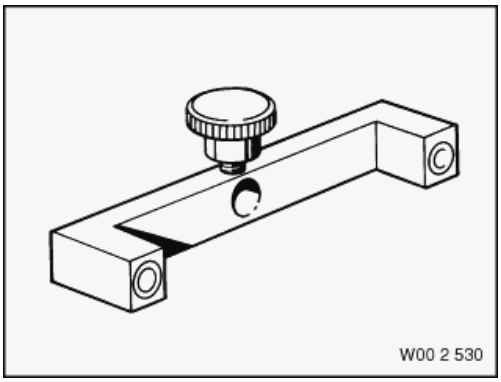
Common	Used in step 56
Usage	For installation of coupling drive plate.. (Getrag transmission) . Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A55
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

2 357 900 Fitting aid

Common	Used in step 57
Usage	For installation of the front radial shaft seal incl. lid.
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

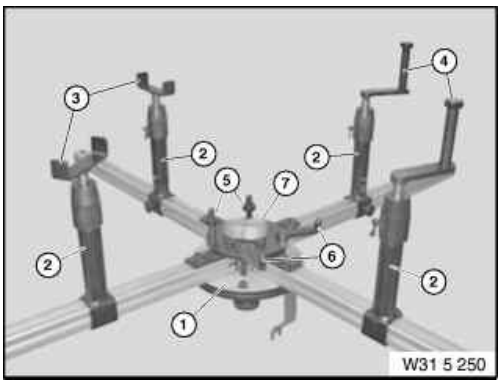
cardiagn.com

0 490 185 (00 2 530) Bridge



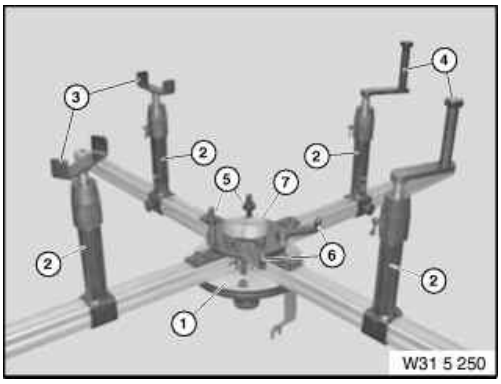
Common	Used in step 61
Usage	(Measuring bridge) For determining the piston projection (Diesel)
Included in the tool or work	
Storage location	A3
Replaced by	
In connection with	
SI-Number	

0 495 821 (31 5 255) Adapter



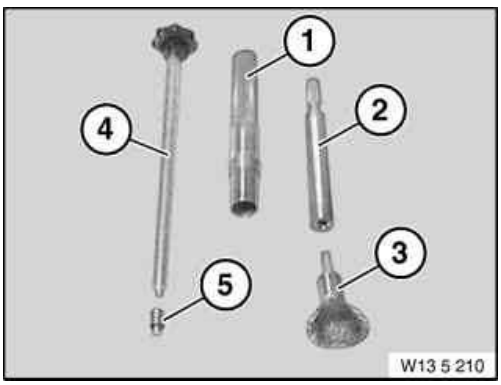
Common	Used in step 63
Usage	(take-up adapter for bore holes (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 495 819 (31 5 253) Adapter



Common	Used in step 63
Usage	(take-up adapter U-section (2 x))
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

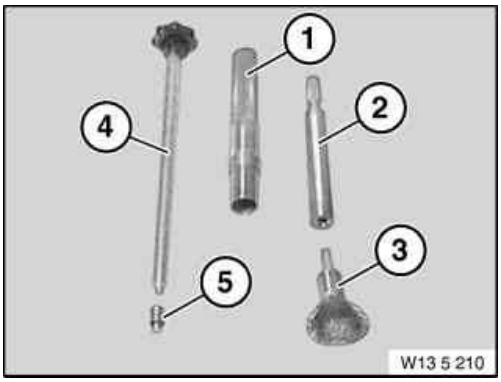
0 493 763 (13 5 215) Plug



Common	Used in step 73
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 762 (13 5 214) Rod



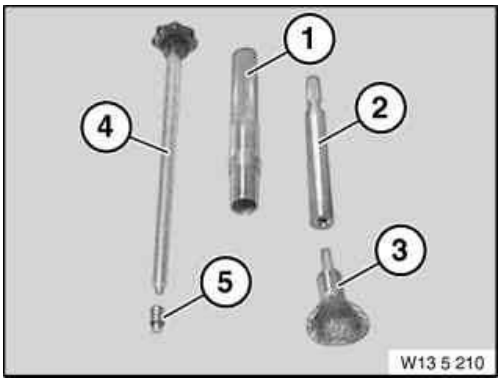
Common

Used in step 73

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool



Common

Used in step 73

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)

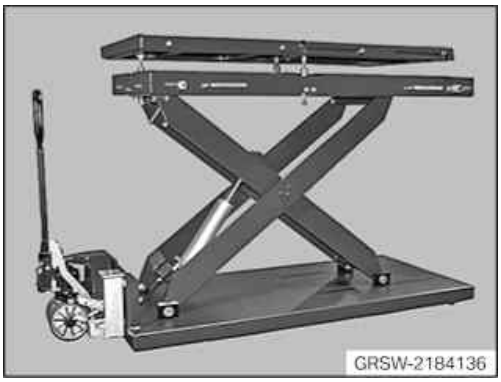
2 184 136 Mobile equipment table lift



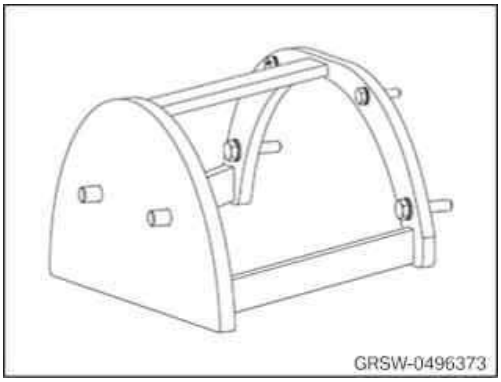
Common	Used in step 79
Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

Replacement tools:

2 299 563 Adapter

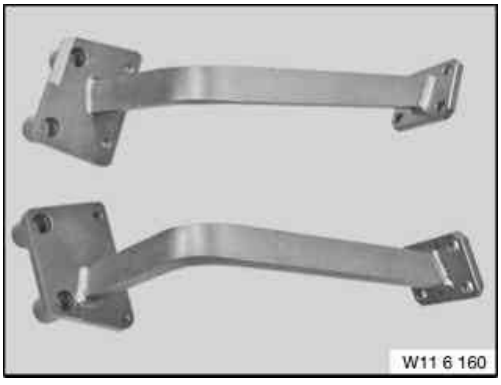
Common	Used in step 9
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate



Common	Used in step 9
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

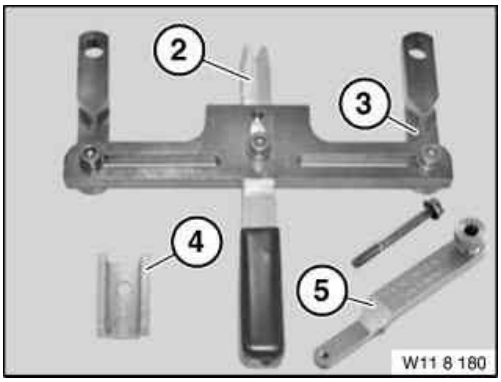
0 496 680 (11 6 160) Support



Common	Used in step 9
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

cardiagn.com

0 494 434 (11 8 183) Basic body



Common Used in step 25 58

Usage	
Included in the tool or work	0 493 587
Storage location	
Replaced by	
In connection with	
SI-Number	

2 448 914 Extractor

Common Used in step 32

Usage	For removing and installing high pressure pump. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A49
Replaced by	
In connection with	
SI-Number	01 15 16 (411)

Overview Technical Data

Side clearance of piston rings Used in step 36

Clean all components before measuring the side clearance.

Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter Used in step 37

Measure the piston diameter at distance (A) from the lower end of the piston skirt.

Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore Used in step 38

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Axial play of crankshaft Used in step 45

	min. 0,053 mm
	max. 0,204 mm

Cylinder head flatness Used in step 60

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

Selecting the cylinder head gasket Used in step 61

cardiagn.com

A decision is made to determine which cylinder head gasket must be used based on the measuring result of the measurement of the piston protrusion.

Cylinder head gasket with number of holes 1	0 mm ... 0,92 mm
Cylinder head gasket with number of holes 2	0,93 mm ... 1,03 mm
Cylinder head gasket with number of holes 3	1,04 mm ... 1,18 mm

Screw-in depth of thread cutter	Used in step 55
Screw-in depth	18 mm

11 21 001 Replacing crankshaft

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

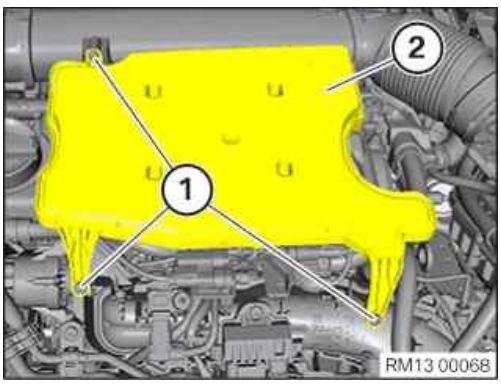
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

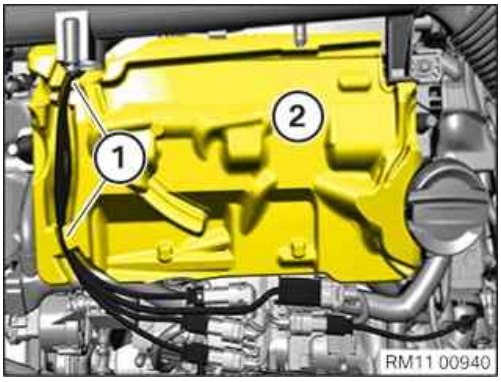
3 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

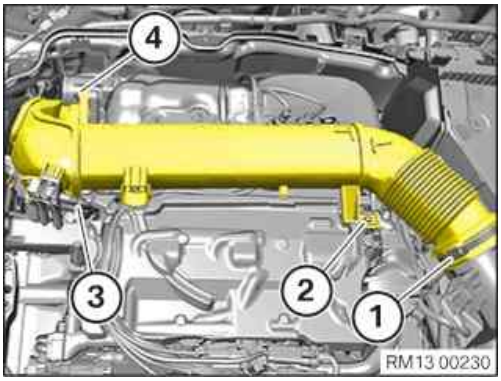
cardiagn.com

4 – Remove the acoustic cover for the injectors

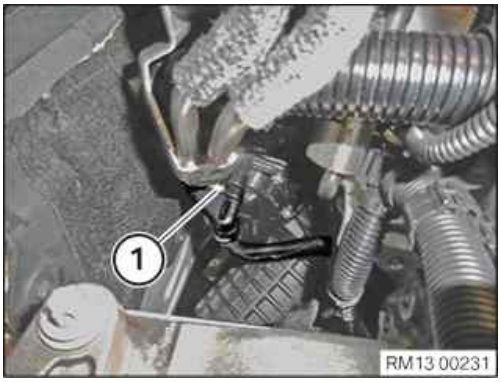


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

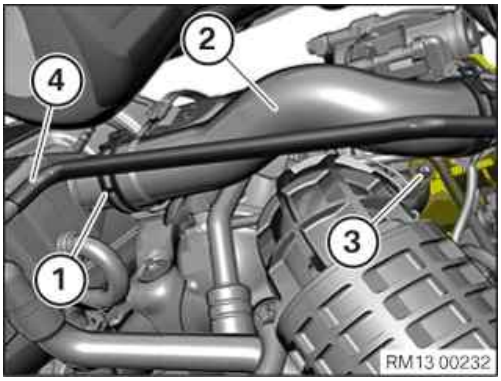
5 – Removing clean air pipe



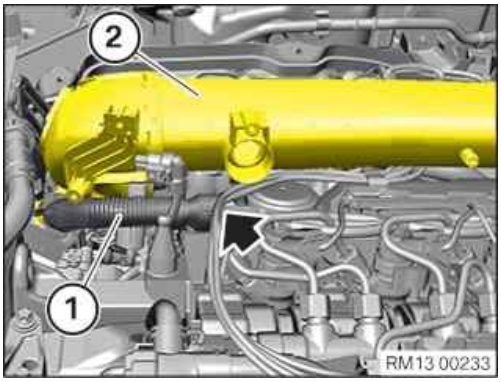
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

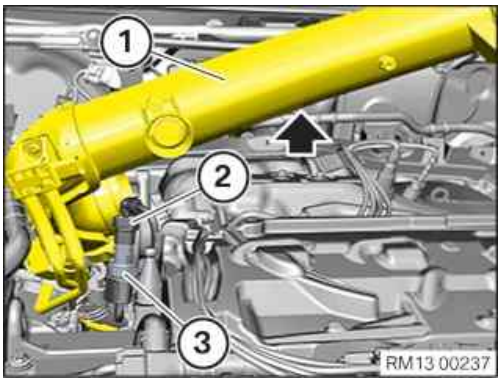


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

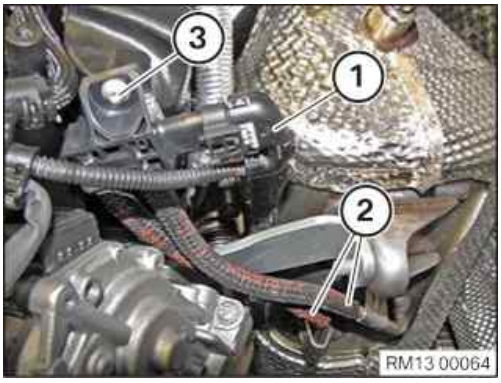
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

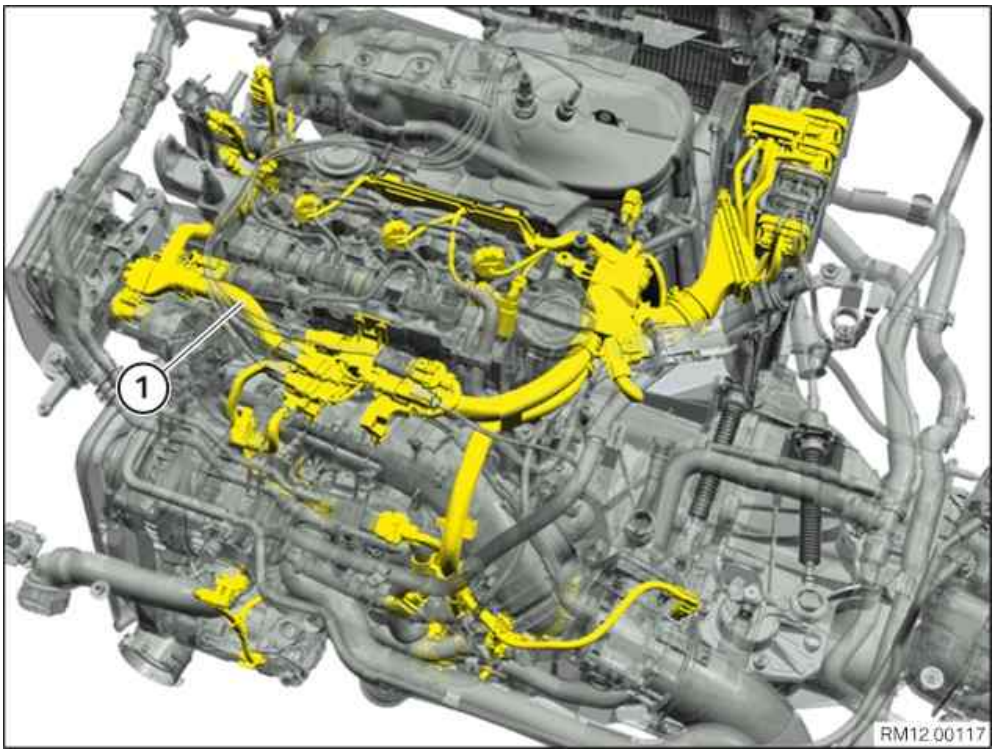


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

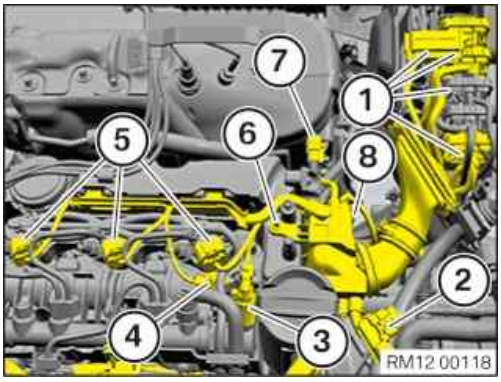
7 – Removing assemblies (on lifting table)

cardiagn.com

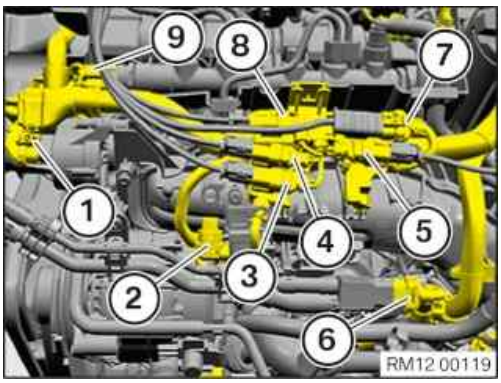
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



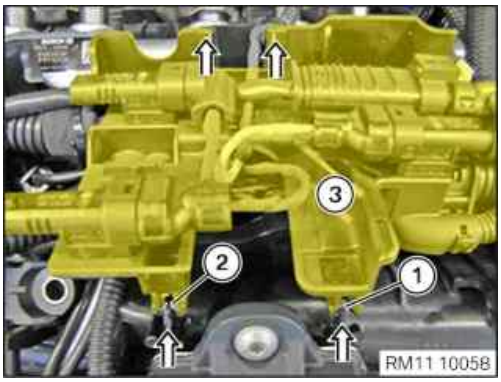
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



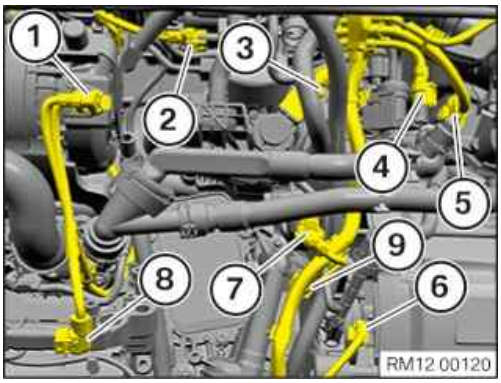
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

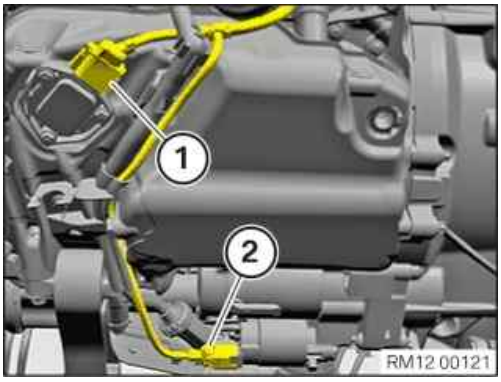
cardiagn.com



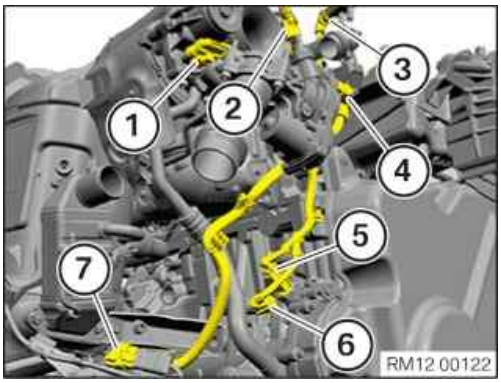
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



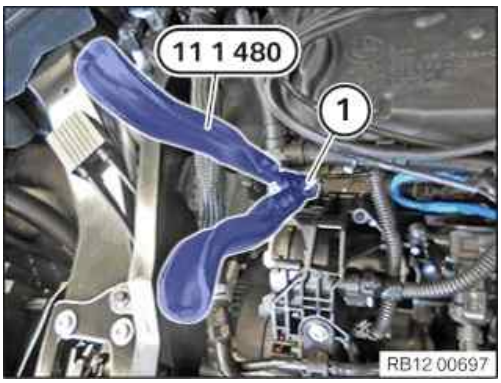
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

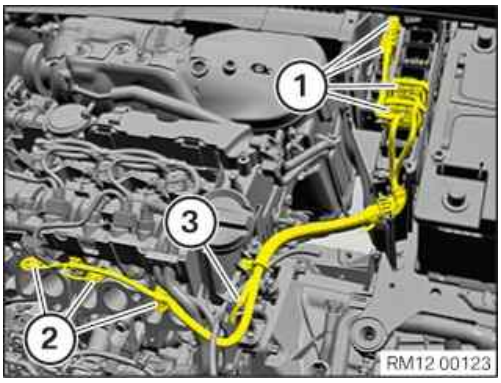


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

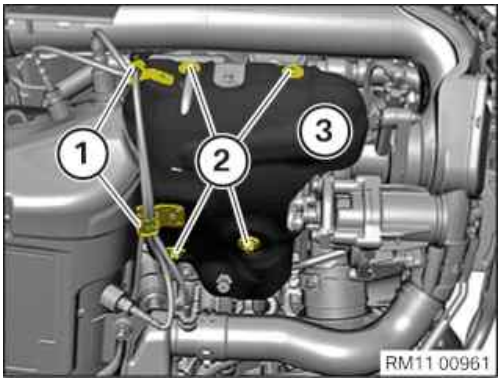
▶ Removing heat shield from top exhaust turbocharger

WARNING

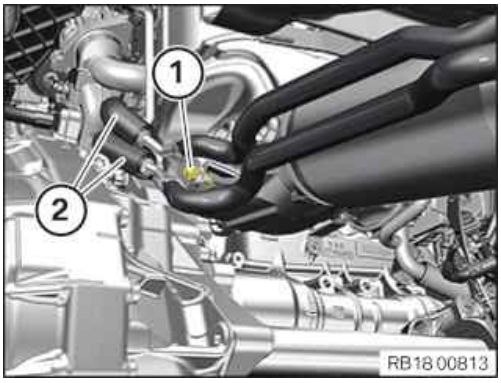
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



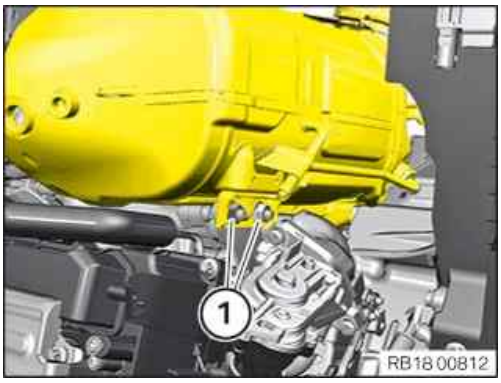
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



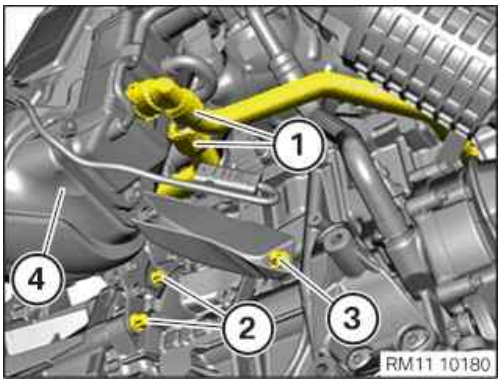
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

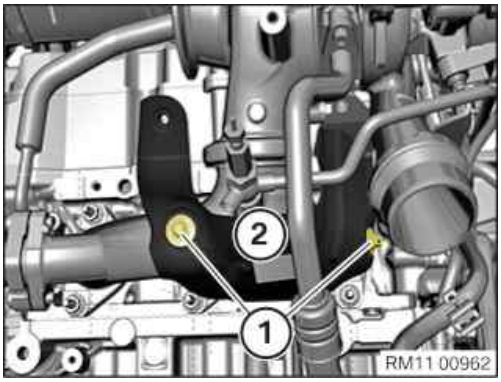
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

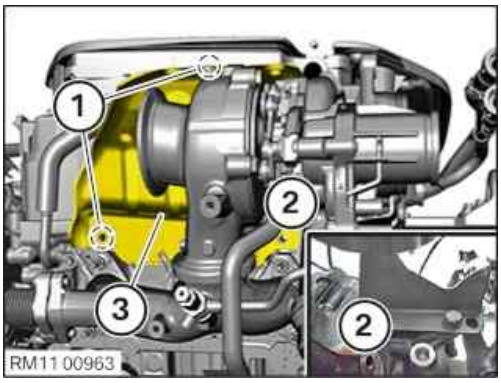
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



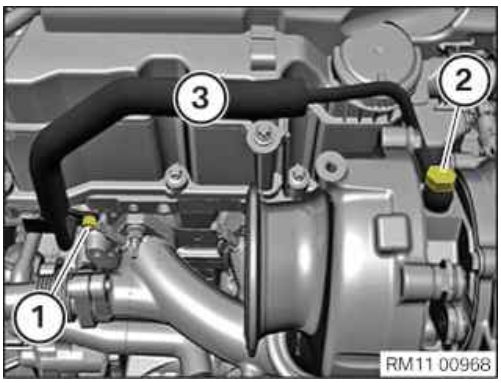
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

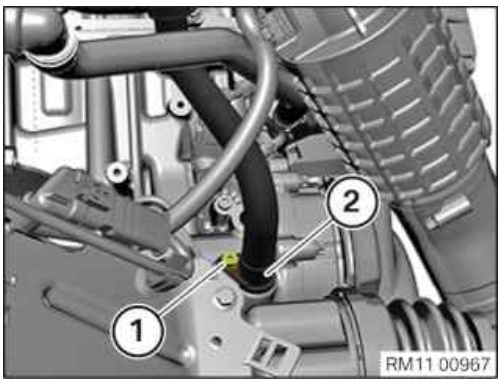
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

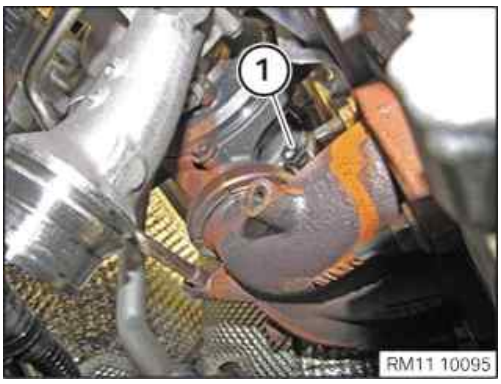
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

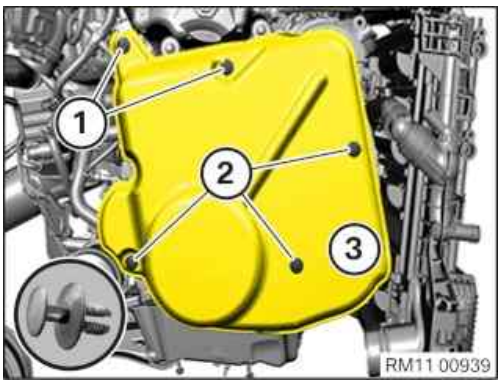
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

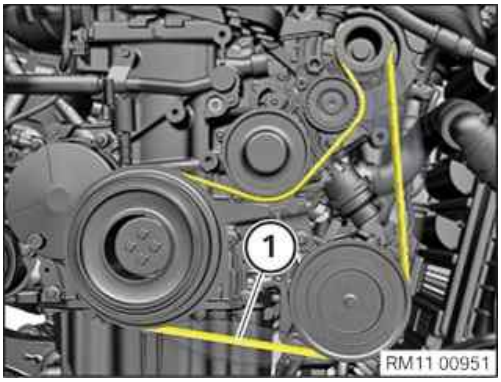
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

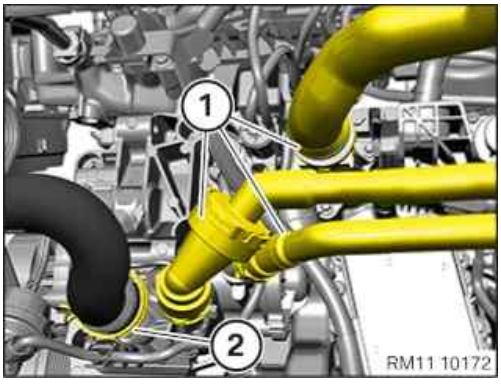
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

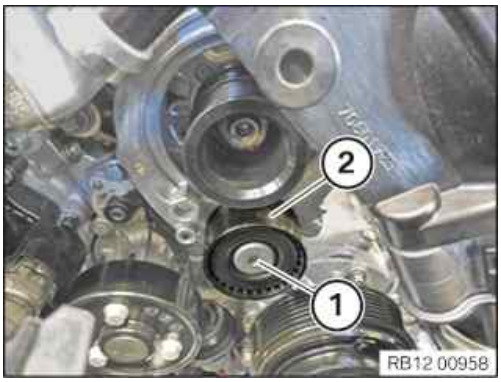


- Guide out the drive belt for the alternator (1) and remove it.

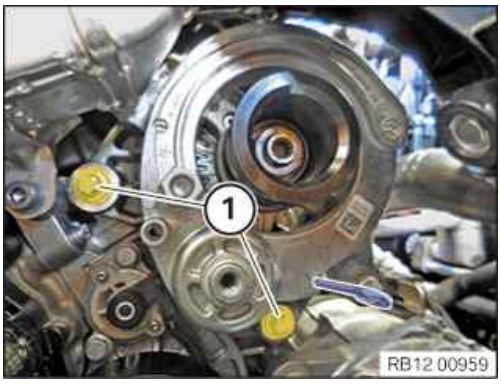


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

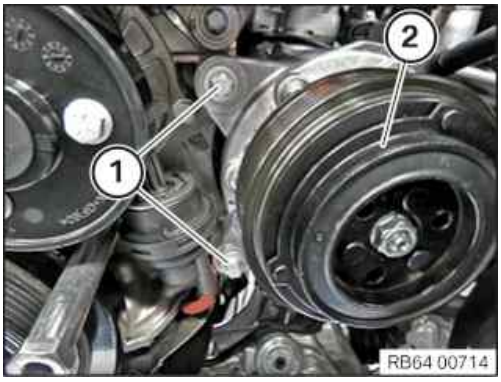
cardiagn.com



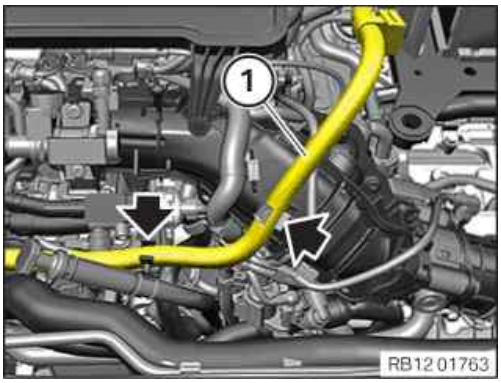
- Loosen screw (1).
- Remove the deflecting element (2).



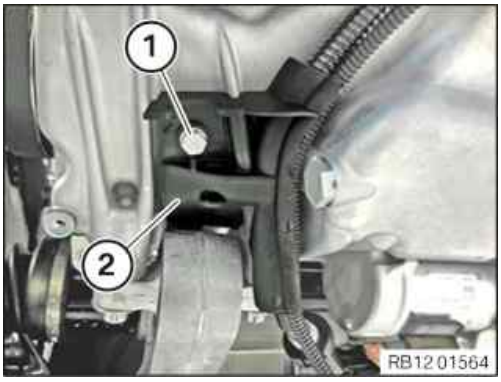
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

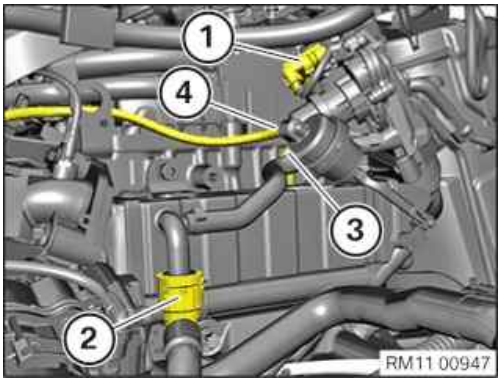
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

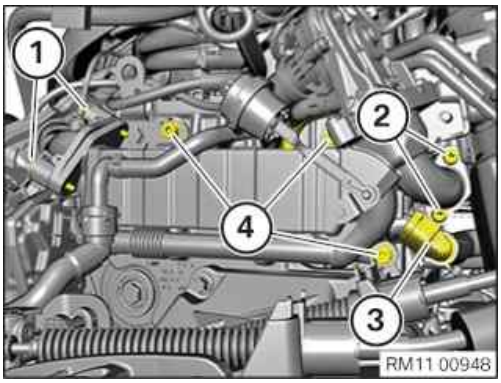
- Perform all work only on components that have cooled down.



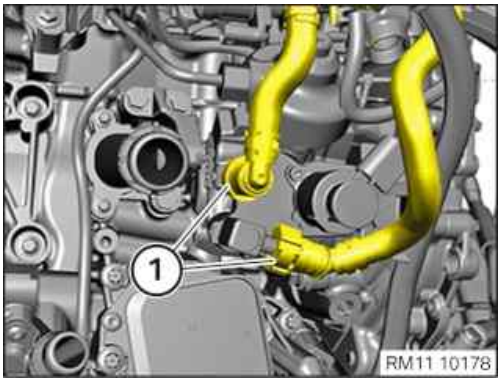
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

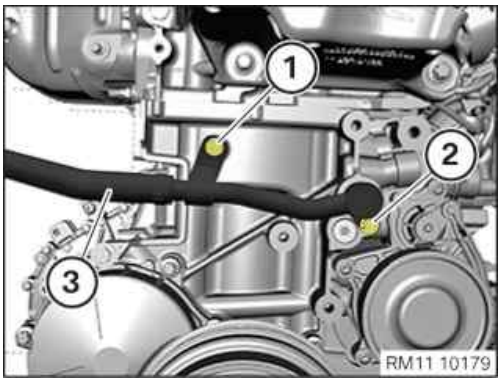


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

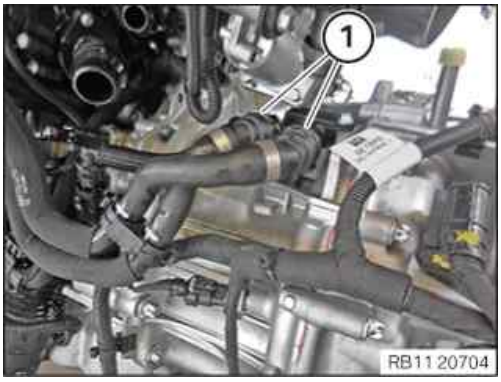
8 – Disconnect the engine from the double-clutch transmission (DKG)

RISK OF DAMAGE

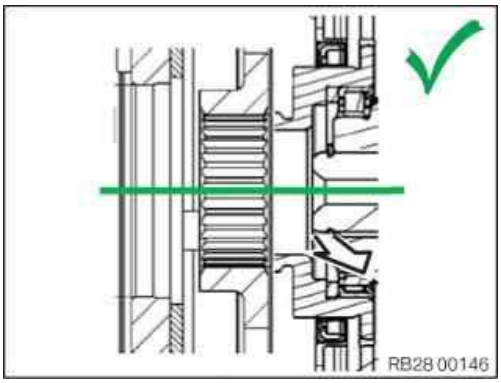
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

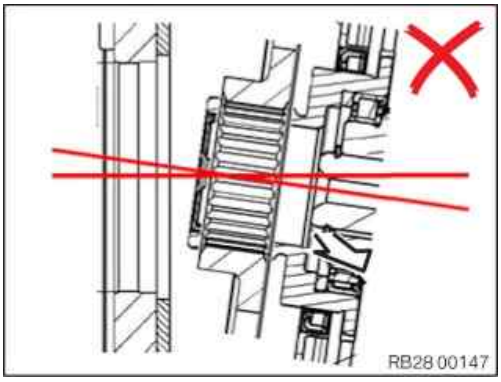
- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.



- Unlock and release coolant line (1).
- Catch and dispose of escaping coolant.

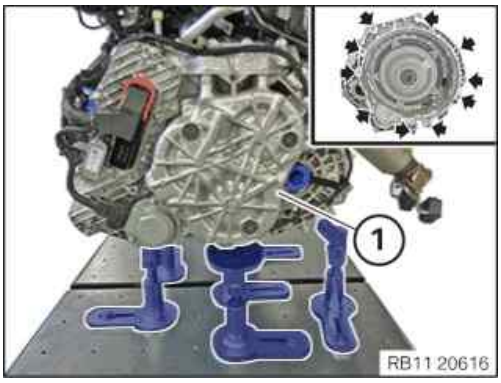


- **Correct:** Pull the double-clutch transmission (DKG) horizontally off the flywheel.

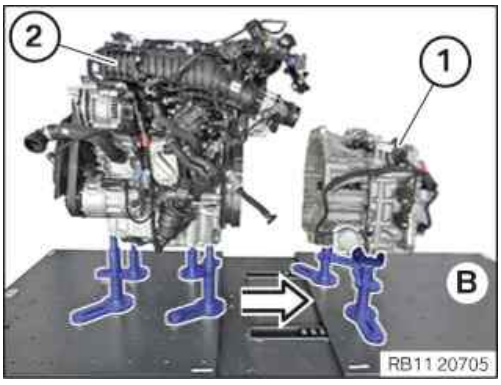


- **Wrong:** Do not pull the double-clutch transmission (DKG) off the flywheel if it is tilted.

cardiagn.com



- Remove screws (arrows).
- Pull the double-clutch transmission (DKG) (1) off the flywheel when it is **absolutely** horizontal.



NOTICE

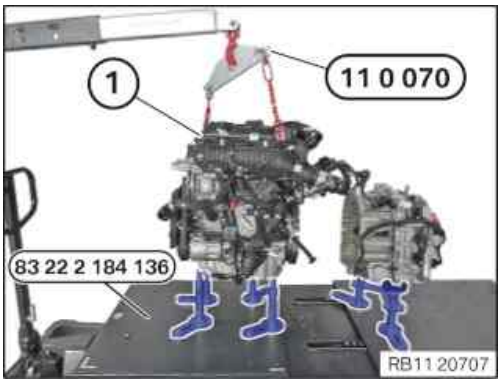
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table top (B) in the direction of arrow and disconnect double-clutch transmission (DKG) (1) from the engine (2).

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach the engine lifter with the special tool **0 490 579 (11 0 070)** and lift the engine (1) off the lifting table.

9 – Mount engine on assembly stand

CAUTION

Heavy component.

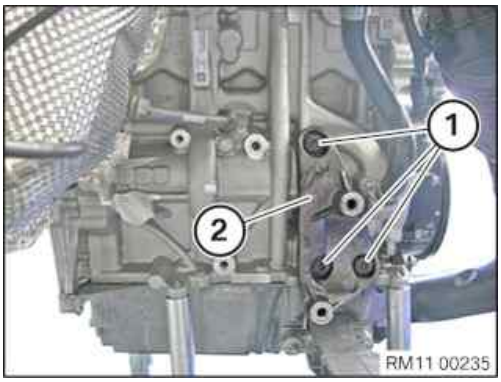
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

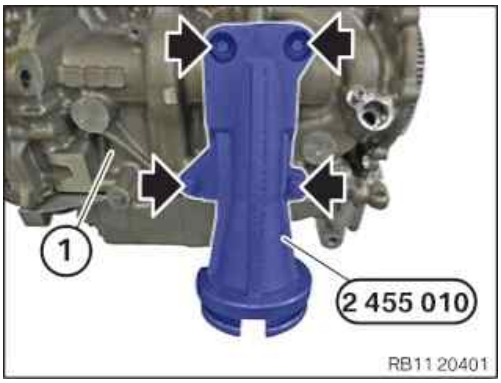
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



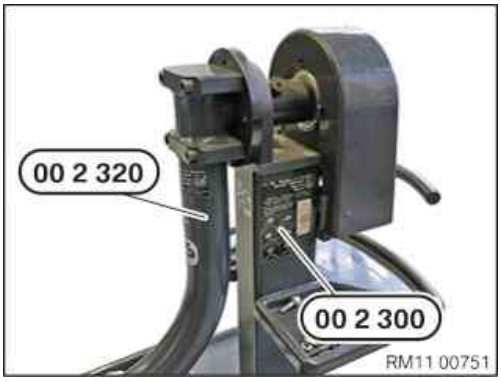
- Loosen screws (1).
- Guide out and remove holder (2).



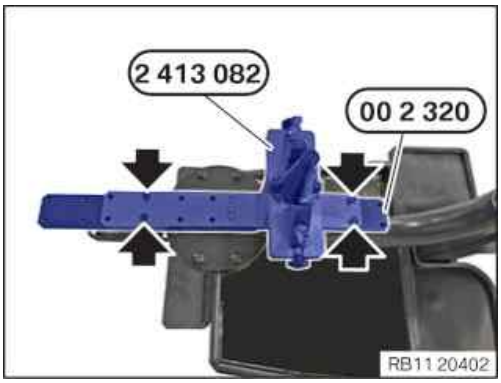
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



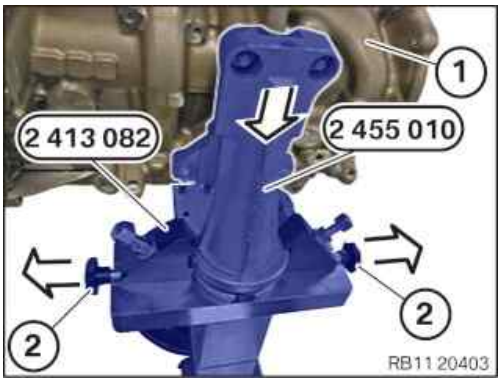
- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

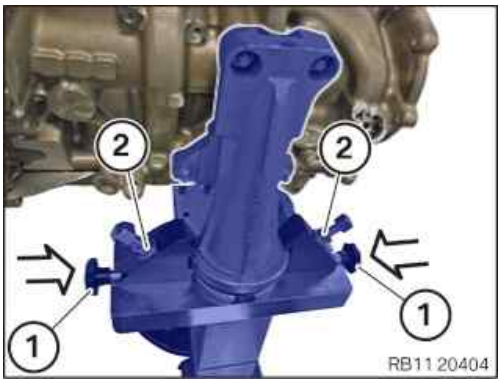
M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com



- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .



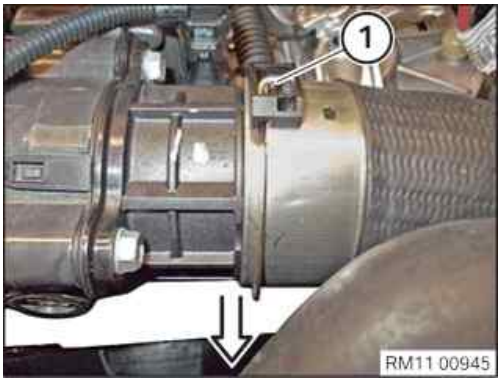
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

TECHNICAL INFORMATION

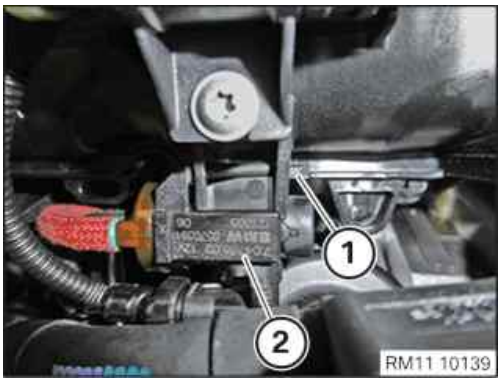
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

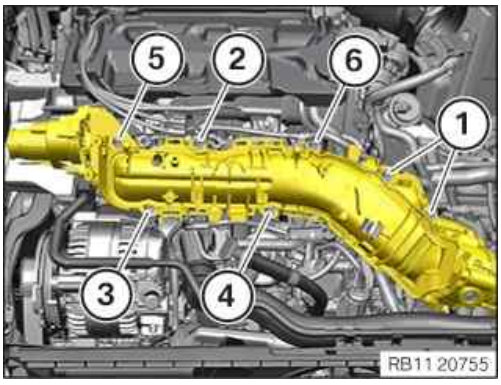


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

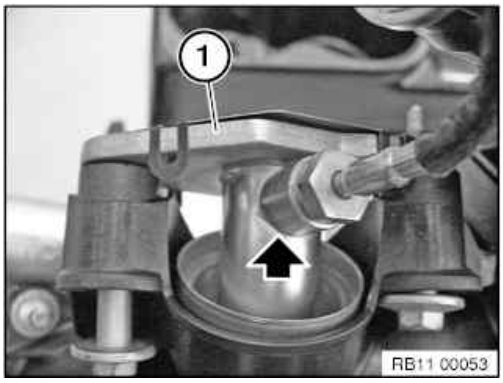
cardiagn.com



- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

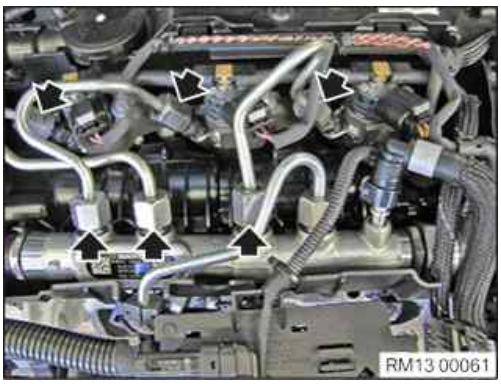
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

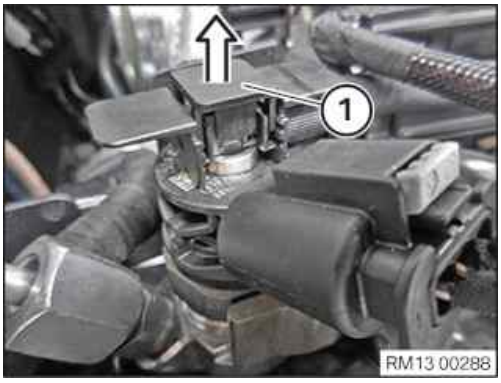
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

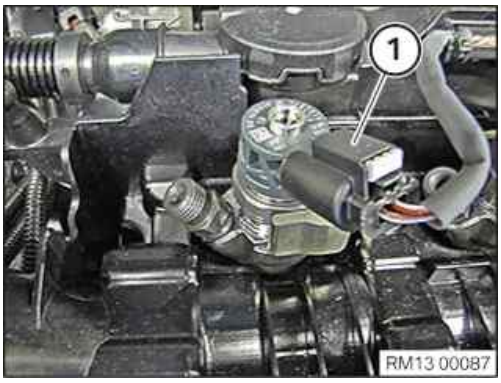
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

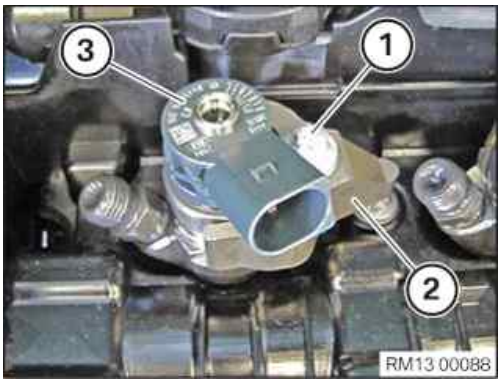
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

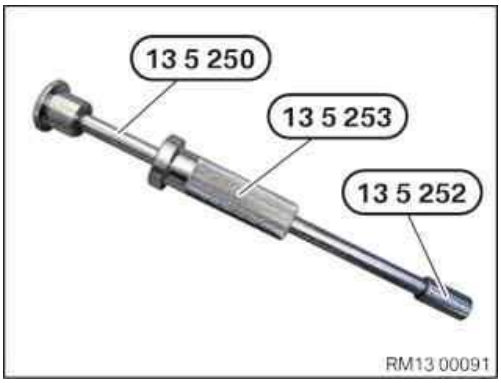
▶ **Loosen stuck injectors**

RISK OF DAMAGE

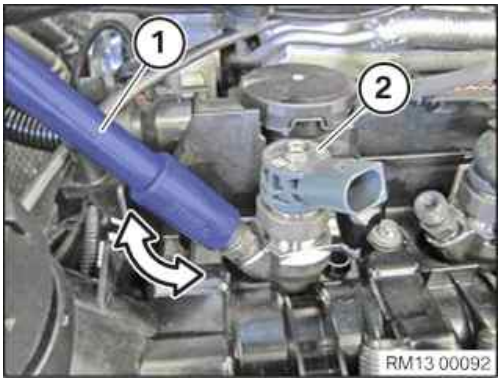
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

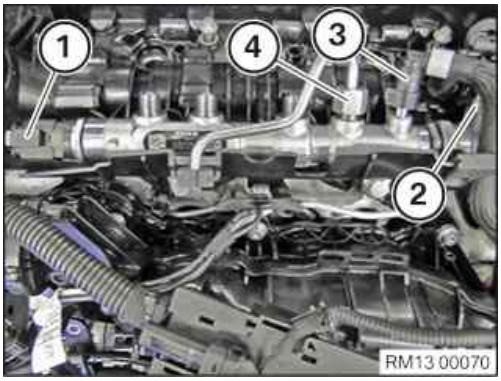
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

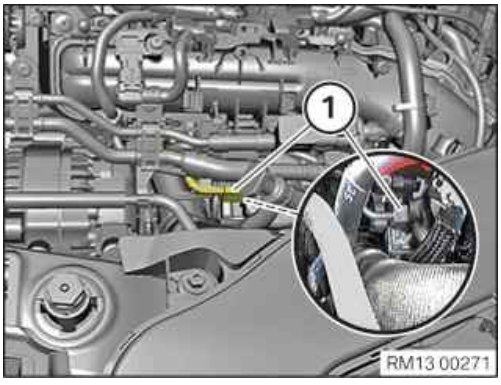
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

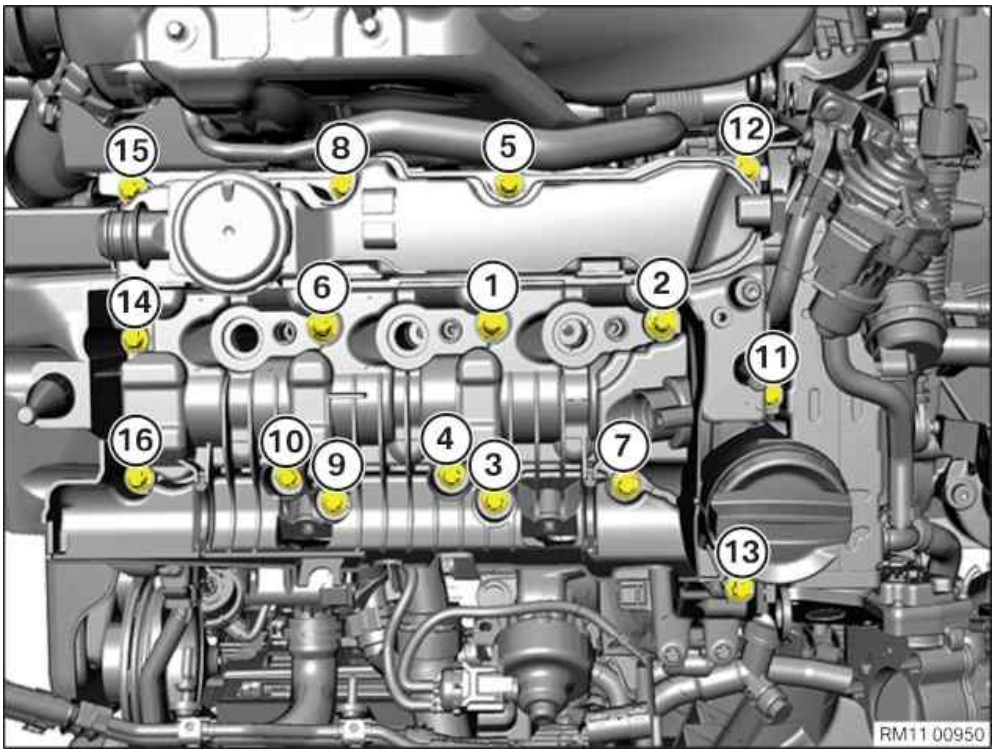
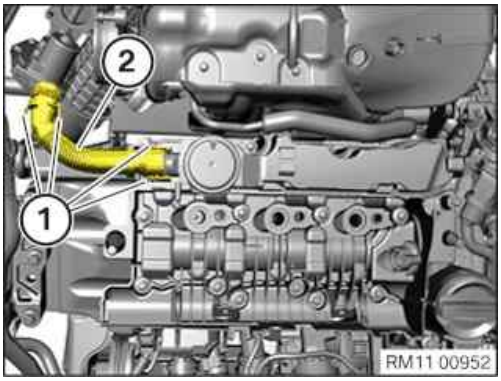
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

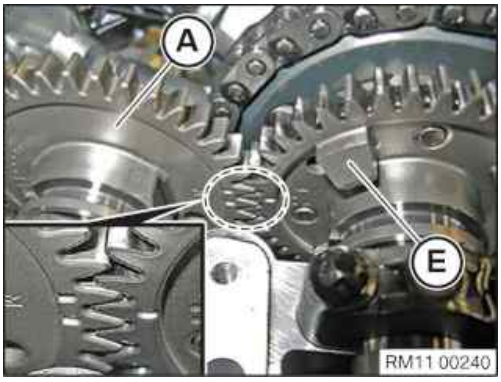
- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

cardiagn.com

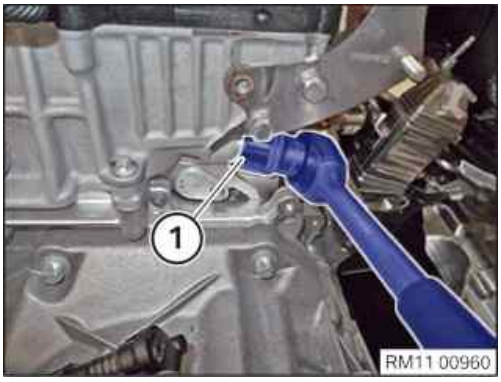
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

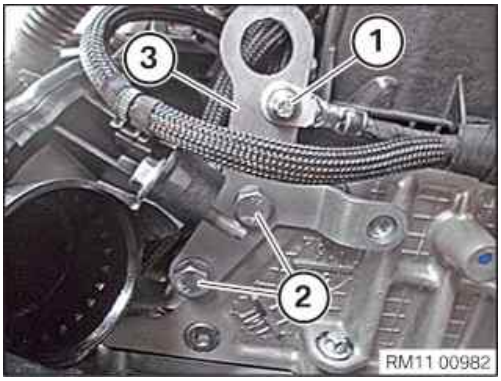


TECHNICAL INFORMATION

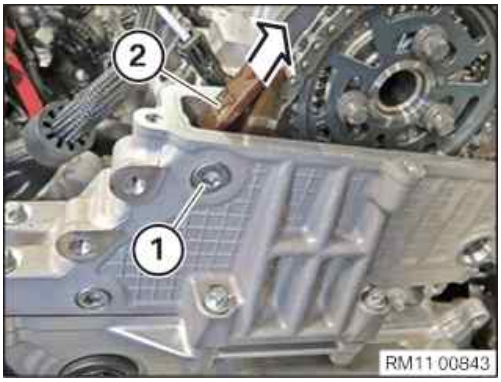
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

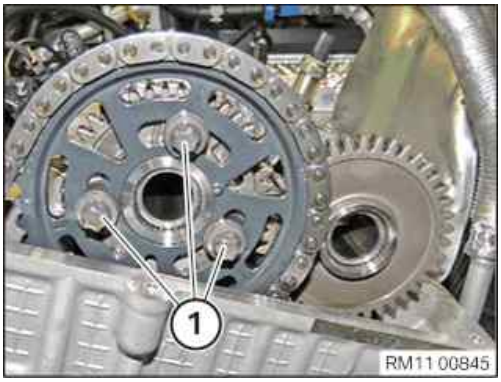


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

cardiagn.com

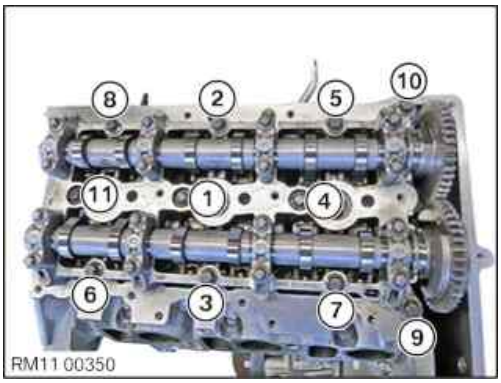
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

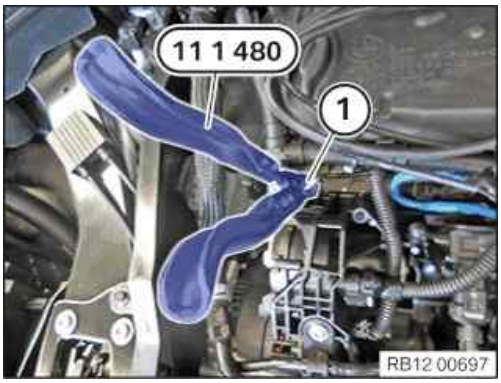
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

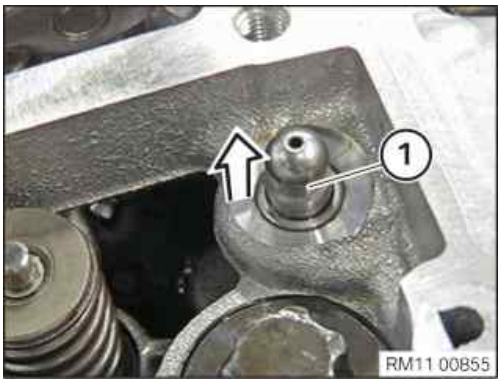
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

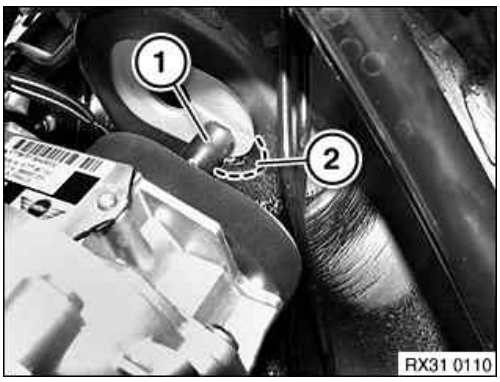
24 – Remove cylinder head.

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!

cardiagn.com

- Position front axle support.
- Bend the underbody panelling to the side in area (3).
- Raise front axle support.
- When raising, insert the charge air cooler into its rubber mount on the transmission cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

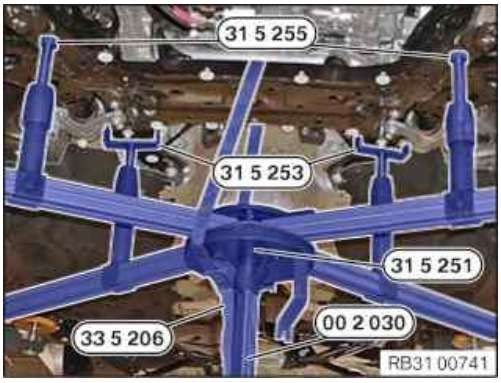
Front axle support, front to body

M12 screw	Renew screw.	Tightening torque	108 Nm

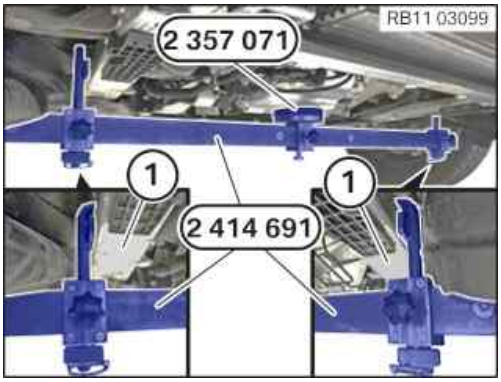
- If applicable, tighten the screws in area (3).

Underbody protection to body

Screw		Tightening torque	3 Nm



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower the universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and set it aside.



- Prepare special tool **2 414 691** together with the special tool **2 357 071**.
- Attach special tool **2 414 691** to front axle support and correctly align the special tool **2 357 071** under the oil sump and tighten.
- Turn special tool **2 414 691** at adjusting screw uniformly upwards, until the special tool **2 357 071** makes contact with the oil sump.
- Tighten all adjusting screws of special tools**2 414 691** and **2 357 071**.

- Remove all glow elements with special tool **0 491 068 (11 6 050)** or a standard tool.

cardiagn.com

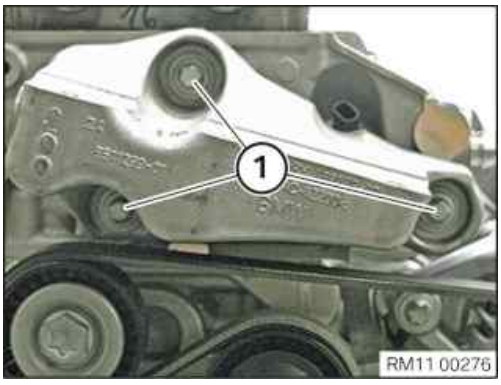
- Loosen screws (1).

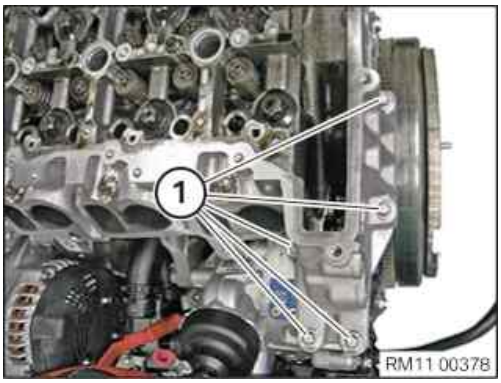


- Loosen screws (1).

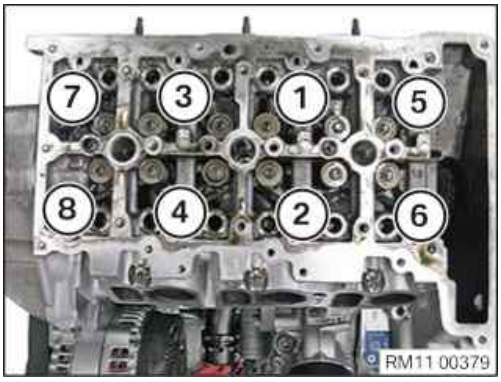
- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Loosen screws (1).



- Loosen the cylinder head bolts in the sequence from (8) to (1).

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

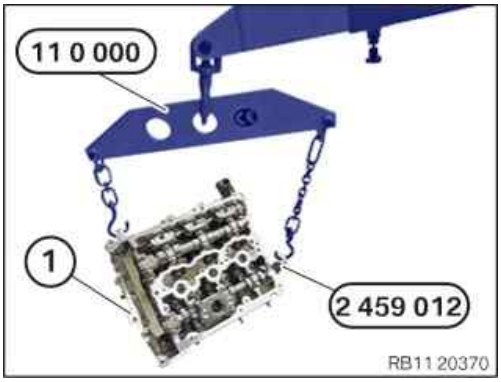
RISK OF DAMAGE

Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

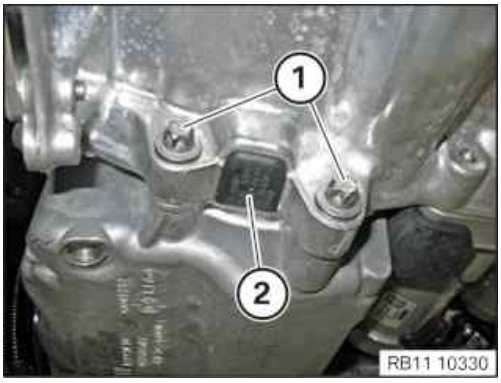
- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- **Carefully** guide out the cylinder head (1) with the engine lifter and the special tool **0 490 561 (11 0 000)** and remove.

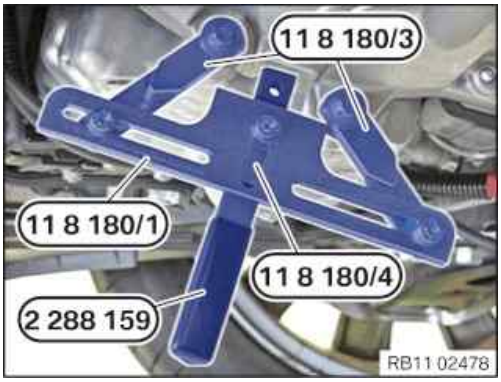


- Mount the cylinder head (1) on the special tool **0 494 362 (11 9 000)**.

25 – Removing the vibration damper



- Release the transmission bolts (1).
- Remove the protective cap (2).



- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

cardiagn.com

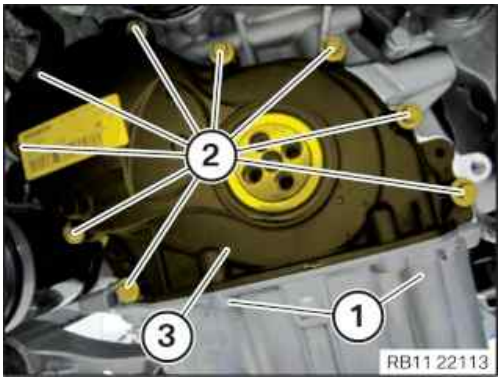
- Loosen screws in the area (1).
- Remove the vibration damper (2).

26 – Remove gear case cover



- Loosen screws (1).
- Loosen screws (2).
- Guide out and remove timing case cover (3).

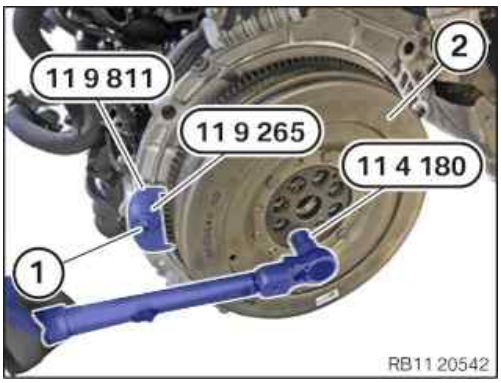
27 – Remove flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

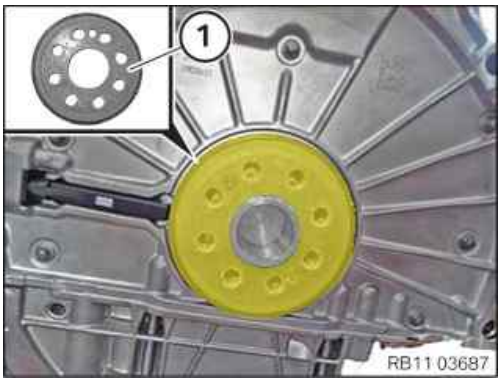
- Remove and install heavy components with the aid of another person/other persons.



- Position special tool **0 496 171 (11 9 811)** with a **standard** 5 mm thick washer between the crankcase and the flywheel.

  The 5 mm thick washer must be mounted between the crankcase and special tool **0 496 171 (11 9 811)** .
- Secure the special tool **0 494 793 (11 9 265)** with the transmission bolt (1).
- Protect the flywheel (2) from falling.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Guide out the flywheel (2) and remove.

cardiagn.com



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

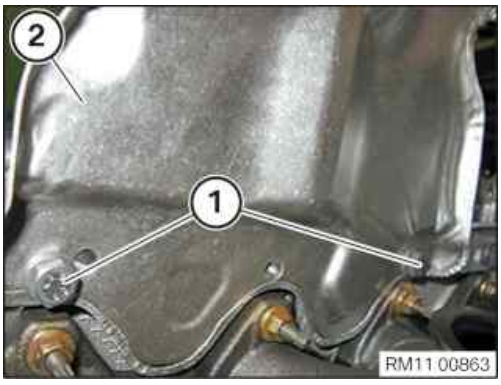
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove increment wheel (1) from the crankshaft and set it aside properly.

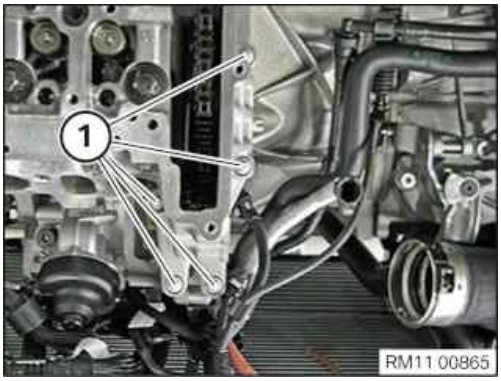
28 – Remove rear timing case cover

Prerequisite

Transmission is removed.



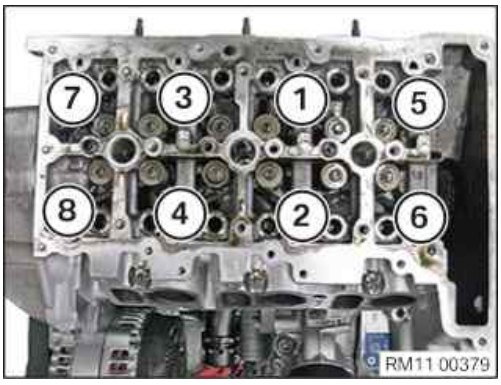
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



TECHNICAL INFORMATION

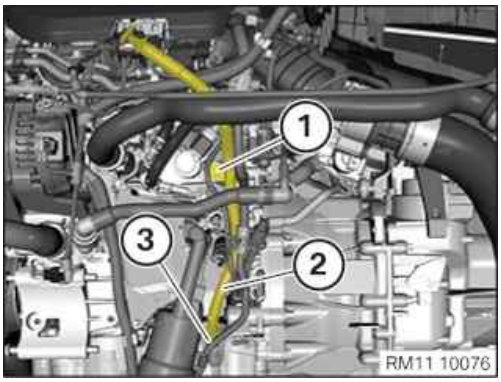
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

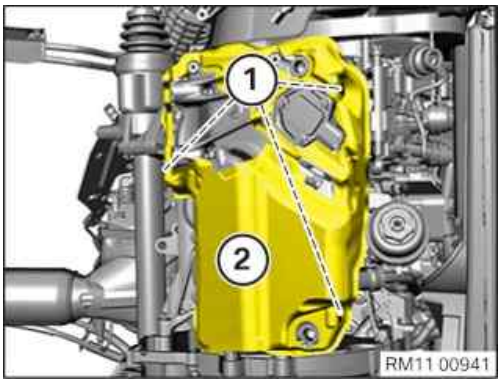


- Loosen the cylinder head bolts in the sequence from (8) to (1).

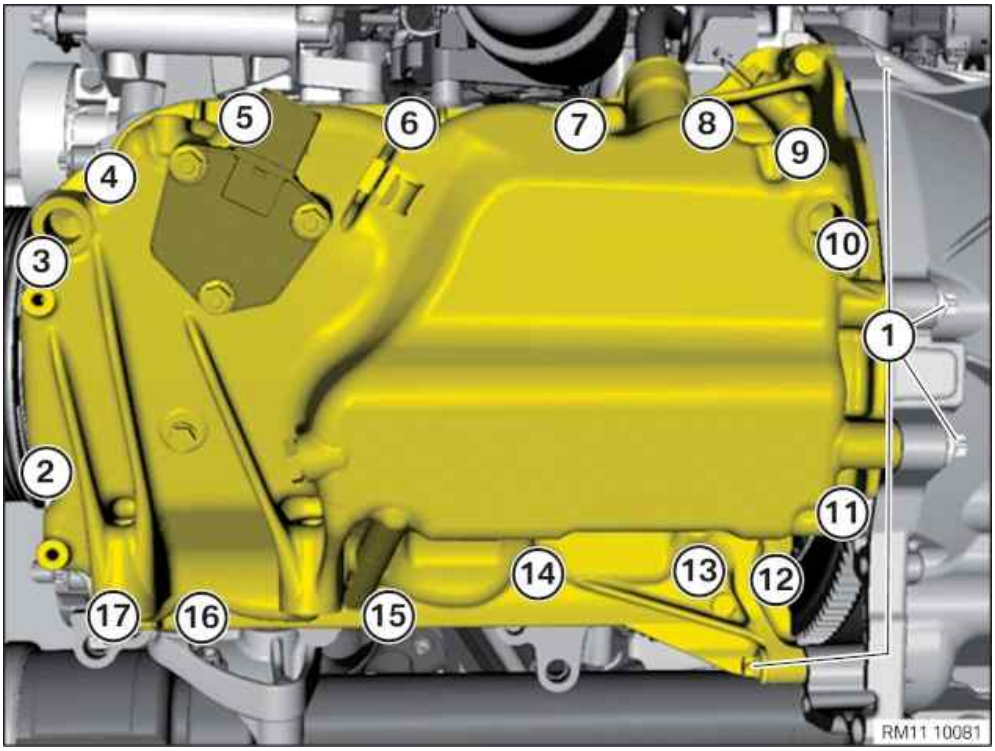
cardiagn.com



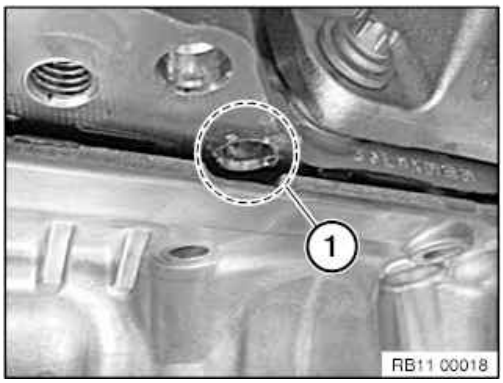
- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- If required, remove sealing ring (3) from oil sump.



- Remove the expanding rivet (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

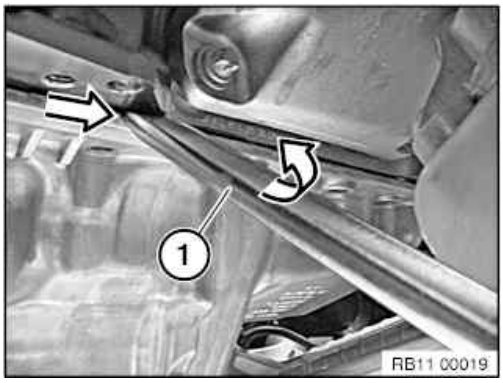


- Tighten the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



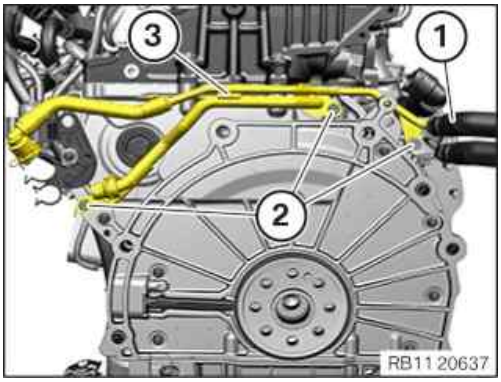
- Release oil sump only in area (1).

cardiagn.com

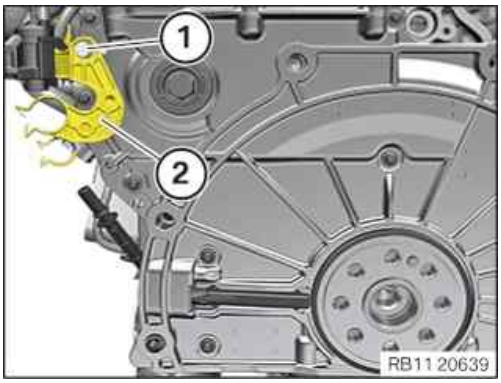


- Release the oil sump using a suitable mounting lever (1) carefully at the position intended for that.
- If required, secure the oil sump against falling.

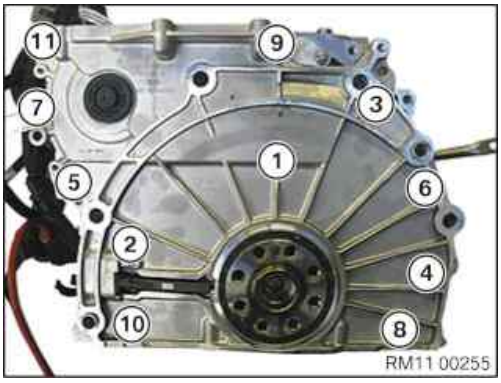
► **If installed: Remove coolant line of the SCR metering module**



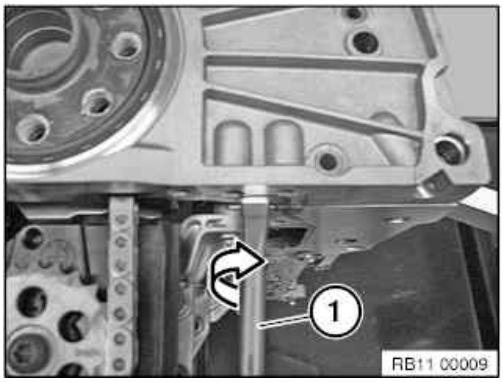
- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



- Loosen screw (1).
- Guide out and remove holder (2).

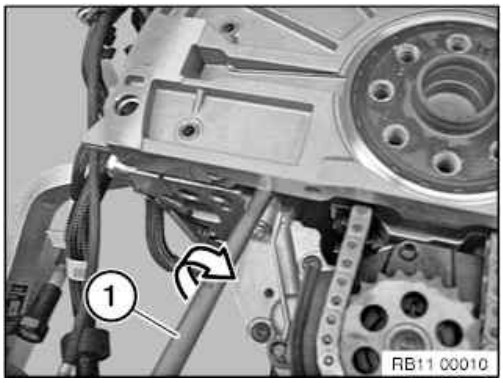


- Loosen screws in the order (11) to (1).



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

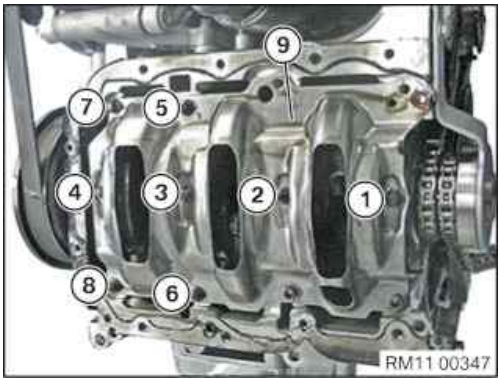
29 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

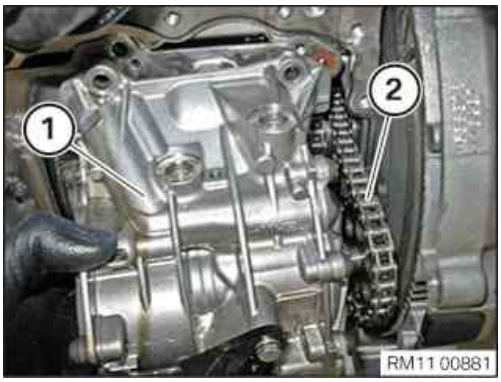
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen screws in the order (8) to (1).
- Guide out and remove the oil deflector (9).

30 – Remove the oil vacuum pump

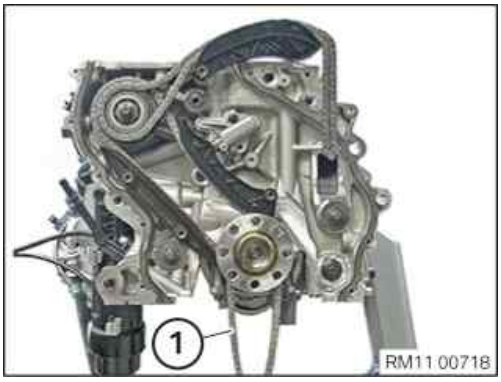
- Loosen screws (1) of the oil vacuum pump (2).



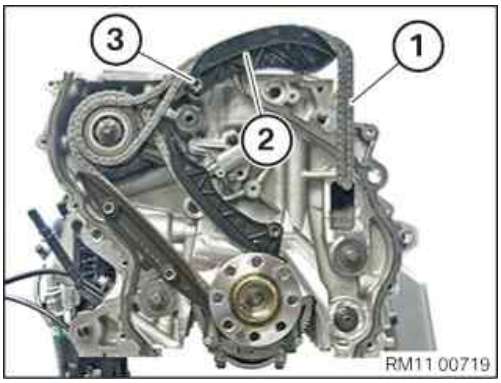
- Remove oil vacuum pump (1) and remove from the drive chain (2).

cardiagn.com

31 – Remove both timing chains

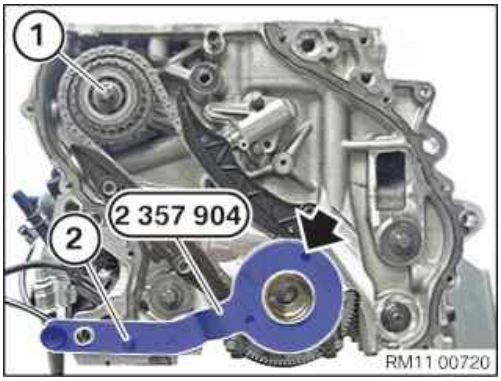


- Remove drive chain (1) for oil pump.

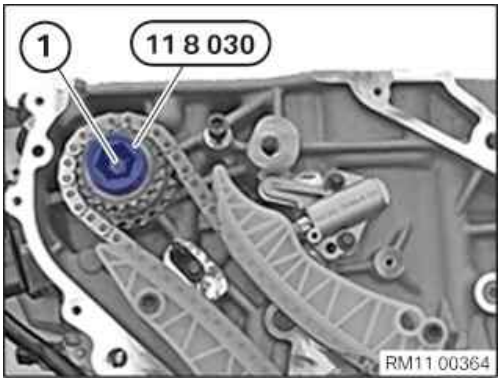


- Remove the timing chain (1) for the camshafts.
- Remove the tensioning rail (2) from the bearing journal (3).

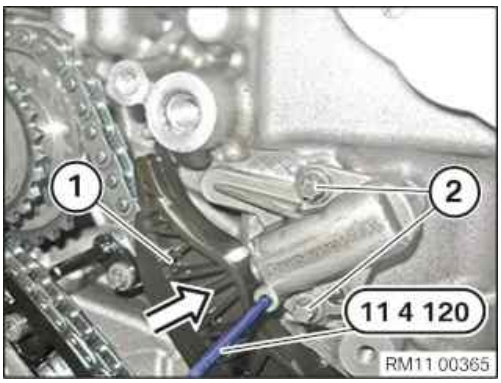
  Bearing journal (3) does not have to be disassembled.



- Secure crankshaft to release central bolt (1) of high pressure pump.
- Position crankshaft with guide pin (arrow).
- Secure special tool **2 357 904** with bolt (2) on crankcase.
- Release central bolt (1) of high pressure pump; do not remove.

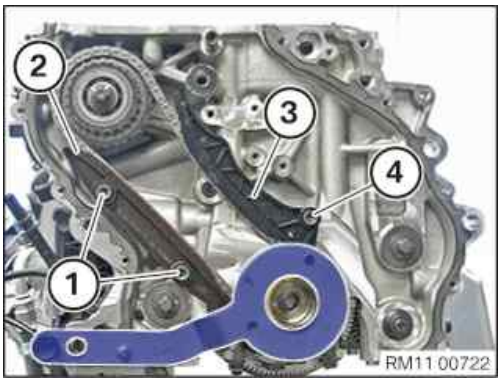


- Screw special tool **0 496 725 (11 8 030)** into sprocket of high pressure pump.
- Unscrew central bolt (1) of high pressure pump until central bolt can be supported on special tool **0 496 725 (11 8 030)**.
- Continue turning central bolt (1) until camshaft sprocket is released from high pressure pump shaft.



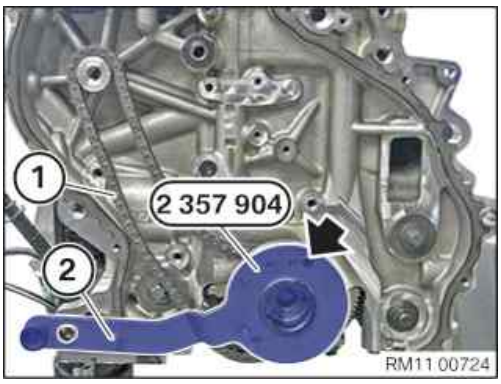
- Press chain tensioner in with tensioning rail (1) by hand in the direction of the arrow until the special tool **0 491 012 (11 4 120)** can be positioned.
- Loosen screws (2).
- Remove chain tensioner.

cardiagn.com



- Loosen both bearing journals (1).
- Remove the guide rail (2).
- Loosen the bearing journals (4).
- Remove the tensioning rail (3).

- Remove bolt and camshaft sprocket (1) of high pressure pump.



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

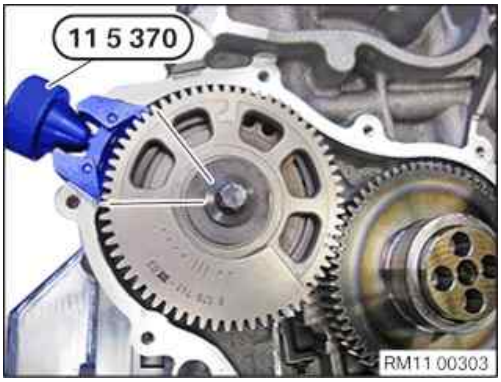
- Unscrew the bolt (2) and remove the special tool **2 357 904**.
- Remove the timing chain (1).

32 – Remove counterbalance shaft

- Fasten counterbalance shaft with special tool in the TDC position of cylinder no. 1.
- Tighten the screws (1).

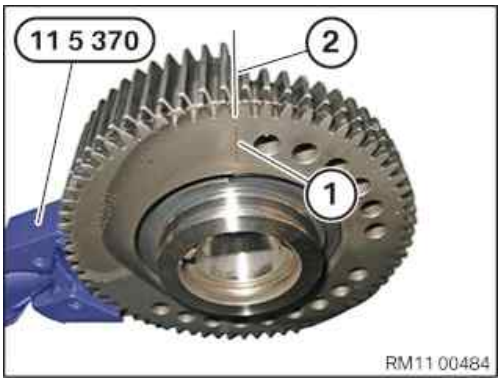
Standard screw connection M6

M6		8 Nm



- Ensure that the gear of the counterbalance shaft is pretensioned and blocked before removal.
- Install the special tool **0 495 131 (11 5 370)** as shown and pre-load the gear.

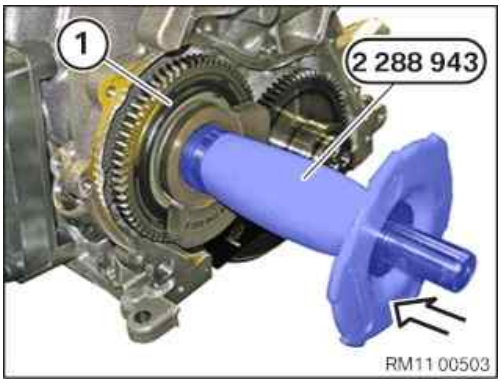
cardiagn.com



- Block gear wheels (1) and (2) until re-installation with the special tool **0 495 131 (11 5 370)**.

- Check whether the marks on the counterbalance shaft gear are aligned with the marks on the crankshaft gear.
- Loosen screw (1).

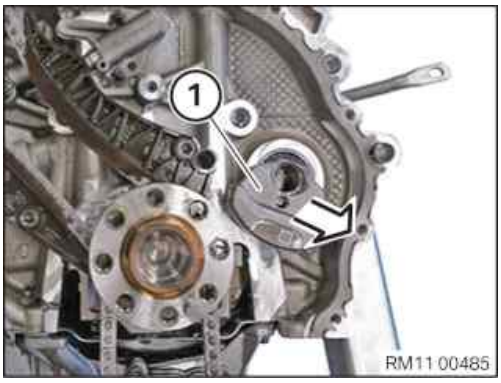
- Loosen screws (1).
- Remove special tool .



- Screw the special tool **2 288 943** far as it will go into the counterbalance shaft.
- Secure counterbalance shaft and gear against falling down!
- By means of targeted hammer blows on the special tool **2 288 943** in the direction of the arrow, loosen the counterbalance shaft from gear (1) .
- Remove special tool **2 288 943**.

- Remove the counterbalance shaft gear in the direction of the arrow.

cardiagn.com



- Remove counterbalance shaft (1) in direction of arrow.

33 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

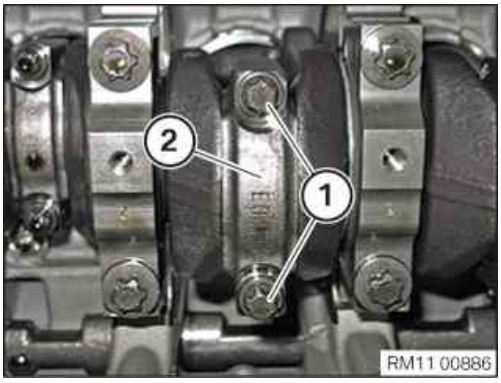
- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.



- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.

34 – Removing the piston with connecting rod

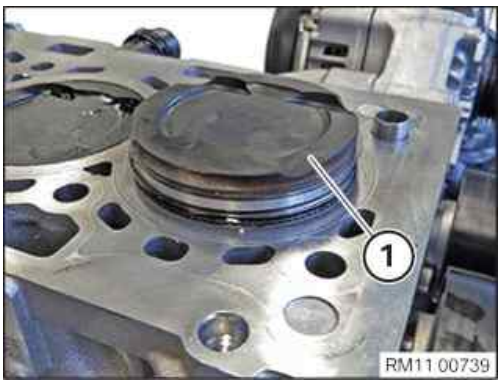
cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.



RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Remove the piston (1) and connecting rod.

35 – Remove the connecting rod bearing shells

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.

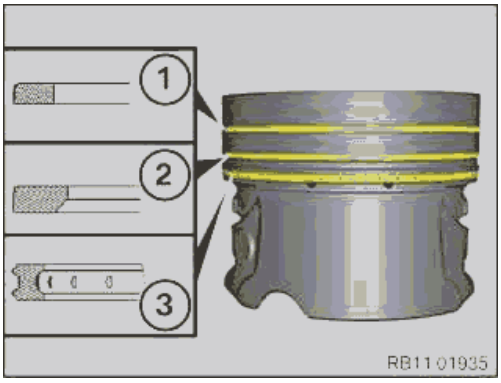
36 – Measure side clearance of piston rings

RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.



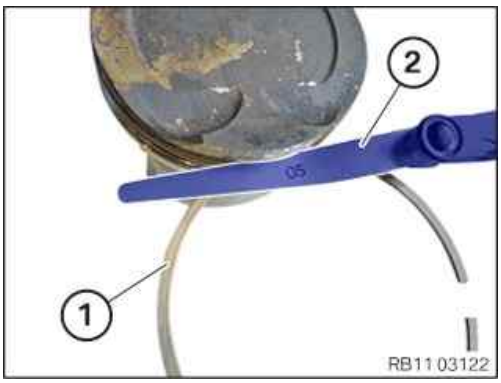
TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)

Check



- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

cardiagn.com

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

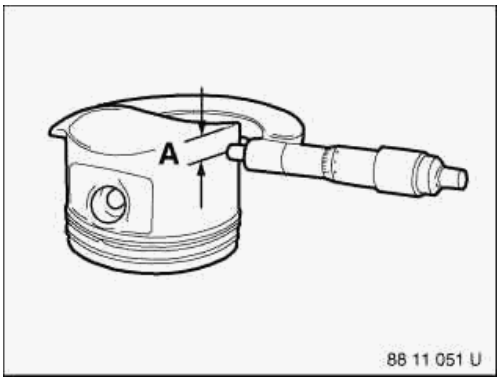
Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

37 – Measure the piston diameter



Check

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Result

» The piston does not correspond to the specifications.

Measure

- Renew the piston.

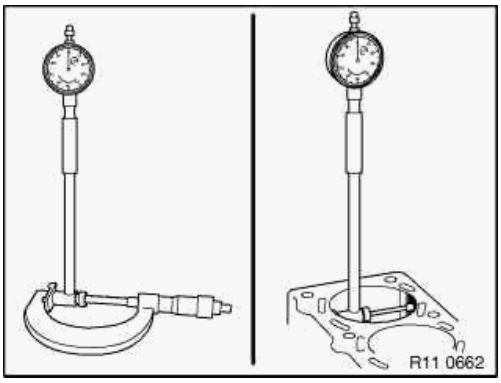
38 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.

Check

cardiagn.com



- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

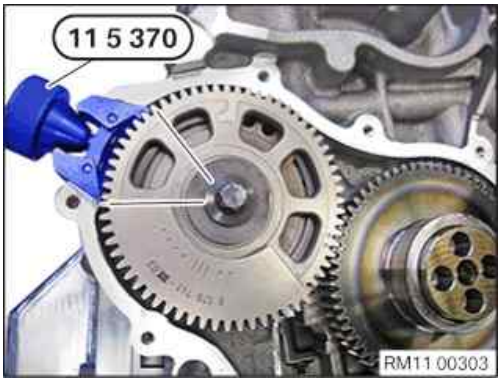
  Parts: Engine

39 – Remove counterbalance shaft

- Fasten counterbalance shaft with special tool in the TDC position of cylinder no. 1.
- Tighten the screws (1).

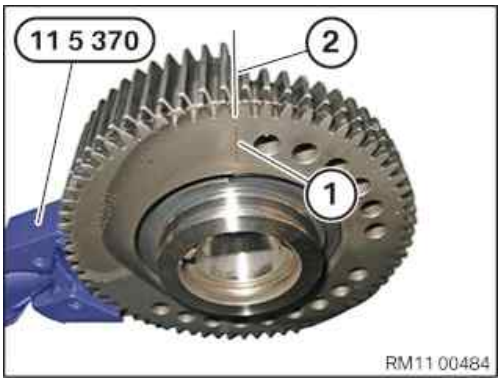
Standard screw connection M6

M6		8 Nm



- Ensure that the gear of the counterbalance shaft is pretensioned and blocked before removal.
- Install the special tool **0 495 131 (11 5 370)** as shown and pre-load the gear.

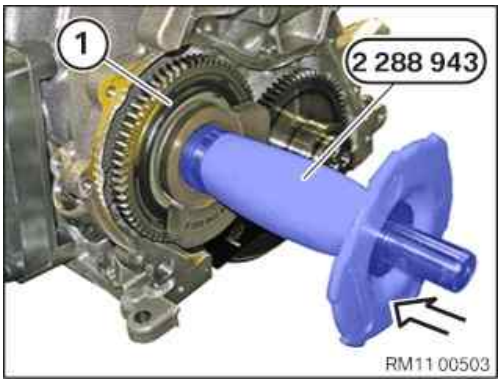
cardiagn.com



- Block gear wheels (1) and (2) until re-installation with the special tool **0 495 131 (11 5 370)**.

- Check whether the marks on the counterbalance shaft gear are aligned with the marks on the crankshaft gear.
- Loosen screw (1).

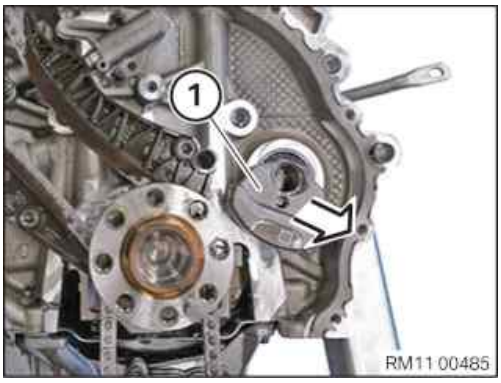
- Loosen screws (1).
- Remove special tool .



- Screw the special tool **2 288 943** far as it will go into the counterbalance shaft.
- Secure counterbalance shaft and gear against falling down!
- By means of targeted hammer blows on the special tool **2 288 943** in the direction of the arrow, loosen the counterbalance shaft from gear (1) .
- Remove special tool **2 288 943**.

- Remove the counterbalance shaft gear in the direction of the arrow.

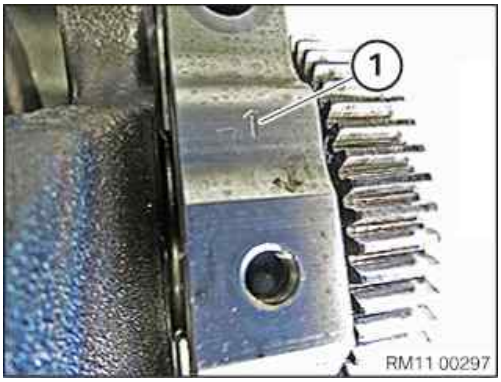
cardiagn.com



- Remove counterbalance shaft (1) in direction of arrow.

MAIN WORK

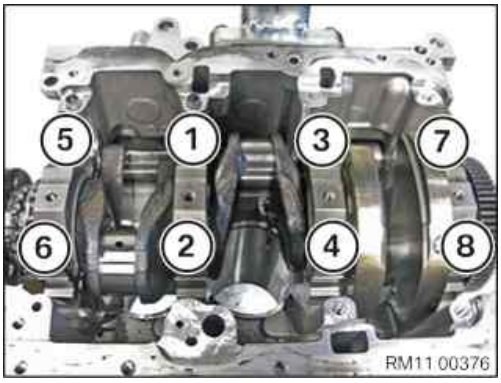
40 – Remove crankshaft



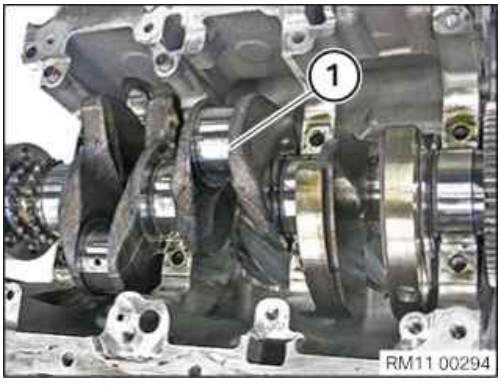
- Observe the marks on the main bearing caps.

  All main bearing caps (1) are numbered according to their installation location (cylinders 1 to 4).

  Main bearing cap number 3 is installed as a thrust bearing.



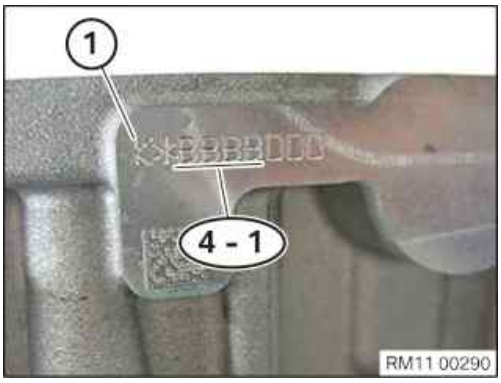
- Loosen screws in the order (8) to (1).
- Remove all main bearing caps and store them properly.



- Remove the crankshaft (1) with a second person and carefully set it aside.

41 – Determine the classification of the main bearing shells and the guide bearing shells

cardiagn.com



- Position (1) K = clutch side
- Item numbers (4) to (1) describe the bearing seats 7 to 1 (key performance indicator on each of the crankshaft bearing caps).
- Enter the code letter on the crankcase in the table.

- K = Clutch side
- Item numbers (1) to (4) describe the bearing seats 1 to 4 (coefficient on each of the crankshaft bearing caps).
- Enter the identification numbers on the crankshaft in the table.

- Enter the code letters and coefficients of the crankcase and the crankshaft.

	Code letter on the crankcase	**Key performance indicator** on the crankshaft
Bearing seat 1		
Bearing seat 2		
Bearing seat 3		
Bearing seat 4		
Bearing seat 5		
Bearing seat 6		
Bearing seat 7		

- The main bearing shells and guide bearing shells are identified by **colour or by number**.
- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankcase**:

	1	2	3
A	Blue = 1	Blue = 1	Blue = 1
B	Green = 2	Green = 2	Green = 2
C	Brown = 3	Brown = 3	Brown = 3

cardiagn.com

- Use the table below to determine the colours of the main bearing shells and the guide bearing shells in the **crankshaft bearing caps**:

	1	2	3
A	Blue = 1	Green = 2	Brown = 3
B	Blue = 1	Green = 2	Brown = 3
C	Blue = 1	Green = 2	Brown = 3

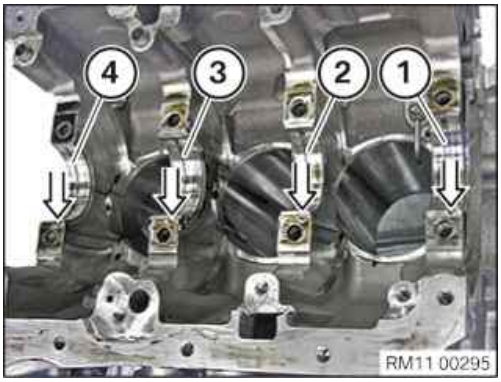
42 – Renewing main bearing shells and guide bearing shells

RISK OF DAMAGE

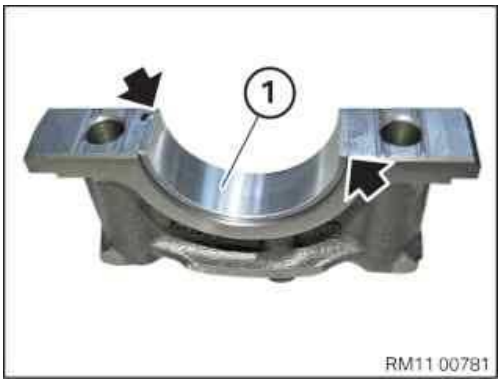
Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

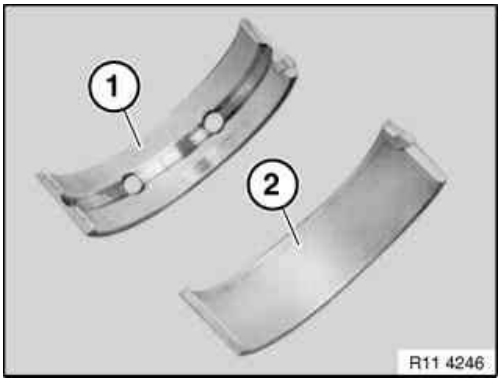
- Always install all bearing shells and bearing supports in the same position from which they were removed.



- Guide the main bearing shells with the lubricating groove (1) and (2) and also (4) out of the crankcase and remove them.
- Feed out and remove the guide bearing shell (3) (with lubricating groove) from the crankcase.



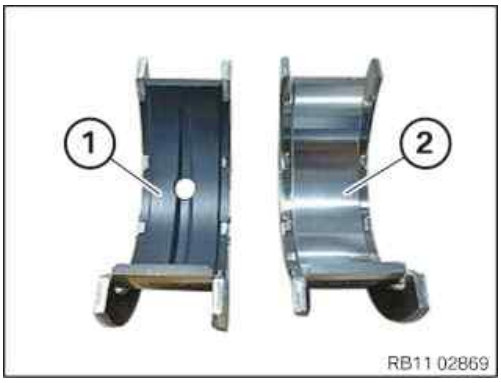
- Feed out and remove the main bearing shells (1) from the crankshaft bearing caps (1), (2) and (4).
- Feed out and remove the guide bearing shell (1) from the crankshaft bearing cap (3).



- Replace main bearing shells with lubricating groove (1) and the main bearing shells (2).

  Parts: Main bearing shells

cardiagn.com



- Replace guide bearing shells with lubricating groove (1) and guide bearing shells (2).

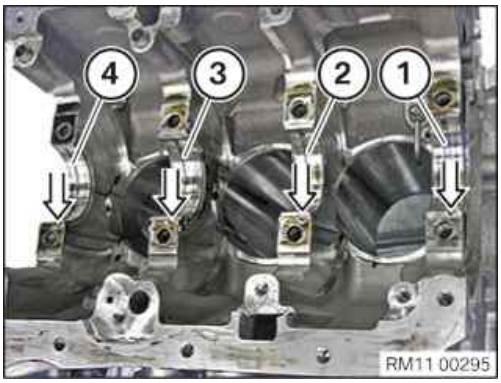
  Parts: Guide bearing shells

- Make sure the guide bearing shells and main bearing shells with lubricating groove (1) are correctly positioned in the crankcase.

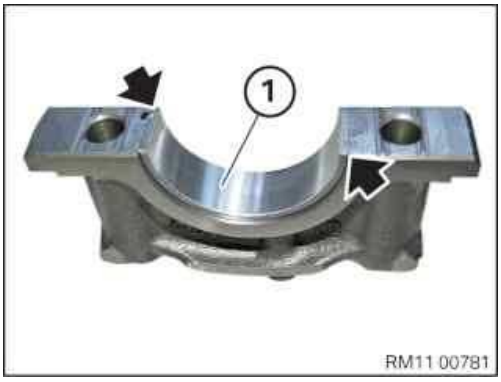
  All guide bearing shells and main bearing shell with lubricating groove (1) in the crankcase are protected against incorrect assembly (mark).

- Make sure the guide bearing shells and main bearing shells (1) are correctly positioned in the crankshaft bearing cap.

  All guide bearing shells and the main bearing shells (1) in the crankshaft bearing caps have protection against incorrect assembly (mark).

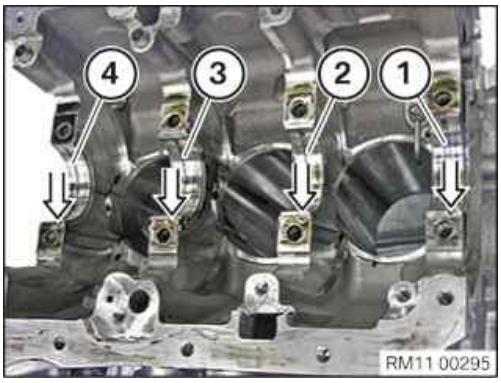


- Guide the main bearing shell with the lubricating groove (1) and (2) and (4) into the crankcase and install it.
- Oil the main bearing shell with the lubricating groove (1) and (2) and (4) .
- Insert and install the guide bearing shell (3) (with lubricating groove) in the crankcase.
- Oil guide bearing shell with lubricating groove (3).

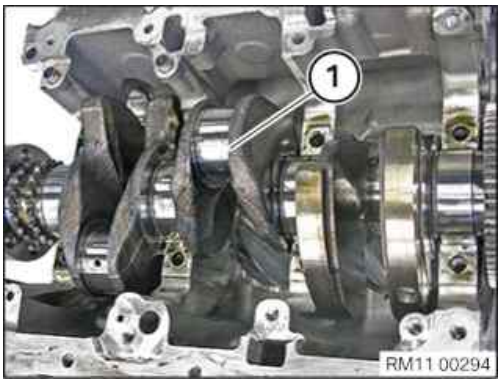


- Guide the main bearing shells (1) into the crankshaft bearing caps (1) and (2) and (4) and install them.
- Oil the main bearing shells (1) and (2) and (4) .
- Insert and install the guide bearing shell (3) in the crankshaft bearing cap.
- Oil the guide bearing shell (3).

cardiagn.com



- Ensure correct installation of the main bearing shells 1 to 4 with the guide lug (arrows).



CAUTION

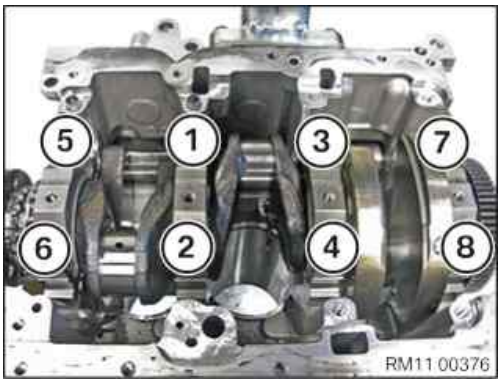
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Install the crankshaft (1).

  Parts: Crankshaft



- Observe the assignment and numbering 1 to 4 of the main bearing caps.

  Assign the main bearing caps according to the order of the cylinders.
- Do not install the main bearing cap in an incorrect position.
- Do not install the main bearing cap in a position twisted by 180 degrees!

  Main bearing caps are coded to prevent incorrect assembly.
- Align main bearing caps exactly.
- Replace main bearing bolts.

  Parts: Bolts
- Tighten the main bearing bolts in the sequence (1) to (8).

Main bearing cap to crankcase

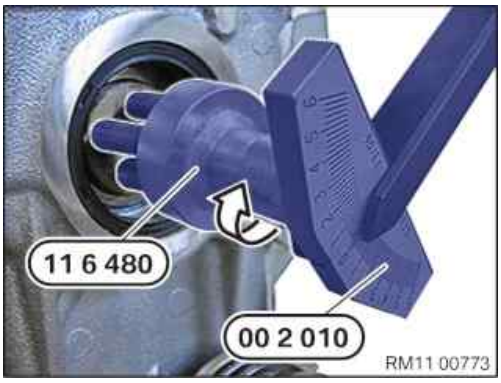
M10x85	Replace screws.	1. tightening torque	25 Nm
		2. tightening torque	50 Nm
		3. Angle of rotation	60 °
		4. Angle of rotation	60 °

POSTPROCESSES

44 – Check the coefficient of friction for the crankshaft

Check

cardiagn.com



- Turn the crankshaft clockwise with the special tool **0 490 130 (00 2 010)** and compare the reading on the scale to the maximum permitted torque.

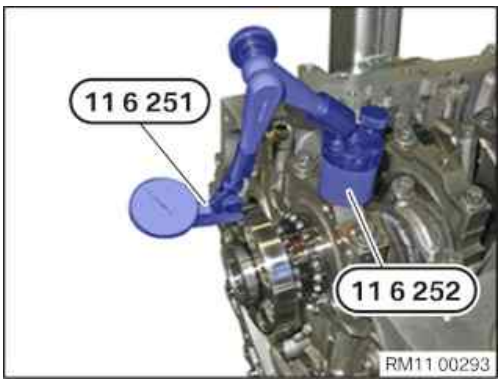
Result

» The maximum permitted torque is exceeded.

Measure

- Correct the radial clearance.

45 – Checking the crankshaft side clearance



Check

- Attach the dial gauge **0 493 144 (11 6 251)** with the tripod **0 493 145 (11 6 252)** to the engine.

Axial play of crankshaft

	min. 0,053 mm
	max. 0,204 mm

Result

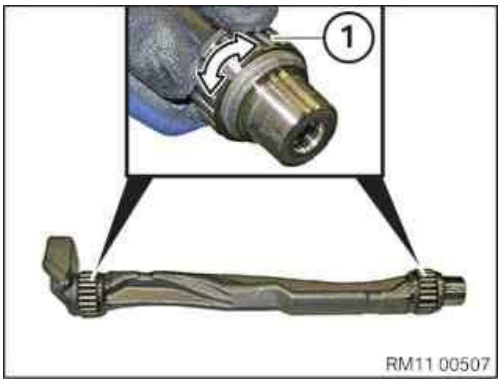
» The side clearance has been exceeded.

Measure

- Renew worn components.

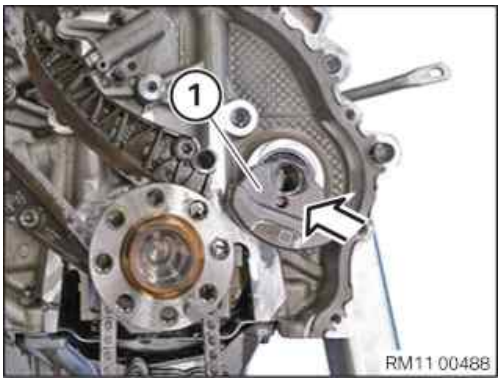
46 – Install counterbalance shaft

- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .



- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.

cardiagn.com

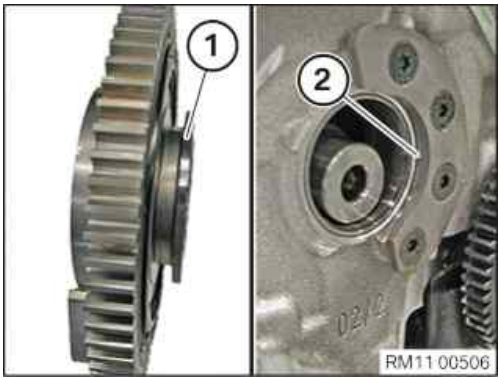


- Install counterbalance shaft (1) in direction of arrow into crankcase.

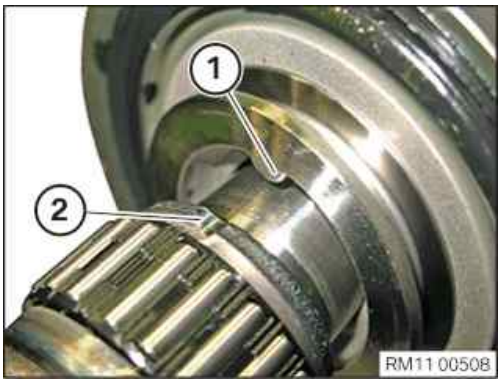
- Fix the counterbalance shaft in the TDC setting of the first cylinder using the special tool .
- Tighten the screws (1).

Standard screw connection M6

M6		8 Nm



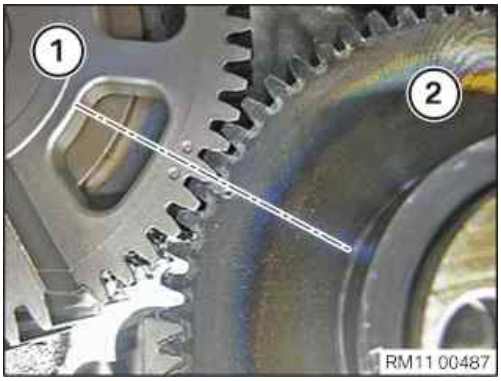
- On installation, make sure that ring (1) of gear is guided in crankcase (2).



NOTICE

For a better overview the removed condition is shown here.

- On installation of counterbalance shaft in gear, make sure that lug (1) on gear is inserted into groove (2) of counterbalance shaft.



- Bring gear (1) of counterbalance shaft into contact in correct installation position (mark) relative to crankshaft (2).

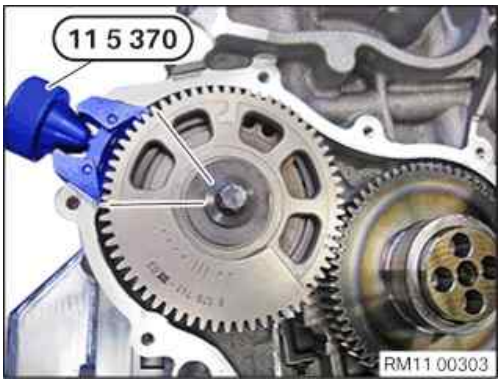
cardiagn.com

- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Gear to counterbalance shaft

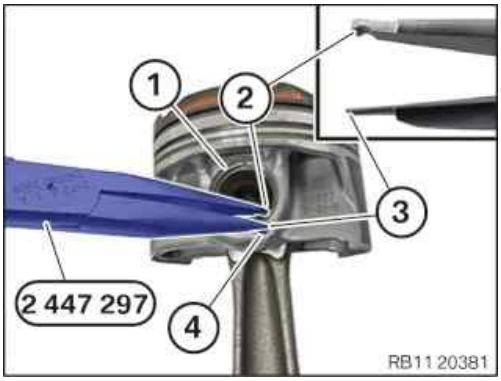
	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °



- Remove special tool **0 495 131 (11 5 370)**.

- Loosen screws (1).
- Remove special tool .

47 – If necessary: Renew the piston



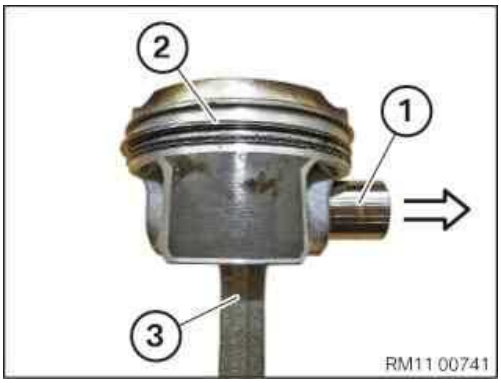
CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).

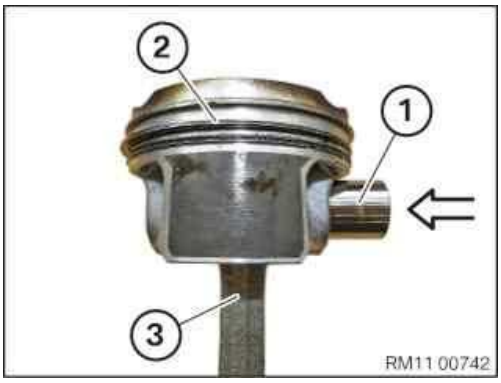


TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

cardiagn.com



- Renew piston with gudgeon pin.

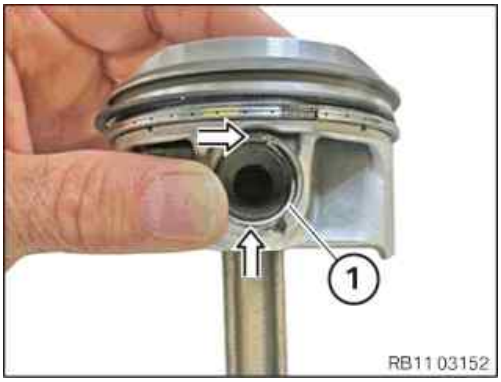
  Parts: Pistons

TECHNICAL INFORMATION

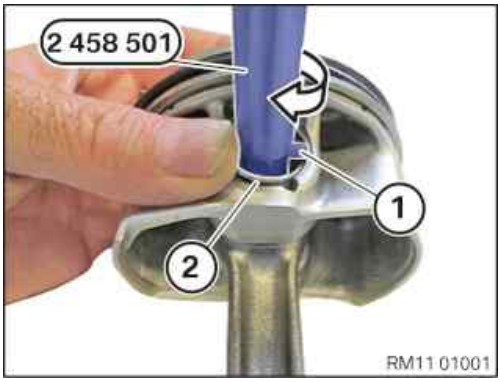
Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.

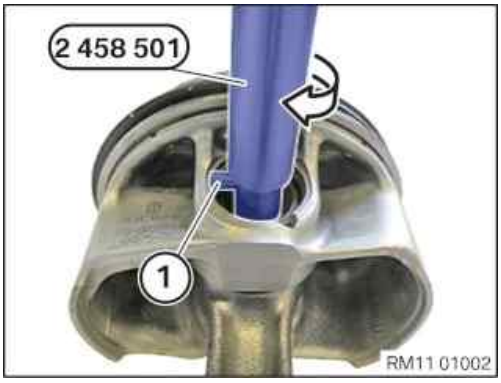
- Prepare special tool on the fitting aid .



- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).

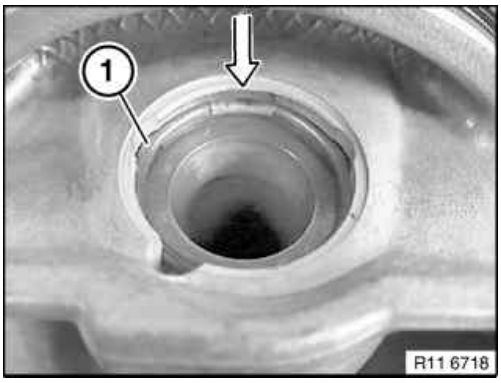


- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.



- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.

cardiagn.com



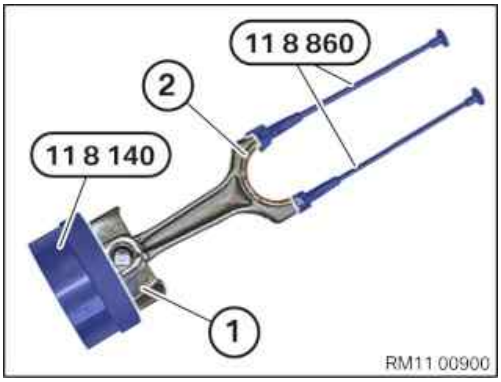
- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

48 – Installing piston with connecting rod

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.



- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.
- Install the piston in the crankcase.
- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

49 – Install the connecting rod bearing cap

cardiagn.com

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

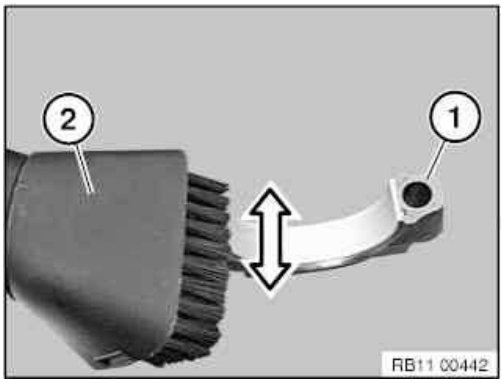
Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

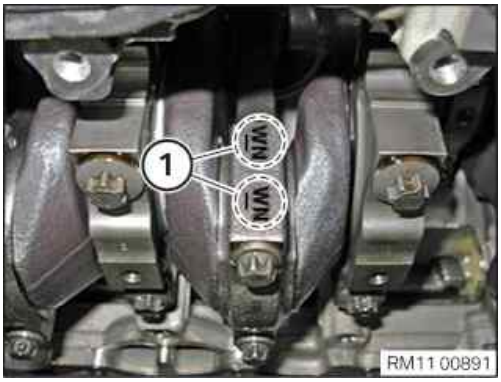
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



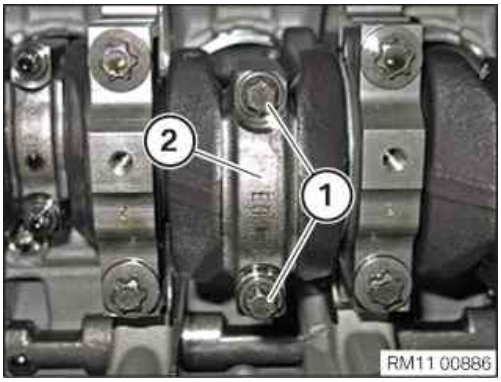
- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.



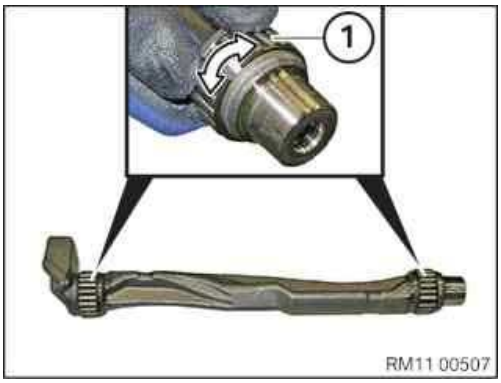
- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

Connecting rod bearing cap to connecting rod

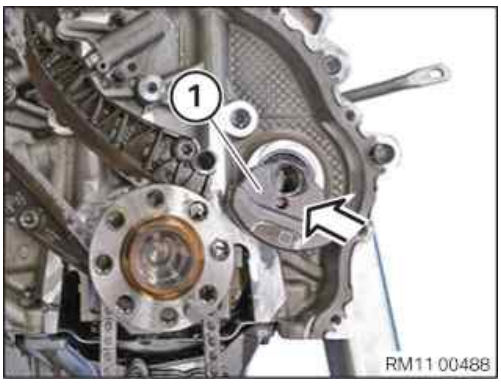
M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

cardiagn.com

- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .



- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.

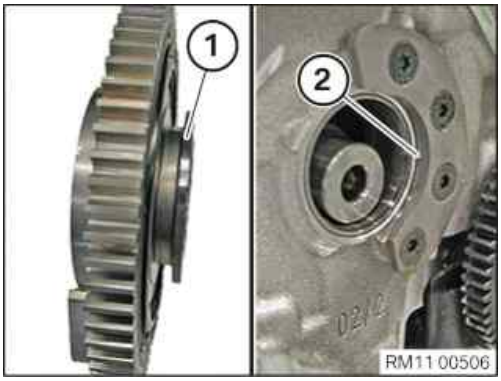


- Install counterbalance shaft (1) in direction of arrow into crankcase.

- Fix the counterbalance shaft in the TDC setting of the first cylinder using the special tool .
- Tighten the screws (1).

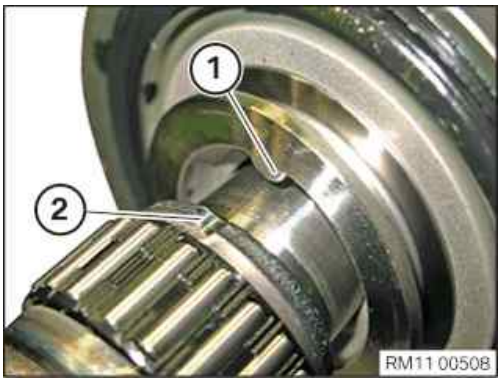
Standard screw connection M6

M6		8 Nm



- On installation, make sure that ring (1) of gear is guided in crankcase (2).

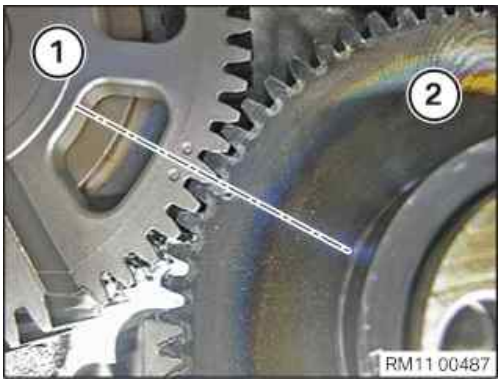
cardiagn.com



NOTICE

For a better overview the removed condition is shown here.

- On installation of counterbalance shaft in gear, make sure that lug (1) on gear is inserted into groove (2) of counterbalance shaft.



- Bring gear (1) of counterbalance shaft into contact in correct installation position (mark) relative to crankshaft (2).

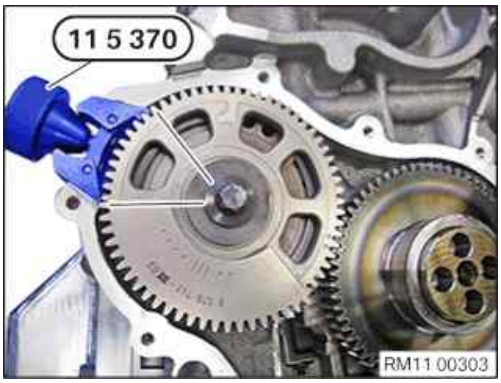
- Renew the screw (1).

  Parts: Screw

- Tighten down screw (1).

Gear to counterbalance shaft

	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °

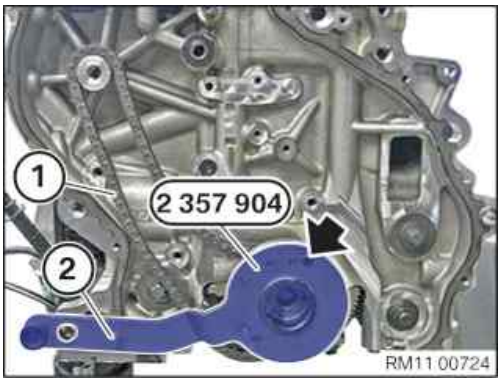


- Remove special tool **0 495 131 (11 5 370)**.

- Loosen screws (1).
- Remove special tool .

51 – Install both timing chains

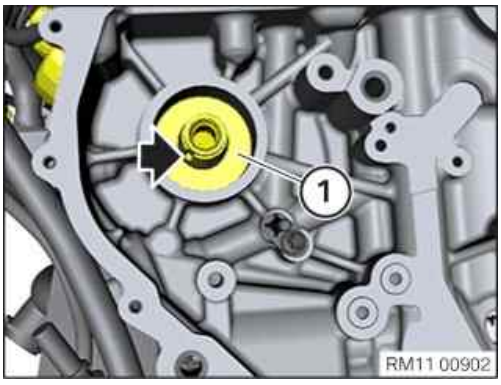
cardiagn.com



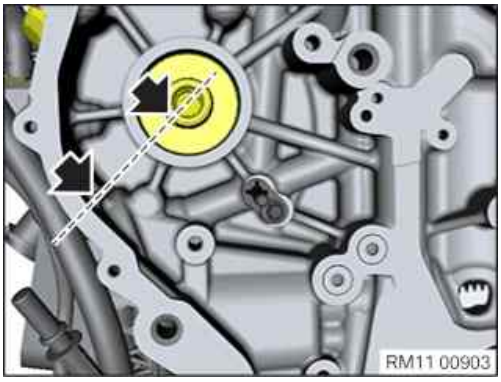
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

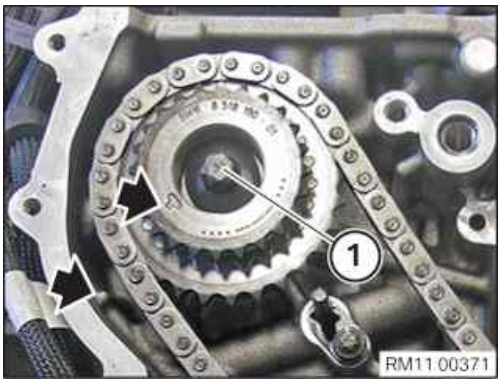
- Position the timing chain (1).
- Secure crankshaft with special tool **2 357 904**.
- Secure special tool **2 357 904** with bolt (2) on crankcase.



- Note spline groove on high pressure pump (1).

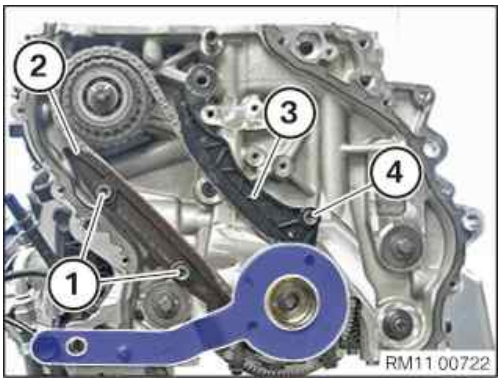


- Mark and groove (arrows) on high pressure pump and crankcase must align.



- Position the impeller with timing chain on the high pressure pump.
- Screw in and fasten central bolt (1) of high pressure pump.
- Mark and cast lug (arrows) must align.

cardiagn.com



- Position tensioning rail (3).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten the bearing journals (4).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

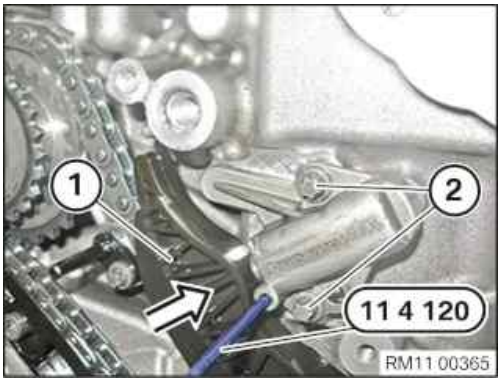
- Position the guide rail (2).
- Replace bearing journal.

  Parts: Bearing journal
- Tighten both bearing journals (1).

Bearing journal of tensioning and guide rail

M8	*Replace bearing journal.*	Tightening torque	20 Nm

- Clean sealing surfaces (1) with compressed air.

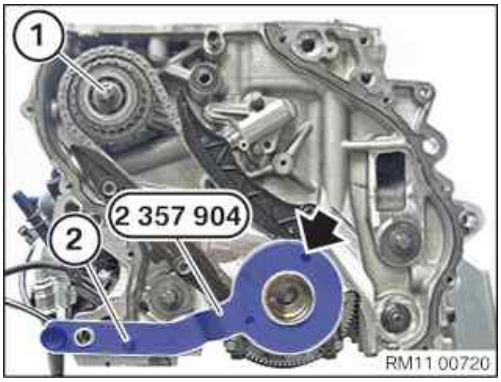


- Position hydraulic chain tensioner.
- Tighten down screws (2).

Chain tensioner to crankcase

M6x22		Tightening torque	10 Nm

- Press chain tensioner in by hand with tensioning rail (1) in direction of arrow until special tool **0 491 012 (11 4 120)** can be removed.



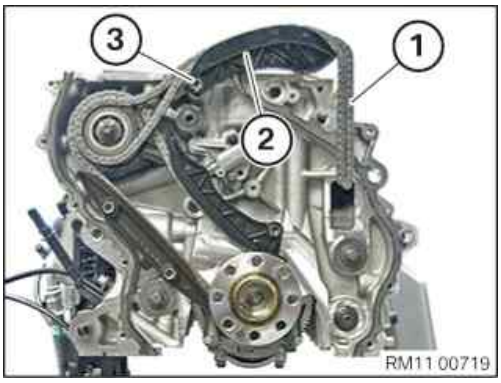
- To fasten central bolt (1) of high pressure pump, crankshaft must remain secured with special tool **2 357 904** and bolt (2).
- Renew central bolt (1).

  Parts: Central bolt
- Tighten central bolt (1).

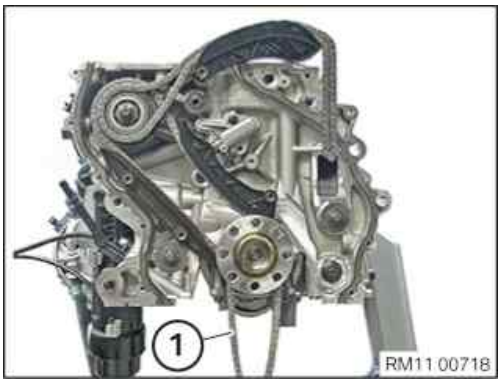
Camshaft sprocket on high pressure pump

M12		Tightening torque	65 Nm

cardiagn.com

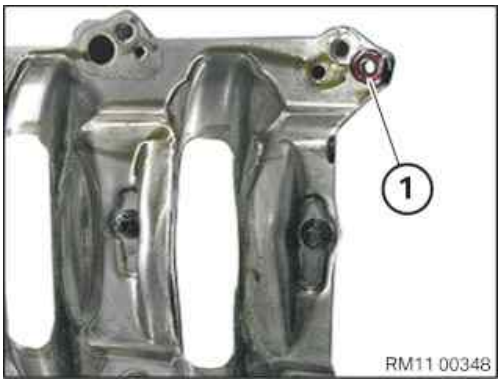


- Position tensioning rail (2) on bearing journal (3).
- Position camshaft timing chain (1).

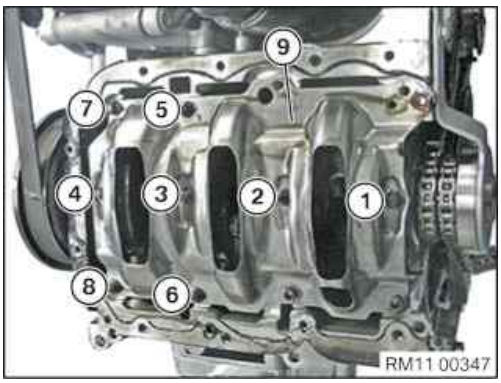


- Mount drive chain (1) for oil pump on crankshaft.

52 – Installing the oil deflector



- Check sealing ring (1) for damage and replace oil deflector if necessary.



- Insert and install the oil deflector (9).
- Renew screws (1) to (4).

  Parts: Bolts
- Hand-tighten the bolts (1) to (4).
-
- Tighten the screws (1) to (8).

Oil deflector to crankshaft bearing cap

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (5) to (8).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

53 – Install the oil vacuum pump

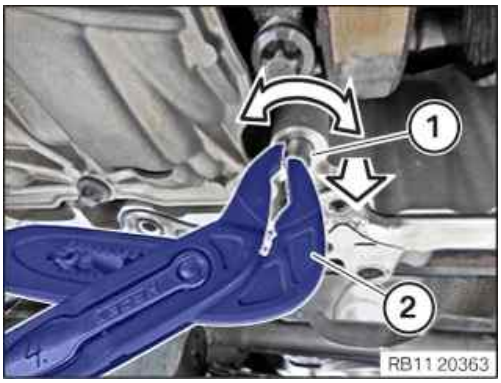
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

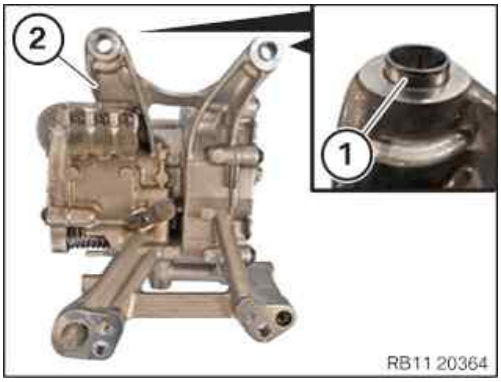
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

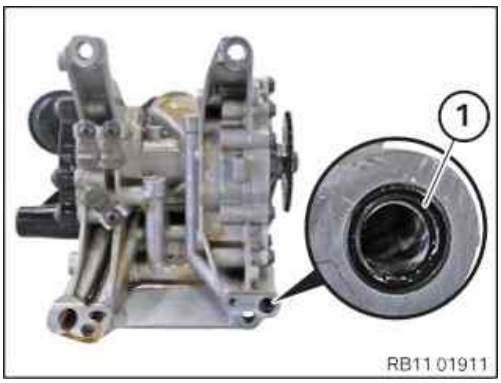


- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

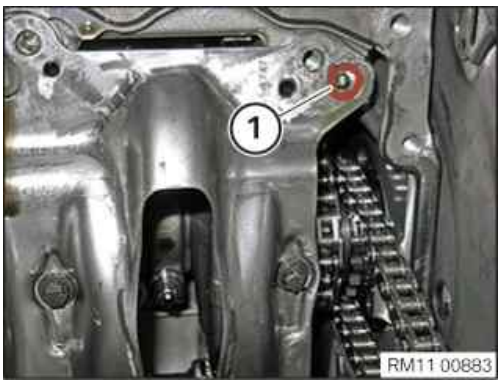
  Parts: Centring sleeves



- Install centering sleeves (1) in the oil vacuum pump (2).



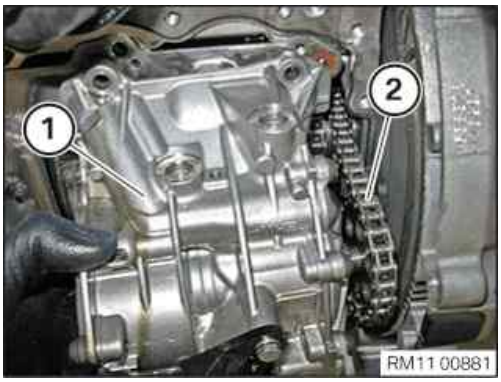
- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.



- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector

cardiagn.com



- Insert oil vacuum pump (1) into the drive chain (2).

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

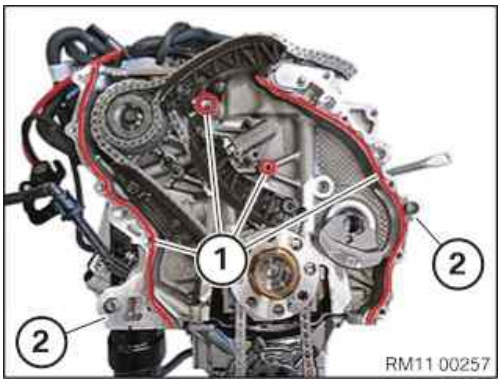
Oil vacuum pump to crankcaseB37

M8x35	*Renew screws.*	Tightening torque	15 Nm
		Angle of rotation	45 °

54 – Install the rear timing case cover

Prerequisite

Transmission is removed.



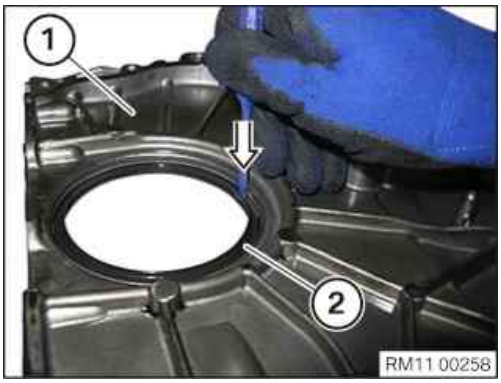
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

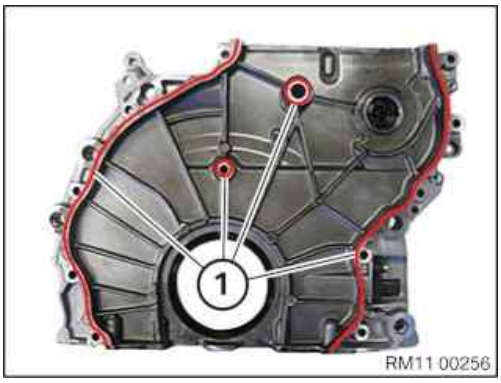
- Do not use any metal-cutting tools.

- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.

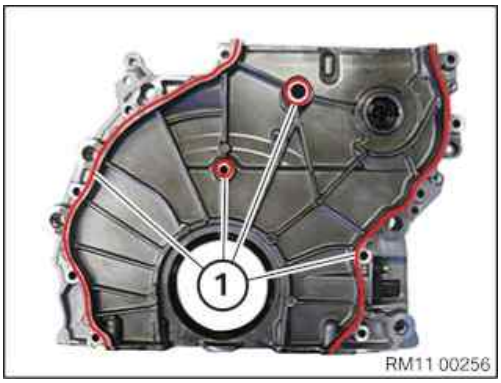


- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.

cardiagn.com



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

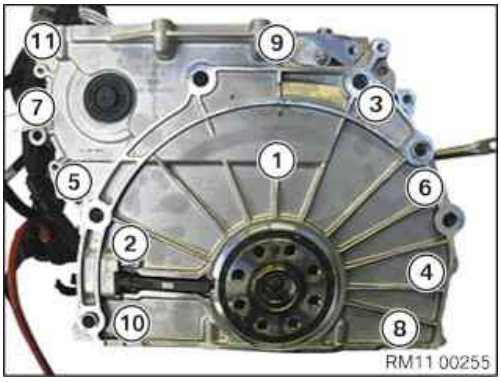


TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.



- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

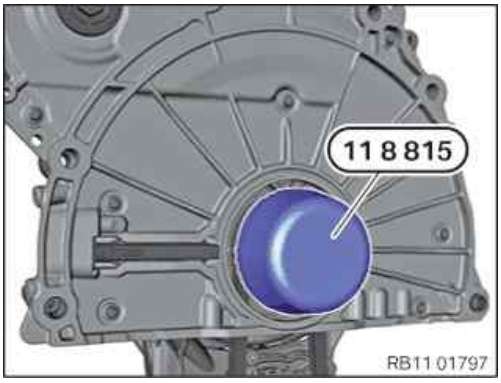
cardiagn.com

RISK OF DAMAGE

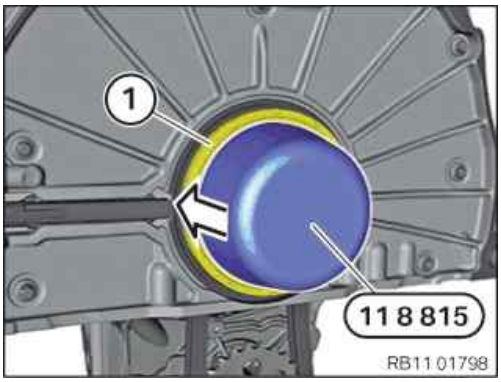
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.



- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.

cardiagn.com

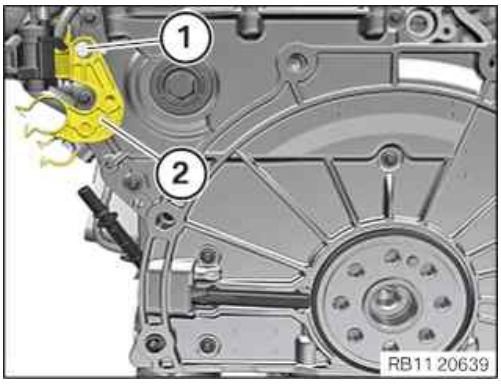
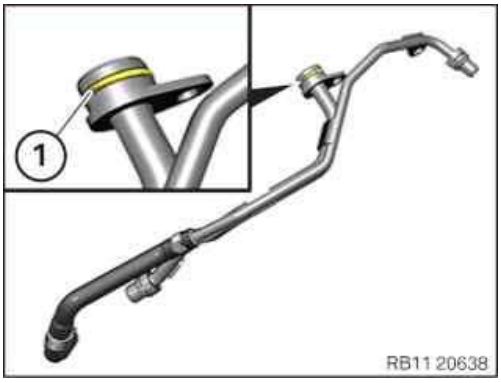
- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



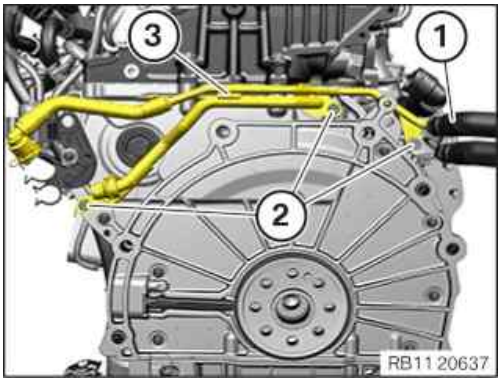
- Insert and install the holder (2).

▶ **If installed: Installing the coolant line of the SCR metering module**



- Renew the O-ring 1.

  Parts: O-ring



- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

▶ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

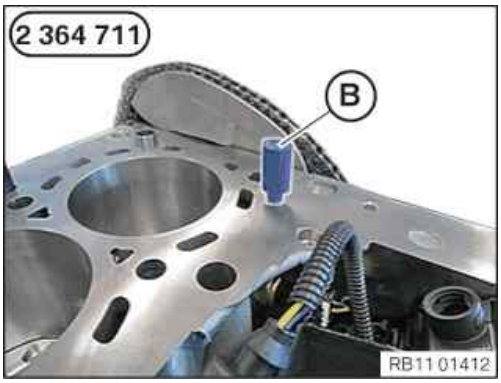
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

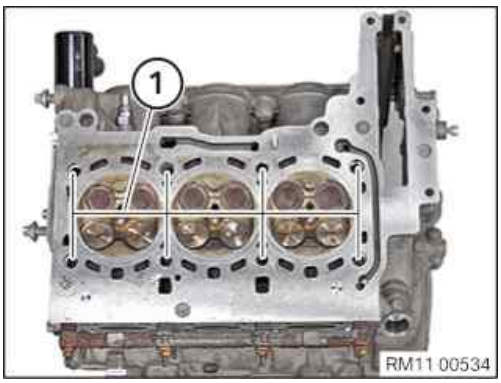
- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

▸ Renewing the cylinder head gasket



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Remove oil and dirt residue from the blind holes (1).

cardiagn.com

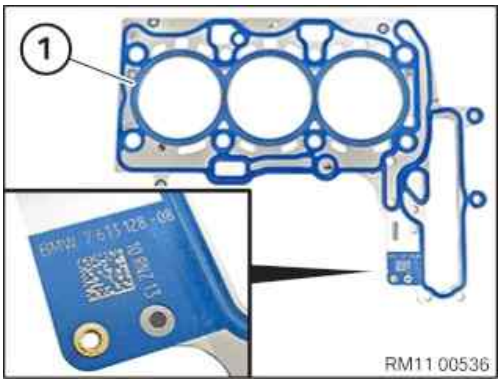
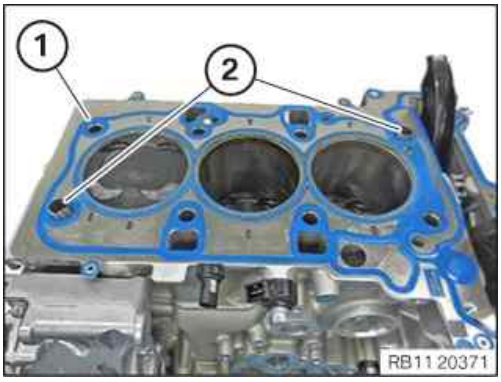
- Check the fitting sleeves (1) for secure fit and damage.

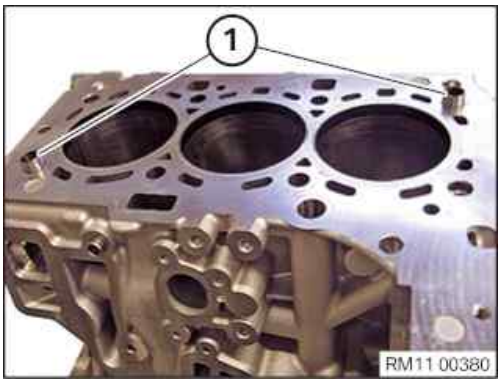


- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.

cardiagn.com

- Fit new cylinder head screws.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

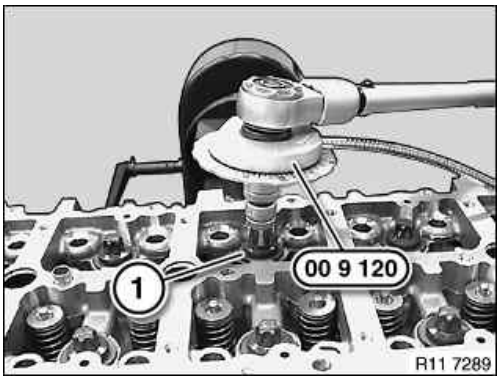
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

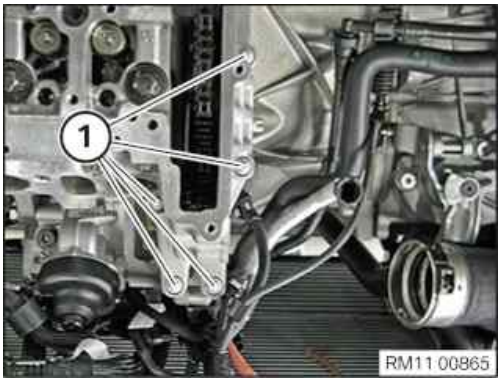
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolts in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

-

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com

TECHNICAL INFORMATION

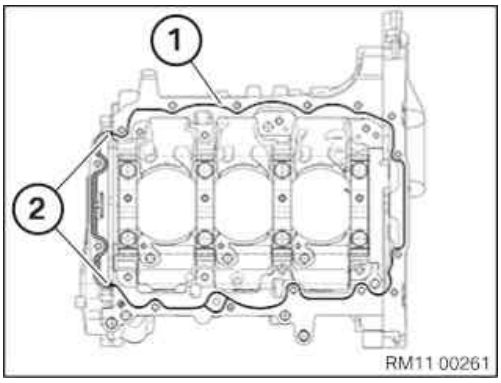
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

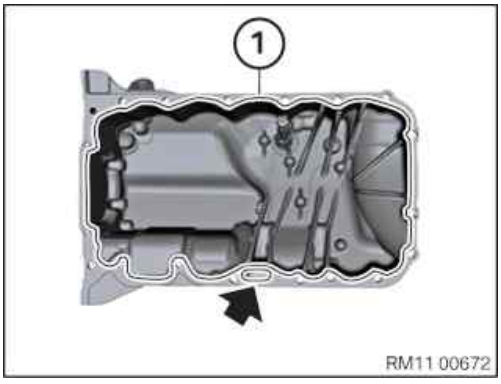
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

cardiagn.com

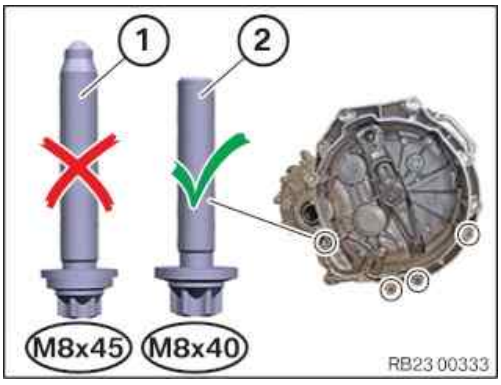
TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

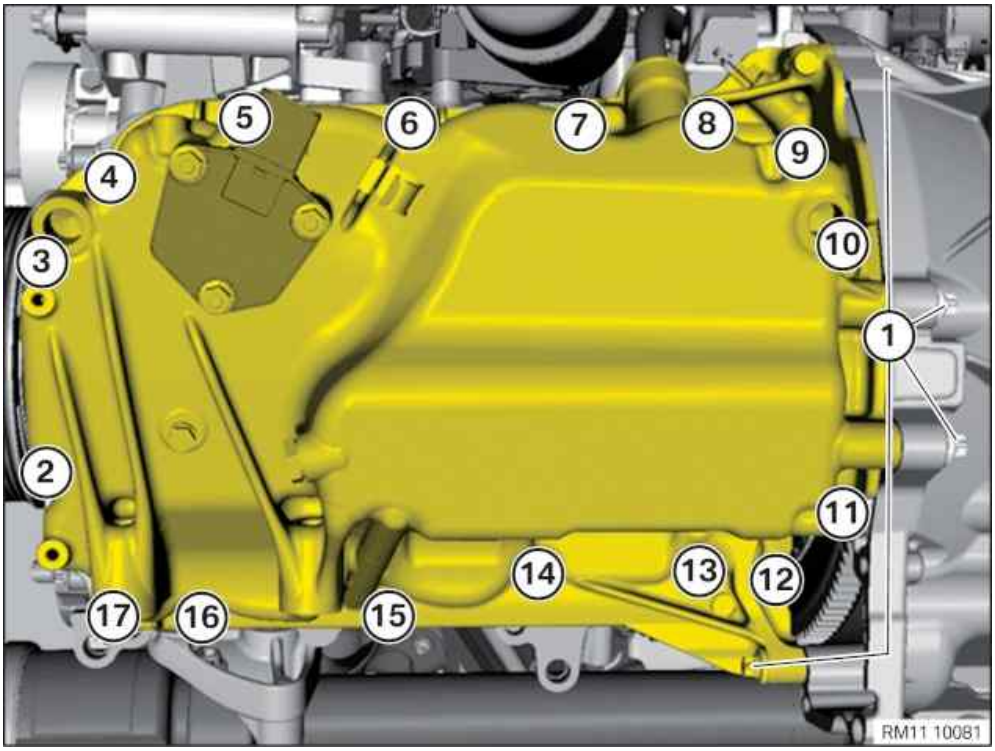
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Hand tighten the screws of oil sump (2) to (17) , but do **not** tighten completely yet.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.

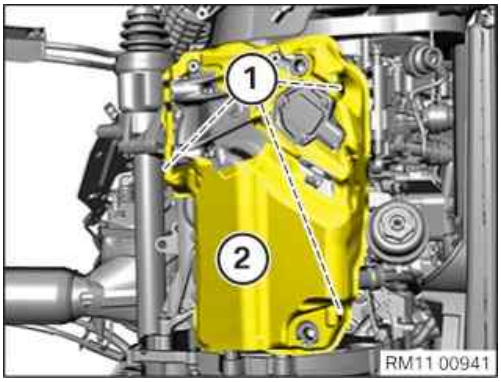
Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com

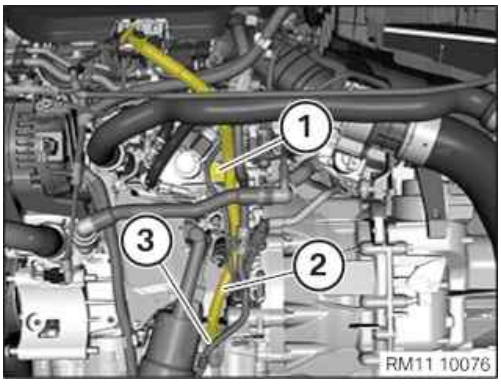
- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

55 – Installing the flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

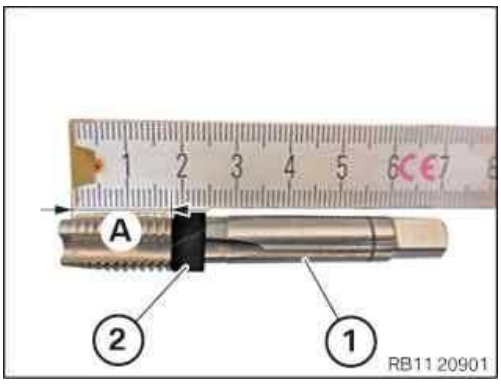
cardiagn.com

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

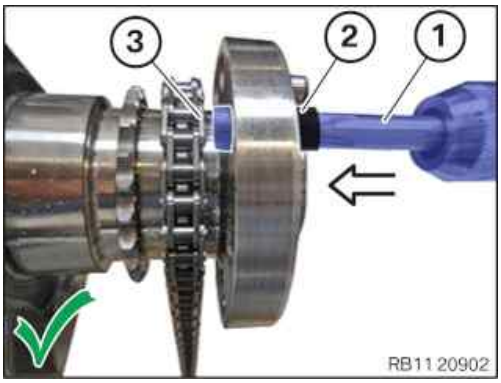
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the depth of insertion (A) on the thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

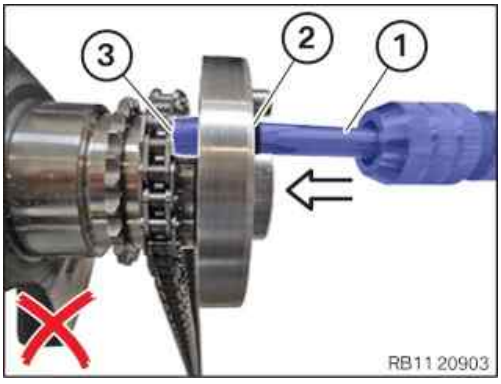
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



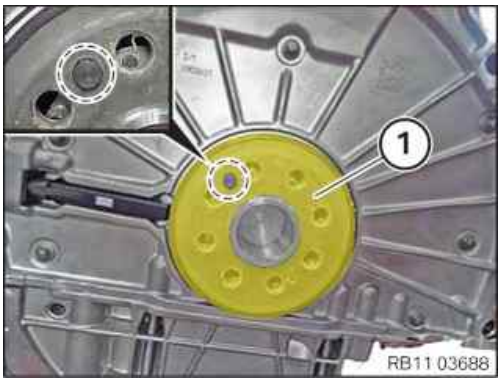
TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

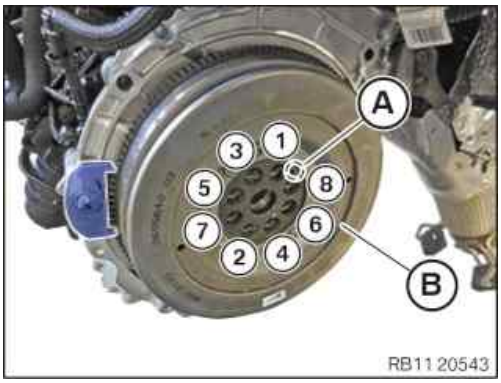
- Make sure that the depth of insertion (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com



- It is essential to observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

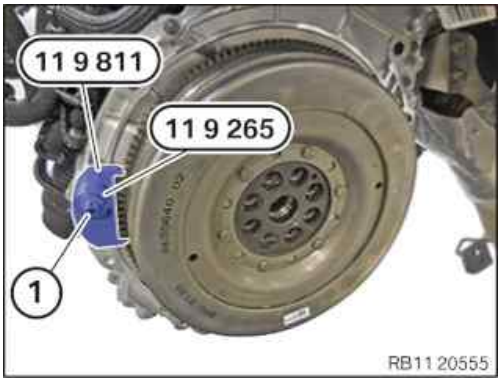


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Thread out special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)** remove.
- Ensure that the washer (5 mm) is removed.

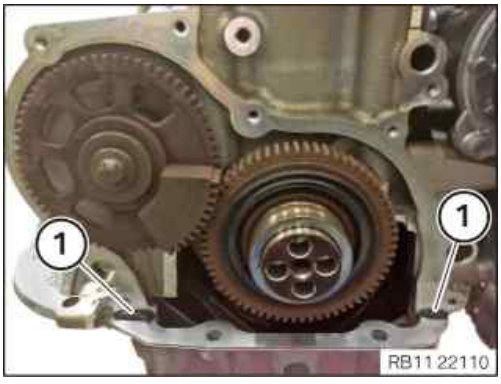
56 – Installing the timing case cover

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

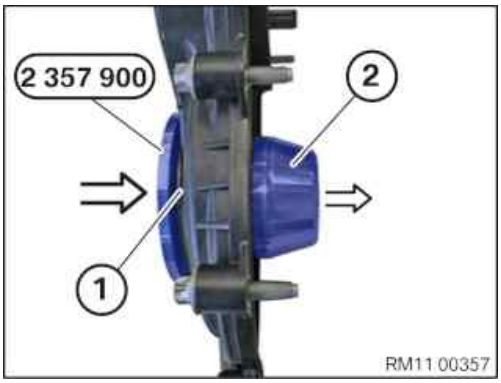
The maximum application time of the liquid sealing compound is 12 minutes.

- Apply sealing compound (1) approx. **5 mm** as shown.

  The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.

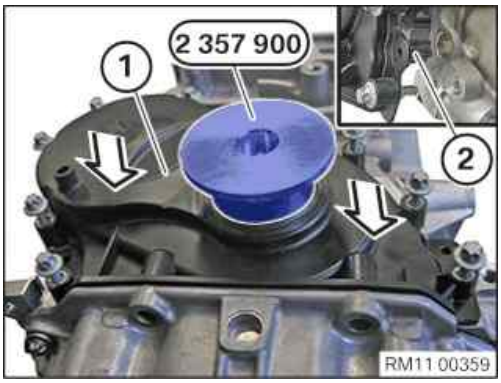
cardiagn.com

- Assemble special tool **2 357 900** as shown.
- Please note that no greases or lubricants may be used on the special tool **2 357 900**.



- Carefully slide the special tool **2 357 900** in the direction of the arrow through the sealing ring into the timing case cover (1).
- Make sure that the special tool **2 357 900** rests flat against the timing case cover (1).
- Remove the fitting aid (2).

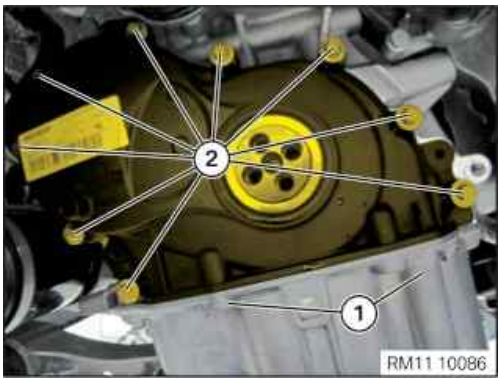
- Connect special tool **2 357 900** to the timing case cover (1) on the hub of the crankshaft (2).



- Feed in and install timing case cover (1) in the direction of the arrow.
- Ensure the guide pins (2) are fitted correctly.
- Tighten screws hand-tight.
- Remove special tool **2 357 900**.

- Make sure that the air guide (1) faces out.

cardiagn.com



- Hand-tighten the bolts (1).
- Tighten the screws (2) in a crosswise sequence with a tightening torque.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

- Tighten the screws (1).

Oil sump to crankcase

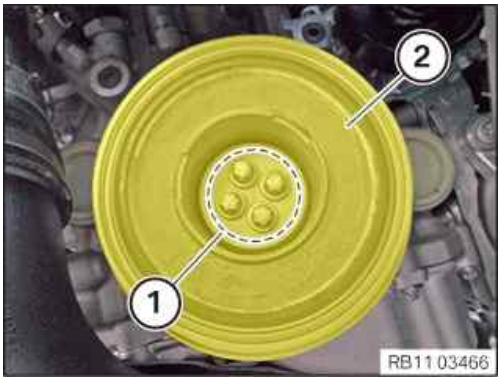
M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

- Tighten the screws (2) in a crosswise sequence with an angle of rotation.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

57 – Installing the vibration damper

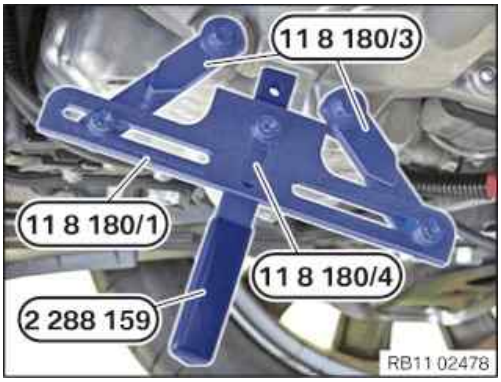


- Position vibration damper (2).
- Renew screws (1).

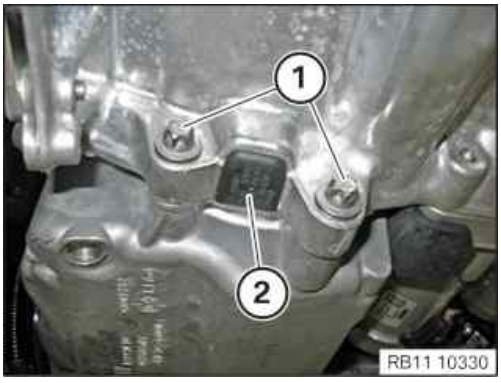
  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	120 °



- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.



- Tighten transmission screws (1).

Transmission to oil sump

M8			19 Nm

- Install protective cap (2).

58 – Cleaning the sealing surface

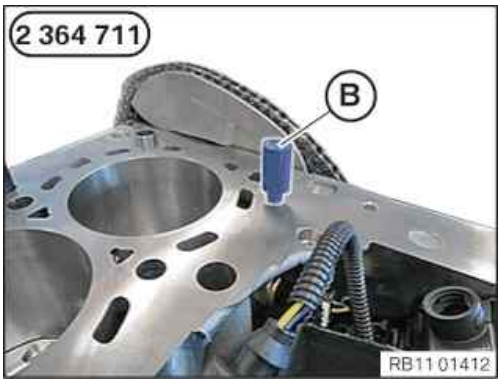
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

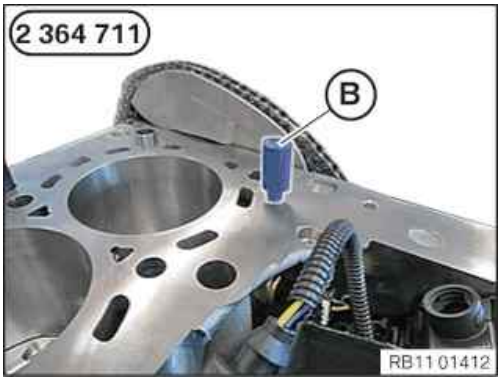
RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

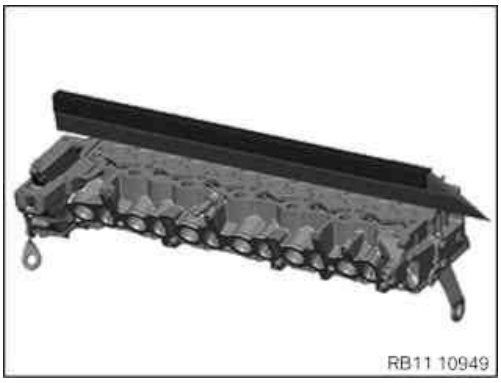
- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.



- Remove special tool (B).

59 – Check the flatness of the cylinder head

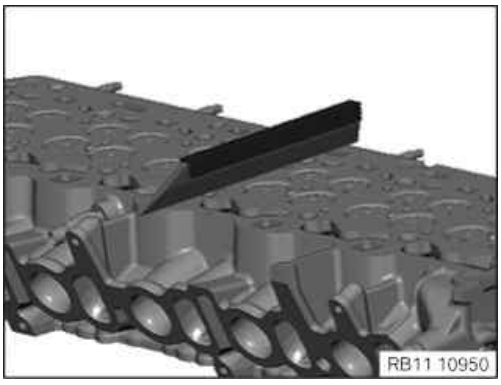
cardiagn.com



- Check the flatness of the cylinder head lengthwise using a straightedge.

Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm



- Check the flatness of the cylinder head crosswise using a straightedge.

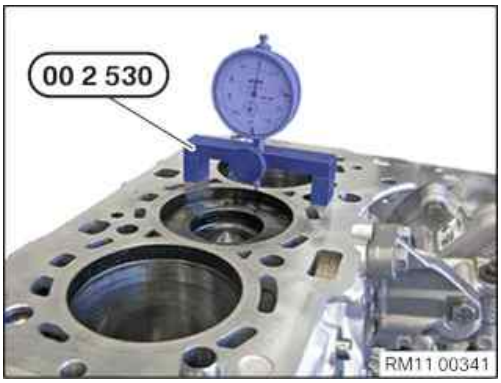
Cylinder head flatness

Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

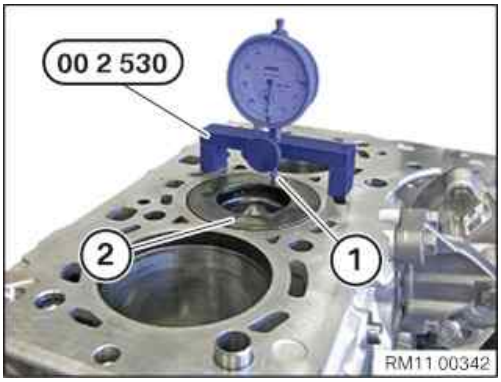
60 – Determining the thickness of the cylinder head gasket

TECHNICAL INFORMATION

The highest piston protrusion on both measuring points of all pistons determines the strength of the cylinder head gasket.

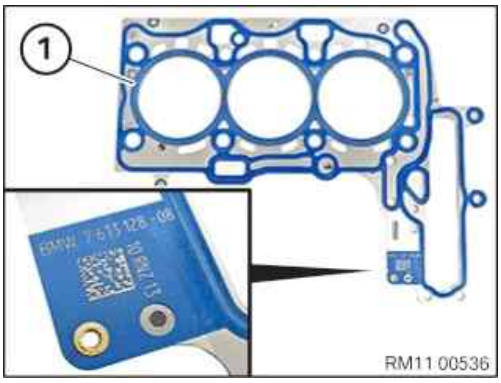


- For measuring the piston protrusion: position special tool **0 490 185 (00 2 530)** including the dial gauge on the cleaned cylinder head lower face.
- Set dial gauge to zero under preload.



- Clean the pistons at the measuring points (1) and (2).
- Place the dial gauge onto the cleaned piston at measuring points (1) and (2).
- Determine highest point by turning crankshaft.
- Measure and record the piston protrusion at measuring points (1) and (2) on all pistons.

cardiagn.com



- Renew cylinder head gasket.

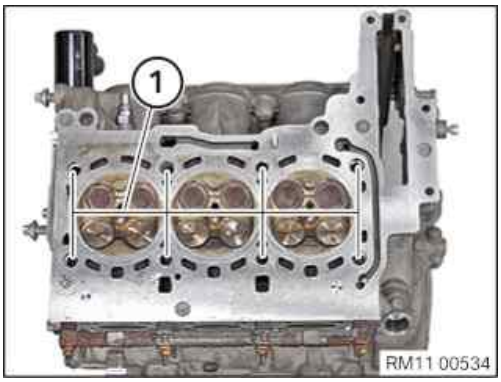
  Parts: Cylinder head gasket

Selecting the cylinder head gasket

A decision is made to determine which cylinder head gasket must be used based on the measuring result of the measurement of the piston protrusion.

Cylinder head gasket with number of holes 1	0 mm ... 0,92 mm
Cylinder head gasket with number of holes 2	0,93 mm ... 1,03 mm
Cylinder head gasket with number of holes 3	1,04 mm ... 1,18 mm

61 – Renewing the cylinder head gasket



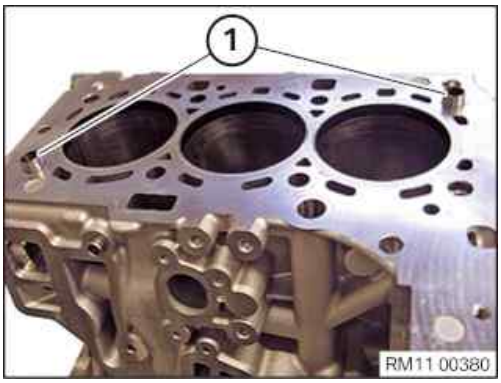
RISK OF DAMAGE

Damage to the surface.

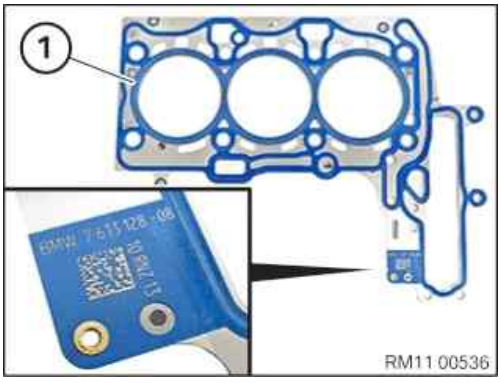
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

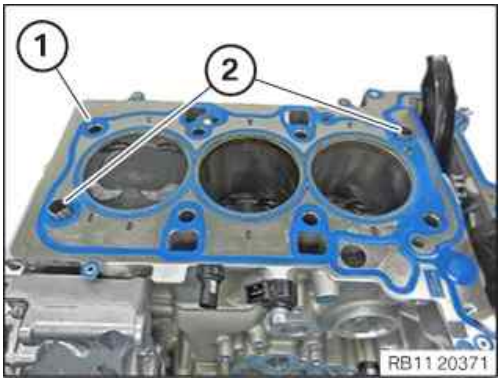
- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

cardiagn.com

62 – Installing the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

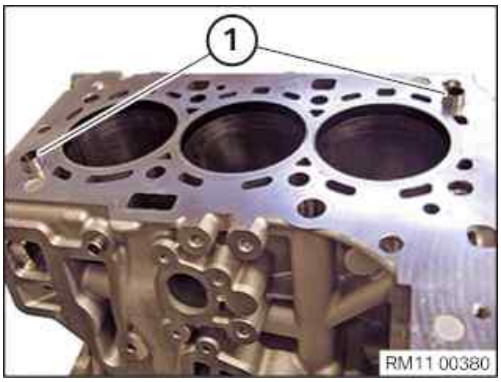
Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

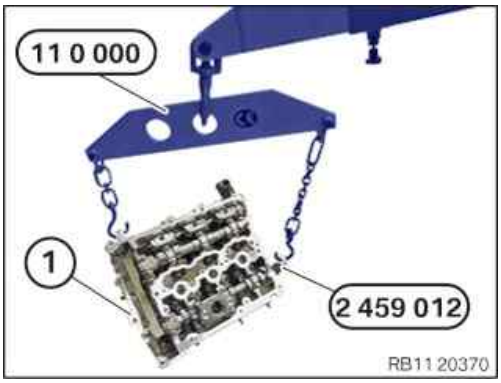
Do not remove bolt coating.



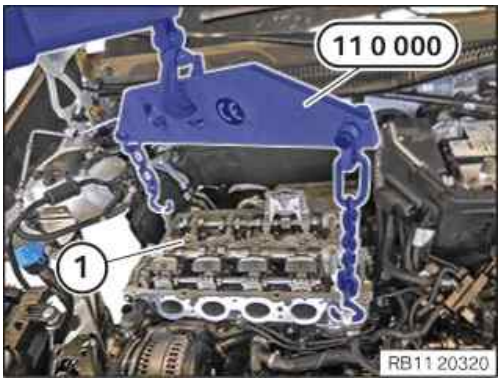
- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.

- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Position cylinder head (1) on special tool **0 490 561 (11 0 000)** and engine lifter.



RISK OF DAMAGE

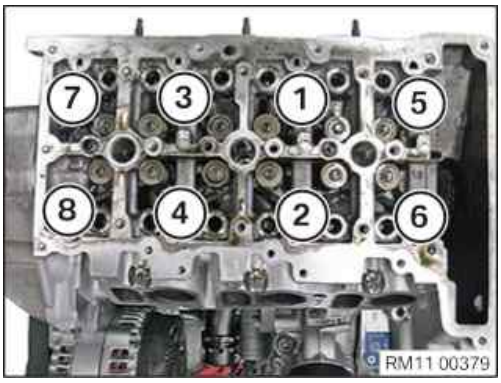
Damage to the guide rails.

Large amounts of force may damage the guide rails of the timing chain.

- Make sure not to damage the guide rail with the cylinder head when removing and installing the cylinder head.

- Feed in the cylinder head (1) **carefully** with the engine lifter and the special tool **0 490 561 (11 0 000)** and install.

cardiagn.com



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

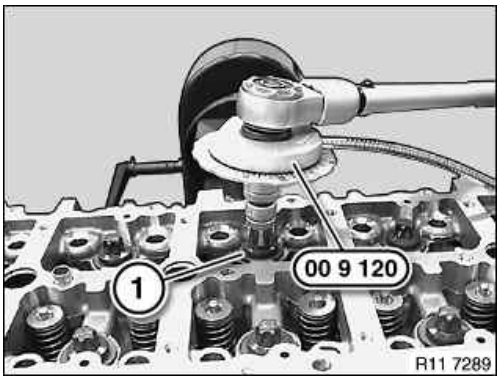
  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

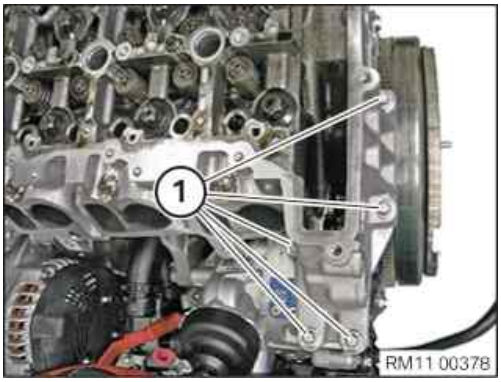
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



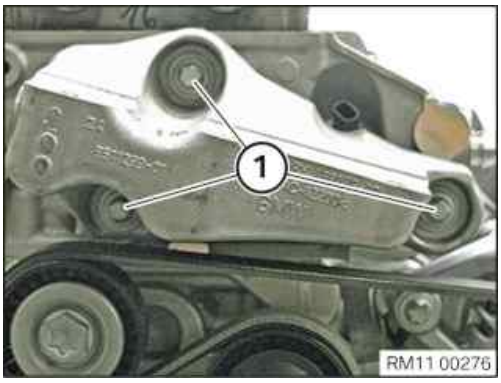
- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

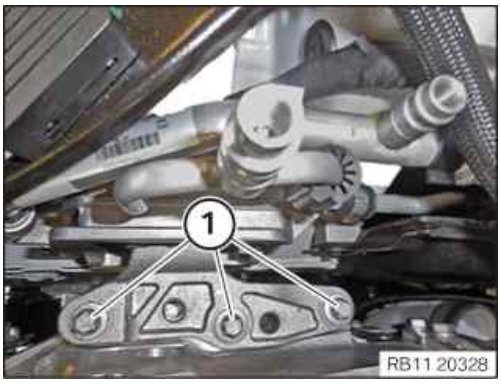
cardiagn.com



- Tighten the screws (1).

Engine support to cylinder head

M10X45		Tightening torque	41 Nm



- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

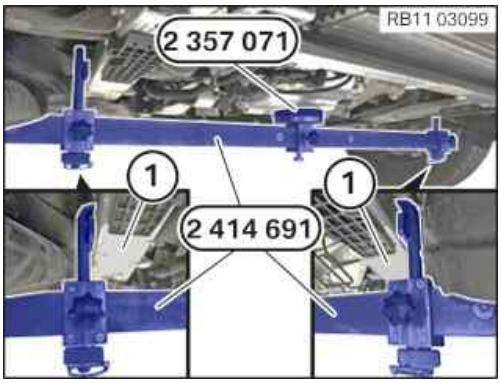
Right engine mount to cylinder head

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

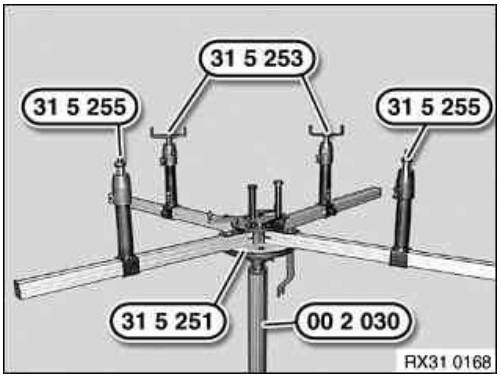
- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



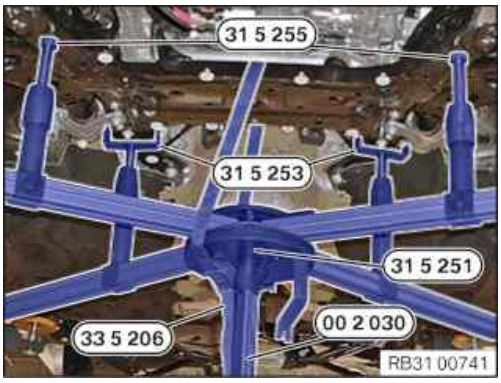
- Disassemble special tool **2 414 691** using special tool **2 357 071**.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

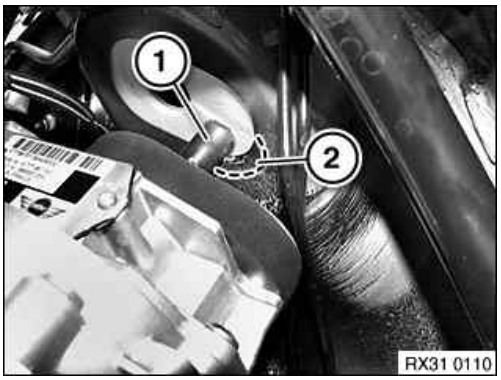
cardiagn.com



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

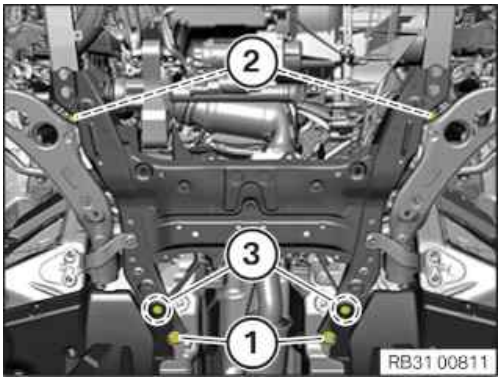


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and the front axle remove.

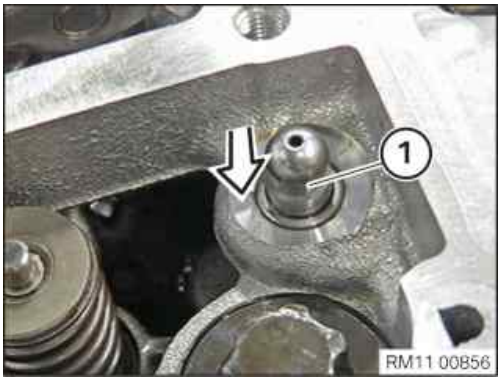
63 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



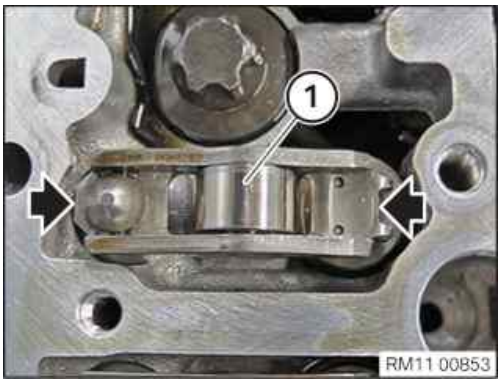
- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

cardiagn.com

64 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

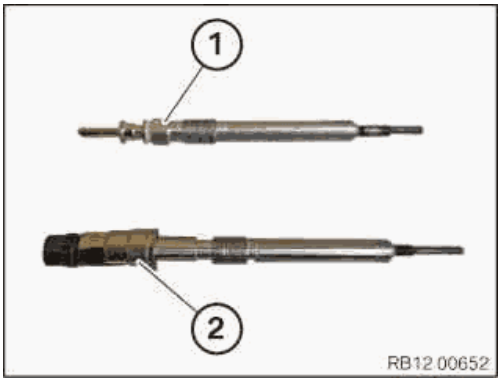


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

65 – Install glow elements

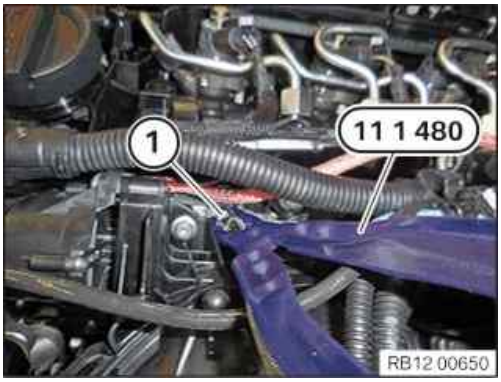


- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

66 – Installing the camshaft support

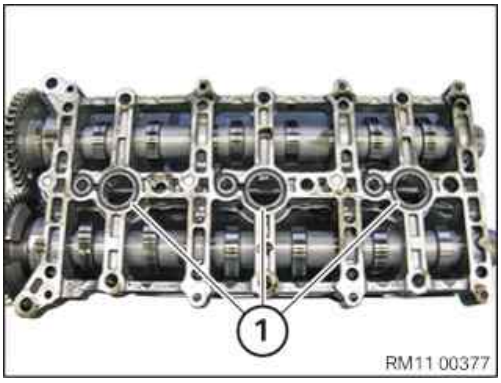
cardiagn.com

RISK OF DAMAGE

Damage of the engine and mounted parts.

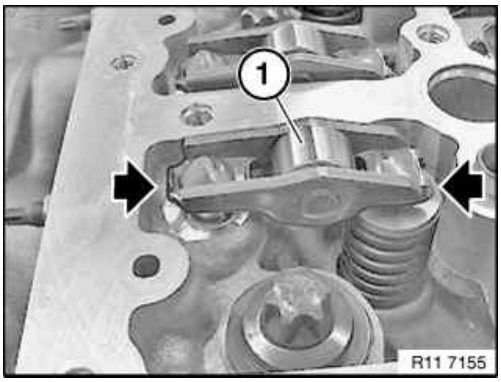
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

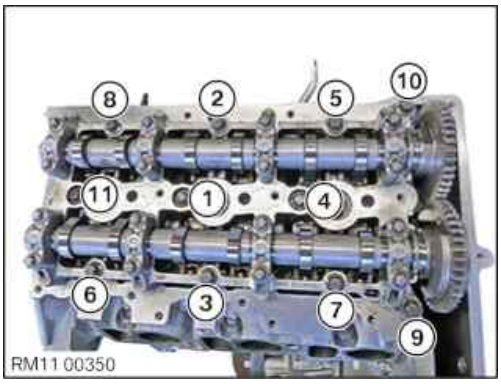


- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

M7x35		Tightening torque	13 Nm

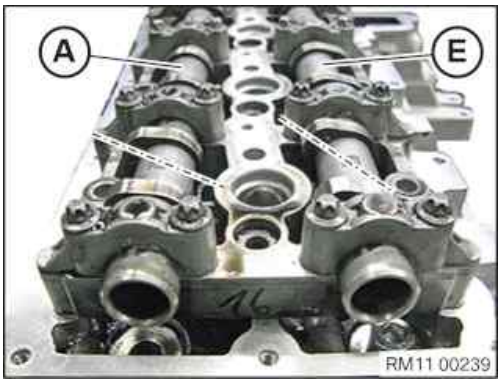
67 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

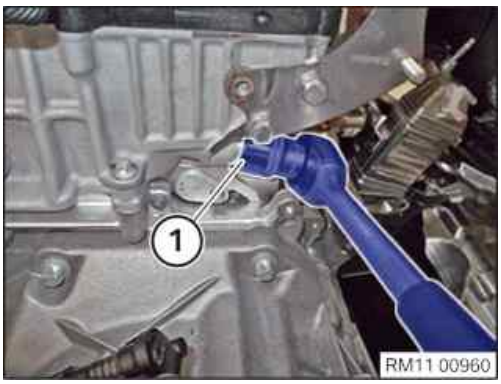
▸ **Remove chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove exhaust camshaft.**

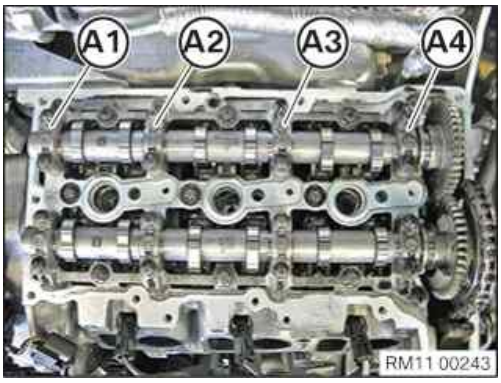
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

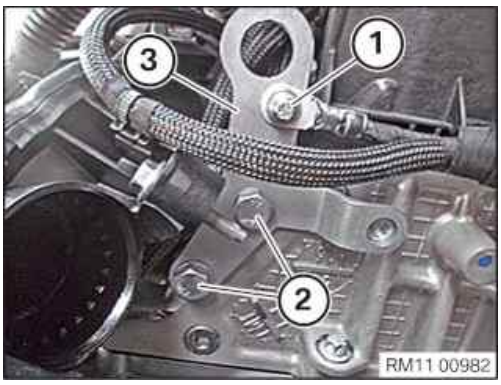


TECHNICAL INFORMATION

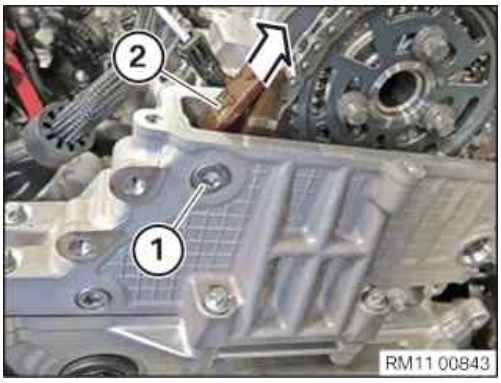
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▸ **Remove the timing chain guide rail**

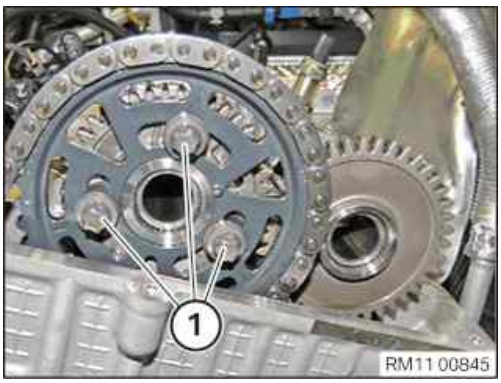


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ **Removing the camshaft sprocket on the intake camshaft**



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▸ **Installing exhaust camshaft**

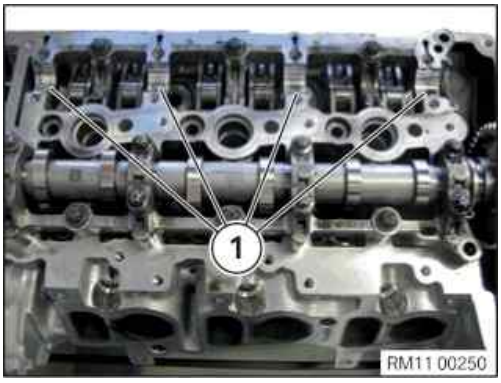
cardiagn.com

RISK OF DAMAGE

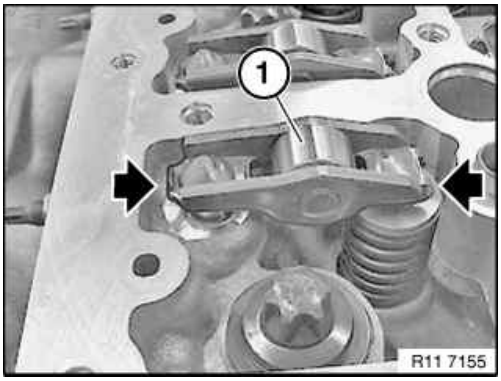
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

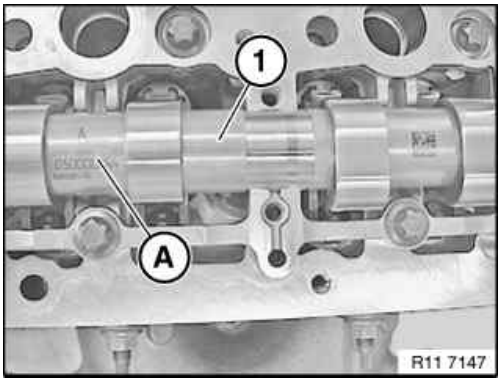
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



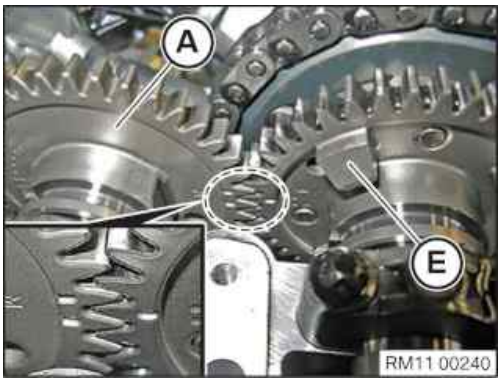
- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.

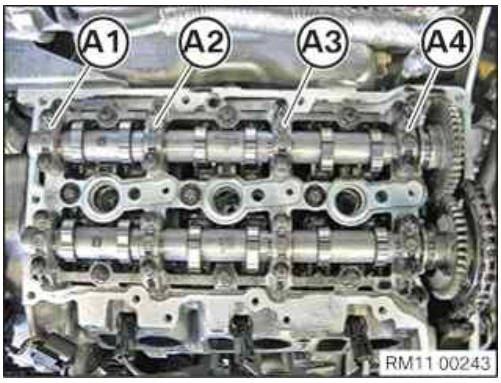


- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.

cardiagn.com



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

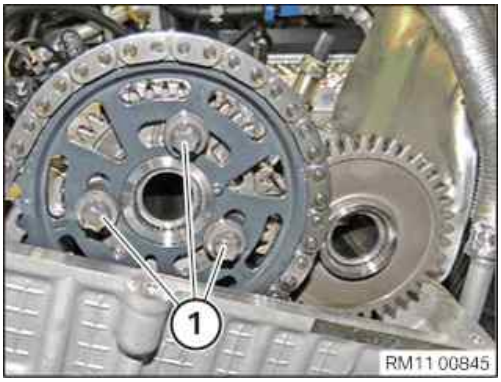
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

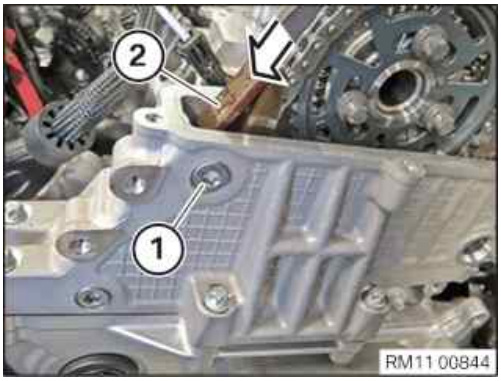
  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

▶ **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▶ **Install the timing chain guide rail**



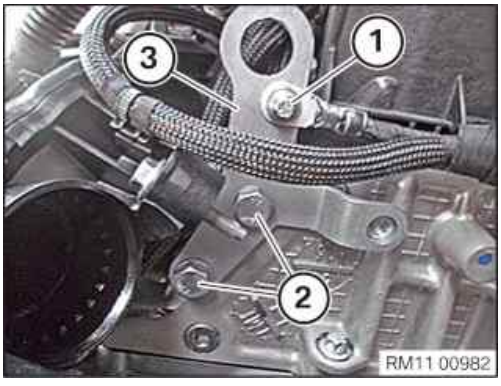
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6			8 Nm

cardiagn.com

▶ **Installing the chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

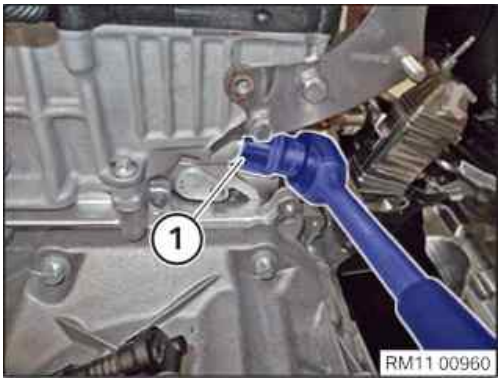
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

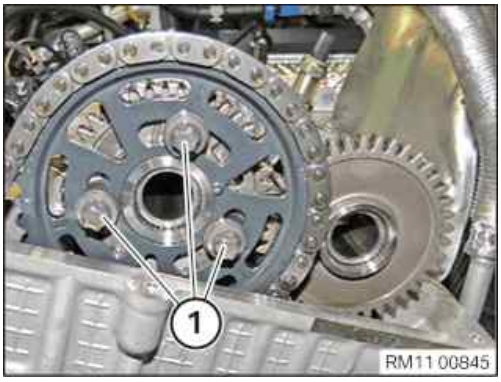


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

cardiagn.com

- Remove special tool **2 288 380**.

69 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

70 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

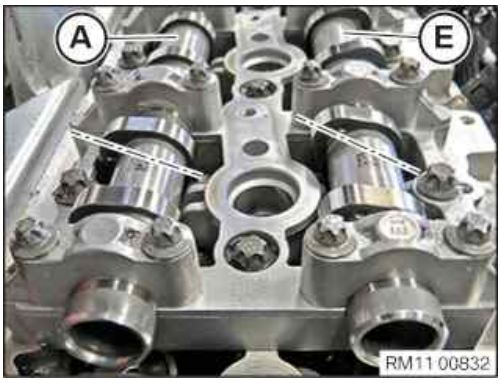
The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

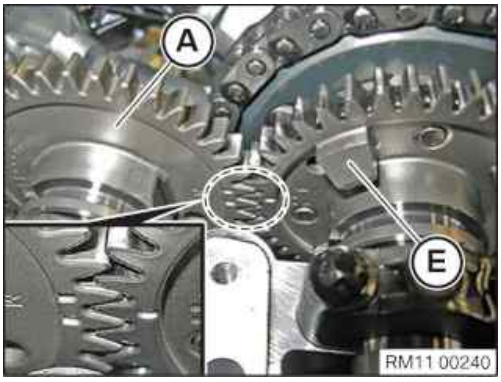
  Do **not** crank the engine in reverse.

cardiagn.com



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

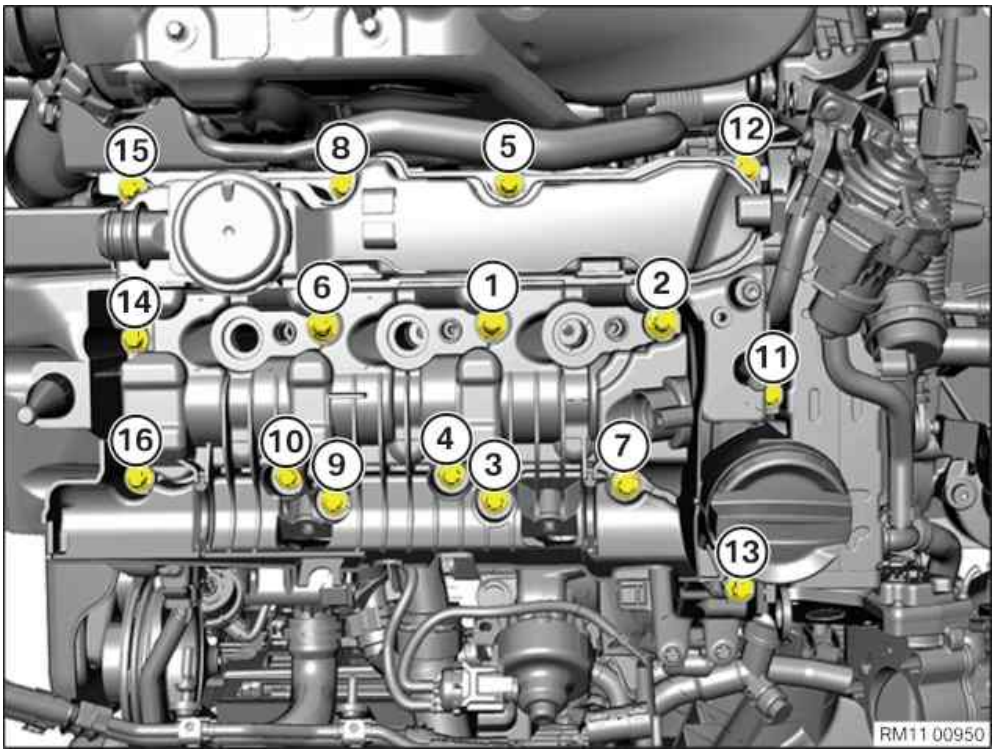
- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

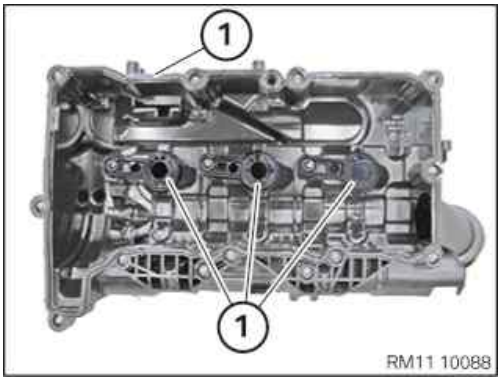
71 – Installing cylinder head cover

cardiagn.com

Overview: Screw connection of the cylinder head cover

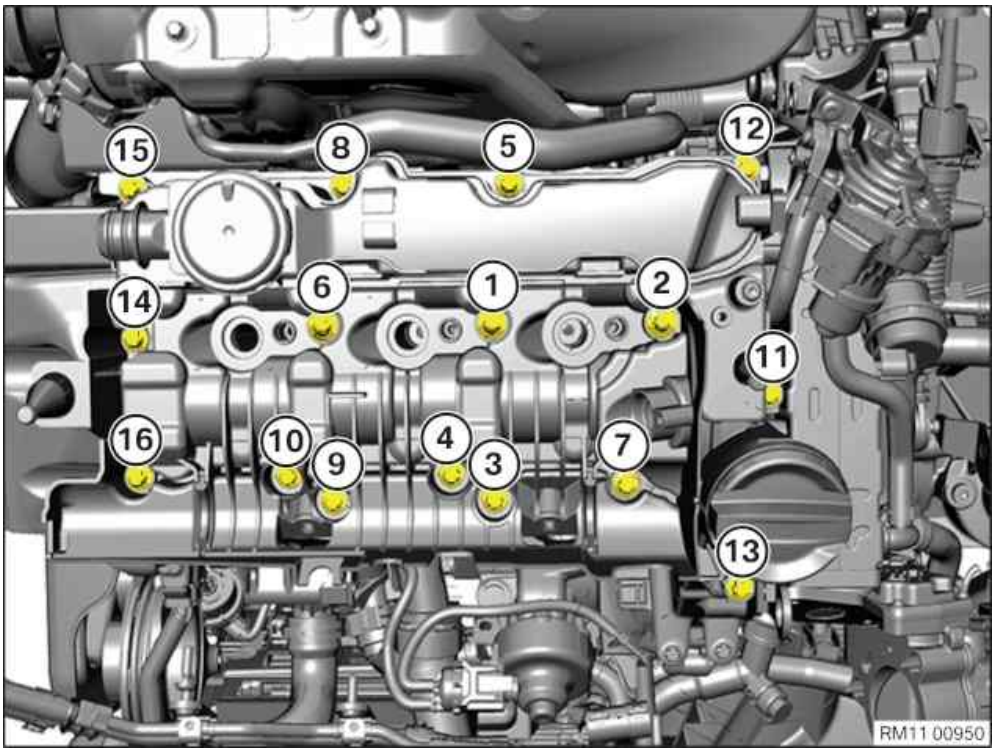


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

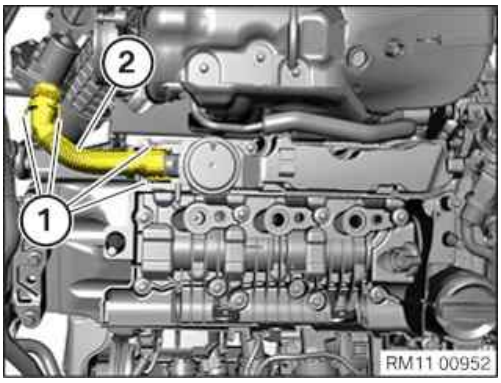


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nm

cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

72 – Installing injectors of injection system

▶ Cleaning the injector shafts

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

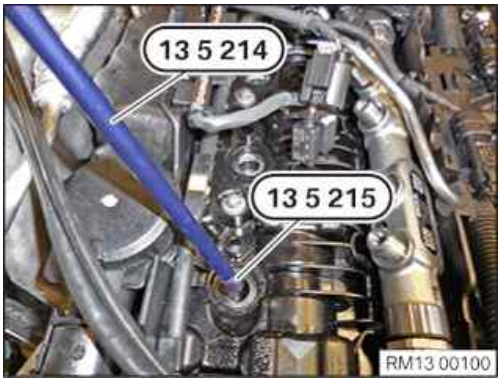
- Wear safety goggles.

RISK OF DAMAGE

Contaminant or foreign body.

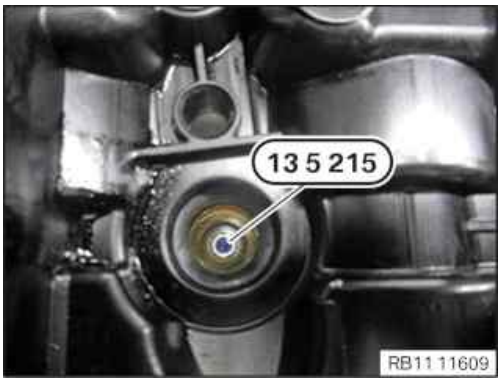
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

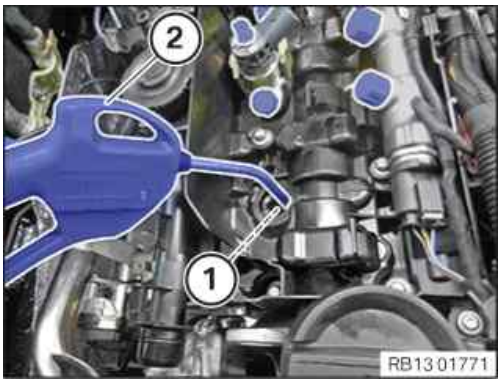
cardiagn.com



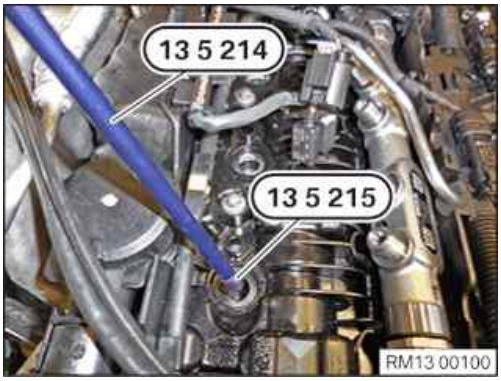
- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

► **Check the placement of the clamping claw**

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

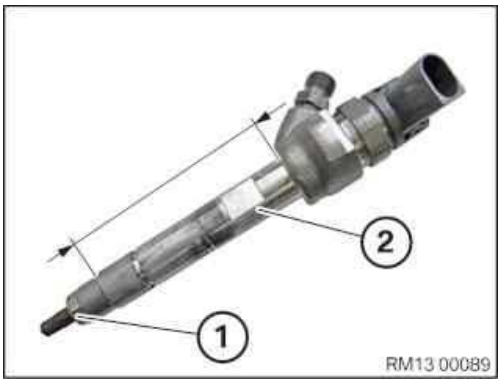
▸ **Prepare the injector for installation**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

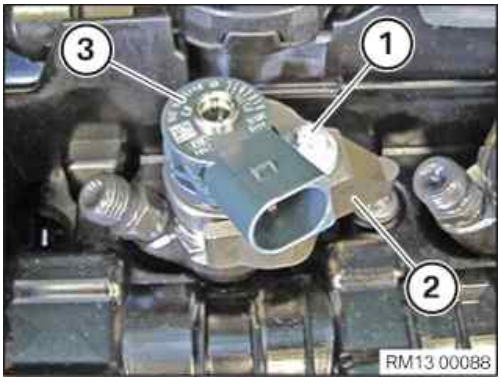


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

Injector lubricating grease	50 g, Can	83230441070

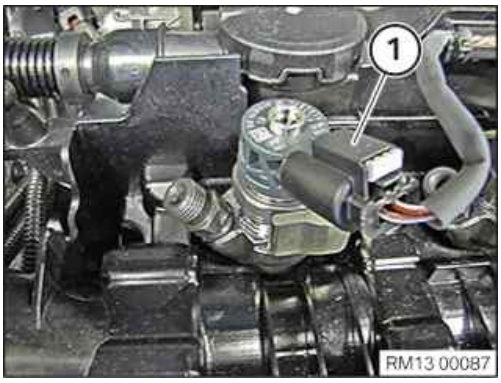


- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

cardiagn.com



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

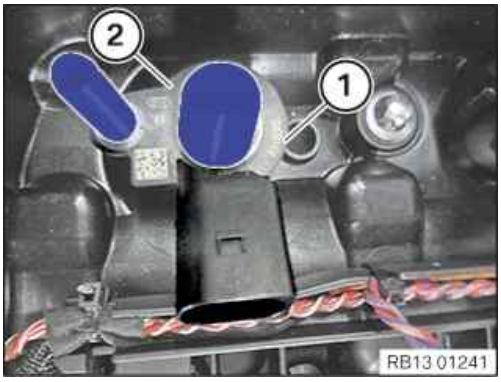
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

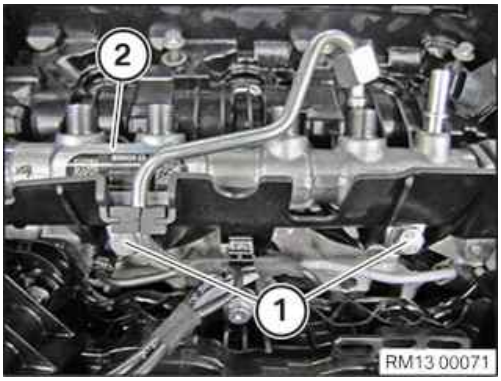
Schematic diagram is for example purposes. Some parts may differ in certain details.



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

73 – Installing the rail

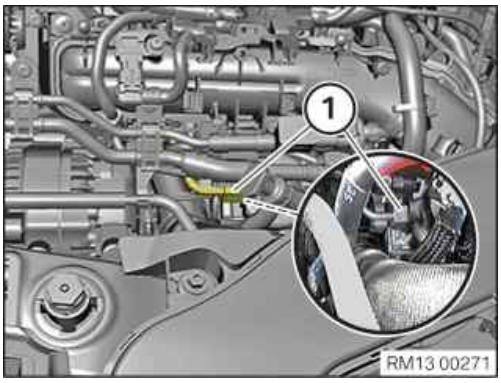


- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

cardiagn.com



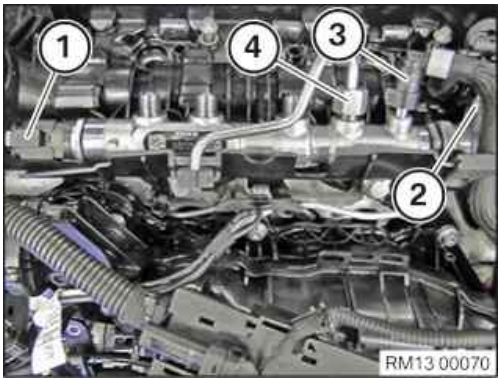
TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

74 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

cardiagn.com

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

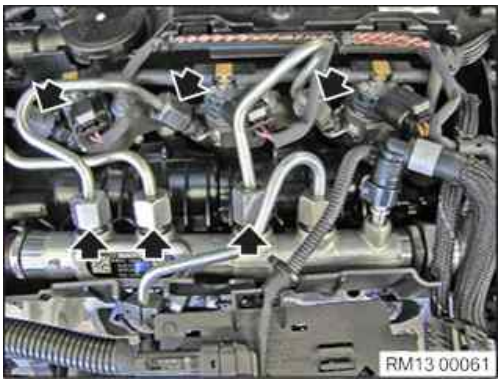
75 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

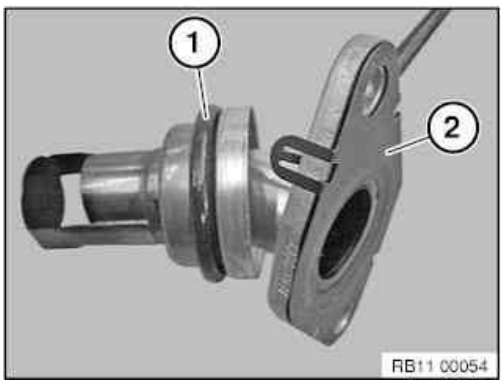
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

76 – Installing the intake plenum

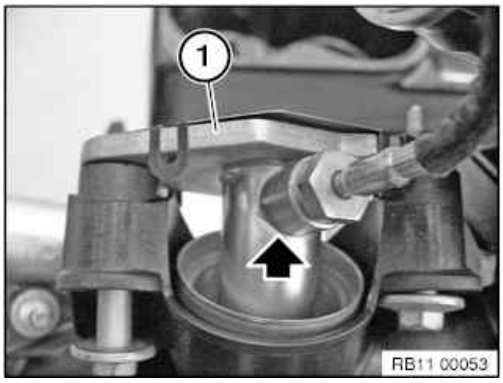


- Renew O-ring (1).

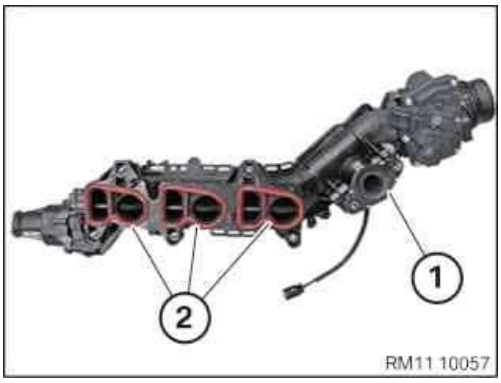
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

cardiagn.com

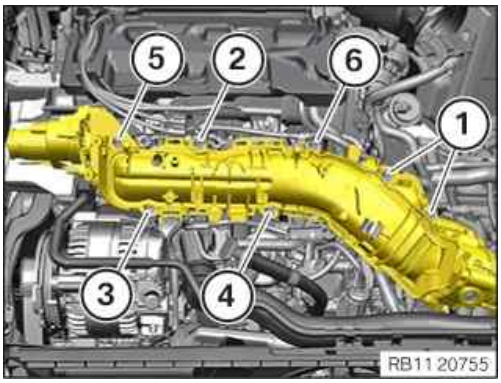


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

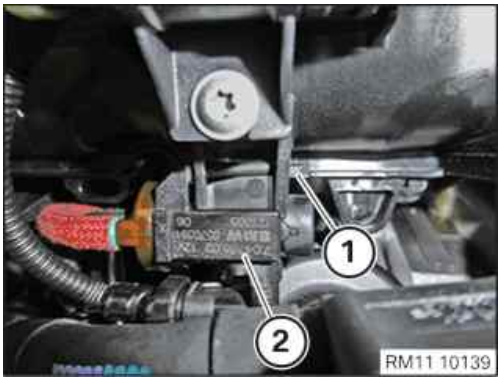
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



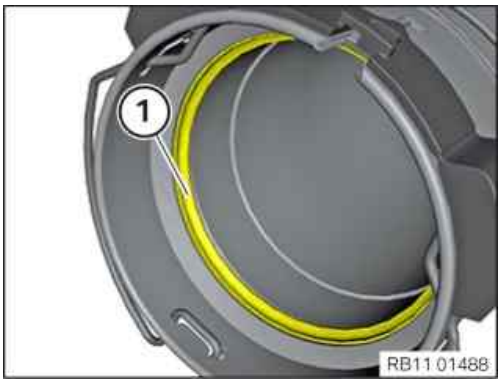
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



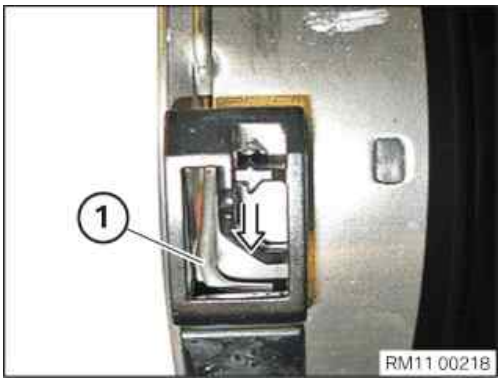
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



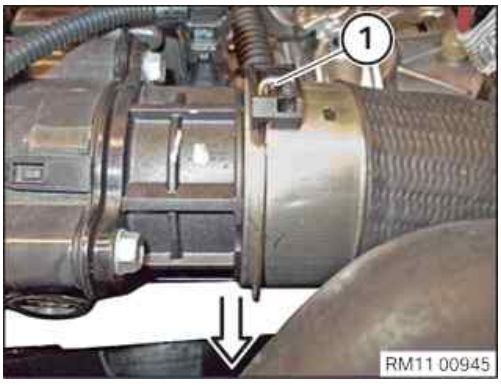
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

77 – Remove the engine from the assembly stand

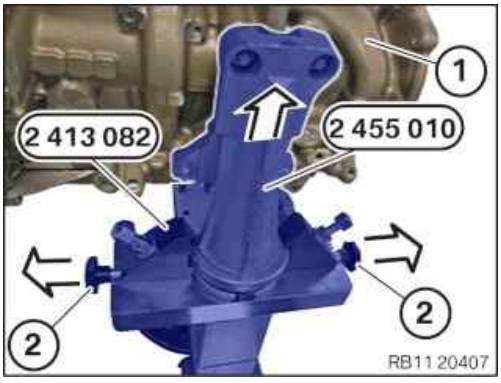
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

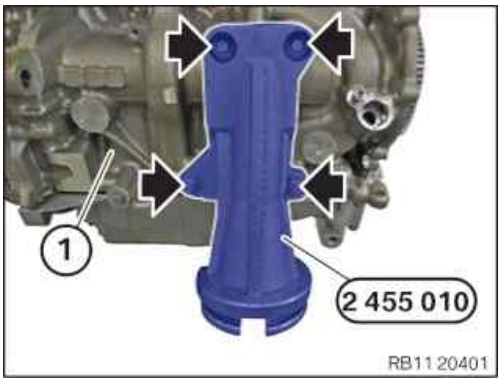
- Remove and install heavy components with the aid of another person/other persons.

- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).

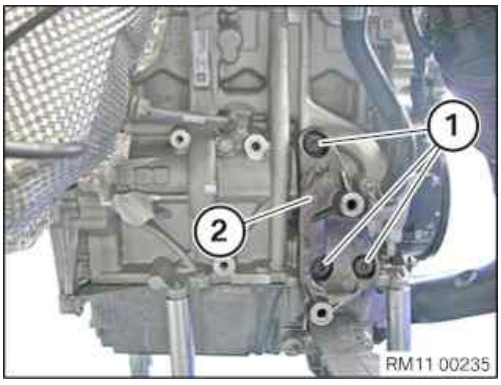


- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.

cardiagn.com



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase

M10		Tightening torque	38 Nm

78 – Install the engine on the double-clutch transmission (DKG)

RISK OF DAMAGE

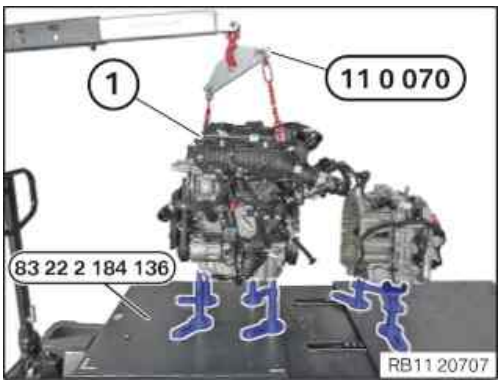
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.

TECHNICAL INFORMATION

Transmission oil temperature 20 °C up to a maximum 40 °C!
Carry out the "Transmission oil adjustment" service function with the diagnosis system.
The double clutch also needs to be replaced if you exceed the oil change interval by more than 3000 km!
Failure to comply with this instruction will result in serious damage to the twin-clutch gearbox (DKG).



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

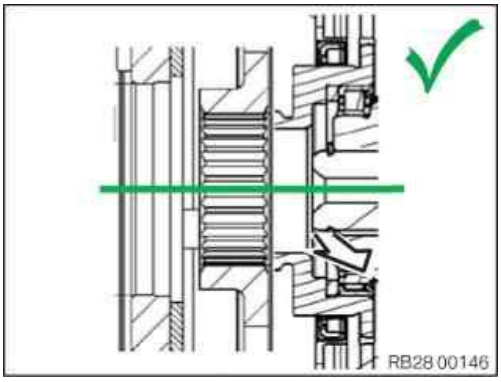
- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.

cardiagn.com

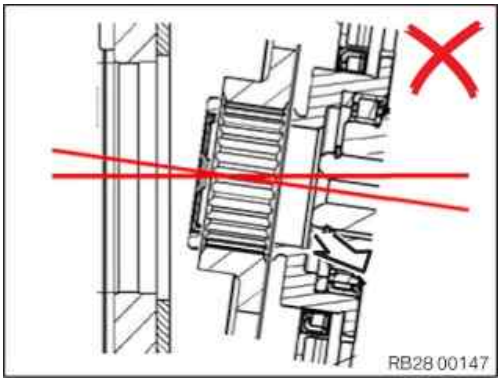
- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

- Clean the gearing (1) of the drive shaft.
- Coat the gearing (1) with MI-Setral-43N grease (BMW part number 83 23 2 152 082).

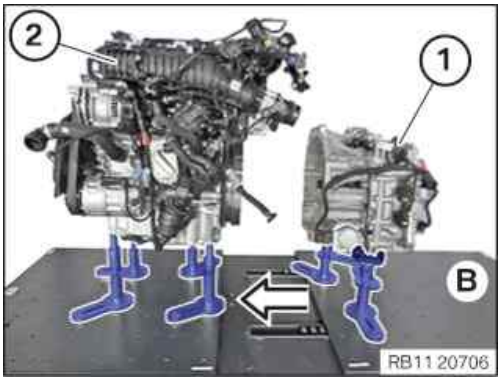
  Tooth gaps must be filled with grease up to tooth height!



- **Correct:** Insert the double-clutch transmission (DKG) horizontally into the flywheel.



- **Wrong:** Do not tilt the double-clutch transmission (DKG) when inserting it into the flywheel.

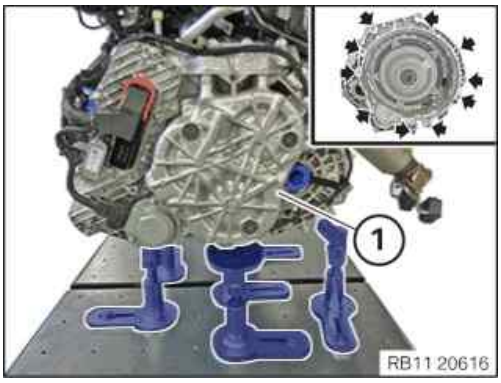


NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table plate (B) in the direction of the arrow and position double-clutch transmission (DKG) (1) **carefully** on the engine (2).

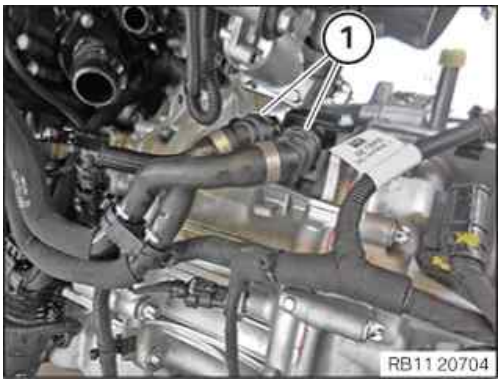
cardiagn.com



- Flange-mount the double-clutch transmission (DKG) to the engine so that it is **absolutely** horizontal.
- Tighten screws (arrows).

Transmission to engine

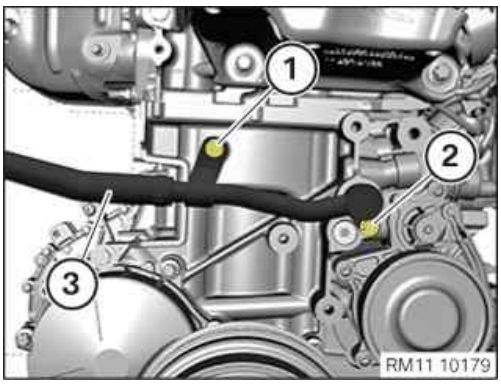
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm



- Connect and lock the coolant lines (1).
- Make sure that you can hear the coolant lines (1) engage.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

79 – Attaching assemblies (on lifting table)

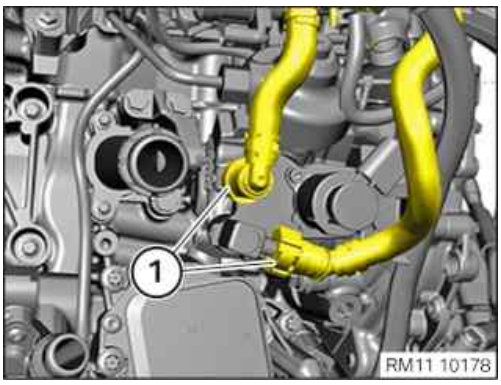


- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm



- Connect and lock fuel lines (1).

  The locks must engage audibly.

► **Installing the exhaust-gas recirculation cooler**

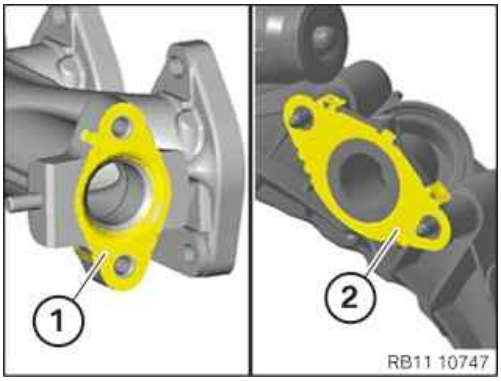
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

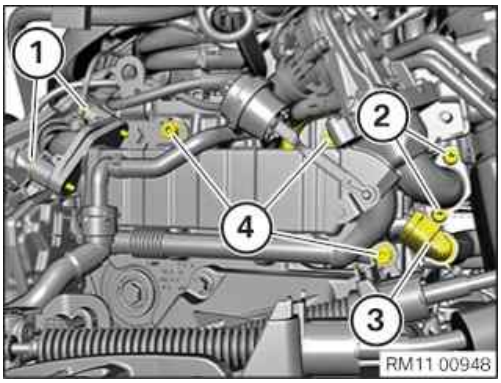


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

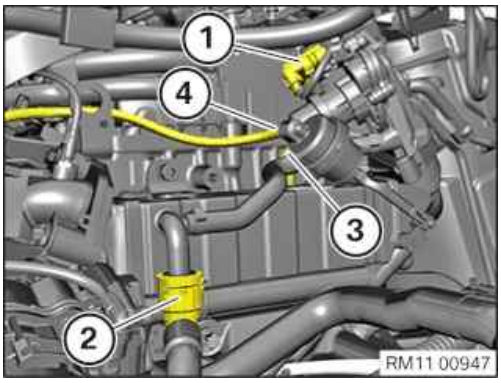
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

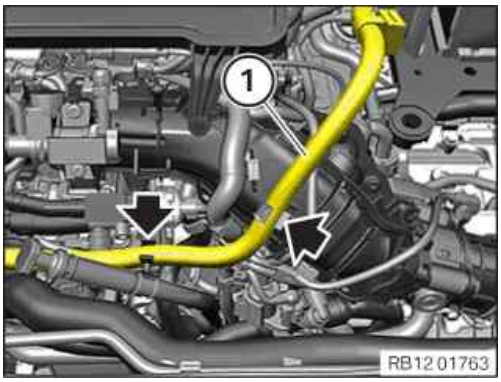


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.



CAUTION

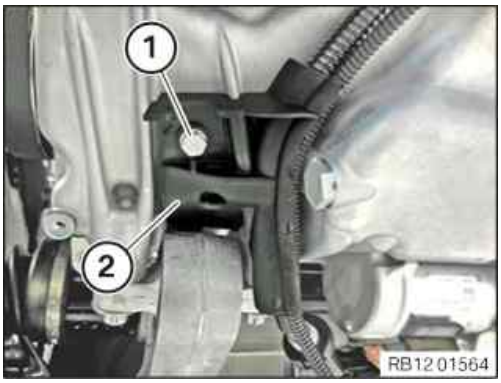
Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

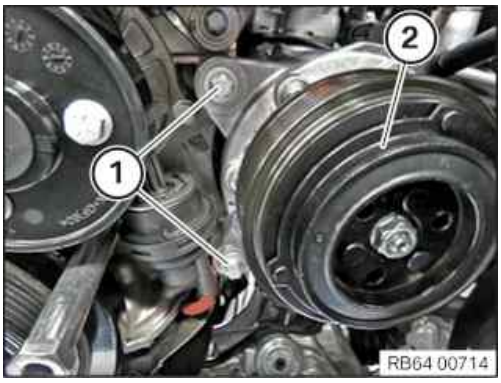


- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

cardiagn.com

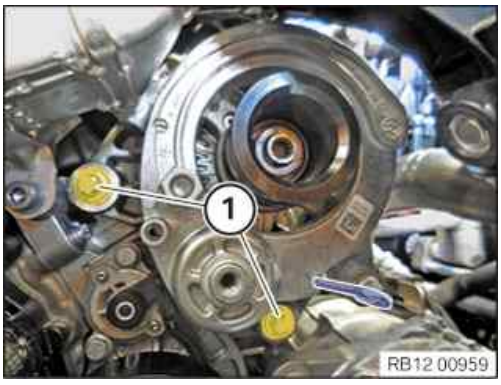


- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

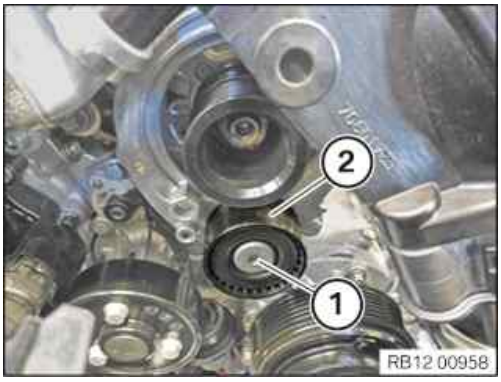
- Tighten the screws (1).



- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

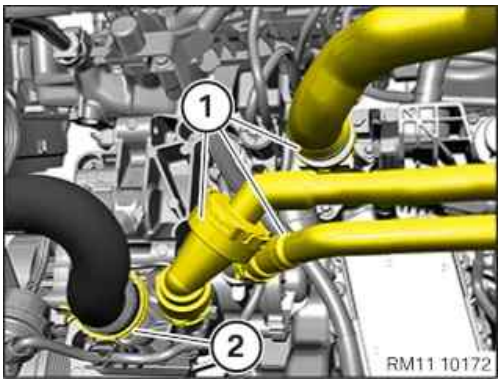
M10x75 / M10x125		Tightening torque	38 Nm



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

▸ Installing the drive belt for alternator

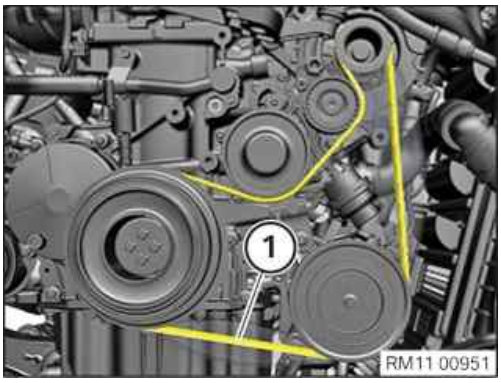
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

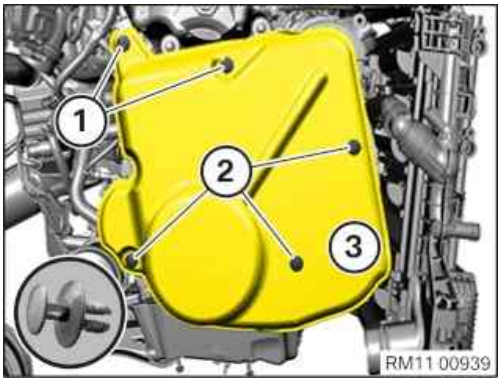
cardiagn.com



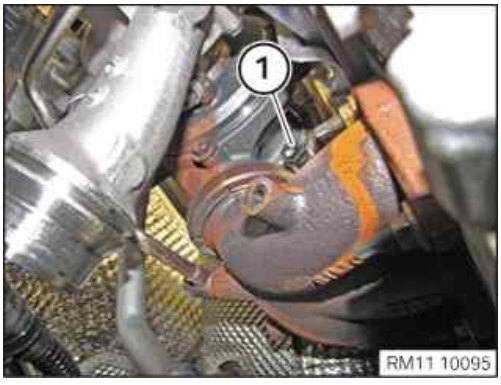
- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ **Install the acoustic cover for the engine at the front**



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

▸ **Installing the oil return line for the exhaust turbocharger**

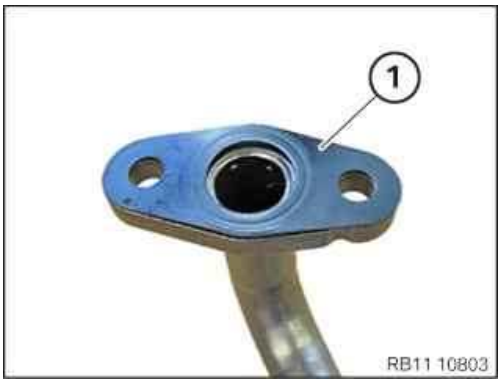
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

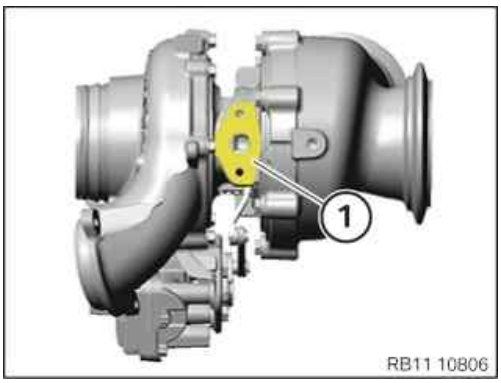
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew gasket (1).

  Parts: Gasket

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

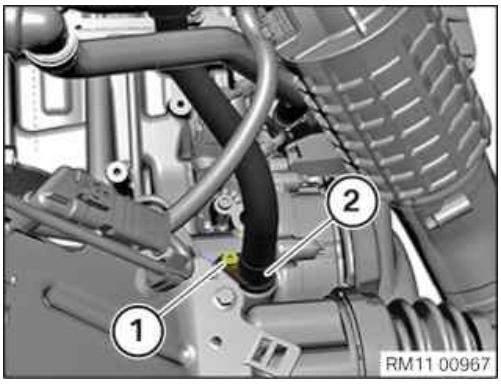
- Clean sealing surface.

cardiagn.com

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

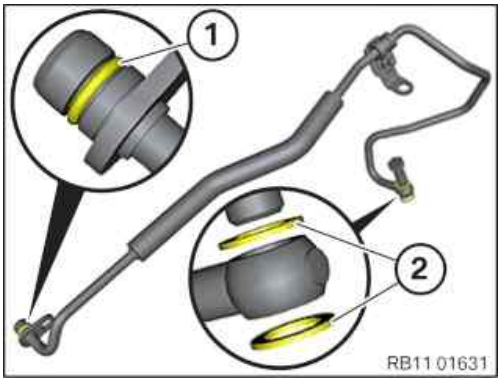


- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

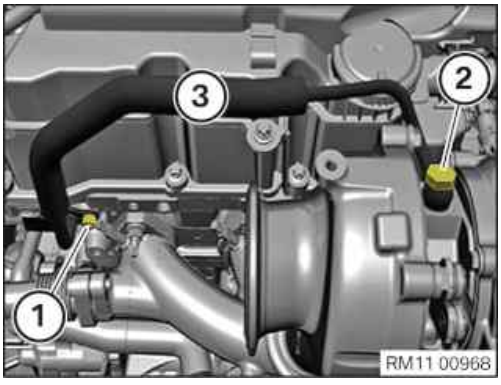
▸ **Install the oil feed line for the exhaust turbocharger**



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

▸ **Installing heat shield on exhaust turbocharger at the rear**

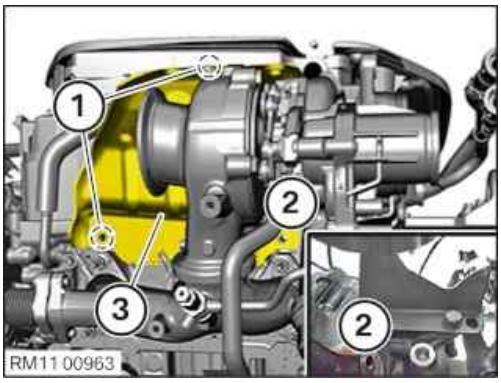
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

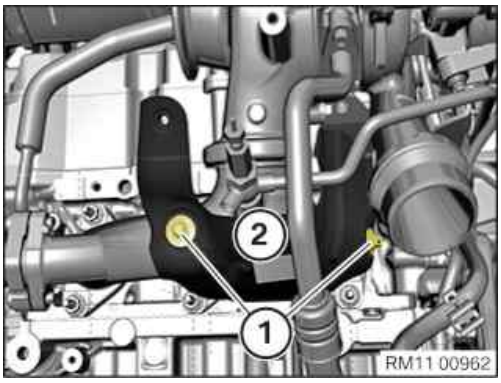
▶ **Installing heat shield on exhaust turbocharger at bottom**

WARNING

Hot surfaces.

Risk of burning!

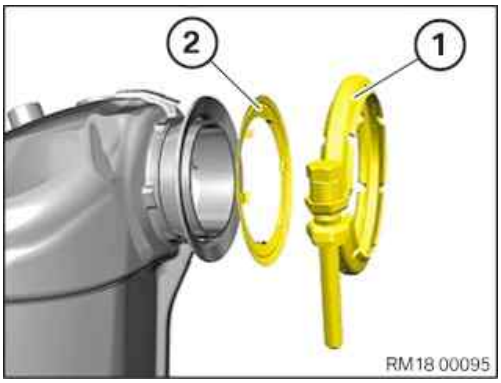
- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

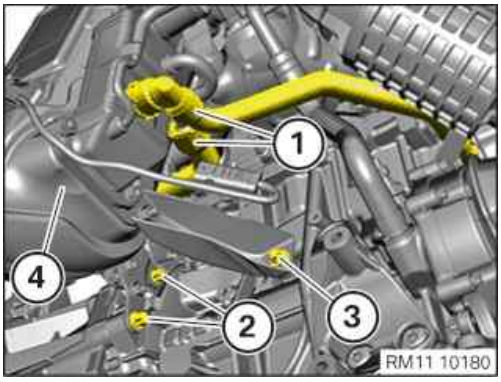
Torx screw BM 6x12		Tightening torque	10 Nm



- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

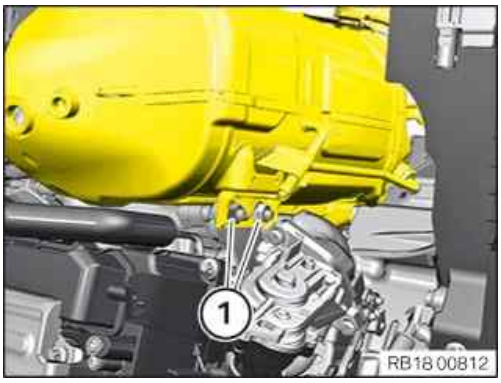
- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).

cardiagn.com



- Tighten nuts (1).

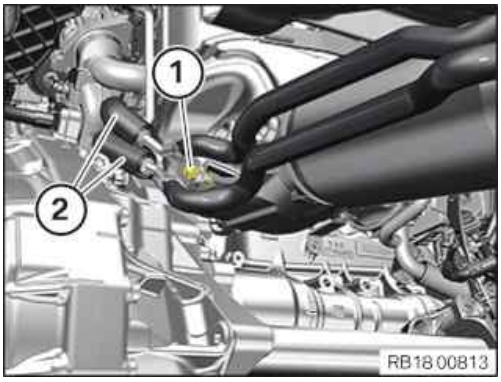
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

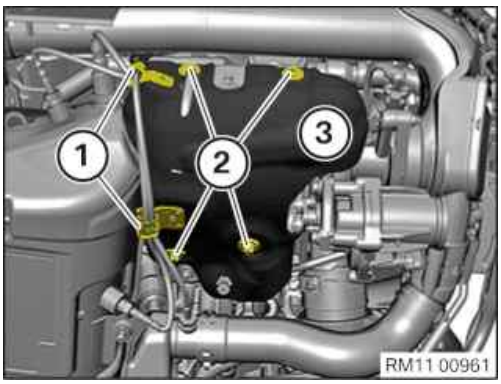
▶ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten down screws (2).

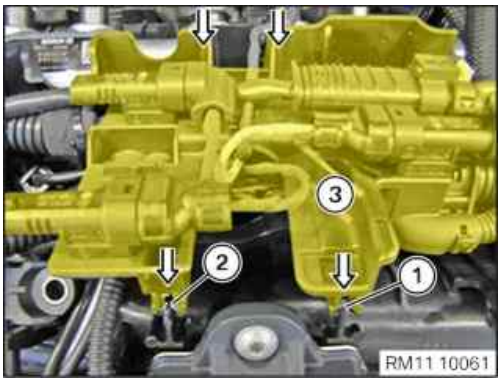
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

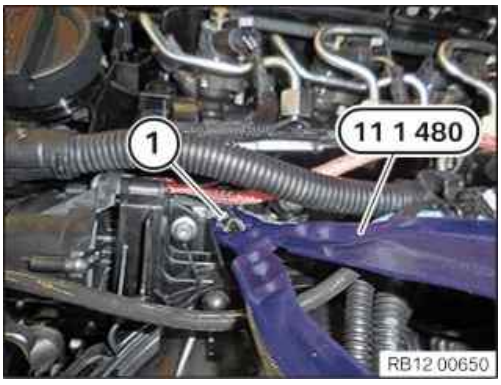
- Secure cable in holders (1).

▶ **Installing the cable clip for the intake plenum**

cardiagn.com

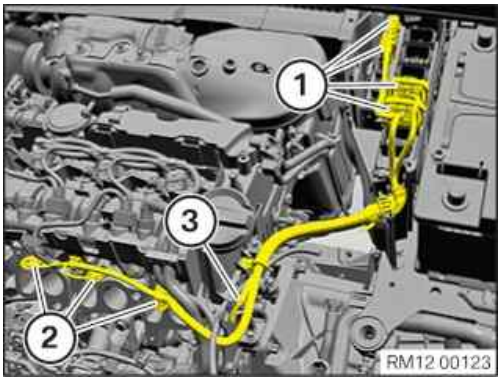


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

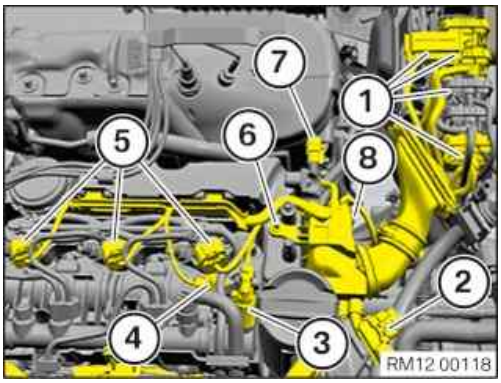
  The connector (1) must engage audibly.



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm



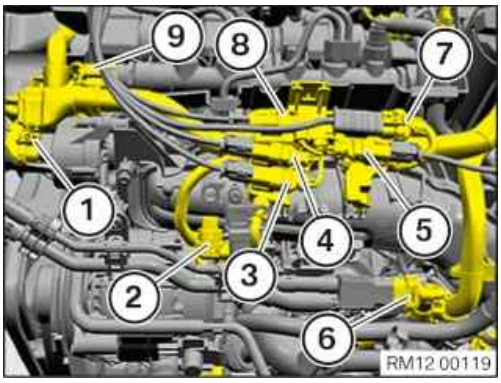
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

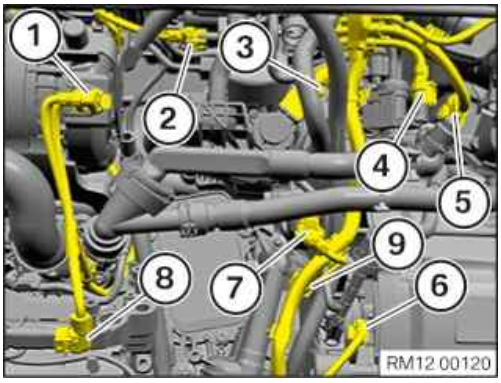
TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

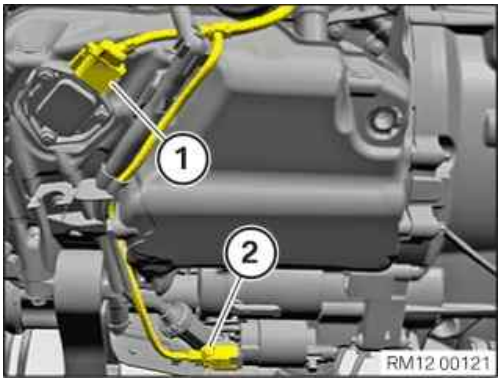
cardiagn.com



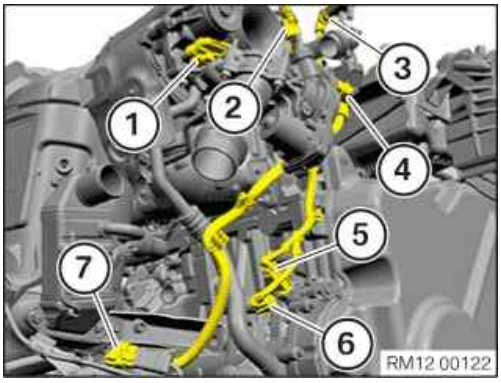
- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.



- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.



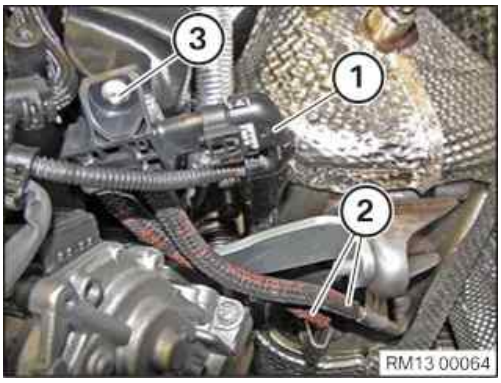
- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

80 – Installing differential pressure sensor

cardiagn.com



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

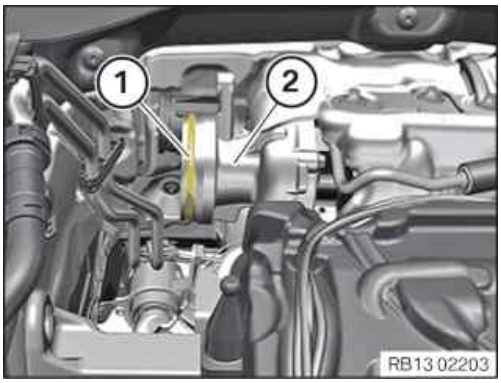
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

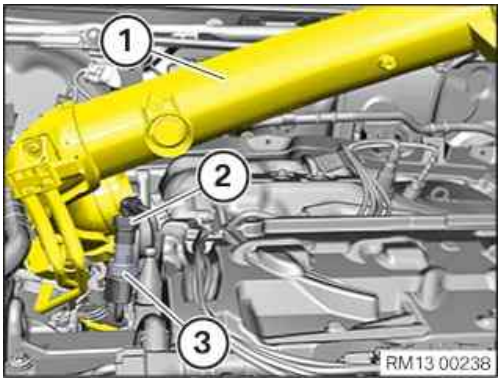
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

81 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



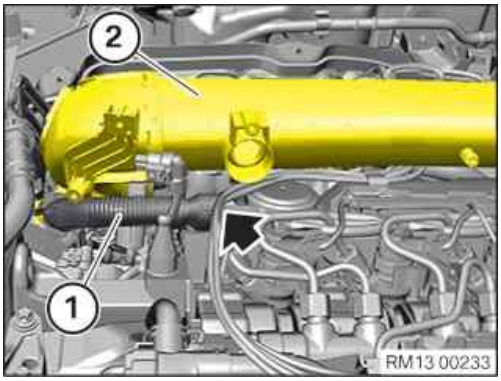
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

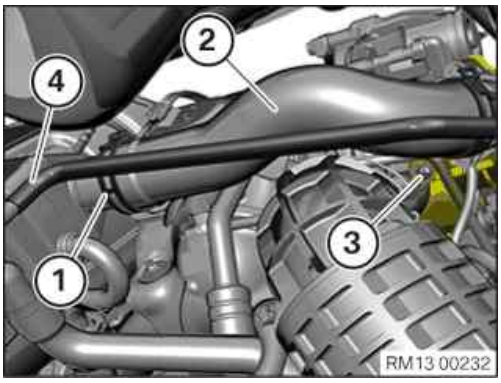
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.

cardiagn.com



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

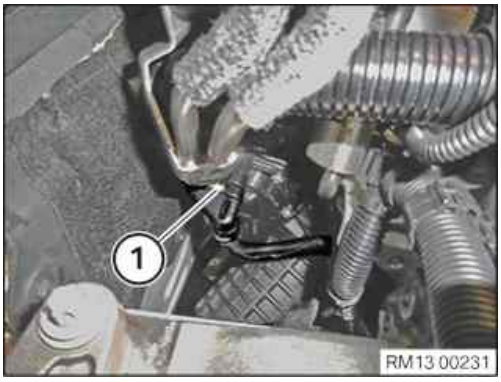
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

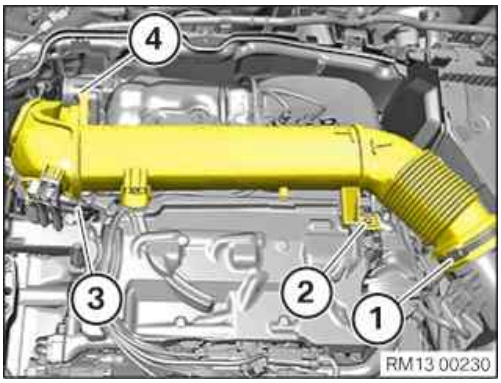
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

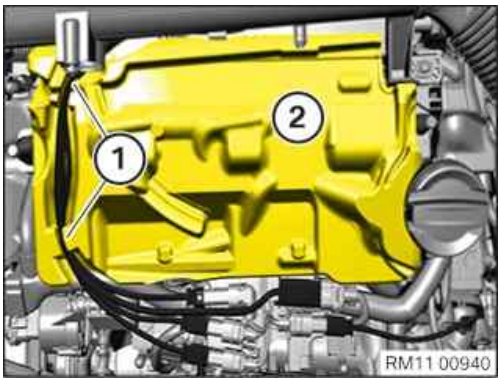
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

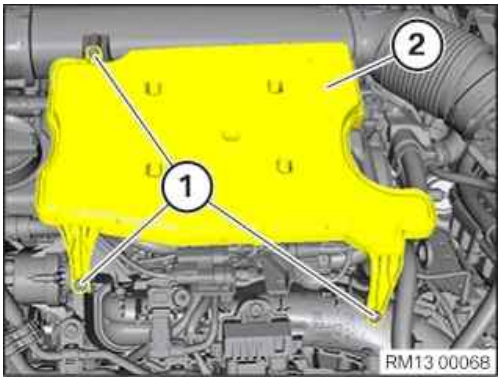
82 – Install the acoustic cover for the injectors

cardiagn.com



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

83 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

84 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

85 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head			Used in step 8
M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase			Used in step 9
M10x30		Tightening torque	38 Nm

Special tool 11 8 930 to special tool 00 2 320			Used in step 9
M14x35		Tightening torque	160 Nm

Rear end of front axle support to body			Used in step 24
M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body			Used in step 24
M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body			Used in step 24
Screw		Tightening torque	3 Nm

Used in step 79

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 79

M8x20		Tightening torque	19 Nm

Bracket to oil sump

Used in step 79

M6		Tightening torque	8 Nm

Air conditioning compressor in component carrier

Used in step 79

M10		Tightening torque	38 Nm

cardiagn.com

Alternator to component carrier — Used in step 79

M10x75 / M10x125		Tightening torque	38 Nm

Deflecting element to belt tensioner — Used in step 79

M8		Tightening torque	38 Nm

Exhaust turbocharger to exhaust manifold — Used in step 79

V-band clamp		Tightening torque	19 Nm

Holder to exhaust turbocharger and crankcase — Used in step 79

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger — Used in step 79

M6x12		Tightening torque	8 Nm

Oil return line to crankcase — Used in step 79

M6x12		Tightening torque	8 Nm

Oil feed line on cylinder head — Used in step 79

M6x12		Tightening torque	8 Nm

Oil feed line to exhaust turbocharger — Used in step 79

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Heat shield for exhaust turbocharger — Used in step 79

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head — Used in step 79

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particle filter to holder — Used in step 79

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger — Used in step 79

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

Holder for coolant lines to diesel particulate filter — Used in step 79

Torx bolt BM6x16		Tightening torque	8 Nm

Ground cable to cylinder head — Used in step 79

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 79

TS5x20		Tightening torque	3,5 Nm

Differential pressure sensor to holder — Used in step 80

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 80 81

Clamp 15–19mm		Tightening torque	3 Nm

cardiagn.com

Exhaust gas pressure sensor

Used in step 81

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

Clean air pipe to exhaust turbocharger

Used in step 81

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover

Used in step 81

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 81

Clamp		Tightening torque	3 Nm

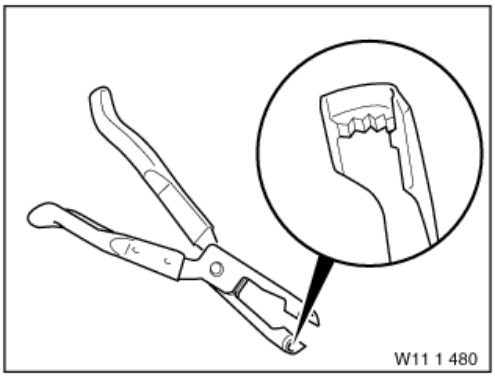
Resonator to manifold and clean air pipe

Used in step 83

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

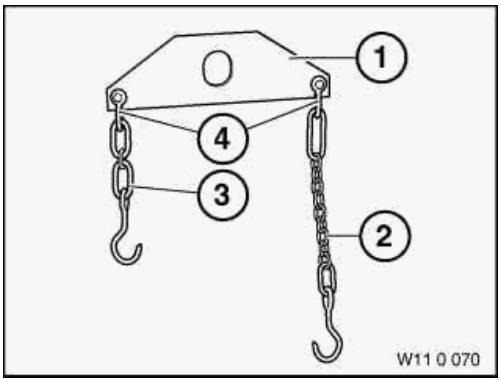
2 459 012 Holder

Common Used in step 8 24 62 78

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 579 (11 0 070) Lifting gear



Common

Used in step 8 9 77 78

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

2 455 010 Engine support

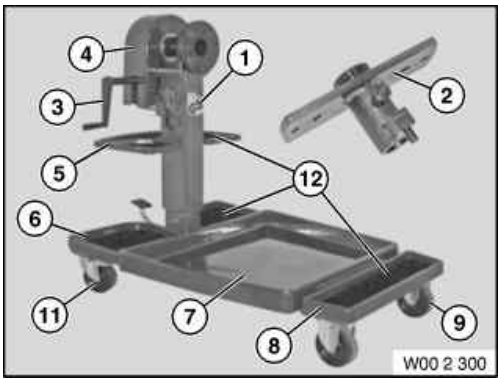
Common Used in step 9 77

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

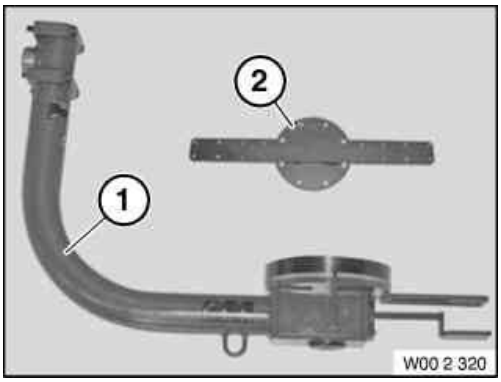
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common

Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

0 495 910 (37 1 152) Socket wrench

Common

Used in step 11 14 73 75

Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

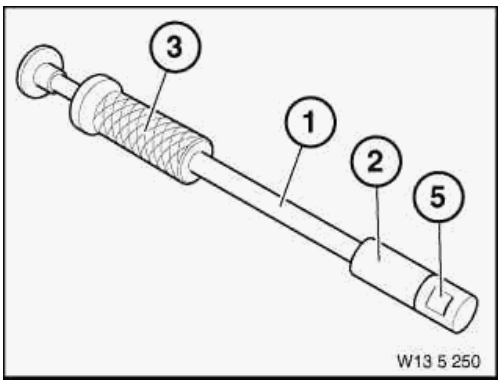
cardiagn.com

2 413 106 Fastener

Common Used in step 11 75

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

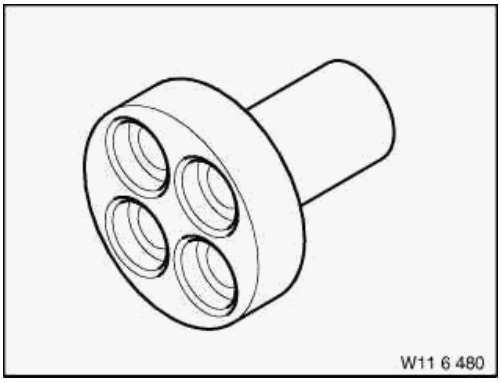
0 493 339 (13 5 252) Bush

Common	Used in step 13
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common	Used in step 13
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 16 67 70
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

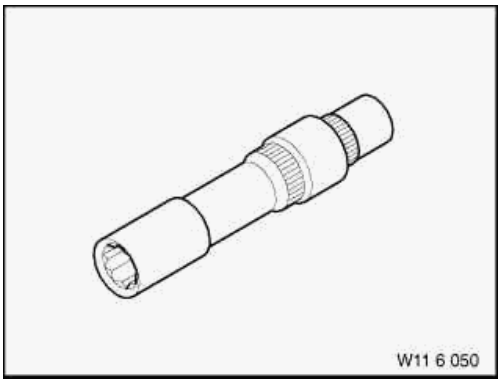
2 288 380 Locating stud

Common	Used in step 16 67 68 70
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common	Used in step 16 67 69 70
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common	Used in step 21 24 62 65
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 22 23 67

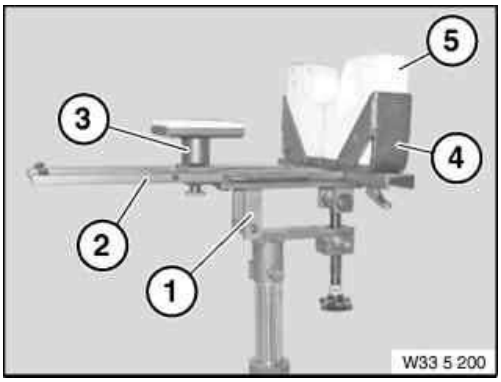
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

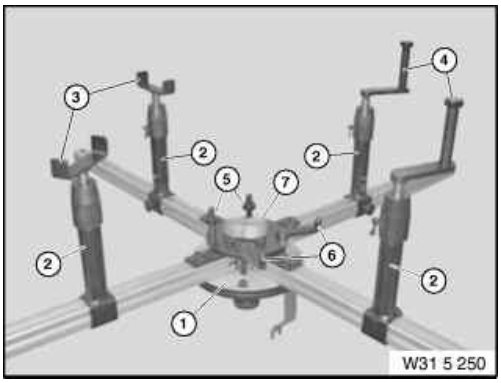
cardiagn.com

0 496 080 (33 5 206) Belt



Common	Used in step 24 62
Usage	(Tensioning strap)
Included in the tool or work	0 496 009
Storage location	
Replaced by	
In connection with	
SI-Number	

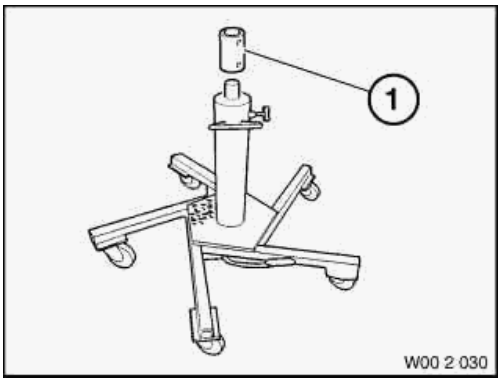
0 495 817 (31 5 251) Basic body



Common	Used in step 24 62
Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

cardiagn.com

0 490 133 (00 2 030) Device



Common Used in step 24 62

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 90 (207)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 490 134 (00 2 031)		**Adapter** (adapter for gearbox holder) Model series: E30, E31, E32, E34, E36	

2 414 691 Support

Common Used in step 24 62

Usage	To support the engine when the engine support is removed.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	2357071
SI-Number	01 12 16 (406)

cardiagn.com

2 357 071 Panel

Common

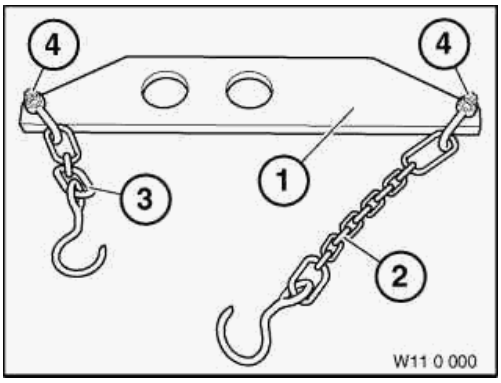
Used in step 24 62

Usage	Additional mounting plate for lifting table MHT 1200. Delivery quantity: 1 piece. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	Table lift MHT 1200 81222184136
SI-Number	01 21 13 (987)

0 490 561 (11 0 000) Lifting gear

Used in step 24 62

cardiagn.com



Common

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

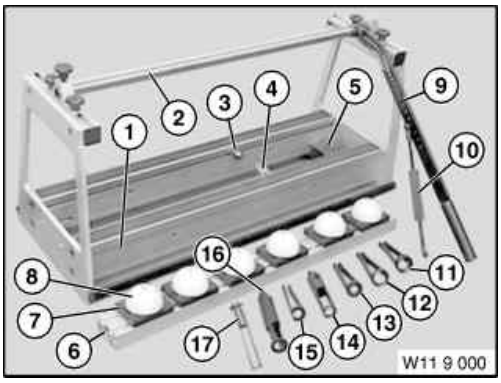
Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

0 494 362 (11 9 000) Device

Used in step 24

cardiagn.com



Common

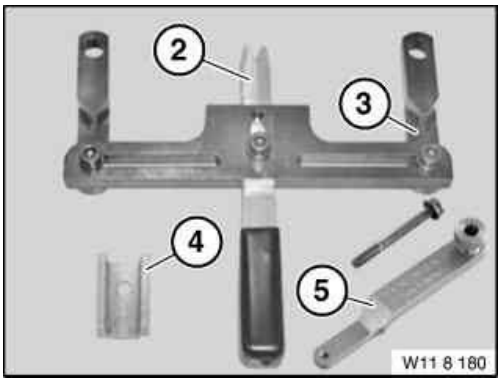
Usage	(Cylinder head expander tool)
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 03 02 (833)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 366 (11 9 001)		**Device**	
6	0 494 371 (11 9 006)		**Insert** (Aluminium strip)	
11	0 494 376 (11 9 012)		**Basket** (Valve spring cage) Engine M41, M51, S50	
17	0 495 028 (11 9 017)		**Basket** (Valve spring cage) Engine N52	
2	0 494 367 (11 9 002)		**Rod**	
3	0 494 368 (11 9 003)		**Adapter** (Sliding block)	
4	0 494 369 (11 9 004)		**Tab**	
5	0 494 370 (11 9 005)		**Quick fastener**	
7	0 494 372 (11 9 007)		**Shaped part** (shaped part)	
8	0 494 373 (11 9 008)		**Shaped part** (Shaped part) Shaped part made of plastic	
9	0 494 374 (11 9 009)		**Lever**	
10	0 494 375 (11 9 011)		**Hook**	
12	0 494 377 (11 9 013)		**Basket** (Valve spring cage) Engine M43, M73	
13	0 494 378 (11 9 014)		**Basket** (Valve spring cage) Engine M44, M52, M54, M56, M62, S52, S54, S62	
14	0 494 379 (11 9 015)		**Basket** (Valve spring cage) Engine M47, M47TU, M57, M57TU, N40, N42, N62, N73	
15	0 494 380 (11 9 016)		**Basket** (Valve spring cage) Engine M21, M40	

cardiagn.com

0 493 587 (11 8 180) Holder



Common

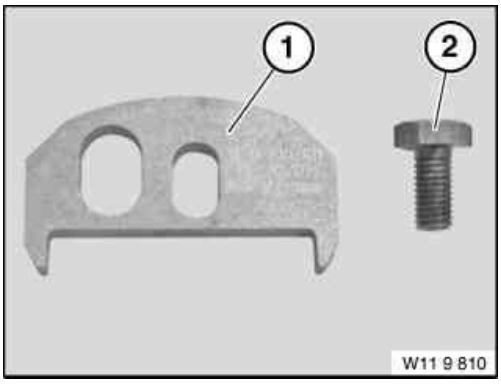
Used in step 25 57

Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

0 496 171 (11 9 811) Holder



Common

Used in step 27 55

Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush

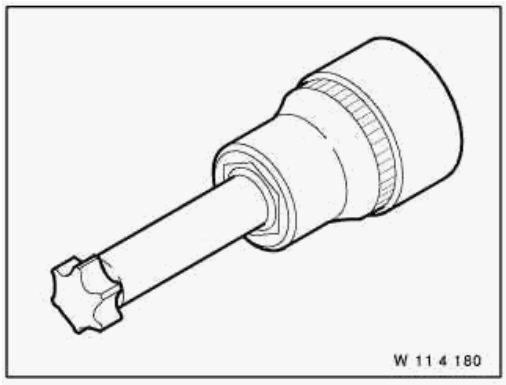
Common

Used in step 27 55

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 491 018 (11 4 180) Socket WAF 46



Common Used in step 27 55

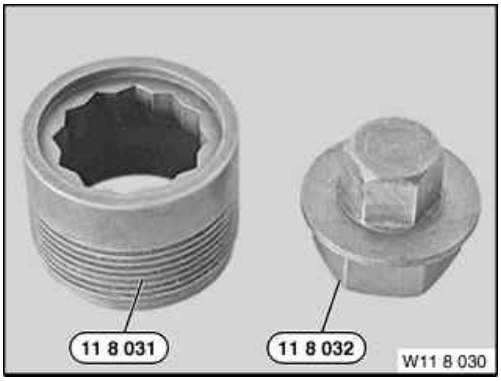
Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

2 357 904 Gauge

Common Used in step 31 51

Usage	For positioning the high pressure pump to the crankshaft . Replaced by gauge 2420824
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 725 (11 8 030) Extractor



Common Used in step 31

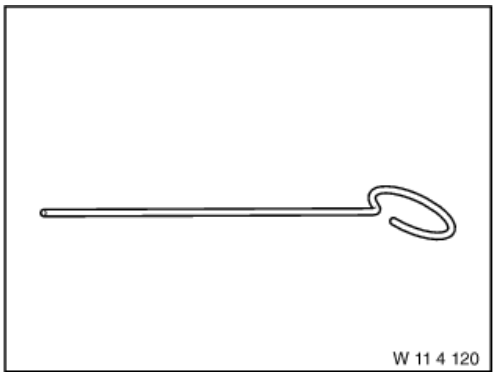
Usage	for the disassembly of the high pressure pump (replaces SWZ 11 8 740 as of 08/2009) 11 8 740 will be replaced by 83 30 2 448 914.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 757 (11 8 031)	**2 448 914**	**Holding sleeve** Replaces SWZ11 8 741 from 08/2009, 09/2011 no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	
2	0 496 758 (11 8 032)	**2 448 914**	**Adapter** Replaces special tool 11 8 742 from 08/2009, 09/2011 remaining inventories will be sold off - no longer available individually. From 10/2016, can only be ordered as a new set of special tools 2 448 914.	

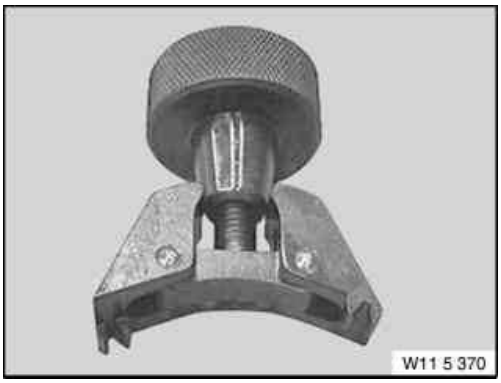
cardiagn.com

0 491 012 (11 4 120) Pin



Common	Used in step 31 51
Usage	(lock pin) For chain tensioners, for locking the chain tensioner piston (e.g. during cylinder head removal and fitting)
Included in the tool or work	
Storage location	B1
Replaced by	
In connection with	
SI-Number	01 12 93 (701)

0 495 131 (11 5 370) Tool

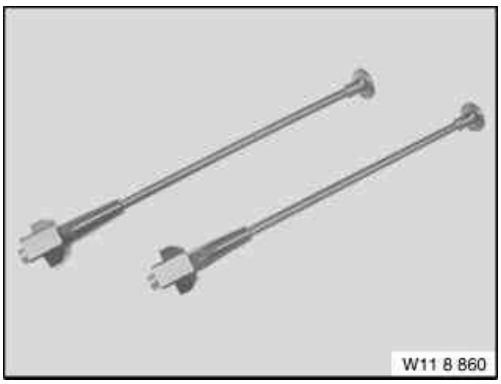


Common	Used in step 32 39 46 50
Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

2 288 943 Striking tool

Common	Used in step 32 39
Usage	For dismantling the ring gear of the counterbalance shaft.. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

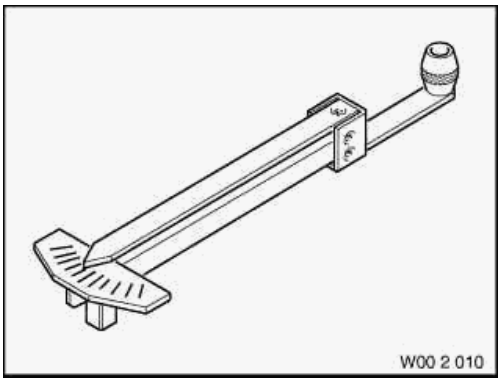
0 496 144 (11 8 860) Assembly tool



Common	Used in step 34 48
Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

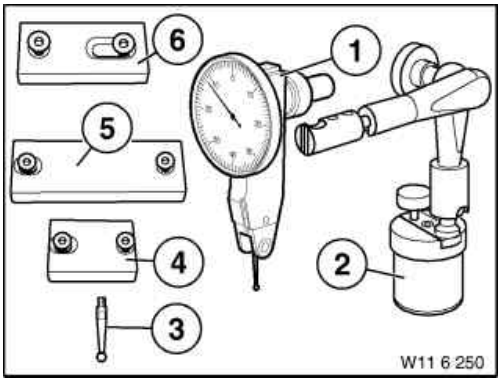
cardiagn.com

0 490 130 (00 2 010) Measurement aid



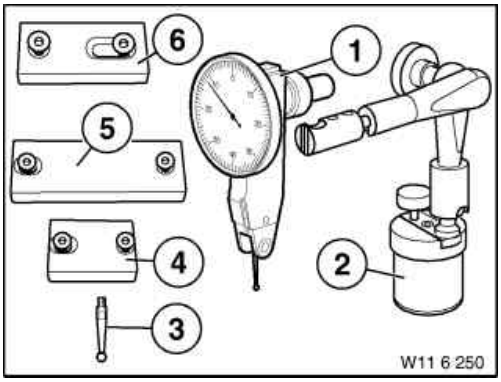
Common	Used in step 44
Usage	(Coefficient of friction meter) For adjusting the steering box (measurement possible in both directions) and for checking and adjusting the bevel pinion and crown wheel bearing in all final drives
Included in the tool or work	
Storage location	X9
Replaced by	
In connection with	
SI-Number	

0 493 144 (11 6 251) Dial gauge



Common	Used in step 45
Usage	(Dial gauge) With 0.8 mm measuring range in each direction
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 145 (11 6 252) Tripod



Common	Used in step 45
Usage	(Small hydraulic tripod with magnetic base)
Included in the tool or work	0 493 143
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 582 (11 8 140) Bush

Common

Used in step 48

Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual

2 448 914 Extractor

Common	Used in step 31
Usage	For removing and installing high pressure pump. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A49
Replaced by	
In connection with	
SI-Number	01 15 16 (411)

Overview Technical Data

Side clearance of piston rings	Used in step 36
Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter	Used in step 37
Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore	Used in step 38
Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Axial play of crankshaft	Used in step 45
	min. 0,053 mm
	max. 0,204 mm

Cylinder head flatness	Used in step 59
Maximum lengthwise deviation from flatness	0,10 mm
Maximum transverse deviation from flatness	0,05 mm

Selecting the cylinder head gasket	Used in step 60
A decision is made to determine which cylinder head gasket must be used based on the measuring result of the measurement of the piston protrusion.	
Cylinder head gasket with number of holes 1	0 mm ... 0,92 mm
Cylinder head gasket with number of holes 2	0,93 mm ... 1,03 mm
Cylinder head gasket with number of holes 3	1,04 mm ... 1,18 mm

Screw-in depth of thread cutter	Used in step 55
Screw-in depth	18 mm

11 21 001 Replacing crankshaft (B37C)

Special tools required:

- 11 6 250
- 00 2 010
- 11 6 480

Important!

Renew main bearing and connecting rod bolts.

When replacing the crankshaft, the main bearing shells and connecting rod bearing shells must be replaced.

There must be no oil in the blind holes **(risk of cracking)**.

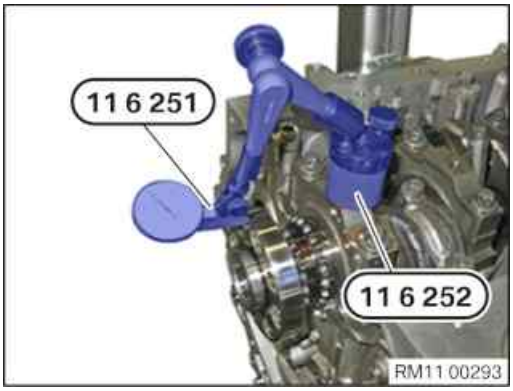
Do not wash off bolt coating.

Incorrect assembly of the crankshaft bearing caps will result in damage to the crankcase.

Necessary preliminary tasks:

- Remove both timing chains.
- Remove front, lower timing case cover.
- Remove all pistons.
- Remove counterbalance shaft.

Removal:



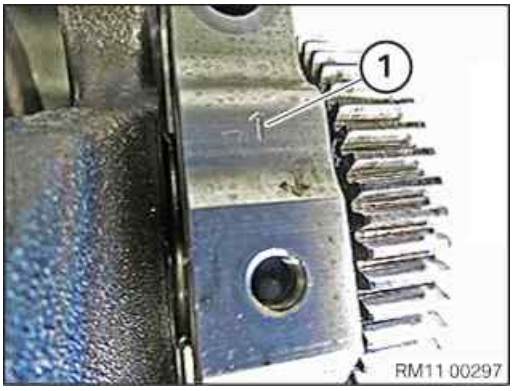
Check crankshaft side clearance.

Fit special tool 11 6 250 .

If the permitted side clearance is exceeded:

- Check crankshaft and guide bearing shells.
- Replace worn components.

cardiagn.com



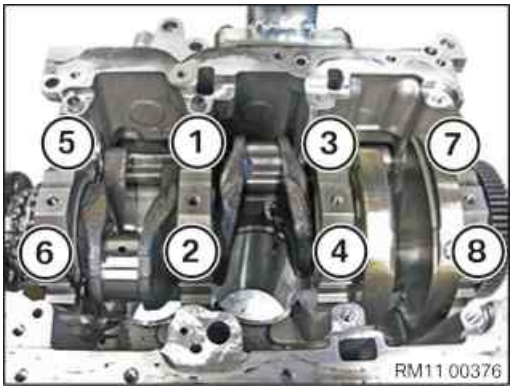
Note:

All crankshaft bearing caps (1) are labelled (bearing positions 1 to 4).

Installation position must be maintained.

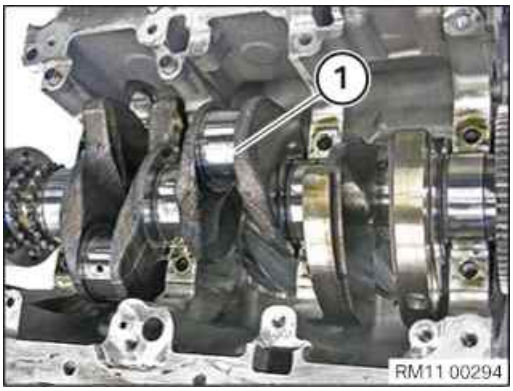
Crankshaft bearing cap 3 is installed as a thrust bearing.

Note:
Graphic on bearing seat 1.



Release main bearing cap screw connections in the sequence **8 - 1**.

Remove main bearing caps 1 - 4.



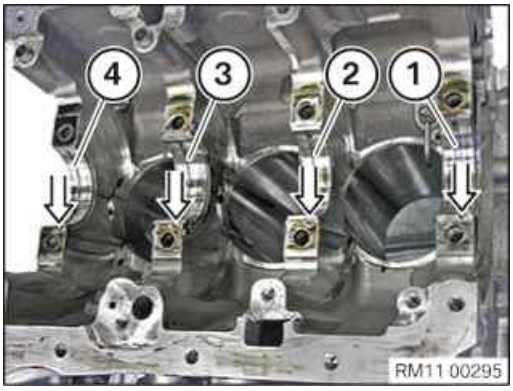
Important!

With the assistance of a second person, remove crankshaft and carefully place to one side.

Pay attention to oil hole in bearing shell.

Pay attention to installation position of crankshaft main bearing shells.

Installation:

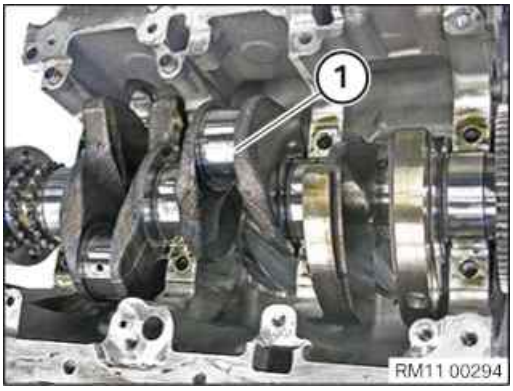


For new crankshaft replace crankshaft main bearing shells.

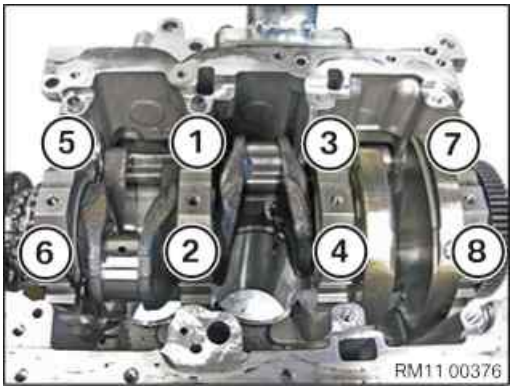
Oil bearing shells (1 - 4).

Both locating grooves of bearing shells in crankcase and on crankshaft bearing cap must be mounted on one side.

cardiagn.com



Insert crankshaft (1).



Important!

Do not fit crankshaft bearing cap in incorrect position.

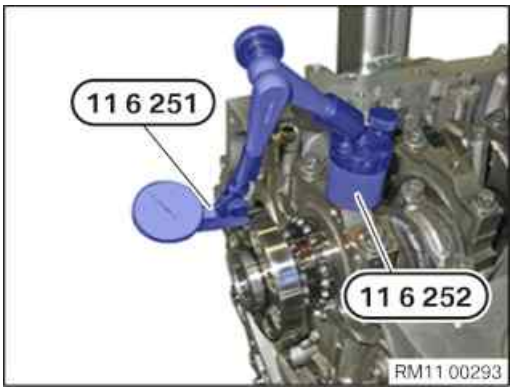
Risk of damage to moulding on crankcase.

Align crankshaft bearing cap exactly.

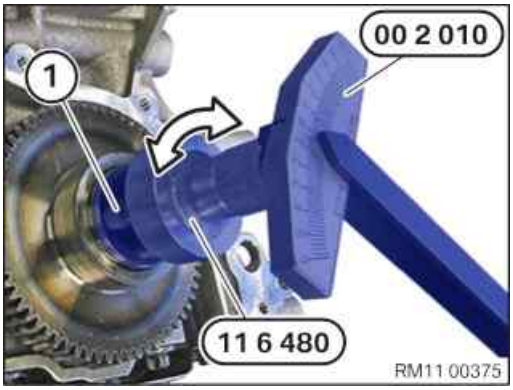
Fit main bearing bolts.

Tighten main bearing bolts in sequence **1 - 8** (comply with tightening specifications).

Tightening torque: 11 11 1AZ



Check side clearance.



Coefficient of friction of crankshaft.

Screw in all screws of vibration damper by hand.

Turn crankshaft evenly with special tool 00 2 010 and special tool 11 6 480 .

cardiagn.com

Required follow-up work:

- Install counterbalance shaft.
- Install all pistons.
- Install lower front timing case cover.
- Install both timing chains.
- Assemble engine.

cardiagn.com

11 22 000 Removing and installing/replacing flywheel (B37C)

Special tools required:

- 11 9 811
- 11 9 265
- 11 4 180

Necessary preliminary tasks:

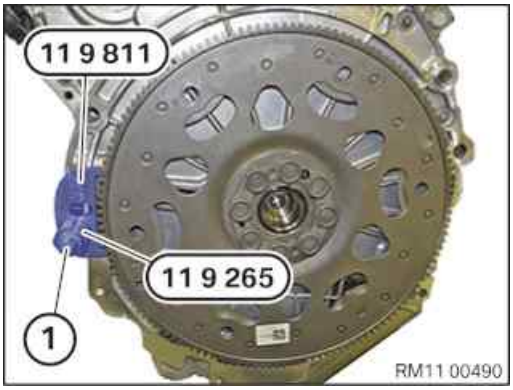
- Remove transmission.
- For manual gearbox:
  Remove clutch.

REMOVAL:

Manual gearbox.

Secure flywheel with Torx screw (1) and special tools 11 9 811 and 11 9 265 .

Release flywheel studs with special tool 11 4 180 /



Automatic transmission.

Secure flywheel with transmission bolt (1) and special tool 11 9 811 / 11 9 265 .

Unfasten flywheel bolts.

INSTALLATION:

cardiagn.com

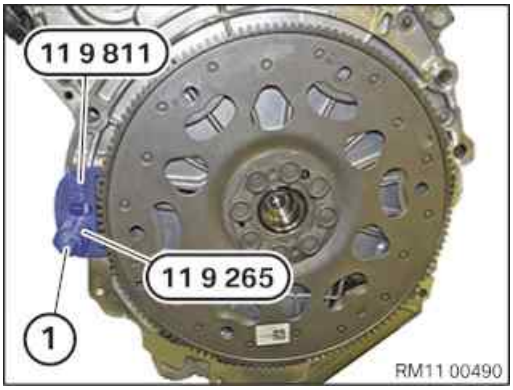
Manual gearbox.

Parts: Replace screws.

Secure flywheel with Torx screw (1) and special tools 11 9 811 and 11 9 265 .

Tighten flywheel bolts with special tool 11 4 180 .

Tightening torque: 11 22 1AZ.



Automatic transmission.

Parts: Replace screws.

Secure flywheel with transmission bolt (1) and special tool 11 9 811 / 11 9 265 .

Unfasten flywheel bolts.

Tightening torque: 11 22 1AZ.

Concluding tasks:

- Install clutch.
- Install transmission.

cardiagn.com

11 22 000 Removing and installing/replacing the flywheel

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Remove vehicle battery

cardiagn.com

WARNING

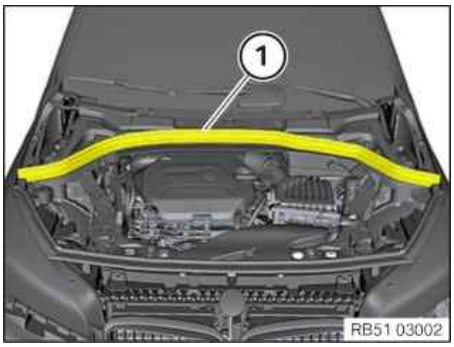
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

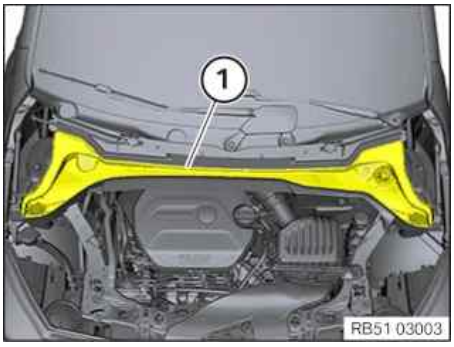
- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

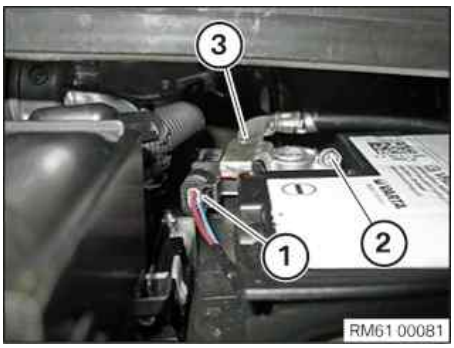
For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



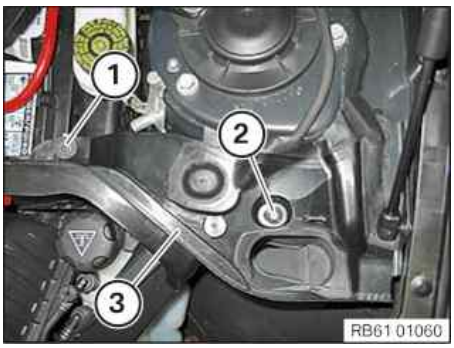
- pull off gasket (1) upwards.



- Remove the cowl panel cover (1) to the top.

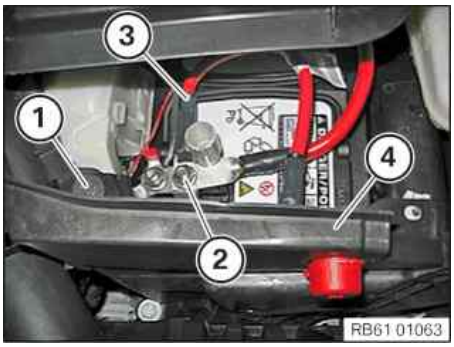


- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

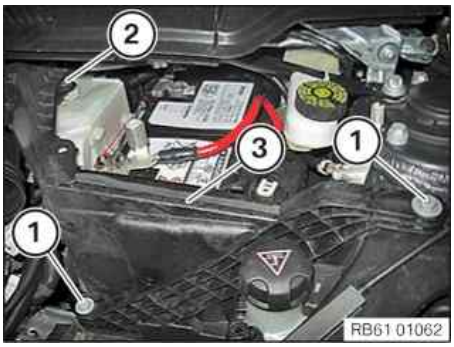


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

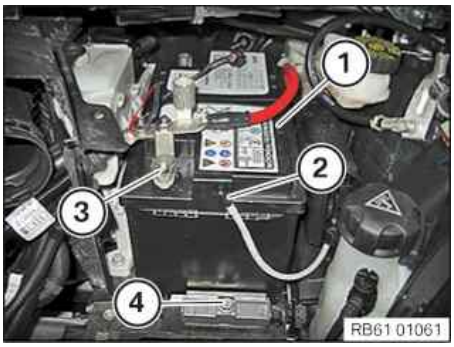
cardiagn.com



- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

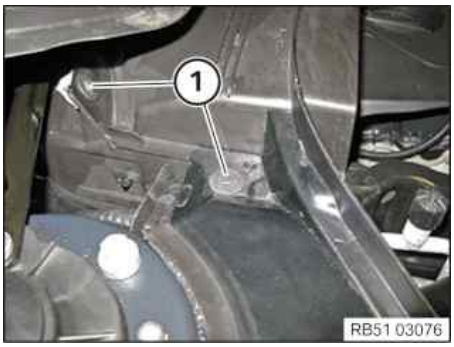
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

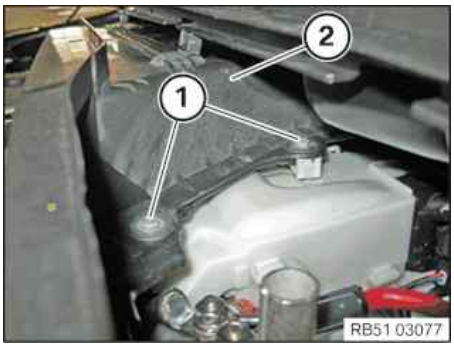
2 – Removing the upper bulkhead cover

- Loosen screws (1).



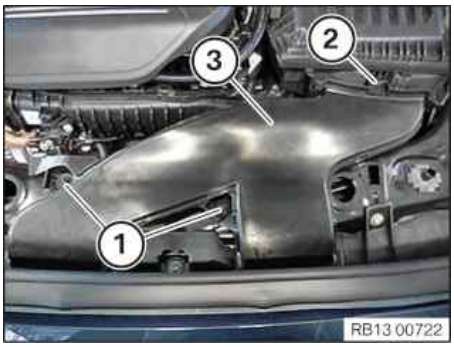
- Loosen screws (1).

cardiagn.com



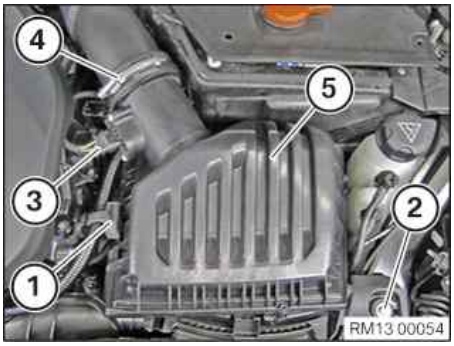
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

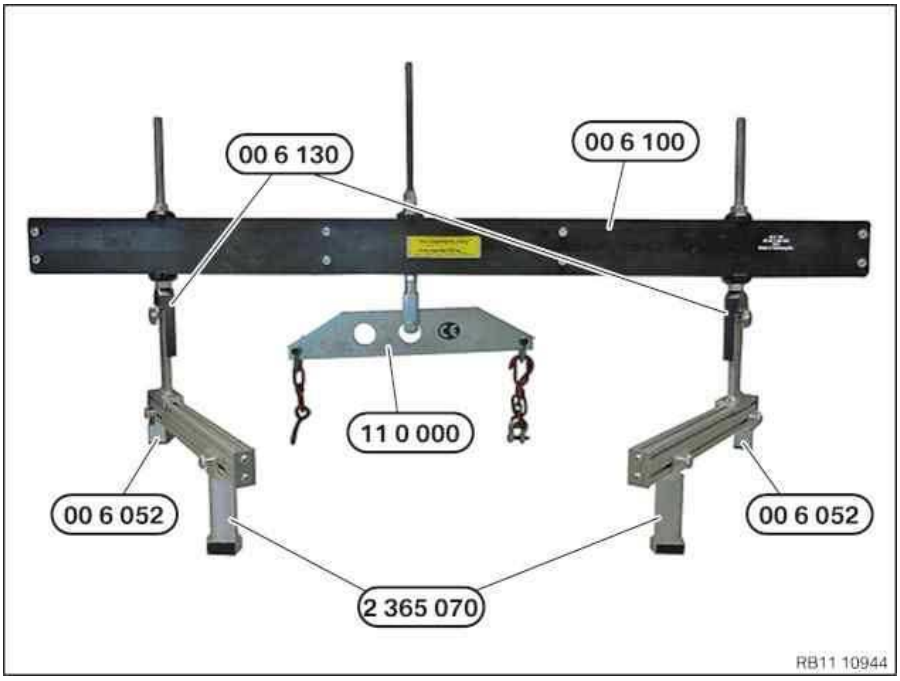
- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

6 – Install the engine bridge

cardiagn.com

Overview: Prepared engine bridge



Prerequisite

Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

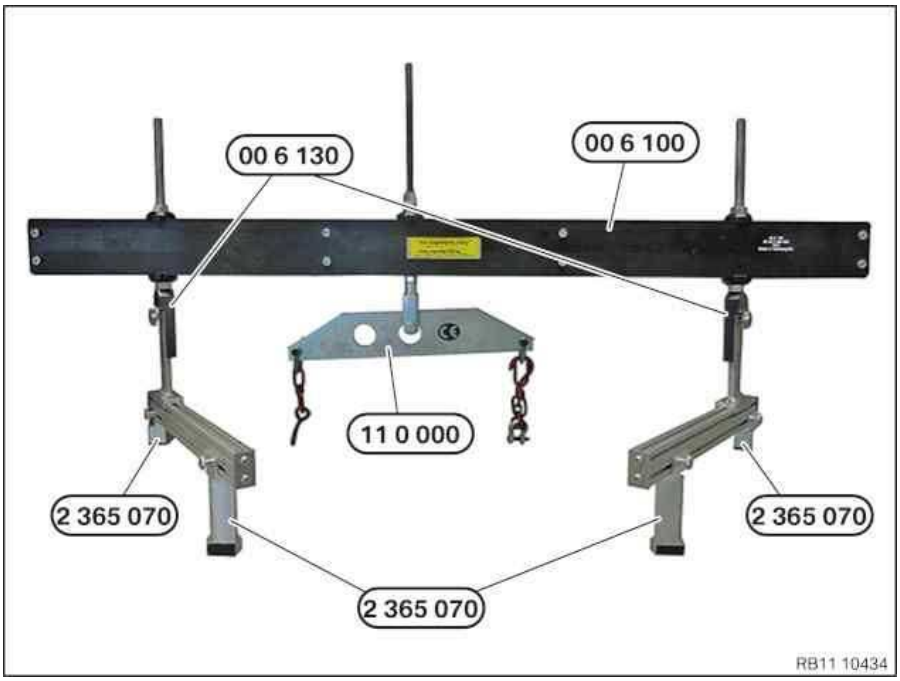
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

cardiagn.com



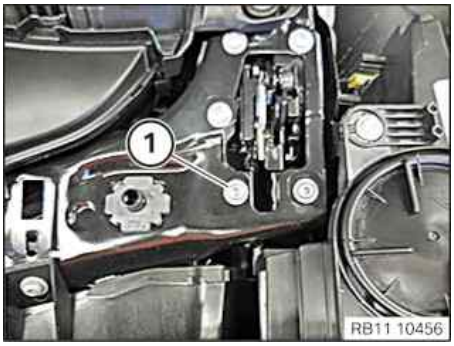
CAUTION

Heavy component.

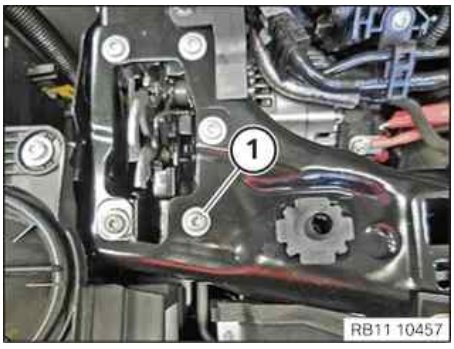
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

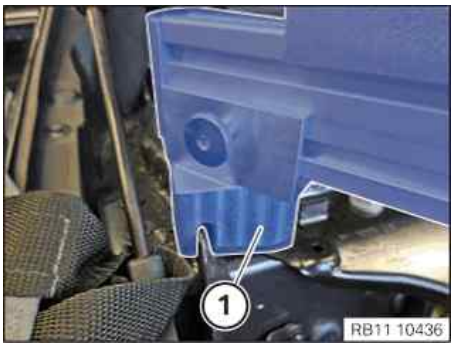
- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.



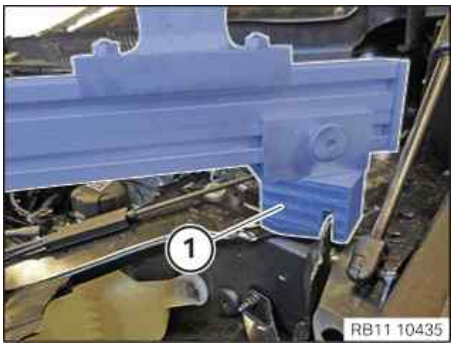
- Loosen screw (1) of the left bonnet catch.



- Loosen screw (1) of the right bonnet catch.

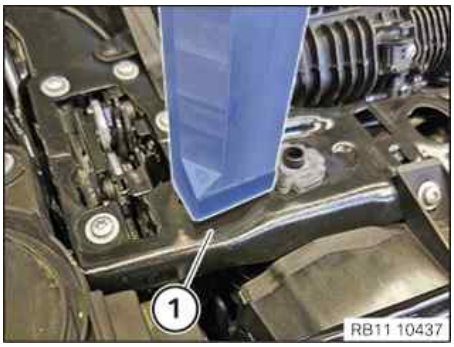


- Position special tool **2 365 070** to the rear mounting point (1) at the right.

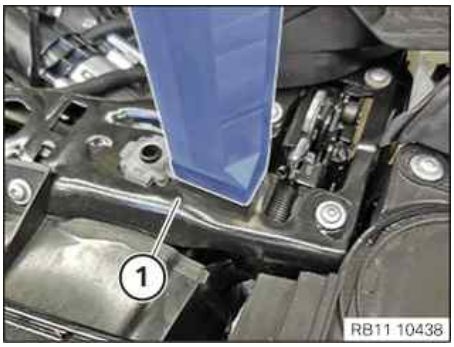


- Position special tool **2 365 070** to the rear mounting point (1) at the left.

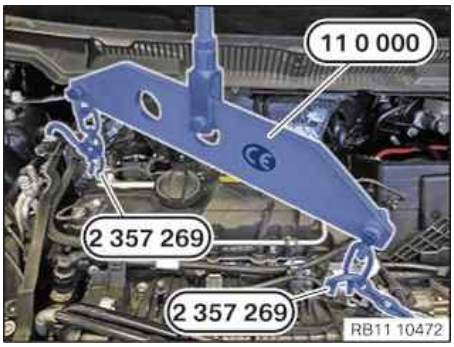
cardiagn.com



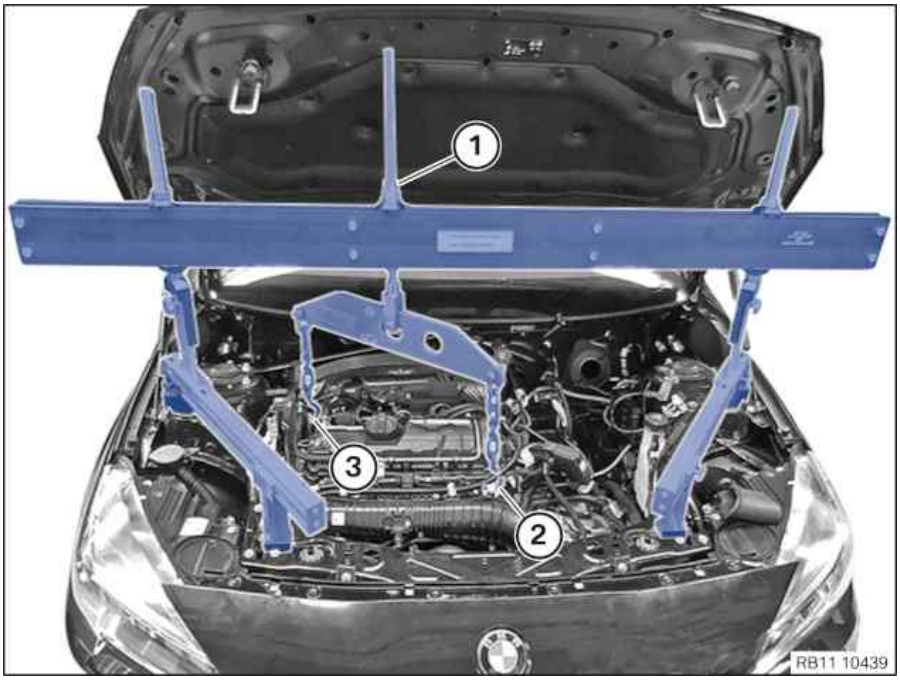
- Position special tool **2 365 070** to the front mounting point (1) at the right.



- Position special tool **2 365 070** to the front mounting point (1) at the left.



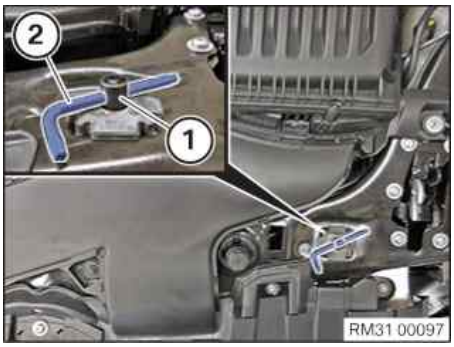
- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools **2 357 269** to the mounting lugs of the engine.



- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

7 – Securing radiator on left and right

cardiagn.com

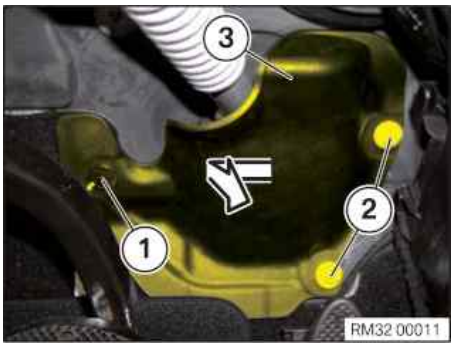


NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

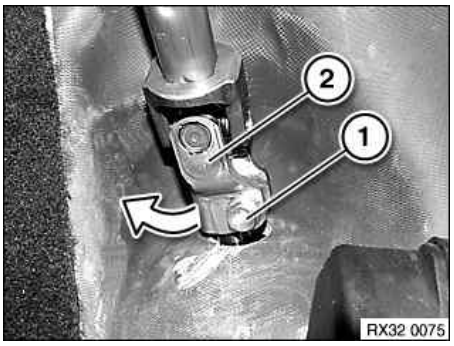
8 – Releasing lower steering shaft from steering gear



- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!



- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

9 – Remove the front left and right wheel

▸ **Removing the wheel**

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

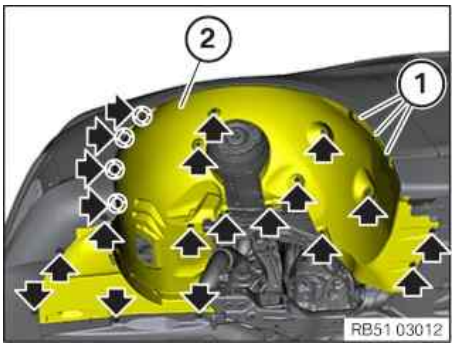
10 – Removing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

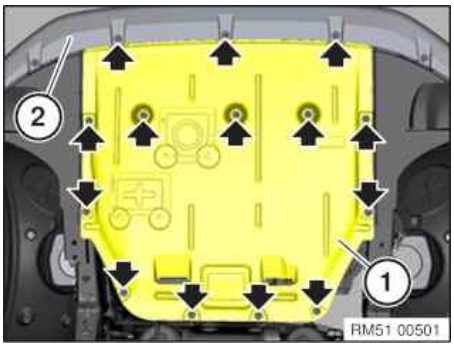
▸ **Remove front wheel arch cover**

cardiagn.com



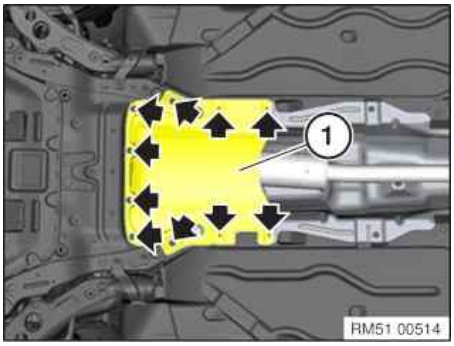
- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

11 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

12 – If installed: Removing rear underbody protection



- Remove screws (arrows).
- Remove the rear underbody protection (1).

13 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

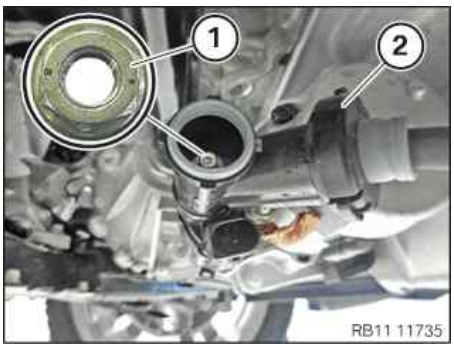
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.

14 – Draining the oil level in the manual gearbox (GS6-58BG, GS6-59DG)

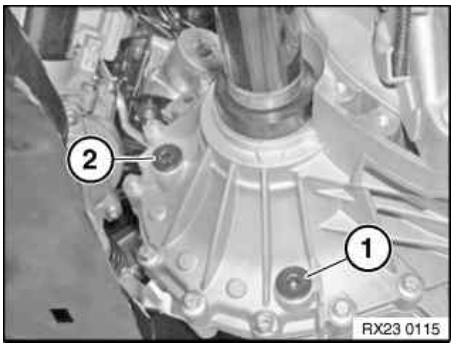
CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

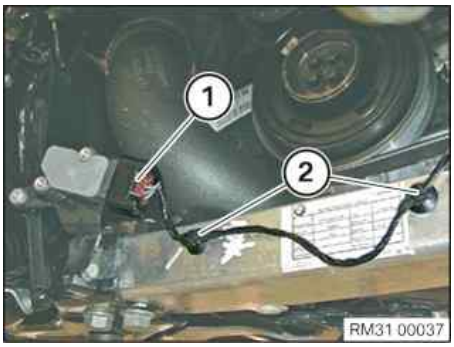


- Draining transmission oil:
  - Release oil drain plug (1) and oil filler plug (2).
  - Clean oil drain plug (1) and screw in.

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

15 – With right installation: Detaching ride height sensor cable



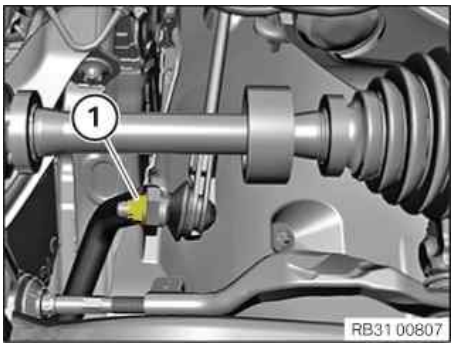
- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

16 – Releasing anti-roll bar on left and right from anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**

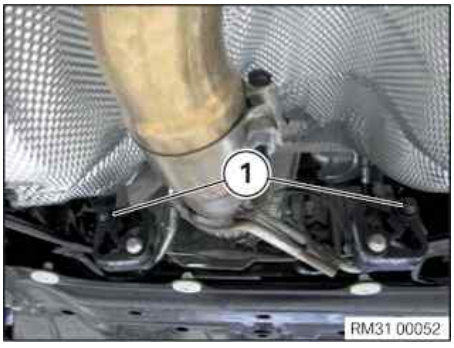


- Unfasten nut (1).

Note: Use the Torx socket for counter support.

- Loosen the anti-roll bar link from the anti-roll bar .

17 – Detaching rubber mount from front axle support

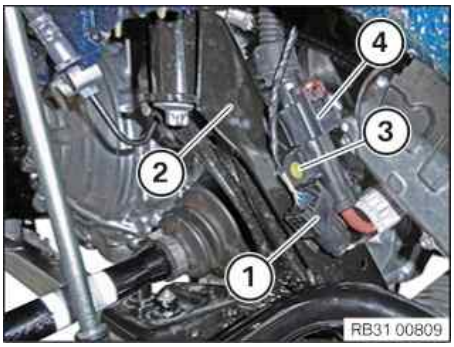


- Spray rubber mount (1) with lubricant and release from holder on front axle support.

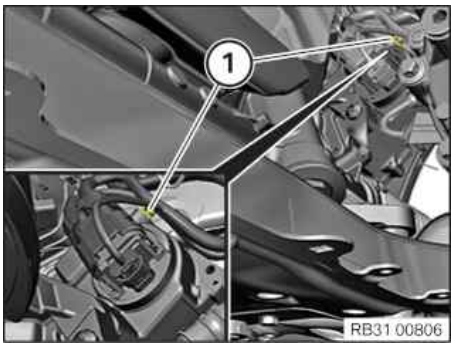
18 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**

cardiagn.com



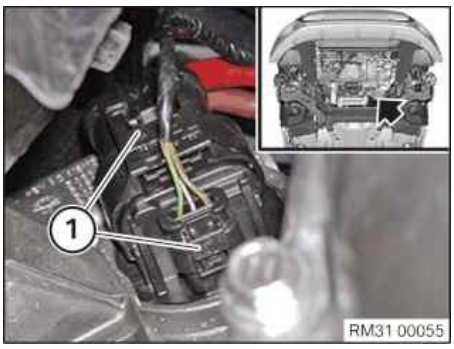
- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).



- Disconnect wiring harness (1) from steering gear.

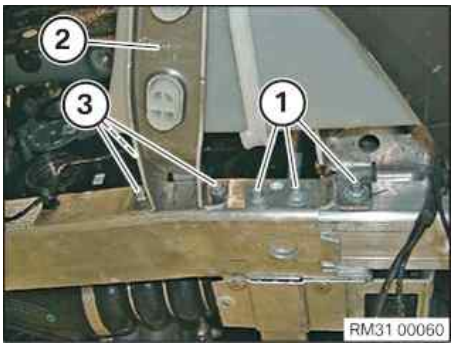
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

19 – Releasing the mounted part from the front axle support



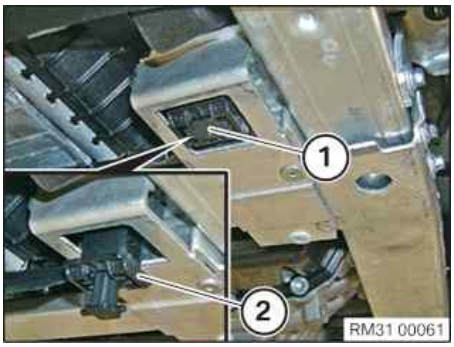
- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

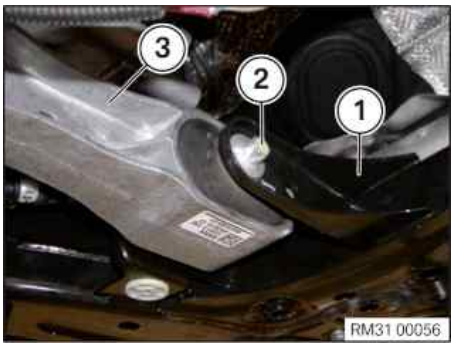
cardiagn.com



NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



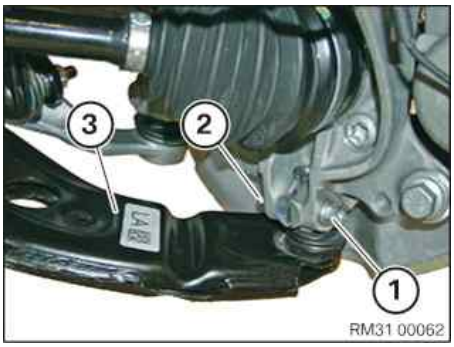
- Loosen screw (2) of the engine support (3) on the front axle (1).

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

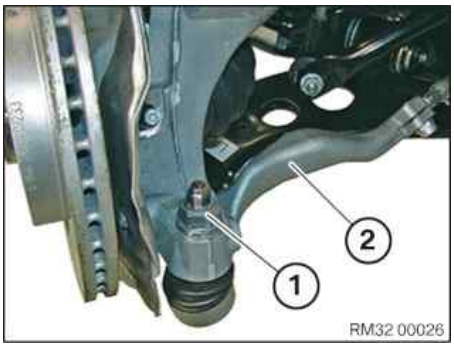
20 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .

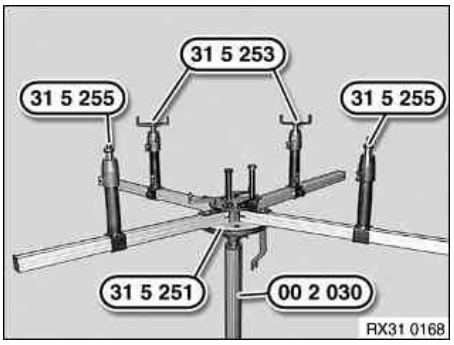


NOTICE

Perform the operations on the left and right side.

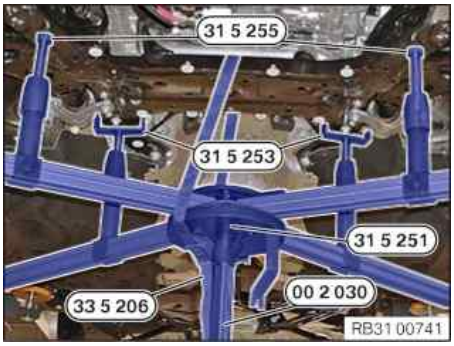
- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.

cardiagn.com



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

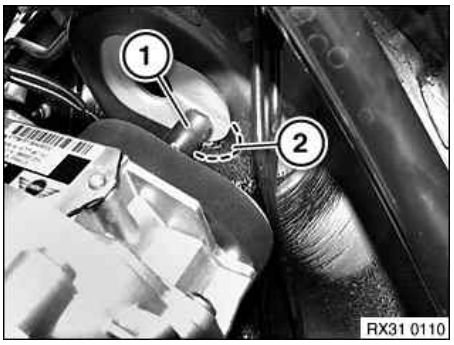
Note: In a profile rail pair, two profile rails are connected to one another by gearing.



- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

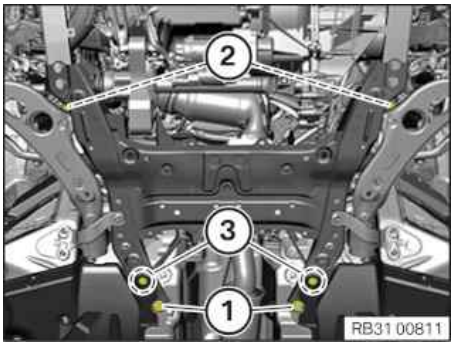


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



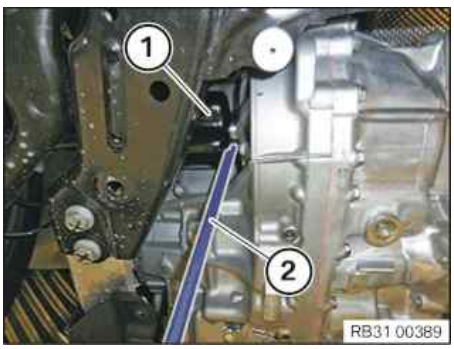
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

21 – Partially removing the left output shaft



- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Tie up output shaft (1).

cardiagn.com

▸ **Remove the left/right radial shaft seal on the differential (manual gearbox)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

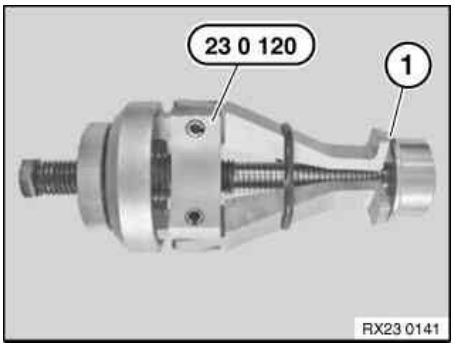
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

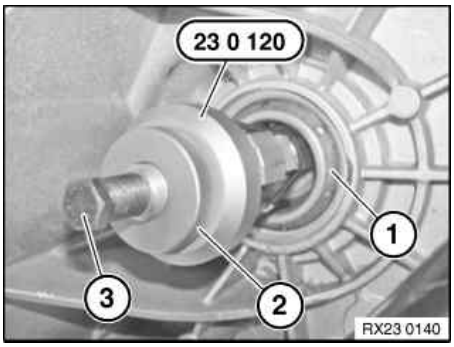
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.



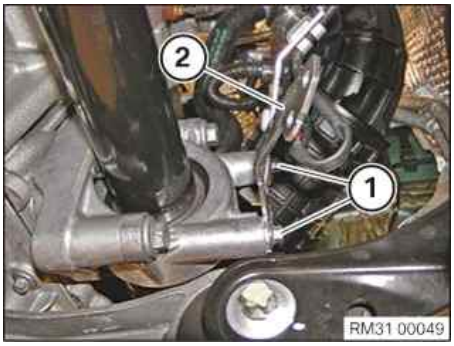
- Prepare special tool **0 496 698 (23 0 120)**.

  The distance (1) must be < 1 mm.



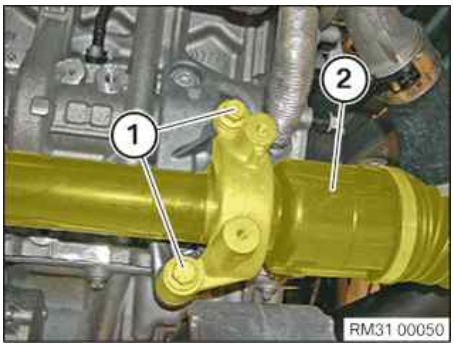
- Insert special tool **0 496 698 (23 0 120)** in the radial shaft seal (1) up to the limit position.
- Spread out the claws by turning the nut (2).
- Screw in screw (3) and pull off the radial shaft seal.

22 – Removing right output shaft partially



- If necessary, unscrew the bolts (1) and remove the holder (heat shield) (2).

cardiagn.com



- Loosen screws (1).
- Pull out the output shaft (2) from the transmission.
- Tie up output shaft (1).

▸ **Remove the left/right radial shaft seal on the differential (manual gearbox)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

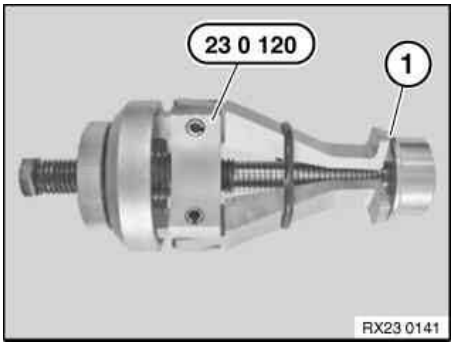
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

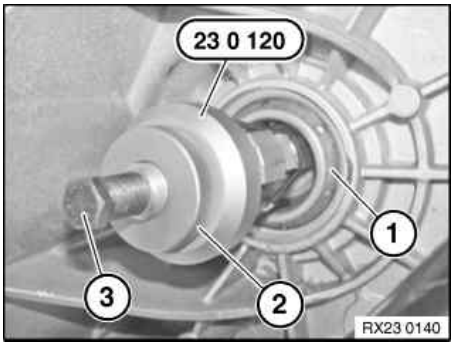
Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.



- Prepare special tool **0 496 698 (23 0 120)**.

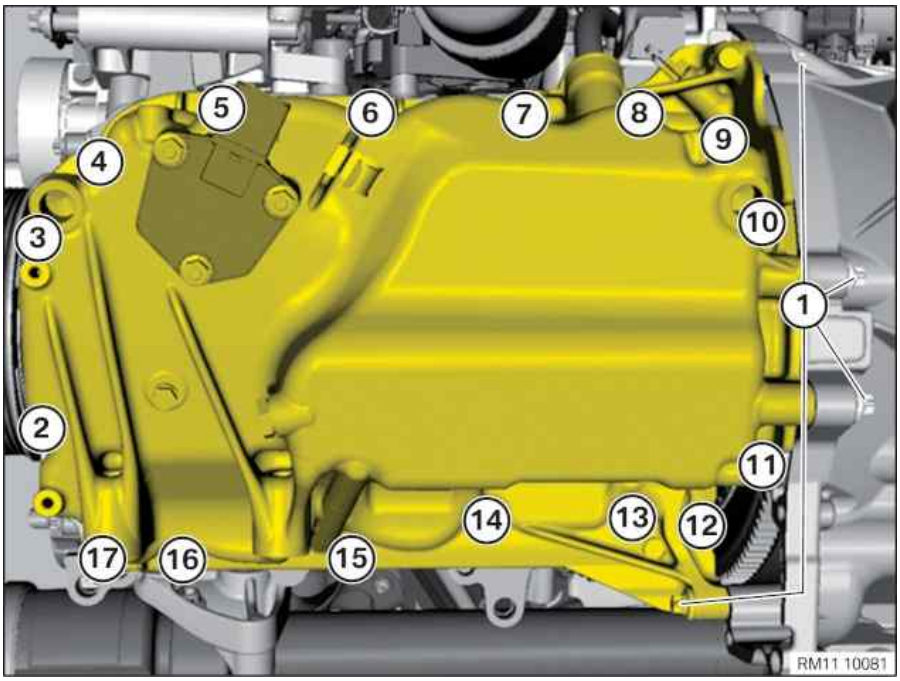
  The distance (1) must be < 1 mm.



- Insert special tool **0 496 698 (23 0 120)** in the radial shaft seal (1) up to the limit position.
- Spread out the claws by turning the nut (2).
- Screw in screw (3) and pull off the radial shaft seal.

23 – Release transmission-side bolting connection oil sump

cardiagn.com



- Unscrew the bolts (1) from the transmission.

24 – Removing the manual gearbox (GS6-59DG, GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

▸ **Remove electronics box**

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

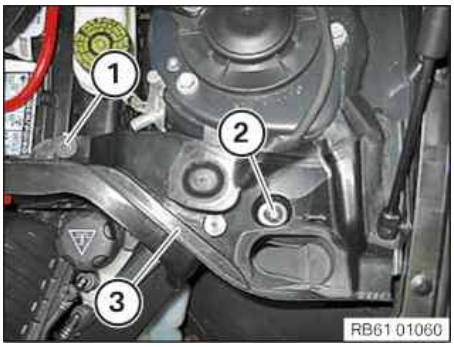
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

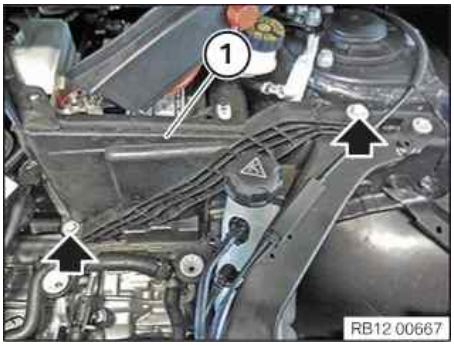
TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

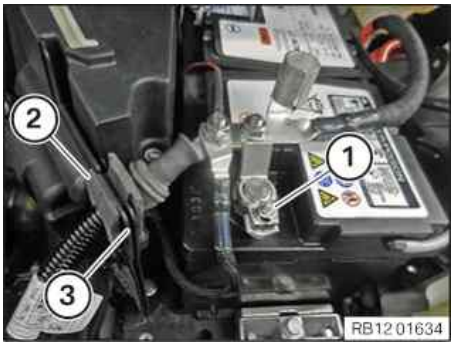


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

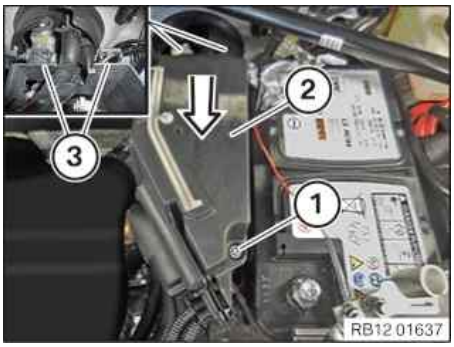


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

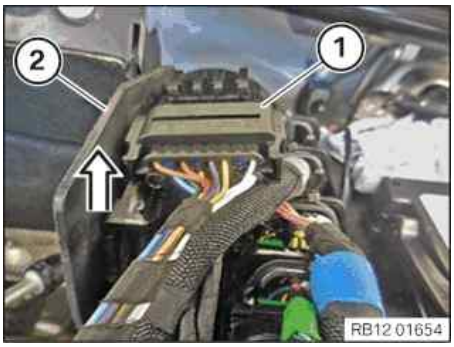


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

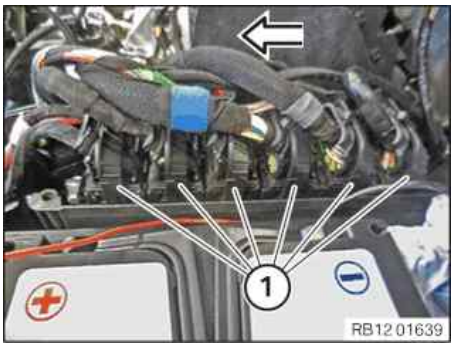
cardiagn.com



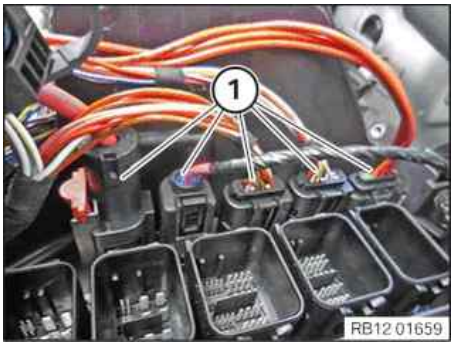
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



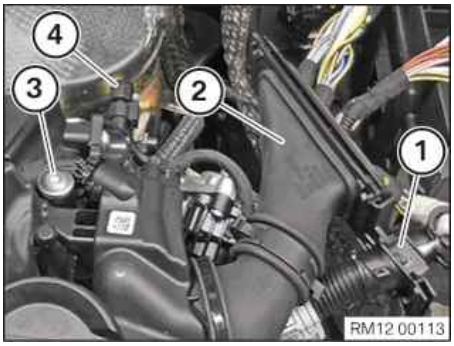
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



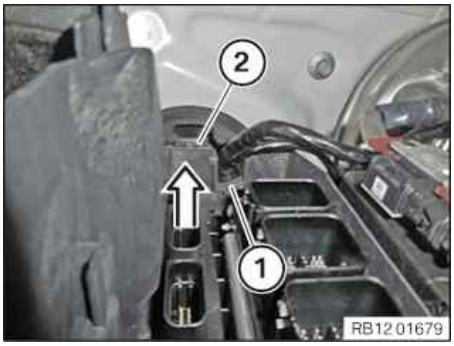
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

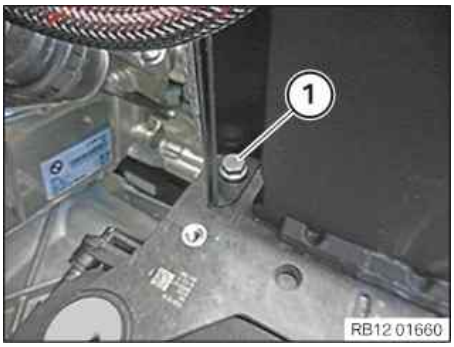


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

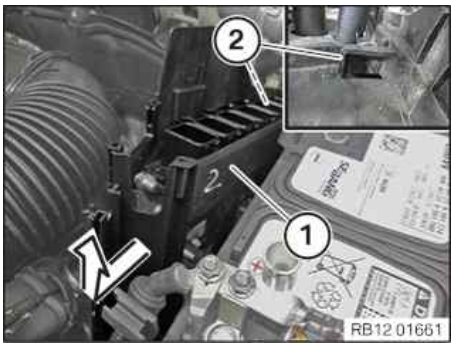


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com

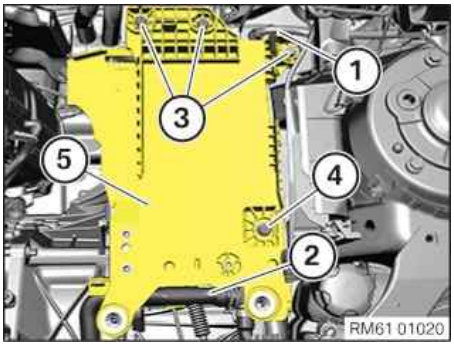


- Loosen screw (1).

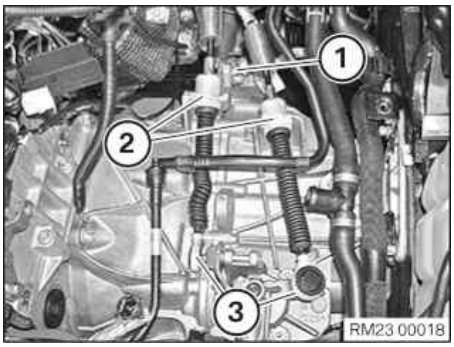


- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

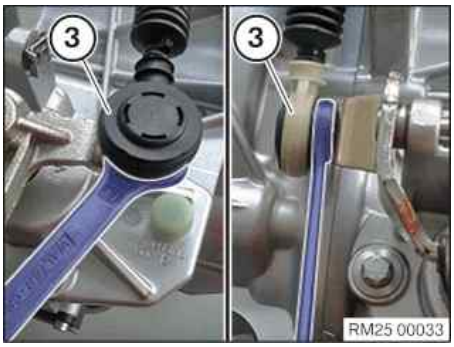
▸ **Remove battery holder**



- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

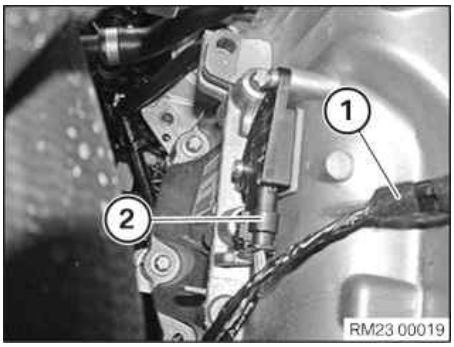


- Release the clip on the limit position/bracket (2) and bend the tabs slightly away from the limit position/bracket (2).
- Unscrew the bolt (1) and detach the ground strap from the transmission.

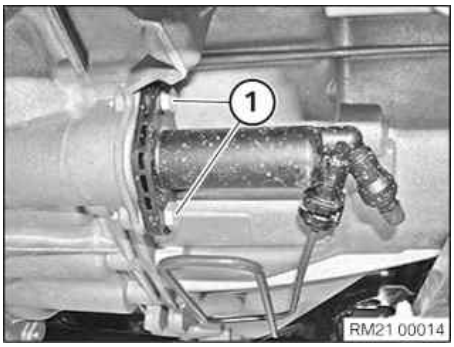


- Lever the fixtures (3) of the selector lever cables away from the ball joints with an open-end spanner SW13.

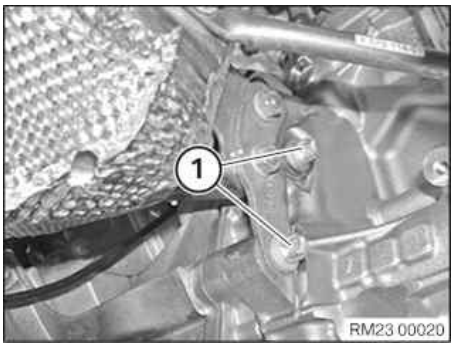
cardiagn.com



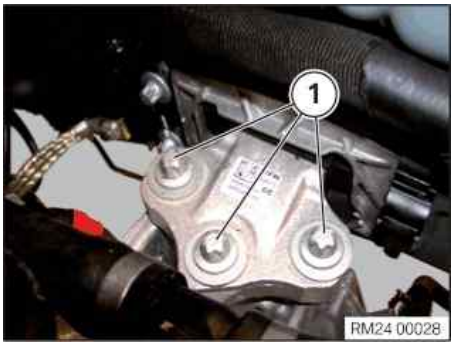
- Disconnect the plug connection (2) of the gear sensor.
- Detach the cable (1) with the holder from the transmission.



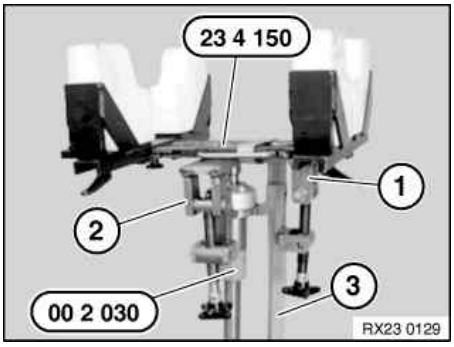
- Relieve tension on clutch slave cylinder slowly; otherwise air will be drawn in through sealing cup. Pressure line of clutch slave cylinder remains connected.
- Unscrew the bolts (1) and remove the clutch slave cylinder.



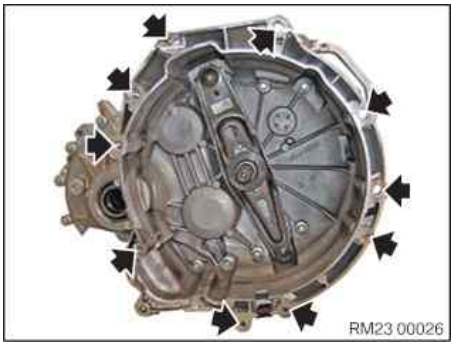
- Loosen screws (1).



- Loosen screws (1).

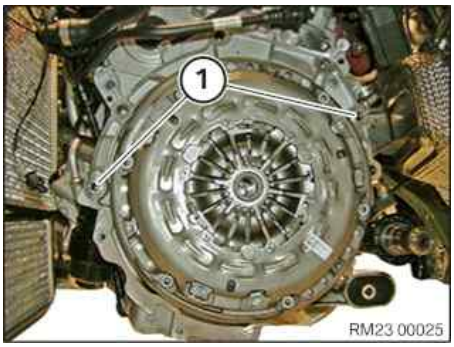


- Support the transmission with special tool **0 490 133 (00 2 030)** and .
- Secure the transmission with the tensioning strap (3).



- Remove screws (arrows).
- Pull transmission downwards and remove.

cardiagn.com



- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check clutch disc for frictional corrosion in gearing and replace if necessary.

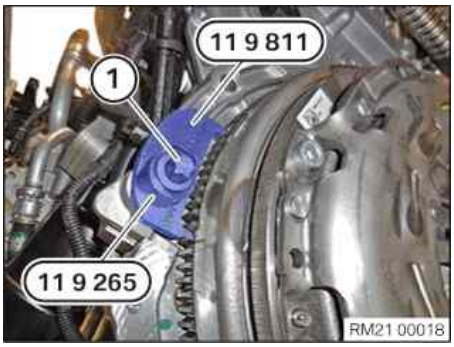
25 – Remove clutch

CAUTION

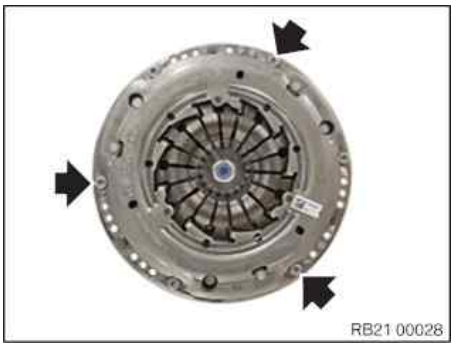
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

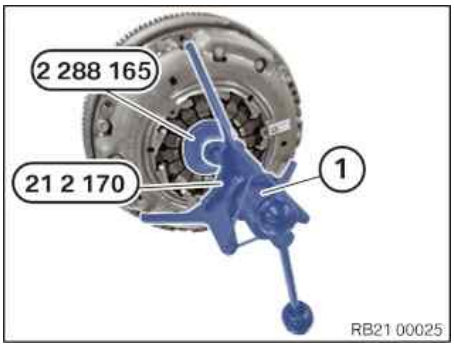


- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.

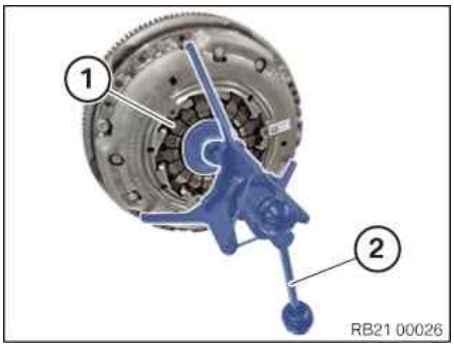


- Detach 3 screws to attach special tool **0 493 839 (21 2 170)** and **2 288 165**.

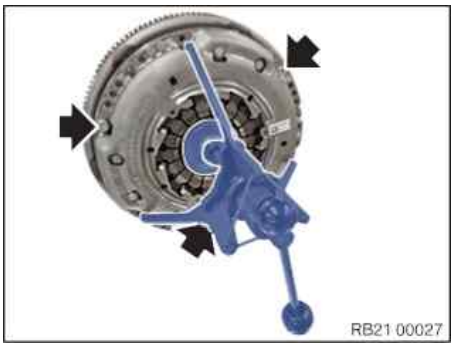
cardiagn.com



- Position special tool **0 493 839 (21 2 170)** and **2 288 165** and tighten on the knurled screw (1).



- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.



- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

MAIN WORK

26 – Removing flywheel

CAUTION

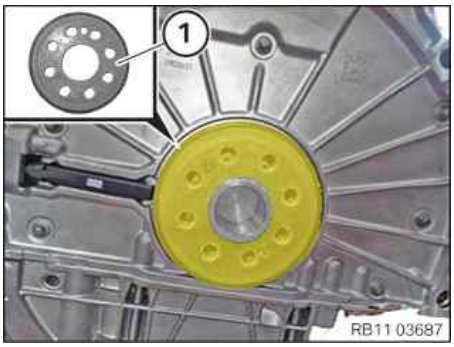
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

27 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

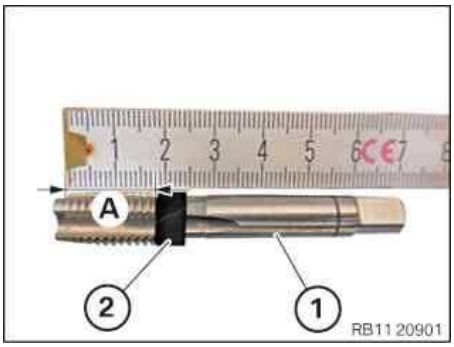
cardiagn.com

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

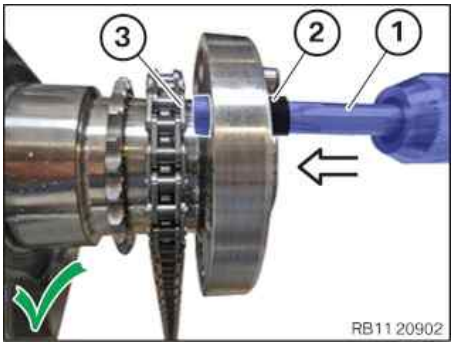
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

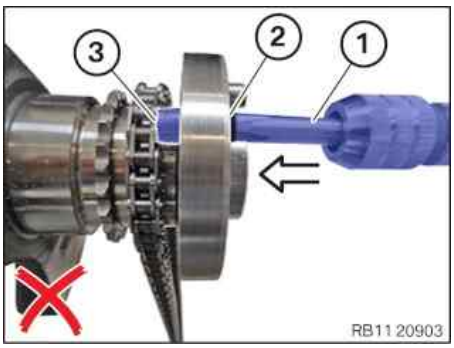
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



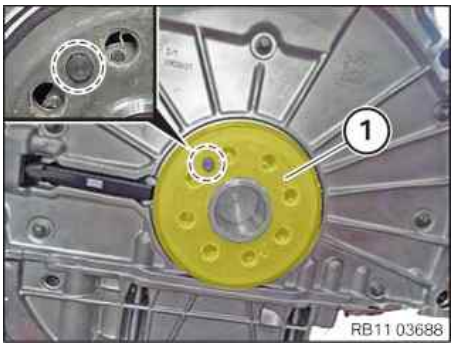
TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

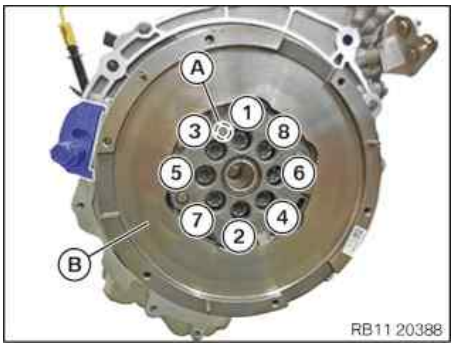
- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com



- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

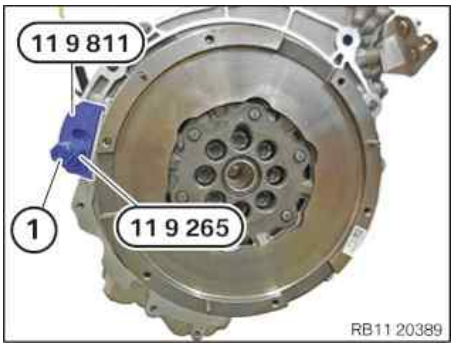


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

POSTPROCESSES

28 – Install clutch

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

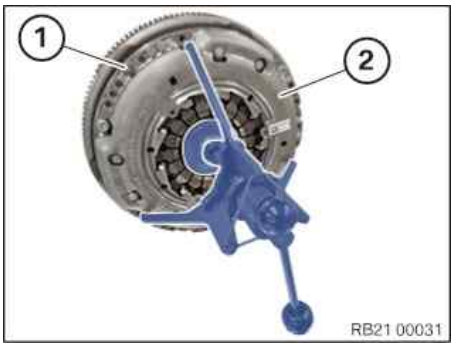
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

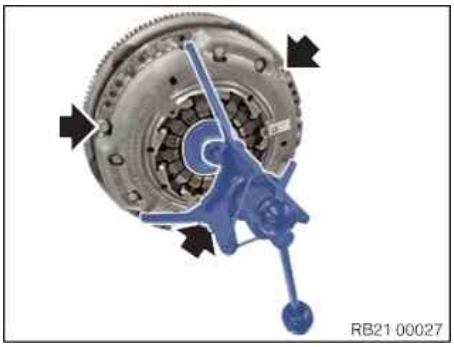
Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.

cardiagn.com

- Centre the clutch disc (1) using special tool **2 358 471**.



- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).

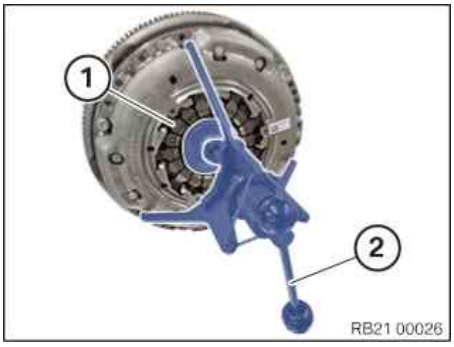


- Renew the bolts (arrows).

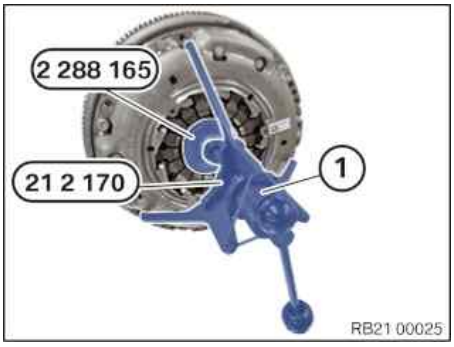
  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel

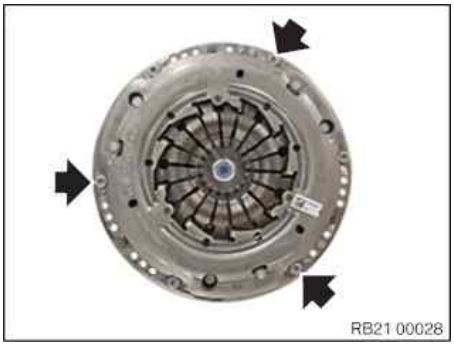
M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °



- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.



- Unscrew the knurled screw (1) and remove the special tool **0 493 839 (21 2 170)** with **2 288 165** from the clutch.



- Renew the bolts (arrows).

  Parts: Bolts
- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

cardiagn.com

- Withdraw special tool **2 358 471** from clutch disc with aid of accompanying screw.

29 – Installing the manual gearbox (GS6-59DG, GS6X60DA)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

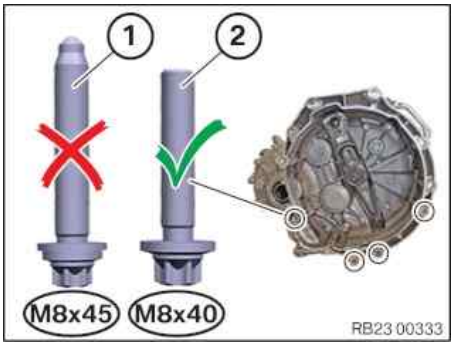
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.



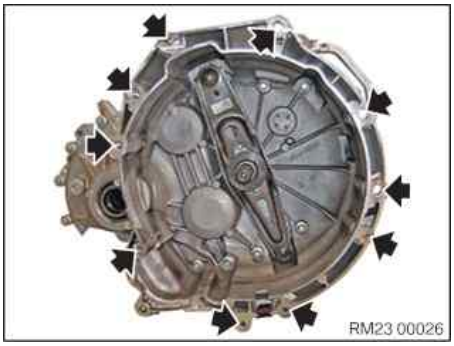
RISK OF DAMAGE

Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- **Wrong:** The screw (1) (starter motor screw connection) must **not** be used for the bottom screw connection of the transmission.
- **Correct:** It is imperative to use the bolt (2) (M8x40) for the lower screw connection of the transmission and flange-mount the transmission.

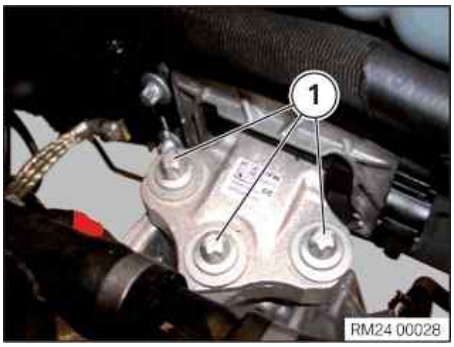


- Tighten screws (arrows).

Transmission to engine

M8x40		Tightening torque	19 Nm
M12x75		Tightening torque	66 Nm

cardiagn.com

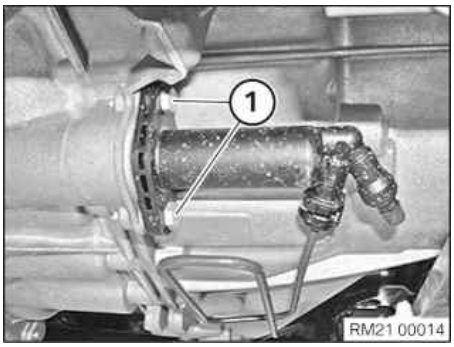


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Transmission mounting

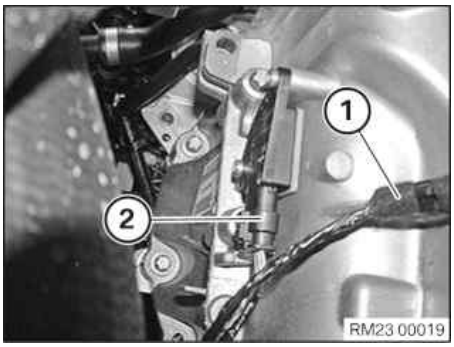
M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °



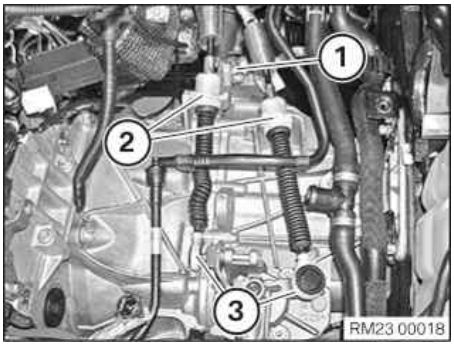
- Install clutch slave cylinder.
- Tighten the screws (1).

Clutch slave cylinder to transmission housing

M8		Tightening torque	19 Nm

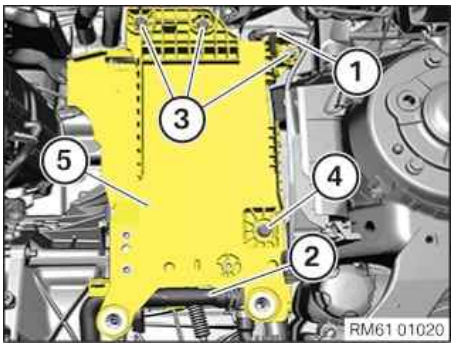


- Connect the plug connection (2) of the gear sensor.
- Clamp the cable (1) with the holder to the transmission.



- Tighten the ground strap on the transmission with the screw (1).
- Clip in the clip on the stop/holder (2).
- Attach the selector lever cables (3) on the ball joints.

▸ **Install the battery holder**



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

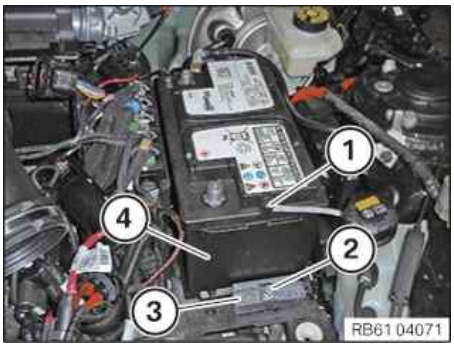
Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

▸ **Partially install vehicle battery**

cardiagn.com



- Install vehicle battery (4).
- Correctly position the holder (3).
- Tighten down screw (2).

Battery terminal rail to battery tray

M8		19 Nm

- Fit and clip the vent hose (1) in.

▷ **Check the vent holes of the battery**

WARNING

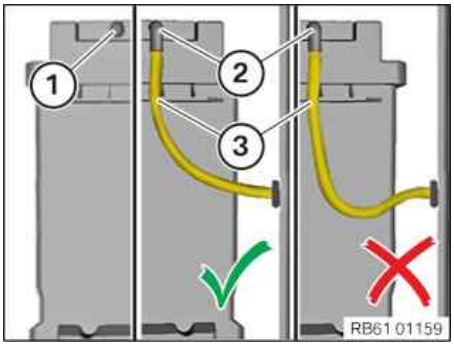
Gas emission.

Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).



Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result
» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result
» The vent hose (3) is not correctly connected.

Measure
- At the vent hole (2), connect the vent hose (3) correctly.

Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

Result
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

cardiagn.com

◁

▶ **Install electronics box**

Prerequisite

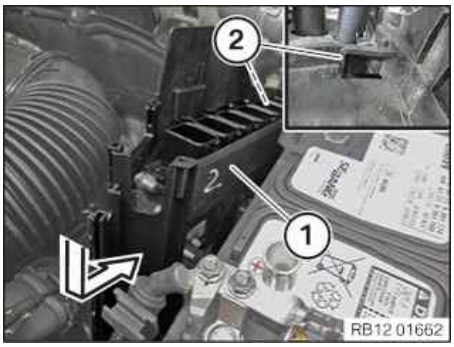
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

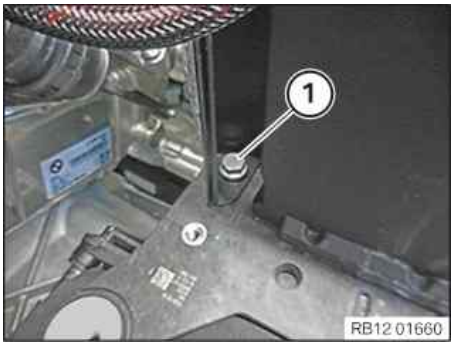
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

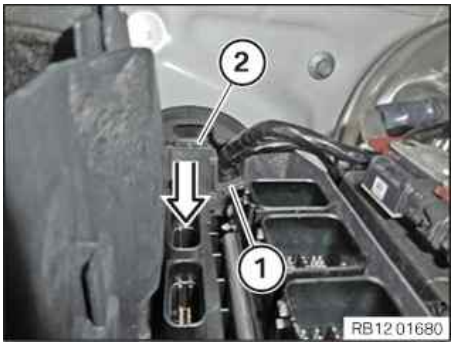
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



- Tighten down screw (1).

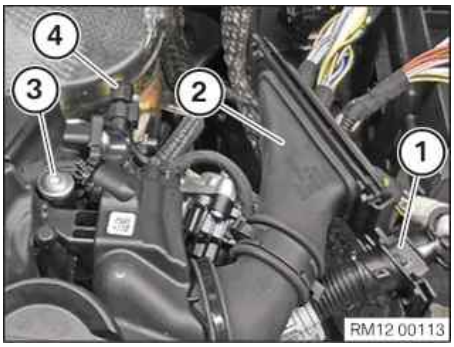
Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

cardiagn.com

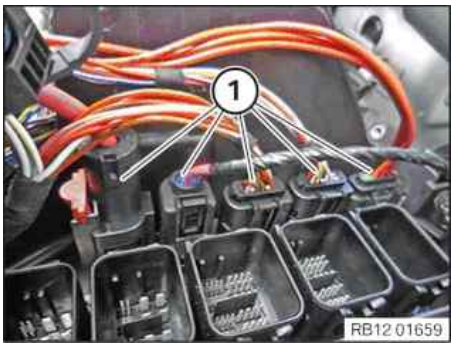


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

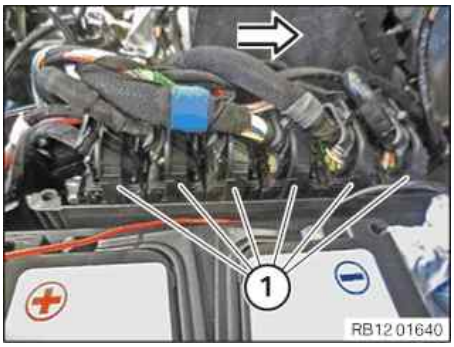
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

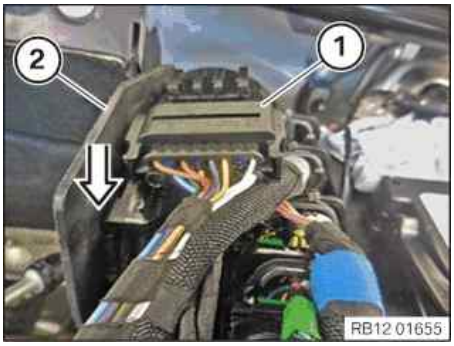
- Attach connector (4) to the differential pressure sensor and lock it audibly.



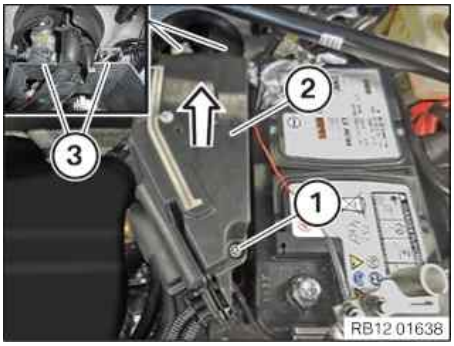
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



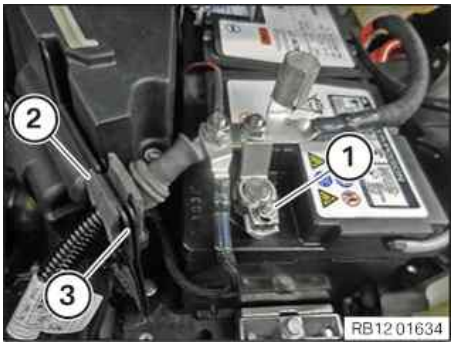
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

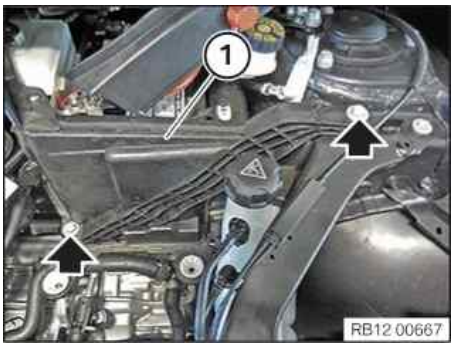


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

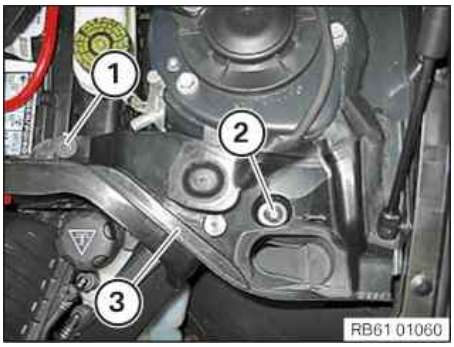
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

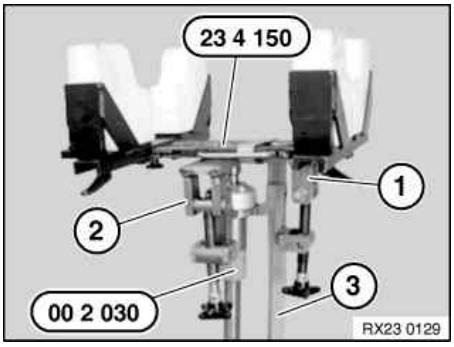
		Tightening torque	3 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

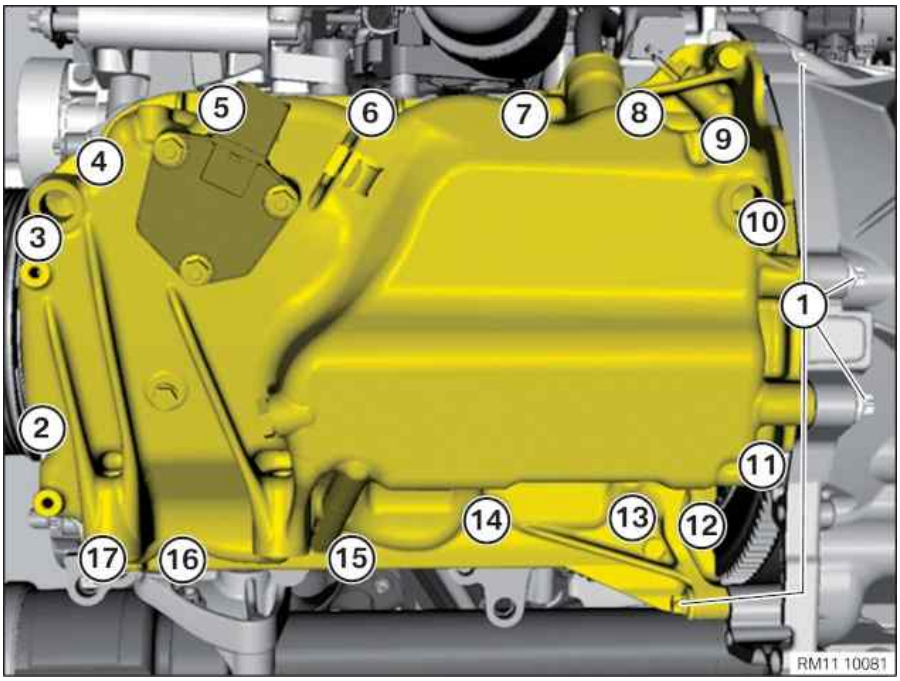
Screw		2,8 Nm



- Loosening the tensioning strap (3).
- Remove special tools **0 490 133 (00 2 030)** and .

30 – Tighten down transmission-side bolting connection oil sump

cardiagn.com



- Join transmission bolts (1) with 5 Nm.
- Tighten the transmission bolts (1) on the transmission.

Transmission to oil sump

M8			19 Nm

31 – Installing right output shaft partially

▸ **Installing the radial shaft seal, right in the differential (manual gearbox)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

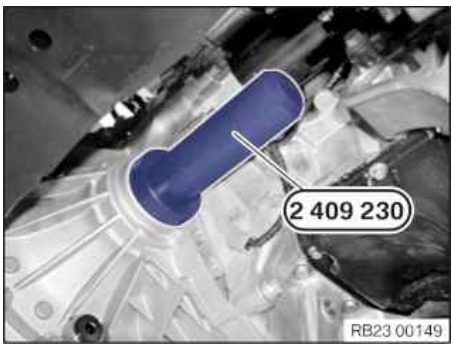
- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

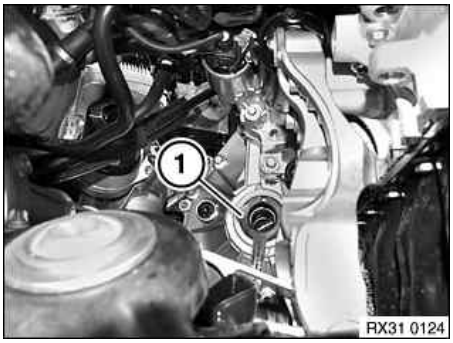


- Coat sealing lips of radial shaft seal with transmission oil.
- Drive the radial shaft seal into the housing with the special tool **2 409 230** until the sealing ring finishes flush with the transmission housing.

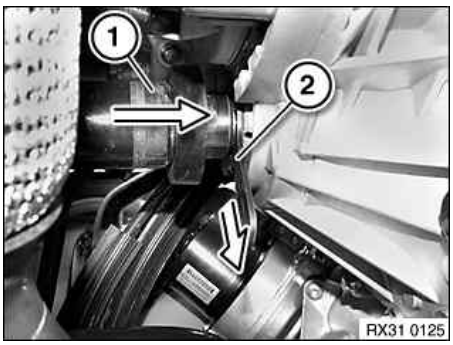
cardiagn.com

- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

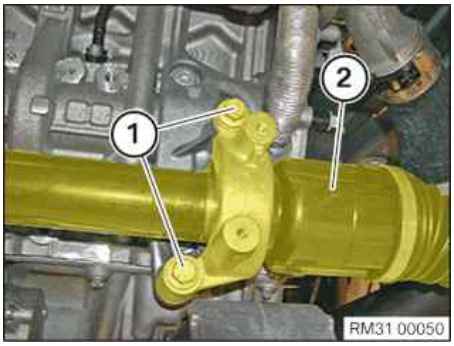
  Parts: O-ring
- Insert new O-ring (1).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.



- Insert output shaft (1) into transmission.
- Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.
- Check for secure seat by levering.



- Tighten the screws (1).

Output shaft bearing to engine block

M10		Tightening torque	38 Nm

32 – Partially installing the left output shaft

▸ **Installing the left radial shaft seal on the differential (manual gearbox)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

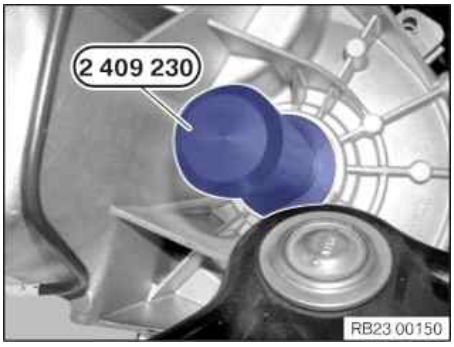
cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

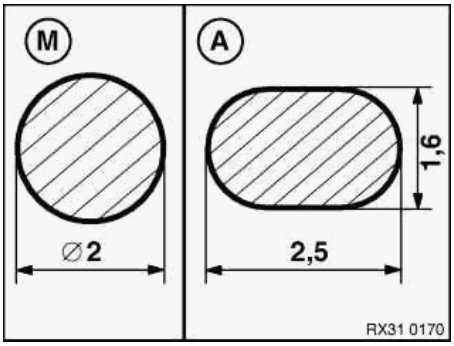
- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.



- Coat sealing lips of radial shaft seal with transmission oil.
- Drive the radial shaft seal into the housing with the special tool **2 409 230** until the sealing ring finishes flush with the transmission housing.

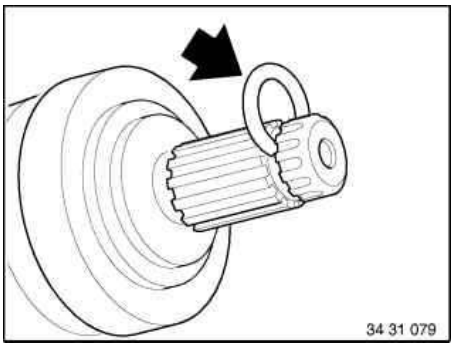
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).

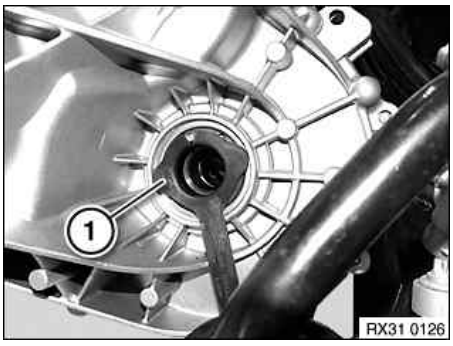


- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

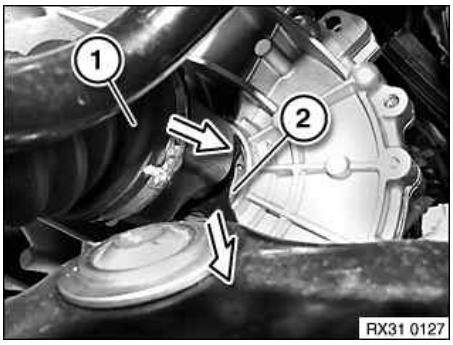


- Renew circlip (arrow).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

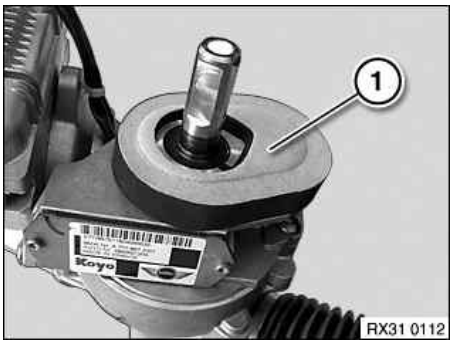
cardiagn.com



- Insert output shaft (1) into transmission.
- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

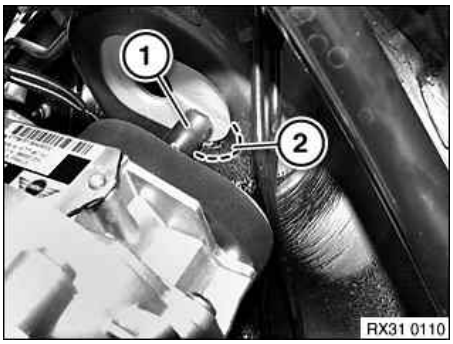
  The output shaft (1) must engage audibly.
- Check for secure seat by levering.

33 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

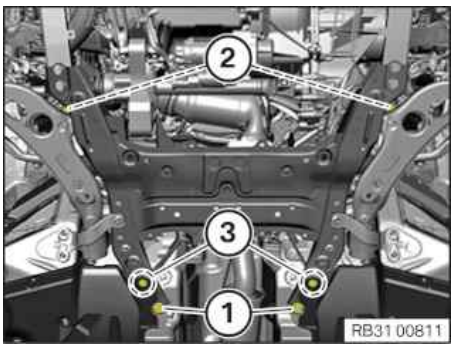


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

Front axle support, front to body

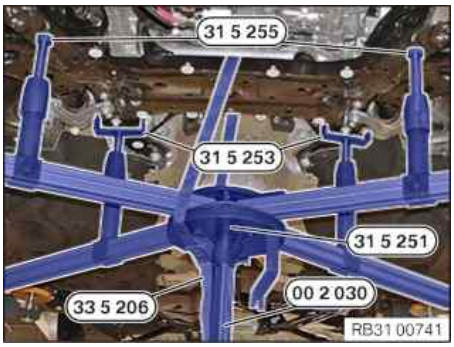
M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

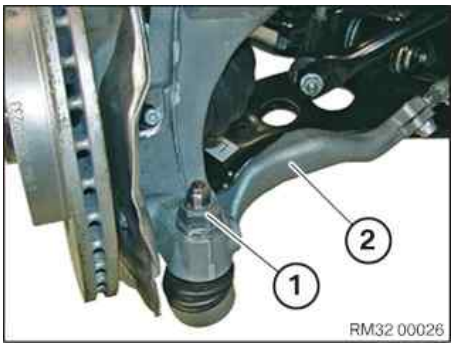
Underbody protection to body

Screw		Tightening torque	3 Nm

cardiagn.com



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.



NOTICE

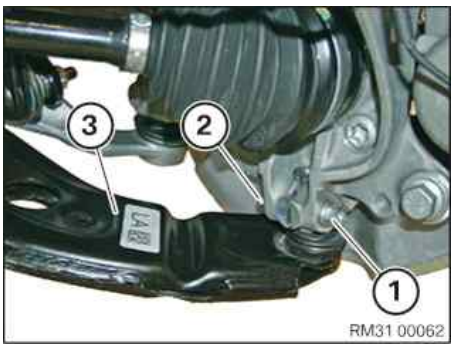
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

34 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

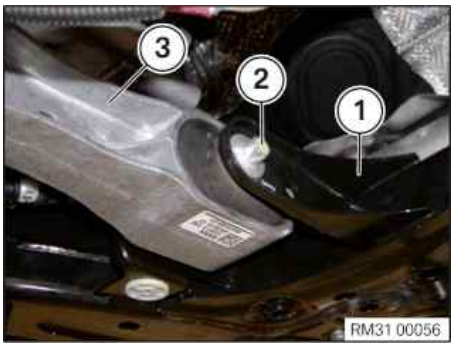
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

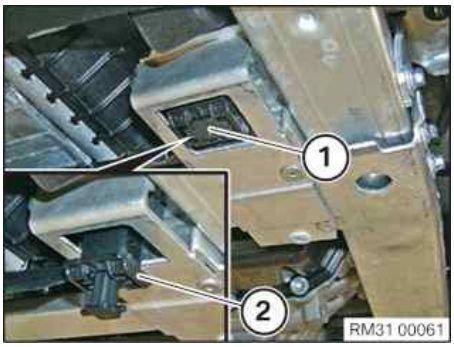
cardiagn.com



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

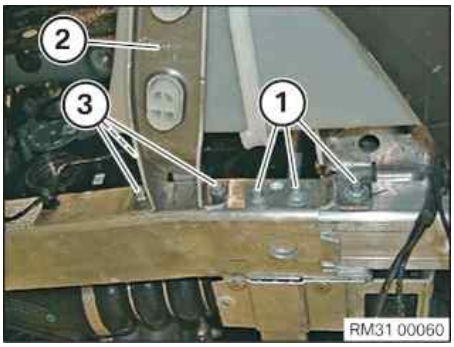
M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

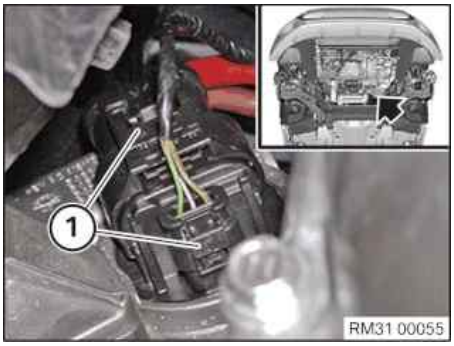
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

35 – Attaching connector at steering gear

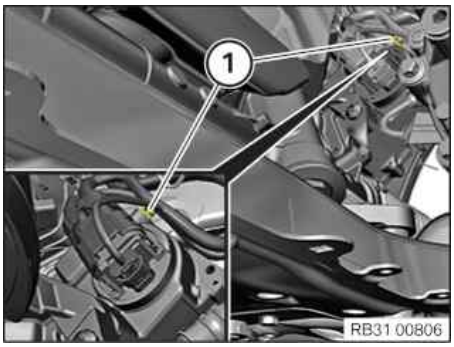
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



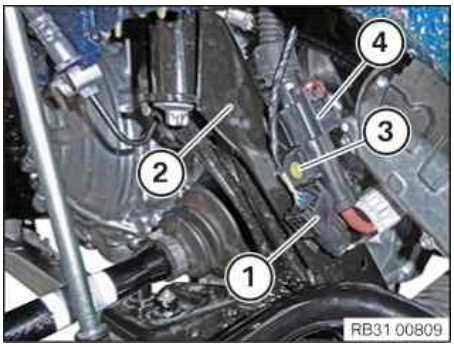
- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com



- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

36 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

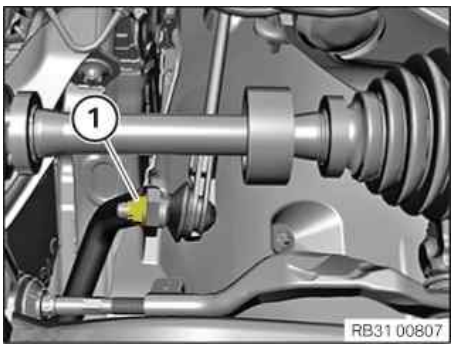
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

37 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

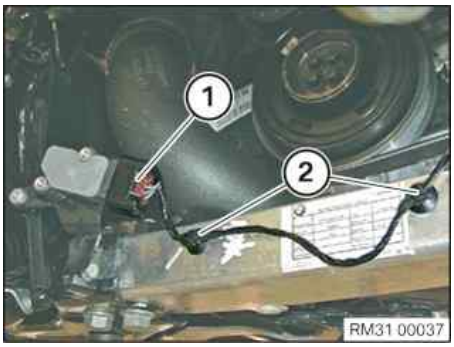
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

38 – With right installation: Securing the cable for the ride height sensor

cardiagn.com



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

39 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

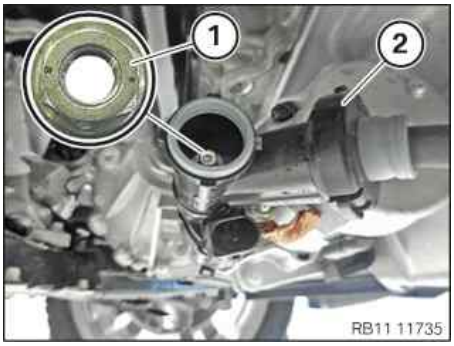
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

40 – Top up the oil level in the manual gearbox (GS6-58BG, GS6-59DG)

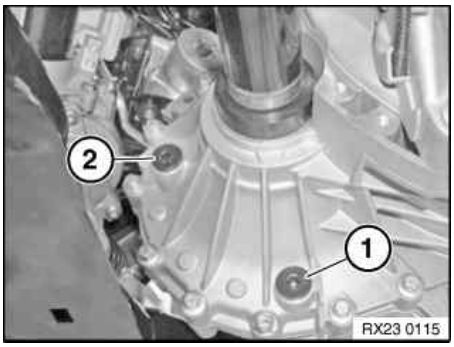
cardiagn.com

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.



- Adding transmission oil:
  - Undo oil filler plug (2).
  - Pour in gear oil until overflowing.
  - Screw in oil filler plug (2).

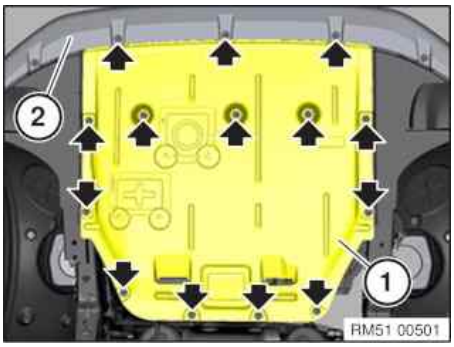
Transmission oil capacity

Transmission oil GS6-58/59BG/DG	1,9 l
Transmission oil: Technically suitable manual gearbox oil	

Oil drain plug / oil filler plug

Hexagon socket		Tightening torque	43 Nm

41 – Installing the front underbody protection

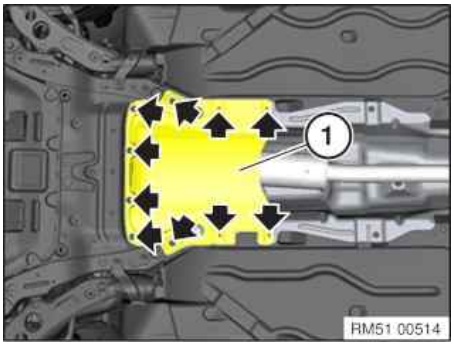


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

42 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

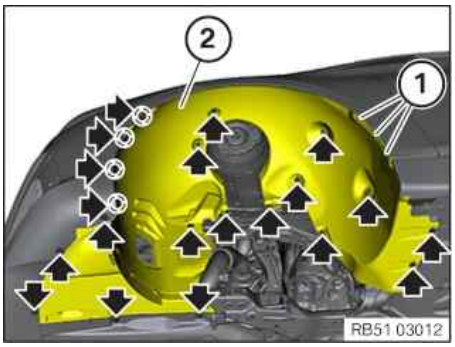
43 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

cardiagn.com



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

44 – Mount the front left and right wheels

▸ **Mounting the wheel**

▹ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

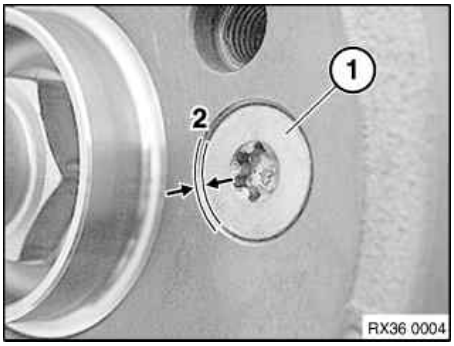
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

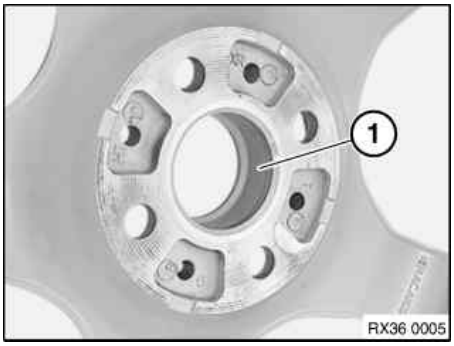
  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◃

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

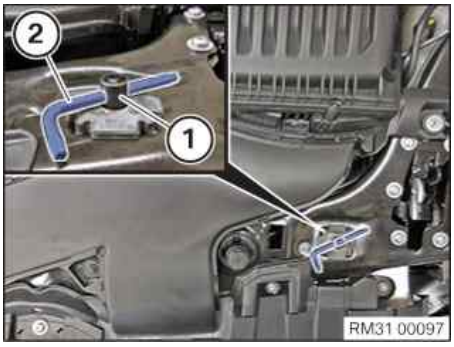
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

45 – Removing fastener for left and right radiator

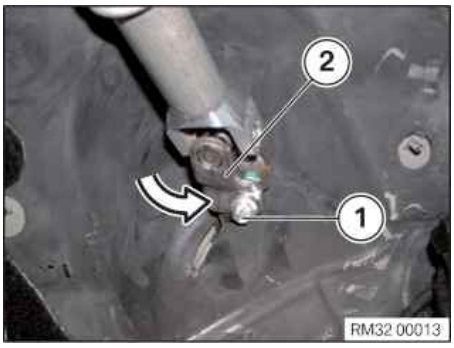


NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

46 – Secure the steering shaft at the bottom on the steering gear



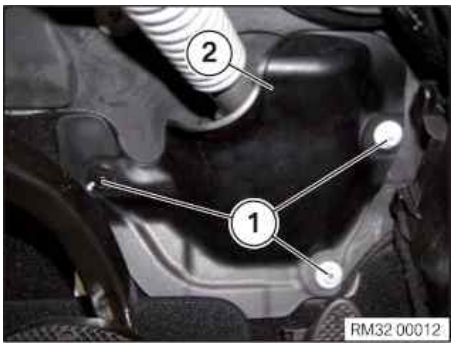
- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

cardiagn.com



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

47 – Remove the engine bridge

CAUTION

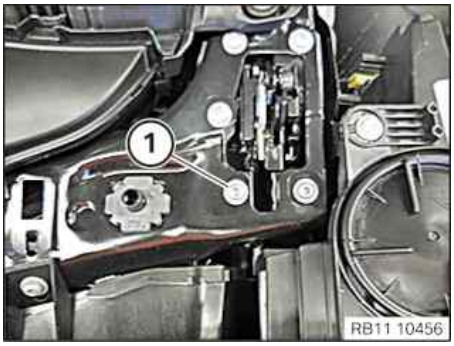
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

cardiagn.com

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

48 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

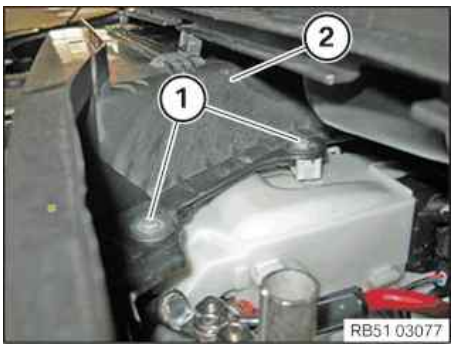
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

49 – Installing the upper bulkhead cover

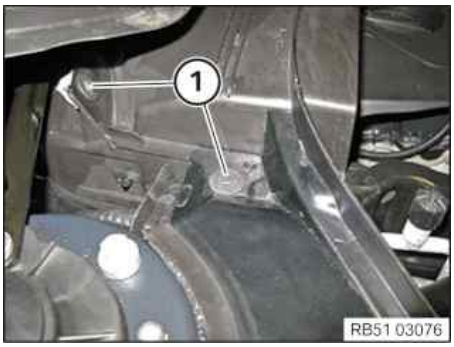


- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

cardiagn.com



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

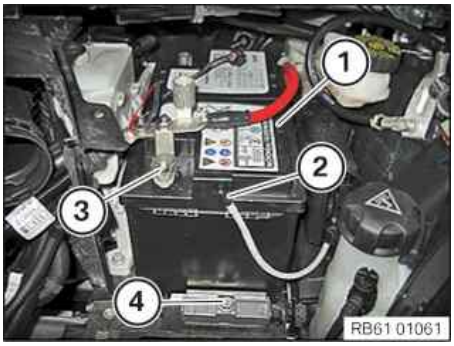
Bulkhead cover, top

Screw		Tightening torque	3 Nm

50 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

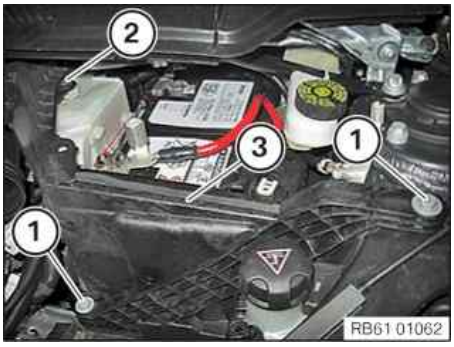
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

Battery cover

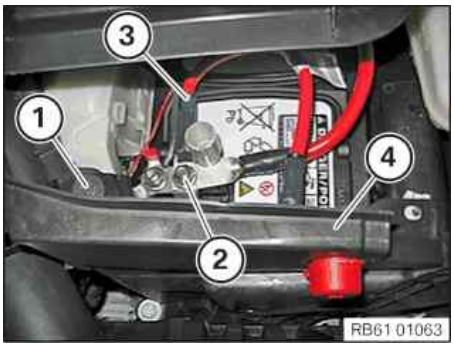
Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm

cardiagn.com



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

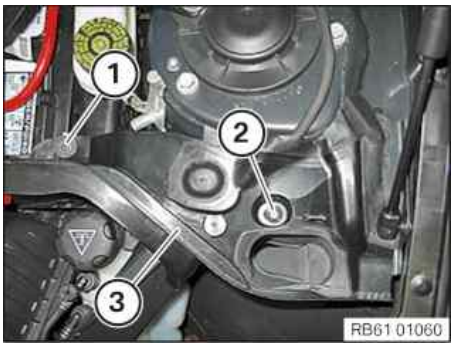
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

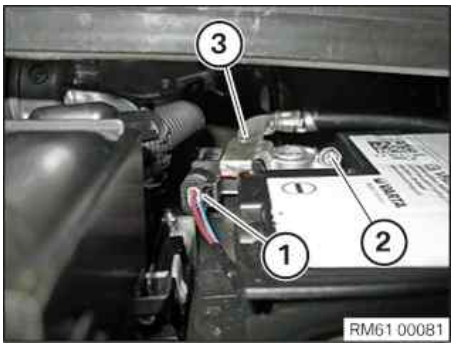
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

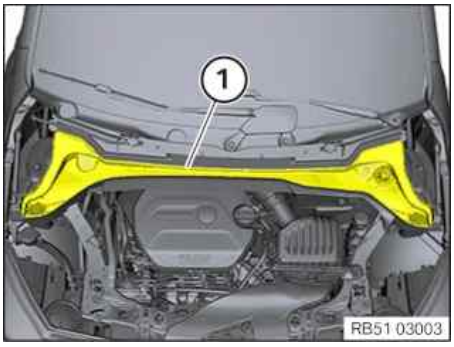


- Position the negative battery terminal (3).
- Tighten nut (2).

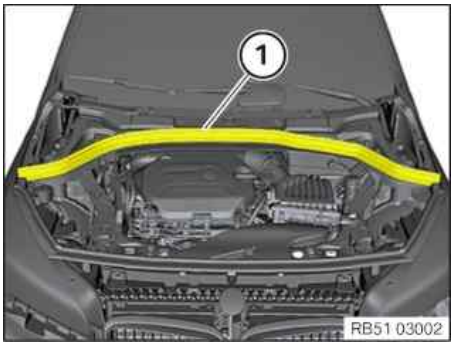
Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.



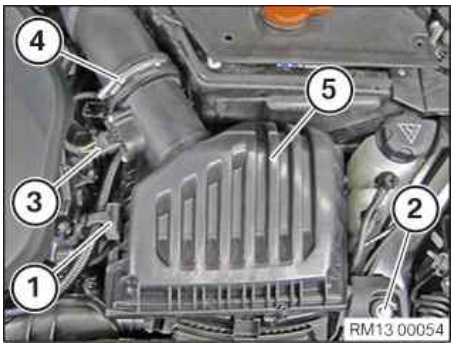
- Feed in the cowl panel cover (1).



- Press the gasket (1) in a downwards direction.

51 – Installing intake silencer housing

cardiagn.com



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

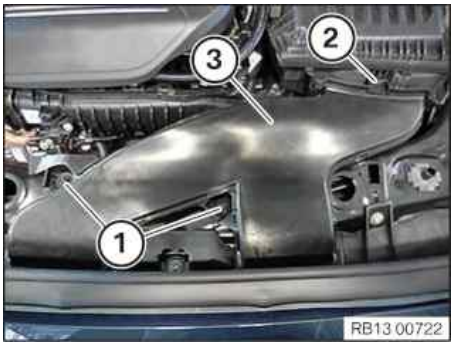
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

52 – Install the intake neck for the intake filter housing

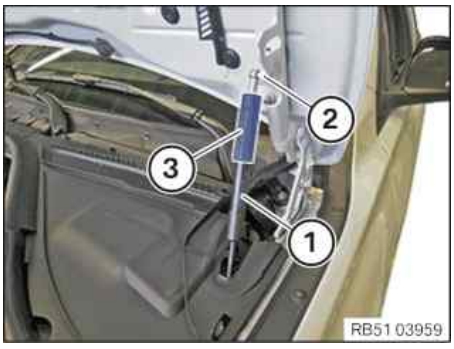


- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

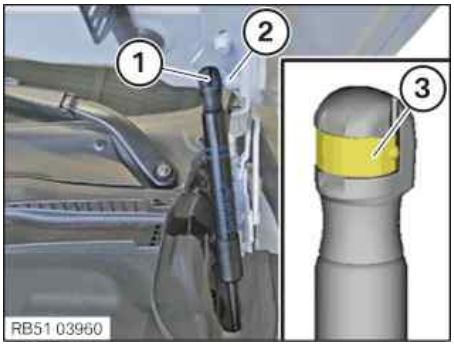
Intake neck to cross connection

M6		Tightening torque	8 Nm

53 – Take bonnet out of the service position



- Support the bonnet by hand.
- Remove the special tool **2 353 020**(3) from the ball pin (2).
- Pull off the special tool **2 353 020**(3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.



CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

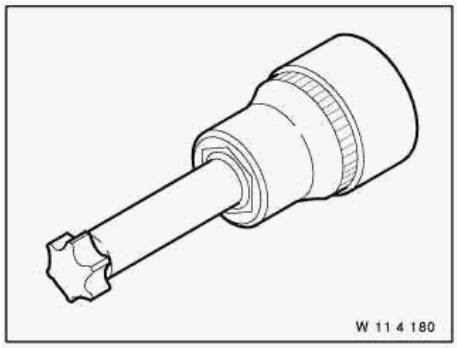
0 491 018 (11 4 180) Socket WAF 46



Common Used in step 26 27

Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

cardiagn.com

2 285 058 Tool set

Common	Used in step 27
Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)

2 358 471 Clutch tool

Common	Used in step 28
Usage	For installation of coupling drive plate.. (Getrag transmission) . Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A55
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

2 409 230 Mandrel

Common	Used in step 31 32
Usage	For installing the rear-wheel drive of Transmission output shaft le./ri. silhouette foil is contained in delivery specification. Further information on the contour-graphic silhouette foil is included in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A75
Replaced by	
In connection with	
SI-Number	01 56 14 (214)

cardiagn.com

2 344 011 Tool

Common	Used in step 44
Usage	Tool (wheel hub grinder) for cleaning the connection of the wheel rim (wheel contact face) to the wheel hub.
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	08 08 12 (872)

2 353 020 Support

Common	Used in step 53
Usage	For service position of engine compartment lid Associated contour-graphic silhouette foil can be ordered under: 83 30 2 356 848. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A74
Replaced by	
In connection with	
SI-Number	01 11 13 (960)

Replacement tools:

0 495 221 (36 1 323) Wheel stud

Common	Used in step 9
Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with

11 22 000 Removing and installing/replacing the flywheel

WARNING

Motor vehicle may slip off the vehicle hoist where components are supported.

Danger! Life-threatening injuries!

- Secure the vehicle hoist against lowering and lifting.

WARNING

Motor vehicle may slip off the vehicle hoist if the weight is distributed unevenly.

Danger! Life-threatening injuries!

- Ensure there is a specific weight compensation on the motor vehicle.

WARNING

Vehicle may slip off the vehicle hoist if the vehicle hoist is handled incorrectly.

Danger! Life-threatening injuries!

- Observe safety information on raising the vehicle using a vehicle hoist.
- For additional information see: 00 ... Raising the vehicle using a vehicle hoist.

CAUTION

Component with heavy weight.

Danger of injury!

- Note component's centre of gravity.
- Support component using a jack.
- Secure component against falling off the jack.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

PRELIMINARY WORK

1 – Bring front compartment lid in the service position

Prerequisite

Engine compartment lid is open.

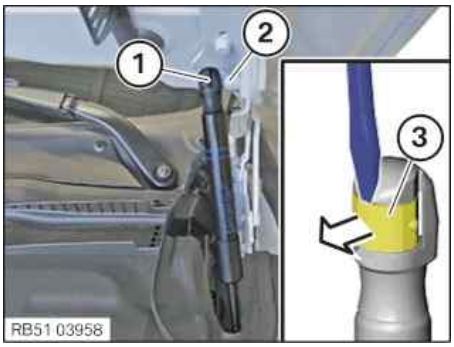
cardiagn.com

CAUTION

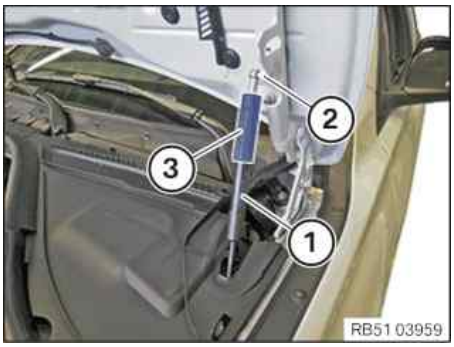
Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.



- Lift clamp (3) slightly using a screwdriver, in the direction of the arrow.
- Lift off ball socket (1) from ball pin (2).
- Repeat the operation on the other side of vehicle.



TECHNICAL INFORMATION

Conduct the following operation with the assistance of a second person.

- Remove the bonnet support and open the bonnet further.
- Push special tool **2 353 020** (3) over gas pressure spring (1).
- Place special tool on the ball pin (2) and engage using force.
- Repeat the operation on the other side of vehicle.

2 – Remove vehicle battery

WARNING

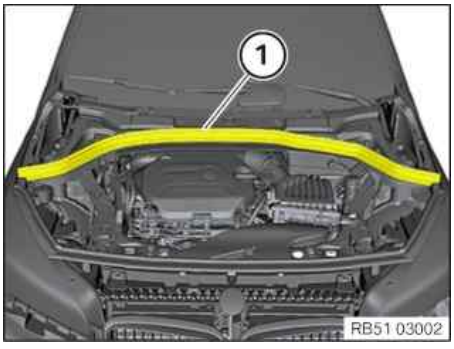
Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

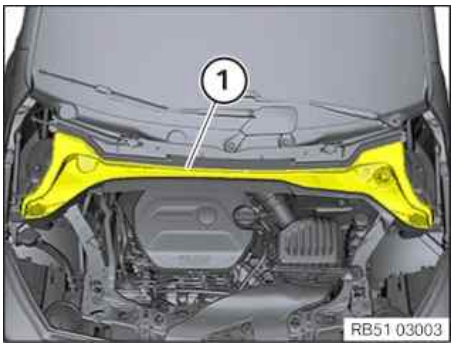
TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)

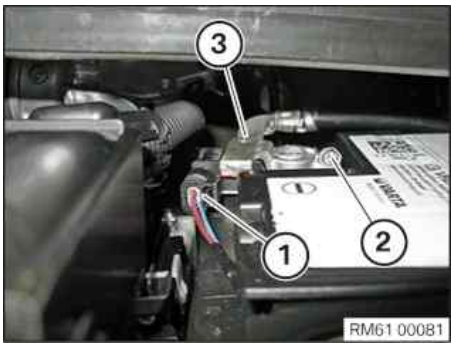


- pull off gasket (1) upwards.

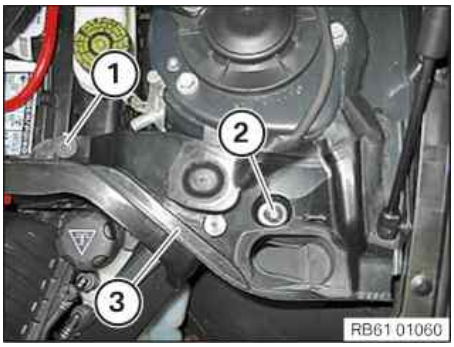
cardiagn.com



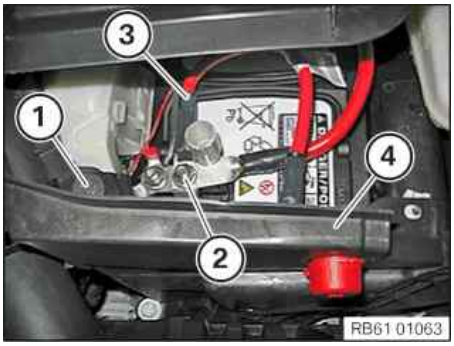
- Remove the cowl panel cover (1) to the top.



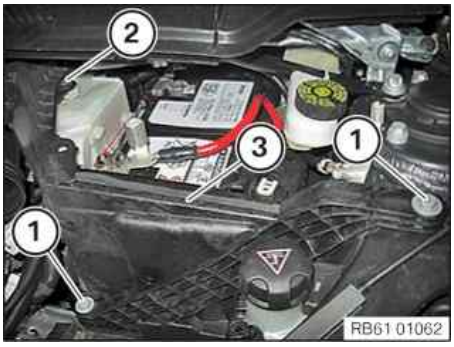
- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).



- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

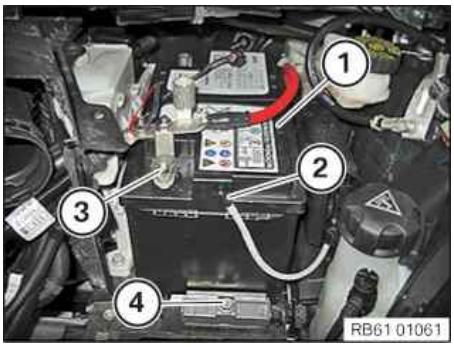


- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.

cardiagn.com



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

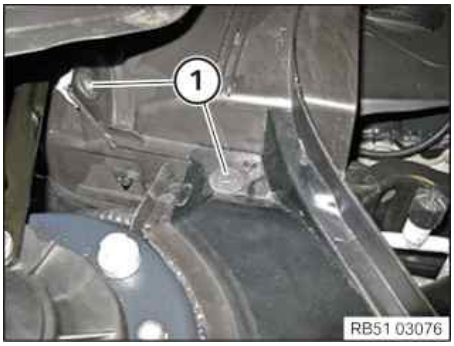
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

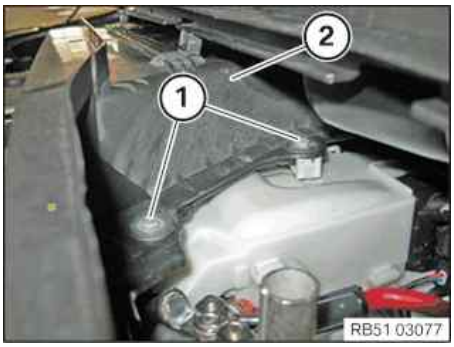
- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

3 – Removing the upper bulkhead cover

- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

4 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

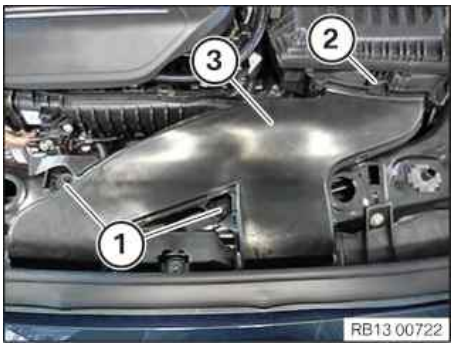
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

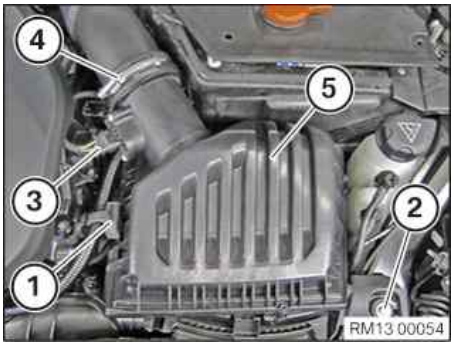
- Unclip the acoustic cover from the marked areas towards the top.

5 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

6 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

7 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

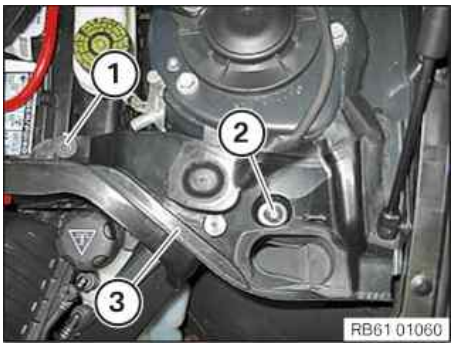
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

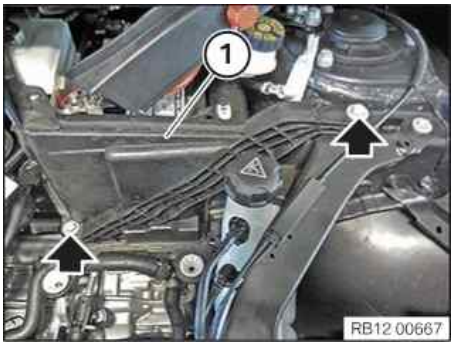
TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

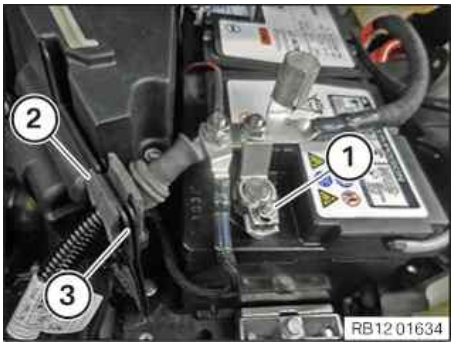


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

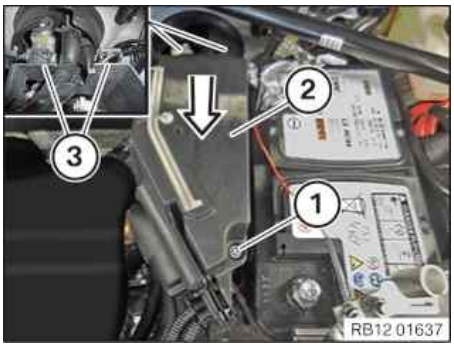


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

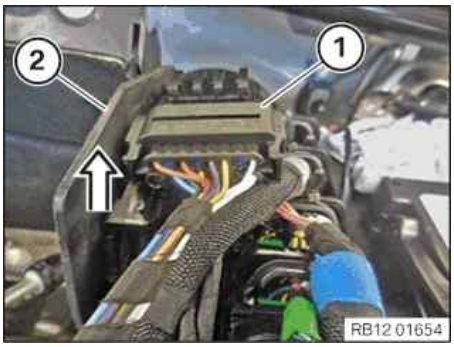


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

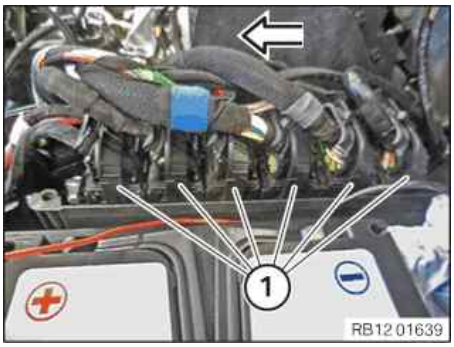
cardiagn.com



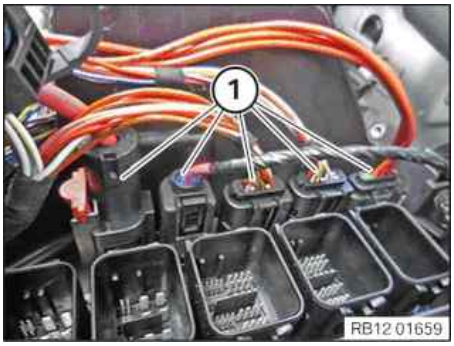
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



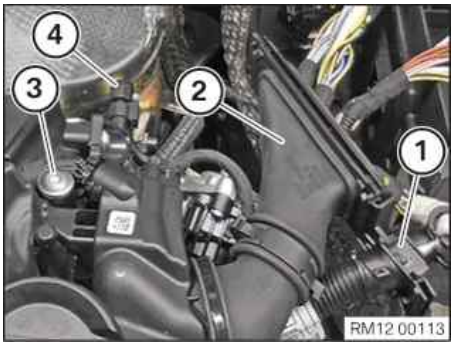
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



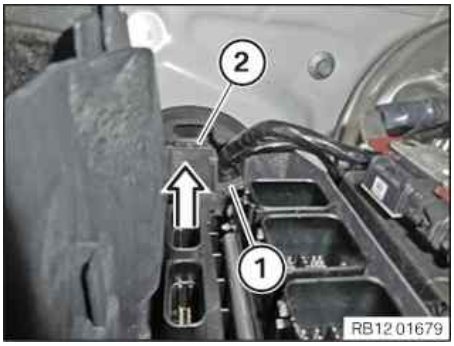
- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.



- Unlock and loosen connector (1).

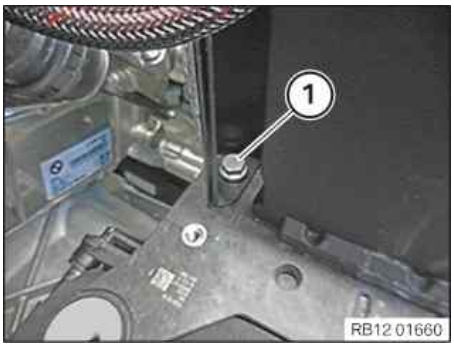


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

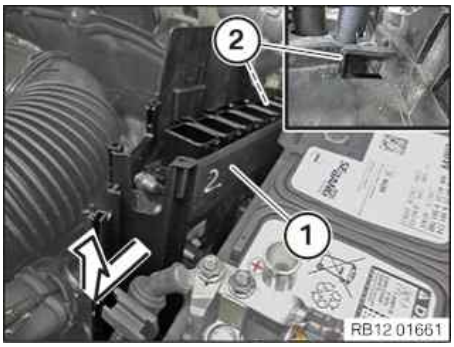


- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

cardiagn.com

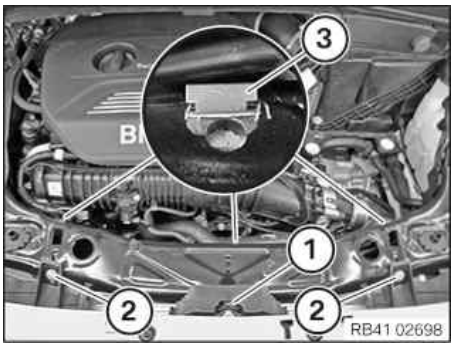


- Loosen screw (1).

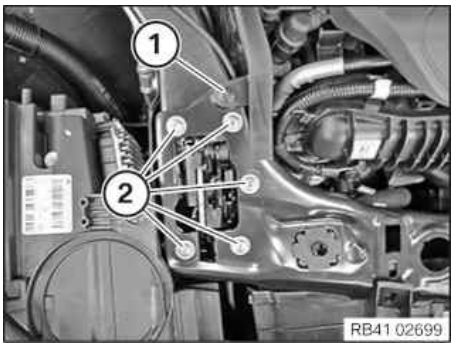


- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

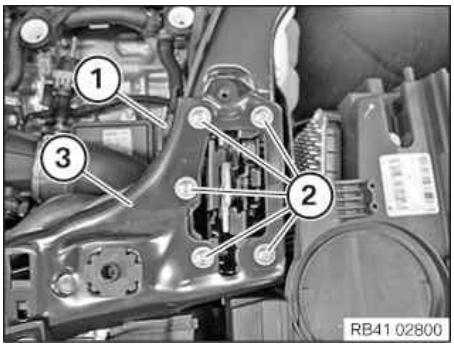
8 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

9 – Removing the fan cowl with electric fan

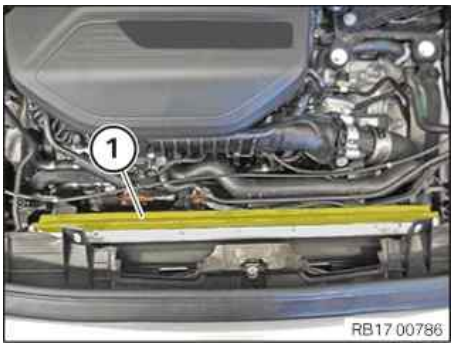
cardiagn.com

WARNING

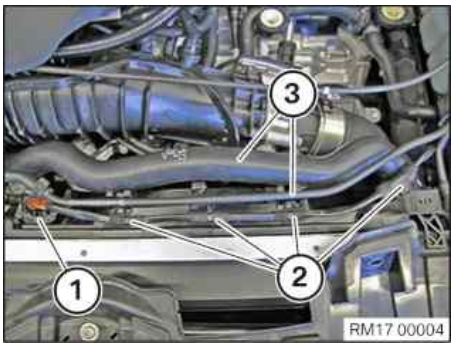
Hot surfaces.

Risk of burning!

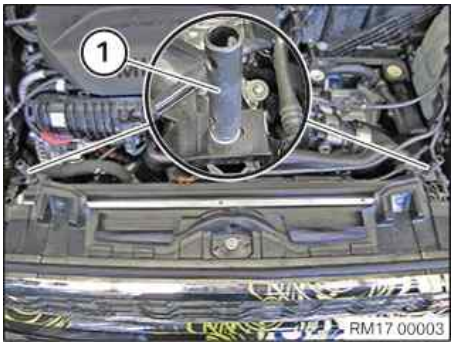
- Perform all work only on components that have cooled down.



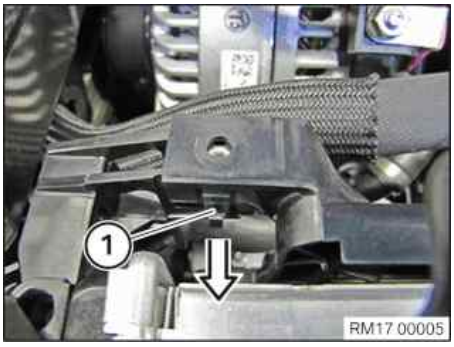
- Feed out and remove the sealing (1) from the radiator.



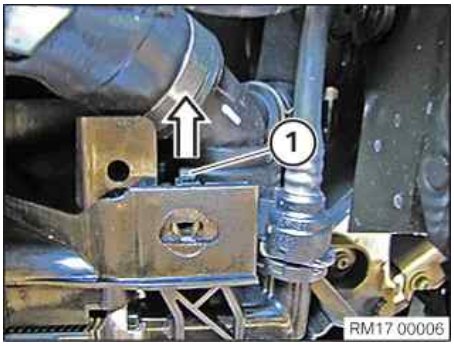
- Unlock plug connection (1) and disconnect.
- Unlock and loosen the clamps (2).
- Feed out connector (1) and place to one side.
- Thread off coolant line (3) and place to the side.



- Loosen screws (1).

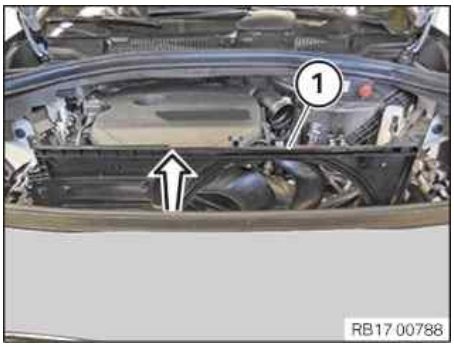


- Unlock the right lock (1) on the fan cowl in the direction of the arrow.



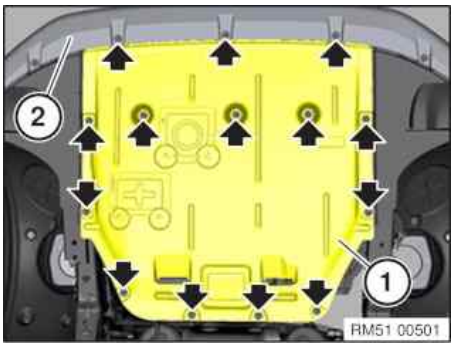
- Unlock the left lock (1) on the fan cowl in the direction of the arrow.

cardiagn.com



- Guide out fan cowl (1) in direction of arrow and remove.

10 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

11 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

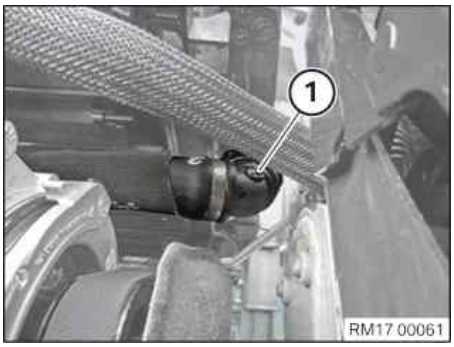
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

TECHNICAL INFORMATION

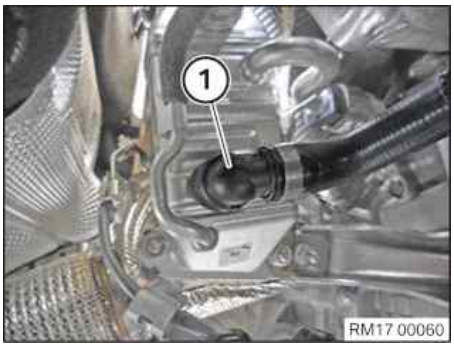
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).

cardiagn.com



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.

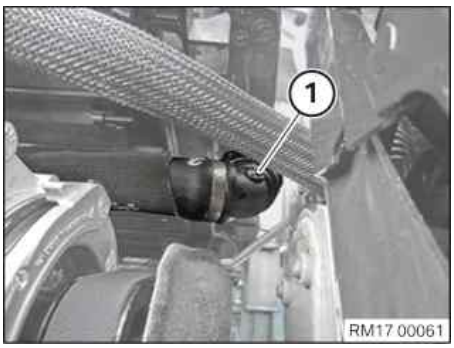


- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

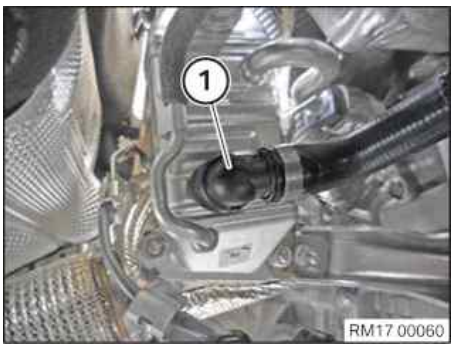
12 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



- Connect the right coolant line (1) to the radiator and lock audibly.



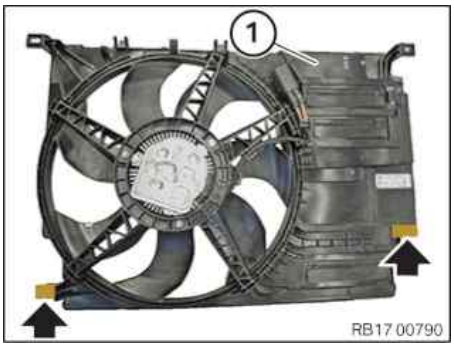
- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

13 – Installing fan cowl with electric fan

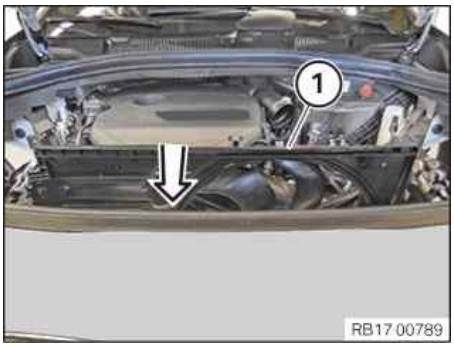
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

cardiagn.com

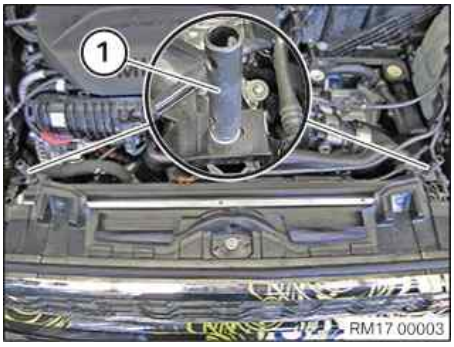


- Feed the guides (arrows) of the fan cowl (1) into the charge air cooler.



- Feed in and install the fan cowl (1) in the direction of the arrow.

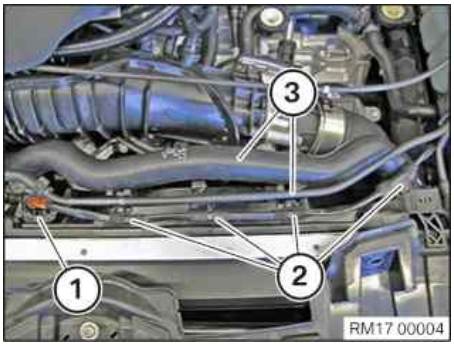
- Lock the left and right locks (arrows).



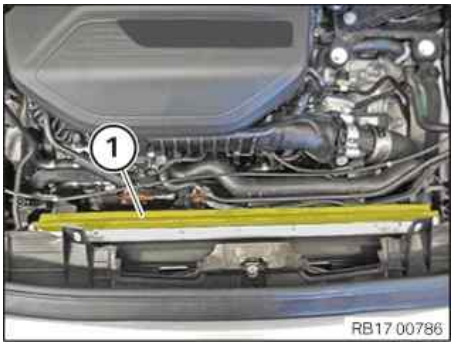
- Tighten the screws (1).

Fan cowl on radiator

M6X12		Tightening torque	6 Nm



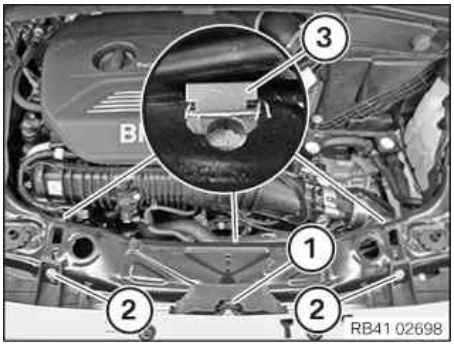
- Connect connectors (1) and lock.
  The connector (1) must engage audibly.
- Secure clamps (2).
- Thread in and install coolant line (3).



- Guide the sealing (1) on the radiator in and install it.

cardiagn.com

14 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

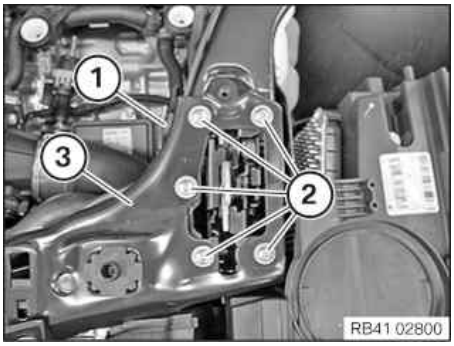
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.

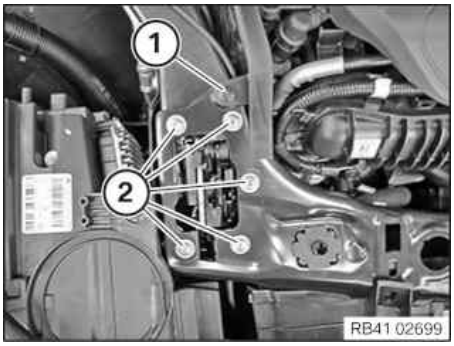


- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



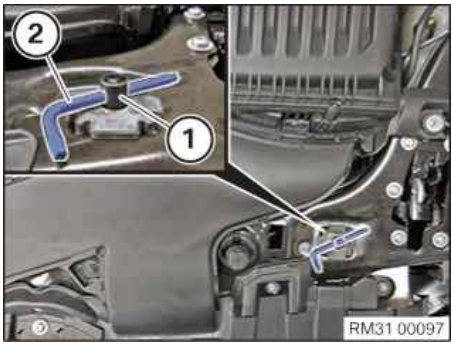
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

15 – Securing radiator on left and right

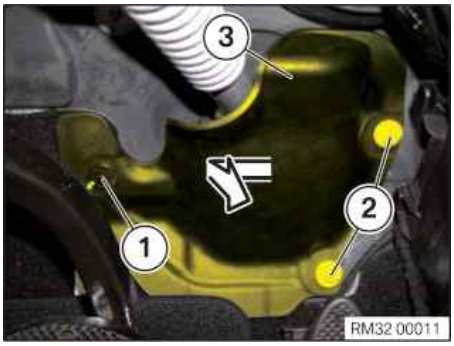


NOTICE

Perform the operations on the left and right side.

- Fasten radiator at centring pin (1) with suitable tool (2).

16 – Releasing lower steering shaft from steering gear

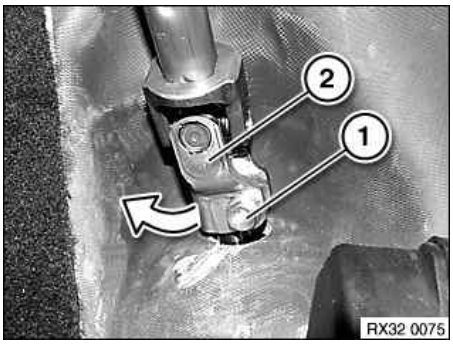


- **If installed:**
- Unfasten nut (1).
- Unscrew the nuts (2) by 1 rotation.

  Do not remove the nuts (2) !
- Remove the cover (3) on the steering column in the direction of the arrow.

  The side footwell trim must not be disassembled!

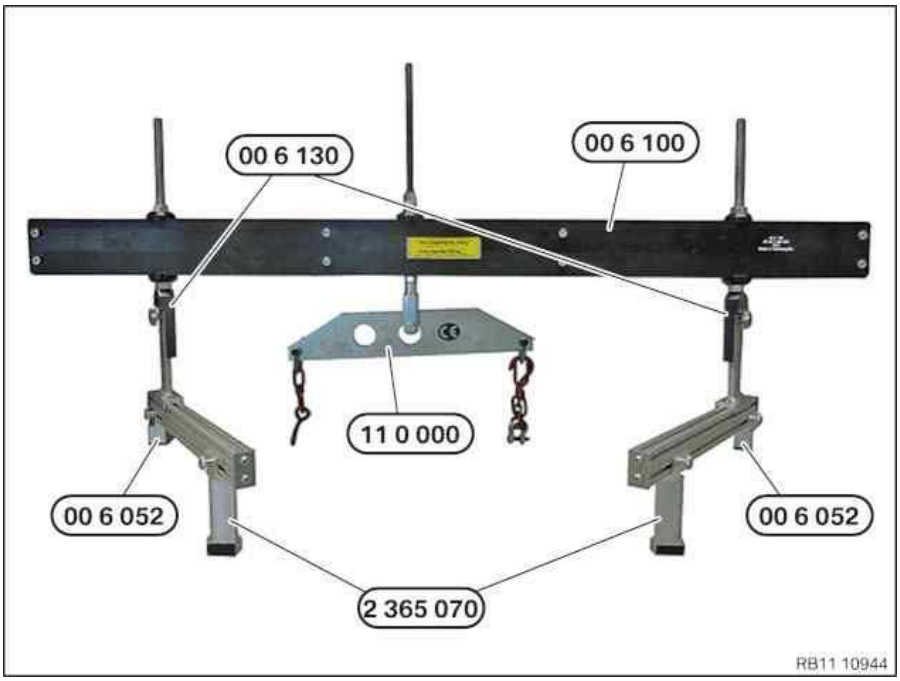
cardiagn.com



- Loosen screw (1).
- Swivel out the universal joint (2) of the bottom steering shaft from the steering gear in the direction of the arrow.

17 – Install the engine bridge

Overview: Prepared engine bridge



Prerequisite

Front compartment lid is in service position.

CAUTION

Components connected to the engine joint or cross member.

Danger of injury!

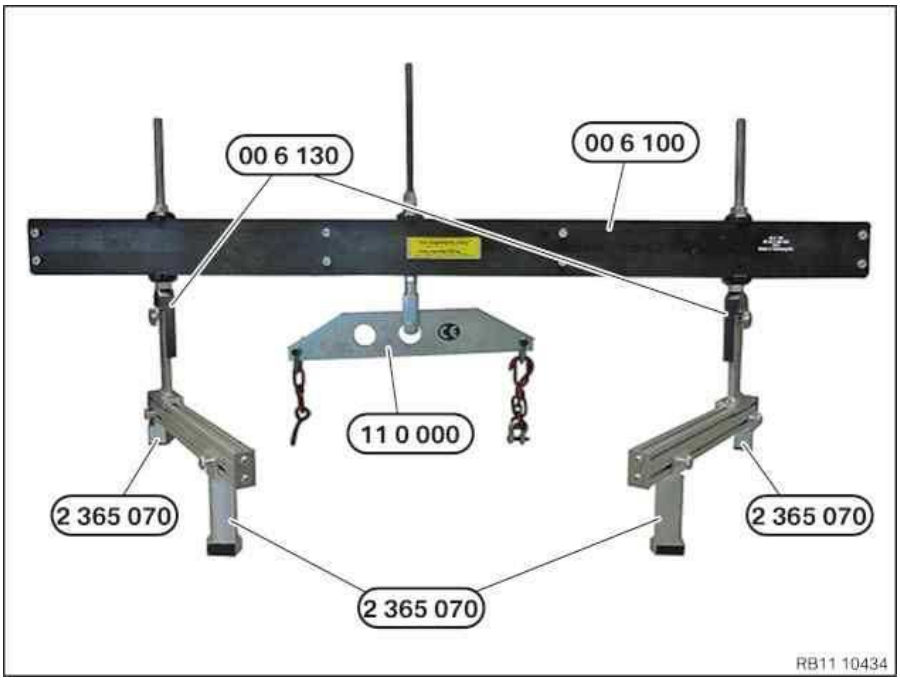
- Check lifting eyes and engine mounting brackets for damage, e.g. cracks.
- Attach the component to correctly mounted engine joints or cross members only.
- Exclusively lift the component, do not move it forwards, backwards or in transverse direction.

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm

cardiagn.com



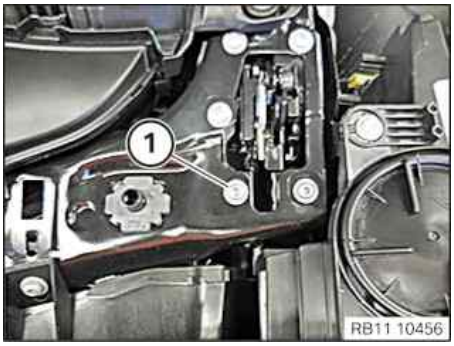
CAUTION

Heavy component.

Heavy components can lead to injury or damage.

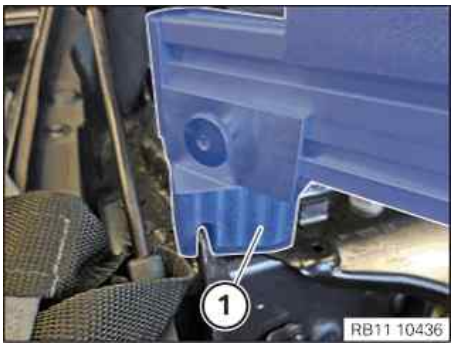
- Remove and install heavy components with the aid of another person/other persons.

- Set entire cross member **0 496 852 (00 6 100)** on the vehicle and position with the help of an auxiliary person.

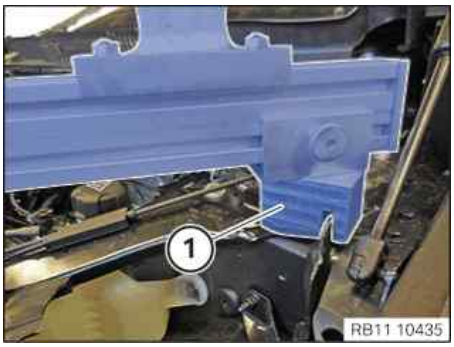


- Loosen screw (1) of the left bonnet catch.

- Loosen screw (1) of the right bonnet catch.

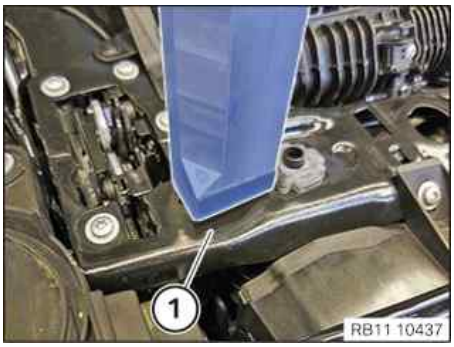


- Position special tool **2 365 070** to the rear mounting point (1) at the right.

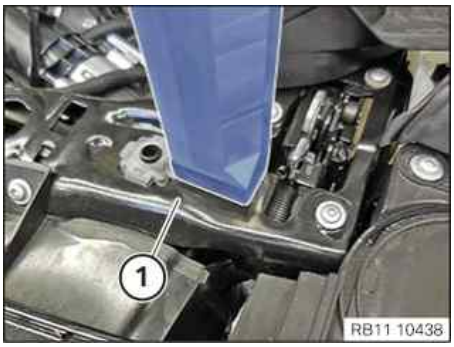


- Position special tool **2 365 070** to the rear mounting point (1) at the left.

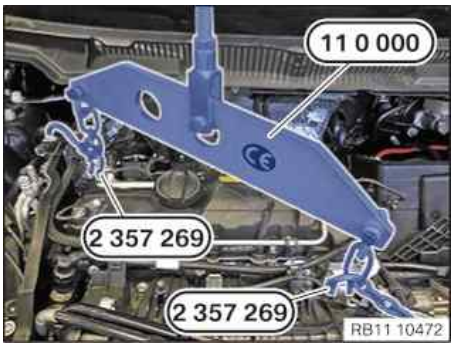
cardiagn.com



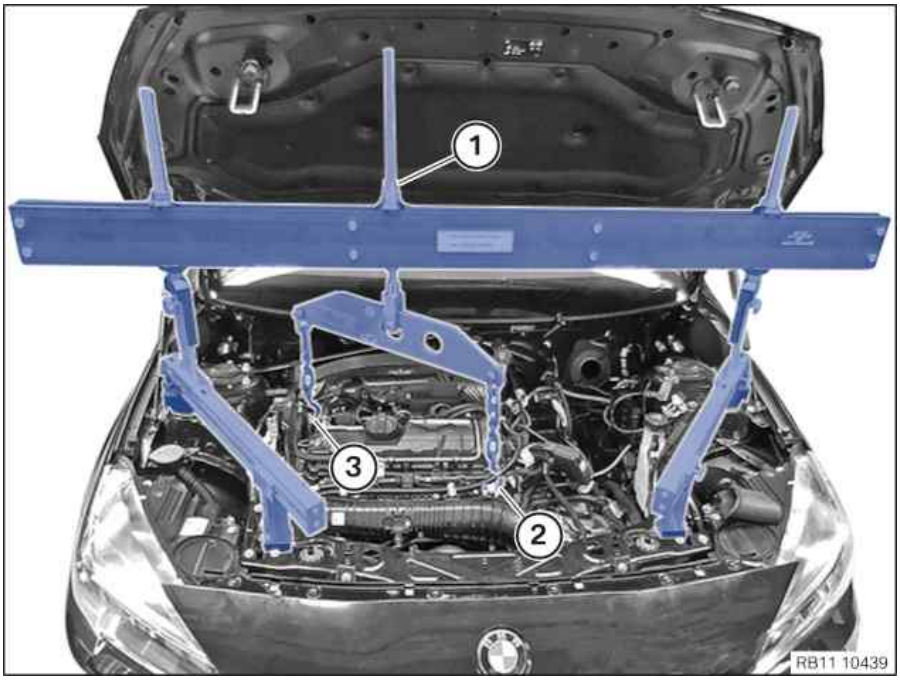
- Position special tool **2 365 070** to the front mounting point (1) at the right.



- Position special tool **2 365 070** to the front mounting point (1) at the left.



- Position special tool **0 490 561 (11 0 000)** above the engine.
- Attach special tools **2 357 269** to the mounting lugs of the engine.



- Tighten side screws (2) and (3).
- Slightly pretension the spindle screw (1) of the engine support beams.
- Tighten down all adjusting screws, knurled screws and nuts on cross member **0 496 852 (00 6 100)** and on special tool .

18 – Remove the front left and right wheel

▸ **Removing the wheel**

cardiagn.com

- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Unscrew the wheel bolts (arrows) and remove the wheel.

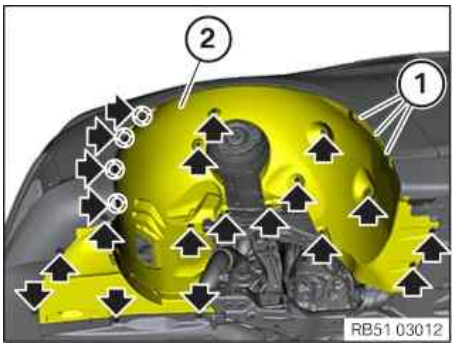
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

19 – Removing front left and right wheel arch cover

NOTICE

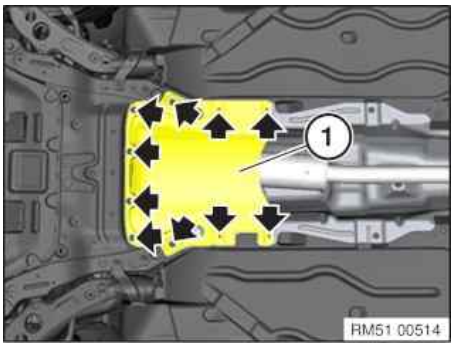
Perform the operations on the left and right side.

▸ **Remove front wheel arch cover**



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed out front wheel arch cover (2).

20 – If installed: Removing rear underbody protection



- Remove screws (arrows).
- Remove the rear underbody protection (1).

21 – Removing starter motor

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

cardiagn.com

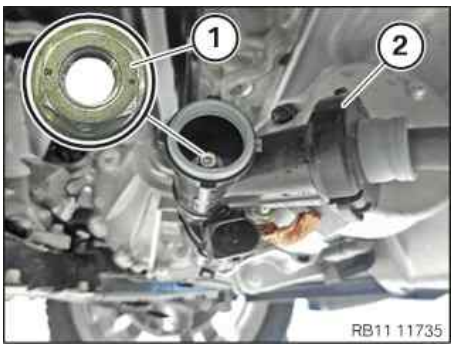
RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

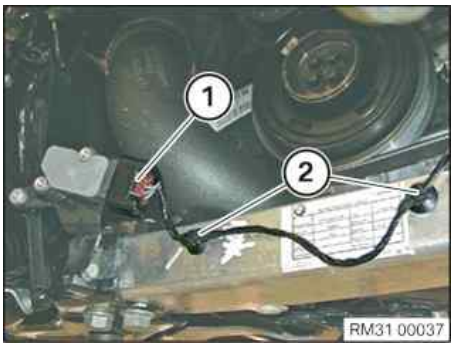
- Unlock and loosen connector (1).
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.

- Loosen screws (1).
- Feed out starter motor and remove.

22 – With right installation: Detaching ride height sensor cable



- Unlock plug connection (1) and disconnect.
- Release cable clip (2) from deformation element adapter.

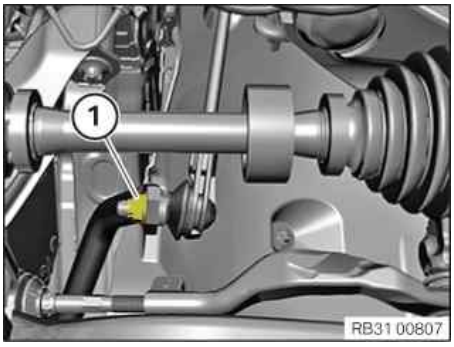
23 – Releasing anti-roll bar on left and right from anti-roll bar link

cardiagn.com

NOTICE

Perform the operations on the left and right side.

▸ **Detach the anti-roll bar from the anti-roll bar link**



- Unfasten nut (1).

Note: Use the Torx socket for counter support.

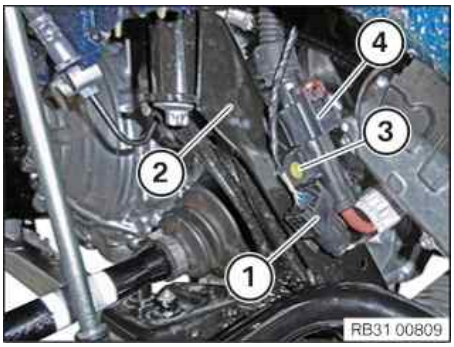
- Loosen the anti-roll bar link from the anti-roll bar .

24 – Detaching rubber mount from front axle support

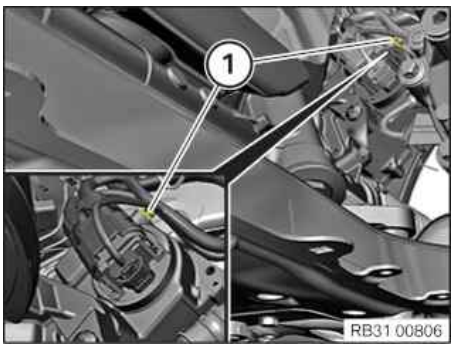
- Spray rubber mount (1) with lubricant and release from holder on front axle support.

25 – Disconnecting plug connections from steering gear

▸ **If installed: Detach connectors from the front axle carrier**



- Release the plug connection (1) from the front axle support (2).
- Loosen screw (3).
- Release the plug connection (4) from the front axle support (2).

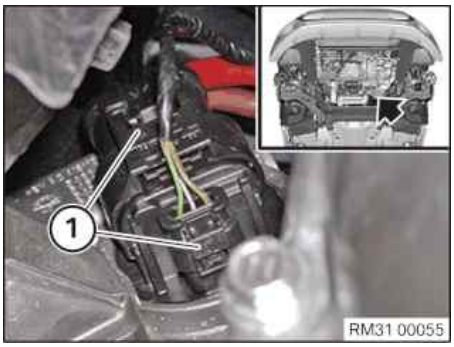


- Disconnect wiring harness (1) from steering gear.

cardiagn.com

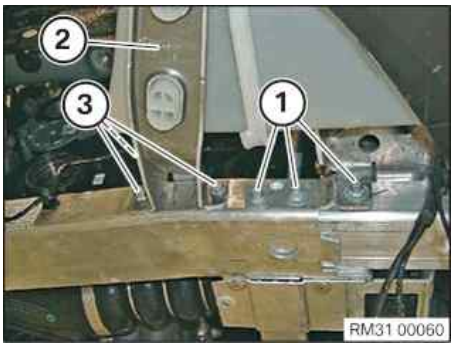
- To unlock the plug connections (see the following work step): unlock plug connections (arrow) with the right hand.

  The plug connections can be reached via the left-hand output shaft.



- Unlock plug connections (arrow) (1)and disconnect from the steering gear.
- Make sure when lowering the front axle that the cables are not damaged!

26 – Releasing the mounted part from the front axle support

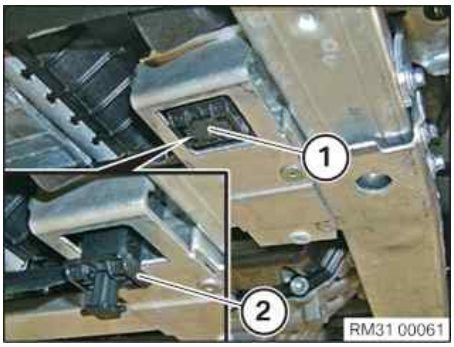


- **Only on right side:** Loosen screws (3) and remove holder for washer fluid reservoir (2).

NOTICE

Perform the operations on the left and right side.

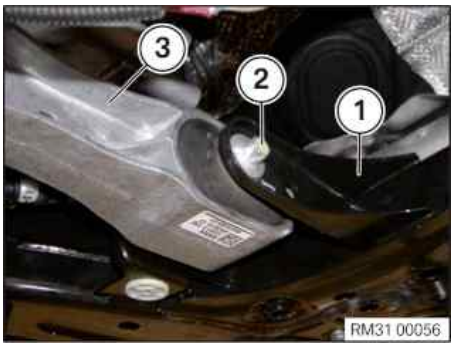
- Loosen screws (1).



NOTICE

Perform the operations on the left and right side.

- Unlock safety catch (1) of the lock (2) from the holder for the charge air cooler.
- Completely remove locks (2).



- Loosen screw (2) of the engine support (3) on the front axle (1).

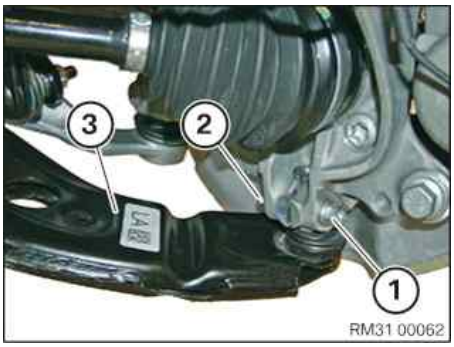
cardiagn.com

NOTICE

Perform the operations on the left and right side.

- Loosen screws (1).

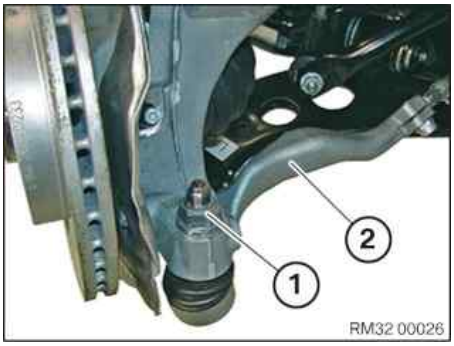
27 – Detaching and removing front axle completely



NOTICE

Perform the operations on the left and right side.

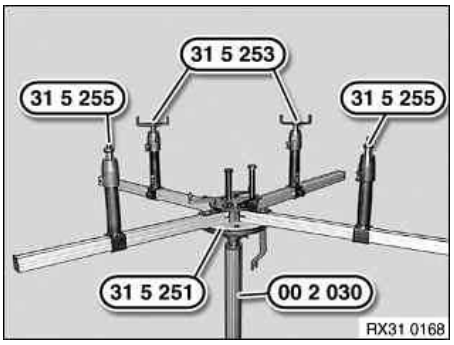
- Unfasten nut (1).
- (2)Pull out screw.
- Detach the wishbone (3) from the swivel bearing .



NOTICE

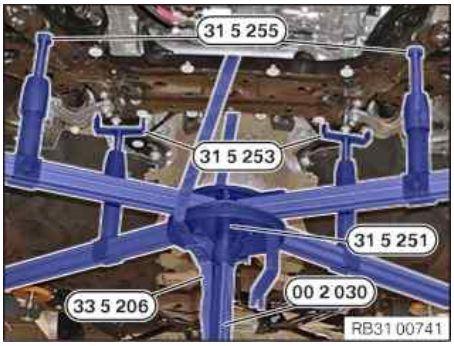
Perform the operations on the left and right side.

- Unfasten nut (1).
- Detach the track rod (2) from the swivel bearing.



- Fit the special tool **0 495 817 (31 5 251)** completely onto the workshop jack **0 490 133 (00 2 030)** with an auxiliary person.
- Insert special tools **0 495 821 (31 5 255)** in telescopic supports of a profile rail pair.
- Insert special tools **0 495 819 (31 5 253)** in telescopic supports of other profile rail pair.

Note: In a profile rail pair, two profile rails are connected to one another by gearing.

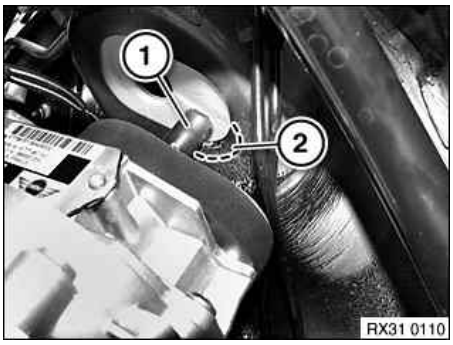


- Align special tools **0 495 821 (31 5 255)** and **0 495 819 (31 5 253)** to front axle support.
- Support front axle support by operating workshop jack **0 490 133 (00 2 030)**.

Note: The centre of gravity of the front axle support must be positioned centrally over the workshop jack!

- Secure front axle support with special tool **0 496 080 (33 5 206)** to special tool **0 495 817 (31 5 251)**.

cardiagn.com

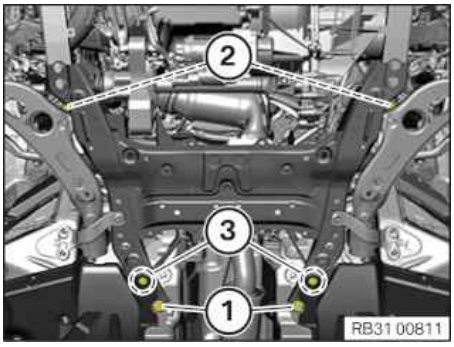


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



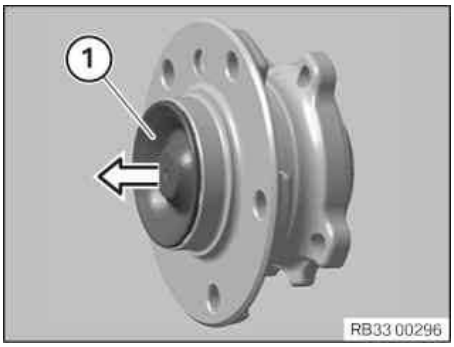
- If applicable, release the screws in area (3).
- Release screws (1) (front axle support, rear).
- Release screws (2) (front axle support, front).
- Bend the underbody panelling to the side in area (3).
- When lowering, release charge air cooler from its rubber mounts.
- Completely lower and remove the front axle.

TECHNICAL INFORMATION

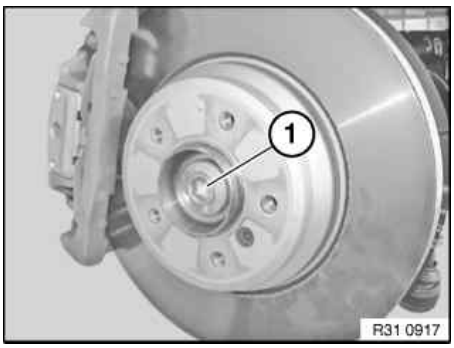
Note the information on thread repairs using Helicoil thread inserts.
For more information see: 41 00 ... Notes on repairing threads

- Check threads for damage; if necessary, repair with Helicoil thread inserts.

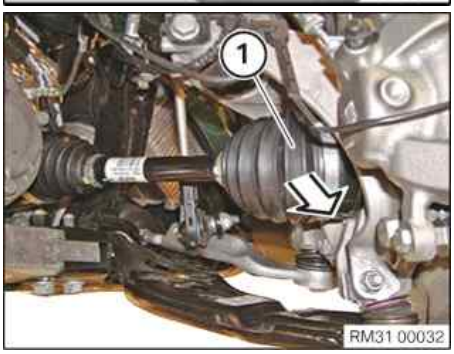
28 – Remove the left drive shaft (double-clutch transmission (DKG))



- If necessary, lever off the protective cap (1).

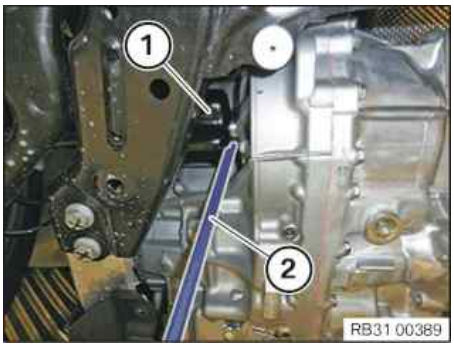


- Press the brake pedal to the floor to unscrew the collar bolt (1).



- Turn steering wheel to left.
- Pull the output shaft (1) out toward the front.

cardiagn.com



- Protect the output shaft (1) from falling.
- Lever out the output shaft (1) with a mounting lever (2) from the transmission.
- Remove output shaft (1).

▸ **Removing the left radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

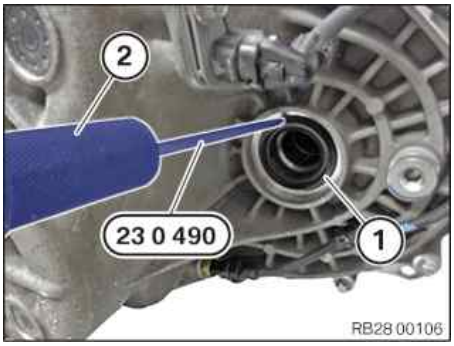
Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

TECHNICAL INFORMATION

Clean the transmission around the radial shaft seal prior to removing the propeller shaft!
Transmission oil (at maximum 0.3 l) may escape from the radial shaft seal opening when pulling off the propeller shaft!
Collect and dispose of escaping transmission oil!

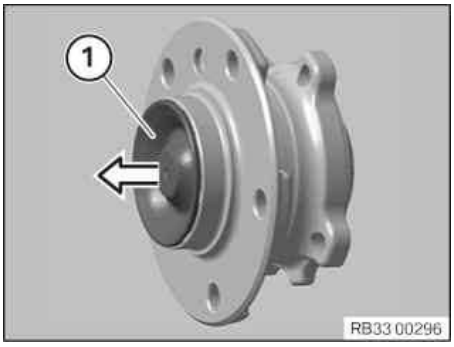


TECHNICAL INFORMATION

Do not use a drill.
Swarf may damage the transmission and result in a failure of the transmission.

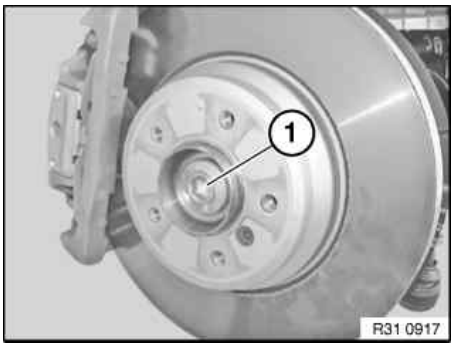
- Drill a hole in the radial shaft seal (1) using a centre punch.
- Screw special tool **0 491 454 (23 0 490)** in the radial shaft seal (1).
- Drive out radial shaft seal (1) with the impact weight (2).

29 – Removing right output shaft (double-clutch transmission (DKG))

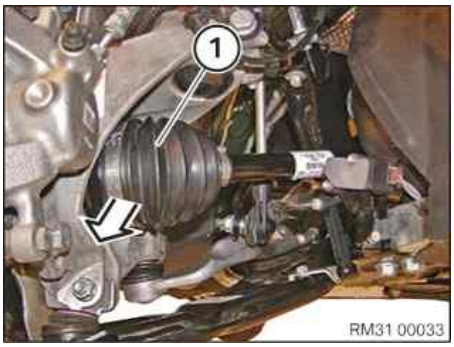


- If necessary, lever off the protective cap (1).

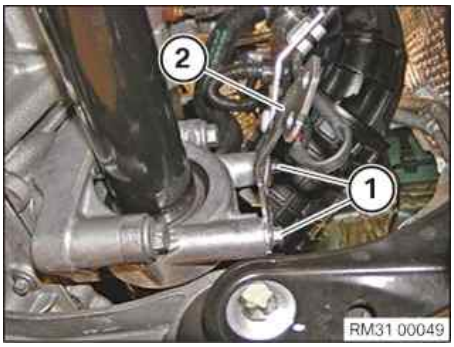
cardiagn.com



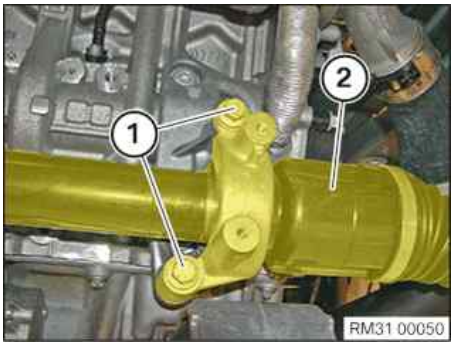
- Press the brake pedal to the floor to unscrew the collar bolt (1).



- Protect the output shaft (1) from falling.
- Turn steering wheel to right.
- Pull the output shaft (1) out.



- If necessary, unscrew the bolts (1) and remove the holder (heat shield) (2).



- Loosen screws (1).
- Pull the output shaft (2) out of the transmission and remove it sideways.
- Remove output shaft (1).

▸ Removing the right radial shaft seal on the differential (7DCT300)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

cardiagn.com

TECHNICAL INFORMATION

Clean the transmission around the radial shaft seal prior to removing the propeller shaft!
Transmission oil (at maximum 0.3 l) may escape from the radial shaft seal opening when pulling off the propeller shaft!
Collect and dispose of escaping transmission oil!

TECHNICAL INFORMATION

Do not use a drill.
Swarf may damage the transmission and result in a failure of the transmission.

- Drive a hole into the radial shaft seal (1) using a centre punch.
- Screw the special tool **0 491 454 (23 0 490)** into the radial shaft seal (1).
- Drive out the radial shaft seal (1) with the impact weight (2).

30 – Removing the double-clutch transmission (DKG)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

RISK OF DAMAGE

Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

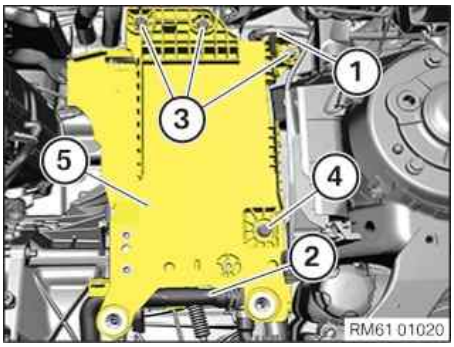
- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.

cardiagn.com

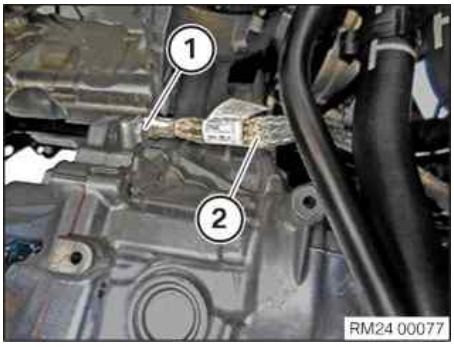
TECHNICAL INFORMATION

It is essential to adhere to conditions of absolute cleanliness.
Any dirty parts must be cleaned before removing the double-clutch transmission (DKG).

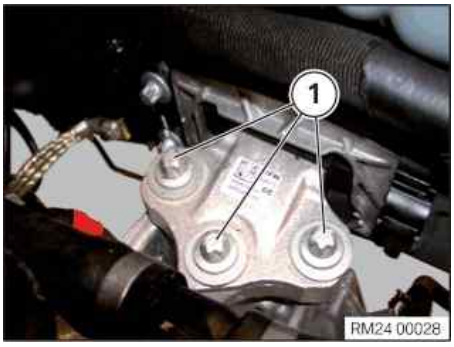
▸ **Remove battery holder**



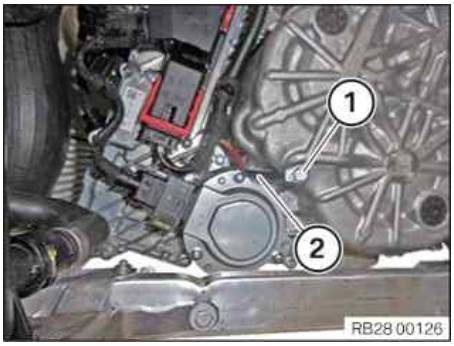
- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).



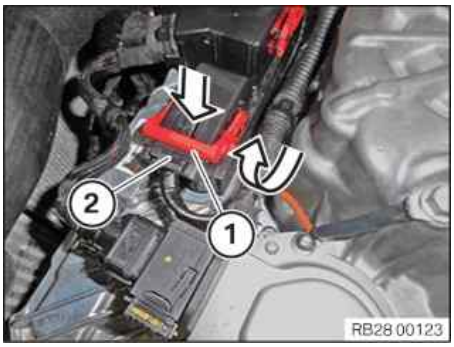
- Loosen screw (1).
- Detach the ground strap (2) from the transmission and set it aside.



- Loosen screws (1).



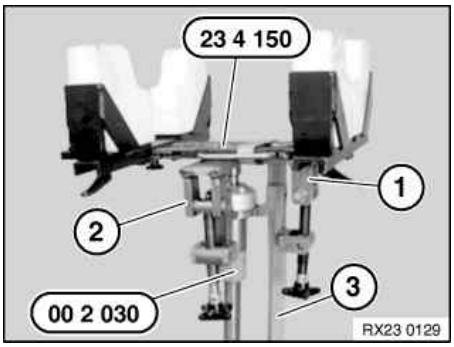
- Release the screw (1) and put the grounding cable (2) to one side.



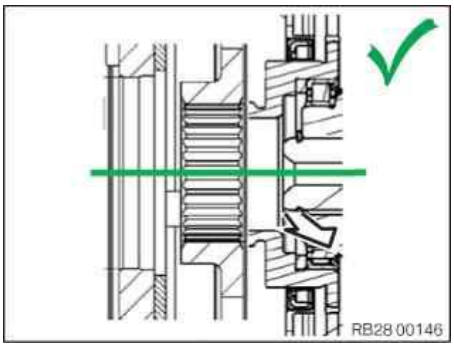
- Fold down the red lever (1) in direction of arrow and pull the plug connection (2) out of the control unit.

cardiagn.com

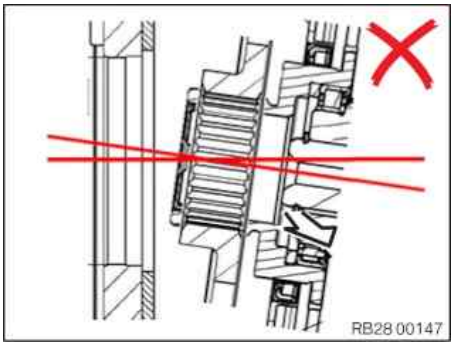
- Unlock and release coolant line (1).



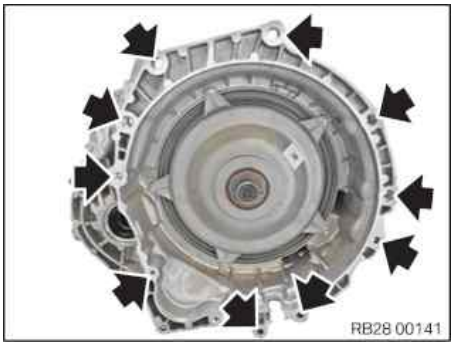
- Support the transmission with special tool **0 490 133 (00 2 030)**and .
- Secure the double-clutch transmission (DKG) with the tensioning strap (3).



- **Correct:** Pull the double-clutch transmission (DKG) horizontally off the flywheel.



- **Wrong:** Do not pull the double-clutch transmission (DKG) off the flywheel if it is tilted.



- Remove screws (arrows).
- Pull the double-clutch transmission (DKG) off the flywheel when it is absolutely horizontal.

MAIN WORK

31 – Remove flywheel (DKG)

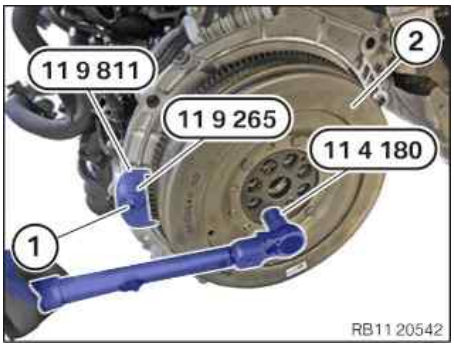
cardiagn.com

CAUTION

Heavy component.

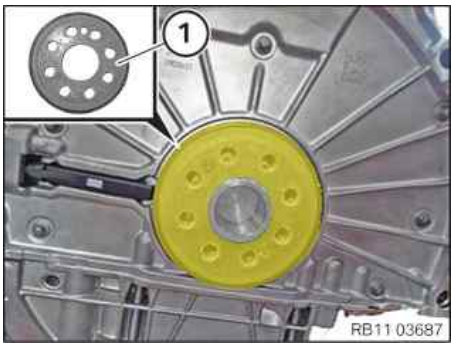
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Position special tool **0 496 171 (11 9 811)** with a **standard** 5 mm thick washer between the crankcase and the flywheel.

  The 5 mm thick washer must be mounted between the crankcase and special tool **0 496 171 (11 9 811)** .
- Secure the special tool **0 494 793 (11 9 265)** with the transmission bolt (1).
- Protect the flywheel (2) from falling.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Guide out the flywheel (2) and remove.



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove increment wheel (1) from the crankshaft and set it aside properly.

32 – Installing the flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

TECHNICAL INFORMATION

Clean all threads with a screw tap.

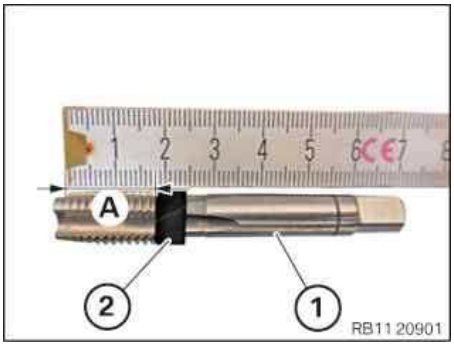
- Clean all the screw threads (1).

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

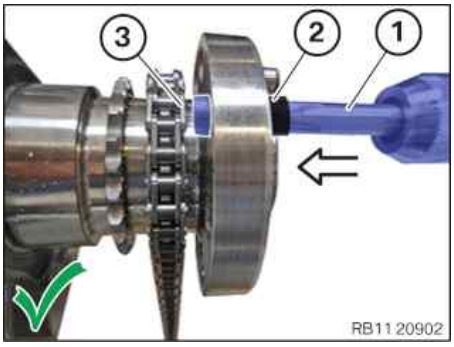
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the depth of insertion (A) on the thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

To provide a better overview: Shown with engine removed.

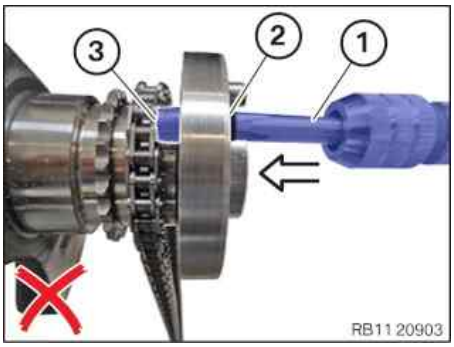
- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).

cardiagn.com

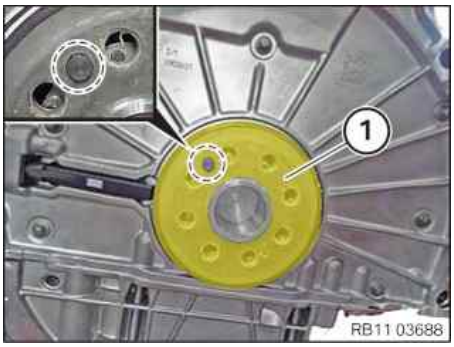


TECHNICAL INFORMATION

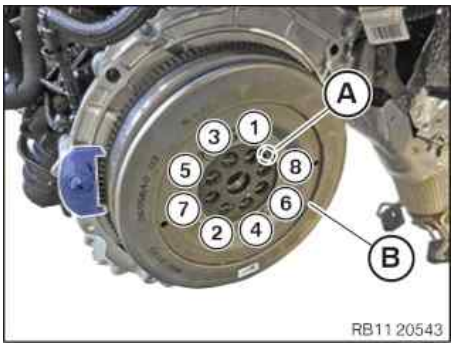
- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

- Make sure that the depth of insertion (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).



- It is essential to observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

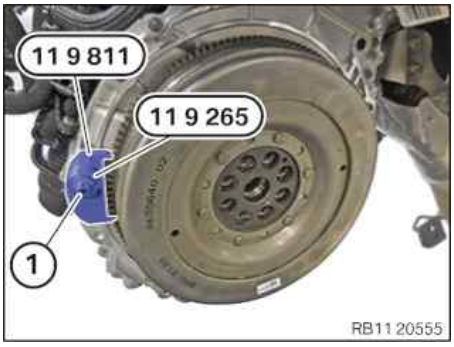


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Thread out special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)** remove.
- Ensure that the washer (5 mm) is removed.

POSTPROCESSES

33 – Installing the double-clutch transmission (DKG)

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the engine block.

Damaged and corroded bolts will lead to major damage in the engine block and the transmission.

- It is imperative that protruding threads of the transmission bolts are checked for corrosion and damage prior to removal.
- It is imperative that all rust is removed from corroded threads and that they are cleaned prior to removal.
- Renew rusted and damaged bolts.

RISK OF DAMAGE

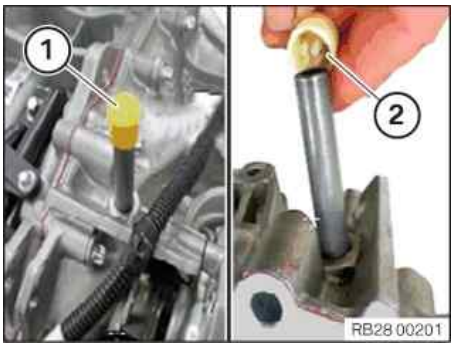
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.

TECHNICAL INFORMATION

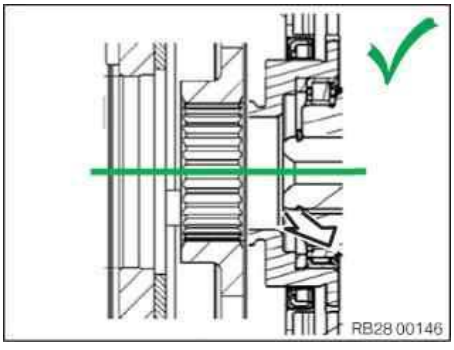
After completing work:
Check gearbox oil level. Use only the approved transmission oil.
Failure to comply with this instruction will result in serious damage to the double-clutch transmission (DKG).



- Remove the protective caps (1) on the new transmission and renew them with the white series vent cap (2).

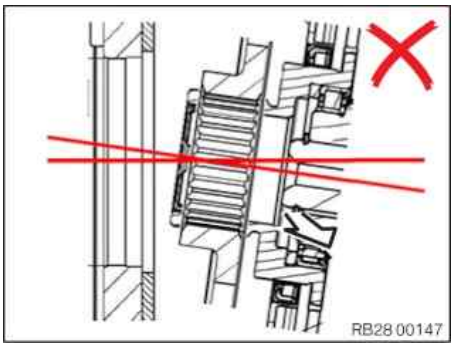
Note: Failure to comply with this may result in damage or leakage in the transmission.

- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.



- **Correct:** Insert the double-clutch transmission (DKG) horizontally into the flywheel.

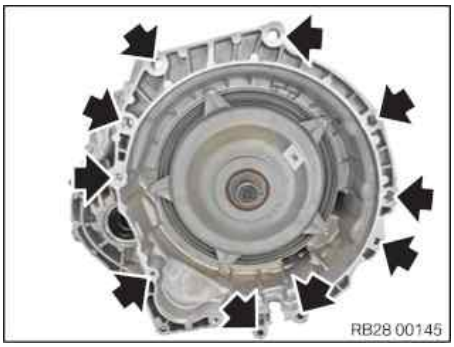
cardiagn.com



- **Wrong:** Do not tilt the double-clutch transmission (DKG) when inserting it into the flywheel.

- Clean the gearing (1) of the drive shaft.
- Coat the gearing (1) with MI-Setral-43N grease (BMW part number 83 23 2 152 082).

  Tooth gaps must be filled with grease up to tooth height.

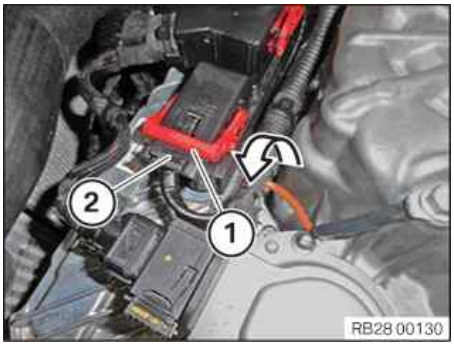


- Flange-mount the double-clutch transmission (DKG) to the engine so that it is absolutely horizontal.
- Hand-tighten the bolts (arrows).
- Tighten screws (arrows).

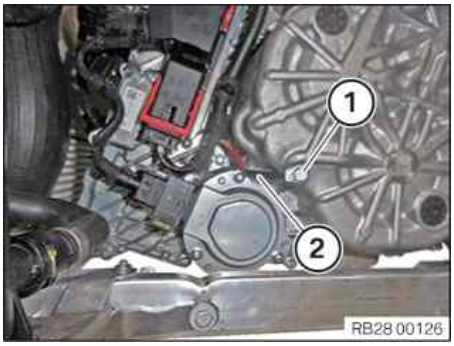
Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Connect and lock the coolant lines (1).



- Install the connector (2) on the control unit and fold down the red lever (1) in the direction of arrow up to the limit position.
- Check the correct fit of the plug connection (2).

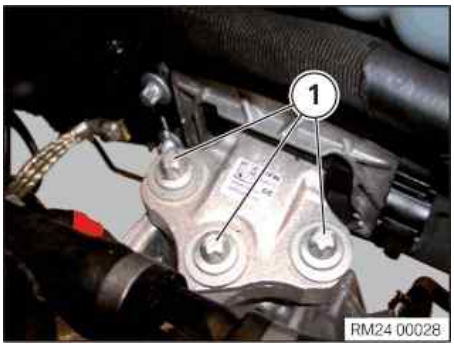


- Install the grounding cable (2) and tighten the bolt (1).

Standard screw connection M6

M6		8 Nm

cardiagn.com

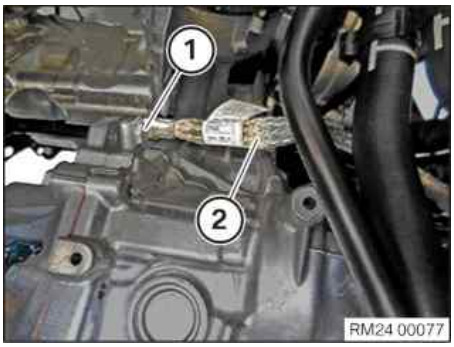


- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Transmission mounting

M10	Renew screws.	Jointing torque Angle of rotation	40 Nm 90 °

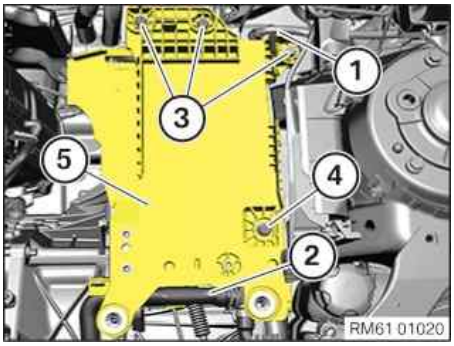


- Screw ground strap (2) onto transmission with screw (1).

Standard screw connection M8

M8		Tightening torque	19 Nm

▸ **Install the battery holder**



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

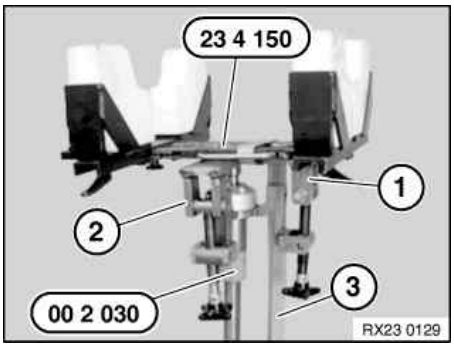
Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).



- Loosening the tensioning strap (3).
- Remove special tools **0 490 133 (00 2 030)** and .

34 – Installing left output shaft (double-clutch transmission (DKG))

▸ **Installing the left radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

cardiagn.com

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

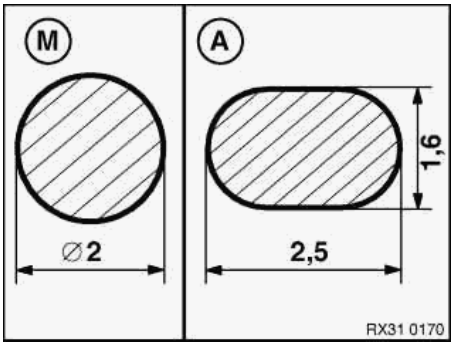
- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Coat sealing lips of radial shaft seal with transmission oil.
- Drive in radial shaft seal using the special tool **2 409 230** into the transmission housing.

  The sealing ring must close flush with the transmission housing.

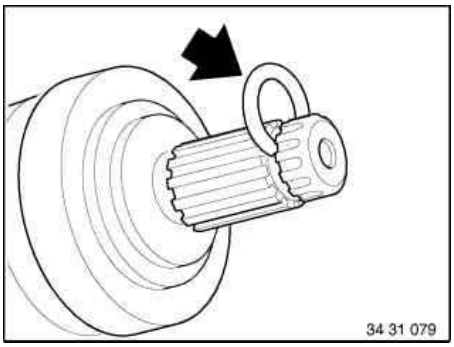
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).

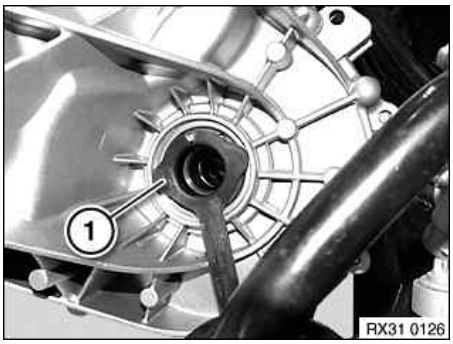


- Do not mix up circlips.

  Different types of output shafts fitted:
  - M: Manual transmission
  - A: Automatic transmission

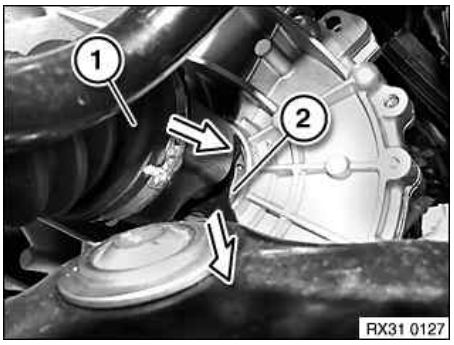


- Renew circlip (arrow).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

cardiagn.com

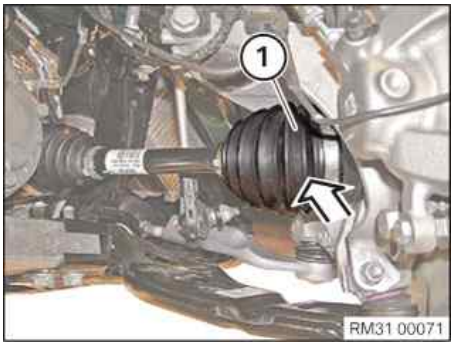


- Insert output shaft (1) into transmission.

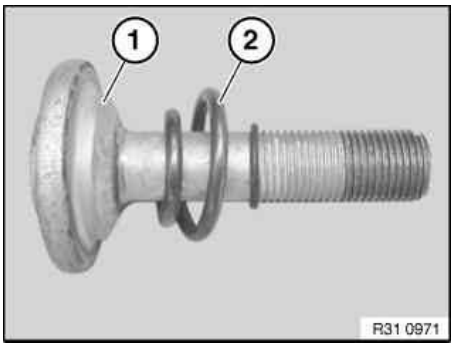
Note: Make sure the output shaft is joined in parallel to the axle and without being entangled.

- **Manual gearbox only:** Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.

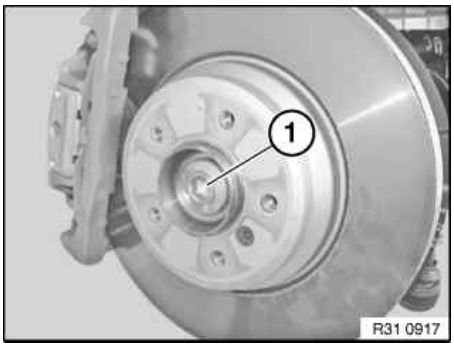
  The output shaft (1) must engage audibly.
- Check for secure seat by levering.



- Turn steering wheel to left.
- Insert the output shaft (1) into the swivel bearing from the front.

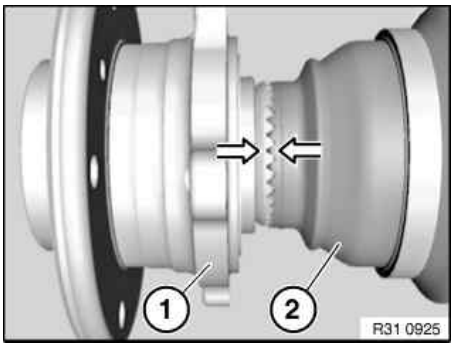


- Note installation position of compression spring (2).
- Keep the collar bolt (1) and the front gearing of the wheel bearing and the output shaft clean and free of grease.



- Renew collar bolt (1) with compression spring.

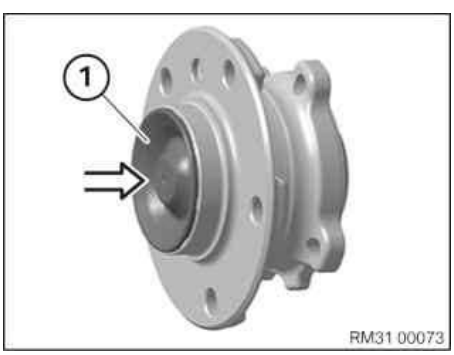
  Parts: Collar bolt with compression spring
- Hand-tighten the collar bolt (1) with the compression spring.



- Install the front gearing of the wheel bearing (1) and output shaft (2) in an interlocking position (tooth-in-tooth position).
- Check whether the front gearing is locked tooth in tooth by reciprocally rotating wheel hub and the output shaft.
- When positive locking is ensured: Tighten the collar bolt to tightening torque. For this purpose, press the brake pedal.

Output shaft to wheel bearing

M16	Replace the collar bolt.	Jointing torque	210 Nm
		Angle of rotation	90 °



- If necessary, attach protective cap (1).

cardiagn.com

▸ **Installing the right radial shaft seal on the differential (7DCT300)**

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Damage to the transmission.

Damage to the transmission through unapproved transmission oil.

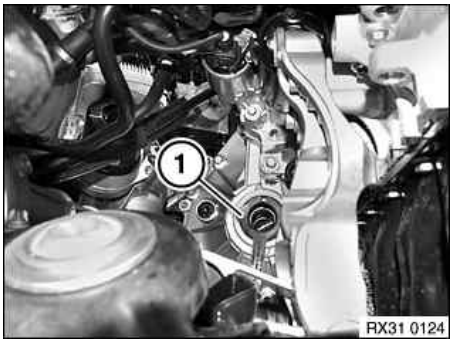
- Use only the approved transmission oil.
- After completion of repair work, check transmission oil level.

- Coat sealing lips of radial shaft seal with transmission oil.
- Drive the radial shaft seal into the gearbox housing using the special tool **2 409 230**.

  The sealing ring must lie flush with the gearbox housing.

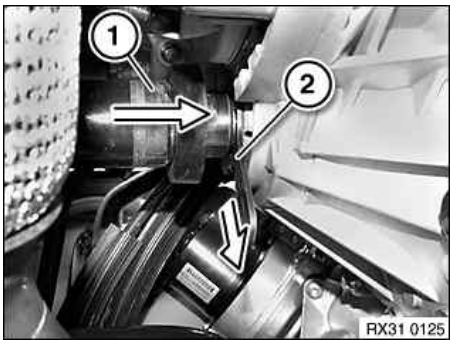
- **With automatic transmission only:**
- Lever out O-ring (1).
- Renew O-ring (1).

  Parts: O-ring
- Insert new O-ring (1).



- Insert installation protection ring (1) into the radial shaft seal.
- Make sure the tool fits over the lip of the radial shaft seal so there is no damage to sealing ring when the output shaft is inserted.

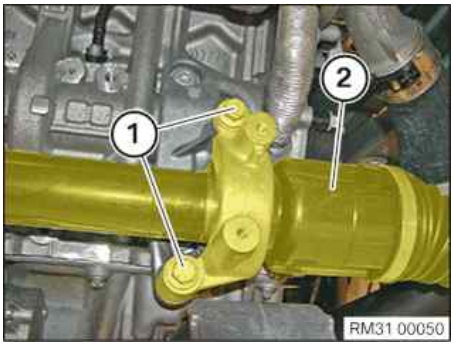
cardiagn.com



- Insert output shaft (1) into transmission.

Note: Make sure the output shaft is joined in parallel to the axle and without being entangled.

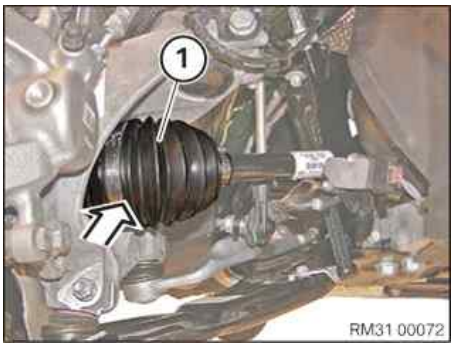
- Pull on the handle to remove the installation protection ring (2) and dispose of it.
- Slide output shaft (1) into the transmission as far as the limit position.
- Check for secure seat by levering.



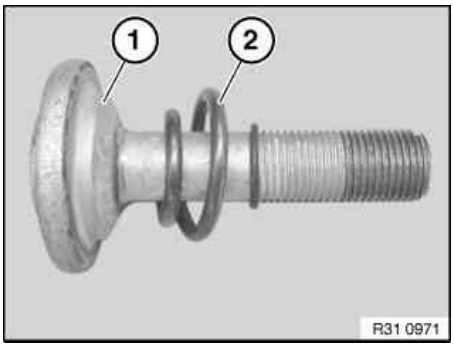
- Tighten the screws (1).

Output shaft bearing to engine block

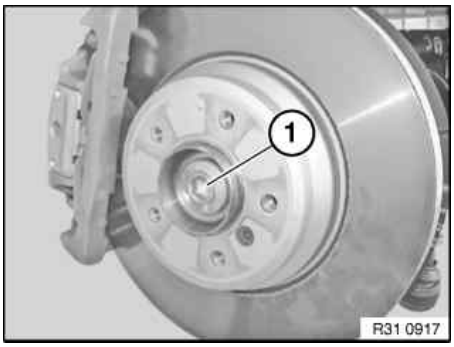
M10		Tightening torque	38 Nm



- Turn steering wheel to right.
- Insert the output shaft (1) into the swivel bearing from the front.

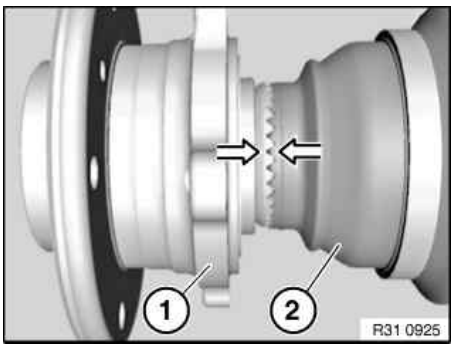


- Note installation position of compression spring (2).
- Keep the collar bolt (1) and the front gearing of the wheel bearing and the output shaft clean and free of grease.



- Renew collar bolt (1) with compression spring.

  Parts: Collar bolt with compression spring
- Hand-tighten the collar bolt (1) with the compression spring.

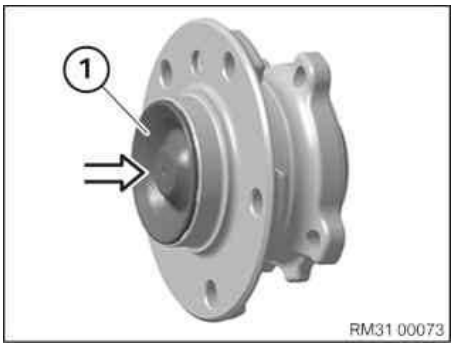


- Install the front gearing of the wheel bearing (1) and output shaft (2) in an interlocking position (tooth-in-tooth position).
- Check whether the front gearing is locked tooth in tooth by reciprocally rotating wheel hub and the output shaft.
- If positive locking is ensured: Tighten the collar bolt to tightening torque. For this purpose, press the brake pedal.

Output shaft to wheel bearing

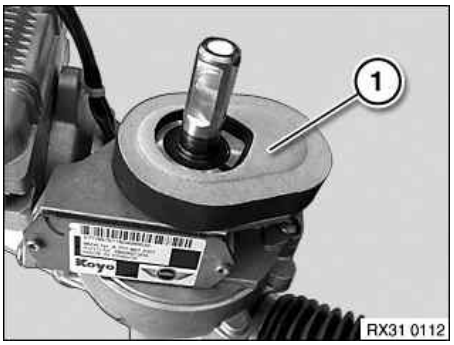
M16	Replace the collar bolt.	Jointing torque	210 Nm
		Angle of rotation	90 °

cardiagn.com



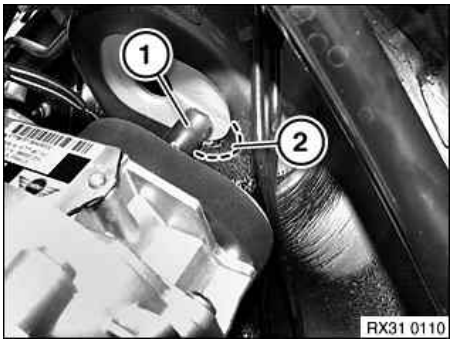
- If necessary, attach protective cap (1).

36 – Mount and secure the complete front axle



- Remove the seal (1).
- Clean surface on steering gear.
- Renew gasket (1).

  Parts: Gasket
- Position the seal (1) and glue it on.

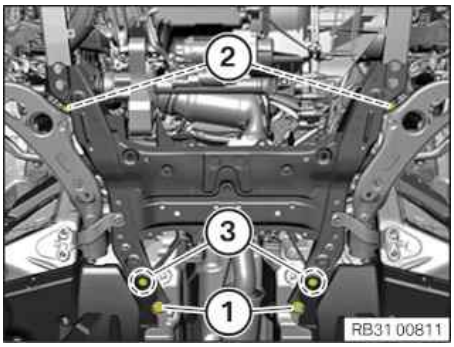


TECHNICAL INFORMATION

Non-compliance with the regulations for installation and disassembly may result in component damage. All work must be performed with care and in compliance with the regulations.

- When raising and lowering the front axle support, make sure that the torsion bar (1) of the electromechanical steering gear (EPS) in area (2) does not collide with the bulkhead!

Note: Collision with the bulkhead may result in damage to the electromechanical steering gear (EPS)!



- Position front axle support.
- Bend underbody panellings in the areas (3) to one side.
- Raise front axle support.
- When raising, insert charge air cooler into the rubber mount of the charge air cooler on cross member.
- Renew screws (1) and (2).

  Parts: Bolts
- Tighten the screws (1).

Rear end of front axle support to body

M14 screw	Renew screw.	Tightening torque	175 Nm

- Tighten down screws (2).

Front axle support, front to body

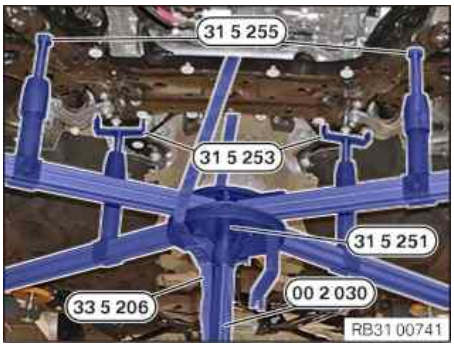
M12 screw	Renew screw.	Tightening torque	108 Nm

- If necessary, tighten the screws in the areas (3).

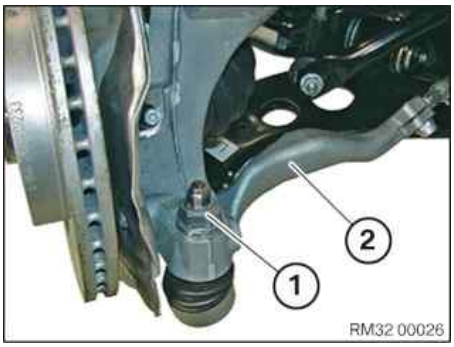
Underbody protection to body

Screw		Tightening torque	3 Nm

cardiagn.com



- Remove special tool **0 496 080 (33 5 206)** from special tool **0 495 817 (31 5 251)**.
- Lower universal jack **0 490 133 (00 2 030)** with the special tool **0 495 817 (31 5 251)** and place it to the side.



NOTICE

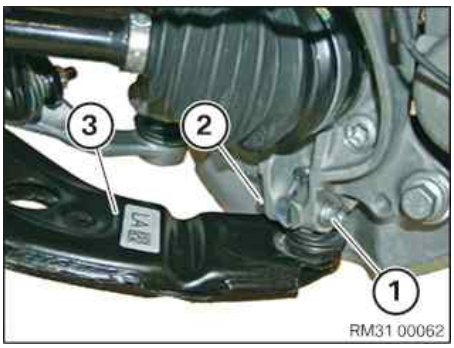
Perform the operations on the left and right side.

- Position the track rod (2) on the swivel bearing .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

Track rod end to swivel bearing

M14	Renew nut.	Tightening torque	175 Nm



NOTICE

Perform the operations on the left and right side.

- Position the wishbone (3) on the swivel bearing .
- Renew the bolt (2) and the nut (1).

  Parts: Bolt, nut
- Insert screw (2).
- Tighten nut (1).

Wishbone to swivel bearing

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

37 – Install the mounted parts on the front axle support

NOTICE

Perform the operations on the left and right side.

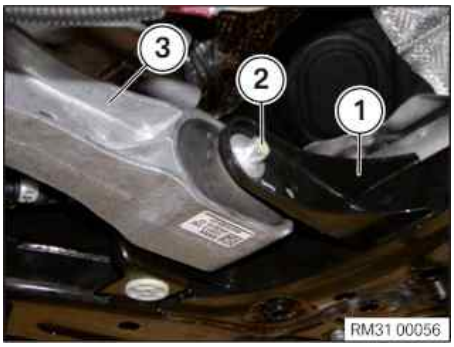
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Holder, wishbone rubber mount, to body

M10 screw	Renew screw.	Jointing torque Angle of rotation	56 Nm 90 °

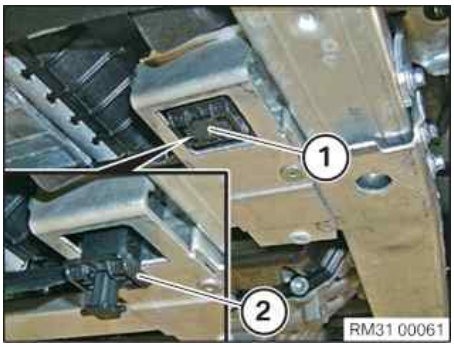
cardiagn.com



- Position the engine support (3) on the front axle support (1).
- Tighten down screw (2).

Holder with rubber mount to front axle support

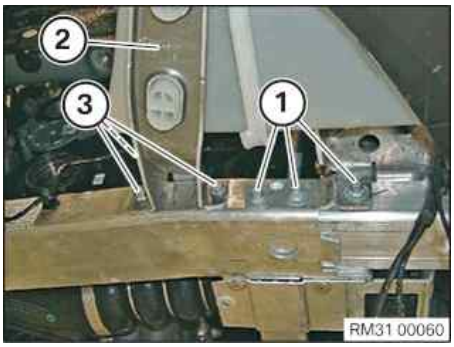
M12 screw		100 Nm



NOTICE

Perform the operations on the left and right side.

- Position the lock (2).
- Lock the bracket (1) of the lock (2) of the holder for the charge air cooler.



- **Only on right side:** Position the holder for the washer fluid reservoir (2).
- Tighten down screws (3).

Washer fluid reservoir holder to front axle support adapter plate

		Tightening torque	10 Nm

NOTICE

Perform the operations on the left and right side.

- Tighten the screws (1).

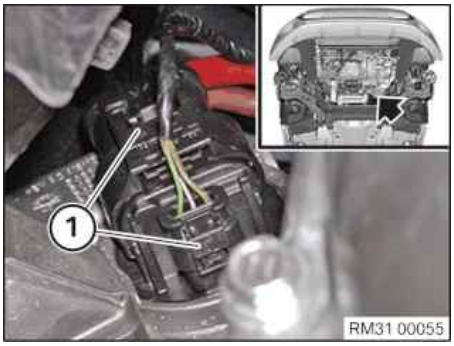
Deformation element, bottom, to adapter plate, front axle carrier

		Tightening torque	11,8 Nm

38 – Attaching connector at steering gear

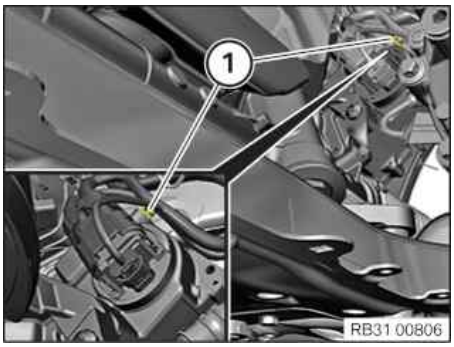
- To connect the connector (see the following step): Connect the connector with the right hand.

  The connectors can be accessed via the left output shaft.



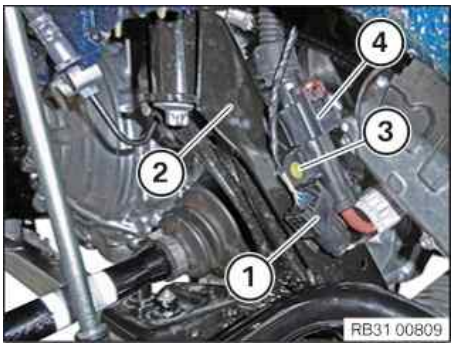
- Connect and lock connector (arrow) (1) with the steering gear.

cardiagn.com



- Fasten the wiring harness (1) on the steering gear.

▸ **If installed: Fasten the plug connections at the front axle support**



- Position the plug connection (4) at the front axle support (2).
- Tighten down screw (3).

Holder to front axle support

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

- Fasten the plug connection (1) at the front axle support (2).

39 – Securing rubber mount on front axle support

- Check rubber mount (1), replace if necessary.

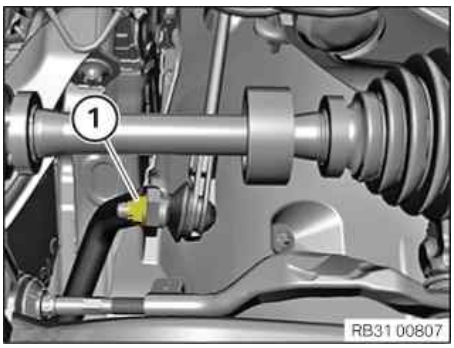
  Parts: Rubber mount
- Spray rubber mount (1) with lubricant and slide onto holder on front axle support.

40 – Securing anti-roll bar on left and right on the anti-roll bar link

NOTICE

Perform the operations on the left and right side.

▸ **Fastening anti-roll bar on the anti-roll bar link**



- Position the anti-roll bar link on the anti-roll bar .
- Renew nut (1).

  Parts: Nut
- Tighten nut (1).

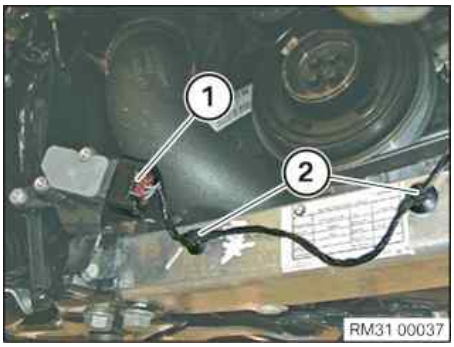
Note: Use the Torx socket for counter support.

Anti-roll bar link to anti-roll bar

M10	Renew nut.	Tightening torque	56 Nm

41 – With right installation: Securing the cable for the ride height sensor

cardiagn.com



- Secure the cable clip (2) on the adapter of the deformation element.
- Connect connectors (1) and lock.

42 – Installing starter motor

CAUTION

Improper routing of the positive battery cable.

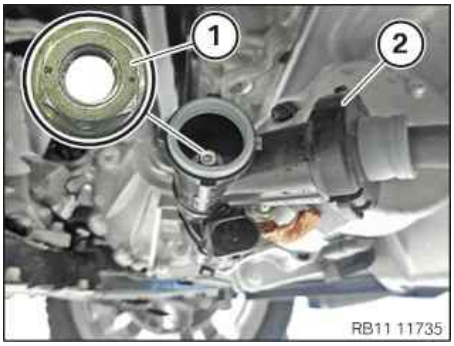
Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm



- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.

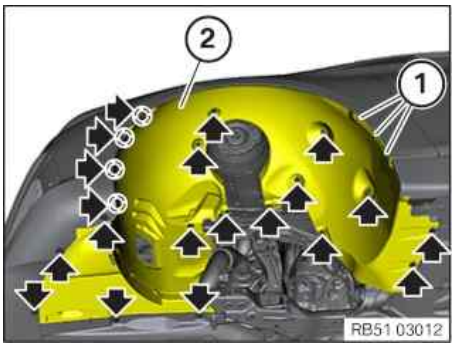
43 – Installing front left and right wheel arch cover

NOTICE

Perform the operations on the left and right side.

▸ **Installing the front wheel arch cover**

cardiagn.com



- Guide the wheel arch cover (2) in.
- Tighten all bolts and nuts (arrows).

Wheel arch cover to body

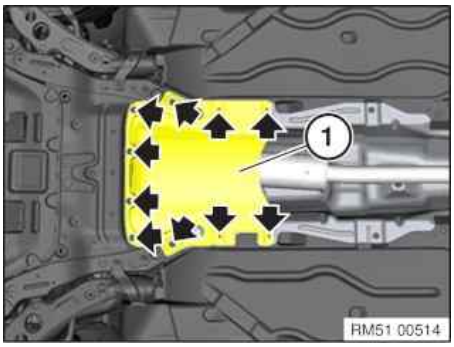
Screw		Tightening torque	2,5 Nm

Wheel arch cover to body

Plastic nut		Tightening torque	3 Nm

- Secure expanding rivet (1).

44 – If installed: Installing underbody protection at rear



- Position rear underbody protection (1).
- Tighten screws (arrows).

Underbody protection to body

Screw		Tightening torque	3 Nm

45 – Mount the front left and right wheels

▸ **Mounting the wheel**

▹ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

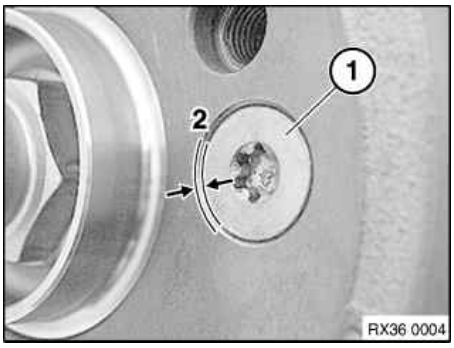
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).



- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

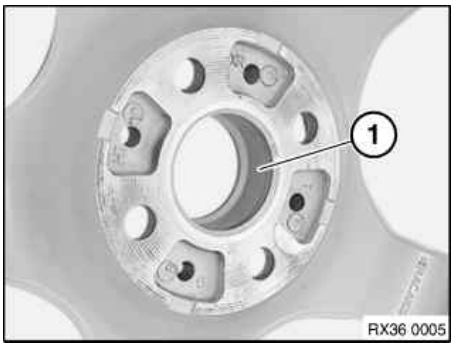
Brake disc to front wheel hub

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub

M8	Renew screw.		16 Nm

cardiagn.com



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

◁

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

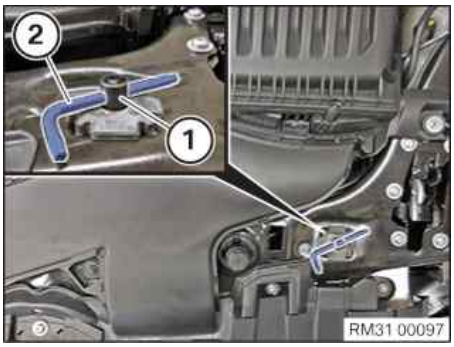
- Renew corroded wheel bolts.

  Parts: Wheel bolts
- Clean the wheel bolts.
- Check wheel bolts (arrows) and threads for damage, renew the wheel bolts if necessary.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

46 – Removing fastener for left and right radiator



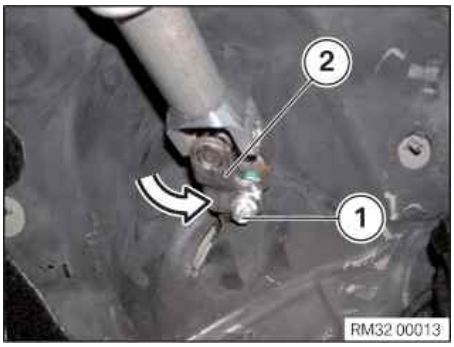
NOTICE

Perform the operations on the left and right side.

- Remove suitable tool (2) from the centering pin (1).

47 – Secure the steering shaft at the bottom on the steering gear

cardiagn.com

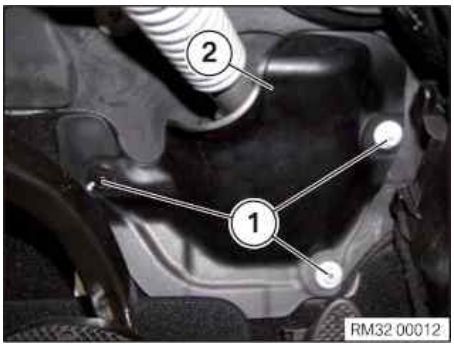


- Clean the screw lock residue from the screw thread in the universal joint (2).
- Pivot the universal joint (2) in the direction of the arrow to the steering gear.
- Renew the screw (1).

  Parts: Screw
- Tighten down screw (1).

Lower steering shaft to steering gear

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm



- **If installed:**
- Position the cover on the steering column (2).
- Tighten nuts (1).

Steering column cover to bulkhead

Plastic nut		Tightening torque	3 Nm

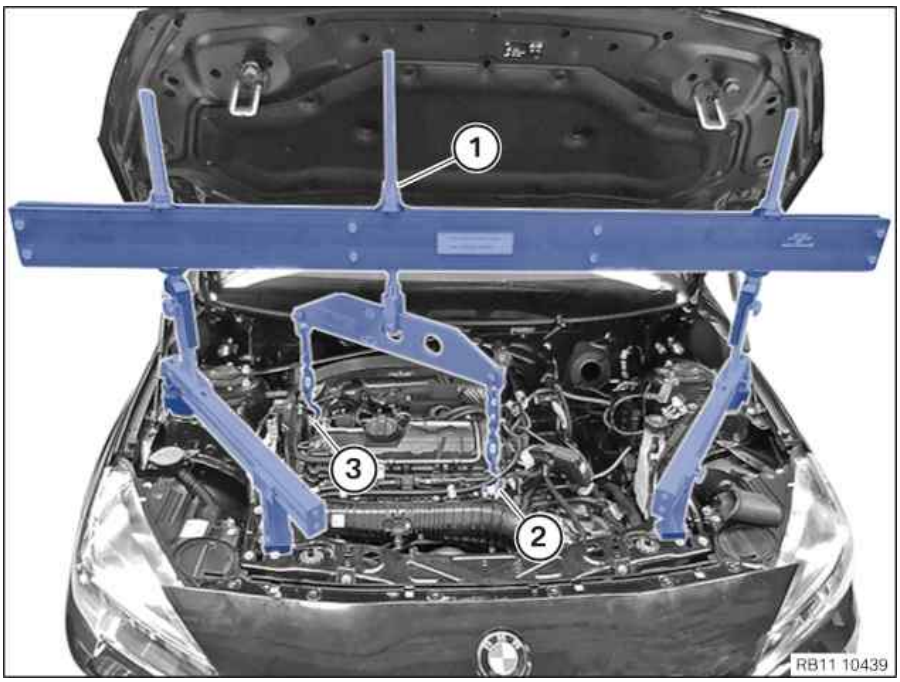
48 – Remove the engine bridge

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

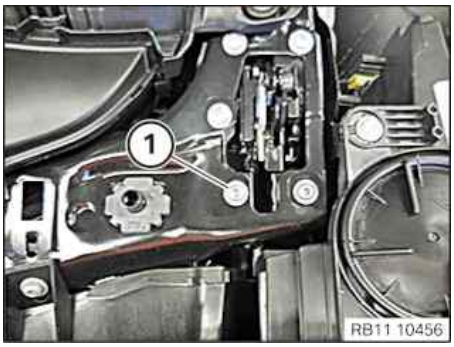
- Remove and install heavy components with the aid of another person/other persons.



- Detach the spindle screw (1) from the engine bridge.
- Unscrew the leg screws (2) and (3).
- Guide the engine bridge out of the vehicle with the help of another person and remove.

cardiagn.com

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.



- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Tighten the screw (1) of the bonnet catch.

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

49 – Install electronics box

Prerequisite

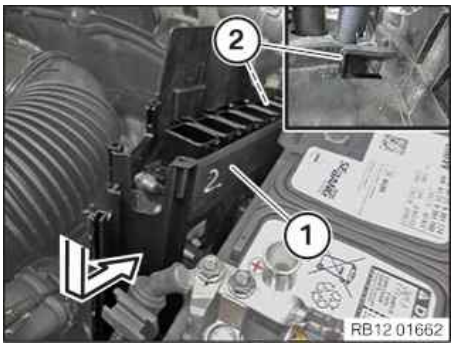
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

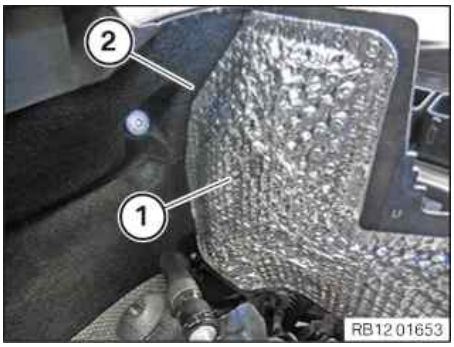
Trapped, crushed or damaged cables may cause short circuits and malfunctions.

- Route all cables without abrasions, do not trap and crush.

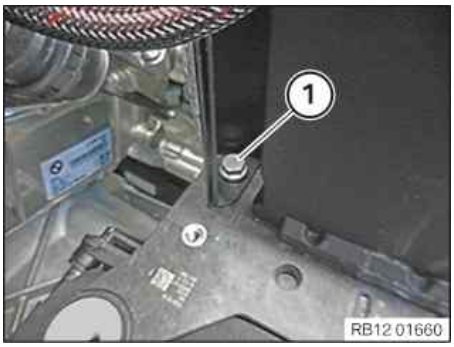


- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

cardiagn.com



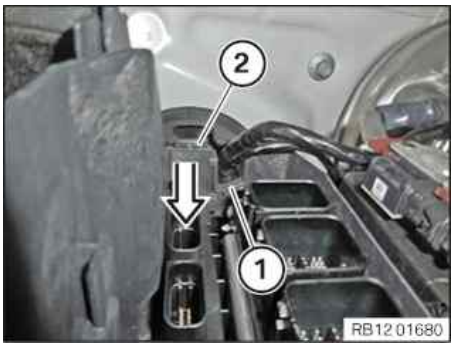
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



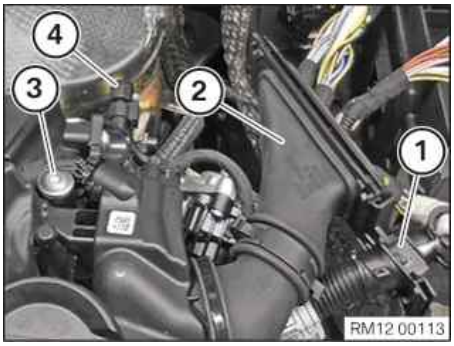
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

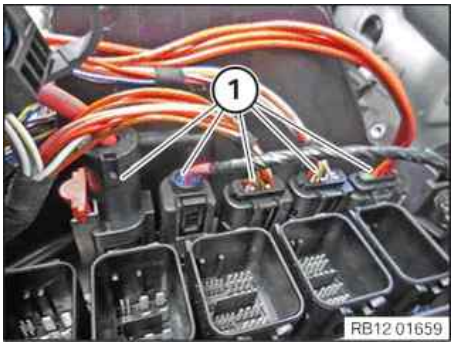


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

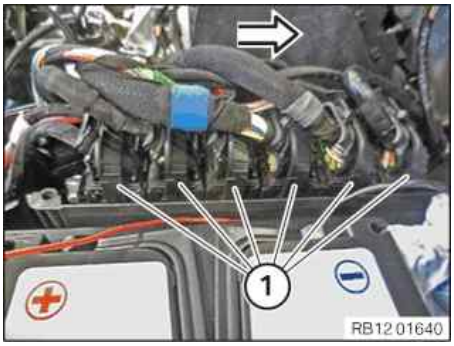
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

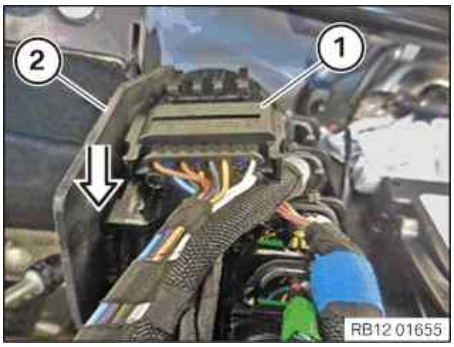


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

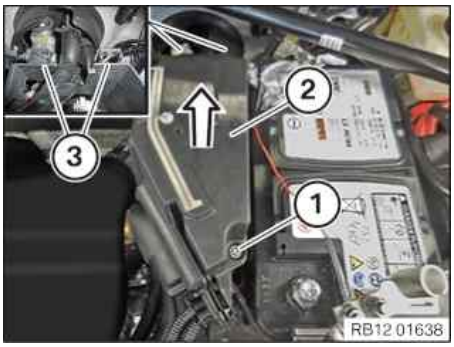


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

cardiagn.com



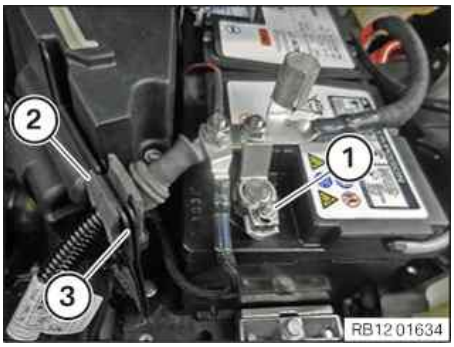
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

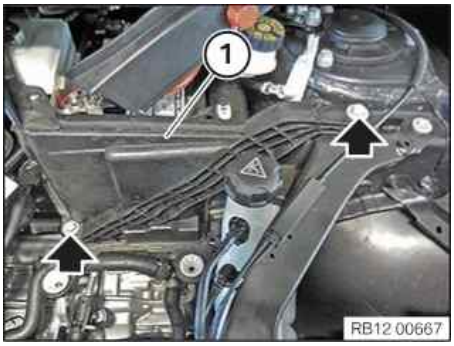
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

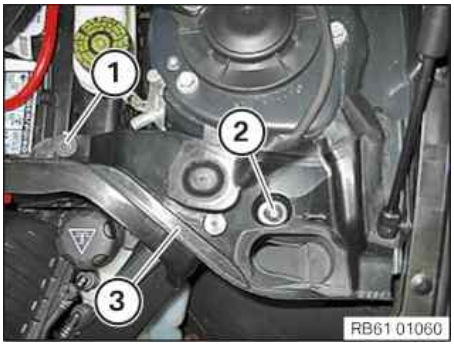
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



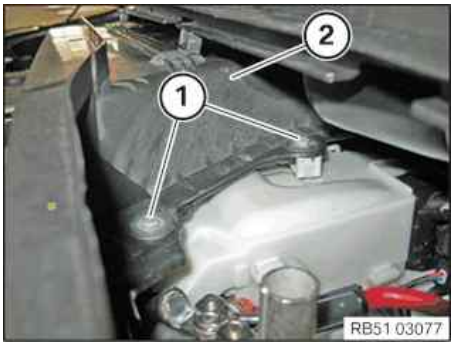
- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

cardiagn.com

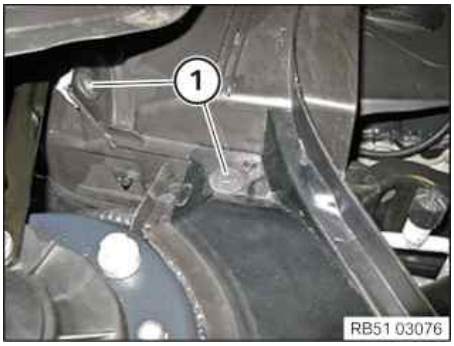
50 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

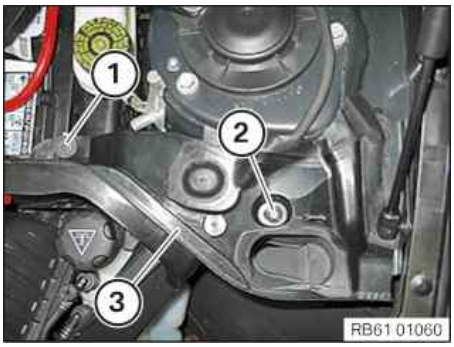
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

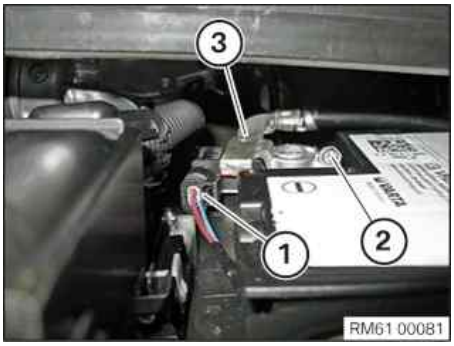
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

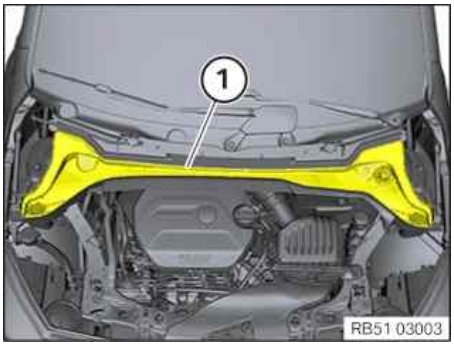


- Position the negative battery terminal (3).
- Tighten nut (2).

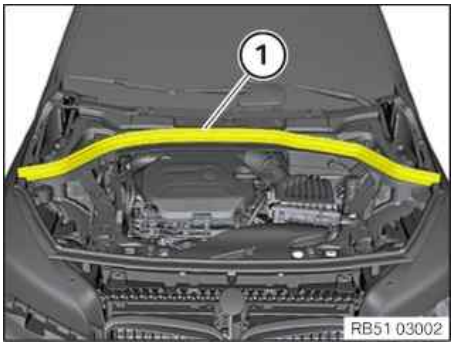
Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.



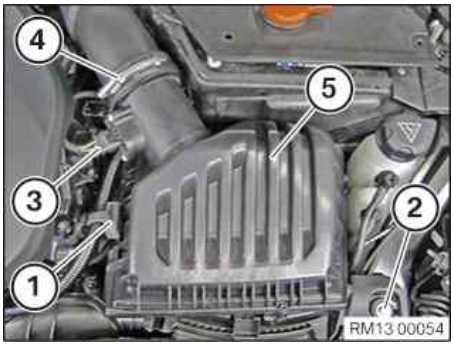
- Feed in the cowl panel cover (1).



- Press the gasket (1) in a downwards direction.

cardiagn.com

52 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

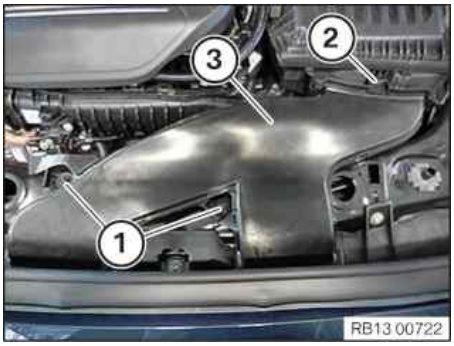
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

53 – Install the intake neck for the intake filter housing



- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

54 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

55 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

56 – Checking/topping up oil level in the double-clutch transmission (DKG) (7DCT300)

CAUTION

Acid burns may result from skin contact with oil or inhaling oil vapours.

Risk of acid burns from contact with oil!

- Wear safety goggles and protective gloves.
- Ensure adequate ventilation.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Transmission oil temperature 20 °C up to a maximum 40 °C!
Carry out the "Transmission oil adjustment" service function with the diagnosis system.
The double clutch also needs to be replaced if you exceed the oil change interval by more than 3000 km!
Failure to comply with this instruction will result in serious damage to the twin-clutch gearbox (DKG).

cardiagn.com

- **Check / top up the oil level (transmission oil temperature must be between 20 °C and 40 °C):**
- Open the oil filler plug (1).
- If oil escapes, seal off again immediately.
- If no oil escapes, add oil until it flows over.
- Drain off excess oil (up to lower edge of filler hole).
- Replace the oil filler plug (1).

  Parts: Oil filler plug
- Tighten the oil filler plug (1).

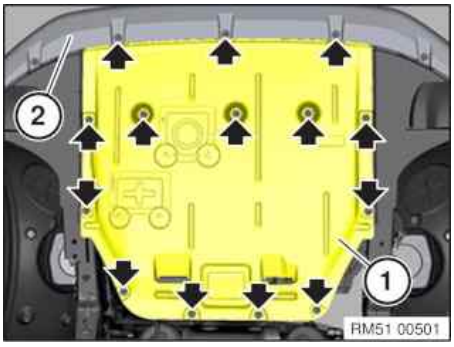
Expendable materials

Twin-clutch gearbox oil BMW DCTF-2	1 , Bottle	83 22 2 433 157

Oil drain plug/oil filler plug of double-clutch transmission (DKG)

M18	Renew screw.	Tightening torque	43 Nm

57 – Installing the front underbody protection

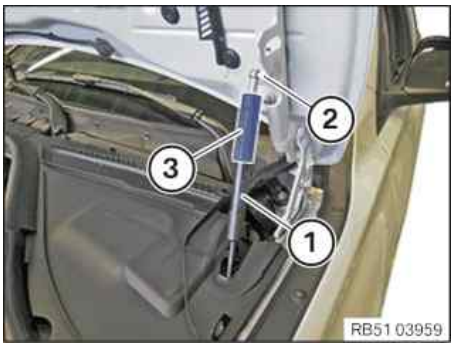


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

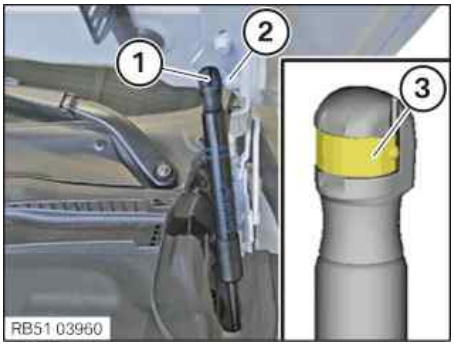
Underbody protection front

			3 Nm

58 – Take bonnet out of the service position



- Support the bonnet by hand.
- Remove the special tool **2 353 020**(3) from the ball pin (2).
- Pull off the special tool **2 353 020**(3) from the gas pressure spring (1).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.



CAUTION

Shutting bonnet or tailgate.

Danger of injury!

- Support bonnet/tailgate in fully open position with the aid of a suitable device.

- Check the clamp (3) is fitted correctly.
- Connect ball socket (1) to ball pin (2).
- Continue to support the bonnet and repeat the operation on the other side of vehicle.

Additional Information

Overview of Tightening Torques

cardiagn.com

Fan cowl on radiator — Used in step 13

M6X12		Tightening torque	6 Nm

Bracing strut to top cross connection — Used in step 14

M8		Tightening torque	25 Nm

Air duct to deformation element/cross connection — Used in step 14

M6x20 screw		Tightening torque	6 Nm

Cross connection on support for cross connection — Used in step 14 48

M6x20		Tightening torque	12 Nm

Special tool to cylinder head — Used in step 17

M8		Tightening torque	21,5 Nm

Flywheel to crankshaft — Used in step 32

M12x1.5	Renew screws.	Tightening torque	120 Nm

Transmission to engine — Used in step 33

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Standard screw connection M6 — Used in step 33

M6			8 Nm

Transmission mounting — Used in step 33

M10	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	90 °

Standard screw connection M8 — Used in step 33

M8		Tightening torque	19 Nm

Battery holder to engine support — Used in step 33

Hexagon screw M8x30		Tightening torque	19 Nm

Output shaft to wheel bearing — Used in step 34 35

M16	Replace the collar bolt.	Jointing torque	210 Nm
		Angle of rotation	90 °

Output shaft bearing to engine block — Used in step 35

M10		Tightening torque	38 Nm

Rear end of front axle support to body — Used in step 36

M14 screw	Renew screw.	Tightening torque	175 Nm

Front axle support, front to body — Used in step 36

M12 screw	Renew screw.	Tightening torque	108 Nm

Underbody protection to body — Used in step 36 44

Screw		Tightening torque	3 Nm

Track rod end to swivel bearing — Used in step 36

M14	Renew nut.	Tightening torque	175 Nm

Wishbone to swivel bearing — Used in step 36

M10	Exclusively use the screw to tighten! Renew screw and nut.	Tightening torque	60 Nm

cardiagn.com

Holder, wishbone rubber mount, to body — Used in step 37

M10 screw	Renew screw.	Jointing torque	56 Nm
		Angle of rotation	90 °

Holder with rubber mount to front axle support — Used in step 37

M12 screw			100 Nm

Washer fluid reservoir holder to front axle support adapter plate — Used in step 37

		Tightening torque	10 Nm

Deformation element, bottom, to adapter plate, front axle carrier — Used in step 37

		Tightening torque	11,8 Nm

Holder to front axle support — Used in step 38

Oval-head screw TS5 x 16		Tightening torque	2,6 Nm

Anti-roll bar link to anti-roll bar — Used in step 40

M10	Renew nut.	Tightening torque	56 Nm

Starter motor to transmission — Used in step 42

M8x45		Tightening torque	19 Nm

Battery positive lead to starter — Used in step 42

M8		Tightening torque	13,5 Nm

Wheel arch cover to body — Used in step 43

Screw		Tightening torque	2,5 Nm

Wheel arch cover to body — Used in step 43

Plastic nut		Tightening torque	3 Nm

Brake disc to front wheel hub — Used in step 45

M8	Renew screw.		16 Nm

Brake disc to rear wheel hub — Used in step 45

M8	Renew screw.		16 Nm

Wheel bolts — Used in step 45

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim. Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence. Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.	Tightening torque Check	140 Nm 140 Nm

Lower steering shaft to steering gear — Used in step 47

M10	Clean screw thread and remove remains of screw locking agent. Renew screw.	Tightening torque	28 Nm

Steering column cover to bulkhead — Used in step 47

Plastic nut		Tightening torque	3 Nm

Electronics box to battery tray — Used in step 49

M8X16		Tightening torque	15 Nm

Wiring harness to cylinder head cover — Used in step 49

TS5x20		Tightening torque	3,5 Nm

cardiagn.com

Cover to electronics box — Used in step 49

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery — Used in step 49

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray — Used in step 49

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall — Used in step 49

		Tightening torque	3 Nm

Battery cover — Used in step 49 51

Screw			2,8 Nm

Bulkhead cover, top — Used in step 50

Screw		Tightening torque	3 Nm

Battery terminal rail to battery tray — Used in step 51

M8 screw			19 Nm

Positive battery terminal — Used in step 51

NutM6			5 Nm

Trailing link — Used in step 51

M8 screw			19 Nm

Positive battery cable to battery terminal — Used in step 51

Nut M8			15,2 Nm

Negative battery terminal (with IBS) — Used in step 51

NutM6			5 Nm

Intake silencer housing to lock bridge — Used in step 52

M6X30		Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 52

Clamp		Tightening torque	3 Nm

Intake neck to cross connection — Used in step 53

M6		Tightening torque	8 Nm

Oil drain plug/oil filler plug of double-clutch transmission (DKG) — Used in step 56

M18	Renew screw.	Tightening torque	43 Nm

Underbody protection front — Used in step 57

			3 Nm

Overview of Special Tools

cardiagn.com

2 353 020 Support

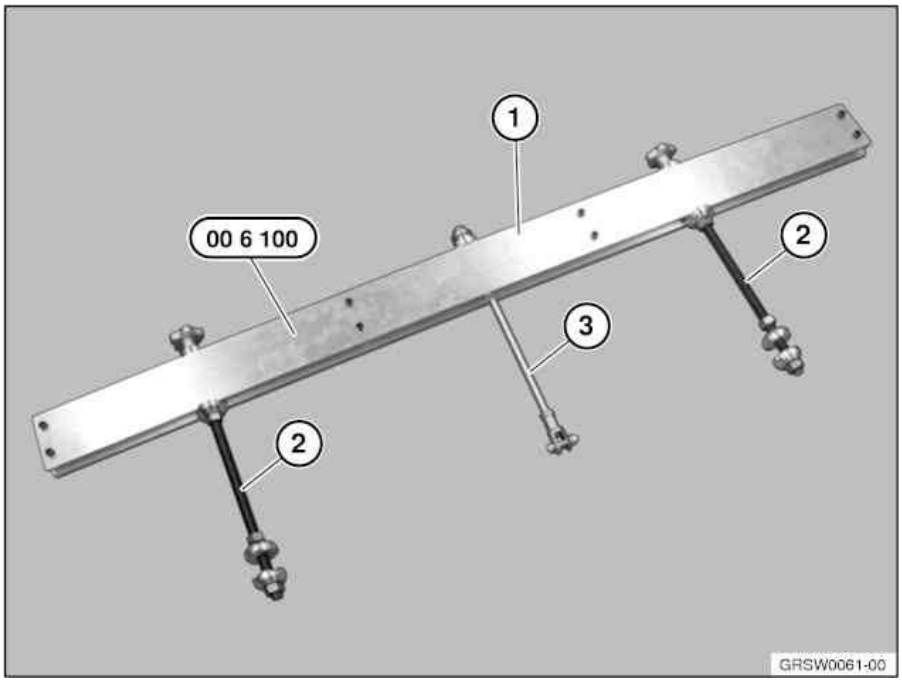
Common	Used in step 1 58
Usage	For service position of engine compartment lid Associated contour-graphic silhouette foil can be ordered under: 83 30 2 356 848. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A74
Replaced by	
In connection with	
SI-Number	01 11 13 (960)

2 459 012 Holder

Common	Used in step 17 48
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 496 852 (00 6 100) Device



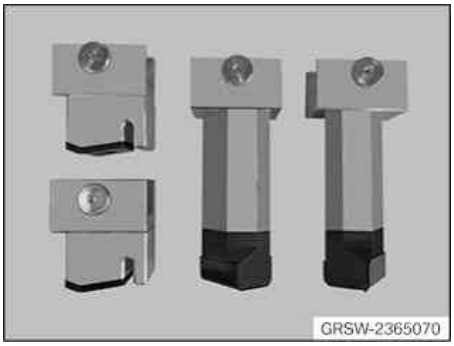
Common Used in step 17

Usage	Engine bridge (device) 006000
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 10 (659)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	2 361 507 (00 6 102)		**Spindle** Set (2 pieces) in connection with 00 6 100.	
3	2 361 506 (00 6 103)		**Spindle** Spindle (central spindle) for Traverse 00 6 100.	

2 365 070 Upholstery



Common Used in step 17

Usage	Washer for securing the engine support.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	Engine bridge 006100 - 0496852 Section 006051 - 0496436 Adapter 006130 - 2209122 Adapter 2318635

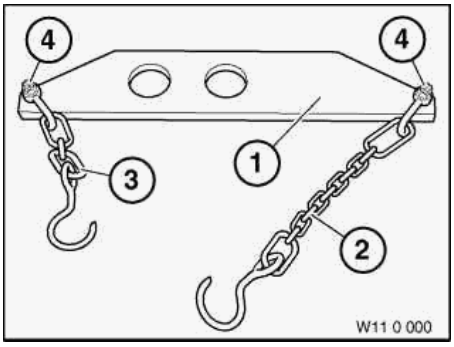
0 490 561 (11 0 000) Lifting gear



Common

Used in step 17

Usage	(Hoisting gear) For removing and installing engines. As of 08/2011 only available as a complete set. Delivered with TÜV inspection certificate and operating instructions. No delivery of separate parts.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 13 94 (888)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 490 565 (11 0 009)		**Shackle** (Shackle) 2 pieces. As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 562 (11 0 001)		**Lifting gear** (Cross member) As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 563 (11 0 002)		**Chain** (Chain) Version: long As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 564 (11 0 003)		**Chain** (Chain) Version: short As of 08/2001, only available as a complete set via 11 0 000 = 0490561. Delivered with TÜV inspection certificate and operating instructions.	

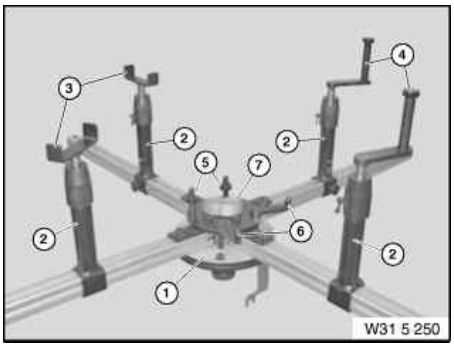
cardiagn.com

2 357 269 Shackle

Common Used in step 17

Usage	Set consisting of 4 pieces. Was valid as campaign for BMW i Aftersales High Voltage. During the course of the changeover from BMWi to iPerformance, a tool changeover also takes place from campaign to warehouse.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 19 13 (985)

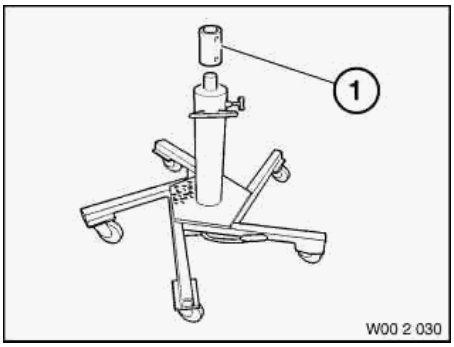
0 495 817 (31 5 251) Basic body



Common Used in step 27 36

Usage	(Basic body) No longer available separately, only via special tool set 31 5 250 (83 30 0 495 567)
Included in the tool or work	0 495 567
Storage location	
Replaced by	
In connection with	
SI-Number	01 24 06 (309)

0 490 133 (00 2 030) Device



Common Used in step 27 30 33 36

Usage	(universal hydraulic lifter base unit) Chassis and hydraulic lifter - For removing and installing rear axle supports and gearboxes. Also for soft top mounts. Is replaced by 81 22 2 219 012
Included in the tool or work	
Storage location	
Replaced by

cardiagn.com

11 23 010 Removing and installing/replacing vibration damper

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

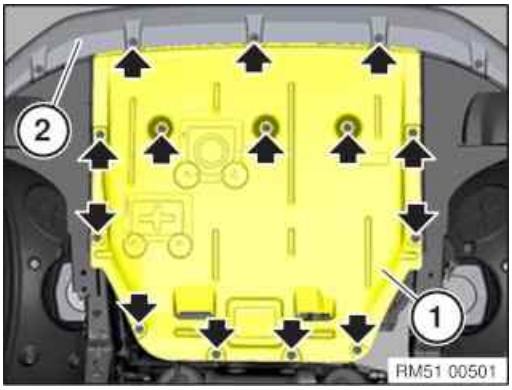
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

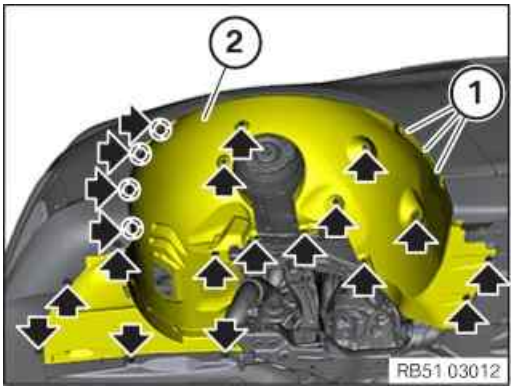
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

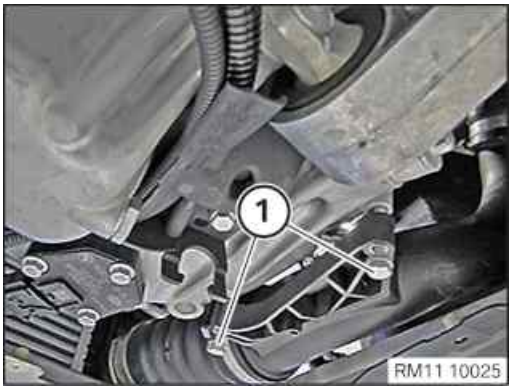
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

5 – Remove right charge-air line

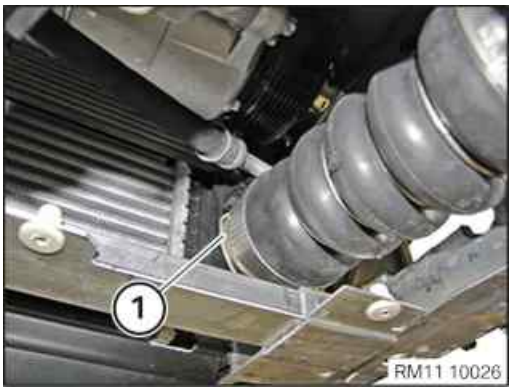


- Release charge air duct screws (1) on oil sump.

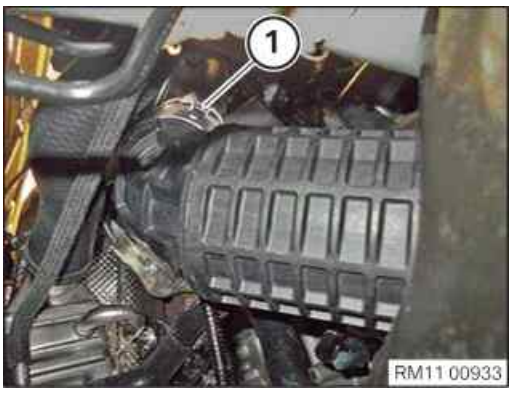
- Detach charge air duct screw connection (1) on crankcase.

cardiagn.com

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



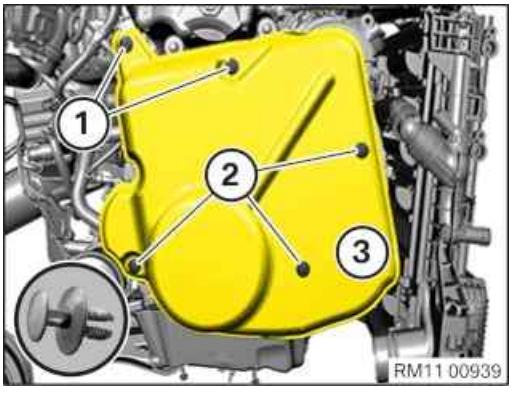
- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

6 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

7 – Removing the drive belt for alternator

cardiagn.com

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

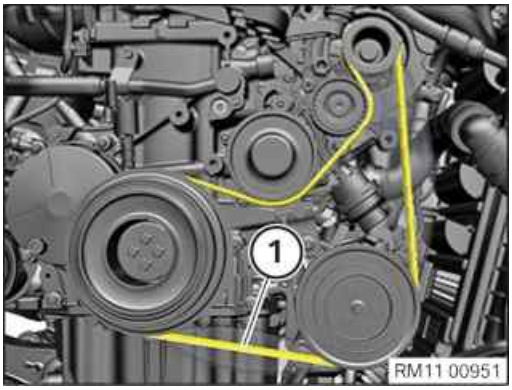
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

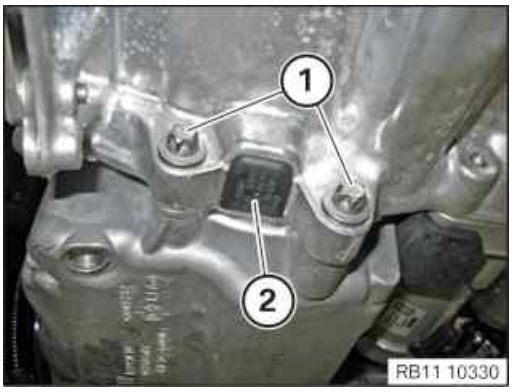


- Guide out the drive belt for the alternator (1) and remove it.

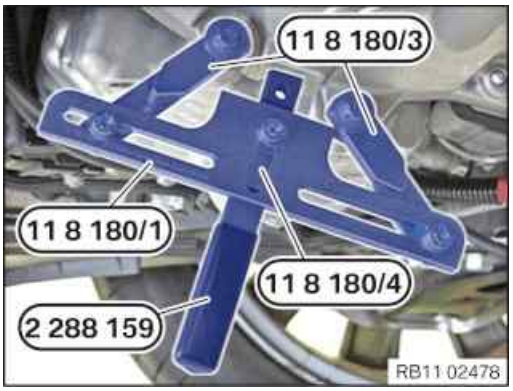
MAIN WORK

8 – Removing the vibration damper

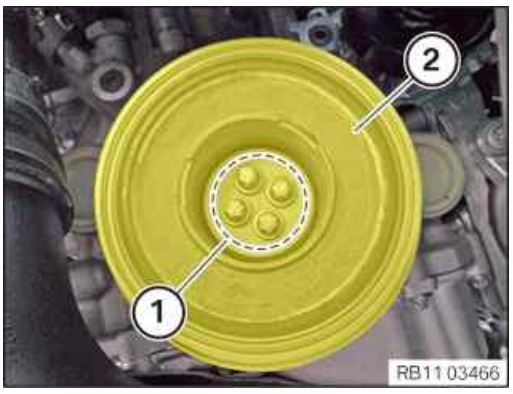
cardiagn.com



- Release the transmission bolts (1).
- Remove the protective cap (2).

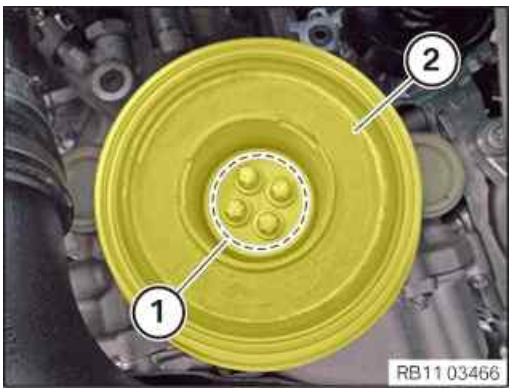


- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.



- Loosen screws in the area (1).
- Remove the vibration damper (2).

9 – Installing the vibration damper



- Position vibration damper (2).
- Renew screws (1).

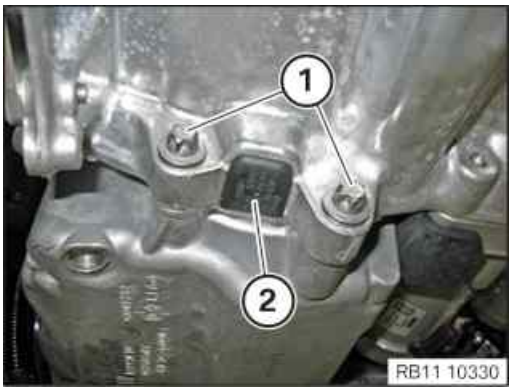
  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	120 °

- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.

cardiagn.com



- Tighten transmission screws (1).

Transmission to oil sump

M8			19 Nm

- Install protective cap (2).

POSTPROCESSES

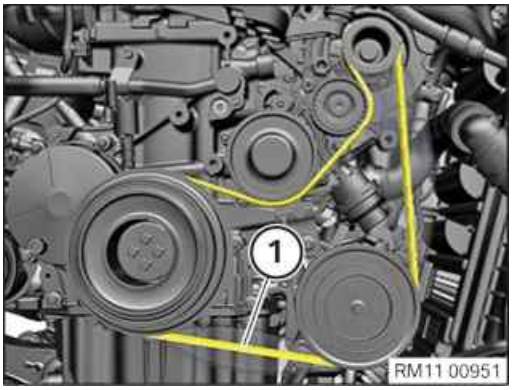
10 – Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

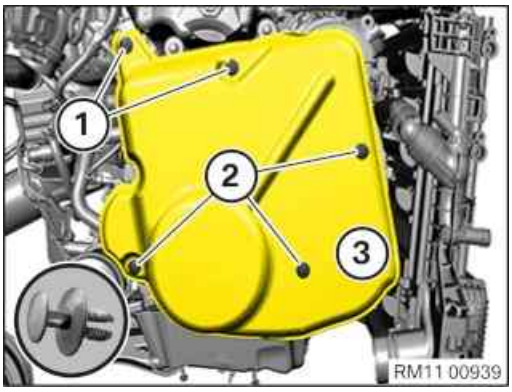


- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

11 – Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

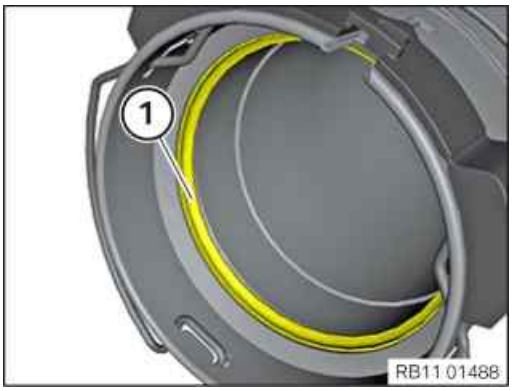
12 – Install right charge air duct

RISK OF DAMAGE

Damage to the exhaust turbocharger.

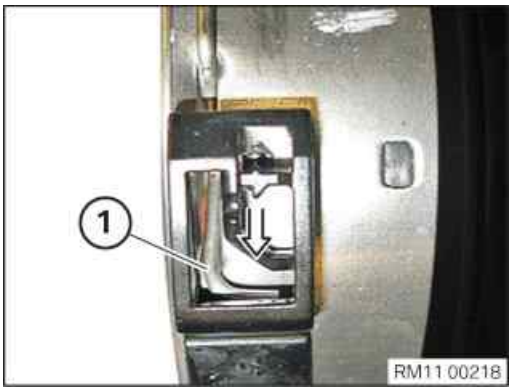
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

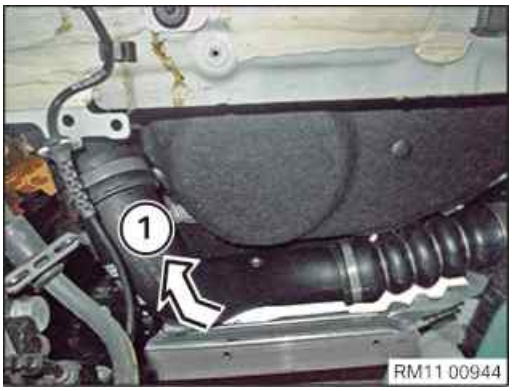


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Gasket

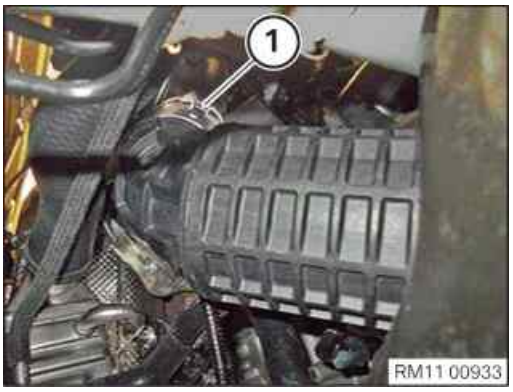


- Let the lock (1) engage at the holder (arrow).



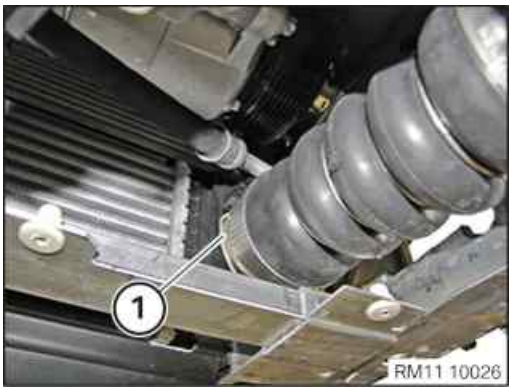
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.

cardiagn.com



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

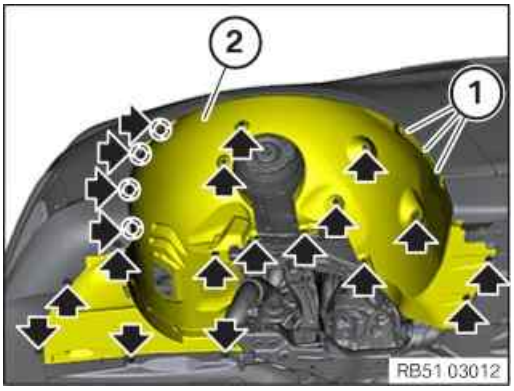
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

13 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

14 – Installing the front right wheel

cardiagn.com

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

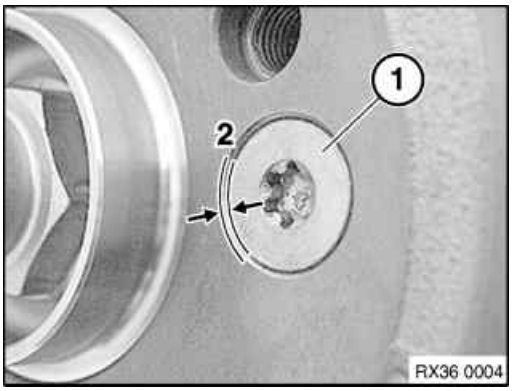
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

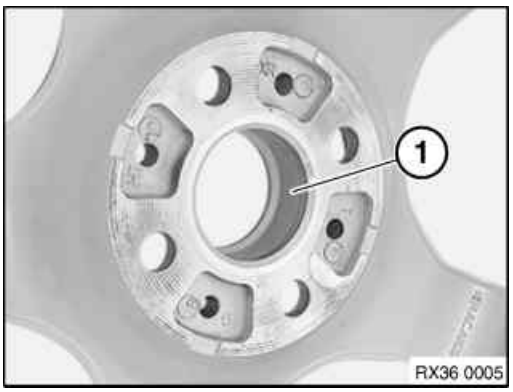


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

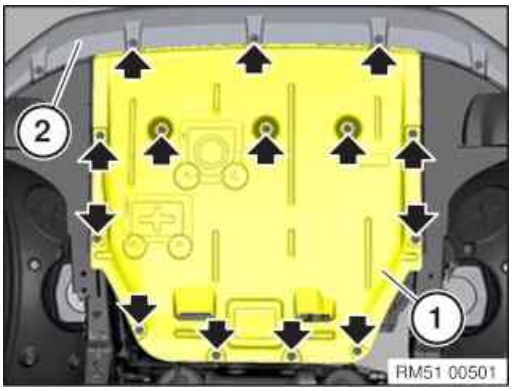
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

15 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

16 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

cardiagn.com

11 23 010 Removing and installing/replacing vibration damper (B37C)

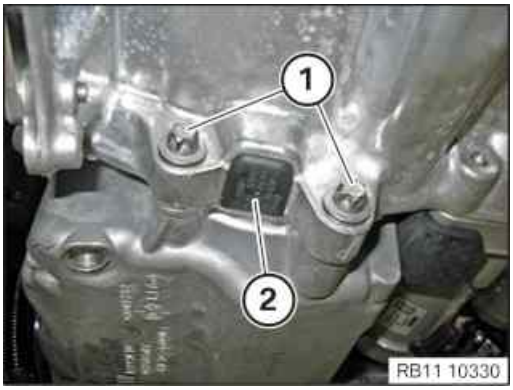
Special tools required:

- 11 8 180
- 2 288 159

Necessary preliminary tasks:

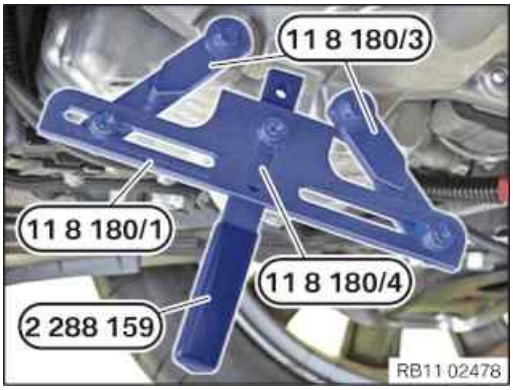
- Remove front underbody protection.
- Remove front right wheel arch cover.
- Remove drive belt.

Removal:



Release screws (1).

Remove protective cap (2).



Prepare special tool 11 8 180 /1 with special tool 11 8 180 /3, 11 8 180 /4 and 2 288 159 .

Fix the special tool 11 8 180 with the housing screws.

Slide the special tool 2 288 159 in the gearbox housing and fix the flywheel.

Tighten down all screws.

cardiagn.com

Slacken all screws on the vibration damper (1).

Remove vibration damper (1).

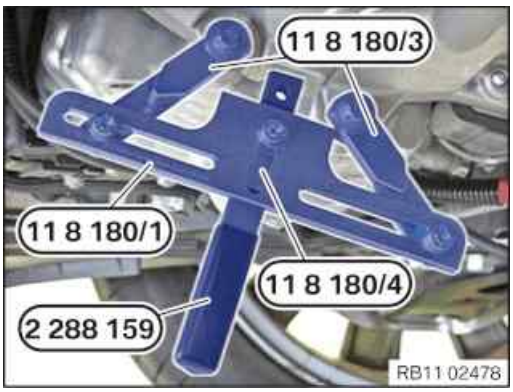
Installation:

Parts: Replace screws.

Position vibration damper (1).

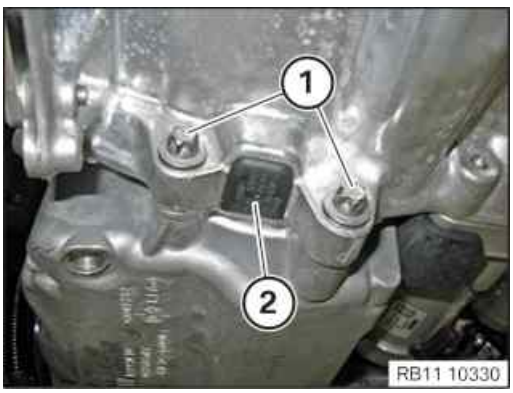
Tighten down all screws.

Tightening torque 11 23 1AZ.



Undo the Torx screws.

Remove special tool 11 8 180 with 2 288 159 .



Tighten down screws (1).

Tightening torque 11 13 1AZ.

Mount protective cap (2).

cardiagn.com

Required reworking:

- Install drive belt.
- Install front right wheel arch cover.
- Install front underbody protection.

cardiagn.com

11 24 571 Replace all connecting rod bearings (B37C)

Necessary preliminary tasks:

- Remove all pistons.

Important!

The connecting rod bearing shells for the connecting rod and the connecting rod bearing cap are **different**.

Dark connecting rod bearing shell must be mounted in connecting rod.

Light connecting rod bearing shell must be mounted in connecting rod bearing cap.

Replace connecting rod bolts.

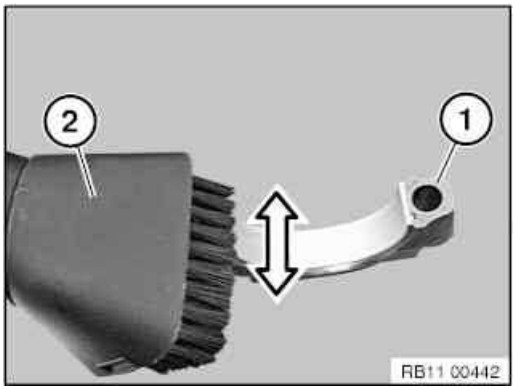
Removal:

Remove connecting rod bearing (2) from connecting rod (1).

Remove connecting rod bearing (2) from connecting rod bearing cap (1).

Installation:

cardiagn.com

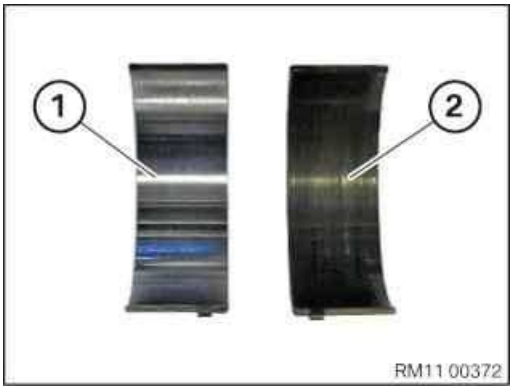


Important!

New connecting rods must be vacuum cleaned prior to installation.

Do not use compressed air to blow off cracked areas.

Use a commercially available vacuum cleaner (2) to vacuum clean cracked areas (1).



One light connecting rod bearing shell (1) and one dark connecting rod bearing shell (2) must be installed per connecting rod.

Clean connecting rod eye (1).

Insert dark connecting rod bearing shell (2) into connecting rod (1).

Oil connecting rod bearing shell (2).

Clean connecting rod bearing cap (1).

Insert light connecting rod bearing shell (2) into connecting rod bearing cap (1).

Oil connecting rod bearing shell (2).

Required follow-up work:

- Install all pistons.

cardiagn.com

11 25 000 Removing and installing or replacing all pistons (B37C)

Special tools required:

- 11 8 860
- 2 288 944
- 11 4 492
- 11 8 140
- 00 2 530

Warning!

Protective goggles must be worn when working on the piston pin circlip.

Necessary preliminary tasks:

- Remove engine with transmission.
- Remove transmission.
- Mount engine on assembly stand.
- Remove cylinder head.
- Remove oil pump with vacuum pump.

Important!

If pistons, connecting rods and connecting rod bearing shells are reused, they must be reinstalled in the same places.

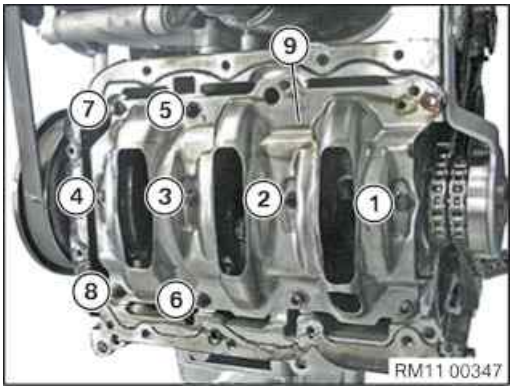
Individual connecting rod replacement is not permitted; they are classified by weight class.

Connecting rods and connecting rod bearing caps are denoted with the same pairing letters. Mixing up the components will result in engine damage.

Piston and gudgeon pins are paired and must not be fitted individually or confused.

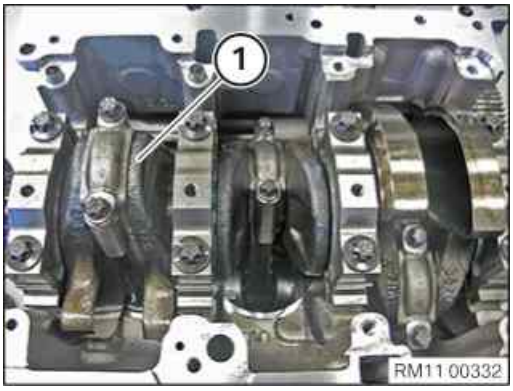
Removal:

cardiagn.com



Release screws in the sequence **8 - 1**.

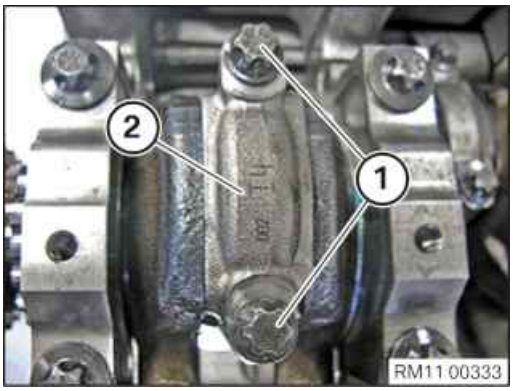
Remove reinforcement (9).



Important!

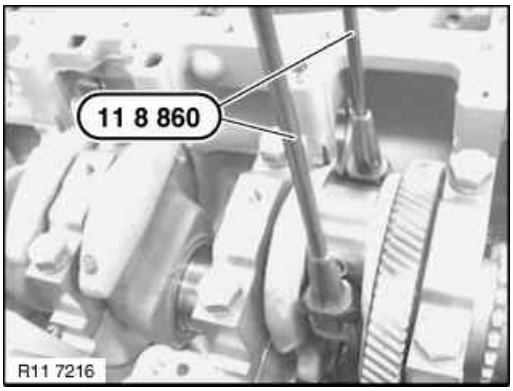
Position crankshaft vertically.

Proceed with care at the cylinder wall and oil spray nozzles **Risk of damage**!



Undo the connecting rod bolt (1).

Remove connecting rod bearing caps (2) and set down in neat order.



Screw special tool 11 8 860 in at large connecting rod eye.

Remove piston and connecting rod.

Installation note:
Pay attention to the protective edge for the cylinder wall.

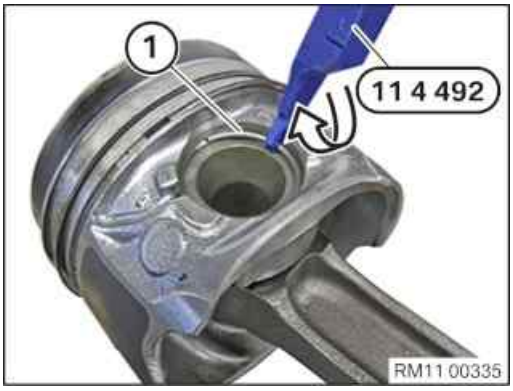
Figure N47D20.

cardiagn.com

Position piston (1) with connecting rod on special tool 2 288 944 .

Warning!

Safety goggles must be worn for the next operation.



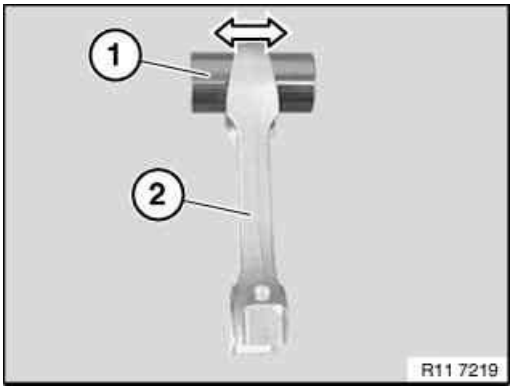
Warning!

Safety goggles must be worn.

Lever out piston circlip (1) with special tool 11 4 492 in direction of arrow.**Important!**

Piston and gudgeon pin are matched to each other.

They must not be mixed up.

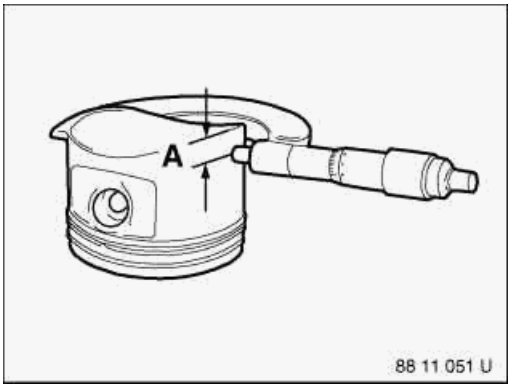


Note:
It must be possible to press gudgeon pin (1) through the bush (small connecting rod eye) with little force; it must not reveal any noticeable play.

Remove gudgeon pin (1) from connecting rod (2).

Installation:

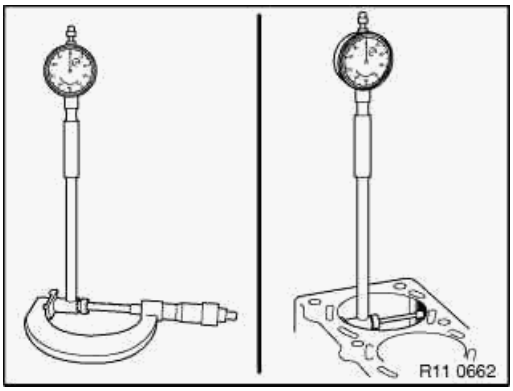
cardiagn.com



Before installation, measure piston installation clearance. Measure piston diameter with micrometre at measuring point A from lower edge of piston and offset at 90° to the axis of the gudgeon pin.

Distance A,

Refer to Technical Data.



Adjust micrometre to cylinder bore of engine block. Set internal measuring device on micrometer to zero. Measure bottom, centre and top of cylinder bore in direction of travel and direction of rotation.

Diameter of the cylinder bore,

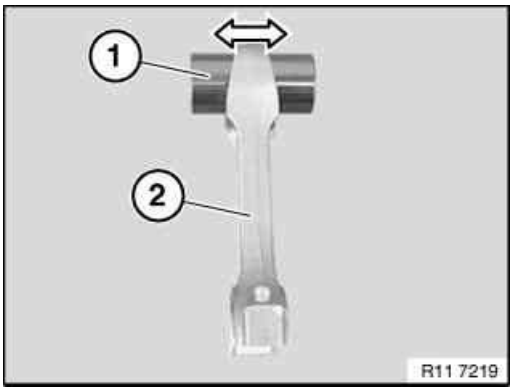
Technical Data.

Piston installation clearance,

Technical Data.

Permitted total wear clearance,

Technical Data.



Clean and oil connecting rod bearing.

If necessary, replace connecting rod bearing.

Installation note:
It must be possible to press gudgeon pin (1) through the bush (small connecting rod eye) and must not display any significant play.

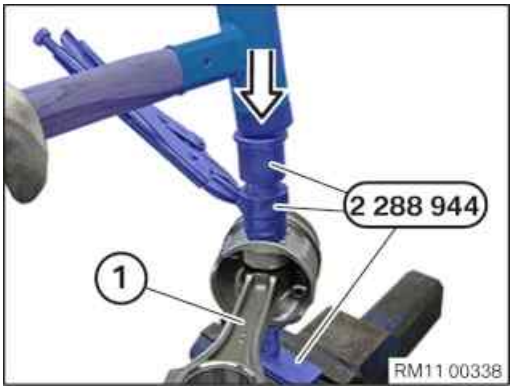
Install gudgeon pin (1).

Warning!
Safety goggles must be worn for the next operation.

Pre-tension gudgeon pin circlip (1) in special tool 2 288 944 .

cardiagn.com

Note:
Make sure the tool is positioned correctly.



Important!

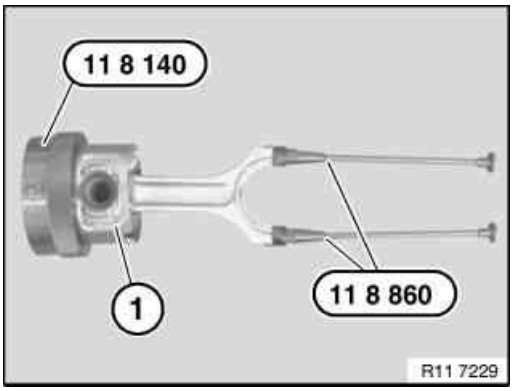
Piston and gudgeon pin are matched to each other.

They must not be mixed up.

Install circlip so that opening is opposite recess.

Insert connecting rod (1) with gudgeon pin into piston.

Drive in gudgeon pin circlip in direction of arrow.



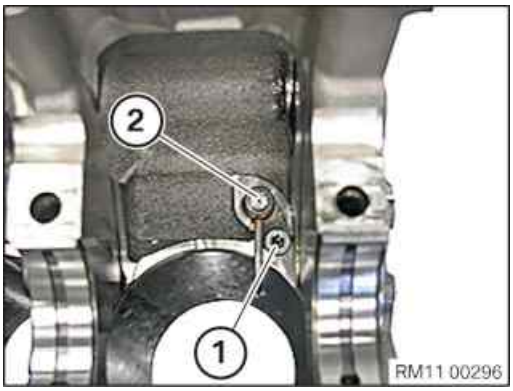
Align contact points of piston rings (offset at approx. 120°, but do not arrange over gudgeon pin boss).

Lightly coat pistons and piston rings with oil.

Prepare piston with piston rings on special tool 11 8 140 .

Screw special tool 11 8 860 on at large connecting rod eye.

Pay attention to the protective edge for the cylinder wall.



Important!

Oil spray nozzles (2) must not be maladjusted or bent.

A bent oil spray nozzle cannot be adjusted and must be replaced.

Release screw (1) and remove oil spray nozzle (2).

cardiagn.com

Insert piston (1) with connecting rod in cylinder.

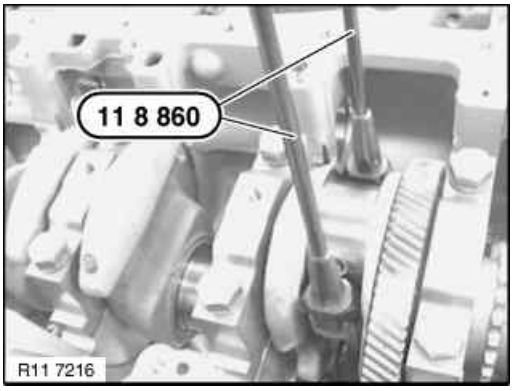
Important!

Risk of piston ring breakage.

Risk of damage to oil spray nozzle.

Only press pistons in with finger force - do **not** knock in!

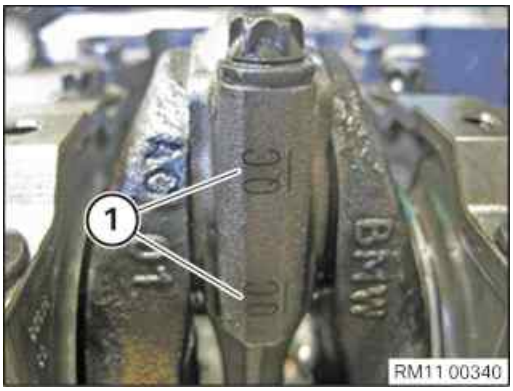
Insert piston so that the arrow points in direction of cylinder 1.



Slide connecting rod eye onto crankshaft.

Remove special tool 11 8 860 from large connecting rod eye.

Note:
Figure N47D20.

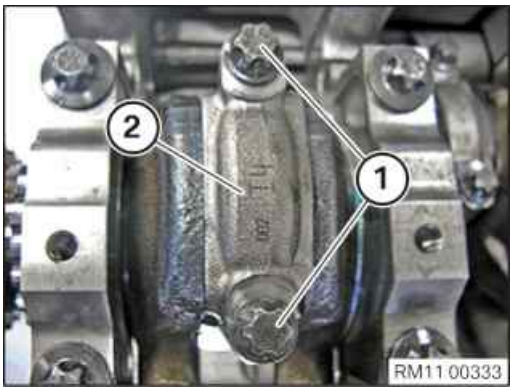


Clean and oil connecting rod bearing.

If necessary, replace connecting rod bearing.

Mount connecting rod bearing caps so that pairing letters (1) match.

Bolt piston (1) with connecting rod to crankshaft.

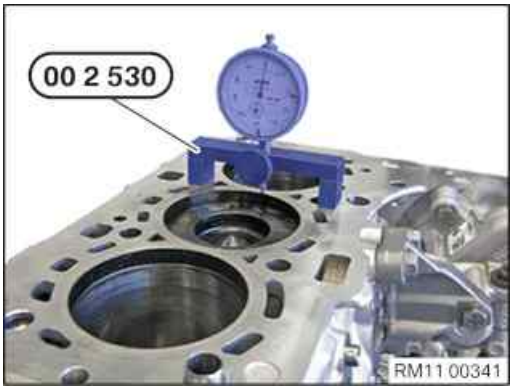


Parts: Replace connecting rod bolt (1).

Tighten connecting rod bolts (1).

Tightening torque: 11 24 1AZ.

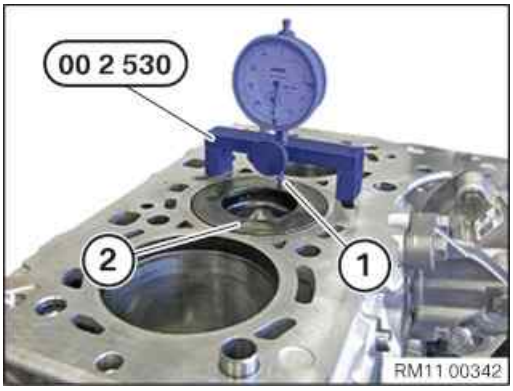
cardiagn.com



The gasket thickness must be recalculated when repair work is carried out on the crankshaft drive or pistons.

Measuring the **piston protrusion:**

Position dial gauge with measuring fixture special tool 00 2 530 on cleaned engine block sealing surface. Set dial gauge to zero under preload.



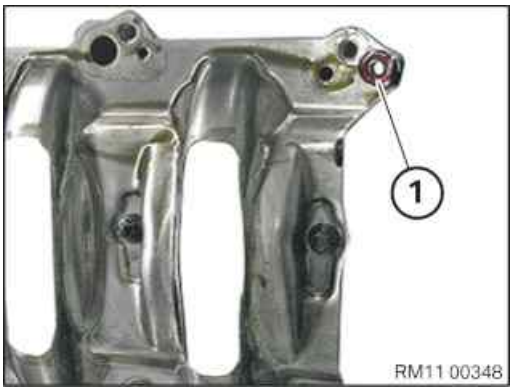
Position piston at TDC.

Clean piston at measuring points (1 and 2).

Position dial gauge at measuring point (1) on piston. Determine highest point by turning crankshaft.

Measure and note down piston protrusion at measuring points (1 and 2) on all pistons.

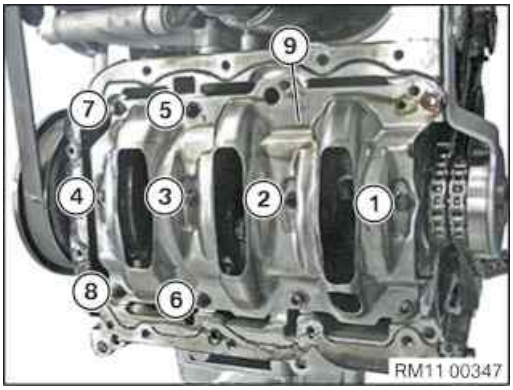
Determine thickness of cylinder head gasket.



Important!

Sealing ring (1) must not be damaged or missing.

Check centring bushes for damage, replace if necessary.



Parts:

- Replace reinforcement (9).
- Replace screws (1 - 4).

Install reinforcement (9).

Tighten screws in the sequence **1 - 4**.

Tightening torque: 11 41 3AZ.

Tighten screws in the sequence **5 - 8**.

Tightening torque: 11 41 2AZ.

cardiagn.com

Required follow-up work:

- Install oil pump with vacuum pump.
- Install cylinder head.
- Remove engine from assembly stand.
- Fit transmission.
- Install engine.
- Check engine function and leak tightness.

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 25 000 Removing and installing/replacing all pistons

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

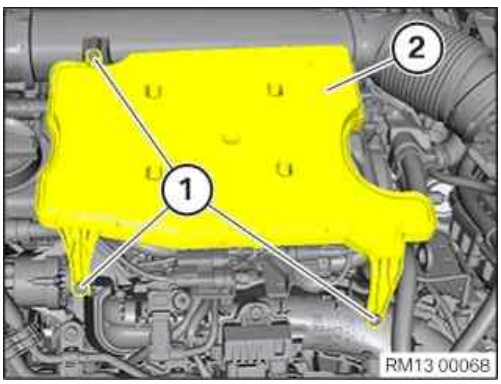
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

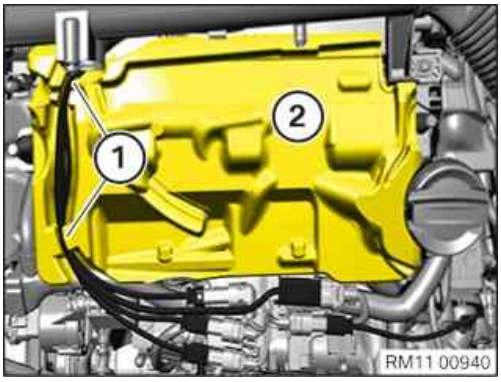
3 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

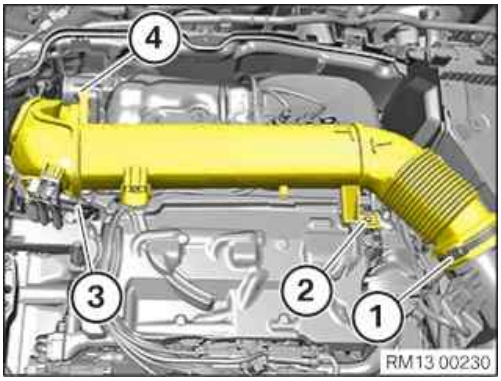
cardiagn.com

4 – Remove the acoustic cover for the injectors

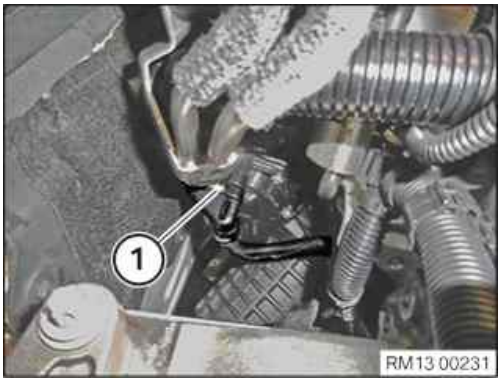


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

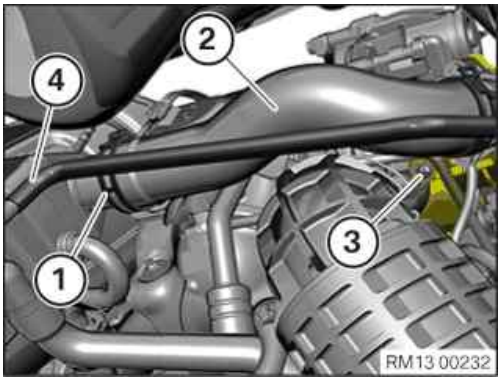
5 – Removing clean air pipe



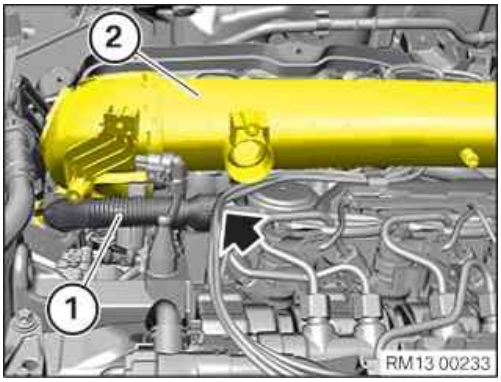
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

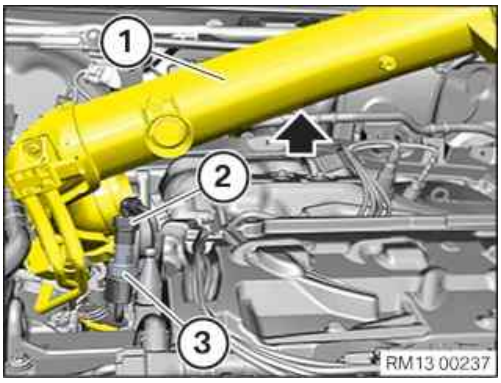


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

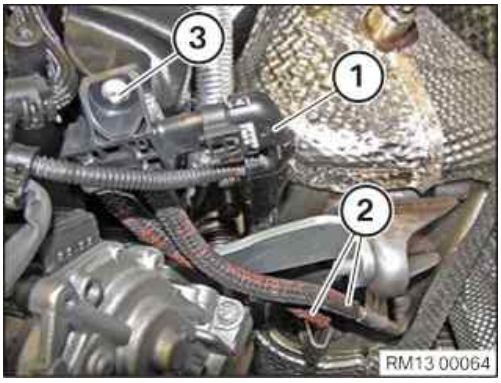
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

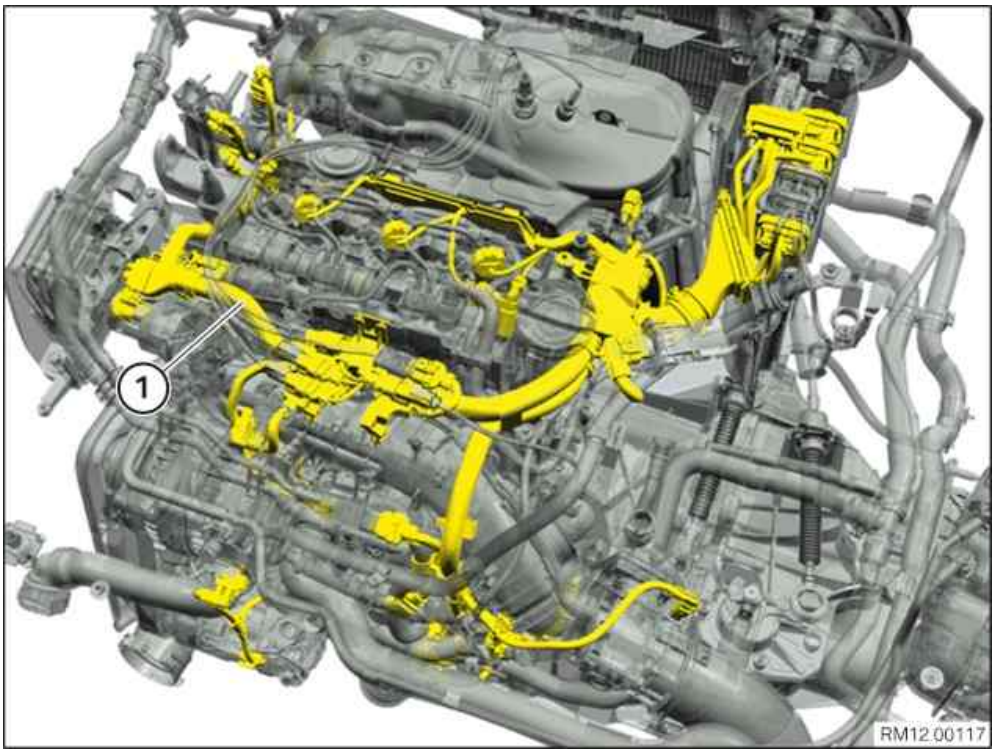


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

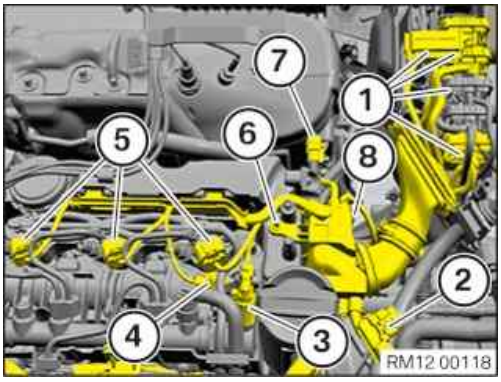
7 – Removing assemblies (on lifting table)

cardiagn.com

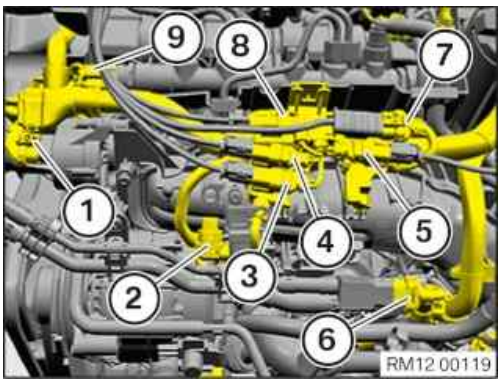
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



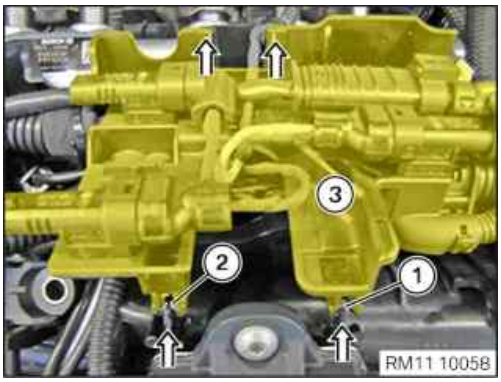
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



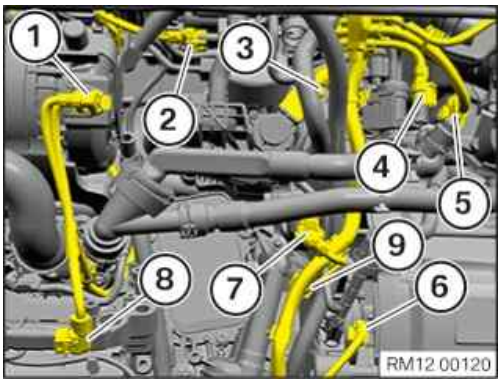
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

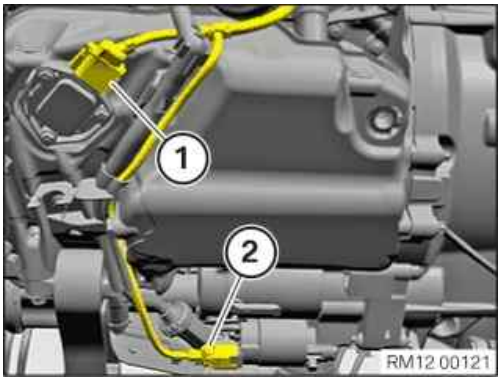
cardiagn.com



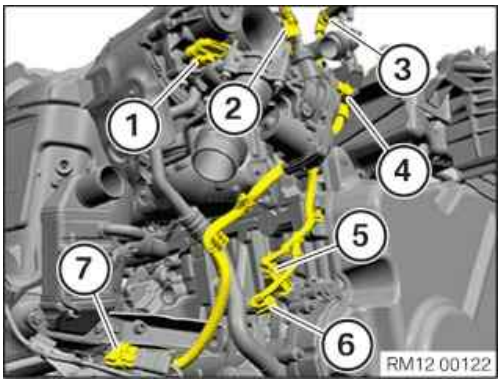
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



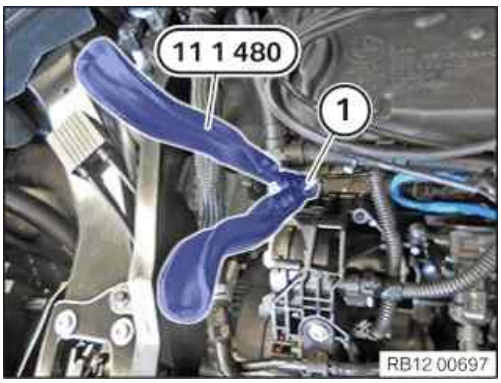
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

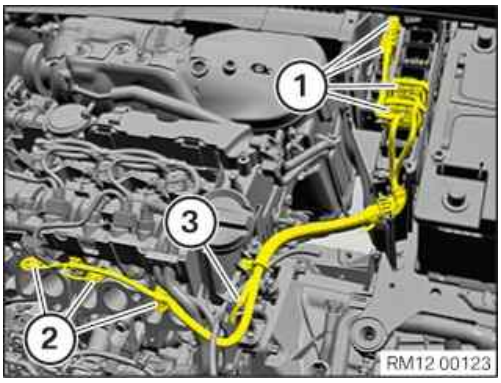


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

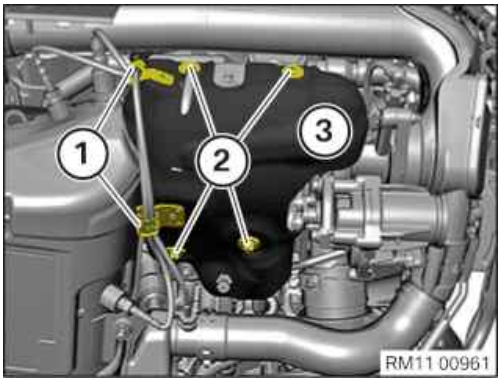
▶ Removing heat shield from top exhaust turbocharger

WARNING

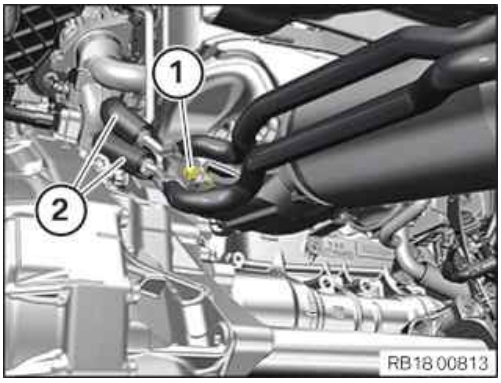
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



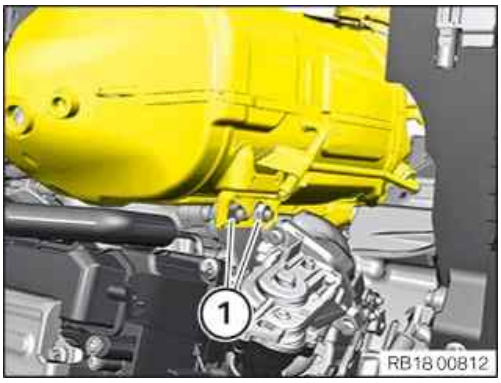
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



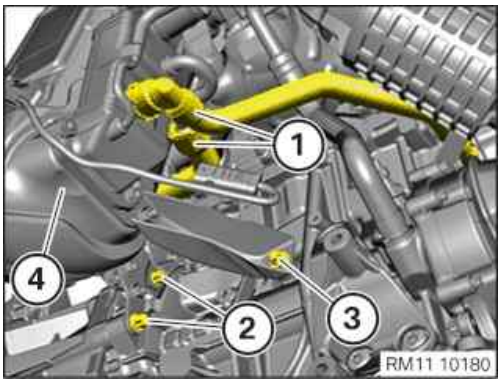
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

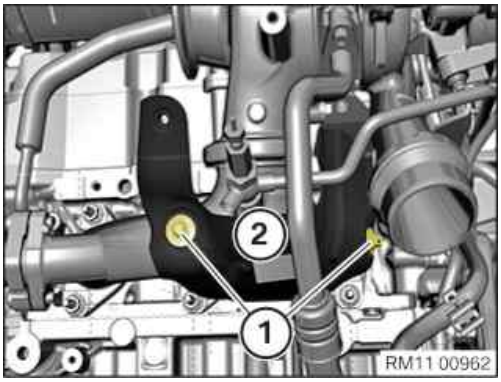
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

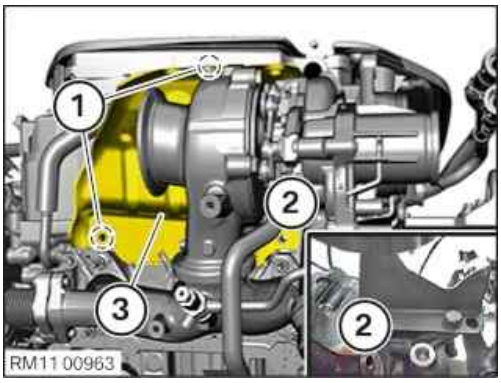
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



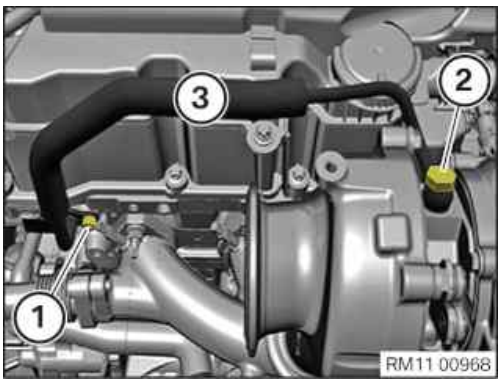
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

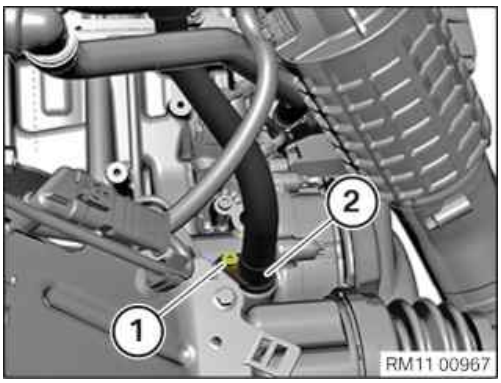
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

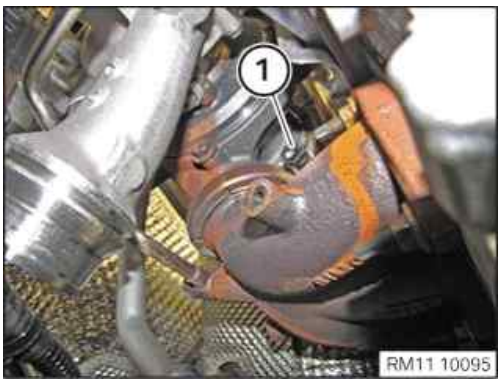
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

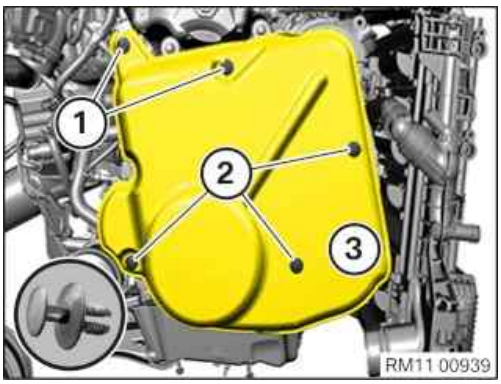
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

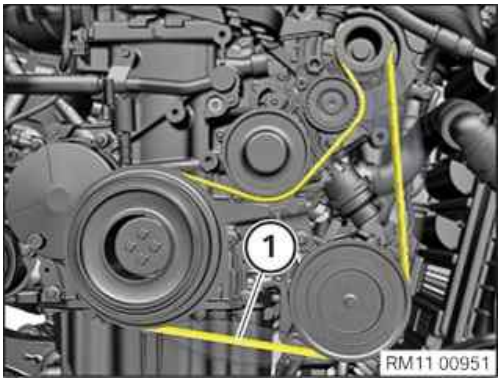
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

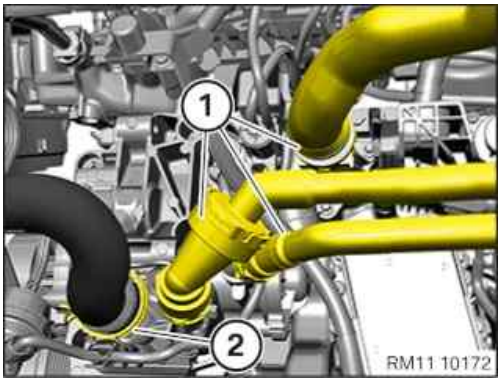
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

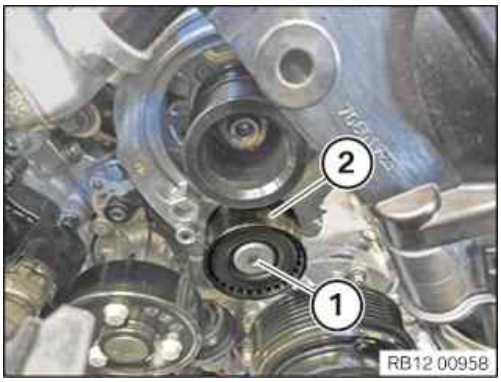


- Guide out the drive belt for the alternator (1) and remove it.

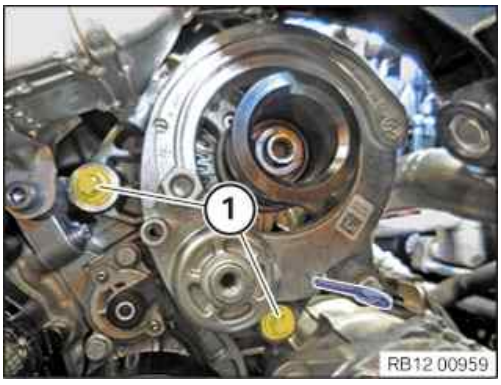


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

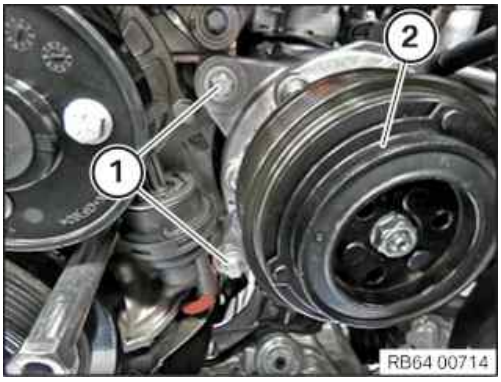
cardiagn.com



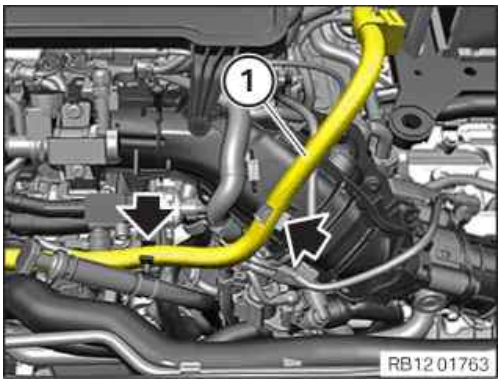
- Loosen screw (1).
- Remove the deflecting element (2).



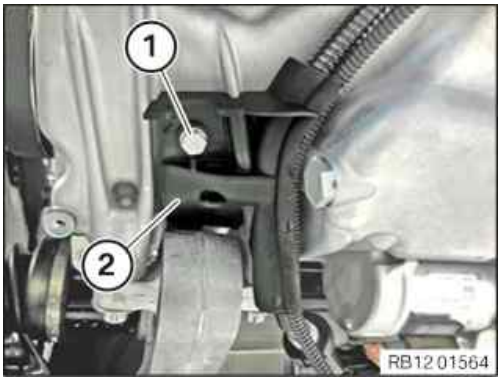
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

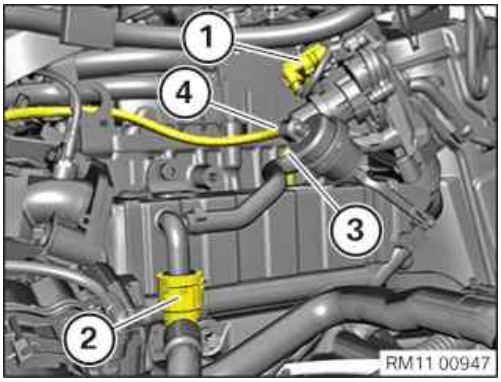
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

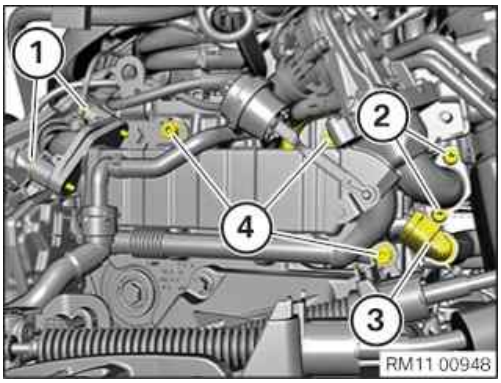
- Perform all work only on components that have cooled down.



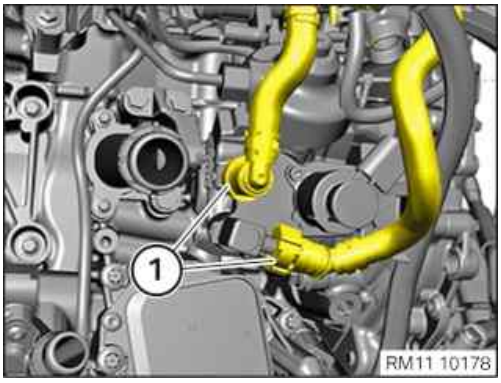
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

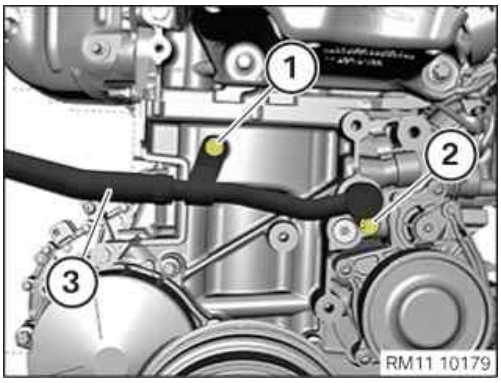


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Detach the engine from the manual gearbox

Prerequisite

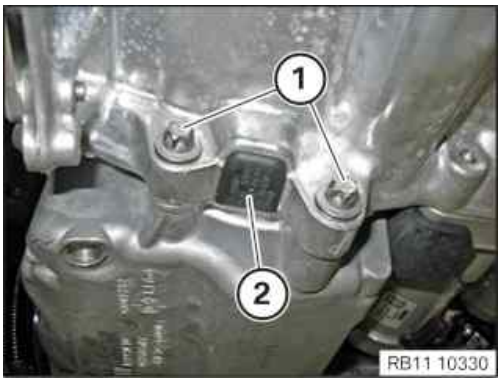
Engine has been removed.

CAUTION

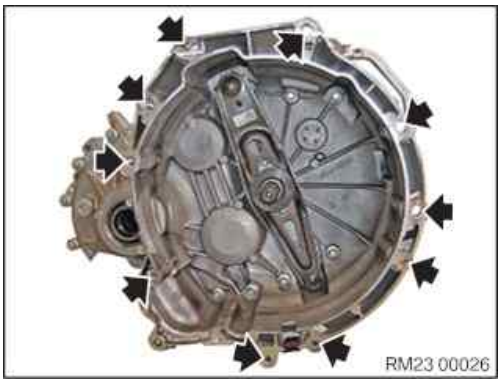
Heavy component.

Heavy components can lead to injury or damage.

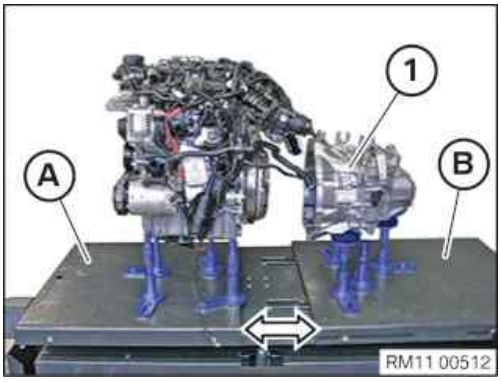
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).



- Remove screws (arrows).



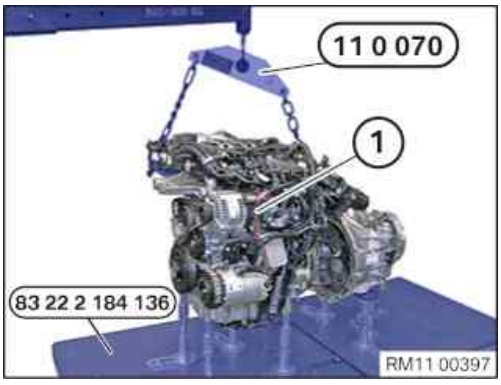
- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Attach engine lifter to special tool **0 490 579 (11 0 070)** and lift engine (1) off lifting table.

9 – Mount engine on assembly stand

CAUTION

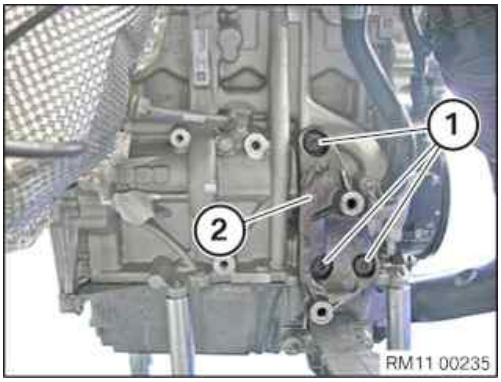
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

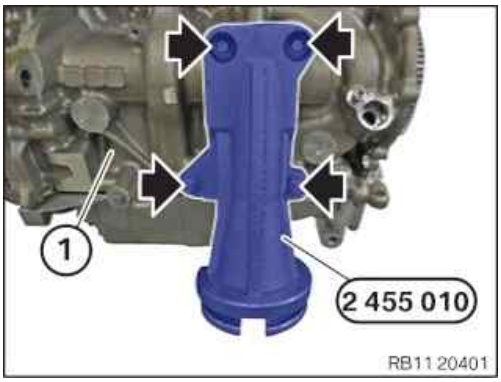
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Loosen screws (1).
- Guide out and remove holder (2).

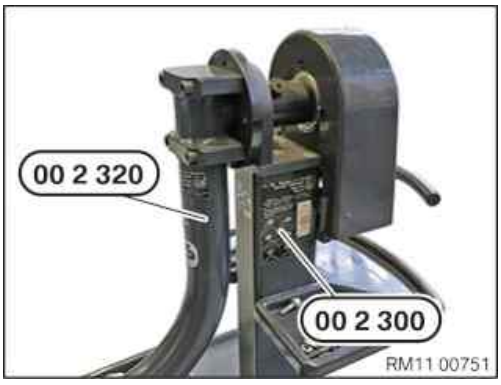
cardiagn.com



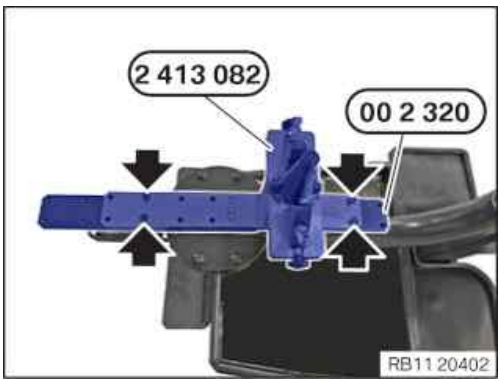
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

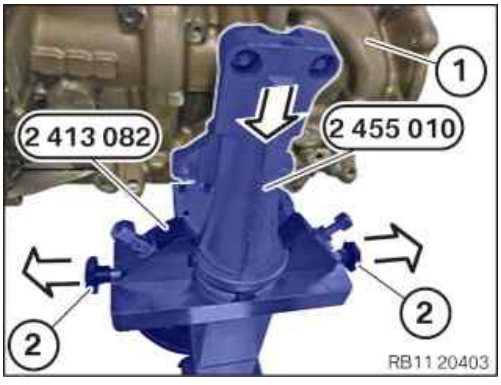


- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

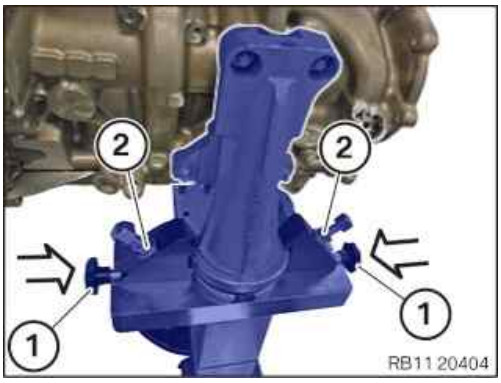
M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.



- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

cardiagn.com



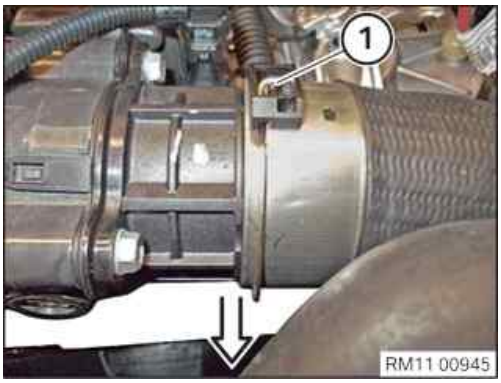
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

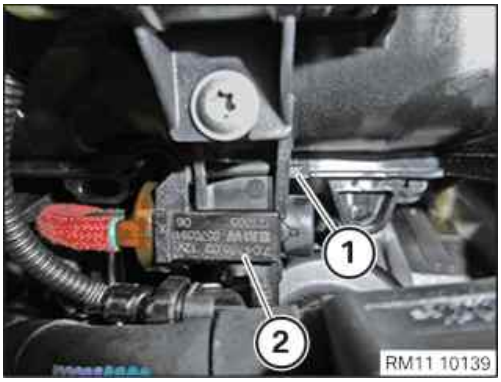
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

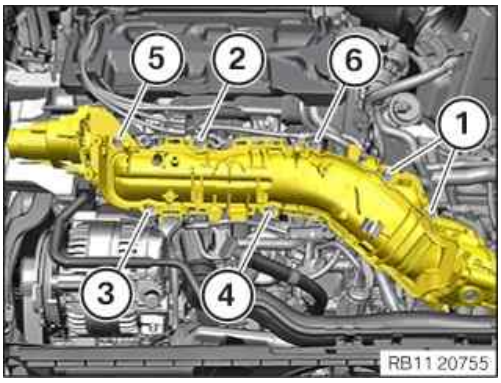


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

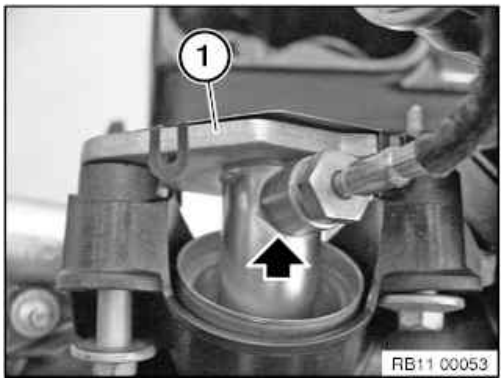


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

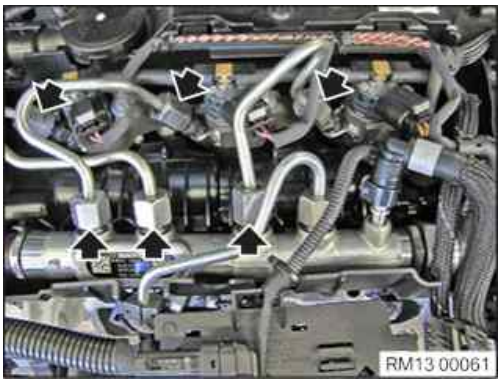
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

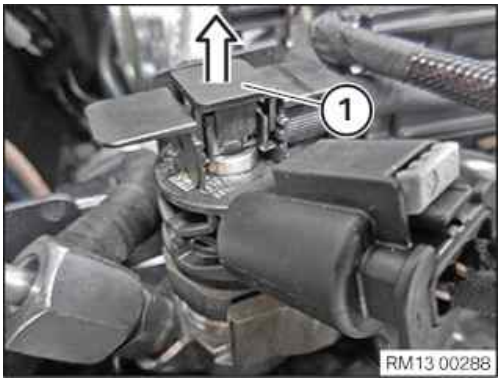
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

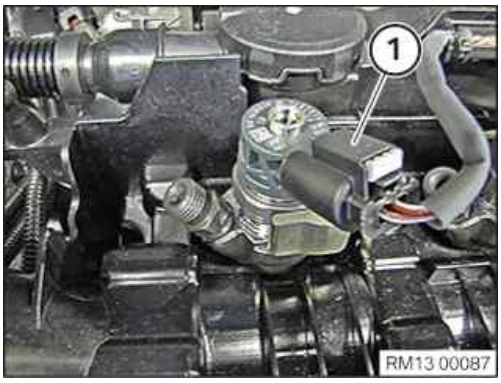
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

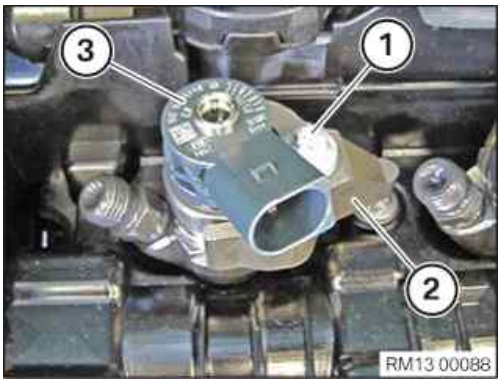
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

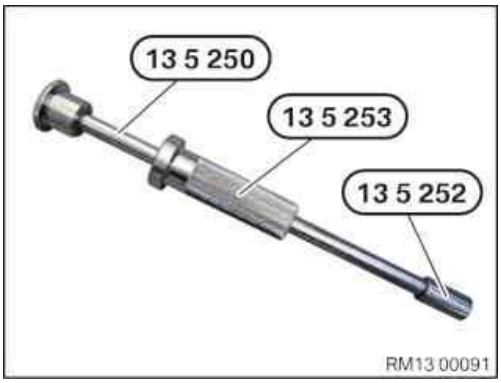
▶ **Loosen stuck injectors**

RISK OF DAMAGE

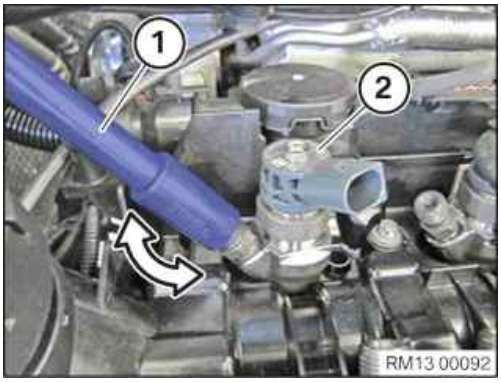
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

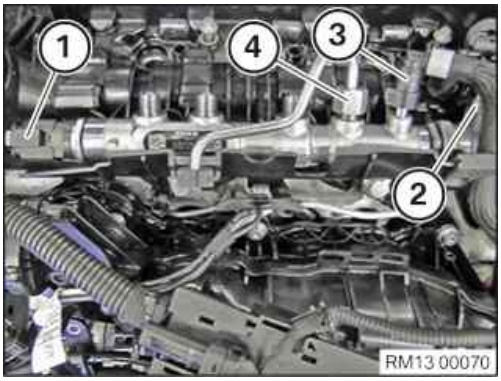
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

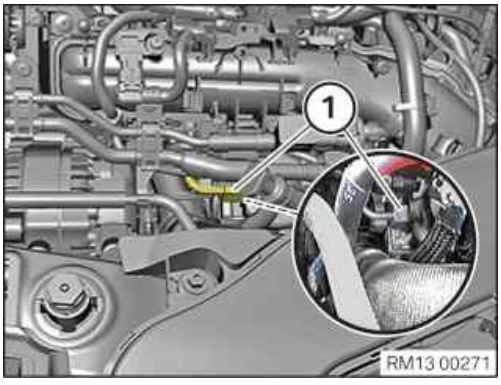
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

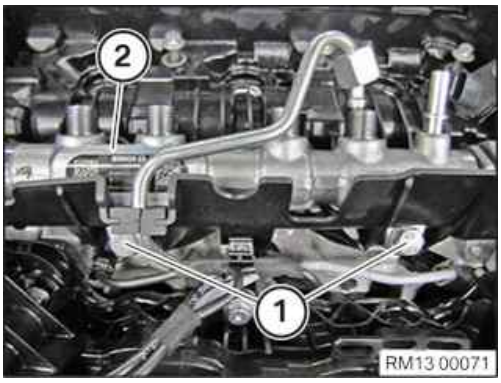


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

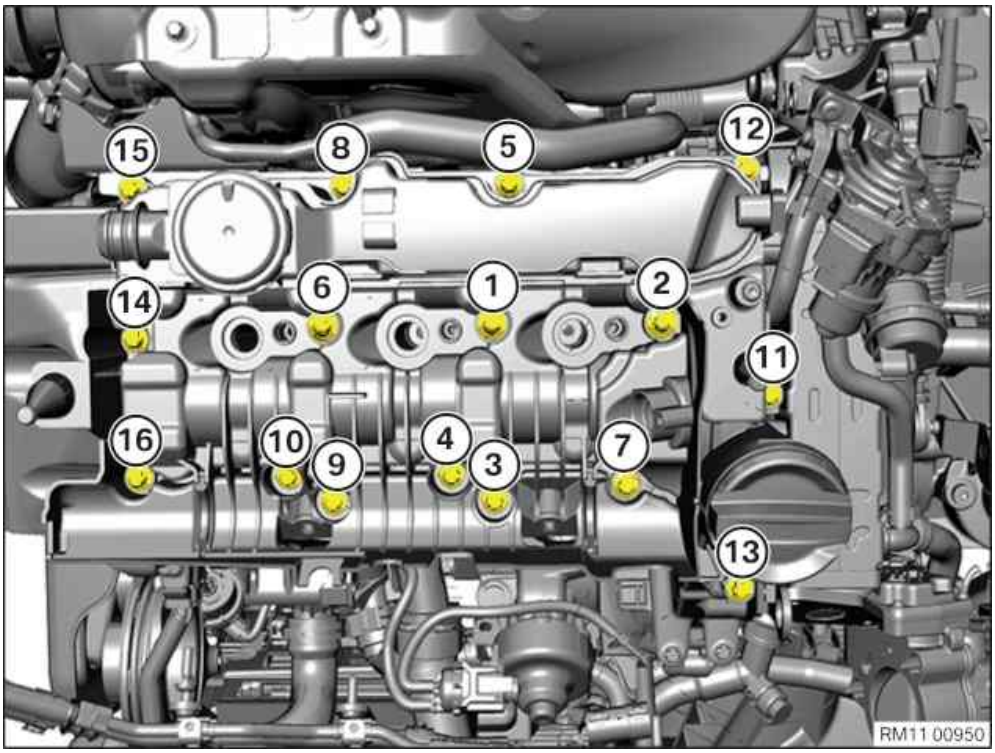
cardiagn.com



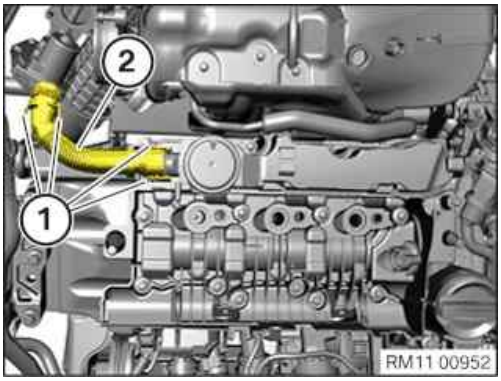
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover

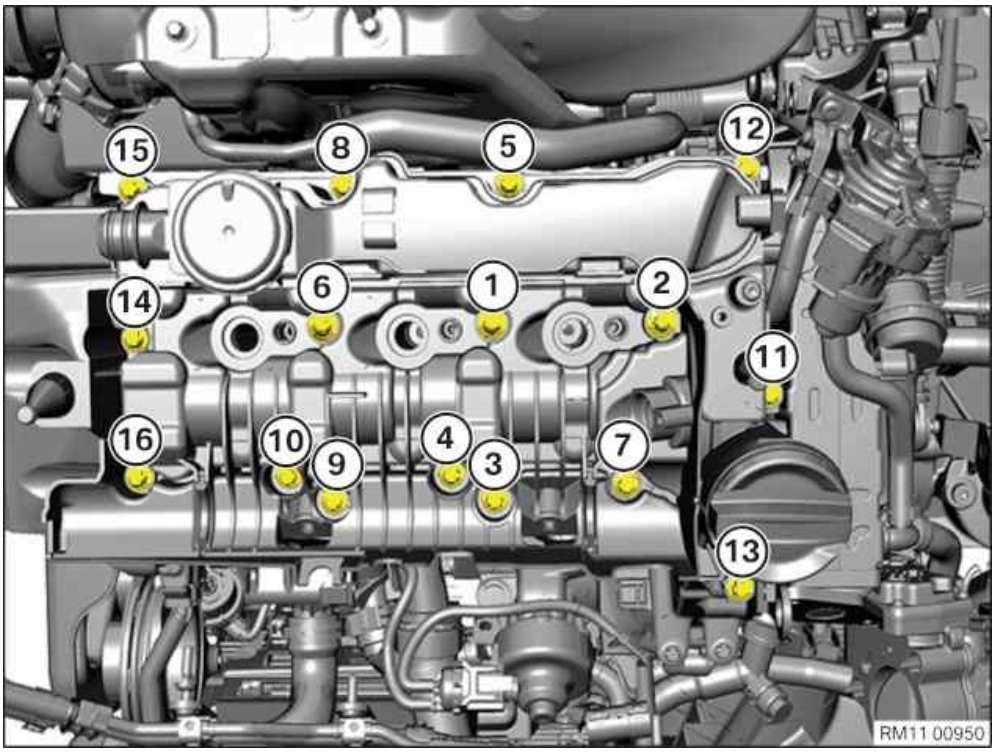


1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

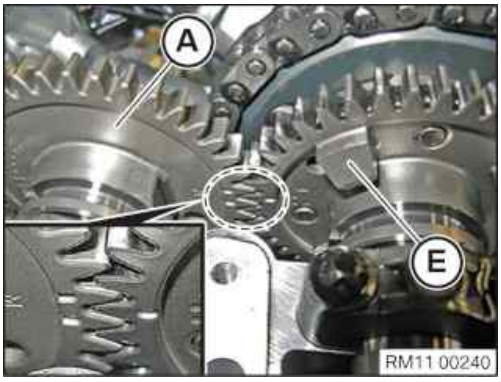
- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

cardiagn.com

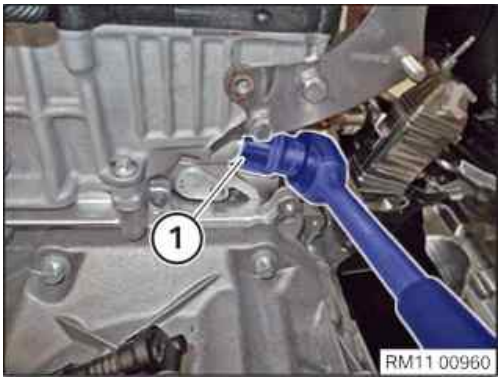
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

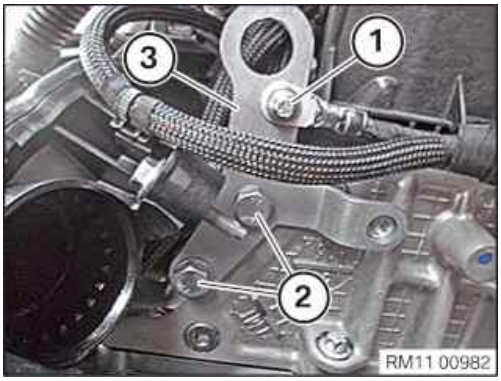


TECHNICAL INFORMATION

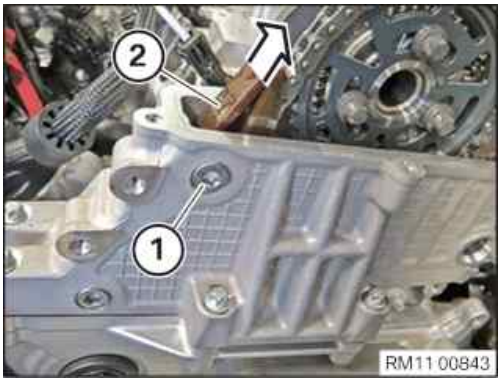
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

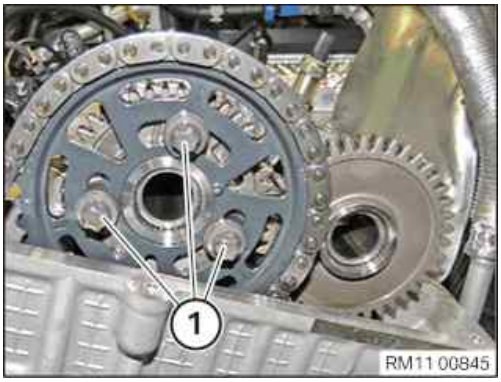


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

cardiagn.com

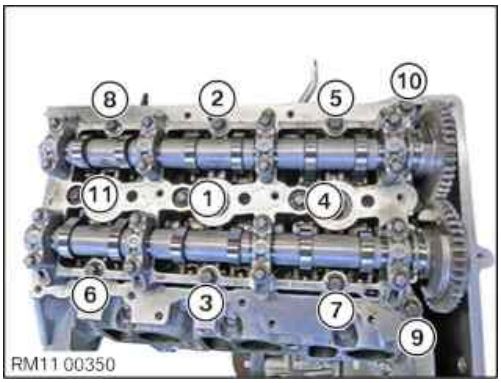
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

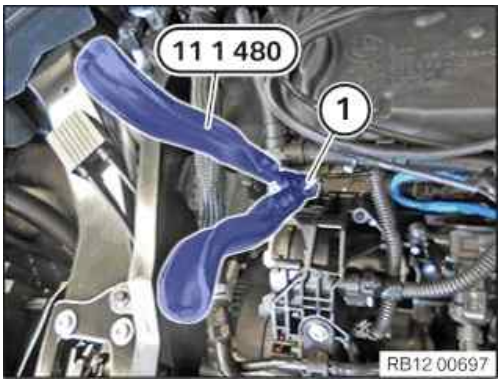
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

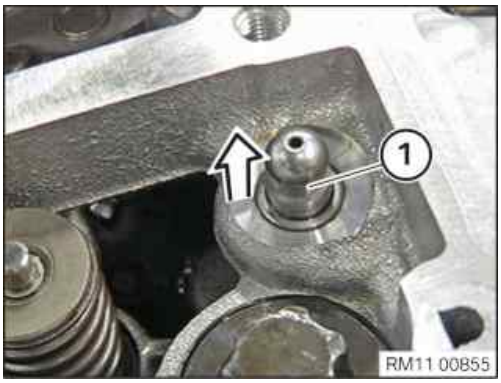
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

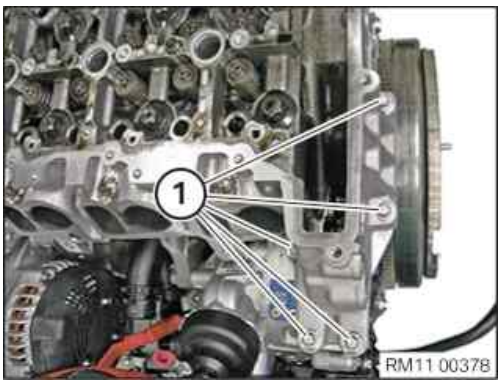
24 – Removing cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).

cardiagn.com

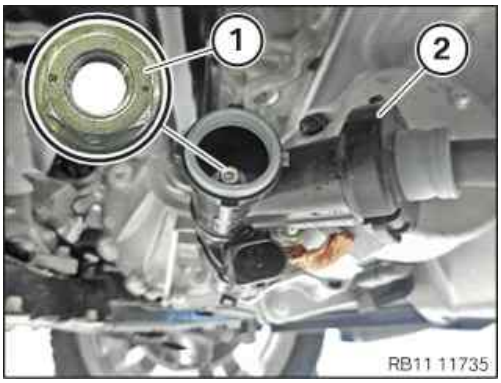
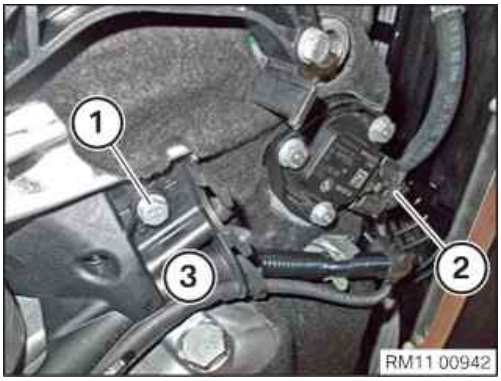
- Loosen the cylinder head bolts in the sequence from (8) to (1).
- Remove cylinder head.

25 – Removing the acoustic cover of the oil sump

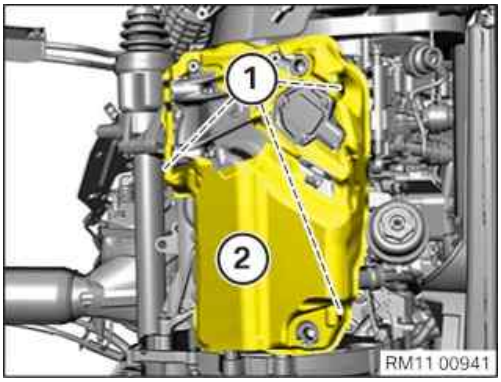
- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

26 – Remove oil sump

cardiagn.com

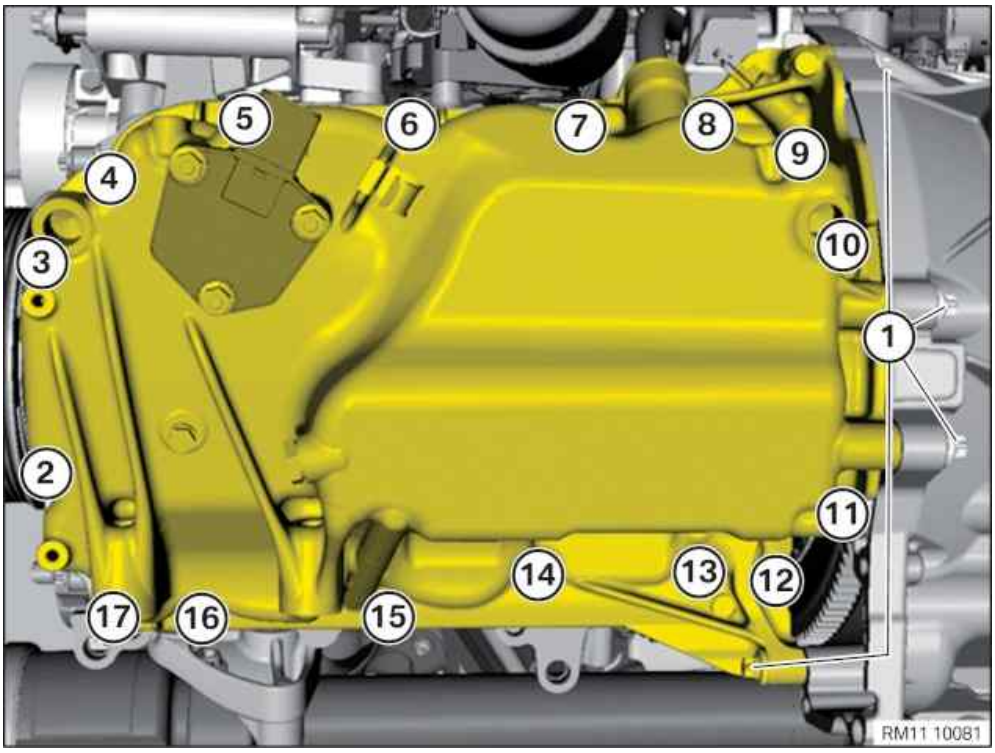
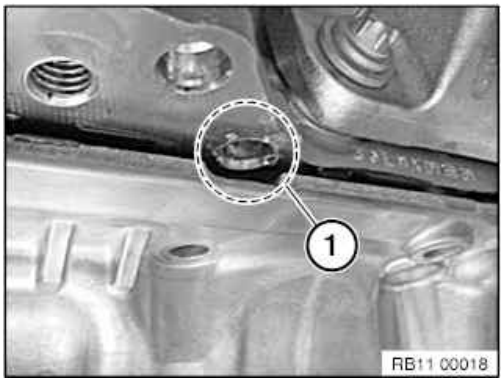
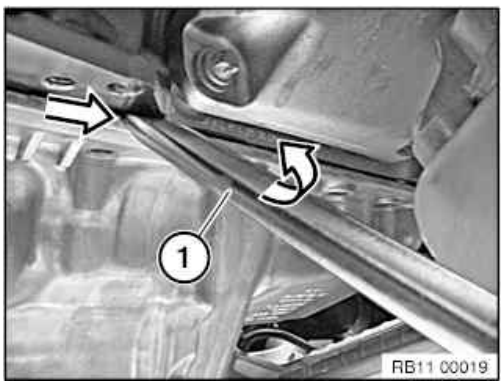
- Loosen screws (1).
- Feed out starter motor and remove.



- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release the oil sump only in area (1).



- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

27 – Remove the oil vacuum pump

cardiagn.com

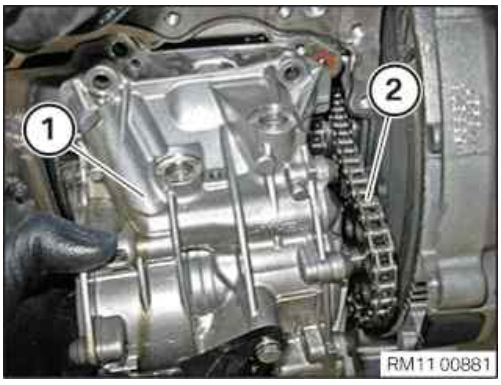
- Loosen screws (1) of the oil vacuum pump (2).



- Remove oil vacuum pump (1) and remove from the drive chain (2).

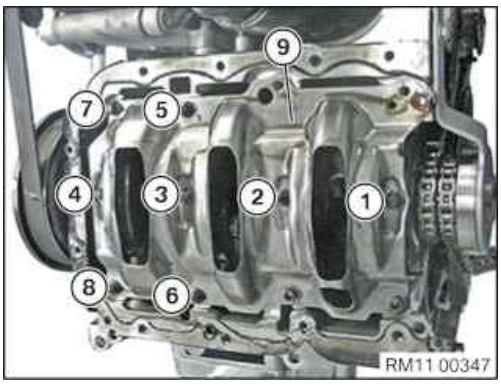
28 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen screws in the order (8) to (1).
- Guide out and remove the oil deflector (9).

29 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

cardiagn.com

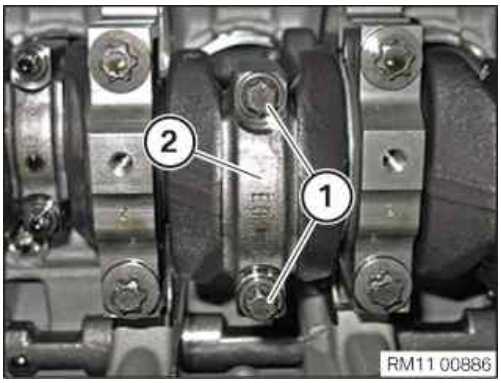
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.



- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.

MAIN WORK

30 – Removing the piston with connecting rod

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.

cardiagn.com

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Remove the piston (1) and connecting rod.

31 – Remove the connecting rod bearing shells

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.

32 – Measure side clearance of piston rings

cardiagn.com

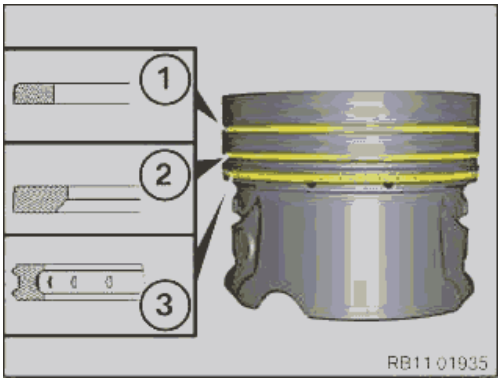
RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.

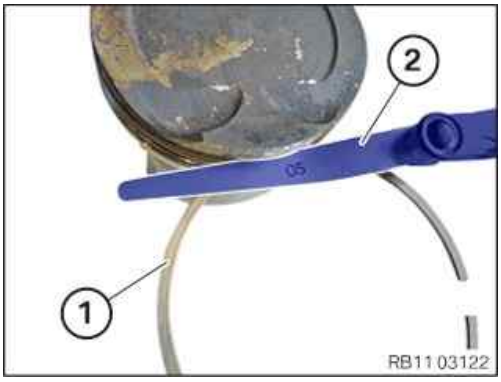


TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)



Check

- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

33 – Measure the piston diameter

Check

cardiagn.com

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Result

» The piston does not correspond to the specifications.

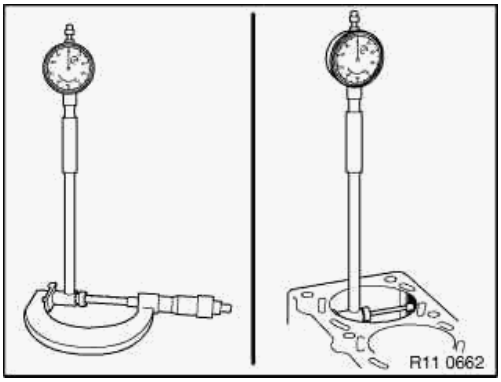
Measure

- Renew the piston.

34 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.



Check

- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

  Parts: Engine

35 – If necessary: Renew the piston

cardiagn.com

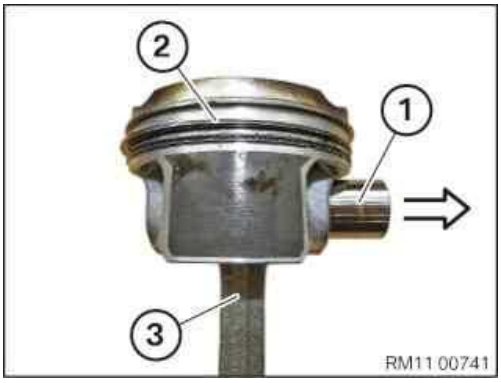
CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).



TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

- Renew piston with gudgeon pin.

  Parts: Pistons

TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.

- Prepare special tool on the fitting aid .

cardiagn.com

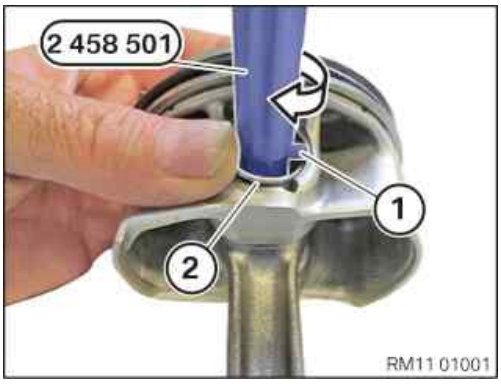
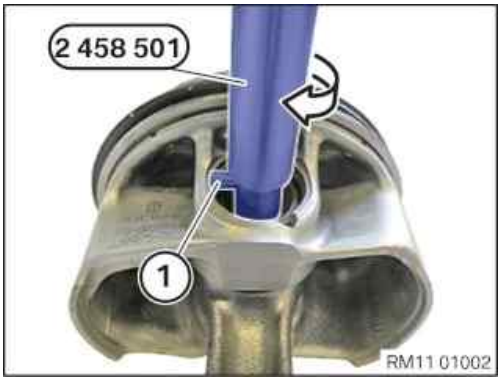
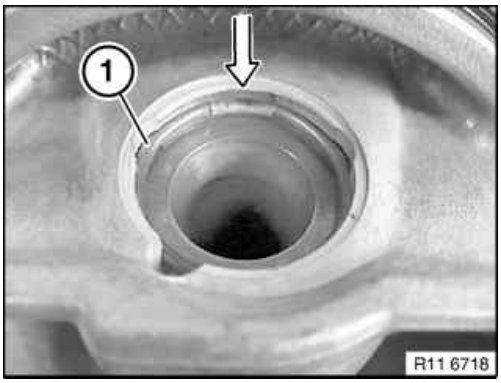
- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).



- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.



- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.



- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

36 – Install the connecting rod bearing shell

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

cardiagn.com

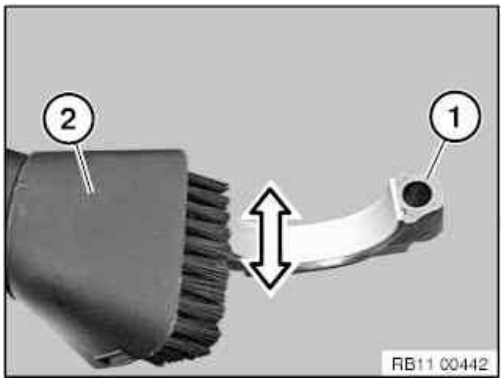
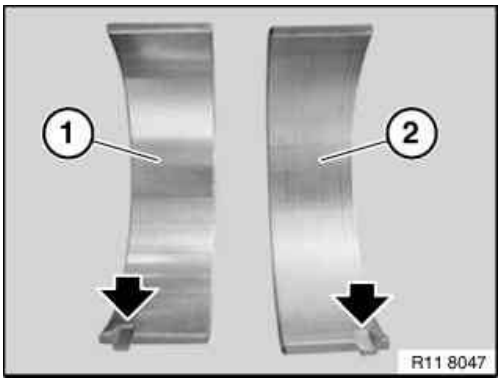
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

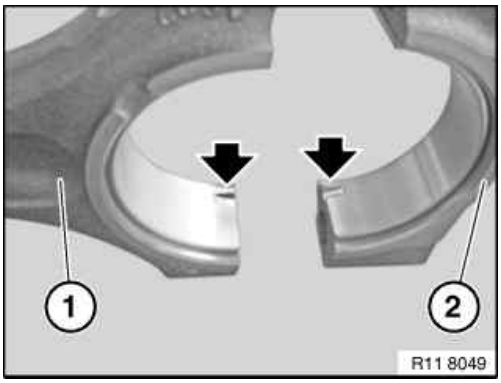


- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



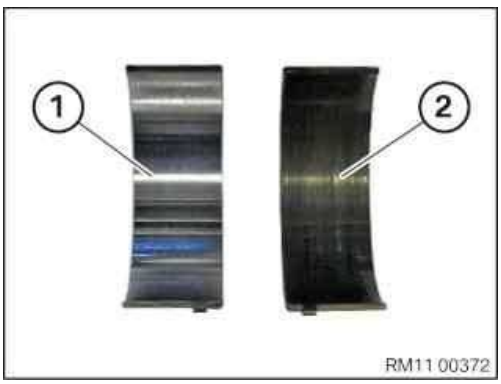
- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing (1) for the connecting rod bearing cap and the connecting rod bearing (2) for the connecting rod are each equipped with protection against incorrect assembly as shown in the marked area.



- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing cap (2) and the connecting rod (1) are each equipped with protection against incorrect assembly.



- Makes sure that a light connecting rod bearing shell (1) and a dark connecting rod bearing shell (2) are installed for each connecting rod.

cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the dark connecting rod bearing shell (2) into the connecting rod (1).
- Oil the connecting rod bearing shell (2).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the light connecting rod bearing shell (2) into the connecting rod bearing cap (1).
- Oil the connecting rod bearing shell (2).

37 – Installing piston with connecting rod

TECHNICAL INFORMATION

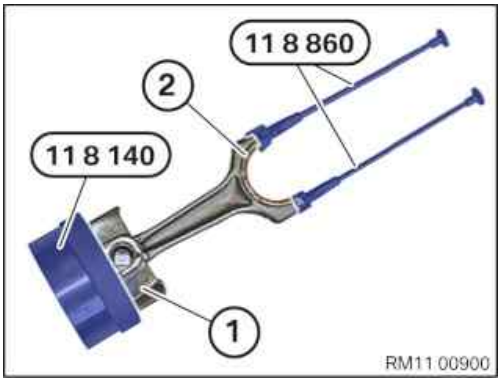
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.



- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Install the piston in the crankcase.

cardiagn.com

- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

POSTPROCESSES

38 – Install the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

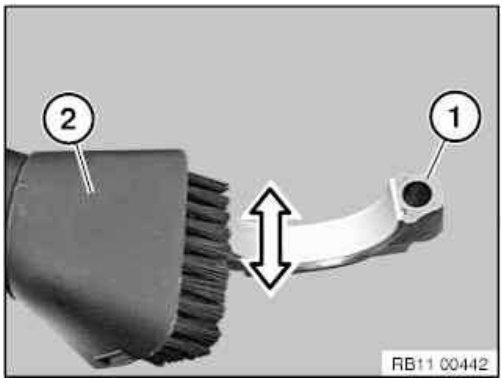
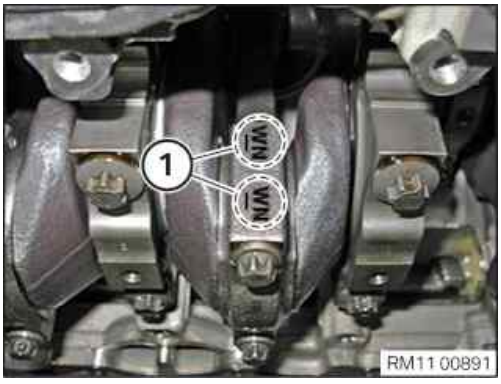
The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.

cardiagn.com

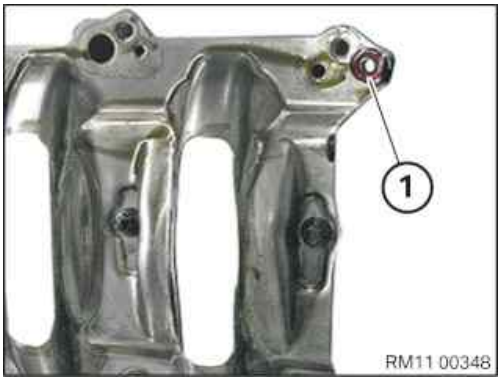
- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

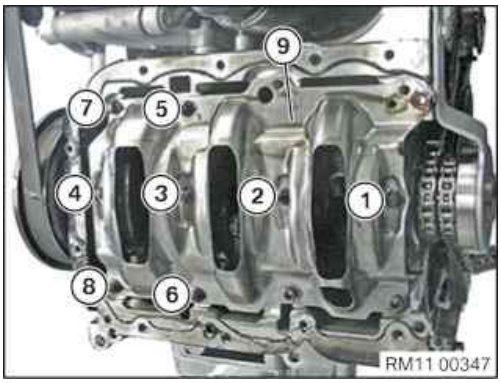
Connecting rod bearing cap to connecting rod

M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

39 – Installing the oil deflector



- Check sealing ring (1) for damage and replace oil deflector if necessary.



- Insert and install the oil deflector (9).
- Renew screws (1) to (4).

  Parts: Bolts
- Hand-tighten the bolts (1) to (4).
-
- Tighten the screws (1) to (8).

Oil deflector to crankshaft bearing cap

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (5) to (8).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

40 – Install the oil vacuum pump

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

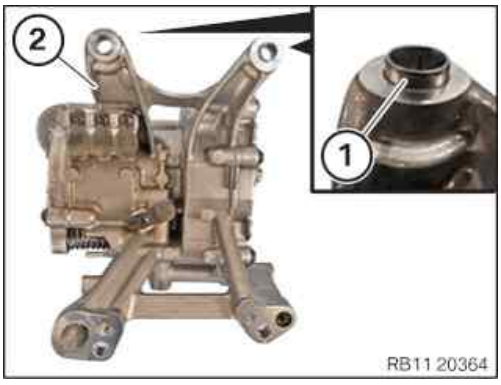
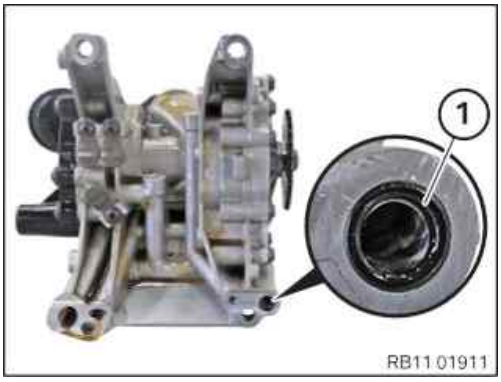
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

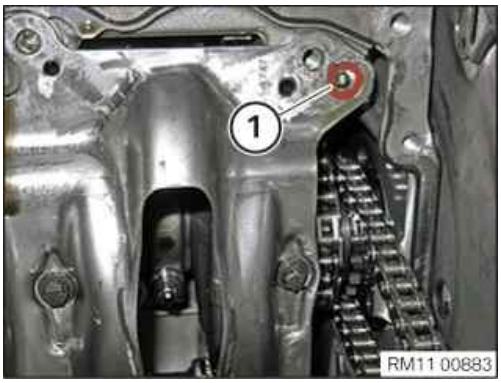
  Parts: Centring sleeves



- Install centering sleeves (1) in the oil vacuum pump (2).

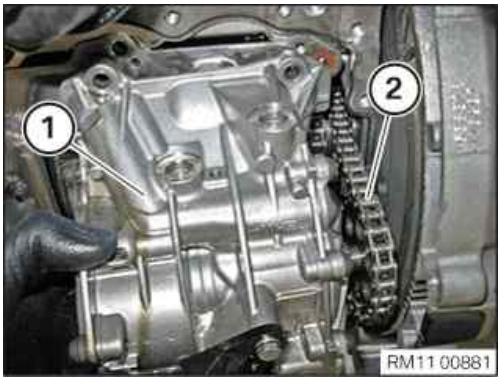


- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.



- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector



- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB37

M8x35	*Renew screws.*	Tightening torque	15 Nm
		Angle of rotation	45 °

41 – Refitting sump

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

cardiagn.com

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

RISK OF DAMAGE

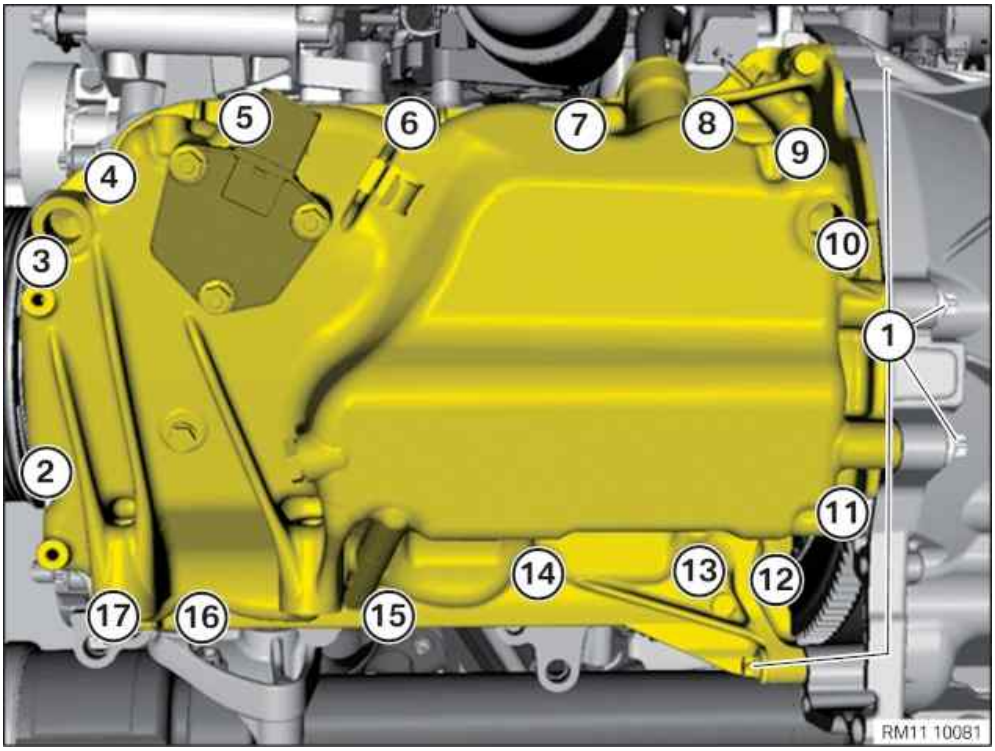
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten the transmission bolts (1) on the oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

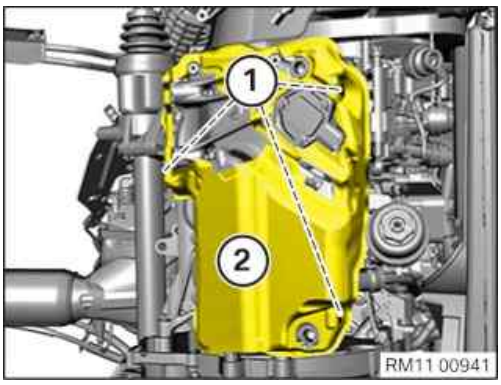
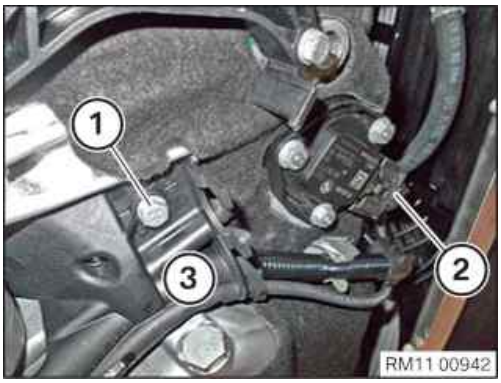
42 – Installing the acoustic cover for the oil sump



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).



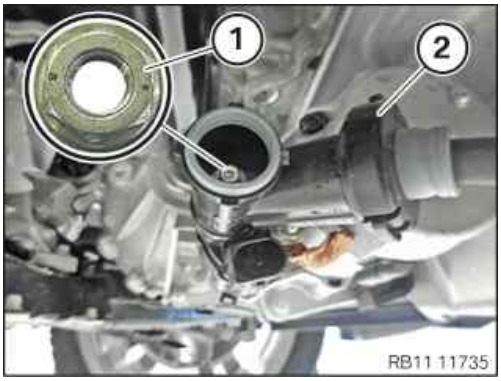
- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.



CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

43 – Mounting the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

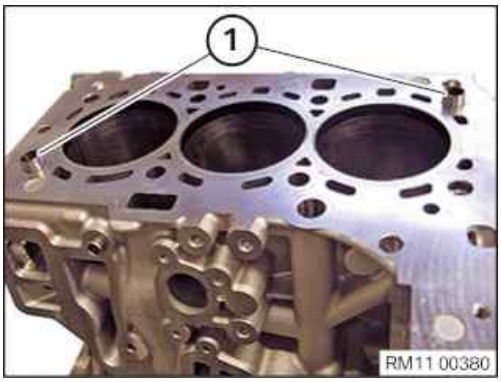
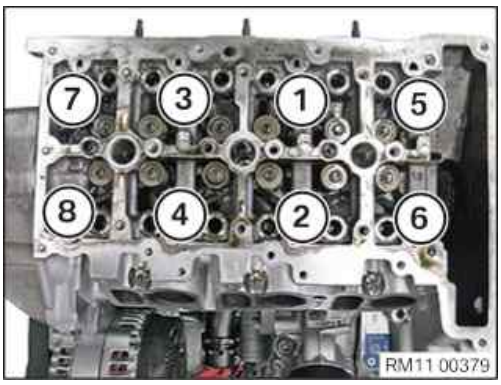
Do not remove bolt coating.



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.
- Clean tapped bores.
- Position the cylinder head on the crankcase.



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

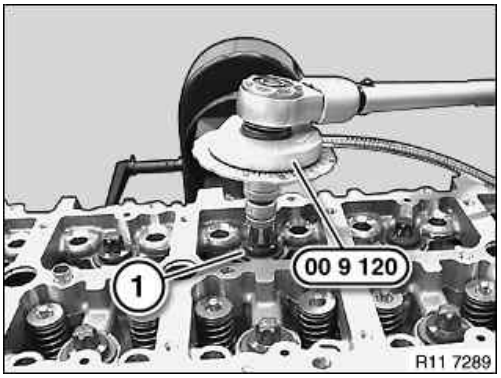
When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

44 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

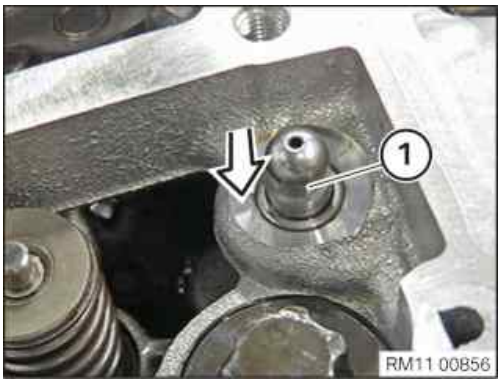
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

45 – Install the roller cam followers

TECHNICAL INFORMATION

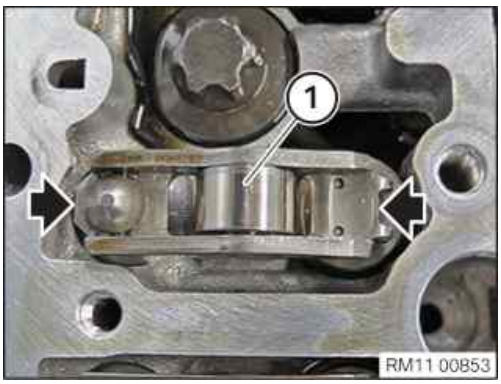
- Note the installation position of the component. The component may be installed in various installation positions.



- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

46 – Install glow elements

cardiagn.com

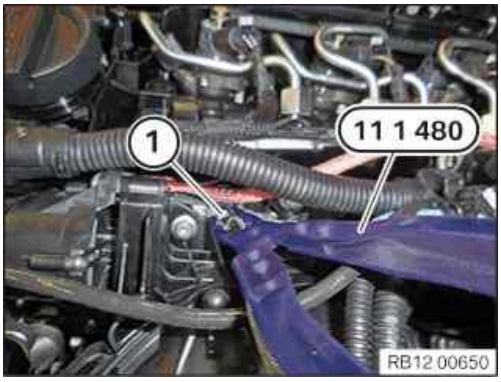
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

47 – Installing the camshaft support

RISK OF DAMAGE

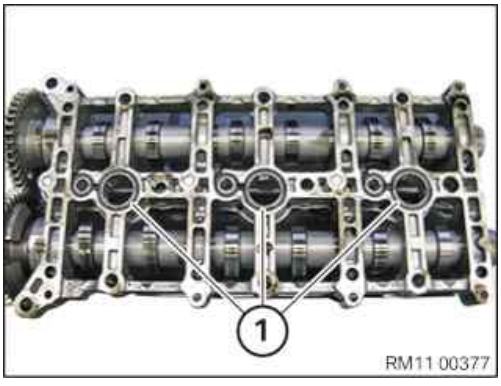
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Renew the seals (1) on the camshaft support.

  Parts: Seals

cardiagn.com

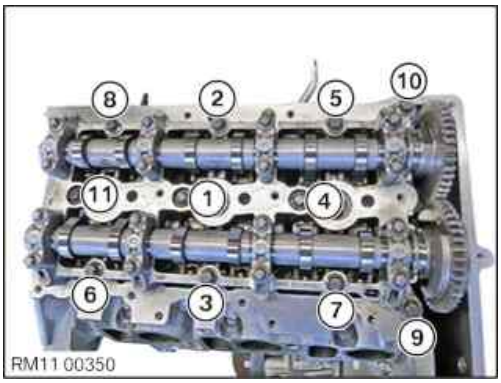
- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

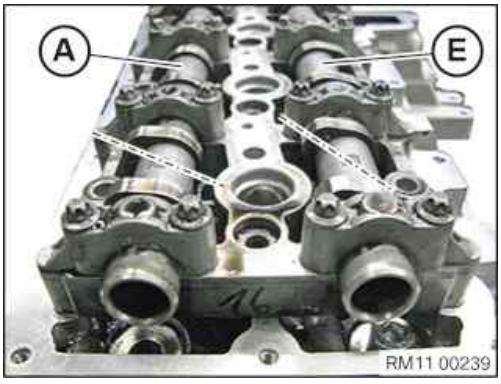
M7x35		Tightening torque	13 Nm

48 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▸ **Remove chain tensioner piston**

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

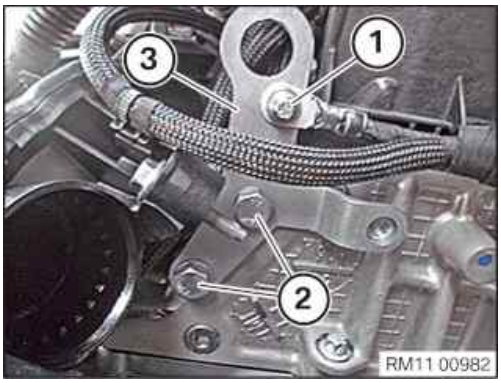
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▶ **Remove the timing chain guide rail**



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

cardiagn.com

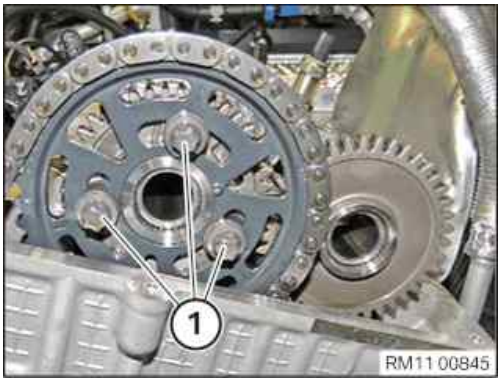
- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▶ **Installing exhaust camshaft**

RISK OF DAMAGE

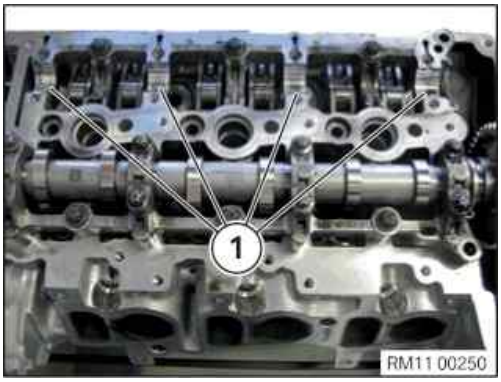
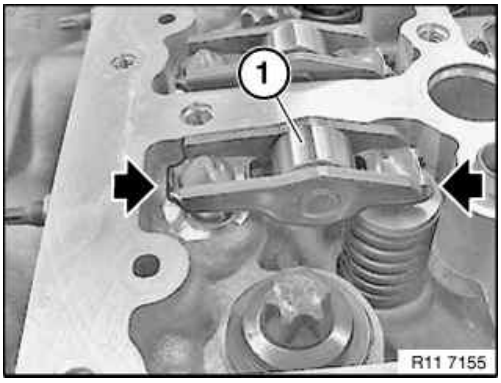
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.

cardiagn.com

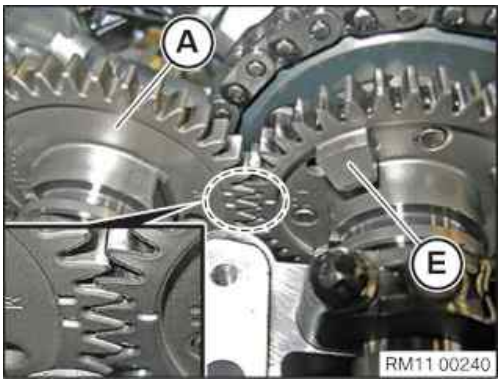
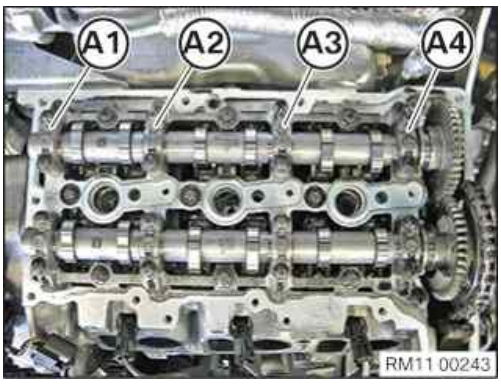
- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

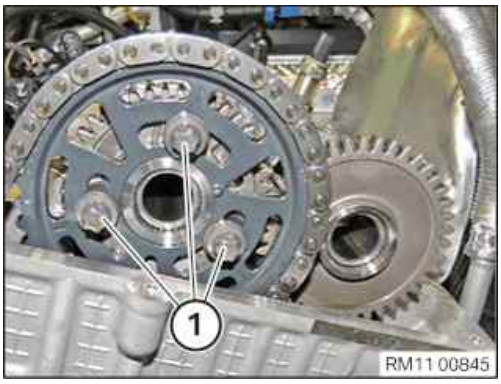
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

► **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

► **Install the timing chain guide rail**

cardiagn.com

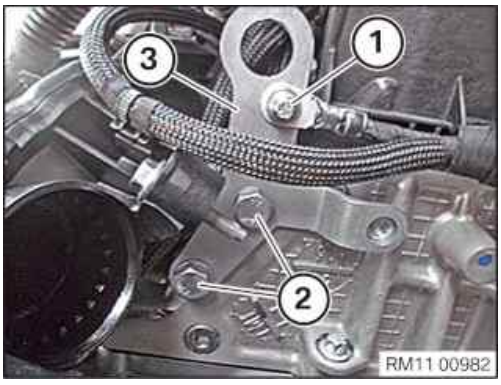
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com

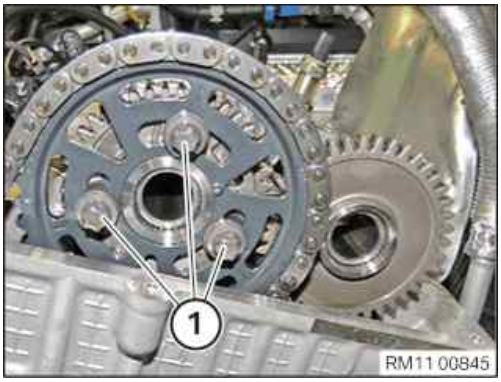
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

49 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

50 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

51 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

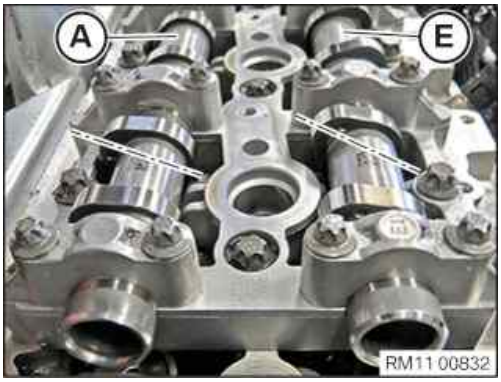
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

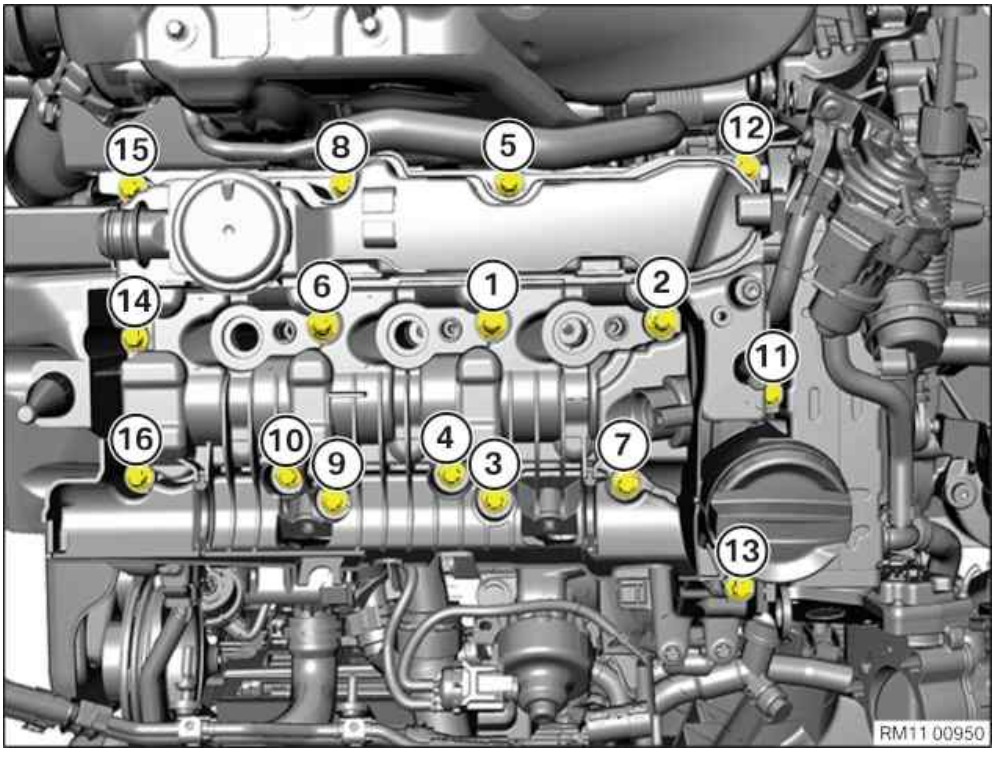
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

52 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover

cardiagn.com

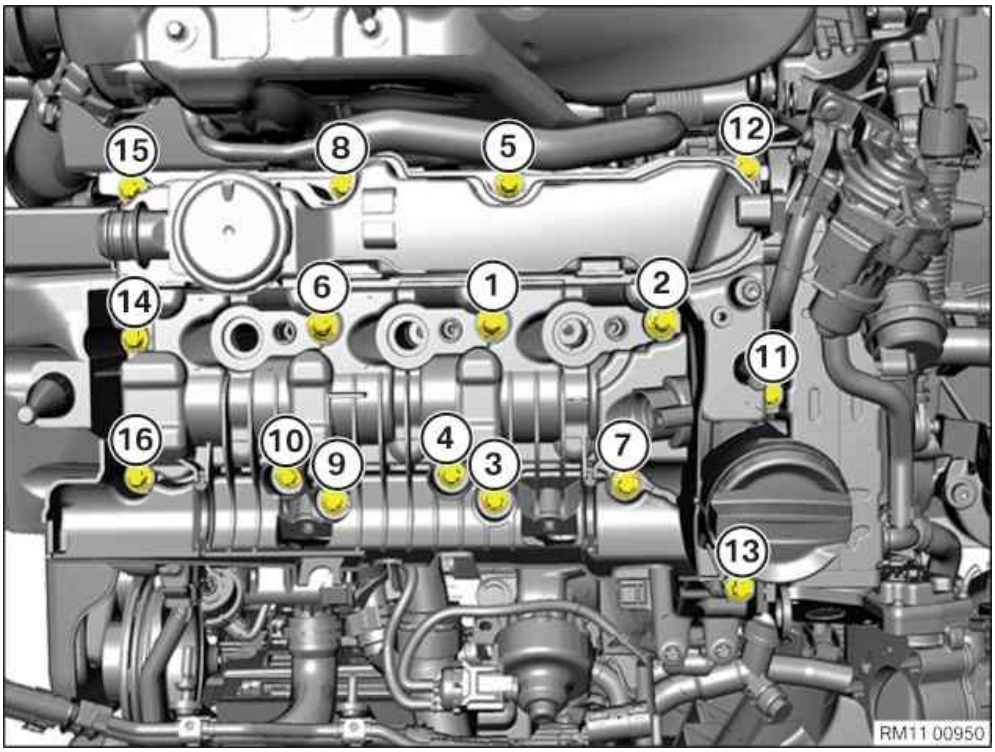
- Renew the gasket (1) of the cylinder head cover.

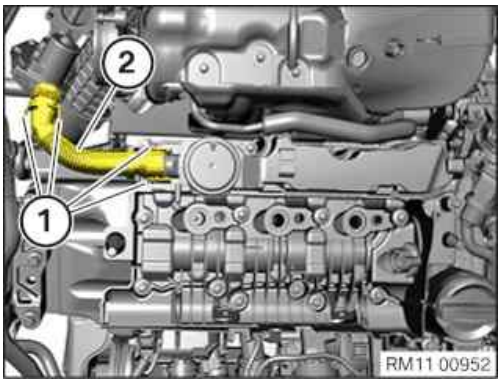
  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

53 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

cardiagn.com

RISK OF DAMAGE

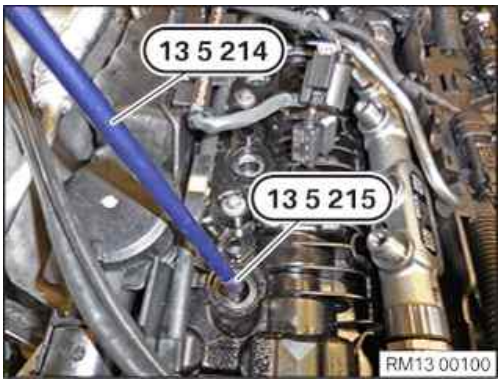
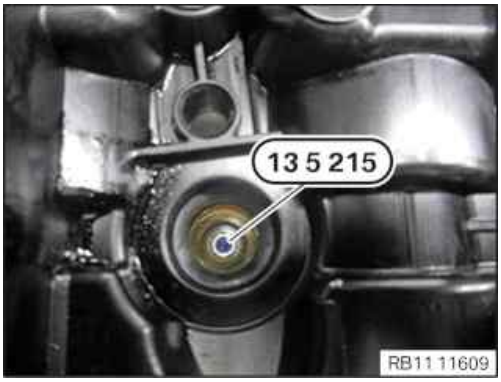
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

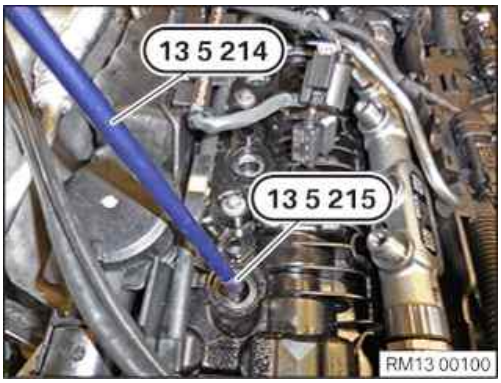
- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

cardiagn.com

RISK OF DAMAGE

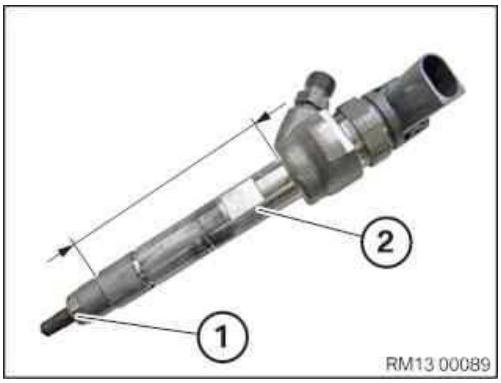
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

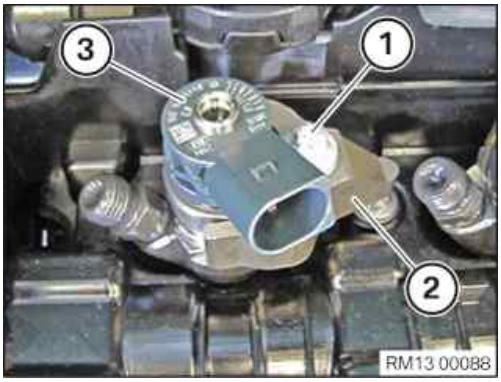


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

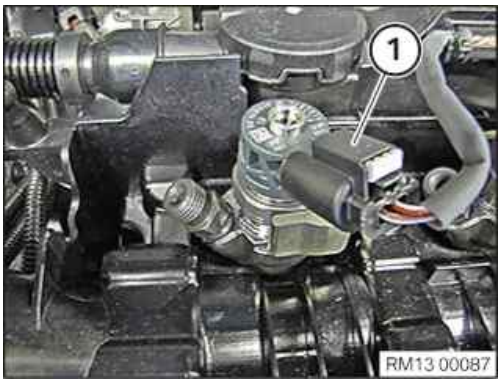
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

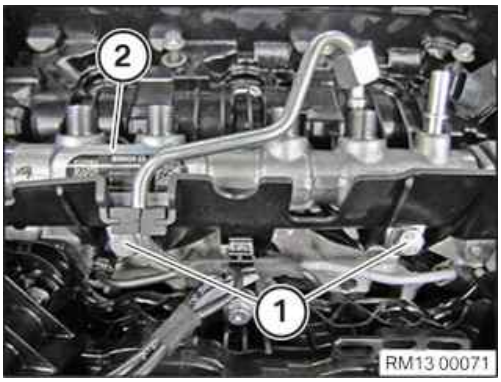
- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

54 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

55 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

56 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

TECHNICAL INFORMATION

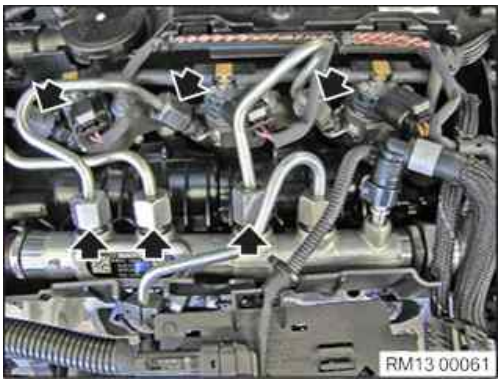
Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

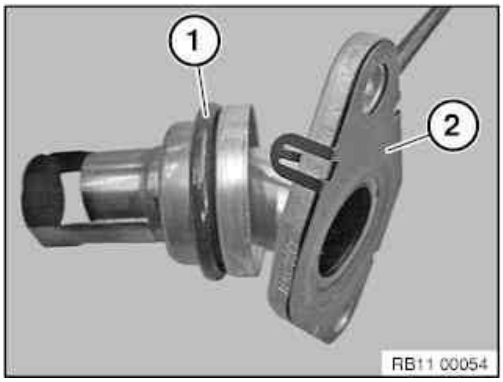
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

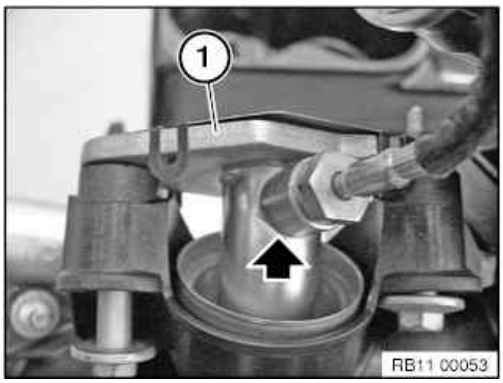
57 – Installing the intake plenum



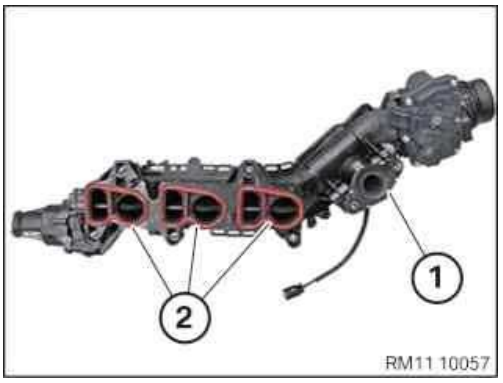
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.

cardiagn.com

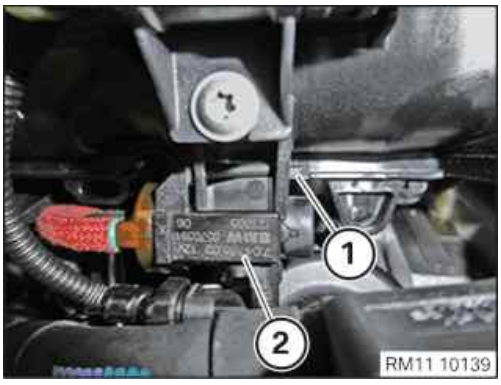
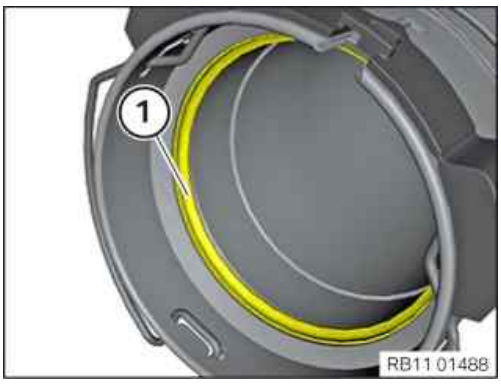
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

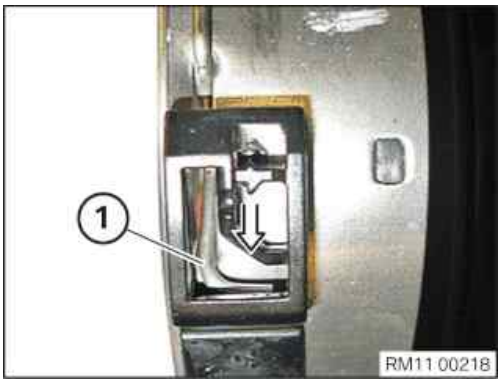


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

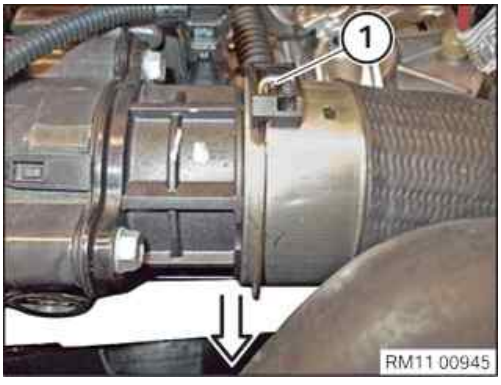


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

58 – Remove the engine from the assembly stand

cardiagn.com

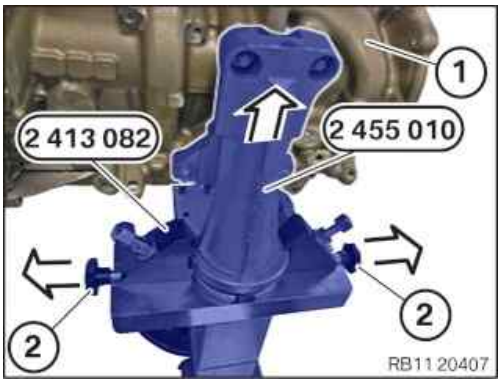
CAUTION

Heavy component.

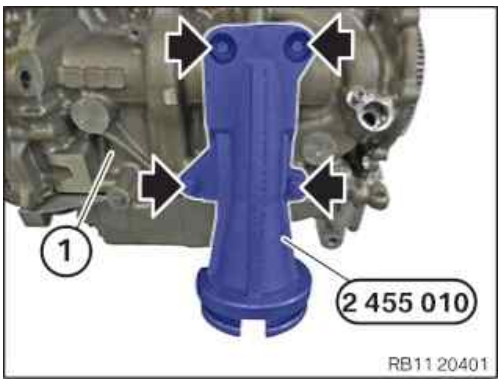
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

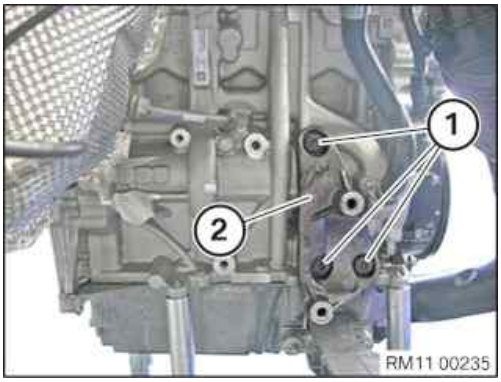
- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase

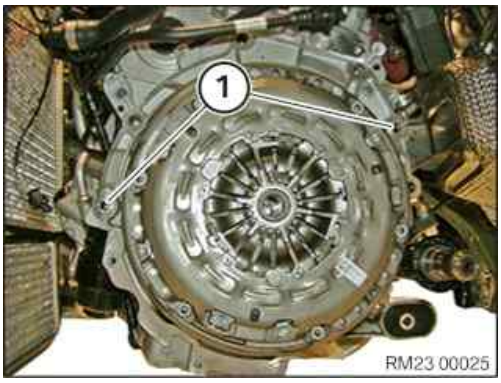
M10		Tightening torque	38 Nm

59 – Mounting engine on manual gearbox

Prerequisite

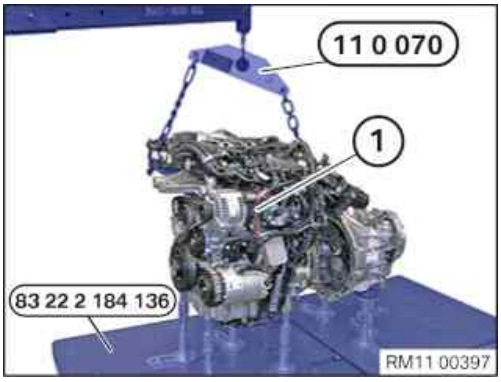
Engine has been removed.

cardiagn.com

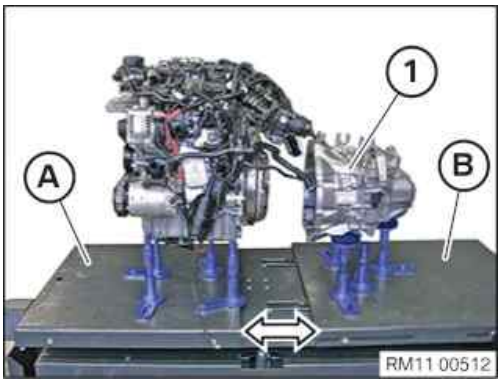


- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

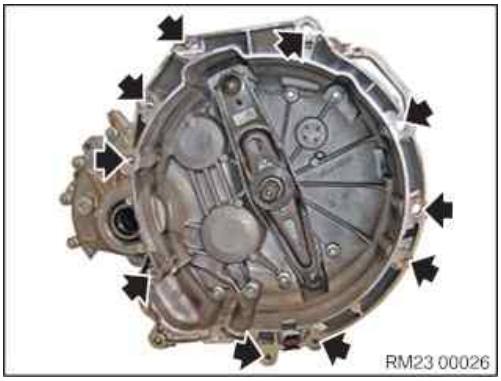
- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

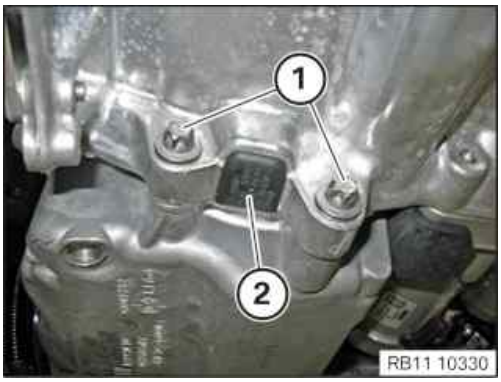


- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

cardiagn.com



- Tighten the screws (1).

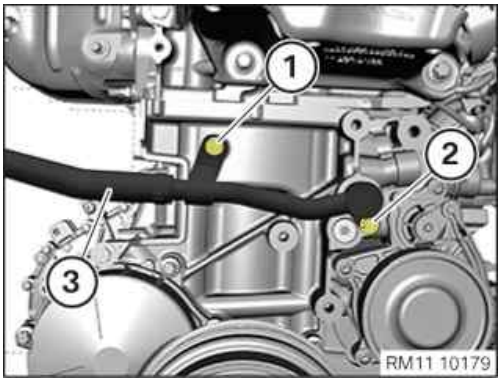
Transmission to oil sump

M8		Tightening torque	19 Nm

- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

60 – Attaching assemblies (on lifting table)

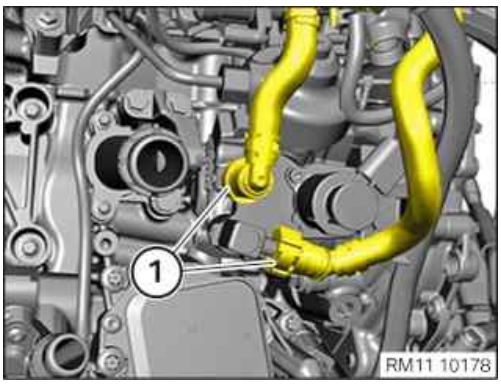


- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm



- Connect and lock fuel lines (1).

  The locks must engage audibly.

▶ **Installing the exhaust-gas recirculation cooler**

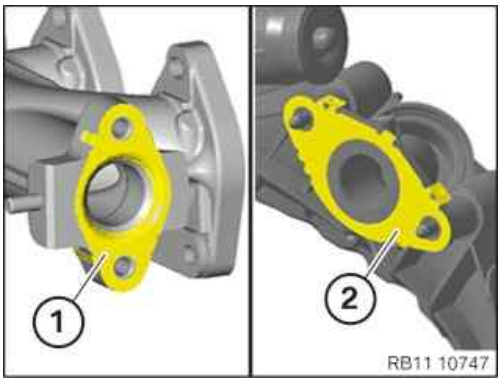
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

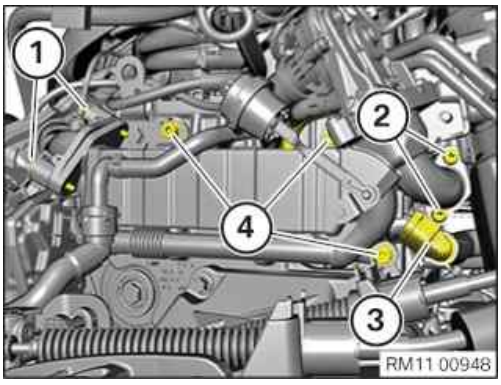


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

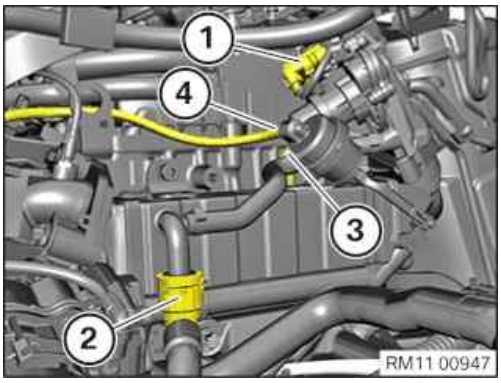
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

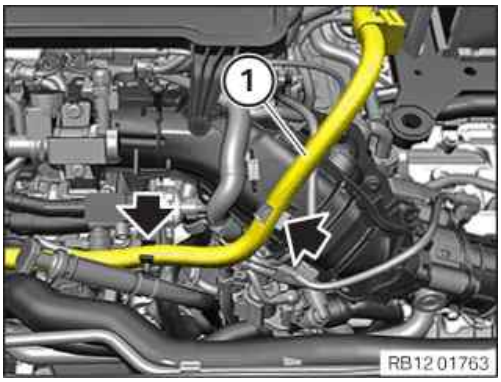


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.



CAUTION

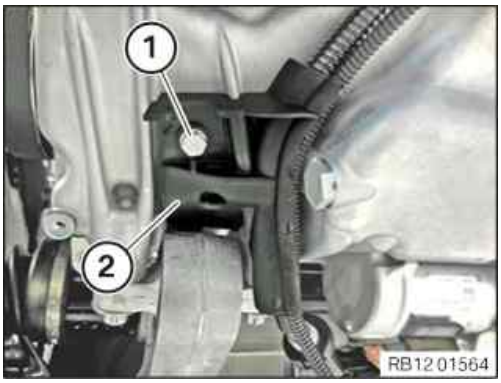
Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

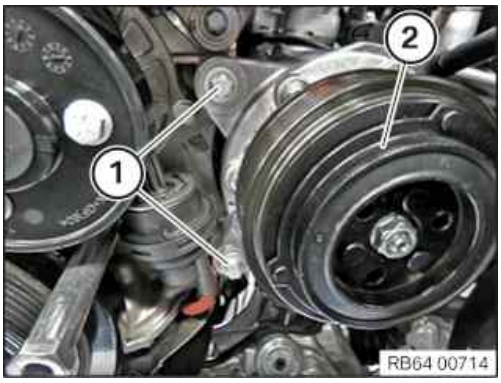


- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

cardiagn.com

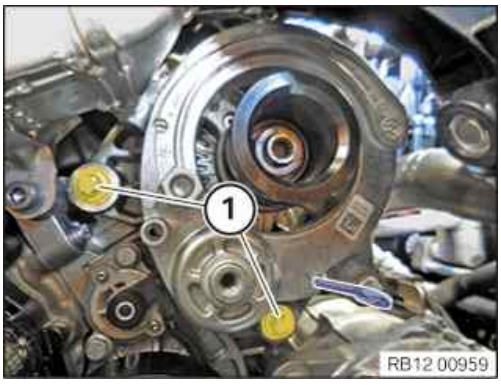


- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

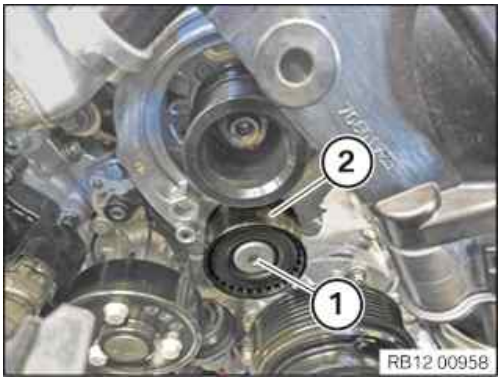
- Tighten the screws (1).



- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

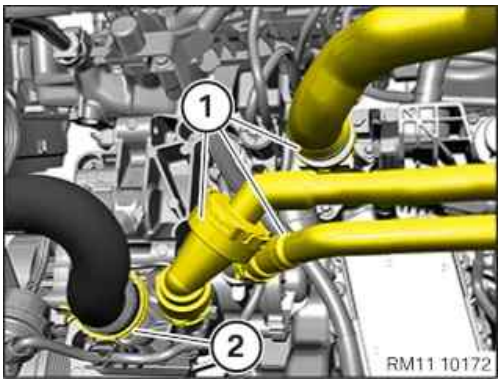
M10x75 / M10x125		Tightening torque	38 Nm



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

▸ Installing the drive belt for alternator

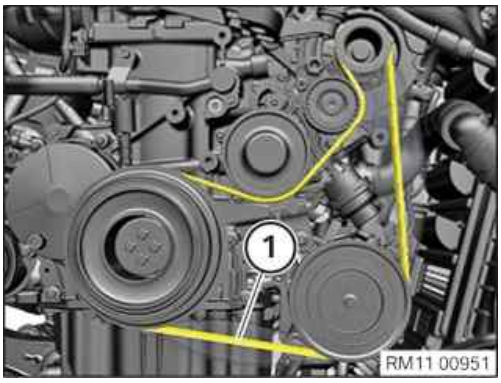
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

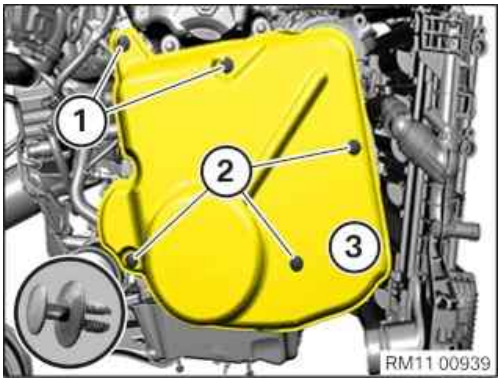
cardiagn.com



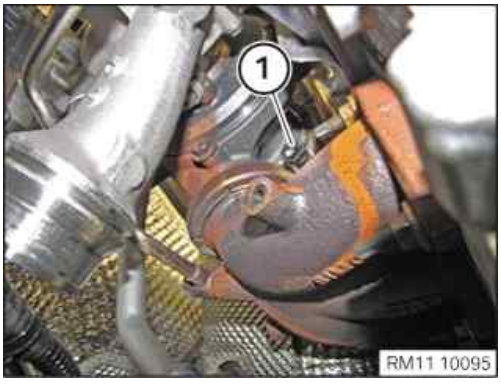
- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ **Install the acoustic cover for the engine at the front**



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

▸ **Installing the oil return line for the exhaust turbocharger**

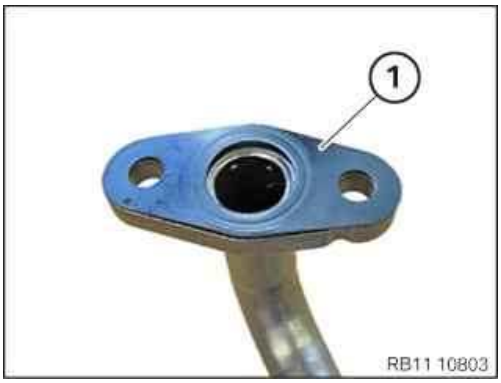
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

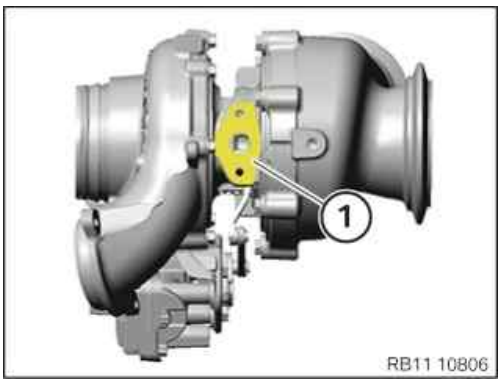
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew gasket (1).

  Parts: Gasket

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

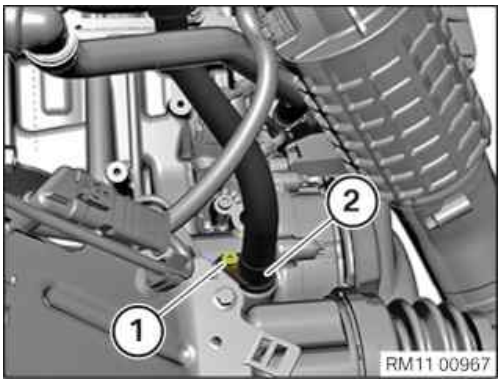
- Clean sealing surface.

cardiagn.com

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

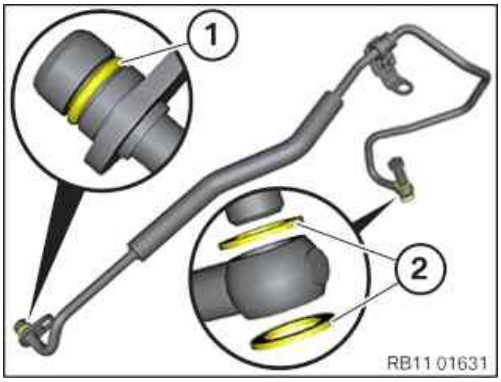


- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

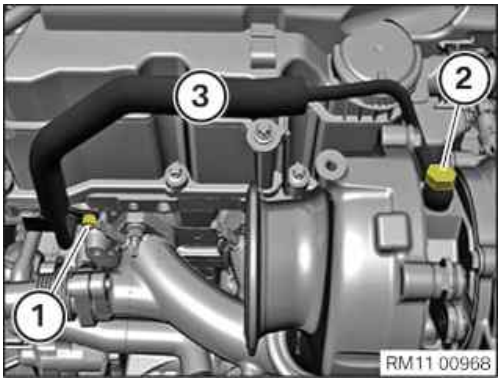
▸ **Install the oil feed line for the exhaust turbocharger**



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

▸ **Installing heat shield on exhaust turbocharger at the rear**

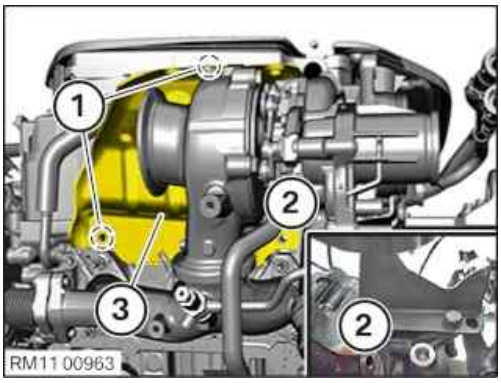
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

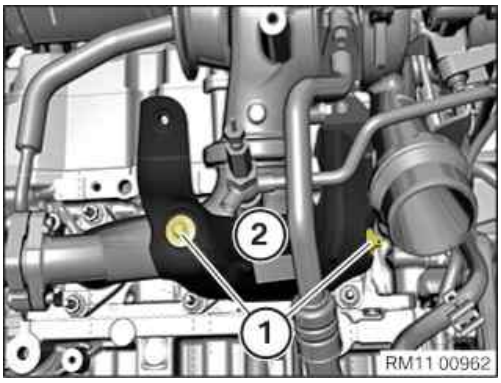
▶ **Installing heat shield on exhaust turbocharger at bottom**

WARNING

Hot surfaces.

Risk of burning!

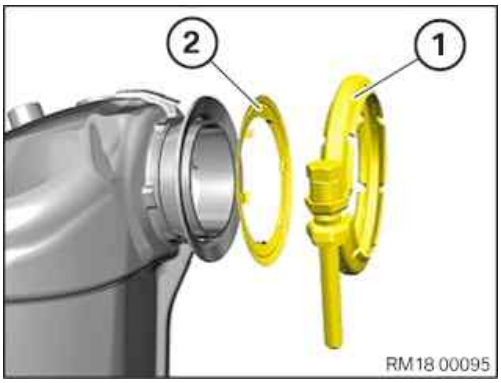
- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

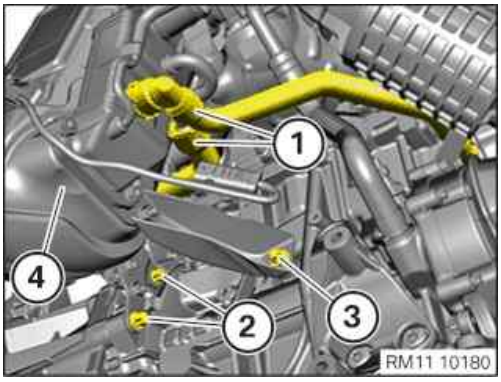
Torx screw BM 6x12		Tightening torque	10 Nm



- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

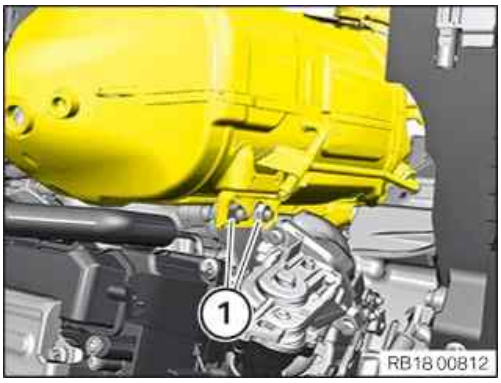
- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).

cardiagn.com



- Tighten nuts (1).

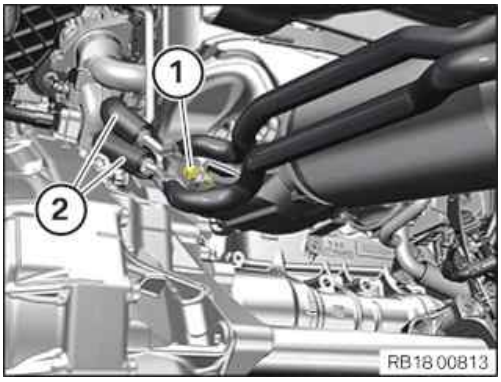
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

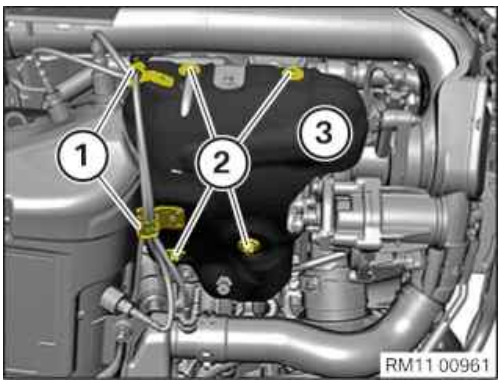
▸ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten down screws (2).

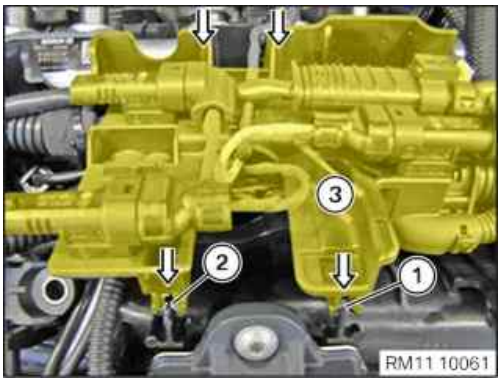
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

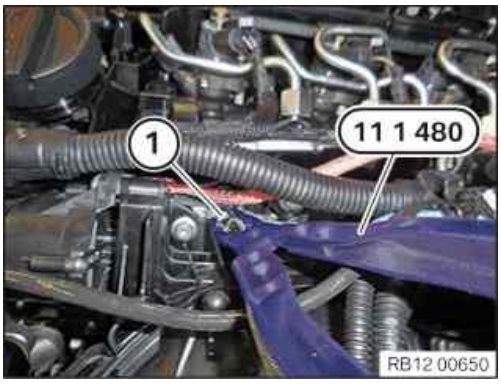
- Secure cable in holders (1).

▸ **Installing the cable clip for the intake plenum**

cardiagn.com

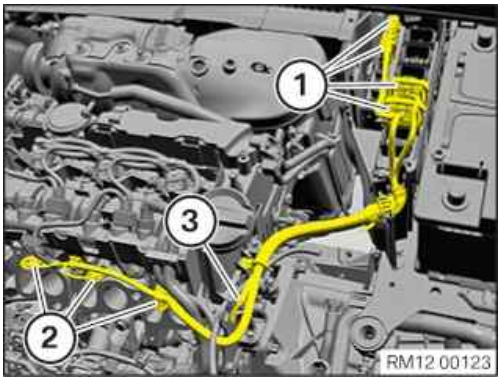


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

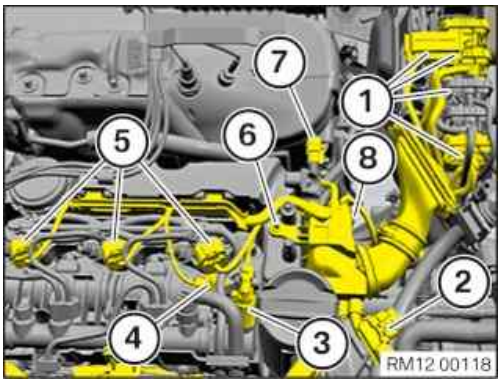
  The connector (1) must engage audibly.



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm



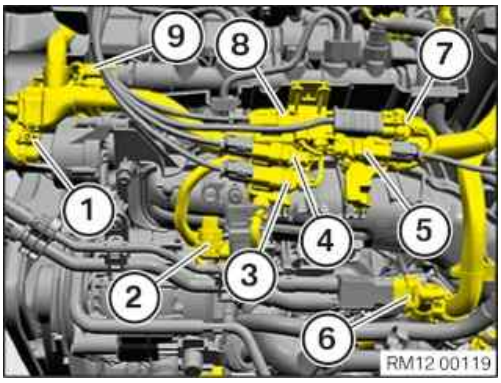
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

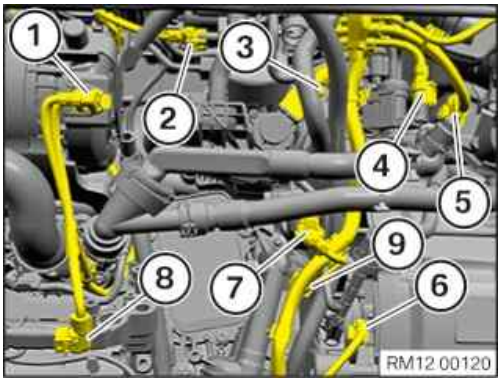
TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

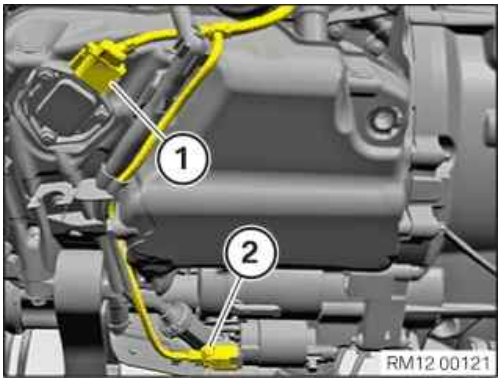
cardiagn.com



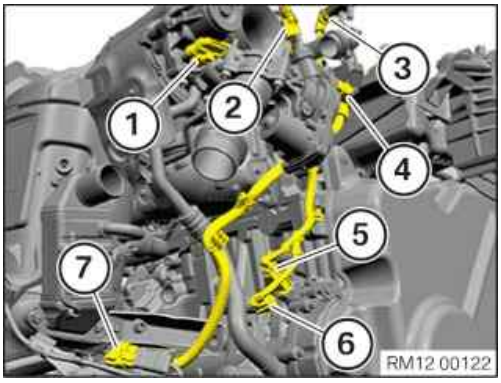
- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.



- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.



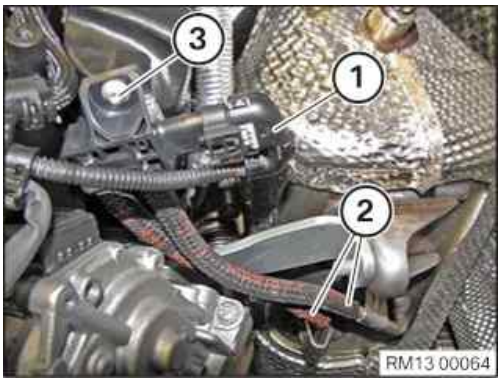
- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

61 – Installing differential pressure sensor

cardiagn.com



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

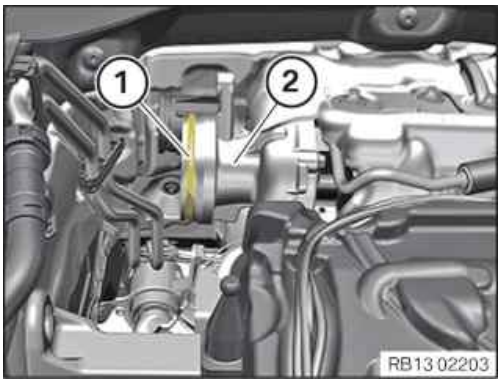
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

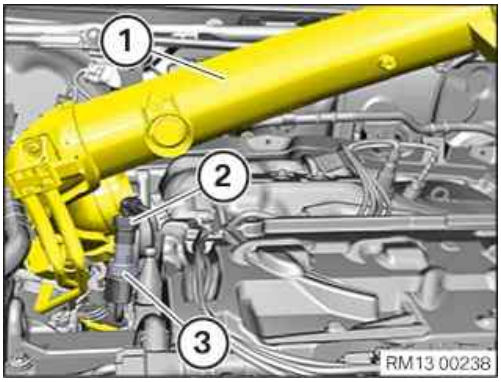
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

62 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



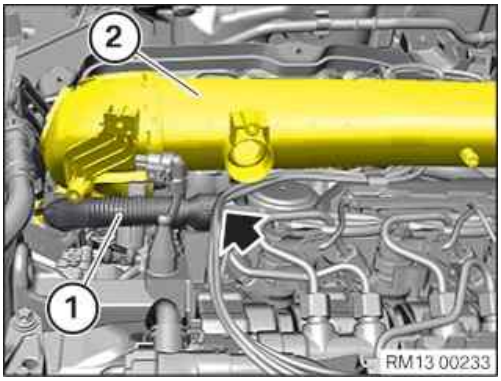
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

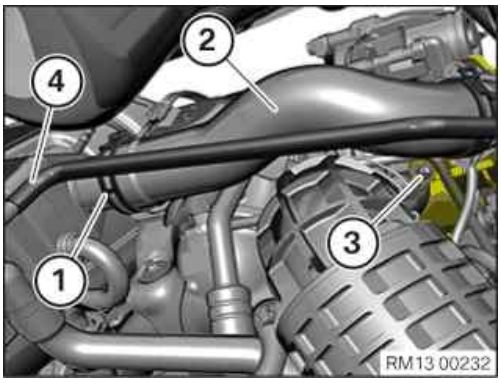
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.

cardiagn.com



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

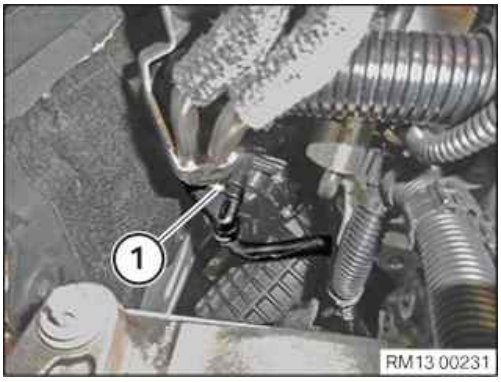
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

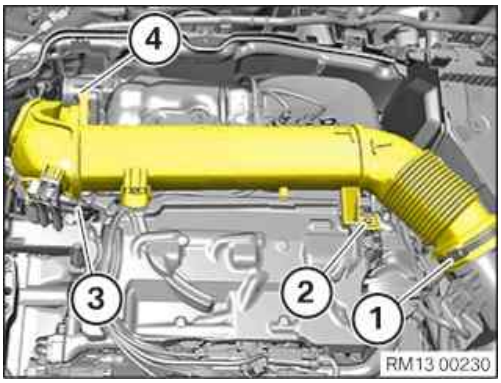
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

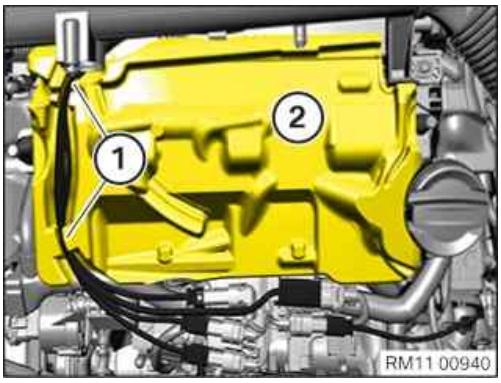
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

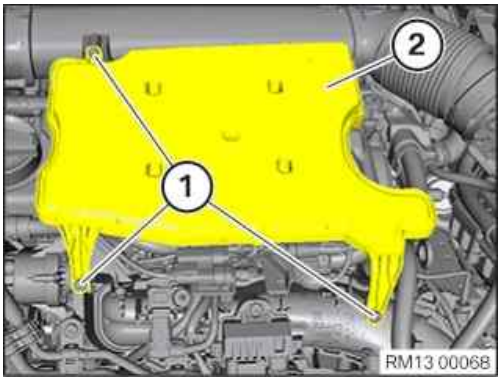
63 – Install the acoustic cover for the injectors

cardiagn.com



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

64 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

65 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

66 – Install engine

- See additional information.

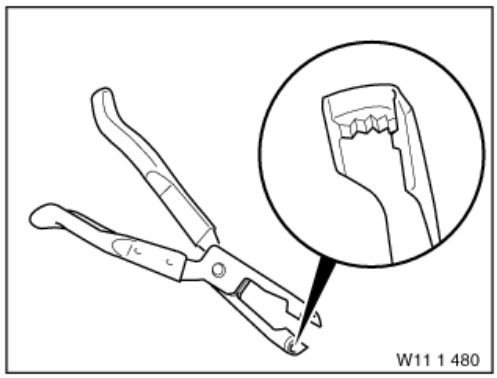
Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

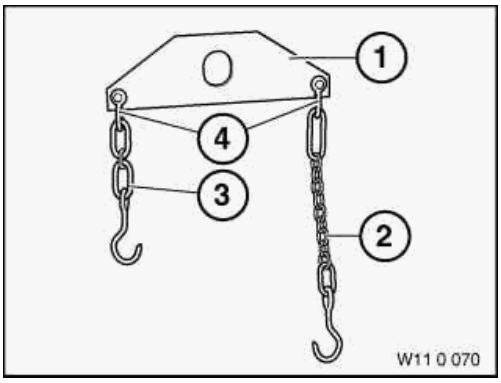
Common Used in step 8 59

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 490 579 (11 0 070) Lifting gear

Used in step 8 9 58 59

cardiagn.com



Common

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

2 455 010 Engine support

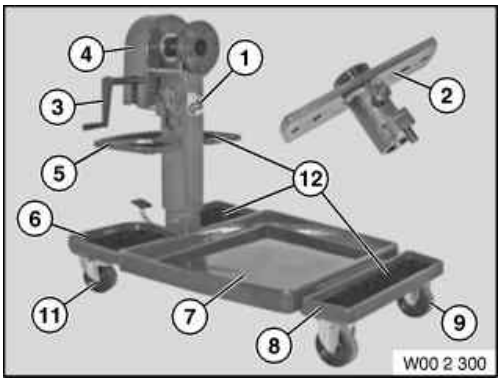
Common Used in step 9 58

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

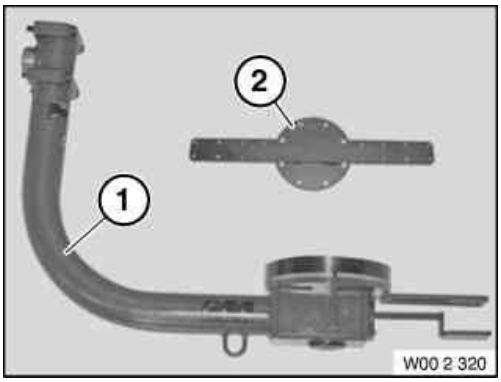
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187

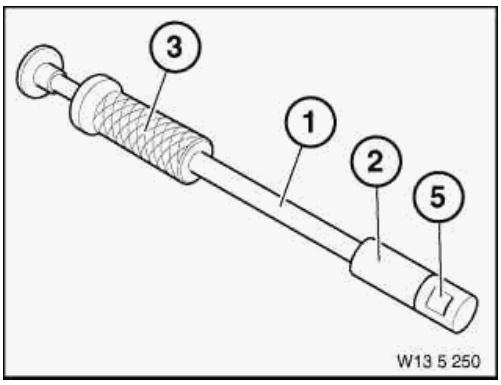
2 413 106 Fastener

Common Used in step 11 56

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush

Common Used in step 13

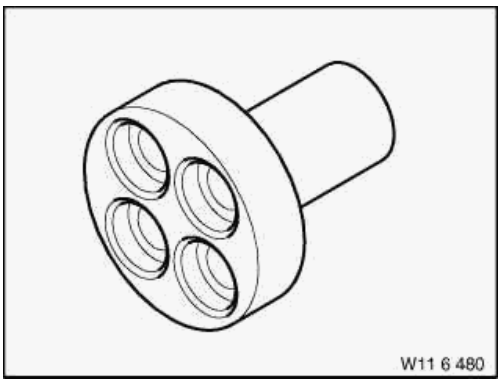
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common Used in step 13

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common Used in step 16 48 51

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 288 380 Locating stud

Common Used in step 16 48 49 51

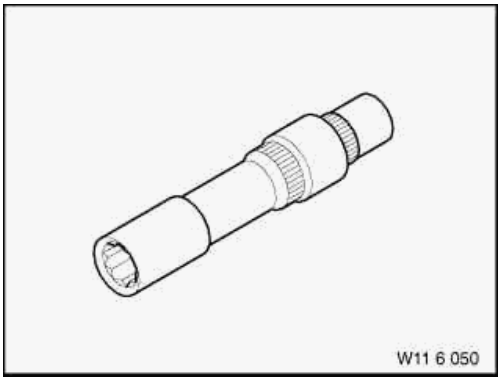
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 16 48 50 51

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common Used in step 21 46

Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

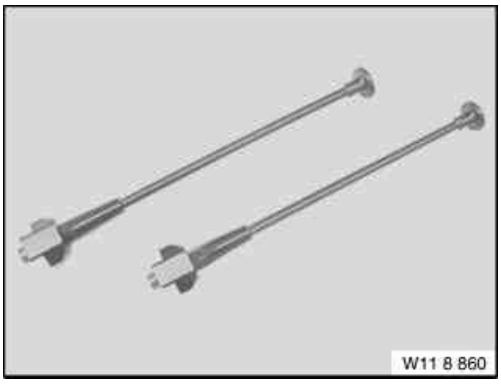
Used in step 22 23 48

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 144 (11 8 860) Assembly tool



Common

Used in step 30 37

Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 493 582 (11 8 140) Bush

Common

Used in step 37

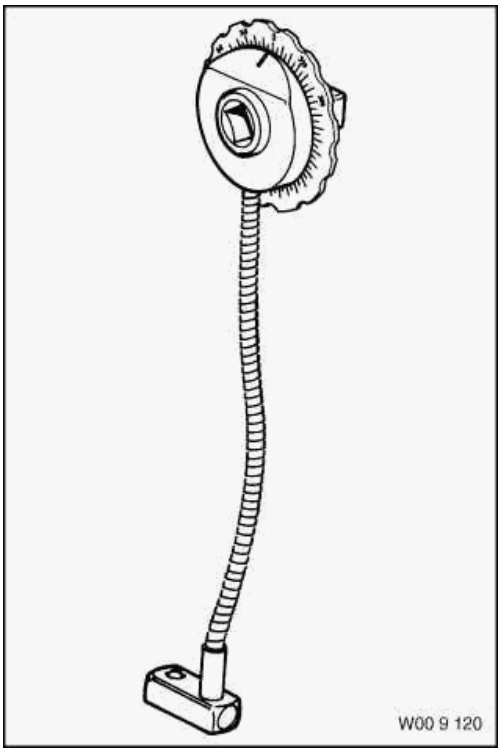
Usage	(Assembly bushes) For installing the pistons
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 394 (11 8 141)		**Bush** Bush for piston installation 84.00 mm	
2	0 494 395 (11 8 142)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	
3	0 494 396 (11 8 143)		**Bush** Liquidation of existing inventory and then available only as a complete tool set 11 8140 (83 30 0 493 582) - as of 12.03.12.	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial



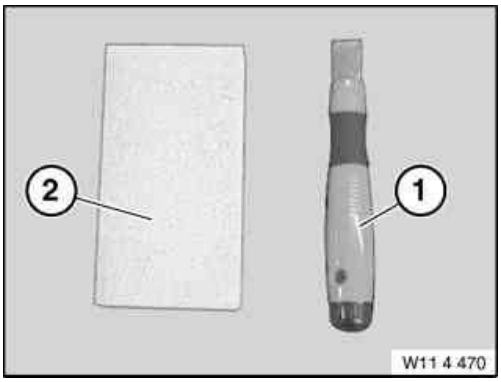
Common

Used in step 38 43

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool



Common

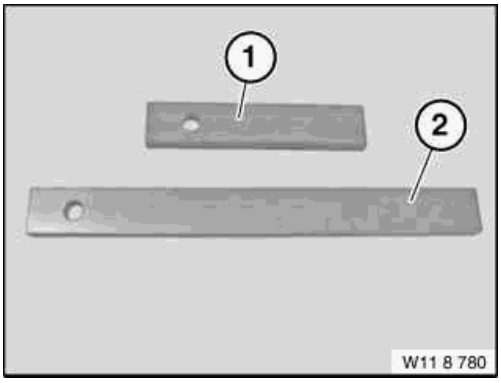
Used in step 41

Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

0 496 120 (11 8 780) Plate



Common

Used in step 41

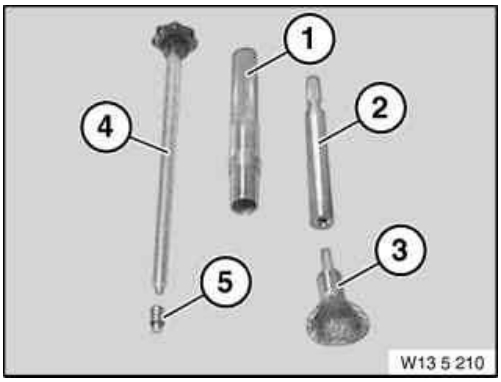
Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

cardiagn.com

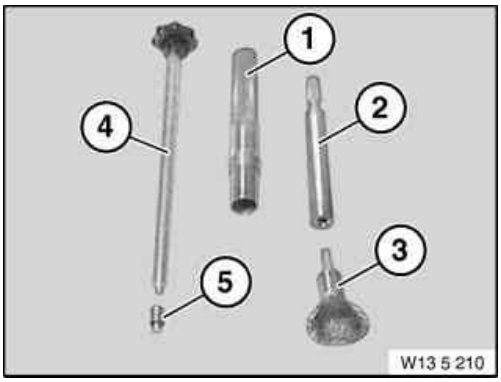
0 493 763 (13 5 215) Plug



Common Used in step 53

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 762 (13 5 214) Rod

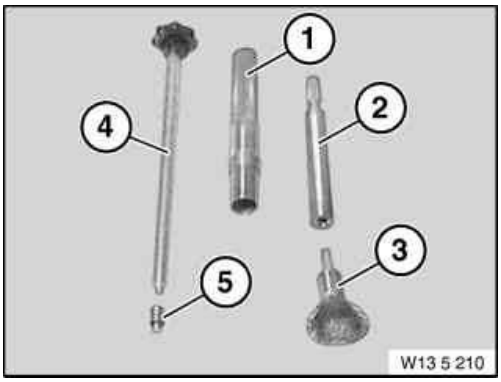


Common Used in step 53

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool



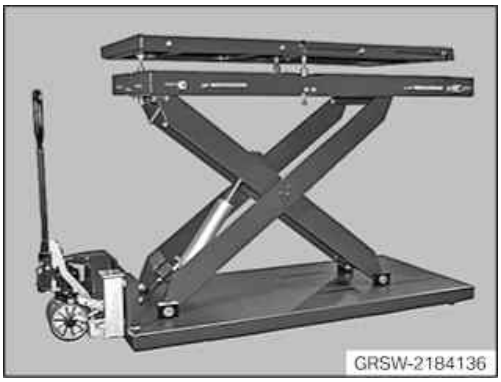
Common Used in step 53

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

2 184 136 Mobile equipment table lift



Common Used in step 59

Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

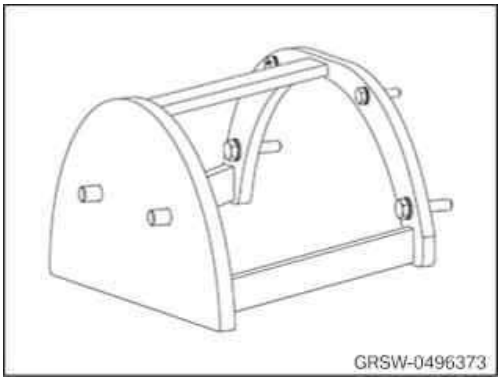
cardiagn.com

Replacement tools:

2 299 563 Adapter

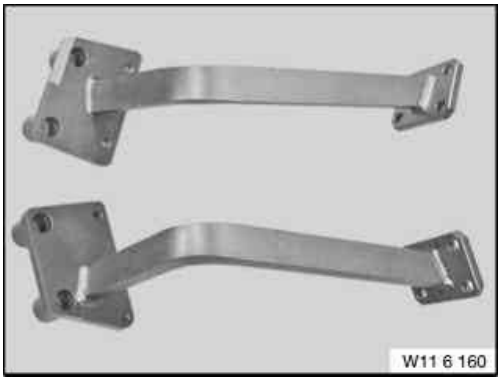
Common	Used in step 9
Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

0 496 373 (11 5 420) Plate



Common	Used in step 9
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support



Common	Used in step 9
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

Overview Technical Data

Side clearance of piston rings

Used in step 32

Clean all components before measuring the side clearance.

Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter

Used in step 33

Measure the piston diameter at distance (A) from the lower end of the piston skirt.

Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore

Used in step 34

cardiagn.com

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

11 25 000 Removing and installing/replacing all pistons

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

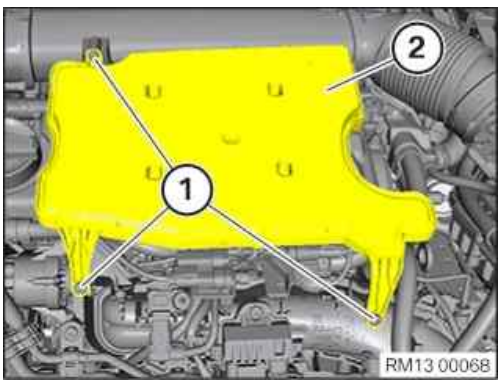
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

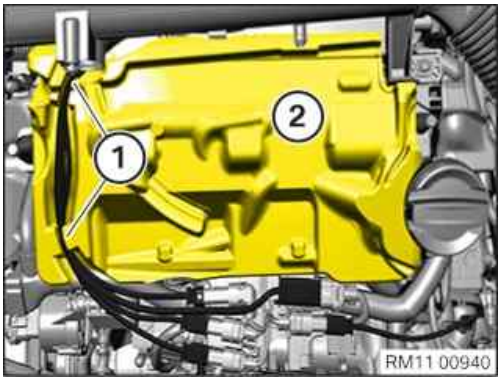
3 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

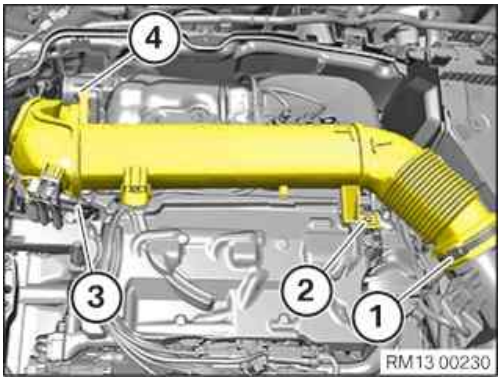
cardiagn.com

4 – Remove the acoustic cover for the injectors

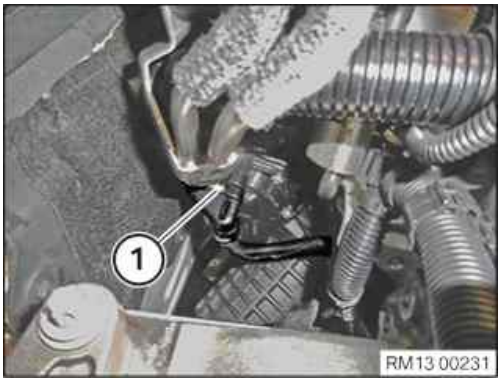


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

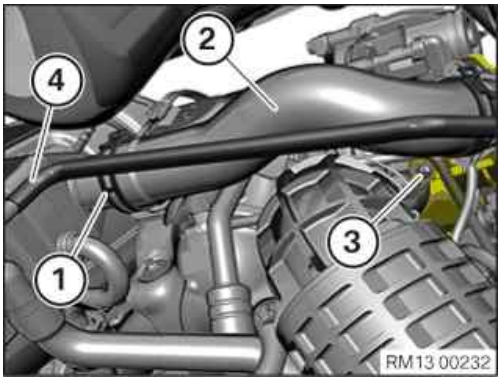
5 – Removing clean air pipe



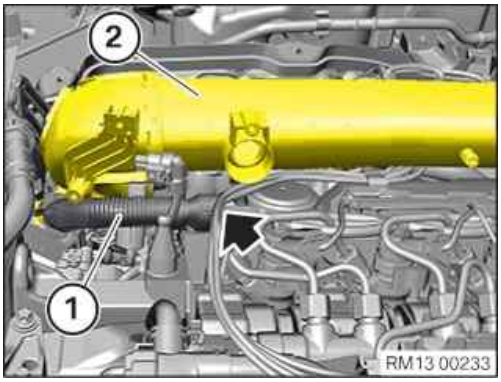
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

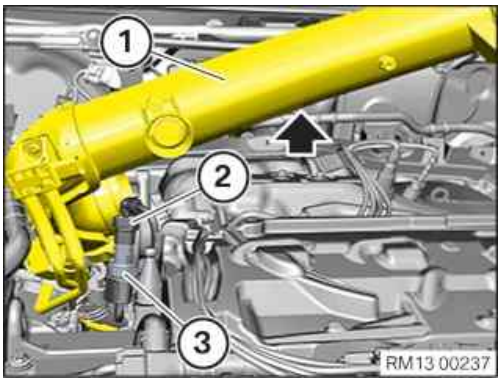


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

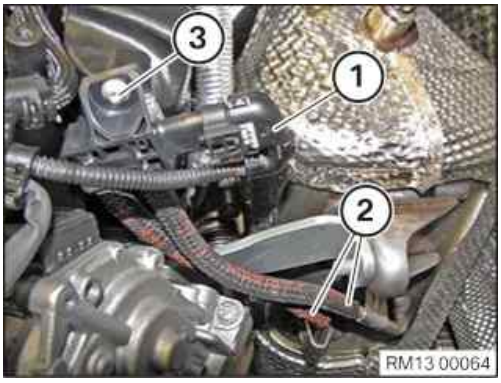
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

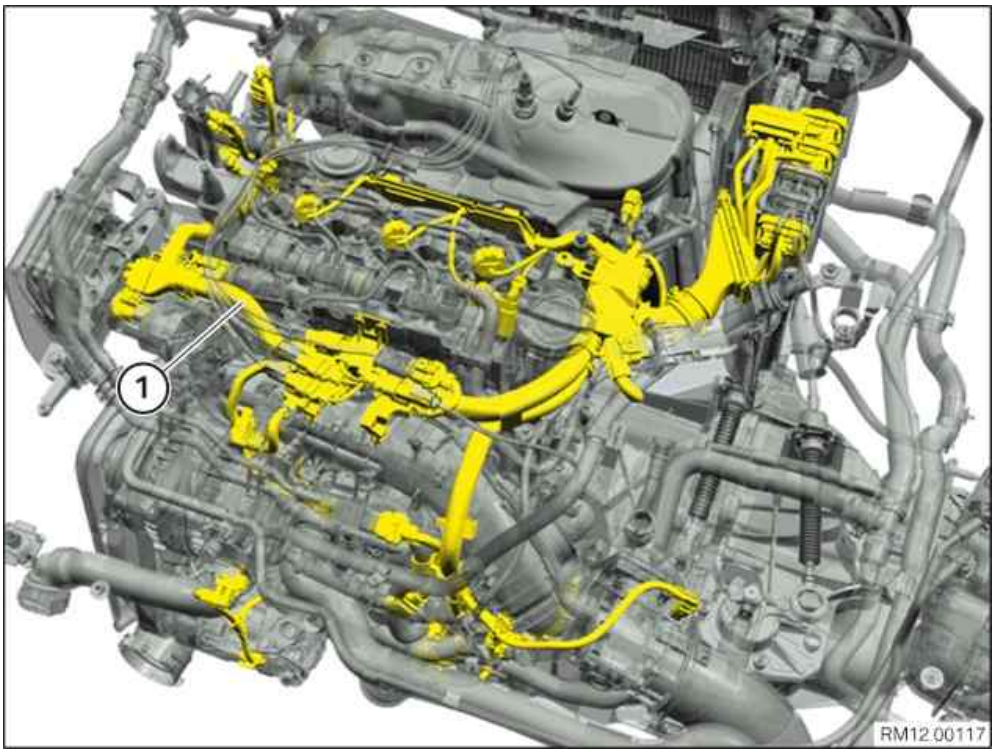


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

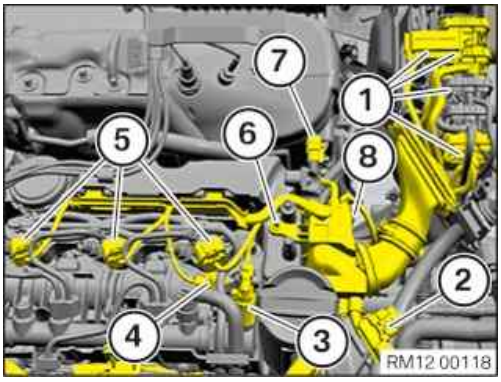
7 – Removing assemblies (on lifting table)

cardiagn.com

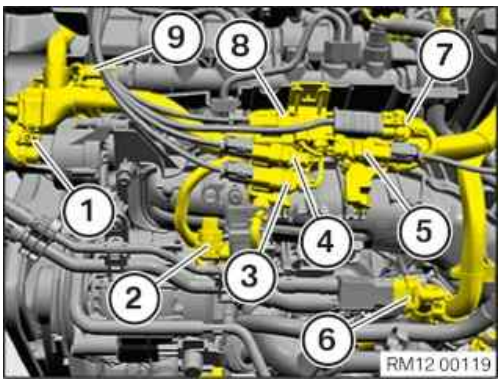
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



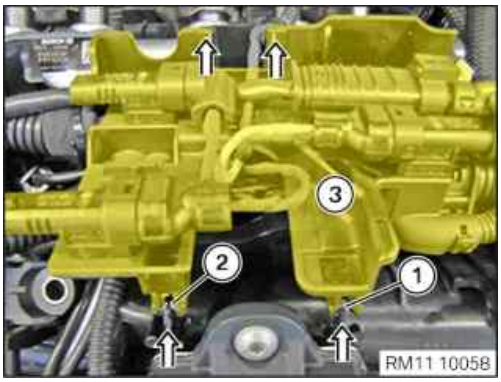
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



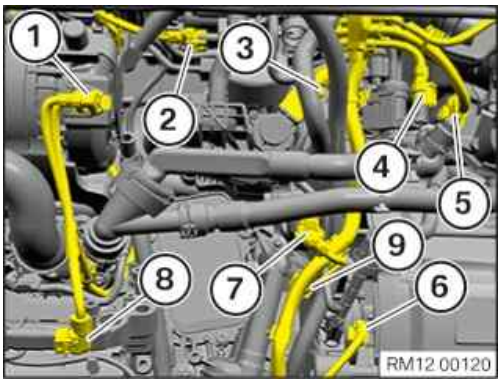
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

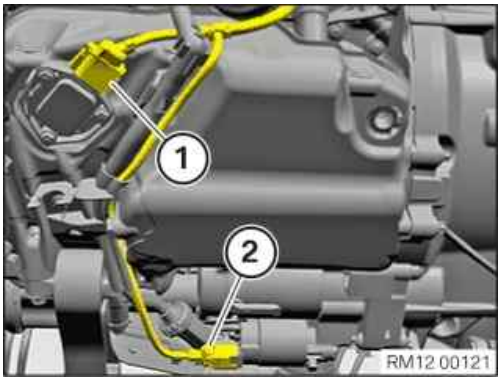
cardiagn.com



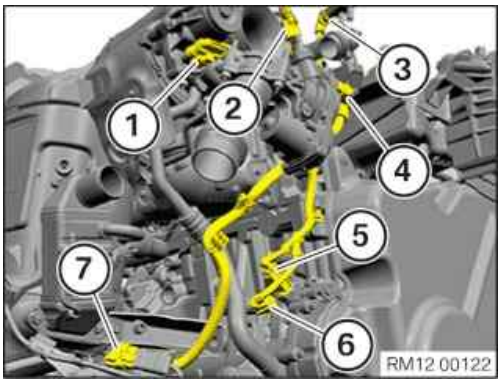
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



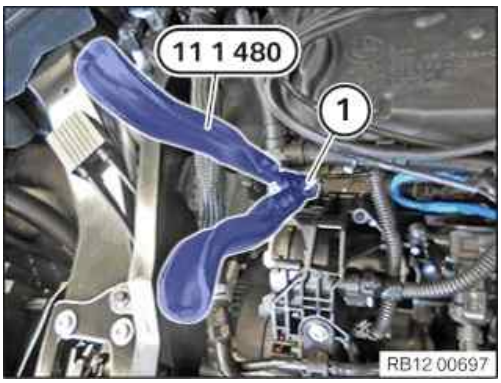
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

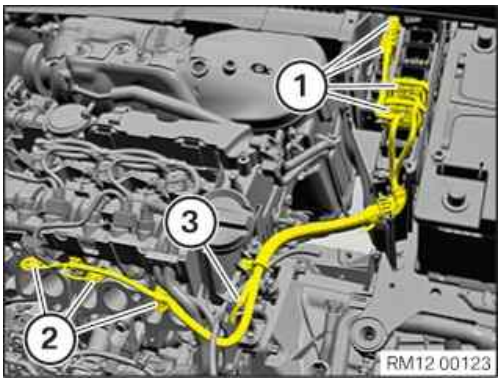


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

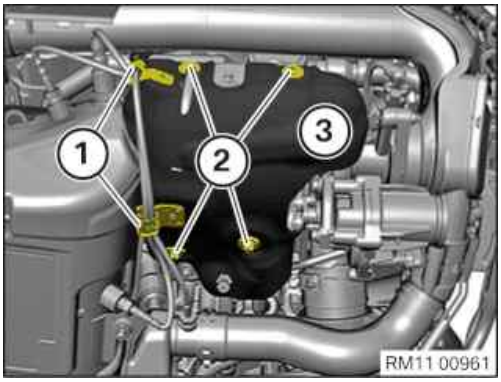
▶ Removing heat shield from top exhaust turbocharger

WARNING

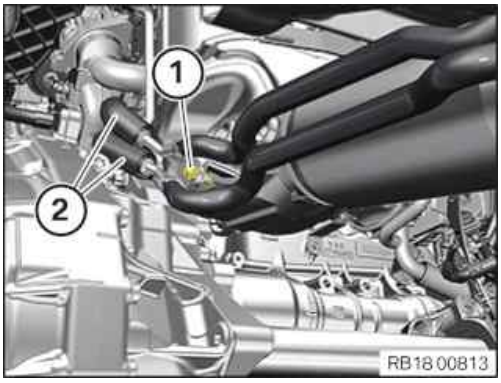
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



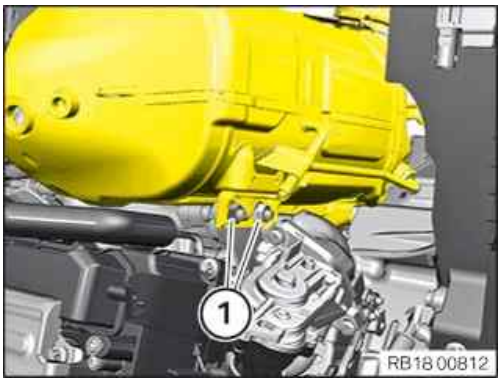
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



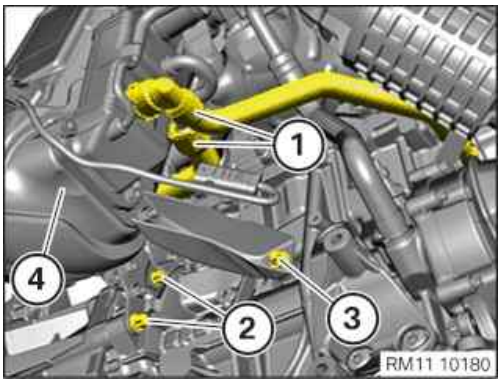
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

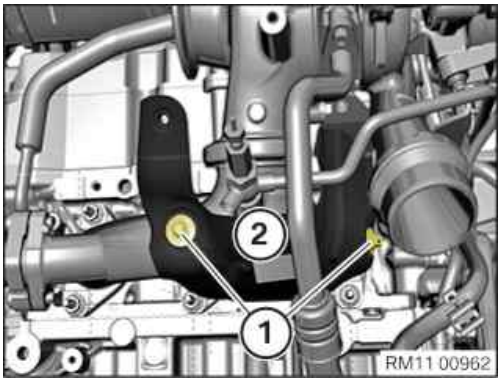
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

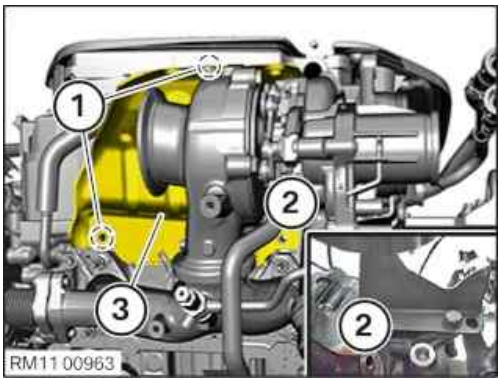
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



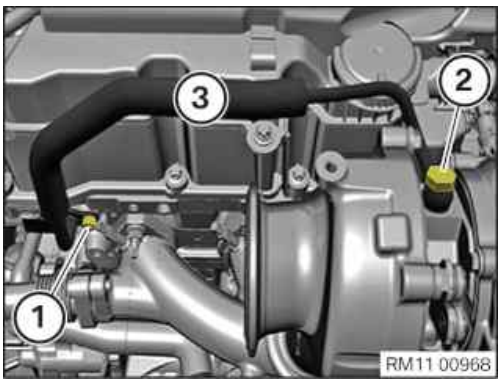
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

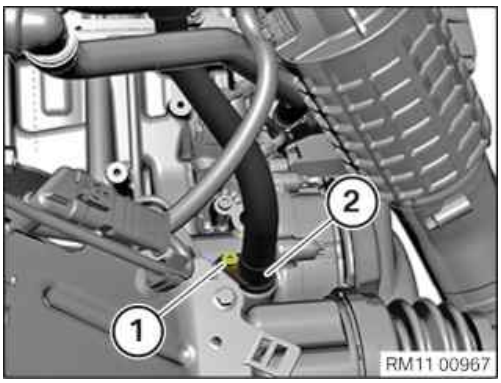
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

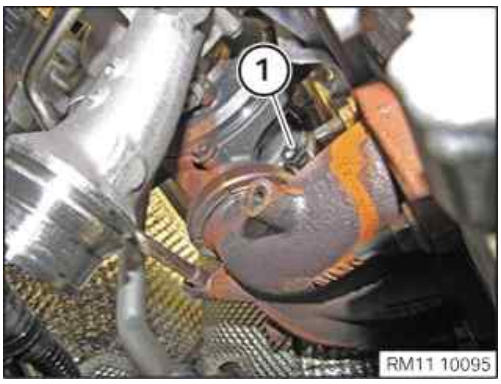
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

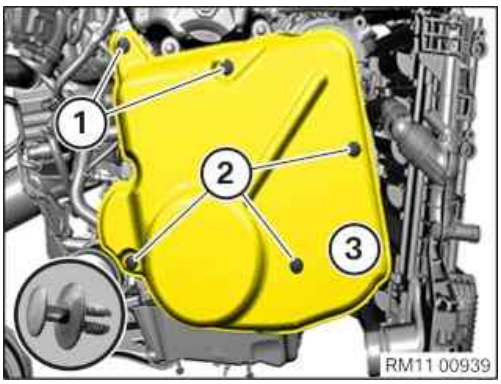
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

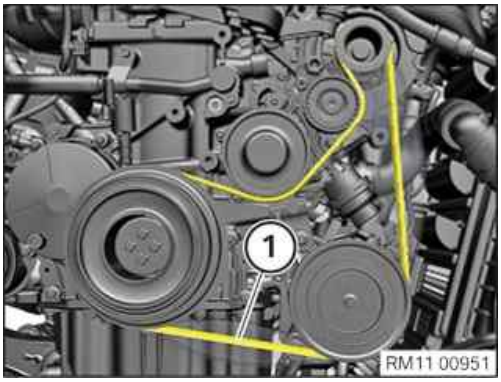
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

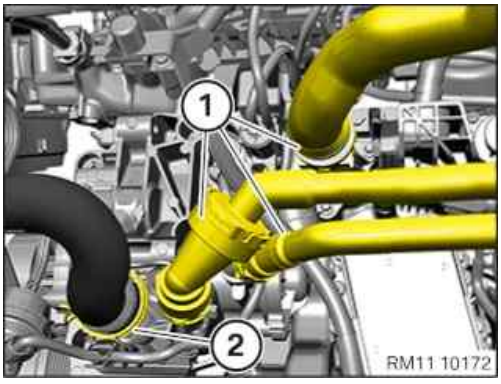
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

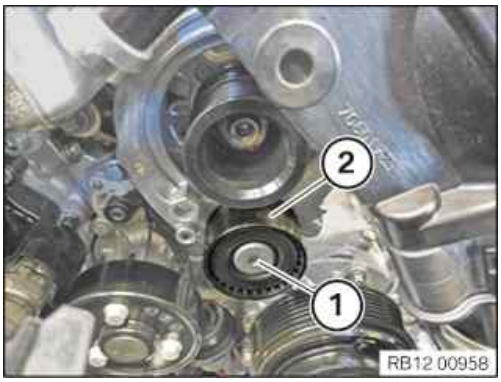


- Guide out the drive belt for the alternator (1) and remove it.

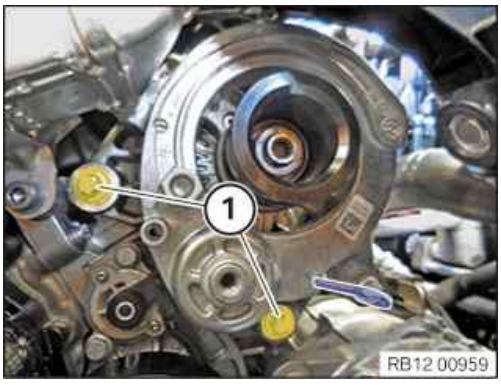


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

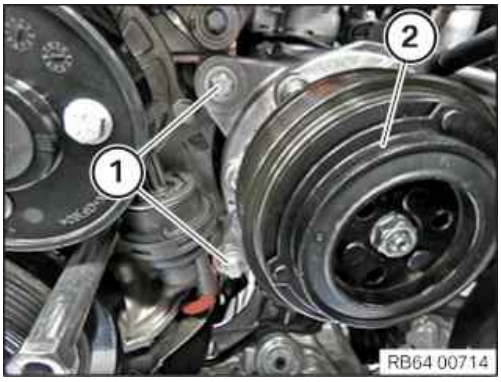
cardiagn.com



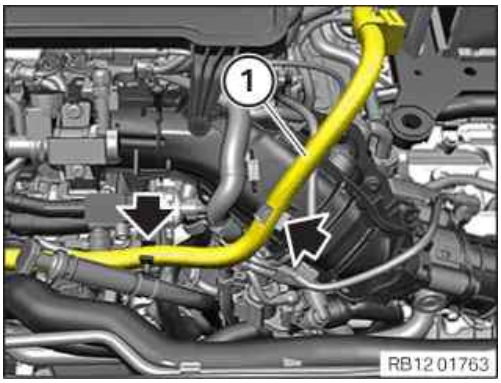
- Loosen screw (1).
- Remove the deflecting element (2).



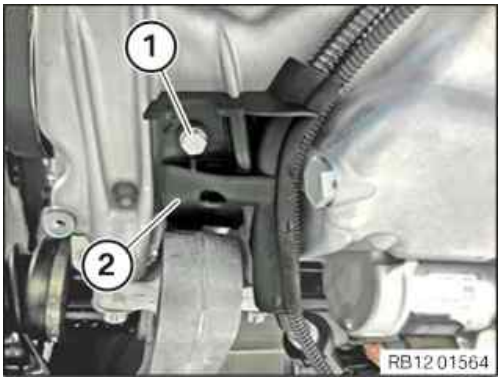
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

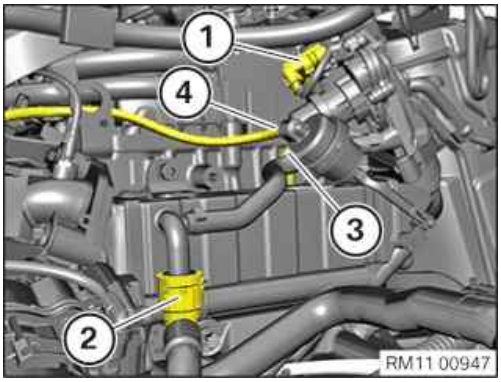
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

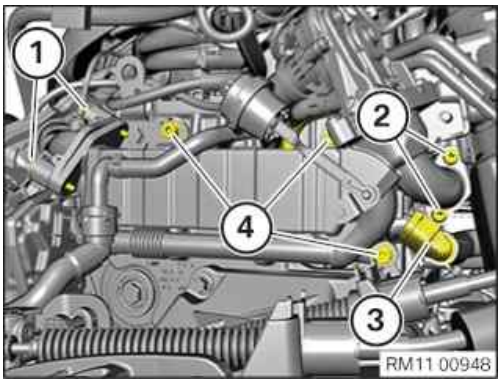
- Perform all work only on components that have cooled down.



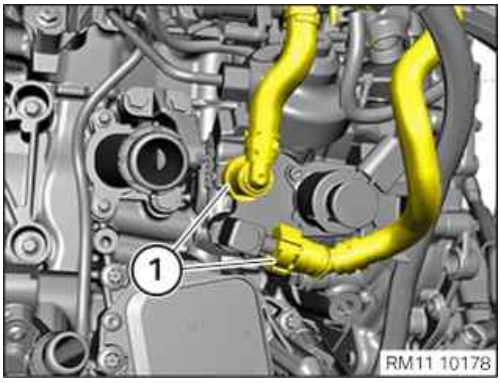
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

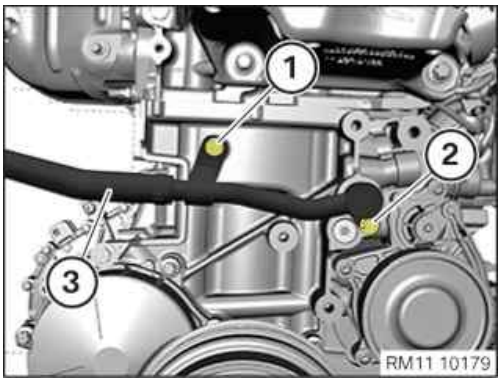


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

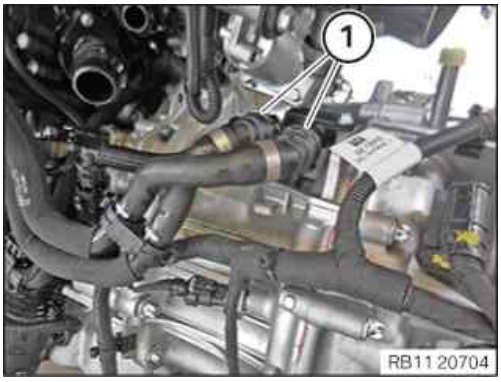
8 – Disconnect the engine from the double-clutch transmission (DKG)

RISK OF DAMAGE

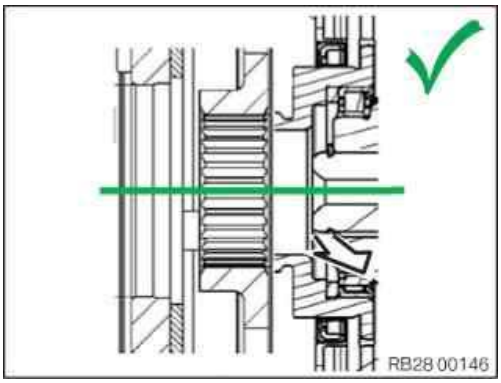
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

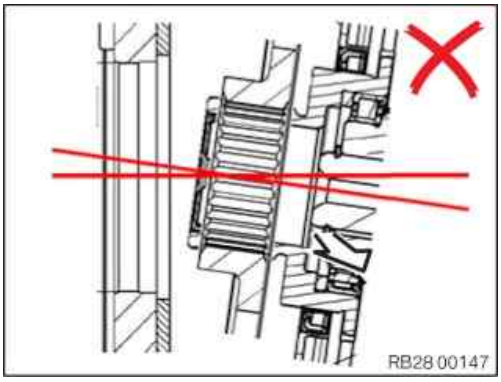
- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.



- Unlock and release coolant line (1).
- Catch and dispose of escaping coolant.

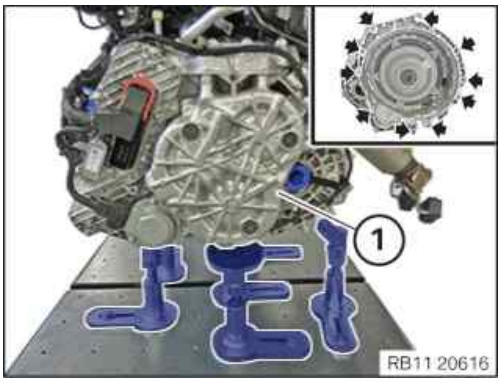


- **Correct:** Pull the double-clutch transmission (DKG) horizontally off the flywheel.

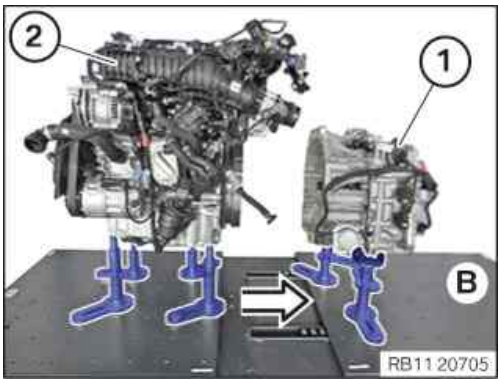


- **Wrong:** Do not pull the double-clutch transmission (DKG) off the flywheel if it is tilted.

cardiagn.com



- Remove screws (arrows).
- Pull the double-clutch transmission (DKG) (1) off the flywheel when it is **absolutely** horizontal.



NOTICE

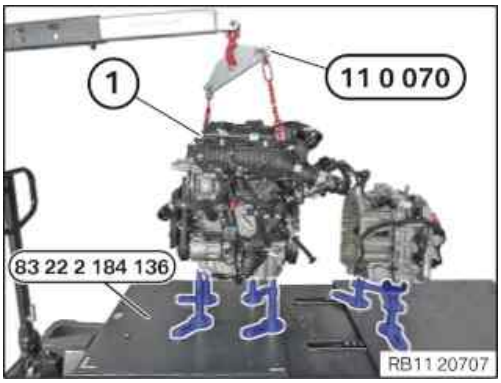
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table top (B) in the direction of arrow and disconnect double-clutch transmission (DKG) (1) from the engine (2).

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach the engine lifter with the special tool **0 490 579 (11 0 070)** and lift the engine (1) off the lifting table.

9 – Mount engine on assembly stand

CAUTION

Heavy component.

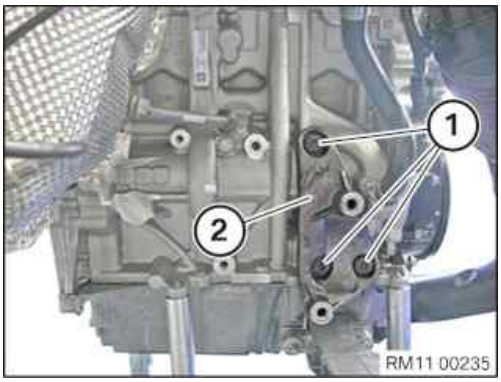
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

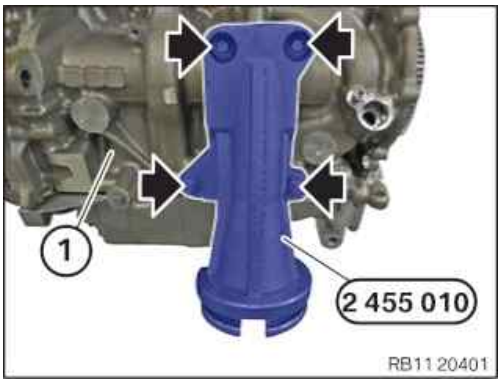
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com



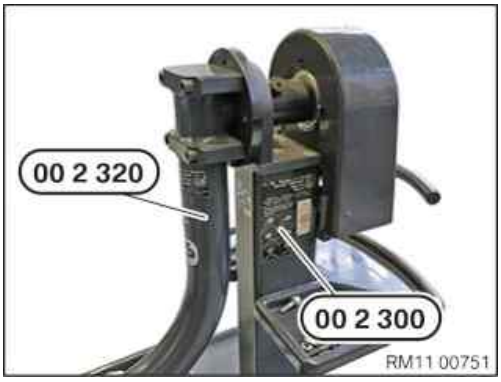
- Loosen screws (1).
- Guide out and remove holder (2).



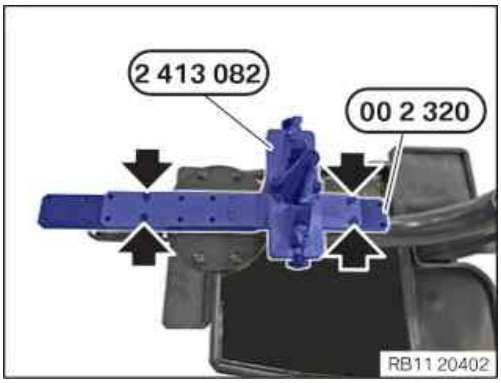
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



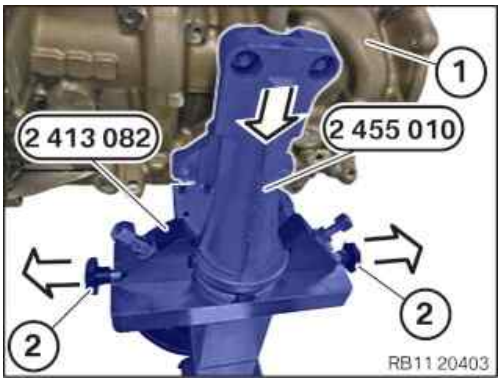
- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

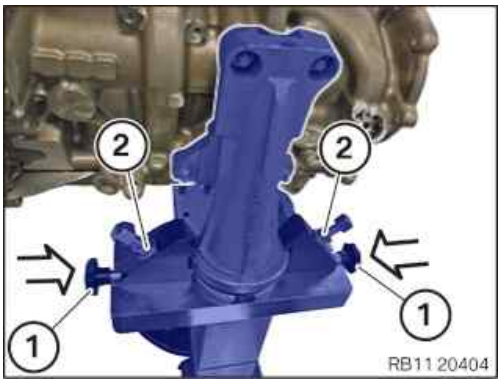
M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com



- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .



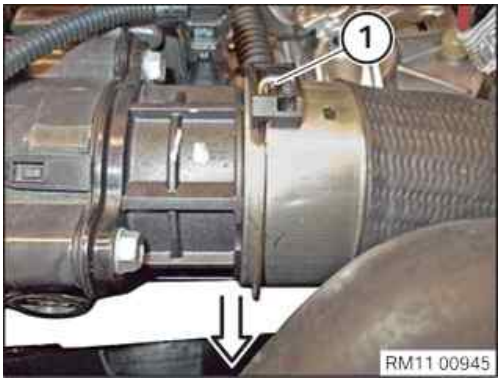
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

cardiagn.com

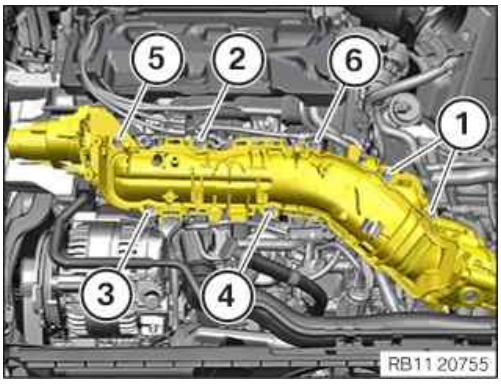
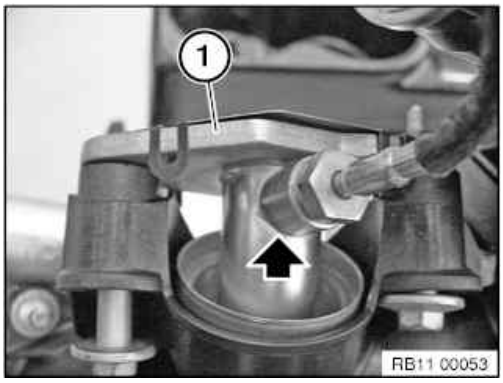
- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

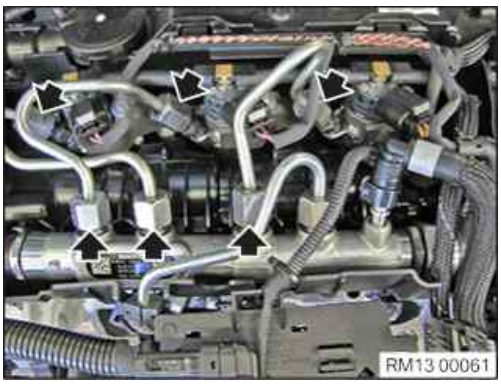
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

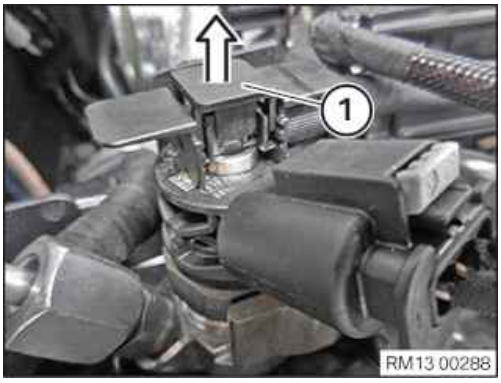
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

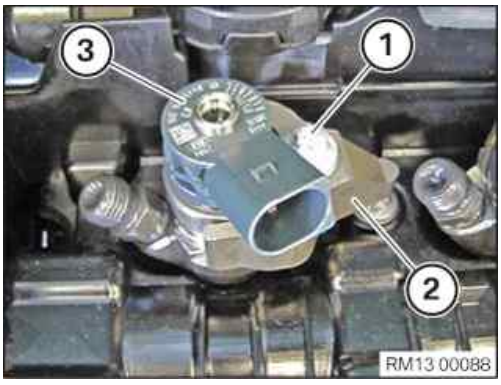
- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

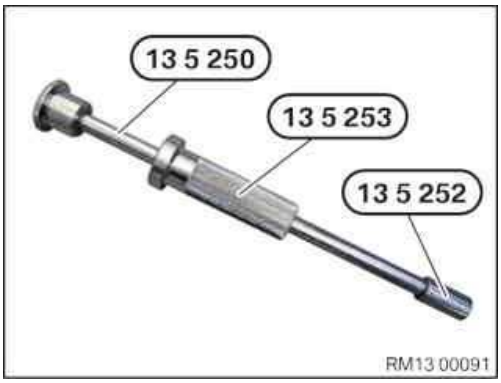
▶ **Loosen stuck injectors**

RISK OF DAMAGE

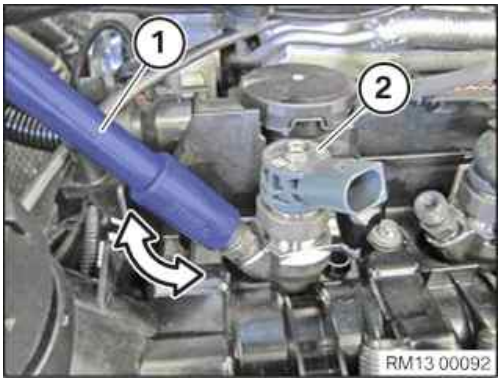
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

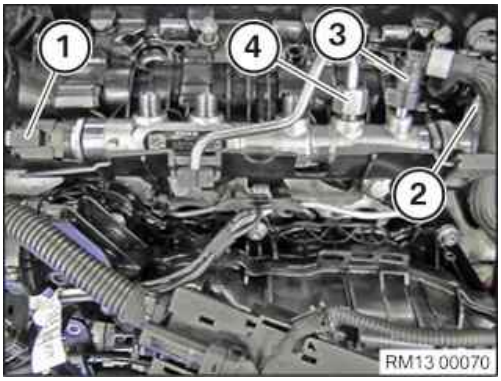
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

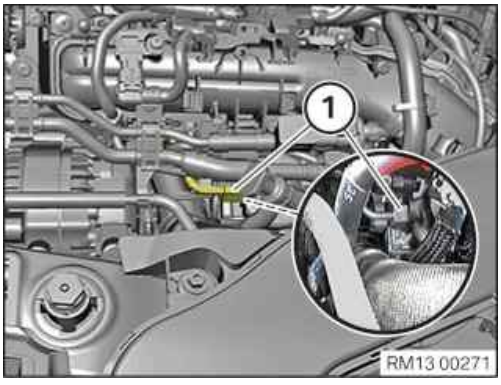
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

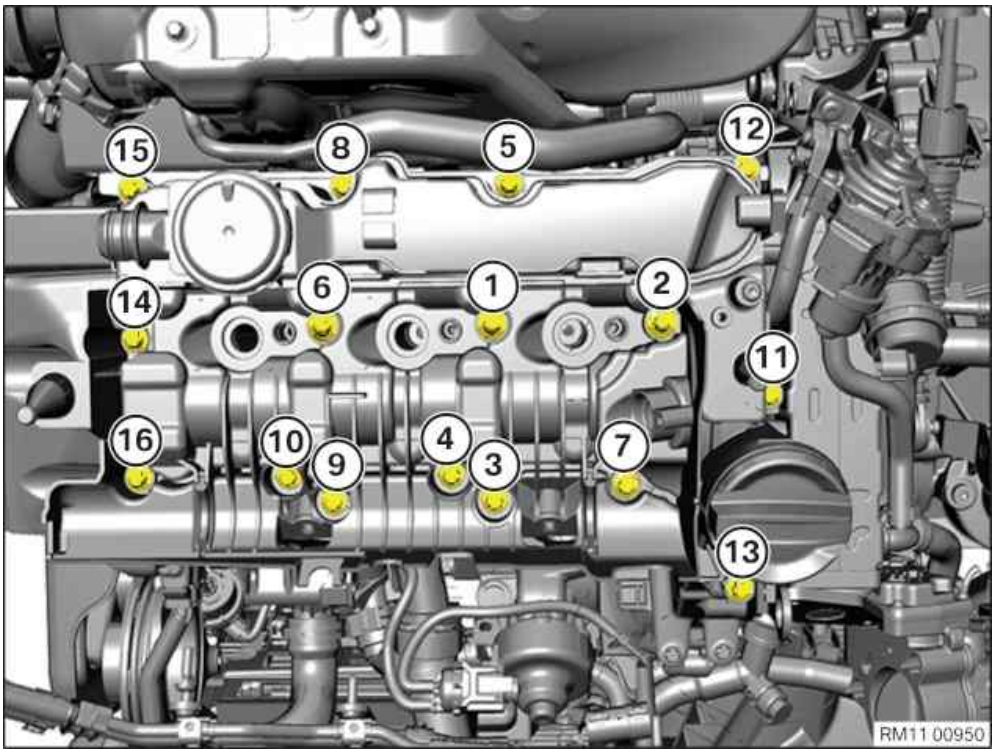
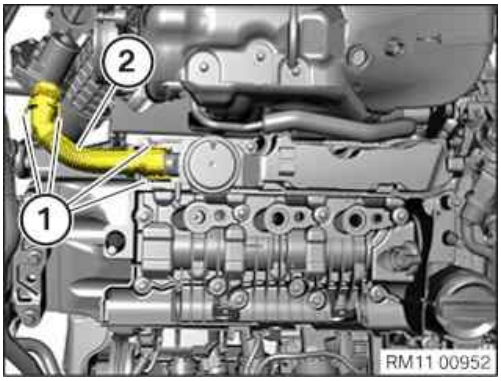
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

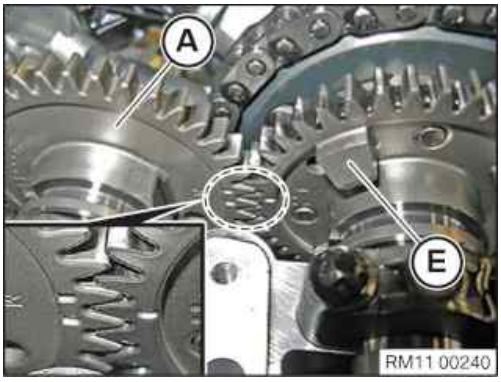
- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

cardiagn.com

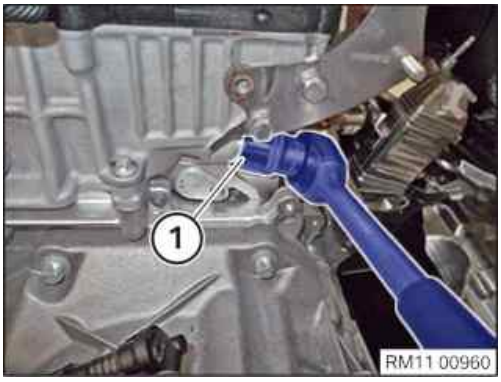
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

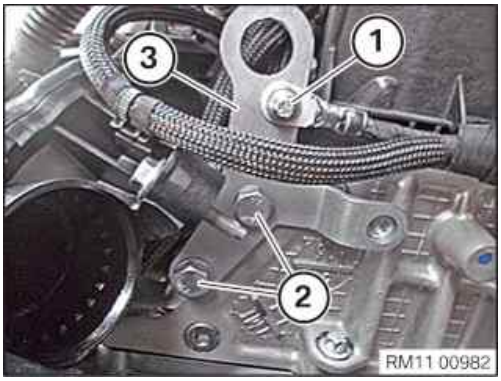


TECHNICAL INFORMATION

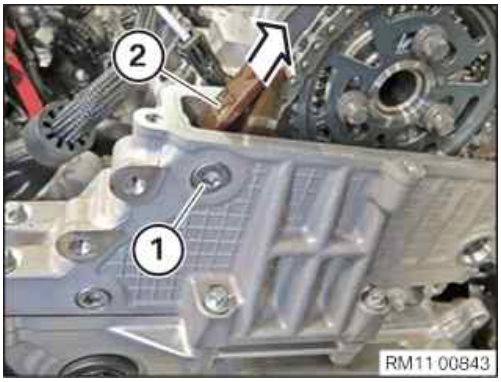
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

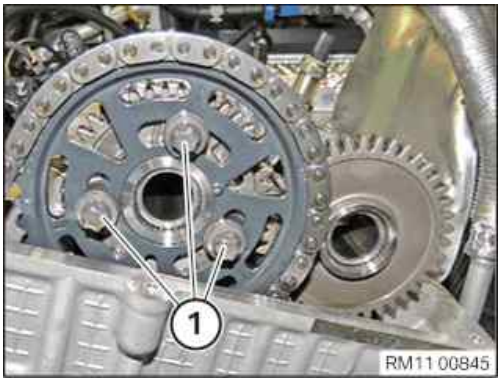


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

cardiagn.com

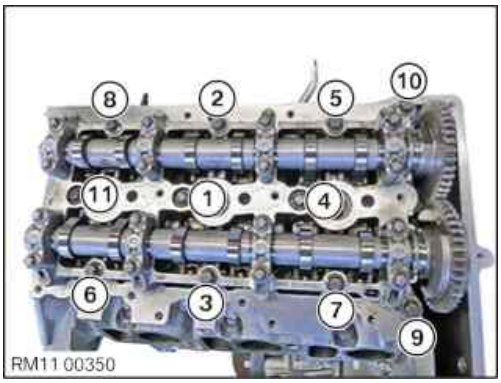
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

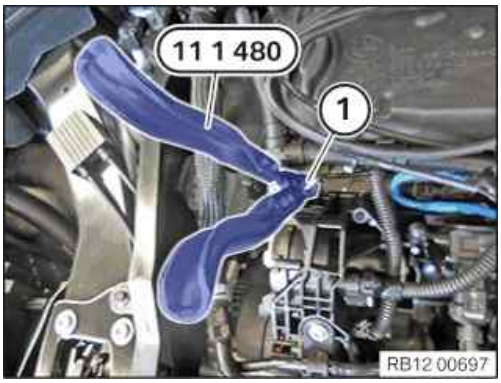
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

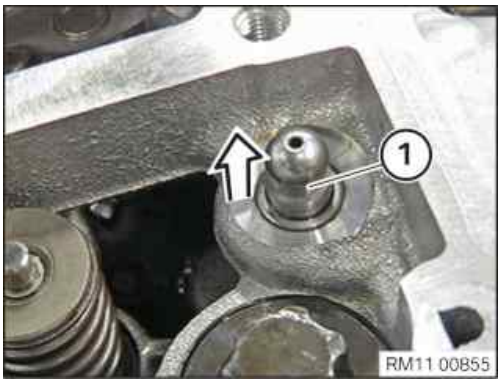
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

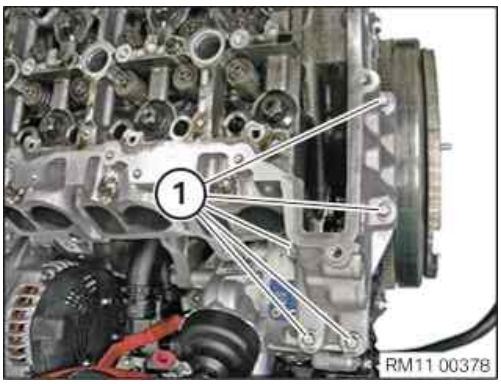
24 – Removing cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).

cardiagn.com

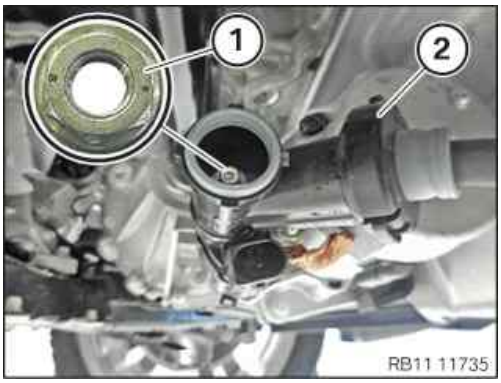
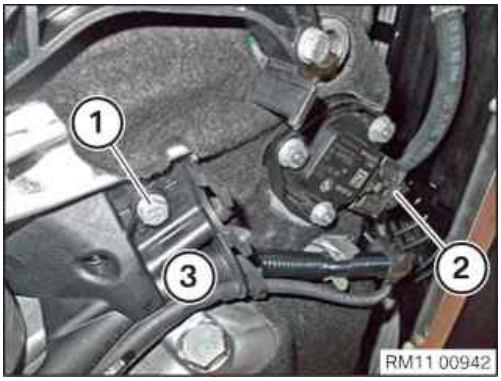
- Loosen the cylinder head bolts in the sequence from (8) to (1).
- Remove cylinder head.

25 – Removing the acoustic cover of the oil sump

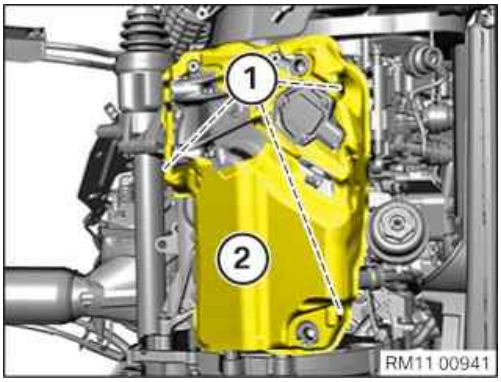
- Unlock connector (1) and pull off.
- Detach the sealing cap (2) in the direction of the arrow.
- Feed out and remove the sealing cap (2).



- Unfasten nut (1).
- Feed out the positive battery cable (2) of the starter motor and set it aside.



- Unscrew the screw (1) on the wiring harness to the oil sump.
- Unlock and pull off connector (2) on the oil-level sensor.
- Place wiring harness (3) to one side.



- Remove the expanding rivets (1) on both sides of the acoustic cover.
- Feed out and remove the acoustic cover (2).

26 – Remove oil sump

cardiagn.com

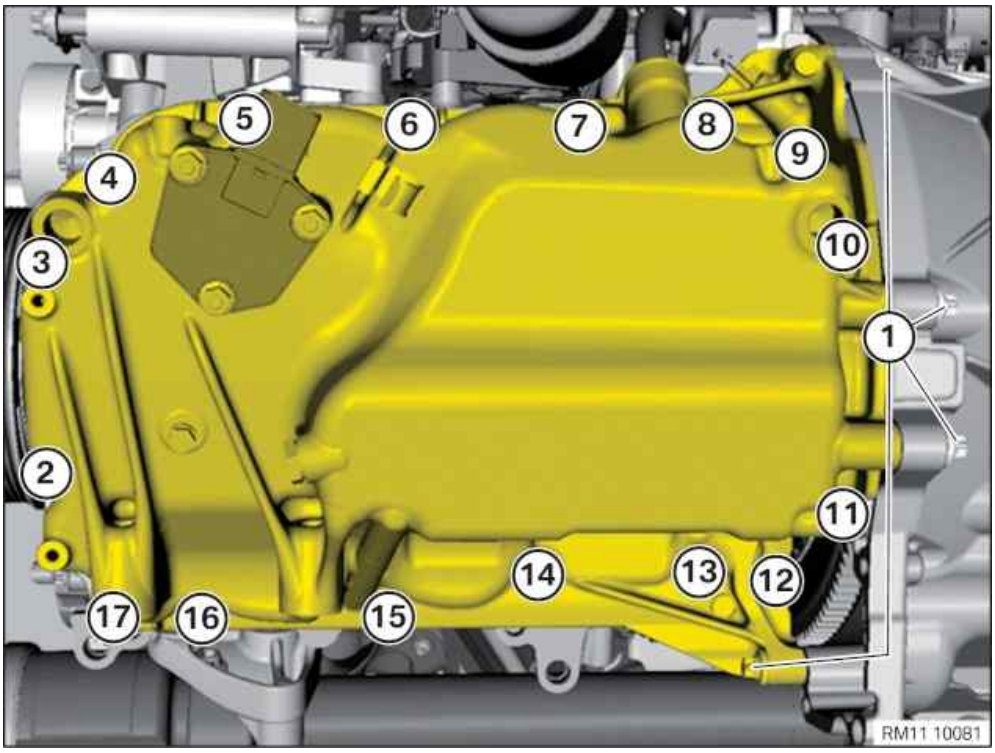
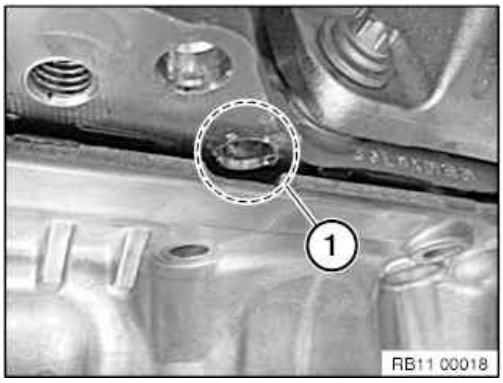
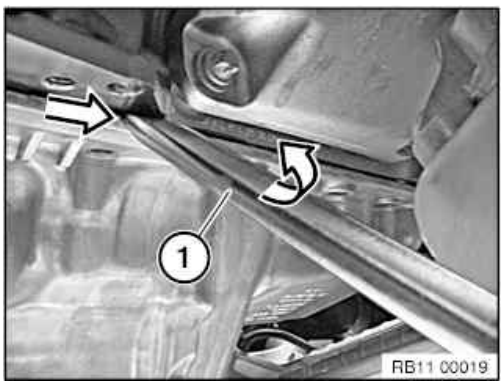
- Loosen screws (1).
- Feed out starter motor and remove.



- Release transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



- Release the oil sump only in area (1).



- Release the oil sump carefully using a suitable mounting lever (1) at the appropriate position in the direction of the arrow.
- Secure the oil sump to prevent it from falling.

27 – Remove the oil vacuum pump

cardiagn.com

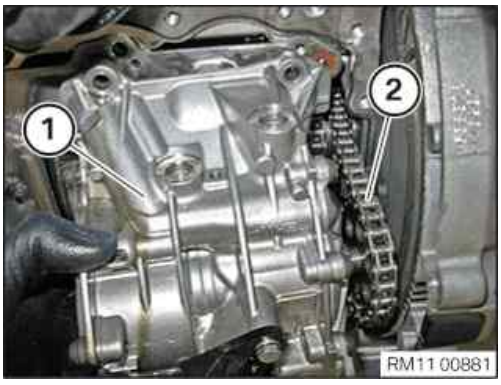
- Loosen screws (1) of the oil vacuum pump (2).



- Remove oil vacuum pump (1) and remove from the drive chain (2).

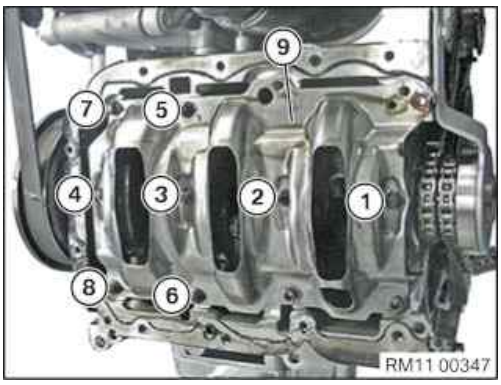
28 – Removing the oil deflector

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen screws in the order (8) to (1).
- Guide out and remove the oil deflector (9).

29 – Remove the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

cardiagn.com

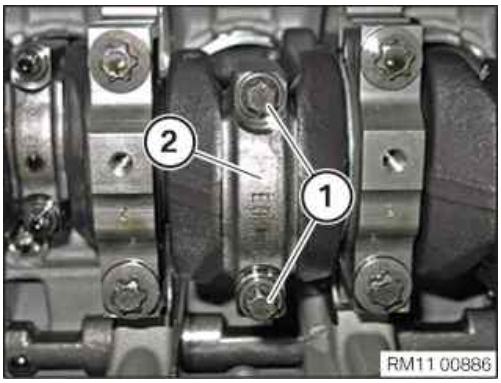
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

- Turn the crankshaft until the connecting rod bearing journal (1) reaches a vertical position.



- Unscrew the connecting rod bolts (1).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing cap (2) and put to one side in the correct order.

MAIN WORK

30 – Removing the piston with connecting rod

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Screw special tool **0 496 144 (11 8 860)** in at large connecting rod eye.

cardiagn.com

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Remove the piston (1) and connecting rod.

31 – Remove the connecting rod bearing shells

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod (1) and store it properly.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Remove the connecting rod bearing (2) from the connecting rod bearing cap (1) and store it properly.

32 – Measure side clearance of piston rings

cardiagn.com

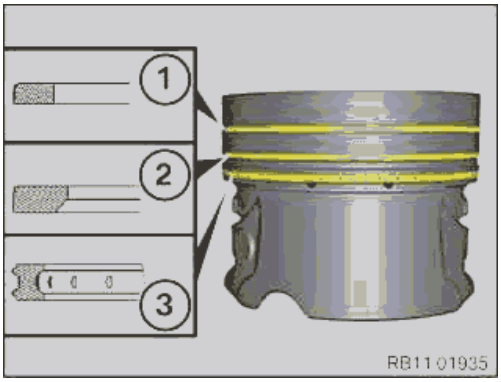
RISK OF DAMAGE

Damage to the piston rings.

Piston rings can bend or break due to large applications of force.

- Handle piston rings carefully.
- Only bend piston ring up lightly.

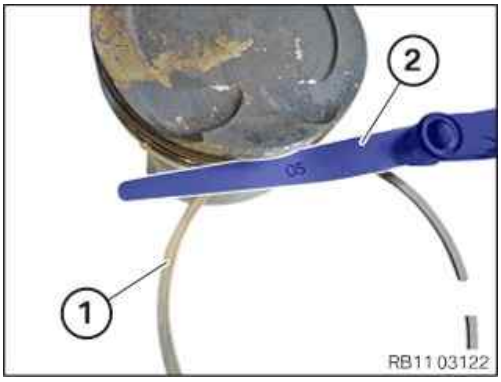


TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

- Mounting orientation of the piston rings

Position number	Description
1	1. Piston ring (plain rectangular compression ring)
2	2. Piston ring (taper faced piston ring)
3	3. Piston ring (oil scraper ring with spiral expander)



Check

- Install all piston rings (1) consecutively as shown in the piston ring groove. Measure the side clearance with a feeler gauge (2).

desired state

- The side clearance of the piston rings is within the tolerance.

Side clearance of piston rings

Clean all components before measuring the side clearance.	
Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Result

» The side clearance of the piston rings is outside of the tolerance.

Measure

- Renew the piston ring.

33 – Measure the piston diameter

Check

cardiagn.com

- Position the measuring bolt in the area (A) and measure the piston installation clearance 90 ° transversely to the gudgeon pin.

Piston diameter

Measure the piston diameter at distance (A) from the lower end of the piston skirt.	
Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Result

» The piston does not correspond to the specifications.

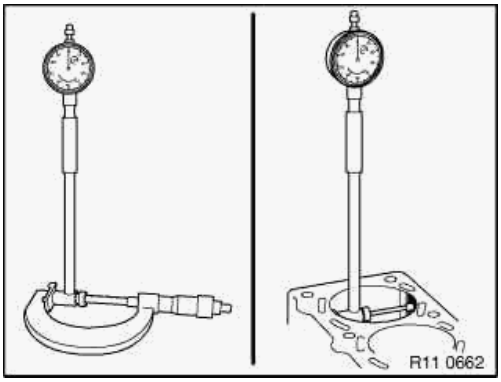
Measure

- Renew the piston.

34 – Measure the cylinder bores

Prerequisite

Cylinder barrel is cleaned.



Check

- Adjusting measuring screw to nominal dimension of cylinder bore.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

- Insert internal measuring device into measuring screw and set to zero.
- With the internal measuring device, measure the cylinder at the following points. Check the deviations from the nominal dimension.
  - Lower third of the cylinder bore in direction of travel,
  - Lower third of the cylinder bore transversely to direction of travel,
  - Middle third of the cylinder bore in direction of travel,
  - Middle third of the cylinder bore transversely to direction of travel,
  - Upper third of the cylinder bore in direction of travel,
  - Upper third of the cylinder bore transversely to direction of travel.

Cylinder bore

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

Result

» Cylinder does not correspond to the specifications.

Measure

- Replace motor.

  Parts: Engine

35 – If necessary: Renew the piston

cardiagn.com

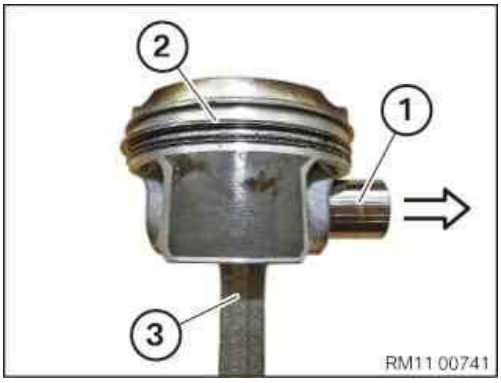
CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

- Use special tool to remove the gudgeon pin circlip.
- Insert the flat side (3) of special tool into the groove (4).
- Grab and remove the gudgeon pin circlip (1) with the arched side (2).



TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Remove the gudgeon pin (1) in the direction of arrow.
- Remove piston (2) from connecting rod (3).

- Renew piston with gudgeon pin.

  Parts: Pistons

TECHNICAL INFORMATION

Piston and gudgeon pin are matched to each other.
Always install piston and gudgeon pin together and do not switch by mistake.

- Position piston (2) on the connecting rod (3).
- Install the gudgeon pin (1) in the direction of arrow.
- You must be able to install the gudgeon pin (1) without major effort.
- Gudgeon pin (1) must be free of play in piston and connecting rod.

- Prepare special tool on the fitting aid .

cardiagn.com

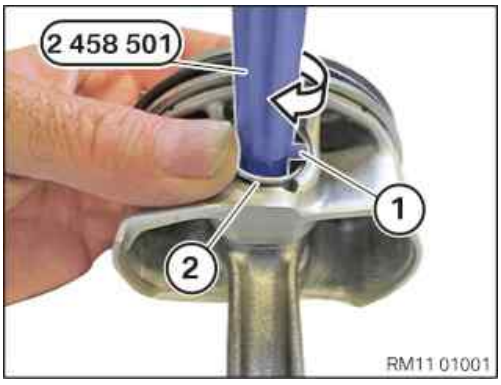
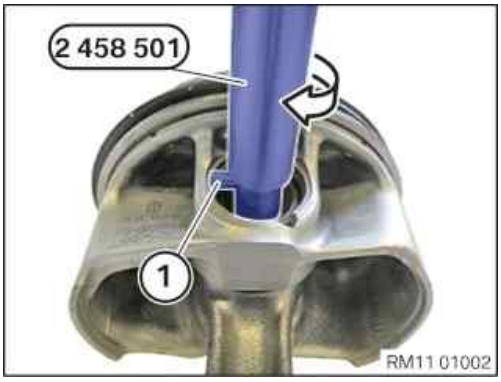
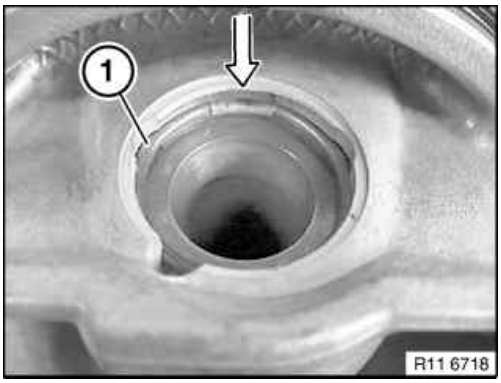
- Insert the gudgeon pin circlip (1) into the groove on the piston (see arrows).



- Screw in the positioned gudgeon pin circlip (2)with and with the guide pin (1) in the direction of the arrow.



- Screw the gudgeon pin circlip with guide pin (1) into the groove of the piston in the direction of the arrow.



- Gudgeon pin circlip (1) must be fitted correctly in the groove (arrow).

36 – Install the connecting rod bearing shell

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

cardiagn.com

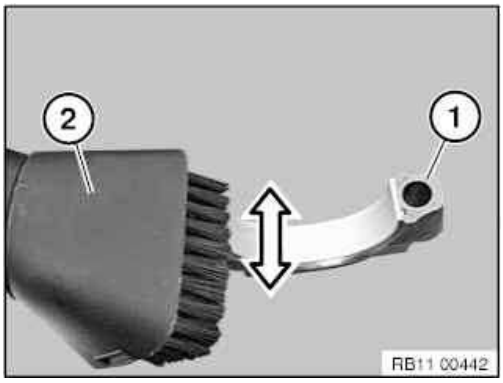
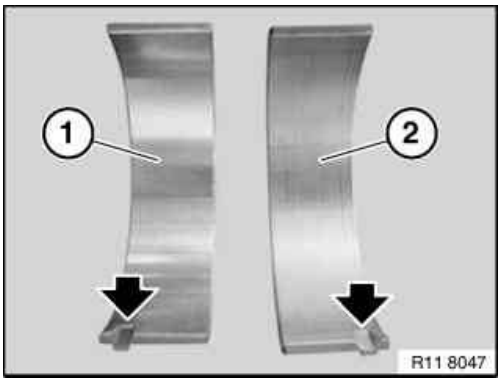
TECHNICAL INFORMATION

The connecting rods of the engine are balanced and are matched to each other.

A single connecting rod is not permitted to be replaced. Always replace all connecting rods.

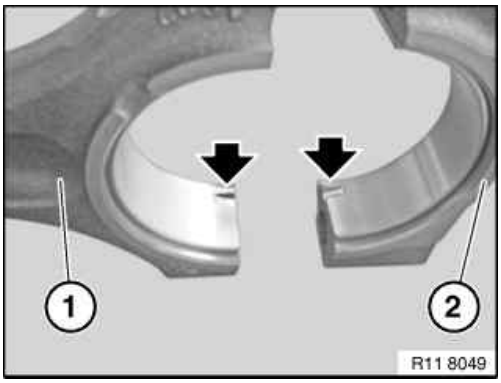


- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



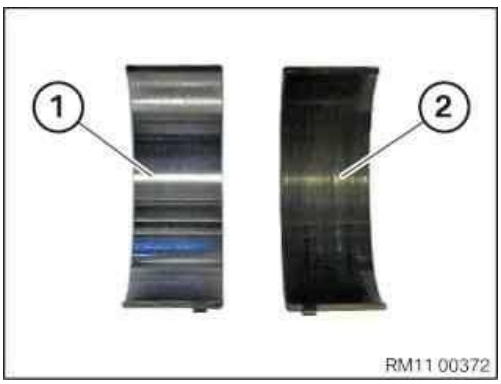
- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing (1) for the connecting rod bearing cap and the connecting rod bearing (2) for the connecting rod are each equipped with protection against incorrect assembly as shown in the marked area.



- To avoid incorrect assembly: Pay attention to marks (arrows).

  The connecting rod bearing cap (2) and the connecting rod (1) are each equipped with protection against incorrect assembly.



- Makes sure that a light connecting rod bearing shell (1) and a dark connecting rod bearing shell (2) are installed for each connecting rod.

cardiagn.com

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the dark connecting rod bearing shell (2) into the connecting rod (1).
- Oil the connecting rod bearing shell (2).

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Insert the light connecting rod bearing shell (2) into the connecting rod bearing cap (1).
- Oil the connecting rod bearing shell (2).

37 – Installing piston with connecting rod

TECHNICAL INFORMATION

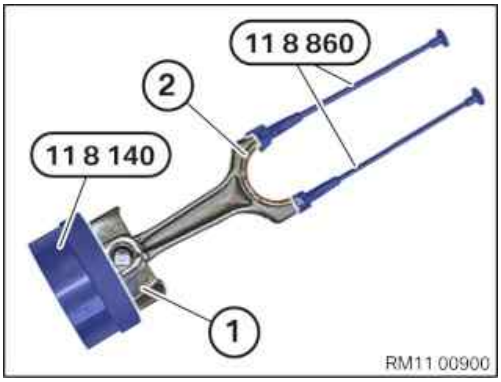
Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.

Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.



- Coat the pistons (1) and piston rings lightly with oil.
- Mount the special tool **0 493 582 (11 8 140)** on the piston (1).
- Screw the special tool **0 496 144 (11 8 860)** in on the large connecting rod eye (2).

- Insert the piston with the special tool **0 493 582 (11 8 140)** with the arrow pointing to cylinder 1.

RISK OF DAMAGE

Damage on the cylinder wall and oil spray nozzles.

Major force can scratch the cylinder wall and bend the oil spray nozzles.

- Carefully move the piston and connecting rod in the engine block.

- Install the piston in the crankcase.

cardiagn.com

- Remove special tool **0 496 144 (11 8 860)** from large connecting rod eye.

POSTPROCESSES

38 – Install the connecting rod bearing cap

RISK OF DAMAGE

Engine damage caused by incorrectly installed bearing shells and bearing supports.

Engine damage may result from incorrectly installing bearing shells and bearing supports.

- Always install all bearing shells and bearing supports in the same position from which they were removed.

TECHNICAL INFORMATION

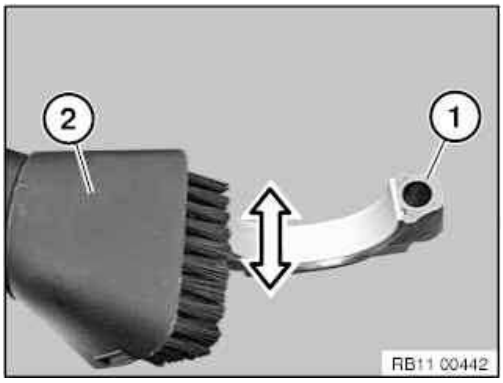
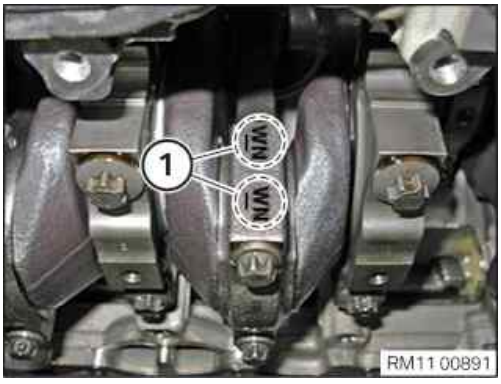
The connecting rods of the engine are balanced and are matched to each other.
A single connecting rod is not permitted to be replaced. Always replace all connecting rods.



- Vacuum the crack surfaces (1) with a conventional vacuum cleaner (2).



- Attach the connecting rod bearing caps to the connecting rod until the designations (1) match.

TECHNICAL INFORMATION

Piston, gudgeon pin, connecting rod and connecting rod bearing shells are matched to each other and balanced.
Always install the piston, gudgeon pin, connecting rod and connecting rod bearing shells in the cylinder from which they were removed.

- Make sure that the connecting rod bearing is attached to the same connecting rod that it was detached from.

cardiagn.com

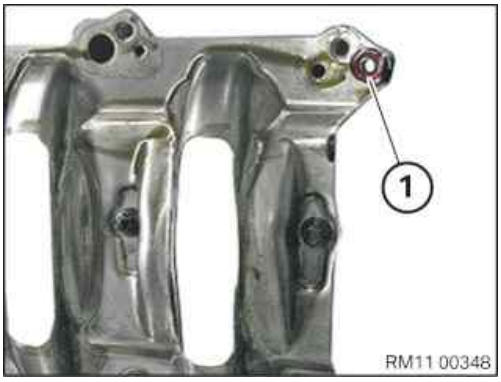
- Position the connecting rod bearing cap (2).
- Tighten the bolts (1) with the special tool **0 490 504 (00 9 120)**.

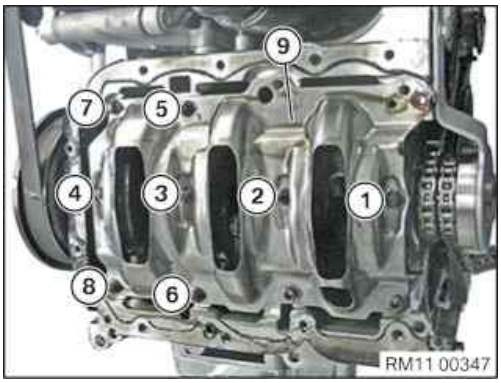
Connecting rod bearing cap to connecting rod

M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

39 – Installing the oil deflector



- Check sealing ring (1) for damage and replace oil deflector if necessary.



- Insert and install the oil deflector (9).
- Renew screws (1) to (4).

  Parts: Bolts
- Hand-tighten the bolts (1) to (4).
-
- Tighten the screws (1) to (8).

Oil deflector to crankshaft bearing cap

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

- Tighten the screws (5) to (8).

Oil deflector to crankcase

M8x14		Tightening torque	19 Nm

40 – Install the oil vacuum pump

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com

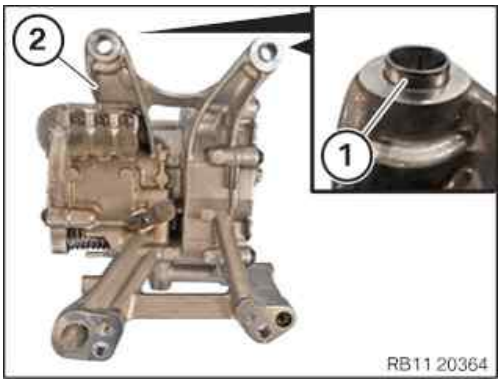
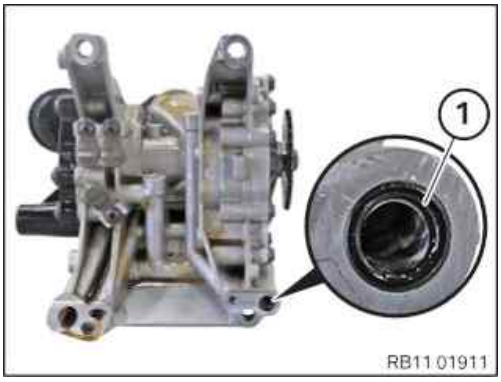
- Remove centering sleeves from the crankcase (1) using a standard tool (2).
- Renew the centring sleeves (1).

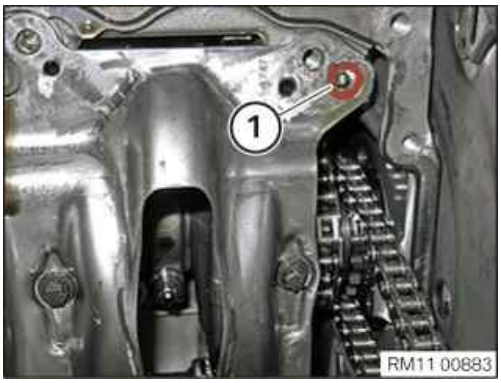
  Parts: Centring sleeves



- Install centering sleeves (1) in the oil vacuum pump (2).

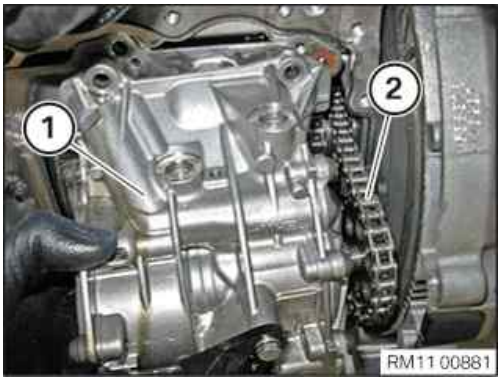


- Check the sealing ring (1) for damage and renew where required.
- Make sure the sealing ring (1) is installed correctly.



- Check sealing ring (1) for damage and replace oil deflector if necessary.

  Parts: Oil deflector



- Insert oil vacuum pump (1) into the drive chain (2).

cardiagn.com

- Renew screws (1).

  Parts: Bolts

- Tighten the screws (1) of the oil vacuum pump (2).

Oil vacuum pump to crankcaseB37

M8x35	*Renew screws.*	Tightening torque	15 Nm
		Angle of rotation	45 °

41 – Refitting sump

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1)and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

cardiagn.com

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.

cardiagn.com

TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.

RISK OF DAMAGE

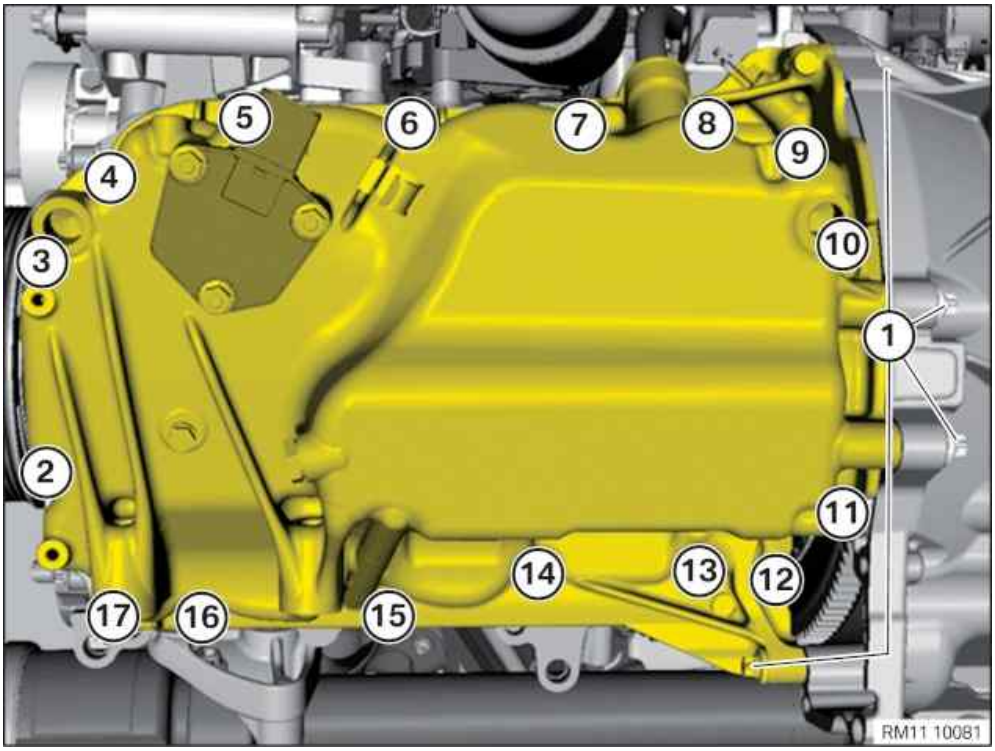
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Tighten screws (2) to (17) **hand-tight**, do **not** tighten fully.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws (2) to (17) on the oil sump.

Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten the transmission bolts (1) on the oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

- Insert and install the starter motor .
- Tighten the screws (1).

Starter motor to transmission

M8x45		Tightening torque	19 Nm

cardiagn.com

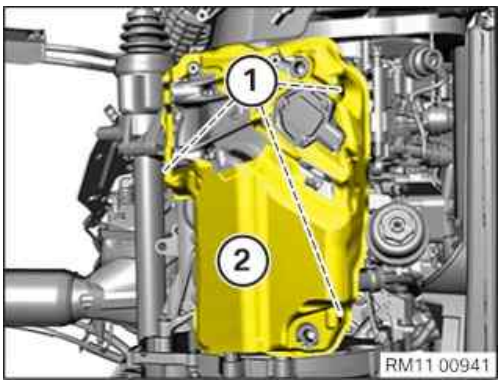
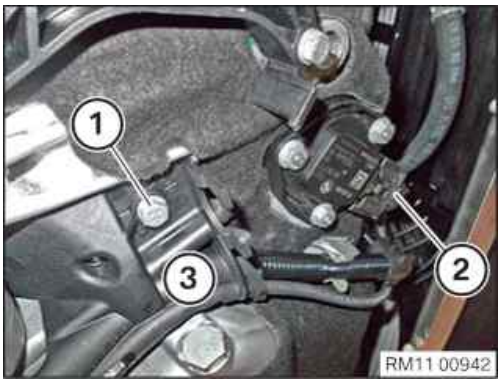
42 – Installing the acoustic cover for the oil sump



- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).



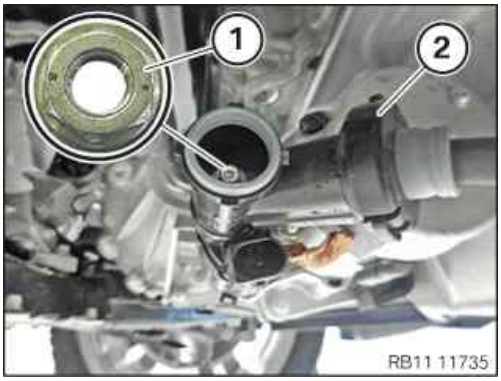
- Position wiring harness (3).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

- Connect and lock the connector (2) on the oil-level sensor.

  The connector must lock audibly.



CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Feed the positive battery cable (2) in on the starter and install.
- Tighten nut (1).

Battery positive lead to starter

M8		Tightening torque	13,5 Nm

- Insert and install the new sealing cap (2).
- Secure the sealing cap (2) in the direction of the arrow.
- Connect and lock the connector (1).

  The connector must engage audibly.

43 – Mounting the cylinder head

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

cardiagn.com

RISK OF DAMAGE

Damage to threads.

Fluid in the threaded hole may damage the thread when screws are tightened in the threads.

- Dry threaded holes (e.g. using compressed air).

TECHNICAL INFORMATION

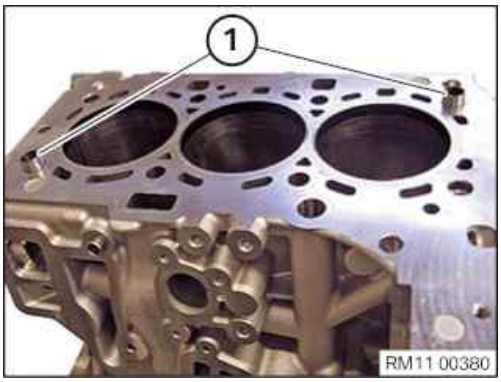
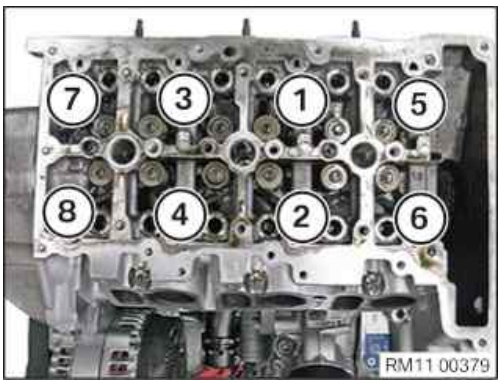
Do not remove bolt coating.



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.
- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.
- Clean tapped bores.
- Position the cylinder head on the crankcase.



- Fit new cylinder head bolts.

  Parts: Cylinder head bolts
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

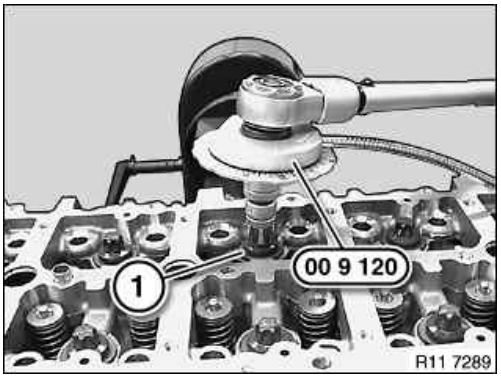
When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolt in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

cardiagn.com

- Tighten the screws (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

44 – Installing the hydraulic valve clearance compensating element

RISK OF DAMAGE

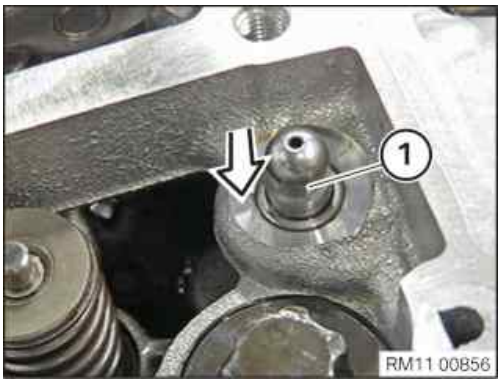
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

45 – Install the roller cam followers

TECHNICAL INFORMATION

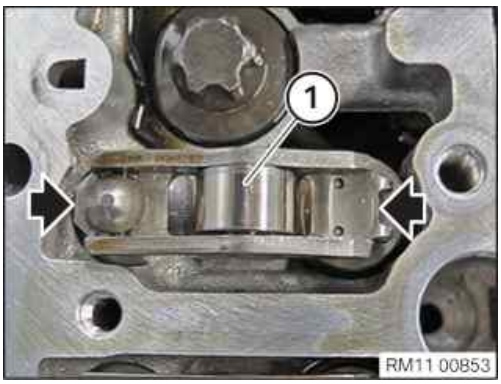
- Note the installation position of the component. The component may be installed in various installation positions.



- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

46 – Install glow elements

cardiagn.com

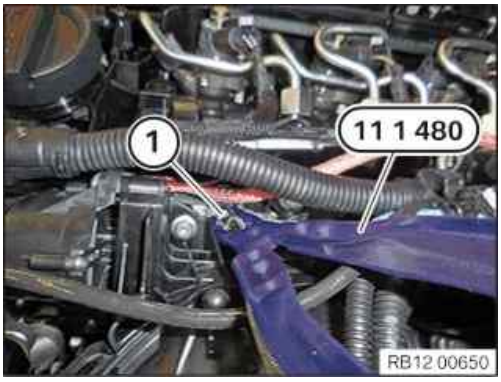
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

47 – Installing the camshaft support

RISK OF DAMAGE

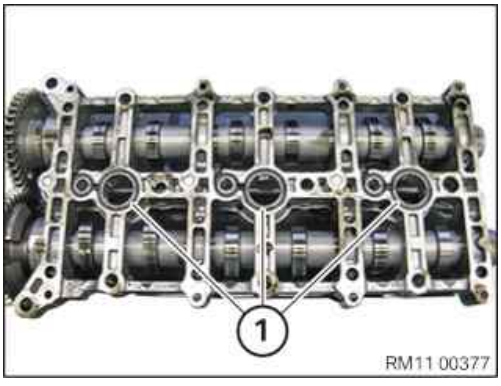
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Renew the seals (1) on the camshaft support.

  Parts: Seals

cardiagn.com

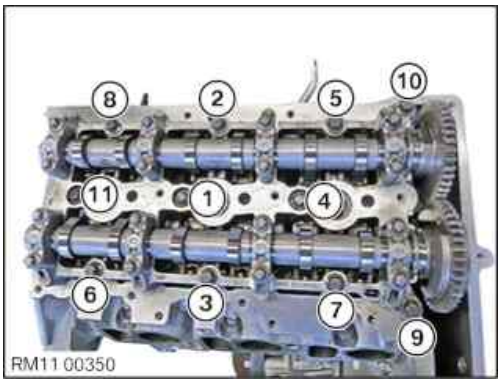
- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

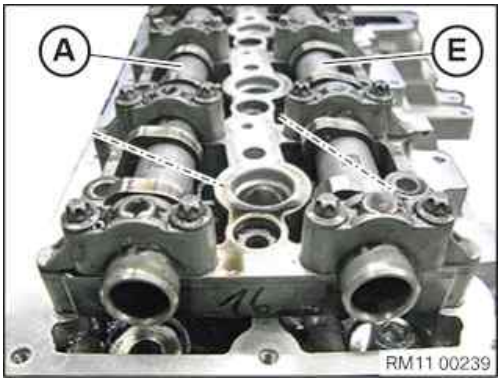
M7x35		Tightening torque	13 Nm

48 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▸ **Remove chain tensioner piston**

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▶ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

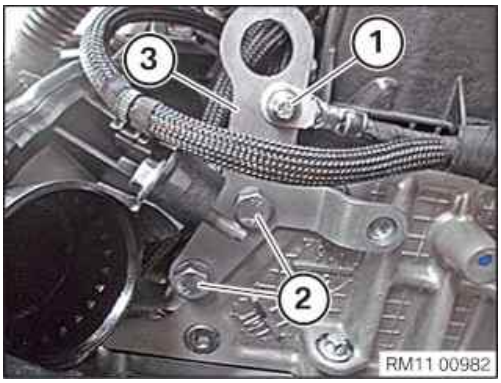
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▶ **Remove the timing chain guide rail**



- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

cardiagn.com

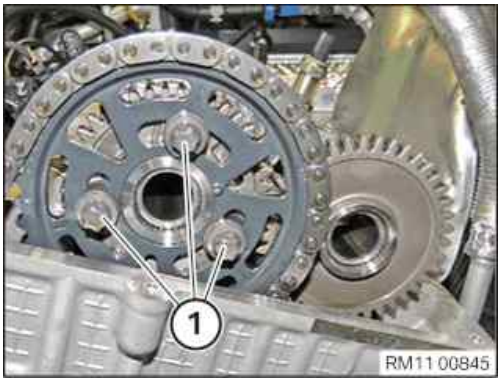
- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

▶ **Installing exhaust camshaft**

RISK OF DAMAGE

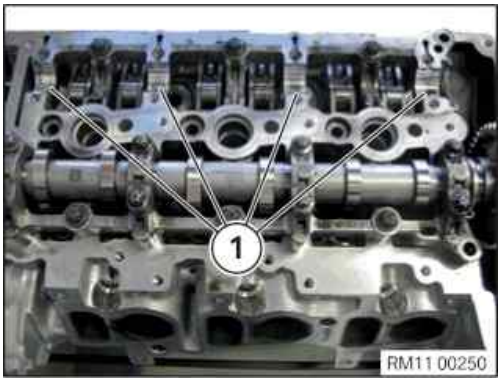
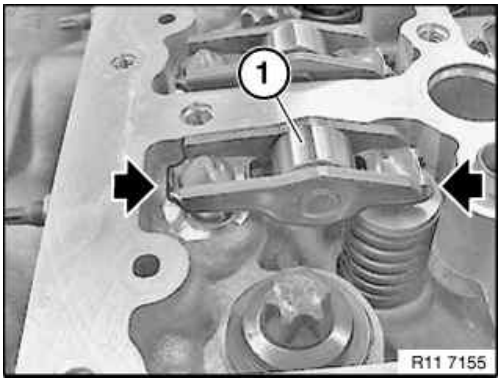
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).



- Make sure the roller cam followers (1) have the correct mounting orientation.

cardiagn.com

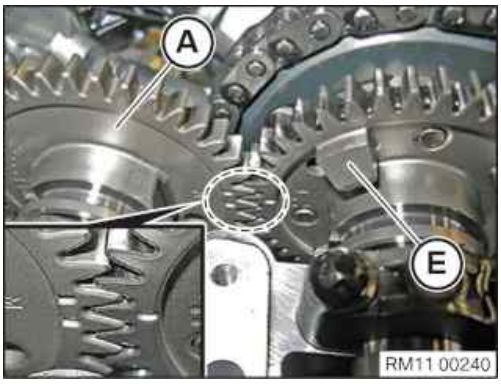
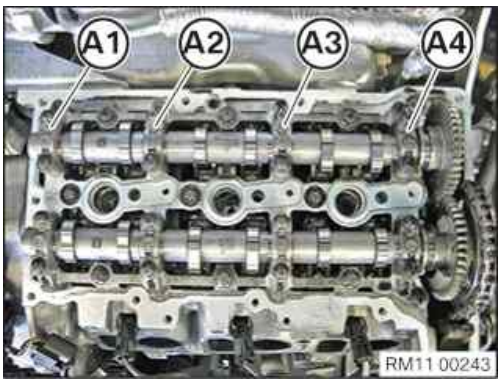
- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

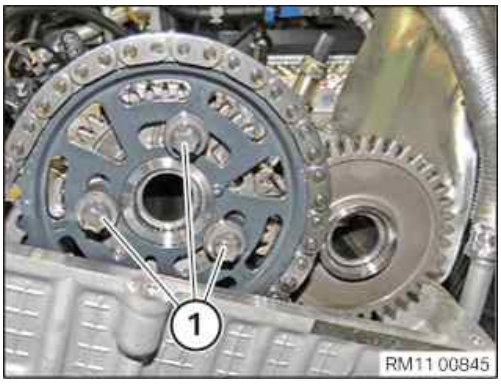
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

► **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

► **Install the timing chain guide rail**

cardiagn.com

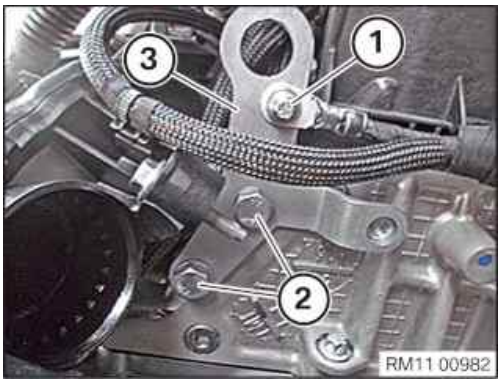
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com

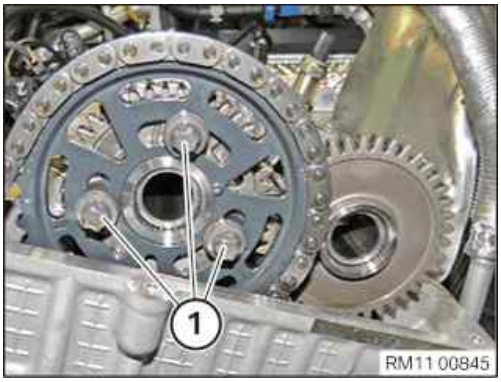
- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

49 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

50 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

51 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

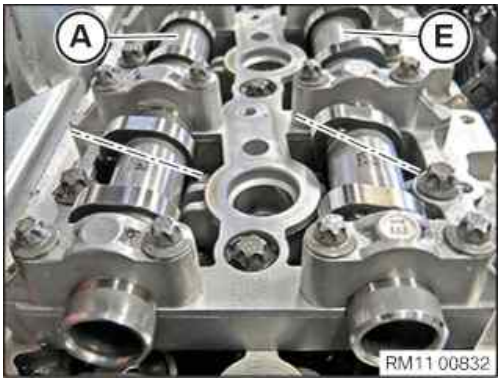
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com

- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

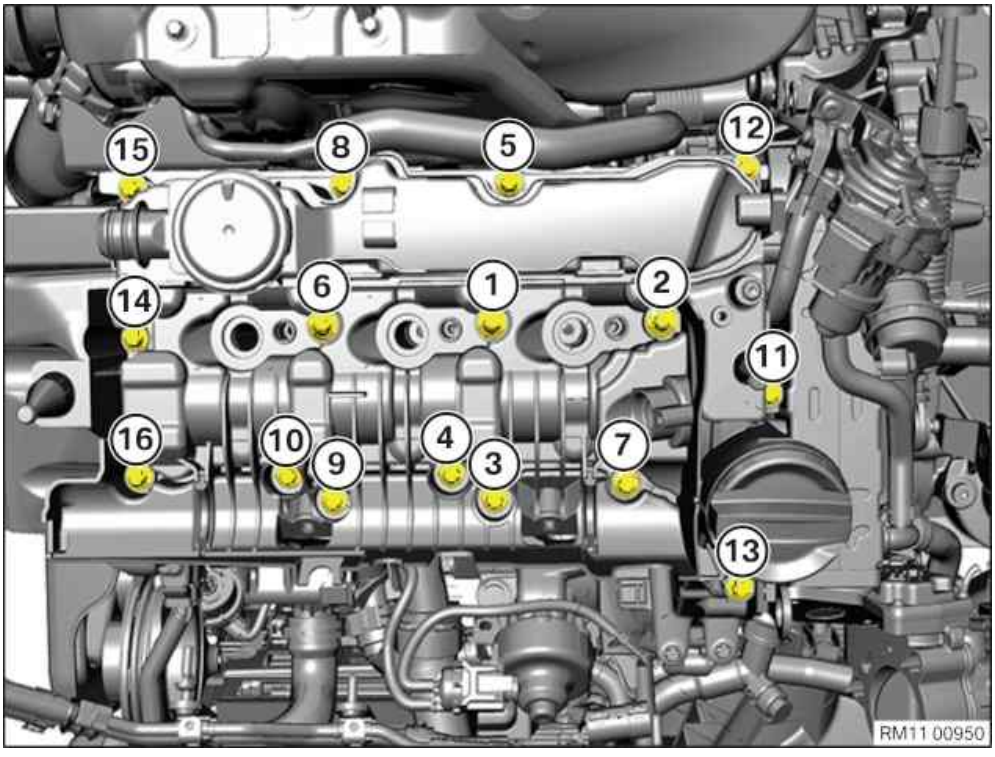
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

52 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover

cardiagn.com

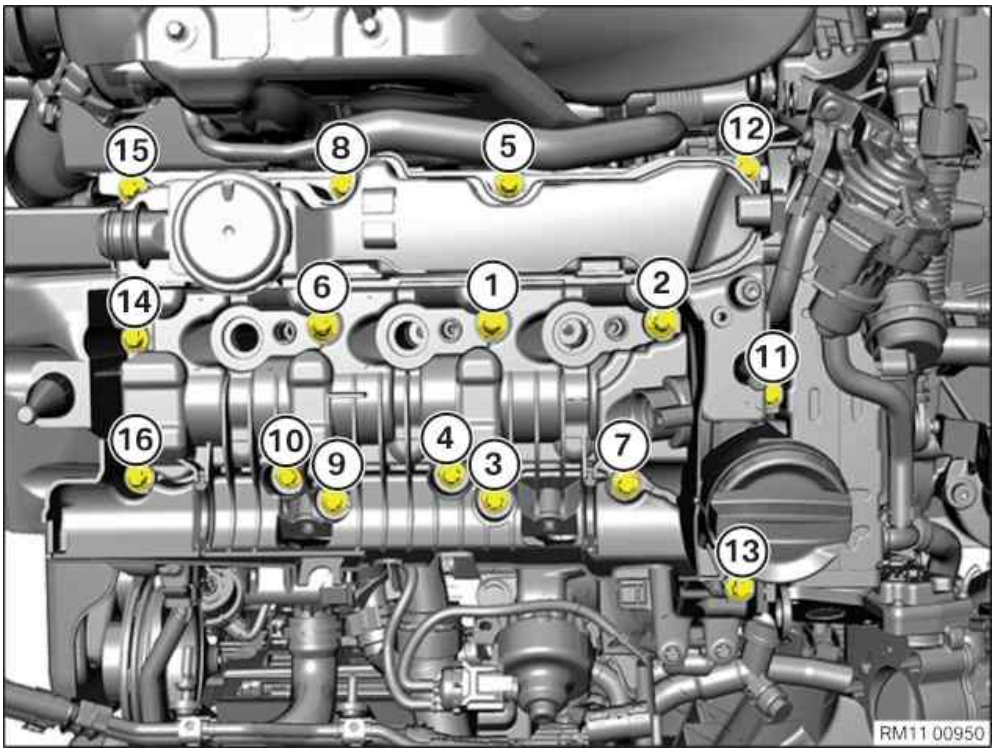
- Renew the gasket (1) of the cylinder head cover.

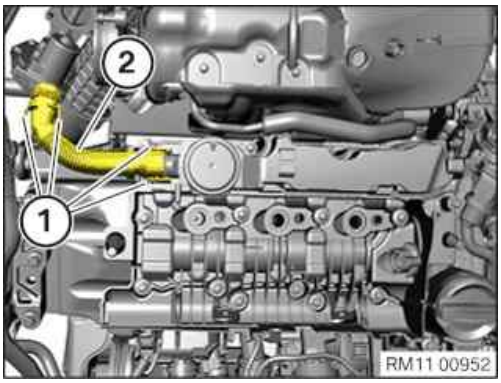
  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nr



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

53 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

cardiagn.com

RISK OF DAMAGE

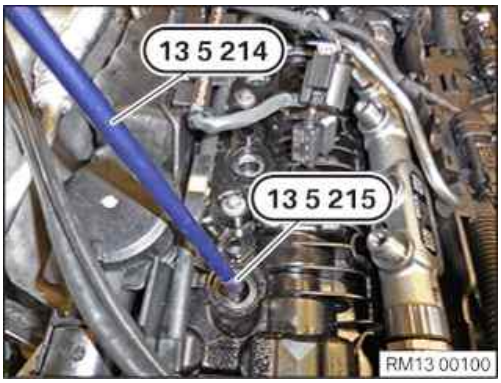
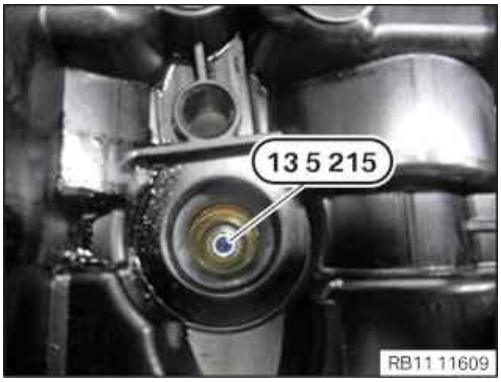
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com

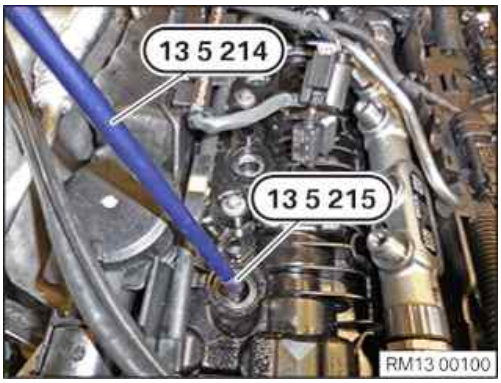
- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

cardiagn.com

RISK OF DAMAGE

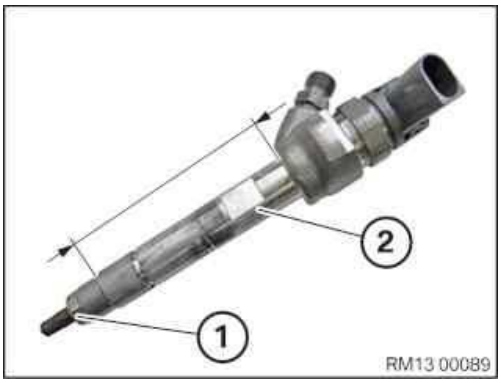
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

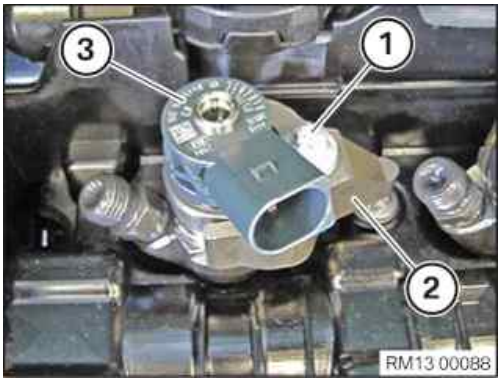


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

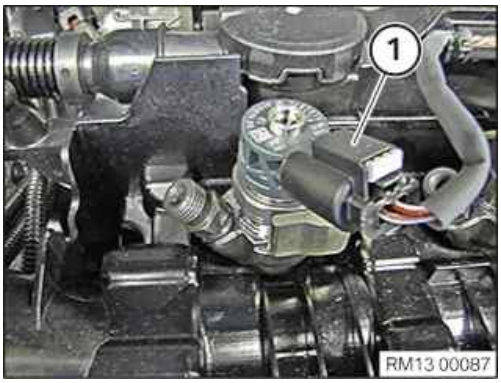
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

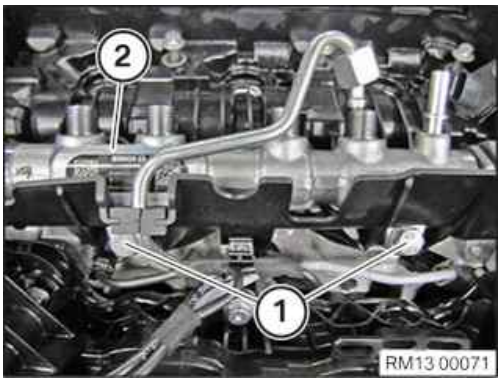
- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

54 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

55 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

56 – Installing high pressure lines between rail and injectors

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

TECHNICAL INFORMATION

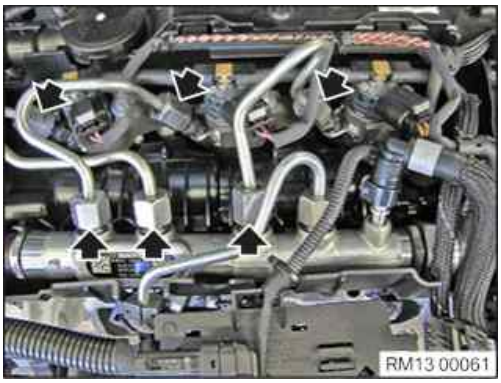
Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

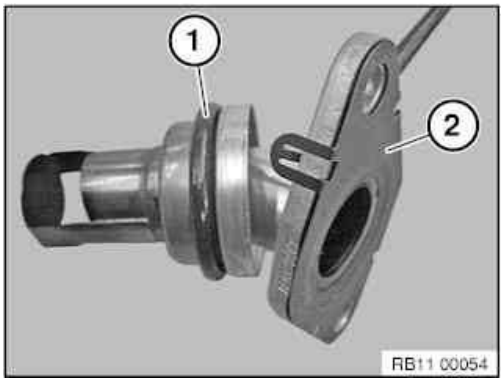
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

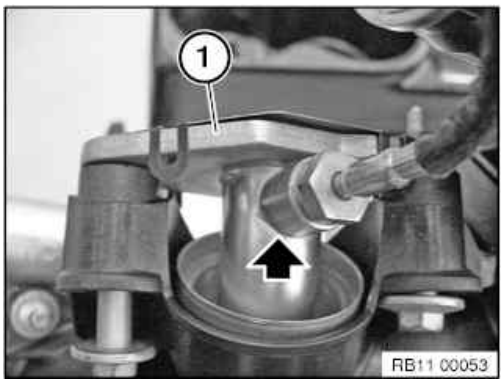
57 – Installing the intake plenum



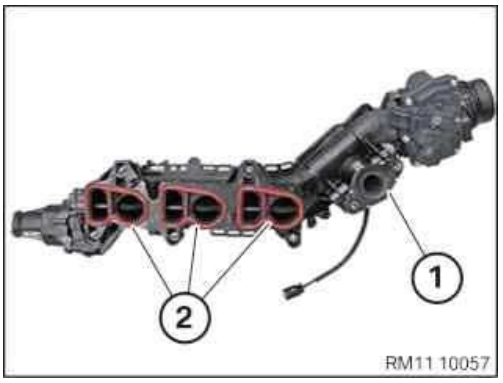
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.

cardiagn.com

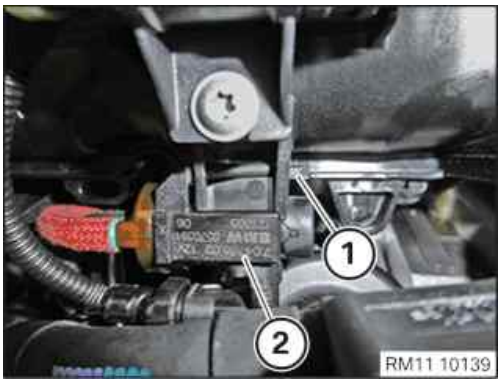
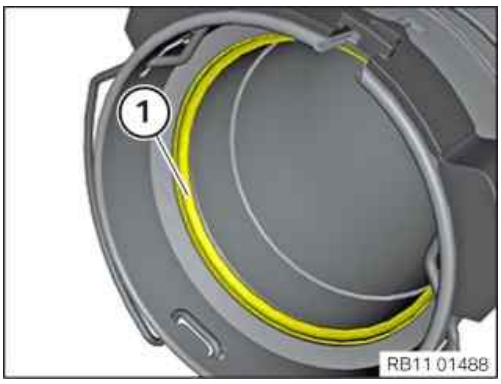
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

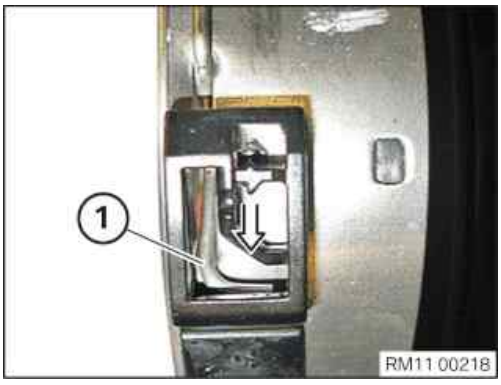


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

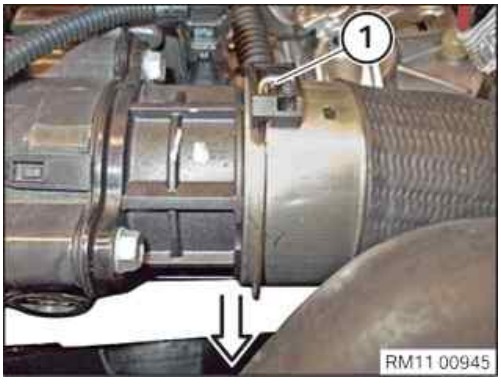


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

58 – Remove the engine from the assembly stand

cardiagn.com

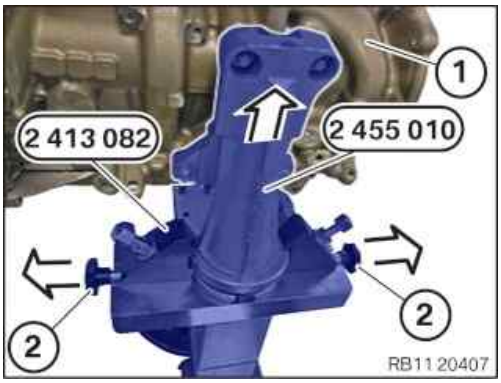
CAUTION

Heavy component.

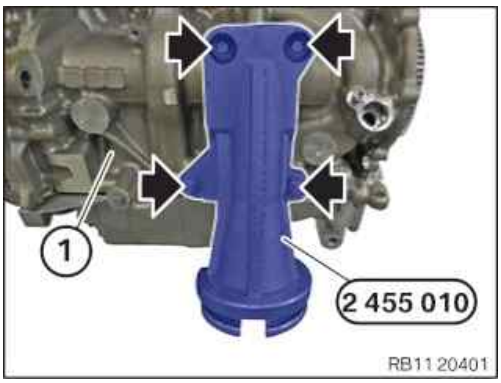
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

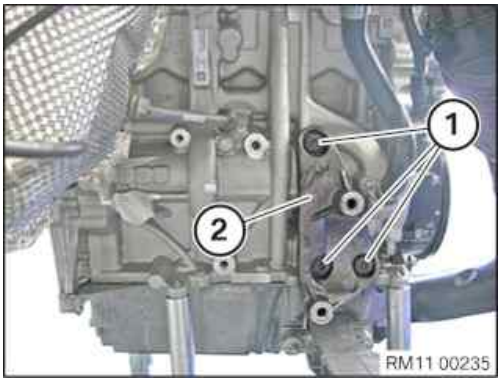
- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase

M10		Tightening torque	38 Nm

59 – Install the engine on the double-clutch transmission (DKG)

cardiagn.com

RISK OF DAMAGE

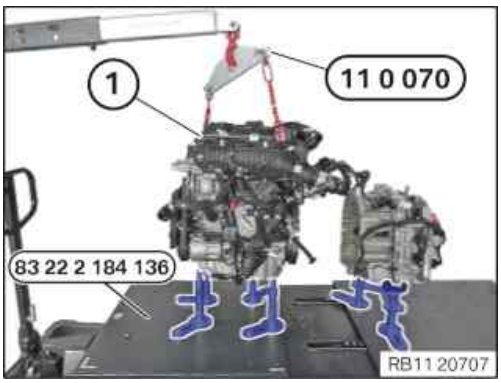
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.

TECHNICAL INFORMATION

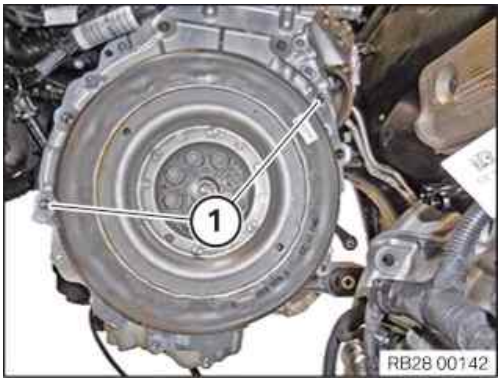
Transmission oil temperature 20 °C up to a maximum 40 °C!
Carry out the "Transmission oil adjustment" service function with the diagnosis system.
The double clutch also needs to be replaced if you exceed the oil change interval by more than 3000 km!
Failure to comply with this instruction will result in serious damage to the twin-clutch gearbox (DKG).



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.

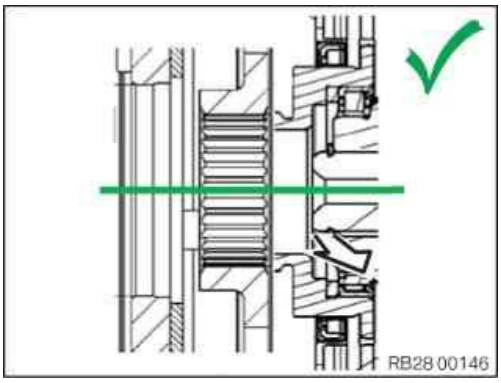


- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

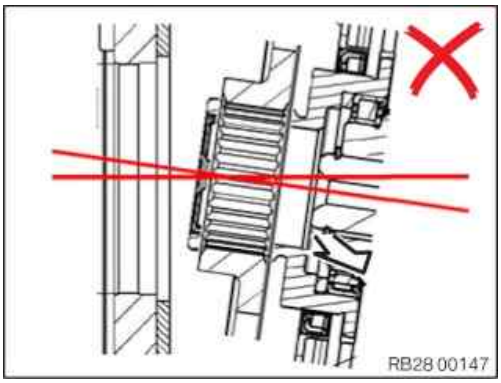
- Clean the gearing (1) of the drive shaft.
- Coat the gearing (1) with MI-Setral-43N grease (BMW part number 83 23 2 152 082).

  Tooth gaps must be filled with grease up to tooth height!

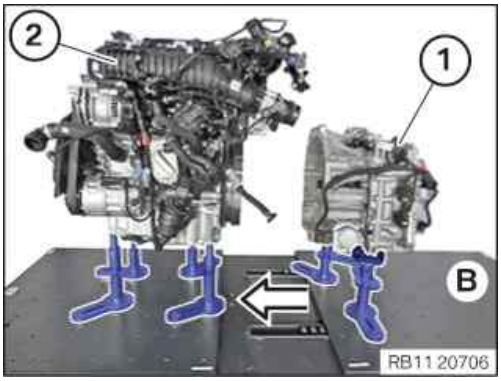
cardiagn.com



- **Correct:** Insert the double-clutch transmission (DKG) horizontally into the flywheel.



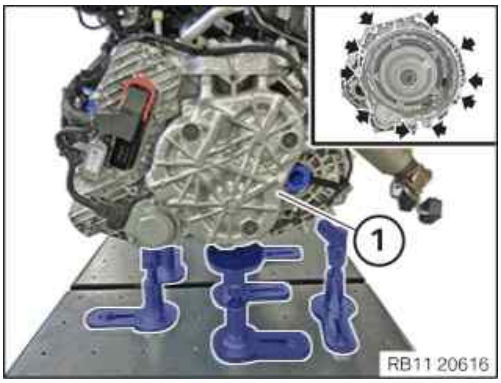
- **Wrong:** Do not tilt the double-clutch transmission (DKG) when inserting it into the flywheel.



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table plate (B) in the direction of the arrow and position double-clutch transmission (DKG) (1) **carefully** on the engine (2).



- Flange-mount the double-clutch transmission (DKG) to the engine so that it is **absolutely** horizontal.
- Tighten screws (arrows).

Transmission to engine

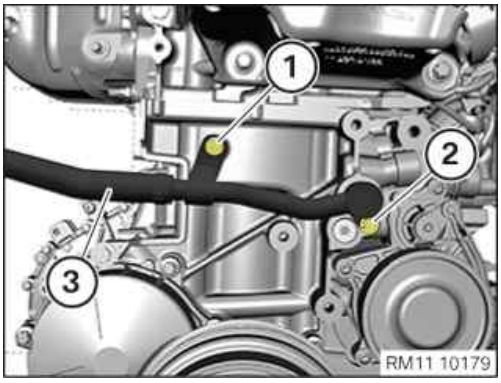
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Connect and lock the coolant lines (1).
- Make sure that you can hear the coolant lines (1) engage.

cardiagn.com

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

60 – Attaching assemblies (on lifting table)

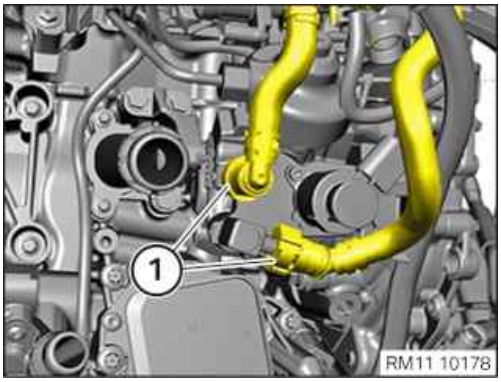


- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm



- Connect and lock fuel lines (1).

  The locks must engage audibly.

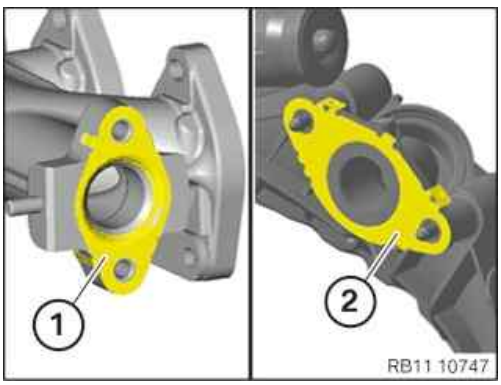
▸ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

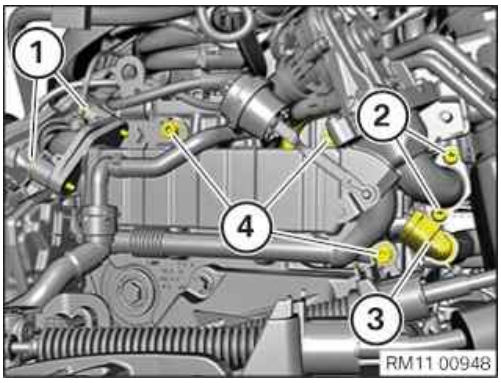


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

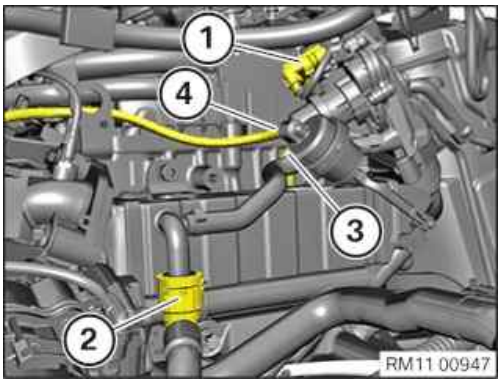
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



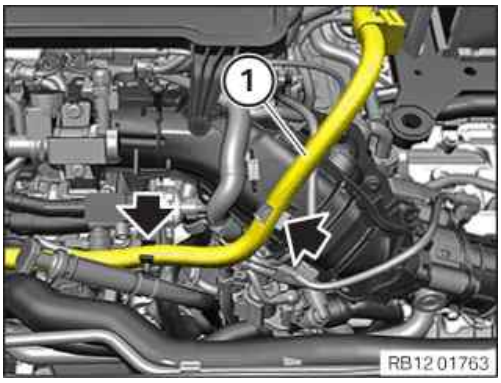
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

cardiagn.com



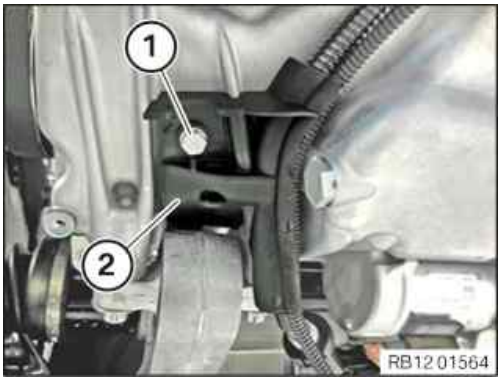
CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

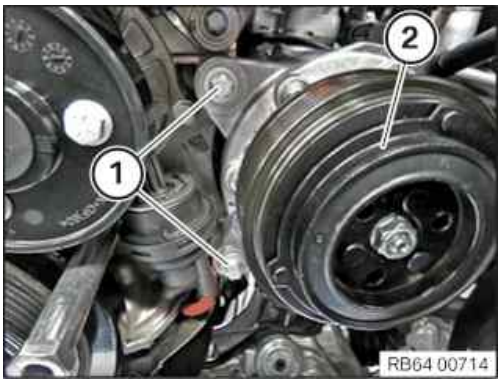
- Insert the positive battery cable (1) into the clamps (arrows).
- Feed in and install positive battery cable at the clamps (1).



- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm



- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

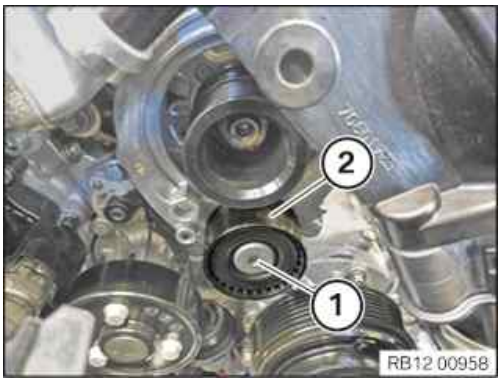
- Tighten the screws (1).

- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

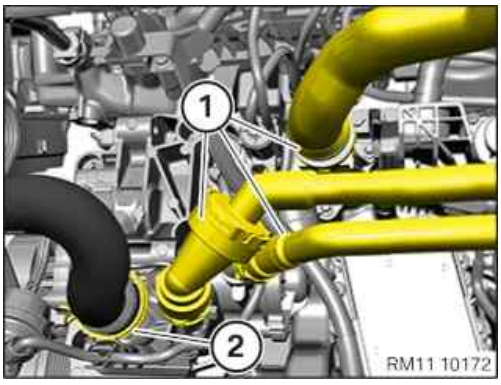
cardiagn.com



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

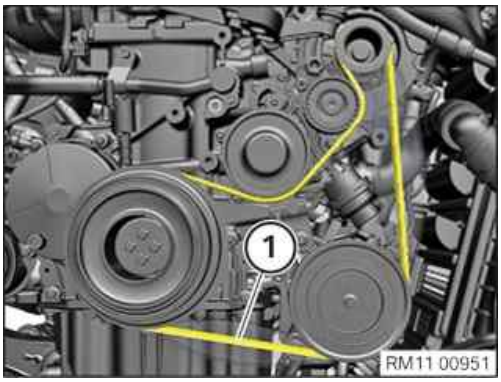
▸ Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

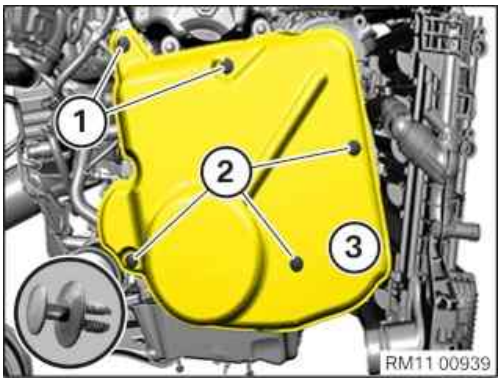


- Feed in the drive belt for the alternator (1) and install it.

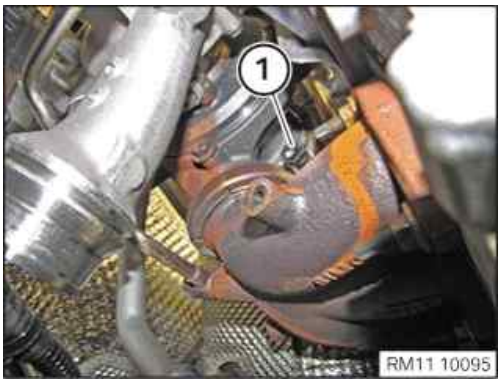
- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

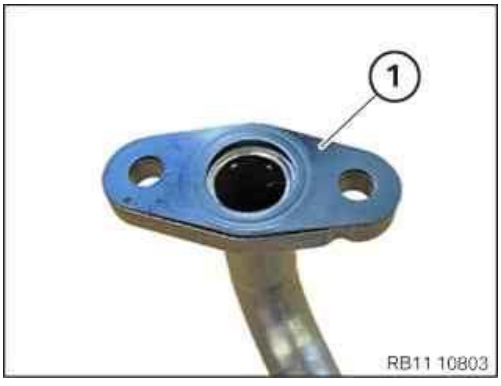
▸ **Installing the oil return line for the exhaust turbocharger**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

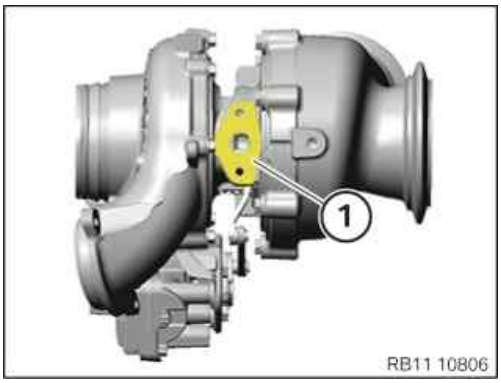


- Renew gasket (1).

  Parts: Gasket

cardiagn.com

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

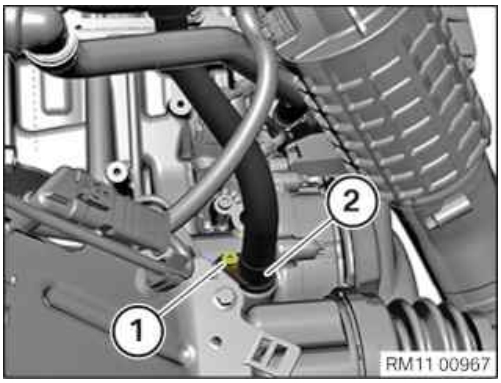
- Do not use any metal-cutting tools.

- Clean sealing surface.

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



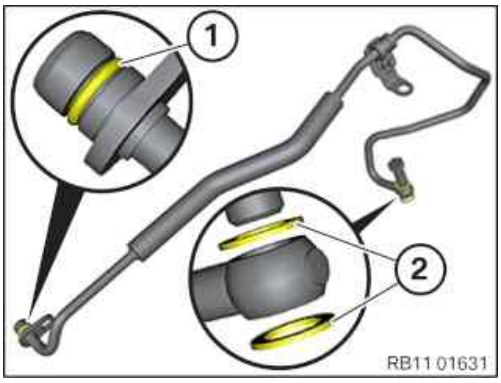
- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

▸ **Install the oil feed line for the exhaust turbocharger**

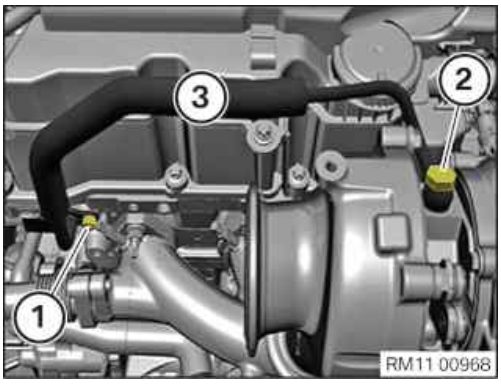
cardiagn.com



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

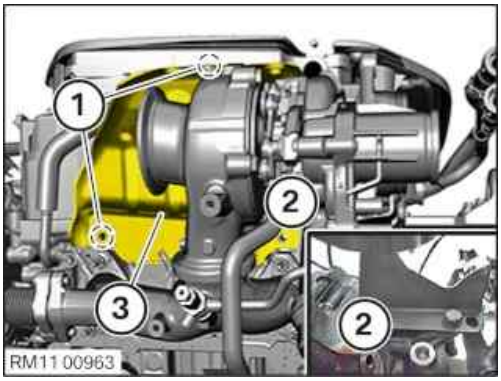
▸ **Installing heat shield on exhaust turbocharger at the rear**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

▸ **Installing heat shield on exhaust turbocharger at bottom**

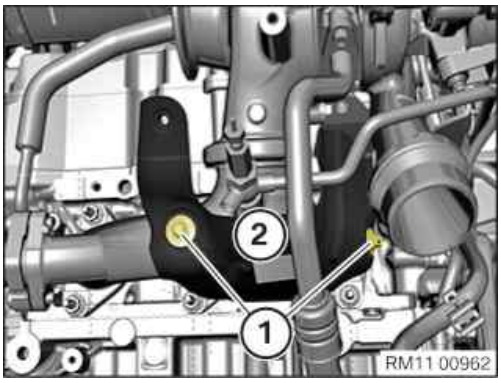
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

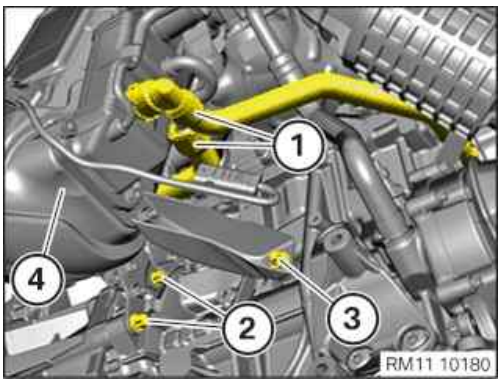
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

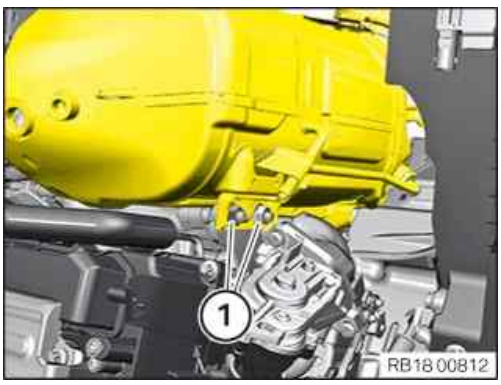
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).



- Tighten nuts (1).

Diesel particle filter to holder

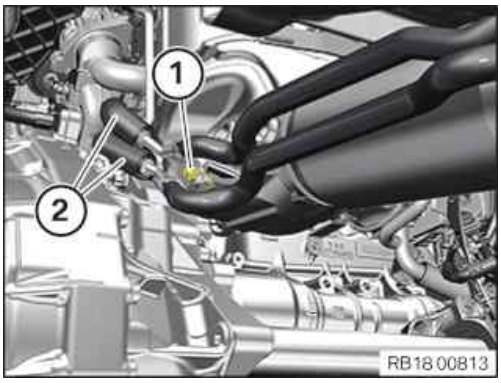
M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

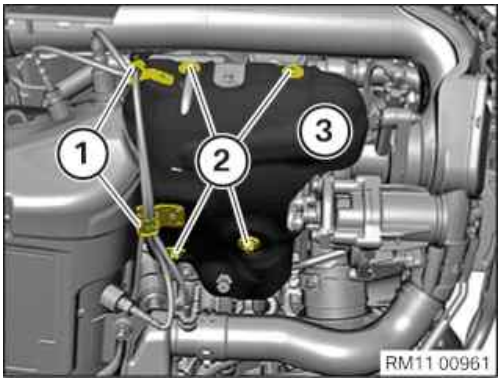
▶ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



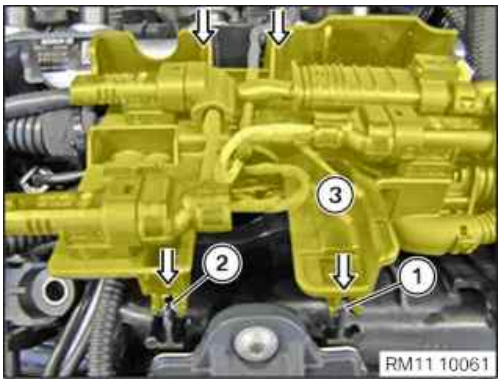
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

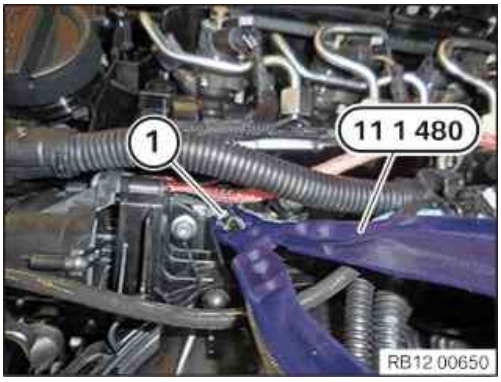
Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

▶ **Installing the cable clip for the intake plenum**



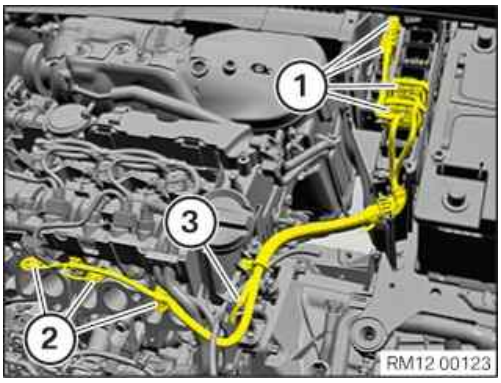
- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

  The connector (1) must engage audibly.

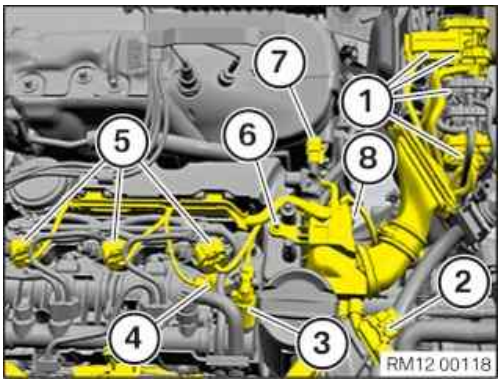
cardiagn.com



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

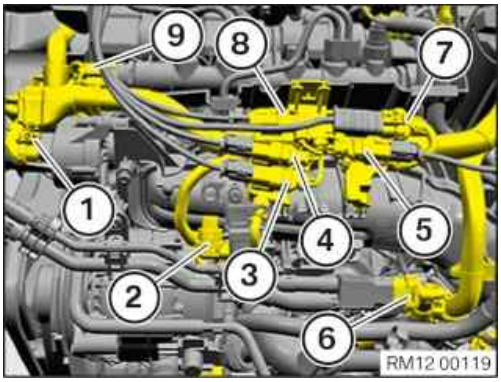


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

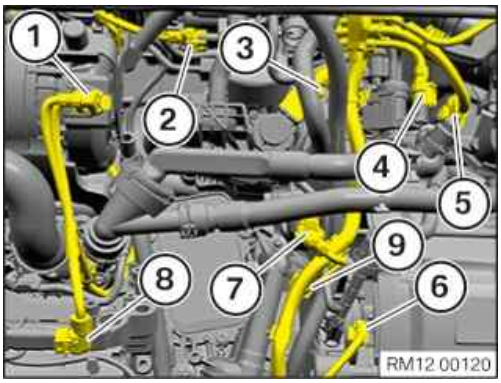
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

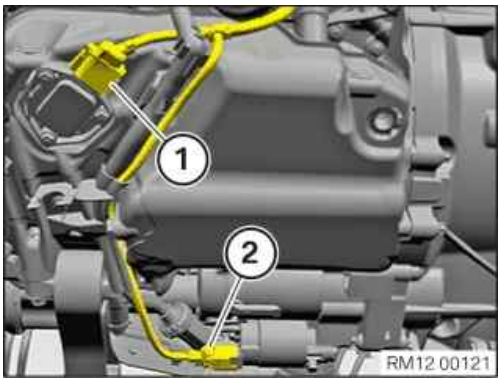


- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.

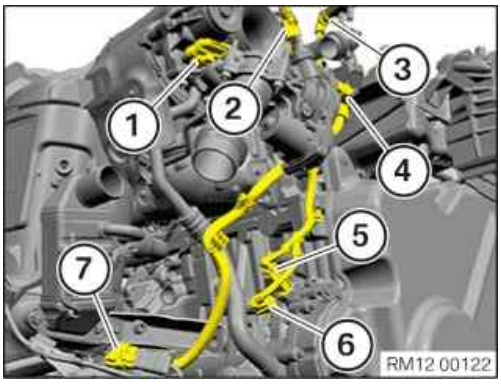


- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.

cardiagn.com

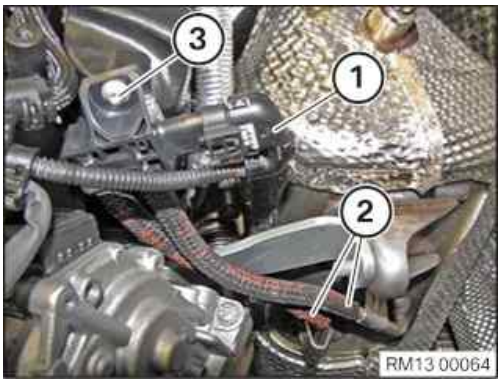


- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

61 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

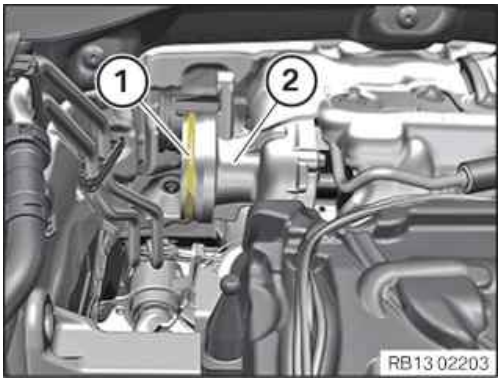
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

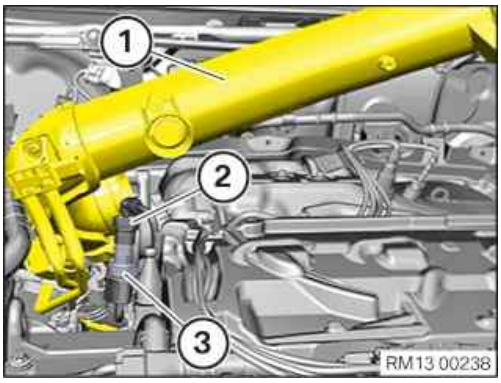
  The connector (1) must engage audibly.

62 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com



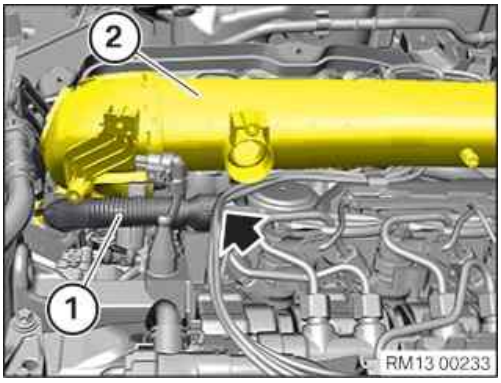
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

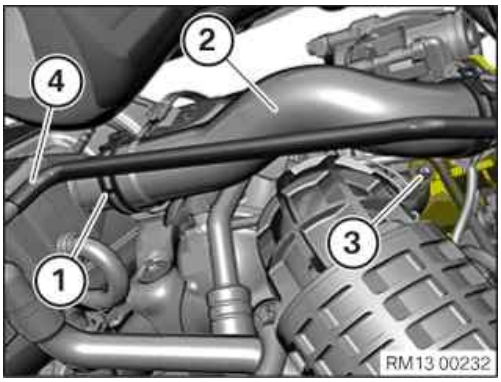
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

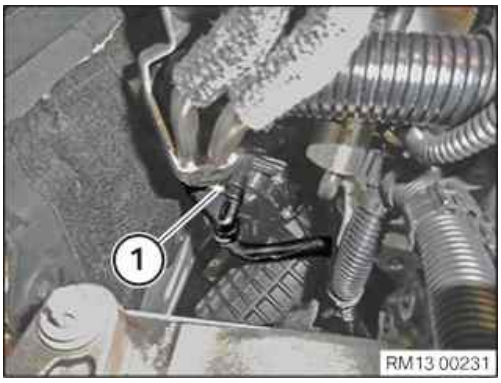
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

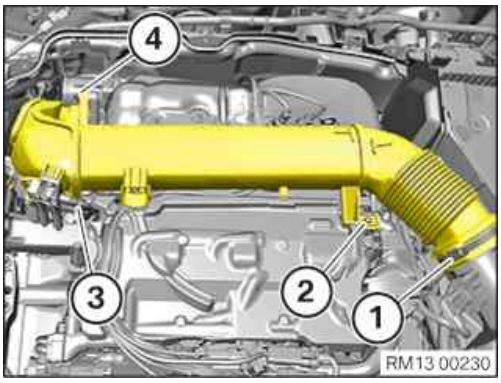
Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.

cardiagn.com



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

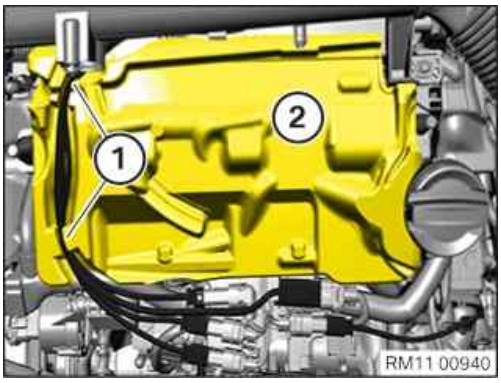
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

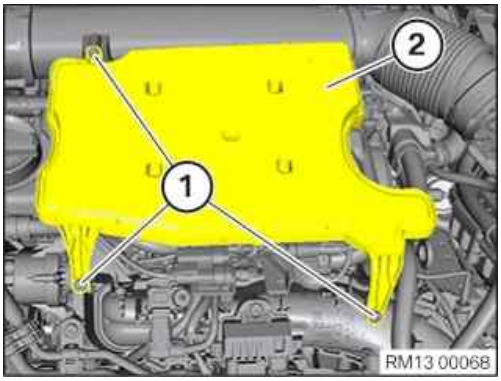
Clamp		Tightening torque	3 Nm

63 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

64 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

65 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

66 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 8

M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase Used in step 9

M10x30		Tightening torque	38 Nm

cardiagn.com

Special tool 11 8 930 to special tool 00 2 320

Used in step 9

M14x35		Tightening torque	160 Nm

Connecting rod bearing cap to connecting rod

Used in step 38

M9x47		Tightening torque	20 Nm
		Angle of rotation 1	70 °
		Angle of rotation 2	70 °

Oil deflector to crankshaft bearing cap

Used in step 39

M8x14	Replace screws.	Tightening torque	35 Nm
		Release	180 °
		Tightening torque	15 Nm
		Angle of rotation	45 °

Oil deflector to crankcase

Used in step 39

M8x14		Tightening torque	19 Nm

Oil vacuum pump to crankcaseB37

Used in step 40

M8x35	*Renewscrews.*	Tightening torque	15 Nm
		Angle of rotation	45 °

Oil sump to crankcase

Used in step 41

M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

Transmission to oil sump

Used in step 41

M8		Tightening torque	19 Nm

Starter motor to transmission

Used in step 41

M8x45		Tightening torque	19 Nm

Bracket to oil sump

Used in step 42 60

M6		Tightening torque	8 Nm

Battery positive lead to starter

Used in step 42

M8		Tightening torque	13,5 Nm

Cylinder head to crankcase

Used in step 43

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °

Cylinder head bolt to timing case cover

Used in step 43

M8x40		Tightening torque	19 Nm

Glow elements to cylinder head

Used in step 46

Glow element		Tightening torque	13 Nm

Camshaft carrier to cylinder head

Used in step 47

M7x35		Tightening torque	13 Nm

cardiagn.com

Intake and exhaust camshaft in camshaft support

Used in step 48

M6x31		Tightening torque	10 Nm

Bearing journal to cylinder head

Used in step 48

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm

Standard screw connection M8

Used in step 48

M8		Tightening torque	19 Nm

Standard screw connection M6

Used in step 48 60

M6			8 Nm

Chain tensioner piston to cylinder head

Used in step 48

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Camshaft sprocket to camshaft

Used in step 48

M7x17.			17 Nm

Cylinder head cover to cylinder head

Used in step 52

M6		Tightening torque.	8,5 Nm

Clamping claw facing to cylinder head cover

Used in step 53

Screw M6		Tightening torque	8 Nm

Injector to cylinder head cover

Used in step 53

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 54

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail

Used in step 54

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 56

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 57

M6		Tightening torque	11 Nm

Holder to crankcase

Used in step 58 60

M10		Tightening torque	38 Nm

Transmission to engine

Used in step 59 60

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 60

M8x20		Tightening torque	5 Nm
		Release angle	90 °

cardiagn.com

Intake plenum to exhaust-gas recirculation cooler

Used in step 60

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 60

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 60

M8x20		Tightening torque	19 Nm

Air conditioning compressor in component carrier

Used in step 60

M10		Tightening torque	38 Nm

Alternator to component carrier

Used in step 60

M10x75 / M10x125		Tightening torque	38 Nm

Deflecting element to belt tensioner

Used in step 60

M8		Tightening torque	38 Nm

Exhaust turbocharger to exhaust manifold

Used in step 60

V-band clamp		Tightening torque	19 Nm

Holder to exhaust turbocharger and crankcase

Used in step 60

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger

Used in step 60

M6x12		Tightening torque	8 Nm

Oil return line to crankcase

Used in step 60

M6x12		Tightening torque	8 Nm

Oil feed line on cylinder head

Used in step 60

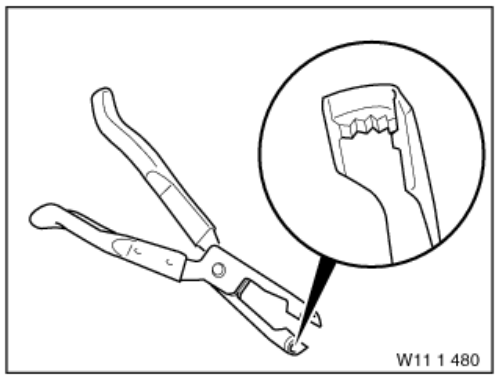
Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe — Used in step 64

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common — Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

2 459 012 Holder

Common — Used in step 8 59

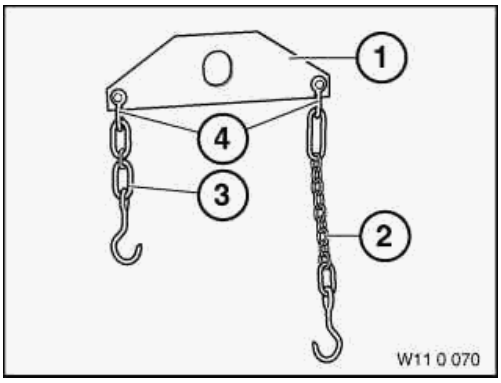
Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 579 (11 0 070) Lifting gear

Used in step 8 9 58 59

cardiagn.com



Common

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

cardiagn.com

2 455 010 Engine support

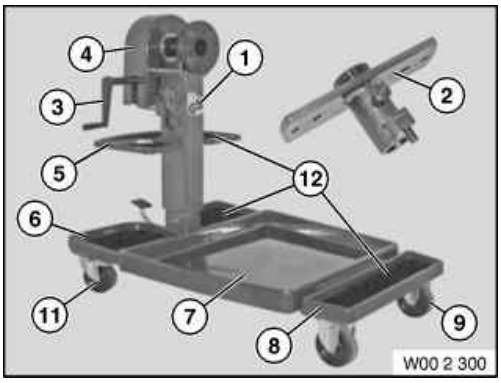
Common Used in step 9 58

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

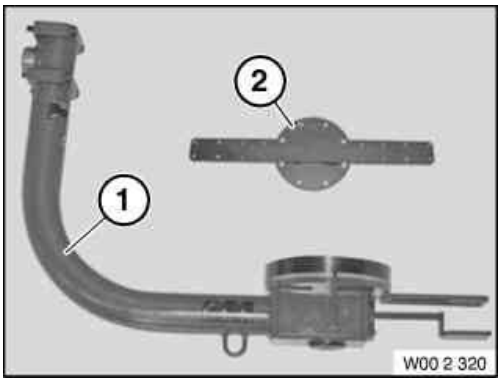
Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common

Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

0 495 910 (37 1 152) Socket wrench

Common

Used in step 11 14 54 56

Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

cardiagn.com

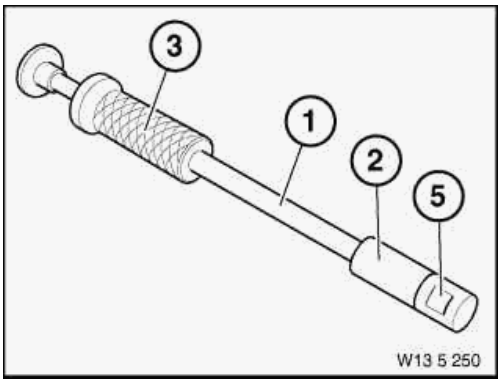
2 413 106 Fastener

Common

Used in step 11 56

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common

Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush

Common Used in step 13

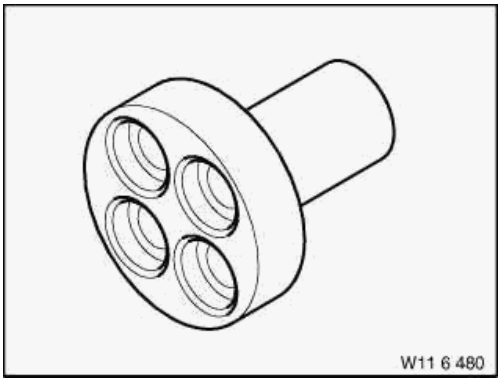
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common Used in step 13

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common Used in step 16 48 51

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

cardiagn.com

2 288 380 Locating stud

Common Used in step 16 48 49 51

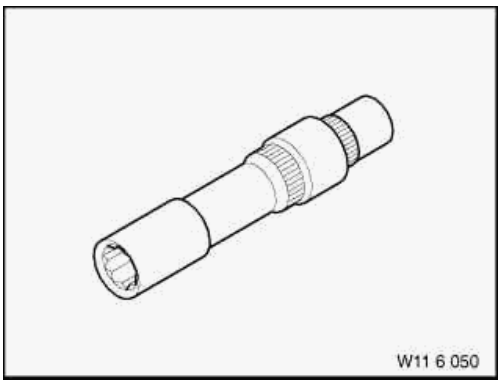
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 112 (11 8 760) Gauge

Common Used in step 16 48 50 51

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common Used in step 21 46

Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

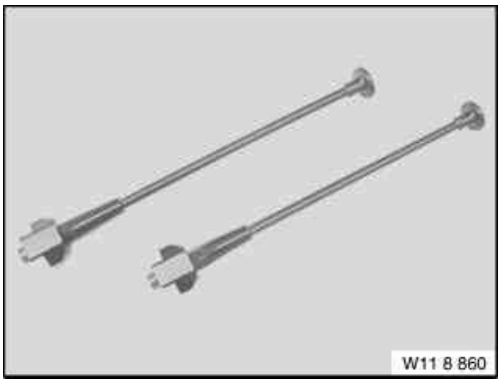
Common Used in step 22 23 48

Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 496 144 (11 8 860) Assembly tool



Common Used in step 30 37

Usage	For installing piston with connecting rod in crankcase.
Included in the tool or work	
Storage location	A23
Replaced by

SI-Number	

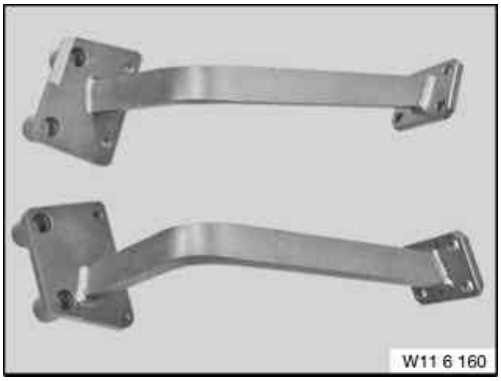
0 496 680 (11 6 160) Support



Common	Used in step 9
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

Overview Technical Data

Side clearance of piston rings

Used in step 32

Clean all components before measuring the side clearance.

Side clearance of the plain rectangular compression ring	0,17 mm ... 0,27 mm
Side clearance of the taper faced piston ring	0,30 mm ... 0,50 mm
Side clearance of the oil scraper ring with spiral expander	0,2 mm ... 0,4 mm

Piston diameter

Used in step 33

Measure the piston diameter at distance (A) from the lower end of the piston skirt.

Distance (A) to the lower end of the piston skirt	17 mm
Nominal dimension of piston diameter	83,936 mm ... 83,954 mm

Cylinder bore

Used in step 34

cardiagn.com

Diameter of cylinder bore	84,00 mm ... 84,018 mm
Permitted irregularity of the cylinder bore	0,01 mm
Permitted conicity of the cylinder bore	0,01 mm

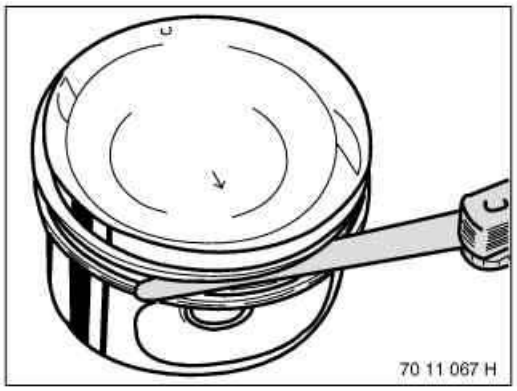
11 25 671 Replacing piston rings on all pistons (B37C)

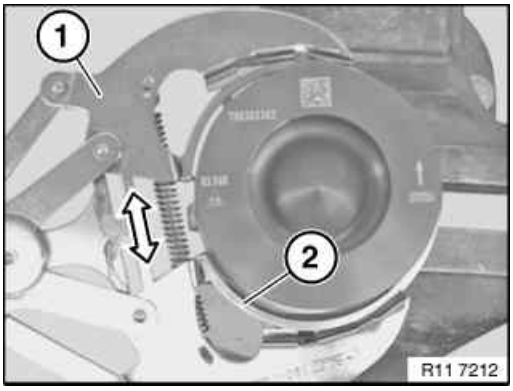
Necessary preliminary tasks:

- Remove pistons.

Removal:

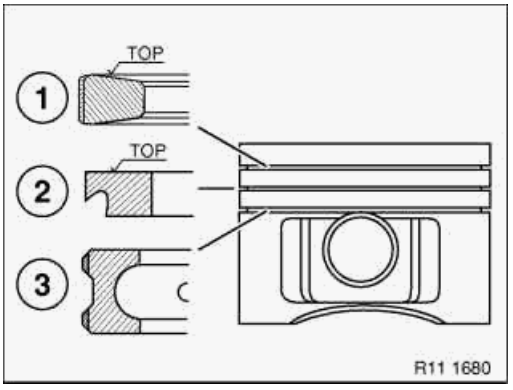


If necessary, measure side clearance.
Refer to Technical Data.



Note:
It might not be possible to find the identification on used piston rings.
Put aside piston rings in correct sequence and installation position.

Remove all piston rings (2) with piston ring pliers (1).



Note:

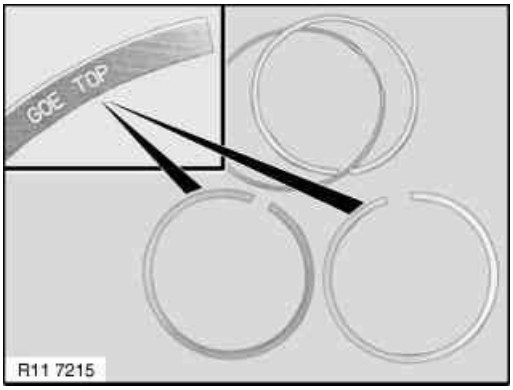
1. Plain rectangular compression ring
2. Piston ring
3. Oil scraper ring with spiral expander.

cardiagn.com

If necessary, measure end clearance.

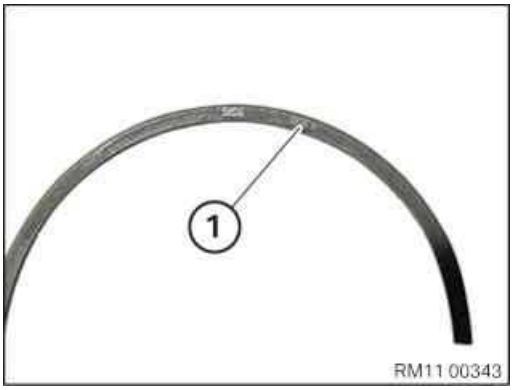
Refer to Technical Data.

Installation:



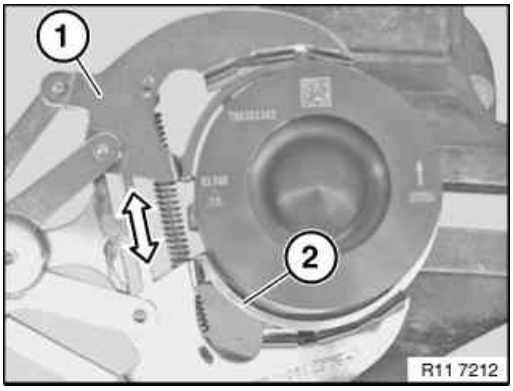
Installation note:
Marking “TOP” must point towards piston crown.

The oil scraper ring has no identification marking and can be installed in any position.



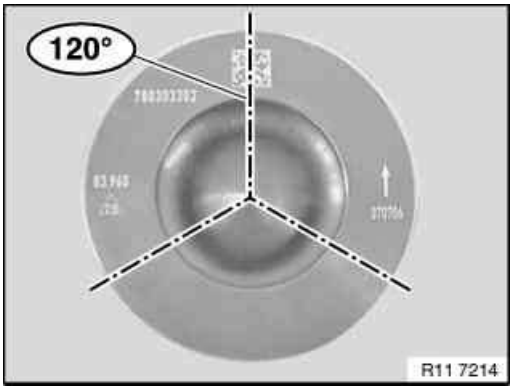
Installation note:
If there is no “TOP” marking, the “GOE” marking (1) must point to the piston crown.

The oil scraper ring has no identification marking and can be installed in any position.



Using piston ring pliers (1), install all piston rings (2) in the correct installation position.

cardiagn.com



Note:
Piston rings must be arranged with a 120° offset.

Align contact points on piston rings (offset at approx. 120°, but do not arrange over gudgeon pin boss).

Lightly coat pistons and piston rings with oil.

Required follow-up work:

- Install piston.

cardiagn.com

11 27 020 Removing and installing/replacing counterbalance shaft (B37C)

Special tools required:

- 2 288 942
- 11 5 370
- 2 288 943

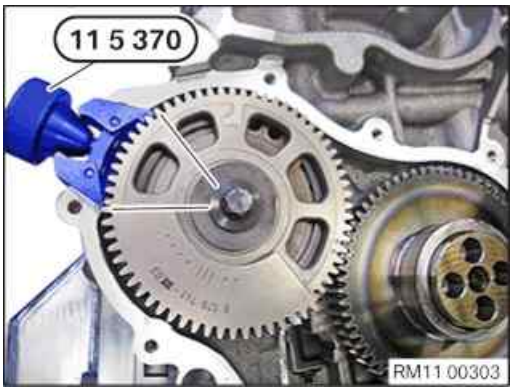
Necessary preliminary tasks:

- Remove engine with gearbox.
- Remove transmission.
- Mount engine on assembly stand.
- Remove cylinder head.
- Remove flywheel.
- Remove oil sump.
- Remove rear timing case cover.
- Remove vibration damper.
- Remove belt tensioner.
- Remove front, lower timing case cover.

Removal:

Use special tool 2 288 942 to fix counterbalance shaft in TDC position of cylinder 1.

Screw special tool 2 288 942 to crankcase (1).



Important!

Ring gear of the counterbalance shaft gear has two sections (fixed gearwheel and free gearwheel).

Ring gear is preloaded and must be blocked before removal.

If the gear must be installed again, the ring gear must remain blocked with special tool 11 5 370 until installation.

If a new gear is being installed, the ring gear must be blocked using the factory fixation until installation.

Block the ring gear of the gear in the position shown using special tool 11 5 370 .

cardiagn.com

Note:
When counterbalance shaft is locked, marks on crankshaft and gear of counterbalance shaft must align.

Release screw (1).

Loosen screw connection (1) on special tool 2 288 942 .

Remove special tool 2 288 942 .

Screw special tool 2 288 943 into the counterbalance shaft as far as the limit position.

Important!

If the gear must be installed again, the ring gear must remain blocked with special tool 11 5 370 until installation.

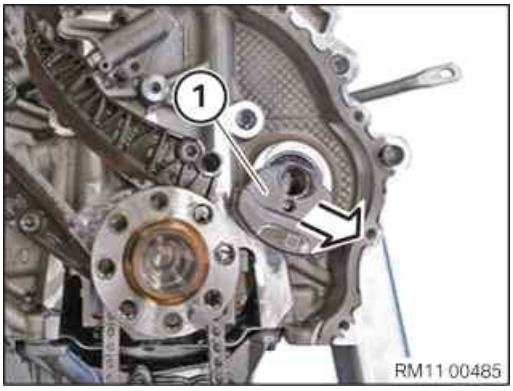
If a new gear is being installed, the ring gear must be blocked using the factory fixation until installation.

cardiagn.com

Separate the counterbalance shaft from gear (1) with hammer blows on special tool 2 288 943 .

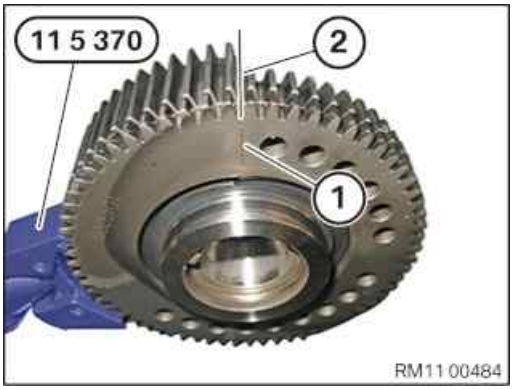
Remove special tool 2 288 943 .

Note:
If necessary, secure the counterbalance shaft against falling.



Remove counterbalance shaft (1) in direction of arrow.*Note:*
If necessary, secure gear of the counterbalance shaft against falling.

Remove gear of the counterbalance shaft in direction of arrow.*Note:*
Figure B38.



Important!

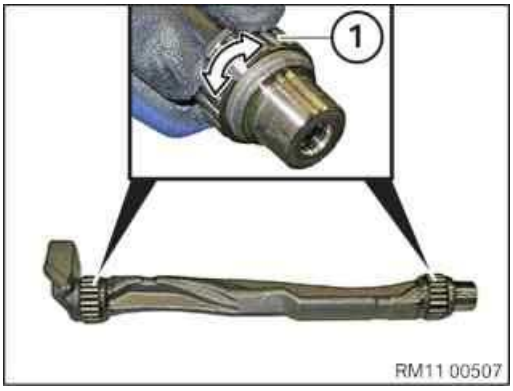
If the gear must be installed again, the ring gear must remain blocked with special tool 11 5 370 until installation.

Installation:

cardiagn.com

Important!

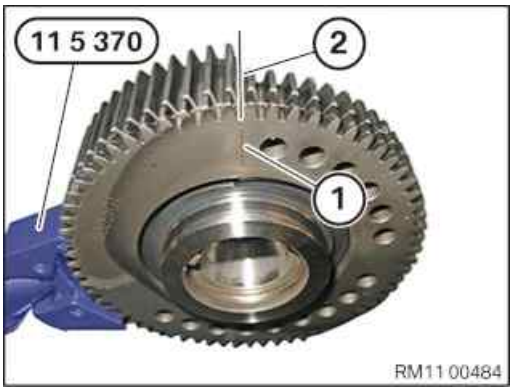
If a new gear is being installed, the ring gear must be blocked using the factory fixation until installation.



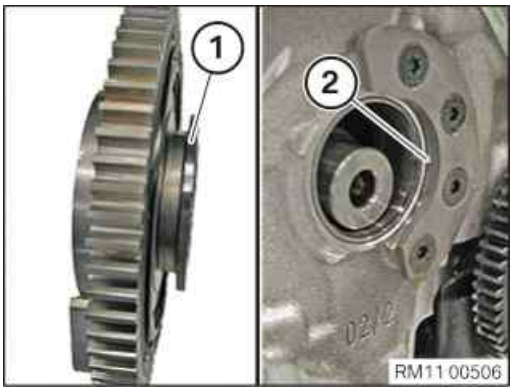
Check needle bearing (1) of the counterbalance shaft.

If necessary, pull needle bearing (1) off the counterbalance shaft and replace it.

Note:
Picture shows B38



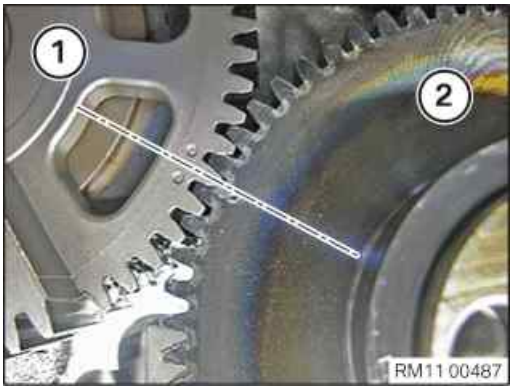
Note:
With correct preload, the mark (1) on the free gearwheel and the section (2) of the fixed gearwheel are aligned.



Note:
Gear is guided over guide ring (1) in crankcase (2).

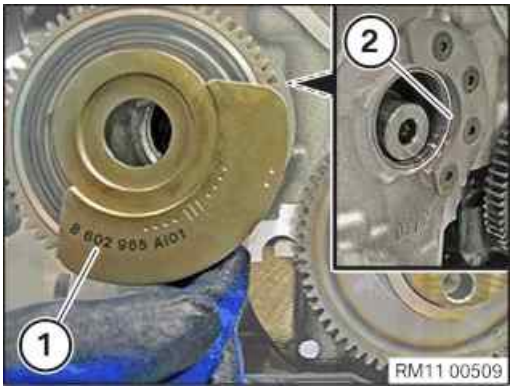
Figure B38.

cardiagn.com



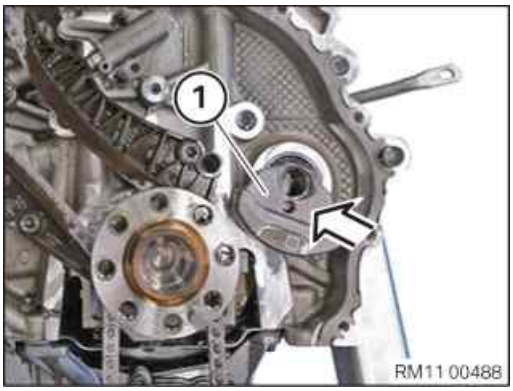
Important!

The marks on the gear (1) of the counterbalance shaft and the crankshaft (2) must align.

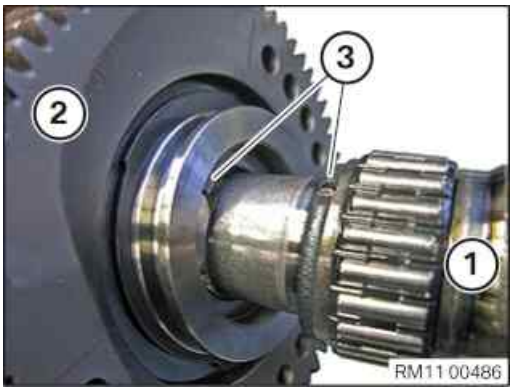


Insert gear (1) of the counterbalance shaft into the guide of the crankcase.*Note:*
Secure counterbalance shaft gear (1) against falling if necessary.

Figure B38.



Install counterbalance shaft (1) in the crankcase in direction of arrow.



Important!

Counterbalance shaft (1) can only be installed in the gear (2) in one position.

Pay attention to encoding (3).

Note:
For purposes of clarity, picture shows component removed.

cardiagn.com

Bring counterbalance shaft (1) into contact in gear (2).

Note:
Parts: Replace screw (1).

Insert screw (1) and tighten until it makes contact.

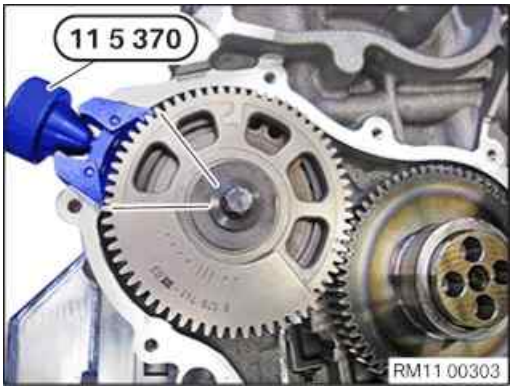
Use special tool 2 288 942 to fix counterbalance shaft in TDC position of cylinder 1.

Screw special tool 2 288 942 to crankcase (1).

Tighten screw (1).

Tightening torque: 11 27 1AZ.

cardiagn.com



Remove special tool 11 5 370 .

With new gear:

Remove factory retainer.

Loosen screw connection (1) on special tool 2 288 942 .

Remove special tool 2 288 942 .

Required follow-up work:

- Install front lower timing case cover.
- Install belt tensioner.
- Install vibration damper.
- Install rear timing case cover.
- Install oil sump.
- Install flywheel.
- Install cylinder head.
- Remove engine from assembly stand and place on table lift.
- Attach transmission.
- Install engine with transmission.

cardiagn.com

This documentation refers to special tools that were not yet available when going to press.

11 27 020 Removing and installing/replacing the counterbalance shaft

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

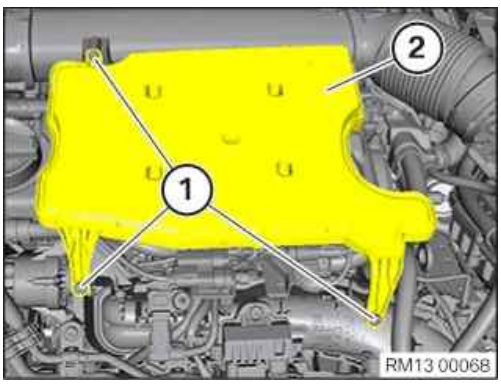
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

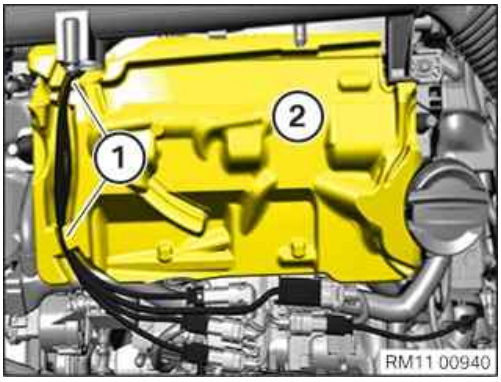
3 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

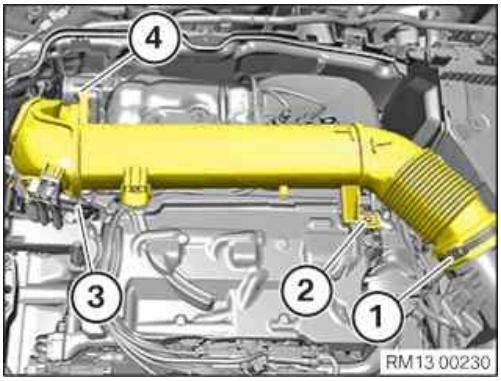
cardiagn.com

4 – Remove the acoustic cover for the injectors

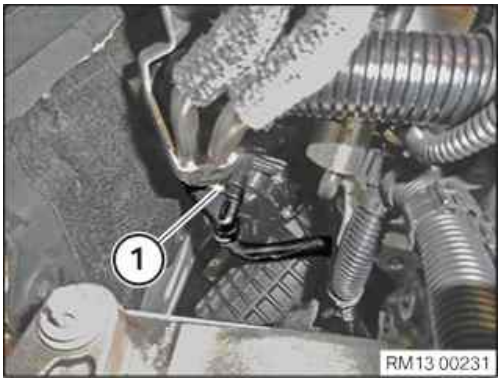


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

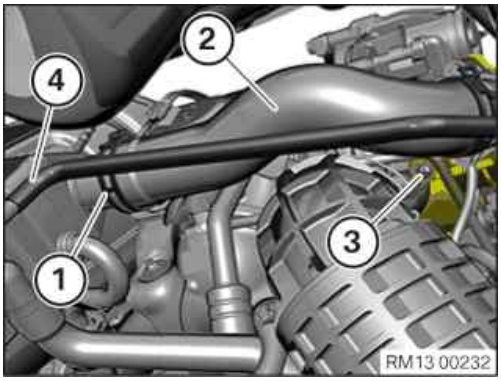
5 – Removing clean air pipe



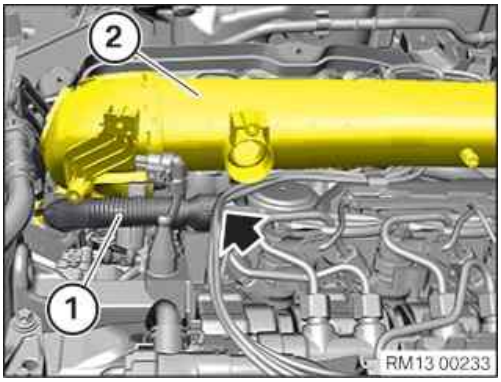
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

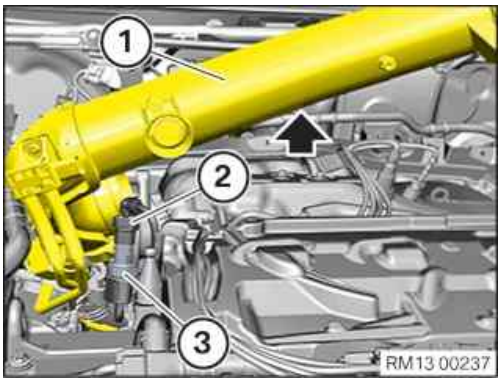


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

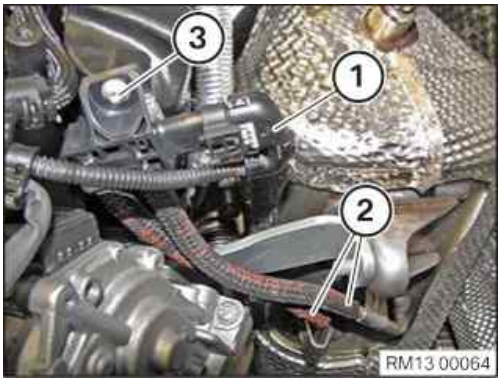
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

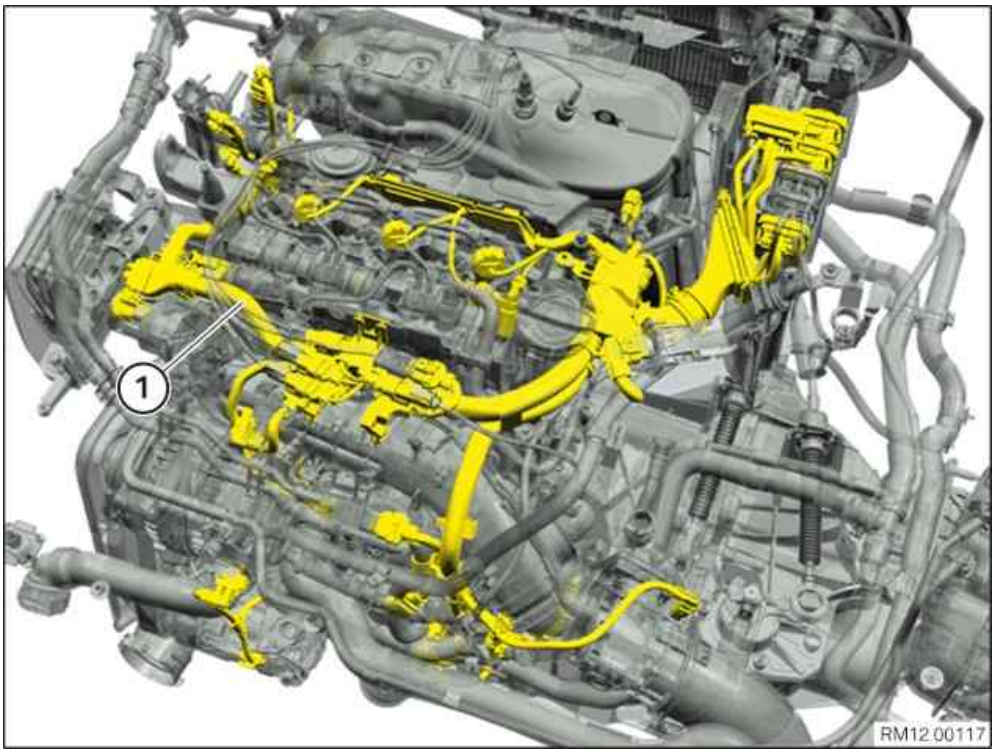


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

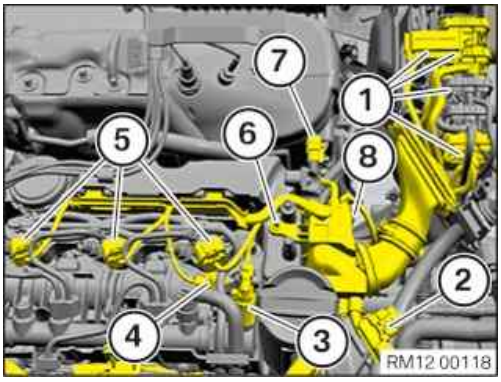
7 – Removing assemblies (on lifting table)

cardiagn.com

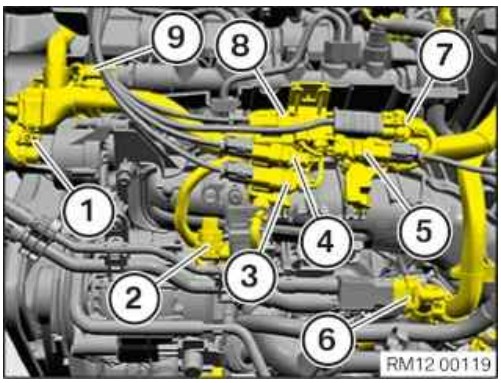
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



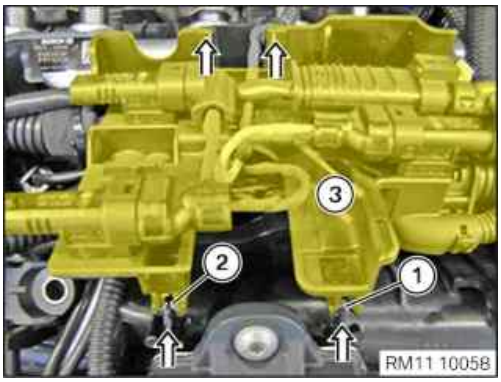
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



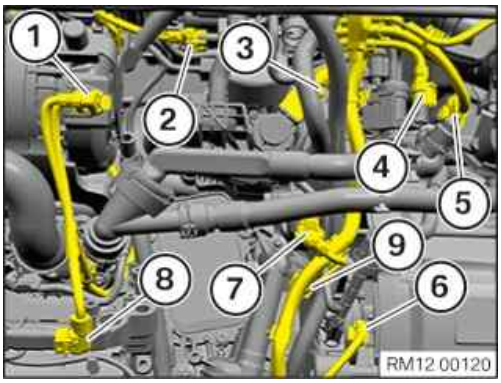
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

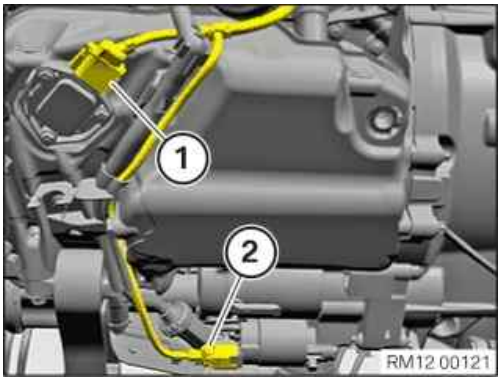
cardiagn.com



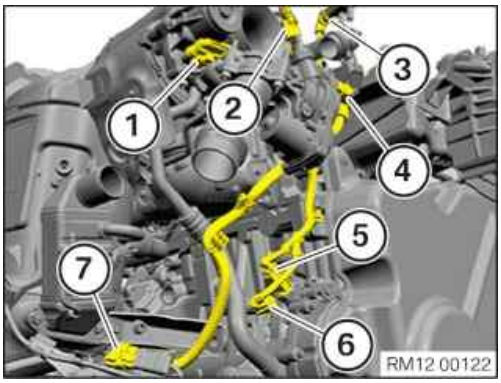
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



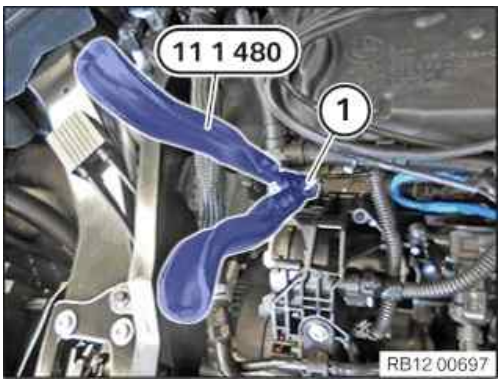
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

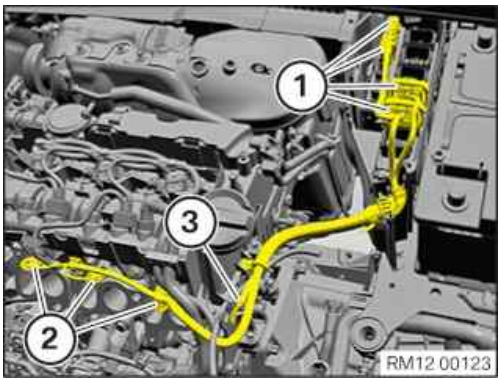


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

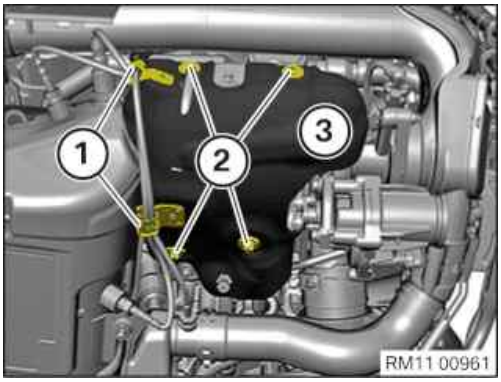
▶ Removing heat shield from top exhaust turbocharger

WARNING

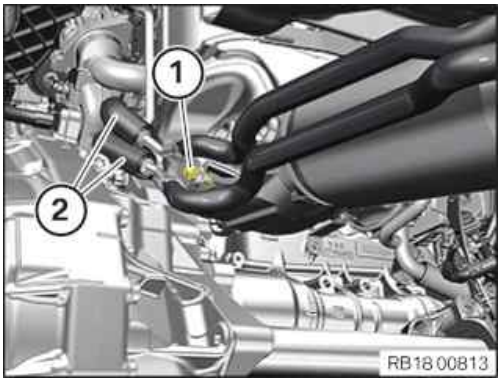
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



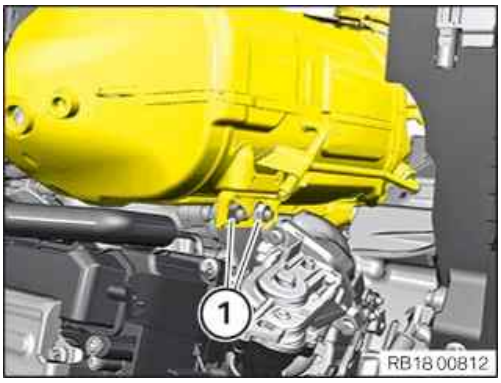
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



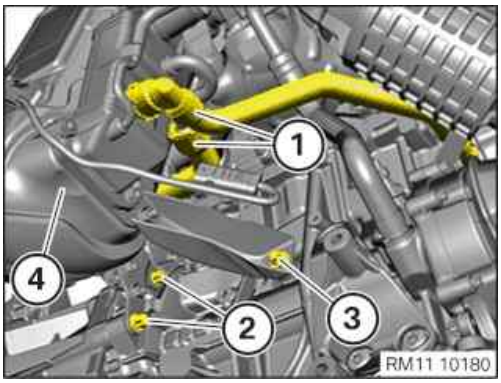
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

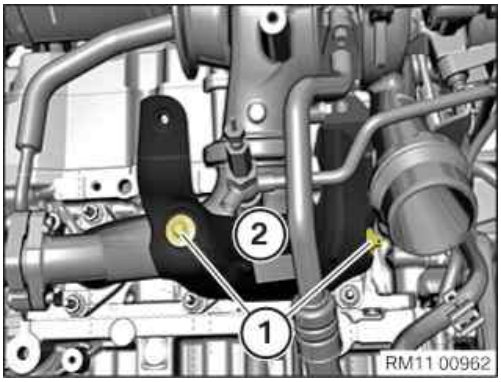
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

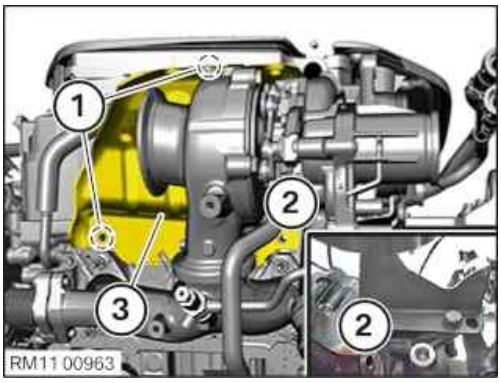
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



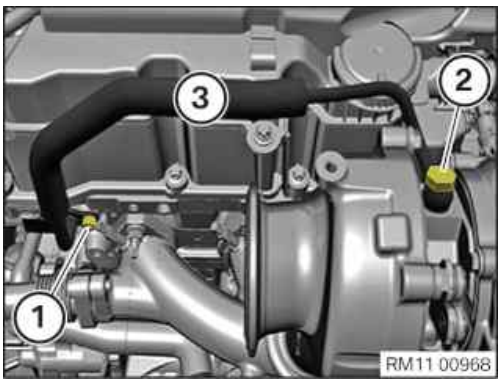
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

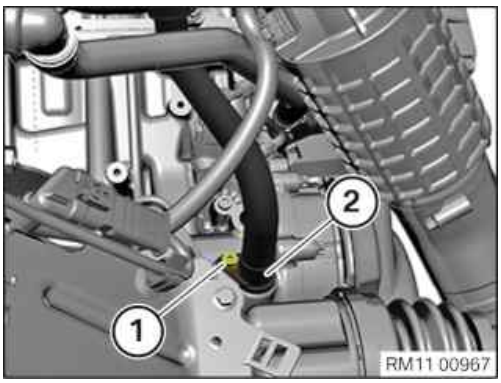
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

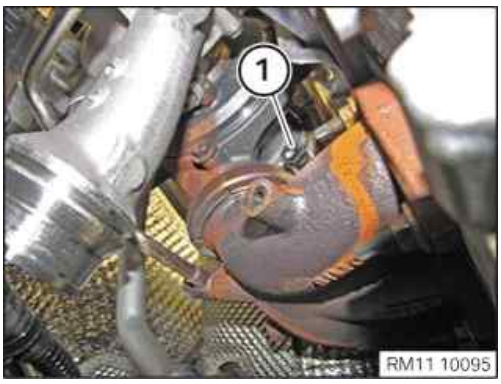
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

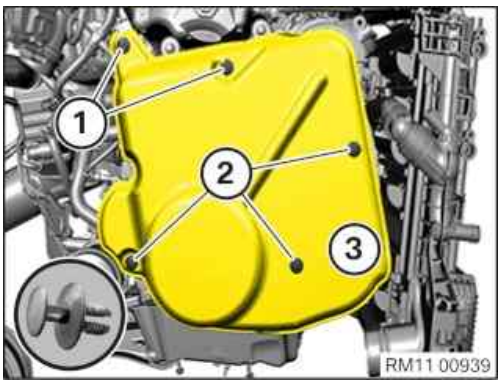
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

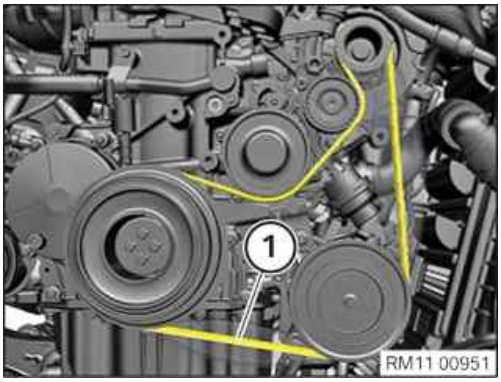
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

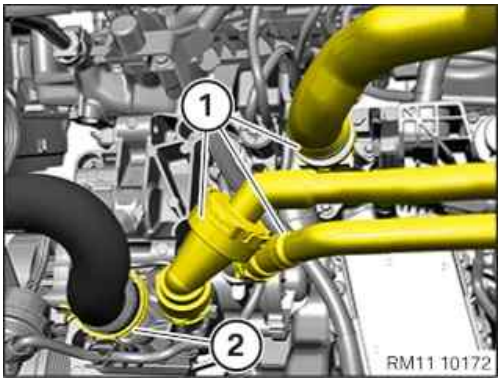
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

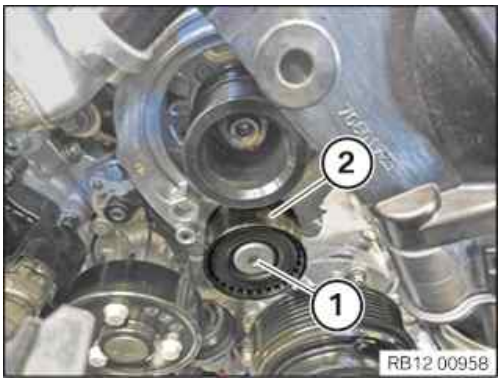


- Guide out the drive belt for the alternator (1) and remove it.

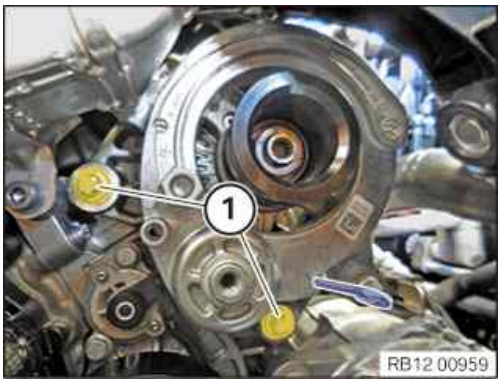


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

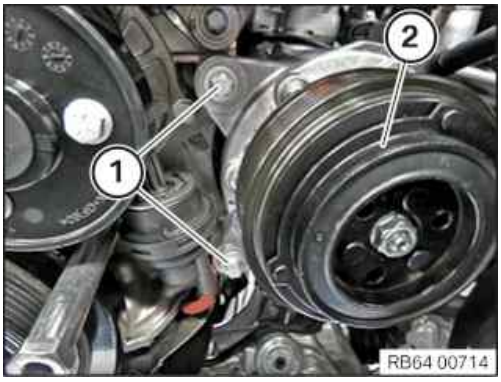
cardiagn.com



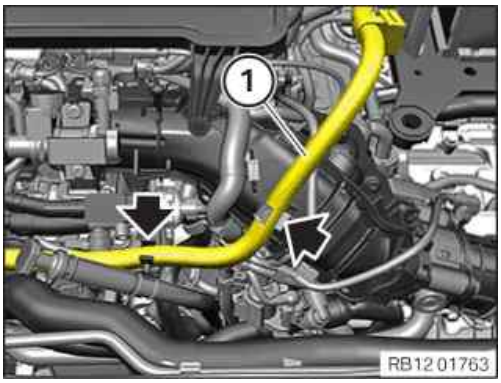
- Loosen screw (1).
- Remove the deflecting element (2).



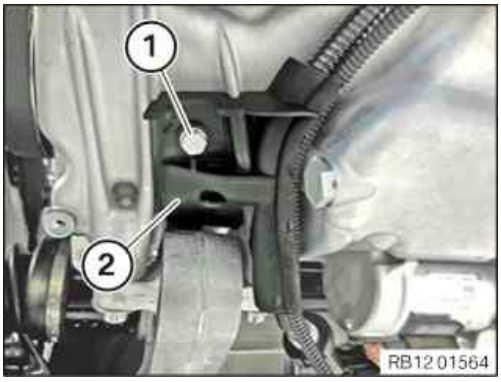
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

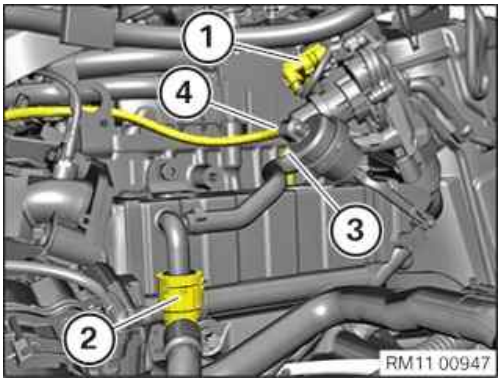
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

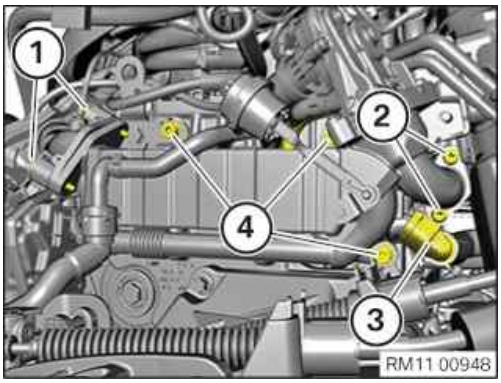
- Perform all work only on components that have cooled down.



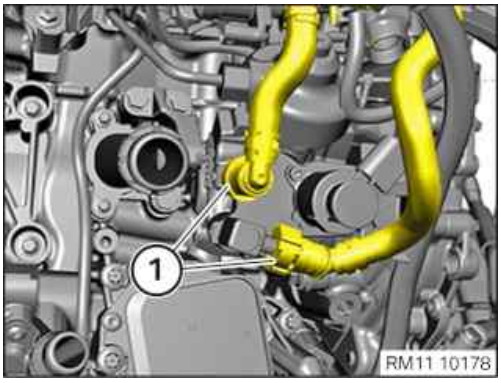
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

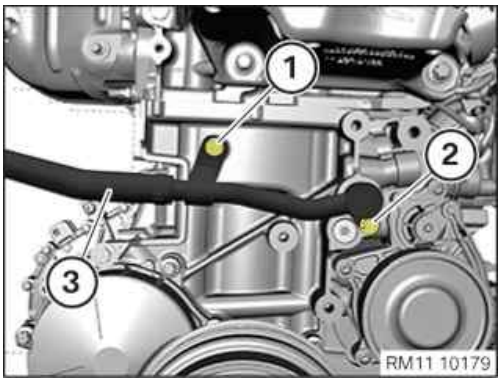


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

8 – Detach the engine from the manual gearbox

Prerequisite

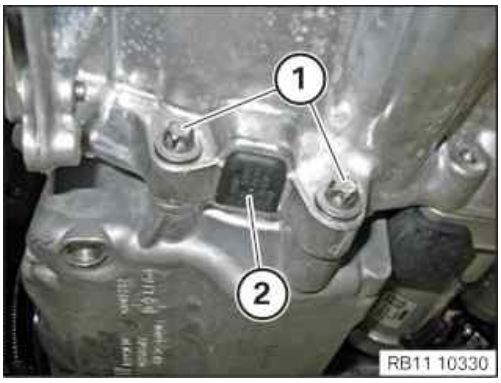
Engine has been removed.

CAUTION

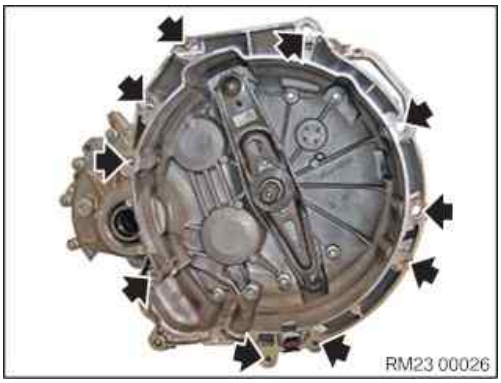
Heavy component.

Heavy components can lead to injury or damage.

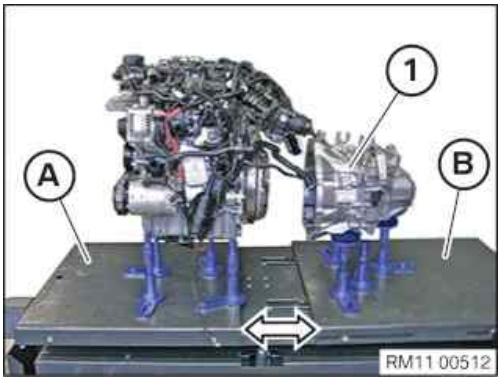
- Remove and install heavy components with the aid of another person/other persons.



- Loosen screws (1).
- Remove protective cap (2).



- Remove screws (arrows).



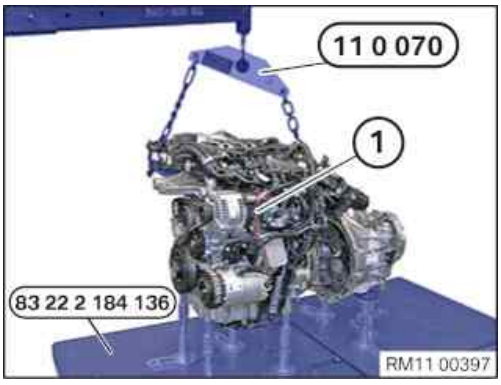
- Slide the table top (B) in the direction of the arrow and slide the manual gearbox (1) to the side.

cardiagn.com

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



- Attach engine lifter to special tool **0 490 579 (11 0 070)** and lift engine (1) off lifting table.

9 – Mount engine on assembly stand

CAUTION

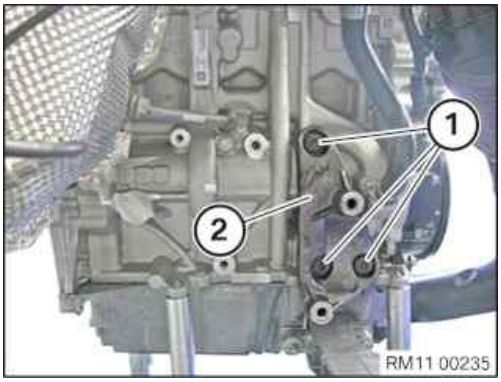
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

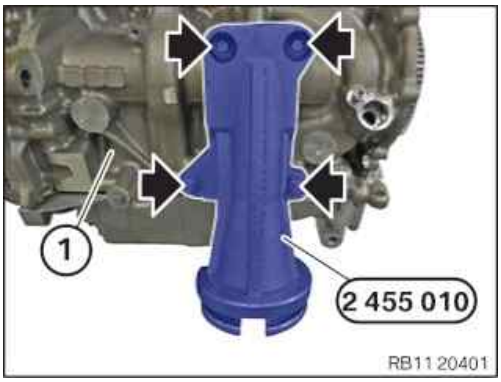
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Loosen screws (1).
- Guide out and remove holder (2).

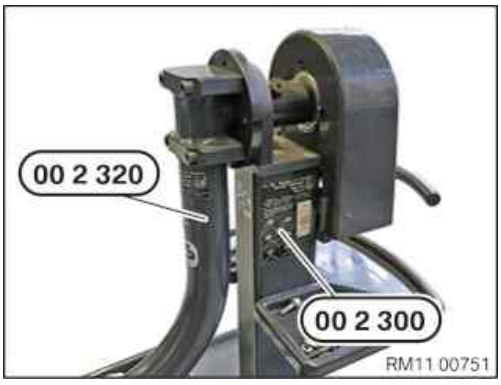
cardiagn.com



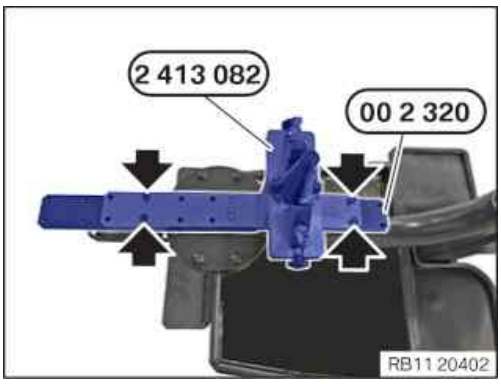
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.

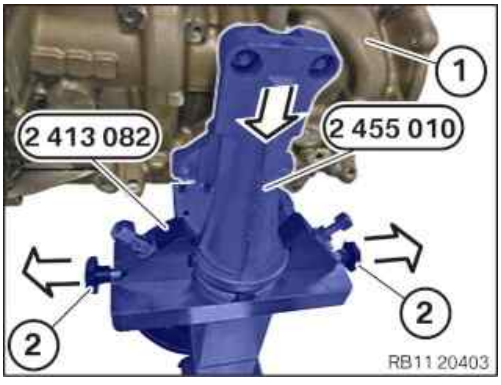


- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

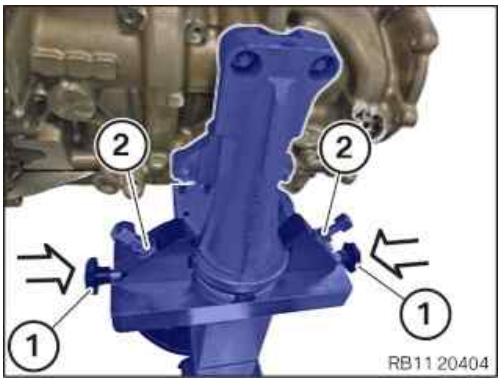
M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.



- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .

cardiagn.com



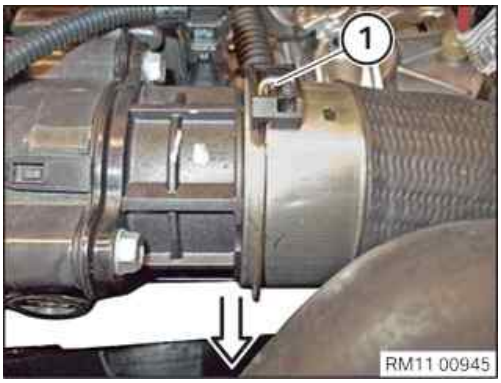
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

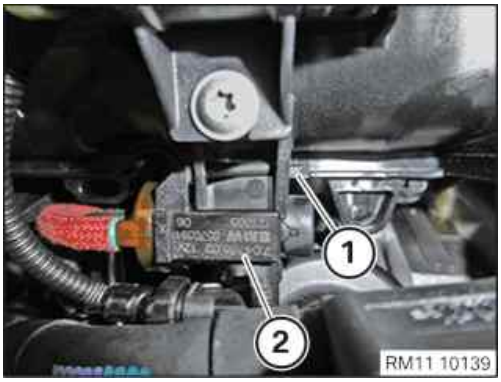
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).

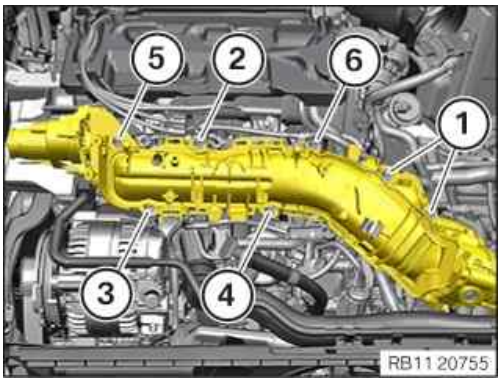


- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

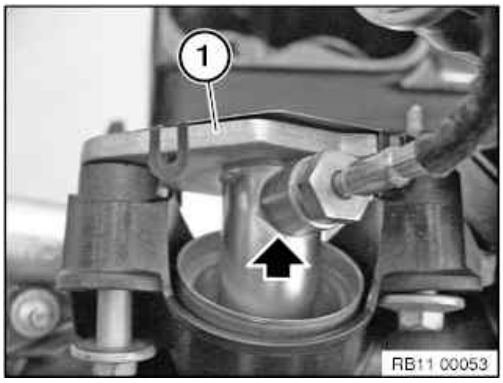


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.

cardiagn.com



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

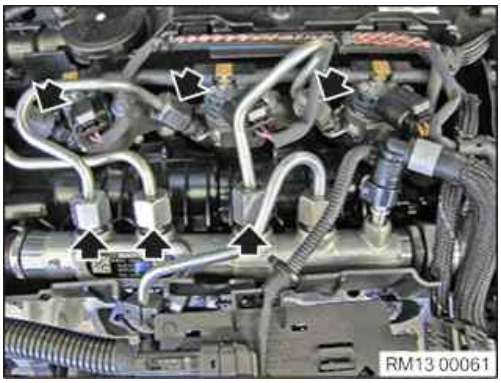
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

RISK OF DAMAGE

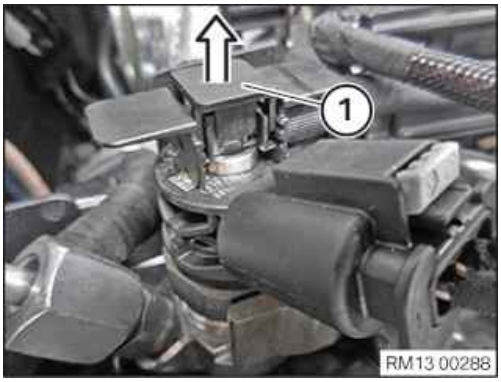
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

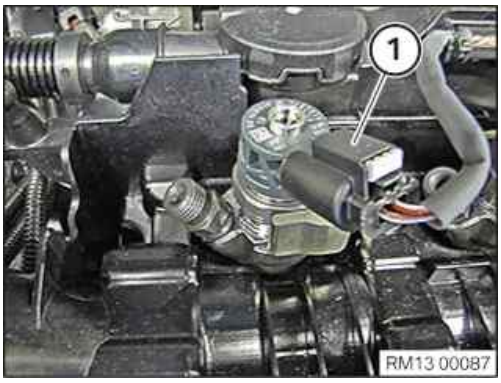
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

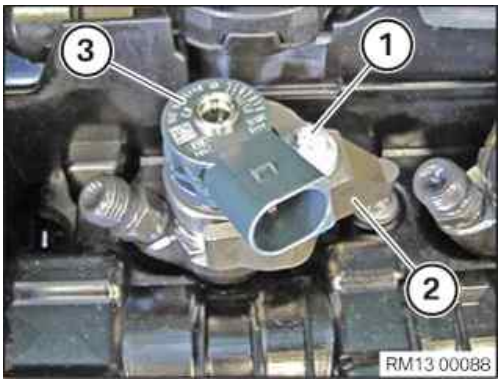
TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

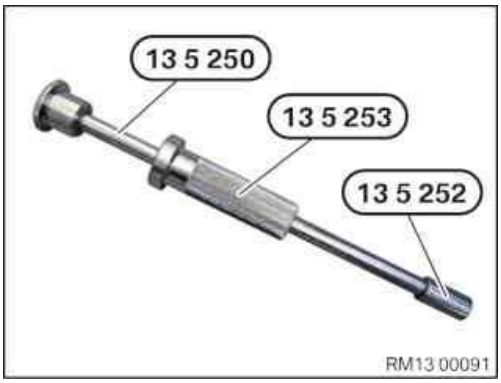
▶ **Loosen stuck injectors**

RISK OF DAMAGE

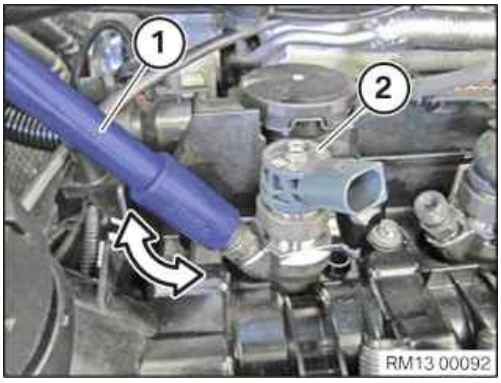
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

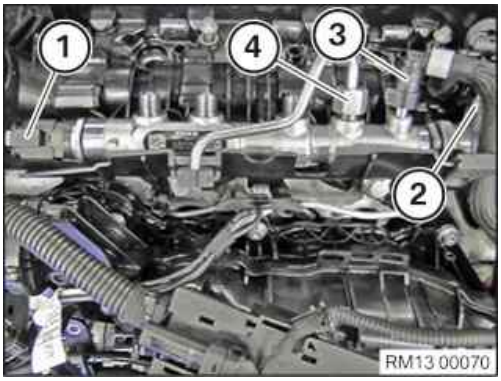
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

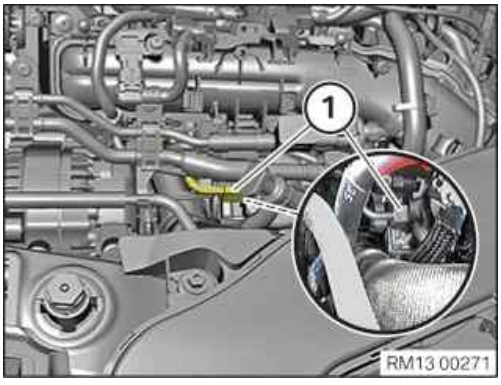
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

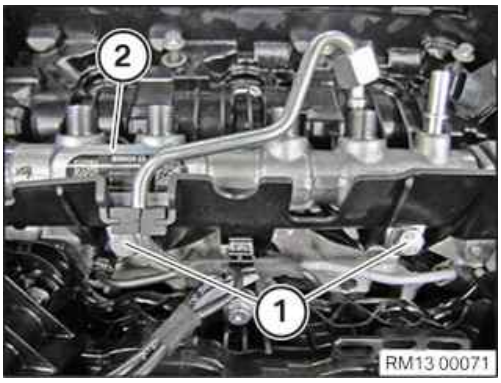


- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

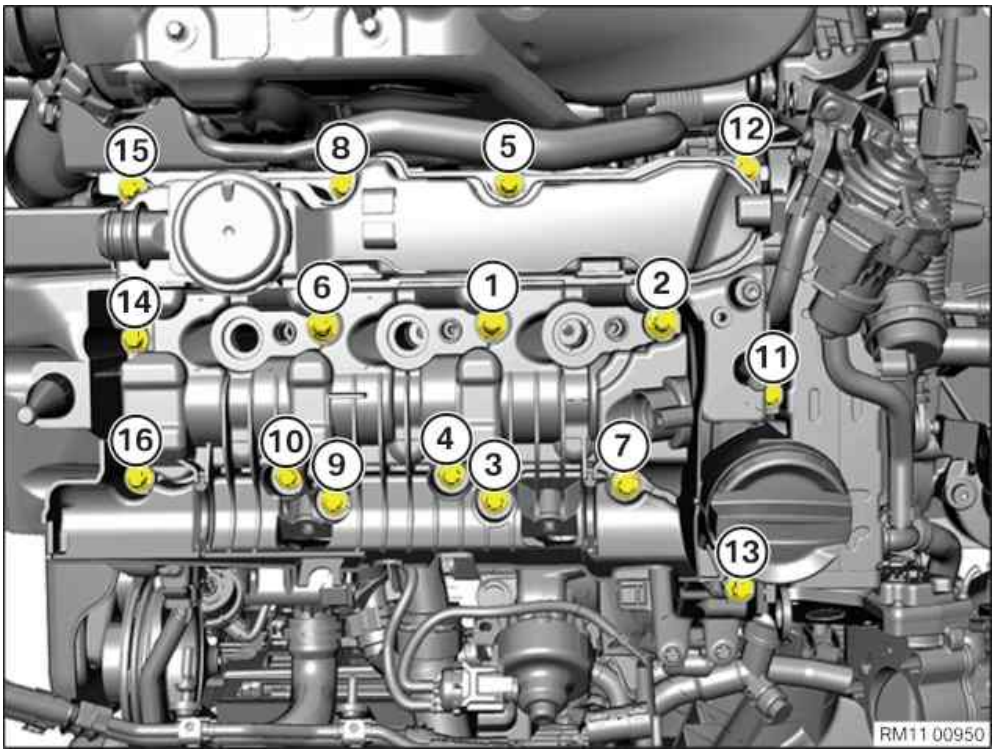
cardiagn.com



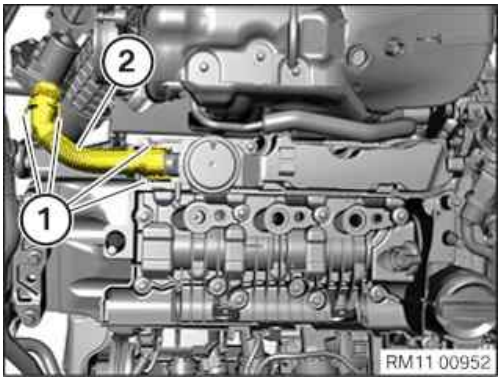
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover

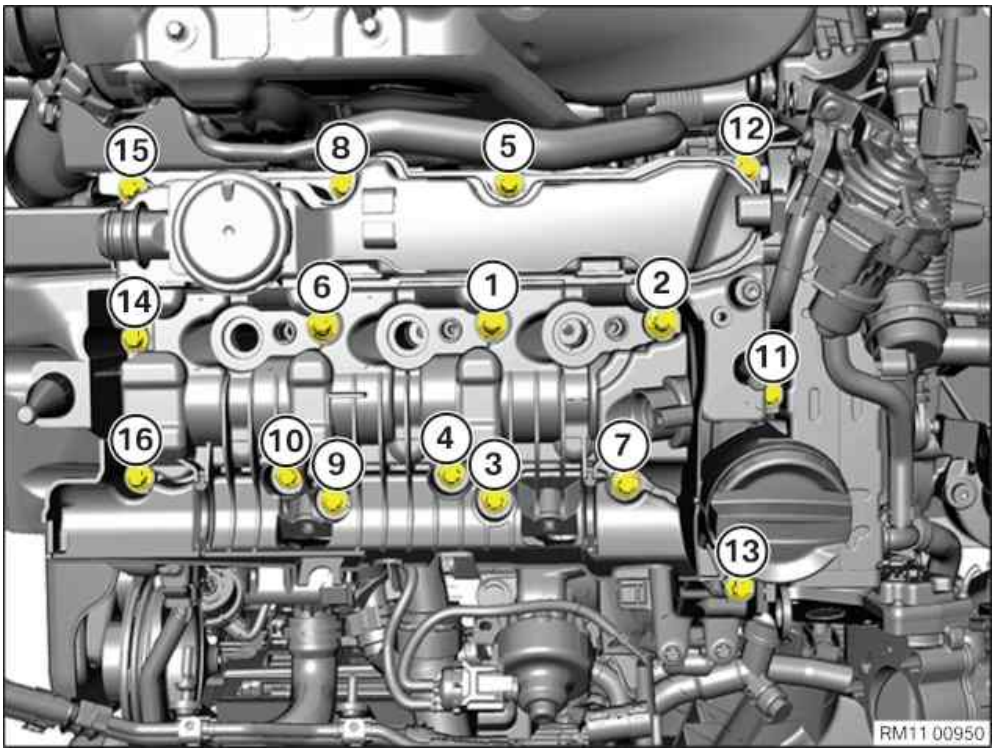


1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

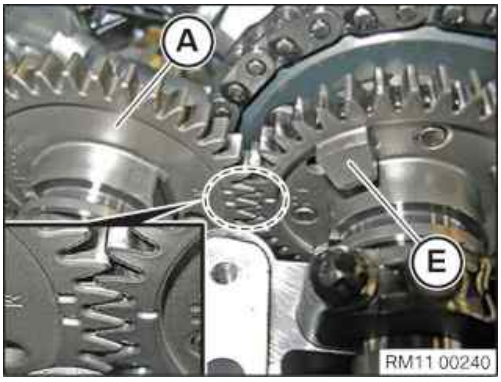
- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

cardiagn.com

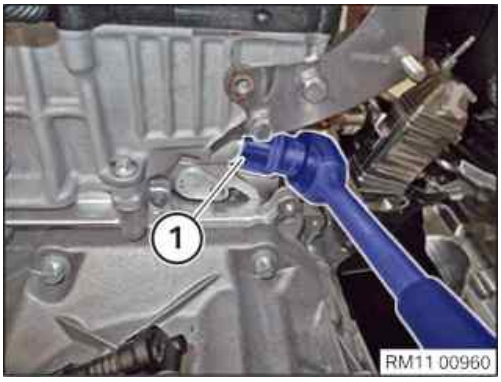
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

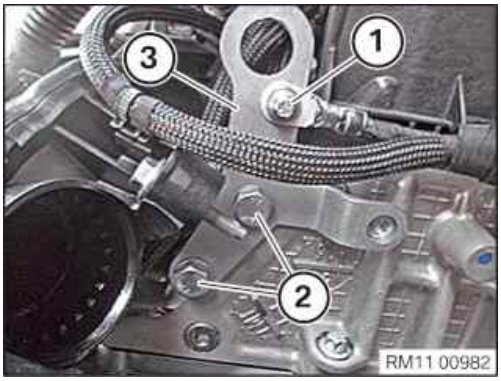


TECHNICAL INFORMATION

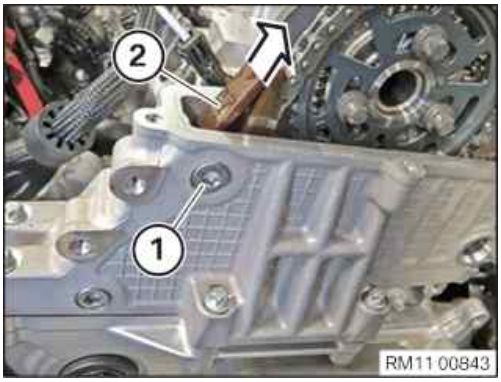
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

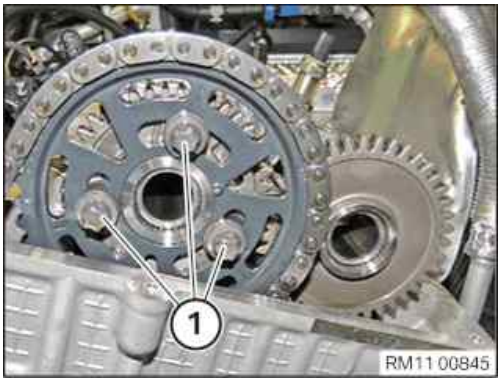


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

cardiagn.com

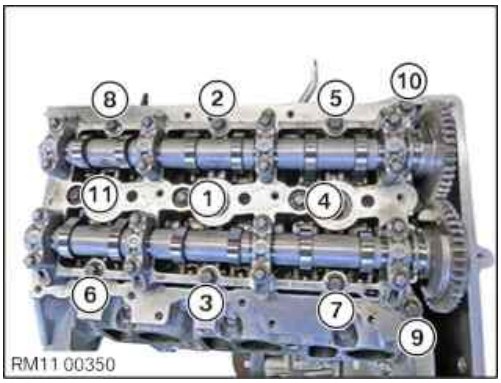
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

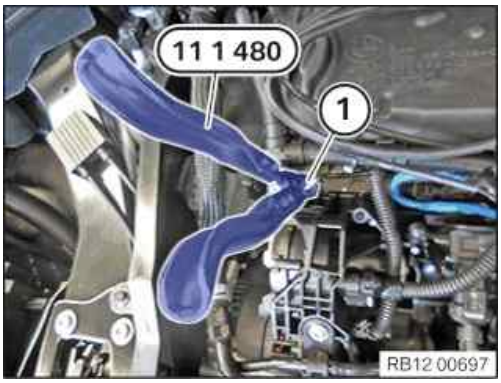
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

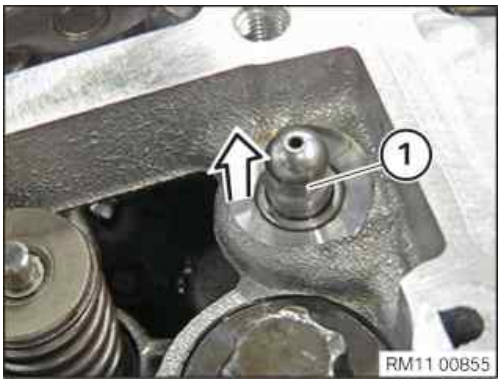
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

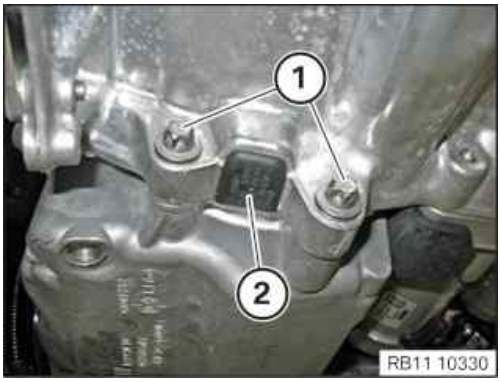
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

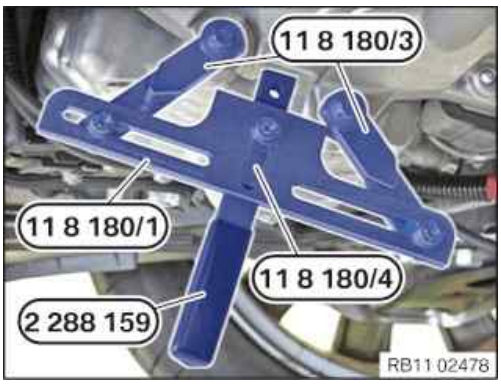


- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

24 – Removing the vibration damper



- Release the transmission bolts (1).
- Remove the protective cap (2).



- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

cardiagn.com

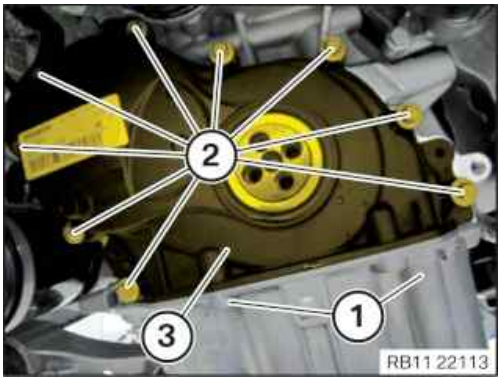
- Loosen screws in the area (1).
- Remove the vibration damper (2).

25 – Remove gear case cover



- Loosen screws (1).
- Loosen screws (2).
- Guide out and remove timing case cover (3).

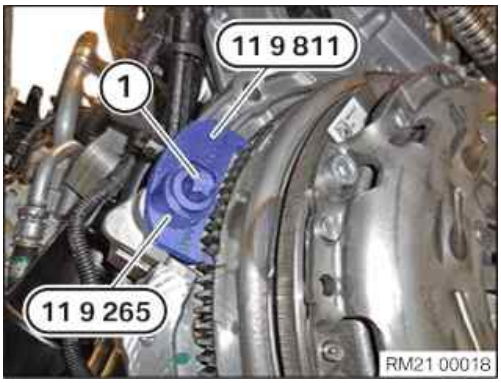
26 – Remove clutch

CAUTION

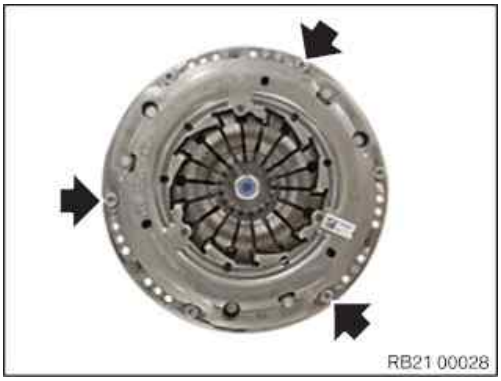
Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

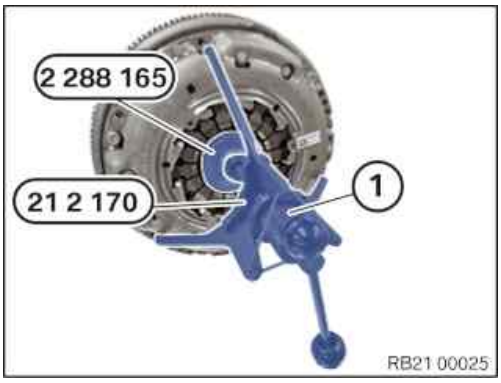


- Block flywheel with transmission bolt (1) and special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.

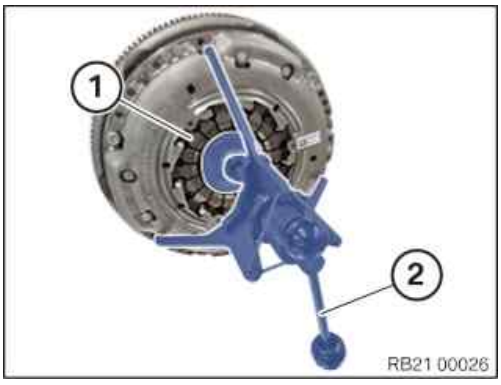


- Detach 3 screws to attach special tool **0 493 839 (21 2 170)** and **2 288 165**.

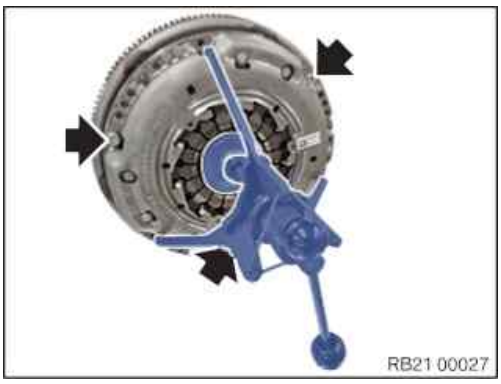
cardiagn.com



- Position special tool **0 493 839 (21 2 170)** and **2 288 165** and tighten on the knurled screw (1).



- Screw in the spindle (2) until the diaphragm spring (1) is preloaded and the clutch disc is free of tension.



- Loosen the remaining 3 screws and remove the clutch with clutch disc from the flywheel.

27 – Removing flywheel

CAUTION

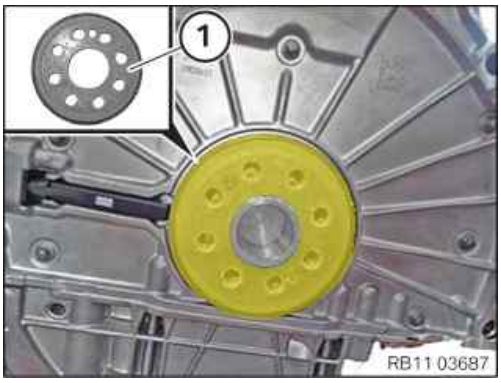
Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

- Secure the flywheel with a transmission bolt (1) and with special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)**.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Remove flywheel.

cardiagn.com



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

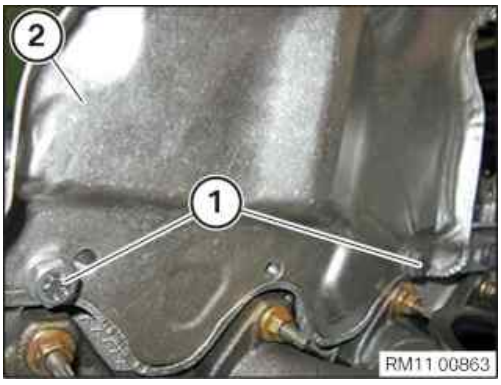
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove the increment wheel (1) from the crankshaft and lay it down correctly.

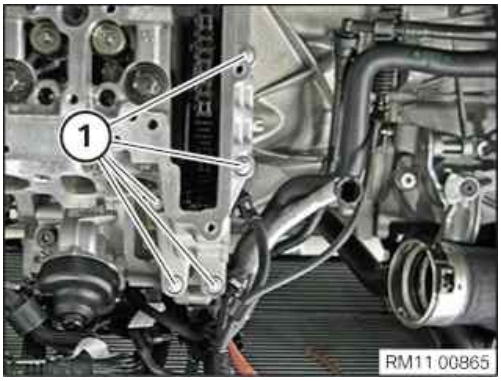
28 – Remove rear timing case cover

Prerequisite

Transmission is removed.



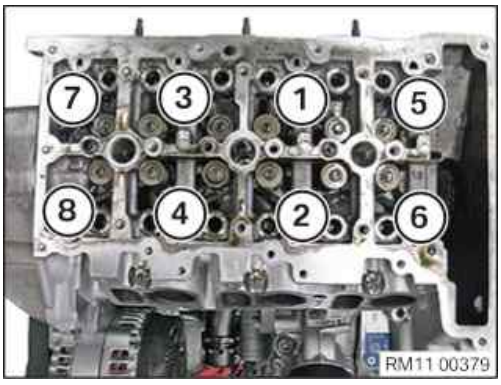
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



TECHNICAL INFORMATION

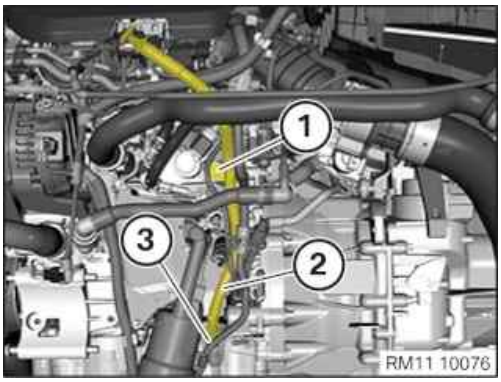
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

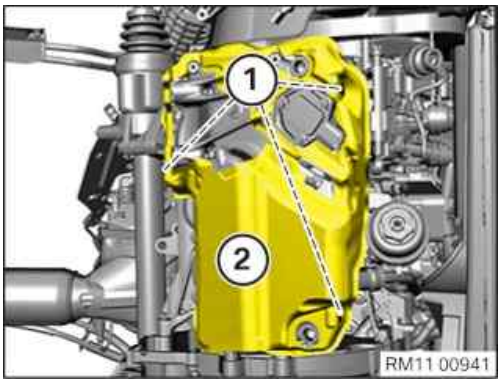


- Loosen the cylinder head bolts in the sequence from (8) to (1).

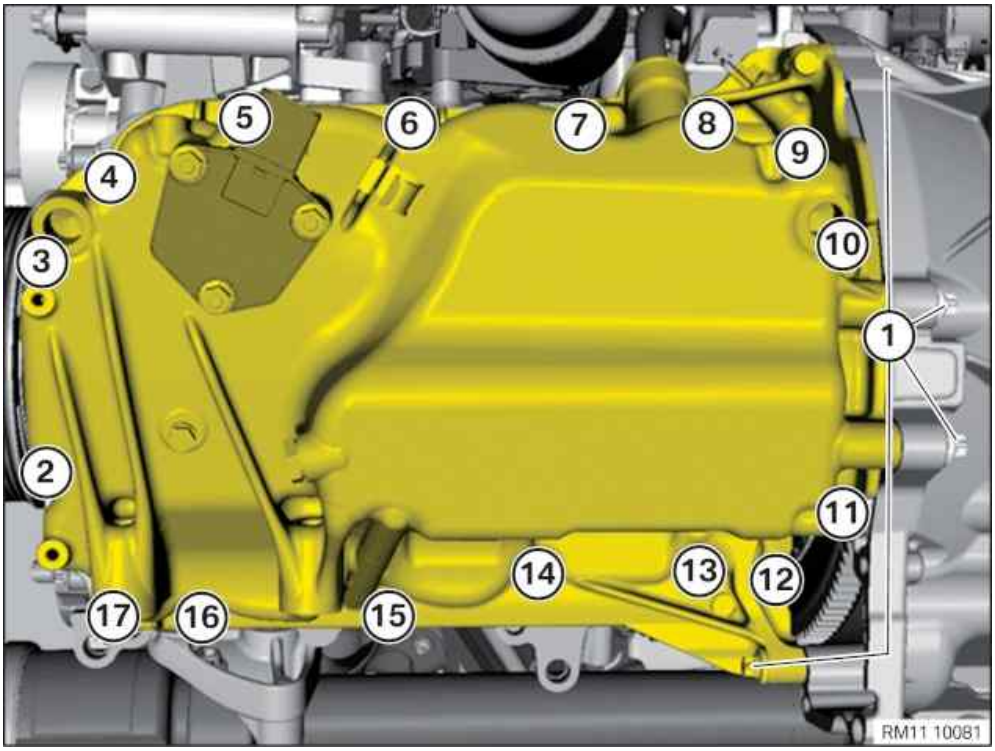
cardiagn.com



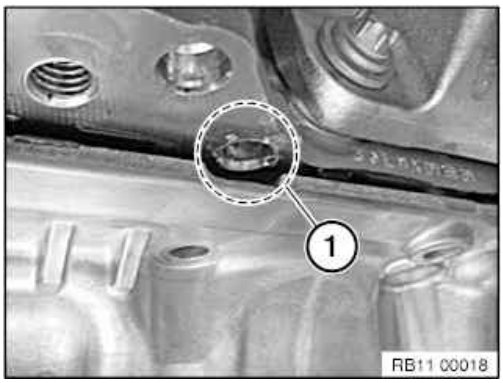
- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- If required, remove sealing ring (3) from oil sump.



- Remove the expanding rivet (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

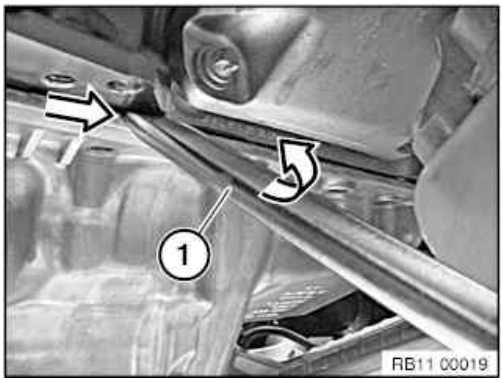


- Tighten the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



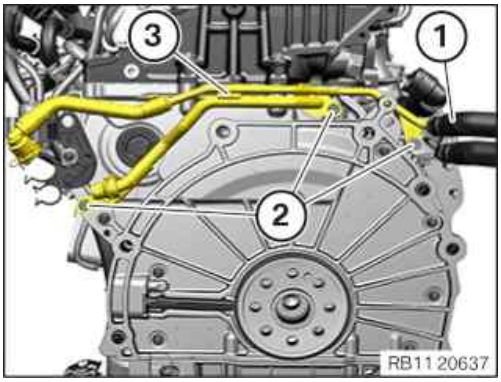
- Release oil sump only in area (1).

cardiagn.com

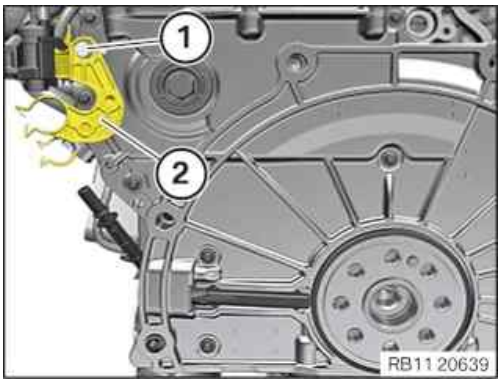


- Release the oil sump using a suitable mounting lever (1) carefully at the position intended for that.
- If required, secure the oil sump against falling.

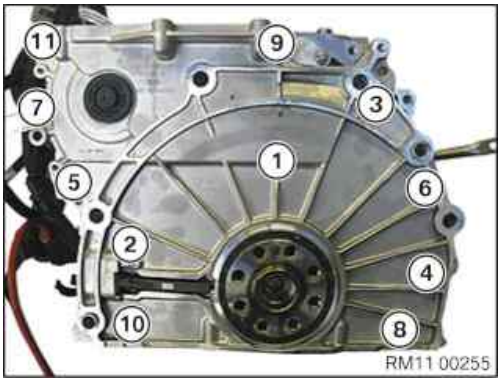
► **If installed: Remove coolant line of the SCR metering module**



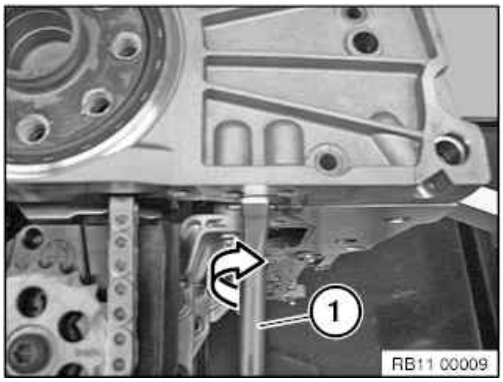
- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



- Loosen screw (1).
- Guide out and remove holder (2).

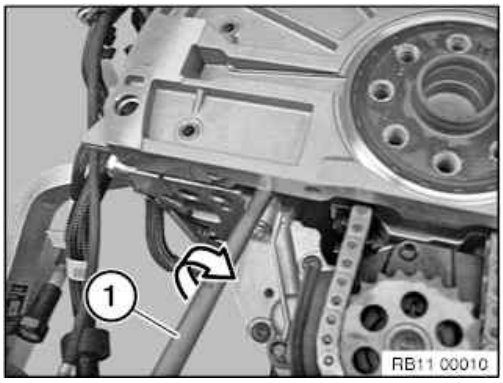


- Loosen screws in the order (11) to (1).



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

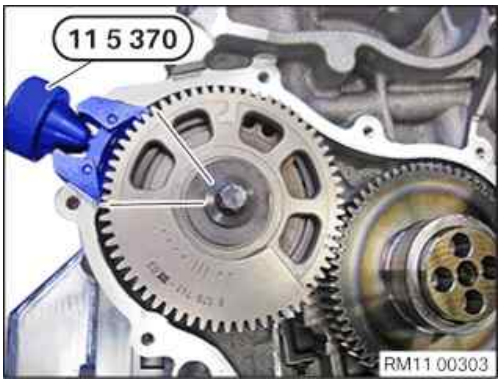
MAIN WORK

29 – Remove counterbalance shaft

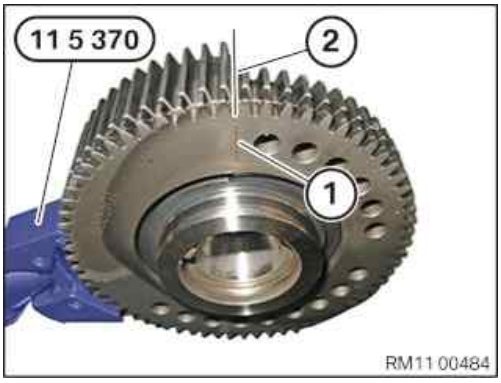
- Fasten counterbalance shaft with special tool in the TDC position of cylinder no. 1.
- Tighten the screws (1).

Standard screw connection M6

M6		8 Nm



- Ensure that the gear of the counterbalance shaft is pretensioned and blocked before removal.
- Install the special tool **0 495 131 (11 5 370)** as shown and pre-load the gear.

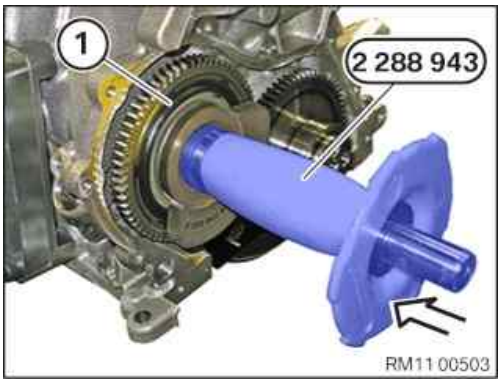


- Block gear wheels (1) and (2) until re-installation with the special tool **0 495 131 (11 5 370)**.

- Check whether the marks on the counterbalance shaft gear are aligned with the marks on the crankshaft gear.
- Loosen screw (1).

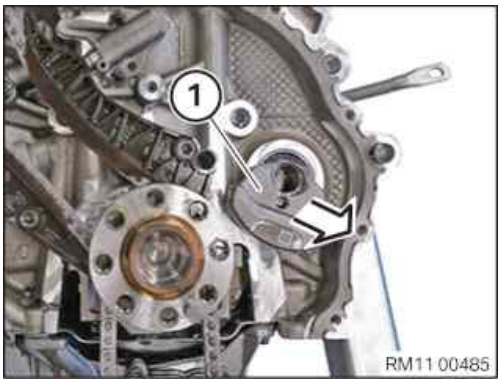
cardiagn.com

- Loosen screws (1).
- Remove special tool .



- Screw the special tool **2 288 943** far as it will go into the counterbalance shaft.
- Secure counterbalance shaft and gear against falling down!
- By means of targeted hammer blows on the special tool **2 288 943** in the direction of the arrow, loosen the counterbalance shaft from gear (1) .
- Remove special tool **2 288 943**.

- Remove the counterbalance shaft gear in the direction of the arrow.

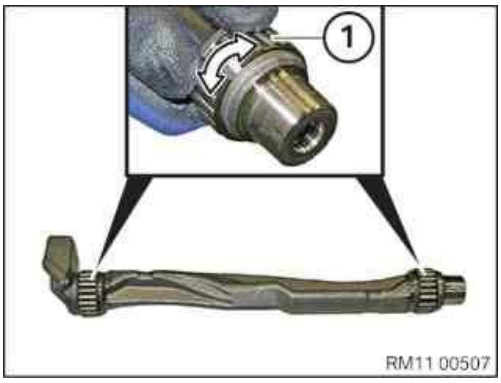


- Remove counterbalance shaft (1) in direction of arrow.

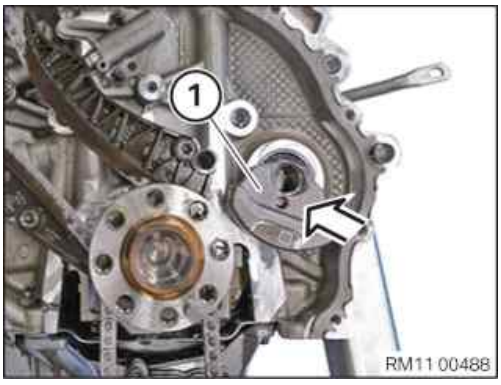
30 – Install counterbalance shaft

- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .

cardiagn.com



- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.

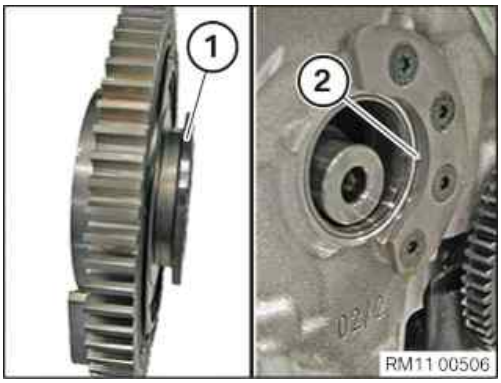


- Install counterbalance shaft (1) in direction of arrow into crankcase.

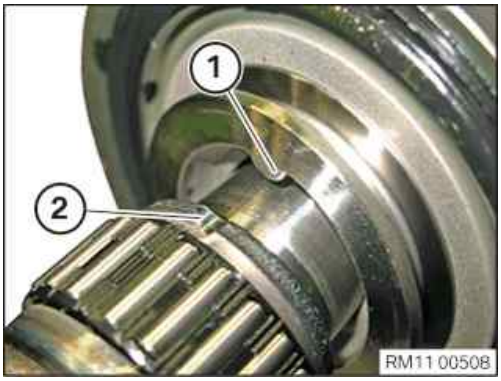
- Fix the counterbalance shaft in the TDC setting of the first cylinder using the special tool .
- Tighten the screws (1).

Standard screw connection M6

M6		8 Nm



- On installation, make sure that ring (1) of gear is guided in crankcase (2).

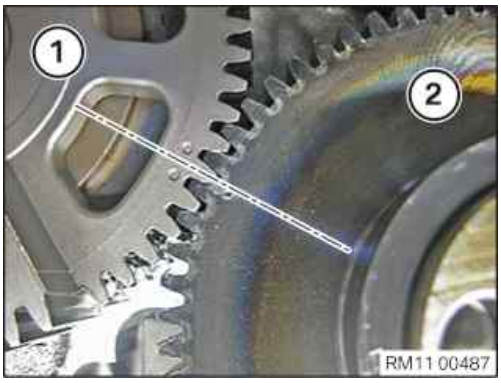


NOTICE

For a better overview the removed condition is shown here.

- On installation of counterbalance shaft in gear, make sure that lug (1) on gear is inserted into groove (2) of counterbalance shaft.

cardiagn.com



- Bring gear (1) of counterbalance shaft into contact in correct installation position (mark) relative to crankshaft (2).

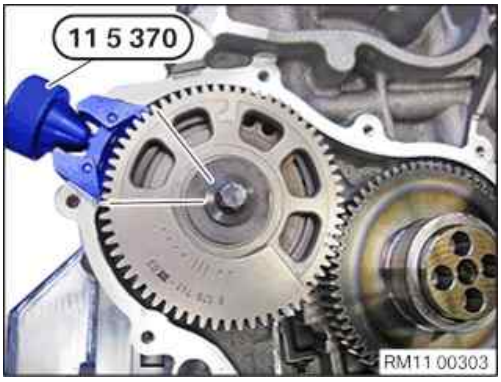
- Renew the screw (1).

  Parts: Screw

- Tighten down screw (1).

Gear to counterbalance shaft

	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °



- Remove special tool **0 495 131 (11 5 370)**.

- Loosen screws (1).
- Remove special tool .

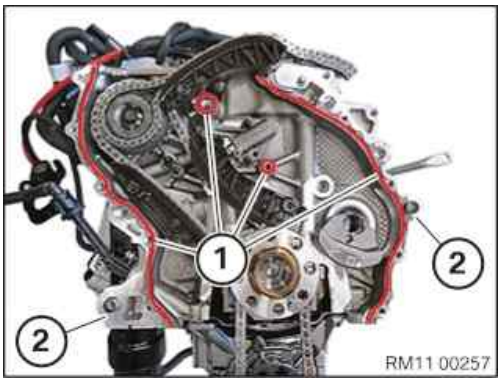
POSTPROCESSES

31 – Install the rear timing case cover

Prerequisite

Transmission is removed.

cardiagn.com



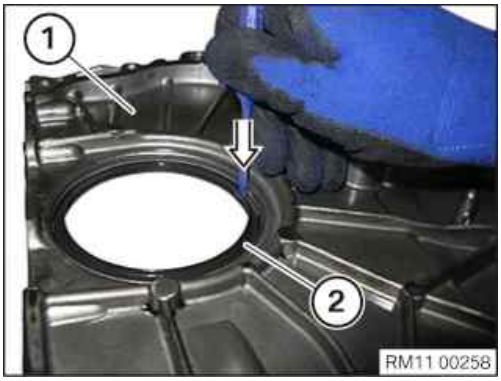
RISK OF DAMAGE

Damage to the surface.

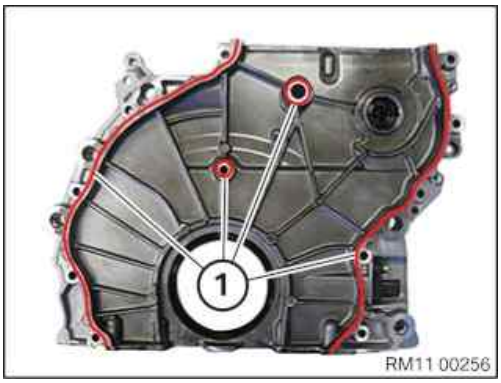
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

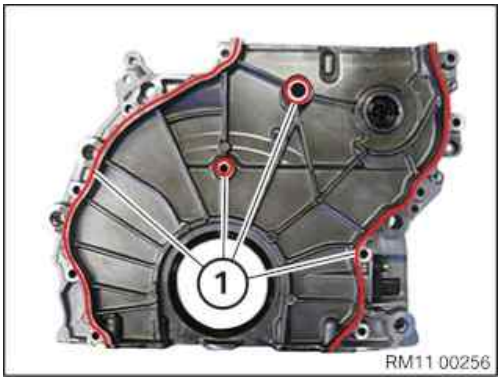
- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.



- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

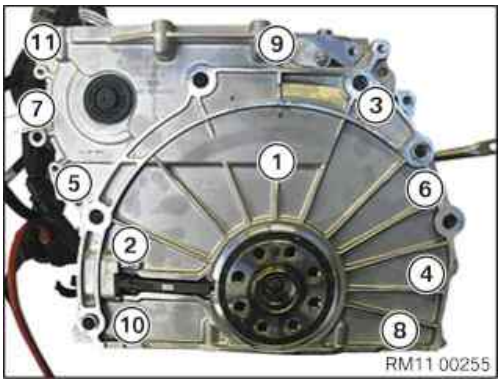


TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.



- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

cardiagn.com

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

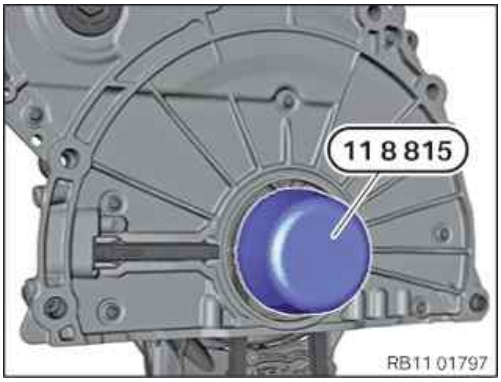
- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE

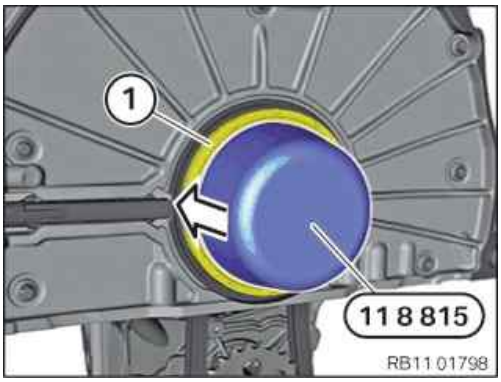
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.



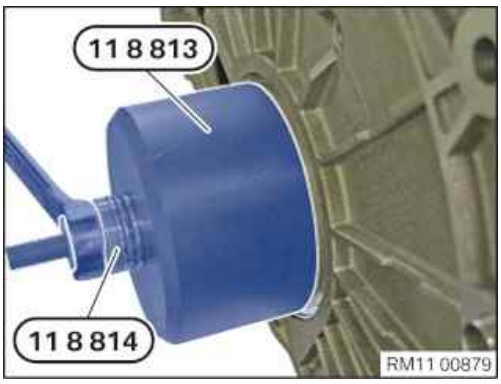
- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

cardiagn.com

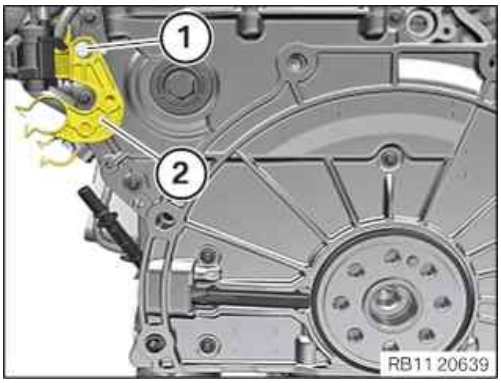
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.

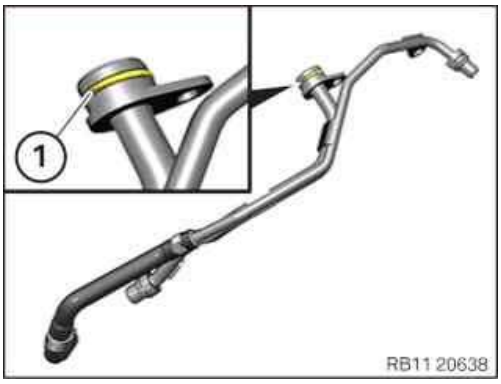


- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

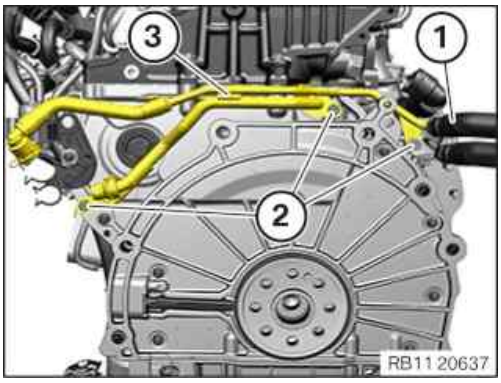
► **If installed: Installing the coolant line of the SCR metering module**



- Renew the O-ring 1.

  Parts: O-ring

cardiagn.com



- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

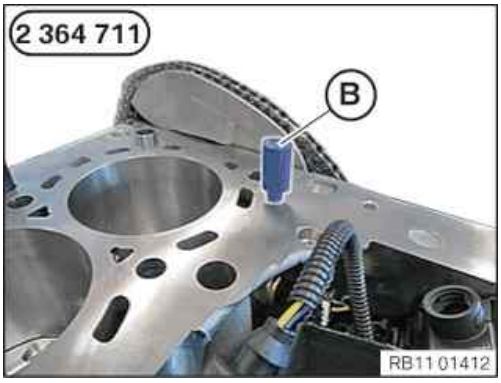
▶ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

RISK OF DAMAGE

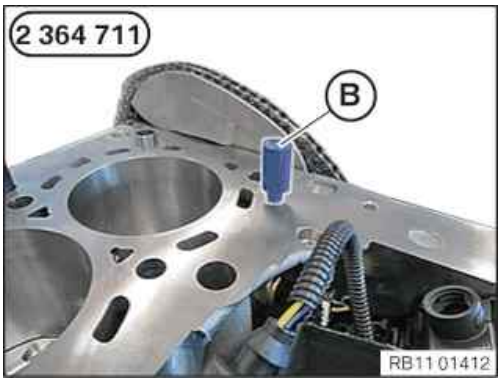
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

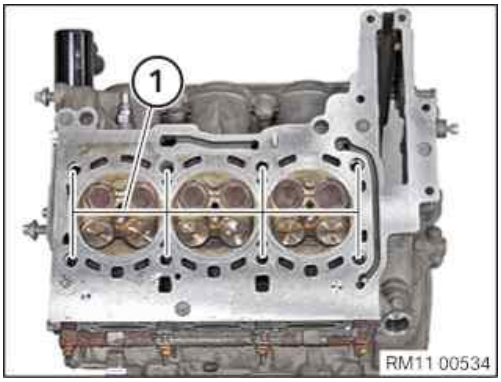
- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com



- Remove special tool (B).

▶ **Renewing the cylinder head gasket**



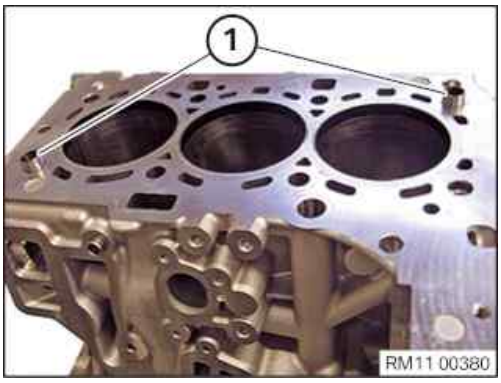
RISK OF DAMAGE

Damage to the surface.

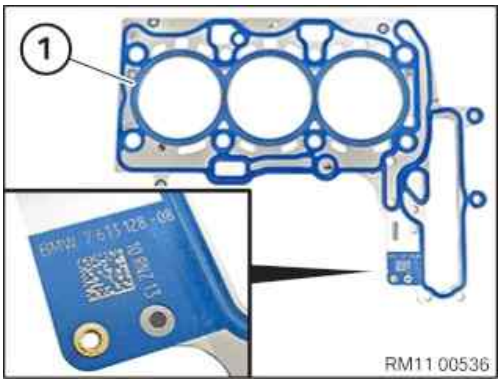
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

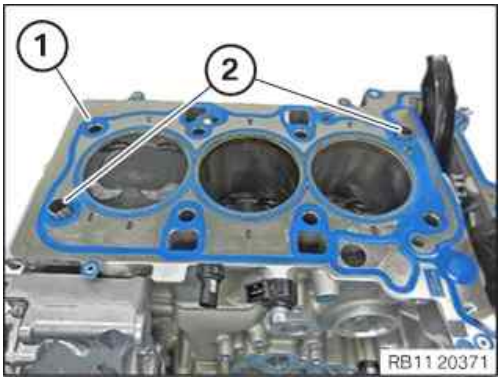
- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



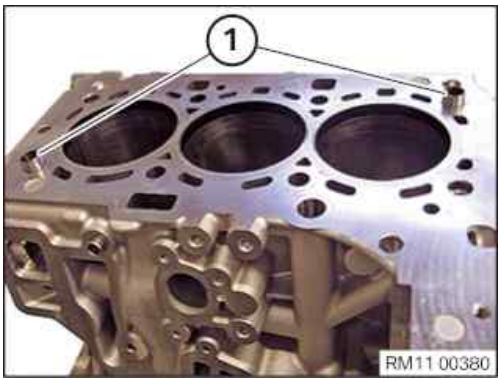
- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

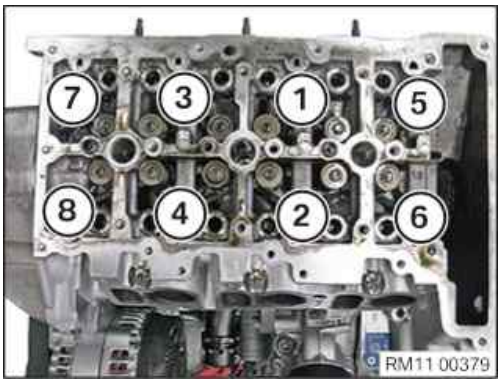
cardiagn.com



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.

- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Fit new cylinder head screws.

  Parts: Cylinder head bolts

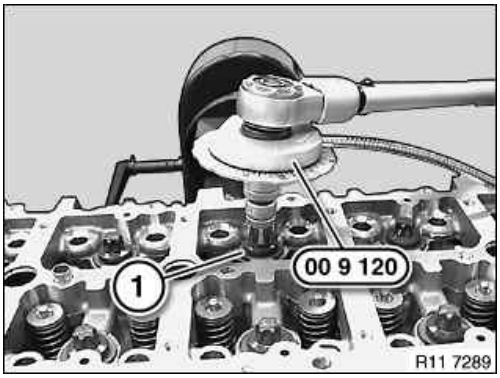
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

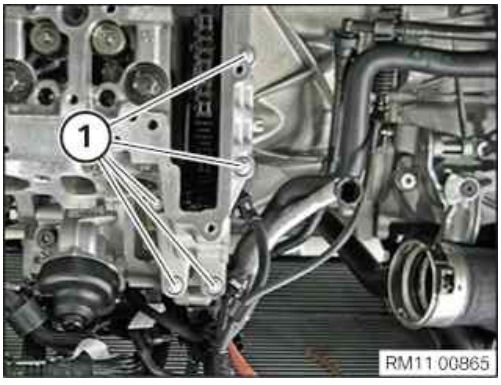
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolts in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

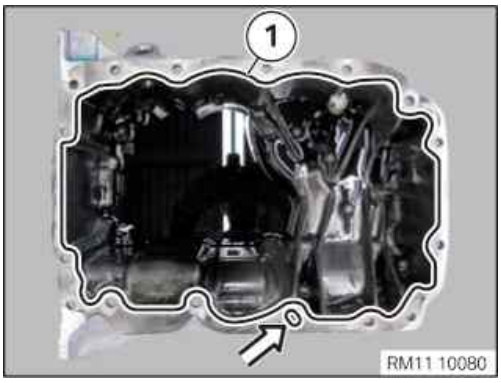
  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com



TECHNICAL INFORMATION

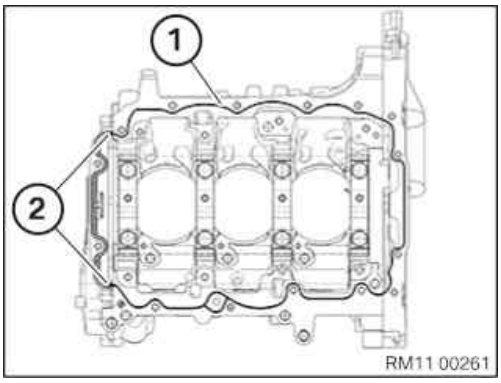
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

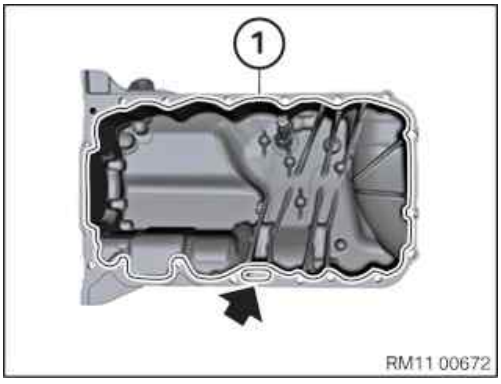
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



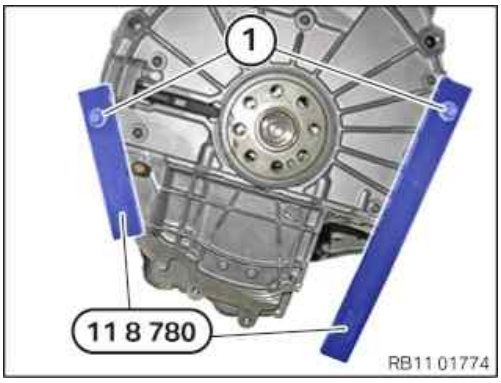
TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

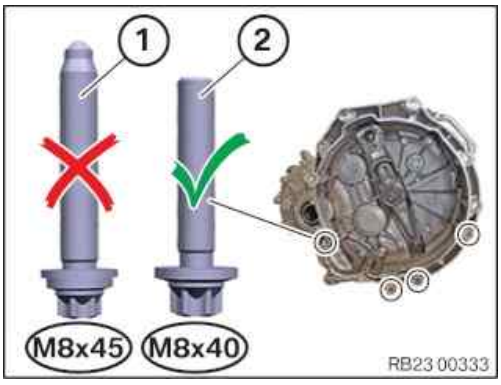
cardiagn.com



TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

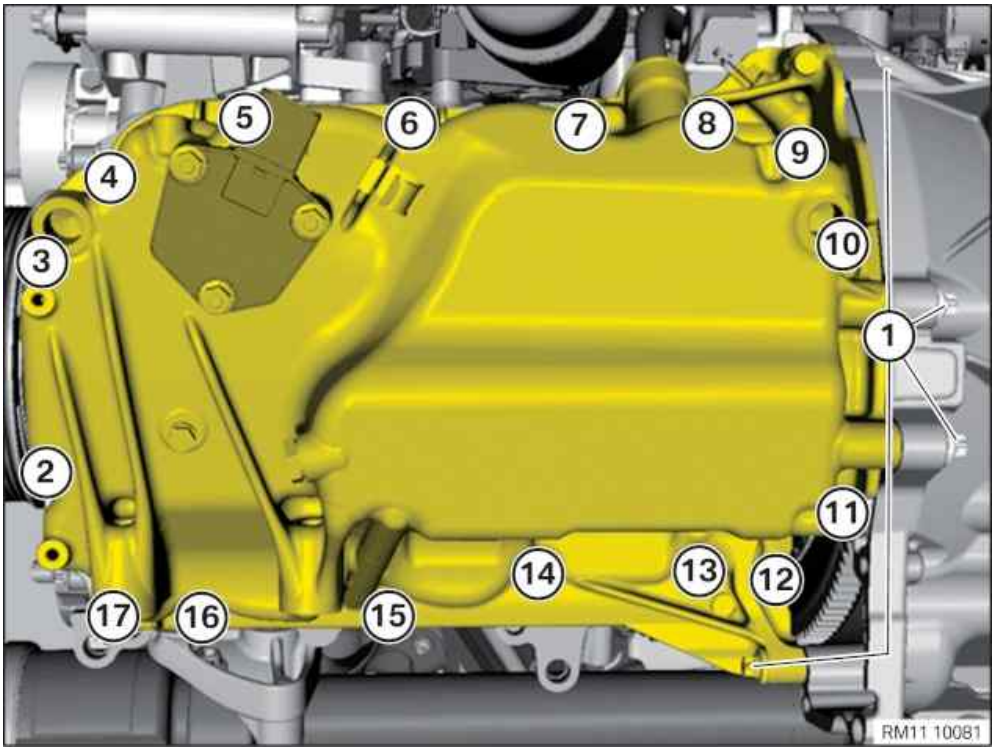
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Hand tighten the screws of oil sump (2) to (17) , but do **not** tighten completely yet.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.

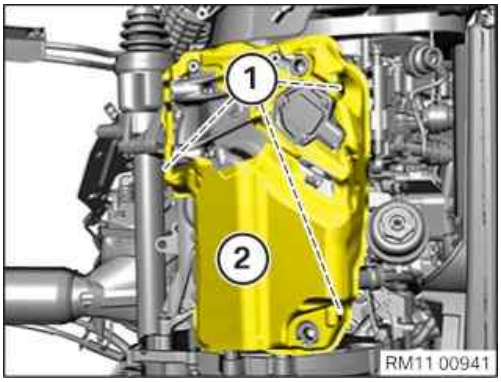
Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

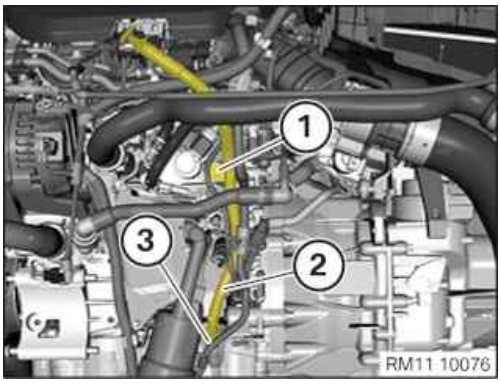


- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

32 – Installing the flywheel

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all screw threads (1).

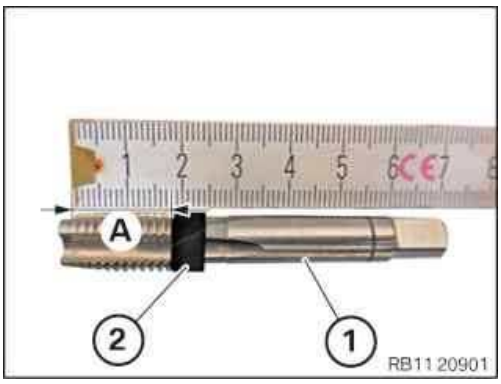
cardiagn.com

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

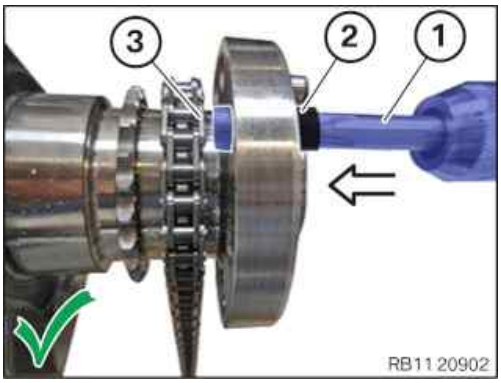
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the screw-in depth (A) on thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

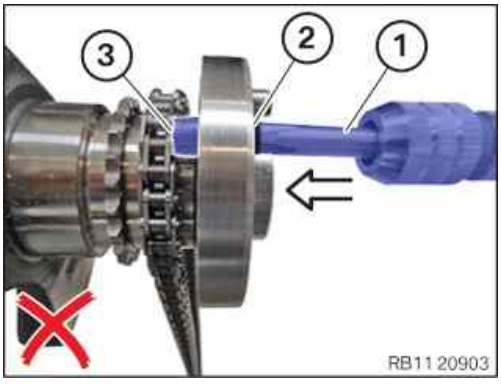
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the screw-in depth (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



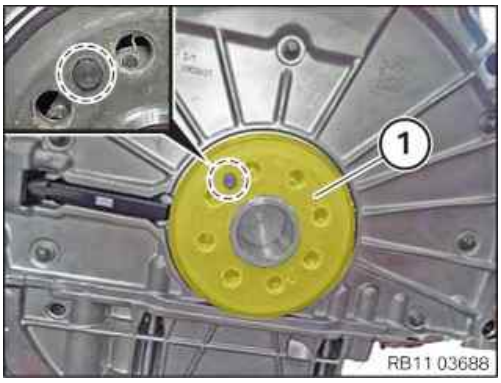
TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

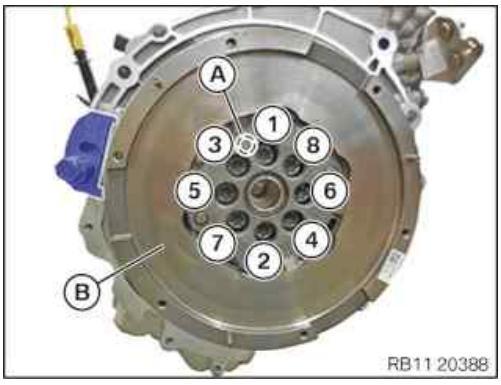
- Make sure that the screw-in depth (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com



- During the installation, note the mark shown without fail.
- Install special tool (1) on the crankshaft as shown.

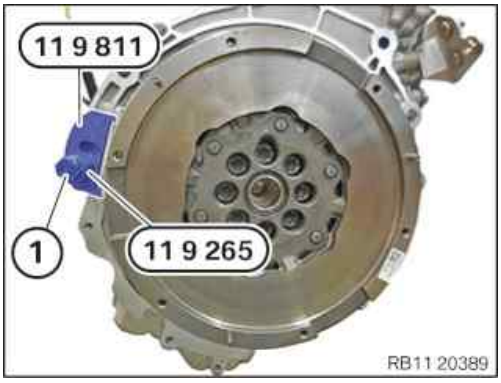


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Observe tightening sequence. While doing so, begin with dowel pin (A).
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Feed out and remove special tools **0 494 793 (11 9 265)** and **0 496 171 (11 9 811)** with the **standard** (5 mm) washer.

33 – Install clutch

CAUTION

Materials harmful to health.

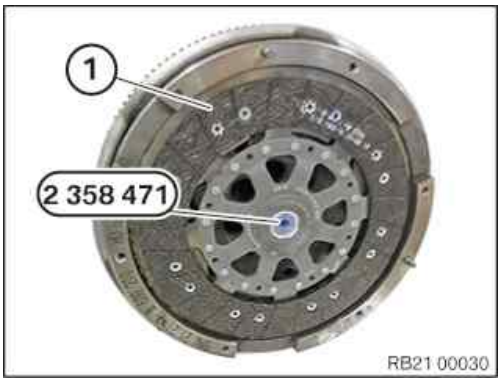
Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

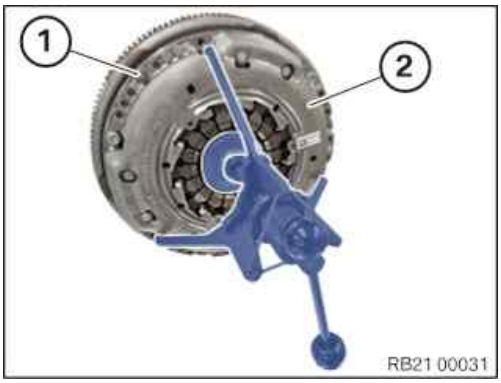
TECHNICAL INFORMATION

Handle the clutch disc carefully. Install the surfaces of the clutch disc in the correct mounting orientation.
Clean friction surfaces of the flywheel and the pressure plate with BMW-approved brake cleaner.
Note designation for ”engine side” / ”transmission side”.

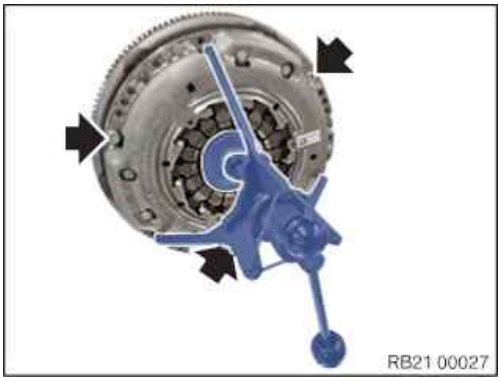
cardiagn.com



- Centre the clutch disc (1) using special tool **2 358 471**.



- Mount the clutch (2) together with the special tool to the flywheel.
- Observe the dowel pins (1).
- The clutch (2) must be secured via the dowel pins (1).

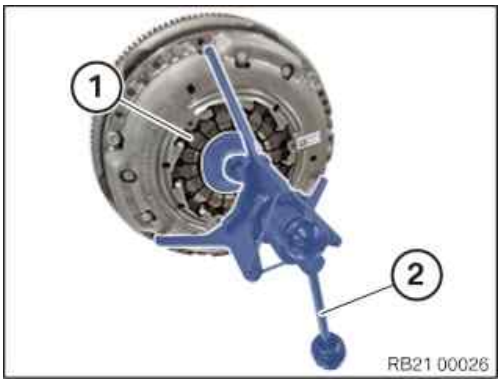


- Renew the bolts (arrows).

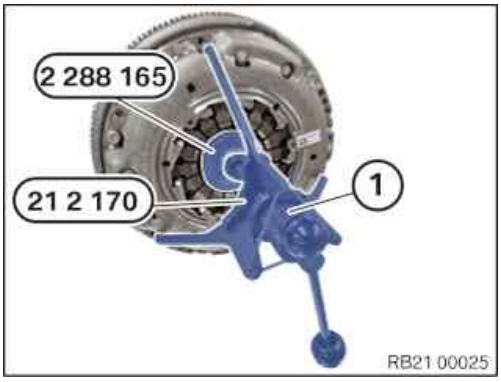
  Parts: Bolts
- Install and tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

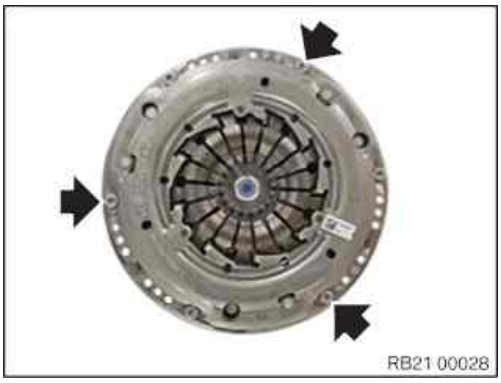


- Loosen the spindle (2) until the diaphragm spring (1) is fully relieved.



- Unscrew the knurled screw (1) and remove the special tool **0 493 839 (21 2 170)** with **2 288 165** from the clutch.

cardiagn.com



- Renew the bolts (arrows).

  Parts: Bolts

- Tighten screws (arrows).

Clutch to flywheel

M8	Renew screws.	Jointing torque	15 Nm
		Angle of rotation	90 °

- Withdraw special tool **2 358 471** from clutch disc with aid of accompanying screw.

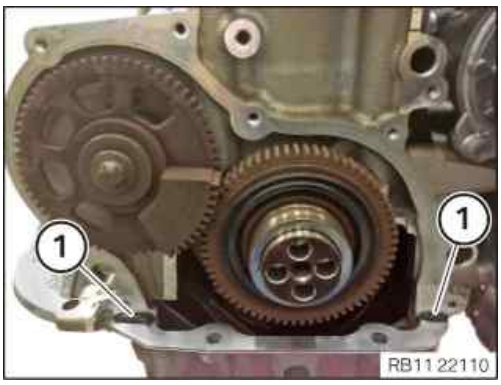
34 – Installing the timing case cover

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

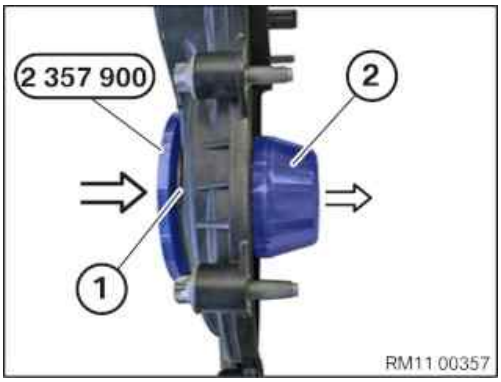
The maximum application time of the liquid sealing compound is 12 minutes.

- Apply sealing compound (1) approx. **5 mm** as shown.

  The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.

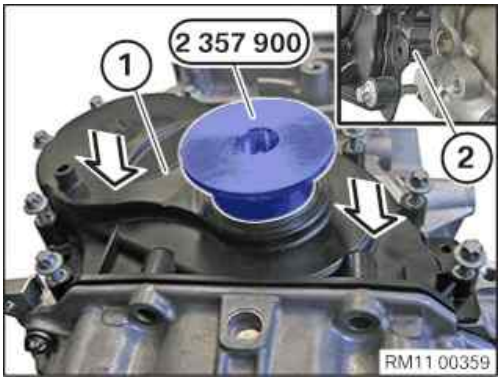
- Assemble special tool **2 357 900** as shown.
- Please note that no greases or lubricants may be used on the special tool **2 357 900**.

cardiagn.com



- Carefully slide the special tool **2 357 900** in the direction of the arrow through the sealing ring into the timing case cover (1).
- Make sure that the special tool **2 357 900** rests flat against the timing case cover (1).
- Remove the fitting aid (2).

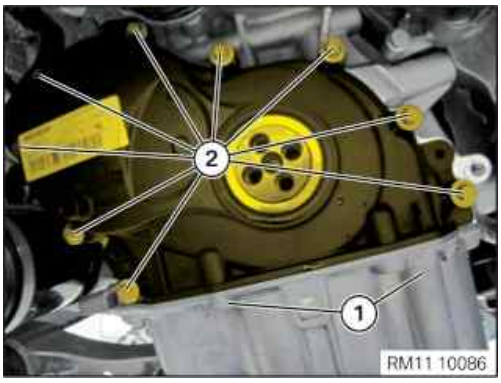
- Connect special tool **2 357 900** to the timing case cover (1) on the hub of the crankshaft (2).



- Feed in and install timing case cover (1) in the direction of the arrow.
- Ensure the guide pins (2) are fitted correctly.
- Tighten screws hand-tight.
- Remove special tool **2 357 900**.

- Make sure that the air guide (1) faces out.

cardiagn.com



- Hand-tighten the bolts (1).
- Tighten the screws (2) in a crosswise sequence with a tightening torque.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

- Tighten the screws (1).

Oil sump to crankcase

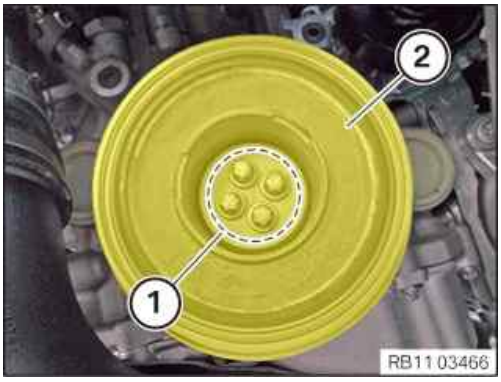
M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

- Tighten the screws (2) in a crosswise sequence with an angle of rotation.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

35 – Installing the vibration damper

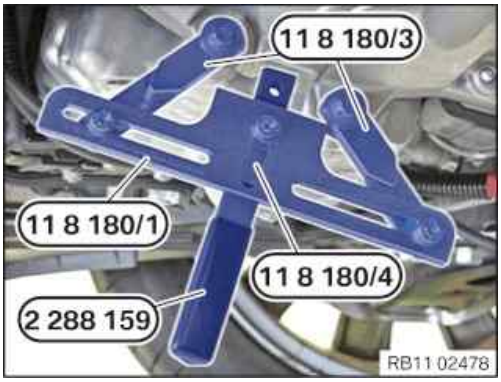


- Position vibration damper (2).
- Renew screws (1).

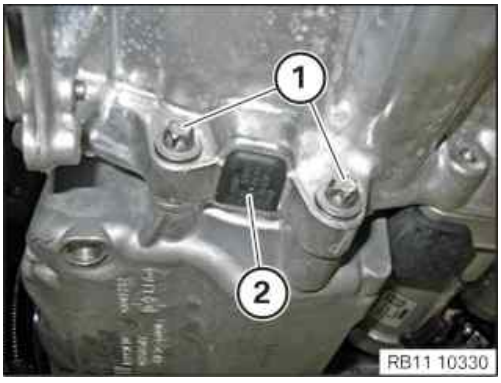
  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	120 °



- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.



- Tighten transmission screws (1).

Transmission to oil sump

M8			19 Nm

- Install protective cap (2).

36 – Installing the hydraulic valve clearance compensating element

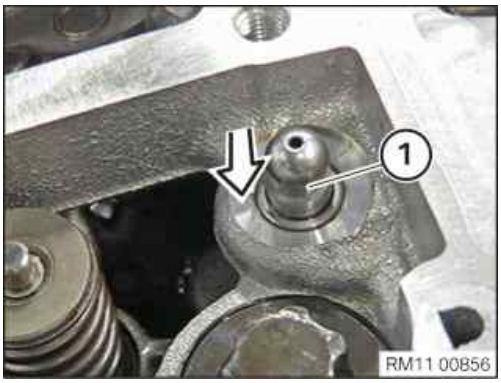
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

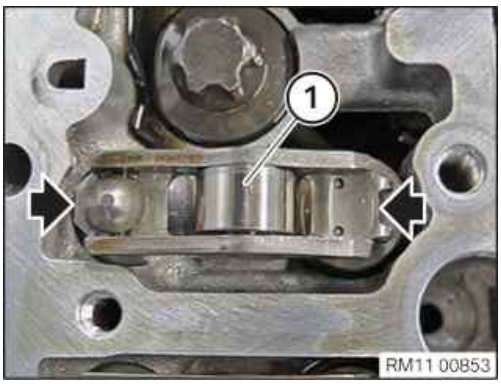


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

37 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

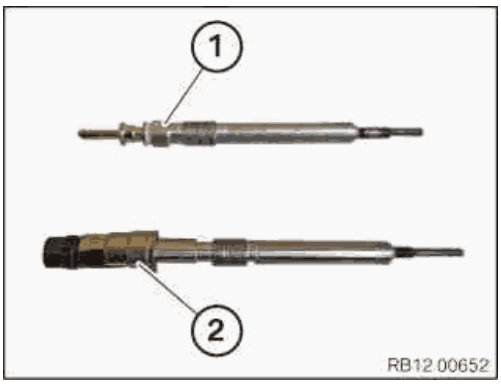


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

38 – Install glow elements



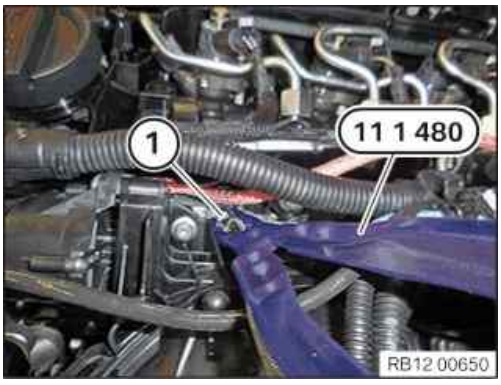
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

cardiagn.com

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

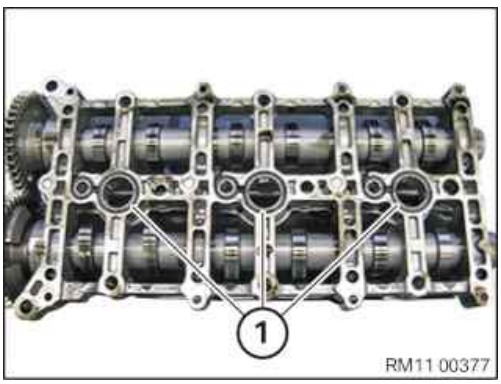
39 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

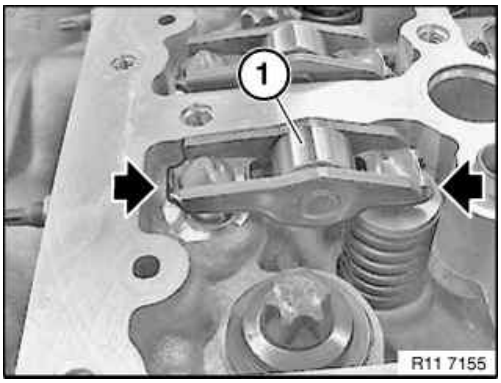
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



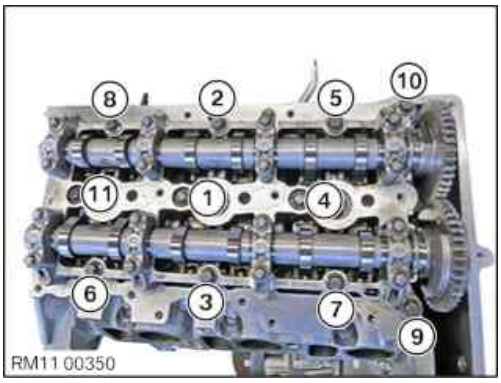
- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.

cardiagn.com



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

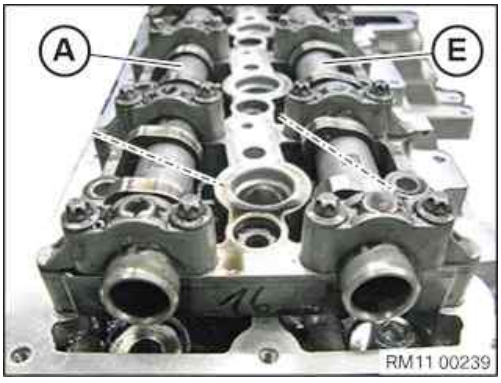
M7x35		Tightening torque	13 Nm

40 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▸ **Remove chain tensioner piston**

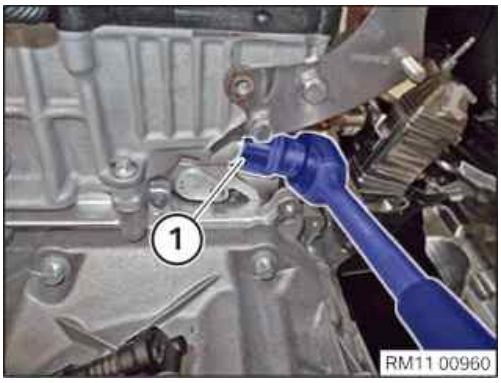
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

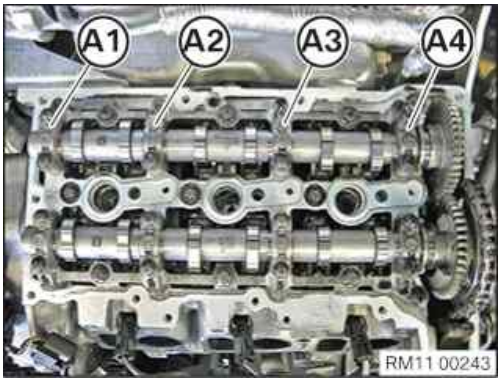
▶ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

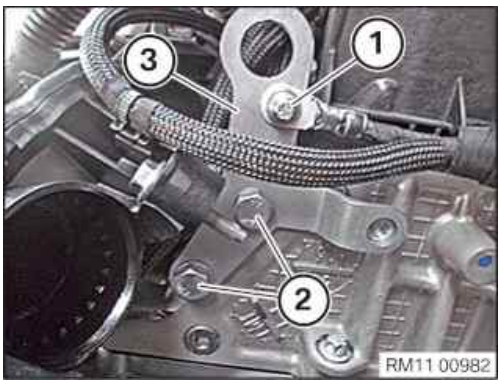


TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

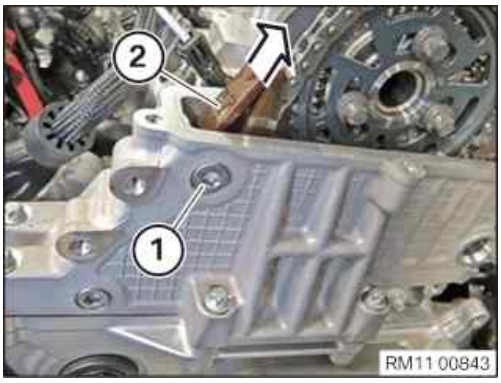
- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▶ **Remove the timing chain guide rail**



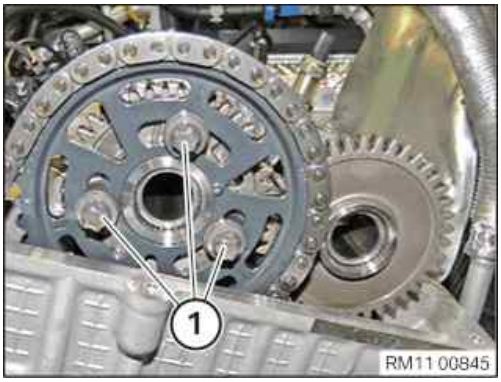
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

cardiagn.com



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

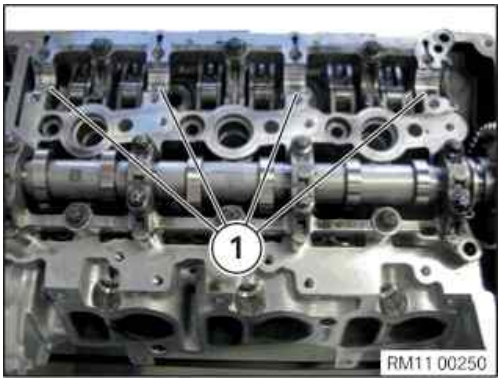
▶ **Installing exhaust camshaft**

RISK OF DAMAGE

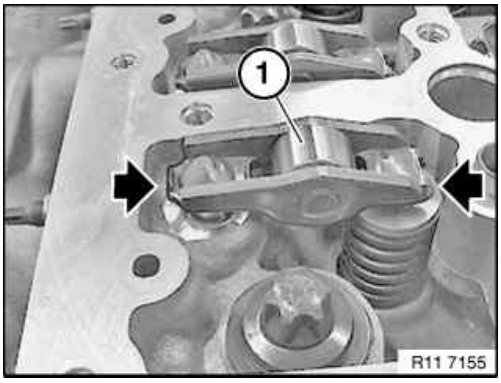
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

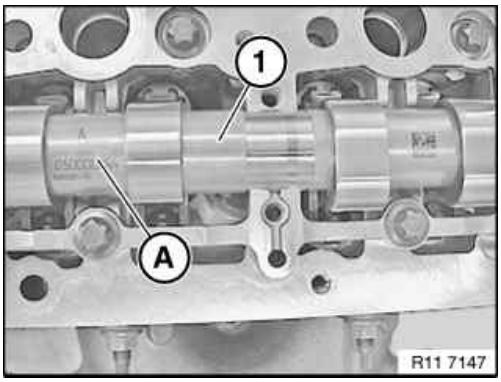


- Oil all bearing positions (1).

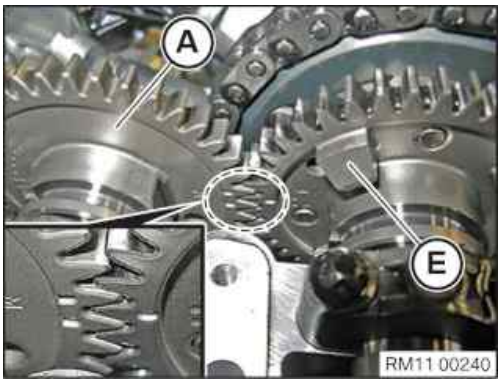


- Make sure the roller cam followers (1) have the correct mounting orientation.

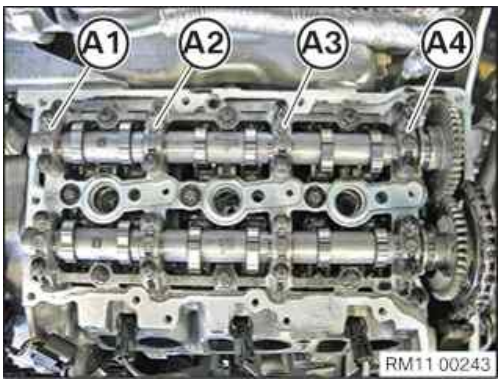
cardiagn.com



- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

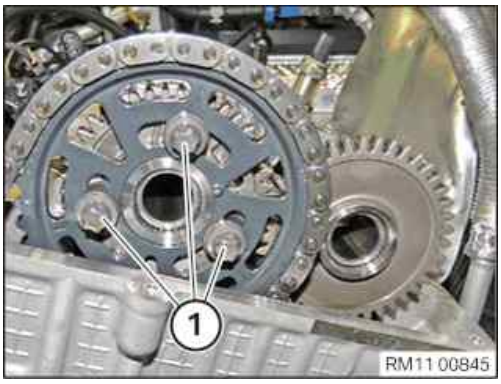
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

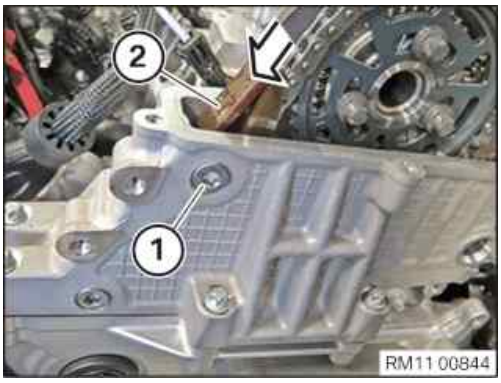
► **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

► **Install the timing chain guide rail**

cardiagn.com



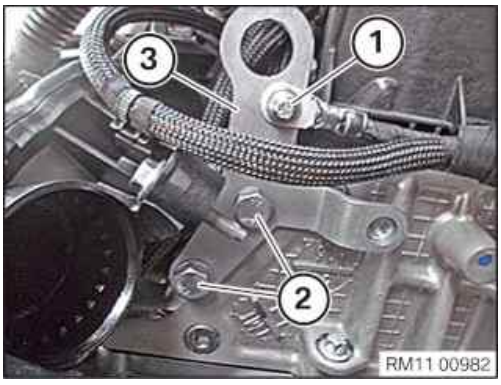
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

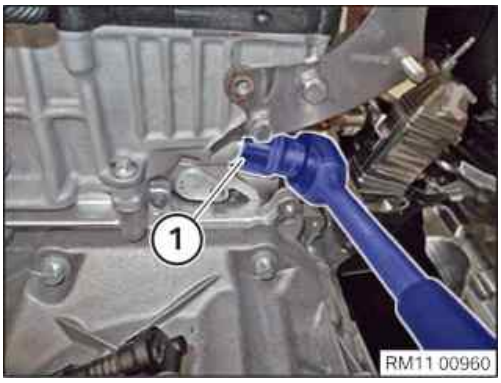
  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com

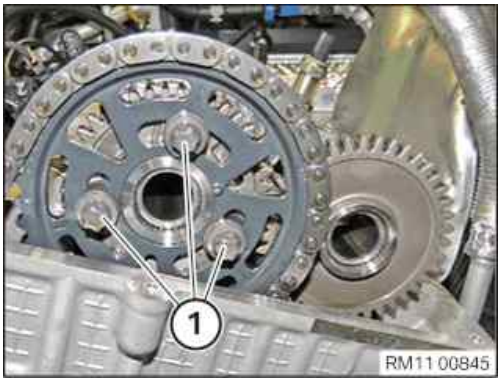


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

41 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

42 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

43 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

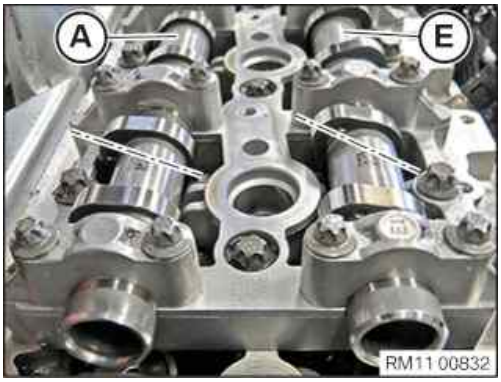
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

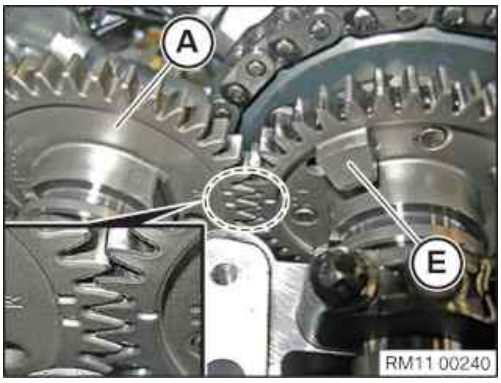
  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

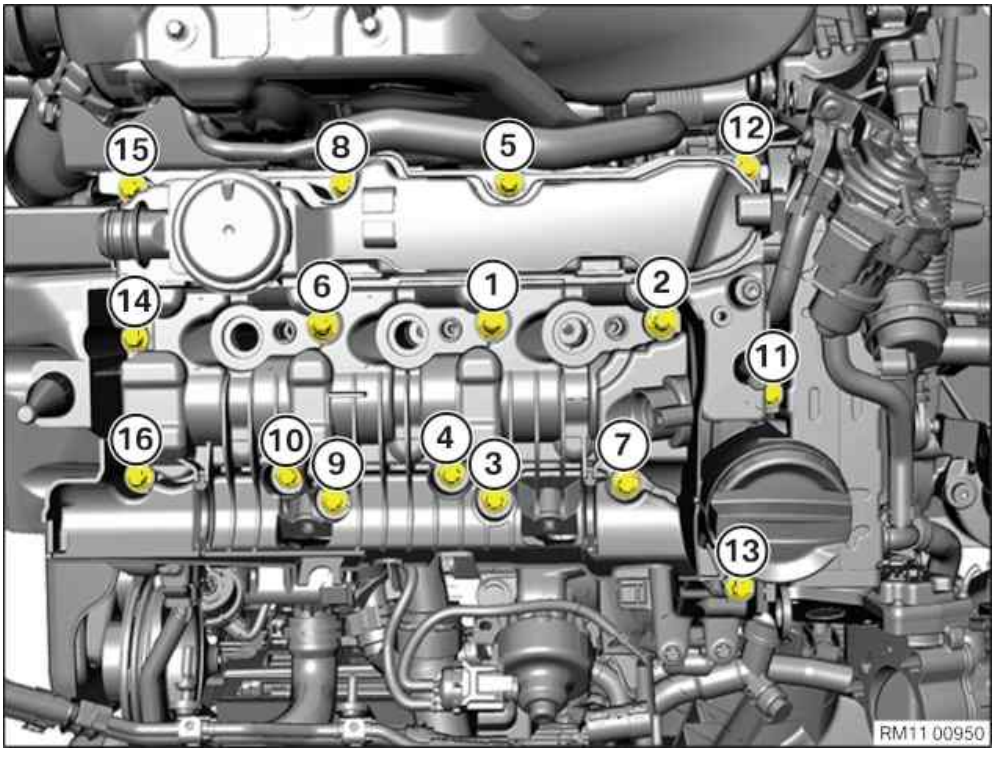
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

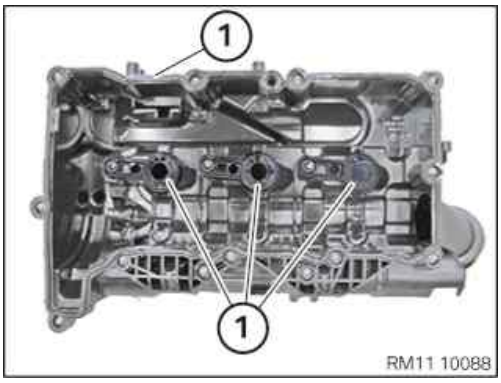
44 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover



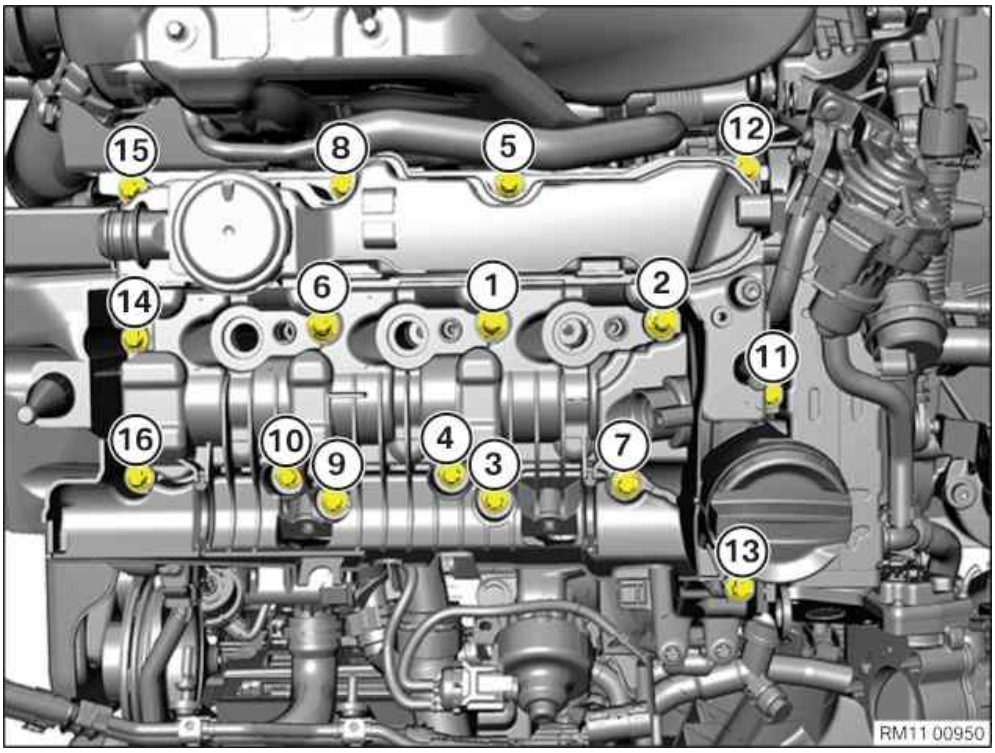
1 to 16 Bolts of the cylinder head cover

cardiagn.com



- Renew the gasket (1) of the cylinder head cover.

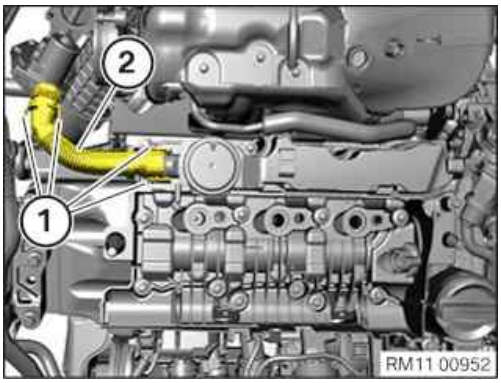
  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nn



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

45 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

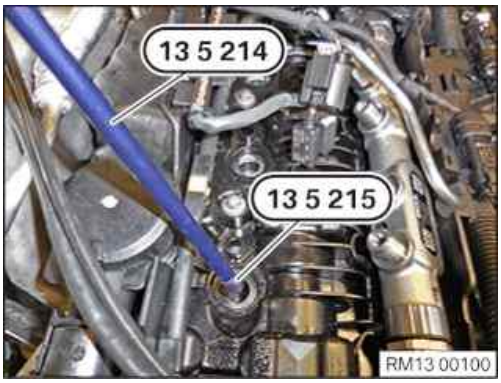
cardiagn.com

RISK OF DAMAGE

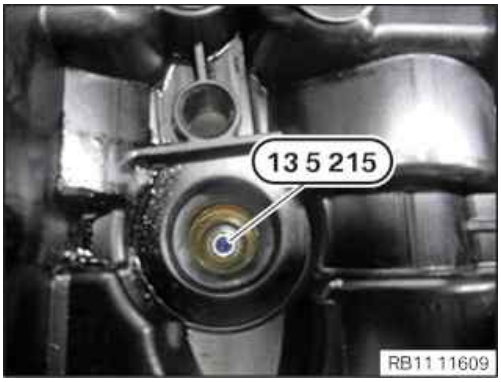
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

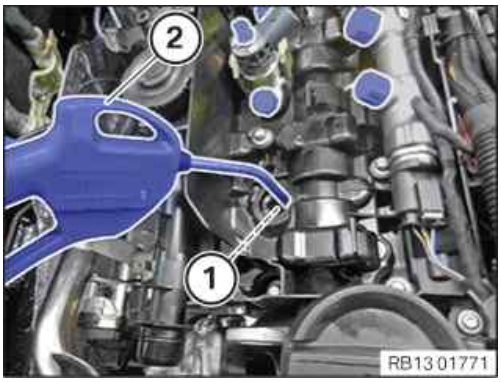


- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

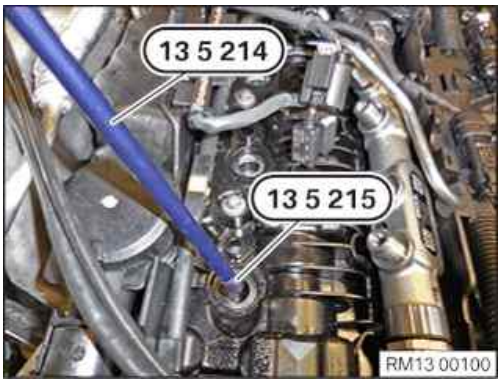
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

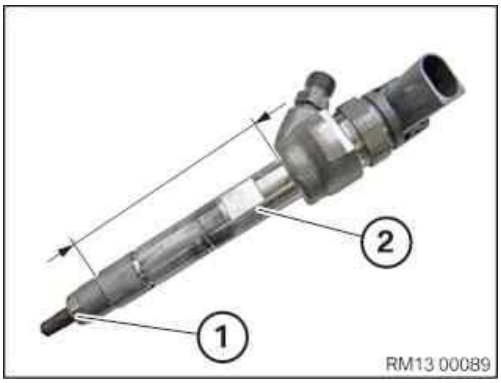
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

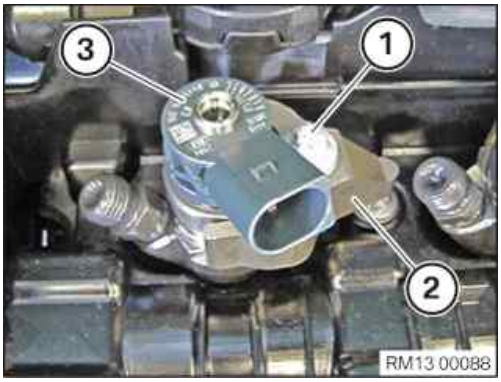


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

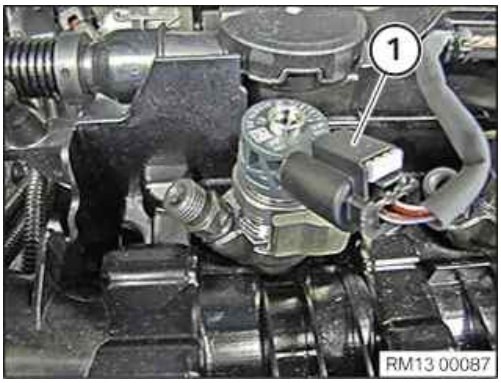
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**

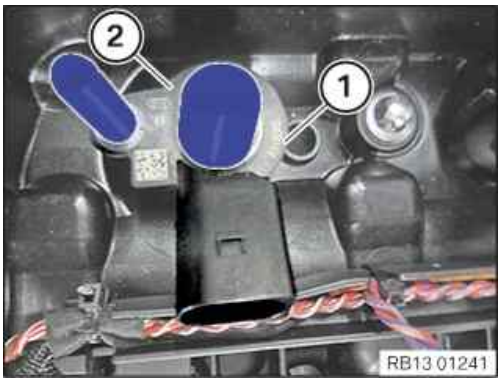
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

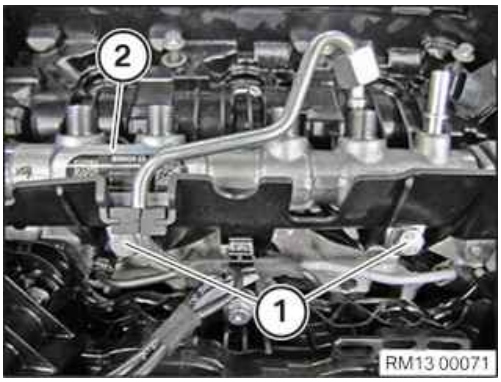
cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

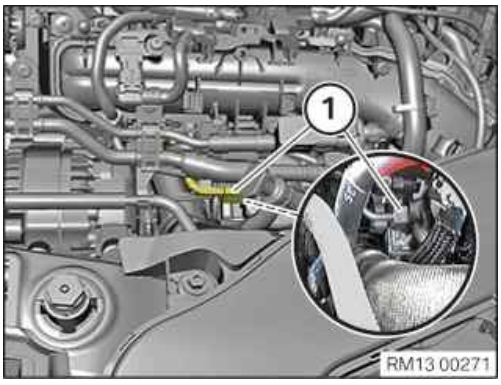
46 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

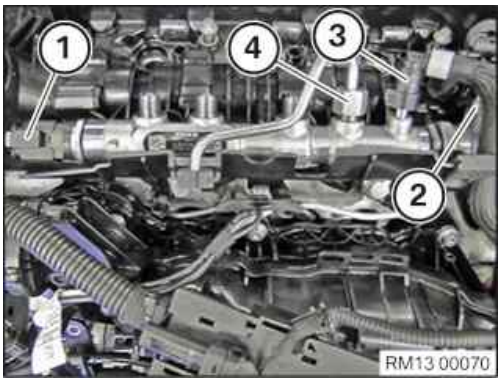
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

47 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

48 – Installing high pressure lines between rail and injectors

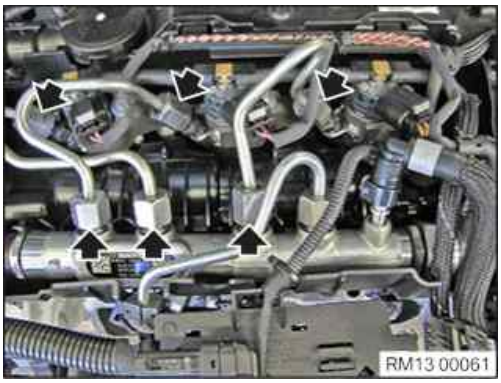
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

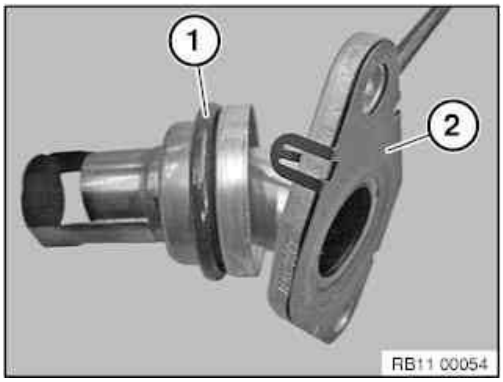
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

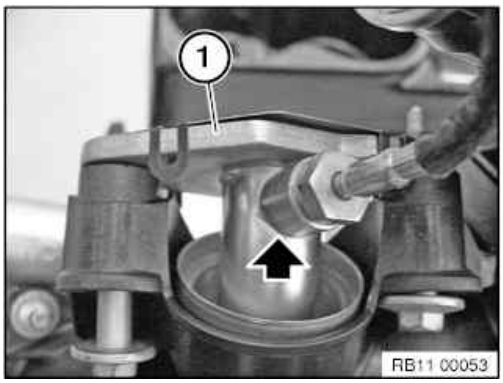
49 – Installing the intake plenum



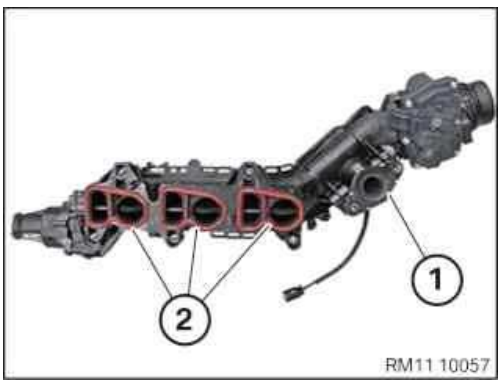
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



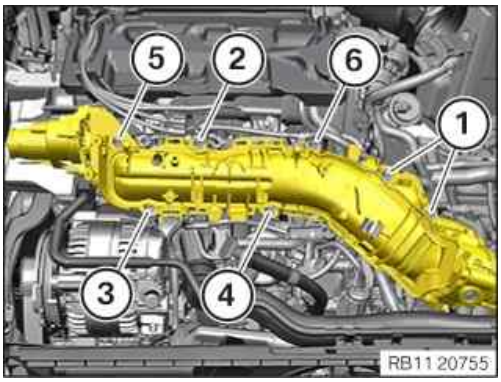
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.

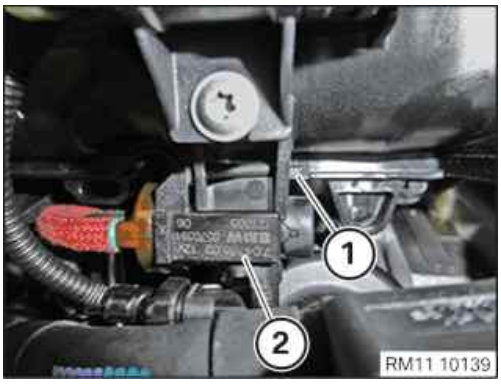
cardiagn.com



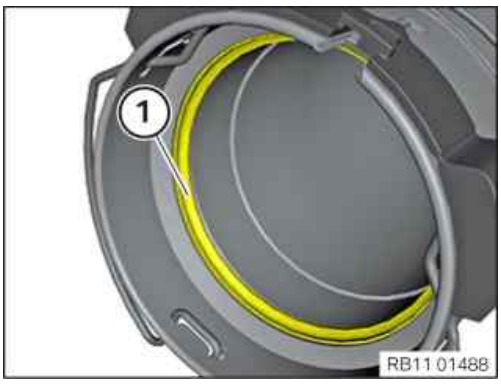
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

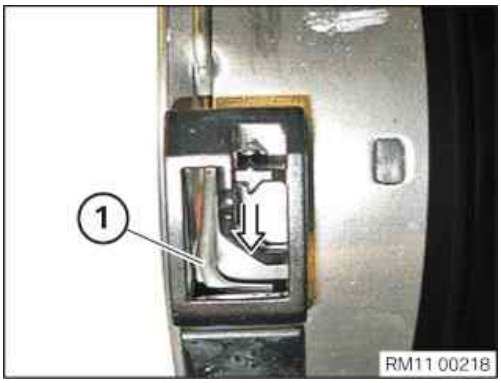


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

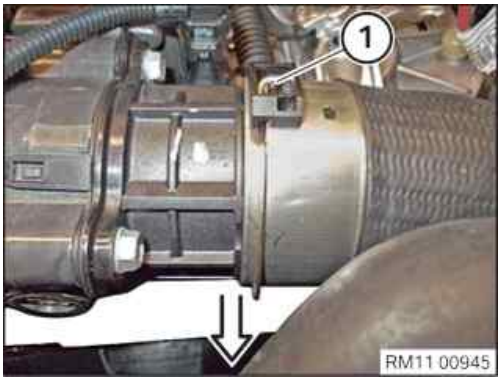


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

50 – Remove the engine from the assembly stand

cardiagn.com

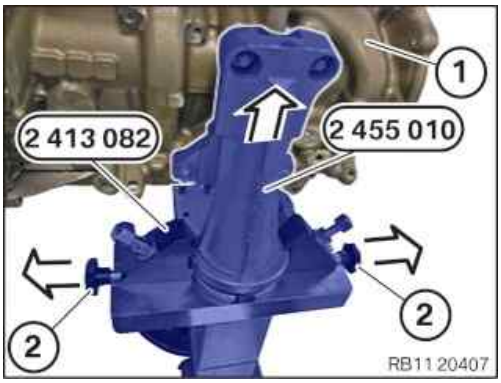
CAUTION

Heavy component.

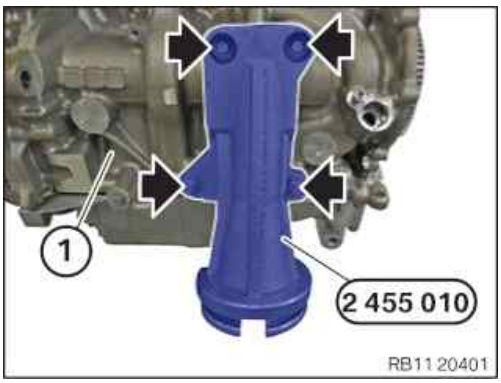
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

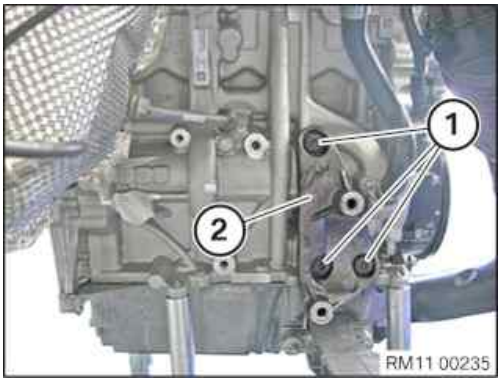
- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase

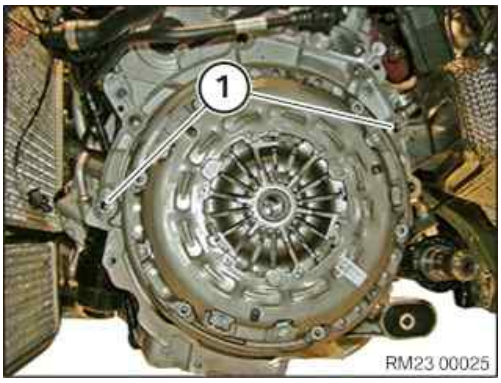
M10		Tightening torque	38 Nm

51 – Mounting engine on manual gearbox

Prerequisite

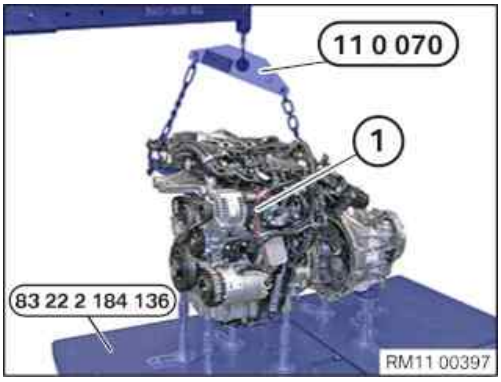
Engine has been removed.

cardiagn.com

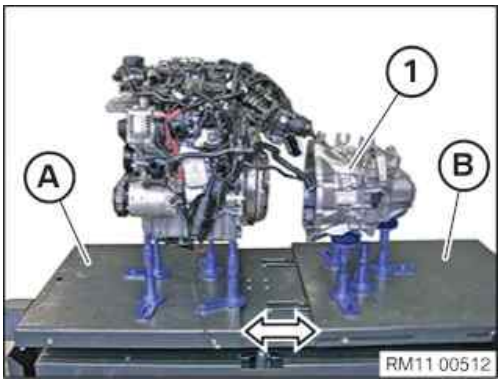


- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

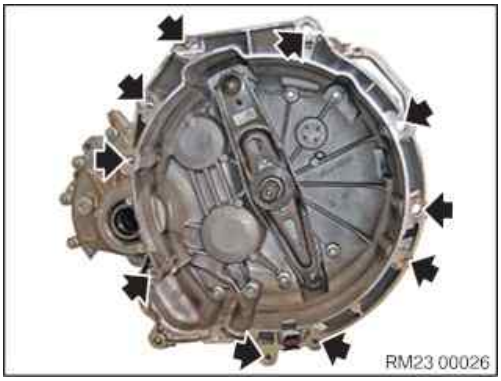
- Remove any grease from the transmission input shaft (arrow) and clean the shaft.
- Do not grease transmission input shaft.
- Check the clutch disc for frictional corrosion in the gearing and renew if necessary.



- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.



- Push table top (B) in direction of arrow and position manual gearbox (1) on engine.

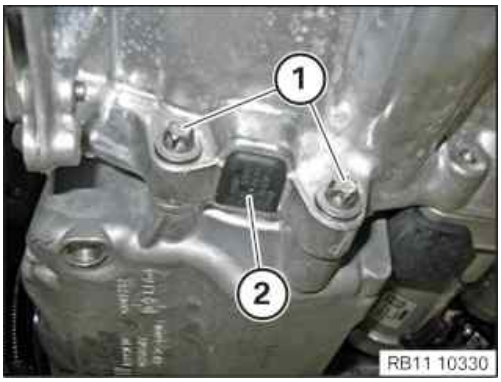


- Tighten screws (arrows).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

cardiagn.com



- Tighten the screws (1).

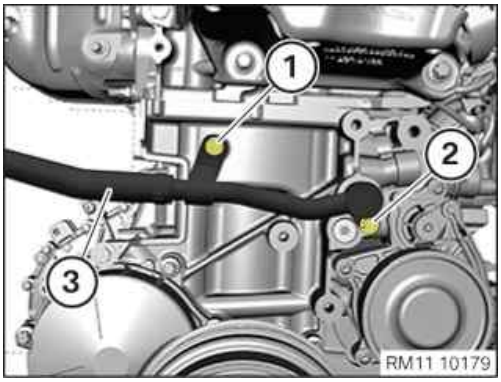
Transmission to oil sump

M8		Tightening torque	19 Nm

- Install the protective cap (2).

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Feed out the special tool **2 459 012** at the cylinder head and remove.

52 – Attaching assemblies (on lifting table)

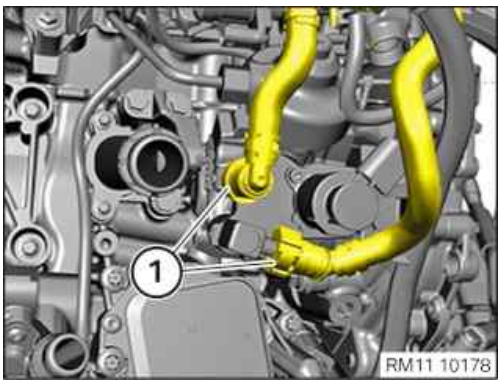


- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm



- Connect and lock fuel lines (1).

  The locks must engage audibly.

▶ **Installing the exhaust-gas recirculation cooler**

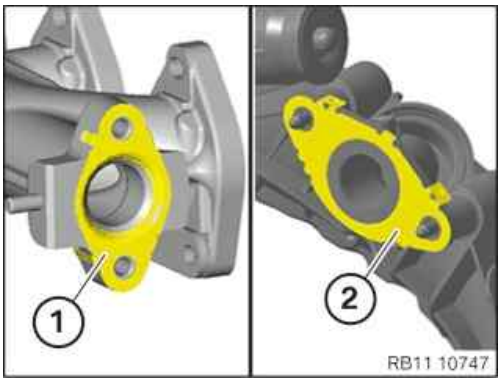
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

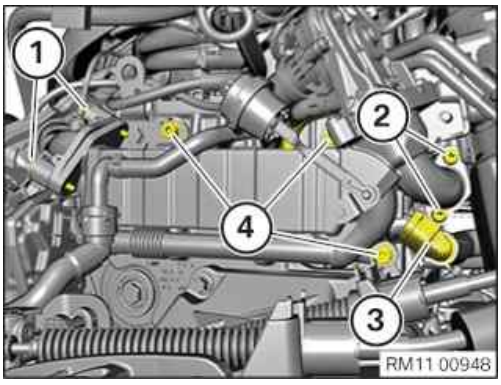


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

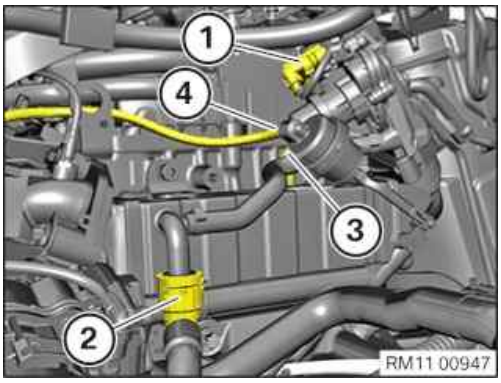
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com

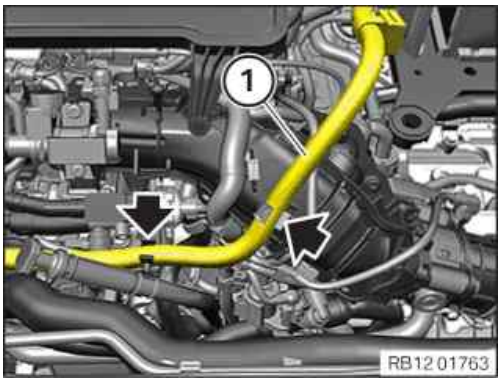


TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.



CAUTION

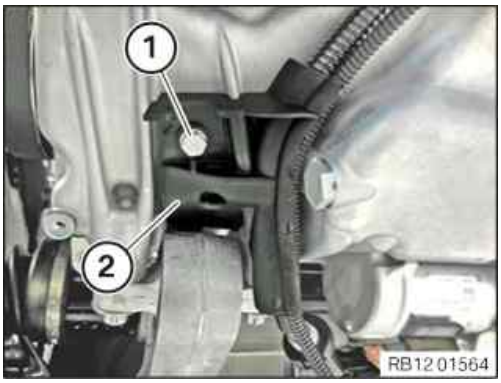
Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

- Insert the positive battery cable (1) into the clamps (arrows).

- Feed in and install positive battery cable at the clamps (1).

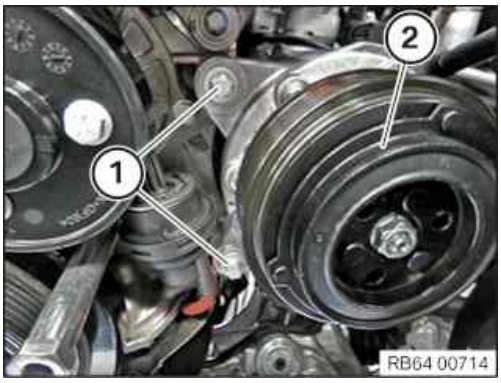


- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm

cardiagn.com

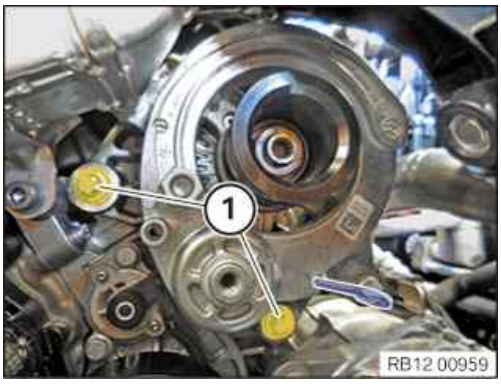


- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

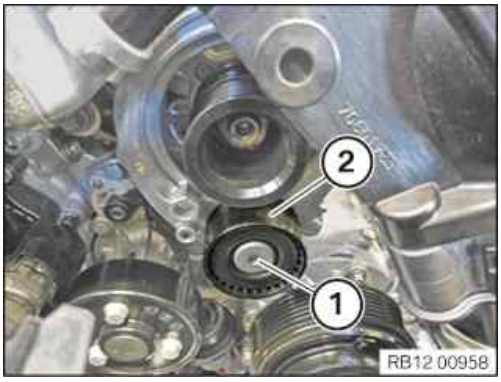
- Tighten the screws (1).



- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

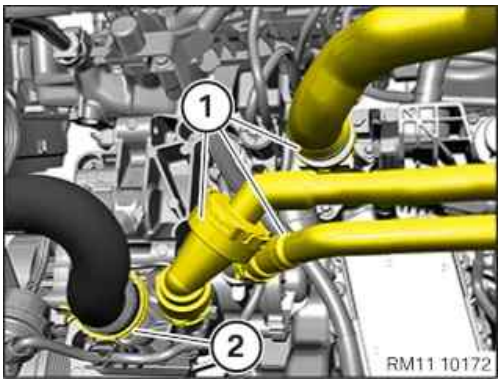
M10x75 / M10x125		Tightening torque	38 Nm



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

▸ Installing the drive belt for alternator

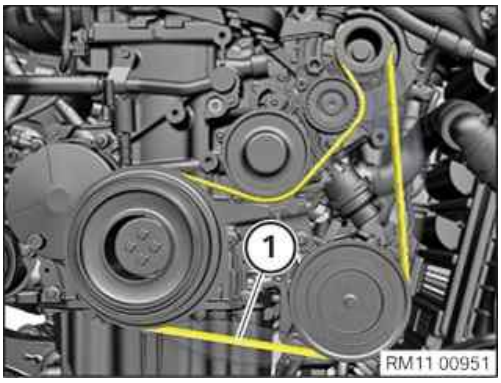
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

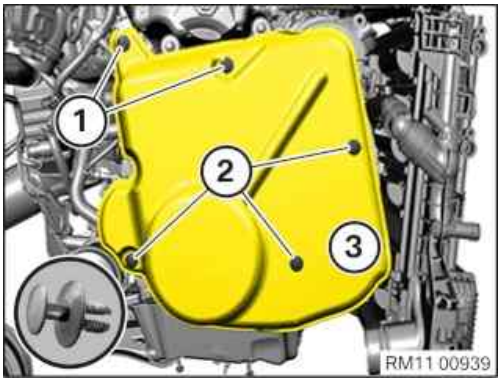
cardiagn.com



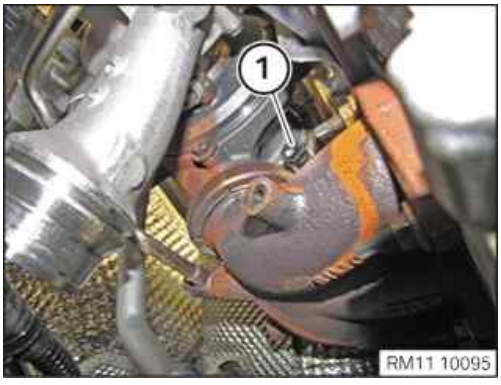
- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ **Install the acoustic cover for the engine at the front**



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

▸ **Installing the oil return line for the exhaust turbocharger**

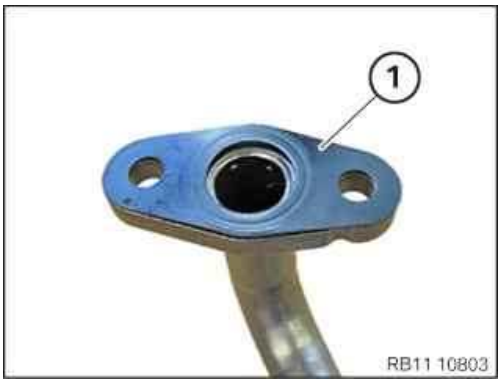
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

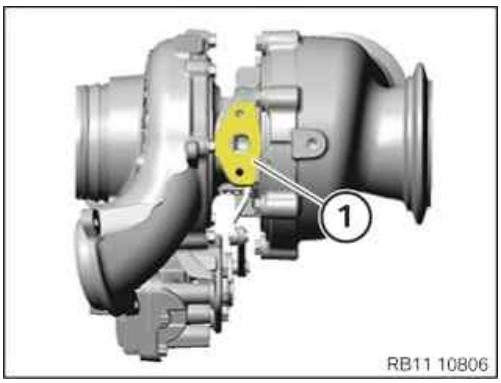
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Renew gasket (1).

  Parts: Gasket

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

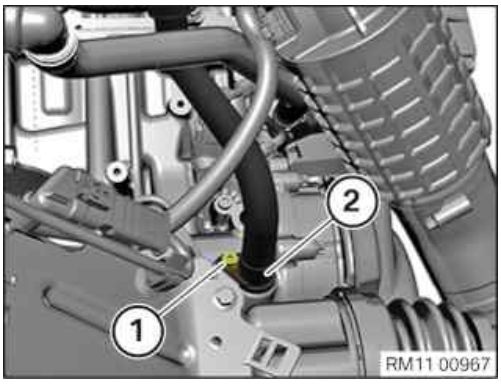
- Clean sealing surface.

cardiagn.com

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm

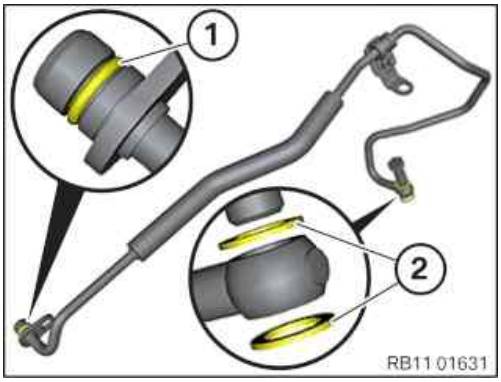


- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

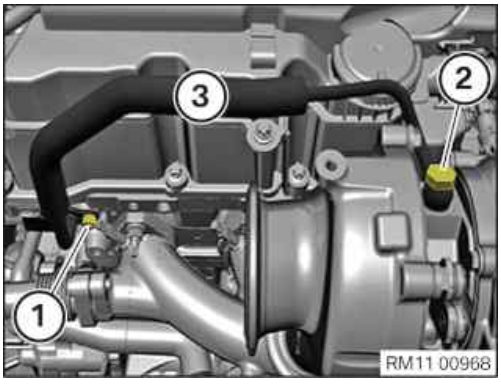
▸ **Install the oil feed line for the exhaust turbocharger**



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

▸ **Installing heat shield on exhaust turbocharger at the rear**

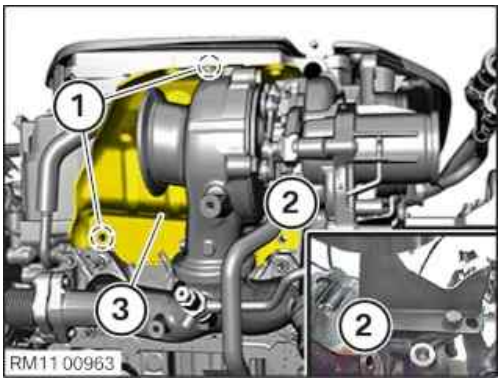
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

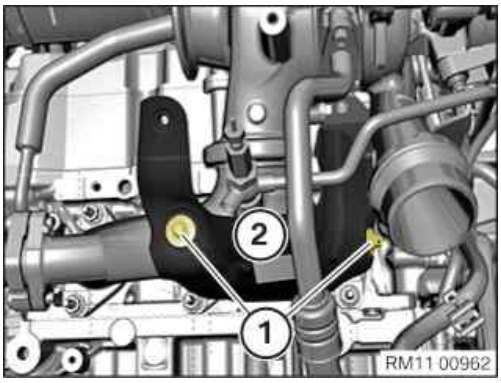
▶ **Installing heat shield on exhaust turbocharger at bottom**

WARNING

Hot surfaces.

Risk of burning!

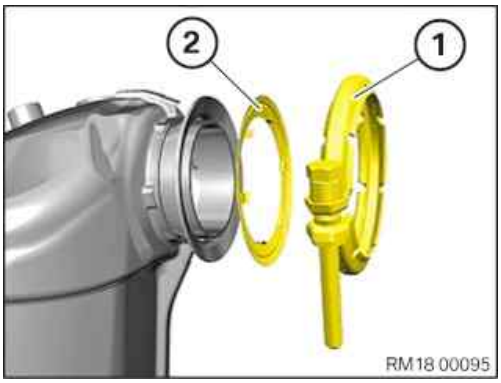
- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (2).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

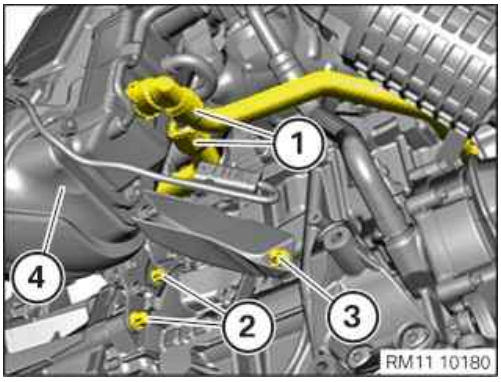
Torx screw BM 6x12		Tightening torque	10 Nm



- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

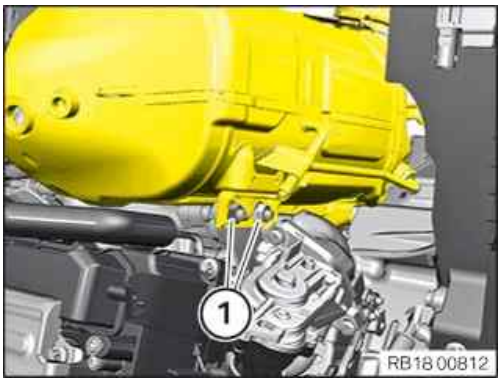
- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).

cardiagn.com



- Tighten nuts (1).

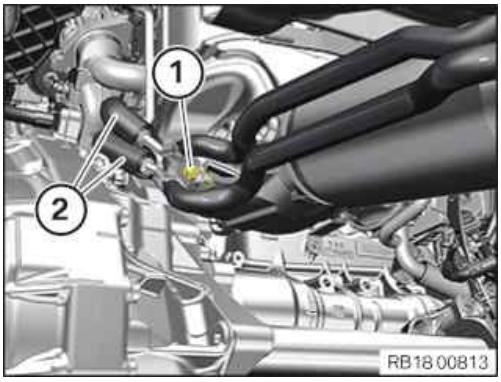
Diesel particle filter to holder

M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

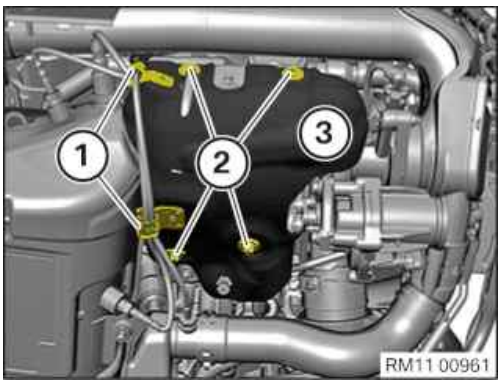
▸ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten down screws (2).

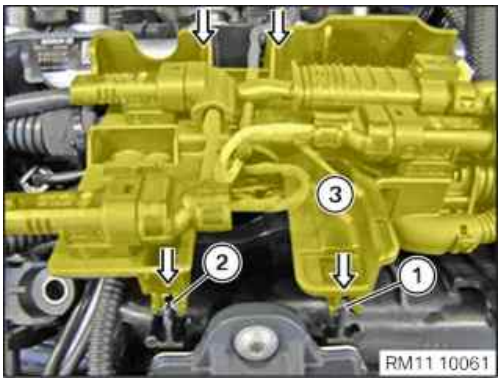
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

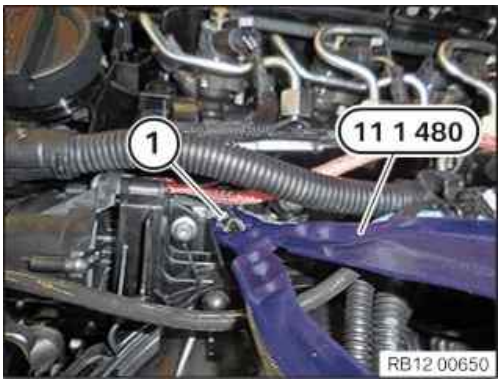
- Secure cable in holders (1).

▸ **Installing the cable clip for the intake plenum**

cardiagn.com

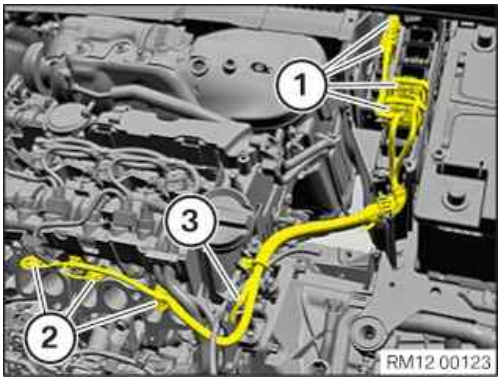


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

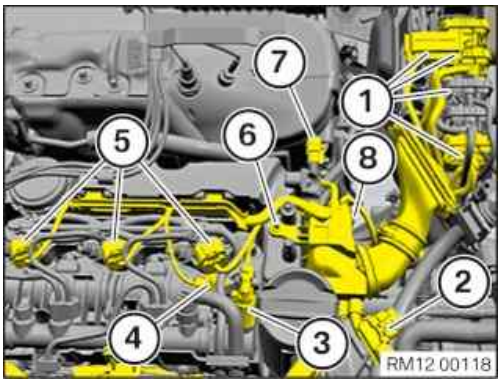
  The connector (1) must engage audibly.



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm



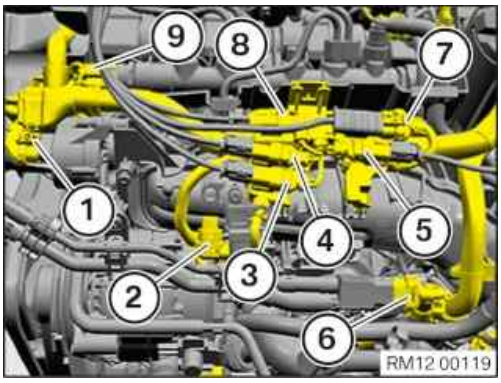
- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

Wiring harness to cylinder head cover

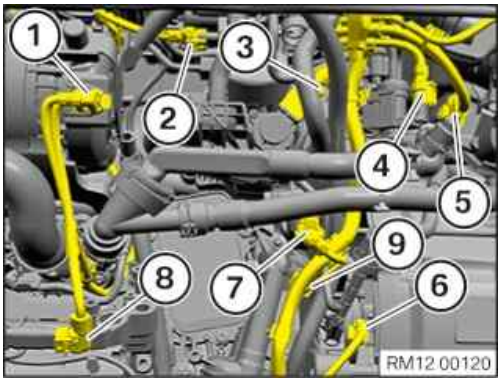
TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

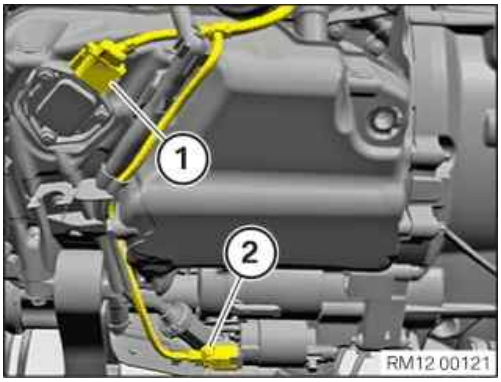
cardiagn.com



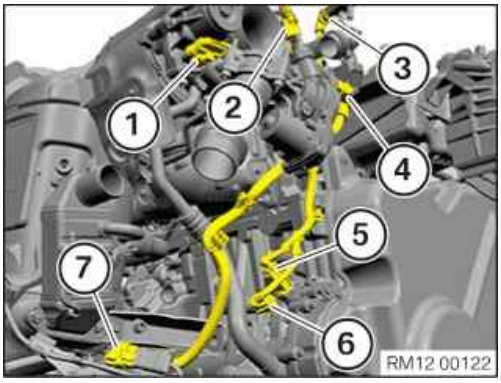
- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.



- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.



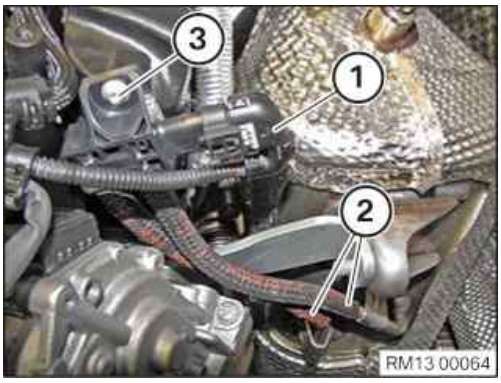
- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

53 – Installing differential pressure sensor

cardiagn.com



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

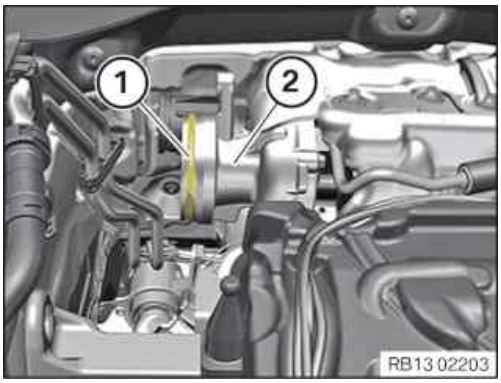
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

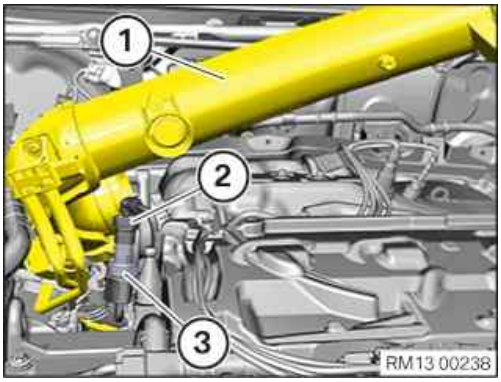
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

54 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.



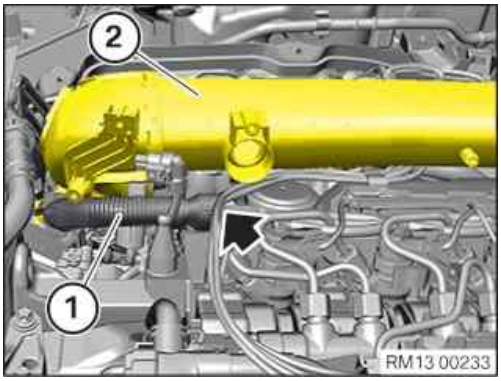
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

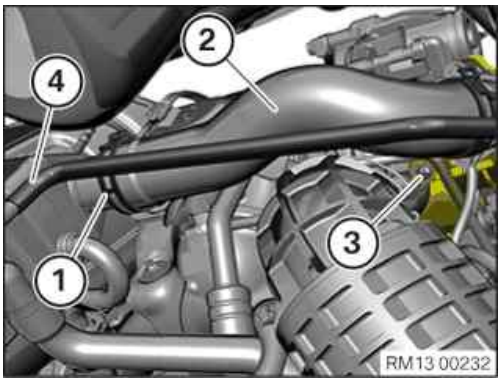
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.

cardiagn.com



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

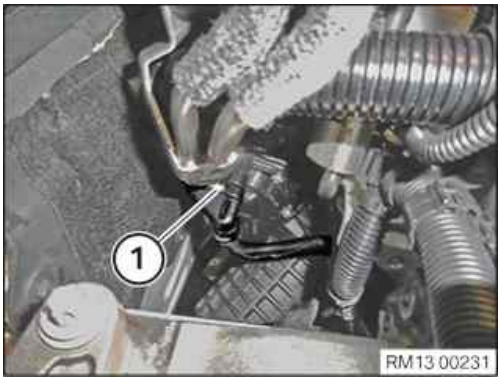
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

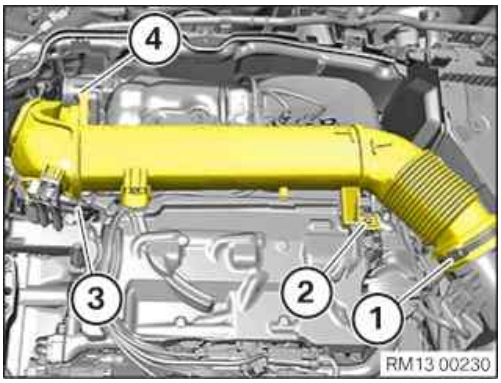
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

Oval-head screw	Renew screw.	Tightening torque	8 Nm

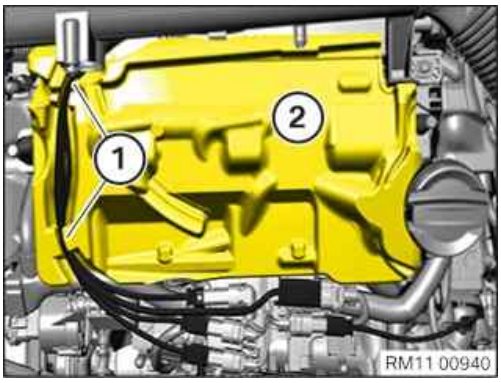
- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

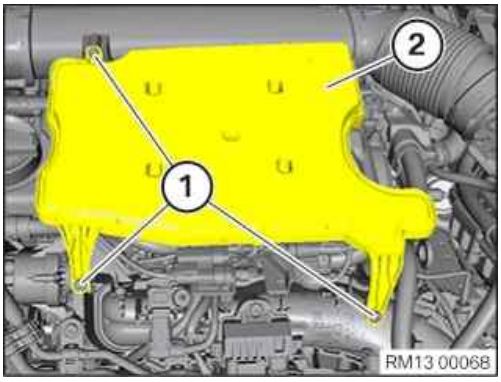
55 – Install the acoustic cover for the injectors

cardiagn.com



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

56 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

57 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

cardiagn.com

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

58 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head			Used in step 8
M8		Tightening torque	21,5 Nm

Special tool 2 455 010 to crankcase			Used in step 9
M10x30		Tightening torque	38 Nm

Special tool 11 8 930 to special tool 00 2 320			Used in step 9
M14x35		Tightening torque	160 Nm

Standard screw connection M6			Used in step 29 30 40 52
M6			8 Nm

Gear to counterbalance shaft			Used in step 30
	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °

Rear timing case cover to crankcase			Used in step 31
M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

SCR coolant lines to crankcase end cover			Used in step 31

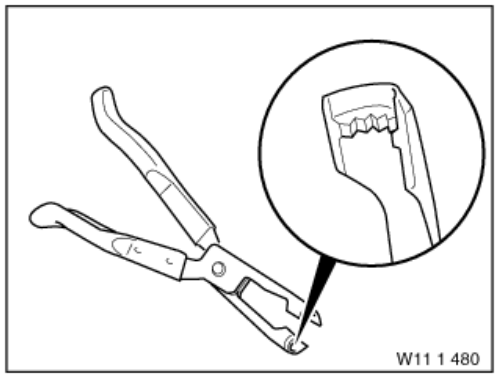
Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

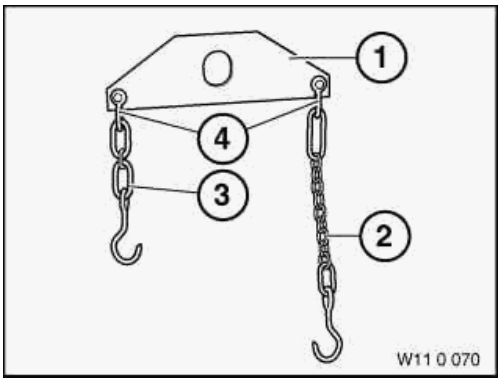
2 459 012 Holder

Common Used in step 8 51

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

cardiagn.com

0 490 579 (11 0 070) Lifting gear



Common Used in step 8 9 50 51

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Chain** (Chain) Version: long As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

2 455 010 Engine support

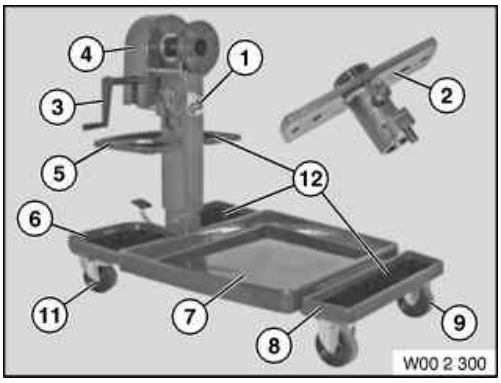
Common Used in step 9 50

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand

Used in step 9

cardiagn.com



Common

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)

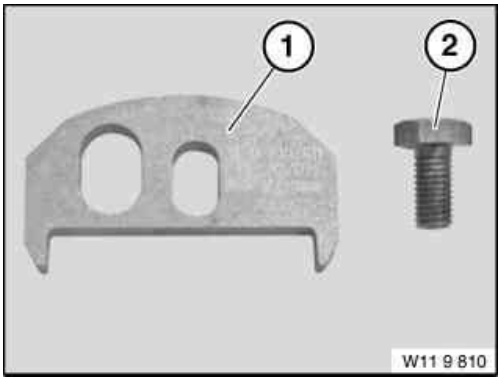
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

0 496 171 (11 9 811) Holder



Common

Used in step 26 27 32

Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

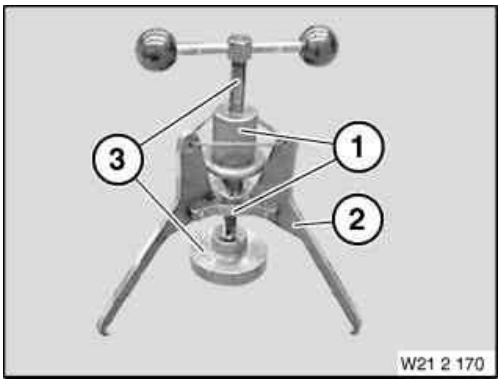
cardiagn.com

0 494 793 (11 9 265) Bush

Common Used in step 26 27 32

Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

0 493 839 (21 2 170) Device



Common Used in step 26 33

Usage	(tensioning device) For resetting adjusting ring and installing self-adjusting clutch on flywheel without tension.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 00 (622)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 494 558 (21 2 171)		**Basic body** (Basic body) Basic body with adjusting spindle Deletion, only available via tool set	
2	0 494 559 (21 2 172)		**Claw** (Clamping claw (1 piece)) Available as part of complete tool set 0493839 only.	
3	0 494 560 (21 2 173)		**Spindle** (Pressure spindle with washer) Available as part of complete tool set 0493839 only.	

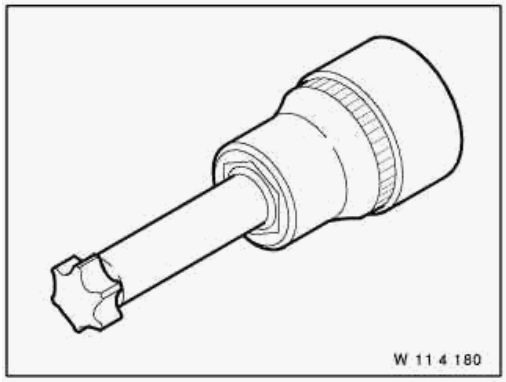
cardiagn.com

2 288 165 Synchronising key

Common Used in step 26 33

Usage	Conversion kit for 21 2 170, for orders till 02.2014. Orders as of March 2014 do not require the conversion, as the new thrust piece has been accounted for.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 09 14 (088)

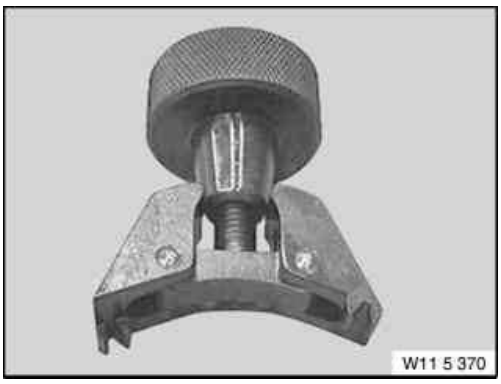
0 491 018 (11 4 180) Socket WAF 46



Common Used in step 27 32

Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

0 495 131 (11 5 370) Tool



Common Used in step 29 30

Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

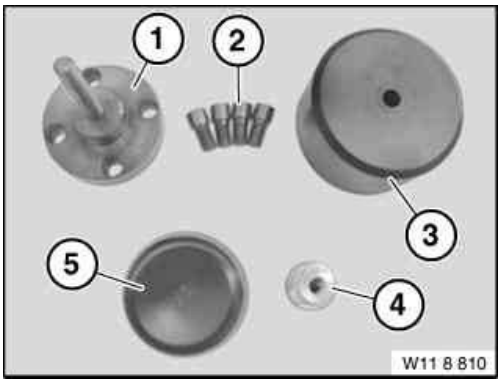
cardiagn.com

2 288 943 Striking tool

Common Used in step 29

Usage	For dismantling the ring gear of the counterbalance shaft.. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

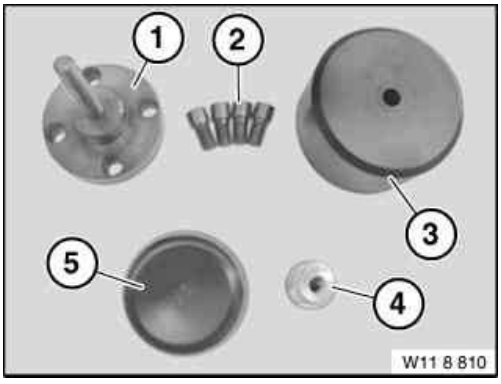
0 496 137 (11 8 815) Holding sleeve



Common Used in step 31

Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 133 (11 8 811) Basic body



Common Used in step 31

Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with

11 27 020 Removing and installing/replacing the counterbalance shaft

PRELIMINARY WORK

1 – Removing engine

- See additional information.

2 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

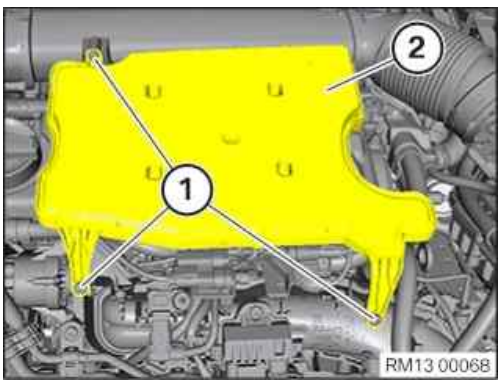
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

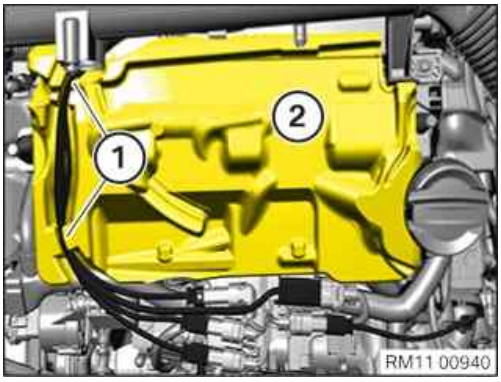
3 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

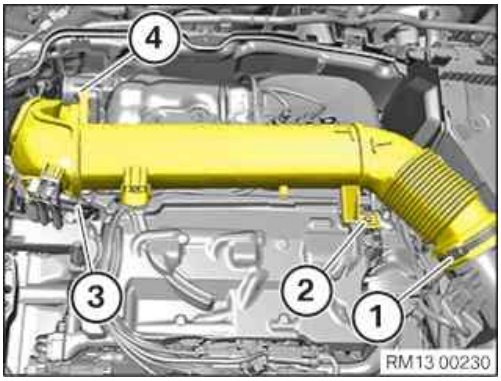
cardiagn.com

4 – Remove the acoustic cover for the injectors

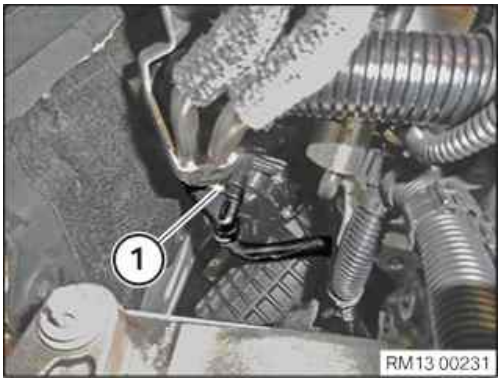


- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

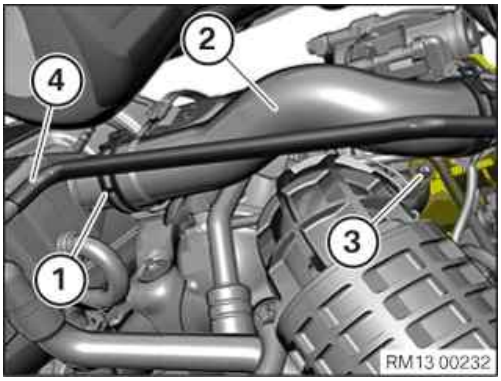
5 – Removing clean air pipe



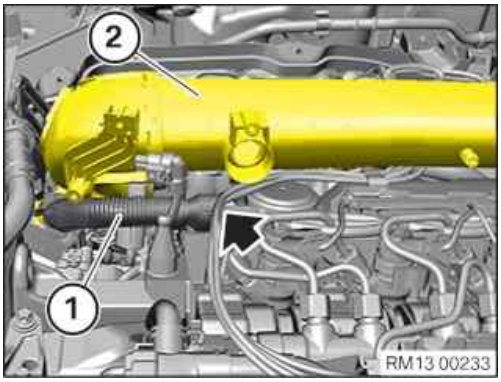
- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).



- Unlock and loosen connector (1).

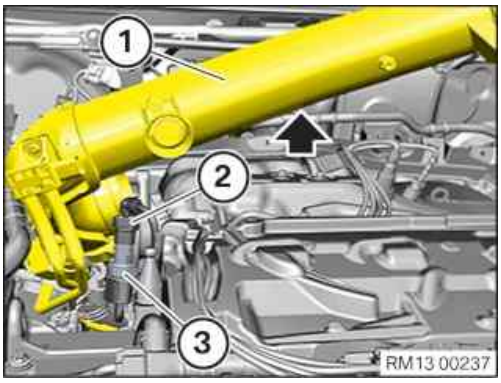


- Unfasten clamp (1).
- Feed out pressure hose (2) and set it aside.
- Loosen screw (3).
- Pull off pressure hose (4) and set it aside.



- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

cardiagn.com



- Thread out clean air pipe (1) upwards in direction of arrow and set it aside.
- Unlock and loosen connector (2).
- Detach exhaust gas pressure sensor (3).
- Guide out and remove the exhaust gas pressure sensor (3).
- Feed out clean air pipe and remove (1).

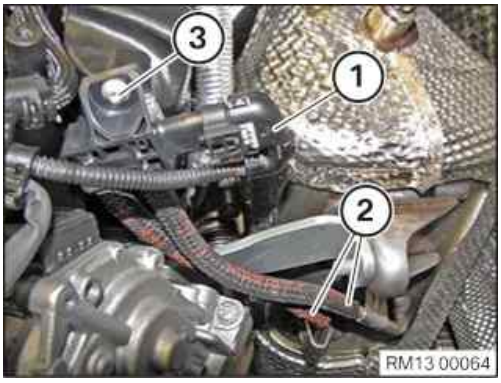
6 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

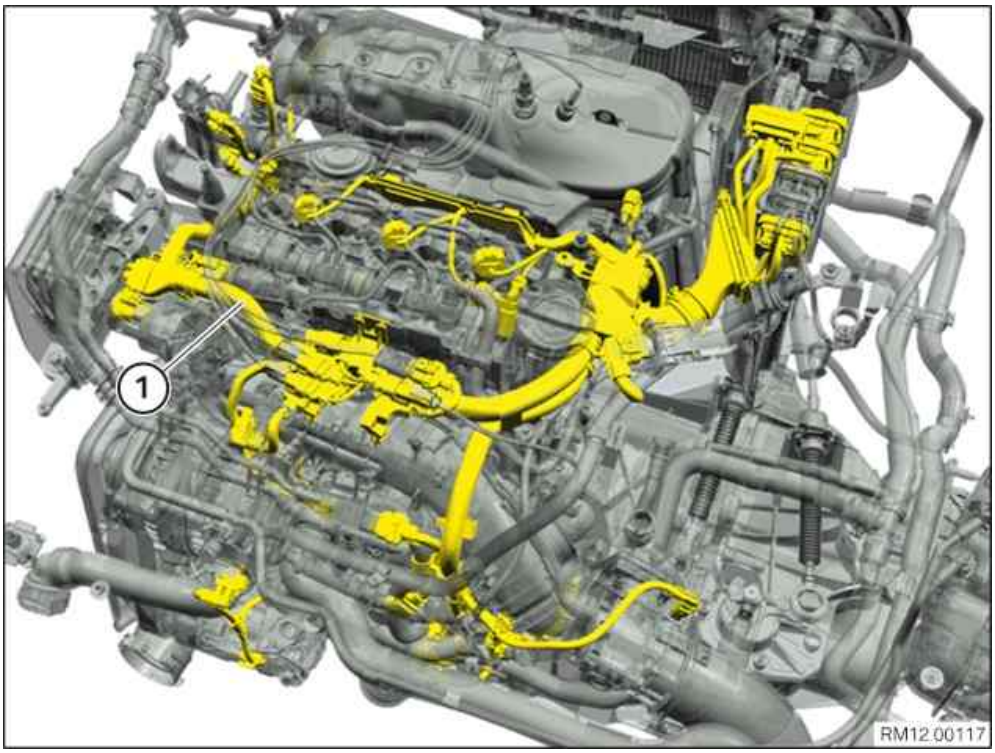


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

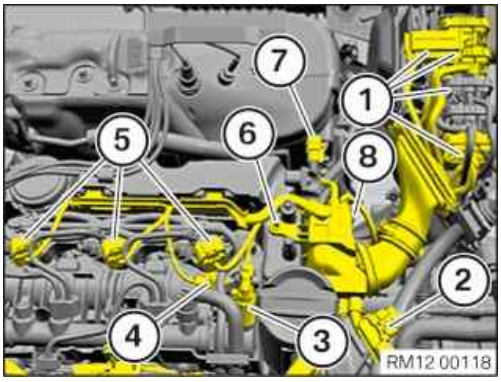
7 – Removing assemblies (on lifting table)

cardiagn.com

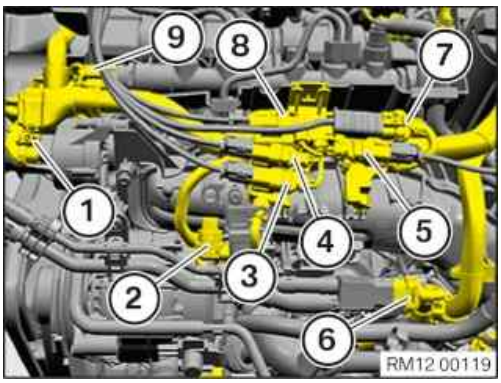
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



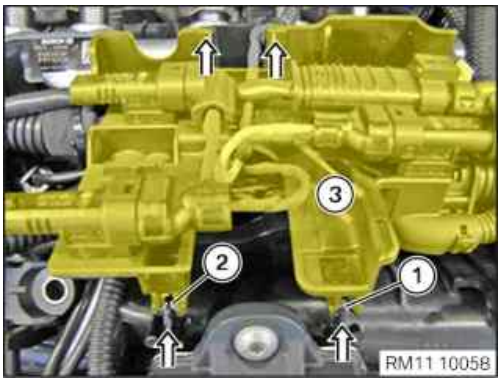
- Remove the connector (1) of the integrated supply module (PDM) and the DME control unit.
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock the connector (3) and disconnect it from the fuel pressure regulator.
- Unlock the connector (4) and disconnect it from the camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock the connector (7) and disconnect it from the differential pressure sensor.
- Unlock the connector (8) and disconnect it from the exhaust-gas recirculation valve.



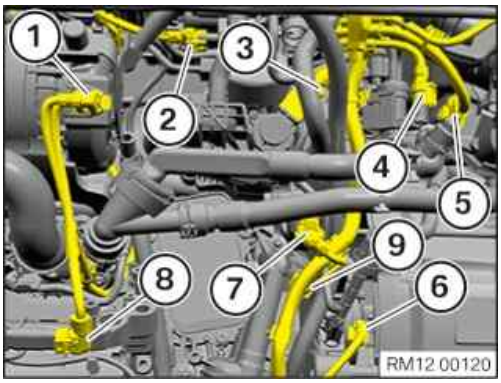
- Unlock the connector (1) and disconnect it from the servomotor for the swirl flaps.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock the connector (3) and disconnect it from the exhaust temperature sensor after the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock the connector (6) and disconnect from the fuel pressure and temperature sensor.
- Unlock connector (7) and pull it off from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.
- Unlock connector (9) and pull off from the rail pressure sensor.

▶ **Removing the cable clips from the intake plenum**

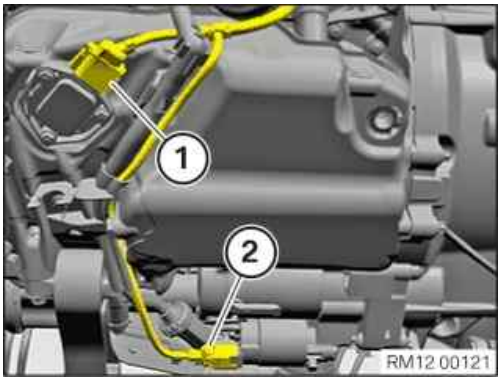
cardiagn.com



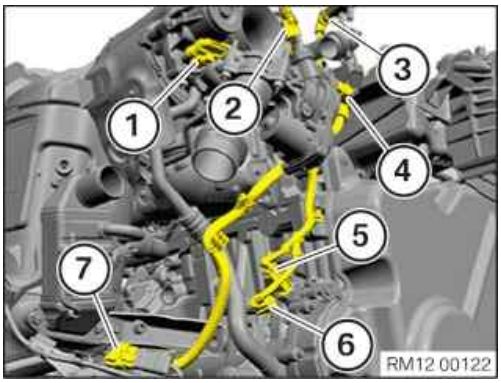
- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.



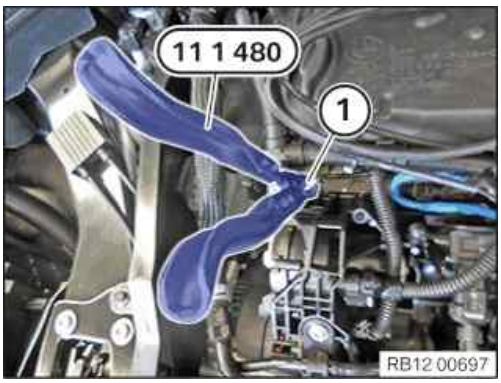
- Unlock and disconnect the connector (1) from the alternator.
- Unlock and disconnect the connector (2) from the electric changeover valve.
- Unlock the connector (3) and pull it off the high pressure pump.
- Unlock and disconnect the connector (4) from the electric changeover valve.
- Unlock connector (5) and pull off from throttle body.
- Unlock the connector (6) and pull it off the crankshaft sensor.
- Unlock the connector (7) and disconnect it from the oil pressure sensor.
- Unlock the connector (8) and disconnect it from the air conditioning compressor.
- Unlock and disconnect the connector (9) from the solenoid valve.



- Unlock the connector (1) and pull off of the oil-level sensor.
- Unlock connector (2) and remove from starter motor.

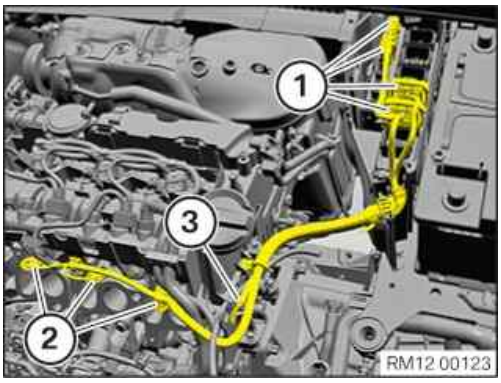


- Unlock the connector (1) and pull it off the exhaust turbocharger.
- Unlock the connector (2) and disconnect it from the exhaust gas pressure sensor.
- Unlock the connector (3) and disconnect it from the differential pressure sensor.
- Unlock connector (4) and pull off from low pressure exhaust-gas recirculation valve.
- Unlock the connector (5) and pull it off the oil pressure switch .
- Unlock connector (6) and disconnect from switching valve.
- Unlock connector (7) and pull it off from the monitoring oxygen sensor.
- Detach, feed out and remove the wiring harness from the clamps.



- Unlock the connectors (1) of all glow elements with the special tool **0 490 796 (11 1 480)** and release them.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.

cardiagn.com



- Pull off the connector (2) of the glow elements using the special tool **0 490 796 (11 1 480)** .
- Loosen screw (3).
- Guide out and remove the connector (1) with the wiring harness.

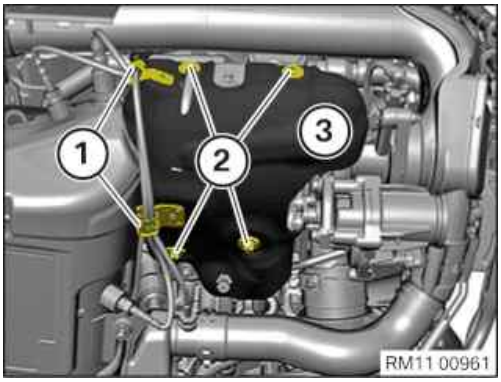
▶ Removing heat shield from top exhaust turbocharger

WARNING

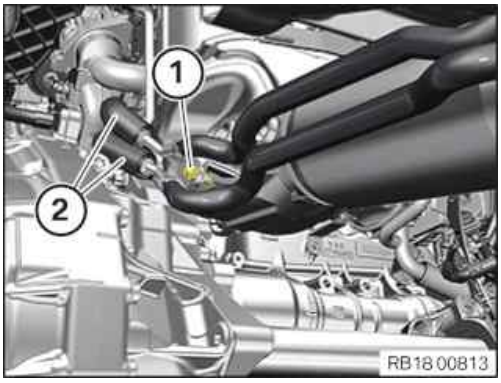
Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



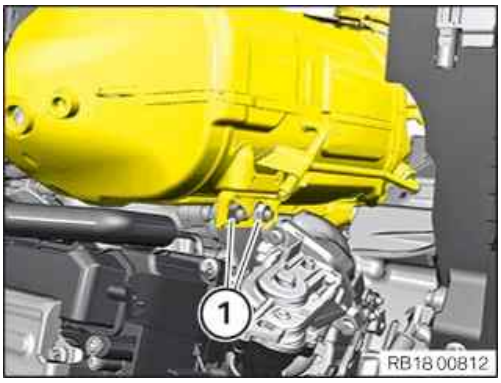
- Release cable from brackets (1).
- Loosen screws (2).
- Feed out and remove the heat shield (3).



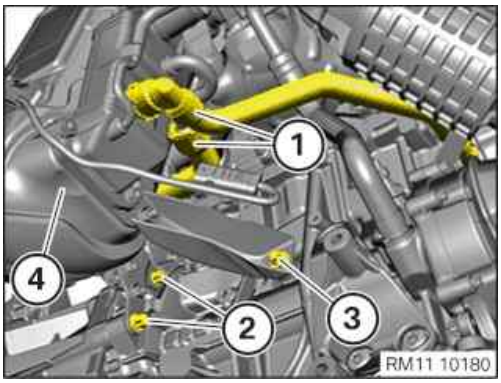
- Loosen screw (1).
- Thread out the coolant lines (2) of the SCR metering module and set aside.

- Loosen V-band clamp (1).
- Feed out V-band clamp (1) and remove.

cardiagn.com



- Loosen nuts (1).



- Unlock and pull off coolant lines (1).
- Loosen screws (2).
- Loosen screw (3).
- Guide out and remove diesel particulate filter (4).

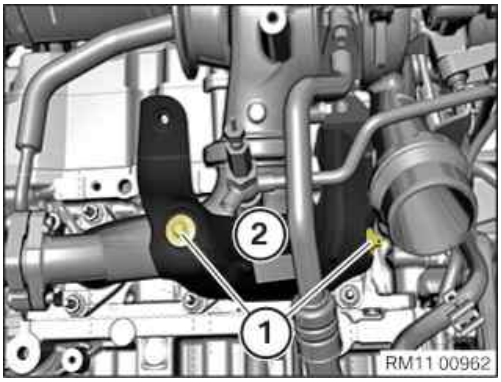
▶ **Remove the heat shield from the exhaust turbocharger at the bottom**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Loosen screws (1).
- Feed out and remove the heat shield (2).

▶ **Removing heat shield from rear exhaust turbocharger**

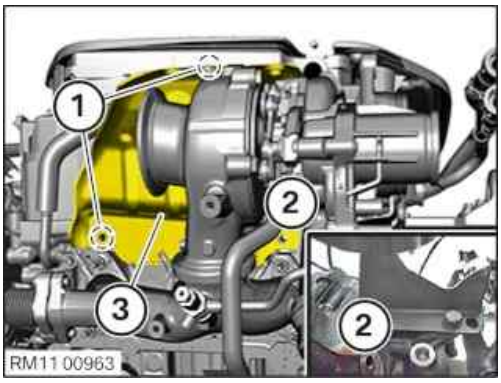
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



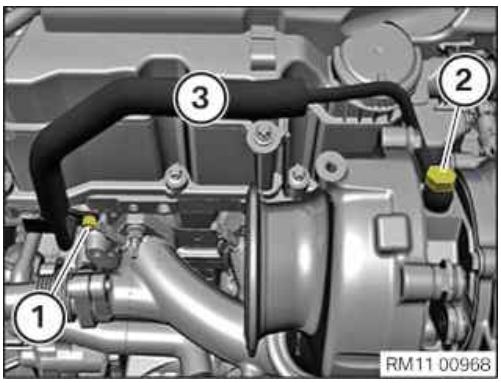
- Loosen screws (1).
- Loosen screw (2).

  Rear screw of the bracket on the exhaust turbocharger.
- Feed out and remove the heat shield (3).

▶ **Remove the oil feed line for the exhaust turbocharger**

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Loosen screw (1).
- Unscrew the banjo bolt (2).
- Pull the oil feed line (3) out of the cylinder head, guide it out and remove it.

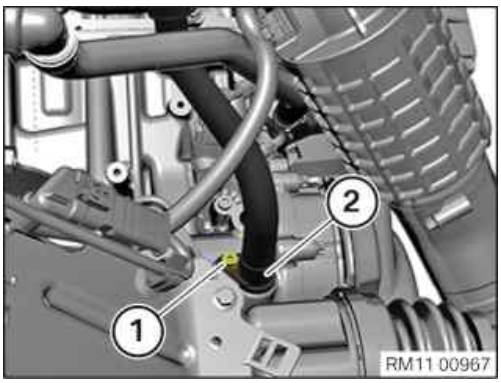
▶ **Removing the oil return line for the exhaust turbocharger**

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.



TECHNICAL INFORMATION

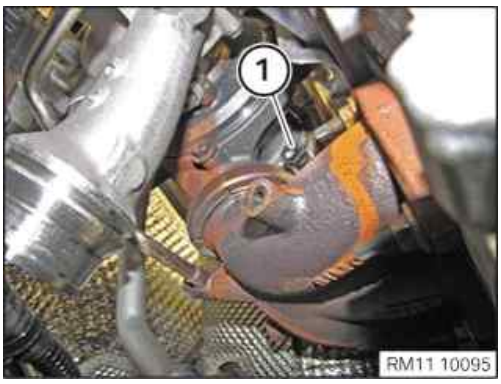
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screw (1).
- Pull the oil return line (2) out of the crankcase.

cardiagn.com

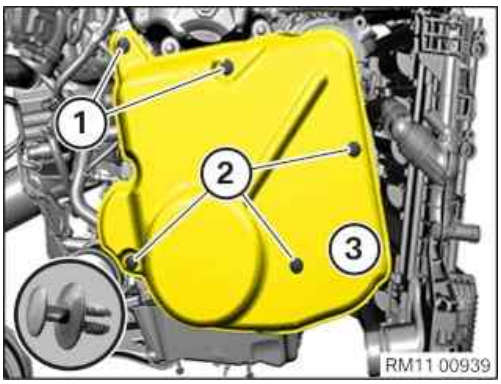
- Loosen screws (1).
- Feed out and remove oil return line (2) downwards.

- Release the screw (1) for the bracket on the exhaust turbocharger and on the crankcase.



- Release the V-clip (1) and remove.
- Take the exhaust turbocharger off of the exhaust manifold.

▶ **Removing the acoustic cover for the engine at the front**



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

▶ **Removing the drive belt for alternator**

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

cardiagn.com

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

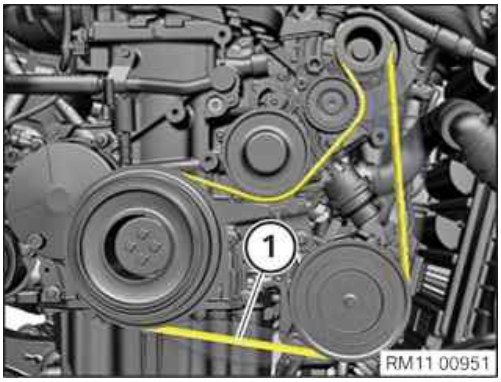
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

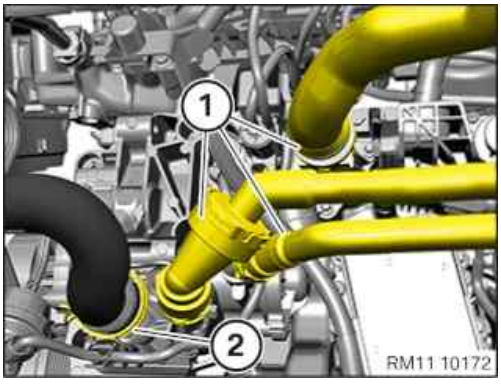
TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .

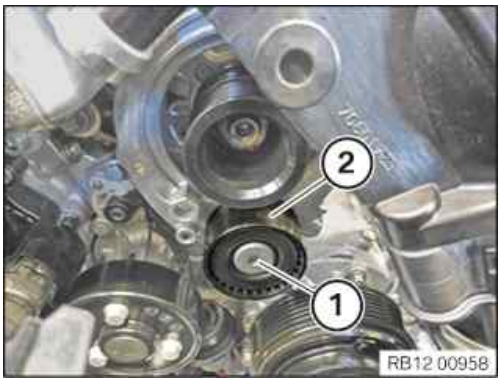


- Guide out the drive belt for the alternator (1) and remove it.

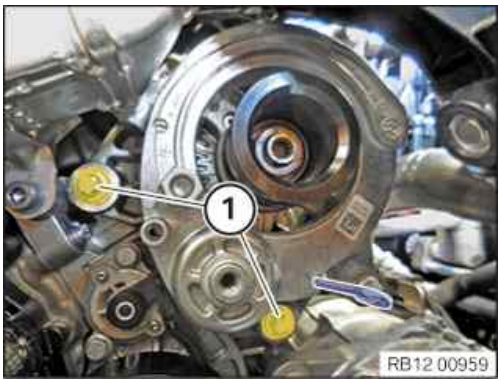


- Unlock and remove coolant lines (1).
- Release the clamp (2) and remove the coolant hose.

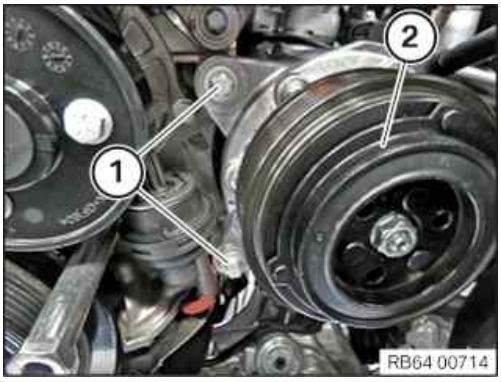
cardiagn.com



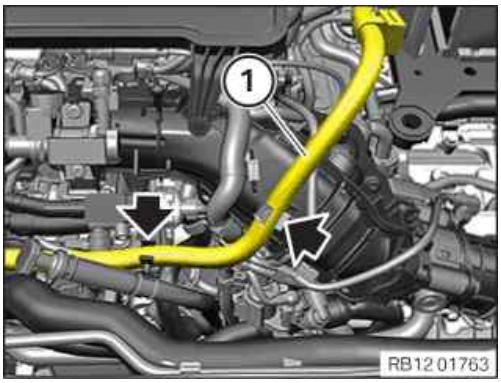
- Loosen screw (1).
- Remove the deflecting element (2).



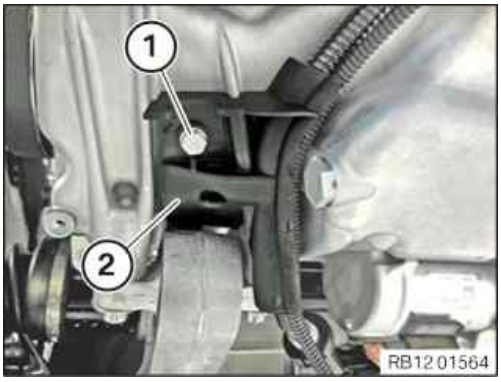
- Loosen screws (1).
- Remove alternator.



- Loosen screws (1).
- Remove air conditioning compressor (2).



- Release the positive battery cable (1) from the clamps (arrows).



- Loosen screw (1).
- Guide out and remove holder (2).

cardiagn.com

- Feed out positive battery cable from the clamps (1) and remove.

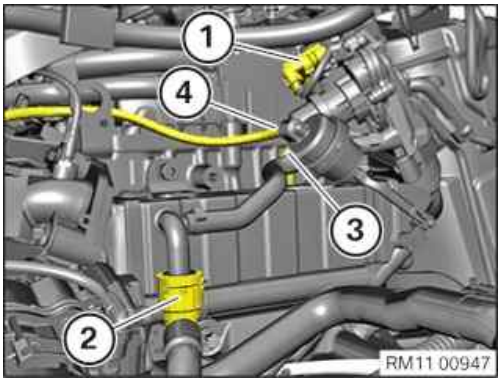
▶ Removing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

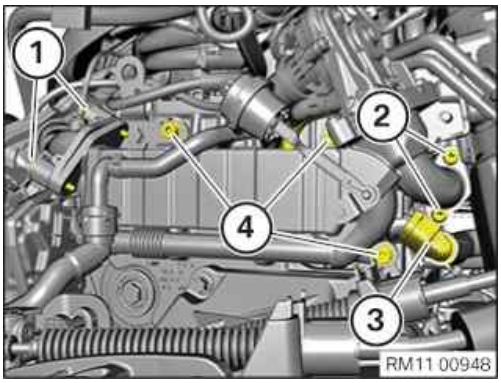
- Perform all work only on components that have cooled down.



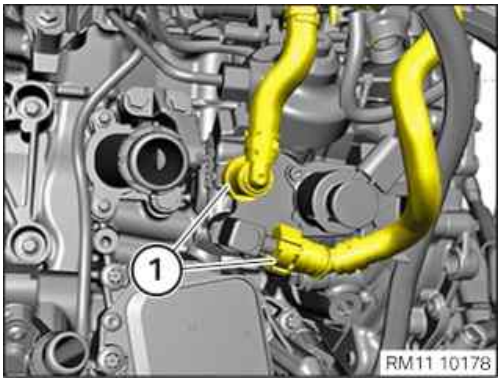
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.

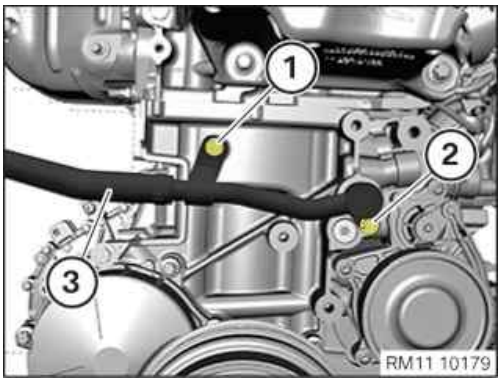


- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.



- Unlock the fuel lines (1) and release them from the high pressure pump.
- Remove the fuel lines (1) .

cardiagn.com



- Loosen screws (1) and (2).
- Remove coolant line (3).

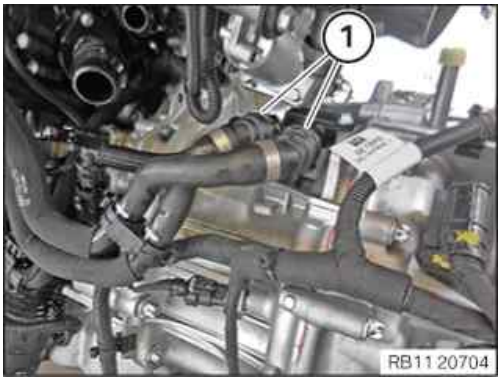
8 – Disconnect the engine from the double-clutch transmission (DKG)

RISK OF DAMAGE

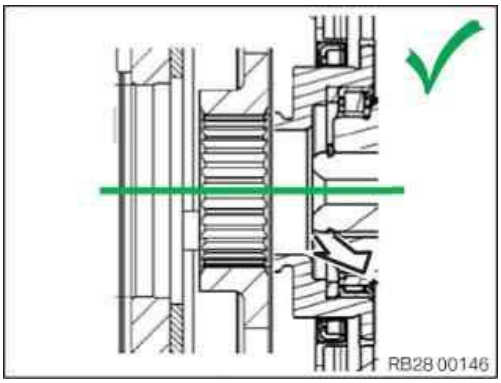
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

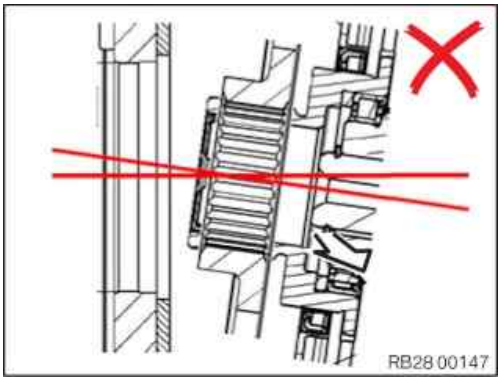
- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.



- Unlock and release coolant line (1).
- Catch and dispose of escaping coolant.



- **Correct:** Pull the double-clutch transmission (DKG) horizontally off the flywheel.



- **Wrong:** Do not pull the double-clutch transmission (DKG) off the flywheel if it is tilted.

cardiagn.com

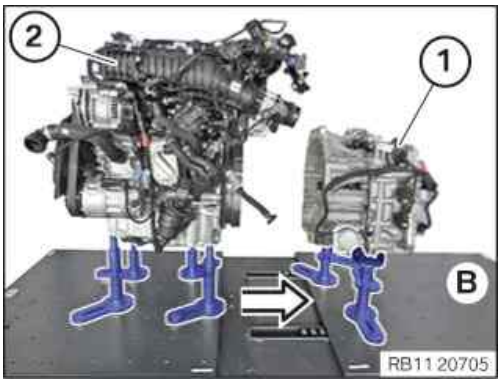
- Remove screws (arrows).
- Pull the double-clutch transmission (DKG) (1) off the flywheel when it is **absolutely** horizontal.



NOTICE

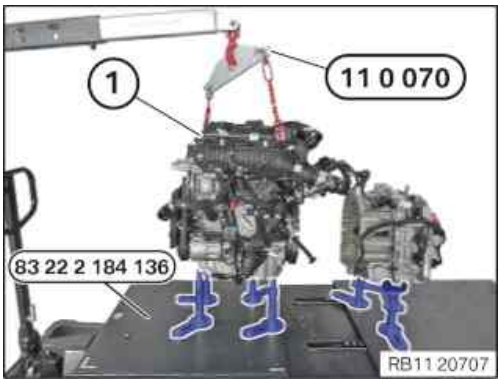
Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table top (B) in the direction of arrow and disconnect double-clutch transmission (DKG) (1) from the engine (2).

- Guide in and position special tool **2 459 012** on cylinder head.
- Tighten the screws (1) of special tool **2 459 012**.

Special tool to cylinder head

M8		Tightening torque	21,5 Nm



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Attach the engine lifter with the special tool **0 490 579 (11 0 070)** and lift the engine (1) off the lifting table.

9 – Mount engine on assembly stand

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

cardiagn.com

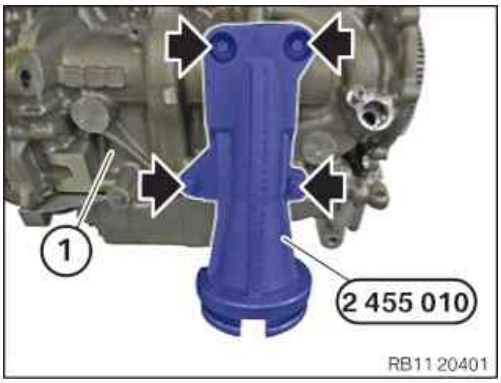
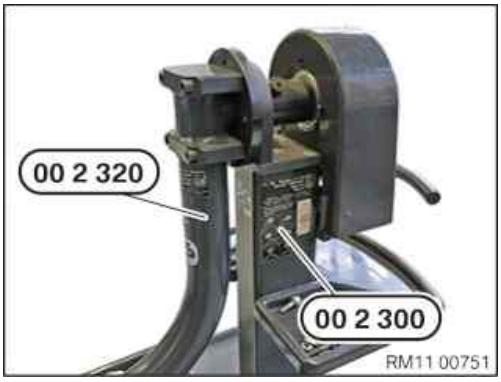
- Loosen screws (1).
- Guide out and remove holder (2).



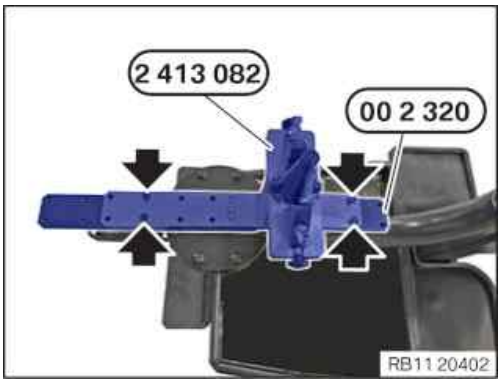
- Position the special tool **2 455 010** on the engine (1).
- Position the standard bolts **M10x30**.
- Tighten the standard bolts (arrows).
-

Special tool 2 455 010 to crankcase

M10x30		Tightening torque	38 Nm



- Prepare the assembly stand **0 495 187 (00 2 300)** with the special tool **0 495 196 (00 2 320)**.



- Screw the special tool to the **0 495 196 (00 2 320)** special tool.
- Tighten screws (arrows).
-

Special tool 11 8 930 to special tool 00 2 320

M14x35		Tightening torque	160 Nm

- Position the engine lifter with the special tool **0 490 579 (11 0 070)** and the engine on the special tool **0 495 187 (00 2 300)**.

cardiagn.com

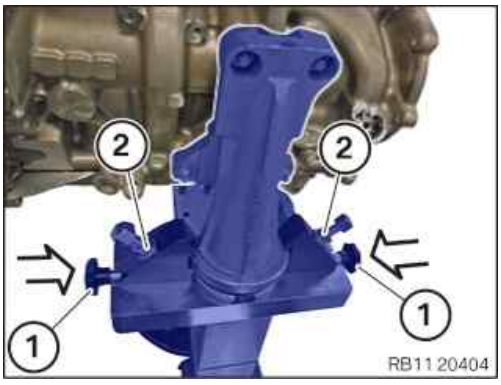
- Detach the holder (2) in the direction of the arrow.
- Position the engine (1) with the special tool **2 455 010** in the direction of the arrow on the special tool .



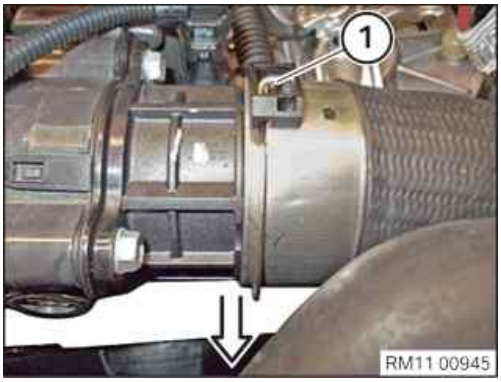
- Lock the holder (1) in direction of arrow.
- Tighten nuts (2).

10 – Removing the intake plenum

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

cardiagn.com

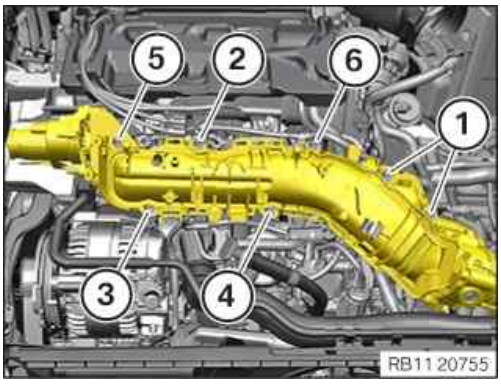
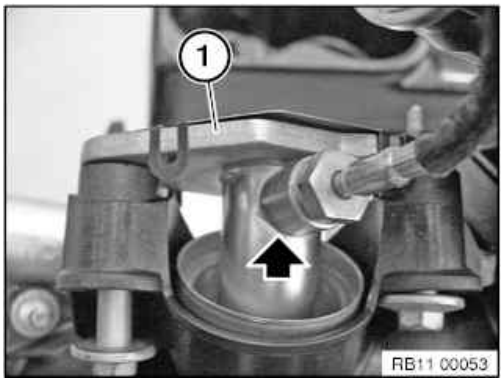
- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

11 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

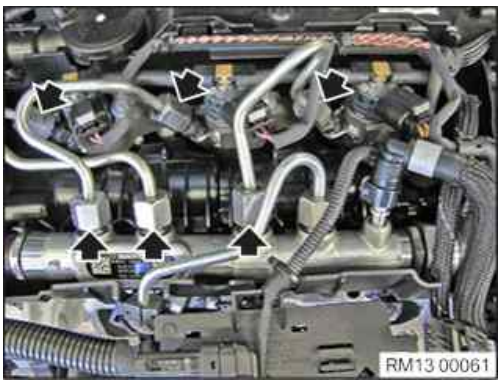
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

12 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

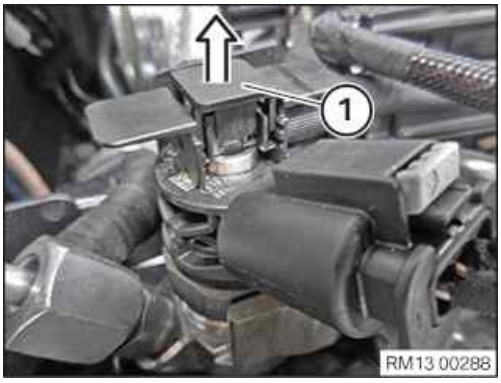
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

13 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.

cardiagn.com

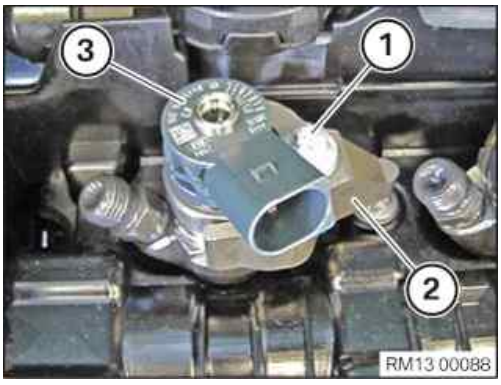
- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

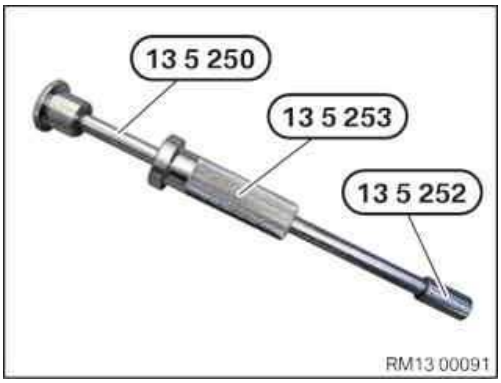
▶ **Loosen stuck injectors**

RISK OF DAMAGE

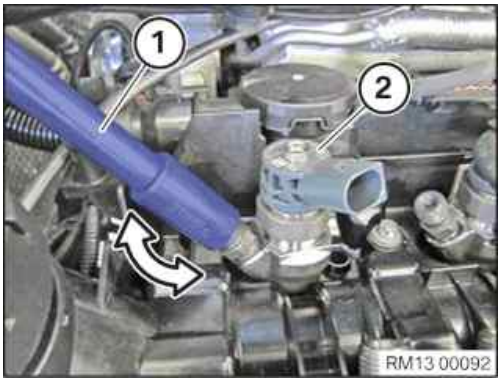
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)**back onto the special tool **0 493 321 (13 5 250)**.



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

14 – Remove high-pressure rail

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

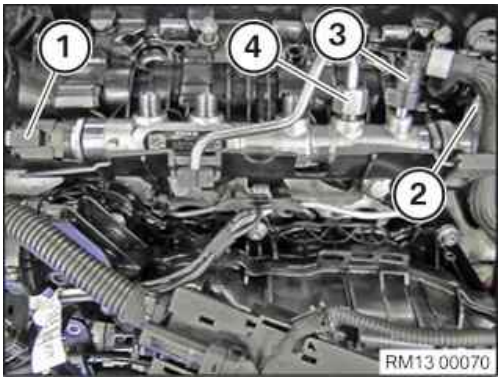
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

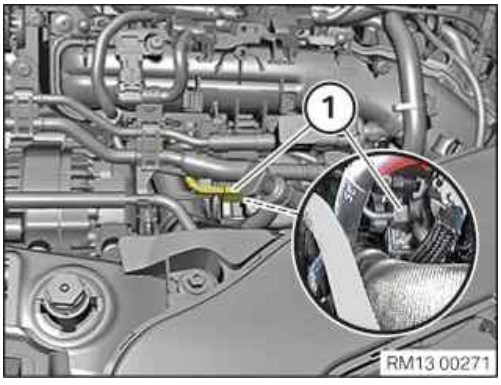
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.

cardiagn.com

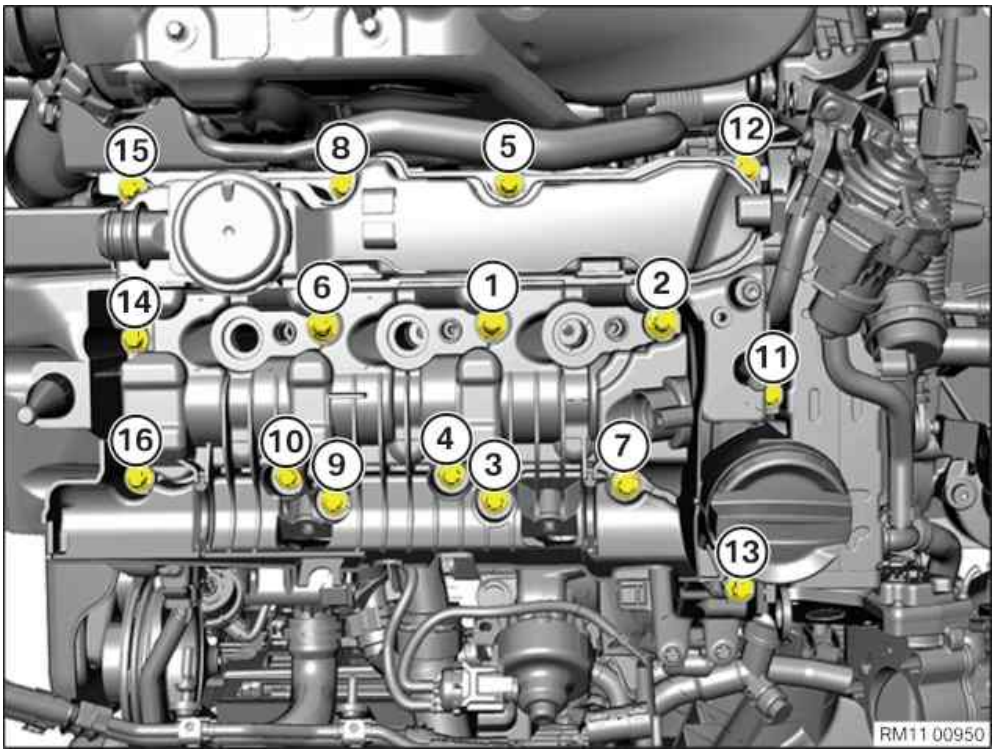
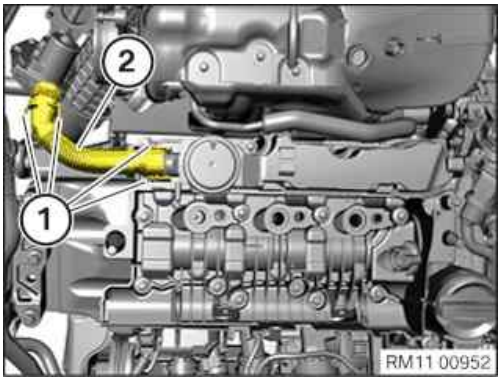
- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

15 – Removing the cylinder head cover

Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).

cardiagn.com

- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

16 – Checking camshaft timing

- Remove protective cap (1) from oil sump.
- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

cardiagn.com

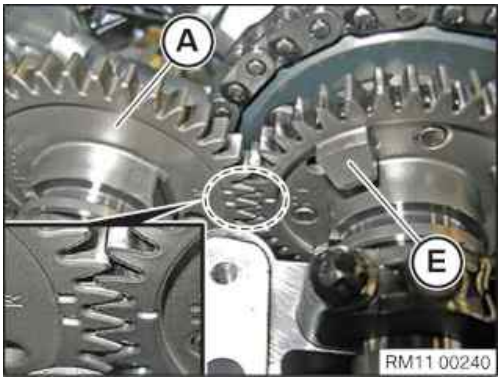
- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

17 – Remove chain tensioner piston

cardiagn.com

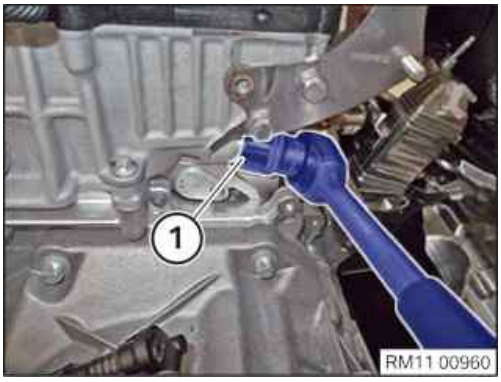
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

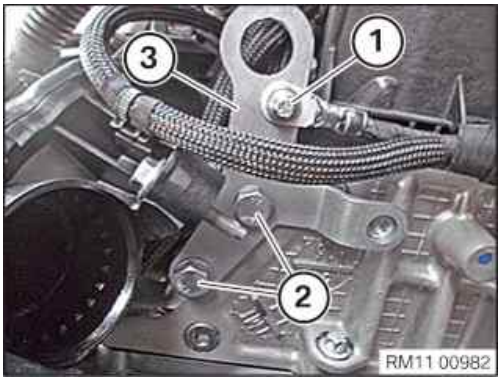


TECHNICAL INFORMATION

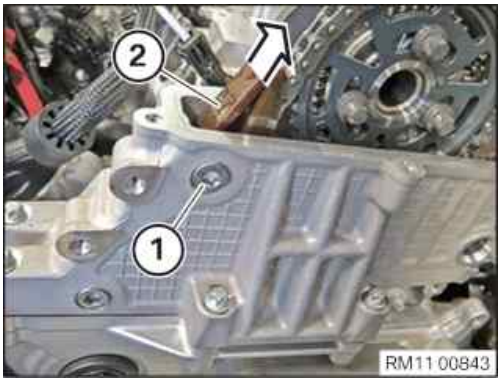
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

18 – Remove the timing chain guide rail

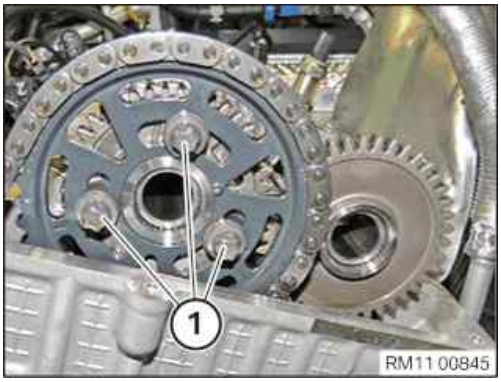


- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

19 – Removing the camshaft sprocket on the intake camshaft



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

20 – Removing the camshaft support

cardiagn.com

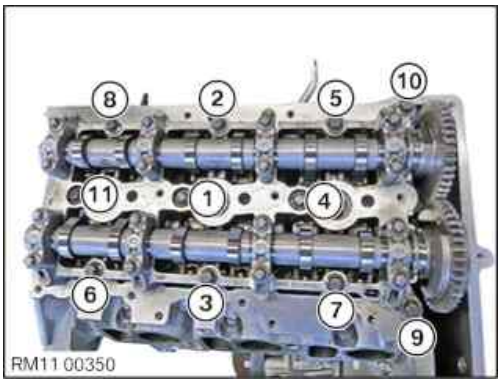
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Loosen all screws step-by-step of the camshaft support in sequence (11) to (1).
- Remove camshaft support in upward direction.

  The camshafts remain installed in the camshaft support.

21 – Removing glow elements

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Damage to the glow elements.

Excessive force may damage the glow elements and they may then have to be renewed.

- Handle glow elements with care and do not drop.
- Do not rest the cylinder head on glow elements. Glow elements protrude from the sealing surface of the cylinder head.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

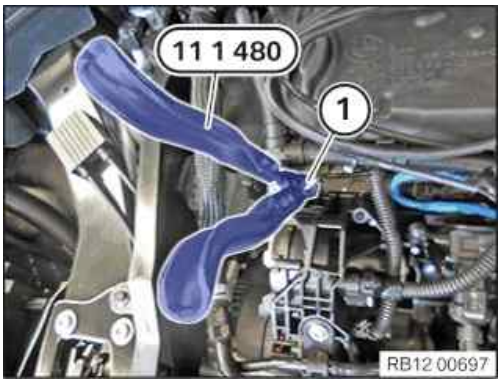
- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Unlock and disconnect plug connection (1) using special tool **0 490 796 (11 1 480)**.

- Release the glow elements with the special tool **0 491 068 (11 6 050)** or conventional tools.
- Feed out preheating elements and remove.

22 – Remove roller cam followers

cardiagn.com

- Guide out and remove all roller cam followers (1) (arrows).
- Place all roller cam followers (1) in order in special tool **0 495 105 (11 4 480)**.

  Roller cam followers that have already been used must be installed in same position again.

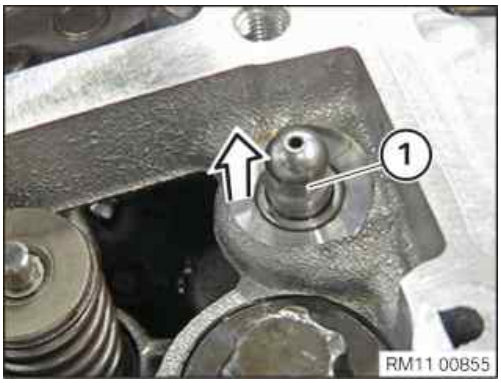
23 – Removing the hydraulic valve clearance compensating element

RISK OF DAMAGE

Contaminant or foreign body.

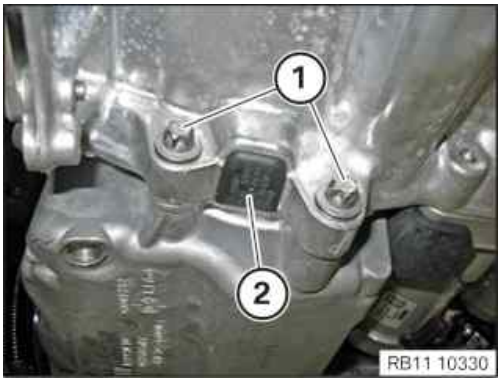
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

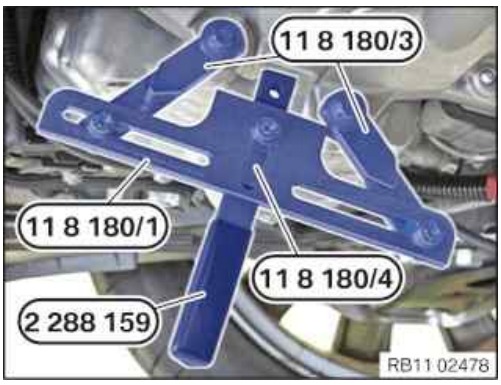


- Remove the hydraulic valve clearance compensating element (1) in the direction of the arrow and place on the special tool **0 495 105 (11 4 480)**.
- Repeat the process on all hydraulic valve clearance compensating elements.

24 – Removing the vibration damper



- Release the transmission bolts (1).
- Remove the protective cap (2).



- Position special tool **0 493 587 (11 8 180)** as illustrated.
- Fasten the special tool **0 493 587 (11 8 180)** to the transmission with transmission bolts.

cardiagn.com

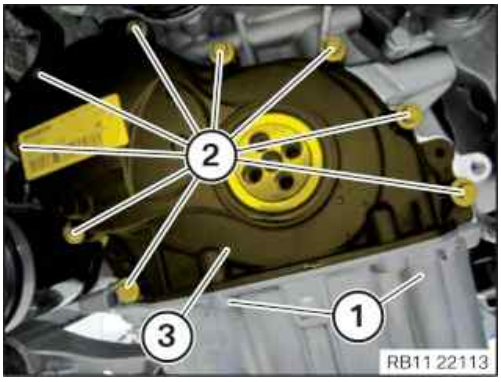
- Loosen screws in the area (1).
- Remove the vibration damper (2).

25 – Remove gear case cover



- Loosen screws (1).
- Loosen screws (2).
- Guide out and remove timing case cover (3).

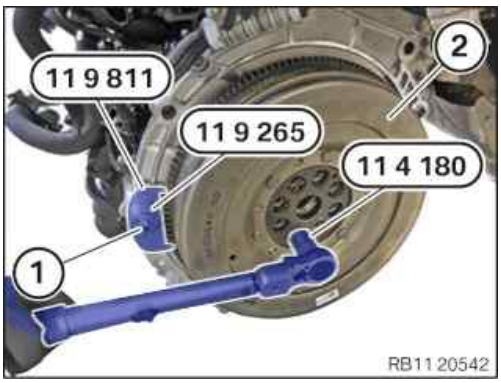
26 – Remove flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

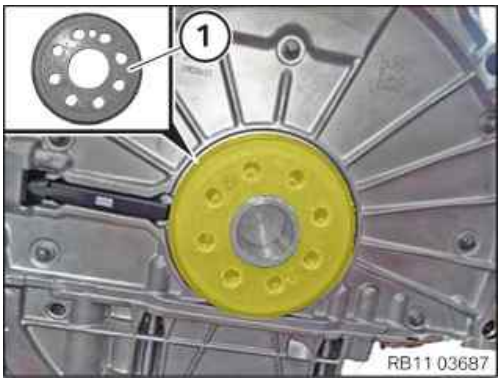
- Remove and install heavy components with the aid of another person/other persons.



- Position special tool **0 496 171 (11 9 811)** with a **standard** 5 mm thick washer between the crankcase and the flywheel.

  The 5 mm thick washer must be mounted between the crankcase and special tool **0 496 171 (11 9 811)** .
- Secure the special tool **0 494 793 (11 9 265)** with the transmission bolt (1).
- Protect the flywheel (2) from falling.
- Unscrew the flywheel bolts with the special tool **0 491 018 (11 4 180)**.
- Guide out the flywheel (2) and remove.

cardiagn.com



RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

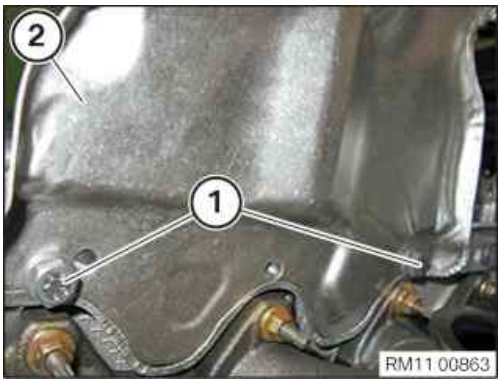
- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

- Remove increment wheel (1) from the crankshaft and set it aside properly.

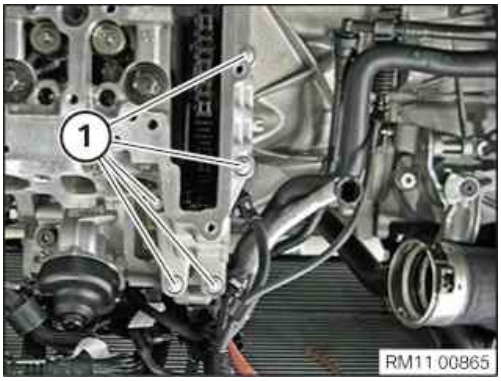
27 – Remove rear timing case cover

Prerequisite

Transmission is removed.



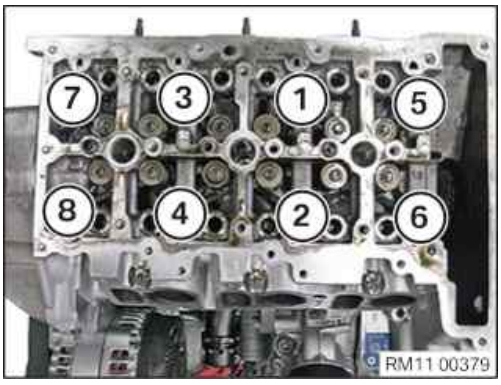
- Loosen screws (1).
- Feed out the heat shield (2) and place to one side.



TECHNICAL INFORMATION

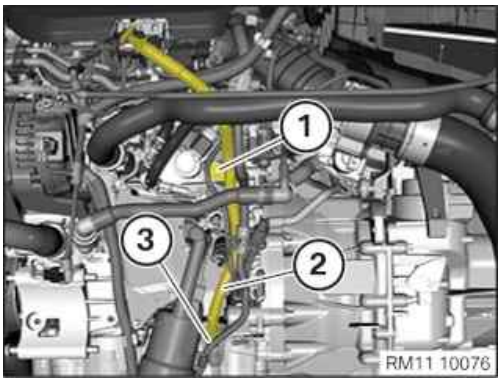
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen screws (1).

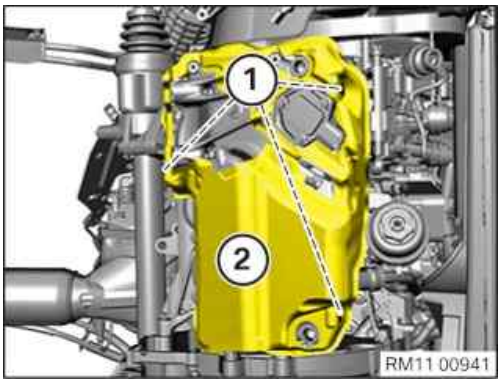


- Loosen the cylinder head bolts in the sequence from (8) to (1).

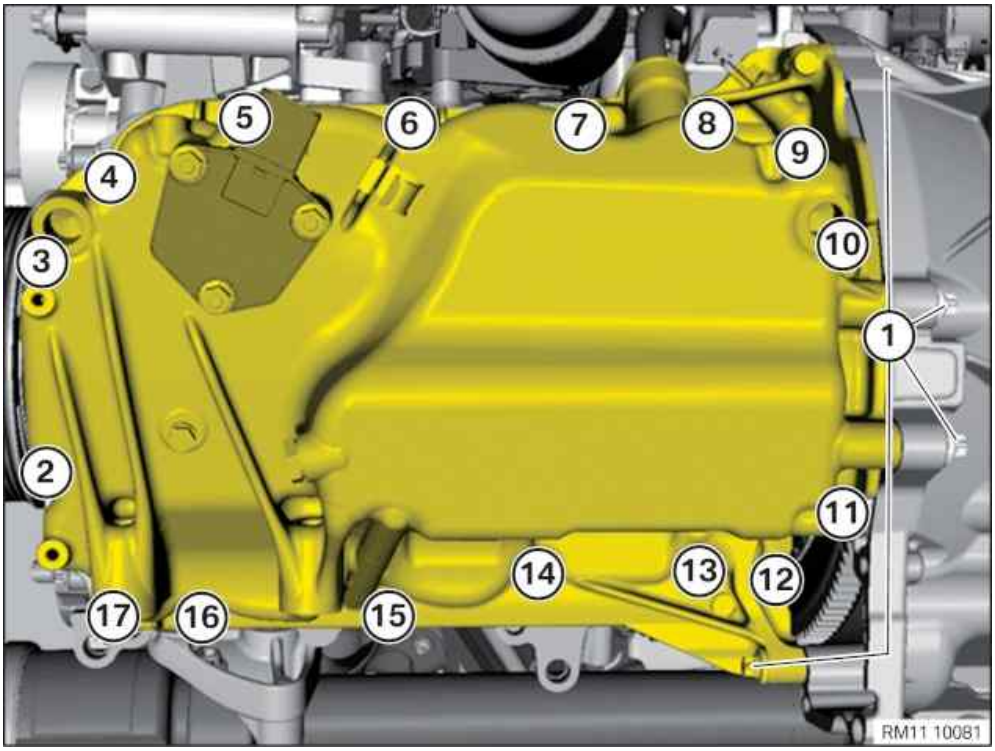
cardiagn.com



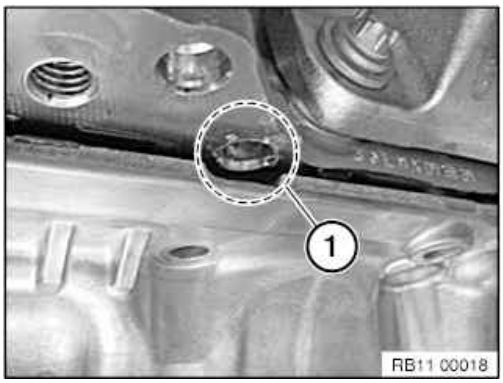
- Unscrew the bolt (1) in the marked area.
- Disconnect the guide tube (2) for the oil dipstick toward the top from the oil sump and remove it.
- If required, remove sealing ring (3) from oil sump.



- Remove the expanding rivet (1) on both sides of the acoustic cover (2).
- Feed out and remove the acoustic cover (2).

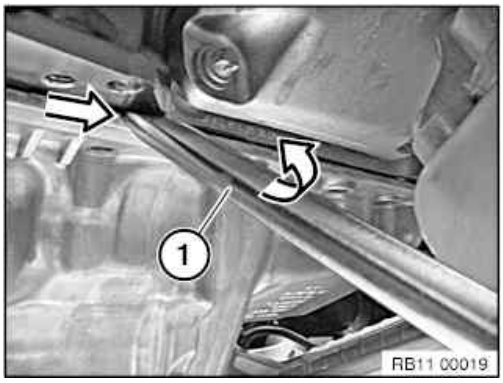


- Tighten the transmission bolts (1) on the oil sump.
- Loosen screws (2) to (17).



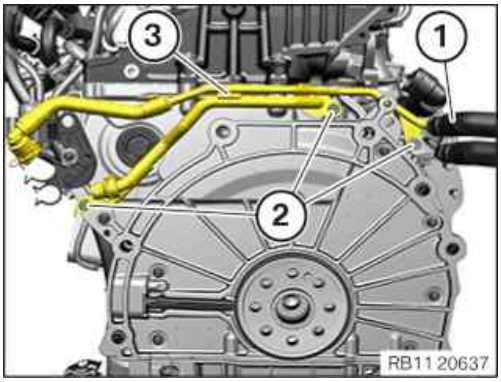
- Release oil sump only in area (1).

cardiagn.com

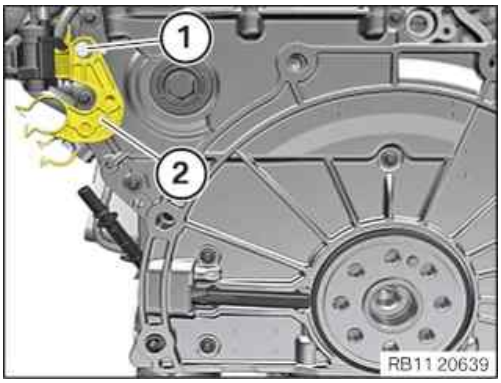


- Release the oil sump using a suitable mounting lever (1) carefully at the position intended for that.
- If required, secure the oil sump against falling.

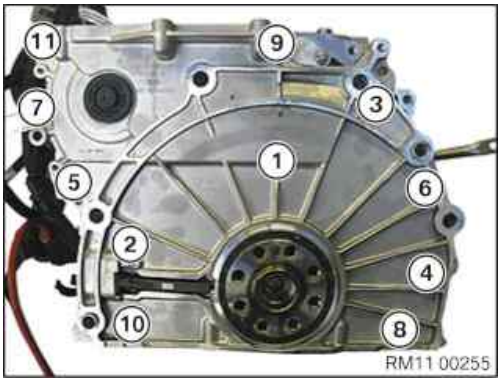
► **If installed: Remove coolant line of the SCR metering module**



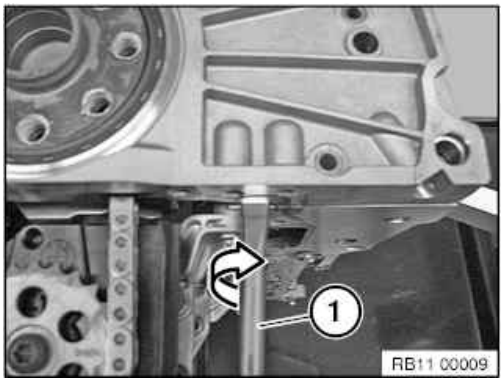
- Unlock and disconnect the coolant hose (1).
- Loosen screws (2).
- Remove the coolant line (3).



- Loosen screw (1).
- Guide out and remove holder (2).

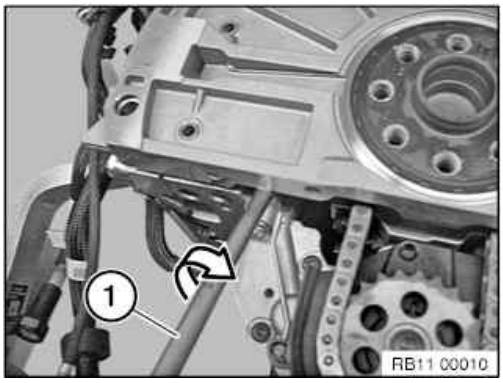


- Loosen screws in the order (11) to (1).



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.

cardiagn.com



- Loosen the timing case cover with a screwdriver (1) in the direction of the arrow.
- Remove the timing case cover.

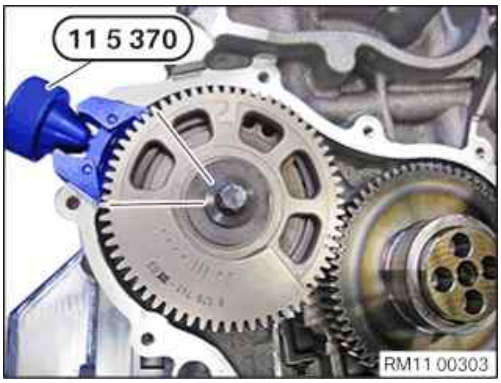
MAIN WORK

28 – Remove counterbalance shaft

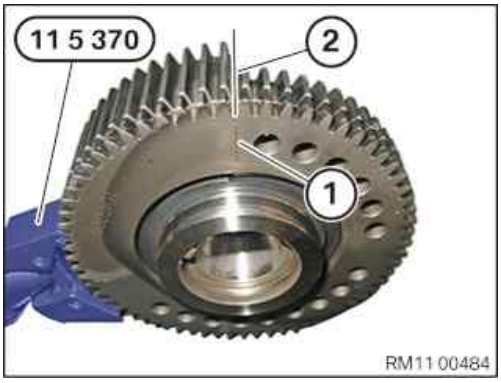
- Fasten counterbalance shaft with special tool in the TDC position of cylinder no. 1.
- Tighten the screws (1).

Standard screw connection M6

M6		8 Nm



- Ensure that the gear of the counterbalance shaft is pretensioned and blocked before removal.
- Install the special tool **0 495 131 (11 5 370)** as shown and pre-load the gear.

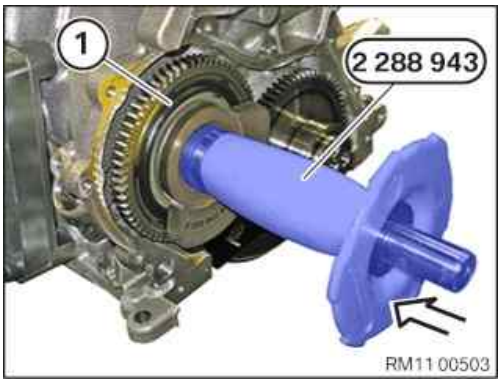


- Block gear wheels (1) and (2) until re-installation with the special tool **0 495 131 (11 5 370)**.

- Check whether the marks on the counterbalance shaft gear are aligned with the marks on the crankshaft gear.
- Loosen screw (1).

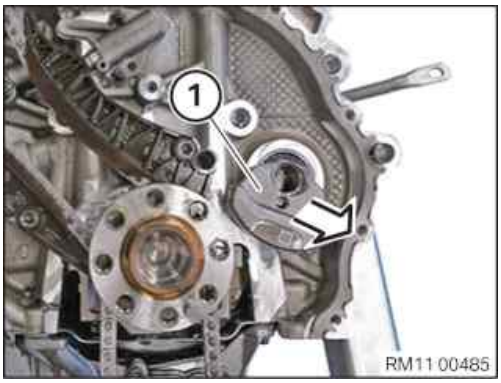
cardiagn.com

- Loosen screws (1).
- Remove special tool .



- Screw the special tool **2 288 943** far as it will go into the counterbalance shaft.
- Secure counterbalance shaft and gear against falling down!
- By means of targeted hammer blows on the special tool **2 288 943** in the direction of the arrow, loosen the counterbalance shaft from gear (1) .
- Remove special tool **2 288 943**.

- Remove the counterbalance shaft gear in the direction of the arrow.

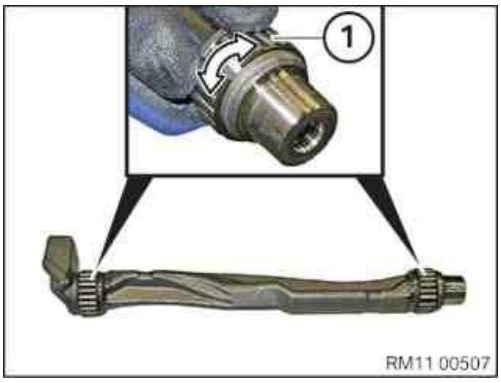


- Remove counterbalance shaft (1) in direction of arrow.

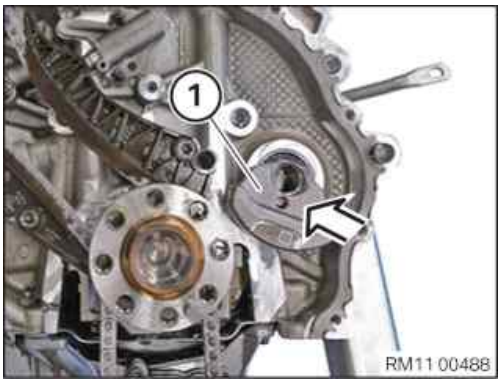
29 – Install counterbalance shaft

- If a new gear is installed, the ring gear must remain blocked until installation using the factory-mounted fixation (1) .

cardiagn.com



- Check both needle bearings (1) of counterbalance shaft for damage.
- Pull off damaged needle bearing (1) from the counterbalance shaft and renew it.

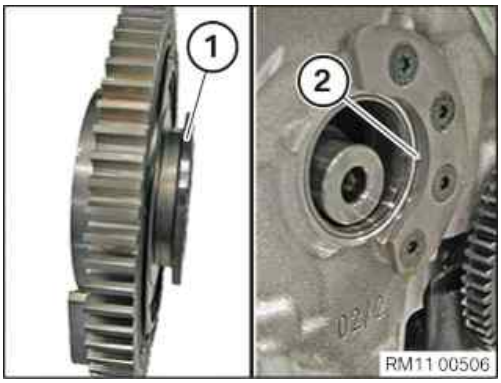


- Install counterbalance shaft (1) in direction of arrow into crankcase.

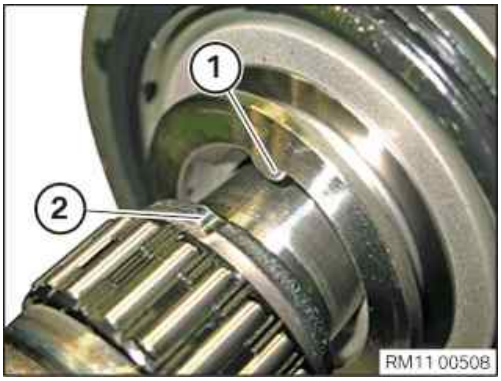
- Fix the counterbalance shaft in the TDC setting of the first cylinder using the special tool .
- Tighten the screws (1).

Standard screw connection M6

M6		8 Nm



- On installation, make sure that ring (1) of gear is guided in crankcase (2).

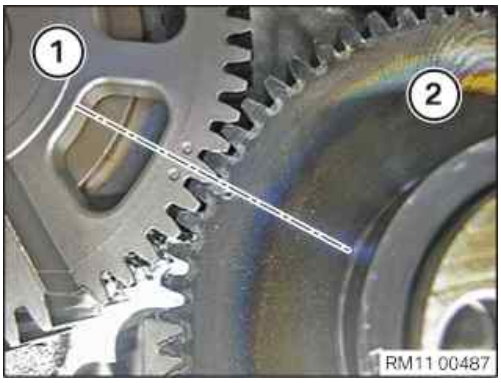


NOTICE

For a better overview the removed condition is shown here.

- On installation of counterbalance shaft in gear, make sure that lug (1) on gear is inserted into groove (2) of counterbalance shaft.

cardiagn.com



- Bring gear (1) of counterbalance shaft into contact in correct installation position (mark) relative to crankshaft (2).

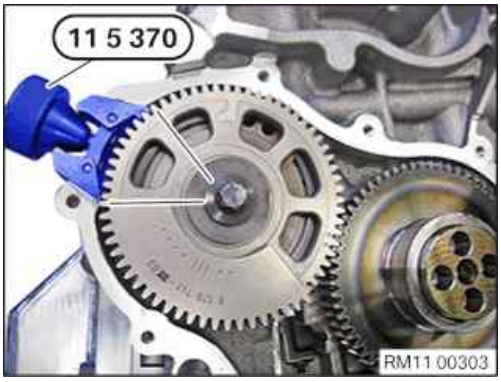
- Renew the screw (1).

  Parts: Screw

- Tighten down screw (1).

Gear to counterbalance shaft

	Renew screw.	Tightening torque	20 Nm
		Angle of rotation	60 °



- Remove special tool **0 495 131 (11 5 370)**.

- Loosen screws (1).
- Remove special tool .

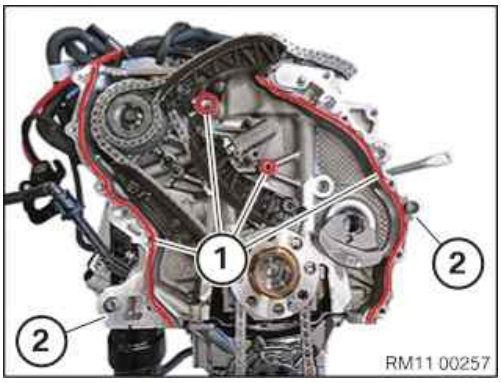
POSTPROCESSES

30 – Install the rear timing case cover

Prerequisite

Transmission is removed.

cardiagn.com



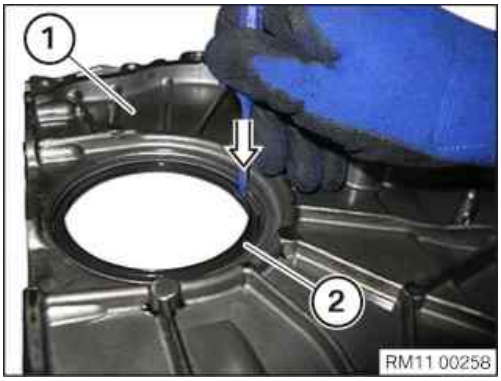
RISK OF DAMAGE

Damage to the surface.

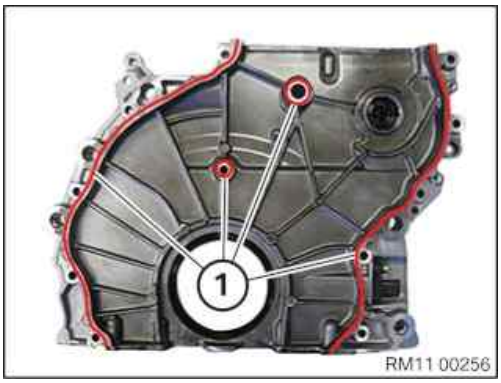
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

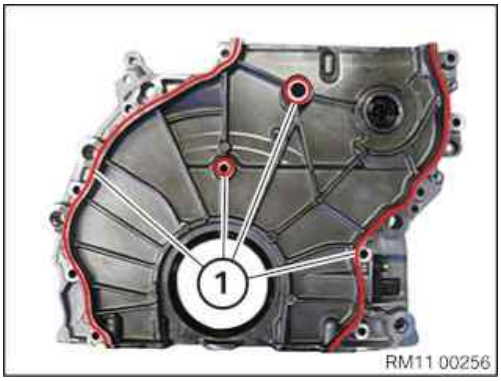
- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.
- Check fitting sleeves (2) for damage and for tight fit; renew if necessary.



- Position the timing case cover (1) underneath.
- Position punch on inner side of crankshaft seal (2).
- Drive out crankshaft seal (2) outwards.



- Remove seal residue from the sealing surfaces (1) using special tool **0 495 102 (11 4 470)**.

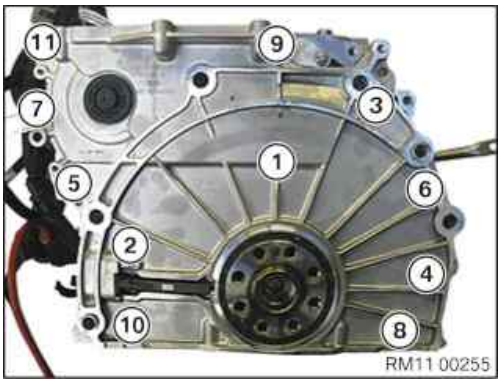


TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Apply sealing bead (1) with a height of approx. 1.5 mm to 2.0 mm on inner side of timing case cover in marked locations. Use liquid sealing compound for this.

  Application time of sealing bead (1) must not exceed 12 minutes.



- Mount the timing case cover without the crankshaft seal.
- Renew screws (1) to (11).

  Parts: Bolts
- Join the bolts in with the sequence (1) to (11).
- Tighten screws in the order (1) to (11).

Rear timing case cover to crankcase

M6	Renew screws.	Jointing torque	8 Nm
		Angle of rotation	90 °

▸ **Installing the rear crankshaft seal**

cardiagn.com

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) on the radial shaft seal with the sharp-edged connector gearing of the output shaft will result in destruction and/or leaks.

- When inserting the output shaft, make sure that the connector gearing of the output shaft does not touch the sealing lip (inner) of the radial shaft seal.

RISK OF DAMAGE

Radial shaft seal damage.

Touching the sealing lip (inner) and applying oil to the radial shaft seal will lead to its destruction.

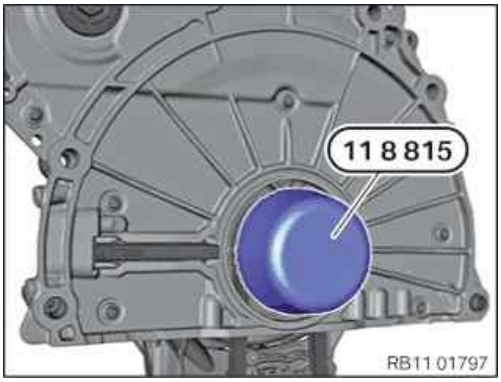
- Do not touch the sealing lip (inner) of the radial shaft seal.
- Do not apply oil to the radial shaft seal.
- Install the radial shaft seal dry.

RISK OF DAMAGE

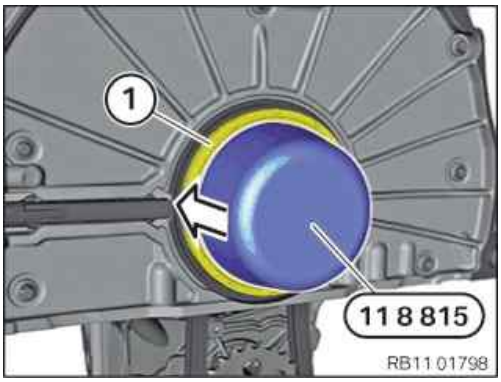
Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.



- Position special tool **0 496 137 (11 8 815)** on crankshaft. Make sure that the crankshaft sensor is not damaged.



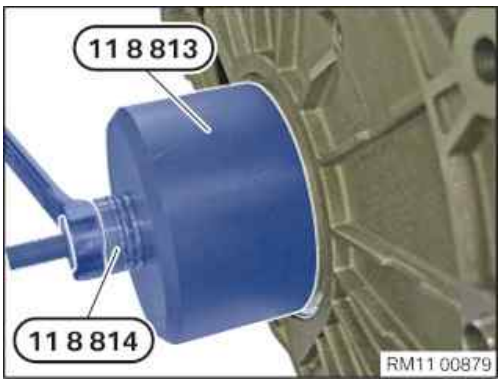
- Fit the crankshaft seal (1) up to the timing case cover in the direction of the arrow using special tool **0 496 137 (11 8 815)** and position.
- Remove special tool **0 496 137 (11 8 815)**.

cardiagn.com

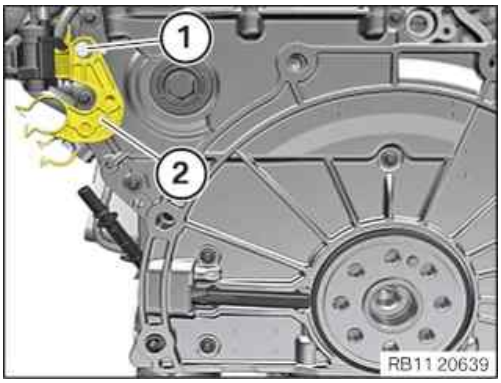
- Secure special tool **0 496 133 (11 8 811)** to the crankshaft using special tool **0 496 134 (11 8 812)**.

- Check the freedom of movement between the special tool **0 496 135 (11 8 813)** and the crankshaft sensor during installation.

  Otherwise there is a risk that the crankshaft sensor will be damaged.
- Slide on special tool **0 496 135 (11 8 813)**.
- Screw down special tool**0 496 136 (11 8 814)**.

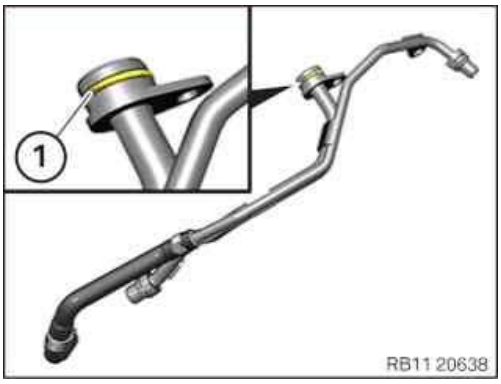


- Press in crankshaft seal with special tool **0 496 135 (11 8 813)**.
- Screw in special tool **0 496 135 (11 8 813)** up to timing case cover.



- Insert and install the holder (2).

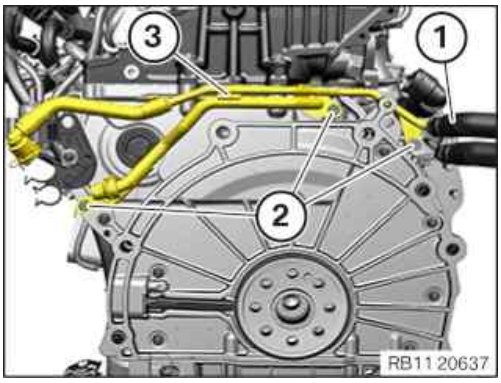
► **If installed: Installing the coolant line of the SCR metering module**



- Renew the O-ring 1.

  Parts: O-ring

cardiagn.com



- Feed in and install coolant line (3).
- Tighten down screws (2).

SCR coolant lines to crankcase end cover

Hexagon screw M6x16		Tightening torque	8 Nm

- Connect and lock the coolant line (1).

  Coolant line (1) must audibly engage.

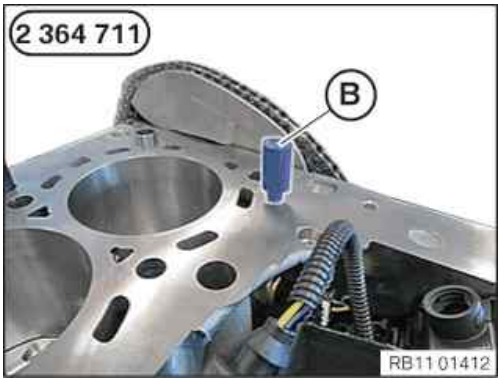
▶ **Cleaning the sealing surface**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Lock the front oil duct using special tool (B) from special tool **2 364 711**.

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean the sealing surface using special tool **0 495 103 (11 4 471)**.

RISK OF DAMAGE

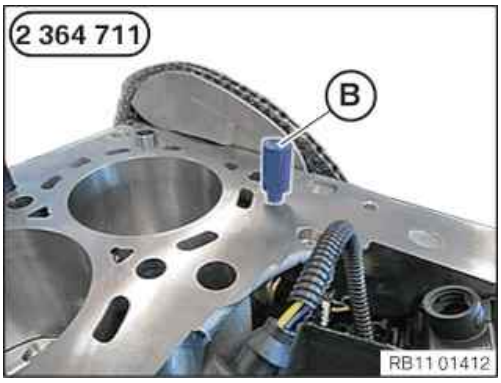
Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

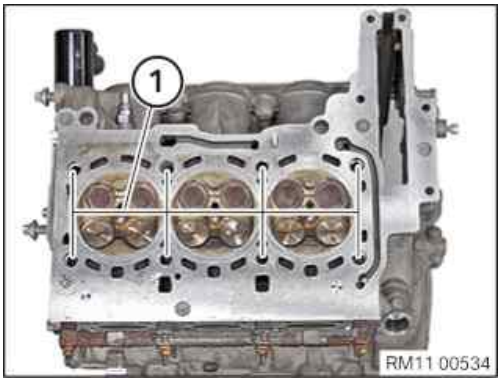
- Clean the sealing surface using special tool **0 495 104 (11 4 472)**.

cardiagn.com



- Remove special tool (B).

▶ **Renewing the cylinder head gasket**



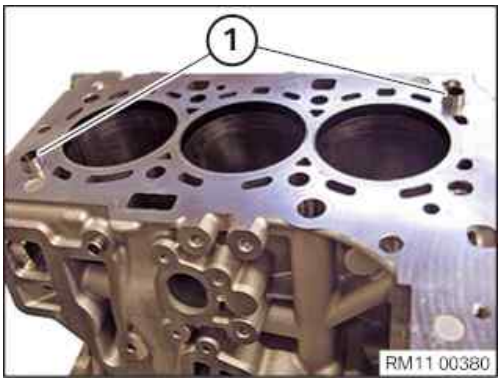
RISK OF DAMAGE

Damage to the surface.

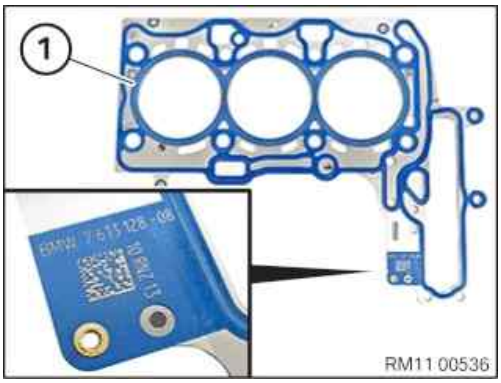
The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

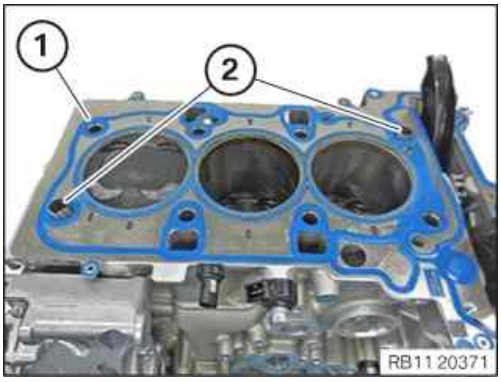
- Remove oil and dirt residue from the blind holes (1).



- Check the fitting sleeves (1) for secure fit and damage.



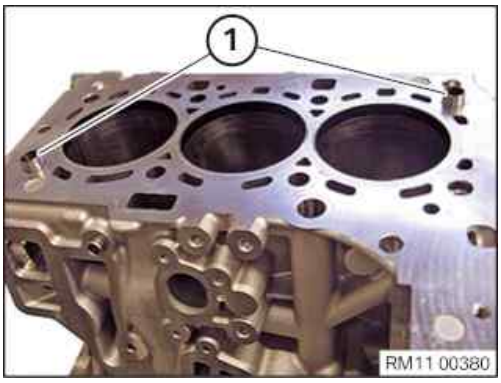
- Identify the cylinder head gasket (1) using the part number.
- **After work on the crankshaft drive and processing the cylinder head, the thickness of the cylinder head gasket must be determined.**



- Guide in the cylinder head gasket (1) and install.

  Parts: Cylinder head gasket.
- Ensure that the cylinder head gasket (1) is installed correctly in the fitting sleeves (2).

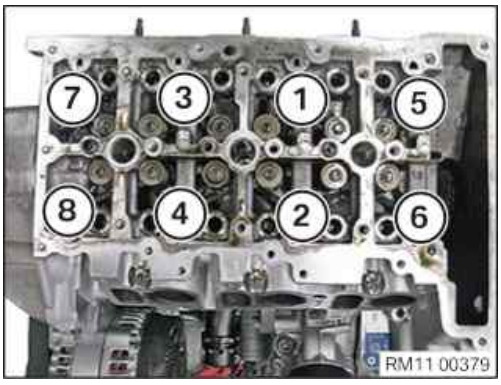
cardiagn.com



- Check the fitting sleeves (1) for damage and renew, if necessary.

  Parts: Fitting sleeves.

- Make sure that the fitting sleeves (1) are installed in the correct mounting orientation.



- Fit new cylinder head screws.

  Parts: Cylinder head bolts

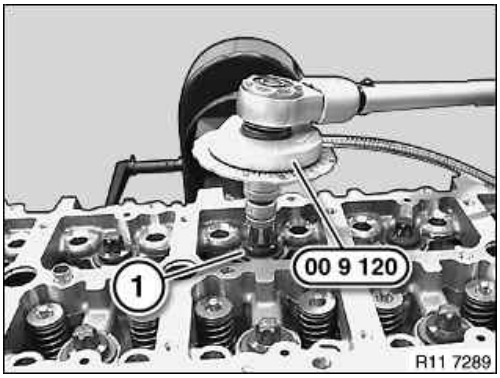
- Do **not** wash off coating of cylinder head bolts.
- **Lightly** oil contact surfaces of cylinder head bolt screw heads.

  There must be **no** coolant, water or engine oil in any of the threaded holes in the engine block.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.
Non-observance of these requirements may result in leaks and damage.

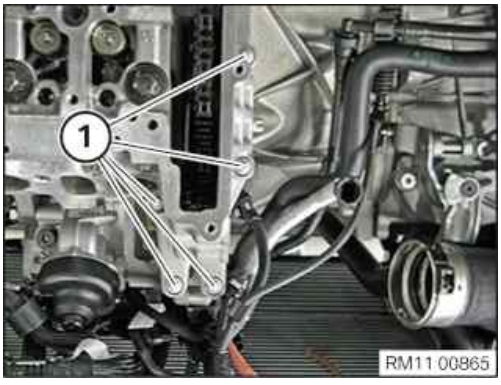
- Feed in cylinder head bolts and install.
- Screw in the cylinder head bolts in the sequence (1) to (8).



- Tighten the cylinder head bolts in the sequence (1) - (8) using special tool **0 490 504 (00 9 120)**.

Cylinder head to crankcase

M12x1.5	Renew screws.	1. Jointing torque	50 Nm
		2. Angle of rotation	120 °
		3. Angle of rotation	120 °



- Tighten the cylinder head bolts (1).

Cylinder head bolt to timing case cover

M8x40		Tightening torque	19 Nm

cardiagn.com

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove fine sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.

TECHNICAL INFORMATION

The sealing surfaces must be free from oils, grease and cleaning agents.

- Remove coarse sealing remains on the sealing surface (1) and the sealing surface on the engine block with the special tool **0 495 102 (11 4 470)**.
- Clean sealing surface (1) with brake cleaner.

Expendable materials

Brake cleaner2.0	500 ml, Spray can	83192365214
	20 , Canister	83192365215

- Have the special tool ready.

TECHNICAL INFORMATION

For more information see: 11 00 ... Overview of consumables in Electronic Parts Catalogue

- Position the sealing compound (1) on special tool as shown.

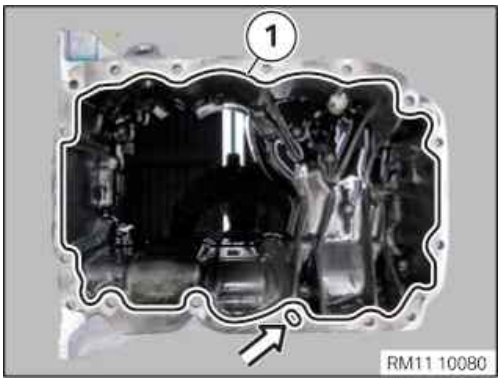
  Parts: Sealing compound

Sealing compound

Loctite 5970 liquid sealing compound	50 ml, Cartridge	83190404517

Overview of consumables (Electronic Parts Catalogue)

cardiagn.com



TECHNICAL INFORMATION

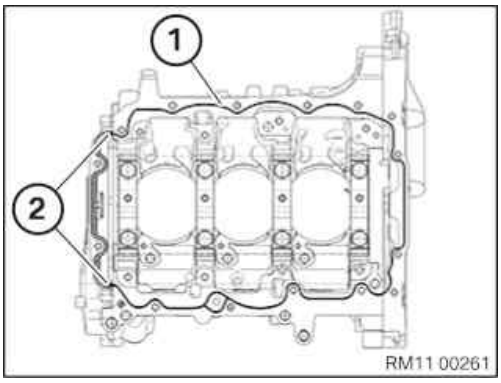
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound without replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Completely surround the oil return orifice (arrow) with the sealing compound.

  No sealing compound may enter the oil return orifice.



TECHNICAL INFORMATION

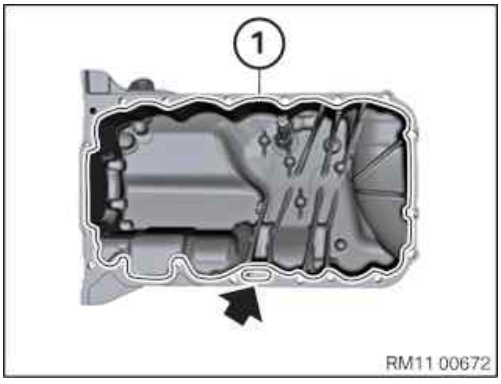
The sealing surfaces must be free from oils, grease and cleaning agents.

TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- **Applying sealing compound after replacing front bottom gear case cover:**
- The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.
- Apply the sealing bead along the inner edge (1) of the oil sump.
- Sealing bead (1) must overlap the seal (2) of the timing case cover by approx. **5 mm**.
- Completely surround the oil return orifice (arrow) with sealing compound.

  No sealing compound may enter the oil return orifice.
- Fix oil sump within the prescribed application time of the sealing compound.



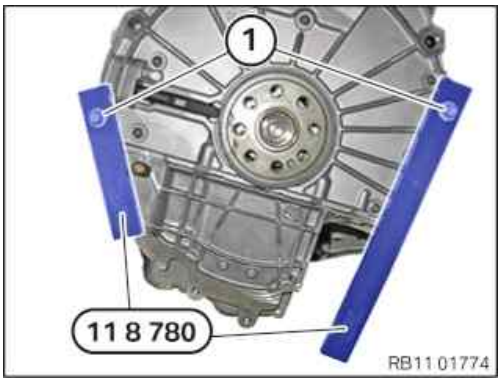
TECHNICAL INFORMATION

The maximum application time of the liquid sealing compound is 12 minutes.

- Apply the sealing compound along the line (1) with a thickness of 2 mm to 2.5 mm.

  The sealing compound must be applied along the inner edge.
- Completely encircle the oil return orifice (arrow) with the sealing compound.

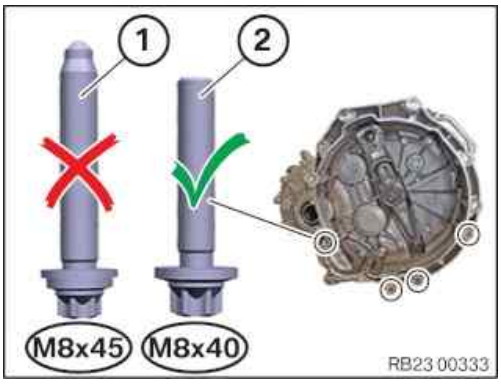
cardiagn.com



TECHNICAL INFORMATION

The special tool 11 8 780 is only required when the transmission is removed.

- Position the special tool **0 496 120 (11 8 780)** with the transmission bolts (1) so that the oil sump is exactly flush with engine block.
- Renew the fitting sleeves if required.



RISK OF DAMAGE

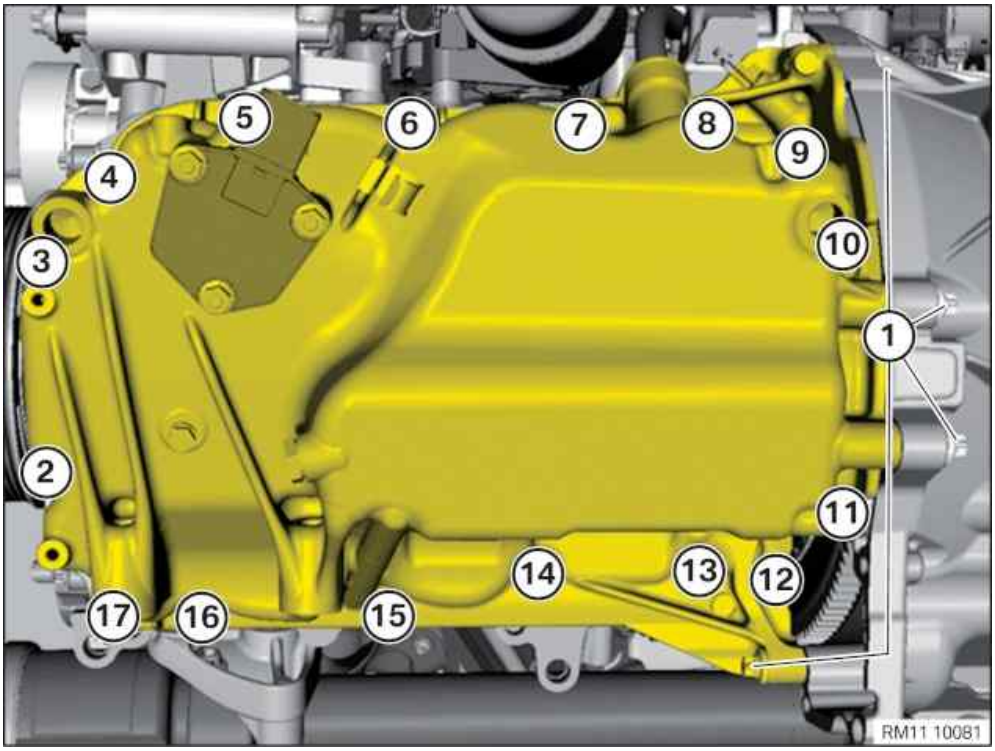
Component damage caused by incorrect screw length.

The use of screws with the incorrect screw length can damage the component.

- Check for correct screw length.
- Re-install screws that correspond to the original screw length.

- Ensure that the **correct** screw (2) (M8x40) is used for mounting the oil sump on the transmission.

  The screw (1) (mounting bolt of the starter motor) may **never** be used for mounting the oil sump.



- Position and install the oil sump.
- Hand tighten the screws of oil sump (2) to (17) , but do **not** tighten completely yet.
- Join transmission bolts (1) with 5 Nm.
- Tighten screws(2) to (17) of the oil sump.

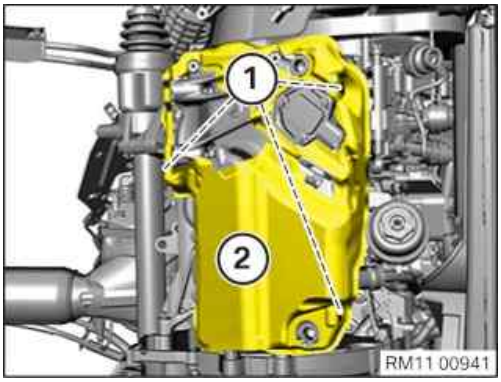
Oil sump to crankcase

M8x30		Tightening torque	2 Nm
M8x110		Tightening torque	2 Nm

- Tighten transmission bolts (1) on oil sump.

Transmission to oil sump

M8		Tightening torque	1 Nm

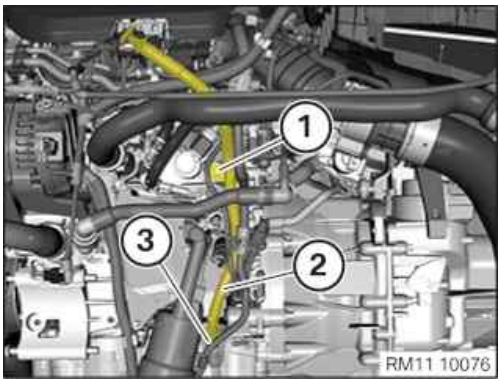


- Thread in and position the acoustic cover (2).
- Install the expanding rivet (1).

cardiagn.com

- Renew O-ring (1).

  Parts: O-ring



- Guide in guide tube (2) for oil dipstick and insert it into oil sump.
- Make sure the sealing ring (3) is positioned correctly in the oil sump.
- Tighten down screw (1).

Guide tube for oil dipstick on engine

M8x16		Tightening torque	19 Nm

31 – Installing the flywheel (DKG)

CAUTION

Heavy component.

Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Clean all threads with a screw tap.

- Clean all the screw threads (1).

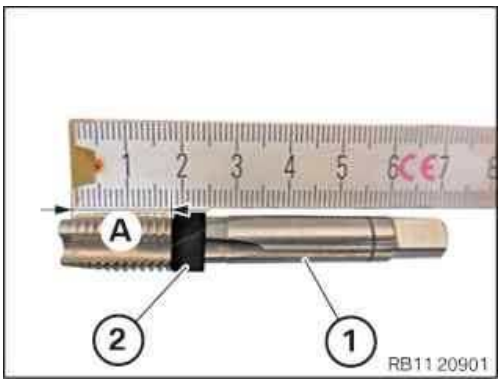
cardiagn.com

- Use the set of special tools **2 285 058**.

Description
Twist drill
Thread cutter M12x1.5
Depth
Insertion tool

- Assemble tool set.

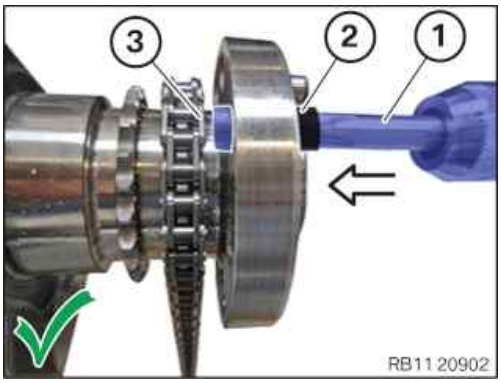
Number	Description
1	Tool holder
2	Thread cutter M12X1,5



- Mark the depth of insertion (A) on the thread cutter (1) from the set of special tools **2 285 058** with a standard tool (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm



NOTICE

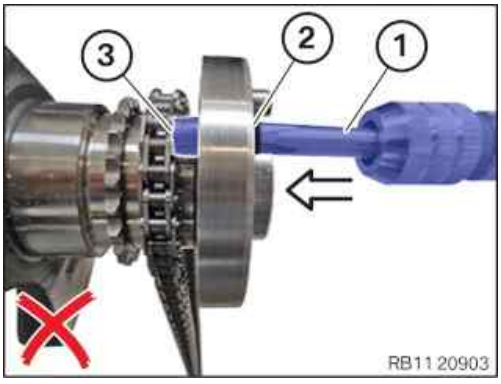
To provide a better overview: Shown with engine removed.

- Screw in the thread cutter (1) from the set of special tools **2 285 058** in direction of arrow up to the installation dimension (2).

Screw-in depth of thread cutter

Screw-in depth	18 mm

- Make sure that the thread cutter does (1) **not** rest on the timing chain (3).



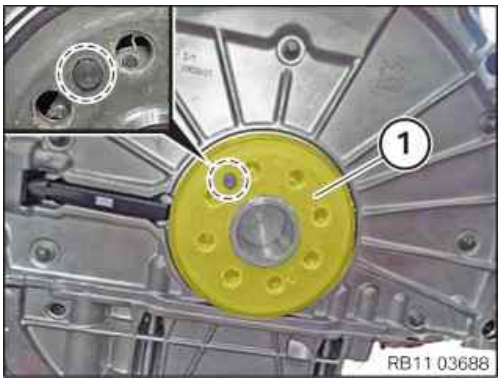
TECHNICAL INFORMATION

- **Carefully** handle the timing chain, to protect the timing chain and timing chain drive against damage.

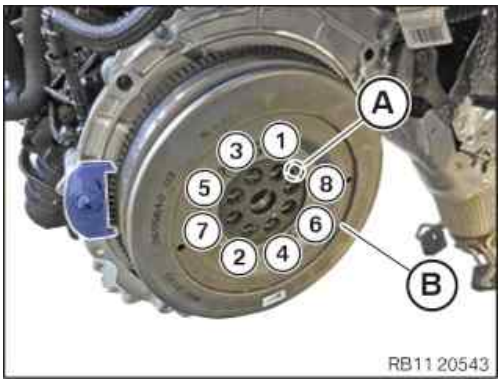
- Make sure that the depth of insertion (2) of the screw tap (1) is not exceeded.

  The thread cutter (1) may not rest on the timing chain (3).

cardiagn.com



- It is essential to observe the marking shown during installation.
- Install special tool (1) on the crankshaft as shown.

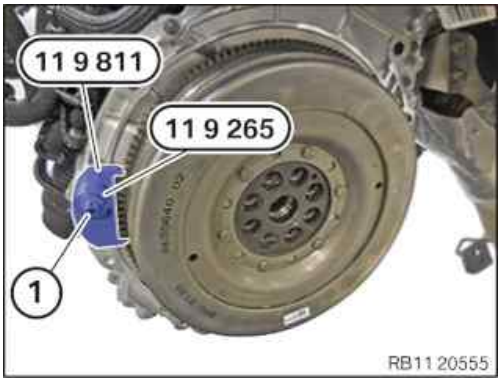


- Position flywheel (B) .
- Renew flywheel bolts (1) to (8).

  Parts: Flywheel bolts
- Tighten flywheel bolts hand-tight with special tool **0 491 018 (11 4 180)**.
- Tighten the flywheel bolts using the special tool **0 491 018 (11 4 180)** in sequence (1) to (8).

Flywheel to crankshaft

M12x1.5	Renew screws.	Tightening torque	120 Nm



- Loosen the transmission bolt (1).
- Thread out special tools **0 496 171 (11 9 811)** and **0 494 793 (11 9 265)** remove.
- Ensure that the washer (5 mm) is removed.

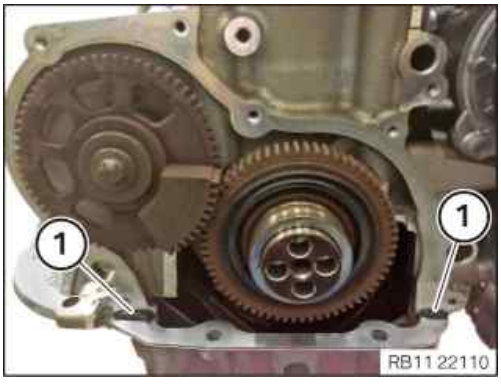
32 – Installing the timing case cover

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



TECHNICAL INFORMATION

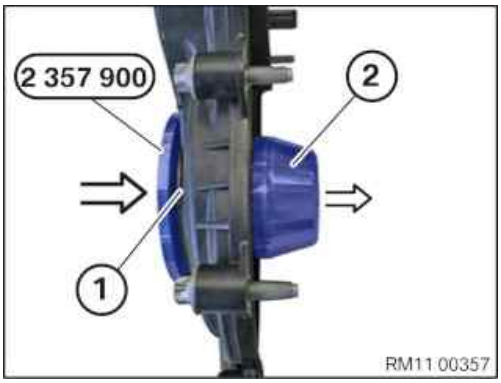
The maximum application time of the liquid sealing compound is 12 minutes.

- Apply sealing compound (1) approx. **5 mm** as shown.

  The height of the sealing compound must be approx. between **2.0 mm** and **2.5 mm**.

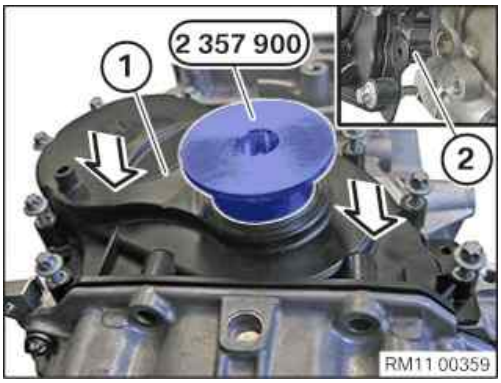
cardiagn.com

- Assemble special tool **2 357 900** as shown.
- Please note that no greases or lubricants may be used on the special tool **2 357 900**.



- Carefully slide the special tool **2 357 900** in the direction of the arrow through the sealing ring into the timing case cover (1).
- Make sure that the special tool **2 357 900** rests flat against the timing case cover (1).
- Remove the fitting aid (2).

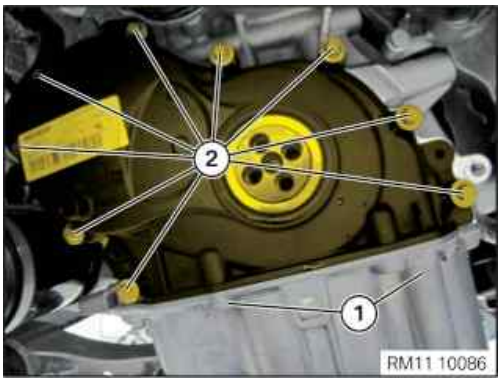
- Connect special tool **2 357 900** to the timing case cover (1) on the hub of the crankshaft (2).



- Feed in and install timing case cover (1) in the direction of the arrow.
- Ensure the guide pins (2) are fitted correctly.
- Tighten screws hand-tight.
- Remove special tool **2 357 900**.

- Make sure that the air guide (1) faces out.

cardiagn.com



- Hand-tighten the bolts (1).
- Tighten the screws (2) in a crosswise sequence with a tightening torque.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

- Tighten the screws (1).

Oil sump to crankcase

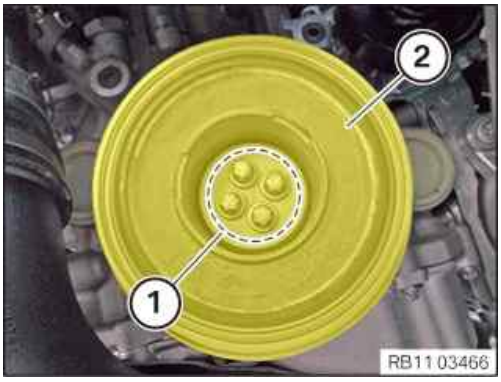
M8x30		Tightening torque	24 Nm
M8x110		Tightening torque	24 Nm

- Tighten the screws (2) in a crosswise sequence with an angle of rotation.

Timing case cover, front, to crankcase

M6	*Observe tightening specification.*	Tightening torque	4 Nm
		Angle of rotation	60 °

33 – Installing the vibration damper

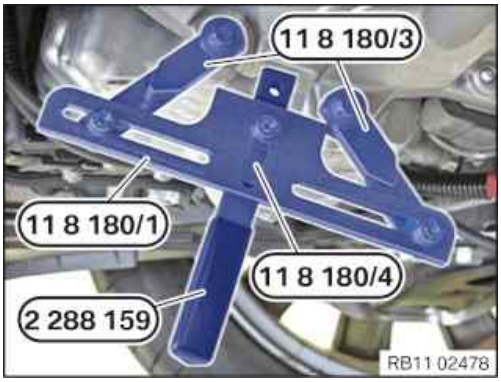


- Position vibration damper (2).
- Renew screws (1).

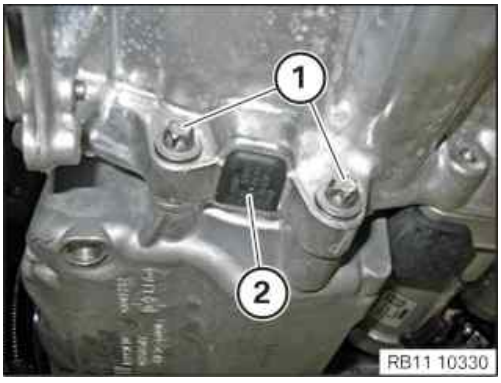
  Parts: Bolts
- Fasten the vibration damper (2) with the bolts (1).
- Tighten the screws (1).

Vibration damper with belt pulley to crankshaft

M10x65	Renew screws.	Jointing torque	40 Nm
		Angle of rotation	120 °



- Release the transmission bolts and remove the special tool **0 493 587 (11 8 180)**.



- Tighten transmission screws (1).

Transmission to oil sump

M8			19 Nm

- Install protective cap (2).

34 – Installing the hydraulic valve clearance compensating element

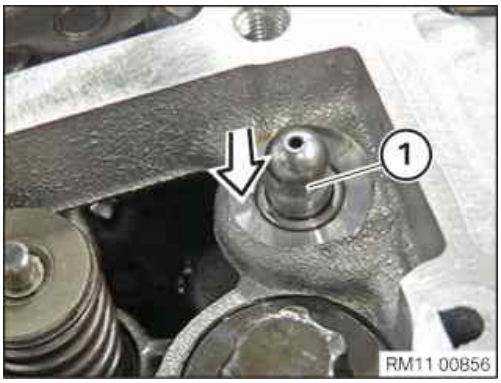
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

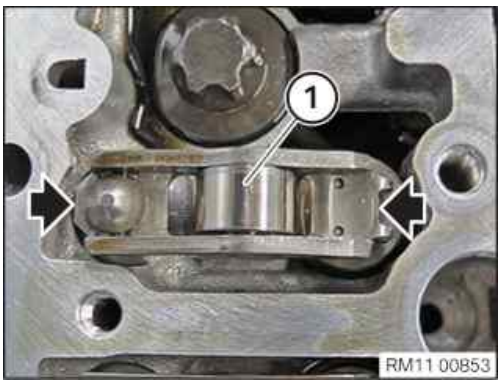


- Install the hydraulic valve clearance compensating element (1) in the direction of the arrow.
- Repeat the process on all hydraulic valve clearance compensating elements.

35 – Install the roller cam followers

TECHNICAL INFORMATION

- Note the installation position of the component. The component may be installed in various installation positions.

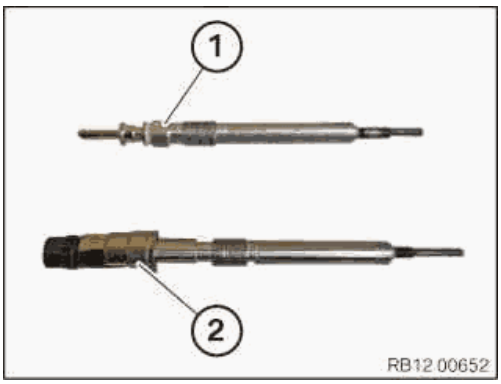


- Check all roller cam followers (1) for damage and replace if necessary.

  Parts: Roller cam followers
- Insert and install all roller cam followers (1).

  Roller cam followers (1) that have already been used must be installed in the same place.
- Note the mounting orientation of the roller cam followers (1).
- Oil all roller cam followers (1).

36 – Install glow elements



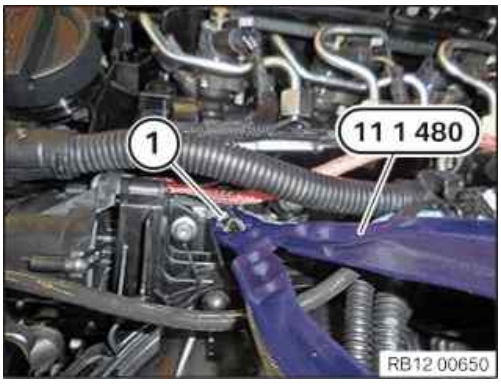
- Install glow elements (1) in cylinders 1, 2, 3 and 4.
- If fitted: Glow element (2) with the **combustion chamber pressure sensor** must be installed in cylinder **2**.

cardiagn.com

- Tighten the glow element with the special tool **0 491 068 (11 6 050)** or conventional tools.

Glow elements to cylinder head

Glow element		Tightening torque	13 Nm



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

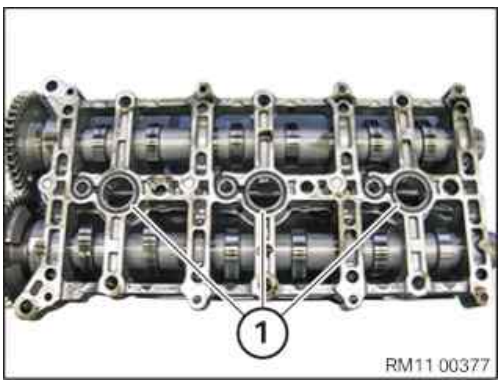
37 – Installing the camshaft support

RISK OF DAMAGE

Damage of the engine and mounted parts.

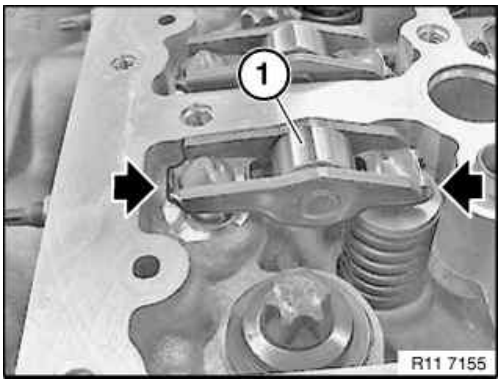
Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.



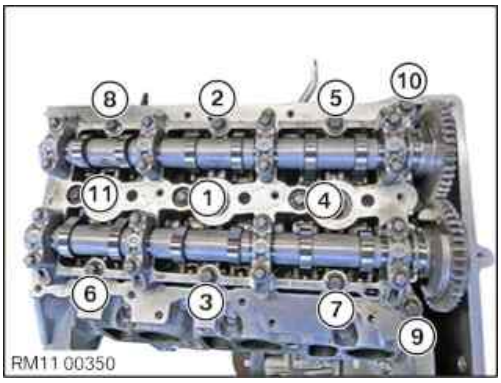
- Renew the seals (1) on the camshaft support.

  Parts: Seals



- Make sure the roller cam followers (1) have the correct mounting orientation.
- Position the camshaft support.

cardiagn.com



- Tighten the screws of the camshaft support incrementally in the sequence (1) to (11).

Camshaft carrier to cylinder head

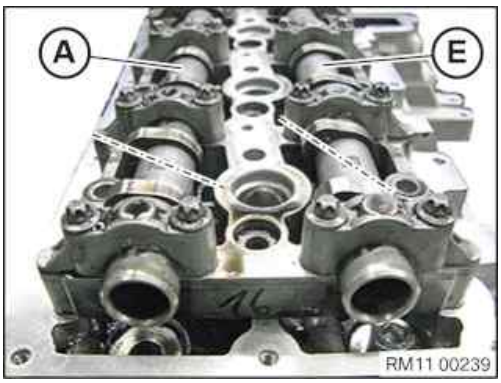
M7x35		Tightening torque	13 Nm

38 – Adjusting the timing of the camshafts

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

▸ **Remove chain tensioner piston**

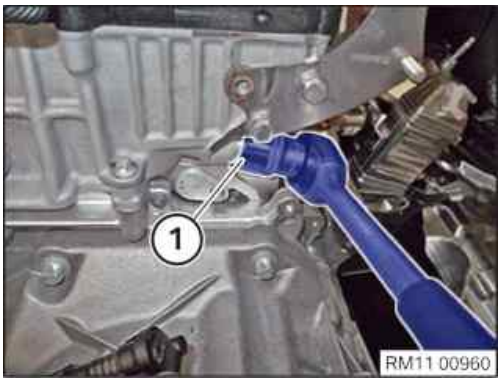
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

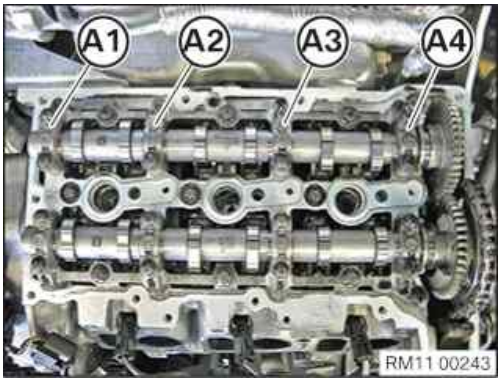
▶ **Remove exhaust camshaft.**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

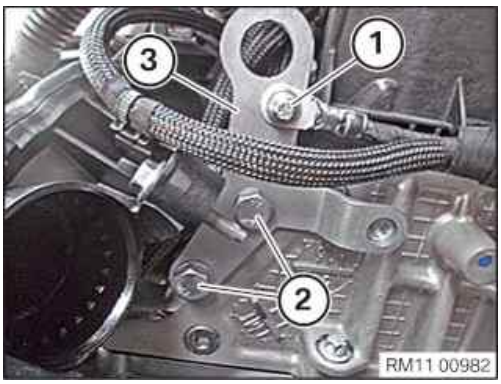


TECHNICAL INFORMATION

The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

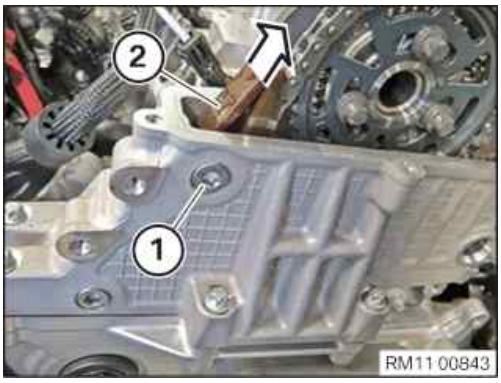
- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▶ **Remove the timing chain guide rail**



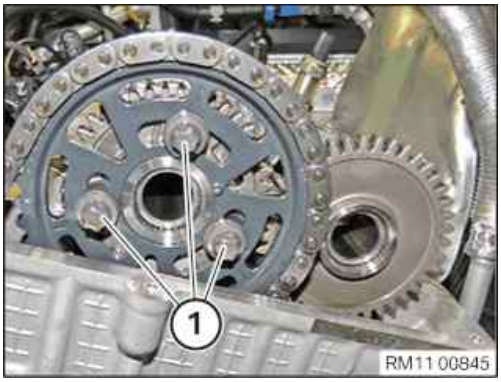
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).

cardiagn.com



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▶ **Removing the camshaft sprocket on the intake camshaft**



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

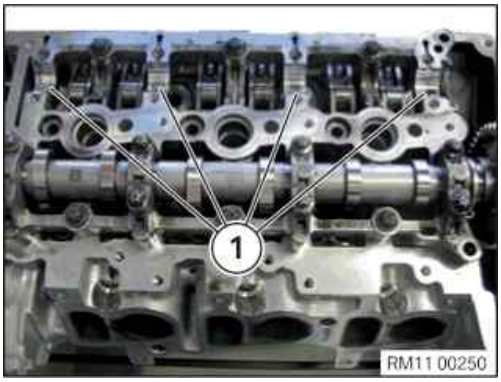
▶ **Installing exhaust camshaft**

RISK OF DAMAGE

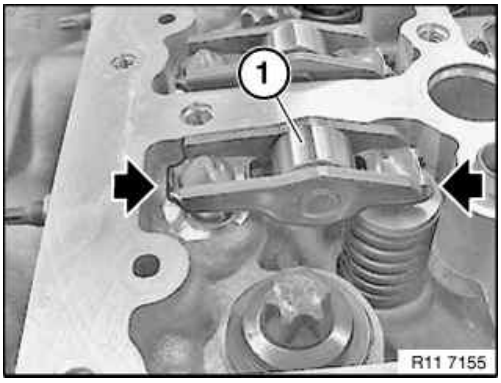
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

- Comply with the regulations for the installation and disassembly.
- Perform work with care.

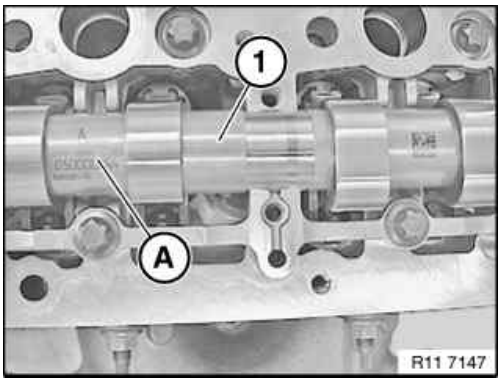


- Oil all bearing positions (1).

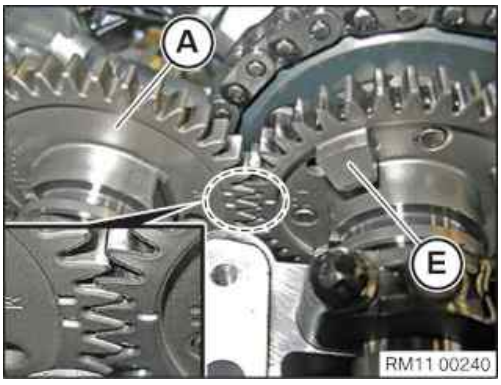


- Make sure the roller cam followers (1) have the correct mounting orientation.

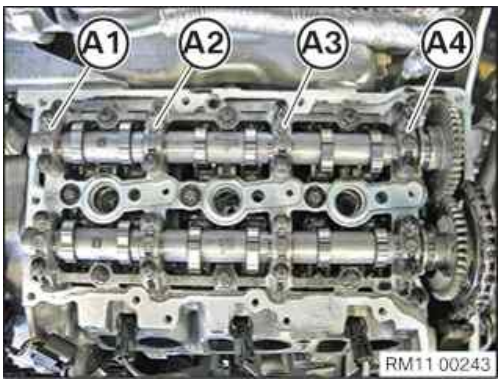
cardiagn.com



- Insert exhaust camshaft (1) so that the identification (A) points upwards.



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

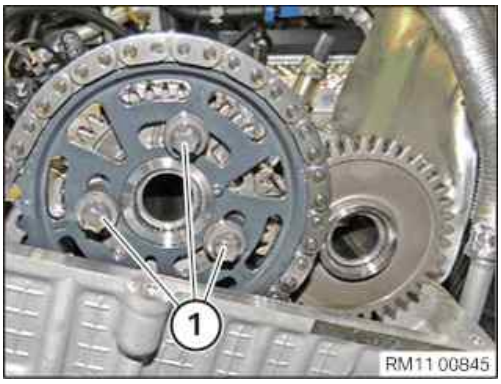
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

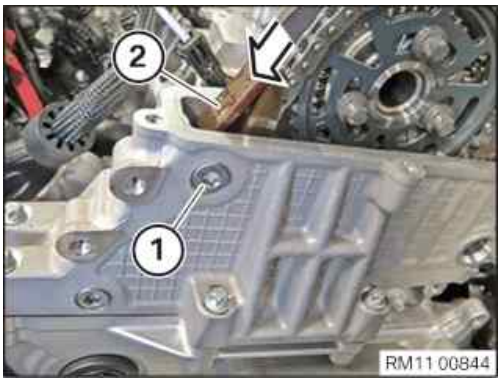
► **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

► **Install the timing chain guide rail**

cardiagn.com



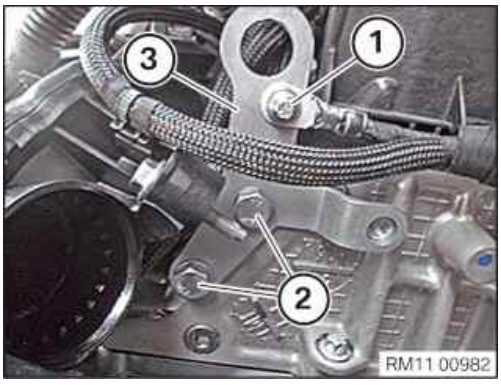
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

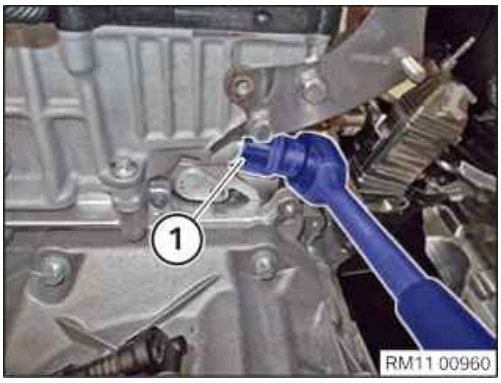
  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com

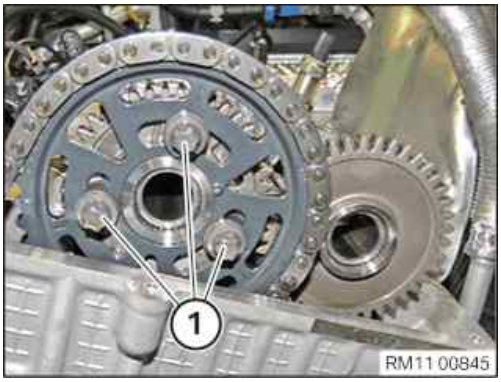


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▶ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

39 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

40 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

41 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

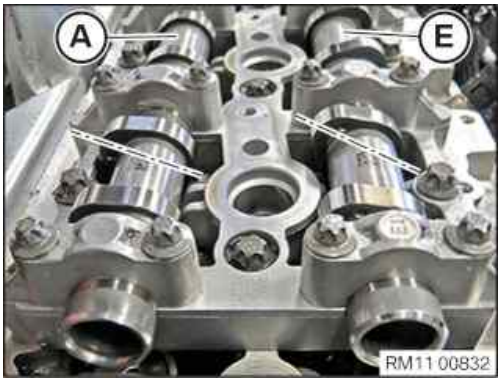
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

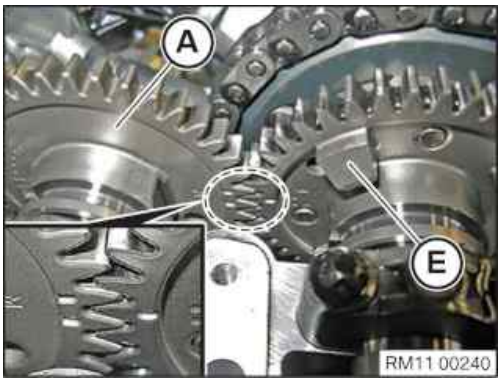
  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

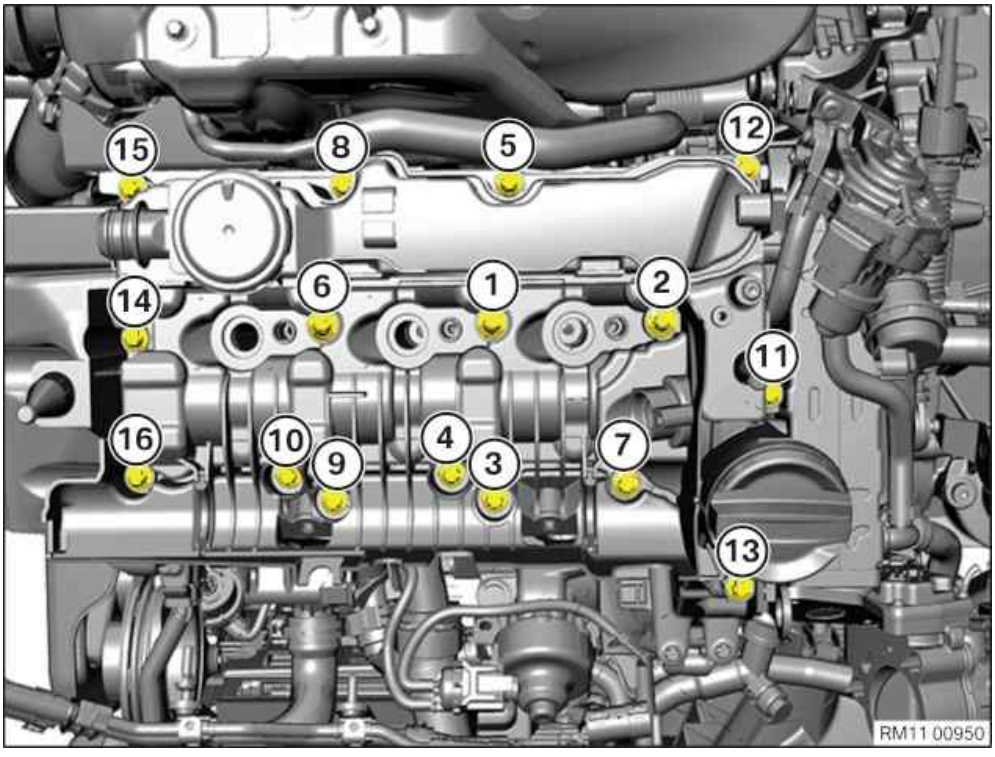
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

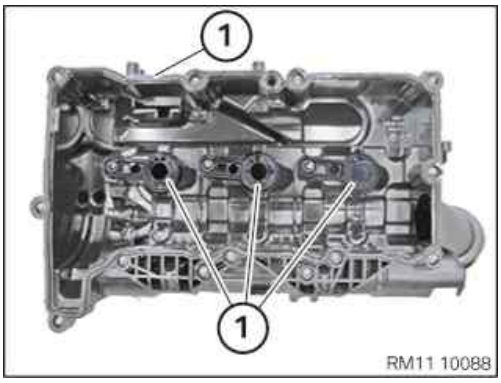
42 – Installing cylinder head cover

Overview: Screw connection of the cylinder head cover



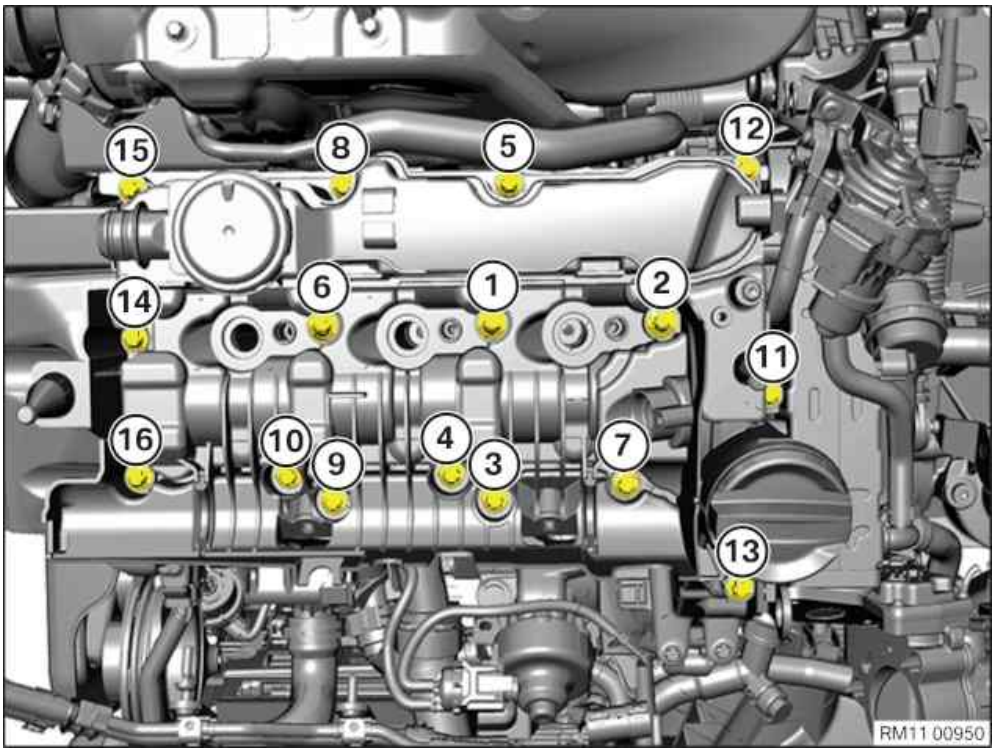
1 to 16 Bolts of the cylinder head cover

cardiagn.com



- Renew the gasket (1) of the cylinder head cover.

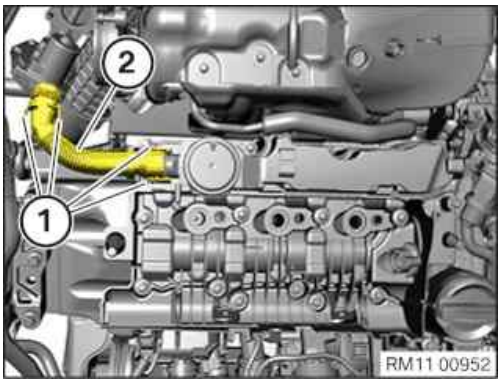
  Parts: Gasket



- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nn



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

43 – Installing injectors of injection system

▸ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

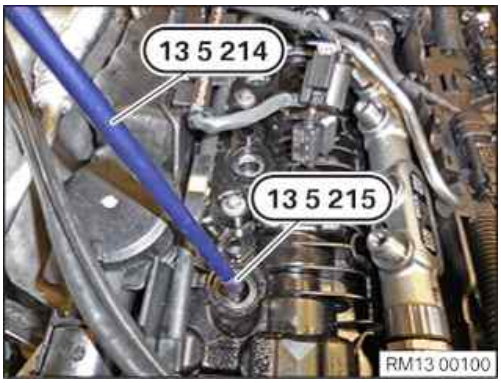
cardiagn.com

RISK OF DAMAGE

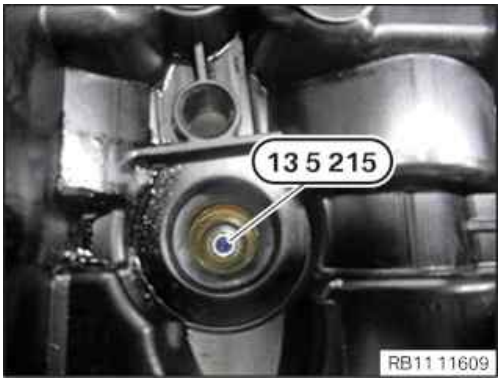
Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.

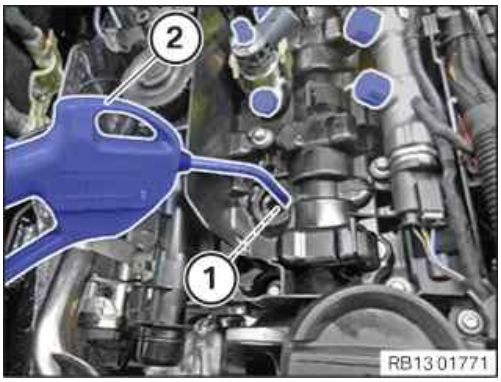


- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

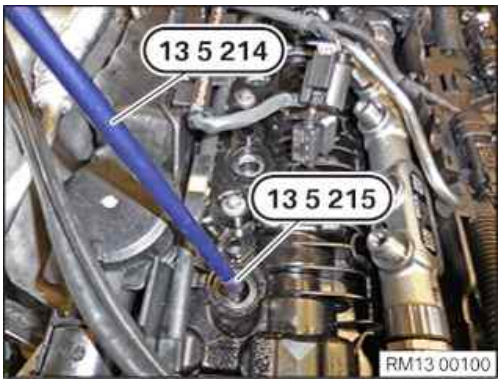
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.

cardiagn.com



- Blow out injector shaft (1) with air gun (2).



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

▸ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▸ **Prepare the injector for installation**

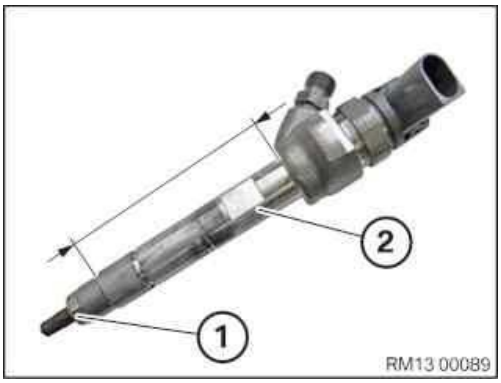
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

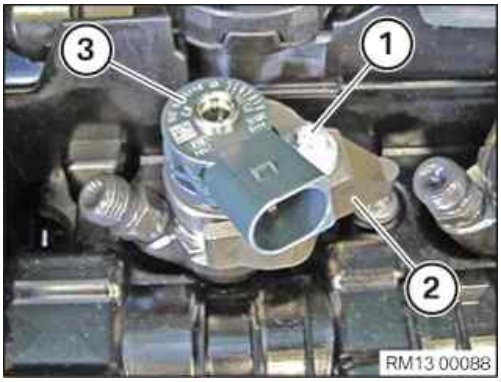


- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring
- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

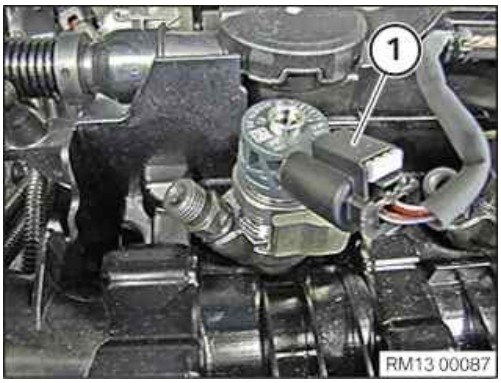
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

▸ **Replacement: Perform injection quantity compensation**

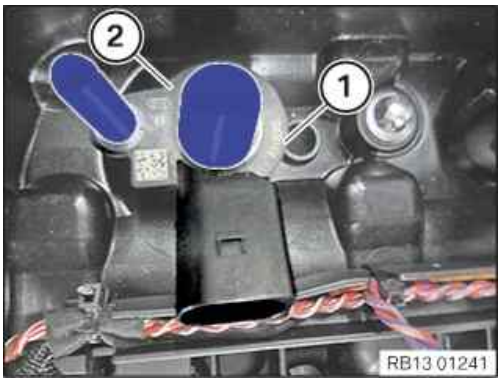
TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

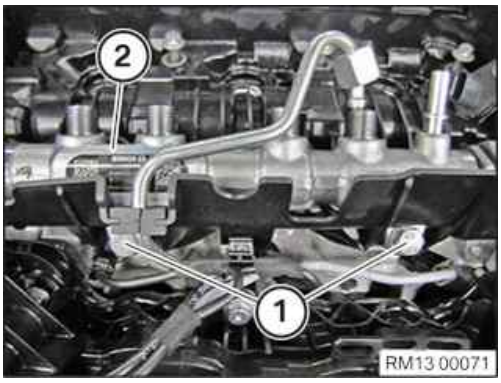
cardiagn.com



- Read off the adjustment value (1) on the new injector (2).

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

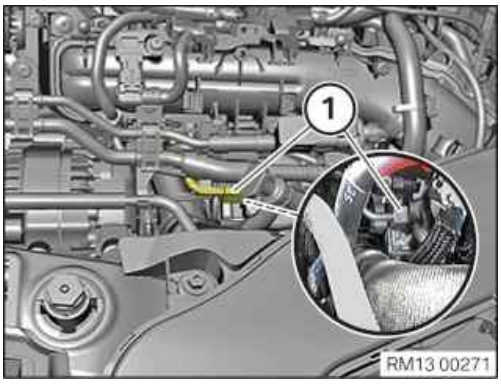
44 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

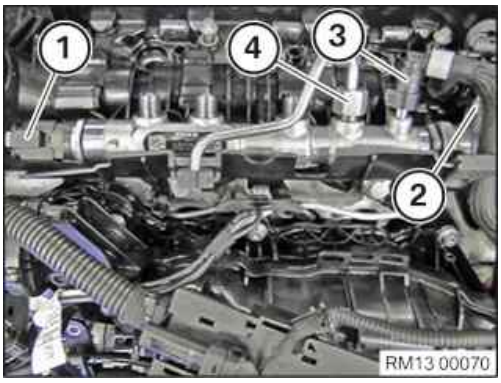
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

45 – Connect the leakage oil line on the injector

- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

46 – Installing high pressure lines between rail and injectors

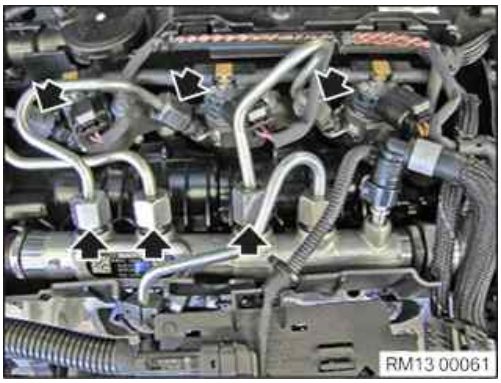
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

cardiagn.com

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

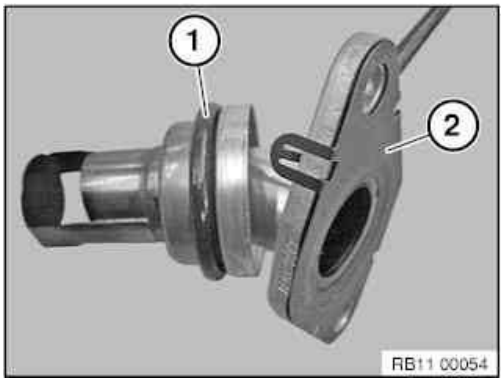
- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

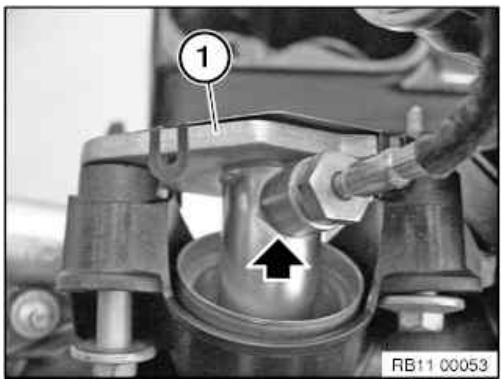
47 – Installing the intake plenum



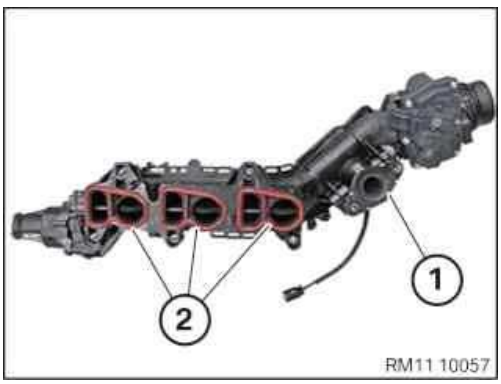
- Renew O-ring (1).

  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.



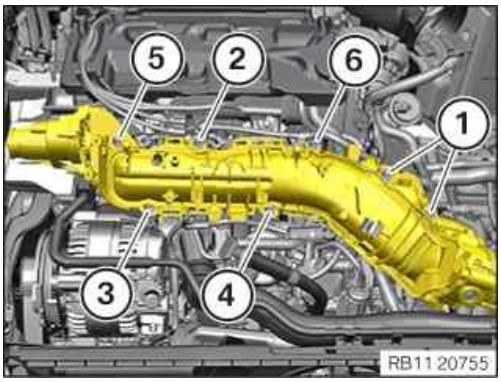
- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.

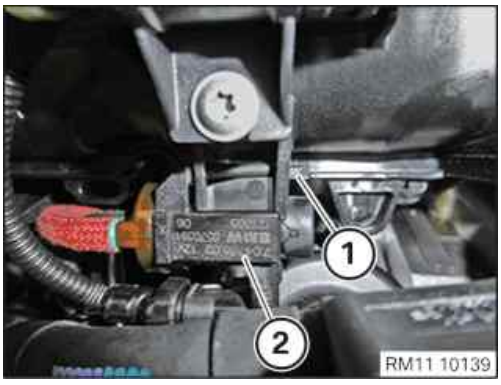
cardiagn.com



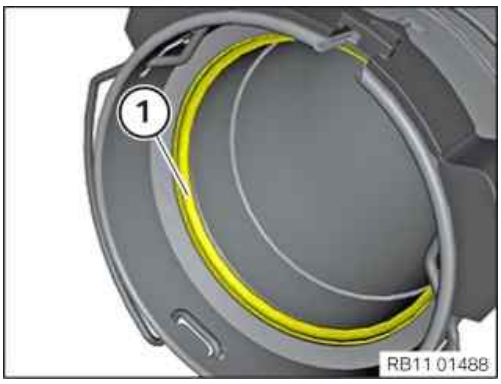
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm

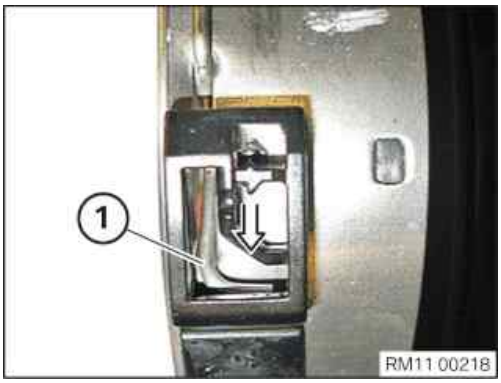


- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.

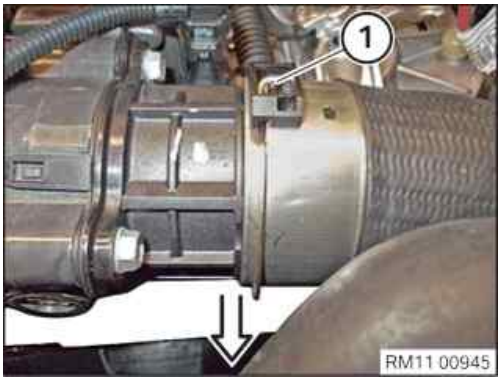


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring



- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.

  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

48 – Remove the engine from the assembly stand

cardiagn.com

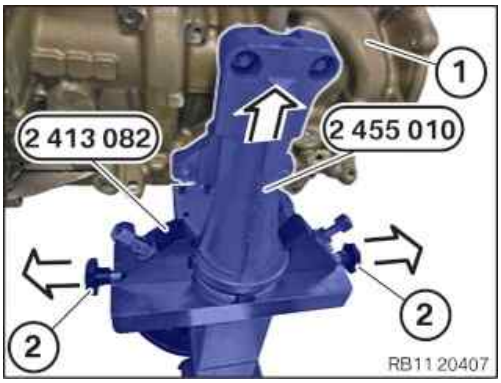
CAUTION

Heavy component.

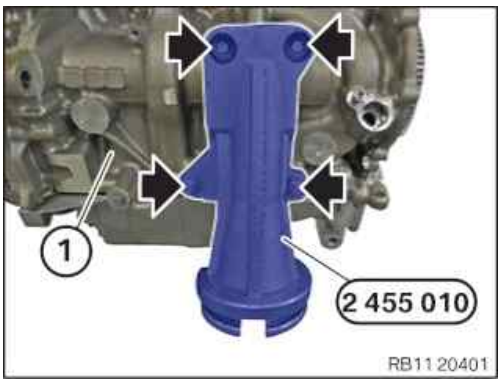
Heavy components can lead to injury or damage.

- Remove and install heavy components with the aid of another person/other persons.

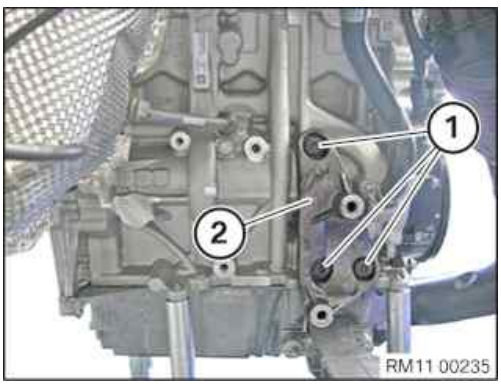
- Insert engine lifter with special tool **0 490 579 (11 0 070)** and position engine (1).



- Unscrew the nuts on special tool .
- Detach the holder (2) in the direction of the arrow.
- Detach the engine (1) with special tool **2 455 010** out of the special tool in the direction of arrow.



- Remove conventional screws (arrows).
- Feed out the special tool **2 455 010** on the engine (1) and remove.



- Insert and install the holder (2).
- Tighten the screws (1).

Holder to crankcase

M10		Tightening torque	38 Nm

49 – Install the engine on the double-clutch transmission (DKG)

cardiagn.com

RISK OF DAMAGE

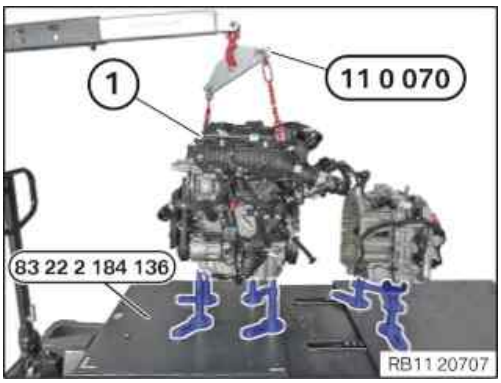
Damage to the flywheel and the double-clutch transmission (DKG).

Damage to the flywheel and the double-clutch transmission (DKG) due to incorrect removal and installation of the double-clutch transmission (DKG).

- Align the double-clutch transmission (DKG) absolutely horizontally during removal and installation.

TECHNICAL INFORMATION

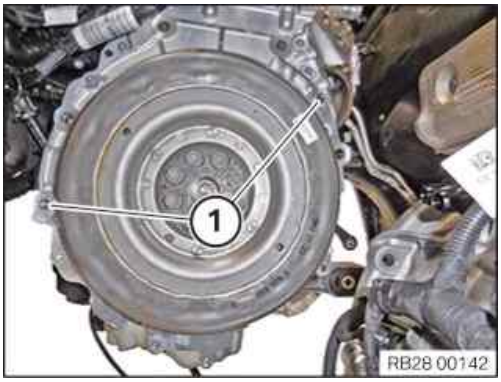
Transmission oil temperature 20 °C up to a maximum 40 °C!
Carry out the "Transmission oil adjustment" service function with the diagnosis system.
The double clutch also needs to be replaced if you exceed the oil change interval by more than 3000 km!
Failure to comply with this instruction will result in serious damage to the twin-clutch gearbox (DKG).



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Position the engine (1) on the lifting table **2 184 136** using the engine lifter and the special tool **0 490 579 (11 0 070)**.
- Feed out engine lifter from engine (1) with special tool **0 490 579 (11 0 070)** and push aside.

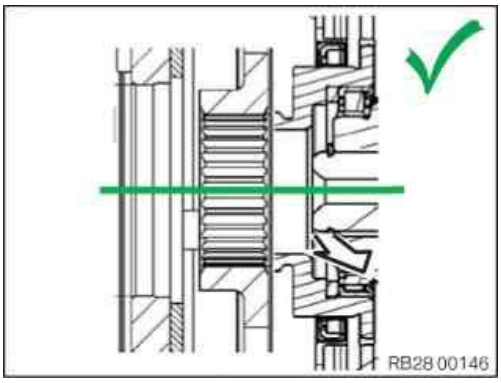


- Check for correct fit of fitting sleeves(1).
- Replace damaged fitting sleeves.

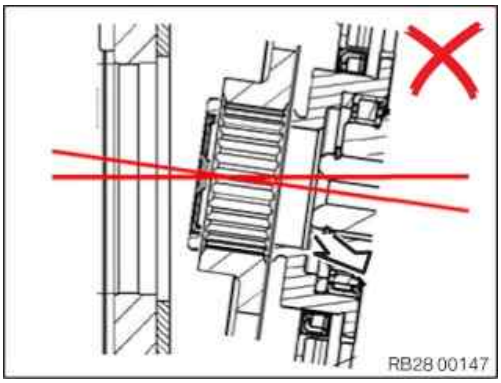
- Clean the gearing (1) of the drive shaft.
- Coat the gearing (1) with MI-Setral-43N grease (BMW part number 83 23 2 152 082).

  Tooth gaps must be filled with grease up to tooth height!

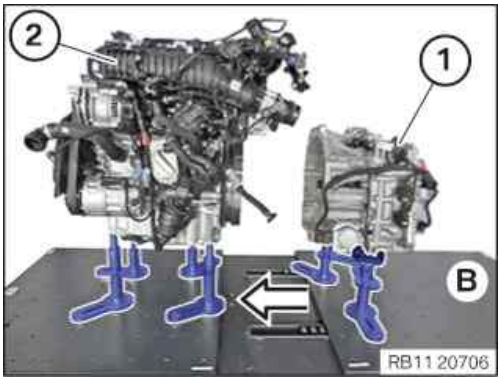
cardiagn.com



- **Correct:** Insert the double-clutch transmission (DKG) horizontally into the flywheel.



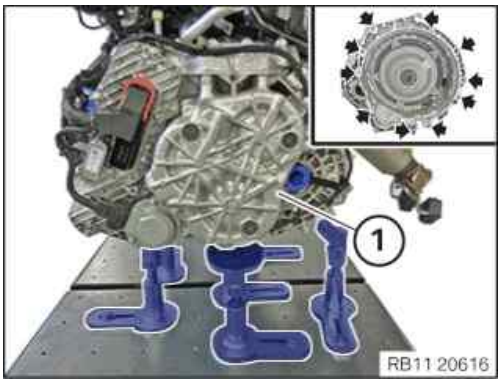
- **Wrong:** Do not tilt the double-clutch transmission (DKG) when inserting it into the flywheel.



NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

- Slide table plate (B) in the direction of the arrow and position double-clutch transmission (DKG) (1) **carefully** on the engine (2).



- Flange-mount the double-clutch transmission (DKG) to the engine so that it is **absolutely** horizontal.
- Tighten screws (arrows).

Transmission to engine

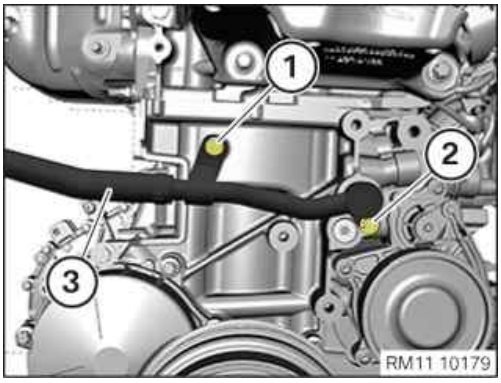
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Connect and lock the coolant lines (1).
- Make sure that you can hear the coolant lines (1) engage.

cardiagn.com

- Unscrew the bolts (1) of the special tool **2 459 012**.
- Guide the special tool **2 459 012** out and remove.

50 – Attaching assemblies (on lifting table)

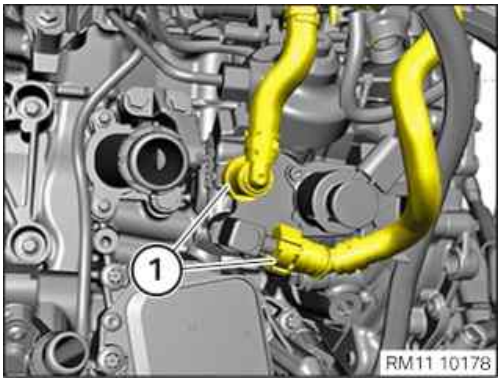


- Renew sealing ring of the coolant line (3).

  Parts: Sealing ring
- Coat the sealing ring and install the coolant line (3) .
- Tighten down screws (1) and (2).

Standard screw connection M6

M6		8 Nm



- Connect and lock fuel lines (1).

  The locks must engage audibly.

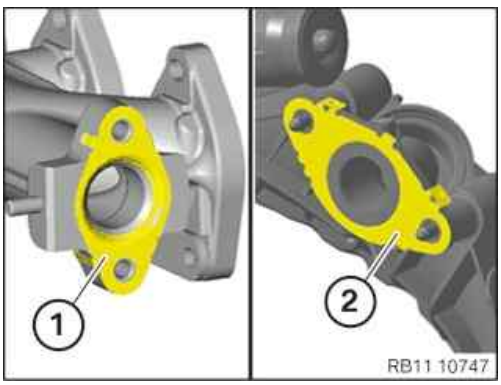
▸ **Installing the exhaust-gas recirculation cooler**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

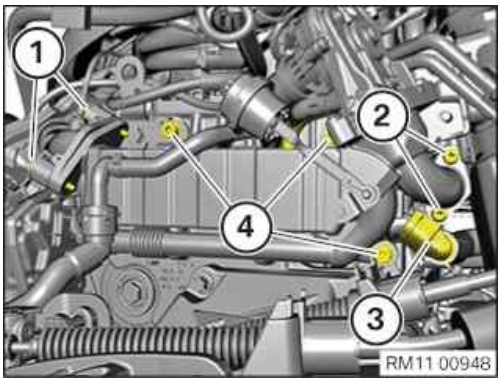


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket
- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

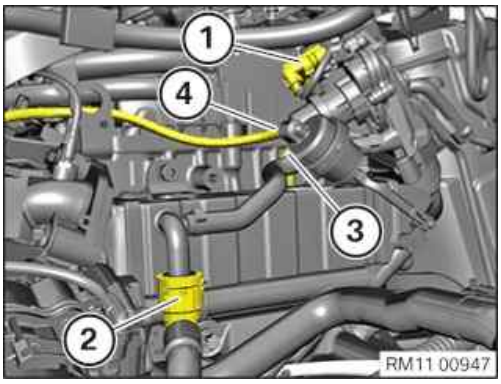
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



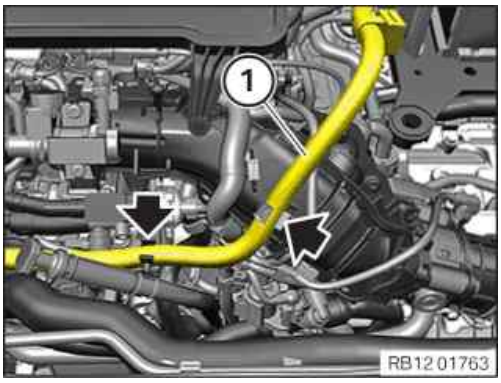
TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

cardiagn.com



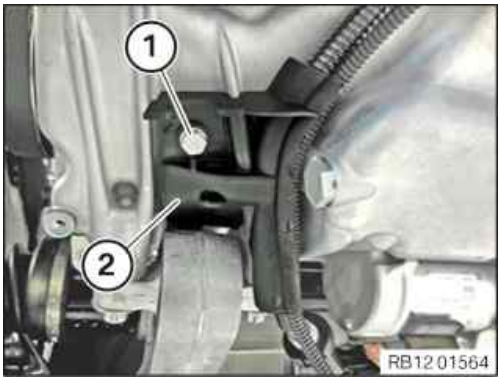
CAUTION

Improper routing of the positive battery cable.

Risk of short circuits!

- Route the positive battery cable without abrasions and do not trap.

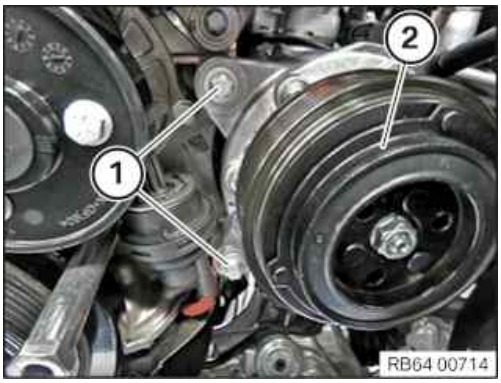
- Insert the positive battery cable (1) into the clamps (arrows).
- Feed in and install positive battery cable at the clamps (1).



- Insert and install the holder (2).
- Tighten down screw (1).

Bracket to oil sump

M6		Tightening torque	8 Nm



- Insert and install the air conditioning compressor (2).

Air conditioning compressor in component carrier

M10		Tightening torque	38 Nm

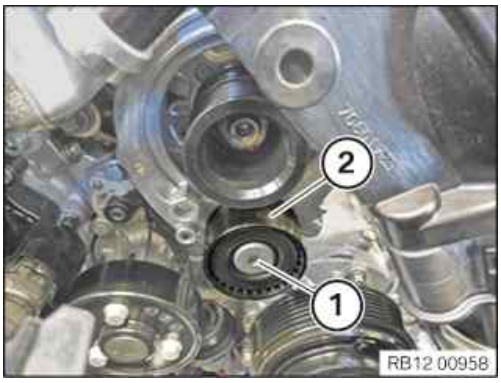
- Tighten the screws (1).

- Insert and install the alternator .
- Tighten the screws (1).

Alternator to component carrier

M10x75 / M10x125		Tightening torque	38 Nm

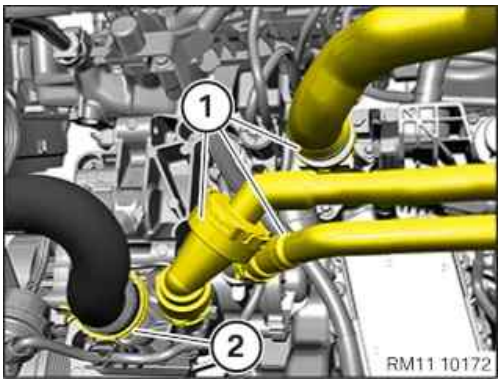
cardiagn.com



- Install the deflecting element (2).
- Tighten down screw (1).

Deflecting element to belt tensioner

M8		Tightening torque	38 Nm



- Install the coolant hose and secure with the clamp (2) .
- Connect and lock the coolant lines (1).

  The locks must engage audibly.

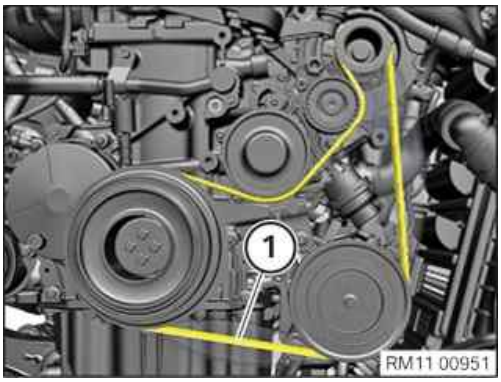
▸ Installing the drive belt for alternator

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

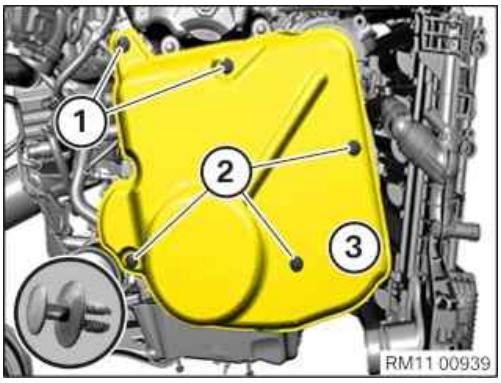


- Feed in the drive belt for the alternator (1) and install it.

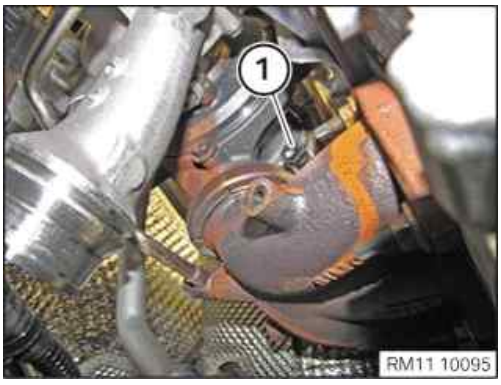
- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

▸ Install the acoustic cover for the engine at the front

cardiagn.com



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.



- Renew the seal between the exhaust turbocharger and the exhaust manifold.

  Parts: Gasket
- Position the exhaust turbocharger with the seal.
- Renew V-band clamp.

  Parts: V-band clamp
- Install V-clip and tighten screw (1).

Exhaust turbocharger to exhaust manifold

V-band clamp		Tightening torque	19 Nm

- Tighten down screw (1).

Holder to exhaust turbocharger and crankcase

M8x16		Tightening torque	22 Nm

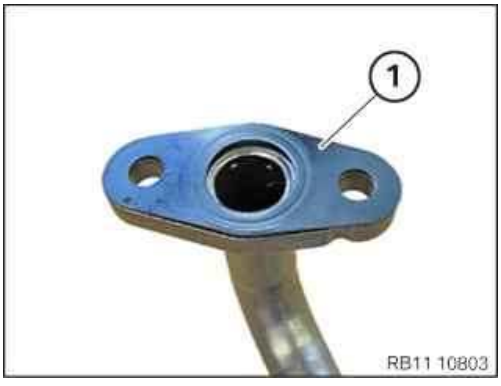
▸ **Installing the oil return line for the exhaust turbocharger**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

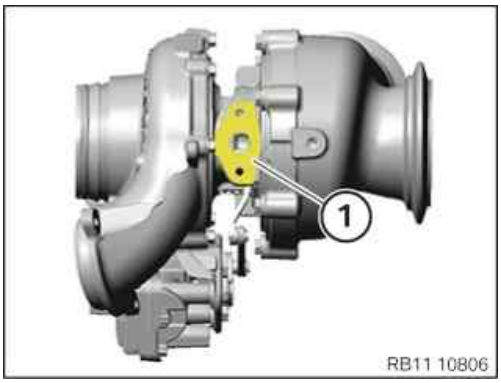


- Renew gasket (1).

  Parts: Gasket

cardiagn.com

- Check the O-ring (1) for damage and renew as needed.



RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

- Do not use any metal-cutting tools.

- Clean sealing surface (1).

RISK OF DAMAGE

Damage to the surface.

The use of metal-cutting tools (e.g. emery cloth) to clean the surfaces can damage them and lead to leaks or engine damage.

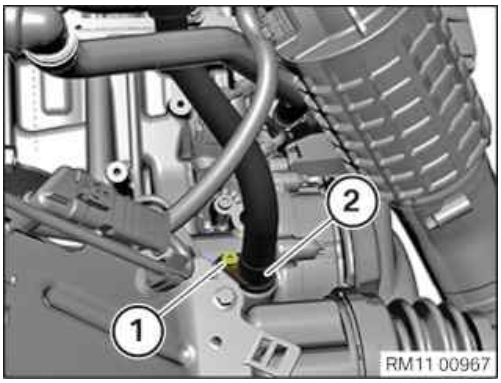
- Do not use any metal-cutting tools.

- Clean sealing surface.

- Feed in and install the oil return line (2) for the exhaust turbocharger.
- Ensure that gasket is correctly seated.
- Tighten the screws (1).

Oil return line to turbocharger

M6x12		Tightening torque	8 Nm



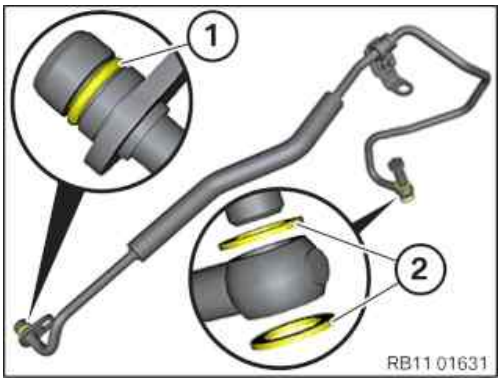
- Install oil return line (2) into crankcase.
- Make sure the O-ring is not damaged.
- Tighten down screw (1).

Oil return line to crankcase

M6x12		Tightening torque	8 Nm

▸ **Install the oil feed line for the exhaust turbocharger**

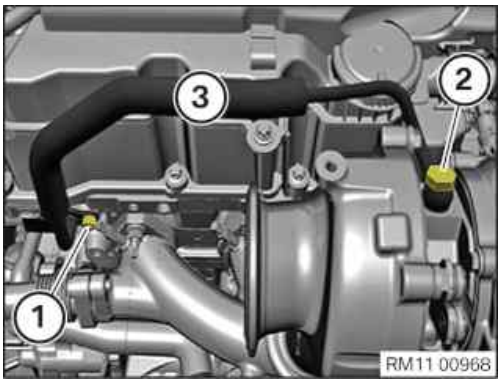
cardiagn.com



- Check the O-ring (1) for damage and replace the oil feed line as needed.

  Parts: Oil feed line
- Renew the sealing rings (2).

  Parts: Sealing ring



- Feed in oil feed line (3) and position.
- Position and tighten the screw (1).

Oil feed line on cylinder head

M6x12		Tightening torque	8 Nm

- Fit and tighten the banjo bolt (2).

  The sealing rings must be positioned correctly.

Oil feed line to exhaust turbocharger

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

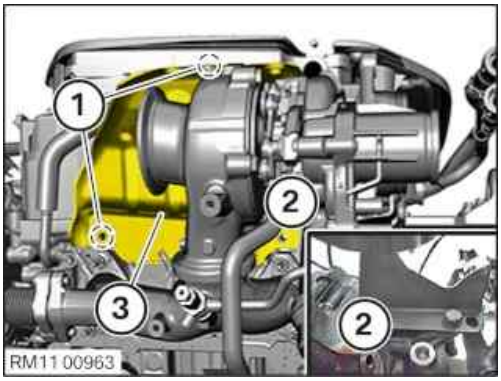
▸ **Installing heat shield on exhaust turbocharger at the rear**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



- Feed in and install the heat shield (3).
- Tighten the screws (1).

Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Tighten down screw (2).

Exhaust turbocharger bracket to cylinder head

Hexagon screw M 8x16		Tightening torque	19 Nm

▸ **Installing heat shield on exhaust turbocharger at bottom**

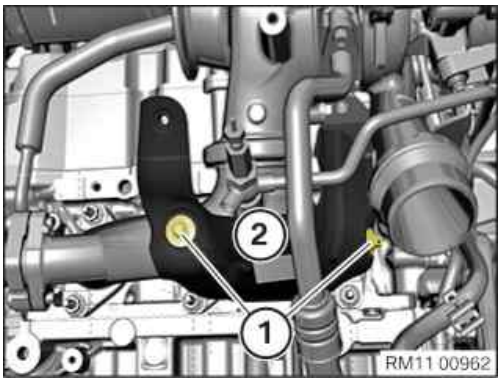
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com



- Feed in and install the heat shield (2).
- Tighten the screws (1).

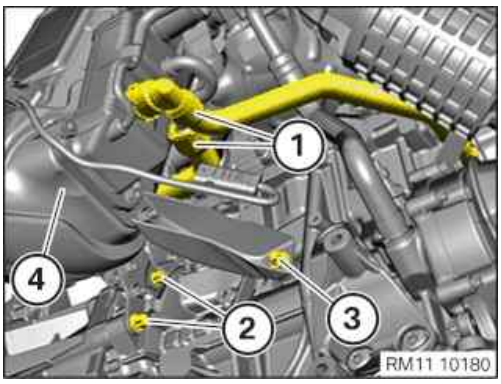
Heat shield for exhaust turbocharger

Torx screw BM 6x12		Tightening torque	10 Nm

- Renew the V-clip (1).

  Parts: V-band clamp
- Renew the gasket (2).

  Parts: Gasket



- Insert and position the diesel particulate filter (4) .
- Tighten down screws (2).

Transmission to engine

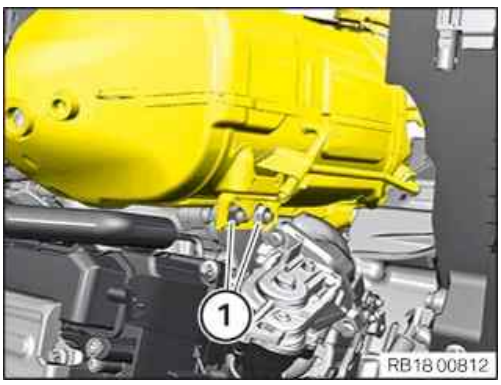
M8		Tightening torque	19 Nm
M12		Tightening torque	66 Nm

- Tighten down screw (3).

Holder to crankcase

M10		Tightening torque	38 Nm

- Connect and audibly lock coolant lines (1).



- Tighten nuts (1).

Diesel particle filter to holder

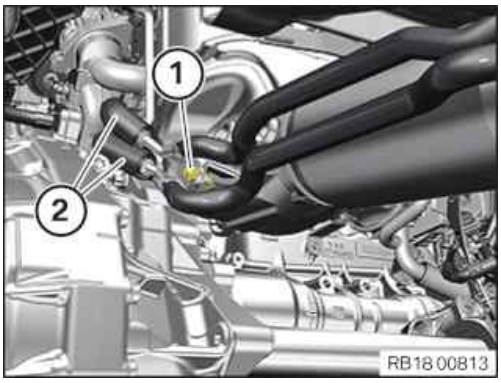
M8 hexagon nut		Tightening torque	19 Nm

- Tighten V-band clamp (1).

Diesel particulate filter V-clip to exhaust turbocharger

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com



- Thread in and install coolant line (2) of the SCR metering module.
- Tighten down screw (1).

Holder for coolant lines to diesel particulate filter

Torx bolt BM6x16		Tightening torque	8 Nm

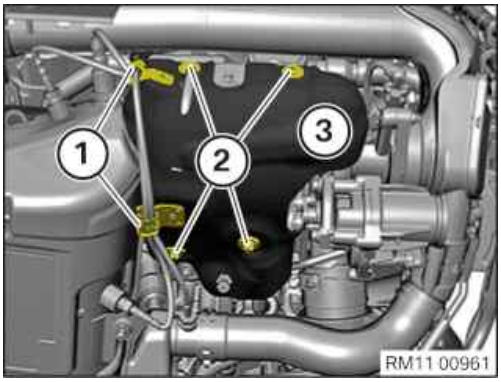
▶ **Install the heat shield on the exhaust turbocharger**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



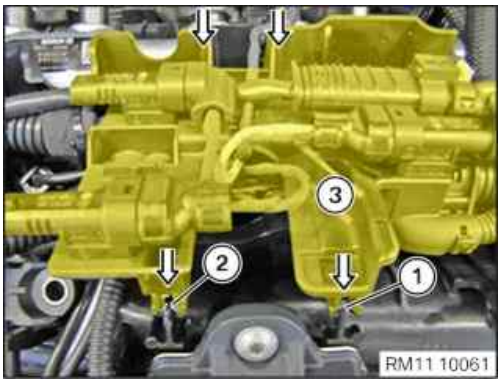
- Feed in and install the heat shield (3).
- Tighten down screws (2).

Heat shield for exhaust turbocharger

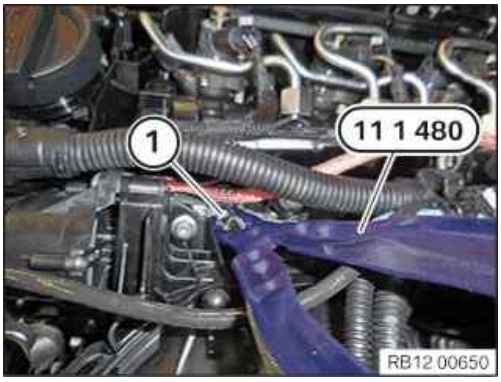
Torx screw BM 6x12		Tightening torque	10 Nm

- Secure cable in holders (1).

▶ **Installing the cable clip for the intake plenum**



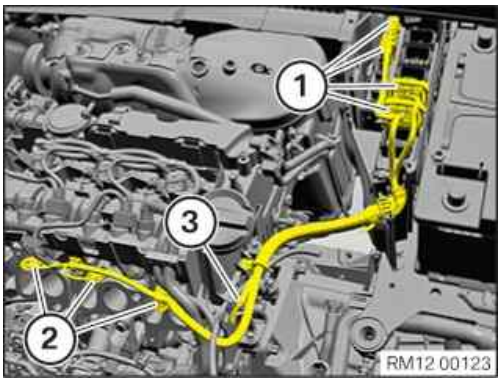
- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).



- Connect and lock the connector (1).

  The connector (1) must engage audibly.

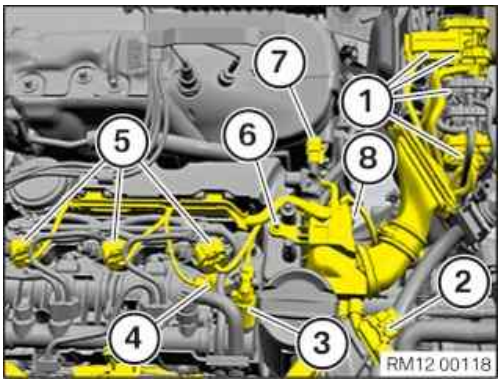
cardiagn.com



- Guide in and install the connector (1) with the wiring harness.
- Plug the connector (2) into the glow element and lock it audibly.
- Mount ground strap and tighten screw (3).

Ground cable to cylinder head

M6x12		Tightening torque	8 Nm

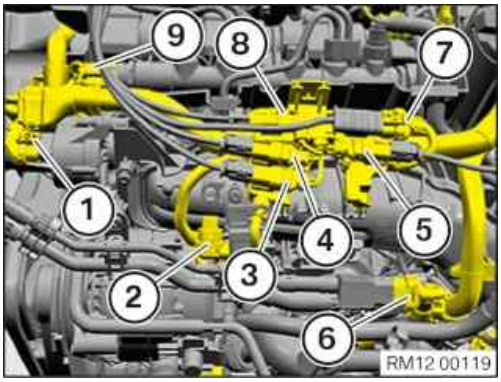


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route the connector (1) to the integrated supply module (PDM) and to the DME control unit.
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

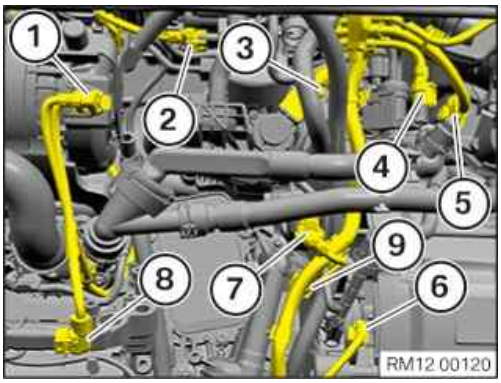
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.
- Attach connector (8) to the exhaust-gas recirculation valve and lock audibly.

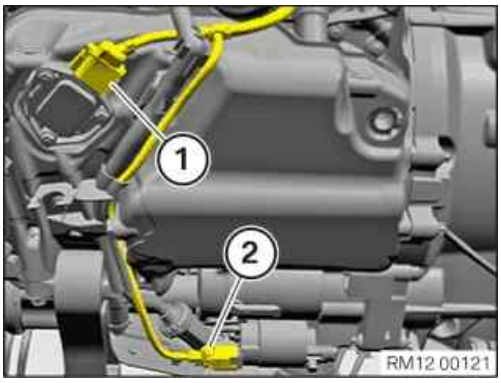


- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.
- Connect the connector (9) to the rail pressure sensor and lock it audibly.

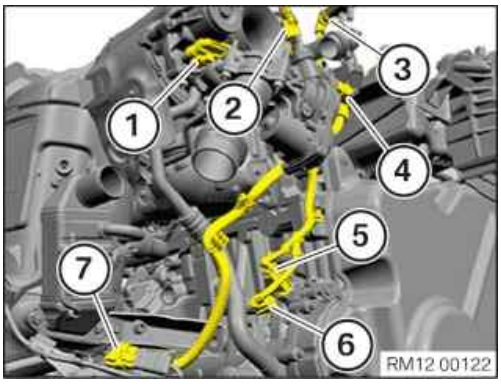


- Connect the connector (1) to the alternator and lock audibly.
- Connect the connector (2) to the electric changeover valve and lock audibly.
- Connect the connector (3) to the high pressure pump and lock audibly.
- Connect the connector (4) to the electric changeover valve and lock audibly.
- Attach connector (5) to the throttle bodies and lock it audibly.
- Connect the connector (6) to the crankshaft sensor and lock it audibly.
- Connect the connector (7) to the oil pressure sensor and lock it audibly.
- Connect the connector (8) to the air conditioning compressor and lock audibly.
- Connect the connector (9) to the solenoid valve and lock audibly.

cardiagn.com

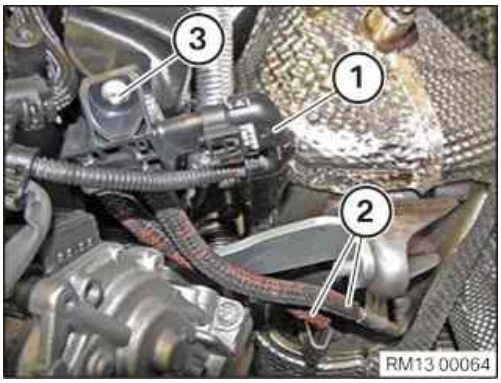


- Connect the connector (1) to the oil-level sensor and lock it audibly.
- Connect connector (2) to the starter motor and lock audibly.



- Attach connector (1) to the exhaust turbocharger and lock it audibly.
- Attach connector (2) to the exhaust gas pressure sensor and lock it audibly.
- Attach connector (3) to the differential pressure sensor and lock it audibly.
- Attach connector (4) to the low pressure exhaust-gas recirculation valve and lock it audibly.
- Attach connector (5) to the oil pressure switch and lock it audibly.
- Attach connector (6) to the switching valve and lock it audibly.
- Connect the connector (7) to the monitoring oxygen sensor and lock audibly.

51 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

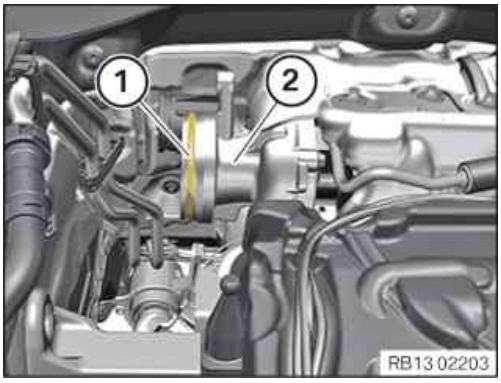
Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

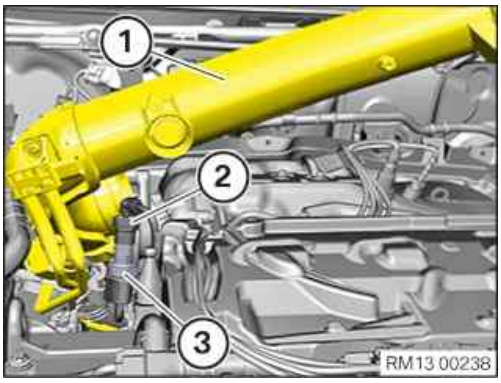
  The connector (1) must engage audibly.

52 – Installing clean air pipe



- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

cardiagn.com



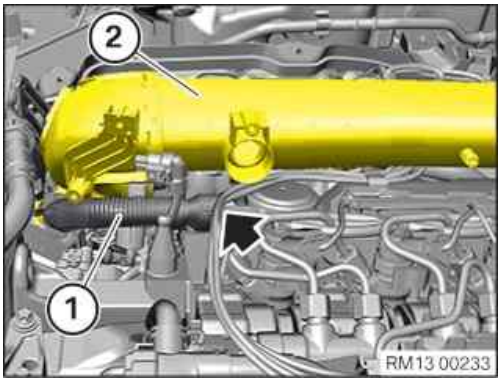
- Feed in clean air pipe (1) and lay it down as shown.
- Insert and install the exhaust gas pressure sensor (3).
- Tighten the exhaust gas pressure sensor (3).

Exhaust gas pressure sensor

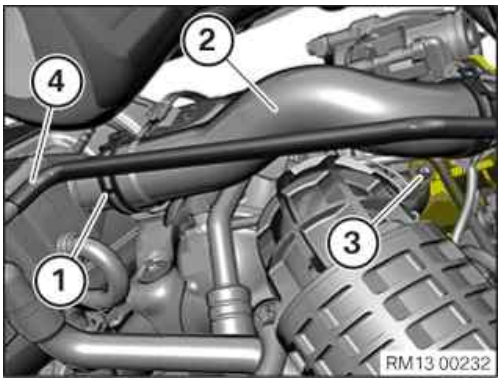
Exhaust gas pressure sensor		Tightening torque	13,5 Nm

- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Install the clean air pipe (1).



- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten down screw (3).

Clean air pipe to exhaust turbocharger

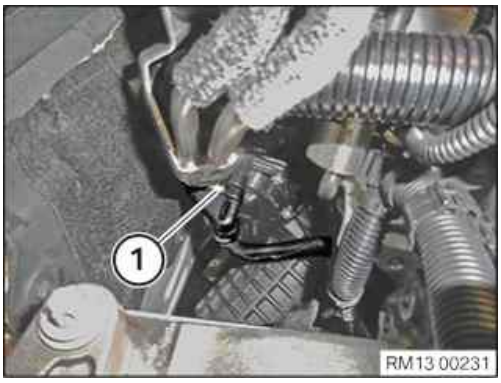
Torx bolt BM8x25		Tightening torque	8 Nm

- Feed the pressure hose (2) in and install.
- Position and secure the clamp (1).
- Check pressure hose (4).
- Renew hardened pressure hoses (4).

  Parts: Pressure hose
- Connect pressure hose (4) and secure with 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

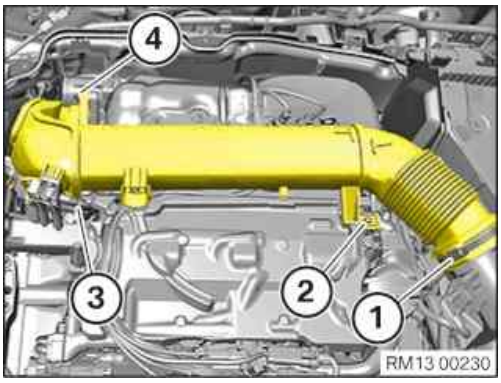
Clamp 15–19mm		Tightening torque	3 Nm



- Connect and lock the connector (1).

  The connector (1) must lock audibly.

cardiagn.com



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

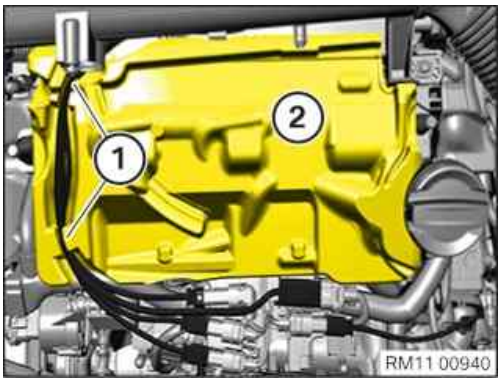
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

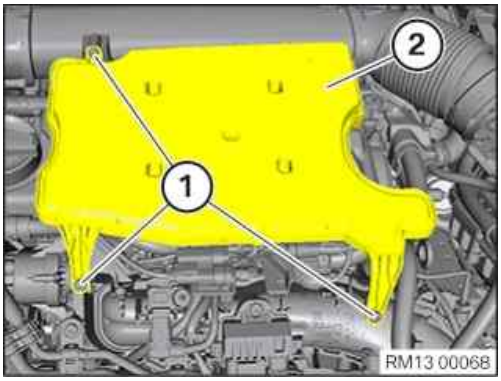
Clamp		Tightening torque	3 Nm

53 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

54 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

55 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

56 – Install engine

- See additional information.

Additional Information

Overview of Tightening Torques

Special tool to cylinder head Used in step 8

Used in step 50

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold

Used in step 50

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head

Used in step 50

M8x20		Tightening torque	19 Nm

Bracket to oil sump

Used in step 50

M6		Tightening torque	8 Nm

Air conditioning compressor in component carrier

Used in step 50

M10		Tightening torque	38 Nm

Alternator to component carrier

Used in step 50

M10x75 / M10x125		Tightening torque	38 Nm

Deflecting element to belt tensioner

Used in step 50

M8		Tightening torque	38 Nm

Exhaust turbocharger to exhaust manifold

Used in step 50

V-band clamp		Tightening torque	19 Nm

Holder to exhaust turbocharger and crankcase

Used in step 50

M8x16		Tightening torque	22 Nm

Oil return line to turbocharger

Used in step 50

M6x12		Tightening torque	8 Nm

Oil return line to crankcase

Used in step 50

M6x12		Tightening torque	8 Nm

Oil feed line on cylinder head

Used in step 50

M6x12		Tightening torque	8 Nm

Oil feed line to exhaust turbocharger

Used in step 50

Hollow bolt	Renew sealing rings.	Jointing torque	10 Nm
		Angle of rotation	45 °

Heat shield for exhaust turbocharger

Used in step 50

Torx screw BM 6x12		Tightening torque	10 Nm

Exhaust turbocharger bracket to cylinder head

Used in step 50

Hexagon screw M 8x16		Tightening torque	19 Nm

Diesel particle filter to holder

Used in step 50

M8 hexagon nut		Tightening torque	19 Nm

Diesel particulate filter V-clip to exhaust turbocharger

Used in step 50

V-band clamp	Renew V-band clamp.	Tightening torque	15 Nm

cardiagn.com

Holder for coolant lines to diesel particulate filter — Used in step 50

Torx bolt BM6x16		Tightening torque	8 Nm

Ground cable to cylinder head — Used in step 50

M6x12		Tightening torque	8 Nm

Wiring harness to cylinder head cover — Used in step 50

TS5x20		Tightening torque	3,5 Nm

Differential pressure sensor to holder — Used in step 51

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 51 52

Clamp 15–19mm		Tightening torque	3 Nm

Exhaust gas pressure sensor — Used in step 52

Exhaust gas pressure sensor		Tightening torque	13,5 Nm

Clean air pipe to exhaust turbocharger — Used in step 52

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover — Used in step 52

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing — Used in step 52

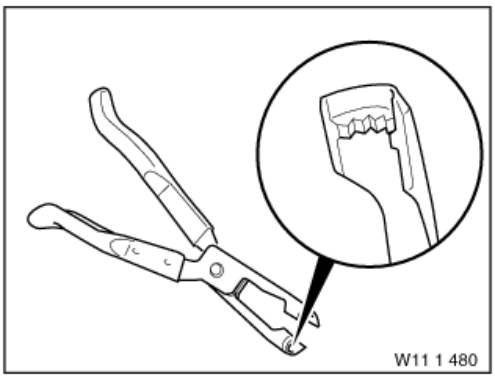
Clamp		Tightening torque	3 Nm

Resonator to manifold and clean air pipe — Used in step 54

Screw TS6	Renew screw.	Tightening torque	5 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common — Used in step 7 21

Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

cardiagn.com

2 459 012 Holder

Common

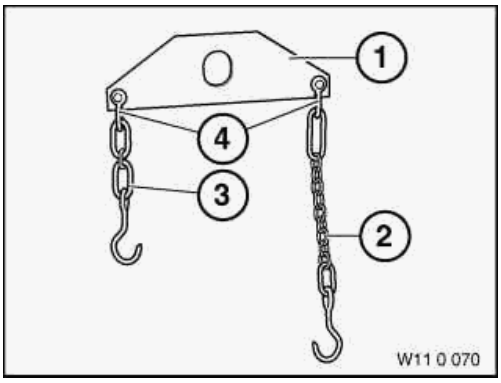
Used in step 8 49

Usage	For removing and installing the cylinder head. Contour-graphic silhouette foil is included in the delivery specification.
Included in the tool or work	
Storage location	A58
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 490 579 (11 0 070) Lifting gear

Used in step 8 9 48 49

cardiagn.com



Common

Usage	(Lifting gear) For removing and installing engines As of 08/2011, only available as a complete set, no separate components!. Delivered with TÜV inspection certificate and operating instructions.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 96 (107)

Consisting of

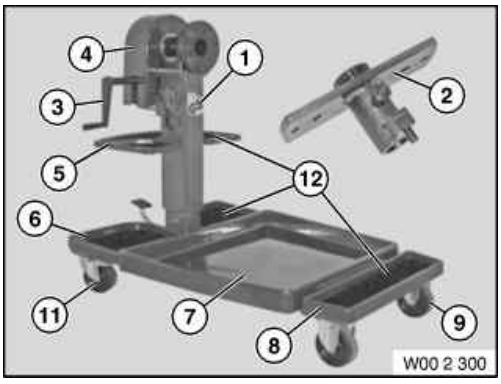
Pos	BMW Order number	Replaced by	Designation	In Connection with
4	0 493 753 (11 0 079)		**Shackle** (Shackle) 2 pieces As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
3	0 490 582 (11 0 073)		**Chain** (Chain) Version: short As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
1	0 490 580 (11 0 071)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	
2	0 490 581 (11 0 072)		**Lifting gear** (Cross member) As of 08/2011, only available as a complete set via 11 0 070 = 0490579. Delivered with TÜV inspection certificate and operating instructions.	

2 455 010 Engine support

Common Used in step 9 48

Usage	For accommodating engine on assembly stand. Engine: B3x, B4x, N47.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 07 17 (487)

0 495 187 (00 2 300) Assembly stand



Common Used in step 9

Usage	Assembly stand with universal flange for mounting engines from S85
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 25 04 (155)

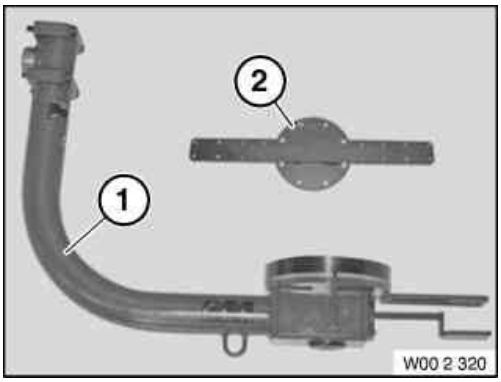
cardiagn.com

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 188 (00 2 301)		**Assembly stand** available only as complete assembly stand 83 30 0 495 187.	
2	0 495 189 (00 2 302)	**2 299 563**	**Tool** (Universal flange). Do not use any more!!! Technically locked. Replaced with a new flange with material number 83 30 2 299 563. All flanges delivered until the end of 2011 will be replaced at no charge. From 2012, only the new flange will be supplied. Also applies to the complete engine mounting stand 00 2 300.	
3	0 495 200 (00 2 303)		**Crank**	
4	0 495 201 (00 2 304)		**Cover** (Protective hood)	
5	0 495 202 (00 2 305)		**oddments tray** (Oddments tray for small parts)	
6	0 495 203 (00 2 306)		**Shaped element** (Rear shaped pan)	
7	0 495 204 (00 2 307)		**Collection pan** (Oil collection pan)	
8	0 495 205 (00 2 308)		**Shaped element** (Front shaped pan)	
9	0 495 206 (00 2 309)		**Wheel** (Front wheel (without stop))	
10	0 495 207 (00 2 311)		**Wheel** (Rear wheel (with stop))	
11	0 495 208 (00 2 312)		**Mat** (Checker mat set)	
2	2 299 563		**Adapter** New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.	

cardiagn.com

0 495 196 (00 2 320) Support arm



Common

Used in step 9

Usage	(Support arm with fixture) For mounting engines using the engine mounting bracket.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	002300 = 0495187
SI-Number	01 25 04 (155)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 197 (00 2 321)		**Support arm**	
2	0 495 198 (00 2 322)		**Panel** (take-up plate)	
3	0 495 380 (00 2 323)		**Panel** (fixture) Engine N73	
6	0 496 287 (00 2 326)		**Panel** (fixture) Engine: M73	
5	0 496 288 (00 2 327)	**0 496 373**	**Panel** (fixture) Engine: S62 Replaced by 11 5 420 (0 496 373)	
8	0 496 533 (00 2 328)		**Support** (Engine mount) Engine: N57, N57Top	
9	0 496 579 (00 2 329)	**0 496 680**	**Support** (Engine mount) Engine: N74 Replaced by 116160 (0 496 680)	
4	0 495 379 (00 2 324)		**Panel** (fixture) Engine M67TU	
5	0 495 381 (00 2 325)		**Panel** (fixture) Engine N62, N62TU	

0 495 910 (37 1 152) Socket wrench

Common

Used in step 11 14 44 46

Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

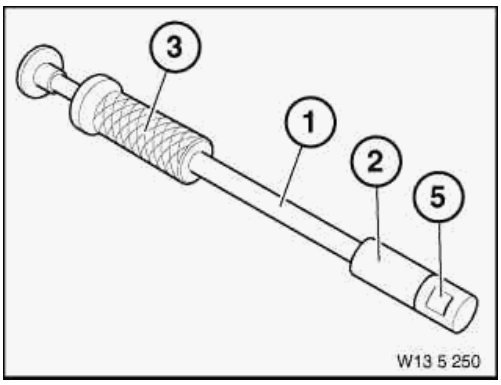
cardiagn.com

2 413 106 Fastener

Common Used in step 11 46

Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

0 493 321 (13 5 250) Puller



Common Used in step 13

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

cardiagn.com

0 493 339 (13 5 252) Bush

Common Used in step 13

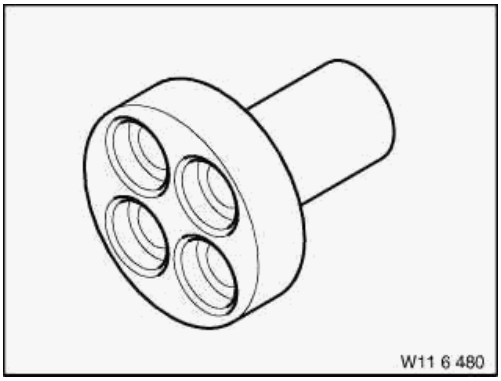
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 340 (13 5 253) Weight

Common Used in step 13

Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common Used in step 16 38 41

Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

Common Used in step 16 38 39 41

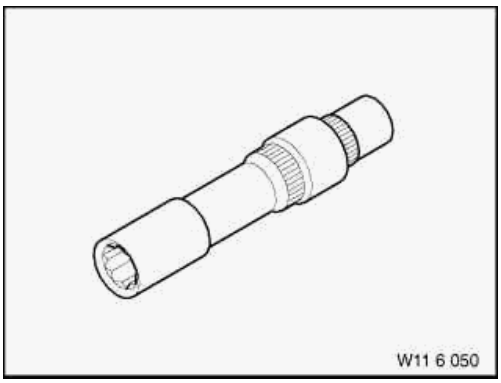
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 112 (11 8 760) Gauge

Common	Used in step 16 38 40 41
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 491 068 (11 6 050) Socket wrench insert



Common	Used in step 21 36
Usage	(Wrench socket AF 10) bi-hexagon/glow elements
Included in the tool or work	
Storage location	B10
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

cardiagn.com

0 495 105 (11 4 480) oddments tray

Common

Used in step 22 23 38

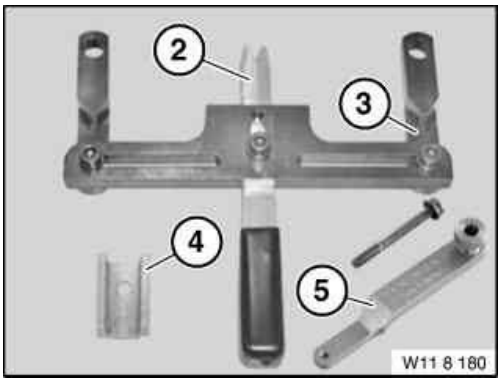
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

cardiagn.com

0 493 587 (11 8 180) Holder



Common

Used in step 24 33

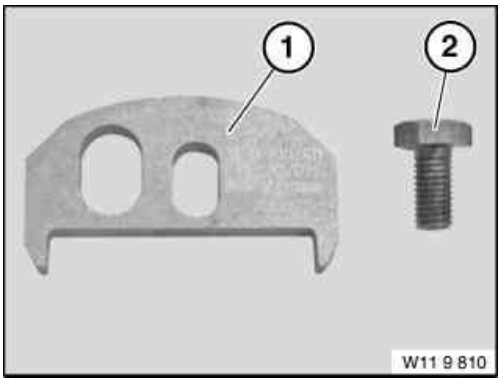
Usage	(Counter support) Blocking flywheel when releasing and tightening down central bolts on vibration absorber
Included in the tool or work	
Storage location	B45
Replaced by	
In connection with	
SI-Number	01 12 99 (452)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
2	0 494 433 (11 8 182)		**Shaped part** (shaped part)	
5	0 494 716 (11 8 185)		**Adapter** (Adapter with adjusting sleeve) E46 M47TU	
1	0 494 432 (11 8 181)	**0 494 434**	**Basic body** (Basic body) E65/M67, E38/M67 Discontinuation Replaced by 11 8 183 (0 494 434)	
3	0 494 434 (11 8 183)		**Basic body**	
4	0 494 435 (11 8 184)		**Adapter** E65 / M67	

cardiagn.com

0 496 171 (11 9 811) Holder

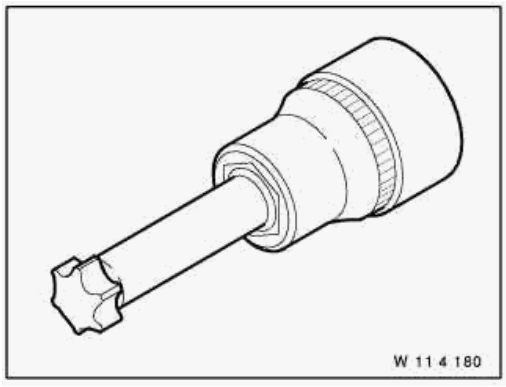


Common	Used in step 26 31
Usage	Available only as a complete tool set 11 9 810 (83 30 0 496 170) - as of 13.01.12
Included in the tool or work	0 496 170
Storage location	C86
Replaced by	
In connection with	
SI-Number	01 07 07 (355)

0 494 793 (11 9 265) Bush

Common	Used in step 26 31
Usage	
Included in the tool or work	0 493 938
Storage location	A44
Replaced by	
In connection with	
SI-Number	

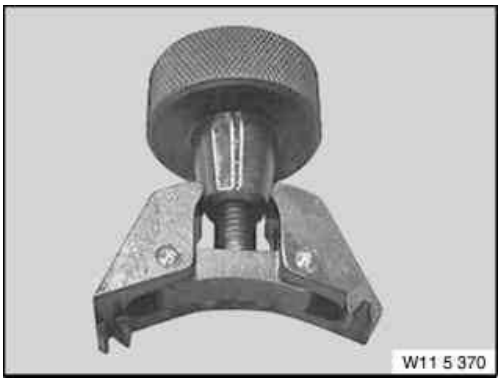
0 491 018 (11 4 180) Socket WAF 46



Common	Used in step 26 31
Usage	(screwdriver bit Torx T60) For releasing and tightening down dual-mass flywheel - model year: from Jan 94
Included in the tool or work	
Storage location	C9
Replaced by	
In connection with	
SI-Number	01 02 94 (777)

cardiagn.com

0 495 131 (11 5 370) Tool

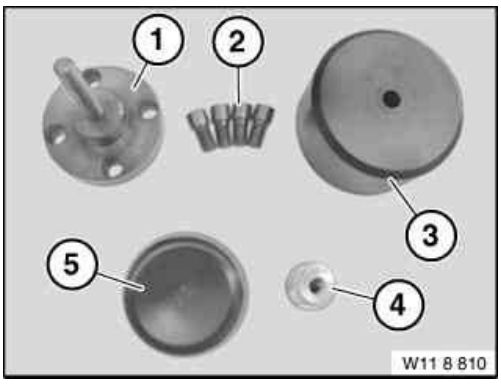


Common	Used in step 28 29
Usage	(Locating tool) For VANOS exhaust camshaft gear setting.
Included in the tool or work	
Storage location	A71
Replaced by	
In connection with	
SI-Number	01 02 05 (173)

2 288 943 Striking tool

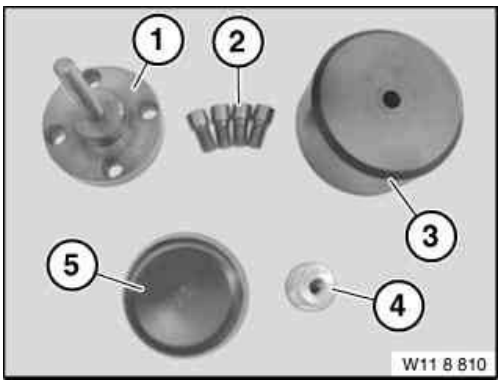
Common	Used in step 28
Usage	For dismantling the ring gear of the counterbalance shaft.. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

0 496 137 (11 8 815) Holding sleeve



Common	Used in step 30
Usage	(Slip sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

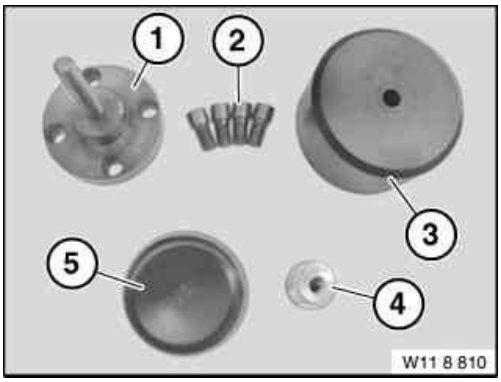
0 496 133 (11 8 811) Basic body



Common	Used in step 30
Usage	Liquidation of existing inventory and then available only as a complete tool set 11 8 810 = 83 30 0 496 132 - as of 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

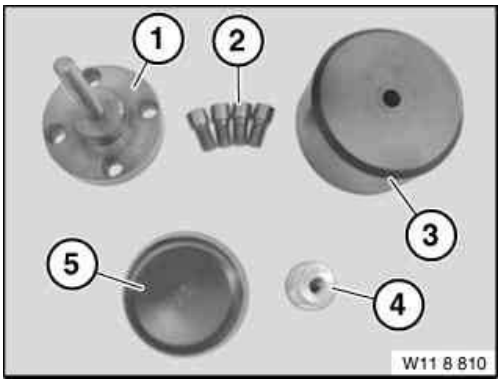
cardiagn.com

0 496 134 (11 8 812) Screw



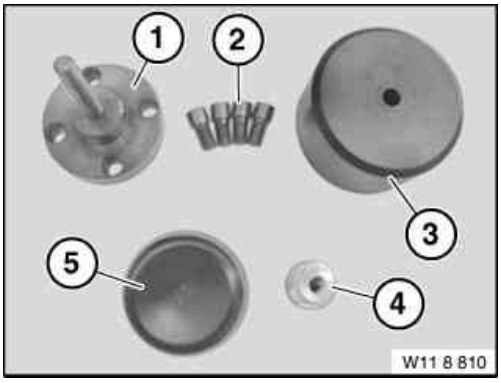
Common	Used in step 30
Usage	(Screw set) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 135 (11 8 813) Holding sleeve



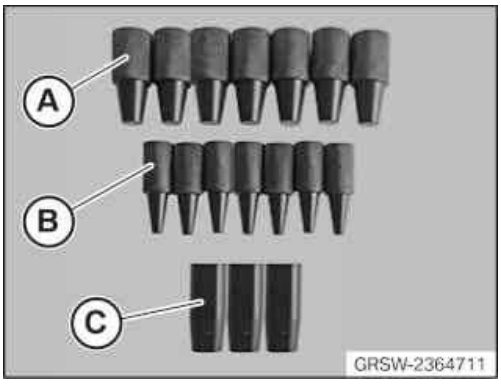
Common	Used in step 30
Usage	(Thrust sleeve) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 496 136 (11 8 814) Nut



Common	Used in step 30
Usage	(Nut with bearing) Liquidation of existing inventory and then available only via complete tool set 11 8 810 = 83 30 0 496 132 - status 09.12.2011
Included in the tool or work	0 496 132
Storage location	
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

2 364 711 Plug



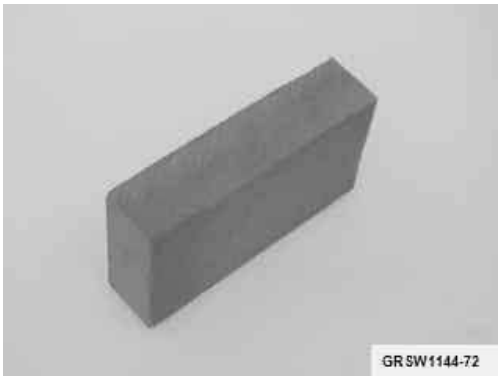
Common	Used in step 30
Usage	For closing the pressure oil holes for cleaning the cylinder head sealing surfaces.
Included in the tool or work	
Storage location	C20
Replaced by	
In connection with	
SI-Number	01 50 14 (203)

cardiagn.com

0 495 103 (11 4 471) Scraper

Common	Used in step 30
Usage	
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

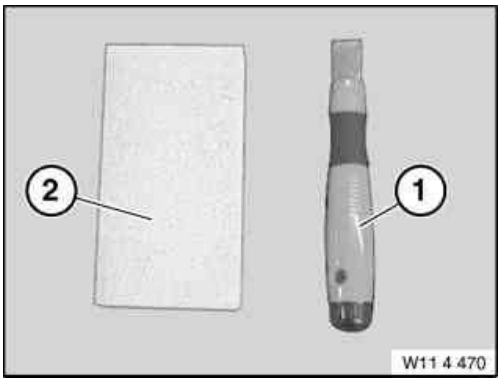
0 495 104 (11 4 472) Extractor



Common	Used in step 30
Usage	(grindstone)
Included in the tool or work	0 495 102
Storage location	C52
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 102 (11 4 470) Tool



Common

Used in step 30

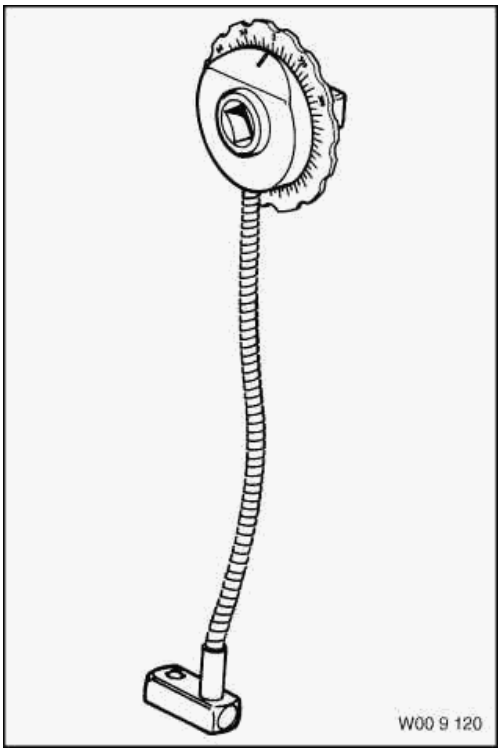
Usage	(cleaning kit) For cleaning sealing surfaces on magnesium crankcase/cylinder head.
Included in the tool or work	
Storage location	C52
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 103 (11 4 471)		**Scraper**	
2	0 495 104 (11 4 472)		**Extractor** (grindstone)	

cardiagn.com

0 490 504 (00 9 120) Torque angle measuring dial

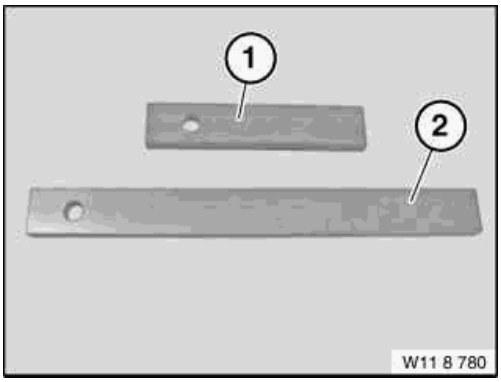


Common Used in step 30

Usage	For torsion angle adjustment of cylinder head bolts (all engines) And reinforcement plate front axle support E46
Included in the tool or work	
Storage location	A4
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 496 120 (11 8 780) Plate



Common

Used in step 30

Usage	(Mounting plates) For securing transmission oil sump when gearbox is removed.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 496 121 (11 8 781)		**Plate** (Mounting plate, short)Discontinued; only available via set 11 8 780 = 0496120.	
2	0 496 122 (11 8 782)		**Plate** (Mounting plate, long) Discontinued; only available via set 11 8 780 = 0496120.	

cardiagn.com

2 285 058 Tool set

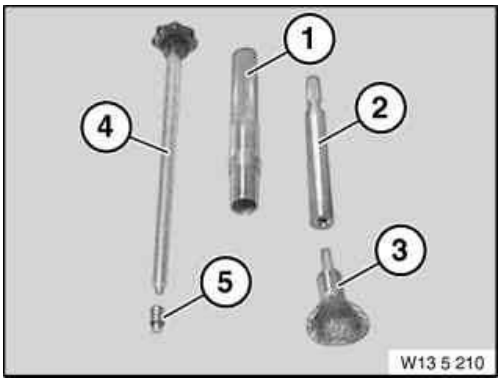
Common	Used in step 31
Usage	
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 02 14 (069)

2 357 900 Fitting aid

Common	Used in step 32
Usage	For installation of the front radial shaft seal incl. lid.
Included in the tool or work	
Storage location	C56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

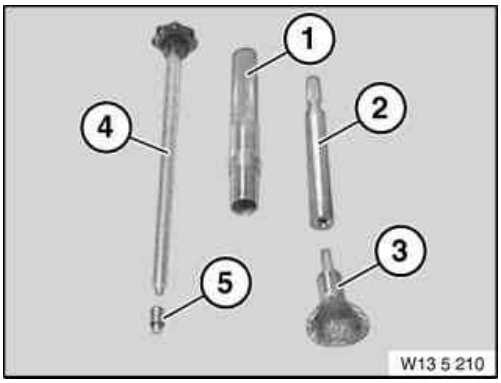
0 493 763 (13 5 215) Plug



Common Used in step 43

Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 762 (13 5 214) Rod

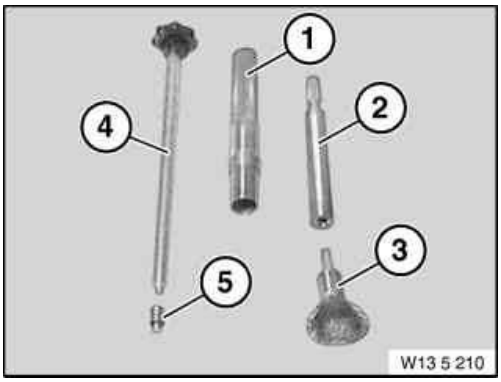


Common Used in step 43

Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool



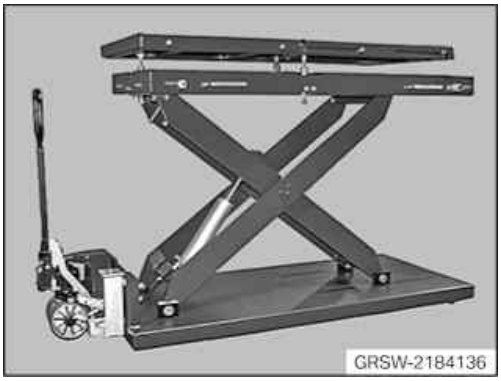
Common Used in step 43

Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

2 184 136 Mobile equipment table lift



Common Used in step 49

Usage	Table lift MHT 1200
Included in the tool or work	
Storage location	
Replaced by	
In connection with	
SI-Number	06 01 10 (649)

Replacement tools:

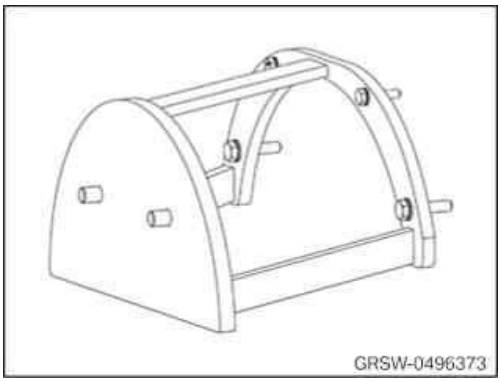
2 299 563 Adapter

Common Used in step 9

Usage	New adapter for the engine assembly stand. Replacement for 83 30 0 495 189 - 00 2 302.
Included in the tool or work	0 495 187
Storage location	
Replaced by	
In connection with	
SI-Number	

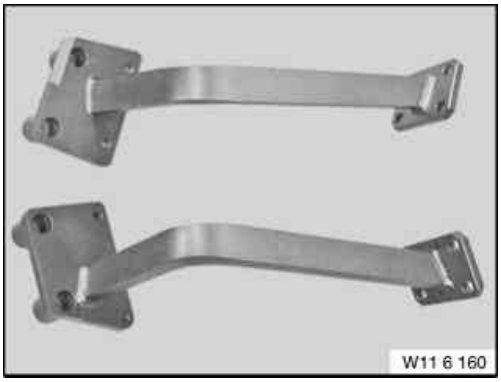
cardiagn.com

0 496 373 (11 5 420) Plate



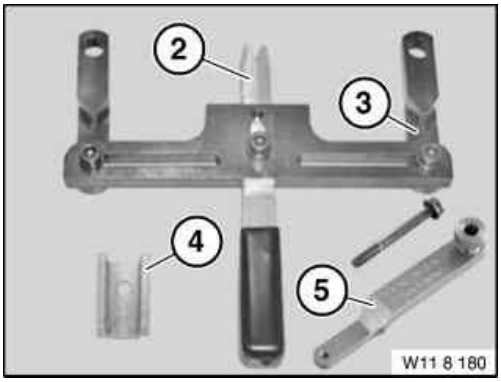
Common	Used in step 9
Usage	(Fixture) Engine S62
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	

0 496 680 (11 6 160) Support



Common	Used in step 9
Usage	For mounting N74 engine on the assembly stand. In combination with 00 2 300, 00 2 320
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	00 2 300; 00 2 320 = 0495196
SI-Number	01 31 09 (604)

0 494 434 (11 8 183) Basic body



Common	Used in step 24 33
Usage	
Included in the tool or work	0 493 587
Storage location	
Replaced by	
In connection with	
SI-Number

11 14 200 Detaching and attaching/replacing timing case cover on front at bottom (B37C)

Special tools required:

- 11 4 471
- 11 4 472
- 2 469 803
- 2 357 900

Caution!

When removing the timing case cover, renewing the timing case cover is **essential**.

Reuse of the timing case cover is **not** permitted.

Caution!

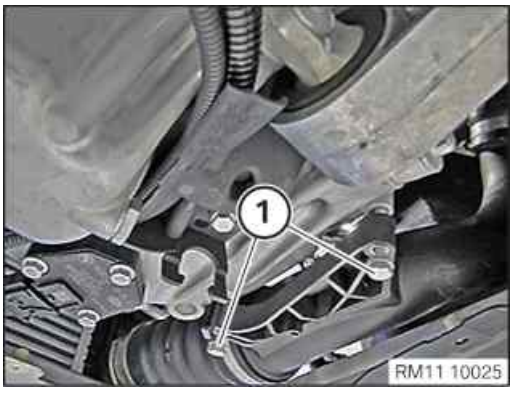
Engines with surface sealant:

Application time of sealing compound maximum 12 min.

Necessary preliminary work:

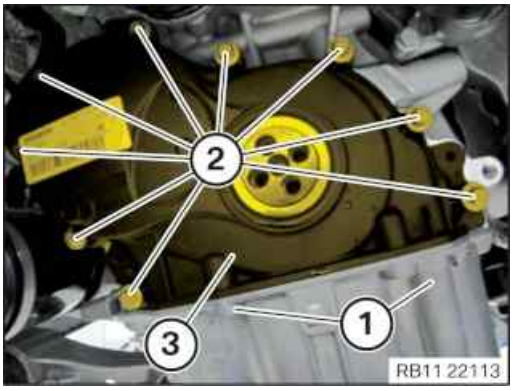
- Remove underbody protection
- Remove vibration damper.
- Remove belt tensioner for alternator.

Removal:



Loosen screws (1).

cardiagn.com



Release screws (1).

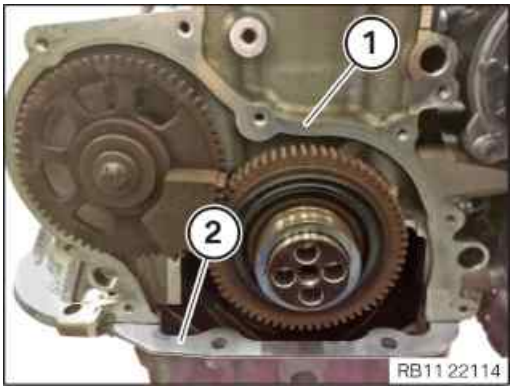
Unfasten screws (2).

Remove gear case cover (3).

Preparation for installation:

Renew timing case cover (1) **without fail**.

Parts: Gear case cover



Caution!

Do not use any metal-cutting tools (e.g. abrasive cloth) for cleaning the sealing surfaces.

Clean sealing surfaces (1) and (2) with special tool 11 4 471 and 11 4 472 of sealing residue.*Installation note:*
Clean sealing surfaces (1) and (2) with brake cleaner 3.3.

Sealing surfaces (1) and (2) **must be free** of oil, grease and cleaning agents.

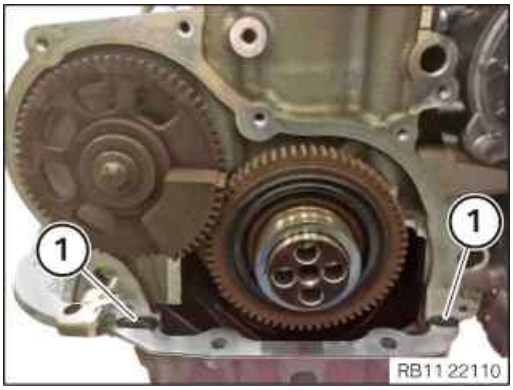
Keep special tool 2 469 803 ready.

cardiagn.com

Position sealing compound (1) on special tool 2 469 803 as shown.

Parts: Sealing compound 2.2

Installation:



Caution!

Application time of sealing compound **maximum** 12 min.

Sealing compound height approximately 2 - 2.5 mm.

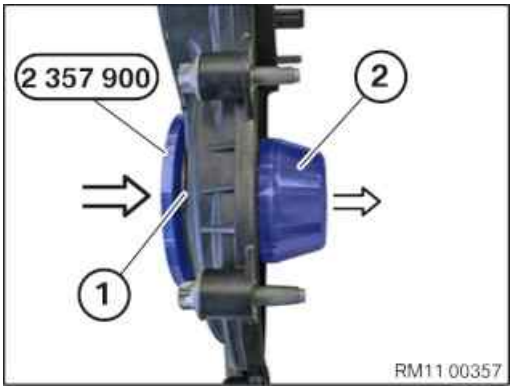
Apply sealing bead (1) approx. 5 mm as shown.

Assemble special tool 2 357 900 as shown.

Caution!

Do not use engine oil or lubricant.

cardiagn.com

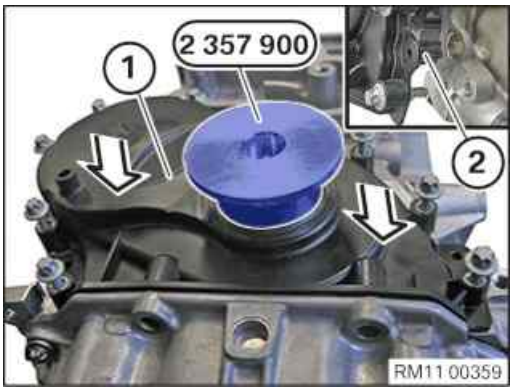


Caution!
Special tool must be resting on timing case cover (1).

Carefully push special tool 2 357 900 through sealing ring into timing case cover and abut.

Remove fitting aid (2).

Fit special tool 2 357 900 with timing case cover (1) on crankshaft hub (2).



Note:
Pay attention to both guide pins (2).

Mount timing case cover (1) on crankcase in direction of arrow.

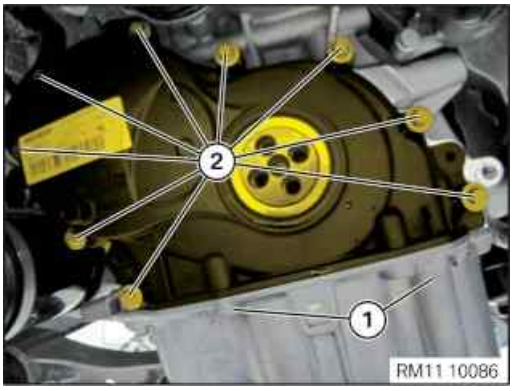
Abut screws.

Note:
Dust lip (1) must be facing outwards.

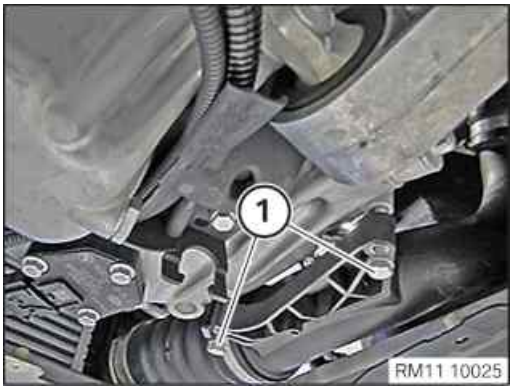
Remove special tool 2 357 900 .

Check installation position of dust lip (1).

cardiagn.com



Abut screws (2) crosswise.
Abut screws (1).
Tighten the screws (2) crosswise.
Tightening torque 11 14 3AZ.
Tighten screws (1).
Tightening torque: 11 13 2AZ.



Tighten down screws (1).
Tightening torque: 11 00 2AZ.

Required follow-up work:

- Install belt tensioner for alternator.
- Install vibration damper.
- Install underbody protection.

cardiagn.com

11 28 010 Removing and installing/replacing alternator drive belt (B37C)

Caution!

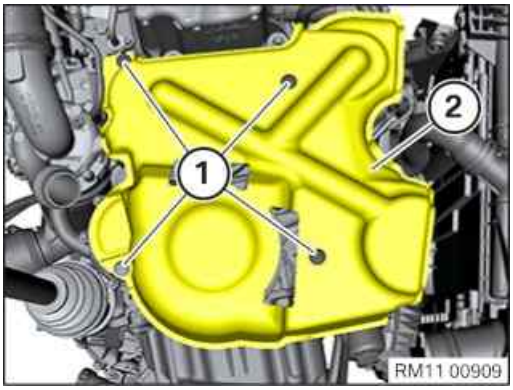
Check drive belt for coolant and oil residues, replace if necessary.

Note:
If the drive belt is to be reused, the direction of rotation must be marked.

Necessary preliminary work:

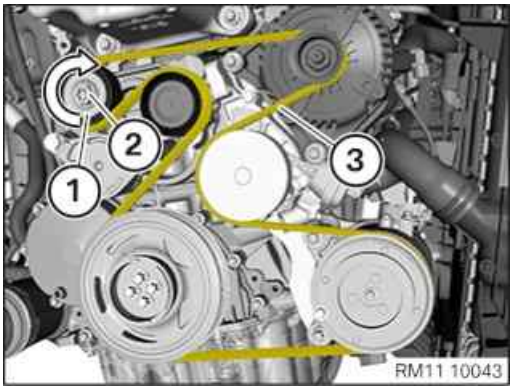
- Remove right charge-air duct
- Remove clean air pipe

Removal:



Release expanding rivet (1).

Remove acoustic cover (2) towards bottom.



Safety information:

- Danger of injury when tensioning or releasing the drive belt.

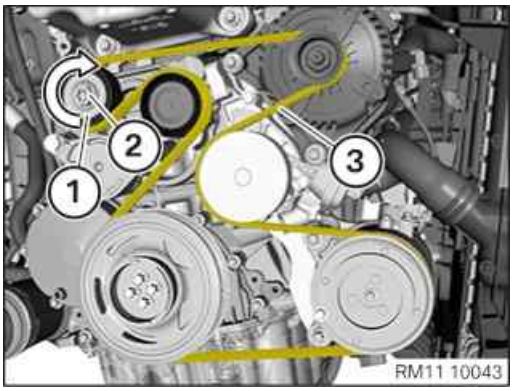
Turn belt tensioner (1) in direction of arrow at bolt (2) with a suitable tool and hold in position.

Remove drive belt (3).

Slowly relieve tension on belt tensioner.

cardiagn.com

Installation:



Safety information:

- Danger of injury when tensioning or releasing the drive belt.

Note:
Observe direction of rotation of drive belt.

Turn belt tensioner (1) in direction of arrow at bolt (2) with a suitable tool and hold in position.

Position drive belt (3).

Slowly relieve tension on belt tensioner.

Required follow-up work:

- Install acoustic cover, front.

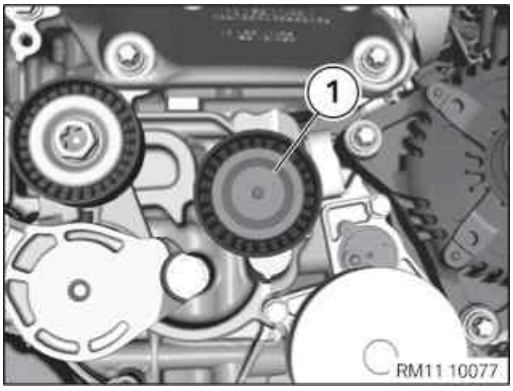
cardiagn.com

11 28 626 Removing and installing/replacing deflecting element for drive belt (B37C)

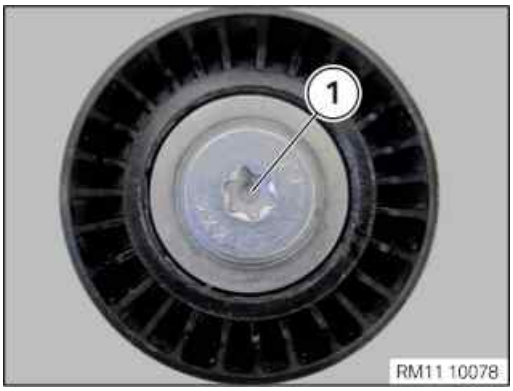
Necessary preliminary tasks:

- Remove drive belt.

Removal:



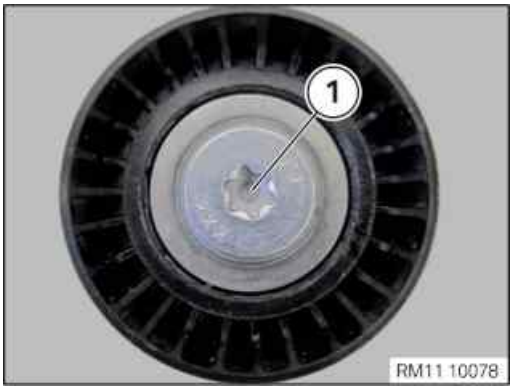
Unclip end cover (1).



Release screwÂ (1).

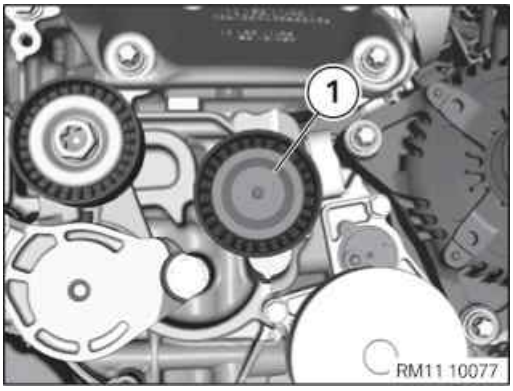
Installation:

cardiagn.com



Tighten screw (1).

Tightening torque. 11 28 2AZ.



Mount end cover (1).

Required follow-up work:

- Install drive belt.

cardiagn.com

11 28 020 Replace tensioning device for drive belt of the alternator

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

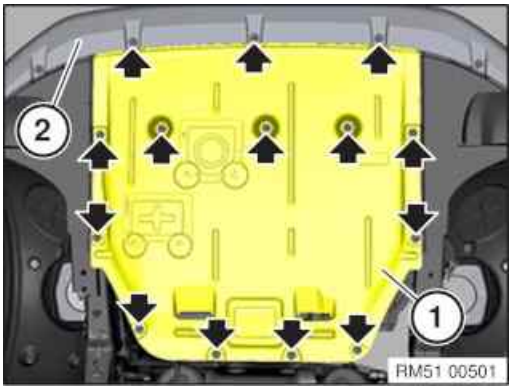
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

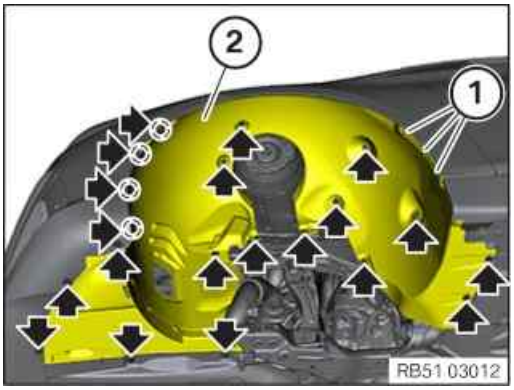
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

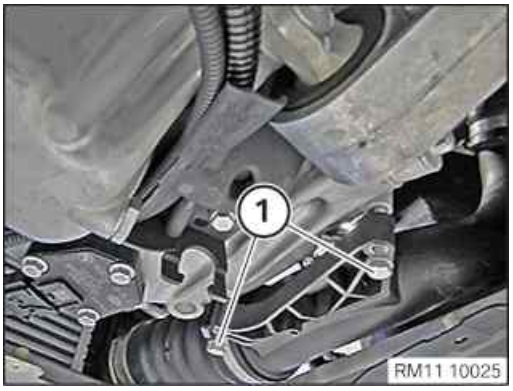
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

5 – Remove right charge-air line

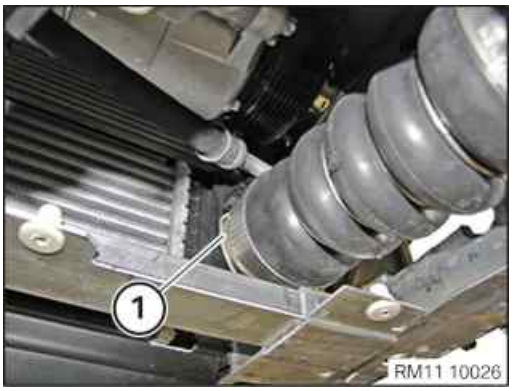


- Release charge air duct screws (1) on oil sump.

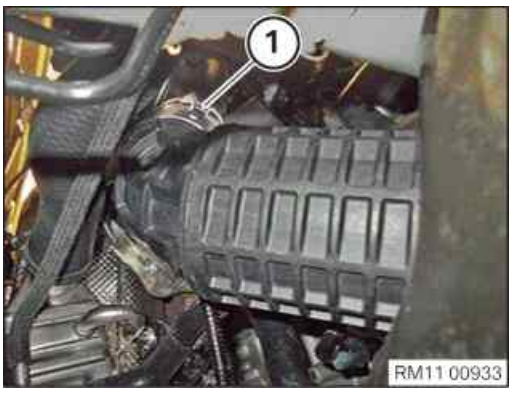
- Detach charge air duct screw connection (1) on crankcase.

cardiagn.com

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



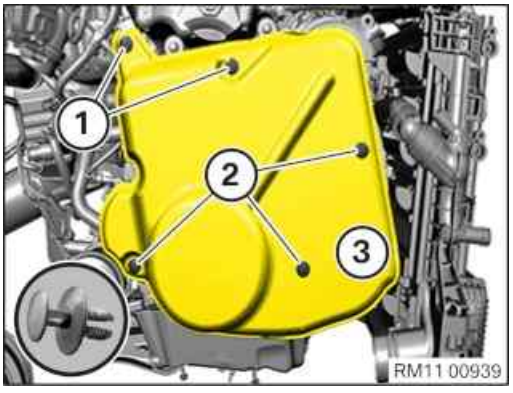
- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

6 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

7 – Removing the drive belt for alternator

cardiagn.com

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

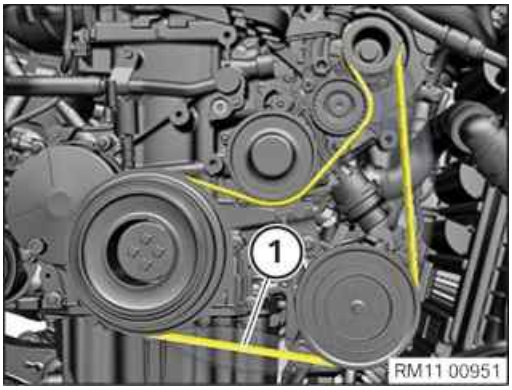
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

cardiagn.com

MAIN WORK

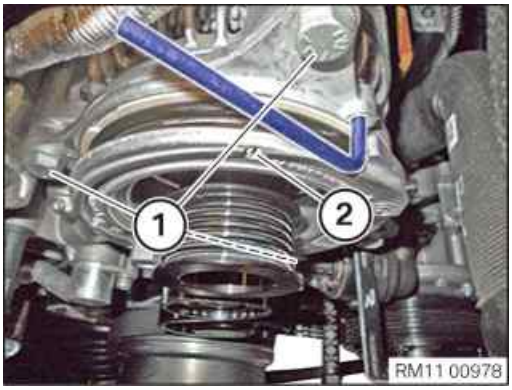
8 – Removing the belt tensioner

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.



TECHNICAL INFORMATION

Remount the belt tensioner for the drive belt on the alternator when replacing the alternator.

- Loosen screws (1).
- Guide out the belt tensioner for the drive belt (2) and remove.

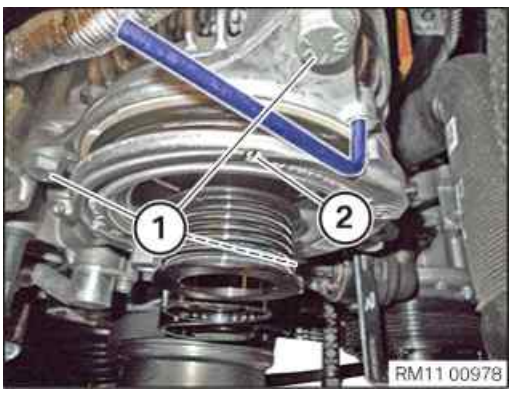
9 – Installing the belt tensioner

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.



- Position the belt tensioner (2) for the drive belt at the alternator and install.
- Tighten screws with holder (1).

Belt tensioner to alternator

M8X30		Tightening torque	28 Nm

POSTPROCESSES

10 – Installing the drive belt for alternator

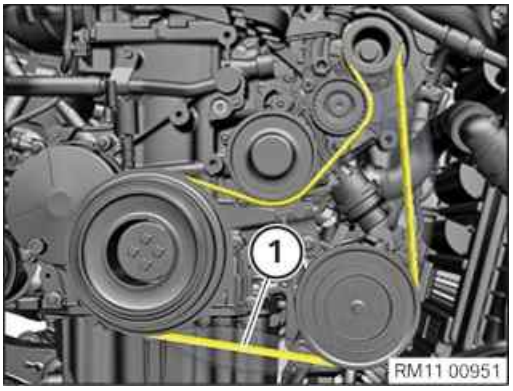
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

cardiagn.com

TECHNICAL INFORMATION

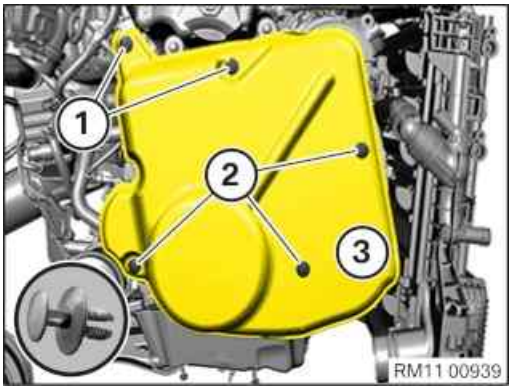
The drive belt must be replaced if contaminated with coolant- and oil residues.



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

11 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

12 – Install right charge air duct

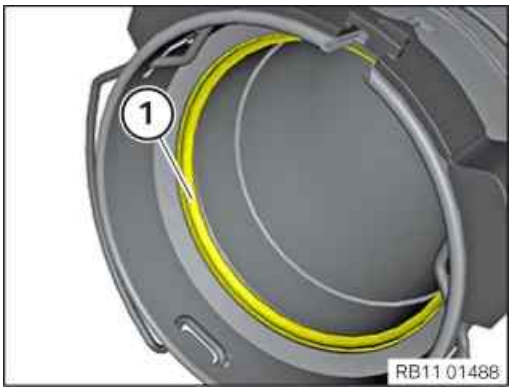
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

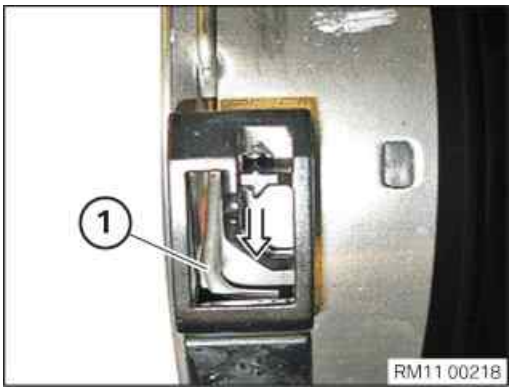
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

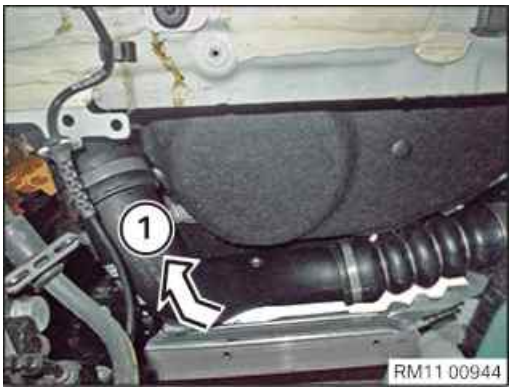


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

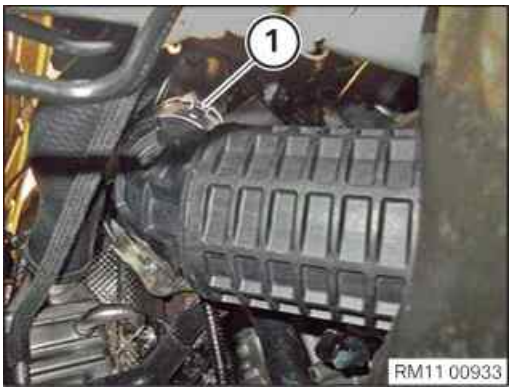
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

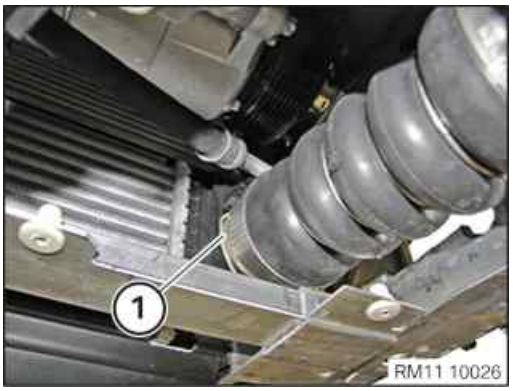


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

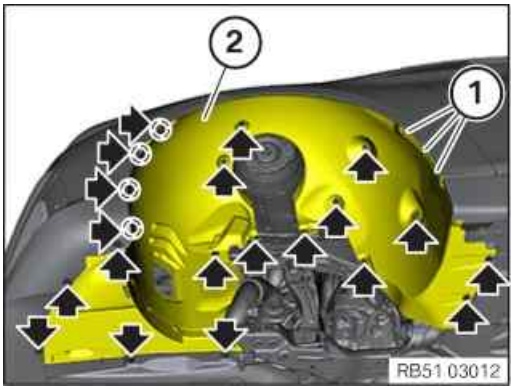
13 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

14 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

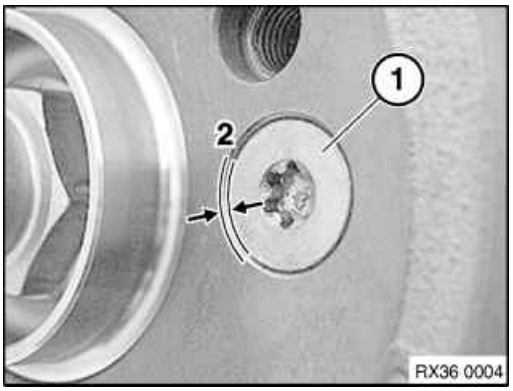
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

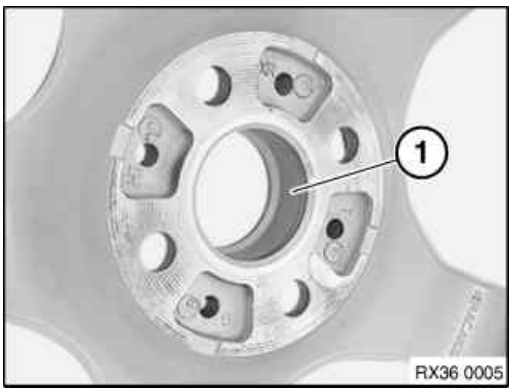


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

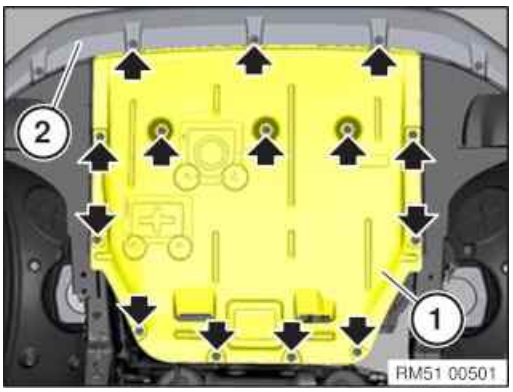
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

15 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

16 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

11 28 025 Replacing deflecting element for drive belt of the alternator

PRELIMINARY WORK

1 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

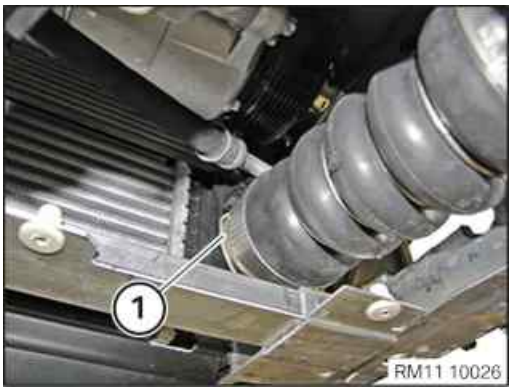
2 – Remove right charge-air line

- Release charge air duct screws (1) on oil sump.

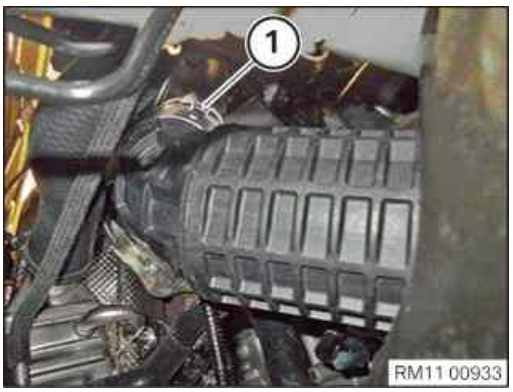
- Detach charge air duct screw connection (1) on crankcase.

cardiagn.com

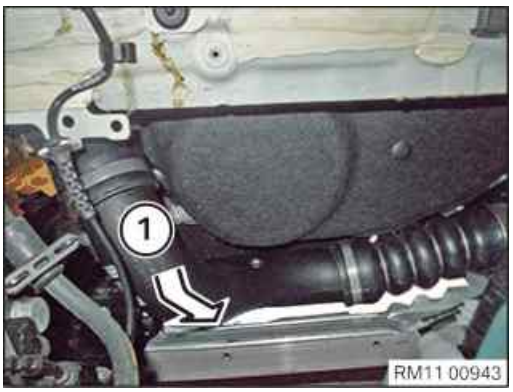
- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

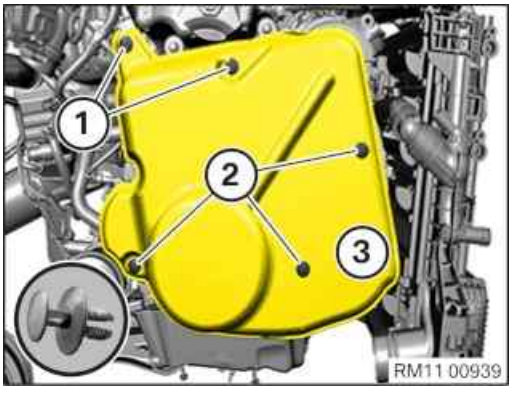


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

3 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

4 – Removing the drive belt for alternator

cardiagn.com

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

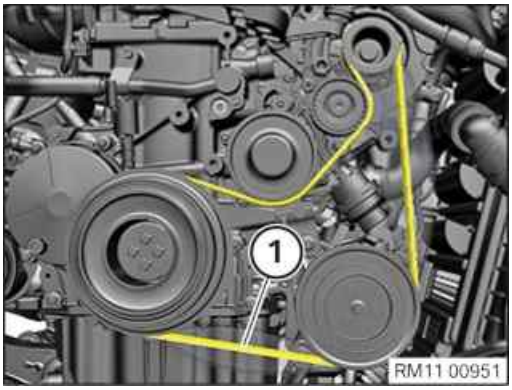
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

cardiagn.com

MAIN WORK

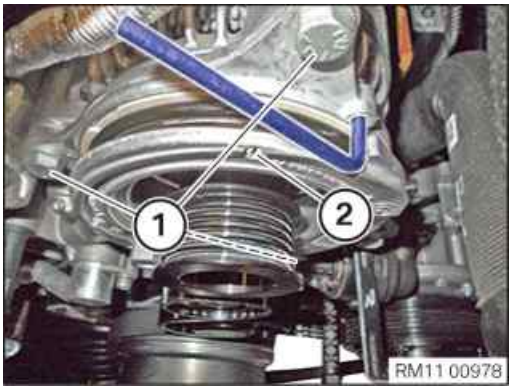
5 – Removing the belt tensioner

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.



TECHNICAL INFORMATION

Remount the belt tensioner for the drive belt on the alternator when replacing the alternator.

- Loosen screws (1).
- Guide out the belt tensioner for the drive belt (2) and remove.

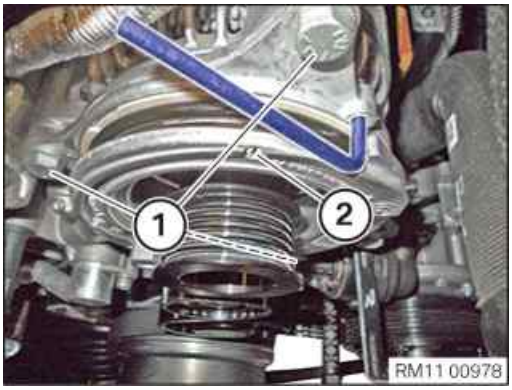
6 – Installing the belt tensioner

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.



- Position the belt tensioner (2) for the drive belt at the alternator and install.
- Tighten screws with holder (1).

Belt tensioner to alternator

M8X30		Tightening torque	28 Nm

POSTPROCESSES

7 – Installing the drive belt for alternator

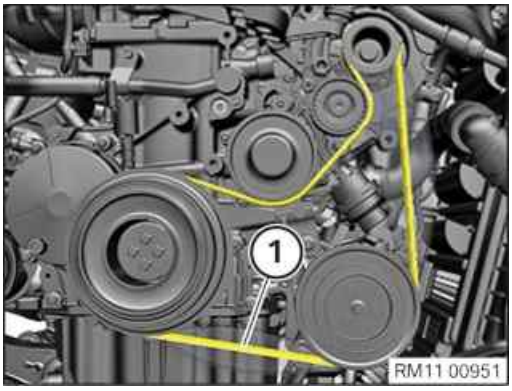
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

cardiagn.com

TECHNICAL INFORMATION

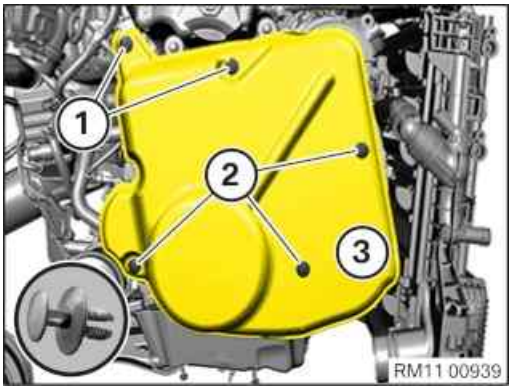
The drive belt must be replaced if contaminated with coolant- and oil residues.



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

8 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

9 – Install right charge air duct

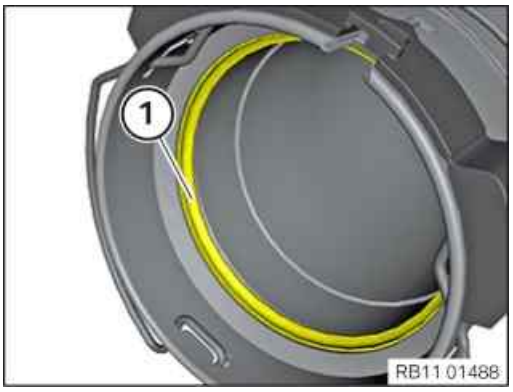
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

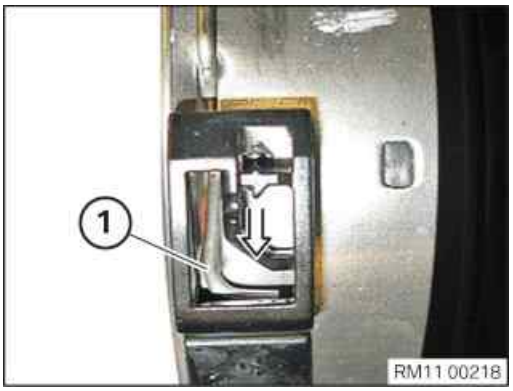
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

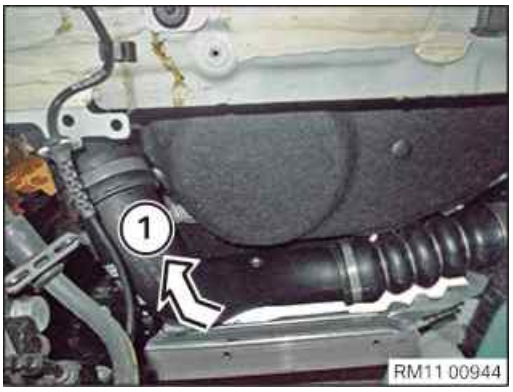


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

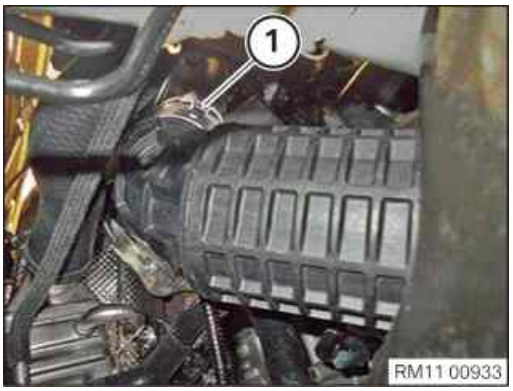
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

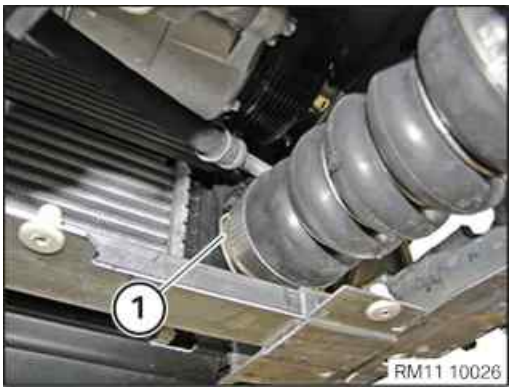


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

10 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

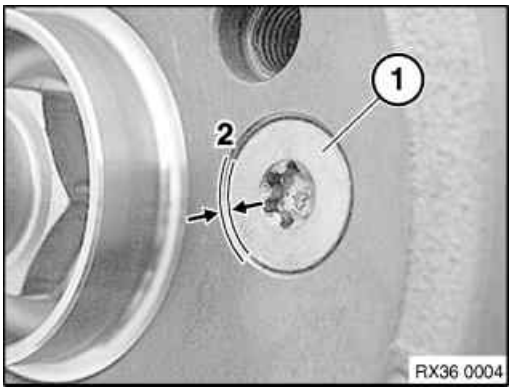
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

cardiagn.com

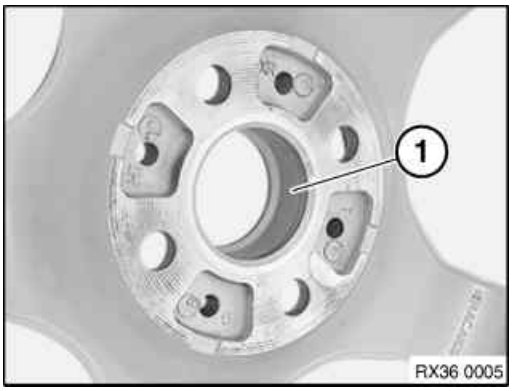


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.

Operating materials	Used in step
2.0 Grease for wheel centring	10

cardiagn.com

11 28 050 Replacing drive belt for air conditioning compressor

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

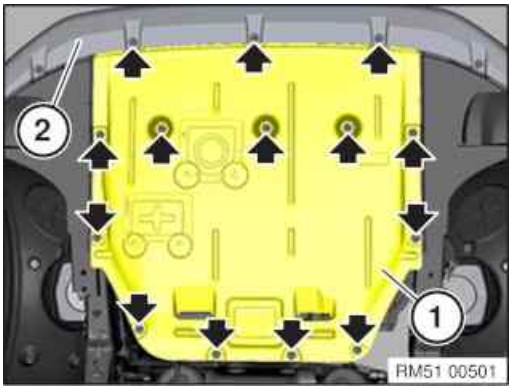
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

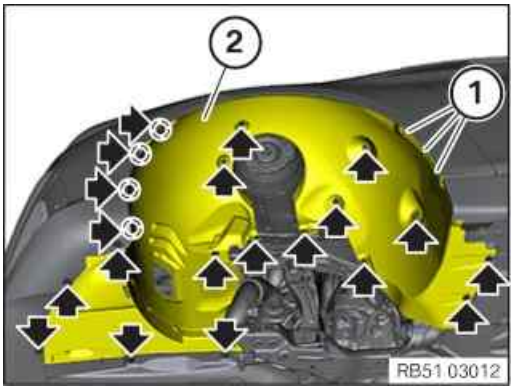
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

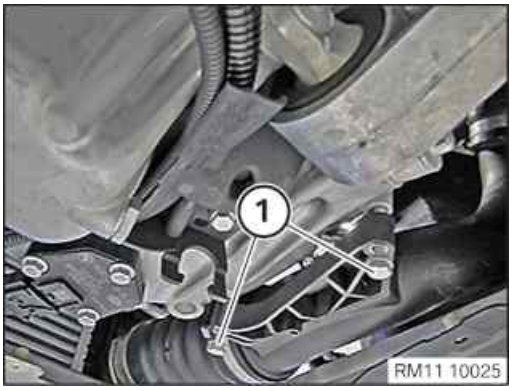
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

5 – Remove right charge-air line

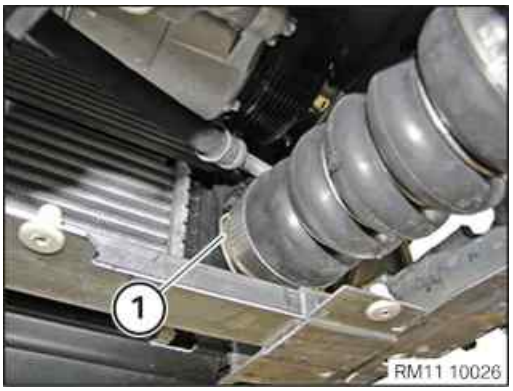


- Release charge air duct screws (1) on oil sump.

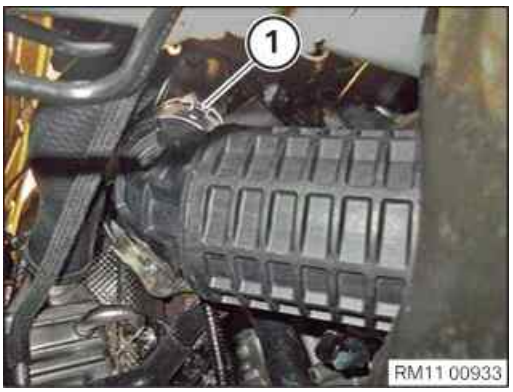
- Detach charge air duct screw connection (1) on crankcase.

cardiagn.com

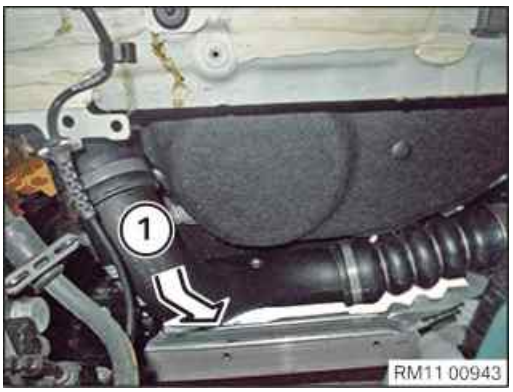
- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

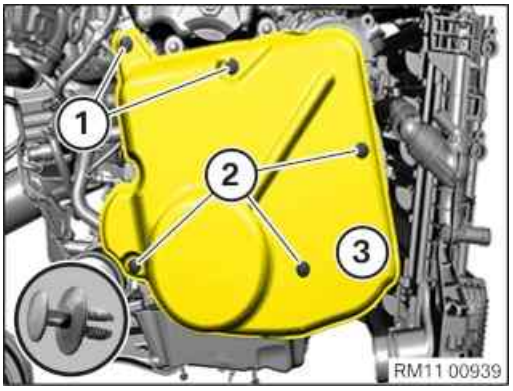


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

6 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

cardiagn.com

7 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

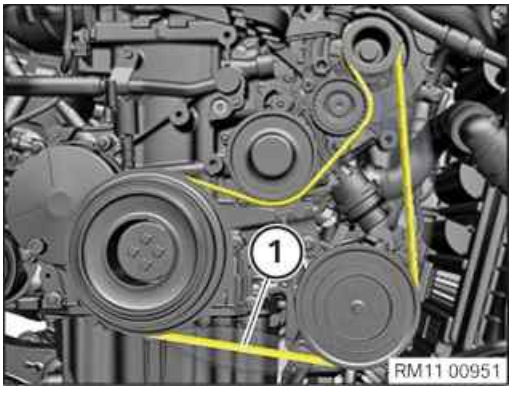
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

8 – Installing the drive belt for alternator

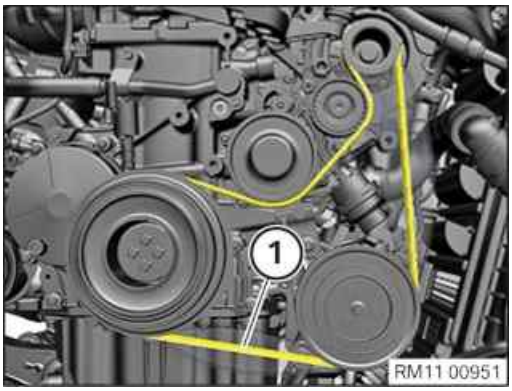
cardiagn.com

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

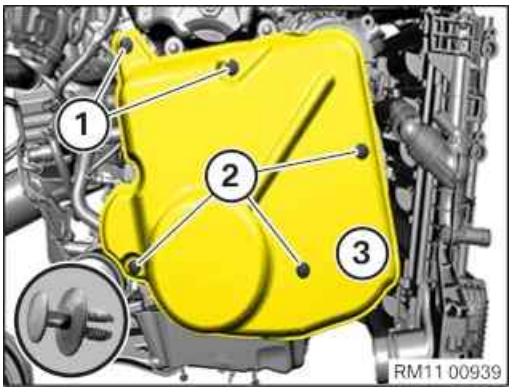


- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

POSTPROCESSES

9 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

10 – Install right charge air duct

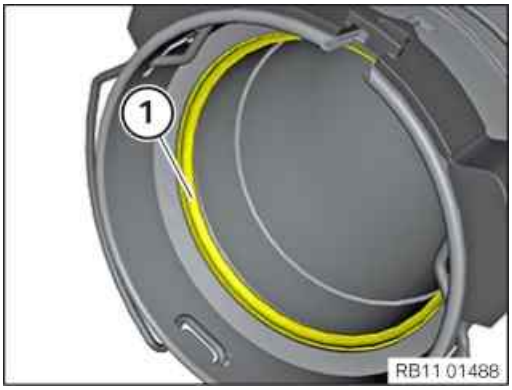
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

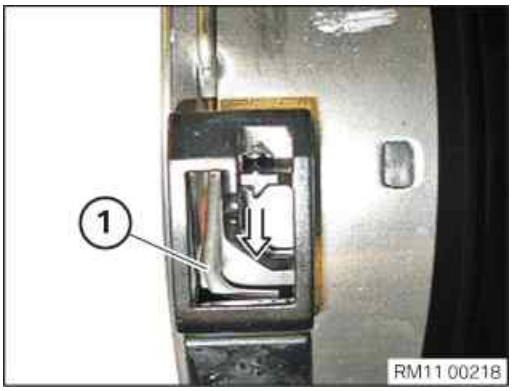
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

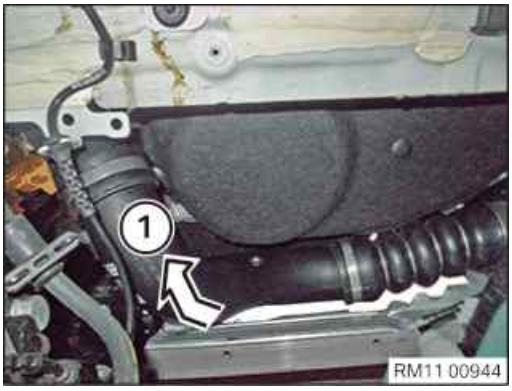


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

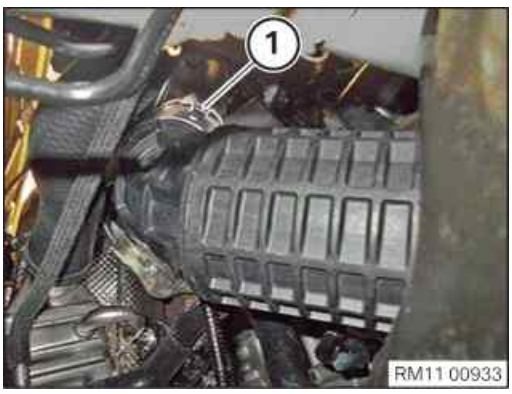
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).



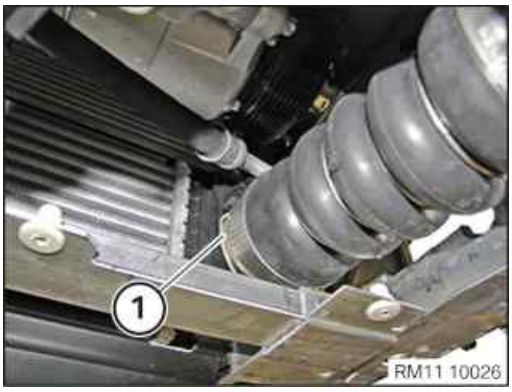
- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.

cardiagn.com



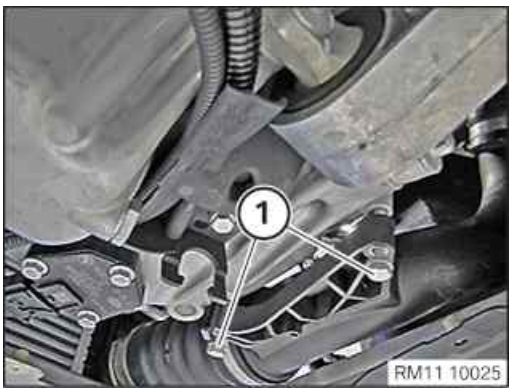
- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

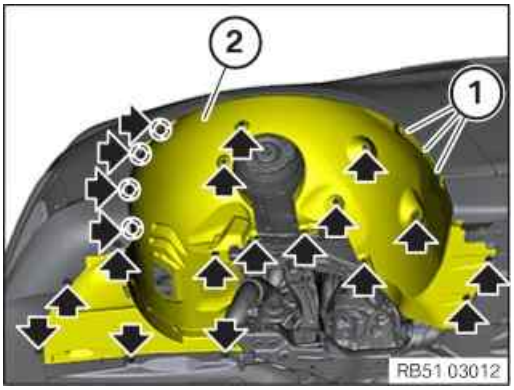


- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

11 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

12 – Installing the front right wheel

▶ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

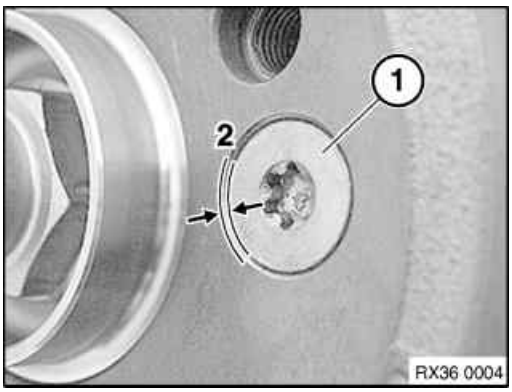
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

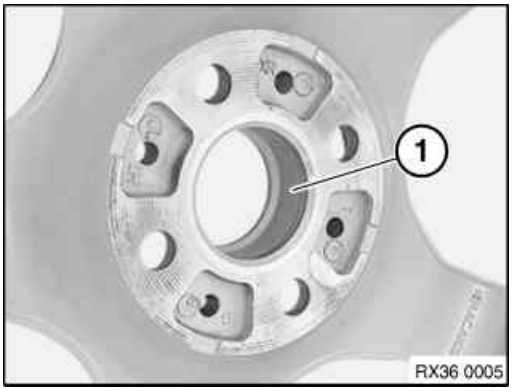


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

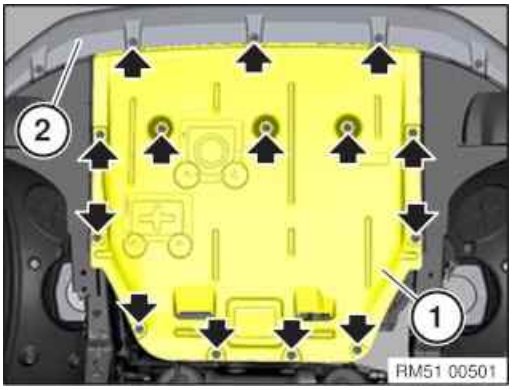
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

13 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

14 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

11 28 010 Replacing drive belt for alternator

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

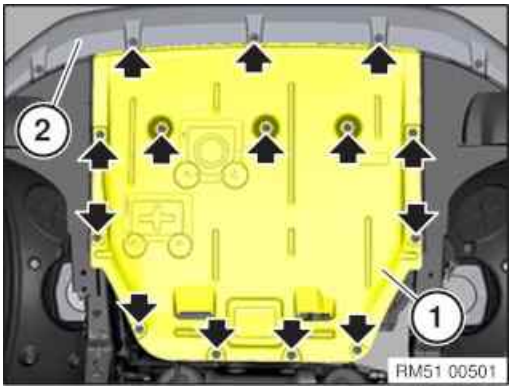
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

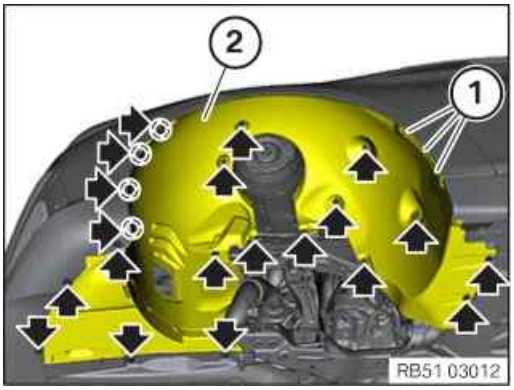
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

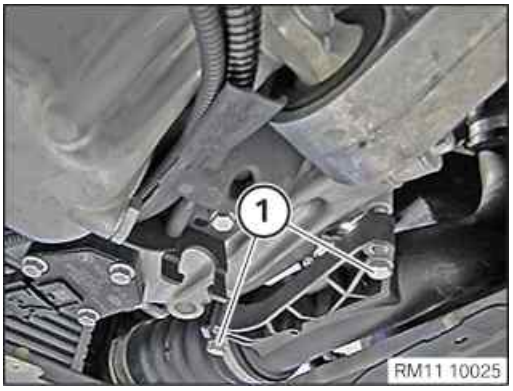
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

5 – Remove right charge-air line

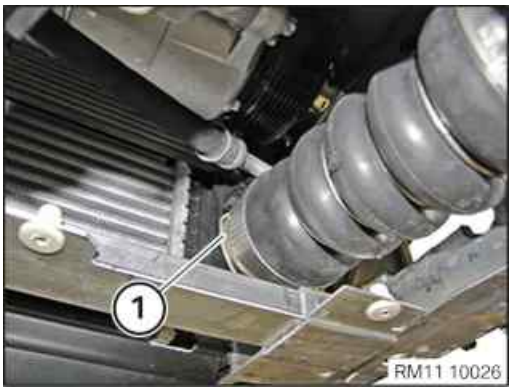


- Release charge air duct screws (1) on oil sump.

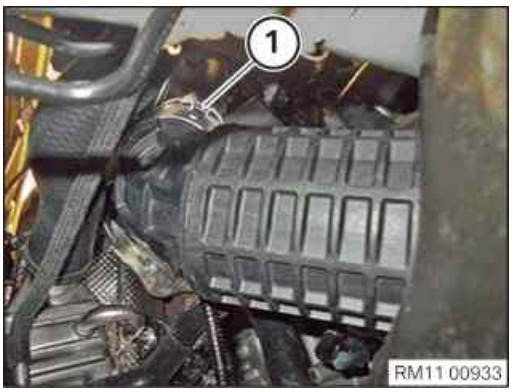
- Detach charge air duct screw connection (1) on crankcase.

cardiagn.com

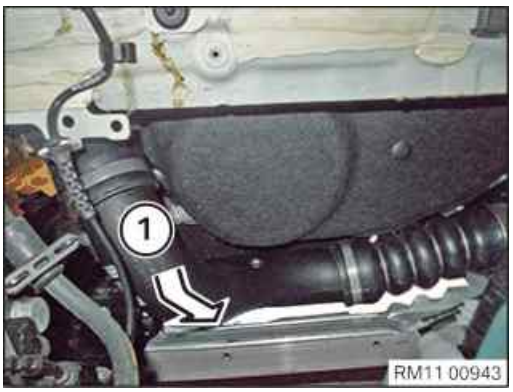
- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

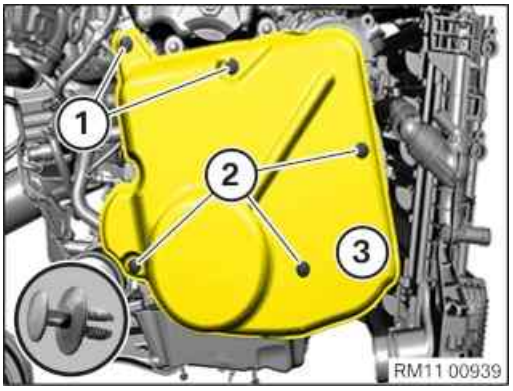


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

6 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

7 – Removing the drive belt for alternator

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

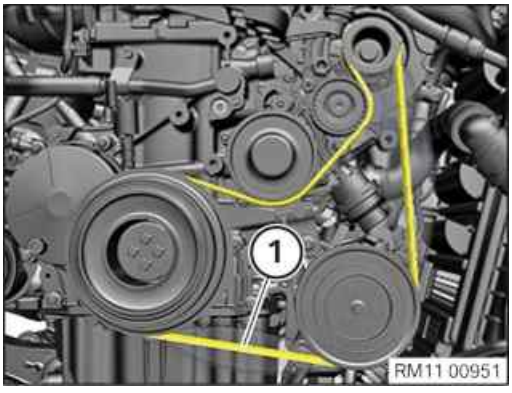
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

8 – Installing the drive belt for alternator

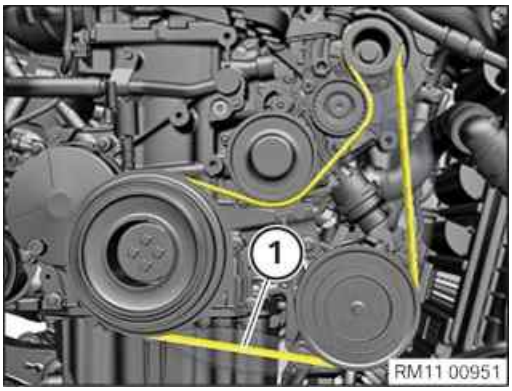
cardiagn.com

TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

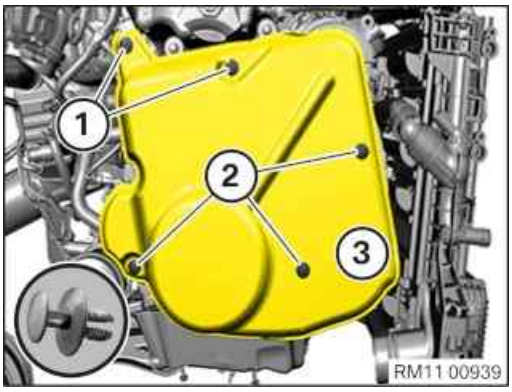


- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

POSTPROCESSES

9 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

10 – Install right charge air duct

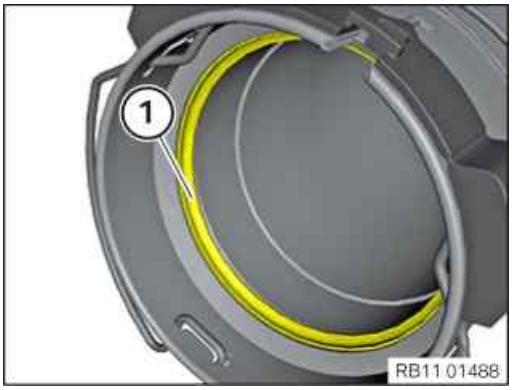
cardiagn.com

RISK OF DAMAGE

Damage to the exhaust turbocharger.

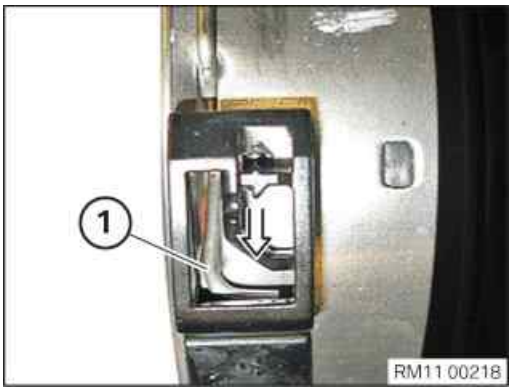
A leak at the pressure pipe can damage the exhaust turbocharger.

- Replace the gaskets and pressure pipe if necessary.

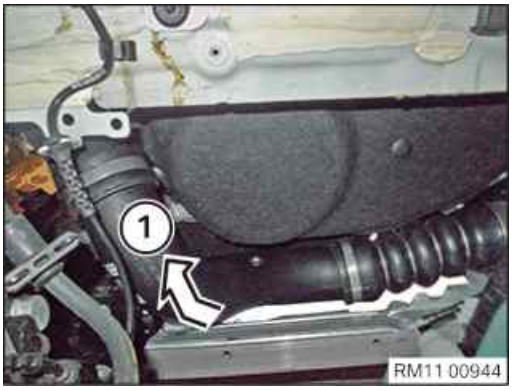


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

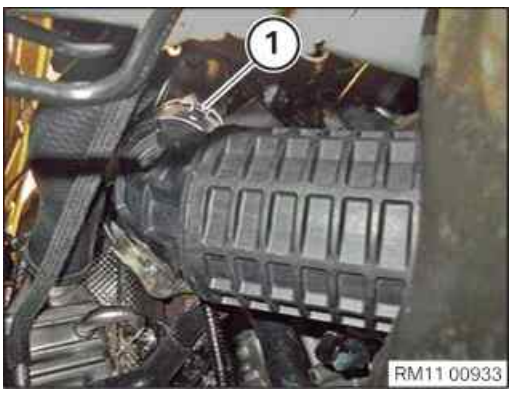
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).



- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.

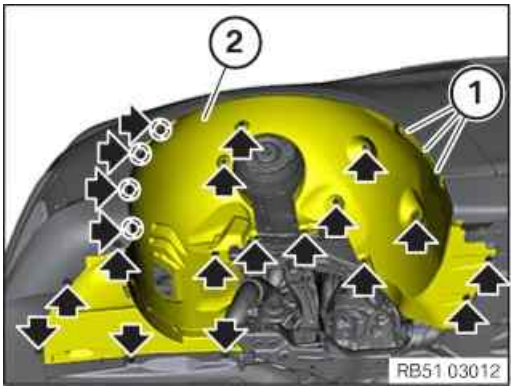
11 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

12 – Installing the front right wheel

▶ **Clean the contact surfaces between the brake disc and the wheel rim**

cardiagn.com

TECHNICAL INFORMATION

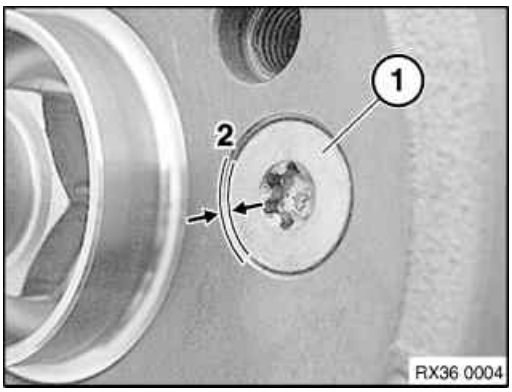
The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

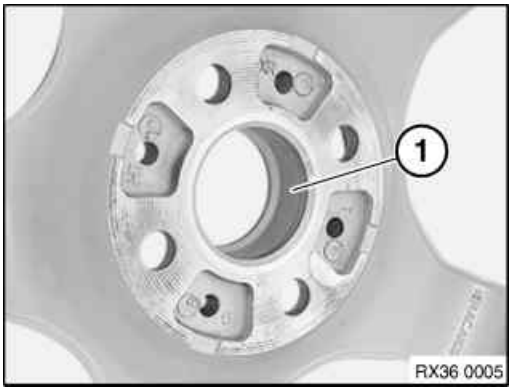


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

11 28 060 Replacing tensioning device drive belt for air conditioning compressor

PRELIMINARY WORK

1 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

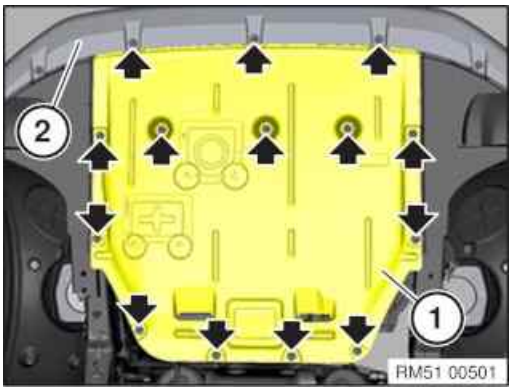
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Unclip the acoustic cover from the marked areas towards the top.

2 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

3 – Remove front right wheel

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

cardiagn.com

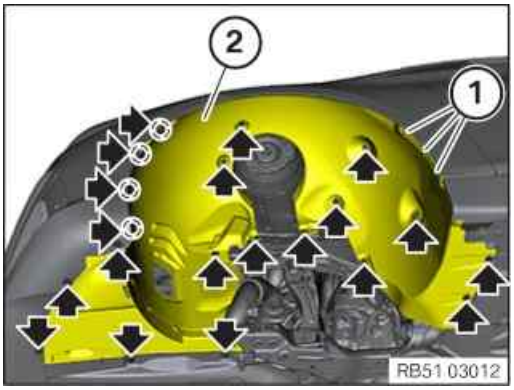
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

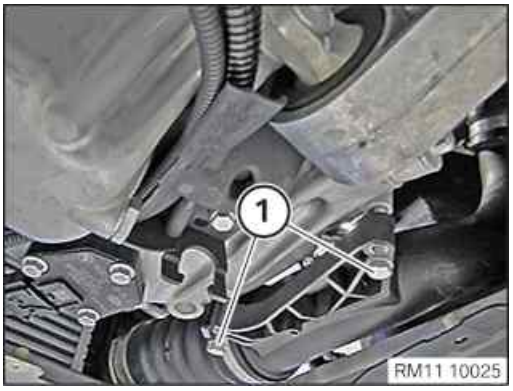
  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

4 – Removing the front right wheel arch cover



- Loosen the expanding rivet (1).
- Unscrew all bolts and nuts (arrows).
- Feed the wheel arch cover (2) out at the front right and remove it.

5 – Remove right charge-air line

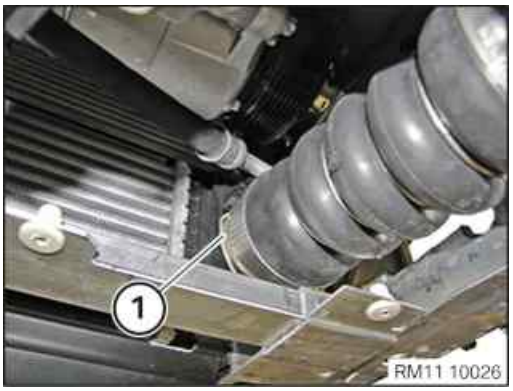


- Release charge air duct screws (1) on oil sump.

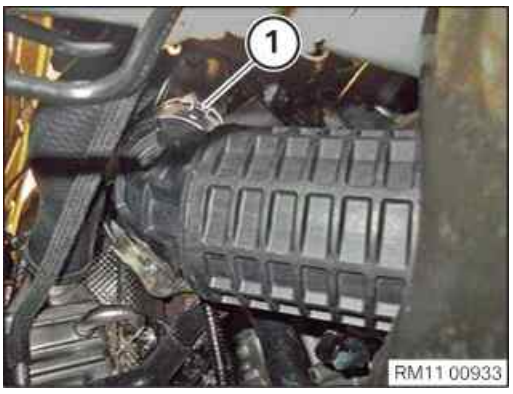
- Detach charge air duct screw connection (1) on crankcase.

cardiagn.com

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).



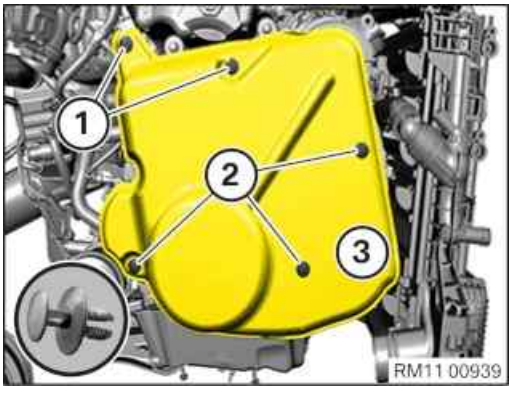
- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.



- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.

- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

6 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

7 – Removing the drive belt for alternator

cardiagn.com

CAUTION

Spring preload.

Danger of injury!

- The use of the specified special tool (tool) is mandatory.
- The described operation must be carried out properly.

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.

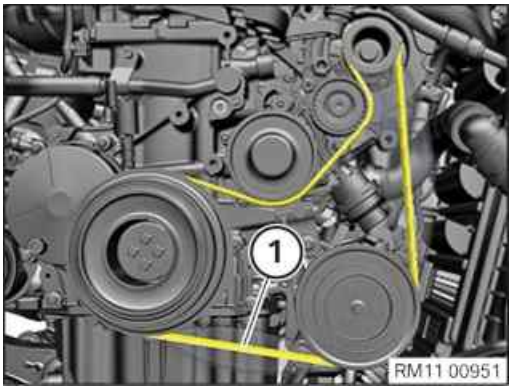
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

TECHNICAL INFORMATION

The drive belt must be replaced if contaminated with coolant- and oil residues.

- Increase the preload on the belt tensioner in the direction of arrow.
- Secure the belt tensioner with the special tool .



- Guide out the drive belt for the alternator (1) and remove it.

cardiagn.com

MAIN WORK

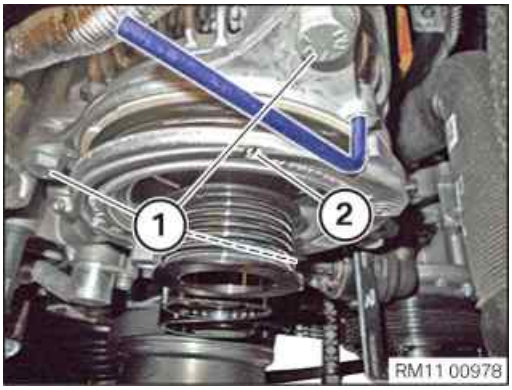
8 – Removing the belt tensioner

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.



TECHNICAL INFORMATION

Remount the belt tensioner for the drive belt on the alternator when replacing the alternator.

- Loosen screws (1).
- Guide out the belt tensioner for the drive belt (2) and remove.

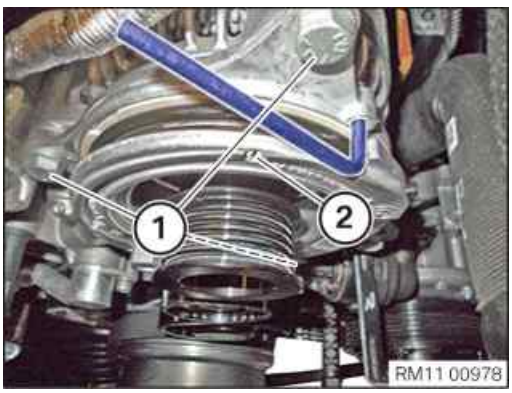
9 – Installing the belt tensioner

CAUTION

Component with preload.

Danger of injury!

- Reduce preload as far as possible before disassembly. Relieve component.



- Position the belt tensioner (2) for the drive belt at the alternator and install.
- Tighten screws with holder (1).

Belt tensioner to alternator

M8X30		Tightening torque	28 Nm

POSTPROCESSES

10 – Installing the drive belt for alternator

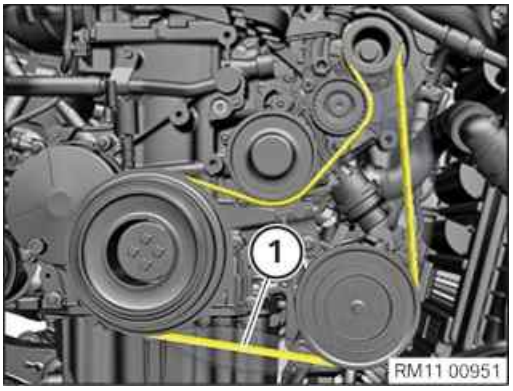
TECHNICAL INFORMATION

If the drive belt is reused: Mark direction of travel and reinstall drive belt in same direction of travel.

cardiagn.com

TECHNICAL INFORMATION

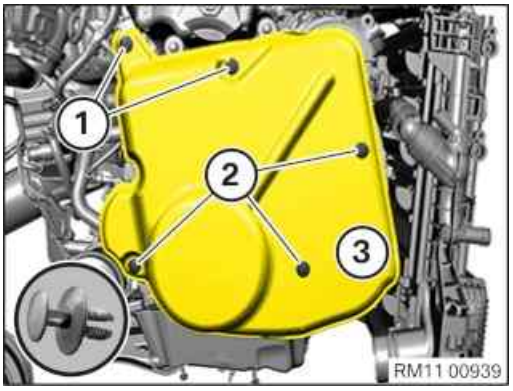
The drive belt must be replaced if contaminated with coolant- and oil residues.



- Feed in the drive belt for the alternator (1) and install it.

- Increase the preload on the belt tensioner in the direction of arrow.
- Feed the special tool out of the belt tensioner and remove it.

11 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

12 – Install right charge air duct

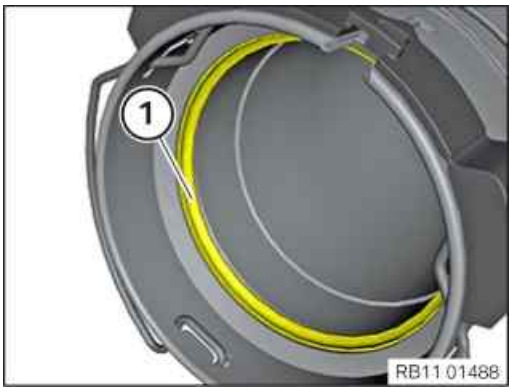
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

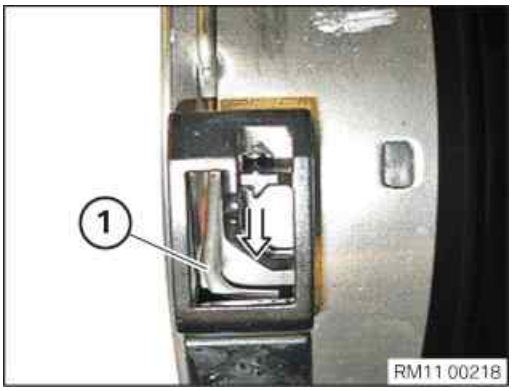
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

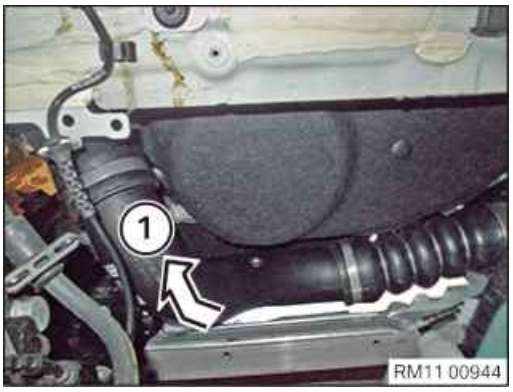


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

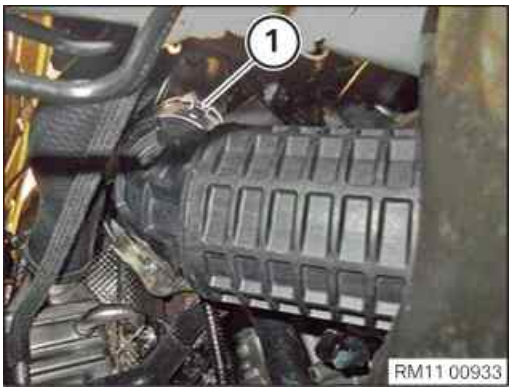
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

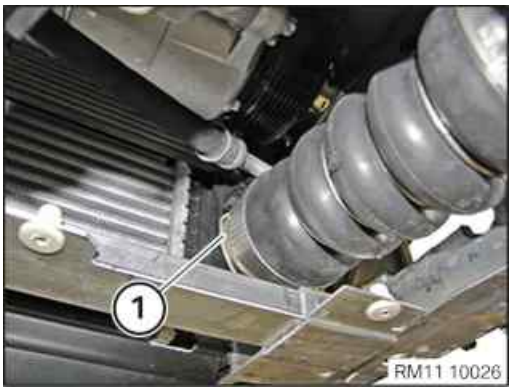


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

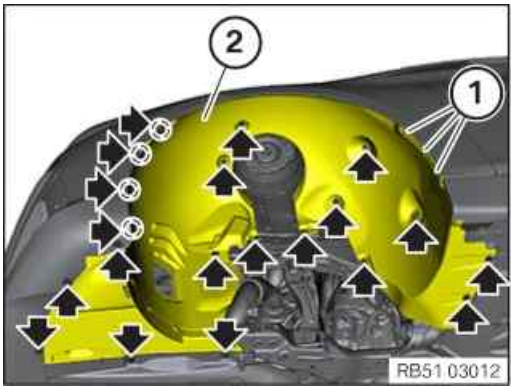
M6x25		Tightening torque	5 Nm

- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

13 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

14 – Installing the front right wheel

▸ **Clean the contact surfaces between the brake disc and the wheel rim**

TECHNICAL INFORMATION

The contact surface between the brake disc and the wheel rim must be clean and free from oil and grease. There is otherwise a risk of the wheel becoming loose at a later time.

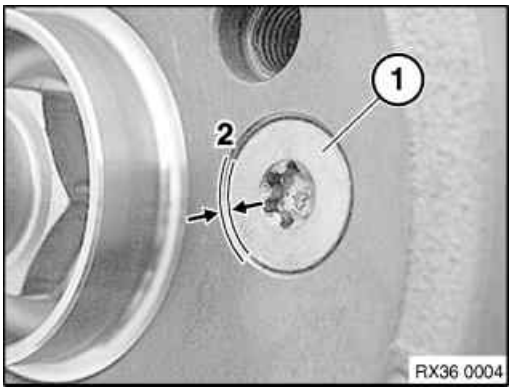
- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).
- In the event of grease residue around the wheel bolt holes: remove and clean the brake disc.

cardiagn.com

- Remove dirt, grease residues and corrosion from the contact surface with a drill and the special tool **2 344 011**.

  Do not operate special tool **2 344 011** with an impact screwdriver.
- Degrease the contact surfaces with the universal cleaner (see BMW Group Parts).

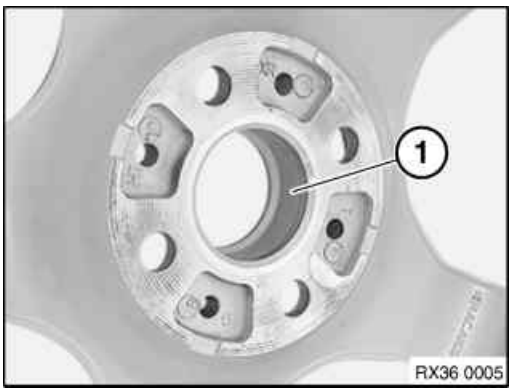


- Check the mounting bolt for the brake disc (1) for secure fit.

  The mounting bolt for the brake disc (1) must not protrude under any circumstances on the contact surface (2) between the brake disc and the wheel rim.

Brake disc to front wheel hub

M8	Renew screw.		16 Nm



- Lightly grease the wheel centring (1) in the wheel rim; refer to additional information for grease for the wheel centring.

cardiagn.com

TECHNICAL INFORMATION

Never use impact screwdrivers or electric screwdrivers to screw in and tighten the wheel bolts.

The wheel rim must rest uniformly against the brake disc.

In the case of non-original BMW wheel bolts/wheel rims, it may be necessary to retighten the wheel bolts on account of setting properties (refer to the documentation from the manufacturer).

Do not apply oil to new wheel bolts.

- Renew corroded wheel bolts.

  Parts: Wheel bolts

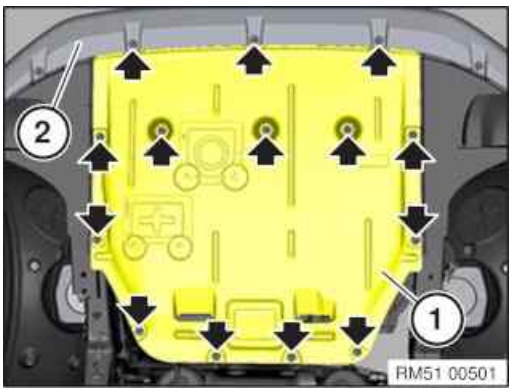
- Clean the wheel bolts and check the threads for damage. Renew the wheel bolts as needed.
- Mount wheel bolts and tighten.

Wheel bolts

M 14/AF 17	Screw in wheel bolts and evenly tighten crosswise by hand in order to centre the wheel rim.	Tightening torque	140 Nm
	Tighten wheel bolts to the prescribed tightening torque with a calibrated torque wrench in a crosswise sequence.	Check	140 Nm
	Check all the wheel bolts in the same order or retighten to the prescribed tightening torque again.		

cardiagn.com

15 – Installing the front underbody protection



- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

16 – Install acoustic cover

RISK OF DAMAGE

Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

Additional Information

Overview of Tightening Torques

Belt tensioner to alternator — Used in step 9

M8X30		Tightening torque	28 Nm

Charge air line to crankcase — Used in step 12

Operating materials	Used in step
2.0 Grease for wheel centring	14

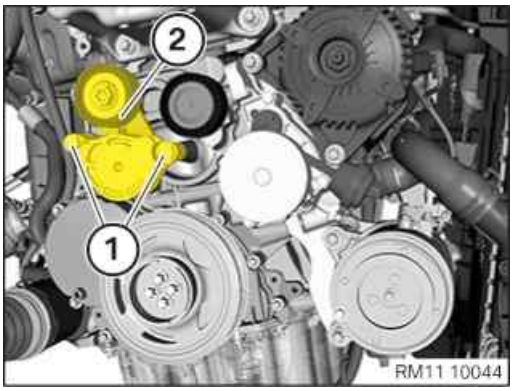
cardiagn.com

11 28 020 Replacing tensioning device for alternator drive belt (B37C)

Necessary preliminary tasks:

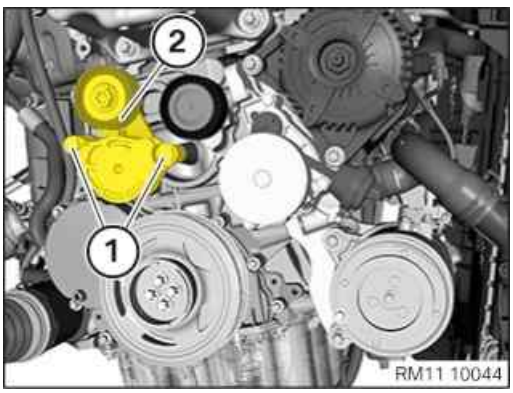
- Remove drive belt.

Removal:



Release screwsÂ (1) from belt tensioner (2).
Remove belt tensioner (2).

Installation:



Install belt tensioner (2).
Tighten down screws (1).
Tightening torque: 11 28 1AZ.

Required follow-up work:

- Install drive belt

cardiagn.com

11 31 505 Adjusting camshaft timing (B37C)

Special tools required:

- 11 6 480
- 2 288 380
- 11 4 480
- 11 8 760

Important!

Risk of damage to engine.

Notes for checking and setting the timing must be observed without fail.

Necessary preliminary tasks:

- Remove front right wheel arch panel
- Remove cylinder head cover
- Remove exhaust-gas recirculation cooler

Crank engine at central bolt with special tool 11 6 480 **Important!**

Do not turn the engine back.

Remove protective cap on oil sump.

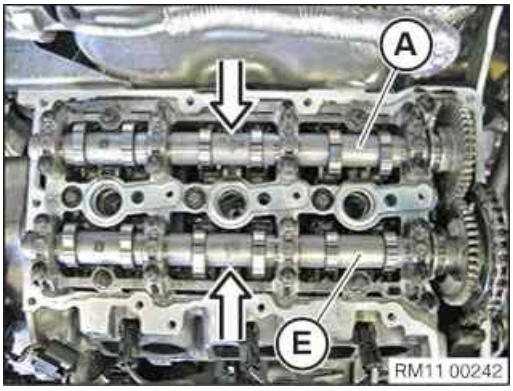
cardiagn.com

Important!

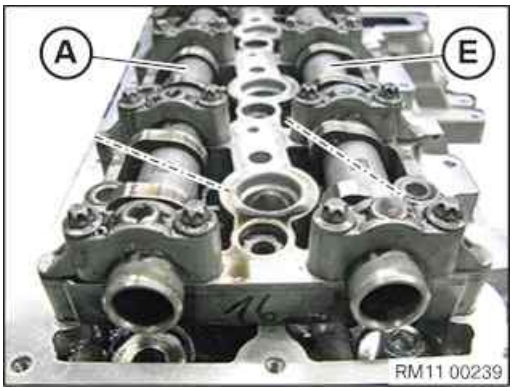
On vehicles with manual gearbox, an additional bore hole that can be confused with dowel hole is located in front of dowel hole.

It must be possible to slide special tool 2 288 380 up to the crank in the oil sump.

Block crankshaft with cylinder no. 1 in TDC firing position with special tool2 288 380 .

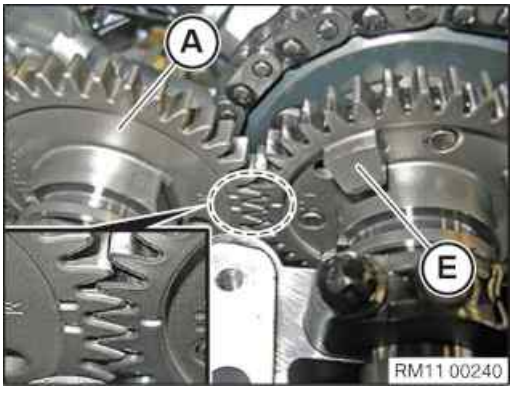


It must be possible to read the part number on the exhaust and intake camshafts (A and E) from above.*Note:*
See illustration.



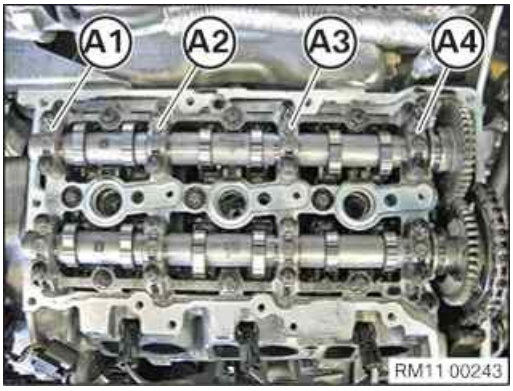
The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) points obliquely outward to the left at cylinder No. 1.



Marks on both camshafts (A and E) must match up (see graphic).*Note:*
The exhaust camshaft must be removed if the marks do not match up (are not aligned).

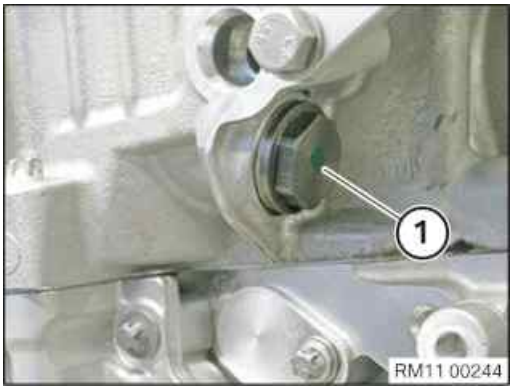
cardiagn.com



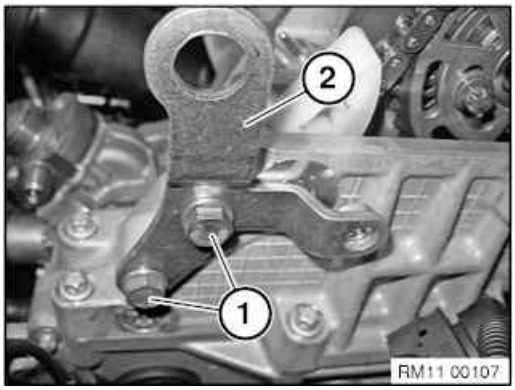
If necessary, release all bolts of camshaft bearing caps **A1** to **A4** by 1/2 a turn at a time, working from the outside inwards.

Remove exhaust camshaft in upward direction.

Place all components on special tool 11 4 480 in a tidy and orderly fashion.



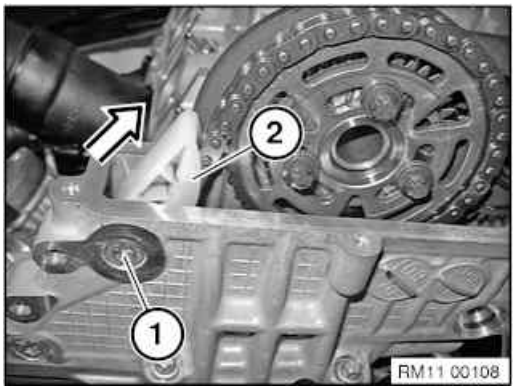
Release chain tensioner (1).



Release screws (1).

Remove suspension element (2).

Note:
Figure N47.

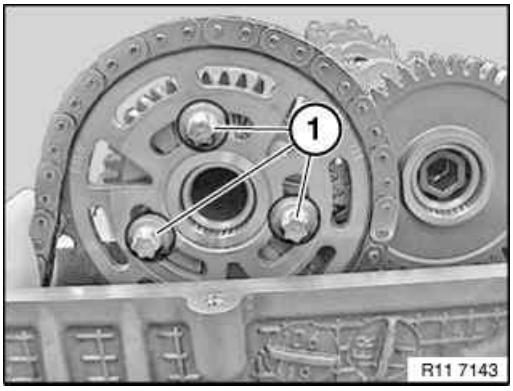


Remove bearing journal (1).

Remove guide rail (2) in direction of arrow.

Note:
Figure N47.

cardiagn.com

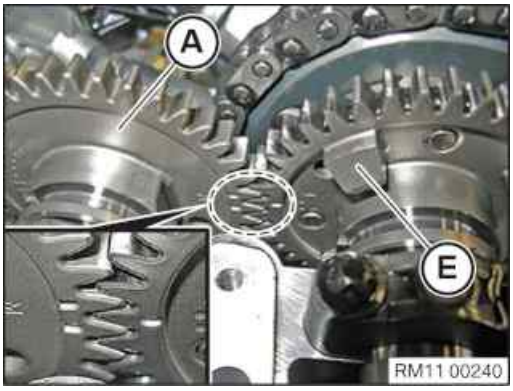


Important!

Protect timing chain to prevent it from falling.

Risk of damage to oil spray nozzle.

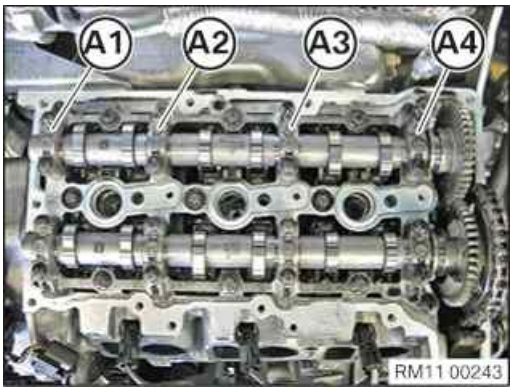
Remove camshaft bolts (1) and detach camshaft sprocket.



Position camshafts (A and E) accordingly (see graphic).

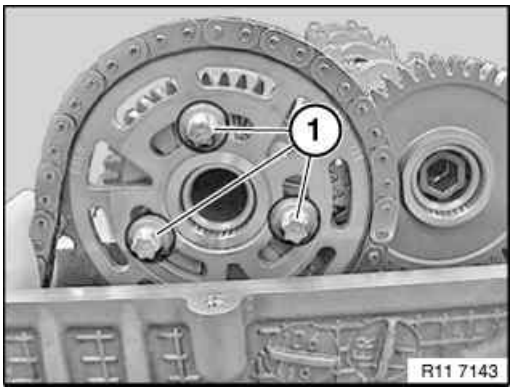
If necessary, insert exhaust camshaft (A) so that both marks match up (see graphic).

Installation note:
Check installation position of roller cam followers.



Tighten down all camshaft bearing caps **A1** to **A4** by 1/2 a turn at a time, working from the inside outwards.

Tightening torque: 11 31 2AZ.



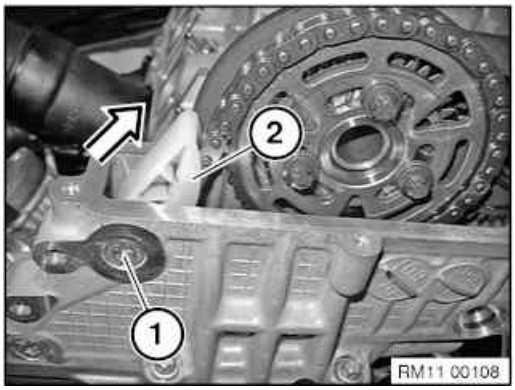
Place the camshaft sprocket with timing chain on the intake camshaft such that bolts (1) are located in the centre of the elongated holes.

Insert bolts (1).

Tighten bolts (1) to 10 Nm.

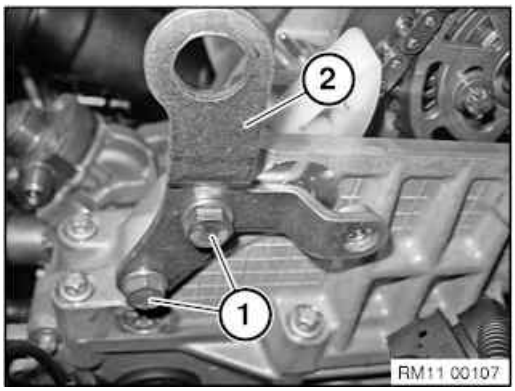
Release bolts (1) again by a 90° turn.

cardiagn.com

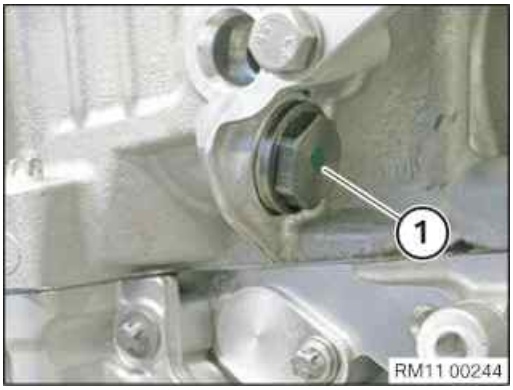


Note:
Parts: Replace bearing journal.

Install guide rail (2) against direction of arrow.
Screw in bearing journals (1).
Tightening torque: 11 12 6AZ.



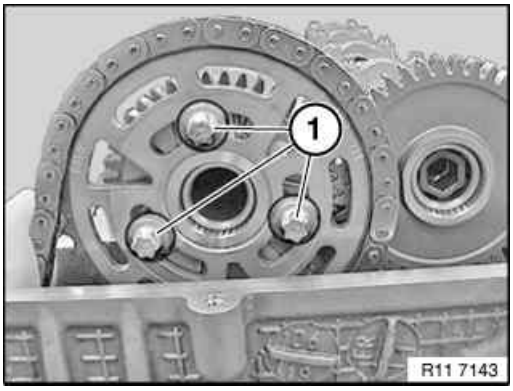
Install suspension element (2).
Tighten down screws (1).
Tightening torque: 11 00 4AZ.



Install chain tensioner (1) and tighten down.
Parts:
Replace sealing ring.
Tightening torque: 11 12 5AZ.

Place special tool 11 8 760 on exhaust camshaft.**Note:**
Special tool 11 8 760 must lie flush on cylinder head.

cardiagn.com



Tighten down screws (1).

Tightening torque: 11 31 1AZ.

Crank engine with special tool 11 6 480 twice in direction of rotation.

Check timing of camshafts.

Important!

Do not turn the engine back.

Important!

Special tool 2 288 380 must be removed before starting engine.

Required follow-up work:

- Install exhaust-gas recirculation cooler
- Install cylinder head cover
- Install front right wheel arch panel

cardiagn.com

11 31 505 Adjusting the timing of the camshaft (s) (for work no. 11 31 005/508)

RISK OF DAMAGE

Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

PRELIMINARY WORK

1 – Checking camshaft timing

- See additional information.

2 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

TECHNICAL INFORMATION

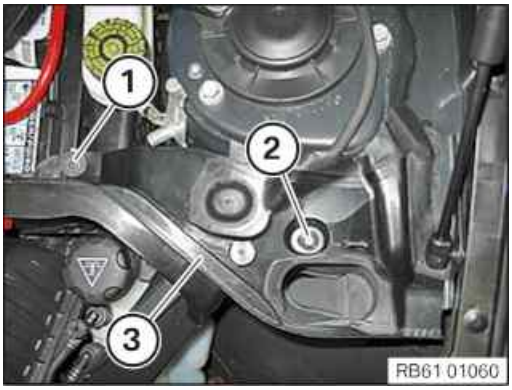
Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

cardiagn.com

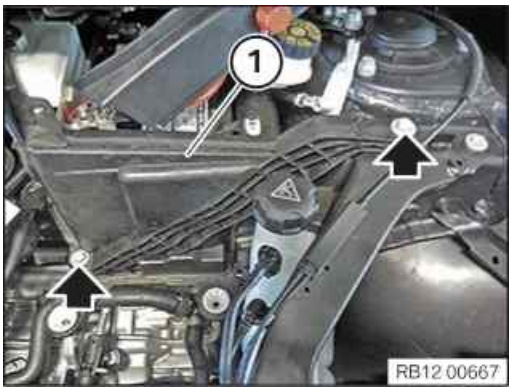
TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

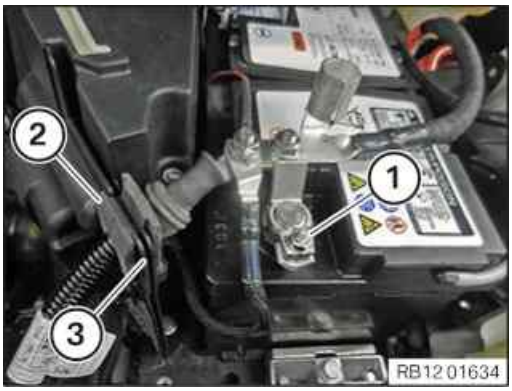


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

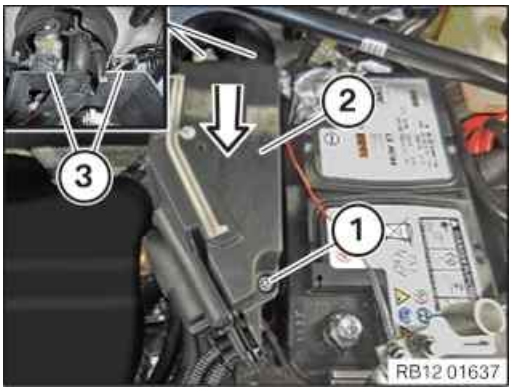


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

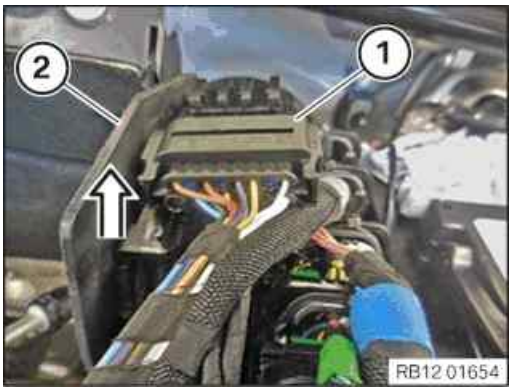


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

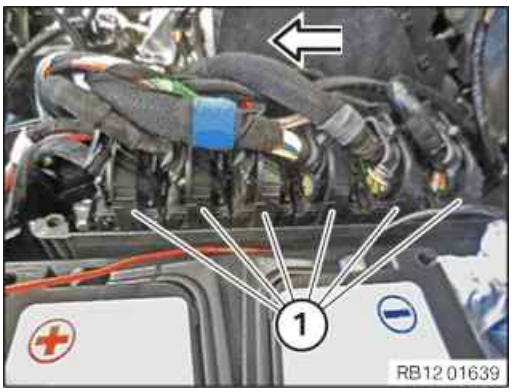
cardiagn.com



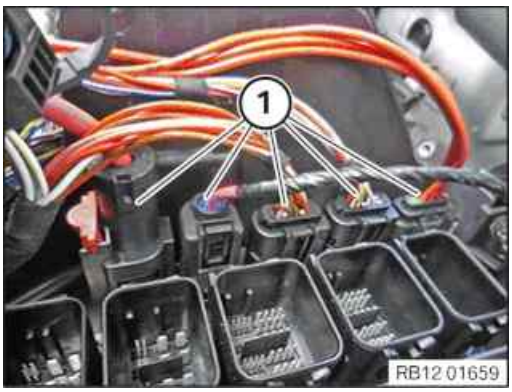
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



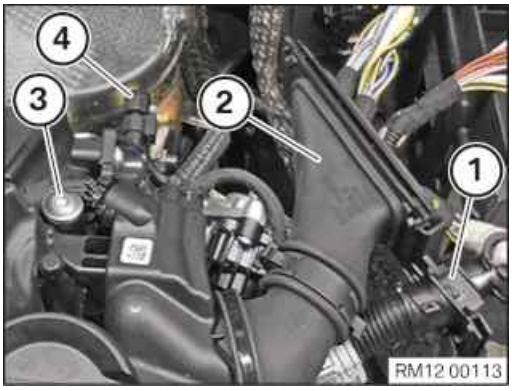
- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).



- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

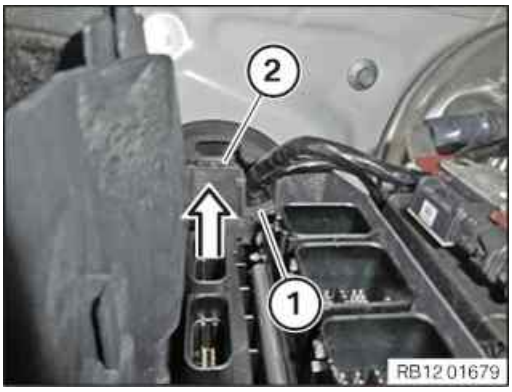


- Unlock and loosen connector (1).

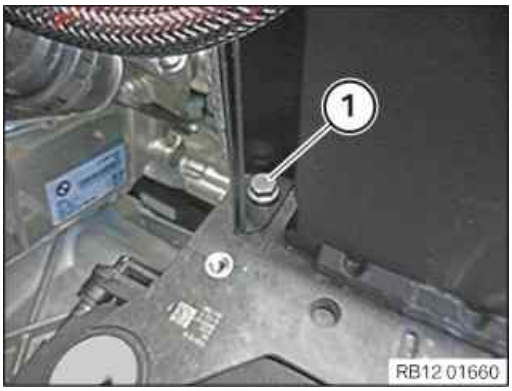


- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.

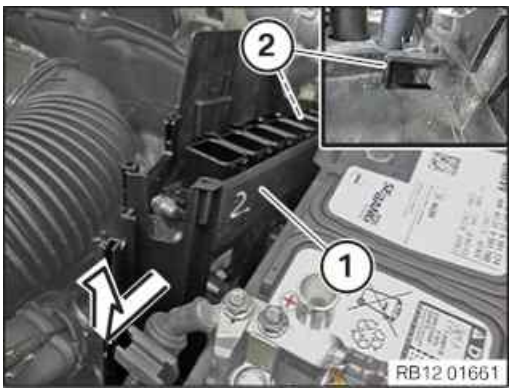
cardiagn.com



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

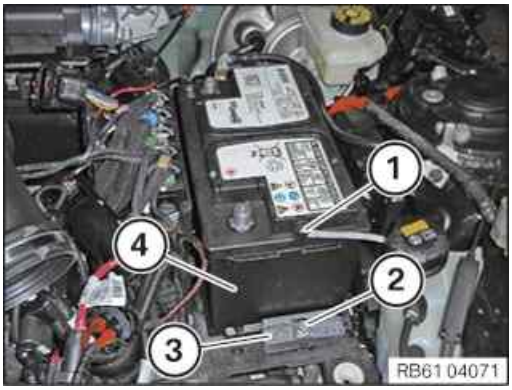


- Loosen screw (1).



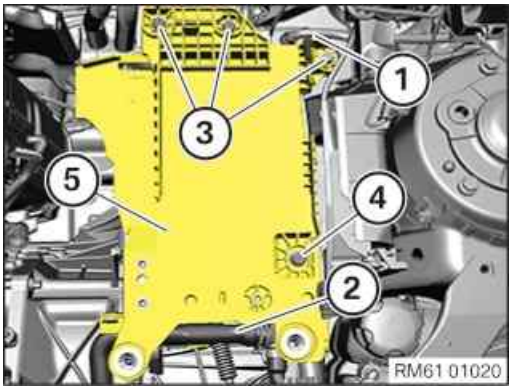
- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

3 – Partially remove vehicle battery



- Pull off the vent hose (1).
- Unscrew the screw (2) and remove the holder (3).
- Remove vehicle battery (4).

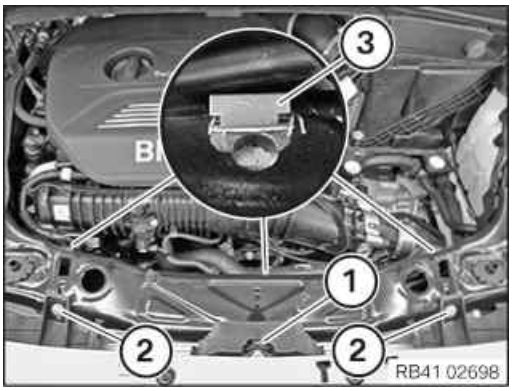
4 – Remove battery holder



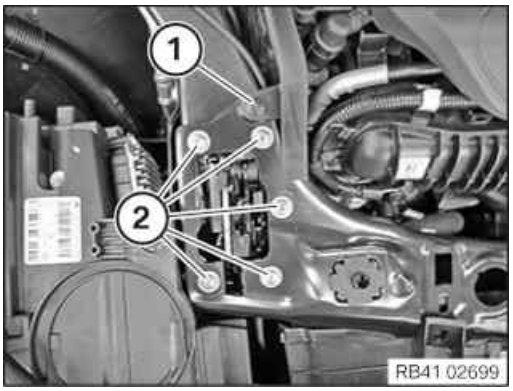
- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

cardiagn.com

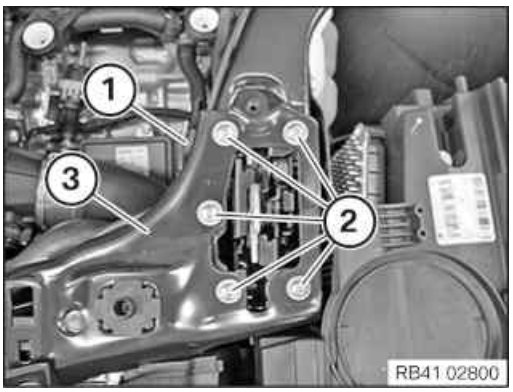
5 – Remove cross connection



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.



- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

6 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

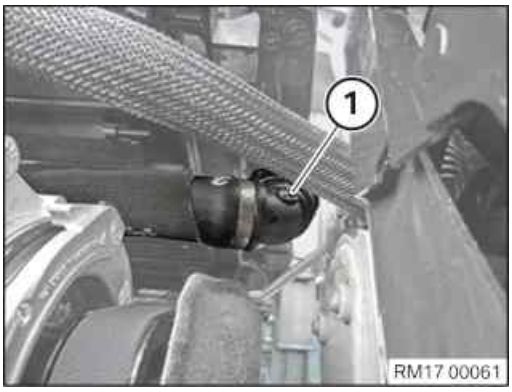
In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

cardiagn.com

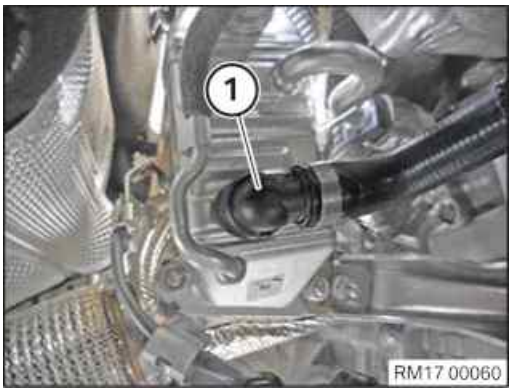
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

7 – Removing the exhaust-gas recirculation cooler

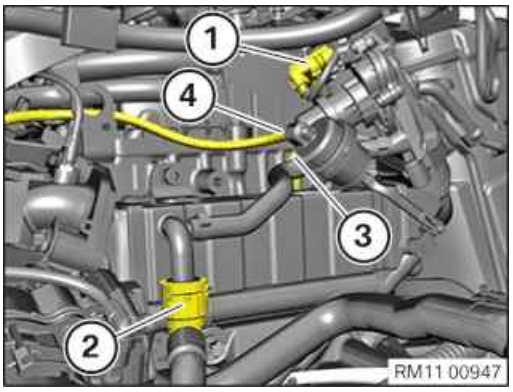
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

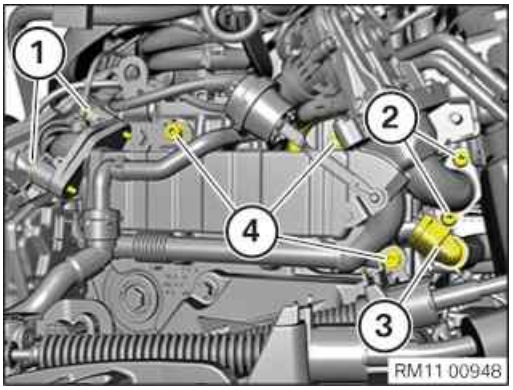
cardiagn.com



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.



- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

8 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

9 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

MAIN WORK

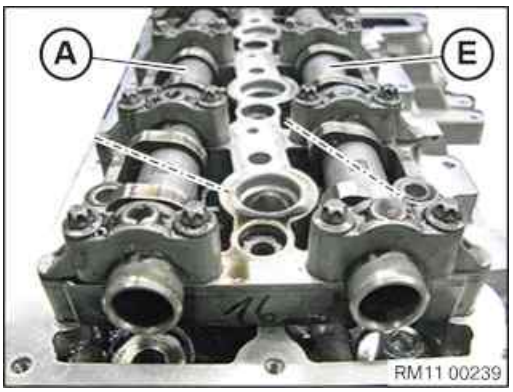
10 – Adjusting the timing of the camshafts

cardiagn.com

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

  Do **not** crank the engine in reverse.

- Slide the special tool **2 288 380** completely into the bore hole of the oil sump.
- Use the special tool to block **2 288 380** the crankshaft in the TDC firing position at the first cylinder.



- The cam of the intake camshaft (E) at the first cylinder points up at an angle.
- The cam of the exhaust camshaft (A) at the first cylinder points outward at an angle.

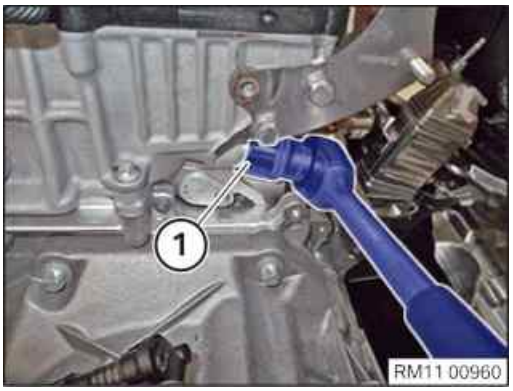
▸ **Remove chain tensioner piston**

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

▸ **Remove exhaust camshaft.**

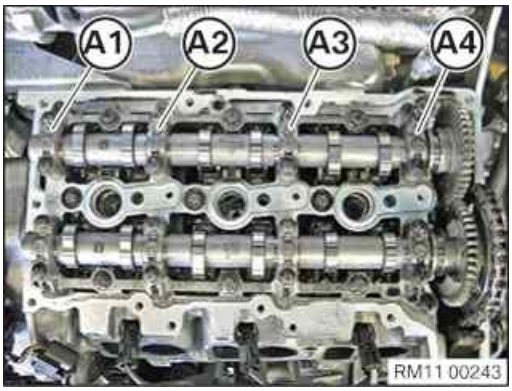
cardiagn.com

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

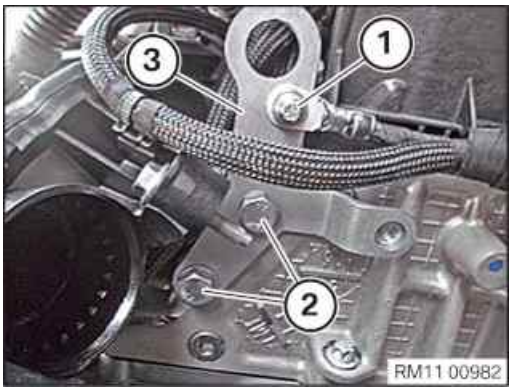


TECHNICAL INFORMATION

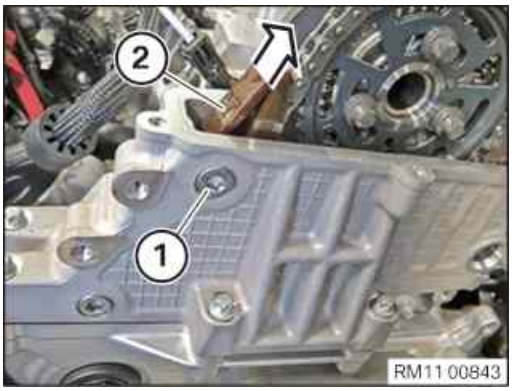
The camshaft is tensioned by the valve springs. Tighten or loosen each screw on the camshaft bearing caps one at a time in the specified sequence and by half a turn only. Repeat procedure.

- Loosen all screws of the exhaust camshaft bearing caps (A1) to (A4) from the outside to the inside, step by step in 1/2 turns.
- Remove exhaust camshaft in upward direction.
- Place all components in special tool **0 495 105 (11 4 480)** in an orderly fashion.

▸ **Remove the timing chain guide rail**



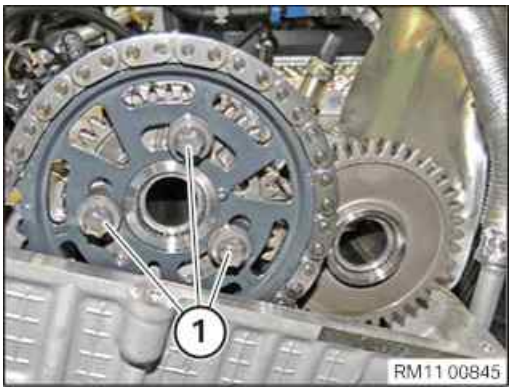
- Release screws (1) and place ground cable to one side.
- Loosen screws (2).
- Remove the mounting bracket (3).



- Remove the bearing journal (1).
- Remove the guide rail (2) in the direction of the arrow.

▸ **Removing the camshaft sprocket on the intake camshaft**

cardiagn.com



- Loosen screws (1).
- Secure the drive chain against falling.
- Remove the camshaft sprocket on the intake camshaft.

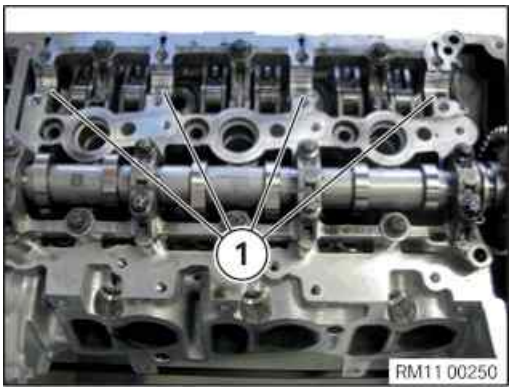
▶ **Installing exhaust camshaft**

RISK OF DAMAGE

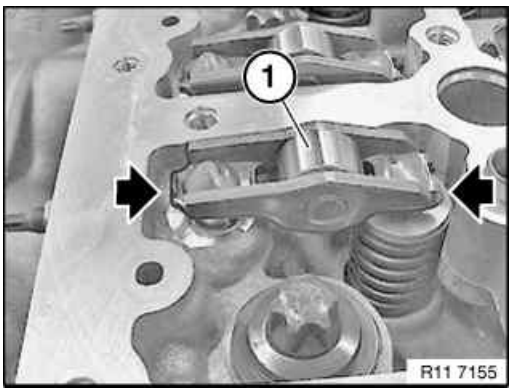
Damage of the engine and mounted parts.

Non-compliance with the instructions for mounting and disassembly may lead to damage to the engine and mounted parts.

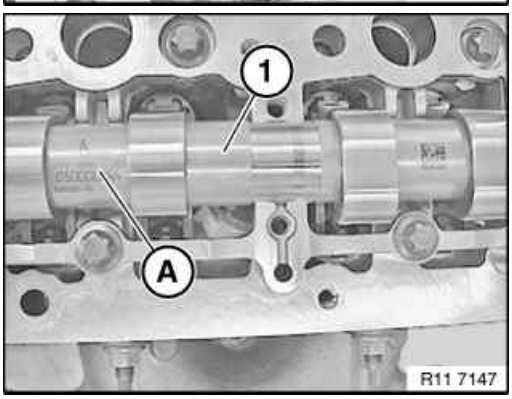
- Comply with the regulations for the installation and disassembly.
- Perform work with care.



- Oil all bearing positions (1).

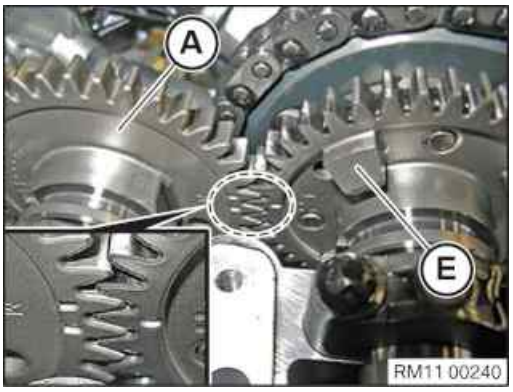


- Make sure the roller cam followers (1) have the correct mounting orientation.

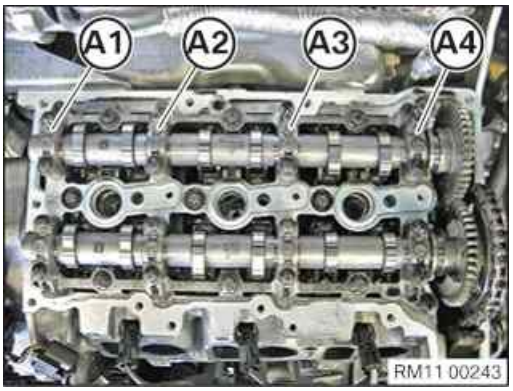


- Insert exhaust camshaft (1) so that the identification (A) points upwards.

cardiagn.com



- Insert the exhaust camshaft (A) so that the marks on the camshafts (A) and (E) correspond in the highlighted area.
- Position the camshafts (A) and (E) accordingly.



- Tighten all exhaust camshaft bearing caps (A1) to (A4) from the inside to the outside by 1/2 a turn at a time.

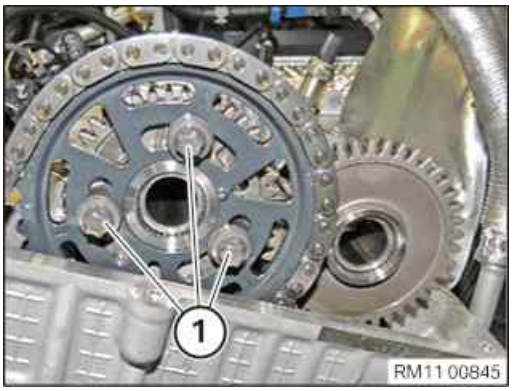
Intake and exhaust camshaft in camshaft support

M6x31		Tightening torque	10 Nm

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

  Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

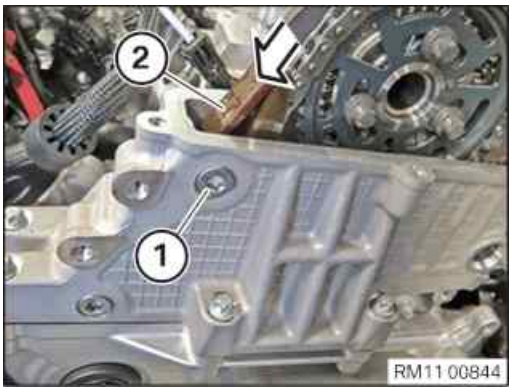
▸ **Installing the camshaft sprocket on the intake camshaft**



- Position the drive chain on the camshaft sprocket so that the thread of the screw connections are located in the centre of the elongated holes.
- Position the camshaft sprocket on the intake camshaft.
- Merely apply the screws (1) hand-tight so that the camshaft sprocket can still be moved in relation to the intake camshaft.

▸ **Install the timing chain guide rail**

cardiagn.com



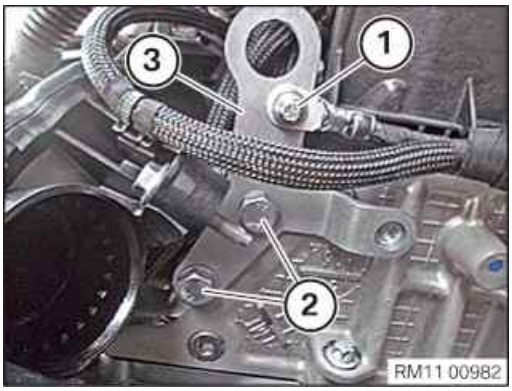
- Position the guide rail (2) in the direction of the arrow.

  Make sure the guide rail (2) is correctly installed at the bottom bearing journal.
- Renew bearing journal (1).

  Parts: Bearing journal
- Tighten the bearing journals (1).

Bearing journal to cylinder head

M16x1.5	Replace bearing journal.	Tightening torque	20 Nm



- Position the mounting bracket (3).
- Tighten down screws (2).

Standard screw connection M8

M8		Tightening torque	19 Nm

- Position the ground cable and tighten the screw (1).

Standard screw connection M6

M6		8 Nm

▸ Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

- Renew sealing ring (1).

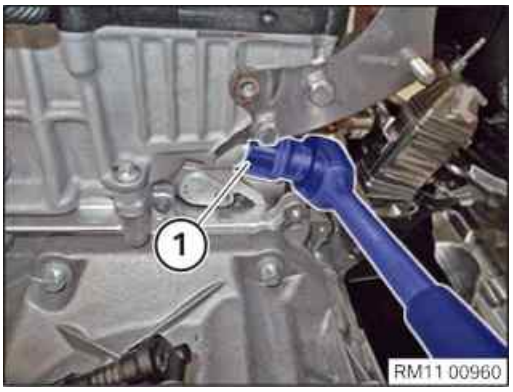
  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.

cardiagn.com

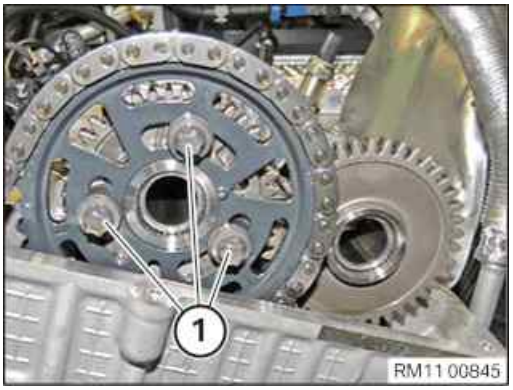


- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

▸ **Tightening the camshaft sprocket on the intake camshaft**



- Tighten the screws (1).

Camshaft sprocket to camshaft

M7x17.			17 Nm

POSTPROCESSES

11 – Removing the special tool to secure the exhaust camshaft

- Remove special tool **0 496 112 (11 8 760)** from the exhaust camshaft.

12 – Remove special tool to disconnect the crank shaft

- Remove special tool **2 288 380**.

13 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

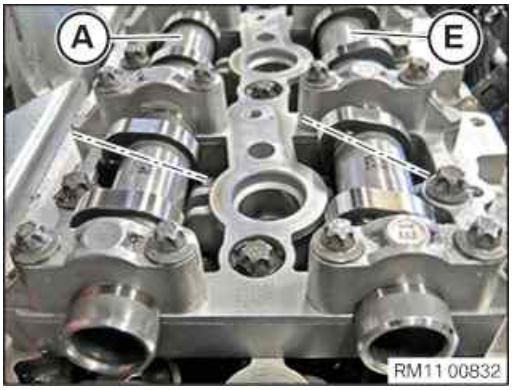
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

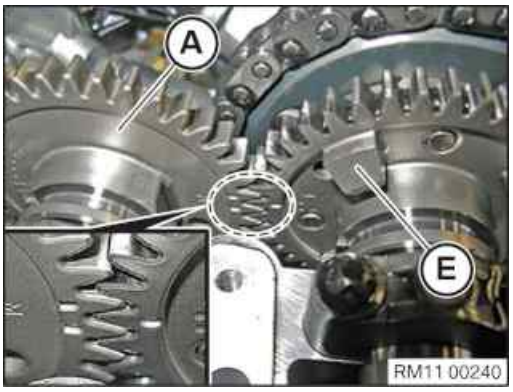
  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

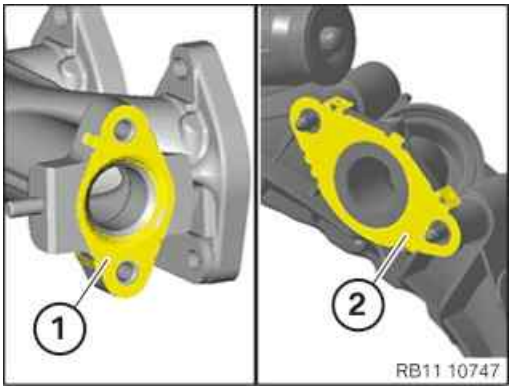
14 – Installing the exhaust-gas recirculation cooler

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



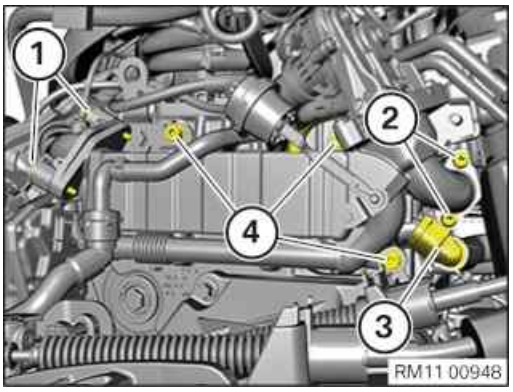
- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket

cardiagn.com



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts
- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

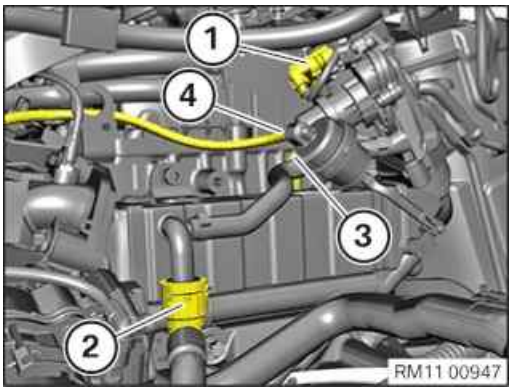
M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

  The coolant hose (3) must audibly engage.
- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm



TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

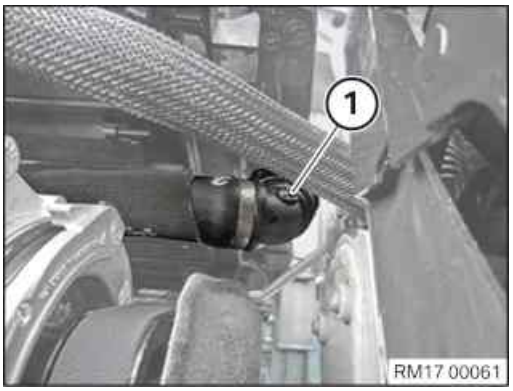
15 Connect the coolant line

cardiagn.com

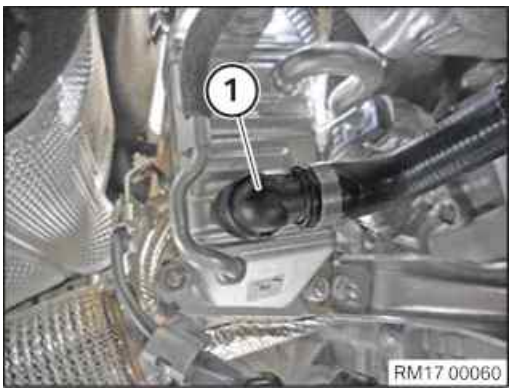
15 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

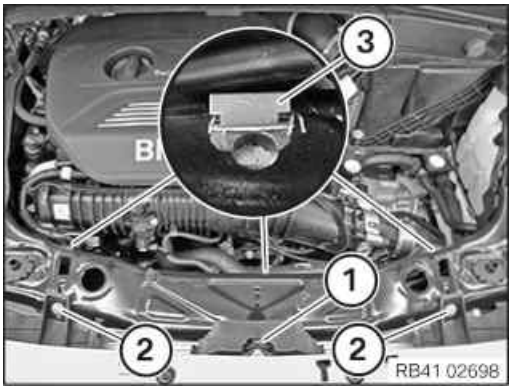


- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

16 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

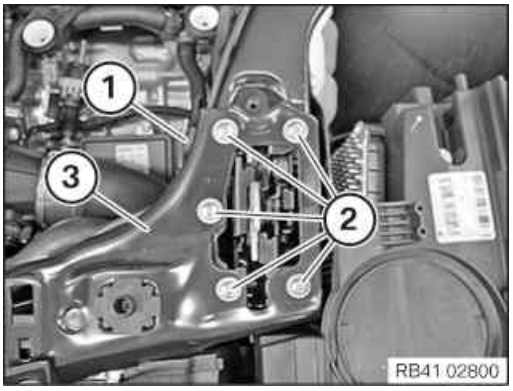
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.



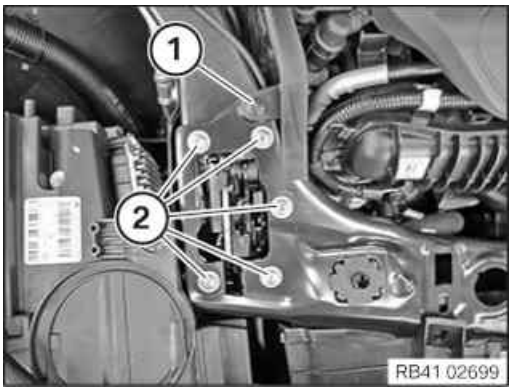
- Tighten screws (2) of cross connection (3).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

cardiagn.com



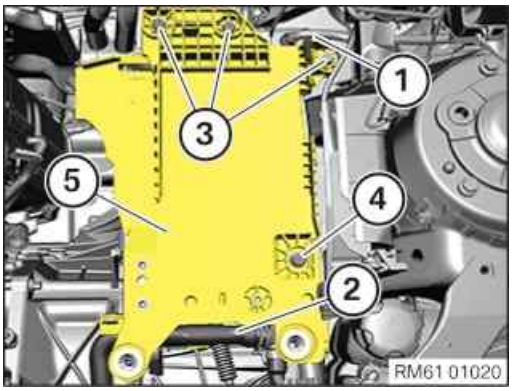
- Tighten down screws (2).

Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

17 – Install the battery holder



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

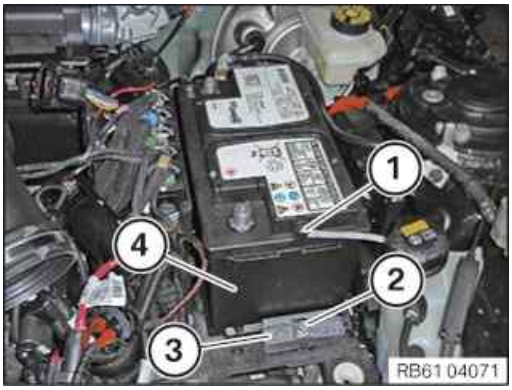
- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

18 – Partially install vehicle battery



- Install vehicle battery (4).
- Correctly position the holder (3).
- Tighten down screw (2).

Battery terminal rail to battery tray

M8		19 Nm

- Fit and clip the vent hose (1) in.

▸ **Check the vent holes of the battery**

WARNING

Gas emission.

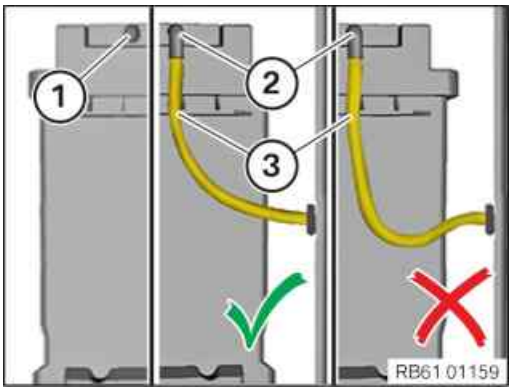
Danger of injury! Danger of explosion!

- Assign the vent holes correctly.
- Route the vent hose correctly.

cardiagn.com

TECHNICAL INFORMATION

The battery has two vent holes, opposite:
One vent hole (1) must be closed correctly with a dummy plug.
The vent hose (3) must be correctly connected and routed at the other vent hole (2).



Check
- Check if the vent hole (1) is correctly closed with a dummy plug.

Result
» No dummy plug.

Measure
- Close the vent hole (1) correctly with a dummy plug.

Check
- Check if the vent hole (2) has a correctly connected vent hose (3).

Result
» The vent hose (3) is not correctly connected.

Measure
- At the vent hole (2), connect the vent hose (3) correctly.

Check
- Check if the vent hose (3) is routed to the outside with a downhill gradient (**no siphon formation!**).

Result
» The vent hose (3) is not correctly routed as shown in the image on the right.

Measure
- Route the vent hose (3) correctly as shown in the centre image.

19 – Install electronics box

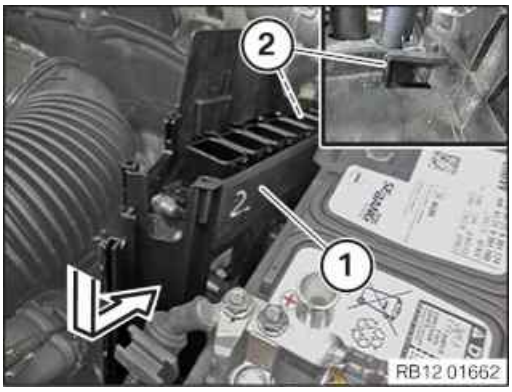
Prerequisite
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

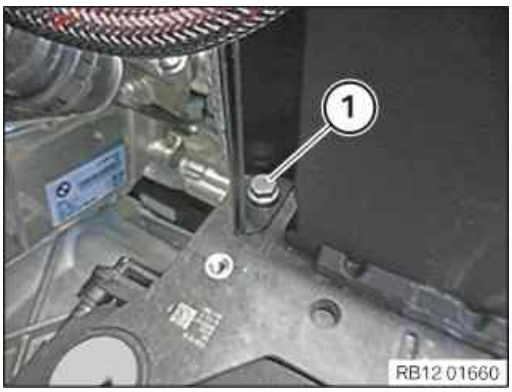
Trapped, crushed or damaged cables may cause short circuits and malfunctions.
- Route all cables without abrasions, do not trap and crush.

cardiagn.com



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

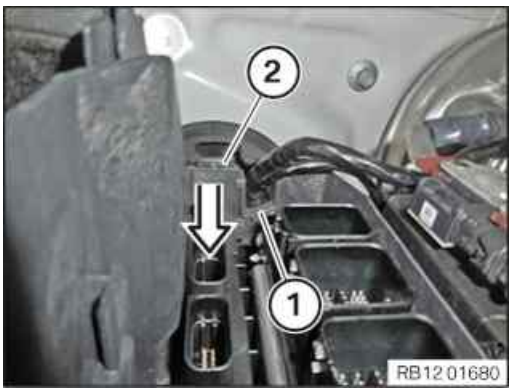
- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).



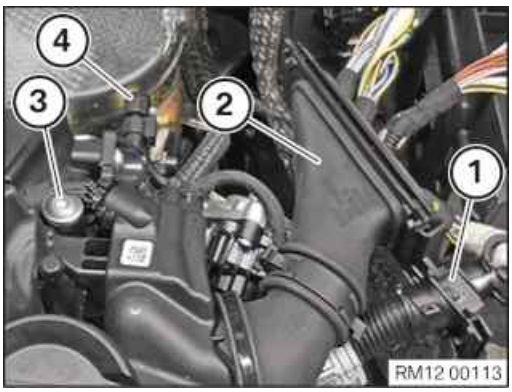
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.



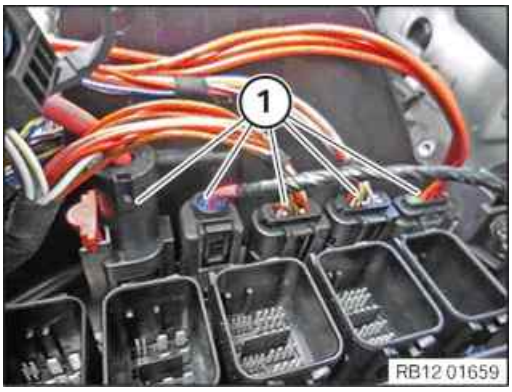
- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

Wiring harness to cylinder head cover

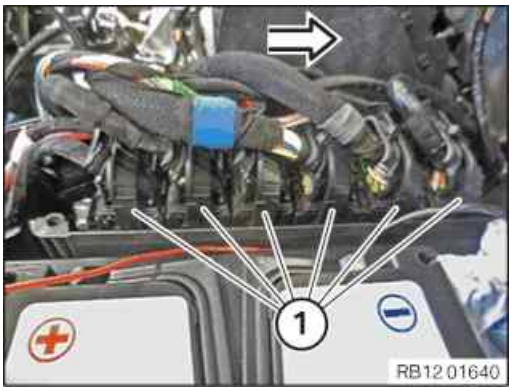
TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

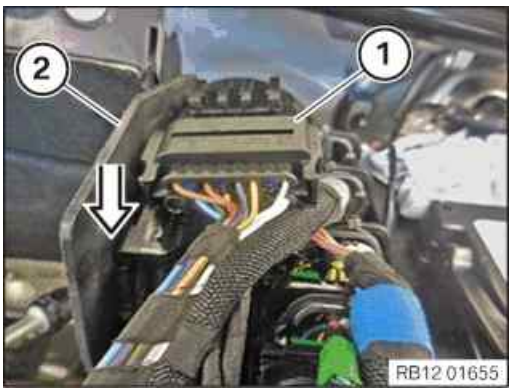
cardiagn.com



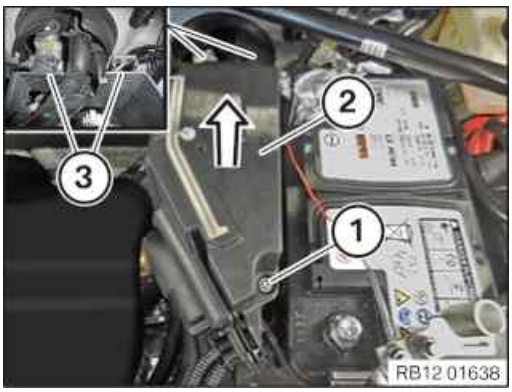
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



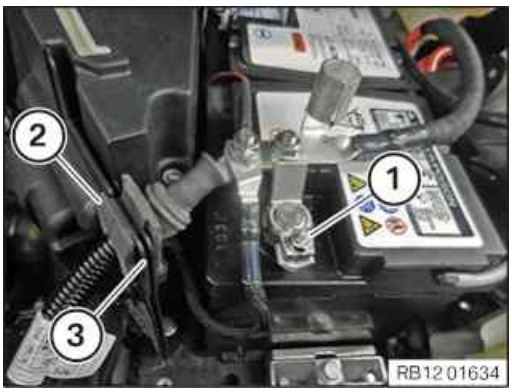
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

RF5x26.5		Tightening torque	2,5 Nm

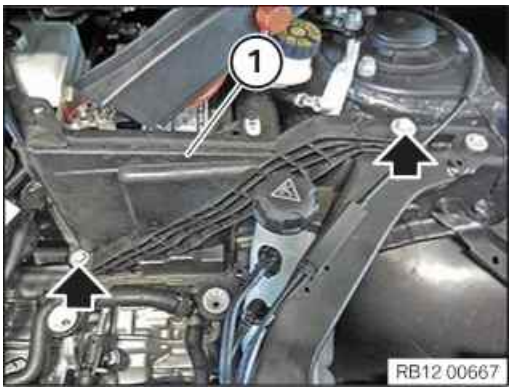


- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

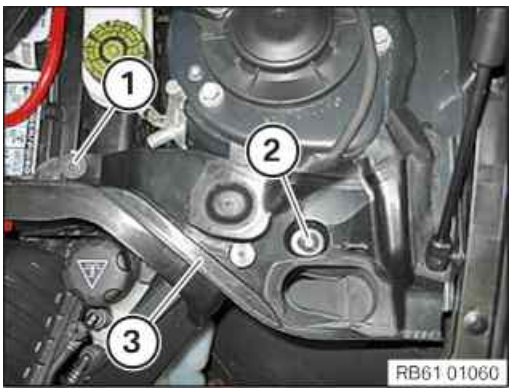
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

20 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

- See additional information.

Overview of Special Tools

2 288 380 Locating stud

Common — Used in step 8 10 12 13

Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

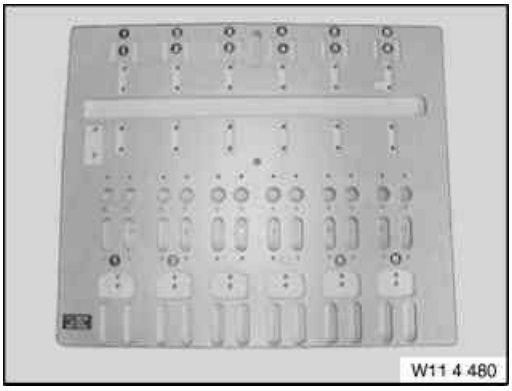
0 496 112 (11 8 760) Gauge

Common — Used in step 9 10 11 13

Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

cardiagn.com

0 495 105 (11 4 480) oddments tray

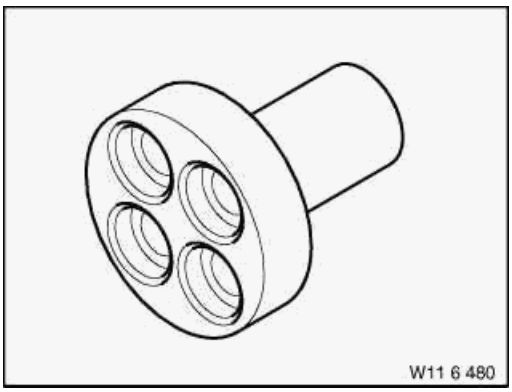


Common	Used in step 10
Usage	(Boards (2 pieces)) For setting down the individual components of the cylinder head.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 17 04 (130)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 495 106 (11 4 481)		**oddments tray** (Board, intake side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	
2	0 495 107 (11 4 482)		**oddments tray** (Board, exhaust side) Discontinued, only available as part of complete special tool 11 4 480 = 83 30 0 495 105	

0 493 380 (11 6 480) Connector



Common	Used in step 10 13
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

Exhaust-gas recirculation cooler seal on intake plenum	14

cardiagn.com

11 31 005 Check the timing of the camshaft (s)

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

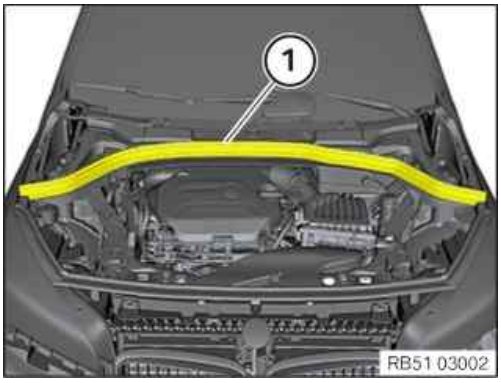
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

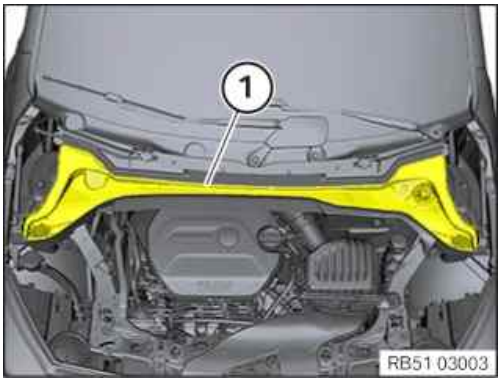
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

cardiagn.com

4 – Remove left and right wiper arm

NOTICE

Description is for left component only. Procedure on the right side is identical.

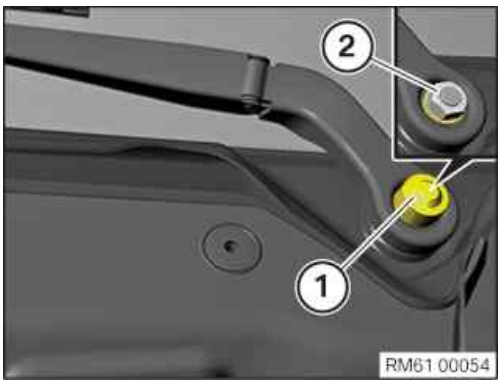
▶ **Remove the wiper arm**

RISK OF DAMAGE

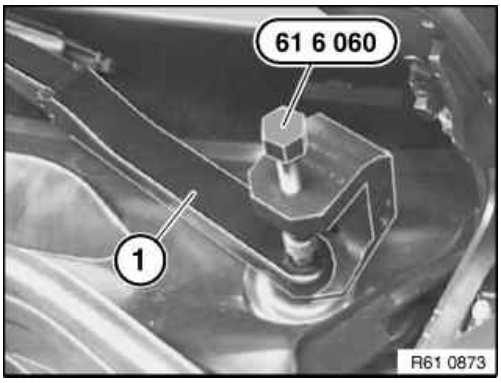
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

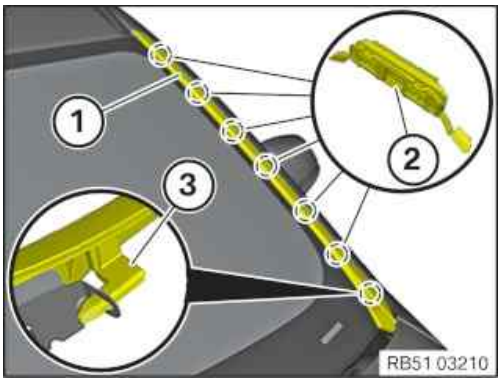
5 – Remove the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

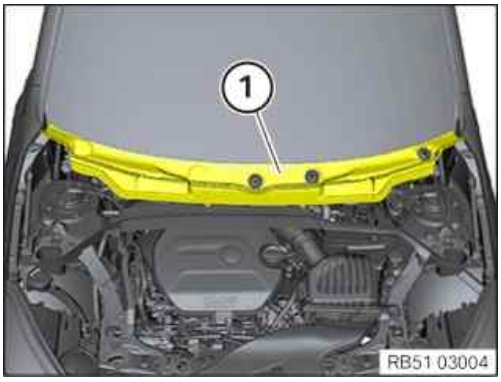
▶ **Remove the gutter strip on the windscreen**

cardiagn.com



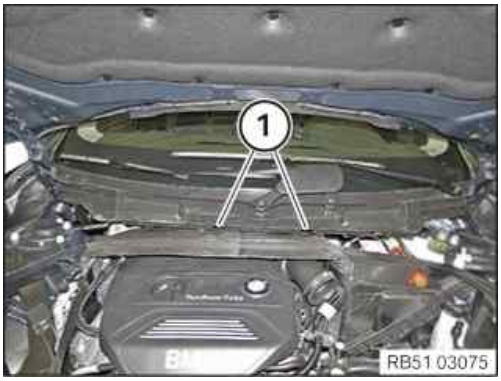
- Unclip the gutter strip (1) from the clips (2) beginning at the roof to the top.
- Feed the gutter strip (1) out of the guide (3).

6 – Remove the rear cowl panel cover

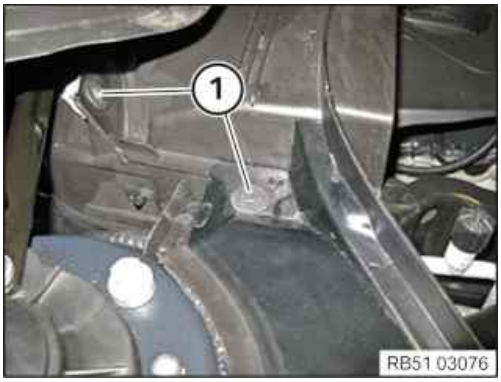


- Disengage and guide out the rear cowl panel cover (1) towards the top.

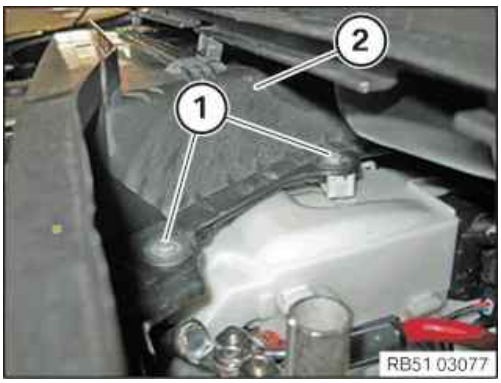
7 – Removing the upper bulkhead cover



- Loosen screws (1).



- Loosen screws (1).



- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

cardiagn.com

8 – Removing the acoustic cover

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

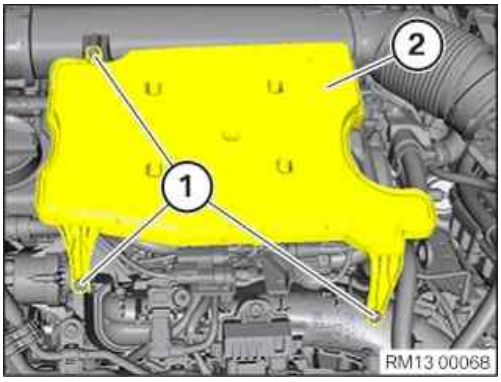
Damage to the acoustic cover.

Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

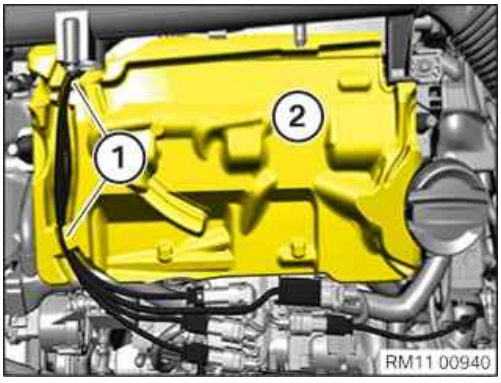
- Unclip the acoustic cover from the marked areas towards the top.

9 – Remove resonator



- Loosen screws (1).
- Guide out and remove the resonator (2).

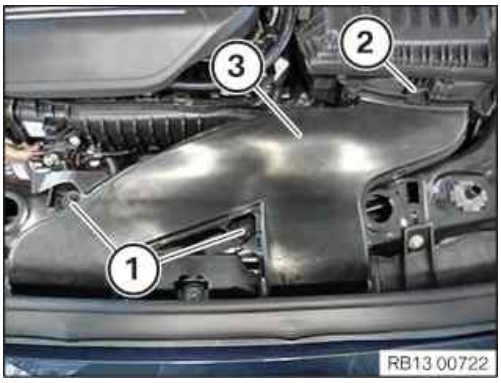
10 – Remove the acoustic cover for the injectors



- Release the wiring harness (1) from the brackets.
- Guide the acoustic cover (2) out and remove.

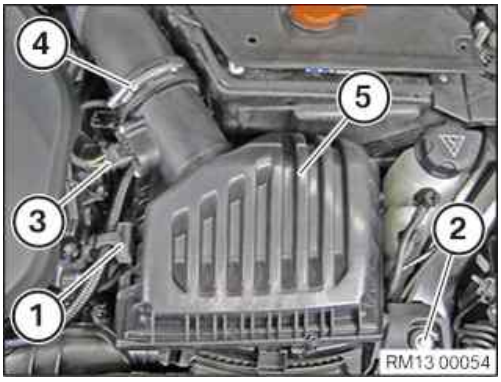
11 – Remove the intake neck for intake silencer housing

cardiagn.com



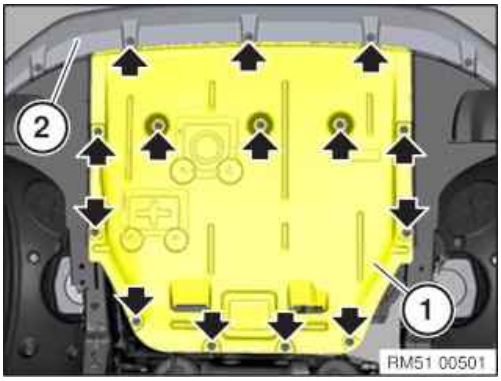
- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

12 – Removing intake silencer housing



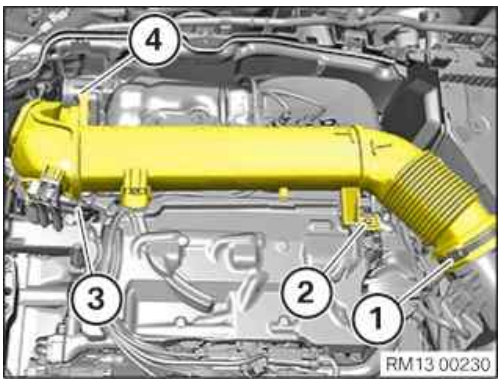
- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

13 – Removing the front underbody protection



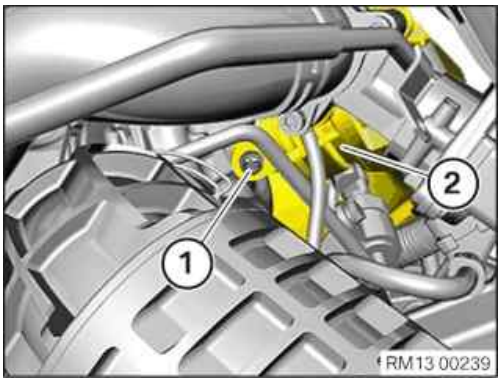
- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

14 – Partially detach the clean air pipe

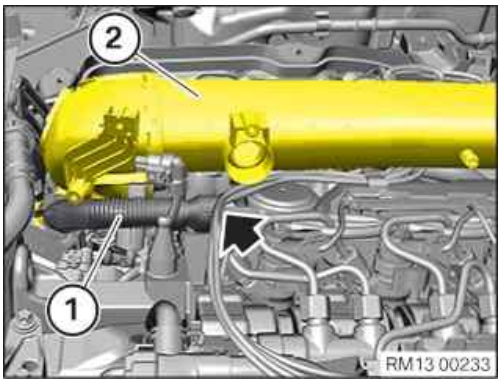


- Release the screw clamp (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Loosen screw (4).

cardiagn.com



- Unscrew the screw (1) from the clean air pipe (2).

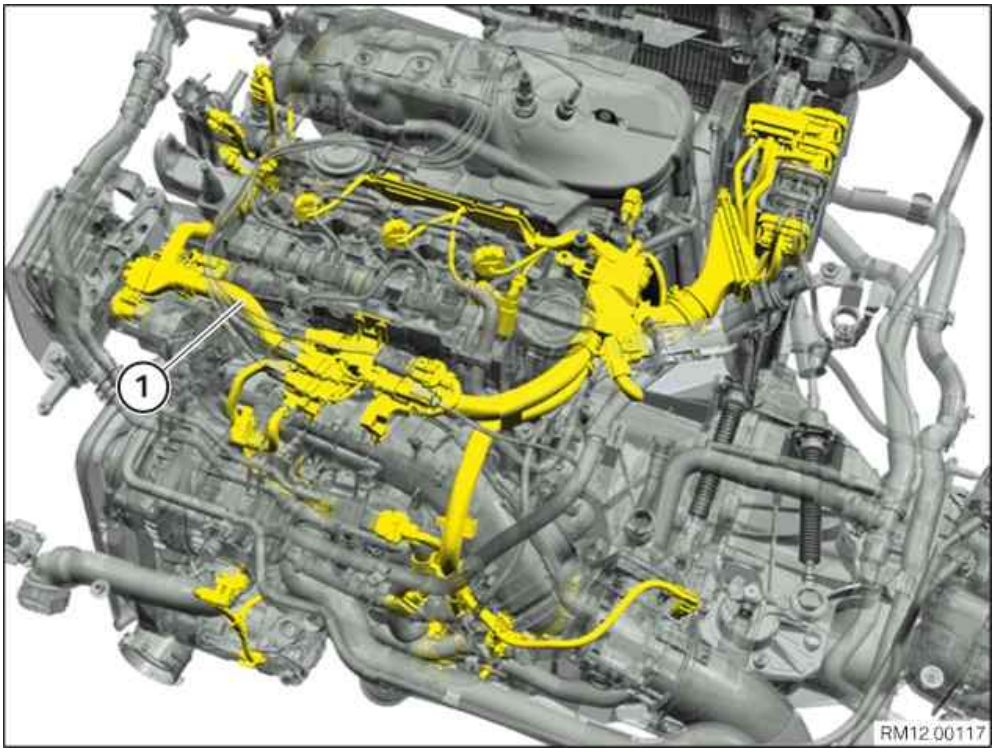


- Detach ventilation line (1) from clean air pipe (2) and set it aside.
- Detach ventilation line (1) from cylinder head cover (arrow).
- Remove the ventilation line (1).

- Thread out the clean air pipe (1) and set it aside as shown.

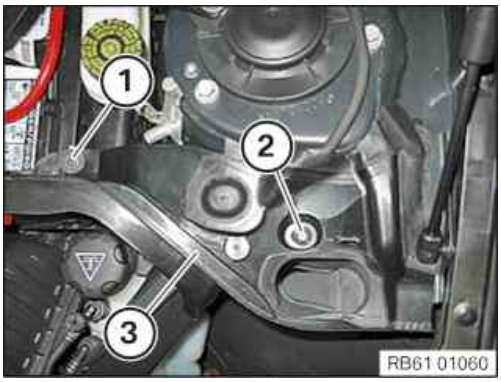
15 – Releasing the wiring harness section for the intake plenum

Overview: Wiring harness section for the engine



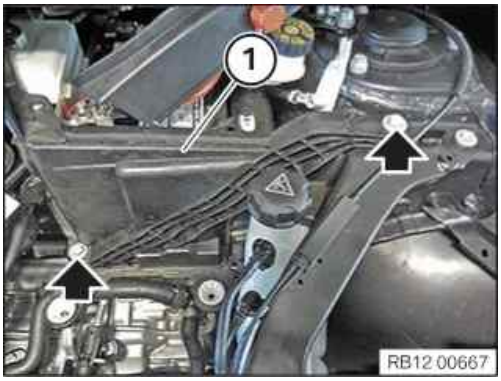
1 Wiring harness section for the engine

cardiagn.com

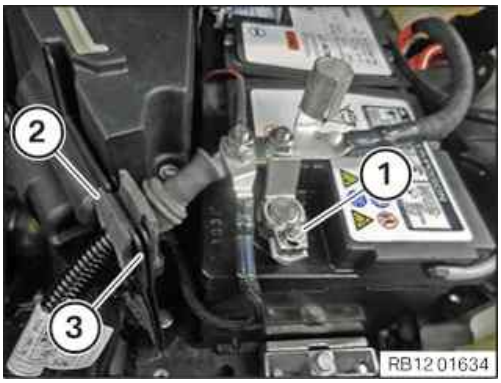


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

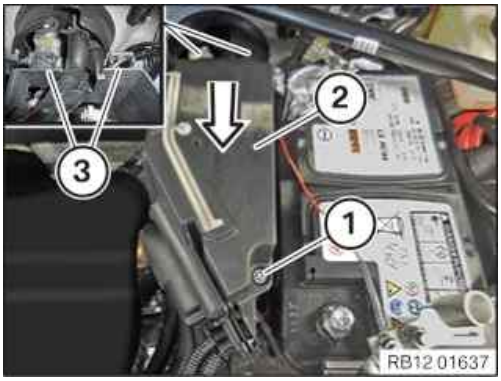
- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.



- Remove screws (arrows).
- Guide out tension strut (1) and remove.

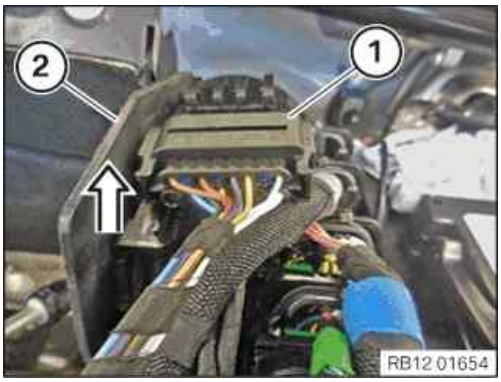


- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.

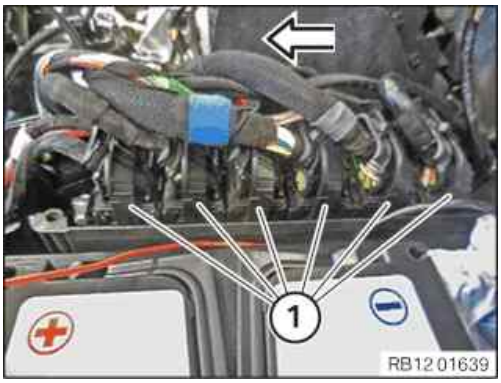


- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.

cardiagn.com

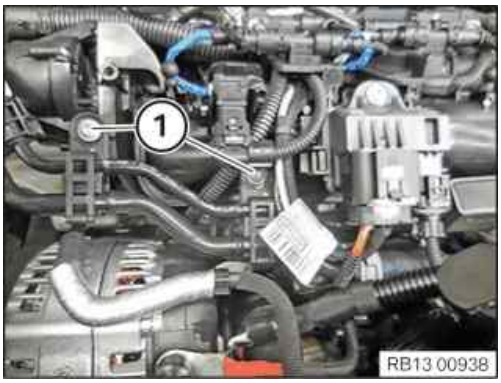


- Guide the connector (1)out of the electronics box (2) in the direction of arrow and remove it.
- Unlock and loosen connector (1).

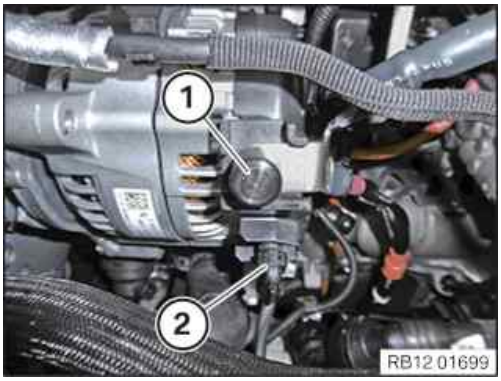


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

- Unlock and loosen connector (1).

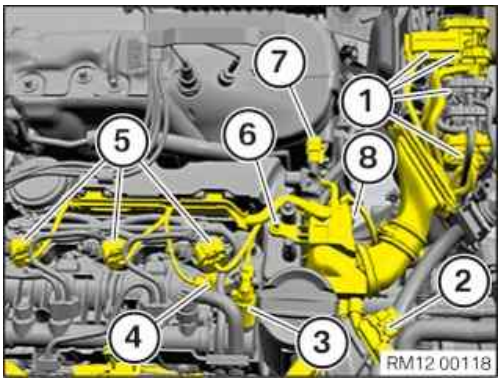


- Loosen screws (1).

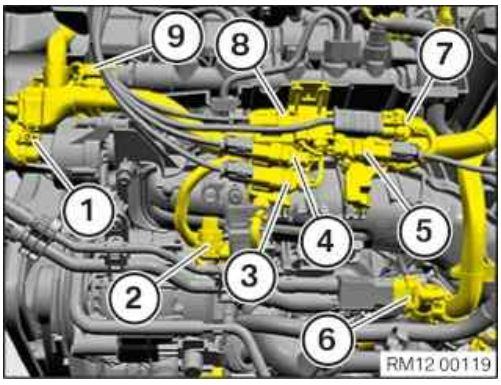


- Release the positive battery cable (1) on the alternator and place to one side.
- Unlock connector (2) and pull off.

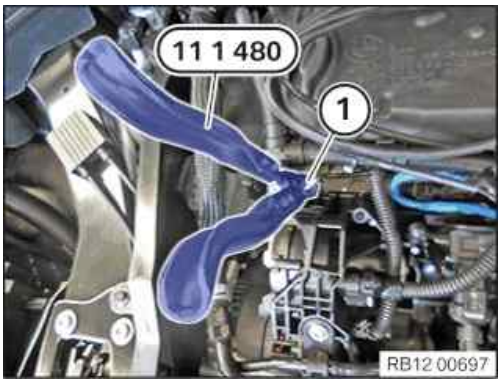
cardiagn.com



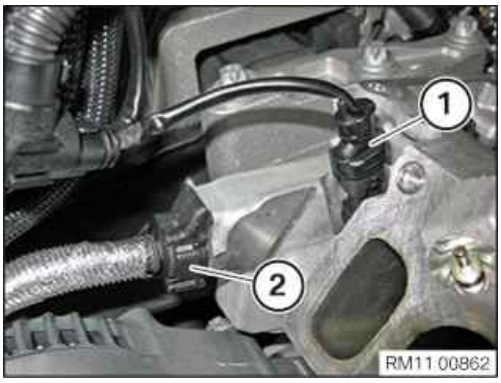
- Disconnect all connectors (1) from the DME control unit and remove the integrated supply module (PDM).
- Unlock connector (2) and pull off from hot film air mass meter.
- Unlock connector (3) and pull off from fuel pressure regulator.
- Unlock connector (4) and disconnect from camshaft sensor.
- Unlock the connector (5) and pull off from the injectors.
- Loosen screw (6).
- Unlock connector (7) and disconnect from differential pressure sensor.



- Unlock connector (1) and pull it off the servomotor for the swirl flap.
- Unlock the connector (2) and pull it off the charging pressure sensor.
- Unlock connector (3) and pull off from exhaust temperature sensor downstream from the diesel particulate filter.
- Unlock connector (4) and pull off from exhaust gas pressure sensor for the low pressure exhaust-gas recirculation cooler.
- Unlock connector (5) and pull off from exhaust gas pressure sensor for the exhaust-gas recirculation cooler.
- Unlock connector (6) and pull off from the fuel pressure and temperature sensor.
- Unlock and disconnect the connector (7) from the front oxygen sensor.
- Unlock connector (8) and pull off from exhaust gas pressure sensor upstream from the diesel particulate filter.

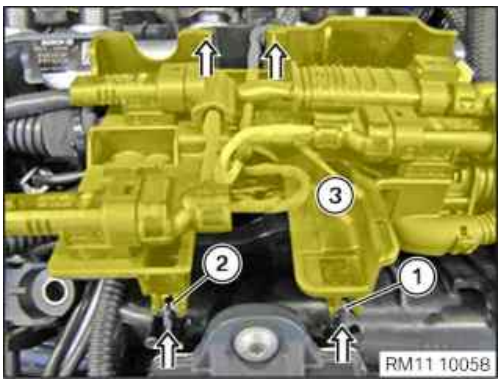


- Unlock connector (1) at all glow elements using special tool **0 490 796 (11 1 480)** and release.
- Guide the wiring harness out of the guide on the cylinder head cover and place to one side.



- Unlock and loosen connector (1).
- Unlock the clamp of the coolant line (2) and release the coolant line.

16 – Removing the cable clips from the intake plenum



- Release the clips (1) and (2).
- Feed out the cable clip (3) in the direction of the arrow and set it aside.

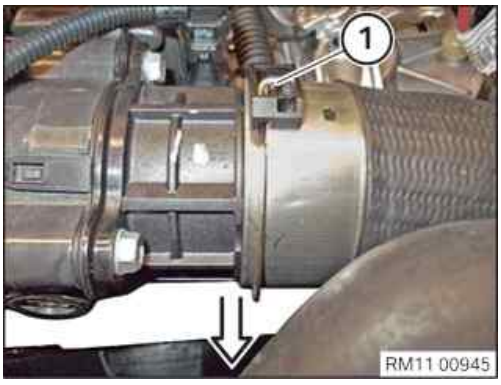
cardiagn.com

17 – Removing the intake plenum

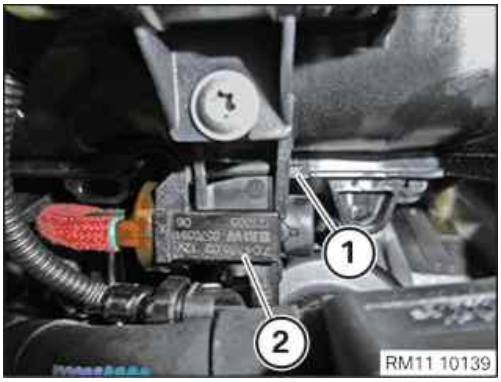
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

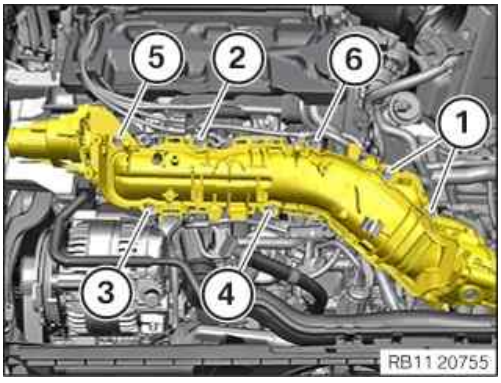
- Unlock the lock (1).



- Ensure that the lock (1) is unlocked.
- Pull the charge air line off the throttle valve.

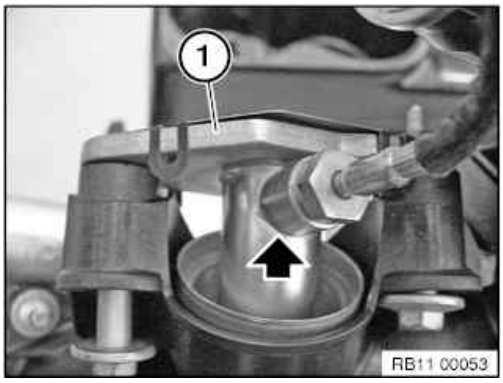


- Unlock the lock (1) upward.
- Guide out the electric changeover valve (2) to the left and set it aside.



- Loosen the screws (1) on the exhaust-gas recirculation cooler.
- Release the screws (2) to (6).
- Guide the intake plenum out forwards and remove it.

cardiagn.com



- Remove the exhaust-gas recirculation pipe (1) in direction of arrow.

18 – Detaching leakage oil line from injector

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

RISK OF DAMAGE

Contaminant or foreign body.

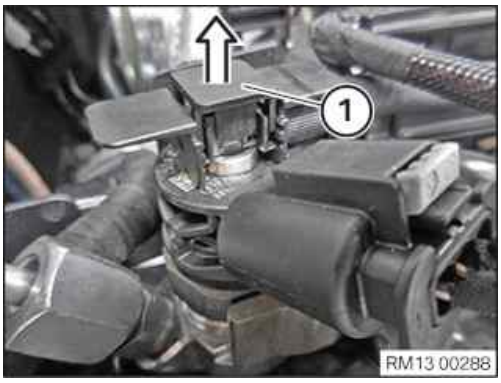
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com



- Release lock (1) in direction of arrow.
- Pull the leakage oil line off the injector in direction of arrow.

19 – Removing high pressure lines between rail and injectors

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

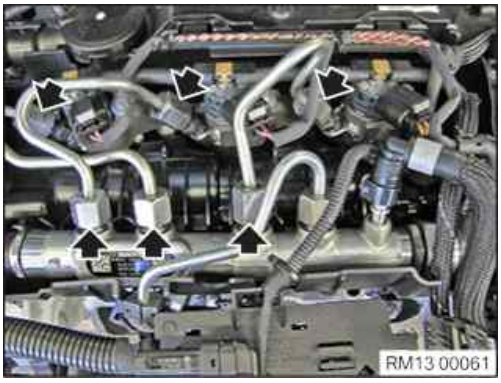
cardiagn.com

TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Release the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)** .
- Feed out and remove the high pressure lines (arrows).
- Seal off all the open cable connections with the special tool **2 413 106**.

20 – Remove the high pressure line between the high pressure pump and the rail

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

cardiagn.com

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

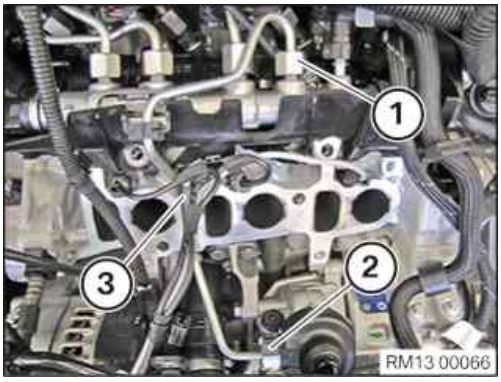
- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.



- Loosen union nut (1) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Loosen union nut (2) with special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).
- Catch and dispose of escaping fuel.
- Feed the high pressure line (3) out and remove.
- Seal open connections using special tool **2 413 106**.

21 – Remove high-pressure rail

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

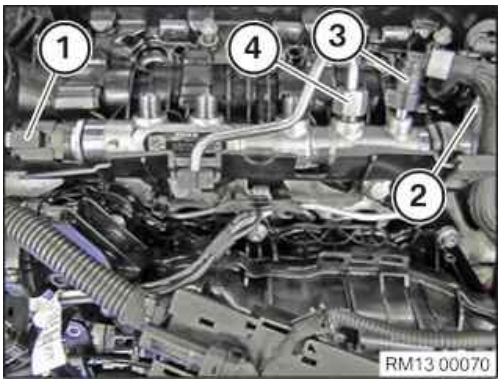
cardiagn.com

TECHNICAL INFORMATION

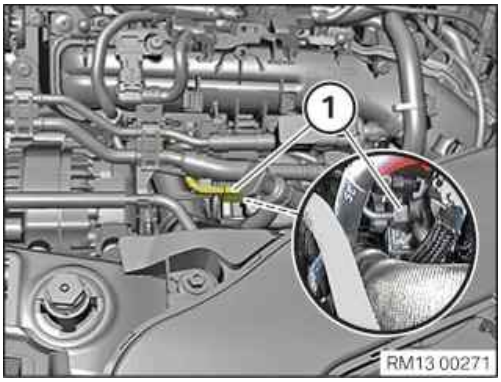
Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

TECHNICAL INFORMATION

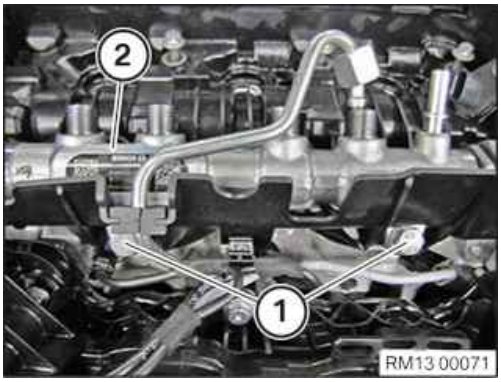
Reset special tool in early to avoid bending pressure lines.



- Unlock and disconnect the plug connection (1).
- Unlock and disconnect the plug connection (2).
- Unlock and release fuel line (3).
- Loosen union nut (4) with special tool **0 495 910 (37 1 152)**.
- Reset special tool **0 495 910 (37 1 152)** early on to avoid bending pressure lines.



- Slacken the union nut (1) on the high pressure pump.



- Loosen screws (1).
- Carefully thread out and remove the rail (2).
- Make sure the pressure line of the high pressure pump is not bent.

22 – Removing injectors of injection system

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

WARNING

Working on fuel system.

Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

CAUTION

On releasing high pressure line, fuel may emerge at high speed.

Danger of injury!

- Wear suitable personal protective equipment.
- Allow the cooling system to cool down to a temperature below 40°C before starting installation work.
- Note warnings on cylinder head cover.

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

RISK OF DAMAGE

Electrostatic discharge.

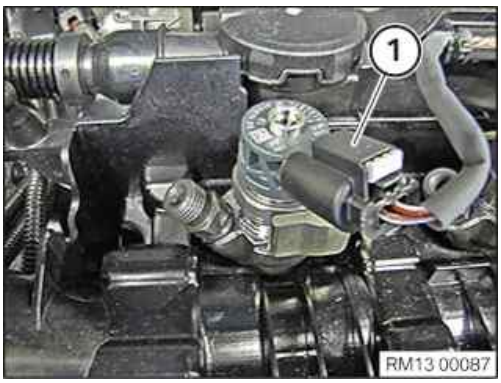
Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

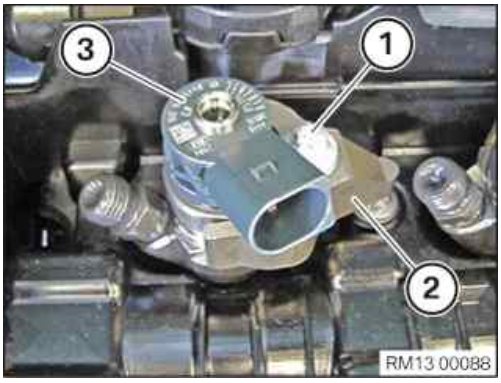
cardiagn.com

TECHNICAL INFORMATION

If several injectors are removed, ensure that each injector is reinstalled in its original installation location (cylinder). Mark injectors.



- Unlock and disconnect connector (1).



- Loosen screw (1).
- Guide out and remove clamping claw (2).
- Feed out and remove the injector (3) with slight rotational movements.

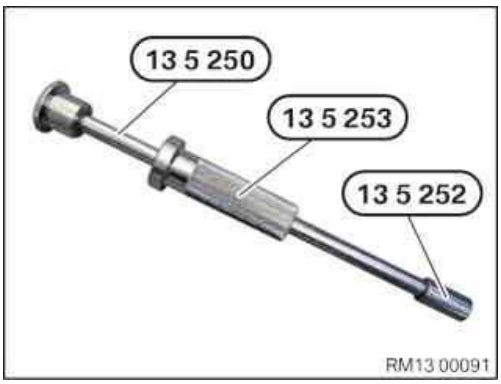
▶ **Loosen stuck injectors**

RISK OF DAMAGE

Contaminant or foreign body.

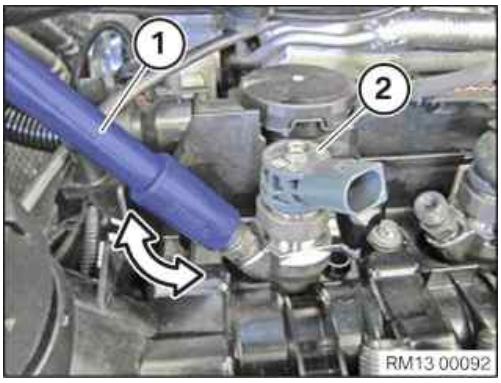
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Unscrew the bush **0 493 321 (13 5 250)** from the special tool **0 493 339 (13 5 252)** and remove the impact weight **0 493 340 (13 5 253)**.
- Screw the bush **0 493 339 (13 5 252)** back onto the special tool **0 493 321 (13 5 250)**.

cardiagn.com



- Screw the special tool (1)**0 493 321 (13 5 250)** with the bush **0 493 339 (13 5 252)** onto the pressure line connection of the injector (2).
- Loosen and remove injector (2) using the special tool (1)**0 493 321 (13 5 250)** and **0 493 339 (13 5 252)** in **short** reciprocating motions.

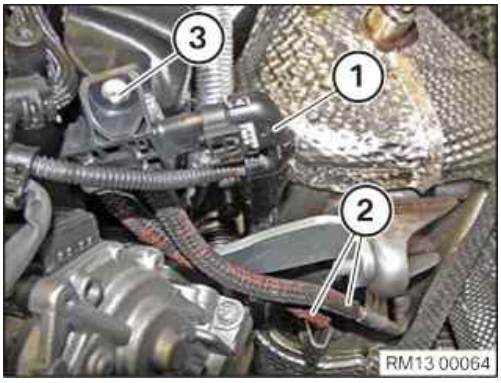
23 – Remove differential pressure sensor

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

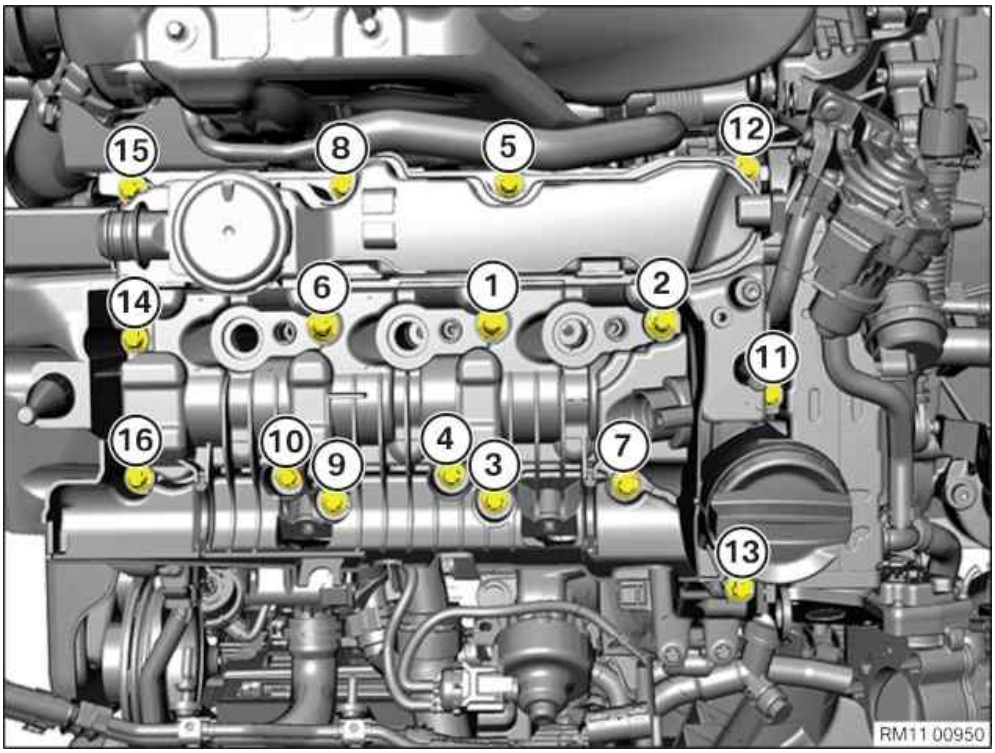


- Unlock and disconnect connector (1).
- Pull off pressure hose (2).
- Loosen screw (3).
- Feed out differential pressure sensor and remove.

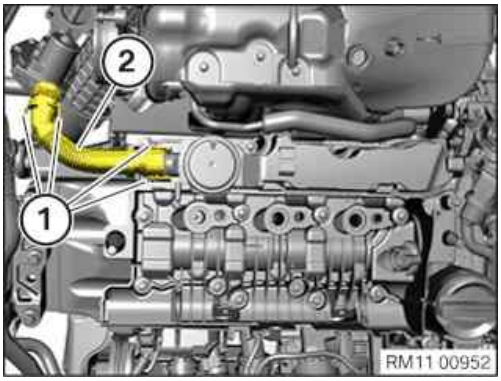
24 – Removing the cylinder head cover

cardiagn.com

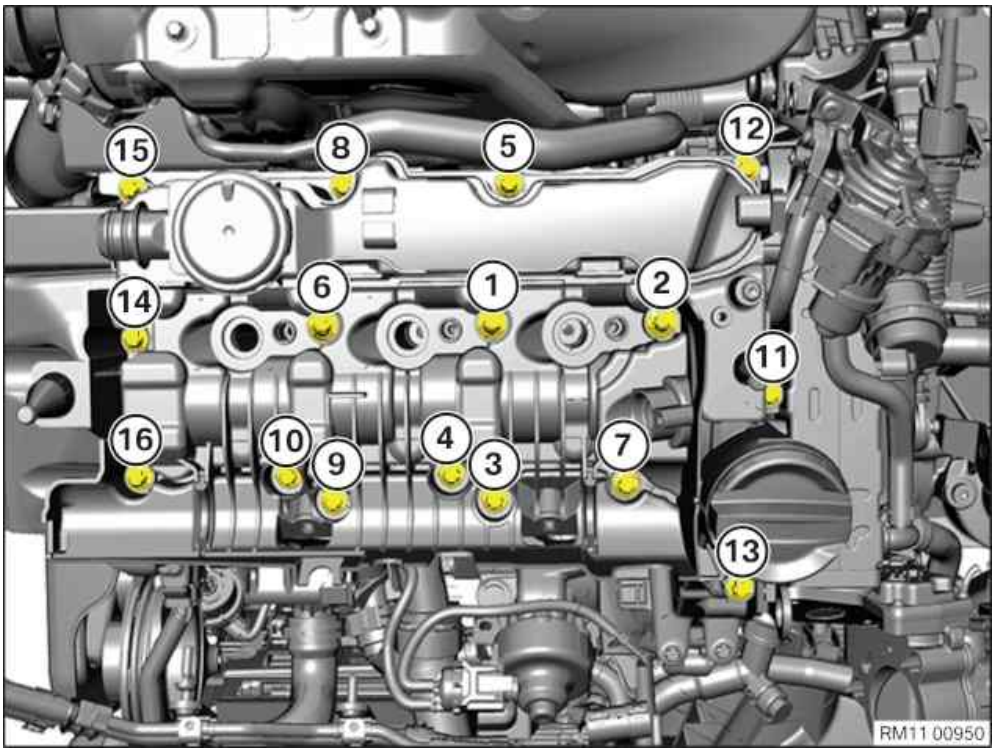
Overview: Screw connection of the cylinder head cover



1 to 16 Bolts of the cylinder head cover



- Carefully unlock the locks (1) of the engine ventilation line (2).
- Remove the engine ventilation line (2).



- Loosen screws in the order (16) to (1).
- Remove cylinder head cover by lifting it out.

25 – Remove front right wheel

cardiagn.com

TECHNICAL INFORMATION

The wheel can be balanced electronically at the vehicle. In this case, it is important not to change the position of the wheel relative to the wheel hub.

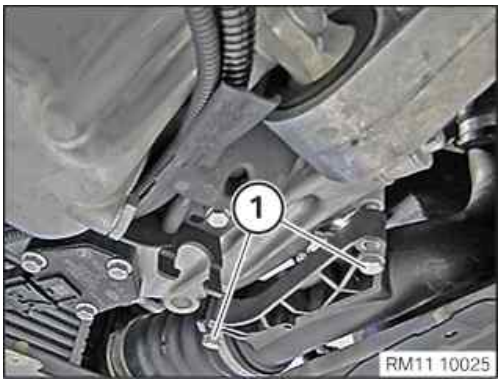
TECHNICAL INFORMATION

Strictly observe the specified procedure to prevent clamping errors and imbalance.

- Turn the wheel so that the valve (arrow) points down.
- If several wheels are removed simultaneously: Use a piece of chalk to mark on each tyre the axle and side on which the corresponding wheel is fitted.
- Mark the alignment of the wheel with respect to the wheel hub.
- Mark the position of the lockable wheel bolt (arrow).
- Unscrew the wheel bolts and remove the wheel.

  Use the matching adapter from tool set (wheel bolt adapter set) to loosen and tighten down the wheel bolt with security code.

26 – Remove right charge-air line

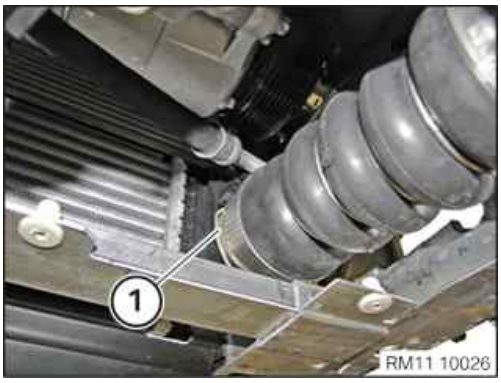


- Release charge air duct screws (1) on oil sump.

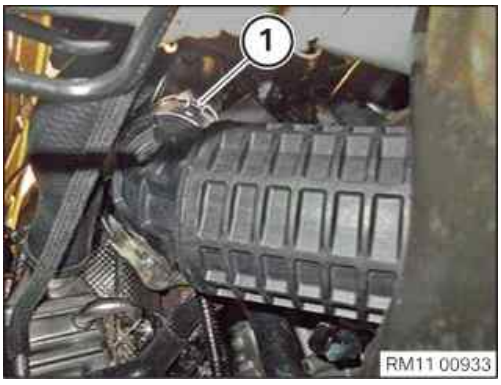
- Detach charge air duct screw connection (1) on crankcase.

- Unfasten lock (1) on exhaust turbocharger and charge air cooler.
- Let the lock (1) engage at the holder (arrow).

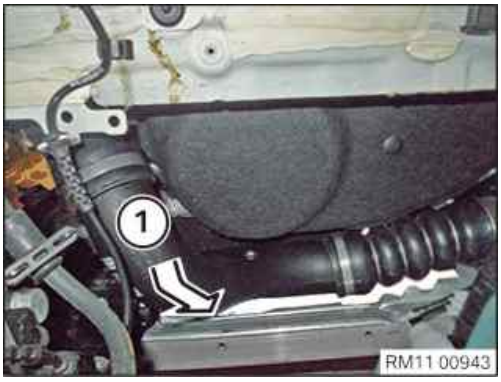
cardiagn.com



- Ensure that lock (1) on charge air cooler is unlocked on both sides.
- Detach charge air duct from charge air cooler.

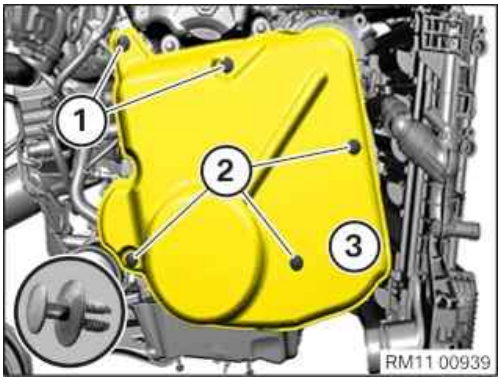


- Ensure that locks (1) from exhaust turbocharger are both unlocked.
- Pull charge air line from exhaust turbocharger.



- Feed out and remove charge air line between side member and front axle support through the wheel arch downwards and to the side.

27 – Removing the acoustic cover for the engine at the front



- Release the expanding rivets (1) from the top.
- Release the expanding rivets (2) from the bottom.
- Feed out and remove acoustic cover (3) downwards.

MAIN WORK

28 – Checking camshaft timing

cardiagn.com

- Remove protective cap (1) from oil sump.

- **Spin the engine twice in the direction of rotation.**

RISK OF DAMAGE

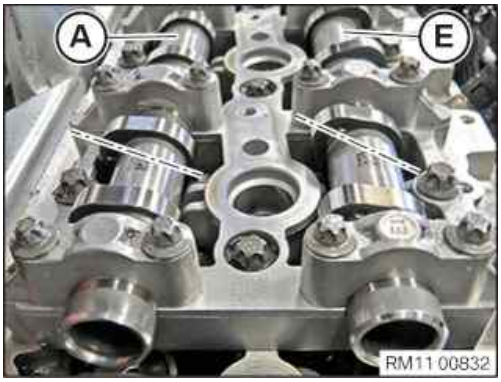
Damage to the engine.

The engine may be damaged if it is manually rotated in the wrong direction.

- Always rotate the engine in the correct direction of rotation by hand: a) Clockwise, facing the vibration damper or b) Counter-clockwise, facing the chain drive. (b) only applies when the rear timing chain is installed.

- Crank the engine on the first cylinder to TDC firing position using special tool **0 493 380 (11 6 480)**.

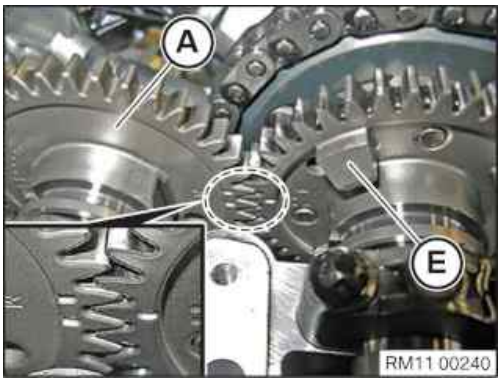
  Do **not** crank the engine in reverse.



- Make sure the cam on the intake camshaft (E) on the first cylinder is pointing upwards at an angle.
- Make sure the cam on the exhaust camshaft (A) on the first cylinder is pointing towards the outside left at an angle.

- Slide the special tool **2 288 380** completely into the oil sump until the engine is blocked.
- If disconnecting is not possible, slowly rotate engine in direction of rotation until the special tool **2 288 380** engages in the flywheel.
- Check whether the engine is blocked free of play.

cardiagn.com



- Make sure the marks on both camshafts (A) and (E) correspond in the highlighted area.

- Place special tool **0 496 112 (11 8 760)** on exhaust camshaft.

TECHNICAL INFORMATION

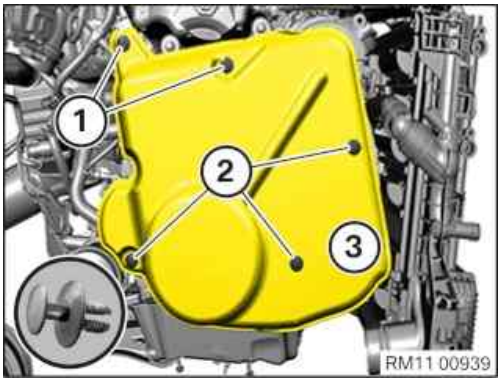
If the check finds that the timings are incorrect, the timings must be adjusted.
For additional information, see: 1131 ... Adjust the timings of the camshafts.

- Special tool **0 496 112 (11 8 760)** must lie flush on cylinder head.

- Remove the special tool **2 288 380** to disconnect the crankshaft.
- Install the protective cap (1).

POSTPROCESSES

29 – Install the acoustic cover for the engine at the front



- Thread in and position the acoustic cover (3).
- Secure the acoustic cover (3) with the expanding rivets (2) from the bottom.
- Secure the acoustic cover (3) with the expanding rivets (1) from the top.

30 – Install right charge air duct

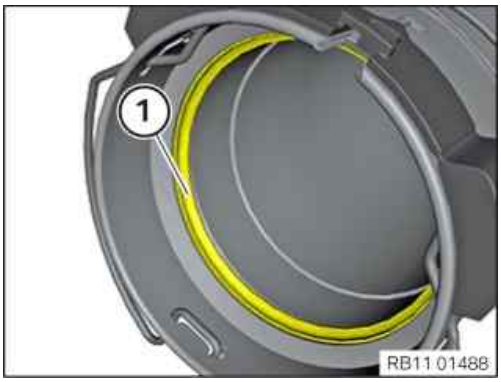
RISK OF DAMAGE

Damage to the exhaust turbocharger.

A leak at the pressure pipe can damage the exhaust turbocharger.

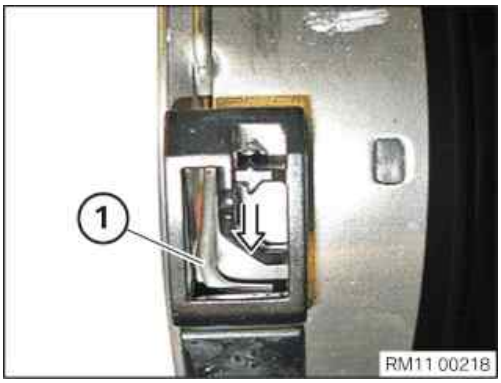
- Replace the gaskets and pressure pipe if necessary.

cardiagn.com

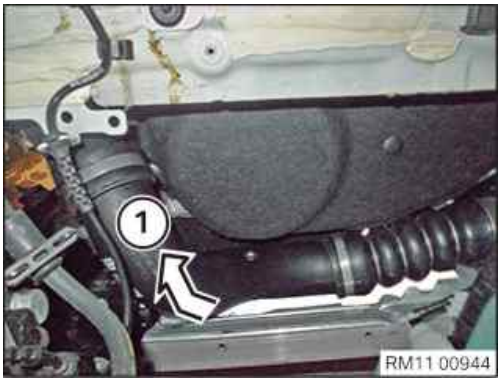


- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

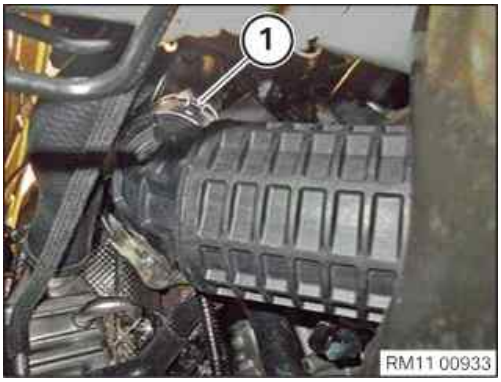
  Parts: Gasket



- Let the lock (1) engage at the holder (arrow).

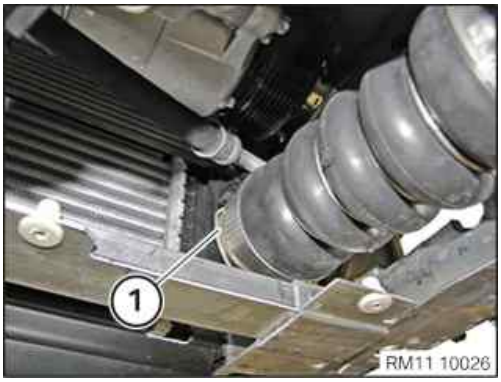


- Feed in charge air duct (1) to the side and upwards through the wheel arch between the side member and front axle support and install.



- Attach charge air duct on the exhaust turbocharger until locks (1) engage on both side.

  The lock (1) must audibly engage.



- Attach the pressure pipe to the charge air cooler until the lock (1) engages on both sides.

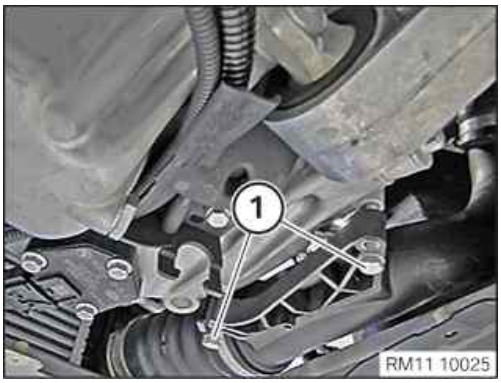
  The lock (1) must audibly engage.

cardiagn.com

- Tighten screw (1) of the charge air duct on the crankcase.

Charge air line to crankcase

M6x25		Tightening torque	5 Nm

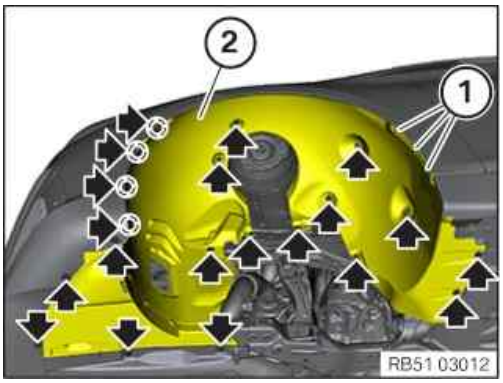


- Tighten charge air duct screws (1) on oil sump.

Charge air duct to oil sump

M6		Tightening torque	8 Nm

31 – Installing the front right wheel arch cover



- Guide in and install the front right wheel arch cover (2).
- Tighten all bolts and nuts (arrows).

Wheel arch cover

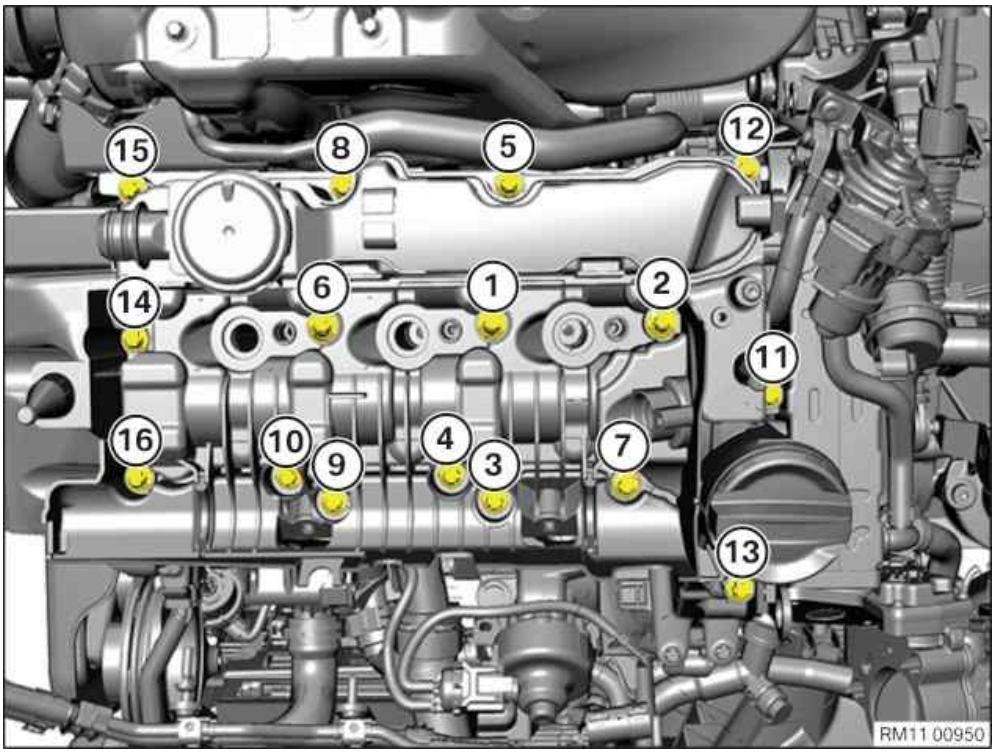
Screw		3 Nm
Plastic nut		2,6 Nm

- Secure expanding rivet (1).

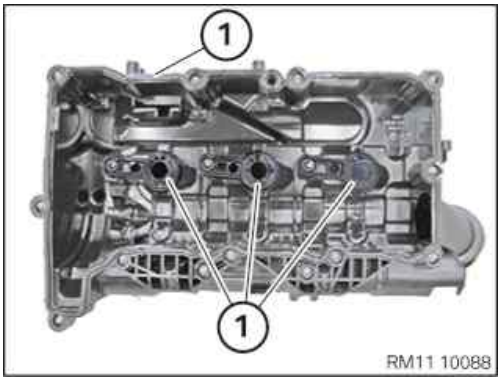
32 – Installing cylinder head cover

cardiagn.com

Overview: Screw connection of the cylinder head cover

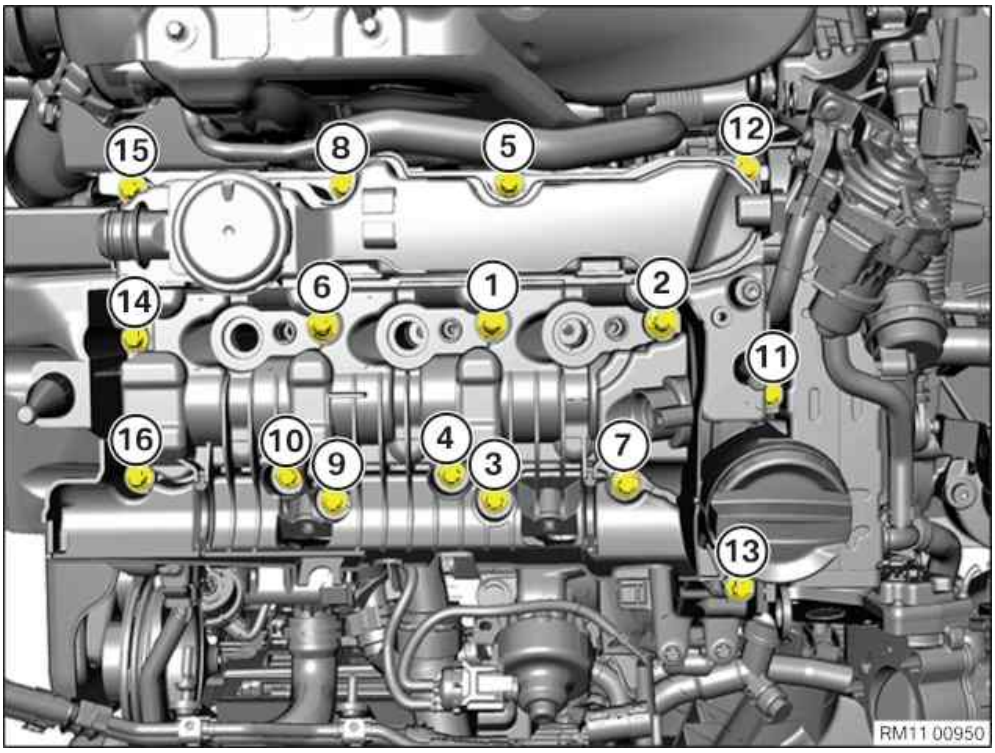


1 to 16 Bolts of the cylinder head cover



- Renew the gasket (1) of the cylinder head cover.

  Parts: Gasket

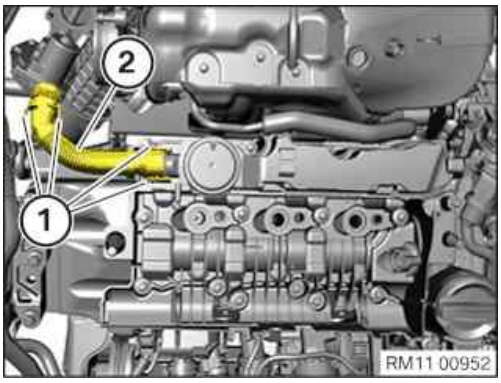


- Install cylinder head cover.
- Tighten screws in the order (1) to (16).

Cylinder head cover to cylinder head

M6		Tightening torque.	8, Nm

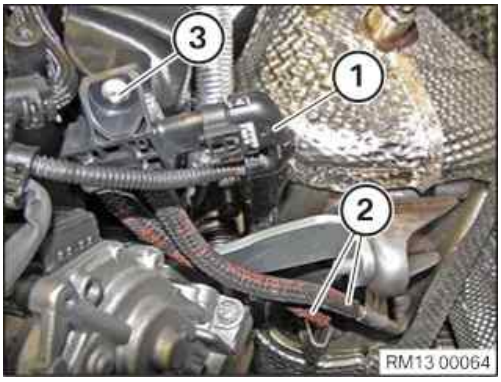
cardiagn.com



- Install and lock the engine ventilation line (2).

  The locks (1) must engage audibly.

33 – Installing differential pressure sensor



- Feed in and install the differential pressure sensor .
- Tighten down screw (3).

Differential pressure sensor to holder

Screw		Tightening torque	4 Nm

- Check pressure hoses (2).
- Renew any hardened pressure hoses (2).

  Parts: Pressure hoses
- Connect the pressure hoses (2) and secure them using 15 mm to 19 mm screw clamps.

Clamp for the pressure hose on the differential pressure sensor

Clamp 15–19mm		Tightening torque	3 Nm

- Connect and lock the connector (1).

  The connector (1) must engage audibly.

34 – Installing injectors of injection system

▶ **Cleaning the injector shafts**

CAUTION

Swirling dirt particles caused by compressed air.

Danger of injury!

- Collect dirt particles, e.g. when blowing out, use cloth to do so.

- Wear safety goggles.

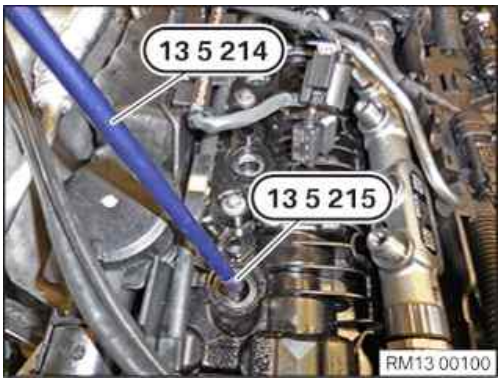
RISK OF DAMAGE

Contaminant or foreign body.

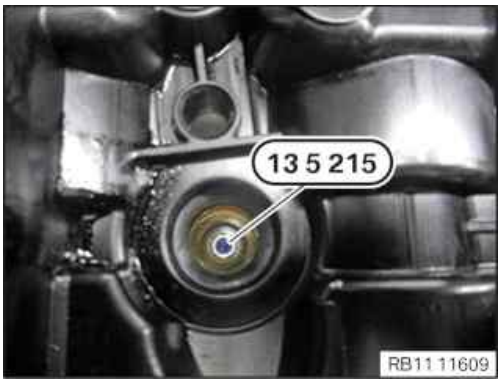
Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



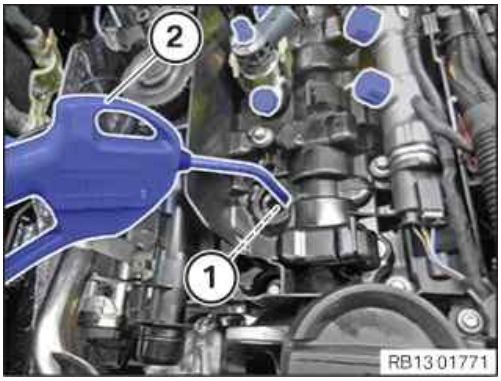
- Check whether the sealing ring remained in the injector shaft and remove the sealing ring as needed.
- Insert the special tool **0 493 763 (13 5 215)** with the special tool **0 493 762 (13 5 214)** from the set of special tools **0 493 758 (13 5 210)** into the injector shaft.
- Remove special tool **0 493 762 (13 5 214)**.



- After insertion, special tool **0 493 763 (13 5 215)** must remain in the injector shaft after cleaning without fail.

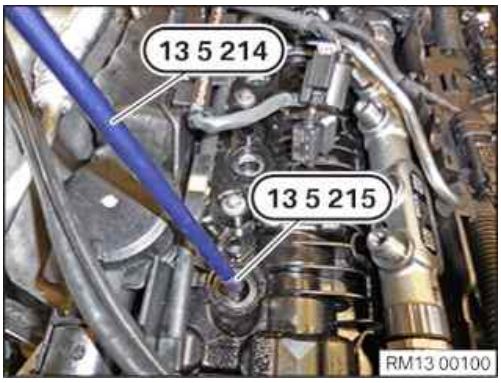
- Insert special tool **0 493 758 (13 5 210)** into the injector shaft.

- Move special tool **0 493 758 (13 5 210)** (1) up and down in the injector shaft with rotational movements.
- Feed out special tool **0 493 758 (13 5 210)**(1) from the injector shaft and remove.



- Blow out injector shaft (1) with air gun (2).

cardiagn.com



- Feed the special tool **0 493 762 (13 5 214)** into the injector shaft and screw it in with the special tool **0 493 763 (13 5 215)**.
- Feed out special tool **0 493 762 (13 5 214)**with special tool **0 493 763 (13 5 215)** from the injector shaft and remove.

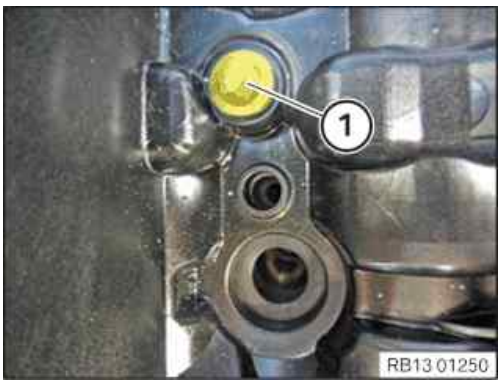
▶ **Check the placement of the clamping claw**

RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.



- Tighten down screw (1).

  The clamping claw is positioned on the bolt (1).

Clamping claw facing to cylinder head cover

Screw M6		Tightening torque	8 Nm

▶ **Prepare the injector for installation**

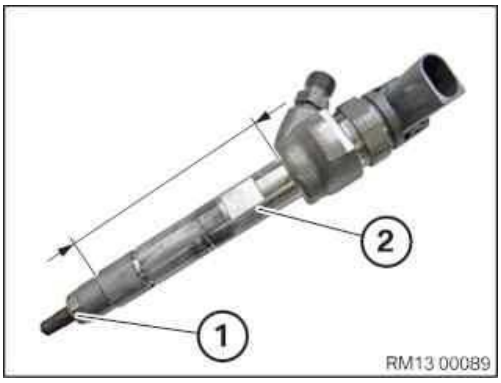
RISK OF DAMAGE

Contaminant or foreign body.

Contamination can result in malfunctions, operating failure or leaks.

- Adhere to the utmost cleanliness.
- Protect components from contamination e.g. by covering.
- Close off line connections with seal plugs.

cardiagn.com



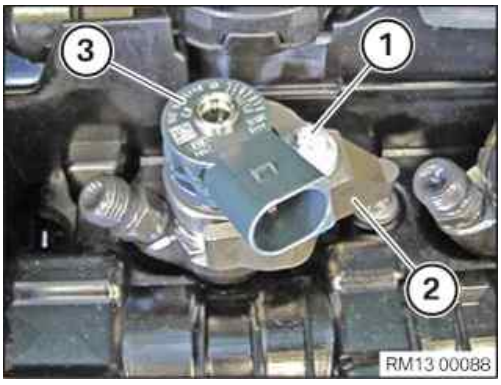
- Renew the copper sealing ring (1) on the injector (2).

  Parts: Copper sealing ring

- Lightly grease the injector in the marked area with heat-resistant grease before installing the injector (2) in the injector shaft.

Expendable materials

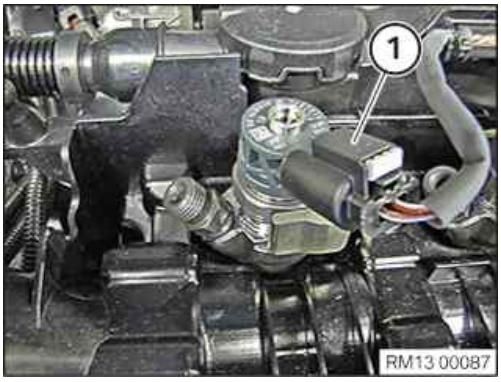
Injector lubricating grease	50 g, Can	83230441070



- Insert and install the injector (3).
- Insert and install the clamping claw (2).
- Tighten down screw (1).

Injector to cylinder head cover

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °



- Connect connectors (1) and lock.

  The connector (1) must engage audibly.

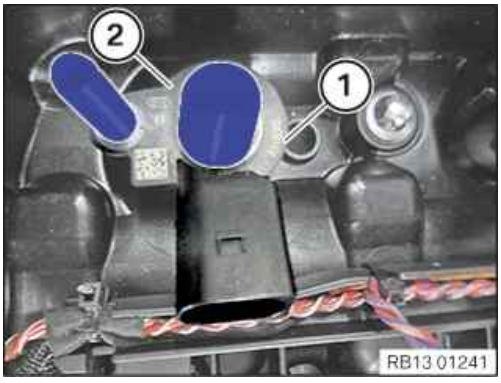
▶ **Replacement: Perform injection quantity compensation**

TECHNICAL INFORMATION

If the DDE control unit or an injector has been replaced, it will also be necessary to carry out injection quantity compensation. The adjustment value (7-position letter/number code) is engraved on each injector.

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.

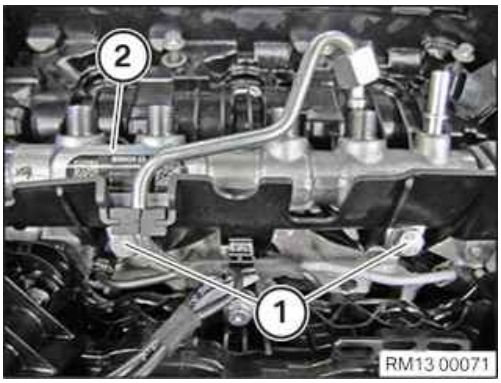


- Read off the adjustment value (1) on the new injector (2).

cardiagn.com

- Connect diagnosis system:
  - Vehicle identification
  - Function selection
  - Service functions
  - Digital diesel electronics (DDE)
  - Adjustment of injectors
  - Testing schedule
- Start service function with the right arrow button.

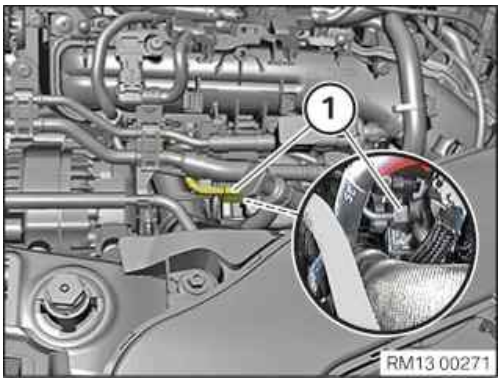
35 – Installing the rail



- Carefully insert and install the rail (2).
- Tighten the screws (1).

Rail on cylinder head cover

Torx screw M8x25		Tightening torque	19 Nm



TECHNICAL INFORMATION

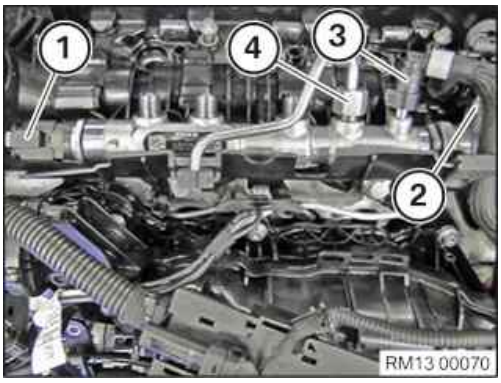
Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten union nut (1).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

cardiagn.com



TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

- Tighten union nut (4) with special tool **0 495 910 (37 1 152)**.

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Connect and lock fuel line (3).

  Fuel line (3) must engage audibly.
- Connect and lock the connector (2).

  The connector (2) must engage audibly.
- Connect and lock the connector (1).

  The connector (1) must engage audibly.

36 – Installing high pressure line between rail and high pressure pump

WARNING

Working on fuel system.

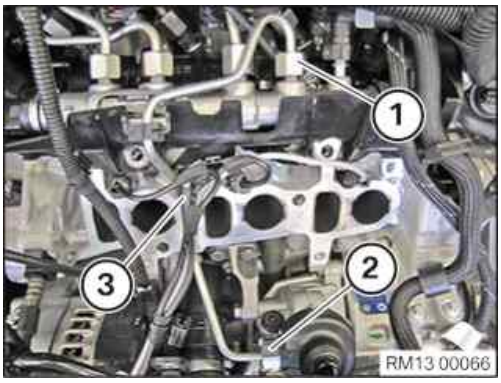
Risk of fire! Danger of explosion!

- When working on the fuel system, make sure that the workbay is sufficiently ventilated, e.g. using extraction unit.
- Tightly seal off open lines and connections; collect any escaping fuel directly at the point of exit.
- No fire, sparks, open flames or smoking.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Thread in and install the high pressure line (3).
- Make sure that the rubber grommet is positioned correctly in the area of the cylinder head cover.
- Tighten the union nut (1) hand-tight.
- Tighten the union nut (2) hand-tight.
- Ensure that high pressure line (3) is installed without any strain.

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the union nut (1) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

- Tighten the union nut (2) with the special tool **0 495 910 (37 1 152)**.
- Reset the special tool **0 495 910 (37 1 152)** in good time in order to avoid bending high pressure line (3).

High pressure line between high pressure pump and rail

High-pressure pipe		Tightening torque	28 Nm

37 – Installing high pressure lines between rail and injectors

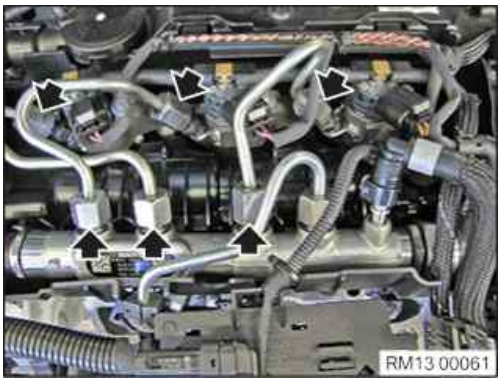
TECHNICAL INFORMATION

If several high pressure lines are removed, ensure that each high pressure line is re-installed in its original installation location. Mark high pressure lines.

TECHNICAL INFORMATION

Reset special tool in early to avoid bending pressure lines.

cardiagn.com



- Remove special tool **2 413 106**.
- Feed in and install the high pressure lines (arrows).
- Hand-tighten the high pressure lines (arrows).

TECHNICAL INFORMATION

Renew high pressure lines when the tightening torque exceeds the maximum of 30 Nm.

- Tighten the high pressure lines (arrows) with the special tool **0 495 910 (37 1 152)**.

High pressure lines between injector and rail

High pressure lines		Tightening torque	28 Nm

- Check the high pressure lines for tightness (**visual inspection**).

38 – Connect the leakage oil line on the injector

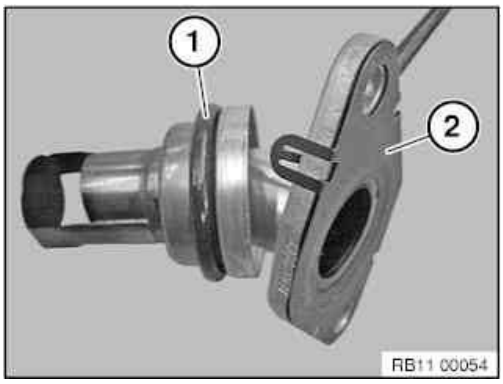
- Check the sealing ring (1) for damage and if necessary, renew the leakage oil line .

  Damaged sealing rings may cause malfunctions during fuel pressure build-up.
- Coat the sealing ring (1) with lubricant before connecting the leakage oil line to the injector.

- Feed leakage oil line into injector and install.
- Lock the lock in direction of arrow (1).

  The lock (1) must audibly engage.

39 – Installing the intake plenum

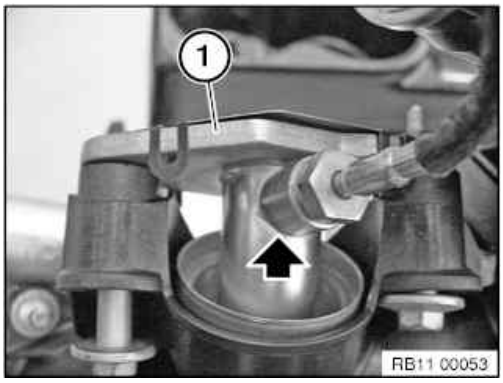


- Renew O-ring (1).

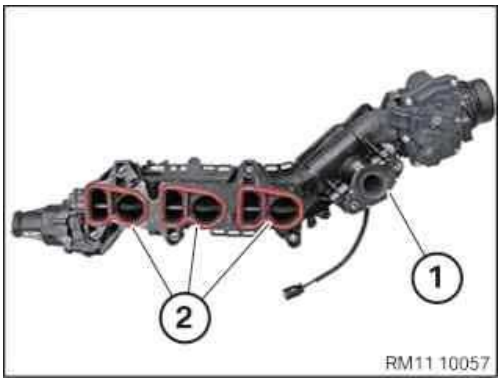
  Parts: O-ring
- Unclip the seal (2).
- Renew gasket.

  Parts: Gasket
- Position seal and clip in.

cardiagn.com

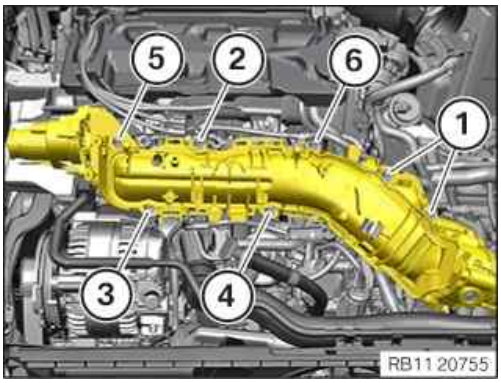


- Install the exhaust-gas recirculation pipe (1) in the intake plenum.



- Renew gaskets (2).

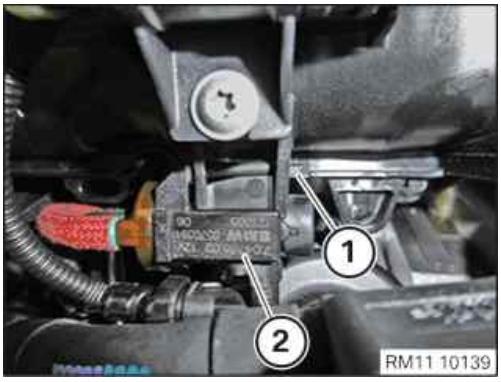
  Parts: Gasket
- Ensure that the seal (1) is firmly mounted on the intake plenum.



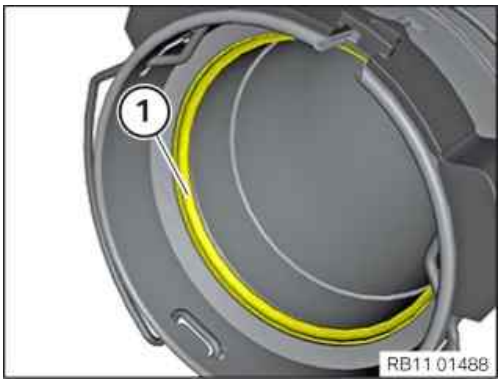
- Guide in and install intake plenum .
- Tighten the screws (1) to (6).

Intake plenum to cylinder head

M6		Tightening torque	11 Nm



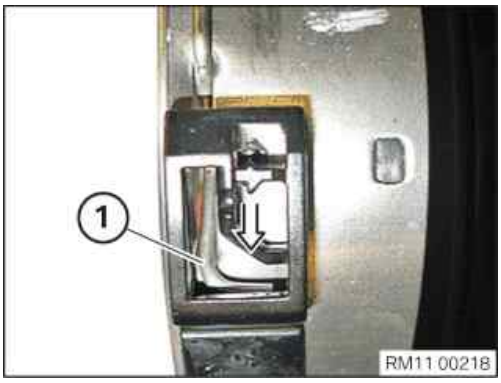
- Feed the electric changeover valve (2) from left to right into the holder on the intake plenum.
- Lock (1) must engage audibly.



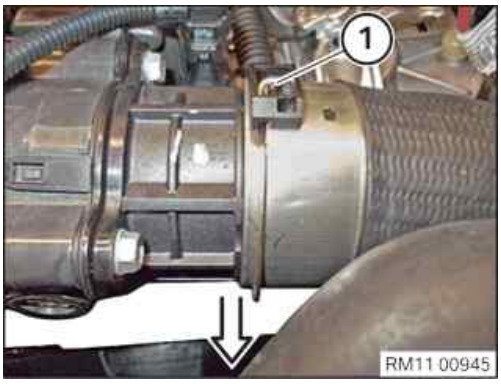
- Check the sealing ring (1) for damage and renew the sealing ring (1) as needed.

  Parts: Sealing ring

cardiagn.com

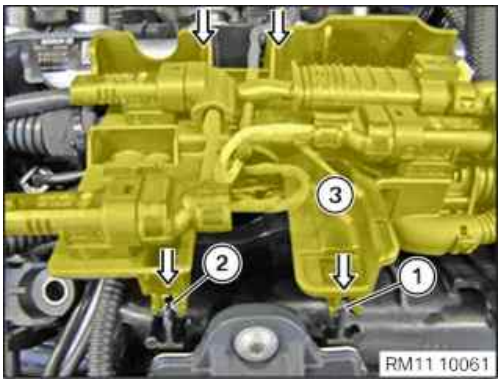


- Engage the lock (1) on the bracket (arrow).



- Connect the charge air line to the throttle valve.
  The lock (1) must audibly engage.
- Check the charge air line for tight fit and freedom of movement.

40 – Installing the cable clip for the intake plenum

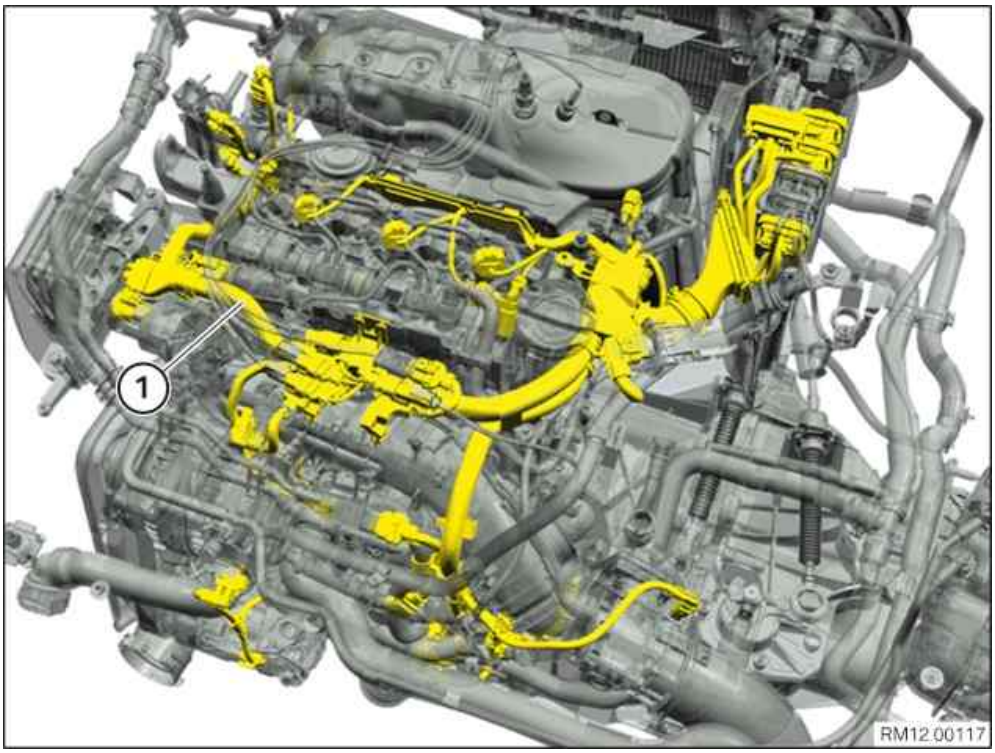


- Feed in and install the cable clip (3) in the direction of arrow.
- Engage clips (1) and (2).

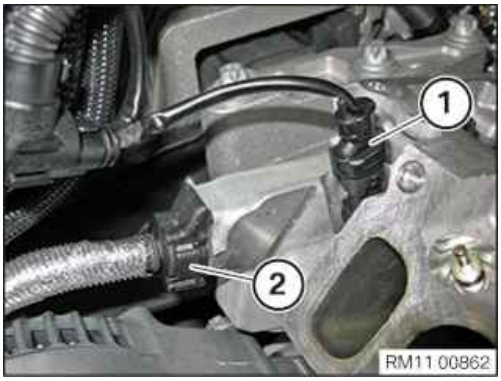
41 – Fastening the wiring harness section for the intake plenum

cardiagn.com

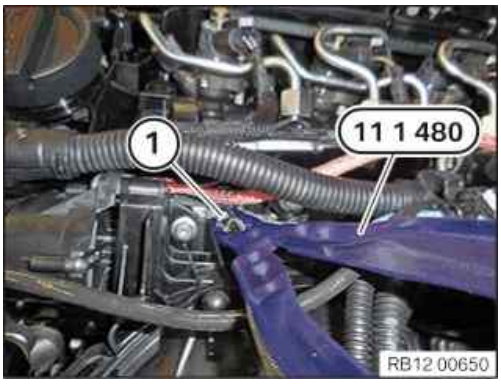
Overview: Wiring harness section for the engine



1 Wiring harness section for the engine



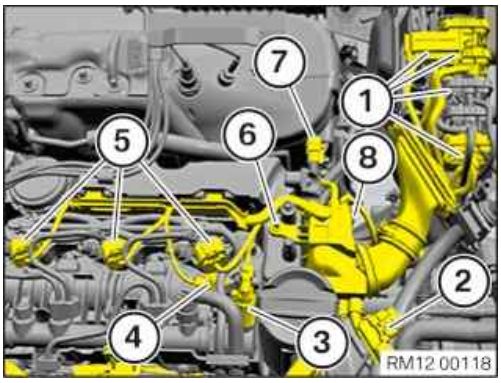
- Connect the coolant line (2) and lock the clamp.
- Connect and lock the connector (1).
- The locks must engage audibly.



- Connect and lock the connector (1) on the glow elements.

  The connector (1) must lock audibly.
- Guide the wiring harness into the guide on the cylinder head cover.

cardiagn.com

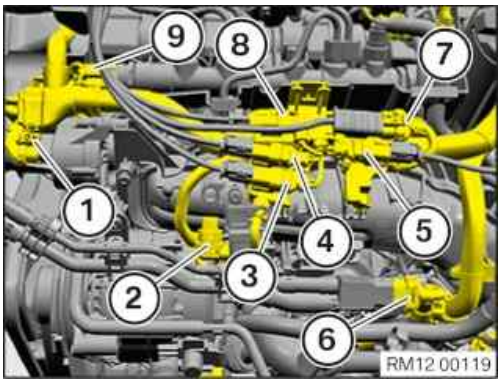


- Route the wiring harness section for the engine and fasten it with the clamps.
- Route all connectors (1) to the DME control unit and remove the integrated supply module (PDM).
- Connect and audibly lock the connector (2) to the hot film air mass meter.
- Attach connector (3) to the fuel pressure regulator and lock it audibly.
- Attach connector (4) to the camshaft sensor and lock it audibly.
- Attach connector (5) to the injectors and lock it audibly.
- Tighten down screw (6).

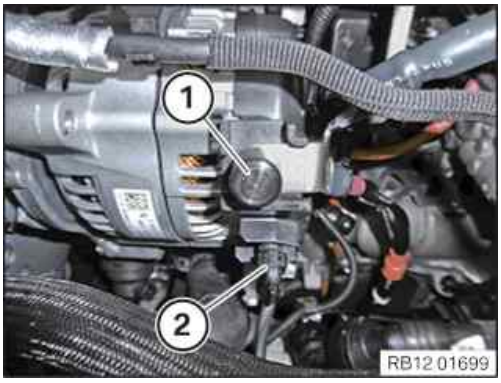
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (7) to the differential pressure sensor and lock it audibly.



- Attach connector (1) to the servomotor for the swirl flaps and lock it audibly.
- Connect the connector (2) to the charging pressure sensor and lock it audibly.
- Attach connector (3) to the exhaust temperature sensor downstream from the diesel particulate filter and lock it audibly.
- Attach connector (4) to the exhaust temperature sensor for the low pressure exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (5) to the exhaust temperature sensor for the exhaust-gas recirculation cooler and lock it audibly.
- Attach connector (6) to the fuel pressure and temperature sensor and lock it audibly.
- Connect the connector (7) to the front oxygen sensor and lock audibly.
- Attach connector (8) to the exhaust temperature sensor upstream from the diesel particulate filter and lock it audibly.

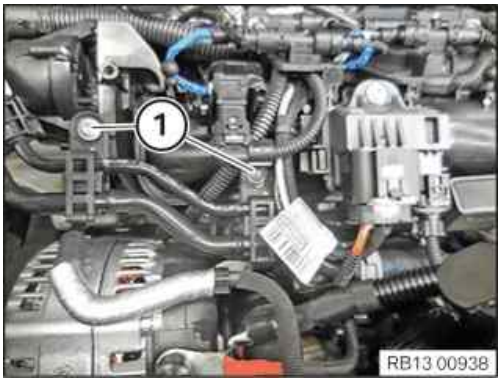


- Connect and lock the connector (2).

  Lock must audibly engage.
- Connect positive battery cable (1) on alternator and tighten.

Positive battery cable to alternator

M8		Tightening torque	19 Nm

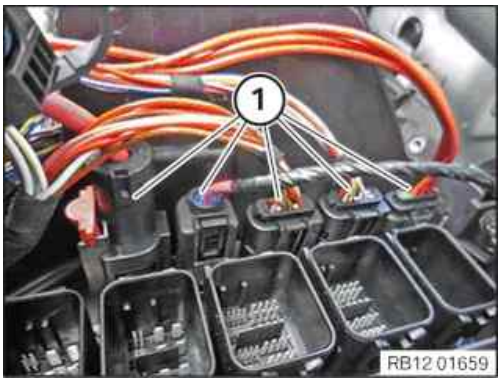


- Position fuel lines.
- Tighten the screws (1).

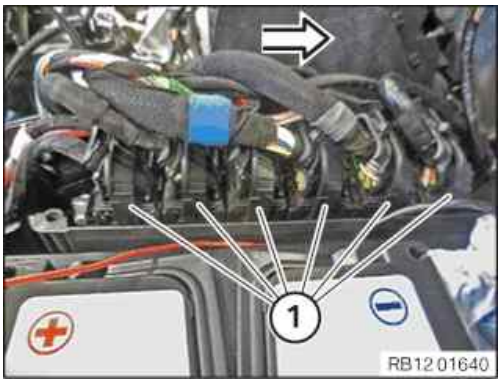
Fuel line to intake plenum

TS6x20		Tightening torque	5 Nm

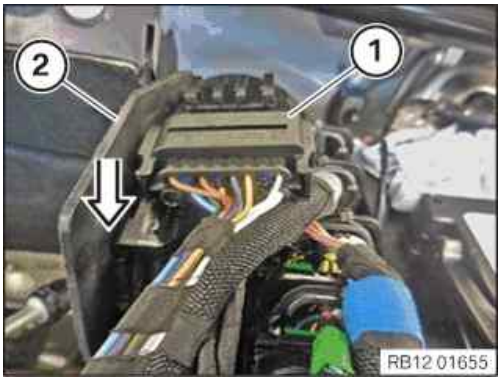
cardiagn.com



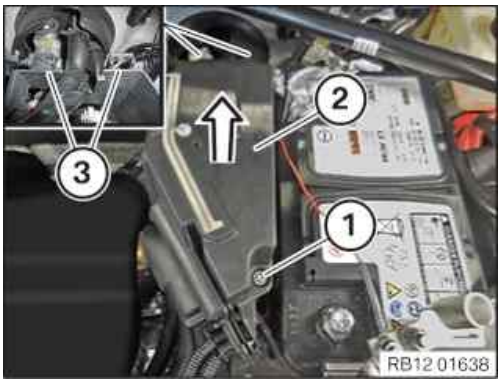
- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.



- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.



- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert and install the cover (2) into the guides (3) in the direction of the arrow.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

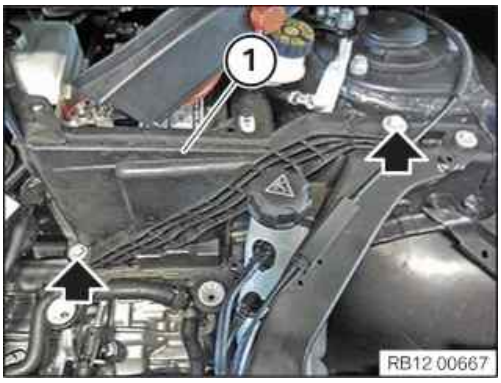
RF5x26.5		Tightening torque	2,5 Nm

- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm

cardiagn.com



- Feed in and install tension strut (1).
- Tighten screws (arrows).

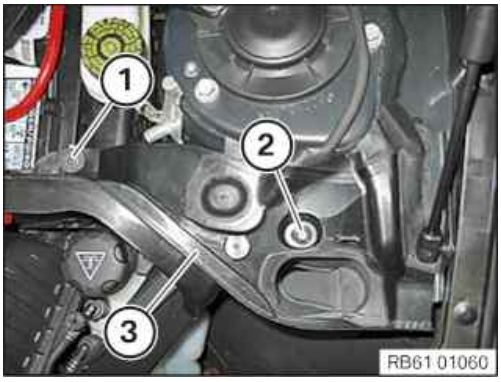
Tension strut to spring strut dome/battery tray

M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

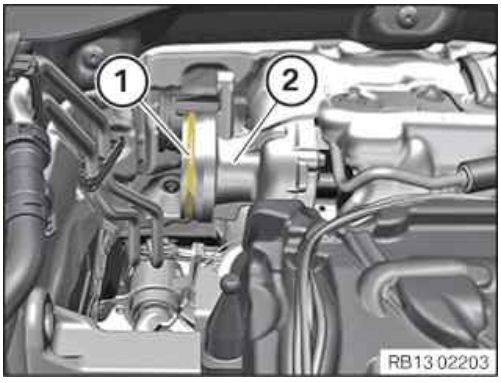


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

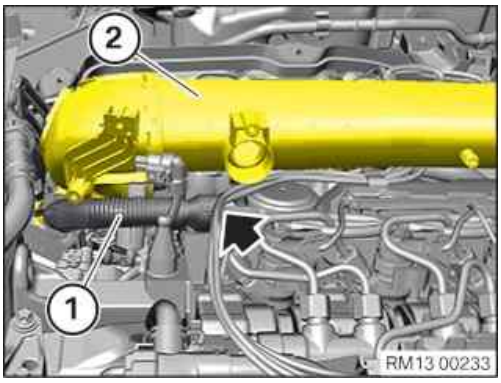
42 – Partially securing clean air pipe



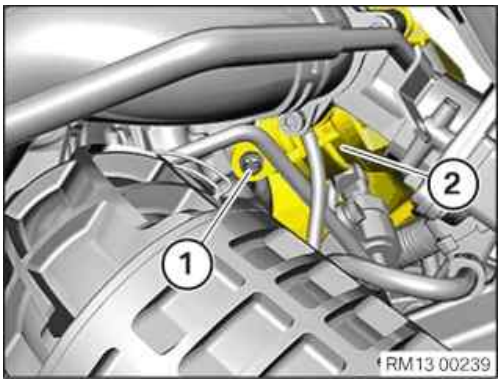
- Check the sealing ring (1) of the exhaust turbocharger (2) for damage and renew it if necessary.

- Feed in clean air pipe (1) and install.

cardiagn.com



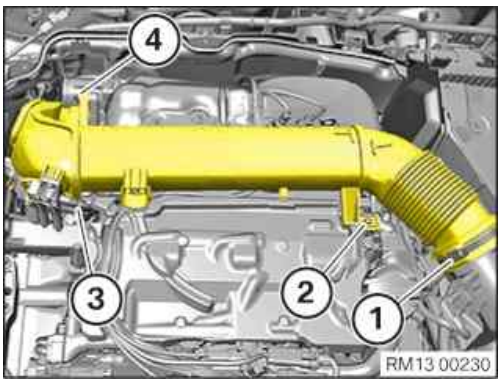
- Feed in ventilation line (1) at clean air pipe (2) and install.
- Feed in ventilation line (1) at cylinder head cover (arrow) and install.



- Tighten screw (1) from clean air pipe (2).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm



- Tighten down screw (4).

Clean air pipe to exhaust turbocharger

Torx bolt BM8x25		Tightening torque	8 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Renew the screw (2).

  Parts: Screw
- Tighten down screw (2).

Clean air pipe to cylinder head cover

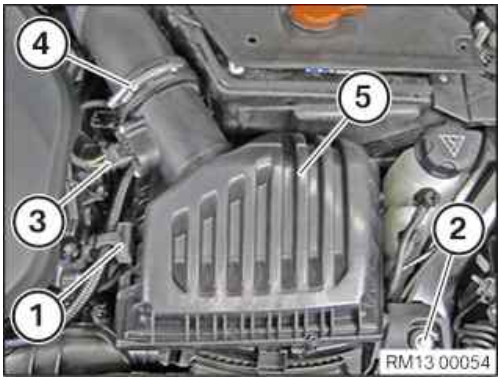
Oval-head screw	Renew screw.	Tightening torque	8 Nm

- Tighten the screw clamp (1).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

43 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.

  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

- Tighten clamp (4).

Clean air pipe to intake silencer housing

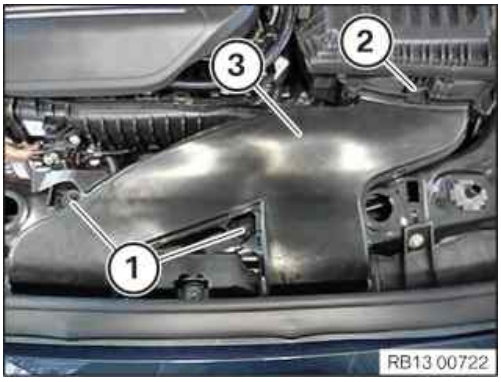
Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).

  The connector (3) must engage audibly.
- Insert and install the holder (1).

cardiagn.com

44 – Install the intake neck for the intake filter housing



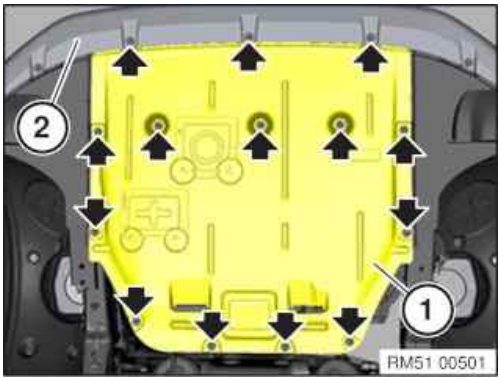
- Insert and install the intake neck (3).

  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

45 – Installing the front underbody protection

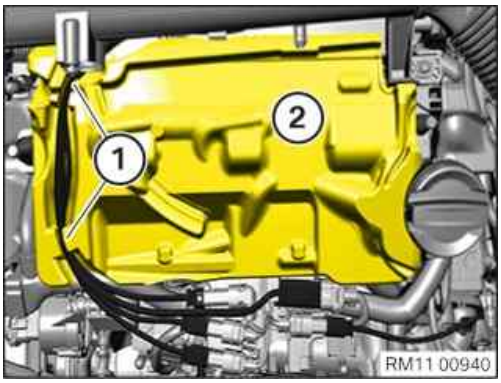


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

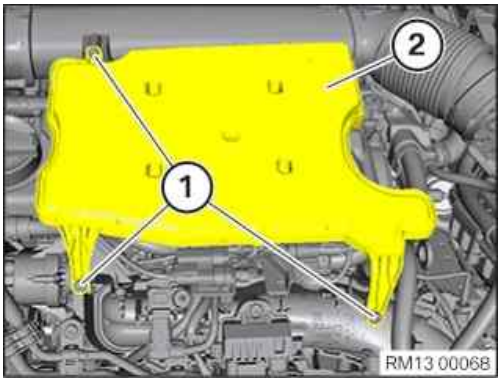
			3 Nm

46 – Install the acoustic cover for the injectors



- Feed the acoustic cover (2) in and install.
- Fasten the wiring harness (1) to the brackets.

47 – Install resonator



- Insert and install the resonator (2).
- Renew screws (1).

  Parts: Bolts
- Tighten the screws (1).

Resonator to manifold and clean air pipe

Screw TS6	Renew screw.	Tightening torque	5 Nm

48 – Install acoustic cover

cardiagn.com

RISK OF DAMAGE

Damage to the acoustic cover.

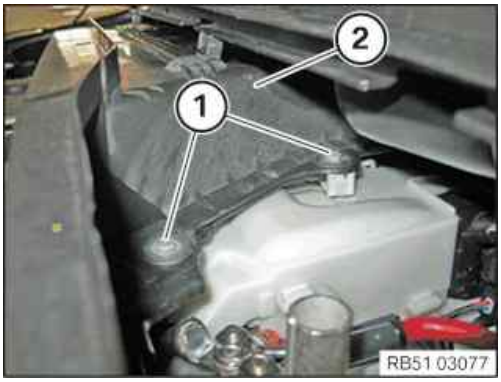
Jerky movements during disassembly and excessive application of force during installation may result in breakage of the acoustic cover.

- Disassemble or mount the acoustic cover carefully.
- Disassemble or mount snap-lock couplings of the ball pivots one after the other.
- Disassemble or mount acoustic cover only at temperatures >20 °C.
- Use only distilled water as an auxiliary material during installation, no lubricants.

- Check for correct installation of all rubber mounts in the acoustic cover (1).

- Clip in the acoustic cover into the holders in the indicated areas.
- Make sure that the acoustic cover engages audibly.

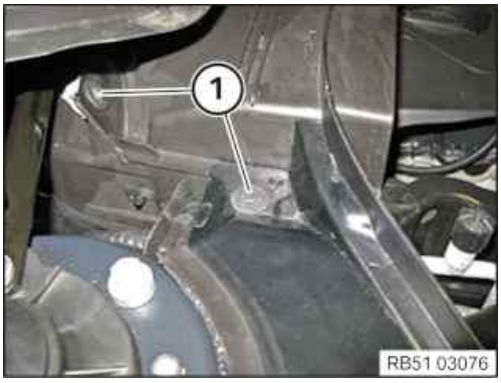
49 – Installing the upper bulkhead cover



- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

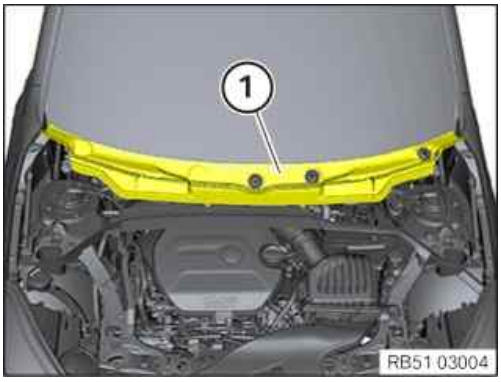
cardiagn.com

- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

50 – Install the rear cowl panel cover



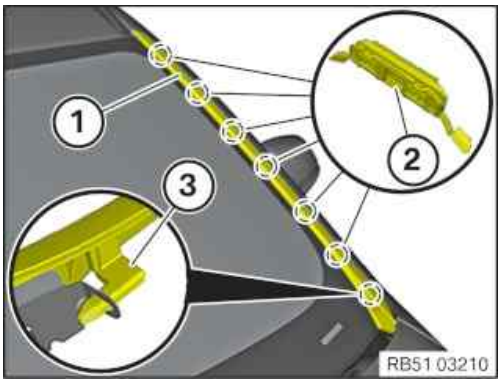
- Feed in and engage the rear cowl panel cover (1).

51 – Install the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▸ **Install the gutter strip on the windscreen**



- Check the clamps (2) for damage and renew if necessary.
- Insert the gutter strip (1) with the guide (3).
- Align the gutter strip (1) at the roof and clip it in.

52 – Install left and right wiper arm

NOTICE

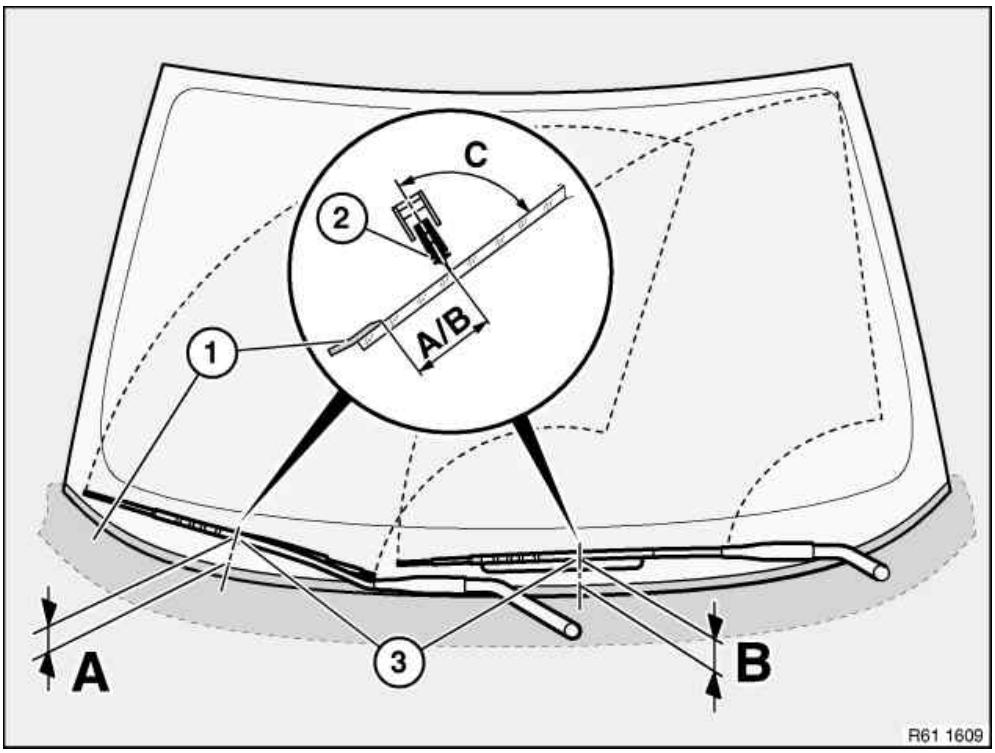
Description is for left component only. Procedure on the right side is identical.

▸ **Install the wiper arm**

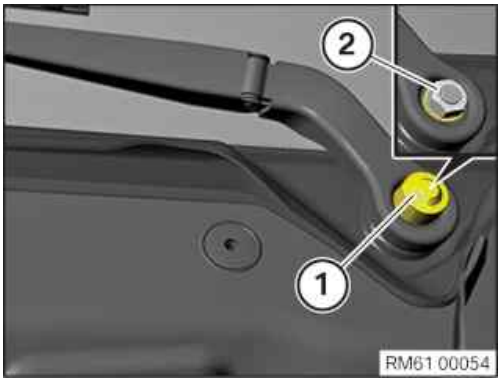
cardiagn.com

TECHNICAL INFORMATION

The wiper system must be in zero position.
After installing the cowl panel cover and before fitting the wiper arm:
Activate the wiper system once to ensure that it has the correct installation position.



- Connect the wiper arm (3).
- Correctly position the wiper arm (2) in relation to the window edge (1).



NOTICE

Description is for left component only. Procedure on the right side is identical.

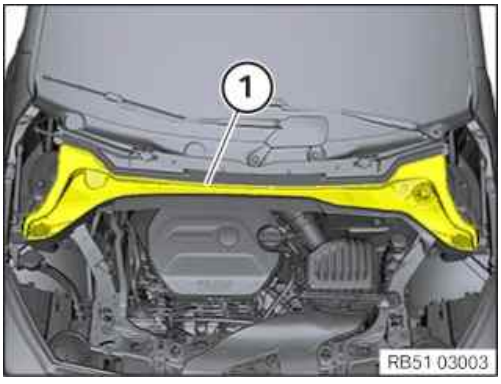
- Tighten nut (2).

Windscreen wiper arm

Combination hexagon nut		Tightening torque	35 Nm

- Connect the protective cap (1).

53 – Installing front cowl panel cover



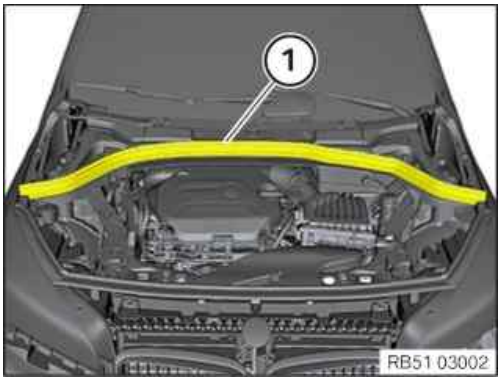
- Insert the cowl panel cover front (1) to the rear and install.
- Check cowl panel cover at front is correctly seated (1).

54 – Install the seal for the bonnet

cardiagn.com

NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Install bonnet seal at rear (1).
- Ensure that the rear bonnet seal (1) is fitted correctly.

55 – Disconnecting all battery earth leads

- See additional information.

Additional Information

Overview of Tightening Torques

Charge air line to crankcase — Used in step 30

M6x25		Tightening torque	5 Nm

Charge air duct to oil sump — Used in step 30

M6		Tightening torque	8 Nm

Wheel arch cover — Used in step 31

Screw			3 Nm
Plastic nut			2,6 Nm

Cylinder head cover to cylinder head — Used in step 32

M6		Tightening torque.	8,5 Nm

Differential pressure sensor to holder — Used in step 33

Screw		Tightening torque	4 Nm

Clamp for the pressure hose on the differential pressure sensor — Used in step 33

Clamp 15–19mm		Tightening torque	3 Nm

Clamping claw facing to cylinder head cover — Used in step 34

Screw M6		Tightening torque	8 Nm

cardiagn.com

Injector to cylinder head cover

Used in step 34

Screw		Jointing torque	8 Nm
		Angle of rotation	120 °

Rail on cylinder head cover

Used in step 35

Torx screw M8x25		Tightening torque	19 Nm

High pressure line between high pressure pump and rail

Used in step 35 36

High-pressure pipe		Tightening torque	28 Nm

High pressure lines between injector and rail

Used in step 37

High pressure lines		Tightening torque	28 Nm

Intake plenum to cylinder head

Used in step 39

M6		Tightening torque	11 Nm

Wiring harness to cylinder head cover

Used in step 41

TS5x20		Tightening torque	3,5 Nm

Positive battery cable to alternator

Used in step 41

M8		Tightening torque	19 Nm

Fuel line to intake plenum

Used in step 41

TS6x20		Tightening torque	5 Nm

Cover to electronics box

Used in step 41

RF5x26.5		Tightening torque	2,5 Nm

Positive battery terminal to battery

Used in step 41

NutM6		Tightening torque	5 Nm

Tension strut to spring strut dome/battery tray

Used in step 41

M8		Tightening torque	19 Nm

Positive battery connection point cover to engine compartment partition wall

Used in step 41

		Tightening torque	3 Nm

Battery cover

Used in step 41

Screw			2,8 Nm

Clean air pipe to exhaust turbocharger

Used in step 42

Torx bolt BM8x25		Tightening torque	8 Nm

Clean air pipe to cylinder head cover

Used in step 42

Oval-head screw	Renew screw.	Tightening torque	8 Nm

Clean air pipe to intake silencer housing

Used in step 42 43

Clamp		Tightening torque	3 Nm

Intake silencer housing to lock bridge

Used in step 43

M6X30		Tightening torque	8 Nm

cardiagn.com

Intake neck to cross connection			Used in step 44
M6		Tightening torque	8 Nm

Underbody protection front			Used in step 45
			3 Nm

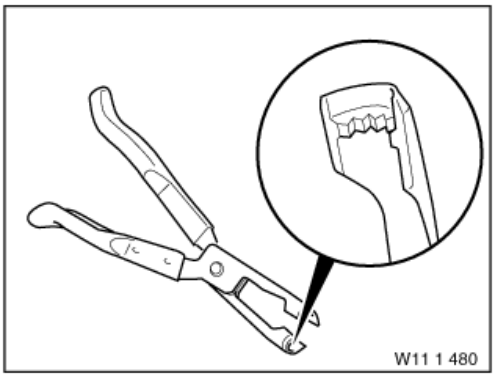
Resonator to manifold and clean air pipe			Used in step 47
Screw TS6	Renew screw.	Tightening torque	5 Nm

Bulkhead cover, top			Used in step 49
Screw		Tightening torque	3 Nm

Windscreen wiper arm			Used in step 52
Combination hexagon nut		Tightening torque	35 Nm

Overview of Special Tools

0 490 796 (11 1 480) Pliers



Common	Used in step 15
Usage	For removing valve stem seal
Included in the tool or work	
Storage location	A10
Replaced by	
In connection with	
SI-Number	01 01 93 (621)

0 495 910 (37 1 152) Socket wrench

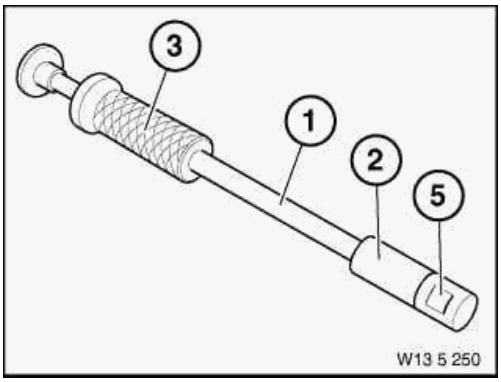
Common	Used in step 19 20 21 35 36 37
Usage	(Socket wrench)SW19
Included in the tool or work	0 495 908
Storage location	B21
Replaced by	
In connection with	
SI-Number	01 01 07 (333)

2 413 106 Fastener

Common	Used in step 19 20 36 37
Usage	For avoiding contamination and damage of rail, injectors and high pressure pump.
Included in the tool or work	
Storage location	Individual
Replaced by	
In connection with	
SI-Number	01 16 16 (419)

cardiagn.com

0 493 321 (13 5 250) Puller



Common

Used in step 22

Usage	For removing injector nozzles or injectors from cylinder head
Included in the tool or work	
Storage location	A16
Replaced by	
In connection with	
SI-Number	01 06 98 (306)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 338 (13 5 251)		**Rod** (guide rod)	
2	0 493 339 (13 5 252)		**Bush** (Threaded bush)	
3	0 493 340 (13 5 253)		**Weight** (Weight)	
4	0 493 379 (13 5 254)		**Claw** (Clamping claw) For removal of injector nozzles / engine: M57	
5	0 495 579 (13 5 255)		**Adapter** For removing steering shaft on E85. Refer to SI 01 11 06 (265)	

0 493 339 (13 5 252) Bush

Common

Used in step 22

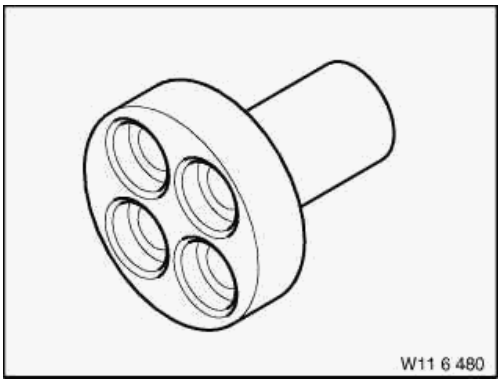
Usage	(Threaded bush)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 340 (13 5 253) Weight

Common	Used in step 22
Usage	(Weight)
Included in the tool or work	0 493 321
Storage location	
Replaced by	
In connection with	
SI-Number	

0 493 380 (11 6 480) Connector



Common	Used in step 28
Usage	For turning over engine at crankshaft hub (vibration absorber) when adjusting valve timing
Included in the tool or work	
Storage location	B2
Replaced by	
In connection with	
SI-Number	01 11 98 (338)

2 288 380 Locating stud

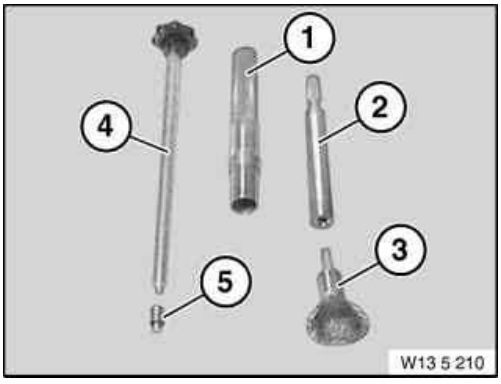
Common	Used in step 28
Usage	For disconnecting the crankshaft at TDC. Contour-graphic silhouette foil is included in delivery specification. Further information on the contour-graphic silhouette foil can be found in service information 00 22 13 (969).
Included in the tool or work	
Storage location	A56
Replaced by	
In connection with	
SI-Number	01 04 14 (071)

cardiagn.com

0 496 112 (11 8 760) Gauge

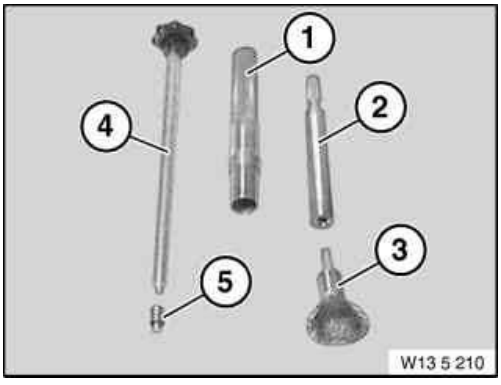
Common	Used in step 28
Usage	For securing camshaft at TDC.
Included in the tool or work	
Storage location	B24
Replaced by	
In connection with	
SI-Number	01 05 07 (353)

0 493 763 (13 5 215) Plug



Common	Used in step 34
Usage	(Seal plug)
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

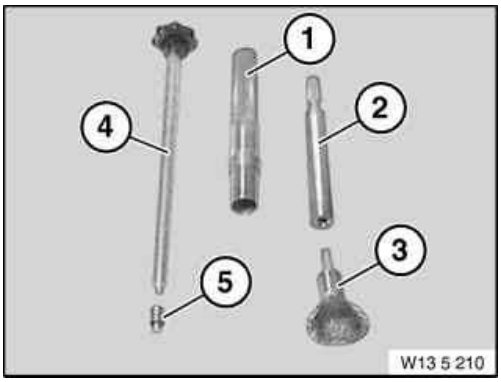
0 493 762 (13 5 214) Rod



Common	Used in step 34
Usage	(Mounting rod) For the seal plug
Included in the tool or work	0 493 758
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 493 758 (13 5 210) Tool



Common Used in step 34

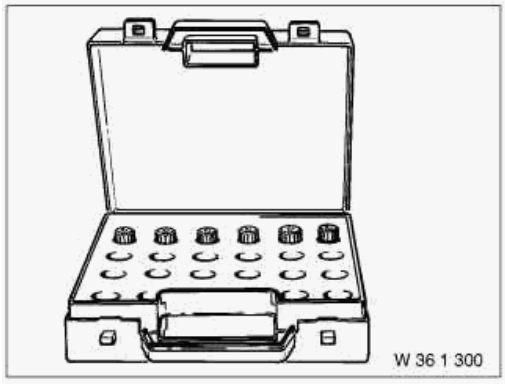
Usage	(Cleaning set) For injector channels
Included in the tool or work	
Storage location	B4
Replaced by	
In connection with	
SI-Number	01 05 00 (574)

Consisting of

Pos	BMW Order number	Replaced by	Designation	In Connection with
1	0 493 759 (13 5 211)		**Holding sleeve** (Guide sleeve)	
2	0 493 760 (13 5 212)		**Holder** (Brush holder)	
3	0 493 761 (13 5 213)		**Brush head**	
4	0 493 762 (13 5 214)		**Rod** (Mounting rod) For the seal plug	
5	0 493 763 (13 5 215)		**Plug** (Seal plug)	

Replacement tools:

0 495 221 (36 1 323) Wheel stud



Common Used in step 25

Usage	(Code 30) Code 39 available separately, (see EPC) under 36 13 1 181 259
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 224 (36 1 326) Wheel stud

Common Used in step 25

Usage	(Code 33) With centring bore available separately, (see EPC) under 36 13 6 765 546
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

cardiagn.com

0 495 225 (36 1 327) Wheel stud

Common	Used in step 25
Usage	(Code 34) With centring bore available separately (see EPC) under 36 13 6 765 547
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 226 (36 1 328) Wheel stud

Common	Used in step 25
Usage	(Code 35) With centring bore available separately, (see EPC) under 36 13 6 762 340
Included in the tool or work	0 492 518
Storage location	
Replaced by	
In connection with	
SI-Number	

0 495 227 (36 1 329) Wheel stud

Common	Used in step 25
Usage	(Code 36) With centring bore available separately (see EPC) under 36 13 6 762 341
Included in the tool or work	0 492 518
Storage location

11 31 005 Checking camshaft timing (B37C)

Special tools required:

- 11 6 480
- 2 288 380
- 11 8 760

Important!

Risk of damage to engine.

Notes for checking and setting the timing must be observed without fail.

Necessary preliminary tasks:

- Remove cylinder head cover
- Remove front right wheel arch panel

Crank engine with special tool 11 6 480 to TDC firing position of cylinder no. 1.**Important!**

Do not crank engine back.

Remove protective cap (1) on oil sump.

cardiagn.com

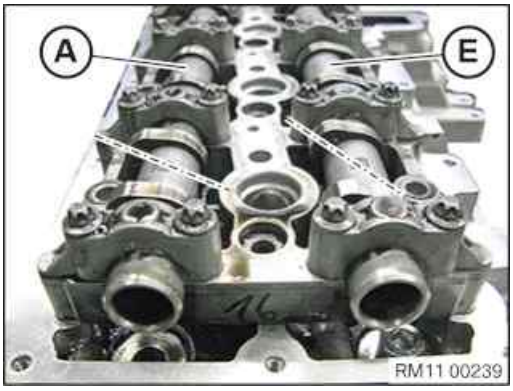
Crank engine at central bolt with special tool 11 6 480

Important!

On vehicles with manual gearbox, an additional bore hole that can be confused with dowel hole is located in front of dowel hole.

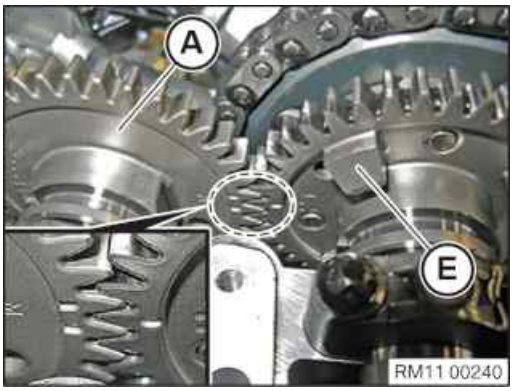
It must be possible to slide special tool 2 288 380 up to the crank in the oil sump.

Use special tool 2 288 380 to block the crankshaft in the TDC firing position Cylinder 1



The cam on the intake camshaft (E) points obliquely upwards at cylinder No. 1.

The cam on the exhaust camshaft (A) points obliquely outward to the left at cylinder No. 1.



Marks on both camshafts (A and E) must match up (see graphic).

Place special tool 11 8 760 on exhaust camshaft.

Note:

Special tool 11 8 760 must lie flush on cylinder head.

If necessary, adjust camshaft timing.

Important!

2 288 380 Remove special tool before starting engine.

cardiagn.com

Install protective cap (1).

Required follow-up work:

- Install cylinder head cover
- Install front right wheel arch panel
- Add final details to vehicle

cardiagn.com

11 31 090 Installing and removing or replacing chain tensioner piston (B37C)

Necessary preliminary tasks:

- Remove exhaust-gas recirculation cooler

Removal:

Release chain tensioner (1).**Important!**

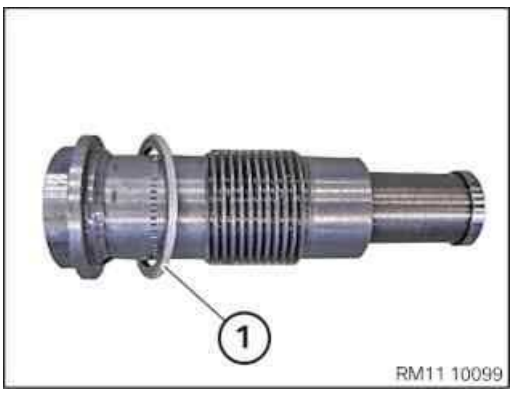
Have a cleaning cloth ready. A small quantity of engine oil will emerge after the screw connection has been released.

Make sure no oil runs into the clutch housing.

Installation:

If the chain tensioner is reused, its oil chamber must be drained. Place chain tensioner on a level support and slowly compress.

Repeat process twice.



Replace sealing ring.

Part: Replace sealing ring (1).

cardiagn.com

Tighten chain tensioner (1).

Tightening torque: 11 12 5AZ.

Required follow-up work:

- Install exhaust-gas recirculation cooler.

cardiagn.com

11 31 ... Notes for checking and adjusting the timings (B37, B38, B47, B48)

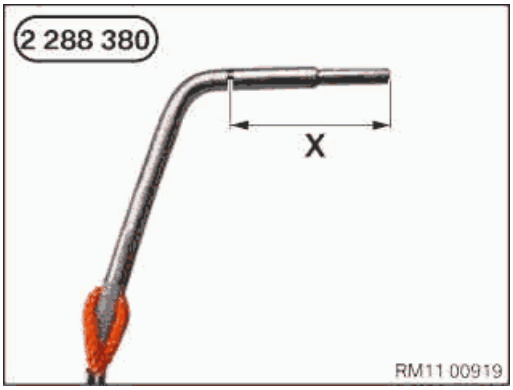
Special tools required:

- 2 288 380

Important!

Risk of damage to engine.

The notes for checking and adjusting the timing must be strictly observed!



Vehicles with manual transmission:

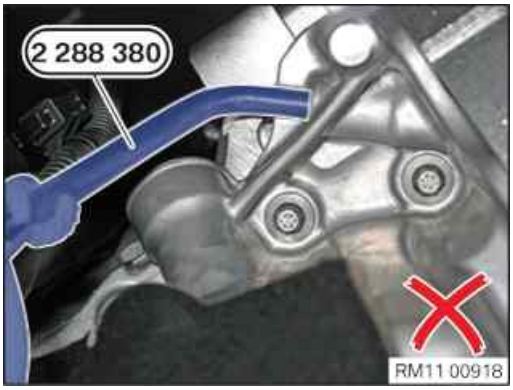
Dimension (x) = 56 mm.

Insert the special tool 2 288 380 up to dimension (X) into the dowel hole.

Vehicles with manual transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.



Vehicles with manual transmission:

Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

Vehicles with automatic transmission:

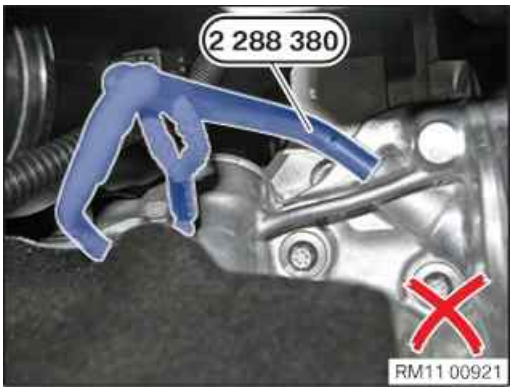
Dimension (Y) = 66 mm.

Insert the special tool 2 288 380 up to dimension (Y) into the dowel hole.

Vehicles with automatic transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.



Vehicles with automatic transmission:

Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

11 31 ... Notes on checking and adjusting the timing (B36, B37, B38, B46, B47, B48)

Special tools required:

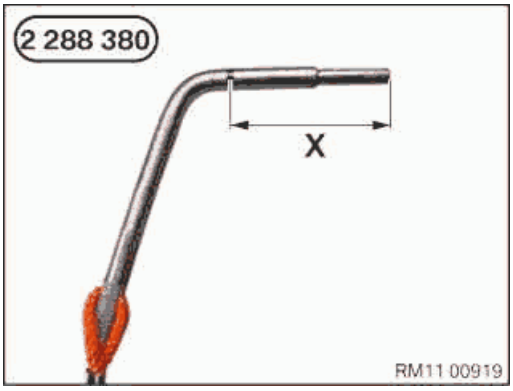
- 2 288 380

Attention!

Risk of damage to engine.

The notes for checking and adjusting the timing must be strictly observed!

If the crankshaft is fixed properly, it is not possible to turn the engine forwards or backwards on the vibration damper.



Vehicles with manual transmission:

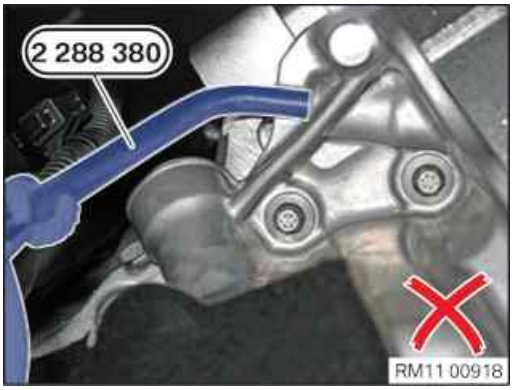
Dimension (x) = 56 mm.

Insert the special tool 2 288 380 up to dimension (X) into the dowel hole.

Vehicles with manual transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.



Vehicles with manual transmission:

Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

Vehicles with automatic transmission:

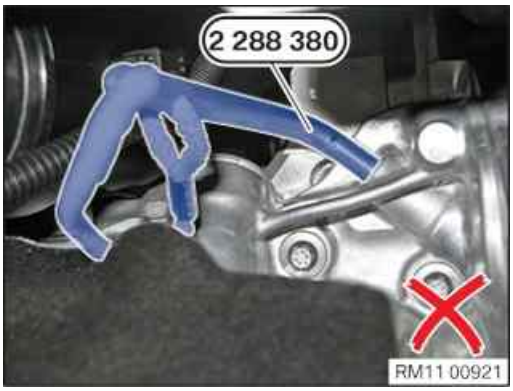
Dimension (Y) = 66 mm.

Insert the special tool 2 288 380 up to dimension (Y) into the dowel hole.

Vehicles with automatic transmission:

Special tool 2 288 380 correctly positioned.

The engine is located at the first cylinder at top dead centre.



Vehicles with automatic transmission:

Special tool 2 288 380 incorrectly positioned.

The TDC setting of the first cylinder has not been acheived.

cardiagn.com

11 31 090 Remove and install/replace chain tensioner piston

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

CAUTION

Materials harmful to health.

Contact with fluids harmful to health!

- Note and follow safety information on containers.
- Conduct all work in appropriate personal protective equipment only.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.

TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

cardiagn.com

TECHNICAL INFORMATION

Follow notes for repair work on the cooling system.

For additional information see:

Main group 17

17 00 ... Notes for working on the cooling system

TECHNICAL INFORMATION

Filling **without** the vacuum filler device (watering can filling) is **not permitted**.

Non-compliance will result in danger of component damage and/or engine damage.

Filling specification **absolutely must** be adhered to.

The operation of the vehicle is not permitted unless the filling procedure has been completed. Otherwise, functional limitations (degradation) and/or overheating may occur.

A bleeding procedure is required after a part has been exchanged in the cooling system and/or after refilling the cooling system.

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

PRELIMINARY WORK

1 – Remove vehicle battery

WARNING

Working on 12 V vehicle electrical system.

Risk of short circuits! Risk of fire!

- Detach battery earth lead from battery.
- For additional batteries: Detach all battery earth leads from additional batteries.

TECHNICAL INFORMATION

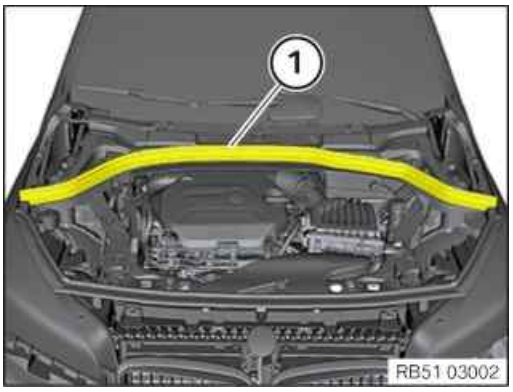
For additional information see:

61 00 ... Safety information on handling the vehicle battery

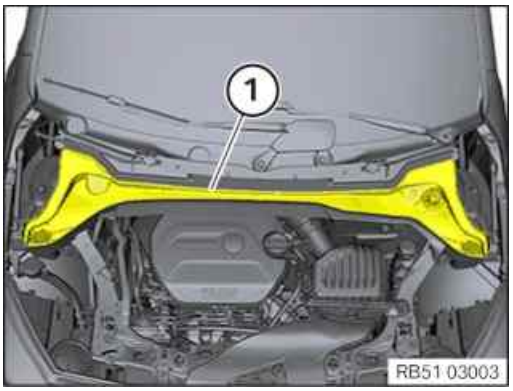
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery

61 12 ... Notes on the intelligent battery sensor (IBS)

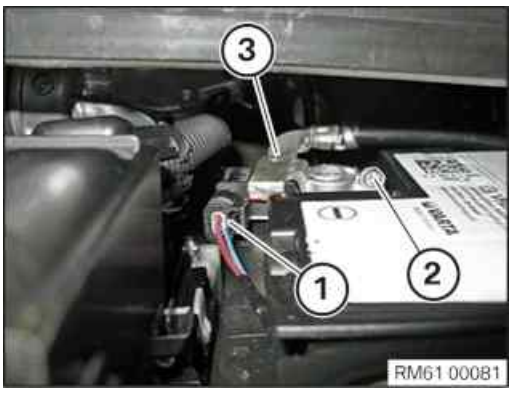
cardiagn.com



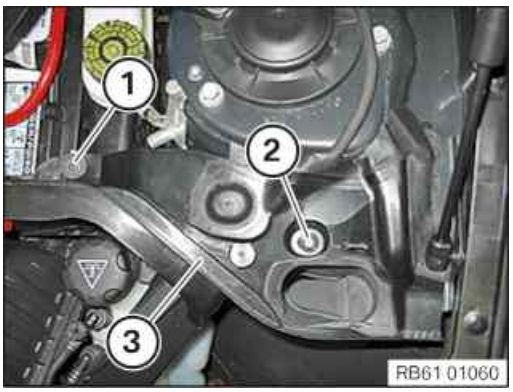
- pull off gasket (1) upwards.



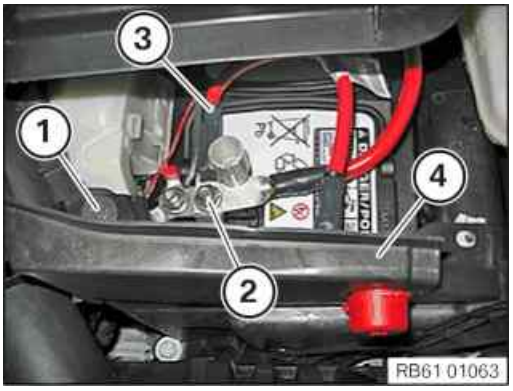
- Remove the cowl panel cover (1) to the top.



- Unlock and disconnect connector (1).
- Slacken nut (2).
- Disconnect the negative battery terminal (3).

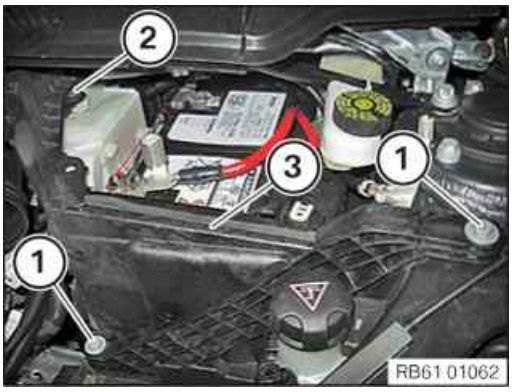


- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

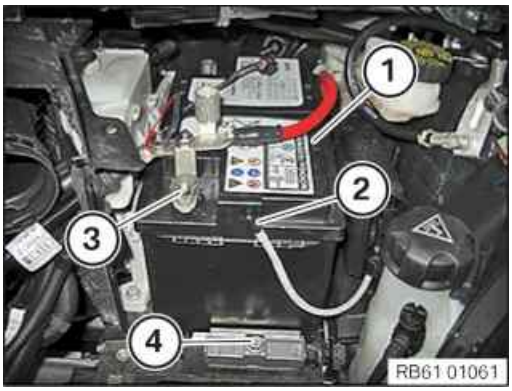


- Loosen screw (1).
- Unscrew the nut (2) and remove the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten nuts (2) on the positive terminal hand-tight.

cardiagn.com



- Loosen screws (1).
- Unscrew the bolt (2) and guide the tension strut (3) out.



- Pull off the vent hose (2).
- Slacken the nut (3) on the positive terminal and remove the positive terminal.

WARNING

Unprotected battery terminals.

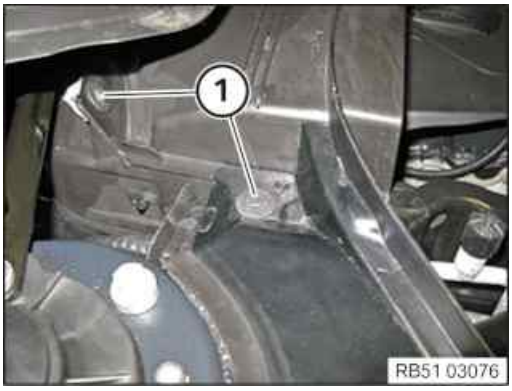
Risk of short circuits! Risk of fire!

- Cover the vehicle battery.

- Loosen the screw (4) and remove the holder.
- Remove vehicle battery (1).

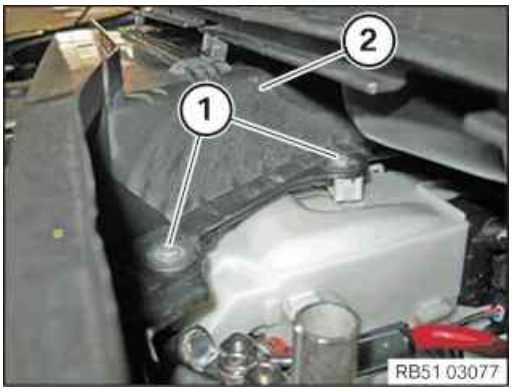
2 – Removing the upper bulkhead cover

- Loosen screws (1).



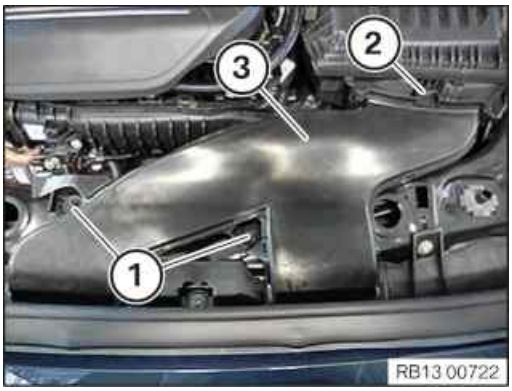
- Loosen screws (1).

cardiagn.com



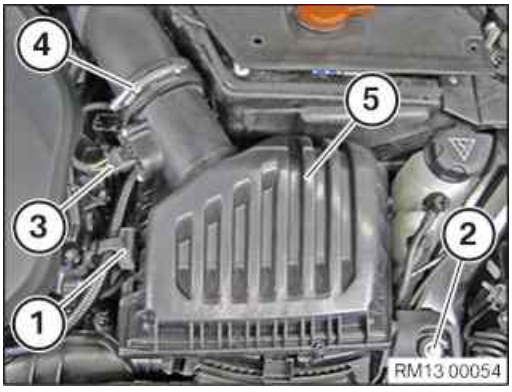
- Loosen screws (1).
- Feed out and remove the upper bulkhead cover (2).

3 – Remove the intake neck for intake silencer housing



- Loosen nuts (1).
- Loosen the lock (2).
- Guide the intake neck (3) out and remove it.

4 – Removing intake silencer housing



- Loosen the holder (1).
- Loosen screw (2).
- Unlock and loosen connector (3).
- Unfasten clamp (4).
- Pull out and remove the intake silencer housing (5) from the rubber mounts towards the top.

5 – Remove electronics box

Prerequisite

Battery earth lead is disconnected.

RISK OF DAMAGE

Electrostatic discharge.

Damage to or destruction of electrical components.

- Leave electrical components in original packaging until just before they are installed. Use the original packaging only for any return shipments. Always package removed components straight away.
- Read and comply with user information on using the associated special tool 12 7 060.
- Only touch the housings of electrical components. Do not touch pins or multi-pin connectors directly.
- Wear electrically conductive clothing and antistatic shoes (with ESD symbol).
- For additional information see: 61 35 Information on electrostatic discharge (ESD) protection.

cardiagn.com

RISK OF DAMAGE

Damage to wires when disconnecting connectors and plug connections.

Sheared wires can cause a short circuit.

- Do not pull on the wires when disconnecting connectors and plug connections.

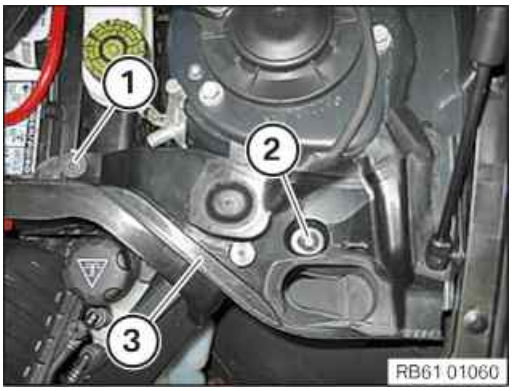
TECHNICAL INFORMATION

Follow instructions for removing and installing control units.

For additional information see: 12 00 ... Notes on removal and installation of control units

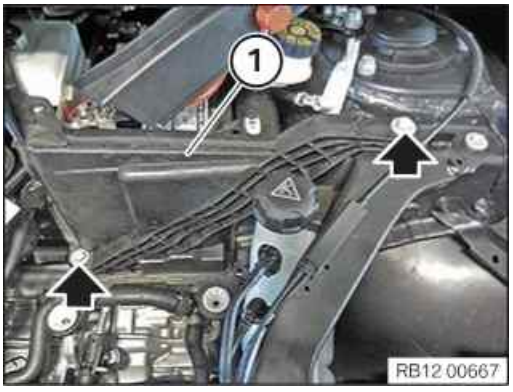
TECHNICAL INFORMATION

Disconnecting control units may cause fault code entries and functional limitations. Fault code entries must be read out and deleted if necessary.



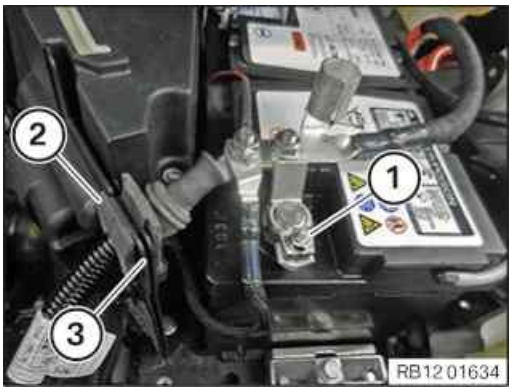
- Release the screw (1) and the expanding rivet (2).
- Remove the fixture for the gasket (3).

- Loosen screw (1).
- Place cover (2) of the positive battery connection point to one side.

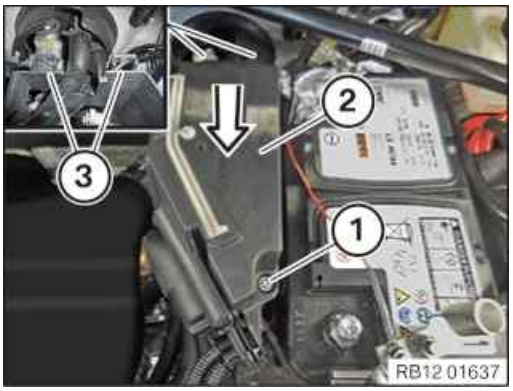


- Remove screws (arrows).
- Guide out tension strut (1) and remove.

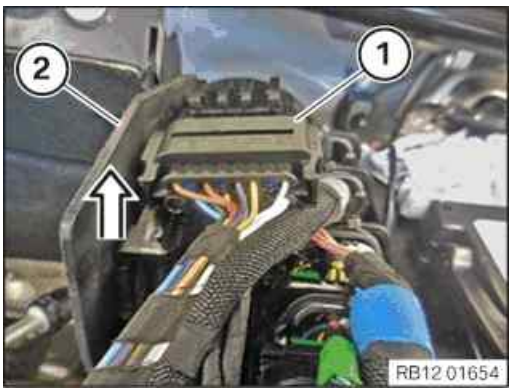
cardiagn.com



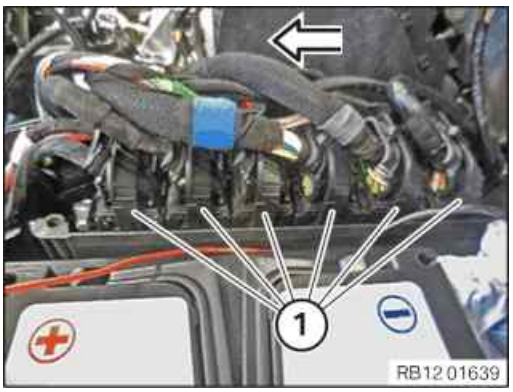
- Undo positive battery terminal (1).
- Feed out positive battery terminal (1) and set aside.
- Guide the positive battery cable (2) out of the holder (3) and lay to one side.



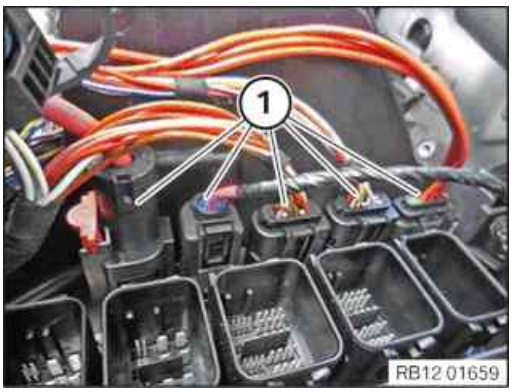
- Loosen screw (1).
- Unlock cover (2) and feed out and remove from the guides (3) in the direction of arrow.



- Feed out connector (1) from the electronics box (2) and remove in the direction of arrow.
- Unlock and loosen connector (1).

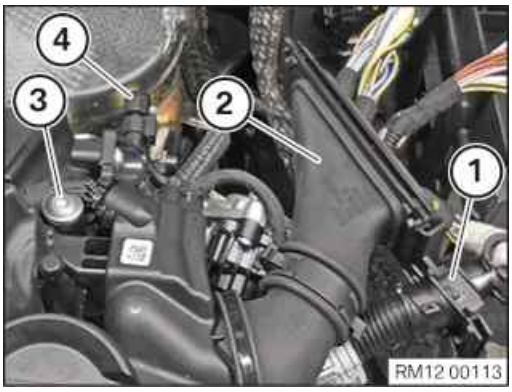


- Unlock and remove the connector (1) in the direction of the arrow.
- Feed out connector (1) and place to one side.

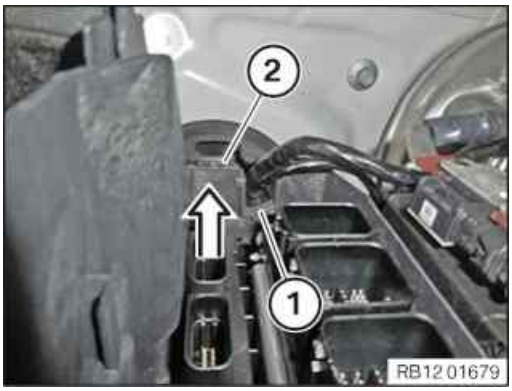


- Unlock and loosen connector (1).

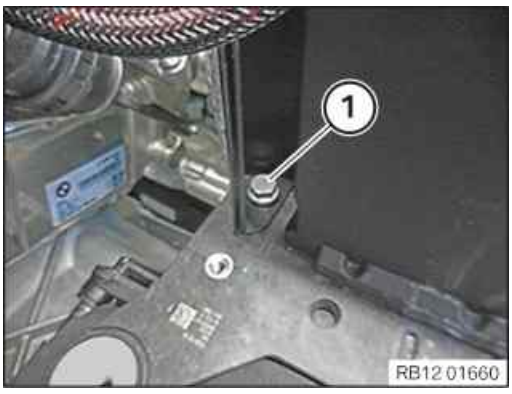
cardiagn.com



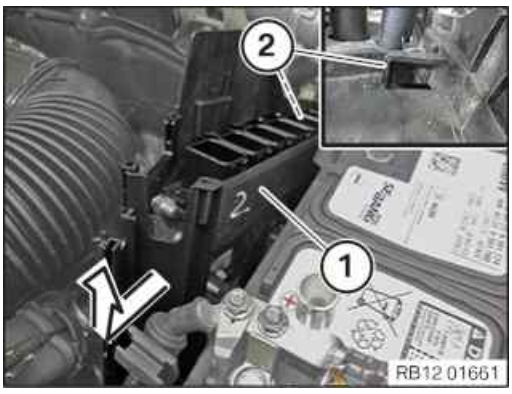
- Detach the wiring harness (1) from the electronics box.
- Detach the wiring harnesses (2) from electronics box.
- Loosen screw (3).
- Set wiring harnesses (1) and (2) aside.
- Unlock the connector (4) and disconnect it from the differential pressure sensor.



- Unlock and loosen holder (1).
- Guide the holder (1) out of the electronics box (2) in direction of arrow and set it aside.

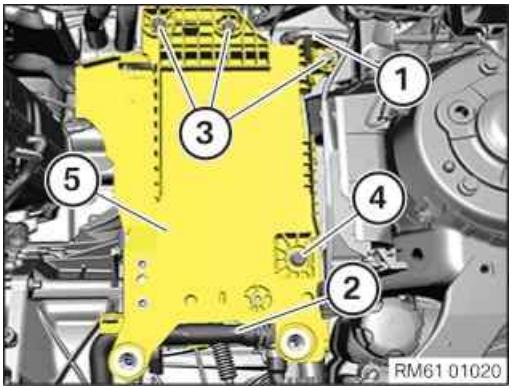


- Loosen screw (1).



- Guide the electronics box (1) out of the guide (2) in direction of arrow and remove.

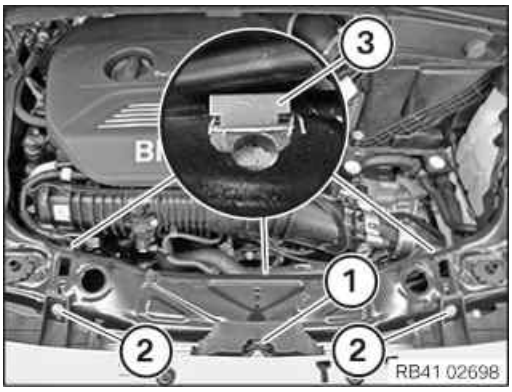
6 – Remove battery holder



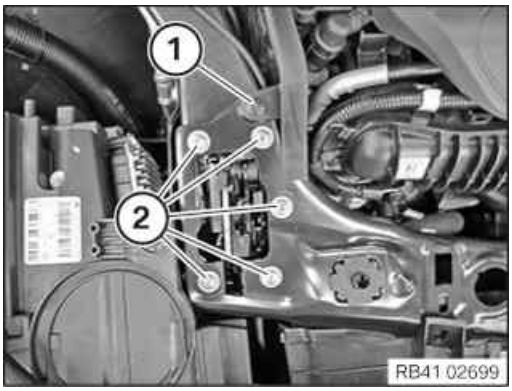
- Detach the cable clip (1) from the battery holder (5).
- Detach the coolant line (2) from the battery holder (5).
- Loosen screws (3).
- Loosen screw (4).
- Thread out and remove the battery holder (5).

7 – Remove cross connection

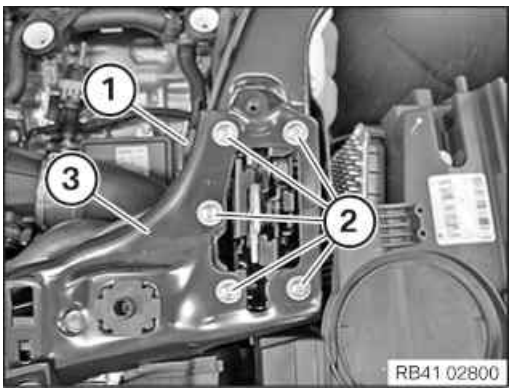
cardiagn.com



- Loosen screws (1) and (2).
- Detach clamps (3) for bonnet lock Bowden cable.

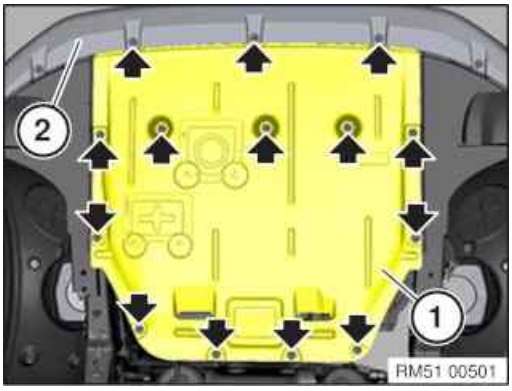


- Lever out expanding rivet (1).
- Loosen screws (2).



- Lever out expanding rivet (1).
- Loosen the screws (2) and remove the cross connection (3).

8 – Removing the front underbody protection



- Remove screws (arrows).
- Pull out and remove front underbody protection (1) under the bumper panel (2).

9 – Draining coolant

WARNING

Hot fluids.

Risk of scalding!

- Conduct all work in the vehicle wearing appropriate personal protective equipment only.

cardiagn.com

TECHNICAL INFORMATION

Life-long fill of coolant!

Do not reuse used coolant.

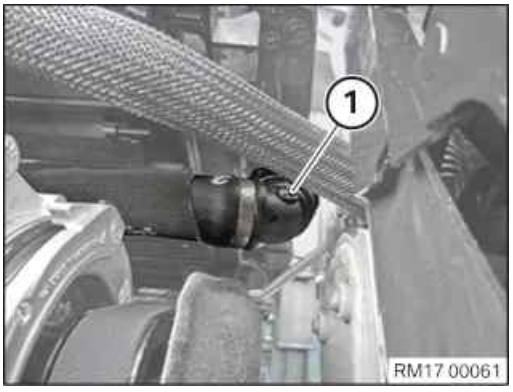
When replacing and removing components which rely on the corrosion protection effect of the coolant, it is essential to change the coolant. The cooling system must therefore be emptied and refilled.

In the case of other removal work involving the draining of part quantities of coolant, the coolant level must be topped up with new coolant.

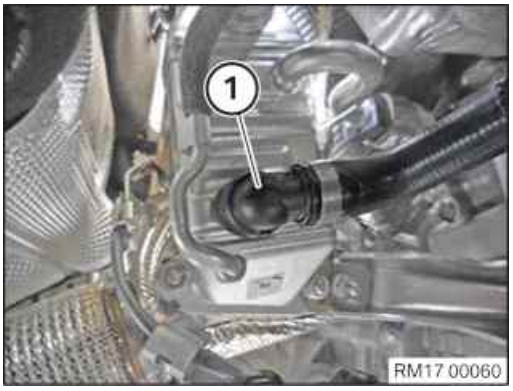
TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Loosen sealing cap (1).



- Unlock and disconnect the coolant line (1) from the radiator on the right.
- Catch and dispose of escaping coolant.



- Unlock and pull off the coolant line (1) from the low pressure exhaust-gas recirculation cooler on the diesel particulate filter.
- Catch and dispose of escaping coolant.

10 – Removing the exhaust-gas recirculation cooler

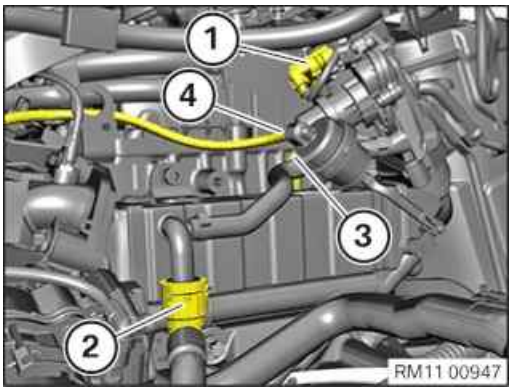
cardiagn.com

WARNING

Hot surfaces.

Risk of burning!

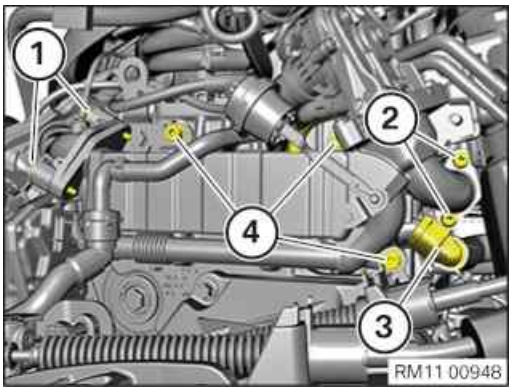
- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Unlock the plug connection (1) on exhaust-gas recirculation valve and pull it off.
- Unlock the coolant hose (2) and pull off from the exhaust-gas recirculation cooler.
- Release the hose clamp from the rear coolant hose (3) at the exhaust-gas recirculation valve and pull off the coolant hose (3).
- Release the vacuum hose (4) and pull off.



- Loosen screws (1).
- Loosen screws (2).
- Unlock coolant hose (3) and pull off.
- Loosen screws (4).
- Guide out and remove exhaust-gas recirculation cooler.

MAIN WORK

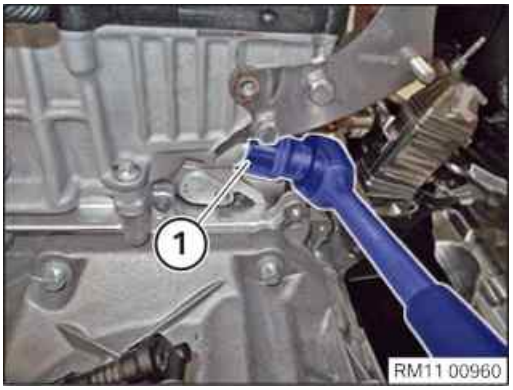
11 – Remove chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.



TECHNICAL INFORMATION

Collect and dispose of emerging fluids. Observe country-specific waste disposal regulations.

- Remove the chain tensioner piston (1).

cardiagn.com

12 – Installing the chain tensioner piston

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

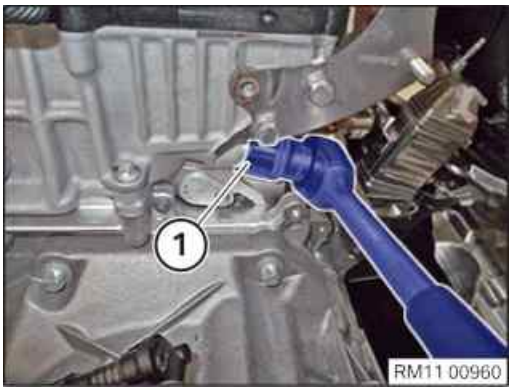
- Renew sealing ring (1).

  Parts: Sealing ring

TECHNICAL INFORMATION

The oil chamber must be drained for reuse of the chain tensioner.

- Place chain tensioner on a level support and slowly compress.
- Repeat this procedure twice.



- Install and tighten the chain tensioner piston (1).

Chain tensioner piston to cylinder head

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

POSTPROCESSES

13 – Installing the exhaust-gas recirculation cooler

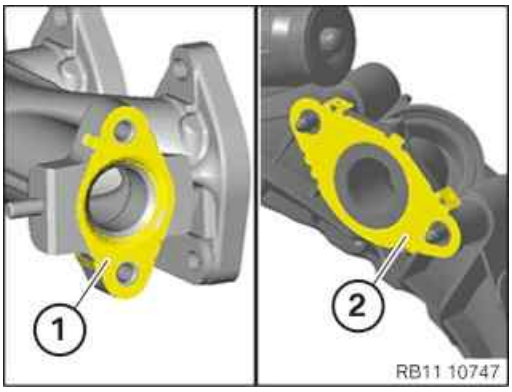
WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

cardiagn.com

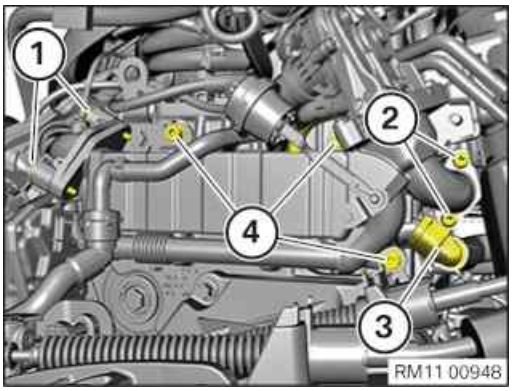


- Renew the seal (1) between the exhaust manifold and the exhaust-gas recirculation cooler.

  Parts: Gasket

- Renew the seal (2) between exhaust-gas recirculation cooler and intake air plenum.

  Parts: Gasket



- Feed in and install the exhaust-gas recirculation cooler.

TECHNICAL INFORMATION

When assembling, it is essential to observe screwing sequences and tightening torques.

Non-observance of these requirements may result in leaks and damage.

- Tighten the bolts (4) and then slacken them again.

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	5 Nm
		Release angle	90 °

- Install seal .
- Make sure the seal is correctly installed.
- Tighten the screws (1).

Intake plenum to exhaust-gas recirculation cooler

M6		Tightening torque	11 Nm

- Make sure the seal is correctly installed.
- Renew screws (2).

  Parts: Bolts

- Tighten down screws (2).

Exhaust-gas recirculation cooler to exhaust manifold

M8x28	Replace screws	Tightening torque	32 Nm

- Connect coolant hose (3) and lock.

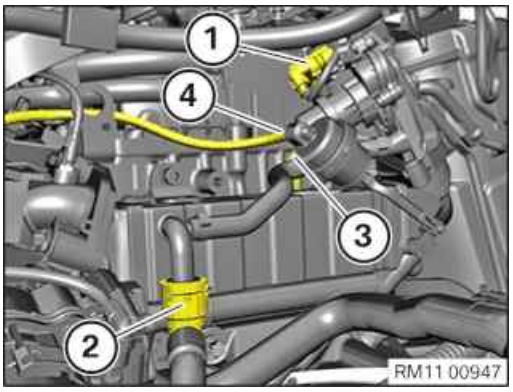
  The coolant hose (3) must audibly engage.

- Tighten down screws (4).

Exhaust-gas recirculation cooler to cylinder head

M8x20		Tightening torque	19 Nm

cardiagn.com



TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.

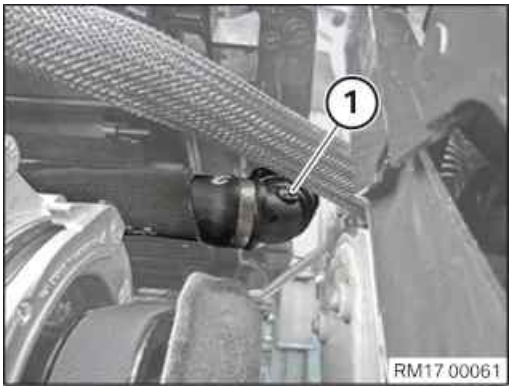
- Connect connectors (1) and lock.
- Attach the coolant hose (2) and lock.
- Replace hose clamp.

  Parts: Hose clamp
- Slide the coolant hose (3) with hose clamp onto the exhaust-gas recirculation valve at rear.
- Secure the hose clamp on the coolant hose (3).
- Route and connect the vacuum hose (4) correctly.

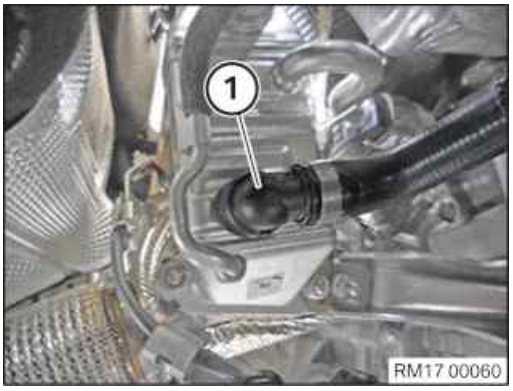
14 – Connect the coolant line

TECHNICAL INFORMATION

Make sure that the connections are locked correctly. The locks must engage audibly.



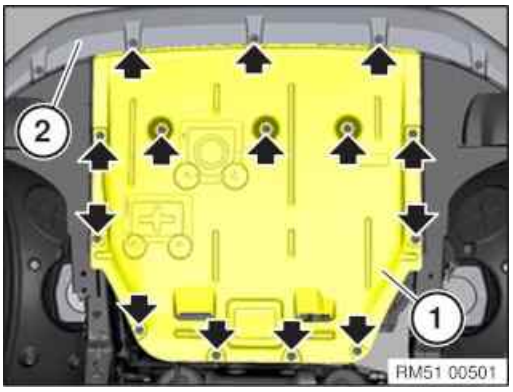
- Connect the right coolant line (1) to the radiator and lock audibly.



- Connect the coolant line (1) to the low pressure exhaust-gas recirculation cooler on the diesel particulate filter and lock audibly.

15 – Installing the front underbody protection

cardiagn.com

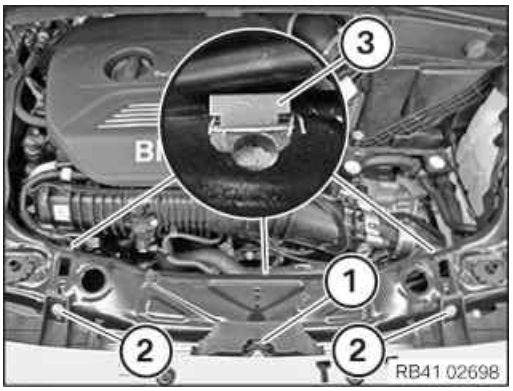


- Guide the front underbody protection (1) in under the bumper panel (2) and position it at the screw points.
- Tighten screws (arrows).

Underbody protection front

			3 Nm

16 – Install cross connection



- Install cross connection.
- Position all screws.
- Tighten down screw (1).

Bracing strut to top cross connection

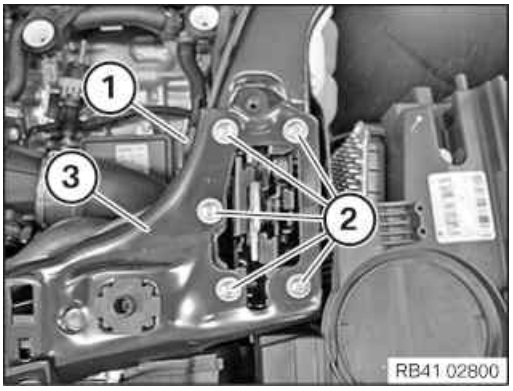
M8		Tightening torque	25 Nm

- Tighten down screws (2).

Air duct to deformation element/cross connection

M6x20 screw		Tightening torque	6 Nm

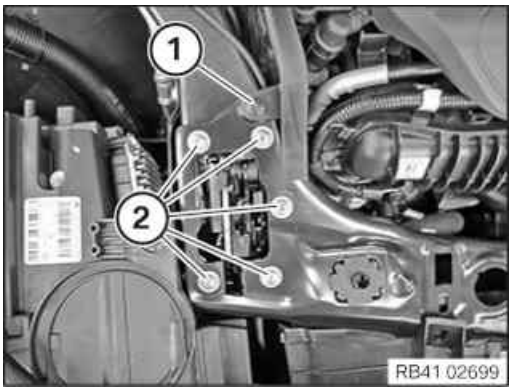
- Fasten clamps (3) for bonnet lock Bowden cable to cross connection.
- Tighten screws (2) of cross connection (3).



Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).



- Tighten down screws (2).

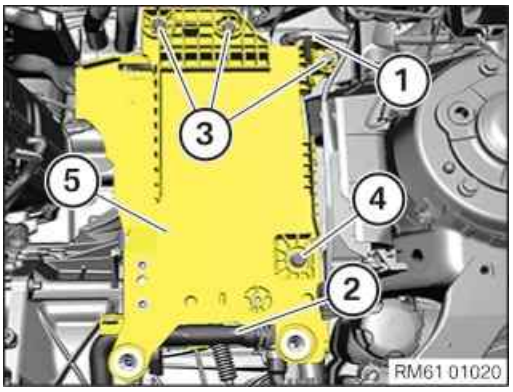
Cross connection on support for cross connection

M6x20		Tightening torque	12 Nm

- Fasten expanding rivet (1).

17 – Install the battery holder

cardiagn.com



- Feed in and install the battery holder (5).
- Hand-tighten the bolt (4).
- Hand-tighten the bolts (3).
- Tighten down screw (4).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Tighten down screws (3).

Battery holder to engine support

Hexagon screw M8x30		Tightening torque	19 Nm

- Fasten the coolant line (2) on the battery holder (5).
- Fasten the cable clip (1) on the battery holder (5).

18 – Install electronics box

Prerequisite

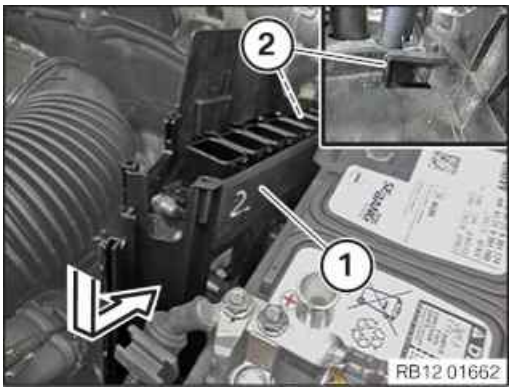
Battery earth lead is disconnected.

RISK OF DAMAGE

Improper routing of cables and wiring harnesses.

Trapped, crushed or damaged cables may cause short circuits and malfunctions.

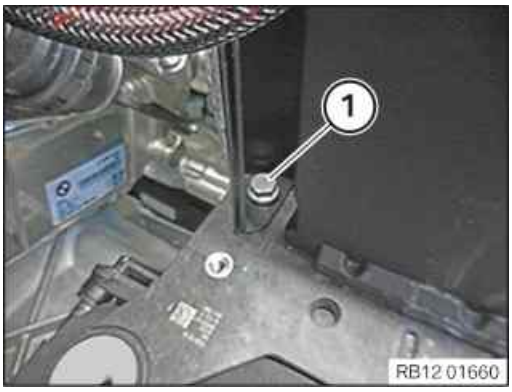
- Route all cables without abrasions, do not trap and crush.



- Guide in and install the electronics box (1) into the guide (2) in direction of arrow.

- Make sure that the electronics box (1) is positioned correctly on the bulkhead (2).

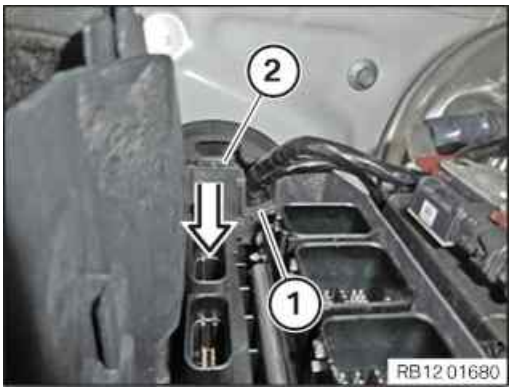
cardiagn.com



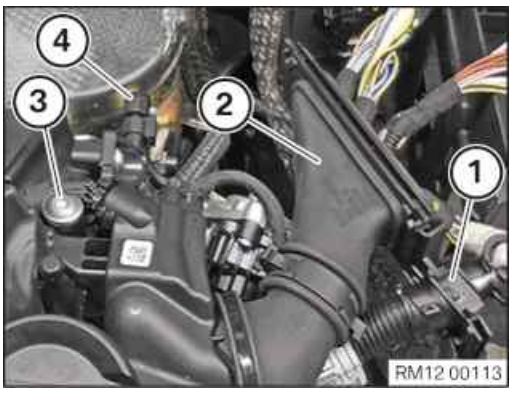
- Tighten down screw (1).

Electronics box to battery tray

M8X16		Tightening torque	15 Nm



- Guide in and install the holder (1) in the electronics box (2) in direction of arrow.
- Make sure the bracket (1) engages audibly.

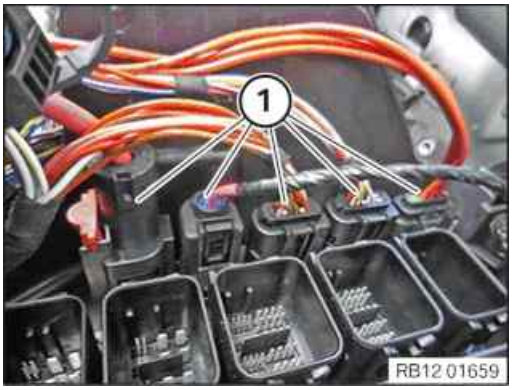


- Lay vehicle wiring harnesses (1) and (2) and mount on electronics box.
- Tighten down screw (3).

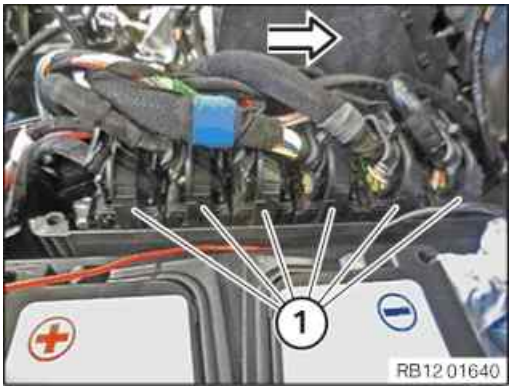
Wiring harness to cylinder head cover

TS5x20		Tightening torque	3,5 Nm

- Attach connector (4) to the differential pressure sensor and lock it audibly.

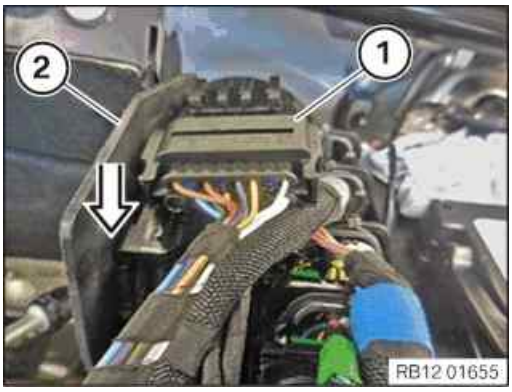


- Connect and lock the connector (1).
- Make sure the connectors (1) engage audibly.

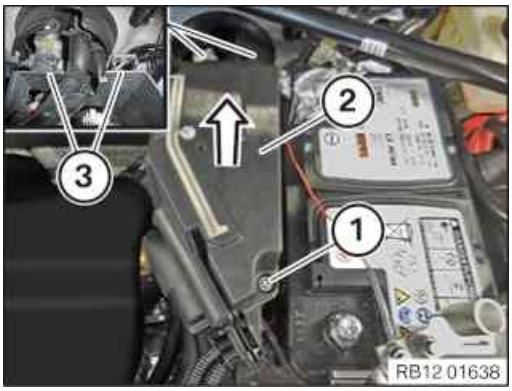


- Connect connector (1) in direction of arrow and lock.
- Make sure the connectors (1) engage audibly.

cardiagn.com



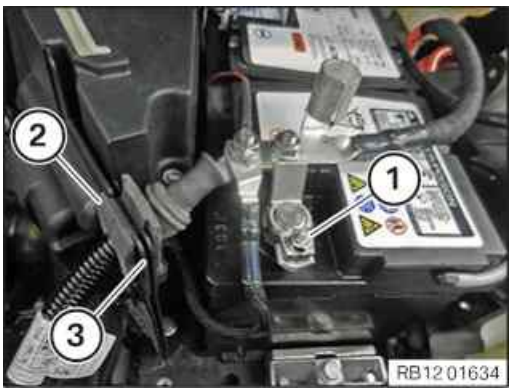
- Connect and lock the connector (1).
- Make sure the connector (1) engages audibly.
- Insert the connector (1) in the direction of arrow at the electronics box (2) and install.



- Insert the cover (2) into the guides (3) in the direction of arrow and install.
- Make sure the cover audibly engages (2) in the guides (3).
- Tighten down screw (1).

Cover to electronics box

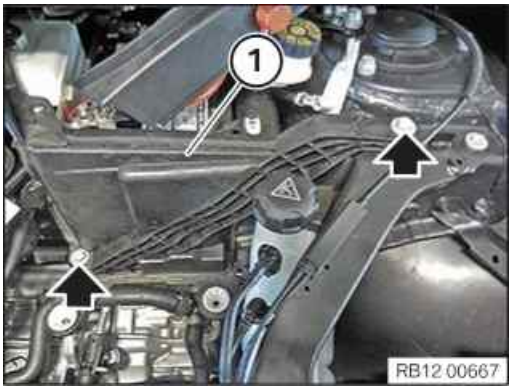
RF5x26.5		Tightening torque	2,5 Nm



- Thread in positive battery cable (2) on holder (3) and install.
- Feed in and install positive battery terminal (1).
- Tighten positive battery terminal (1).

Positive battery terminal to battery

NutM6		Tightening torque	5 Nm



- Feed in and install tension strut (1).
- Tighten screws (arrows).

Tension strut to spring strut dome/battery tray

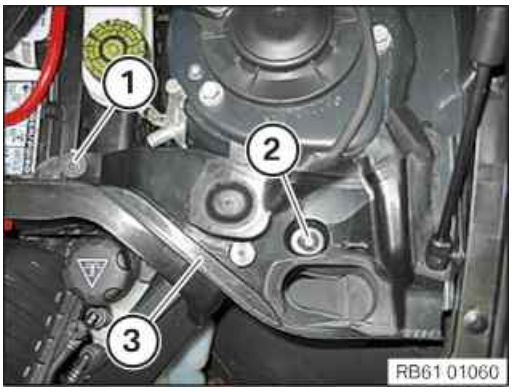
M8		Tightening torque	19 Nm

- Feed in and install cover (2) at the positive battery connection point.
- Tighten down screw (1).

Positive battery connection point cover to engine compartment partition wall

		Tightening torque	3 Nm

cardiagn.com

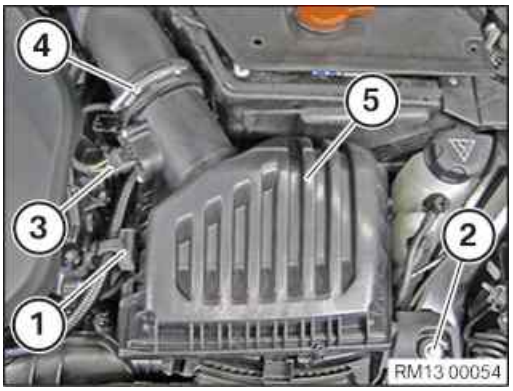


- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

19 – Installing intake silencer housing



- Insert the intake silencer housing (5) into the rubber mounts and install it.
  Intake filter housing (5) must engage audibly.
- Tighten down screw (2).

Intake silencer housing to lock bridge

M6X30		Tightening torque	8 Nm

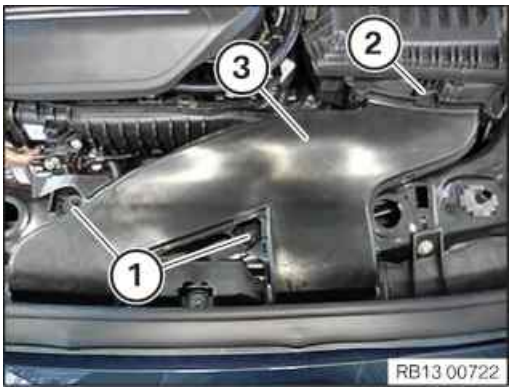
- Tighten clamp (4).

Clean air pipe to intake silencer housing

Clamp		Tightening torque	3 Nm

- Connect and lock the connector (3).
  The connector (3) must engage audibly.
- Insert and install the holder (1).

20 – Install the intake neck for the intake filter housing

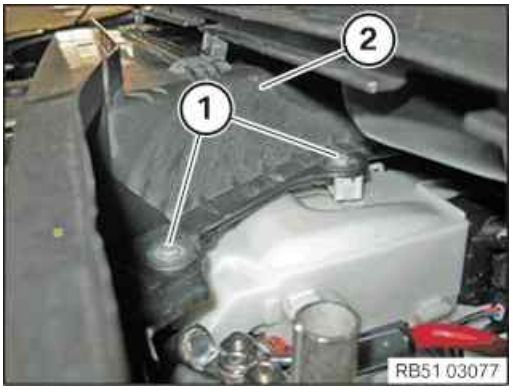


- Insert and install the intake neck (3).
  The lock (2) must audibly engage.
- Tighten nuts (1).

Intake neck to cross connection

M6		Tightening torque	8 Nm

21 – Installing the upper bulkhead cover

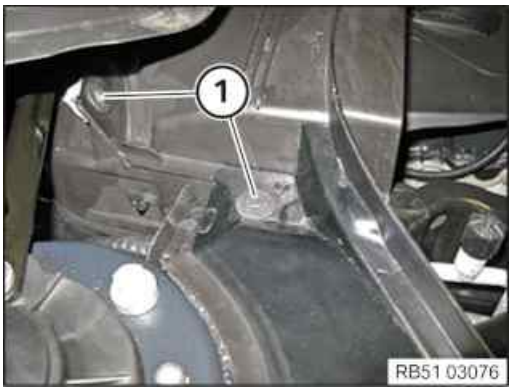


- Feed in and install cover (2) of the bulkhead at the top.
- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

cardiagn.com



- Tighten the screws (1).

Bulkhead cover, top

Screw		Tightening torque	3 Nm

- Tighten the screws (1).

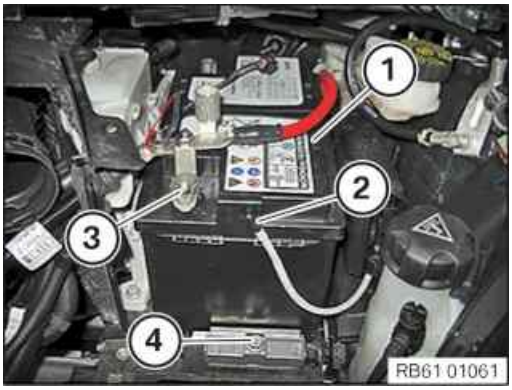
Bulkhead cover, top

Screw		Tightening torque	3 Nm

22 – Install vehicle battery

TECHNICAL INFORMATION

For additional information see:
61 00 ... Safety information on handling the vehicle battery
61 00 / 12 00 ... Notes on disconnecting and connecting the vehicle battery
61 12 ... Notes on the intelligent battery sensor (IBS)



- Install vehicle battery (1).
- Tighten the holder with the bolt (4).

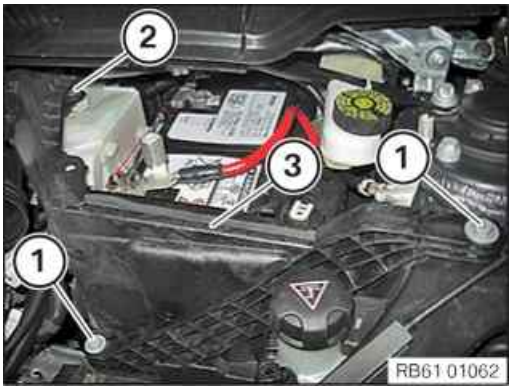
Battery terminal rail to battery tray

M8 screw		19 Nm

- Position the vent hose (2).
- Position the positive terminal.
- Tighten the nut (3) on the positive terminal.

Positive battery terminal

NutM6		5 Nm



- Insert the tension strut (3).
- Tighten down screw (2).

Battery cover

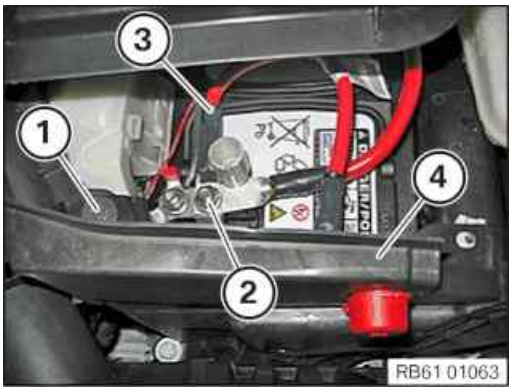
Screw		2,8 Nm

- Tighten the screws (1).

Trailing link

M8 screw		19 Nm

cardiagn.com



- Position the positive battery cable (3) with the cover of the remote positive terminal (4).
- Tighten down screw (1).

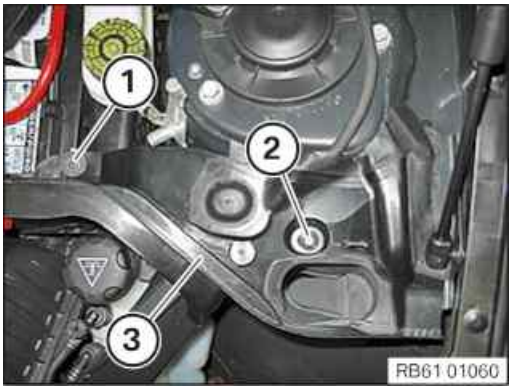
Battery cover

Screw		2,8 Nm

- Tighten the nut (2) on the positive terminal.

Positive battery cable to battery terminal

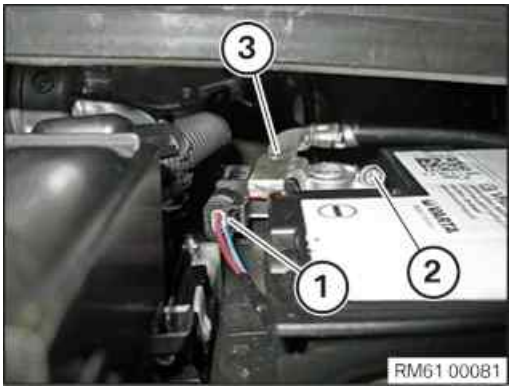
Nut M8		15,2 Nm



- Position the fixture for the gasket (3) and secure with the expanding rivet (2).
- Tighten down screw (1).

Battery cover

Screw		2,8 Nm

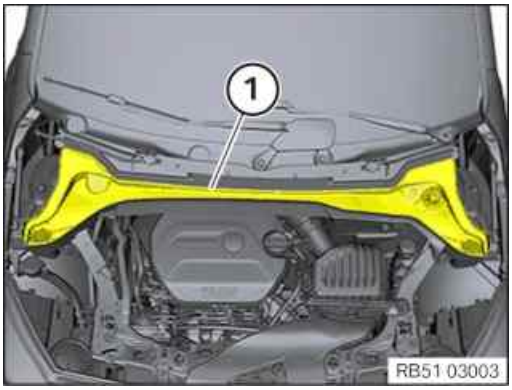


- Position the negative battery terminal (3).
- Tighten nut (2).

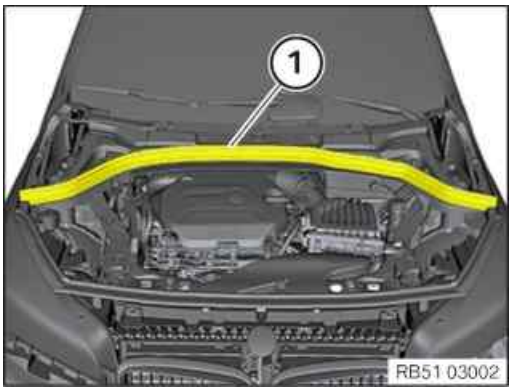
Negative battery terminal (with IBS)

NutM6		5 Nm

- Connect connectors (1) and lock.



- Feed in the cowl panel cover (1).



- Press the gasket (1) in a downwards direction.

23 – Fill and bleed the coolant circuit

▸ **Filling and bleed the high-temperature coolant circuit**

cardiagn.com

- See additional information.

Additional Information

Overview of Tightening Torques

Chain tensioner piston to cylinder head — Used in step 12

NX7 25 mm	Replace sealing ring, oil thread.	Jointing torque	12 Nm
		Angle of rotation	90 °

Exhaust-gas recirculation cooler to cylinder head — Used in step 13

M8x20		Tightening torque	5 Nm
		Release angle	90 °

Intake plenum to exhaust-gas recirculation cooler — Used in step 13

M6		Tightening torque	11 Nm

Exhaust-gas recirculation cooler to exhaust manifold — Used in step 13

M8x28	Replace screws	Tightening torque	32 Nm

Exhaust-gas recirculation cooler to cylinder head — Used in step 13

M8x20		Tightening torque	19 Nm

Underbody protection front — Used in step 15

			3 Nm

Bracing strut to top cross connection — Used in step 16

M8		Tightening torque	25 Nm

Air duct to deformation element/cross connection — Used in step 16

M6x20 screw		Tightening torque	6 Nm

Cross connection on support for cross connection — Used in step 16

M6x20		Tightening torque	12 Nm

Battery holder to engine support — Used in step 17

Hexagon screw M8x30		Tightening torque	19 Nm

Electronics box to battery tray — Used in step 18

M8X16		Tightening torque	15 Nm

11 31 028 Removing and installing / replacing exhaust camshaft

WARNING

Hot surfaces.

Risk of burning!

- Perform all work only on components that have cooled down.

PRELIMINARY WORK

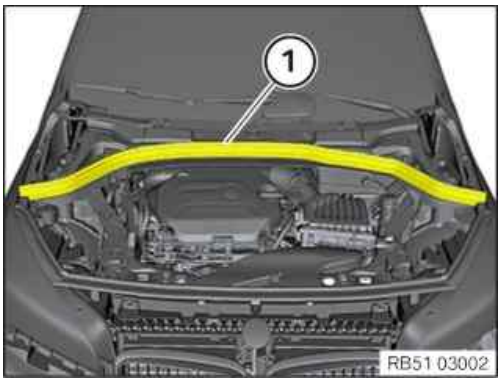
1 – Disconnecting all battery earth leads

- See additional information.

2 – Remove the seal for the rear bonnet

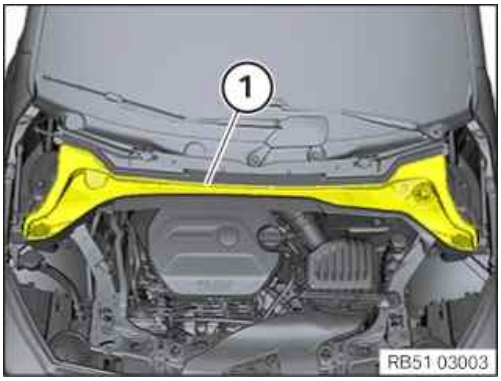
NOTICE

Schematic diagram is for example purposes. Some parts may differ in certain details.



- Pull off rear bonnet seal (1) towards the top and remove.

3 – Removing front cowl panel cover



- Guide the front cowl panel cover (1) out toward the top and remove it.

4 – Remove left and right wiper arm

cardiagn.com

NOTICE

Description is for left component only. Procedure on the right side is identical.

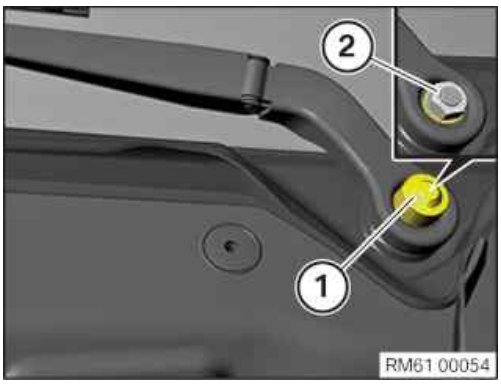
▶ **Remove the wiper arm**

RISK OF DAMAGE

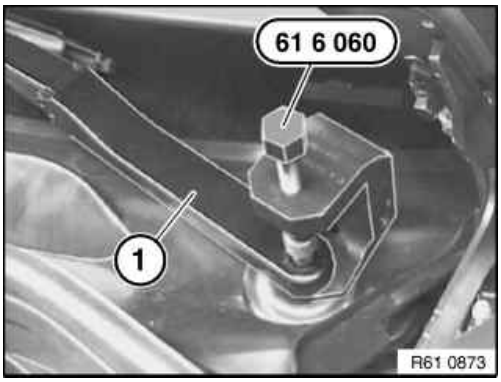
Damage to wiper console

While removing the wiper arms without using special tool, the wiper console can break.

- Removing the wiper arms must be carried out only using the prescribed special tool.
- Do not lift off wiper arm, else the wiper console may break on the predetermined breaking point for the pedestrian protection.



- Remove the protective cap (1).
- Loosen nut (2).



- Pull off the wiper arm (1) using special tool .

5 – Remove the gutter strip on the windscreen on the left and right

NOTICE

Description is for left component only. Procedure on the right side is identical.

▶ **Remove the gutter strip on the windscreen**
